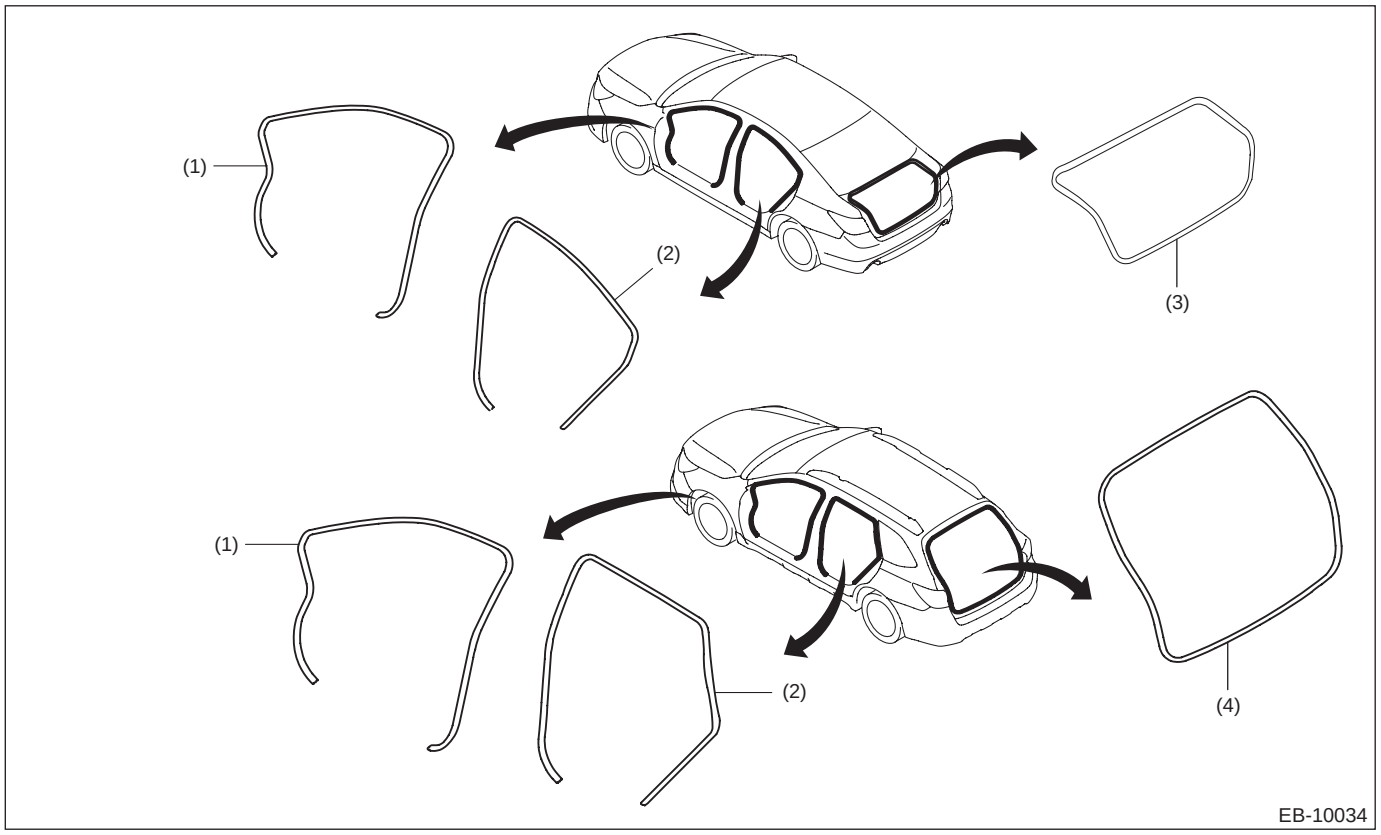
For the components of power rear gate, refer to the power rear gate system. <Ref. to PRG-2, UNIT AND REAR GATE, COMPONENT, General Description.>



(1)	Hinge - rear gate	(7)	Cover - rear gate
(2)	Panel - rear gate	(8)	Stopper rubber
(3)	Striker - rear gate	(9)	Stay ASSY - rear gate
(4)	Latch & actuator - rear gate	(10)	Clip
(5)	Buffer - rear gate (panel - rear gate side)	(11)	Drip - rear gate
(6)	Buffer - rear gate (body side)		

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 16 (1.6, 11.8)
T3: 20 (2, 14.8)
T4: 25 (2.5, 18.4)

7. WEATHER STRIP

(1) Panel ASSY - front door
(2) Weather strip - front door LWR
(3) Weather strip - front door
(4) Panel ASSY - rear door (sedan model)
(5) Weather strip - rear door LWR
(6) Weather strip - rear door (sedan model)
(7) Panel ASSY - rear door (OUTBACK model)
(8) Weather strip - rear door (OUTBACK model)

(1) Weather strip - body side flange front
(2) Weather strip - body side flange rear
(3) Weather strip - trunk lid (sedan model)
(4) Weather strip - rear gate (OUTBACK model)

B: CAUTION

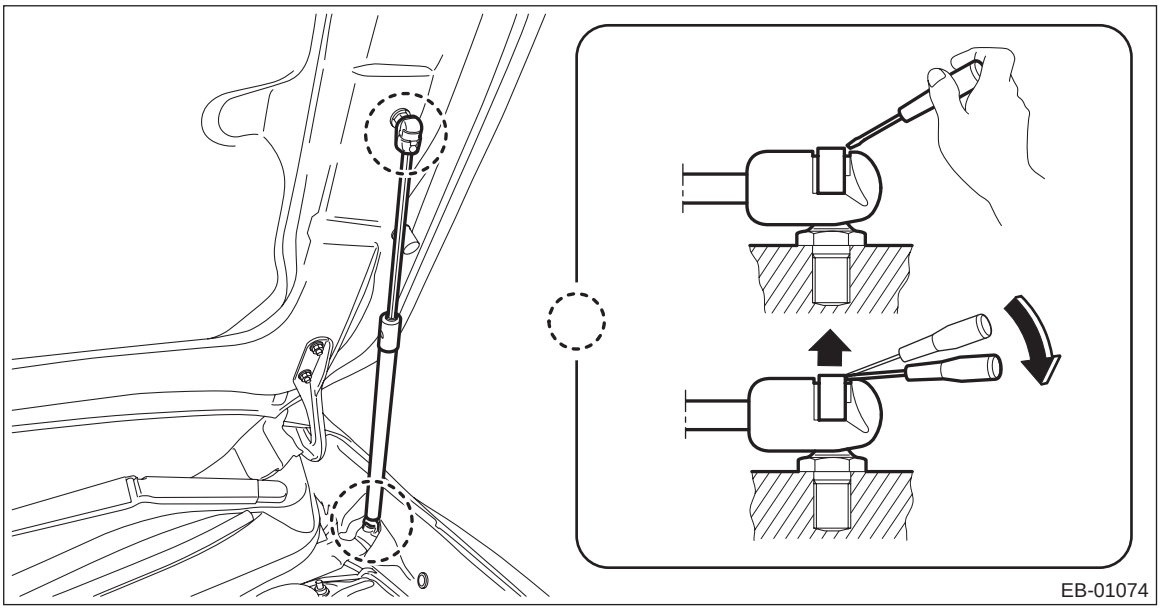
Exterior body panels are heavy. When removing or installing, do not drop and damage the panels. Do not damage the panel painting surface.

C: PREPARATION TOOL

1. GENERAL TOOL

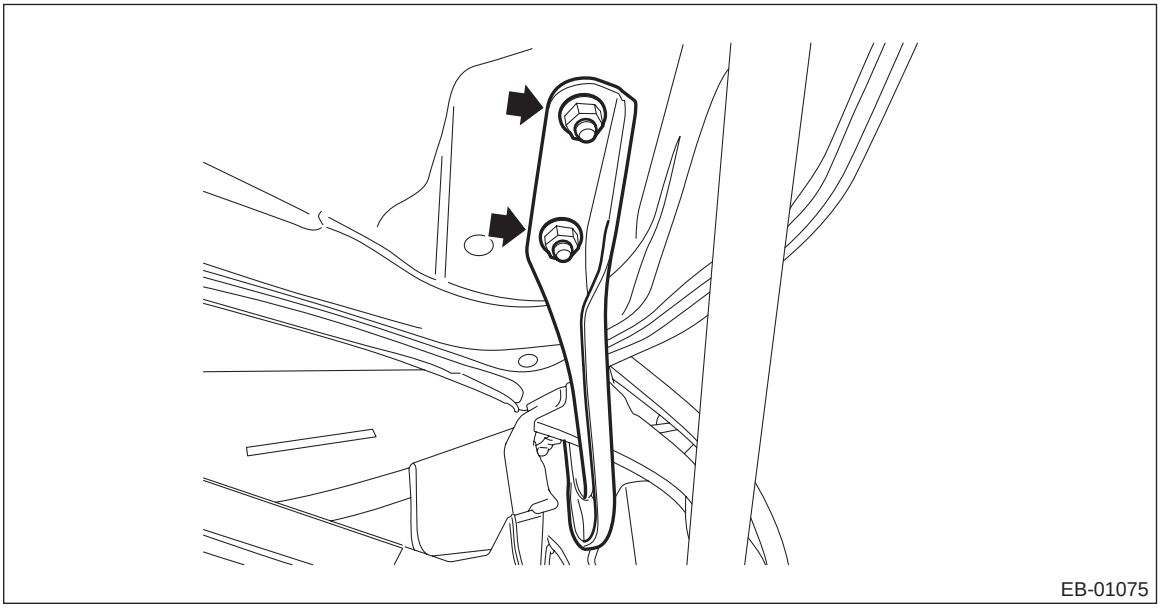
TOOL NAME	REMARKS
Support jack	Used for supporting door panel.
Clip remover	Used for removing various types of clips.

2. Front Hood



A: REMOVAL

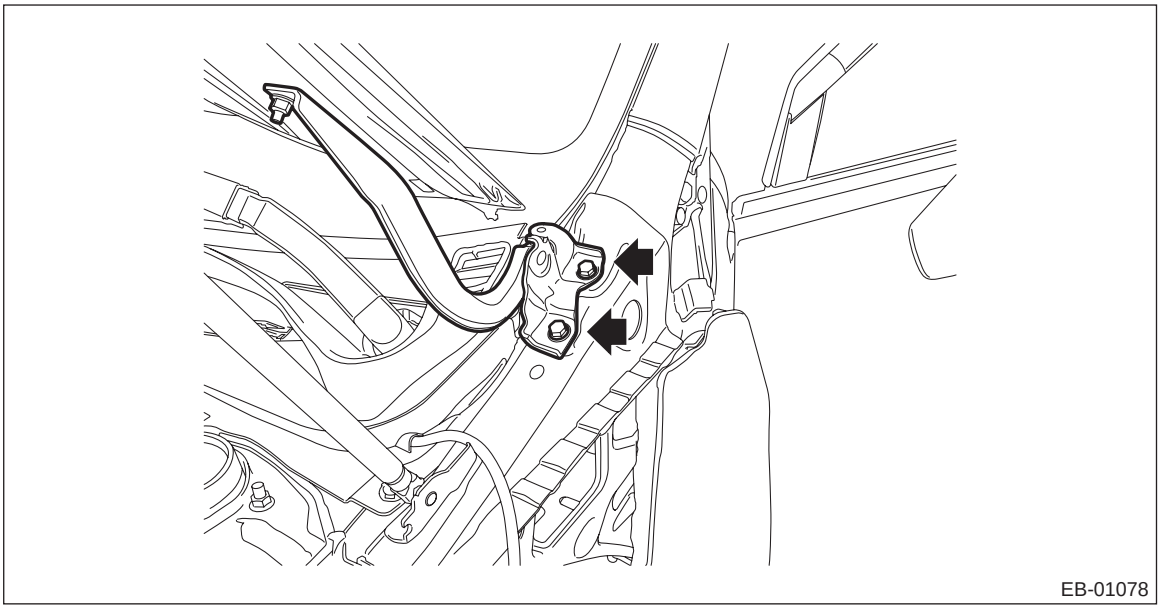
CAUTION:
The hood COMPL - front is heavy. When removing and installing it, always work in a team of two or more persons.



1) Open the hood COMPL - front.
2) Remove the stay assembly - front hood.

CAUTION:
Do not remove the stop ring completely. Raise it to the position enough to remove the ball stud.

(1) Gently push the stop ring against the ball stud to be raised with a flat tip screwdriver.
(2) Pull the stay assembly - front hood toward you, and remove the stay assembly - front hood from the ball stud.



3) Remove the nut on the hood COMPL - front side, and remove the hood COMPL - front.

4) Remove the hinge COMPL - front hood from the body.

NOTE:
The hinge COMPL - front hood cannot be removed with the fender COMPL - front attached. Therefore, remove the fender COMPL - front beforehand.

B: INSTALLATION

1) Temporarily fit the hinge COMPL - front hood around the original position on the vehicle body.
2) Install the hood COMPL - front to the hinge COMPL - front hood.

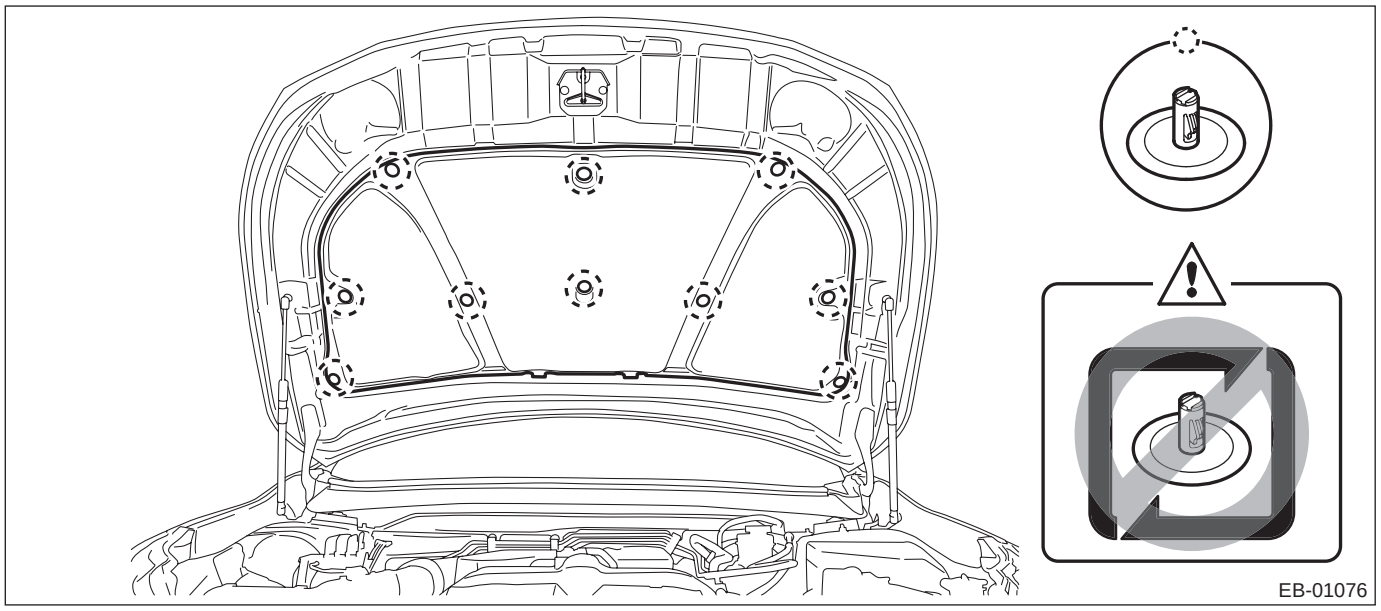
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

3) Install the stay assembly - front hood.
4) When temporarily fitting the fender COMPL - front and adjusting the clearance, make sure that a uniform clearance is created around the hood COMPL - front.

NOTE:
When installing the fender COMPL - front, make sure that a uniform clearance is created around it.
- Fender COMPL - front to Hood COMPL - front: <Ref. to EB-15, ADJUSTMENT, Front Hood.>
- Fender COMPL - front to Panel assembly - front door: <Ref. to EB-28, ADJUSTMENT, Front Door.>

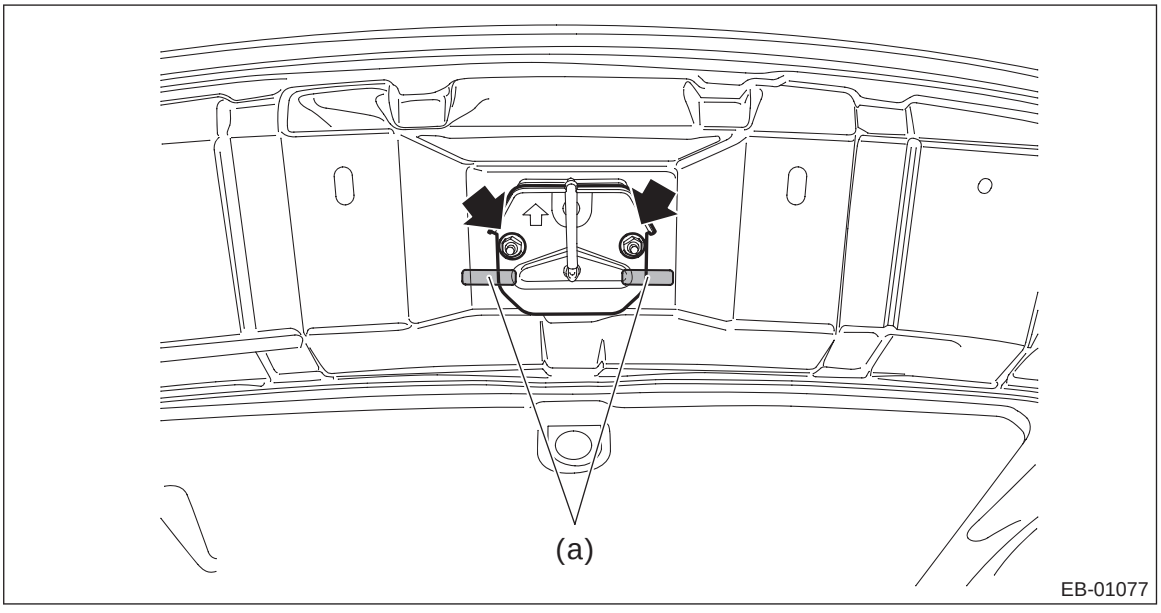
5) Install the hinge COMPL - front hood.
   (1) Tighten the bolts at the front side, and temporarily fit the bolts at the rear side.
   (2) Remove the fender COMPL - front.
   (3) Tighten the hinge COMPL - front hood to the specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



6) Readjust the fender COMPL - front to install.

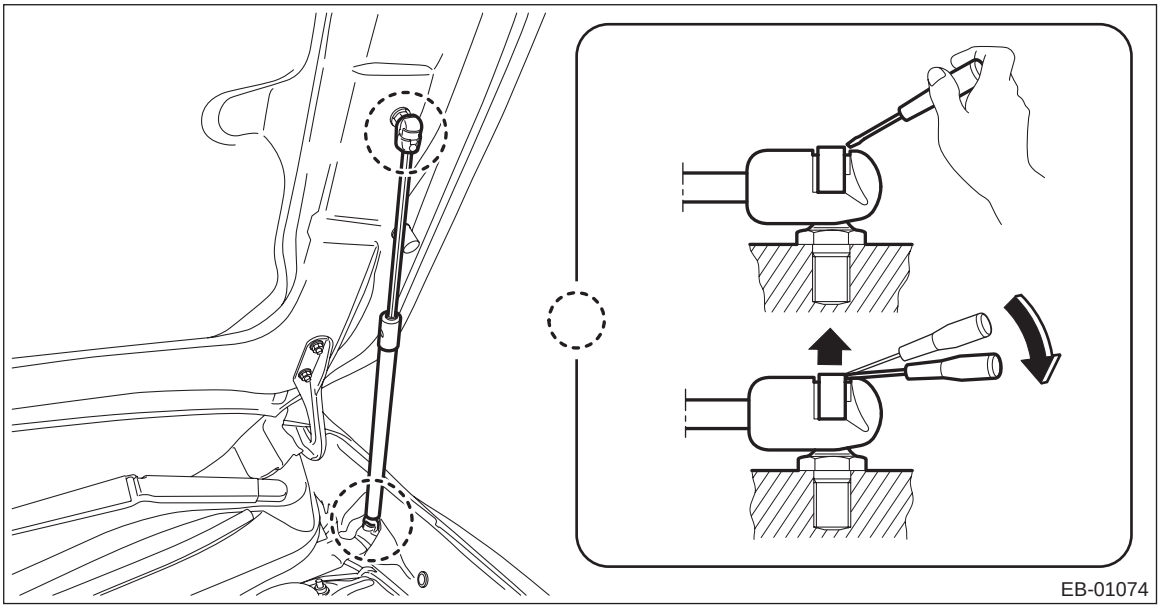
NOTE:
When installing the fender COMPL - front, make sure that a uniform clearance is created around it.
- Fender COMPL - front to Hood COMPL - front: <Ref. to EB-15, ADJUSTMENT, Front Hood.>
- Fender COMPL - front to Panel assembly - front door: <Ref. to EB-28, ADJUSTMENT, Front Door.>



C: DISASSEMBLY

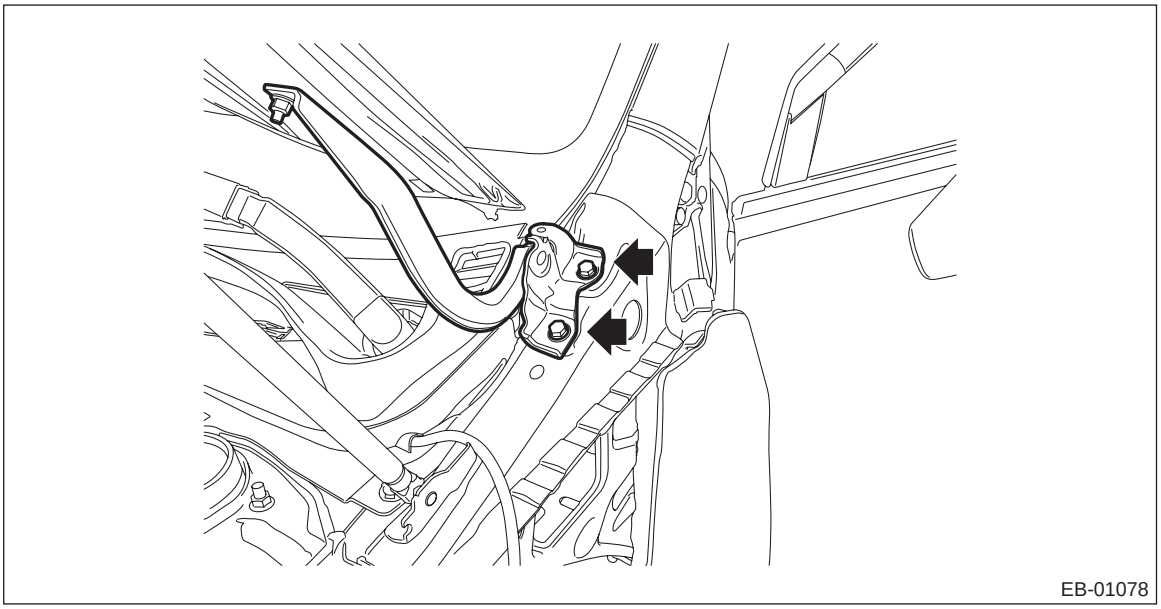
CAUTION:
- **Do not damage the piston rods and oil seals of stay assembly - front hood.**
- **Never disassemble the stay assembly - front hood: They contain gas.**
- **The hood COMPL - front is heavy. When removing or installing the hood COMPL - front, stay assembly - front hood, and hinge COMPL - front hood, be sure to work in a team of two or more persons.**
- **Do not reuse any clips damaged during removal. The damaged clip cannot fix the insulator securely. Therefore, always replace with a new part.**

1) Remove the clips, and remove the insulator - front hood.



2) Make alignment marks (a), and remove the striker - front hood from the hood COMPL - front.

3) Remove the stay assembly - front hood.



CAUTION:
Do not remove the stop ring completely. Raise it to the position enough to remove the ball stud.

(1) Gently push the stop ring against the ball stud to be raised with a flat tip screwdriver.
(2) Pull the stay assembly - front hood toward you, and remove the stay assembly - front hood from the ball stud.

EB-01074

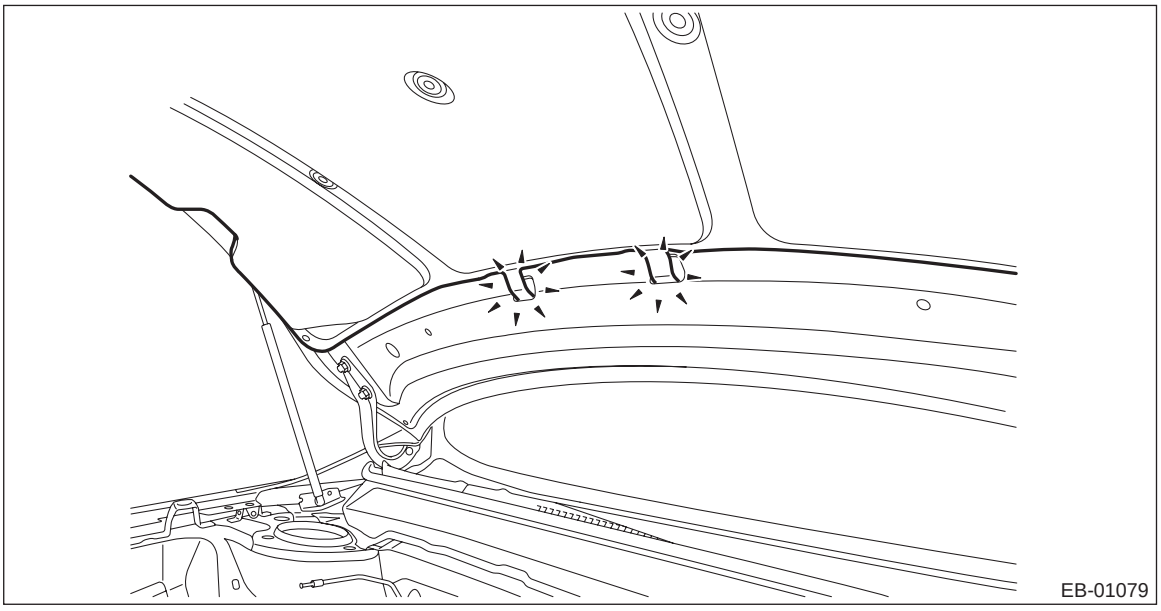
4) Remove the hinge COMPL - front hood from the body.

NOTE:
The hinge COMPL - front hood cannot be removed with the fender COMPL - front attached. Therefore, remove the fender COMPL - front beforehand.

EB-01078

D: ASSEMBLY

1) Install the hinge COMPL - front hood.

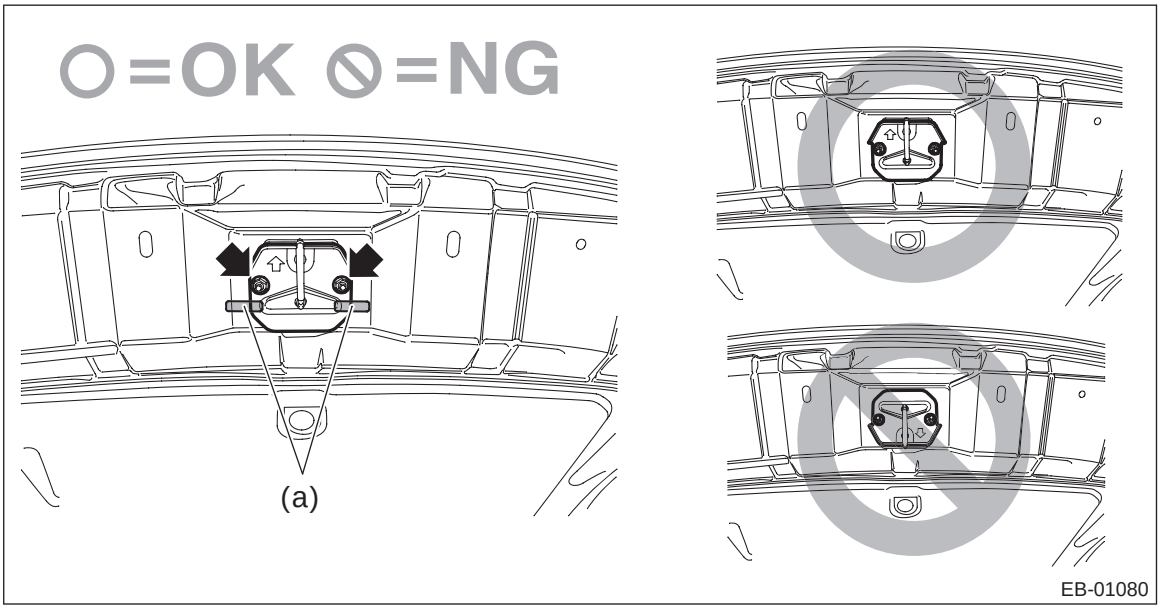


Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Install the stay assembly - front hood.

Tightening torque:
20 N·m (2 kgf-m, 14.8 ft-lb)

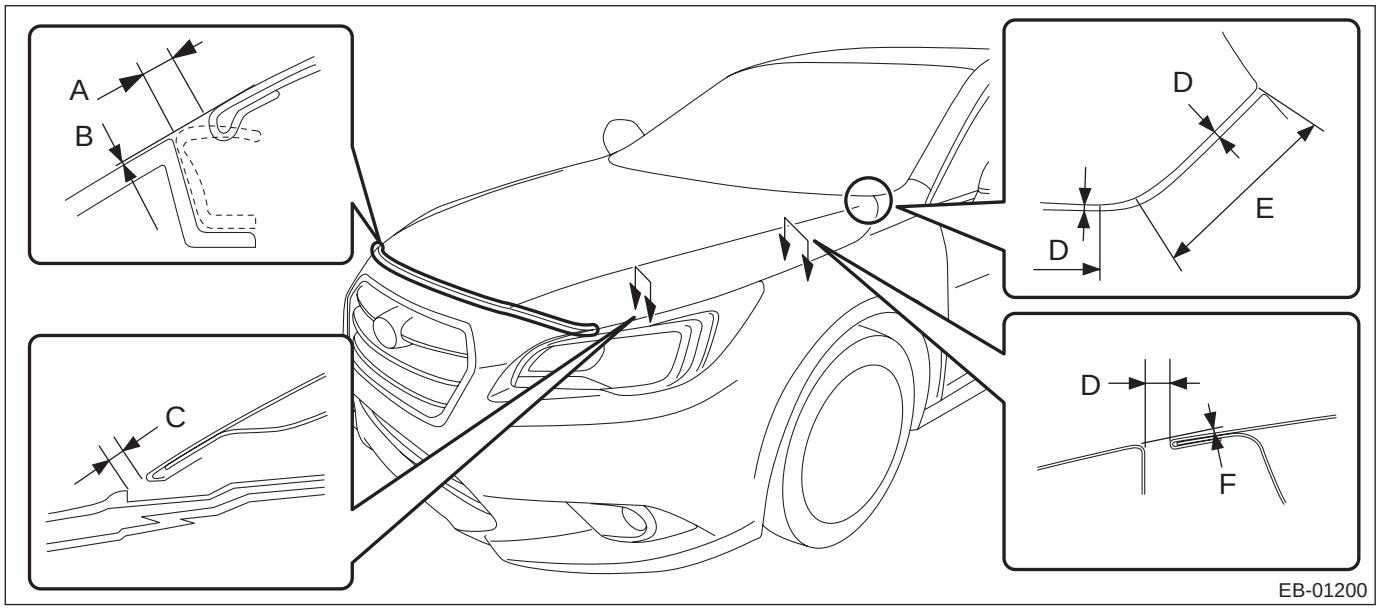
3) Install the insulator - front hood.



NOTE:
Securely insert the claws of the insulator - front hood.

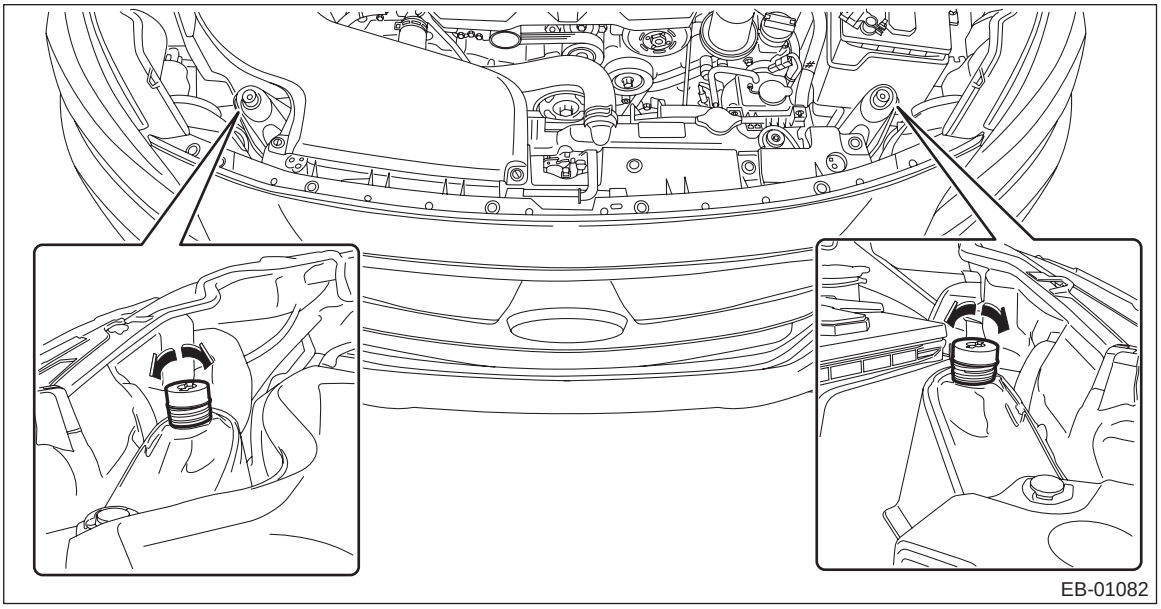
4) Align the alignment marks (a), and install the striker - front hood to the hood COMPL - front.

CAUTION:
When installing the striker - front hood, make sure that the front and rear sides are positioned in a correct direction.



Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

NOTE:
It is not necessary to adjust the striker - front hood because there is no span of adjustable range.

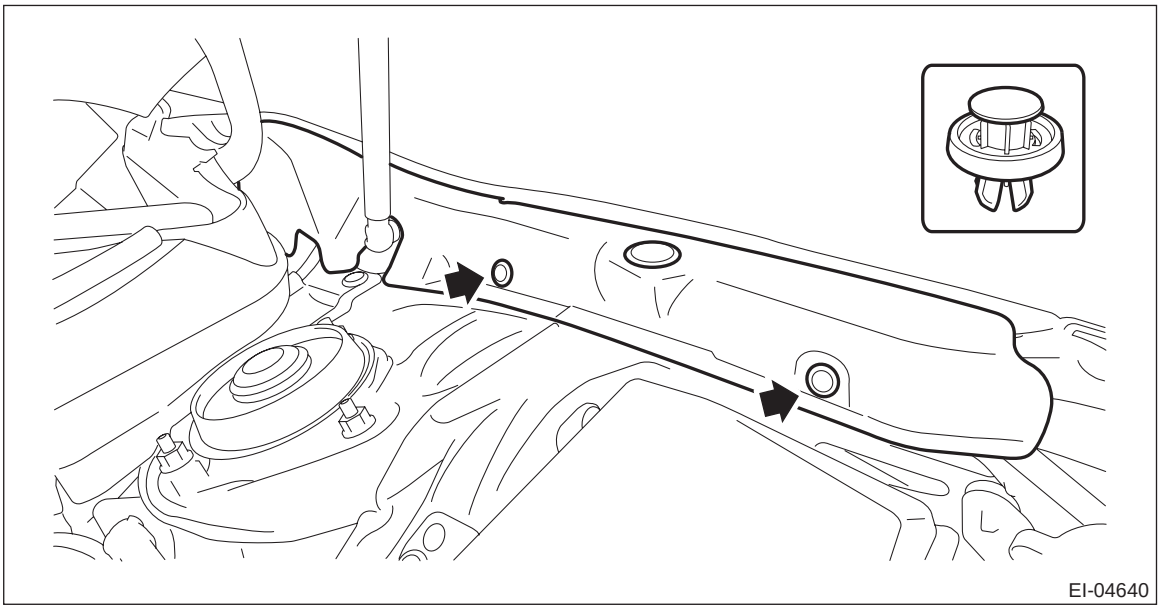


E: ADJUSTMENT

NOTE:
Adjustment should be performed on the fender COMPL - front, lock assembly - front hood and buffer - front hood, because adjustment cannot be performed on the hinge COMPL - front hood.
Adjust the clearance around the hood COMPL - front as follows.

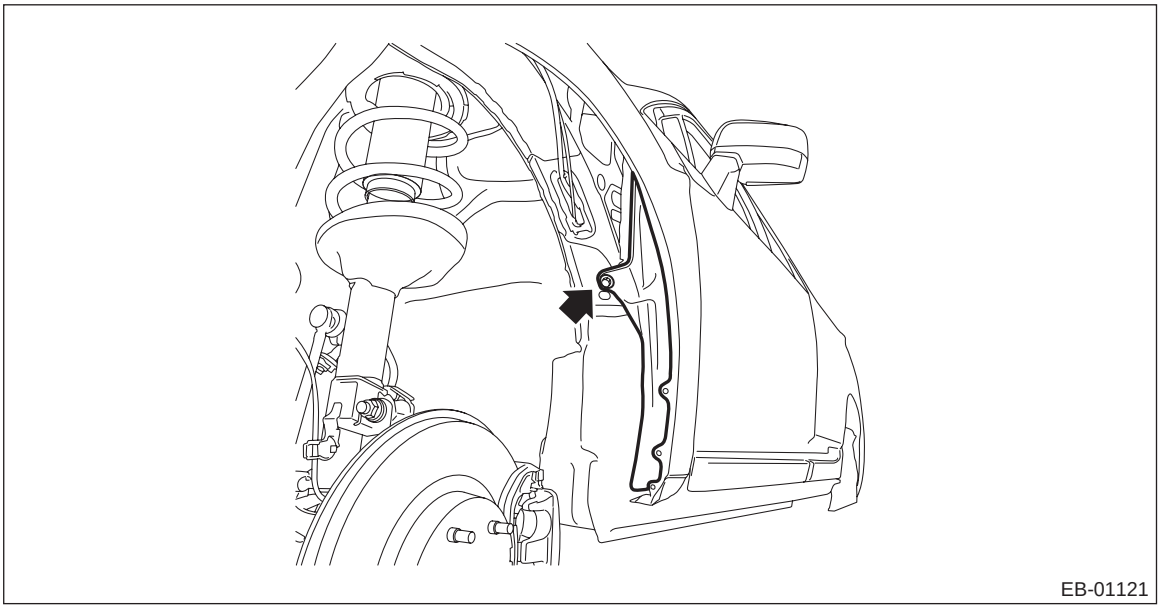
Part		Standard
A	Hood COMPL - front to Bumper face front	4.2±1.7 mm (0.17±0.07 in)
B	Surface level gap between Hood COMPL - front and Bumper face front	–0.2+1.7, –1.2 mm (0.01+0.07, –0.05 in)
C	Hood COMPL - front to Light assembly - head	4±1.8 mm (0.16±0.07 in)
D	Hood COMPL - front to Fender COMPL - front (from front end to just before curved portion)	4±1.5 mm (0.16±0.06 in)
E	Hood COMPL - front to Fender COMPL - front (from rear end to just before curved portion)	4±1 mm (0.16±0.04 in)
F	Surface level gap: Hood COMPL - front to Fender COMPL - front	0.5±1 mm (0.02±0.04 in)

1) Adjust the front end height of the hood COMPL - front. <Ref. to SL-58, ADJUSTMENT, Front Hood Lock Assembly.>
2) Rotate the buffer - front hood of the hood COMPL - front to adjust the height.



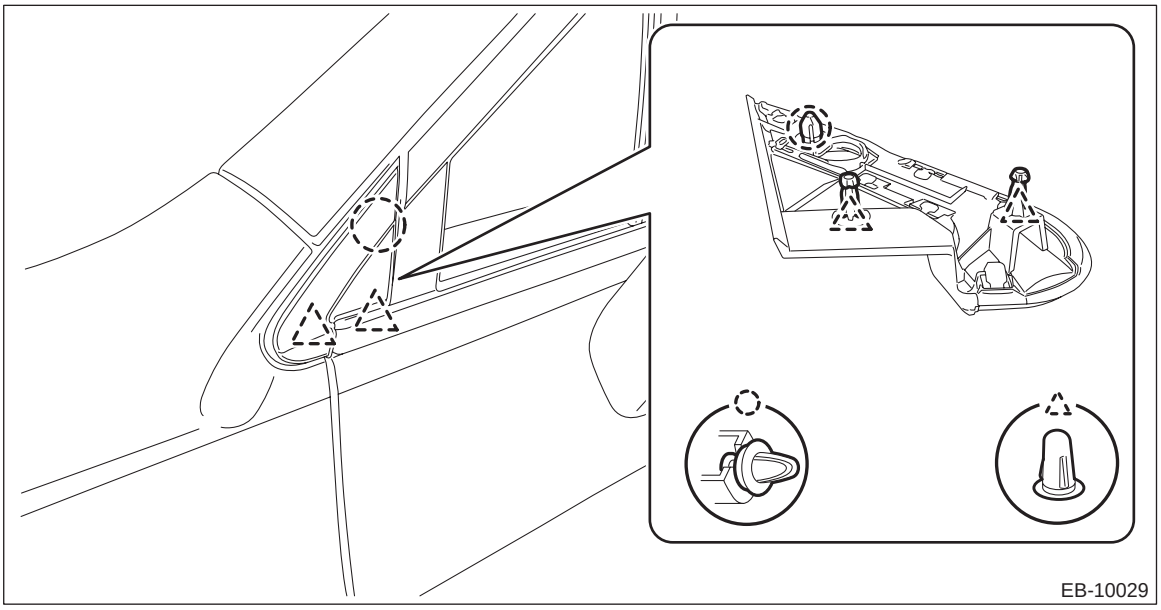
3. Front Fender

A: REMOVAL



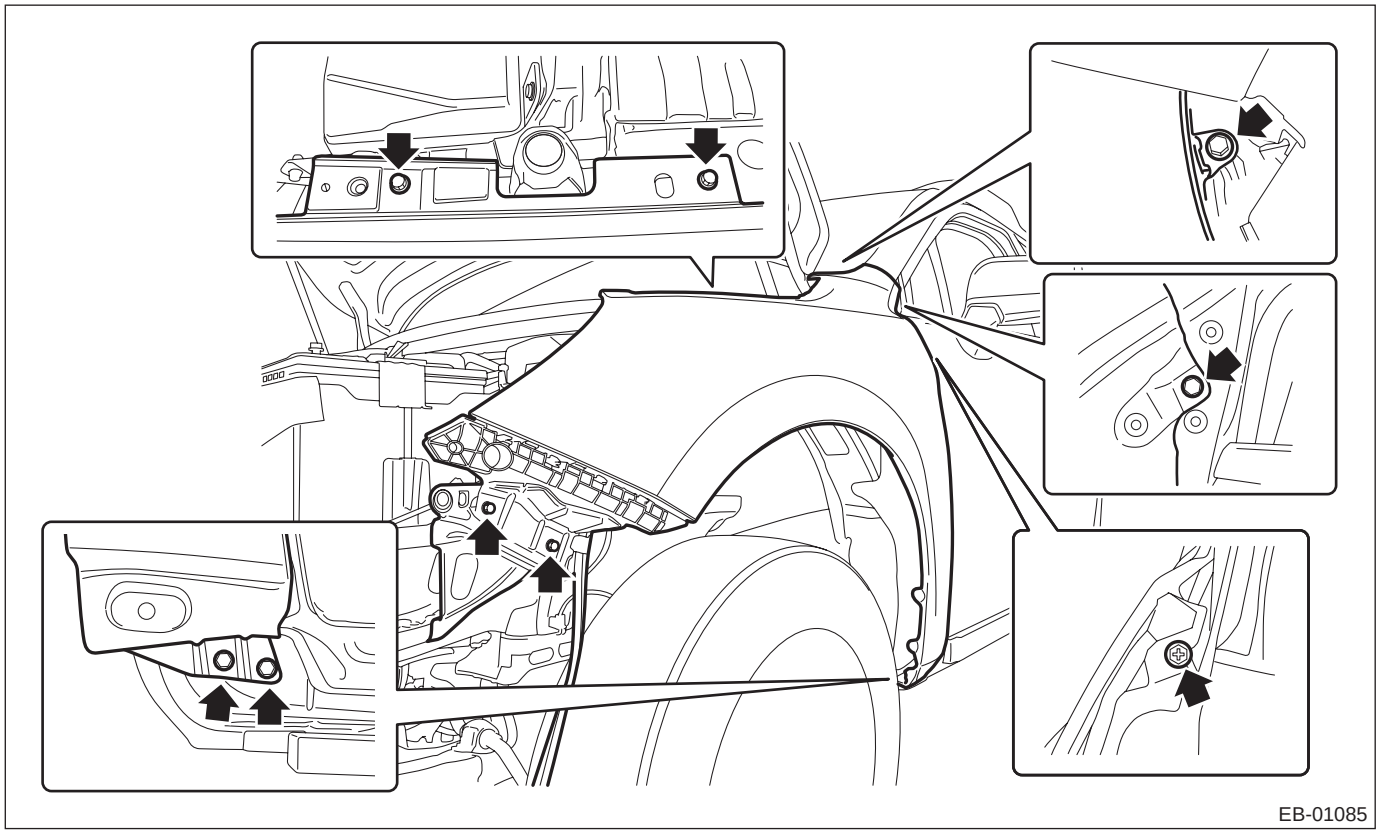
1. FENDER PANEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the bumper face - front. <Ref. to EI-35, REMOVAL, Front Bumper.>
3) Remove the light assembly - head. <Ref. to LI-30, REMOVAL, Headlight Assembly.>
4) Remove the cover - front fender UPR.
   (1) Remove the clip.
   (2) Release the claws by pulling them forward, and remove the cover - front fender UPR.



CAUTION:
Forcibly removing the part may cause creases.

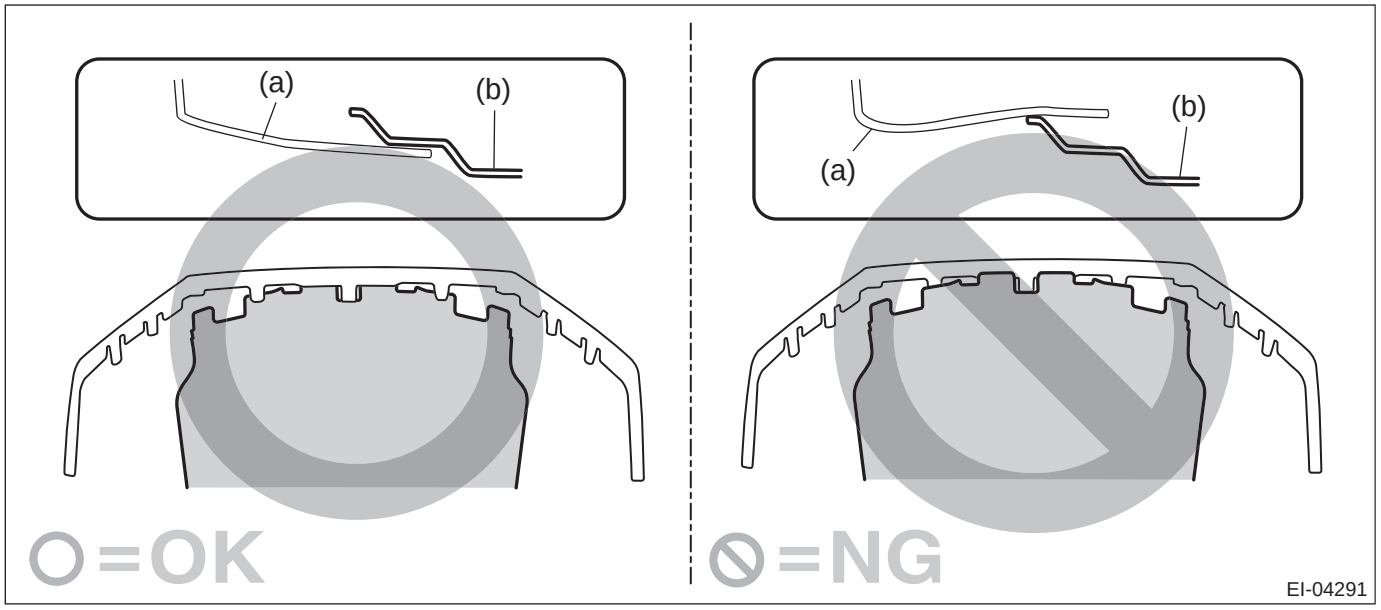
EI-04640



5) Remove the mud guard - front. <Ref. to EI-30, REMOVAL, Mud Guard.>
6) Remove the side garnish assembly. <Ref. to EI-62, REMOVAL, Side Garnish.>
7) Remove the cover - fender LWR.

EB-01121

8) Remove the cover - A pillar assembly.



9) Remove the fender COMPL - front.

B: INSTALLATION

1. FENDER PANEL

CAUTION:
- **After installing the fender COMPL - front, be sure to perform headlight beam adjustment.**
- **Install the bumper face - front so that the front end of the under cover (b) comes inside the bumper face - front (a).**

- **Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.**

1) Install the fender COMPL - front.

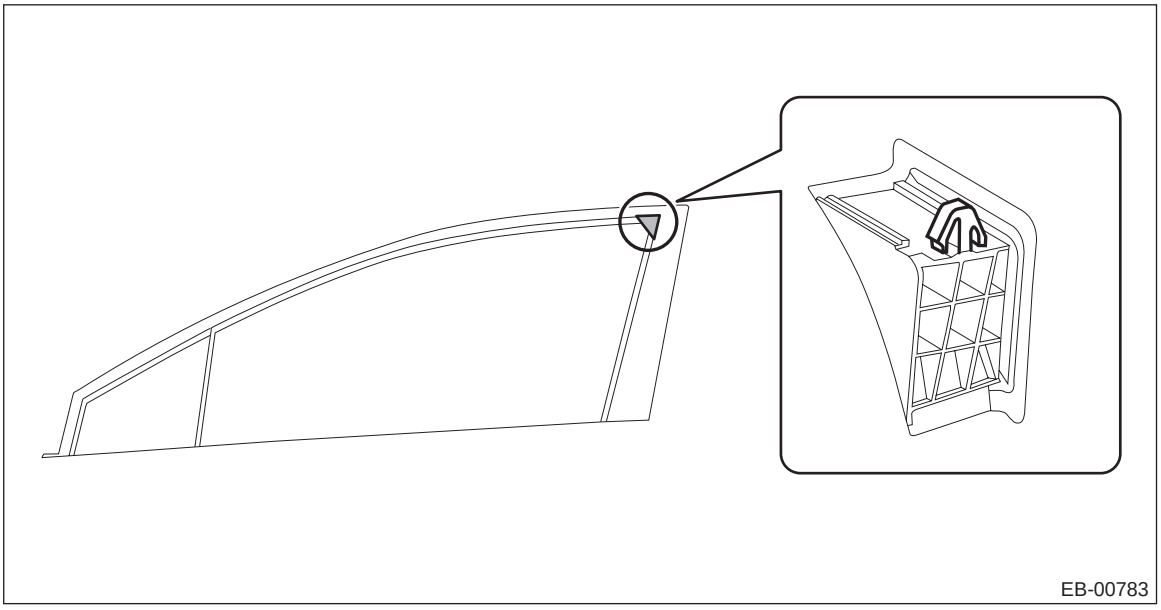
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

NOTE:
When installing the fender COMPL - front, make sure that a uniform clearance is created around it.
- Fender COMPL - front to Hood COMPL - front: <Ref. to EB-15, ADJUSTMENT, Front Hood.>
- Fender COMPL - front to Panel assembly - front door: <Ref. to EB-28, ADJUSTMENT, Front Door.>

2) Install the cover - A pillar assembly.
3) Install the spoiler assembly - side. <Ref. to EI-63, INSTALLATION, Side Garnish.>
4) Install the mud guard - front.
5) Install the light assembly - head.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

6) Install the bumper face - front. <Ref. to EI-39, INSTALLATION, Front Bumper.>
7) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
8) Adjust the headlight beam and fog light beam.
- Adjust the headlight beam. <Ref. to LI-34, HEADLIGHT BEAM ADJUSTMENT, ADJUSTMENT, Headlight Assembly.>
- Adjust the fog light beam. (Model with fog light) <Ref. to LI-45, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

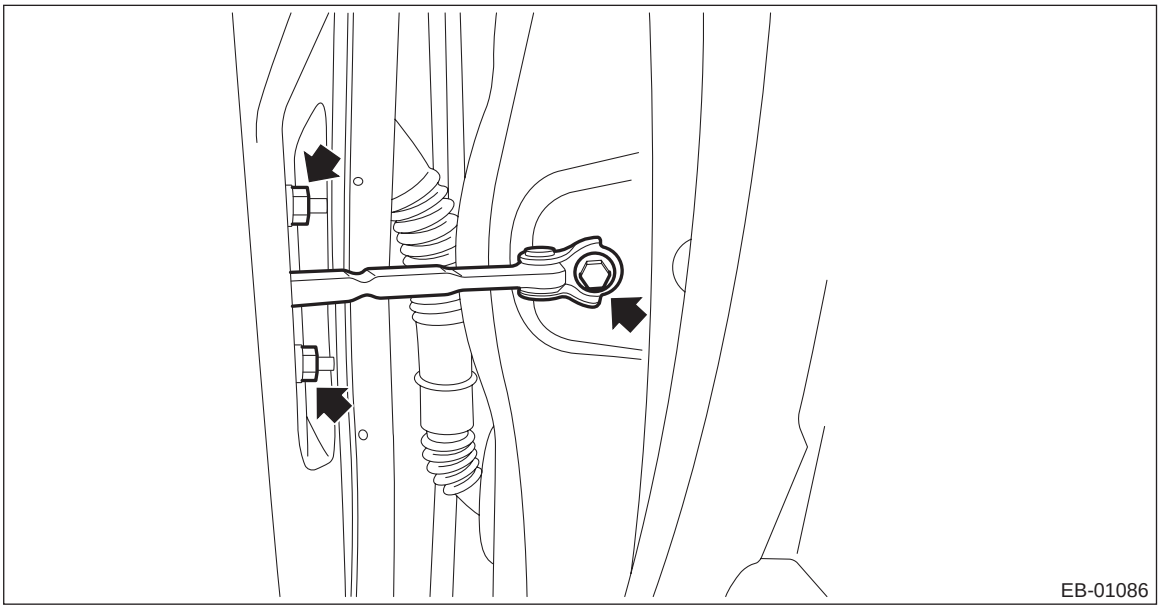


4. Front Door

A: REMOVAL

1. FRONT DOOR PANEL

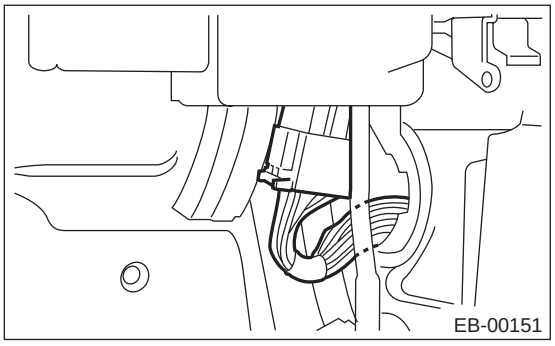
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the garnish assembly - door. (OUTBACK model) <Ref. to EI-62, OUTBACK MODEL, REMOVAL, Side Garnish.>
3) Remove the trim panel - front door. <Ref. to EI-74, FRONT DOOR, REMOVAL, Door Trim.>
4) Remove the sealing cover - front door. <Ref. to EB-30, REMOVAL, Front Sealing Cover.>
5) Remove the outer mirror assembly. <Ref. to GW-27, REMOVAL, Outer Mirror Assembly.>
6) Remove the front door speaker assembly. <Ref. to ET-26, DOOR SPEAKER, REMOVAL, Front Speaker.>
7) Remove the cover B pillar - front door INN.



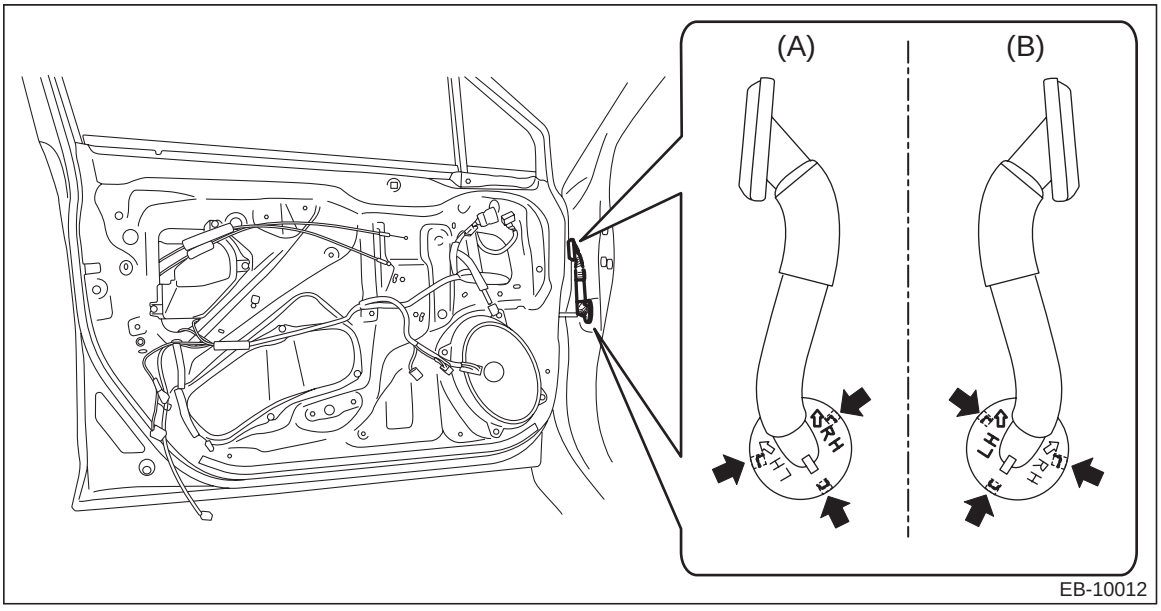
CAUTION:
Always replace with a new part, because engagement of the claw weakens.

8) Remove the front door impact sensor assembly. <Ref. to AB-55, REMOVAL, Front Door Impact Sensor.>
9) Remove the glass assembly - front door and the glass - front door partition. <Ref. to GW-20, REMOVAL, Front Door Glass.>
10) Remove the regulator & motor assembly - front of the front door. <Ref. to GW-24, REMOVAL, Front Regulator and Motor Assembly.>
11) Remove the door sash tape. <Ref. to EB-41, FRONT DOOR, REMOVAL, Door Sash Tape.>
12) Remove the latch and actuator assembly - front. <Ref. to SL-38, REMOVAL, Front Door Latch and Door Lock Actuator Assembly.>
13) Remove the handle - door outer. <Ref. to SL-34, REMOVAL, Front Outer Handle.>
14) Remove the strip - front door. <Ref. to EB-68, REPLACEMENT, Weather Strip.>
15) Remove the clips and the upper hooks, and remove the cover sash - inner front.

CAUTION:
Do not forcibly pull the cover sash - inner front. Otherwise, the hook section of the cover sash - inner front may be damaged.



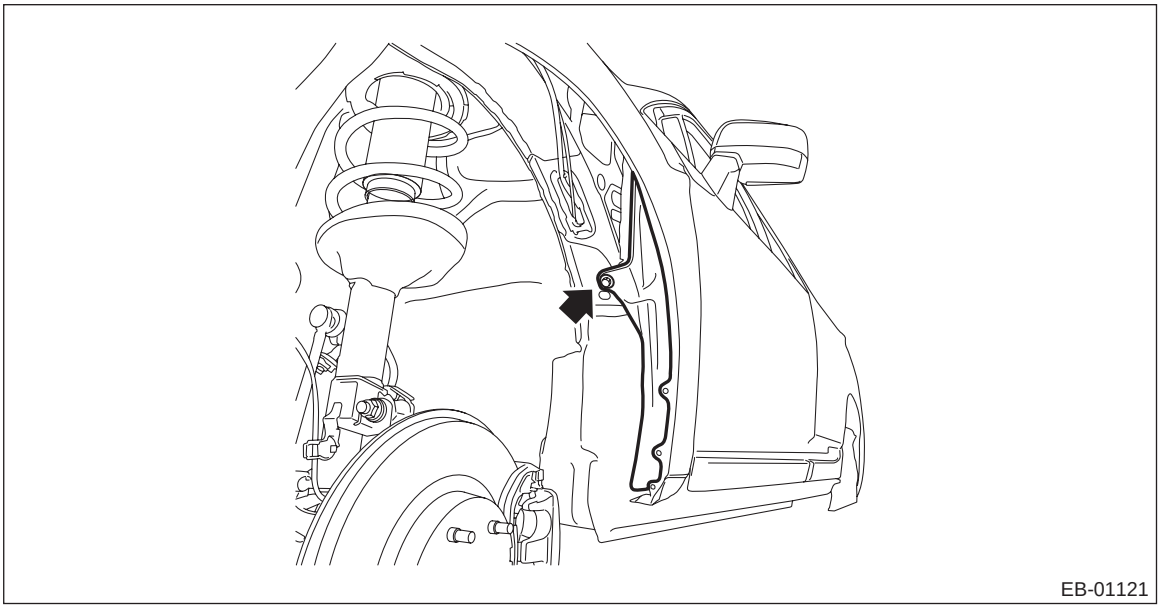
16) Remove the bolts and nuts, and then detach the checker assembly - front door.



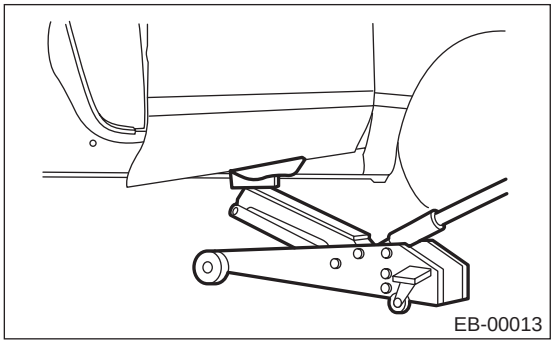
17) Remove the cover side sill - front and the front cover - side sill. <Ref. to EI-95, REMOVAL, Lower Inner Trim.>

18) Disconnect the front door harness connectors.

(1) Disconnect the connector of door harness from body harness.



(2) Push in the claws to remove the grommet, and pull out the door harness connector.



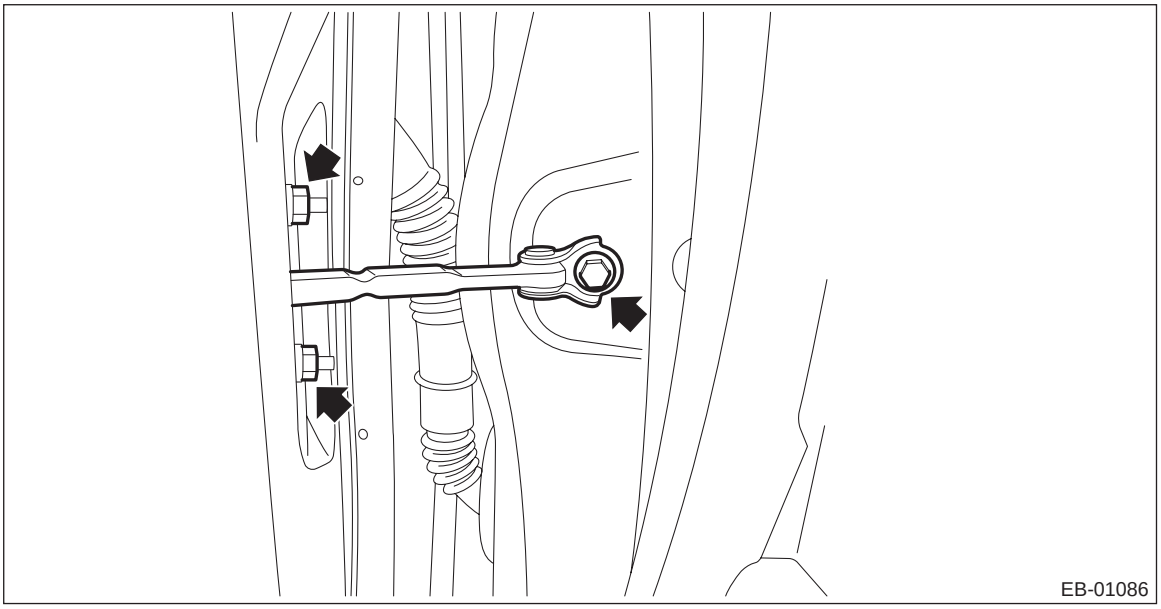
(A) Driver's side (B) Passenger's side

19) Turn over the mud guard - front. <Ref. to EI-30, REMOVAL, Mud Guard.>
20) Remove the cover - fender LWR.

EB-01121

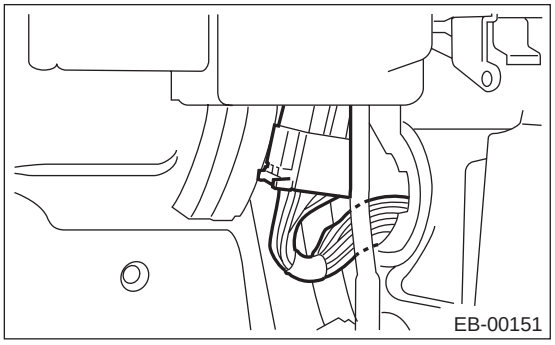
21) Before removing the panel assembly - front door, make the following preparations.

CAUTION:
• Do not excessively lift the panel assembly - front door with the floor jack. The door hinges may be damaged.
• While removing or installing, do not use a jack, etc. on the garnish section.
(1) Put a wooden block on a floor jack and place the jack under the panel assembly - front door.
(2) Support the panel assembly - front door with the jack to protect it from damage.



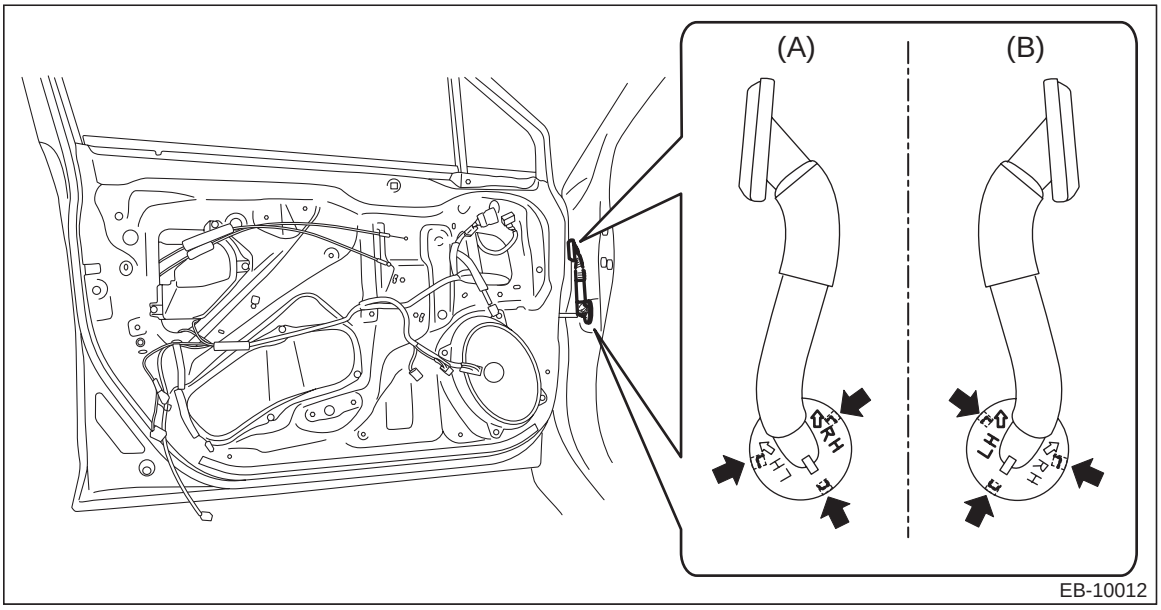
EB-00013

22) Remove the bolts on the side of the panel assembly - front door of the upper hinge - front door and the lower hinge - front door from the fender side, and remove the panel assembly - front door.



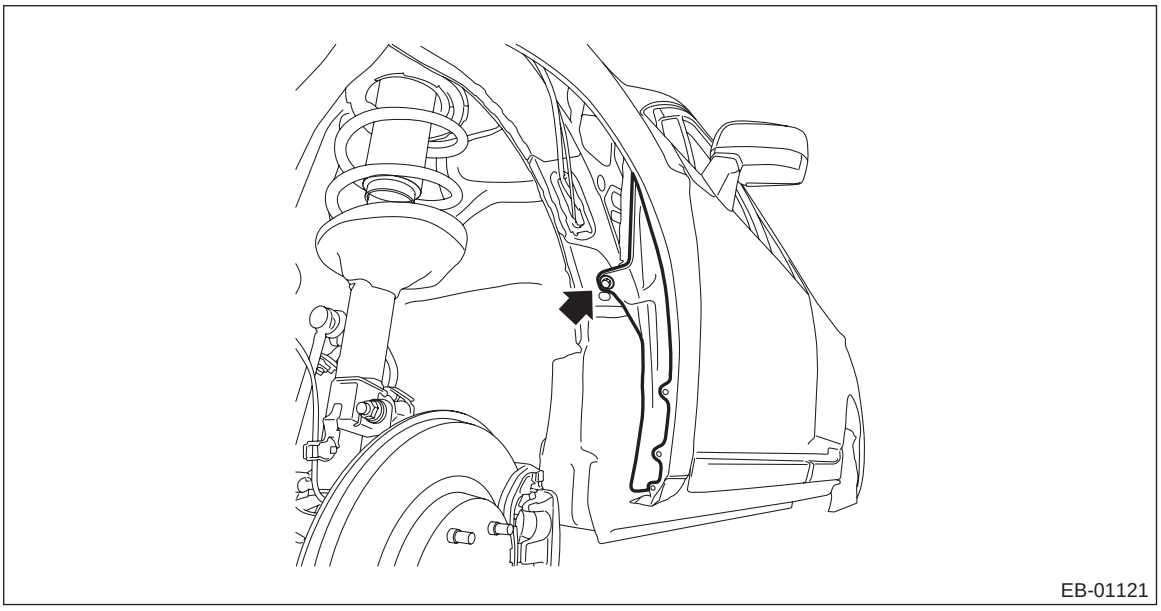
CAUTION:
The panel assembly - front door is heavy. When removing and installing it, always work in a team of two or more persons.

2. FRONT DOOR HINGE

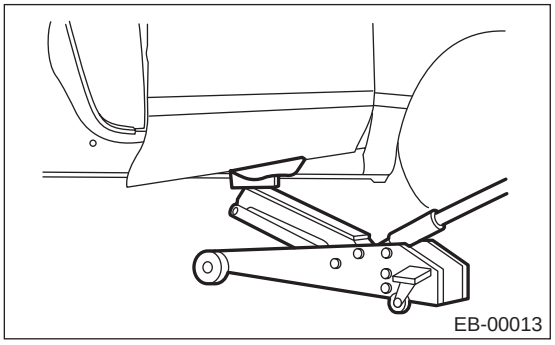


1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the garnish assembly - door. (OUTBACK model) <Ref. to EI-62, OUTBACK MODEL, REMOVAL, Side Garnish.>
3) Remove the bolts and nuts, and then detach the checker assembly - front door.

4) Remove the cover side sill - front and the front cover - side sill. <Ref. to EI-95, REMOVAL, Lower Inner Trim.>
5) Disconnect the front door harness connectors.
   (1) Disconnect the connector of door harness from body harness.



(2) Push in the claws to remove the grommet, and pull out the door harness connector.

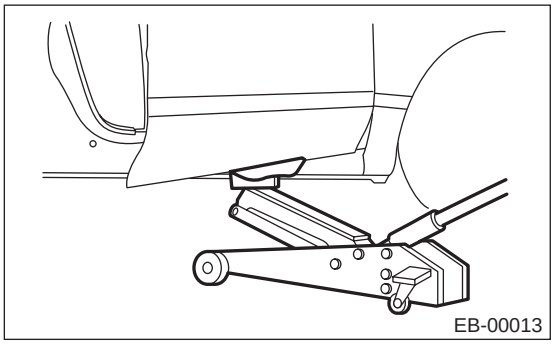


(A) Driver's side (B) Passenger's side

6) Turn over the mud guard - front. <Ref. to EI-30, REMOVAL, Mud Guard.>
7) Remove the cover - fender LWR.

8) Before removing the panel assembly - front door, make the following preparations.

CAUTION:
• Do not excessively lift the panel assembly - front door with the floor jack. The door hinges may be damaged.
• While removing or installing, do not use a jack, etc. on the garnish section.
(1) Put a wooden block on a floor jack and place the jack under the panel assembly - front door.
(2) Support the panel assembly - front door with the jack to protect it from damage.



9) Remove the bolts on the side of the panel assembly - front door of the upper hinge - front door and the lower hinge - front door from the fender side, and remove the panel assembly - front door.

CAUTION:
The panel assembly - front door is heavy. When removing and installing it, always work in a team of two or more persons.
10) Remove the bolts, and remove the upper hinge - front door and the lower hinge - front door from the vehicle.

B: INSTALLATION

1. FRONT DOOR PANEL

1) Put a wooden block and the like on a jack and place the panel assembly - front door on it.

2) Adjust the height by the jack, and temporarily install the panel assembly - front door to the upper hinge - front door and the lower hinge - front door.

NOTE:
• When installing the panel assembly - front door, make sure that a uniform clearance is created around the panel.
• Perform installation while paying attention to the assembly direction of the grommet.
3) Adjust the clearance around the panel assembly - front door. <Ref. to EB-28, ADJUSTMENT, Front Door.>
4) Tighten the mounting bolts of the panel assembly - front door to the specified torque from the fender side.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
5) Install the cover - fender LWR.
6) Install the mud guard - front. <Ref. to EI-30, INSTALLATION, Mud Guard.>

7) Connect door harness connector, and install the cover side sill - front and the front cover - side sill. <Ref. to EI-98, INSTALLATION, Lower Inner Trim.>
8) Tighten the bolts and nuts of the checker assembly - front door.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-4, FRONT DOOR, COMPONENT, General Description.>
9) Attach the door sash tape. <Ref. to EB-45, FRONT DOOR, INSTALLATION, Door Sash Tape.>
10) Before installing each part, check the following items.
- Rod of the latch and actuator assembly - front is free from deformation.
- Grease is applied sufficiently to the rod joints of the latch and actuator assembly - front.
- Cable of the latch and actuator assembly - front is free from deformation such as fray.
- Grease is applied sufficiently to the cable joints of the latch and actuator assembly - front.

11) Install door internal parts in the reverse order of removal.
- Weather strip - front door
- Handle - door outer

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
- Latch & actuator assembly - front

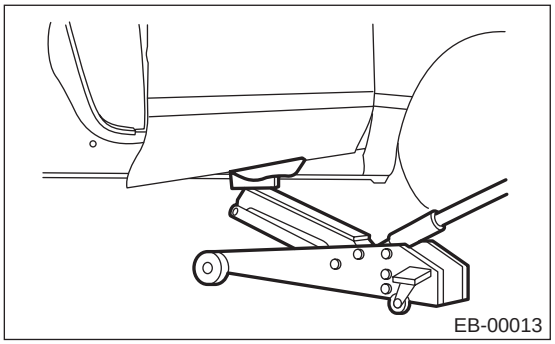
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
- Regulator & motor assembly - front for the front door

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
- Running channel - front door

CAUTION:
Check that the running channel - front door is securely fixed to the panel assembly - front door and to the sash COMPL - partition.
- Glass assembly - front door, and glass - front door partition

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
12) Install the front door impact sensor. <Ref. to AB-56, INSTALLATION, Front Door Impact Sensor.>
13) Install the cover B pillar - front door INN.

CAUTION:
Always replace with a new part, because engagement of the claw weakens.
14) Install the front door speaker assembly.
15) Install the outer mirror assembly. <Ref. to GW-28, INSTALLATION, Outer Mirror Assembly.>



Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
16) Install the sealing cover. <Ref. to EB-30, INSTALLATION, Front Sealing Cover.>
17) Install the trim panel - front door. <Ref. to EI-76, INSTALLATION, Door Trim.>
18) Install the garnish assembly - door. (OUTBACK model) <Ref. to EI-63, OUTBACK MODEL, INSTALLATION, Side Garnish.>
19) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>

2. FRONT DOOR HINGE

1) Apply grease to the sliding area of the upper hinge - front door and the lower hinge - front door, and install to the vehicle.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)

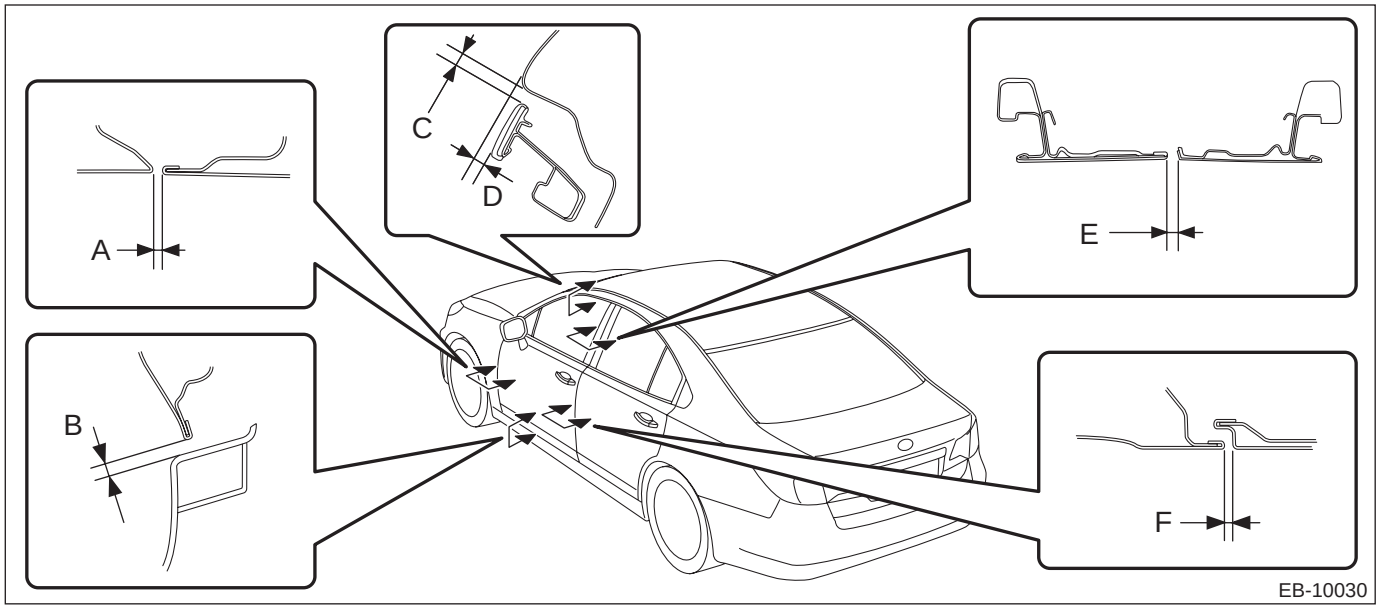
2) Put a wooden block and the like on a jack and place the panel assembly - front door on it.

3) Adjust the height by the jack, and temporarily install the panel assembly - front door to the upper hinge - front door and the lower hinge - front door.

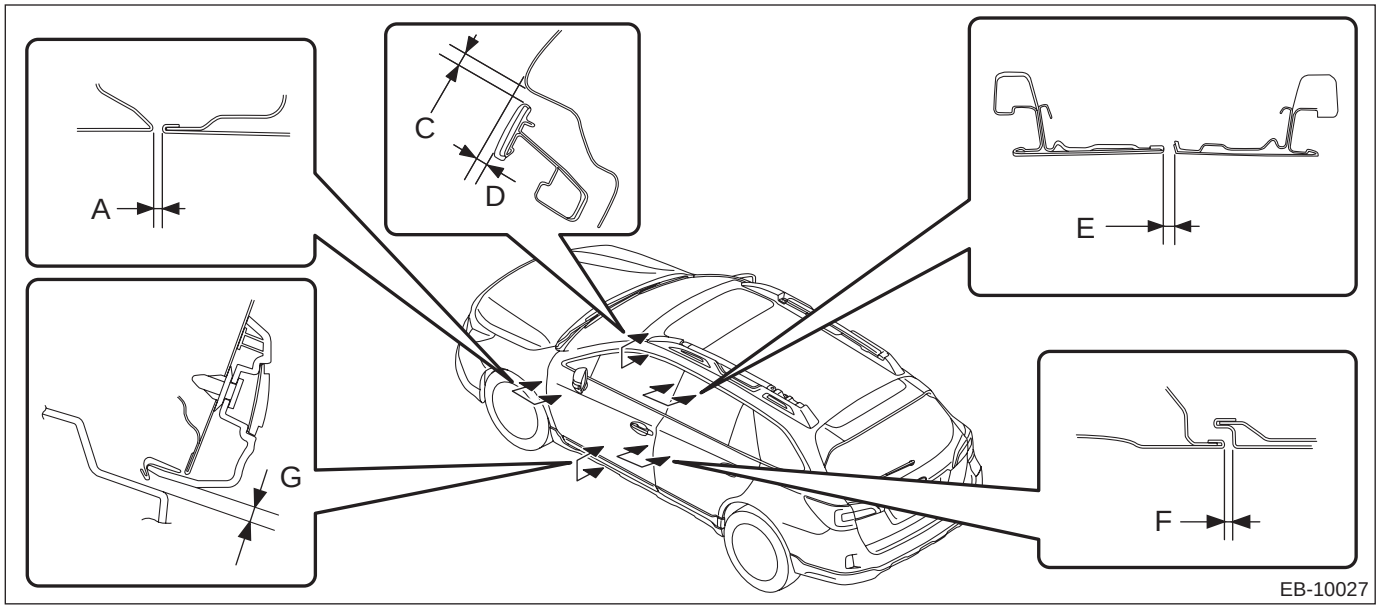
NOTE:
• When installing the panel assembly - front door, make sure that a uniform clearance is created around the panel.
• Perform installation while paying attention to the assembly direction of the grommet.

4) Adjust the clearance around the panel assembly - front door. <Ref. to EB-28, ADJUSTMENT, Front Door.>
5) Tighten the bolts of the panel assembly - front door to the specified torque from the fender side.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



6) Install the cover - fender LWR.
7) Install the mud guard - front. <Ref. to EI-30, INSTALLATION, Mud Guard.>
8) Connect door harness connector, and install the cover side sill - front and the front cover - side sill. <Ref. to EI-98, INSTALLATION, Lower Inner Trim.>
9) Tighten the bolts on the vehicle side of the checker assembly - front door.

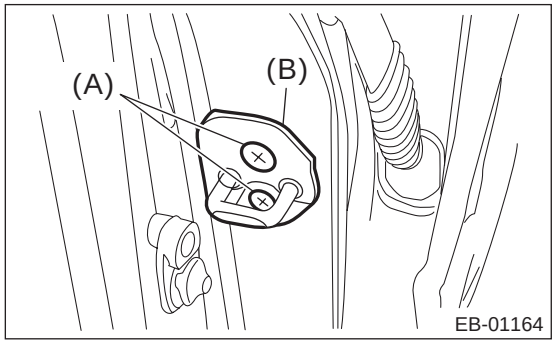


Tightening torque:
Refer to “COMPONENT” of “General Description”. <Ref. to EB-4, FRONT DOOR, COMPONENT, General Description.>

10) Install the garnish assembly - door. (OUTBACK model) <Ref. to EI-63, OUTBACK MODEL, INSTALLATION, Side Garnish.>
11) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>

C: ADJUSTMENT

Adjust the clearance around the panel assembly - front door as follows.

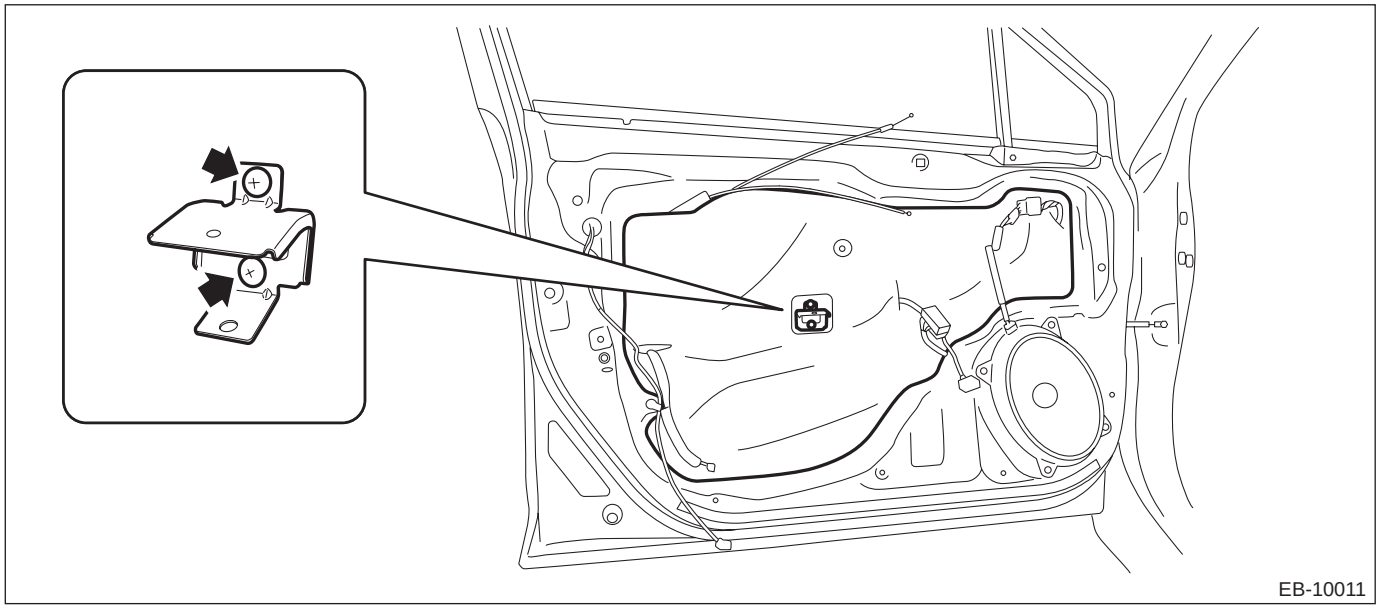


Part		Standard
A	Fender COMPL - front to Panel assembly - front door	4.2±1.25 mm (0.17±0.05 in)
B	Panel assembly - front door to Side sill garnish assembly (sedan model)	5.4±1.8 mm (0.21±0.07 in)
C	Panel side outer to Front door sash	5.2+1.5, –1 mm (0.2+0.06, –0.04 in)
D	Surface level gap between panel side outer and front door sash	4.9±1.5 mm (0.19±0.06 in)
E	Front door sash to Rear door sash	4.4+1.5, –1 mm (0.17+0.06, –0.04 in)
F	Panel assembly - front door to Panel assembly - rear door	4.2±1.25 mm (0.17±0.05 in)
G	Garnish assembly front door to Side sill garnish assembly (OUTBACK model)	4.4±1.8 mm (0.17±0.07 in)

1) Adjust the vertical and horizontal positions of the panel assembly - front door.
   (1) Turn over the mud guard - front, and loosen the vehicle side bolts of the upper hinge - front door and the lower hinge - front door.
   (2) Adjust the vertical and horizontal clearance of the panel assembly - front door.
2) Adjust the surface level gap between the panel assembly - front door and the panel assembly - rear door.

CAUTION:
Do not use an impact wrench. Welding area on the striker nut plate is easily broken.

(1) Loosen the screws (A).
(2) Tap the striker - front door (B) using a plastic hammer to adjust the surface level gap between the rear end of the panel assembly - front door and the front end of the panel assembly - rear door.



5. Front Sealing Cover

A: REMOVAL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door. <Ref. to EI-74, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - front door.

CAUTION:
- **Carefully remove the butyl tape. Excessive force will easily break the cover.**
- **If the sealing cover - front door gets broken, replace it with a new part.**
- **Be careful not to allow the butyl tape to contact any trims and seats because the butyl tape, which has a strong adhesive force, is difficult to remove once it adhered.**

(1) Remove the screw to remove the bracket - door trim front.
(2) Disconnect connectors.
(3) Carefully remove the butyl tape to remove the sealing cover - front door.

B: INSTALLATION

CAUTION:
- **If the sealing cover - front door gets broken, replace it with a new part.**
- **Apply a uniform bead of butyl tape.**
- **Attach the sealing cover - front door, keeping it from becoming wrinkled.**
- **Breaks in the bead will allow water leakage and contamination.**

1) Install the sealing cover - front door.
(1) Forcefully push the butyl tape portion to prevent any floating on surface.
(2) When replacing the sealing cover, use the butyl tape.

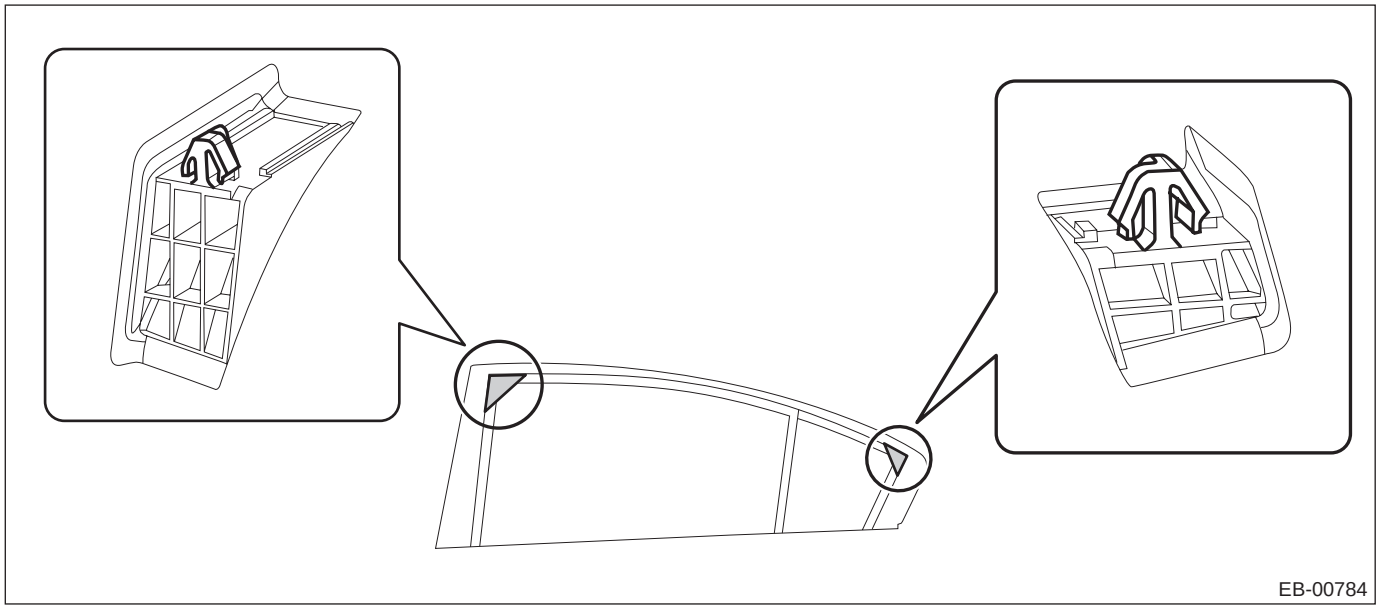
Preparation items:
Butyl tape: 3M Butyl Tape 8626 or equivalent

2) Install the trim panel - front door. <Ref. to EI-76, INSTALLATION, Door Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

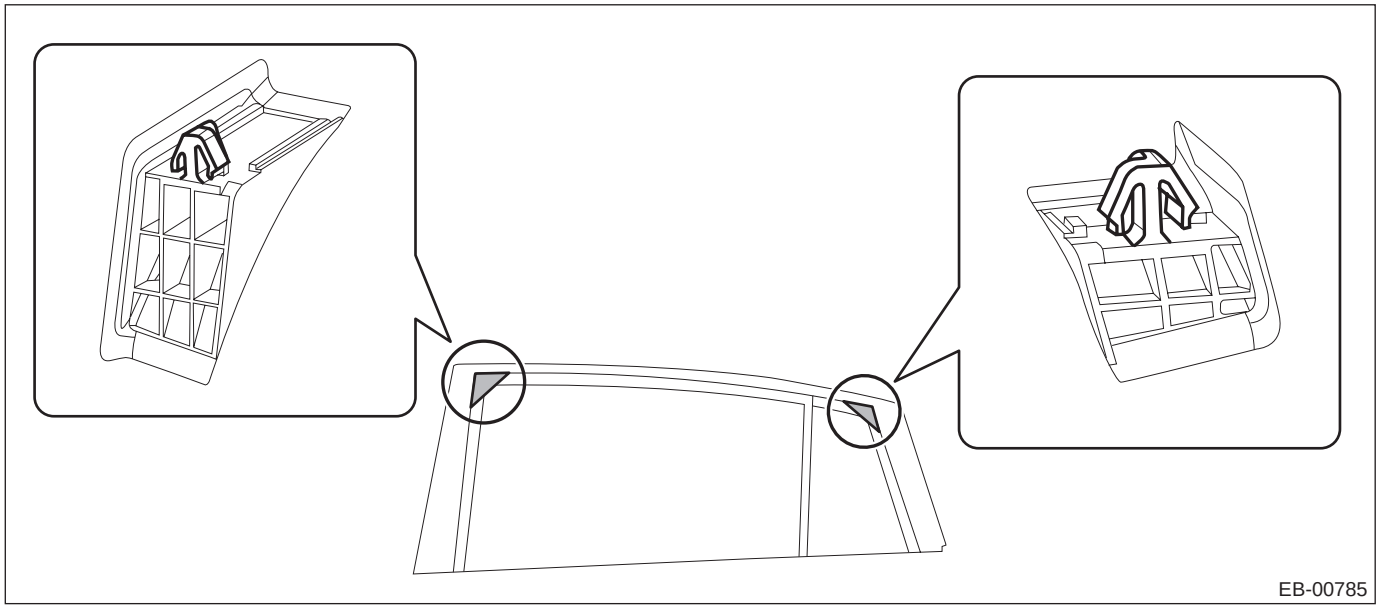
If the sealing cover - front door is broken, replace it with a new part.

6. Rear Door



A: REMOVAL

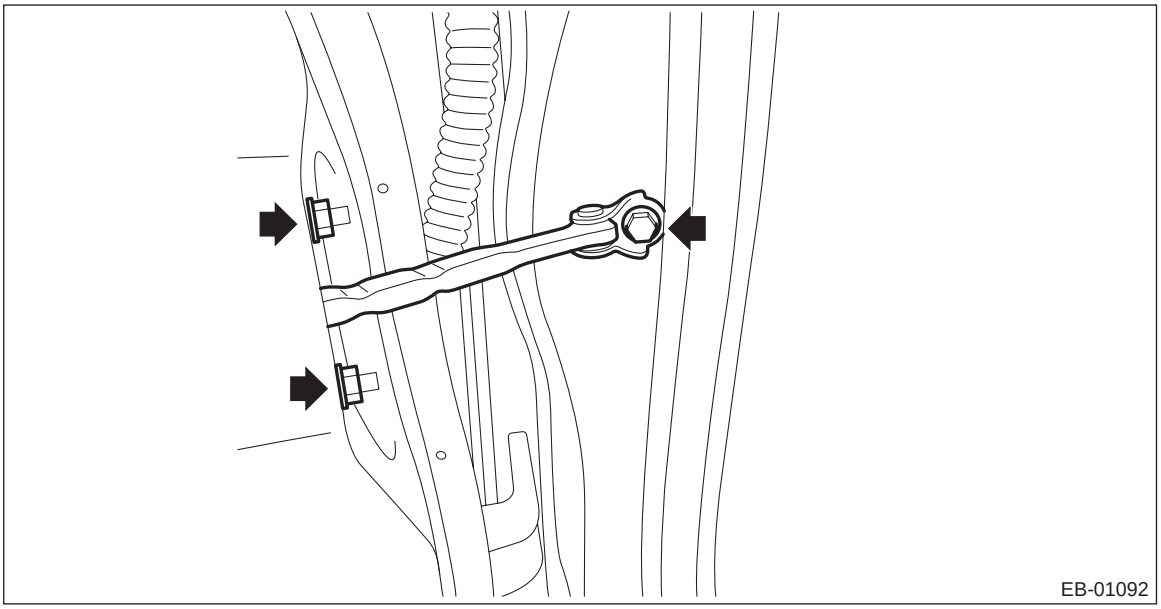
1. REAR DOOR PANEL



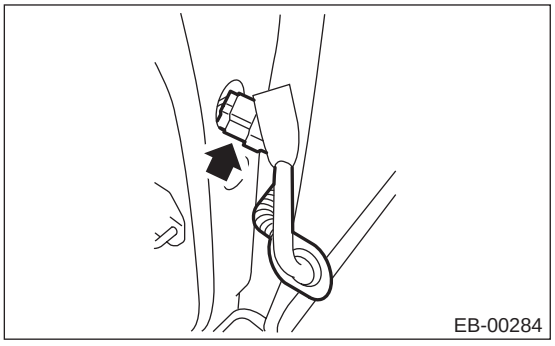
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the garnish assembly - door. (OUTBACK model) <Ref. to EI-62, OUTBACK MODEL, REMOVAL, Side Garnish.>
3) Remove the trim panel - rear door. <Ref. to EI-75, REAR DOOR, REMOVAL, Door Trim.>
4) Remove the sealing cover - rear door. <Ref. to EB-40, REMOVAL, Rear Sealing Cover.>
5) Remove the cover B pillar - rear door INN and the cover C pillar - rear door INN.

CAUTION:
Always replace with a new part, because engagement of the claw weakens.

- Sedan model

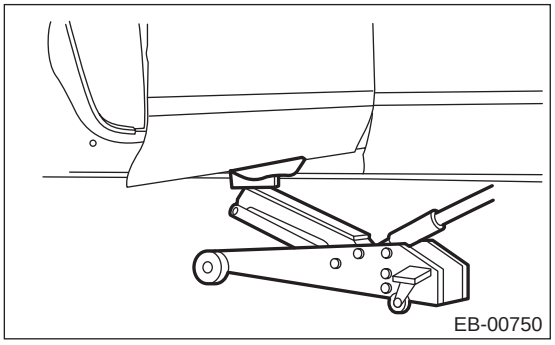


- OUTBACK model

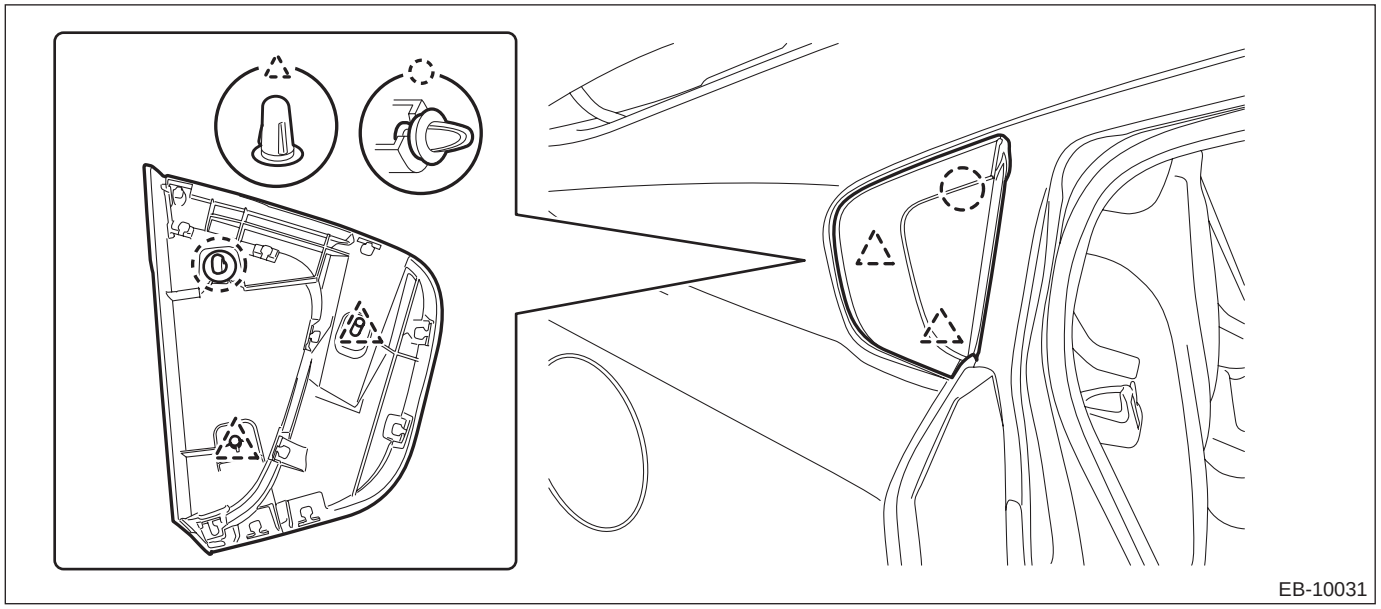


6) Remove the rear door speaker assembly. <Ref. to ET-28, REMOVAL, Rear Speaker.>
7) Remove the sash COMPL - rear partition and the glass assembly - rear door. <Ref. to GW-35, REMOVAL, Rear Door Glass.>

8) Remove the regulator - rear. <Ref. to GW-38, REMOVAL, Rear Regulator and Motor Assembly.>
9) Remove the door sash tape. <Ref. to EB-42, REAR DOOR, REMOVAL, Door Sash Tape.>
10) Remove the latch and actuator assembly - rear. <Ref. to SL-46, REMOVAL, Rear Door Latch and Door Lock Actuator Assembly.>
11) Remove the cover - handle rear outer. <Ref. to SL-42, REMOVAL, Rear Outer Handle.>
12) Remove the weather strip - rear door. <Ref. to EB-68, REPLACEMENT, Weather Strip.>
13) Remove the bolts and nuts, and then detach the checker assembly - rear door.



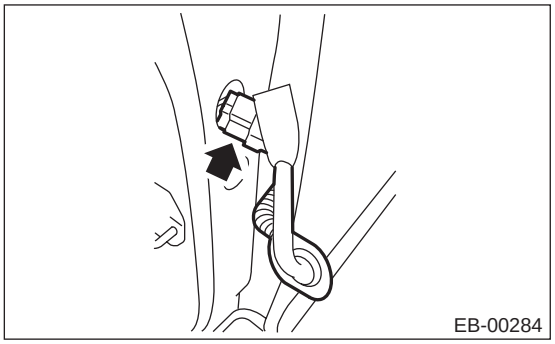
14) Disconnect the rear door harness connectors.
(1) Remove the grommet and pull out the rear door harness connector from inside the center pillar.
(2) Disconnect the rear door harness connectors.



15) Before removing the panel assembly - rear door, make the following preparations.

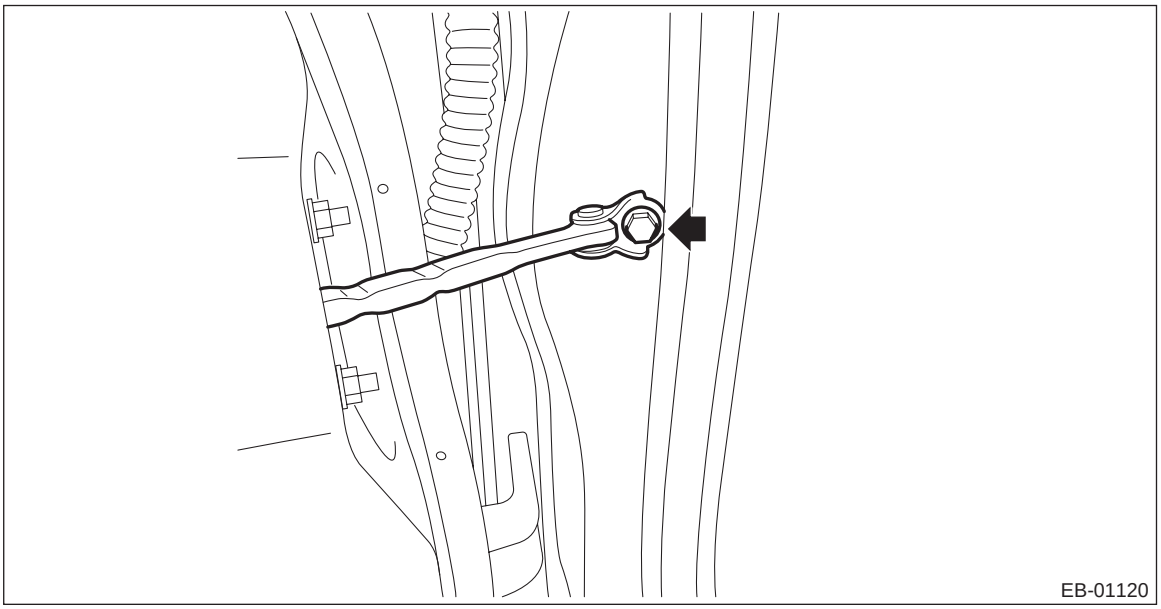
CAUTION:
• Do not excessively lift the panel assembly - rear door with the floor jack. The door hinges may be damaged.
• While removing or installing, do not use a jack, etc. on the garnish section.
(1) Put a wooden block on a floor jack and place the jack under the panel assembly - rear door.
(2) Support the panel assembly - rear door with the jack to protect it from damage.

EB-00750



16) Remove the door-side bolts for the upper hinge - rear door and the lower hinge - rear door to remove the panel assembly - rear door.

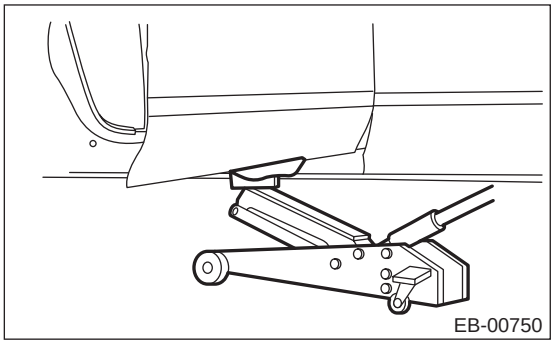
CAUTION:
The panel assembly - rear door is heavy. When removing and installing it, always work in a team of two or more persons.
17) Remove the cover - C pillar assembly. (Sedan model)



EB-10031

2. REAR DOOR HINGE

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the garnish assembly - door. (OUTBACK model) <Ref. to EI-62, OUTBACK MODEL, REMOVAL, Side Garnish.>
3) Disconnect the rear door harness connectors.
   (1) Remove the grommet and pull out the rear door harness connector from inside the center pillar.
   (2) Disconnect the rear door harness connectors.

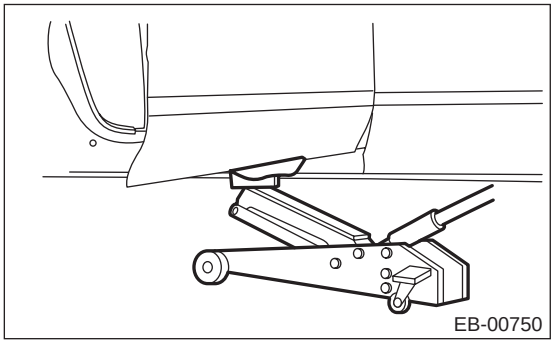


4) Remove the bolt on the vehicle side to disconnect the checker assembly - rear door.

5) Before removing the panel assembly - rear door, make the following preparations.

CAUTION:
• The panel assembly - rear door is heavy. When removing and installing it, always work in a team of two or more persons.
• Do not excessively lift the panel assembly - rear door with the floor jack. The door hinges may be damaged.
• While removing or installing, do not use a jack, etc. on the garnish section.
(1) Put a wooden block on a floor jack and place the jack under the panel assembly - rear door.
(2) Support the panel assembly - rear door with the jack to protect it from damage.

EB-00750



6) Remove the bolts on the side of the panel assembly - rear door of the upper hinge - rear door or the lower hinge - rear door.

CAUTION:
Do not remove the upper hinge - rear door and the lower hinge - rear door at the same time.
7) Remove the hinge - rear door from the vehicle.

B: INSTALLATION

1. REAR DOOR PANEL

1) Put a wooden block and the like on a jack and place the panel assembly - rear door on it.

EB-00750

2) Adjust the height by the jack, and temporarily install the panel assembly - rear door to the upper hinge - rear door and the lower hinge - rear door.

NOTE:
• When installing the panel assembly - rear door, make sure that a uniform clearance is created around the panel.
• Perform installation while paying attention to the assembly direction of the grommet.
3) Adjust the clearance around the panel assembly - rear door. <Ref. to EB-38, ADJUSTMENT, Rear Door.>
4) Tighten the mounting bolts of the panel assembly - rear door to the specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
5) Tighten the bolts and nuts of the checker assembly - rear door.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-5, REAR DOOR, COMPONENT, General Description.>

6) Connect the door harness connector, and install the harness grommet.
7) Attach the door sash tape. <Ref. to EB-47, REAR DOOR, INSTALLATION, Door Sash Tape.>
8) Before installing each part, check the following items.
- Is the lever of the frame assembly - rear door outer is free from deformation?
- Is grease applied sufficiently to the lever joints of the latch and actuator assembly - rear.
- Is the cable of the latch and actuator assembly - rear free from deformation such as fray.
- Is grease applied sufficiently to the cable joints of the latch and actuator assembly - rear?

9) Install door internal parts in the reverse order of removal.
- Weather strip - rear door
- Handle - door outer

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
- Latch & actuator assembly - rear

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

NOTE:
Make sure the child safety lock works correctly after installation.
- Regulator & motor assembly - rear for the rear door

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
- Sash COMPL - rear partition, and glass assembly - rear door

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
- Running channel - rear door

CAUTION:
Check that the running channel - rear door is securely fixed to the panel assembly - rear door and to the sash COMPL - partition.
10) Install the cover B pillar - rear door INN and the cover C pillar - rear door INN.

CAUTION:
Always replace with a new part, because engagement of the claw weakens.
11) Install the rear door speaker assembly.
12) Install the sealing cover. <Ref. to EB-40, INSTALLATION, Rear Sealing Cover.>
13) Install the trim panel - rear door. <Ref. to EI-76, INSTALLATION, Door Trim.>
14) Install the garnish assembly - door. (OUTBACK model) <Ref. to EI-63, OUTBACK MODEL, INSTALLATION, Side Garnish.>
15) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>

2. REAR DOOR HINGE

1) Apply grease to the sliding area of door hinges, and install to vehicle.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)

2) Adjust the height by the jack, and temporarily install the panel assembly - rear door to the upper hinge - rear door and the lower hinge - rear door.

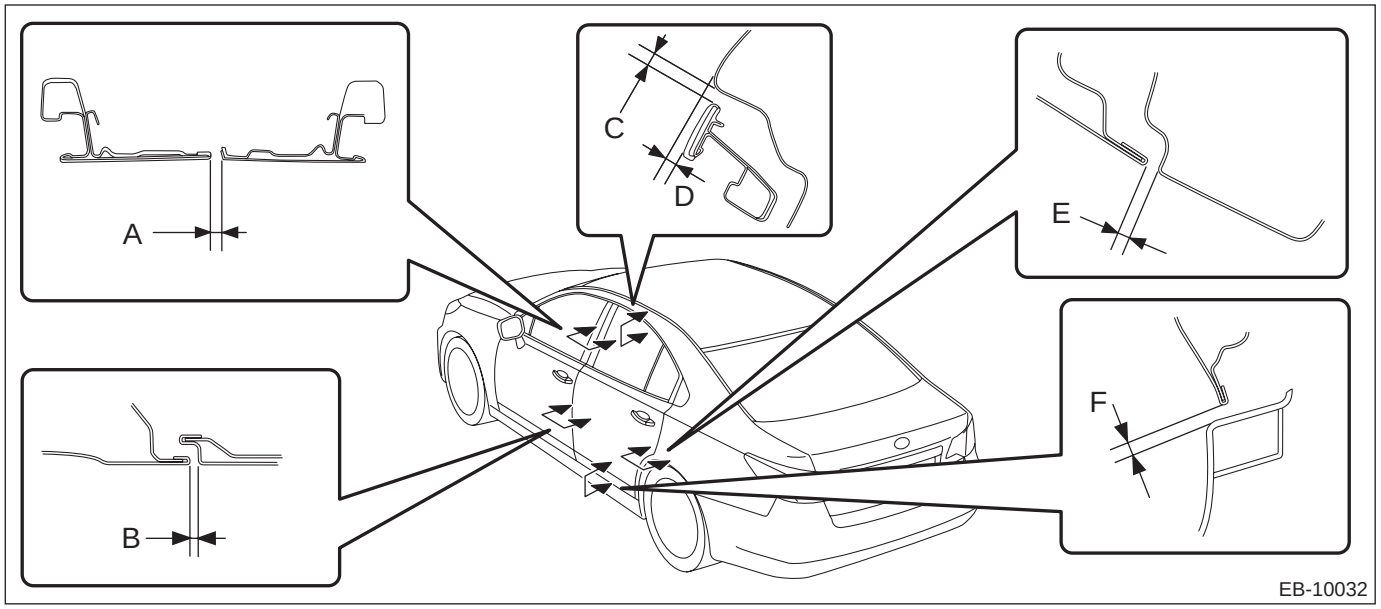
NOTE:
When installing the panel assembly - rear door, make sure that a uniform clearance is created around the panel.

3) Adjust the clearance around the panel assembly - rear door. <Ref. to EB-38, ADJUSTMENT, Rear Door.>

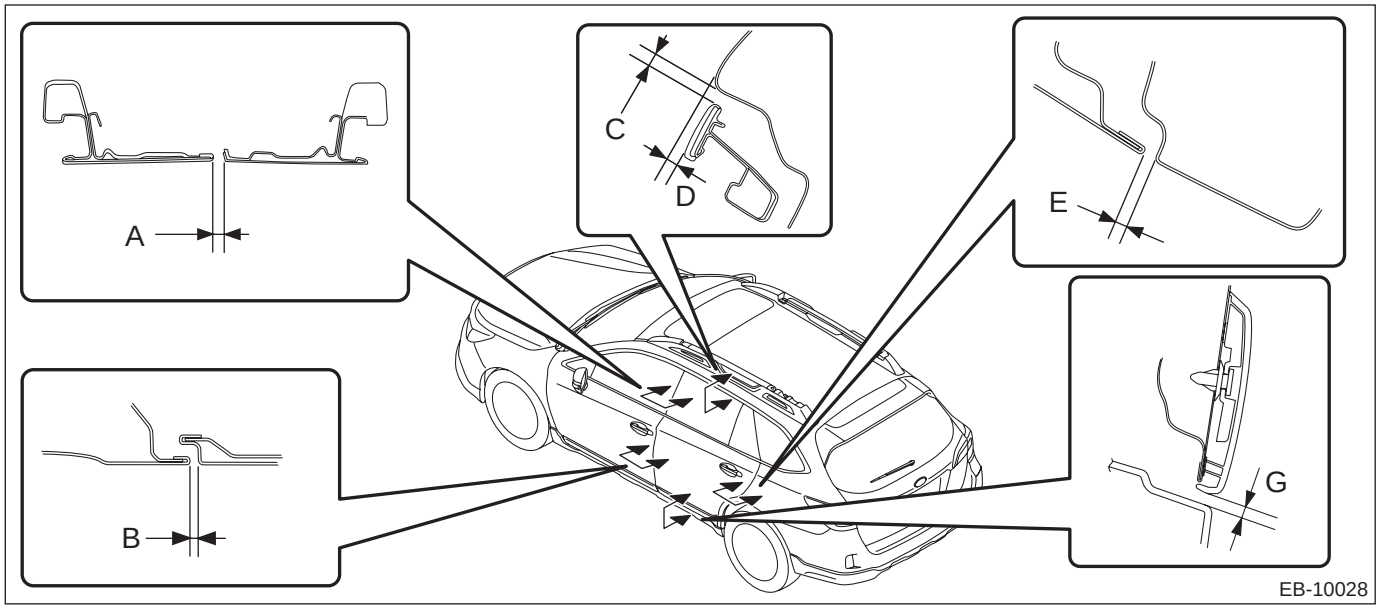
NOTE:
When installing the panel assembly - rear door, make sure that a uniform clearance is created around the panel.

4) Tighten the bolts of the panel assembly - rear door to the specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



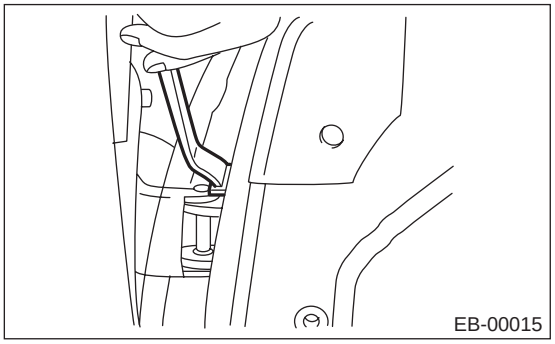
5) Connect the door harness connector, and install the harness grommet.
6) Tighten the bolts on the vehicle side of the checker assembly - rear door.



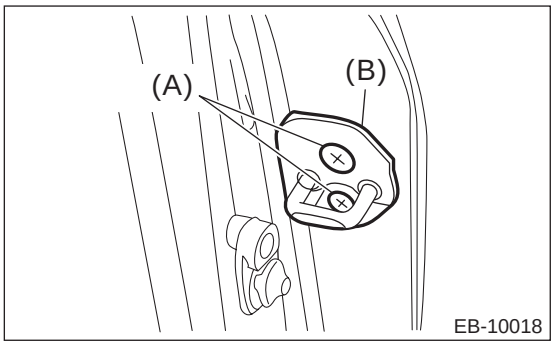
Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-5, REAR DOOR, COMPONENT, General Description.>

7) Install the garnish assembly - door. (OUTBACK model) <Ref. to EI-63, OUTBACK MODEL, INSTALLATION, Side Garnish.>
8) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>

C: ADJUSTMENT



Adjust the clearance around the panel assembly - rear door as follows.

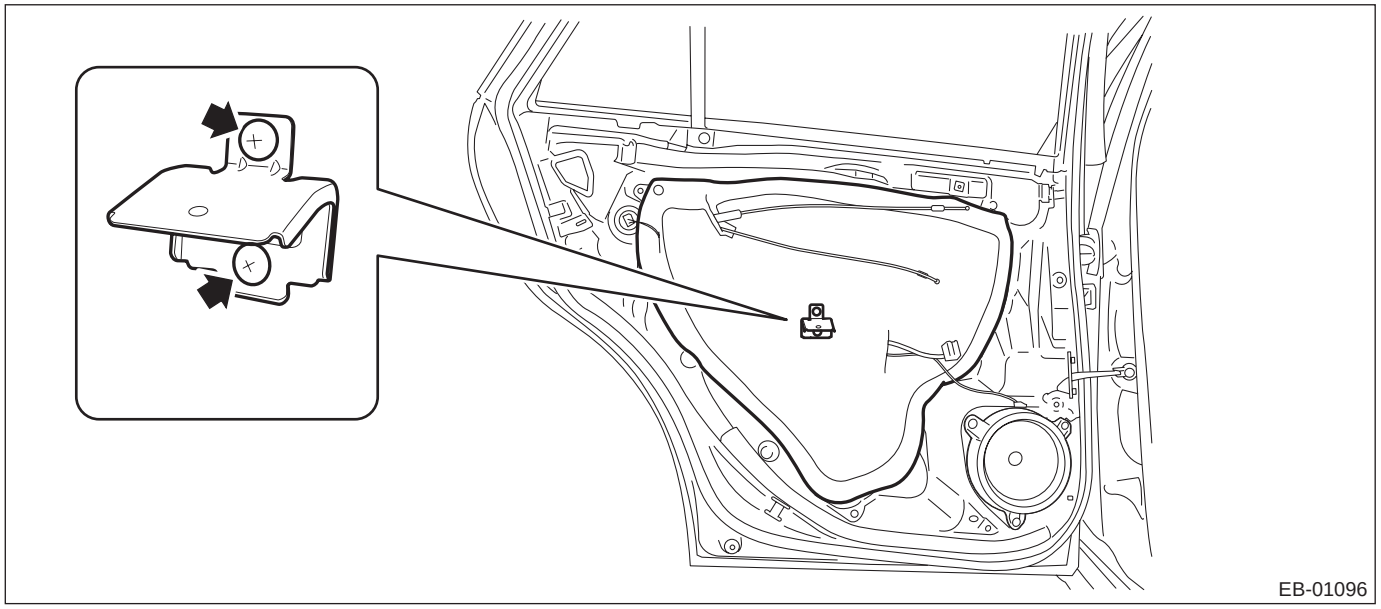


Part		Standard
A	Panel assembly - front door to Panel assembly - rear door	4.4+1.5, –1 mm (0.17+0.06, –0.04 in)
B	Front door sash to Rear door sash	4.2±1.25 mm (0.17±0.05 in)
C	Panel side outer to Rear door sash	5.2+1.5, –1 mm (0.2+0.06, –0.04 in)
D	Surface level gap between panel side outer and rear door sash	4.1±1.5 mm (0.16±0.06 in)
E	Panel assembly - rear door to Panel side outer	3.7±1.25 mm (0.15±0.05 in)
F	Panel assembly - rear door to Side sill garnish assembly (sedan model)	5.4±1.8 mm (0.21±0.07 in)
G	Panel assembly - rear door to Side sill garnish assembly (OUTBACK model)	4.4±1.8 mm (0.179±0.07 in)

1) Adjust the vertical and horizontal positions of the panel assembly - rear door.
   (1) Loosen the body side bolts of the upper hinge - rear door and the lower hinge - rear door.
   (2) Adjust the vertical and horizontal clearance of the panel assembly - rear door.

2) Adjust the surface level gap between the panel assembly - rear door and the body.

CAUTION:
Do not use an impact wrench. Welding area on the striker nut plate is easily broken.
   (1) Loosen the screws (A).
   (2) Tap the striker - rear door (B) using a plastic hammer to adjust the surface level gap between the rear end of the panel assembly - rear door and the rear quarter.



7. Rear Sealing Cover

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear door. <Ref. to EI-75, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - rear door.

CAUTION:
- **Carefully remove the butyl tape. Excessive force will easily break the cover.**
- **If the sealing cover - rear door gets broken, replace it with a new part.**
- **Be careful not to allow the butyl tape to contact any trims and seats because the butyl tape, which has a strong adhesive force, is difficult to remove once it adhered.**

(1) Remove the screw to remove the bracket - door trim rear.
(2) Disconnect connectors.
(3) Carefully remove the butyl tape to remove the sealing cover - rear door.

B: INSTALLATION

CAUTION:
- **If the sealing cover - rear door gets broken, replace it with a new part.**
- **Apply a butyl tape evenly.**
- **Attach the sealing cover - rear door, keeping it from becoming wrinkled.**
- **Breaks in the bead will allow water leakage and contamination.**

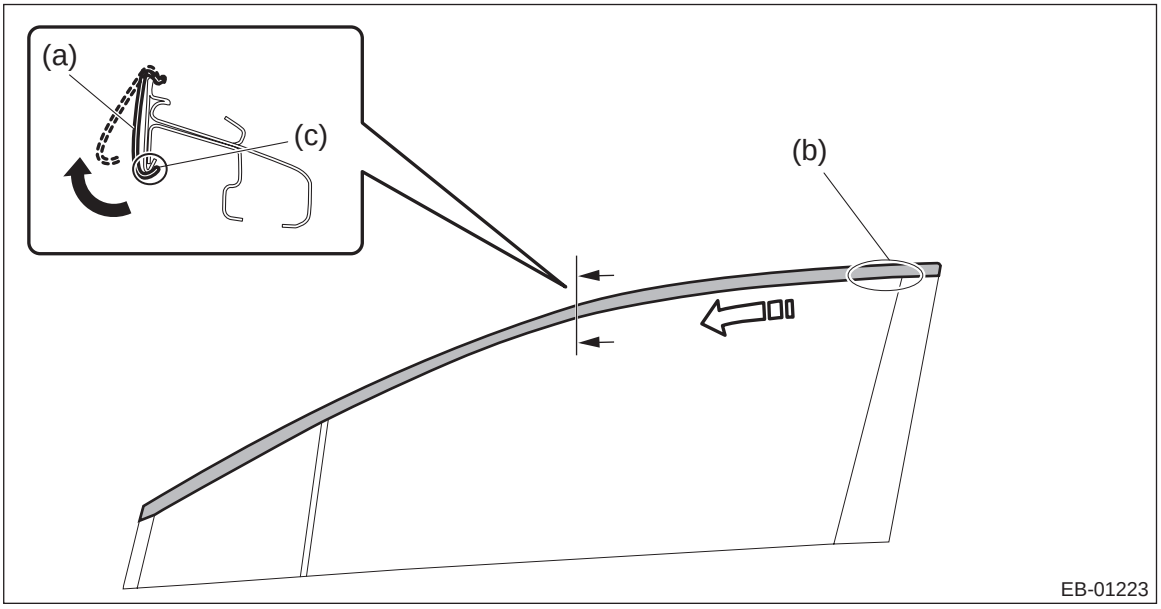
1) Install the sealing cover.
(1) Forcefully push the butyl tape portion to prevent any floating on surface.
(2) When replacing the sealing cover, use the butyl tape.

Preparation items:
Butyl tape: 3M Butyl Tape 8626 or equivalent

2) Install the trim panel - rear door. <Ref. to EI-76, INSTALLATION, Door Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

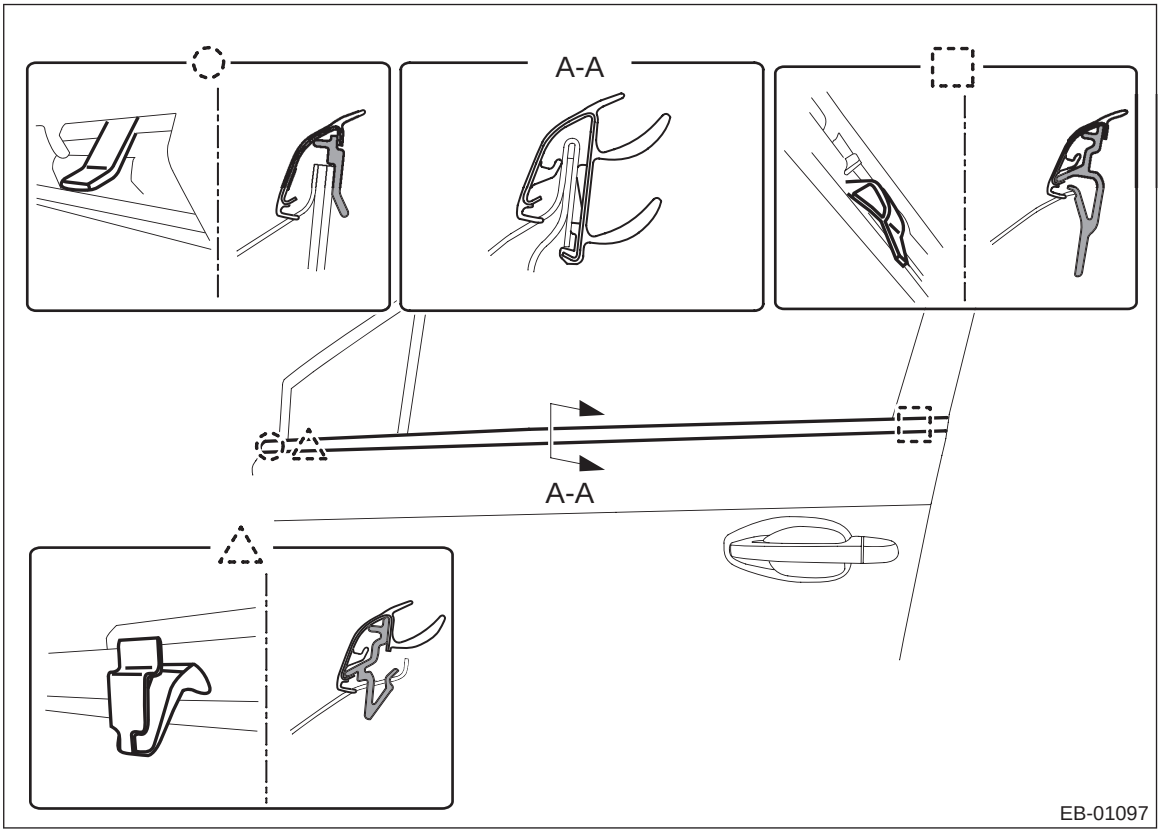
If the sealing cover - rear door is broken, replace it with a new part.



8. Door Sash Tape

A: REMOVAL

1. FRONT DOOR



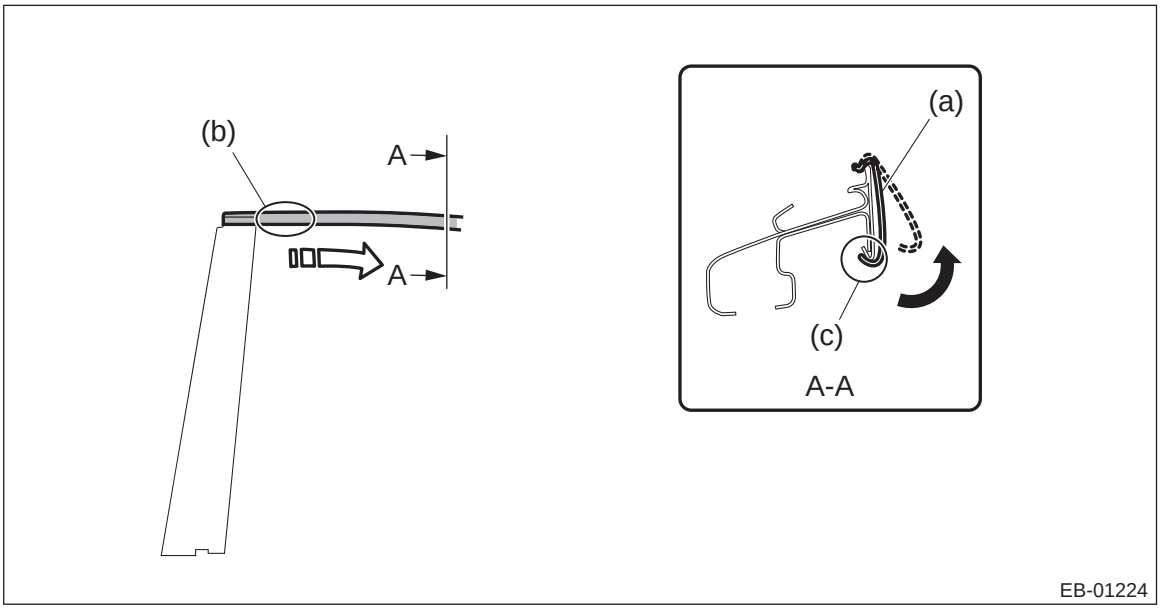
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door. <Ref. to EI-74, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the outer mirror assembly. <Ref. to GW-27, REMOVAL, Outer Mirror Assembly.>
4) Remove the sealing cover - front door. <Ref. to EB-30, REMOVAL, Front Sealing Cover.>
5) Remove the glass assembly - front door. <Ref. to GW-20, REMOVAL, Front Door Glass.>
6) Remove the running channel - front door.
7) Remove the clip, and remove the weather strip - door upper side. <Ref. to EB-69, DOOR, REPLACEMENT, Weather Strip.>
8) Remove the molding - door sash front (a) by disengaging the bottom part (c) from the specified position (b) toward the front side of the vehicle.

CAUTION:
- **When removing the molding - door sash, take special care to avoid the distortion.**
- **When distortion occurred to the molding - door sash, always replace it with a new part.**

9) Remove the weather strip outer - front door.

CAUTION:
- **When removing the weather strip outer, be careful not to damage the vehicle.**
- **Do not reuse the weather strip outer. Always replace with a new part.**

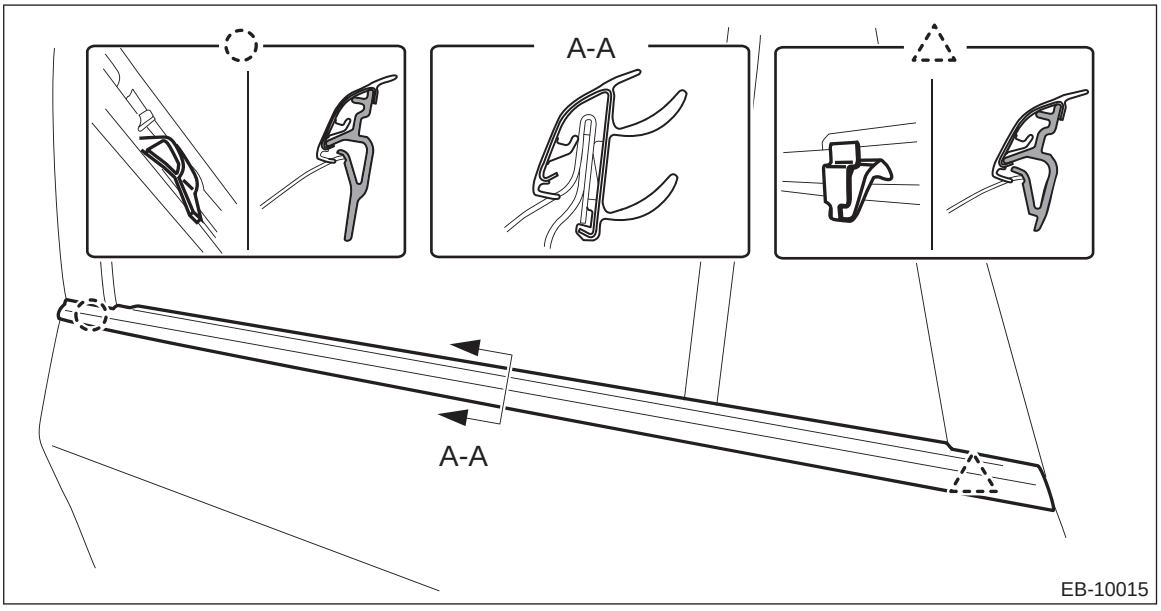
10) Peel the door sash tape from the door sash.



NOTE:
- If the tape is difficult to remove, warm the tape with a hairdryer, etc. to make the removal easier. Use a household hairdryer. Do not use industrial dryers.
- If tape residue is remaining on the door sash, wipe clean.

2. REAR DOOR

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear door. <Ref. to EI-75, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - rear door. <Ref. to EB-40, REMOVAL, Rear Sealing Cover.>
4) Remove the glass assembly - rear door. <Ref. to GW-35, REMOVAL, Rear Door Glass.>
5) Remove the running channel - rear door.
6) Remove the clip, and remove the weather strip - door upper side. <Ref. to EB-69, DOOR, REPLACEMENT, Weather Strip.>

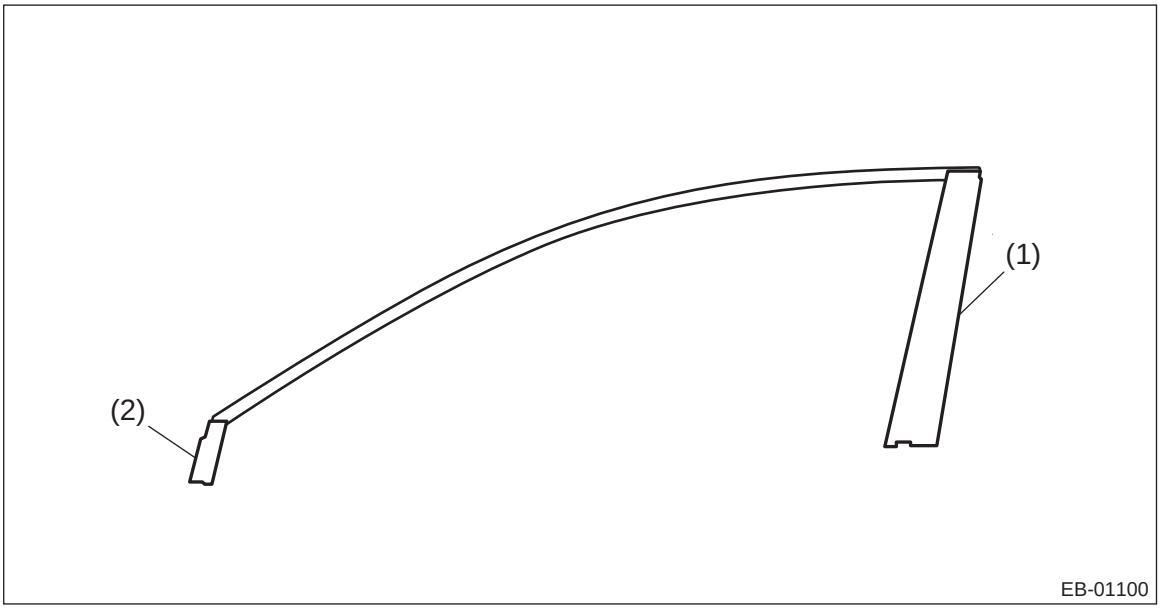


7) Remove the molding - door sash rear (a) by disengaging the bottom part (c) from the specified position (b) toward the rear side of the vehicle.

CAUTION:
- **When removing the molding - door sash, take special care to avoid the distortion.**
- **When distortion occurred to the molding - door sash, always replace it with a new part.**

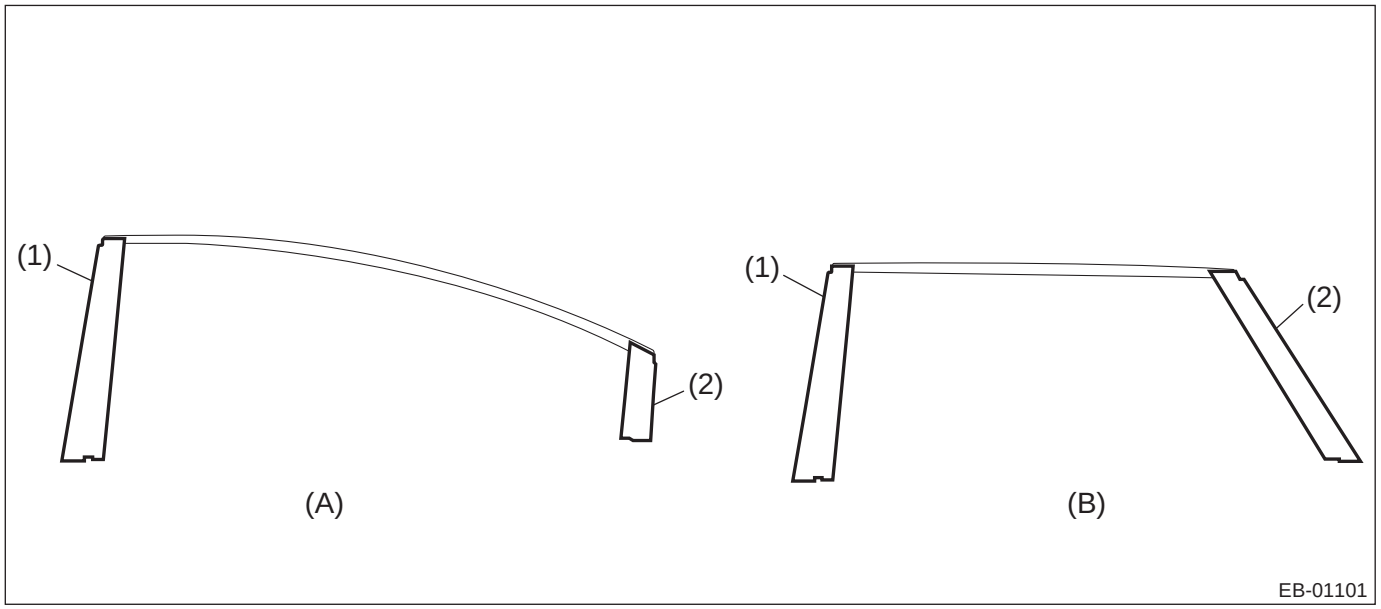
8) Remove the weather strip outer - rear door.

CAUTION:
- **When removing the weather strip outer, be careful not to damage the vehicle.**
- **Do not reuse the weather strip outer. Always replace with a new part.**



9) Peel the door sash tape from the door sash.

NOTE:
- If the tape is difficult to remove, warm the tape with a hairdryer, etc. to make the removal easier. Use a household hairdryer. Do not use industrial dryers.
- If tape residue is remaining on the door sash, wipe clean.

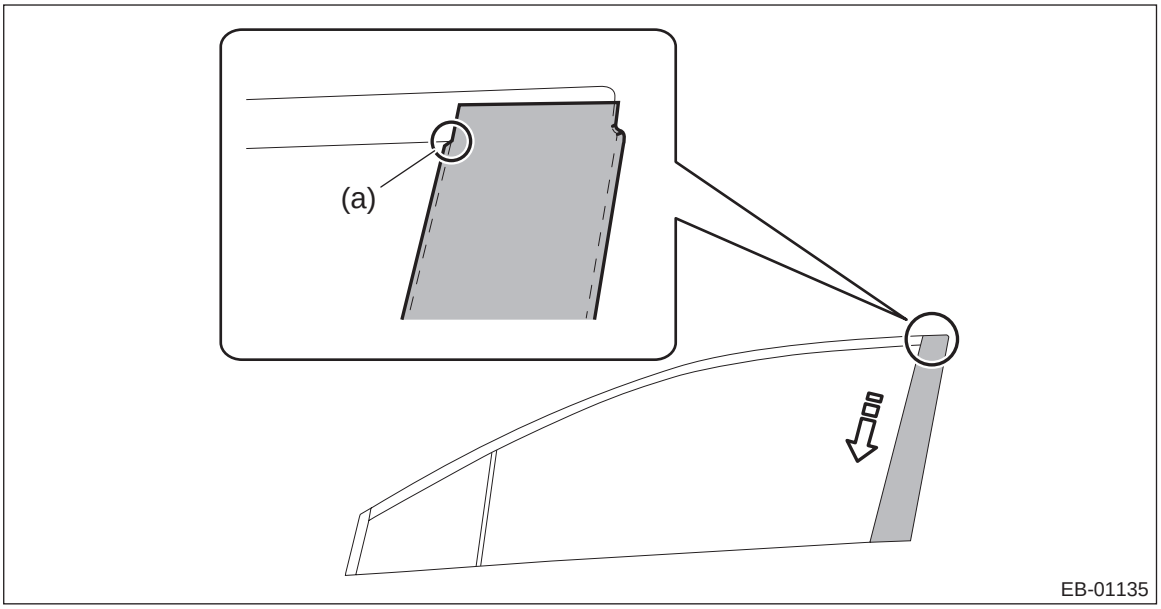


B: INSTALLATION

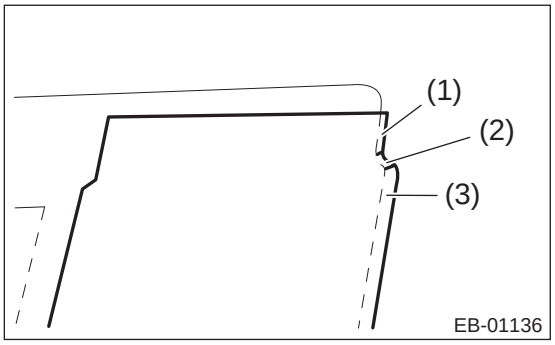
CAUTION:
- **Do not reuse the removed door sash tape. Replace it with a new tape.**
- **When applying tape, use a spatula, etc. to apply evenly, pushing it against the sash to make sure that no air bubbles are formed.**

If air bubbles are formed, reapply the tape.
- **If the tape is wrinkled, etc. during application, replace the tape.**
- **Turning points and ends of the tape will be a cause for peeling if the pressure is insufficient during application, so make sure to push down on the tape firmly when applying.**
- **There are locations where the tape ends will overlap each other. When applying the tape, be careful of the order of their application.**
  - **Front**

  - **Rear**

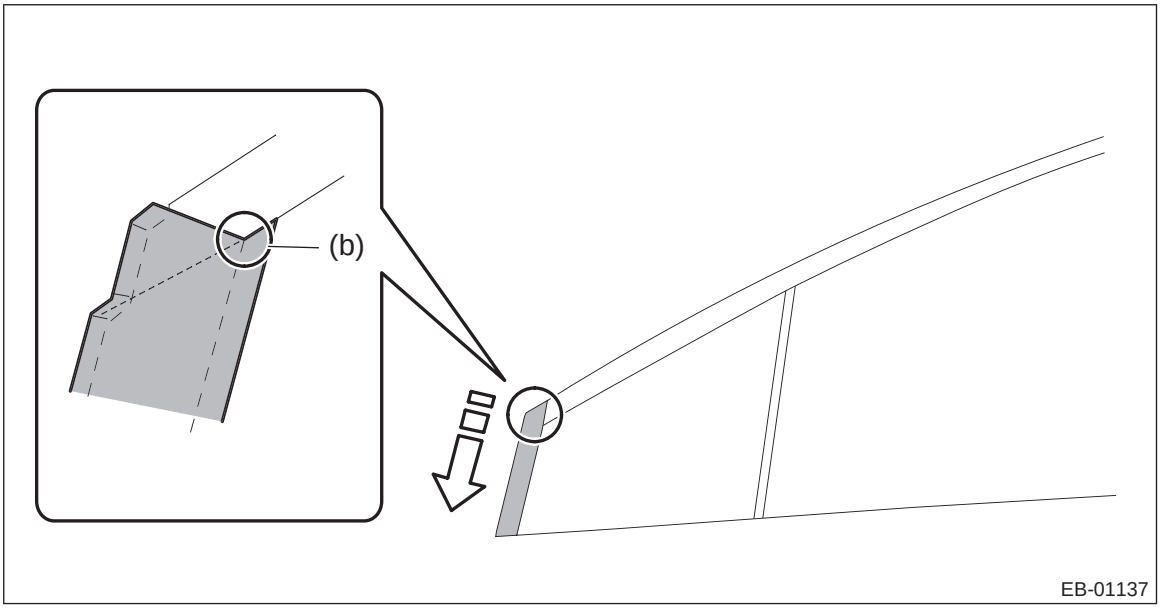


(A) Sedan model (B) OUTBACK model

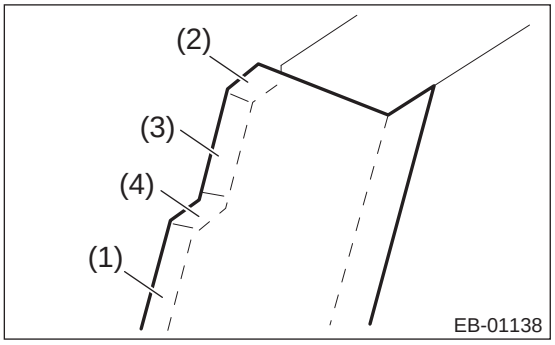


- **Do not reuse the weather strip outer. Always replace with a new part.**

1. FRONT DOOR

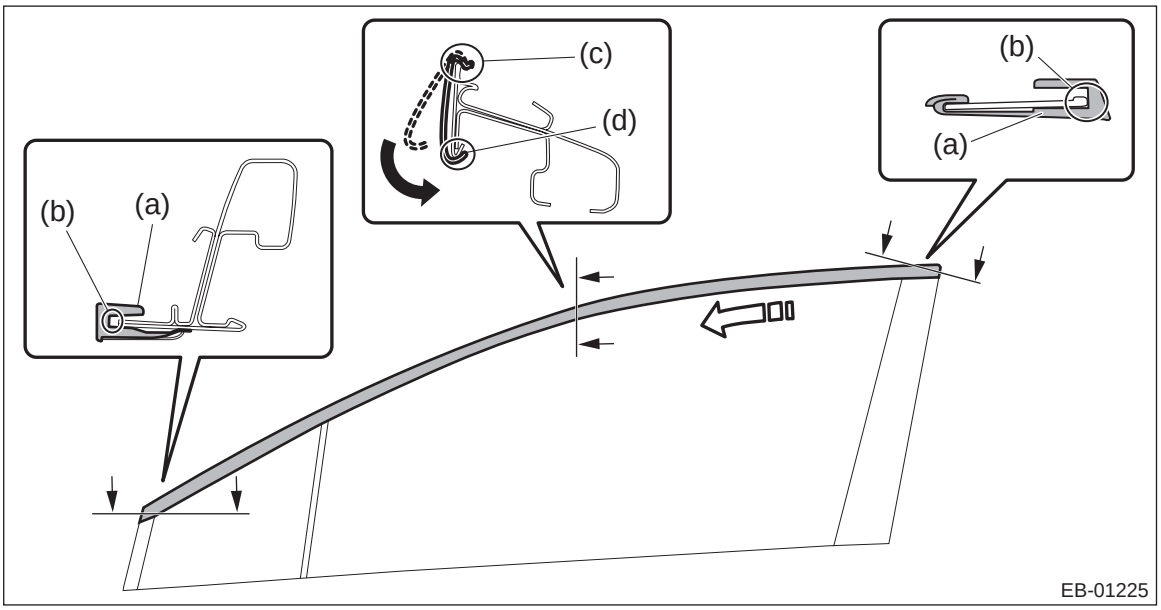


1) Apply the front door sash tape - rear from the top of the vehicle towards the bottom as shown in the figure (a).



2) Fold the corners at the door upper end area in the order of (1) — (3).

3) Apply the front door sash tape - front from the top of the vehicle towards the bottom as shown in the figure (b).

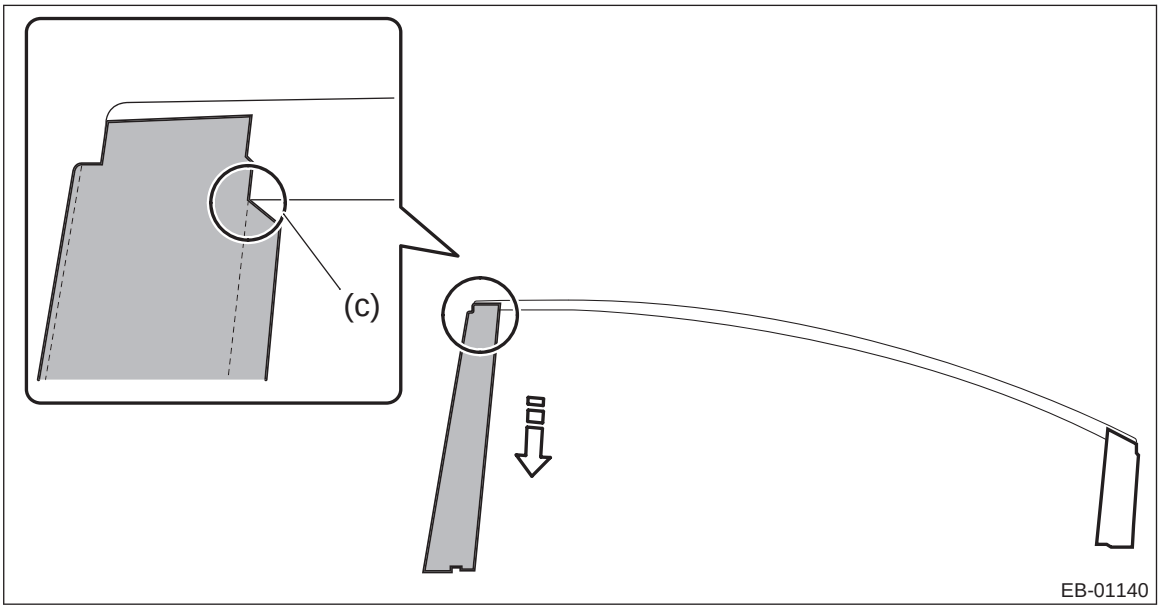


4) Fold the corners at the door upper end area in the order of (1) — (4).

5) Install the molding - door sash front.
   (1) Align the molding - door sash front (a) with the end of the sash (b), then temporarily install by hooking it on the upper edge (c) of the sash.
   (2) Fit the lower edge of the sash (d) from the rear side of vehicle toward the front side of the vehicle.

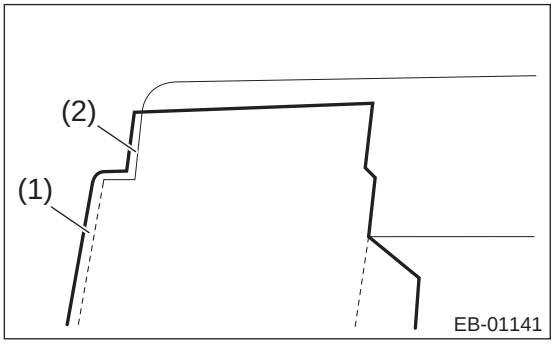
CAUTION:
• Do not apply a concentrated load to any location of the molding - door sash, because such a load may bend the parts.
• When distortion occurred to the molding - door sash, always replace it with a new part.

6) Install the weather strip outer - front door.
7) Install the running channel - front door.
8) Install the glass assembly - front door.



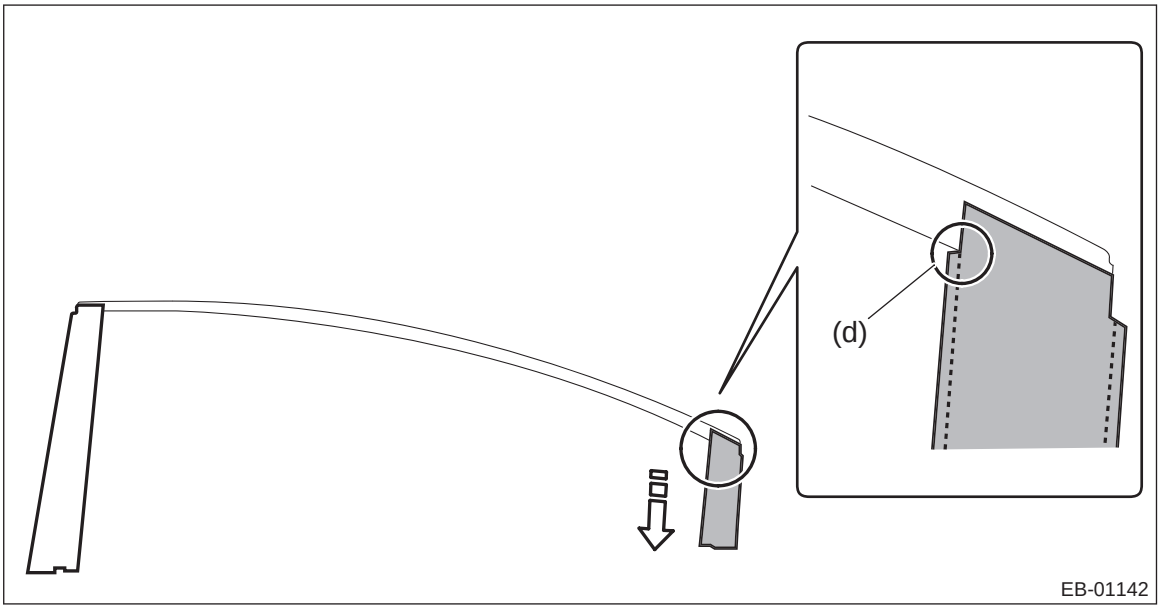
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
9) Install the weather strip - front door.
10) Install the sealing cover - front door.
11) Install the outer mirror assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
12) Install the trim panel - front door. <Ref. to EI-76, INSTALLATION, Door Trim.>
13) Connect the ground terminal to the battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>

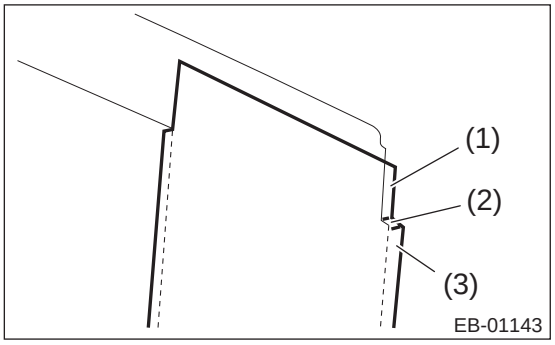


2. REAR DOOR

Sedan model

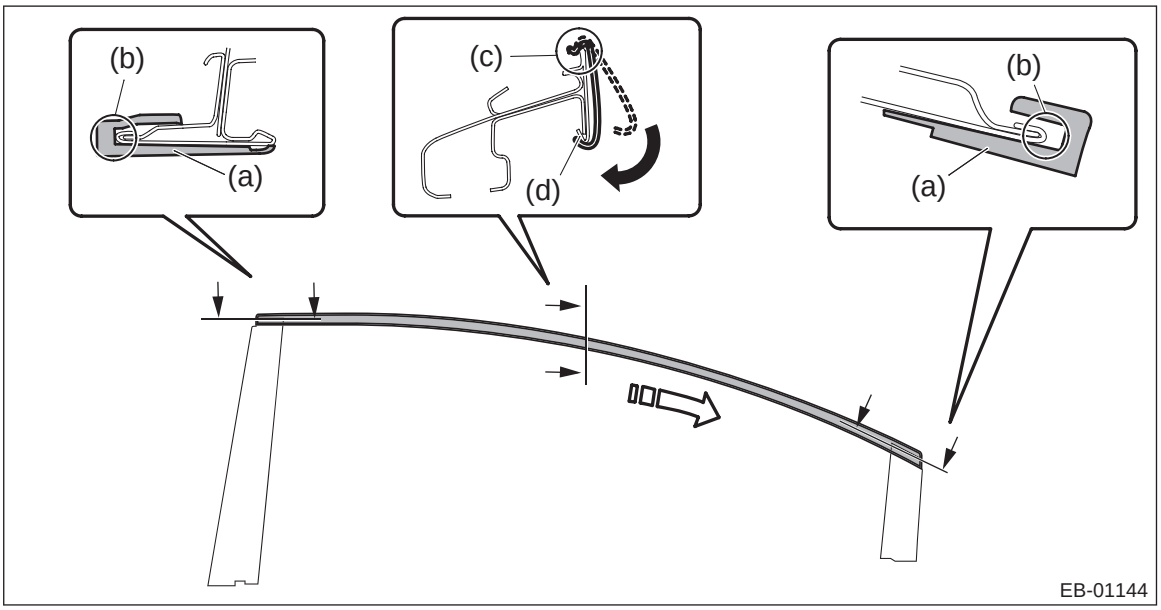


1) Apply the rear door sash tape - front from the top of the vehicle towards the bottom as shown in the figure (c).



2) Fold the corners at the door upper end area in the order of (1) — (2).

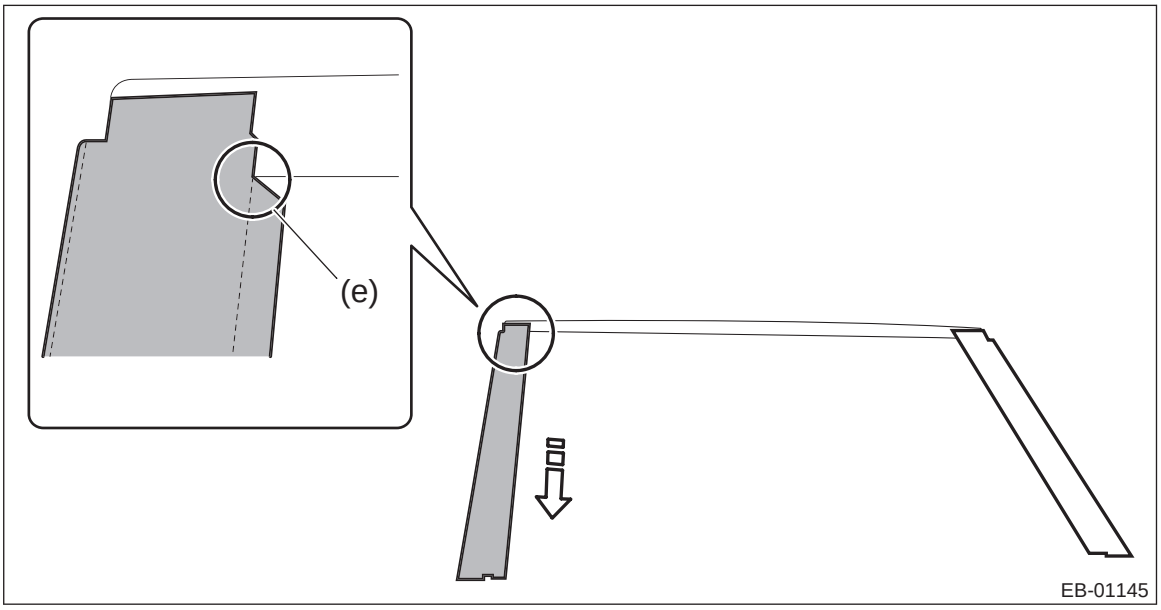
3) Apply the rear door sash tape - rear from the top of the vehicle towards the bottom as shown in the figure (d).



4) Fold the corners at the door upper end area in the order of (1) — (3).

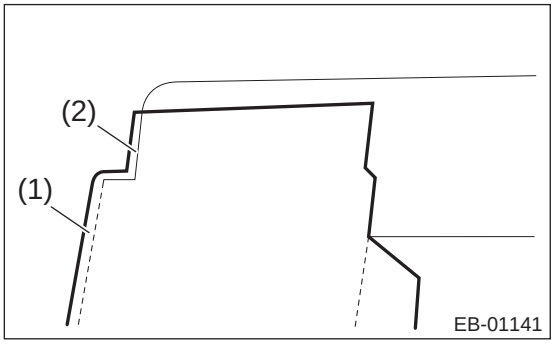
5) Install the molding - door sash rear.
   (1) Align the molding - door sash rear (a) with the end of the sash (b), then temporarily install by hooking it on the upper edge (c) of the sash.
   (2) Fit the lower edge of the sash (d) from the front side of vehicle toward the rear side of the vehicle.

CAUTION:
• Do not apply a concentrated load to any location of the molding - door sash, because such a load may bend the parts.
• When distortion occurred to the molding - door sash, always replace it with a new part.



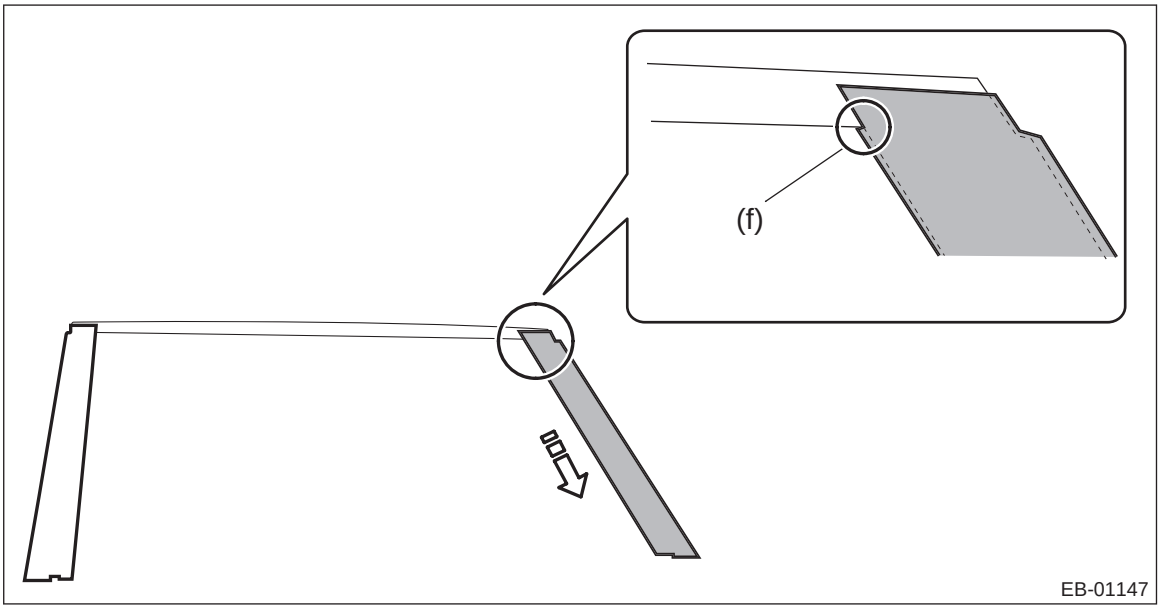
6) Install the weather strip outer - rear door.
7) Install the running channel - rear door.
8) Install the glass assembly - rear door.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
9) Install the weather strip - rear door.
10) Install the sealing cover - rear door.
11) Install the trim panel - rear door. <Ref. to EI-76, INSTALLATION, Door Trim.>
12) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>

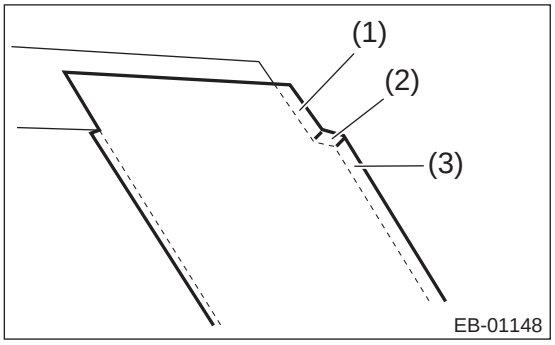


3. REAR DOOR

OUTBACK model

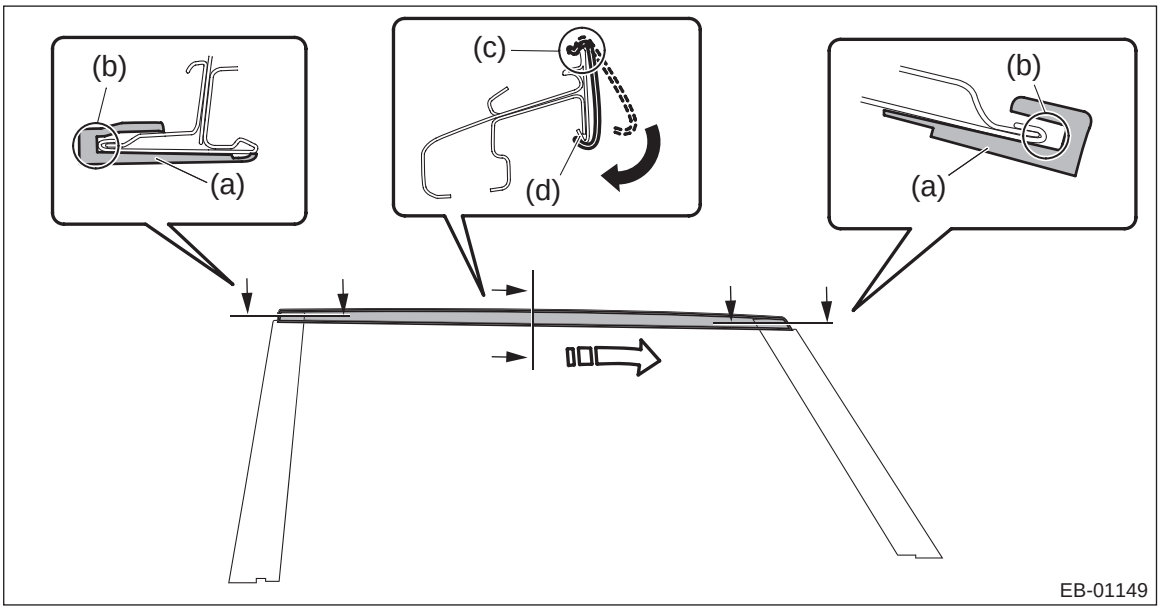


1) Apply the rear door sash tape - front from the top of the vehicle towards the bottom as shown in the figure (e).



2) Fold the corners at the door upper end area in the order of (1) — (2).

3) Apply the rear door sash tape - rear from the top of the vehicle towards the bottom as shown in the figure (f).



4) Fold the corners at the door upper end area in the order of (1) — (3).

5) Install the molding - door sash rear.
   (1) Align the molding - door sash rear (a) with the end of the sash (b), then temporarily install by hooking it on the upper edge (c) of the sash.
   (2) Fit the lower edge of the sash (d) from the front side of vehicle toward the rear side of the vehicle.

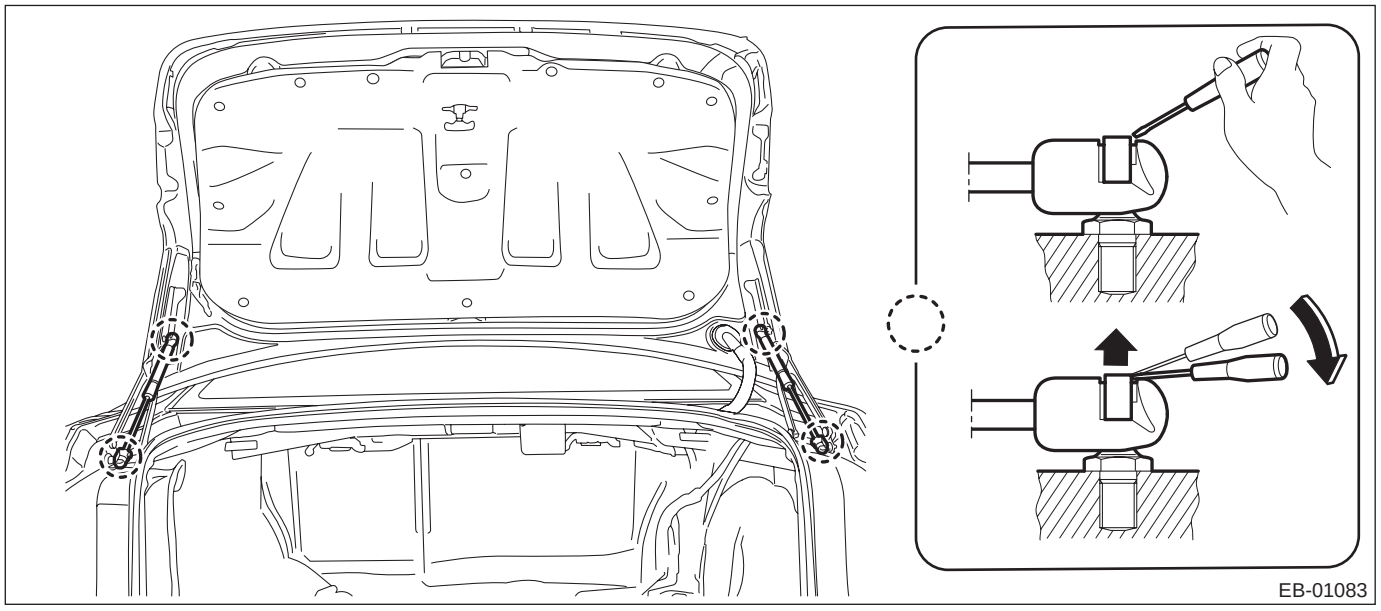
CAUTION:
• Do not apply a concentrated load to any location of the molding - door sash, because such a load may bend the parts.
• When distortion occurred to the molding - door sash, always replace it with a new part.

6) Install the weather strip outer - rear door.
7) Install the running channel - rear door.
8) Install the glass assembly - rear door.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
9) Install the weather strip - rear door.
10) Install the sealing cover - rear door.
11) Install the trim panel - rear door. <Ref. to EI-76, INSTALLATION, Door Trim.>
12) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>

9. Trunk Lid

A: REMOVAL

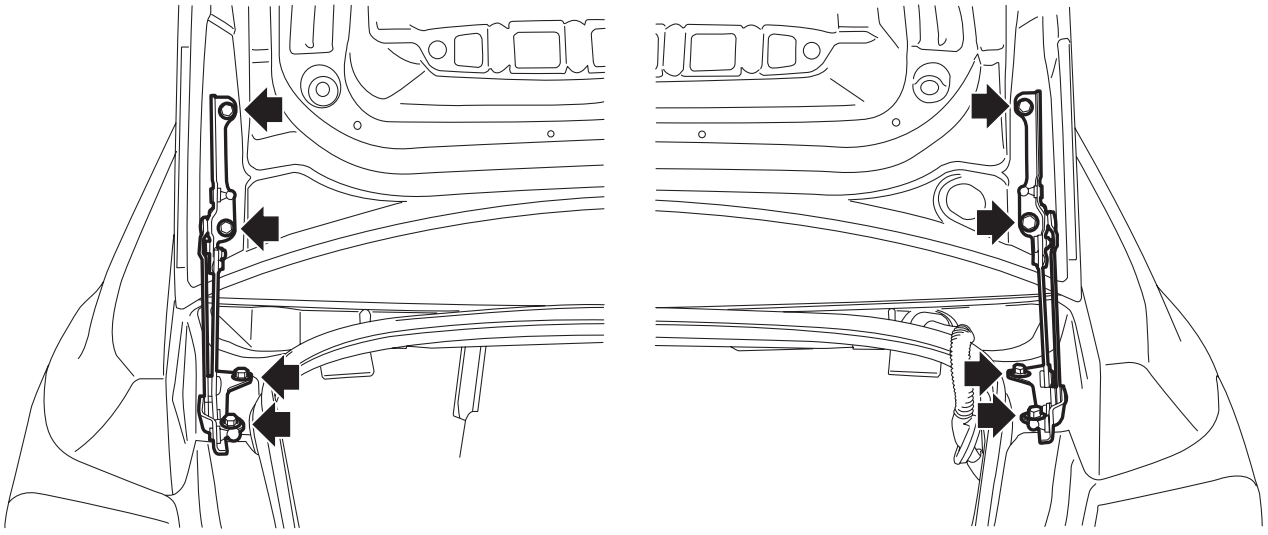


CAUTION:
Trunk lid COMPL is heavy. When removing and installing it, always work in a team of two or more persons.

1. TRUNK LID DAMPER STAY

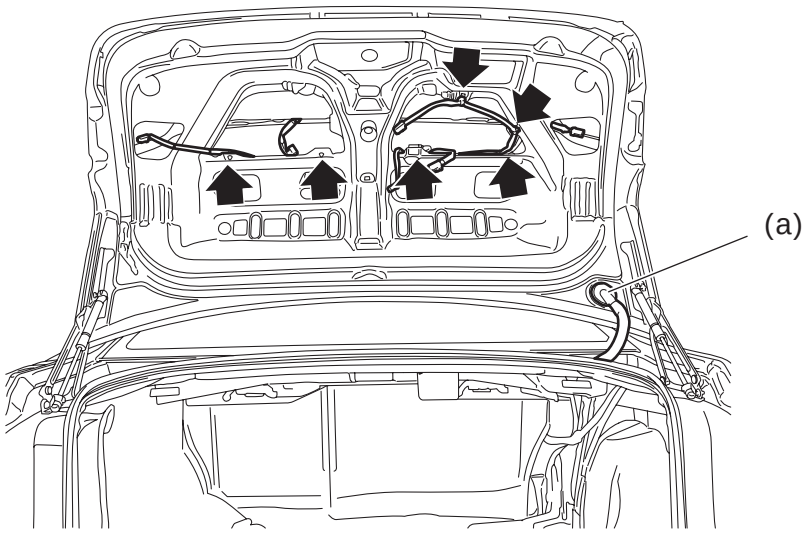
1) Open the trunk lid COMPL.
2) Remove the stay assembly - trunk lid.

CAUTION:
Do not remove the stop ring completely. Raise it to the position enough to remove the ball stud.



(1) Remove the stopper - hinge.
(2) Gently push the stop ring against the ball stud to be raised with a flat tip screwdriver.
(3) Pull the stay assembly - trunk lid toward you, and remove the stay assembly - trunk lid from the ball stud.

2. TRUNK LID HINGE



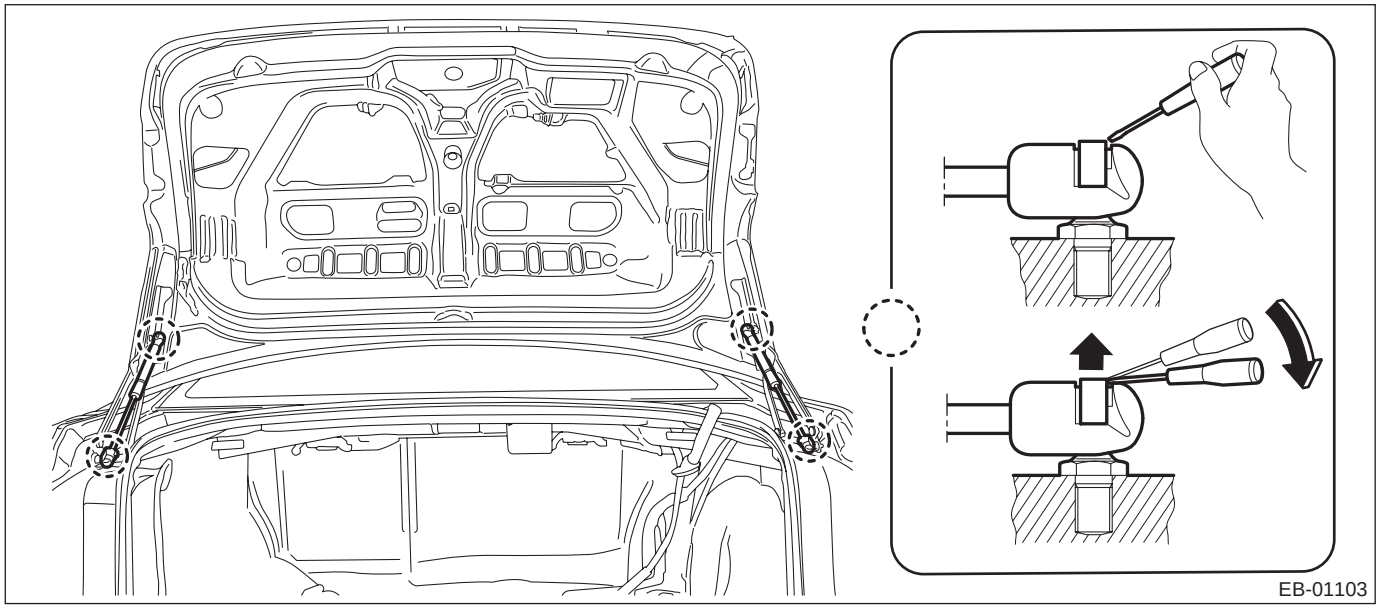
1) Open the trunk lid COMPL.
2) Remove the stay assembly - trunk lid. <Ref. to EB-51, TRUNK LID DAMPER STAY, REMOVAL, Trunk Lid.>

3) Remove the hinge assembly - trunk lid.

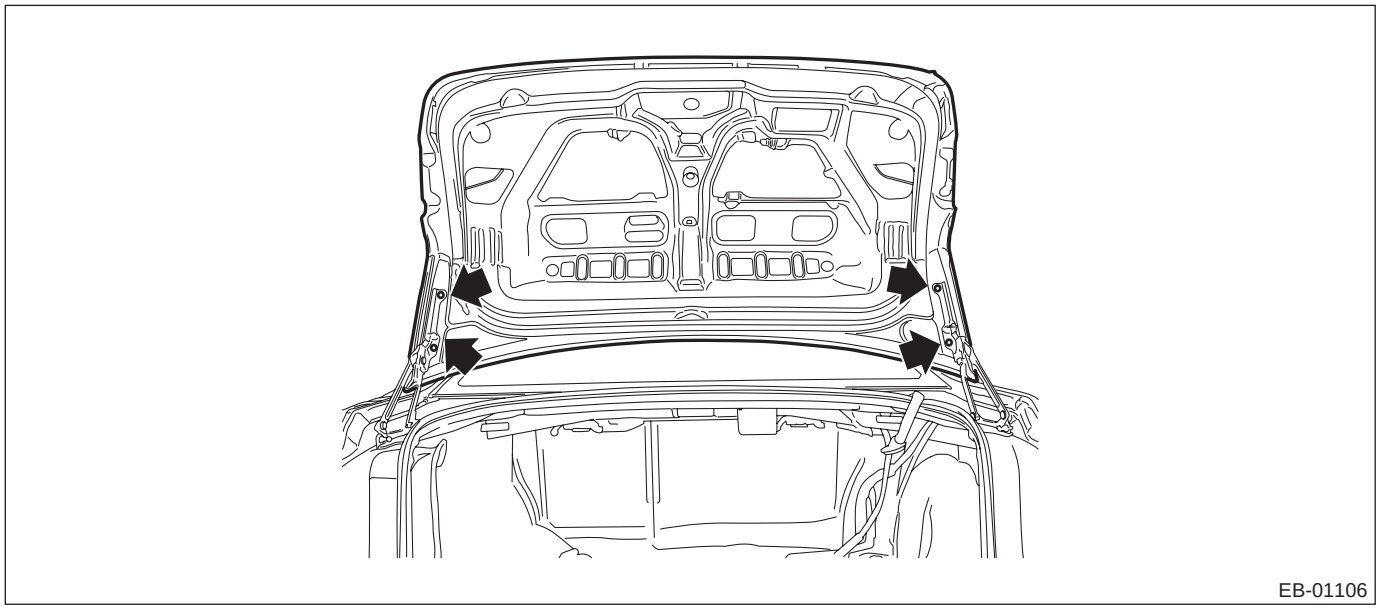
EB-01104

3. TRUNK LID PANEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - trunk lid. <Ref. to EI-112, REMOVAL, Trunk Room Trim.>
3) Remove the garnish - trunk. <Ref. to EI-64, REMOVAL, Trunk Lid Garnish.>
4) Remove the key lock - trunk lid. <Ref. to SL-76, TRUNK LID, REPLACEMENT, Key Lock Cylinders.>
5) Remove the light assembly - rear finisher. <Ref. to LI-57, SEDAN MODEL, REMOVAL, Rear Finisher Light Assembly.>
6) Remove the license plate light. <Ref. to LI-61, SEDAN MODEL, REMOVAL, License Plate Light.>
7) Remove the rearview camera assembly. <Ref. to ET-54, SEDAN MODEL, REMOVAL, Rearview Camera System.>
8) Remove the rear antenna assembly - exterior. (Model with keyless access with push button start) <Ref. to SL-98, REAR ANTENNA (SEDAN MODEL), REMOVAL, Keyless Access Outdoor Antenna.>
9) Remove the lock assembly - trunk lid. <Ref. to SL-53, REMOVAL, Trunk Lid Latch and Actuator Assembly.>
10) Remove the stopper - trunk lid LWR.
11) Disconnect the harness clip, and then pull out the harness as shown in the figure (a).



EB-01105



12) Remove the stay assembly - trunk lid.

CAUTION:
Do not remove the stop ring completely. Raise it to the position enough to remove the ball stud.

(1) Remove the stopper - hinge.
(2) Gently push the stop ring against the ball stud to be raised with a flat tip screwdriver.
(3) Pull the stay assembly - trunk lid toward you, and remove the stay assembly - trunk lid from the ball stud.

EB-01103

13) Remove the trunk lid COMPL.

EB-01106

14) Remove the hinge assembly - trunk lid from the body.

B: INSTALLATION

1) Install the hinge assembly - trunk lid.

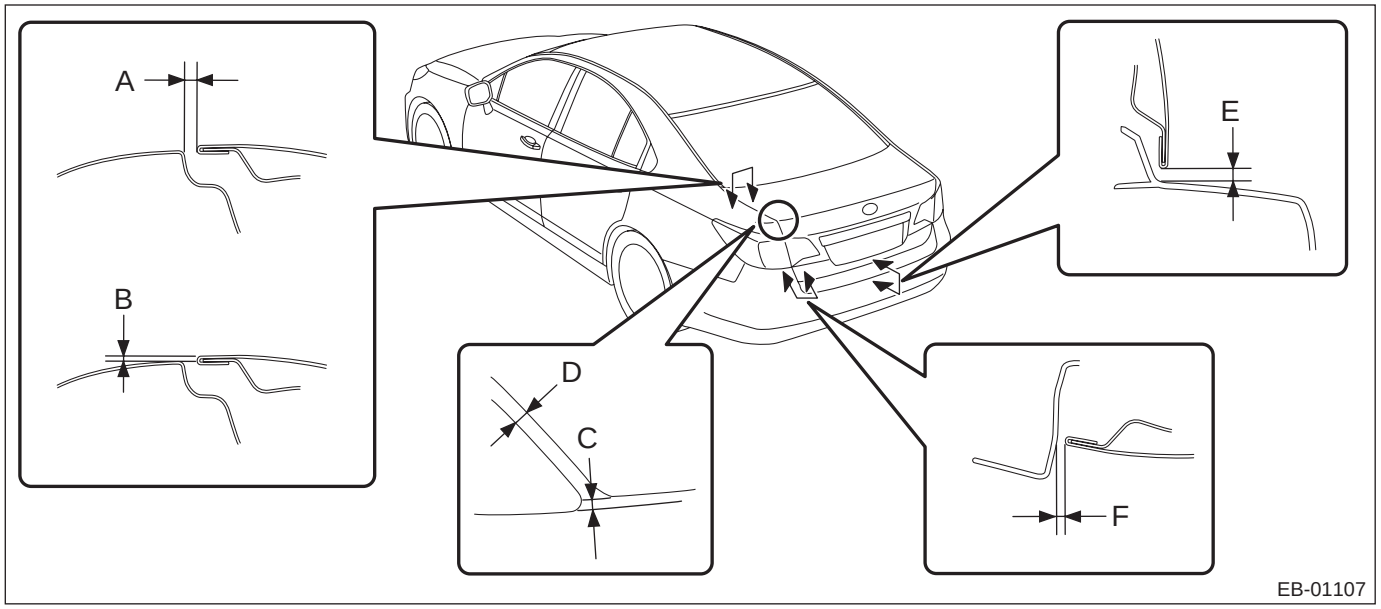
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Install the trunk lid COMPL.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

3) Install the stopper - trunk lid LWR.
4) Adjust while paying attention to make a uniform clearance around the trunk lid COMPL. <Ref. to EB-55, ADJUSTMENT, Trunk Lid.>
5) Install the stay assembly - trunk lid.

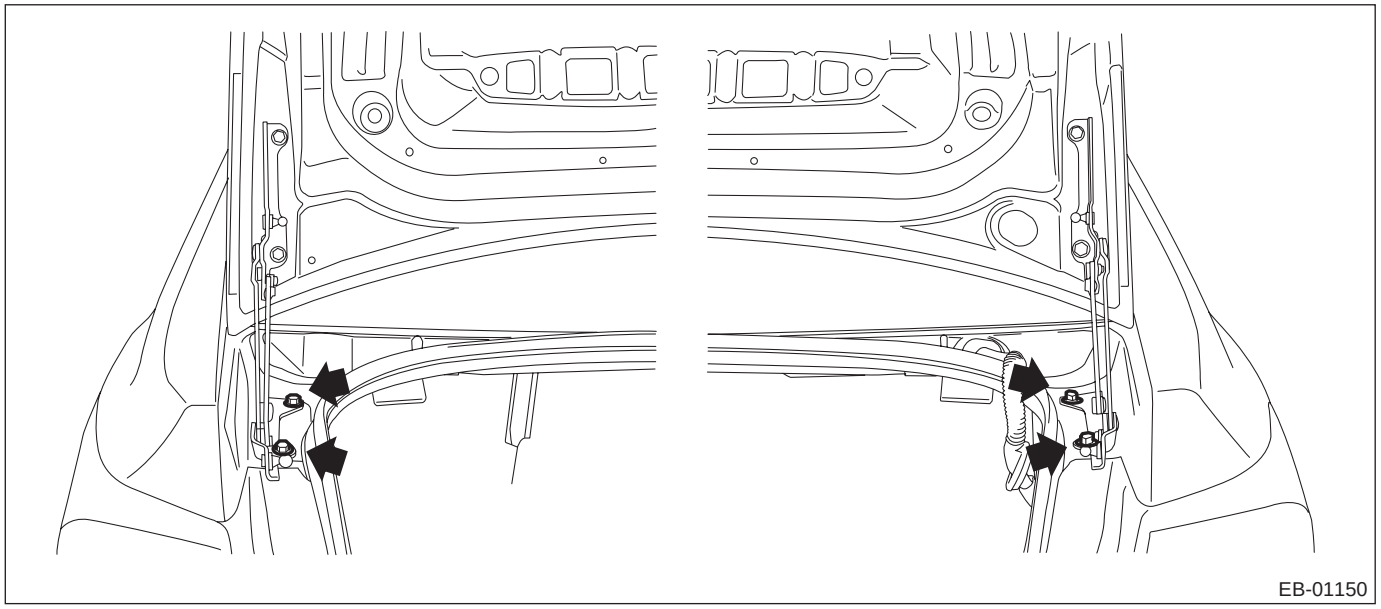
Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-6, TRUNK LID PANEL, COMPONENT, General Description.>
6) Install the stopper - hinge.
7) Install the harness clip and the harness.
8) Install the light assembly - rear finisher. <Ref. to LI-58, SEDAN MODEL, INSTALLATION, Rear Finisher Light Assembly.>



Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
9) Install the license plate light. <Ref. to LI-63, SEDAN MODEL, INSTALLATION, License Plate Light.>
10) Install the key lock - trunk lid.
11) Install the rearview camera assembly. <Ref. to ET-55, SEDAN MODEL, INSTALLATION, Rearview Camera System.>
12) Install the garnish - trunk. <Ref. to EI-64, INSTALLATION, Trunk Lid Garnish.>

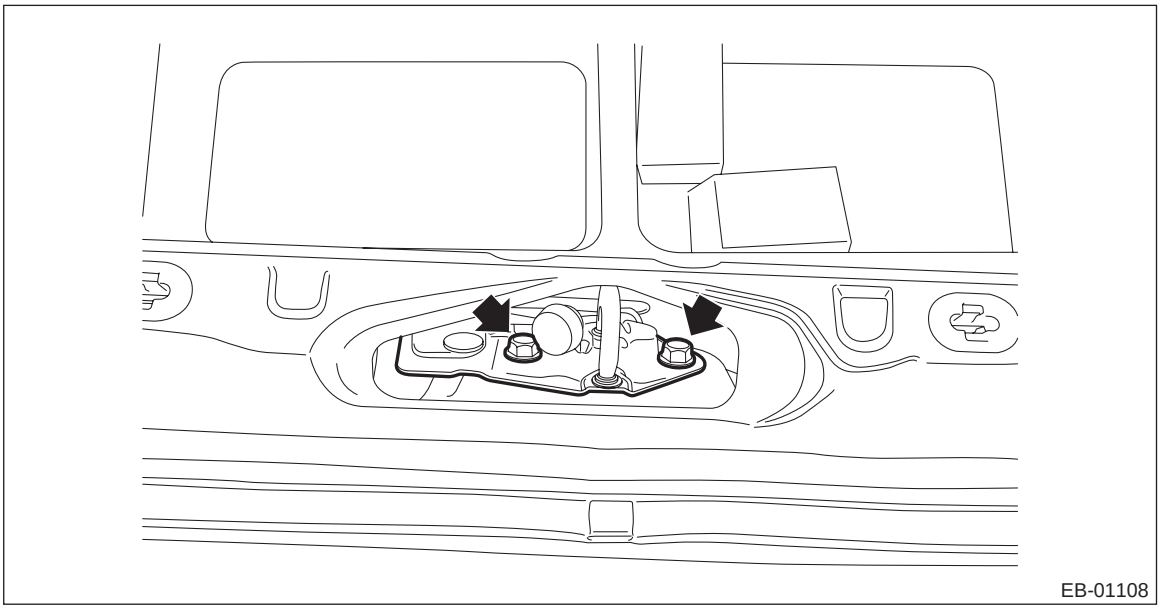
Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
13) Install the rear antenna assembly - exterior.
14) Install the lock assembly - trunk lid.

Tightening torque
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
15) Install the trim panel - trunk lid. <Ref. to EI-113, INSTALLATION, Trunk Room Trim.>
16) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>



C: ADJUSTMENT

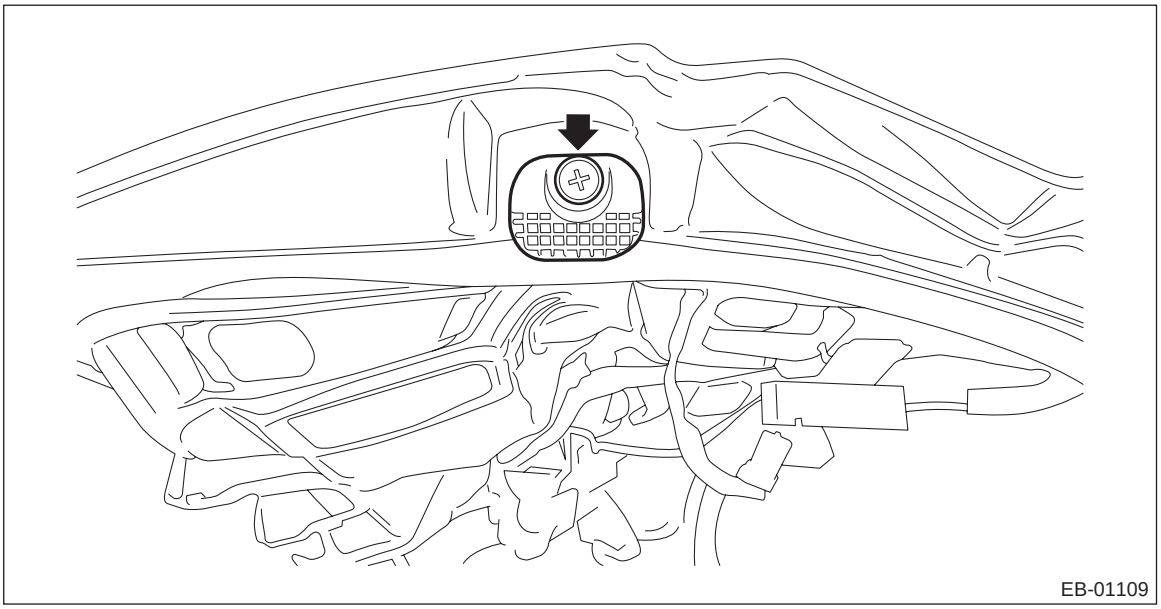
Adjust the clearance around the trunk lid COMPL as follows.



Part		Standard
A	Trunk lid COMPL and Panel - side outer	3.5±1 mm (0.14±0.04 in)
B	Surface level gap between Trunk lid COMPL and Panel - side outer	0±1 mm (0±0.04 in)
C	Surface level gap between Trunk lid COMPL and Panel - side outer	–0.5±1 mm (–0.02±0.04 in)
D	Trunk lid COMPL and Panel - side outer	4.5±1 mm (0.18±0.04 in)
E	Trunk lid COMPL to Bumper face - rear	6.8±1.5 mm (0.27±0.06 in)
F	Trunk lid COMPL to Bumper face - rear	5±1.5 mm (0.2±0.06 in)

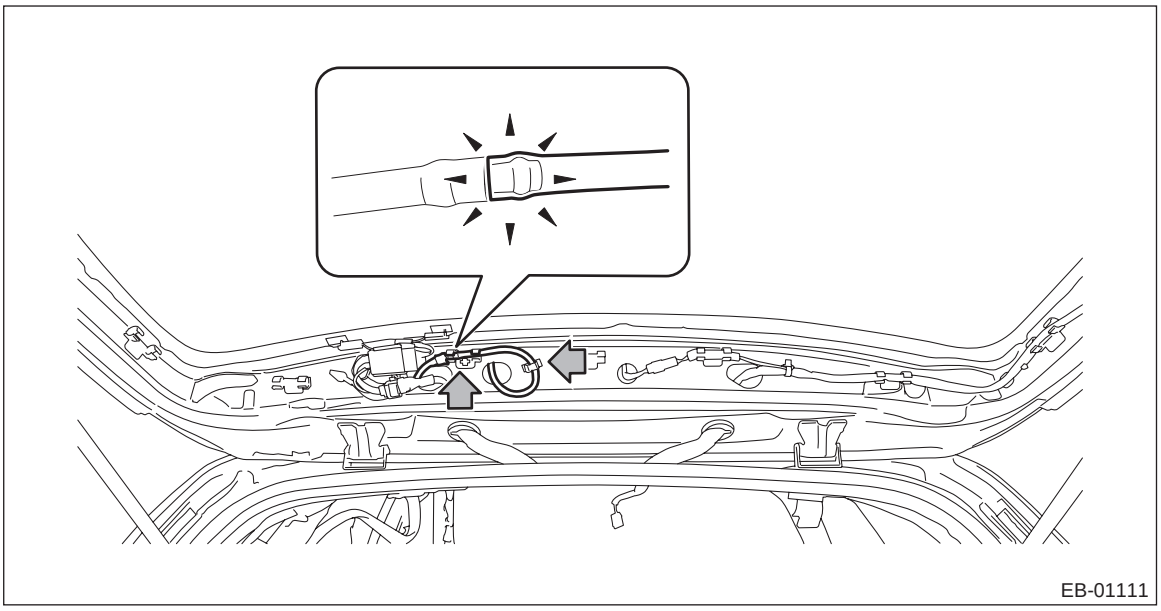
1) Adjust the horizontal position of the trunk lid COMPL.
   (1) Loosen the mounting bolt.
   (2) Adjust the horizontal clearance of the trunk lid COMPL.

2) Adjust the surface level gap between the trunk lid COMPL and the body.
   (1) Remove the trim panel - trunk rear.
   (2) Loosen the bolt.
   (3) Tap the striker - trunk using a plastic hammer to adjust the surface level gap between the trunk lid COMPL and the body.



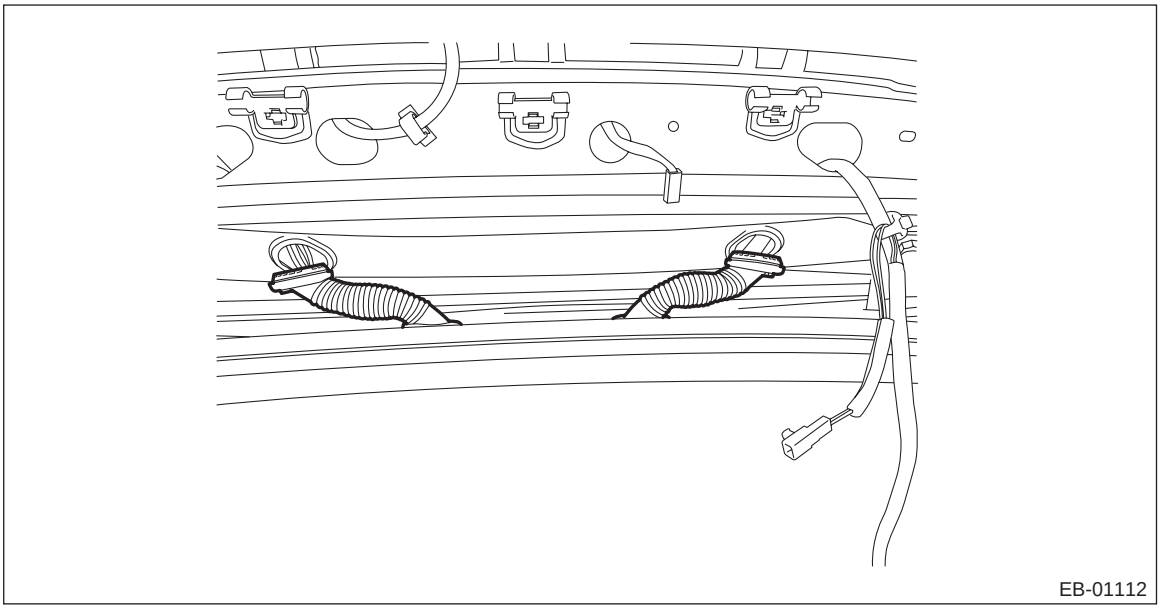
10.Rear Gate

A: REMOVAL



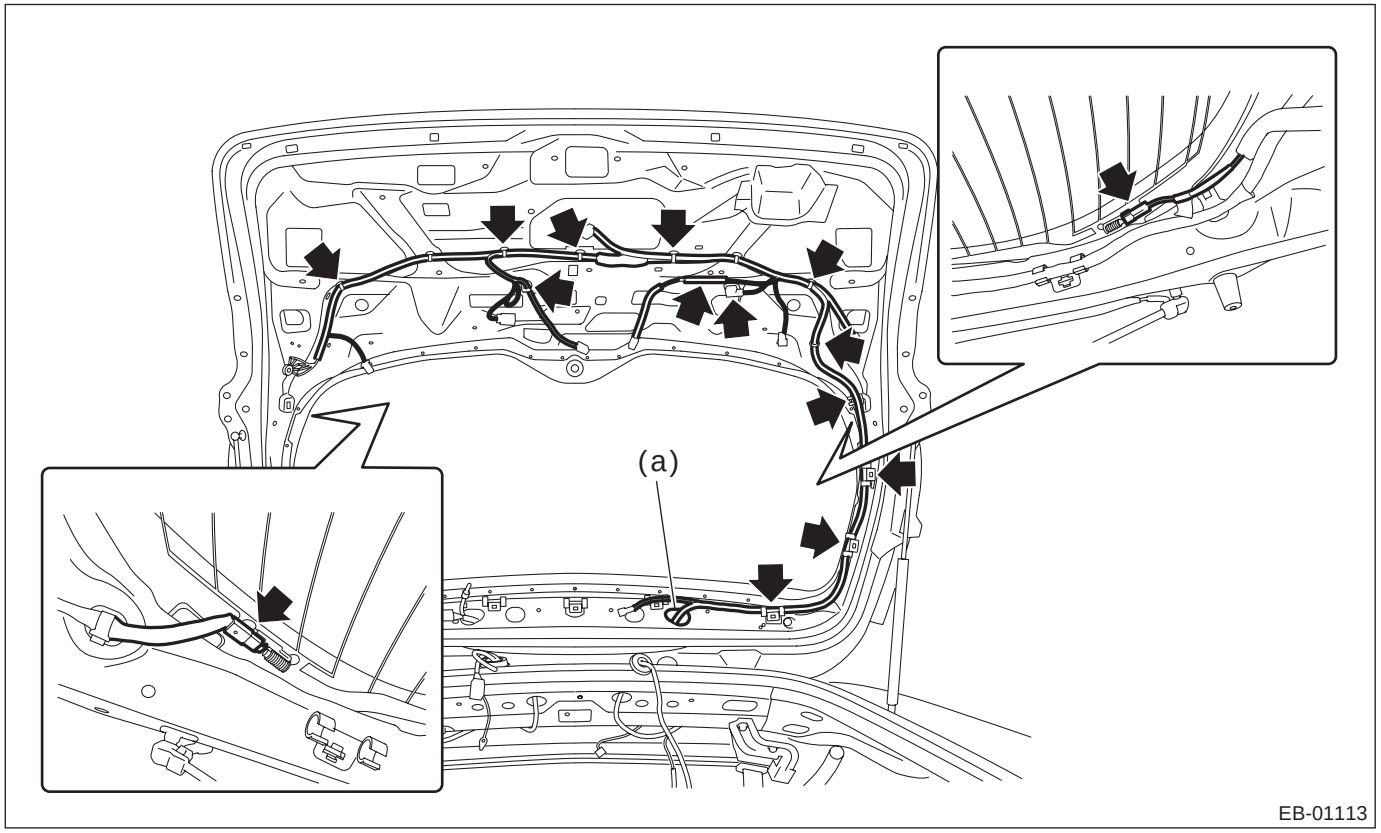
1. REAR GATE PANEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the rod - power rear gate. (Model with power rear gate) <Ref. to PRG-9, REMOVAL, Power Rear Gate Rod.>
3) Remove the trim panel - rear gate. <Ref. to EI-124, REMOVAL, Rear Gate Trim.>
4) Remove the garnish assembly - rear gate. <Ref. to EI-65, REMOVAL, Rear Gate Garnish.>
5) Remove the power rear gate touch sensor. (Model with power rear gate) <Ref. to PRG-15, REMOVAL, Power Rear Gate Touch Sensor.>
6) Remove the light assembly - rear finisher. <Ref. to LI-57, OUTBACK MODEL, REMOVAL, Rear Finisher Light Assembly.>
7) Remove the license plate light. <Ref. to LI-62, OUTBACK MODEL, REMOVAL, License Plate Light.>
8) Remove the rearview camera assembly. <Ref. to ET-55, OUTBACK MODEL, REMOVAL, Rearview Camera System.>
9) Remove the antenna assembly - radio. <Ref. to ET-32, RADIO ANTENNA AMPLIFIER, REMOVAL, Antenna.>
10) Remove the arm assembly - rear wiper and the motor assembly - rear wiper. <Ref. to WW-42, REMOVAL, Rear Wiper Motor.>
11) Remove the rear antenna assembly - exterior. (Model with keyless access with push button start) <Ref. to SL-98, REAR ANTENNA (OUTBACK MODEL), REMOVAL, Keyless Access Outdoor Antenna.>
12) Remove the rear gate latch and actuator - rear gate. <Ref. to SL-50, REMOVAL, Rear Gate Latch and Actuator Assembly.>
13) Remove the buffer - rear gate.



EB-01109

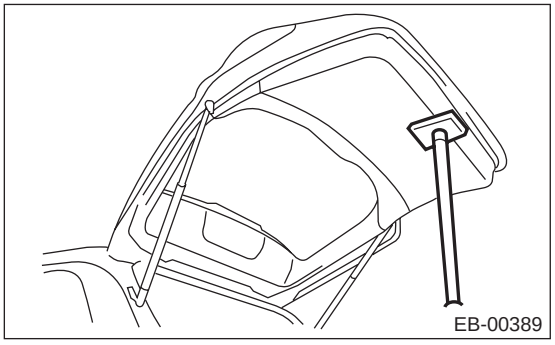
14) Remove the roof spoiler. <Ref. to EI-70, REMOVAL, Roof Spoiler.>



15) Disconnect the hose assembly - rear washer.
(1) Disconnect the joint portion of the hose assembly - rear washer.
(2) Remove the clip.

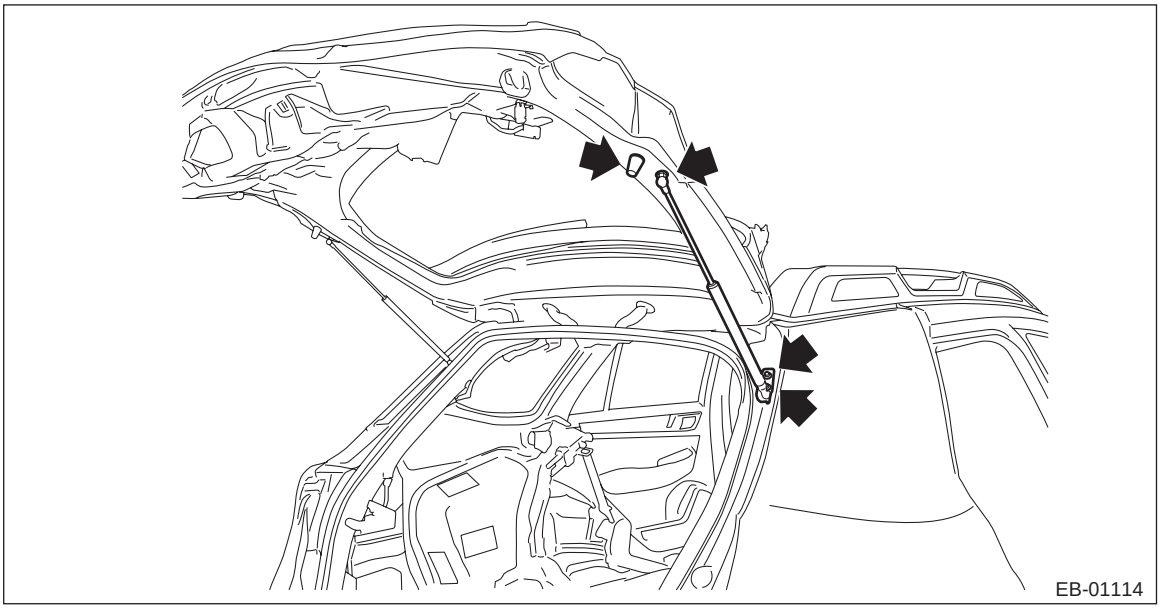
EB-01111

16) Remove the nozzle - rear washer. <Ref. to WW-45, REMOVAL, Rear Washer.>
17) Remove the rubber duct connection.



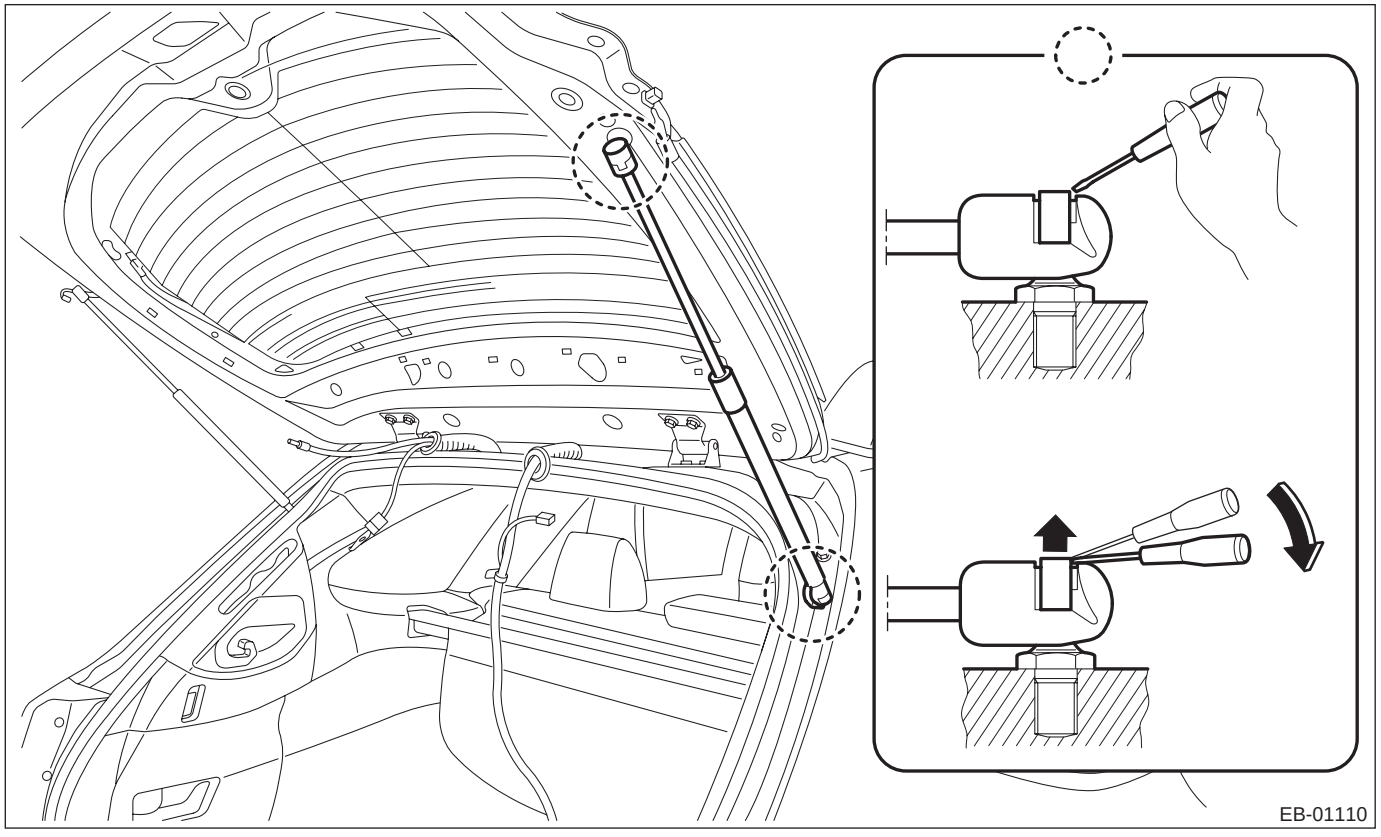
EB-01112

18) Disconnect the connector, and then pull out the harness from the panel - rear gate shown in the figure (a).

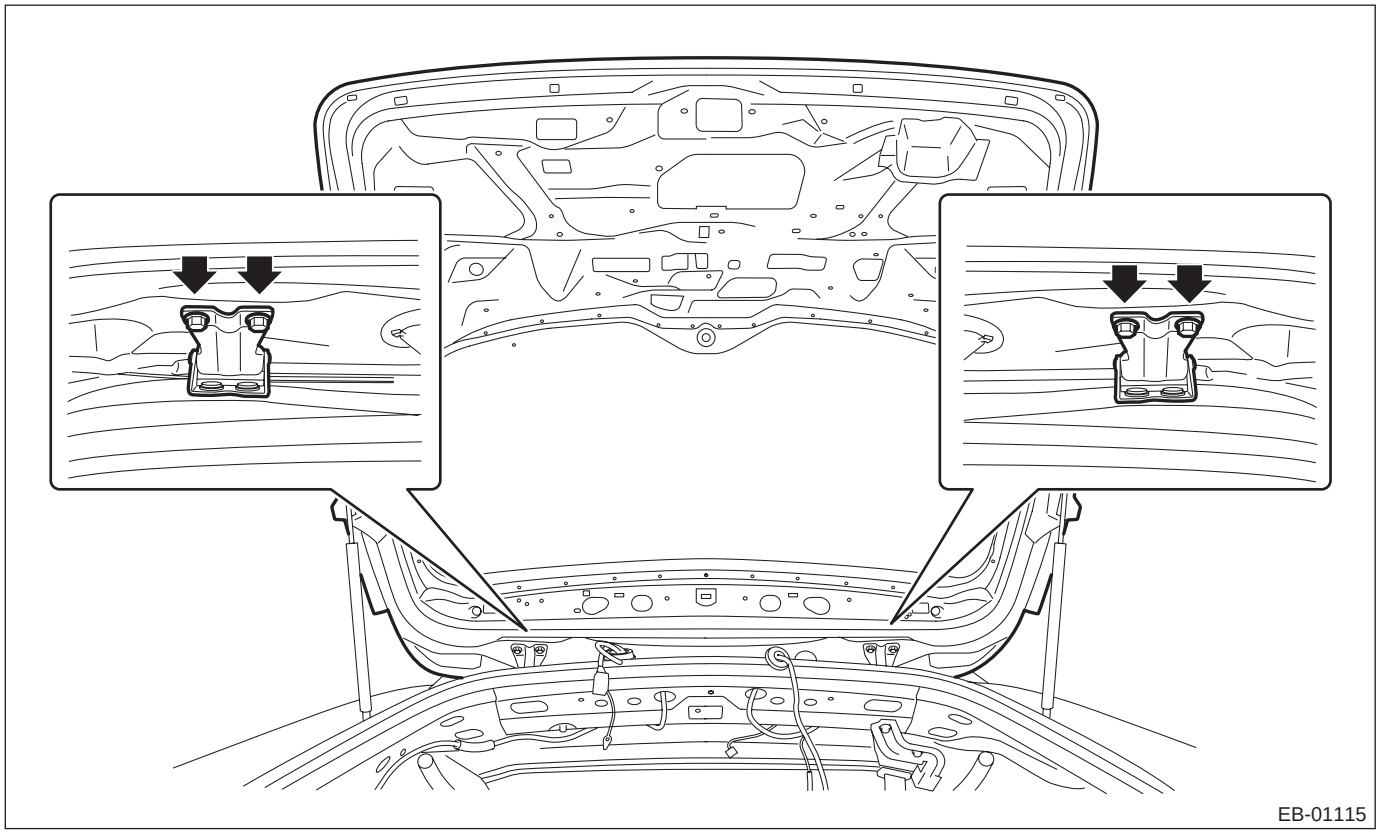


19) Remove the harness clip from the panel - rear gate.
20) Before removing the stay assembly - rear gate, prevent the panel - rear gate from closing by using a prop or the like.

CAUTION:
If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the panel - rear gate with secure material to prevent injury or damage.



21) Remove the stay assembly - rear gate.
- Model without power rear gate
  1. Remove the stopper - rear gate and remove the attachment section on the side of the stay assembly - rear gate.
  2. Remove the mounting bolts on the body side.

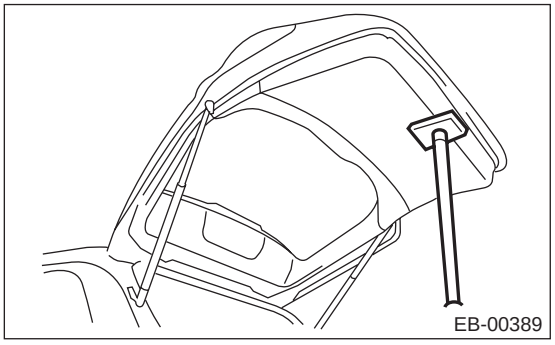


- Model with power rear gate

CAUTION:
Do not remove the stop ring completely. Raise it to the position enough to remove the ball stud.
  1. Gently push the stop ring against the ball stud to be raised with a flat tip screwdriver.
  2. Pull the stay assembly - rear gate toward you, and remove the stay assembly - rear gate from the ball stud.

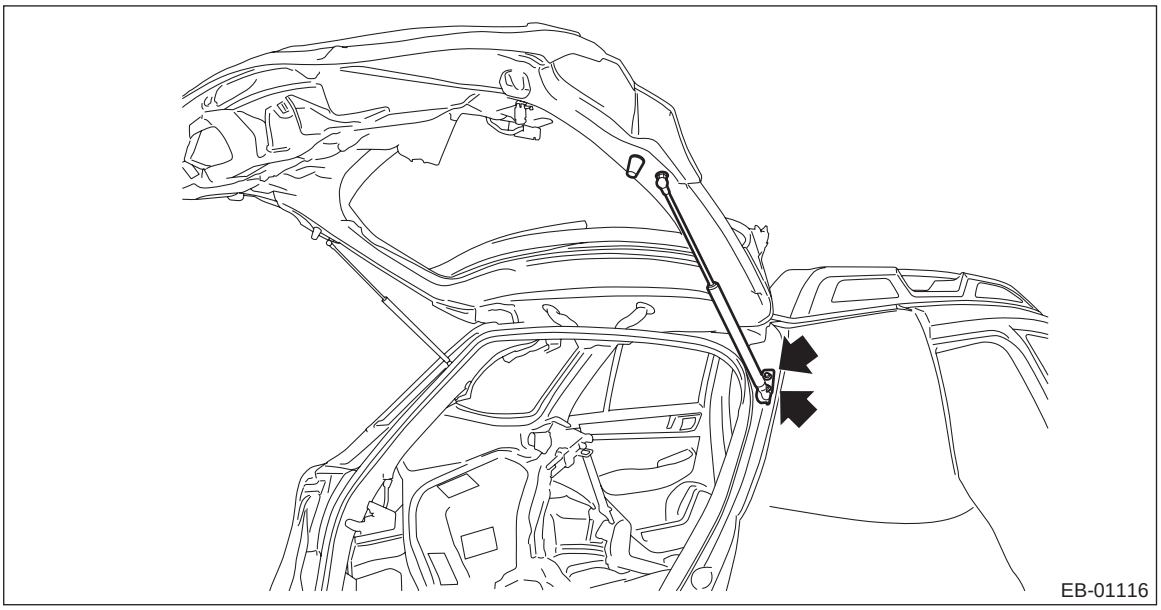
22) Remove the bolts of the hinge - rear gate, and remove the panel - rear gate.

CAUTION:
The panel - rear gate is heavy. When removing and installing it, always work in a team of two or more persons.



23) Remove the hinge - rear gate from the vehicle.

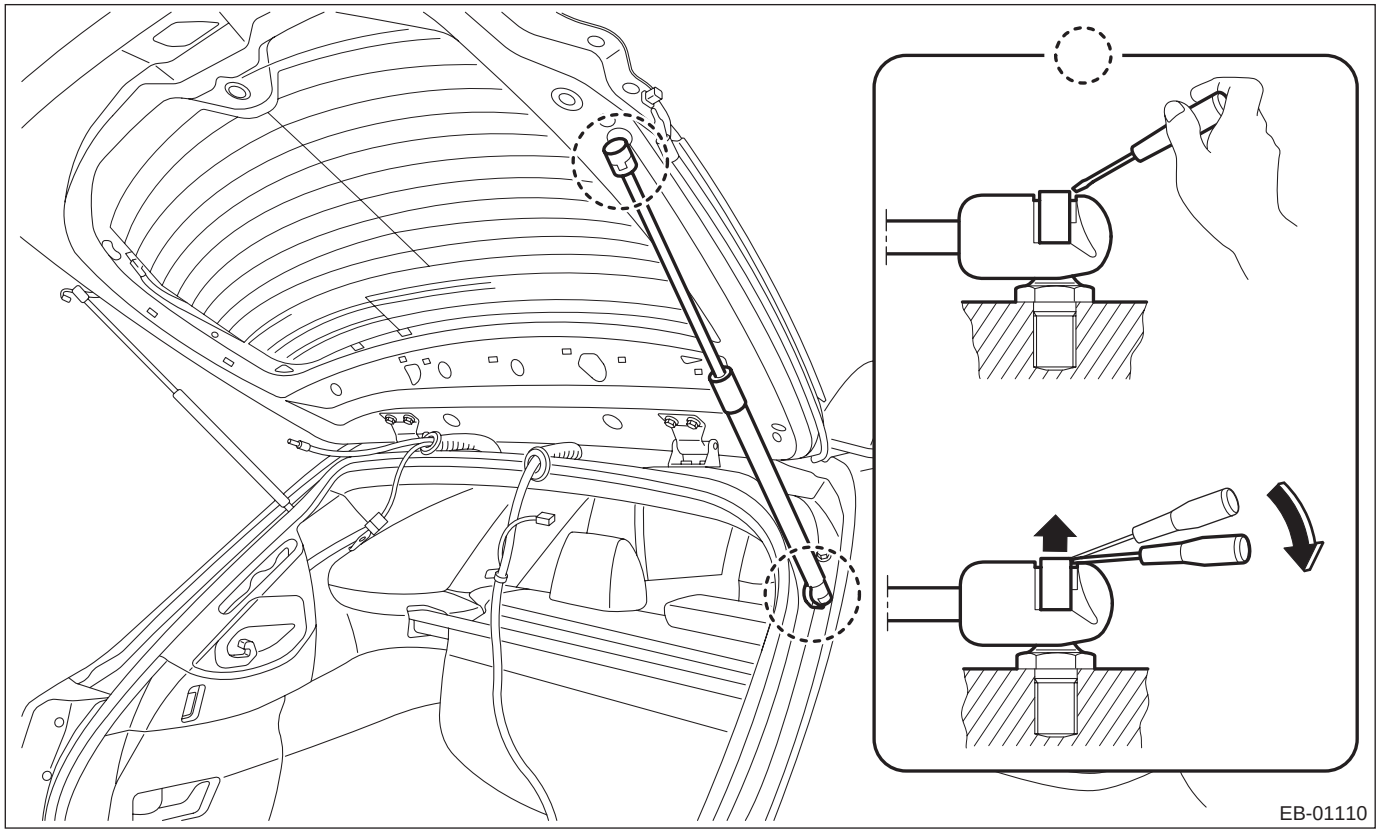
2. REAR GATE DAMPER STAY



CAUTION:
- **Do not damage piston rods and oil seals.**
- **Never disassemble cylinders: They contain gas.**
- **The panel - rear gate is heavy. When removing and installing it, always work in a team of two or more persons.**

1) Before removing the stay assembly - rear gate, prevent the panel - rear gate from closing by using a prop or the like.

CAUTION:
If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the panel - rear gate with secure material to prevent injury or damage.



2) Remove the stay assembly - rear gate.
- Model without power rear gate
  1. Remove the mounting portion on the stay assembly - rear gate.
  2. Remove the mounting bolts on the body side.

- Model with power rear gate

CAUTION:
Do not remove the stop ring completely. Raise it to the position enough to remove the ball stud.

1. Gently push the stop ring against the ball stud to be raised with a flat tip screwdriver.
2. Pull the stay assembly - rear gate toward you, and remove the stay assembly - rear gate from the ball stud.

B: INSTALLATION

1. REAR GATE PANEL

CAUTION:
The panel - rear gate is heavy. When removing and installing it, always work in a team of two or more persons.

1) Install the hinge - rear gate to the vehicle body.
2) Temporarily install the panel - rear gate to the hinge - rear gate.

NOTE:
When installing, make sure that a uniform clearance is created around the panel - rear gate.

3) Adjust the clearance around the panel - rear gate. <Ref. to EB-65, ADJUSTMENT, Rear Gate.>
4) Tighten the bolts of the hinge - rear gate.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

5) Install the stay assembly - rear gate.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-7, REAR GATE, COMPONENT, General Description.>

6) Install the harness clip and the harness.
7) Install the light assembly - rear finisher. <Ref. to LI-58, OUTBACK MODEL, INSTALLATION, Rear Finisher Light Assembly.>

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

8) Install the license plate light. <Ref. to LI-63, OUTBACK MODEL, INSTALLATION, License Plate Light.>
9) Install the rearview camera assembly. <Ref. to ET-55, OUTBACK MODEL, INSTALLATION, Rearview Camera System.>
10) Install the rear gate garnish. <Ref. to EI-66, INSTALLATION, Rear Gate Garnish.>

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

11) Install the nozzle - rear washer.
12) Install the roof spoiler. <Ref. to EI-66, INSTALLATION, Rear Gate Garnish.>

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

13) Install the antenna assembly - radio.

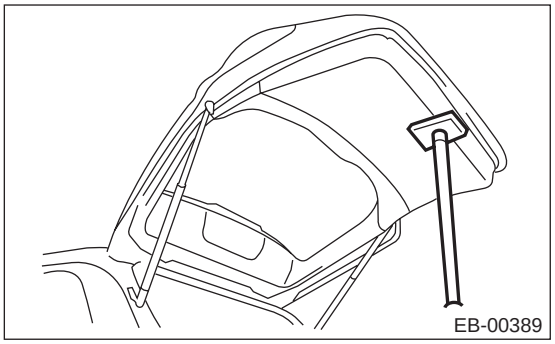
Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

14) Install the power rear gate touch sensor. (Model with power rear gate) <Ref. to PRG-16, INSTALLATION, Power Rear Gate Touch Sensor.>
15) Install the motor assembly - rear wiper and the arm assembly - rear wiper. <Ref. to WW-43, INSTALLATION, Rear Wiper Motor.>

Tightening torque:
Motor assembly - rear wiper and arm assembly - rear wiper: <Ref. to WW-3, REAR WIPER, COMPONENT, General Description.>

16) Install the rear antenna assembly - exterior. (Model with keyless access with push button start)
17) Attach the buffer - rear gate and the stopper - rear gate.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-7, REAR GATE, COMPONENT, General Description.>



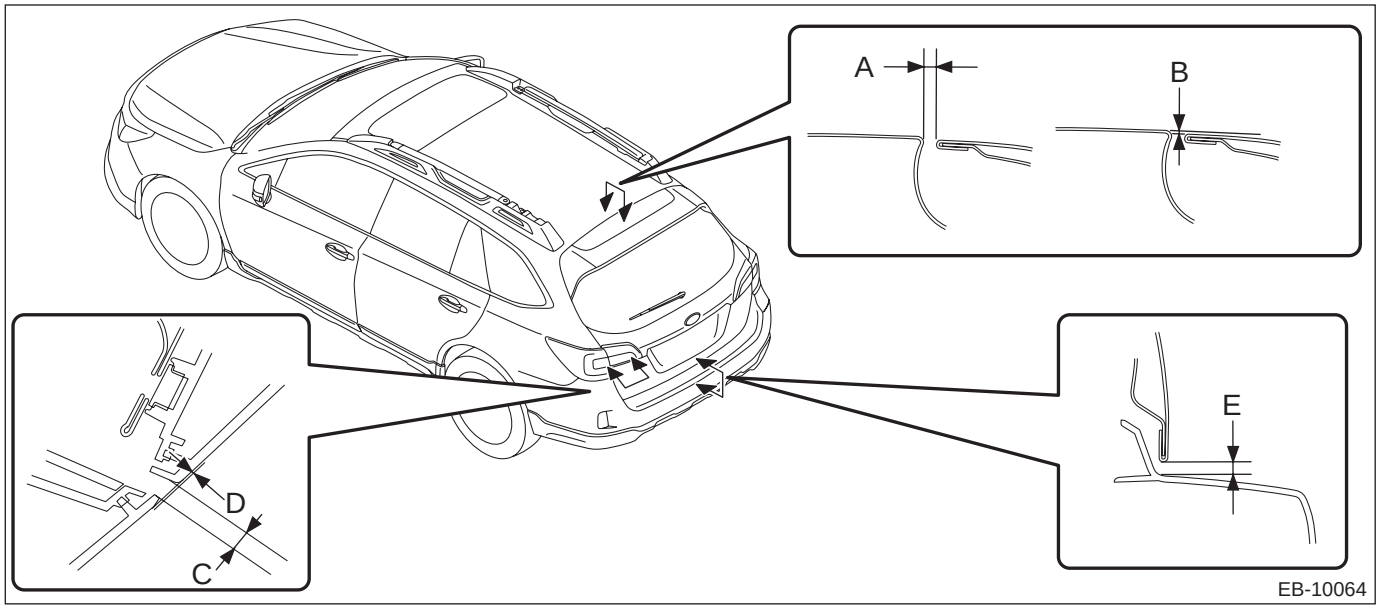
18) Install the latch and actuator - rear gate. <Ref. to SL-50, INSTALLATION, Rear Gate Latch and Actuator Assembly.>

Tightening torque
25 N·m (2.5 kgf-m, 18.4 ft-lb)
19) Install the trim panel - rear gate. <Ref. to EI-125, INSTALLATION, Rear Gate Trim.>
20) Install the rod - power rear gate. <Ref. to PRG-10, INSTALLATION, Power Rear Gate Rod.>
21) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>

2. REAR GATE DAMPER STAY

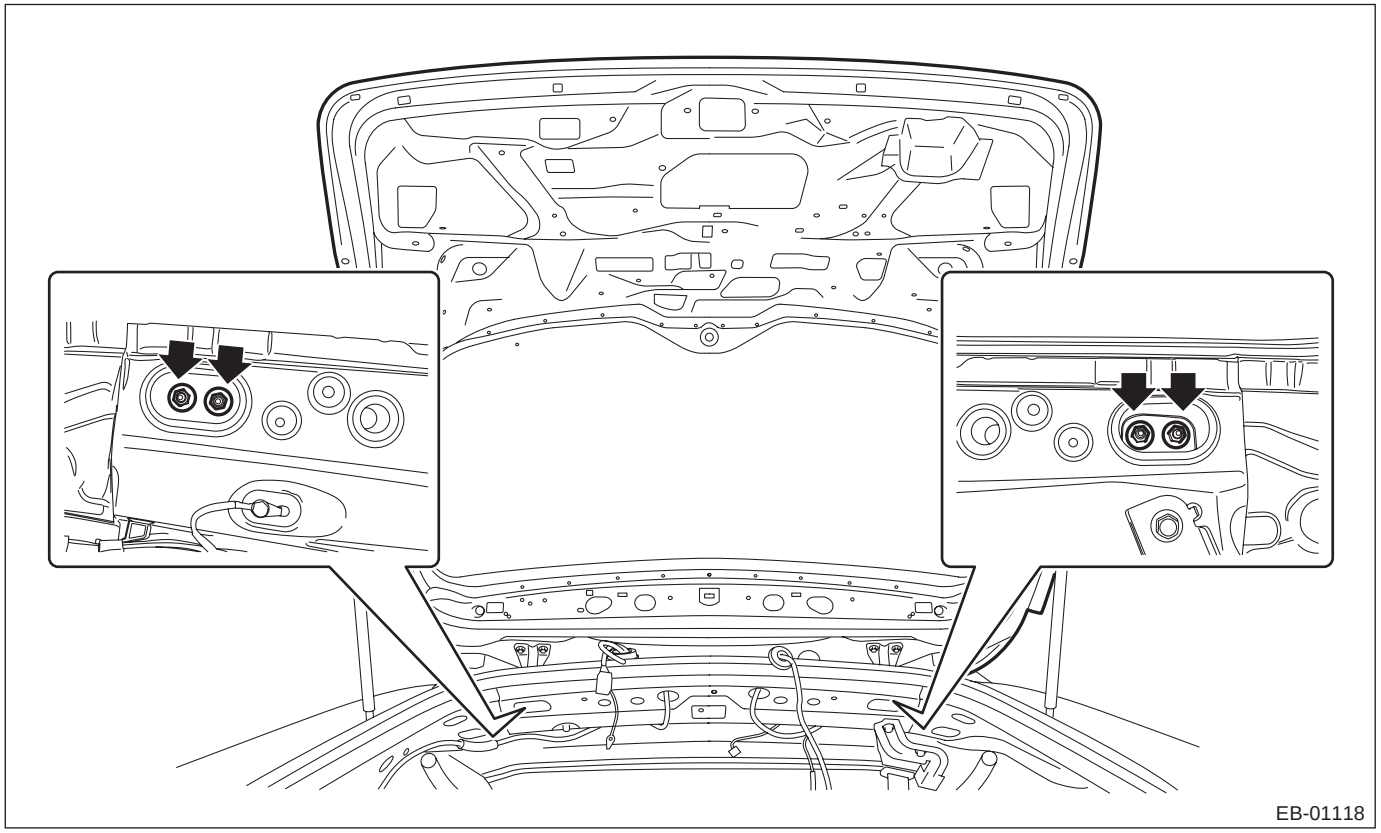
CAUTION:
The panel - rear gate is heavy. When removing and installing it, always work in a team of two or more persons.
1) Prevent the panel - rear gate from closing using prop or the like.

CAUTION:
If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the panel - rear gate with secure material to prevent injury or damage.



2) Install the stay assembly - rear gate.

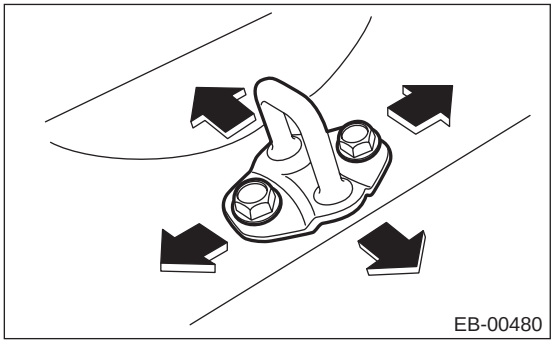
Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-7, REAR GATE, COMPONENT, General Description.>



C: ADJUSTMENT

Adjust the clearance around the panel - rear gate as follows.

Part		Standard
A	Panel - rear gate to Roof panel	6.6+1.5, –1 mm (0.26+0.06, –0.04 in)
B	Surface level gap: Panel - rear gate to Roof panel	0.5+0.5, –1.5 mm (0.02+0.02, –0.06 in)
C	Finisher - light to Rear combination light	4.8±2 mm (0.19±0.08 in)
D	Surface level gap: Finisher - light to Rear combination light	0±1.6 mm (0±0.06 in)
E	Panel - rear gate to Bumper face - rear	8±1.5 mm (0.31±0.06 in)



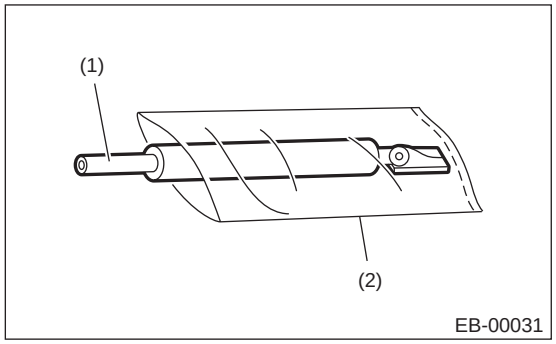
1) Adjust the vertical and horizontal positions of the panel - rear gate.

(1) Loosen the mounting bolts of the hinge - rear gate.
(2) Adjust the vertical and horizontal clearance of the panel - rear gate.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Adjust the surface level gap between the panel - rear gate and the body.

(1) Remove the trim panel - rear skirt.
(2) Loosen the bolt.
(3) Tap the striker - rear gate using a plastic hammer to adjust the surface level gap between the panel - rear gate and the body.

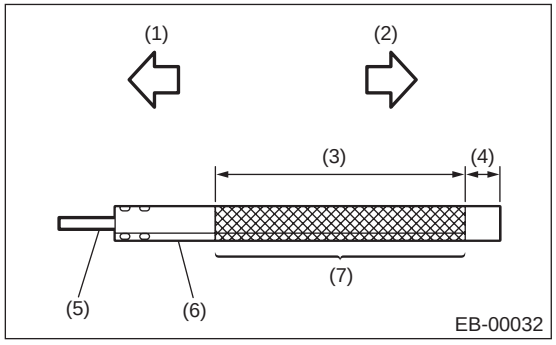


Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

D: DISPOSAL

1. REAR GATE DAMPER STAY

CAUTION:
Gas is colorless, odorless, and harmless. However, gas pressure may spray cutting powder or oil. Be sure to wear dust-resistant goggles.



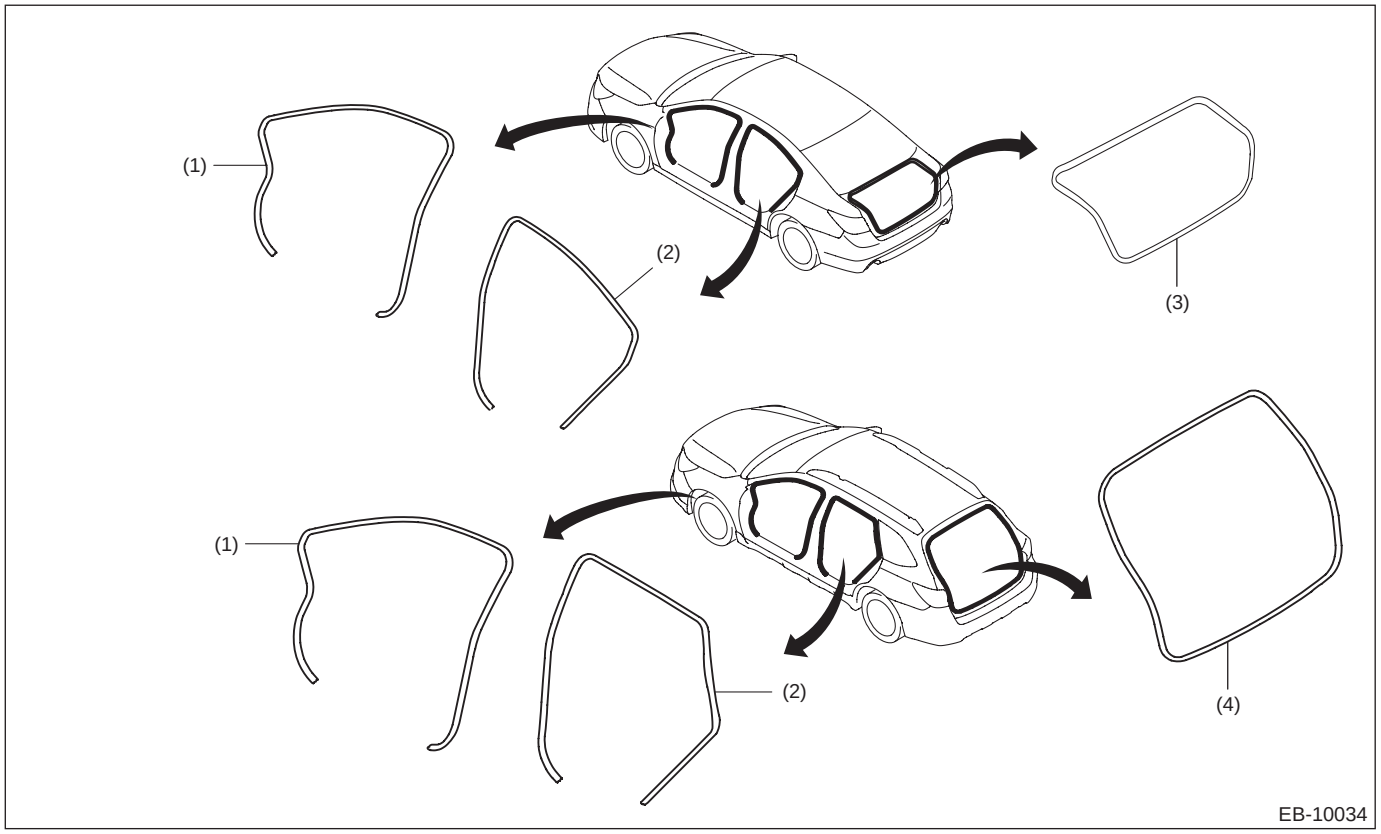
1) Cover with a vinyl sack as shown in the figure.

(1) Stay ASSY - rear gate
(2) Vinyl sack

NOTE:
Prevent the vinyl sack from being caught by drill cutting edge.

2) Lift the body side slightly with piston rods fully extended, and secure the body side with vise.
Drill a hole of 2 to 3 mm (0.08 to 0.12 in) diameter at a point 6 to 196 mm (0.24 to 7.72 in) from the body side, and bleed the gas in the rear gate damper stay completely.

(1) Door side
(2) Body side
(3) 196 mm (7.72 in)
(4) 6 mm (0.24 in)
(5) Piston rod
(6) Cylinder
(7) Portion to be drilled



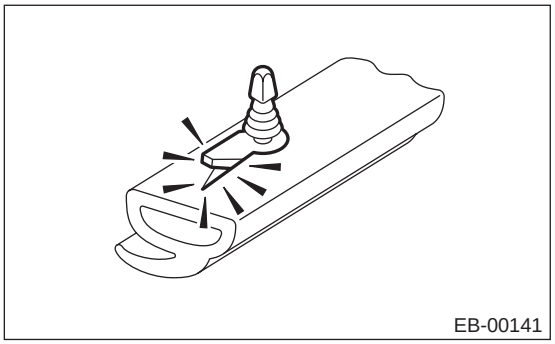
11.Weather Strip

A: REPLACEMENT

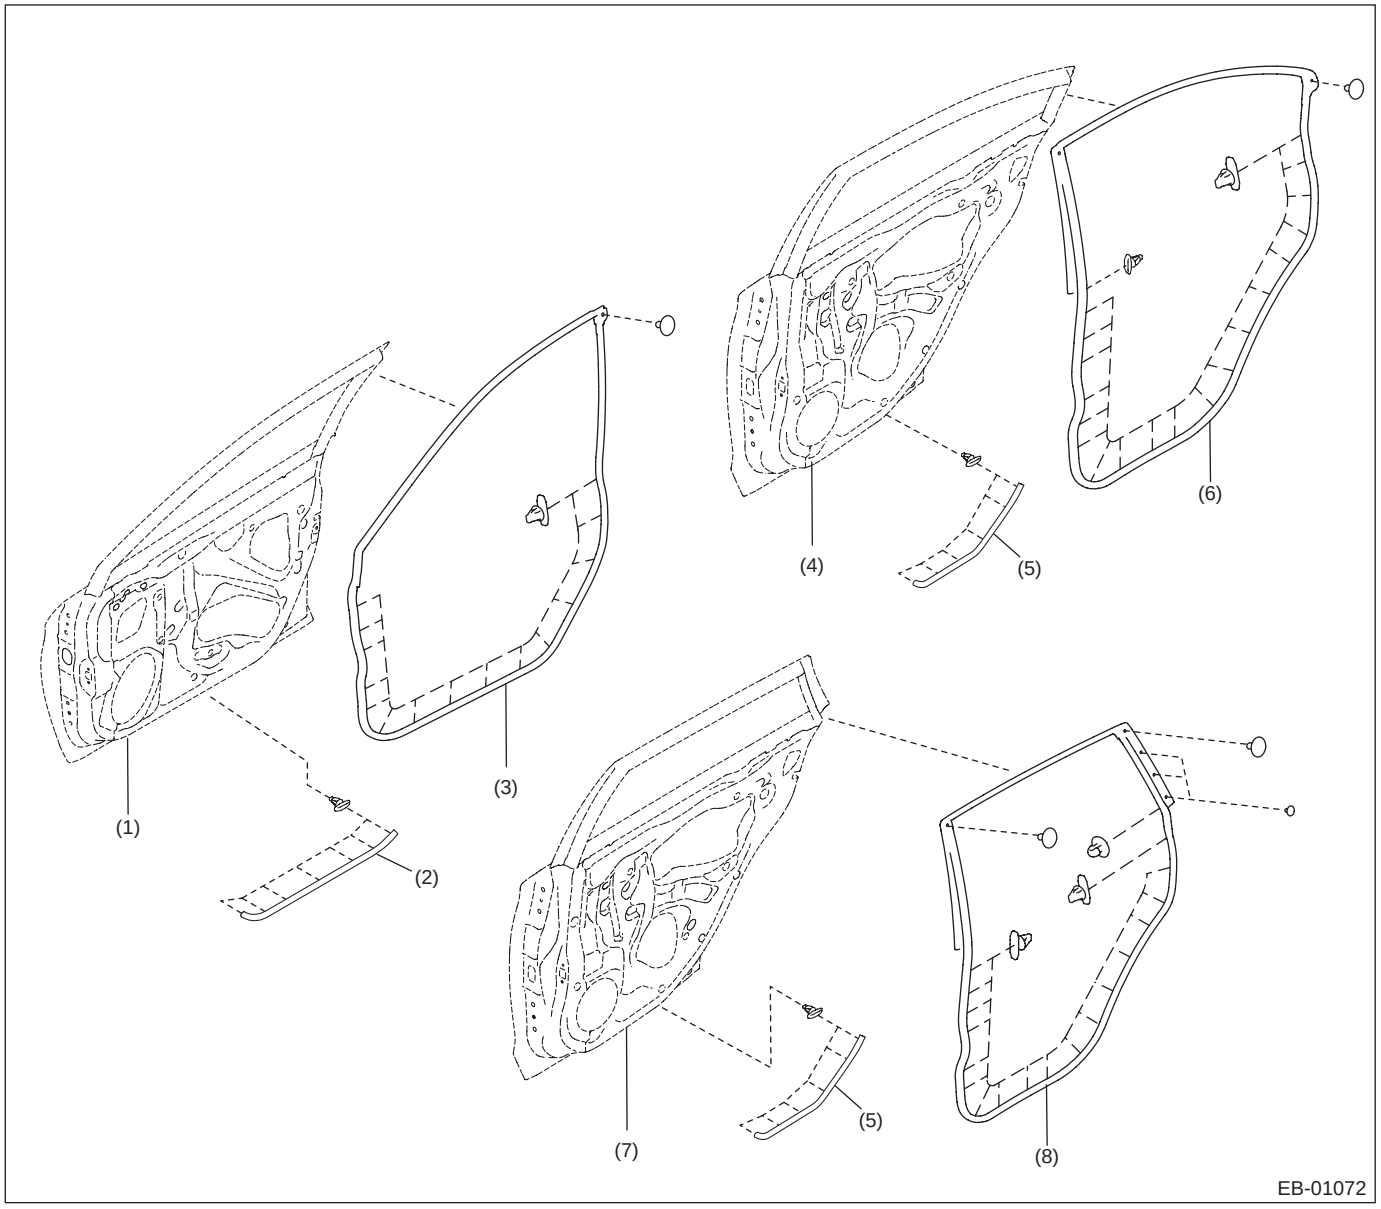
1. FLANGE

1) Remove the weather strip - body side flange while pulling the rubber. Be careful not to tear the rubber.
2) Replace the weather strip - trunk lid while pulling the rubber. Be careful not to tear the rubber.

NOTE:
While removing the weather strip - trunk lid, be careful not to allow adhesive to contact the trim panel - roof assembly and trim panel - trunk side.



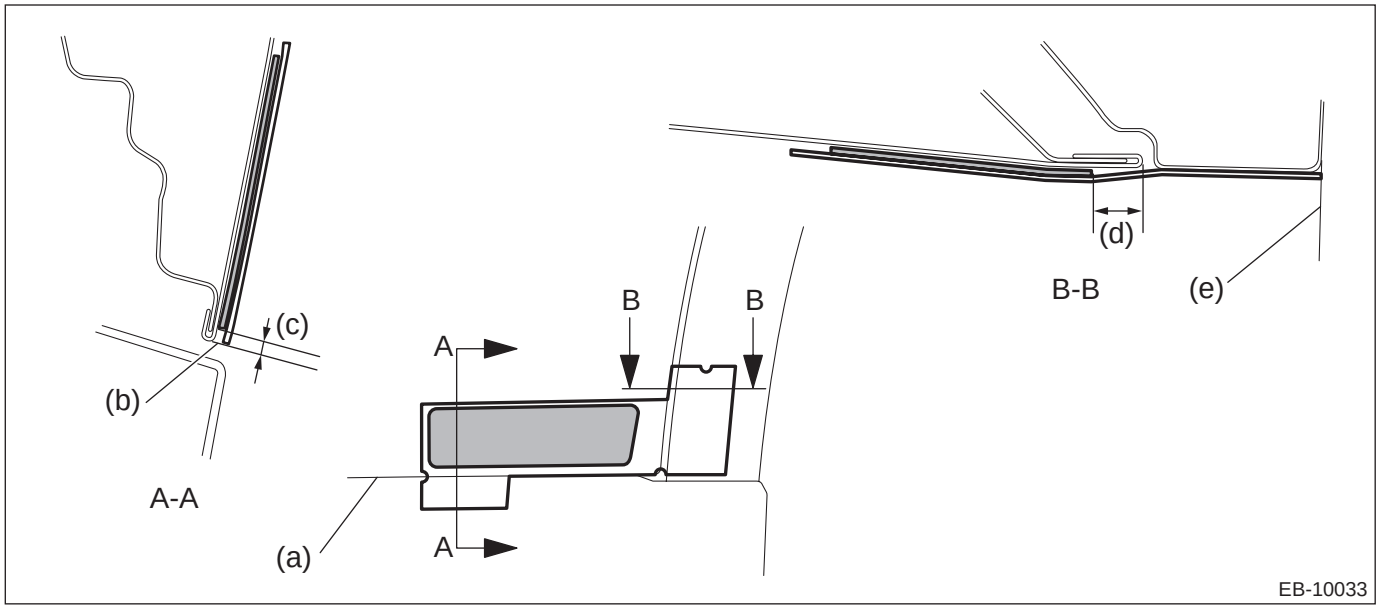
(1) Weather strip - body side flange front
(2) Weather strip - body side flange rear
(3) Weather strip - trunk lid (sedan model)
(4) Weather strip - rear gate (OUTBACK model)



2. DOOR

1) Remove the weather strip after removing the clip. Be careful not to tear the rubber.

CAUTION:
If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use clip remover to remove.



Weather Strip

(1) Panel ASSY - front door
(2) Weather strip - front door LWR
(3) Weather strip - front door
(4) Panel ASSY - rear door (sedan model)
(5) Weather strip - rear door LWR
(6) Weather strip - rear door (sedan model)
(7) Panel ASSY - rear door (OUTBACK model)
(8) Weather strip - rear door (OUTBACK model)

12.Protector Tape

A: INSTALLATION

(a) Panel ASSY - rear door end

(b) Push the application tape end against the panel assembly - rear door end.

(c) 4 mm $^{+0\ mm}_{-4\ mm}$ (0.16 in $^{+0\ in}_{-0.16\ in}$)

(d) 14.4±4 mm (0.57±0.16 in)

(e) Push the application tape end against the panel assembly - rear door end.

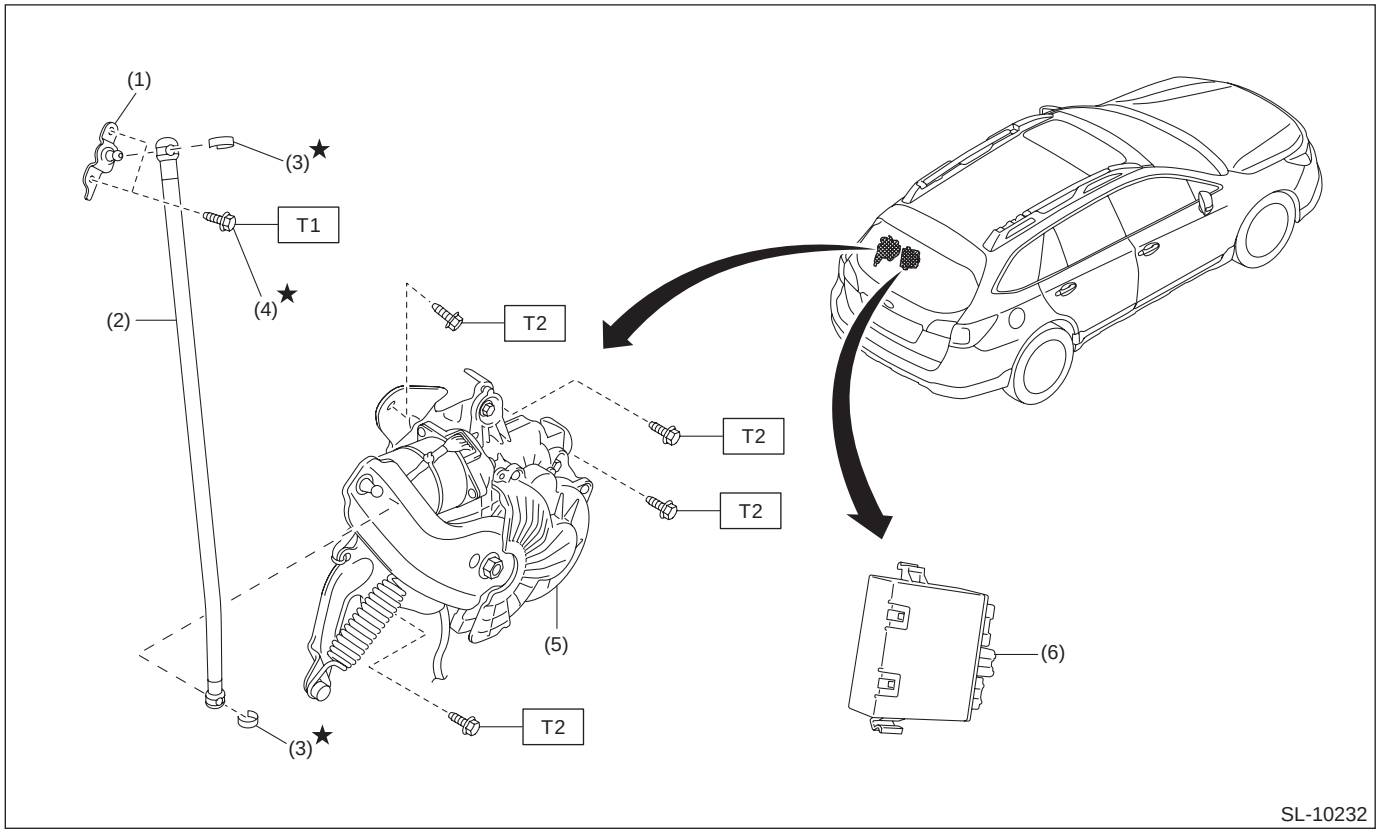
1) Clean the area around applying position to remove any foreign objects on body.
2) Detach the backing papers from the protector tape and moisten the attaching area and protector tape backside by spraying liquid (mild detergent solution at 3% concentration).
3) Apply the protector tape to the vehicle body.

CAUTION:
Remove the water or air bubbles out of the protector tape by using the plastic or rubber spatula.
4) Detach the application tape and temporary retention tape.

POWER REAR GATE SYSTEM

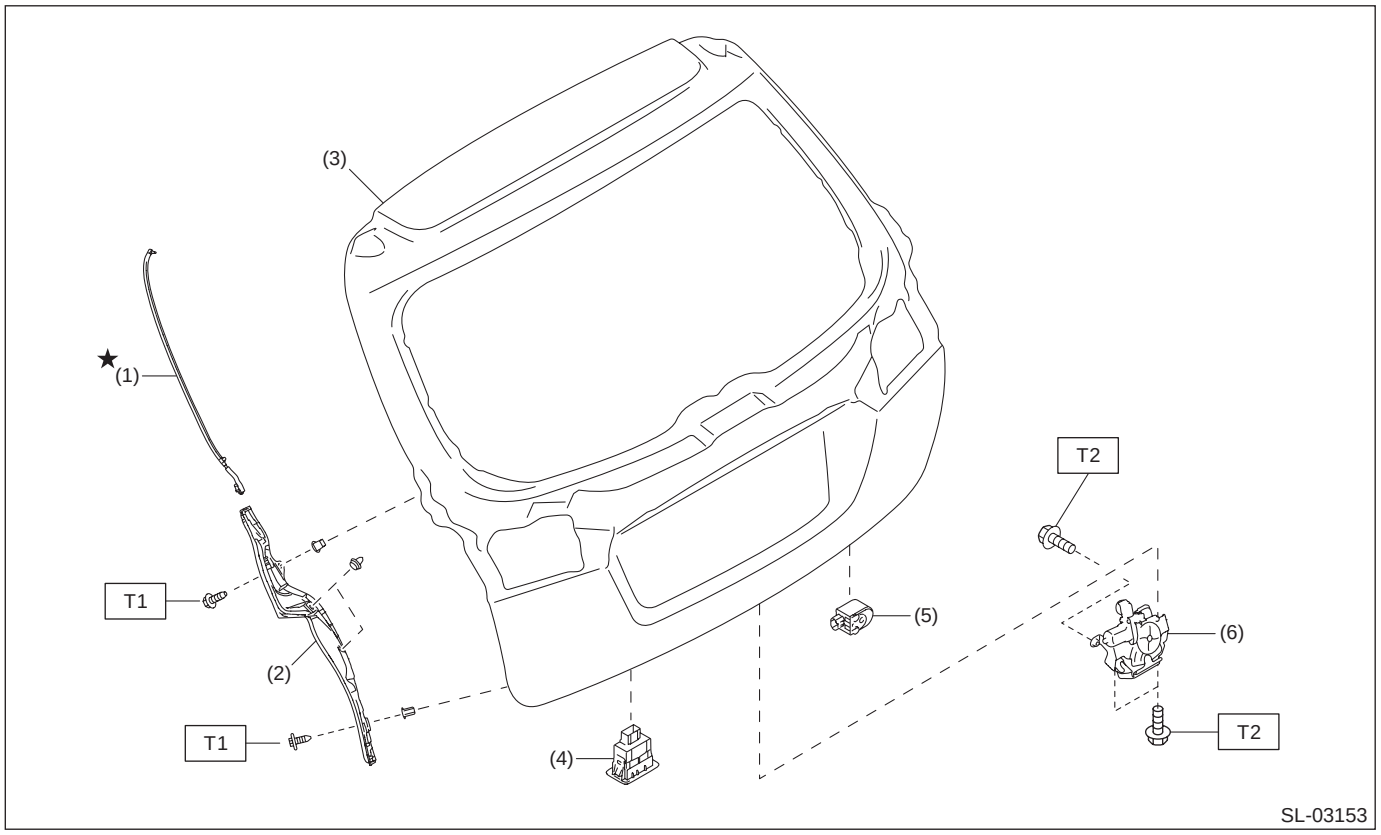
PRG

		Page
1.	General Description	2
2.	Relay and Fuse	4
3.	Power Rear Gate System	5
4.	Power Rear Gate Control Module	6
5.	Power Rear Gate Drive Unit	8
6.	Power Rear Gate Rod	9
7.	Power Rear Gate Auto Closer	11
8.	Power Rear Gate Touch Sensor	15
9.	Power Rear Gate Buzzer	17
10.	Power Rear Gate Inner Switch	18
11.	Power Rear Gate Driver's Switch	19
12.	Memory Height Switch	20
13.	Rear Gate Opener Button	21
14.	Body Integrated Unit	22
15.	Diagnostics with Phenomenon	23



1. General Description

A: LOCATION



Refer to “LOCATION” in the “POWER REAR GATE SYSTEM (DIAGNOSTICS)” section. <Ref. to PRG(diag)-5, LOCATION, Electrical Component Location.>

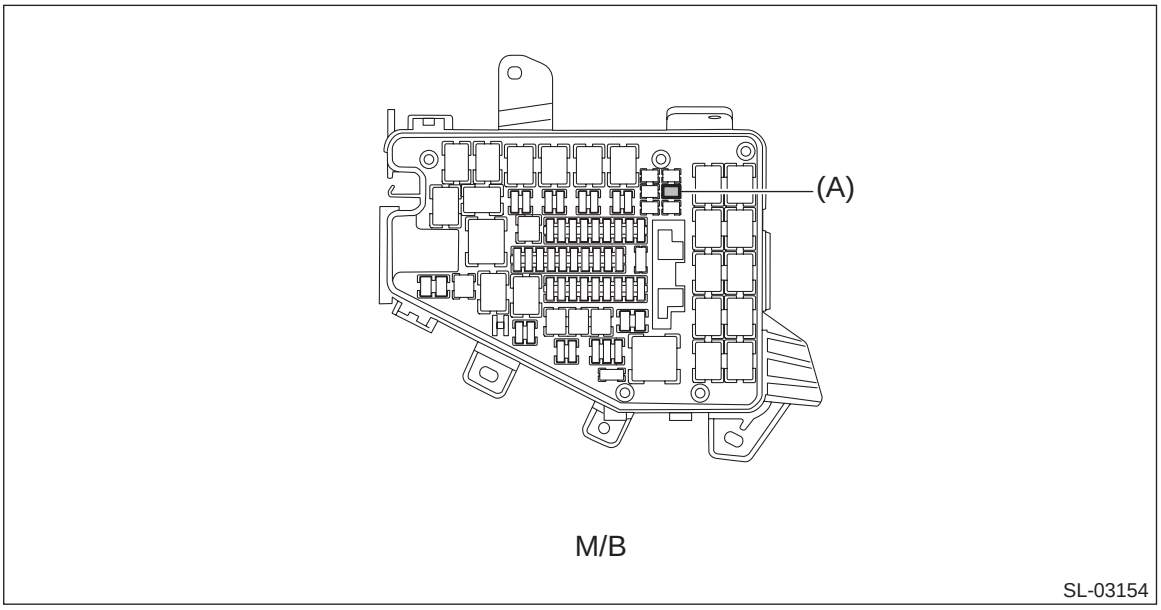
B: COMPONENT

1. UNIT AND REAR GATE

(1)	Bracket rod - power rear gate	(4)	Flange bolt	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Rod - power rear gate	(5)	Power rear gate drive unit (PRG D/U)	***T1: 16 (1.6, 11.4)***
(3)	Stop ring	(6)	Power rear gate control module (PRG CM)	***T2: 25 (2.5, 18.4)***

(1)	Power rear gate touch sensor UPR	(4)	Power rear gate inner switch	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Power rear gate touch sensor LWR	(5)	Power rear gate buzzer	***T1: 1.5 (0.2, 1.1)***
(3)	Panel - rear gate	(6)	Power rear gate auto closer	***T2: 25 (2.5, 18.4)***

C: CAUTION



• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
• After reassembly, close the rear gate and then connect the battery ground cable. Initialization of the power rear gate auto closer is necessary, when connection is performed with the rear gate open. <Ref. to PRG-5, INITIALIZATION, PROCEDURE, Power Rear Gate System.>

D: PREPARATION TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

2. Relay and Fuse

A: LOCATION

Main fuse box (M/B)	Fuse 30 A (power rear gate control module)	(A)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-22, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

3. Power Rear Gate System

A: WIRING DIAGRAM

Refer to “Power Rear Gate System” in the wiring diagram. <Ref. to WI-298, WIRING DIAGRAM, Power Rear Gate System.>

B: INSPECTION

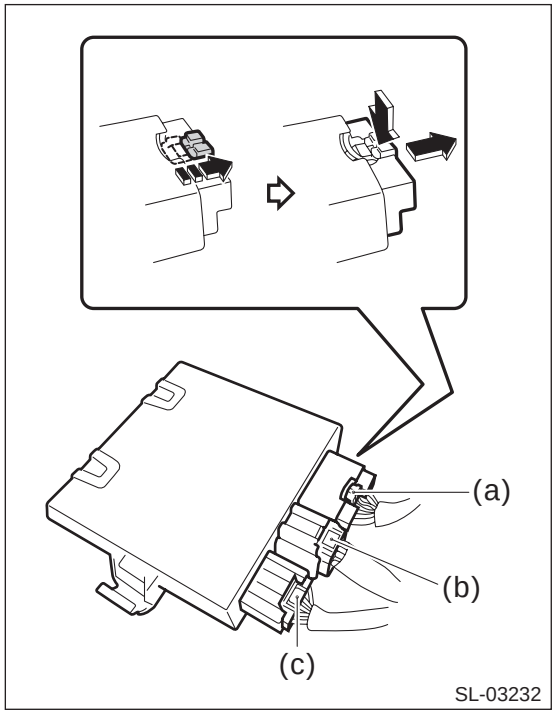
Refer to “Basic Diagnostic Procedure” of “POWER REAR GATE SYSTEM (DIAGNOSTICS)”. <Ref. to PRG(diag)-2, Basic Diagnostic Procedure.>

C: PROCEDURE

1. INITIALIZATION

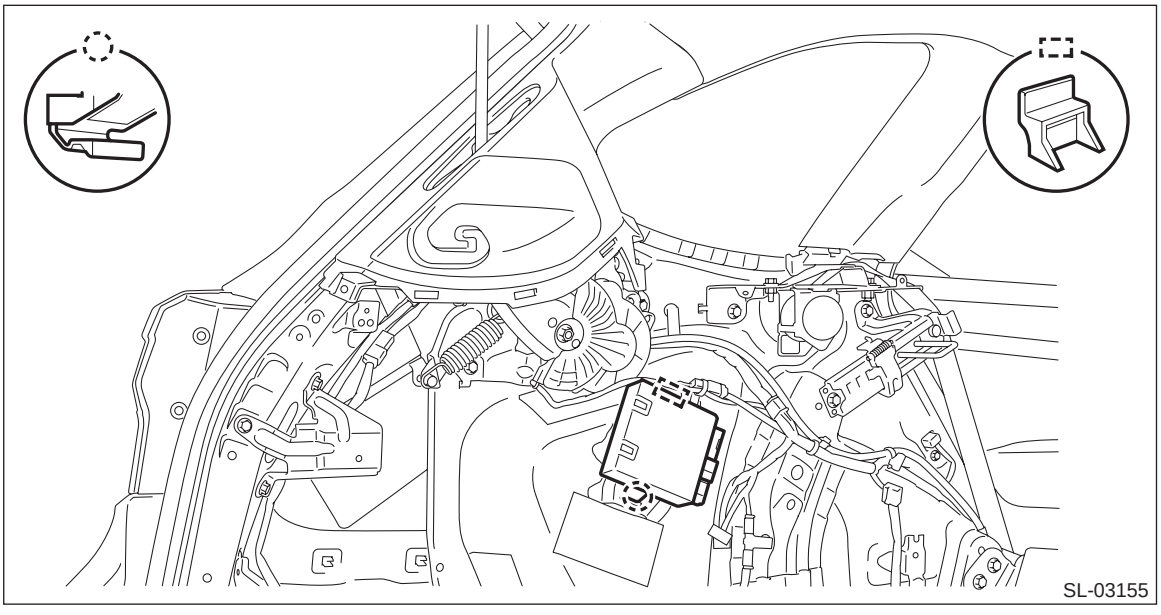
NOTE:
Perform the initialization of the power rear gate auto closer, if the battery ground cable is connected with the rear gate open. Initialization is not required when the battery ground cable is connected with the rear gate closed.
1) Turn the ignition switch to OFF.
2) Close the rear gate slowly, and release the hold of rear gate after a clicking sound is heard when the latch is engaged halfway.
3) The auto closer function then operates and pulls the rear gate to engage fully.
4) Operate the power rear gate switches after the rear gate is closed fully to check that automatic open/close of the power rear gate operates normally. If the power rear gate still does not operate properly, perform the following diagnostic procedures. <Ref. to PRG(diag)-2, Basic Diagnostic Procedure.>

D: NOTE



For procedure of each component in the power rear gate system, refer to the respective section.
- Power rear gate control module (PRG CM): <Ref. to PRG-6, Power Rear Gate Control Module.>
- Power rear gate drive unit (PRG D/U): <Ref. to PRG-8, Power Rear Gate Drive Unit.>
- Power rear gate rod: <Ref. to PRG-9, Power Rear Gate Rod.>
- Power rear gate auto closer: <Ref. to PRG-11, Power Rear Gate Auto Closer.>
- Power rear gate touch sensor: <Ref. to PRG-15, Power Rear Gate Touch Sensor.>
- Power rear gate buzzer: <Ref. to PRG-17, Power Rear Gate Buzzer.>
- Power rear gate inner switch: <Ref. to PRG-18, Power Rear Gate Inner Switch.>
- Power rear gate driver’s switch: <Ref. to PRG-19, Power Rear Gate Driver’s Switch.>
- Memory height switch: <Ref. to PRG-20, Memory Height Switch.>
- Power rear gate opener button (PRG): <Ref. to PRG-21, Rear Gate Opener Button.>
- Body integrated unit: <Ref. to PRG-22, Body Integrated Unit.>

4. Power Rear Gate Control Module



A: REMOVAL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear apron LH. <Ref. to EI-102, REMOVAL, Rear Quarter Trim.>
3) Remove the power rear gate control module (PRG CM).
   (1) Disconnect the connectors in the following order.
   1: Disconnect the connector (b).
   2: Pull the slide lock in the arrowed direction, and disconnect the connector (a) by pressing in the lock.
   3: Disconnect the connector (c).

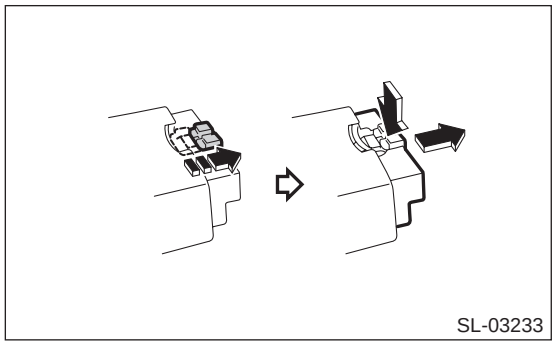
NOTE:
When the connectors are not disconnected in the sequence, a diagnosis code (DTC) may be detected.

(2) Release the lock and hook, and remove the power rear gate control module (PRG CM).

B: INSTALLATION

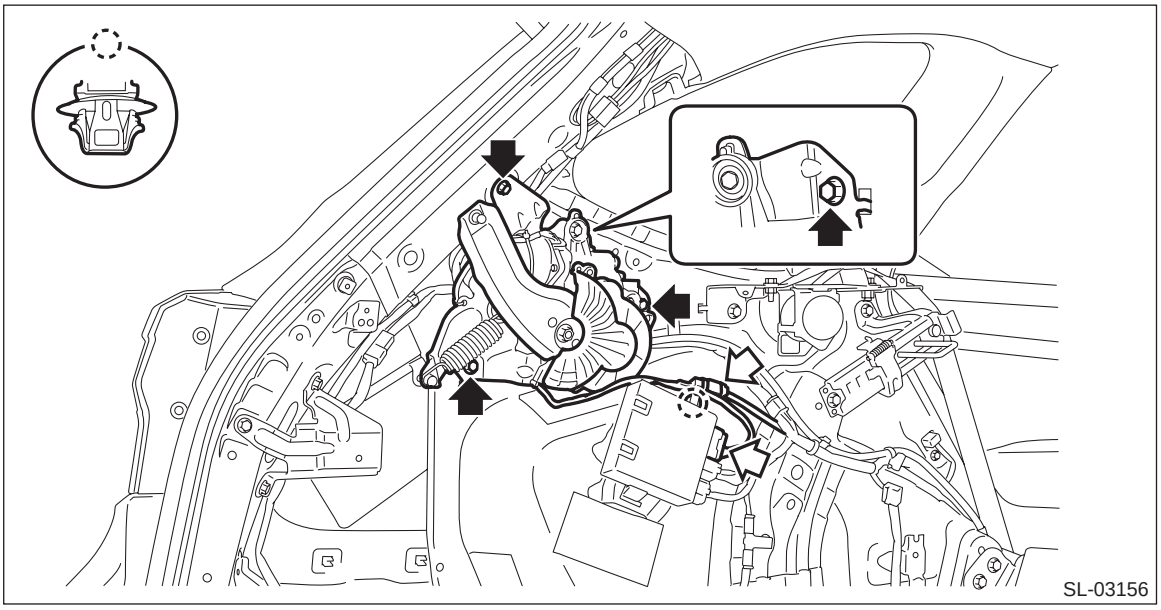
1) Install the power rear gate control module (PRG CM).

NOTE:
Connect the connectors in reverse order of removal.



2) Install the trim panel - rear apron LH.
3) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>

5. Power Rear Gate Drive Unit



A: REMOVAL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the rod - power rear gate. <Ref. to PRG-9, REMOVAL, Power Rear Gate Rod.>
3) Remove the trim panel - rear apron LH and trim panel - rear quarter pillar UPR rear LH PRG. <Ref. to EI-102, REMOVAL, Rear Quarter Trim.>
4) Remove the power rear gate drive unit (PRG D/U).
   (1) Remove the harness clip, and disconnect the connector.

NOTE:
Pull the slide lock in the arrowed direction, and disconnect the PRG CM connector by pressing in the lock.

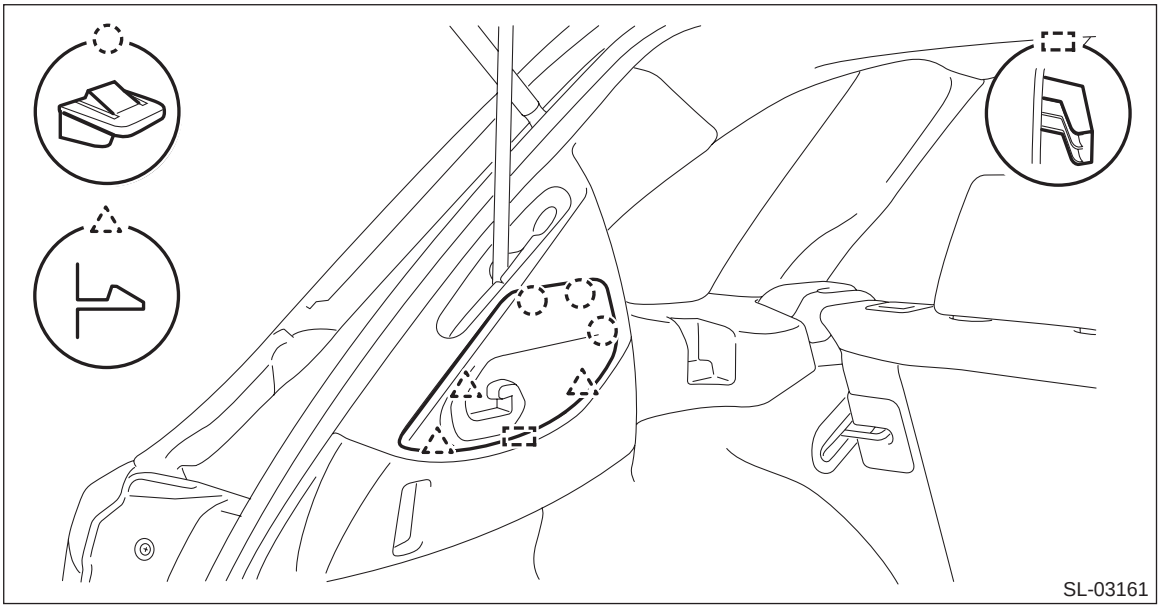
SL-03233

(2) Remove the bolts, and then remove the power rear gate drive unit (PRG D/U).

SL-03156

B: INSTALLATION

1) Install the power rear gate drive unit (PRG D/U).

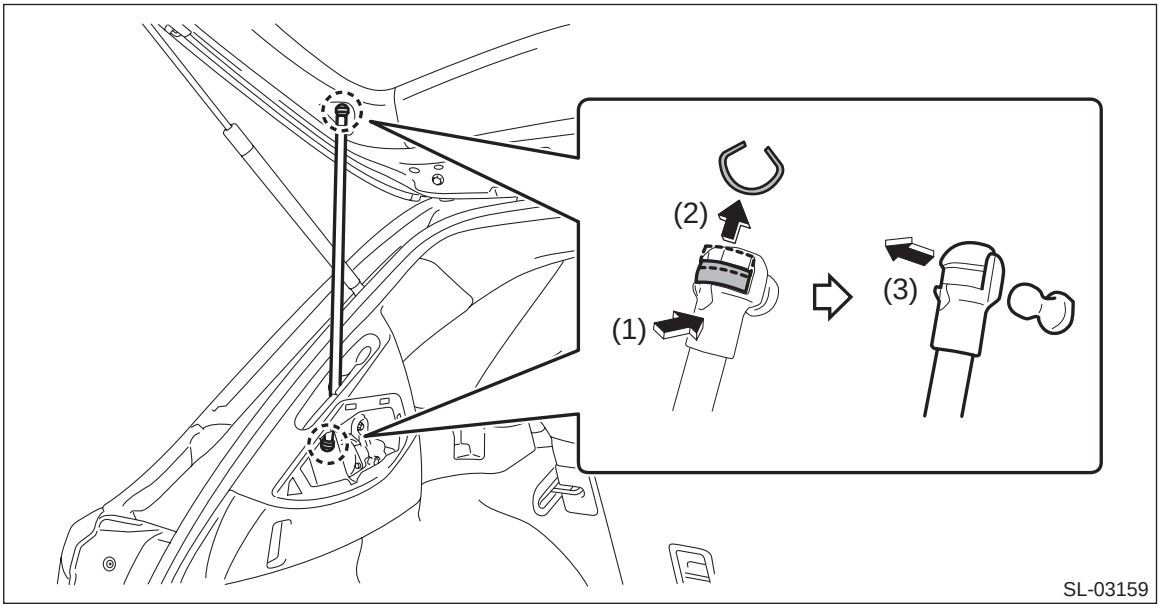


Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Install the trim panel - rear apron LH and trim panel - rear quarter pillar UPR rear LH PRG.
3) Install the rod - power rear gate. <Ref. to PRG-10, INSTALLATION, Power Rear Gate Rod.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>

6. Power Rear Gate Rod

A: REMOVAL

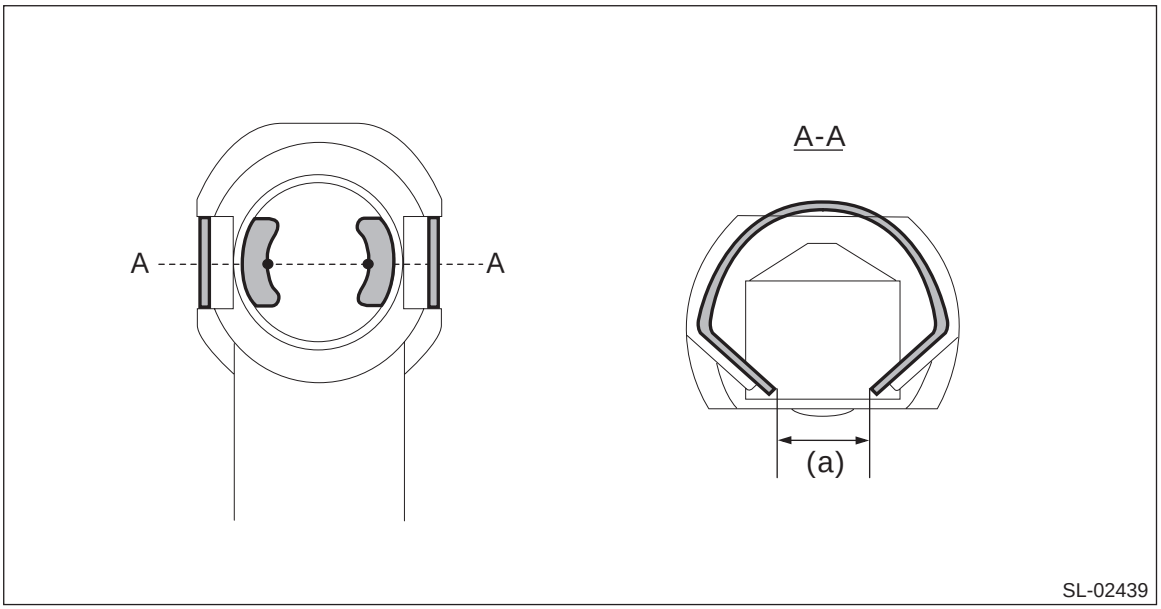


1) Hold the rear gate to the fully open position.
2) Disconnect the ground terminal from battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
3) Release the claws and then remove the cover - rear quarter pillar PRG.

4) Remove the rod - power rear gate.

CAUTION:
• Using a small flat tip screwdriver wrapped with protective tape, remove the part by gradually applying force.
• When the rod - power rear gate is removed, it could lead to abnormal play or noise. Therefore, always replace the stop ring with a new part. Also, be sure to check the clearance of the stop ring before installing. <Ref. to PRG-10, INSTALLATION, Power Rear Gate Rod.>

(1) Press down the rod - power rear gate to the ball stud (bracket rod - power rear gate).
(2) With the rod pressed, remove the stop ring while sliding along the ball housing groove.
(3) Disconnect the rod - power rear gate from the ball stud (bracket rod - power rear gate).

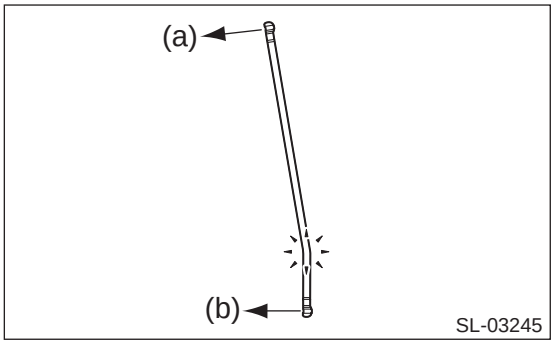


B: INSTALLATION

1) Install the new stop ring to the rod - power rear gate.

CAUTION:
- **Do not reuse the stop ring.**
- **Align the stop ring to the ball housing groove, and attach the ring by gradually applying force, while paying attention not to deform it.**

2) Check the clearance (a) of the stop ring.



Specification:

6.4 — 7.2 mm (0.25 — 0.28 in)

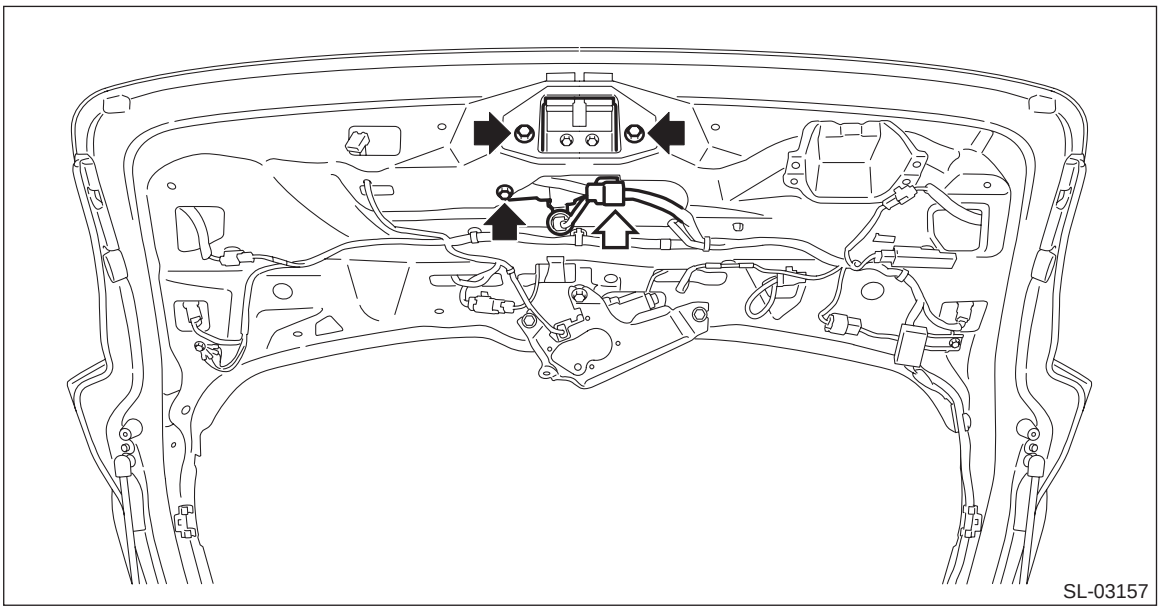
Replace the stop ring if the inspection result is not within the standard value.

3) Install the rod - power rear gate.

CAUTION:
- **Do not install the battery sensor ground terminal before installing the rod. If the power rear gate drive unit moves by wrong operation of the switch, the installation of the rod may be no longer possible.**
- **Check that the stop ring and ball stud are vertically placed, and then slowly press in the rod.**
- **Install the rod with its angular end facing downward.**

(a) Rear gate side
(b) PRG D/U side

4) Install the cover - rear quarter pillar PRG.
5) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>



C: INSPECTION

Check the ball housing and ball stud (bracket rod - power rear gate) of the rod - power rear gate for excessive play, wear or bent. Replace the rod - power rear gate if defective.

7. Power Rear Gate Auto Closer

A: REMOVAL

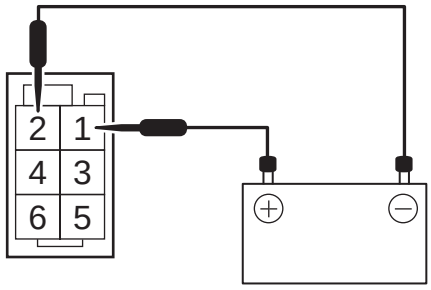
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-124, REMOVAL, Rear Gate Trim.>
3) Remove the power rear gate auto closer.
   (1) Disconnect the connector.
   (2) Remove the bolts, and then remove the power rear gate auto closer.

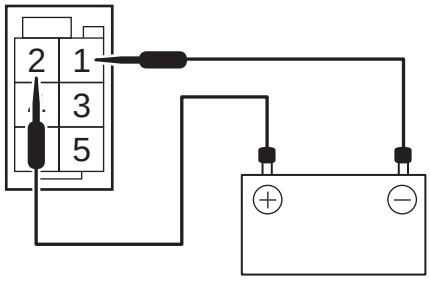
B: INSTALLATION

1) Install the power rear gate auto closer.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Install the trim panel - rear gate.
3) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>





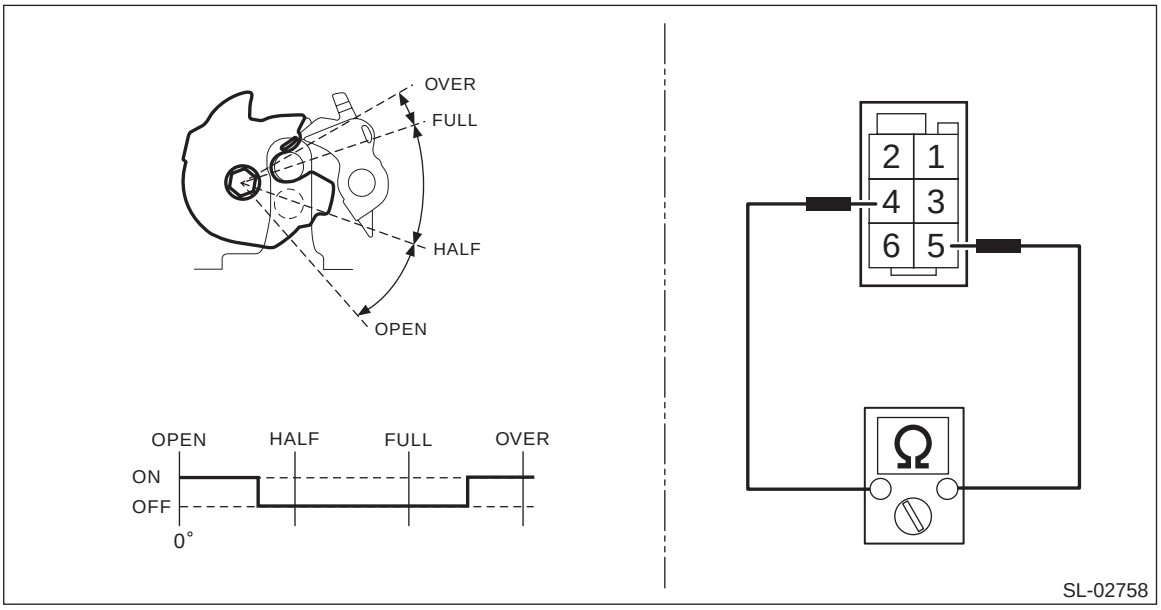
C: INSPECTION

1. LATCH

Pull the emergency lever to check that the latch operates properly.
If latch deformation, abnormal wear, or unsmooth lock operation is observed, replace the power rear gate auto closer.

2. ACTUATOR

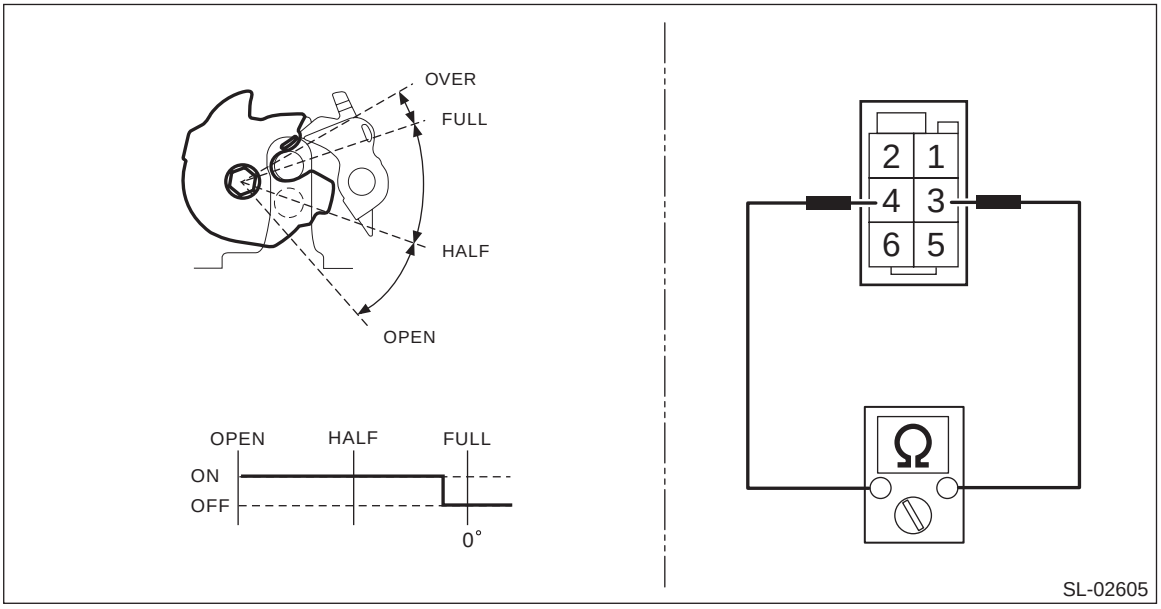
1) Check motor operation
(1) Check the motor operation when battery voltage is applied between the terminals of motor.



Terminal No.	Inspection conditions	Specification	Connection diagram
1 (+) — 2 (–)	Connect battery to the terminals	CLOSE rotation	 SL-02432
2 (+) — 1 (–)		OPEN rotation	 SL-02431

(2) After the motor operation check is completed, perform initialization of the sector switch in the following procedures.
1. Operate the motor in the OPEN direction for approximately 2 seconds.
2. Connect the connector of power rear gate auto closer.
3. Connect the ground terminal to the battery sensor with the rear gate fully open.

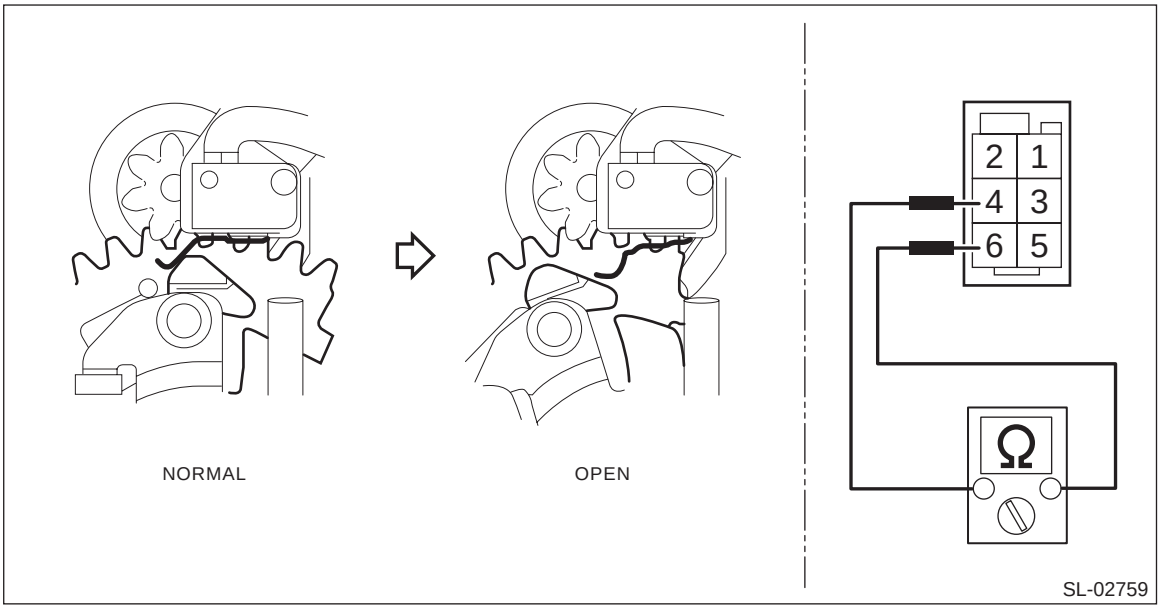
2) Check switch
(1) Check the resistance between switch terminals.



Preparation tool:
Circuit tester

- Latch switch

Terminal No.	Inspection conditions	Standard
5 — 4	OPEN	Less than 1 Ω
	HALF	10 kΩ or more
	FULL	10 kΩ or more
	OVER	Less than 1 Ω



- Courtesy switch

Terminal No.	Inspection conditions	Standard
3 — 4	OPEN	Less than 1 Ω
	HALF	Less than 1 Ω
	FULL	10 kΩ or more

- Sector switch

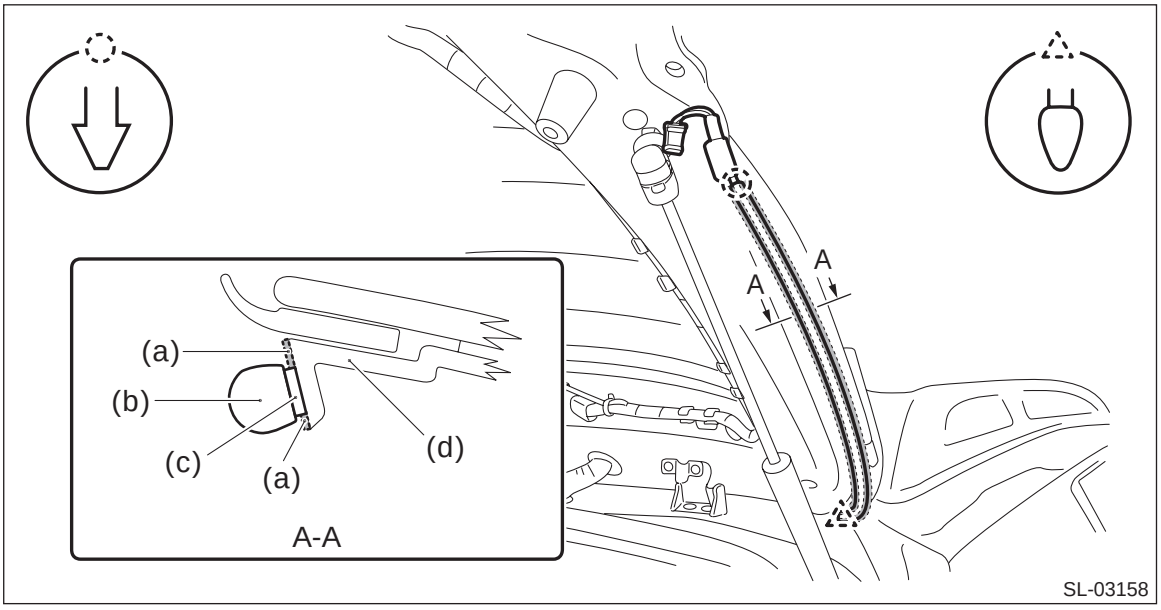
CAUTION:
Perform the check while operating the motor in the OPEN direction with the battery voltage applied between the terminals of motor. For detailed procedures, refer to 1) Check motor operation.

Terminal No.	Inspection conditions	Standard
4 — 6	Switch ON (NORMAL)	Less than 1 Ω
	Switch OFF (OPEN)	10 kΩ or more

(2) After the switch check is completed, perform initialization of the sector switch in the following procedures.
1. Operate the motor in the OPEN direction for approximately 2 seconds.
2. Connect the connector of power rear gate auto closer.
3. Connect the ground terminal to the battery sensor with the rear gate fully open.

3) Replace the power rear gate auto closer if it is found defective.

8. Power Rear Gate Touch Sensor



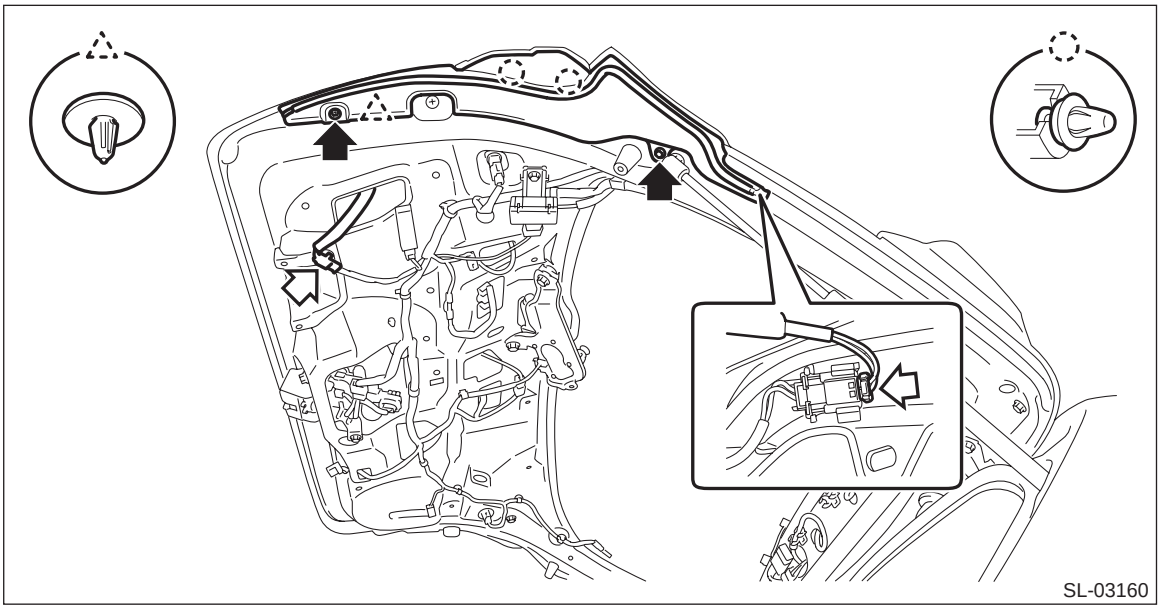
A: REMOVAL

1. TOUCH SENSOR UPR

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the touch sensor LWR. <Ref. to PRG-15, TOUCH SENSOR LWR, REMOVAL, Power Rear Gate Touch Sensor.>
3) Remove the power rear gate touch sensor UPR.

CAUTION:
• The touch sensor UPR can be removed only when it is defective because it is secured with double-sided tape.
• When removing the touch sensor UPR, be careful not to deform the touch sensor UPR bracket.
• Always replace the touch sensor UPR with a new part after removal.

(1) Affix masking tape on the touch sensor UPR bracket so that the tape runs along the touch sensor UPR.
(2) Remove the rubber clip and remove the power rear gate touch sensor UPR.



(a) Masking tape (area covered with tape)
(b) Touch sensor UPR
(c) Double-sided tape
(d) Touch sensor UPR bracket

2. TOUCH SENSOR LWR

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-124, REMOVAL, Rear Gate Trim.>
3) Remove the power rear gate touch sensor LWR.
(1) Remove the screws and clips.

(2) Disconnect the connector and remove the power rear gate touch sensor LWR.

B: INSTALLATION

1. TOUCH SENSOR UPR

1) Install the power rear gate touch sensor UPR.
(1) Clean the bracket surface of the touch sensor UPR to remove dust and dirt fully.
(2) Using a sponge, apply primer to the bracket surface of the touch sensor UPR that is not covered with masking tape.

CAUTION:
- **Do not apply primer beyond masking tape. This may cause discolored touch sensor UPR bracket.**
- **Dry the primered surface for approx. 10 minutes without touching it.**

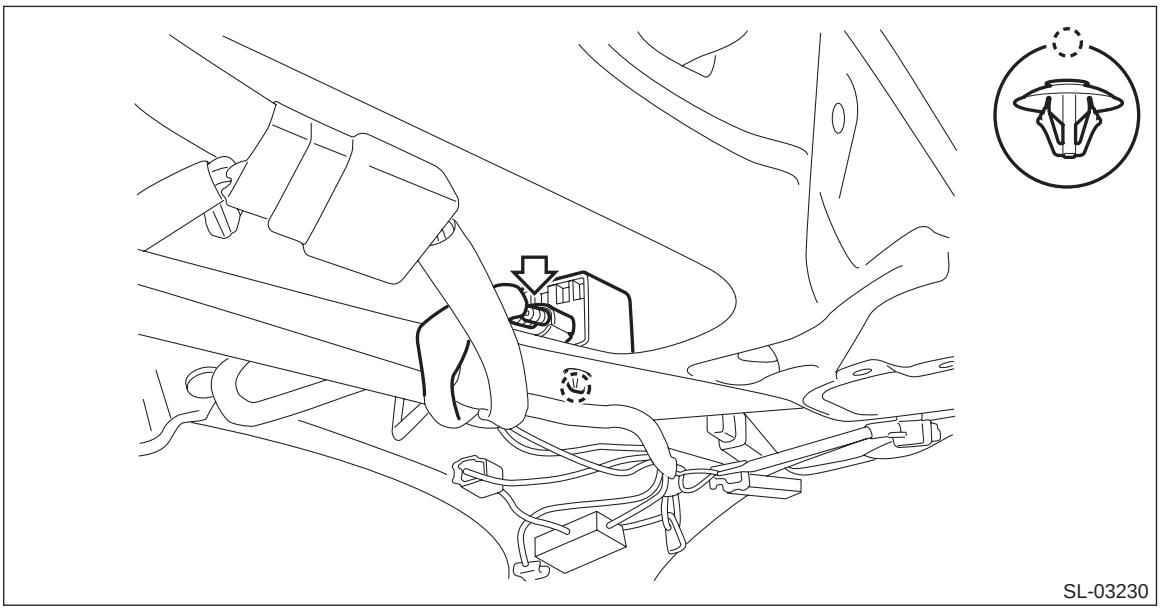
Preparation items:
Primer: 3M 4298-UV or equivalent
(3) Install the touch sensor UPR.

CAUTION:
When affix the touch sensor UPR, do not use tools.
1. Affix a new touch sensor UPR along the masking tape.
2. Press-fit the touch sensor UPR securely and remove the masking tape.

2) Install the power rear gate touch sensor LWR. <Ref. to PRG-16, TOUCH SENSOR LWR, INSTALLATION, Power Rear Gate Touch Sensor.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>

2. TOUCH SENSOR LWR

1) Install the power rear gate touch sensor LWR.



CAUTION:
- **Make sure the electrical connector is connected securely.**
- **When installing the touch sensor LWR, be careful not to get the connector or harness crimped or deformed.**

Tightening torque:
1.5 N·m (0.2 kgf-m, 1.1 ft-lb)
2) Install the trim panel - rear gate.
3) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>

9. Power Rear Gate Buzzer

A: REMOVAL

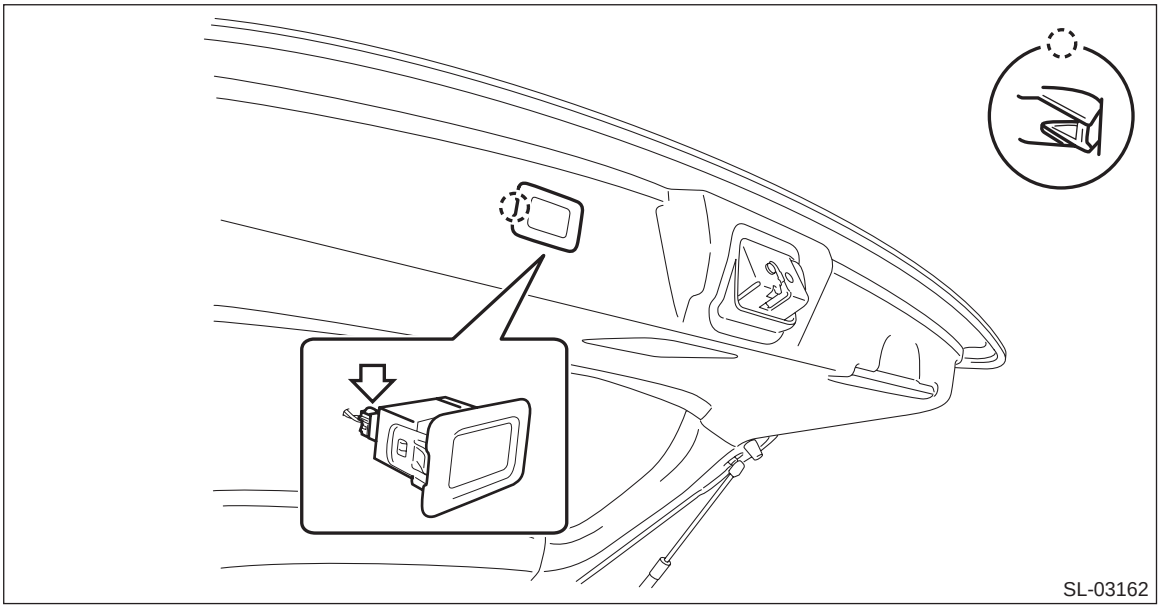
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-124, REMOVAL, Rear Gate Trim.>
3) Remove the power rear gate buzzer.
   (1) Disconnect the connector.
   (2) Release the claws, and then remove the power rear gate buzzer.

B: INSTALLATION

1) Install the power rear gate buzzer.
2) Install the trim panel - rear gate.
3) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

Refer to “Diagnostics with Phenomenon” in the “POWER REAR GATE SYSTEM (DIAGNOSTICS)” section. <Ref. to PRG(diag)-49, THE BUZZER DOES NOT SOUND, INSPECTION, Diagnostics with Phenomenon.>



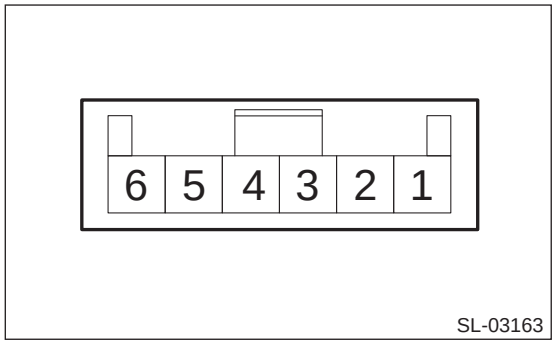
10.Power Rear Gate Inner Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the power rear gate inner switch.
   (1) Release the claws and pull out the power rear gate inner switch rearward.

NOTE:
Insert a flat tip screwdriver wrapped with protective tape into the slit on the left.

   (2) Disconnect the connector and remove the power rear gate inner switch.



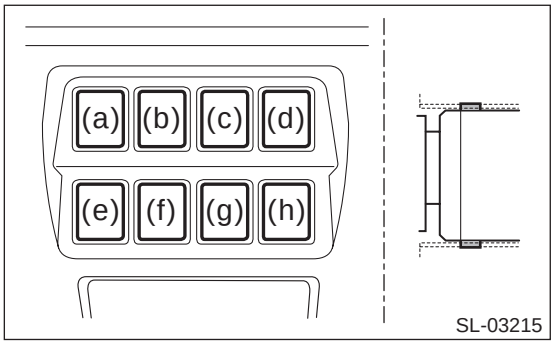
B: INSTALLATION

1) Install the power rear gate inner switch.
2) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



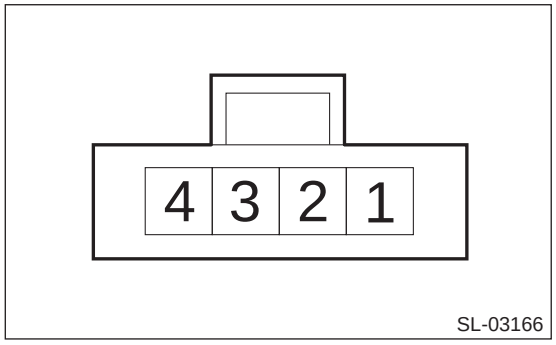
Terminal No.	Inspection conditions	Standard
1 — 2	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Replace the power rear gate inner switch, if the inspection result is not within the standard value.

11.Power Rear Gate Driver's Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-78, REMOVAL, Instrument Panel Lower Cover.>
3) Release the claws, and then remove the power rear gate driver's switch (a).



B: INSTALLATION

1) Install the power rear gate driver's switch.
2) Install the cover assembly - instrument panel LWR driver.
3) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>

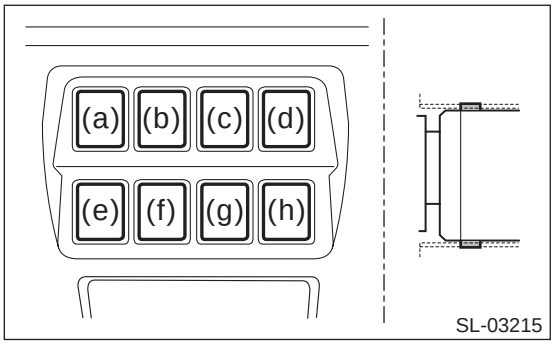
C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 4	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.



Terminal No.	Inspection conditions	Specification
2 (+) — 3 (–)	Apply battery voltage.	Light ON

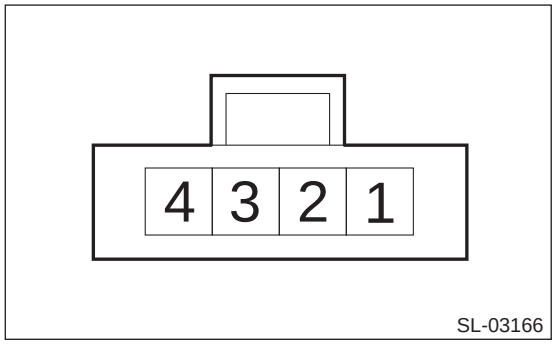
3) Replace the power rear gate driver's switch if it is found defective.

12.Memory Height Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-78, REMOVAL, Instrument Panel Lower Cover.>
3) Release the claws and remove the memory height switch.

(c) Model with SRF
(d) Model without SRF



B: INSTALLATION

1) Install the memory height switch.
2) Install the cover assembly - instrument panel LWR driver.
3) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between switch terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 4	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
2 (+) — 3 (–)	Apply battery voltage.	Light ON

3) Replace the memory height switch if it is found defective.

13.Rear Gate Opener Button

A: NOTE

Refer to the “SECURITY AND LOCKS” section for operation procedures of the rear gate opener button (PRG). <Ref. to SL-48, Rear Gate Opener Button.>

14.Body Integrated Unit

A: NOTE

Refer to the “SECURITY AND LOCKS” section for operation procedures of the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>

15.Diagnostics with Phenomenon

A: INSPECTION

Refer to “Diagnostics with Phenomenon” in the “POWER REAR GATE SYSTEM (DIAGNOSTICS)” section. <Ref. to PRG(diag)-48, Diagnostics with Phenomenon.>

7.	Read Diagnostic Trouble Code (DTC)	11
8.	Clear Memory Mode	12
9.	Read Current Data	13
10.	List of Diagnostic Trouble Code (DTC)	15
11.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	16
12.	General Diagnostic Table	47
13.	Diagnostics with Phenomenon	48

1. Basic Diagnostic Procedure

A: PROCEDURE

Step		Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Using the Check List for Interview, ask the customer the condition of how the trouble occurred. <Ref. to PRG(diag)-3, CHECK, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Interview the customer. <Ref. to PRG(diag)-3, CHECK, Check List for Interview.>
2	**INITIALIZATION OF PRG SYS.** 1) Open the PRG manually. 2) Manually close PRG to the partially latched position, and operate the auto closer to fully close PRG. 3) Press any of the PRG operation switches to perform the automatic operation of PRG. <Ref. to PRG-5, INITIALIZATION, PROCEDURE, Power Rear Gate System.>	Is the initialization operation possible?	Go to step **4**.	Go to step **3**.
3	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **4**.	Perform the inspection according to the diagnosis for LAN system.
4	**CHECK POWER REAR GATE SYSTEM.** Using the Subaru Select Monitor, read DTC of power rear gate system. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to PRG(diag)-9, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to PRG(diag)-15, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.
5	**CHECK DIAGNOSTICS WITH PHENOMENON.** Check “Diagnostics with Phenomenon”. <Ref. to PRG(diag)-48, Diagnostics with Phenomenon.>	Does the symptom apply?	Perform diagnosis according to the procedures in the diagnostics with phenomenon.	Currently, system is normal. A temporary poor contact may be a possible cause. Therefore, check the harness connector.

2. Check List for Interview

A: CHECK

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

<table>
<tr><td colspan="4">Power Rear Gate System Check List for Interview

</table>

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

CAUTION:
• Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
• Be careful not to damage the airbag system wiring harness.

B: INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items which might affect power rear gate related problems.
1) Check the battery. <Ref. to SC(H4DO)-60, INSPECTION, Battery.> <Ref. to SC(H6DO)-60, INSPECTION, Battery.>
2) Check the relay and fuse condition. <Ref. to PRG-4, Relay and Fuse.>
3) Check the connecting condition of harness and harness connector.

C: PREPARATION TOOL

1. SPECIAL TOOL

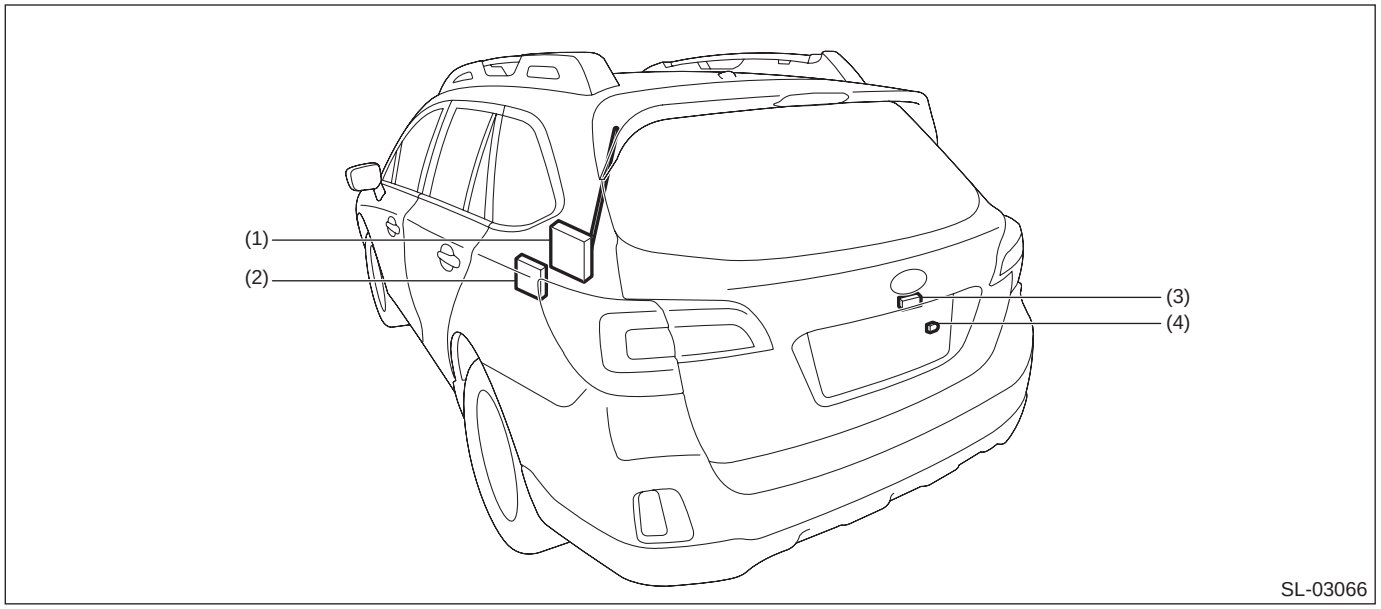

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
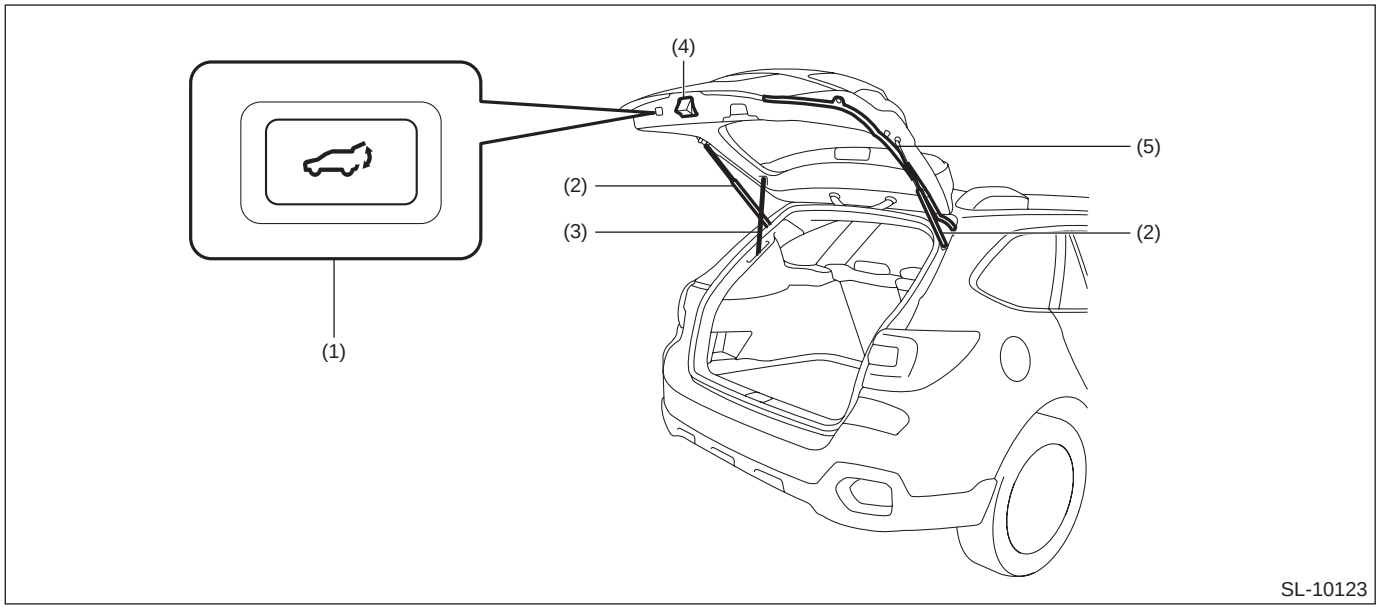
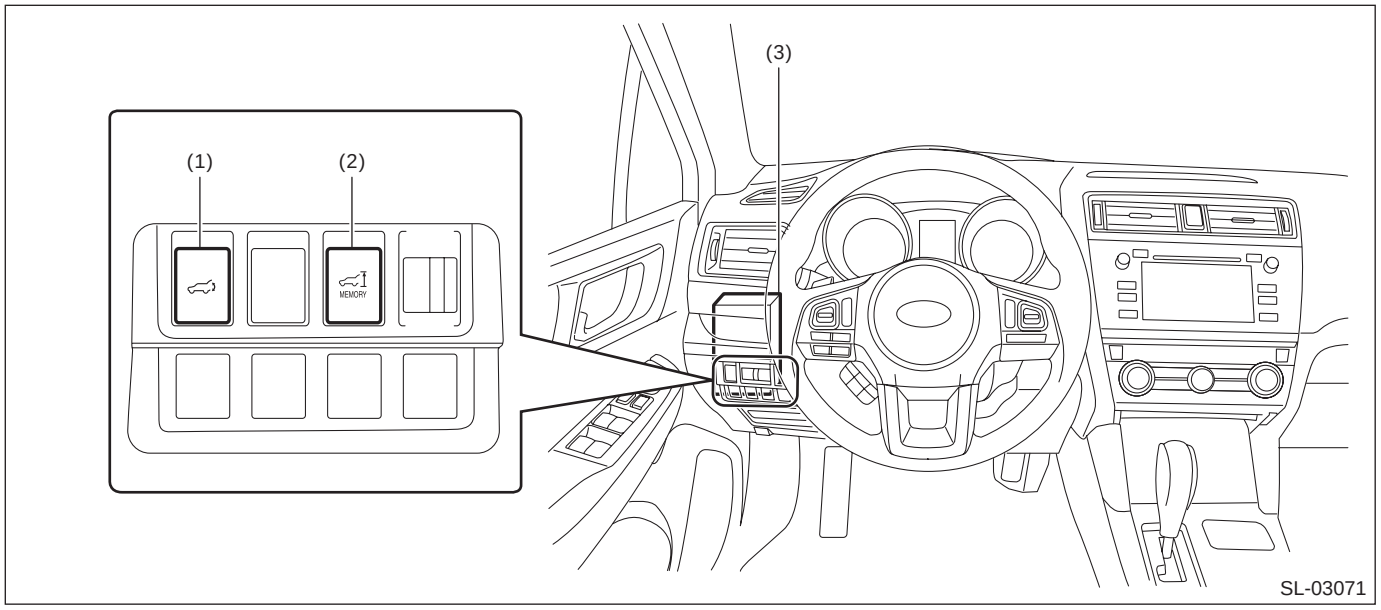
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

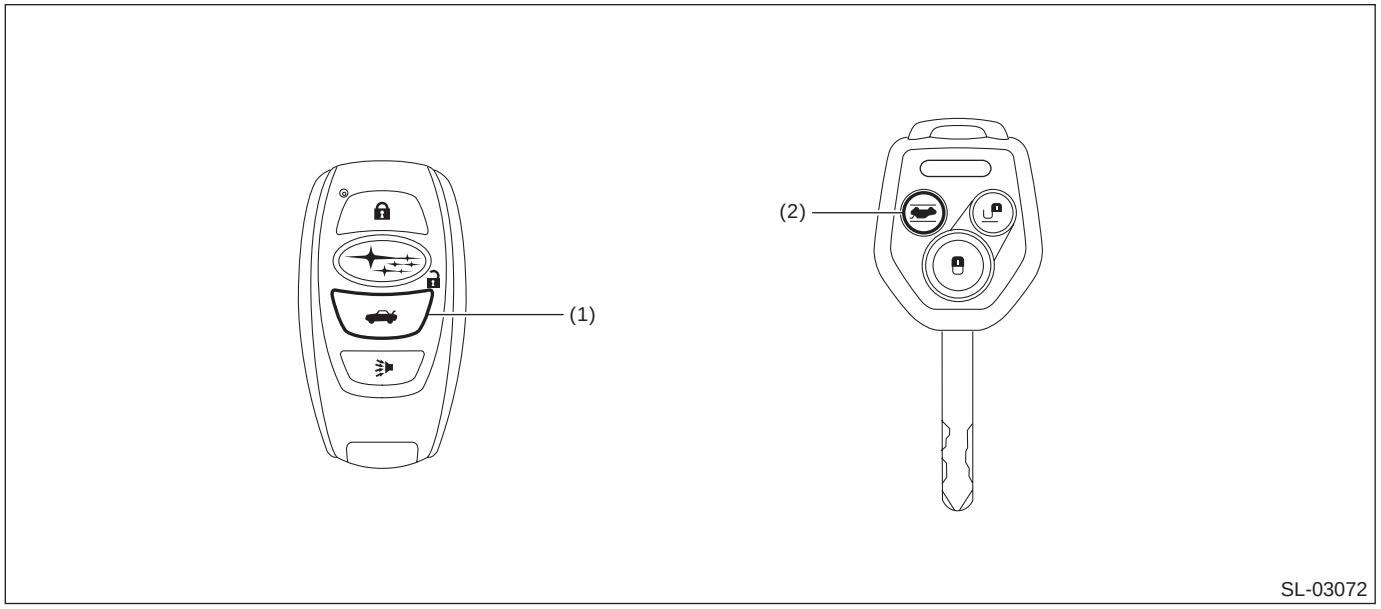


TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

4. Electrical Component Location



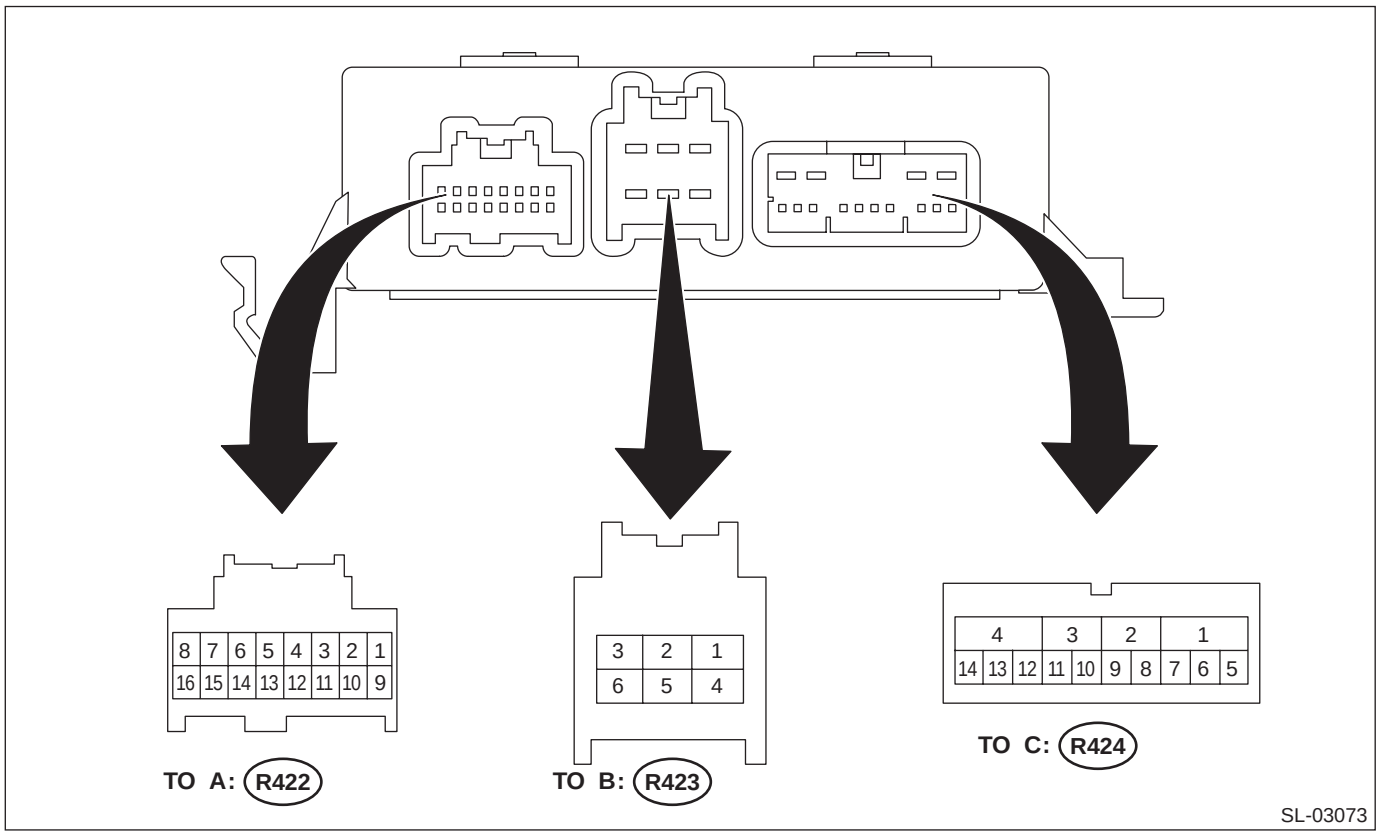
A: LOCATION



(1) Power rear gate drive unit (PRG DU)
(2) Power rear gate control module (PRG CM)
(3) Rear gate opener button
(4) Power rear gate buzzer

(1) Power rear gate inner switch
(2) Gas damper
(3) Rod - power rear gate
(4) Power rear gate auto closer
(5) Power rear gate touch sensor

(1) Power rear gate driver's switch (2) Memory height switch (3) Body integrated unit



(1) Rear gate/trunk SW (access key) (with keyless access with push button start system)

(2) Rear gate/trunk SW (keyless transmitter) (without keyless access with push button start system)

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

1. POWER REAR GATE CONTROL MODULE

Terminal No.	Content	Measuring condition	Standard
(R422) No. 1 ←→ (R422) No. 9	Touch sensor	When sensor is ON	2.7 V or less
(R422) No. 2 ←→ Chassis ground	—	—	—
(R422) No. 3 ←→ (R422) No. 9	Latch switch	When rear gate is fully closed	9 — 16 V
(R422) No. 4 ←→ (R422) No. 9	Courtesy switch	When rear gate is fully closed	9 — 16 V
(R422) No. 5 ←→ (R422) No. 9	Sector switch	When rear gate is fully closed	Less than 1 V

B: WIRING DIAGRAM

Refer to "Power Rear Gate System" in the wiring diagram. <Ref. to WI-298, WIRING DIAGRAM, Power Rear Gate System.>

6. Subaru Select Monitor

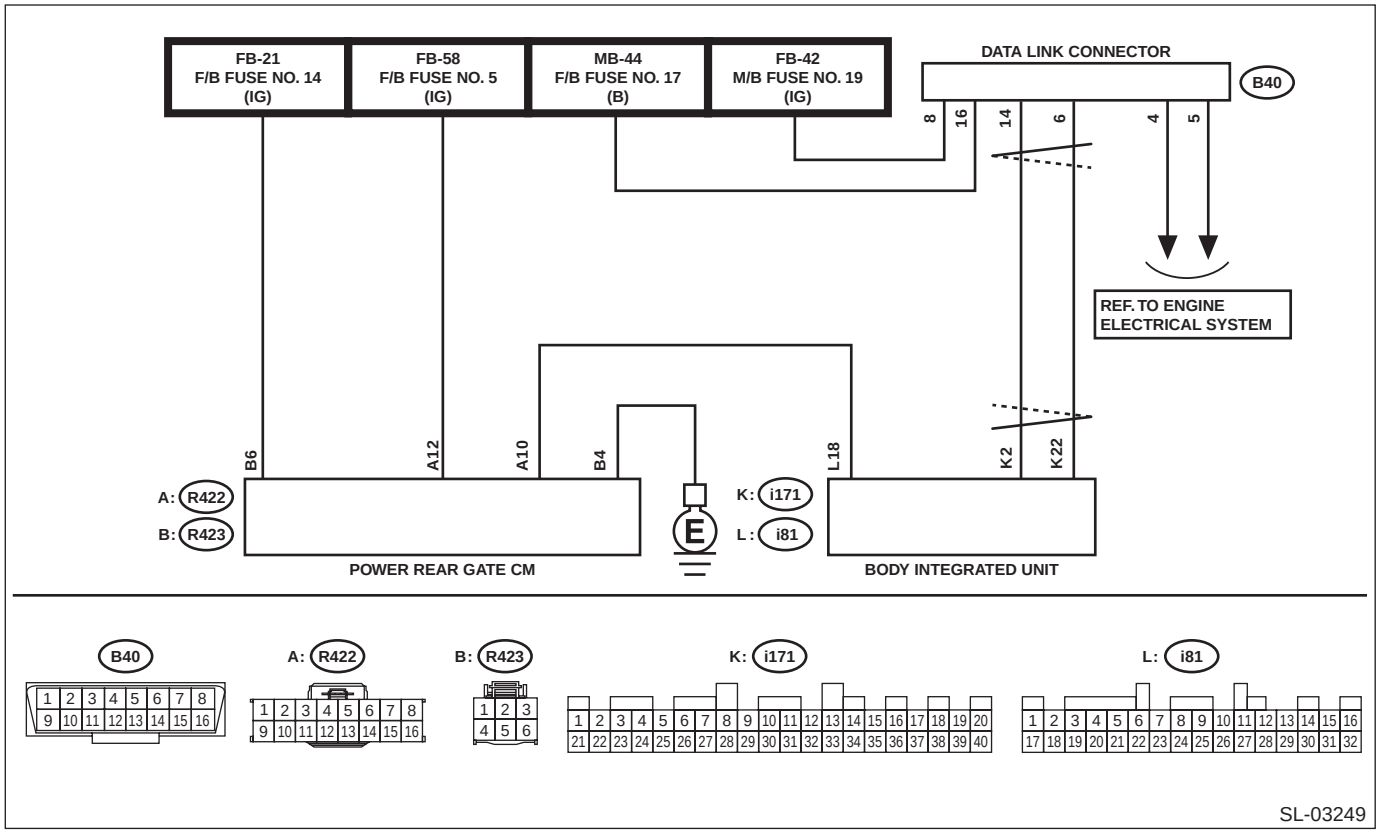
A: OPERATION

- For detailed operation procedures, refer to “Application help”.
- When communication with Subaru Select Monitor is not possible, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to PRG(diag)-9, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

B: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

NOTE:
If the communication with the body integrated unit is not possible either, refer to LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-12, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

Detecting condition:



- Defective harness
- Power supply circuit malfunction
- Body integrated unit malfunctioning
- Defective LIN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Not communicable with Subaru Select Monitor.

Wiring diagram:

Power rear gate system <Ref. to WI-298, WIRING DIAGRAM, Power Rear Gate System.>

	Step	Check	Yes	No
1	**CHECK FUSE.** Check the fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in the harness between the battery and power rear gate CM.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the power rear gate CM connectors in the order of (R423) → (R422). 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between the power rear gate CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 12 (+) — Chassis ground (–):*** ***(R423) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **3**.	Repair the open circuit of harness between the power rear gate CM connector and fuse.
3	**CHECK HARNESS.** Using a tester, measure the resistance between the power rear gate CM connector and chassis ground. ***Connector & terminal*** ***(R423) No. 4 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between the power rear gate CM connector and chassis ground.
4	**CHECK BODY INTEGRATED UNIT.** Check the body control system. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **5**.	Perform the inspection according to the diagnosis for body control system.
5	**CHECK POWER REAR GATE CM.** 1) Turn the ignition switch to OFF. 2) Connect the power rear gate CM connector in the order of (R422) → (R423). 3) Communicate with the power rear gate CM using the Subaru Select Monitor.	Is communication possible?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the power rear gate CM. <Ref. to PRG-6, Power Rear Gate Control Module.>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Power Rear Gate» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to PRG(diag)-15, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Power Rear Gate» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to PRG(diag)-15, List of Diagnostic Trouble Code (DTC).>

9. Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Power Rear Gate» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- Communication with PRG CM and Subaru Select Monitor takes time. It takes time to show all the items, and the status cannot be reflected on the display. Therefore, select items only that need to be checked or up to two to three items, when checking the status. (When displaying selected items only, place a check mark for the item to be displayed and press the “Select” button.)

B: LIST

Item Name	Description	Standard	Note
+POWER B	Power supply voltage value	9 — 16 V	—
+ B	PRG CM power supply voltage value	9 — 16 V	—
IGN SW	Ignition switch status	ON: IGN ON OFF: IGN OFF	—
Memory stop SW	Memorized height switch status	ON: switch ON OFF switch OFF	—

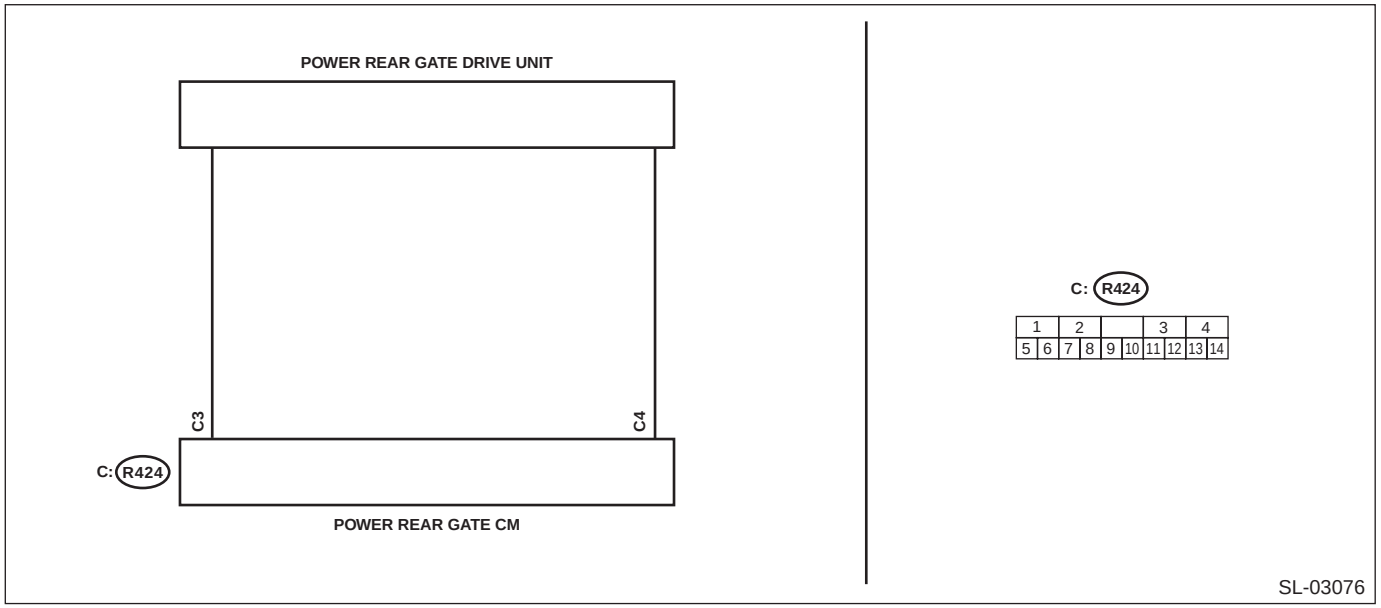
11.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B2500 BATTERY POWER SUPPLY

DTC detecting condition:
Detected when the power supply voltage is less than 9 V or 16 V or more at starting PRG operation (when SW is operated).
Trouble symptom:
The power rear gate does not operate.
Wiring diagram:
Power rear gate system <Ref. to WI-298, WIRING DIAGRAM, Power Rear Gate System.>

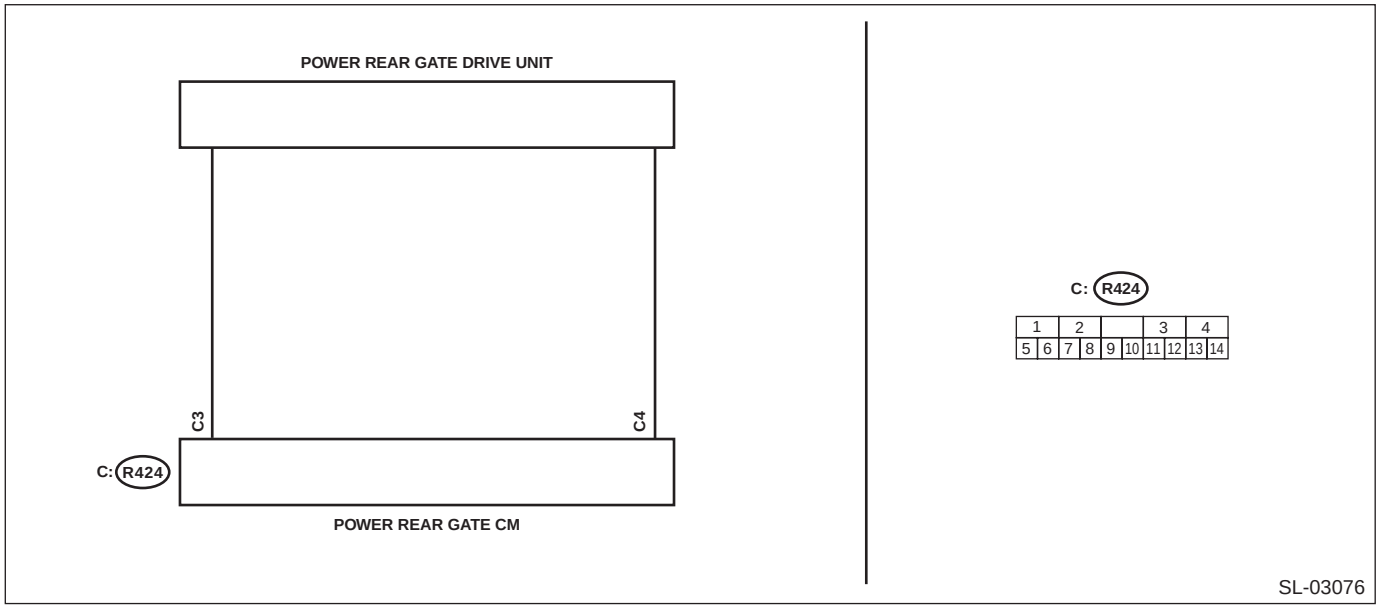


Step		Check	Yes	No
1	**CHECK AUTO OPERATION.** 1) Turn the ignition switch to OFF. 2) Using operation switch, perform power rear gate auto open/close operation from full close position or full open position.	Is auto operation activated?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B2500 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse. <Ref. to PRG-4, Relay and Fuse.>	Is the check result OK?	Replace the defective fuse. When the fuse is blown immediately, repair the short circuit.	Go to step **4**.
4	**CHECK HARNESS.** 1) Disconnect the PRG CM connector (R423). 2) Using a tester, measure the voltage between the PRG CM connector and chassis ground. ***Connector & terminal*** ***(R423) No. 6 (+) — Chassis ground (–):***	Is the voltage 9 V or more?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** Using a tester, measure the resistance between the PRG CM connector and chassis ground. ***Connector & terminal*** ***(R423) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK CONNECTOR.** Disconnect the PRG CM connector (R423).	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>

B: DTC B2507 PRG MOTOR CIRCUIT OPEN

DTC detecting condition:
When the open circuit in motor is detected during the motor operation.
Trouble symptom:
The power rear gate does not operate.
Wiring diagram:
Power rear gate system <Ref. to WI-298, WIRING DIAGRAM, Power Rear Gate System.>

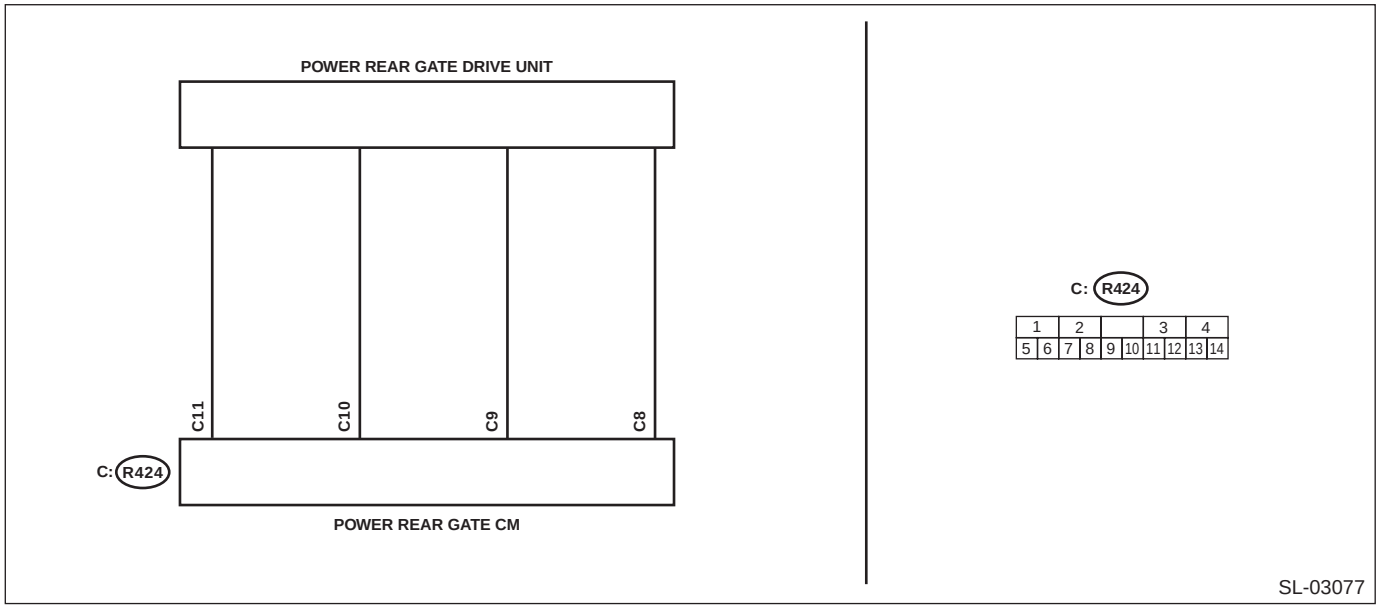


Step		Check	Yes	No
1	**CHECK AUTO OPERATION.** 1) Turn the ignition switch to OFF. 2) Using operation switch, perform power rear gate auto open/close operation from full close position or full open position.	Is auto operation activated?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B2507 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK POWER REAR GATE DRIVE UNIT (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the PRG CM connectors in the order of (R423) → (R424). 3) Measure the resistance between PRG CM connectors. ***Connector & terminal*** ***(R424) No. 3 — (R424) No. 4:***	Is the resistance less than 1 Ω?	Go to step **4**.	Replace the PRG DU. <Ref. to PRG-8, Power Rear Gate Drive Unit.>
4	**CHECK CONNECTOR.** Check the PRG CM connector (R424).	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Replace the PRG DU. <Ref. to PRG-8, Power Rear Gate Drive Unit.>

C: DTC B2508 PRG MOTOR CIRCUIT LOW

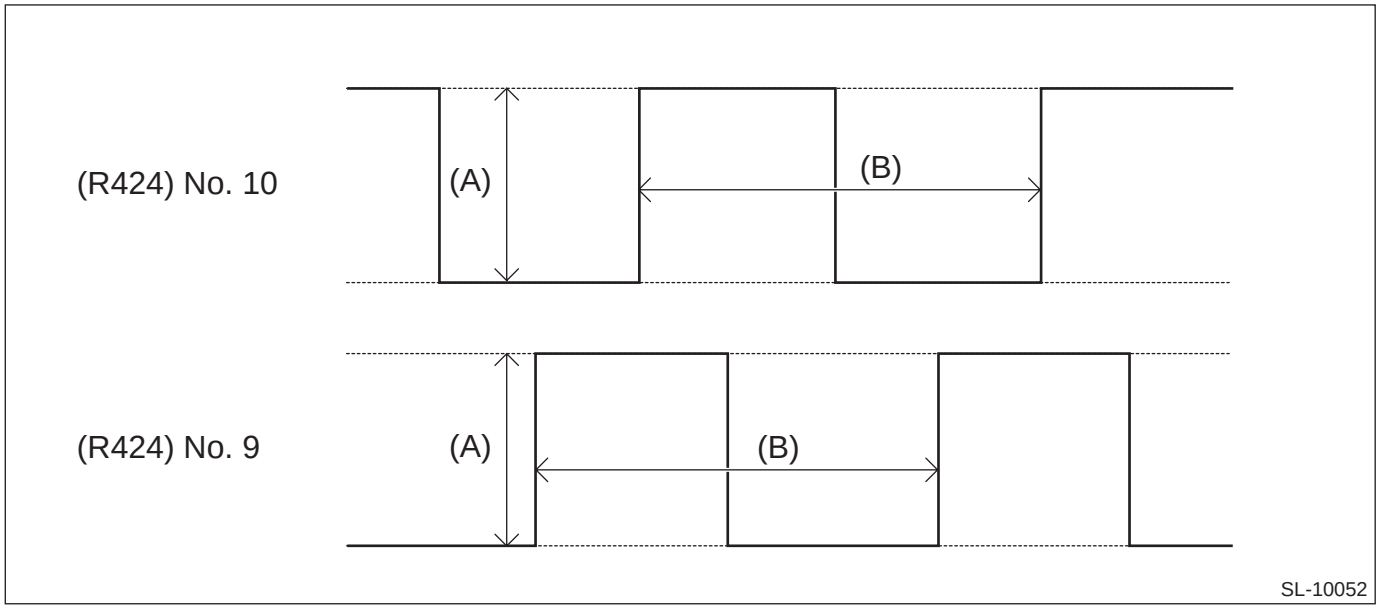
DTC detecting condition:
When the short to ground in motor circuit is detected.
Trouble symptom:
The power rear gate does not operate.
Wiring diagram:
Power rear gate system <Ref. to WI-298, WIRING DIAGRAM, Power Rear Gate System.>



Step		Check	Yes	No
1	**CHECK AUTO OPERATION.** 1) Turn the ignition switch to OFF. 2) Using operation switch, perform power rear gate auto open/close operation from full close position or full open position.	Is auto operation activated?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B2508 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the PRG CM connectors in the order of (R423) → (R424). 3) Using a tester, measure the resistance between the PRG CM connector and chassis ground. ***Connector & terminal*** ***(R424) No. 3 — Chassis ground:*** ***(R424) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the PRG DU. <Ref. to PRG-8, Power Rear Gate Drive Unit.>
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the PRG CM connectors. ***Connector & terminal*** ***(R424) No. 3 — (R424) No. 4:***	Is the resistance 0.1 Ω or more?	Go to step **5**.	Replace the PRG DU. <Ref. to PRG-8, Power Rear Gate Drive Unit.>
5	**CHECK CONNECTOR.** Check the PRG CM connector (R424).	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>

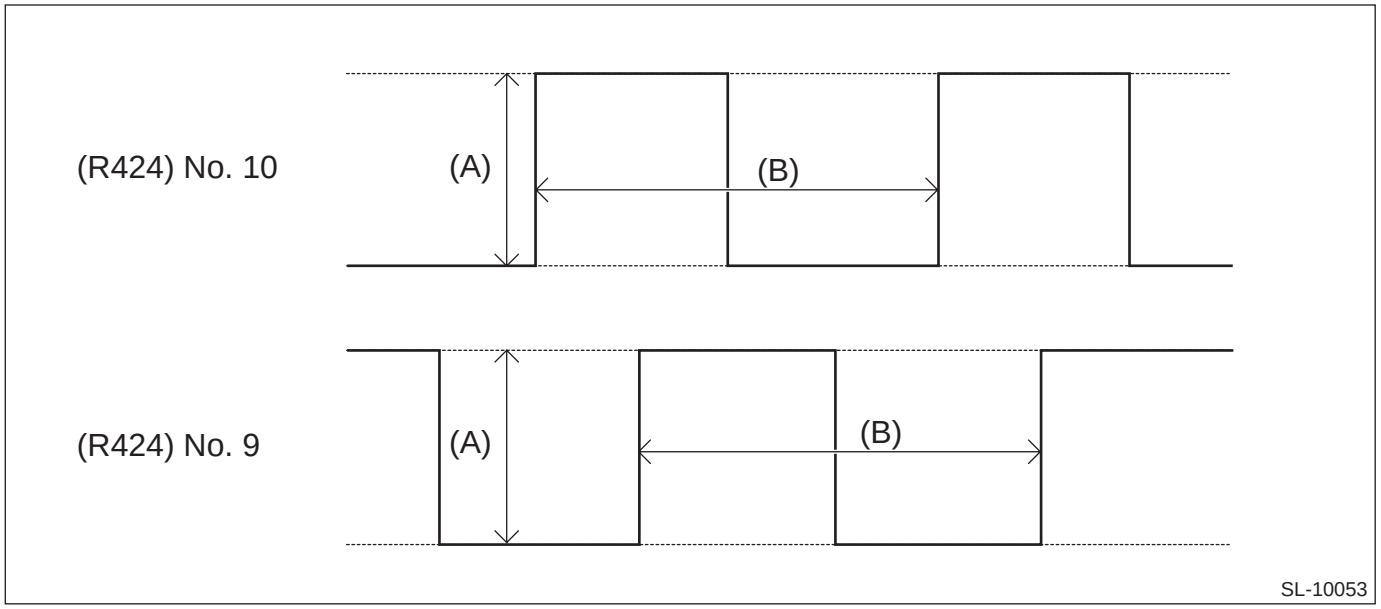
D: DTC B250B ROTATION SENSOR A STUCK



DTC detecting condition:
When output of drive unit rotation sensor does not last for 1 sec during the auto-operation.
Trouble symptom:
The power rear gate does not operate.
Wiring diagram:
Power rear gate system <Ref. to WI-298, WIRING DIAGRAM, Power Rear Gate System.>

Step		Check	Yes	No
1	**CHECK AUTO OPERATION.** 1) Turn the ignition switch to OFF. 2) Using operation switch, perform power rear gate auto open/close operation from full close position or full open position.	Does it work as fully open → fully close and fully close → fully open?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B250B, B250D, or B2525 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK ROTATION SENSOR SIGNAL.** Using an oscilloscope, measure the waveform between PRG CM connectors. ***Connector & terminal*** ***(R424) No. 9 — (R424) No. 8:*** ***(R424) No. 10 — (R424) No. 8:***	Does the voltage change (approx. 0 V ←→ 12 V), when the power rear gate is manually opened/closed?	Go to step **4**.	Replace the PRG DU. <Ref. to PRG-8, Power Rear Gate Drive Unit.>
4	**CHECK PRG CM.** Using an oscilloscope, measure the waveform between PRG CM connectors. ***Connector & terminal*** ***(R424) No. 9 (+) — (R424) No. 11 (–):*** ***(R424) No. 10 (+) — (R424) No. 11 (–):***	Does the waveform change as noted in the margin when the power rear gate is manually opened/closed?	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>	Replace the PRG DU. <Ref. to PRG-8, Power Rear Gate Drive Unit.>



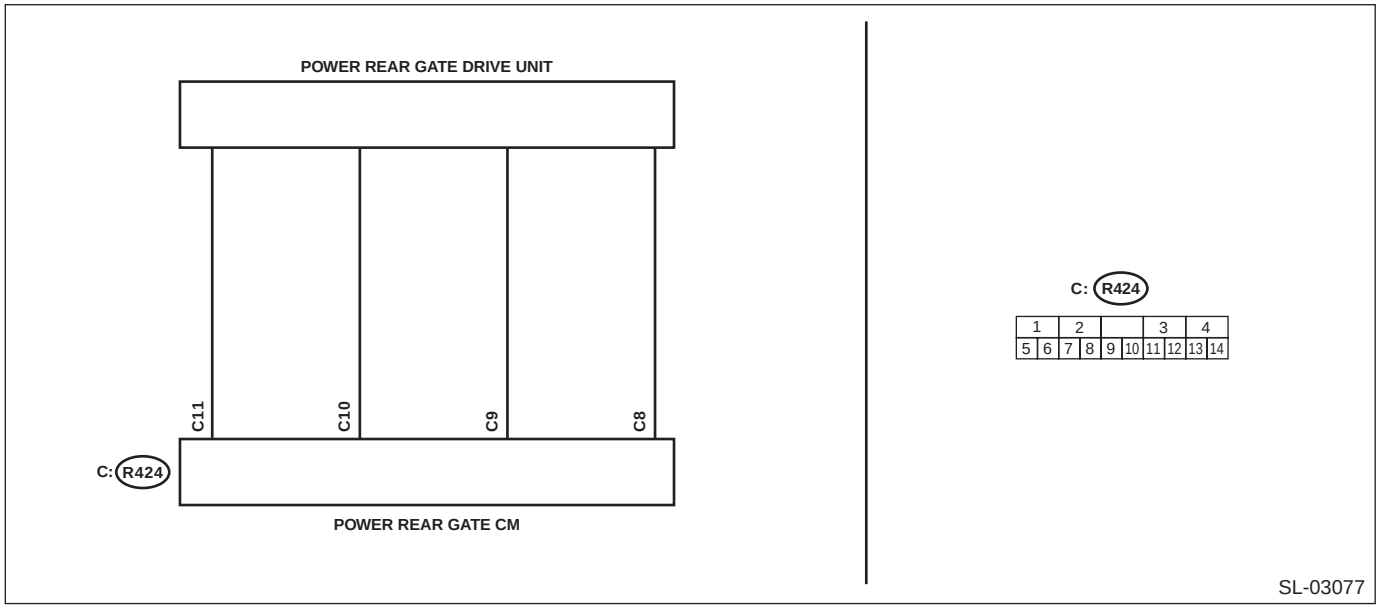
NOTE:
• When the power rear gate is open

(A) Approx. 10 V

(B) Cycles change according to the time the power rear gate is opened/closed.

- When the power rear gate is closed

(A) Approx. 10 V

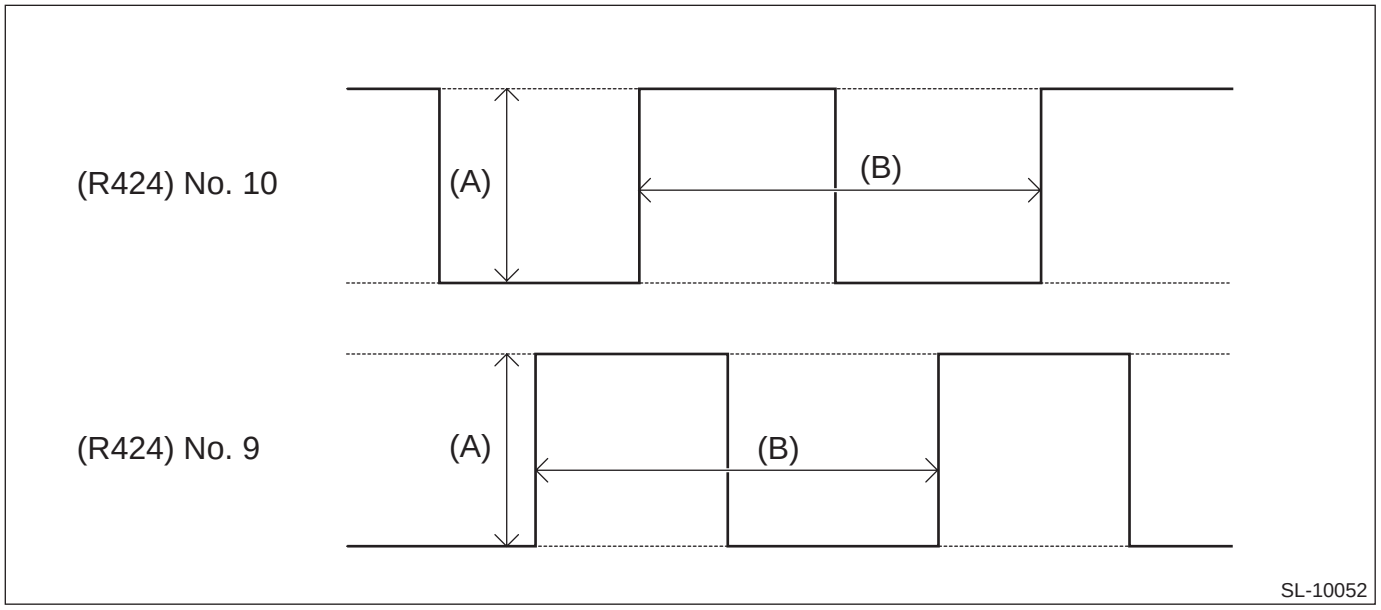


(B) Cycles change according to the time the power rear gate is opened/closed.

E: DTC B250D ROTATION SENSOR B STUCK

NOTE:
For the diagnostic procedure, refer to DTC B250B. <Ref. to PRG(diag)-22, DTC B250B ROTATION SENSOR A STUCK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

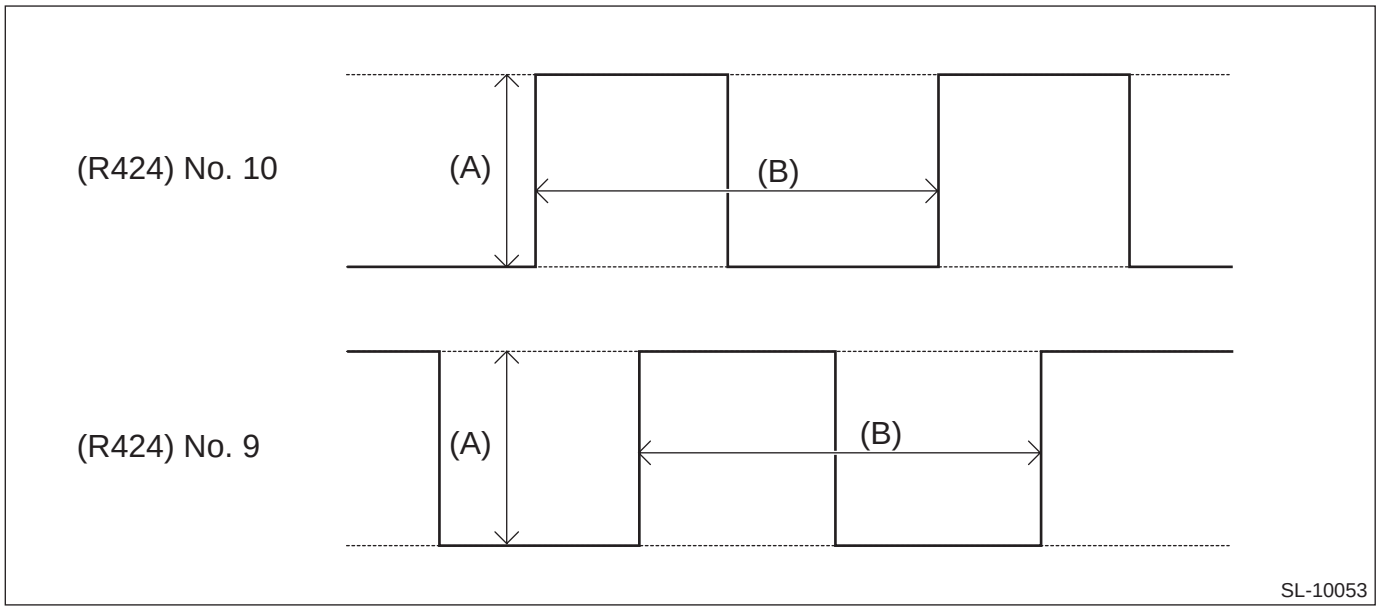
F: DTC B250F ROTATION SENSOR PULSE/COUNT



DTC detecting condition:
Output of the power rear gate drive unit rotation sensor is out of specified range.
Trouble symptom:
Auto operation stops halfway.
Wiring diagram:
Power rear gate system <Ref. to WI-298, WIRING DIAGRAM, Power Rear Gate System.>

Step		Check	Yes	No
1	**CHECK AUTO OPERATION.** 1) Turn the ignition switch to OFF. 2) Using operation switch, perform power rear gate auto open/close operation from full close position or full open position.	Does it work as fully open → fully close and fully close → fully open?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B250F displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK CURRENT DATA.** 1) Activate the auto closer to a fully closed position. 2) Using the Subaru Select Monitor, confirm the «Pulse-count 2» when fully closed and fully open. <Ref. to PRG(diag)-13, Read Current Data.> NOTE: When confirming the current data, display only one item to be checked at a time. When the displayed items are too many, changes in the pulses will not be retrieved.	Does the value show six pulses when fully closed, and 1800 pulses when fully open?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK PRG CM.** Using an oscilloscope, measure the waveform between PRG CM connectors. ***Connector & terminal*** ***(R424) No. 9 (+) — (R424) No. 11 (–):*** ***(R424) No. 10 (+) — (R424) No. 11 (–):***	Does the waveform change as noted in the margin when the power rear gate is manually opened/closed?	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>	Replace the PRG DU. <Ref. to PRG-8, Power Rear Gate Drive Unit.>

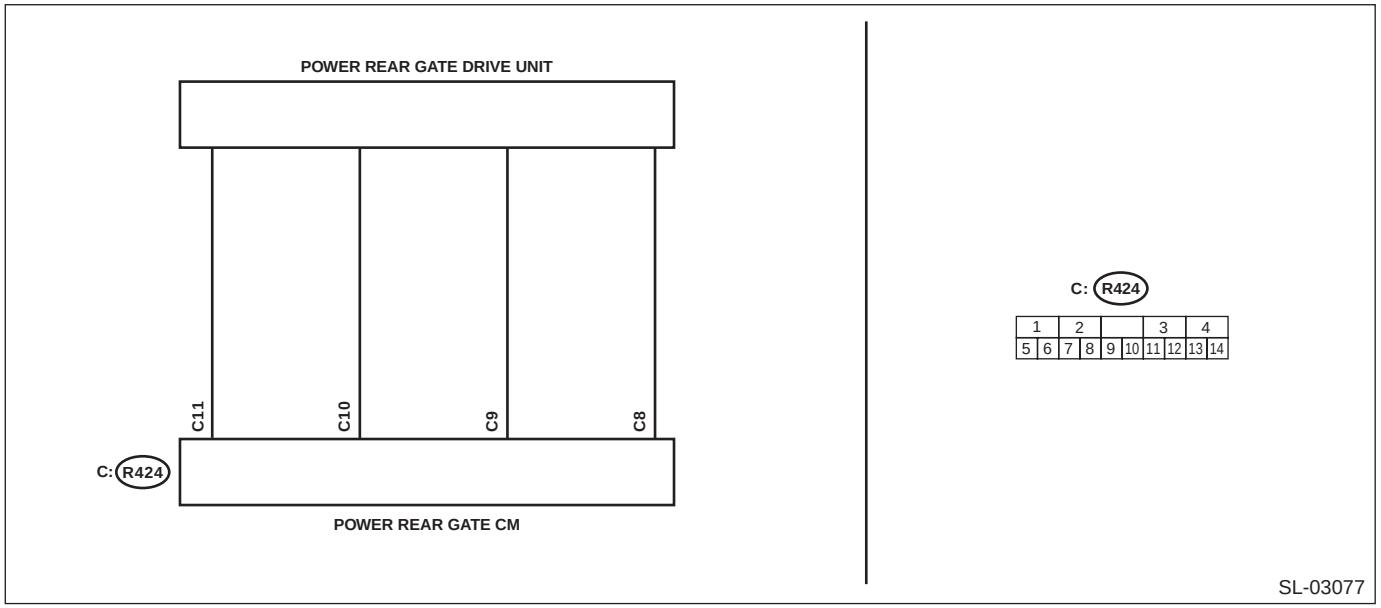


NOTE:
- When the power rear gate is open

(A) Approx. 10 V

(B) Cycles change according to the time the power rear gate is opened/closed.

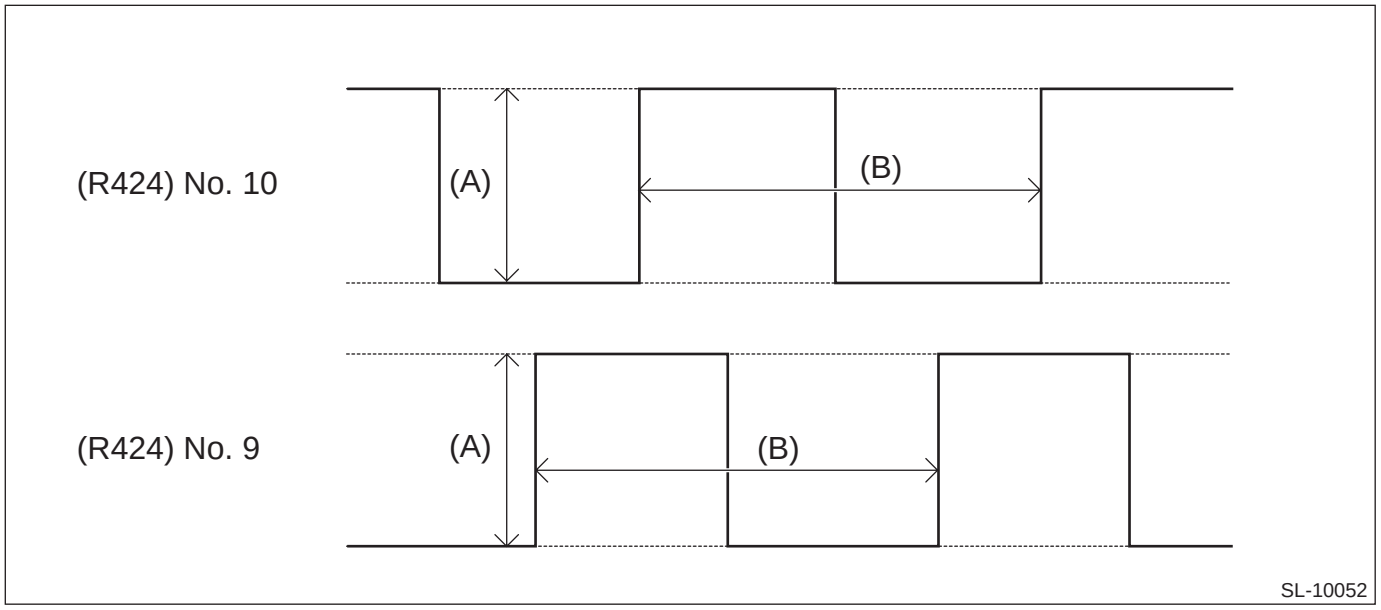
- When the power rear gate is closed



(A) Approx. 10 V

(B) Cycles change according to the time the power rear gate is opened/closed.

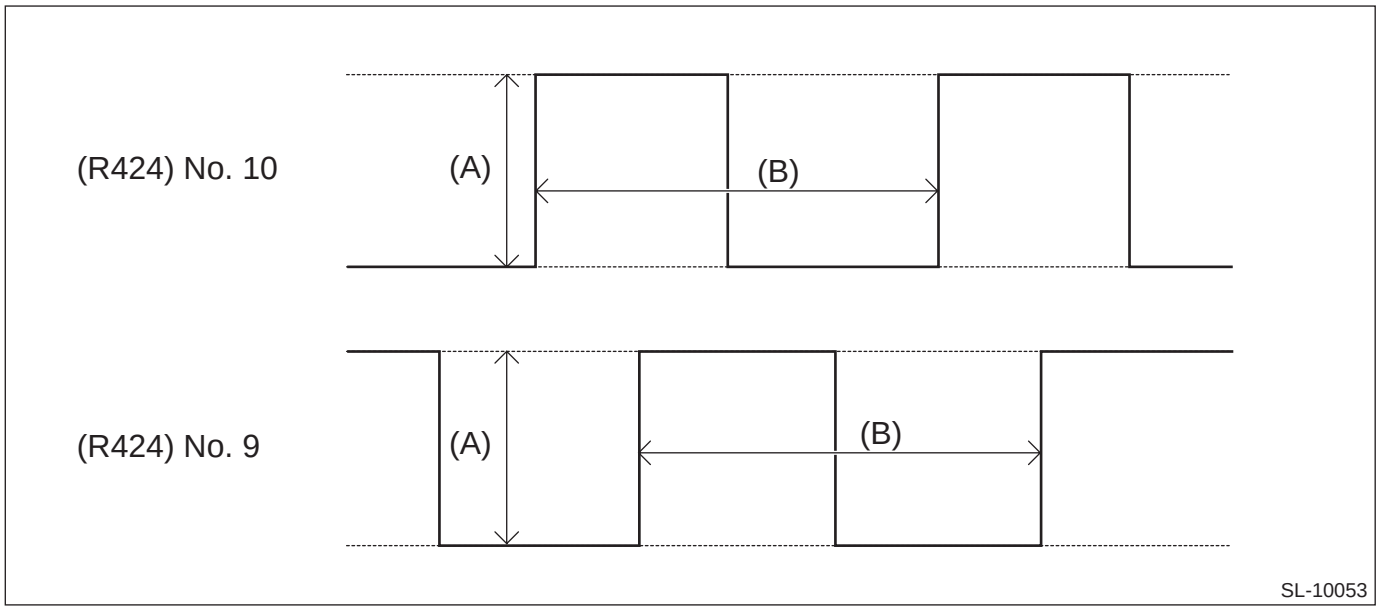
G: DTC B2511 ROTATION SENSOR PULSE/REVERSE DIRECTION



DTC detecting condition:
When output of the power rear gate drive unit rotation sensor is different from the direction that it should be.
Trouble symptom:
Auto-operation does not function.
Wiring diagram:
Power rear gate system <Ref. to WI-298, WIRING DIAGRAM, Power Rear Gate System.>

Step		Check	Yes	No
1	**CHECK AUTO OPERATION.** 1) Turn the ignition switch to OFF. 2) Using operation switch, perform power rear gate auto open/close operation from full close position or full open position.	Does it work as fully open → fully close and fully close → fully open?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B2511 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK CURRENT DATA.** 1) Activate the auto closer to a fully closed position. 2) Press the operation switch to perform the auto-open/close operation. 3) Using the Subaru Select Monitor, confirm the «Pulse-count 2» when fully closed and fully open. <Ref. to PRG(diag)-13, Read Current Data.> NOTE: When confirming the current data, display only one item to be checked at a time. When the displayed items are too many, changes in the pulses will not be retrieved.	Does the pulse count increase during the open operation? And does the pulse count decrease during the close operation?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK PRG CM.** Using an oscilloscope, measure the waveform between PRG CM connectors. ***Connector & terminal*** ***(R424) No. 9 (+) — (R424) No. 11 (–):*** ***(R424) No. 10 (+) — (R424) No. 11 (–):***	Does the waveform change as noted in the margin when the power rear gate is manually opened/closed?	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>	Replace the PRG DU. <Ref. to PRG-8, Power Rear Gate Drive Unit.>



NOTE:
- When the power rear gate is open

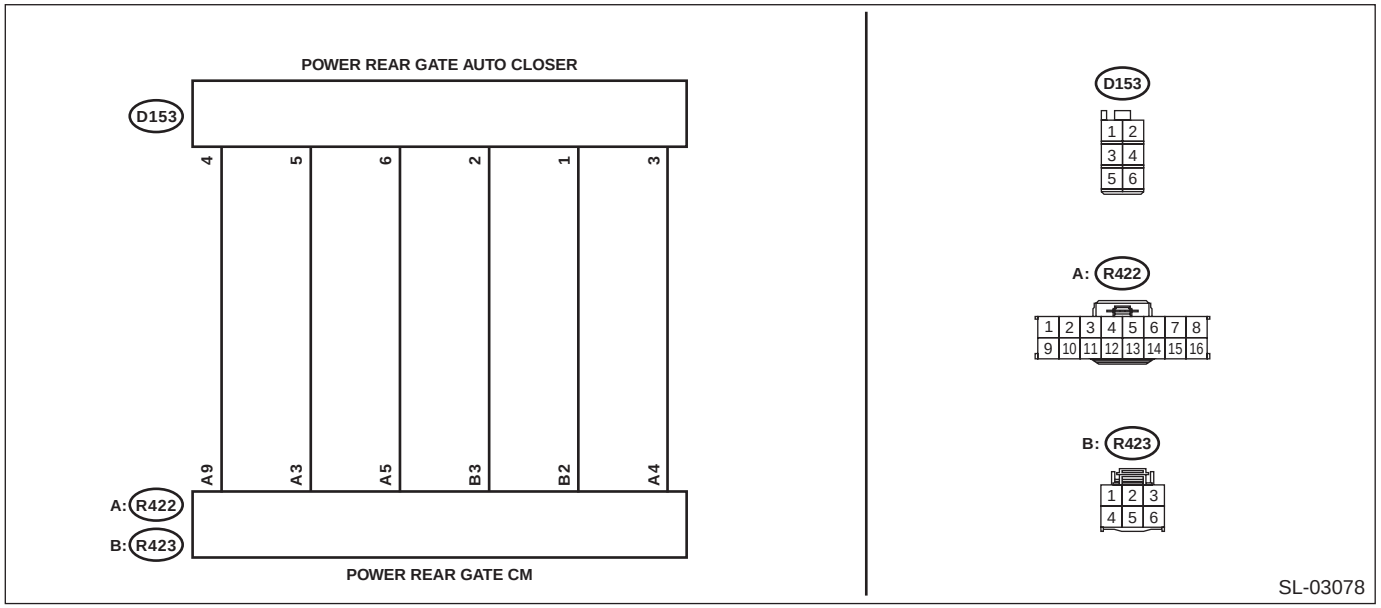
(A) Approx. 10 V

(B) Cycles change according to the time the power rear gate is opened/closed.

- When the power rear gate is closed

(A) Approx. 10 V

(B) Cycles change according to the time the power rear gate is opened/closed.



H: DTC B2512 DAMPER BREAKAGE

DTC DETECTING CONDITION:
Abrupt drop in the rear gate has been detected after PRG operation stopped.
TROUBLE SYMPTOM:
Does not hold at the full-open position.

	Step	Check	Yes	No
1	**CHECK REAR GATE CONDITION.** Check the rear gate.	Is there any non genuine parts equipped to the rear gate? Or does it have foreign objects such as snow?	Remove non genuine parts or foreign objects. Go to step **2**.	Go to step **2**.
2	**CHECK REAR GATE.** Hold the rear gate at the fully open position.	Does it hold at the fully open position?	Go to step **3**.	Replace the rear gate damper stay. <Ref. to EB-61, REAR GATE DAMPER STAY, REMOVAL, Rear Gate.>
3	**CHECK PRG CM.** 1) Close the rear gate fully. 2) Press the operation switch to perform the auto-open operation to a full open position. 3) Repeat the auto-open operation at least three times. 4) Turn the ignition switch to ON. 5) Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B2512 displayed? (Current malfunction)	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

I: DTC B2513 LATCH CONDITION

DTC detecting condition:
When the status of power rear gate auto closer changes differently from normal condition.
Trouble symptom:
Auto-operation does not function.
Wiring diagram:
Power rear gate system <Ref. to WI-298, WIRING DIAGRAM, Power Rear Gate System.>

	Step	Check	Yes	No
1	**CHECK REAR GATE.** Visually inspect the rear gate.	Is it free from any foreign matters caught in and installed without misalignment?	Go to step **2**.	Remove the foreign matters. Adjust the alignment.
2	**CHECK PRG AUTO CLOSER.** 1) Close the rear gate fully. 2) Disconnect the PRG CM connectors in the order of (R423) → (R422). 3) Disconnect the PRG auto closer connector. 4) Check the continuity between PRG auto closer connectors. ***Terminals*** ***No. 5 — No. 4 (latch switch):*** ***No. 3 — No. 4 (courtesy switch):*** ***No. 6 — No. 4 (sector switch):***	Is the continuity condition as follows? Latch switch: No continuity Courtesy switch: No continuity Sector switch: Continuity present	Go to step **3**.	Replace the PRG auto closer. <Ref. to PRG-11, Power Rear Gate Auto Closer.>
3	**CHECK PRG AUTO CLOSER.** 1) Connect the disconnected connectors. Connect the PRG CM connector in the order of (R422) → (R423). 2) Press the operation switch to perform the auto-open operation to a full open position. 3) Disconnect the PRG CM connectors in the order of (R423) → (R422). 4) Disconnect the PRG auto closer connector. 5) Check the continuity between PRG auto closer connectors. ***Terminals*** ***No. 5 — No. 4 (latch switch):*** ***No. 3 — No. 4 (courtesy switch):*** ***No. 6 — No. 4 (sector switch):***	Is the continuity condition as follows? Latch switch: Continuity present Courtesy switch: Continuity present Sector switch: Continuity present	Go to step **4**.	Replace the PRG auto closer. <Ref. to PRG-11, Power Rear Gate Auto Closer.>

	Step	Check	Yes	No
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 3 — Chassis ground:*** ***(R422) No. 4 — Chassis ground:*** ***(R422) No. 5 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK HARNESS (OPEN CIRCUIT).** Measure the resistance between PRG CM connector and PRG auto closer connector. ***Connector & terminal*** ***(R422) No. 3 — (D153) No. 5:*** ***(R422) No. 4 — (D153) No. 3:*** ***(R422) No. 5 — (D153) No. 6:***	Is the resistance 10 Ω or less?	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>	Repair or replace the open circuit of harness.

J: DTC B2514 IGNITION

DTC detecting condition:
When the LIN communication signal and direct line signal do not match.
Trouble symptom:
The power rear gate does not operate.
Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Power rear gate system <Ref. to WI-298, WIRING DIAGRAM, Power Rear Gate System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Fully open the rear gate. 2) Turn the ignition switch to OFF. 3) Wait for five seconds or more. 4) Turn the ignition switch to ON. 5) Wait for five seconds or more. 6) Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B2514 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK CURRENT DATA.** Check «Ignition Signal» and «IGN SW» using the Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.> NOTE: When confirming the current data, display only 2 items to be checked at a time.	When the ignition switch is turned to ON/OFF, are these two data synchronized?	Go to step **3**.	When «Ignition Signal» is not synchronized: Go to step **4**. When «IGN SW» is not synchronized: Go to step **8**.

	Step	Check	Yes	No
3	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the PRG CM connectors in the order of (R423) → (R422).	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
4	**CHECK CURRENT DATA.** Check the current data «Voltage of IGN» of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-25, Read Current Data.>	When the ignition switch is turned to ON/OFF, does the value change? (At ON: 10 — 15 V)	Go to step **5**.	Check the body control system. <Ref. to BC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
5	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the PRG CM connectors in the order of (R423) → (R422). 2) Disconnect the body integrated unit connector. 3) Measure the resistance between PRG CM connector and body integrated unit. ***Connector & terminal*** ***(i81) No. 18 — (R422) No. 10:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 10 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair or replace the short circuit of the harness.
7	**CHECK HARNESS (SHORT CIRCUIT IN LIN COMMUNICATION LINE).** 1) Turn the ignition switch to ON. 2) Measure the voltage between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 10 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **8**.	Repair or replace the short circuit of the harness.
8	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 12 (+) — Chassis ground (–):***	Is the voltage 9 V or more?	Go to step **9**.	Repair or replace the open circuit of harness.
9	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the PRG CM connectors in the order of (R423) → (R422).	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>

K: DTC B2515 LATCH SW

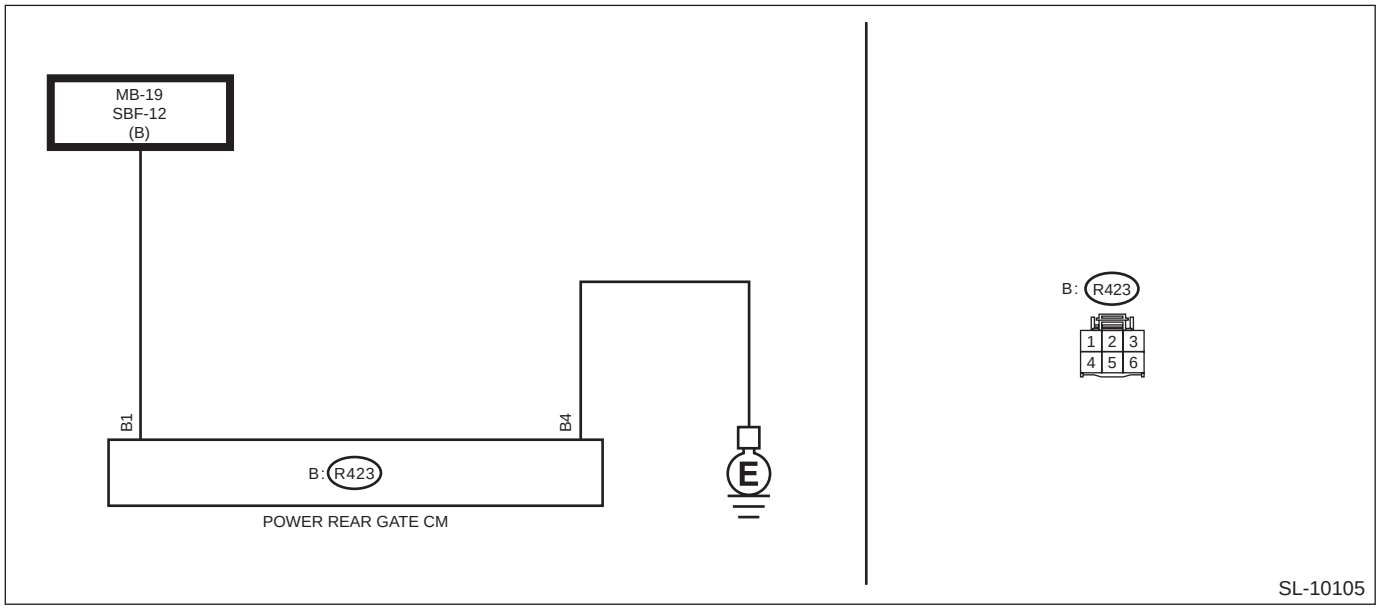
NOTE:
For the diagnostic procedure, refer to DTC B2513. <Ref. to PRG(diag)-32, DTC B2513 LATCH CONDITION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

L: DTC B2516 SECTOR SW

DTC detecting condition:
Change of sector SW cannot be detected.
Trouble symptom:
Auto-operation does not function.
Wiring diagram:
Power rear gate system <Ref. to WI-298, WIRING DIAGRAM, Power Rear Gate System.>

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Using the operation switch, fully open the power rear gate. 2) Turn the ignition switch to ON. 3) Check «SECTOR SW» using the Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.>	Does the «SECTOR SW» indicate ON?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK SECTOR SW.** 1) Turn the ignition switch to OFF. 2) Disconnect the PRG CM connectors in the order of (R423) → (R422). 3) Disconnect the PRG auto closer connector. 4) Check the sector SW. <Ref. to PRG-12, INSPECTION, Power Rear Gate Auto Closer.>	Is the check result OK?	Go to step **3**.	Replace the PRG auto closer. <Ref. to PRG-11, Power Rear Gate Auto Closer.>
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 5 — Chassis ground:*** ***(R422) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.

Step		Check	Yes	No
4	**CHECK PRG CM (OPEN CIRCUIT).** Measure the resistance between PRG CM connector and PRG auto closer connector. ***Connector & terminal*** ***(R422) No. 5 — (D153) No. 6:***	Is the resistance 10 Ω or less?	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>	Repair or replace the open circuit of harness.



M: DTC B2517 COURTESY SW

NOTE:
For the diagnostic procedure, refer to DTC B2513. <Ref. to PRG(diag)-32, DTC B2513 LATCH CONDITION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

N: DTC B2519 POWER +B OPEN

DTC detecting condition:
When power supply malfunction is detected in power system.
Trouble symptom:
When SW is operated, buzzer sounds and PRG auto-operation does not function.
Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Power rear gate system <Ref. to WI-298, WIRING DIAGRAM, Power Rear Gate System.>

Step		Check	Yes	No
1	**CHECK AUTO OPERATION.** 1) Turn the ignition switch to OFF. 2) Using operation switch, perform power rear gate auto open/close operation from full close position or full open position.	Is auto operation activated?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B2519 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse. <Ref. to PRG-4, Relay and Fuse.>	Is the check result OK?	Go to step **4**.	Replace the defective fuse. When the fuse is blown immediately, repair the short circuit.
4	**CHECK HARNESS.** 1) Disconnect the PRG CM connector (R423). 2) Using a tester, measure the voltage between the PRG CM connector and chassis ground. ***Connector & terminal*** ***(R423) No. 1 (+) — Chassis ground (–):***	Is the voltage 9 V or more?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the PRG CM connector and chassis ground. ***Connector & terminal*** ***(R423) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the PRG CM connector (R423).	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>

O: DTC B251A LIN CONNECTION NO-RECEIVE DATA

DTC DETECTING CONDITION:
When LIN communication failure is detected for two seconds or more.
TROUBLE SYMPTOM:
The power rear gate does not operate.

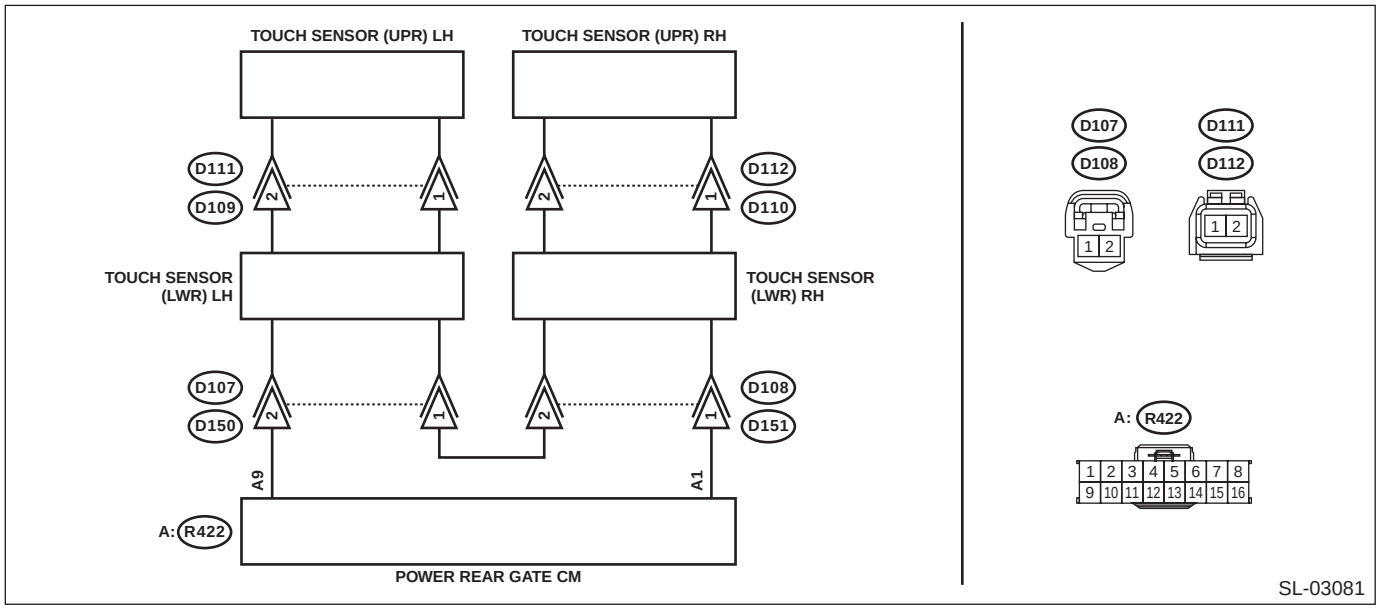
NOTE:
For diagnostic procedures, refer to DTC U0230 in BODY CONTROL SYSTEM (DIAGNOSTICS). <Ref. to BC(diag)-73, DTC U0230 LOST COMMUNICATION WITH POWER REAR GATE CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

P: DTC B251B LIN CONNECTION BUS PHYSICAL

DTC DETECTING CONDITION:
When LIN communication failure is detected.
TROUBLE SYMPTOM:
The power rear gate does not operate.

NOTE:
For diagnostic procedures, refer to DTC U1673 in BODY CONTROL SYSTEM (DIAGNOSTICS). <Ref. to BC(diag)-81, DTC U1673 LIN COMMUNICATION BUS ERROR BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Q: DTC B2522 EEPROM



DTC DETECTING CONDITION:
When failure in PRG CM is detected.
TROUBLE SYMPTOM:
The memorized half-stop position is reset, and returned to the default setting.

Step		Check	Yes	No
1	**CHECK DTC.** 1) Close all doors of the vehicle. 2) Turn the ignition switch to OFF. 3) Wait for one minute or more. 4) Turn the ignition switch to ON. 5) Repeat procedures from 1) to 4) at least three times. 6) Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B2522 displayed? (Current malfunction)	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

R: DTC B2524 TOUCH SENSOR CIRCUIT/OPEN

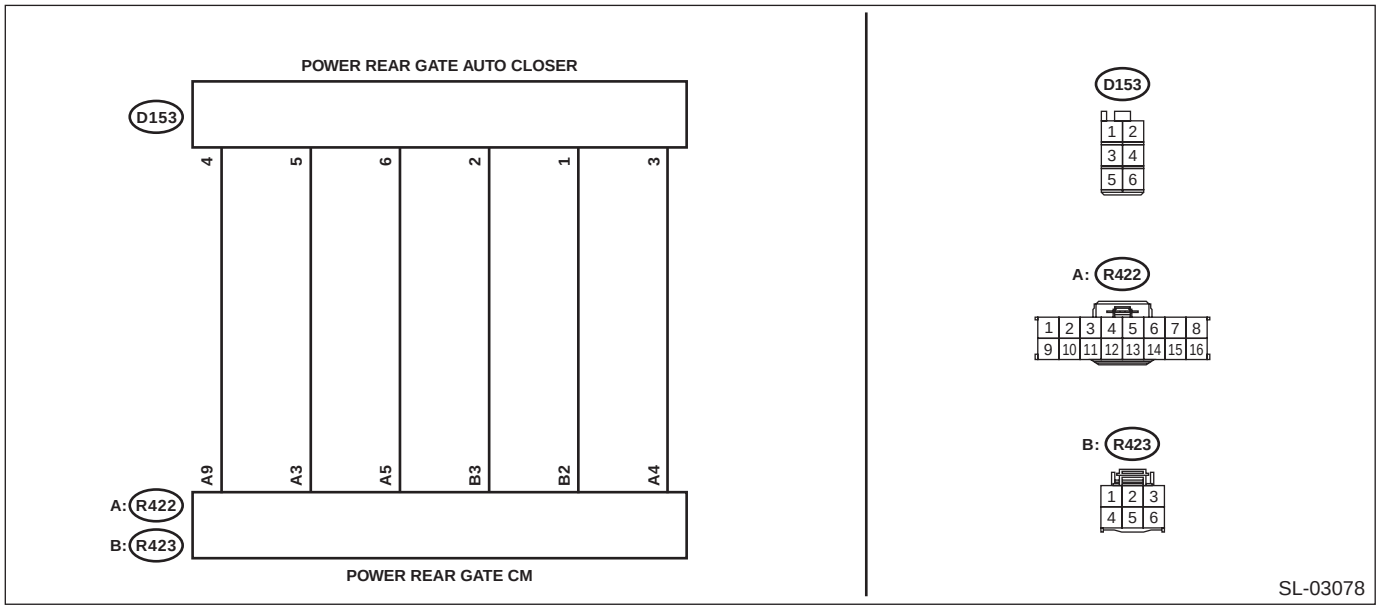
DTC detecting condition:
When malfunction in the touch sensor is detected.
Trouble symptom:
The power rear gate does not operate.
Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Power rear gate system <Ref. to WI-298, WIRING DIAGRAM, Power Rear Gate System.>

Step		Check	Yes	No
1	**CHECK TOUCH SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the touch sensor (LWR) RH / (LWR) LH connectors. 3) Measure the resistance between the touch sensor (LWR) RH / (LWR) LH connectors. ***Connector & terminal*** ***(D108) No. 1 — (D108) No. 2:*** ***(D107) No. 1 — (D107) No. 2:***	Is the resistance 2 kΩ or less while the sensor is touched, and approx. 10 kΩ when not touched?	Go to step **6**.	Go to step **2**.
2	**CHECK TOUCH SENSOR (UPR).** 1) Disconnect the touch sensor (UPR) RH / (UPR) LH connectors. 2) Measure the resistance between the touch sensor (UPR) RH / (UPR) LH connectors. ***Connector & terminal*** ***(D112) No. 1 — (D112) No. 2:*** ***(D111) No. 1 — (D111) No. 2:***	Is the resistance 2 kΩ or less while the sensor is touched, and approx. 10 kΩ when not touched?	Go to step **3**.	Replace the touch sensor (UPR) RH / (UPR) LH. <Ref. to PRG-15, Power Rear Gate Touch Sensor.>
3	**CHECK TOUCH SENSOR (LWR).** Measure the resistance between the touch sensor (LWR) RH / (LWR) LH connectors. ***Connector & terminal*** ***(D110) No. 1 — (D108) No. 1:*** ***(D110) No. 2 — (D108) No. 2:*** ***(D109) No. 1 — (D107) No. 1:*** ***(D109) No. 2 — (D107) No. 2:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the open sensor. <Ref. to PRG-15, Power Rear Gate Touch Sensor.>

	Step	Check	Yes	No
4	**CHECK TOUCH SENSOR (LWR).** Measure the resistance between the touch sensor (LWR) RH / (LWR) LH connectors. ***Connector & terminal*** ***(D109) No. 1 — (D107) No. 2:*** ***(D109) No. 2 — (D107) No. 1:*** ***(D110) No. 1 — (D108) No. 2:*** ***(D110) No. 2 — (D108) No. 1:*** ***(D109) No. 1 — Chassis ground:*** ***(D109) No. 2 — Chassis ground:*** ***(D110) No. 1 — Chassis ground:*** ***(D110) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the short circuit to power supply of the harness.
5	**CHECK CONNECTOR.** Check the connector of each sensor.	Is there poor contact of connector?	Replace the defective sensor. <Ref. to PRG-15, Power Rear Gate Touch Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
6	**CHECK HARNESS.** 1) Disconnect the PRG CM connectors in the order of (R423) → (R422). 2) Measure the resistance between PRG CM connector and touch sensor connector. ***Connector & terminal*** ***(R422) No. 1 — (D151) No. 1:*** ***(R422) No. 9 — (D150) No. 2:*** ***(D150) No. 1 — (D151) No. 2:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS (OPEN CIRCUIT).** Measure the resistance between PRG CM connector and touch sensor connector or chassis ground. ***Connector & terminal*** ***(R422) No. 1 — (D151) No. 2:*** ***(R422) No. 9 — (D151) No. 2:*** ***(R422) No. 1 — (R422) No. 9:*** ***(R422) No. 1 — Chassis ground:*** ***(R422) No. 9 — Chassis ground:*** ***(D150) No. 1 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **8**.	Repair or replace the short circuit of the harness.

Step		Check	Yes	No
8	**CHECK CONNECTOR.** Check each connector.	Is there poor contact of connector?	Replace the defective sensor or module.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.



S: DTC B2525 ROTATION SENSOR POWER SUPPLY

NOTE:
For the diagnostic procedure, refer to DTC B250B. <Ref. to PRG(diag)-22, DTC B250B ROTATION SENSOR A STUCK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

T: DTC B2526 AUTO CLOSER MOTOR CIRCUIT OPEN

DTC detecting condition:
When malfunction in the power rear gate auto closer is detected.
Trouble symptom:
The pull-in/release operation of closer is not possible.
Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Power rear gate system <Ref. to WI-298, WIRING DIAGRAM, Power Rear Gate System.>

Step		Check	Yes	No
1	**CHECK CLOSER UNIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the PRG CM connectors in the order of (R423) → (R422). 3) Disconnect the PRG auto closer connector. 4) Perform the operation check for the PRG auto closer motor. <Ref. to PRG-12, INSPECTION, Power Rear Gate Auto Closer.>	Is the check result OK?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the PRG CM connector and PRG auto closer connector. ***Connector & terminal*** ***(R423) No. 2 — (D153) No. 1:*** ***(R423) No. 3 — (D153) No. 2:*** ***(R422) No. 9 — (D153) No. 4:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the PRG CM connector and chassis ground. ***Connector & terminal*** ***(R423) No. 2 — Chassis ground:*** ***(R423) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>	Repair or replace the short circuit of the harness.

U: DTC B2527 AUTO CLOSER MOTOR CIRCUIT LAW

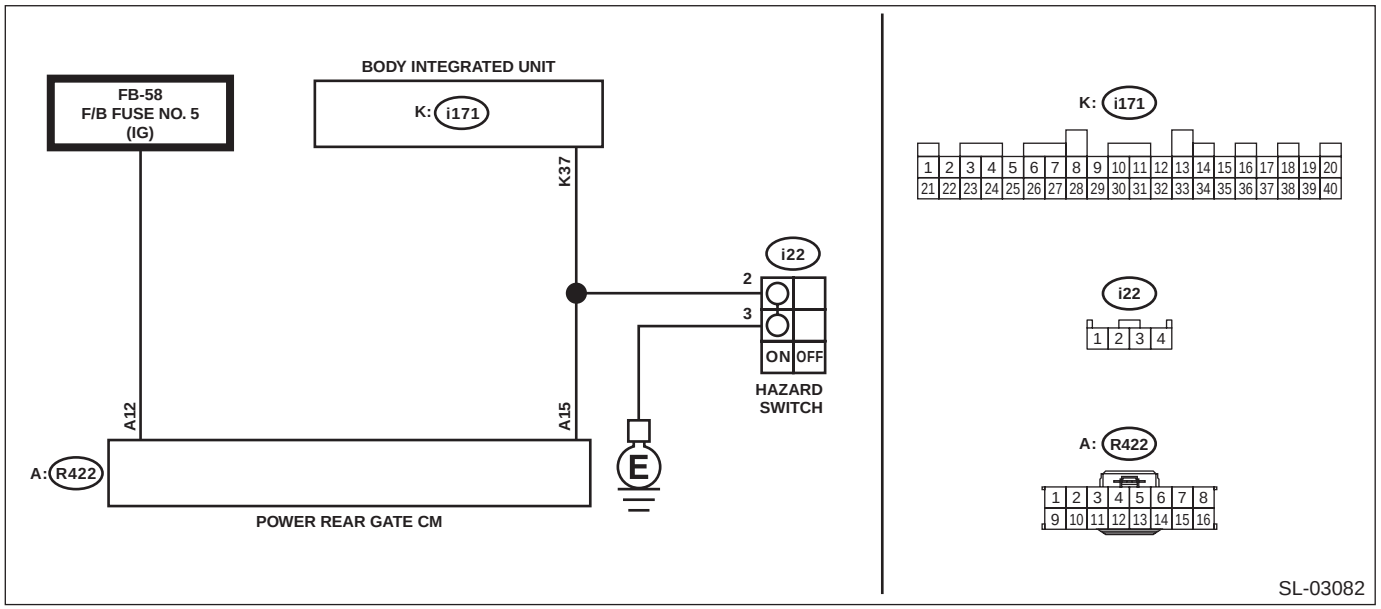
DTC DETECTING CONDITION:
When malfunction in the power rear gate auto closer is detected.
TROUBLE SYMPTOM:
The pull-in/release operation of closer is not possible.

NOTE:
For the diagnostic procedure, refer to DTC B2526. <Ref. to PRG(diag)-45, DTC B2526 AUTO CLOSER MOTOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

12.General Diagnostic Table

A: INSPECTION

Symptoms	Note
Turn hazard lights do not illuminate	<Ref. to PRG(diag)-48, TURN HAZARD LIGHTS DO NOT ILLUMINATE, INSPECTION, Diagnostics with Phenomenon.>
The buzzer does not sound	<Ref. to PRG(diag)-49, THE BUZZER DOES NOT SOUND, INSPECTION, Diagnostics with Phenomenon.>
Operation by the PRG driver's SW is not possible	<Ref. to PRG(diag)-54, OPERATION BY THE PRG DRIVER'S SW IS NOT POSSIBLE, INSPECTION, Diagnostics with Phenomenon.>
Memory height SW does not function.	<Ref. to PRG(diag)-51, CHECK MEMORY HEIGHT SW INPUT CIRCUIT, INSPECTION, Diagnostics with Phenomenon.>
PRG inner SW does not function	<Ref. to PRG(diag)-55, PRG INNER SW DOES NOT FUNCTION, INSPECTION, Diagnostics with Phenomenon.>
PRG position cannot be memorized. Does not stop at a height registered in memory.	<Ref. to PRG(diag)-52, PRG POSITION CANNOT BE MEMORIZED, INSPECTION, Diagnostics with Phenomenon.>
PRG opener button does not function	<Ref. to PRG(diag)-52, PRG OPENER BUTTON DOES NOT FUNCTION, INSPECTION, Diagnostics with Phenomenon.>
Operation from keyless/keyless access mobile key is not possible.	<Ref. to PRG(diag)-53, OPERATION FROM KEYLESS/KEYLESS ACCESS MOBILE KEY IS NOT POSSIBLE, INSPECTION, Diagnostics with Phenomenon.>
PRG does not operate. Only operate in either auto-open or close operation.	<Ref. to PRG(diag)-56, PRG DOES NOT OPERATE, INSPECTION, Diagnostics with Phenomenon.>



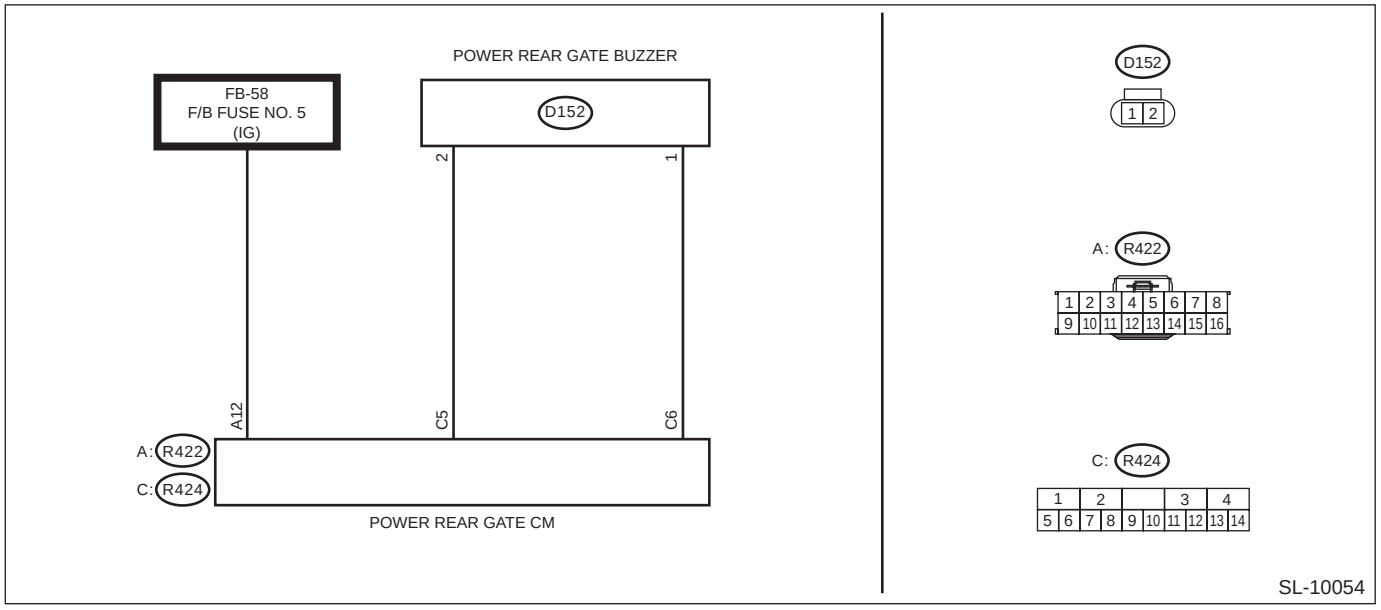
13.Diagnostics with Phenomenon

A: INSPECTION

1. TURN HAZARD LIGHTS DO NOT ILLUMINATE

Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Power rear gate system <Ref. to WI-298, WIRING DIAGRAM, Power Rear Gate System.>



Step		Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT.** Check the hazard light illumination using the following procedures. • Turn the hazard switch to ON. • Perform lock/unlock operation using keyless key / access key.	Does the hazard light illuminate?	Go to step **2**.	Perform diagnosis for the body integrated unit. <Ref. to BC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
2	**CHECK PRG CM.** 1) Unlock the vehicle. 2) Turn the ignition switch to ON. 3) Press and hold the power rear gate driver's switch to activate the power rear gate auto operation.	Does the hazard light illuminate during the power rear gate operation?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.

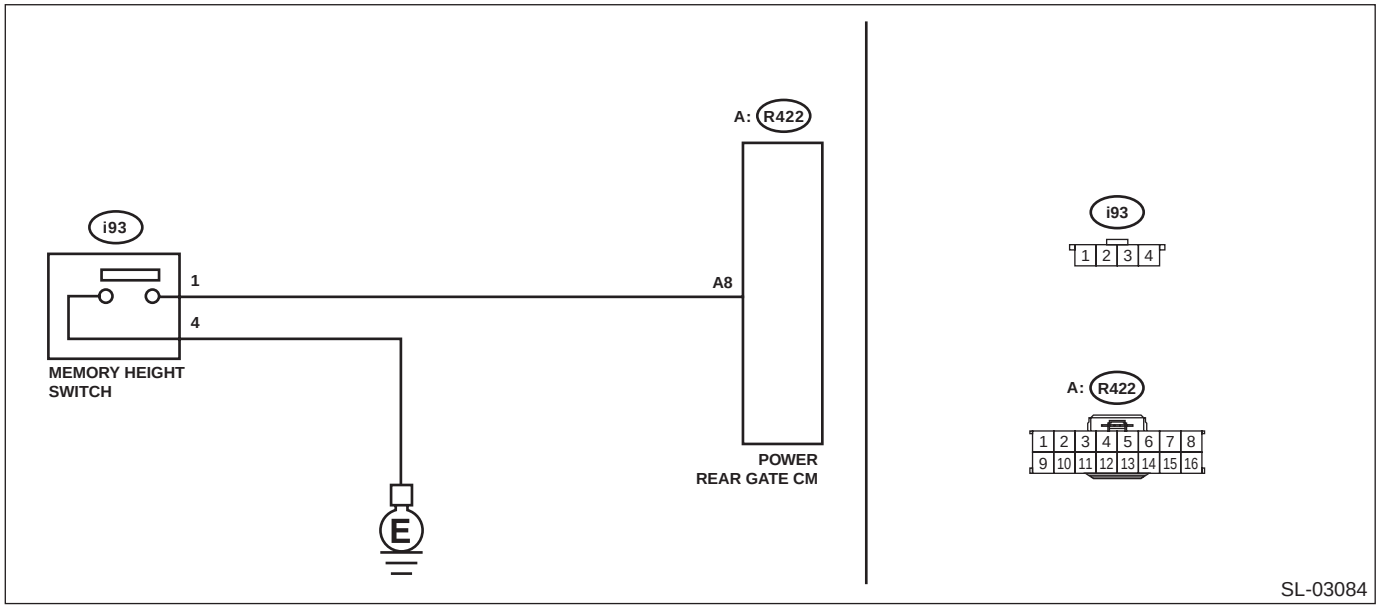
	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Disconnect the PRG CM connectors in the order of (R423) → (R422). 4) Measure the resistance between body integrated unit connector and PRG CM connector. ***Connector & terminal*** ***(R422) No. 15 — (i171) No. 37:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 15 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>	Repair or replace the short circuit of the harness.

2. THE BUZZER DOES NOT SOUND

Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Power rear gate system <Ref. to WI-298, WIRING DIAGRAM, Power Rear Gate System.>

	Step	Check	Yes	No
1	**CHECK CUSTOMIZATION SETTINGS.** Check the current data «Answer-Back Buzzer Information» of power rear gate using Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.>	Is it ON?	Go to step **2**. (Buzzer sounds)	Go to step **3**. (Buzzer stops)
2	**CHECK AUTO OPERATION.** 1) Turn the ignition switch to OFF. 2) From full close position or full open position, press and hold the power rear gate driver’s switch to open/close the power rear gate.	Does the buzzer sound during the auto operation?	System is normal.	Go to step **3**.



Step		Check	Yes	No
3	**CHECK FUNCTION.** 1) From the full open position, push the rear gate inner switch to perform the power rear gate auto close operation. 2) During the power rear gate auto close operation, press the sensor unit of the touch sensor to perform the reverse operation. NOTE: During the power rear gate reverse operation, beeping sound (warning sound) is made.	Does the buzzer sound?	System is normal.	Go to step **4**.
4	**CHECK CURRENT DATA.** 1) Check the current data «BUZZER» of power rear gate using Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.> 2) From the full open position, push the rear gate inner switch to perform the power rear gate auto close operation. 3) During the power rear gate auto close operation, press the sensor unit of the touch sensor to perform the reverse operation.	Is the change of ON ←→ OFF detected?	Go to step **5**.	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>
5	**CHECK HARNESS.** 1) Disconnect the power rear gate buzzer connector. 2) Using an oscilloscope, measure the voltage between power rear gate buzzer connector and chassis ground. 3) From the full open position, push the rear gate inner switch to perform the power rear gate auto close operation. 4) During the power rear gate auto close operation, press the sensor unit of the touch sensor to perform the reverse operation. ***Connector & terminal*** ***(D152) No. 1 (+) — Chassis ground (–):***	Does the voltage waveform temporarily change between ON and OFF during the power rear gate reverse operation?	Replace the power rear gate buzzer. <Ref. to PRG-17, Power Rear Gate Buzzer.>	Go to step **6**.
6	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the PRG CM connectors in the order of (R423) → (R424). 2) Measure the resistance between PRG CM connector and power rear gate buzzer connector. ***Connector & terminal*** ***(R424) No. 5 — (D152) No. 2:*** ***(R424) No. 6 — (D152) No. 1:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Connect the power rear gate buzzer connector. 2) Measure the resistance between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R424) No. 5 — Chassis ground:*** ***(R424) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>	Repair or replace the short circuit of the harness.

3. CHECK MEMORY HEIGHT SW INPUT CIRCUIT

NOTE:
Before performing diagnosis, initialize PRG SYS by opening PRG in manual operation, and then operating the power rear gate auto closer from the partially latched state.

Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Power rear gate system <Ref. to WI-298, WIRING DIAGRAM, Power Rear Gate System.>

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** Check «Memory stop SW» using the Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.>	Does the display switch between OFF ←→ ON according to memory height SW operation?	Input circuit is normal.	Go to step **2**.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the PRG CM connectors in the order of (R423) → (R422). 2) Disconnect the memory height SW connector. 3) Measure the resistance between PRG CM connector and memory height SW connector. ***Connector & terminal*** ***(R422) No. 8 — (i93) No. 1:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 8 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** Measure the resistance between memory height SW connector and chassis ground. ***Connector & terminal*** ***(i93) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK MEMORY HEIGHT SW.** Measure the resistance between switch terminals. ***Terminals*** ***No. 1 — No. 4:***	Is the resistance 1 MΩ or more at OFF, and less than 1 Ω at ON?	Go to step **6**.	Replace the memory height SW. <Ref. to PRG-20, Memory Height Switch.>

	Step	Check	Yes	No
6	**CHECK CONNECTOR.**	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>

4. PRG POSITION CANNOT BE MEMORIZED

NOTE:
Before performing diagnosis, initialize PRG SYS by opening PRG in manual operation, and then operating the power rear gate auto closer from the partially latched state.

	Step	Check	Yes	No
1	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK MEMORY HEIGHT SW.**	Is the memory height SW ON?	Go to step **3**.	Set the memory height SW to ON.
3	**CHECK EACH SW.** Perform inspections described in "PRG INNER SW DOES NOT FUNCTION" and "CHECK MEMORY HEIGHT SW INPUT CIRCUIT". <Ref. to PRG(diag)-55, PRG INNER SW DOES NOT FUNCTION, INSPECTION, Diagnostics with Phenomenon.> <Ref. to PRG(diag)-51, CHECK MEMORY HEIGHT SW INPUT CIRCUIT, INSPECTION, Diagnostics with Phenomenon.>	Is the check result OK?	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>	Repair it according to each inspection.

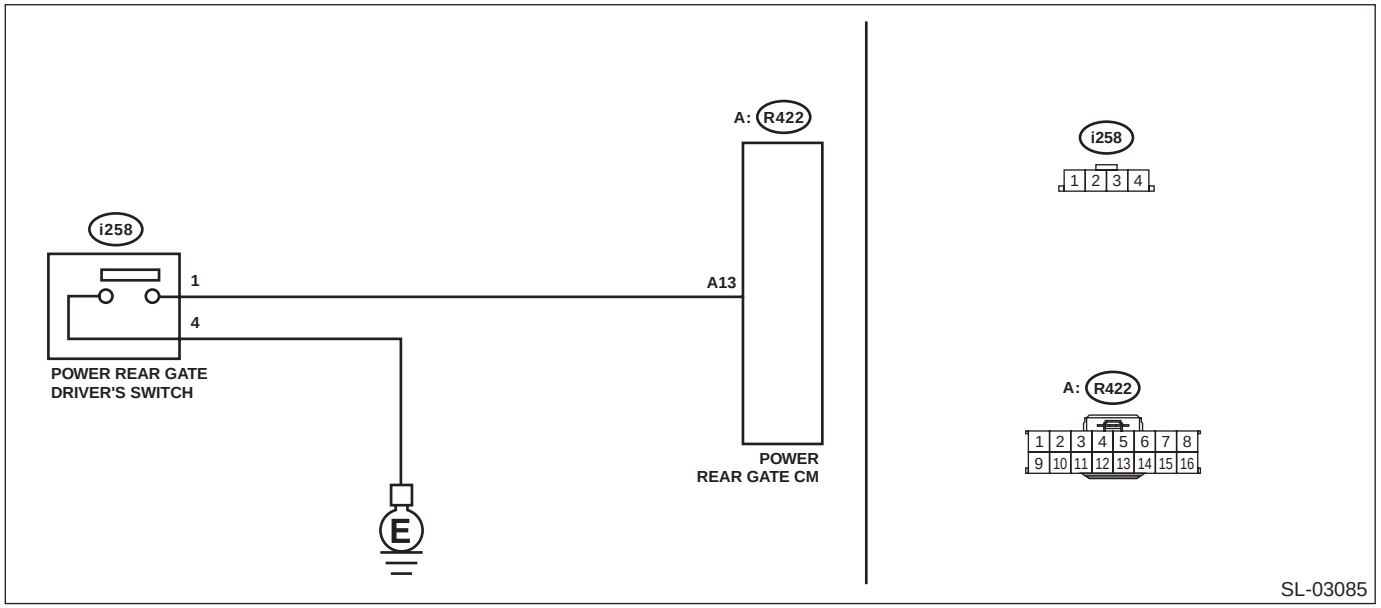
5. PRG OPENER BUTTON DOES NOT FUNCTION

NOTE:
Before performing diagnosis, initialize PRG SYS by opening PRG in manual operation, and then operating the power rear gate auto closer from the partially latched state.

	Step	Check	Yes	No
1	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK CURRENT DATA.** Check «R/G Open SW» using the Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.>	Does the display switch between "OFF" "tap" "press and hold" according to PRG opener button operation?	Switch input signal is normal.	Go to step **3**.
3	**CHECK BODY INTEGRATED UNIT.** • For models with keyless access Perform STEP 6 and subsequent procedures in "CANNOT UNLOCK WITH THE REAR GATE OPENER BUTTON" in KPS (DIAGNOSTICS). <Ref. to KPS(diag)-125, REAR GATE CANNOT BE UNLOCKED WITH THE REAR GATE OPENER BUTTON, INSPECTION, Diagnostics with Phenomenon.> • For models without keyless access Perform "CHECK REAR GATE OPENER BUTTON CIRCUIT" in Door Lock Control System. <Ref. to SL-15, CHECK REAR GATE OPENER BUTTON CIRCUIT, INSPECTION, Door Lock Control System.>	Is the check result OK?	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>	Repair it according to each inspection.

6. OPERATION FROM KEYLESS/KEYLESS ACCESS MOBILE KEY IS NOT POSSIBLE

NOTE:
Before performing diagnosis, initialize PRG SYS by opening PRG in manual operation, and then operating the power rear gate auto closer from the partially latched state.



Step		Check	Yes	No
1	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK CURRENT DATA.** Check «Normal Keyless R/G SW» or «Smart Keyless R/G SW» using the Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.>	Does the display switch between "OFF" "tap" "press and hold" according to mobile key SW operation?	Switch input signal is normal.	Go to step **3**.
3	**CHECK BODY INTEGRATED UNIT.** • For models with keyless access Perform "KEYLESS ACCESS LOCK/UNLOCK CANNOT BE PERFORMED FROM ANY OF THE DOORS" in KPS (DIAGNOSTICS). <Ref. to KPS(diag)-110, KEYLESS ACCESS LOCK/UNLOCK CANNOT BE PERFORMED FROM ANY OF THE DOORS, INSPECTION, Diagnostics with Phenomenon.> • For models without keyless access Perform "NONE OF THE FUNCTIONS OF THE KEYLESS ENTRY SYSTEM OPERATE" in Door Lock Control System. <Ref. to SL-18, SYMPTOM CHART, INSPECTION, Keyless Entry System.>	Is the check result OK?	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>	Repair it according to each inspection.

7. OPERATION BY THE PRG DRIVER'S SW IS NOT POSSIBLE

NOTE:
Before performing diagnosis, initialize PRG SYS by opening PRG in manual operation, and then operating the power rear gate auto closer from the partially latched state.

Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Power rear gate system <Ref. to WI-298, WIRING DIAGRAM, Power Rear Gate System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Check «D SW» using the Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.>	Does the display switch between OFF ←→ ON according to PRG driver's SW operation?	Input circuit is normal.	Go to step **2**.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the PRG CM connectors in the order of (R423) → (R422). 2) Disconnect the power rear gate driver's SW connector. 3) Measure the resistance between PRG CM connector and power rear gate driver's SW connector. ***Connector & terminal*** ***(R422) No. 13 — (i258) No. 1:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 13 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** Measure the resistance between power rear gate driver's SW connector and chassis ground. ***Connector & terminal*** ***(i258) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
5	**CHECK POWER REAR GATE DRIVER'S SW.** Measure the resistance between switch terminals. ***Terminals*** ***No. 1 — No. 4:***	Is the resistance 1 MΩ or more at OFF, and less than 1 Ω at ON?	Go to step **6**.	Replace the memory height SW. <Ref. to PRG-20, Memory Height Switch.>
6	**CHECK CONNECTOR.**	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>

8. PRG INNER SW DOES NOT FUNCTION

NOTE:
Before performing diagnosis, initialize PRG SYS by opening PRG in manual operation, and then operating the power rear gate auto closer from the partially latched state.

Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Power rear gate system <Ref. to WI-298, WIRING DIAGRAM, Power Rear Gate System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Check «R/G inner SW» using the Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.>	Does the display switch between OFF ←→ ON according to PRG inner SW operation?	Input circuit is normal.	Go to step **2**.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the PRG CM connectors in the order of (R423) → (R422). 2) Disconnect the PRG inner SW connector. 3) Measure the resistance between PRG CM connector and PRG inner SW connector. ***Connector & terminal*** ***(R422) No. 6 — (D154) No. 1:*** ***(R422) No. 9 — (D154) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK PRG INNER SW.** Measure the resistance between switch terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 1 MΩ or more at OFF, and less than 1 Ω at ON?	Go to step **5**.	Replace the PRG inner SW. <Ref. to PRG-18, Power Rear Gate Inner Switch.>
5	**CHECK CONNECTOR.**	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>

9. PRG DOES NOT OPERATE

NOTE:
When confirming the current data, display only the affected items to be checked. When the display items are too many, changes in the signals will not be reflected.

	Step	Check	Yes	No
1	**CHECK VEHICLE SPEED.** 1) Turn the ignition switch to ON. 2) Check «Front Wheel Speed» of the PRG CM using the Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.>	Is the reading 0 km/h?	Go to step **2**.	VDC <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>, and the body integrated unit <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> must be checked, and if no fault is found, replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>
2	**CHECK PARKING CONDITION.** Using the Subaru Select Monitor, check «P range SW» or «EPB Operating status» for PRG CM. <Ref. to PRG(diag)-13, Read Current Data.>	For CVT models, does «P range SW» indicate «ON» when the shift lever is in P position? For MT models. does «EPB Operating status» indicate «Operate» when the EPB is activated?	Go to step **3**.	VDC <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>, and the body integrated unit <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> must be checked, and if no fault is found, replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>

	Step	Check	Yes	No
3	**CHECK R/G OPEN PERMISSION CONDITIONS.** Using the Subaru Select Monitor, check «R/G Open Authorized State» for the PRG CM. <Ref. to PRG(diag)-13, Read Current Data.> When the vehicle is in locked state: No permission When the vehicle is in unlocked state: Permission	Does display show as described on left at vehicle locked/unlocked state?	Go to step **4**.	Body integrated unit <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> must be checked, and if no fault is found, replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>
4	**CHECK Auto Start Stop STATUS.** Using the Subaru Select Monitor, check «Idle Stop Control» for the PRG CM. <Ref. to PRG(diag)-13, Read Current Data.>	Is «Idle Stop Uncontrol» displayed while not controlling the idling stop?	Go to step **5**.	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>
5	**CHECK TOUCH SENSOR CONDITIONS.** Check «TOUCH SENSOR» for the PRG CM using the Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.>	Does the display change as ON ←→ OFF along with the ON/OFF operation of the touch sensor?	Go to step **6**.	Check the touch sensor with reference to DTC B2524. <Ref. to PRG(diag)-42, DTC B2524 TOUCH SENSOR CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
6	**CHECK LATCH CONDITIONS.** Using the Subaru Select Monitor, check «COURTESY SW» «LATCH SW» «SECTOR SW» for PRG CM. <Ref. to PRG(diag)-13, Read Current Data.> • Rear gate open state «COURTESY SW»: ON «LATCH SW»: ON «SECTOR SW»: ON • Rear gate closed state «COURTESY SW»: OFF «LATCH SW»: OFF «SECTOR SW»: ON	In a rear gate open/closed state, does the display indicate each combination of values described on the left?	Go to step **7**.	Check the closer with reference to DTC B2513. <Ref. to PRG(diag)-32, DTC B2513 LATCH CONDITION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
7	**CHECK PRG CM POWER SUPPLY.** Check «+ B» for the PRG CM using the Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.>	Is the voltage 9 — 16 V?	Go to step **8**.	Check the power supply with reference to DTC B2500. <Ref. to PRG(diag)-16, DTC B2500 BATTERY POWER SUPPLY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

	Step	Check	Yes	No
8	**CHECK SW INPUT.** From a rear gate fully closed or fully open state, perform auto operation using the following operation switches. • Power rear gate driver's switch • Rear gate opener button • Power rear gate inner switch • Rear gate / trunk SW (keyless transmitter or access key)	Is the check result OK?	Currently, system is normal. Operation conditions are not met temporarily.	Perform inspection with reference to "OPERATION BY THE PRG DRIVER'S SW IS NOT POSSIBLE", "PRG INNER SW DOES NOT FUNCTION", "PRG OPENER BUTTON DOES NOT FUNCTION", "OPERATION FROM KEYLESS/ KEYLESS ACCESS MOBILE KEY IS NOT POSSIBLE". <Ref. to PRG(diag)-54, OPERATION BY THE PRG DRIVER'S SW IS NOT POSSIBLE, INSPECTION, Diagnostics with Phenomenon.> <Ref. to PRG(diag)-55, PRG INNER SW DOES NOT FUNCTION, INSPECTION, Diagnostics with Phenomenon.> <Ref. to PRG(diag)-52, PRG OPENER BUTTON DOES NOT FUNCTION, INSPECTION, Diagnostics with Phenomenon.> <Ref. to PRG(diag)-53, OPERATION FROM KEYLESS/ KEYLESS ACCESS MOBILE KEY IS NOT POSSIBLE, INSPECTION, Diagnostics with Phenomenon.>

CRUISE CONTROL SYSTEM

CC

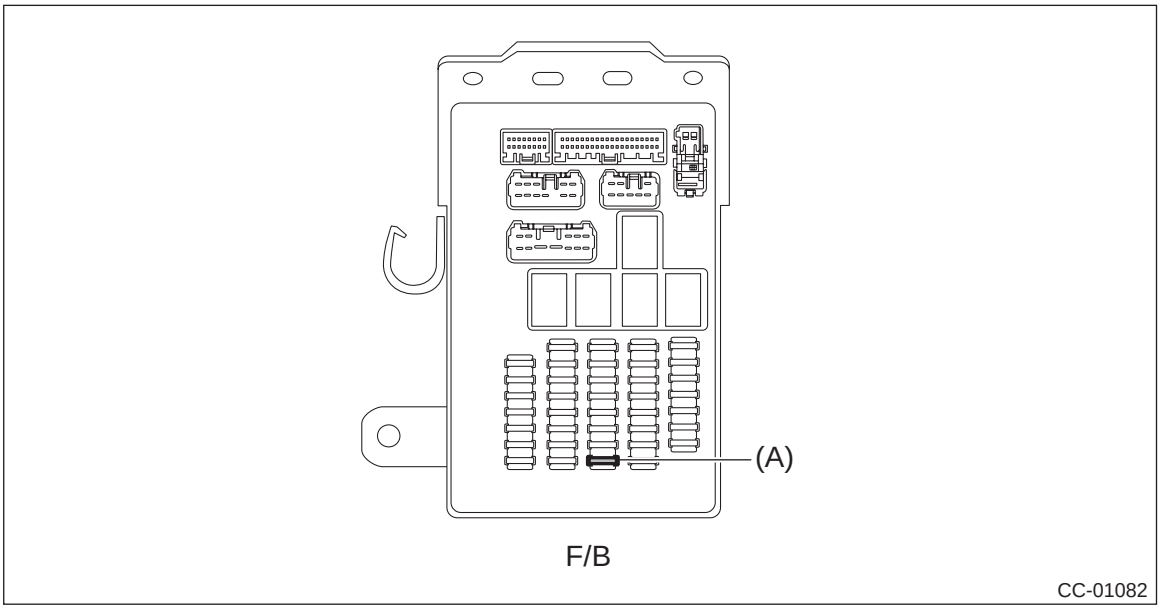
		Page
1.	General Description	2
2.	Relay and Fuse	3
3.	Cruise Control System	4
4.	Control Unit	5
5.	Cruise Control Command Switch	6
6.	Combination Meter	8
7.	Stop Light & Brake Switch	9
8.	Clutch Switch	10
9.	Inhibitor Switch	11
10.	Transmission Control Module (TCM)	12
11.	Neutral Position Switch	13
12.	Diagnostics with Phenomenon	14

1. General Description

A: LOCATION

Refer to “LOCATION” of “CRUISE CONTROL SYSTEM (DIAGNOSTICS)” section. <Ref. to CC(diag)-6, LOCATION, Electrical Component Location.>

B: CAUTION



• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
• Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. <Ref. to AB-10, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VDC sensor midpoint setting mode” of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: PREPARATION TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

2. Relay and Fuse

A: LOCATION

Fuse & relay box (F/B)	Fuse 7.5 A (stop light and brake switch)	(A)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-22, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

3. Cruise Control System

A: WIRING DIAGRAM

Refer to “Cruise Control System” in the wiring diagram. <Ref. to WI-152, WIRING DIAGRAM, Cruise Control System.>

B: INSPECTION

Refer to “Basic Diagnostic Procedure” of “CRUISE CONTROL SYSTEM (DIAGNOSTICS)”. <Ref. to CC(diag)-2, Basic Diagnostic Procedure.>

C: NOTE

For operation procedures of each component of the cruise control system, refer to the respective section.

- Control module: <Ref. to CC-5, Control Unit.>

NOTE:
System control of the cruise control is performed by each module. For procedure, refer to the following sections.

  - Engine control module (ECM):
    - H4 model: <Ref. to FU(H4DO)-82, Engine Control Module (ECM).>
    - H6 model: <Ref. to FU(H6DO)-84, Engine Control Module (ECM).>
  - Transmission control module (TCM):
    - H4 model: <Ref. to CVT(TR580)-161, Transmission Control Module (TCM).>
    - H6 model: <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>
- Cruise control command switch: <Ref. to CC-6, Cruise Control Command Switch.>
- Combination meter: <Ref. to IDI-11, Combination Meter.>
- Stop light and brake switch: <Ref. to BR-80, Stop Light Switch.>
- Clutch switch: <Ref. to CL-31, Clutch Switch.>
- Inhibitor switch:
  - H4 model: <Ref. to CVT(TR580)-105, Inhibitor Switch.>
  - H6 model: <Ref. to CVT(TR690)-102, Inhibitor Switch.>
- Neutral position switch: <Ref. to 6MT-55, Switches and Harness.>

4. Control Unit

A: NOTE

System control of the cruise control is performed by each module. For procedure, refer to the following sections.

- Engine control module (ECM):
  - H4 model: <Ref. to FU(H4DO)-82, Engine Control Module (ECM).>
  - H6 model: <Ref. to FU(H6DO)-84, Engine Control Module (ECM).>
- Transmission control module (TCM):
  - H4 model: <Ref. to CVT(TR580)-161, Transmission Control Module (TCM).>
  - H6 model: <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>

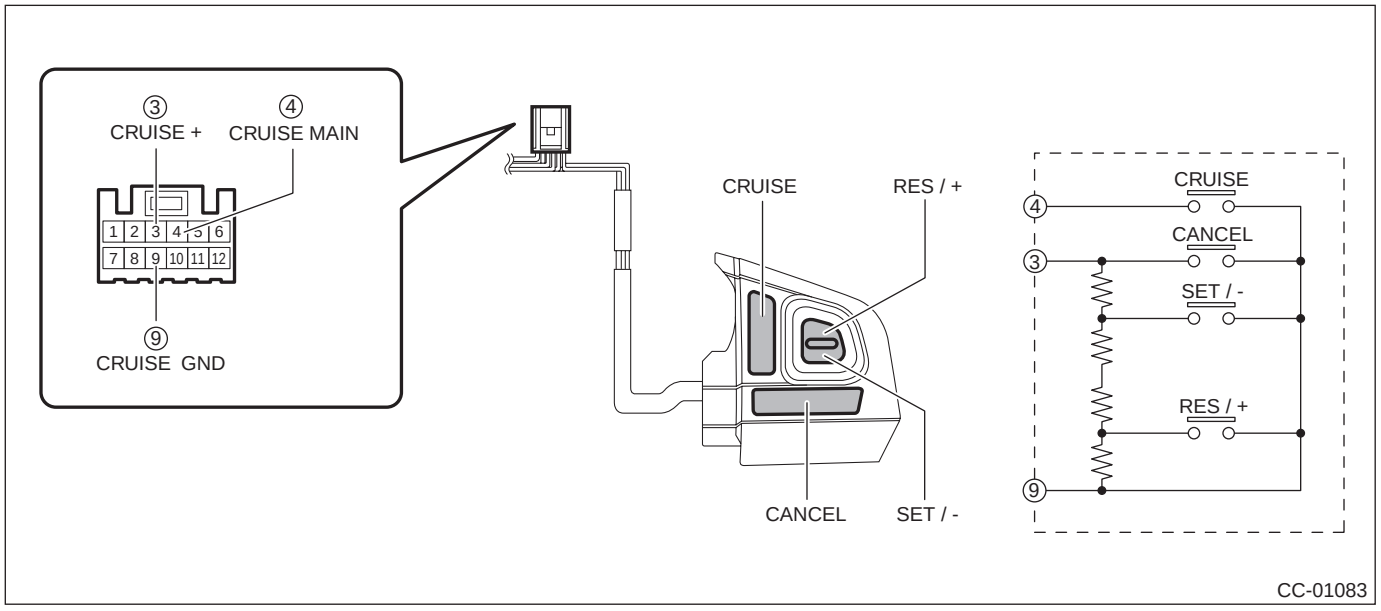
5. Cruise Control Command Switch

A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Set the tire to the straight-ahead position.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
3) Remove the driver's airbag module. <Ref. to AB-33, REMOVAL, Driver's Airbag Module.>
4) Remove the steering wheel. <Ref. to PS-12, REMOVAL, Steering Wheel.>
5) Remove the cruise control command switch assembly. <Ref. to PS-13, DISASSEMBLY, Steering Wheel.>

B: INSTALLATION

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.
• If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• Securely install the switch. Improper insertion of the pin or claw of the switch may cause improper installation.
1) Install the cruise control command switch assembly. <Ref. to PS-13, DISASSEMBLY, Steering Wheel.>
2) Align the center position of the steering roll connector. <Ref. to AB-64, ADJUSTMENT, Roll Connector.>
3) Install the steering wheel.



Tightening torque:
39 N·m (4 kgf-m, 28.8 ft-lb)

Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)
4) Install the driver's airbag module. <Ref. to AB-34, INSTALLATION, Driver's Airbag Module.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions		Standard
3 — 9	CANCEL SET/– RES/+	All OFF	Approx. 4,020 Ω
	CANCEL	ON	Less than 1 Ω
	SET/–	ON	Approx. 250 Ω
	RES/+	ON	Approx. 1,470 Ω
4 — 9	CRUISE (MAIN)	OFF	1 MΩ or more
		ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
10 (+) — 11 (–)	Apply battery voltage.	Light ON

3) Replace the cruise control command switch assembly if it is found defective.

6. Combination Meter

A: NOTE

For the operation procedures for combination meter, refer to “INSTRUMENTATION/DRIVER INFO” section. <Ref. to IDI-11, Combination Meter.>

7. Stop Light & Brake Switch

A: NOTE

For the operation procedures for stop light and brake switch, refer to “BRAKE” section. <Ref. to BR-80, Stop Light Switch.>

8. Clutch Switch

A: NOTE

For the operation procedures for clutch switch, refer to “CLUTCH SYSTEM” section. <Ref. to CL-31, Clutch Switch.>

9. Inhibitor Switch

A: NOTE

For the operation procedures for inhibitor switch, refer to “CONTINUOUSLY VARIABLE TRANSMISSION” section.

- H4 model: <Ref. to CVT(TR580)-105, Inhibitor Switch.>
- H6 model: <Ref. to CVT(TR690)-102, Inhibitor Switch.>

10.Transmission Control Module (TCM)

A: NOTE

For the operation procedures for transmission control module (TCM), refer to “CONTINUOUSLY VARIABLE TRANSMISSION” section.

- H4 model: <Ref. to CVT(TR580)-161, Transmission Control Module (TCM).>
- H6 model: <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>

11.Neutral Position Switch

A: NOTE

For the operation procedures for neutral position switch, refer to “MANUAL TRANSMISSION AND DIFFERENTIAL” section. <Ref. to 6MT-55, Switches and Harness.>

12.Diagnostics with Phenomenon

A: INSPECTION

Refer to “Diagnostics with Phenomenon” of “CRUISE CONTROL SYSTEM (DIAGNOSTICS)” section. <Ref. to CC(diag)-11, Diagnostics with Phenomenon.>

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

CC(diag)

		Page
1.	Basic Diagnostic Procedure	2
2.	General Description	5
3.	Electrical Component Location	6
4.	Engine Control Module (ECM) I/O Signal	7
5.	Subaru Select Monitor	8
6.	Read Cancel Code	9
7.	Real-time Diagnosis	10
8.	Diagnostics with Phenomenon	11
9.	List of Cancel Code	13
10.	Diagnostic Procedure with Cancel Code	15

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
• When performing diagnosis, observe the legal speed limit on the road.
• The cancel code will also appear when the cruise control is cancelled by the driver's operation. Do not confuse them.
• Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.

	Step	Check	Yes	No
1	**CHECK MALFUNCTION INDICATOR LIGHT.** Make sure the malfunction indicator light illuminates.	Does the malfunction indicator light illuminate?	Go to step **5**.	Go to step **2**.
2	**CHECK CRUISE INDICATOR LIGHT.** Make sure the cruise indicator light blinks.	Does the cruise indicator light blink?	Go to step **7**.	Go to step **3**.
3	**CHECK CRUISE SWITCH OPERATION.** Check the CRUISE switch operation. (Check the illumination of the CRUISE indicator.)	Is the CRUISE switch turned on? (Does the CRUISE indicator illuminate?)	Go to step **4**.	Go to phenomenon 1. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
4	**CHECK CRUISE CONTROL SET OPERATION.** Check the cruise control setting operation.	Can the cruise control be set while driving at 40 km/h (25 MPH) or more?	Go to step **8**.	Go to step **7**.
5	**CHECK DTC.** Read all DTCs using the Subaru Select Monitor.	Is an engine or ABS/VDC related DTC displayed?	Record the DTC. Go to step **6**.	Go to phenomenon 2. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
6	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, check the Freeze Frame Data or Information in Trouble State.	Was the Freeze Frame Data or Information in Trouble State recorded?	Record the data. Perform the diagnosis according to the engine or ABS/VDC related DTC.	Perform the diagnosis according to the engine or ABS/VDC related DTC.
7	**CHECK CANCEL CODE.** Using the Subaru Select Monitor, read the cancel codes. NOTE: • Do not turn the ignition switch to OFF after the cruise control is deactivated. • Do not operate the cruise control command switch after the cruise control is deactivated. If the above is performed, the cancel code will be cleared.	Is it possible to read the cancel codes?	Perform the diagnosis according to the cancel code. <Ref. to CC(diag)-13, LIST, List of Cancel Code.>	Go to step **8**.

	Step	Check	Yes	No
8	**CHECK SET INDICATOR.** Check the illumination of the SET indicator.	Does the SET indicator illuminate?	Go to step **9**.	Go to phenomenon 3. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
9	**CHECK VEHICLE SPEED IS HELD WITHIN SET SPEED.** Make sure the vehicle speed is held within set speed.	Is the vehicle speed kept within setting speed ±3 km/h (±2 MPH)? (Make sure that on a level road.)	Go to step **10**.	Go to phenomenon 4. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
10	**CHECK RES/+ OPERATION.** Check the RES/+ switch operation.	Does the vehicle speed increase or return to set speed after RES/+ switch has been pressed?	Go to step **11**.	Go to phenomenon 5. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
11	**CHECK SET/– OPERATION.** Check the SET/– switch operation.	Does the vehicle speed decrease after SET/– switch has been pressed?	Go to step **12**.	Go to phenomenon 6. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
12	**CANCEL OPERATION CHECK.** Check the CANCEL switch operation.	Is the cruise control released after CANCEL switch has been pressed?	Go to step **13**.	Go to phenomenon 7. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
13	**CHECK CRUISE CONTROL RELEASE OPERATION.** Check the cruise control release operation.	Is the cruise control released after brake pedal has been depressed?	Go to step **14**.	Go to phenomenon 8. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

Step		Check	Yes	No
14	**CHECK CRUISE CONTROL RELEASE OPERATION.** Check the cruise control release operation.	Is the cruise control released after shifting to the neutral position?	Go to step **15**.	Go to phenomenon 9. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
15	**CHECK CRUISE CONTROL RELEASE OPERATION.** Check the cruise control release operation.	Is the cruise control released after depressing the clutch pedal?	Finish the diagnosis.	Go to phenomenon 10. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

2. General Description

A: CAUTION

Airbag system wiring harness is routed near the cruise control command switch.

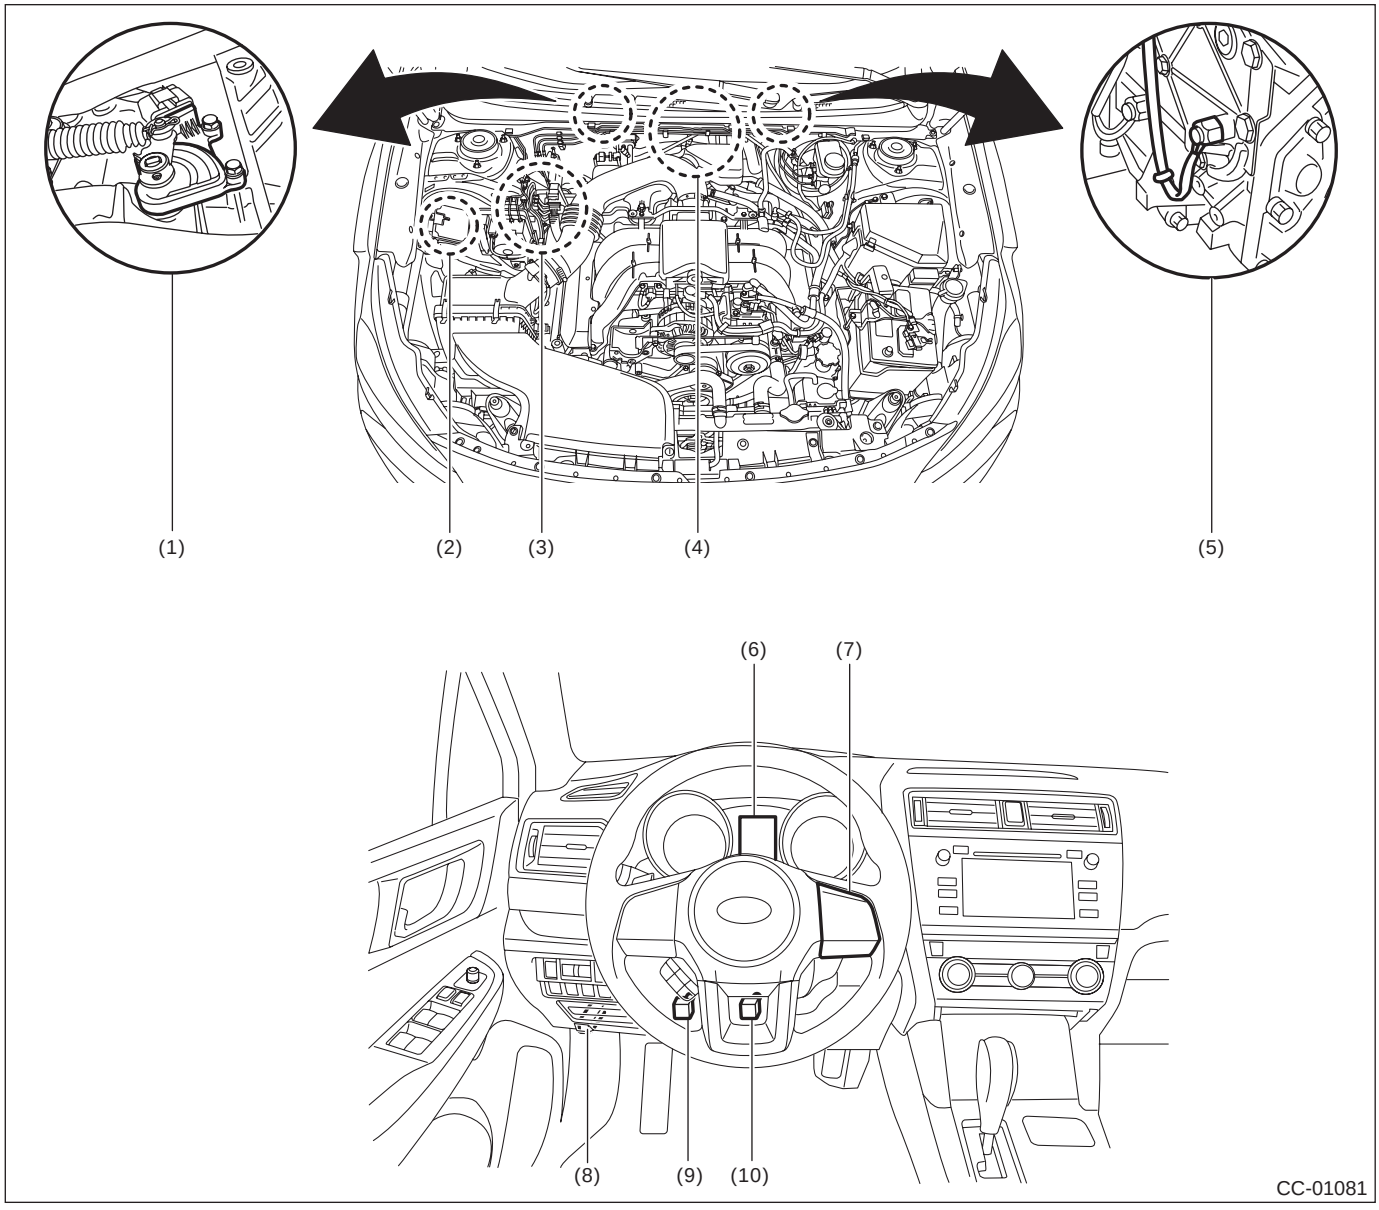
CAUTION:
• Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
• Be careful not to damage the airbag system wiring harness when servicing the cruise control command switch. Airbag system wiring harness is routed near the cruise control command switch.

B: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL



TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used for Subaru Select Monitor 4.

C: INSPECTION

Check the battery. <Ref. to SC(H4DO)-60, INSPECTION, Battery.> <Ref. to SC(H6DO)-60, INSPECTION, Battery.>

3. Electrical Component Location

A: LOCATION

(1) Inhibitor switch (CVT model)
(2) TCM (engine type: EZ)
(3) ECM
(4) TCM (engine type: FB) (on the transmission)
(5) Neutral position switch (MT model)
(6) Cruise indicator light and cruise set indicator light
(7) Cruise control command switch
(8) Data link connector
(9) Clutch switch (MT model)
(10) Stop light and brake switch

4. Engine Control Module (ECM) I/O Signal

A: ELECTRICAL SPECIFICATION

For details on the input/output signals for the engine control module, refer to ENGINE (DIAGNOSTICS). <Ref. to EN(H6DO)(diag)-22, ELECTRICAL SPECIFICATION, Engine Control Module (ECM) I/O Signal.> <Ref. to EN(H4DO)(diag)-21, ELECTRICAL SPECIFICATION, Engine Control Module (ECM) I/O Signal.>

B: WIRING DIAGRAM

Refer to “Cruise Control System” in the wiring diagram. <Ref. to WI-152, WIRING DIAGRAM, Cruise Control System.>

5. Subaru Select Monitor

A: OPERATION

1. GENERAL DESCRIPTION

The on-board diagnosis function of the cruise control system uses Subaru Select Monitor.
The on-board diagnosis function operates in two categories, which are used depending on the type of problems;
1) Cruise Control Cancel Conditions Diagnosis:
(1) This category of diagnosis requires actual vehicle driving in order to determine the cause, as when cruise speed is cancelled during driving although cruise cancel condition is not entered.
(2) Cruise control memory in ECM stores the cancel code which occurred during driving. When there are multiple cancel code, they are shown on the Subaru Select Monitor.

CAUTION:
• In the cruise control memory, not only the cruise control "cancel" occurred (although the "cancel" operation is not entered by the driver), but also the "cancel" condition input by the driver is stored.
• The latest memory content (latest code) is cleared when ignition switch is turned to OFF. However, memory contents set by the diagnosis of faulty switches related to the system and cruise control will remain as trouble history (memory code) after the ignition switch is turned to OFF.
2) Real-time Diagnosis:
Real-time diagnosis function is used to determine whether or not the input signal system is in good order, according to signal emitted from switches, sensors, etc.
(1) Vehicle cannot be driven at cruise speed when the problem occurs in the cruise control system or relevant circuits.
(2) Monitor the signal conditions from switches and sensors.

2. BASIC OPERATION

For operation procedures, refer to the "PC application help for Subaru Select Monitor".

6. Read Cancel Code

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Engine Control System».
5) Drive vehicle at 40 km/h (25 MPH) or more and set the cruise control.

CAUTION:
- **When performing diagnosis, observe the legal speed limit on the road.**
- **The cancel code will also appear when the cruise control is cancelled by the driver's operation. Do not confuse them.**
- **Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.**

6) When the set speed is cancelled by itself (when cancelled without a cancel operation such as applying the brake) or if the cruise control could not be set by performing the setting operation, selecting the «Cancel Code» on the engine malfunction diagnosis screen will display the cancel code on the select monitor display.

NOTE:
The «Current» and «The past» are contained in the cancel code. The latest code recognized during current test drive is displayed in «Current». Cancel codes resulting from fault diagnosis of switches relating to the system and cruise control are also displayed in «The past».
7) Perform Engine DTC Clear Memory operation. <Ref. to EN(H6DO)(diag)-87, Clear Memory Mode.> <Ref. to EN(H4DO)(diag)-80, Clear Memory Mode.>
Cancel codes for switches relating to the system and cruise control are deleted by clearing memory on the engine side.

NOTE:
- The latest code will be cleared by turning ignition switch to OFF.
- For detailed operation procedures, refer to “Application help”.
- For details on cancel codes, refer to List of Cancel Code. <Ref. to CC(diag)-13, List of Cancel Code.>

7. Real-time Diagnosis

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Engine Control System» and then «Enter».
5) On «Select Function» display, select «Data Monitor».
6) Make sure that normal display is shown when operated as follows:

- Depress and release the brake pedal. (Stop light switch and brake switch are turned ON.)
- Turn the “CRUISE” switch to ON.
- Turn the “CANCEL” switch to ON.
- Turn the “SET/–” switch to ON.
- Turn the “RES/+” switch to ON.
- Depress or release the clutch switch.
- Place the shift lever in any position other than neutral.

NOTE:
For detailed operation procedures, refer to “Application help”.

8. Diagnostics with Phenomenon

A: DIAGNOSTIC PROCEDURE WITH PHENOMENON

Phenomenon		Check Item	Note
1	CRUISE switch is not turned ON. (CRUISE indicator does not illuminate.) Or the cruise control is cancelled without CRUISE switch operation.	(1) Perform cruise cancel conditions diagnosis.	Perform the diagnosis according to displayed cancel code.
		(2) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(3) Check the cruise control command switch.	<Ref. to CC(diag)-15, 11, Diagnostic Procedure with Cancel Code.>
		(4) Check the CRUISE indicator.	<Ref. to CC(diag)-12, CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT, Diagnostics with Phenomenon.>
2	Cruise control cannot be set. Or cruise control is cancelled without releasing operation.	(1) Perform cruise cancel conditions diagnosis.	Perform the diagnosis according to displayed cancel code.
		(2) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(3) Check the cruise control command switch.	<Ref. to CC(diag)-15, 11, Diagnostic Procedure with Cancel Code.>
		(4) Check stop light switch and brake switch.	<Ref. to BR-80, Stop Light Switch.> <Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.>
		(5) Check clutch switch.	<Ref. to CL-31, Clutch Switch.> <Ref. to CC(diag)-19, 13, Diagnostic Procedure with Cancel Code.>
		(6) Check the neutral position switch.	<Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.> <Ref. to CC(diag)-24, 62, Diagnostic Procedure with Cancel Code.>
		(7) Check vehicle speed sensor.	<Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>
3	SET indicator does not illuminate.	Check the SET indicator.	<Ref. to CC(diag)-12, CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT, Diagnostics with Phenomenon.>
4	Vehicle speed is not held within set speed ±3 km/h (±2 MPH).	Check the vehicle speed sensor.	<Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>
5	Vehicle speed does not increase or does not return to set speed after RES/+ switch has been pressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the RES/+ switch.	<Ref. to CC(diag)-15, 11, Diagnostic Procedure with Cancel Code.>
6	Vehicle speed does not decrease after SET/– switch has been pressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the SET/– switch.	<Ref. to CC(diag)-15, 11, Diagnostic Procedure with Cancel Code.>
7	Cruise control is not released after CANCEL switch has been pressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the CANCEL switch.	<Ref. to CC(diag)-15, 11, Diagnostic Procedure with Cancel Code.>
8	Cruise control is not released after brake pedal has been depressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check stop light switch and brake switch.	<Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.> <Ref. to BR-80, INSTALLATION, Stop Light Switch.>
9	Cruise control is not released after shifting to the neutral position.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the neutral position switch.	<Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.> <Ref. to CC-13, Neutral Position Switch.>
10	Cruise control is not released after clutch pedal has been depressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check clutch switch.	<Ref. to CC(diag)-19, 13, Diagnostic Procedure with Cancel Code.> <Ref. to CL-31, CLUTCH SWITCH, INSTALLATION, Clutch Switch.>

B: CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT

TROUBLE SYMPTOM:

Cruise control can be set, but the CRUISE indicator and SET indicator do not illuminate.

Step		Check	Yes	No
1	**CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT.** Perform the combination meter operation check. <Ref. to MET(diag)-15, System Operation Check Mode.>	Do the CRUISE & SET indicators illuminate?	Go to step **2**.	Replace the meter case assembly. <Ref. to IDI-11, Combination Meter.>
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault?	Perform the diagnosis according to the diagnosis for LAN system.	Replace the ECM. <Ref. to FU(H6DO)-84, Engine Control Module (ECM).> <Ref. to FU(H4DO)-82, Engine Control Module (ECM).>

9. List of Cancel Code

A: LIST

NOTE:
• The cancel code is registered even when cancel is performed intentionally by the driver.
• Cancel codes are cleared if the ignition switch is turned to OFF.
• If a different cancel code is input after a cancel code (latest code) has been input, the latest code is overwritten.
• If the cruise indicator light is flashing, a malfunction is occurring in the system or cruise control related switch. The cancel code at this time is saved even after ignition switch is OFF as a memory code of a past malfunction.
• To display a cancel code, use the Subaru Select Monitor to read the code after the cruise control is deactivated during a driving test.

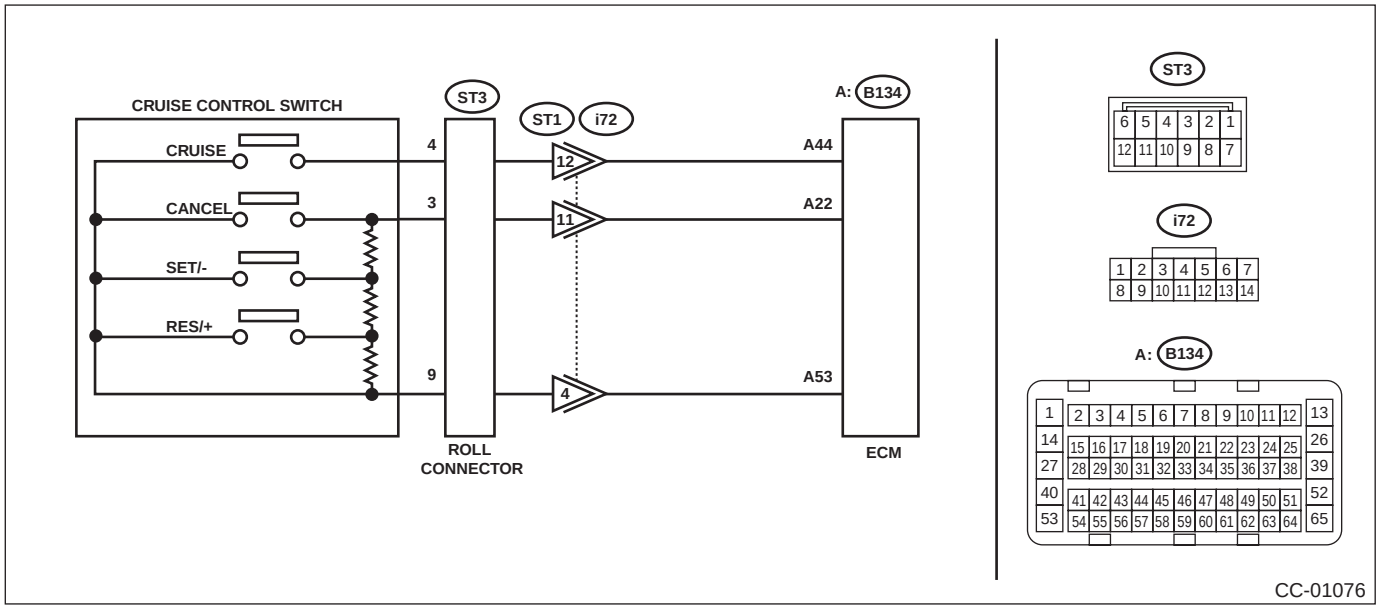
Cancel code	Item	Contents of diagnosis	Note
11	Main Switch	CRUISE switch of cruise control command switch is turned to OFF, and then the cruise control is released.	This code is displayed without operating the CRUISE switch. <Ref. to CC(diag)-15, 11, Diagnostic Procedure with Cancel Code.>
12	Stop & Brake switch	Stop light switch or brake switch is turned to ON, and then the cruise control is released.	This code is displayed without depressing the brake pedal. <Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.>
13	Clutch Switch	Clutch switch is turned to ON, and then the cruise control is released.	This code is displayed without depressing the clutch pedal. <Ref. to CC(diag)-19, 13, Diagnostic Procedure with Cancel Code.>
14	Neutral	Neutral position switch is turned to ON, and then the cruise control is released.	This code is displayed without shifting to neutral position. <Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.>
15	Cancel switch	Cancel switch is turned to ON, and then the cruise control is released.	This code is displayed without operating the cancel switch. <Ref. to CC(diag)-21, 15, Diagnostic Procedure with Cancel Code.>
16	Ignition switch	Ignition switch is turned to OFF, and then the cruise control is released.	This code is displayed without operating the ignition switch. <Ref. to CC(diag)-22, 16, Diagnostic Procedure with Cancel Code.>
21	Abnormality of switches when Ignition switch on	When the ignition switch is turned to ON, each switch of cruise control command switch is already turned to ON.	This code is displayed when the ignition switch is turned to ON without operating the cruise control command switch. <Ref. to CC(diag)-22, 21, Diagnostic Procedure with Cancel Code.>
22	Abnormality of change in vehicle speed	Malfunction of vehicle speed signal variation is detected.	<Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>
24	Abnormality of switches related to cruise control	Open circuit of the cruise control switch is detected during cruise driving. (The system is judged as model without cruise control.)	This code is displayed with normal operation. <Ref. to CC(diag)-23, 24, Diagnostic Procedure with Cancel Code.>
31	Abnormal engine speed Signal	• Abnormal increase of engine speed is detected. • Gear is placed in Neutral, 1st (MT model only) or Reverse position.	Cruise in 2nd shift position or more. <Ref. to CC(diag)-23, 31, Diagnostic Procedure with Cancel Code.>
32	Cruse Control out of Range	• Controlled vehicle speed decreased under the limit during cruising. • Set operation was performed at vehicle speed unavailable for setting. • RESUME operation was performed without memorized vehicle speed.	This code is displayed, though the vehicle speed is increased to the speed available for cruise set and set operation was performed again. <Ref. to CC(diag)-23, 32, Diagnostic Procedure with Cancel Code.>

List of Cancel Code

Cancel code	Item	Contents of diagnosis	Note
34	Prohibition of cruise control at continuing big Accel. angle	The vehicle has been driven at higher speed than set vehicle speed for an abnormally long time (approximately 10 minutes) during cruise driving.	This code is displayed when driving for a long period of time at higher speed than appropriate cruise set vehicle speed by operating accelerator pedal. In this case, the cruise setting is deactivated. <Ref. to CC(diag)-23, 34, Diagnostic Procedure with Cancel Code.>
35	Prohibition of cruise control at vehicle speed F/B malfunction	Set vehicle speed cannot be kept because of some reasons (steep uphill, parking brake, abnormal decrease of engine output, etc.) during cruise driving.	This code is displayed when driving condition is not suitable for cruise control. Perform cruise set operation again after clearing the possible cause. <Ref. to CC(diag)-24, 35, Diagnostic Procedure with Cancel Code.>
41	VDC/TCS Operating	Vehicle dynamics control (VDC), TCS or EPB is operated during cruise driving or cruise setting.	This code is displayed when driving condition is not suitable for cruise control. Perform cruise set operation again after clearing the possible cause. <Ref. to CC(diag)-24, 41, Diagnostic Procedure with Cancel Code.>
43	ABS/VDC Failure	ABS or Vehicle dynamics control (VDC) system malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-24, 43, Diagnostic Procedure with Cancel Code.>
44	Body Integrated unit Failure	Body integrated unit system malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-24, 44, Diagnostic Procedure with Cancel Code.>
45	Meter Failure	Combination meter malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-24, 45, Diagnostic Procedure with Cancel Code.>
49	TCM Failure	Transmission control module (TCM) malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-24, 49, Diagnostic Procedure with Cancel Code.>
61	Brake switch abnormal	Malfunction in the stop light & brake switch is detected.	<Ref. to CC(diag)-24, 61, Diagnostic Procedure with Cancel Code.>
62	Neutral Switch Failure	Neutral position switch malfunction is detected.	<Ref. to CC(diag)-24, 62, Diagnostic Procedure with Cancel Code.>
63	Abnormality 1 of change in vehicle speed	Malfunction of vehicle speed signal variation is detected.	<Ref. to CC(diag)-25, 63, Diagnostic Procedure with Cancel Code.>
64	Engine Sensor Failure 1	Malfunction related to engine is detected.	<Ref. to CC(diag)-25, 64, Diagnostic Procedure with Cancel Code.>
65	Abnormality 1 of switches related to cruise control	Cruise control command switch malfunction is detected. (When the switch is pressed ON for a long time (approximately two minutes), stuck ON condition is detected.)	<Ref. to CC(diag)-25, 65, Diagnostic Procedure with Cancel Code.>
66	Cruise Control Calculation Error	Malfunction of the cruise control calculation (microcomputer) is detected.	<Ref. to CC(diag)-25, 66, Diagnostic Procedure with Cancel Code.>

10.Diagnostic Procedure with Cancel Code

A: 11



When CRUISE switch is pressed, or a malfunction related to CRUISE switch occurs, this is detected.

TROUBLE SYMPTOM:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

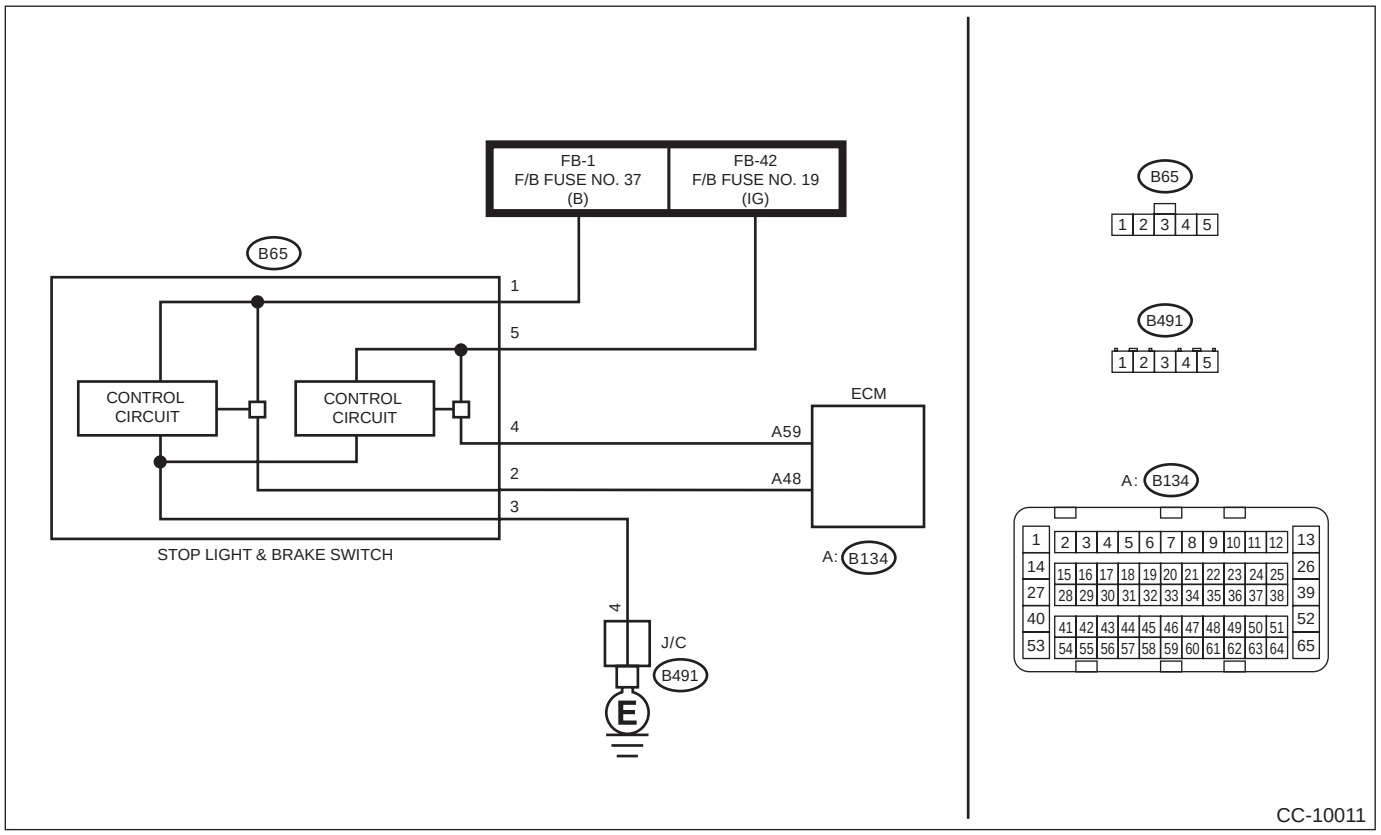
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Cruise control system <Ref. to WI-152, WIRING DIAGRAM, Cruise Control System.>

Step		Check	Yes	No
1	**CHECK CRUISE CONTROL COMMAND SWITCH CIRCUIT.** 1) Remove the driver’s airbag module. <Ref. to AB-33, REMOVAL, Driver’s Airbag Module.> 2) Disconnect the harness connector of cruise control command switch. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(ST3) No. 4 (+) — Chassis ground (–):*** ***(ST3) No. 3 (+) — Chassis ground (–):***	Is the voltage 5 V or more?	Go to step **2**.	Check the harness between cruise control command switch and ECM, and the steering roll connector for open or short circuit, or for poor contact.
2	**CHECK CRUISE CONTROL COMMAND SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Remove the cruise control command switch. <Ref. to CC-6, REMOVAL, Cruise Control Command Switch.> 3) Measure the resistance between harness connector terminal and chassis ground. ***Connector & terminal*** ***(ST3) No. 9 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check for open circuit between cruise control command switch, ECM, and chassis ground and check the ECM.

	Step	Check	Yes	No
3	**CHECK CRUISE CONTROL COMMAND SWITCH.** Measure the resistance between switch terminals when the cruise control command switch is not depressed. ***Terminals*** ***No. 3 — No. 9:***	Is the resistance approx. 4 kΩ?	Go to step **4**.	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>
4	**CHECK CANCEL SWITCH.** 1) Turn the ignition switch to OFF. 2) Remove the cruise control command switch. <Ref. to CC-6, REMOVAL, Cruise Control Command Switch.> 3) Measure the resistance between switch terminals with the CANCEL switch pressed. ***Terminals*** ***No. 3 — No. 9:***	Is the resistance approx. less than 1 Ω when the CANCEL switch is pressed?	Go to step **5**.	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>
5	**CHECK SET/– SWITCH.** Measure the resistance between the switch terminals with the SET/– switch pressed. ***Terminals*** ***No. 3 — No. 9:***	Is the resistance approx. 250 Ω when the SET/– switch is pressed?	Go to step **6**.	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>
6	**CHECK RES/+ SWITCH.** Measure the resistance between the switch terminals with the RES/+ switch pressed. ***Terminals*** ***No. 3 — No. 9:***	Is the resistance approx. 1,500 Ω when the RES/+ switch is pressed?	Replace the ECM. <Ref. to FU(H6DO)-84, Engine Control Module (ECM).> <Ref. to FU(H4DO)-82, Engine Control Module (ECM).>	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>

B: 12



Detected when the brake pedal is depressed, or the error related to the stop light & brake switch occurred.

Trouble symptom:

- Cruise control cannot be set.
- Cruise control cannot be released.

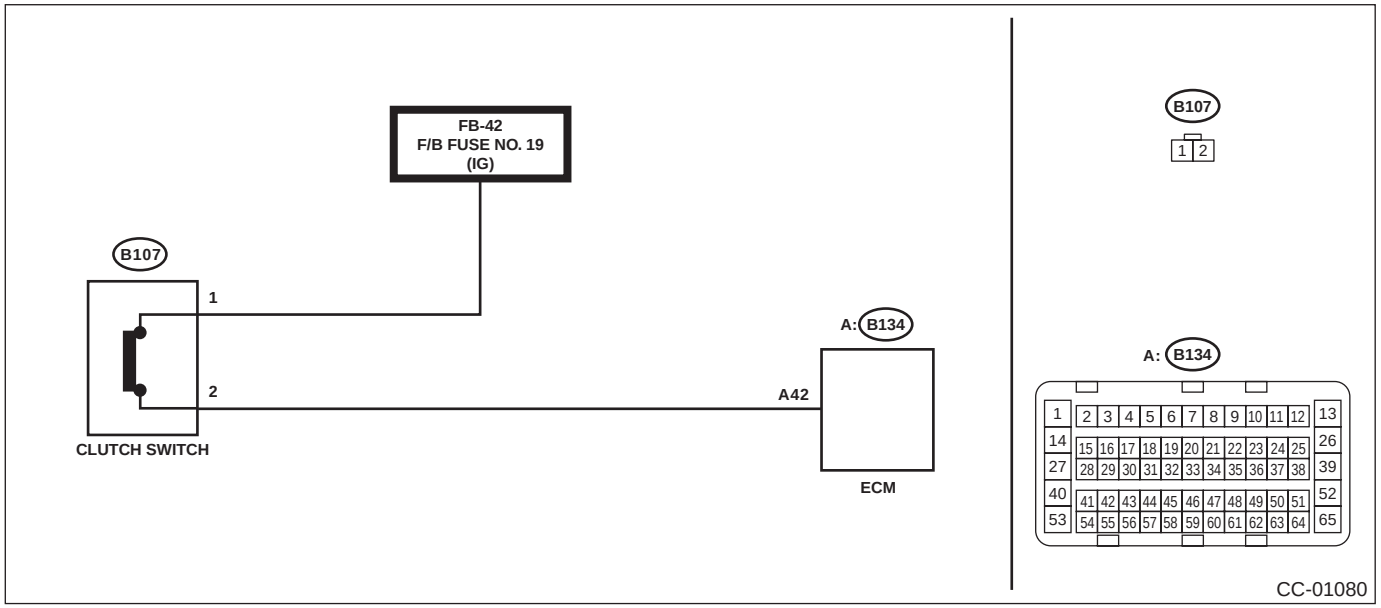
Wiring diagram:

Cruise control system <Ref. to WI-152, WIRING DIAGRAM, Cruise Control System.>

	Step	Check	Yes	No
1	**CHECK STOP LIGHT & BRAKE SWITCH.** Check the stop light & brake switch. <Ref. to CC-9, Stop Light & Brake Switch.>	Is the check result for the stop light & brake switch installation position OK?	Go to step **2**.	Replace the stop light & brake switch. Or adjust the installation position.
2	**CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the stop light & brake switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(B65) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	• Check the fuse No. 37 (fuse & relay box). • Check for open or short circuit in harness between the stop light & brake switch and the fuse & relay box.

	Step	Check	Yes	No
3	**CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.** Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(B65) No. 5 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	• Check the fuse No. 19 (fuse & relay box). • Check for open or short circuit in harness between the stop light & brake switch and the fuse & relay box.
4	**CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of ECM. 3) Measure the resistance between ECM harness connector terminal and stop light & brake switch harness connector terminal. ***Connector & terminal*** ***(B65) No. 4 — (B134) No. 59:*** ***(B65) No. 2 — (B134) No. 48:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the harness.
5	**CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.** 1) Connect the stop light & brake switch harness connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM harness connector and chassis ground both when the brake pedal is depressed and when not depressed. ***Connector & terminal*** ***(B134) No. 59 (+) — Chassis ground (–):*** ***(B134) No. 48 (+) — Chassis ground (–):***	Does the voltage appear in (B134) No. 59 when the brake pedal is depressed? (0 V when the brake pedal is not depressed) Does the voltage appear in (B134) No. 48 when the brake pedal is not depressed? (0 V when the brake pedal is depressed)	Replace the ECM. <Ref. to FU(H6DO)-84, Engine Control Module (ECM).> <Ref. to FU(H4DO)-82, Engine Control Module (ECM).>	Replace the stop light & brake switch. <Ref. to CC-9, Stop Light & Brake Switch.>

C: 13



Detected when clutch pedal is depressed or malfunction related to clutch switch occurs.

Trouble symptom:

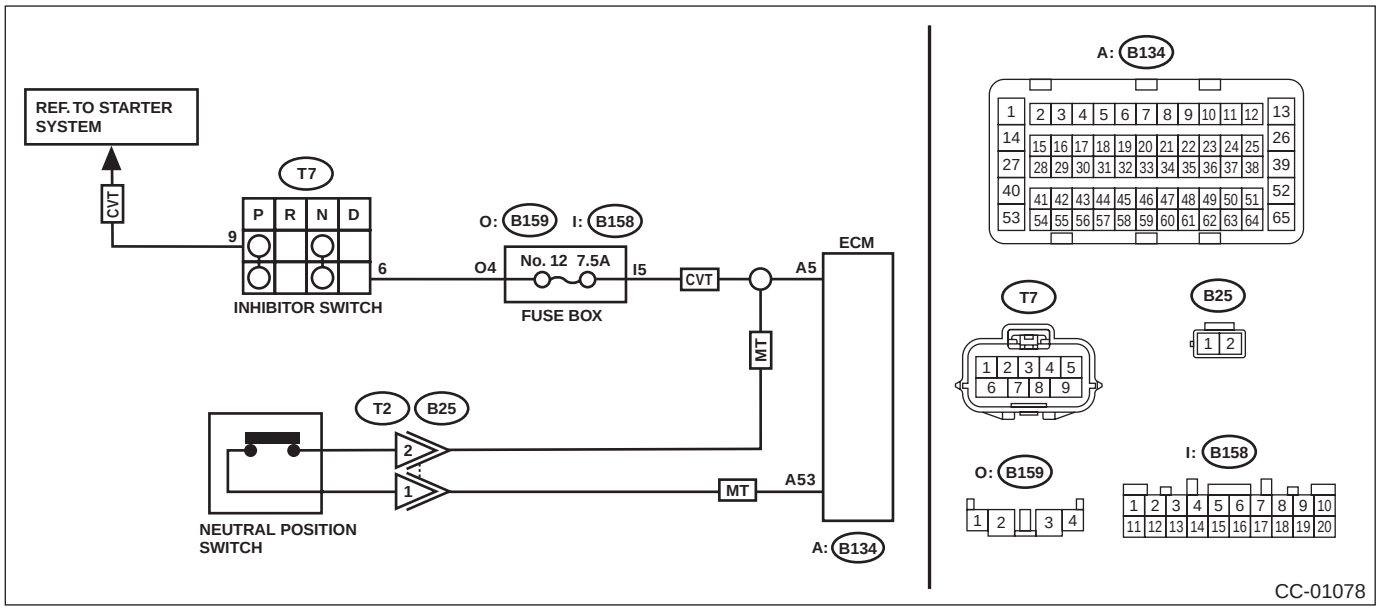
- Cruise control cannot be set.
- Cruise control cannot be released.

Wiring diagram:

Cruise control system <Ref. to WI-152, WIRING DIAGRAM, Cruise Control System.>

Step		Check	Yes	No
1	**CHECK CLUTCH SWITCH.** Check the clutch switch. <Ref. to CC-10, Clutch Switch.>	Is the check result of the clutch switch unit and installation position OK?	Go to step **2**.	Replace the clutch switch. Or adjust the installation position.
2	**CHECK CLUTCH SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the clutch switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(B107) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	• Check the fuse No. 19 (fuse & relay box). • Check open or shorted circuit of harness between clutch switch and fuse & relay box.
3	**CHECK CLUTCH SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of ECM. 3) Measure the resistance between clutch switch harness connector terminal and ECM harness connector terminal. ***Connector & terminal*** ***(B107) No. 2 — (B134) No. 42:***	Is the resistance less than 10 Ω?	Replace the ECM. <Ref. to FU(H6DO)-84, Engine Control Module (ECM).> <Ref. to FU(H4DO)-82, Engine Control Module (ECM).>	Repair the harness.

D: 14



Detected when the select lever is shifted to the neutral position, or when an error related to the neutral position switch occurs.

Trouble symptom:

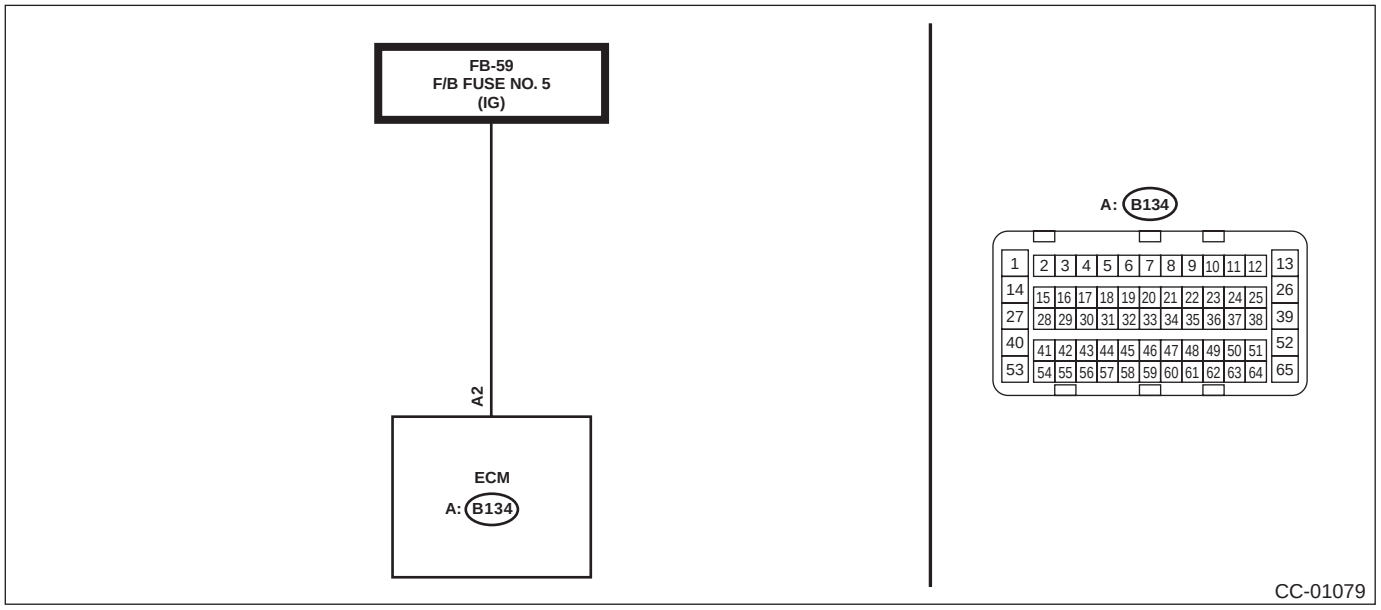
Cruise control cannot be set.

Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Cruise control system <Ref. to WI-152, WIRING DIAGRAM, Cruise Control System.>

Step		Check	Yes	No
1	**CHECK TRANSMISSION TYPE.**	Is the transmission type CVT?	Go to step **2**.	Go to step **5**. (MT model)
2	**CHECK INHIBITOR SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the inhibitor switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(T7) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	• Check the fuse. • Check for open or short circuit in the harness between inhibitor switch and ECM.
3	**CHECK INHIBITOR SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the starter motor harness connector. 3) Measure the resistance between the inhibitor switch harness connector terminal and the starter motor. ***Connector & terminal*** ***(T7) No. 9 — Starter motor:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair the harness.

	Step	Check	Yes	No
4	**CHECK INHIBITOR SWITCH.** Remove and check the inhibitor switch. <Ref. to CC-11, Inhibitor Switch.>	Is the check result OK?	Replace the ECM. <Ref. to FU(H6DO)-84, Engine Control Module (ECM).> <Ref. to FU(H4DO)-82, Engine Control Module (ECM).>	Replace the inhibitor switch.
5	**CHECK NEUTRAL POSITION SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the neutral position switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(B25) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Check for open or short in the harness between neutral position switch and ECM.
6	**CHECK NEUTRAL POSITION SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure resistance between harness connector terminal of neutral position switch and chassis ground. ***Connector & terminal*** ***(B25) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair the harness.
7	**CHECK NEUTRAL POSITION SWITCH.** Remove and check the neutral position switch. <Ref. to CC-13, Neutral Position Switch.>	Is the check result OK?	Replace the ECM. Replace the ECM. <Ref. to FU(H6DO)-84, Engine Control Module (ECM).> <Ref. to FU(H4DO)-82, Engine Control Module (ECM).>	Replace the neutral position switch.



E: 15

Detected when CANCEL switch is pressed or malfunction related to CRUISE switch occurs.
TROUBLE SYMPTOM:
- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to DTC 11 for diagnostic procedure.
<Ref. to CC(diag)-15, 11, Diagnostic Procedure with Cancel Code.>

F: 16

Detected when ignition switch is turned to OFF or malfunction related to the ignition switch occurs.
Trouble symptom:
Cruise control cannot be set.
Wiring diagram:
Cruise control system <Ref. to WI-152, WIRING DIAGRAM, Cruise Control System.>

Step		Check	Yes	No
1	**CHECK IGNITION SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(B134) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Check for poor contact of ECM connector.	• Check the fuse No. 5 (fuse & relay box). • Check the harness for open or short circuit between ignition switch and ECM.

G: 21

Cruise control command switch malfunction is detected.
TROUBLE SYMPTOM:
- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to DTC 11 for diagnostic procedure.
<Ref. to CC(diag)-15, 11, Diagnostic Procedure with Cancel Code.>

H: 22

Malfunction related to vehicle speed sensor is detected.
DIAGNOSIS:
Open or shorted circuit in vehicle speed sensor system.
TROUBLE SYMPTOM:
Cruise control cannot be set. (Cancelled immediately.)

	Step	Check	Yes	No
1	**CHECK ABS OR VDC WARNING LIGHT.** 1) Turn the ignition switch to ON. 2) After the initial operation of combination meter is completed, check if ABS or VDC warning light continues to illuminate.	Does the warning light continue to illuminate?	Check the VDCCM. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>	Go to step **2**.
2	**CHECK DTC OF LAN COMMUNICATION CIRCUIT.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform inspection according to DTC.	Replace the ECM. <Ref. to FU(H6DO)-84, Engine Control Module (ECM).> <Ref. to FU(H4DO)-82, Engine Control Module (ECM).>

I: 24

Malfunction in cruise control-related switch is detected.
TROUBLE SYMPTOM:
- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to DTC 11 for diagnostic procedure.
<Ref. to CC(diag)-15, 11, Diagnostic Procedure with Cancel Code.>

J: 31

Engine speed signal malfunction is detected.
Abnormal increase of engine speed is detected.
Gear is placed in 1st (only for MT vehicles) or Reverse position.
After driving at the 2nd gear position or higher, perform the cruise setting again. If a cancel code is not detected, it is normal.

K: 32

Detected when the vehicle speed is out of the system controllable range.
Increase vehicle speed high enough to allow the cruise control to function, and then perform setting operation again.
If cancel code is still detected after setting cruise again, perform the diagnosis for DTC 22.
Refer to DTC 22 for diagnostic procedure.
<Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>

L: 34

The vehicle has been driven at a speed higher than set speed for a long time (approximately 10 minutes) during cruise driving.
This cancel code is detected when driving for a long period of time at a speed higher than appropriate for cruise control setting by operating the accelerator pedal.
Perform the cruise control setting operation again. If the cancel code is not detected, it is normal.

M: 35

Detected when it is impossible to perform the vehicle speed feedback.
Set vehicle speed cannot be kept for some reasons (steep uphill, unreleased parking brake, etc.) during cruise driving.
Cancel code is detected when driving condition is not suitable for cruise control.
Perform cruise set operation again after clearing the possible cause.

N: 41

VDC/TCS/EPB is operated.
Vehicle dynamics control (VDC) or TCS/EPB is operated during cruise driving or cruise setting.
<Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

O: 43

ABS/VDC malfunction is detected.
VDC malfunction is detected during cruise driving or cruise setting.
<Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

P: 44

Body integrated unit malfunction is detected.
Body integrated unit system malfunction is detected during cruise driving or cruise setting.
<Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Q: 45

Combination meter malfunction is detected.
Combination meter malfunction is detected during cruise driving or cruise setting.
<Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

R: 49

Automatic transmission malfunction is detected.
Automatic transmission malfunction is detected during cruise driving or cruise control setting.
<Ref. to CVT(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

S: 61

Malfunction in the stop light & brake switch is detected.
TROUBLE SYMPTOM:
- Cruise control cannot be set.
- Cruise control cannot be released.

Refer to DTC 12 for diagnostic procedure.
<Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.>

T: 62

Neutral position switch malfunction is detected.
TROUBLE SYMPTOM:
Cruise control cannot be set.
Refer to DTC 14 for diagnostic procedure.
<Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.>

U: 63

Malfunction of vehicle speed signal variation is detected.
TROUBLE SYMPTOM:
Cruise control cannot be set. (Cancelled immediately.)
Refer to DTC 22 for diagnostic procedure.
<Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>

NOTE:
When the vehicle was suddenly accelerated on low μ road surface while VDC is OFF, this cancel code may be stored. In this case, restart the engine and perform the cruise control setting operation again. If the cancel code is not detected, it is normal.

V: 64

Malfunction related to engine is detected.
Refer to the Engine Diagnostic Procedure for diagnostic procedure.
<Ref. to EN(H6DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
<Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

W: 65

Cruise control command switch malfunction is detected.
While the command switch is pressed ON for a long time (approximately two minutes), stuck ON condition is detected.
TROUBLE SYMPTOM:
- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to DTC 11 for diagnostic procedure.
<Ref. to CC(diag)-15, 11, Diagnostic Procedure with Cancel Code.>

X: 66

Cruise control calculation malfunction is detected.
Refer to the Engine Diagnostic Procedure for diagnostic procedure.
<Ref. to EN(H6DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
<Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

13. Diagnostic Procedure with Diagnostic Trouble Code (DTC) 23

1. Basic Diagnostic Procedure

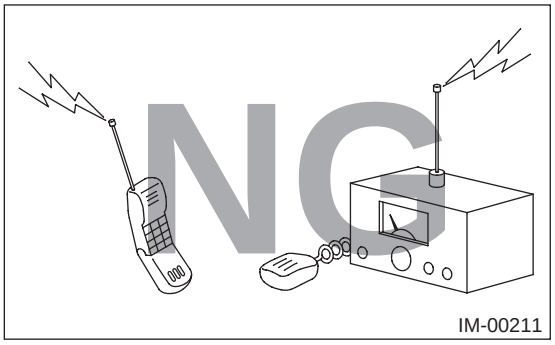
A: PROCEDURE

1. WITHOUT KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

CAUTION:
When the body integrated unit (except for C0 and C5 models) or the immobilizer CM (C0 and C5 models) is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

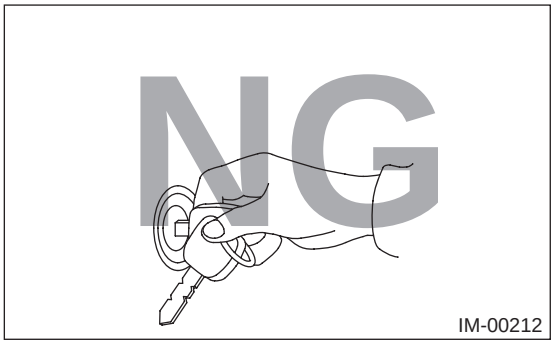
	Step	Check	Yes	No
1	**CONFIRM NUMBER OF REGISTERED IMMOBILIZER KEY.** Confirm the number of registered immobilizer key. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is the number of registration 0?	Register the immobilizer system.	Go to step **2**.
2	**CHECK SECURITY INDICATOR LIGHT.** 1) Remove the ignition key from ignition switch. 2) Wait at least 60 seconds.	Does the security indicator light blink?	Go to step **3**.	Check the security indicator light circuit. <Ref. to IM(diag)-16, CHECK SECURITY INDICATOR LIGHT CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.>
3	**CHECK KEY SWITCH.** Insert the ignition key in the ignition switch. (OFF or ACC)	Does the security indicator light remain blinking?	Check the key switch circuit. <Ref. to IM(diag)-19, CHECK KEY SWITCH CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.>	Go to step **4**.
4	**CHECK SECURITY INDICATOR LIGHT.** Check the security indicator light status in the condition of step 3.	Does the security indicator light go off?	Go to step **7**.	Go to step **5**.
5	**CHECK SECURITY INDICATOR LIGHT.** Turn the ignition switch to ON.	Does the security indicator light go off?	Go to step **7**.	Go to step **6**.
6	**CHECK ENGINE START.** Turn the ignition switch to START.	Does the starter operate?	Check the LAN communication system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **8**.
7	**CHECK ENGINE START.** Turn the ignition switch to START.	Does the engine start?	Immobilizer system is normal.	Go to step **9**.

	Step	Check	Yes	No
8	**CHECK DTC.** Read the DTC and time stamp of the system(s) below. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).> NOTE: For time stamp, refer to “LAN SYSTEM”. <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.> • Body integrated unit (except for C0 and C5 models) • Immobilizer CM (C0 and C5 models)	Are any DTCs displayed?	Go to step **10**.	Replace the body integrated unit (except for C0 and C5 models) or the immobilizer CM (C0 and C5 models). <Ref. to SL-84, Body Integrated Unit.>
9	**CHECK DTC.** Read the DTC and time stamp of the system(s) below. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).> NOTE: For time stamp, refer to “LAN SYSTEM”. <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.> • ECM	Are any DTCs displayed?	Go to step **10**.	Perform the diagnosis for engine system. <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to EN(H6DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
10	**CHECK FREEZE FRAME DATA.** Check the freeze frame data.	Are the data recorded?	Record the data. Go to step **11**.	Go to step **11**.
11	**CHECK DTC.** Check the displayed DTC.	Are DTCs irrelevant to the immobilizer displayed?	Perform the diagnosis according to DTCs irrelevant to the immobilizer first.	Go to step **12**.
12	**PERFORM DIAGNOSIS.** 1) Inspect using the “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to IM(diag)-23, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> 2) Repair the trouble cause. 3) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.> 4) Read DTCs again. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Inspect using the “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to IM(diag)-23, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Finish the diagnosis.



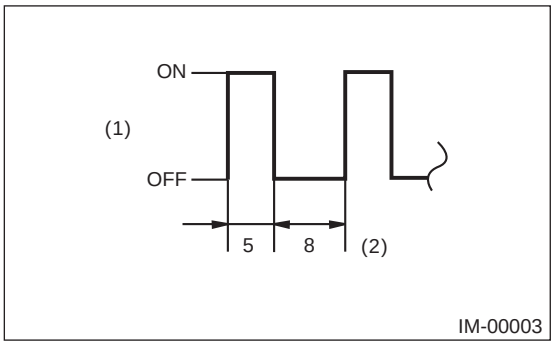
2. WITH KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

NOTE:
For immobilizer diagnosis of model with the keyless access with push button start system, refer to “Keyless Access with Push Button Start System”. <Ref. to KPS(diag)-2, Basic Diagnostic Procedure.>



2. General Description

A: CAUTION



CAUTION:
• Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
• Be careful not to damage the airbag system wiring harness.
• While diagnostic items are being checked, do not operate radios, portable telephones, etc. which emit electromagnetic waves near or inside the vehicle.

• When turning the ignition switch to ON or OFF while diagnostic items are being checked, do not allow keys with different ID codes close to the ignition switch. If the ignition key is on a key holder, remove it from the key holder before performing diagnoses.

• When repeatedly turning the ignition switch to ON or OFF while diagnostic items are being checked, it should be switched in cycles of "ON" for at least 5 seconds → "OFF" for at least 8 seconds.

(1) Ignition switch position
(2) Sec.

• If the engine fails to start with a registered ignition key, detach the ignition key from ignition switch and wait for approx. 1 second until security indicator light begins to flash. And then start the engine again.
• Before performing the diagnostics, obtain all keys for the vehicle from the owner.
• Do not register a body integrated unit already registered to another vehicle to diagnose failures or inspect functions.

B: PREPARATION TOOL

1. SPECIAL TOOL

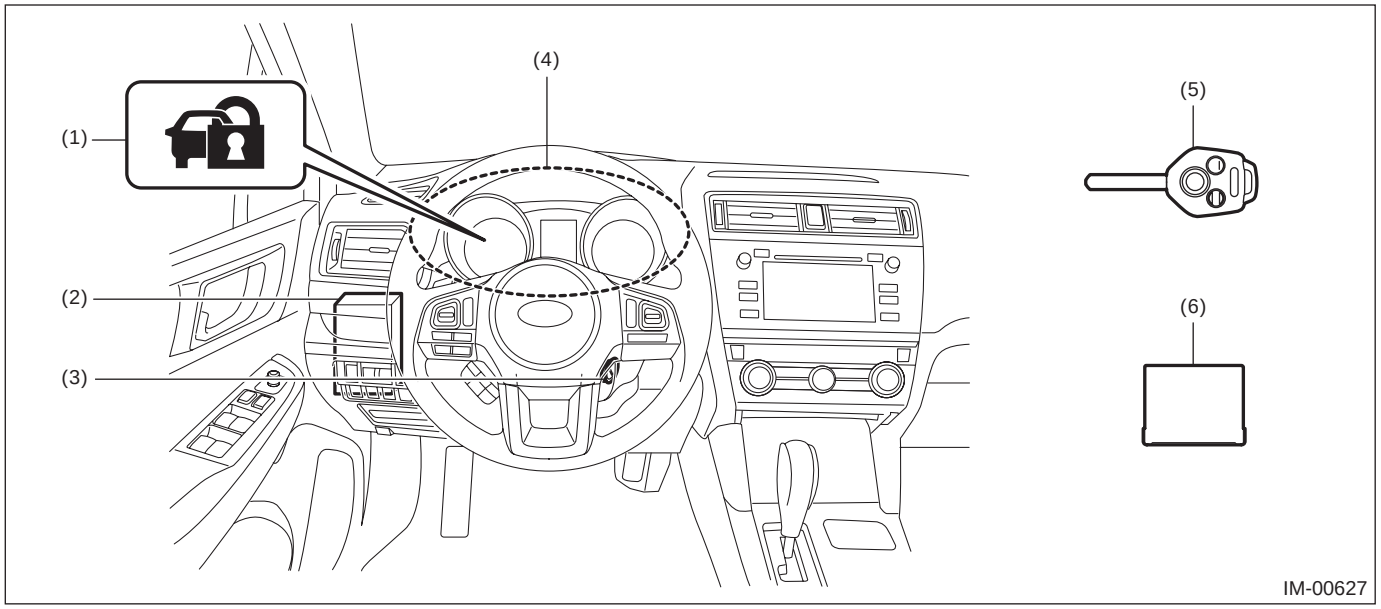


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

3. Electrical Component Location

A: LOCATION

(1) Security indicator light
(2) Body integrated unit
(3) Immobilizer antenna
(4) Combination meter
(5) Ignition key
(6) Immobilizer control module (C0 and C5 models)

4. Immobilizer Control Module I/O Signal

A: WIRING DIAGRAM

1. IMMOBILIZER

Refer to “Immobilizer System” in the wiring diagram. <Ref. to WI-253, WIRING DIAGRAM, Immobilizer System.>

5. Subaru Select Monitor

A: OPERATION

For operation procedures, refer to “Application help”.

B: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

1. ECM

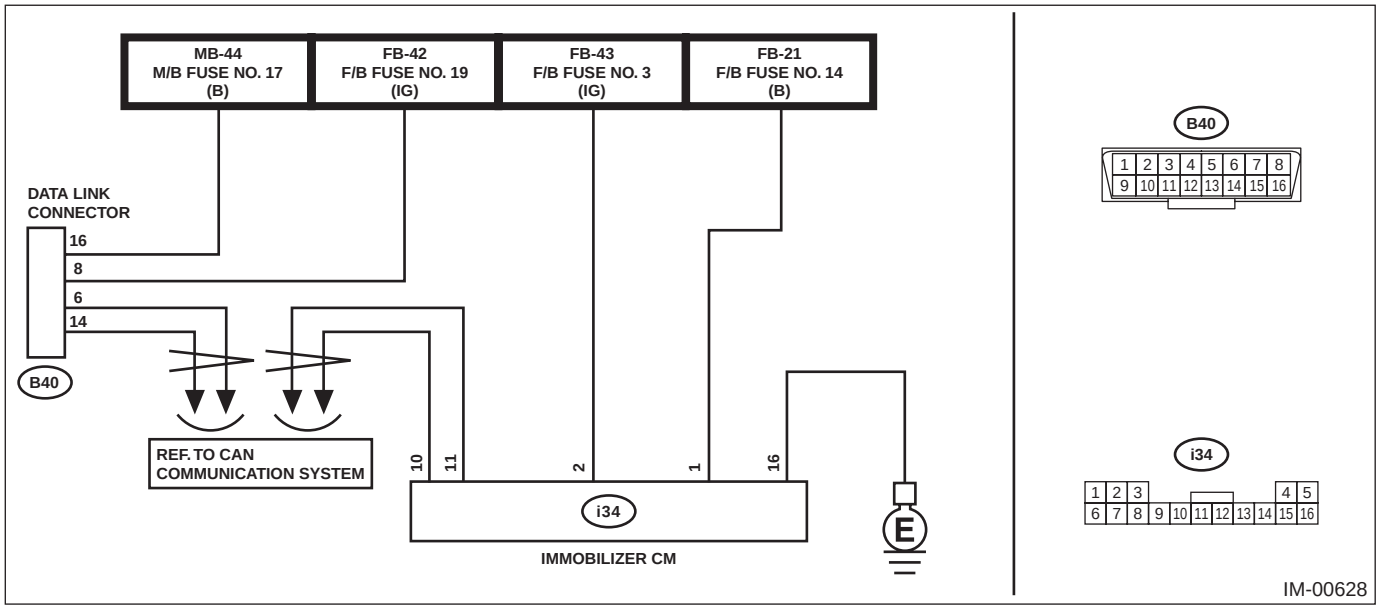
If the communication with ECM is not possible, refer to ENGINE (DIAGNOSTICS). <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to EN(H6DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

2. BODY INTEGRATED UNIT

If the communication with the body integrated unit is not possible, refer to BODY CONTROL SYSTEM (DIAGNOSTICS). <Ref. to BC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

3. IMMOBILIZER CM

Detecting condition:



- Defective harness
- Power supply circuit malfunction
- Defective immobilizer CM
- Body integrated unit malfunctioning
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Not communicable with Subaru Select Monitor.

Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Immobilizer system <Ref. to WI-253, WIRING DIAGRAM, Immobilizer System.>

	Step	Check	Yes	No
1	**CHECK FUSE.** Check the fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in the harness between the battery and immobilizer CM.
2	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **3**.	Perform the inspection according to the diagnosis for LAN system.
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the immobilizer CM connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between the immobilizer CM connector and chassis ground. ***Connector & terminal*** ***(i34) No. 2 (+) — Chassis ground (–):*** ***(i34) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **4**.	Repair the open circuit of harness between the immobilizer CM connector and fuse.
4	**CHECK HARNESS.** Using a tester, measure the resistance between the immobilizer CM connector and chassis ground. ***Connector & terminal*** ***(i34) No. 16 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness between the immobilizer CM connector and chassis ground.
5	**CHECK IMMOBILIZER CM.** 1) Turn the ignition switch to OFF. 2) Connect the immobilizer CM connector. 3) Perform communication with the immobilizer CM.	Is communication possible?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the immobilizer CM. <Ref. to SL-90, Immobilizer Control Module.>

6. Read Diagnostic Trouble Code (DTC)

A: OPERATION

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to List of Diagnostic Trouble Code (DTC). <Ref. to BC(diag)-42, List of Diagnostic Trouble Code (DTC).>

1. ECM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Engine Control System» and then select «Enter».
5) On «Engine Control System» display, select «DTC».

2. BODY INTEGRATED UNIT

NOTE:
Except for C0 and C5 models
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Body Control» display, select «DTC».

3. IMMOBILIZER CM

NOTE:
For C0 and C5 models
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Immobilizer» and then select «Enter».
5) On «Immobilizer» display, select «DTC».

7. Clear Memory Mode

A: OPERATION

NOTE:
For detailed operation procedures, refer to “Application help”.

1. ECM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Engine Control System» and then select «Enter».
5) On «Engine Control System» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
Initial diagnosis of electronic throttle control is performed after memory clearance. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.

2. BODY INTEGRATED UNIT

NOTE:
Except for C0 and C5 models
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Body Control» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

3. IMMOBILIZER CM

NOTE:
For C0 and C5 models
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Immobilizer» and then select «Enter».
5) On «Immobilizer» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

8. Inspection Mode

A: PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

DTC	Item	Note
B1401	METER COLLATION	—
B1402	IMMOBILIZER KEY COLLATION	—
B1407	MET COMMUNICATION	—
B1408	METER NON-VOLATILE MEMORY	—
B1410	TRANSPONDER COMMUNICATION	—
B1411	IMMOBILIZER ANTENNA	—
B1413	IMMOBILIZER CONTROL MODULE BATTERY POWER SUPPLY	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Remove the ignition key from the ignition switch, and insert again.
4) Turn the ignition switch OFF → ON, and wait for 10 seconds or more.
5) Read the DTC and check that the DTC is not displayed. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

2. INSPECTION MODE 2

DTC	Item	Note
B1412	IMMOBILIZER CONTROL MODULE CAN REGISTER STUCK	—
B1414	IMMOBILIZER CONTROL MODULE NON-VOLATILE MEMORY	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Disconnect and reconnect the battery, and then wait for one minute or more.
4) Turn the ignition switch to ON.
5) Read the DTC and check that the DTC is not displayed. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

3. INSPECTION MODE 3

DTC	Item	Note
B1570	ANTENNA	—
B1571	REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM)	—
B1572	IMM CIRCUIT EXCEPT ANTENNA CIRCUIT	—
B1574	KEY COMMUNICATION	—
B1575	INCORRECT IMMOBILIZER KEY	—
B1576	EGI CONTROL MODULE EEPROM	—
B1577	IMM CONTROL MODULE EEPROM	—
B1578	METER	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Start the engine, and then run the engine at idle for 10 seconds or more. Or, disconnect and reconnect the battery, then turn the ignition switch OFF → ON, and wait for 10 seconds or more.
4) Read the DTC and check that the DTC is not displayed. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

9. Read Current Data

A: OPERATION

NOTE:
For detailed operation procedures, refer to “Application help”.

1. ECM

For current data of ECM, refer to ENGINE (DIAGNOSTICS). <Ref. to EN(H4DO)(diag)-46, Subaru Select Monitor.>

2. BODY INTEGRATED UNIT

NOTE:
Except for C0 and C5 models
Refer to the BODY CONTROL SYSTEM (DIAGNOSTICS) for the current data of the body integrated unit. <Ref. to BC(diag)-25, Read Current Data.>

3. IMMOBILIZER CM

NOTE:
For C0 and C5 models
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Immobilizer» and then select «Enter».
5) On «Immobilizer» display, select «Data Monitor».

B: LIST

1. ECM

For current data of ECM, refer to ENGINE (DIAGNOSTICS). <Ref. to EN(H4DO)(diag)-46, Subaru Select Monitor.>

2. BODY INTEGRATED UNIT

NOTE:
Except for C0 and C5 models
Refer to the BODY CONTROL SYSTEM (DIAGNOSTICS) for the current data of the body integrated unit. <Ref. to BC(diag)-25, Read Current Data.>

3. IMMOBILIZER CM

NOTE:
For C0 and C5 models

Item	Content / display range	Standard	Note
Trip Count [count]	Time stamp information	—	—
Count	Time stamp information	—	—
Time Count [msec]	Time stamp information	—	—
BATT Voltage	Immobilizer CM battery voltage	6 — 16 V	—
Ignition SW input	Ignition switch status	ON: When the switch is ON OFF: When the switch is OFF	—
key-lock warning SW Input	Key warning switch status	ON: When the switch is ON OFF: When the switch is OFF	—
Immobilizer indicator output	Security indicator output status	OFF: When indicator is OFF Blink: When indicator is blinking ON: When indicator is ON blink (one): When one ignition key is registered blink (two): When two ignition keys are registered blink (three): When three ignition keys are registered blink (four): When four ignition keys are registered	—

10.Freeze Frame Data Display

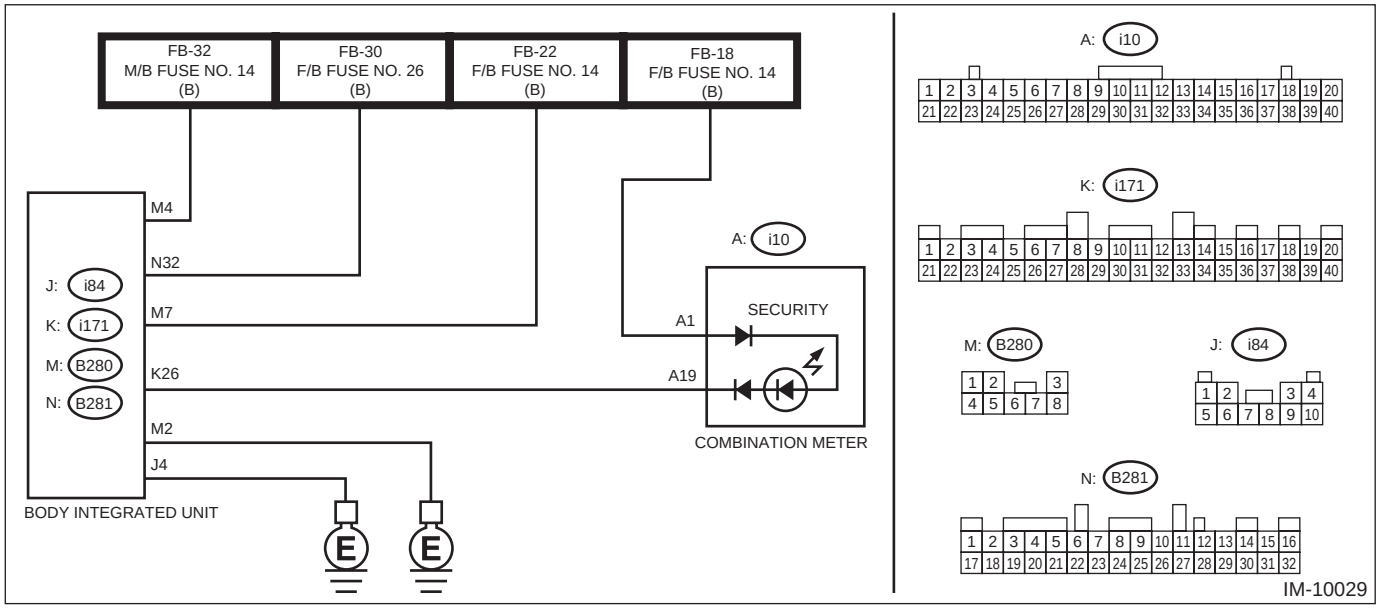
A: OPERATION

NOTE:
Displays only for vehicles with immobilizer CM
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Immobilizer» and then select «Enter».
5) On «Immobilizer» display, select «DTC».
6) On «DTC» display, select «FFD».

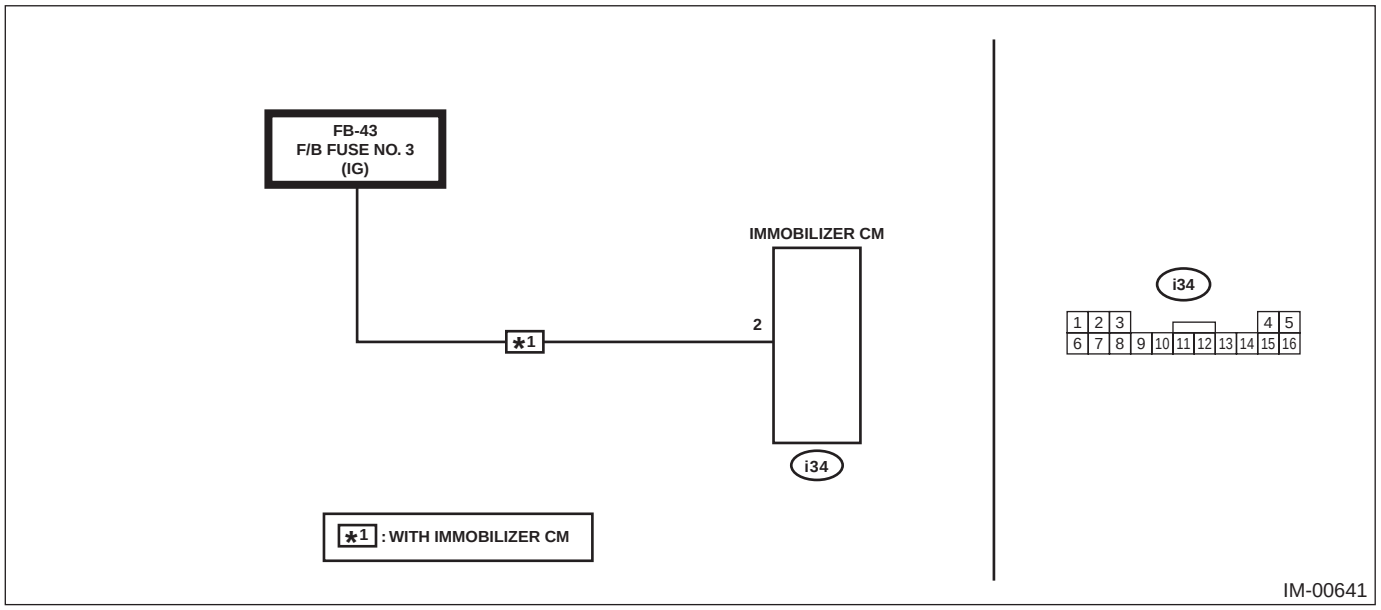
NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Item	Content / display range
Trip Count	Time stamp information <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.>
Count	
Time Count	
BATT voltage	Immobilizer CM battery voltage
Ignition SW input	Ignition switch status
key-lock warning SW Input	Key warning switch status
Immobilizer indicator output	Security indicator output status
Immobilizer SET/ UNSET status	Immobilizer SET/UNSET status



11.Diagnostics Chart for Security Indicator Light



A: INSPECTION

1. CHECK SECURITY INDICATOR LIGHT CIRCUIT

CAUTION:
When the body integrated unit (except for C0 and C5 models) or the immobilizer CM (C0 and C5 models) is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Wiring diagram:
Immobilizer system <Ref. to WI-253, WIRING DIAGRAM, Immobilizer System.>

	Step	Check	Yes	No
1	**CHECK FUSE.** 1) Remove the ignition key from ignition switch. Or, turn off the power. 2) Check the fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the replaced fuse blows out easily, repair the short circuit in the harness between the fuse and body integrated unit.
2	**CONFIRM DESTINATION.** Verify the destination of the vehicle.	Is destination for C0 or C5?	Go to step **3**.	Go to step **9**.
3	**CHECK IMMOBILIZER CM.** Check the current data «Ignition SW input» of immobilizer CM. <Ref. to IM(diag)-14, Read Current Data.>	Does the display change in accordance with the ignition switch OFF ←→ ON?	Go to step **7**.	Go to step **4**.
4	**CHECK IGNITION SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Remove the F/B fuse No. 3. 3) Measure the voltage between F/B fuse No. 3 (lower stream side) and chassis ground. ***Connector & terminal*** ***F/B fuse No. 3 (lower stream side) (+) — Chassis ground (–):***	Is the voltage 6 V or more?	Repair the short circuit to power supply in harness between the immobilizer CM and fuse.	Go to step **5**.
5	**CHECK IGNITION SWITCH CIRCUIT.** Check the current data «Ignition SW input» of immobilizer CM. <Ref. to IM(diag)-14, Read Current Data.>	Is «ON» displayed?	Replace the immobilizer CM. <Ref. to SL-90, Immobilizer Control Module.>	Go to step **6**.
6	**CHECK IGNITION SWITCH CIRCUIT.** 1) Disconnect the connector from immobilizer CM. 2) Measure the resistance between immobilizer CM connector terminal and fuse. ***Connector & terminal*** ***(i34) No. 2 — F/B fuse No. 3 (lower stream side):***	Is the resistance less than 10 Ω?	Replace the immobilizer CM. <Ref. to SL-90, Immobilizer Control Module.>	Replace the open circuit of harness between the immobilizer CM and fuse.
7	**CHECK IMMOBILIZER CM.** Check the current data «key-lock warning SW» of immobilizer CM. <Ref. to IM(diag)-14, Read Current Data.>	Does the display change in accordance with the ignition key removal/insertion?	Go to step **8**.	Check the key switch circuit. <Ref. to IM(diag)-19, CHECK KEY SWITCH CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.>
8	**CHECK IMMOBILIZER CM.** 1) Check the current data «Immobilizer indicator output» of immobilizer CM. <Ref. to IM(diag)-14, Read Current Data.> 2) Remove the ignition key from ignition switch. 3) Wait at least 60 seconds.	Is «Blink» displayed?	Go to step **9**.	Replace the immobilizer CM. <Ref. to SL-90, Immobilizer Control Module.>
9	**CHECK SECURITY INDICATOR LIGHT.** 1) Disconnect the connector from body integrated unit. 2) Connect the resistor (100 Ω) between the body integrated unit connector terminal (i171) No. 26 and chassis ground.	Does the security indicator light illuminate?	Go to step **10**.	Go to step **12**.

	Step	Check	Yes	No
10	**CHECK BODY INTEGRATED UNIT GROUND CIRCUIT.** Measure the resistance between the body integrated unit connector terminal and chassis ground. ***Connector & terminal*** ***(B280) No. 2 — Chassis ground:*** ***(i84) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **11**.	Repair the open circuit of the body integrated unit ground circuit.
11	**CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.** Measure the voltage between the body integrated unit connector terminal and chassis ground. ***Connector & terminal*** ***(B280) No. 4 (+) — Chassis ground (–):*** ***(B280) No. 7 (+) — Chassis ground (–):*** ***(B281) No. 32 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Check the harness for open or short circuit between body integrated unit and fuse.
12	**CHECK COMBINATION METER CIRCUIT.** 1) Remove the combination meter. <Ref. to IDI-11, Combination Meter.> 2) Measure the voltage between combination meter connector terminal and chassis ground. ***Connector & terminal*** ***(i10) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **13**.	Check for an open or short circuit in the harness between the combination meter and fuse.
13	**CHECK COMBINATION METER CIRCUIT.** Measure the resistance between the body integrated unit connector terminal and combination meter connector terminal. ***Connector & terminal*** ***(i171) No. 26 — (i10) No. 19:***	Is the resistance less than 10 Ω?	LED bulb is defective. Replace the combination meter case assembly. <Ref. to IDI-13, DISASSEMBLY, Combination Meter.>	Repair the harness or connector.

2. CHECK KEY SWITCH CIRCUIT

CAUTION:
When the body integrated unit (except for C0 and C5 models) or the immobilizer CM (C0 and C5 models) is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:
Immobilizer system <Ref. to WI-253, WIRING DIAGRAM, Immobilizer System.>

Step		Check	Yes	No
1	**CHECK POWER SUPPLY CIRCUIT.** 1) Disconnect the connector from key warning switch. 2) Measure the voltage between key warning switch connector terminal and chassis ground. ***Connector & terminal*** ***(i63) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Check the harness for an open or short between the key warning switch and fuse.
2	**CHECK KEY WARNING SWITCH.** 1) Insert the ignition key in the ignition switch. (OFF or ACC) 2) Measure the resistance between key warning switch connector terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Replace the key warning switch. <Ref. to SL-73, Key Lock Cylinders.>
3	**CHECK KEY WARNING SWITCH.** 1) Remove the ignition key from ignition switch. 2) Measure the resistance between key warning switch connector terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the key warning switch. <Ref. to SL-73, Key Lock Cylinders.>

	Step	Check	Yes	No
4	**CHECK HARNESS BETWEEN KEY WARNING SWITCH AND BODY INTEGRATED UNIT (EXCEPT FOR C0 AND C5 MODELS) OR IMMOBILIZER CM (C0 AND C5 MODELS).** 1) Disconnect the connector from the body integrated unit (except for C0 and C5 models) or the immobilizer CM (C0 and C5 models). 2) Measure the resistance between key warning switch connector terminal and body integrated unit (except for C0 and C5 models) or immobilizer CM (C0 and C5 models) connector terminal. ***Connector & terminal*** ***Body integrated unit (except for C0 and C5 models)*** ***(i63) No. 2 — (i84) No. 10:*** ***Immobilizer CM (C0 and C5 models)*** ***(i63) No. 2 — (i34) No. 3:***	Is the resistance less than 10 Ω?	Replace the body integrated unit (except for C0 and C5 models) <Ref. to SL-84, Body Integrated Unit.> or immobilizer CM (C0 and C5 models) <Ref. to SL-90, Immobilizer Control Module.>.	Repair harness between key warning switch and body integrated unit (except for C0 and C5 models) or immobilizer CM (C0 and C5 models).

12.List of Diagnostic Trouble Code (DTC)

A: LIST

NOTE:
If DTCs irrelevant to the immobilizer are displayed, perform diagnosis according to the DTCs irrelevant to the immobilizer first.

1. ECM

DTC	Item	Note
B1570	ANTENNA	<Ref. to IM(diag)-30, DTC B1570 ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1571	REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM)	<Ref. to IM(diag)-34, DTC B1571 REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1572	IMM CIRCUIT EXCEPT ANTENNA CIRCUIT	<Ref. to IM(diag)-36, DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1574	KEY COMMUNICATION	<Ref. to IM(diag)-42, DTC B1574 KEY COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1575	INCORRECT IMMOBILIZER KEY	<Ref. to IM(diag)-44, DTC B1575 INCORRECT IMMOBILIZER KEY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1576	EGI CONTROL MODULE EEPROM	<Ref. to IM(diag)-46, DTC B1576 EGI CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1577	IMM CONTROL MODULE EEPROM	<Ref. to IM(diag)-47, DTC B1577 IMM CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1578	METER	<Ref. to IM(diag)-48, DTC B1578 METER, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

2. BODY INTEGRATED UNIT

NOTE:
Except for C0 and C5 models

DTC	Item	Note	Relation between ECM and DTC
B1401	METER COLLATION	<Ref. to IM(diag)-23, DTC B1401 METER COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1578
B1402	IMMOBILIZER KEY COLLATION	<Ref. to IM(diag)-23, DTC B1402 IMMOBILIZER KEY COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1575
B1407	MET COMMUNICATION	<Ref. to IM(diag)-24, DTC B1407 MET COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1578
B1408	METER NON-VOLATILE MEMORY	<Ref. to IM(diag)-25, DTC B1408 METER NON-VOLATILE MEMORY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1578
B1410	TRANSPONDER COMMUNICATION	<Ref. to IM(diag)-25, DTC B1410 TRANSPONDER COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1574
B1411	IMMOBILIZER ANTENNA	<Ref. to IM(diag)-25, DTC B1411 IMMOBILIZER ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1570

NOTE:
The starter relay control is performed in immobilizer system. When the body integrated unit detects a nonconformity of reference code, it immediately outputs a starter relay cut signal to ECM, and then ECM stops the starter relay operation. In this case, engine does not start, and DTC is not recorded in ECM. Check that the engine does not start on the DTC of body integrated unit.

3. IMMOBILIZER CM

NOTE:
For C0 and C5 models

DTC	Item	Note	Relation between ECM and DTC
B1402	IMMOBILIZER KEY COLLATION	<Ref. to IM(diag)-23, DTC B1402 IMMOBILIZER KEY COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1575
B1410	TRANSPONDER COMMUNICATION	<Ref. to IM(diag)-25, DTC B1410 TRANSPONDER COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1574
B1411	IMMOBILIZER ANTENNA	<Ref. to IM(diag)-25, DTC B1411 IMMOBILIZER ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1570
B1412	IMMOBILIZER CONTROL MODULE CAN REGISTER STUCK	<Ref. to IM(diag)-26, DTC B1412 IMMOBILIZER CONTROL MODULE CAN REGISTER STUCK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	—
B1413	IMMOBILIZER CONTROL MODULE BATTERY POWER SUPPLY	<Ref. to IM(diag)-27, DTC B1413 IMMOBILIZER CONTROL MODULE BATTERY POWER SUPPLY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	—
B1414	IMMOBILIZER CONTROL MODULE NON-VOLATILE MEMORY	<Ref. to IM(diag)-29, DTC B1414 IMMOBILIZER CONTROL MODULE NON-VOLATILE MEMORY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1577

NOTE:
The starter relay control is performed in immobilizer system. When the immobilizer CM detects a nonconformity of reference code, it immediately outputs a starter relay cut signal to ECM, and then ECM stops the starter relay operation. In this case, engine does not start, and DTC is not recorded in ECM. Therefore, check DTC on the immobilizer CM to identify the cause of the engine not starting.

13.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B1401 METER COLLATION

DIAGNOSIS START CONDITION:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC DETECTING CONDITION:
Reference code incompatibility between combination meter and body integrated unit

TROUBLE SYMPTOM:
- Engine will not start.
- The security indicator illuminates.

CAUTION:
When the combination meter is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK COMBINATION METER REGISTRATION.** Perform registration of combination meter. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Currently, it is normal. (Combination meter registration is not complete.)	Refer to "Correspondence table when registration is not possible" in the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. If the registration still does not work properly, replace the combination meter. <Ref. to IDI-11, Combination Meter.>

B: DTC B1402 IMMOBILIZER KEY COLLATION

NOTE:
Refer to DTC B1575 for diagnostic procedure. <Ref. to IM(diag)-44, DTC B1575 INCORRECT IMMOBILIZER KEY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

C: DTC B1407 MET COMMUNICATION

Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:
Communication failure between body integrated unit and combination meter

Trouble symptom:
- Engine will not start.
- The security indicator illuminates.

CAUTION:
When the combination meter is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the body integrated unit. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC of the body integrated unit except for DTC B1407 displayed?	Perform the diagnosis of DTCs other than B1407.	Check the combination meter. <Ref. to MET(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC B1408 METER NON-VOLATILE MEMORY

DIAGNOSIS START CONDITION:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC DETECTING CONDITION:
Defective combination meter

TROUBLE SYMPTOM:
- Engine will not start.
- The security indicator illuminates.

CAUTION:
When the combination meter is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK COMBINATION METER REGISTRATION.** 1) Perform the Clear Memory Mode. (Combination meter and body integrated unit) <Ref. to MET(diag)-11, Clear Memory Mode.> <Ref. to IM(diag)-11, Clear Memory Mode.> 2) Perform registration of combination meter. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. 3) Read the DTC of the body integrated unit. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1408 displayed?	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

E: DTC B1410 TRANSPONDER COMMUNICATION

NOTE:
Refer to DTC B1574 for diagnostic procedure. <Ref. to IM(diag)-42, DTC B1574 KEY COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

F: DTC B1411 IMMOBILIZER ANTENNA

NOTE:
Refer to DTC B1570 for diagnostic procedure. <Ref. to IM(diag)-30, DTC B1570 ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

G: DTC B1412 IMMOBILIZER CONTROL MODULE CAN REGISTER STUCK

DIAGNOSIS START CONDITION:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

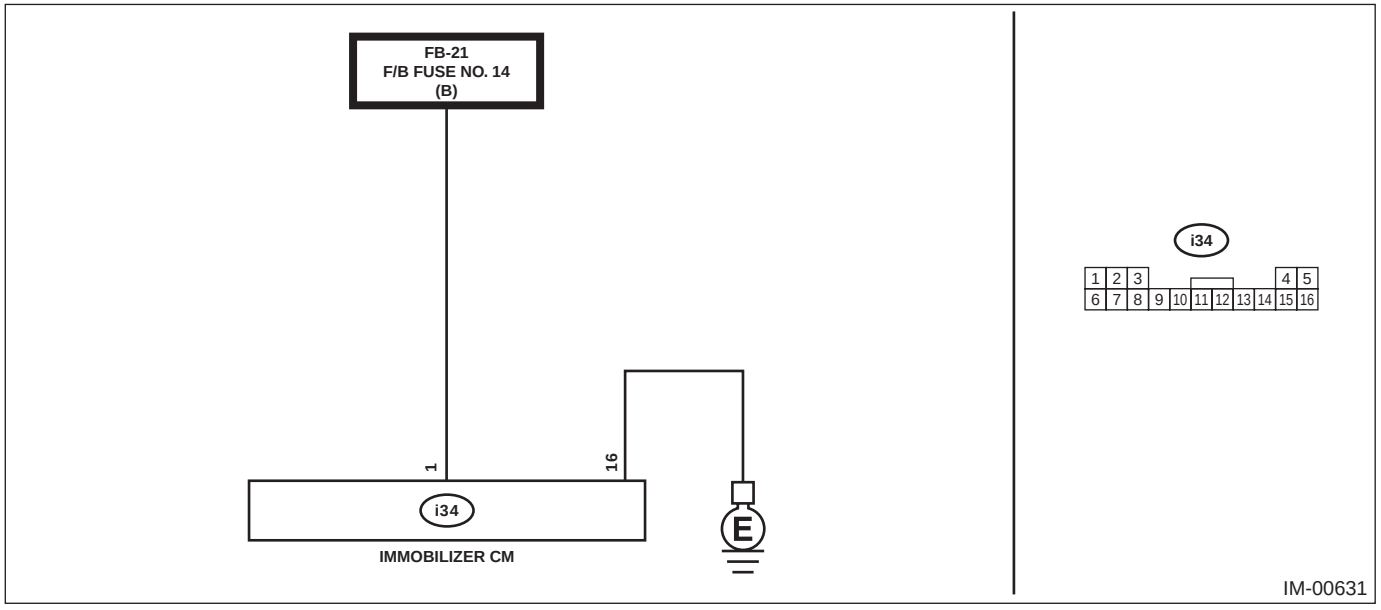
DTC DETECTING CONDITION:
- Defective immobilizer CM
- Failed to access the ROM of immobilizer CM.

TROUBLE SYMPTOM:
- The security indicator does not blink after the ignition key is turned to OFF.
- The security indicator remains off.

CAUTION:
When the immobilizer CM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Disconnect the ground cable from battery. 2) Wait for at least 10 seconds. 3) Connect the ground cable to battery. 4) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.> 5) Read the DTC of the immobilizer CM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1412 displayed?	Go to step **2**.	Currently, it is normal.
2	**CHECK DTC.** 1) Disconnect the ground cable from battery. 2) Wait for at least 10 seconds. 3) Connect the ground cable to battery. 4) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.> 5) Read the DTC of the immobilizer CM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1412 displayed?	Go to step **3**.	Currently, it is normal.
3	**CHECK DTC.** 1) Disconnect the ground cable from battery. 2) Wait for at least 10 seconds. 3) Connect the ground cable to battery. 4) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.> 5) Read the DTC of the immobilizer CM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1412 displayed?	Replace the immobilizer CM. <Ref. to SL-90, Immobilizer Control Module.>	Currently, it is normal.

H: DTC B1413 IMMOBILIZER CONTROL MODULE BATTERY POWER SUPPLY



Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:
Battery voltage for the immobilizer CM was outside the specification for a certain period of time.

Trouble symptom:
The security indicator does not blink after the ignition key is turned to OFF.

CAUTION:
When the immobilizer CM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Wiring diagram:
Immobilizer system <Ref. to WI-253, WIRING DIAGRAM, Immobilizer System.>

Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit to power supply in harness between the battery and immobilizer CM.
2	**CHECK CURRENT DATA.** Confirm the current data «BATT voltage» display of immobilizer CM. <Ref. to IM(diag)-14, Read Current Data.>	Is the display 10 V or more?	Go to step **3**.	Go to step **5**.
3	**CHECK CURRENT DATA.** 1) Disconnect the ground cable from battery. 2) Wait for at least 10 seconds. 3) Connect the ground cable to battery. 4) Confirm the current data «BATT voltage» display of immobilizer CM. <Ref. to IM(diag)-14, Read Current Data.>	Is the display 10 V or more?	Go to step **4**.	Go to step **5**.

	Step	Check	Yes	No
4	**CHECK DTC.** Read the DTC of the immobilizer CM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1413 displayed?	Replace the immobilizer CM. <Ref. to SL-90, Immobilizer Control Module.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
5	**CHECK IMMOBILIZER CM POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from immobilizer CM. 3) Measure the voltage between immobilizer CM connector and chassis ground. ***Connector & terminal*** ***(i34) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Repair the open circuit of harness between the immobilizer CM and fuse.
6	**CHECK IMMOBILIZER CM GROUND CIRCUIT.** Measure the resistance between immobilizer CM connector and chassis ground. ***Connector & terminal*** ***(i34) No. 16 — Chassis ground:***	Is the resistance less than 10 Ω?	Replace the immobilizer CM. <Ref. to SL-90, Immobilizer Control Module.>	Repair the open circuit of harness between the immobilizer CM connector and chassis ground.

I: DTC B1414 IMMOBILIZER CONTROL MODULE NON-VOLATILE MEMORY

DIAGNOSIS START CONDITION:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC DETECTING CONDITION:
- Defective immobilizer CM
- Failed to access the ROM in immobilizer CM.

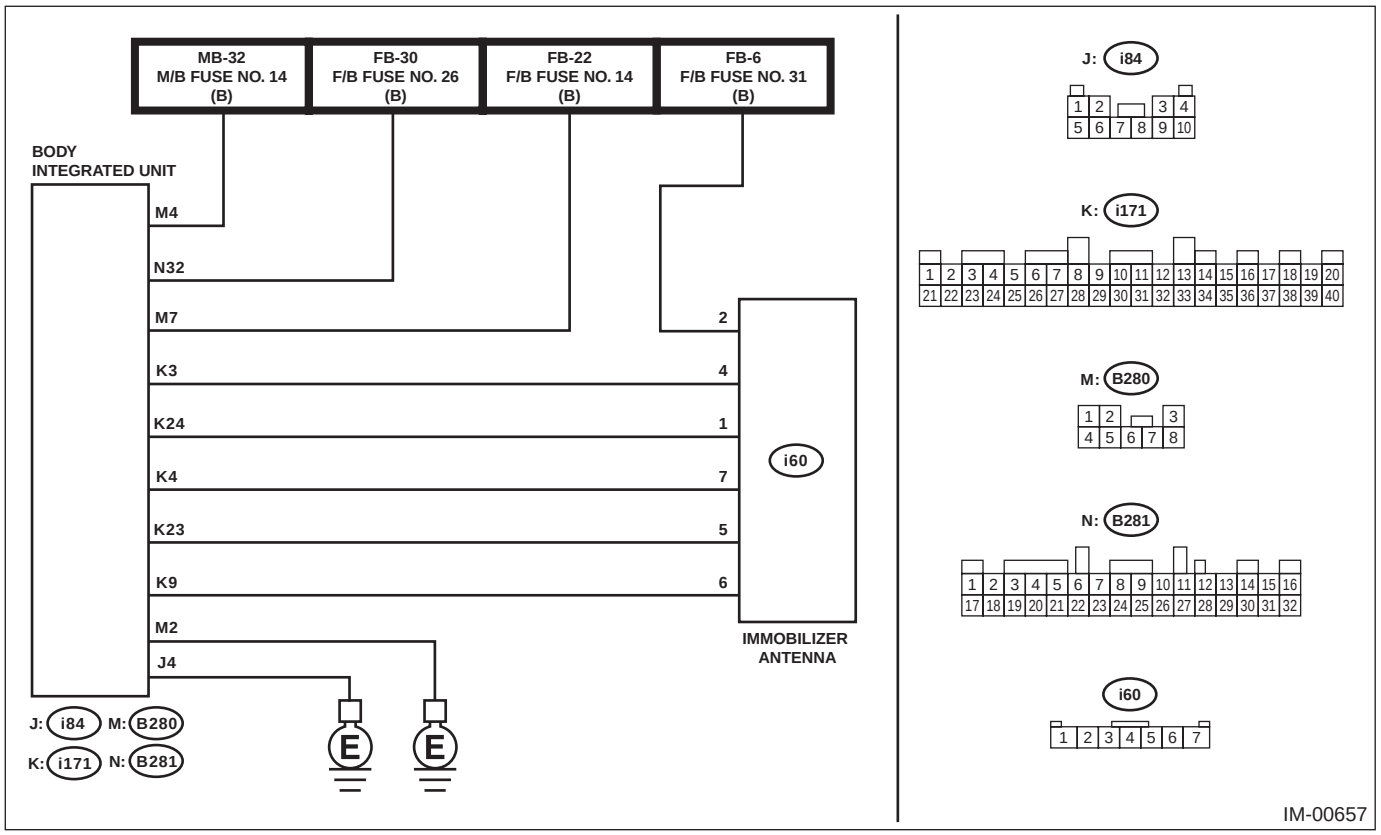
TROUBLE SYMPTOM:
Engine will not start.

CAUTION:
When the immobilizer CM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Disconnect the ground cable from battery. 2) Wait for at least 10 seconds. 3) Connect the ground cable to battery. 4) Read the DTC of the immobilizer CM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1414 displayed?	Go to step **2**.	The system has returned to a normal condition at this time. Finish the diagnosis.
2	**CHECK DTC.** 1) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.> 2) Disconnect the ground cable from battery. 3) Wait for at least 10 seconds. 4) Connect the ground cable to battery. 5) Read the DTC of the immobilizer CM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1414 displayed?	Replace the immobilizer CM. <Ref. to SL-90, Immobilizer Control Module.>	The system has returned to a normal condition at this time. Finish the diagnosis.

J: DTC B1570 ANTENNA

1. EXCEPT FOR C0 AND C5 MODELS



Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:
Received an immobilizer antenna malfunction signal during unit collation

Trouble symptom:
- Engine will not start.
- The security indicator illuminates.

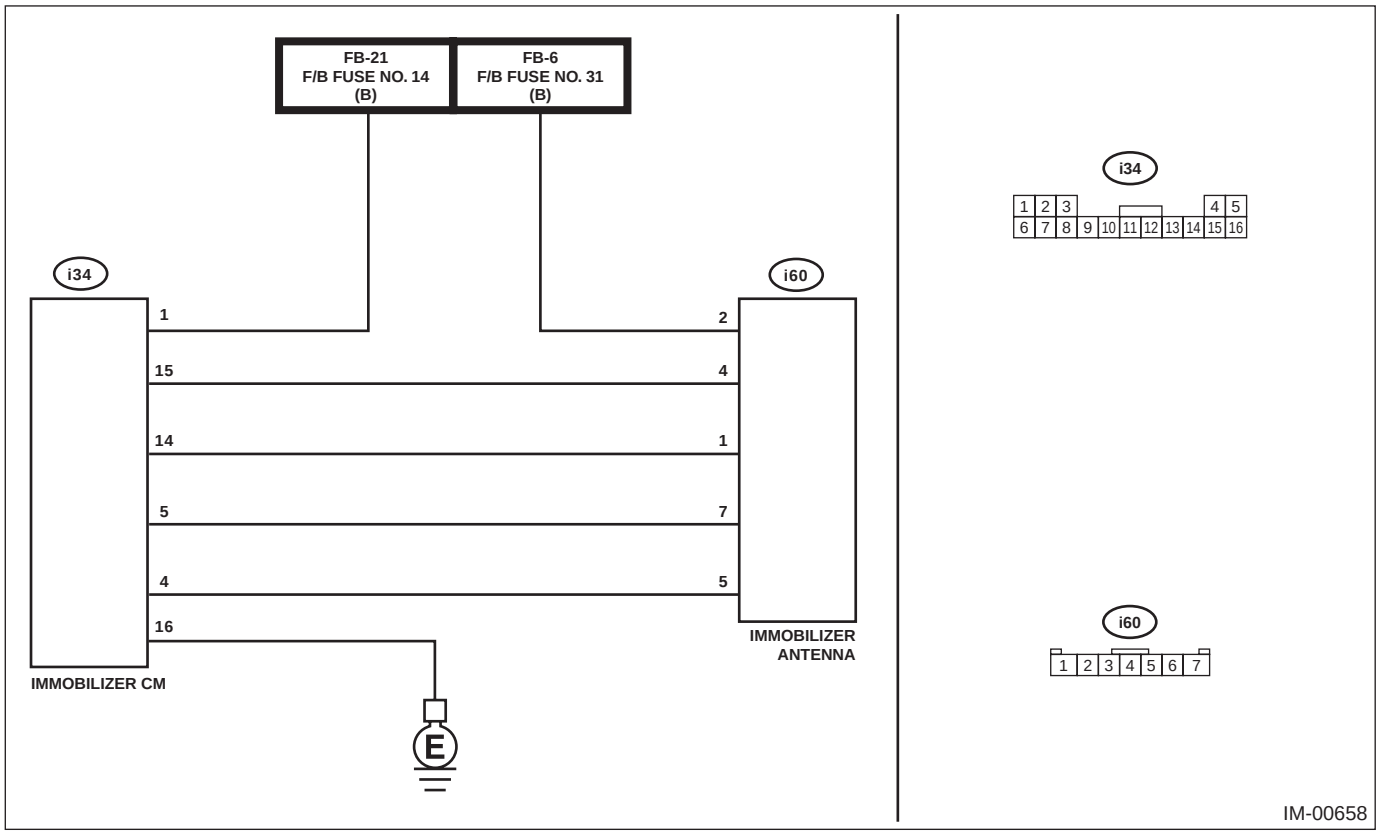
CAUTION:
When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Wiring diagram:
Immobilizer system <Ref. to WI-253, WIRING DIAGRAM, Immobilizer System.>

Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit to power supply in harness between the battery and body integrated unit.
2	**CHECK CURRENT DATA.** Confirm the current data «BATT voltage (control)» display of body integrated unit. <Ref. to BC(diag)-25, Read Current Data.>	Is the display 10 V or more?	Go to step **3**.	Go to step **5**.

	Step	Check	Yes	No
3	**CHECK POWER SUPPLY CIRCUIT FOR IMMOBILIZER ANTENNA.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from immobilizer antenna. 3) Insert the ignition key into the key cylinder, then measure the voltage between the immobilizer antenna connector and the chassis ground using an oscilloscope. ***Connector & terminal*** ***(i60) No. 1 (+) — Chassis ground (–):***	Is the voltage 5±0.5 V approx. 200 ms after inserting the ignition key into the key cylinder? And then, does the voltage return to 0 V within 2 s?	Go to step **4**.	Repair the open or short circuit of harness between the body integrated unit connector and immobilizer antenna connector.
4	**CHECK IMMOBILIZER ANTENNA GROUND CIRCUIT (OPEN CIRCUIT).** Measure the resistance between immobilizer antenna connector and chassis ground. ***Connector & terminal*** ***(i60) No. 7 — Chassis ground:*** ***(i171) No. 4 — (i60) No. 7:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the open circuit in harnesses between the body integrated unit connector and the immobilizer antenna connector, and between the body integrated unit connector and the chassis ground.
5	**CHECK IMMOBILIZER ANTENNA COMMUNICATION CIRCUIT (OPEN CIRCUIT).** Measure the resistance between the body integrated unit connector and immobilizer antenna connector. ***Connector & terminal*** ***(i171) No. 23 — (i60) No. 5:*** ***(i171) No. 3 — (i60) No. 4:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness between the body integrated unit connector and immobilizer antenna connector.
6	**CHECK IMMOBILIZER ANTENNA.** 1) Connect all connectors. 2) Insert the ignition key in the ignition switch. (OFF or ACC) 3) Read the DTC of the body integrated unit. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1411 displayed?	Replace the immobilizer antenna. <Ref. to SL-91, Immobilizer Antenna.> Go to step **7**.	Go to step **7**.
7	**CHECK IMMOBILIZER ANTENNA.** 1) Insert the ignition key in the ignition switch. (OFF or ACC) 2) Read the DTC of the body integrated unit. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1411 displayed?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Malfunction occurred in the immobilizer antenna.

2. FOR C0 AND C5 MODELS



Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:
Immobilizer antenna is faulty.

Trouble symptom:
- Engine will not start.
- The security indicator illuminates.

CAUTION:
When the immobilizer CM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Wiring diagram:
Immobilizer system <Ref. to WI-253, WIRING DIAGRAM, Immobilizer System.>

Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit to power supply in harness between the battery and immobilizer CM.
2	**CHECK CURRENT DATA.** Confirm the current data «BATT voltage» display of immobilizer CM. <Ref. to IM(diag)-14, Read Current Data.>	Is the display 10 V or more?	Go to step **3**.	Go to step **5**.

	Step	Check	Yes	No
3	**CHECK POWER SUPPLY CIRCUIT FOR IMMOBILIZER ANTENNA.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from immobilizer antenna. 3) Insert the ignition key into the key cylinder, then measure the voltage between the immobilizer antenna connector and the chassis ground using an oscilloscope. ***Connector & terminal*** ***(i60) No. 1 (+) — Chassis ground (–):***	Is the voltage 5±0.5 V approx. 200 ms after inserting the ignition key into the key cylinder? And then, does the voltage return to 0 V within 2 s?	Go to step **4**.	Repair the open or short circuit of harness between the immobilizer CM connector and immobilizer antenna connector.
4	**CHECK IMMOBILIZER ANTENNA GROUND CIRCUIT (OPEN CIRCUIT).** Measure the resistance between immobilizer antenna connector and chassis ground. ***Connector & terminal*** ***(i60) No. 7 — Chassis ground:*** ***(i34) No. 5 — (i60) No. 7:*** ***(i34) No. 16 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the open circuit in harnesses between the immobilizer CM connector and the immobilizer antenna connector, and between the immobilizer CM connector and the chassis ground.
5	**CHECK IMMOBILIZER ANTENNA COMMUNICATION CIRCUIT (OPEN CIRCUIT).** Measure the resistance between immobilizer CM connector and immobilizer antenna connector. ***Connector & terminal*** ***(i34) No. 4 — (i60) No. 5:*** ***(i34) No. 15 — (i60) No. 4:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair the open circuit of harness between the immobilizer CM connector and immobilizer antenna connector.
6	**CHECK IMMOBILIZER ANTENNA.** 1) Connect all connectors. 2) Insert the ignition key in the ignition switch. (OFF or ACC) 3) Read the DTC of the immobilizer CM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1411 displayed?	Replace the immobilizer antenna. <Ref. to SL-91, Immobilizer Antenna.> Go to step **7**.	Go to step **7**.
7	**CHECK IMMOBILIZER ANTENNA.** 1) Insert the ignition key in the ignition switch. (OFF or ACC) 2) Read the DTC of the immobilizer CM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1411 displayed?	Replace the immobilizer CM. <Ref. to SL-90, Immobilizer Control Module.>	Malfunction occurred in the immobilizer antenna.

K: DTC B1571 REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM)

1. EXCEPT FOR C0 AND C5 MODELS

Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:
Reference code incompatibility between body integrated unit and ECM

Trouble symptom:
- Engine will not start.
- The security indicator illuminates.

CAUTION:
When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CONFIRM NUMBER OF REGISTERED IMMOBILIZER KEY.** Confirm the number of registered immobilizer key. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is the number of registration 0?	Go to step **2**.	Go to step **3**.
2	**PERFORM IMMOBILIZER SYSTEM REGISTRATION.** Register the immobilizer system. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Go to step **3**.
3	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Go to step **4**.
4	**CHECK DTC.** 1) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.> 2) Read the DTC of the ECM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Are DTCs other than DTC B1571 displayed?	Perform the diagnosis of DTCs other than B1571.	Go to step **5**.
5	**PERFORM ECM REGISTRATION.** 1) Replace the ECM. <Ref. to FU(H4DO)-82, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, Engine Control Module (ECM).> 2) Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Refer to "Correspondence table when registration is not possible" in the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. If the registration still does not work properly, replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>

2. FOR C0 AND C5 MODELS

Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:
Reference code incompatibility between immobilizer CM and ECM

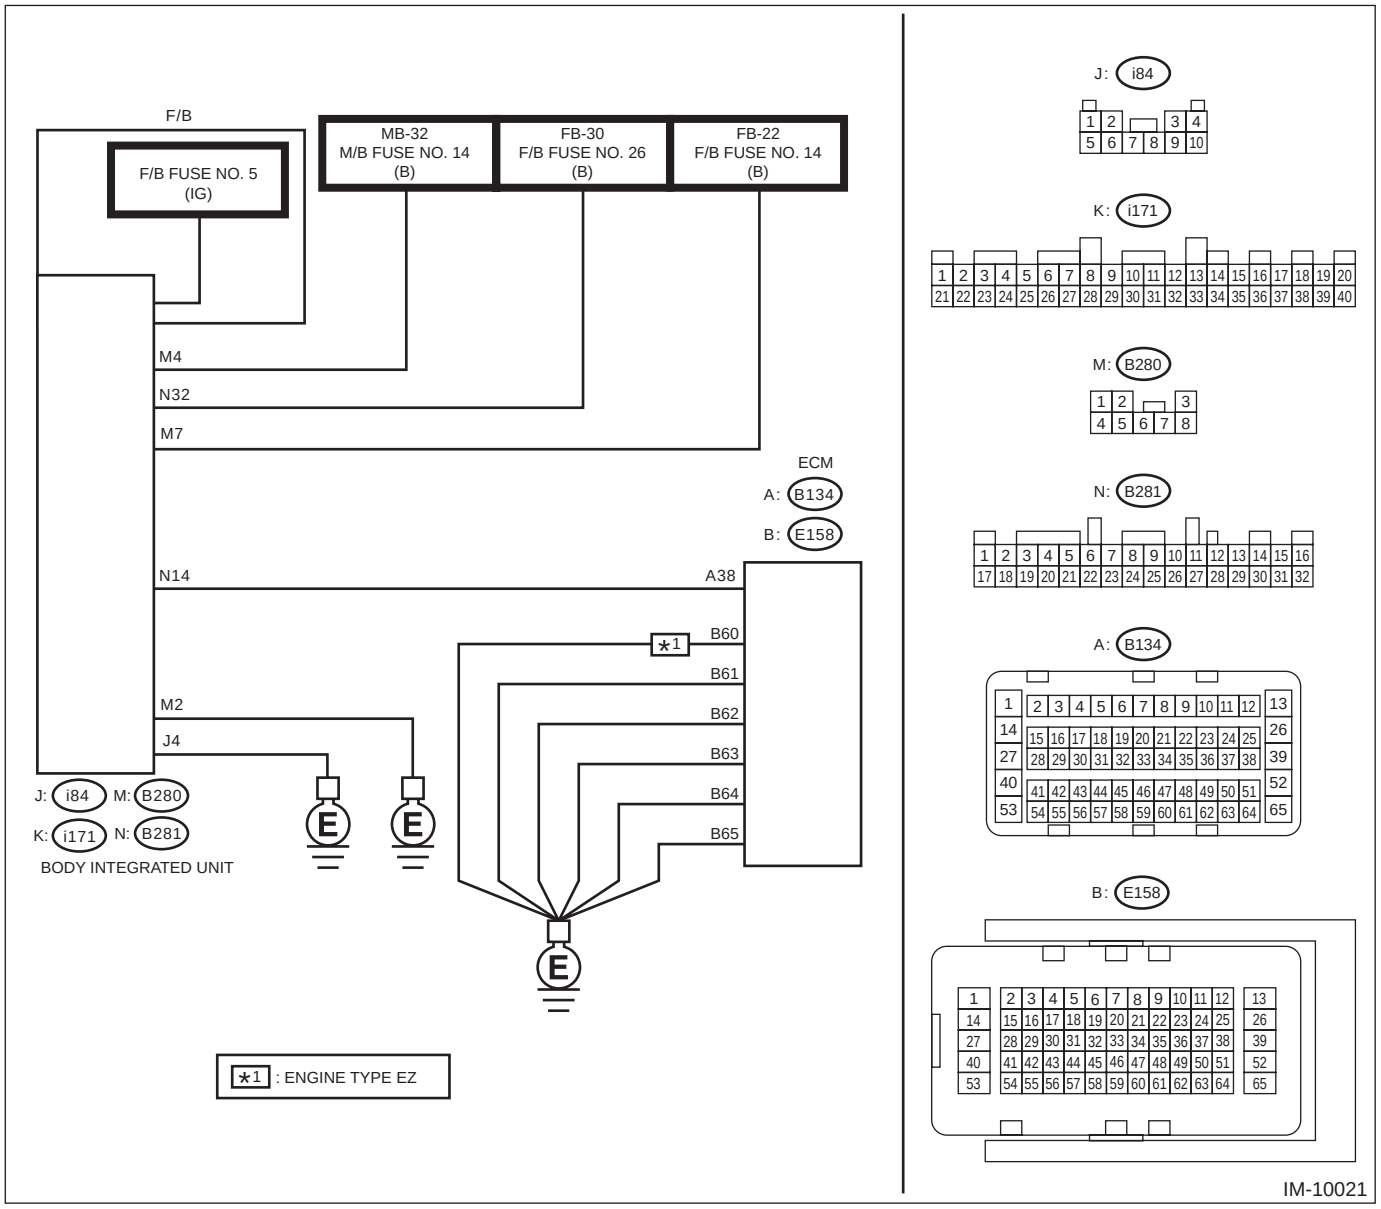
Trouble symptom:
- Engine will not start.
- The security indicator illuminates.

CAUTION:
When the immobilizer CM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CONFIRM NUMBER OF REGISTERED IMMOBILIZER KEY.** Confirm the number of registered immobilizer key. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is the number of registration 0?	Go to step **2**.	Go to step **3**.
2	**PERFORM IMMOBILIZER SYSTEM REGISTRATION.** Register the immobilizer system. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Go to step **3**.
3	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Go to step **4**.
4	**CHECK DTC.** 1) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.> 2) Read the DTC of the ECM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Are DTCs other than DTC B1571 displayed?	Perform the diagnosis of DTCs other than B1571.	Go to step **5**.
5	**PERFORM ECM REGISTRATION.** 1) Replace the ECM. <Ref. to FU(H4DO)-82, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, Engine Control Module (ECM).> 2) Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Refer to "Correspondence table when registration is not possible" in the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. If the registration still does not work properly, replace the immobilizer CM. <Ref. to SL-84, Body Integrated Unit.>

L: DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT

1. EXCEPT FOR C0 AND C5 MODELS



Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:
Communication failure between body integrated unit and ECM

Trouble symptom:
- Engine will not start.
- The security indicator illuminates.

CAUTION:
When the body integrated unit or ECM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

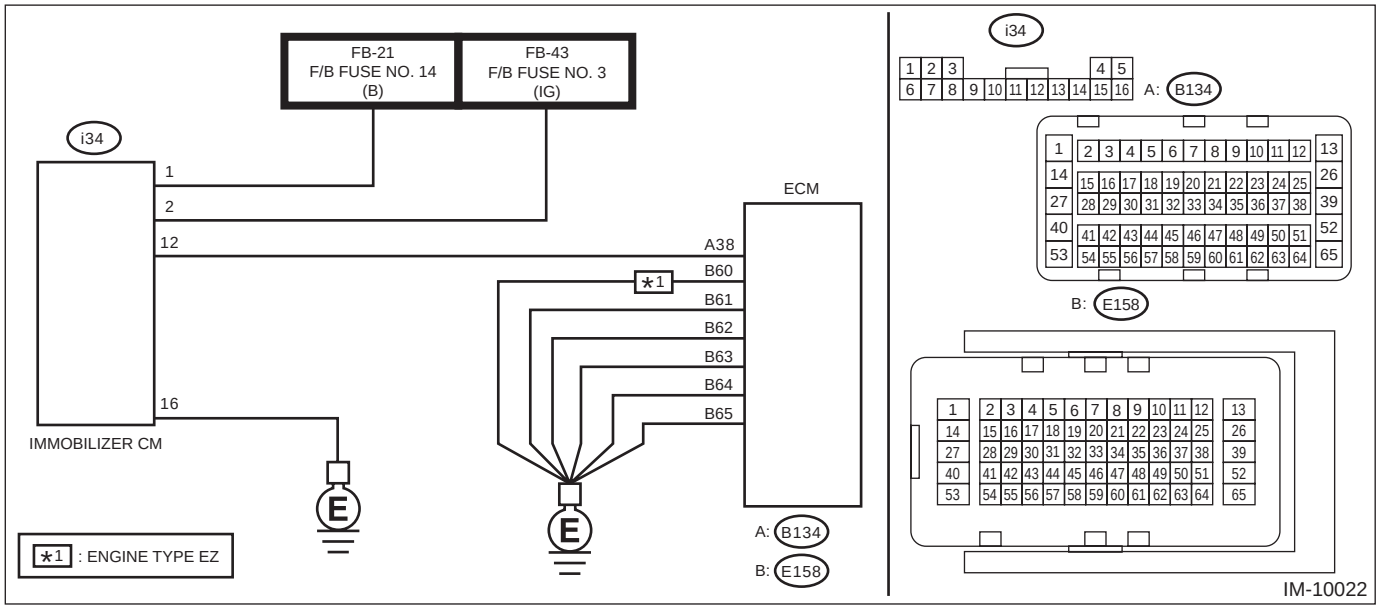
Wiring diagram:
Immobilizer system <Ref. to WI-253, WIRING DIAGRAM, Immobilizer System.>

	Step	Check	Yes	No
1	**CHECK GROUNDING POINT.** Check the grounding point of the engine ground and chassis ground.	Are there any loose connections, any foreign objects caught in the ground lines or contact surface, or any fluid stains?	Remove the foreign matters, and tighten to the specified torque. Then start the engine, and check that the fault was removed. Check DTC <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>, and when DTC B1572 is still displayed, Go to step **2**.	Go to step **2**.
2	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **3**.	Replace the fuse. If the fuse blows out easily, repair the short circuit to power supply in harness between the battery and body integrated unit.
3	**CHECK CURRENT DATA.** Confirm the current data «BATT voltage (control)» display of body integrated unit. <Ref. to IM(diag)-14, Read Current Data.>	Is the display 10 V or more?	Go to step **4**.	Go to step **5**.
4	**CHECK CURRENT DATA.** Check the current data «Voltage of IGN» display of body integrated unit. <Ref. to IM(diag)-14, Read Current Data.>	Is the display 10 V or more?	Go to step **7**.	Go to step **6**.
5	**CHECK BODY INTEGRATED UNIT BATTERY POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Measure the voltage between body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B280) No. 4 (+) — Chassis ground (–):*** ***(B280) No. 7 (+) — Chassis ground (–):*** ***(B281) No. 32 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Repair the open or short circuit of harness between the body integrated unit connector and fuse.
6	**CHECK BODY INTEGRATED UNIT IGN POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. 2) Measure the voltage between F/B fuse No. 5 and chassis ground. ***Connector & terminal*** ***F/B fuse No. 5 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **7**.	Repair the open or short circuit of harness between the body integrated unit connector and ignition switch.
7	**CHECK BODY INTEGRATED UNIT GROUND CIRCUIT (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B280) No. 2 — Chassis ground:*** ***(i84) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **8**.	Repair the open circuit of harness between the body integrated unit connector and chassis ground.

	Step	Check	Yes	No
8	**CHECK GROUND CIRCUIT FOR ECM (OPEN CIRCUIT).** 1) Disconnect the ECM connector. 2) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 60 — Engine ground (engine type EZ only):*** ***(E158) No. 61 — Engine ground:*** ***(E158) No. 62 — Engine ground:*** ***(E158) No. 63 — Engine ground:*** ***(E158) No. 64 — Engine ground:*** ***(E158) No. 65 — Engine ground:***	Is the resistance less than 10 Ω?	Go to step **9**.	Repair the open circuit in harness between ECM connector and chassis ground.
9	**CHECK HARNESS (OPEN CIRCUIT) BETWEEN BODY INTEGRATED UNIT AND ECM.** 1) Disconnect the ECM connector. 2) Measure the resistance between the body integrated unit connector and ECM. ***Connector & terminal*** ***(B281) No. 14 — (B134) No. 38:***	Is the resistance less than 10 Ω?	Go to step **10**.	Repair the open circuit of harness between the body integrated unit connector and ECM.
10	**CHECK COMMUNICATION LINE HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Disconnect the body integrated unit connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 38 (+) — Chassis ground (–):***	Is the voltage 6 V or more?	Repair the short circuit to power supply in harness between body integrated unit connector and ECM connector.	Go to step **11**.
11	**CHECK COMMUNICATION CIRCUIT HARNESS (SHORT CIRCUIT TO GROUND).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between the ECM connector and each ground. ***Connector & terminal*** ***(B134) No. 38 — Chassis ground:*** ***(B134) No. 38 — Engine ground:***	Is the resistance less than 10 Ω?	Repair the ground short circuit of harness between body integrated unit connector and ECM connector.	Go to step **12**.
12	**CHECK ECM.** 1) Replace the ECM. (Do not perform ECM registration.) <Ref. to FU(H4DO)-82, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, Engine Control Module (ECM).> 2) Connect all connectors. 3) Turn the ignition switch to ON. 4) Wait for 5 seconds. 5) Read DTC of engine. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1572 displayed?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Register the ECM. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

2. FOR C0 AND C5 MODELS

Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.



DTC detecting condition:
Communication failure between immobilizer CM and ECM

Trouble symptom:
- Engine will not start.
- The security indicator illuminates.

CAUTION:
When the immobilizer CM or ECM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Immobilizer system <Ref. to WI-253, WIRING DIAGRAM, Immobilizer System.>

Step		Check	Yes	No
1	**CHECK GROUNDING POINT.** Check the grounding point of the engine ground and chassis ground.	Are there any loose connections, any foreign objects caught in the ground lines or contact surface, or any fluid stains?	Remove the foreign matters, and tighten to the specified torque. Then start the engine, and check that the fault was removed. Check DTC <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>, and when DTC B1572 is still displayed, Go to step **2**.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **3**.	Replace the fuse. If the fuse blows out easily, repair the short circuit to power supply in harness between the battery and immobilizer CM.
3	**CHECK CURRENT DATA.** Confirm the current data «BATT voltage» display of immobilizer system. <Ref. to BC(diag)-25, OPERATION, Read Current Data.>	Is the display 10 V or more?	Go to step **6**.	Go to step **4**.
4	**CHECK GROUND CIRCUIT FOR ECM (OPEN CIRCUIT).** 1) Disconnect the ECM connector. 2) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 60 — Engine ground (engine type EZ only):*** ***(E158) No. 61 — Engine ground:*** ***(E158) No. 62 — Engine ground:*** ***(E158) No. 63 — Engine ground:*** ***(E158) No. 64 — Engine ground:*** ***(E158) No. 65 — Engine ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the open circuit in harness between ECM connector and chassis ground.
5	**CHECK IMMOBILIZER CM BATTERY POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the immobilizer CM connector. 3) Measure the voltage between immobilizer CM connector and chassis ground. ***Connector & terminal*** ***(i34) No. 1 (+) — Chassis ground (–):***	Is the display 10 V or more?	Go to step **6**.	Repair the open or short circuit of harness between the immobilizer CM connector and fuse.
6	**CHECK IMMOBILIZER CM IGN POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. 2) Measure the voltage between immobilizer CM connector and chassis ground. ***Connector & terminal*** ***(i34) No. 2 (+) — Chassis ground (–):***	Is the display 10 V or more?	Go to step **7**.	Repair the open or short circuit of harness between the immobilizer CM connector and ignition switch.
7	**CHECK IMMOBILIZER CM GROUND CIRCUIT (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between immobilizer CM connector and chassis ground. ***Connector & terminal*** ***(i34) No. 16 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **8**.	Repair the open circuit of harness between the immobilizer CM connector and chassis ground.
8	**CHECK HARNESS BETWEEN IMMOBILIZER CM AND ECM (OPEN CIRCUIT).** Measure the resistance between immobilizer CM connector and ECM connector. ***Connector & terminal*** ***(i34) No. 12 — (B134) No. 38:***	Is the resistance less than 10 Ω?	Go to step **9**.	Repair the open circuit of harness between the immobilizer CM connector and ECM.
9	**CHECK COMMUNICATION LINE HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 38 (+) — Engine ground (–):***	Is the voltage 6 V or more?	Repair the short circuit to power supply in harness between immobilizer CM connector and ECM connector.	Go to step **10**.

	Step	Check	Yes	No
10	**CHECK COMMUNICATION CIRCUIT HARNESS (SHORT CIRCUIT TO GROUND).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between immobilizer CM connector and each ground. ***Connector & terminal*** ***(i34) No. 12 — Chassis ground:*** ***(i34) No. 12 — Engine ground:***	Is the resistance less than 10 Ω?	Repair the short circuit to ground in harness between immobilizer CM connector and ECM connector.	Go to step **11**.
11	**CHECK ECM.** 1) Replace the ECM. (Do not perform ECM registration.) <Ref. to FU(H4DO)-82, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, Engine Control Module (ECM).> 2) Connect all connectors. 3) Turn the ignition switch to ON. 4) Wait for 5 seconds. 5) Read DTC of engine. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1572 displayed?	Replace the immobilizer CM. <Ref. to SL-90, Immobilizer Control Module.>	Malfunction occurred in ECM. Register the ECM. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

M: DTC B1574 KEY COMMUNICATION

1. EXCEPT FOR C0 AND C5 MODELS

DIAGNOSIS START CONDITION:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC DETECTING CONDITION:
Communication failure between ignition key and body integrated unit

TROUBLE SYMPTOM:
- Engine will not start.
- The security indicator illuminates.

CAUTION:
When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK IGNITION KEY.** 1) Remove the ignition key from the ignition switch. 2) Insert the ignition key into the ignition switch, and then turn the ignition switch to ON. 3) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.> 4) Read the DTC of the body integrated unit. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1410 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: It is possible that the surrounding radio wave environment was poor.
2	**CHECK IGNITION KEY.** 1) Prepare a spare ignition key that is already registered. 2) Insert the ignition key into the ignition switch, and then turn the ignition switch to ON. 3) Read the DTC of the body integrated unit. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1410 displayed?	Go to step **3**.	Malfunction occurred in ignition key.
3	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1411 displayed?	Perform the diagnosis of DTC B1411. <Ref. to IM(diag)-25, DTC B1411 IMMOBILIZER ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> Go to step **4**.	Go to step **4**.
4	**CHECK IMMOBILIZER ANTENNA.** 1) Insert the ignition key into the ignition switch, and then turn the ignition switch to ON. 2) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.> 3) Read the DTC of the body integrated unit. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1410 displayed?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Malfunction occurred in the immobilizer antenna.

2. FOR C0 AND C5 MODELS

DIAGNOSIS START CONDITION:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC DETECTING CONDITION:
Communication failure between ignition key and immobilizer CM

TROUBLE SYMPTOM:
- Engine will not start.
- The security indicator illuminates.

CAUTION:
When the immobilizer CM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK IGNITION KEY.** 1) Remove the ignition key from the ignition switch. 2) Insert the ignition key into the ignition switch, and then turn the ignition switch to ON. 3) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.> 4) Read the DTC of the immobilizer CM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1410 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: It is possible that the surrounding radio wave environment was poor.
2	**CHECK IGNITION KEY.** 1) Prepare a spare ignition key that is already registered. 2) Insert the ignition key into the ignition switch, and then turn the ignition switch to ON. 3) Read the DTC of the immobilizer CM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1410 displayed?	Go to step **3**.	Malfunction occurred in ignition key.
3	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of immobilizer CM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1411 displayed?	Perform the diagnosis of DTC B1411. <Ref. to IM(diag)-25, DTC B1411 IMMOBILIZER ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> Go to step **4**.	Go to step **4**.
4	**CHECK IMMOBILIZER ANTENNA.** 1) Insert the ignition key into the ignition switch, and then turn the ignition switch to ON. 2) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.> 3) Read the DTC of the immobilizer CM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1410 displayed?	Replace the immobilizer CM. <Ref. to SL-90, Immobilizer Control Module.>	Malfunction occurred in the immobilizer antenna.

N: DTC B1575 INCORRECT IMMOBILIZER KEY

1. EXCEPT FOR C0 AND C5 MODELS

DIAGNOSIS START CONDITION:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC DETECTING CONDITION:
Use of unregistered key in body integrated unit.

TROUBLE SYMPTOM:
- Engine will not start.
- The security indicator illuminates, when the ignition key is inserted into the ignition switch or when the ignition switch is turned to ON.

CAUTION:
When the body integrated unit or combination meter is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CONFIRM NUMBER OF REGISTERED IGNITION KEY.** Using the Subaru Select Monitor, check the number of registered ignition keys. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is one or more ignition key(s) registered?	Go to step **2**.	Register the immobilizer.
2	**CHECK IGNITION KEY.** 1) Prepare all the pre-registered ignition keys. 2) Insert the ignition key in the ignition switch. 3) Turn the ignition switch to ON. 4) Read the DTC of the body integrated unit. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).> 5) Perform step 2) to 4) with another registered ignition key.	Is DTC B1402 displayed for all ignition keys?	Refer to "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume, and perform the actions for the case that all keys are faulty/lost.	Ignition key unit was defective, or ignition key was not registered.

2. FOR C0 AND C5 MODELS

DIAGNOSIS START CONDITION:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC DETECTING CONDITION:
Use of unregistered key in immobilizer CM.

TROUBLE SYMPTOM:
- Engine will not start.
- The security indicator illuminates, when the ignition key is inserted into the ignition switch or when the ignition switch is turned to ON.

CAUTION:
When the immobilizer CM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CONFIRM NUMBER OF REGISTERED IGNITION KEY.** Using the Subaru Select Monitor, check the number of registered ignition keys. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is one or more ignition key(s) registered?	Go to step **2**.	Register the immobilizer.
2	**CHECK IGNITION KEY.** 1) Prepare all the pre-registered ignition keys. 2) Insert the ignition key in the ignition switch. 3) Turn the ignition switch to ON. 4) Read the DTC of the immobilizer CM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).> 5) Perform step 2) to 4) with another registered ignition key.	Is DTC B1402 displayed for all ignition keys?	Refer to "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume, and perform the actions for the case that all keys are faulty/lost.	Ignition key unit was defective, or ignition key was not registered.

O: DTC B1576 EGI CONTROL MODULE EEPROM

DIAGNOSIS START CONDITION:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC DETECTING CONDITION:
- ECM malfunctioning
- Failed to access ROM in ECM during key registration.

TROUBLE SYMPTOM:
- Engine will not start.
- The security indicator illuminates.

CAUTION:
When the ECM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Go to step **2**.
2	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Go to step **3**.
3	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Refer to "Correspondence table when registration is not possible" in the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. If the registration still does not work properly, replace the ECM. <Ref. to FU(H4DO)-82, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, Engine Control Module (ECM).>

P: DTC B1577 IMM CONTROL MODULE EEPROM

DIAGNOSIS START CONDITION:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC DETECTING CONDITION:
- Defective body integrated unit (except for C0 and C5 models) or immobilizer CM (C0 and C5 models)
- Failed to access ROM in the body integrated unit (except for C0 and C5 models) or the immobilizer CM (C0 and C5 models)

TROUBLE SYMPTOM:
- Engine will not start.
- The security indicator illuminates.

CAUTION:
When the body integrated unit (except for C0 and C5 models) or the immobilizer CM (C0 and C5 models) is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Go to step **2**.
2	**PERFORM ECM REGISTRATION.** 1) Perform the Clear Memory Mode. (ECM and immobilizer CM) <Ref. to IM(diag)-11, Clear Memory Mode.> 2) Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Refer to "Correspondence table when registration is not possible" in the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. If the registration still does not work properly, replace the following parts. Body integrated unit (except for C0 and C5 models) <Ref. to SL-84, Body Integrated Unit.> Immobilizer CM (C0 and C5 models) <Ref. to SL-90, Immobilizer Control Module.>

Q: DTC B1578 METER

Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:
Reference code incompatibility between combination meter and body integrated unit or communication failure between body integrated unit and ECM

Trouble symptom:
- Engine will not start.
- The security indicator illuminates.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the body integrated unit. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1401, B1407, or B1408 displayed?	Perform the diagnosis for the displayed DTC B1401, B1407 or B1408.	Perform the diagnosis of DTC B1572. <Ref. to IM(diag)-36, DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

LAN SYSTEM (DIAGNOSTICS)

12.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	132
13.	Diagnostics with Phenomenon	177

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
• Remove foreign matter (dust, water, oil, etc.) from each control module connector during removal and installation.
• Registration of immobilizer may be needed after the replacement of control modules, etc. For detailed procedure, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

NOTE:
• To check harness for open or short circuits, shake the suspected trouble spot or connector.
• Perform the diagnosis, and when the control module is replaced as a result of judgment that malfunction is the control module, re-check that the control module was actually malfunctioning. Replace to a new control module, and confirm that the malfunction is eliminated. Then, install the previously removed control module again and check that the malfunction reproduces again.
• Check List for Interview <Ref. to LAN(diag)-4, Check List for Interview.>

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** Ask the customer when and how the trouble occurred using the interview check list. <Ref. to LAN(diag)-4, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Interview the customer.
2	**BASIC INSPECTION (CAN DIAGNOSTIC IS NOT USED).** Check the power supply circuit of the module which might affect CAN communication problem. <Ref. to LAN(diag)-7, INSPECTION WITHOUT USING CAN DIAGNOSTIC, INSPECTION, General Description.>	Is the power supply circuit of each module that is performing CAN communication normal?	Go to step **3**.	Repair or replace the faulty portion.
3	**BASIC INSPECTION (CAN DIAGNOSTIC IS NOT USED).** Check the registration status of the body integrated unit which might affect CAN communication problem. <Ref. to LAN(diag)-8, INSPECTION USING CAN DIAGNOSTIC, INSPECTION, General Description.>	Does the registration status of the body integrated unit match with the vehicle specification? (When the Subaru Select Monitor and the body integrated unit cannot communicate, and the registration status cannot be checked, Go to step **5**.)	Go to step **4**.	Match the registration status of the body integrated unit with the vehicle specification.
4	**CHECK COMMUNICATION FOR INITIALIZING.** Communicate with the all systems by connecting the Subaru Select Monitor.	Is the communication for initializing finished for all modules?	Go to step **5**.	Check the error of communication for initializing. <Ref. to LAN(diag)-12, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

Step		Check	Yes	No
5	**CHECK DTC.** 1) Start the engine and read all DTCs. NOTE: When the engine does not start, perform the diagnosis for the engine start malfunction. <Ref. to EN(H4DO)(diag)-85, Diagnostics for Engine Starting Failure.> <Ref. to EN(H6DO)(diag)-95, Diagnostics for Engine Starting Failure.> 2) Record all DTCs (current malfunction and past malfunction), time stamp and freeze frame data. NOTE: For time stamp, refer to “TIME STAMP” of General Description. <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.>	Is DTC U**** displayed on Subaru Select Monitor?	Go to step **6**.	Using the diagnostics with phenomenon, perform inspection. <Ref. to LAN(diag)-177, Diagnostics with Phenomenon.>
6	**CHECK USING THE DTC CHECK SHEET.** Perform the inspection using the DTC check sheet. <Ref. to LAN(diag)-127, CHECK USING THE DTC CHECK SHEET, LIST, List of Diagnostic Trouble Code (DTC).>	Is CAN communication line faulty?	Repair or replace the faulty portion of the harness. And then, Go to step **7**.	Perform the diagnosis for the displayed DTCs. And then, Go to step **7**.
7	**PERFORM DIAGNOSIS.** 1) Perform the Clear Memory Mode. <Ref. to LAN(diag)-44, OPERATION, Clear Memory Mode.> 2) Read the DTC. <Ref. to LAN(diag)-43, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Repeat the Basic Diagnostic Procedure from the beginning until DTC is not shown.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Inspect the following items regarding the vehicle's state.

1. DISPLAY STATUS IN THE COMBINATION METER

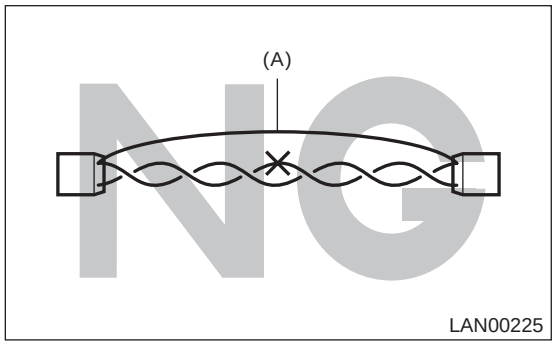
Display status in the combination meter	Engine coolant temperature gauge display	❑ OK / ❑ NG
	Fuel gauge display	❑ OK / ❑ NG
	Tachometer display	❑ OK / ❑ NG (0 rpm at idling etc.)
Display of other indicators	Malfunction indicator light	❑ ON / ❑ Blink / ❑ OFF
	Sport indicator light (AT warning light)	❑ ON / ❑ Blink / ❑ OFF
	ABS warning light	❑ ON / ❑ Blink / ❑ OFF
	VDC warning light	❑ ON / ❑ Blink / ❑ OFF
	Security indicator light	❑ ON / ❑ Blink / ❑ OFF
	AT OIL TEMP warning light	❑ ON / ❑ Blink / ❑ OFF
	Tire pressure warning light	❑ ON / ❑ Blink / ❑ OFF
	Engine coolant temperature warning light	❑ Blue light ON / ❑ Red light ON / ❑ Red light blinks / ❑ Blue and red lights blink
	CRUISE indicator	❑ ON / ❑ Blink / ❑ OFF
	Shift indicator	❑ OK / ❑ NG
	Fuel level warning light	❑ ON / ❑ Blink / ❑ OFF
	Airbag warning light	❑ ON / ❑ OFF
	VDC OFF indicator	❑ ON / ❑ OFF
	Brake warning light	❑ ON / ❑ OFF
	EyeSight warning light	❑ ON / ❑ Blink / ❑ OFF
	Lane departure warning OFF indicator light	❑ ON / ❑ OFF
	Pre-collision brake OFF indicator light	❑ ON / ❑ OFF
	Headlight beam leveler indicator	❑ ON / ❑ OFF

2. CONDITIONS UNDER WHICH TROUBLE OCCURS

Driving condition	❑ At standstill (while idling) ❑ When the vehicle is running Vehicle speed km/h (MPH) ❑ While accelerating Acceleration km/h (MPH) to km/h (MPH) ❑ Decelerating (with braking) Deceleration km/h (MPH) to km/h (MPH) ❑ Decelerating (without braking) Deceleration km/h (MPH) to km/h (MPH)
	❑ Flat road ❑ Uphill ❑ Downhill ❑ Gravel road ❑ Bumpy road ❑ Snowy road
	Does it occur when operating any part? Operated part: **TROUBLE SYMPTOM:**
	Are there any other troubles occurred? From where: **TROUBLE SYMPTOM:**

3. General Description

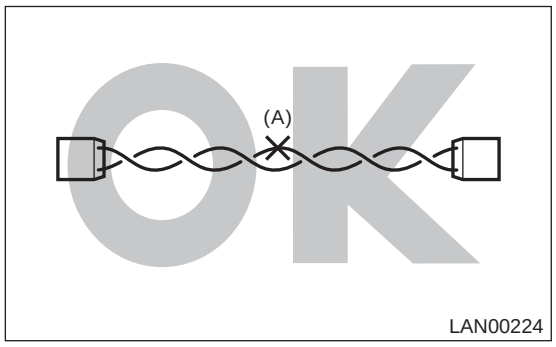
A: CAUTION



1. SRS AIRBAG SYSTEM

Airbag system wiring harness is routed near the body integrated unit and twisted pair line.

CAUTION:
- **Do not use the electrical test equipment on all airbag system wiring harnesses and connectors.**
- **Be careful not to damage the airbag system wiring harness when servicing the body integrated unit and LAN system.**



2. LAN SYSTEM

- Bus line of LAN system is twisted pair line. Be careful not to by-pass or partly unbind the twisted pair line.
- Do not make clearance between bus lines (CAN High, CAN Low).
- Difference of bus line length should be within 10 cm (3.94 in).
- Fray near the connector should be within 8 cm (3.14 in).

(A) Bypass wire connection

- If the characteristics of the twisted pair line are changed, it may extremely weaken against noise.
- When repairing the harness, connect the wires using soldering and protect it with electrical tape etc.

(A) Soldering and protection with electrical tape

3. TIME STAMP

There are three types of record data for the information of time stamp, and they are stored together with diagnostic codes.

NOTE:
Depending on DTCs, time stamp may not be stored.

a. **«Trip Count»**

This indicates the number of times that the ignition has been turned to ON since the vehicle was manufactured. The ignition ON count of when the diagnostic code is stored is displayed on the diagnostic code check screen.

NOTE:
Subaru Select Monitor 4 screen (A/C system diagnostic code and time stamp)

Code	Description & trouble position	Trouble occurrence record	**«Trip Count»**	«Time Count»	«Category»
B14E1	Air Mix Door Actuator Stepping Motor Circuit Open (Driver)	Detected on the first time	**983**	18000	Common
B14E7	Heater Core Sensor Circuit Open	Detected on the 2nd time	**984**	117800	Common

The current Trip Count can be checked at “Current Data Display & Save” in “Integ. unit mode”.
By comparing the current Trip Count and the Trip Count of when the diagnostic code was stored, it is possible to determine that it is how many ignition-ON operations ago that DTC was stored.

b. **«Time Count»**

The elapsed time from when the ignition is turned to ON to when the diagnostic code is stored is displayed on the diagnostic code check screen. It is possible to determine the length of time that passed between when the user started driving and when the diagnostic code was stored. Therefore, if Trip Count until the vehicle-received-date is determined by interviewing the user, it is possible to estimate where the user was driving when the diagnostic code was stored, using the information such as Trip Count and Time Count. This estimate is useful information to perform diagnosis including checking of repeatability.

NOTE:
Subaru Select Monitor 4 screen (A/C system diagnostic code and time stamp)

Code	Description & trouble position	Trouble occurrence record	«Trip Count»	**«Time Count»**	«Category»
B14E1	Air Mix Door Actuator Stepping Motor Circuit Open (Driver)	Detected on the first time	983	**18000**	Common
B14E7	Heater Core Sensor Circuit Open	Detected on the 2nd time	984	**117800**	Common

When multiple diagnostic codes are recorded for one trouble, it is extremely important to determine the diagnostic code that was stored first. (It is important to perform the diagnosis for the first recorded diagnostic code.) In this case, it is also possible to immediately determine which diagnostic code was recorded first, using the information such as Trip Count and Time Count.

c. **«Category»**
Each unit individually counts the elapsed time since the ignition is turned to ON. However, these time counts may have some errors, and therefore, the control modules need to be adjusted to the time carried by the master-time unit (the body integrated unit). When the count is set as common, it means that each control module is already adjusted to the master time, and the display for the master integrated unit is always indicated as “Common”. When the count is indicated as “Originally”, it means that the time is not synchronized with the master time. In this case, check the communication between the corresponding control module and integrated unit. When all controls other than the body integrated unit is indicated as “Originally”, perform the basic inspection for the body integrated unit. <Ref. to BC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

NOTE:
Subaru Select Monitor 4 screen (A/C system diagnostic code and time stamp)

Code	Description & trouble position	Trouble occurrence record	«Trip Count»	«Time Count»	**«Category»**
B14E1	Air Mix Door Actuator Stepping Motor Circuit Open (Driver)	Detected on the first time	983	18000	**Common**
B14E7	Heater Core Sensor Circuit Open	Detected on the 2nd time	984	117800	**Common**

Even when multiple diagnostic codes are stored in multiple control modules, it is possible to determine the code stored first through the count function.

NOTE:
Troubleshooting for CAN system U-code occurrence
When the first stored diagnostic code is a U-code for CAN system, perform the troubleshooting as a U code combination, instead of a U code alone. In addition, when CAN open circuit occurs, communication of the diagnostic device itself becomes impossible beyond the particular areas. However, trouble positions can also be determined by the combination of initial communication success/failure. Thus, by performing the basic diagnostic procedure in LAN system, trouble positions can be determined efficiently on the principle above. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: INSPECTION

1. INSPECTION WITHOUT USING CAN DIAGNOSTIC

Step		Check	Yes	No
1	**CHECK BATTERY.** Check the battery. <Ref. to SC(H4DO)-60, INSPECTION, Battery.> <Ref. to SC(H6DO)-60, INSPECTION, Battery.>	Is the check result OK?	Go to step **2**.	Charge or replace the battery.
2	**CHECK FUSE.** Check the fuse which might affect the problem.	Is the check result OK?	Go to step **3**.	Replace the fuse. If the replaced fuse blows out easily, some type of fault is present. Therefore, repair the faulty portion.
3	**CHECK HARNESS.** Check the harness and harness connector connection which might affect the problem.	Is the check result OK?	In the Basic Diagnostic Procedure, Go to step **3**.	Repair or replace the faulty harness or harness connector.

2. INSPECTION USING CAN DIAGNOSTIC

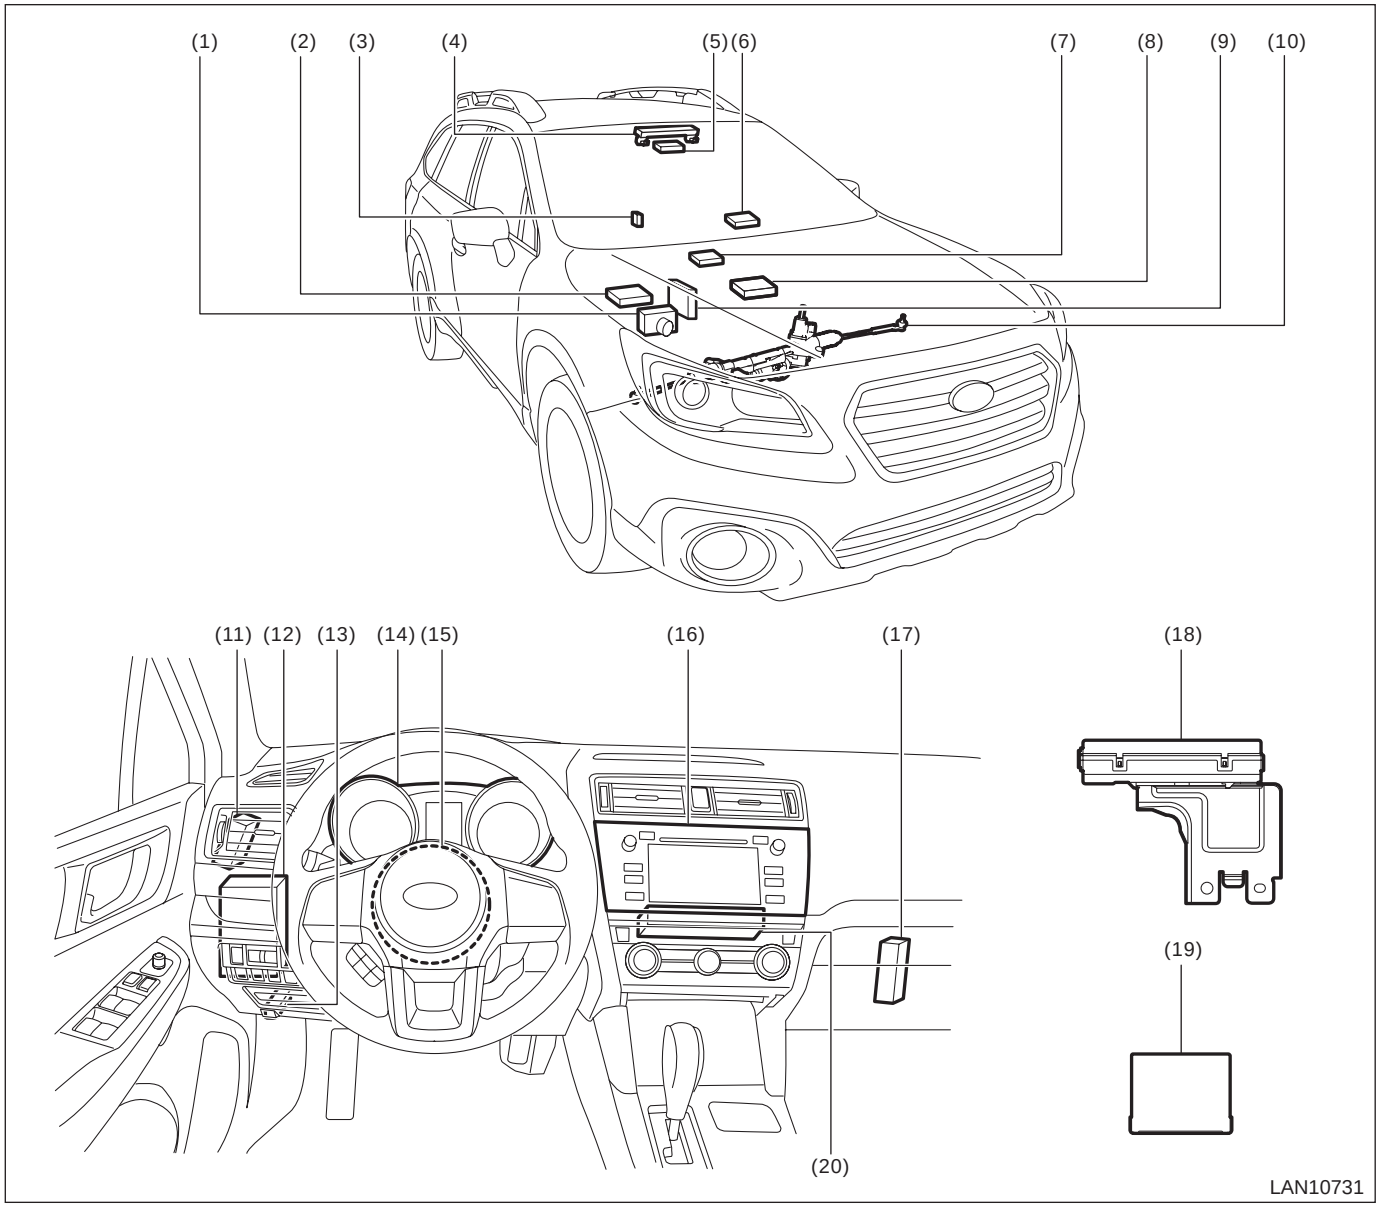
Step		Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT REGISTRATION STATUS.** Check that settings of body integrated unit correspond to vehicle equipment. <Ref. to BC(diag)-38, Registration Body Integrated Unit.>	Does the vehicle equipment correspond to settings?	Go to step **2**.	Match the settings of the body integrated unit with the vehicle equipment.
2	**CHECK BODY INTEGRATED UNIT CUSTOMIZE SETTING.** Check that settings of body integrated unit correspond to vehicle condition. <Ref. to BC(diag)-35, User Customizing.>	Do the customize settings correspond to the vehicle condition?	Go to step **3**.	Match the settings of the body integrated unit with the vehicle condition.
3	**CHECK FACTORY INITIAL SETTING OF BODY INTEGRATED UNIT.** Confirm «Factory initial setting» of body integrated unit registrations is set to «Market». <Ref. to BC(diag)-38, Registration Body Integrated Unit.>	Is it set to «Market»?	In the Basic Diagnostic Procedure, Go to step **4**.	Switch from «Factory» to «Market».

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL



TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

3. PREPARATION ITEMS

ITEM NAME	REMARKS
120 Ω resistance element (1/4 W or more)	Used as an alternative to end resistance.

4. Electrical Component Location

A: LOCATION

(1)	VDC CM	(8)	Transmission CM (engine type: FB)	(15)	Steering angle sensor
(2)	Transmission CM (engine type: EZ)	(9)	Engine CM	(16)	Audio or navigation
(3)	Radar sensor LH	(10)	Power steering CM	(17)	A/C CM
(4)	Stereo camera	(11)	Auto headlight beam leveler CM (AHL CM) or steering responsive fog light CM (SRF CM)	(18)	Keyless access CM
(5)	High beam assist module (rear-view mirror)	(12)	Body integrated unit	(19)	Immobilizer CM (for C0 and C5 models)
(6)	RAB CU (under seat)	(13)	Data link connector	(20)	Data communication module (DCM)
(7)	Airbag CM (in console box)	(14)	Combination meter		

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

- Body integrated unit

For I/O signals of the body integrated unit, refer to BODY CONTROL SYSTEM (DIAGNOSTICS). <Ref. to BC(diag)-12, Control Module I/O Signal.>

- Engine CM

For I/O signals of ECM, refer to ENGINE (DIAGNOSTICS). <Ref. to EN(H4DO)(diag)-21, Engine Control Module (ECM) I/O Signal.> <Ref. to EN(H6DO)(diag)-22, Engine Control Module (ECM) I/O Signal.>

- Transmission CM

For I/O signals of TCM, refer to AUTOMATIC TRANSMISSION (DIAGNOSTICS). <Ref. to CVT(diag)-12, Transmission Control Module (TCM) I/O Signal.>

- VDC CM

For I/O signals of VDC CM, refer to VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS). <Ref. to VDC(diag)-17, Control Module I/O Signal.>

- Power steering CM

For unit I/O signals of power steering CM, refer to POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS). <Ref. to PS(diag)-9, Control Module I/O Signal.>

- A/C CM

For unit I/O signals of A/C CM, refer to HVAC SYSTEM (DIAGNOSTICS). <Ref. to AC(diag)-6, Control Module I/O Signal.>

- Combination meter

For I/O signals of combination meter, refer to COMBINATION METER (DIAGNOSTICS). <Ref. to MET(diag)-6, Control Module I/O Signal.>

- Airbag CM

For I/O signals of the airbag CM, refer to AIRBAG SYSTEM (DIAGNOSTICS). <Ref. to AB(diag)-24, Airbag Control Module I/O Signal.>

- Keyless access CM

For I/O signals of keyless access CM, refer to KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS). <Ref. to KPS(diag)-14, Control Module I/O Signal.>

- Auto headlight beam leveler CM

For I/O signals of auto headlight beam leveler CM, refer to AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS). <Ref. to AL(diag)-6, Control Module I/O Signal.>

- Steering responsive fog light CM

For I/O signals of the steering responsive fog light CM, refer to STEERING RESPONSIVE FOG LIGHTS (DIAGNOSTICS). <Ref. to SRF(diag)-7, Control Module I/O Signal.>

- Radar sensor

For I/O signals of the radar sensor, refer to BSD/RCTA (DIAGNOSTICS). <Ref. to RVD(diag)-9, Control Module I/O Signal.>

- Immobilizer CM

For I/O signals of the immobilizer CM, refer to IMMOBILIZER (DIAGNOSTICS). <Ref. to IM(diag)-7, Immobilizer Control Module I/O Signal.>

- Audio or navigation

For I/O signals of the navigation, refer to INFOTAINMENT SYSTEM (DIAGNOSTICS). <Ref. to INF(diag)-8, Control Module I/O Signal.>

- Data communication module (DCM)

For I/O signals of DCM, refer to TELEMATICS (DIAGNOSTICS). <Ref. to TEL(diag)-8, Control Module I/O Signal.>

- RAB CM

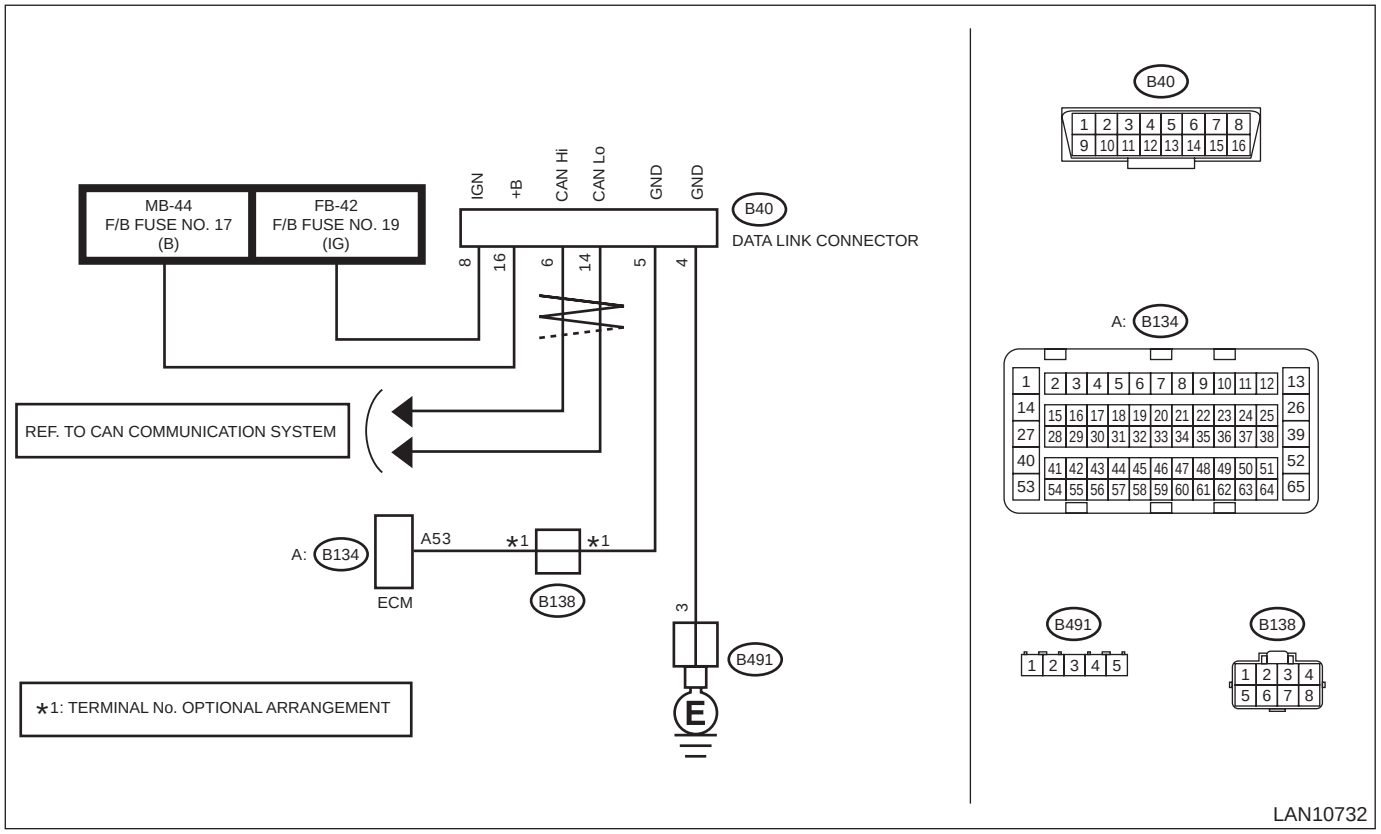
For I/O signals of the RAB CM, refer to Reverse Automatic Braking (DIAGNOSTICS). <Ref. to RAB(diag)-8, Control Module I/O Signal.>

- Data link connector

For I/O signals of data link connector, refer to ENGINE (DIAGNOSTICS). <Ref. to EN(H4DO)(diag)-21, Engine Control Module (ECM) I/O Signal.> <Ref. to EN(H6DO)(diag)-22, Engine Control Module (ECM) I/O Signal.>

B: WIRING DIAGRAM

Refer to “CAN Communication System” in the wiring diagram. <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>



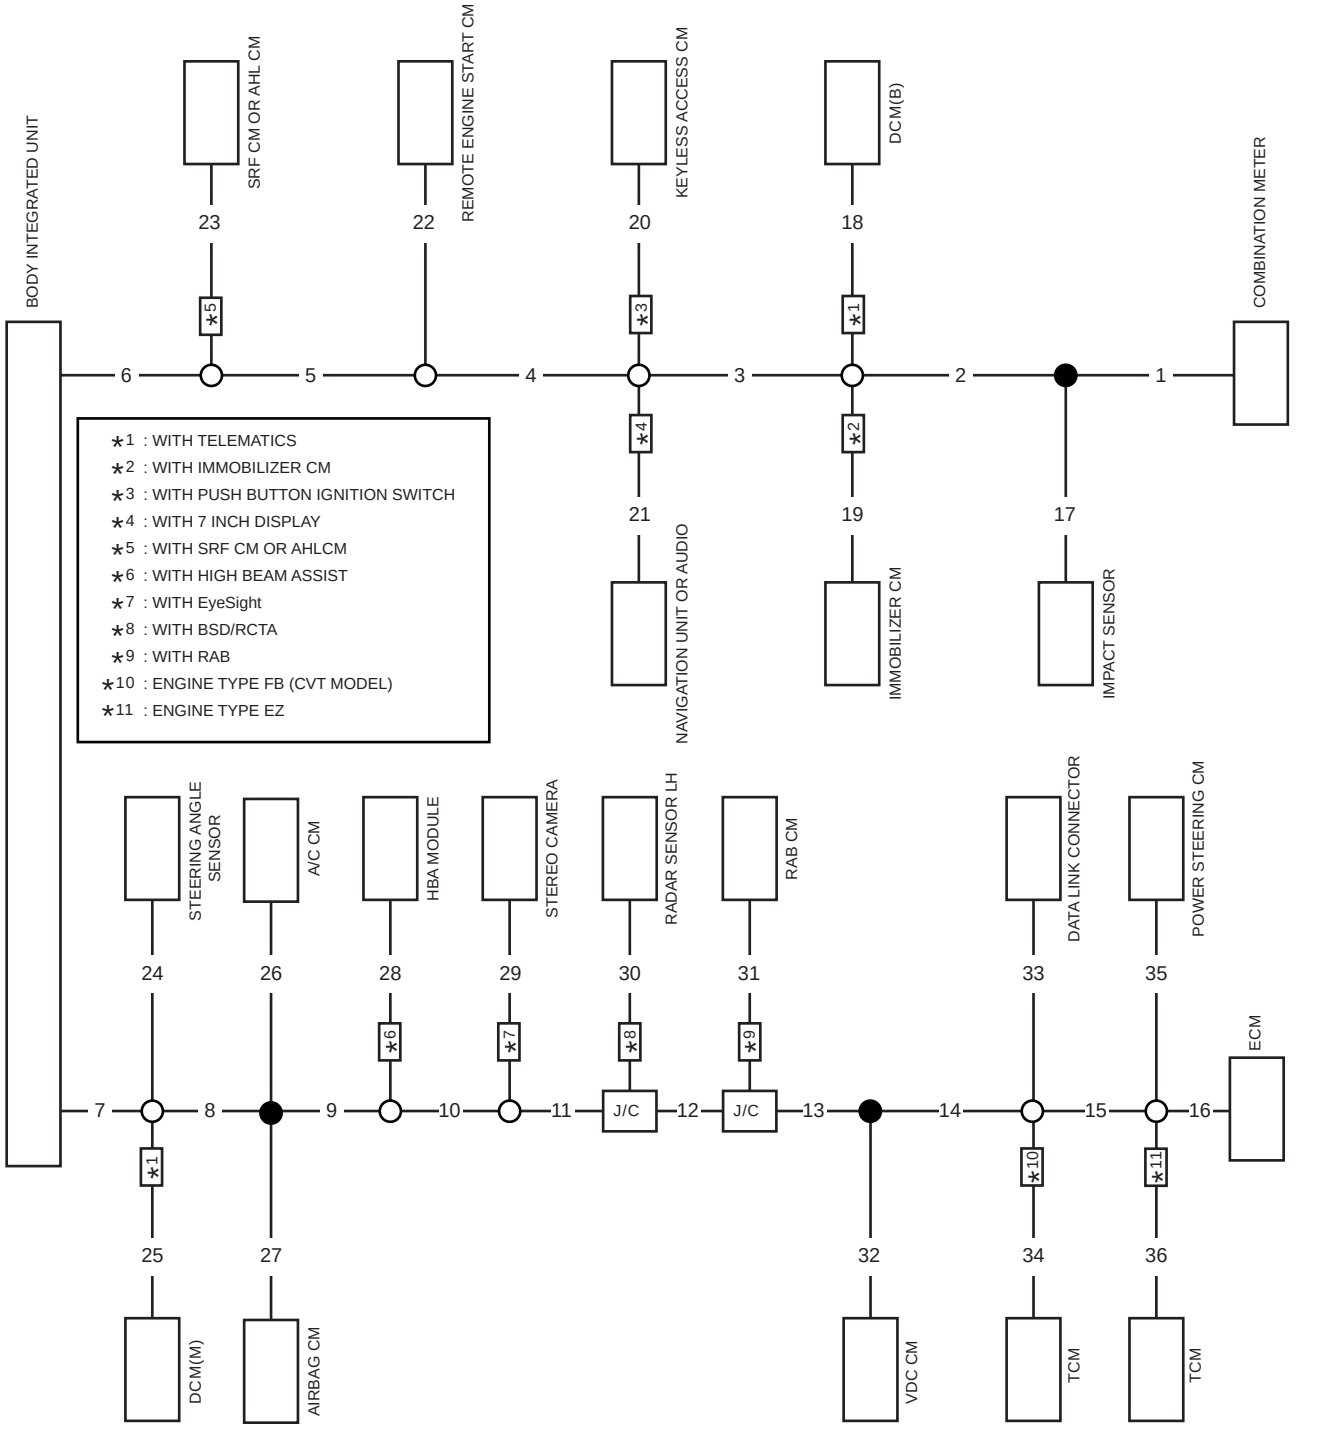
6. Subaru Select Monitor

A: OPERATION

For details of basic operations, refer to “Application help”.

B: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Diagnosis:
Subaru Select Monitor communication line is open or shorted.
Trouble symptom:
Not communicable with Subaru Select Monitor.
Wiring diagram:
CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>



Step		Check	Yes	No
1	**CHECK SUBARU SELECT MONITOR.** 1) Connect the Subaru Select Monitor to another vehicle. 2) Check communication condition between Subaru Select Monitor and vehicle.	Is communication performed normally?	Go to step **2**.	Subaru Select Monitor unit or diagnosis cable is faulty. Or check the fuse on the vehicle side.
2	**CHECK DATA LINK CONNECTOR.** Use a tester to check for continuity in the ground circuit. ***Connector & terminal*** ***(B40) No. 4 — Chassis ground:*** ***(B40) No. 5 — (B134) No. 53:***	Is there continuity?	Go to step **3**.	Repair or replace the open circuit.

	Step	Check	Yes	No
3	**CHECK DATA LINK CONNECTOR.** 1) Turn the ignition switch to ON. 2) Using a tester, check the power supply of data link connector. ***Connector & terminal*** ***(B40) No. 8 (+) — Chassis ground (–):*** ***(B40) No. 16 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Check the power supply circuits to the data link connector.
4	**CHECK COMMUNICATION FOR INITIALIZING ERROR.** Perform the communication for initializing with each module by connecting the Subaru Select Monitor. (For systems whose module can communicate with diagnostic devices) NOTE: By performing «CAN bus check», confirmation of minimal connection modules is possible. <Ref. to LAN(diag)-45, CAN BUS ECU Communication Check.>	Is the communication possible with all modules?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Perform the inspection using the check sheet of communication for initializing. <Ref. to LAN(diag)-14, CHECK USING THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

1. CHECK USING THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING

A/C: Air conditioner CM

A/B: Airbag CM

STA: Steering angle sensor

EYE: Stereo camera

BIU: Body integrated unit

AHL: Auto headlight beam leveler CM or steering responsive fog light CM

RES: Remote engine starter CM

AVN: Navigation unit

IMB: Immobilizer CM

KPS: Keyless access CM

IMP: Impact sensor

MET: Combination meter

DCM(M): Data communication module (MAIN CAN)

DCM(B): Data communication module (BODY CAN)

HBA: High beam assist module

RAB: RAB CM

Step		Check	Yes	No
1	**MODULE INSTALLATION CHECK.** 1) Using the check sheet for communication for initializing, check the vehicle installation module (module targeted for CAN communication). 2) Write "-" marks in the field for installation check (A) if the vehicle to be inspected does not have relevant module. 3) Write "-" marks in all blank fields on the same row that the "-" mark has filled in.	Was the module installation check on the left performed?	Go to step **2**.	Perform the module installation check, Go to step **2**.

	Step	Check	Yes	No
2	**SUBARU SELECT MONITOR COMMUNICATION INITIALIZATION CHECK.** 1) Connect the Subaru Select Monitor to the vehicle. 2) Check if communication with the module installed on the vehicle is possible. 3) Write "◯" marks in the field for communication initialization (B) if the module succeeded in the communication for initializing with Subaru Select Monitor. If the module failed in the communication, write a "×". 4) Write "◯" marks in all blank fields on the same row that the "◯" mark has filled in. 5) When at least one field in a column of wiring location (C) is filled with the "◯" mark, then the wiring for that location is normal. Write "◯" marks in all blank fields on the same column that the "◯" mark has filled in under the circled number.	Was the communication checked with all the modules installed on the vehicle?	Go to step **3**.	Perform the communication check, Go to step **3**.
3	**CHECK FIELD FOR COMMUNICATION FOR INITIALIZING (B).** Check if communication with all the modules installed on the vehicle was possible.	Is "×" written in all the fields for communication for initializing (B)? (The communication was not possible between all the modules and the Subaru Select Monitor.)	Go to step **6**.	Go to step **4**.
4	**CHECK WIRING LOCATION OF MODULE THAT CANNOT PERFORM COMMUNICATION.** Using the check sheet for communication for initializing, check open circuit of the modules which have no "◯" mark in their columns of the wiring location (C) in ascending order by referring to the network diagram.	Is CAN communication line faulty?	Repair or replace the faulty portion of the harness.	Go to step **5**.
5	**CHECK POWER SUPPLY CIRCUIT OF CONTROL MODULE.** Check power supply circuit of the control module that cannot perform communication. (Check the harness between control module connector and battery, and check the fuse.)	Is power supply circuit faulty?	Repair or replace the faulty portion of the power supply circuit.	In the Basic Diagnostic Procedure, Go to step **5**.
6	**CHECK CAN COMMUNICATION LINE.** Check for short circuit to ground of CAN communication line. <Ref. to LAN(diag)-55, GROUND SHORT INSPECTION, INSPECTION, CAN Communication Circuit Check.>	Is CAN communication line faulty?	Repair or replace the faulty portion of the harness.	Go to step **7**.
7	**CHECK CAN COMMUNICATION LINE.** Check for short circuit to power supply of CAN communication line. <Ref. to LAN(diag)-60, BATTERY SHORT INSPECTION, INSPECTION, CAN Communication Circuit Check.>	Is CAN communication line faulty?	Repair or replace the faulty portion of the harness.	Go to step **8**.
8	**CHECK CAN COMMUNICATION LINE.** Check for short circuit between the CAN communication lines. <Ref. to LAN(diag)-70, 52 Ω OR LESS, INSPECTION, CAN Communication Circuit Check.>	Is CAN communication line faulty?	Repair or replace the faulty portion of the harness.	Go to step **9**.
9	**CHECK CAN COMMUNICATION LINE.** Check the data link connector harness. (Check for open circuit of network diagram No. 33.)	Is CAN communication line faulty?	Repair or replace the faulty portion of the harness.	Go to step **10**.

Step		Check	Yes	No
10	**CHECK SUBARU SELECT MONITOR.** Connect the Subaru Select Monitor to another vehicle to check whether the communication can be executed normally.	Is the Subaru Select Monitor OK?	It is possible that poor contact occurs at the data link connector.	The Subaru Select Monitor is faulty. Replace with a normal Subaru Select Monitor, and perform the diagnosis.

2. EXAMPLE OF WRITING FOR THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING

- When No. 1 is open

NOTE:
When communication with the combination meter cannot be established and the impact sensor operates: No. 1 is open. When communication with the combination meter cannot be established and the impact sensor also does not operate: No. 2 is open.

- When No. 28 is open

NOTE:
This is the same as No. 17, No. 22 and No. 24, but it is possible to diagnose using examples of lost communication detection in each module. <Ref. to LAN(diag)-129, EXAMPLE OF DTC DATA NOT RECEIVED, LIST, List of Diagnostic Trouble Code (DTC).>

LAN10764

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «All diagnosis code».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to List of Diagnostic Trouble Code (DTC). <Ref. to LAN(diag)-124, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «All diagnosis code».
On «All diagnosis code» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

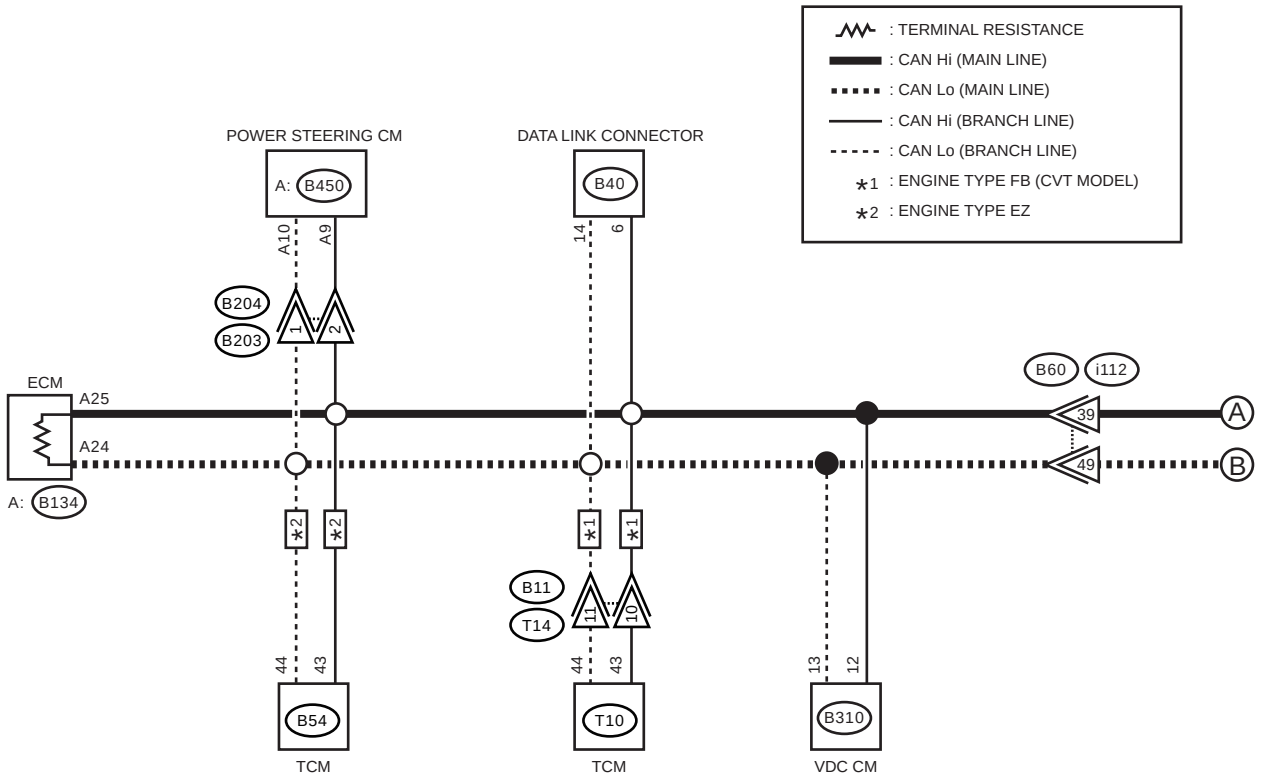
9. CAN BUS ECU Communication Check

A: OPERATION

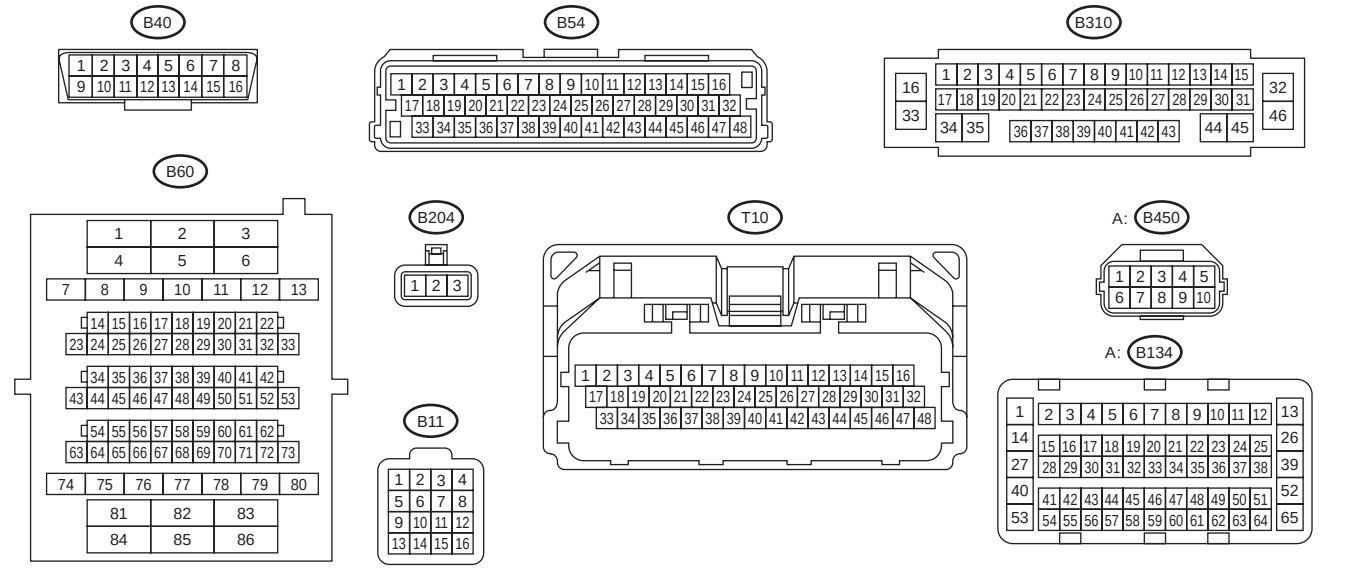
Systems connected to vehicle CAN bus and require communicating with the Subaru Select Monitor will be displayed.
List of the systems displayed does not mean the confirmation of communication. It displays presence or absence of the systems required. And, even when a system is equipped, it may not be displayed because of a communication trouble etc.
1) Turn the ignition switch to ON.
2) On «Start» display, select «Diagnosis».
3) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
4) On «Main Menu» display, select «CAN bus check».
5) After a while, systems connected to vehicle CAN bus will be displayed.
6) In communication for initializing, communication is confirmed in each control module.

NOTE:
- This function does not function normally, when the ignition switch is OFF.
- Optional control modules and control modules that are equipped differently depending on grades may not be displayed.
- For detailed operation procedures, refer to “Application help”.

10.CAN Communication Circuit Check

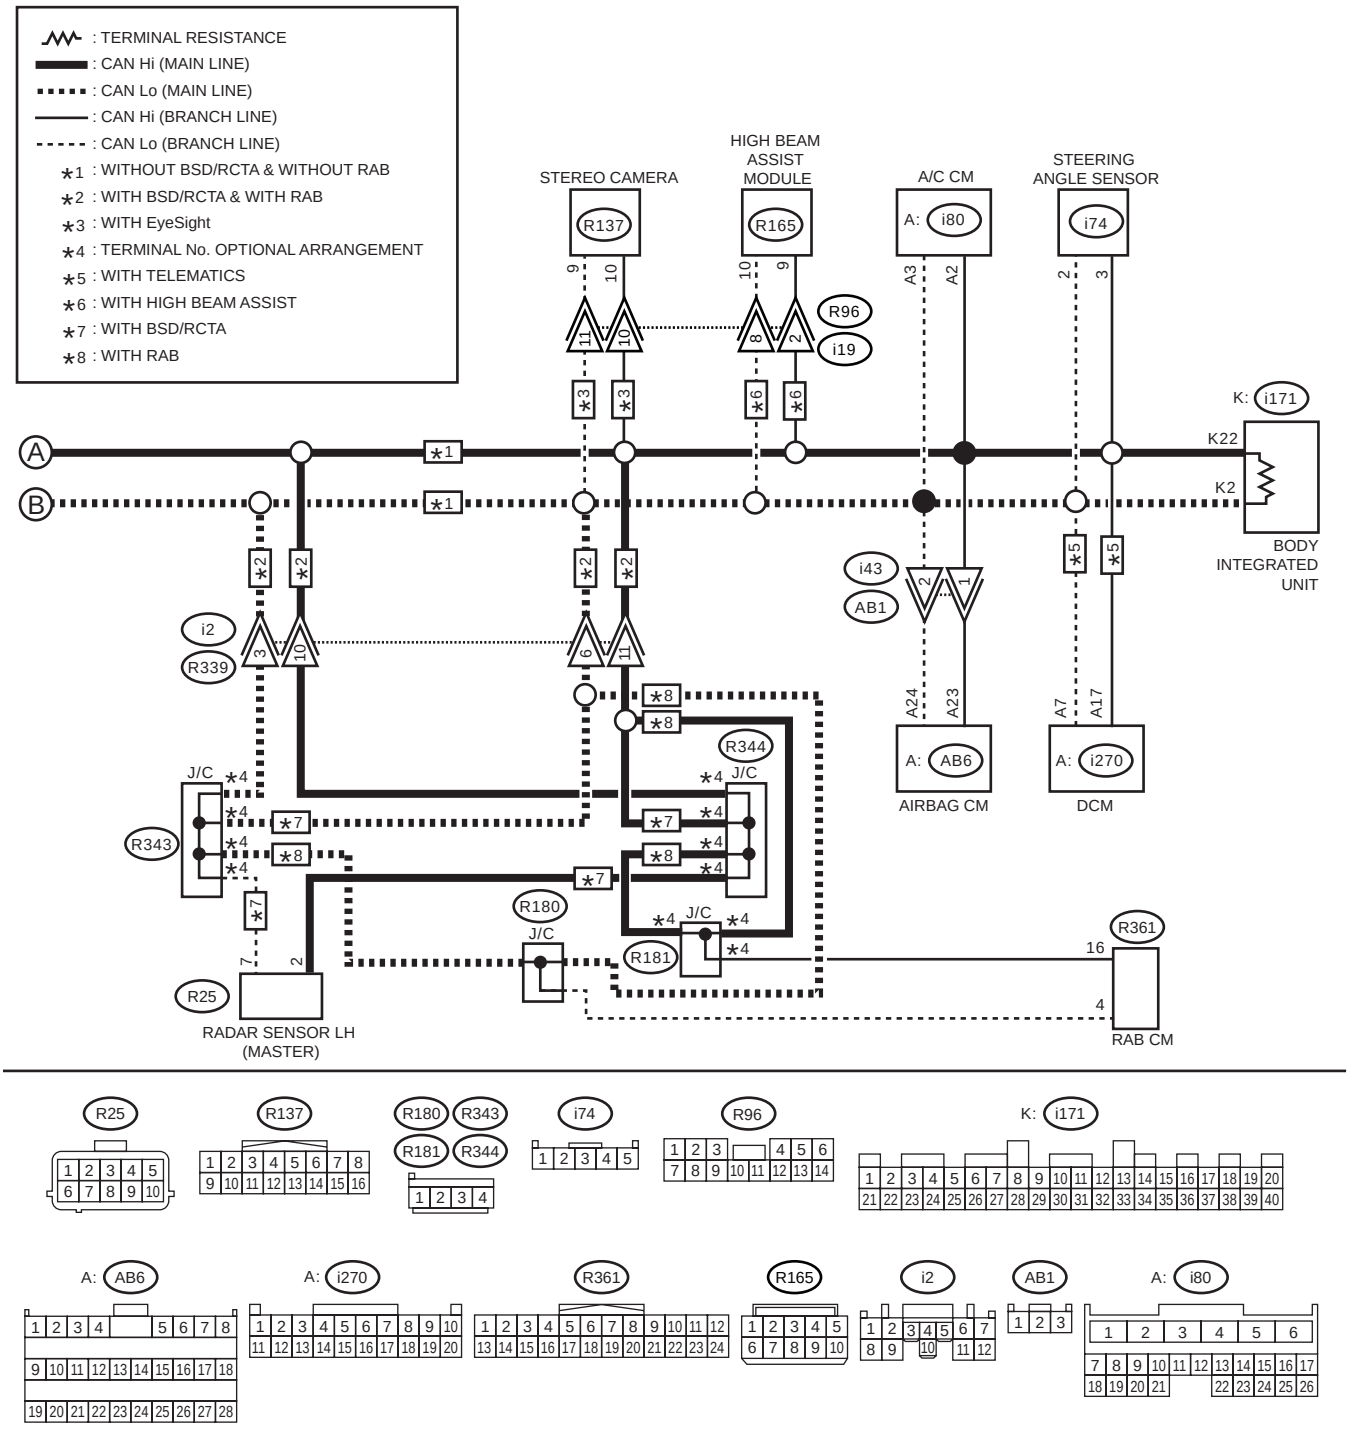


A: PROCEDURE



1. MAIN-CAN

NOTE:
• When measuring the resistance of CAN communication circuit, measure it in sleep status.
To enter sleep status
– With ignition switch OFF and key or switch operation stopped, keep the doors, trunk, and rear gate all closed for one minute or more.
– On models with keyless access function, keep the access key 2 m or more away from the vehicle.
• When the bus line is measured, combined resistance of the end resistance (120 Ω) in ECM and the end resistance (120 Ω) in body integrated unit can be measured. The combined resistance is supposed to be approximately 53 — 61 Ω with the stabilizing circuit included. If the measured resistance value becomes 52 Ω or less, main wiring harness or related lines may be shorted. Or, the combined resistance may have changed because of a resistance other than the end resistance created on the circuit. If the measured value is 62 Ω or more, there may be a malfunction such as open circuit in one of the end resistances, in the stabilizing circuit, or in the main wiring harness.
Also, even when the resistance value falls within approx. 53 — 61 Ω, related lines may be open if an error of communication for initializing or a CAN system U-code has occurred. (The resistance cannot be between approx. 53 — 61 Ω if the main wiring harness is open.)



Wiring diagram:

CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>

LAN10728

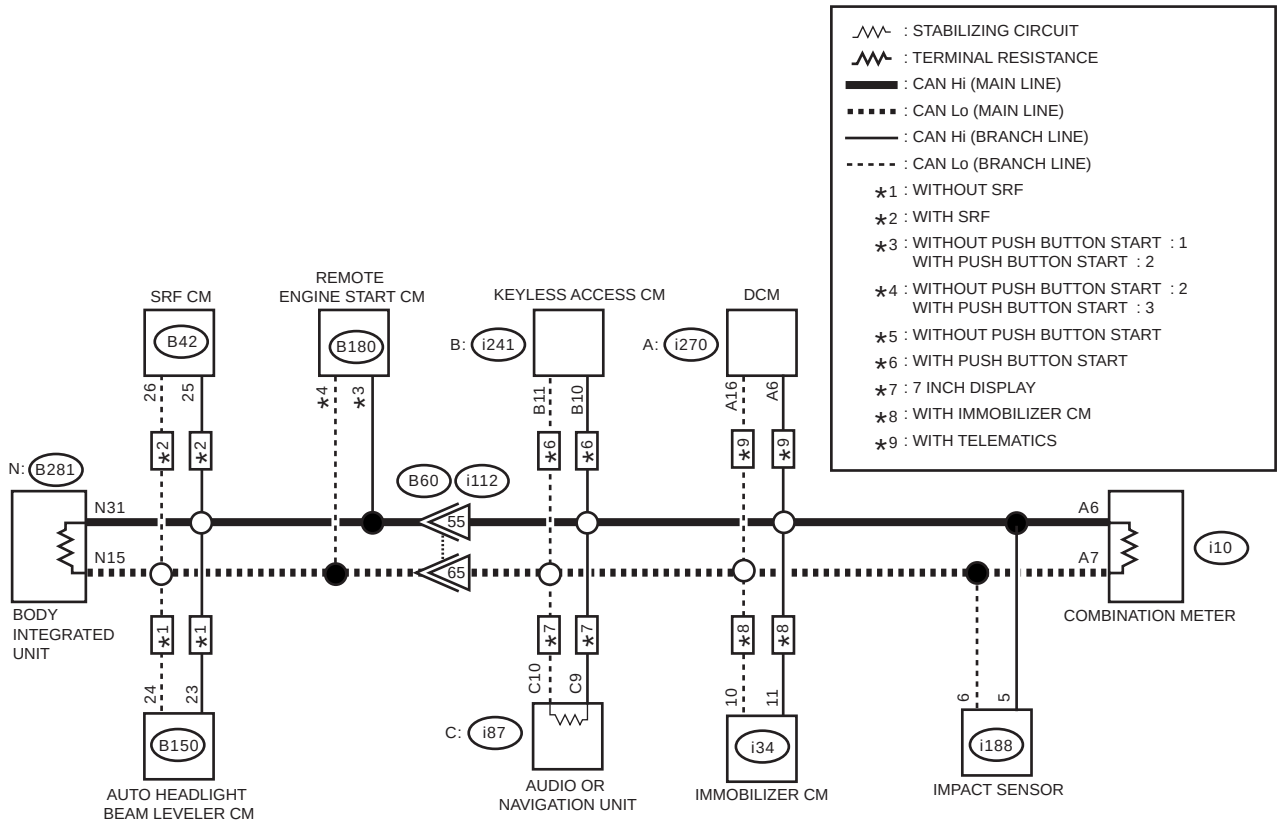
LAN10729

Step		Check	Yes	No
1	**CHECK BASIC DIAGNOSTIC PROCEDURE.** Check that the basic diagnosis has been performed up to STEP 3. NOTE: Possible defective parts can be narrowed easily by inspection using Subaru Select Monitor before performing “CHECK CAN COMMUNICATION CIRCUIT” using a tester.	Was the basic diagnostic procedure performed?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

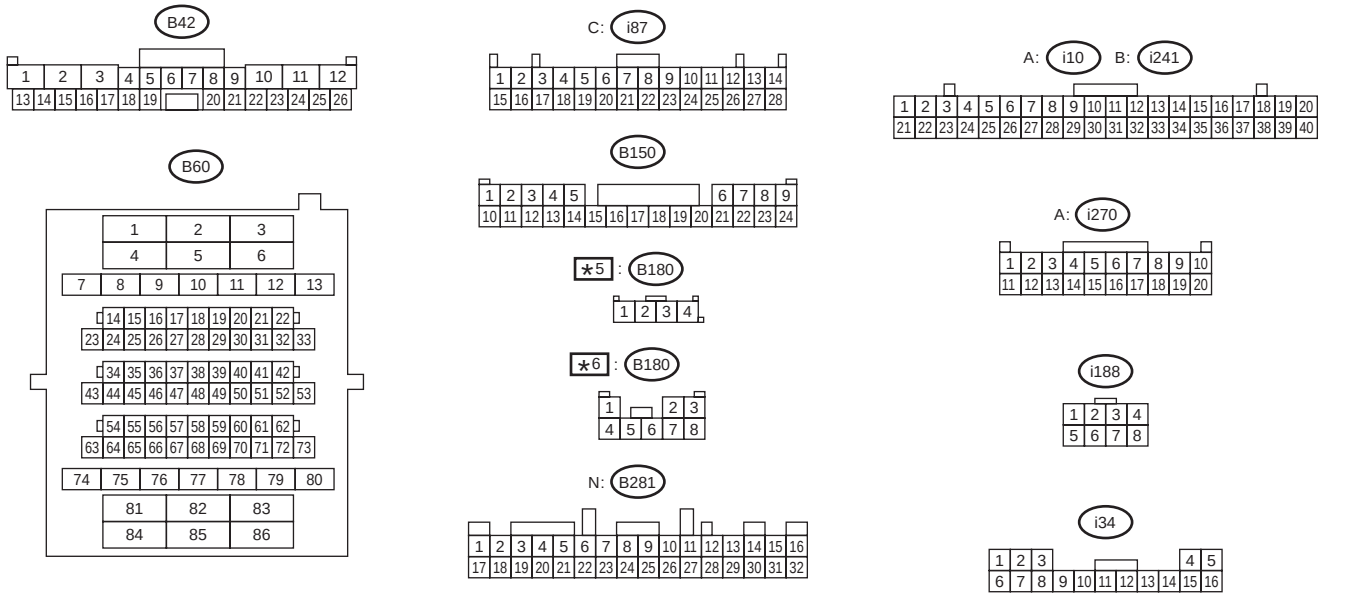
	Step	Check	Yes	No
2	**CHECK FROM DATA LINK CONNECTOR.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Check for ground short. <Ref. to LAN(diag)-55, GROUND SHORT INSPECTION, INSPECTION, CAN Communication Circuit Check.>	Go to step **3**.
3	**CHECK FROM DATA LINK CONNECTOR.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Is the voltage 5 V or less?	Go to step **4**.	Check for battery short. <Ref. to LAN(diag)-60, BATTERY SHORT INSPECTION, INSPECTION, CAN Communication Circuit Check.>
4	**CHECK FROM DATA LINK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B40) No. 6 — (B40) No. 14:***	Is the resistance 52 Ω or less?	Perform the inspection for resistance of 52 Ω or less. <Ref. to LAN(diag)-70, 52 Ω OR LESS, INSPECTION, CAN Communication Circuit Check.>	Go to step **5**.
5	**CHECK FROM DATA LINK CONNECTOR.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B40) No. 6 — No. 14:***	Is the resistance 62 Ω or more?	Perform the inspection for resistance of 62 Ω or more. <Ref. to LAN(diag)-75, 62 Ω OR MORE, INSPECTION, CAN Communication Circuit Check.>	If the display of CAN system U-code disappears from the current malfunction, the CAN network is currently normal. If the U-code has detected as current malfunction, related lines may be open. Perform the inspection for the related line corresponding to the detected DTC. <Ref. to LAN(diag)-53, LIST, CAN Communication Circuit Check.>

2. BODY-CAN

NOTE:
- When measuring the resistance of CAN communication circuit, measure it in sleep status.



To enter sleep status
  – With ignition switch OFF and key or switch operation stopped, keep the doors, trunk, and rear gate all closed for one minute or more.
  – On models with keyless access function, keep the access key 2 m or more away from the vehicle.



- When the bus line is measured, combined resistance of the end resistance (120 Ω) in body integrated unit and the end resistance (120 Ω) in combination meter can be measured. The combined resistance is supposed to be approximately 53 — 61 Ω with the stabilizing circuit included. If the measured resistance value becomes 52 Ω or less, main wiring harness or related lines may be shorted. Or, the combined resistance may have changed because of a resistance other than the end resistance created on the circuit. If the measured value is 62 Ω or more, there may be a malfunction such as open circuit in one of the end resistances, in the stabilizing circuit, or in the main wiring harness.

Also, even when the resistance value falls within approx. 53 — 61 Ω, related lines may be open if an error of communication for initializing or a CAN system U-code has occurred. (The resistance cannot be between approx. 53 — 61 Ω if the main wiring harness is open.)

Wiring diagram:

CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>

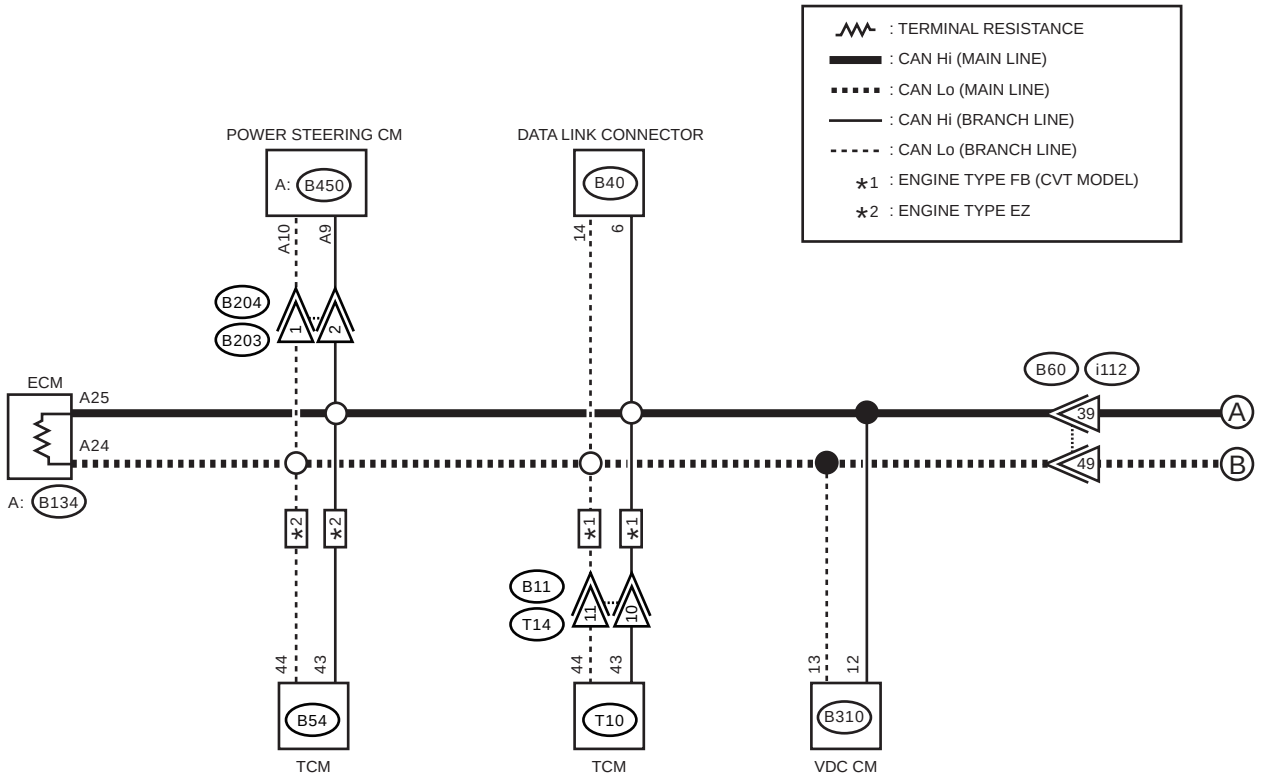
LAN10730

	Step	Check	Yes	No
1	**CHECK BASIC DIAGNOSTIC PROCEDURE.** Check that the basic diagnosis has been performed up to STEP 3. NOTE: Possible defective parts can be narrowed easily by inspection using Subaru Select Monitor before performing “CHECK CAN COMMUNICATION CIRCUIT” using a tester.	Was the basic diagnostic procedure performed?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
2	**CHECK FROM IMPACT SENSOR CONNECTOR.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i88) No. 5 — Chassis ground:*** ***(i88) No. 6 — Chassis ground:***	Is the resistance less than 10 Ω?	Check for ground short. <Ref. to LAN(diag)-55, GROUND SHORT INSPECTION, INSPECTION, CAN Communication Circuit Check.>	Go to step **3**.
3	**CHECK FROM IMPACT SENSOR CONNECTOR.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i88) No. 5 — Chassis ground:*** ***(i88) No. 6 — Chassis ground:***	Is the voltage 5 V or less?	Go to step **4**.	Check for battery short. <Ref. to LAN(diag)-60, BATTERY SHORT INSPECTION, INSPECTION, CAN Communication Circuit Check.>
4	**CHECK FROM IMPACT SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i88) No. 5 — (i88) No. 6:***	Is the resistance 52 Ω or less?	Perform the inspection for resistance of 52 Ω or less. <Ref. to LAN(diag)-70, 52 Ω OR LESS, INSPECTION, CAN Communication Circuit Check.>	Go to step **5**.
5	**CHECK FROM IMPACT SENSOR CONNECTOR.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i88) No. 5 — (i88) No. 6:***	Is the resistance 62 Ω or more?	Perform the inspection for resistance of 62 Ω or more. <Ref. to LAN(diag)-75, 62 Ω OR MORE, INSPECTION, CAN Communication Circuit Check.>	If the display of CAN system U-code disappears from the current malfunction, the CAN network is currently normal. If the U-code has detected as current malfunction, related lines may be open. Perform the inspection for the related line corresponding to the detected DTC. <Ref. to LAN(diag)-53, LIST, CAN Communication Circuit Check.>

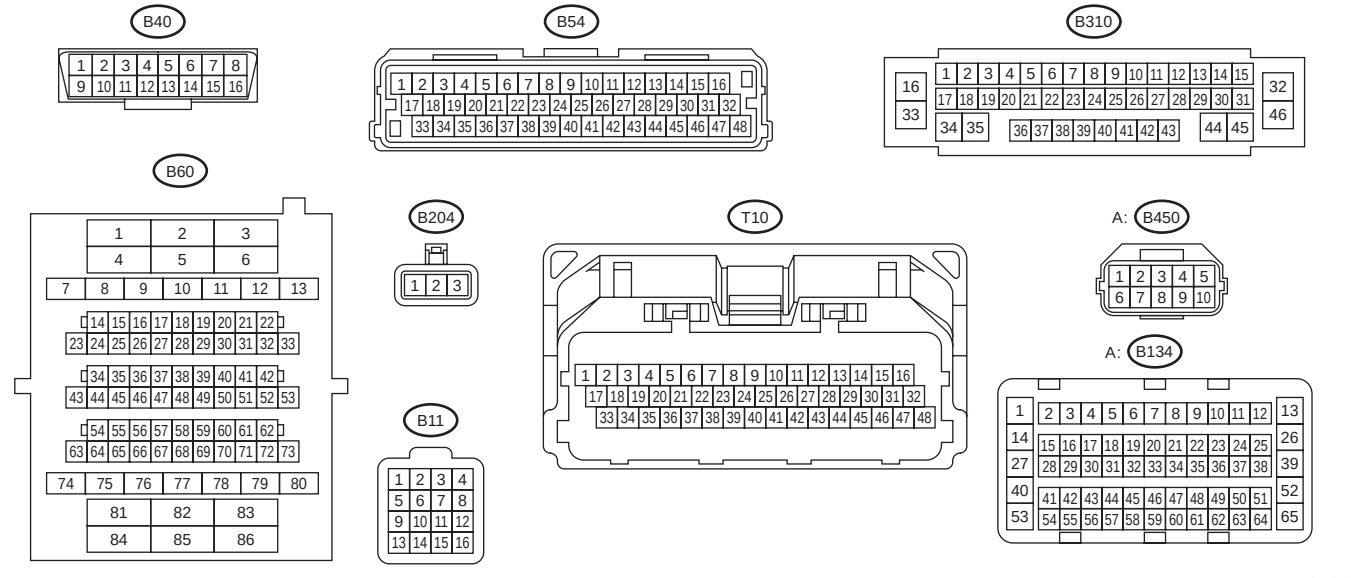
B: LIST

Resistance value between CAN Hi and Lo	Contents of inspection	Remarks
Ground short inspection	<Ref. to LAN(diag)-55, GROUND SHORT INSPECTION, INSPECTION, CAN Communication Circuit Check.>	Shorted to ground in the communication circuit or control module.
Battery short inspection	<Ref. to LAN(diag)-60, BATTERY SHORT INSPECTION, INSPECTION, CAN Communication Circuit Check.>	Shorted to battery power supply in the communication circuit or control module.
53 — 61 Ω	<Ref. to LAN(diag)-65, 53 — 61 Ω, INSPECTION, CAN Communication Circuit Check.>	Combined resistance of end resistance does not have malfunction; short to ground or +B short of the CAN communication circuit is possible, however.
52 Ω or less	<Ref. to LAN(diag)-70, 52 Ω OR LESS, INSPECTION, CAN Communication Circuit Check.>	Resistance is lower than combined resistance of end resistance. Short to CAN Hi and CAN Lo on the CAN communication circuit is possible.
62 Ω or more	<Ref. to LAN(diag)-75, 62 Ω OR MORE, INSPECTION, CAN Communication Circuit Check.>	Resistance is higher than combined resistance of end resistance. Open circuit of CAN communication circuit is possible.
Related lines 53 — 61 Ω (TCM)	<Ref. to LAN(diag)-80, RELATED LINES 53 — 61 Ω (TCM), INSPECTION, CAN Communication Circuit Check.>	No TCM data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (steering angle sensor)	<Ref. to LAN(diag)-83, RELATED LINES 53 — 61 Ω (STEERING ANGLE SENSOR), INSPECTION, CAN Communication Circuit Check.>	No steering angle sensor data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (A/C control module)	<Ref. to LAN(diag)-86, RELATED LINES 53 — 61 Ω (A/C CONTROL MODULE), INSPECTION, CAN Communication Circuit Check.>	No A/C data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (power steering CM)	<Ref. to LAN(diag)-89, RELATED LINES 53 — 61 Ω (POWER STEERING CM), INSPECTION, CAN Communication Circuit Check.>	No power steering data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (combination meter)	<Ref. to LAN(diag)-92, RELATED LINES 53 — 61 Ω (COMBINATION METER), INSPECTION, CAN Communication Circuit Check.>	No meter data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (infotainment system)	<Ref. to LAN(diag)-94, RELATED LINES 53 — 61 Ω (INFOTAINMENT SYSTEM), INSPECTION, CAN Communication Circuit Check.>	No infotainment data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (airbags)	<Ref. to LAN(diag)-96, RELATED LINES 53 — 61 Ω (AIRBAG CM SYSTEM), INSPECTION, CAN Communication Circuit Check.>	No airbag data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (keyless access system)	<Ref. to LAN(diag)-99, RELATED LINES 53 — 61 Ω (KEYLESS ACCESS SYSTEM), INSPECTION, CAN Communication Circuit Check.>	No keyless access CM data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (impact sensor system)	<Ref. to LAN(diag)-105, RELATED LINES 53 — 61 Ω (IMPACT SENSOR SYSTEM), INSPECTION, CAN Communication Circuit Check.>	Perform inspection when impact sensor malfunction is detected.
Related lines 53 — 61 Ω (BSD/RCTA)	<Ref. to LAN(diag)-107, RELATED LINES 53 — 61 Ω (BSD/RCTA), INSPECTION, CAN Communication Circuit Check.>	No BSD/RCTA data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (headlight beam leveler or SRF)	<Ref. to LAN(diag)-101, RELATED LINES 53 — 61 Ω (HEADLIGHT BEAM LEVELER OR SRF), INSPECTION, CAN Communication Circuit Check.>	No headlight beam leveler data is received. Perform inspection when faulty is detected.

Resistance value between CAN Hi and Lo	Contents of inspection	Remarks
Related lines 53 — 61 Ω (remote engine starter)	<Ref. to LAN(diag)-103, RELATED LINES 53 — 61 Ω (REMOTE ENGINE STARTER), INSPECTION, CAN Communication Circuit Check.>	Perform inspection when the remote engine starter does not operate, while the mobile key side operates normally.
Related lines 53 — 61 Ω (stereo camera)	<Ref. to LAN(diag)-110, RELATED LINES 53 — 61 Ω (STEREO CAMERA), INSPECTION, CAN Communication Circuit Check.>	No stereo camera data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (immobilizer system)	<Ref. to LAN(diag)-112, RELATED LINES 53 — 61 Ω (IMMOBILIZER SYSTEM), INSPECTION, CAN Communication Circuit Check.>	No immobilizer data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (telematics)	<Ref. to LAN(diag)-114, RELATED LINES 53 — 61 Ω (TELEMATICS), INSPECTION, CAN Communication Circuit Check.>	No telematics data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (RAB)	<Ref. to LAN(diag)-118, RELATED LINES 53 — 61 Ω (RAB), INSPECTION, CAN Communication Circuit Check.>	Perform inspection when no RAB data is received, or invalid data is detected.
Related lines 53 — 61 Ω (HBA)	<Ref. to LAN(diag)-121, RELATED LINES 53 — 61 Ω (HBA), INSPECTION, CAN Communication Circuit Check.>	No HBA data is received. Perform inspection when faulty is detected.

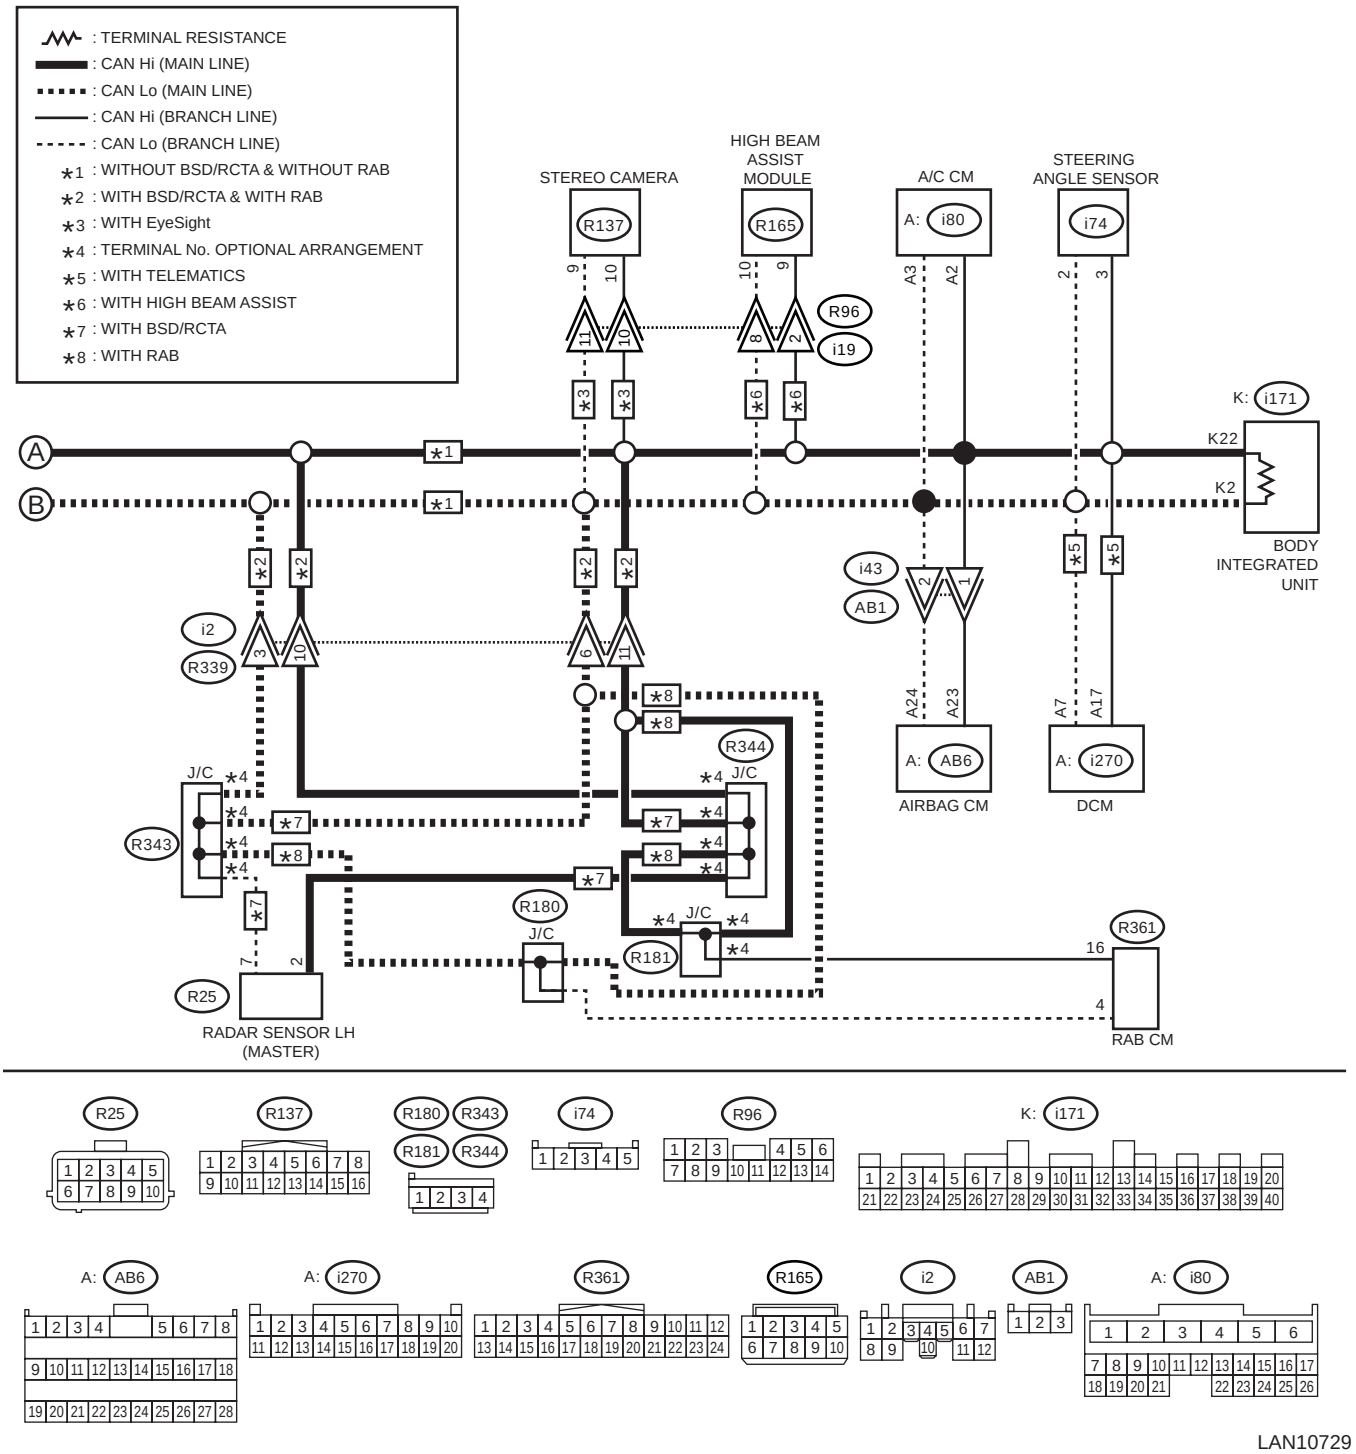


C: INSPECTION



1. GROUND SHORT INSPECTION

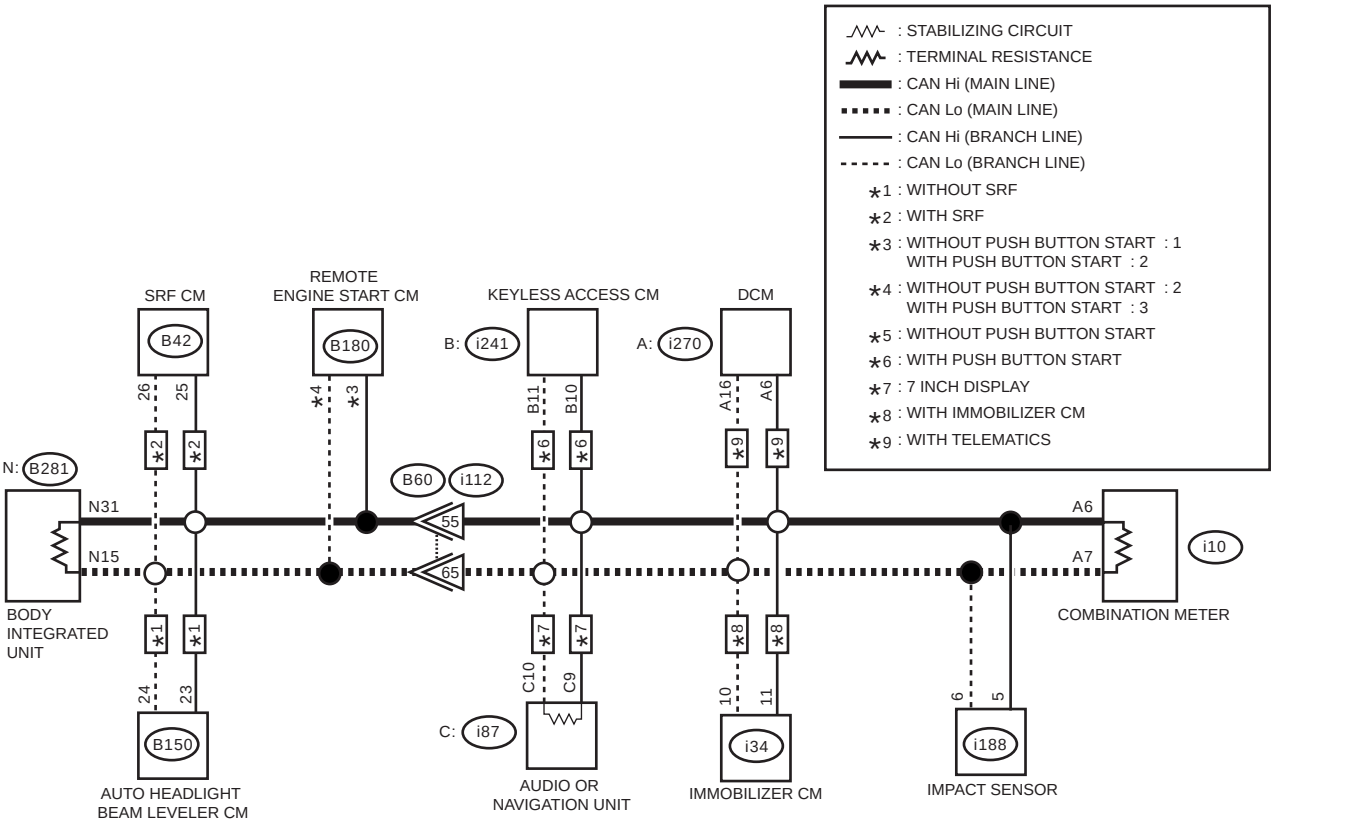
- MAIN-CAN



Wiring diagram:

CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>

LAN10728



NOTE:
Main wiring harness or related lines may be shorted to ground, or shorted to ground in one of the control modules.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **2**.	Currently, it is normal.
2	**CHECK CONTROL MODULE.** With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Did the resistance change to 10 Ω or more?	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, Go to step **3**.	Repair or replace the short circuit of the main wiring harness and related lines between body integrated unit and ECM.
3	**CHECK BETWEEN MAIN WIRING HARNESSES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i171) No. 22 — Chassis ground:*** ***(i171) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Repair or replace the short circuit of the main wiring harness and related lines between ECM and body integrated unit.	Replace the body integrated unit. <Ref. to SL-84, REMOVAL, Body Integrated Unit.>

- BODY-CAN

Wiring diagram:

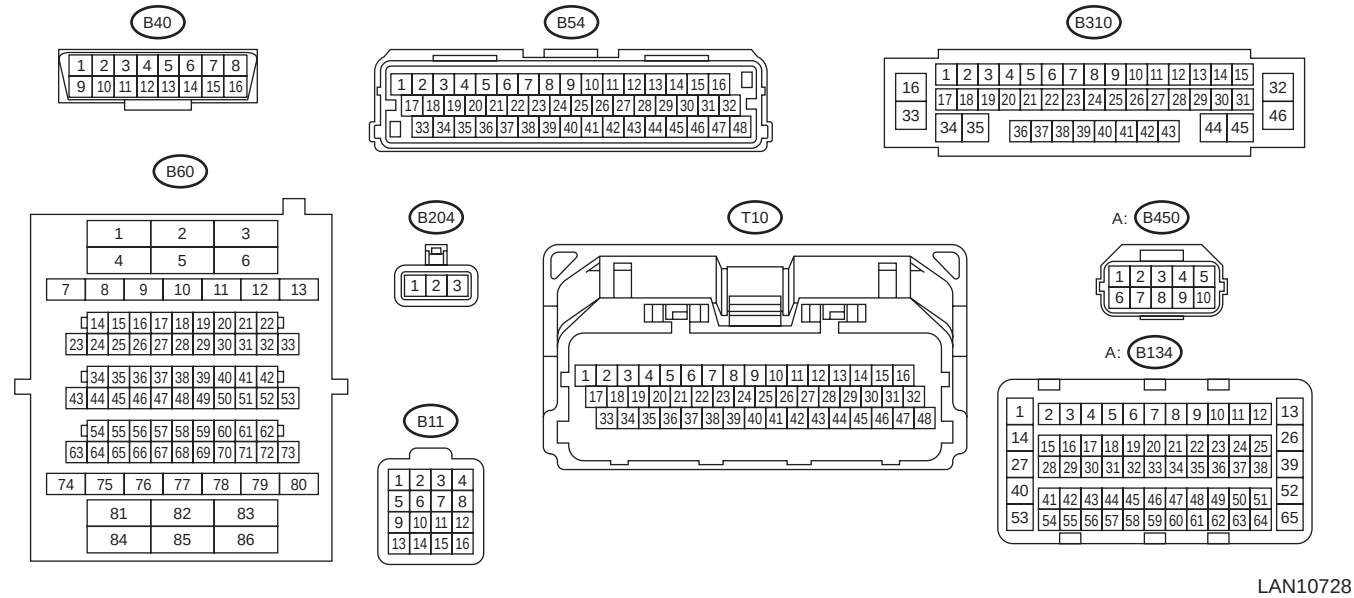
CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>

LAN10730

NOTE:

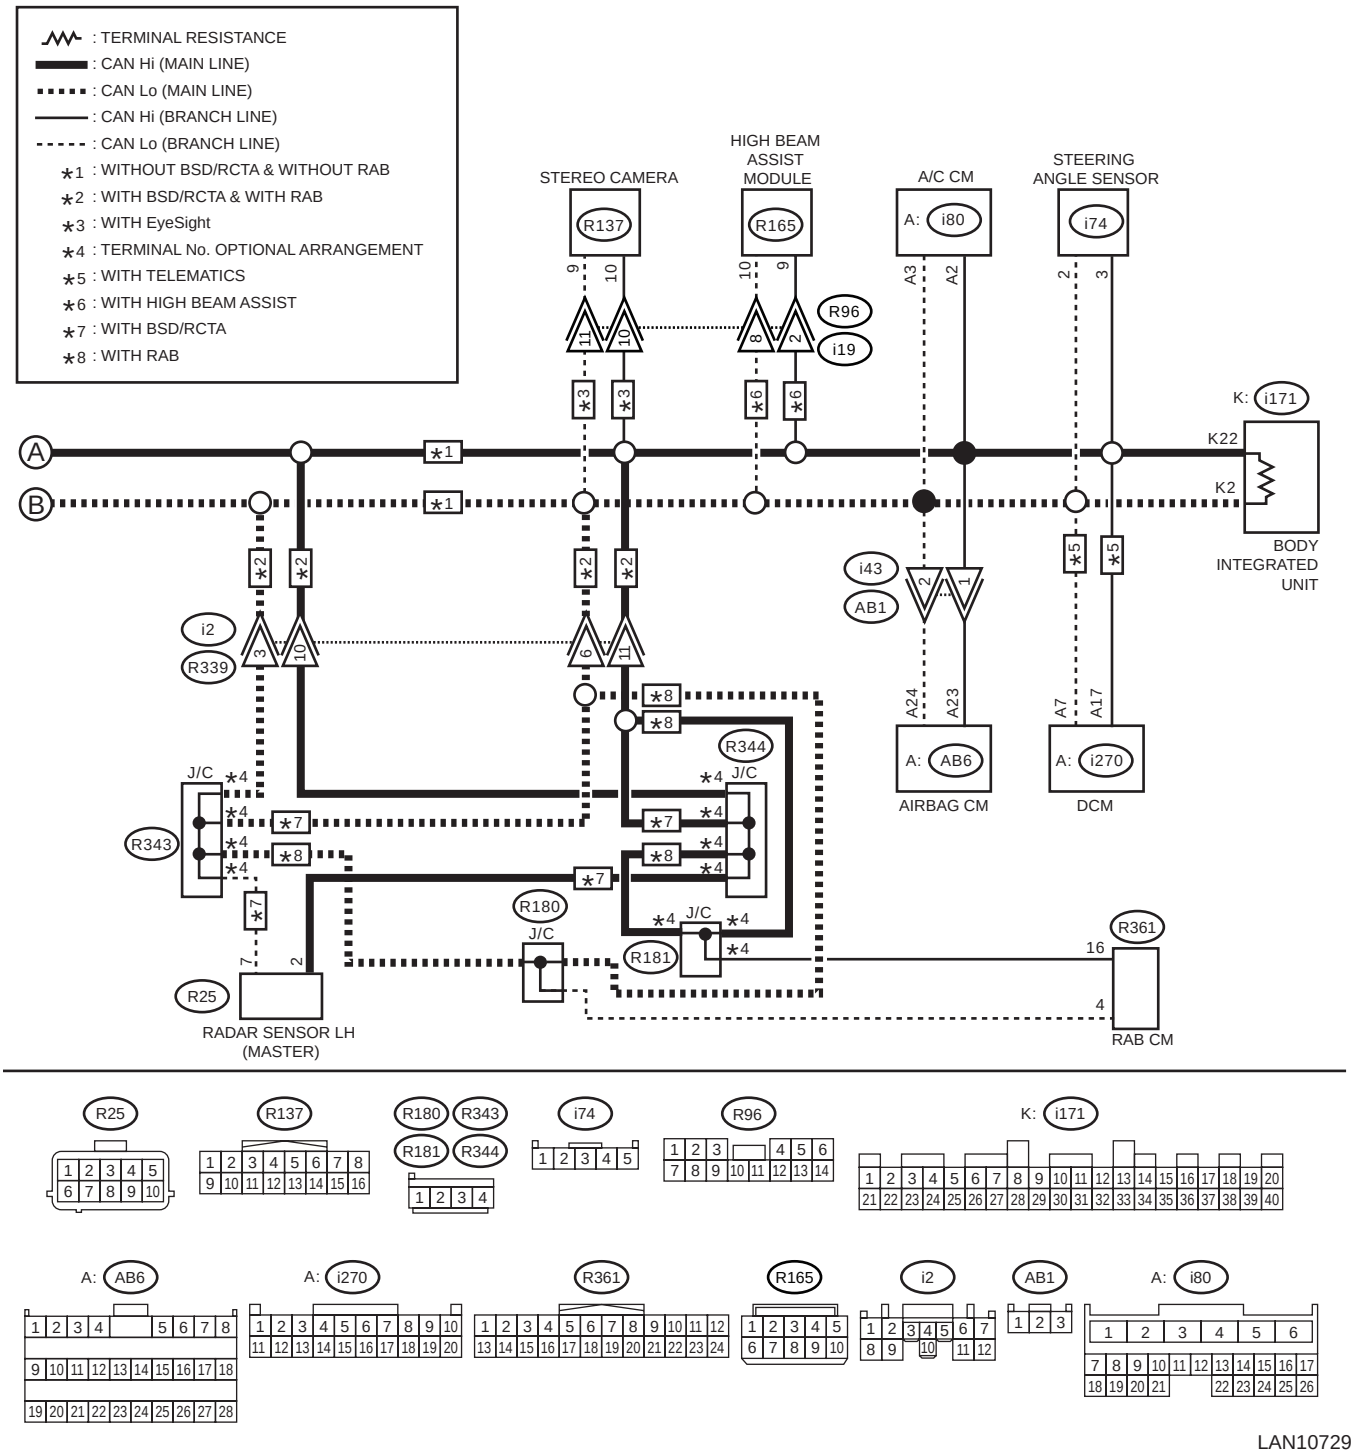
Main wiring harness or related lines may be shorted to ground, or shorted to ground in one of the control modules.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i188) No. 5 — Chassis ground:*** ***(i188) No. 6 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **2**.	Currently, it is normal.
2	**CHECK CONTROL MODULE.** With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(i188) No. 5 — Chassis ground:*** ***(i188) No. 6 — Chassis ground:***	Did the resistance change to 10 Ω or more?	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, Go to step **3**.	Repair or replace the short circuit of the main wiring harness or related lines between body integrated unit and impact sensor.
3	**CHECK BETWEEN MAIN WIRING HARNESSES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B281) No. 31 — Chassis ground:*** ***(B281) No. 15 — Chassis ground:***	Is the resistance less than 10 Ω?	Repair or replace the short circuit of the main wiring harness and related lines between ECM and body integrated unit.	Replace the body integrated unit. <Ref. to SL-84, REMOVAL, Body Integrated Unit.>



2. BATTERY SHORT INSPECTION

- MAIN-CAN

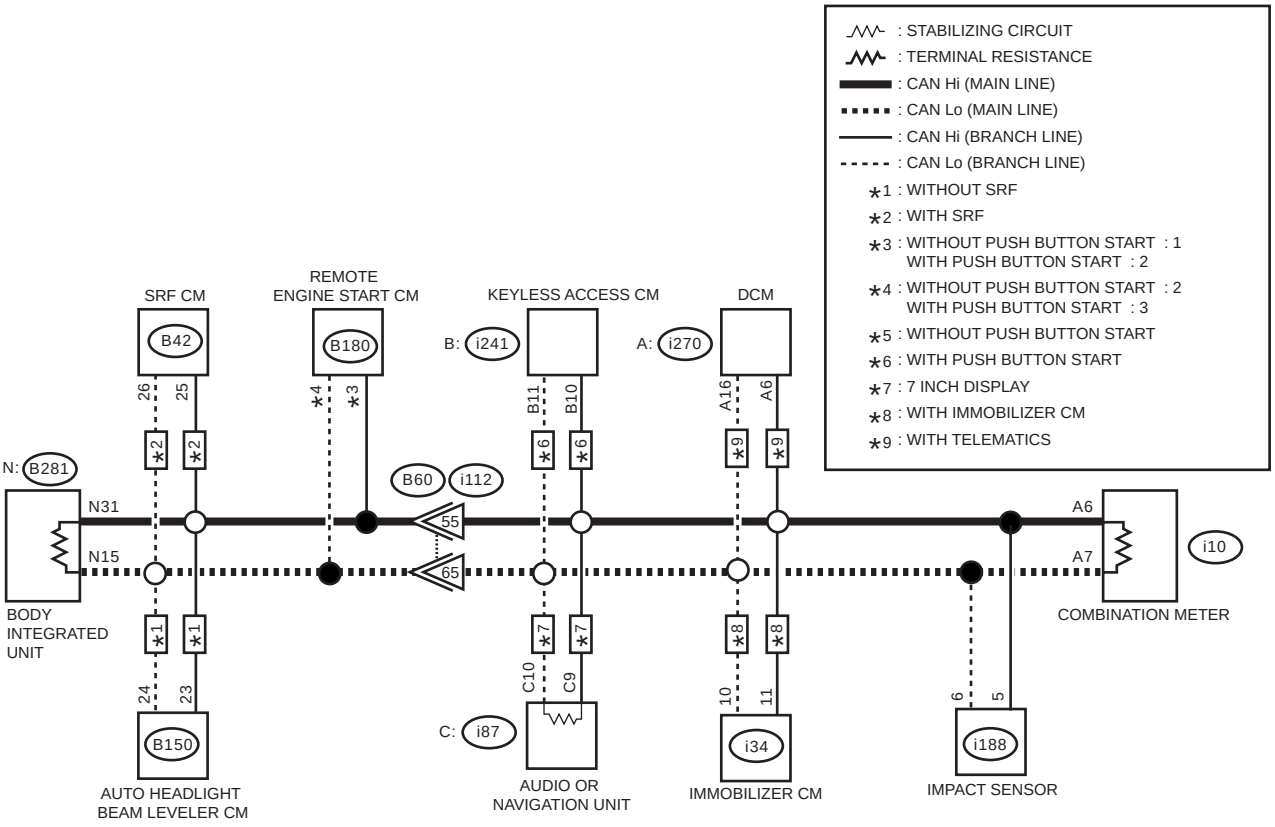


Wiring diagram:

CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>

LAN10728

LAN10729



NOTE:
Main wiring harness or related lines may be shorted to battery circuit, or shorted to battery circuit in one of the control modules.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Is the voltage 5 V or less?	Currently, it is normal.	Go to step **2**.
2	**CHECK CONTROL MODULE.** With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Did the voltage change to 5 V or less?	Replace the control module whose voltage has changed. When the value changed at disconnecting the body integrated unit, Go to step **3**.	Repair or replace the short circuit of the harness between body integrated unit and ECM.
3	**CHECK BETWEEN MAIN WIRING HARNESSES.** Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i171) No. 22 — Chassis ground:*** ***(i171) No. 2 — Chassis ground:***	Is the voltage 5 V or less?	Replace the body integrated unit. <Ref. to SL-84, REMOVAL, Body Integrated Unit.>	Repair or replace the short circuit of the harness between ECM and body integrated unit.

- BODY-CAN

Wiring diagram:

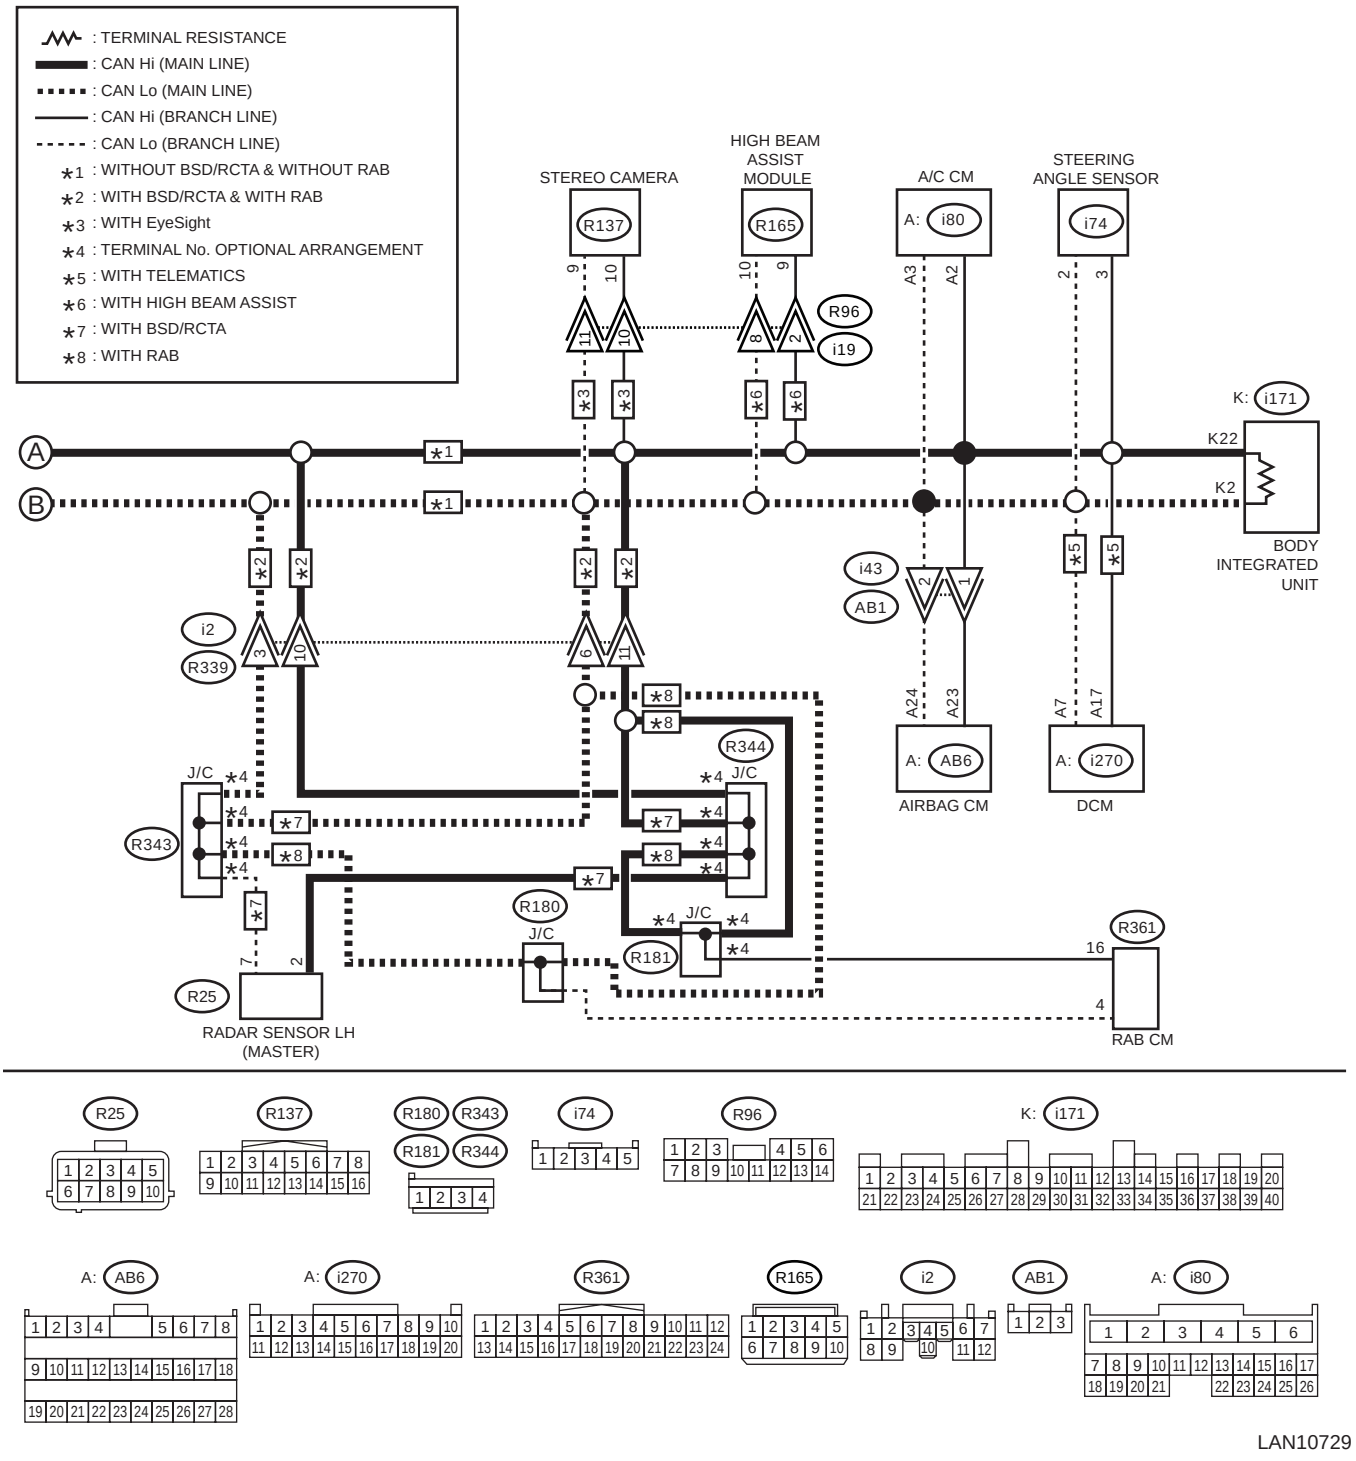
CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>

LAN10730

NOTE:

Main wiring harness or related lines may be shorted to battery circuit, or shorted to battery circuit in one of the control modules.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i188) No. 5 — Chassis ground:*** ***(i188) No. 6 — Chassis ground:***	Is the voltage 5 V or less?	Currently, it is normal.	Go to step **2**.
2	**CHECK CONTROL MODULE.** With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(i188) No. 5 — Chassis ground:*** ***(i188) No. 6 — Chassis ground:***	Did the voltage change to 5 V or less?	Replace the control module whose voltage has changed. When the value changed at disconnecting the body integrated unit, Go to step **3**.	Repair or replace the short circuit of the harness between body integrated unit and impact sensor.
3	**CHECK BETWEEN MAIN WIRING HARNESSES.** Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B281) No. 31 — Chassis ground:*** ***(B281) No. 15 — Chassis ground:***	Is the voltage 5 V or less?	Replace the body integrated unit. <Ref. to SL-84, REMOVAL, Body Integrated Unit.>	Repair or replace the short circuit of the harness between ECM and body integrated unit.



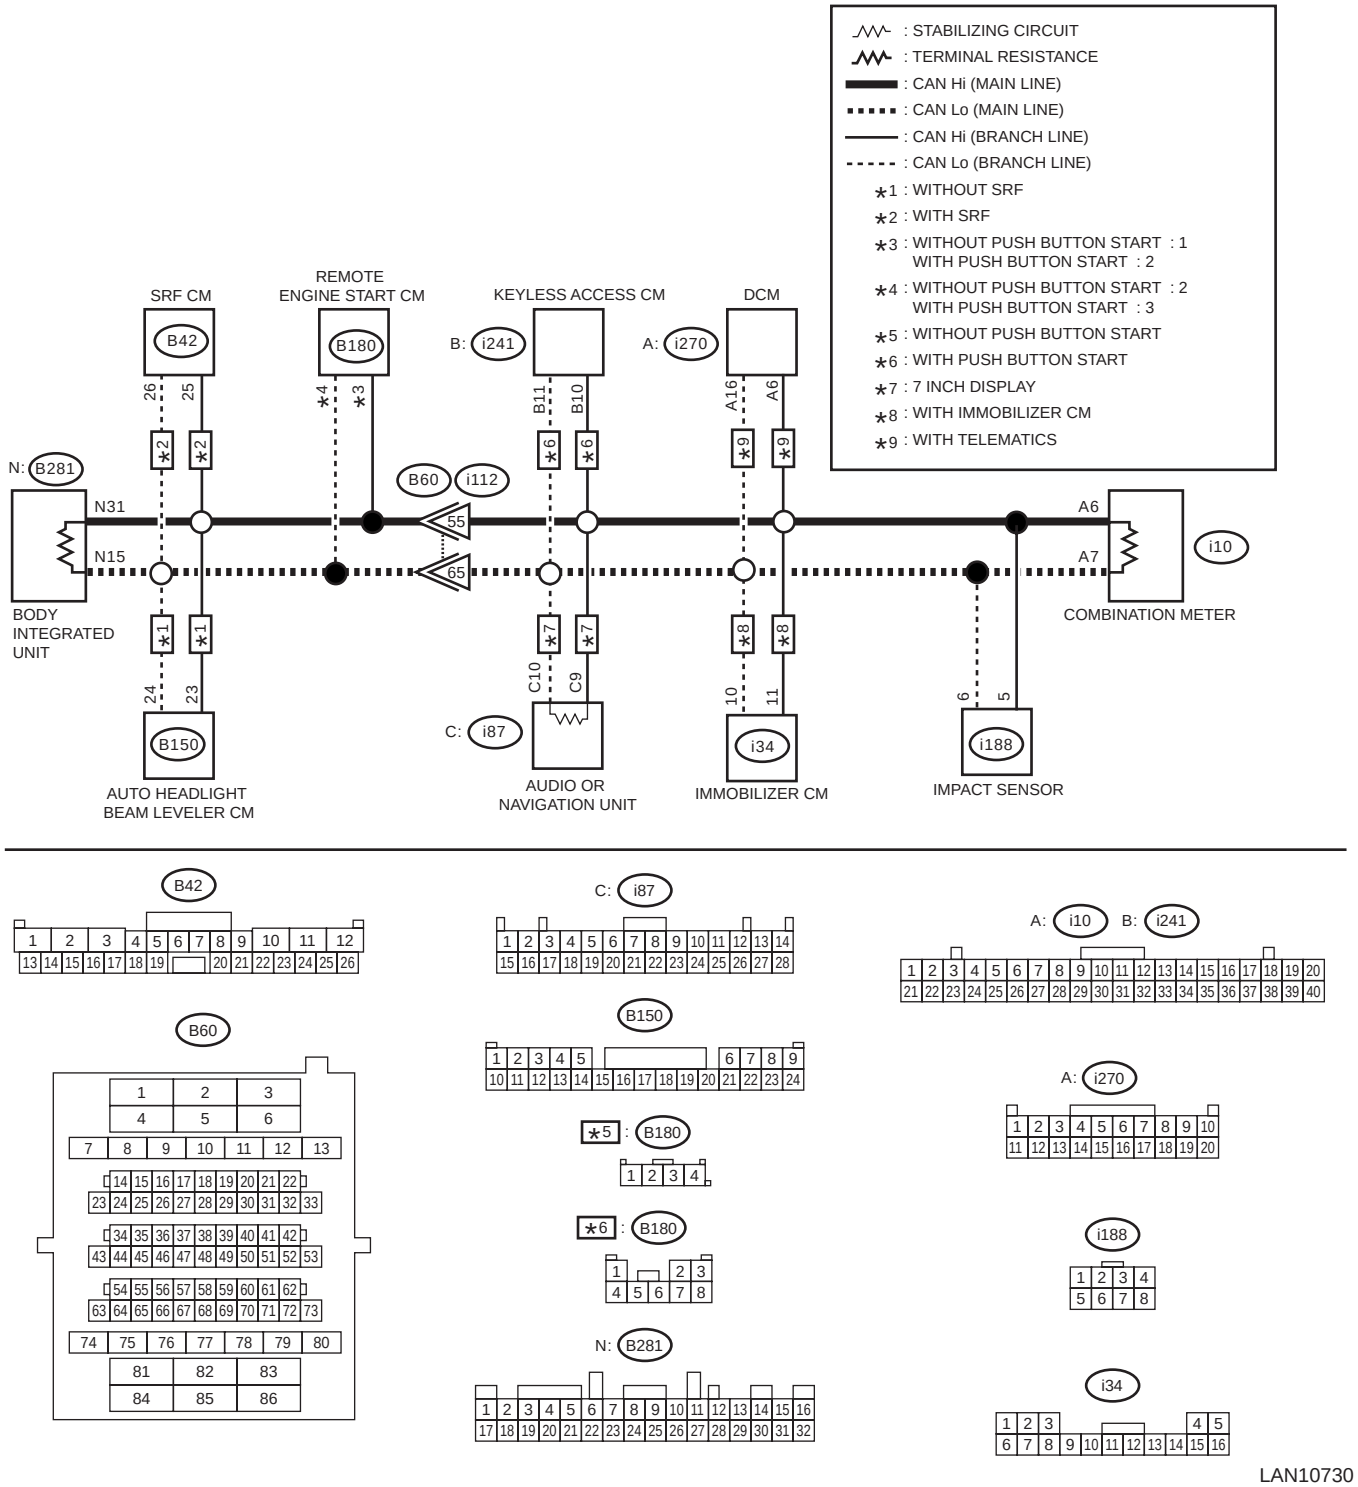
3. 53 — 61 Ω

- MAIN-CAN

Wiring diagram:

CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>

LAN10729



NOTE:
When the measured resistance value is 53 — 61 Ω, main wiring harness or related lines may be shorted to ground, or shorted to power supply line, or related line may be open.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **2**.	Go to step **3**.
2	**CHECK CONTROL MODULE.** With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Did the resistance change to 10 Ω or more?	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, replace the body integrated unit. <Ref. to SL-84, REMOVAL, Body Integrated Unit.> Go to step **3**.	Repair or replace the short circuit of the harness between body integrated unit and ECM.
3	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Is the voltage 5 V or less?	CAN communication circuit is normal.	Go to step **4**.
4	**CHECK CONTROL MODULE.** With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Did the voltage change to 5 V or less?	Replace the control module whose voltage has changed. When the value changed at disconnecting the body integrated unit, replace the body integrated unit. <Ref. to SL-84, REMOVAL, Body Integrated Unit.> Go to step **5**.	Repair or replace the short circuit of the harness between body integrated unit and ECM.
5	**CHECK HARNESS.** Using a tester, measure the voltage between terminals and chassis ground. ***Connector & terminal*** ***(i171) No. 22 — Chassis ground:*** ***(i171) No. 2 — Chassis ground:***	Is the voltage 5 V or less?	CAN communication circuit is normal.	Repair or replace the short circuit of the harness between ECM and body integrated unit.

- BODY-CAN

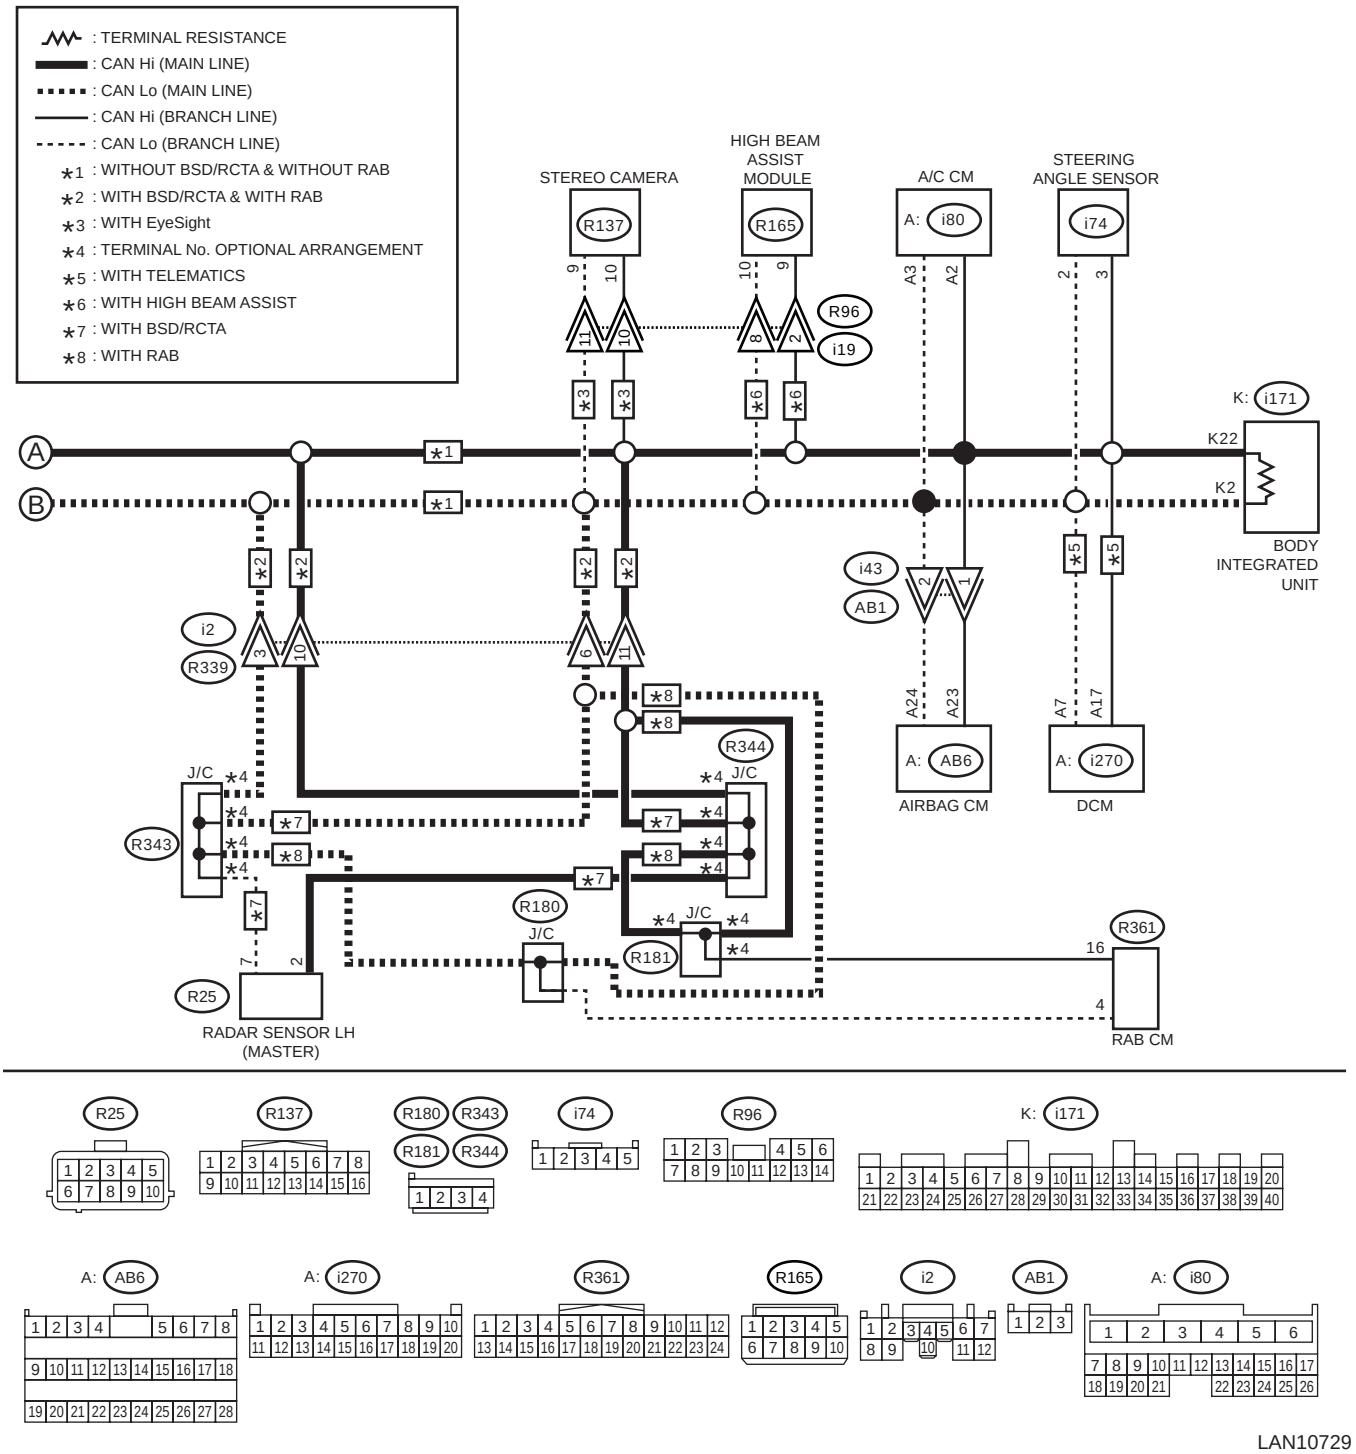
Wiring diagram:

CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>

NOTE:

When the measured resistance value is 53 — 61 Ω, main wiring harness or related lines may be shorted to ground, or shorted to power supply line, or related line may be open.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i188) No. 5 — Chassis ground:*** ***(i188) No. 6 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **2**.	Go to step **3**.
2	**CHECK CONTROL MODULE.** With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(i188) No. 5 — Chassis ground:*** ***(i188) No. 6 — Chassis ground:***	Did the resistance change to 10 Ω or more?	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, replace the body integrated unit. <Ref. to SL-84, REMOVAL, Body Integrated Unit.> Go to step **3**.	Repair or replace the short circuit of the harness between body integrated unit and ECM.
3	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i188) No. 5 — Chassis ground:*** ***(i188) No. 6 — Chassis ground:***	Is the voltage 5 V or less?	CAN communication circuit is normal.	Go to step **4**.
4	**CHECK CONTROL MODULE.** With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(i188) No. 5 — Chassis ground:*** ***(i188) No. 6 — Chassis ground:***	Did the voltage change to 5 V or less?	Replace the control module whose voltage has changed. When the value changed at disconnecting the body integrated unit, replace the body integrated unit. <Ref. to SL-84, REMOVAL, Body Integrated Unit.> Go to step **5**.	Repair or replace the short circuit of the harness between body integrated unit and ECM.
5	**CHECK HARNESS.** Using a tester, measure the voltage between terminals and chassis ground. ***Connector & terminal*** ***(B281) No. 31 — Chassis ground:*** ***(B281) No. 15 — Chassis ground:***	Is the voltage 5 V or less?	CAN communication circuit is normal.	Repair or replace the short circuit of the harness between combination meter and body integrated unit.



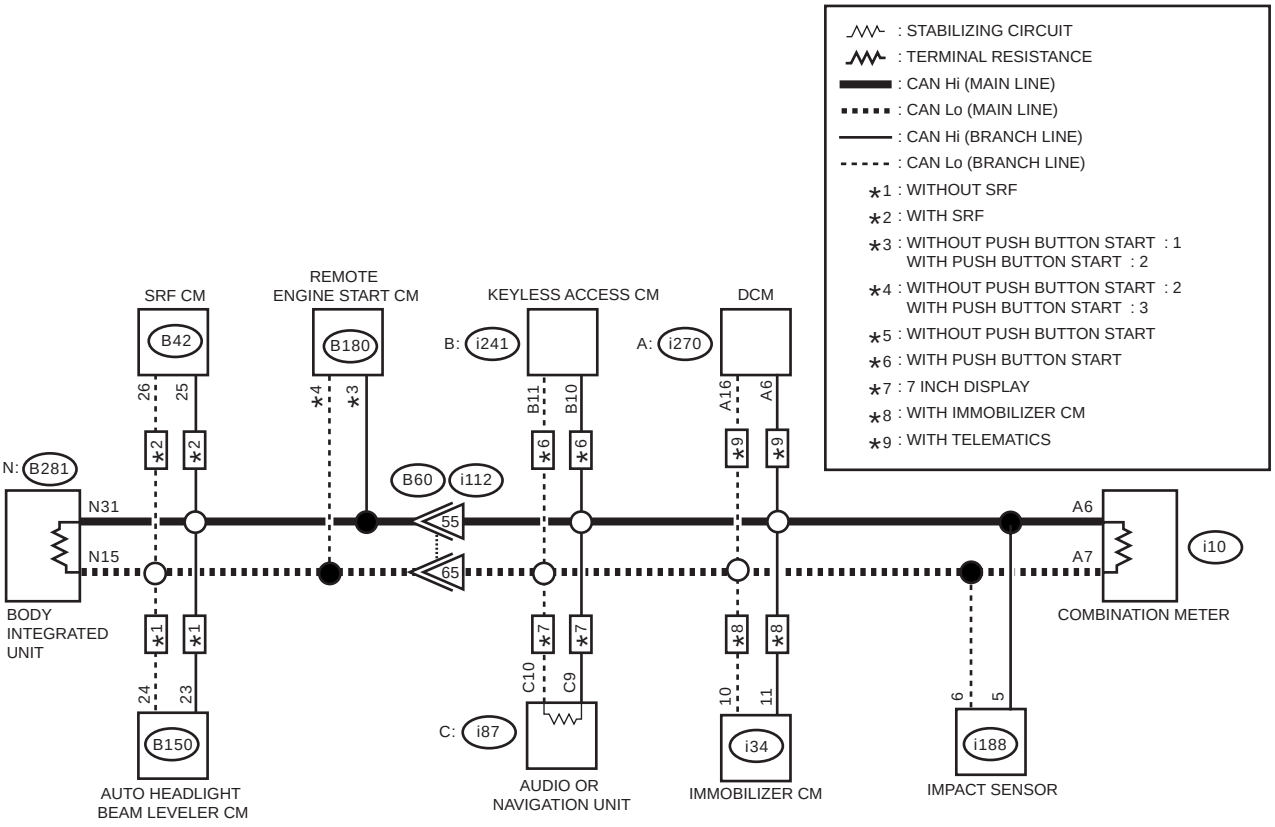
4. 52 Ω OR LESS

- MAIN-CAN

Wiring diagram:

CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>

NOTE:
When the bus line is measured, combined resistance of the end resistance (120 Ω) in ECM and the end resistance (120 Ω) in body integrated unit can be measured. The combined resistance is approximately 53 — 61 Ω with the stabilizing circuit included. When the measured resistance value is 52 Ω or less, main wiring harness or related lines may be shorted, or combined resistance may have changed because resistance other than end resistance is created on the circuit.



CAN Communication Circuit Check

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B40) No. 6 — No. 14:***	Is the resistance less than 10 Ω?	Go to step **2**.	Go to step **3**.
2	**CHECK MAIN WIRING HARNESS AND RELATED LINES.** With a tester connected, disconnect control module connectors in order. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(B40) No. 6 — No. 14:***	Is there any control module whose condition has changed from short state?	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, replace the body integrated unit. <Ref. to SL-84, REMOVAL, Body Integrated Unit.> Go to step **3**.	Repair or replace the short circuit of the harness between body integrated unit and ECM.
3	**CHECK CONTROL MODULE.** 1) Disconnect the connectors of ECM and body integrated unit. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(B134) No. 24 — (B134) No. 25:*** ***(i171) No. 22 — (i171) No. 2:***	Is the resistance 114 — 126 Ω?	Go to step **4**.	Replace the control module whose end resistance value is out of the specified range.
4	**CHECK HARNESS.** Using the tester, check the short circuit of each harness. ***Connector & terminal*** ***(i171) No. 22 — (i171) No. 2:***	Is the resistance 1 MΩ or more?	CAN communication circuit is normal.	Go to step **5**.
5	**CHECK CONTROL MODULE.** With a tester connected, disconnect control modules in order. ***Connector & terminal*** ***(i171) No. 22 — (i171) No. 2:***	Are there any control modules whose resistance changed to 1 MΩ or more?	Replace the control module that has changed.	Repair or replace the harness part which has resistance component.

- BODY-CAN

Wiring diagram:

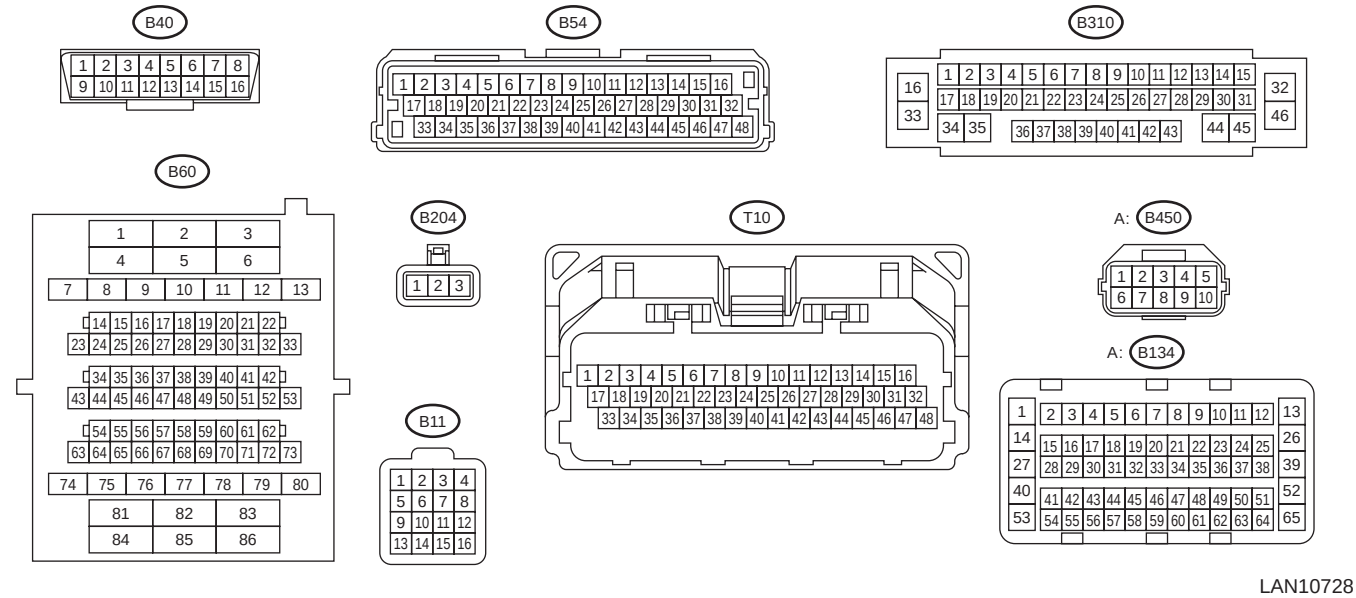
CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>

LAN10730

NOTE:

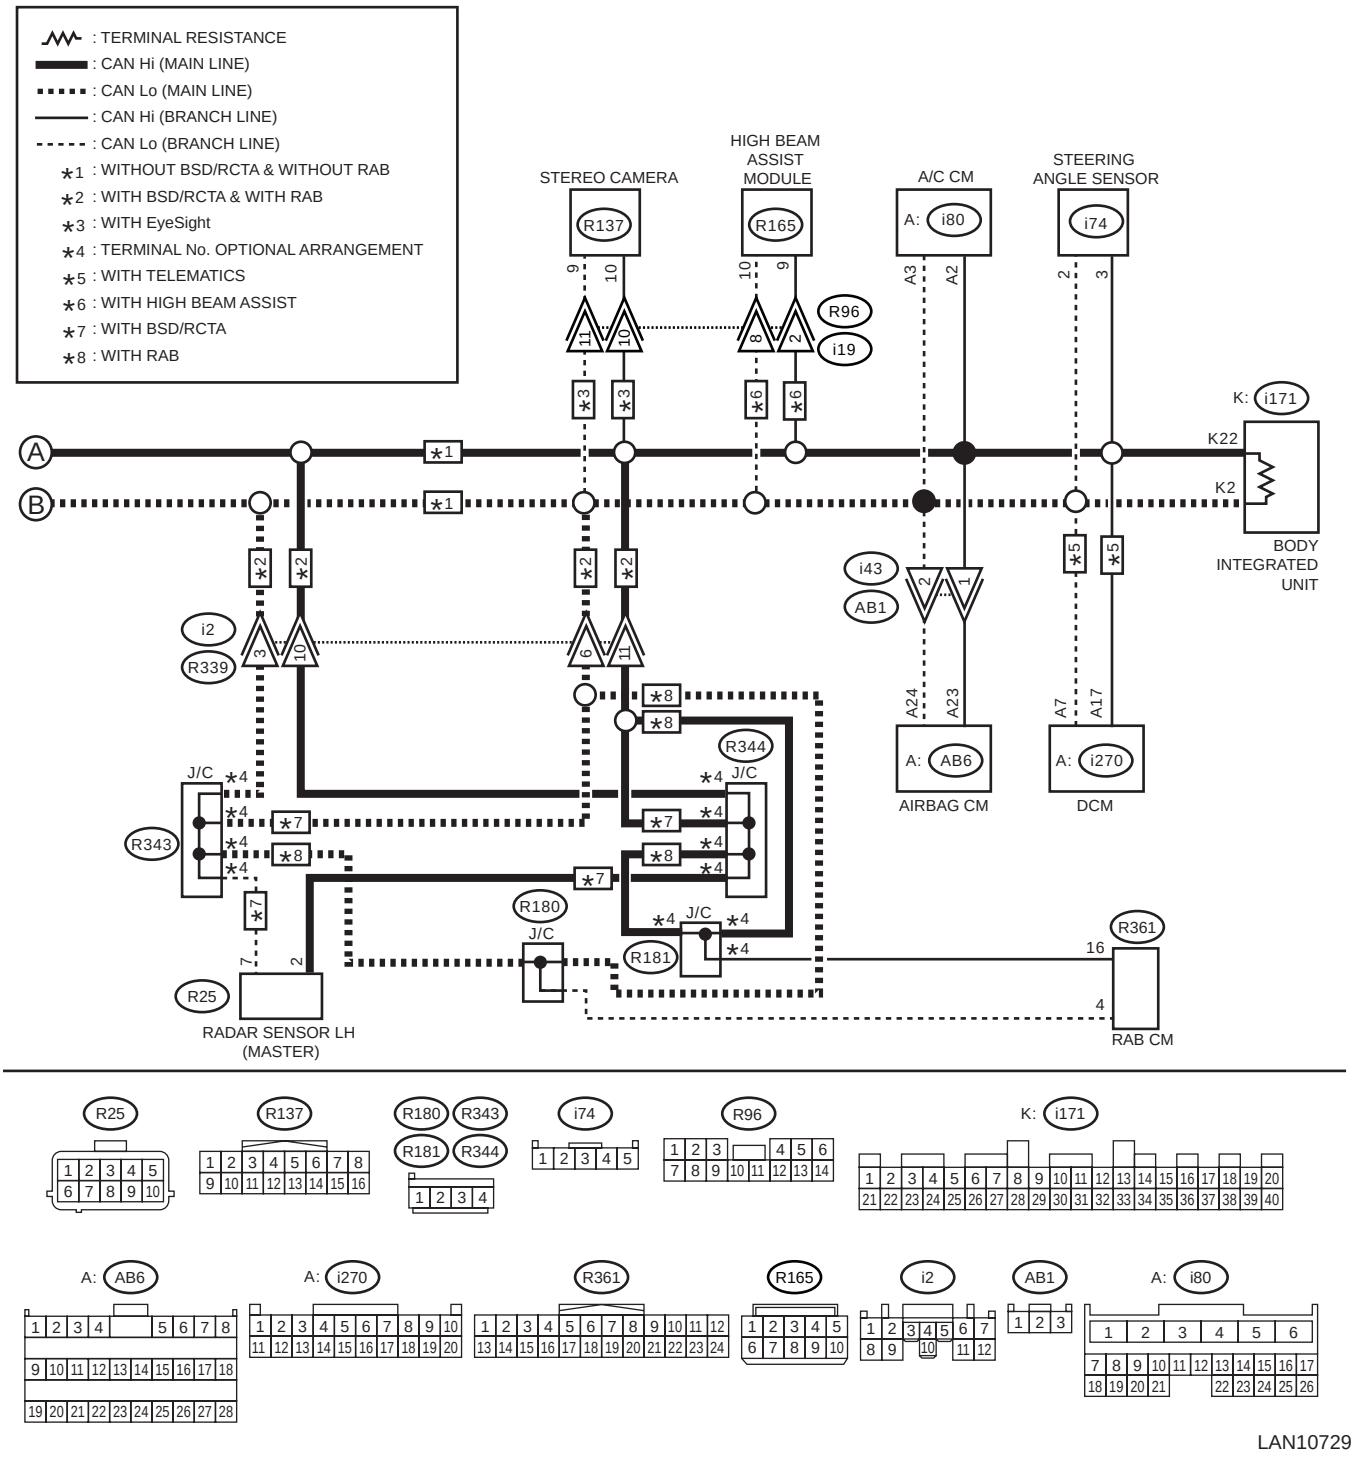
When the bus line is measured, combined resistance of the end resistance (120 Ω) in body integrated unit and the end resistance (120 Ω) in combination meter can be measured. The combined resistance is approximately 53 — 61 Ω with the stabilizing circuit included. When the measured resistance value is 52 Ω or less, main wiring harness or related lines may be shorted, or combined resistance may have changed because resistance other than end resistance is created on the circuit.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i188) No. 5 — (i188) No. 6:***	Is the resistance less than 10 Ω?	Go to step **2**.	Go to step **3**.
2	**CHECK MAIN WIRING HARNESS AND RELATED LINES.** With a tester connected, disconnect control module connectors in order. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(i188) No. 5 — (i188) No. 6:***	Is there any control module whose condition has changed from short state?	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, replace the body integrated unit. <Ref. to SL-84, REMOVAL, Body Integrated Unit.> Go to step **3**.	Repair or replace the short circuit of the harness between body integrated unit and ECM.
3	**CHECK CONTROL MODULE.** 1) Disconnect the connectors of the body integrated unit and combination meter. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(B281) No. 15 — (B281) No. 31:*** ***(i10) No. 6 — (i10) No. 7:***	Is the resistance 114 — 126 Ω?	Go to step **4**.	Replace the control module whose end resistance value is out of the specified range.
4	**CHECK HARNESS.** Using the tester, check the short circuit of each harness. ***Connector & terminal*** ***(i10) No. 6 — (i10) No. 7:***	Is the resistance 1 MΩ or more?	CAN communication circuit is normal.	Go to step **5**.
5	**CHECK CONTROL MODULE.** With a tester connected, disconnect control modules in order. ***Connector & terminal*** ***(i10) No. 6 — (i10) No. 7:***	Are there any control modules whose resistance changed to 1 MΩ or more?	Replace the control module that has changed.	Repair or replace the harness part which has resistance component.



5. 62 Ω OR MORE

- MAIN-CAN



Wiring diagram:

CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>

LAN10728

LAN10729

NOTE:
When the CAN communication circuit is measured, combined resistance of the end resistance (120 Ω) in ECM and the end resistance (120 Ω) in body integrated unit can be measured. The combined resistance is approximately 53 — 61 Ω with the stabilizing circuit included. When the measured resistance value is 62 Ω or more, either one of the end resistances, or stabilizing circuit, or main wiring harness may have malfunction such as open circuit.

	Step	Check	Yes	No
1	**CHECK CONTROL MODULE.** 1) Disconnect the connectors of ECM and body integrated unit. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(B134) No. 24 — (B134) No. 25:*** ***(i171) No. 2 — (i171) No. 22:***	Is the resistance 114 — 126 Ω?	Go to step **2**.	Replace the control module whose value is out of the specification.
2	**CHECK HARNESS.** Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B40) No. 6 — (B134) No. 25:*** ***(B40) No. 14 — (B134) No. 24:*** ***(B40) No. 6 — (i171) No. 22:*** ***(B40) No. 14 — (i171) No. 2:***	Is there continuity?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS.** 1) Disconnect the combination meter connector. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B281) No. 31 — (i10) No. 6:*** ***(B281) No. 15 — (i10) No. 7:***	Is there continuity?	It is possible that temporary poor communication occurs.	Repair or replace the open circuit of harness.

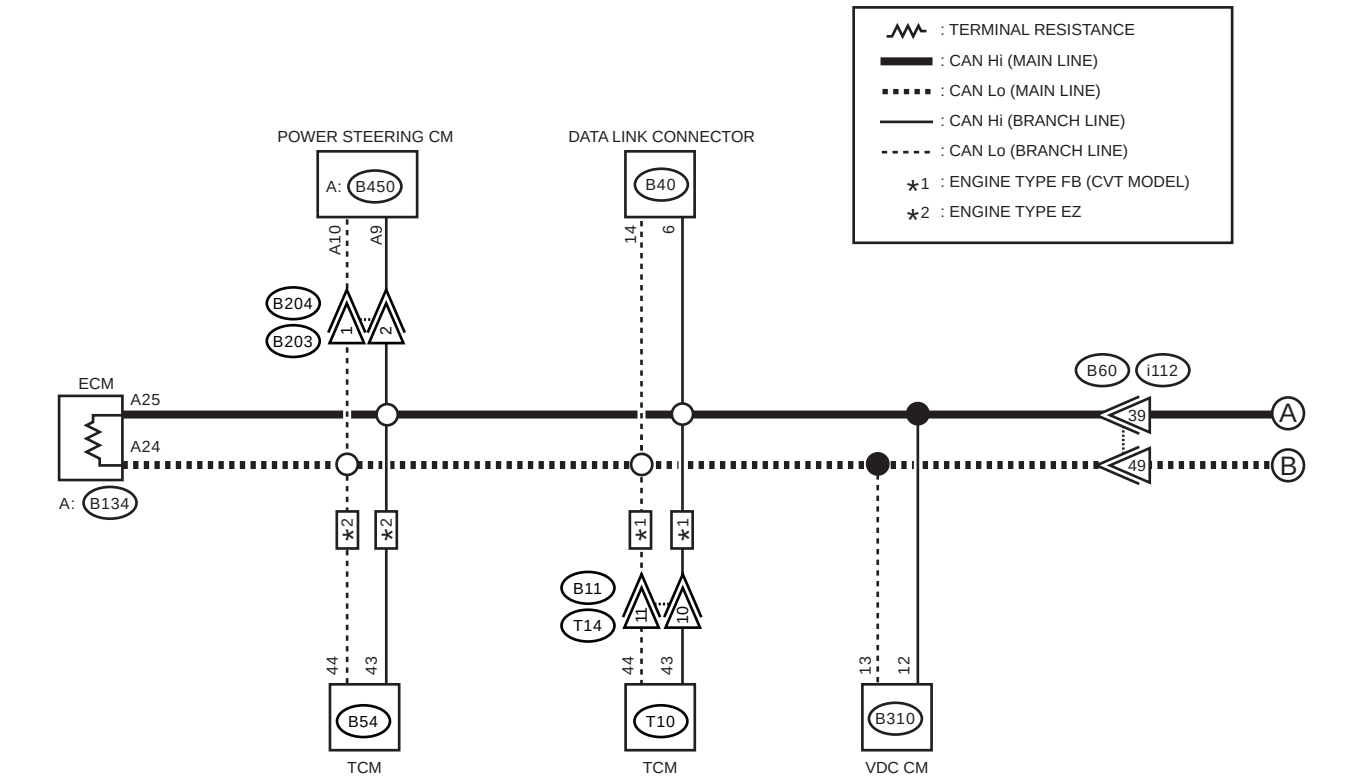
CAN Communication Circuit Check

- BODY-CAN

Wiring diagram:

CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>

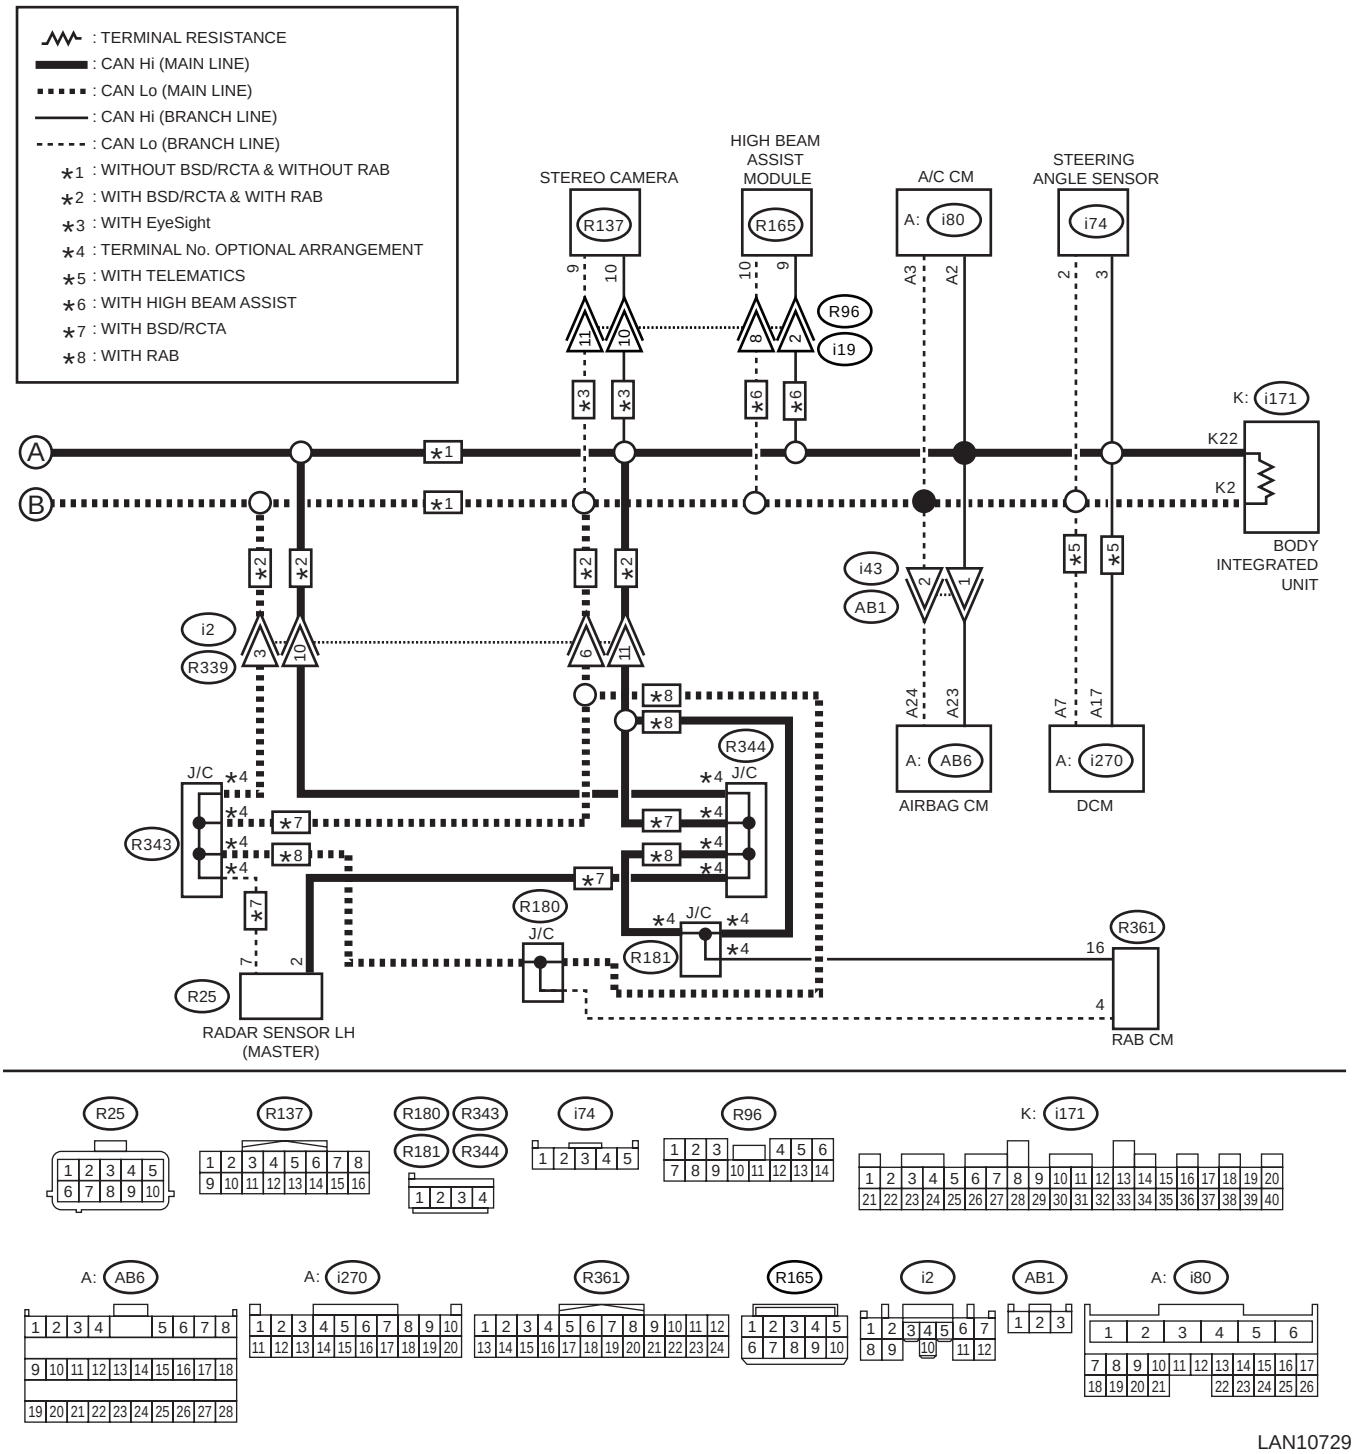
NOTE:



When the CAN communication circuit is measured, combined resistance of the end resistance (120 Ω) in body integrated unit and the end resistance (120 Ω) in combination meter can be measured. The combined resistance is approximately 53 — 61 Ω with the stabilizing circuit included. When the measured resistance value is 62 Ω or more, either one of the end resistances, or stabilizing circuit, or main wiring harness may have malfunction such as open circuit.

	Step	Check	Yes	No
1	**CHECK CONTROL MODULE.** 1) Disconnect the connectors of the body integrated unit and combination meter. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(B281) No. 15 — (B281) No. 31:*** ***(i10) No. 6 — (i10) No. 7:***	Is the resistance 114 — 126 Ω?	Go to step **2**.	Replace the control module whose value is out of the specification.
2	**CHECK HARNESS.** Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B40) No. 6 — (B134) No. 25:*** ***(B40) No. 14 — (B134) No. 24:*** ***(B40) No. 6 — (i171) No. 22:*** ***(B40) No. 14 — (i171) No. 2:***	Is there continuity?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS.** 1) Disconnect the combination meter connector. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B281) No. 31 — (i10) No. 6:*** ***(B281) No. 15 — (i10) No. 7:***	Is there continuity?	It is possible that temporary poor communication occurs.	Repair or replace the open circuit of harness.

6. RELATED LINES 53 — 61 Ω (TCM)

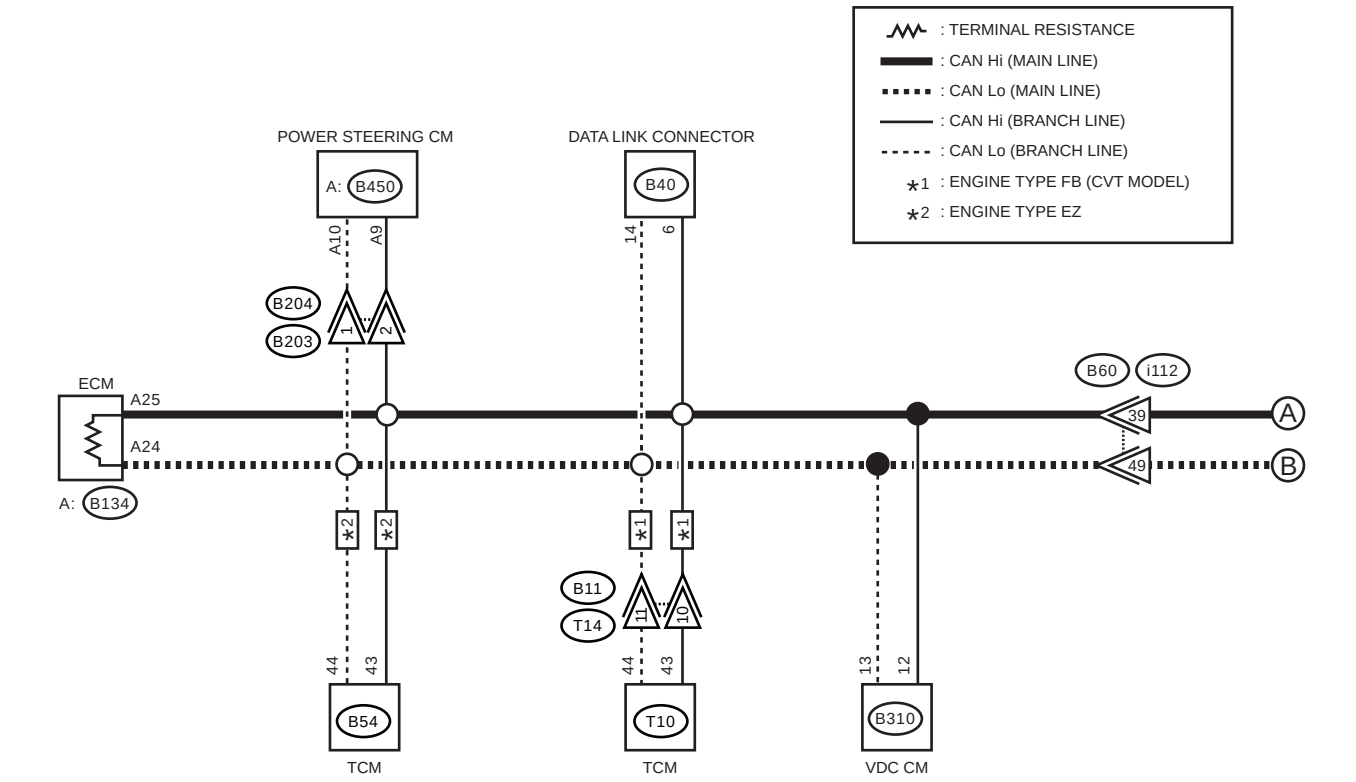


Wiring diagram:

CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>

LAN10728

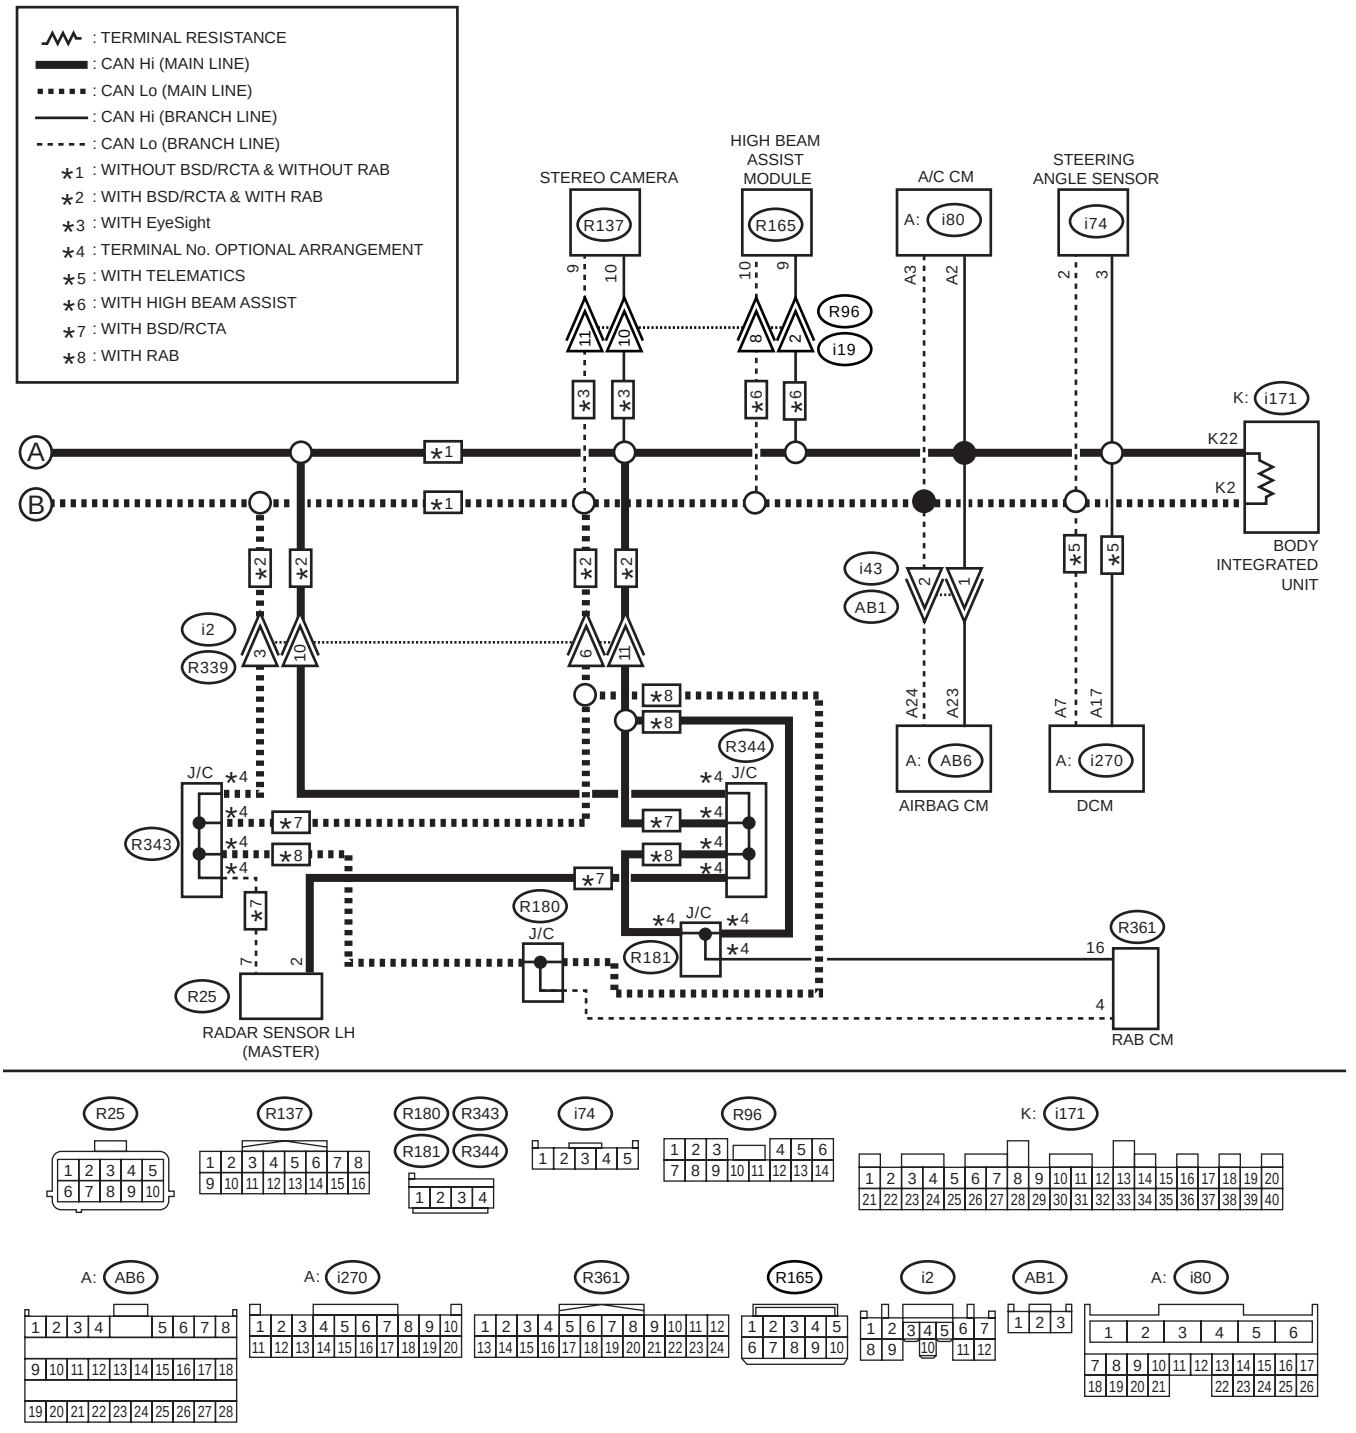
LAN10729



NOTE:
Perform inspection when no data is received, or faulty is detected. This is different from power supply shorted or ground shorted.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the TCM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***Engine type: EZ*** ***(B54) No. 43 — (B54) No. 44:*** ***Engine type: FB*** ***(T10) No. 43 — (T10) No. 44:***	Is the resistance 400 Ω or more?	Related lines between TCM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***Engine type: EZ*** ***(B54) No. 44 — (B40) No. 14:*** ***(B54) No. 43 — (B40) No. 6:*** ***Engine type: FB*** ***(T10) No. 44 — (B40) No. 14:*** ***(T10) No. 43 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of TCM related lines.	Check DTC of TCM. <Ref. to CVT(diag)-24, OPERATION, Read Diagnostic Trouble Code (DTC).>

7. RELATED LINES 53 — 61 Ω (STEERING ANGLE SENSOR)

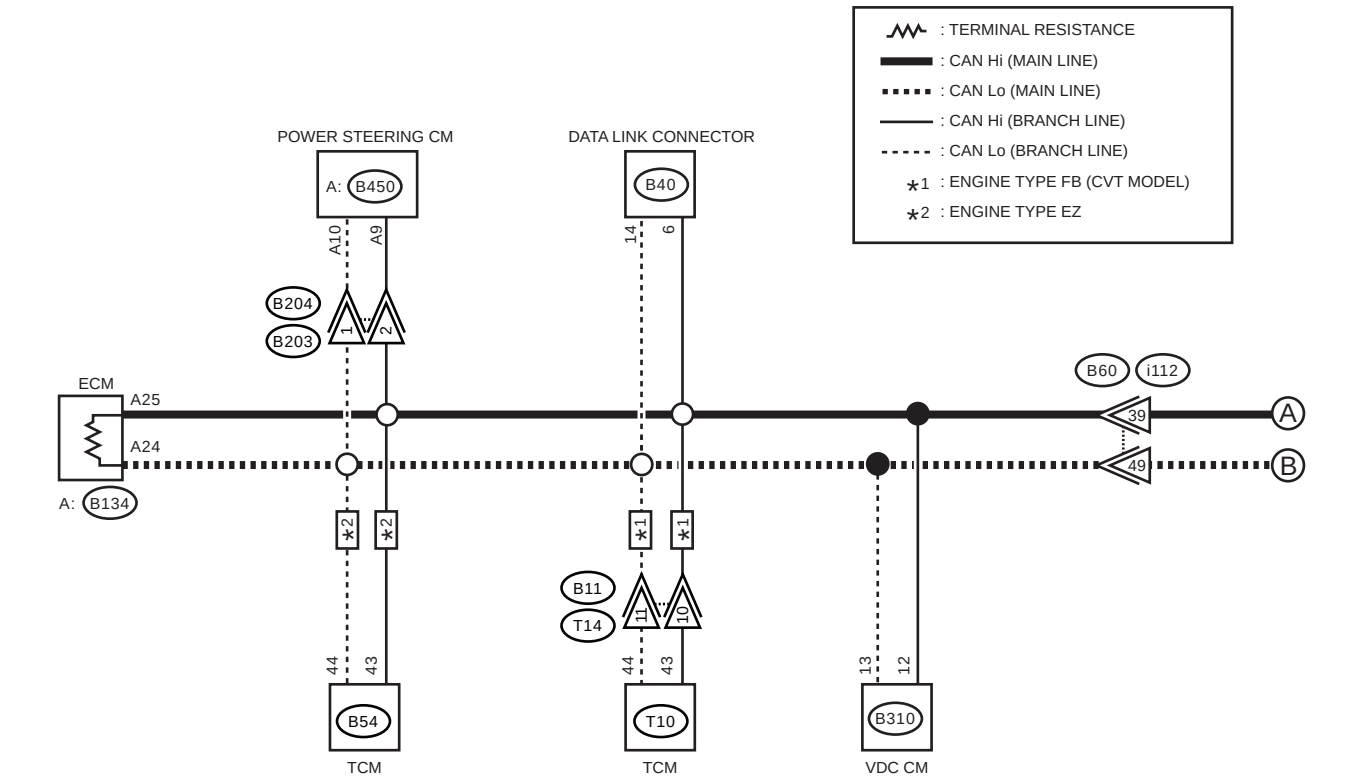


Wiring diagram:

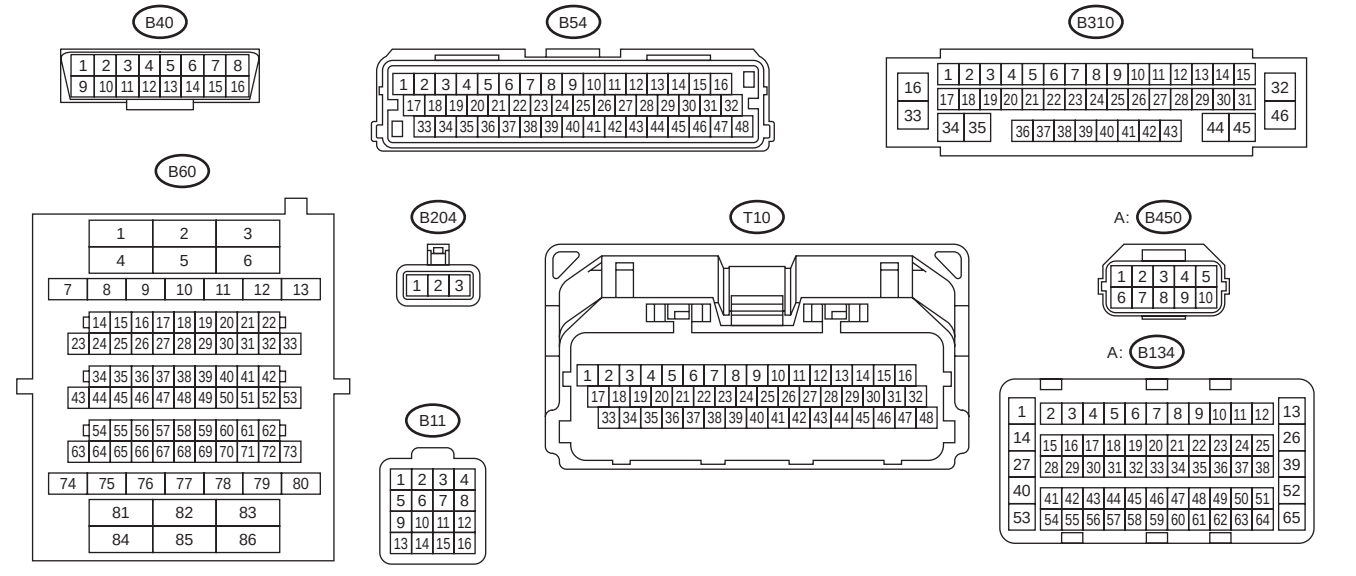
CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>

LAN10728

LAN10729

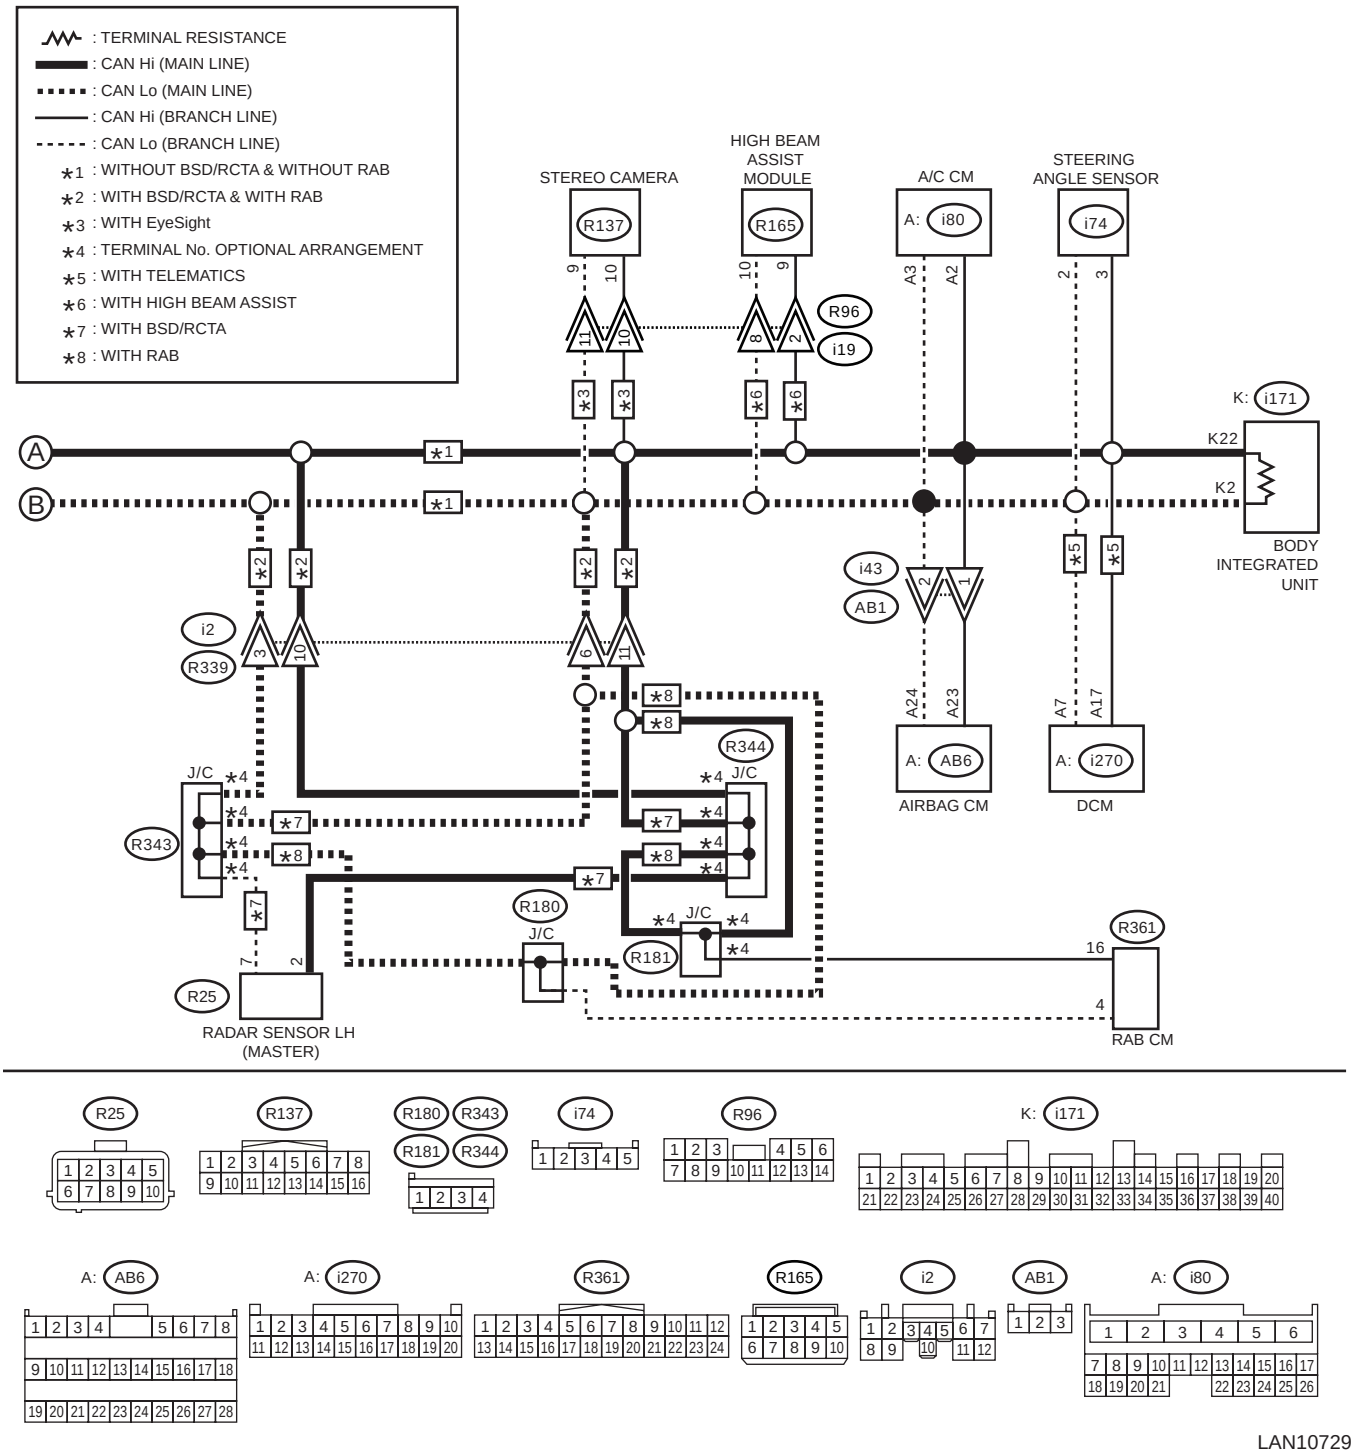


Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the steering angle sensor connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i74) No. 2 — No. 3:***	Is the resistance 400 Ω or more?	Related lines between steering angle sensor and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.



Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i74) No. 2 — (B40) No. 14:*** ***(i74) No. 3 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of steering angle sensor related lines.	Check DTC of VDC CM. <Ref. to VDC(diag)-25, OPERATION, Read Diagnostic Trouble Code (DTC).>

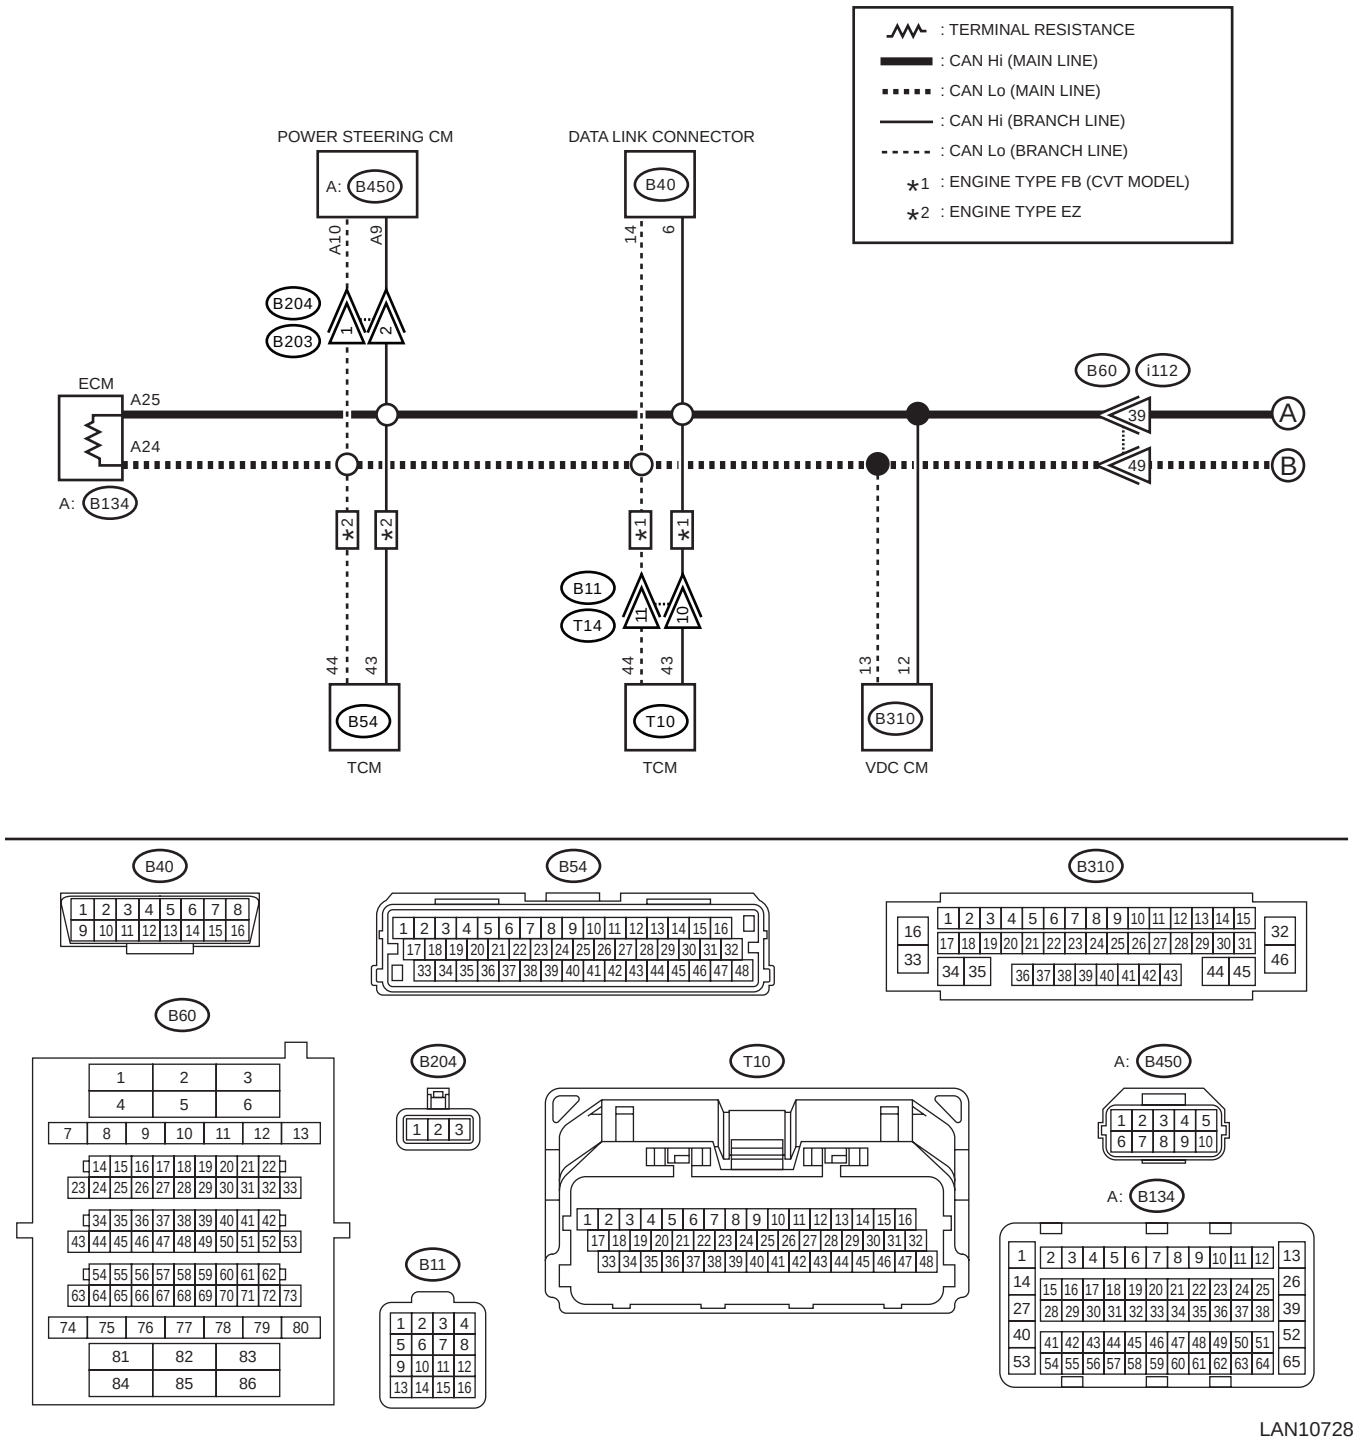
8. RELATED LINES 53 — 61 Ω (A/C CONTROL MODULE)



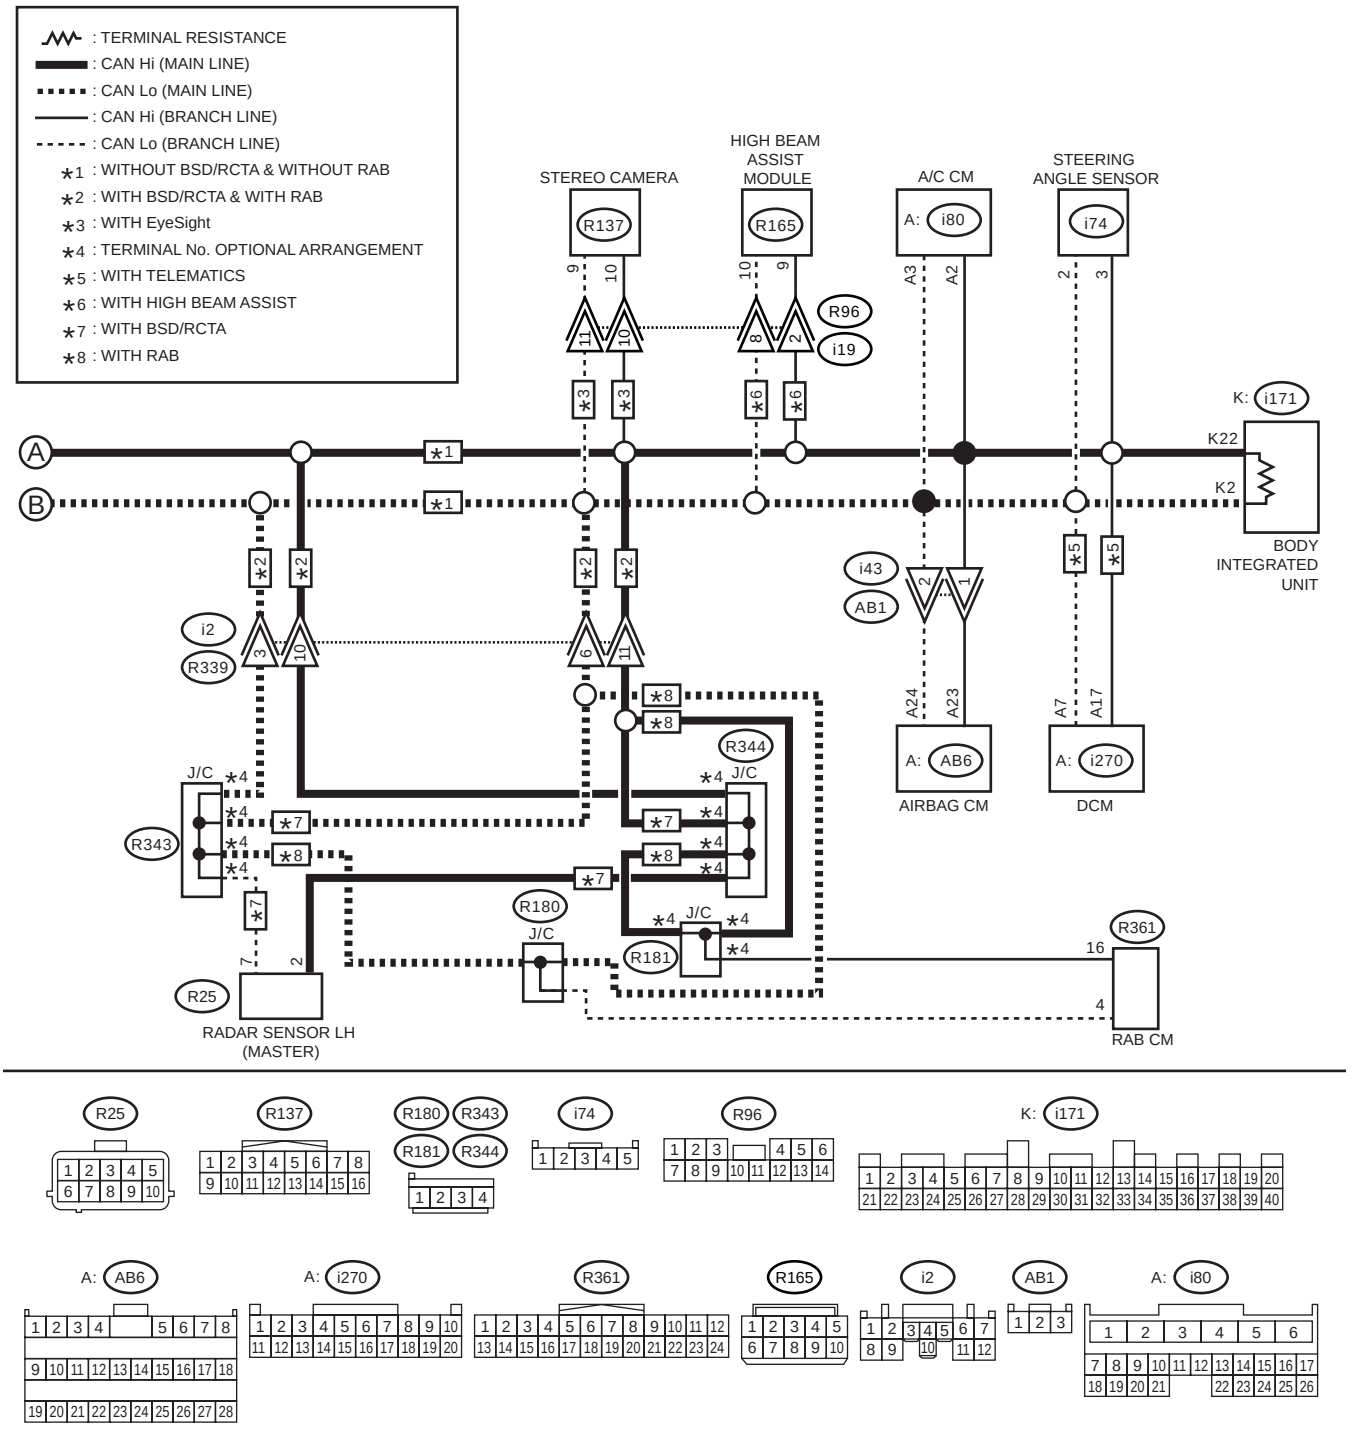
Wiring diagram:

CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>

LAN10728



Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the A/C control module connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i80) No. 2 — No. 3:***	Is the resistance 400 Ω or more?	Related lines between A/C control module and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.



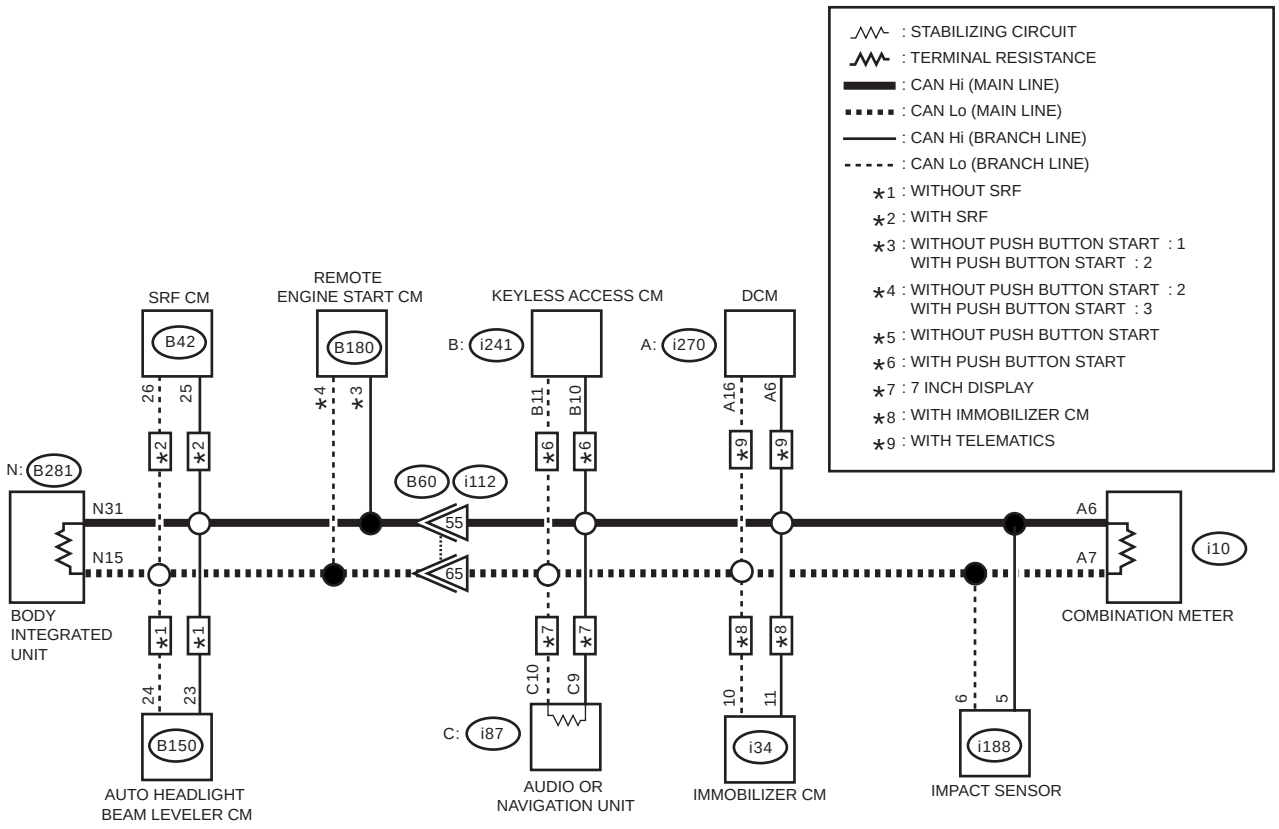
Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i80) No. 2 — (B40) No. 6:*** ***(i80) No. 3 — (B40) No. 14:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of A/C control module related lines.	Check the DTC of A/C control module. <Ref. to AC(diag)-43, Read Diagnostic Trouble Code (DTC).>

9. RELATED LINES 53 — 61 Ω (POWER STEERING CM)

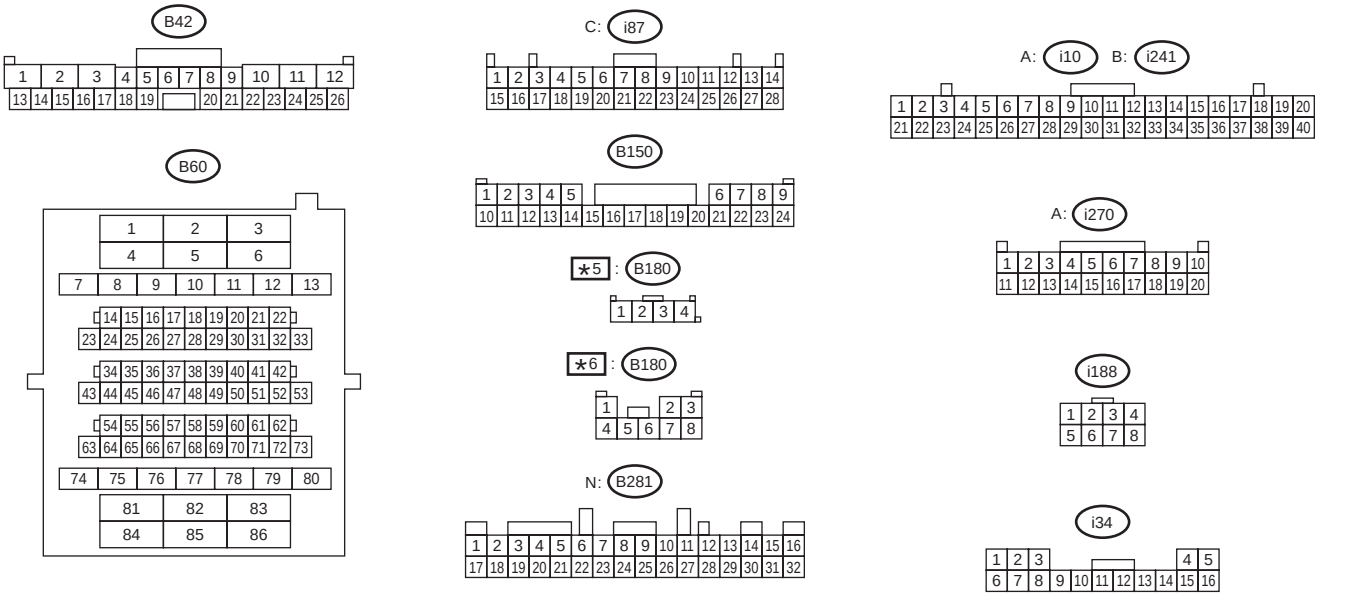
Wiring diagram:

CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>

LAN10729



Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the power steering CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B450) No. 9 — No. 10:***	Is the resistance 400 Ω or more?	Related lines or main wiring harness between power steering CM and main wiring harness is open at two places or more.	Go to step **2**.

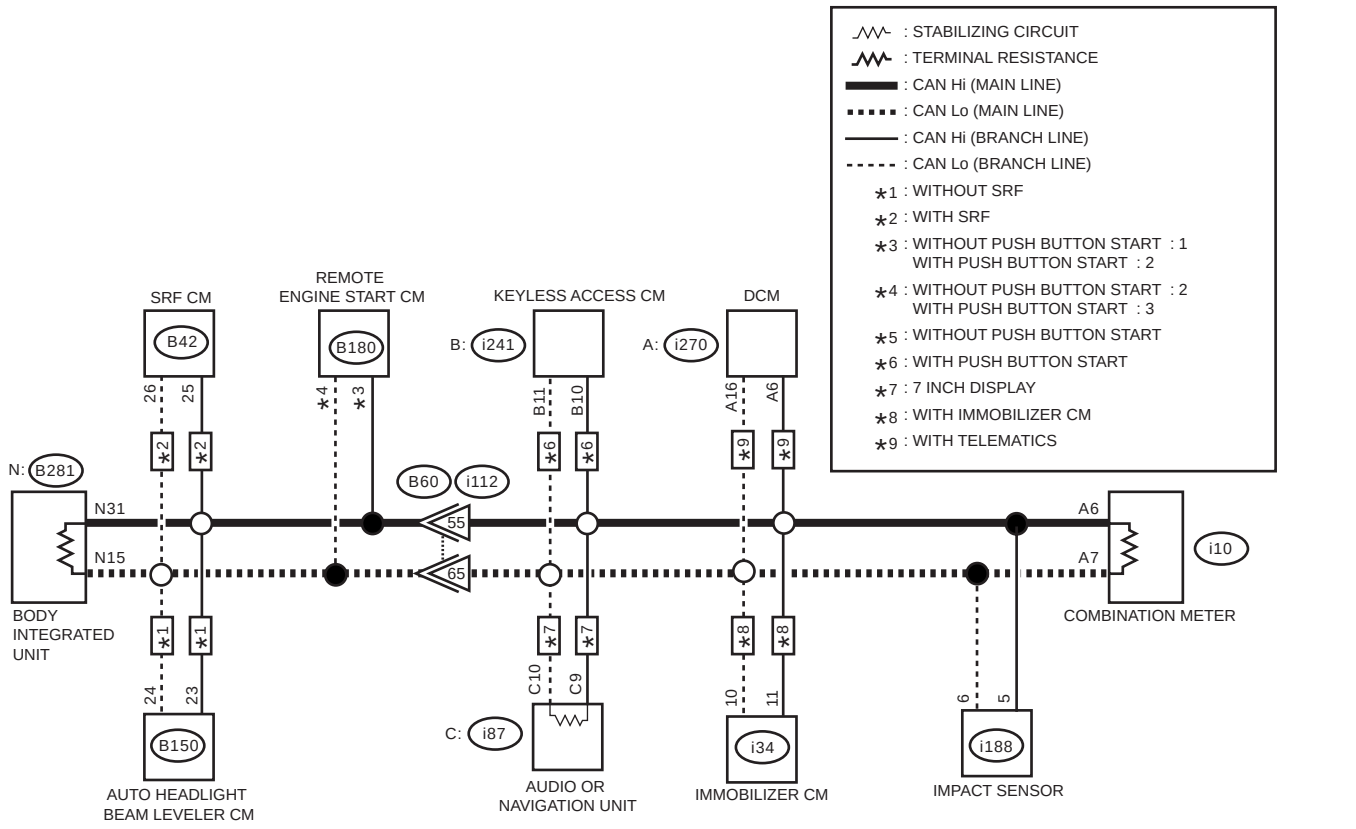


Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B450) No. 9 — (B40) No. 6:*** ***(B450) No. 10 — (B40) No. 14:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit portion of power steering CM related lines.	Check DTC of power steering CM. <Ref. to PS(diag)-15, OPERATION, Read Diagnostic Trouble Code (DTC).>

10.RELATED LINES 53 — 61 Ω (COMBINATION METER)

Wiring diagram:

CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>



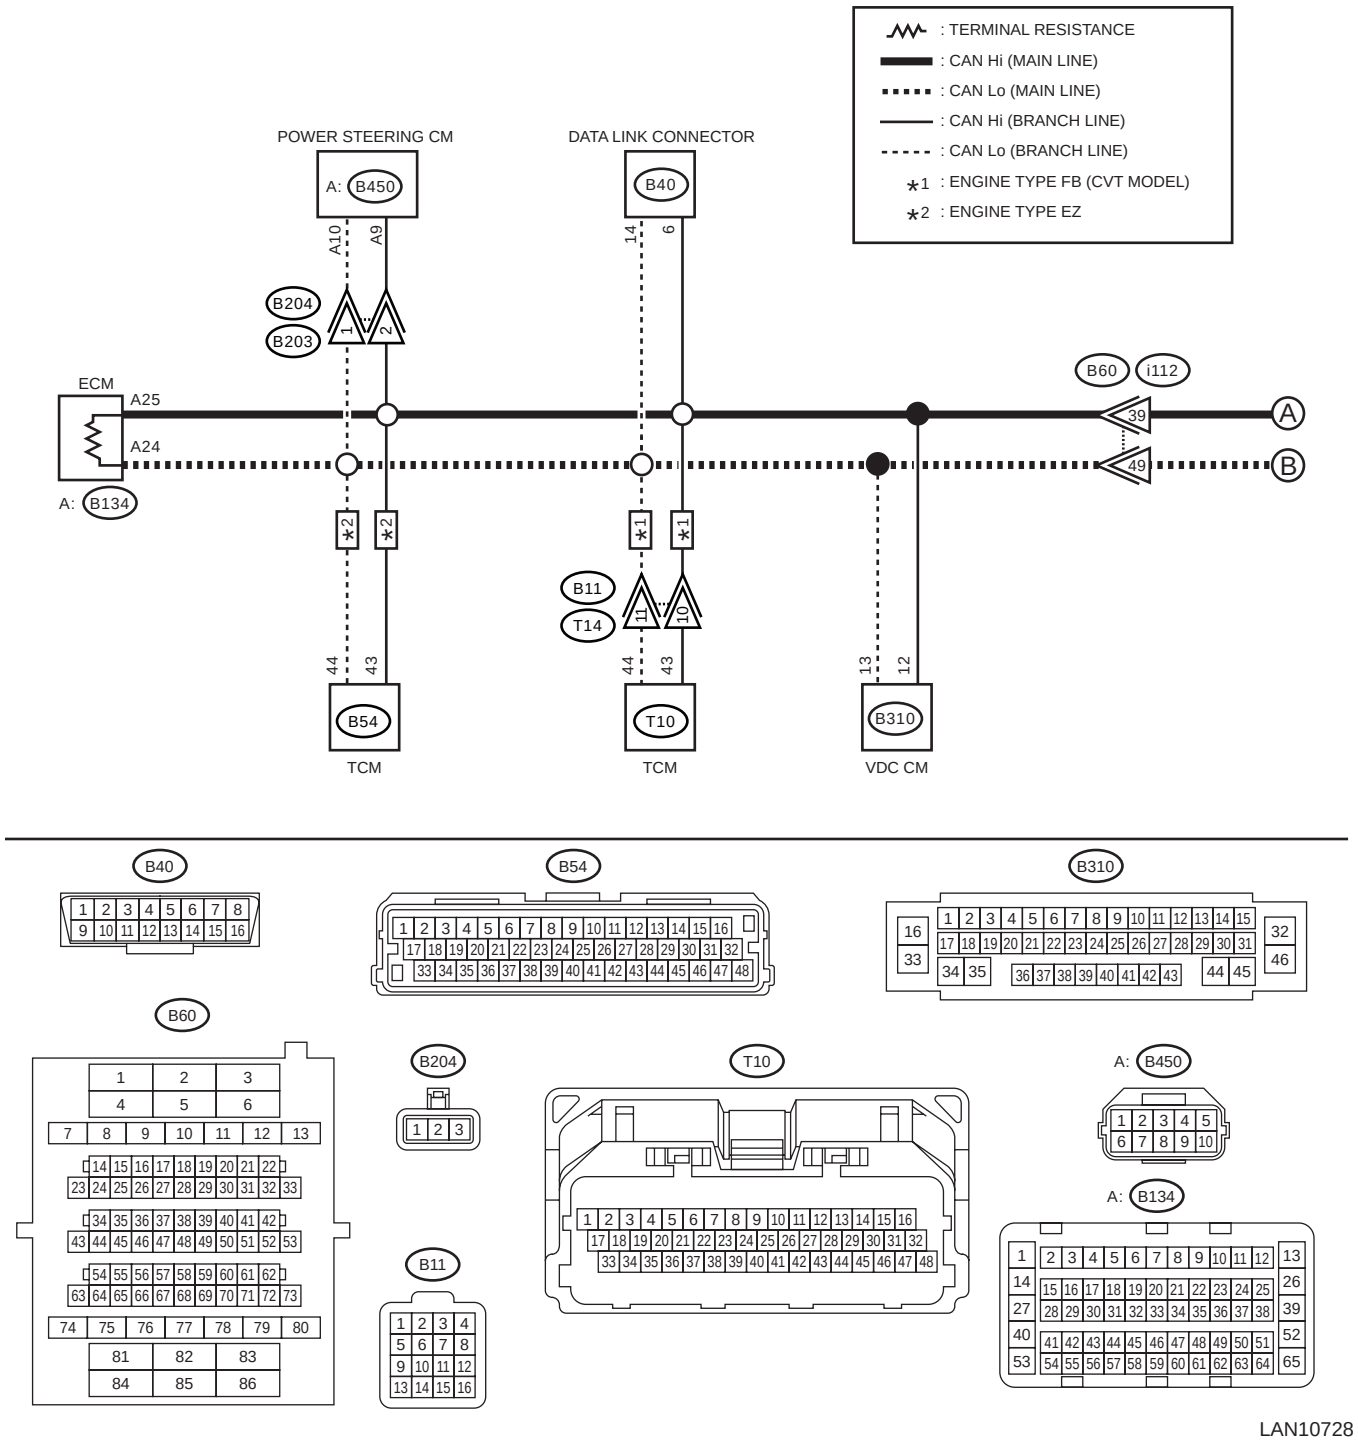
LAN10730

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the combination meter connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i10) No. 6 — No. 7:***	Is the resistance 400 Ω or more?	Related lines between combination meter and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i10) No. 6 — (i188) No. 5:*** ***(i10) No. 7 — (i188) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of combination meter related lines.	Check DTC of combination meter. <Ref. to MET(diag)-10, OPERATION, Read Diagnostic Trouble Code (DTC).>

11.RELATED LINES 53 — 61 Ω (INFOTAINMENT SYSTEM)

Wiring diagram:

CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>



LAN10730

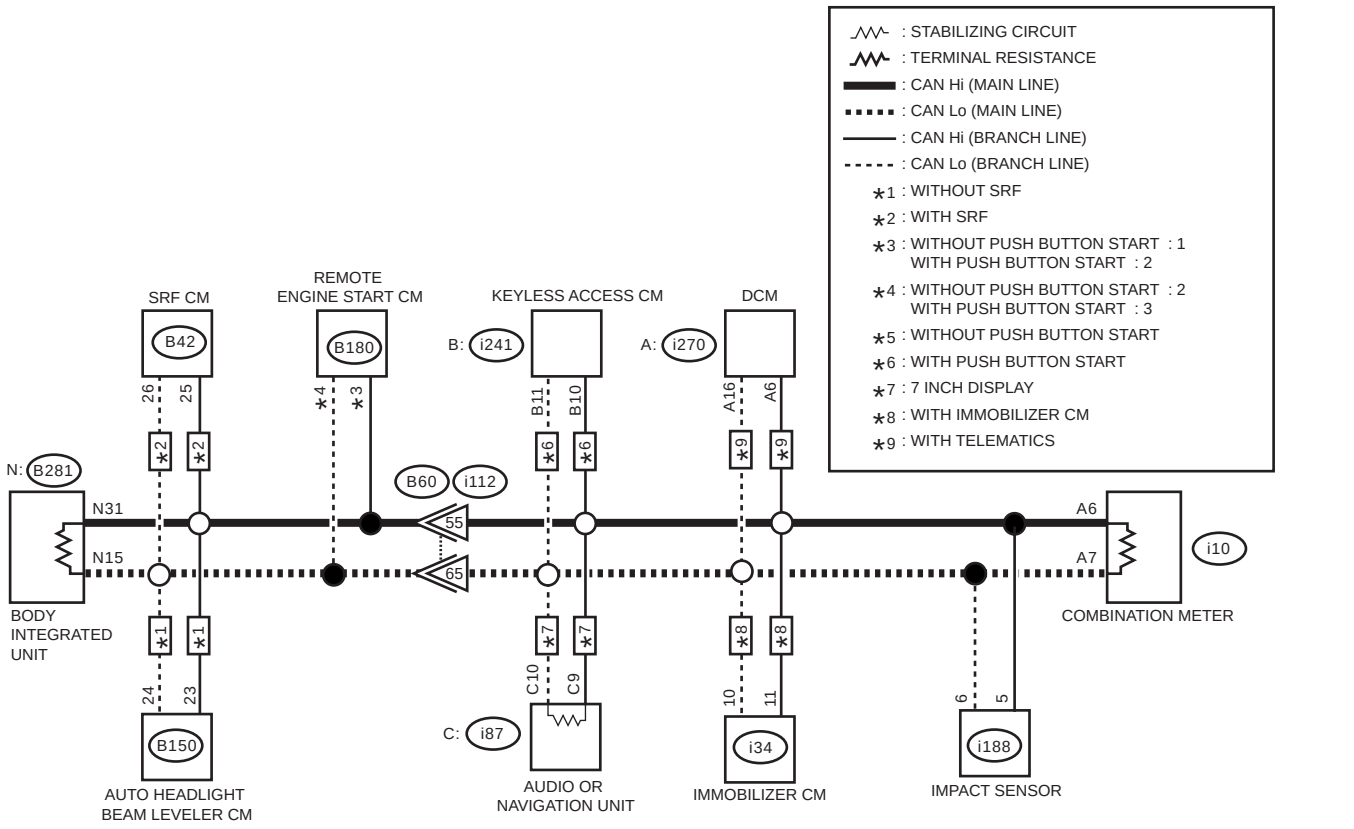
	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the navigation unit connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i87) No. 9 — No. 10:***	Is the resistance 400 Ω or more?	Related lines between the navigation unit and the main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i87) No. 9 — (i188) No. 5:*** ***(i87) No. 10 — (i188) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of the navigation unit related lines.	Check DTC of infotainment system. <Ref. to INF(diag)-16, OPERATION, Read Diagnostic Trouble Code (DTC).>

12.RELATED LINES 53 — 61 Ω (AIRBAG CM SYSTEM)

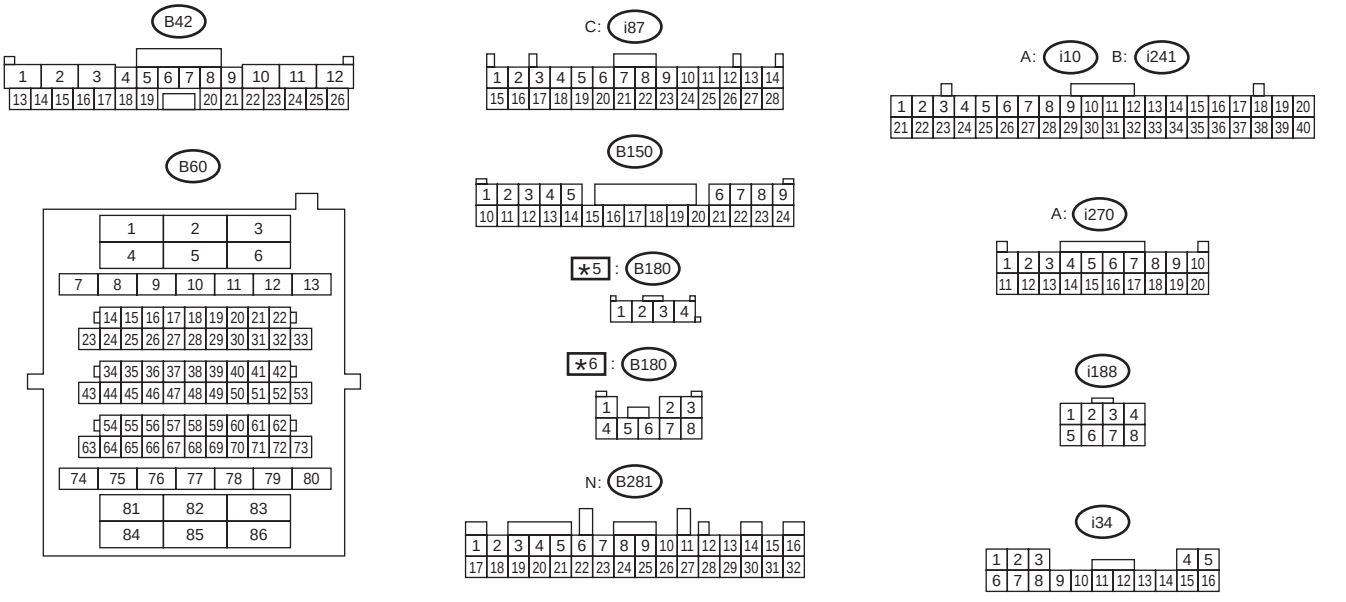
Wiring diagram:

CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>

LAN10729



Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the airbag CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal (AB6) No. 23 — No. 24:***	Is the resistance 400 Ω or more?	Related lines between airbag CM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.

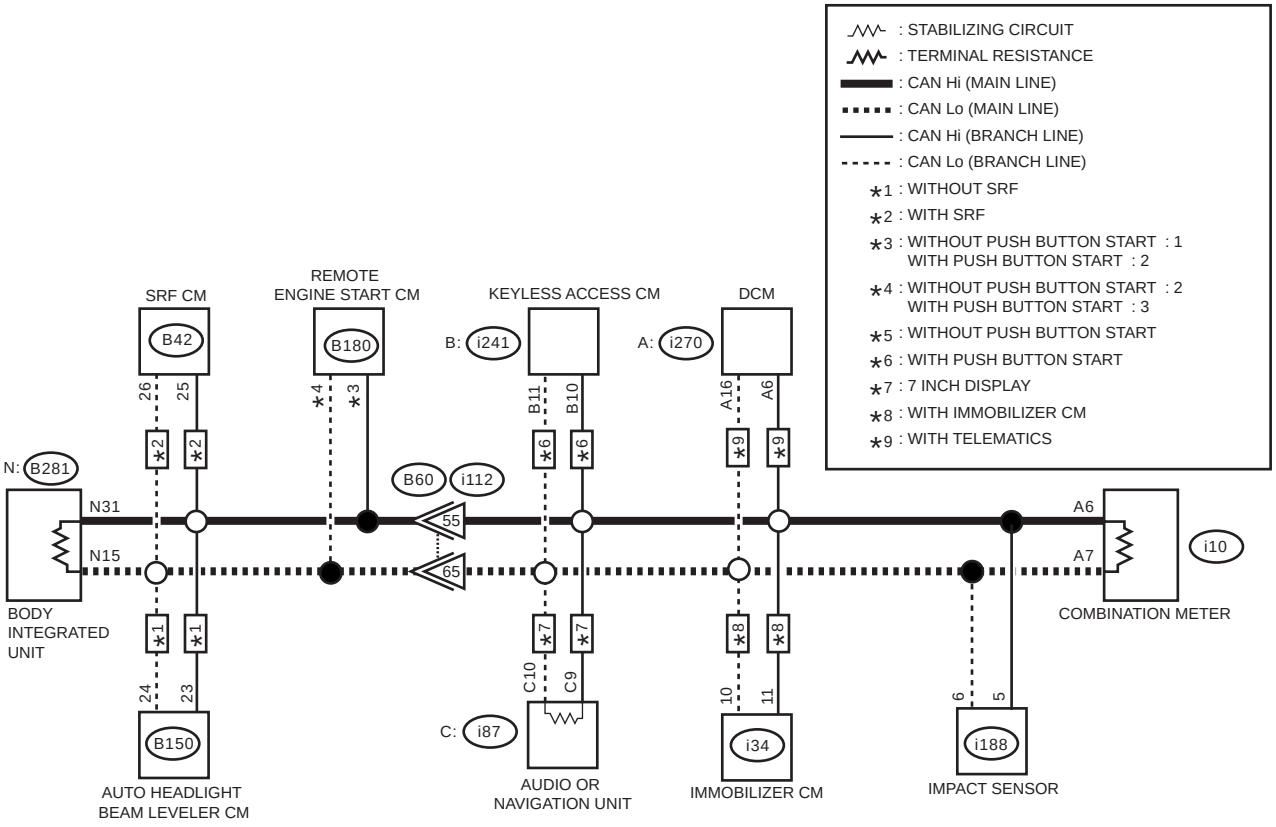


Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(AB6) No. 23 — (B40) No. 6:*** ***(AB6) No. 24 — (B40) No. 14:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit portion of airbag CM related lines.	Check DTC of air-bag CM. <Ref. to AB(diag)-29, OPERATION, Read Diagnostic Trouble Code (DTC).>

13.RELATED LINES 53 — 61 Ω (KEYLESS ACCESS SYSTEM)

Wiring diagram:

CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>



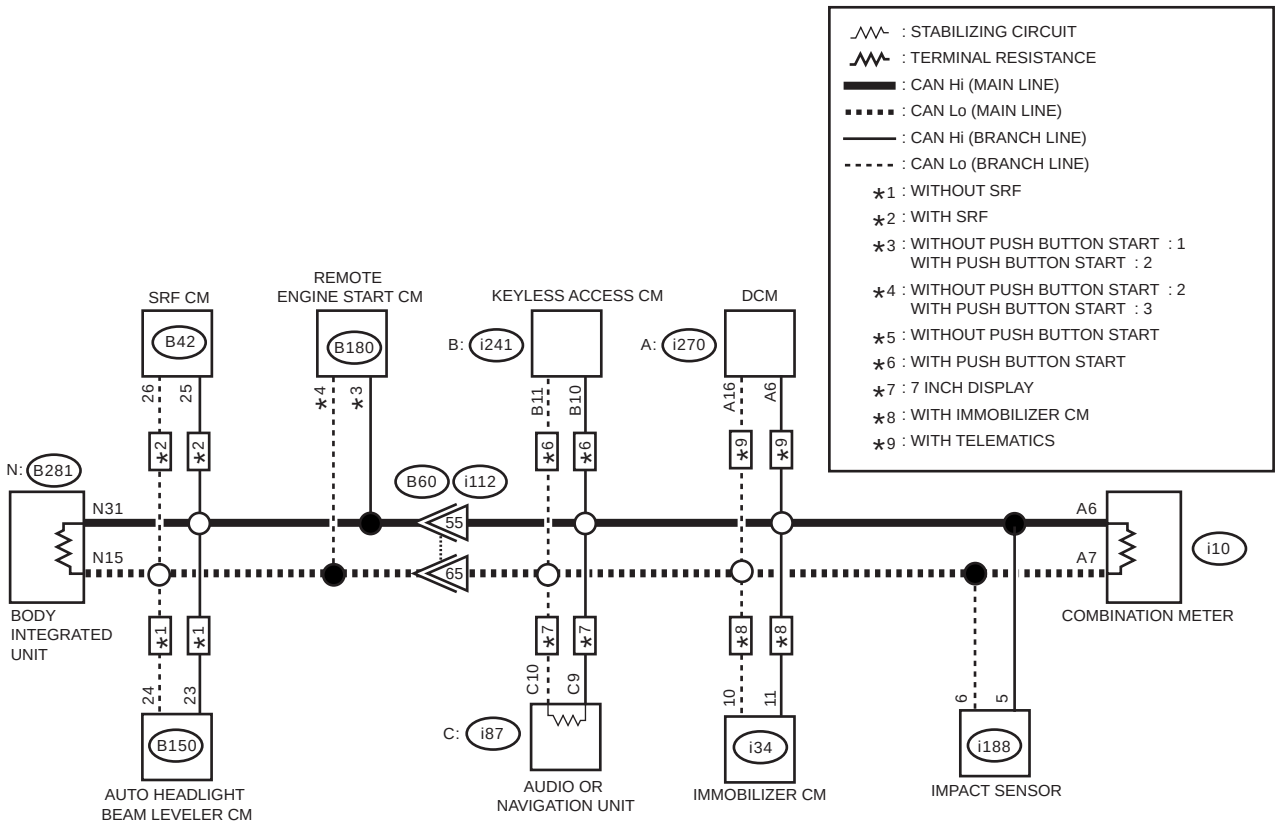
LAN10730

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i241) No. 10 — No. 11:***	Is the resistance 400 Ω or more?	Related lines between keyless access CM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i241) No. 10 — (i188) No. 5:*** ***(i241) No. 11 — (i188) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of keyless access CM related lines.	Check DTC of keyless access CM. <Ref. to KPS(diag)-24, OPERATION, Read Diagnostic Trouble Code (DTC).>

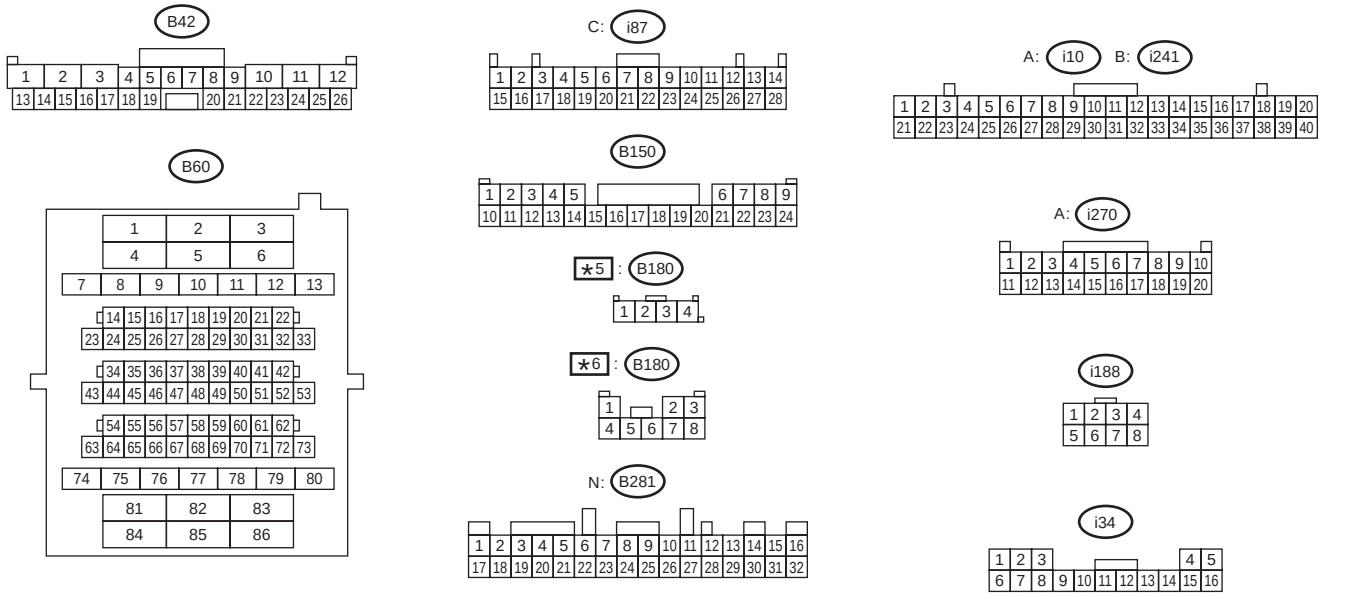
14.RELATED LINES 53 — 61 Ω (HEADLIGHT BEAM LEVELER OR SRF)

Wiring diagram:

CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>



LAN10730

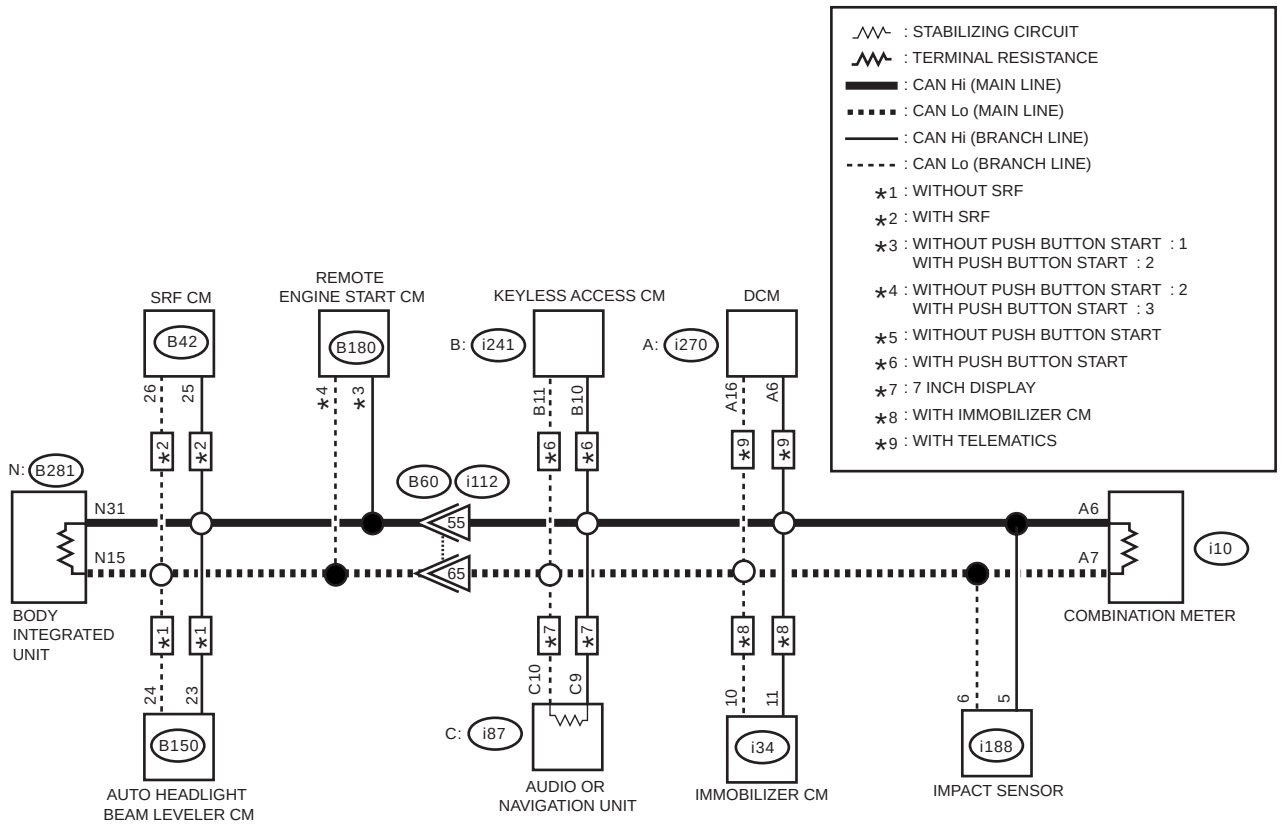


Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the headlight beam leveler CM connector or SRF CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***Without SRF*** ***(B150) No. 23 — No. 24:*** ***With SRF*** ***(B42) No. 25 — No. 26:***	Is the resistance 400 Ω or more?	Related lines between headlight beam leveler CM or SRF CM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***Without SRF*** ***(B150) No. 24 — (i188) No. 6:*** ***(B150) No. 23 — (i188) No. 5:*** ***With SRF*** ***(B42) No. 26 — (i188) No. 6:*** ***(B42) No. 25 — (i188) No. 5:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of headlight beam leveler or SRF related lines.	Check DTC of headlight beam leveler system. <Ref. to AL(diag)-10, OPERATION, Read Diagnostic Trouble Code (DTC).> <Ref. to SRF(diag)-12, OPERATION, Read Diagnostic Trouble Code (DTC).>

15.RELATED LINES 53 — 61 Ω (REMOTE ENGINE STARTER)

Wiring diagram:

CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>



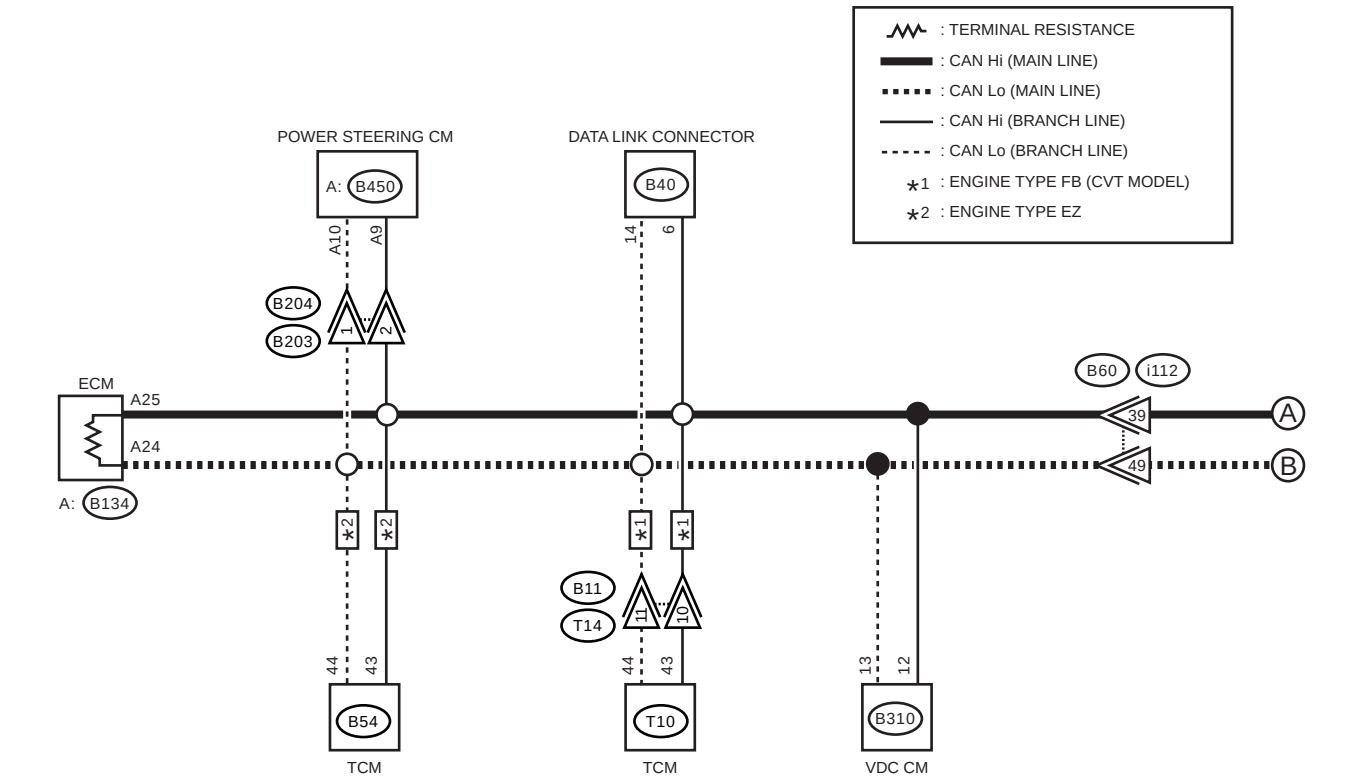
LAN10730

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the remote engine start CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***Without push button start*** ***(B180) No. 1 — No. 2:*** ***With push button start*** ***(B180) No. 2 — No. 3:***	Is the resistance 400 Ω or more?	Related lines between remote engine start CM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***Without push button start*** ***(B180) No. 1 — (i188) No. 5:*** ***(B180) No. 2 — (i188) No. 6:*** ***With push button start*** ***(B180) No. 2 — (i188) No. 5:*** ***(B180) No. 3 — (i188) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of remote engine start CM related lines.	The communication harness is normal. Check the remote engine starter CM or the mobile key.

16.RELATED LINES 53 — 61 Ω (IMPACT SENSOR SYSTEM)

Wiring diagram:

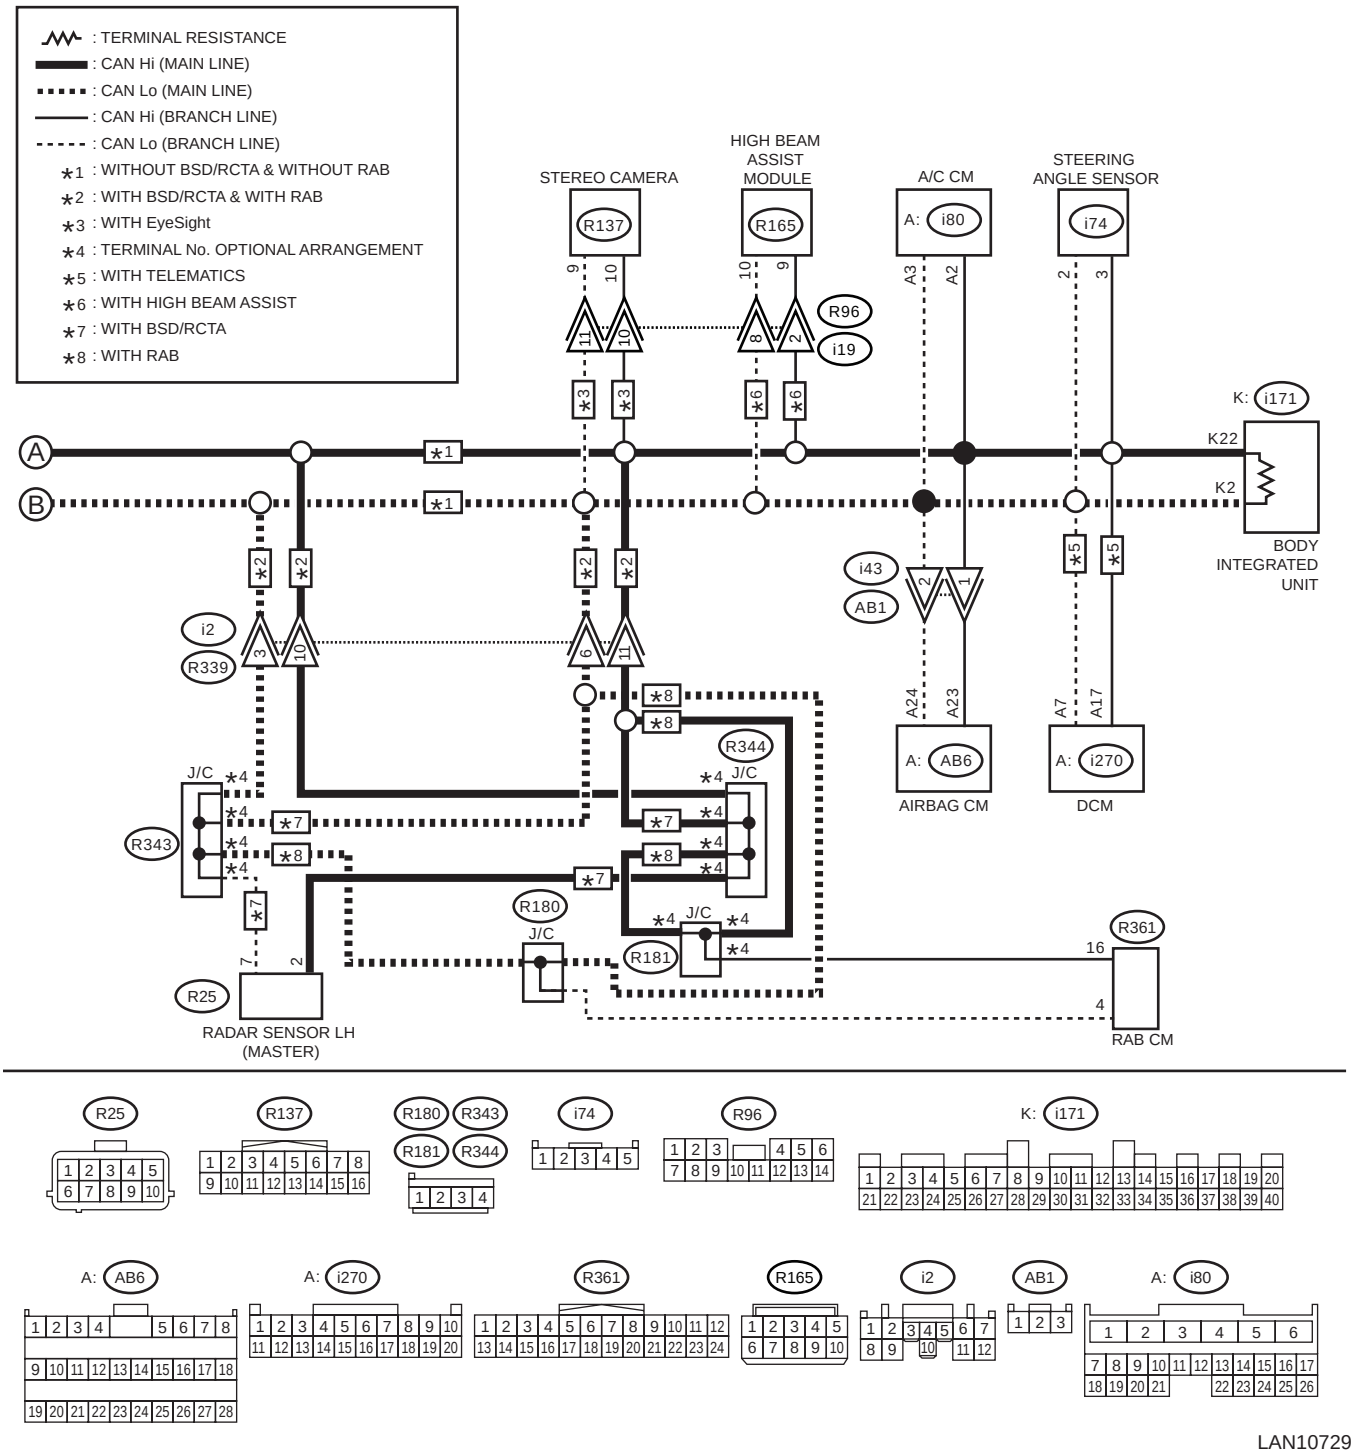
CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>



LAN10730

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the impact sensor connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i188) No. 5 — No. 6:***	Is the resistance 400 Ω or more?	Related lines between the impact sensor and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i188) No. 6 — (B281) No. 15:*** ***(i188) No. 5 — (B281) No. 31:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of the impact sensor system related lines.	The communication harness is normal. Check the impact sensor.

17.RELATED LINES 53 — 61 Ω (BSD/RCTA)

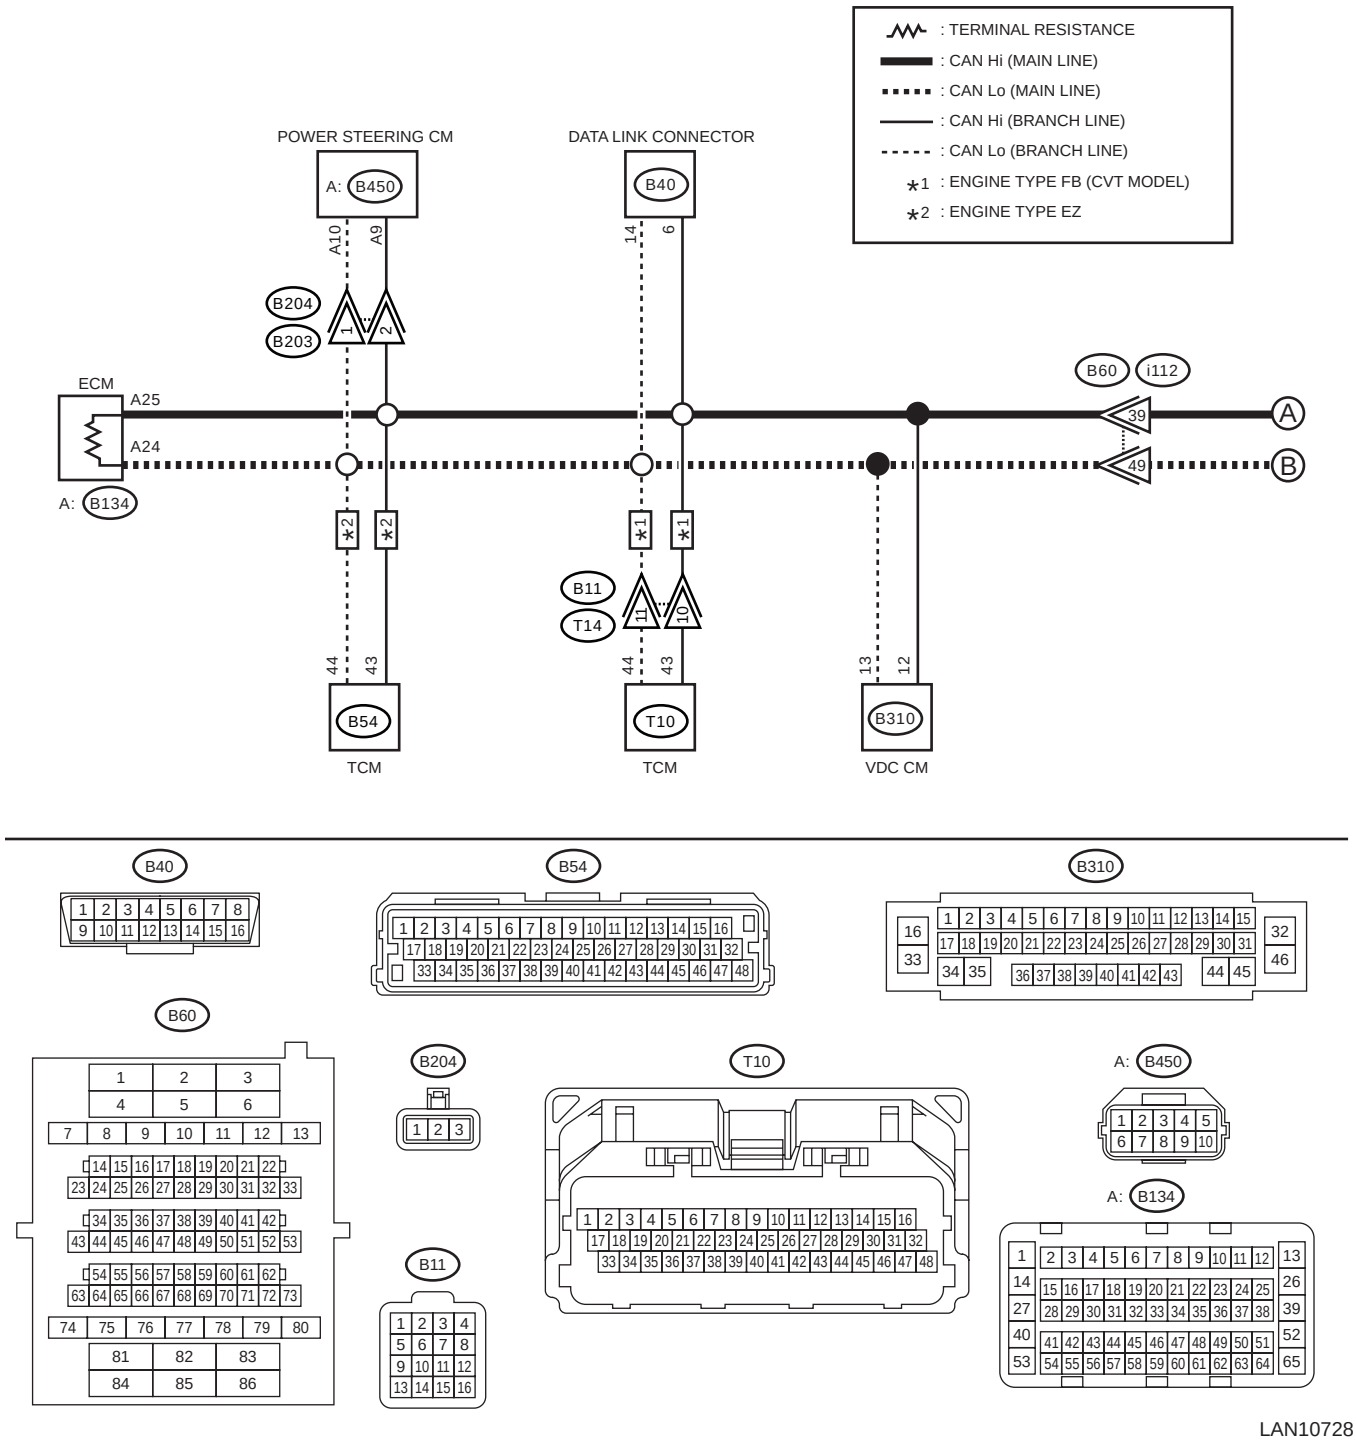


Wiring diagram:

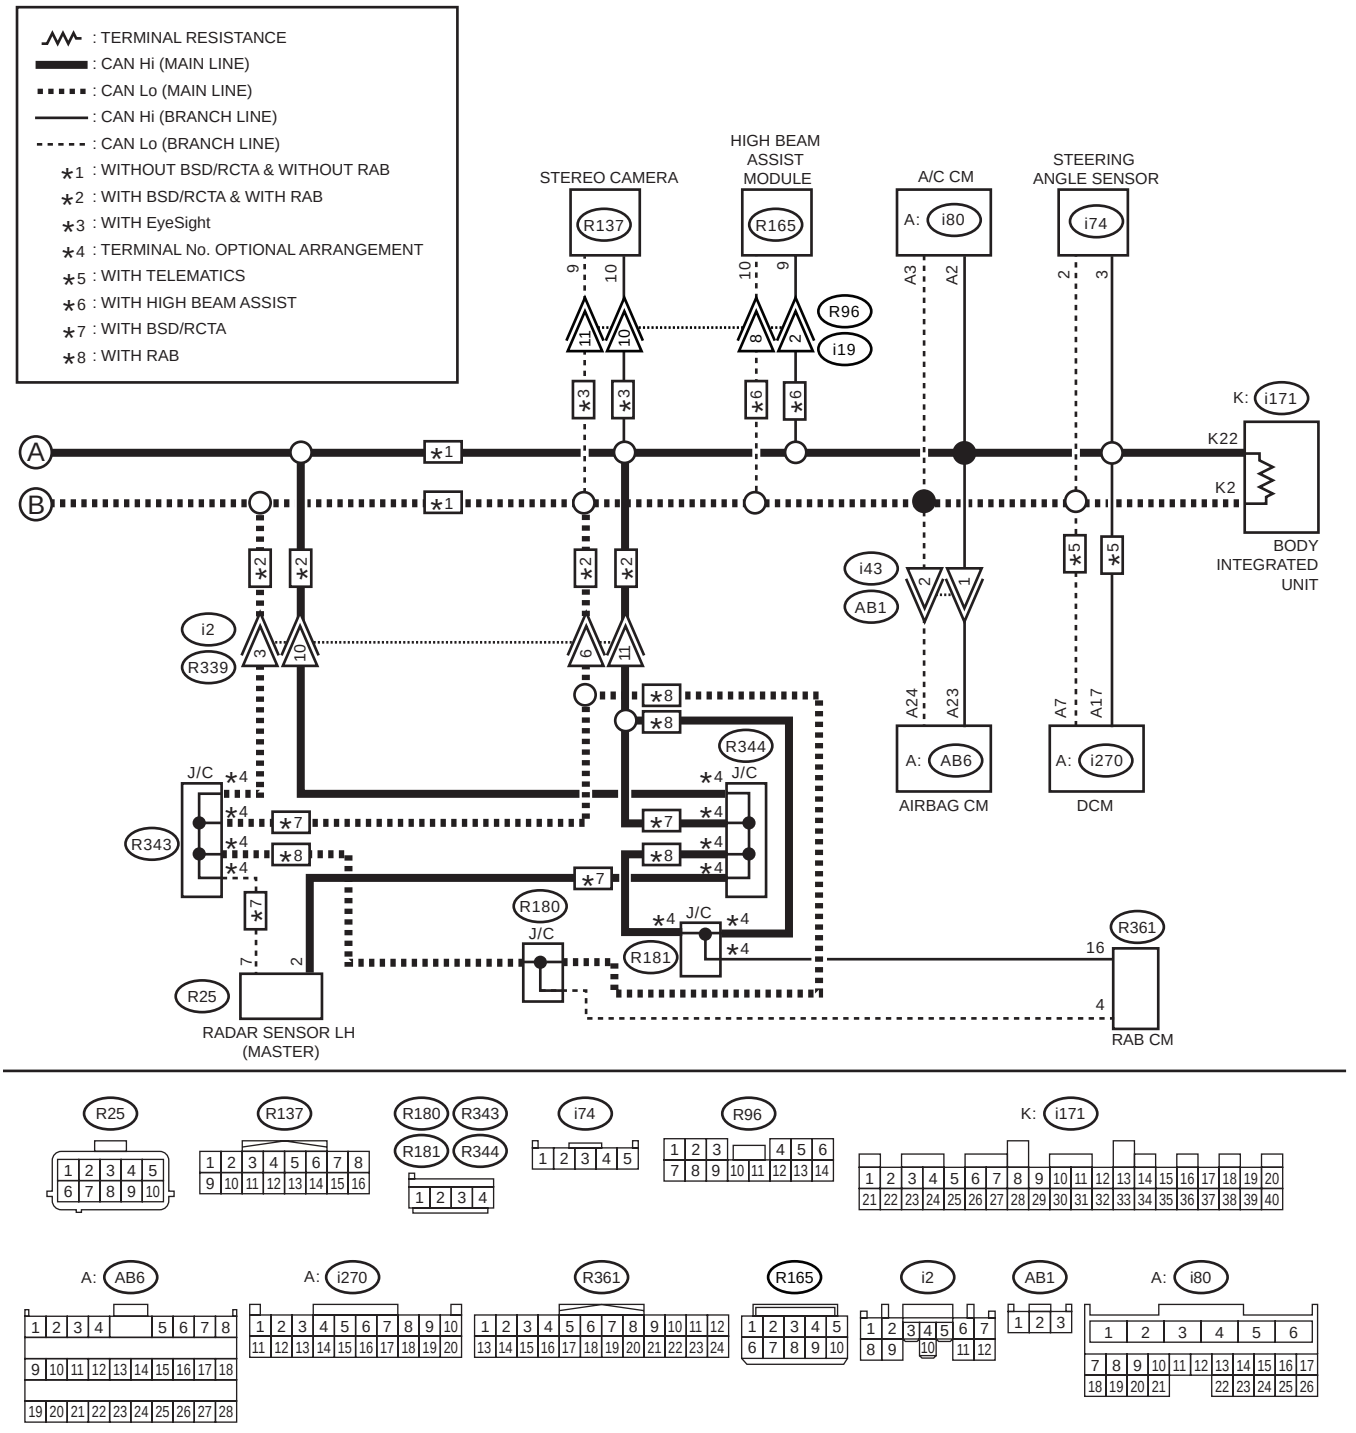
CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>

LAN10728

LAN10729



Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the radar sensor LH connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal (R25) No. 2 — No. 7:***	Is the resistance 400 Ω or more?	Related lines between radar sensor LH and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.

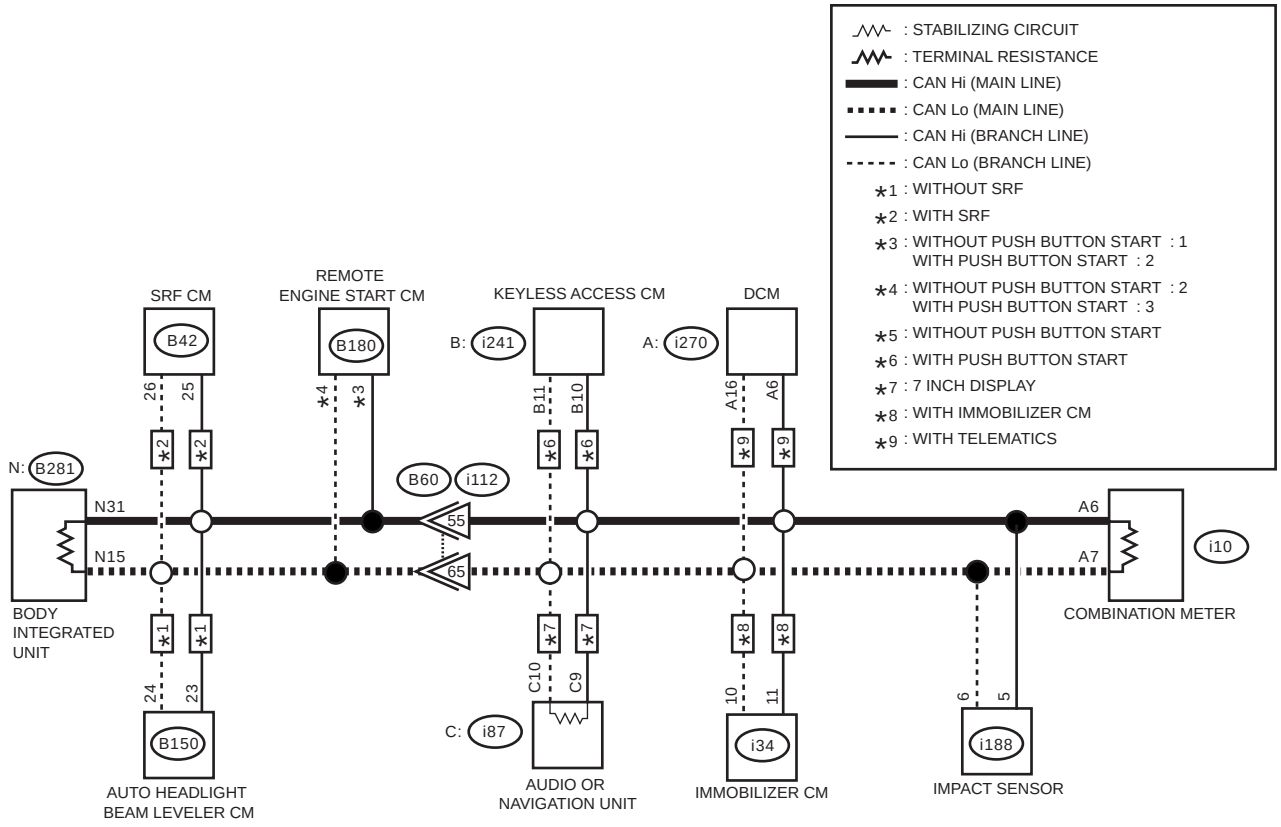


Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B25) No. 2 — (B40) No. 6:*** ***(R25) No. 7 — (B40) No. 14:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of the Subaru Rear Vehicle Detection related lines.	The communication harness is normal. Check DTC of radar sensor. <Ref. to RVD(diag)-13, OPERATION, Read Diagnostic Trouble Code (DTC).>

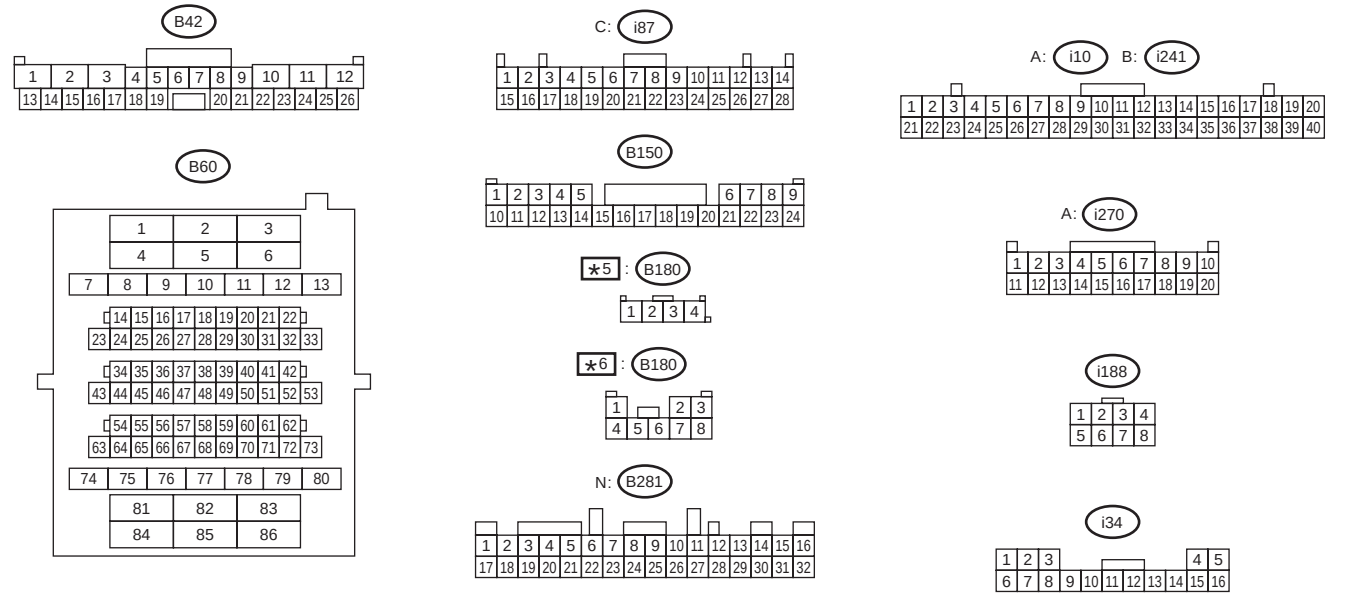
18.RELATED LINES 53 — 61 Ω (STEREO CAMERA)

Wiring diagram:

CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>



LAN10729



Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the stereo camera connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal (R137) No. 10 — No. 9:***	Is the resistance 400 Ω or more?	Related lines between stereo camera and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.

Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R137) No. 9 — (B40) No. 14:*** ***(R137) No. 10 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of stereo camera related lines.	Check DTC of stereo camera. <Ref. to ES(diag)-42, Diagnostic Code(s) Display.>

19.RELATED LINES 53 — 61 Ω (IMMOBILIZER SYSTEM)

Wiring diagram:

LAN10730

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the immobilizer CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i34) No. 10 — No. 11:***	Is the resistance 400 Ω or more?	Related lines between immobilizer CM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i34) No. 11 — (i188) No. 5:*** ***(i34) No. 10 — (i188) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of immobilizer related lines.	The communication harness is normal. Check DTC of immobilizer system. <Ref. to IM(diag)-10, IMMOBILIZER CM, OPERATION, Read Diagnostic Trouble Code (DTC).>

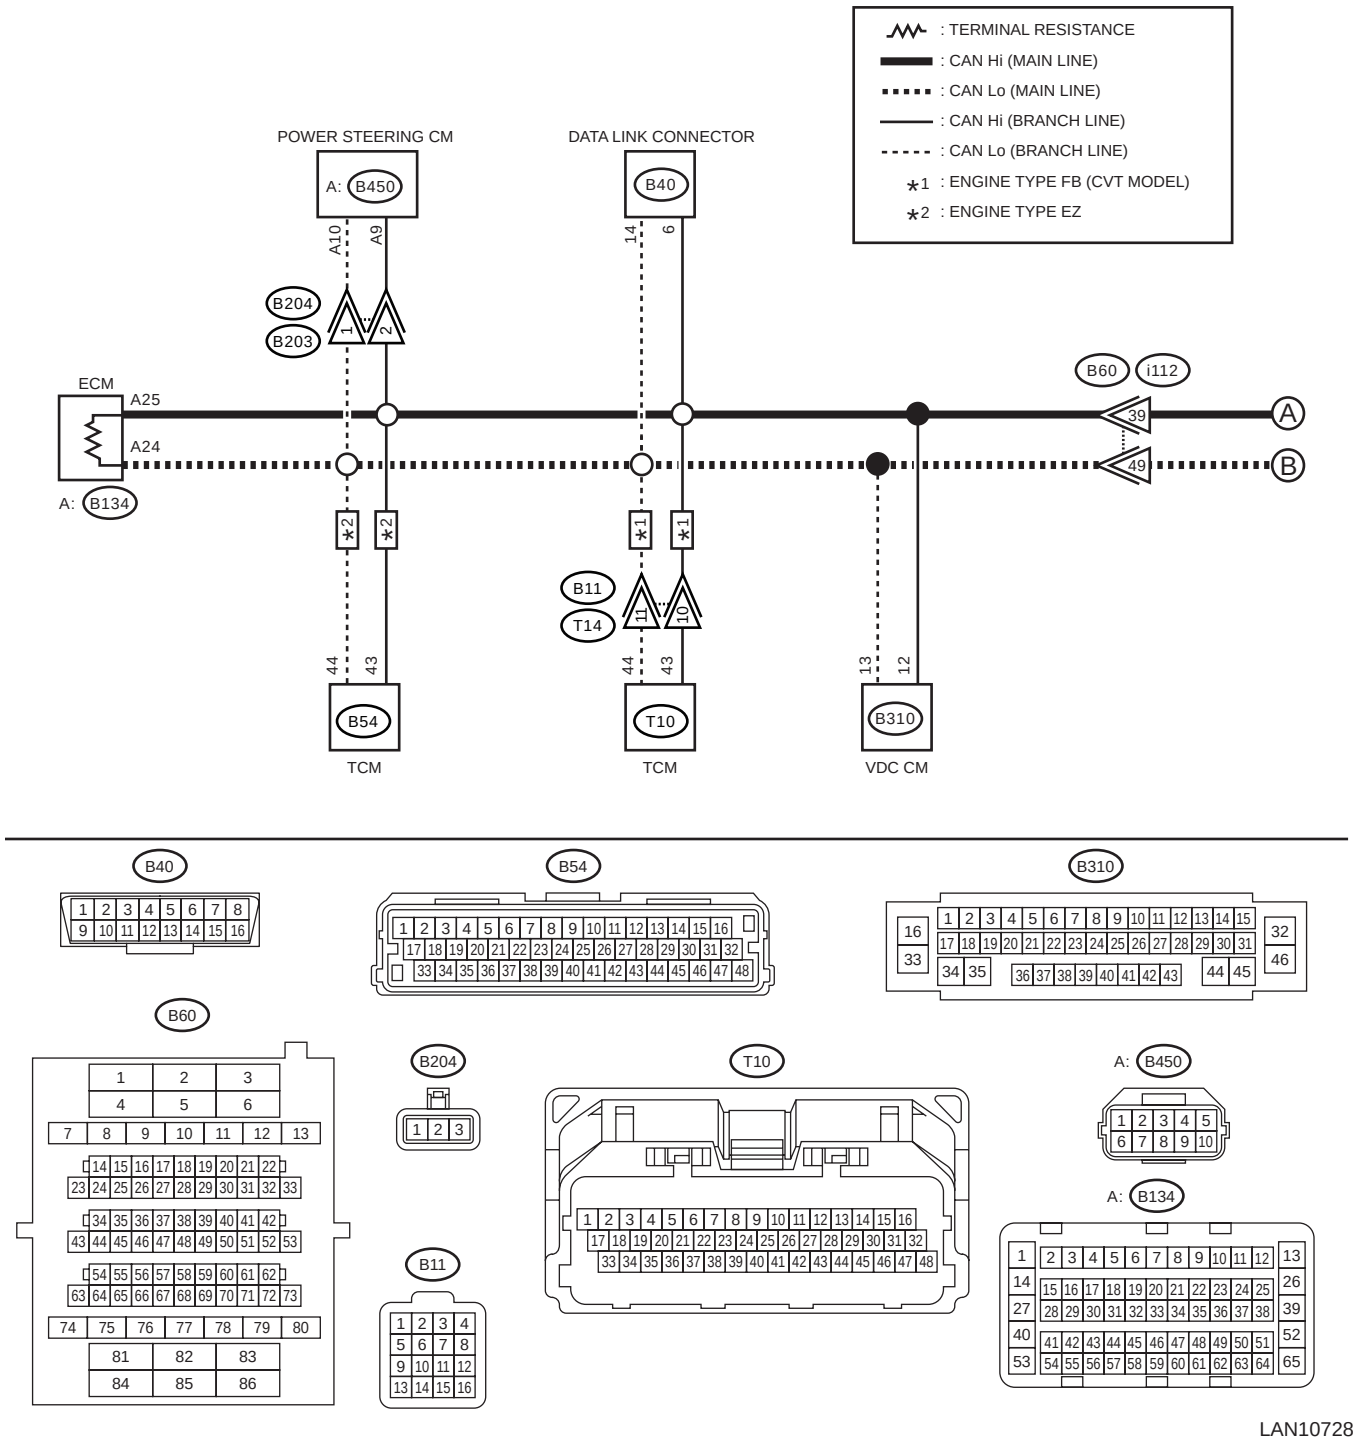
- BODY-CAN



LAN10730

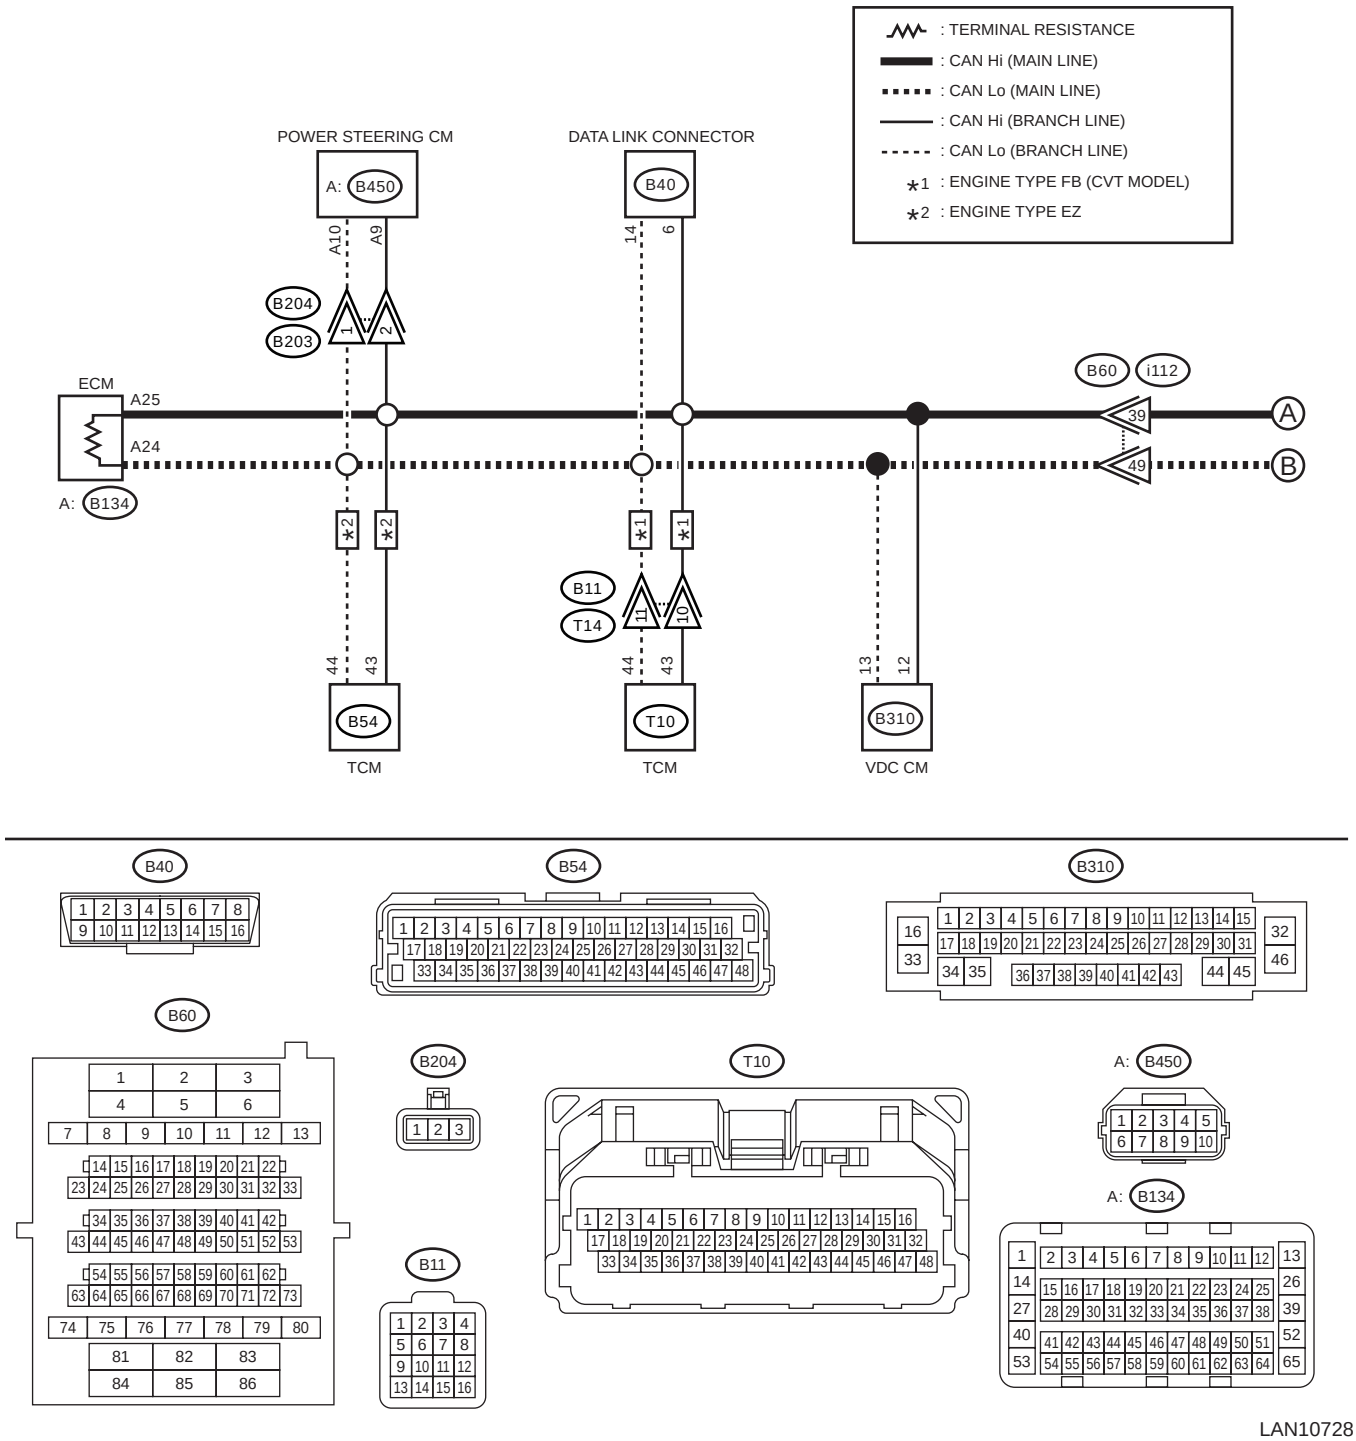
	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the DCM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i270) No. 6 — No. 16:*** ***(i270) No. 7 — No. 17:***	Is the resistance 400 Ω or more?	Related lines between DCM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i270) No. 17 — (B40) No. 6:*** ***(i270) No. 7 — (B40) No. 14:*** ***(i270) No. 6 — (i188) No. 5:*** ***(i270) No. 16 — (i188) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of telematics system related lines.	The communication harness is normal. Check DTC of the telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>

21.RELATED LINES 53 — 61 Ω (RAB)

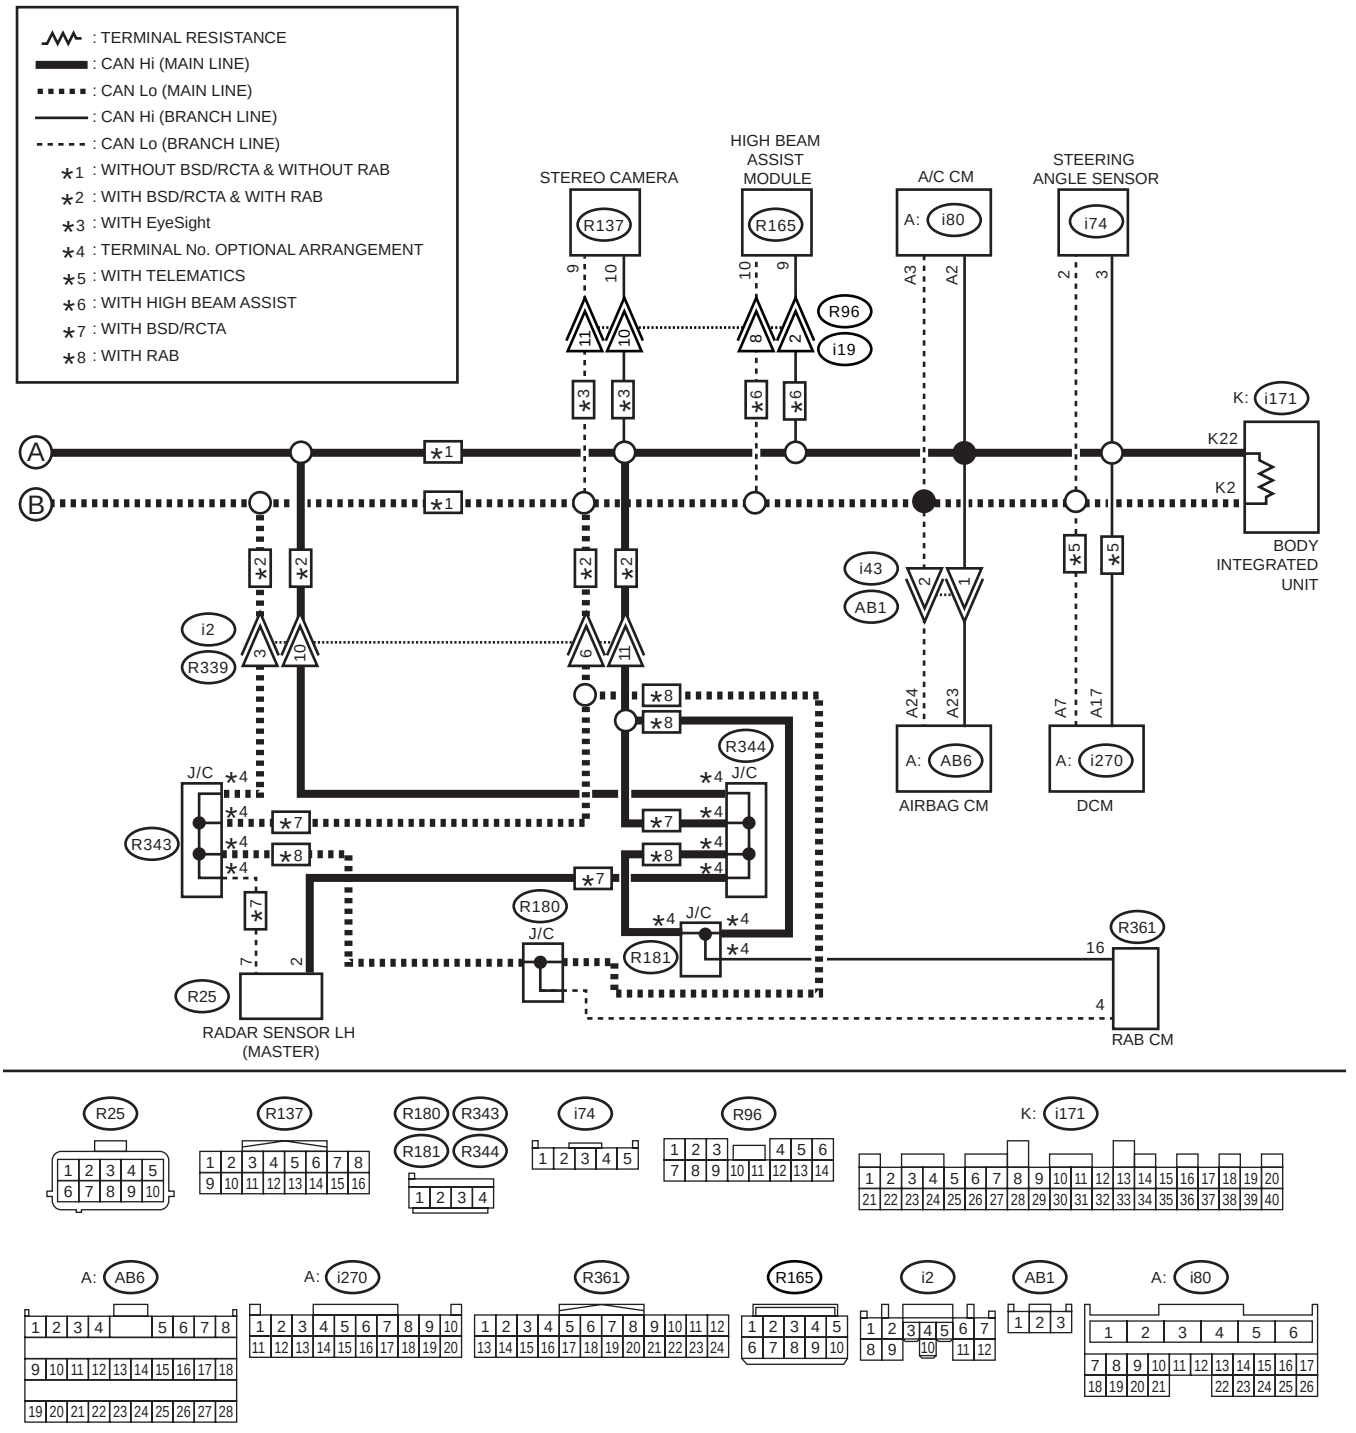
Wiring diagram:

CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>

LAN10729



Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the RAB CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal (R361) No. 4 — No. 16:***	Is the resistance 400 Ω or more?	Related lines between RAB CM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.



Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R361) No. 4 — (B40) No. 14:*** ***(R361) No. 16 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of RAB related lines.	The communication harness is normal. Check DTC of RAB. <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>

22.RELATED LINES 53 — 61 Ω (HBA)

Wiring diagram:

CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>

Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the HBA module connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal (R165) No. 9 — No. 10:***	Is the resistance 400 Ω or more?	Related lines between HBA module and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.

Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R165) No. 10 — (B40) No. 14:*** ***(R165) No. 9 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of HBA related lines.	The communication harness is normal. Check DTC of body integrated unit. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>

11.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Note
U0073	CONTROL MODULE COMMUNICATION BUS OFF	<Ref. to LAN(diag)-132, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. CHECK USING THE DTC CHECK SHEET

- DTC check sheet for data non-arrival detection

| | (A) | (C) (B) | | | (C) | | | | | | | | | | | | | | | | | | | | | (D) | | | | | | | | | | | | | | | | | | |

	Step	Check	Yes	No
2	**CHECK DTC (BUS OFF DETECTION / DATA NOT RECEIVED).** Check the DTC. NOTE: It becomes impossible for CAN diagnostic module to read DTC, if there is a current malfunction of open harness (data not received). If this occurs, perform the “Check using the check sheet of communication for initializing” <Ref. to LAN(diag)-14, CHECK USING THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>, and use this check sheet to confirm that the corresponding part becomes the past malfunction.	Is DTC bus off or data not received?	Go to step **3**.	Perform the diagnosis for the displayed DTCs.
3	**CHECK DTC (BUS OFF DETECTION / DATA NOT RECEIVED).** Mark “X” in the field corresponding to the DTCs that has been detected by each module in the DTC check sheet.	Were all the corresponding field in the DTC check sheet filled?	Go to step **4**.	Fill all the corresponding field in the DTC check sheet, Go to step **4**.
4	**CHECK CAN COMMUNICATION LINE.** Check the CAN communication line by referring to the example of DTC data not received.	Is CAN communication line faulty?	Repair or replace the faulty portion of the harness.	Perform the diagnosis for the displayed DTCs.

2. EXAMPLE OF DTC DATA NOT RECEIVED

LAN10733

- Vicinity of No. 24 steering angle sensor

| | (A) | (B) | | | (C) | | | | | | | | | | | | | | | | | | | | | (D) | | | | | | | | | | | | | | | | | | |

- Vicinity of No. 28 HBA unit

| | (A) | (B) | | | (C) | | | | | | | | | | | | | | | | | | | | | | (D) | | | | | | | | | | | | | | | | | | |

12.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

DTC detecting condition:
Integrated unit communication is shut down because of high speed CAN error.
Trouble symptom:
CAN communication is not normal.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Using the Subaru Select Monitor, read DTC of CAN system.	Is U0073 a current malfunction?	Go to step **3**.	It may be a temporary poor contact. Perform the clear memory.
3	**CHECK CAN COMMUNICATION CIRCUIT.** Check CAN communication circuit. <Ref. to LAN(diag)-46, PROCEDURE, CAN Communication Circuit Check.>	Is CAN communication circuit faulty?	Repair the faulty portion, following the diagnosis procedure.	Go to step **4**.
4	**CHECK DTC.** 1) Perform the inspection using the DTC check sheet. <Ref. to LAN(diag)-127, CHECK USING THE DTC CHECK SHEET, LIST, List of Diagnostic Trouble Code (DTC).> 2) Using the Subaru Select Monitor, read DTC of CAN system.	Is U0073 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Disconnect the control modules other than body integrated unit in order. NOTE: When disconnecting ECM or VDC CM, connect resistance of 120 Ω between CAN Hi and CAN Lo as an alternative of end resistance. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of CAN system.	Is there any control module that U0073 is not detected as current malfunction?	Replace the control module.	Repeat 1) to 4) in step 3 until U0073 is not detected.

B: DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF

DTC detecting condition:
Integrated unit communication is shut down because of high speed CAN error.
Trouble symptom:
CAN communication is not normal.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Using the Subaru Select Monitor, read DTC of CAN system.	Is U0074 a current malfunction?	Go to step **3**.	It may be a temporary poor contact. Perform the clear memory.
3	**CHECK CAN COMMUNICATION CIRCUIT.** Check CAN communication circuit. <Ref. to LAN(diag)-46, PROCEDURE, CAN Communication Circuit Check.>	Is CAN communication circuit faulty?	Repair the faulty portion, following the diagnosis procedure.	Go to step **4**.
4	**CHECK DTC.** 1) Perform the inspection using the DTC check sheet. <Ref. to LAN(diag)-127, CHECK USING THE DTC CHECK SHEET, LIST, List of Diagnostic Trouble Code (DTC).> 2) Using the Subaru Select Monitor, read DTC of CAN system.	Is U0074 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Disconnect the control modules other than body integrated unit in order. NOTE: When disconnecting ECM or VDC CM, connect resistance of 120 Ω between CAN Hi and CAN Lo as an alternative of end resistance. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of CAN system.	Is there any control module that U0074 is not detected as current malfunction?	Replace the control module.	Repeat 1) to 4) in step 3 until U0074 is not detected.

C: DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A"

DTC detecting condition:
No data is received from ECM.
Trouble symptom:
Cooperation control of transmission may not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0100 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-46, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor.	Is U0100 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the engine data no-receive detected in several modules?	Replace the ECM. <Ref. to FU(H4DO)-82, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, Engine Control Module (ECM).>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0100 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

D: DTC U0101 LOST COMMUNICATION WITH TCM

DTC detecting condition:
No data is received from TCM.
Trouble symptom:
Cooperation control with transmission is not performed.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0101 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-46, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0101 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the transmission data no-receive detected in several modules?	Replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0101 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

E: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

DTC detecting condition:
No data is received from VDC CM.
Trouble symptom:
ABS warning light and VDC warning light illuminate.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0122 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-46, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0122 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the VDC data no-receive detected in several modules?	Replace the VDC CM. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0122 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

F: DTC U0126 LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE

DTC detecting condition:
No data is received from steering angle sensor.
Trouble symptom:
VDC CM does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0126 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-46, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0126 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the steering angle sensor data no-receive detected in several modules?	Replace the steering angle sensor. <Ref. to VDC-27, Steering Angle Sensor.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0126 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

G: DTC U0128 LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE

DTC detecting condition:
No data is received from VDC CM.
Trouble symptom:
ABS warning light and VDC warning light illuminate.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0128 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-46, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0128 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the electronic parking data no-receive detected in several modules?	Replace the VDC CM. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0128 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

H: DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE

DTC detecting condition:
No data is received from power steering CM.
Trouble symptom:
Cooperation control with power steering CM does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0131 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-46, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0131 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the electric power steering data no-receive detected in several modules?	Replace the power steering CM. <Ref. to PS-48, Power Steering Control Module.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0131 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

I: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

DTC detecting condition:
No data is received from body integrated unit.
Trouble symptom:
Cooperation control with body integrated unit does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0140 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-46, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0140 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the body integrated data no-receive detected in several modules?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0140 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

J: DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE

DTC detecting condition:
No data is received from airbag CM.
Trouble symptom:
Cooperation control with airbag CM does not operate properly.

CAUTION:
When checking the airbag system, refer to the cautions regarding the airbag system prior to the inspection. <Ref. to AB-10, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0151 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-46, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0151 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the airbag data no-receive detected in several modules?	Replace the airbag CM. <Ref. to AB-51, Airbag Control Module.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0151 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

K: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

DTC detecting condition:
No data is received from combination meter.
Trouble symptom:
Display of combination meter does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0155 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-46, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0155 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the meter data no-receive detected in several modules?	Replace the meter. <Ref. to IDI-11, Combination Meter.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0155 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

L: DTC U0162 LOST COMMUNICATION WITH AUDIO VISUAL NAVIGATION DISPLAY MODULE

DTC detecting condition:
No data is received from audio or navigation.
Trouble symptom:
The audio or navigation does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0162 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-46, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0162 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the AVN data no-receive detected in several modules?	Replace the audio or navigation. <Ref. to ET-24, Audio.> <Ref. to ET-48, Navigation Body.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0162 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

M: DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE

DTC detecting condition:
No data is received from A/C control panel.
Trouble symptom:
Cooperation control of air conditioner does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0164 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-46, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0164 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the air conditioner data no-receive detected in several modules?	Replace the A/C control panel. <Ref. to AC-49, Control Panel.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0164 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

N: DTC U0167 LOST COMMUNICATION WITH IMMOBILIZER CONTROL MODULE

DTC detecting condition:
No data is received from immobilizer CM.
Trouble symptom:
Immobilizer does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0167 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-46, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0167 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the immobilizer data no-receive detected in several modules?	Replace the immobilizer CM. <Ref. to SL-90, Immobilizer Control Module.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0167 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

O: DTC U0181 LOST COMMUNICATION WITH HEADLAMP LEVELING CONTROL MODULE

DTC detecting condition:
No data is received from auto headlight beam leveler CM.
Trouble symptom:
Coordination control of auto headlight beam leveler CM does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0181 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-46, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0181 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the auto headlight beam leveler data no-receive detected in several modules?	Replace the auto headlight beam leveler CM or SRF CM. <Ref. to LI-80, Auto Headlight Beam Leveler Control Module.> <Ref. to LI-88, Steering Responsive Fog Lights CM.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0181 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

P: DTC U0327 SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE

DTC detecting condition:
No data is received from keyless access CM.
Trouble symptom:
Cooperation control of keyless access does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0327 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-46, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0327 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC (CURRENT MALFUNCTION).** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the smart data no-receive detected in several modules?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0327 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

Q: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”

DTC detecting condition:
Defective data from ECM.
Trouble symptom:
Defective data on CAN communication occurs.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0401 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0401 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the engine data abnormal detected in several modules?	Replace the ECM. <Ref. to FU(H4DO)-82, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, Engine Control Module (ECM).>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0401 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

R: DTC U0402 INVALID DATA RECEIVED FROM TCM

DTC detecting condition:
Received error data from TCM.
Trouble symptom:
Sport indicator light blinks.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0402 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0402 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the transmission data abnormal detected in several modules?	Replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0402 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

S: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

DTC detecting condition:
Data from VDC CM is faulty.
Trouble symptom:
ABS warning light and VDC warning light illuminate.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0416 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the VDC CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0416 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the VDC data abnormal detected in several modules?	Replace the VDC CM. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0416 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

T: DTC U0417 INVALID DATA RECEIVED FROM PARK BRAKE CONTROL MODULE

DTC detecting condition:
Data from VDC CM is faulty.
Trouble symptom:
ABS warning light and VDC warning light illuminate.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0417 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the VDC CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0417 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the electronic parking data abnormal detected in several modules?	Replace the VDC CM. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0417 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

U: DTC U0420 INVALID DATA RECEIVED FROM POWER STEERING CONTROL MODULE

DTC detecting condition:
Defective data was transmitted from EPS CM.
Trouble symptom:
Cooperation control with EPS CM does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0420 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the power steering CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0420 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the electric power steering data abnormal detected in several modules?	Replace the power steering CM. <Ref. to PS-48, Power Steering Control Module.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0420 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

V: DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

DTC detecting condition:
Defective data was transmitted from body integrated unit.
Trouble symptom:
Cooperation control with body integrated unit does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0422 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0422 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the body integrated data abnormal detected in several modules?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0422 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

W: DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

DTC detecting condition:
Defective data was transmitted from combination meter.
Trouble symptom:
Display of combination meter does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0423 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the combination meter connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0423 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the meter data abnormal detected in several modules?	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0423 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

X: DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE

DTC detecting condition:
Defective data was transmitted from A/C control panel.
Trouble symptom:
Cooperation control of air conditioner does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0424 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the A/C control panel connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0424 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the air conditioner data abnormal detected in several modules?	Replace the A/C control panel. <Ref. to AC-49, Control Panel.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0424 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

Y: DTC U0426 INVALID DATA RECEIVED FROM IMMOBILIZER CONTROL MODULE

DTC detecting condition:
Invalid data was transmitted from immobilizer CM.
Trouble symptom:
Immobilizer does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0426 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the immobilizer CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0426 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the immobilizer data abnormal detected in several modules?	Replace the immobilizer CM. <Ref. to SL-90, Immobilizer Control Module.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0426 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

Z: DTC U0427 INVALID DATA RECEIVED FROM VEHICLE SECURITY CONTROL MODULE

DTC detecting condition:
Defective data was transmitted from keyless access CM.
Trouble symptom:
Cooperation control of keyless access does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0427 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the keyless access CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0427 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the smart data abnormal detected in several modules?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0427 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AA:DTC U0428 INVALID DATA RECEIVED FROM STEERING ANGLE SENSOR MODULE

DTC detecting condition:
Defective data was transmitted from steering angle sensor.
Trouble symptom:
VDC CM does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0428 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the steering angle sensor connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0428 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the steering angle sensor data abnormal detected in several modules?	Replace the steering angle sensor. <Ref. to VDC-27, Steering Angle Sensor.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0428 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AB:DTC U0452 INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE

DTC detecting condition:
Invalid data was transmitted from airbag CM.
Trouble symptom:
The airbag does not operate normally.

CAUTION:
When checking the airbag system, refer to the cautions regarding the airbag system prior to the inspection. <Ref. to AB-10, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0452 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the airbag CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0452 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the airbag CM data abnormal detected in several modules?	Replace the airbag CM. <Ref. to AB-51, Airbag Control Module.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0452 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AC:DTC U0482 INVALID DATA RECEIVED FROM HEADLAMP LEVELING CONTROL MODULE

DTC detecting condition:
Invalid data was transmitted from auto headlight beam leveler CM.
Trouble symptom:
The auto headlight beam leveler does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0482 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the auto headlight beam leveler CM or SRF CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0482 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the auto headlight beam leveler data error detected in several modules?	Replace the auto headlight beam leveler CM or SRF CM. <Ref. to LI-80, Auto Headlight Beam Leveler Control Module.> <Ref. to LI-88, Steering Responsive Fog Lights CM.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U0482 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AD:DTC U1073 CONTROL MODULE COMMUNICATION BUS "SONAR-CAN" OFF

DTC detecting condition:
RAB CM communication is shut down because of high speed CAN error.
Trouble symptom:
CAN communication is not normal.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Using the Subaru Select Monitor, read DTC of CAN system.	Is U1073 a current malfunction?	Go to step **3**.	It may be a temporary poor contact. Perform the clear memory.
3	**CHECK CAN COMMUNICATION CIRCUIT.** Check CAN communication circuit. <Ref. to LAN(diag)-46, PROCEDURE, CAN Communication Circuit Check.>	Is CAN communication circuit faulty?	Repair the faulty portion, following the diagnosis procedure.	Go to step **4**.
4	**CHECK DTC.** 1) Perform the inspection using the DTC check sheet. <Ref. to LAN(diag)-127, CHECK USING THE DTC CHECK SHEET, LIST, List of Diagnostic Trouble Code (DTC).> 2) Using the Subaru Select Monitor, read DTC of CAN system.	Is U1073 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Disconnect the control modules other than body integrated unit in order. NOTE: When disconnecting ECM or VDC CM, connect resistance of 120 Ω between CAN Hi and CAN Lo as an alternative of end resistance. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of CAN system.	Is there any control module that U1073 is not detected as a current malfunction?	Replace the control module.	Repeat 1) to 4) in step 3 until U1073 is not detected.

AE:DTC U111F <HBA>LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

DTC detecting condition:
No data from VDC is received.
Trouble symptom:
HBA does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U111F a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-46, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U111F a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the VDC data no-receive detected in several modules?	Replace the VDC CM. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U111F a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AF:DTC U1140 LOST COMMUNICATION WITH BODY CONTROL MODULE BODY-CAN

DTC detecting condition:
No data is received from body integrated unit.
Trouble symptom:
Cooperation control with body integrated unit does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U1140 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-46, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U1140 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the body integrated data no-receive detected in several modules?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U1140 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AG:DTC U1145 <HBA>LOST COMMUNICATION WITH BODY CONTROL MODULE

DTC detecting condition:
No data is received from body integrated unit.
Trouble symptom:
HBA does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U1145 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-46, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U1145 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the body integrated data no-receive detected in several modules?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U1145 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AH:DTC U115A <HBA>LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

DTC detecting condition:
No data is received from combination meter.
Trouble symptom:
HBA does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U115A a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-46, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U115A a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the meter data no-receive detected in several modules?	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U115A a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AI: DTC U1232 LOST COMMUNICATION WITH REAR/SIDE RADAR CONTROL MODULE

DTC detecting condition:
No data is received from radar sensor.
Trouble symptom:
Cooperation control of radar sensor does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U1232 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-46, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U1232 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the Subaru Rear Vehicle Detection data no-receive detected in several modules?	Replace the radar sensor LH. <Ref. to RVD-6, Radar Sensor.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U1232 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AJ:DTC U1233 LOST COMMUNICATION WITH RAB CONTROL MODULE

DTC detecting condition:
No data is received from RAB CM.
Trouble symptom:
Coordination control of RAB CM does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U1233 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-46, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U1233 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the sonar data no-receive detected in several modules?	Replace the RAB CM.	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U1233 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AK:DTC U1235 LOST COMMUNICATION WITH EyeSight

DTC detecting condition:
No data from stereo camera is received.
Trouble symptom:
Cooperation control of EyeSight does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U1235 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U1235 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the EyeSight data no-receive detected in several modules?	Replace the stereo camera. <Ref. to ES-8, Stereo Camera.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U1235 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AL:DTC U123C LOST COMMUNICATION WITH HIGH BEAM ASSIST CONTROL MODULE

DTC detecting condition:
No data is received from HBA module.
Trouble symptom:
HBA does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U123C a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U123C a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the HBA data no-receive detected in several modules?	Replace the HBA module. <Ref. to GW-67, Rearview Mirror.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U123C a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AM:DTC U141A <HBA>INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

DTC detecting condition:
Data from VDC CM is faulty.
Trouble symptom:
HBA does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U141A a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the VDC CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U141A a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the VDC data abnormal detected in several modules?	Replace the VDC CM. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U141A a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AN:DTC U1422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE BODY-CAN

DTC detecting condition:
Defective data was transmitted from body integrated unit.
Trouble symptom:
Cooperation control with body integrated unit does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U1422 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U1422 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the body integrated data abnormal detected in several modules?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U1422 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AO:DTC U142A <HBA>INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

DTC detecting condition:
Data from the combination meter is not normal.
Trouble symptom:
HBA does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U142A a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the combination meter connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U142A a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the meter data abnormal detected in several modules?	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U142A a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AP:DTC U1433 INVALID DATA RECEIVED FROM EyeSight

DTC detecting condition:
Defective data was transmitted from stereo camera.
Trouble symptom:
Cooperation control of EyeSight does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U1433 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the stereo camera connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U1433 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the EyeSight data abnormal detected in several modules?	Replace the stereo camera. <Ref. to ES-8, Stereo Camera.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U1433 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AQ:DTC U1446 <HBA>INVALID DATA RECEIVED FROM BODY CONTROL MODULE

DTC detecting condition:
Defective data was transmitted from body integrated unit.
Trouble symptom:
HBA does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U1446 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U1446 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the body integrated data abnormal detected in several modules?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U1446 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AR:DTC U1534 INVALID DATA RECEIVED FROM SONAR ECU

DTC detecting condition:
Defective data was transmitted from RAB CM.
Trouble symptom:
Coordination control of RAB CM does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U1534 current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the RAB CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U1534 current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is the sonar invalid data detected in several modules?	Replace the RAB CM.	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U1534 current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AS:DTC U153D INVALID DATA RECEIVED FROM HIGH BEAM ASSIST CONTROL MODULE

DTC detecting condition:
Defective data was transmitted from HBA module.
Trouble symptom:
HBA does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U153D a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the HBA module connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U153D a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is incorrect HBA data detected in several modules?	Replace the HBA module. <Ref. to GW-67, Rearview Mirror.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is U153D a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

13.Diagnostics with Phenomenon

A: LIST

Symptoms	Reference
DTC other than U-code is displayed.	<Ref. to LAN(diag)-178, DTC OTHER THAN U-CODE IS DISPLAYED, INSPECTION, Diagnostics with Phenomenon.>
Faster/slower vehicle speed than the actual speed is displayed.	<Ref. to LAN(diag)-178, FASTER/SLOWER VEHICLE SPEED THAN THE ACTUAL SPEED IS DISPLAYED, INSPECTION, Diagnostics with Phenomenon.>
More/less fuel than the actual amount is displayed.	<Ref. to LAN(diag)-178, MORE/LESS FUEL THAN THE ACTUAL AMOUNT IS DISPLAYED, INSPECTION, Diagnostics with Phenomenon.>
Fuel level warning light illuminates despite of sufficient fuel.	<Ref. to LAN(diag)-179, FUEL LEVEL WARNING LIGHT ILLUMINATES DESPITE OF SUFFICIENT FUEL, INSPECTION, Diagnostics with Phenomenon.>
Engine coolant temperature light blinks in red and blue alternately.	<Ref. to LAN(diag)-180, ENGINE COOLANT TEMPERATURE LIGHT BLINKS IN RED AND BLUE ALTERNATELY, INSPECTION, Diagnostics with Phenomenon.>
[S], [I] or [S#] indicator is blinking.	<Ref. to LAN(diag)-180, [S], [I] OR [S#] INDICATOR IS BLINKING, INSPECTION, Diagnostics with Phenomenon.>
The VDC warning light illuminates.	<Ref. to LAN(diag)-181, THE VDC WARNING LIGHT ILLUMINATES, INSPECTION, Diagnostics with Phenomenon.>
VDC-OFF indicator illuminates.	<Ref. to LAN(diag)-181, VDC-OFF INDICATOR ILLUMINATES, INSPECTION, Diagnostics with Phenomenon.>
Brake warning light illuminates.	<Ref. to LAN(diag)-182, BRAKE WARNING LIGHT ILLUMINATES, INSPECTION, Diagnostics with Phenomenon.>
Shift position is not displayed.	<Ref. to LAN(diag)-182, SHIFT POSITION IS NOT DISPLAYED, INSPECTION, Diagnostics with Phenomenon.>
AT oil temperature warning light is blinking.	<Ref. to LAN(diag)-183, AT OIL TEMPERATURE WARNING LIGHT IS BLINKING, INSPECTION, Diagnostics with Phenomenon.>
Door indicator is not displayed.	<Ref. to LAN(diag)-183, DOOR INDICATOR IS NOT DISPLAYED, INSPECTION, Diagnostics with Phenomenon.>
Clearance indicator does not illuminate.	<Ref. to LAN(diag)-184, CLEARANCE INDICATOR DOES NOT ILLUMINATE, INSPECTION, Diagnostics with Phenomenon.>
HI beam indicator does not illuminate.	<Ref. to LAN(diag)-184, HI BEAM INDICATOR DOES NOT ILLUMINATE, INSPECTION, Diagnostics with Phenomenon.>
Front fog light indicator does not illuminate.	<Ref. to LAN(diag)-185, FRONT FOG LIGHT INDICATOR DOES NOT ILLUMINATE, INSPECTION, Diagnostics with Phenomenon.>
Illumination is fixed at the maximum brightness.	<Ref. to LAN(diag)-185, ILLUMINATION IS FIXED AT THE MAXIMUM BRIGHTNESS, INSPECTION, Diagnostics with Phenomenon.>
Cruise control indicator does not illuminate.	<Ref. to LAN(diag)-186, CRUISE CONTROL INDICATOR DOES NOT ILLUMINATE, INSPECTION, Diagnostics with Phenomenon.>
AWD indicator illuminates.	<Ref. to LAN(diag)-186, AWD INDICATOR ILLUMINATES, INSPECTION, Diagnostics with Phenomenon.>
Hill hold indicator does not illuminate.	<Ref. to LAN(diag)-187, HILL HOLD INDICATOR DOES NOT ILLUMINATE, INSPECTION, Diagnostics with Phenomenon.>

B: INSPECTION

1. DTC OTHER THAN U-CODE IS DISPLAYED

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is DTC other than U-code displayed.	Perform the diagnosis for DTC other than the U-code.	Perform trouble-shooting according to phenomenon of the problem. (If no phenomenon of the problem is present, it is normal currently.)

2. FASTER/SLOWER VEHICLE SPEED THAN THE ACTUAL SPEED IS DISPLAYED

	Step	Check	Yes	No
1	**CHECK THE ACTUAL VEHICLE SPEED.** Check that the vehicle speed indicated in the meter matches with the actual vehicle speed.	Does the vehicle speed match?	Currently, it is normal.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** Read DTC of combination meter. <Ref. to MET(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK SPEEDOMETER.** Connect the Subaru Select Monitor, and perform forced operation of the speedometer with «Active Test» for the combination meter. <Ref. to MET(diag)-15, System Operation Check Mode.>	Do the indicated vehicle speed on Subaru Select Monitor and the speedometer indication match?	Perform a unit inspection for the vehicle speed sensor.	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

3. MORE/LESS FUEL THAN THE ACTUAL AMOUNT IS DISPLAYED

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read DTC of combination meter. <Ref. to MET(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is «DTC B1500 FUEL SENDER OPEN/SHORT-CIRCUIT DETECTION» displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK FUEL GAUGE.** Connect the Subaru Select Monitor, and perform forced operation of the fuel gauge with «Active Test» for the combination meter. <Ref. to MET(diag)-15, System Operation Check Mode.>	Do the indicated amount on Subaru Select Monitor and the fuel gauge indication match?	Perform a unit inspection for the fuel sub level sensor and the fuel level sensor. <Ref. to FU(H4DO)-124, Fuel Sub Level Sensor.> <Ref. to FU(H4DO)-121, Fuel Level Sensor.> <Ref. to FU(H6DO)-128, Fuel Sub Level Sensor.> <Ref. to FU(H6DO)-125, Fuel Level Sensor.>	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

4. FUEL LEVEL WARNING LIGHT ILLUMINATES DESPITE OF SUFFICIENT FUEL

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read DTC of combination meter. <Ref. to MET(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is «DTC B1500 FUEL SENDER OPEN/SHORT-CIRCUIT DETECTION» displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK FUEL LEVEL WARNING LIGHT.** Connect the Subaru Select Monitor, and perform forced operation of the fuel level warning light with «Active Test» for the combination meter. <Ref. to MET(diag)-15, System Operation Check Mode.>	Do the indicated amount on Subaru Select Monitor and the fuel level warning light indication match?	Perform a unit inspection for the fuel sub level sensor and the fuel level sensor. <Ref. to FU(H4DO)-124, Fuel Sub Level Sensor.> <Ref. to FU(H4DO)-121, Fuel Level Sensor.> <Ref. to FU(H6DO)-128, Fuel Sub Level Sensor.> <Ref. to FU(H6DO)-125, Fuel Level Sensor.>	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

5. ENGINE COOLANT TEMPERATURE LIGHT BLINKS IN RED AND BLUE ALTERNATELY

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read DTC of engine. <Ref. to EN(H4DO)(diag)-65, Read Diagnostic Trouble Code (DTC).> <Ref. to EN(H6DO)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is any of «DTC P0116 ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE»«DTC P0117 ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT LOW»«DTC P0118 ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT HIGH» displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK THE ENGINE COOLANT TEMPERATURE LIGHT.** Connect the Subaru Select Monitor, and perform forced operation of the engine coolant temperature light with «Active Test» for the combination meter. <Ref. to MET(diag)-15, System Operation Check Mode.>	Do the indicated amount on Subaru Select Monitor and the engine coolant temperature light indication match?	Perform a unit inspection of the engine coolant temperature sensor. <Ref. to FU(H4DO)-43, Engine Coolant Temperature Sensor.> <Ref. to FU(H6DO)-39, Engine Coolant Temperature Sensor.>	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

6. [S], [I] OR [S#] INDICATOR IS BLINKING

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read DTC of engine and combination meter. <Ref. to EN(H4DO)(diag)-65, Read Diagnostic Trouble Code (DTC).> <Ref. to EN(H6DO)(diag)-70, Read Diagnostic Trouble Code (DTC).> <Ref. to MET(diag)-10, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK THE ENGINE COOLANT TEMPERATURE LIGHT.** Connect the Subaru Select Monitor, and perform forced operation of the SI-DRIVE indication with «Active Test» for the combination meter. <Ref. to MET(diag)-15, System Operation Check Mode.>	Do the indicated amount on Subaru Select Monitor and the SI-DRIVE indication match?	Check the engine. <Ref. to EN(H4DO)(diag)-2, Basic Diagnostic Procedure.> <Ref. to EN(H6DO)(diag)-2, Basic Diagnostic Procedure.>	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

7. THE VDC WARNING LIGHT ILLUMINATES

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read DTC of the VDC. <Ref. to VDC(diag)-25, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK VDC WARNING LIGHT.** Connect the Subaru Select Monitor, and perform forced operation of «VDC operation/failure indicator» with «Active Test» for the combination meter. <Ref. to MET(diag)-15, System Operation Check Mode.>	Do the indication on Subaru Select Monitor and indication of «VDC operation/failure indicator» match?	Check the VDC warning light. <Ref. to VDC(diag)-28, Warning Light Illumination Pattern.>	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

8. VDC-OFF INDICATOR ILLUMINATES

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read DTC of the VDC. <Ref. to VDC(diag)-25, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK VDC OFF INDICATOR LIGHT.** Connect the Subaru Select Monitor, and perform forced operation of «VDC OFF indicator» with «Active Test» for the combination meter. <Ref. to MET(diag)-15, System Operation Check Mode.>	Do the indication on Subaru Select Monitor and indication of «VDC OFF indicator» match?	Check the VDC OFF indicator light. <Ref. to VDC(diag)-28, Warning Light Illumination Pattern.>	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

9. BRAKE WARNING LIGHT ILLUMINATES

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read DTC of the VDC. <Ref. to VDC(diag)-25, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK BRAKE WARNING LIGHT.** Connect the Subaru Select Monitor, and perform forced operation of «BRAKE warning» with «Active Test» for the combination meter. <Ref. to MET(diag)-15, System Operation Check Mode.>	Do the indication on Subaru Select Monitor and indication of «BRAKE warning» match?	Check the brake warning light. <Ref. to VDC(diag)-28, Warning Light Illumination Pattern.>	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

10.SHIFT POSITION IS NOT DISPLAYED

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read the DTC of the TCM. <Ref. to CVT(diag)-24, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK SHIFT INDICATOR.** Connect the Subaru Select Monitor, and perform forced operation of the shift indicator with «Active Test» for the combination meter. <Ref. to MET(diag)-15, System Operation Check Mode.>	Do the indication on Subaru Select Monitor and the shift indicator indication match?	Check the shift indicator. <Ref. to CVT(diag)-235, Diagnostic Procedure without Diagnostic Trouble Code (DTC).>	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

11.AT OIL TEMPERATURE WARNING LIGHT IS BLINKING

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read the DTC of the TCM. <Ref. to CVT(diag)-24, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK AT OIL TEMP LIGHT.** Connect the Subaru Select Monitor, and perform forced operation of «AT (CVT) oil temperature warning» with «Active Test» for the combination meter. <Ref. to MET(diag)-15, System Operation Check Mode.>	Do the indication on Subaru Select Monitor and indication of «AT (CVT) oil temperature warning» match?	Go to step **4**.	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>
4	**PERFORM CVT LEARNING.** Connect the Subaru Select Monitor and perform the CVT learning. <Ref. to CVT(diag)-32, Learning Control.>	Does the AT oil temperature warning light go off?	Currently, it is normal.	Check the AT OIL TEMP light. <Ref. to CVT(diag)-34, AT OIL TEMP Warning Light Display.>

12.DOOR INDICATOR IS NOT DISPLAYED

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read the DTC of the body integrated unit. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK DOOR INDICATOR.** Connect the Subaru Select Monitor, and perform forced operation of the door indicator with «Active Test» for the combination meter. <Ref. to MET(diag)-15, System Operation Check Mode.>	Do the indication on Subaru Select Monitor and the door indicator indication match?	Go to step **4**.	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>
4	**CHECK DATA MONITOR FOR BODY INTEGRATED UNIT.** Connect the Subaru Select Monitor, and display data monitor of the body integrated unit: «Driver's door SW input»«P-door SW input»«Rear right door SW input»«Rear left door SW input». <Ref. to BC(diag)-25, Read Current Data.>	Do the door open/close and data indication match?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Inspect door switch circuit. <Ref. to SL-18, INSPECTION, Keyless Entry System.>

13.CLEARANCE INDICATOR DOES NOT ILLUMINATE

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read the DTC of the body integrated unit. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK CLEARANCE INDICATOR.** Connect the Subaru Select Monitor, and perform forced operation of «Position light indicator» with «Active Test» for the combination meter. <Ref. to MET(diag)-15, System Operation Check Mode.>	Do the indication on Subaru Select Monitor and the clearance indicator indication match?	Go to step **4**.	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>
4	**CHECK DATA MONITOR FOR BODY INTEGRATED UNIT.** Connect the Subaru Select Monitor, and display the data monitor of the body integrated unit: «Lighting I Switch Input». <Ref. to BC(diag)-25, Read Current Data.>	Do the switch operation and data indication match?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Check the clearance light. <Ref. to LI-16, Clearance Light and Illumination Light System.>

14.HI BEAM INDICATOR DOES NOT ILLUMINATE

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read the DTC of the body integrated unit. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK HI BEAM INDICATOR.** Connect the Subaru Select Monitor, and perform forced operation of «High-beam indicator» with «Active Test» for the combination meter. <Ref. to MET(diag)-15, System Operation Check Mode.>	Do the indication on Subaru Select Monitor and the HI beam indicator indication match?	Go to step **4**.	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>
4	**CHECK DATA MONITOR FOR BODY INTEGRATED UNIT.** Connect the Subaru Select Monitor, and display the data monitor of the body integrated unit: «Dimmer Hi Switch Input». <Ref. to BC(diag)-25, Read Current Data.>	Do the switch operation and data indication match?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Check the headlight system. <Ref. to LI-7, Headlight System.>

15.FRONT FOG LIGHT INDICATOR DOES NOT ILLUMINATE

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read the DTC of the body integrated unit. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK THE FRONT FOG LIGHT INDICATOR.** Connect the Subaru Select Monitor, and perform forced operation of «Front fog light indicator» with «Active Test» for the combination meter. <Ref. to MET(diag)-15, System Operation Check Mode.>	Do the indication on Subaru Select Monitor and the front fog light indicator indication match?	Go to step **4**.	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>
4	**CHECK DATA MONITOR FOR BODY INTEGRATED UNIT.** Connect the Subaru Select Monitor, and display the data monitor of the body integrated unit: «Front fog lamp SW input». <Ref. to BC(diag)-25, Read Current Data.>	Do the switch operation and data indication match?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Check the front fog light system. <Ref. to LI-17, Front Fog Light System.>

16.ILLUMINATION IS FIXED AT THE MAXIMUM BRIGHTNESS

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read DTC of combination meter. <Ref. to MET(diag)-10, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK ILLUMINATION.** Connect the Subaru Select Monitor, and perform forced operation of «Illumination check» with «Active Test» for the combination meter. <Ref. to MET(diag)-15, System Operation Check Mode.>	Do the indication on Subaru Select Monitor and the indicator indication match?	Check the clearance light & illumination light system. <Ref. to LI-16, Clearance Light and Illumination Light System.>	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

17.CRUISE CONTROL INDICATOR DOES NOT ILLUMINATE

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **2**.
2	**CHECK DATA MONITOR OF ENGINE.** Display the data monitor of engine «Main Switch» using Subaru Select Monitor. <Ref. to EN(H4DO)(diag)-46, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.> <Ref. to EN(H6DO)(diag)-53, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>	Do the switch operation and data indication match?	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>	Check the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>

18.AWD INDICATOR ILLUMINATES

	Step	Check	Yes	No
1	**CHECK MODE.** Connect the Subaru Select Monitor and change to AWD mode. NOTE: When AWD ON/OFF switching mode is not available, go to step 2.	Did the AWD indicator go off?	Currently, it is normal.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** Read the DTC of the TCM. <Ref. to CVT(diag)-24, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **4**.
4	**CHECK AWD INDICATOR.** Connect the Subaru Select Monitor, and perform forced operation of «AWD warning» with «Active Test» for the combination meter. <Ref. to MET(diag)-15, System Operation Check Mode.>	Do the indication on Subaru Select Monitor and the AWD indicator indication match?	Check the AWD indicator. <Ref. to CVT(diag)-37, AWD Warning Light Display.>	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

19.HILL HOLD INDICATOR DOES NOT ILLUMINATE

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read DTC of the VDC. <Ref. to VDC(diag)-25, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-43, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Check the hill hold indicator light. <Ref. to VDC(diag)-28, Warning Light Illumination Pattern.>

EyeSight

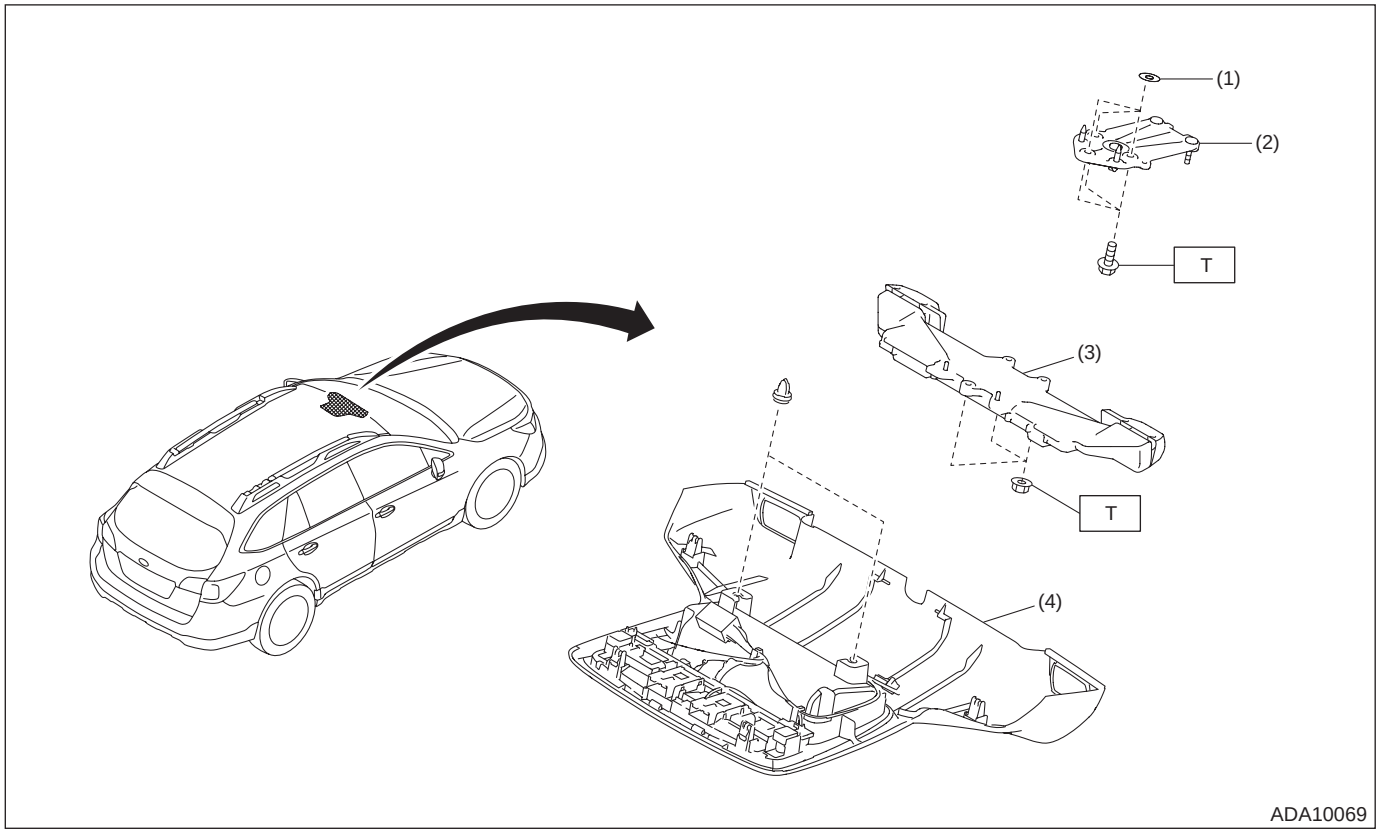
15.	Diagnostics with Phenomenon	43



1. General Description

A: LOCATION

Refer to “LOCATION” of “EyeSight (DIAGNOSTICS)” section. <Ref. to ES(diag)-14, LOCATION, Electrical Component Location.>

B: COMPONENT

1. STEREO CAMERA

(1) Shim (washer)
(2) Camera plate
(3) Stereo camera
(4) Stereo camera cover ASSY

Tightening torque: N·m (kgf-m, ft-lb)
T: 5.5±1 (0.56±0.1, 4.1±0.7)

C: CAUTION

• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
• Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. <Ref. to AB-10, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VSC(VDC) Centering Mode” of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• If the damage is found in the glass repair prohibited area, always replace the glass. Damage, dirt, aftermarket part installation or sticker attachment in the prohibited area can affect the recognition of stereo camera, and thereby the EyeSight function may not operate properly. <Ref. to PC-8, CHECK WINDSHIELD GLASS INCLUDING PROHIBITED AREA FOR MODEL WITH HBA AND EyeSight, CAUTION, Precaution.>
• When the suspension-related components have been removed, installed or replaced, or the wheel alignment is adjusted, perform “Clear Active Lane Keep System Learning Value”. <Ref. to ES(diag)-49, OPERATION, Clear Active Lane Keep System Learning Value.>

D: PREPARATION TOOL

1. SPECIAL TOOL

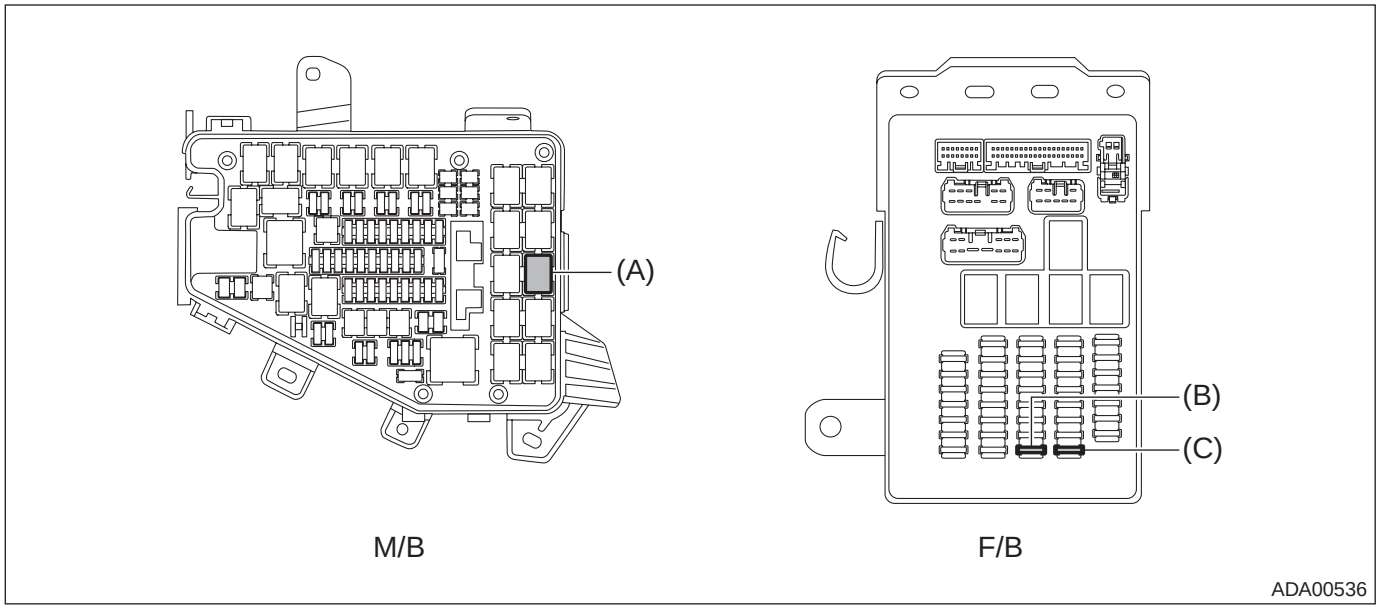


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST87599VA000	87599VA000	RANDOM CHART	Used for adjusting stereo camera.
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Measure (5 m (16 ft) or more)	Used for adjusting stereo camera.
Leveling line	
Plumb bob	
Packing tape	

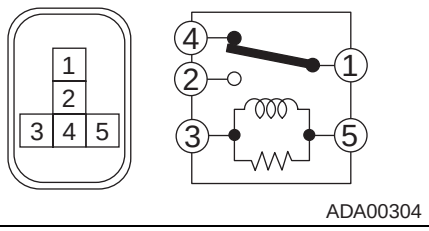
2. Relay and Fuse

A: LOCATION

Main fuse box (M/B)	Brake light relay	(A)
Fuse & relay box (F/B)	Fuse 7.5 A (brake light relay and stop light & brake switch)	(B)
	Fuse 7.5 A (stereo camera)	(C)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-22, Power Supply Circuit.>

B: INSPECTION



1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

2. CHECK RELAY

1) Measure the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	
1 — 4	Always	Less than 1 Ω	
1 — 2	Apply battery voltage between terminals 3 and 5.	Less than 1 Ω	

2) Replace the relay if the inspection result is not within the standard value.

3. EyeSight System

A: WIRING DIAGRAM

Refer to “EyeSight System” in the wiring diagram. <Ref. to WI-232, WIRING DIAGRAM, EyeSight System.>

B: INSPECTION

Refer to “Basic Diagnostic Procedure” of “EyeSight (DIAGNOSTICS)” section. <Ref. to ES(diag)-2, Basic Diagnostic Procedure.>

C: NOTE

For procedure of each component in the EyeSight system, refer to the respective section.

- Control module: <Ref. to ES-7, Control Unit.>

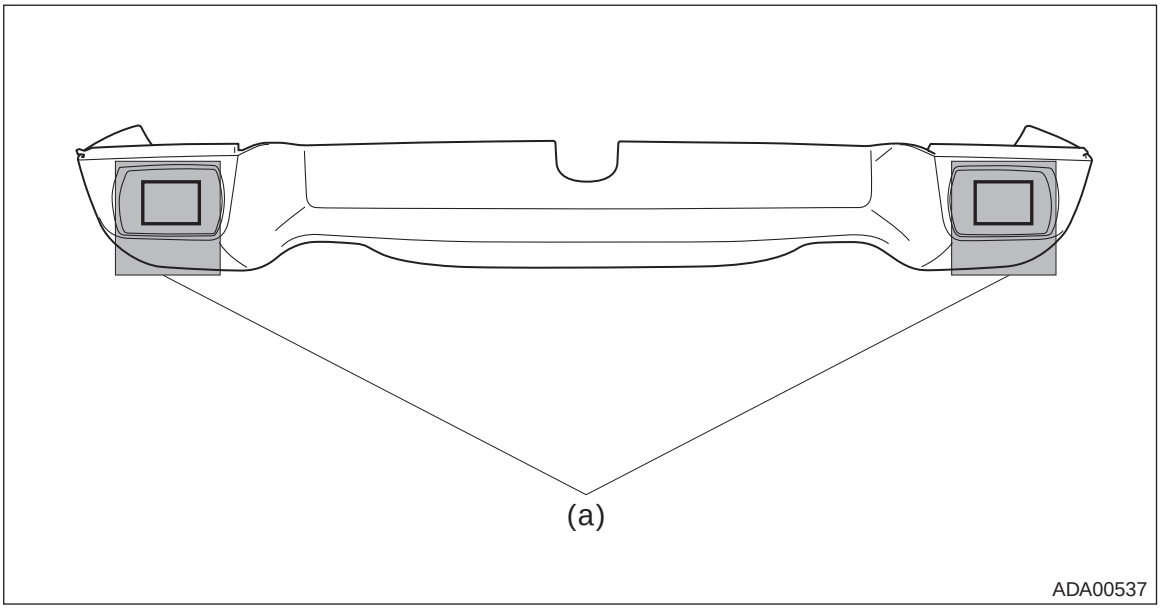
NOTE:
System control of the EyeSight is performed by each module. For procedure, refer to the following sections.

- Engine control module (ECM):
  - H4 model: <Ref. to FU(H4DO)-82, Engine Control Module (ECM).>
  - H6 model: <Ref. to FU(H6DO)-84, Engine Control Module (ECM).>
- Transmission control module (TCM):
  - H4 model: <Ref. to CVT(TR580)-161, Transmission Control Module (TCM).>
  - H6 model: <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>
- VDC control module & hydraulic control unit (VDCCM&H/U): <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- Stereo camera: <Ref. to ES-8, Stereo Camera.>
- Power steering control module: <Ref. to PS-48, Power Steering Control Module.>
- Body integrated unit: <Ref. to SL-84, Body Integrated Unit.>

- Stereo camera: <Ref. to ES-8, Stereo Camera.>
- Combination meter: <Ref. to IDI-11, Combination Meter.>
- Stop light and brake switch: <Ref. to BR-80, Stop Light Switch.>
- Switches and harness: <Ref. to ES-33, Switches and Harness.>
- Roll connector (steering angle sensor): <Ref. to AB-61, Roll Connector.>

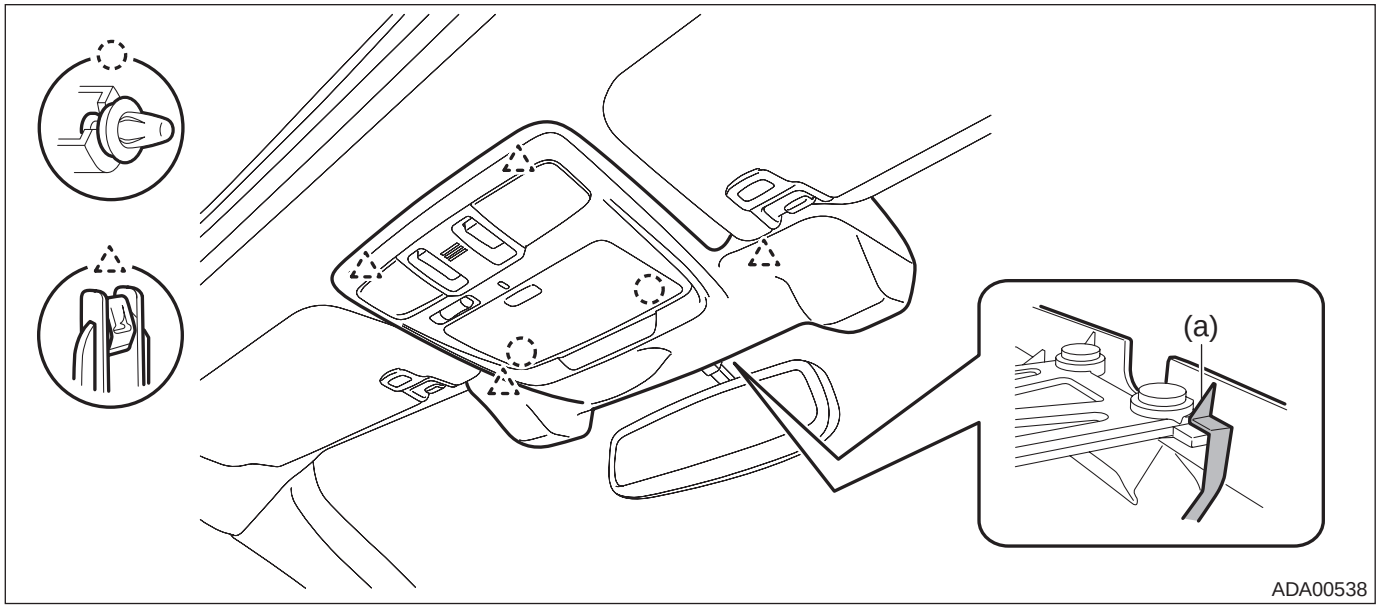
4. Control Unit

A: NOTE



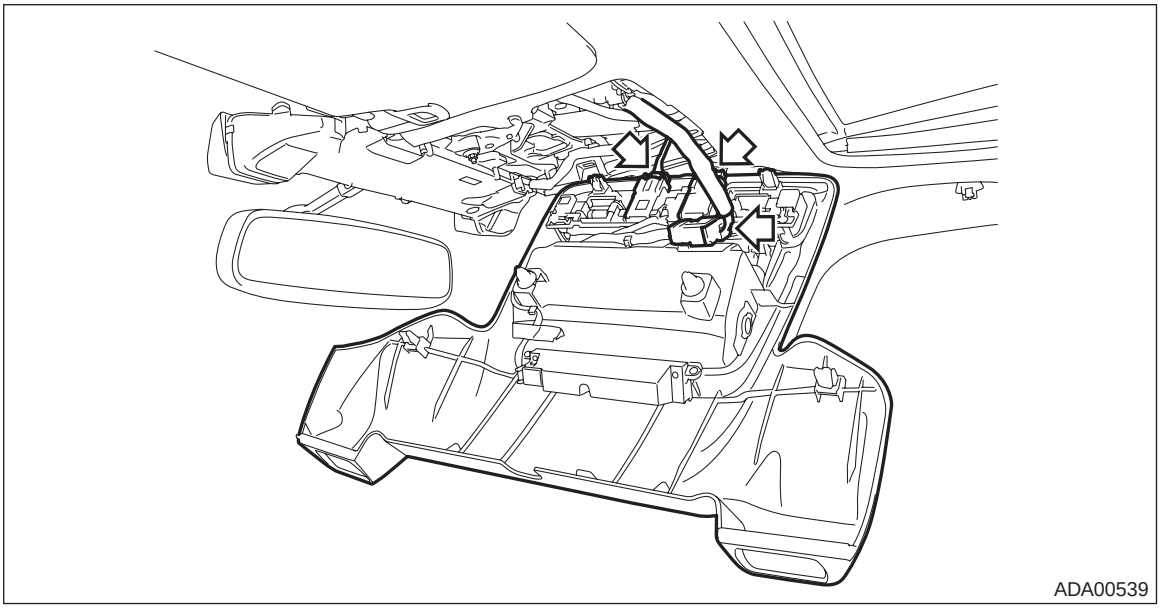
System control of the EyeSight is performed by each module. For procedure, refer to the following sections.

- Engine control module (ECM)
  - H4 model: <Ref. to FU(H4DO)-82, Engine Control Module (ECM).>
  - H6 model: <Ref. to FU(H6DO)-84, Engine Control Module (ECM).>
- Transmission control module (TCM)
  - H4 model: <Ref. to CVT(TR580)-161, Transmission Control Module (TCM).>
  - H6 model: <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>
- VDC control module (VDC CM): <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDC-CM&H/U).>
- Stereo camera: <Ref. to ES-8, Stereo Camera.>
- Power steering control module: <Ref. to PS-48, Power Steering Control Module.>
- Body integrated unit: <Ref. to SL-84, Body Integrated Unit.>



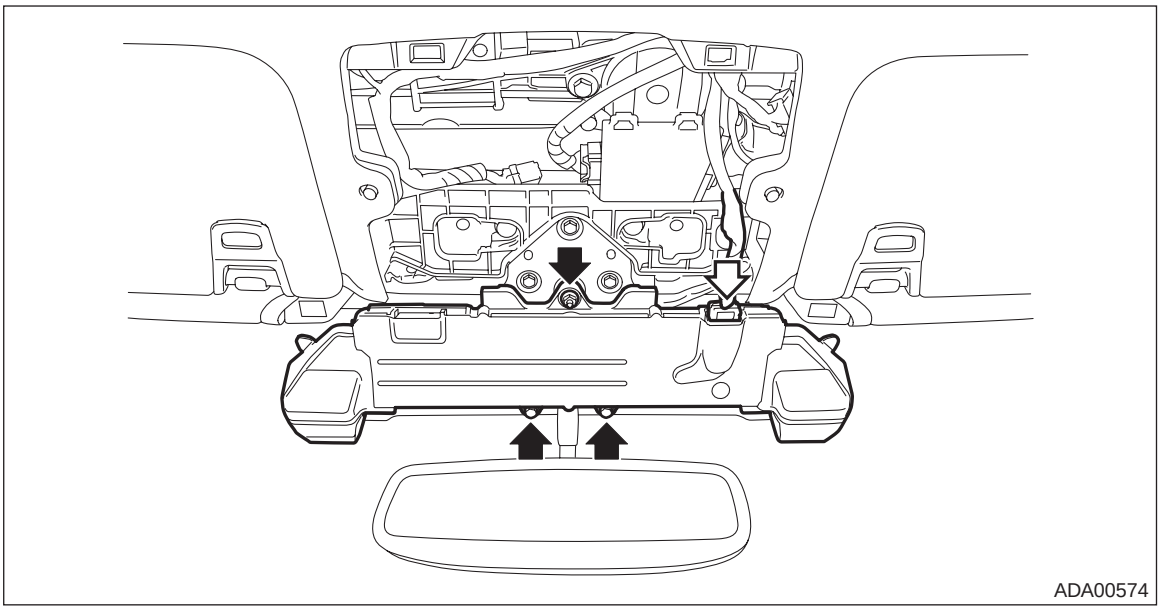
5. Stereo Camera

A: REMOVAL

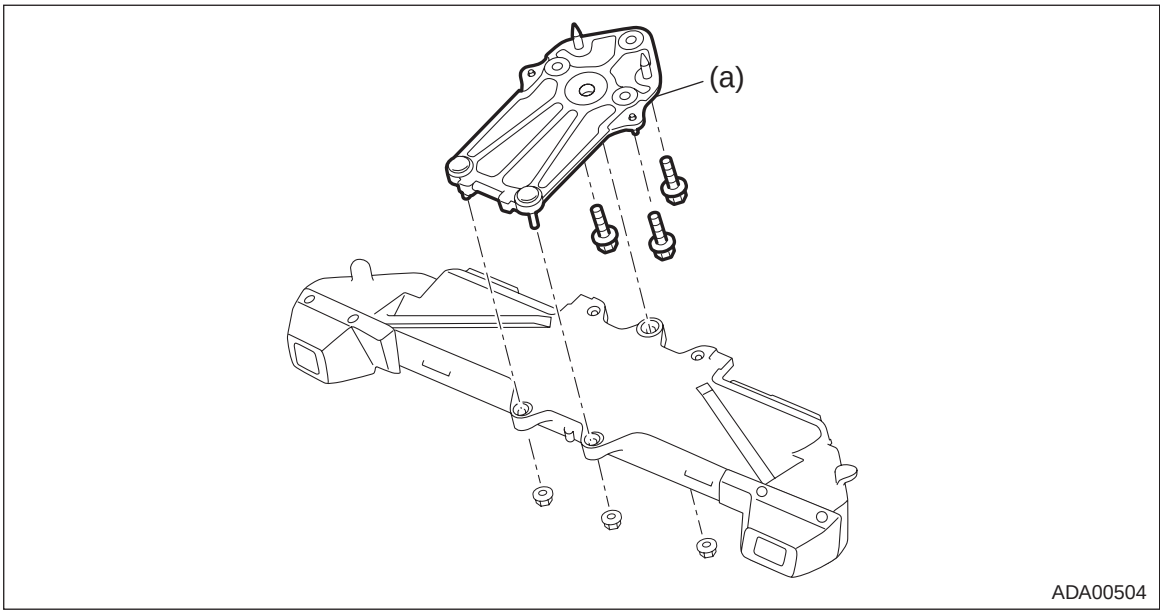


CAUTION:
• When the stereo camera or windshield glass has been replaced, removed or installed, always perform the adjustment and inspection of the camera. (When the stereo camera has been replaced with a new part, the camera remains in a failed state until adjustment and inspection are performed.)
• Since the stereo camera is a precision equipment, install the protective cover before handling it. (New stereo camera is equipped with a protective cover as a service part.)
• During removal, do not hold at the left and right cameras.
• Do not apply any impact to the stereo camera. (Even the slightest shock will deviate the optical axis of the camera, resulting in the loss of normal operation of the camera.)
• Do not disassemble the stereo camera.
• Attach the protective cover to the replacement part, put it into the box in the same way as the other parts and return it. Cover the replaced stereo camera with a protective cover.
• Do not touch the lens filter on the stereo camera. If touched, replace the stereo camera.
• When removing the stereo camera cover assembly, cover with dust-free paper such as copy paper to avoid interference with the lens filter section, and attach the paper using tape while being careful not to let the adhesive surface contact the glass surface. Be sure to remove the paper after the procedure.
Also, do not put your hand on the polyurethane section of the windshield contact surface. Doing so may cause the polyurethane section to be removed, which may interfere with the normal operation if it hangs down in front of the lens filter section.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Attach dust-free paper (a) such as copy paper to the stereo camera cover assembly.

3) Remove the stereo camera cover assembly.
(1) Pull down the stereo camera cover assembly, and then release the clips and claws.
(2) Release the hook (a) on the front side of stereo camera cover assembly.



(3) Disconnect the connectors, and remove the stereo camera cover assembly.



NOTE:
For models with sunroof, disconnect the sunroof switch connector.

4) Remove the stereo camera.
(1) Disconnect the connector.
(2) Remove the nuts, and then remove the stereo camera.

ADA00574

NOTE:
Remove the camera plate (a) as required.

ADA00504

B: INSTALLATION

CAUTION:
• Do not remove the protective cover until just before installing the stereo camera cover assembly. Using the bolt and nut, install the stereo camera with the protective cover attached, connect the connectors, and then remove the protective cover.
• Do not apply any impact to the stereo camera. (Even the slightest shock will deviate the optical axis of the camera, resulting in the loss of normal operation of the camera.)
• During installation, do not hold at the left and right cameras.
• Do not change the installation position of the stereo camera or do not modify the surrounding structure.
• Remove the protective cover, install the stereo camera cover assembly, and then perform adjustment and inspection of the stereo camera. <Ref. to ES-12, Camera Adjustment, Inspection.>
• Do not touch the lens filter on the stereo camera. If touched, replace the stereo camera.
• When installing the stereo camera cover assembly, cover with dust-free paper such as copy paper to avoid interference with the lens filter section, and attach the paper using tape while being careful not to let the adhesive surface contact the glass surface. Be sure to remove the paper after the procedure.
Also, do not put your hand on the polyurethane section of the windshield contact surface. Doing so may cause the polyurethane section to be removed, which may interfere with the normal operation if it hangs down in front of the lens filter section.
• When installing the stereo camera cover assembly, take care so that the harness does not interfere with the stereo camera or does not get caught.
• Do not allow the stereo camera cover assembly to come in contact with the stereo camera. Install the stereo camera cover assembly precisely so that it will not block the visibility of the camera.
• Because the stereo camera is incompatible, be sure to check the part number before installation.
1) Attach the camera plate.

Tightening torque:
5.5±1 N·m (0.56±0.1 kgf-m, 4.1±0.7 ft-lb)

NOTE:
Align the positioning pins of camera plate to the positioning holes of front rail.
2) Install the stereo camera.

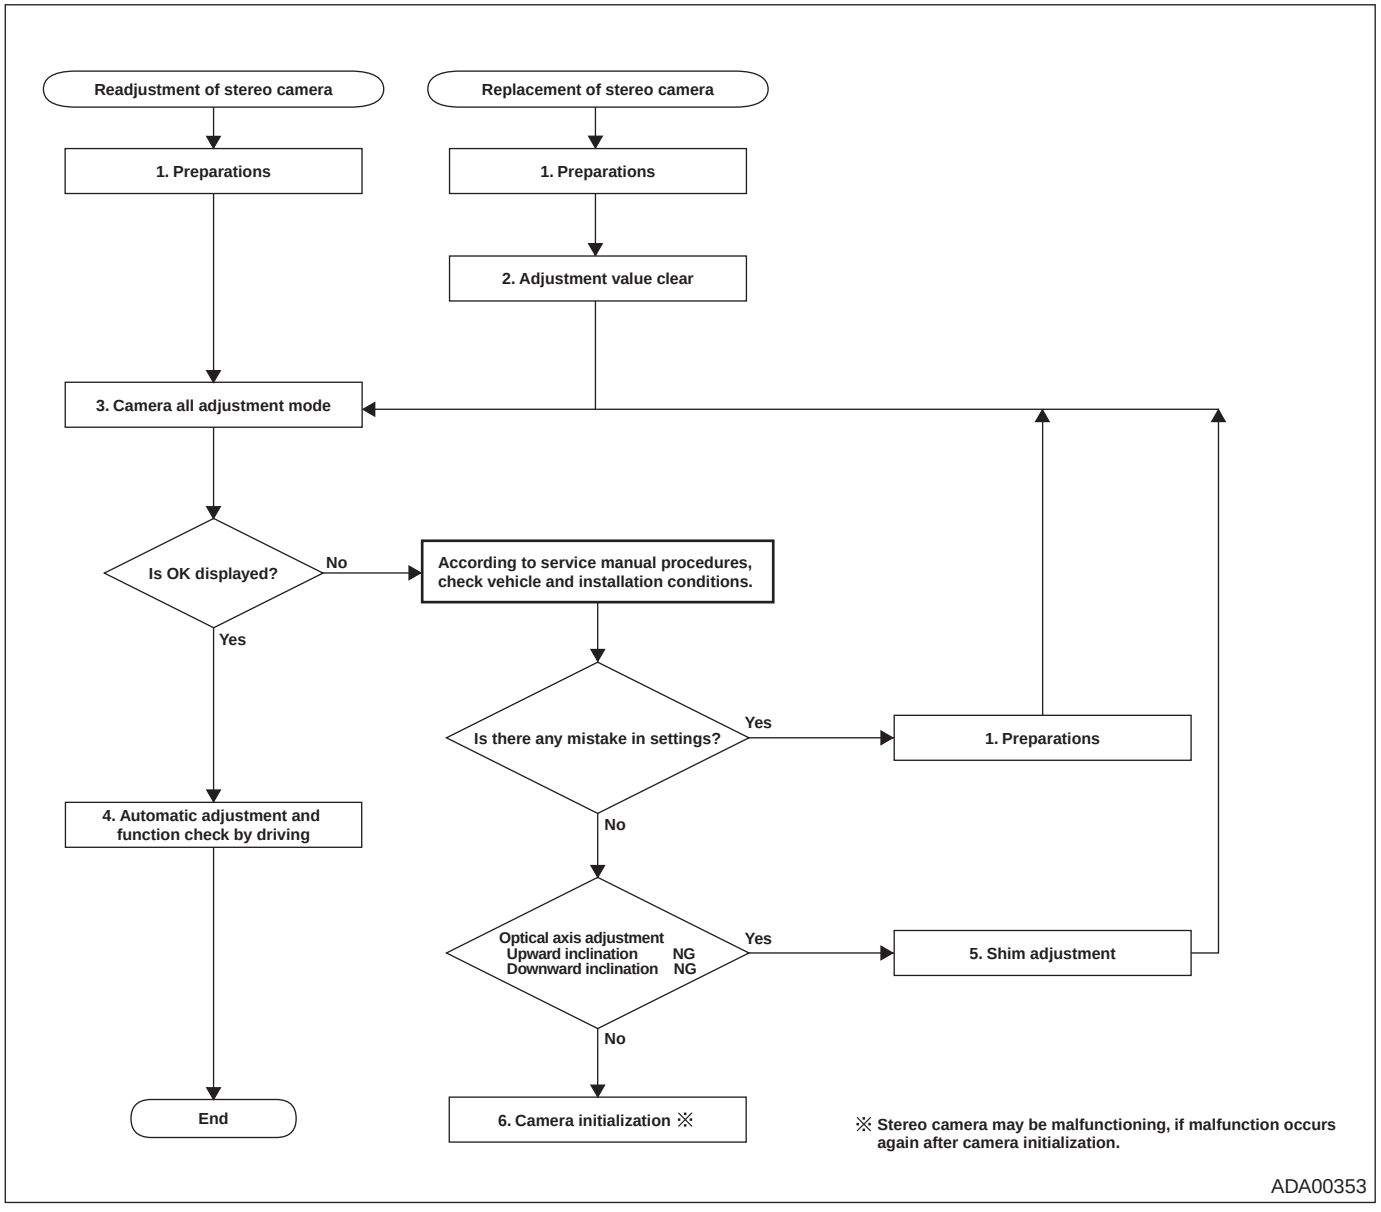
Tightening torque:
5.5±1 N·m (0.56±0.1 kgf-m, 4.1±0.7 ft-lb)

NOTE:
Align the positioning holes of stereo camera to the positioning pins of camera plate.
3) Install the stereo camera cover assembly.

Tightening torque:
5.5±1 N·m (0.56±0.1 kgf-m, 4.1±0.7 ft-lb)
4) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
5) Perform the adjustment or inspection of the stereo camera. <Ref. to ES-12, Camera Adjustment, Inspection.>

6. Camera Adjustment, Inspection

A: PROCEDURE



CAUTION:
- **Perform the camera adjustment and inspection at curb weight without passengers.**
- **Handle RANDOM CHART (ST) carefully so as not to break it with the adhesive force of the tape.**

Perform inspection or adjustment according to the following procedures.
- Readjustment of stereo camera

Perform the adjustment in the following order: [1. Preparations] → [3. Camera all adjustment mode (replacement/removal)] → [4. Automatic adjustment and function check by driving].
- Replacement of stereo camera

Perform the replacement in the following order: [1. Preparations] → [2. Adjustment value clear] → [3. Camera all adjustment mode (replacement/removal)] → [4. Automatic adjustment and function check by driving].

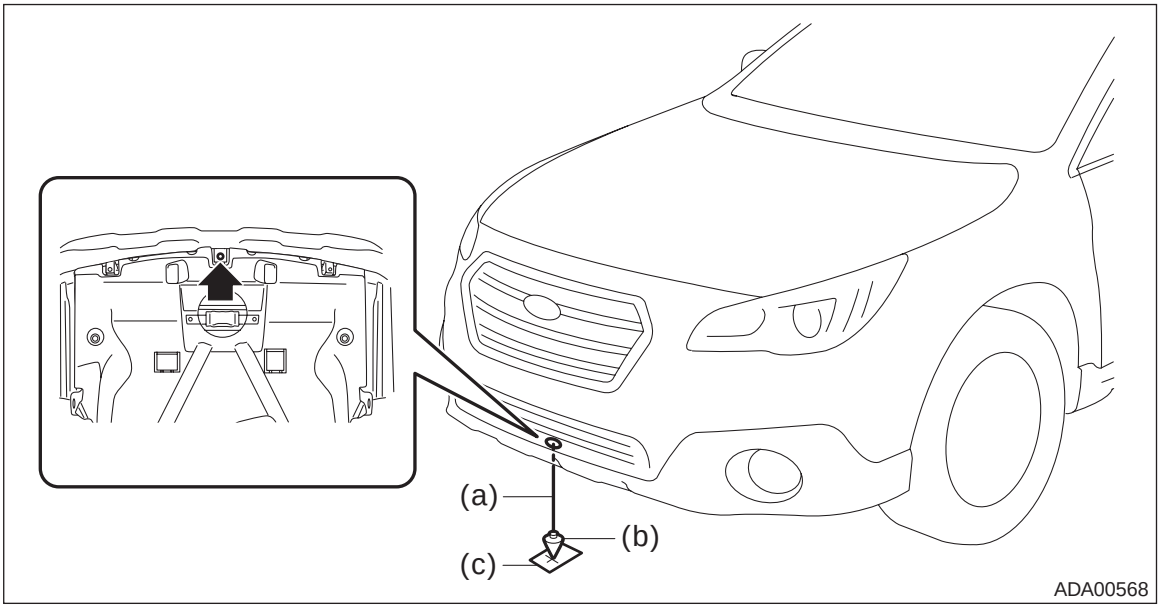
NOTE:
When the stereo camera or windshield glass has been removed or installed, always perform readjustment of the stereo camera.

1. PREPARATIONS

Perform the preparation of the adjustment and inspection for the stereo camera.

- **When performing adjustment or inspection by affixing RANDOM CHART onto partition**

1) Before preparation, check the following items.
   (1) The headlight is off.
   (2) The vehicle is parked on a level surface.
   (3) The inflation pressure of tires is correct.
   (4) The vehicle does not have load.
   (5) The front wheels are directed to the straight ahead position, when the steering wheel is set to the center position.



NOTE:
When the front wheels are not directed to the straight ahead position, adjust the alignment. <Ref. to FS-15, ADJUSTMENT, Wheel Alignment.>

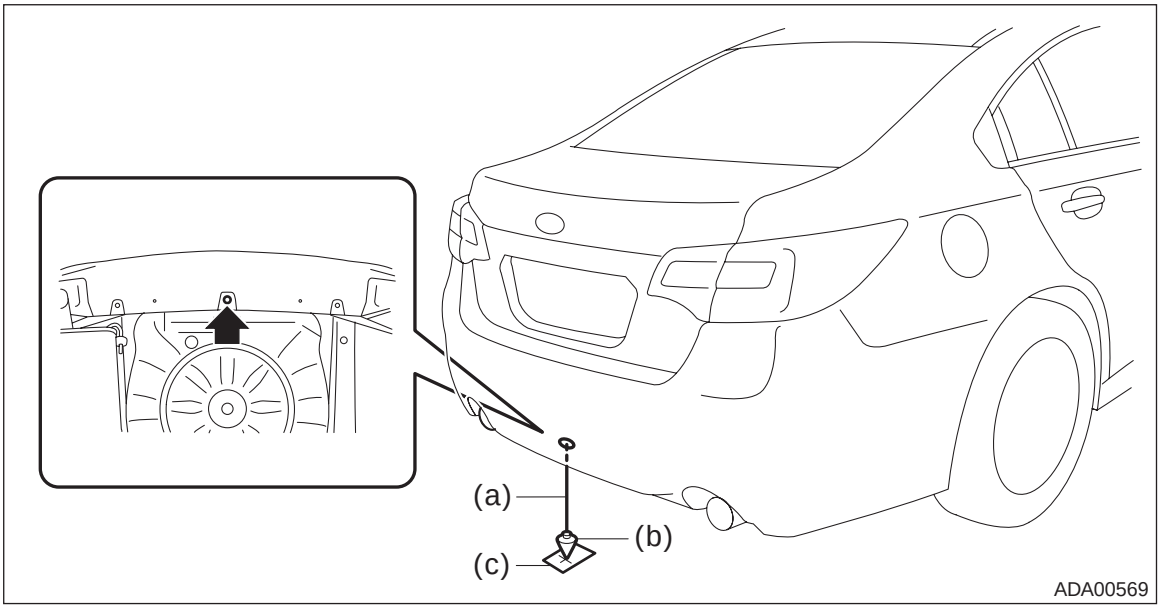
2) Prepare the Subaru Select Monitor, measure, plumb bob, leveling line and RANDOM CHART (ST).

Preparation tool:
ST: RANDOM CHART (87599VA000)

3) Stop the vehicle on a level surface where approximately 5 m (16.41 ft) space can be secured in front of the vehicle.

4) Suspend the plumb bob with leveling line from front center position of vehicle (center clip on lower side of front bumper), and mark the position where the plumb bob touches the ground. (Point A)

(a) Leveling line (b) Plumb bob (c) Point A

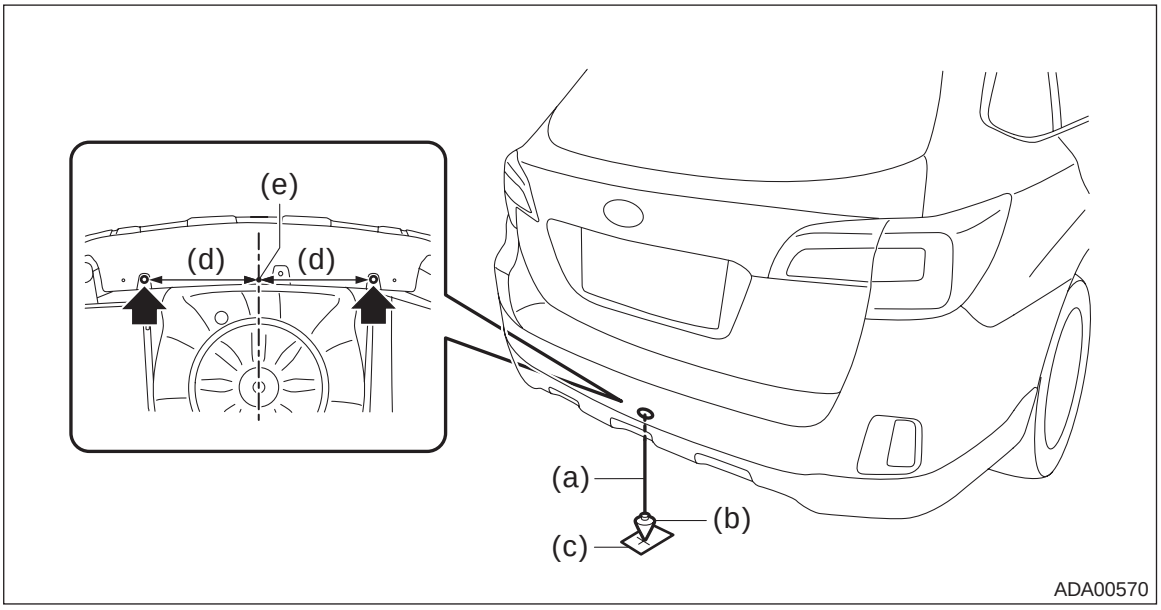


NOTE:
Stick the packing tape etc. on the floor, then make a marking on the tape.

5) Suspend the plumb bob with leveling line from rear center position of vehicle, and mark the position where the plumb bob touches the ground.

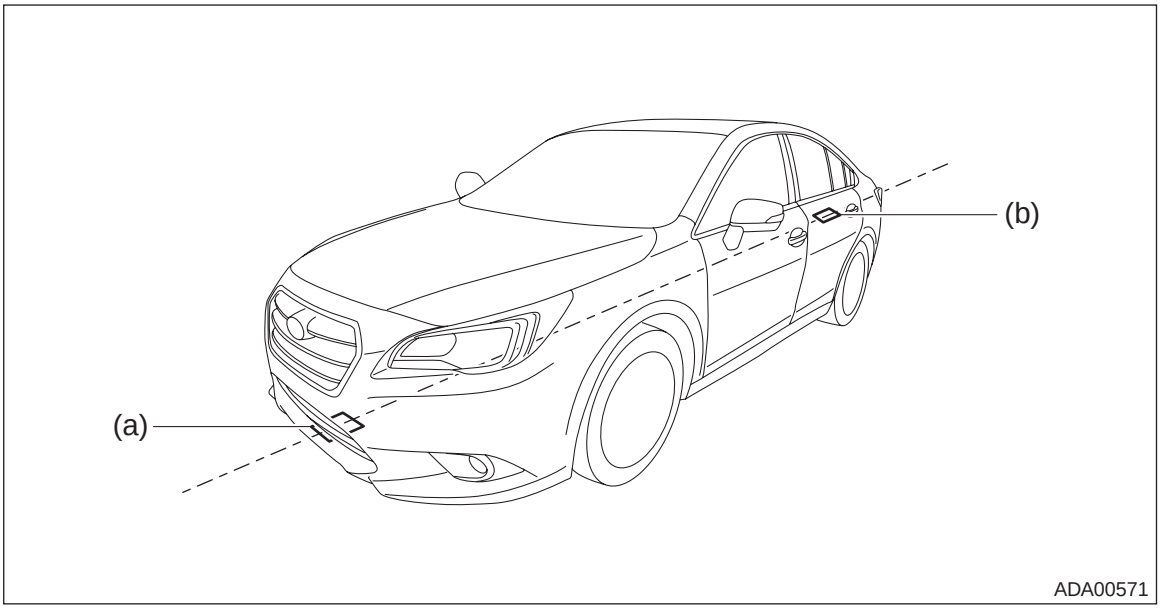
CAUTION:
Be aware that the rear center position of vehicle is different between sedan model and OUTBACK model.

• Sedan model



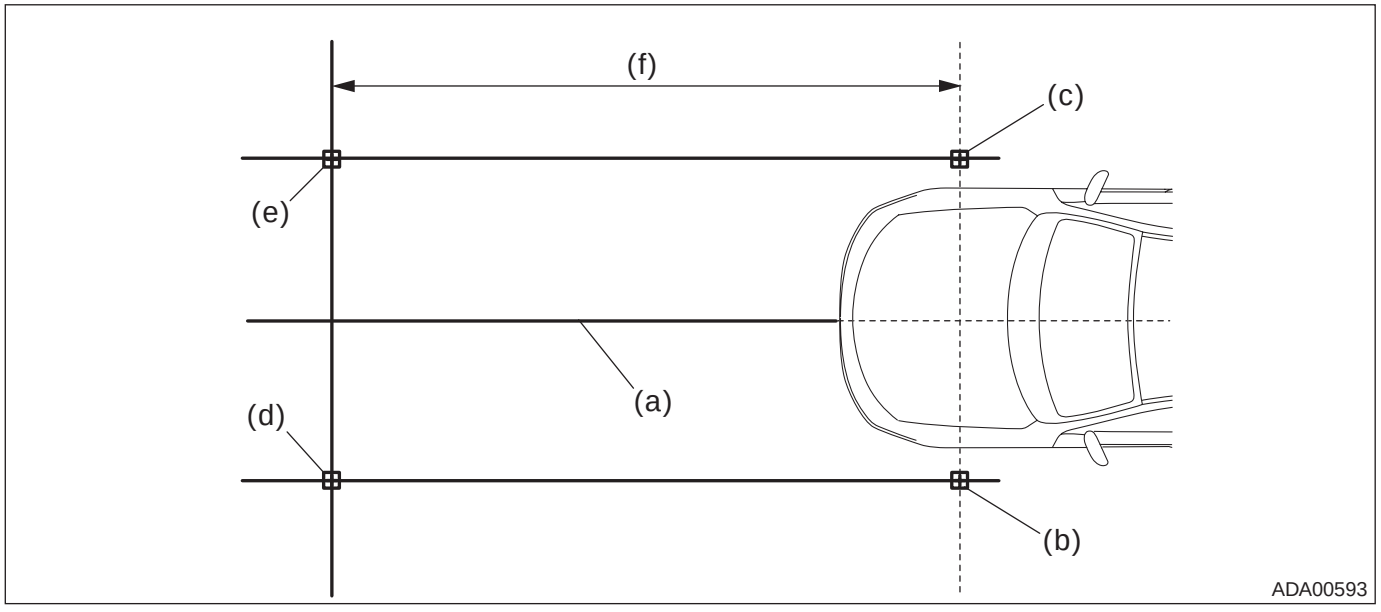
Suspend the plumb bob with leveling line from center clip on lower side of rear bumper, and mark the position where the plumb bob touches the ground. (Point B)

(a) Leveling line (b) Plumb bob (c) Point B



• OUTBACK model

Measure the distance between clips on lower side of rear bumper, suspend the plumb bob with leveling line at the center position, and mark the position where the plumb bob touches the ground. (Point B)

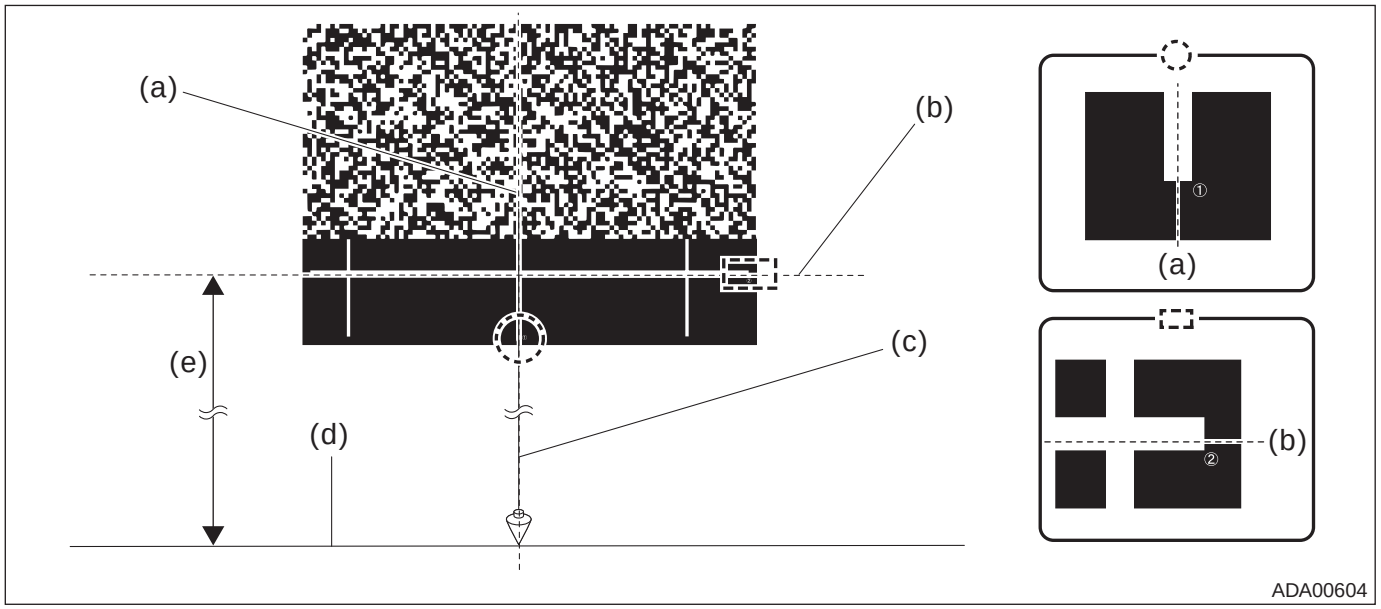


(a) Leveling line (c) Point B (e) Center position
(b) Plumb bob (d) Same distance

NOTE:
Stick the packing tape etc. on the floor, then make a marking on the tape.
6) Strain approximately 5 m (16.41 ft) leveling line from the marking point B through the marking point A toward front of the vehicle, and fix it with packing tape. (A-B line)

(a) Point A
(b) Point B

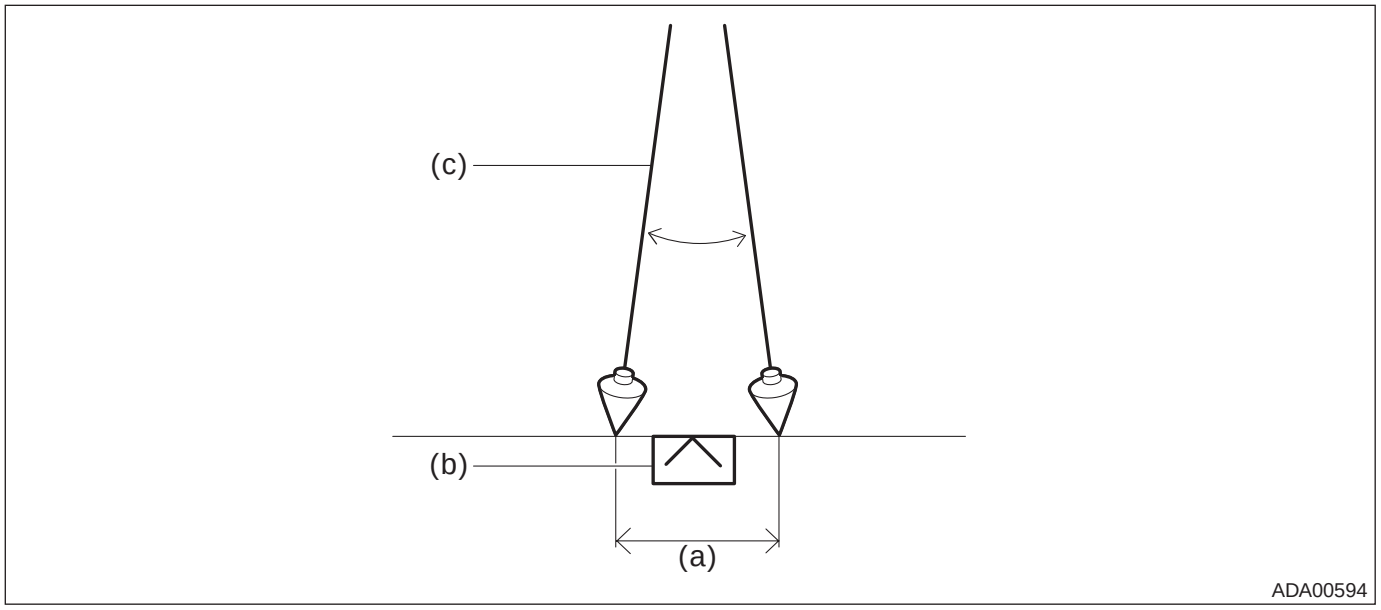
NOTE:
Confirm that there is no wet condition or unevenness on the floor, to strain the leveling line correctly.
7) Mark the installation position of the partition.
(1) Suspend the plumb bob from the center of each front wheel, and mark the point C and point D.
(2) Strain the leveling lines from the point C and point D toward the front of vehicle parallel to the vehicle body center line (A-B line), and fix the leveling lines with packing tape.
(3) Make markings at the points 4,000 mm (13 ft, 1 1/2 in) ahead of the vehicle from the point C and point D. (Point E and point F)
(4) Strain the leveling line so that it passes through the point E and point F. (E-F line)



(a) Vehicle body center line (A-B line)
(b) Point C
(c) Point D
(d) Point E
(e) Point F
(f) 4,000 mm (13 ft, 1 1/2 in)

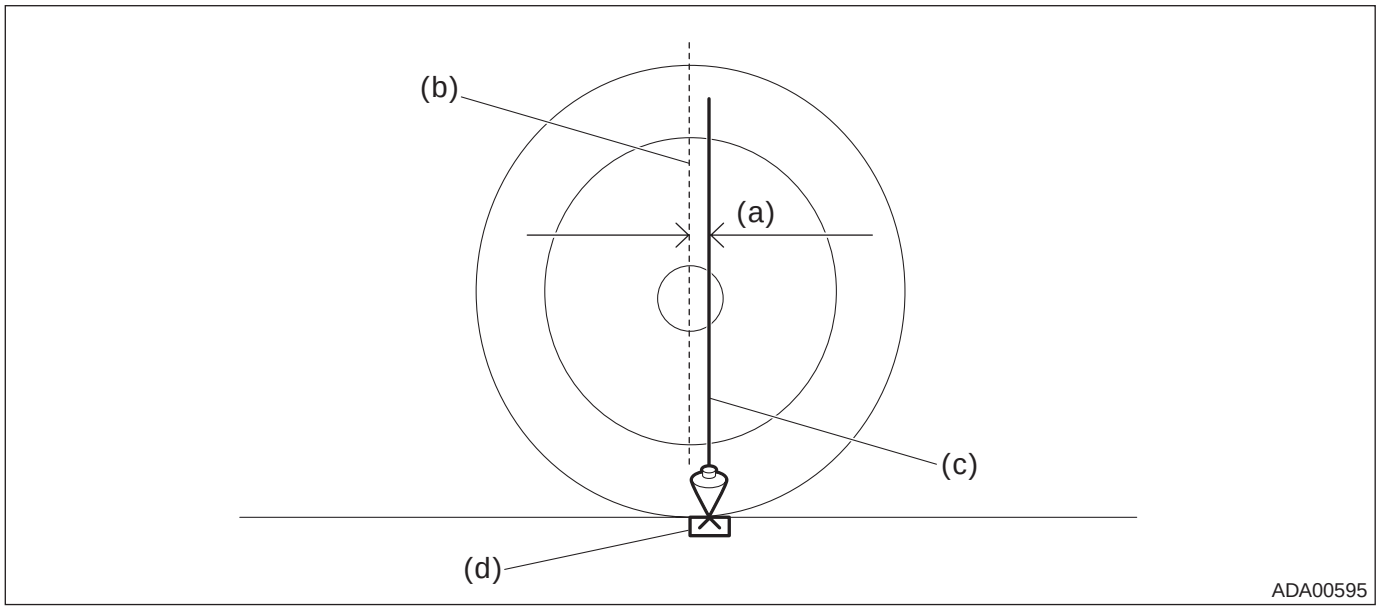
8) Place the partition and RANDOM CHART.

CAUTION:
• Affix the RANDOM CHART onto the vertical partition with flat surface.
• When affixing the RANDOM CHART using tape, place the tape within 10 mm (0.39 in) from the edge of the CHART. In this case, do not affix with lustrous tapes which may reflect the light.
• Perform the adjustment work at lighted places. If the lighting is not enough, adjustment cannot be done, and accuracy rate may not be acquired.
• The adjustment in the outdoors cannot be recommended. Note the sun position, when adjusting it in outdoor by necessity. (It is not acceptable when the sunlight comes from front or rear of the vehicle)



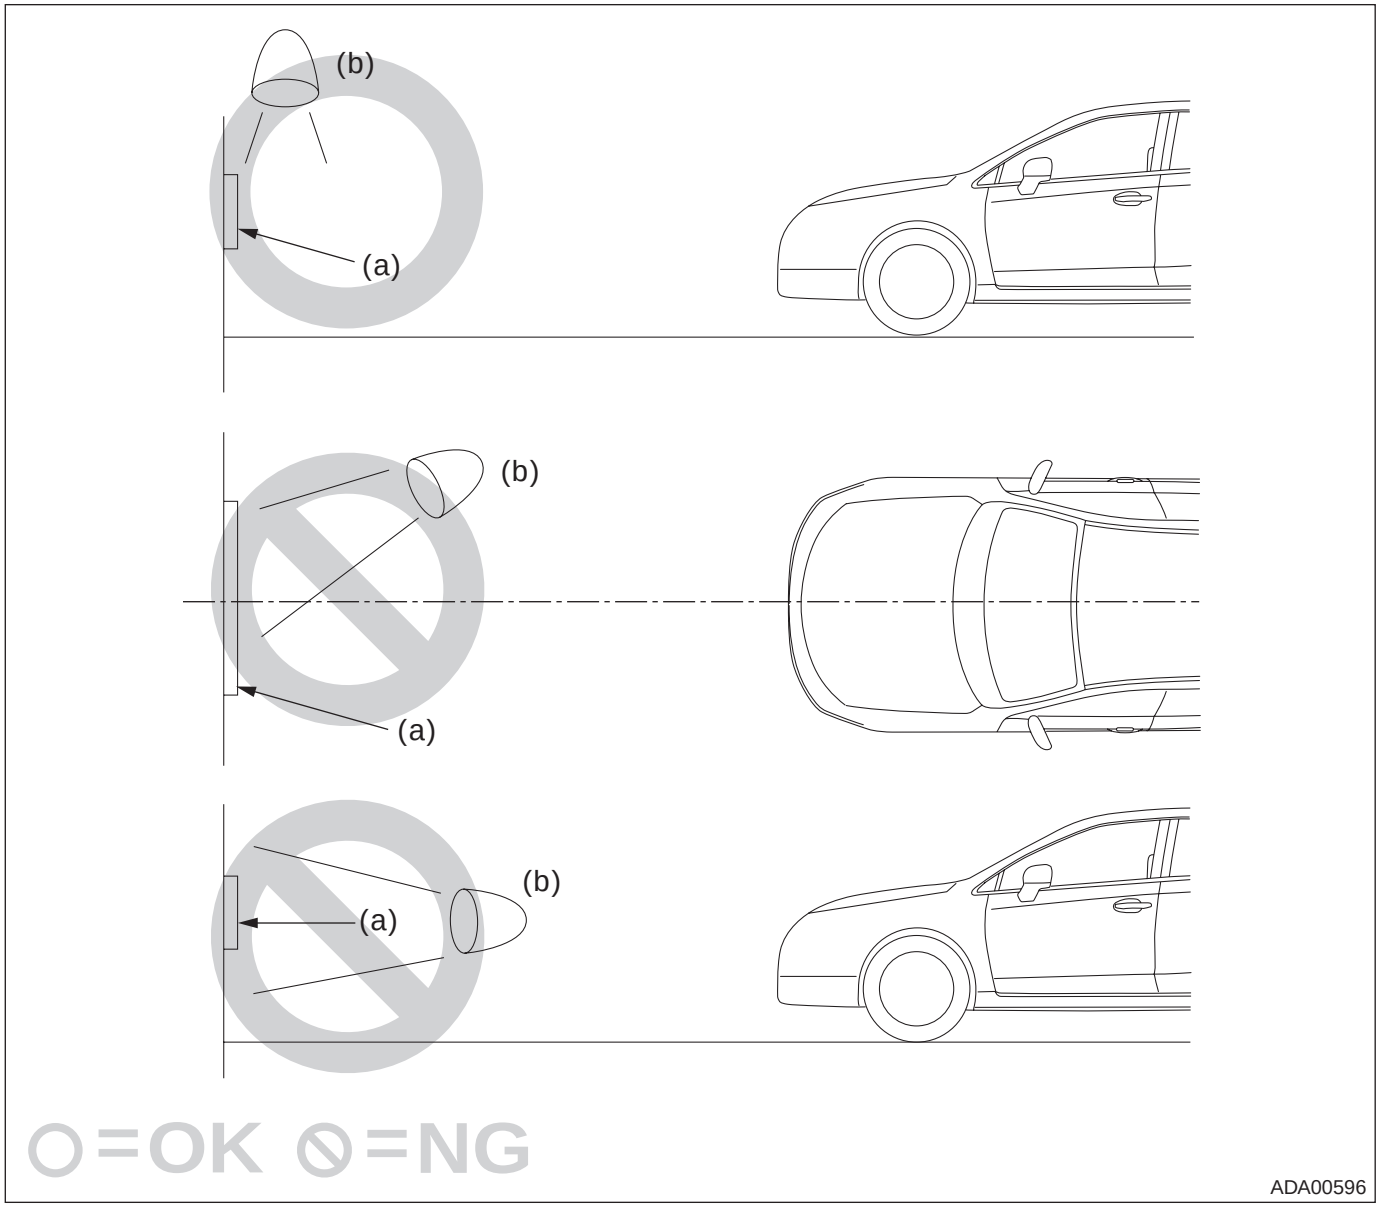
(1) Using the plumb bob, attach the RANDOM CHART on the partition, so that the setting reference (vertical line) center is aligned with the vehicle body center line (leveling line) and the height of the setting reference (horizontal line) center from the floor is 1,000 mm (3 ft, 3 3/8 in).
(2) Adjust the partition so that it is parallel to E-F line.

(a) ① = Setting reference (vertical line) and vehicle body center line (A-B line)
(b) ② = Setting reference (horizontal line)
(c) Plumb bob
(d) E-F line
(e) 1,000 mm (3 ft, 3 3/8 in)



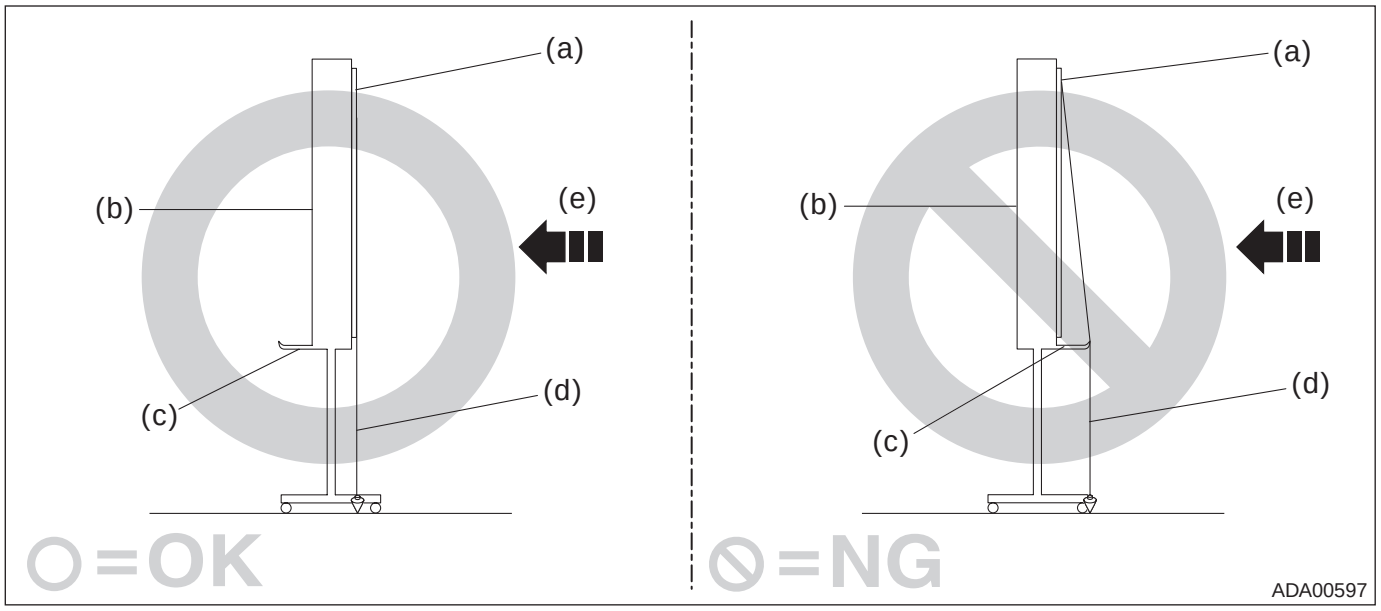
CAUTION:

- **Centering accuracy of the plumb bob shall be ±4 mm (±0.16 in) or less.**



(a) ±4 mm (±0.16 in) (b) Marking (c) Plumb bob

- **Positioning accuracy of the measure shall be ±2 mm (±0.08 in) or less.**
- **Centering accuracy of the tire shall be ±4 mm (±0.16 in) or less.**



(a) ±4 mm (±0.16 in) (c) Plumb bob (d) Marking
(b) Tire center line

• Apply the lighting from the upper direction of RANDOM CHART, and make adjustment so that brightness is even in the CHART. (If the lighting is applied from the position where light reflects at RANDOM CHART, the adjustment cannot be done, because the reflected light enters the camera.)

(a) RANDOM CHART (b) Lighting

• When using a white board as a partition, affix the RANDOM CHART on the flat surface without protrusion such as penholder. When suspending the plumb bob, suspend it vertically from the RANDOM CHART by avoiding protrusion.

(a) RANDOM CHART
(b) White board
(c) Protrusion (penholder, etc.)
(d) Plumb bob
(e) Vehicle travel direction

9) Turn the ignition switch to OFF.
10) Check the windshield glass and the dashboard. <Ref. to ES(diag)-7, WINDSHIELD GLASS AND DASHBOARD, INSPECTION, General Description.>

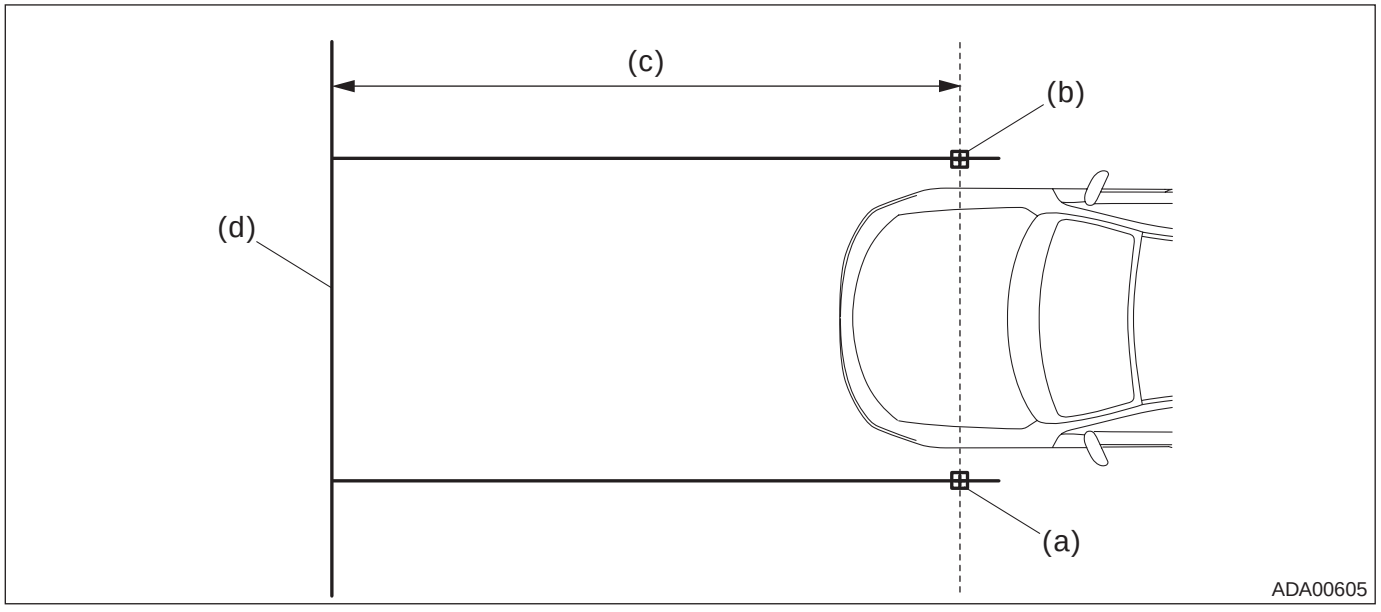
CAUTION:
If there are any dirt, object or reflection from dashboard within the visibility of stereo camera, the correct adjustment and inspection can not be performed. Especially, do not put paper etc. on the dashboard.
11) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.
12) Turn the ignition switch to ON.
13) Wait for 10 seconds.
14) On «Start» display, select «Diagnosis».
15) On «Vehicle selection» display, enter vehicle information and select «Confirmed».
16) On «Main Menu» display, select «Each System».
17) Select «EyeSight» on «Select System» display while pressing the pre-collision brake OFF switch and lane departure warning OFF switch at the same time, and then select «Enter».

NOTE:
If «EyeSight» is selected without pressing two switches at the same time, the camera adjustment items are not displayed in «Work Support». (for preventing misoperation)
Also, the message is not displayed, when the camera does not finish the start-up (approx. 10 seconds after ignition switch ON). In this case, repeat from the selection of «EyeSight».
18) On «Select Function» display, select «Work Support».

19) From the work support item list, select and perform camera adjustment or other inspections.

NOTE:
• When performing {Camera adjustment, inspection}, pre-collision brake OFF indicator light, lane departure warning OFF indicator light in the meter will illuminate, and the normal function will be disabled.
• After camera adjustment, the function will be enabled, when the ignition switch is turned to OFF and system is restarted.

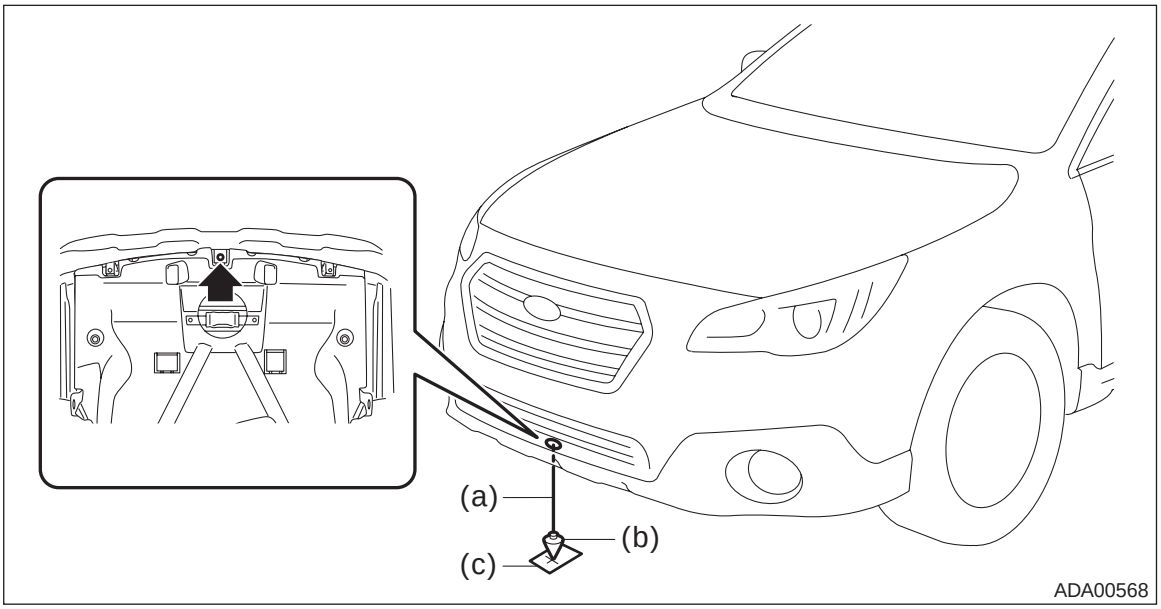


• When performing adjustment or inspection by affixing RANDOM CHART onto wall

1) Before preparation, check the following items.
(1) The headlight is off.
(2) The vehicle is parked on a level surface.
(3) The inflation pressure of tires is correct.
(4) The vehicle does not have load.
(5) The front wheels are directed to the straight ahead position, when the steering wheel is set to the center position.

NOTE:
When the front wheels are not directed to the straight ahead position, adjust the alignment. <Ref. to FS-15, ADJUSTMENT, Wheel Alignment.>
2) Prepare the Subaru Select Monitor, measure, plumb bob, leveling line and RANDOM CHART (ST).

Preparation tool:
ST: RANDOM CHART (87599VA000)
3) Mark the park position of the vehicle.
(1) Strain the leveling line so that it is at right angles to wall on which the RANDOM CHART is affixed, and fix the leveling line with packing tape.
(2) Make a marking 4,000 mm (13 ft, 1 1/2 in) away from the wall where the leveling line is fixed. (Point A and point B)



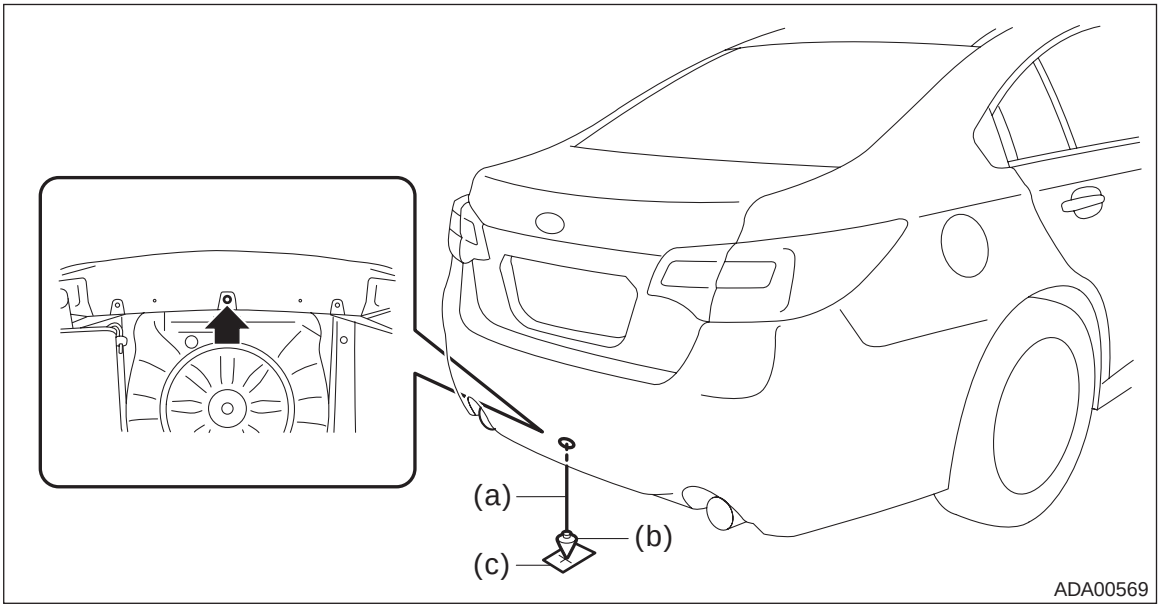
NOTE:
Stick the packing tape etc. on the floor, then make a marking on the tape.
(3) Strain the leveling line so that it passes through the point A and point B. (A-B line)

(a) Point A
(b) Point B
(c) 4,000 mm (13 ft, 1 1/2 in)
(d) Wall

4) Suspend the plumb bob from the center of each front wheel of the vehicle, and place the vehicle so that it is aligned with the leveling line (A-B line).

5) Suspend the plumb bob with leveling line from front center position of vehicle (center clip on lower side of front bumper), and mark the position where the plumb bob touches the ground. (Point C)

(a) Leveling line (b) Plumb bob (c) Point C

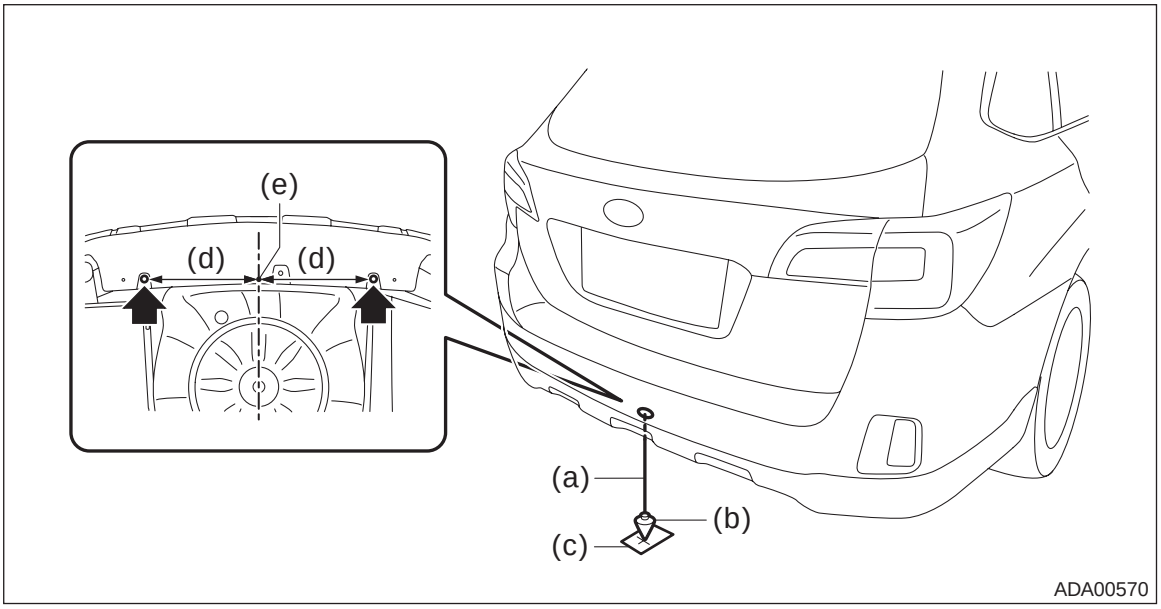


NOTE:
Stick the packing tape etc. on the floor, then make a marking on the tape.

6) Suspend the plumb bob with leveling line from rear center position of vehicle, and mark the position where the plumb bob touches the ground.

CAUTION:
Be aware that the rear center position of vehicle is different between sedan model and OUTBACK model.

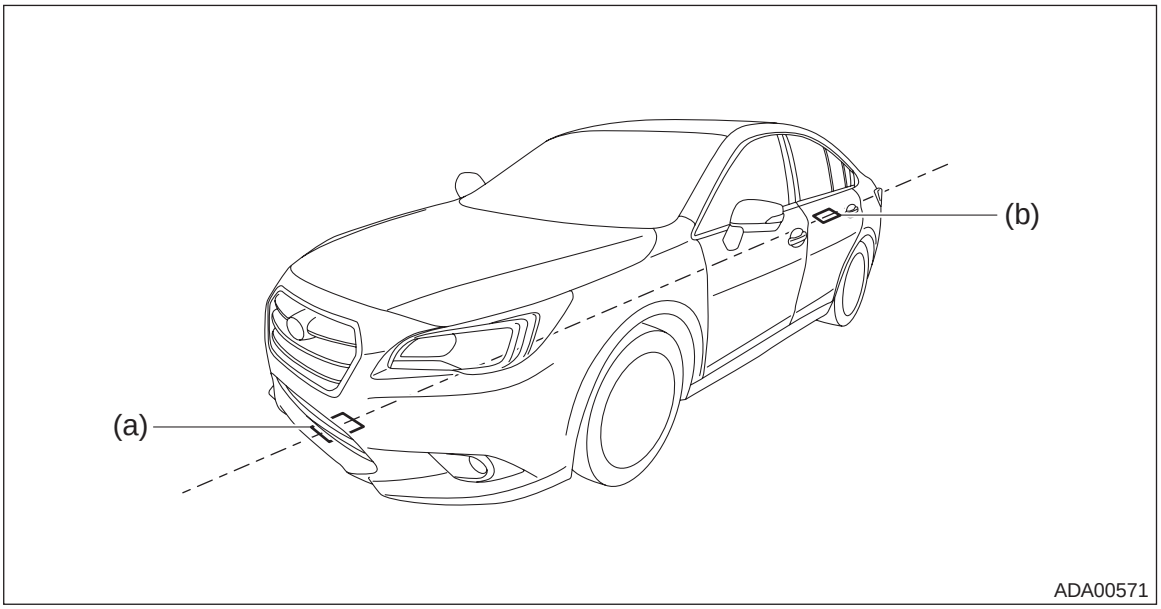
- Sedan model



Suspend the plumb bob with leveling line from center clip on lower side of rear bumper, and mark the position where the plumb bob touches the ground. (Point D)

(a) Leveling line (b) Plumb bob (c) Point D

• OUTBACK model

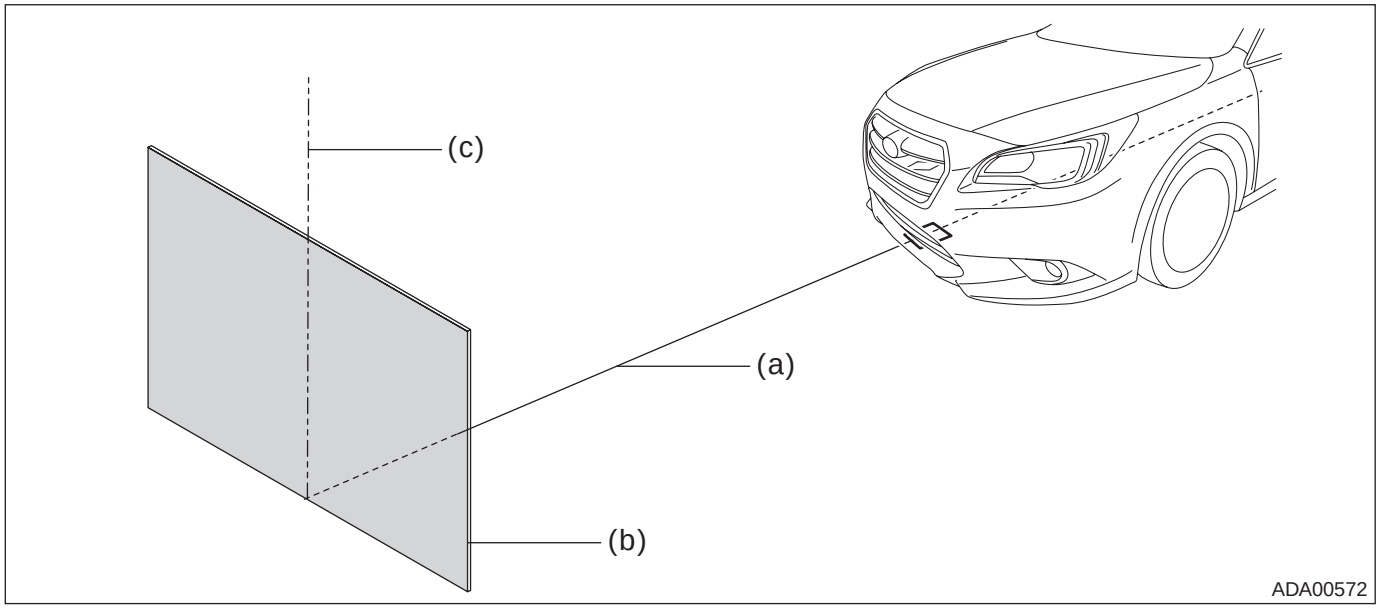


Measure the distance between clips on lower side of rear bumper, suspend the plumb bob with leveling line at the center position, and mark the position where the plumb bob touches the ground. (Point D)

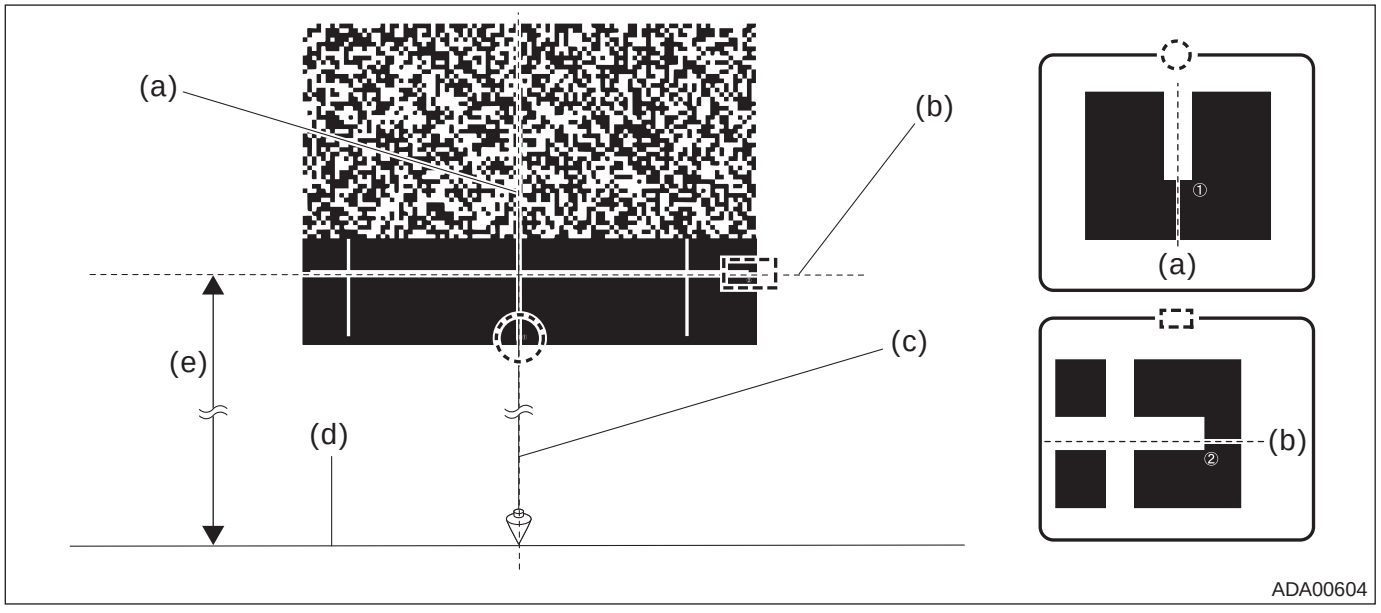
(a) Leveling line
(b) Plumb bob
(c) Point D
(d) Same distance
(e) Center position

NOTE:
Stick the packing tape etc. on the floor, then make a marking on the tape.

7) Strain the leveling line from the making point D through the marking point C to the wall, and fix it with packing tape. (C-D line)



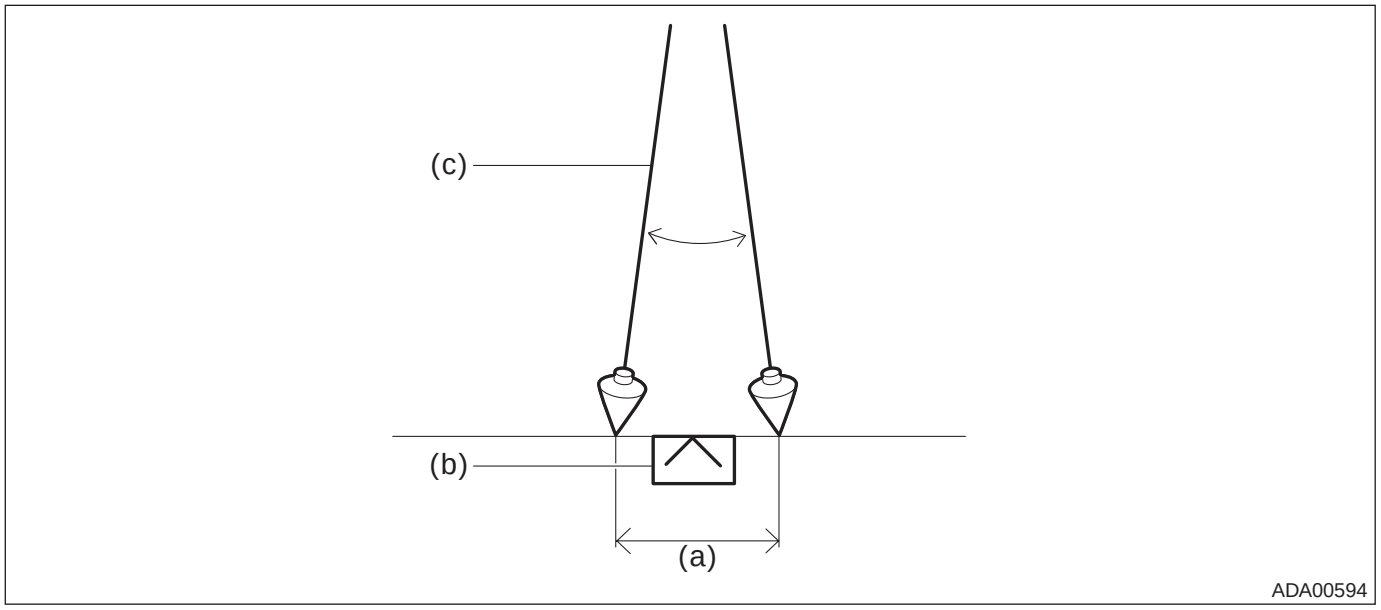
(a) Point C
(b) Point D



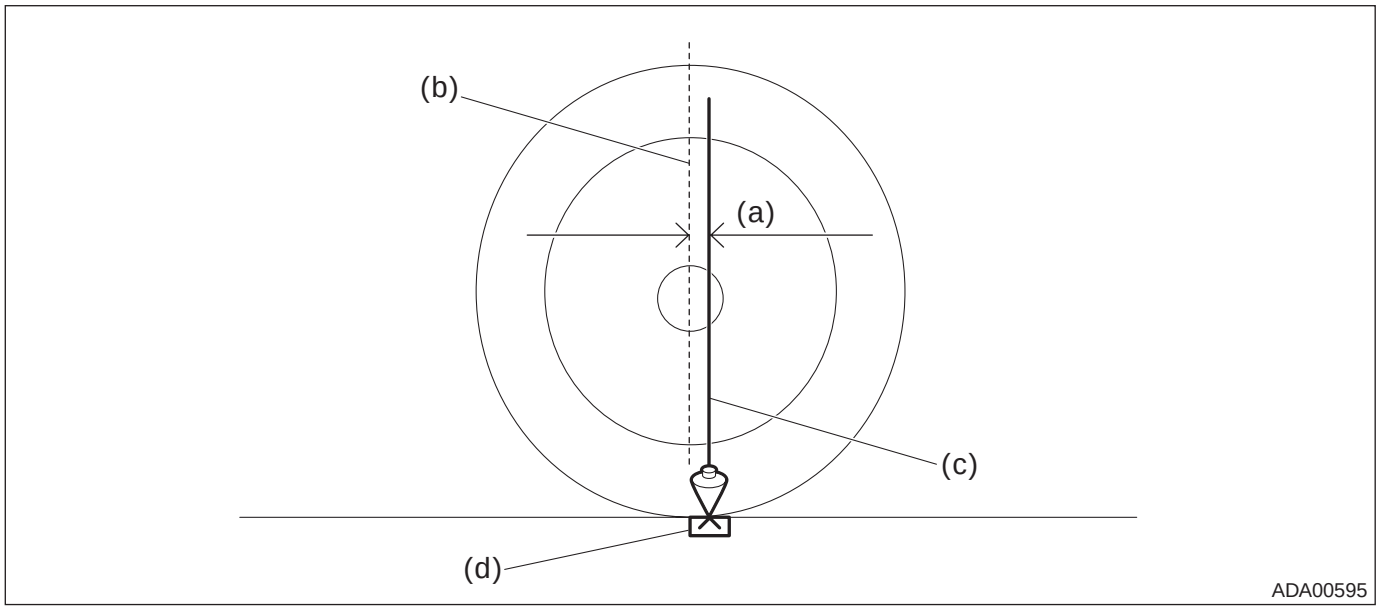
8) Place the RANDOM CHART.

CAUTION:
- **Affix the RANDOM CHART onto the vertical wall, etc. with flat surface.**
- **When affixing the RANDOM CHART using tape, place the tape within 10 mm (0.39 in) from the edge of the CHART. In this case, do not affix with lustrous tapes which may reflect the light.**
- **Perform the adjustment work at lighted places. If the lighting is not enough, adjustment cannot be done, and accuracy rate may not be acquired.**
- **The adjustment in the outdoors cannot be recommended. Note the sun position, when adjusting it in outdoor by necessity. (It is not acceptable when the sunlight comes from front or rear of the vehicle)**

(1) Using the plumb bob, attach the RANDOM CHART on a wall, so that the setting reference (vertical line) center is aligned with the vehicle body center line (leveling line) and the height of the setting reference (horizontal line) center from the floor is 1,000 mm (3 ft, 3 3/8 in).

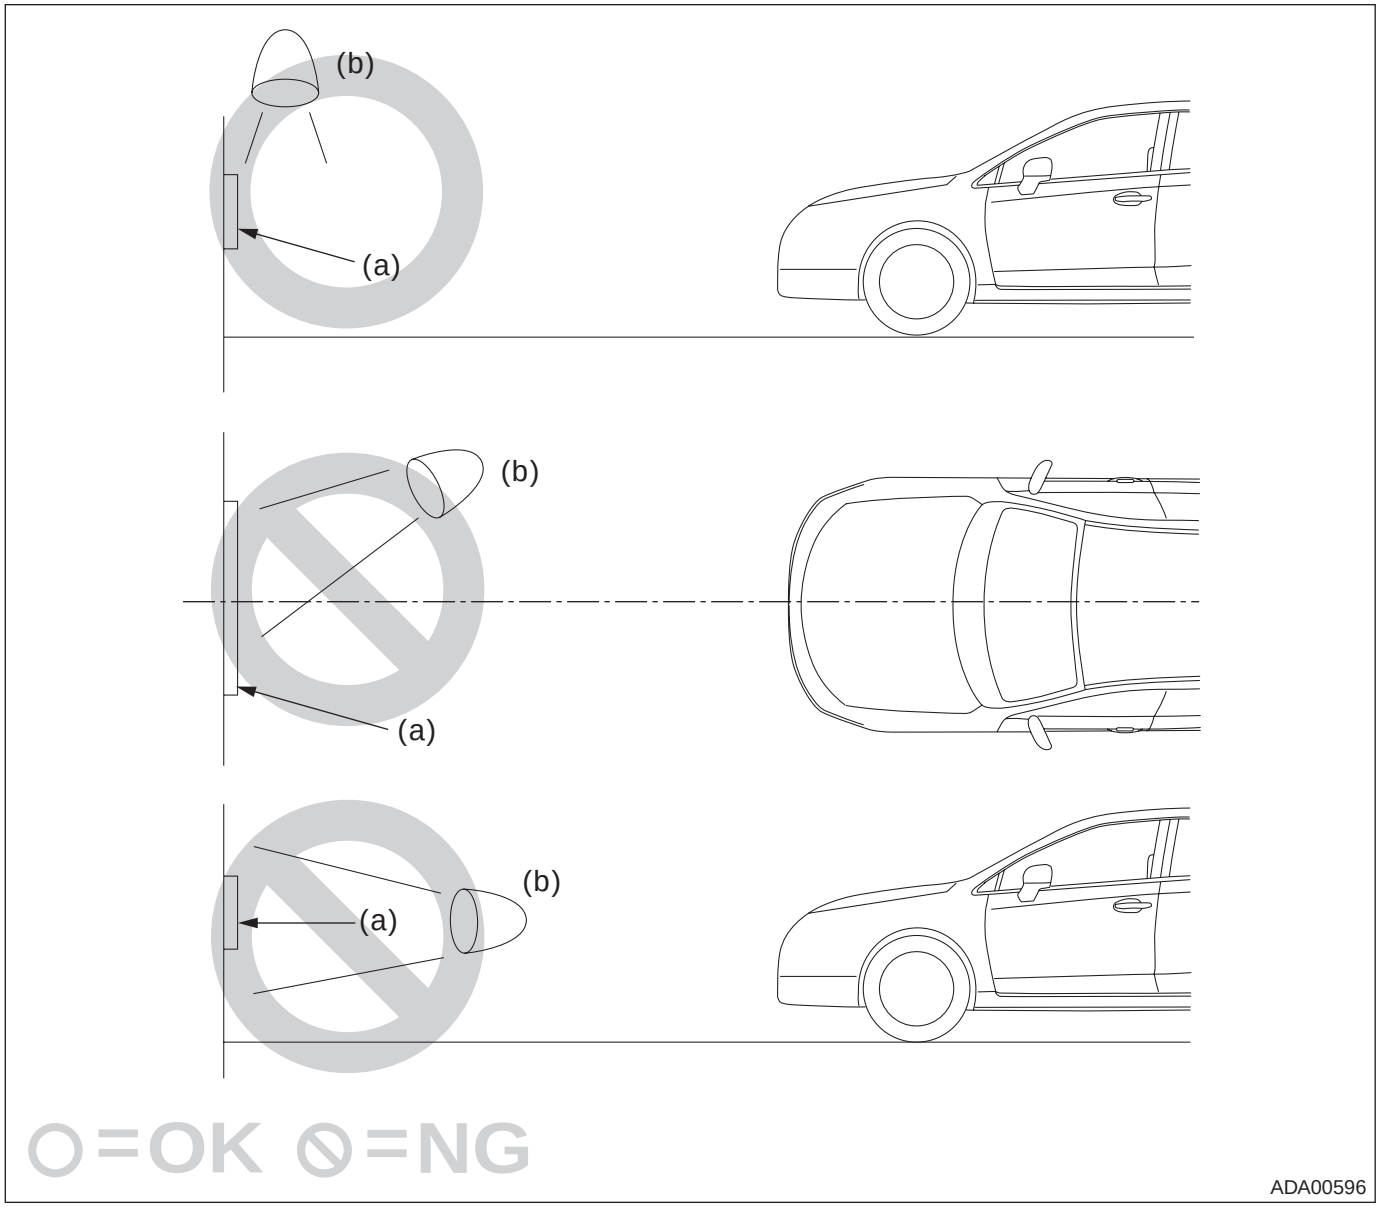


(a) Vehicle body center line (C-D line) (b) Wall (c) Setting reference (vertical line)



(a) ① = Setting reference (vertical line) and vehicle body center line (C-D line)
(b) ② = Setting reference (horizontal line)
(c) Plumb bob
(d) Floor
(e) 1,000 mm (3 ft, 3 3/8 in)

CAUTION:
- **Centering accuracy of the plumb bob shall be ±4 mm (±0.16 in) or less.**



(a) ±4 mm (±0.16 in) (b) Marking (c) Plumb bob

- **Positioning accuracy of the measure shall be ±2 mm (±0.08 in) or less.**
- **Centering accuracy of the tire shall be ±4 mm (±0.16 in) or less.**

(a) ±4 mm (±0.16 in) (c) Plumb bob (d) Marking
(b) Tire center line

• Apply the lighting from the upper direction of RANDOM CHART, and make adjustment so that brightness is even in the CHART. (If the lighting is applied from the position where light reflects at RANDOM CHART, the adjustment cannot be done, because the reflected light enters the camera.)

(a) RANDOM CHART (b) Lighting

9) Turn the ignition switch to OFF.
10) Check the windshield glass and the dashboard. <Ref. to ES(diag)-7, WINDSHIELD GLASS AND DASHBOARD, INSPECTION, General Description.>

CAUTION:
If there are any dirt, object or reflection from dashboard within the visibility of stereo camera, the correct adjustment and inspection can not be performed. Especially, do not put paper etc. on the dashboard.
11) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.
12) Turn the ignition switch to ON.
13) Wait for 10 seconds.
14) On «Start» display, select «Diagnosis».
15) On «Vehicle selection» display, enter vehicle information and select «Confirmed».
16) On «Main Menu» display, select «Each System».
17) Select «EyeSight» on «Select System» display while pressing the pre-collision brake OFF switch and lane departure warning OFF switch at the same time, and then select «Enter».

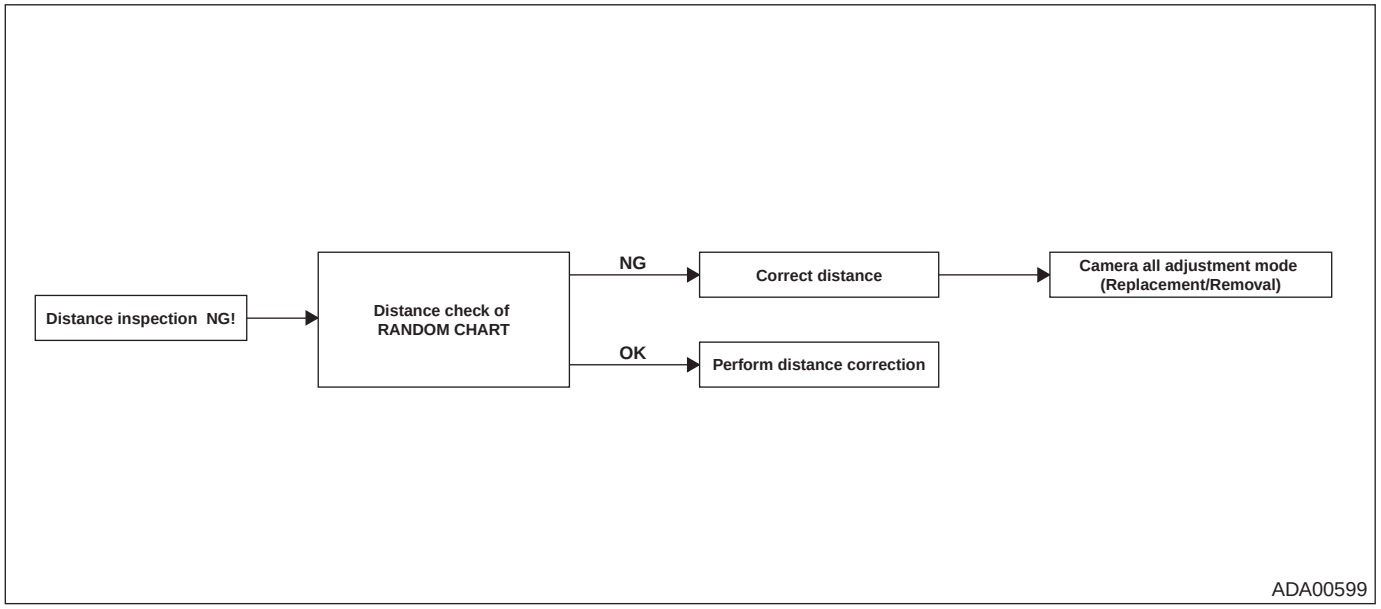
NOTE:
If «EyeSight» is selected without pressing two switches at the same time, the camera adjustment items are not displayed in «Work Support». (for preventing misoperation)
Also, the message is not displayed, when the camera does not finish the start-up (approx. 10 seconds after ignition switch ON). In this case, repeat from the selection of «EyeSight».
18) On «Select Function» display, select «Work Support».
19) From the work support item list, select and perform camera adjustment or other inspections.

NOTE:
• When performing {Camera adjustment, inspection}, pre-collision brake OFF indicator light, lane departure warning OFF indicator light in the meter will illuminate, and the normal function will be disabled.
• After camera adjustment, the function will be enabled, when the ignition switch is turned to OFF and system is restarted.

2. ADJUSTMENT VALUE CLEAR

Perform when replacing stereo camera. (Do not perform when performing stereo camera re-adjustment and inspection)
1) From the work support item list, select «Clear adjustment value».
2) When «Make the following adjustment/inspection. Please push OK if ready.» is displayed, if preparation is ready, select «OK».
3) When «Clear the adjustment value.» is displayed, select «OK».
4) When «Clearing adjustment value...» is displayed, wait until process finishes.
5) When the adjustment value clear is finished correctly, and «Adjustment value cleared OK!» is displayed, select «OK» to finish.
6) Turn the ignition switch to OFF and wait for approx. 5 seconds or more.

CAUTION:
If the ignition switch OFF period is short, the adjustment value clear can not be performed correctly.
7) Next, perform the camera all adjustment mode (replacement/removal). <Ref. to ES-27, CAMERA ALL ADJUSTMENT MODE (REPLACEMENT/REMOVAL), PROCEDURE, Camera Adjustment, Inspection.>

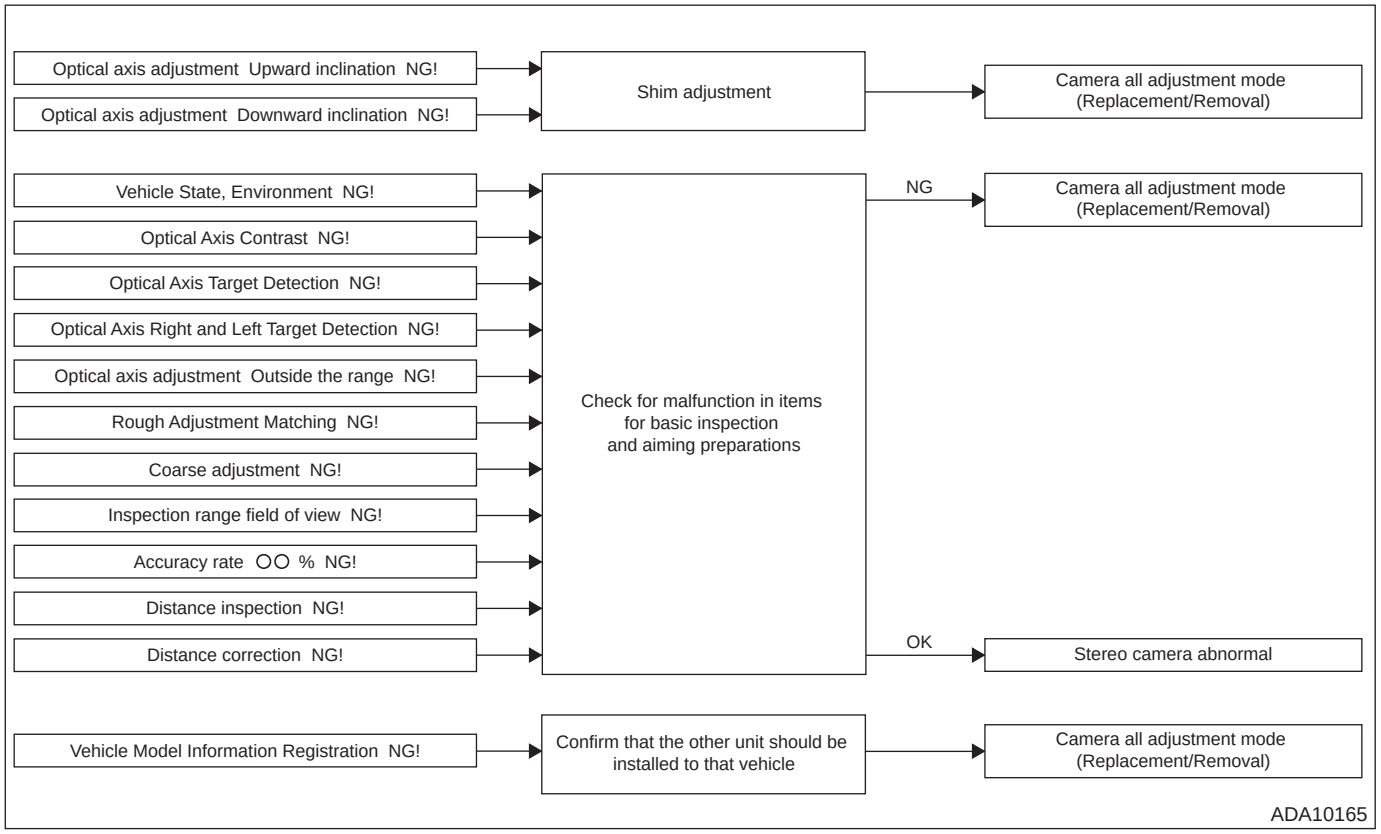


3. CAMERA ALL ADJUSTMENT MODE (REPLACEMENT/REMOVAL)

Perform this procedure when the stereo camera is replaced or re-adjustment is necessary (when stereo camera malfunctioning, when stereo camera reinstalled, when windshield glass replaced).

CAUTION:

- **When the stereo camera is replaced, be sure to perform the «Clear adjustment value» first. When {Clear adjustment value} was skipped, restart the procedure from {Clear adjustment value} again. <Ref. to ES-26, ADJUSTMENT VALUE CLEAR, PROCEDURE, Camera Adjustment, Inspection.>**
- **Perform the camera adjustment and inspection at curb weight without passengers.**
- **When the camera all adjustment mode is performed, if the procedures are not completed correctly to the end, the warning light illuminates, when the vehicle moves.**



1) From the work support item list, select «Camera all adjustment mode (replacement/removal)».
2) When «Make the following adjustment/inspection. Please push OK if ready.» is displayed, if preparation is ready, select «OK».
3) When «In process...» is displayed, wait until inspection finishes.
4) When the accuracy rate inspection is finished correctly, and «Accuracy rate ○○% OK!» is displayed, select «OK» to go to step 9).
5) When «Distance inspection NG!» is displayed, refer to the NOTE below.

NOTE:
Distance check and adjustment of RANDOM CHART: <Ref. to ES-13, PREPARATIONS, PROCEDURE, Camera Adjustment, Inspection.>
6) When «Perform distance correction.» is displayed, select «OK». When the distance correction is finished correctly, and «Distance correction OK!» is displayed, select «OK» and proceed to the accuracy rate inspection.
7) When «Perform accuracy rate inspection.» is displayed, select «OK». When the accuracy rate inspection is finished correctly, and «Accuracy rate ○○% OK!» is displayed, select «OK» to go to next.

8) When «○○ NG!» is displayed during adjustment, refer to the NOTE below.

CAUTION:
For details on the displayed items, refer to the following list. Check the list items, and if the same NG item is displayed even when aiming is performed again, replace the stereo camera.

LIST

Error code	Display	Check items on error	Remarks
1401	«Vehicle State, Environment NG!»	Check body integrated unit.	—
1402	«Vehicle Model Information Registration NG!»	Confirm the part numbers of EyeSight system components, and reconfirm that the unit should be installed to that vehicle. To confirm the components, check each item.	—
1403	«Optical Axis Contrast NG!»	1. Make sure that the stereo camera cover assembly is installed correctly. 2. There should be no obstacles that blocks the stereo camera. 3. Stereo camera and camera plate are assembled with no gap. 4. Random chart for ver. 3 must be used. 5. There should be no obstacles that blocks the random chart. 6. Random chart must be set correctly for the vehicle. 7. Grid pattern of random chart should not be dirty or damaged. 8. Lighting circumstance for random chart should be normal. 9. Make sure that the headlight is off. 10.There should be no objects (reflection) on the instrument panel. 11.Dirt should not adhere to the windshield or the lens filter of the stereo camera. 12.There should be no crack on the windshield. NOTE: Detecting measures for the error codes 1403, 1404, 1405, 1406 and 1407 are different. Check items on error with high relevance are shown in the remarks.	Highly relevant with the check items 1 to 12.
1404	«Optical Axis Target Detection NG!»		Highly relevant with the check items 4, 6, 7, 8, 9, 10, 11 and 12.
1405	«Optical Axis Target Detection NG!»		Highly relevant with the check items 4, 6, 7, 8, 9, 10, 11 and 12.
1406	«Optical Axis Right and Left Target Detection NG!»		Highly relevant with the check items 1 to 12.
1407	«Out of the Optical Axis Adjustment Range NG!»		Highly relevant with the check items 3 and 6.

Error code	Display	Check items on error	Remarks
1408	«Optical axis adjustment Upward inclination NG!»	1. Random chart must be set correctly for the vehicle. 2. Aiming is performed with the vehicle at curb weight. 3. There should be no malfunction in the suspension. If there are no problems above, perform shim adjustment so that optical axis turns downward.	—
1409	«Optical axis adjustment Downward inclination NG!»	1. Random chart must be set correctly for the vehicle. 2. Aiming is performed with the vehicle at curb weight. 3. There should be no malfunction in the suspension. If there are no problems above, perform shim adjustment so that optical axis turns upward.	—
140A	«Rough Adjustment Matching NG!»	1. Make sure that the stereo camera cover assembly is installed correctly. 2. There should be no obstacles that blocks the stereo camera. 3. Stereo camera and camera plate are assembled with no gap. 4. There should be no obstacles that blocks the random chart. 5. Random pattern of random chart should not be dirty or damaged. 6. Lighting circumstance for random chart should be normal. 7. There should be no objects (reflection) on the instrument panel. 8. Dirt should not adhere to the windshield or the lens filter of the stereo camera. 9. There should be no crack on the windshield. NOTE: Detecting measures for the error codes 140A, 140B and 140C are different. Check items on error with high relevance are shown in the remarks.	Highly relevant with the check items 1 to 9.
140B	«Coarse adjustment NG!»		Highly relevant with the check items 3, 5, 7 and 9.
140C	«Coarse adjustment NG!»		Highly relevant with the check items 3, 5, 7 and 9.
140E	«Inspection range field of view NG!»	1. Make sure that the stereo camera cover assembly is installed correctly. 2. There should be no obstacles that blocks the random chart. 3. Random pattern of random chart should not be dirty or damaged. 4. Lighting circumstance for random chart should be normal. 5. There should be no objects (reflection) on the instrument panel. 6. Dirt should not adhere to the windshield or the lens filter of the stereo camera. 7. There should be no crack on the windshield. 8. Windshield for EyeSight should be assembled.	—
140F	«Distance inspection NG!»	1. Distance from random chart to wheel center of the vehicle should be 4,000 mm (13.12 ft). 2. Lighting circumstance for random chart should be normal.	—
1410	«Accuracy rate 00% NG !»	1. Lighting circumstance for random chart should be normal. 2. Random pattern of random chart should not be dirty or damaged. 3. There should be no objects (reflection) on the instrument panel. 4. Dirt should not adhere to the windshield or the lens filter of the stereo camera. 5. There should be no crack on the windshield.	—
1501	«Distance correction NG!»	When «Distance inspection NG!» is displayed and distance correction is performed without inspection, check the following. 1. Distance from random chart to wheel center of the vehicle should be 4,000 mm (13.12 ft). 2. Lighting circumstance for random chart should be normal.	—

NOTE:
• Shim adjustment: <Ref. to ES-31, SHIM ADJUSTMENT, PROCEDURE, Camera Adjustment, Inspection.>
• Basic inspection items: <Ref. to ES(diag)-7, INSPECTION, General Description.>
• Aiming preparation items: <Ref. to ES-13, PREPARATIONS, PROCEDURE, Camera Adjustment, Inspection.>

9) Turn the ignition switch to OFF and wait for approx. 10 seconds. (time necessary to save adjustment and inspection result)

CAUTION:
• If the ignition switch OFF period after adjustment and inspection finished is short, the adjustment and inspection result cannot be saved correctly. The warning is displayed on the meter LCD, when the vehicle moves.
• When aiming begins, normal recognition process stops and the warning is displayed on the meter LCD. The warning display will be cleared by turning the ignition switch OFF → ON.
• If the steering wheel is operated many times during adjustment and inspection preparation, the power steering control module is overheated. Therefore, you may have to wait for at least 10 seconds after turning the ignition switch to OFF.
10) Turn the ignition switch to ON. Make sure the «Aiming Completion Status» of «Data monitor» is «Exit» using Subaru Select Monitor.
11) Perform the {Clear Memory}, and turn the ignition switch to OFF.
12) Subsequently perform the automatic adjustment and function check by a test driving. <Ref. to ES-30, AUTOMATIC ADJUSTMENT AND FUNCTION CHECK BY DRIVING, PROCEDURE, Camera Adjustment, Inspection.>

4. AUTOMATIC ADJUSTMENT AND FUNCTION CHECK BY DRIVING

NOTE:
• Perform the automatic adjustment and function check by driving to improve the recognition accuracy of stereo camera, when the stereo camera is replaced or re-adjusted, or the EyeSight function does not operate correctly.
• The automatic adjustment and function check by driving adjust the stereo camera more in detail, based on the stereo camera adjustment using RANDOM CHART.
1) Perform this procedure after finishing stereo camera adjustment and inspection.
2) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.
3) On «Start» display, select «Diagnosis».
4) On «Vehicle selection» display, enter vehicle information and select «Confirmed».
5) On «Main Menu» display, select «Each System».
6) On «Select System» display, select «EyeSight» and then select «Enter».
7) On «Select Function» display, select «Data Monitor».
8) From the data monitor item list, select «Automatic Adjustment Status».
9) Drive the vehicle until «Automatic adjustment status» displays «0F», «1F», «2F» or «3F».

CAUTION:
• For the automatic adjustment, drive the vehicle on straight road with white lines on both sides at a speed of 40 km/h (25 MPH) or more for at least five minutes, while maintaining distance from the preceding vehicle 40 m (132 ft) or more.
• Maintain the following conditions until «Automatic adjustment status» displays «0F», «1F», «2F» or «3F».
– Turn the active lane keep and cruise main to OFF.
– Hold down the pre-collision brake OFF switch for two seconds to turn OFF the pre-collision brake function.

Display	Content	Unit of measure	Note (at idling)
Automatic adjustment status	Index for automatic adjustment operation performed by the driving test after the completion of the optical axis adjustment	—	«0F», «1F», «2F» or «3F» is displayed when completed.

NOTE:
• It may takes long until «0F», «1F», «2F» or «3F» is displayed depends on the road condition etc.
• For new vehicles, «00» may be displayed. A test-drive is not necessary before delivery because high-accuracy aiming setting has been performed at the factory.

10) From the data monitor item list, display «Lane recognition status» to check if any of the following appears.

NOTE:
When driving does not continue until «0F», «1F», «2F» or «3F» is displayed, it may take long before recognition completes.
- Recognizing white lines on both sides during driving at 40 km/h (25 MPH) or more: «03»
- Recognizing white lines on both sides with lane width 3 m (10 ft) or more during driving at 65 km/h (40 MPH) or more: «05»

Display	Content	Unit of measure	Note (at idling)
Lane recognition status	Display of lane recognition status	—	Recognized when vehicle lane can be seen by 20 m (66 ft) or more.

11) From the data monitor item list, display «Preceding vehicle distance» to check if the distance from the preceding vehicle is approximately the same.

5. SHIM ADJUSTMENT

1) Turn the ignition switch to OFF.
2) Detach the stereo camera cover assembly, and remove the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>
3) Remove the stereo camera plate, and insert the shim into the vehicle body and camera plate.

Preparation items:
Genuine part: Shim (washer) (031105000)

NOTE:
- Inserting the shim into the vehicle front side makes camera downward.
- Inserting the shim into the vehicle rear side makes camera upward.
- There is a case that the shim may be inserted at the production line, but it is not abnormal.

4) Install the stereo camera plate.

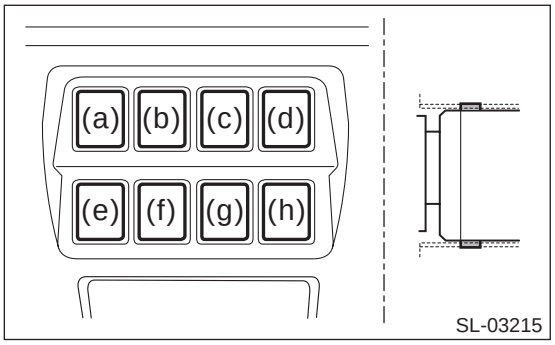
Tightening torque:
5.5±1 N·m (0.56±0.1 kgf-m, 4.1±0.7 ft-lb)

5) Install the stereo camera and stereo camera cover assembly. <Ref. to ES-11, INSTALLATION, Stereo Camera.>
6) Perform the camera all adjustment mode (replacement/removal). <Ref. to ES-27, CAMERA ALL ADJUSTMENT MODE (REPLACEMENT/REMOVAL), PROCEDURE, Camera Adjustment, Inspection.>

6. CAMERA INITIALIZATION

This is a recovery measures prepared for the data failure caused by the low battery voltage during data storage to inside the stereo camera.

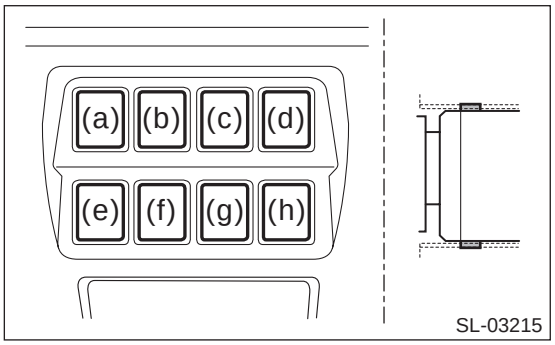
CAUTION:
Do not usually perform camera initialization because it will clear the aiming data and/or DTCs.
Perform the camera initialization only when the aiming result is NG even if the vehicle is placed correctly as shown in the flowchart described in “A: Procedure”. After camera initialization, perform the aiming in the same procedure as for camera replacement.
1) Connect the Subaru Select Monitor.



NOTE:
For detailed operation procedures, refer to “Application help”.
2) Turn the ignition switch to ON.
3) Wait for 10 seconds.
4) On «Start» display, select «Diagnosis».
5) On «Vehicle selection» display, enter vehicle information and select «Confirmed».
6) On «Main Menu» display, select «Each System».
7) On «Select System» display, select «EyeSight» and then select «Enter».
8) On «Select Function» display, select «DTC».
9) Select «Clear Memory» while pressing the pre-collision brake OFF switch and lane departure warning OFF switch at the same time.
10) Turn the ignition switch to OFF.
11) Wait for 5 seconds.
12) Next, perform the clear adjustment value. <Ref. to ES-26, ADJUSTMENT VALUE CLEAR, PROCEDURE, Camera Adjustment, Inspection.>

7. Switches and Harness

A: REMOVAL



1. PRE-COLLISION BRAKE OFF SWITCH

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-78, REMOVAL, Instrument Panel Lower Cover.>
3) Release the claws and remove the pre-collision brake OFF switch (h).

2. LANE DEPARTURE WARNING OFF SWITCH

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-78, REMOVAL, Instrument Panel Lower Cover.>
3) Release the claws and remove the lane departure warning OFF switch (g).

3. EyeSight STEERING SWITCH

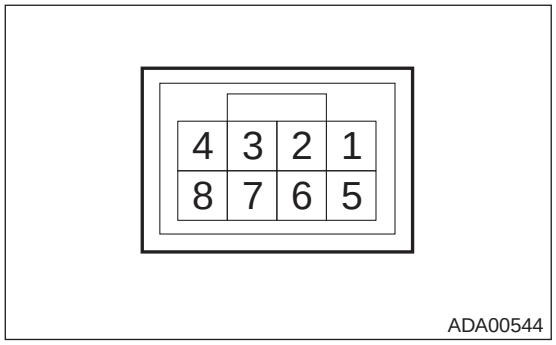
NOTE:
For the operation procedures for the EyeSight steering switch, refer to “CRUISE CONTROL SYSTEM” section. <Ref. to CC-6, REMOVAL, Cruise Control Command Switch.>

B: INSTALLATION

1. PRE-COLLISION BRAKE OFF SWITCH/LANE DEPARTURE WARNING OFF SWITCH

1) Install the pre-collision brake OFF switch or the lane departure warning OFF switch.
2) Install the cover assembly - instrument panel LWR driver.
3) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>

2. EyeSight STEERING SWITCH



NOTE:
For the operation procedures for the EyeSight steering switch, refer to “CRUISE CONTROL SYSTEM” section. <Ref. to CC-6, INSTALLATION, Cruise Control Command Switch.>

C: INSPECTION

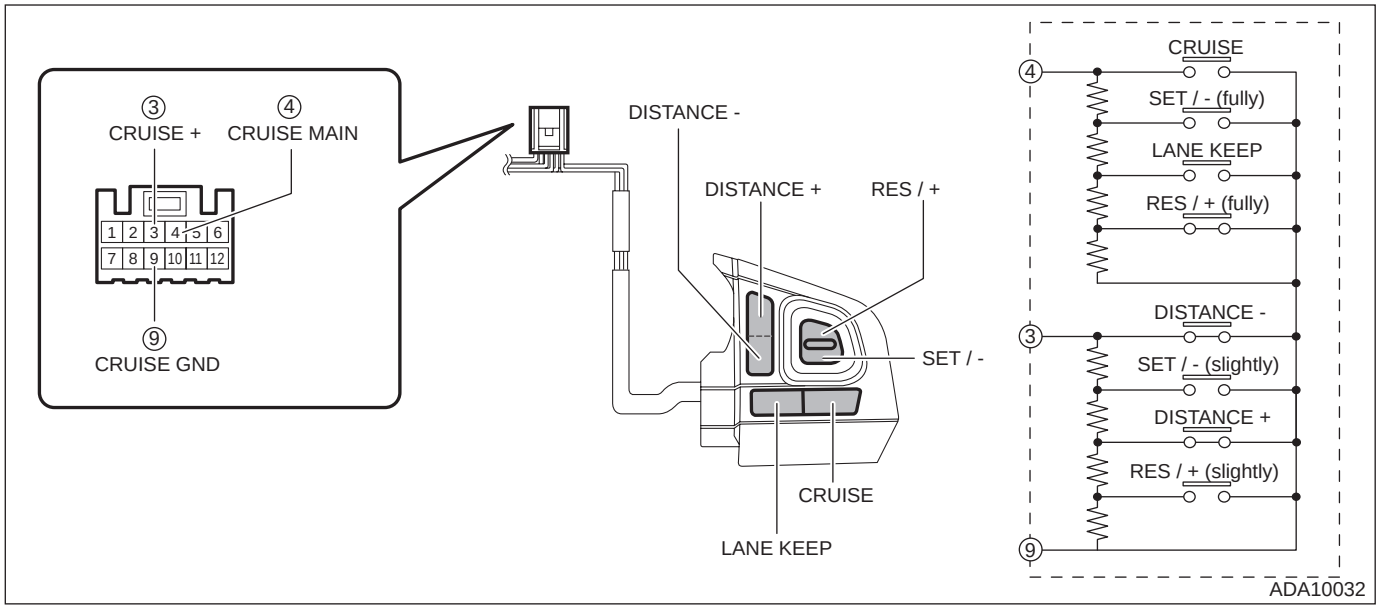
1. PRE-COLLISION BRAKE OFF SWITCH/LANE DEPARTURE WARNING OFF SWITCH

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
6 — 8	Switch OFF	Approx. 8.2 kΩ
	Switch ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.



Terminal No.	Inspection conditions	Specification
1 (+) — 4 (–)	Apply battery voltage.	Light ON

3) Replace the pre-collision brake OFF switch or the lane departure warning OFF switch if it is found defective.

2. EyeSight STEERING SWITCH

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions		Standard
3 — 9	DISTANCE– SET/– (slightly) DISTANCE+ RES/+ (slightly)	All OFF	Approx. 4,020 Ω
	DISTANCE–	ON	Less than 1 Ω
	SET/– (slightly)	ON	Approx. 250 Ω
	DISTANCE+	ON	Approx. 680 Ω
	RES/+ (slightly)	ON	Approx. 1,470 Ω
4 — 9	CRUISE (MAIN) SET/– (fully) RES/+ (fully)	All OFF	Approx. 4,020 Ω
	CRUISE (MAIN)	ON	Less than 1 Ω
	SET/– (fully)	ON	Approx. 250 Ω
	LANE KEEP	ON	Approx. 680 Ω
	RES/+ (fully)	ON	Approx. 1,470 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
10 (+) — 11 (–)	Apply battery voltage.	Light ON

3) Replace the EyeSight steering switch if it is found defective.

8. Combination Meter

A: NOTE

For the operation procedures for combination meter, refer to “INSTRUMENTATION/DRIVER INFO” section. <Ref. to IDI-11, Combination Meter.>

9. Transmission Control Module (TCM)

A: NOTE

For the operation procedures for transmission control module (TCM), refer to “CONTINUOUSLY VARIABLE TRANSMISSION” section.

- H4 model: <Ref. to CVT(TR580)-161, Transmission Control Module (TCM).>
- H6 model: <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>

10.Stop Light & Brake Switch

A: NOTE

For the operation procedures for stop light and brake switch, refer to “BRAKE” section. <Ref. to BR-80, Stop Light Switch.>

11.VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)

A: NOTE

For the operation procedures for VDC control module & hydraulic control module (VDCCM&H/U), refer to “VEHICLE DYNAMICS CONTROL (VDC)” section. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

12.Power Steering Control Module

A: NOTE

For the operation procedures for power steering control module, refer to “POWER ASSISTED SYSTEM (POWER STEERING)” section. <Ref. to PS-48, Power Steering Control Module.>

13.Roll Connector

A: NOTE

For the operation procedures for roll connector (steering angle sensor), refer to “AIRBAG SYSTEM” section. <Ref. to AB-61, Roll Connector.>

14.Body Integrated Unit

A: NOTE

Refer to the “SECURITY AND LOCKS” section for operation procedures of the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>

15.Diagnostics with Phenomenon

A: INSPECTION

Refer to “Diagnostics with Phenomenon” of “EyeSight (DIAGNOSTICS)” section. <Ref. to ES(diag)-50, Diagnostics with Phenomenon.>

EyeSight (DIAGNOSTICS)

ES(diag)

		Page
1.	Basic Diagnostic Procedure	2

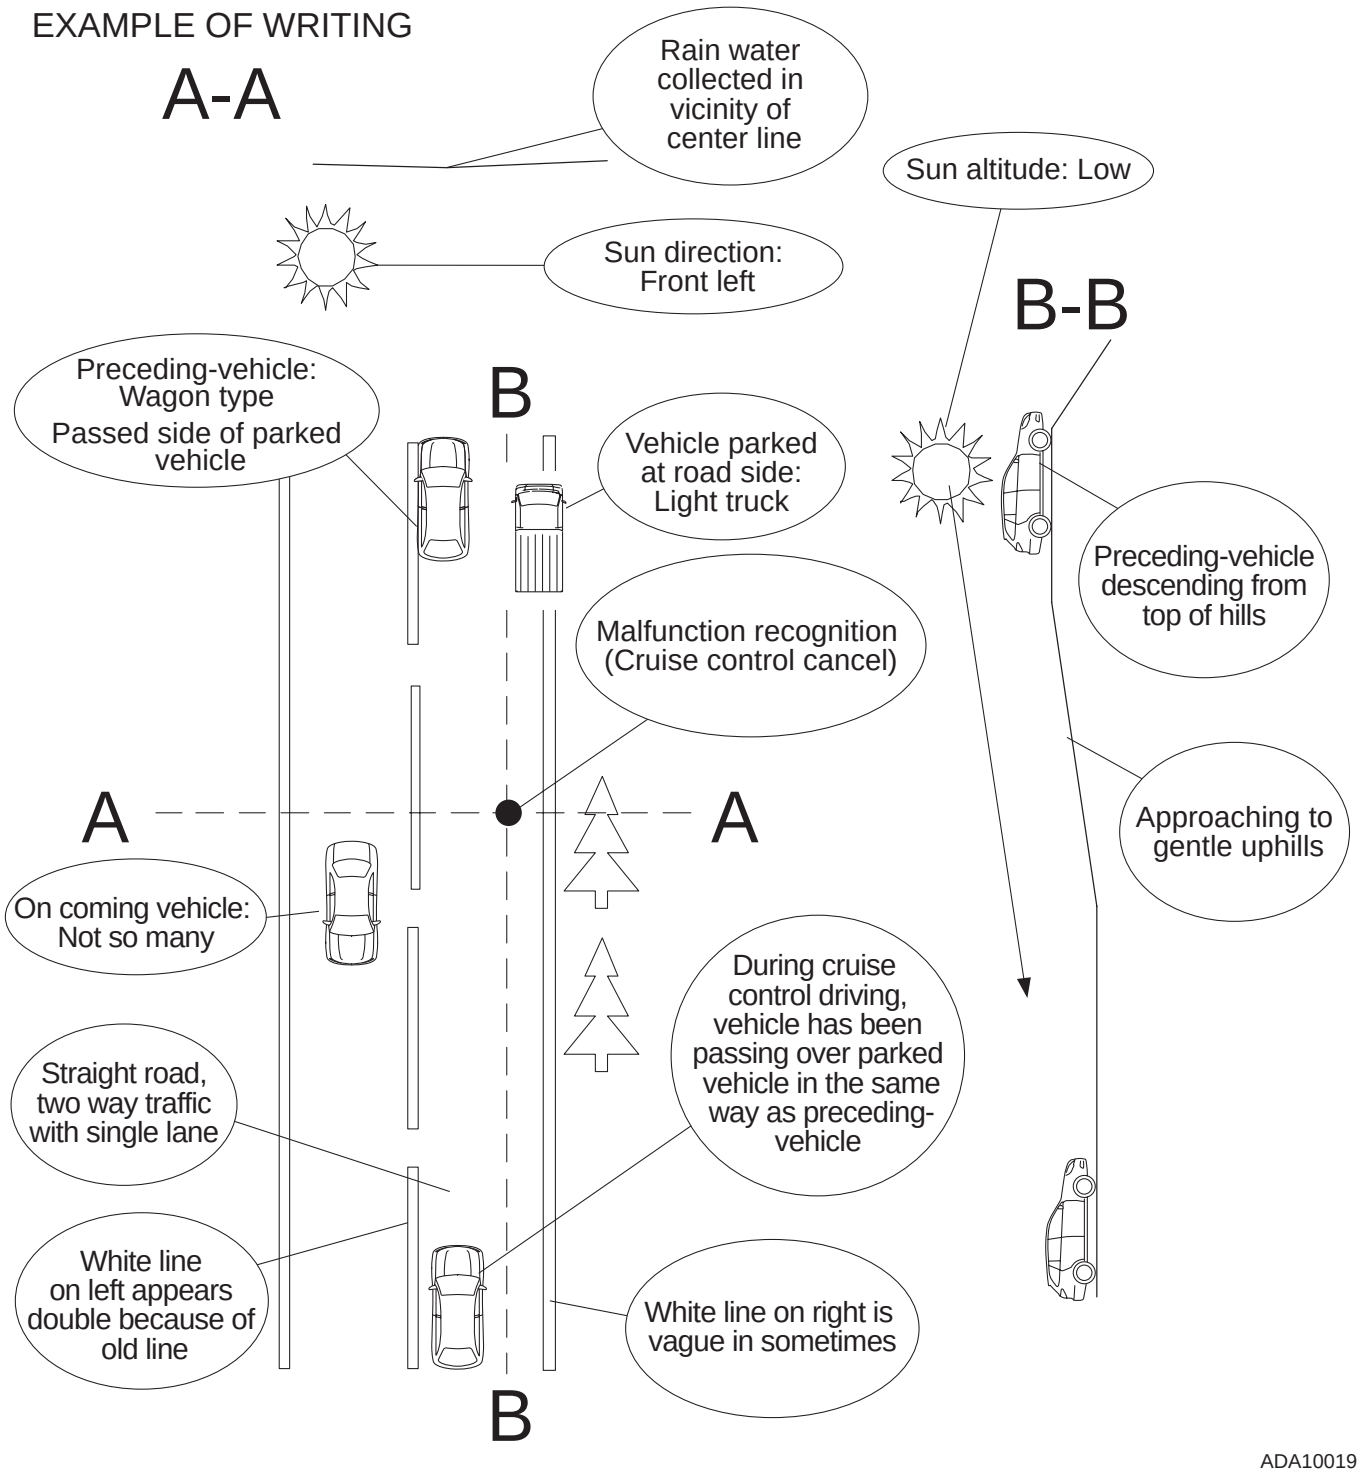
10.	Freeze Frame Data Display	47
11.	Clear Memory Mode	48
12.	Clear Active Lane Keep System Learning Value	49
13.	Diagnostics with Phenomenon	50
14.	EyeSight Temporary Code(s) Display	78
15.	ECM Cancel Code(s) Display	85
16.	ACC Cancel Code(s) Display	88
17.	Active Lane Keep System Code(s) Display	90
18.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	91

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
• Start the diagnosis after the engine has started. (Cruise control main switch does not turn on even if it is pressed before the engine starts.)
• When performing diagnosis, observe the legal speed limit on the road.
• ECM cancel code, ACC cancel code and lane keep assist code are not the diagnostic trouble codes (DTCs). These codes will also appear when the cruise control or the active lane keep is cancelled by the driver's operation. Do not confuse them.
• Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.
• Be sure to record the following data before performing the Clear Memory. (Data must be obtained before inspection because the Clear Memory operation deletes previous faults and temporary stop history.)
– All diagnostic trouble codes (DTCs)
– DTC of stereo camera (current malfunction, past malfunction)
– Freeze frame data of stereo camera
– ACC cancel code of stereo camera
– Lane keep assist code of stereo camera
– EyeSight temporary stop code of stereo camera
– Current data of stereo camera
(To obtain the data concerning camera adjustment information, previous trouble or temporary stop history, all data must be measured for a few seconds after the engine has started.)
• When a temporary stop occurs, stereo camera may be affected by a small amount of dirt that would not be perceived by the driver. In this case, cleaning the windshield glass is effective. <Ref. to ES(diag)-7, WINDSHIELD GLASS AND DASHBOARD, INSPECTION, General Description.>

	Step	Check	Yes	No
1	**PREPARATION BEFORE INSPECTION.** Using the Check List for Interview, confirm the condition of the malfunction occurrence from the user. <Ref. to ES(diag)-3, CHECK, Check List for Interview.>	Is there any component that obviously seems to affect the malfunction?	Repair or replace the component that seems to affect the malfunction.	Go to step **2**.
2	**CHECK DTC.** Read the DTC using Subaru Select Monitor. NOTE: When communication with the stereo camera could not be established, check the circuit. <Ref. to ES(diag)-21, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>	Are any DTCs displayed?	Perform the diagnosis according to DTC and freeze frame data. <Ref. to ES(diag)-42, Diagnostic Code(s) Display.> <Ref. to ES(diag)-47, Freeze Frame Data Display.> If the diagnostic codes other than the stereo camera are displayed, refer to the diagnosis for the relevant codes.	Go to step **3**.
3	**PERFORM DIAGNOSTICS WITH PHENOMENON.** Using the diagnostics with phenomenon, perform inspection. <Ref. to ES(diag)-50, Diagnostics with Phenomenon.>	Is the vehicle free from any problem described in the diagnostics with phenomenon? / Are indicators normal?	Finish the diagnosis.	Perform the diagnosis according to the diagnostics with phenomenon.



2. Check List for Interview

A: CHECK

Inspect the following items regarding the vehicle's state.

Writer/ Inspector	Writer's name		
	Inspector's Name		
Vehicle information	Car accessory equipment condition	Car accessory is installed to the windshield glass.	No/Yes (Position:)
		Other	No/Yes (Accessory's name:)
	Is there any modification for the following items?	Suspension?	Not changed / Changed (Specifically:)
		Headlight?	Not changed / Changed (Specifically:)
		Tire size?	Not changed / Changed (Specifically:)
		Front wiper?	Not changed / Changed (Specifically:)
	How is the condition around camera?	Is there any scratch or damage on the windshield glass?	No/Yes (Specifically:)
		Are antennas, etc. attached on the prohibited area?	No/Yes (Specifically:)
		Is wide mirror or accessory attached?	No/Yes (Specifically:)
	How is the surface condition of the windshield glass?	Presence of oil film, fogging, dirt and/or glass coating	No/Yes (Specifically:)
	How is the condition of the dashboard?	Is there anything that can be easily reflected against the windshield glass on the dashboard?	No/Yes (Specifically:)
	How is the deterioration of the wiper?	Does any streak or uneven wiping area remain in front of the camera?	No/Yes (Specifically:)
	How is the condition of the tire?	Is there any wear? Is there any excessive wear difference?	No/Yes (Specifically:)
		Is the air pressure proper?	Proper/Improper (Specifically:)
	How is the condition of the camera lens filter?	Is there finger print adhesion or cracks on the lens filter?	No/Yes (Specifically:)
Description of malfunction	What kind of malfunction has been detected?	Failure / temporary stop / faulty operation of adaptive cruise control / faulty operation of pre-collision brake / other faulty operations	
	What kind of DTC and/or cancel code is displayed?		
	How is the meter display?	EyeSight warning light	Off/On/Blink
		Pre-collision brake OFF indicator light	Off/On
		Lane departure warning OFF indicator light	Off/On
		Multi-information display	• Halt: camera view defectiveness • Halt: camera temperature range outside • Halt

<table>
<tr><td rowspan="10">Occurrence conditions</td><td>Occurrence date</td><td></td><td>Occurrence location</td><td></td></tr>

<tr><td colspan="4">Detailed chart
(Refer to the example of description.)</td></tr>
<tr><td colspan="4">In case of malfunction caused by temporary stop or faulty operation, describe the details by referring to the example below so that the following conditions can be recognized. (Images taken with a digital camera, etc. are acceptable.)
• Road shape (straight, curve, tunnel, number of lane, etc.)
• Road grade and it's change
• Presence of white line, guardrails and/or side wall (degree of clarity)
• Position of the sun
• Presence and shape of preceding vehicle, oncoming vehicle, vehicle running on the next lane or pedestrian
• Presence and shape of surrounding building or structure
• Traveled course of own vehicle and preceding vehicle</td></tr>
</table>

EXAMPLE OF WRITING
A-A
Rain water collected in vicinity of center line
Sun altitude: Low
Sun direction: Front left
B-B
Preceding-vehicle: Wagon type
Passed side of parked vehicle
B
Vehicle parked at road side: Light truck
Preceding-vehicle descending from top of hills
Malfunction recognition (Cruise control cancel)
A
A
Approaching to gentle uphills
On coming vehicle: Not so many
During cruise control driving, vehicle has been passing over parked vehicle in the same way as preceding-vehicle
Straight road, two way traffic with single lane
White line on left appears double because of old line
White line on right is vague in sometimes
B
ADA10019

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

Airbag system wiring harness is routed near the cruise control command switch.

CAUTION:
• Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
• Be careful not to damage the airbag system wiring harness when servicing the cruise control command switch.

2. EyeSight

CAUTION:
• Do not hold the camera unit of the stereo camera.
• Do not touch the lens on the stereo camera.
• Do not clean the lens of the stereo camera.
• When cleaning the windshield glass, use care so that the glass cleaner, etc. does not come in contact with the lens of the stereo camera.
• Do not make an impact or apply excessive force to the stereo camera.
• Do not disassemble the stereo camera.
• Do not change the installation position of the stereo camera or do not modify the surrounding structure.
• If the stereo camera or windshield glass is removed or replaced, always adjust or check the stereo camera.
• When lifting up the vehicle to rotate the tires, turn off the pre-crash function.
• Stereo camera axis may be displaced even in a minor collision. So be sure to adjust the stereo camera even when the EyeSight warning light is not illuminated or when the "Stereo Camera Temporary Stop" is not displayed on the multi-information display.
• When removing the stereo camera cover assembly, cover it with a copy paper or similar dust-free paper to avoid any interference to the camera lens, and tape the paper while being careful not to let the adhesive surface contact the glass surface. Be sure to remove the paper after the procedure. <Ref. to ES-8, REMOVAL, Stereo Camera.>

B: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".

2. GENERAL TOOL

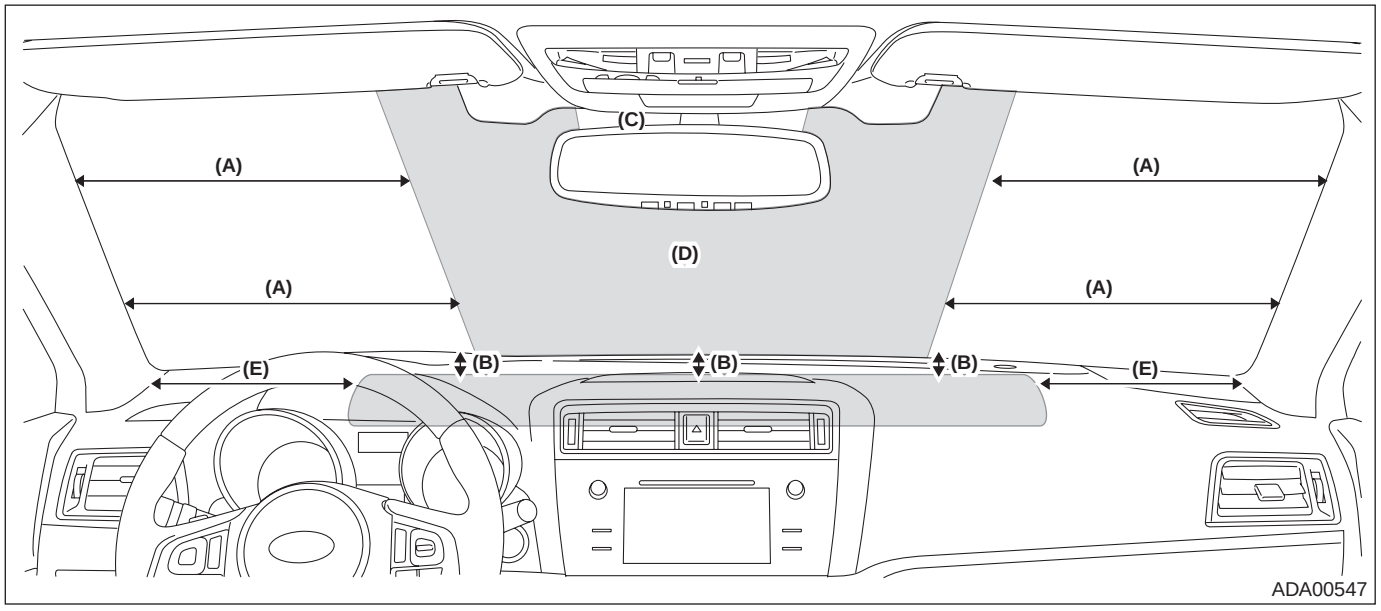
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Masking tape	Used for removing and installing stereo camera cover assembly.
DST-i	Used with Subaru Select Monitor 4.

C: INSPECTION

1. BATTERY

Check the battery. <Ref. to SC(H4DO)-58, Battery.> <Ref. to SC(H6DO)-58, Battery.>

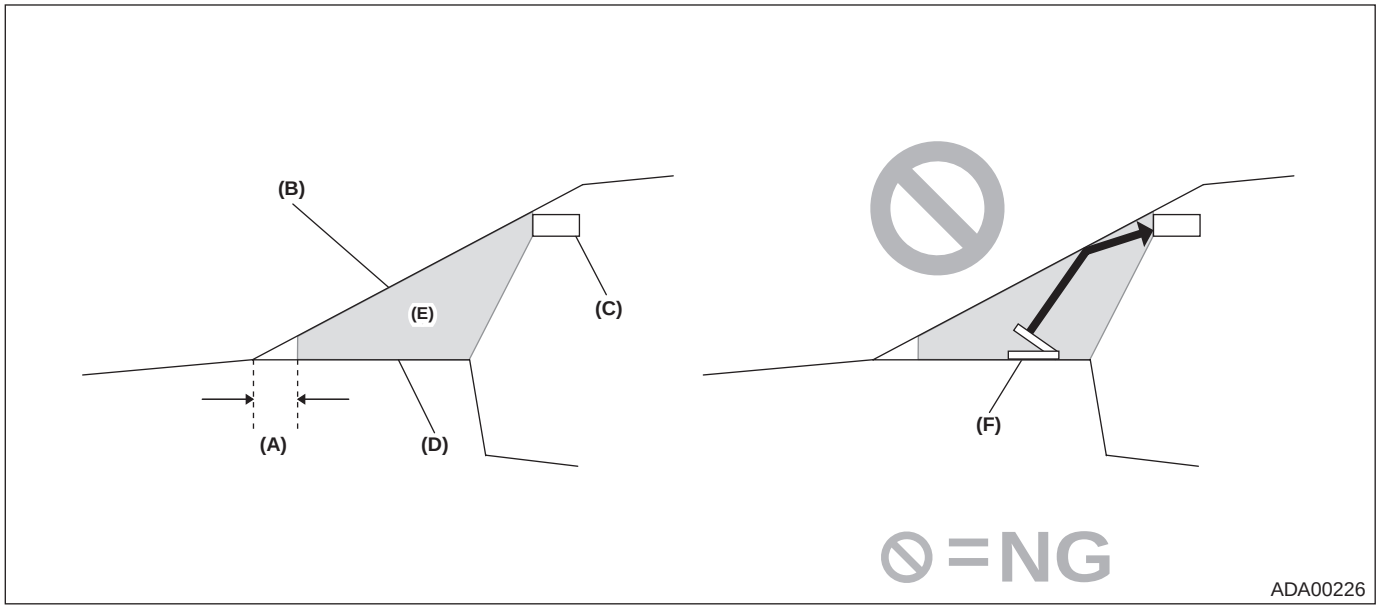
2. WINDSHIELD GLASS AND DASHBOARD



Remove the windshield glass and dashboard in front of the stereo camera.

Standard:

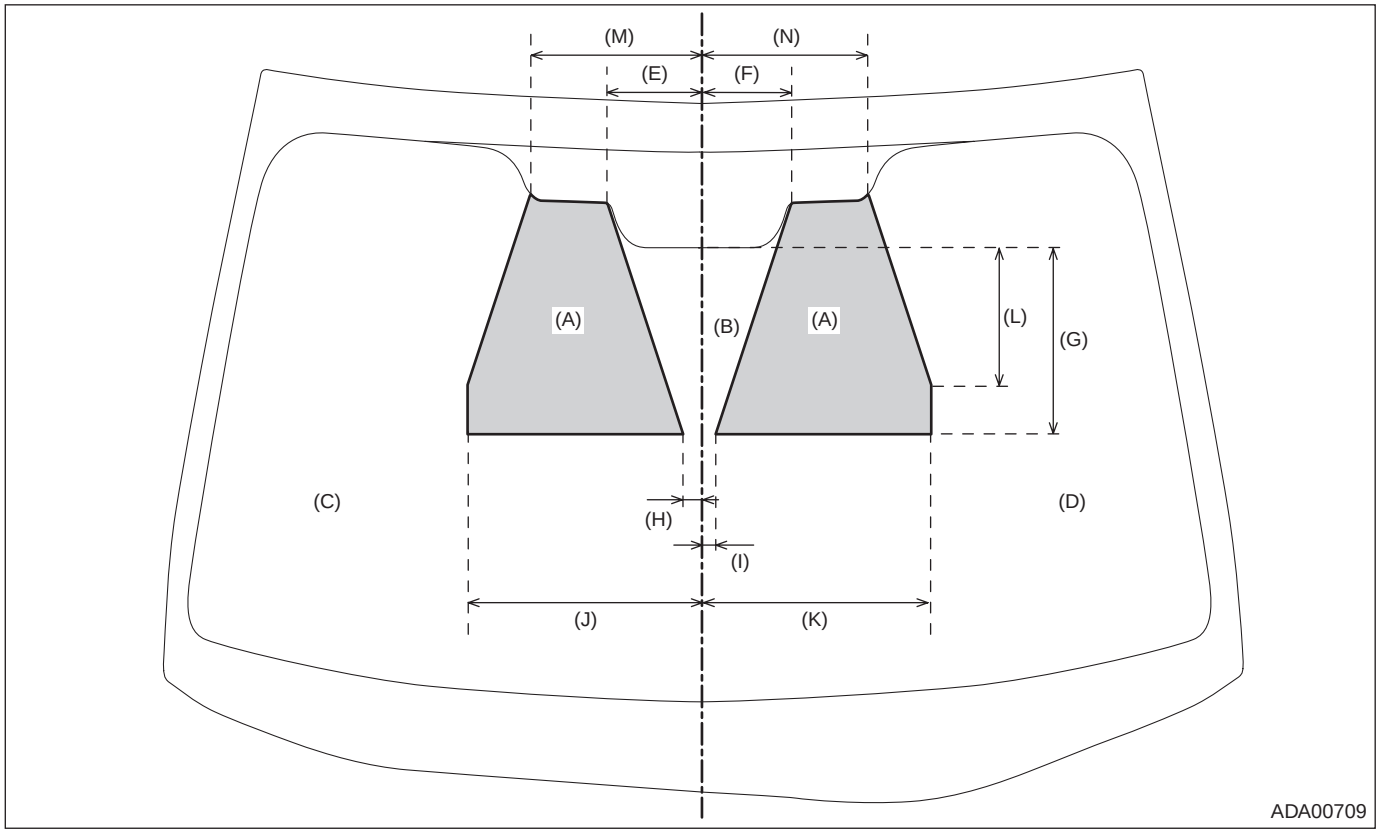
There must be no oil film, dirt, scratch or fogging that obstructs the forward visibility of the stereo camera.



Do not stick or attach the aftermarket parts on the prohibited area (D) shown in the figure below. Even outside the prohibited area, if the abnormal operation occurs due to the reflection of the light or the reflection on the glass, change the adhering position or installation position.

- ***Application of stickers or antennas, installation of wide-type mirror***
  - ***This will affect the visibility of the stereo camera, causing the function not to operate correctly.***
- ***Placement of navigation unit, ETC or other things on the dashboard***
  - ***These things will be reflected on the windshield glass, affecting the recognition of the stereo camera, thus causing the function not to operate correctly.***
- Front view

(A) 360 mm (14 in)
(B) 70 mm (2.7 in)
(C) Ceramic area
(D) Prohibited area
(E) 230 mm (9 in)

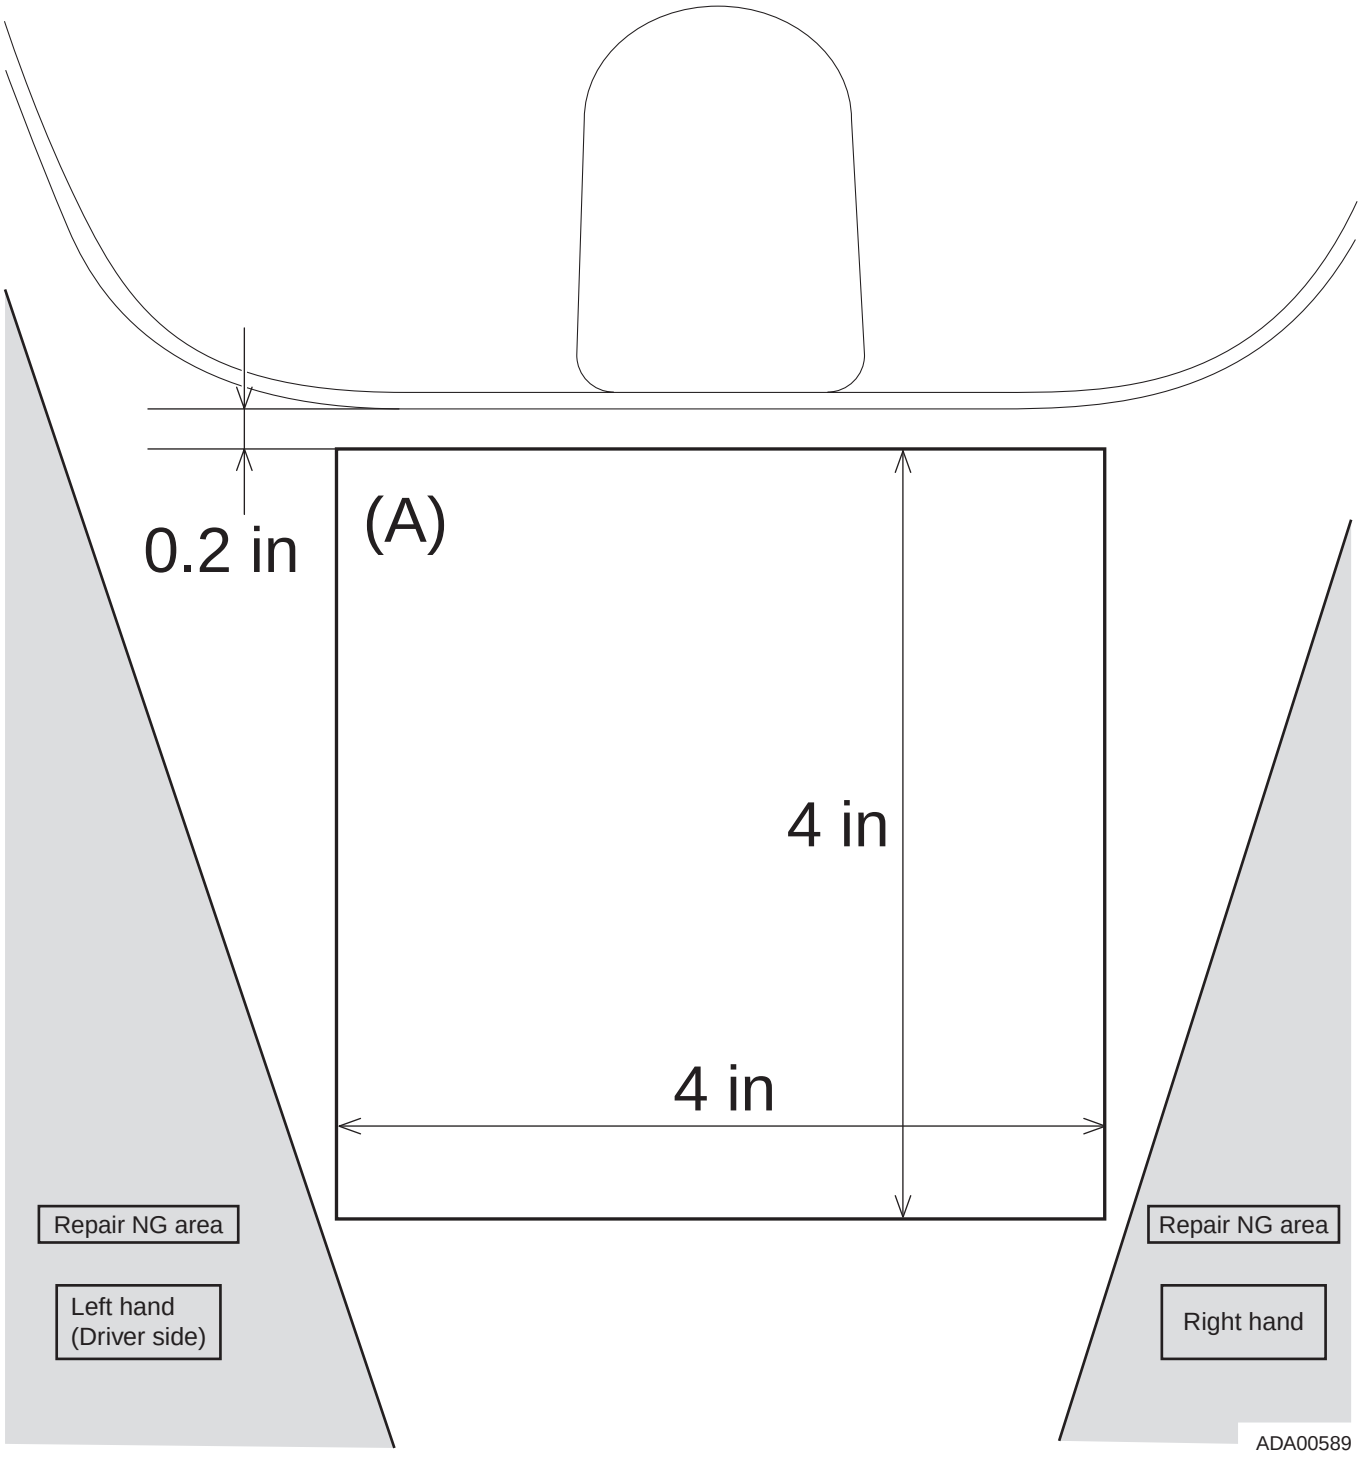


- Side view

(A)	120 mm (4.7 in)	(C)	Stereo camera cover	(E)	Prohibited area
(B)	Windshield glass	(D)	Dashboard	(F)	External monitor etc.

NOTE:
- Clean the windshield glass if dirt or fogging is found on the glass. Repair or replace the glass if damage is found.
  - When cleaning the inner side of the windshield glass, be careful not to touch the lens of the stereo camera. Take care so that the glass cleaner is not applied to the lens. (As with the removal procedure of the stereo camera, cover the opening of camera cover with a copy paper or similar dust-free paper before the procedure, in order to avoid any interference to the camera lens, and tape the paper while being careful not to let the adhesive surface contact the glass surface. Be sure to remove the paper after the procedure. <Ref. to ES-8, REMOVAL, Stereo Camera.>
  - When replacing the windshield glass, be sure to replace the part for the EyeSight.
  - If the glass is removed or replaced, always perform the stereo camera adjustment and inspection.

- If the damage is found in the glass repair prohibited area shown in the figure below, replace the glass.
  – Damage in the prohibited area can affect the recognition of the stereo camera even if it is repaired, and thereby EyeSight function may not operate properly.

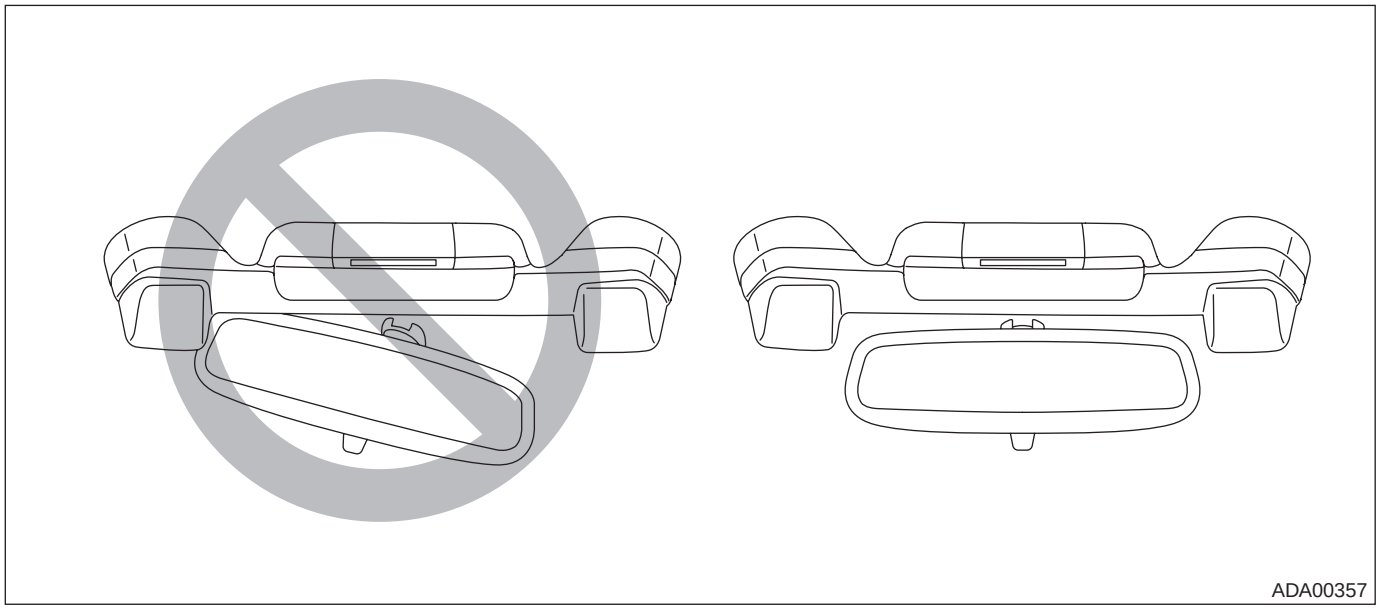


(A)	Glass repair prohibited area	(E)	130 mm (5.1 in)	(J)	315 mm (12.4 in)
(B)	Glass repairable area	(F)	130 mm (5.1 in)	(K)	315 mm (12.4 in)
(C)	Glass repairable area (LH side)	(G)	261 mm (10.3 in)	(L)	200 mm (7.9 in)
(D)	Glass repairable area (RH side)	(H)	23 mm (0.9 in)	(M)	228 mm (9.0 in)
		(I)	23 mm (0.9 in)	(N)	228 mm (9.0 in)

– Install the ETC transponder inside the area (A) shown in the figure below.

Before installing, attach a full-scale copy of the following figure onto the windshield glass surface to install the parts to correct positions.

– Align the position with respect to the end of the ceramic area.
– Prepare a full-scale copy in which the reference dimension on the upper part of the figure actually has 4 inches long.
– Only the transponder with a thickness of 1.5 inches or less can be used.



- Relocate any aftermarket parts out of the prohibited area.
- Do not touch the lens on the stereo camera. Do not clean the lens of the stereo camera. (If the lens surface is touched, the stereo camera must be replaced as it is impossible to clean the lens surface for ensuring quality.)

3. REAR VIEW MIRROR

Check the rear view mirror condition.

Standard:

The rear view mirror other than genuine parts shall not be used. (Wide mirrors shall not be used)
The visibility of the stereo camera shall not be blocked.
— This will affect the visibility of the stereo camera, causing the system not to operate correctly.

4. FRONT WIPER

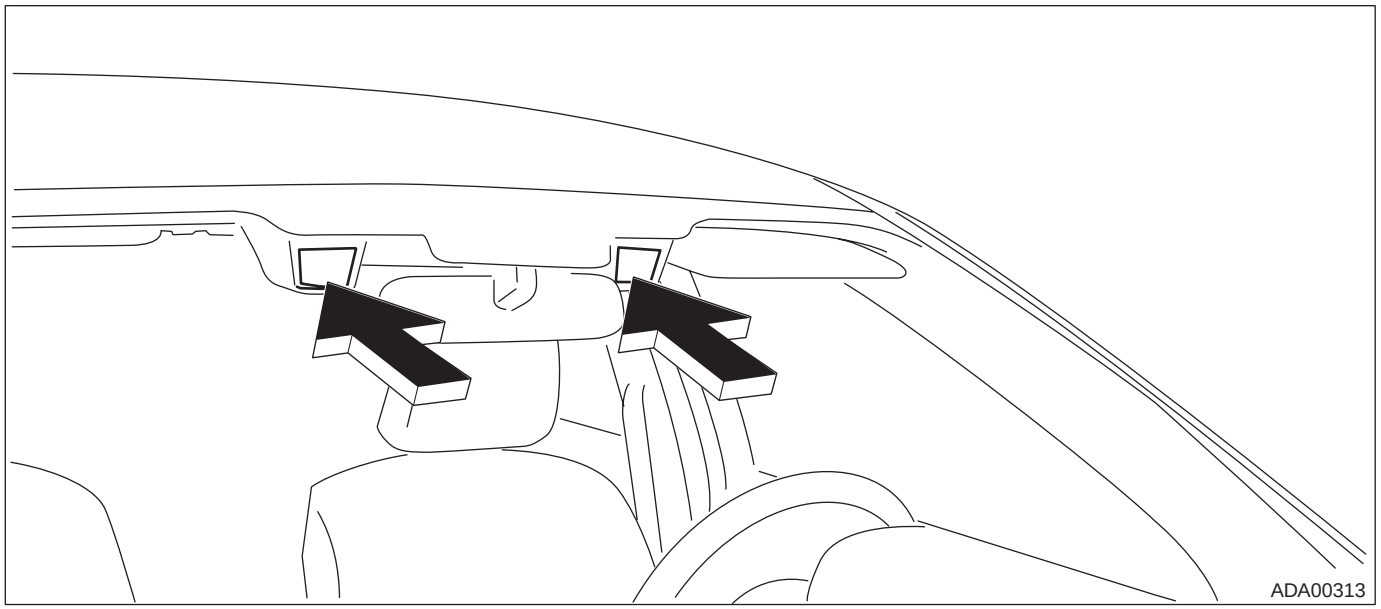
Check the wiping condition of windshield glass.

Standard:

Use Subaru genuine part only for wiper blade body and blade rubber.
— Using the part other than genuine part will affect the recognition of the stereo camera, which may cause the function not to operate correctly.
Do not continue using the damaged blade rubber.
— The glass may be damaged. If the wiping performance decreases, or if the distinct streak is found, replace it as soon as possible.

NOTE:
Clean the windshield glass if there is an oil film or any dirt on the surface.

5. TIRE INFLATION PRESSURE



Check the tire air pressure.

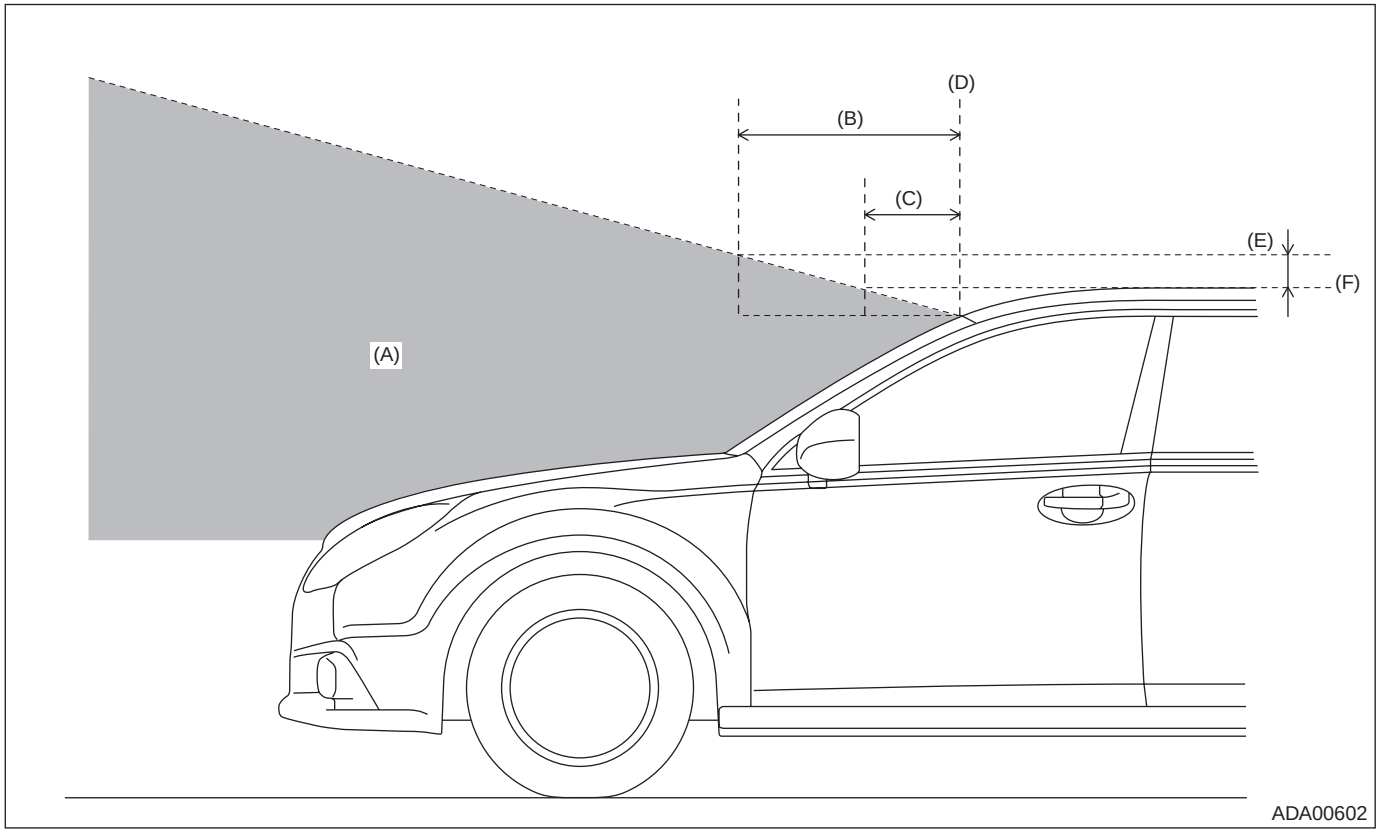
Standard:

Adjust to the specified air pressure. <Ref. to WT-2, SPECIFICATION, General Description.>
Do not install worn tire or tires with excessive wear difference.
Install tires with specified size.

6. STEREO CAMERA

Through the windshield glass, check if there are any fingerprints or faults such as crack found on lens filters at the left and right camera lenses of the stereo camera.

NOTE:

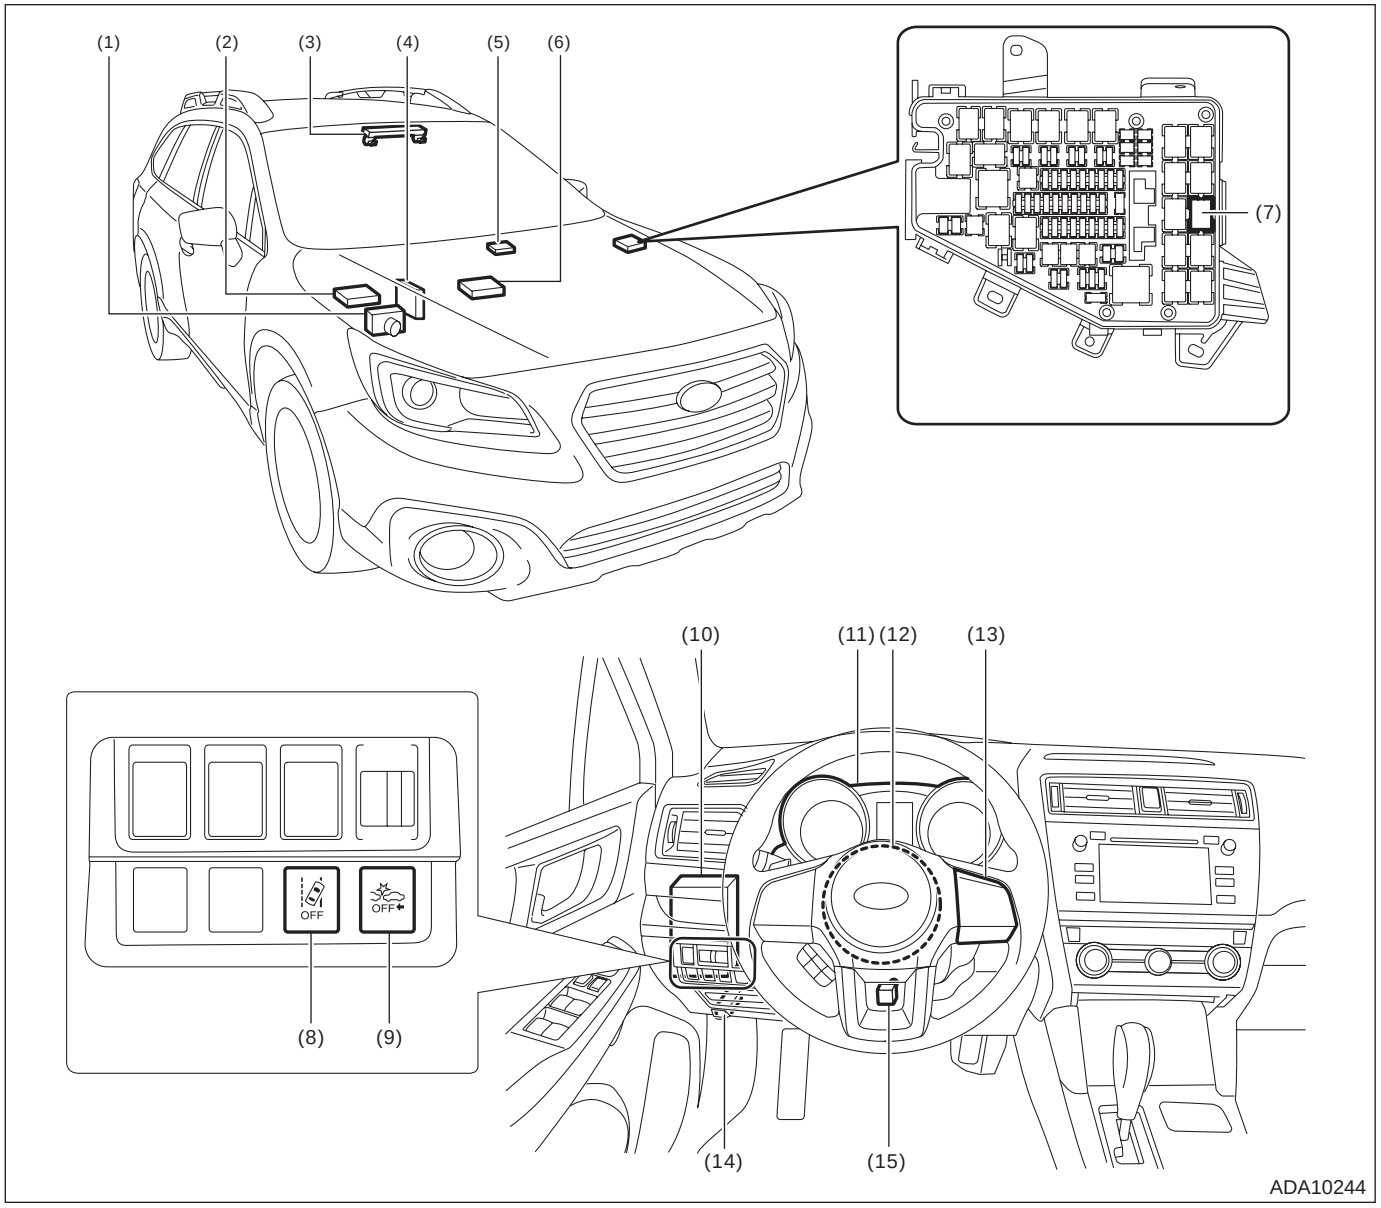


- Do not remove the camera or camera cover to check the lens.
- When spider's web or insects are found within the camera view or inside the lens hood, remove it by blowing air etc. while taking care not to touch the lens surface. Do not use a hand or a cloth.
- Thin and uniform adhesion of dust, dirt or tobacco stains to the lens filter surface resulting from normal use will not be an obstacle. Do not attempt to clean in such cases.
- If an oil film such as a fingerprint or any excessive dirt adheres, or if the lens filter cracks, replace the stereo camera. <Ref. to ES-8, Stereo Camera.>
- If the fingerprint adhesions or cracks occur on the lens filter, the following failures may arise.
  – The vehicle may not be able to detect the preceding vehicle or obstacle due to the effects of the headlight of the oncoming vehicle.
  – The vehicle may not be able to detect the preceding vehicle or obstacle due to the effects of the brake light operation of the preceding vehicle.
  – All the functions of the EyeSight may be suspended by the self-diagnosis function equipped with the camera.
  – When the lens filter is broken, the vehicle may not be able to detect the preceding vehicle or obstacle all day and all night.
- Do not clean the lens filter with any cleaner. It is quite difficult to uniformly clean both of the right and left lenses, and such an attempt just ends up spreading dirt and will cause problems as same as those from oil film.

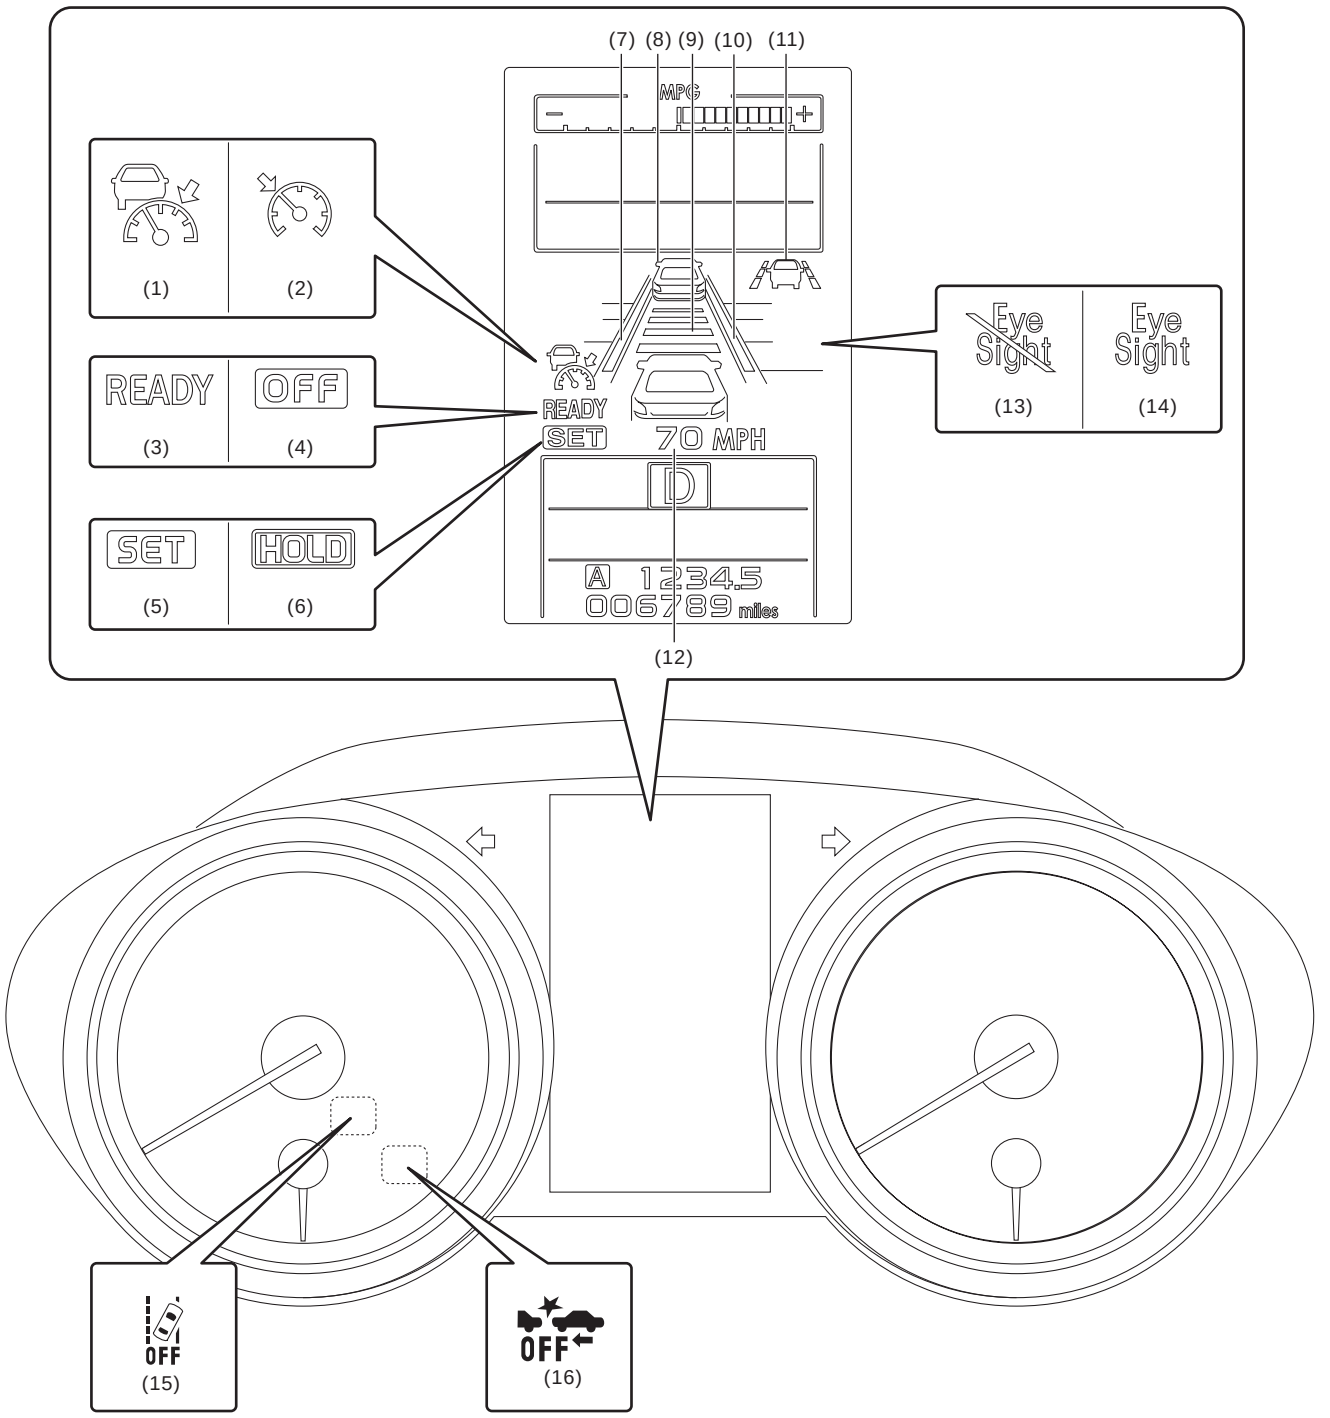
7. LOAD ON THE ROOF

Check that load on the roof is not sticking out to the front of the stereo camera.

Standard:



The load on the roof is placed outside the prohibited area (A) shown in the figure below.



(A) Prohibited area
(B) 880 mm (34.6 in)
(C) 520 mm (20.5 in)
(D) Windshield glass upper end
(E) 100 mm (3.9 in)
(F) Highest surface of the roof

		ALL OFF → lane keep switch ON	3.6 V — 4.5 V
		ALL OFF → following distance (+) ON	1.6 V — 2.5 V
		ALL OFF → following distance (–) ON	0.0 V — 0.5 V

2. ENGINE CONTROL MODULE (ECM)

For details on the input/output signals for the engine control module, refer to ENGINE (DIAGNOSTICS). <Ref. to EN(H4DO)(diag)-21, Engine Control Module (ECM) I/O Signal.> <Ref. to EN(H6DO)(diag)-22, Engine Control Module (ECM) I/O Signal.>

3. VDC CONTROL MODULE (VDCCM)

For details on the input/output signals for VDC control module, refer to VDC (DIAGNOSTICS). <Ref. to VDC(diag)-17, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

4. TRANSMISSION CONTROL MODULE (TCM)

For details on the input/output signals for the transmission control module, refer to AUTOMATIC TRANSMISSION (DIAGNOSTICS). <Ref. to CVT(diag)-12, Transmission Control Module (TCM) I/O Signal.>

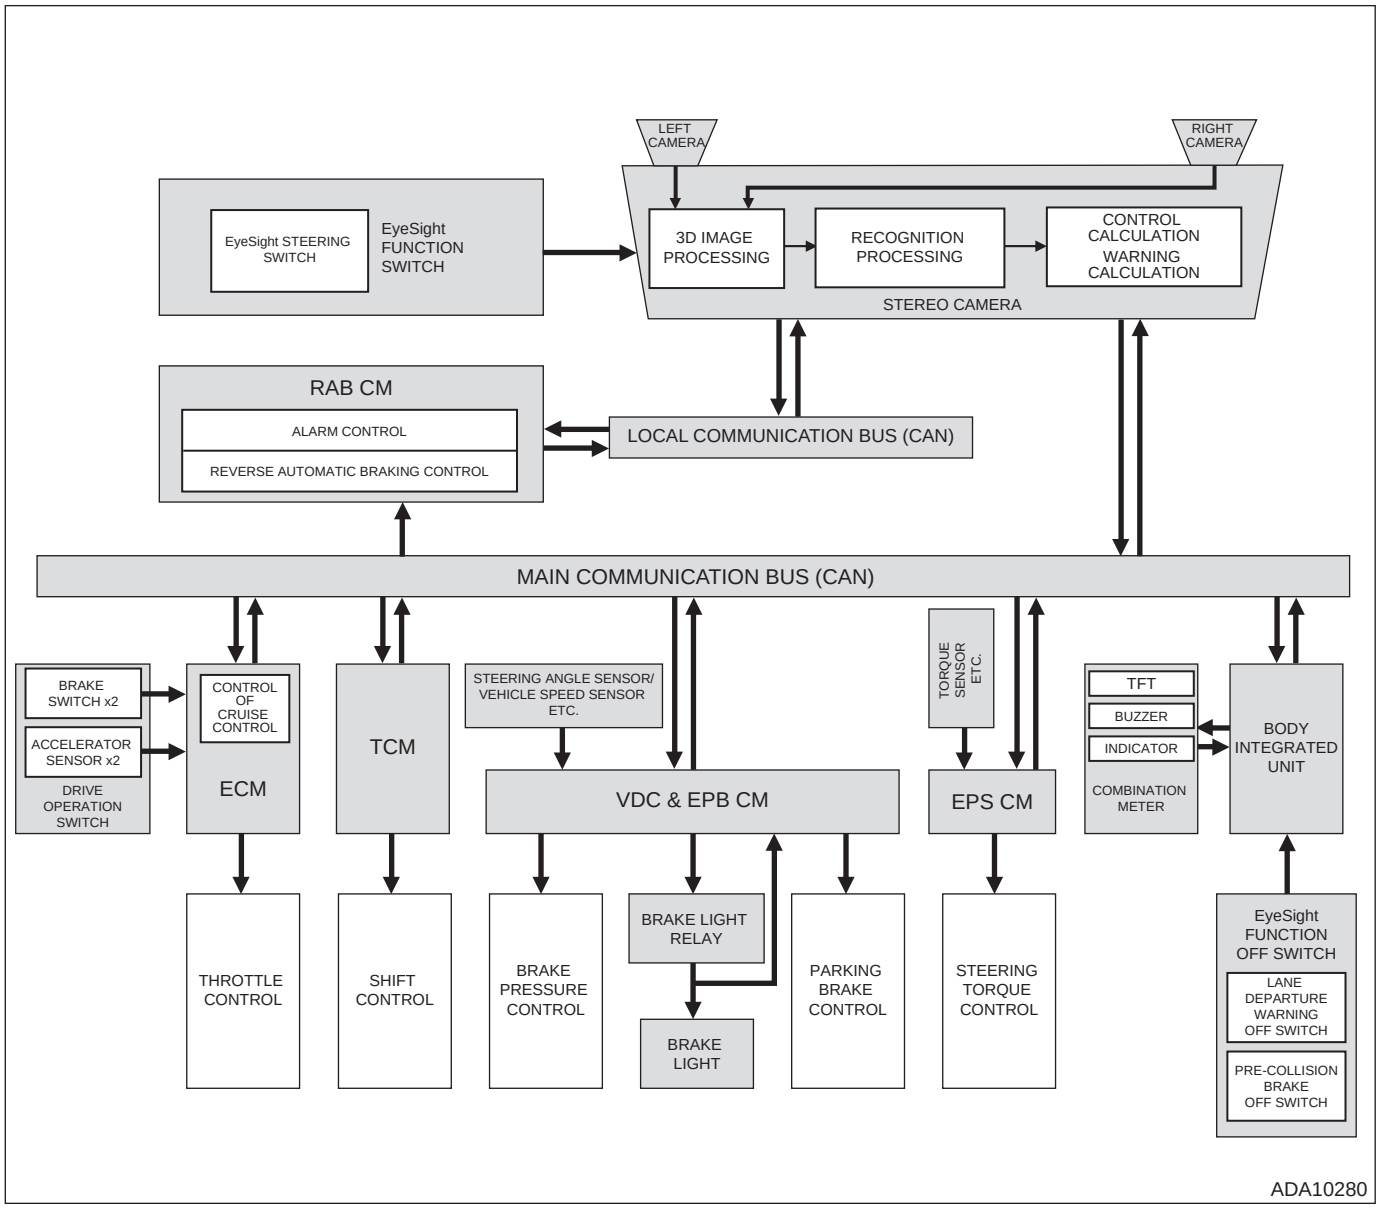
5. BODY INTEGRATED UNIT

Refer to the BODY CONTROL SYSTEM (DIAGNOSTICS) for the I/O Signal of the body integrated unit. <Ref. to BC(diag)-12, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

6. COMBINATION METER

For details on the input/output signals for the combination meter, refer to COMBINATION METER (DIAGNOSTICS). <Ref. to MET(diag)-6, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

7. RAB CM



For details on the input/output signals for RAB CM, refer to RAB (DIAGNOSTICS). <Ref. to RAB(diag)-8, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

B: WIRING DIAGRAM

Refer to “EyeSight System” in the wiring diagram. <Ref. to WI-232, EyeSight System.>

C: SYSTEM BLOCK DIAGRAM

Main signals used between stereo camera and relevant CM

6. Subaru Select Monitor

A: OPERATION

1. GENERAL DESCRIPTION

For on-board diagnosis function of the EyeSight, use the Subaru Select Monitor.
The on-board diagnosis function operates in three categories, which are used depending on the type of problems.
1) Diagnosis with diagnostic trouble code (DTC):
When the electrical failure occurs in the EyeSight, DTC is detected from the stereo camera. If the DTC is detected, the relevant DTC is displayed by illuminating or blinking the EyeSight warning light. To check the details concerning the DTC, use the Subaru Select Monitor.
2) Diagnosis with cancel code and lane keep assist code:
(1) This category of diagnosis requires actual driving of the vehicle in order to determine the cause in such a case when the set speed is cancelled during cruise control driving or the control is cancelled during active lane keep driving although any cancel condition is not entered.
(2) With ECM cancel code and stereo camera ACC cancel code, cancel condition (Code No.) is stored when detected during cruise control driving. With lane keep assist code of stereo camera, cancel condition (Code No.) is stored if active lane keeping does not operate or if control cancel occurs during active lane keep driving.

CAUTION:
• With ECM cancel code, not only the cruise control “cancel” occurred (although the driver does not input the “cancel” operation), but also the “cancel” condition input by the driver is stored.
• The latest memory contents of the ECM cancel code (latest code) is cleared when the ignition switch is turned to OFF. However, memory contents set by the diagnosis of faulty switches related to the system and cruise control will remain as trouble history (memory code) after the ignition switch is turned to OFF.
3) Real-time diagnosis:
Real-time diagnosis function is used to determine whether or not the input signal system is in good order, according to signal emitted from switches, sensors, etc.
(1) Vehicle cannot be driven at cruise speed when the problem occurs in the cruise control system or relevant circuits.
(2) Monitor the signal conditions from switches and sensors.

2. BASIC OPERATION

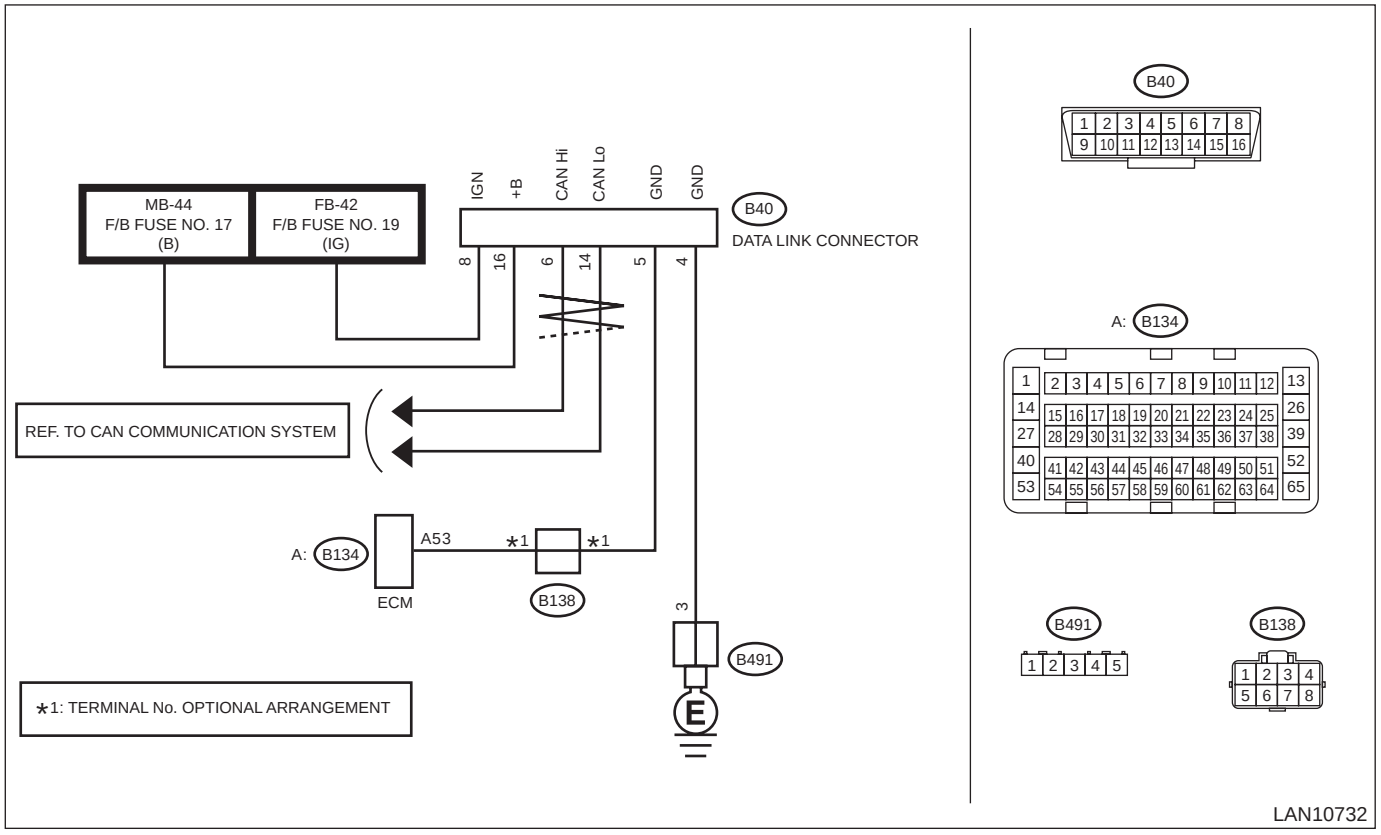
For detailed operation procedures, refer to “Application help”.

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

- Communication error with stereo camera

Detecting condition:



- Defective harness connector
- Power supply circuit malfunction
- Defective stereo camera
- Defective CAN system
- Defective Subaru Select Monitor

Trouble symptom:

- EyeSight warning light blinks.

Wiring diagram:

CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>

Step		Check	Yes	No
1	**CHECK SUBARU SELECT MONITOR.** 1) Connect the Subaru Select Monitor to another vehicle. 2) Check communication condition between Subaru Select Monitor and vehicle.	Is communication performed normally?	Go to step **2**.	Subaru Select Monitor unit or diagnosis cable is faulty.

Step		Check	Yes	No
2	**CHECK COMMUNICATION FOR INITIALIZING ERROR.** Perform the communication for initializing with each module by connecting the Subaru Select Monitor. (For systems whose module can communicate with diagnostic devices) NOTE: By performing «CAN bus check», confirmation of minimal connection modules is possible. <Ref. to LAN(diag)-45, CAN BUS ECU Communication Check.>	Is the communication possible with all modules?	The circuit has returned to a normal condition at this time. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.	When the communication fails with all modules, Go to step **3**. When the communication fails with particular module only, perform the inspection using the check sheet of communication for initializing. <Ref. to LAN(diag)-14, CHECK USING THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>
3	**CHECK DATA LINK CONNECTOR (OPEN CIRCUIT).** Use a tester to check for continuity in the ground circuit. ***Connector & terminal*** ***(B40) No. 4 — Chassis ground:*** ***(B40) No. 5 — (B134) No. 53:***	Is there continuity?	Go to step **4**.	Repair or replace the open circuit.
4	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Using a tester, check the power supply of data link connector. ***Connector & terminal*** ***(B40) No. 8 (+) — Chassis ground (–):*** ***(B40) No. 16 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.	Check the power supply circuits to the data link connector. (including the fuses)

7. Read Current Data

A: OPERATION

1. STEREO CAMERA

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «EyeSight» and select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

- **LIST**

Display	Content	Unit of measure	Reference
Camera ID	Display of serial No. inside the stereo camera	—	—
Control Software Version	Control software version	—	—
Recognition Software Version	Recognition software version	—	—
Model Registration	Display of displacement and vehicle model	—	—
ECU Power Supply Voltage (IG)	Display of input voltage of stereo camera	V	—
Initial Aiming Completion Status	Initial aiming completion flag	—	Finished (After factory shipping, when stereo camera is replaced or adjusted, "Not Finish" is displayed.)
Aiming Completion Status	Aiming completion flag	—	Not Finish (After factory shipping, when stereo camera is replaced or adjusted, "Finished" is displayed.)
Ignition SW ON Count	Total count of ignition switch ON	times	—
Trip Meter	Odometer value	• km • mile	—
Front Axle Wheel Average Speed	Front axle average wheel speed	km/h	—
Engine Speed	Engine speed	rpm	—
Accel opening angle	Acceleration opening angle signal	%	—
ETC Throttle Angle Signal	Electronic throttle control opening angle signal	%	—
Steering Angle Sensor Value (Right +) (Left -)	Steering angle sensor value signal	deg	—
Longitudinal G Sensor Value (Deceleration +) (Acceleration -)	Longitudinal acceleration	m/s^2	—
Brake Fluid Target Pressure	Target value of brake fluid pressure	MPa	—
Master Cylinder Actual Fluid Pressure	Brake pressure	MPa	—
Right Front Wheel W/C Actual Fluid Pressure	Right front wheel cylinder fluid pressure	MPa	—
Left Front Wheel W/C Actual Fluid Pressure	Left front wheel cylinder fluid pressure	MPa	—
Target Torque	Target torque command signal	Nm	—
Engine Torque	Actual engine shaft torque value	Nm	—
AT rapid start prevention, engine torque down command value	AT false start prevention control, engine torque down command value Or AT false start (reverse) prevention control, engine torque down command value	Nm	—

Display	Content	Unit of measure	Reference
Warning Code	Warning code signal	—	• No alarm • HALT • Detection/Lost of Vehicle Beep • ACC Cancel • Lead Vehicle Start Alert • Brake More or Following Distance or Pre-Collision Brake(1st)/AT false start restraint • Pre-Collision Brake (2nd Braking) • Limit Speed Warning • Rear View Alarm • Steering Wheel Not Held • LDW -R • LDW -L • Lane Sway Warning
Brake SW Input	Brake switch signal status	—	• OFF • ON
Brake Lamp SW (BIU)	Brake light switch signal status	—	• OFF • ON
Brake Lamp SW (VDC)	Brake light switch status	—	• OFF • ON
Current Gear Position	Current gear position signal	—	• P • R • Auto Neutral • 6 • 5 • 4 • 3 • 2 • 1 • N
SI Drive Mode	SI-DRIVE mode (display)	—	• OFF • S# • I • S
Trip Count [count]	Number of ignition ON	times	—
Count	Original counts identification information	—	—
Time Count [msec]	Elapsed time after ignition switch ON	ms	—
Automatic Adjustment Status	Automatic adjustment status	—	—
Lane Recognition Status	Display of lane recognition status	—	• Other than follows: 00 • Both lanes are recognized at 40 km/h or more: 03 • Both lanes are recognized at 65 km/h or more (ALK recognition standby): 05
Distance from Leading Vehicle	Display of distance from preceding vehicle	m	—

Display	Content	Unit of measure	Reference
EyeSight Temporary 0 Count	Occurrence count of EyeSight temporary stop 0	times	Refer to “List of contents for camera temporary stop”. <Ref. to ES(diag)-83, LIST OF CONTENTS FOR CAMERA TEMPORARY STOP, LIST, EyeSight Temporary Code(s) Display.>
EyeSight Temporary 1 Count	Occurrence count of EyeSight temporary stop 1	times	
EyeSight Temporary 2 Count	Occurrence count of EyeSight temporary stop 2	times	
EyeSight Temporary 3 Count	Occurrence count of EyeSight temporary stop 3	times	
EyeSight Temporary 4 Count	Occurrence count of EyeSight temporary stop 4	times	
EyeSight Temporary 5 Count	Occurrence count of EyeSight temporary stop 5	times	
EyeSight Temporary 6 Count	Occurrence count of EyeSight temporary stop 6	times	
EyeSight Temporary 7 Count	Occurrence count of EyeSight temporary stop 7	times	
EyeSight Temporary 8 Count	Occurrence count of EyeSight temporary stop 8	times	
EyeSight Temporary 9 Count	Occurrence count of EyeSight temporary stop 9	times	
EyeSight Temporary 10 Count	Occurrence count of EyeSight temporary stop 10	times	
EyeSight Temporary 11 Count	Occurrence count of EyeSight temporary stop 11	times	
EyeSight Temporary 12 Count	Occurrence count of EyeSight temporary stop 12	times	
EyeSight Temporary 13 Count	Occurrence count of EyeSight temporary stop 13	times	
EyeSight Temporary 14 Count	Occurrence count of EyeSight temporary stop 14	times	
EyeSight Temporary 15 Count	Occurrence count of EyeSight temporary stop 15	times	
EyeSight Temporary 16 Count	Occurrence count of EyeSight temporary stop 16	times	
EyeSight Temporary 17 Count	Occurrence count of EyeSight temporary stop 17	times	
EyeSight Temporary 18 Count	Occurrence count of EyeSight temporary stop 18	times	
EyeSight Temporary 19 Count	Occurrence count of EyeSight temporary stop 19	times	
EyeSight Temporary 20 Count	Occurrence count of EyeSight temporary stop 20	times	
EyeSight Temporary 21 Count	Occurrence count of EyeSight temporary stop 21	times	
EyeSight Temporary 22 Count	Occurrence count of EyeSight temporary stop 22	times	
EyeSight Temporary 23 Count	Occurrence count of EyeSight temporary stop 23	times	
EyeSight Temporary 24 Count	Occurrence count of EyeSight temporary stop 24	times	
EyeSight Temporary 25 Count	Occurrence count of EyeSight temporary stop 25	times	
EyeSight Temporary 26 Count	Occurrence count of EyeSight temporary stop 26	times	
EyeSight Temporary 27 Count	Occurrence count of EyeSight temporary stop 27	times	
EyeSight Temporary 28 Count	Occurrence count of EyeSight temporary stop 28	times	
EyeSight Temporary 29 Count	Occurrence count of EyeSight temporary stop 29	times

Lane Blink	Request signal for lane (solid line) blinking	—	• OFF • Flashing at The Same Time • Flashing Alternately
Steering Wheel Display	(Steering wheel icon) illumination signal	—	• OFF • ON • Flashing1 • Flashing2
Turn SW (Left)	Operation status of left turn switch	—	• OFF • ON
Turn SW (Right)	Operation status of right turn switch	—	• OFF • ON
Calibration (EPS)	Calibration signal (not used)	—	• Not set • Set
Steering Control Active	Lane keep control operation instruction	—	• Not Operate • Operate
Steering Assistance Operation Status	Lane keep control operation status	—	• Normal • No Assist • Limited Assist
EyeSight Recognition Status (EPS)	EyeSight recognition status signal	—	• Not Detect • Detect
Absolute Steering Angle Detection	Absolute angle detection signal (not used)	—	• No detection • detection
Steering Angle Sensor malfunction	Steering angle sensor signal	deg	—
Yaw Rate Value (Right -) (Left +)	Yaw rate value signal	rad/sec	—
Lateral G Sensor Value (Right -) (Left +)	Lateral acceleration signal	m/s^2	—
Steering Control Torque Target	Steering control instruction signal	Nm	—
Additional Steering Torque(Active Lane Keep System)	Additional steering torque signal (lane keep)	Nm	—
EPS Motor Operation Current	Motor operation current value	A	—
EPS Torque	Torque sensor main value	Nm	—
EPS Torque (Detailed)	Torque sensor value (resolution improved)	Nm	—
EPS Motor Operation Current (Steering Support High Speed)	Motor operation current value (high speed steering support)	Arms	—
Target Current Value (EPS)	Final target current value	Arms	—
EPS Motor Absolute Angle	Motor absolute angle	deg	—
Driver Throttle Input Override Control	Instruction signal of AT false start prevention control Or instruction signal of AT false start (reverse) prevention control	—	• OFF • ON
Adaptive Cruise Control Torque Down	Torque down prohibition signal of stereo camera	—	• ON • OFF
Initial Inspection Distance Accuracy Rate	Accuracy rate of initial inspection distance	%	—
Initial Inspection Distance Check	Initial inspection distance	—	—
Initial Optical Axis (X-Axis)	Initial optical axis (X-axis)	pix	—
Initial Optical Axis (X-Axis2)	Initial optical axis (X-axis 2)	pix	—
Initial Optical Axis (Y-Axis)	Initial optical axis (Y-axis)	pix	—

Display	Content	Unit of measure	Reference
Initial Left Image Rotation Deviation Correction Value	Initial left image, rotation deviation correction value	—	—
Initial Left Image Vertical Deviation Correction Value	Initial left image, vertical deviation correction value	—	—
Initial Right Image Rotation Deviation Correction Value	Initial right image, rotation deviation correction value	—	—
Initial Distance Correction Value	Initial distance correction value	—	—
Initial Invalid Distance Data Count	Number of initial invalid distance data	—	—
Initial Other Inspection	Another initial inspection	—	—
Initial Error Code	Initial error code	—	—
DC-Ratio	Accuracy rate of inspection distance	%	—
Distance	Inspection distance	—	—
Optical Axis (X-Axis)	Optical axis (X-axis)	pix	—
Optical Axis (X-Axis2)	Optical axis (X-axis 2)	pix	—
Optical Axis (Y-Axis)	Optical axis (Y-axis)	pix	—
Left Image Rotation Deviation Correction Value	Left image, rotation deviation correction value	—	—
Left Image Vertical Deviation Correction Value	Left image, vertical deviation correction value	—	—
Right Image Rotation Deviation Correction Value	Right image, rotation deviation correction value	—	—
Distance Correction Value	Distance correction value	—	—
Invalid Distance Data Count	Number of invalid distance data	—	—
Other Inspection	Other inspection	—	—
Error Code	Error code detailed information	—	—
HBA(Room Mirror) Function Presence Information	HBA (room mirror) function presence information	—	• No Function • Yes
Camera Battery Open Status (+B)	Display of stereo camera battery (+B circuit) status	—	• Connect • Disconnected
Image ON/OFF status	ON/OFF status of present image sensor	—	• OFF • ON
Camera Temperature (Current)	Current temperature display of stereo camera internal circuit	°C	—
Camera temperature, operation status	Camera temperature and operation status	—	• Normal • High Temp. • Low Temp.
Camera Temperature (Previous Maximum Value)	Display of stereo camera internal circuit temperature (past MAX value)	°C	—
Ignition SW ON Count When Camera Temperature (Previous Maximum Value)	Ignition switch ON count when stereo camera internal circuit temperature is displayed (past MAX value)	times	—
Camera Temperature (Previous Minimum Value)	Display of stereo camera internal circuit temperature (past MIN value)	°C	—
Ignition SW ON Count When Camera Temperature (Previous Minimum Value)	Ignition switch ON count when stereo camera internal circuit temperature is displayed (past MIN value)	times	—
EyeSight Temporary 0 Continuation Count	Continuation count of EyeSight temporary stop 0	times	—
EyeSight Temporary 1 Continuation Count	Continuation count of EyeSight temporary stop 1	times	—
EyeSight Temporary 2 Continuation Count	Continuation count of EyeSight temporary stop 2	times	—

Display	Content	Unit of measure	Reference
EyeSight Temporary 3 Continuation Count	Continuation count of EyeSight temporary stop 3	times	—
EyeSight Temporary 4 Continuation Count	Continuation count of EyeSight temporary stop 4	times	—
EyeSight Temporary 5 Continuation Count	Continuation count of EyeSight temporary stop 5	times	—
EyeSight Temporary 6 Continuation Count	Continuation count of EyeSight temporary stop 6	times	—
EyeSight Temporary 7 Continuation Count	Continuation count of EyeSight temporary stop 7	times	—
EyeSight HALT Code	EyeSight halt code signal	—	• No HALT • E1-1(No Camera View) • E2(Out of Temp. Range) • E3(Other)
Ambient Air Temperature(Indication)	Ambient air temperature signal	°C	—
Ambient Air Temperature(Control)	Outside temperature for control signal	°C	—
Head lamp : small	Headlight small signal status	—	• OFF • ON
Headlight SW (LO)	Headlight LO switch operation status	—	• OFF • ON
Head Lamp High Beam	Headlight Hi beam signal status	—	• OFF • ON
Wiper SW (Front)	Front wiper switch operation status	—	• OFF • ON
VDC OFF SW	VDC OFF signal	—	• OFF • ON
VDC "OFF" Indicator Status	VDC OFF indicator status	—	• OFF • ON
EyeSight Input Control Suspended Status (EPS)	Overheat protection limit signal	—	• No detection • detection
Camera Failure Real-Time Check (At The Time of Failure)	Camera failure real-time information at the time of failure	—	—
Camera Temperature (At The Time of Failure)	Camera temperature sensor at the time of failure	°C	—
Image ON/OFF Status/Sensor Ready Status (At The Time of Failure)	Image ON/OFF status at the time of failure	—	• OFF • ON
Adaptive Cruise Control Failure (EyeSight → Combination Meter)	Stereo camera failure signal for combination meter	—	• Normal • Abnormal
VDC Sensor Failure	VDC sensor failure signal	—	• Normal • Abnormal
ABS System Failure	ABS system failure signal	—	• Normal • Abnormal
Vehicle Speed Sensor Failure	Vehicle speed sensor failure signal	—	• Normal • Abnormal
Adaptive Cruise Control Failure (EyeSight → VDC)	Failure signal of stereo camera to VDC control module	—	• Normal • Abnormal
EyeSight Reception (VDC)	Failure signal of stereo camera	—	• Not yet received • Receive
EPB Error Status	Electronic parking brake error information signal	—	• Normal • Stroke Too Short • Urgent Release • Pulling Power Abnormal

Display	Content	Unit of measure	Reference
Hill Descent Control Status	Hill descent control status signal	—	• System OFF • Waiting • Operating • Infinitive
Hill Start Assist Operation Status	Hill start assist operation status signal	—	• Not Operate • Operate
EyeSight Failure	EyeSight failure signal	—	• Normal • Abnormal
Engine Failure	Engine failure signal	—	• Normal • Abnormal
Transmission Failure	TCM failure signal	—	• Normal • Abnormal
EyeSight Failure (EPS → EyeSight)	Failure signal for EyeSight (EPS)	—	• Normal • Abnormal
Adaptive Cruise Control Failure (EyeSight → EPS)	Stereo camera failure signal for EPS control module	—	• Normal • Abnormal
ETC Failure	Electronic throttle control failure signal	—	• Normal • Abnormal
EEPROM Failure	Failure signal of combination meter	—	• Normal • Abnormal
Brake Lamp SW Fail Status	Brake light switch failure signal	—	• Normal • Abnormal
Brake Lamp Relay Drive	Brake light relay drive status signal	—	• Not Operating • Operating
EyeSight Communication Error (VDC)	Stereo camera communication failure signal	—	• Normal • Abnormal
Judgment of Lost Communication with Adaptive Cruise Control ECM CAN	No-receive signal of EyeSight CAN data	—	• Normal • Not Receive
EyeSight Received Data (ECM)	NG signal of stereo camera data	—	• Normal • Abnormal
Steering Angle Sensor Status	Steering angle sensor status	—	• Normal • Abnormal
Steering Angle Sensor Error Code	Steering angle sensor error code signal	—	• Normal • EEPROM Abnormal • IG Voltage Drop • Counter Overflow • ROM Trouble • RAM Trouble • Magnetometric Sensor Trouble
EyeSight Customization Change Request (Combination Meter → EyeSight)	EyeSight customization change request signal	—	• OFF • ON
EyeSight Customization Reset Request (Combination Meter → EyeSight)	EyeSight customization reset request signal	—	• OFF • ON
Target Gear Position	Target gear position signal	—	• P • R • Auto Neutral • 6 • 5 • 4 • 3 • 2 • 1 • N

Display	Content	Unit of measure	Reference
Transmission Shift Control Mode	TCM shift control mode signal	—	• Position Fixed Mode • Gear Fixed Mode • Position Fixed Temporary • Gear Fixed Temporary • M Position • D Range • ” — ” display
Shift Position	Shift position information	—	• Error • P • R • N • D • D-S • 3 • 2 • 1
CVT 8-speed Mode Control	CVT multi-stage speed control signal when EyeSight operates	—	• Not Operate • Operate
Lock Up Status	Lock up information	—	• Converter • Slip Lock Up • Lock Up
Brake Lamp Status	Brake light state signal	—	• OFF • ON
Brake Vectoring Control Operation	Active torque vectoring control operation status	—	• Not Operate • Operate
Speedometer / Distance Display Unit	Speedometer / distance display unit	—	• km/h • mile
EyeSight Specification	EyeSight judgment signal	—	• No • Yes
Vehicle Height	Vehicle height information	—	• Unclear • OBK • Standard
Fuel Type	Fuel type	—	• Gasoline • Diesel
Engine Displacement	Engine displacement	—	• 1500 cc • 2000 cc • 2500 cc • 3000 cc • 3600 cc • 1600 cc
Camshaft Type	Engine type	—	• SOHC • DOHC
Number of Cylinders	Number of cylinder for engine	—	• 4 Cylinder • 6 Cylinder
Turbo	Presence or absence of turbo	—	• Turbo • NA
Vehicle Type	Vehicle type information signal	—	• Impreza Type • Forester Type • Exiga Type • Legacy/Outback Type • WRX Type

Display	Content	Unit of measure	Reference
Destination Code	Destination code signal	—	• Japan • U.S. (U4, U5, U6) • Canada(C0) • EURO(Left) (EC, EA, E2, EL) • General(Left)(K4) & Latin America(C4) • Middle & Near East(KS) • U.K(EK) • Thailand/Singapore(ER,EN) • Australia(KA,KC) • China(EH) • South Korea(C6)
WGN/SDN	Vehicle type signal	—	• SEDAN • WAGON
Drive System	Driving method of AWD	—	• AWD • VTD • 2WD
AT Type	AT type	—	• CVT(TR58) • 4AT • 5AT • 6AT • CVT(TR690)
Idling Stop Specification	Auto Start Stop judgment signal	—	• No • Yes
EPB Check 1	Electronic parking brake failure information signal	—	• Abnormal • Normal
EPB Check 2	Electronic parking brake failure information signal	—	• Abnormal • Normal
EPB Check 3	Electronic parking brake failure information signal	—	• Abnormal • Normal
Steering Control Check 1	Stereo camera transmission data abnormal	—	• Normal • Abnormal
Steering Control Check 2	Steering control instruction value from stereo camera abnormal	—	• Normal • Abnormal
Active Lane Keep System Standby Status	Active lane keep assist stand-by status	—	• NG • OK
Lane Departure Prevention Assist Canceled Reason Control Check	Active lane keep, reason of cancelling the lane departure prevention assist	—	—
Active Lane Keep System Canceled Reason Control Check	Reason of cancelling the lane keep assist (system failure)	—	—

2. ENGINE CONTROL MODULE (ECM)

For current data of engine control module, refer to ENGINE (DIAGNOSTICS). <Ref. to EN(H4DO)(diag)-46, Subaru Select Monitor.> <Ref. to EN(H6DO)(diag)-53, Subaru Select Monitor.>

3. VDC CONTROL MODULE (VDCCM)

For current data of VDC control module, refer to VDC (DIAGNOSTICS). <Ref. to VDC(diag)-19, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>

4. TRANSMISSION CONTROL MODULE (TCM)

For current data of transmission control module, refer to CVT (DIAGNOSTICS). <Ref. to CVT(diag)-18, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>

5. BODY INTEGRATED UNIT

For current data of body integrated unit, refer to BODY CONTROL (DIAGNOSTICS). <Ref. to BC(diag)-25, LIST, Read Current Data.>

6. COMBINATION METER

For current data of the combination meter, refer to COMBINATION METER (DIAGNOSTICS). <Ref. to MET(diag)-13, LIST, Read Current Data.>

7. RAB CM

For details on the current data for RAB CM, refer to RAB (DIAGNOSTICS). <Ref. to RAB(diag)-15, LIST, Read Current Data.>

8. Real-time Diagnosis

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «EyeSight» and select «Enter».
5) On «Select Function» display, select «Data Monitor».
6) Check that the display changes and the contents are correct when performing the operations as follows.

- Depress and release the brake pedal. (Stop light switch and brake switch are turned ON.)
  - Item «Brake Lamp SW (BIU)» «Brake SW Input» «Brake Lamp SW (VDC)»
- Turn the cruise switch to ON.
  - Item «Cruise Control SW Voltage (Port14)» and «Cruise Control SW Voltage (Port16)»
- Turn the “SET/–” switch to ON.
  - Item «Cruise Control SW Voltage (Port14)» and «Cruise Control SW Voltage (Port16)»
- Turn the “RES/+” switch to ON.
  - Item «Cruise Control SW Voltage (Port14)» and «Cruise Control SW Voltage (Port16)»
- Turn the “F.D. Set+” switch to ON.
  - Item «Cruise Control SW Voltage (Port14)» and «Cruise Control SW Voltage (Port16)»
- Turn the “F.D. Set–” switch to ON.
  - Item «Cruise Control SW Voltage (Port14)» and «Cruise Control SW Voltage (Port16)»
- Turn the “Lane keep” switch to ON.
  - Item «Cruise Control SW Voltage (Port14)» and «Cruise Control SW Voltage (Port16)»
- Operate the shift lever.
  - Item «Current gear position»
- Press and hold the pre-collision brake OFF switch.
  - Item «Pre-Collision Brake OFF Indicator»
- Press and hold the lane departure warning OFF switch.
  - Item «Lane Departure Warning OFF Indicator»

NOTE:
For detailed operation procedures, refer to “Application help”.

9. Diagnostic Code(s) Display

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «EyeSight» and select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to ES(diag)-42, LIST, Diagnostic Code(s) Display.>
- Up to ten codes can be stored. When more than ten codes are output, they will not be stored.
- The same code is stored only once, and even when the same code occurs several times, information will not be updated.

B: LIST

- List of Diagnostic Trouble Code (DTC)

DTC	Item	Contents of diagnosis	Reference
U0073	CONTROL MODULE COMMUNICATION BUS OFF	Detected when bus off status (the stereo camera detects the failure and is disconnected from CAN line) occurs.	<Ref. to ES(diag)-91, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0100	LOST COMMUNICATION WITH ECM/PCM “A”	Detected when CAN data from ECM is not transmitted to stereo camera.	<Ref. to ES(diag)-91, DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0101	LOST COMMUNICATION WITH TCM	Detected when CAN data from TCM is not transmitted to stereo camera.	<Ref. to ES(diag)-91, DTC U0101 LOST COMMUNICATION WITH TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	Detected when CAN data from VDC is not transmitted to stereo camera.	<Ref. to ES(diag)-91, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0126	LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE	Detected when CAN data from steering angle sensor is not transmitted to stereo camera.	<Ref. to ES(diag)-91, DTC U0126 LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0131	LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE	Detected when CAN data from EPS CM is not transmitted to stereo camera.	<Ref. to ES(diag)-91, DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	Detected when CAN data from body integrated unit is not transmitted to stereo camera.	<Ref. to ES(diag)-91, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	Detected when CAN data from combination meter is not transmitted to stereo camera.	<Ref. to ES(diag)-91, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0401	INVALID DATA RECEIVED FROM ECM/PCM “A”	Failure counter diagnosis of engine control module (ECM)	<Ref. to ES(diag)-92, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0402	INVALID DATA RECEIVED FROM TCM	Failure counter diagnosis of automatic transmission control module (TCM)	<Ref. to ES(diag)-92, DTC U0402 INVALID DATA RECEIVED FROM TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Contents of diagnosis	Reference
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	Failure counter diagnosis of VDC control module (VDC CM)	<Ref. to ES(diag)-92, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0420	INVALID DATA RECEIVED FROM POWER STEERING CONTROL MODULE	Failure counter diagnosis of EPS CM	<Ref. to ES(diag)-92, DTC U0420 INVALID DATA RECEIVED FROM POWER STEERING CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	Failure counter diagnosis of body integrated unit	<Ref. to ES(diag)-92, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0423	INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE	Failure counter diagnosis of combination meter	<Ref. to ES(diag)-92, DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0428	INVALID DATA RECEIVED FROM STEERING ANGLE SENSOR MODULE	Failure counter diagnosis of steering angle sensor	<Ref. to ES(diag)-92, DTC U0428 INVALID DATA RECEIVED FROM STEERING ANGLE SENSOR MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1073	CONTROL MODULE COMMUNICATION BUS "SONAR-CAN" OFF	Detected when bus off status (the stereo camera detects the failure and is disconnected from the local CAN line) occurs.	<Ref. to ES(diag)-92, DTC U1073 CONTROL MODULE COMMUNICATION BUS "SONAR-CAN" OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1233	LOST COMMUNICATION WITH RAB CONTROL MODULE	Detected when CAN data from RAB CM is not transmitted to the stereo camera.	<Ref. to ES(diag)-92, DTC U1233 LOST COMMUNICATION WITH RAB CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1534	INVALID DATA RECEIVED FROM SONAR ECU	Failure counter diagnosis of RAB CM	<Ref. to ES(diag)-93, DTC U1534 INVALID DATA RECEIVED FROM SONAR ECU, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2801	TCM ABNORMAL	Detected when error occurs in the automatic transmission.	<Ref. to ES(diag)-93, DTC B2801 TCM ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2802	ETC ABNORMAL	Detected when error occurs in the electronic throttle control.	<Ref. to ES(diag)-93, DTC B2802 ETC ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2803	EPB OPERATION PROHIBIT	Detected when error occurs in EPB operation, or when executing VDC brake maintenance mode. (EPB operation prohibited)	<Ref. to ES(diag)-93, DTC B2803 EPB OPERATION PROHIBIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2804	EPB NO ACTIVITY DETECTED	Detected when error occurs in the EPB operation. (EPB operation abnormal)	<Ref. to ES(diag)-93, DTC B2804 EPB NO ACTIVITY DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2806	ECM ABNORMAL	Detected when error occurs in the engine control module (ECM).	<Ref. to ES(diag)-93, DTC B2806 ECM ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2807		Detected when cruise indicator illumination request from ECM and ON/OFF information of cruise function do not match.	<Ref. to ES(diag)-93, DTC B2807 ECM ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2809	VDC MALFUNCTION	Detected when error occurs in the VDC.	<Ref. to ES(diag)-93, DTC B2809 VDC MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B280A	VDC ECHO BACK DISAGREEMENT	Detected when error occurs in the VDC. (VDC brake control malfunction 1)	<Ref. to ES(diag)-94, DTC B280A VDC ECHO BACK DISAGREEMENT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Contents of diagnosis	Reference
B280B	VDC BRAKE FLUID PRESSURE	Detected when error occurs in the VDC. (VDC brake control malfunction 3)	<Ref. to ES(diag)-94, DTC B280B VDC BRAKE FLUID PRESSURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B280F	COMBINATION METER MALFUNCTION	Detected when error occurs in the CAN communication with combination meter.	<Ref. to ES(diag)-94, DTC B280F COMBINATION METER MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2810	INCOMPATIBLE WITH EyeSight (COMBINATION METER)	Detected when different (undesignated) type of combination meter is installed.	<Ref. to ES(diag)-94, DTC B2810 INCOMPATIBLE WITH EyeSight (COMBINATION METER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2811	EPS ABNORMAL	EPS abnormal	<Ref. to ES(diag)-94, DTC B2811 EPS ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2814	POWER SUPPLY LOW VOLTAGE	Detected when battery voltage is below specified value or when the +B harness of the stereo camera is broken.	<Ref. to ES(diag)-95, DTC B2814 POWER SUPPLY LOW VOLTAGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2815	POWER SUPPLY HIGH VOLTAGE	Detected when battery voltage exceeds the specified value.	<Ref. to ES(diag)-97, DTC B2815 POWER SUPPLY HIGH VOLTAGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2817	BRAKE LAMP	Detected when error occurs in the brake light illumination circuit.	<Ref. to ES(diag)-97, DTC B2817 BRAKE LAMP, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B281B	STEERING ANGLE SENSOR FAIL	Detected when error occurs in the steering angle sensor system.	<Ref. to ES(diag)-97, DTC B281B STEERING ANGLE SENSOR FAIL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B281C	INCOMPATIBLE WITH EyeSight (EPS)	Detected when the EPS CM which is not exclusively for EyeSight is installed.	<Ref. to ES(diag)-97, DTC B281C INCOMPATIBLE WITH EyeSight (EPS), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B281E	RAB CONTROL MODULE	Detected when there is a malfunction in sonar sensor or RAB CM.	<Ref. to ES(diag)-98, DTC B281E RAB CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B281F	REVERSE AUTOMATIC BRAKING OVERRIDE	Detected when a stop hold command is output from RAB CM even when an accelerator override is generated by the driver.	<Ref. to ES(diag)-98, DTC B281F REVERSE AUTOMATIC BRAKING OVERRIDE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2821	REVERSE AUTOMATIC BRAKING CONTROL PROHIBITION	Detected when error occurs in RAB CM.	<Ref. to ES(diag)-98, DTC B2821 REVERSE AUTOMATIC BRAKING CONTROL PROHIBITION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A0	VEHICLE MODEL JUDGMENT	Detected when the model code stored in EEPROM and the model code used for CAN data are different, or when +B harness of the stereo camera is broken at aiming completion.	<Ref. to ES(diag)-99, DTC B28A0 VEHICLE MODEL JUDGMENT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A1	EyeSight COMMUNICATION(ECM)	Abnormal judgment for stereo camera by ECM Or detected when the stereo camera or ECM is assembled incorrectly.	<Ref. to ES(diag)-101, DTC B28A1 EyeSight COMMUNICATION(ECM), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A2	EyeSight COMMUNICATION(VDC)	Abnormal judgment for stereo camera data by VDC	<Ref. to ES(diag)-103, DTC B28A2 EyeSight COMMUNICATION(VDC), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A3	EyeSight COMMUNICATION(METER)	Abnormal judgment for stereo camera data by combination meter	<Ref. to ES(diag)-104, DTC B28A3 EyeSight COMMUNICATION(METER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Contents of diagnosis	Reference
B28A4	EyeSight COMMUNICATION(EPS)	Abnormal judgment for stereo camera data by EPS CM	<Ref. to ES(diag)-105, DTC B28A4 EyeSight COMMUNICATION(EPS), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A5	ENGINE TORQUE LIMITER CONTROL PROHIBIT	Detected when error occurs in the transmission data from stereo camera to ECM.	<Ref. to ES(diag)-106, DTC B28A5 ENGINE TORQUE LIMITER CONTROL PROHIBIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A6	INTERNAL STEREO CAMERA COMMUNICATION 1	Detected when an communication error occurs inside the stereo camera.	<Ref. to ES(diag)-107, DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A7	STEREO CAMERA RECOGNITION(TARGET)	Detected when error occurs in the communication data inside the control module due to external factors such as noises.	<Ref. to ES(diag)-107, DTC B28A7 STEREO CAMERA RECOGNITION(TARGET), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A8	INTERNAL STEREO CAMERA COMMUNICATION 2		<Ref. to ES(diag)-107, DTC B28A8 INTERNAL STEREO CAMERA COMMUNICATION 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A9	STEREO CAMERA SYNCHRONIZED RECOGNITION DATA		<Ref. to ES(diag)-107, DTC B28A9 STEREO CAMERA SYNCHRONIZED RECOGNITION DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28AA	STEREO CAMERA MICROCOMPUTER 1	Detected when error occurs in the communication with microcomputer 1 system inside the stereo camera.	<Ref. to ES(diag)-107, DTC B28AA STEREO CAMERA MICROCOMPUTER 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28AB	STEREO CAMERA MICROCOMPUTER 2	Detected when error occurs in the communication with microcomputer 2 system inside the stereo camera.	<Ref. to ES(diag)-107, DTC B28AB STEREO CAMERA MICROCOMPUTER 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28AC	STEREO CAMERA ASIC	Detected when error occurs in the ASIC system inside the stereo camera.	<Ref. to ES(diag)-108, DTC B28AC STEREO CAMERA ASIC, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28AD	STEREO CAMERA IMAGE RECOGNITION	Detected when error occurs in the stereo camera image system.	<Ref. to ES(diag)-108, DTC B28AD STEREO CAMERA IMAGE RECOGNITION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28AE	INTERNAL STEREO CAMERA POWER SUPPLY	Detected when error occurs in the internal power supply system of stereo camera.	<Ref. to ES(diag)-108, DTC B28AE INTERNAL STEREO CAMERA POWER SUPPLY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28AF	STEREO CAMERA ADJUSTMENT INCOMPLETE	Detected when adjustment/ inspection of camera has not been completed normally.	<Ref. to ES(diag)-108, DTC B28AF STEREO CAMERA ADJUSTMENT INCOMPLETE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28B1	STEREO CAMERA AUTOMATIC ADJUSTMENT	Detected when the optical axis of stereo camera is deviated in lateral direction or when the fluctuation range of automatic adjustment value has been enlarged.	<Ref. to ES(diag)-108, DTC B28B1 STEREO CAMERA AUTOMATIC ADJUSTMENT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28B2	STEREO CAMERA HIGH TEMPERATURE	Detected when the temperature of the stereo camera excessively increases. (When this DTC is detected, the camera will not return to the normal state after performing adjustment or inspection. In this case, always replace the stereo camera.)	<Ref. to ES(diag)-108, DTC B28B2 STEREO CAMERA HIGH TEMPERATURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Contents of diagnosis	Reference
B28B3	STEREO CAMERA LOW TEMPERATURE	Detected when the temperature of the stereo camera excessively decreases. (When this DTC is detected, the camera will not return to the normal state after performing adjustment or inspection. In this case, always replace the stereo camera.)	<Ref. to ES(diag)-109, DTC B28B3 STEREO CAMERA LOW TEMPERATURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28B5	+B CIRCUIT ABNORMAL	Detected when there is an open circuit in power supply line of the stereo camera.	<Ref. to ES(diag)-109, DTC B28B5 +B CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28B6	PRE-COLLISION OFF SWITCH	Pre-collision brake switch or harness is faulty. Detected also when the switch is held down for over 45 seconds.	<Ref. to ES(diag)-110, DTC B28B6 PRE-COLLISION OFF SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28B7	LDP OFF SWITCH	Lane departure warning OFF switch or harness is faulty. Detected also when the switch is held down for over 45 seconds.	<Ref. to ES(diag)-112, DTC B28B7 LDP OFF SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28B8	EyeSight STEERING SWITCH 1	Detected when EyeSight steering switch is malfunctioning, when the harness is abnormal or when there is an open circuit.	<Ref. to ES(diag)-114, DTC B28B8 EyeSight STEERING SWITCH 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28B9	EyeSight STEERING SWITCH 2		<Ref. to ES(diag)-115, DTC B28B9 EyeSight STEERING SWITCH 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28BA	STEERING ANGLE AND STEREO CAMERA CORRELATION MISALIGNED	• Detected when the center point of steering angle sensor deviates. • Detected when there is an excessive deviation in the alignment.	<Ref. to ES(diag)-116, DTC B28BA STEERING ANGLE AND STEREO CAMERA CORRELATION MISALIGNED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

10.Freeze Frame Data Display

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «EyeSight» and select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «FFD».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- Freeze frame data is stored for three DTCs. Allocation of the three DTCs are as follows:
  – DTC that occurred first.
  – DTC that occurred first during the latest driving cycle (from IGN ON to IGN OFF).
  – DTC that occurred first during the second latest driving cycle.
  – However, DTCs will be stored in order of occurrence until these three DTCs are stored.
- For details on freeze frame data, refer to List of freeze frame data. <Ref. to ES(diag)-47, LIST, Freeze Frame Data Display.>
- Freeze frame data is cleared in Clear Memory Mode. <Ref. to ES(diag)-48, Clear Memory Mode.>

B: LIST

- List of freeze frame data

Display	Content	Unit
ECU Power Supply Voltage (IG)	Display of input voltage of stereo camera	V
Engine Speed	Engine speed	rpm
Accel opening angle	Acceleration opening angle signal	%
Brake Fluid Target Pressure	Target value of brake fluid pressure	MPa
Master Cylinder Actual Fluid Pressure	Brake pressure	MPa
Right Front Wheel W/C Actual Fluid Pressure	Right front wheel cylinder fluid pressure	MPa
Left Front Wheel W/C Actual Fluid Pressure	Left front wheel cylinder fluid pressure	MPa
Brake SW Input	Brake switch signal status	—
Brake Lamp SW (BIU)	Brake light switch signal status	—
Brake Lamp SW (VDC)	Brake light switch status	—
Trip Count	Timestamp information_Trip counter	times
Count	Timestamp information_original count identification information	—
Time Count [msec]	Timestamp information_time counter	ms
Drive Wheel Average Speed	Average wheel speed signal	km/h
Brake Lamp Command	Brake lamp light up command signal	—
EPB Activate Request	Electronic parking brake activate request	—
EPB State	Electronic parking brake operation status signal	—
Idle SW for EPB Control	Idle switch signal for electronic parking brake control	—
Driver Brake Detection	Driver brake detection signal	—
Brake Control Actuation	Brake operation permission signal	—
Pre-Collision Brake Assist Command	Pre-collision brake assist command signal	—
Pre-Collision Brake Action	Pre-collision brake command signal	—
Risk Avoidance Assist standby Command	Risk avoidance assist stand-by command signal	—
Adaptive Cruise Control Torque Down	Torque down prohibition signal of stereo camera	—
Hill Descent Control Status	Hill descent control status signal	—
Engine Failure	Engine failure signal	—
Brake Lamp SW Fail Status	Brake light switch failure signal	—

11.Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «EyeSight» and select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

12.Clear Active Lane Keep System Learning Value

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «EyeSight» and select «Enter».
5) On «Select Function» display, select «Work Support».
6) On «Work Support» display, select «Clear Active Lane Keep System Learning Value».

NOTE:
• When suspension parts are replaced or wheel alignment is adjusted, perform «Clear Active Lane Keep System Learning Value».
• For detailed operation procedures, refer to “Application help”.

13.Diagnostics with Phenomenon

A: DIAGNOSTIC PROCEDURE WITH PHENOMENON

1. TEMPORARY STOP OF EyeSight

	Step	Check	Yes	No
1	**CHECK FOR PRESENCE OF TEMPORARY STOP CODES.** Check for the presence of the temporary stop codes. <Ref. to ES(diag)-78, EyeSight Temporary Code(s) Display.>	Is a temporary stop code displayed?	Check EyeSight temporary stop code. <Ref. to ES(diag)-78, EyeSight Temporary Code(s) Display.>	Temporary stop does not occur. Make sure to interview with the customer, and also confirm that no DTCs are recorded.

2. CRUISE CONTROL WAS CANCELLED WITHOUT OPERATING THE CRUISE SWITCH

	Step	Check	Yes	No
1	**CHECK FOR PRESENCE OF CANCEL CODE.** Check for the presence of ECM cancel codes. <Ref. to ES(diag)-85, ECM Cancel Code(s) Display.>	Is a cancel code displayed?	Perform the diagnosis for the displayed cancel code. <Ref. to ES(diag)-85, ECM Cancel Code(s) Display.>	Go to step **2**.
2	**PERFORM REAL TIME DIAGNOSIS.** Check the input signal of cruise control system. <Ref. to ES(diag)-41, Real-time Diagnosis.>	Is the check result OK?	Go to step **4**.	Go to step **3**.
3	**CHECK EyeSight STEERING SWITCH.** Check the EyeSight steering switch. <Ref. to ES(diag)-76, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>	Is the check result OK?	Go to step **4**.	Repair or replace the faulty portion of the steering switch.
4	**CHECK COMBINATION METER.** Using «All lamps lighted» of “System Operation Check Mode” on MET, check the indication of the indicator. <Ref. to MET(diag)-15, OPERATION, System Operation Check Mode.>	Is the check result OK?	Go to step **5**.	Replace the meter case assembly. <Ref. to IDI-11, Combination Meter.>
5	**INSPECTION OF CRUISE INDICATOR.** Check the CRUISE indicator. <Ref. to ES(diag)-75, CHECK ADAPTIVE CRUISE CONTROL INDICATOR LIGHT/CONSTANT SPEED CRUISE CONTROL INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT, Diagnostics with Phenomenon.>	Is the check result OK?	The circuit has returned to a normal condition at this time. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.	Repair or replace the faulty portion according to the inspection result.

3. CRUISE CONTROL SWITCH IS NOT TURNED TO ON. (CRUISE INDICATOR LIGHT DOES NOT ILLUMINATE)

	Step	Check	Yes	No
1	**PERFORM REAL TIME DIAGNOSIS.** Check the input signal of cruise control system. <Ref. to ES(diag)-41, Real-time Diagnosis.>	Is the check result OK?	Go to step **3**.	Go to step **2**.
2	**CHECK EyeSight STEERING SWITCH.** Check EyeSight steering switch. <Ref. to ES(diag)-76, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>	Is the check result OK?	Go to step **3**.	Repair or replace the faulty portion of the steering switch.
3	**INSPECTION OF CRUISE INDICATOR.** Check the CRUISE indicator. <Ref. to ES(diag)-75, CHECK ADAPTIVE CRUISE CONTROL INDICATOR LIGHT/CONSTANT SPEED CRUISE CONTROL INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT, Diagnostics with Phenomenon.>	Is the check result OK?	The circuit has returned to a normal condition at this time. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.	Repair or replace the faulty portion according to the inspection result.

4. CRUISE CONTROL IS CANCELLED WITHOUT RELEASING OPERATION

NOTE:
- Do not turn the ignition switch to OFF after the cruise control is deactivated.
- Do not operate the EyeSight steering switch after the cruise control is deactivated.

If the above is performed, the cancel code the ECM will be cleared.

	Step	Check	Yes	No
1	**CHECK FOR PRESENCE OF CANCEL CODE.** Check for the presence of ECM cancel codes. <Ref. to ES(diag)-85, ECM Cancel Code(s) Display.>	Is a cancel code displayed?	Perform the diagnosis for the displayed cancel code. <Ref. to ES(diag)-85, ECM Cancel Code(s) Display.>	Go to step **2**.
2	**PERFORM REAL TIME DIAGNOSIS.** Check the input signal of cruise control system. <Ref. to ES(diag)-41, Real-time Diagnosis.>	Is the check result OK?	Go to step **6**.	• When EyeSight steering switch signal is faulty, Go to step **3**. • When the stop light switch or brake switch signal is faulty, Go to step **4**. • When the sift lever signal is faulty, Go to step **5**.
3	**CHECK EyeSight STEERING SWITCH.** Check the EyeSight steering switch. <Ref. to ES(diag)-76, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>	Is the check result OK?	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>	Repair or replace the faulty portion of the steering switch.

	Step	Check	Yes	No
4	**INSPECTION OF STOP LIGHT SWITCH AND BRAKE SWITCH.** Check stop light switch and brake switch. <Ref. to BR-76, Brake Pedal.> <Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.>	Is the check result OK?	Replace the ECM. <Ref. to FU(H4DO)-82, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, REMOVAL, Engine Control Module (ECM).>	Repair or replace the faulty portion of the stop light switch or brake switch.
5	**INSPECTION OF NEUTRAL POSITION SWITCH.** Check the neutral position switch. <Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.> <Ref. to CC(diag)-24, 62, Diagnostic Procedure with Cancel Code.>	Is the check result OK?	Replace the ECM. <Ref. to FU(H4DO)-82, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, REMOVAL, Engine Control Module (ECM).>	Repair or replace the faulty portion of the neutral position switch.
6	**INSPECTION OF VEHICLE SPEED SENSOR.** Check the vehicle speed sensor. <Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>	Is the check result OK?	Replace the VDCCM. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Repair or replace the faulty portion of the vehicle speed sensor.

5. CRUISE CONTROL CANNOT BE SET

NOTE:
- Do not turn the ignition switch to OFF after the cruise control is deactivated.
- Do not operate the EyeSight steering switch after the cruise control is deactivated.

If the above is performed, the cancel code the ECM will be cleared.

	Step	Check	Yes	No
1	**PERFORM REAL TIME DIAGNOSIS.** Check the input signal of cruise control system. <Ref. to ES(diag)-41, Real-time Diagnosis.>	Is the check result OK?	Go to step **5**.	• When EyeSight steering switch signal is faulty, Go to step **2**. • When the stop light switch or brake switch signal is faulty, Go to step **3**. • When the sift lever signal is faulty, Go to step **4**.
2	**CHECK EyeSight STEERING SWITCH.** Check the EyeSight steering switch. <Ref. to ES(diag)-76, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>	Is the check result OK?	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>	Repair or replace the faulty portion of the steering switch.

	Step	Check	Yes	No
3	**INSPECTION OF STOP LIGHT SWITCH AND BRAKE SWITCH.** Check stop light switch and brake switch. <Ref. to BR-76, Brake Pedal.> <Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.>	Is the check result OK?	Replace the ECM. <Ref. to FU(H4DO)-82, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, REMOVAL, Engine Control Module (ECM).>	Repair or replace the faulty portion of the stop light switch or brake switch.
4	**INSPECTION OF NEUTRAL POSITION SWITCH.** Check the neutral position switch. <Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.> <Ref. to CC(diag)-24, 62, Diagnostic Procedure with Cancel Code.>	Is the check result OK?	Replace the ECM. <Ref. to FU(H4DO)-82, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, REMOVAL, Engine Control Module (ECM).>	Repair or replace the faulty portion of the neutral position switch.
5	**INSPECTION OF VEHICLE SPEED SENSOR.** Check the vehicle speed sensor. <Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>	Is the check result OK?	Replace the VDCCM. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Repair or replace the faulty portion of the vehicle speed sensor.

6. SET INDICATOR DOES NOT ILLUMINATE

	Step	Check	Yes	No
1	**INSPECTION OF SET INDICATOR.** Check the SET indicator. <Ref. to ES(diag)-75, CHECK ADAPTIVE CRUISE CONTROL INDICATOR LIGHT/CONSTANT SPEED CRUISE CONTROL INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT, Diagnostics with Phenomenon.>	Is the check result OK?	Replace the ECM. <Ref. to FU(H4DO)-82, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, REMOVAL, Engine Control Module (ECM).>	Repair or replace the faulty portion according to the inspection result.

7. VEHICLE SPEED IS NOT HELD WITHIN SET SPEED ±3 KM/H (±2 MPH) ON A LEVEL ROAD

	Step	Check	Yes	No
1	**INSPECTION OF VEHICLE SPEED SENSOR.** Check the vehicle speed sensor. <Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>	Is the check result OK?	Replace the ECM. <Ref. to FU(H4DO)-82, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, REMOVAL, Engine Control Module (ECM).>	Repair or replace the faulty portion according to the inspection result.

8. VEHICLE SPEED DOES NOT INCREASE OR DOES NOT RETURN TO SET SPEED AFTER RES/+ SWITCH HAS BEEN PRESSED

Step		Check	Yes	No
1	**PERFORM REAL TIME DIAGNOSIS.** Check the input signal of cruise control system. <Ref. to ES(diag)-41, Real-time Diagnosis.>	Is the check result OK?	The circuit has returned to a normal condition at this time. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**INSPECTION OF RES/+ SWITCH.** Check the RES/+ switch. <Ref. to ES(diag)-76, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>	Is the check result OK?	Replace the ECM. <Ref. to FU(H4DO)-82, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, REMOVAL, Engine Control Module (ECM).>	Repair or replace the faulty portion of the steering switch.

9. VEHICLE SPEED DOES NOT DECREASE AFTER SET/– SWITCH HAS BEEN PRESSED

Step		Check	Yes	No
1	**PERFORM REAL TIME DIAGNOSIS.** Check the input signal of cruise control system. <Ref. to ES(diag)-41, Real-time Diagnosis.>	Is the check result OK?	The circuit has returned to a normal condition at this time. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**INSPECTION OF SET/– SWITCH.** Check the SET/– switch. <Ref. to ES(diag)-76, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>	Is the check result OK?	Replace the ECM. <Ref. to FU(H4DO)-82, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, REMOVAL, Engine Control Module (ECM).>	Repair or replace the faulty portion of the steering switch.

10.CRUISE CONTROL IS NOT DEACTIVATED AFTER THE CRUISE SWITCH IS PRESSED

	Step	Check	Yes	No
1	**PERFORM REAL TIME DIAGNOSIS.** Check the input signal of cruise control system. <Ref. to ES(diag)-41, Real-time Diagnosis.>	Is the check result OK?	The circuit has returned to a normal condition at this time. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**INSPECTION OF CRUISE SWITCH.** Check the cruise switch. <Ref. to ES(diag)-76, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>	Is the check result OK?	Replace the ECM. <Ref. to FU(H4DO)-82, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, REMOVAL, Engine Control Module (ECM).>	Repair or replace the faulty portion of the steering switch.

11.FOLLOWING DISTANCE DOES NOT CHANGE, EVEN AFTER THE FOLLOWING DISTANCE SWITCH IS PRESSED

	Step	Check	Yes	No
1	**PERFORM REAL TIME DIAGNOSIS.** Check the input signal of cruise control system. <Ref. to ES(diag)-41, Real-time Diagnosis.>	Is the check result OK?	The circuit has returned to a normal condition at this time. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**INSPECTION OF FOLLOWING DISTANCE SWITCH.** Check the following distance switch. <Ref. to ES(diag)-76, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>	Is the check result OK?	Replace the ECM. <Ref. to FU(H4DO)-82, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, REMOVAL, Engine Control Module (ECM).>	Repair or replace the faulty portion of the steering switch.

12.CRUISE CONTROL IS NOT RELEASED AFTER BRAKE PEDAL HAS BEEN DEPRESSED

	Step	Check	Yes	No
1	**PERFORM REAL TIME DIAGNOSIS.** Check the input signal of cruise control system. <Ref. to ES(diag)-41, Real-time Diagnosis.>	Is the check result OK?	The circuit has returned to a normal condition at this time. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**INSPECTION OF STOP LIGHT SWITCH AND BRAKE SWITCH.** Check stop light switch and brake switch. <Ref. to ES(diag)-76, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>	Is the check result OK?	Replace the ECM. <Ref. to FU(H4DO)-82, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, REMOVAL, Engine Control Module (ECM).>	Repair or replace the faulty portion according to the inspection result.

13.CRUISE CONTROL IS NOT RELEASED AFTER SHIFTING TO THE NEUTRAL POSITION

	Step	Check	Yes	No
1	**PERFORM REAL TIME DIAGNOSIS.** Check the input signal of cruise control system. <Ref. to ES(diag)-41, Real-time Diagnosis.>	Is the check result OK?	The circuit has returned to a normal condition at this time. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**INSPECTION OF NEUTRAL POSITION SWITCH.** Check the neutral position switch. <Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.> <Ref. to CC(diag)-24, 62, Diagnostic Procedure with Cancel Code.>	Is the check result OK?	Replace the ECM. <Ref. to FU(H4DO)-82, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, REMOVAL, Engine Control Module (ECM).>	Repair or replace the faulty portion according to the inspection result.

14.ACCELERATION OR DECELERATION DOES NOT OCCUR ACCORDING TO THE PRECEDING VEHICLE. THE PRECEDING VEHICLE IS DIFFICULT TO BE DETECTED. BRAKING FORCE IS WEAKER THAN USUAL. ALARM FOR REQUIRING MORE BRAKE PEDAL FORCE DOES NOT SOUND

	Step	Check	Yes	No
1	**CHECK USING CHECK LIST.** Using CHECK LIST (ADAPTIVE CRUISE CONTROL), check the condition and respond to it. Check list (adaptive cruise control) <Ref. to ES(diag)-65, CHECK LIST (ADAPTIVE CRUISE CONTROL), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> • Check that the current status applies to the condition that the use of adaptive cruise control is not desired. • Check that the current status applies to the condition or the object that is hard to be recognized by the stereo camera. • Check that the current status applies to the driving condition that the preceding vehicle cannot be recognized or the vehicle on the next lane or the object on the roadside may be recognized by mistake. • Check that the current status applies to the condition that brake force may become poor. • Check that the current status applies to the condition that the alarm for requiring more brake pedal force does not sound even in a short vehicle distance.	Is there a relevant item in the check list?	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.	Go to step **2**.
2	**INSPECTION OF WINDSHIELD GLASS AND DASHBOARD.** Check the windshield glass and the dashboard. <Ref. to ES(diag)-7, WINDSHIELD GLASS AND DASHBOARD, INSPECTION, General Description.>	Is the check result OK?	Go to step **3**.	Repair or replace the faulty portion according to the inspection result.
3	**INSPECTION OF FRONT WIPER.** Check the front wiper. <Ref. to ES(diag)-11, FRONT WIPER, INSPECTION, General Description.>	Is the check result OK?	Go to step **4**.	Repair or replace the faulty portion according to the inspection result.
4	**CHECK STEREO CAMERA.** Check the stereo camera. <Ref. to ES(diag)-12, STEREO CAMERA, INSPECTION, General Description.>	Is the check result OK?	Go to step **5**.	Repair or replace the faulty portion according to the inspection result.
5	**CHECK BRAKE.** Bleed air from brake system. <Ref. to BR-69, BRAKE LINE, PROCEDURE, Air Bleeding.>	Is the check result OK?	Go to step **6**.	Repair or replace the faulty portion according to the inspection result.
6	**ADJUST OPTICAL AXIS OF THE STEREO CAMERA.** Adjust the optical axis of the stereo camera. <Ref. to ES-12, PROCEDURE, Camera Adjustment, Inspection.>	Is the check result OK?	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>	Repair or replace the faulty portion according to the inspection result.

15.PRE-COLLISION BRAKE DOES NOT OPERATE / PRE-COLLISION BRAKE OPERATES BUT BRAKE FORCE IS NOT SUFFICIENT TO STOP / PRE-COLLISION BRAKE ASSIST DOES NOT OPERATE

	Step	Check	Yes	No
1	**CHECK PRE-COLLISION BRAKE OFF INDICATOR LIGHT.** Check the pre-collision brake OFF indicator light.	Is the pre-collision brake OFF indicator light off?	Go to step **2**.	This is normal. Operate the brake OFF switch to deactivate. When the indicator remains on after the deactivation, perform the diagnosis described in “Pre-collision brake OFF indicator light does not go off”.
2	**CHECK USING CHECK LIST.** Using CHECK LIST (PRE-COLLISION BRAKE), check the followings and respond to it. • Does it apply to the condition that the pre-collision brake does not operate, or there is a high possibility that the vehicle cannot stop safely before collision with the pre-collision brake? • Does it apply to the condition that there is a high possibility that the pre-collision brake does not operate due to the recognition status of the stereo camera? • Does it apply to the condition that the system does not operate correctly and the turning OFF of the pre-collision brake is desired? • Does it apply to the condition that the pre-collision brake OFF indicator light illuminates?	Is there a relevant item in the check list?	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>

16.PRE-COLLISION BRAKE OPERATES IMPROPERLY / PRE-COLLISION BRAKE IS NOT RELEASED / PRE-COLLISION BRAKE ASSIST OPERATES IMPROPERLY

	Step	Check	Yes	No
1	**CHECK USING CHECK LIST.** Using CHECK LIST (PRE-COLLISION BRAKE), check the followings and respond to it. • Does it apply to the condition that turning OFF of the pre-collision brake is desired? • Does it apply to the condition that the pre-collision brake may operate?	Is there a relevant item in the check list?	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>

17.PRE-COLLISION BRAKE OFF INDICATOR LIGHT DOES NOT GO OFF / PRE-COLLISION BRAKE OFF INDICATOR LIGHT ILLUMINATES AUTOMATICALLY

	Step	Check	Yes	No
1	**CHECK CONDITION OF OCCURRENCE.** Interview the customer to check if it occurs when the engine is started.	Does it occur when starting the engine?	This is normal. (Light illumination for a while after the engine start is normal.)	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK FOR PRESENCE OF TEMPORARY STOP CODES.** Check for the presence of the temporary stop codes. <Ref. to ES(diag)-78, EyeSight Temporary Code(s) Display.>	Is a temporary stop code displayed?	Check EyeSight temporary stop code. <Ref. to ES(diag)-78, EyeSight Temporary Code(s) Display.>	Go to step **3**.
3	**INSPECTION OF PRE-COLLISION BRAKE OFF SWITCH.** Check the pre-collision brake OFF switch. <Ref. to ES(diag)-110, DTC B28B6 PRE-COLLISION OFF SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Is the check result OK?	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>	Repair or replace the faulty portion according to the inspection result.

18.PRE-COLLISION BRAKE OFF INDICATOR LIGHT DOES NOT ILLUMINATE / PRE-COLLISION BRAKE OFF INDICATOR LIGHT GOES OFF AUTOMATICALLY

	Step	Check	Yes	No
1	**CHECK CONDITION OF OCCURRENCE.** Interview the customer to check if it occurs when the engine is started.	Does it occur when starting the engine?	This is normal. (Light illumination for a while after the engine start is normal.)	Go to step **2**.
2	**INSPECTION OF PRE-COLLISION BRAKE OFF SWITCH.** Check the pre-collision brake OFF switch. <Ref. to ES(diag)-110, DTC B28B6 PRE-COLLISION OFF SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Is the check result OK?	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>	Repair or replace the faulty portion according to the inspection result.

19.AT RAPID START PREVENTION CONTROL DOES NOT OPERATE / AT RAPID START PREVENTION CONTROL IS RELEASED AUTOMATICALLY

	Step	Check	Yes	No
1	**CHECK PRE-COLLISION BRAKE OFF INDICATOR LIGHT.** Check the pre-collision brake OFF indicator light.	Is the pre-collision brake OFF indicator light off?	Go to step **2**.	This is normal. Operate the brake OFF switch to deactivate. When the indicator remains on after the deactivation, perform the diagnosis described in “Pre-collision brake OFF indicator light does not go off”.
2	**CHECK USING CHECK LIST.** Using CHECK LIST (AT RAPID START PREVENTION CONTROL), check the following and respond to it. • Does it apply to the condition that the AT rapid start prevention control may not operate? • Does it apply to the condition that the pre-collision brake OFF indicator light illuminates?	Is there a relevant item in the check list?	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>

20.AT RAPID START PREVENTION CONTROL OPERATES IMPROPERLY / AT RAPID START PREVENTION CONTROL IS NOT RELEASED

	Step	Check	Yes	No
1	**CHECK USING CHECK LIST.** Using CHECK LIST (AT RAPID START PREVENTION CONTROL), check the following and respond to it. • Does it apply to the condition that turning OFF of the AT rapid start prevention control is desired? • Does it apply to the condition that the AT rapid start prevention control may operate?	Is there a relevant item in the check list?	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>

21.LANE DEPARTURE WARNING DOES NOT OPERATE / LANE DEPARTURE WARNING IS RELEASED AUTOMATICALLY

	Step	Check	Yes	No
1	**INSPECTION OF LANE DEPARTURE WARNING OFF INDICATOR LIGHT.** Check the lane departure warning OFF indicator light.	Is the lane departure warning OFF indicator light off?	Go to step **2**.	This is normal. Operate the lane departure warning OFF switch to deactivate. When the indicator remains on after the deactivation, perform the diagnosis described in “Lane departure warning OFF indicator light does not go off”.
2	**CHECK USING CHECK LIST.** Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it. • Does it apply to the condition that the lane departure warning does not operate or is difficult to operate? • Does it apply to the condition that the lane departure warning OFF indicator light illuminates?	Is there a relevant item in the check list?	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>

22.LANE DEPARTURE WARNING OPERATES IMPROPERLY / LANE DEPARTURE WARNING IS NOT RELEASED

	Step	Check	Yes	No
1	**CHECK USING CHECK LIST.** Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it. • Does it apply to the condition that the vehicle lane is recognized erroneously and the lane departure warning may operate?	Is there a relevant item in the check list?	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>

23.LANE DEPARTURE WARNING OFF INDICATOR LIGHT DOES NOT GO OFF / LANE DEPARTURE WARNING OFF INDICATOR LIGHT ILLUMINATES AUTOMATICALLY

	Step	Check	Yes	No
1	**CHECK CONDITION OF OCCURRENCE.** Interview the customer to check if it occurs when the engine is started.	Does it occur when starting the engine?	This is normal. (Light illumination for a while after the engine start is normal.)	Go to step **2**.
2	**CHECK FOR PRESENCE OF TEMPORARY STOP CODES.** Check for the presence of the temporary stop codes. <Ref. to ES(diag)-78, EyeSight Temporary Code(s) Display.>	Is a temporary stop code displayed?	Check EyeSight temporary stop code. <Ref. to ES(diag)-78, EyeSight Temporary Code(s) Display.>	Go to step **3**.
3	**CHECK LANE DEPARTURE WARNING OFF SWITCH.** Check the lane departure warning OFF switch. <Ref. to ES(diag)-112, DTC B28B7 LDP OFF SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Is the check result OK?	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>	Repair or replace the faulty portion according to the inspection result.

24.LANE DEPARTURE WARNING OFF INDICATOR LIGHT DOES NOT ILLUMINATE / LANE DEPARTURE WARNING OFF INDICATOR LIGHT GOES OFF AUTOMATICALLY

	Step	Check	Yes	No
1	**CHECK CONDITION OF OCCURRENCE.** Interview the customer to check if it occurs when the engine is started.	Does it occur when starting the engine?	This is normal. (Light illumination for a while after the engine start is normal.)	Go to step **2**.
2	**CHECK LANE DEPARTURE WARNING OFF SWITCH.** Check the lane departure warning OFF switch. <Ref. to ES(diag)-112, DTC B28B7 LDP OFF SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Is the check result OK?	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>	Repair or replace the faulty portion according to the inspection result.

25.SWAY WARNING DOES NOT OPERATE / SWAY WARNING IS RELEASED AUTOMATICALLY

	Step	Check	Yes	No
1	**INSPECTION OF LANE DEPARTURE WARNING OFF INDICATOR LIGHT.** Check the lane departure warning OFF indicator light.	Is the lane departure warning OFF indicator light off?	Go to step **2**.	This is normal. Operate the lane departure warning OFF switch to deactivate. When the indicator remains on after the deactivation, perform the diagnosis described in “Lane departure warning OFF indicator light does not go off”.

	Step	Check	Yes	No
2	**CHECK USING CHECK LIST.** Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it. • Does it apply to the condition that the sway warning may not operate? • Does it apply to the condition that the lane departure warning OFF indicator light illuminates?	Is there a relevant item in the check list?	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>

26.SWAY WARNING OPERATES IMPROPERLY / SWAY WARNING IS NOT RELEASED

	Step	Check	Yes	No
1	**CHECK CONDITION OF OCCURRENCE.** Interview the customer to check if it occurs when the engine is started.	Does it occur when starting the engine?	This is normal. (Light illumination for a while after the engine start is normal.)	Go to step **2**.
2	**CHECK USING CHECK LIST.** Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it. • Does it apply to the condition that the sway warning may operate improperly?	Is there a relevant item in the check list?	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>

27.FORWARD VEHICLE'S START MONITORING FUNCTION DOES NOT OPERATE

	Step	Check	Yes	No
1	**CHECK USING CHECK LIST.** Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it. • Does it apply to the condition that the forward vehicle's start monitoring function does not operate even when the preceding vehicle has already started?	Is there a relevant item in the check list?	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>

28.FORWARD VEHICLE'S START MONITORING FUNCTION OPERATES IMPROPERLY / FORWARD VEHICLE'S START MONITORING FUNCTION IS NOT RELEASED

	Step	Check	Yes	No
1	**CHECK USING CHECK LIST.** Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it. • Does it apply to the condition that the forward vehicle's start monitoring function operates even when the preceding vehicle has not yet started?	Is there a relevant item in the check list?	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>

29.LANE KEEP SWITCH IS NOT TURNED TO ON. (LANE KEEP INDICATOR LIGHT DOES NOT ILLUMINATE IN WHITE.)

	Step	Check	Yes	No
1	**PERFORM REAL TIME DIAGNOSIS.** Check the input signal of cruise control system. <Ref. to ES(diag)-41, Real-time Diagnosis.>	Is the check result OK?	Go to step **3**.	Go to step **2**.
2	**CHECK LANE KEEP SWITCH.** Check the lane keep switch. <Ref. to ES(diag)-76, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>	Is the check result OK?	Go to step **3**.	Repair or replace the faulty portion of the steering switch.
3	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to MET(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>	Repair or replace the faulty portion of the combination meter.

30.LANE KEEP (LANE DEPARTURE PREVENTION) CANNOT BE READY (LANE INDICATOR DOES NOT ILLUMINATE) / LANE KEEP (LANE DEPARTURE PREVENTION) DOES NOT OPERATE (LANE KEEP INDICATOR DOES NOT ILLUMINATE IN GREEN) / THOUGH LANE KEEP (LANE DEPARTURE PREVENTION) IS OPERATING, THE VEHICLE DEPARTS OUT OF THE LANE DUE TO POOR ASSISTANCE

	Step	Check	Yes	No
1	**CHECK FOR PRESENCE OF LANE DEPARTURE PREVENTION DEACTIVATION CODES.** Check for the presence of ECM lane departure prevention deactivation codes. <Ref. to ES(diag)-90, Active Lane Keep System Code(s) Display.>	Is a lane departure prevention deactivation code displayed?	Perform the diagnosis for the displayed lane departure prevention deactivation code. <Ref. to ES(diag)-90, Active Lane Keep System Code(s) Display.>	Go to step **2**.
2	**CHECK USING CHECK LIST.** Using CHECK LIST (LANE KEEP), check the following and respond to it. • Does it apply to the condition that use of lane keeping is not desired? • Does it apply to the condition or the object that is hard to be recognized by the stereo camera? • Does it apply to the road condition that the white line is difficult to be recognized?	Is there a relevant item in the check list?	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.	Go to step **3**.
3	**INSPECTION OF WINDSHIELD GLASS AND DASHBOARD.** Check the windshield glass and the dashboard. <Ref. to ES(diag)-7, WINDSHIELD GLASS AND DASHBOARD, INSPECTION, General Description.>	Is the check result OK?	Go to step **4**.	Repair or replace the faulty portion according to the inspection result.
4	**INSPECTION OF FRONT WIPER.** Check the front wiper. <Ref. to ES(diag)-11, FRONT WIPER, INSPECTION, General Description.>	Is the check result OK?	Go to step **5**.	Repair or replace the faulty portion according to the inspection result.
5	**CHECK OPTICAL AXIS OF HEADLIGHT.** Check the optical axis of the headlight. <Ref. to LI-34, ADJUSTMENT, Headlight Assembly.>	Is the check result OK?	Go to step **6**.	Repair or replace the faulty portion according to the inspection result.

	Step	Check	Yes	No
6	**CHECK STEREO CAMERA.** Check the stereo camera. <Ref. to ES(diag)-12, STEREO CAMERA, INSPECTION, General Description.>	Is the check result OK?	Go to step **7**.	Repair or replace the faulty portion according to the inspection result.
7	**CHECK TIRE AND WHEEL ALIGNMENT.** Check the tire and wheel alignment.	Is the check result OK?	Go to step **8**.	Repair or replace the faulty portion according to the inspection result.
8	**ADJUST OPTICAL AXIS OF THE STEREO CAMERA.** Adjust the optical axis of the stereo camera. Adjust the optical axis of the stereo camera. <Ref. to ES-12, PROCEDURE, Camera Adjustment, Inspection.>	Was the fault fixed after adjusting the optical axis?	The current state is normal.	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>

31.LANE KEEP (LANE DEPARTURE PREVENTION) IS CANCELLED WITHOUT RELEASING OPERATION

	Step	Check	Yes	No
1	**CHECK CONDITION OF OCCURRENCE.** Interview the customer to check if it was cancelled by the cancel conditions described in OM.	Is it cancelled by the cancel conditions (releasing of lane departure prevention function) described in the OM?	This is normal.	Go to step **2**.
2	**CHECK FOR PRESENCE OF LANE DEPARTURE PREVENTION DEACTIVATION CODES.** Check for the presence of ECM lane departure prevention deactivation codes. <Ref. to ES(diag)-90, Active Lane Keep System Code(s) Display.>	Is a lane departure prevention deactivation code displayed?	Perform the diagnosis for the displayed lane departure prevention deactivation code. <Ref. to ES(diag)-90, Active Lane Keep System Code(s) Display.>	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>

32.CHECK LIST (ADAPTIVE CRUISE CONTROL)

Item name			Yes/No	
[1]: When the vehicle does not accelerate or decelerate according to the preceding vehicle, or when it is difficult to detect the preceding vehicle.				
1	Check that the current status applies to the condition that the use of adaptive cruise control is not desired.			
	1	Tire pressure is not correct.	Yes	No
	2	The vehicle is equipped with the temporary spare tire.	Yes	No
	3	The vehicle is equipped with worn tire or tires with excessive wear difference.	Yes	No
	4	The vehicle is equipped with the tires out of specification.	Yes	No
	5	The suspension has been modified.	Yes	No
	6	The vehicle is equipped with the tire chain.	Yes	No
	7	Headlight is dirty or the optical axis is deviated. (The vehicle cannot correctly emit the headlight beam against the object and recognize it.)	Yes	No
	8	The driving of own vehicle is unstable due to an accident or failure.	Yes	No
	9	The brake warning light illuminates.	Yes	No
	10	Vehicle is tilted by the heavy load.	Yes	No
	11	Passenger capacity is exceeded.	Yes	No
	12	The vehicle is towing the trailer or other vehicle.	Yes	No
	13	The vehicle drives on the general road (other than limited highway). (Depending on the road environment (complicated roads etc.), the vehicle may not be able to drive according to the traffic condition, which may lead to the traffic accident.)	Yes	No
	14	The vehicle drives on the sharp bend.	Yes	No
	15	The vehicle drives on the slippery roads such as icy road or snow-covered road. (Tires can spin, losing the vehicle control.)	Yes	No
	16	The vehicle drives under the traffic condition that the certain vehicle distance is difficult to be maintained due to frequent acceleration and deceleration. (The vehicle may not be able to drive according to the traffic condition.)	Yes	No
	17	There is a steep downhill. (The vehicle may drive at higher speed than the set vehicle speed.)	Yes	No
	18	The vehicle performs adaptive driving while recognizing the preceding vehicle on the steep downhills. (Brake can be overheated.)	Yes	No
	19	The vehicle drives on the road with repeated steep uphills and downhills or crossover. (The vehicle may not be able to recognize the preceding vehicle or may recognize the road surface, and appropriate control may not be performed.)	Yes	No
	20	The vehicle is entering the interchange, service area, parking area, junction or tollgate. (The vehicle may not be able to recognize the preceding vehicle.)	Yes	No
	21	When the surrounding brightness (such as inlet and outlet of a tunnel) suddenly changes.	Yes	No
	22	There are water, snow or sandy dust raised by the preceding vehicle or oncoming vehicle, or sand or smoke blown in the wind, or moisture in front of own vehicle. (The vehicle may not be able to recognize the preceding vehicle or may recognize the water, and appropriate control may not be performed.)	Yes	No
	23	The windshield glass is covered with fog, snow, dirt, frost or sandy dust.	Yes	No
	24	The raindrops, water drops or dirt on the windshield glass are not wiped off sufficiently. (The vehicle may not be able to recognize the preceding vehicle, and appropriate control may not be performed.)	Yes	No
	25	Canoes etc. loaded on the roof block the visibility of the stereo camera.	Yes	No

Item name			Yes/No	
2	Check that the current status applies to the condition or the object that is hard to be recognized by the stereo camera.			
	1	That was a vehicle with large speed difference (low-speed driving vehicle, stopping vehicle, oncoming vehicle).	Yes	No
	2	That was a cutting-in vehicle.	Yes	No
	3	That was a motorcycle, bicycle, pedestrian or animal, etc.	Yes	No
	4	It was dim in the evening or in the morning.	Yes	No
	5	The headlight did not illuminate during nighttime hours or inside the tunnel.	Yes	No
	6	The tail light of the preceding vehicle did not illuminate during nighttime hours or inside the tunnel.	Yes	No
	7	The vehicle was exposed to the intense light (backlight such as sunlight or headlight high-beam light) from the front of the vehicle.	Yes	No
	8	The rearmost surface of the preceding vehicle was small, low or uneven. That was a truck equipped with an unloaded platform without gate, a vehicle that the luggage was protruding from the rear end of the vehicle, a vehicle of special shape (carrier car, side car, etc.) or a vehicle with low vehicle height.	Yes	No
	9	There was an object extremely close to the bumper of the own vehicle.	Yes	No
3	Check that the current status applies to the driving condition that the preceding vehicle cannot be recognized or the vehicle on the next lane or the object on the roadside may be recognized by mistake.			
	1	The vehicle began adaptive cruise control from the condition that the vehicle distance was short immediately after the preceding vehicle was cut in.	Yes	No
	2	The vehicle drives on the curve, outlet and inlet of the curve, or the road with many curves in succession. (Recognition may not be performed properly, because the preceding vehicle is out of recognition area.)	Yes	No
	3	The position against the preceding vehicle deviated laterally.	Yes	No
	4	There were some objects just near the road side.		
	5	The speed difference against the preceding vehicle was large.	Yes	No
	6	Other vehicle cut ahead of the own vehicle.	Yes	No
	7	The vehicle distance was extremely short.	Yes	No
	8	The own vehicle swayed in the vehicle lane.	Yes	No
	9	The road surface was uneven due to roll or unpaved track.	Yes	No
	10	The vehicle drove on the narrow lane because of the lane closure or construction work.	Yes	No
	11	The driving of own vehicle was unstable due to an accident or failure.	Yes	No
	12	The own vehicle was loaded with the extremely heavy load in the luggage compartment or on the rear seat.	Yes	No
[2]: When braking force is weaker than usual.				
1	Check that the current status applies to the condition that brake force may become poor.			
	1	The vehicle status (loading amount, passenger, etc.) was inappropriate.	Yes	No
	2	The road surface was very steep, slippery, sharp turn, or uneven.	Yes	No
	3	The service maintenance condition of the vehicle (brake system, tire wear, tire pressure, spare tire, etc.) was inappropriate.	Yes	No
	4	The brake was cold at low ambient temperature or immediately after the driving had started.	Yes	No
	5	The symptom occurred between immediately after engine started and after a while the vehicle started driving (Completion of warming up operation can be used as an indication.).	Yes	No
	6	The brake force becomes poor due to the overheating of the brake on the downhills.	Yes	No
	7	The brake force becomes poor because of the wet brake after driving onto the puddle or washing the vehicle.	Yes	No
[3]: When the alarm for requiring more brake pedal force does not sound.				
1	Check that the current status applies to the condition that the alarm for requiring more brake pedal force does not sound even in a short vehicle distance.			
	1	The speed difference between own vehicle and preceding vehicle (when the vehicle speed of the own vehicle was approximately the same as that of the preceding vehicle) was small.	Yes	No
	2	The vehicle speed of the preceding vehicle was faster than that of the own vehicle (when the vehicle distance was getting longer).	Yes	No
	3	Other vehicle cut in extremely close to the own vehicle.	Yes	No
	4	The preceding vehicle decelerated abruptly.	Yes	No
	5	There are many continuous uphills and downhills.	Yes	No

33.CHECK LIST (PRE-COLLISION BRAKE)

Item name			Yes/No	
[1]: When pre-collision brake did not operate, or when vehicle could not stop safely before collision in spite of pre-collision brake operation.				
1	Check that the current status applies to the condition that the pre-collision brake does not operate, or there is a high possibility that the vehicle cannot stop safely before collision in spite of pre-collision brake operation.			
	1	Conditions such as the followings occurred: 1) Vehicle speed difference with the preceding vehicle is small. 2) Distance from the preceding vehicle is long. 3) Lateral deviation (offset amount) is large.	Yes	No
	2	The vehicle status (loading amount, number of passenger, etc.) was inappropriate.	Yes	No
	3	The road surface was very steep, slippery, sharp turn, or uneven.	Yes	No
	4	There was problem for the frontal visibility (rain, snow, fog, smoke, etc.).	Yes	No
	5	The objects were livestock, animals, guardrail, telephone pole, tree, fence, wall, etc.	Yes	No
	6	The object was motorcycle, bicycle, or pedestrian. However, the system could not recognize the object due to surrounding brightness, motion, posture, and/or angle.	Yes	No
	7	Crash avoidance operation (accelerator pedal, brake pedal, steering wheel, etc.) was performed.	Yes	No
	8	The service maintenance condition of the vehicle (brake system, tire wear, tire pressure, spare tire, etc.) was inappropriate.	Yes	No
	9	The vehicle is towing the trailer or other vehicle.	Yes	No
	10	The brake was cold at low ambient temperature or immediately after the driving had started.	Yes	No
	11	The brake force becomes poor due to the overheating of the brake on the downhills.	Yes	No
	12	The brake force becomes poor because of the wet brake after driving onto the puddle or washing the vehicle.	Yes	No

		Item name	Yes/No	
2	Check that the current status applies to the condition that there is a high possibility that the pre-collision brake does not operate depending on the recognition status of the stereo camera.			
	1	It was bad weather (heavy rain, snowstorm, dense fog).	Yes	No
	2	The field of view was insufficient due to water, snow or sandy dust raised by the preceding vehicle or oncoming vehicle, or the moisture, sand or smoke blown in the wind.	Yes	No
	3	The headlight did not illuminate during nighttime hours or inside the tunnel.	Yes	No
	4	The tail light of the preceding vehicle did not illuminate during nighttime hours or inside the tunnel.	Yes	No
	5	The vehicle approached the motorcycle, bicycle or pedestrian in the night.	Yes	No
	6	It was dark in the evening or in the morning.	Yes	No
	7	The rearmost surface of the preceding vehicle was small, low or uneven. That was a truck equipped with an unloaded platform without gate, a vehicle that the luggage was protruding from the rear end of the vehicle, a vehicle of special shape (carrier car, side car, etc.) or a vehicle with low vehicle height.	Yes	No
	8	There was a wall in front of the stopping vehicle.	Yes	No
	9	There was an object close to the vehicle.	Yes	No
	10	That was a vehicle stopped sideways.	Yes	No
	11	That was a vehicle which was oncoming or driving in reverse.	Yes	No
	12	The object was small seen from the stereo camera. (small animals, infants, person squatting down or lying down)	Yes	No
	13	The preceding vehicle made a sharp turn, or performed abrupt acceleration or deceleration.	Yes	No
	14	Other vehicle, motorcycle, bicycle or pedestrian existed extremely close to the bumper of the own vehicle.	Yes	No
	15	The speed difference was 5 km/h (3.1 MPH) or less. (The control is performed in close distance. Depending on the objects shape and size, the rear end surface may be outside the camera visibility area.)	Yes	No
	16	Other vehicle, motorcycle, bicycle or pedestrian cut in from the side or jumped in front of the own vehicle.	Yes	No
	17	The own vehicle changed the vehicle lane, and followed the preceding vehicle right behind.	Yes	No
	18	The vehicle was exposed to the intense light (backlight such as sunlight or headlight high-beam light) from the front of the vehicle.	Yes	No
	19	The windshield glass was covered with fog, snow, dirt, frost or sandy dust.	Yes	No
	20	The windshield glass has not yet been wiped off sufficiently during or after the use of the window washer.	Yes	No
	21	The recognition of the object was imperfect due to the raindrop or droplet of the window washer or the wiper blade blocking the visibility of the stereo camera.	Yes	No
	22	Canoes etc. loaded on the roof blocked the visibility of the stereo camera.	Yes	No
	23	Other vehicle, motorcycle, bicycle or pedestrian existed out of the illuminating area of the headlight.	Yes	No
	24	The vehicle drove on the sharp turn, steep uphills or steep downhills.	Yes	No
	25	The road surface was uneven due to roll or unpaved track.	Yes	No
	26	The vehicle passed through the outlet or inlet of a tunnel.	Yes	No
	27	The object was fence or wall.	Yes	No
	28	The object was a plate of glass, mirror wall or door.	Yes	No
3	Check that the current status applies to the condition that the system does not operate correctly and the turning OFF of the pre-collision brake is desired.			
	1	Tire pressure is not correct.	Yes	No
	2	The vehicle is equipped with the temporary spare tire.	Yes	No
	3	The vehicle is equipped with worn tire or tires with excessive wear difference.	Yes	No
	4	The vehicle is equipped with the tires out of specification.	Yes	No
	5	The suspension has been modified.	Yes	No
	6	The vehicle is equipped with the tire chain.	Yes	No
	7	Headlight is dirty or the optical axis is deviated. (The vehicle cannot correctly emit the headlight beam against the object and recognize it.)	Yes	No
	8	The driving status of own vehicle is unstable due to an accident or failure.	Yes	No
	9	The brake warning light illuminates.	Yes	No
	10	Vehicle is tilted by the heavy load. Or, passenger capacity is exceeded.	Yes	No

		Item name	Yes/No	
4	Check that the current status applies to the condition that the pre-collision brake OFF indicator light illuminates. (When the pre-collision brake OFF indicator light illuminates, the pre-collision brake does not operate.)			
	1	The pre-collision brake is turned off, using the pre-collision brake OFF switch.	Yes	No
	2	Approximately for 7 seconds after the engine has started.	Yes	No
	3	EyeSight is malfunctioning.	Yes	No
	4	EyeSight is stopped temporarily.	Yes	No
[2]: When pre-collision brake operated improperly.				
1	Check that the current status applies to the condition that turning OFF of the pre-collision brake is desired.			
	1	The vehicle is towed.	Yes	No
	2	The vehicle is loaded on the carrier car.	Yes	No
	3	The chassis dynamometer or free roller is used.	Yes	No
	4	The vehicle is lifted up, engine is started and the tire is spun.	Yes	No
	5	The vehicle passes through the banners, flags, drooping branches or grass while making contact with them.	Yes	No
	6	The vehicle performs sporty driving on the circuit.	Yes	No
	7	When the vehicle uses the movable type car wash machine.	Yes	No
2	Check that the current status applies to the condition that the pre-collision brake may operate.			
	1	The vehicle passes through the ETC gate at a speed exceeding the specification.	Yes	No
	2	The vehicle drives close to the preceding vehicle.	Yes	No
	3	The vehicle drives on the place where the road surface gradient changed suddenly.	Yes	No
	4	The vehicle passes through the moisture or mass of smoke.	Yes	No
	5	When the exhaust gas emitted from the preceding vehicle is visible clearly at cold weather.	Yes	No
	6	There is an obstacle on the curve or crossing.	Yes	No
	7	The vehicle passes through close to other vehicle or obstacle.	Yes	No
	8	The vehicle parks close to the wall in front or to other vehicle.	Yes	No

34.CHECK LIST (AT RAPID START PREVENTION CONTROL)

Item name			Yes/No	
[1]: When AT rapid start prevention control did not operate.				
1	Check that the current status applies to the condition that the AT rapid start prevention control may not operate.			
	1	Conditions such as the followings occurred: 1) Distance from the front object is long. 2) Vehicle speed difference is small. 3) Lateral deviation (offset amount) is large.	Yes	No
	2	It was bad weather (heavy rain, snowstorm, dense fog).	Yes	No
	3	The visibility was insufficient due to sand or smoke blown in the air.	Yes	No
	4	The vehicle approached the object in the evening, in the morning or in the night.	Yes	No
	5	The vehicle approached the object in the dark place (e.g. closed-in parking lot).	Yes	No
	6	The height of the object was low. (low wall, low guardrail, vehicle with low height etc.)	Yes	No
	7	The object was small seen from the stereo camera. (Small animals, infants, person squatting down or lying down)	Yes	No
	8	The object or rearmost area of the preceding vehicle (trailer, etc.) was small. Or the vehicle approached them too close. (The system triggers the operation by recognizing the area other than the rearmost section, resulting in insufficient control.)	Yes	No
	9	The object such as other vehicle, motorcycle, bicycle or pedestrian cut in from the side or jumped in front of the own vehicle.	Yes	No
	10	The own vehicle changed the vehicle lane when it started, and approached right behind the object.	Yes	No
	11	The vehicle was exposed to the intense light (backlight such as sunlight or headlight high-beam light) from the front of the vehicle.	Yes	No
	12	The windshield glass was covered with fog, snow, dirt, frost or sandy dust.	Yes	No
	13	The windshield glass has not yet been wiped off sufficiently during or after the use of the window washer.	Yes	No
	14	The recognition of the object was imperfect due to the raindrop or droplet of the window washer or the wiper blade blocking the visibility of the stereo camera.	Yes	No
	15	Canoes etc. loaded on the roof blocked the visibility of the stereo camera.	Yes	No
	16	The object existed out of the illuminating area of the headlight.	Yes	No
	17	The vehicle drove on the sharp turn, steep uphills or steep downhills.	Yes	No
	18	The object was a fence or wall with even pattern (striped pattern or bricks) or unpatterned surface.	Yes	No
	19	The object was a plate of glass, mirror wall or door.	Yes	No
	20	Crash avoidance operation (accelerator pedal, brake pedal, steering wheel, etc.) was performed.	Yes	No
2	Check that the current status applies to the condition that the pre-collision brake OFF indicator light illuminates. (When the pre-collision brake OFF indicator light illuminates, the AT rapid start prevention control does not operate.)			
	1	The pre-collision brake was turned off, using the pre-collision brake OFF switch.	Yes	No
	2	Approximately for 7 seconds after the engine has started.	Yes	No
	3	EyeSight is malfunctioning.	Yes	No
	4	EyeSight is stopped temporarily.	Yes	No
[2]: When AT rapid start prevention control operated improperly.				
1	Check that the current status applies to the condition that the releasing of the AT rapid start prevention control is desired.			
	1	The vehicle is towed.	Yes	No
	2	The vehicle is loaded on the carrier car.	Yes	No
	3	The chassis dynamometer or free roller is used.	Yes	No
	4	The vehicle is lifted up, engine is started and the tire is spun.	Yes	No
	5	The vehicle passes through the banners, flags, drooping branches or grass while making contact with them.	Yes	No
	6	The vehicle performs sporty driving on the circuit.	Yes	No

		Item name	Yes/No	
2	Check that the current status applies to the condition that the AT rapid start prevention control may operate.			
	1	The vehicle passes through the ETC gate at a speed exceeding the specification.	Yes	No
	2	The vehicle drives close to the preceding vehicle.	Yes	No
	3	The vehicle drives on the place where the road surface gradient changed suddenly.	Yes	No
	4	The vehicle passes through the moisture or mass of smoke.	Yes	No
	5	There is an obstacle on the curve or crossing.	Yes	No
	6	The vehicle passes through close to other vehicle or obstacle.	Yes	No
	7	The vehicle parks close to the wall in front or to other vehicle.	Yes	No

35.CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION)

		Item name	Yes/No	
[1]: When the lane departure warning did not operate.				
1	Check that the current status applies to the condition that the lane departure warning does not operate or is difficult to operate.			
	1	The lane departure warning is turned off.	Yes	No
	2	The vehicle speed of the own vehicle is approximately less than 50 km/h (31 MPH).	Yes	No
	3	That was approximately 7 seconds period after the lane departure warning had occurred once.	Yes	No
	4	The steering wheel was turned fully or rapidly.	Yes	No
	5	The brake pedal is depressed.	Yes	No
	6	The vehicle is accelerated by depressing the accelerator pedal.	Yes	No
	7	The vehicle distance from the preceding vehicle is short.	Yes	No
	8	That was approximately 7 seconds period while the turn signal indicator was operating or after the lever was returned.	Yes	No
	9	The vehicle has not returned inside the vehicle lane after the operation of the lane departure warning.	Yes	No
	10	The width of the vehicle lane is narrow.	Yes	No
	11	The vehicle lane is difficult to be recognized seen from the stereo camera. (Lane line (white line, etc.) does not exist or is fading out. Or the color of the lane line is very similar to that of the road surface, and difficult to be seen. Or the width of the lane line is very thin.)	Yes	No
	12	The preceding vehicle performed crash avoidance action to avoid the obstacle, and the own vehicle performed steering operation after the preceding vehicle.	Yes	No
2	Check that the current status applies to the condition that the lane departure warning OFF indicator light illuminates. (When the lane departure warning OFF indicator light illuminates, the lane departure warning does not operate.)			
	1	The lane departure warning is turned off, using the lane departure warning OFF switch.	Yes	No
	2	Approximately for 7 seconds after the engine has started.	Yes	No
	3	EyeSight is malfunctioning.	Yes	No
	4	EyeSight is stopped temporarily.	Yes	No
[2]: When the lane departure warning malfunctioned.				
1	Check that the current status applies to the condition that the vehicle lane is recognized erroneously and the lane departure warning may operate.			
	1	There was the tire track on the wet road or snow-covered road.	Yes	No
	2	There was the boundary line between snow-covered area and asphalt or on the trace of road repair.	Yes	No
	3	There was the double vehicle lane.	Yes	No
	4	The shadow of the guardrail was detected by mistake.	Yes	No

Item name			Yes/No	
[3]: When the sway warning did not operate.				
1	Check that the current status applies to the condition that the sway warning may not operate.			
	1	The vehicle drove on the road with many curves in succession.	Yes	No
	2	The vehicle speed changed greatly.	Yes	No
	3	That was immediately after the vehicle lane had changed.	Yes	No
	4	The vehicle lane was difficult to be recognized seen from the stereo camera. (Lane line (white line, etc.) does not exist or is fading out. Or the color of the lane line is very similar to that of the road surface, and difficult to be seen. Or the width of the lane line is very thin.)	Yes	No
	5	That was immediately after the sway had begun.	Yes	No
2	Check that the current status applies to the condition that the lane departure warning OFF indicator light illuminates. (When the lane departure warning OFF indicator light illuminates, the sway warning does not operate.)			
	1	The lane departure warning is turned off, using the lane departure warning OFF switch.	Yes	No
	2	Approximately for 7 seconds after the engine has started.	Yes	No
	3	EyeSight is malfunctioning.	Yes	No
	4	EyeSight is stopped temporarily.	Yes	No
[4]: When the sway warning malfunctioned.				
1	Check that the current status applies to the condition that the sway warning may operate.			
	1	That was after the sway had stopped.	Yes	No
	2	The driver lost concentration on driving the vehicle due to fatigue or looking away.	Yes	No
[5]: When the forward vehicle's start monitoring function did not operate or when it malfunctioned.				
1	Check that the current status applies to the condition that the forward vehicle's start monitoring function does not operate even when the preceding vehicle has already started, or that the forward vehicle's start monitoring function operates even when the preceding vehicle has not yet started.			
	1	The motorcycle cut in the space between the own vehicle and the stopped preceding vehicle.	Yes	No
	2	The vehicle could not recognize the preceding vehicle properly due to the weather condition or road shape.	Yes	No
	3	The stereo camera lost sight of the preceding vehicle.	Yes	No
	4	The driver did not depress the brake pedal with select lever in D, M or N range. (At this time, forward vehicle's start monitoring function does not operate.)	Yes	No
	5	The forward vehicle's start monitoring function was turned OFF via the customization function.	Yes	No

36.CHECK LIST (ACTIVE LANE KEEP)

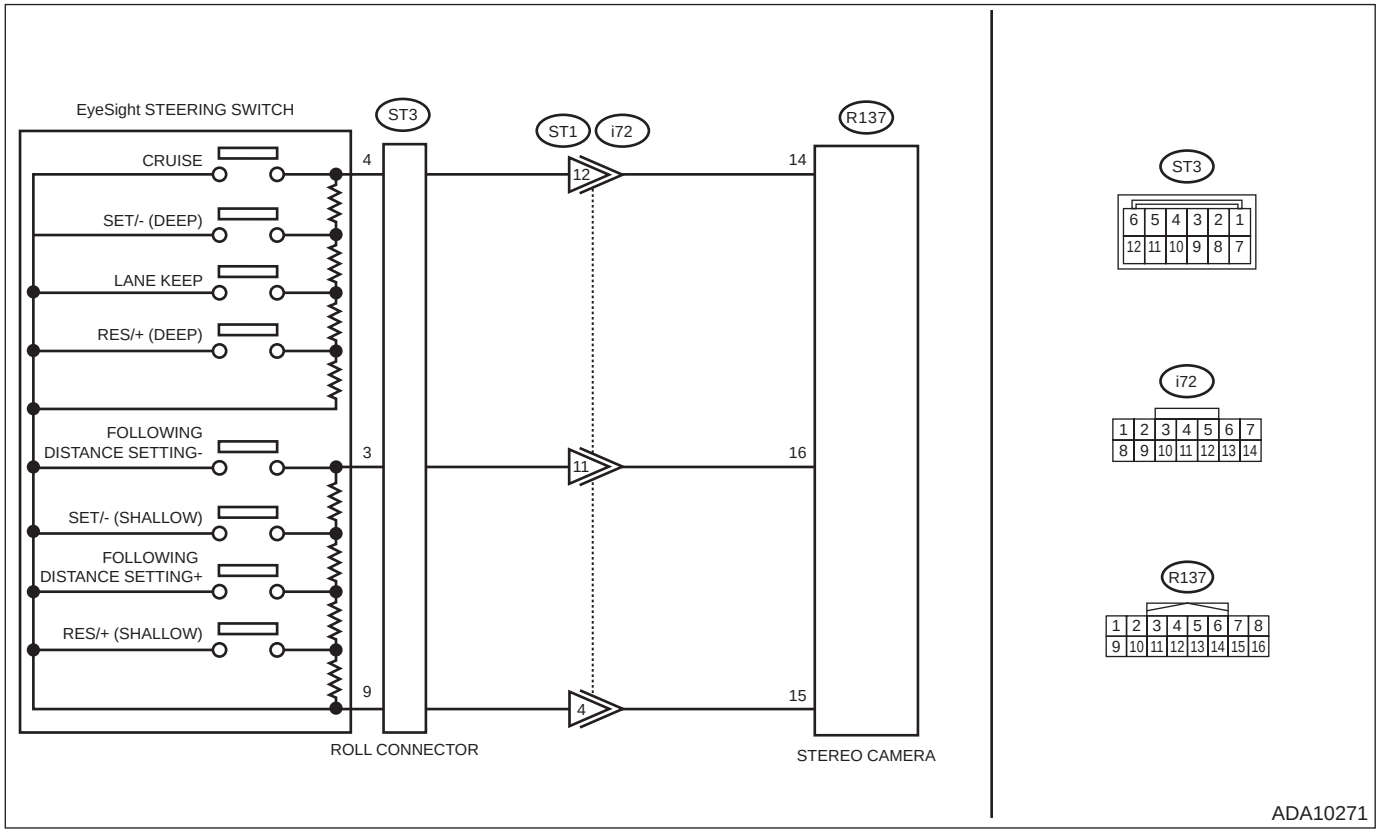
Item name			Yes/No	
1	Check that the current status applies to the condition that use of lane keeping is not desired.			
	1	An object was placed on the dashboard.	Yes	No
	2	Tire pressure is not correct.	Yes	No
	3	The vehicle is equipped with the temporary spare tire.	Yes	No
	4	The vehicle is equipped with worn tire or tires with excessive wear difference.	Yes	No
	5	The vehicle is equipped with the tires out of specification.	Yes	No
	6	The flat tire is repaired using the temporary repair kit.	Yes	No
	7	The suspension (including STI parts) has been modified.	Yes	No
	8	Wheel balance is abnormal (balance weight falls off, slides off, etc.).	Yes	No
	9	Wheel alignment is out of the specified value.	Yes	No
	10	The steering wheel has been replaced with a non-genuine part.	Yes	No
	11	The steering wheel is off-center.	Yes	No
	12	The lighting devices, such as headlights and fog lights, have been modified.	Yes	No
	13	An abnormal vibration can be felt on the steering wheel.	Yes	No
	14	The steering wheel operation is heavier than usual.	Yes	No
	15	An error occurs, for example, no display appears in the combination meter or no alarm sounds.	Yes	No
	16	The headlight cannot illuminate the road surface sufficiently because the headlight is dirty, attached with ice, snow or mud, or the optical axis is deviated.	Yes	No
	17	The driving status of own vehicle was unstable due to an accident or failure.	Yes	No
	18	The vehicle carried heavy load.	Yes	No
	19	Passenger capacity was exceeded.	Yes	No
	20	The vehicle towed another vehicle.	Yes	No
	21	The vehicle drove on a general road (other than limited highways).	Yes	No
	22	The vehicle drove on a road with sharp curves, such as an urban highway.	Yes	No
	23	The vehicle drove on a slippery road such as icy roads or snow-covered roads.	Yes	No
	24	The vehicle drove on a lane restricted road or a temporary road due to road construction.	Yes	No
	25	The vehicle drove on a road where obsolete white lines did not disappear completely.	Yes	No
	26	On the road surface there were some snow, puddles, snow melting agent, cracks, road repair traces, obsolete white lines.	Yes	No
	27	The vehicle entered the interchange, service area, parking area, junction or tollgate.	Yes	No
	28	The vehicle drove on a road where the surrounding brightness (such as inlet and outlet of a tunnel) suddenly changed.	Yes	No
	29	The vehicle drove on a road where there was some water or sandy dust raised by a preceding vehicle or oncoming vehicle, or sand or smoke blown in the wind, or moisture in front of own vehicle.	Yes	No
	30	The windshield glass was covered with fog, snow, dirt, frost or sandy dust.	Yes	No
	31	The raindrops, water drops or dirt on the windshield glass were not wiped off sufficiently.	Yes	No
	32	Canoes etc. loaded on the roof block the visibility of the stereo camera.	Yes	No
	33	The vehicle drove immediately after the stereo camera was replaced or adjusted.	Yes	No

Item name			Yes/No	
2	Check that the current status applies to the condition or the object, such as a white line, that is hard to be recognized by the stereo camera.			
	1	The vehicle drove when it was dark in the evening or in the morning.	Yes	No
	2	The vehicle drove under the road condition, such as rainy or snowy weather, that the white line was difficult to be recognized.	Yes	No
	3	The headlight did not illuminate during nighttime hours or inside the tunnel.	Yes	No
	4	The vehicle was exposed to the intense light (backlight such as sunlight or headlight) from the front of the vehicle.	Yes	No
	5	The vehicle drove on a road where the driving lane was yellow.	Yes	No
	6	The vehicle drove on a road where the color of the lane division line was similar to the color of the road surface, which was difficult to be recognized.	Yes	No
	7	The vehicle drove on a road where the width of the lane division line was narrow.	Yes	No
	8	The vehicle drove on a road where the lane division line did not exist or almost disappeared.	Yes	No
	9	The vehicle drove on a road where the width of the driving lane was narrow.	Yes	No
	10	The vehicle drove on a road where there was a fork lane, such as an interchange outlet of the highway, or an intersection.	Yes	No
	11	The vehicle drove on a road where the surrounding brightness (such as inlet and outlet of a tunnel) suddenly changed.	Yes	No
	12	The vehicle drove on a road where the white line had a special shape, such as a double line.	Yes	No
	13	The vehicle drove under the condition that the white line was difficult to be recognized due to the short distance to the preceding vehicle.	Yes	No
	14	Another vehicle cut in ahead of the vehicle from the next lane, or the preceding vehicle changed the driving lane.	Yes	No
	15	The vehicle drove on a road where the curve shape changed suddenly.	Yes	No
	16	A shadow of the guardrail formed on the white line.	Yes	No
3	Check that the current status applies to the condition that sufficient performance of lane keeping cannot be achieved.		Yes	No
	1	The vehicle was subjected to cross wind.	Yes	No
	2	The vehicle is equipped with winter tires or non-genuine tires.	Yes	No
	3	The vehicle drove on a uphill or a downhill where the road surface gradient suddenly changed.	Yes	No
	4	The vehicle drove on an uneven, rolling or jointed road surface.	Yes	No
	5	The vehicle drove on a road where the road surface cross gradient changed suddenly or was large.	Yes	No
	6	The acceleration or deceleration speed was large.	Yes	No
	7	The vehicle drove immediately after the tire was replaced or the tire air pressure was changed.	Yes	No
	8	The vehicle drove immediately after the vehicle weight was extremely changed.	Yes	No
	9	The vehicle drove immediately after the stereo camera was repaired, adjusted or replaced.	Yes	No
	10	The vehicle drove immediately after the suspension or steering system was repaired or replaced.	Yes	No
	11	The vehicle drove immediately after the engine was started at a low outside temperature.	Yes	No

B: CHECK ADAPTIVE CRUISE CONTROL INDICATOR LIGHT/CONSTANT SPEED CRUISE CONTROL INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT

Trouble symptom:
Adaptive cruise control or conventional cruise control can be set, but adaptive cruise control indicator light/constant speed cruise control indicator light and cruise SET indicator light do not illuminate.

	Step	Check	Yes	No
1	**CHECK ADAPTIVE CRUISE CONTROL INDICATOR LIGHT/CONSTANT SPEED CRUISE CONTROL INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT.** Check the combination meter. <Ref. to MET(diag)-15, OPERATION, System Operation Check Mode.>	Does adaptive cruise control indicator light/constant speed cruise control indicator light and cruise SET indicator light illuminate?	Go to step **2**.	Replace the meter case assembly. <Ref. to IDI-11, Combination Meter.>
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **3**.	Perform the diagnosis according to diagnosis for LAN system.
3	**PERFORM REAL TIME DIAGNOSIS.** Check the input signal of cruise control system. <Ref. to ES(diag)-41, Real-time Diagnosis.>	Is the check result OK?	The circuit has returned to a normal condition at this time. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK EyeSight STEERING SWITCH.** Check EyeSight steering switch. <Ref. to ES-33, Switches and Harness.>	Is the check result OK?	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>	Replace the EyeSight steering switch. <Ref. to ES-33, Switches and Harness.>



C: CHECK EyeSight STEERING SWITCH

Trouble symptom:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Wiring diagram:

NOTE:
For the coupling connector, refer to WIRING SYSTEM.
EyeSight System <Ref. to WI-232, WIRING DIAGRAM, EyeSight System.>

Step		Check	Yes	No
1	**CHECK EyeSight STEERING SWITCH CIRCUIT.** 1) Remove the driver's airbag module. <Ref. to AB-33, REMOVAL, Driver's Airbag Module.> 2) Disconnect the EyeSight steering switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(ST3) No. 3 (+) — Chassis ground (–):*** ***(ST3) No. 4 (+) — Chassis ground (–):***	Is the voltage 5 V or more?	Go to step **2**.	Check for open/short circuit or poor contact in the harness between EyeSight steering switch and stereo camera and in the steering roll connector.
2	**CHECK EyeSight STEERING SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Remove the EyeSight steering switch. <Ref. to ES-33, Switches and Harness.> 3) Measure the resistance between harness connector terminal and chassis ground. ***Connector & terminal*** ***(ST3) No. 9 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check for open circuit between EyeSight steering switch and chassis ground.

	Step	Check	Yes	No
3	**CHECK EyeSight STEERING SWITCH.** Check EyeSight steering switch. <Ref. to ES-33, Switches and Harness.>	Is the check result OK?	Replace the stereo camera. <Ref. to ES-8, Stereo Camera.>	Replace the EyeSight steering switch. <Ref. to ES-33, Switches and Harness.>

14.EyeSight Temporary Code(s) Display

A: OPERATION

If the EyeSight pause code is detected from the stereo camera, all the functions of the EyeSight excluding the conventional cruise control stop temporarily and cannot be used. When the failure is resolved, the function starts operating.

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «EyeSight» and select «Enter».
5) On «Select Function» display, select «Cancel Code».
6) On «Cancel Code» display, select «EyeSight HALT Code».

NOTE:

- For detailed operation procedures, refer to “Application help”.
- Temporary stop is not released even if the lane departure warning OFF switch or pre-collision brake OFF switch is pressed.
- Depending on the situation, temporary stop may not be released even if the ignition switch is turned off.
- Up to 20 codes can be stored.
- Stored codes will be cleared by Clear Memory.
- For details on EyeSight temporary stop codes, refer to List of EyeSight temporary stop code. <Ref. to ES(diag)-79, LIST, EyeSight Temporary Code(s) Display.>

B: LIST

- List of EyeSight temporary stop code

EyeSight pause code	Item	Contents of diagnosis	Reference
E5	Stereo Camera Temporary Stop	The operation stopped temporarily due to vertical deviation of the optical axis of the stereo camera. (During CRUISE MAIN ON, “Halt” is displayed in the multi-information display.)	Perform inspection concerning the item for E5 of the “CHECK LIST (CAMERA TEMPORARY STOP)”. <Ref. to ES(diag)-81, CHECK LIST (CAMERA TEMPORARY STOP), LIST, EyeSight Temporary Code(s) Display.> This code may be displayed when the rear of the vehicle is lowered by the overload. When the failure is resolved, and the operation returns from the temporary stop status after driving for a while, it is normal. If this code is displayed in an ordinary use under which the vehicle is not tilted, readjust the stereo camera. <Ref. to ES-12, PROCEDURE, Camera Adjustment, Inspection.> If the same cancel code is still detected after readjustment, replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>
CC CD		Temporary stop was performed due to the bad weather, backlight, fogged window or dirty window interfering with the recognition function of the stereo camera. And this code may be displayed also when the front of the camera is blocked by the hand or when it is very dark around the vehicle or when the vehicle is surrounded by the blanket of snow and nothing can be seen from the stereo camera. (During CRUISE MAIN ON, “Temporary stop Camera view defectiveness” is displayed in the multi-information display.)	Investigate the following items No. 1 and No. 2, and check that the possible cause of the temporary stop is applied either to No. 1 or No. 2. 1. Perform inspection concerning the item for CC and CD of the “CHECK LIST (CAMERA TEMPORARY STOP)”. <Ref. to ES(diag)-81, CHECK LIST (CAMERA TEMPORARY STOP), LIST, EyeSight Temporary Code(s) Display.> When there is a relevant item in the check list, it can be the cause of malfunction. 2. Read the temporary stop count stored in the temporary stop count of current data, and check the cause of the temporary stop occurred in the past from “LIST OF CONTENTS FOR CAMERA TEMPORARY STOP: 0 — 23 COUNTS”. <Ref. to ES(diag)-83, LIST OF CONTENTS FOR CAMERA TEMPORARY STOP, LIST, EyeSight Temporary Code(s) Display.> When the causes of the temporary stop for No. 1 and No. 2 correspond, drive the vehicle for a while after the cause of the temporary stop has been eliminated. If the operation returns from the temporary stop status, it is normal. (However, when the temporary stop takes place and is cancelled repeatedly, the temporary stop status is kept for a while to delay the return of the operation, which prevents the irritation.) When this is not the case, check the stereo camera and its periphery. <Ref. to ES(diag)-7, WINDSHIELD GLASS AND DASHBOARD, INSPECTION, General Description.> <Ref. to ES(diag)-11, FRONT WIPER, INSPECTION, General Description.> <Ref. to ES(diag)-12, STEREO CAMERA, INSPECTION, General Description.>
CE		The temperature of the stereo camera became excessively high or low, and the operation stopped temporarily. (During CRUISE MAIN ON, “Temporary stop Camera temperature range outside” is displayed in the multi-information display.)	Perform inspection concerning the item for CE of the “CHECK LIST (CAMERA TEMPORARY STOP)”. <Ref. to ES(diag)-81, CHECK LIST (CAMERA TEMPORARY STOP), LIST, EyeSight Temporary Code(s) Display.> When the operation returns from the temporary stop status after the failure is resolved, it is normal. When the operation does not return from the temporary status even if driving the vehicle for a while after the failure has been resolved, replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>
33		Detected when engine speed is 300 rpm or less. (Not detected at an initial ignition switch ON.) (During CRUISE MAIN ON, “Halt” is displayed in the multi-information display.)	Detected when the engine speed drops below 300 rpm after the engine has started once. If the same EyeSight temporary stop code is detected again when the engine is restarted, check the ECM. <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to EN(H6DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

EyeSight Temporary Code(s) Display

EyeSight pause code	Item	Contents of diagnosis	Reference
C0	Pre-Collision Second Braking Activation	The operation stopped temporarily because the pre-collision secondary brake operated three times between engine starting and stopping. (This is not a normal driving operation, or the system may be malfunctioning.) (During CRUISE MAIN ON, “Halt” is displayed in the multi-information display.)	This code may be displayed when the pre-collision brake is operated intentionally. Turn the ignition switch to OFF, and restart after a while. If the operation returns from the temporary stop status, it is normal. When temporary stop status continues with a code other than C0 after restart, perform diagnosis according to the code. When temporary stop status continues with the code of C0 after restart, the stereo camera may be malfunctioning. Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>
A0	CAN Diagnosis	The voltage dropped below 10 V immediately after IGN ON. (During CRUISE MAIN ON, “Halt” is displayed in the multi-information display.)	This code may be displayed when the engine is not started for a while with the ignition switch ON and when the engine has started after that. This is a normal operation. If this is not the case, the supply voltage may be malfunctioning. <Ref. to ES(diag)-95, DTC B2814 POWER SUPPLY LOW VOLTAGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
A1	ECM Reprogramming	The operation stopped temporarily because the control module (CM) is being reprogrammed. (During CRUISE MAIN ON, “Halt” is displayed in the multi-information display.)	After the completion of the reprogramming operation, turn the ignition to OFF and restart. If the operation returns from the temporary stop status, it is normal.
F9	EPS Input Control Suspended	The operation stopped temporarily because an assist limitation (overheat prevention control) was operated in order to prevent the electric power steering malfunction due to overheat.	This code may be displayed when the steering wheel is operated repeatedly while the vehicle is stopped or running in very low speed. After stopping the engine, leave the vehicle for approximately 30 minutes to cool down, and restart the engine. If the operation returns from the temporary stop status, it is normal.
		The operation stopped temporarily because of an electric power steering voltage decrease.	This code may be displayed when battery power is low. Replace or charge the battery, and restart the engine. If the operation returns from the temporary stop status, it is normal.
		The operation stopped temporarily because of an electric power steering bus off.	Electric power steering detected a failure and was disconnected from CAN line.

1. CHECK LIST (CAMERA TEMPORARY STOP)

Even when the set status of the adaptive cruise control is canceled or when a temporary stop status occurs, the EyeSight temporary stop code will not be retained for the following conditions.

- When the VDC operation is stopped by pressing the VDC OFF switch
- When the pre-collision brake operation is stopped by pressing the pre-collision brake OFF switch
- When the lane departure warning is stopped by pressing the lane departure warning OFF switch
- Immediately after the engine start

When these cases does not apply but the EyeSight temporary stop code is displayed, perform the inspection according to the following items.

Item name			Yes/No	
[1]: EyeSight temporary stop code [CC, CD] (At this time, “HALT(E1 camera view defectiveness)” is displayed in the multi-information display.)				
1	Check that the current status applies to the condition that are difficult to be recognized by the stereo camera.			
	1	It was bad weather (heavy rain, snowstorm, dense fog; especially when the oil film adheres to the windshield glass, the glass coating agent is used, or when the old wiper is used).	Yes	No
	2	The vehicle was exposed to the intense light (backlight such as sunlight or headlight high-beam light) from the front of the vehicle.	Yes	No
	3	The raindrops, water drops or dirt on the windshield glass are not wiped off sufficiently.	Yes	No
	4	The windshield glass is covered with fog, snow, dirt, frost or sandy dust, and either of them blocks the visibility of the stereo camera.	Yes	No
	5	The vehicle was tilted excessively by the heavy load.	Yes	No
	6	Canoes etc. loaded on the roof blocked the visibility of the stereo camera.	Yes	No
	7	The field of view was insufficient due to water or snow raised by the preceding vehicle or oncoming vehicle, or the moisture, sand, smoke or sandy dust blown in the wind.	Yes	No
	8	The vehicle passed through the outlet or inlet of a tunnel.	Yes	No
	9	The rearmost area of preceding vehicle was small (trailer, etc.), low or uneven.	Yes	No
	10	The object was a fence or wall with even pattern (striped pattern or bricks) or unpatterned surface.	Yes	No
	11	The object was a plate of glass, mirror wall or door.	Yes	No
	12	The tail light of the preceding vehicle did not illuminate during nighttime hours or inside the tunnel.	Yes	No
	13	The vehicle passed through the banners, flags, drooping branches or grass.	Yes	No
	14	The vehicle drove on the steep uphills or steep downhills.	Yes	No
	15	Front of the camera was blocked by the hand.	Yes	No
	16	It was very dark and there was no obstacle around the vehicle.	Yes	No
	17	The surrounding ground surface was similarly colored. (There is snow as far as the eye can see.)	Yes	No
	18	Dirt such as fingerprint adhered to the lens portion of the stereo camera.	Yes	No
	19	Stable recognition was difficult because of reflection to the windshield glass.	Yes	No
	20	The stereo camera was subject to impact, and the displacement or distortion occurred.	Yes	No
[2]: EyeSight temporary stop code [CE] (At this time, “HALT(E2 camera temperature range outside)” is displayed in the multi-information display.)				
1	Check that the current status applies to the condition that the temperature of the stereo camera becomes excessively high or low.			
	1	The compartment temperature was high. (For example: The vehicle was left under the scorching sun.) Or the compartment temperature was low. (For example: The vehicle was left under the frigid environment.)	Yes	No
[3]: EyeSight temporary stop code [E5] (At this time, “Temporary stop” is displayed in the multi-information display.)				
1	Check that the current status applies to the condition that the vertical deviation occurs on the stereo camera optical axis.			
	1	The vehicle was tilted excessively by the heavy load.	Yes	No
	2	The vehicle drove on the steep uphills or steep downhills.	Yes	No
	3	The stereo camera was subject to impact, and the displacement or distortion occurred.	Yes	No
[4]: EyeSight temporary stop code [33] (At this time, “Temporary stop” is displayed in the multi-information display.)				
1	Check that the current status applies to the condition that the engine speed drops to 300 rpm or below.		Yes	No
[5]: EyeSight temporary stop code [C0] (At this time, “Temporary stop” is displayed in the multi-information display.)				
1	Check that the current status applies to the condition that the pre-collision secondary brake operated three times between starting and stopping of engine.		Yes	No

EyeSight Temporary Code(s) Display

	Item name	Yes/No	
[6]: EyeSight temporary stop code [A0] (At this time, “Temporary stop” is displayed in the multi-information display.)			
1	Check that the current status applies to the condition that the voltage dropped below 10 V immediately after the ignition ON.	Yes	No
[7]: EyeSight temporary stop code [A1] (At this time, “Temporary stop” is displayed in the multi-information display.)			
1	Check that the control module (CM) is currently being reprogrammed.	Yes	No
[8]: EyeSight temporary stop code [F9] (At this time, “Temporary stop” is displayed in the multi-information display.)			
1	Check that the current status applies to the condition that the steering wheel is operated repeatedly when the vehicle stops or moves very slowly.	Yes	No

2. LIST OF CONTENTS FOR CAMERA TEMPORARY STOP

Read the camera temporary stop count from Current Data Display & Save of Subaru Select Monitor, estimate the possible cause of the temporary stop according to the chart below. (After clearing the memory, the number of occurrences for each temporary stop is accumulated.)

Displayed item	Main causes	Possible conditions for temporary stop (including events occurring less frequently)
EyeSight Temporary 0 Count	Front of the camera is blocked by hand, dirty window glass	Backlight, dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, front of the camera is blocked by hand, bad weather (heavy rain, snowstorm, dense fog), unpatterned wall, water or snow raised by preceding vehicle
EyeSight Temporary 1 Count	Front of the camera is blocked by hand, dirty window glass	Backlight, dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, front of the camera is blocked by hand, bad weather (heavy rain, snowstorm, dense fog), water or snow raised by preceding vehicle, very dark and no obstacle around the vehicle, unpatterned wall, blanket of snow around the vehicle and no obstacle is found
EyeSight Temporary 2 Count	Fogged window glass, frost on the window glass	Dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, front of the camera is blocked by hand, bad weather (heavy rain, snowstorm, dense fog), unpatterned wall, water or snow raised by preceding vehicle
EyeSight Temporary 3 Count	Backlight	Backlight, dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, bad weather (heavy rain, snowstorm, dense fog), unpatterned wall, water or snow raised by preceding vehicle
EyeSight Temporary 4 Count	Water raised by preceding vehicle	Backlight, dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, front of the camera is blocked by hand, bad weather (heavy rain, snowstorm, dense fog), unpatterned wall, water or snow raised by preceding vehicle, use of the window washer
EyeSight Temporary 5 Count	Dirty window glass, fogged window glass, oil film on the window glass	Dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, bad weather (heavy rain, snowstorm, dense fog), water or snow raised by preceding vehicle
EyeSight Temporary 6 Count	Storm of rain	Dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, bad weather (heavy rain, snowstorm, dense fog), water or snow raised by preceding vehicle, use of the window washer
EyeSight Temporary 7 Count	Object on the dashboard reflected against the windshield glass	Object on the dashboard reflected against the windshield glass, snowstorm
EyeSight Temporary 8 Count	Dirty window glass, bad weather	Backlight, dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, front of the camera is blocked by hand, object on the dashboard reflected against the windshield glass, bad weather (heavy rain, snowstorm, dense fog), unpatterned wall, water drop raised by preceding vehicle, steep slope, continuous sharp curve, banner, grass, preceding vehicle with large uneven surface (trailer, etc.), preceding vehicle driving in the night without illuminating the tail light, preceding vehicle with snow adhered, use of the window washer
EyeSight Temporary 9 Count	Not used	—
EyeSight Temporary 10 Count	Not used	—

EyeSight Temporary Code(s) Display

Displayed item	Main causes	Possible conditions for temporary stop (including events occurring less frequently)
EyeSight Temporary 11 Count	Not used	—
EyeSight Temporary 12 Count	Camera has been deformed by hitting it.	The stereo camera was subject to impact, and the displacement or distortion occurred.
EyeSight Temporary 13 Count	Not used	—
EyeSight Temporary 14 Count	Not used	—
EyeSight Temporary 15 Count	Not used	—
EyeSight Temporary 16 Count	Not used	—
EyeSight Temporary 17 Count	Not used	—
EyeSight Temporary 18 Count	Not used	—
EyeSight Temporary 19 Count	Not used	—
EyeSight Temporary 20 Count	Not used	—
EyeSight Temporary 21 Count	The vehicle is tilted excessively by the heavy load.	• The vehicle is tilted excessively by the heavy load. • The vehicle drives on the steep uphills or steep downhills. • The stereo camera was subject to impact, and the displacement or distortion occurred.
EyeSight Temporary 22 Count	Camera has been deformed by hitting it.	The stereo camera was subject to impact, and the displacement or distortion occurred.
EyeSight Temporary 23 Count	Camera has been deformed by hitting it.	The stereo camera was subject to impact, and the displacement or distortion occurred.
EyeSight Temporary 24 Count	Camera has been deformed by hitting it.	The stereo camera was subject to impact, and the displacement or distortion occurred.
EyeSight Temporary 25 Count	Camera has been deformed by hitting it.	The stereo camera was subject to impact, and the displacement or distortion occurred.
EyeSight Temporary 26 Count	Dirty window glass left for a long time	Dirty window glass, fogged window glass, frost on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens
EyeSight Temporary 27 Count	Not used	—
EyeSight Temporary 28 Count	Can't see anything in a complete darkness.	The vehicle drove in a complete darkness with the headlight turned off. Or, the camera was blinded when driving.
EyeSight Temporary 29 Count	Not used	—
EyeSight Temporary 30 Count	Not used	—
EyeSight Temporary 31 Count	In a high temperature of 70°C (158°F) or more or in a low temperature of –10°C (14°F) or less	—

15.ECM Cancel Code(s) Display

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
On «Select System» display, select «Engine Control System».
2) Drive vehicle at 40 km/h (25 MPH) or more and set the cruise control.

CAUTION:
- **When performing diagnosis, observe the legal speed limit on the road.**
- **The cancel code will also appear when the cruise control is cancelled by the driver's operation. Do not confuse them.**
- **Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.**

3) When the set speed is cancelled by itself (without any cancel operations such as applying brake) or when the cruise control could not be set by performing the setting operation, select the «Cancel Code(s) Display» on the engine malfunction diagnosis screen.

NOTE:
The «Current» and «The past» are contained in the cancel code. The latest code recognized during current test drive is displayed in «Current». Cancel codes resulting from fault diagnosis of switches relating to the system and cruise control are also displayed in «The past».
4) Perform Engine DTC Clear Memory operation. <Ref. to EN(H4DO)(diag)-80, Clear Memory Mode.> <Ref. to EN(H6DO)(diag)-87, Clear Memory Mode.>
Cancel codes for switches relating to the system and cruise control are deleted by clearing memory on the engine side.

NOTE:
- For detailed operation procedures, refer to "Application help".
- The latest code will be cleared by turning ignition switch to OFF.
- For details on cancel codes, refer to List of ECM cruise control cancel code. <Ref. to ES(diag)-85, LIST, ECM Cancel Code(s) Display.>

B: LIST

- List of ECM cruise control cancel code(s)

When the cruise control is cancelled, the ECM outputs the following cancel codes.

Cancel code	Item	Contents of diagnosis	Reference
11	Main switch	Main switch of the EyeSight steering switch is turned to OFF, and the cruise control is released.	This DTC is displayed without operating the main switch. <Ref. to ES(diag)-76, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>
12	Stop & Brake switch	Stop light switch or brake switch is turned to ON, and then the cruise control is released.	This DTC is displayed without depressing the brake pedal. <Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.>
14	Neutral switch	Neutral position switch is turned to ON, and then the cruise control is released.	This DTC is displayed without shifting to neutral position. <Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.>
15	Cancel switch	Cancel switch is turned to ON, and then the cruise control is released.	This DTC is displayed without operating the cancel switch. <Ref. to CC(diag)-21, 15, Diagnostic Procedure with Cancel Code.>
16	Ignition switch	Ignition switch is turned to OFF, and then the cruise control is released.	This DTC is displayed without operating the ignition switch. <Ref. to CC(diag)-22, 16, Diagnostic Procedure with Cancel Code.>

ECM Cancel Code(s) Display

Cancel code	Item	Contents of diagnosis	Reference
21	Abnormality of switches when Ignition switch on	When the ignition switch is turned to ON, each switch of the EyeSight steering switch is already turned ON.	This DTC is displayed when turning ignition switch to ON without operating the EyeSight steering switch. <Ref. to CC(diag)-22, 21, Diagnostic Procedure with Cancel Code.>
22	Abnormality of change in vehicle speed	Malfunction of vehicle speed signal variation is detected.	<Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>
24	Abnormality of switches related to cruise control	Open circuit of the EyeSight steering switch is detected during cruise driving. (The system is judged as model without cruise control.)	This DTC is displayed with normal operation. <Ref. to CC(diag)-23, 24, Diagnostic Procedure with Cancel Code.>
31	Engine Speed	• Abnormal increase of engine speed is detected. • Gear is placed in Neutral, 1st or Reverse position.	Cruise in 2nd shift position or more. <Ref. to CC(diag)-23, 31, Diagnostic Procedure with Cancel Code.>
32	Cruse Control out of Range	• Vehicle speed exceeds the controllable range during cruising. • Set operation was performed at vehicle speed unavailable for setting. • RESUME operation was performed without memorized vehicle speed.	This DTC is displayed, though the vehicle speed is increased to the speed available for cruise set and set operation was performed again. <Ref. to CC(diag)-23, 32, Diagnostic Procedure with Cancel Code.>
34	Prohibition of cruise control at continuing big Accel. angle	The vehicle has been driven at higher speed than set vehicle speed for an abnormally long time (approximately 10 minutes) during cruise driving.	<Ref. to CC(diag)-23, 34, Diagnostic Procedure with Cancel Code.>
35	Prohibition of cruise control at vehicle speed F/B malfunction	Set vehicle speed cannot be kept because of some reasons (steep uphill, parking brake, abnormal decrease of engine output, etc.) during cruise driving.	<Ref. to CC(diag)-24, 35, Diagnostic Procedure with Cancel Code.>
41	VDC/TCS/EPB Operating	Vehicle dynamics control (VDC), TCS or EPB is operated during cruise driving or cruise setting.	<Ref. to CC(diag)-24, 41, Diagnostic Procedure with Cancel Code.>
43	ABS/VDC Failure	When the cruise switch is ON, ABS or vehicle dynamics control (VDC) system malfunction is detected.	<Ref. to CC(diag)-24, 43, Diagnostic Procedure with Cancel Code.>
44	Body Integrated unit Failure	When the cruise switch is ON, body integrated unit system malfunction is detected.	<Ref. to CC(diag)-24, 44, Diagnostic Procedure with Cancel Code.>
45	Meter Failure	When the cruise switch is ON, combination meter malfunction is detected.	<Ref. to CC(diag)-24, 45, Diagnostic Procedure with Cancel Code.>
47	Adaptive cruise control ECM abnormal	When the cruise switch is ON, stereo camera malfunction is detected.	Check the DTCs related to stereo camera.
49	TCM Failure	Transmission control module (TCM) malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-24, 49, Diagnostic Procedure with Cancel Code.>
53	Adaptive Cruise Control Forced Cancel	Stereo camera detects the release command of the cruise control during cruise driving or cruise setting operation.	Check the stereo camera. Check the ACC cancel code. <Ref. to ES(diag)-88, ACC Cancel Code(s) Display.>
54	Release SW	Brake control module detects the brake pedal operation by the driver during cruise driving or cruise setting operation.	If this code is detected when the brake pedal is not depressed intentionally, check the release switch.
55	Adaptive cruise control reception data abnormal	When the cruise switch is ON, malfunction is detected in the reception data from the stereo camera.	Check the cancel code of stereo camera.
61	Brake Switch Failure	Malfunction in the stop light & brake switch is detected.	<Ref. to CC(diag)-24, 61, Diagnostic Procedure with Cancel Code.>
62	Neutral Switch Failure	Neutral position switch malfunction is detected.	<Ref. to CC(diag)-24, 62, Diagnostic Procedure with Cancel Code.>

Cancel code	Item	Contents of diagnosis	Reference
63	Abnormality 1 of change in vehicle speed	Malfunction of vehicle speed signal variation is detected. This code may be displayed by a sudden starting of the vehicle on a road with low μ and with the VDC OFF. In this case, restart the engine and perform the cruise setting again. If the cancel code is not displayed, the vehicle is in normal status.	<Ref. to CC(diag)-25, 63, Diagnostic Procedure with Cancel Code.>
64	Engine Sensor Failure 1	Malfunction related to engine is detected.	<Ref. to CC(diag)-25, 64, Diagnostic Procedure with Cancel Code.>
65	Abnormality 1 of switches related to cruise control	Malfunction of the EyeSight steering switch is detected. (When the switch is pressed ON for a long time (approximately two minutes), stuck ON condition is detected.)	<Ref. to CC(diag)-25, 65, Diagnostic Procedure with Cancel Code.>
66	Cruise Control Calculation Error	Malfunction of the cruise control calculation (microcomputer) is detected.	<Ref. to CC(diag)-25, 66, Diagnostic Procedure with Cancel Code.>

16.ACC Cancel Code(s) Display

A: OPERATION

When the ACC cancel code is detected from the stereo camera, the cruise control will be cancelled.
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «EyeSight» and select «Enter».
5) On «Select Function» display, select «Cancel Code».
6) On «Cancel Code» display, select «ACC Cancel Code(s) Display».

NOTE:
• For detailed operation procedures, refer to “Application help”.
• Up to eight codes can be stored. When more than eight codes are output, the oldest code will be deleted to store the latest code.
• Stored codes will be cleared by Clear Memory.
• For details on ACC cancel codes, refer to List of ACC cancel code. <Ref. to ES(diag)-88, LIST, ACC Cancel Code(s) Display.>

B: LIST

• List of ACC cancel code(s)

ACC cancel code	Item	Contents of diagnosis
02	Adaptive mode: Stop holding	Displayed when the cruise control is cancelled after the own vehicle stops following the preceding vehicle.
04	Adaptive mode: Camera temporary stop	Displayed when the cruise control is canceled by the EyeSight temporarily stop while driving in the adaptive cruise mode.
08	Common:Vehicle Speed Sensor Abnormal	Displayed when the cruise control is canceled due to a wheel speed sensor malfunction.
09	Common: Brake operation	Displayed when the cruise control is canceled by the brake operation of the driver.
0A	Common: Pre-crash brake	Displayed when the cruise control is canceled because the pre-collision brake function is activated.
0B	Common: AT manual mode	Displayed when the cruise control is canceled because the AT manual mode is selected or paddle operation is performed.
0C	Common: VDC switch OFF	Displayed when the VDC function is turned OFF by the VDC OFF switch and the cruise control is canceled.
0D	Common:Any Door is Opened	Displayed when the cruise control is canceled because either of the driver’s door, passenger’s door, or rear doors is opened.
0E	Common:Driver Seat Belt Unfastened	Displayed when the cruise control is canceled because the driver’s seat belt is unfastened.
0F	Common: EPB operation	Displayed when the cruise control is canceled because the EPB is activated.
10	Common: EPB special mode	Displayed when the cruise control is canceled by an irregular operation of a driver, which repeats activation/deactivation of the EPB.
12	Common: AT gear range	Displayed in the following situations: The driver performed the SET or RES operation to drive the vehicle either in the adaptive cruise mode or in the constant speed mode, but that operation was not accepted because it was done immediately after shifting into D range.
13	Common:Steep Sloping Road	Displayed when the road surface was judged to be too steep and therefore the cruise control is canceled.
14	Common: ABS operation	Displayed when the cruise control is canceled because the ABS is activated.
15	Common: Large steering operation	Displayed when the cruise control is canceled because the steering wheel is fully turned.
16	Adaptive mode: Stop judgment	Displayed when the cruise control is cancelled after the own vehicle stops following the preceding vehicle while driving in the adaptive cruise control mode.
17	Common:Parking Brake Activation	Displayed when the cruise control is cancelled because the parking brake is applied.

ACC cancel code	Item	Contents of diagnosis
18	Adaptive mode: Stop forced cancellation	Displayed when the cruise control is cancelled under the following situations: The own vehicle stops following the preceding vehicle while driving in the adaptive cruise control mode, and the driver repeats the SET or RES operation and the automatic brake control continues for 120 seconds.
19	Common:X-Mode	Displayed when the cruise control is canceled because the X mode is activated.
1A	Common:TSM Activation	This item is displayed when the cruise control is cancelled by the operation of TSM commanded by VDC.
1B	Common:VDC Activation	Displayed when the cruise control is canceled because the VDC is activated.
1C	Common:Cancel SW Operation	This item is displayed when the cruise control is canceled by the operation of CANCEL switch.
1D	Common:Cruise SW OFF	This item is displayed when the cruise control is canceled by turning the cruise switch OFF.
1E	CC Mode:Max Speed Exceeded	Displayed when the cruise control is canceled because the own vehicle speed exceeds the controllable range while driving in the constant speed mode.
1F	ACC Mode:Max Speed Exceeded	Displayed when the cruise control is canceled because the own vehicle speed exceeds the controllable range while driving in the adaptive cruise mode.

NOTE:
- “Adaptive cruise mode”: Adaptive cruise control
- “Constant speed mode”: Conventional cruise control
- “Common”: Adaptive cruise control and conventional cruise control

17.Active Lane Keep System Code(s) Display

A: OPERATION

Lane Departure Prevention Deactivate Code(s) Display: The lane departure prevention deactivate code is output, when the lane keep (lane departure prevention) is canceled during the operation or the standby state is canceled.
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «EyeSight» and select «Enter».
5) On «Select Function» display, select «Cancel Code».
6) On «Cancel Code» display, select «Lane Departure Prevention Assist Deactivate Code(s) Display».

NOTE:
• For detailed operation procedures, refer to “Application help”.
• Up to eight codes can be stored. When more than eight codes are output, the oldest code will be deleted to store the latest code.
• Stored codes will be cleared by Clear Memory.
• For details on lane keep assist codes, refer to List of lane keep assist code. <Ref. to ES(diag)-90, OPERATION, Active Lane Keep System Code(s) Display.>

B: LIST

• List of lane keep assist code

Code	Item	Contents of diagnosis
04	Lateral Acceleration is Large	Detected when control output value exceeds the controllable range by a driving operation such as rounding a curve at high speed or making a sharp turn.
0C	Lane Recognition Prohibition(Environmental Factor)	Detected when a driving lane width is narrowed.
18	Out of Control Return Possibility Range	Detected when lane departure prevention control continues for a predetermined time.
26	Real Yaw Rate Excessive	Detected when actual yaw rate exceeds the maximum value of target yaw rate by a specified amount.
37	Yaw Rate Sensor Abnormal(Control)	Detected when the difference between actual yaw rate and expected yaw rate becomes the specified value or more.
50	Camera Adjustment Abnormal 1	Detected when the accuracy of camera learning values is not sufficient. Usually detected after replacing the camera and performing an aiming, and resolved by an automatic adjustment while driving.
52	Yaw Rate Sensor Abnormal(Recognition)	Detected when the vehicle weaves all over the road or when the camera condition is not good and therefore white lines are not correctly recognized.

18.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when an error occurs in the CAN line. (Bus off)

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

Detected when CAN data from engine control module (ECM) is not transmitted to stereo camera.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data from TCM is not transmitted to stereo camera.
When lost communication with TCM and TCM abnormal occur simultaneously, perform diagnosis for lost communication with TCM first.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC is not transmitted to stereo camera.
When lost communication with vehicle dynamics control and vehicle dynamics control module abnormal or VDC echo back disagreement occur simultaneously, perform diagnosis for lost communication with vehicle dynamics control first.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U0126 LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE

Detected when CAN data from steering angle sensor is not transmitted to stereo camera.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

F: DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE

Detected when CAN data from EPS CM is not transmitted to stereo camera.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

G: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data from body integrated unit is not transmitted to stereo camera.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

H: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from combination meter is not transmitted to stereo camera.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

I: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”

Failure counter diagnosis of engine control module (ECM)

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

J: DTC U0402 INVALID DATA RECEIVED FROM TCM

Failure counter diagnosis of automatic transmission control module (TCM)

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

K: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

Failure counter diagnosis of VDC control module (VDC CM)

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

L: DTC U0420 INVALID DATA RECEIVED FROM POWER STEERING CONTROL MODULE

Failure counter diagnosis of EPS CM

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

M: DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

Failure counter diagnosis of body integrated unit

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

N: DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

Failure counter diagnosis of combination meter

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

O: DTC U0428 INVALID DATA RECEIVED FROM STEERING ANGLE SENSOR MODULE

Failure counter diagnosis of steering angle sensor

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

P: DTC U1073 CONTROL MODULE COMMUNICATION BUS "SONAR-CAN" OFF

Detected when the bus off status (the stereo camera detects the failure and is disconnected from the local CAN line) occurs.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Q: DTC U1233 LOST COMMUNICATION WITH RAB CONTROL MODULE

Detected when CAN data from RAB CM did not reach the stereo camera.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

R: DTC U1534 INVALID DATA RECEIVED FROM SONAR ECU

Failure counter diagnosis of RAB CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

S: DTC B2801 TCM ABNORMAL

Detected when error occurs in the automatic transmission.
When lost communication with TCM and TCM abnormal occur simultaneously, perform diagnosis for lost communication with TCM first.

NOTE:
Check the automatic transmission. <Ref. to CVT(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

T: DTC B2802 ETC ABNORMAL

Detected when error occurs in the electronic throttle control.

NOTE:
Check the electronic throttle control. <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to EN(H6DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

U: DTC B2803 EPB OPERATION PROHIBIT

EPB operation is prohibited.
In addition, in VDC brake maintenance mode <Ref. to VDC-17, BRAKE MAINTENANCE MODE, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>, even if any DTC is detected, the system malfunction does not exist. Therefore, perform Clear Memory Mode. <Ref. to ES(diag)-48, Clear Memory Mode.>

NOTE:
Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

V: DTC B2804 EPB NO ACTIVITY DETECTED

EPB control is abnormal.

NOTE:
Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

W: DTC B2806 ECM ABNORMAL

Detected when error occurs in the engine control module (ECM).

NOTE:
Perform check of the ECM. <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to EN(H6DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

X: DTC B2807 ECM ABNORMAL

Detected when cruise indicator illumination request from ECM and ON/OFF information of cruise function do not match.

NOTE:
- Perform check of the ECM. <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to EN(H6DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
- Check the ECM cruise control cancel code. <Ref. to ES(diag)-85, ECM Cancel Code(s) Display.>

Y: DTC B2809 VDC MALFUNCTION

Detected when error occurs in the VDC. (VDC failure)
When lost communication with vehicle dynamics control and vehicle dynamics control module abnormal or VDC echo back disagreement occur simultaneously, perform diagnosis for lost communication with vehicle dynamics control first.

NOTE:
Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Z: DTC B280A VDC ECHO BACK DISAGREEMENT

Detected when error occurs in the VDC. (VDC brake control malfunction 1)
When lost communication with vehicle dynamics control and vehicle dynamics control module abnormal or VDC echo back disagreement occur simultaneously, perform diagnosis for lost communication with vehicle dynamics control first.

NOTE:
Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AA:DTC B280B VDC BRAKE FLUID PRESSURE

Detected when error occurs in the VDC. (VDC brake control malfunction 3)

NOTE:
Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AB:DTC B280F COMBINATION METER MALFUNCTION

Malfunction is detected in the combination meter.
DTC DETECTING CONDITION:
Defective combination meter
TROUBLE SYMPTOM:
- All functions of EyeSight system do not operate.
- EyeSight warning light blinks or illuminates.
- Combination meter does not illuminate.

NOTE:
Check the combination meter. <Ref. to IDI-10, INSPECTION, Combination Meter System.>

AC:DTC B2810 INCOMPATIBLE WITH EyeSight (COMBINATION METER)

Detected when the combination meter, which is not designed exclusively for EyeSight is installed.
DTC DETECTING CONDITION:
Incorrect specifications of combination meter
TROUBLE SYMPTOM:
All functions of EyeSight system do not operate.

NOTE:
Replace the combination meter with the one designed for EyeSight. <Ref. to IDI-11, Combination Meter.>

AD:DTC B2811 EPS ABNORMAL

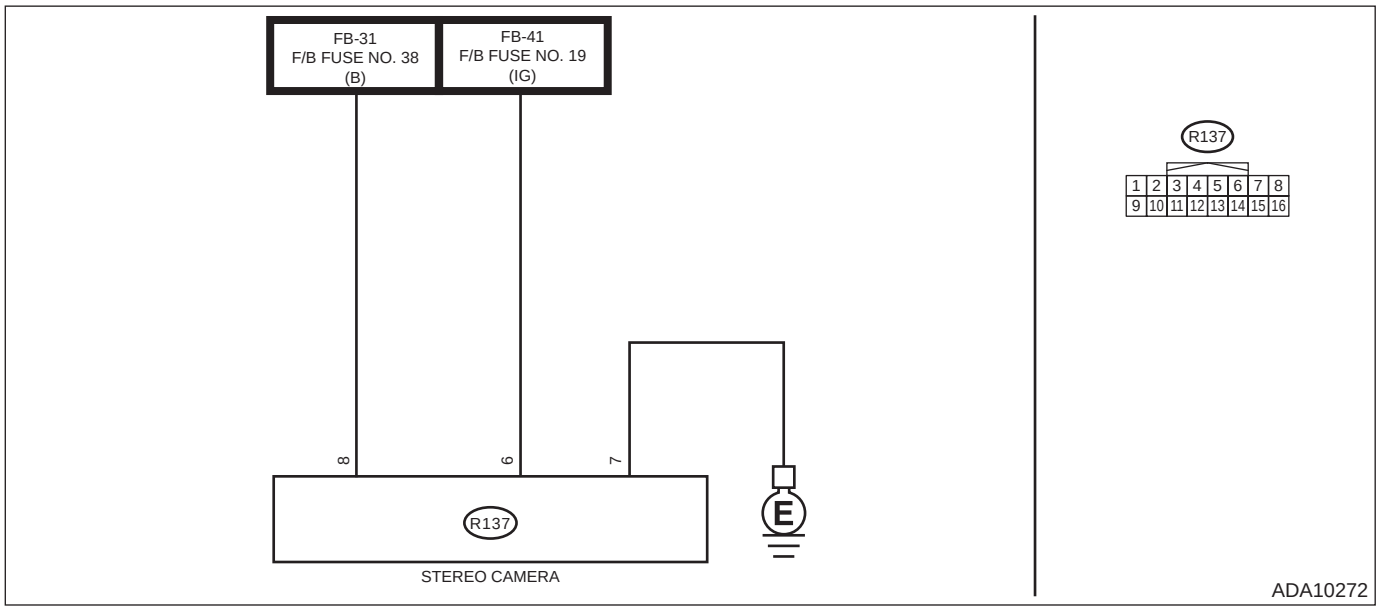
Malfunction is detected in the electric power steering.

NOTE:
Check the electric power steering. <Ref. to PS(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AE:DTC B2814 POWER SUPPLY LOW VOLTAGE

Detected when the status of 7.0 V or less continues approximately for 5 seconds and is judged to be low-voltage malfunction, or when the +B harness of the stereo camera is broken.

DTC detecting condition:



- Input voltage to stereo camera is out of specifications.
- Defective stereo camera control harness (open circuit in +B harness)
- Defective stereo camera

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light blinks or illuminates.
- Cruise indicator light blinks.
- Malfunction indicator light illuminates.
- VDC warning light illuminates.
- ATF temperature warning light illuminates.

Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
EyeSight System <Ref. to WI-232, WIRING DIAGRAM, EyeSight System.>

Step		Check	Yes	No
1	**CHECK GENERATOR.** 1) Start the engine and idle for a while. 2) Measure the voltage between generator terminal B and chassis ground. ***Connector & terminal*** ***Generator terminal B (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Check the generator. <Ref. to SC(H4DO)-33, Generator.> <Ref. to SC(H6DO)-34, Generator.>
2	**CHECK BATTERY TERMINAL.** Turn the ignition switch to OFF.	Is the battery terminal connected securely?	Go to step **3**.	Tighten the battery terminal securely.
3	**CHECK FUSE.** Check fuses No. 19 and No. 38 in the fuse & relay box. <Ref. to ES-5, Relay and Fuse.>	Is the check result OK?	Go to step **4**.	Replace the faulty fuse. When the replaced fuse blows out easily, check the short circuit in harness.

	Step	Check	Yes	No
4	**CHECK HARNESS (POWER SUPPLY CIRCUIT).** 1) Disconnect the stereo camera. 2) Turn the ignition switch to ON. 3) Measure the voltage between harness connector of stereo camera and chassis ground. ***Connector & terminal*** ***(R137) No. 6 (+) — Chassis ground (–):*** ***(R137) No. 8 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Check the power supply system circuit, and if any fault is found, repair the defective parts or replace the harness.
5	**CHECK HARNESS (GROUND CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable from battery. 3) Measure the resistance between stereo camera and chassis ground. ***Connector & terminal*** ***(R137) No. 7 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Check the ground system circuit, and if any fault is found, repair the defective parts or replace the harness.
6	**CHECK POOR CONTACT OF CONNECTORS.** Check stereo camera connector.	Is there poor contact of the connector?	Repair the connector.	Go to step **7**.
7	**CHECK STEREO CAMERA.** 1) Connect all connectors and battery terminals securely. 2) Start the engine, drive the vehicle at 40 km/h (24.9 MPH) or more, stop the vehicle and then stop the engine. 3) After 3 seconds or more have elapsed, restart the engine. 4) Clear the memory. <Ref. to ES(diag)-48, Clear Memory Mode.> 5) Read the DTC. <Ref. to ES(diag)-42, Diagnostic Code(s) Display.>	Is DTC B2814 or B2815 displayed?	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.

AF:DTC B2815 POWER SUPPLY HIGH VOLTAGE

Detected when the status for the battery voltage of 16 V or more continues approximately for 5 seconds and is judged to be abnormally high voltage.
Refer to DTC B2814 for DTC detecting condition, trouble symptom and diagnostic procedure. <Ref. to ES(diag)-95, DTC B2814 POWER SUPPLY LOW VOLTAGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AG:DTC B2817 BRAKE LAMP

DTC DETECTING CONDITION:

- Defective brake light relay
- Defective brake light switch
- Defective VDC

TROUBLE SYMPTOM:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.
- Brake light does not go off or illuminate.

NOTE:
When this DTC is detected, check VDC system. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AH:DTC B281B STEERING ANGLE SENSOR FAIL

DTC DETECTING CONDITION:
Defective steering angle sensor
TROUBLE SYMPTOM:
All functions of EyeSight system do not operate.

NOTE:
Check the steering angle sensor. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AI: DTC B281C INCOMPATIBLE WITH EyeSight (EPS)

Detected when the EPS CM which is not exclusively for EyeSight is installed.
DTC DETECTING CONDITION:
Incorrect specifications of EPS CM.
TROUBLE SYMPTOM:
All functions of EyeSight system do not operate.

NOTE:
Replace the EPS CM with the one exclusively designed for EyeSight.

AJ:DTC B281E RAB CONTROL MODULE

DTC detecting condition:
- Defective RAB CM.
- Defective unit that is cooperatively controlled with stereo camera.

Trouble symptom:
- The Reverse Automatic Braking function does not operate.
- RAB warning light illuminates.
- All functions of EyeSight do not operate. (Functions terminated due to a cooperative control unit failure)
- EyeSight warning light illuminates. (Functions terminated due to a cooperative control unit failure)

Step		Check	Yes	No
1	**CHECK DTCS (DETERMINING A FAILURE OF COOPERATIVE CONTROL UNIT).** Read the DTC related to EyeSight using the Subaru Select Monitor. <Ref. to ES(diag)-42, Diagnostic Code(s) Display.>	Is DTC other than DTC B281E displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC.** Read the DTC related to the Reverse Automatic Braking using the Subaru Select Monitor. <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Finish the diagnosis.

AK:DTC B281F REVERSE AUTOMATIC BRAKING OVERRIDE

DTC detecting condition:
Defective RAB CM.

Trouble symptom:
- The Reverse Automatic Braking function does not operate.
- RAB warning light illuminates.

NOTE:
Check the Reverse Automatic Braking. <Ref. to RAB(diag)-2, Basic Diagnostic Procedure.>

AL:DTC B2821 REVERSE AUTOMATIC BRAKING CONTROL PROHIBITION

DTC detecting condition:
Defective RAB CM.

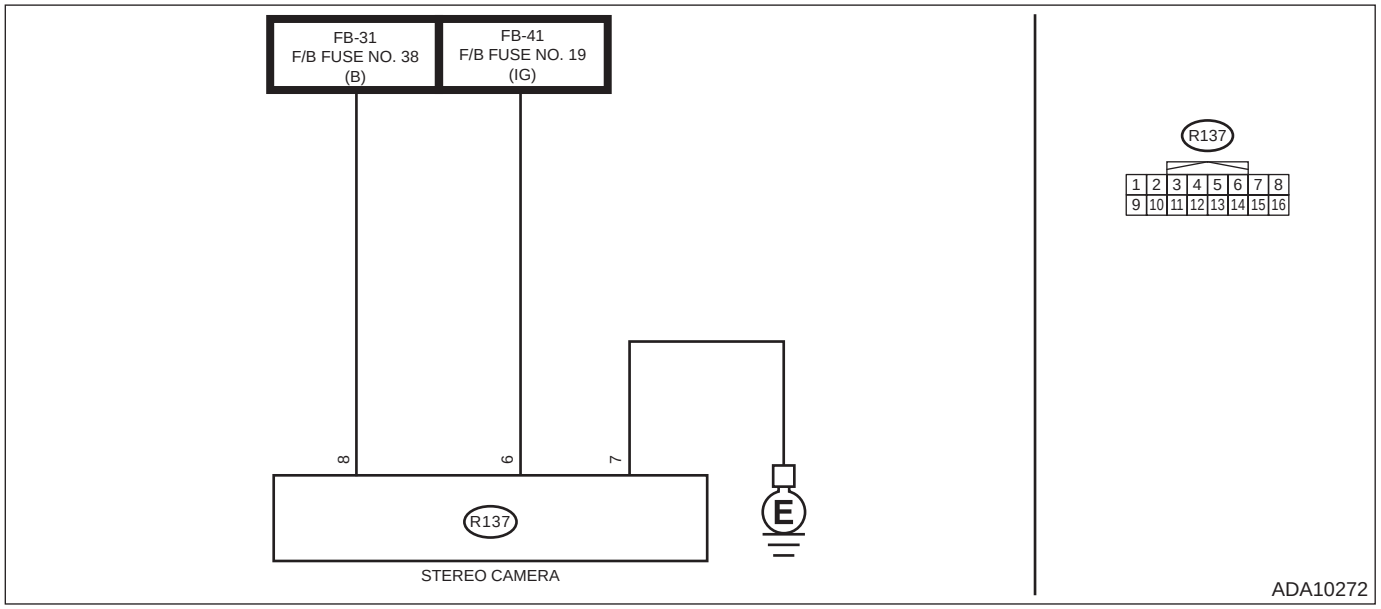
Trouble symptom:
- The Reverse Automatic Braking function does not operate.
- RAB warning light illuminates.

NOTE:
Check the Reverse Automatic Braking. <Ref. to RAB(diag)-2, Basic Diagnostic Procedure.>

AM:DTC B28A0 VEHICLE MODEL JUDGMENT

Detected when the model code for stereo camera and the model code used for CAN data are different.

DTC detecting condition:



- Defective CAN system
- Defective stereo camera
- In the aiming operation, there is an open circuit in the +B harness of the stereo camera.
- In the completion of the aiming operation, the switching from IGN OFF to IGN ON takes place too early, and the recording of the model information has not yet been finished.

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
EyeSight System <Ref. to WI-232, WIRING DIAGRAM, EyeSight System.>

Step		Check	Yes	No
1	**CHECK RELATED CM.** Check the part number of the ECM, TCM, VDCCM and combination meter.	Is each CM a genuine part?	Go to step **2**.	Replace the non-genuine CM with a genuine one.
2	**CHECK STEREO CAMERA.** 1) Remove the camera cover. 2) Check the part number of the stereo camera.	Is the stereo camera genuine?	Go to step **3**.	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is DTC for LAN system displayed?	Perform the diagnosis of DTCs for LAN system.	Go to step **4**.
4	**CHECK MODEL REGISTRATION INFORMATION.** Check the «Model registration information» from the current data of stereo camera. <Ref. to ES(diag)-23, Read Current Data.>	Does vehicle and data correspond?	Perform the adjustment or inspection of the camera. <Ref. to ES-12, Camera Adjustment, Inspection.>	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK FUSE.** Check fuses No. 19 and No. 38 in the fuse & relay box. <Ref. to ES-5, Relay and Fuse.>	Is the check result OK?	Go to step **6**.	Replace the faulty fuse. When the replaced fuse blows out easily, check the short circuit in harness.
6	**CHECK HARNESS (POWER SUPPLY CIRCUIT).** 1) Disconnect the stereo camera. 2) Turn the ignition switch to ON. 3) Measure the voltage between harness connector of stereo camera and chassis ground. ***Connector & terminal*** ***(R137) No. 6 (+) — Chassis ground (–):*** ***(R137) No. 8 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **7**.	Check the power supply system circuit, and if any fault is found, repair the defective parts or replace the harness.
7	**CHECK HARNESS (GROUND CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable from battery. 3) Measure the resistance between stereo camera and chassis ground. ***Connector & terminal*** ***(R137) No. 7 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **8**.	Check the ground system circuit, and if any fault is found, repair the defective parts or replace the harness.
8	**CHECK POOR CONTACT OF CONNECTORS.** Check stereo camera connector.	Is there poor contact of the connector?	Repair the connector.	Go to step **9**.
9	**CHECK STEREO CAMERA.** 1) Connect all connectors and battery terminals securely. 2) Clear the memory. <Ref. to ES(diag)-48, Clear Memory Mode.> 3) Read the DTC. <Ref. to ES(diag)-42, Diagnostic Code(s) Display.>	Is DTC B28A0 displayed?	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.

AN:DTC B28A1 EyeSight COMMUNICATION(ECM)

Detected when the engine control module (ECM) detects the malfunction of stereo camera, or when the stereo camera or ECM is assembled incorrectly.

DTC detecting condition:

- Defective CAN system
- Defective engine control module (ECM)
- Defective stereo camera
- Incorrect assembly of stereo camera (when the stereo camera designed for EyeSight (Ver. 2) type vehicle is installed to the EyeSight (Ver. 3) type vehicle, etc.)
- Incorrect assembly of ECM (when the ECM designed for another model is installed, etc.)

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

	Step	Check	Yes	No
1	**CHECK ECM.** Check the part number of the ECM.	Is the ECM genuine?	Go to step **2**.	Replace the ECM. <Ref. to FU(H4DO)-82, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, REMOVAL, Engine Control Module (ECM).>
2	**CHECK STEREO CAMERA.** 1) Remove the camera cover. 2) Check the part number of the stereo camera.	Is the stereo camera genuine?	Go to step **3**.	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is DTC for LAN system displayed?	Perform the diagnosis of DTCs for LAN system.	Go to step **4**.
4	**CHECK ECM.** Perform the diagnosis for the engine. <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to EN(H6DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is DTC for engine displayed?	Perform the diagnosis for DTC for the engine.	Go to step **5**.
5	**CHECK CONNECTOR.** Check the ECM connector and the stereo camera connector.	Is the check result OK?	Go to step **6**.	Repair or replace the connector.
6	**CHECK STEREO CAMERA.** Read the DTC. <Ref. to ES(diag)-42, Diagnostic Code(s) Display.>	Is DTC other than DTC B28A1 displayed?	Perform the diagnosis for DTC other than DTC B28A1.	Go to step **7**.

	Step	Check	Yes	No
7	**CHECK STEREO CAMERA.** 1) Clear the memory. <Ref. to ES(diag)-48, Clear Memory Mode.> 2) Read the DTC. <Ref. to ES(diag)-42, Diagnostic Code(s) Display.>	Is DTC B28A1 displayed?	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.

AO:DTC B28A2 EyeSight COMMUNICATION(VDC)

Detected when the VDC control module (VDCCM) detects the malfunction of stereo camera.

DTC detecting condition:

- Defective CAN system
- Defective VDC control module (VDCCM)
- Defective stereo camera

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is DTC for LAN system displayed?	Perform the diagnosis of DTCs for LAN system.	Go to step **2**.
2	**CHECK VDC.** Perform the diagnosis for VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is DTC for VDC displayed?	Perform the diagnosis of DTCs for VDC.	Go to step **3**.
3	**CHECK CONNECTOR.** Check the VDC connector and the stereo camera connector.	Is the check result OK?	Go to step **4**.	Repair or replace the connector.
4	**CHECK STEREO CAMERA.** Read the DTC. <Ref. to ES(diag)-42, Diagnostic Code(s) Display.>	Is DTC other than DTC B28A2 displayed?	Perform the diagnosis for DTC other than DTC B28A2.	Go to step **5**.
5	**CHECK STEREO CAMERA.** 1) Clear the memory. <Ref. to ES(diag)-48, Clear Memory Mode.> 2) Read the DTC. <Ref. to ES(diag)-42, Diagnostic Code(s) Display.>	Is DTC B28A2 displayed?	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.

AP:DTC B28A3 EyeSight COMMUNICATION(METER)

Detected when the combination meter detects the malfunction of stereo camera.

DTC detecting condition:

- Defective CAN system
- Defective combination meter
- Defective stereo camera

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is DTC for LAN system displayed?	Perform the diagnosis of DTCs for LAN system.	Go to step **2**.
2	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to MET(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is DTC for combination meter displayed?	Perform the diagnosis for DTC for the combination meter.	Go to step **3**.
3	**CHECK CONNECTOR.** Check the combination meter connector and the stereo camera connector.	Is the check result OK?	Go to step **4**.	Repair or replace the connector.
4	**CHECK STEREO CAMERA.** Read the DTC. <Ref. to ES(diag)-42, Diagnostic Code(s) Display.>	Is DTC other than DTC B28A3 displayed?	Perform the diagnosis for DTC other than DTC B28A3.	Go to step **5**.
5	**CHECK STEREO CAMERA.** 1) Clear the memory. <Ref. to ES(diag)-48, Clear Memory Mode.> 2) Read the DTC. <Ref. to ES(diag)-42, Diagnostic Code(s) Display.>	Is DTC B28A3 displayed?	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.

AQ:DTC B28A4 EyeSight COMMUNICATION(EPS)

Detected when the power steering control module (EPS CM) detects the malfunction of stereo camera.

DTC detecting condition:

- Defective CAN system
- Defective EPS CM
- Defective stereo camera

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is DTC for LAN system displayed?	Perform the diagnosis of DTCs for LAN system.	Go to step **2**.
2	**CHECK EPS CM.** Perform the diagnosis for the power steering system. <Ref. to PS(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is DTC for power steering system displayed?	Perform the diagnosis for DTC for the EPS.	Go to step **3**.
3	**CHECK CONNECTOR.** Check the EPS CM connector and the stereo camera connector.	Is the check result OK?	Go to step **4**.	Repair or replace the connector.
4	**CHECK STEREO CAMERA.** Read the DTC. <Ref. to ES(diag)-42, Diagnostic Code(s) Display.>	Is DTC other than DTC B28A4 displayed?	Perform the diagnosis for DTC other than DTC B28A4.	Go to step **5**.
5	**CHECK STEREO CAMERA.** 1) Clear the memory. <Ref. to ES(diag)-48, Clear Memory Mode.> 2) Read the DTC. <Ref. to ES(diag)-42, Diagnostic Code(s) Display.>	Is DTC B28A4 displayed?	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.

AR:DTC B28A5 ENGINE TORQUE LIMITER CONTROL PROHIBIT

Detected when abnormal data is transmitted from stereo camera to engine control module (ECM) and the engine control module (ECM) prohibits the AT rapid start prevention control, or when the engine control module (ECM) prohibits the AT rapid start prevention control.

DTC detecting condition:

- Defective CAN system
- Defective engine control module (ECM)
- Defective stereo camera
- Defective combination meter
- Incorrect assembly of combination meter (when the combination meter that is not for EyeSight is installed.)

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

	Step	Check	Yes	No
1	**CHECK COMBINATION METER.** Check the part number of the combination meter.	Is the combination meter genuine?	Go to step **2**.	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is DTC for LAN system displayed?	Perform the diagnosis of DTCs for LAN system.	Go to step **3**.
3	**CHECK ECM.** Perform the diagnosis for the engine. <Ref. to EN(H4DO)(diag)-2, Basic Diagnostic Procedure.> <Ref. to EN(H6DO)(diag)-2, Basic Diagnostic Procedure.>	Is DTC for engine displayed?	Perform the diagnosis for DTC for the engine.	Go to step **4**.
4	**CHECK CONNECTOR.** Check the ECM connector and the stereo camera connector.	Is the check result OK?	Go to step **5**.	Repair or replace the connector.
5	**CHECK STEREO CAMERA.** Read the DTC. <Ref. to ES(diag)-42, Diagnostic Code(s) Display.>	Is DTC other than DTC B28A5 displayed?	Perform the diagnosis for DTC other than DTC B28A5.	Go to step **6**.
6	**CHECK STEREO CAMERA.** 1) Clear the memory. <Ref. to ES(diag)-48, Clear Memory Mode.> 2) Read the DTC again. <Ref. to ES(diag)-42, Diagnostic Code(s) Display.>	Is DTC B28A5 displayed?	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.

AS:DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1

Detected when communication error occurs inside the stereo camera.
DTC detecting condition:
Communication error occurs inside the stereo camera.
Trouble symptom:
All functions of EyeSight system do not operate.

Step		Check	Yes	No
1	**CHECK RESTARTING.** 1) Turn the ignition switch to OFF. 2) Start the engine. 3) Read the DTC related to the stereo camera using the Subaru Select Monitor. <Ref. to ES(diag)-42, Diagnostic Code(s) Display.>	Is DTC 28A6 displayed after restarting the engine?*1	Replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>	Clear the memory, in which temporary communication failure occurs and complete the step.

*1: When malfunction is detected after restarting the engine, 0 is registered in IG counter. Other values can be regarded as DTCs detected in the past.

AT:DTC B28A7 STEREO CAMERA RECOGNITION(TARGET)

Detected when error occurs in the communication data inside the control module caused by external factors such as noises.

NOTE:
If the same DTC is still detected after the engine has restarted, replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>

AU:DTC B28A8 INTERNAL STEREO CAMERA COMMUNICATION 2

Detected when error occurs in the communication data inside the control module caused by external factors such as noises.

NOTE:
If the same DTC is still detected after the engine has restarted, replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>

AV:DTC B28A9 STEREO CAMERA SYNCHRONIZED RECOGNITION DATA

Detected when error occurs in the communication data inside the control module caused by external factors such as noises.

NOTE:
If the same DTC is still detected after the engine has restarted, replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>

AW:DTC B28AA STEREO CAMERA MICROCOMPUTER 1

Detected when communication error occurs due to malfunction of microcomputer inside the stereo camera.
DTC DETECTING CONDITION:
Communication error occurs due to malfunction of microcomputer inside the stereo camera.
TROUBLE SYMPTOM:
All functions of EyeSight system do not operate.
Refer to DTC B28A6 for diagnostic procedure. <Ref. to ES(diag)-107, DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AX:DTC B28AB STEREO CAMERA MICROCOMPUTER 2

Detected when communication error occurs due to malfunction of microcomputer inside the stereo camera.
DTC detecting condition:
Communication error occurs due to malfunction of microcomputer inside the stereo camera.
Trouble symptom:
All functions of EyeSight system do not operate.
Refer to DTC B28A6 for diagnostic procedure. <Ref. to ES(diag)-107, DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AY:DTC B28AC STEREO CAMERA ASIC

Detected when communication error occurs due to malfunction of ASIC.
DTC detecting condition:
Communication error occurs due to malfunction of ASIC.
Trouble symptom:
All functions of EyeSight system do not operate.
Refer to DTC B28A6 for diagnostic procedure. <Ref. to ES(diag)-107, DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AZ:DTC B28AD STEREO CAMERA IMAGE RECOGNITION

Detected when improper image recognition occurs in the microcomputer inside the stereo camera.
DTC detecting condition:
Improper image recognition occurs in the microcomputer inside the stereo camera.
Trouble symptom:
All functions of EyeSight system do not operate.
Refer to DTC B28A6 for diagnostic procedure. <Ref. to ES(diag)-107, DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BA:DTC B28AE INTERNAL STEREO CAMERA POWER SUPPLY

Detected when improper power supply inside the stereo camera occurs.
DTC detecting condition:
Improper power supply inside the stereo camera occurs.
Trouble symptom:
All functions of EyeSight system do not operate.
Refer to DTC B28A6 for diagnostic procedure. <Ref. to ES(diag)-107, DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BB:DTC B28AF STEREO CAMERA ADJUSTMENT INCOMPLETE

Detected when adjustment or inspection of stereo camera has not been completed normally.
DTC DETECTING CONDITION:
- Operation is aborted during adjustment or inspection of the stereo camera.
- After the replacement of the stereo camera, adjustment or inspection of camera has not yet been performed.

TROUBLE SYMPTOM:
All functions of EyeSight system do not operate.
For diagnostic procedure, perform adjustment/inspection of camera. When the adjustment or inspection of camera is performed, and if it is not completed successfully, replace the camera.

BC:DTC B28B1 STEREO CAMERA AUTOMATIC ADJUSTMENT

Detected when the optical axis of stereo camera is deviated in lateral direction or when the fluctuation range of automatic adjustment value has expanded.

NOTE:
Readjust the stereo camera. <Ref. to ES-12, PROCEDURE, Camera Adjustment, Inspection.>
If the same DTC is still detected after readjustment, replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>

BD:DTC B28B2 STEREO CAMERA HIGH TEMPERATURE

Detected when the temperature of the stereo camera excessively increases.

NOTE:
When this DTC is detected, performing adjustment or inspection of the camera will not return to the normal state. In this case, always replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>

BE:DTC B28B3 STEREO CAMERA LOW TEMPERATURE

Detected when the temperature of the stereo camera excessively decreases.

NOTE:
When this DTC is detected, performing adjustment or inspection of the camera will not return to the normal state. In this case, always replace the stereo camera. <Ref. to ES-8, REMOVAL, Stereo Camera.>

BF:DTC B28B5 +B CIRCUIT OPEN

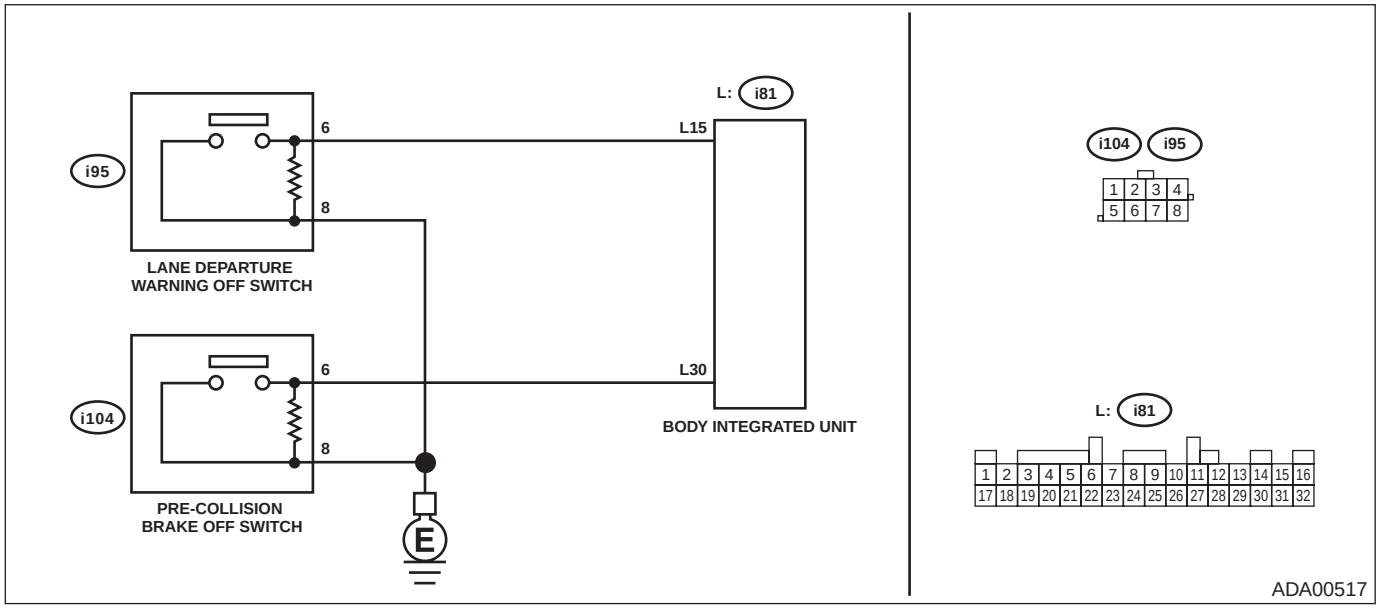
Detected when there is an open circuit in power supply line.

NOTE:
Refer to DTC B2814 for diagnostic procedure. <Ref. to ES(diag)-95, DTC B2814 POWER SUPPLY LOW VOLTAGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BG:DTC B28B6 PRE-COLLISION OFF SWITCH

Detected when pre-collision brake OFF switch circuit is not installed, open-circuited or is stuck to ON.

DTC DETECTING CONDITION:



- Wiring of pre-collision brake OFF switch is not connected.
- Pre-collision brake OFF switch circuit is open.
- Pre-collision brake OFF switch circuit stays ON for 45 seconds or more.

TROUBLE SYMPTOM:

All functions of EyeSight system do not operate.

WIRING DIAGRAM:

EyeSight System <Ref. to WI-232, WIRING DIAGRAM, EyeSight System.>

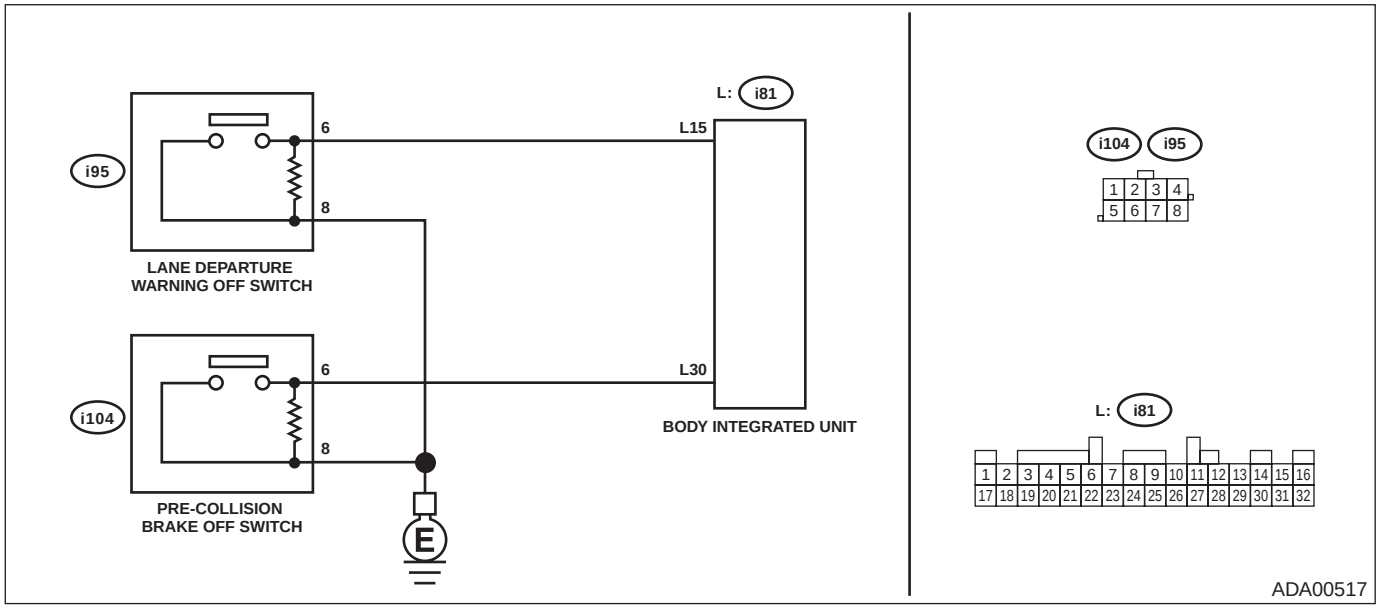
Step		Check	Yes	No
1	**CHECK CURRENT DATA.** Confirm the current data «Pre-Collision Brake OFF SW Status (BIU)» of EyeSight using Subaru Select Monitor. <Ref. to ES(diag)-23, Read Current Data.>	Does the display change according to ON/OFF operation of the pre-collision brake OFF switch?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.	Go to step **2**.

Step		Check	Yes	No
2	**CHECK HARNESS.** 1) Disconnect the stereo camera connector and the pre-collision brake OFF switch connector. 2) Using the tester, measure the resistance between the stereo camera connector and pre-collision brake OFF switch connector as well as chassis ground. ***Connector & terminal*** ***(i104) No. 6 — (i81) No. 30:*** ***(i104) No. 8 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace an open circuit in harness between the stereo camera connector and pre-collision brake OFF switch connector.
3	**CHECK HARNESS.** Using the tester, measure the resistance between the pre-collision brake OFF switch connector and chassis ground. ***Connector & terminal*** ***(i104) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Check the pre-collision brake OFF switch. <Ref. to ES-34, INSPECTION, Switches and Harness.>	Repair or replace the short circuit to ground in harness between the stereo camera connector and pre-collision brake OFF switch connector.

BH:DTC B28B7 LDP OFF SWITCH

Detected when lane departure warning OFF switch circuit is not installed, open-circuited, or is stuck to ON.

DTC DETECTING CONDITION:



- Wiring of lane departure warning OFF switch is not connected.
- Lane departure warning OFF switch circuit is open.
- Lane departure warning OFF switch circuit stays ON for 45 seconds or more.

TROUBLE SYMPTOM:

All functions of EyeSight system do not operate.

WIRING DIAGRAM:

EyeSight System <Ref. to WI-232, WIRING DIAGRAM, EyeSight System.>

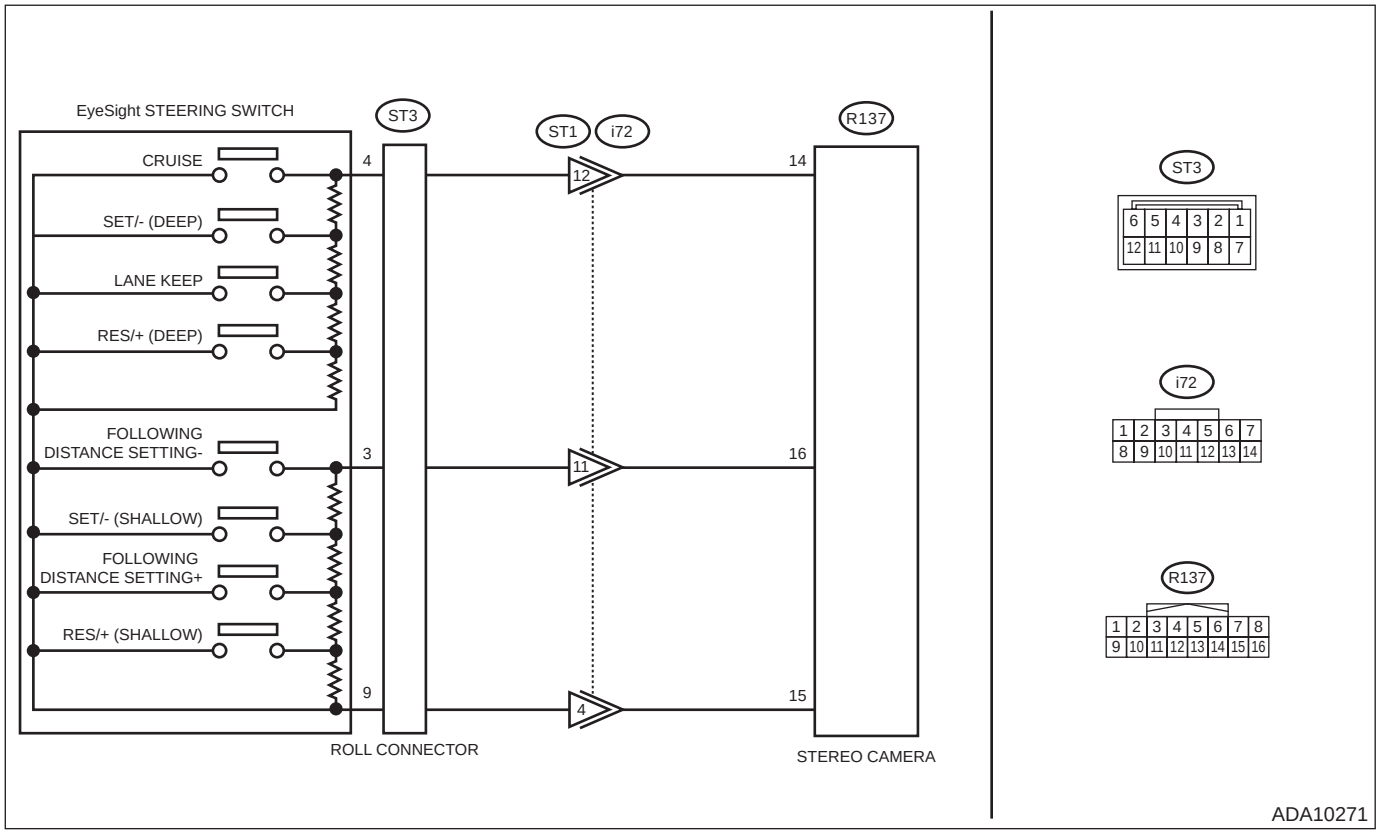
	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Confirm the current data «Lane Departure Warning OFF SW (BIU)» of EyeSight using Subaru Select Monitor. <Ref. to ES(diag)-23, Read Current Data.>	Does the display change according to the lane departure warning OFF switch ON/OFF operation?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK HARNESS.** 1) Disconnect the stereo camera connector and the lane departure warning OFF switch connector. 2) Using the tester, measure the resistance between the stereo camera connector and lane departure warning OFF switch connector. ***Connector & terminal*** ***(i95) No. 6 — (i81) No. 15:*** ***(i95) No. 8 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace an open circuit in harness between the stereo camera connector and lane departure warning OFF switch connector.

Step		Check	Yes	No
3	**CHECK HARNESS.** Using the tester, measure the resistance between the lane departure warning OFF switch connector and chassis ground. ***Connector & terminal*** ***(i95) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Check the lane departure warning OFF switch. <Ref. to ES-34, INSPECTION, Switches and Harness.>	Repair or replace the short circuit to ground in harness between the stereo camera connector and lane departure warning OFF switch connector.

BI: DTC B28B8 EyeSight STEERING SWITCH 1

Detected when EyeSight steering switch is not installed or has malfunction, or when the harness is faulty or open-circuited or in stuck ON condition.

DTC detecting condition:



- Wiring of the EyeSight steering switch is not connected.
- EyeSight steering switch circuit is open.
- EyeSight steering switch circuit stays ON.

Trouble symptom:

All functions of EyeSight system do not operate.

Wiring diagram:

EyeSight System <Ref. to WI-232, WIRING DIAGRAM, EyeSight System.>

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** Confirm the current data «Cruise Control SW Voltage (Port14)» and «Cruise Control SW Voltage (Port16)» of EyeSight using Subaru Select Monitor. <Ref. to ES(diag)-23, Read Current Data.>	Is the voltage according to the pressed EyeSight steering switch displayed?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.	Go to step **2**.

Step		Check	Yes	No
2	**CHECK HARNESS.** 1) Disconnect the stereo camera connector and EyeSight steering switch connector. 2) Using the tester, measure the resistance between stereo camera connector and EyeSight steering switch connector. ***Connector & terminal*** ***(ST3) No. 4 — (R137) No. 14:*** ***(ST3) No. 3 — (R137) No. 16:*** ***(ST3) No. 9 — (R137) No. 15:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace an open circuit in harness between the stereo camera connector and the EyeSight steering switch connector.
3	**CHECK HARNESS.** Using the tester, measure the resistance between EyeSight steering switch connector and chassis ground. ***Connector & terminal*** ***(ST3) No. 4 — Chassis ground:*** ***(ST3) No. 3 — Chassis ground:*** ***(ST3) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Check the EyeSight steering switch. <Ref. to ES-34, INSPECTION, Switches and Harness.>	Repair or replace the short circuit to ground in harness between the stereo camera connector and the EyeSight steering switch connector.

BJ:DTC B28B9 EyeSight STEERING SWITCH 2

Detected when steering switch for EyeSight is not installed, is open-circuited or is stuck to ON.
Refer to DTC B28B8 for diagnostic procedure. <Ref. to ES(diag)-114, DTC B28B8 EyeSight STEERING SWITCH 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BK:DTC B28BA STEERING ANGLE AND STEREO CAMERA CORRELATION MISALIGNED

- Detected when the center point of the steering angle sensor is misaligned.
- Detected when the alignment is extremely misaligned.

DTC detecting condition:

- Defective wheel alignment
- Defective VDCCM
- Defective stereo camera

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

NOTE:

- Prior confirmation is required to check if the work related to alignment has been performed or there is an accident history.
- Record the value of current data «Active Lane Keep System Control Learning Value 3 (Steering Wheel Angles Offset)» of stereo camera using Subaru Select Monitor.

	Step	Check	Yes	No
1	**CHECK DTC.** Read DTC of the VDC. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>	Is DTC related to steering angle sensor displayed?	Perform the diagnosis for DTC for VDC, Go to step **2**.	Go to step **2**.
2	**CHECK DRIVING CONDITION.** Check the driving condition.	Is the steering wheel obviously tilted when the vehicle is in the straight ahead position? (Check if it is obviously tilted at the closest point between the column cover and the steering wheel.)	Perform the wheel alignment adjustment. <Ref. to FS-11, Wheel Alignment.>, and Go to step **3**.	Go to step **3**.
3	**CHECK CURRENT DATA.** 1) Display the current data «Steer Angle Sensor Op» of stereo camera using Subaru Select Monitor. <Ref. to ES(diag)-23, Read Current Data.> NOTE: Do not use «Steering Angle Sensor Value (Right +) (Left -)» when checking. 2) Check the value when the vehicle is in the straight ahead position.	Is the value from –2 to+2 degrees?	Go to step **4**.	Perform «VSC(VDC) Centering Mode» for VDC. <Ref. to VDC-16, VDC SENSOR MID-POINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> Repeat the step 3. Go to step **3**.
4	**CHECK JOB CONTENT.** Check the job contents performed so far. (To identify whether the problem belongs to the vehicle or the stereo camera.)	Is one of the following actions performed: steering angle sensor diagnosis, wheel alignment adjustment or VDC sensor centering mode?	Go to step **5**.	Replace the stereo camera. <Ref. to ES-8, Stereo Camera.>
5	**LANE KEEP ASSIST LEARNING VALUE CLEAR.** 1) Perform «Clear Active Lane Keep System Learning Value». <Ref. to ES(diag)-49, Clear Active Lane Keep System Learning Value.> 2) Turn the ignition switch OFF → ON. 3) Display the current data «Active Lane Keep System Control Learning Value 3 (Steering Wheel Angles Offset)» of stereo camera using Subaru Select Monitor. <Ref. to ES(diag)-23, Read Current Data.>	Is the value of «Active Lane Keep System Control Learning Value 3 (Steering Wheel Angles Offset)» 0?	Go to step **6**.	Performing «Clear Active Lane Keep System Learning Value» is not complete. Go to step **7**.

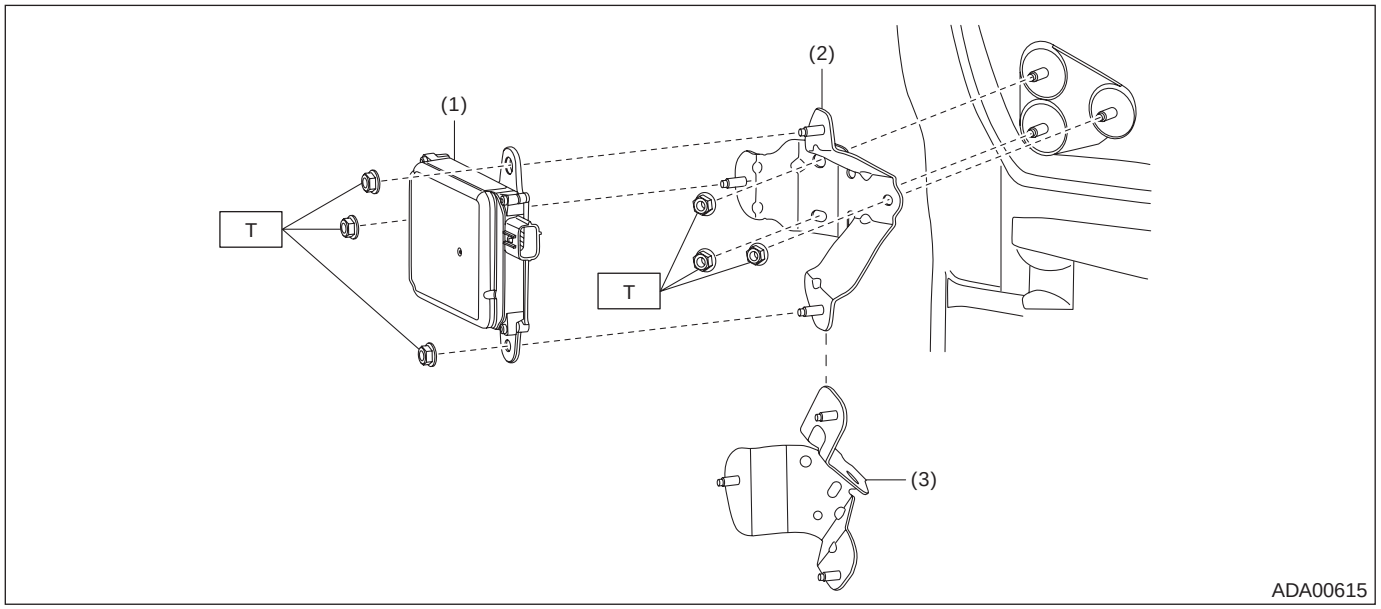
Step		Check	Yes	No
6	**CHECK DTC.** 1) Clear the memory. <Ref. to ES(diag)-48, Clear Memory Mode.> 2) Turn the ignition switch OFF → ON. 3) Read the DTC. <Ref. to ES(diag)-42, Diagnostic Code(s) Display.>	Is DTC B28BA displayed?	Clearing the memory is not complete. Go to step **7**.	The current state is normal. Finish the diagnosis.
7	**CHECK SUBARU SELECT MONITOR CONNECTION.** Check the connection of Subaru Select Monitor.	Is there any fault in the harness and connection between Subaru Select Monitor and stereo camera?	Replace the harness or repair the connection. In case that the step 5 is not performed Go to step **5**. In case that the step 5 has been performed Go to step **6**.	Replace the stereo camera. <Ref. to ES-8, Stereo Camera.>

Blind Spot Detection/Rear Cross Traffic Alert

RVD

Page

1. General Description 2
2. Relay and Fuse 4
3. Blind Spot Detection/Rear Cross Traffic Alert 5
4. Radar Sensor 6
5. Switches and Harness 13
6. Combination Meter 14
7. Outer Mirror Assembly 15
8. Diagnostics with Phenomenon 16



1. General Description

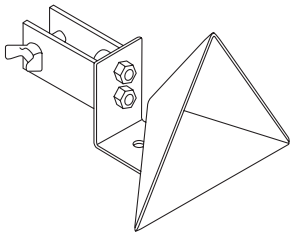
A: LOCATION

Refer to “LOCATION” of “Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)” section. <Ref. to RVD(diag)-8, LOCATION, Electrical Component Location.>

B: COMPONENT

1. RADAR SENSOR

(1) Radar sensor (master & slave)
(2) Radar bracket (Sedan model)
(3) Radar bracket (OUTBACK model)



Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

C: CAUTION

• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
• For precautions for rear vehicle detection function, refer to “CAUTION” in “Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)” section. <Ref. to RVD(diag)-4, CAUTION, General Description.>

D: PREPARATION TOOL

1. SPECIAL TOOL

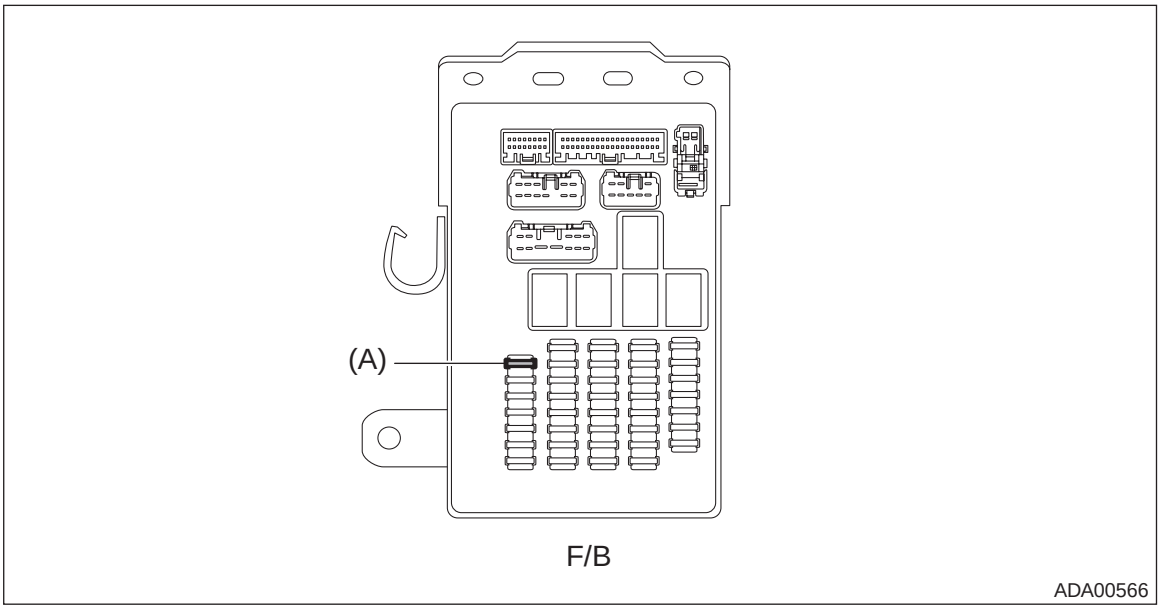


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST87699AL00A	87699AL00A	RADAR REFLECTOR	Used for adjusting the radar axis of the radar sensor. NOTE: Attach the radar reflector to a round pole with a diameter of approx. 20 mm (0.79 in) or a 20-mm (0.79-in) square pole.
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Measure (5 m (16 ft) or more)	Used for adjusting the radar axis of the radar sensor.
Leveling line	
Plumb bob	
Packing tape	
Stand, tripod, etc.	

2. Relay and Fuse

A: LOCATION

Fuse & relay box (F/B)	Fuse 15 A (Radar sensor (master & slave))	(A)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-22, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

3. Blind Spot Detection/Rear Cross Traffic Alert

A: WIRING DIAGRAM

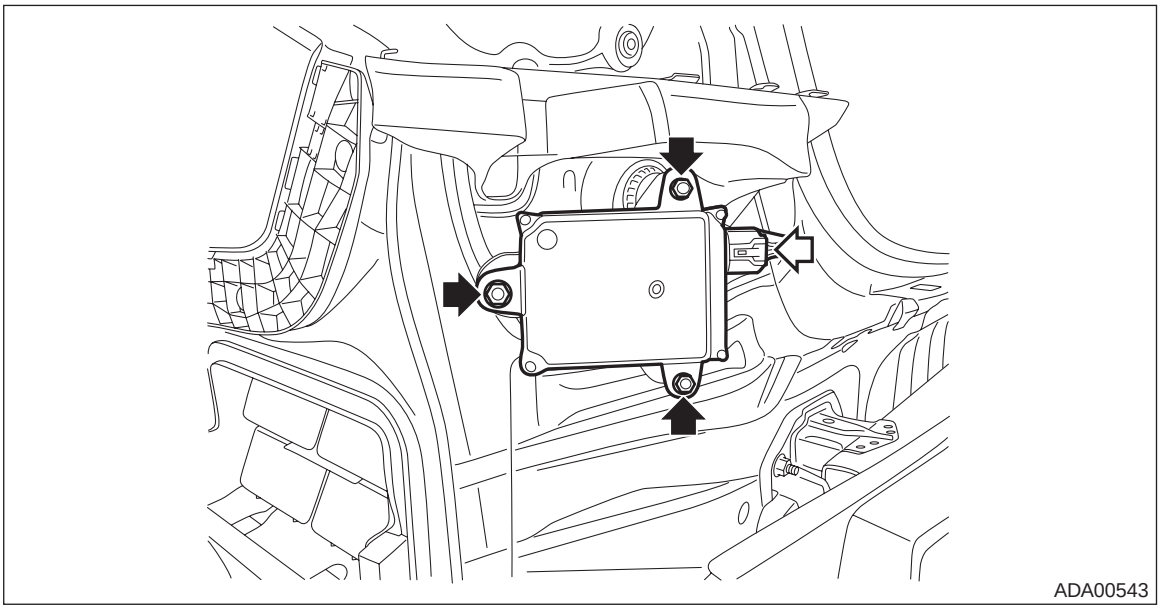
Refer to “Blind Spot Detection/Rear Cross Traffic Alert” in the wiring diagram. <Ref. to WI-131, WIRING DIAGRAM, Blind Spot Detection/Rear Cross Traffic Alert.>

B: INSPECTION

Refer to “Basic Diagnostic Procedure” of “Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)” section. <Ref. to RVD(diag)-2, Basic Diagnostic Procedure.>

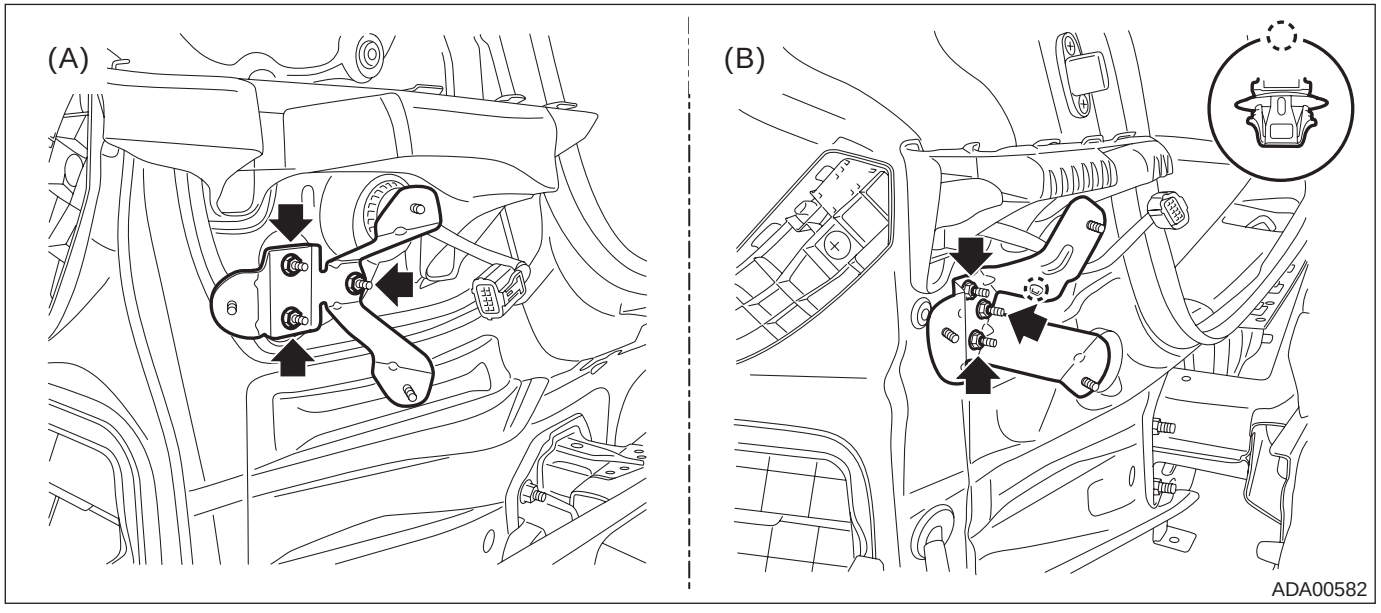
C: NOTE

For procedure of each component in the Subaru Rear Vehicle Detection system, refer to the respective sections.



- Radar sensor: <Ref. to RVD-6, Radar Sensor.>
- BSD/RCTA OFF switch: <Ref. to RVD-13, Switches and Harness.>
- Combination meter: <Ref. to RVD-14, Combination Meter.>
- Outer mirror assembly: <Ref. to RVD-15, Outer Mirror Assembly.>

4. Radar Sensor



A: REMOVAL

1. RADAR SENSOR LH (MASTER)

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the bumper face - rear. <Ref. to EI-45, REMOVAL, Rear Bumper.>
3) Remove the radar sensor LH (master).
   (1) Disconnect the connector.
   (2) Remove the nut and remove the radar sensor LH.

4) Remove the radar bracket.
   (1) Remove the harness clamp. (OUTBACK model)
   (2) Remove the nut and remove the radar bracket.

(A) Sedan model (B) OUTBACK model

2. RADAR SENSOR RH (SLAVE)

NOTE:
For the procedure of radar sensor RH (slave), refer to “RADAR SENSOR LH (MASTER)”.

B: INSTALLATION

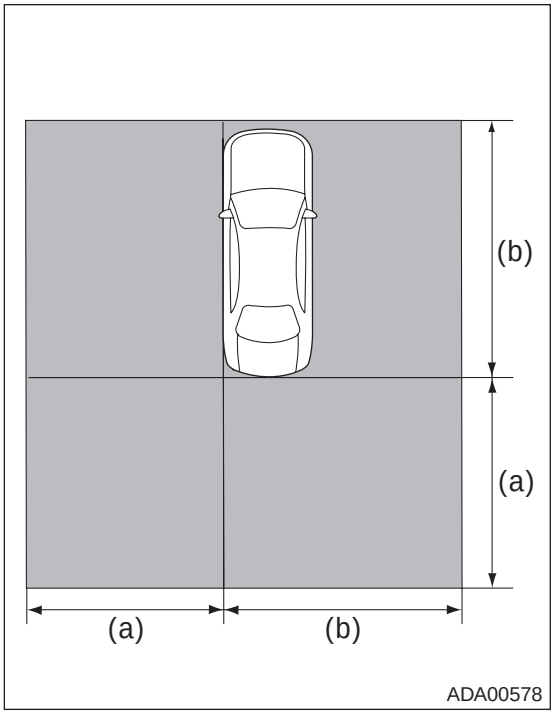
1) Install the radar bracket.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the radar sensor.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the bumper face - rear.
4) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
5) Perform the adjustment of the radar sensor radar axis. <Ref. to RVD-8, RADAR AXIS ADJUSTMENT, ADJUSTMENT, Radar Sensor.>

C: ADJUSTMENT

1. RADAR AXIS ADJUSTMENT



CAUTION:
- **After removal/installation or replacement of the radar sensor, perform the radar axis adjustment.**
- **The procedure for the master is only shown here. However the procedure for the slave can also be done in the same way as the master.**

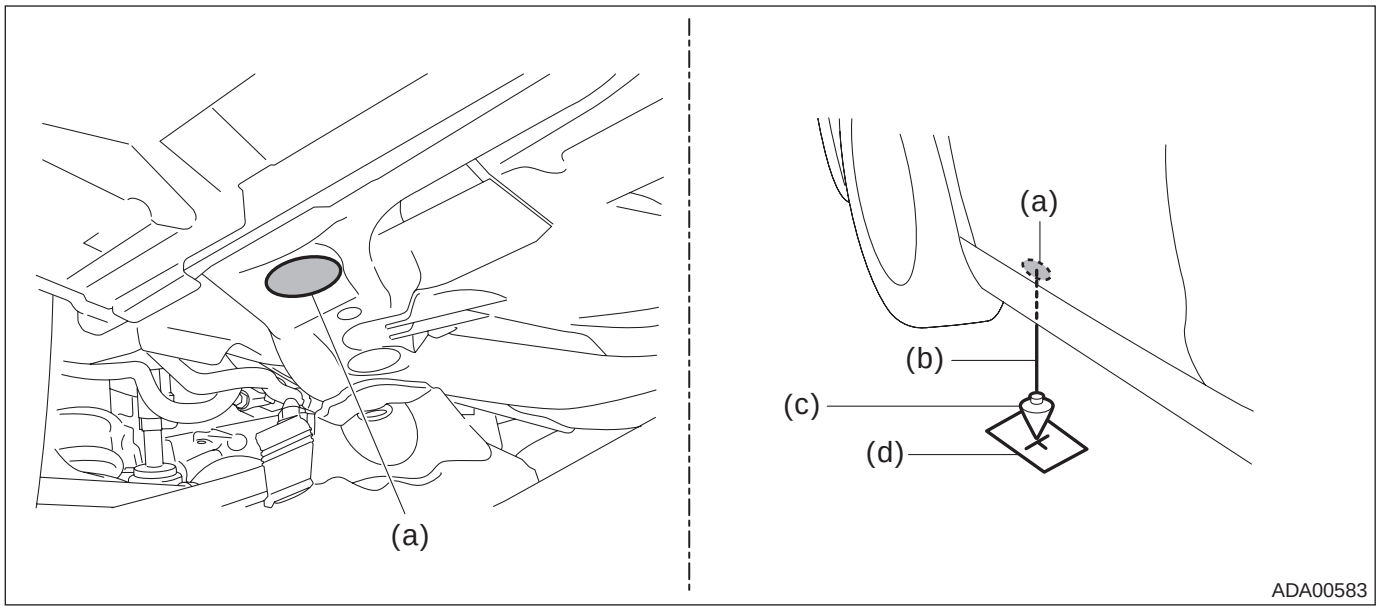
1) Before performing the inspection, check the following items.
- The inflation pressure of tires is correct.
- The vehicle does not have load.
- Vehicle's fuel tank is fully filled.

2) Place the vehicle on a level surface, where approximately 5 square meters (16.41 square ft) area can be secured behind the vehicle.

CAUTION:
- **No metallic objects around the vehicle and on the floor in the area.**
- **Do not let in objects other than the RADAR REFLECTOR (ST), persons and metallic objects inside the area.**

NOTE:
The illustration shows the secured area for adjusting the radar axis on the master side.

(a) Approx. 4 m (13.12 ft)
(b) Approx. 5 m (16.41 ft)

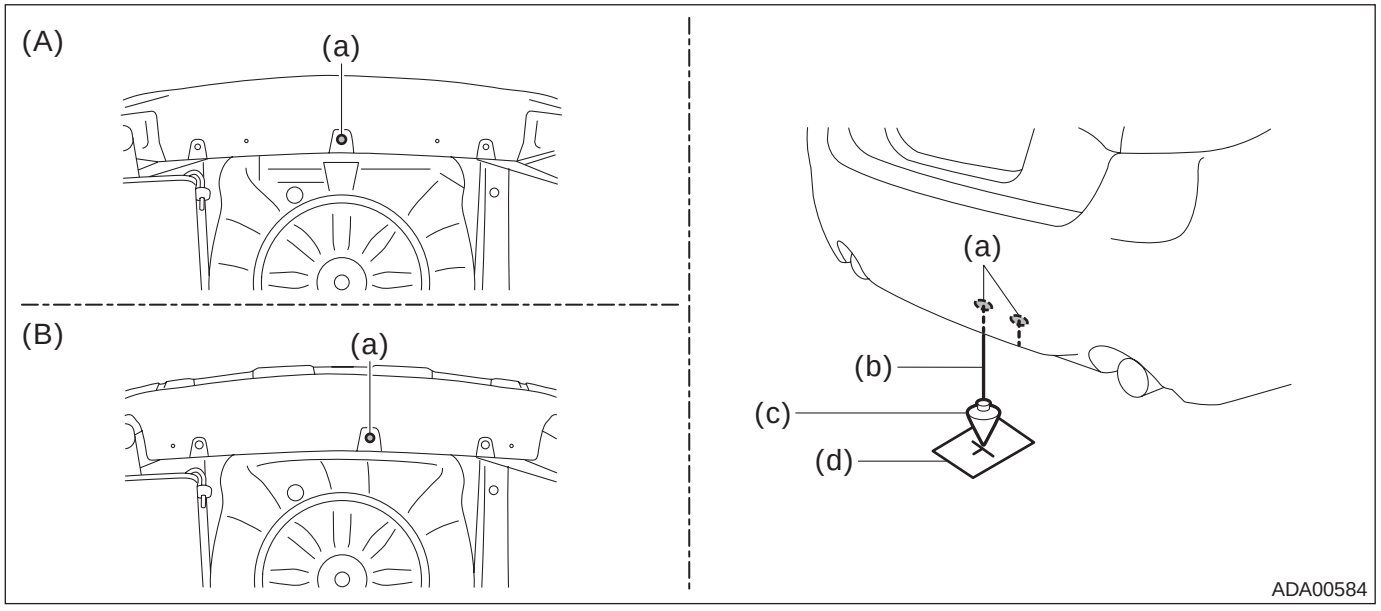


3) Prepare the Subaru Select Monitor, measure, leveling line, plumb bob, packing tape, RADAR REFLECTOR (ST), and stand or tripod for fixing the RADAR REFLECTOR.

Preparation tool:
ST: RADAR REFLECTOR (87699AL00A)

4) Set up the radar reflector.

NOTE:
The following procedure explains the method of setting the radar reflector so that the distance between radar reflector and radar sensor is 1,500 mm (4.92 ft) and the radar is positioned at an angle of 50 degree.

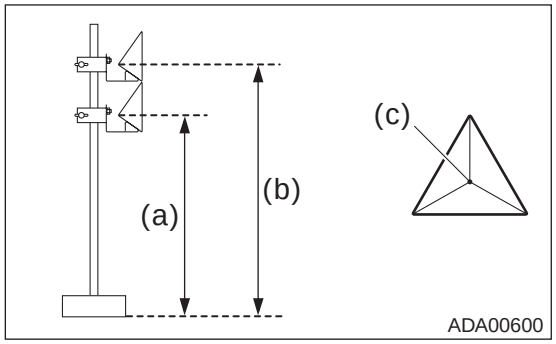


(1) Suspend the plumb bob from the center of the front hole cap, and mark the position where the plumb bob touches the ground. (Point A)

(a) Front hole cap
(b) Leveling line
(c) Plumb bob
(d) Point A

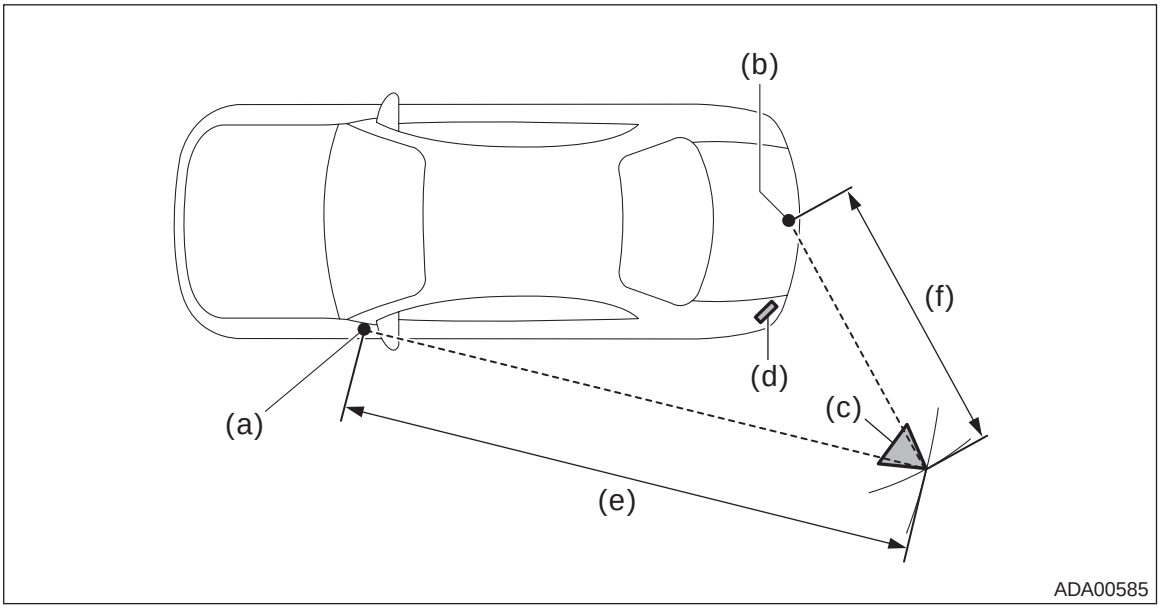
NOTE:
Stick the packing tape etc. on the floor, then make a marking on the tape.

(2) Suspend the plumb bob from the center of the center clip located on the lower side of the rear bumper, and mark the position where the plumb bob touches the ground. (Point B)



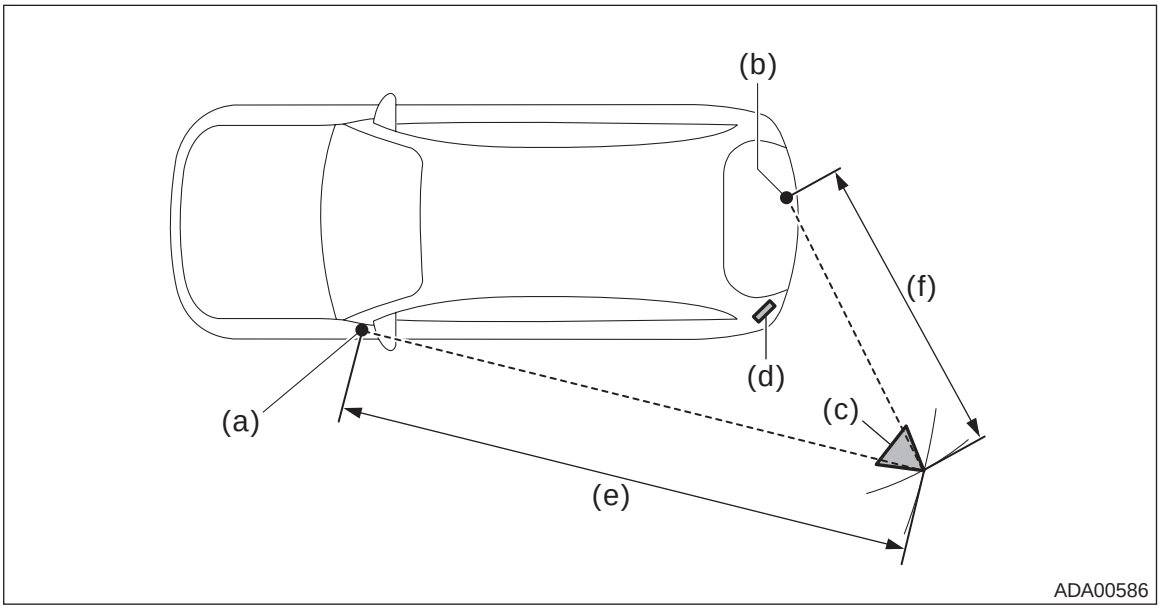
(A) Sedan model
(B) OUTBACK model
(a) Center clip
(b) Leveling line
(c) Plumb bob
(d) Point B

NOTE:
Stick the packing tape etc. on the floor, then make a marking on the tape.



(3) Stretch a leveling line to draw an arc with the marked point A as a pivot.
(4) Stretch a leveling line to draw an arc with the marked point B as a pivot.
(5) Set up the radar reflector at the cross point.

CAUTION:
When setting up the radar reflector, adjust the height so that the center of the pyramid points at the radar sensor as shown in the figure.

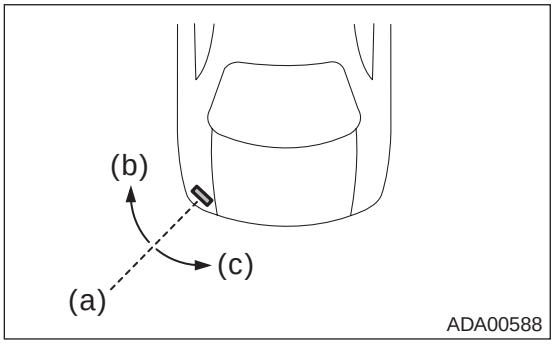


(a) Sedan model: 685±10 mm (26.97±0.39 in)
(b) OUTBACK model: 800±10 mm (31.50±0.39 in)
(c) Center of pyramid

- Sedan model

(a) Point A
(b) Point B
(c) Radar reflector
(d) Radar sensor
(e) 4,420 mm (14.50 ft)
(f) 2,025 mm (6.64 ft)

- OUTBACK model



(a) Point A
(b) Point B
(c) Radar reflector
(d) Radar sensor
(e) 4,430 mm (14.53 ft)
(f) Master side: 2,100 mm (6.89 ft)
Slave side: 2,005 mm (6.58 ft)

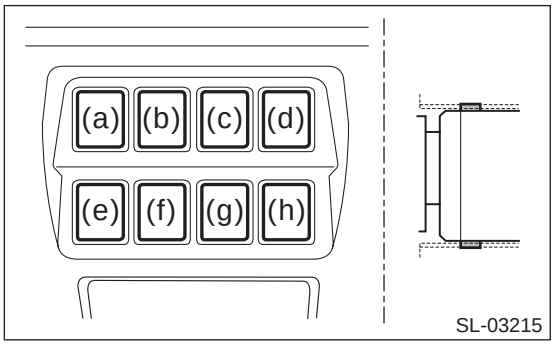
5) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.

6) Turn the ignition switch to ON and wait for 10 seconds.
7) Perform radar axis adjustment.
(1) On «Start» display, select «Diagnosis».
(2) On «Vehicle selection» display, enter vehicle information and select «Confirmed».
(3) On «Main Menu» display, select «Each System».
(4) On «Select System» display, select «Subaru Rear Vehicle Detection(RH)» or «Subaru Rear Vehicle Detection(LH)» and then select «Enter».
(5) On «Select Function» display, select «Work Support».
(6) From the work support item list, select «RADAR Alignment».
(7) Follow the messages displayed on the Subaru Select Monitor screen when working.

NOTE:
Deviation of radar axis direction is indicated by + (plus) or – (minus).

(a) Center of radar
(b) + (plus)
(c) – (minus)



(8) If the result is out of permissive range, it is assumed that the radar reflector position may be incorrect or the radar bracket or its installation location on the vehicle may be deformed. Check the set position of the radar reflector, radar bracket and other attachment, and perform the radar axis adjustment again.

5. Switches and Harness

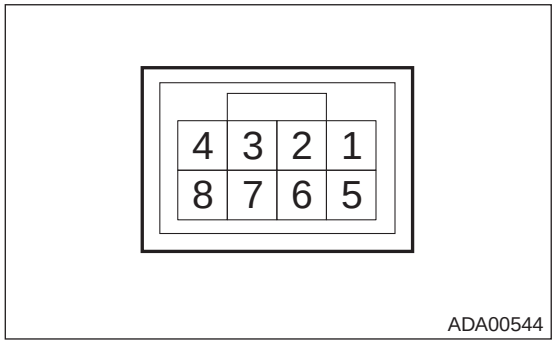
A: REMOVAL

BSD/RCTA OFF switch

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-78, REMOVAL, Instrument Panel Lower Cover.>
3) Release the claws and remove the BSD/RCTA OFF switch (f).

B: INSTALLATION

BSD/RCTA OFF switch



1) Install the BSD/RCTA OFF switch.
2) Install the cover assembly - instrument panel LWR driver.
3) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

BSD/RCTA OFF switch

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
6 — 8	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
1 (+) — 4 (–)	Apply battery voltage.	Light ON

3) Replace the BSD/RCTA OFF switch if it is found defective.

6. Combination Meter

A: NOTE

For the operation procedures for combination meter, refer to “INSTRUMENTATION/DRIVER INFO” section. <Ref. to IDI-11, Combination Meter.>

7. Outer Mirror Assembly

A: NOTE

For the operation procedures for the outer mirror assembly, refer to “GLASS/WINDOWS/MIRRORS” section. <Ref. to GW-27, Outer Mirror Assembly.>

8. Diagnostics with Phenomenon

A: INSPECTION

Refer to “Diagnostics with Phenomenon” of “Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)” section. <Ref. to RVD(diag)-40, Diagnostics with Phenomenon.>

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

RVD(diag)

15.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	23
16.	Diagnostic Procedure with Cancel Code	39
17.	Diagnostics with Phenomenon	40

1. Basic Diagnostic Procedure

A: PROCEDURE

Step		Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Using the Check List for Interview, ask the customer the condition of how trouble occurs.	Did you interview the customer?	Go to step **2**.	Interview the customer. <Ref. to RVD(diag)-3, Check List for Interview.>
2	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** Check for communication with the radar sensor. NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to RVD(diag)-11, INSPECTION, Subaru Select Monitor.>	Is communication possible?	Go to step **3**.	Check the communication circuit.
3	**CHECK RADAR SENSOR.** Read the DTC and cancel code of the radar sensors LH and RH using the Subaru Select Monitor. <Ref. to RVD(diag)-13, Read Diagnostic Trouble Code (DTC).> <Ref. to RVD(diag)-15, Read Cancel Code.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs and cancel code. (Perform the diagnosis to the side that displayed the DTC.) <Ref. to RVD(diag)-21, List of Diagnostic Trouble Code (DTC).> <Ref. to RVD(diag)-15, Read Cancel Code.> After diagnosis, Go to step **6**.	Go to step **4**.
4	**PERFORM DIAGNOSTICS WITH PHENOMENON.** Check the list of Diagnostics with Phenomenon. <Ref. to RVD(diag)-40, Diagnostics with Phenomenon.>	Does the symptom apply?	Perform diagnosis according to the procedures in the diagnostics with phenomenon.	Go to step **5**.
5	**CHECK TROUBLE PHENOMENON.** 1) Perform the basic inspection. <Ref. to RVD(diag)-6, INSPECTION, General Description.> 2) Check the radar sensor. <Ref. to RVD(diag)-9, Control Module I/O Signal.> 3) Perform check of current data. <Ref. to RVD(diag)-18, Read Current Data.>	Was the trouble cause found?	Perform the Clear Memory after repairing or replacing the cause of trouble.	System is normal.
6	**PERFORM DIAGNOSIS.** 1) Perform the Clear Memory Mode. <Ref. to RVD(diag)-14, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to RVD(diag)-16, Inspection Mode.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to RVD(diag)-21, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

2. Check List for Interview

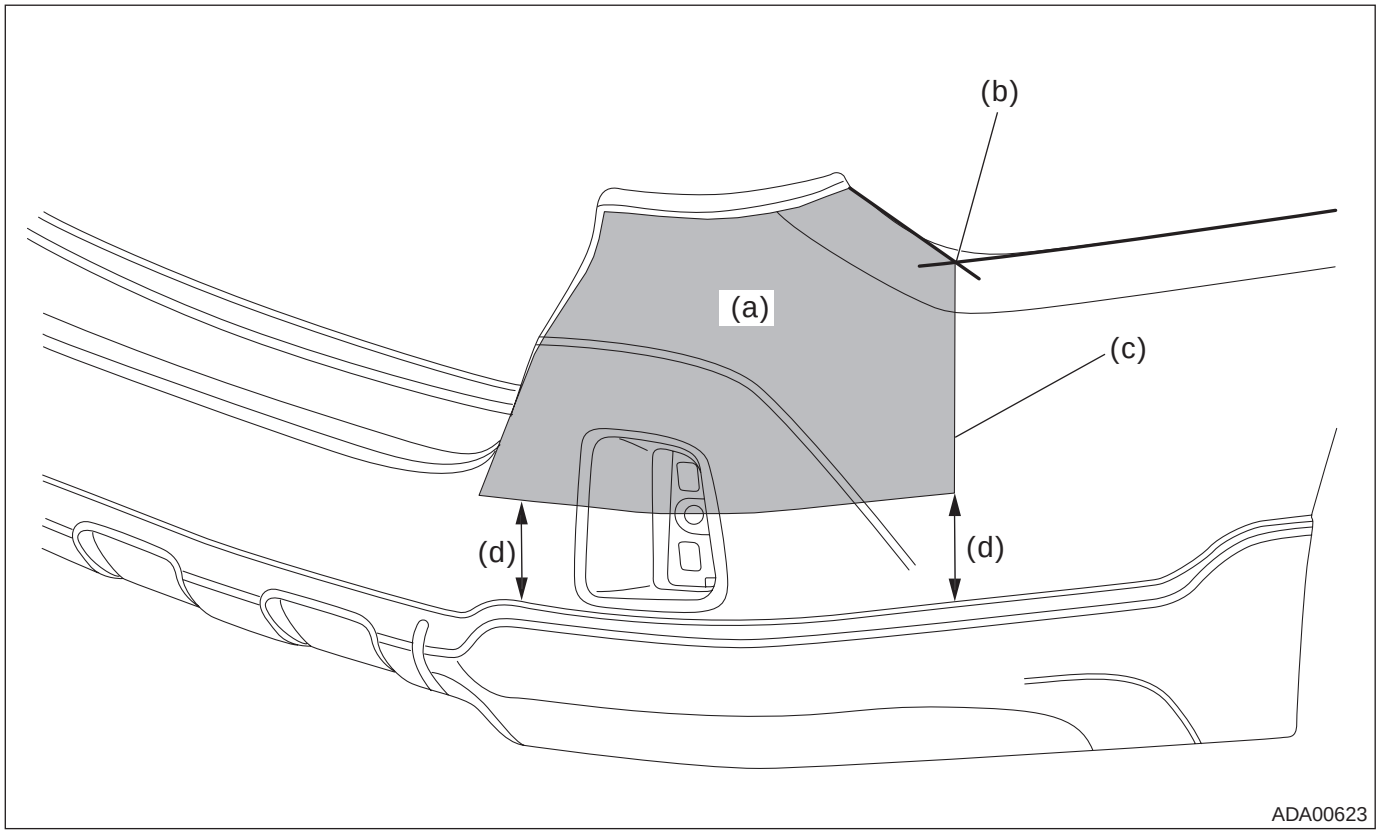
A: CHECK

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

<table>
<tr><td colspan="2">Blind Spot Detection/Rear Cross Traffic Alert Check List for Interview</td><td colspan="2">Received Year Month Date</td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td>Registration No.</td><td>Initial year of registration
Year Month Date</td></tr>
<tr><td>Vehicle model</td><td>Frame number</td></tr>
<tr><td>Interviewer</td><td>Inspector</td><td>Engine type</td><td>Odometer reading</td></tr>
<tr><td colspan="4">Customer specified content
•
•
•</td></tr>
<tr><td>Date when problem occurred</td><td>Year Month Date</td><td>Frequency of trouble occurrence</td><td>Always occurs
Sometimes occurs
(times per day, times per month)</td></tr>
<tr><td rowspan="2">Condition of trouble occurrence (How the trouble occurs)</td><td rowspan="2"></td><td>Weather</td><td>Fine • Cloudy • Rainy • Snowy • Others ( )</td></tr>
<tr><td>Temperature</td><td>°C (°F) — °C (°F)</td></tr>
<tr><td>Road conditions</td><td></td><td>Occurrence location</td><td></td></tr>
<tr><td>Accessory installation condition</td><td colspan="3"></td></tr>
<tr><td>Confirmation of trouble condition</td><td colspan="3"></td></tr>
<tr><td>Diagnostic code</td><td colspan="3"></td></tr>
</table>

3. General Description

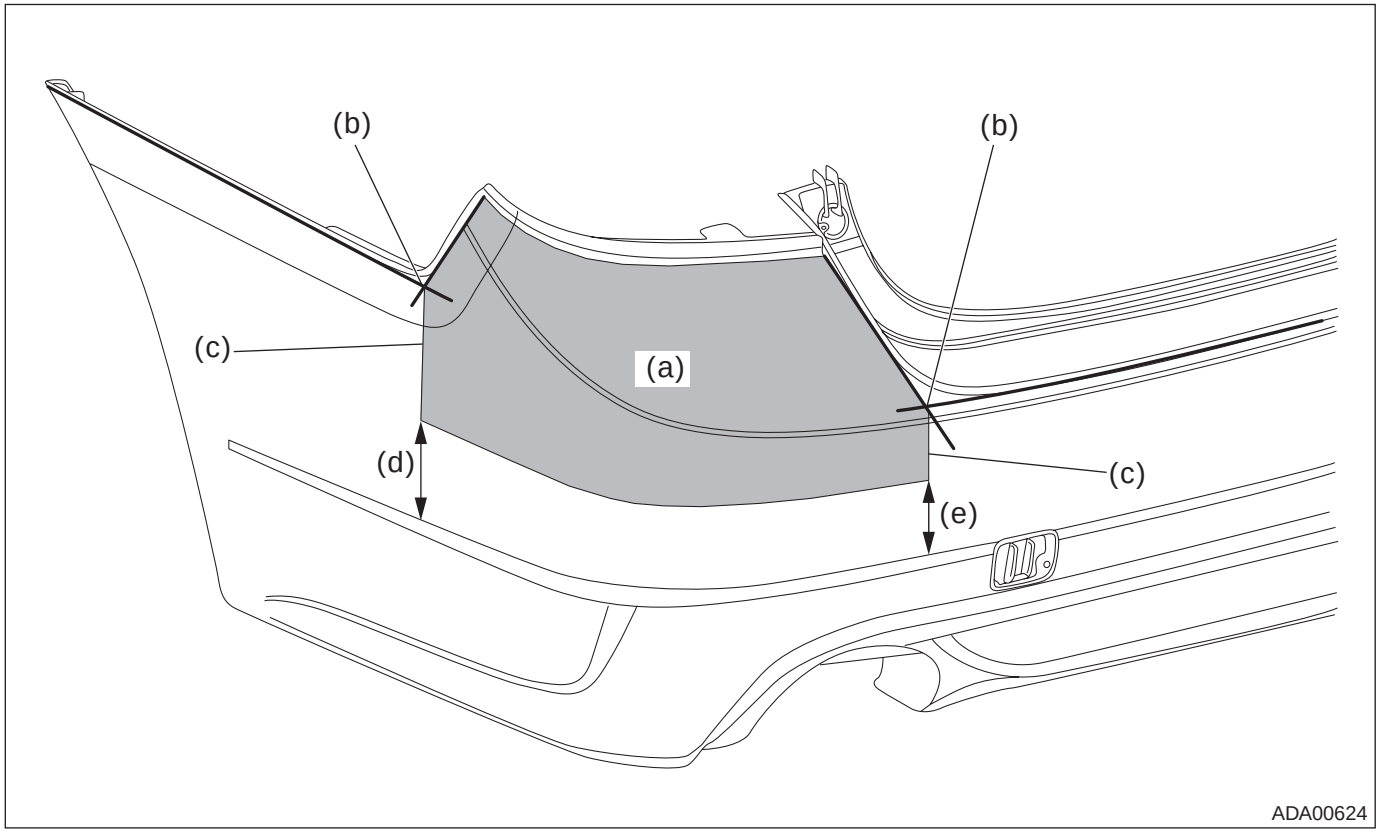
A: CAUTION



1. BSD/RCTA

1. In some cases, BSD/RCTA may not work correctly under the following conditions.
   - In bad weather such as heavy rain, fog, snow, sand storm, etc.
   - When ice, snow, dirt, etc. cover the rear bumper.
   - When the rear bumper has scratches or deformation in the area of the radar sensor.
   - When a difference of vehicle speeds between your own vehicle and another vehicle within the detection range is too large.
   - When there is another vehicle remaining within the detection range while your own vehicle starts from stationary state.
   - While driving on a steep slope with a series of uphills and downhills.
   - While driving on a wet road with such as puddles.
   - When more than one vehicle is approaching one after another with a short distance.
   - When vehicle speed of your own vehicle is almost the same as that of the vehicle within the detection range.
   - When a difference of the vehicle heights between your own vehicle and another vehicle in the next lane is too large.
   - Immediately after operating the BSD/RCTA OFF switch.
   - On wide lanes, when another vehicle of the next lane drives along the opposite edge so the distance is too large for the detection.
2. Basically, BSD/RCTA does not detect the following types of vehicle as well as objects other than vehicles; however, it may detect them depending on circumstances.
   - Oncoming vehicle
   - Small motorcycle, bike, pedestrian, etc.
   - Vehicle following behind on the same lane
   - Stationary objects such as guardrail, wall, sign and parked vehicle
   - Another vehicle driving on two lanes away
3. BSD/RCTA may perform unnecessary detection in the following conditions.
   - When guardrails or walls are close enough to be within the detection range.
   - When distance from the vehicle behind is short.
   - On narrow lanes, when another vehicle driving on two lanes away enters the detection range.

4. Radar sensors of BSD/RCTA are each located on LH and RH sides. Always observe the followings for proper operation of the system.
- Always clean the vicinity of radar sensors.
- Do not give a strong impact to the radar sensor areas. Displacement of the radar sensors may result in improper operation of the system such that it may not detect the vehicle entering the detection range.
- Do not disassemble the radar sensors.
- Do not scratch or deform the bumper areas with the radar sensors.



NOTE:
Replace the rear bumper in the following cases.
- When there is any collision trace or dent inside the radar projection area.
- When there is any scuffed (chipped off) section inside the radar projection area on the resin bumper.
- When there is any crack inside the radar projection area.

NOTE:
Radar projection area
- OUTBACK model

(a) Radar projection area (b) Point of intersection (c) Vertical line
(d) 100 mm (3.9 in)

- Sedan model

(a) Radar projection area
(b) Point of intersection
(c) Vertical line
(d) 100 mm (3.9 in)
(e) 80 mm (3.1 in)

For other flaws, perform the sensor readjustment. If no problem is found, replacement is unnecessary.
- Do not put a sticker, etc. on/around the radar sensors.
- Do not retrofit the radar sensors or the bumper close to the radar sensors.
- Do not repaint the radar sensors or the bumper close to the radar sensors.

NOTE:
If there is any painting defect inside the radar projection area, replace the rear bumper without trying to repair it.
- Do not give a strong impact, force or drop-off to the radar sensors because they are precision devices.
- Do not reuse the radar sensors that were affected by strong impact, force, or fell off.

B: INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items that might provoke the problems related to BSD/RCTA.
1) Check the battery. <Ref. to SC(H4DO)-58, Battery.> <Ref. to SC(H6DO)-58, Battery.>
2) Check the relay and fuse condition. <Ref. to RVD-4, Relay and Fuse.>
3) Check the connecting condition of harness and connector.

C: PREPARATION TOOL

1. SPECIAL TOOL

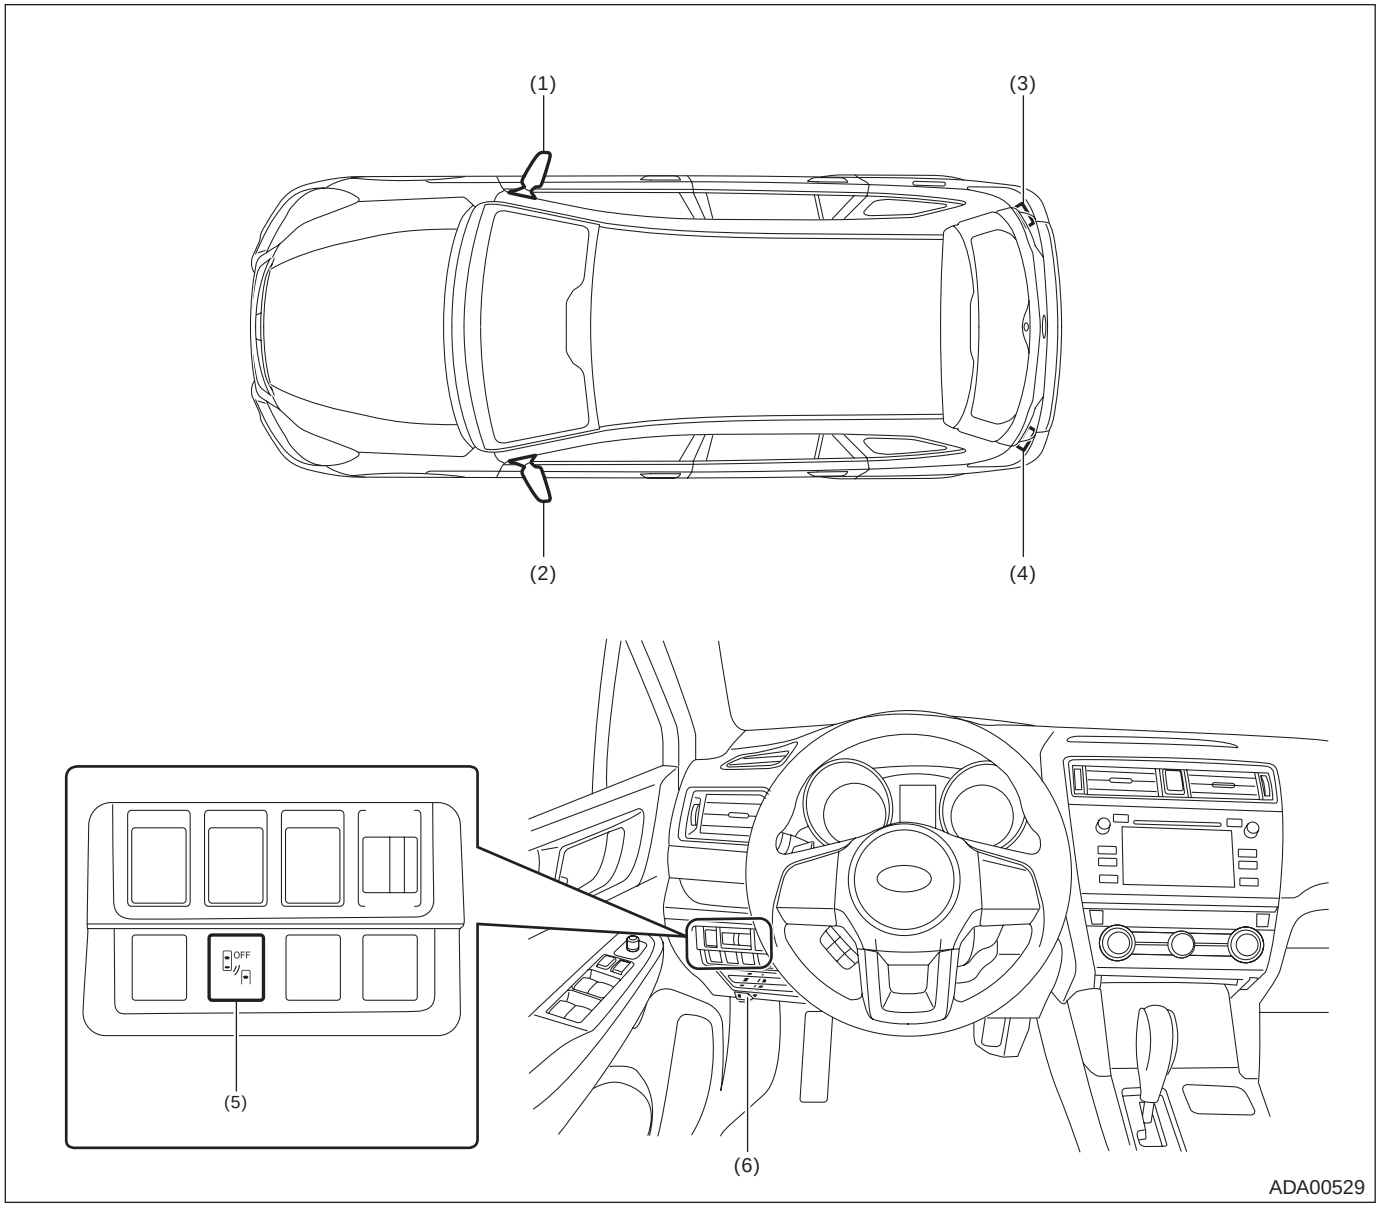


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
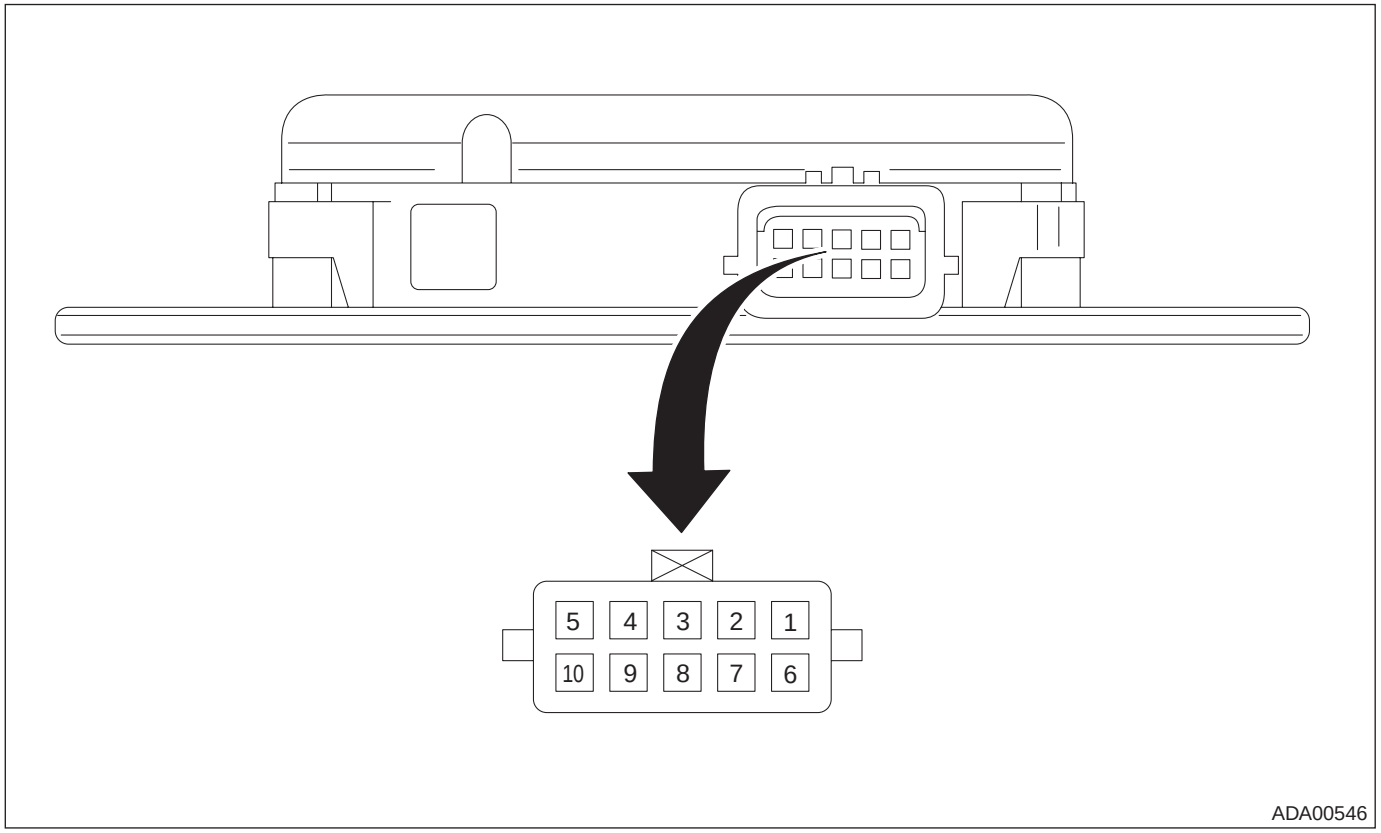
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

4. Electrical Component Location

A: LOCATION

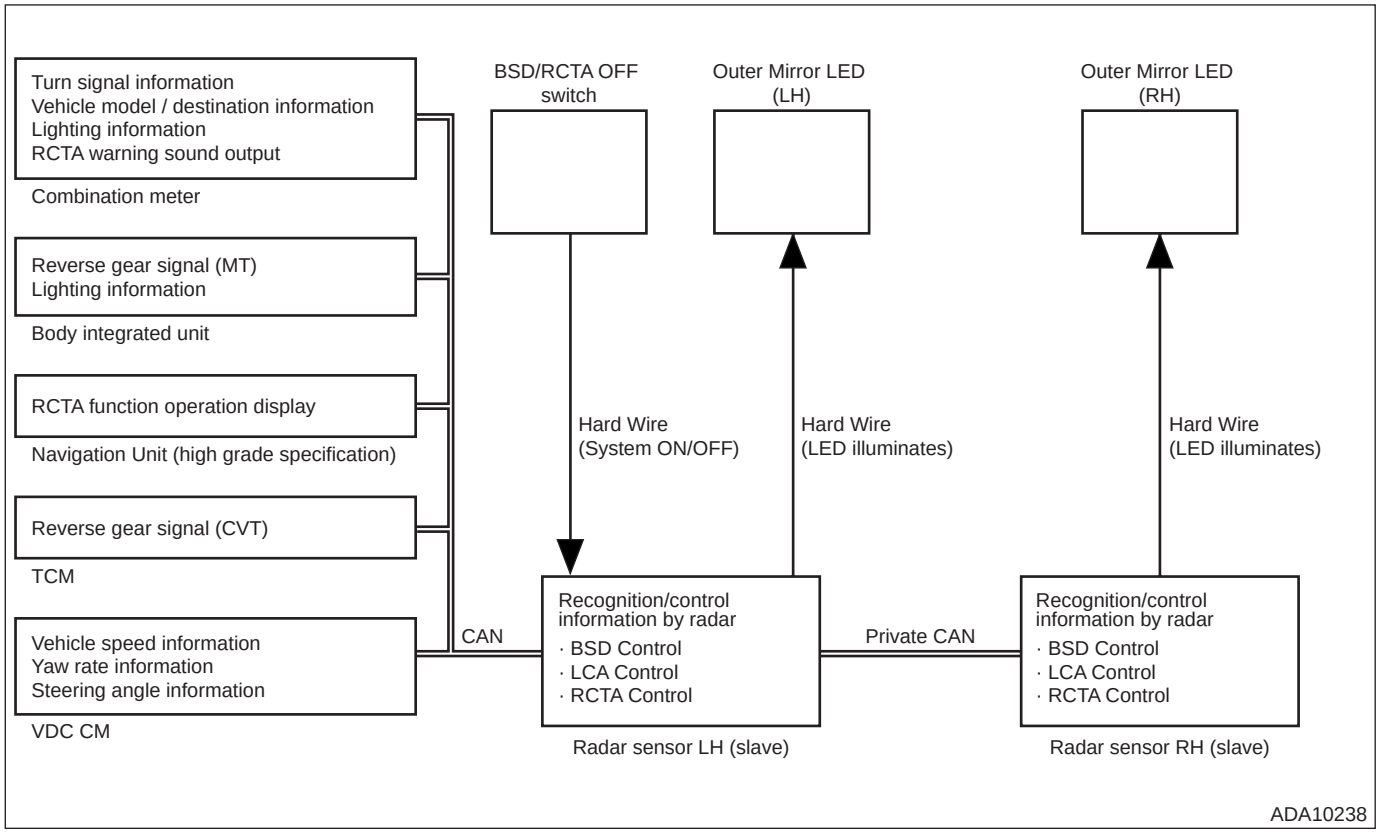


(1) Outer mirror ASSY RH
(2) Outer mirror ASSY LH
(3) Radar sensor RH (slave)
(4) Radar sensor LH (master)
(5) BSD/RCTA OFF switch
(6) Data link connector

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

1. RADAR SENSOR



Terminal No.	Content		Measuring condition	Standard
	Radar sensor LH (master)	Radar sensor RH (slave)		
1 ←→ Chassis ground	Private CAN H	Private CAN H	Always	1 MΩ or more
2 ←→ Chassis ground	Master CAN H	—	Always	1 MΩ or more
3 ←→ Chassis ground	—	—	—	—
4 ←→ Chassis ground	Left mirror LED output	Right mirror LED output	• Ignition switch OFF → ON • BSD/RCTA OFF switch OFF → ON	• When indicator is ON: 2.5 — 10.5 V • When indicator is blinking: 0 ←→ 2.5 — 10.5 V • When indicator is OFF: Less than 1 V
5 ←→ Chassis ground	Ignition power supply	Ignition power supply	Ignition switch OFF → ON	Less than 1 V → 9 — 16 V
6 ←→ Chassis ground	Private CAN L	Private CAN L	Always	1 MΩ or more
7 ←→ Chassis ground	Master CAN L	—	Always	1 MΩ or more
8 ←→ Chassis ground	BSD/RCTA OFF switch	—	• Ignition switch ON • BSD/RCTA OFF switch OFF → ON (while pressing and holding the switch)	Less than 1 V → 9 — 16 V
9 ←→ Chassis ground	—	—	—	—
10 ←→ Chassis ground	GND	GND	Always	Less than 1 Ω

B: WIRING DIAGRAM

Refer to “BSD/RCTA System” in the wiring diagram. <Ref. to WI-131, WIRING DIAGRAM, Blind Spot Detection/Rear Cross Traffic Alert.>

C: SYSTEM BLOCK DIAGRAM

- BSD/RCTA system is configured by the following components.
- There is a control ECM in the radar sensor main body, which performs the vehicle identification and the alert judgment control.
- The LH/RH radar sensors are identified as Master/Slave for control purposes. They are connected by the private CAN to execute the controls through mutual communication. The radar on the Master side receives the input from the vehicle CAN and the BSD/RCTA OFF switch, so information necessary for control can be obtained from other modules via the vehicle CAN.
- The outer mirror LED is directly driven by the signal from the radar sensor.

6. Subaru Select Monitor

A: OPERATION

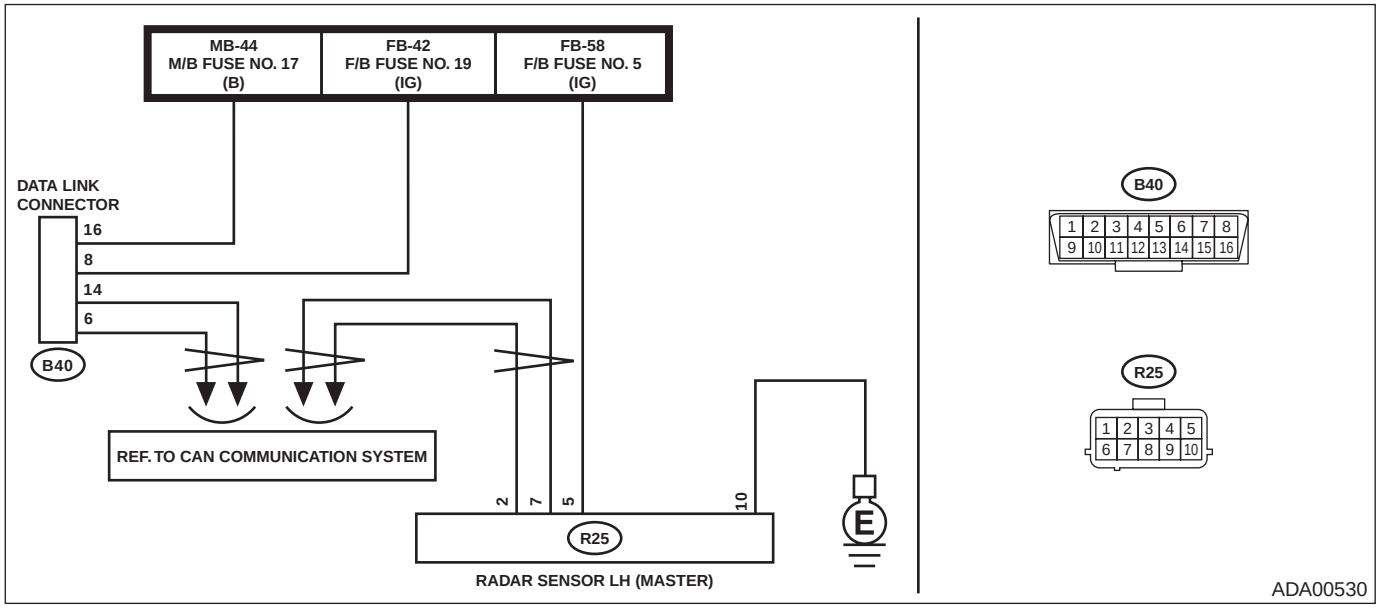
- For detailed operation procedures, refer to “Application help”.
- When the radar sensor cannot communicate with Subaru Select Monitor, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to RVD(diag)-11, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

When communication with the radar sensor is impossible

Detecting condition:



- Defective harness connector
- Power supply circuit malfunction
- Defective radar sensor
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Communication is impossible between radar sensor and Subaru Select Monitor.

Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
BSD/RCTA system <Ref. to WI-131, WIRING DIAGRAM, Blind Spot Detection/Rear Cross Traffic Alert.>

Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse for radar sensor LH. <Ref. to RVD-4, Relay and Fuse.>	Is the check result OK?	Go to step **2**.	Replace the fuse. If the replaced fuse has blown out immediately, repair the short circuit to ground in harness between fuse and radar sensor LH.

	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the radar sensor LH connector. 2) Turn the ignition switch to ON. 3) Using a tester, measure the voltage between radar sensor LH connector (harness side) and chassis ground. ***Connector & terminal*** ***(R25) No. 5 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the open circuit of harness between fuse and radar sensor LH connector.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Using a tester, measure the resistance between radar sensor LH connector (harness side) and chassis ground. ***Connector & terminal*** ***(R25) No. 10 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit in harness between radar sensor and chassis ground.
4	**CHECK LAN SYSTEM.** 1) Connect the radar sensor LH connector. 2) Inspect LAN system. <Ref. to RVD(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **5**.	Perform the inspection according to the diagnosis for LAN system.
5	**CHECK RADAR SENSOR.** Communicate with the radar sensor.	Is communication possible?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the radar sensor LH. <Ref. to RVD-6, Radar Sensor.>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Subaru Rear Vehicle Detection(RH)» or «Subaru Rear Vehicle Detection(LH)» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to the List of Diagnostic Trouble Codes (DTC). <Ref. to RVD(diag)-21, List of Diagnostic Trouble Code (DTC).>
- Check and replace the side that displayed the DTC.

8. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Subaru Rear Vehicle Detection(RH)» or «Subaru Rear Vehicle Detection(LH)» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

9. Read Cancel Code

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Subaru Rear Vehicle Detection(RH)» or «Subaru Rear Vehicle Detection(LH)» and then select «Enter».
5) On «Select Function» display, select «Cancel Code».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning cancel codes, refer to the List of Cancel Codes. <Ref. to RVD(diag)-22, List of Cancel Code.>

10.Inspection Mode

A: OPERATION

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

DTC	Item	Note
U0073	CONTROL MODULE COMMUNICATION BUS OFF	—
U0101	LOST COMMUNICATION WITH TCM	—
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	—
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	—
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	—
U0402	INVALID DATA RECEIVED FROM TCM	—
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	—
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	—
U0423	INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE	—
B2304	REAR RADAR ON-OFF SWITCH STUCK	—
B2311	REAR RADAR DETECT TCM	—
B2313	REAR RADAR DETECT VDC	—
B2327	REAR RADAR INTERNAL FAILURE (INTERNAL ELECTRIC CIRCUIT)	—
B2350	REAR RADAR COMMUNICATION ERROR BETWEEN MASTER AND SLAVE	—

1) Perform the Clear Memory Mode. <Ref. to RVD(diag)-14, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to RVD(diag)-13, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Start the engine and wait for 30 seconds or more.
4) Read the DTC and check that the DTC is not displayed. <Ref. to RVD(diag)-13, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. <Ref. to RVD(diag)-21, List of Diagnostic Trouble Code (DTC).>

2. INSPECTION MODE 2

DTC	Item	Note
B2300	REAR RADAR CIRCUIT LOW	—
B2301	REAR RADAR CIRCUIT HIGH	—

1) Perform the Clear Memory Mode. <Ref. to RVD(diag)-14, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to RVD(diag)-13, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Start the engine.
4) Perform the System Operation Check Mode «Door mirror indicator active test». <Ref. to RVD(diag)-20, System Operation Check Mode.>
5) Read the DTC and check that the DTC is not displayed. <Ref. to RVD(diag)-13, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. <Ref. to RVD(diag)-21, List of Diagnostic Trouble Code (DTC).>

3. INSPECTION MODE 3

DTC	Item	Note
B2329	REAR RADAR AXIS ALIGNMENT INCOMPLETE	—

1) Perform the Clear Memory Mode. <Ref. to RVD(diag)-14, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to RVD(diag)-13, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Perform the adjustment of radar axis.
4) Read the DTC and check that the DTC is not displayed. <Ref. to RVD(diag)-13, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. <Ref. to RVD(diag)-21, List of Diagnostic Trouble Code (DTC).>

11.Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Subaru Rear Vehicle Detection(RH)» or «Subaru Rear Vehicle Detection(LH)» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

- «Subaru Rear Vehicle Detection (LH)»

Display	Content	Reference value	Note
SRVD System fail flag	Current failure status of BSD/RCTA system is displayed.	• Normal • Fail	—
SRVD System HALT flag	Current temporary stop status of BSD/RCTA system is displayed. Temporary stop: Temporarily stops when reception of radar sensor waves failed due to some obstacles or when the temperature is not within the range of –40°C (–40°F) — 85°C (185°F). Temporarily stops when the direction of the radar sensor is not correct.	• Normal • Halt	—
SRVD System ON-OFF flag	ON/OFF status of BSD/RCTA system is displayed. If this flag is set to «OFF» while the values of «SRVD System fail flag» and «SRVD System HALT flag» are «Normal», the BSD/RCTA system is set to OFF by the BSD/RCTA OFF switch.	• OFF • ON	—
LH-Side Target detection flag	Detection status of the control target vehicle on the rear left side is displayed. Detection is possible if the target vehicle is moving when the own vehicle drives forward at 12 km/h (8 MPH) or more or backward at 0 km/h (0 MPH) or more.	• Un-detect • Detect	—
LH-Side BSD caution 1st flag	ON is displayed when the 1st stage BSD warning on the left side is activated (when the outer mirror assembly illuminates).	• OFF • ON	—
LH-Side LCA caution 1st flag	ON is displayed when the 1st stage LCA warning on the left side is activated (when the outer mirror assembly illuminates).	• OFF • ON	—
LH-Side RCTA caution flag	ON is displayed when the RCTA warning on the left side is activated (when the outer mirror assembly illuminates and buzzer sounds).	• OFF • ON	—
LH-Side Radar Voltage value	Power supply voltage of the radar sensor LH is displayed.	0 — 25.5 V	—
LH-Side Temperature value	Ambient temperature of the radar sensor LH is displayed.	–128 — 127°C	—
Ignition SW ON Count	Time stamp information <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.>	—	—
Count		—	—
Time Count		—	—

- «Subaru Rear Vehicle Detection (RH)»

Display	Content	Reference value	Note
SRVD System fail flag	Current failure status of BSD/RCTA system is displayed.	• Normal • Fail	—
SRVD System HALT flag	Current temporary stop status of BSD/RCTA system is displayed. Temporary stop: Temporarily stops when reception of radar sensor waves failed due to some obstacles or when the temperature is not within the range of –40°C (–40°F) — 85°C (185°F).	• Normal • Halt	—
SRVD System ON-OFF flag	ON/OFF status of BSD/RCTA system is displayed. If this flag is set to «OFF» while the values of «SRVD System fail flag» and «SRVD System HALT flag» are «Normal», the BSD/RCTA system is set to OFF by the BSD/RCTA OFF switch.	• OFF • ON	—
RH-Side Target detection flag	Detection status of the control target vehicle on the rear right side is displayed. Detection is possible if the target vehicle is moving when the own vehicle drives forward at 12 km/h (8 MPH) or more or backward at 0 km/h (0 MPH) or more.	• Un-detect • Detect	—
RH-Side BSD caution 1st flag	ON is displayed when the 1st stage BSD warning on the right side is activated (outer mirror assembly illuminates).	• OFF • ON	—
RH-Side LCA caution 1st flag	ON is displayed when the 1st stage LCA warning on the right side is activated (outer mirror assembly illuminates).	• OFF • ON	—
RH-Side RCTA caution flag	ON is displayed when the RCTA warning on the right side is activated (when the outer mirror assembly illuminates and buzzer sounds).	• OFF • ON	—
RH-Side Radar Voltage value	Power supply voltage of the radar sensor RH is displayed.	0 — 25.5 V	—
RH-Side Temperature value	Ambient temperature of the radar sensor RH is displayed.	–128 — 127°C	—
Ignition SW ON Count	Time stamp information <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.>	—	—
Count		—	—
Time Count		—	—

12.System Operation Check Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Subaru Rear Vehicle Detection(RH)» or «Subaru Rear Vehicle Detection(LH)» and then select «Enter».
5) On «Select Function» display, select «Active Test».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Data	Note
Door mirror indicator active test	Outer mirror assembly indicator is illuminated.

13.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Reference
B2300	REAR RADAR CIRCUIT LOW	<Ref. to RVD(diag)-23, DTC B2300 REAR RADAR CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2301	REAR RADAR CIRCUIT HIGH	<Ref. to RVD(diag)-26, DTC B2301 REAR RADAR CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2304	REAR RADAR ON-OFF SWITCH STUCK	<Ref. to RVD(diag)-29, DTC B2304 REAR RADAR ON-OFF SWITCH STUCK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> NOTE: Only radar sensor LH (master) is detected.
B2311	REAR RADAR DETECT TCM	<Ref. to RVD(diag)-32, DTC B2311 REAR RADAR DETECT TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2313	REAR RADAR DETECT VDC	<Ref. to RVD(diag)-33, DTC B2313 REAR RADAR DETECT VDC, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2327	REAR RADAR INTERNAL FAILURE (INTERNAL ELECTRIC CIRCUIT)	<Ref. to RVD(diag)-34, DTC B2327 REAR RADAR INTERNAL FAILURE (INTERNAL ELECTRIC CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2329	REAR RADAR AXIS ALIGNMENT INCOMPLETE	<Ref. to RVD(diag)-35, DTC B2329 REAR RADAR AXIS ALIGNMENT INCOMPLETE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2350	REAR RADAR COMMUNICATION ERROR BETWEEN MASTER AND SLAVE	<Ref. to RVD(diag)-36, DTC B2350 REAR RADAR COMMUNICATION ERROR BETWEEN MASTER AND SLAVE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0073	CAN FAILURE, BUS ‘OFF’ DETECTION	<Ref. to RVD(diag)-38, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0101	LOST COMMUNICATION WITH TCM	<Ref. to RVD(diag)-38, DTC U0101 LOST COMMUNICATION WITH TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	<Ref. to RVD(diag)-38, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	<Ref. to RVD(diag)-38, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	<Ref. to RVD(diag)-38, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0402	INVALID DATA RECEIVED FROM TCM	<Ref. to RVD(diag)-38, DTC U0402 INVALID DATA RECEIVED FROM TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	<Ref. to RVD(diag)-38, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	<Ref. to RVD(diag)-38, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0423	INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE	<Ref. to RVD(diag)-38, DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

14.List of Cancel Code

A: LIST

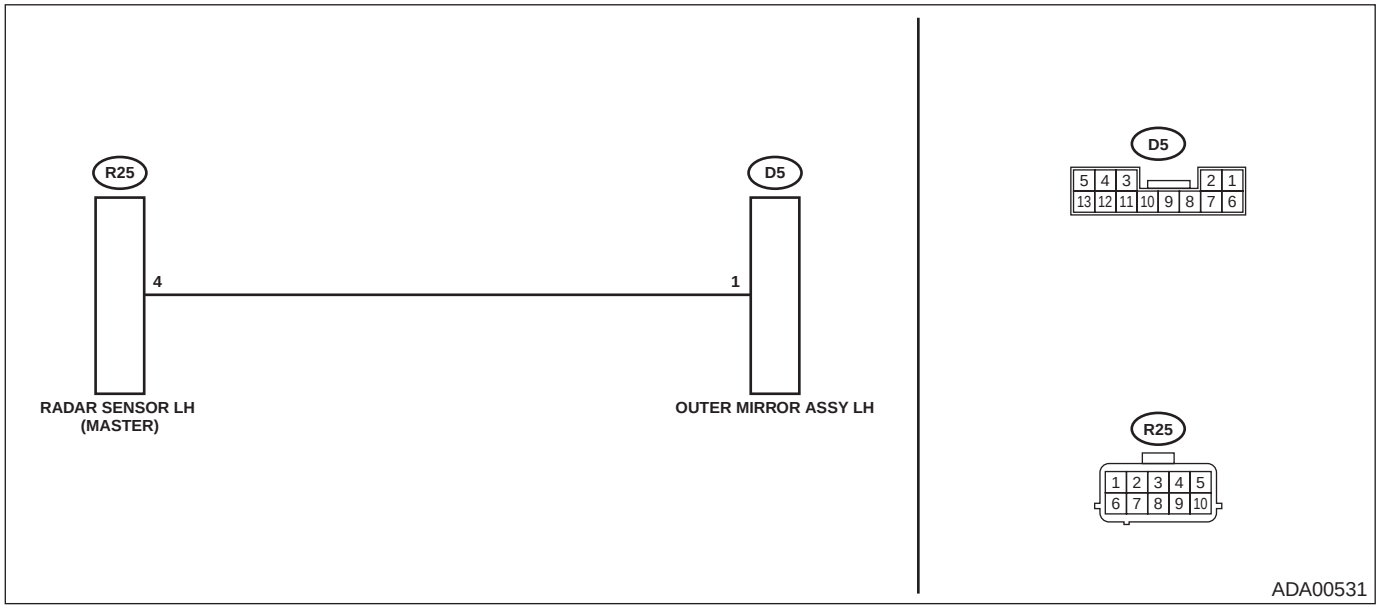
Code	Item	Contents of diagnosis
B2320	REAR RADAR LOW VOLTAGE (LESS THAN 9 V)	Temporarily stops because the voltage supplied to radar drops to or below 9 V. Returns to normal when the voltage becomes normal.
B2321	REAR RADAR HIGH VOLTAGE (MORE THAN 16 V)	Temporarily stops because the voltage supplied to radar rises to or above 16 V. Returns to normal when the voltage becomes normal.
B2328	REAR RADAR INTERNAL FAILURE (RADAR MISALIGNMENT)	Deviation of the radar axis prevents normal detection. Returns to normal when the radar axis becomes normal. When B2328 is frequently detected, perform “Diagnostic Procedure with Cancel Code”. <Ref. to RVD(diag)-39, DTC B2328 REAR RADAR INTERNAL FAILURE (RADAR MISALIGNMENT), Diagnostic Procedure with Cancel Code.>
B2340	RADAR ASSY B&S OUT OF OPERATION TEMPERATURE RANGE	Temporarily stops because the temperature is outside the operative range (–40°C (–40°F) — 85°C (185°F)). Returns to normal when the ambient temperature falls within the operative range.
B2341	RADAR ASSY B&S DEGRADATION OF DETECTING PERFORMANCE	Temporarily stops because some obstacles blocked radar waves of the back and side radar. Returns to normal when the transmission and reception of radar signals becomes normal.

15.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B2300 REAR RADAR CIRCUIT LOW

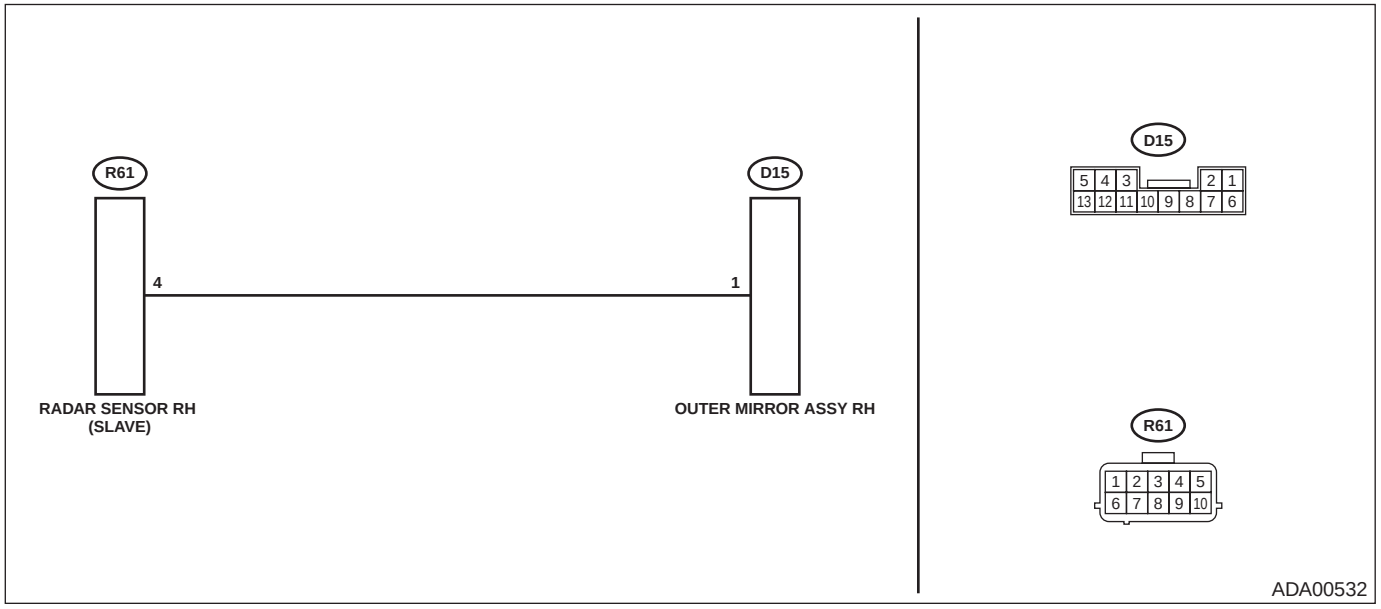
DTC detecting condition:

- Short circuit to ground in the harness between radar sensor and outer mirror assembly
- Ground short circuit of the harness in outer mirror assembly module (Malfunction of the outer mirror assembly)
- Defective radar sensor



Trouble symptom:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.



Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
BSD/RCTA system <Ref. to WI-131, WIRING DIAGRAM, Blind Spot Detection/Rear Cross Traffic Alert.>

- Radar sensor LH

- Radar sensor RH

NOTE:
Check and replace the side that displayed the DTC.

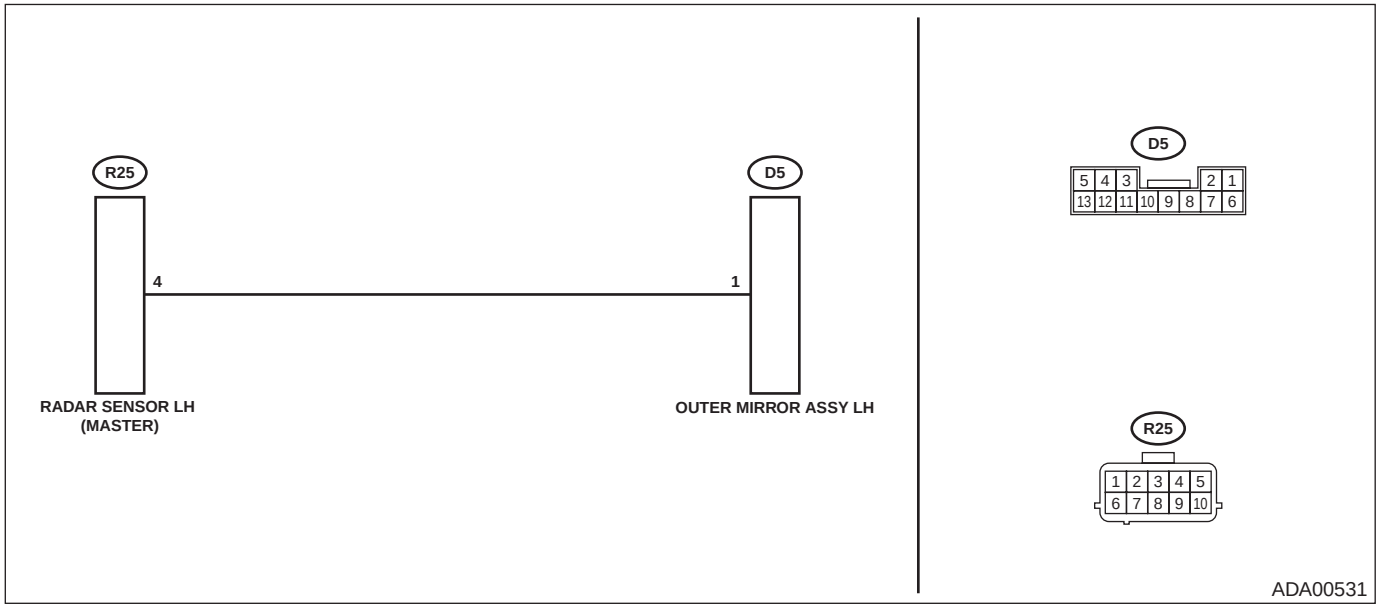
	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to RVD(diag)-13, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2327 displayed? (Current malfunction)	Perform the diagnosis of DTC B2327. <Ref. to RVD(diag)-34, DTC B2327 REAR RADAR INTERNAL FAILURE (INTERNAL ELECTRIC CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK DTC.** Read the DTC. <Ref. to RVD(diag)-13, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2300 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK OPERATION CHECK MODE.** Perform the system operation check mode «Door mirror indicator active test» from «Subaru Rear Vehicle Detection(RH)» or «Subaru Rear Vehicle Detection(LH)». <Ref. to RVD(diag)-20, System Operation Check Mode.>	Does the indicator illuminate?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Disconnect the radar sensor connector. 2) Disconnect the outer mirror assembly connector. 3) Using a tester, measure the resistance between radar sensor connector (harness side) and the chassis ground. ***Connector & terminal*** ***Radar sensor LH*** ***(R25) No. 4 — Chassis ground:*** ***Radar sensor RH*** ***(R61) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short to ground in harness between radar sensor connector and outer mirror assembly connector.
5	**CHECK CONNECTOR.** Check the radar sensor connector and the outer mirror assembly connector. (Insecure connection, poor contact, etc.)	Is the check result OK?	Go to step **6**.	Repair the connector.
6	**CHECK OUTER MIRROR ASSEMBLY.** Perform unit-check for the outer mirror assembly. <Ref. to GW-27, Outer Mirror Assembly.>	Is the check result OK?	Go to step **7**.	Replace the outer mirror assembly. <Ref. to GW-27, Outer Mirror Assembly.>
7	**CHECK BSD/RCTA.** 1) Restore the vehicle to its original state. 2) Perform the Inspection Mode. <Ref. to RVD(diag)-16, Inspection Mode.>	Is DTC B2300 displayed? (Current malfunction)	Replace the radar sensor. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

B: DTC B2301 REAR RADAR CIRCUIT HIGH

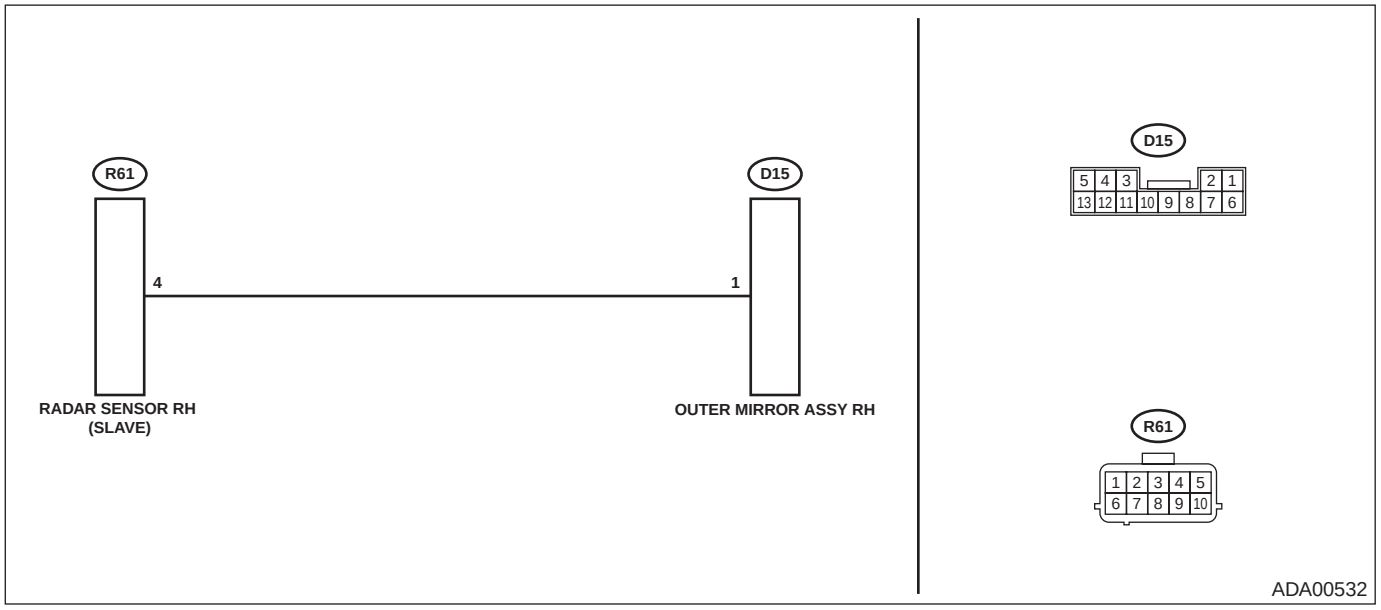
DTC detecting condition:

- Open circuit or short circuit to power supply in harness between radar sensor and outer mirror assembly.
- Open circuit or short circuit to power supply of harness in the outer mirror assembly module. (Malfunction of the outer mirror assembly)
- Open circuit or short circuit to power supply of harness between outer mirror assembly and ground.
- Defective radar sensor



Trouble symptom:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.



Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
BSD/RCTA system <Ref. to WI-131, WIRING DIAGRAM, Blind Spot Detection/Rear Cross Traffic Alert.>

- Radar sensor LH

- Radar sensor RH

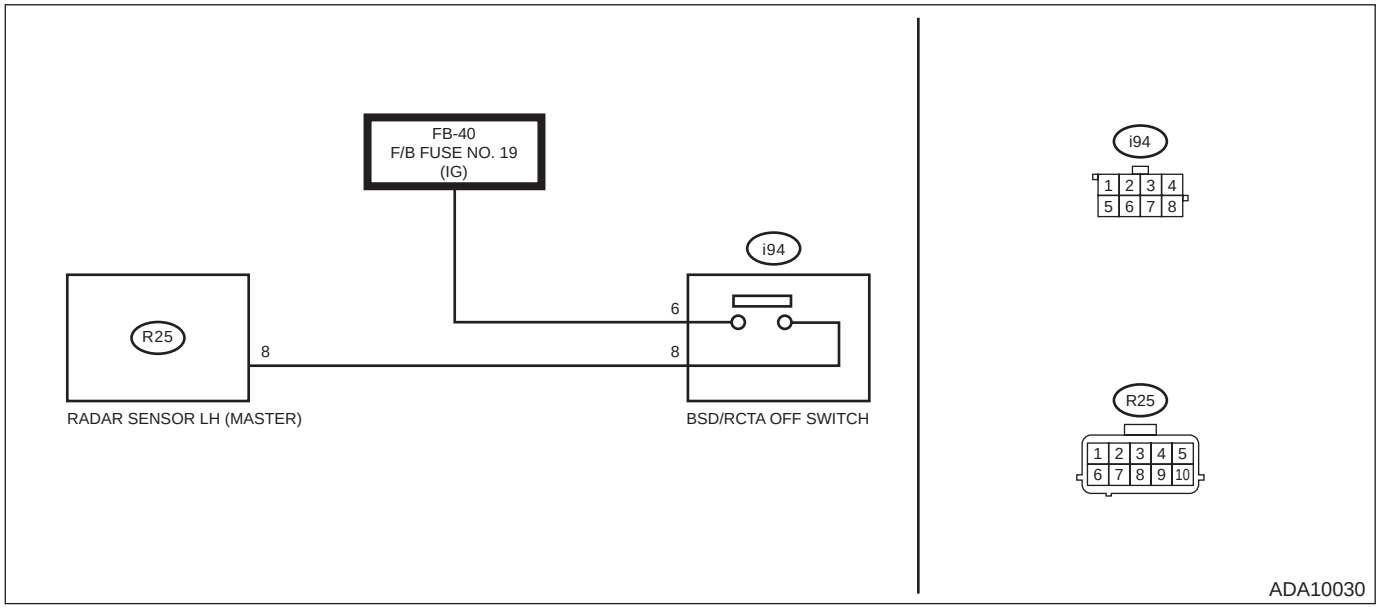
NOTE:
Check and replace the side that displayed the DTC.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to RVD(diag)-13, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2327 displayed? (Current malfunction)	Perform the diagnosis of DTC B2327. <Ref. to RVD(diag)-34, DTC B2327 REAR RADAR INTERNAL FAILURE (INTERNAL ELECTRIC CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK DTC.** Read the DTC. <Ref. to RVD(diag)-13, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2301 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK OPERATION CHECK MODE.** Perform the system operation check mode «Door mirror indicator active test» from «Subaru Rear Vehicle Detection(RH)» or «Subaru Rear Vehicle Detection(LH)». <Ref. to RVD(diag)-20, System Operation Check Mode.>	Does the indicator illuminate?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the radar sensor connector. 2) Disconnect the outer mirror assembly connector. 3) Using a tester, measure the resistance between radar sensor connector (harness side) and outer mirror assembly connector (harness side). ***Connector & terminal*** ***Radar sensor LH*** ***(R25) No. 4 — (D5) No. 2:*** ***Radar sensor RH*** ***(R61) No. 4 — (D15) No. 2:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness between radar sensor connector and outer mirror assembly connector.
5	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between radar sensor connector (harness side) and the chassis ground. ***Connector & terminal*** ***Radar sensor LH*** ***(R25) No. 4 (+) — Chassis ground (–):*** ***Radar sensor RH*** ***(R61) No. 4 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair the short circuit to power supply in harness between radar sensor connector and outer mirror assembly connector.
6	**CHECK CONNECTOR.** Check the radar sensor connector and the outer mirror assembly connector. (Insecure connection, poor contact, etc.)	Is the check result OK?	Go to step **7**.	Repair the connector.
7	**CHECK OUTER MIRROR ASSEMBLY.** Perform unit-check for the outer mirror assembly. <Ref. to GW-27, Outer Mirror Assembly.>	Is the check result OK?	Go to step **8**.	Replace the outer mirror assembly. <Ref. to GW-27, Outer Mirror Assembly.>
8	**CHECK BSD/RCTA.** 1) Restore the vehicle to its original state. 2) Perform the Inspection Mode. <Ref. to RVD(diag)-16, Inspection Mode.>	Is DTC B2301 displayed? (Current malfunction)	Replace the radar sensor. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

C: DTC B2304 REAR RADAR ON-OFF SWITCH STUCK

DTC detecting condition:



- BSD/RCTA OFF switch is stuck to ON. (Switch malfunction)
- Switch was left pressed for a prolonged time.
- Defective radar sensor

Trouble symptom:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
BSD/RCTA system <Ref. to WI-131, WIRING DIAGRAM, Blind Spot Detection/Rear Cross Traffic Alert.>

Step		Check	Yes	No
1	**CHECK METER DISPLAY.** 1) Turn the ignition switch to ON. 2) Check the display of OFF indicator in the combination meter LCD display.	Does the display change according to operation of BSD/RCTA OFF switch?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: • Temporary poor contact of connector, temporary open or short circuit of harness may be the cause. • User may have kept pressing the switch for 30 seconds or more.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** Check the current data «SRVD System ON-OFF flag» of «Subaru Rear Vehicle Detection(RH)» or «Subaru Rear Vehicle Detection(LH)». <Ref. to RVD(diag)-18, Read Current Data.>	Does the display change according to operation of BSD/RCTA OFF switch?	Check the combination meter. <Ref. to MET(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**INSPECTION OF SWITCH UNIT.** Perform unit inspection of the BSD/RCTA OFF switch. <Ref. to RVD-13, Switches and Harness.>	Is the check result OK?	Go to step **4**.	Replace the BSD/RCTA OFF switch. <Ref. to RVD-13, Switches and Harness.>
4	**CHECK BATTERY.** Check the battery. <Ref. to SC(H4DO)-58, Battery.> <Ref. to SC(H6DO)-58, Battery.>	Is the check result OK?	Go to step **5**.	Charge or replace the battery.
5	**CHECK FUSE.** Check the fuse of BSD/RCTA OFF switch. <Ref. to RVD-4, Relay and Fuse.>	Is the check result OK?	Go to step **6**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the fuse and the BSD/RCTA OFF switch.
6	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the BSD/RCTA OFF switch connector. 2) Turn the ignition switch to ON. 3) Using a tester, measure the voltage between BSD/RCTA OFF switch connector and chassis ground. ***Connector & terminal*** ***(i94) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **7**.	Repair the open circuit of harness between the fuse and the BSD/RCTA OFF switch.
7	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the radar sensor LH connector. 3) Using a tester, measure the resistance between BSD/RCTA OFF switch connector and radar sensor LH connector (harness side). ***Connector & terminal*** ***(i94) No. 8 — (R25) No. 8:***	Is the resistance less than 1 Ω?	Go to step **8**.	Repair the open circuit of harness between BSD/RCTA OFF switch and radar sensor LH.
8	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the BSD/RCTA OFF switch connector (harness side) and the chassis ground. ***Connector & terminal*** ***(i94) No. 8 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **9**.	Repair the short circuit to ground in harness between BSD/RCTA OFF switch and radar sensor LH.
9	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between the BSD/RCTA OFF switch connector (harness side) and the chassis ground. ***Connector & terminal*** ***(i94) No. 8 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **10**.	Repair the short circuit to power supply in harness between BSD/RCTA OFF switch and radar sensor LH.
10	**CHECK CONNECTOR.** Check the radar sensor LH connector. (Insecure connection, poor contact, etc.)	Is the check result OK?	Go to step **11**.	Repair the connector.

Step		Check	Yes	No
11	**CHECK BSD/RCTA.** 1) Restore the vehicle to its original state. 2) Perform the Inspection Mode. <Ref. to RVD(diag)-16, Inspection Mode.>	Is DTC B2304 displayed? (Current malfunction)	Replace the radar sensor LH. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

D: DTC B2311 REAR RADAR DETECT TCM

DTC detecting condition:
Automatic transmission fails.
Trouble symptom:
- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.
- AT OIL TEMP light blinks in the combination meter.

NOTE:
Check and replace the side that displayed the DTC.

	Step	Check	Yes	No
1	**CHECK TRANSMISSION.** Check the transmission. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis of the transmission.
2	**CHECK BSD/RCTA.** 1) Restore the vehicle to its original state. 2) Perform the Inspection Mode. <Ref. to RVD(diag)-16, Inspection Mode.>	Is DTC B2311 displayed? (Current malfunction)	Replace the radar sensor. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

E: DTC B2313 REAR RADAR DETECT VDC

DTC detecting condition:
Vehicle dynamics control (VDC) fails.
Trouble symptom:
- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.
- VDC warning light illuminates in the combination meter.

NOTE:
Check and replace the side that displayed the DTC.

Step		Check	Yes	No
1	**CHECK VDC.** Check the VDC. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the VDC diagnosis.
2	**CHECK BSD/RCTA.** 1) Restore the vehicle to its original state. 2) Perform the Inspection Mode. <Ref. to RVD(diag)-16, Inspection Mode.>	Is DTC B2313 displayed? (Current malfunction)	Replace the radar sensor. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

F: DTC B2327 REAR RADAR INTERNAL FAILURE (INTERNAL ELECTRIC CIRCUIT)

DTC DETECTING CONDITION:
Defective radar sensor
TROUBLE SYMPTOM:
- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

NOTE:
Check and replace the side that displayed the DTC.

	Step	Check	Yes	No
1	**CHECK BSD/RCTA.** 1) Perform the Clear Memory Mode. <Ref. to RVD(diag)-14, Clear Memory Mode.> 2) Read the DTC again. <Ref. to RVD(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2327 displayed? (Current malfunction)	Replace the radar sensor. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

G: DTC B2329 REAR RADAR AXIS ALIGNMENT INCOMPLETE

DTC detecting condition:
Axis adjustment of the radar sensor has failed.
(Forced termination of the Subaru Select Monitor, improper location of the target reflector, or deviation of the radar sensor due to impact.)

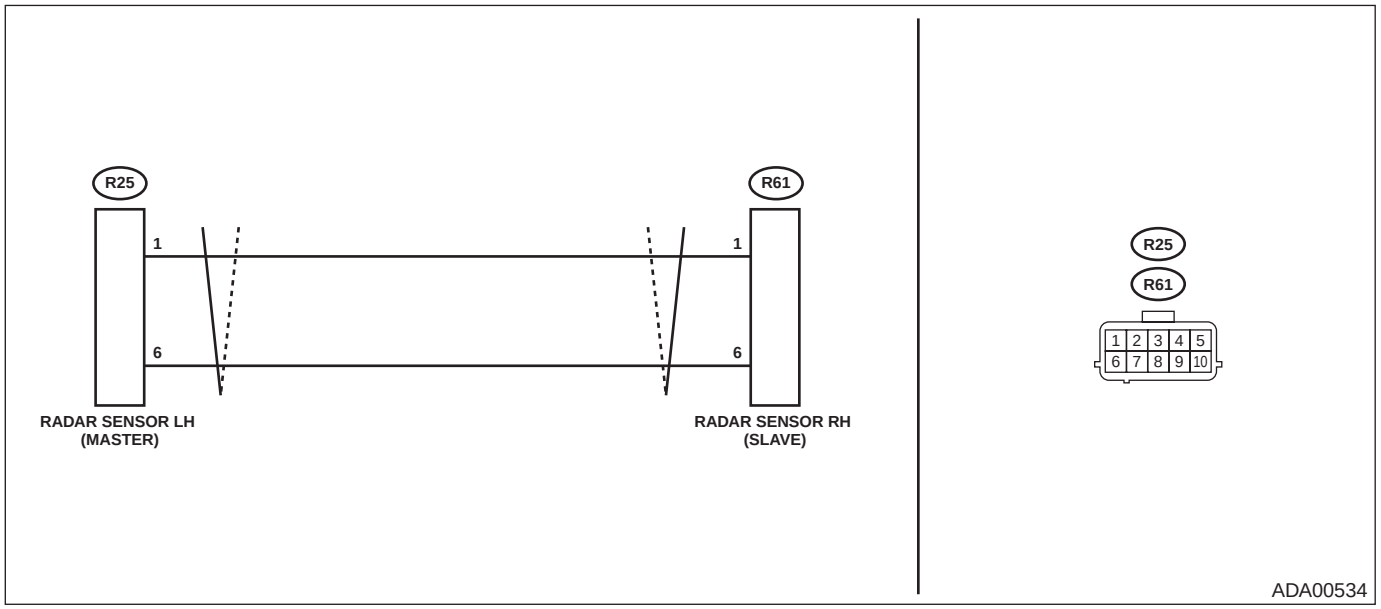
Trouble symptom:
- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

NOTE:
Check and replace the side that displayed the DTC.

	Step	Check	Yes	No
1	**CHECK REAR BUMPER.** Check the rear bumper. (Stickered, trace of repainting, etc.)	Is the check result OK?	Go to step **2**.	Replace or repair the bumper. <Ref. to EI-45, Rear Bumper.> Go to step **2**.
2	**CHECK RADAR SENSOR BRACKET.** 1) Remove the rear bumper. <Ref. to EI-45, Rear Bumper.> 2) Check the mounting bracket of the radar sensor as well as its installation position. (Visible damage, deformation, etc.) <Ref. to RVD-6, Radar Sensor.>	Is the check result OK?	Go to step **3**.	Replace the mounting bracket of the radar sensor, or repair the installation position. <Ref. to RVD-6, Radar Sensor.> Go to step **3**.
3	**ADJUSTMENT OF RADAR SENSOR AXIS.** 1) Install the rear bumper. 2) Perform the adjustment of radar axis. <Ref. to RVD-8, ADJUSTMENT, Radar Sensor.> 3) Perform the Inspection Mode. <Ref. to RVD(diag)-16, Inspection Mode.>	Is DTC B2329 displayed? (Current malfunction)	Replace the radar sensor. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

H: DTC B2350 REAR RADAR COMMUNICATION ERROR BETWEEN MASTER AND SLAVE

DTC detecting condition:



- Defective harness for CAN communication between radar sensor LH and radar sensor RH
- Defective radar sensor

Trouble symptom:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
BSD/RCTA system <Ref. to WI-131, WIRING DIAGRAM, Blind Spot Detection/Rear Cross Traffic Alert.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to RVD(diag)-13, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2350 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the radar sensor connectors LH and RH. 2) Using a tester, measure the resistance between radar sensor RH connector (harness side) and radar sensor LH connector (harness side). ***Connector & terminal*** ***(R25) No. 1 — (R61) No. 1:*** ***(R25) No. 6 — (R61) No. 6:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness between radar sensor RH connector and radar sensor LH connector.
3	**CHECK HARNESS (SHORT BETWEEN LINES, GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between radar sensor LH connectors (harness side) and the resistance between radar sensor LH connector (harness side) and chassis ground. ***Connector & terminal*** ***(R25) No. 1 — (R25) No. 6:*** ***(R25) No. 1 — Chassis ground:*** ***(R25) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness between radar sensor RH connector and radar sensor LH connector.
4	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between radar sensor LH connector (harness side) and chassis ground. ***Connector & terminal*** ***(R25) No. 1 (+) — Chassis ground (–):*** ***(R25) No. 6 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair the short to power supply in harness between radar sensor RH connector and radar sensor LH connector.
5	**CHECK RADAR SENSOR. (INTERNAL IMPEDANCE).** Using a tester, measure the internal impedance between radar sensor LH and radar sensor RH terminals. ***Terminals*** ***Radar sensor LH*** ***No. 1 — No. 6:*** ***Radar sensor RH*** ***No. 1 — No. 6:***	Is the resistance approximately 120 Ω?	Go to step **6**.	Replace the radar sensor RH or radar sensor LH. <Ref. to RVD-6, Radar Sensor.>
6	**CHECK BSD/RCTA.** 1) Restore the vehicle to its original state. 2) Perform the Clear Memory Mode. <Ref. to RVD(diag)-14, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to RVD(diag)-16, Inspection Mode.>	Is DTC B2350 displayed? (Current malfunction)	Replace the radar sensor on the side that displayed the DTC. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

I: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

J: DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data from TCM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

K: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC CM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

L: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data from BIU does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

M: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from combination meter does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

N: DTC U0402 INVALID DATA RECEIVED FROM TCM

Received error data from TCM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

O: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

Received error data from VDC CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

P: DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

Received error data from BIU.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Q: DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

Received error data from combination meter.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

16.Diagnostic Procedure with Cancel Code

A: DTC B2328 REAR RADAR INTERNAL FAILURE (RADAR MISALIGNMENT)

Detecting condition:

- Excessive impact was given to the installation area of the radar sensor, which resulted in deviation of the radar sensor axis.
- Mounting bracket for the radar sensor is deformed.
- Defective radar sensor

TROUBLE SYMPTOMS:

- All functions of BSD/RCTA are temporarily suspended.
- The icon indicating function suspended will be displayed in the combination meter LCD display.
- Function-suspended confirmation will be displayed for approx. two seconds on LCD display in the combination meter.

NOTE:
If DTC B2328 is detected repeatedly, check or replace the part corresponding to the cancel code.

	Step	Check	Yes	No
1	**CHECK REAR BUMPER.** Check the rear bumper. (Stickered, trace of repainting, etc.)	Is the check result OK?	Go to step **2**.	Replace or repair the bumper. <Ref. to EI-45, Rear Bumper.> Go to step **2**.
2	**CHECK RADAR SENSOR BRACKET.** 1) Remove the rear bumper. <Ref. to EI-45, Rear Bumper.> 2) Check the mounting bracket of the radar sensor as well as its installation position. (Visible damage, deformation, etc.) <Ref. to RVD-6, Radar Sensor.>	Is the check result OK?	Go to step **3**.	Replace the mounting bracket of the radar sensor, or repair the installation position. <Ref. to RVD-6, Radar Sensor.>Go to step **3**.
3	**ADJUSTMENT OF RADAR SENSOR AXIS.** 1) Install the rear bumper. 2) Perform the adjustment of radar axis. <Ref. to RVD-8, ADJUSTMENT, Radar Sensor.> 3) Read the cancel code. <Ref. to RVD(diag)-15, Read Cancel Code.>	Is B2328 displayed?	Replace the radar sensor. <Ref. to RVD-6, Radar Sensor.>	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

17.Diagnostics with Phenomenon

A: INSPECTION

Symptoms	Maintenance parts
BSD/RCTA does not operate.	Fuse
	LAN system <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
	Body control system <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>
	Radar sensor LH
	Radar sensor RH
BSD/RCTA cannot be turned OFF.	BSD/RCTA OFF switch
	LAN system <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
	Body control system <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>
	Radar sensor LH
Error message appears in the combination meter.	Check cancel code. <Ref. to RVD(diag)-15, Read Cancel Code.>
	Radar sensor LH
	Radar sensor RH
	Combination meter <Ref. to MET(diag)-2, Basic Diagnostic Procedure.>
Outer mirror assembly (LH) indicator does not illuminate.	Outer mirror assembly <Ref. to GW-27, Outer Mirror Assembly.>
	Radar sensor LH
Outer mirror assembly (RH) indicator does not illuminate.	Outer mirror assembly <Ref. to GW-27, Outer Mirror Assembly.>
	Radar sensor RH
Outer mirror assembly (LH) indicator remains on.	Radar sensor LH
Outer mirror assembly (RH) indicator remains on.	Radar sensor RH
Outer mirror assembly (LH) indicator does not blink.	Radar sensor LH
Outer mirror assembly (RH) indicator does not blink.	Radar sensor RH
Outer mirror assembly (LH) indicator keeps blinking.	Radar sensor LH
Outer mirror assembly (RH) indicator keeps blinking.	Radar sensor RH

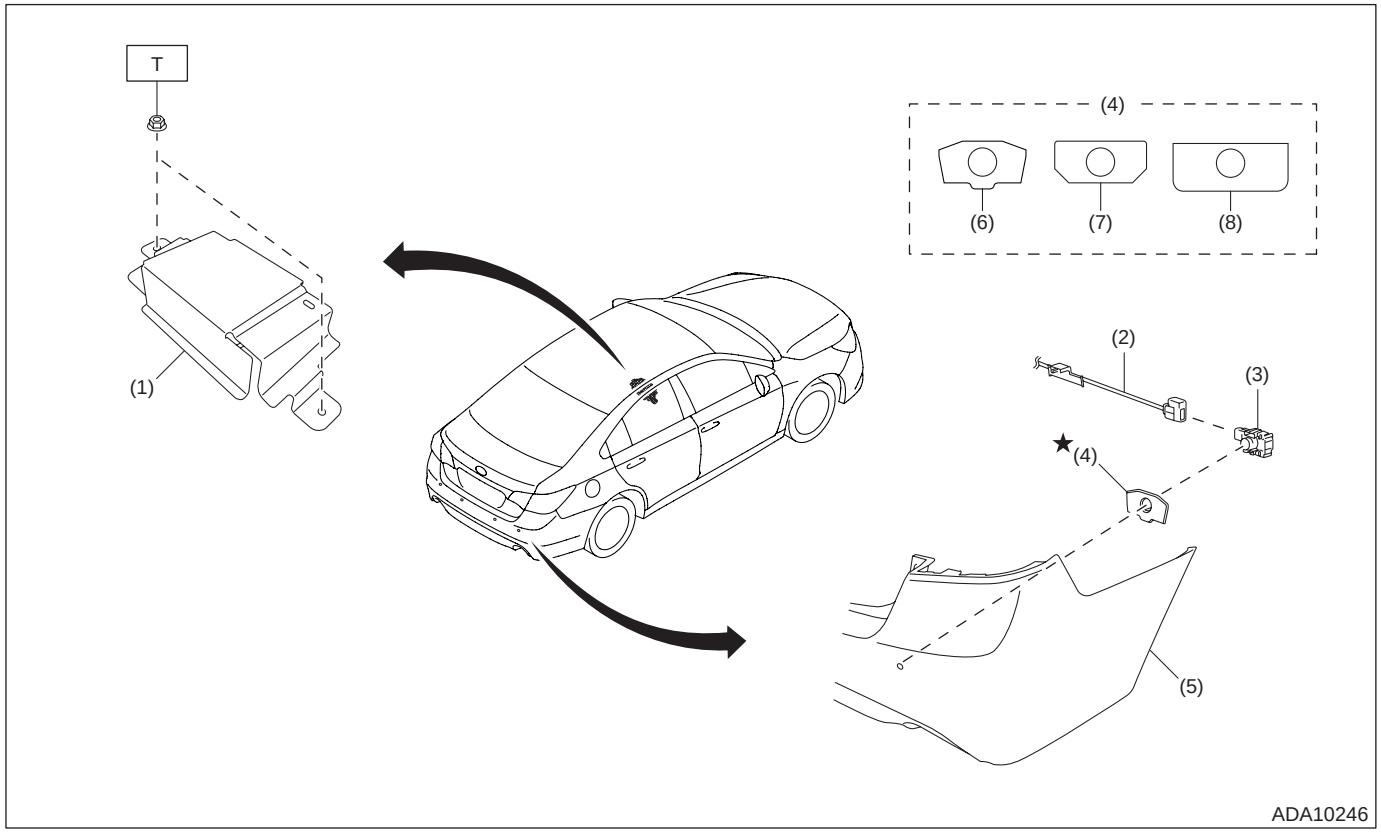
Reverse Automatic Braking

RAB

		Page
1.	General Description	2
2.	Relay and Fuse	4
3.	Reverse Automatic Braking	5
4.	Reverse Automatic Braking CM	6
5.	Sensor and Harness	7
6.	Control Unit	13
7.	Stereo Camera	14
8.	Combination Meter	15
9.	Audio	16
10.	Navigation Body	17

1. General Description

A: NOTE



Using the EyeSight brake control, the Reverse Automatic Braking detects obstacles with the Reverse Automatic Braking CM and sonar sensor to operate the system.

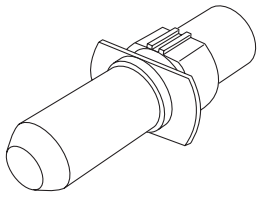
B: LOCATION

Refer to “LOCATION” in the “Reverse Automatic Braking (DIAGNOSTICS)” section. <Ref. to RAB(diag)-6, LOCATION, Electrical Component Location.>

C: COMPONENT

1. REVERSE AUTOMATIC BRAKING CM AND SONAR SENSOR

(1) Reverse Automatic Braking CM
(2) Cord assembly - sonar
(3) Sonar sensor
(4) Holder - sonar
(5) Bumper face - rear
(6) Sedan model
(7) OUTBACK model (inner)
(8) OUTBACK model (corner)



Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

D: CAUTION

• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
• For precautions for Reverse Automatic Braking, refer to “CAUTION” in “Reverse Automatic Braking (DIAGNOSTICS)” section. <Ref. to RAB(diag)-4, CAUTION, General Description.>

E: PREPARATION TOOL

1. SPECIAL TOOL

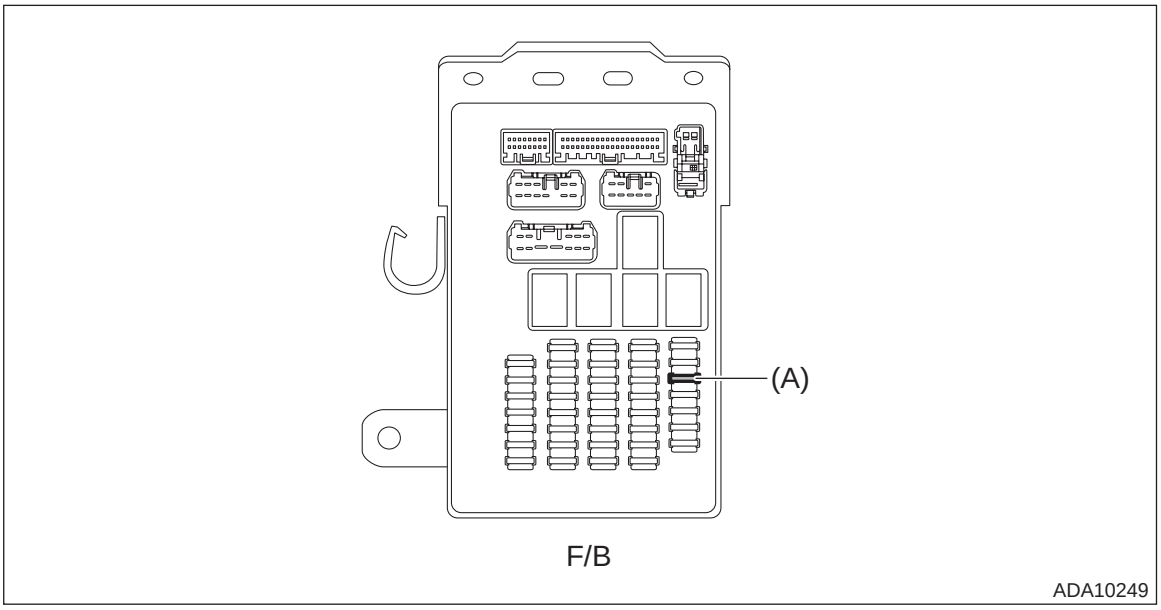


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST87692VA000	87692VA000 (Newly adopted tool)	SONAR TOOL	Used for installing the holder - sonar.

2. GENERAL TOOL

TOOL NAME	REMARKS
Angle gauge	Used for inspecting height and angle of the sonar sensor.
Try square	
Measure	
Leveling line	
Plumb bob	
Packing tape	

2. Relay and Fuse

A: LOCATION

Fuse & relay box (F/B)	Fuse 7.5 A (RAB CM)	(A)

NOTE:
- Refer to “LOCATION” of the “EyeSight” section because the EyeSight system control is used. <Ref. to ES-5, LOCATION, Relay and Fuse.>
- For other related fuses, refer to the wiring diagram. <Ref. to WI-22, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

3. Reverse Automatic Braking

A: WIRING DIAGRAM

Refer to “Reverse Automatic Braking” in the wiring diagram. <Ref. to WI-332, WIRING DIAGRAM, Reverse Automatic Braking.>

B: INSPECTION

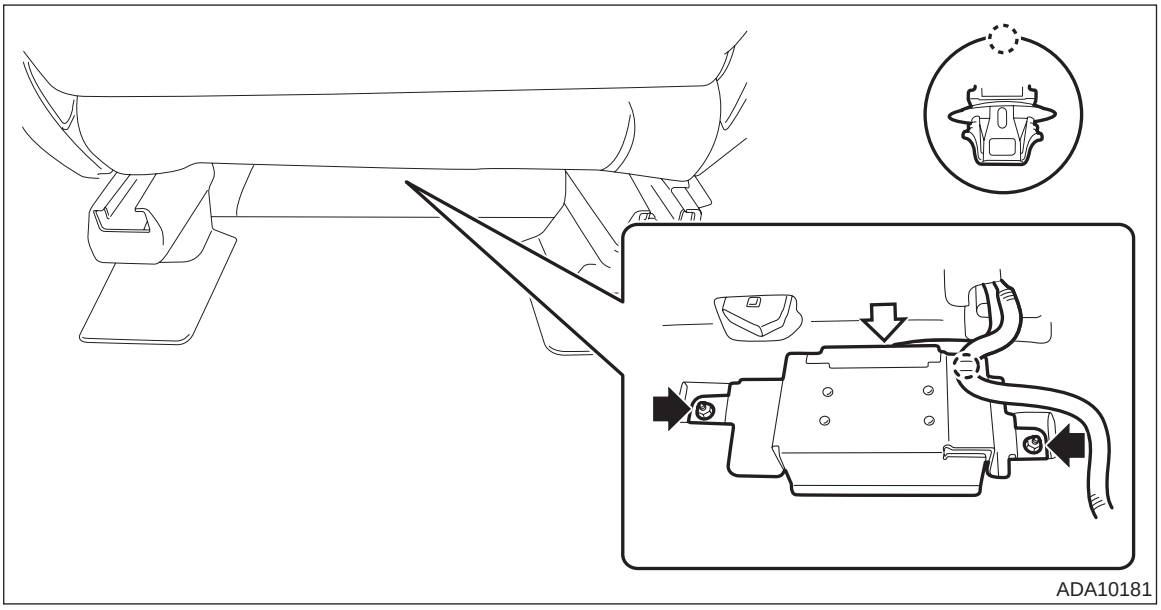
Refer to “Basic Diagnostic Procedure” of “Reverse Automatic Braking (DIAGNOSTICS)” section. <Ref. to RAB(diag)-2, Basic Diagnostic Procedure.>

C: NOTE

For procedure of each component in the Reverse Automatic Braking, refer to the respective section.

- Reverse Automatic Braking CM: <Ref. to RAB-6, Reverse Automatic Braking CM.>
- Sensor and harness: <Ref. to RAB-7, Sensor and Harness.>
- Control module: <Ref. to RAB-13, Control Unit.>

NOTE:
System control of the Reverse Automatic Braking is performed by each module. For procedure, refer to the following sections.



- Engine control module (ECM):
  - H4 model: <Ref. to FU(H4DO)-82, Engine Control Module (ECM).>
  - H6 model: <Ref. to FU(H6DO)-84, Engine Control Module (ECM).>
- Transmission control module (TCM):
  - H4 model: <Ref. to CVT(TR580)-161, Transmission Control Module (TCM).>
  - H6 model: <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>
- VDC control module (VDC CM): <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- Body integrated unit: <Ref. to SL-84, Body Integrated Unit.>
- Parking brake actuator: <Ref. to PB-9, Parking Brake Actuator.>
- Reverse Automatic Braking CM: <Ref. to RAB-6, Reverse Automatic Braking CM.>

- Stereo camera: <Ref. to ES-8, Stereo Camera.>
- Combination meter: <Ref. to IDI-11, Combination Meter.>
- Audio ASSY or navigation ASSY: <Ref. to ET-24, Audio.>

4. Reverse Automatic Braking CM

A: REMOVAL

NOTE:
Remove the Reverse Automatic Braking CM after sliding the front seat LH back and forth as necessary.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the Reverse Automatic Braking CM.
   (1) Remove the connector and harness clip.
   (2) Remove the nut and remove the Reverse Automatic Braking CM.

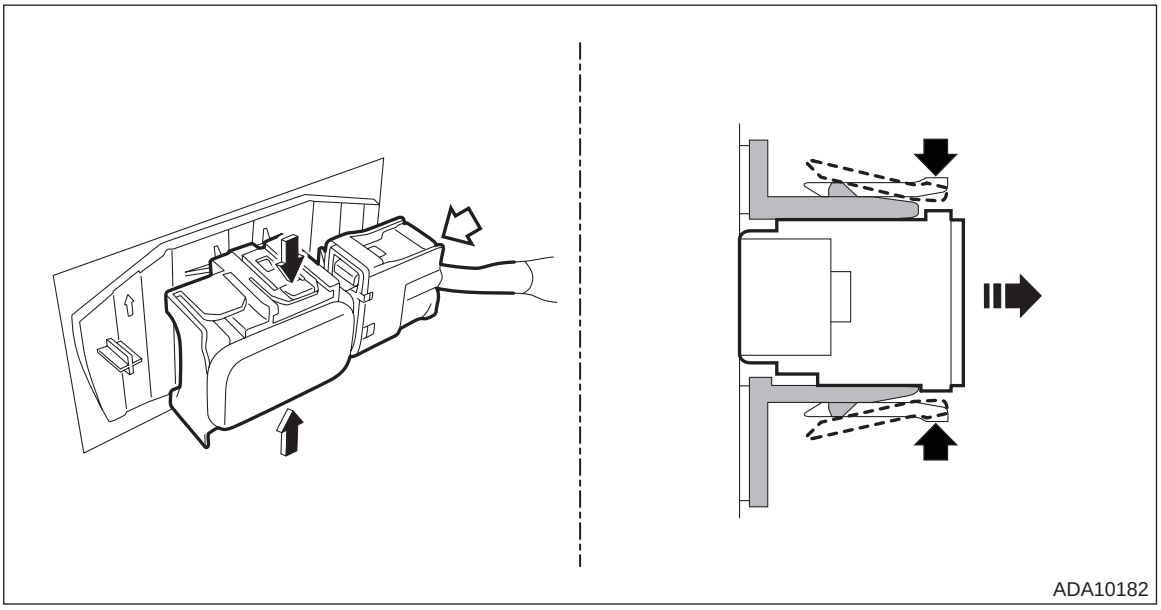
B: INSTALLATION

1) Install the Reverse Automatic Braking CM.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>

5. Sensor and Harness

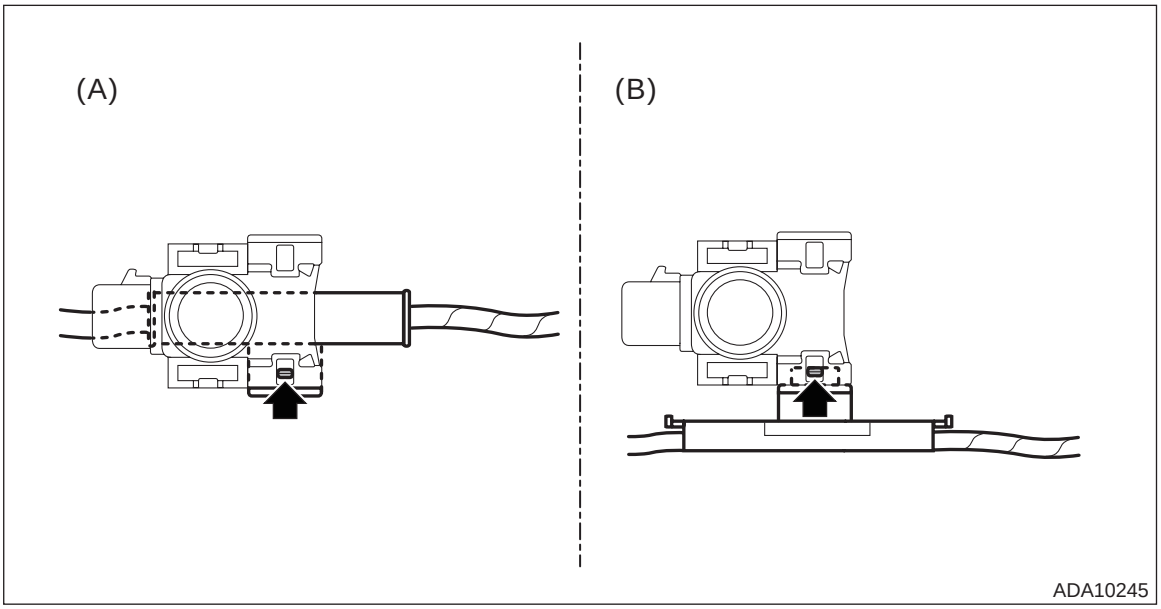
A: REMOVAL



1. SONAR SENSOR

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
2) Remove the bumper face - rear. <Ref. to EI-45, REMOVAL, Rear Bumper.>
3) Remove the sonar sensor.

CAUTION:
• When reusing the sensor, make sure to place a mark on the sensor and the bumper face - rear or others, and surely return each sensor to the original position before removed.
• The holder - sonar is fixed to the bumper face - rear with the double-sided tape and therefore cannot be removed.



NOTE:
The procedure for sedan model is only shown here. However the procedure for OUTBACK model can also be done in the same way as sedan model.

(1) Disconnect the connector.
(2) Release the claws and then remove the sonar sensor.

NOTE:
• The sonar sensors are equipped at four portions on the bumper face - rear.
• The figure indicates the sonar sensor (right corner). Remove the rest of the sensors in the same manner.

(3) Using a flat tip screwdriver wrapped with a protection tape or cloth, release the lock from the front side of the sonar sensor to remove the cord assembly - sonar.

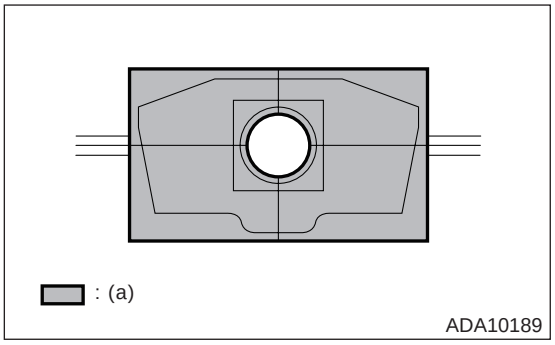
(A) Sedan model (B) OUTBACK model

NOTE:
Use a flat tip screwdriver with an appropriate size for the insertion opening.

B: INSTALLATION

1. SONAR SENSOR

CAUTION:
• When reusing the sensor, make sure to align the mark on the sensor and the bumper face - rear or others, and surely return each sensor to the original position before removed.
• If either the bumper face - rear or the holder - sonar is damaged, replace both to new parts.

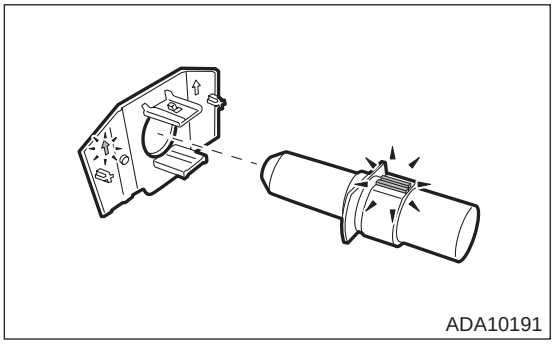


1) When installing the holder - sonar, perform work according to the following procedures.

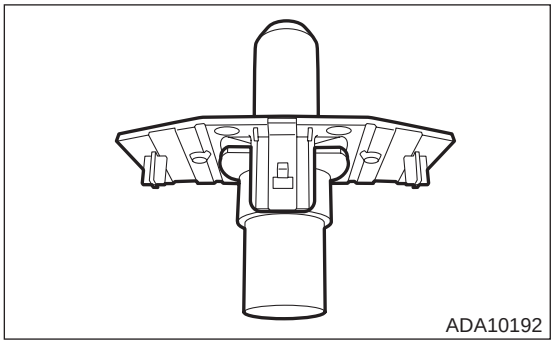
NOTE:
The procedure for sedan model is only shown here. However the procedure for OUTBACK model can also be done in the same way as sedan model.

(1) Clean the holder - sonar installation area of the bumper face - rear.
(2) Apply the primer to the primer application range frame (a) using sponge.

CAUTION:
• The primer has high volatility and can damage the coating surface. Therefore, be careful not to apply the primer on the surface of the bumper face - rear.
• Do not reapply the primer over the dried surface.



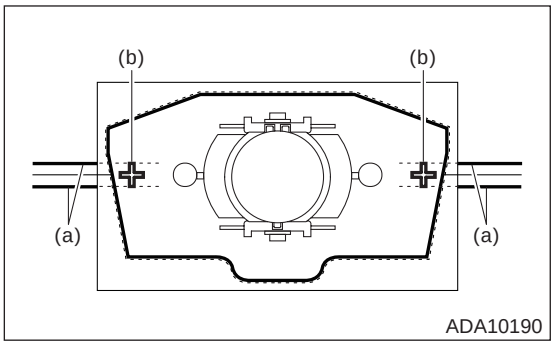
Preparation items:
Primer: 3M K-540NT or equivalent



(3) Install SONAR TOOL (ST) to the holder - sonar.

Preparation tool:
ST: SONAR TOOL (87692VA000)

1. Confirm that the arrows of the holder - sonar are facing up, and then set SONAR TOOL (ST) with the two slit portions facing up.



2. Install the holder - sonar and SONAR TOOL (ST) so that there is no gap in between.

(4) Install the holder - sonar.

1. Check if the primer is dry.
2. Detach the double-sided tape of the holder - sonar.
3. Insert the centering pin ends of SONAR TOOL (ST) into the sensor holes of the bumper face - rear, and install while aligning with the mark-off line (shape of the holder - sonar) within the primer application range frame of the bumper face - rear.

NOTE:
The mark-off (a) and pins (b) of the holder - sonar come to the same position.

4. To prevent play or looseness between the installation surface of the bumper face - rear and the holder - sonar, press down SONAR TOOL (ST) with approximately 49 — 59 N (5 — 6 kgf, 11 — 13 lb) for one second.

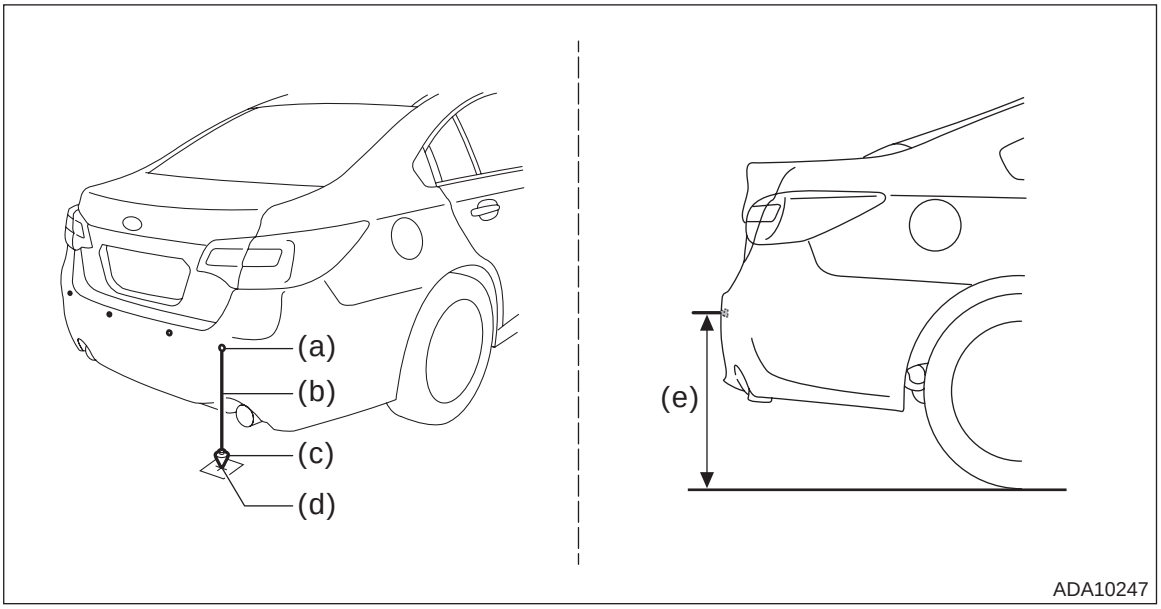
(5) Remove SONAR TOOL (ST), and check if the holder - sonar is fixed securely.

2) Install the sonar sensor.
3) Install the bumper face - rear.
4) Connect the ground terminal to battery sensor. <Ref. to RC-4, BATTERY, NOTE, Repair Contents.>
5) When the bumper face - rear, holder - sonar and sonar sensor are replaced, check the installation height and angle. <Ref. to RAB-11, SONAR SENSOR, INSPECTION, Sensor and Harness.>

C: INSPECTION

1. SONAR SENSOR

- **Height and angle inspection**



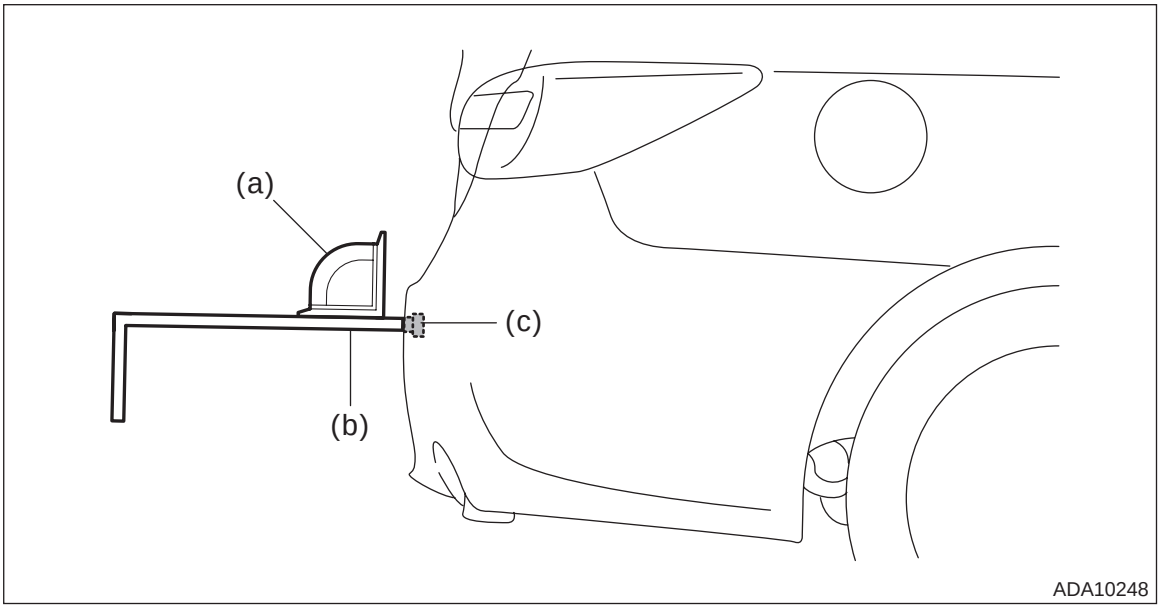
CAUTION:
Perform the inspection for each sonar sensor at curb weight.

NOTE:
The procedure for sedan model is only shown here. However the procedure for OUTBACK model can also be done in the same way as sedan model.

1) Before performing measurement, check the following items.
   (1) The vehicle is parked on a level surface.
   (2) The inflation pressure of tires is correct.
   (3) The vehicle does not have load.
   (4) Check the area around the sensor and rear bumper for any scratches or other type of deformation.
2) Prepare the measure, plumb bob, leveling line, angle gauge and try square.
3) Measure installation height of the sonar sensor.
   (1) Suspend the plumb bob with leveling line from the sensor, and mark the position where the plumb bob touches the ground. (Point A)

NOTE:
Stick the packing tape etc. on the floor, then make a marking on the tape.

   (2) Measure the height from the sensor to the marked Point A.



(a)	Sonar sensor	(c)	Plumb bob	(e)	Height
(b)	Leveling line	(d)	Point A		

   (3) Confirm that sensor installation height is within the acceptable limit.

Specification:
Sedan model: 590 — 620 mm (23.23 — 24.41 in)
OUTBACK model: 475 — 505 mm (18.7 — 19.88 in)

4) Measure the installation angle of the sonar sensor.
(1) Using an angle gauge and try square, measure the installation angle as shown in the figure.

(a) Angle gauge (b) Try square (c) Sonar sensor

NOTE:
Use the measurement tools while placing them perpendicularly to the sonar sensor.
(2) Confirm that sensor installation angle is within the acceptable limit.

Specification:
Sedan model: 2° — 6°
OUTBACK model: 6° — 10°

5) If the inspection result is not within the standard value, the rear bumper, holder - sonar or sonar sensor may be improperly installed or deformed. Check the installation status of each part, and perform inspection again.

6. Control Unit

A: NOTE

System control of the Reverse Automatic Braking is performed by each module. For procedure, refer to the following sections.

- Engine control module (ECM)
  - H4 model: <Ref. to FU(H4DO)-82, Engine Control Module (ECM).>
  - H6 model: <Ref. to FU(H6DO)-84, Engine Control Module (ECM).>
- Transmission control module (TCM)
  - H4 model: <Ref. to CVT(TR580)-161, Transmission Control Module (TCM).>
  - H6 model: <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>
- VDC control module (VDC CM): <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDC-CM&H/U).>
- Body integrated unit: <Ref. to SL-84, Body Integrated Unit.>
- Parking brake actuator: <Ref. to PB-9, Parking Brake Actuator.>
- Reverse Automatic Braking CM: <Ref. to RAB-6, Reverse Automatic Braking CM.>

7. Stereo Camera

A: NOTE

For the operation procedures for the stereo camera, refer to “EyeSight” section. <Ref. to ES-8, Stereo Camera.>

8. Combination Meter

A: NOTE

For the operation procedures for combination meter, refer to “INSTRUMENTATION/DRIVER INFO” section. <Ref. to IDI-11, Combination Meter.>

9. Audio

A: NOTE

For the operation procedures for audio, refer to “ENTERTAINMENT” section. <Ref. to ET-24, Audio.>

10.Navigation Body

A: NOTE

For the operation procedures for the navigation unit, refer to “ENTERTAINMENT” section. <Ref. to ET-24, Audio.>

17.	Cancel Code	61

1. Basic Diagnostic Procedure

A: PROCEDURE

Step		Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Ask the customer when and how the trouble occurred using the interview check list.	Did you interview the customer?	Go to step **2**.	Perform the interview.
2	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Select «Reverse Automatic Braking». NOTE: For detailed operation procedures, refer to “Application help”.	Is communication possible?	Go to step **3**.	Check the communication circuit.
3	**CHECK DTC.** Read the DTC relating «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Record the DTC, time stamp and freeze frame data, and go to next.	Perform diagnosis according to the procedures in the diagnostics with phenomenon.
4	**PERFORM DIAGNOSIS.** 1) Perform the diagnosis for the displayed DTCs. 2) Repair or replace the cause of trouble. 3) Perform the clear memory for «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-14, Clear Memory Mode.> 4) Execute the inspection mode. 5) Read the DTC relating «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Repeat step 4 until DTC is not shown.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

<table>
<tr><td colspan="2">Reverse Automatic Braking Check List for Interview</td><td colspan="2">Received Year Month Date</td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td>Registration No.</td><td>Initial year of registration

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

Airbag system harness is routed near the RAB CM.

CAUTION:
- **Do not use the electrical test equipment on the airbag system harnesses and connector circuits.**
- **Be careful not to damage the airbag system harness.**

B: INSPECTION

Before performing diagnostics, check the following item which might affect the Reverse Automatic Braking problems.

1. BASIC INSPECTION

1) Check the battery.
2) Check the main and other fuses, harnesses and connectors. Also check for proper grounding.

C: PREPARATION TOOL

1. SPECIAL TOOL

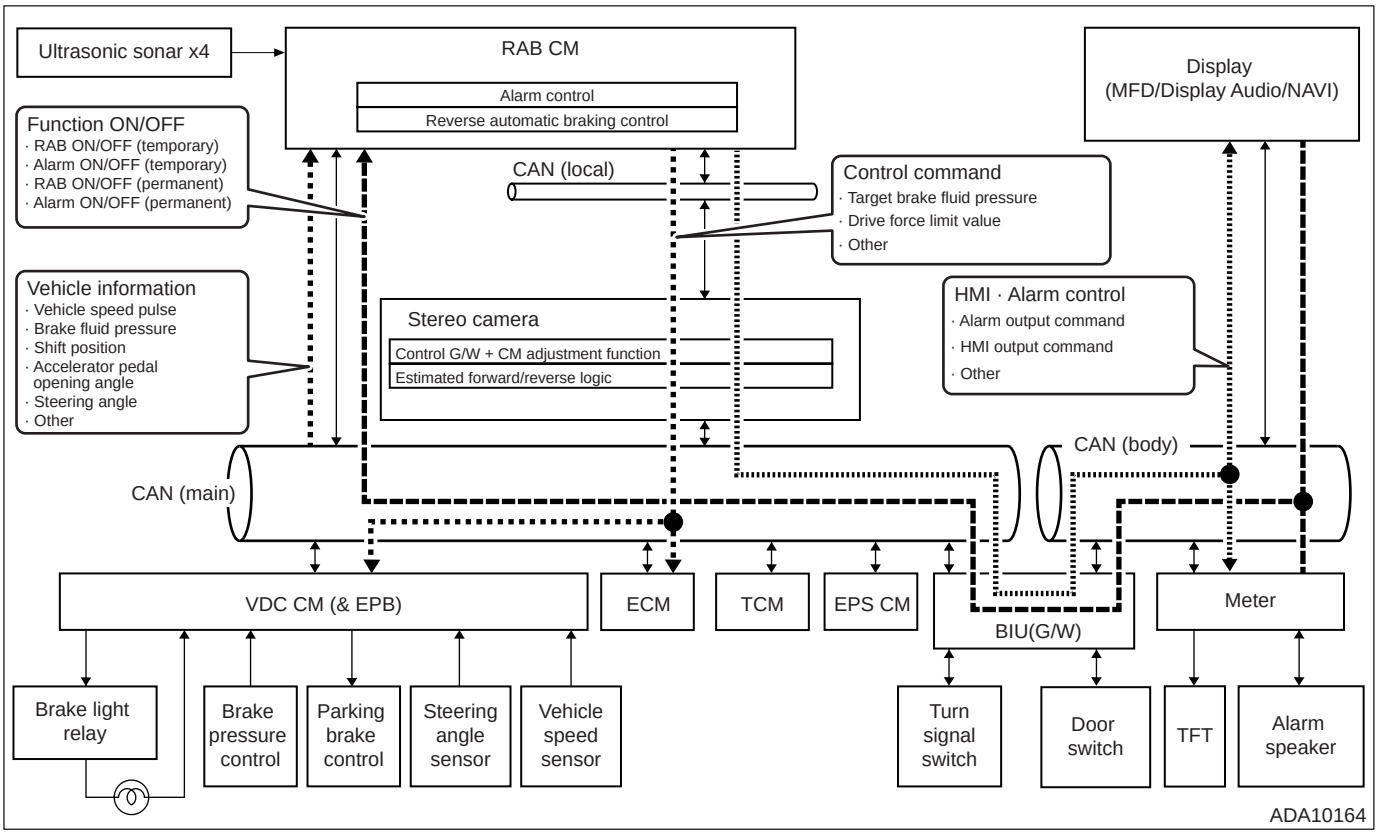

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
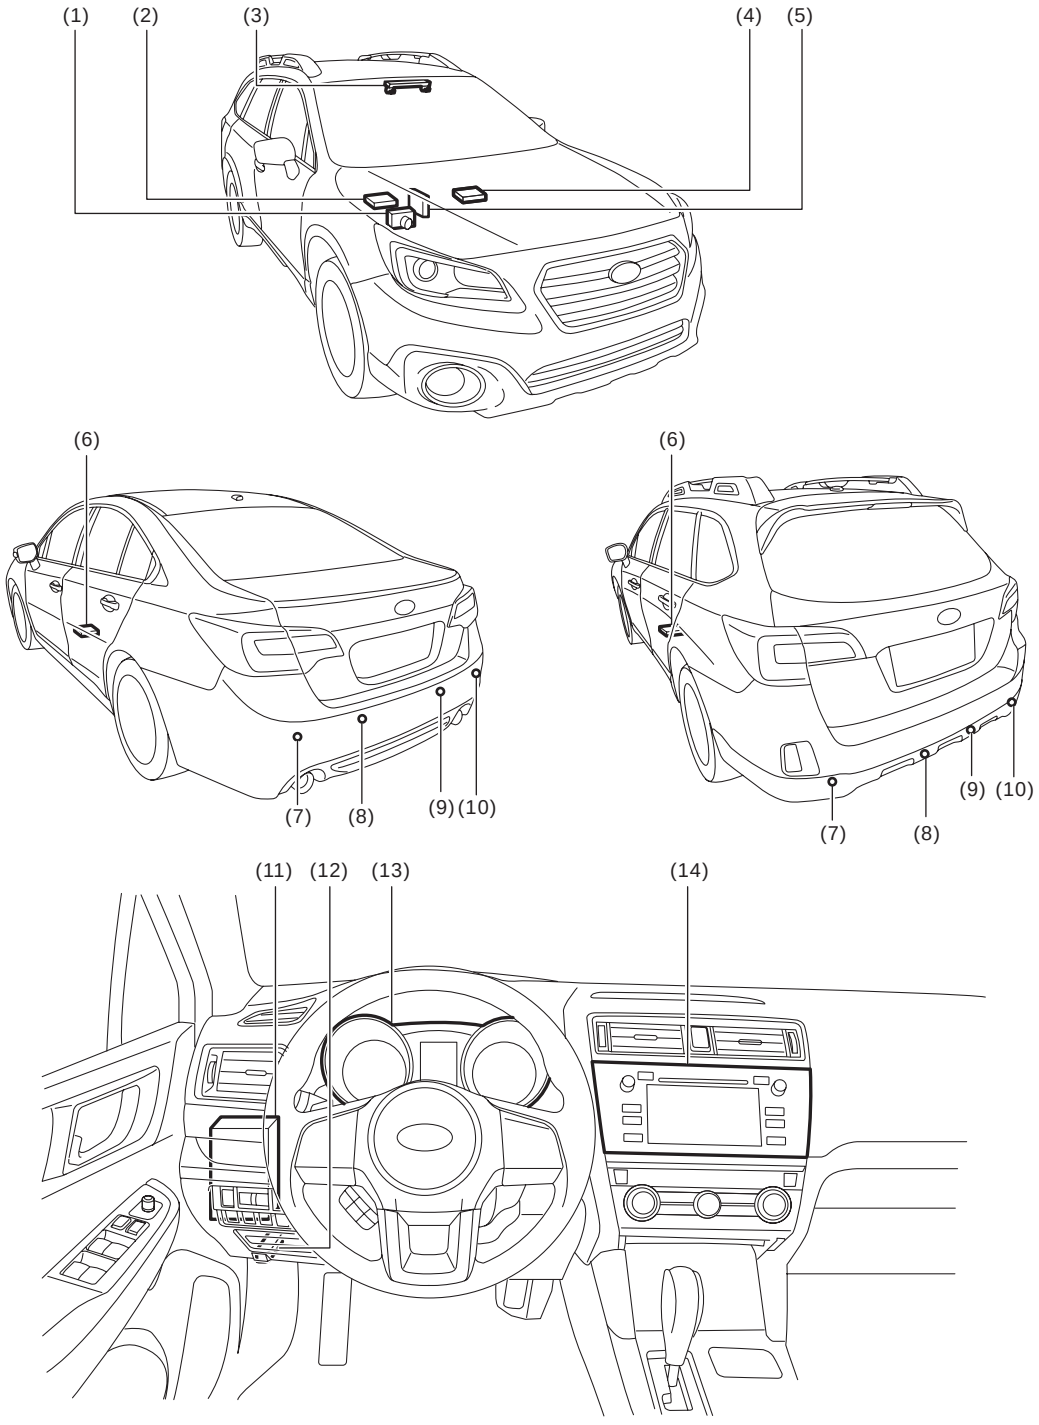
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

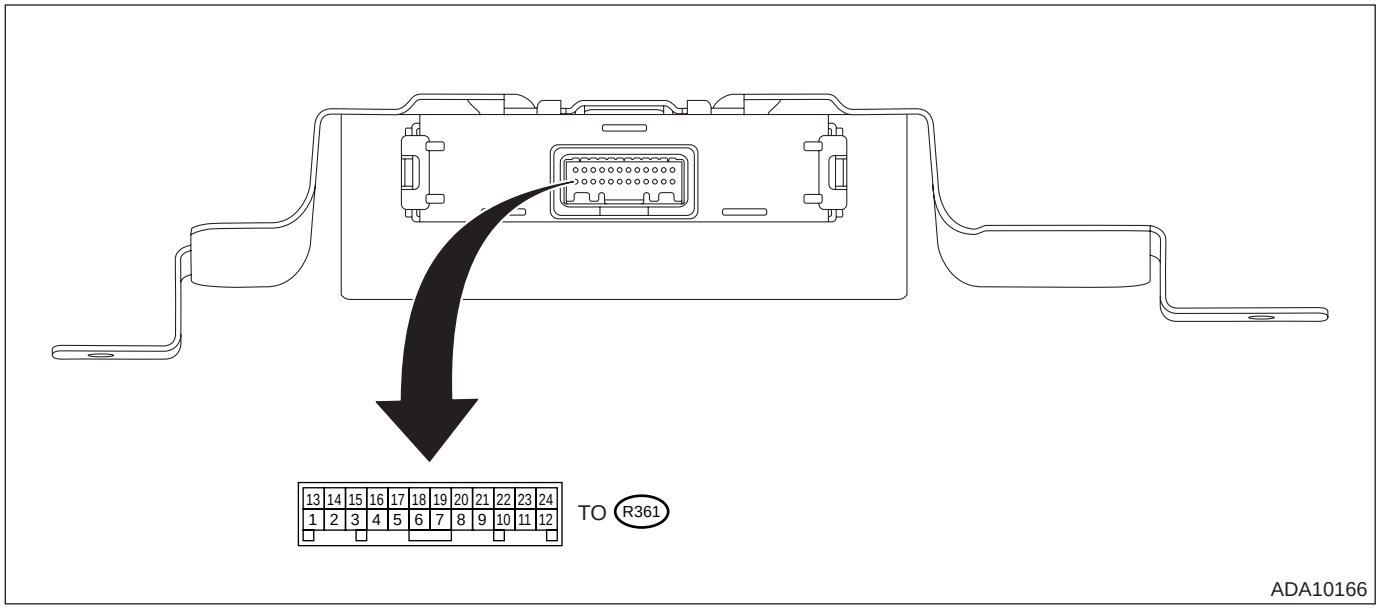


D: SYSTEM BLOCK DIAGRAM

The Reverse Automatic Braking is a system to avoid collision or reduce collision damage by informing with sound and operating the brake automatically, when the vehicle may collide with walls or obstacles on the rear during reversing.

4. Electrical Component Location

A: LOCATION



ADA10239

(1) VDC CM

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

1. RAB CM

Terminal No.	Content	Measuring condition	Standard
(R361) No. 1 ←→ Chassis ground	Ignition power supply	Ignition switch ON	Battery voltage
(R361) No. 2 ←→ Chassis ground	Ground	Always	1 Ω or less
(R361) No. 3	Not used	—	—
(R361) No. 4	Main CAN-L	—	—
(R361) No. 5	Local CAN-H (stereo camera communication line)	—	—
(R361) No. 6	Not used	—	—
(R361) No. 7	Not used	—	—
(R361) No. 8	Sonar sensor communication line (left corner -)	—	—
(R361) No. 9	Sonar sensor communication line (right inner -)	—	—
(R361) No. 10	Not used	—	—
(R361) No. 11	Sonar sensor communication line (left inner +)	—	—
(R361) No. 12	Sonar sensor communication line (right corner +)	—	—
(R361) No. 13	Battery power supply	Always	Battery voltage
(R361) No. 14	Not used	—	—
(R361) No. 15	Not used	—	—
(R361) No. 16	Main CAN-H	—	—
(R361) No. 17	Not used	—	—
(R361) No. 18	Local CAN-L (stereo camera communication line)	—	—
(R361) No. 19	Not used	—	—
(R361) No. 20	Not used	—	—
(R361) No. 21	Sonar sensor communication line (left inner -)	—	—
(R361) No. 22	Sonar sensor communication line (right corner -)	—	—
(R361) No. 23	Sonar sensor communication line (left corner +)	—	—
(R361) No. 24	Sonar sensor communication line (right inner +)	—	—

6. Inspection Mode

A: PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform the inspection mode and make sure that the function is resumed correctly and the DTC is recorded.
1) Turn the ignition switch to ON, and wait for 6 seconds or more. (*1)
2) Confirm that the RAB warning light (RAB malfunction indicator light) of MID in the combination meter is off.
3) Read the DTC and check that the DTC is not displayed. (*2)
*1: Even with normal condition, “RAB warning light (RAB OFF indicator light)” illuminates for 6 seconds after turning the ignition switch to ON, and then goes off after 6 seconds.
*2: Perform all DTC diagnosis within 3 seconds after the ignition switch is turned to ON. It is not necessary to shift the gear in the R range to operate the function.

7. Warning Light Illumination Pattern

A: NOTE

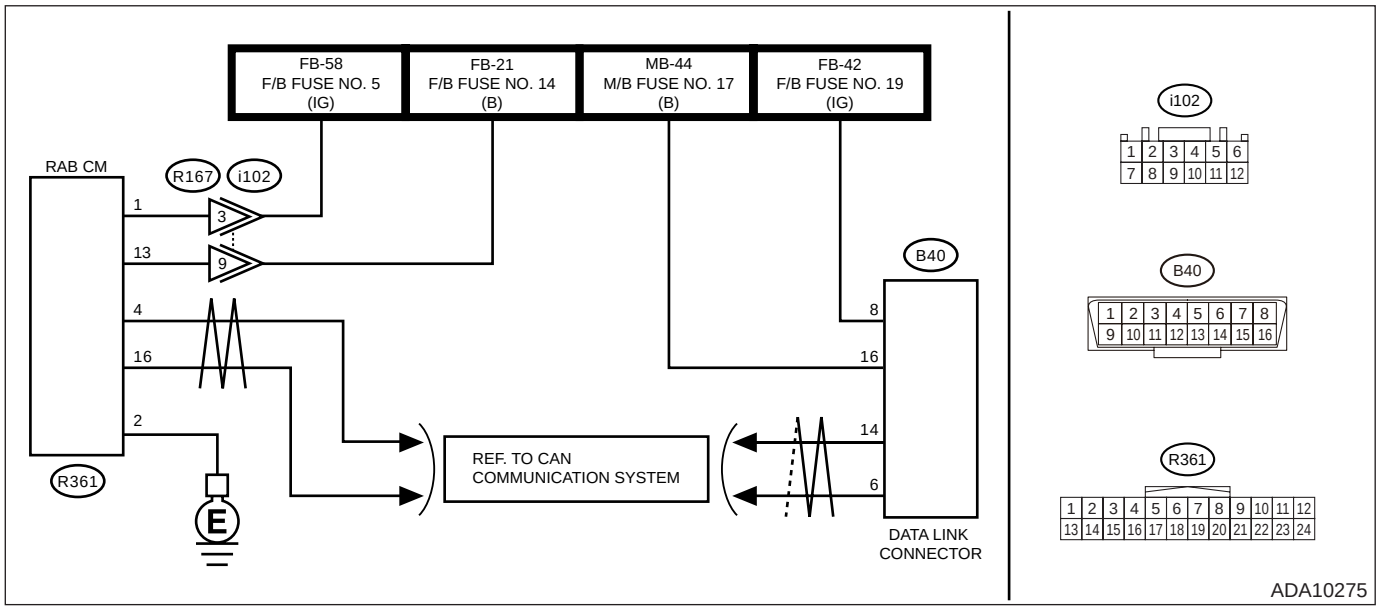
- When the Reverse Automatic Braking is error

“RAB” illuminates in MID in the combination meter.

- When the Reverse Automatic Braking is stopped temporarily

“RAB OFF” illuminates in MID in the combination meter.

NOTE:
Even with normal condition, “RAB warning light (RAB OFF indicator light)” illuminates for 6 seconds after turning the ignition switch to ON, and then goes off after 6 seconds.



8. Diagnostic Procedure for Subaru Select Monitor Communication

A: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Trouble symptom:
Communication is not possible with «Reverse Automatic Braking».
Detecting condition:
- Defective harness connector
- Power supply circuit malfunction
- Defective RAB CM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Wiring diagram:
Reverse Automatic Braking <Ref. to WI-332, Reverse Automatic Braking.>

Step		Check	Yes	No
1	**CHECK OUTPUT SIGNAL OF ECM.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the replaced fuse has blown out immediately, repair the short circuit to ground in harness between fuse and RAB CM.
2	**CHECK POWER SUPPLY CIRCUIT (OPEN).** 1) Disconnect the RAB CM connector. 2) Turn the ignition switch to ON. 3) Using a tester, measure the voltage between the RAB CM connector and chassis ground. ***Connector & terminal*** ***(R361) No. 1 (+) — Chassis ground (–):*** ***(R361) No. 13 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the open circuit in the harness between fuse and RAB CM connector.

	Step	Check	Yes	No
3	**CHECK GROUND CIRCUIT (OPEN).** 1) Turn the ignition switch to OFF. 2) Using a tester, measure the resistance between the RAB CM connector and chassis ground. ***Connector & terminal*** ***(R361) No. 2 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between RAB CM connector and chassis ground.
4	**CHECK LAN SYSTEM.** 1) Connect the RAB CM connector. 2) Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **5**.	Perform the inspection according to the diagnosis for LAN system.
5	**CHECK SUBARU SELECT MONITOR.** Connect the Subaru Select Monitor to another vehicle.	Is the communication possible with the vehicle?	Go to step **6**.	Replace or repair the Subaru Select Monitor.
6	**CHECK RAB CM.** Communicate with «Reverse Automatic Braking».	Is communication possible?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>

9. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Reverse Automatic Braking» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to RAB(diag)-24, List of Diagnostic Trouble Code (DTC).>

10.Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Reverse Automatic Braking» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

11.Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Reverse Automatic Braking» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Items to be displayed	Content	Standard	Note (unit)
Battery Voltage	System information	0 — 24.5	V
Ignition Voltage	System information	0 — 17.85	V

13.Customize

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Reverse Automatic Braking» and then select «Enter».
5) On «Select Function» display, select «Customize» and then select «Enter».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Customize item	Initial setting value	Setting value	Content
RAB Function ON/OFF Information(SSM)	ON	ON OFF	ON/OFF of the RAB function can be selected.

14.Work Support

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Reverse Automatic Braking» and then select «Enter».
5) On «Select Function» display, select «Work Support» and then select «Enter».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Work support item	Content
RAB Operation Record Data Save	When ignition switch ON counts of “Latest”, “1 block before”, “2 blocks before”... “4 blocks before” all shows “0”, it can be judges that there is no data. The display shows the latest data and the data in the previous 4 times in the order of their occurrence. Blue letter means that the data exists, and black letter means that there is no data. Select the blue letters and read out the details.
ECU Initialize	RAB CM is reset to the factory settings.
ECU Parts Number Display	RAB CM part number is displayed.
Software Information Display	Software information is displayed

Sensitivity of each sonar sensor can NOT be adjusted.

15.List of Diagnostic Trouble Code (DTC)

16.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B2C00 SONAR CONTROL MODULE CIRCUIT

Outline of diagnosis:
Detect the malfunction of the RAB CM.
Time needed for diagnosis:
10 ms
Recovery conditions:
Ignition switch OFF → ON

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC relating «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is a DTC other than DTC B2C00 displayed? (Current malfunction)	Perform the diagnosis for DTC other than DTC B2C00.	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>

B: DTC B2C01 RR SONAR CONTROL MODULE CIRCUIT

Outline of diagnosis:
Detect the malfunction of the RAB CM.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC relating «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is a DTC other than DTC B2C01 displayed? (Current malfunction)	Perform the diagnosis for DTC other than DTC B2C01.	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>

C: DTC B2C02 RRC SONAR CONTROL MODULE CIRCUIT

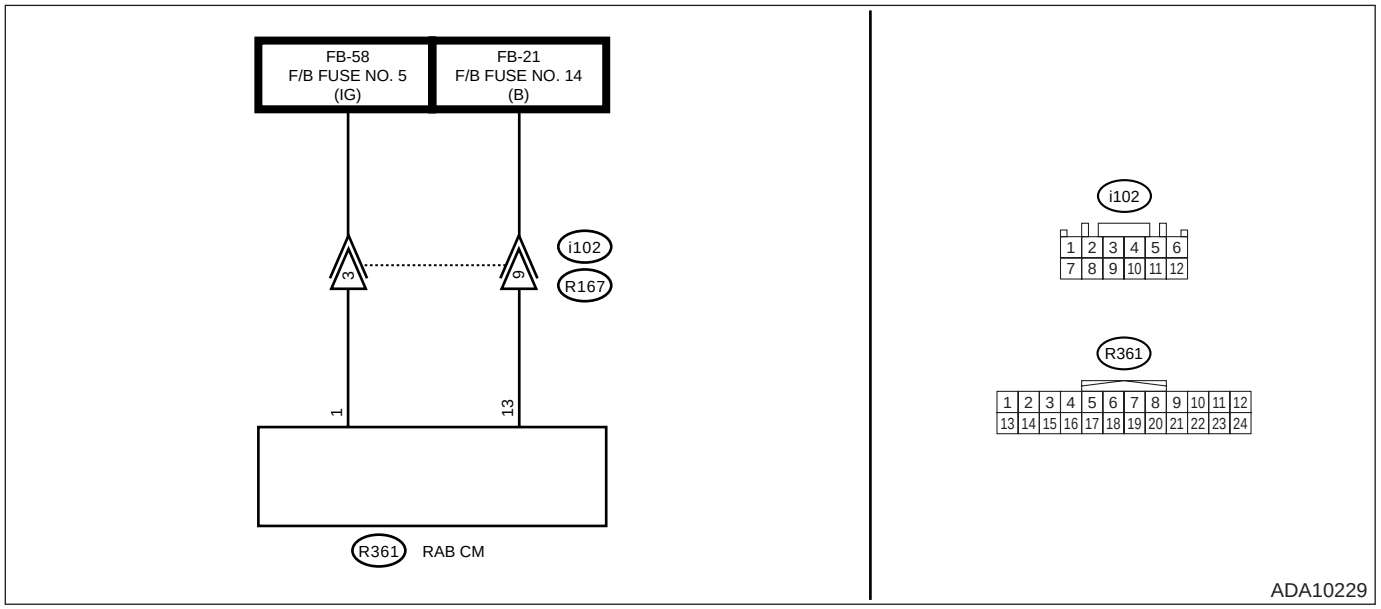
Outline of diagnosis:
Detect the malfunction of the RAB CM.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON

Step		Check	Yes	No
1	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is a DTC other than DTC B2C02 displayed? (Current malfunction)	Perform the diagnosis for DTC other than DTC B2C02.	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>

D: DTC B2C03 RL SONAR CONTROL MODULE CIRCUIT

Outline of diagnosis:
Detect the malfunction of the RAB CM.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC relating «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is a DTC other than DTC B2C03 displayed? (Current malfunction)	Perform the diagnosis for DTC other than DTC B2C03.	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>

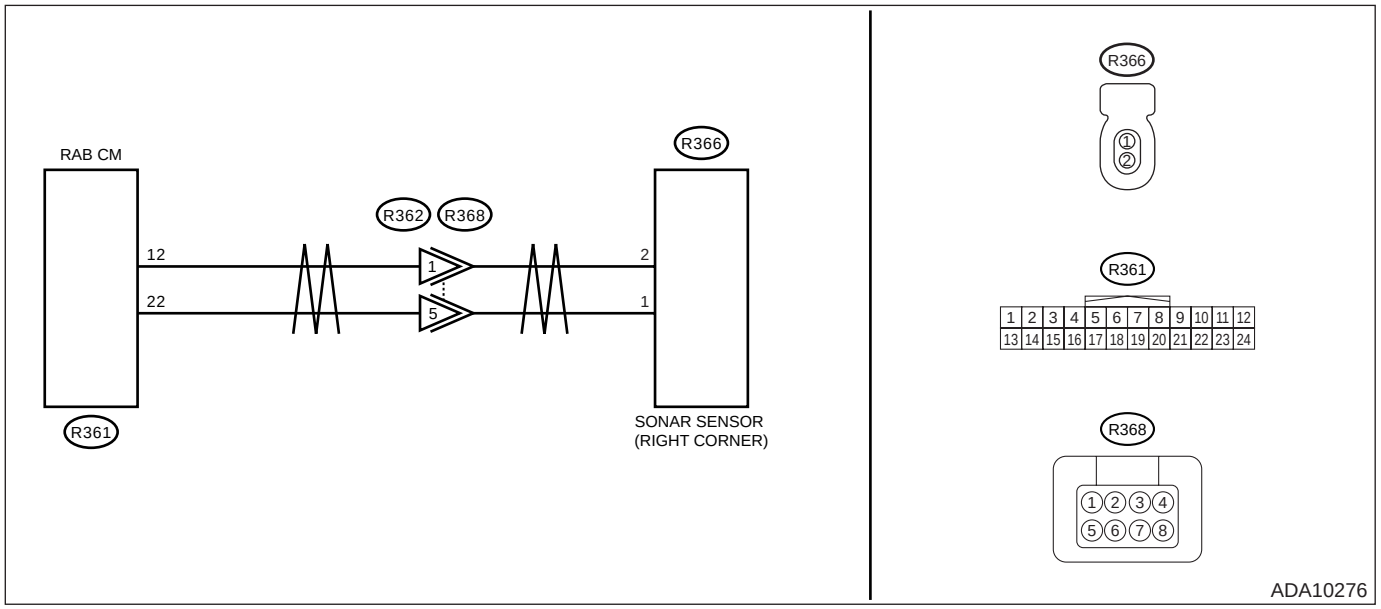


E: DTC B2C04 RLC SONAR CONTROL MODULE CIRCUIT

Outline of diagnosis:
Detect the malfunction of the RAB CM.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON

Step		Check	Yes	No
1	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is a DTC other than DTC B2C04 displayed? (Current malfunction)	Perform the diagnosis for DTC other than DTC B2C04.	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>

F: DTC B2C05 SONAR CONTROL MODULE POWER SUPPLY



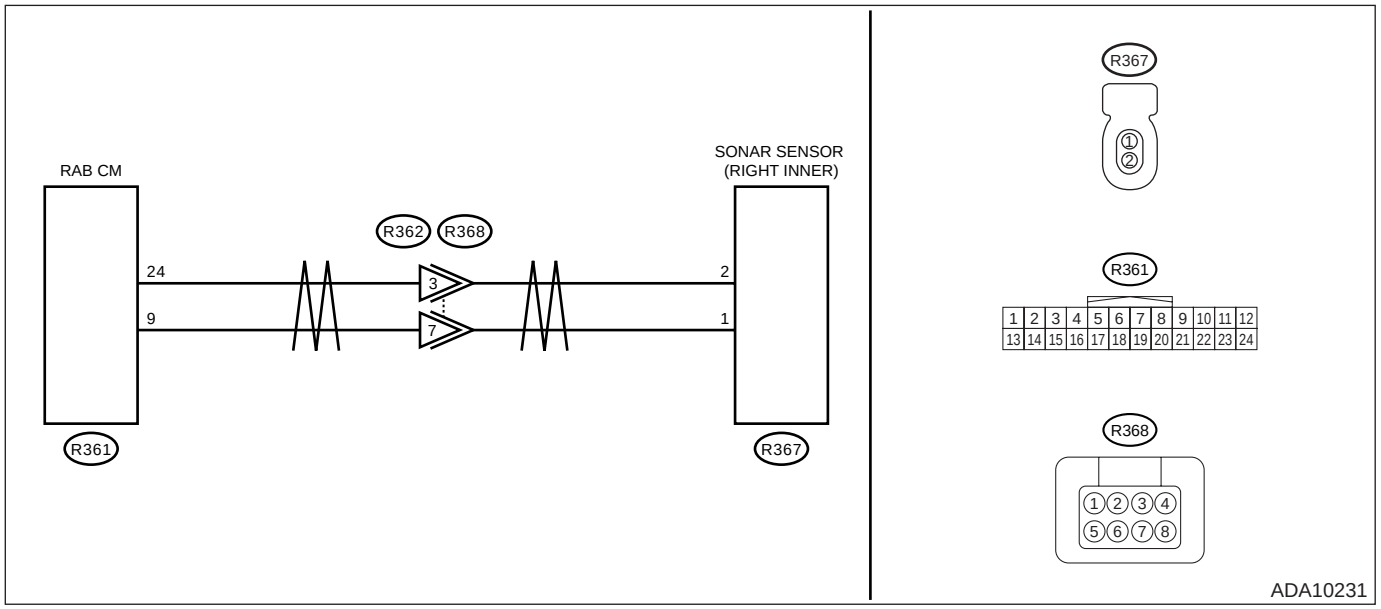
Outline of diagnosis:
Voltage supply to the ignition power supply terminal and the battery power supply terminal was 16 V or more.
Time needed for diagnosis:
200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-332, Reverse Automatic Braking.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the RAB CM connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C05 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK RAB CM POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the RAB CM connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between the RAB CM connector and chassis ground. ***Connector & terminal*** ***(R361) No. 1 (+) — Chassis ground (–):*** ***(R361) No. 13 (+) — Chassis ground (–):***	Is the voltage 16 V or less?	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Check the harness between the RAB CM connector and power supply.

G: DTC B2C06 RR SONAR SENSOR CIRCUIT / NO SIGNAL

Outline of diagnosis:
Sonar sensor (right corner) harness is open.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-332, Reverse Automatic Braking.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right corner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C06 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right corner) connector and the RAB CM connector. 3) Using a tester, measure resistance value of the harness between the sonar sensor (right corner) connector and RAB CM connector. ***Connector & terminal*** ***(R361) No. 12 — (R366) No. 2:*** ***(R361) No. 22 — (R366) No. 1:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair or replace the open circuit in the harness between sonar sensor connector and RAB CM connector.



Step		Check	Yes	No
3	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (right corner) and sonar sensor (right inner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C06 displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (right corner). <Ref. to RAB-7, Sensor and Harness.>

H: DTC B2C07 RR SONAR SENSOR / SONAR CONTROL MODULE CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC B2C06. <Ref. to RAB(diag)-30, DTC B2C06 RR SONAR SENSOR CIRCUIT / NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

I: DTC B2C08 RRC SONAR SENSOR CIRCUIT / NO SIGNAL

Outline of diagnosis:
Sonar sensor (right inner) harness is open.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-332, Reverse Automatic Braking.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right inner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C08 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right inner) connector and the RAB CM connector. 3) Using a tester, measure resistance value of the harness between the sonar sensor (right inner) connector and RAB CM connector. ***Connector & terminal*** ***(R361) No. 24 — (R367) No. 2:*** ***(R361) No. 9 — (R367) No. 1:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair or replace the open circuit in the harness between sonar sensor connector and RAB CM connector.

	Step	Check	Yes	No
3	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (right inner) and sonar sensor (right corner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C08 displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (right inner). <Ref. to RAB-7, Sensor and Harness.>

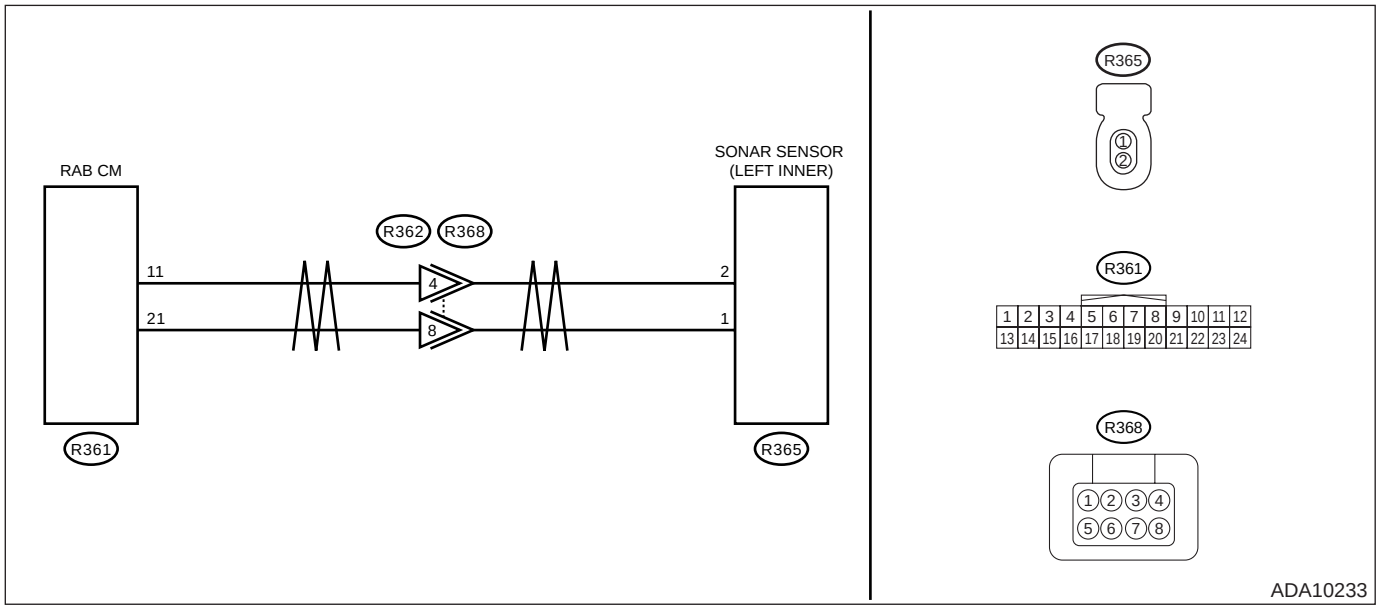
J: DTC B2C09 RRC SONAR SENSOR / SONAR CONTROL MODULE CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC B2C07. <Ref. to RAB(diag)-31, DTC B2C07 RR SONAR SENSOR / SONAR CONTROL MODULE CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

K: DTC B2C0A RL SONAR SENSOR CIRCUIT / NO SIGNAL

Outline of diagnosis:
Sonar sensor (left corner) harness is open.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-332, Reverse Automatic Braking.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left corner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C0A displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left corner) connector and the RAB CM connector. 3) Using a tester, measure resistance value of the harness between the sonar sensor (left corner) connector and RAB CM connector. ***Connector & terminal*** ***(R361) No. 8 — (R364) No. 1:*** ***(R361) No. 23 — (R364) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair or replace the open circuit in the harness between sonar sensor connector and RAB CM connector.



Step		Check	Yes	No
3	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (left corner) and sonar sensor (left inner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C0A displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (left corner). <Ref. to RAB-7, Sensor and Harness.>

L: DTC B2C0B RL SONAR SENSOR / SONAR CONTROL MODULE CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC B2C0A. <Ref. to RAB(diag)-34, DTC B2C0A RL SONAR SENSOR CIRCUIT / NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

M: DTC B2C0C RLC SONAR SENSOR CIRCUIT / NO SIGNAL

Outline of diagnosis:
Sonar sensor (left inner) harness is open.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-332, Reverse Automatic Braking.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left inner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C0C displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left inner) connector and the RAB CM connector. 3) Using a tester, measure resistance value of the harness between the sonar sensor (left inner) connector and RAB CM connector. ***Connector & terminal*** ***(R361) No. 11 — (R365) No. 2:*** ***(R361) No. 21 — (R365) No. 1:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair or replace the open circuit in the harness between sonar sensor connector and RAB CM connector.

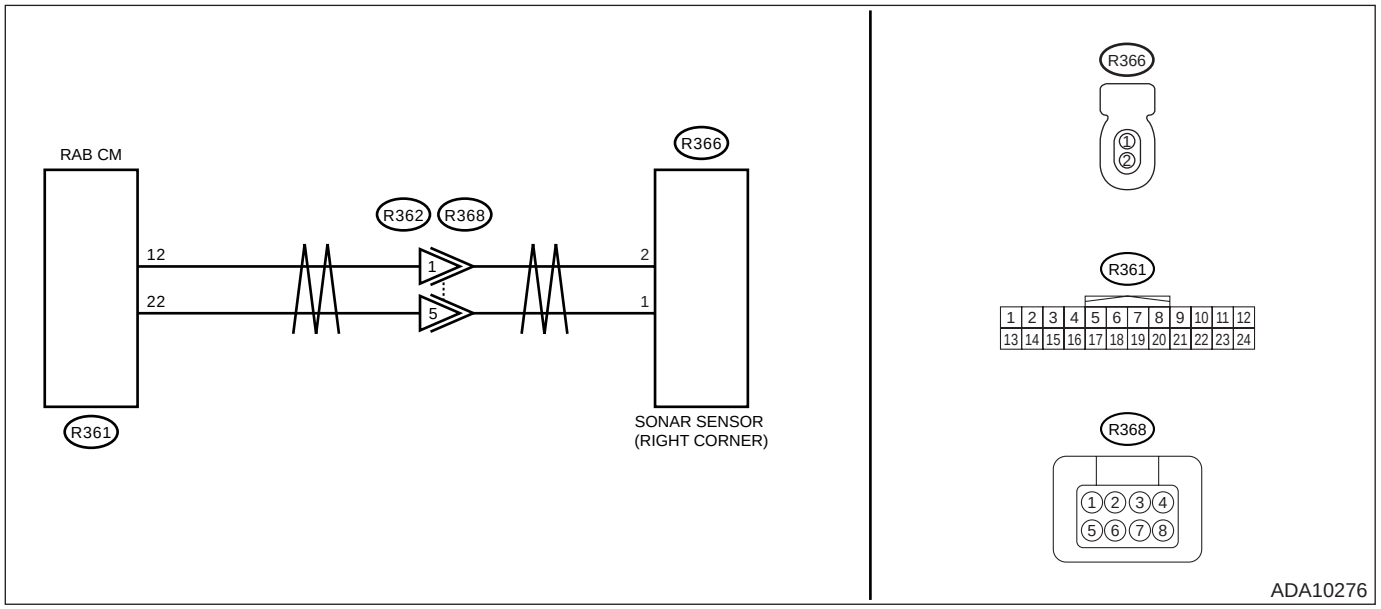
	Step	Check	Yes	No
3	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (left inner) and sonar sensor (left corner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C0C displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (left inner). <Ref. to RAB-7, Sensor and Harness.>

N: DTC B2C0D RLC SONAR SENSOR / SONAR CONTROL MODULE CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC B2C0C. <Ref. to RAB(diag)-36, DTC B2C0C RLC SONAR SENSOR CIRCUIT / NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

O: DTC B2C0E RR SONAR HARNESS HIGH

Outline of diagnosis:
Sonar sensor (right corner) harness is shorted to power supply.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-332, Reverse Automatic Braking.>

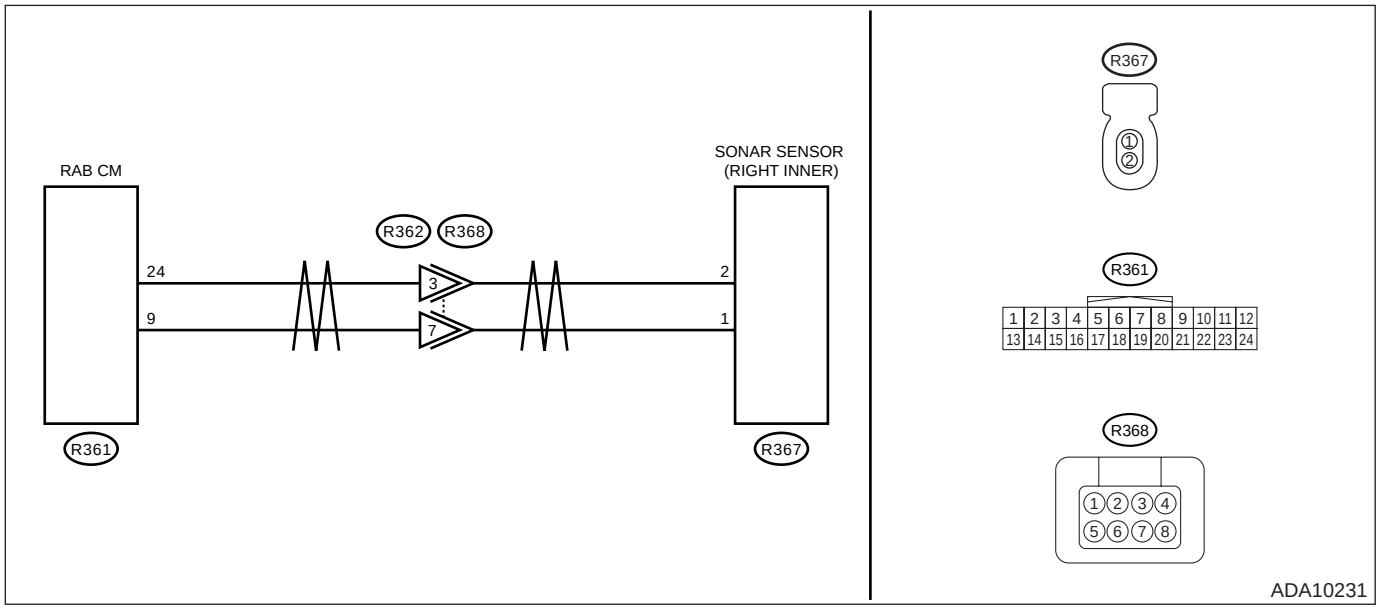


Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right corner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C0E displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right corner) connector and the RAB CM connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between sonar sensor (right corner) connector and chassis ground. ***Connector & terminal (R366) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.
3	**CHECK SONAR SENSOR.** 1) Turn the ignition switch to OFF. 2) Switch the sonar sensor (right corner) and sonar sensor (right inner). 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C0E displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (right corner).

P: DTC B2C0F RR SONAR HARNESS LOW

Outline of diagnosis:
Sonar sensor (right corner) harness is shorted to ground.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-332, Reverse Automatic Braking.>

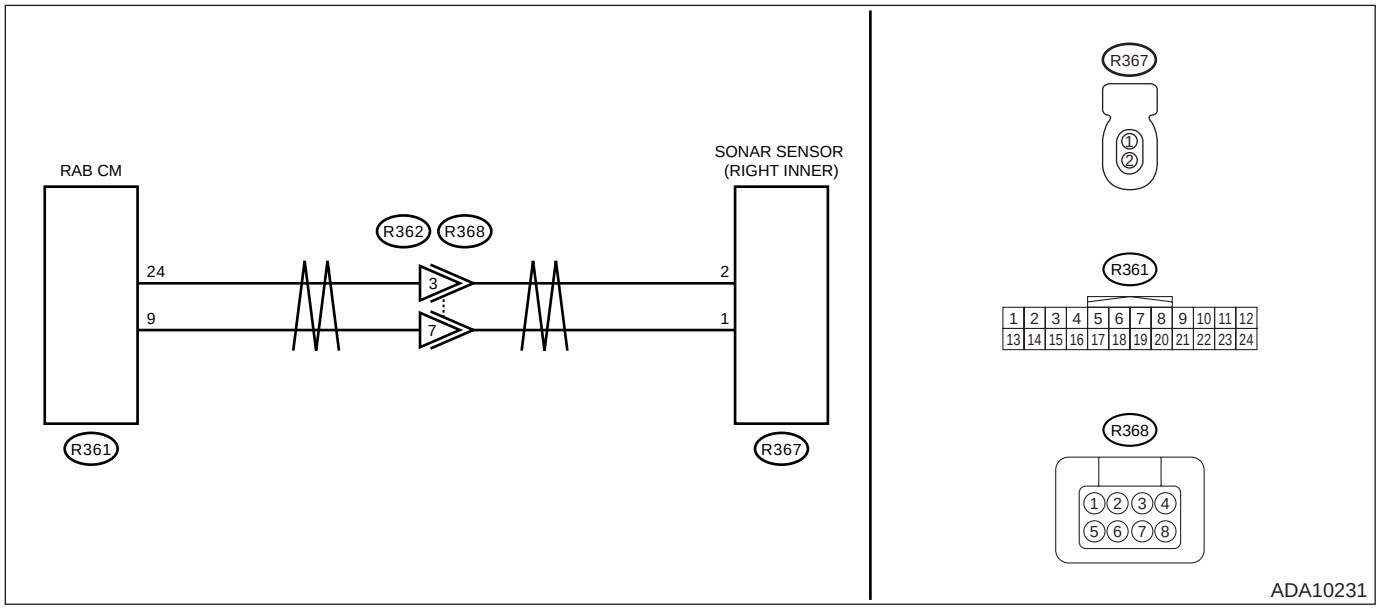


Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right corner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C0F displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right corner) connector and the RAB CM connector. 3) Using a tester, measure the resistance between sonar sensor (right corner) connector and chassis ground. ***Connector & terminal*** ***(R366) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.

	Step	Check	Yes	No
3	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (right corner) and sonar sensor (right inner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C0F displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (right corner).

Q: DTC B2C10 RRC SONAR HARNESS HIGH

Outline of diagnosis:
Sonar sensor (right inner) harness is shorted to power supply.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-332, Reverse Automatic Braking.>

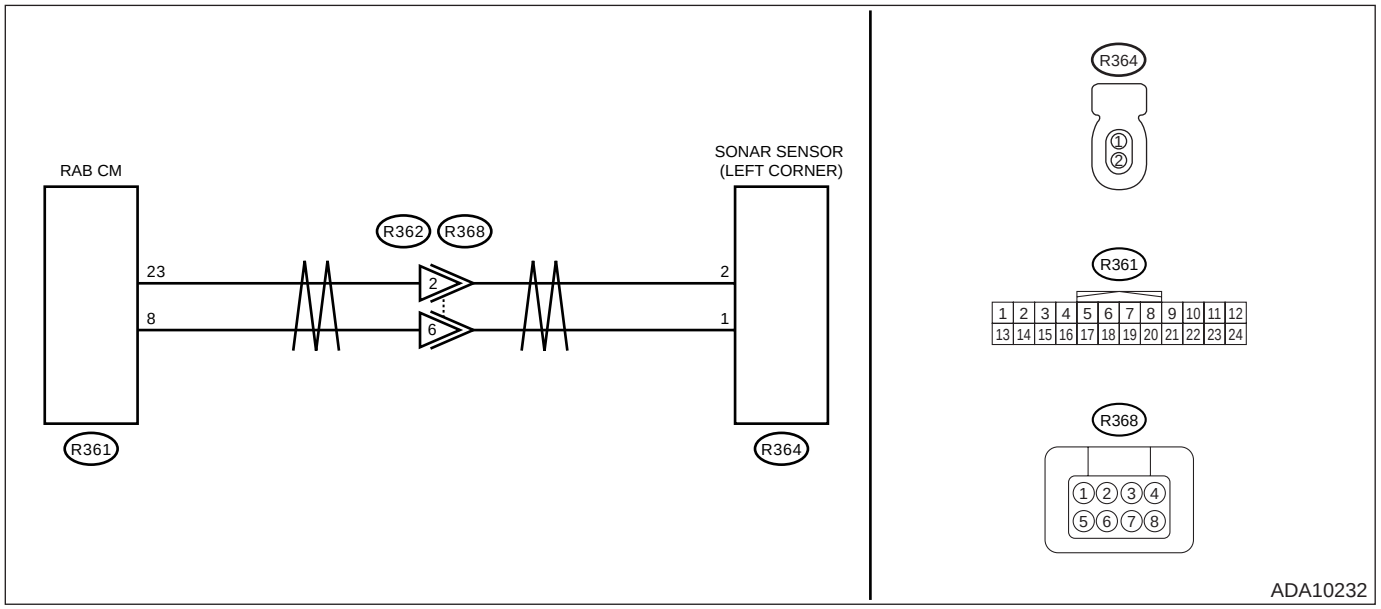


Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right inner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C10 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right inner) connector and the RAB CM connector. 3) Using a tester, measure the voltage between sonar sensor (right inner) connector and chassis ground. ***Connector & terminal*** ***(R367) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.

	Step	Check	Yes	No
3	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (right inner) and sonar sensor (right corner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C10 displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (right inner).

R: DTC B2C11 RRC SONAR HARNESS LOW

Outline of diagnosis:
Sonar sensor (right inner) harness is shorted to ground.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-332, Reverse Automatic Braking.>

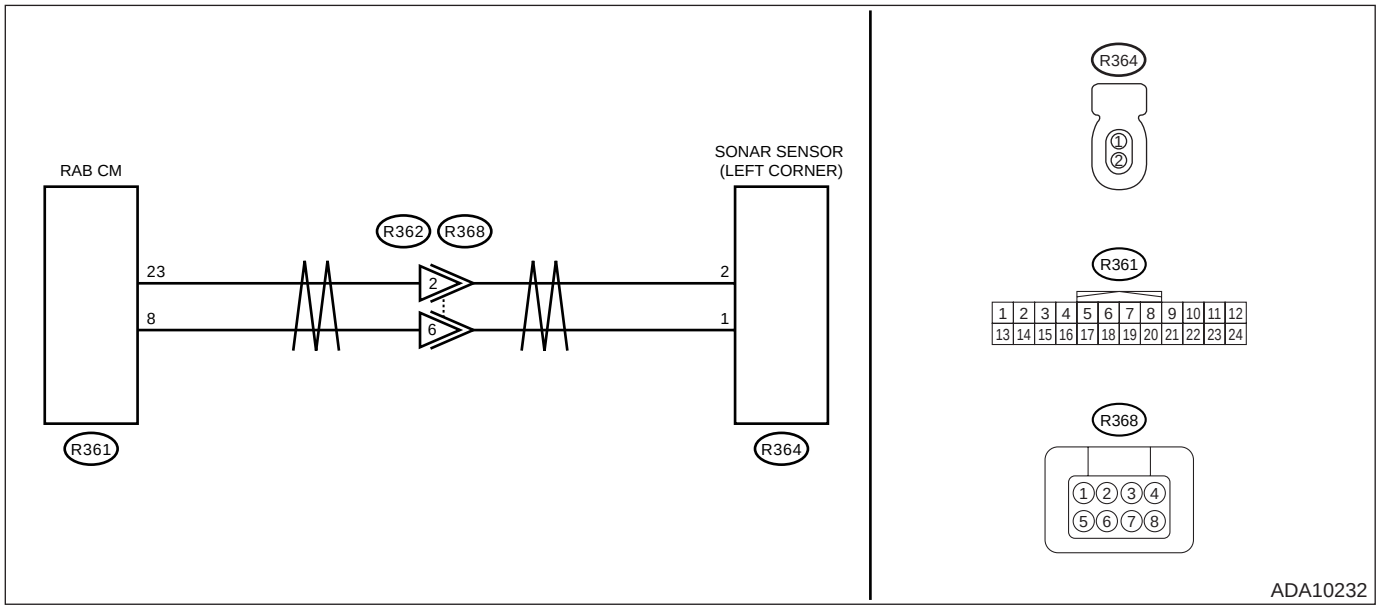


Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right inner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C11 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right inner) connector and the RAB CM connector. 3) Using a tester, measure the resistance between sonar sensor (right inner) connector and chassis ground. ***Connector & terminal*** ***(R367) No. 2 — Chassis ground:***	Is the resistance less than 1 MΩ?	Go to step **3**.	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.

	Step	Check	Yes	No
3	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (right inner) and sonar sensor (right corner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C11 displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (right inner).

S: DTC B2C12 RL SONAR HARNESS HIGH

Outline of diagnosis:
Sonar sensor (left corner) harness is shorted to power supply.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-332, Reverse Automatic Braking.>

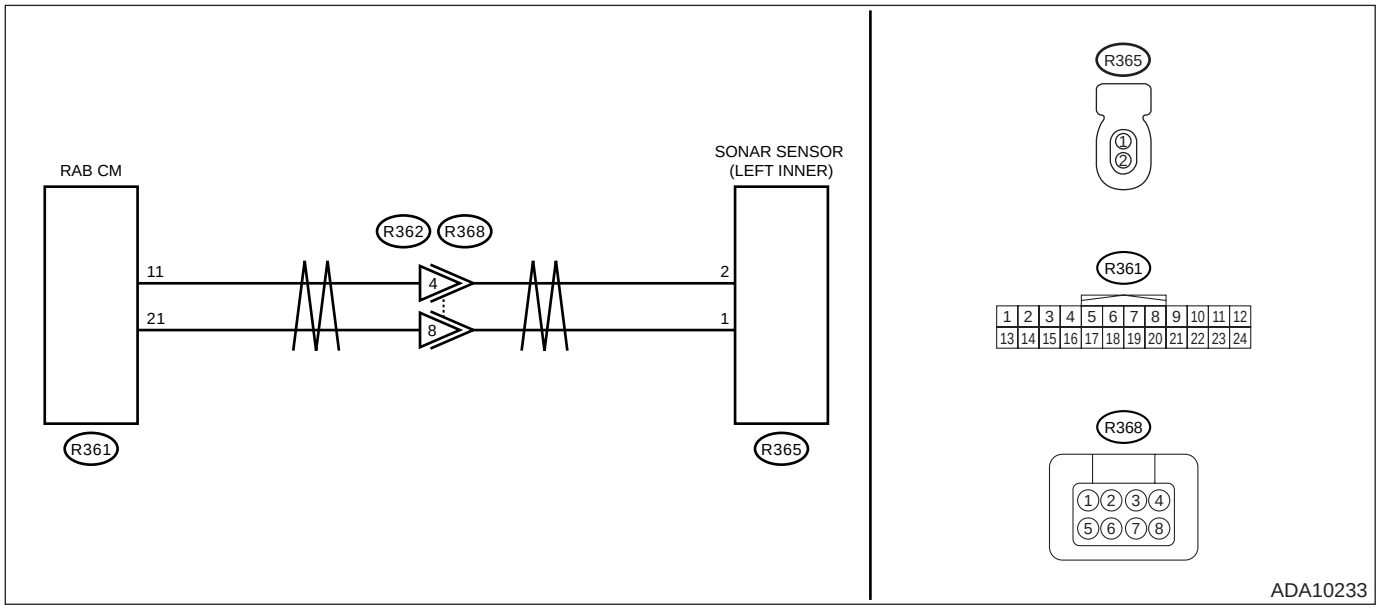


Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left corner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C12 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left corner) connector and the RAB CM connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between sonar sensor (left corner) connector and chassis ground. ***Connector & terminal (R364) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.
3	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (left corner) and sonar sensor (left inner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C12 displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (left corner).

T: DTC B2C13 RL SONAR HARNESS LOW

Outline of diagnosis:
Sonar sensor (left corner) harness is shorted to ground.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-332, Reverse Automatic Braking.>

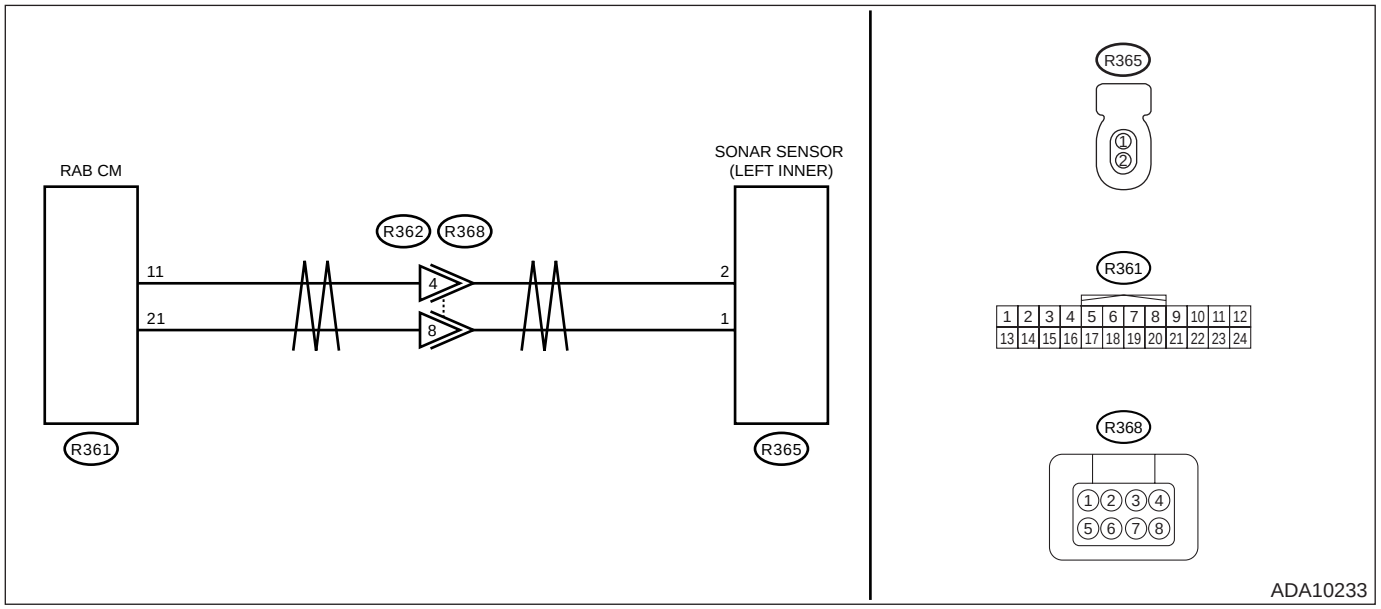


Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left corner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C13 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left corner) connector and the RAB CM connector. 3) Using a tester, measure the resistance between sonar sensor (left corner) connector and chassis ground. ***Connector & terminal*** ***(R364) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.

	Step	Check	Yes	No
3	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (left corner) and sonar sensor (left inner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C13 displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (left corner).

U: DTC B2C14 RLC SONAR HARNESS HIGH

Outline of diagnosis:
Sonar sensor (left inner) harness is shorted to power supply.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-332, Reverse Automatic Braking.>



Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left inner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C14 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left inner) connector and the RAB CM connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between sonar sensor (left inner) connector and chassis ground. ***Connector & terminal (R365) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.
3	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (left inner) and sonar sensor (left corner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C14 displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (left inner).

V: DTC B2C15 RLC SONAR HARNESS LOW

Outline of diagnosis:
Sonar sensor (left inner) harness is shorted to ground.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-332, Reverse Automatic Braking.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left inner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C15 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left inner) connector and the RAB CM connector. 3) Using a tester, measure the resistance between sonar sensor (left inner) connector and chassis ground. ***Connector & terminal*** ***(R365) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.

	Step	Check	Yes	No
3	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (left inner) and sonar sensor (left corner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C15 displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (left inner).

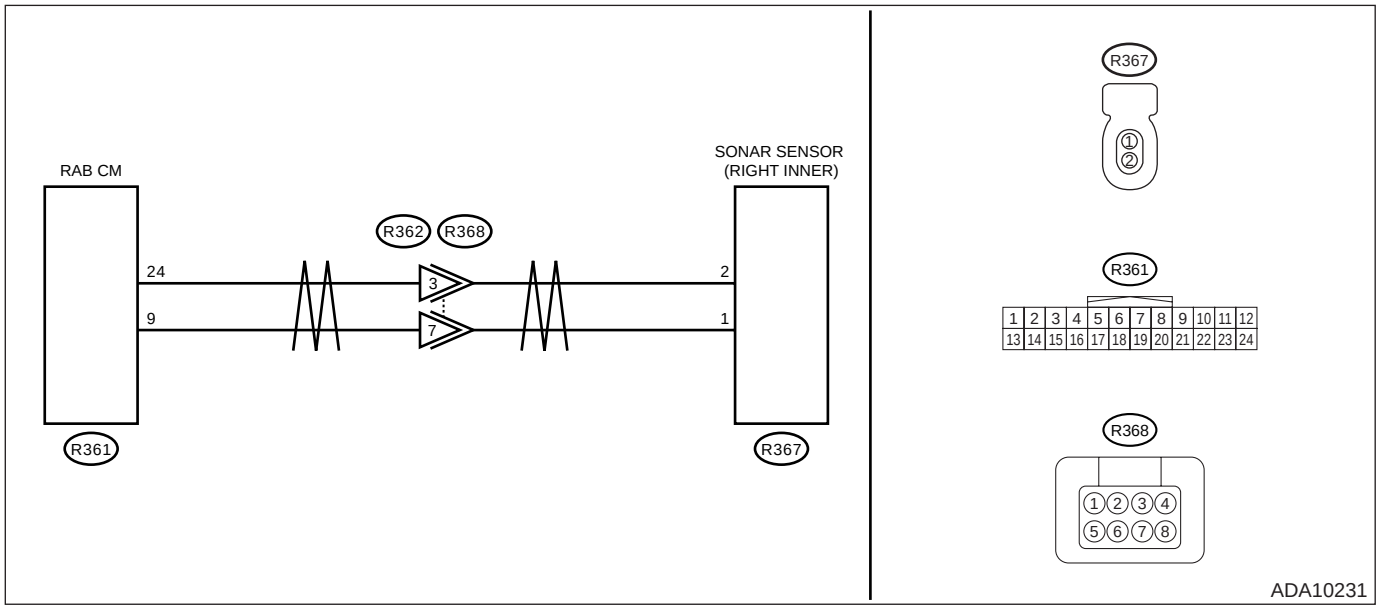
W: DTC B2C16 RRC SONAR HARNESS HIGH / RRC SONAR CONTROL MODULE CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC B2C10. <Ref. to RAB(diag)-42, DTC B2C10 RRC SONAR HARNESS HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

X: DTC B2C17 RLC SONAR HARNESS HIGH / RLC SONAR CONTROL MODULE CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC B2C14. <Ref. to RAB(diag)-50, DTC B2C14 RLC SONAR HARNESS HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Y: DTC B2C18 RR SONAR HARNESS HIGH / RR SONAR CONTROL MODULE CIRCUIT

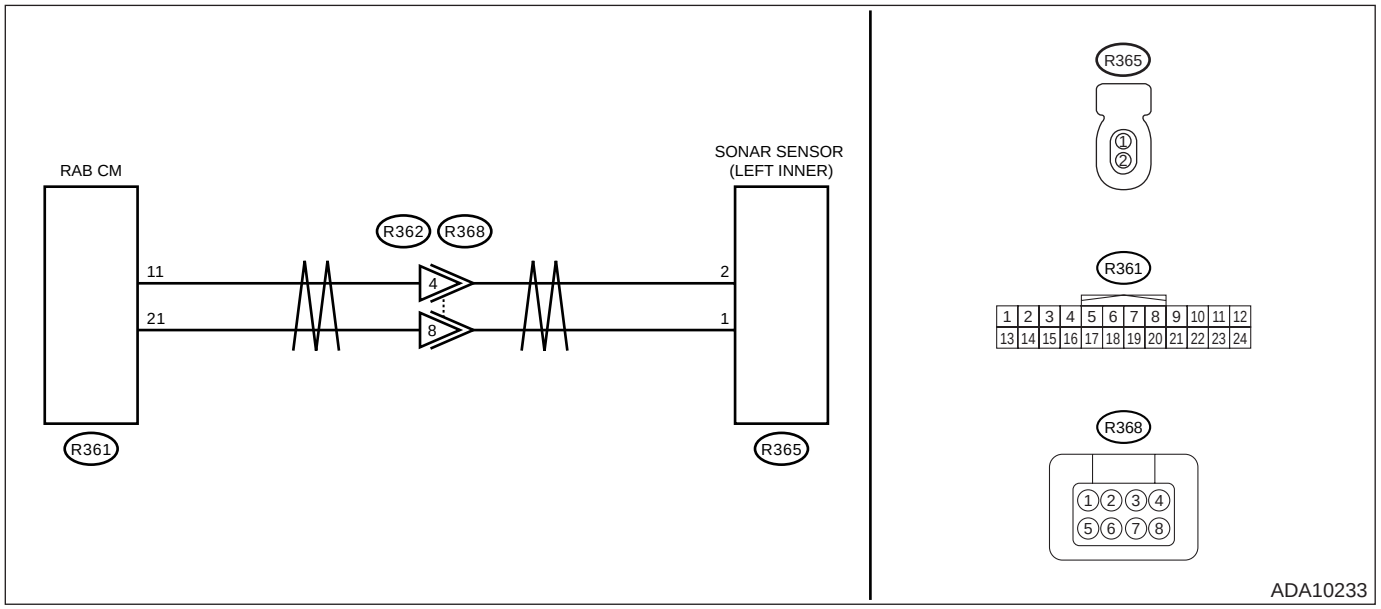


NOTE:
For the diagnostic procedure, refer to DTC B2C0E. <Ref. to RAB(diag)-38, DTC B2C0E RR SONAR HARNESS HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Z: DTC B2C19 RL SONAR HARNESS HIGH / RL SONAR CONTROL MODULE CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC B2C12. <Ref. to RAB(diag)-46, DTC B2C12 RL SONAR HARNESS HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

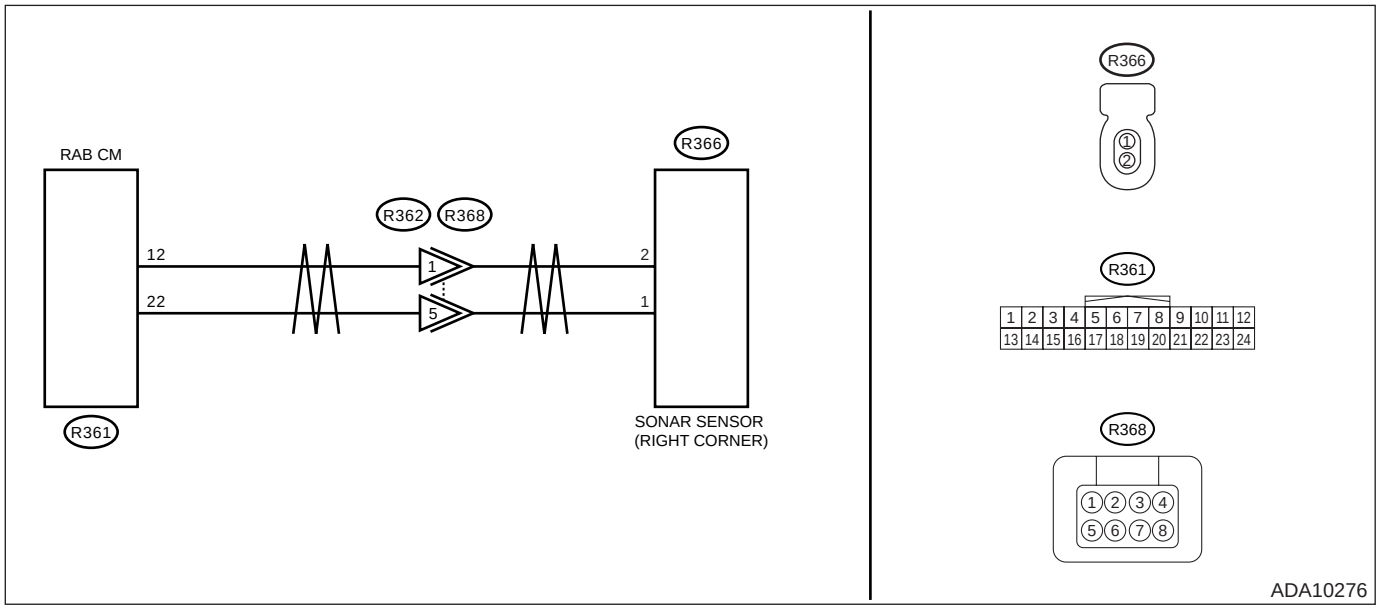
AA:DTC B2C1A RRC SONAR SENSOR



Outline of diagnosis:
Sonar sensor (right inner) is faulty.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-332, Reverse Automatic Braking.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right inner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C1A displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (right inner) and sonar sensor (right corner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C1A displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (right inner). <Ref. to RAB-7, Sensor and Harness.>

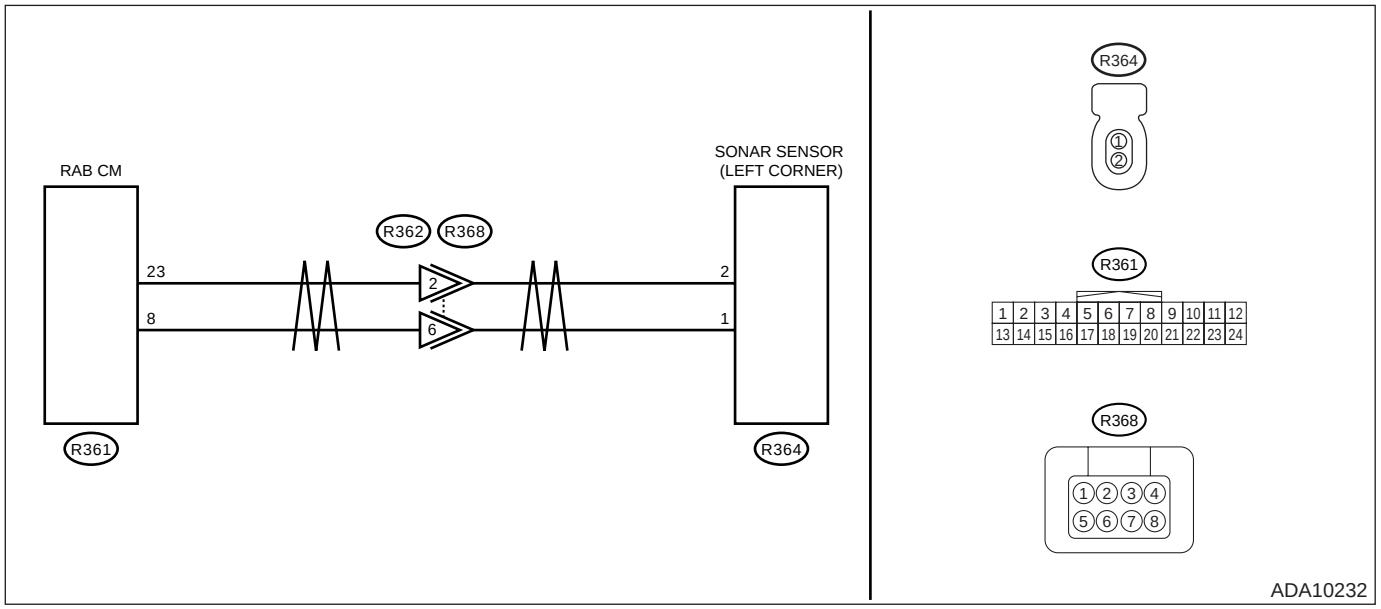
AB:DTC B2C1B RLC SONAR SENSOR



Outline of diagnosis:
Sonar sensor (left inner) is faulty.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-332, Reverse Automatic Braking.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left inner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C1B displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (left inner) and sonar sensor (left corner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C1B displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (left inner). <Ref. to RAB-7, Sensor and Harness.>

AC:DTC B2C1C RR SONAR SENSOR



Outline of diagnosis:
Sonar sensor (right corner) harness is shorted to power supply.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-332, Reverse Automatic Braking.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right corner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C1C displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (right corner) and sonar sensor (right inner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C1C displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (right corner). <Ref. to RAB-7, Sensor and Harness.>

AD:DTC B2C1D RL SONAR SENSOR

Outline of diagnosis:
Sonar sensor (left corner) harness is shorted to ground.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-332, Reverse Automatic Braking.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left corner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C1D displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (left corner) and sonar sensor (left inner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C1D displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (left corner). <Ref. to RAB-7, Sensor and Harness.>

AE:DTC B2C1E RRC SONAR HARNESS LOW / RRC SONAR CONTROL MODULE CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC B2C11. <Ref. to RAB(diag)-44, DTC B2C11 RRC SONAR HARNESS LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AF:DTC B2C1F RLC SONAR HARNESS LOW / RLC SONAR CONTROL MODULE CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC B2C15. <Ref. to RAB(diag)-52, DTC B2C15 RLC SONAR HARNESS LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AG:DTC B2C20 RR SONAR HARNESS LOW / RR SONAR CONTROL MODULE CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC B2C0F. <Ref. to RAB(diag)-40, DTC B2C0F RR SONAR HARNESS LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AH:DTC B2C21 RL SONAR HARNESS LOW / RL SONAR CONTROL MODULE CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC B2C13. <Ref. to RAB(diag)-48, DTC B2C13 RL SONAR HARNESS LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AI: DTC B2C22 EyeSight SYSTEM

Outline of diagnosis:
EyeSight is faulty.
Time needed for diagnosis:
800 ms
Recovery conditions:
Ignition switch OFF → ON

NOTE:
Perform the diagnosis for EyeSight. <Ref. to ES(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AJ:DTC U0077 LOCAL CAN COMMUNICATION BUS OFF

Outline of diagnosis:
Local communication is faulty.
Time needed for diagnosis:
500 ms
Recovery conditions:
Ignition switch OFF → ON

Step		Check	Yes	No
1	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of «Reverse Automatic Braking». <Ref. to RAB(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is a DTC other than DTC U0077 displayed? (Current malfunction)	Perform the diagnosis for DTC other than DTC U0077.	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>

AK:DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AL:DTC U0101 LOST COMMUNICATION WITH TCM

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AM:DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AN:DTC U0128 LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AO:DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AP:DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AQ:DTC U0181 LOST COMMUNICATION WITH HEADLAMP LEVELING CONTROL MODULE

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AR:DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AS:DTC U0402 INVALID DATA RECEIVED FROM TCM

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AT:DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AU:DTC U0417 INVALID DATA RECEIVED FROM PARK BRAKE CONTROL MODULE

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AV:DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AW:DTC U0482 INVALID DATA RECEIVED FROM HEADLAMP LEVELING CONTROL MODULE

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AX:DTC U1235 LOST COMMUNICATION WITH EyeSight

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AY:DTC U1433 INVALID DATA RECEIVED FROM EyeSight

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

17.Cancel Code

A: NOTE

When the cancel codes are detected from the RAB CM, the Reverse Automatic Braking will be cancelled.

B: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Reverse Automatic Braking» and then select «Enter».
5) On «Select Function» display, select «Cancel Code».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- Up to three codes can be stored. When there are four or more codes, the oldest code is deleted and the newest code is stored.
- Stored codes will be cleared by Clear Memory.

C: LIST

Code	Description & trouble position	Content
0X01	+B Low Voltage	The battery power supply of RAB CM is reduced.
0X02	IGN Low Voltage	The ignition power supply of RAB CM is reduced.
0X03	RRC Sonar Noise	Sonar sensor (right inner) signal is interfered due to noise.
0X04	RLC Sonar Noise	Sonar sensor (left inner) signal is interfered due to noise.
0X05	RR Sonar Noise	Sonar sensor (right corner) signal is interfered due to noise.
0X06	RL Sonar Noise	Sonar sensor (left corner) signal is interfered due to noise.
0X07	RRC Sonar Dirty HALT I	Substance adhered to the sonar sensor (right inner).
0X08	RLC Sonar Dirty HALT I	Substance adhered to the sonar sensor (left inner).
0X09	RR Sonar Dirty HALT I	Substance adhered to the sonar sensor (right corner).
0X0A	RL Sonar Dirty HALT I	Substance adhered to the sonar sensor (left corner).
0X0B	RRC Sonar Dirty HALT II	Substance adhered to the sonar sensor (right inner).
0X0C	RLC Sonar Dirty HALT II	Substance adhered to the sonar sensor (left inner).
0X0D	RR Sonar Dirty HALT II	Substance adhered to the sonar sensor (right corner).
0X0E	RL Sonar Dirty HALT II	Substance adhered to the sonar sensor (left corner).
0X0F	RRC Sonar Mount Error	Substance adhered to the sonar sensor (right inner).
0X10	RLC Sonar Mount Error	Substance adhered to the sonar sensor (left inner).
0X11	Detect Low Level of Vehicle Height	The vehicle was tilted (ex. the rear of the vehicle was lowered) due to overload. (OUTBACK model only)

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
• Subaru Select Monitor kit is required for reading DTC, performing diagnosis and reading current data.
• Before removal or installation, be sure to remove any foreign matter (dust, moisture, oil, etc.).
• Registration of immobilizer may be needed after the replacement of control modules, etc. For detailed procedure, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

NOTE:
• Using the Function Setting (Customize), check that the keyless access system is not in a cancelled state. <Ref. to SL-110, OPERATION, Function Setting (Customize).>
• Check List for Interview <Ref. to KPS(diag)-4, Check List for Interview.>

	Step	Check	Yes	No
1	**CHECK BATTERY.** Using a tester, measure the battery voltage.	Is the voltage 11 V or more?	Go to step **2**.	Charge or replace the battery and perform check pre-inspection. Go to step **2**.
2	**CHECK PRE-INSPECTION.** Use the interview check list to interview the user. <Ref. to KPS(diag)-4, Check List for Interview.>	Was the symptoms of the trouble recorded in the interview?	Go to step **3**.	Interview the user again.
3	**BASIC INSPECTION.** Perform the inspection for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **4**.	Check it according to DTC of LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
4	**CHECK TROUBLE SYMPTOM.** 1) Read DTC for «Keyless Access with Push Button Start». <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to KPS(diag)-22, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.> 2) Record all DTCs, time stamp and freeze frame data. NOTE: For time stamp, refer to "LAN SYSTEM". <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. After diagnosis, Go to step **7**.	Go to step **5**.
5	**CHECK PHENOMENON LIST.** Check the "Phenomenon List". <Ref. to KPS(diag)-108, General Diagnostic Table.>	Is there a symptom that corresponds in the phenomenon list?	Perform diagnosis according to the procedures in the phenomenon list.	Go to step **6**.
6	**CHECK TROUBLE PHENOMENON.** 1) Perform check of current data. <Ref. to KPS(diag)-26, Read Current Data.> 2) Perform a function check. 3) Perform a unit check.	Was the trouble cause found?	Repair the cause of trouble.	Repeat a basic check again.

Step		Check	Yes	No
7	**PERFORM DIAGNOSIS.** 1) Perform the Clear Memory Mode. <Ref. to KPS(diag)-25, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to KPS(diag)-32, Inspection Mode.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Inspect the following items regarding the vehicle's state.

<table>
<tr><td colspan="4">Keyless Access with Push Button Start System Trouble Check List for Interview
Received Year Month Date</td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td>Registration No.</td><td>Initial year of registration
Year Month Date</td></tr>
<tr><td>Vehicle model</td><td>Frame number</td></tr>
<tr><td>Interviewer</td><td>Inspector</td><td>Engine type</td><td>Odometer reading</td></tr>
<tr><td colspan="4">Customer specified content</td></tr>
<tr><td>Date and time when the trouble occurred</td><td></td><td>Frequency of trouble occurrence</td><td></td></tr>
<tr><td>Condition of trouble occurrence</td><td></td><td>Weather</td><td></td></tr>
<tr><td>Road conditions</td><td></td><td>Occurrence location</td><td></td></tr>
<tr><td>Accessory installation condition</td><td colspan="3"></td></tr>
<tr><td colspan="4">Trouble condition</td></tr>
<tr><td colspan="3">❑ DTC</td><td>❑( )</td></tr>
<tr><td rowspan="2">❑ Immobilizer system</td><td>Engine does not start</td><td colspan="2">❑ Starter does not operate
❑ Starter operates but engine does not start
❑ Engine starts but stops immediately</td></tr>
<tr><td colspan="3">Does not start with remote engine starter</td></tr>
<tr><td rowspan="2">❑ Steering lock system</td><td colspan="3">The steering lock is not released</td></tr>
<tr><td colspan="3">The steering lock does not lock</td></tr>
<tr><td rowspan="6">❑ Keyless access system</td><td colspan="3">Can not lock/unlock using the touch sensor (lock), touch sensor (unlock), trunk opener button or rear gate opener button and rear lock button</td></tr>
<tr><td>Cannot lock with the touch sensor (lock)
Cannot unlock with the touch sensor (unlock)
Cannot lock nor unlock with the touch sensor (lock), touch sensor (unlock)
Trunk does not open with the trunk opener button.
Rear gate can not be locked with the rear lock button</td><td colspan="2">❑ Driver's side door
❑ Passenger's side door
❑ Trunk</td></tr>
<tr><td>Access key lockout protection function does not operate</td><td colspan="2">❑ Passenger room
❑ Luggage room</td></tr>
<tr><td colspan="3">The LED does not illuminate when the access key button is pressed</td></tr>
<tr><td colspan="3">The external buzzer does not beep</td></tr>
<tr><td colspan="3">The passenger room buzzer does not sound</td></tr>
<tr><td>❑ Other</td><td colspan="3">The room light or map light does not illuminate
( )</td></tr>
</table>

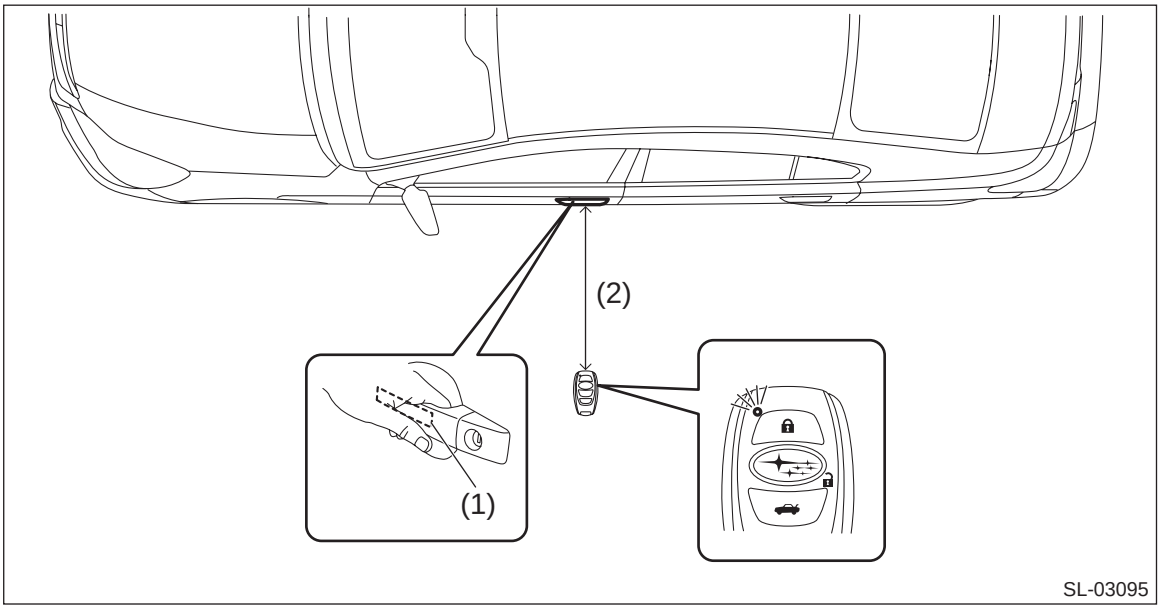
NOTE:
- Perform the diagnostics according to the basic diagnostic procedure.
- If the room light or map light does not illuminate and the keyless access does not function at the same time, the back-up fuse may be loose or blown.

3. General Description

A: CAUTION

1. SRS AIRBAG SYSTEM

The airbag system wiring harness is routed near the keyless access with push button start system.



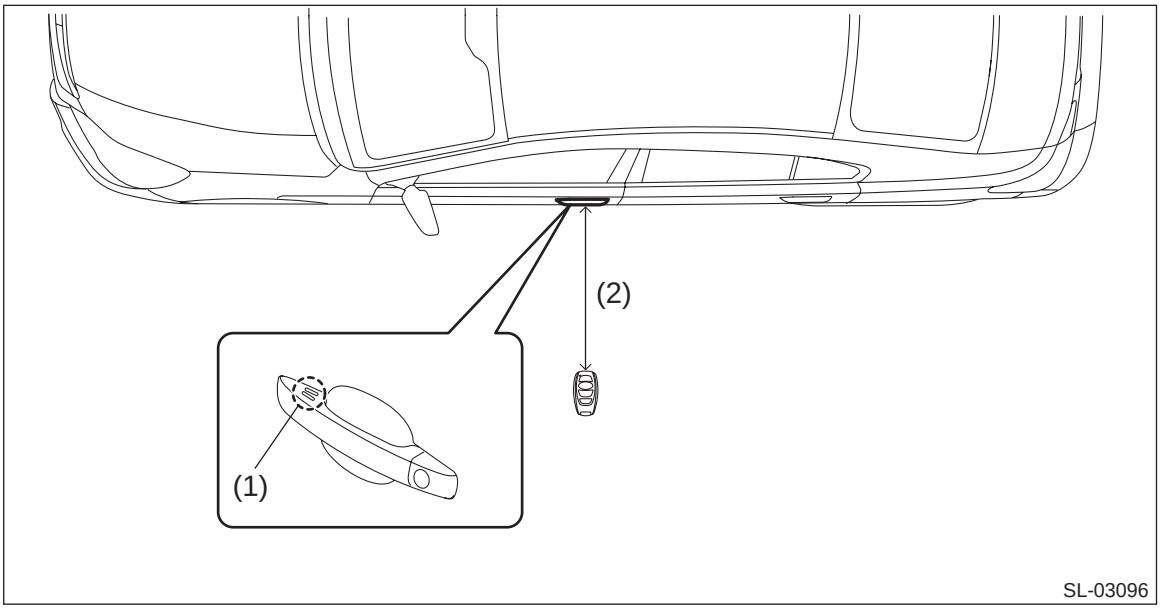
CAUTION:
- **Do not use the electrical test equipment on all airbag system wiring harnesses and connectors.**
- **Be careful not to damage the wiring harness of the airbag system when servicing the keyless access with push button start system.**

2. KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

NOTE:
- Using the function setting (ECM customizing), check that the keyless access system is not OFF. <Ref. to SL-110, OPERATION, Function Setting (Customize).>
- The dark current is approx. 400 mA if there is communication between the vehicle and access key.
- The dark current is approx. 40 mA if there is no communication between the vehicle and access key.*

* No communication with the vehicle means that the keyless access function has been cancelled or that the access key has not been near the vehicle for 15 minutes or more after door locking.

1) Keyless access door unlock function check



(1) Touch sensor (unlock) (2) 40 — 80 cm

(1) When carrying the access key with all doors locked by keyless lock operation, check that when the touch sensor (unlock) built in to the back side surface of door outer handle of front door is touched, the driver's door will unlock (when touched on the driver's side) or all doors will unlock (when touched on the passenger's side) and the answer-back function operates (hazard light blinks twice, access buzzer sounds twice).

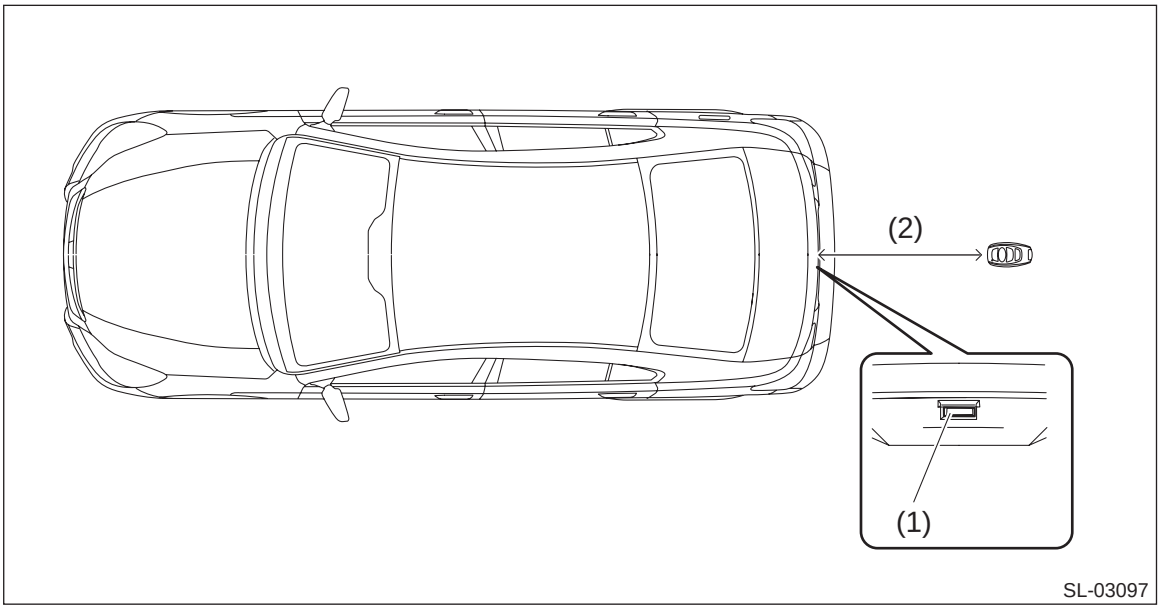
(2) In the keyless access door unlock detection area, hold the access key at the same height as the outer handle (approx. 80 cm from the ground) and in the direction shown in the figure, and check that the vehicle becomes unlock mode [access key LED (red) blinks] at 40 to 80 cm from the vehicle.

NOTE:
Check the access key battery if the LED (red) does not illuminates when the access key button is pressed. <Ref. to SL-89, INSPECTION, Access Key.>

2) Keyless access door lock function check

(1) Touch sensor (lock) (2) Approx. 30 cm

(1) When carrying the access key outside of the vehicle with all doors closed and unlocked, check that when the touch sensor (lock) on the surface of door outer handle of front door is touched, all doors will lock and the answer-back function operates (hazard light blinks once, access buzzer sounds once).

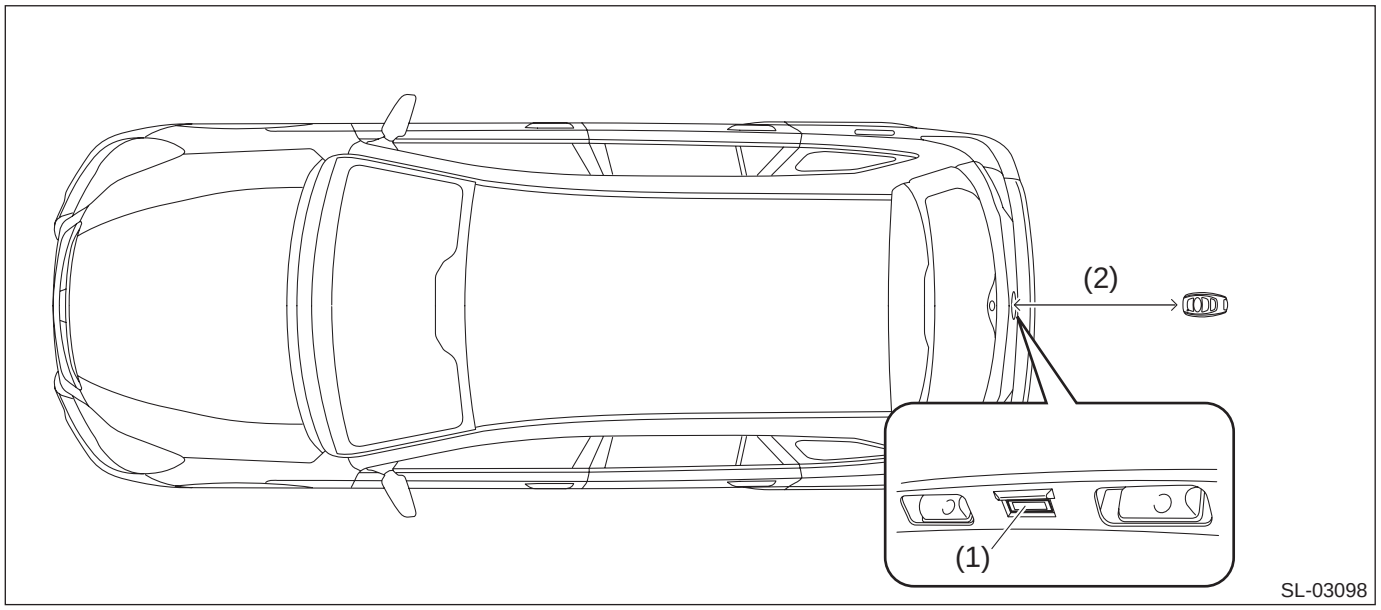


CAUTION:
If the access key is within the vehicle but not within the detection area (in the instrument panel, on the rear tray, in the glove box, on the floor, or in the door trim pocket), then lockout protection will not function when the doors are locked and the access key will be locked into the vehicle.

(2) To check the keyless access door lock operation range, hold the access key at a height of 10 cm under the bottom edge of the door glass (approx. 80 cm from the ground), point it in the direction shown in the figure at a distance of approx. 30 cm from the vehicle, and check that all doors lock and the answer-back function operates (hazard light blinks once, access buzzer sounds once) when you touch the touch sensor (lock).

(3) Check the passenger's side door in the same manner.

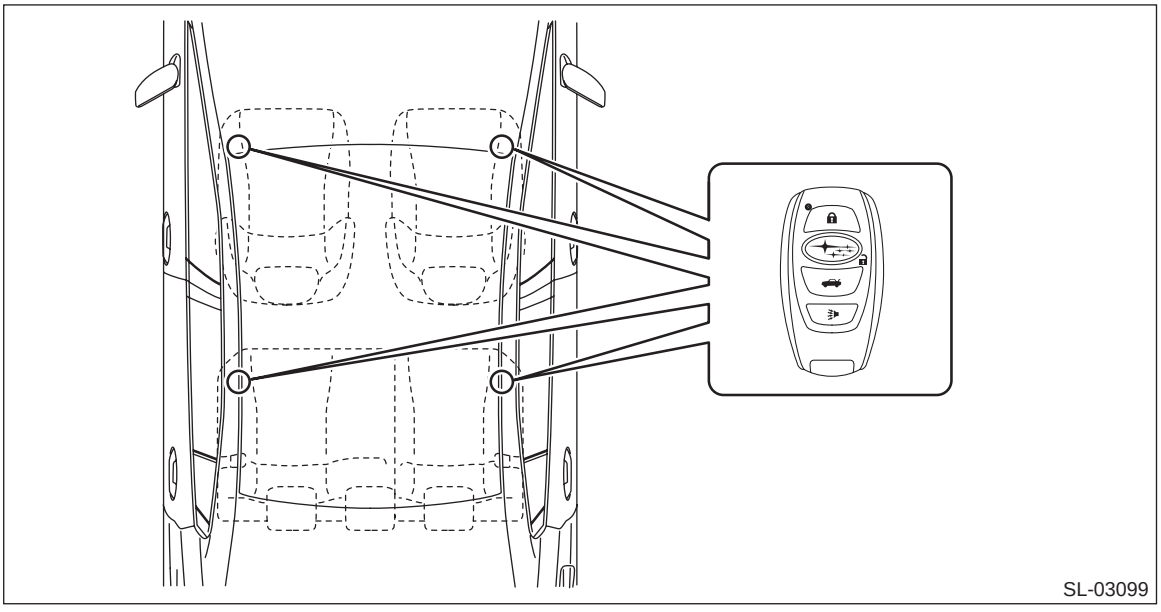
NOTE:
- When the door cannot lock if the touch sensor (lock) is touched, touch the touch sensor (lock) with palm.
- Since communication is not possible within close range (20 cm or less) of the door outer handle, the access key may not operate if you touch the touch sensor (lock) with the same hand you are holding the access key.
- If the lockout prevention buzzer sounds, it is possible that the interior transmitter has radio wave leakage.



3) Check of the keyless access trunk open function

(1) Trunk opener button (2) 40 — 80 cm

(1) With the trunk closed, check that the trunk opens and the answer-back function operates (hazard light blinks twice, access buzzer sounds twice) when you press the trunk opener button while carrying the access key.
(2) To check the keyless access trunk open operation range, hold the access key behind and in the center of the vehicle at the same height as the trunk opener button (90 cm from the ground), point it in the direction shown in the figure at a distance of 40 to 80 cm from the vehicle, and check that the trunk opens and the answer-back function operates (hazard light blinks twice, access buzzer sounds twice) when the trunk opener button is pressed.



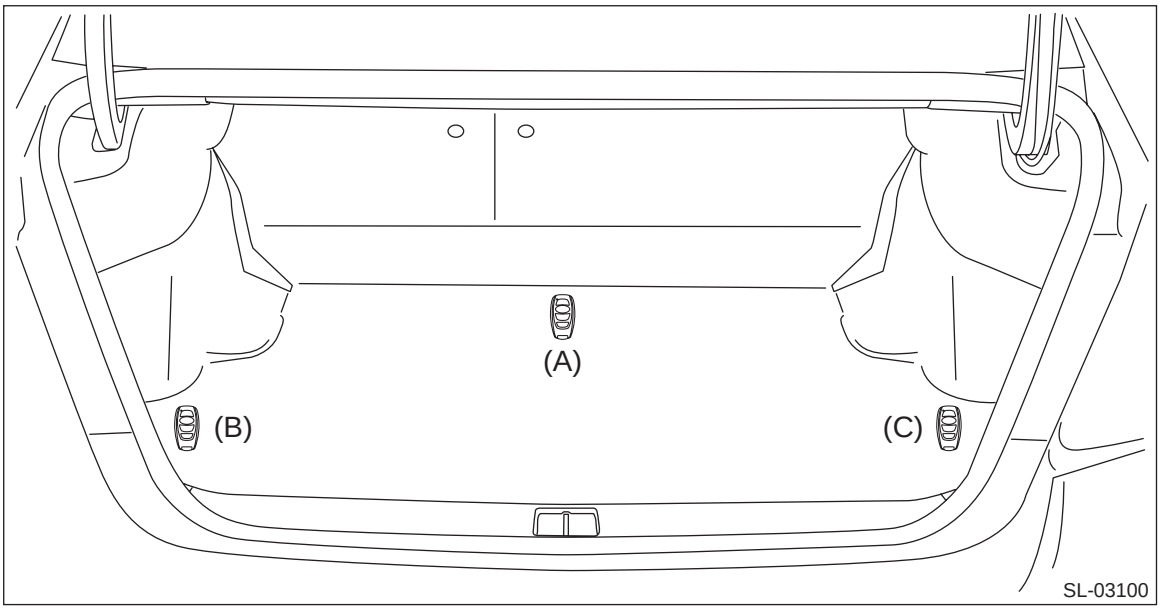
4) Check of the keyless access rear gate function

(1) Rear gate opener button (2) 40 — 80 cm

(1) With the rear gate locked, the all doors unlocks and the rear gate opens simultaneously and the answer-back function operates (hazard light blinks twice, external buzzer sounds twice) when you press the rear gate opener button while carrying the access key.
(2) To check the range for keyless access rear gate open operation, hold the access key behind and in the center of the vehicle at the same height as the rear gate opener button (90 cm from the ground), point it in the direction shown in the figure at a distance of 40 to 80 cm from the vehicle, and check that the all doors unlocks and the rear gate opens simultaneously and the answer-back function operates (hazard light blinks twice, external buzzer sounds twice) when the rear gate opener button is pressed.
(3) With the rear gate unlock, check that the all doors lock and the answer-back function operates (hazard light blinks once, external buzzer sounds once) when rear lock button is pressed while carrying the access key.

5) Keyless access ignition switching function check
(1) With the ignition OFF, enter the vehicle while carrying the access key. Depress the brake pedal with the shift lever in the “P” range (except for MT model) or depress the clutch pedal (MT model), and check that the push button ignition switch indicator is illuminated in green, and check that the engine starts when you press the push button ignition switch.
(2) While carrying the access key, check that the status changes as follows each time you press the push button ignition switch without depressing the brake pedal (except for MT model) or clutch pedal (MT model): ‘Ignition OFF’ → ‘ACC ON’ → ‘Ignition ON’ → ‘Ignition OFF’. However on the model except for MT, if the shift lever is a range other than the “P” range and the push button ignition switch is pressed from ignition ON, then the status will not change to ignition OFF and instead will change to ACC ON.
(3) After the vehicle has stopped, press the push button ignition switch and ignition is turned OFF (engine stopped · all power supplies OFF). However on the model except for MT, if the shift lever is in a range other than the “P” range and the push button ignition switch is pressed with the vehicle stopped, then the power supply will not change to ignition OFF and instead will change to ACC ON. Check that the steering lock operates if the door is opened in the ignition OFF state. (However, except for MT model, the shift must be in the “P” range.)
(4) To check the range of the keyless access ignition operation, check that the engine can start when you set the access key at the check position on the seat in the direction indicated in the figure.

CAUTION:
The access key may not be correctly detected even though it is within the detection area within the passenger room, if it is on the instrument panel, on the rear tray, in the glove box, on the floor, or in the door trim pocket.



NOTE:
Perform the check multiple times, once each with the access key positioned on the driver’s seat, on the passenger’s seat, and on the rear seat in 2 locations.

6) Lockout protection function check with the access key in the trunk

CAUTION:
Open one of the windows before performing this check in order to prevent the key from being locked inside the vehicle.

(1) With all doors closed and locked, and with the access key in the trunk room and the trunk closed, check that the access buzzer sounds (approx. 2 seconds). Also check that the trunk opens when you press the trunk opener button.

(2) To check the detection range of the lockout protection function with the access key in the trunk, position the access key in the direction shown in the figure, and check that the lockout protection function operates normally when you check the lockout protection function for the access key locked in the trunk.

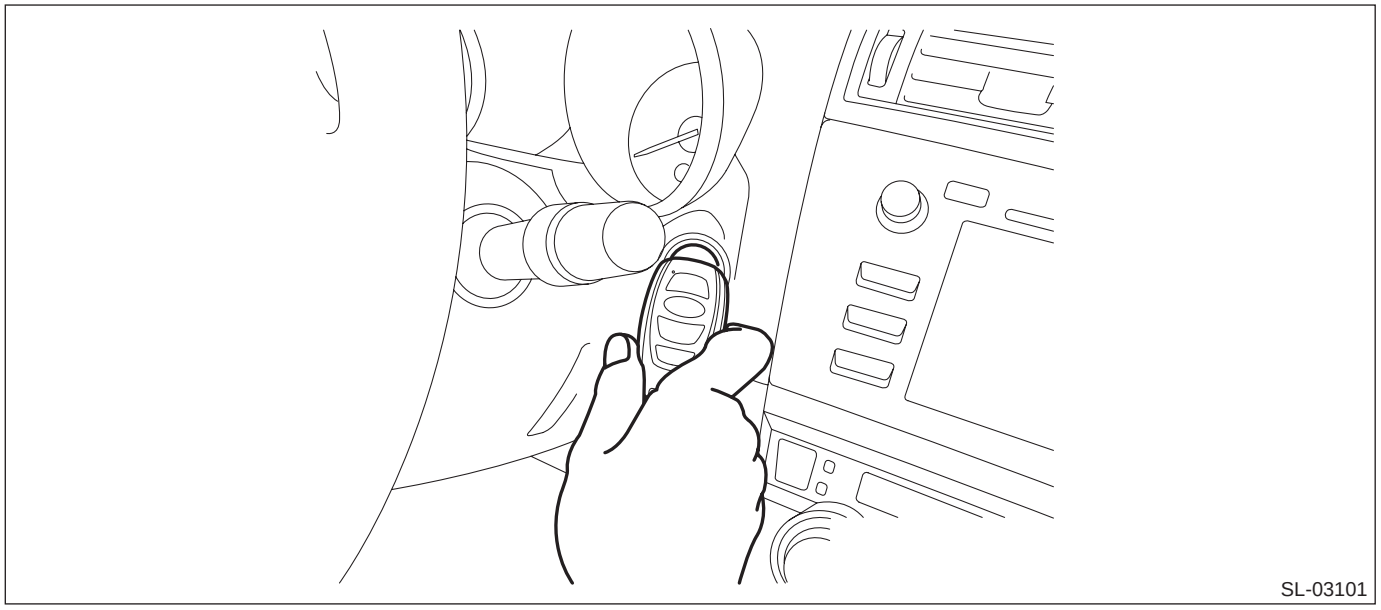
CAUTION:
The lockout protection function will not operate if the access key is any of the locations described below.

- Near the spare tire or on the edge of the trunk room.
- Inside a bag made of metallic material or near metal objects.

NOTE:
Check the trunk in two locations or more.

7) Lockout protection function check (in the passenger room)

CAUTION:
Open one of the windows before performing this check in order to prevent the key from being locked inside the vehicle.



(1) Position the access key on the driver's or passenger's seat.

(2) Close all doors. (with all doors unlocked)

(3) Check that the doors do not lock and the lockout protection buzzer (exterior) sounds for 2 seconds when you touch the touch sensor (lock) of either the driver's or passenger's door.

8) Keyless access cancel function check
(1) After setting the keyless access cancel function, check that all keyless access and start system (keyless access) functions are inoperable. (For cancel setting, refer to <Ref. to SL-110, OPERATION, Function Setting (Customize).>)

NOTE:
When keyless access is cancelled, door lock and unlock can be operated by access key button operation and the starter system can be operated by passing the access key over the push button ignition switch with the access key button toward you.

9) Access key diagnostic mode
(1) Connect to the Subaru Select Monitor, and select «Diagnosis» on the «Start» display.
(2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
(3) On «Main Menu» display, select «Each System».
(4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
(5) On «Select Function» display, select «Work Support».
(6) From «Work Support», select «Keyless access system check».
(7) Select the transmitter to check from the items.
(8) Check that the door lock buzzer sounds (short blips, a continuous beeping sound for the center room antenna) when the access key is near the selected transmitter or antenna.

B: PREPARATION TOOL

1. SPECIAL TOOL

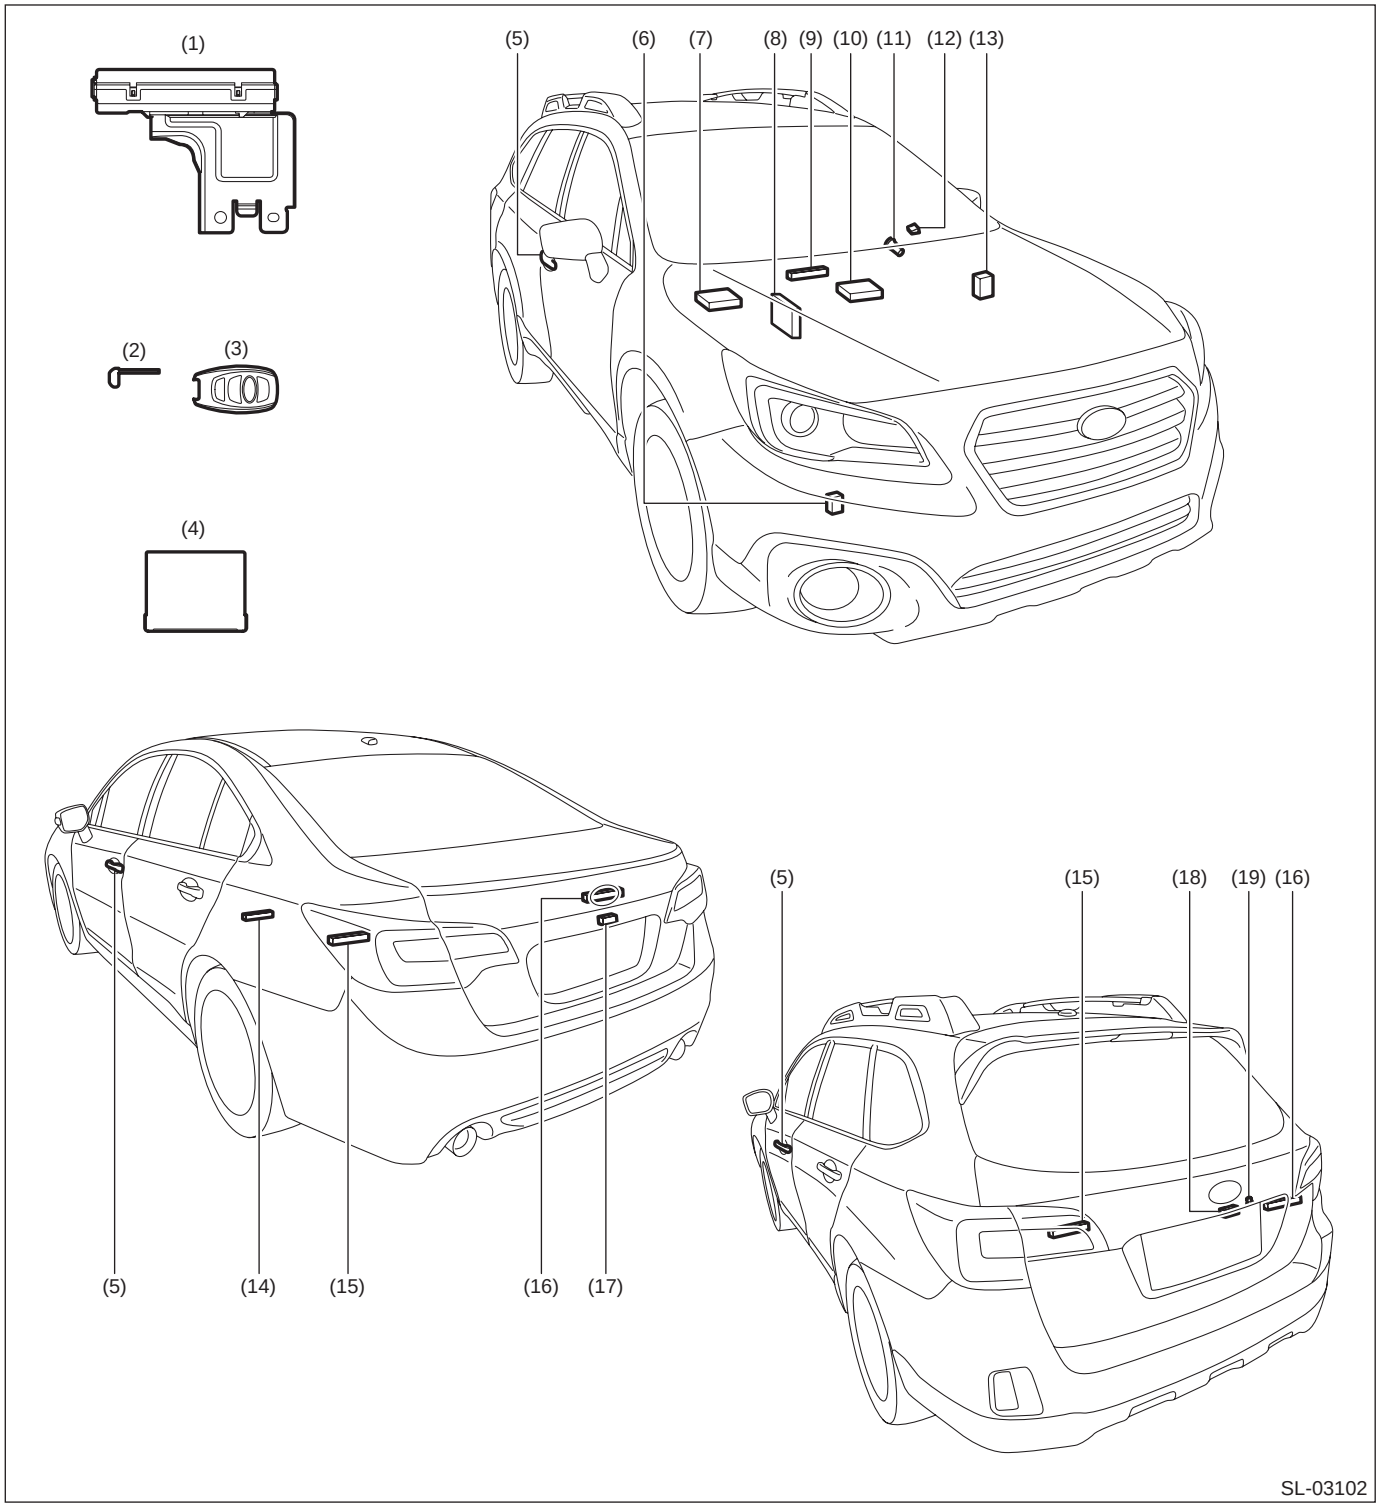


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
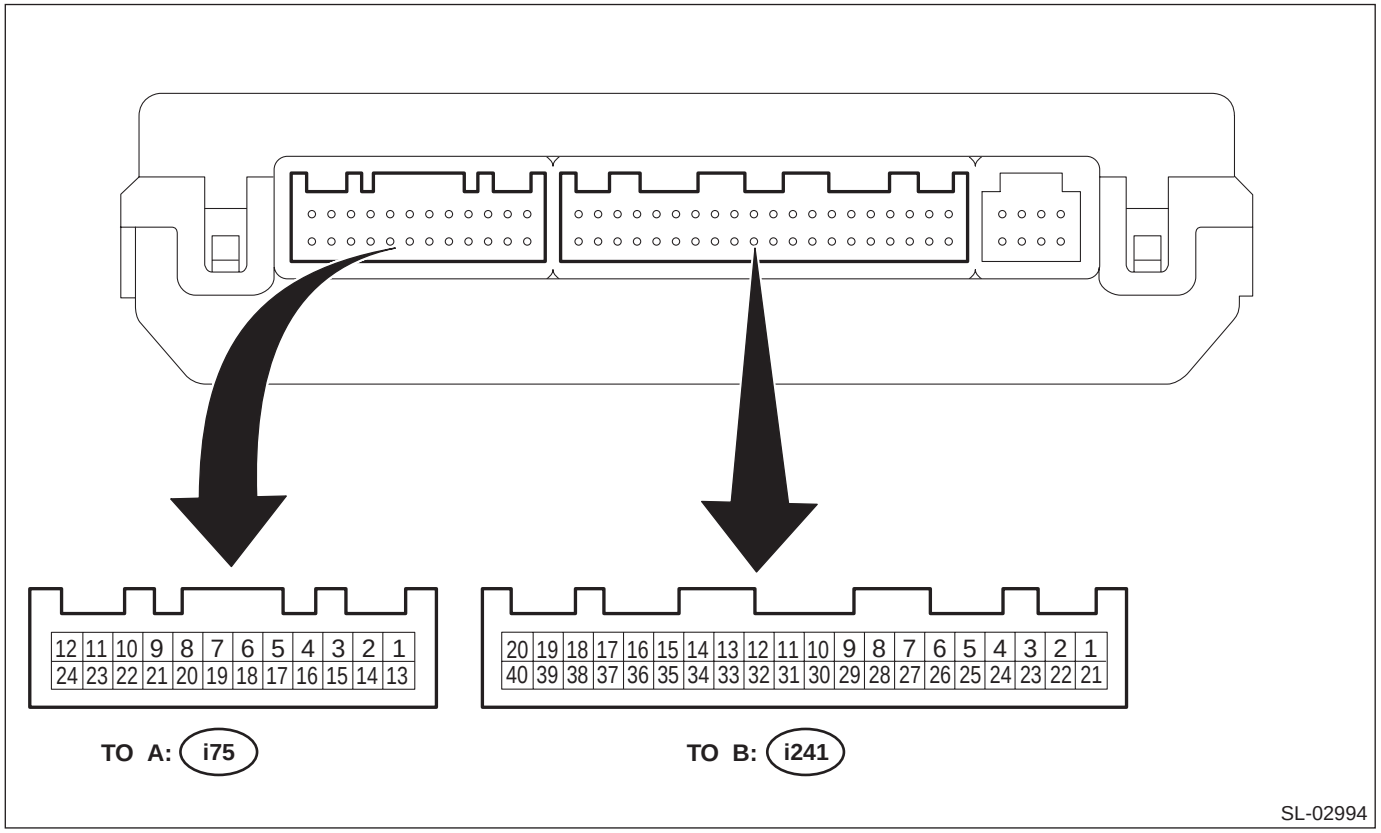
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

4. Electrical Component Location

A: LOCATION



(1) Keyless access CM
(2) Mechanical key
(3) Access key
(4) ID code box
(For C0 and C5 model only)
(5) Front outer handle (front exterior antenna)
– Touch sensor (lock)
– Touch sensor (unlock)
(6) Access buzzer
(7) TCM (engine type: EZ)
(8) ECM
(9) Front interior antenna
(10) TCM (engine type: FB)
(11) Push button ignition switch
(12) Steering lock CM
(13) Body integrated unit
(14) Center interior antenna
(15) Rear interior antenna
(16) Rear exterior antenna
(17) Trunk opener button
(18) Rear gate opener button
(19) Rear lock button

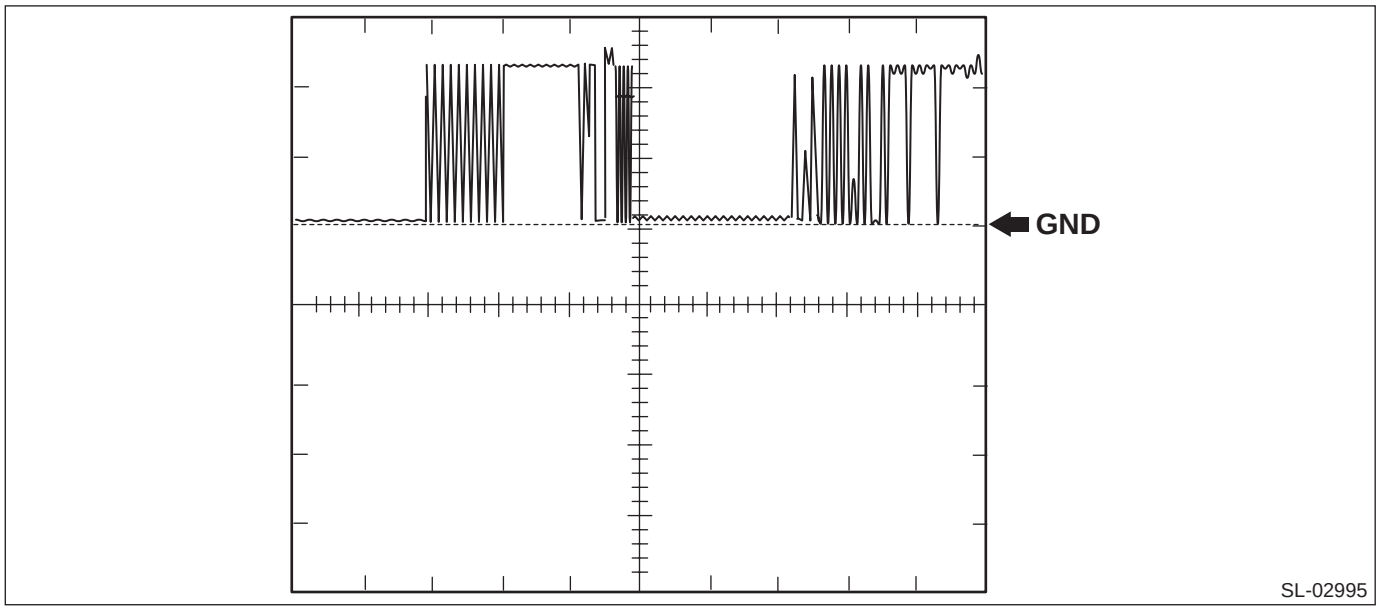
5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

1. KEYLESS ACCESS CM

Terminal No.	Content	Measuring condition	Standard
(i75) No. 1 ←→ Chassis ground	Ground	Always *1	Less than 1 Ω
(i75) No. 2 ←→ 1	Immobilizer signal reception (ignition switch)	Wait for 30 seconds or more after the door was opened or closed with IG OFF and the brake pedal (except for MT model) or clutch pedal (MT model) released.	1 V or less
		Turn the ignition switch to OFF and with the access key near the push button ignition switch, press the push button ignition switch. (with the access key battery removed)	Waveform 1
(i75) No. 3	—	—	—
(i75) No. 4 ←→ 1	Start switch input 1	Push button ignition switch pressed → released*1	Less than 1 Ω → 10 kΩ or more
(i75) No. 5 ←→ 1	Indicator output (orange)	With ACC ON or IG ON, brake pedal (AT model) or clutch pedal (MT model) not depressed	9.5 V or more
(i75) No. 6 ←→ 1	Start switch character illumination	When illumination of start switch goes off, the headlight is OFF → ON, after setting the illumination control to MAX	Less than 2 V → 9.5 V or more
(i75) No. 7 ←→ Chassis ground	Engine speed	While engine idling	Waveform 2
(i75) No. 8 ←→ Chassis ground (except for MT model)	Shift P position	Except for shift positions P → Shift position P	40 kΩ or more → 200 Ω or less
(i75) No. 9 ←→ Chassis ground	Steering lock power supply	Always *1	10 kΩ or more

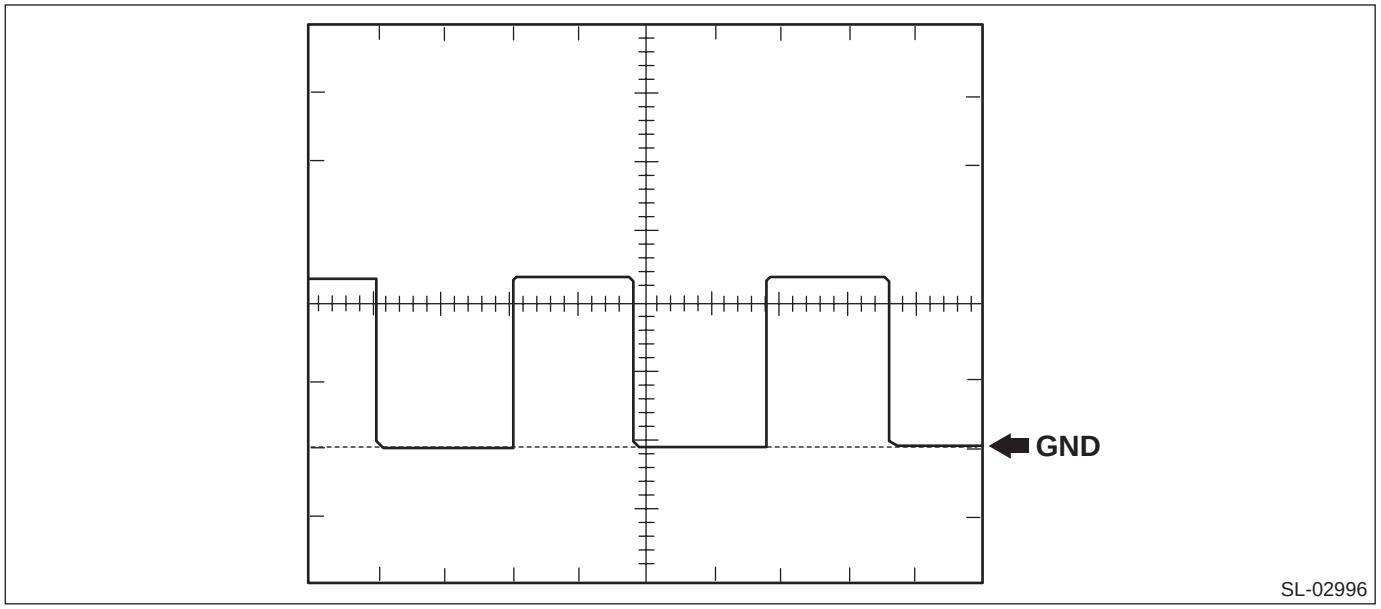
Terminal No.	Content	Measuring condition	Standard
(i75) No. 10	—	—	—
(i75) No. 11 ←→ Chassis ground	IGN2 relay drive	Always (20°C) *1	74.15 — 460.88 Ω
(i75) No. 12 ←→ Chassis ground	IGN1 relay drive	Always (20°C) *1	50.87 — 72.17 Ω
(i75) No. 13 ←→ Chassis ground	Immobilizer amplifier ground	Always *1	Less than 1 Ω
(i75) No. 14 ←→ 1	Immobilizer signal transmission (ignition switch)	Wait for 30 seconds or more after the door was opened or closed with IG OFF and the brake pedal (except for MT model) or clutch pedal (MT model) released.	1 V or less
		Turn the ignition switch to OFF and with the access key near the push button ignition switch, press the push button ignition switch. (with the access key battery removed)	Waveform 3
(i75) No. 15 ←→ 1	Immobilizer amplifier power supply	Wait for 30 seconds or more after the door was opened or closed with IG OFF and the brake pedal (except for MT model) or clutch pedal (MT model) released.	1 V or less
		Within 30 seconds after the push button ignition switch is pressed with IG OFF and access key not in the passenger room	Waveform 4
(i75) No. 16	—	—	—
(i75) No. 17 ←→ 1	Start switch input 2	Push button ignition switch pressed → released*1	Less than 1 Ω → 10 kΩ or more
(i75) No. 18 ←→ 1	Indicator output (green)	Depress the brake pedal (except for MT models) or clutch pedal (MT models) with the access key in the passenger room.	9.5 V or more
(i75) No. 19	—	—	—
(i75) No. 20 ←→ Chassis ground (MT model)	Clutch switch input	Clutch pedal depressed → Released	9.5 V or more → 1 V or less
(i75) No. 21 ←→ 1	Steering lock position input	With ignition switch OFF and shift position P, and with push button ignition switch pressed, Steering lock → Steering unlock	9.5 V or more → 1.2 V or less
(i75) No. 22	—		
(i75) No. 23 ←→ Chassis ground	ACC relay drive	Always (20°C) *1	152.61 — 216.5 Ω
(i75) No. 24 ←→ 1	+B power supply 1 (main)	Always *1	9.5 — 16 V
(i241) No. 1 ←→ 21	Front interior antenna –	All doors closed, power OFF, access key not in passenger room, touch sensor (lock) OFF → ON	No pulse output → Pulse output detected
(i241) No. 2 ←→ 21	Front interior antenna +	All doors closed, power OFF, access key not in passenger room, touch sensor (lock) OFF → ON	No pulse output → Pulse output detected
(i241) No. 3 ←→ 21	Passenger side external antenna –	Power OFF, all doors closed, all doors locked by lock operation with wireless remote control, access key not in passenger room	No pulse output → Pulse output detected
(i241) No. 4 ←→ 21	Passenger side external antenna +	Power OFF, all doors closed, all doors locked by lock operation with wireless remote control, access key not in passenger room	No pulse output → Pulse output detected
(i241) No. 5 ←→ 21	Driver side external antenna +	Power OFF, all doors closed, all doors locked by lock operation with wireless remote control, access key not in passenger room	No pulse output → Pulse output detected



Terminal No.	Content	Measuring condition	Standard
(i241) No. 6 ←→ 21	Driver side external antenna –	Power OFF, all doors closed, all doors locked by lock operation with wireless remote control, access key not in passenger room	No pulse output → Pulse output detected
(i241) No. 7 ←→ 21	Passenger's sensor drive power supply	Power OFF → IG ON	9.5 V or more → less than 2 V
(i241) No. 8	—	—	—
(i241) No. 9 ←→ 21	Driver's sensor drive power supply	Power OFF → IG ON	9.5 V or more → less than 2 V
(i241) No. 10 ←→ Chassis ground	CAN communication (Hi)	ACC ON or IGN ON or power OFF, and open/close the door	Pulse generation
(i241) No. 11 ←→ Chassis ground	CAN communication (Lo)	ACC ON or IGN ON or power OFF, and open/close the door	Pulse generation
(i241) No. 12	—	—	—
(i241) No. 13	LIN communication	ACC ON or IGN ON or power OFF, and open/close the door	Pulse generation
(i241) No. 14	—	—	—
(i241) No. 15 ←→ 21	Rear exterior antenna –	Power OFF, all doors closed, all doors locked, trunk or rear gate opener button OFF → ON	No pulse output → Pulse output detected
(i241) No. 16 ←→ 21	Rear exterior antenna +	Power OFF, all doors closed, all doors locked, trunk or rear gate opener button OFF → ON	No pulse output → Pulse output detected
(i241) No. 17 ←→ 21	Rear interior antenna –	All doors closed, power OFF, access key not in passenger room, touch sensor (lock) OFF → ON	No pulse output → Pulse output detected
(i241) No. 18 ←→ 21	Rear interior antenna +	All doors closed, power OFF, access key not in passenger room, touch sensor (lock) OFF → ON	No pulse output → Pulse output detected
(i241) No. 19 ←→ 21	Center interior antenna –	All doors closed, power OFF, access key not in passenger room, touch sensor (lock) OFF → ON	No pulse output → Pulse output detected
(i241) No. 20 ←→ 21	Center interior antenna +	All doors closed, power OFF, access key not in passenger room, touch sensor (lock) OFF → ON	No pulse output → Pulse output detected
(i241) No. 21 ←→ Chassis ground	Ground	Always *1	Less than 1 Ω
(i241) No. 22	—	—	—
(i241) No. 23 ←→ Chassis ground	ID code box presence judgment terminal	Always *1	With ID code box Less than 1 Ω
			Without ID code box 1 MΩ or more
(i241) No. 24 ←→ 21	Request switch input	Power OFF, all doors locked, trunk or rear gate lock button OFF → ON	9.5 V or more → less than 2 V
(i241) No. 25 ←→ 21	Passenger's lock sensor signal	Power OFF, all doors closed, all doors locked, access key carried, passenger's seat touch sensor (lock) OFF → ON	9.5 V or more → less than 2 V (→ 9.5 V or more)
(i241) No. 26 ←→ 21	Driver's lock sensor signal	Power OFF, all doors closed, all doors locked, access key carried, driver's seat touch sensor (lock) OFF → ON	9.5 V or more → less than 2 V (→ 9.5 V or more)
(i241) No. 27	—	—	—
(i241) No. 28 ←→ 21	Passenger's unlock sensor signal	Power OFF, all doors closed, all doors locked, access key carried, passenger's seat touch sensor (unlock) OFF → ON	9.5 V or more → less than 2 V (→ 9.5 V or more)
(i241) No. 29 ←→ 21	Driver's unlock sensor signal	Power OFF, all doors closed, all doors locked, access key carried, driver's seat touch sensor (unlock) OFF → ON	9.5 V or more → less than 2 V (→ 9.5 V or more)
(i241) No. 30	—	—	—

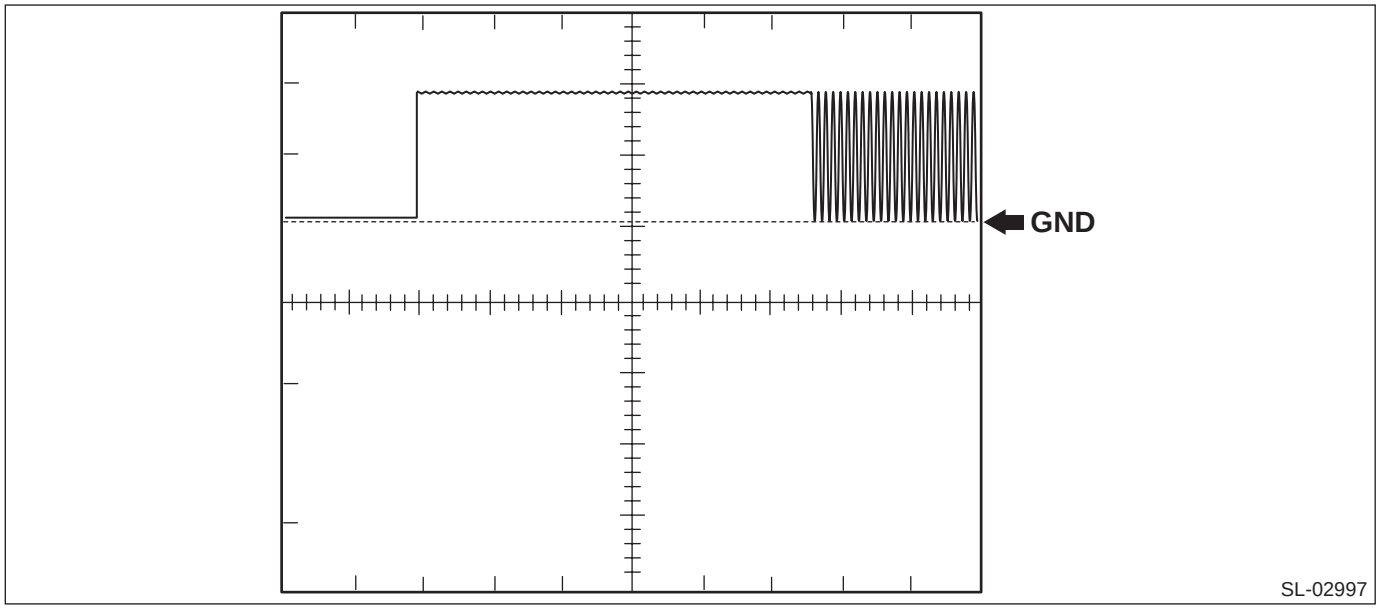
Terminal No.	Content	Measuring condition	Standard
(i241) No. 31 ←→ Chassis ground (except for MT model)	Stop light switch input	Brake pedal depressed → released	9.5 V or more → 1 V or less
(i241) No. 32 ←→ Chassis ground	Vehicle speed signal input	Always	30 kΩ or more
(i241) No. 33	—	—	—
(i241) No. 34 ←→ 21 (except for MT model)	Neutral switch input	Shift position N → any shift position other than P or N	Less than 2 V → 9.5 V or more
(i241) No. 35 ←→ 21	Starter drive request	Shift lever is in position P or position N and access key is in passenger compartment. While depressing the brake pedal (AT model) or clutch pedal (MT model), press the push button ignition switch (engine starts).	Less than 2 V → 9.5 V or more
(i241) No. 36 ←→ 21	ACC cutoff input	When brake pedal (AT model) or clutch pedal (MT model) depressed, push button ignition switch pressed (while cranking) → Except when cranking	Less than 2 V → 9.5 V or more
(i241) No. 37 ←→ 21	Immobilizer collation	Ignition switch ON	7 V or more → pulse generates temporarily
(i241) No. 38	—	—	—
(i241) No. 39	—	—	—
(i241) No. 40 ←→ Chassis ground	+B power supply 2 (DCDC backup)	Always *1	9.5 — 16 V

NOTE:



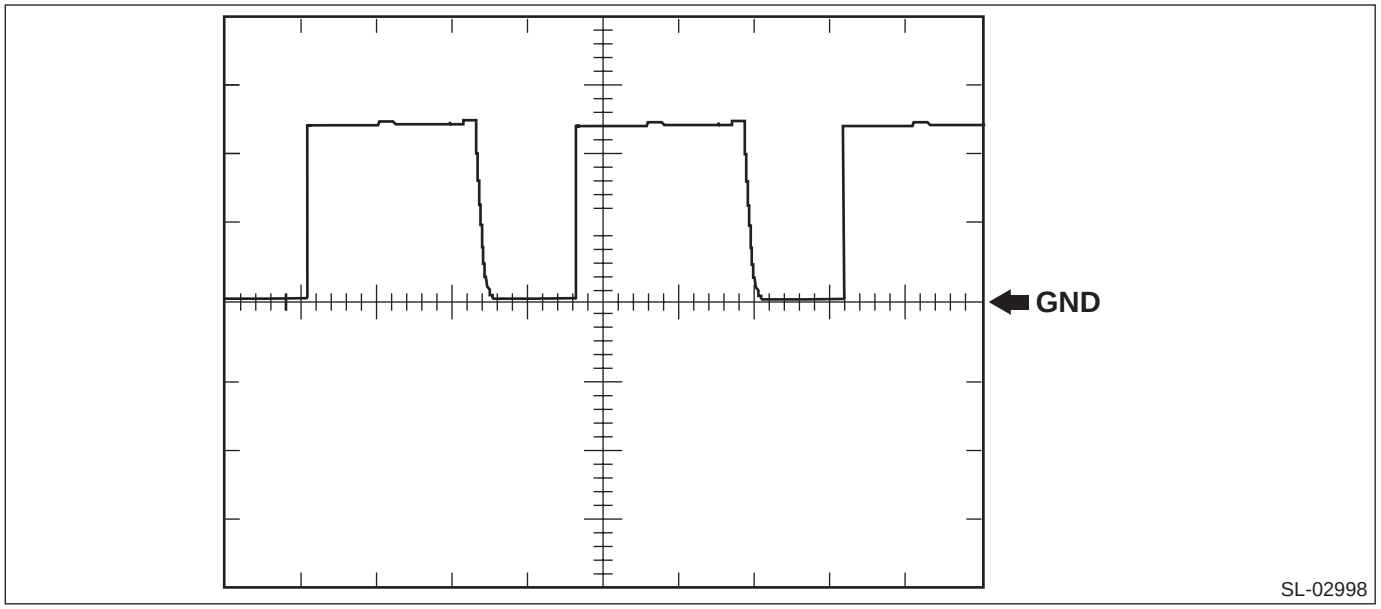
*1: Perform while the control module connector is disconnected.

1. Waveform 1



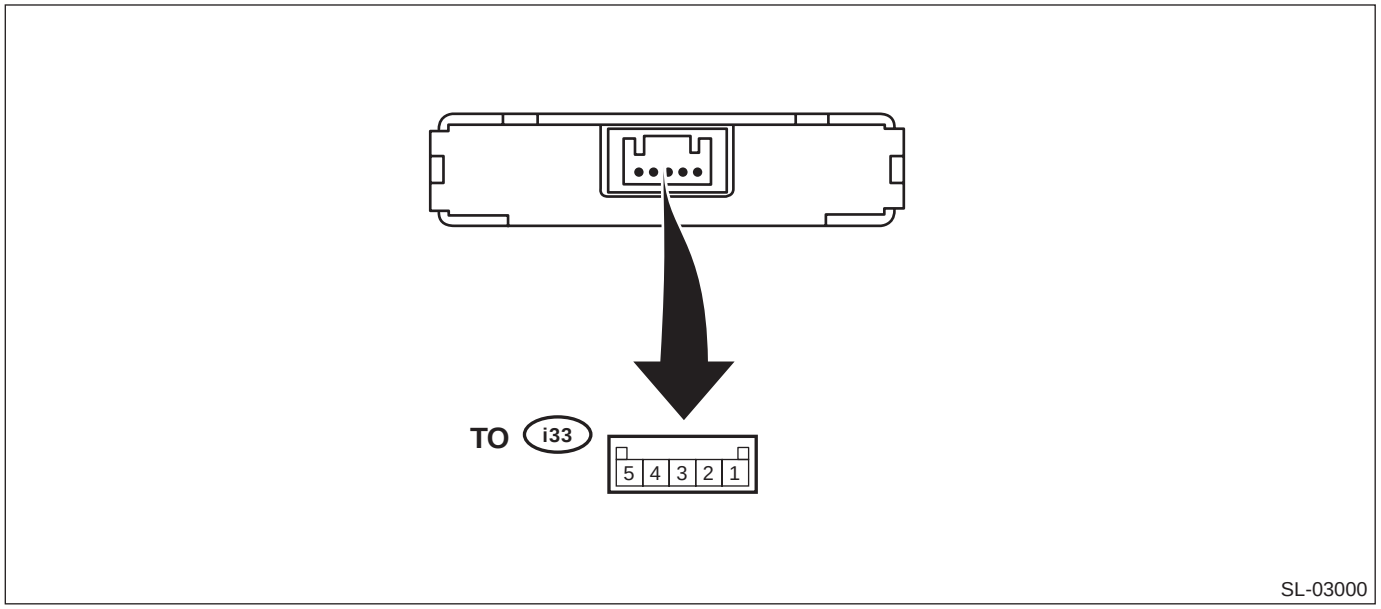
Item	Content
Measured terminal	(i75) No. 2 ←→ 1
Equipment setting	2 V/DIV, 20 ms/DIV
Measuring condition	Turn the ignition switch to OFF and with the access key near the push button ignition switch, press the push button ignition switch (with the access key battery removed).

2. Waveform 2



Item	Content
Measured terminal	(i75) No. 7 ⟷ Chassis ground
Equipment setting	5 V/DIV, 100 ms/DIV
Measuring condition	While engine idling

3. Waveform 3

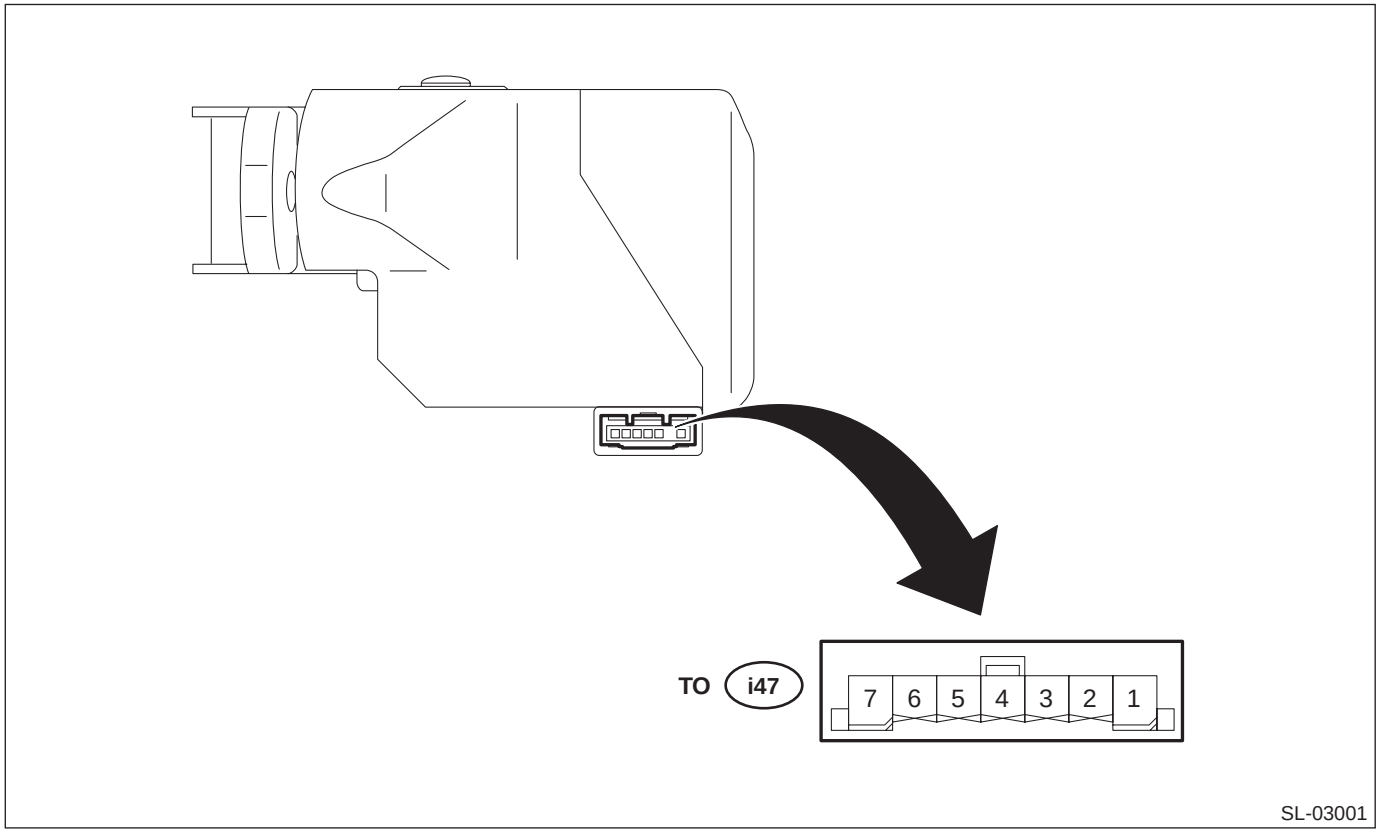


Item	Content
Measured terminal	(i75) No. 14 ⟷ 1
Equipment setting	2 V/DIV, 20 ms/DIV
Measuring condition	Turn the ignition switch to OFF and with the access key near the push button ignition switch, press the push button ignition switch (with the access key battery removed).

4. Waveform 4

Item	Content
Measured terminal	(i75) No. 15 ←→ 1
Equipment setting	2 V/DIV, 200 ms/DIV
Measuring condition	Within 30 seconds after the push button ignition switch is pressed with IG OFF and access key not in the passenger room

2. ID CODE BOX



Terminal No.	Contents	Measuring condition	Standard
(i33) No. 1 ←→ 5	Battery power supply	Always *1	9.5 V or more
(i33) No. 2	LIN communication	ACC ON, IGN ON or power OFF, and open/close the door	Pulse generation
(i33) No. 3	—	—	—
(i33) No. 4 ←→ 5	Immobilizer communication 1	Ignition switch OFF	0 V
		Ignition switch ON	7 V or more → pulse generates temporarily
(i33) No. 5 ←→ Chassis ground	Ground	Always *1	Less than 1 Ω

NOTE:
*1: Perform while the control module connector is disconnected.

3. BODY INTEGRATED UNIT

Refer to the BODY CONTROL SYSTEM (DIAGNOSTICS) for the I/O Signal of the body integrated unit. <Ref. to BC(diag)-12, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

4. STEERING LOCK CM

Terminal No.	Contents	Measuring condition	Standard
(i47) No. 1 ←→ Chassis ground	Ground	Always *1	Less than 1 Ω
(i47) No. 2	—	—	—
(i47) No. 3 ←→ Chassis ground	Steering lock motor drive power supply	Motor not operating → Motor operating	9.5 V or more → 1 V or less
(i47) No. 4 ←→ Chassis ground	Unlock position output	Lock → Unlock	9.5 V or more → 1 V or less
(i47) No. 5	LIN communication	ACC ON, IGN ON or power OFF, and open/close the door	Pulse generation
(i47) No. 6 ←→ Chassis ground	Ignition power supply	Ignition switch ON *1	9.5 V or more
(i47) No. 7 ←→ Chassis ground	Battery power supply	Always *1	9.5 V or more

NOTE:
*1: Perform while the control module connector is disconnected.

B: WIRING DIAGRAM

Refer to “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM” in WI section. <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

6. Subaru Select Monitor

A: OPERATION

- For detailed operation procedures, refer to “Application help”.
- When the keyless access system cannot communicate with Subaru Select Monitor, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”.

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Communication error with keyless access system

Detecting condition:

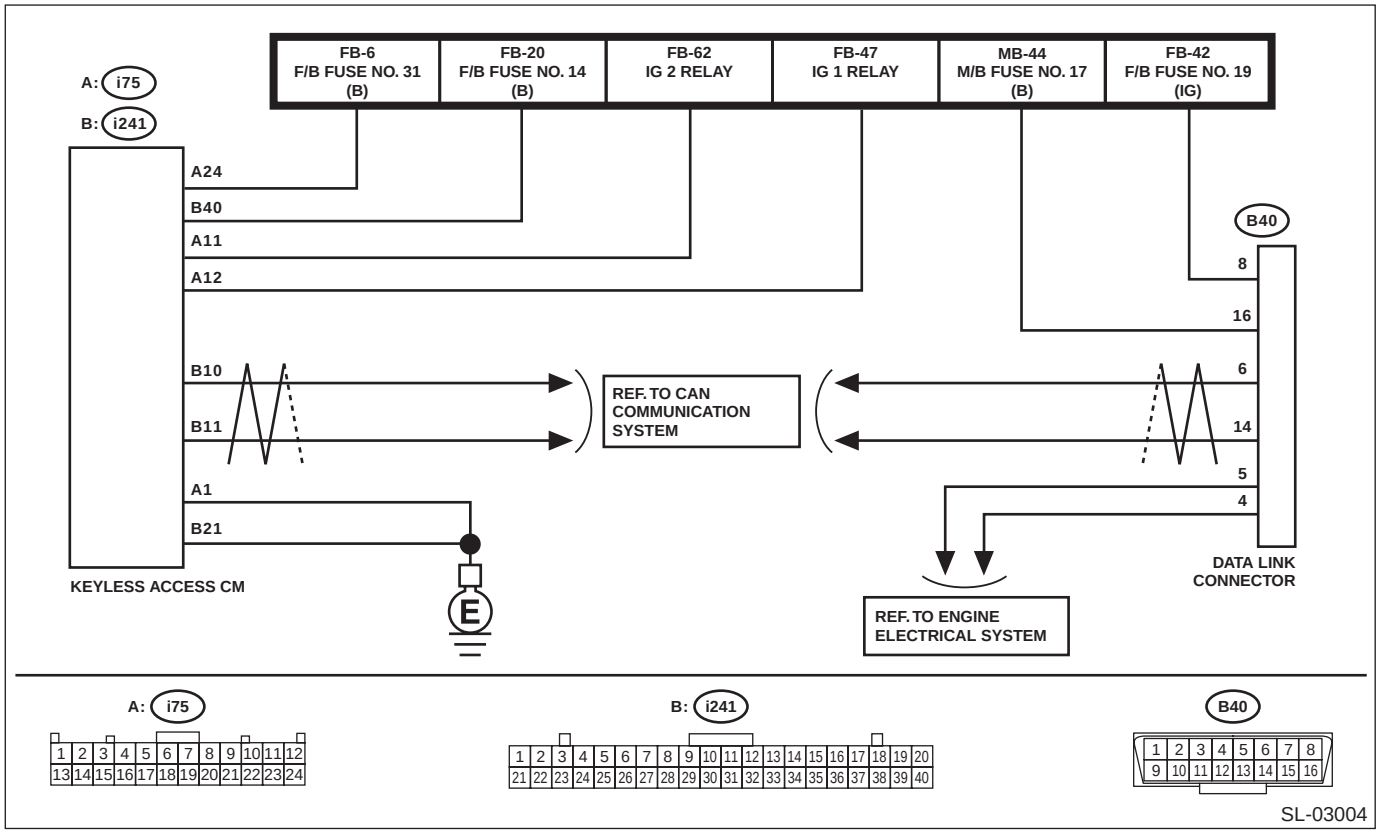
- Defective harness
- Power supply circuit malfunction
- Defective keyless access CM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Not communicable with Subaru Select Monitor.

CAUTION:

For replacement procedure of keyless access CM, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.



Wiring diagram:

NOTE:

For the coupling connector, refer to “WIRING SYSTEM”.

– Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

– CAN communication system <Ref. to WI-133, WIRING DIAGRAM, CAN Communication System.>

	Step	Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse for keyless access CM. <Ref. to SL-10, INSPECTION, Relay and Fuse.>	Is the check result OK?	Go to step **2**.	Replace the fuse. If the replaced fuse has blown out immediately, repair the short circuit to ground in harness between fuse and keyless access CM.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector (harness side) and chassis ground. ***Connector & terminal*** ***(i75) No. 24 (+) — Chassis ground (–):*** ***(i241) No. 40 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the open circuit of harness between fuse and keyless access CM connector.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between the keyless access CM connector (harness side) and chassis ground. ***Connector & terminal*** ***(i75) No. 11 (+) — Chassis ground (–):*** ***(i75) No. 12 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Check IG relay circuit.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Using a tester, measure the resistance between the keyless access CM connector (harness side) and chassis ground. ***Connector & terminal*** ***(i75) No. 1 — Chassis ground:*** ***(i241) No. 21 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness between keyless access CM connector and chassis ground.
5	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **6**.	Perform the inspection according to the diagnosis for LAN system.
6	**CHECK KEYLESS ACCESS CM.** Communicate with the keyless access system.	Is communication possible?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to KPS(diag)-37, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- Initial diagnosis of electronic throttle control is performed after memory clearance. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.

9. Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Items to be displayed	Content	Standard	Note
Driver’s unlock touch sensor switch	Status of the touch sensor (unlock) built on the back surface of the driver’s door outer handle	ON: ON when the touch sensor is touched OFF: OFF when the touch sensor is not touched	—
Passenger’s unlock touch sensor switch	Status of the touch sensor (unlock) built on the back surface of the passenger’s door outer handle	ON: ON when the touch sensor is touched OFF: OFF when the touch sensor is not touched	—
Driver’s lock touch sensor SW	Status of the touch sensor (lock) built on the surface of the driver’s door outer handle	ON: ON when the touch sensor is touched OFF: OFF when the touch sensor is not touched	—
Passenger’s lock touch sensor SW	Status of the touch sensor (unlock) built on the back surface of the passenger’s door outer handle	ON: ON when the touch sensor is touched OFF: OFF when the touch sensor is not touched	—
Rear Gate Request SW	Rear gate lock/unlock button status	ON: When the switch is ON OFF: When the switch is OFF	—
Trunk Request SW	Trunk opener button status	ON: When the switch is ON OFF: When the switch is OFF	—
Secret code Keyless registration	Secret code keyless registration status	unregistered: When not registered registered: When registered	—
ECU ACC	Keyless access CM power supply voltage status	ON: When the voltage is present OFF: When the voltage is not present	—
Control Module Voltage(Backup)	Keyless access CM back-up power supply voltage status	ON: When the voltage is present OFF: When the voltage is not present	—
B/up fuse	Keyless access CM back-up fuse status	Connecting: When the fuse is connected Not connected: When the fuse is not connected	—
Incorrect vehicle ID	ID information when performing the keyless access	No: Registered access key Yes: Unregistered access key	—
No response	Access key response status	No: There is a response from the access key when the keyless access is performed Yes: There is no response from the access key when keyless access is performed	—

Shift N signal(AT only)	Shift (N) status	ON: When the shift position is “N” OFF: When the shift position is other than “N”	—
Delivery mode signal(AT only)	Delivery mode status	ON: When in delivery mode OFF: When in other than the delivery mode	—
ACC relay monitor	Drive status of ACC relay	ON: While the accessory relay drive is output OFF: While the accessory relay drive stops	—
IGN latch monitor	IGN latch status	ON: While the IGN latch signal is output OFF: While the IGN latch signal stops	—
STSW signal monitor	Engine start permission signal output status	ON: When pressing the push button ignition switch while depressing the brake pedal (except for MT model) or the clutch pedal (MT model) OFF: Other than the above	—
IGN1/2 relay monitor (drive output)	Drive output monitoring status of IG relay	ON: While the IG relay 1/2 drive is output OFF: While the IG relay stops	—
IGN1/2 relay monitor (coil voltage)	Coil voltage monitoring status of IG relay	ON: While the IG relay 1/2 drive is output OFF: While the IG relay stops	—
ACCR signal	Accessory cut relay drive status	ON: While the accessory cut relay drive is output OFF: While the accessory cut relay drive stops	—
Vehicle Speed Signal	Driving status	Stopped status: While the vehicle stops Drive status: While the vehicle is driving	—
Engine Speed	Condition of the engine	Stopped: While the engine stops Rotating: While the engine is rotating	—
Vehicle identification	Vehicle recognition status	GAS MT: Equipped vehicle is displayed. GAS AT: Equipped vehicle is displayed. HEV AT: Equipped vehicle is displayed. Auto Start Stop MT: Equipped vehicle is displayed. Auto Start Stop AT: Equipped vehicle is displayed.	—
Power Supply Condition	Power supply status	All OFF status: IG 1 relay, IG 2 relay, and ACC relay is all OFF ACC relay ON status: Accessory is ON IGN relay ON status: Ignition is ON STSW Condition: The push button ignition switch is pressed while the brake pedal (except for MT model) or the clutch pedal (MT model) is depressed	—
Start SW trouble	Start SW mismatch	No: Start SW is normal Yes: Start SW is faulty	—
P signal mismatch	Shift P signal error	No: Shift P signal is normal Yes: Shift P signal is abnormal	—
Steering lock unlock waiting time out	Detecting status of the steering lock unlock waiting time out	No: Steering lock unlock time out has not occurred Yes: Steering lock unlock time out occurred	—
Key collation waiting time out	Detecting status of the key collation waiting time out	No: Key collation time out has not occurred Yes: Key collation time out occurred	—
IGN1/2 external circuit abnormal	IGN relay output status	No: IGN 1/2 external circuit is normal Yes: IGN 1/2 external circuit is faulty	—

10.Inspection Mode

A: PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. PREPARATION FOR THE INSPECTION MODE

1) Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) Perform the Clear Memory Mode. <Ref. to KPS(diag)-25, Clear Memory Mode.>
3) Read the DTC and check that the DTC is not displayed. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 2).

2. INSPECTION MODE 1

DTC	Item	Note
U0073	CONTROL MODULE COMMUNICATION BUS OFF	—
U0100	LOST COMMUNICATION WITH ECM/PCM “A”	—
U0101	LOST COMMUNICATION WITH TCM	—
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	—
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	—
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	—
U0401	INVALID DATA RECEIVED FROM ECM/PCM “A”	—
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	—
B1571	REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM)	—
B1572	IMM CIRCUIT EXCEPT ANTENNA CIRCUIT	—
B1576	EGI CONTROL MODULE EEPROM	—
B1577	IMM CONTROL MODULE EEPROM	—
B2271	IGN RELAY CONTROL CIRCUIT	—
B2274	ACC RELAY CONTROL CIRCUIT	—
B2275	ENGINE START REQUEST CONTROL CIRCUIT	—
B2276	ACC RELAY OFF SIGNAL	—
B2277	SUBMERGING CIRCUIT	—
B2285	STEERING LOCK POSITION SIGNAL CORRELATION	—
B2286	ENGINE SPEED SIGNAL(WITHOUT Auto Start Stop)	—
B2781	STEERING LOCK CM CONTROL CIRCUIT	—
B2782	STEERING LOCK DRIVE REQUEST SIGNAL CORRELATION	—
B2785	LIN COMMUNICATION	—
B2786	STEERING LOCK CM COMMUNICATION	—
B2788	IGN SIGNAL CORRELATION (STEERING LOCK CM)	—
B2789	ID CODE BOX COMMUNICATION	—
B278D	ID CODE BOX JUDGMENT CIRCUIT	—
B2793	BACK UP POWER	—

Diagnostic procedure:
1) Prepare for the inspection mode. <Ref. to KPS(diag)-32, PREPARATION FOR THE INSPECTION MODE, PROCEDURE, Inspection Mode.>
2) Start the engine, and let it idle for 40 seconds or more.
3) Read the DTC and check that the DTC is not displayed. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

3. INSPECTION MODE 2

DTC	Item	Note
B2779	REMOTE CONTROL ENGINE STARTER COLLATION	—

Diagnostic procedure:
1) Prepare for the inspection mode. <Ref. to KPS(diag)-32, PREPARATION FOR THE INSPECTION MODE, PROCEDURE, Inspection Mode.>
2) Register the remote engine starter, and operate it.
3) Read the DTC and check that the DTC is not displayed. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

4. INSPECTION MODE 3

DTC	Item	Note
B2790	ID CODE BOX CIRCUIT	—
B27A1	DRIVER SIDE EXTERNAL ANTENNA OPEN	—
B27A2	PASSENGER SIDE EXTERNAL ANTENNA OPEN	—
B27A5	FRONT INTERNAL ANTENNA OPEN	—
B27A6	REAR INTERNAL ANTENNA OPEN	—
B27A7	TRUNK/REAR GATE INTERNAL ANTENNA OPEN	—
B27A8	TRUNK/REAR GATE EXTERNAL ANTENNA OPEN	—

Diagnostic procedure:
1) Prepare for the inspection mode. <Ref. to KPS(diag)-32, PREPARATION FOR THE INSPECTION MODE, PROCEDURE, Inspection Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

5. INSPECTION MODE 4

DTC	Item	Note
B2282	VEHICLE SPEED SIGNAL CORRELATION	—
B2283	VEHICLE SPEED SENSOR	—

Diagnostic procedure:
1) Prepare for the inspection mode. <Ref. to KPS(diag)-32, PREPARATION FOR THE INSPECTION MODE, PROCEDURE, Inspection Mode.>
2) Drive for 20 seconds or more at a vehicle speed of 25 km/h (15.5 MPH) or more.
3) Read the DTC and check that the DTC is not displayed. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

6. INSPECTION MODE 5

DTC	Item	Note
B2784	ANTENNA CIRCUIT (PUSH ENGINE SWITCH)	—
B278A	PUSH ENGINE SWITCH POWER SUPPLY CIRCUIT	—

Diagnostic procedure:
1) Prepare for the inspection mode. <Ref. to KPS(diag)-32, PREPARATION FOR THE INSPECTION MODE, PROCEDURE, Inspection Mode.>
2) Press the push button ignition switch with no access key in the passenger room.
3) Read the DTC and check that the DTC is not displayed. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

7. INSPECTION MODE 6

DTC	Item	Note
B2284	BRAKE SIGNAL CORRELATION	—

Diagnostic procedure:
1) Prepare for the inspection mode. <Ref. to KPS(diag)-32, PREPARATION FOR THE INSPECTION MODE, PROCEDURE, Inspection Mode.>
2) Turn the ignition switch to ON, depress and hold the brake pedal for 20 seconds of more, then release the brake pedal and wait for 20 seconds and more.
3) Read the DTC and check that the DTC is not displayed. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

11.Keyless Access System Check

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
5) On «Select Function» display, select «Work Support».
6) On «Work Support» display, select «Keyless access system check».
7) Select a transmitter to be checked.
8) Select [Exit] to exit the system check. The screen will return to the «Keyless access system check» screen.

Data	Customize setting	Remarks
Keyless access system check	Driver side external transmitter - internal tuner	When the setting content on the left is selected, the access key is neared to the selected transmitter (access antenna) and collation matches, the buzzer will sound.
	Passenger side external transmitter - internal tuner	
	Fr internal transmitter - internal tuner	
	Rr internal transmitter - internal tuner	
	Trunk internal transmitter, interior tuner	
	Trunk-external transmitter - trunk-internal tuner	
	R gate internal transmitter - internal tuner	
	R gate external transmitter - internal tuner	
	Immobilizer amplifier transmission	
Collation result history Clear	Execution	
	—	

NOTE:
For detailed operation procedures, refer to “Application help”.

12.System Operation Check Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
5) On «Select Function» display, select «Active Test».
6) Select a location to be inspected.

Data	Keyless access CM output check	Remarks
Driver seat sensor power supply	Output	Perform the output check for the driver's door touch sensor.
	Stop	
Passenger seat sensor power supply	Output	Perform the output check for the passenger's door touch sensor.
	Stop	
STSW	Output	Turn on the STSW. *2
	Stop	
ACC	Output	Turn on the ACC.
	Stop	
IGN1/2	Output	Turn on the IGN1/2.
	Stop	
Start SW character illumination lighted	Output	Perform ON output of the push button ignition switch back-up light. *1
	Stop	
Start SW indicator lighted (green)	Output	Perform ON output of the push button ignition switch back-up light. *1
	Stop	
Start SW indicator lighted (orange)	Output	Perform ON output of the push button ignition switch back-up light. *1
	Stop	
Steering lock power supply	Output	Output the power supply signal from keyless access CM to steering lock CM.
	Stop	

*1: When lit by a condition other than for a system operation check mode, it will not become unlit even when set to OFF or no output.
*2: When performed with ignition switch ON, engine will start. Therefore, great care must be exercised.

NOTE:
For detailed operation procedures, refer to “Application help”.

13.List of Diagnostic Trouble Code (DTC)

A: LIST

1. Keyless access system

DTC	Item	Note
U0073	CONTROL MODULE COMMUNICATION BUS OFF	<Ref. to KPS(diag)-39, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

14.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

Detected when CAN data from the engine control module (ECM) does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data from TCM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data from BIU does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

F: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from meter does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

G: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”

Detected when there is malfunction in CAN data from the engine control module (ECM).

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

H: DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

Detected when CAN data from BIU is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

I: DTC B2271 IGN RELAY CONTROL CIRCUIT

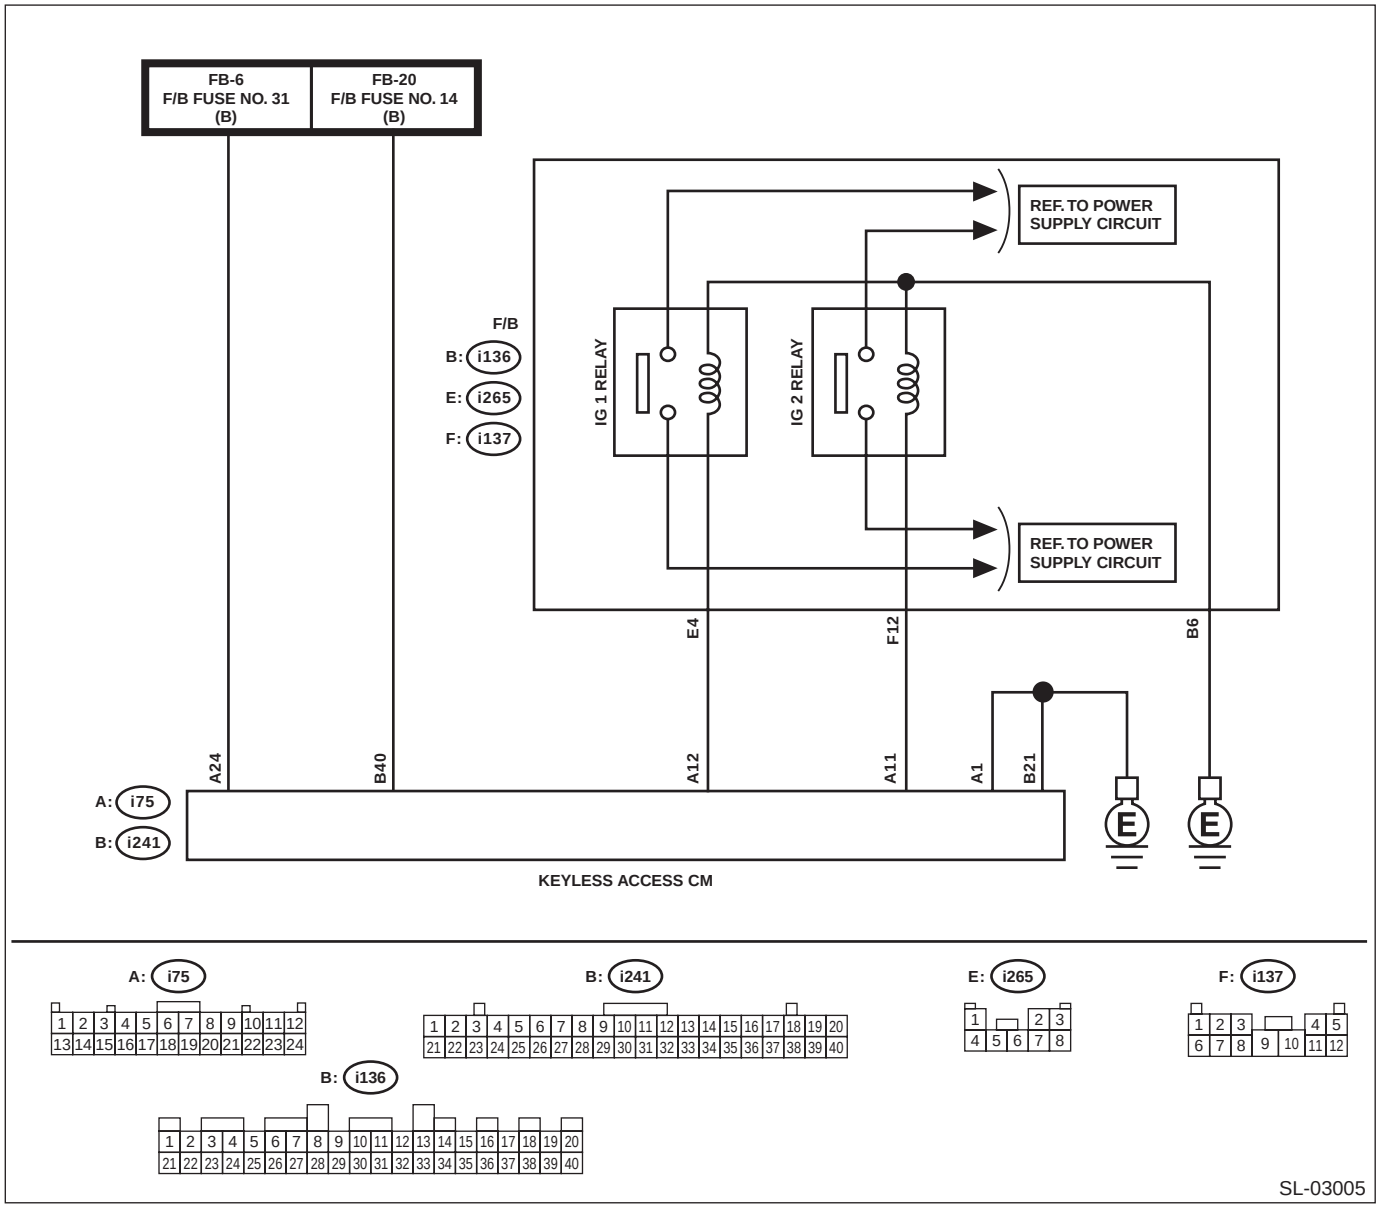
DTC detecting condition:

- When malfunction is detected in IG1 and IG2 drive circuits in the keyless access CM.
- When malfunction is detected in IG hold circuit in the keyless access CM.

Trouble symptom:

Not all functions operate at IGN ON.

CAUTION:



For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

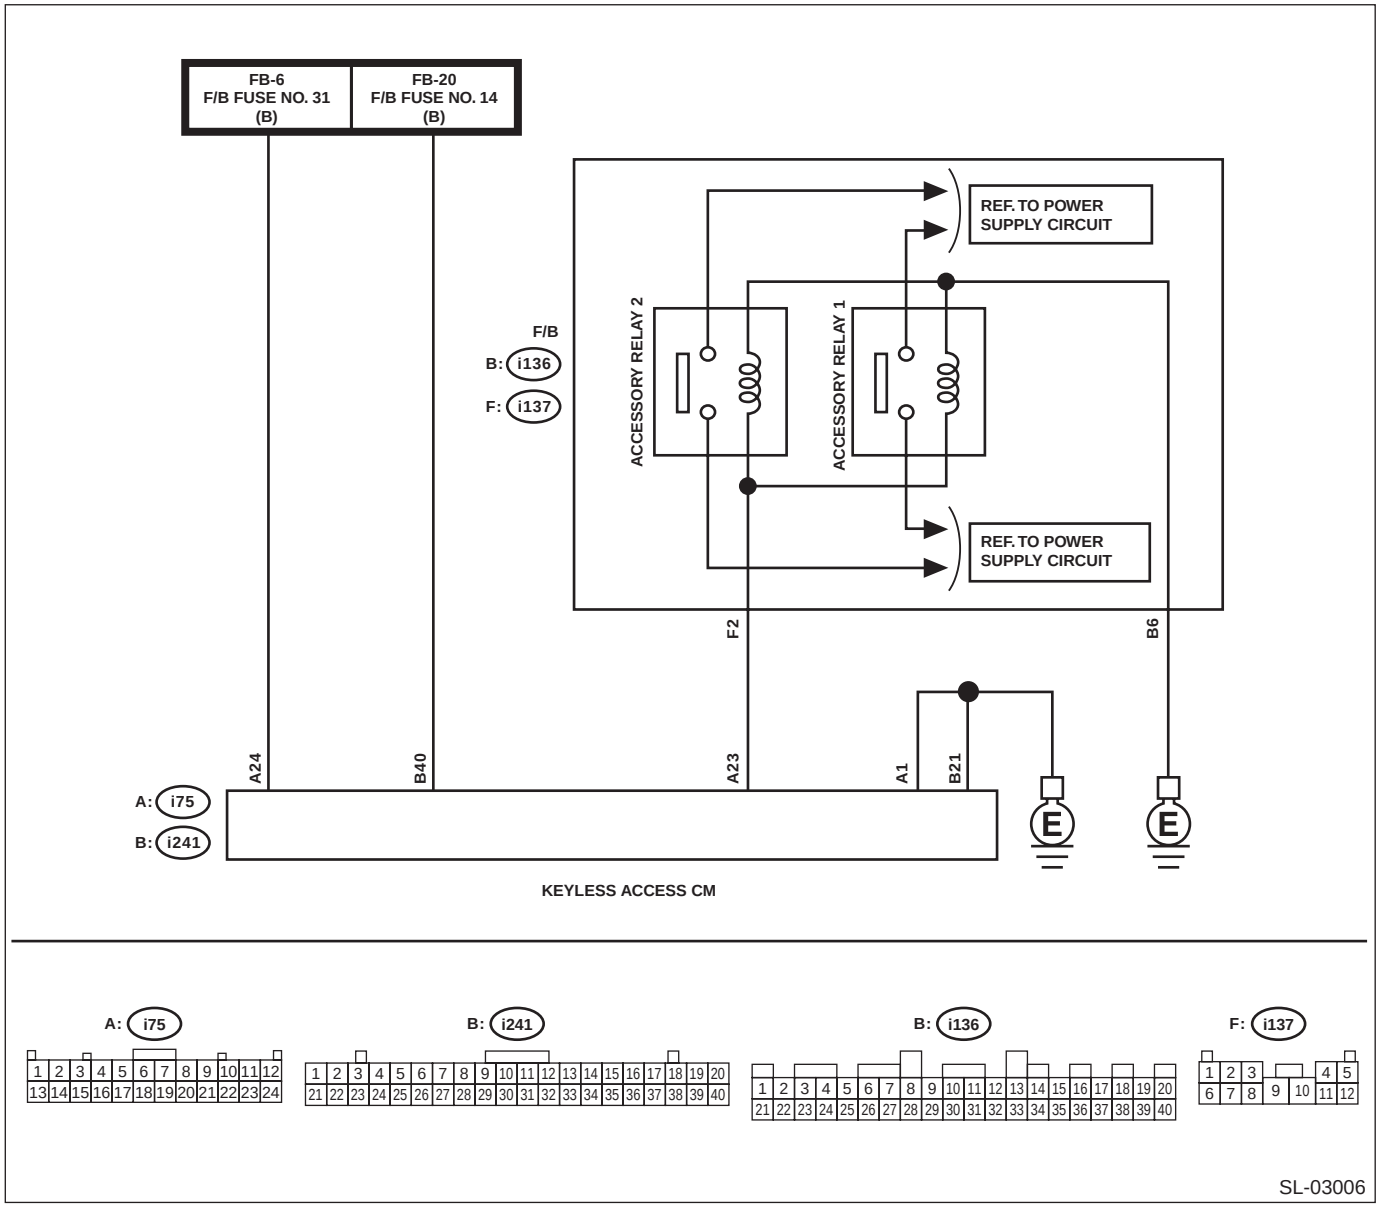
Wiring diagram:

NOTE:

For the coupling connector, refer to "WIRING SYSTEM".

Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK FUSE.** Check the fuse. <Ref. to SL-10, INSPECTION, Relay and Fuse.>	Is the check result OK?	Go to step **3**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
3	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 24 (+) — Chassis ground (–):*** ***(i241) No. 40 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **4**.	Check the power supply circuit.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 21 — Chassis ground:*** ***(i75) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 11 — Chassis ground:***	Is resistance 74.15 — 460.88 Ω? (20°C)	Go to step **6**.	Check IG relay 2. Go to step **7**.
6	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 12 — Chassis ground:***	Is resistance 50.87 — 72.17 Ω? (20°C)	Go to step **8**.	Check IG relay 1. Go to step **7**.
7	**CHECK RELAY.** Perform unit inspection of IG relay 1 and IG relay 2. <Ref. to SL-10, CHECK RELAY, INSPECTION, Relay and Fuse.>	Is the check result OK?	Go to step **8**.	Replace the relay. <Ref. to SL-9, Relay and Fuse.>



Step		Check	Yes	No
8	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 11 (+) — Chassis ground (–):*** ***(i75) No. 12 (+) — Chassis ground (–):***	Is the voltage 1 V or less → 9.5 — 16 V when ACC → IGN ON?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>

J: DTC B2274 ACC RELAY CONTROL CIRCUIT

DTC detecting condition:
When malfunction is detected in ACC relay drive circuit in the keyless access CM or external circuit.
Trouble symptom:
Each function does not operate at the ACC position.

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Stop light system <Ref. to WI-349, WIRING DIAGRAM, Stop Light System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.

	Step	Check	Yes	No
2	**CHECK FUSE.** Check the fuse. <Ref. to SL-9, Relay and Fuse.>	Is the check result OK?	Go to step **3**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
3	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 24 (+) — Chassis ground (–):*** ***(i241) No. 40 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **4**.	Check the power supply circuit.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 21 — Chassis ground:*** ***(i75) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 23 — Chassis ground:***	Is resistance 152.61 — 216.5 Ω? (20°C)	Go to step **7**.	Go to step **6**.
6	**CHECK RELAY.** Perform inspection of ACC relay unit. <Ref. to SL-9, Relay and Fuse.>	Is the check result OK?	Go to step **7**.	Replace the relay.
7	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and the accessory relay (push button start), and between the accessory relay (push button start) and chassis ground. ***Connector & terminal*** ***(i75) No. 23 — (i137) No. 2:*** ***(i136) No. 6 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 23 (+) — Chassis ground (–):***	Is the voltage 1 V or less → 9.5 — 16 V when OFF → ACC ON?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

K: DTC B2275 ENGINE START REQUEST CONTROL CIRCUIT

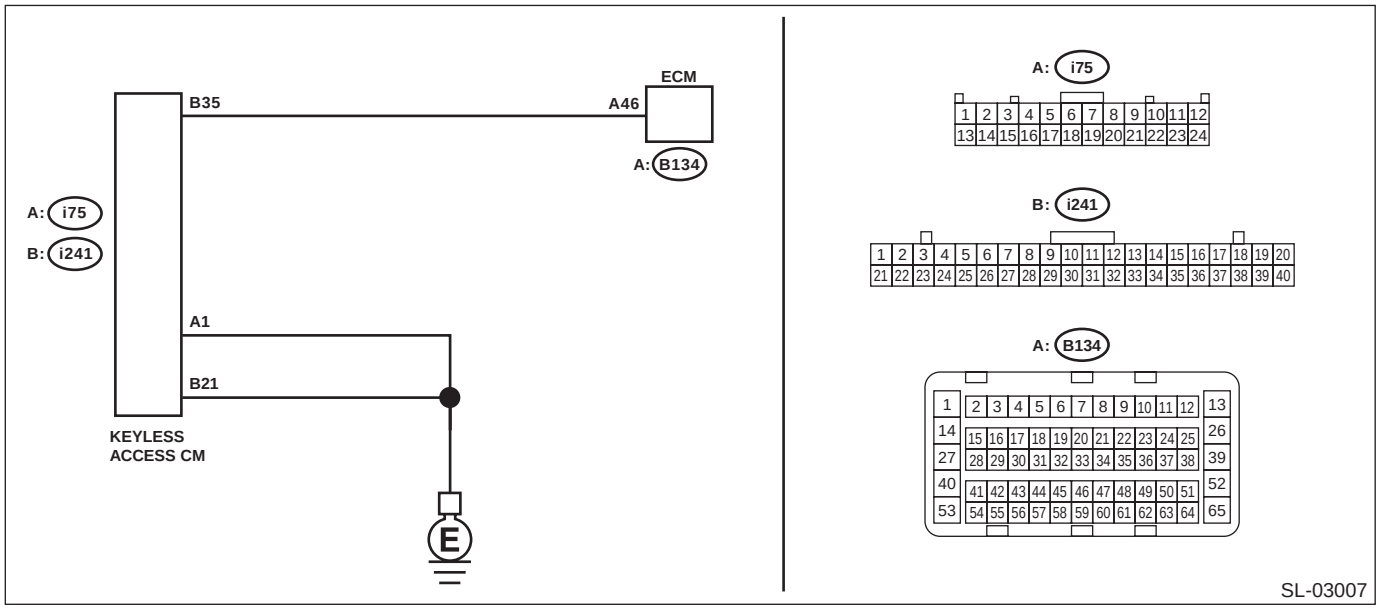
DTC detecting condition:

- When malfunction is detected in engine start permission signal output circuit in the keyless access CM.
- When malfunction is detected in external engine start permission signal circuit.

Trouble symptom:

Engine will not start.

CAUTION:



For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Wiring diagram:

NOTE:

For the coupling connector, refer to "WIRING SYSTEM".

Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK FUSE.** Check the fuse. <Ref. to SL-9, Relay and Fuse.>	Is the check result OK?	Go to step **3**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector and ECM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and ECM. ***Connector & terminal*** ***(i241) No. 35 — (B134) No. 46:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 21 — Chassis ground:*** ***(i75) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 35 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector and ECM connector. 2) Place the access key in the passenger room. 3) Using a tester, measure the voltage between the terminals of keyless access CM connector. ***Connector & terminal*** ***(i241) No. 35 (+) — (i241) No. 21 (–):***	Does the voltage change as 2 V or less → 9 V or more when the push button ignition switch is turned on while depressing the brake pedal with the shift position in P or N (AT model) or while depressing clutch pedal (MT model)?	Perform inspection according to the diagnosis of engine. <Ref. to EN(H4DO)(diag)-85, PROCEDURE, Diagnostics for Engine Starting Failure.> <Ref. to EN(H6DO)(diag)-95, PROCEDURE, Diagnostics for Engine Starting Failure.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

L: DTC B2276 ACC RELAY OFF SIGNAL

DTC detecting condition:
When input error occurs in accessory relay cut input signal of keyless access CM.
Trouble symptom:
- The accessory power supply is not cut during engine start.
- Starter rotation is slow.

CAUTION:
For replacement procedure of keyless access CM and ECM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector and ECM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and ECM. ***Connector & terminal*** ***(i241) No. 36 — (B134) No. 64:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 36 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.

	Step	Check	Yes	No
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 21 — Chassis ground:*** ***(i75) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector and ECM connector. 2) Place the access key in the passenger room. 3) Using a tester, measure the voltage between terminals of the keyless access CM connector when the push button ignition switch is pressed while depressing the brake pedal, with the shift lever in the P range for model except for MT or while depressing the clutch pedal for MT model. ***Connector & terminal*** ***(i241) No. 36 (+) — (i241) No. 21 (–):***	Is the voltage 9.5 — 16 V → 1 V or less?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Replace the ECM. <Ref. to FU(H4DO)-82, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, REMOVAL, Engine Control Module (ECM).>

M: DTC B2277 SUBMERGING CIRCUIT

DTC detecting condition:
When the water-submersion detection circuit integrated into the keyless access CM detects the water submersion.
Trouble symptom:
- The ignition can be turned ON, but cannot be turned OFF.
- Engine will not start.

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK SUBMERSION CONDITION.** Check the keyless access CM and environment of equipment, and check the harness for any trace of water submersion.	Is there any trace of water submersion?	Take necessary measures against water submersion and replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

N: DTC B2282 VEHICLE SPEED SIGNAL CORRELATION

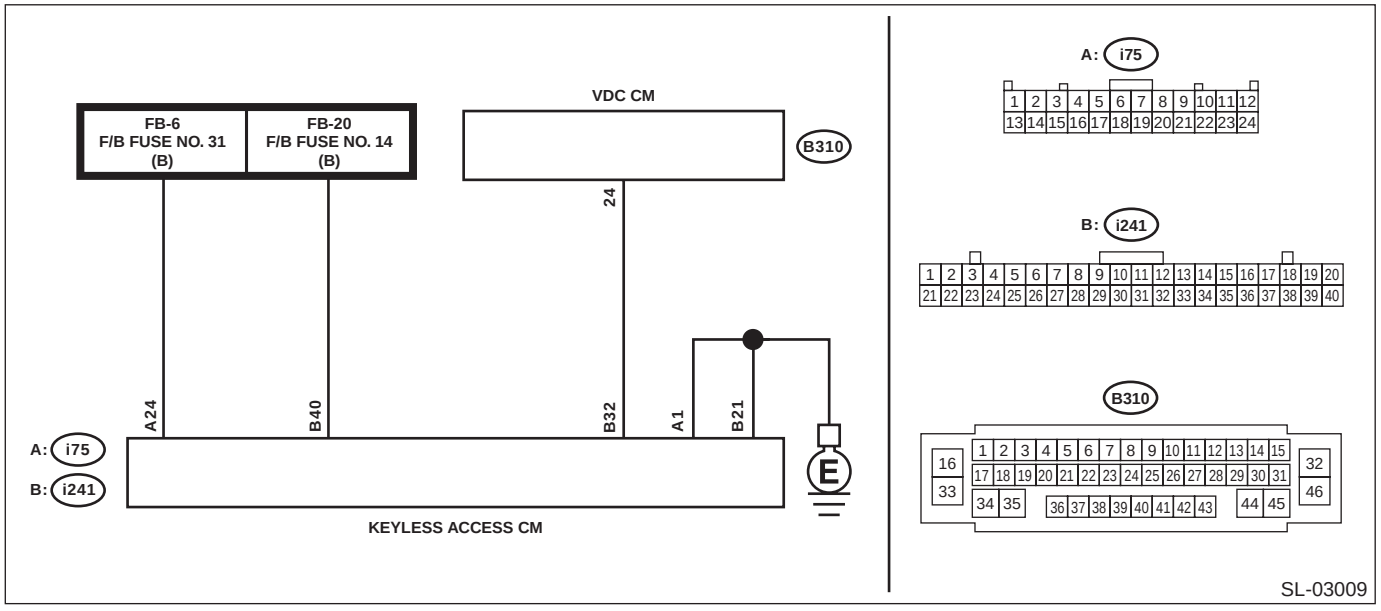
DTC detecting condition:
When the vehicle speed signal transmitted from VDC via solid line and the vehicle speed signal transmitted from VDC via CAN communication line do not match.

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK COMBINATION METER.** Check that the speedometer is displayed normally.	Is the check result OK?	Go to step **3**.	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

	Step	Check	Yes	No
3	**CHECK CURRENT DATA.** Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> «Vehicle speed signal»	Is the display normal according to the parked state or driving state?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the VDC CM connector. 3) Using a tester, measure the resistance between the keyless access CM connector and VDC CM connector. ***Connector & terminal*** ***(i241) No. 32 — (B310) No. 24:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 32 — Chassis ground:***	Is the resistance 30 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK KEYLESS ACCESS CM.** 1) Connect each connector. 2) Using the Subaru Select Monitor, measure the waveform between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 32 — Chassis ground:***	Is 3.54 Hz displayed when the vehicle is driven at approx. 5 km/h (3 MPH)? Or does the value change from 3.54 Hz when the vehicle stops?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>



O: DTC B2283 VEHICLE SPEED SENSOR

DTC detecting condition:
Either of the following malfunctions is detected. (Vehicle speed sensor failure is detected.)
- Vehicle speed signal failure detection 1: Excessive deceleration detection
- Vehicle speed signal failure detection 2: Engine speed interlock detection

Trouble symptom:
The steering lock cannot be released.

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK COMBINATION METER.** Check that the speedometer is displayed normally.	Is the check result OK?	Go to step **3**.	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

	Step	Check	Yes	No
3	**CHECK CURRENT DATA.** Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> «Vehicle speed signal»	Is the display normal according to the parked state or driving state?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the VDC CM connector. 3) Using a tester, measure the resistance between the keyless access CM connector and VDC CM connector. ***Connector & terminal*** ***(i241) No. 32 — (B310) No. 24:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 32 — Chassis ground:***	Is the resistance 30 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK KEYLESS ACCESS CM.** 1) Connect each connector. 2) Using the Subaru Select Monitor, measure the waveform between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 32 — Chassis ground:***	Is 3.54 Hz displayed when the vehicle is driven at approx. 5 km/h (3 MPH)? Or does the value change from 3.54 Hz when the vehicle stops?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

P: DTC B2284 BRAKE SIGNAL CORRELATION

DTC detecting condition:
When the brake signal transmitted via the hard wire and the brake signal transmitted from body integrated unit via CAN communication line do not match.
Trouble symptom:
If the hard-wired brake signal is faulty, the engine will not start.

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Stop light system <Ref. to WI-349, WIRING DIAGRAM, Stop Light System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CURRENT DATA.** Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> «Stop light SW»	Is DTC displayed normally according to the brake pedal operation?	Go to step **3**.	Check the stop light system.
3	**CHECK CURRENT DATA.** Check the current data display of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-25, Read Current Data.> «Stop light SW»	Is DTC displayed normally according to the brake pedal operation?	Go to step **4**.	Check body integrated unit <Ref. to BC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> and the stop light switch circuit.

	Step	Check	Yes	No
4	**CHECK FUSE.** Check the fuse. <Ref. to SL-10, INSPECTION, Relay and Fuse.>	Is the check result OK?	Go to step **5**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
5	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 24 (+) — Chassis ground (–):*** ***(i241) No. 40 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **6**.	Check the power supply circuit.
6	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 21 — Chassis ground:*** ***(i75) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the stop light switch connector. 2) Using a tester, measure the resistance between the keyless access CM connector and stop light switch connector. ***Connector & terminal*** ***(i241) No. 31 — (B65) No. 2:***	Is the resistance less than 1 Ω?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 31 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **9**.	Repair or replace the short circuit of the harness.
9	**CHECK HARNESS.** Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the brake pedal is depressed. ***Connector & terminal*** ***(i241) No. 31 (+) — Chassis ground (–):***	Does the voltage change as follows? Brake pedal not depressed: 1 V or less → Brake pedal depressed: 11 — 14 V	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>	Check the power supply circuit of stop light switch.

Q: DTC B2285 STEERING LOCK POSITION SIGNAL CORRELATION

DTC detecting condition:
When the steering lock position signal transmitted from the steering lock CM via solid line and the steering lock position signal transmitted via LIN communication system do not match.
Trouble symptom:
- There are conditions when the steering lock is not released.
- Engine will not start.

CAUTION:
For replacement procedure of keyless access CM and steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK DTC.** Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed?	Perform the diagnosis of DTC B2785. <Ref. to KPS(diag)-67, DTC B2785 LIN COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK CURRENT DATA.** Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> When locked: • Lock side sensor status: ON • Unlock side sensor status: OFF • Lock confirmation: Confirmed • Unlock confirmation: Not confirmed When unlocked: • Lock side sensor status: OFF • Unlock side sensor status: ON • Lock confirmation: Not confirmed • Unlock confirmation: Confirmed NOTE: To lock the steering lock, turn off the power, and open → close, or close → open the driver's door. To unlock the steering lock, turn the ignition switch to ACC ON or IGN ON.	Are the readings as shown on the left according to the steering lock status?	Go to step **4**.	Replace the steering lock CM. <Ref. to SL-104, REMOVAL, Steering Lock CM.>
4	**CHECK CURRENT DATA.** Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> When locked: • Steering unlock switch: OFF When unlocked: • Steering unlock switch: ON NOTE: To lock the steering lock, turn off the power, and open → close, or close → open the driver's door. To unlock the steering lock, turn the ignition switch to ACC ON or IGN ON.	Are the readings as shown on the left according to the steering lock status?	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>	Go to step **5**.
5	**CHECK FUSE.** Check the fuse. <Ref. to SL-10, INSPECTION, Relay and Fuse.>	Is the check result OK?	Go to step **6**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
6	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 24 (+) — Chassis ground (–):*** ***(i241) No. 40 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **7**.	Check the power supply circuit.
7	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 21 — Chassis ground:*** ***(i75) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **8**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
8	**CHECK HARNESS.** Using a tester, measure the resistance between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(i47) No. 4 — Chassis ground:***	Does the following occur? Steering lock: 10 kΩ or more → Steering unlock: less than 1 Ω	Go to step **9**.	Replace the steering lock CM. <Ref. to SL-104, REMOVAL, Steering Lock CM.>
9	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the steering lock CM connector. 3) Using a tester, measure the resistance between the keyless access CM connector and steering lock CM connector. ***Connector & terminal*** ***(i75) No. 21 — (i47) No. 4:***	Is the resistance less than 1 Ω?	Go to step **10**.	Repair or replace the open circuit of harness.
10	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 21 — Chassis ground:***	Is the resistance 10 kΩ or more?	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>	Repair or replace the short circuit of the harness.

R: DTC B2286 ENGINE SPEED SIGNAL(WITHOUT Auto Start Stop)

DTC detecting condition:
When the engine speed signal transmitted from the ECM via solid line and the engine speed signal transmitted from the ECM via CAN communication line do not match.
Trouble symptom:
Cannot start the engine, or the engine stops after starting.

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK COMBINATION METER.** Confirm that the speedometer is displayed normally.	Can the data be read normally?	Go to step **3**.	Perform the diagnosis for the engine. <Ref. to EN(H4DO)(diag)-85, PROCEDURE, Diagnostics for Engine Starting Failure.> <Ref. to EN(H6DO)(diag)-95, PROCEDURE, Diagnostics for Engine Starting Failure.>

	Step	Check	Yes	No
3	**CHECK CURRENT DATA.** Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> «Engine speed»	Can the data be read normally?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the ECM connector. 3) Using a tester, measure the resistance between the keyless access CM connector and ECM connector. ***Connector & terminal*** ***(i75) No. 7 — (B134) No. 10:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 7 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK HARNESS.** 1) Connect the keyless access CM connector and ECM connector. 2) Using the Subaru Select Monitor, measure the waveform between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 7 — Chassis ground:***	Does the pulse stop when the engine is stopped, and does the pulse generate when the engine is started?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Perform the diagnosis for the engine. <Ref. to EN(H4DO)(diag)-85, PROCEDURE, Diagnostics for Engine Starting Failure.> <Ref. to EN(H6DO)(diag)-95, PROCEDURE, Diagnostics for Engine Starting Failure.>

S: DTC B2779 REMOTE CONTROL ENGINE STARTER COLLATION

DTC detecting condition:
When the keyless access CM does not respond to engine start even when the remote control engine starter is ON, or when there is a code mismatch.
Trouble symptom:
Remote engine starter does not function.

Step		Check	Yes	No
1	**REGISTER THE REMOTE ENGINE STARTER.** 1) Clear the DTC. <Ref. to KPS(diag)-25, Clear Memory Mode.> 2) Register the remote engine starter using the Subaru Select Monitor. (Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.) NOTE: When the registration failed, refer to "Correspondence table when registration is not possible" in "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. 3) Read the DTC again. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B2779 displayed?	Replace the remote engine starter.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

T: DTC B2781 STEERING LOCK CM CONTROL CIRCUIT

DTC detecting condition:

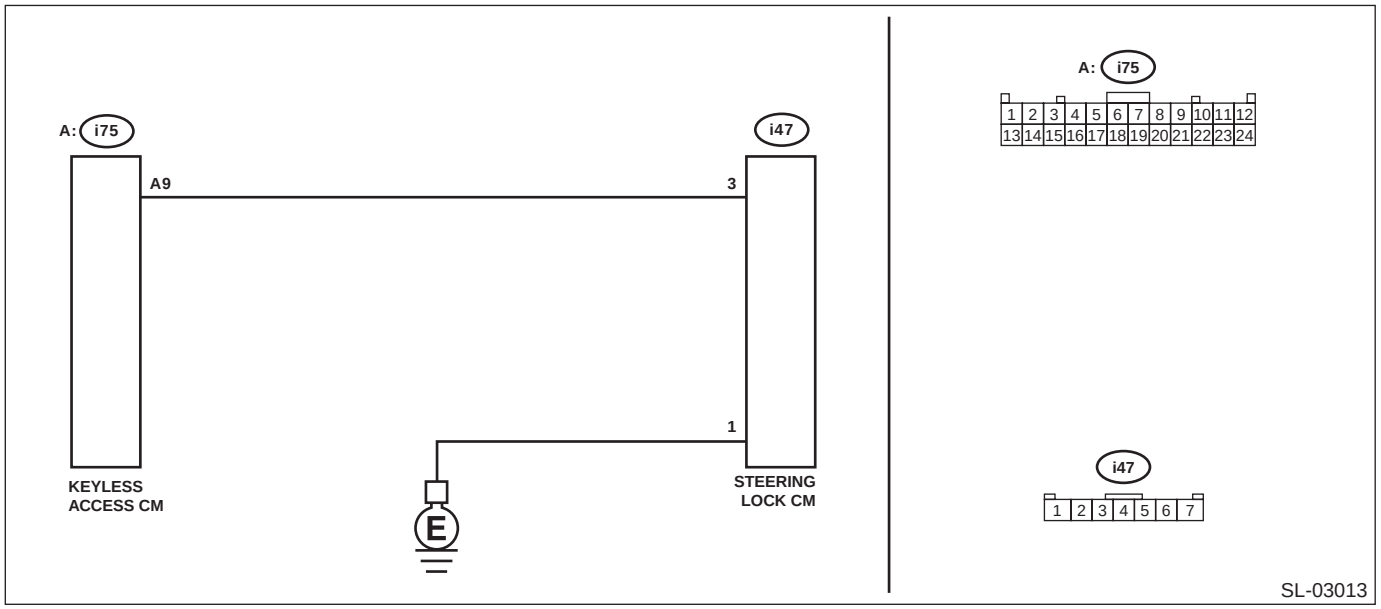
- When malfunction is detected in lock/unlock position detection sensor.
- When the open or short circuit in the steering lock motor drive circuit is detected.

Trouble symptom:

- The steering lock cannot be released.
- Engine will not start.

CAUTION:
For replacement procedure of steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

NOTE:
When all ECMs connected to collation system LIN bus cannot communicate with the keyless access CM, DTC B2785 is output.



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed?	Perform the diagnosis of DTC B2785. <Ref. to KPS(diag)-67, DTC B2785 LIN COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Replace the steering lock CM. <Ref. to SL-104, Steering Lock CM.>

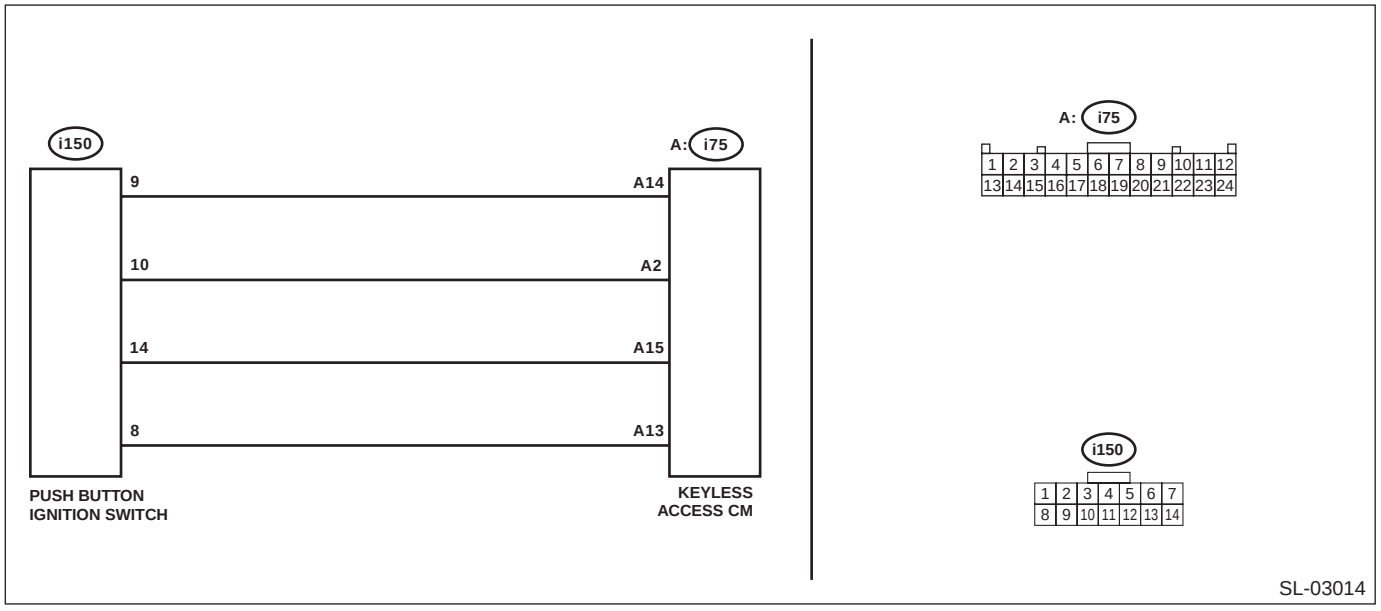
U: DTC B2782 STEERING LOCK DRIVE REQUEST SIGNAL CORRELATION

DTC detecting condition:
When the open or short circuit in the steering lock motor power supply circuit is detected.
Trouble symptom:
- The steering lock cannot be released.
- Engine will not start.

CAUTION:
For replacement procedure of keyless access CM and steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

Step		Check	Yes	No
1	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the steering lock CM connector. 2) Using a tester, measure the resistance between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(i47) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair or replace the open circuit of harness.
2	**CHECK STEERING LOCK CM.** 1) Connect the steering lock CM connector. 2) Set to ACC OFF, IGN OFF, and shift position P. 3) Using a tester, open the door, and measure the voltage between terminals of steering lock CM connector when the steering lock motor is driven. ***Connector & terminal*** ***(i47) No. 3 (+) — (i47) No. 1 (–):***	Does the voltage change as follows? 1 V or less (steering lock motor in operation) → 11 — 14 V (steering lock motor not in operation)	Go to step **3**.	Go to step **4**.



Step		Check	Yes	No
3	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 3) Turn the ignition switch to OFF. 4) Disconnect the battery ground cable and reconnect it, and then clear the abnormal information displayed on the data monitor. 5) Turn the ignition switch to ON. 6) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Does the display «Is DTC (B2782) displayed?» appear?	Replace the steering lock CM. <Ref. to SL-104, Steering Lock CM.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
4	**CHECK CONNECTOR.** 1) Disconnect the steering lock CM connector. 2) Disconnect the keyless access CM connector. 3) Check each connector.	Is the check result OK?	Go to step **5**.	Repair or replace the connector.
5	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between steering lock CM connector and keyless access CM connector. ***Connector & terminal*** ***(i75) No. 9 — (i47) No. 3:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between steering lock CM connector and chassis ground, and between keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 9 — Chassis ground:***	Is the resistance 10 kΩ or more?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Repair or replace the short circuit of the harness.

V: DTC B2784 ANTENNA CIRCUIT (PUSH ENGINE SWITCH)

DTC detecting condition:
When open or short circuit occurs in the antenna coil.
Trouble symptom:
The keyless access function may not be operable.

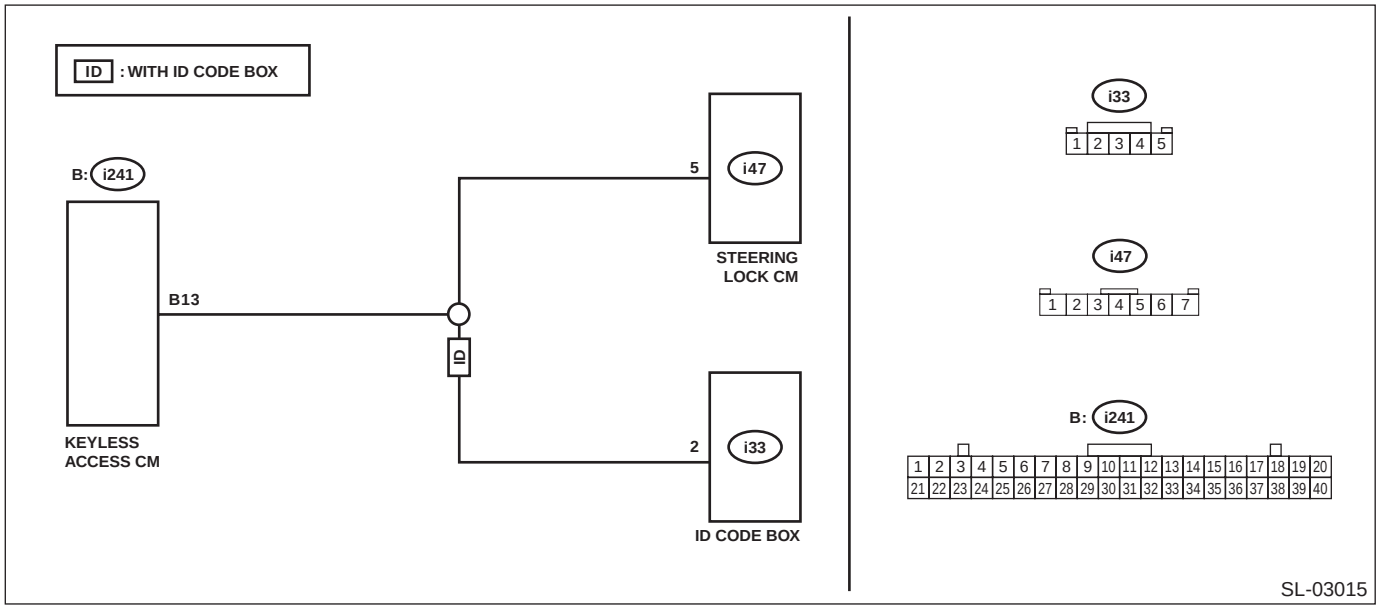
CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Immobilizer system <Ref. to WI-253, WIRING DIAGRAM, Immobilizer System.>

Step		Check	Yes	No
1	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the push button ignition switch connector. 2) Disconnect the keyless access CM connector. 3) Using a tester, measure the resistance between the push button ignition switch connector and the keyless access CM connector. ***Connector & terminal*** ***(i150) No. 14 — (i75) No. 15:*** ***(i150) No. 9 — (i75) No. 14:*** ***(i150) No. 10 — (i75) No. 2:*** ***(i150) No. 8 — (i75) No. 13:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair or replace the open circuit of harness.
2	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the push button ignition switch connector and chassis ground. ***Connector & terminal*** ***(i150) No. 14 — Chassis ground:*** ***(i150) No. 9 — Chassis ground:*** ***(i150) No. 10 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **3**.	Repair or replace the short circuit of the harness.

	Step	Check	Yes	No
3	**CHECK PUSH BUTTON IGNITION SWITCH.** 1) Replace the push button ignition switch. <Ref. to SL-106, Push Button Ignition Switch.> 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 3) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B2784 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Malfunction occurred in the push button ignition switch.

W: DTC B2785 LIN COMMUNICATION



DTC detecting condition:
When the keyless access CM detected the collation system LIN bus communication error three times in a row.

Trouble symptom:
The keyless access function may not be operable.

CAUTION:
For replacement procedure of keyless access CM, steering lock CM and ID code box, refer to "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 2) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the steering lock CM connector. 3) Disconnect the ID code box connector. (With ID code box) 4) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i241) No. 13 — (i47) No. 5:*** ***(i241) No. 13 — (i33) No. 2: (with ID code box)***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i241) No. 13 — Chassis ground:*** ***(i47) No. 5 — Chassis ground:*** ***(i33) No. 2 — Chassis ground: (with ID code box)***	Is the resistance 10 kΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK DTC.** 1) Connect the keyless access CM connector only. 2) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **5**.
5	**CHECK ID CODE BOX.** NOTE: For model without ID code box, go to the next step. 1) Connect the ID code box. 2) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed?	Replace the ID code box. <Ref. to SL-103, ID Code Box.>	Go to step **6**.
6	**CHECK STEERING LOCK CM.** 1) Connect the steering lock CM. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 3) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed?	Replace the steering lock CM. <Ref. to SL-104, Steering Lock CM.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

X: DTC B2786 STEERING LOCK CM COMMUNICATION

DTC detecting condition:
When communication between keyless access CM and steering lock CM is interrupted for a set amount of time.
Trouble symptom:
The steering lock cannot be released.

CAUTION:
For replacement procedure of keyless access CM and steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Are DTCs other than DTC B2786 displayed?	Perform the diagnosis of DTCs other than B2786.	Go to step **2**.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the steering lock CM connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i241) No. 13 — (i47) No. 5:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM and chassis ground. ***Connector & terminal*** ***(i241) No. 13 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.

	Step	Check	Yes	No
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(i47) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(i47) No. 6 (+) — Chassis ground (–):*** ***(i47) No. 7 (+) — Chassis ground (–):***	Is the voltage 11 — 14 V?	Go to step **6**.	Repair or replace the faulty portion of the power supply circuit.
6	**CHECK STEERING LOCK CM.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 3) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **7**.
7	**CHECK STEERING LOCK CM.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 3) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B2786 displayed?	Replace the steering lock CM. <Ref. to SL-104, Steering Lock CM.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Y: DTC B2788 IGN SIGNAL CORRELATION (STEERING LOCK CM)

DTC detecting condition:
When mismatch occurs in the IG1 input of the steering lock CM for both LIN communication line input (IG1 input value of keyless access CM) and solid line input.
Trouble symptom:
The steering lock cannot be released.

CAUTION:
For replacement procedure of keyless access CM and steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse. <Ref. to SL-10, INSPECTION, Relay and Fuse.>	Is the check result OK?	Go to step **2**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
2	**CHECK CURRENT DATA.** Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> «IGN1/2 relay monitor (drive output)»	Is the display normal according to the ignition switch operation?	Go to step **3**.	Go to step **5**.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the steering lock CM connector. 2) Using a tester, measure the resistance between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(i47) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK HARNESS.** 1) Connect the steering lock CM connector. 2) Using a tester, measure the voltage between the steering lock CM connector terminals. ***Connector & terminal*** ***(i47) No. 6 (+) — (i47) No. 1 (–):***	Is the voltage 11 — 14 V with IG ON? Is the voltage less than 1 V with IG OFF?	Replace the steering lock CM. <Ref. to SL-104, REMOVAL, Steering Lock CM.>	Check the DC power supply circuit.
5	**CHECK DTC.** Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B2271 displayed?	Perform the diagnosis of DTC B2271. <Ref. to KPS(diag)-40, DTC B2271 IGN RELAY CONTROL CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>

Z: DTC B2789 ID CODE BOX COMMUNICATION

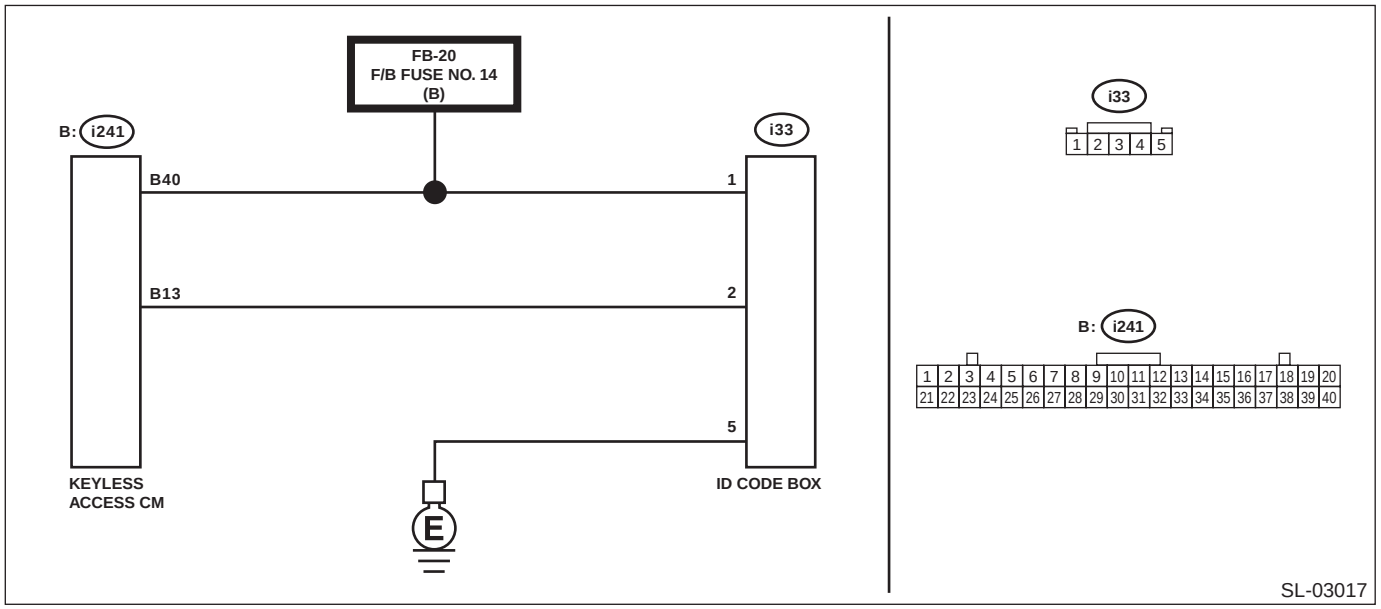
DTC detecting condition:

- When communication between keyless access CM and ID code box is interrupted for a set amount of time.
- Open or short circuit in the wiring harness between keyless access CM and ID code box

Trouble symptom:

Engine will not start.

CAUTION:



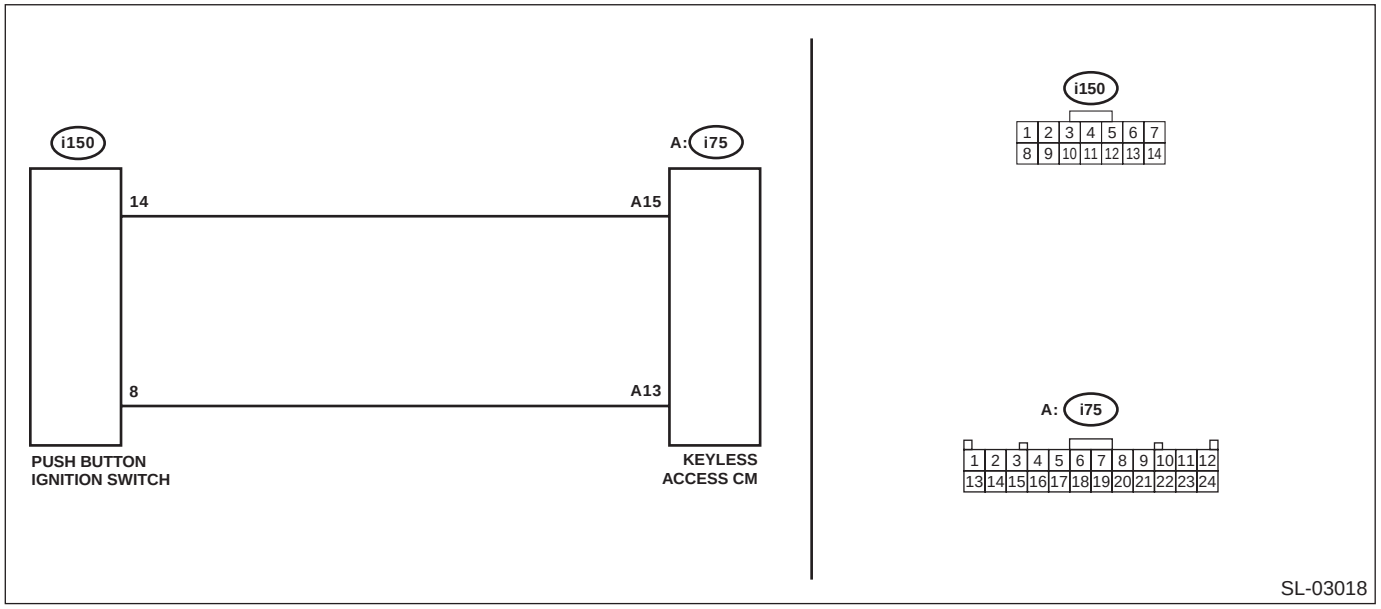
For replacement procedure of keyless access CM and ID code box, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Wiring diagram:

NOTE:

For the coupling connector, refer to "WIRING SYSTEM".

Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>



Step		Check	Yes	No
1	**CHECK DTC.** 1) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 2) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B2789 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the ID code box connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i241) No. 13 — (i47) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between ID code box connector and chassis ground. ***Connector & terminal*** ***(i241) No. 13 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between ID code box connector and chassis ground. ***Connector & terminal*** ***(i47) No. 5 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** Using a tester, measure the voltage between ID code box connector and chassis ground. ***Connector & terminal*** ***(i33) No. 1 (+) — Chassis ground (–):***	Is the voltage 11 — 14 V?	Go to step **6**.	Repair or replace the faulty portion of the power supply circuit.
6	**CHECK ID CODE BOX.** 1) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 2) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **7**.
7	**CHECK ID CODE BOX.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 3) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B2789 displayed?	Replace the ID code box. <Ref. to SL-103, ID Code Box.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

AA:DTC B278A PUSH ENGINE SWITCH POWER SUPPLY CIRCUIT

DTC detecting condition:
When the power supply circuit of the push button ignition switch is shorted to ground.
Trouble symptom:
- Engine does not start even when the access key is pointed toward the vehicle.
- The keyless access system function does not operate.

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:
Immobilizer system <Ref. to WI-253, WIRING DIAGRAM, Immobilizer System.>

Step		Check	Yes	No
1	**CHECK KEYLESS ACCESS CM.** 1) Turn the ignition switch to OFF. 2) Take the access key out of the passenger room. 3) Push the push button ignition switch. Within 30 seconds, use oscilloscope to measure the waveform between connectors. ***Connector & terminal*** ***(i150) No. 14 — (i150) No. 8:*** 	Is the waveform shown in the left column displayed?	Replace the push button ignition switch. <Ref. to SL-106, Push Button Ignition Switch.>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the push button ignition switch connector. 3) Using a tester, measure the resistance between the push button ignition switch connector and the keyless access CM connector. ***Connector & terminal*** ***(i150) No. 8 — (i75) No. 13:*** ***(i150) No. 14 — (i75) No. 15:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 13 — Chassis ground:*** ***(i75) No. 15 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK DTC.** 1) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 2) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B278A displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

AB:DTC B278D ID CODE BOX JUDGMENT CIRCUIT

DTC detecting condition:
When the evaluation of the ID code box setting circuit via the hard wire is judged as none, ID code box communication is received. (at new registration)
Trouble symptom:
Initial registration for the access key is not possible.

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

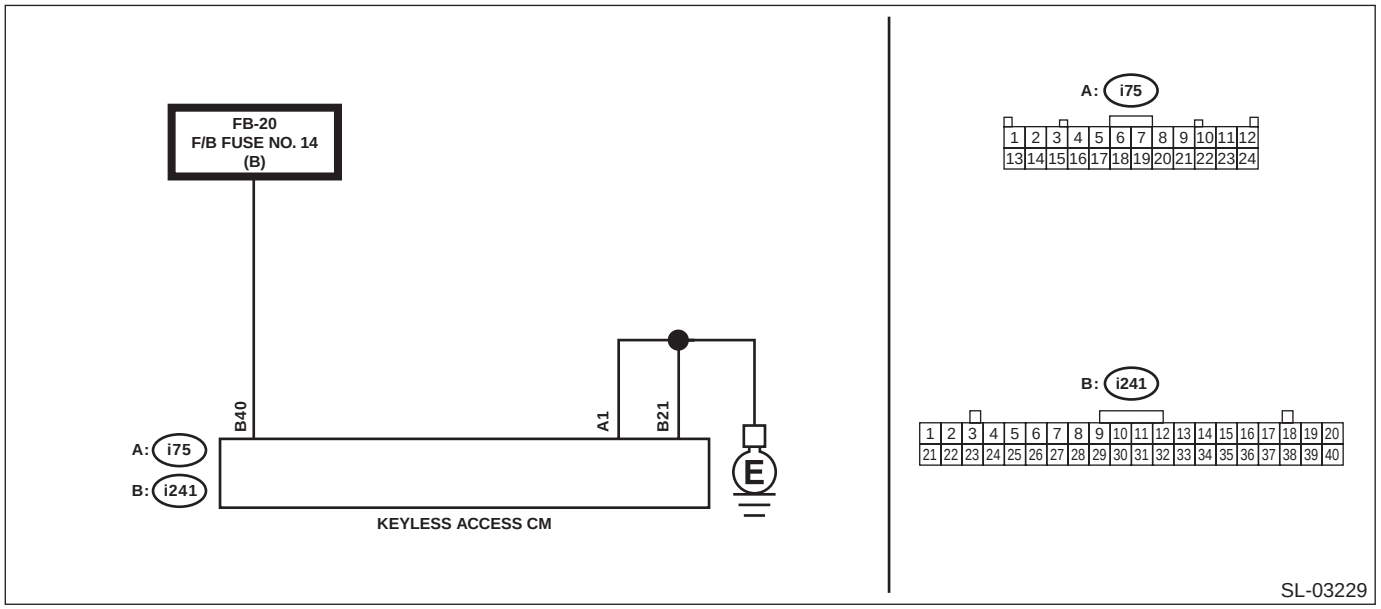
NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Using the Subaru Select Monitor, clear the memory of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-25, Clear Memory Mode.> 3) Turn the ignition switch to OFF → ON. 4) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B278D displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Measure the resistance between keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 23 — Chassis ground:***	Is the resistance 10 kΩ or more?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Repair or replace the short circuit of the harness.

AC:DTC B2790 ID CODE BOX CIRCUIT

DTC detecting condition:
An error has occurred inside the ID code box.
Trouble symptom:
Engine will not start.



CAUTION:
For replacement procedure of ID code box, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Using the Subaru Select Monitor, clear the memory of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-25, Clear Memory Mode.> 3) Turn the ignition switch to OFF → ON. 4) Register the ID code box. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume. 5) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B2790 displayed?	Replace the ID code box. <Ref. to SL-103, ID Code Box.>	ID code box registration was not performed properly.

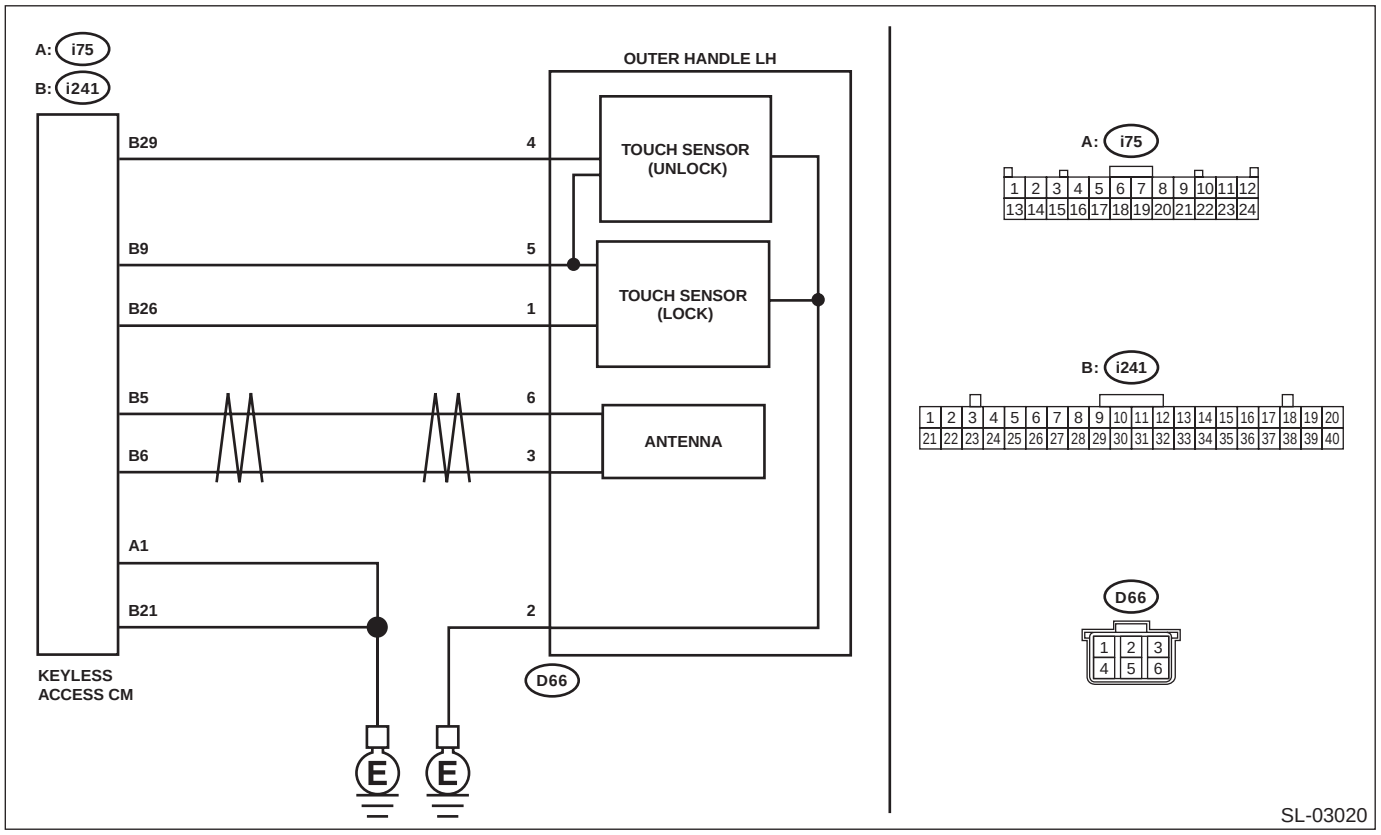
AD:DTC B2793 BACK UP POWER

DTC detecting condition:
When a fault occurs in +B2 power input for the keyless access CM.
Trouble symptom:
None

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:
Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> «ECM power supply voltage (back-up)»	Is «ON» displayed?	Go to step **2**.	Go to step **3**.
2	**CHECK DTC.** 1) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 2) Start the engine, and let it idle for 40 seconds or more. 3) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B2793 displayed?	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
3	**CHECK FUSE.** Check the fuse. <Ref. to SL-10, INSPECTION, Relay and Fuse.>	Is the check result OK?	Go to step **4**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
4	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 40 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Repair or replace the open circuit of harness.



AE:DTC B27A1 DRIVER SIDE EXTERNAL ANTENNA OPEN

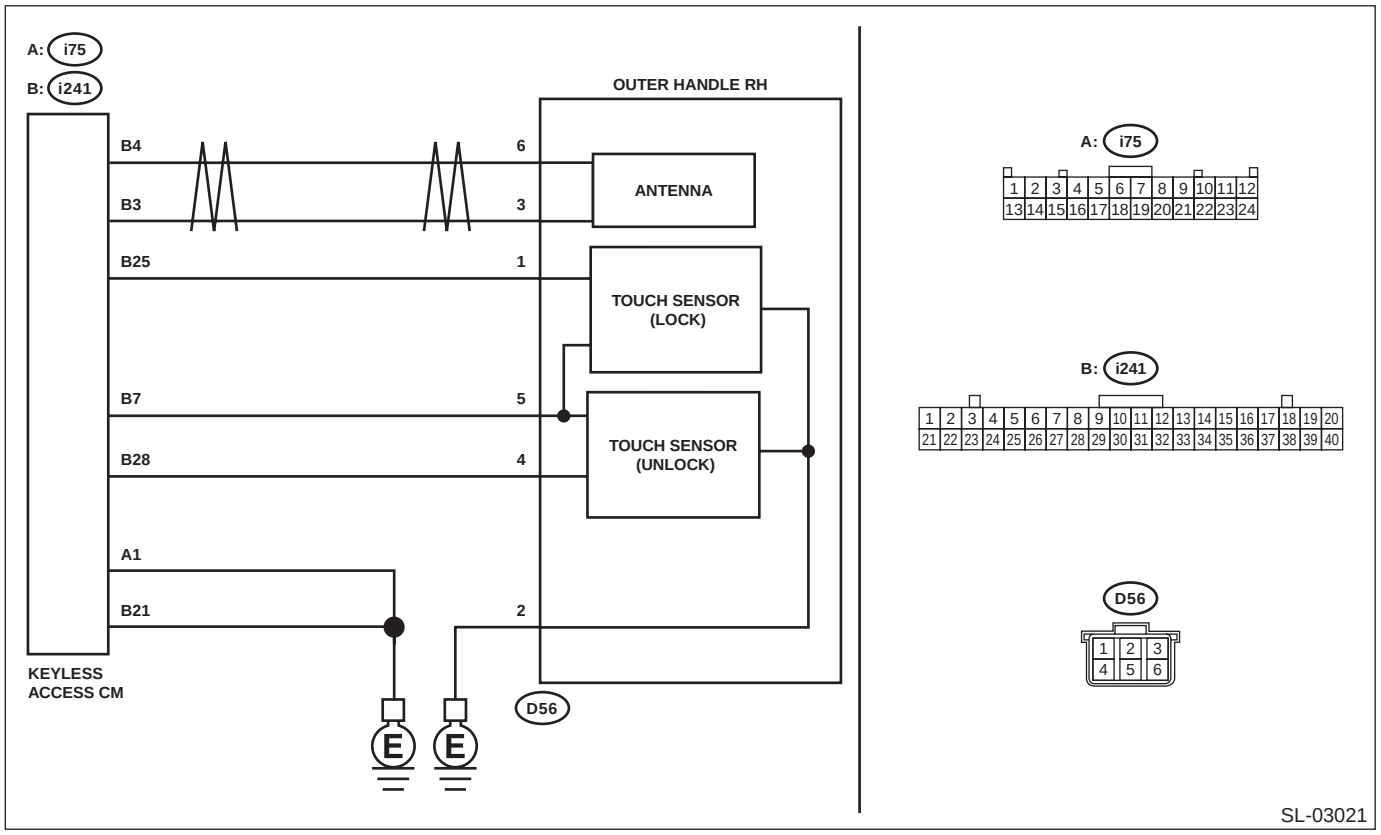
DTC detecting condition:
When open circuit occurs in the harness between keyless access CM and driver's side front door outer handle antenna.
Trouble symptom:
Keyless access system does not function.

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front door outer handle connector. 3) Check the connector.	Is the check result OK?	Go to step **3**.	Repair or replace the connector.
3	**CHECK POWER SUPPLY CIRCUIT.** Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 24 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **4**.	Check the power supply circuit.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and front door outer handle connector, and between front door outer handle connector, keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 5 — (D66) No. 6:*** ***(i241) No. 6 — (D66) No. 3:*** ***(D66) No. 2 — Chassis ground:*** ***(i75) No. 1 — Chassis ground:*** ***(i241) No. 21 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 5 — Chassis ground:*** ***(i241) No. 6 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK DTC.** 1) Connect the keyless access CM connector. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A1 displayed?	Go to step **7**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
7	**CHECK FRONT DOOR OUTER HANDLE.** 1) Replace the driver's side front door outer handle with the passenger's front door outer handle. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A1 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Replace the driver's side front door outer handle. <Ref. to SL-34, Front Outer Handle.>



AF:DTC B27A2 PASSENGER SIDE EXTERNAL ANTENNA OPEN

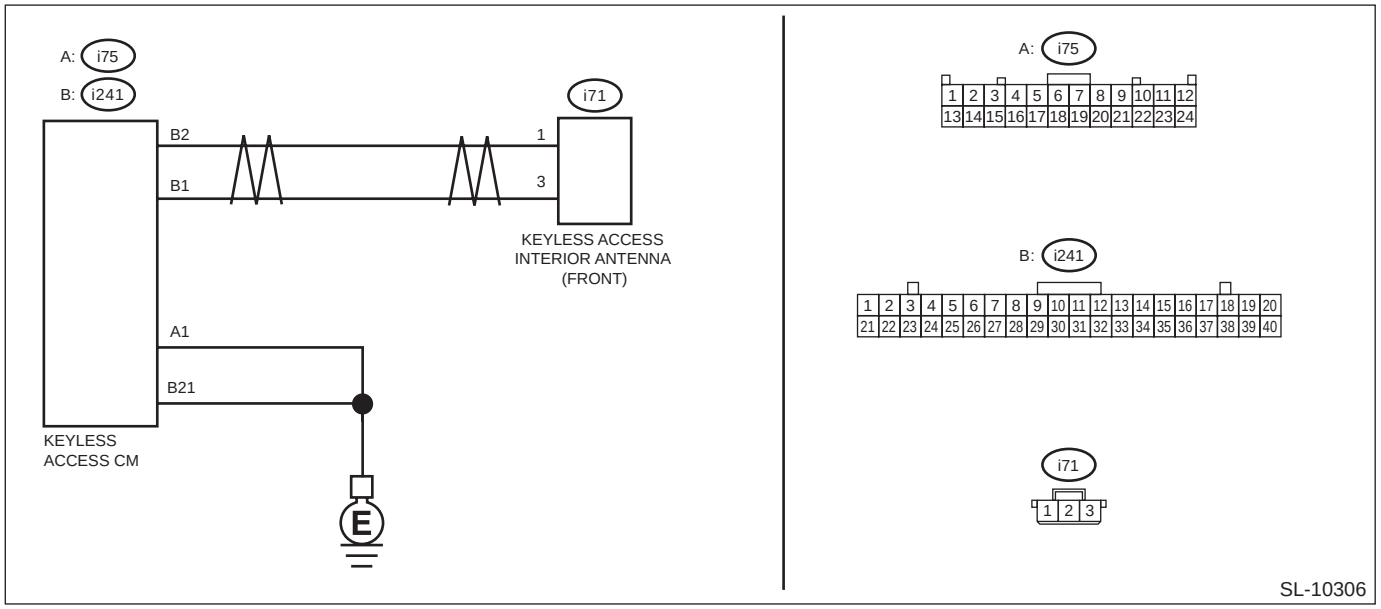
DTC detecting condition:
When open circuit occurs in the harness between keyless access CM and passenger's side front door outer handle antenna.
Trouble symptom:
Keyless access system does not function.

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front door outer handle connector. 3) Check the connector.	Is the check result OK?	Go to step **3**.	Repair or replace the connector.
3	**CHECK POWER SUPPLY CIRCUIT.** Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 24 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **4**.	Check the power supply circuit.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and front door outer handle connector, and between front door outer handle connector, keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 4 — (D56) No. 6:*** ***(i241) No. 3 — (D56) No. 3:*** ***(D56) No. 2 — Chassis ground:*** ***(i75) No. 1 — Chassis ground:*** ***(i241) No. 21 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 3 — Chassis ground:*** ***(i241) No. 4 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK DTC.** 1) Connect the keyless access CM connector. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A2 displayed?	Go to step **7**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
7	**CHECK FRONT DOOR OUTER HANDLE.** 1) Replace the passenger's side front door outer handle with the driver's front door outer handle. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A2 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Replace the passenger's side front door outer handle. <Ref. to SL-34, Front Outer Handle.>



AG:DTC B27A5 FRONT INTERNAL ANTENNA OPEN

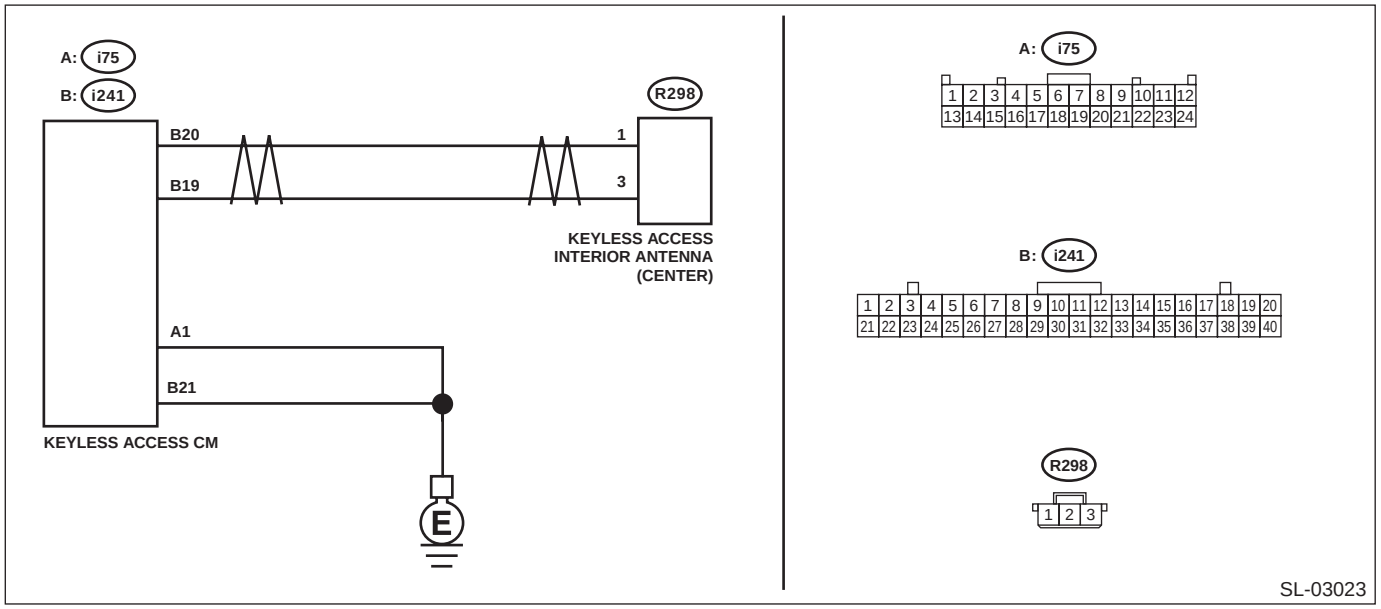
DTC detecting condition:
When open circuit occurs in the harness between keyless access CM and front interior antenna.
Trouble symptom:
Keyless access system does not function. (when the access key is in the front area of the passenger room)

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front interior antenna connector. 3) Check the connector.	Is the check result OK?	Go to step **3**.	Repair or replace the connector.
3	**CHECK POWER SUPPLY CIRCUIT.** Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 24 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **4**.	Check the power supply circuit.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and front interior antenna connector, and between front interior antenna connector, keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 1 — (i71) No. 3:*** ***(i241) No. 2 — (i71) No. 1:*** ***(i75) No. 1 — Chassis ground:*** ***(i241) No. 21 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 1 — Chassis ground:*** ***(i241) No. 2 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK DTC.** 1) Connect the keyless access CM connector. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A5 displayed?	Go to step **7**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
7	**CHECK FRONT INTERIOR ANTENNA.** 1) Replace the rear interior antenna with the front interior antenna. <Ref. to SL-93, Keyless Access Indoor Antenna.> 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A5 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Malfunction occurred in the front interior antenna.



AH:DTC B27A6 REAR INTERNAL ANTENNA OPEN

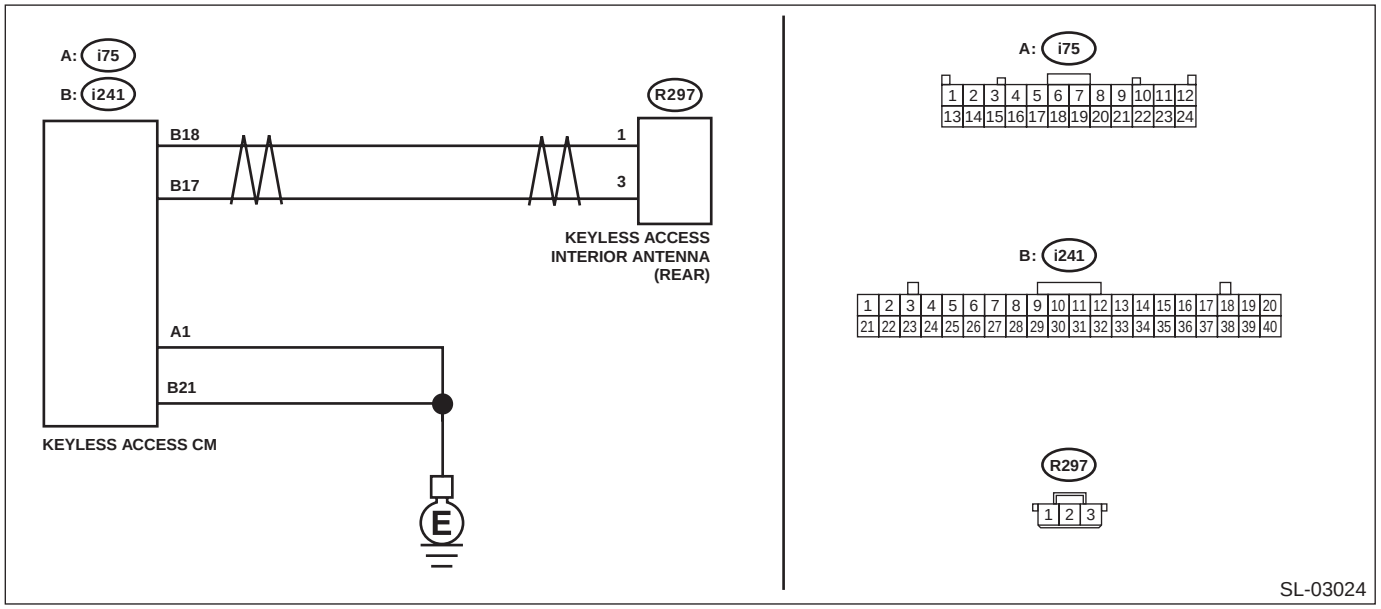
DTC detecting condition:
When open circuit occurs in the harness between keyless access CM and center interior antenna.
Trouble symptom:
Keyless access system does not function. (when the access key is in the rear area of the passenger room (near the seat))

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the center interior antenna connector. 3) Check the connector.	Is the check result OK?	Go to step **3**.	Repair or replace the connector.
3	**CHECK POWER SUPPLY CIRCUIT.** Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 24 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **4**.	Check the power supply circuit.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and center interior antenna connector, and between center interior antenna connector, keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 19 — (R298) No. 3:*** ***(i241) No. 20 — (R298) No. 1:*** ***(i75) No. 1 — Chassis ground:*** ***(i241) No. 21 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 19 — Chassis ground:*** ***(i241) No. 20 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK DTC.** 1) Connect the keyless access CM connector. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A6 displayed?	Go to step **7**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
7	**CHECK CENTER INTERIOR ANTENNA.** 1) Replace the center interior antenna with the front interior antenna. <Ref. to SL-93, Keyless Access Indoor Antenna.> 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A6 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Malfunction occurred in the center interior antenna.



AI: DTC B27A7 TRUNK/REAR GATE INTERNAL ANTENNA OPEN

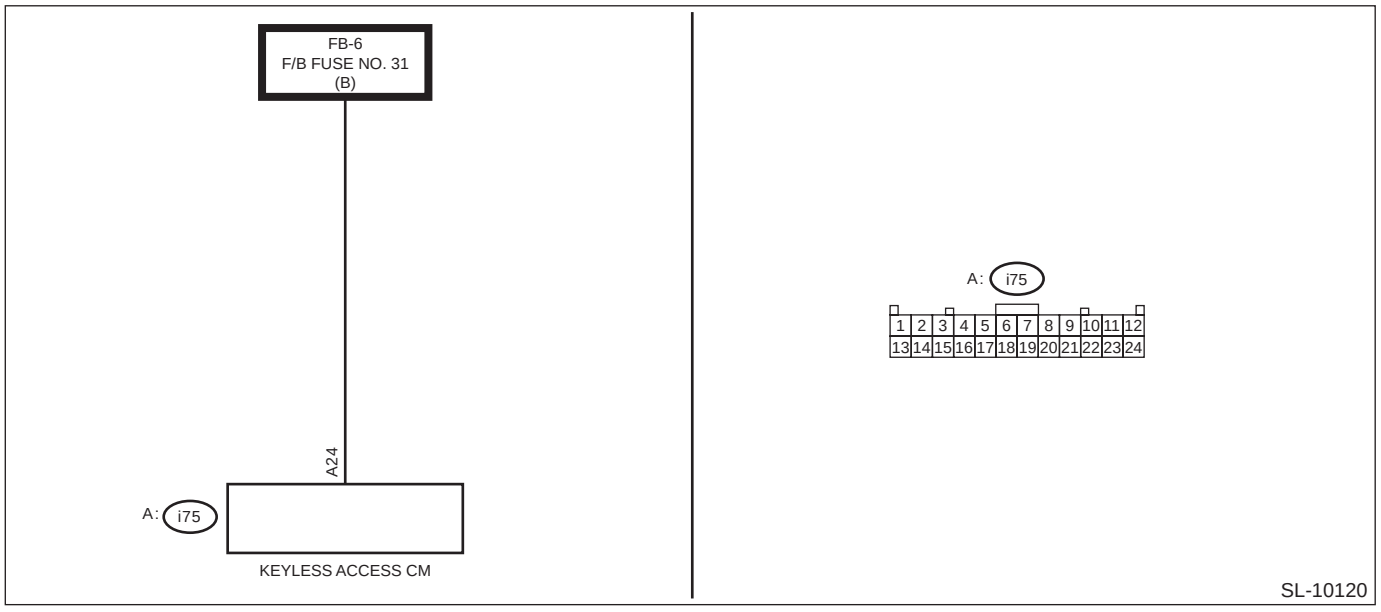
DTC detecting condition:
When open circuit occurs in the harness between keyless access CM and rear interior antenna.
Trouble symptom:
Keyless access system does not function. (when the access key is in the rear area of the passenger room (in the luggage room or trunk))

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

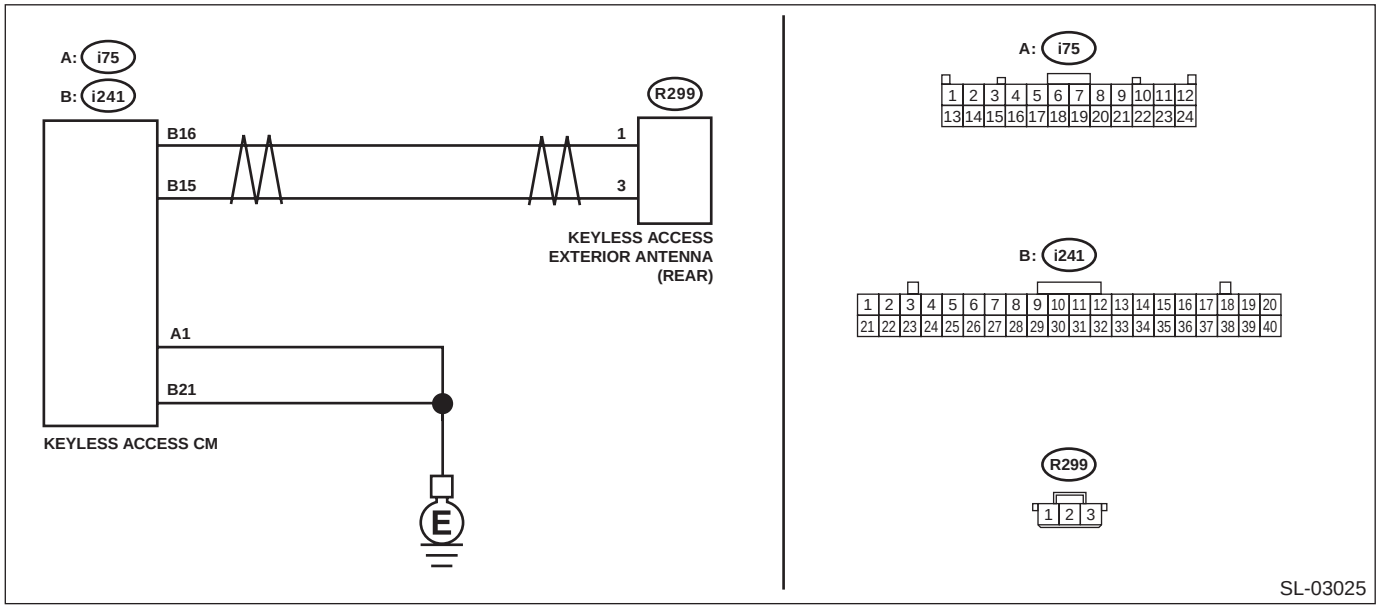
NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the rear interior antenna connector. 3) Check the connector.	Is the check result OK?	Go to step **3**.	Repair or replace the connector.
3	**CHECK POWER SUPPLY CIRCUIT.** Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 24 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **4**.	Check the power supply circuit.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and rear interior antenna connector, and between rear interior antenna connector, keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 17 — (R297) No. 3:*** ***(i241) No. 18 — (R297) No. 1:*** ***(i75) No. 1 — Chassis ground:*** ***(i241) No. 21 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 17 — Chassis ground:*** ***(i241) No. 18 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK DTC.** 1) Connect the keyless access CM connector. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A7 displayed?	Go to step **7**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
7	**CHECK REAR INTERIOR ANTENNA.** 1) Replace the rear interior antenna with the front interior antenna. <Ref. to SL-93, Keyless Access Indoor Antenna.> 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A7 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Malfunction occurred in the rear interior antenna.

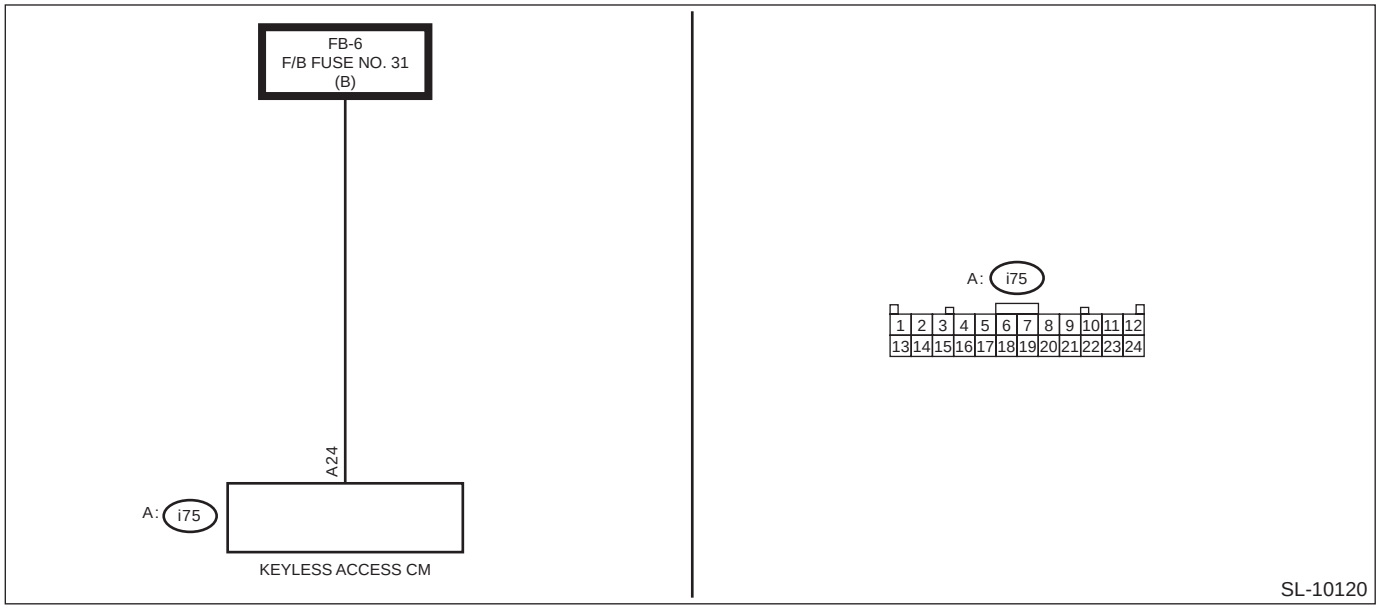


AJ:DTC B27A8 TRUNK/REAR GATE EXTERNAL ANTENNA OPEN

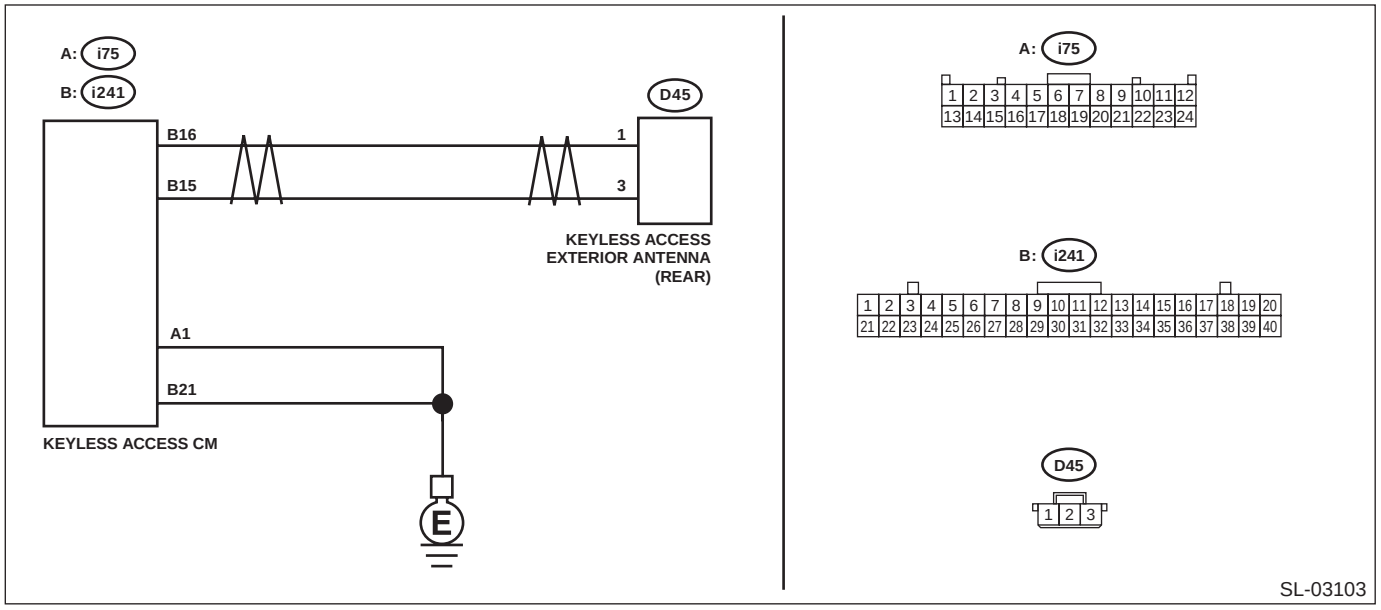


DTC detecting condition:
When open circuit occurs in the harness between keyless access CM and rear exterior antenna.
Trouble symptom:
Keyless access system does not function.
(Unable to unlock with the rear gate opener button, or unable to lock with the rear lock button, unable to open the trunk with the trunk opener button)

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:



NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>



- Sedan model

- OUTBACK model

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the rear exterior antenna connector. 3) Check the connector.	Is the check result OK?	Go to step **3**.	Repair or replace the connector.
3	**CHECK POWER SUPPLY CIRCUIT.** Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 24 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **4**.	Check the power supply circuit.

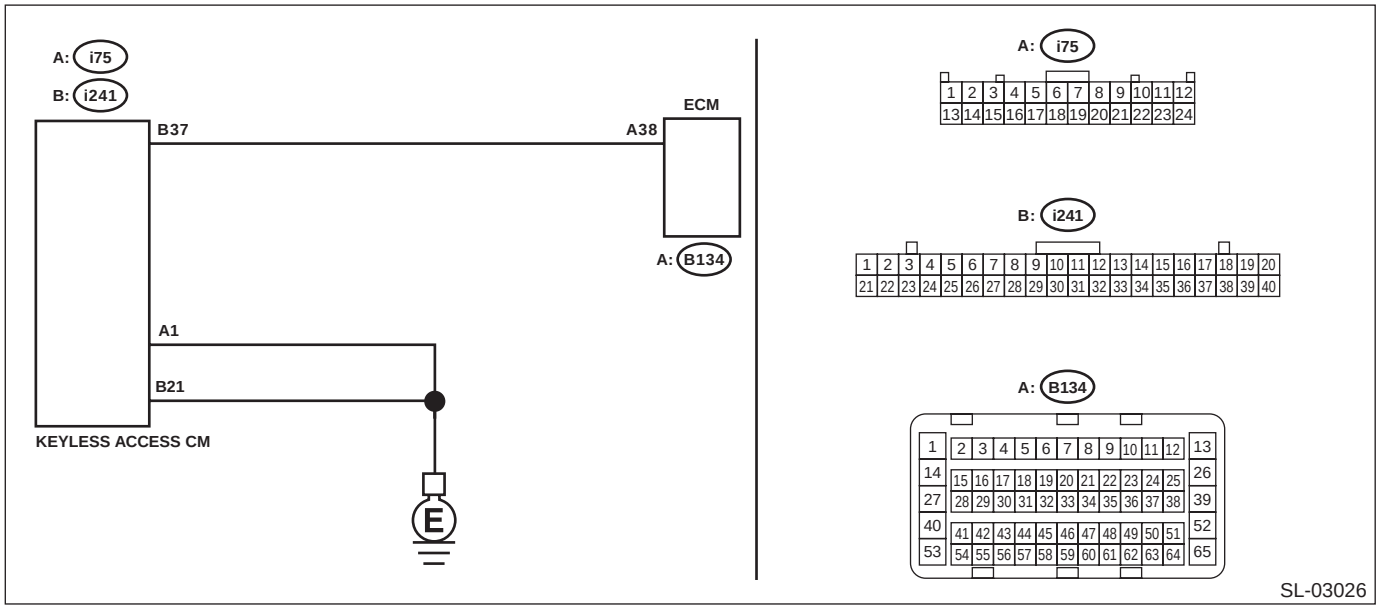
	Step	Check	Yes	No
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and rear external antenna connector. ***Connector & terminal*** ***Sedan model*** ***(i241) No. 15 — (R299) No. 3:*** ***(i241) No. 16 — (R299) No. 1:*** ***OUTBACK model*** ***(i241) No. 15 — (D45) No. 3:*** ***(i241) No. 16 — (D45) No. 1:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 15 — Chassis ground:*** ***(i241) No. 16 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK DTC.** 1) Connect the keyless access CM connector. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A8 displayed?	Go to step **7**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
7	**CHECK REAR EXTERIOR ANTENNA.** 1) Replace the rear exterior antenna with the rear interior antenna. <Ref. to SL-93, Keyless Access Indoor Antenna.> <Ref. to SL-97, Keyless Access Outdoor Antenna.> 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-25, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A8 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Malfunction occurred in the rear external antenna.

AK:DTC B1571 REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM)

DTC DETECTING CONDITION:
Incompatibility of reference code between keyless access CM (model without ID code box) or ID code box (model with ID code box) and ECM occurs.
TROUBLE SYMPTOM:
Engine will not start.

CAUTION:
For replacement procedure of keyless access CM, ECM and ID code box, refer to "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK ECM.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is ECM registration finished? And does the engine start?	ECM registration was not performed properly.	Go to step **2**.
2	**REPLACE ECM.** 1) Install the ECM from other normal operating vehicle (with push button start) which use same ECM to the vehicle to be diagnosed. 2) Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is ECM registration finished? And does the engine start?	Replace the ECM. <Ref. to FU(H4DO)-82, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, REMOVAL, Engine Control Module (ECM).> Install the ECM from other vehicle to the original vehicle.	Replace Keyless access CM (model without ID code box), <Ref. to SL-102, Keyless Access CM.> or replace ID code box (model with ID code box). <Ref. to SL-103, NOTE, ID Code Box.>



AL:DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT

1. EXCEPT FOR C0 AND C5 MODELS

DTC detecting condition:
Communication error between keyless access CM and ECM
Trouble symptom:
Engine will not start.

CAUTION:
For replacement procedure of keyless access CM and ECM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

Step		Check	Yes	No
1	**CHECK GROUNDING POINT.** Check the grounding point of the engine ground and chassis ground.	Are there any loose connections, any foreign objects caught in the ground lines or contact surface, or any fluid stains?	Remove the foreign matters, and tighten to the specified torque. Then start the engine, and check that the fault was removed. Check DTC <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>, and when DTC B1572 is still displayed, Go to step **2**.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> 3) Display the next data. «Immobilizer» «Engine start» «Unlock confirmation» ***Data*** ***«Immobilizer» = «Unset»:*** ***«Engine start» = «Engine start permission»:*** ***«Unlock confirmation» = «Confirmed»:***	Is the data displayed as indicated on the left?	Go to step **3**.	Perform diagnostics with phenomenon. <Ref. to KPS(diag)-140, ENGINE DOES NOT START, INSPECTION, Diagnostics with Phenomenon.>
3	**CHECK CURRENT DATA.** Use the Subaru Select Monitor to check the current data of «Keyless Access with Push Button Start» when holding down the push button ignition switch while depressing the brake pedal (except for MT models) or the clutch pedal (MT models). <Ref. to KPS(diag)-26, Read Current Data.> ***Data*** ***«EGI code reception status» = «Reception»:*** NOTE: If «Reception» is displayed, the status changes to «Not yet received» in 10 seconds. When performing the check again, perform the check after turning the ignition to OFF.	Is the data displayed as indicated on the left?	Go to step **4**.	Repair or replace the harness between keyless access CM and ECM.
4	**CHECK WIRING HARNESS (OPEN).** 1) Turn the ignition switch to OFF. 2) Disconnect the keyless access CM connector and ECM connector. 3) Using a tester, measure the resistance between the keyless access CM connector and ECM connector. ***Connector & terminal*** ***(i241) No. 37 — (B134) No. 38:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK WIRING HARNESS (OPEN).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 1 — Chassis ground:*** ***(i241) No. 21 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK ECM.** 1) Install the ECM from other normal operating vehicle (with push button start) which use same ECM to the vehicle to be diagnosed. 2) Perform ECM registration. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.	Is ECM registration finished? And does the engine start?	Replace the ECM. <Ref. to FU(H4DO)-82, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, REMOVAL, Engine Control Module (ECM).> Install the ECM from other vehicle to the original vehicle.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

2. FOR C0 AND C5 MODELS

DTC detecting condition:
Communication error between ID code box and ECM
Trouble symptom:
Engine will not start.

CAUTION:
For replacement procedure of ID code box and ECM, refer to "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

Step		Check	Yes	No
1	**CHECK GROUNDING POINT.** Check the grounding point of the engine ground and chassis ground.	Are there any loose connections, any foreign objects caught in the ground lines or contact surface, or any fluid stains?	Remove the foreign matters, and tighten to the specified torque. Then start the engine, and check that the fault was removed. Check DTC <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>, and when DTC B1572 is still displayed, Go to step **2**.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> 3) Display the next data. «Immobilizer» «Engine start» «Unlock confirmation» ***Data*** ***«Immobilizer» = «Unset»:*** ***«Engine start» = «Engine start permission»:*** ***«Unlock confirmation» = «Confirmed»:***	Is the data displayed as indicated on the left?	Go to step **3**.	Perform diagnostics with phenomenon. <Ref. to KPS(diag)-140, ENGINE DOES NOT START, INSPECTION, Diagnostics with Phenomenon.>
3	**CHECK CURRENT DATA.** Use the Subaru Select Monitor to check the current data of «Keyless Access with Push Button Start» when holding down the push button ignition switch while depressing the brake pedal (except for MT models) or the clutch pedal (MT models). <Ref. to KPS(diag)-26, Read Current Data.> ***Data*** ***«EGI code reception status» = «Reception»:*** NOTE: If «Reception» is displayed, the status changes to «Not yet received» in 10 seconds. When performing the check again, perform the check after turning the ignition to OFF.	Is the data displayed as indicated on the left?	Go to step **4**.	Repair or replace the harness between ID code box and ECM.
4	**CHECK WIRING HARNESS (OPEN).** 1) Turn the ignition switch to OFF. 2) Disconnect the ID code box connector and the ECM connector. 3) Using a tester, measure the resistance between ID code box connector and ECM connector. ***Connector & terminal*** ***(i33) No. 4 — (B134) No. 38:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK WIRING HARNESS (OPEN).** Using a tester, measure the resistance between ID code box connector and chassis ground. ***Connector & terminal*** ***(i33) No. 5 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK ECM.** 1) Install the ECM from other normal operating vehicle (with push button start) which use same ECM to the vehicle to be diagnosed. 2) Perform ECM registration. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.	Is ECM registration finished? And does the engine start?	Replace the ECM. <Ref. to FU(H4DO)-82, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, REMOVAL, Engine Control Module (ECM).> Install the ECM from other vehicle to the original vehicle.	Replace the ID code box. <Ref. to SL-103, NOTE, ID Code Box.>

AM:DTC B1576 EGI CONTROL MODULE EEPROM

DTC DETECTING CONDITION:

- ECM malfunctioning
- When the ROM in ECM was inaccessible during registration.

TROUBLE SYMPTOM:

Engine will not start.

CAUTION:

For replacement procedure of ECM, refer to “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

	Step	Check	Yes	No
1	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.	Is ECM registration complete?	Make sure that the engine can start. This completes the work.	Go to step **2**.
2	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.	Is ECM registration complete?	Make sure that the engine can start. This completes the work.	Go to step **3**.
3	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.	Is ECM registration complete?	Make sure that the engine can start. This completes the work.	Replace the ECM. <Ref. to FU(H4DO)-82, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, REMOVAL, Engine Control Module (ECM).>

AN:DTC B1577 IMM CONTROL MODULE EEPROM

1. EXCEPT FOR C0 AND C5 MODELS

DTC detecting condition:

- Defective keyless access CM
- When inaccessible to ROM in keyless access CM.

Trouble symptom:

Engine will not start.

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Perform the clear memory operation of ECM. <Ref. to EN(H4DO)(diag)-80, Clear Memory Mode.> <Ref. to EN(H6DO)(diag)-87, Clear Memory Mode.> 3) Turn the ignition switch to OFF. 4) Remove and install the battery. 5) Turn the ignition switch to ON. 6) After 5 seconds or more, read DTC. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B1577 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. FOR C0 AND C5 MODELS

DTC detecting condition:

- ID code box malfunction
- When inaccessible to ROM in ID code box.

Trouble symptom:

Engine will not start.

CAUTION:

For replacement procedure of ID code box, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Step		Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Perform the clear memory operation of ECM. <Ref. to EN(H4DO)(diag)-80, Clear Memory Mode.> <Ref. to EN(H6DO)(diag)-87, Clear Memory Mode.> 3) Turn the ignition switch to OFF. 4) Register the ID code box. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. 5) Read the DTC again. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC B1577 displayed?	Replace the ID code box. <Ref. to SL-103, ID Code Box.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

15.General Diagnostic Table

A: INSPECTION

1. IMMOBILIZER SYSTEM

Symptoms	Note
Engine does not start	<Ref. to KPS(diag)-140, ENGINE DOES NOT START, INSPECTION, Diagnostics with Phenomenon.>
	<Ref. to KPS(diag)-65, DTC B2784 ANTENNA CIRCUIT (PUSH ENGINE SWITCH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	<Ref. to KPS(diag)-75, DTC B278A PUSH ENGINE SWITCH POWER SUPPLY CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	<Ref. to KPS(diag)-67, DTC B2785 LIN COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	<Ref. to KPS(diag)-73, DTC B2789 ID CODE BOX COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	<Ref. to KPS(diag)-79, DTC B2790 ID CODE BOX CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	Check the brake switch (except for MT model). <Ref. to BR-81, INSPECTION, Stop Light Switch.> Check the clutch switch for MT model. <Ref. to CL-31, INSPECTION, Clutch Switch.>
	Check the parking switch signal. <Ref. to CS-54, INSPECTION, AT Shift Lock Solenoid and “P” Range Switch.>
	Check the DTC of the ECM.
Cannot register the immobilizer.	Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER”.
Engine does not start with the remote engine starter.	<Ref. to KPS(diag)-61, DTC B2779 REMOTE CONTROL ENGINE STARTER COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

2. KEYLESS ACCESS SYSTEM

Symptoms	Reference
All doors cannot be locked/unlocked with keyless access.	<Ref. to KPS(diag)-110, KEYLESS ACCESS LOCK/UNLOCK CANNOT BE PERFORMED FROM ANY OF THE DOORS, INSPECTION, Diagnostics with Phenomenon.>
Cannot lock with keyless access from the driver's door.	<Ref. to KPS(diag)-111, CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot lock/unlock from the driver's door with keyless access.	<Ref. to KPS(diag)-112, CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot unlock from the driver's door with keyless access.	<Ref. to KPS(diag)-113, CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot unlock from the passenger's door with keyless access.	<Ref. to KPS(diag)-116, CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot lock/unlock from the passenger's door with keyless access.	<Ref. to KPS(diag)-115, CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot lock from the passenger's door with keyless access.	<Ref. to KPS(diag)-114, CANNOT LOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Keyless access passenger room buzzer does not sound.	<Ref. to KPS(diag)-117, KEYLESS ACCESS PASSENGER ROOM BUZZER DOES NOT SOUND, INSPECTION, Diagnostics with Phenomenon.>
Keyless access external buzzer does not beep.	<Ref. to KPS(diag)-117, KEYLESS ACCESS EXTERNAL BUZZER DOES NOT BEEP, INSPECTION, Diagnostics with Phenomenon.>
Interior collation does not function.	<Ref. to KPS(diag)-119, INTERIOR COLLATION DOES NOT FUNCTION, INSPECTION, Diagnostics with Phenomenon.>
Trunk does not open with the trunk opener button.	<Ref. to KPS(diag)-121, TRUNK WILL NOT OPEN WITH KEYLESS ACCESS, INSPECTION, Diagnostics with Phenomenon.>
Access key lockout protection function in the trunk does not operate.	<Ref. to KPS(diag)-123, ACCESS KEY LOCKOUT PROTECTION FUNCTION IN THE TRUNK DOES NOT OPERATE, INSPECTION, Diagnostics with Phenomenon.>
Rear gate cannot be unlocked with the rear gate opener button.	<Ref. to KPS(diag)-125, REAR GATE CANNOT BE UNLOCKED WITH THE REAR GATE OPENER BUTTON, INSPECTION, Diagnostics with Phenomenon.>
Rear gate can not be locked when using the rear lock button.	<Ref. to KPS(diag)-127, CAN NOT LOCK WHEN USING THE REAR LOCK BUTTON, INSPECTION, Diagnostics with Phenomenon.>

3. STEERING LOCK SYSTEM

Symptoms	Reference
The steering lock cannot be released (Cannot start the engine).	<Ref. to KPS(diag)-129, THE STEERING LOCK IS NOT RELEASED, INSPECTION, Diagnostics with Phenomenon.>
The steering lock does not operate.	<Ref. to KPS(diag)-131, THE STEERING LOCK DOES NOT OPERATE, INSPECTION, Diagnostics with Phenomenon.>

4. POWER SUPPLY SWITCHING SYSTEM

Symptoms	Reference
Power will not turn ON (both accessory and ignition).	<Ref. to KPS(diag)-132, POWER WILL NOT TURN ON (BOTH ACCESSORY AND IGNITION), INSPECTION, Diagnostics with Phenomenon.>
Power will not turn ON (accessory only).	<Ref. to KPS(diag)-135, POWER WILL NOT TURN ON (ACCESSORY DOES NOT TURN ON, BUT IGNITION TURNS ON), INSPECTION, Diagnostics with Phenomenon.>
Power will not turn ON (ignition only).	<Ref. to KPS(diag)-137, POWER WILL NOT TURN ON (ACCESSORY TURNS ON, BUT IGNITION DOES NOT TURN ON), INSPECTION, Diagnostics with Phenomenon.>

16.Diagnostics with Phenomenon

A: INSPECTION

1. KEYLESS ACCESS LOCK/UNLOCK CANNOT BE PERFORMED FROM ANY OF THE DOORS

CAUTION:
• Check that there are no other registered access keys inside the passenger room.
• Check that the access key is not too close to the vehicle.
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK OPERATION OF KEYLESS DOOR LOCK.** Using the keyless function of the access key, check the operation of the door lock.	Does it lock/unlock normally?	Check the exterior antenna, touch sensor, lock/unlock button.	Go to step **2**.
2	**CHECK ACCESS KEY.** Check for whether lock and unlock is possible with the registered access key.	Is there any access key which can lock/unlock when the touch sensor is operated?	Check the access key that does not operate. Go to step **3**.	Go to step **4**.
3	**CHECK ACCESS KEY.** Measure the battery voltage of the access key that does not operate.	Is the voltage 2.5 — 3.2 V?	Replace the access key.	Replace the battery.
4	**CHECK DOOR LOCK.** Operate the driver's center door lock switch.	Does the door lock operate?	Go to step **5**.	Check the door lock control system. <Ref. to SL-11, INSPECTION, Door Lock Control System.>
5	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 24 (+) — Chassis ground (–):*** ***(i241) No. 40 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Check the keyless access CM power supply circuit.
6	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 21 — Chassis ground:*** ***(i75) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>	Repair or replace the open circuit of harness.

2. CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR

CAUTION:
- **Check that there are no other registered access keys inside the passenger room.**
- **Check that the access key is not too close to the vehicle.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-11, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK CURRENT DATA.** 1) Display the current data «Driver's seat lock status SW input» of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-25, Read Current Data.> 2) Read the data when locking/unlocking the driver's side lock actuator.	Does the data change from ON/OFF?	Go to step **3**.	Check the door lock switch circuit.
3	**CHECK CURRENT DATA.** 1) Display the current data «Driver's lock touch sensor SW» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> 2) Read the data when operating the touch sensor (lock) of the door outer handle.	Does the data change from ON/OFF according to the sensor operation?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector. ***Connector & terminal*** ***(i241) No. 26 — (D66) No. 1:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 26 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the driver's side front outer handle with the passenger's side front outer handle.	Does it operate properly?	Replace the driver's side front outer handle. <Ref. to SL-34, REMOVAL, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

3. CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR

CAUTION:
- **Check that there are no other registered access keys inside the passenger room.**
- **Check that the access key is not too close to the vehicle.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-11, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK FUSE.** Check the fuse. <Ref. to SL-10, INSPECTION, Relay and Fuse.>	Is the check result OK?	Go to step **3**.	Replace the fuse.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector, and between front outer handle connector and chassis ground. ***Connector & terminal*** ***(i241) No. 5 — (D66) No. 6:*** ***(i241) No. 6 — (D66) No. 3:*** ***(i241) No. 9 — (D66) No. 5:*** ***(D66) No. 2 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between front outer handle connector and chassis ground. ***Connector & terminal*** ***(i241) No. 5 — Chassis ground:*** ***(i241) No. 6 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Turn the ignition switch to OFF, close all doors and take the access key out of passenger room. 3) Use the Subaru Select Monitor, measure the waveform between the keyless access CM connectors. ***Connector & terminal*** ***(i241) No. 5 — (i241) No. 21:*** ***(i241) No. 6 — (i241) No. 21:***	Does pulse output change from pulse output OFF → pulse output ON by the lock operation using access key?	Go to step **6**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

	Step	Check	Yes	No
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the driver's side front outer handle with the passenger's side front outer handle.	Does it operate properly?	Replace the driver's side front outer handle. <Ref. to SL-34, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

4. CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR

CAUTION:
- **Check that there are no other registered access keys inside the passenger room.**
- **Check that the access key is not too close to the vehicle.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-11, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK CURRENT DATA.** 1) Display the current data «Driver's seat lock status SW input» of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-25, Read Current Data.> 2) Read the data when locking/unlocking the driver's side lock actuator.	Does the data change from ON/OFF?	Go to step **3**.	Check the door lock switch circuit.
3	**CHECK CURRENT DATA.** 1) Display the current data «Driver's unlock touch sensor switch» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> 2) Read the data when operating the touch sensor (unlock) of the door outer handle.	Does the data change from ON/OFF according to the sensor operation?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector. ***Connector & terminal*** ***(i241) No. 29 — (D66) No. 4:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 29 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.

Step		Check	Yes	No
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the driver's side front outer handle with the passenger's side front outer handle.	Does it operate properly?	Replace the driver's side front outer handle. <Ref. to SL-34, REMOVAL, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

5. CANNOT LOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR

CAUTION:
• Check that there are no other registered access keys inside the passenger room.
• Check that the access key is not too close to the vehicle.
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Step		Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-11, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK CURRENT DATA.** 1) Display the current data «Passenger's seat lock status SW input» of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-25, Read Current Data.> 2) Read the data when locking/unlocking the passenger's side lock actuator.	Does the data change from ON/OFF?	Go to step **3**.	Check the door lock switch circuit.
3	**CHECK CURRENT DATA.** 1) Display the current data «Passenger's lock touch sensor SW» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> 2) Read the data when operating the touch sensor (lock) of the door outer handle.	Does the data change from ON/OFF according to the sensor operation?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector. ***Connector & terminal*** ***(i241) No. 25 — (D56) No. 1:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 25 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.

	Step	Check	Yes	No
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the passenger's side front outer handle with the driver's side front outer handle.	Does it operate properly?	Replace the passenger's side front outer handle. <Ref. to SL-34, REMOVAL, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

6. CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR

CAUTION:
• Check that there are no other registered access keys inside the passenger room.
• Check that the access key is not too close to the vehicle.
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-11, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK FUSE.** Check the fuse. <Ref. to SL-10, INSPECTION, Relay and Fuse.>	Is the check result OK?	Go to step **3**.	Replace the fuse.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector, and between front outer handle connector and chassis ground. ***Connector & terminal*** ***(i241) No. 4 — (D56) No. 6:*** ***(i241) No. 3 — (D56) No. 3:*** ***(i241) No. 7 — (D56) No. 5:*** ***(D56) No. 2 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 3 — Chassis ground:*** ***(i241) No. 4 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.

	Step	Check	Yes	No
5	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Turn the ignition switch to OFF, close all doors and take the access key out of passenger room. 3) Use the Subaru Select Monitor, measure the waveform between the keyless access CM connectors. ***Connector & terminal*** ***(i241) No. 3 — (i241) No. 21:*** ***(i241) No. 4 — (i241) No. 21:***	Does pulse output change from pulse output OFF → pulse output ON by the lock operation using access key?	Go to step **6**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the passenger's side front outer handle with the driver's side front outer handle.	Does it operate properly?	Replace the passenger's side front outer handle. <Ref. to SL-34, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

7. CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR

CAUTION:
- **Check that there are no other registered access keys inside the passenger room.**
- **Check that the access key is not too close to the vehicle.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-11, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK CURRENT DATA.** 1) Display the current data «Passenger's seat lock status SW input» of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-25, Read Current Data.> 2) Read the data when locking/unlocking the passenger's side lock actuator.	Does the data change from ON/OFF?	Go to step **3**.	Check the door lock switch circuit.
3	**CHECK CURRENT DATA.** 1) Display the current data «Passenger's unlock touch sensor switch» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> 2) Read the data when operating the touch sensor (unlock) of the door outer handle.	Does the data change from ON/OFF according to the sensor operation?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector. ***Connector & terminal*** ***(i241) No. 28 — (D56) No. 4:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 28 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the passenger's side front outer handle with the driver's side front outer handle.	Does it operate properly?	Replace the passenger's side front outer handle. <Ref. to SL-34, REMOVAL, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

8. KEYLESS ACCESS PASSENGER ROOM BUZZER DOES NOT SOUND

CAUTION:
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to MET(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Replace the combination meter. <Ref. to IDI-11, REMOVAL, Combination Meter.>

9. KEYLESS ACCESS EXTERNAL BUZZER DOES NOT BEEP

	Step	Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT SETTING.** Using the Subaru Select Monitor, check the «Ans.-back Buzzer» data of body integrated unit. <Ref. to BC(diag)-25, Read Current Data.>	Is the setting "ON"?	Go to step **2**.	Change the setting to "ON".
2	**CHECK BUZZER OPERATION.** Use the Subaru Select Monitor to perform the body integrated unit function check «Keyless Buzzer Output». <Ref. to BC(diag)-41, OPERATION, Function Check.>	Does the buzzer sound?	Go to step **3**.	Go to step **5**.

	Step	Check	Yes	No
3	**CHECK KEYLESS ACCESS SYSTEM.** 1) Turn to IGN OFF. 2) With all doors closed and the access key carried, touch the touch sensor (lock) on the driver's door handle.	Does the door lock?	Go to step **4**.	Refer to "CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR" and perform inspection. <Ref. to KPS(diag)-111, CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>
4	**CHECK KEYLESS ACCESS SYSTEM.** 1) Turn to IGN ON. 2) Open the door glass. 3) Turn to IGN OFF. 4) Place the access key on the driver's seat, and close the door. 5) Touch the touch sensor (lock) on the driver's door handle.	Does the buzzer sound? (Lock-out protection warning)	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>
5	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn to IGN OFF. 2) Disconnect the connectors of the body integrated unit and keyless buzzer. 3) Measure the resistance between body integrated unit connector and keyless buzzer connector. ***Connector & terminal*** ***(B281) No. 10 — (B490) No. 1:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between keyless buzzer connector and chassis ground. ***Connector & terminal*** ***(B490) No. 1 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **7**.	Repair or replace the short circuit of the harness.
7	**CHECK HARNESS (OPEN CIRCUIT).** Measure the resistance between keyless buzzer connector and chassis ground. ***Connector & terminal*** ***(B490) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **8**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
8	**CHECK BODY INTEGRATED UNIT.** 1) Connect the connector of body integrated unit. 2) Use the Subaru Select Monitor to perform the body integrated unit function check «Keyless Buzzer Output». <Ref. to BC(diag)-41, OPERATION, Function Check.> 3) Measure the voltage between body integrated unit connector and chassis ground using an oscilloscope. ***Connector & terminal*** ***(B281) No. 10 (+) — Chassis ground (–):***	Is the frequency 2kHz, voltage 9 V or more?	Replace the keyless buzzer. <Ref. to SL-108, Access Buzzer.>	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>

10.INTERIOR COLLATION DOES NOT FUNCTION

CAUTION:
When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK ACCESS KEY.** Check the battery of the access key. <Ref. to SL-89, INSPECTION, Access Key.>	Is the check result OK?	Go to step **2**.	Replace the battery.
2	**CHECK POWER SUPPLY CIRCUIT.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 24 (+) — Chassis ground (–):*** ***(i241) No. 40 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **3**.	Check the power supply circuit.
3	**CHECK INTERIOR ANTENNA (FRONT).** 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Front interior transmitter + interior tuner». <Ref. to KPS(diag)-35, Keyless Access System Check.> 2) Using a tester, check the output between keyless access CM connector terminals while performing the Keyless access system check. ***Connector & terminal*** ***(i241) No. 1 — No. 2:***	Is a pulse output?	Go to step **4**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
4	**CHECK INTERIOR ANTENNA (CENTER).** 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Rear interior transmitter + interior tuner». <Ref. to KPS(diag)-35, Keyless Access System Check.> 2) Using a tester, check the output between keyless access CM connector terminals while performing the Keyless access system check. ***Connector & terminal*** ***(i241) No. 19 — No. 20:***	Is a pulse output?	Go to step **5**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

Step		Check	Yes	No
5	**CHECK INTERIOR ANTENNA (REAR).** 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Trunk internal transmitter + interior tuner» or «Rear gate internal transmitter + interior tuner». <Ref. to KPS(diag)-35, Keyless Access System Check.> 2) Using a tester, check the output between keyless access CM connector terminals while performing the Keyless access system check. ***Connector & terminal*** ***(i241) No. 17 — No. 18:***	Is a pulse output?	Go to step **6**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
6	**CHECK WIRING HARNESS (OPEN).** 1) Disconnect the front interior antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the front interior antenna connector and the keyless access CM connector. ***Connector & terminal*** ***(i71) No. 1 — (i241) No. 2:*** ***(i71) No. 3 — (i241) No. 1:***	Is there continuity?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK WIRING HARNESS (OPEN).** 1) Disconnect the center interior antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the center interior antenna connector and the keyless access CM connector. ***Connector & terminal*** ***(R298) No. 1 — (i241) No. 20:*** ***(R298) No. 3 — (i241) No. 19:***	Is there continuity?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK WIRING HARNESS (OPEN).** 1) Disconnect the rear interior antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the rear interior antenna connector and the keyless access CM connector. ***Connector & terminal*** ***(R297) No. 1 — (i241) No. 18:*** ***(R297) No. 3 — (i241) No. 17:***	Is there continuity?	Go to step **9**.	Repair or replace the open circuit of harness.
9	**CHECK ANTENNA.** Replace the front interior antenna with a new or properly functioning part.	Does it operate properly?	Replace the front interior antenna. <Ref. to SL-93, REMOVAL, Keyless Access Indoor Antenna.>	Go to step **10**.
10	**CHECK ANTENNA.** Replace the center interior antenna with a new or properly functioning part.	Does it operate properly?	Replace the center interior antenna. <Ref. to SL-93, REMOVAL, Keyless Access Indoor Antenna.>	Go to step **11**.
11	**CHECK ANTENNA.** Replace the rear interior antenna with a new or properly functioning part.	Does it operate properly?	Replace the rear interior antenna. <Ref. to SL-93, REMOVAL, Keyless Access Indoor Antenna.>	Go to step **12**.

	Step	Check	Yes	No
12	**CHECK KEYLESS ACCESS SYSTEM CHECK.** 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Front interior transmitter + interior tuner». <Ref. to KPS(diag)-35, Keyless Access System Check.> 2) Hold the access key 1 m or more away from the audio panel, then come closer to within 0.8 m.	Does the buzzer sound?	Go to step **13**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
13	**CHECK KEYLESS ACCESS SYSTEM CHECK.** 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Rear interior transmitter + interior tuner». <Ref. to KPS(diag)-35, Keyless Access System Check.> 2) Hold the access key 1 m or more away from the center of the second row seats, then come closer to within 0.8 m.	Does the buzzer sound?	Go to step **14**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
14	**CHECK KEYLESS ACCESS SYSTEM CHECK.** 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Trunk internal transmitter + interior tuner» or «Rear gate internal transmitter + interior tuner». <Ref. to KPS(diag)-35, Keyless Access System Check.> 2) Hold the access key 1 m or more away from the back of the rear seat, then come closer to within 0.8 m.	Does the buzzer sound?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

11.TRUNK WILL NOT OPEN WITH KEYLESS ACCESS

CAUTION:
- **Check that there are no other registered access keys inside the trunk.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**

	Step	Check	Yes	No
1	**CHECK TRUNK OPENER BUTTON.** Check that the trunk opens with the driver's seat trunk opener button.	Does it open normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-11, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK KEYLESS OPERATION.** Check that the trunk opens when the trunk opener button of the access key is operated.	Does it open normally?	Go to step **9**.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK TRUNK UNLOCK OPERATION.** 1) Using the Subaru Select Monitor, select the function check «R gate/trunk UNLK output» of «Body Control». <Ref. to BC(diag)-41, Function Check.> 2) Check that the trunk opens when the R gate/trunk UNLK signal is output.	Does it open normally?	Go to step **7**.	Go to step **4**.
4	**CHECK WIRING HARNESS (OPEN).** 1) Disconnect the body integrated unit connector and trunk lid lock actuator connector. 2) Check the continuity between body integrated unit connector and trunk lid lock actuator connector. ***Connector & terminal*** ***(i266) No. 7 — (R186) No. 1:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK WIRING HARNESS (OPEN).** Check the continuity between the trunk lid lock actuator connector and chassis ground. ***Connector & terminal*** ***(R186) No. 2 — Chassis ground:***	Is there continuity?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK TRUNK LID LOCK ACTUATOR.** Check the trunk lid lock actuator. <Ref. to SL-53, Trunk Lid Latch and Actuator Assembly.>	Is the check result OK?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Replace the trunk lid latch & actuator assembly. <Ref. to SL-53, Trunk Lid Latch and Actuator Assembly.>
7	**CHECK ACCESS KEY.** Check the access key LED when the trunk opener button of the access key is operated.	Does the access key LED illuminate?	Go to step **8**.	Replace the access key. <Ref. to SL-89, REPLACEMENT, Access Key.>
8	**CHECK ACCESS KEY.** 1) Prepare all access keys registered to the vehicle. 2) Check that the trunk opens with each access key.	Does it open normally?	Go to step **9**.	Replace the access key. <Ref. to SL-89, REPLACEMENT, Access Key.>
9	**CHECK CURRENT DATA.** 1) Display the current data «Trunk Request SW» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> 2) Read the data when pressing the trunk opener button.	Does the data display ON?	Go to step **13**.	Go to step **10**.
10	**CHECK WIRING HARNESS (OPEN).** 1) Disconnect the trunk opener button connector and the keyless access CM connector. 2) Using a tester, check continuity between the trunk opener button connector and keyless access CM connector. ***Connector & terminal*** ***(R294) No. 2 — (i241) No. 24:***	Is there continuity?	Go to step **11**.	Repair or replace the open circuit of harness.
11	**CHECK WIRING HARNESS (OPEN).** 1) Using a tester, check the continuity between the trunk opener button connector and chassis ground. ***Connector & terminal*** ***(R294) No. 1 — Chassis ground:***	Is there continuity?	Go to step **12**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
12	**CHECK TRUNK OPENER BUTTON.** Using a tester, check the continuity between trunk opener button connector terminals. ***Terminals*** ***No. 1 — No. 2:***	Is there continuity when pressing the switch?	Go to step **13**.	Replace the trunk opener button. <Ref. to SL-100, Trunk Opener Button.>
13	**CHECK WIRING HARNESS (OPEN).** 1) Disconnect the exterior rear antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the exterior rear antenna connector and keyless access CM connector. ***Connector & terminal*** ***(R299) No. 1 — (i241) No. 16:*** ***(R299) No. 3 — (i241) No. 15:***	Is there continuity?	Go to step **14**.	Repair or replace the open circuit of harness.
14	**CHECK OUTSIDE REAR ANTENNA.** Replace the outside rear antenna with new or properly working parts.	Does it operate properly?	Replace the outside rear antenna. <Ref. to SL-97, REMOVAL, Keyless Access Outdoor Antenna.>	Go to step **15**.
15	**CHECK KEYLESS ACCESS SYSTEM CHECK.** 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Trunk external transmitter + interior tuner». <Ref. to KPS(diag)-35, Keyless Access System Check.> 2) Hold the access key 1 m or more away from the trunk, then come closer to within 0.8 m.	Does the outside buzzer sound?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

12.ACCESS KEY LOCKOUT PROTECTION FUNCTION IN THE TRUNK DOES NOT OPERATE

CAUTION:
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK TRUNK OPENER BUTTON.** Check that the trunk opens with the driver's seat trunk opener button.	Does it open normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-11, INSPECTION, Door Lock Control System.>
2	**CHECK KEYLESS OPERATION.** Check that the trunk opens when the trunk opener button of the access key is operated.	Does it open normally?	Go to step **7**.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK TRUNK UNLOCK OPERATION.** 1) Using the Subaru Select Monitor, select the function check «R gate/trunk UNLK output» of «Body Control». <Ref. to BC(diag)-41, Function Check.> 2) Check that the trunk opens when the R gate/trunk UNLK signal is output.	Does it open normally?	Go to step **7**.	Go to step **4**.
4	**CHECK WIRING HARNESS (OPEN).** 1) Disconnect the body integrated unit connector and trunk lid lock actuator connector. 2) Check the continuity between body integrated unit connector and trunk lid lock actuator connector. ***Connector & terminal*** ***(i266) No. 7 — (R186) No. 1:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK WIRING HARNESS (OPEN).** Check the continuity between the trunk lid lock actuator connector and chassis ground. ***Connector & terminal*** ***(R186) No. 2 — Chassis ground:***	Is there continuity?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK TRUNK LID LOCK ACTUATOR.** Check the trunk lid lock actuator. <Ref. to SL-53, Trunk Lid Latch and Actuator Assembly.>	Is the check result OK?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Replace the trunk lid latch & actuator assembly. <Ref. to SL-53, Trunk Lid Latch and Actuator Assembly.>
7	**CHECK ACCESS KEY.** 1) Prepare all access keys registered to the vehicle. 2) Check that the trunk opens with each access key.	Does it open normally?	Go to step **8**.	Replace the access key. <Ref. to SL-89, REPLACEMENT, Access Key.>
8	**CHECK KEYLESS ACCESS SYSTEM CHECK.** 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Trunk internal transmitter + interior tuner». <Ref. to KPS(diag)-35, Keyless Access System Check.> 2) Hold the access key 1 m or more away from the center of inside the trunk, then come closer to within 0.8 m.	Does the outside buzzer sound?	Check the circuit of the rear gate/trunk opener button. <Ref. to SL-15, CHECK REAR GATE OPENER BUTTON CIRCUIT, INSPECTION, Door Lock Control System.>	Go to step **9**.
9	**CHECK WIRING HARNESS (OPEN).** 1) Disconnect the interior rear antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the interior rear antenna connector and keyless access CM connector. ***Connector & terminal*** ***(R297) No. 1 — (i241) No. 18:*** ***(R297) No. 3 — (i241) No. 17:***	Is there continuity?	Go to step **10**.	Repair or replace the open circuit of harness.
10	**CHECK PASSENGER ROOM REAR ANTENNA.** Replace the passenger room rear antenna with a new or properly functioning part.	Does it operate properly?	Replace the passenger room rear antenna. <Ref. to SL-93, REMOVAL, Keyless Access Indoor Antenna.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

13.REAR GATE CANNOT BE UNLOCKED WITH THE REAR GATE OPENER BUTTON

CAUTION:
• Check that there are no other registered access keys inside the rear gate.
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK KEYLESS OPERATION.** Check that the rear gate unlocks when the rear gate unlock button of the access key is pressed.	Does it operate properly?	Go to step **6**.	For vehicles without power rear gate Go to step **2**. For vehicles with power rear gate <Ref. to PRG(diag)-52, PRG OPENER BUTTON DOES NOT FUNCTION, INSPECTION, Diagnostics with Phenomenon.>
2	**CHECK REAR GATE UNLOCK OPERATION.** 1) Using the Subaru Select Monitor, select the function check «R gate/trunk UNLK output» of «Body Control». <Ref. to BC(diag)-41, Function Check.> 2) Check that the rear gate unlocks when the R gate/trunk UNLK signal is output.	Does it operate properly?	Go to step **6**.	Go to step **3**.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the body integrated unit connector and rear gate lock actuator connector. 2) Check the continuity between body integrated unit connector and rear gate lock actuator connector. ***Connector & terminal*** ***(i266) No. 7 — (D46) No. 1:***	Is there continuity?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Check the continuity between the rear gate lock actuator connector and chassis ground. ***Connector & terminal*** ***(D46) No. 2 — Chassis ground:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK REAR GATE LOCK ACTUATOR.** 1) Check the rear gate lock actuator. <Ref. to SL-51, INSPECTION, Rear Gate Latch and Actuator Assembly.>	Is the check result OK?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Replace the rear gate latch and actuator assembly. <Ref. to SL-50, Rear Gate Latch and Actuator Assembly.>
6	**CHECK ACCESS KEY.** 1) Prepare all access keys registered to the vehicle. 2) Check that the rear gate lock can be unlocked with each access key.	Is the check result OK?	Go to step **7**.	Replace the access key. <Ref. to SL-89, REPLACEMENT, Access Key.>

Step		Check	Yes	No
7	**CHECK CURRENT DATA.** 1) Display the current data «R Gate Release SW input» of «Body Control» using Subaru Select Monitor. <Ref. to BC(diag)-25, Read Current Data.> 2) Read the data when pressing the rear gate opener button.	Does the data display ON?	Go to step **14**.	Go to step **8**.
8	**CHECK WIRING HARNESS (OPEN).** 1) Disconnect the rear gate opener button connector and body integrated unit connector. 2) Using a tester, check the continuity between the rear gate opener button connector and body integrated unit connector. ***Connector & terminal*** ***(D77) No. 1 — (i171) No. 6:***	Is there continuity?	Go to step **9**.	Repair or replace the open circuit of harness.
9	**CHECK WIRING HARNESS (OPEN).** 1) Using a tester, check the continuity between the rear gate opener button connector and chassis ground. ***Connector & terminal*** ***(D77) No. 2 — Chassis ground:***	Is there continuity?	Go to step **10**.	Repair or replace the open circuit of harness.
10	**CHECK REAR GATE OPENER BUTTON.** Using a tester, check the continuity between rear gate opener button connector terminals. ***Terminals*** ***No. 1 — No. 2:***	Is there continuity when pressing the switch?	Go to step **11**.	Replace the rear gate opener button. <Ref. to SL-48, REMOVAL, Rear Gate Opener Button.>
11	**CHECK WIRING HARNESS (OPEN).** 1) Disconnect the exterior rear antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the exterior rear antenna connector and keyless access CM connector. ***Connector & terminal*** ***(D45) No. 1 — (i241) No. 16:*** ***(D45) No. 3 — (i241) No. 15:***	Is there continuity?	Go to step **12**.	Repair or replace the open circuit of harness.
12	**CHECK OUTSIDE REAR ANTENNA.** Replace the outside rear antenna with new or properly working parts. <Ref. to SL-97, REMOVAL, Keyless Access Outdoor Antenna.>	Does it operate properly?	The outside rear antenna has a failure.	Go to step **13**.
13	**CHECK CURRENT DATA.** 1) Display the current data «R gate lock status SW input» of «Body Control» using Subaru Select Monitor. <Ref. to BC(diag)-25, Read Current Data.> 2) Read the data when locking/unlocking the rear gate lock actuator.	Does the data change from ON ←→ OFF?	Go to step **14**.	Check body integrated unit. <Ref. to SL-84, REMOVAL, Body Integrated Unit.>

	Step	Check	Yes	No
14	**CHECK KEYLESS ACCESS SYSTEM CHECK.** 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Rear gate external transmitter + interior tuner». <Ref. to KPS(diag)-35, Keyless Access System Check.> 2) Hold the access key 1 m or more away from the rear gate, then come closer to within 0.8 m.	Does the outside buzzer sound?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>

14.CAN NOT LOCK WHEN USING THE REAR LOCK BUTTON

CAUTION:
- **Check that there are no other registered access keys inside the vehicle.**
- **Check that the keyless access function is not stopped.**
- **Inspect LAN system or keyless access system according to the basic diagnostic procedure, and make sure that DTC is not input.**
- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**

	Step	Check	Yes	No
1	**CHECK REAR GATE ACTUATOR.** While carrying the access key, operate the touch sensor (lock) and touch sensor (unlock).	When the switch is operated, does the rear gate lock/unlock?	Go to step **2**.	Go to step **9**.
2	**CHECK REAR LOCK BUTTON.** 1) Display the current data «Rear Gate Request SW» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> 2) Read the data when operating the rear lock button.	Does the data change between ON/OFF?	Go to step **7**.	Go to step **3**.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the rear lock button connector and the keyless access CM connector. 2) Using a tester, measure the resistance between harness. ***Connector & terminal*** ***(D77) No. 3 — (i241) No. 24:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair or replace the open circuit of the harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between harness and chassis ground. ***Connector & terminal*** ***(D77) No. 3 — Chassis ground:***	Is the resistance 10 MΩ or more?	Go to step **5**.	Repair or replace the short of harness.
5	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between harness and chassis ground. ***Connector & terminal*** ***(D77) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of the harness.

Step		Check	Yes	No
6	**CHECK REAR LOCK BUTTON.** Measure the resistance when the rear lock button is operated using the tester. ***Terminals*** ***No. 3 — No. 4:***	Did the resistance change from 1 MΩ or more to less than 10 Ω?	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>	Replace the rear lock button. <Ref. to SL-101, REMOVAL, Rear Lock Button.>
7	**CHECK WIRING HARNESS (OPEN).** 1) Disconnect the exterior rear antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the exterior rear antenna connector and keyless access CM connector. ***Connector & terminal*** ***(D45) No. 1 — (i241) No. 16:*** ***(D45) No. 3 — (i241) No. 15:***	Is there continuity?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK OUTSIDE REAR ANTENNA.** Replace the outside rear antenna with new or properly working parts. <Ref. to SL-97, REMOVAL, Keyless Access Outdoor Antenna.>	Does it operate properly?	The outside rear antenna has a failure.	Go to step **9**.
9	**CHECK BODY INTEGRATED UNIT.** 1) Connect the disconnected connectors. 2) Use the Subaru Select Monitor to perform the body integrated unit function check. <Ref. to BC(diag)-41, Function Check.> 3) Actuate the door lock actuator LOCK output.	Does the rear gate lock actuator lock?	It is possible that temporary poor communication occurs.	Go to step **10**.
10	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the body integrated unit connector and rear gate lock actuator connector. 2) Check the continuity between body integrated unit connector and rear gate lock actuator connector. ***Connector & terminal*** ***(i266) No. 7 — (D46) No. 1:***	Is there continuity?	Go to step **11**.	Repair or replace the open circuit of harness.
11	**CHECK HARNESS (OPEN CIRCUIT).** 1) Check the continuity between the rear gate lock actuator connector and chassis ground. ***Connector & terminal*** ***(D46) No. 2 — Chassis ground:***	Is there continuity?	Go to step **12**.	Repair or replace the open circuit of harness.
12	**CHECK REAR GATE LOCK ACTUATOR.** 1) Check the rear gate lock actuator. <Ref. to SL-51, INSPECTION, Rear Gate Latch and Actuator Assembly.>	Is the check result OK?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Replace the rear gate latch and actuator assembly. <Ref. to SL-50, Rear Gate Latch and Actuator Assembly.>

15.THE STEERING LOCK IS NOT RELEASED

CAUTION:
When the steering lock CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK OPERATION.** 1) Depress the brake pedal. 2) While turning the steering wheel lightly to the left and right, press the push button ignition switch. 3) Confirm that the steering lock is released and the engine starts.	Does the engine fail to start with the steering lock released?	Perform the diagnosis for engine system. <Ref. to EN(H4DO)(diag)-85, PROCEDURE, Diagnostics for Engine Starting Failure.> <Ref. to EN(H6DO)(diag)-95, PROCEDURE, Diagnostics for Engine Starting Failure.>	Go to step **2**.
2	**CHECK DTC.** Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **3**.
3	**CHECK CURRENT DATA.** 1) Using the Subaru Select Monitor, display the current data of «Keyless Access with Push Button Start»: «Steering lock unlock request reception status» and «Steering lock lock/unlock command reception history». <Ref. to KPS(diag)-26, Read Current Data.> 2) Read the data when the push button ignition switch is pressed while in possession of the access key. (Maintain for 10 seconds after switch operation)	Does the data change from "Not yet received" to "Reception", and from "OFF" to "ON"?	Go to step **4**.	Go to step **7**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the steering lock CM connector. 2) Using a tester, measure the voltage between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(i47) No. 7 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, check continuity between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(i47) No. 1 — Chassis ground:***	Is there continuity?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK STEERING LOCK CM.** 1) Connect the disconnected connectors. 2) Using a tester, measure the voltage between steering lock CM terminals right after the ignition switch is turned to ON. ***Connector & terminal*** ***(i47) No. 3 (+) — (i47) No. 1 (–):***	Is the voltage 1 V or less right after the ignition ON?	Replace the steering lock CM. <Ref. to SL-104, REMOVAL, Steering Lock CM.>	Repair or replace the open circuit of harness.

Step		Check	Yes	No
7	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the current data of «Keyless Access with Push Button Start»: «Code collation result between smart ECM and ID code box». <Ref. to KPS(diag)-26, Read Current Data.>	Is data displayed as being normal?	Go to step **9**.	Go to step **8**.
8	**CHECK CURRENT DATA.** 1) Replace with a properly functioning or new ID code box. <Ref. to SL-103, NOTE, ID Code Box.> 2) Using the Subaru Select Monitor, display the current data of «Keyless Access with Push Button Start»: «Code collation result between smart ECM and ID code box». <Ref. to KPS(diag)-26, Read Current Data.>	Is data displayed as being normal?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
9	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the current data of «Keyless Access with Push Button Start»: «Code collation result between steering locked ECM and ID code box». <Ref. to KPS(diag)-26, Read Current Data.>	Is data displayed as being normal?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **10**.
10	**CHECK ID CODE BOX.** 1) Replace with a properly functioning or new ID code box. <Ref. to SL-103, NOTE, ID Code Box.> 2) Using the Subaru Select Monitor, display the current data of «Keyless Access with Push Button Start»: «Code collation result between steering locked ECM and ID code box». <Ref. to KPS(diag)-26, Read Current Data.>	Is data displayed as being normal?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **11**.

	Step	Check	Yes	No
11	**CHECK STEERING LOCK CM.** 1) Replace with a properly functioning or new steering lock CM. <Ref. to SL-104, REMOVAL, Steering Lock CM.> 2) After registering, the steering lock operates when the ignition is turned to OFF and the driver's door is opened and closed. 3) Turn the ignition to ON. 4) Operate the steering and check for whether the steering lock is released.	Is the steering lock released, and does the engine start?	Replace the steering lock CM. <Ref. to SL-104, REMOVAL, Steering Lock CM.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

16.THE STEERING LOCK DOES NOT OPERATE

CAUTION:
When the keyless access CM or steering lock CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK DTC.** Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK CURRENT DATA.** 1) Display the current data «Driver's door SW input» of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-25, Read Current Data.> 2) Read the data when opening and closing the driver's door.	Does the data change from ON to OFF according to the opening and closing?	Go to step **3**.	Inspect door switch circuit.
3	**CHECK CURRENT DATA.** Display the current data «Shift P Signal» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.>	Is the status displayed correctly when the shift lever is shifted from P to other than P?	Go to step **4**.	Check the P range switch and harness.
4	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the current data «Code collation result between smart ECM and ID code box» under «Keyless Access with Push Button Start». <Ref. to KPS(diag)-26, Read Current Data.>	Is the status normal?	Go to step **5**.	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>
5	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the current data «Code collation result between steering locked ECM and ID code box» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-26, Read Current Data.>	Is the status normal?	Go to step **6**.	Replace the steering lock CM. <Ref. to SL-104, REMOVAL, Steering Lock CM.>
6	**CHECK CURRENT DATA.** 1) Display the current data «Steering lock lock/unlock command reception history» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> 2) While in possession of the access key, perform engine start operations, and read data within 10 seconds after starting.	Is data displayed as ON?	Go to step **7**.	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>

	Step	Check	Yes	No
7	**CHECK STEERING LOCK CM.** Using a tester, measure the waveform between steering lock CM terminals immediately after the following operations. Perform ignition ON, driver's side door close → shift lever "P" range, ignition OFF, and close → open the driver's side door. ***Connector & terminal*** ***(i47) No. 3 — (i47) No. 1:***	Is the waveform immediately after opening the driver's side door abnormal?	Replace the steering lock CM. <Ref. to SL-104, REMOVAL, Steering Lock CM.>	Go to step **8**.
8	**CHECK WIRING HARNESS (OPEN).** 1) Disconnect the keyless access CM connector and the steering lock CM connector. 2) Using a tester, check continuity between the keyless access CM connector and steering lock CM connector. ***Connector & terminal*** ***(i47) No. 3 — (i75) No. 9:***	Is there continuity?	Go to step **9**.	Repair or replace the open circuit of harness.
9	**CHECK WIRING HARNESS (OPEN).** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 21 — Chassis ground:*** ***(i75) No. 1 — Chassis ground:***	Is there continuity?	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>	Repair or replace the open circuit of harness.

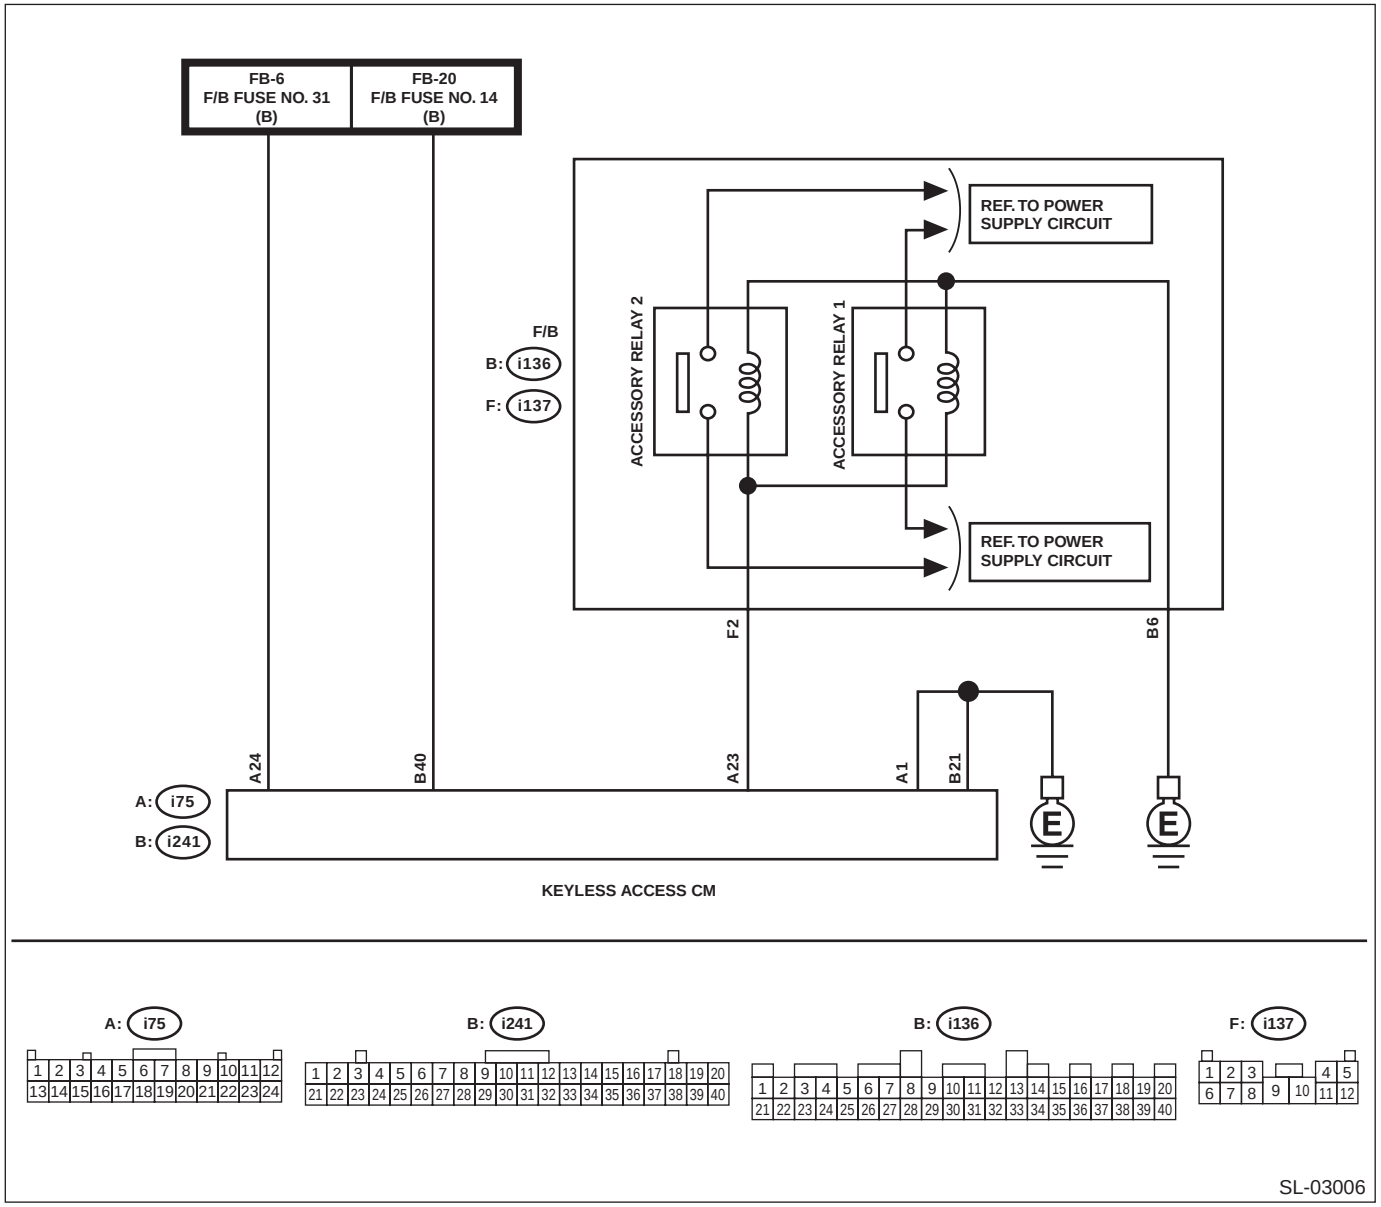
17.POWER WILL NOT TURN ON (BOTH ACCESSORY AND IGNITION)

CAUTION:
• When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.
• When the keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK FUSE.** Check the fuse. <Ref. to SL-10, INSPECTION, Relay and Fuse.>	Is the check result OK?	Go to step **2**.	Replace the fuse.
2	**CHECK POWER SUPPLY.** 1) Remove IG relay 1 (push button start), IG relay 2 (push button start) and accessory relay (push button start). 2) Using a tester, measure the voltage between the relay block connector and chassis ground.	Is the voltage 10 V or more?	Go to step **3**.	Check the DC power supply circuit.
3	**CHECK CONNECTOR.** Check the engagement of each connector and terminal for any deformation or looseness.	Is the check result OK?	Go to step **4**.	Repair the connector, or replace harness.
4	**CHECK WIRING HARNESS (OPEN).** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 24 (+) — Chassis ground (–):*** ***(i241) No. 40 (+) — Chassis ground (–):***	Is the voltage between 8 V and 16 V?	Go to step **5**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
5	**CHECK WIRING HARNESS (OPEN).** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 21 — Chassis ground:*** ***(i75) No. 1 — Chassis ground:***	Is there continuity?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK DTC.** 1) Connect the keyless access CM connector. 2) Carrying the access key, depress the brake pedal (except for MT model) or clutch pedal (MT model), and push the push button ignition switch. 3) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **7**.
7	**CHECK CURRENT DATA.** 1) Display the current data «Push start SW 1» and «Push start SW 2» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.> 2) Read the data when pressing the push button ignition switch. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Does it change from OFF to ON along with the operation?	Go to step **8**.	Go to step **13**.
8	**CHECK RELAY (PUSH BUTTON START).** Check IG relay 1 and 2 (push button start), and accessory relay (push button start). <Ref. to SL-9, Relay and Fuse.>	Is the check result OK?	Go to step **9**.	Replace the faulty relay.
9	**CHECK WIRING HARNESS (OPEN).** 1) Disconnect the keyless access CM connector, IG relay 1 (push button start), IG relay 2 (push button start) and accessory relay (push button start). 2) Using a tester, check continuity between terminals of keyless access CM connector, IG relay 1 (push button start), IG relay 2 (push button start) and accessory relay (push button start). ***Connector & terminal*** ***(i75) No. 12 — (i265) No. 4:*** ***(i75) No. 11 — (i137) No. 12:*** ***(i75) No. 23 — (i137) No. 2:***	Is there continuity?	Go to step **10**.	Repair or replace the open circuit of harness.
10	**CHECK WIRING HARNESS (GROUND SHORT CIRCUIT).** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 12 — Chassis ground:*** ***(i75) No. 11 — Chassis ground:*** ***(i75) No. 23 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Go to step **11**.
11	**CHECK WIRING HARNESS (OPEN).** Using a tester, check the continuity between F/B connector and chassis ground. ***Connector & terminal*** ***(i136) No. 6 — Chassis ground:***	Is there continuity?	Go to step **12**.	Repair or replace the open circuit of harness.

Step		Check	Yes	No
12	**CHECK KEYLESS ACCESS CM.** 1) Connect all the disconnected connectors. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the ignition is turned from OFF to ON. ***Connector & terminal*** ***(i75) No. 12 (+) — Chassis ground (–):*** ***(i75) No. 11 (+) — Chassis ground (–):*** ***(i75) No. 23 (+) — Chassis ground (–):***	Did the voltage change from 1 V or less to +B-2 V or more?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
13	**CHECK PUSH BUTTON IGNITION SWITCH.** 1) Disconnect the push button ignition switch connector. 2) Using a tester, check the continuity between the push button ignition switch connector terminals. ***Terminals*** ***No. 7 — No. 5:*** ***No. 2 — No. 5:***	When the button was pressed, did it change to continuity exists? (No continuity when button is released)	Go to step **14**.	Replace the push button ignition switch. <Ref. to SL-106, REMOVAL, Push Button Ignition Switch.>
14	**CHECK WIRING HARNESS (OPEN).** Using a tester, check the continuity between the push button ignition switch connector and chassis ground. ***Connector & terminal*** ***(i150) No. 4 — Chassis ground:*** ***(i150) No. 5 — Chassis ground:***	Is there continuity?	Go to step **15**.	Repair or replace the open circuit of harness.
15	**CHECK WIRING HARNESS (OPEN).** 1) Disconnect the keyless access CM connector. 2) Using a tester, check continuity between the keyless access CM connector and the push button ignition switch connector. ***Connector & terminal*** ***(i150) No. 7 — (i75) No. 4:*** ***(i150) No. 2 — (i75) No. 17:***	Is there continuity?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Repair or replace the open circuit of harness.



18.POWER WILL NOT TURN ON (ACCESSORY DOES NOT TURN ON, BUT IGNITION TURNS ON)

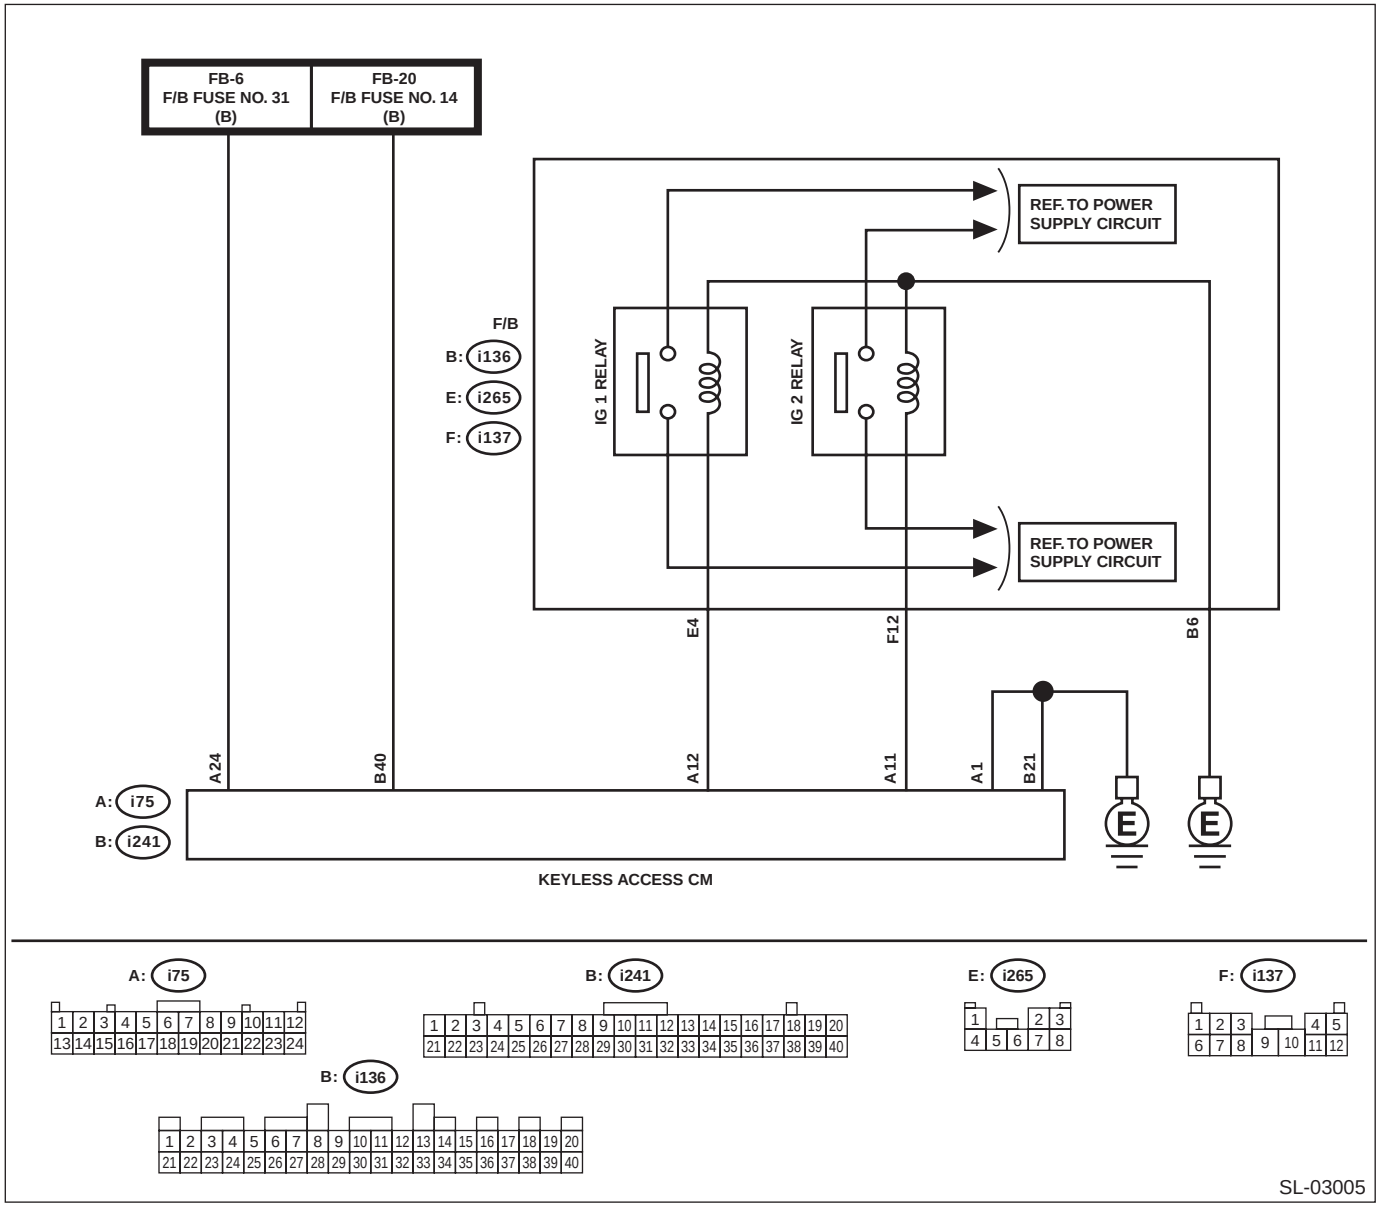
CAUTION:

- **When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.**
- **When the keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**

Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

	Step	Check	Yes	No
1	**CHECK FUSE.** Check the fuse. <Ref. to SL-10, INSPECTION, Relay and Fuse.>	Is the check result OK?	Go to step **2**.	Replace the fuse.
2	**CHECK CONNECTOR.** Check the engagement of each connector and terminal for any deformation or looseness.	Is the check result OK?	Go to step **3**.	Repair the connector, or replace harness.
3	**CHECK WIRING HARNESS (OPEN).** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 24 (+) — Chassis ground (–):*** ***(i241) No. 40 (+) — Chassis ground (–):***	Is the voltage between 8 V and 16 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK WIRING HARNESS (OPEN).** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 21 — Chassis ground:*** ***(i75) No. 1 — Chassis ground:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK ACCESSORY RELAY (PUSH BUTTON START).** Check the accessory relay (push button start). <Ref. to SL-9, Relay and Fuse.>	Is the check result OK?	Go to step **6**.	Replace the relay.
6	**CHECK WIRING HARNESS (OPEN).** 1) Disconnect the keyless access CM connector and F/B connector. 2) Using a tester, check continuity between keyless access CM connector and F/B connector. ***Connector & terminal*** ***(i75) No. 23 — (i137) No. 2:***	Is there continuity?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK WIRING HARNESS (GROUND SHORT CIRCUIT).** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 23 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Go to step **8**.
8	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the ignition is turned from OFF to ON. ***Connector & terminal*** ***(i75) No. 23 (+) — Chassis ground (–):***	Did the voltage change from 1 V or less → +B-2 V or more?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>



19.POWER WILL NOT TURN ON (ACCESSORY TURNS ON, BUT IGNITION DOES NOT TURN ON)

CAUTION:

- **When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.**
- **When the keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**

Wiring diagram:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Keyless access with push button start system <Ref. to WI-262, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

	Step	Check	Yes	No
1	**CHECK FUSE.** Check the fuse. <Ref. to SL-10, INSPECTION, Relay and Fuse.>	Is the check result OK?	Go to step **2**.	Replace the fuse.
2	**CHECK CONNECTOR.** Check the engagement of each connector and terminal for any deformation or looseness.	Is the check result OK?	Go to step **3**.	Repair the connector, or replace harness.
3	**CHECK WIRING HARNESS (OPEN).** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 24 (+) — Chassis ground (–):*** ***(i241) No. 40 (+) — Chassis ground (–):***	Is the voltage between 8 V and 16 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK WIRING HARNESS (OPEN).** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i241) No. 21 — Chassis ground:*** ***(i75) No. 1 — Chassis ground:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK IG RELAY 1 AND 2 (PUSH BUTTON START).** Check IG relay 1 (push button start) and IG relay 2 (push button start). <Ref. to SL-9, Relay and Fuse.>	Is the check result OK?	Go to step **6**.	Replace the relay.
6	**CHECK WIRING HARNESS (OPEN).** 1) Disconnect the keyless access CM connector and F/B connector. 2) Using a tester, check continuity between keyless access CM connector and F/B connector. ***Connector & terminal*** ***(i75) No. 11 — (i137) No. 12:*** ***(i75) No. 12 — (i265) No. 4:***	Is there continuity?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK WIRING HARNESS (GROUND SHORT CIRCUIT).** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(i75) No. 11 — Chassis ground:*** ***(i75) No. 12 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Go to step **8**.

Step		Check	Yes	No
8	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the ignition is turned from OFF to ON. ***Connector & terminal*** ***(i75) No. 11 (+) — Chassis ground (–):*** ***(i75) No. 12 (+) — Chassis ground (–):***	Did the voltage change from 1 V or less → +B-2 V or more?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

20.ENGINE DOES NOT START

CAUTION:
• When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.
• When the keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**INITIALIZE STEERING LOCK.** 1) Place the shift lever in the Parking range. 2) Operate the driver's door switch ON/OFF with the ignition switch OFF. 3) Wait for 10 seconds. 4) Place the access key on the driver's seat. 5) Press the push button ignition switch while depressing the brake pedal.	Can the engine start?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK DTC.** Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-24, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to KPS(diag)-37, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK POWER SUPPLY SWITCHING.** 1) Place the access key on the driver's seat. 2) Press the push button ignition switch without depressing the brake pedal.	When the switch is operated, does the <IG-OFF> → <ACC-ON> → <IG-ON> → <IG-OFF> change occur?	Go to step **4**.	Perform the diagnostics according to the symptom for power supply switching system in General Diagnostic Table. <Ref. to KPS(diag)-109, POWER SUPPLY SWITCHING SYSTEM, INSPECTION, General Diagnostic Table.>
4	**CHECK CURRENT DATA.** 1) Place the access key on the driver's seat. 2) Press the push button ignition switch while depressing the brake pedal. 3) Using the Subaru Select Monitor, confirm the keyless access CM, the current data «STSW signal monitor» when pressing the push button ignition switch. <Ref. to KPS(diag)-26, Read Current Data.> NOTE: If it is difficult to confirm, press the push button ignition switch for approximately five seconds longer.	Does the data change from OFF → ON?	Go to step **10**.	Except for MT model: Go to step **5**. MT model: Go to step **7**.

	Step	Check	Yes	No
5	**CHECK CURRENT DATA.** Check the keyless access CM, current data «Shift P Signal» using the Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.>	Is «ON» displayed in parking position, and «OFF» displayed in other positions?	Go to step **6**.	Go to step **11**.
6	**CHECK CURRENT DATA.** Confirm the keyless access CM, current data «Stop Light Switch» using the Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.>	Is «ON» displayed when brake pedal depressed, and «OFF» displayed when brake pedal not depressed?	Go to step **7**.	Go to step **13**.
7	**CHECK CURRENT DATA.** Confirm the keyless access CM, current data «Neutral SW/Clutch SW» using the Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.>	Is «ON» displayed in parking and neutral positions, and «OFF» displayed in other positions?	Go to step **8**.	Go to step **15**.
8	**CHECK STEERING LOCK.** Operate the push button ignition switch to perform the power supply switching and check steering lock condition during ACC-ON condition.	Is the steering lock in unlocked condition?	Go to step **9**.	Perform the diagnostics according to the symptom for steering lock system in General Diagnostic Table. <Ref. to KPS(diag)-109, STEERING LOCK SYSTEM, INSPECTION, General Diagnostic Table.>
9	**CHECK KEYLESS ACCESS CM.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Using a tester, measure the voltage between the keyless access CM connector and chassis ground in the following procedures. 1. Press the push button ignition switch with the brake pedal depressed. (Measure within 10 seconds.) 2. Release the push button ignition switch from the condition of step 1. above. ***Connector & terminal*** ***(i241) No. 37 (+) — Chassis ground (–):***	Does the value change from 1 V or less to +B-2 V or more in the step 1, and return to 1 V or less in the step 2?	Perform the diagnosis for engine system. <Ref. to EN(H4DO)(diag)-85, PROCEDURE, Diagnostics for Engine Starting Failure.> <Ref. to EN(H6DO)(diag)-95, PROCEDURE, Diagnostics for Engine Starting Failure.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
10	**CHECK CURRENT DATA.** 1) Connect the disconnected connectors. 2) Confirm the keyless access CM, current data «Engine start permission request reception status» using the Subaru Select Monitor. <Ref. to KPS(diag)-26, Read Current Data.>	Is “Reception” displayed with ignition switch ON, and “Not yet received” displayed in other positions?	Perform the diagnosis for engine system. <Ref. to EN(H4DO)(diag)-85, PROCEDURE, Diagnostics for Engine Starting Failure.> <Ref. to EN(H6DO)(diag)-95, PROCEDURE, Diagnostics for Engine Starting Failure.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

	Step	Check	Yes	No
11	**CHECK "P" RANGE SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the AT shift lever connector. 3) Using a tester, check the continuity of "P" range switch. ***Terminals*** ***No. 1 — 2:***	Does it change from Continuity ←→ No continuity according to shift lever operation?	Go to step **12**.	Replace the "P" range switch. <Ref. to CS-49, REMOVAL, AT Shift Lock Solenoid and "P" Range Switch.>
12	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the keyless access CM connector. 3) Using a tester, check continuity between the keyless access CM connector and the AT select lever connector, and between the AT select lever connector and chassis ground. ***Connector & terminal*** ***(i44) No. 1 — (i75) No. 8:*** ***(i44) No. 2 — Chassis ground:***	Is there continuity?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Repair or replace the harness.
13	**CHECK STOP LIGHT SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the stop light switch connector. 3) Using a tester, check continuity of the stop light switch connector. ***Terminals*** ***No. 1 — No. 2:***	Does it change from Continuity ←→ No continuity according to brake pedal operation?	Go to step **14**.	Replace the stop light switch. <Ref. to BR-80, REMOVAL, Stop Light Switch.>
14	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Using a tester, check continuity between the keyless access CM connector and the stop light switch connector, and between the stop light switch connector and fuse. ***Connector & terminal*** ***(i241) No. 31 — (B65) No. 2:*** ***(B65) No. 1 — F/B fuse No. 37:***	Is there continuity?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Repair or replace the harness.
15	**CHECK INHIBITOR SWITCH.** Check the inhibitor switch. <Ref. to CVT(TR690)-102, INSPECTION, Inhibitor Switch.>	Is the check result OK?	Go to step **16**.	Replace the inhibitor switch. <Ref. to CVT(TR690)-107, REMOVAL, Inhibitor Switch.>
16	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the inhibitor switch connector. 3) Using a tester, measure the continuity between the keyless access CM connector and the inhibitor switch connector, and between the inhibitor switch connector and the starter motor. ***Connector & terminal*** ***Engine type: FB*** ***(i241) No. 34 — (B12) No. 1:*** ***(B12) No. 5 — Starter motor:*** ***Engine type: EZ*** ***(i241) No. 34 — (B12) No. 12:*** ***(B12) No. 11 — Starter motor:***	Is there continuity?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Repair or replace the harness.

BODY CONTROL SYSTEM (DIAGNOSTICS)

16.	General Diagnostic Table	83
17.	Diagnostics with Phenomenon	86

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
• Subaru Select Monitor is required for reading DTC, performing diagnosis and reading current data.
• Remove foreign matter (dust, water, oil, etc.) from the body integrated unit connector during removal and installation.
• Registration of immobilizer may be needed after the replacement of control modules, etc. For detailed procedure, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

NOTE:
• To check harness for open or short circuits, shake the suspected trouble spot or connector.
• Check List for Interview <Ref. to BC(diag)-3, Check List for Interview.>

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** Ask the customer when and how the trouble occurred using the interview check list. <Ref. to BC(diag)-3, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Interview the customer.
2	**BASIC INSPECTION.** Check components which might affect body control. <Ref. to BC(diag)-8, INSPECTION, General Description.>	Is the check result of the component that might influence the body control problem OK?	Go to step **3**.	Repair or replace each component.
3	**CHECK DTC.** 1) Read the DTC. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to LAN(diag)-12, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.> 2) Record all DTCs, time stamp and freeze frame data. NOTE: For time stamp, refer to "LAN SYSTEM". <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.>	Is DTC displayed on Subaru Select Monitor?	Perform the diagnosis for the displayed DTCs. <Ref. to BC(diag)-42, List of Diagnostic Trouble Code (DTC).> Go to step **6**.	Go to step **4**.
4	**CHECK PHENOMENON LIST.** Check the "Phenomenon List". <Ref. to BC(diag)-86, Diagnostics with Phenomenon.>	Is there a symptom that corresponds in the phenomenon list?	Perform diagnosis according to the procedures in the phenomenon list.	Go to step **5**.
5	**PERFORM GENERAL DIAGNOSTICS.** Inspect using the "General Diagnostic Table". <Ref. to BC(diag)-83, General Diagnostic Table.>	Is the check result OK?	The body control system is normal.	Go to step **6**.
6	**PERFORM DIAGNOSIS.** 1) Perform the Clear Memory Mode. <Ref. to BC(diag)-19, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to BC(diag)-20, Inspection Mode.>	Is DTC displayed on Subaru Select Monitor?	Perform the diagnosis for the displayed DTCs. <Ref. to BC(diag)-42, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

2. Check List for Interview

A: CHECK

1. BODY CONTROL

Inspect the following items regarding the vehicle's state.

Body Control System Check List for Interview		Date of Vehicle Bring-in Year Month Day	
Customer's name		Registration No.	Initial year of registration Year Month Date
		Vehicle model	Frame number
Interviewer	Inspector	Engine type	Odometer reading
Customer specified content			
Date and time when the trouble occurred		Frequency of trouble occurrence	
Condition of trouble occurrence		Weather	
Road conditions		Occurrence location	
Accessory installation condition			
Trouble condition			
❑ Diagnostic code			❑ ( )

- Condition of ignition power supply

Ignition position	❑ OFF ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)
Timing	❑ Immediately after turning the ignition ON. ❑ Immediately after turning the ignition to START.

Check List for Interview

- Symptoms

NOTE:
The items vary depending on destinations and equipment.

Vehicle condition	Clearance light does not illuminate.	❑ Yes / ❑ No
	Clearance light indicator does not illuminate.	❑ Yes / ❑ No
	Low beam does not illuminate.	❑ Yes / ❑ No
	High beam does not illuminate.	❑ Yes / ❑ No
	High beam indicator does not illuminate.	❑ Yes / ❑ No
	Front fog light does not illuminate.	❑ Yes / ❑ No
	Front fog light indicator does not illuminate.	❑ Yes / ❑ No
	Key cannot be removed from key cylinder.	❑ Yes / ❑ No
	Key can be removed with the shift in a range other than P.	❑ Yes / ❑ No
	Shift lever can not be operated.	❑ Yes / ❑ No
	Shift lock does not operate.	❑ Yes / ❑ No
	Warning buzzer for key left in ignition does not beep.	❑ Yes / ❑ No
	The security indicator does not illuminate.	❑ Yes / ❑ No
	Wiper deicer does not operate.	❑ Yes / ❑ No
	Rear defogger does not operate.	❑ Yes / ❑ No
	Combination meter does not dim when headlights are ON.	❑ Yes / ❑ No
	Rear wiper does not operate.	❑ Yes / ❑ No
	Doors can not be locked/unlocked with central door lock switch.	❑ Yes / ❑ No
	Doors and rear gate can not be locked/unlocked with keyless entry system or keyless access.	❑ Yes / ❑ No
	Trunk can not be opened with keyless entry system or keyless access.	❑ Yes / ❑ No
	Rear gate can not be opened when rear gate opener button is pressed.	❑ Yes / ❑ No
	Hazard answer-back does not operate.	❑ Yes / ❑ No
	Ignition key illumination does not light.	❑ Yes / ❑ No
	Ignition key illumination blinks.	❑ Yes / ❑ No
	Room light does not operate in accordance with door open/close operations.	❑ Yes / ❑ No
	Room light blinks.	❑ Yes / ❑ No
	Map light does not operate in accordance with door open/close operations.	❑ Yes / ❑ No
	Map light blinks.	❑ Yes / ❑ No
	Luggage/trunk room light does not operate in accordance with rear gate/trunk open/close operations.	❑ Yes / ❑ No
	Luggage/trunk room light is blinking.	❑ Yes / ❑ No
	Security monitoring does not start	❑ Yes / ❑ No
	Security cannot be cancelled	❑ Yes / ❑ No
	Hazard does not blink during security monitoring	❑ Yes / ❑ No
	Horn does not sound during security monitoring	❑ Yes / ❑ No
	Alarm operates as soon as security monitor condition occurs.	❑ Yes / ❑ No
	Security alarm does not operate even when impact is applied (model with impact sensor).	❑ Yes / ❑ No
	Engine does not start.	❑ Yes / ❑ No

- Conditions under which trouble occurs

Driving condition	❑ At standstill (while idling) ❑ When the vehicle is running Vehicle speed km/h (MPH) ❑ While accelerating Acceleration km/h (MPH) to km/h (MPH) ❑ Decelerating (with braking) Deceleration km/h (MPH) to km/h (MPH) ❑ Decelerating (without braking) Deceleration km/h (MPH) to km/h (MPH)
	❑ Flat road ❑ Uphill ❑ Downhill ❑ Gravel road ❑ Bumpy road ❑ Snowy road
	Does it occur when operating any part? Operated part: Trouble symptom:
	Are there any other troubles occurred? From where: Trouble symptom:

2. HIGH BEAM ASSIST

Inspect the following items regarding the vehicle's state.

<table>
<tr><td colspan="2">High Beam Assist Check List for Interview</td><td colspan="2">Date of Vehicle Bring-in Year Month Day</td></tr>

<tr><td>Headlight of oncoming vehicle
* When the type is unknown, indicate the color.</td><td>• HID/LED (white)
• Halogen
• Only one side was lit
• Other ( )</td></tr>
</table>

Conditions upon symptom occurrence	Road conditions	Preceding vehicle	• No preceding vehicle • Straight • Gentle right-hand curve • Gentle left-hand curve • Sharp right-hand curve • Sharp left-hand curve • Uphill • Downhill • Intersection • Top of the hill • Other ( )
		Number of street light ahead	• 0 • 1 • 2 • 3 • 4 • 5 • More ( )
		Reflection board/Signs	• 0 • 1 • 2 • 3 • 4 • 5 • More ( )
			• Red • White • Blue • Other ( )
	Vehicle status	Number of passengers: , (Front seats: /Rear seats:)	
		Cargo room load capacity	
		Tire inflation pressure (when vehicle was brought in) • Front wheel kPa (psi) • Rear wheel kPa (psi)	
	Driving duration and distance with the described load condition	• Distance km (mile) • Time minutes	
	Driving environment before symptom occurrence (Approximately 10 minutes before the occurrence)	• Inner city (surroundings are bright by street lights) • Suburbs (surroundings are relatively dark due to sparse street lights)	
Accessory installation condition			
Diagnostic code			
Other NOTE: • Describe things that were noticed, if any. • Attach illustration or photo of the road ahead of the vehicle at the time of the symptom occurrence.			

3. General Description

A: CAUTION

1. SRS AIRBAG SYSTEM

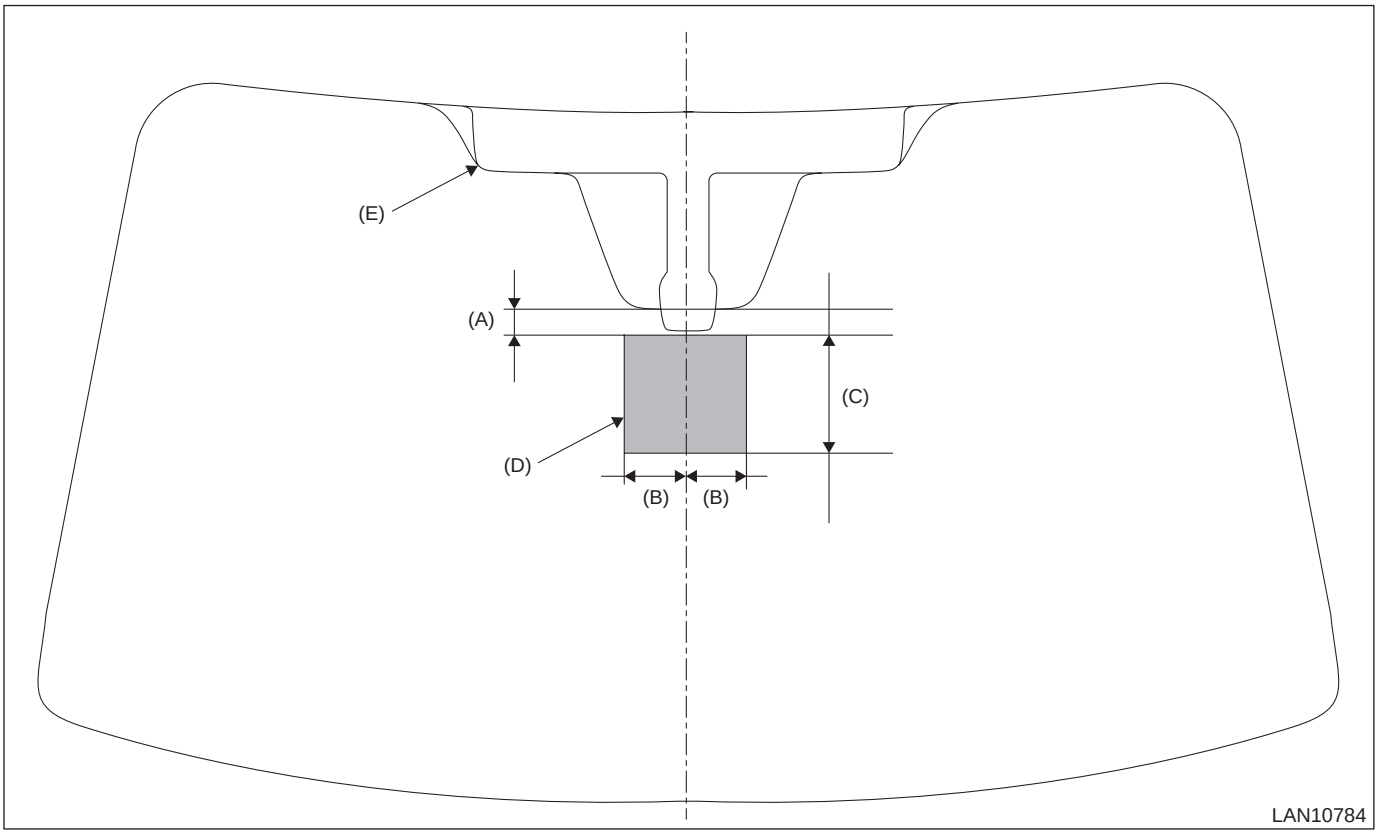
Airbag system wiring harness is routed near the body integrated unit and body control circuits.

CAUTION:
- **Do not use the electrical test equipment on all airbag system wiring harnesses and connectors.**
- **Be careful not to damage the airbag system wiring harness, when servicing the body control system.**

B: INSPECTION

1. BODY CONTROL SYSTEM

Before performing diagnosis, check the following items which might affect body control system problems.
1) Check the battery. <Ref. to SC(H4DO)-60, INSPECTION, Battery.>
2) Check the fuse condition. <Ref. to SL-9, Relay and Fuse.>
Make sure that ampere of the fuse is setting value, and it is not blown out.
3) Check the connecting condition of harness and harness connector.
4) Confirm settings of body integrated unit are corresponded to vehicle equipment. <Ref. to BC(diag)-38, OPERATION, Registration Body Integrated Unit.>
5) Make sure that the User Customizing of the body integrated unit matches the vehicle equipment. <Ref. to BC(diag)-35, OPERATION, User Customizing.>
6) Confirm “Factory initial setting” of body integrated unit registrations is “Market”.



2. CAMERA LENS MAINTENANCE

When cleaning the camera lens of the high beam assist module, use a soft cloth.

CAUTION:
- **Be careful not to leave scratch or anything else on the lens.**
- **Do not attach any foreign matter such as oil and fluid.**

3. WINDSHIELD GLASS

Check the windshield glass. In the angle of view area (D) of the high beam assist camera as shown in the figure below, there must be no oil film, dirt, fogging or scratch that obstructs the forward visibility of the high beam assist camera. Clean the windshield glass if oil film, dirt or fogging is found on the glass. When the glass of the high beam assist camera is not normal due to scratches in the angle of view area (D), the high beam assist performance may be affected and the function may not operate properly.

(A) 30 mm (1.2 in)
(B) 55 mm (2.2 in)
(C) 100 mm (3.9 in)
(D) Angle of view area of high beam assist camera
(E) Ceramic line

C: PREPARATION TOOL

1. SPECIAL TOOL

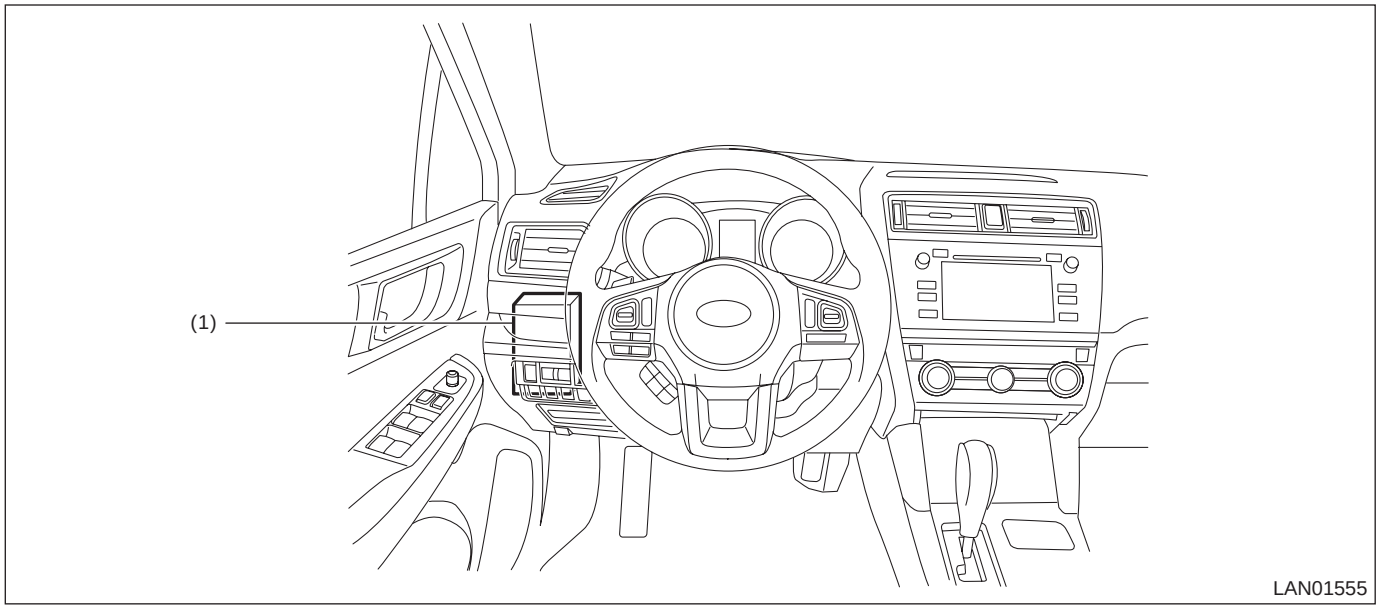


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
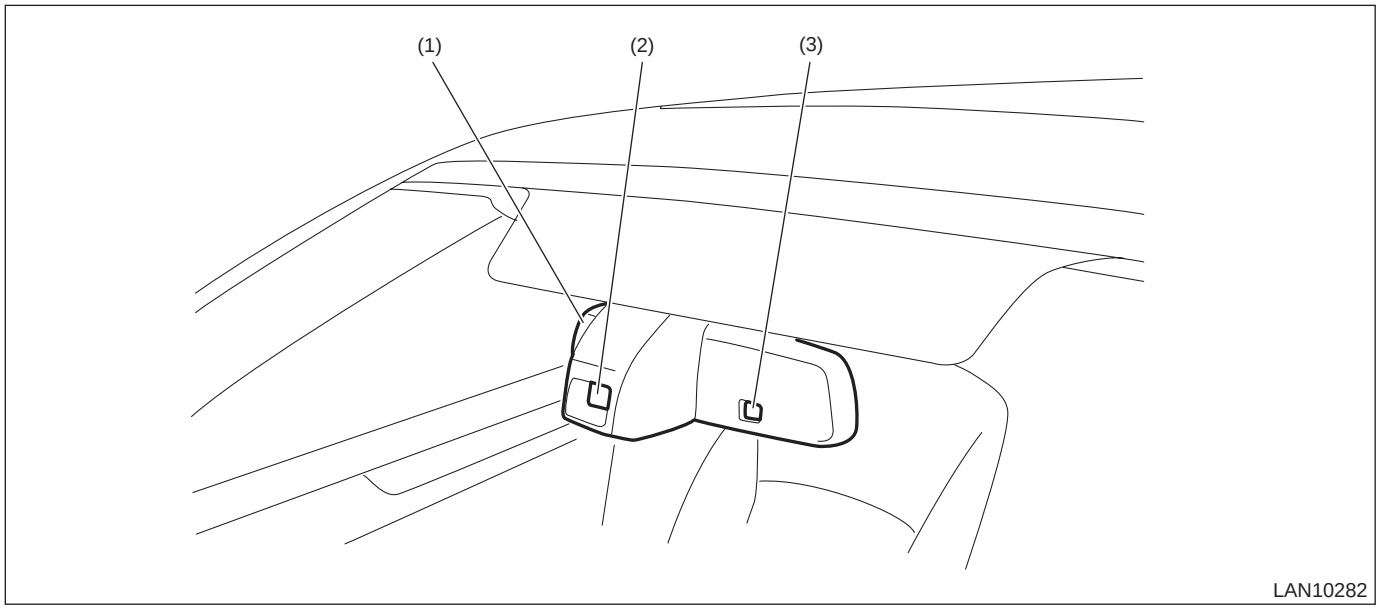
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

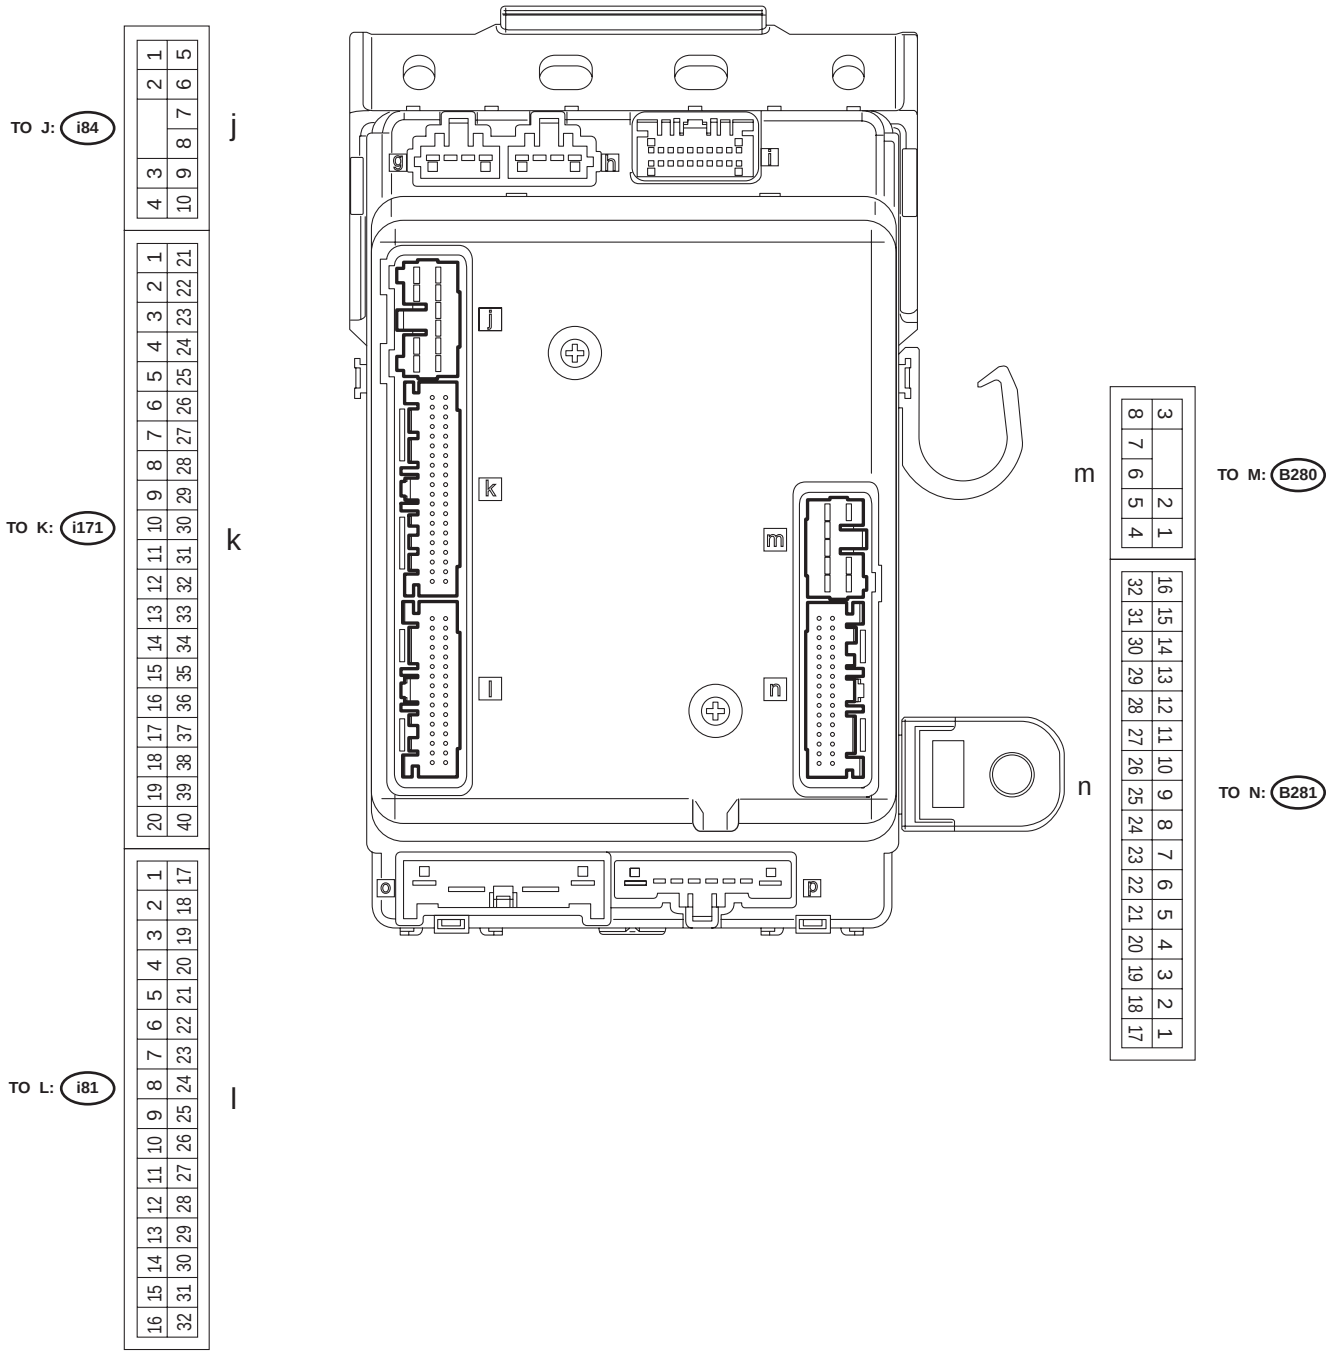
2. GENERAL TOOL



TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

4. Electrical Component Location

A: LOCATION



(1) Body integrated unit

(1) High beam assist module (Rear view mirror)
(2) Camera lens
(3) Ambient light sensor

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

Terminal No.	Content	Measuring condition	Standard
(i84) No. 1 ←→ Chassis ground	Turn output (left rear side)	Left turn signal OFF → ON	Less than 1 V → 9 — 16 V
(i84) No. 2	—	—	—
(i84) No. 3 ←→ Chassis ground	Shift lock solenoid output (CVT model)	• IG ON • Shift lever P range • Stop light switch ON (brake pedal depressed)	9 — 16 V
		• IG ON • Shift lever P range • Stop light switch OFF (brake pedal not depressed)	Less than 1 V
(i84) No. 4 ←→ Chassis ground	GND	Always	Less than 1 Ω
(i84) No. 5 ←→ Chassis ground	Turn output (right rear side)	Right turn signal OFF → ON	Less than 1 V → 9 — 16 V
(i84) No. 6 ←→ Chassis ground	Door lock (driver's seat unlock)	When UNLOCK signal is output	Less than 1 V → 9 — 16 V
(i84) No. 7	—	—	—
(i84) No. 8 ←→ Chassis ground	Luggage/trunk light output	Luggage/trunk light OFF → ON	Less than 1 V → 9 — 16 V
(i84) No. 9 ←→ Chassis ground	Room light output	Room light OFF → ON	Less than 1 V → 9 — 16 V
(i84) No. 10 ←→ Chassis ground	ACC (model with keyless access with push button start system)	ACC OFF → ON	Less than 1 V → 9 — 16 V
	Key-in switch (model without keyless access with push button start system)	Ignition key not inserted → inserted	Less than 1 V → 9 — 16 V
(i171) No. 1	—	—	—
(i171) No. 2	Main system CAN (L)	—	Communication line
(i171) No. 3 ←→ (i171) No. 4	Immobilizer antenna (B)	When ignition key inserted	Pulse generation
(i171) No. 4 ←→ Chassis ground	Immobilizer antenna amplifier GND	Always	Less than 1 Ω
(i171) No. 5	—	—	—
(i171) No. 6 ←→ Chassis ground	Opener switch (rear gate/trunk)	Rear gate/trunk opener switch ON	9 — 16 V → less than 1 V
(i171) No. 7 ←→ (i171) No. 8	—	—	—
(i171) No. 8 ←→ Chassis ground	Illumination sensor GND	Always	Less than 1 Ω
(i171) No. 9 ←→ Chassis ground	Key ring illumination (LED drive)	Key ring OFF → ON	Less than 1 V → 9 — 16 V
(i171) No. 10 ←→ Chassis ground	Map light output	Map light OFF → ON	Less than 1 V → 9 — 16 V
(i171) No. 11	—	—	—
(i171) No. 12 ←→ Chassis ground	Manual switch (unlock)	Door unlock switch OFF → ON	9 — 16 V → less than 1 V
(i171) No. 13 ←→ Chassis ground	Door switch (passenger's seat)	Passenger's door closed → open	9 — 16 V → less than 1 V
(i171) No. 14 ←→ Chassis ground	Door switch (rear seat LH)	Rear seat LH door closed → open	9 — 16 V → less than 1 V
(i171) No. 15 ←→ Chassis ground	Door switch (rear gate/trunk)	Rear gate/trunk closed → open	9 — 16 V → less than 1 V
(i171) No. 16 ←→ Chassis ground	Dimmer Hi switch	Dimmer switch Hi beam OFF → ON	9 — 16 V → less than 1 V
(i171) No. 17	—	—	—
(i171) No. 18 ←→ Chassis ground	Turn signal right	Left turn signal OFF → ON	Less than 1 V → 9 — 16 V
(i171) No. 19 ←→ Chassis ground	Lighting II switch (redundant circuit)	Lighting switch 2 OFF → ON	9 — 16 V → less than 1 V

Terminal No.	Content	Measuring condition	Standard
(i171) No. 20 ←→ Chassis ground	Lighting Lo relay output (redundant circuit)	Lighting switch 2 OFF → ON	9 — 16 V → less than 1 V
(i171) No. 21 ←→ Chassis ground	Power supply for lighting relay (redundant circuit)	ACC OFF → ON (with keyless access with push button start system), or ignition key not inserted → inserted (without keyless access with push button start system)	Less than 1 V → 9 — 16 V
(i171) No. 22	Main system CAN (H)	—	Communication line

6. Subaru Select Monitor

A: OPERATION

- For detailed operation procedures, refer to “Application help”.
- When communication with Subaru Select Monitor is not possible, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE” of LAN system. <Ref. to LAN(diag)-12, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to List of Diagnostic Trouble Code (DTC). <Ref. to BC(diag)-42, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

9. Inspection Mode

A: PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

DTC	Item	Note
B1010	BODY CONTROL SYSTEM (BIU) MALFUNCTION	—
B1011	BATTERY CONTROL POWER SUPPLY	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to BC(diag)-19, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Disconnect and reconnect the battery, and then wait for one minute or more.
4) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

2. INSPECTION MODE 2

DTC	Item	Note
B1012	BATTERY BACKUP POWER SUPPLY	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to BC(diag)-19, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Disconnect and reconnect the back-up fuse, and then wait for one minute or more.
4) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

3. INSPECTION MODE 3

DTC	Item	Note
B1013	IGNITION POWER	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to BC(diag)-19, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) After the ignition switch is ON, wait for one minute or more.
4) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

4. INSPECTION MODE 4

DTC	Item	Note
B1014	ACC POWER	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to BC(diag)-19, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) After ACC is ON, wait for one minute or more.
4) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

5. INSPECTION MODE 5

DTC	Item	Note
B1015	KEY INTERLOCK CIRCUIT	CVT model without keyless access with push button start system

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to BC(diag)-19, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) After the ignition switch is ON, press the shift knob switch and wait for 10 seconds or more.
4) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

6. INSPECTION MODE 6

DTC	Item	Note
B1016	SHIFT LOCK CIRCUIT	CVT model

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to BC(diag)-19, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) After the ignition switch is ON, wait for 10 seconds or more without depressing the brake pedal. Or, after the ignition switch is ON, press the shift knob switch with the brake pedal depressed and wait for 10 seconds or more.
4) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

7. INSPECTION MODE 7

DTC	Item	Note
B1401	METER COLLATION	Model without keyless access with push button start system / model without immobilizer CM
B1402	IMMOBILIZER KEY COLLATION	Model without keyless access with push button start system / model without immobilizer CM

U0128	LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE	—
U0131	LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE	—
U0151	LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE	—
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	—
U0167	LOST COMMUNICATION WITH IMMOBILIZER CONTROL MODULE	Model without keyless access with push button start system / model without immobilizer CM
U0327	SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE	Model with keyless access with push button start system
U0401	INVALID DATA RECEIVED FROM ECM/PCM “A”	—
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	—
U0423	INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE	—
U0426	INVALID DATA RECEIVED FROM IMMOBILIZER CONTROL MODULE	Model without keyless access with push button start system / model without immobilizer CM
U0427	INVALID DATA RECEIVED FROM VEHICLE SECURITY CONTROL MODULE	Model with keyless access with push button start system
U1673	LIN COMMUNICATION BUS ERROR BODY CONTROL MODULE	Depends on the customize setting
U0101	LOST COMMUNICATION WITH TCM	Depends on the customize setting
U0164	LOST COMMUNICATION WITH HVAC CONTROL MODULE	Depends on the customize setting
U0169	LOST COMMUNICATION WITH SUNROOF CONTROL MODULE	Depends on the customize setting
U0208	LOST COMMUNICATION WITH SEAT MEMORY	Depends on the customize setting
U0230	LOST COMMUNICATION WITH POWER REAR GATE CONTROL MODULE	Depends on the customize setting
U0402	INVALID DATA RECEIVED FROM TCM	Depends on the customize setting
U0424	INVALID DATA RECEIVED FROM HVAC CONTROL MODULE	Depends on the customize setting
U123C	LOST COMMUNICATION WITH HIGH BEAM ASSIST CONTROL MODULE	Depends on the customize setting
U153D	INVALID DATA RECEIVED FROM HIGH BEAM ASSIST CONTROL MODULE	Depends on the customize setting

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to BC(diag)-19, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Turn the ignition switch OFF → ON, and wait for 10 seconds or more.
4) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

8. INSPECTION MODE 8

DTC	Item	Note
B1107	CAN COMMUNICATION (BIU) STUCK	—
U1500	KEYLESS UART COM. MALFUNCTION	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to BC(diag)-19, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Disconnect and reconnect the battery and wait for one minute or more. Then turn the ignition switch OFF → ON and wait for 10 seconds or more.
4) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

9. CAMERA VIEW ANGLE INSPECTION MODE

Diagnostic procedure:
Drive the vehicle under the following conditions with the high beam assist ON in the night time.
- Activate the high beam assist operation (high beam assist indicator illuminates).
- Drive at least 20 minutes in total at a vehicle speed of 35 km/h (22 MPH) or more, on a road with many straight sections and clear lane markings on both sides (white, orange and dashed lines are acceptable).

NOTE:
- Always drive under such ambience (dimness) that the high beam light can turn to ON/OFF automatically.
- Avoid a road with a center line only.
- Avoid a road where the strong wind can blow the vehicle from side to side, and also avoid weaving within a lane. (Because the vehicle may judge that the lane is not straight.)

10.Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Items to be displayed	Content	Unit of measure	Note
BATT voltage (control)	Constant power supply from the battery. Input value to the body integrated unit.	0 — 21.5 V	—
BATT voltage (BACKUP)	Constant power supply from the battery. Input value to the body integrated unit.	0 — 21.5 V	—
IGN Voltage	IG system circuit voltage. Input value to the body integrated unit.	0 — 21.5 V	—
ACC voltage	ACC system circuit voltage. Input value to the body integrated unit.	0 — 21.5 V	—
number of regist.	Number of the registered key in the keyless entry system.	0 — 4	Model without keyless access with push button start system
Front Wheel Speed	Front wheel average speed. CAN data input value. Received from the VDC CM.	km/h	—
Fuel consumption	Injection quantity per 1 sec calculated from an instantaneous fuel injection quantity per 50 msec. CAN data input value. Received from the ECM.	cc/s	—
Engine Coolant Temperature	Engine coolant temperature. CAN data input value. Received from the ECM.	–40 — 215°C	—
Shift Position	Shift position. CAN data input value. Received from the TCM.	1 — 3, D-S, D, N, R, P	—
Buzzer beeping request	Passenger room buzzer beeping request. CAN data output value. Sent to the combination meter.	Status for ’beeping deactivated’ Reverse warning Key warning buzzer Light Remained Buzzer Customize 1 Customize 2 Registration completed 1 Registration completed 2 Registered Registration NG	—

Items to be displayed	Content	Unit of measure	Note
EPB Operation Status	EPB operating status. CAN data input value, received from the VDC.	Error Released Operate Operating Releasing Dynamic Parking	—
Destination Code	Vehicle destination information. CAN data receiving value. Received from the combination meter.	JPN U4, U5, U6 C0 EC, EA, E2, EL K4, C4, C6 KS EK ER, EN KA, KC EH C6	—
Illumination Sensor Output	Output voltage from the illumination sensor. Body integrated unit input value.	0 — 5 V	—
Off delay time	Interior light off delay time. Body integrated unit custom setting values.	OFF 10 Sec 20 Sec 30 Sec	—
Auto Light Sensitivity Adjustment	Sensitivity of auto light function. Body integrated unit custom setting values.	Dull Normal Sensitive Very sensitive	—
key-lock warning SW Input	Key warning switch ON/OFF status. Body integrated unit input value. Set to ON when the ignition key is inserted.	ON/OFF	Model without keyless access with push button start system
ACC Input	ACC ON/OFF status. Body integrated unit input value. Set to ON when the ignition switch is turned to ACC.	ON/OFF	Model with keyless access with push button start system
Stop Light Switch	Brake switch ON/OFF status. Body integrated unit input value. Set to ON when the brake pedal is pressed.	ON/OFF	—
Front fog lamp SW input	Front fog light switch ON/OFF status. Body integrated unit input value. Set to ON when the front fog light switch is ON.	ON/OFF	—
Driver's door SW input	Driver's door switch ON/OFF status. Body integrated unit input value. Set to ON when the door is open.	ON/OFF	—
P-door SW input	Passenger's door switch ON/OFF status. Body integrated unit input value. Set to ON when the door is open.	ON/OFF	—
Rear right door SW input	Rear right door switch ON/OFF status. Body integrated unit input value. Set to ON when the door is open.	ON/OFF	—
Rear left door SW input	Rear left door switch ON/OFF status. Body integrated unit input value. Set to ON when the door is open.	ON/OFF	—
R Gate SW input	Rear gate / trunk switch ON/OFF status. Body integrated unit input value. Set to ON when the rear gate / trunk is open.	ON/OFF	—

Items to be displayed	Content	Unit of measure	Note
Manual lock SW input	ON/OFF status of the manual lock switch located on the power window main switch (or on the passenger's side power window switch). Body integrated unit input value. Set to ON when the manual lock switch is set to lock.	ON/OFF	—
Manual unlock SW input	ON/OFF status of the manual lock switch located on the power window main switch (or on the passenger's side power window switch). Body integrated unit input value. Set to ON when the manual lock switch is set to unlock.	ON/OFF	—
P SW	P range switch ON/OFF status. Body integrated unit input value. Set to ON in the P range.	ON/OFF	—
MT Reverse Switch	MT back-up light switch ON/OFF status. Body integrated unit input value. Set to ON when the shift lever is set to R range and the back-up light switch is ON.	ON/OFF	—
R wiper ON SW input	Rear wiper ON switch ON/OFF status. Body integrated unit input value. Set to ON when the rear wiper switch is ON.	ON/OFF	—
R wiper INT SW input	Rear wiper INT switch ON/OFF status. Body integrated unit input value. Set to ON when the rear wiper switch is in the INT position.	ON/OFF	—
R washer SW input	Rear washer switch ON/OFF status. Body integrated unit input value. Set to ON when the rear washer switch is ON.	ON/OFF	—
Fr wiper input	Front wiper return switch ON/OFF status. Body integrated unit input value. Set to ON when the front wiper is outside of the stop position.	ON/OFF	—
Driver's seat lock status SW input	ON/OFF status of the driver's seat lock status switch. Body integrated unit input value. Set to ON when the door status is LOCK.	ON/OFF	Model with keyless access with push button start system
Passenger's seat lock status SW input	ON/OFF status of the passenger's seat lock status switch. Body integrated unit input value. Set to ON when the door status is LOCK.	ON/OFF	Model with keyless access with push button start system
R gate lock status SW input	ON/OFF status of the rear gate lock status switch. Body integrated unit input value. Set to ON when the rear gate status is LOCK.	ON/OFF	—
R Gate Release SW input	ON/OFF status of the rear gate release switch / trunk opener switch. Body integrated unit input value. Set to ON when the rear gate release switch / trunk opener switch is pressed.	ON/OFF	—
Rr Defogger output	Rear defogger relay output ON/OFF status. Body integrated unit output value. Set to ON when the rear defogger is activated.	ON/OFF	—
lock actuator LOCK output	Door lock actuator output ON/OFF status. Body integrated unit output value. Set to ON when a lock signal is output.	ON/OFF	—
All seat UNLOCK output	ON/OFF status of the all door lock actuator output. Body integrated unit output value. Set to ON when an all door unlock signal is output.	ON/OFF	—
D-seat UNLOCK output	ON/OFF status of the driver's door lock actuator output Body integrated unit output value. Set to ON when a driver's door / all door unlock signal is output.	ON/OFF	—
R gate/trunk UNLOCK output	Rear gate / trunk lock actuator ON/OFF status. Body integrated unit output value. Set to ON when an unlock signal is output.	ON/OFF	—

Items to be displayed	Content	Unit of measure	Note
Rear Wiper Output	Rear wiper relay output ON/OFF status. Body integrated unit output value. Set to ON when the rear wiper is activated.	ON/OFF	—
Shift lock solenoid output	Shift lock solenoid output ON/OFF status. Body integrated unit output value. Solenoid is activated to set this item to ON when depressing the brake pedal with the shift lever in P range.	ON/OFF	—
Key lock solenoid output	Key lock solenoid output ON/OFF status. Body integrated unit output value. Solenoid is activated to set this item to ON when the key is inserted with the shift lever in other than P range.	ON/OFF	Model without keyless access with push button start system
wiper deicer output	Wiper deicer output ON/OFF status. Body integrated unit output value. Set to ON while the wiper deicer is operating.	ON/OFF	—
Keyless Buzzer Output	Keyless buzzer ON/OFF status. Body integrated unit output value. Set to ON while the keyless buzzer is sounding.	ON/OFF	—
Horn Output	Security horn output ON/OFF status. Body integrated unit output value. Set to ON while the horn is sounding due to a security breach.	ON/OFF	—
Room lamp output	Room light output ON/OFF status. Body integrated unit output value. Set to ON while the room light illuminates with the switch in DOOR position.	ON/OFF	—
key illumination lamp o/p	Key illumination light output ON/OFF status. Body integrated unit output value. Set to ON while the key illumination light illuminates.	ON/OFF	Model without keyless access with push button start system
Immobilizer lamp output	Security indicator output ON/OFF status. Body integrated unit output value. Set to ON while the security indicator in the combination meter illuminates.	ON/OFF	—
Keyless operation 1	Keyless mode registration mode status of the body integrated unit. Set to Register while in the keyless registration mode.	Register/Normal	Model without keyless access with push button start system
Keyless operation 2	Keyless mode delete mode status of the body integrated unit. Set to Deletion while in the keyless delete mode.	Deletion/Normal	Model without keyless access with push button start system
Small Light SW	Lighting 1 relay CAN output ON/OFF status. CAN data sending value. Set to ON when the position light indicator in the combination meter illuminates.	ON/OFF	—
Headlamp	Lighting Lo relay CAN output ON/OFF status. CAN data output value. Set to ON when the headlight Lo illuminates.	ON/OFF	—
High Beam	Lighting Hi relay CAN output ON/OFF status. CAN data output value. Set to ON when the headlight Hi illuminates.	ON/OFF	—
Power rear gate setting	Presence or absence of the power rear gate. Body integrated unit custom setting values.	ON/OFF	—
Lane change signal setting	Presence or absence of the one-touch blinker control. Body integrated unit custom setting values.	ON/OFF	—
Rear wiper auto setting	Presence or absence of the rear wiper control linked with reverse shift. Body integrated unit custom setting values.	ON/OFF	—

Items to be displayed	Content	Unit of measure	Note
Left turn signal input	Left turn signal switch ON/OFF status. Body integrated unit input value. Set to ON while the left turn signal switch is ON.	ON/OFF	—
Right turn signal input	Right turn signal switch ON/OFF status. Body integrated unit input value. Set to ON while the right turn signal switch is ON.	ON/OFF	—
Left turn signal output	Left turn signal light output ON/OFF status. Body integrated unit output value. Set to ON while the left turn signal light illuminates.	ON/OFF	—
Right turn signal output	Right turn signal light output ON/OFF status. Body integrated unit output value. Set to ON while the right turn signal light illuminates.	ON/OFF	—
TPMS Setting	Presence or absence of TPMS. Body integrated unit custom setting values.	TPMS/No TPMS	—
Driver's Door Unlock Setting	Presence or absence of the driver's seat select unlock control. Body integrated unit custom setting values.	Selection/ALL	Model with keyless access with push button start system
Rear Gate Unlock Setting	Presence or absence of the rear gate select unlock control. Body integrated unit custom setting values.	Selection/ALL	Model with keyless access with push button start system
Wiper link Auto Light Setup	ON/OFF status of the wiper interlock auto light function control. Body integrated unit custom setting values.	ON/OFF	—
High Beam Assist Function	Presence or absence of high beam assist. Body integrated unit custom setting values.	ON/OFF	—
Head Lamp Low Beam Specification	Headlight low beam light source type. Body integrated unit custom setting values.	Halogen/HID/LED	—
Head Lamp High Beam Specification	Headlight high beam light source type. Body integrated unit custom setting values.	Halogen/HID/LED	—
High Beam Assist Current Setting	Presence or absence of high beam assist. Body integrated unit custom setting values.	ON/OFF	—
HBA indicator	Set to ON when high beam assist is activated. CAN data output value.	OFF/ON	—
High Beam Assist Failure Indicator	Set to ON when high beam assist fails. CAN data output value.	OFF/ON	—
High Beam Assist Failure Message	Sends display status of high beam assist related words. CAN data output value.	No Display/HALT/Fail	—
<HBA>High Beam Request Status	Set to Request when high beam is requested for high beam assist module. High beam assist module CAN data output value.	Non Request/Request	—
<HBA>R Range Signal	Set to ON when shift lever is at reverse position. High beam assist module CAN data input value.	ON/OFF	—
<HBA>Head Lamp Low Beam Signal	Set to ON when the headlight low beam illuminates. High beam assist module CAN data input value.	ON/OFF	—
<HBA>Head Lamp High Beam Signal	Set to ON when the headlight high beam illuminates. High beam assist module CAN data input value.	ON/OFF	—

Items to be displayed	Content	Unit of measure	Note

Hazard switch Input	Turn hazard switch input ON/OFF status. Body integrated unit input value. Set to ON when the turn hazard switch is ON.	ON/OFF	—
P-CR OFF switch Input	Pre-collision brake OFF switch ON/OFF status. Body integrated unit input value. Set to ON when the pre-collision brake OFF switch is ON.	ON/OFF	—
LANE OFF switch Input	Lane departure warning OFF switch ON/OFF status. Body integrated unit input value. Set to ON when the lane departure warning OFF switch is ON.	ON/OFF	—
Towing switch input	Towing switch ON/OFF status. Body integrated unit input value. Set to ON when the towing switch is ON.	ON/OFF	—
Door handle Light output	Door handle light output ON/OFF status. Body integrated unit output value. Set to ON when the pull handle LED illuminates.	ON/OFF	—
Auto Dimmer Cancel setting	Sensitivity of auto dimmer cancel function. Body integrated unit custom setting values.	0 (OFF) Dull 2 Normal 4 Most	—

11.User Customizing

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Select Function» display, select «Customize».

NOTE:
• If not equipped (depending on destination area or vehicle equipment condition), customizing is not possible.
• For detailed operation procedures, refer to “Application help”.
List of User Customizing item

Item	Initial setting value	Setting value	Note
Off delay time	30 Sec	OFF 10 Sec 20 Sec 30 Sec	Room light off delay time can be selected.
Auto Light Sensitivity Adjustment	Sensitive	Dull Normal Sensitive Very sensitive	Sensitivity of the automatic lighting can be adjusted.
Lane change signal setting	ON	ON OFF	ON: One-touch blinker function operates. OFF: One-touch blinker function does not operate.
Rear wiper auto setting	OFF (U0, U4, U5 models) ON: (C0, C5 models)	ON OFF	ON: Rear wiper operates in sync with the reverse shift. OFF: Rear wiper does not operate in sync with the reverse shift.
Driver’s Door Unlock Setting	Selection	Selection ALL	Selection: When the touch sensor (unlock) on the driver’s side is touched, only the driver’s door is unlocked. When the touch sensor (unlock) on the passenger’s side is touched, all doors are unlocked. ALL: When the touch sensor (unlock) on the driver’s side is touched, all doors are unlocked. When the touch sensor (unlock) on the passenger’s side is touched, all doors are unlocked.
Rear Gate Unlock Setting	Selection	Selection ALL	Selection: When the rear gate opener button is pressed, only the rear gate is unlocked. ALL: When the rear gate opener button is pressed, all doors are unlocked.
Wiper link Auto Light Setup	ON	ON OFF	ON: Wiper interlock auto light function is activated. OFF: Wiper interlock auto light function is deactivated.
High Beam Assist Function	— (*1)	ON OFF	Set to ON for models with high beam assist.
Head Lamp Low Beam Specification	— (*1)	Halogen HID LED	Set according to the headlight type.
Head Lamp High Beam Specification	— (*1)	Halogen HID LED	Set according to the headlight type.
High Beam Assist Current Setting	— (*1)	ON OFF	Set to ON for models with high beam.
Rear defogger operation mode	Normal	Normal Continuous	Normal: Automatically stops in 15 minutes after the switch is turned to ON. Continuous: Repeats the cycle of 15-minute active condition and 2-minute inactive condition until the switch is turned to OFF.

Item	Initial setting value	Setting value	Note
Security Alarm Setup	ON	ON OFF	ON: Warning function (hazard, horn) is activated. OFF: Warning function (hazard, horn) is deactivated.
Impact Sensor Setup	ON	ON OFF	ON: Impact sensor is activated. OFF: Impact sensor is deactivated. (Set to “OFF” in models without the impact sensor.)
Alarm delay setup	ON	ON OFF	ON: The alarm monitor starts 30 seconds after the keyless lock operation. OFF: The alarm monitor starts immediately after the keyless lock operation.
Lockout prevention	ON	ON OFF	ON: Key lockout prevention function is activated. (The function does not operate if safety knob is locked by hand.) OFF: Key lockout prevention function is deactivated.
Impact sensor	OFF	ON OFF	ON: Vehicle is controlled in impact sensor equipped mode. (Make sure to set to “OFF” for models without the impact sensor. When set to “ON”, hazard, horn or siren become activated by keyless lock (alarm monitor start).) OFF: Vehicle is controlled in no impact sensor mode.
Buzzer sounding setting	ON	ON OFF	ON: Buzzer sounds when lock/unlock is selected by keyless entry system. OFF: Buzzer does not sound when lock/unlock is selected by keyless entry system.
Abnormal warning lamp flashing setting	ON	ON OFF	ON: Hazard blinks when lock/unlock is selected by keyless entry system. OFF: Hazard does not blink when lock/unlock is selected by keyless entry system.
Initial keyless setting	—	— Execution	—
Initial button setting	—	— Execution	—
Initial Security setting	—	— Execution	—
Door open warning	ON	ON OFF	ON: If a door stays half shut for 20 minutes, interior lighting linked with the door such as room light, map light, luggage room light, trunk room light and key ring illumination go off to prevent battery run-out. OFF: Room light, map light, luggage room light, trunk room light, key ring illumination and door warning light remain lit.
Dome Light Alarm Setting	OFF	ON OFF	ON: Room light illumination is interlocked with the alarm. OFF: Room light illumination is not interlocked with the alarm.
Welcome Light (Exit)	30 Sec	OFF 30 Sec 60 Sec 90 Sec	Lighting time length of the welcome lighting (exiting) function can be set.
Welcome Light Off Delay Time(Approaching)	30 Sec	OFF 30 Sec 60 Sec 90 Sec	Lighting time length of the welcome lighting (approaching) function can be set.
Keyless Buzzer Volume	5	1 — 7	Buzzer volume can be set.
Auto Dimmer Cancel setting	3	0 (OFF) Least 2 Normal 4 Most	Auto dimmer cancel sensitivity can be set.

NOTE:
*1: Customization item according to the actual vehicle equipment

6) When the setting is complete, see «Data monitor» to make sure that the alterations are consistent with the actual equipment on the vehicle.

CAUTION:
- **the above settings must match the actual vehicle equipment.**
- **Do not change settings except for setting above while setting the functions.**
- **Be sure not to change Factory initial setting except when installing a new body integrated unit.**

12.Registration Body Integrated Unit

A: OPERATION

1. CONFIRM CURRENT SETTING

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Select Function» display, select «Customize».
6) Save the setting.

Required items for new registration. (Except for system not equipped)

Item	Content				Note
number of regist.	1	2	3	4	Number of registered key

2. REGISTRATION BODY INTEGRATED UNIT (FUNCTION SETTING)

CAUTION:
For the body integrated unit, function selection is available to control the entire vehicle systems. It is possible to control the original functions of vehicle when registrations of body integrated unit and function setting are corresponded to vehicle equipment.
If registrations and function setting are different from vehicle equipment, vehicle system does not operate normally and diagnosis cannot be performed correctly. Pay attention to following item.
- **Be sure to correspond registrations, or User Customizing settings to vehicle equipment.**
- **Do not change the settings of vehicle improperly.**
- **Make sure that the key illumination does not blink with ignition switch ON, or that the body integrated unit registration item «Factory initial setting» is set to «Market». If "Factory initial setting" is set to «Factory», key illumination blinks when the ignition switch is turned ON, to notify that the settings are not confirmed. (If the vehicle is a model with the keyless access with push button start system, check by the current data display function of Subaru Select Monitor because no key illumination is available.)**
- **Key illumination does not blink with ignition switch turned to ON and go off with door closed. (Models without the keyless access with push button start system)**
- **Be sure to register immobilizer if body integrated unit is replaced with a new part. (Models without the keyless access with push button start system)**
- **Make a registration of immobilizer when the parts related to immobilizer have been replaced. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Select Function» display, select «Customize».
6) Change the setting to the contents saved at confirmation of current setting.

CAUTION:
- **To perform normal operation of vehicle and diagnosis, above settings must match the actual vehicle equipment.**
- **When the body integrated unit is new or in Factory mode, the key illumination blinks, and user customizing is incomplete. Check the user customizing settings. (For models with keyless access with push button start system, the room light illuminates.)**
- **Be sure not to change Factory initial setting except when installing a new body integrated unit.**

NOTE:
"Factory" mode:
- Body integrated unit has not been set yet. For model without keyless access with push button start system, it can be recognized by key ring illumination blinking with ignition switch turned to ON. For model with keyless access with push button start system, it can be recognized by room light, map light and luggage room light blinking with ignition switch turned to ON.
- All replacement body integrated units are set to "Factory" mode. When replacing a body integrated unit, be sure to perform the registration operation.

"Market" mode:
- Each settings have been set. For model without keyless access with push button start system, it can be recognized by key ring illumination coming on in concocting with room light and going off with ignition switch turned to ON. For model with keyless access with push button start system, it can be recognized by room light, map light and luggage room light not blinking with ignition switch turned to ON.

7) Perform the Factory initial setting. On the «Customize» display screen of Subaru Select Monitor, select the «Factory initial setting».
8) Change the mode from Factory to Market.
9) Turn the ignition switch to OFF to settle the setting.
10) Perform the User Customizing. <Ref. to BC(diag)-35, OPERATION, User Customizing.>

NOTE:
For detailed operation procedures, refer to "Application help".

11) Register the immobilizer key. Follow the procedure of the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume. (Models without the keyless access with push button start system, and except for C0 and C5 models)
12) For vehicles with remote engine starter, refer to “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume and perform registration of the remote engine starter. (Models without the keyless access with push button start system)

13.Function Check

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Select Function» display, select «Active Test».

NOTE:
• In order to check the body integrated unit function, inspect the body integrated unit and actuator using Subaru Select Monitor without operating switches.
• For detailed operation procedures, refer to “Application help”.

B: LIST

Item	Display	Note
lock actuator LOCK output	ON/OFF	—
All seat UNLOCK output	ON/OFF	—
R gate/trunk UNLOCK output	ON/OFF	—

15.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B1010 BODY CONTROL SYSTEM (BIU) MALFUNCTION

DTC detecting condition:
System error in body integrated unit (integrated unit EEPROM malfunction)
Time needed for diagnosis:
Immediately
Trouble symptom:
LAN communication immobilizer function may not be executed normally.

	Step	Check	Yes	No
1	**CHECK DTC.** Check DTC indicated by body integrated unit. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC B1010 displayed? (Current malfunction)	Go to step **2**.	Temporary EEPROM access error occurred.
2	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Connect the disconnected connectors. 4) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC B1010 displayed? (Current malfunction)	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Temporary EEPROM access error occurred.

B: DTC B1011 BATTERY CONTROL POWER SUPPLY

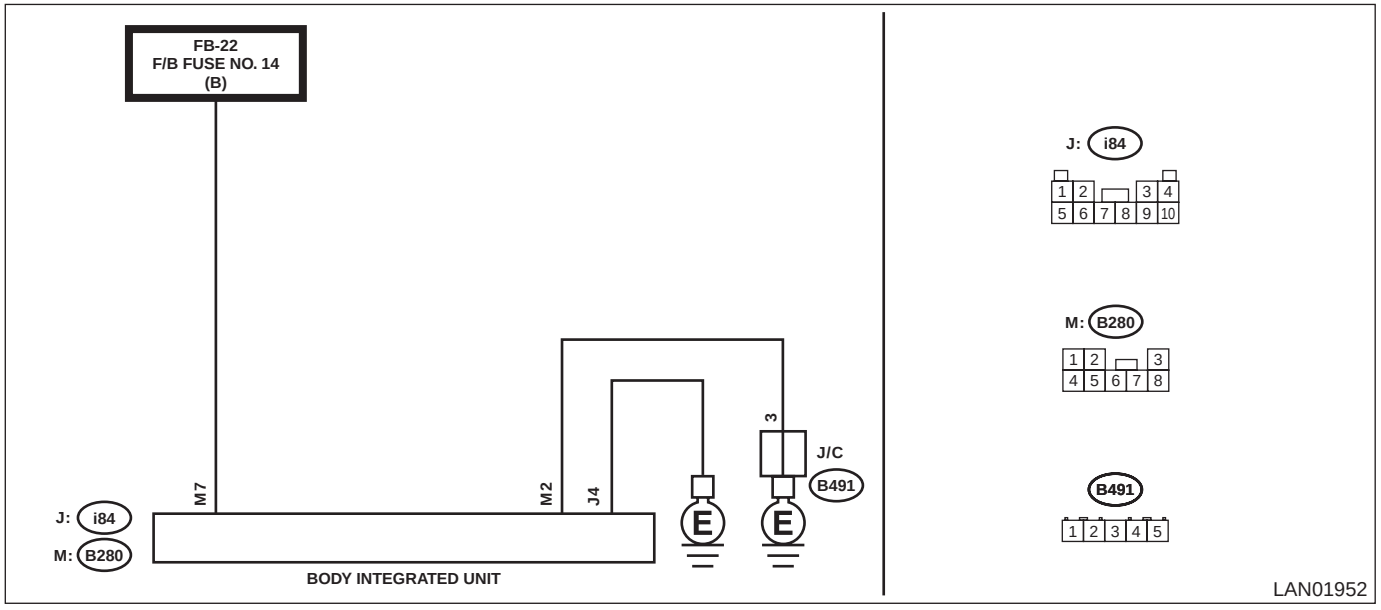
DTC detecting condition:

- Voltage failure caused by poor contact of battery power supply control circuit
- Battery voltage of body integrated unit is not within the range of 8.3 — 16.7 V.

Time needed for diagnosis:

40 s or more

Trouble symptom:



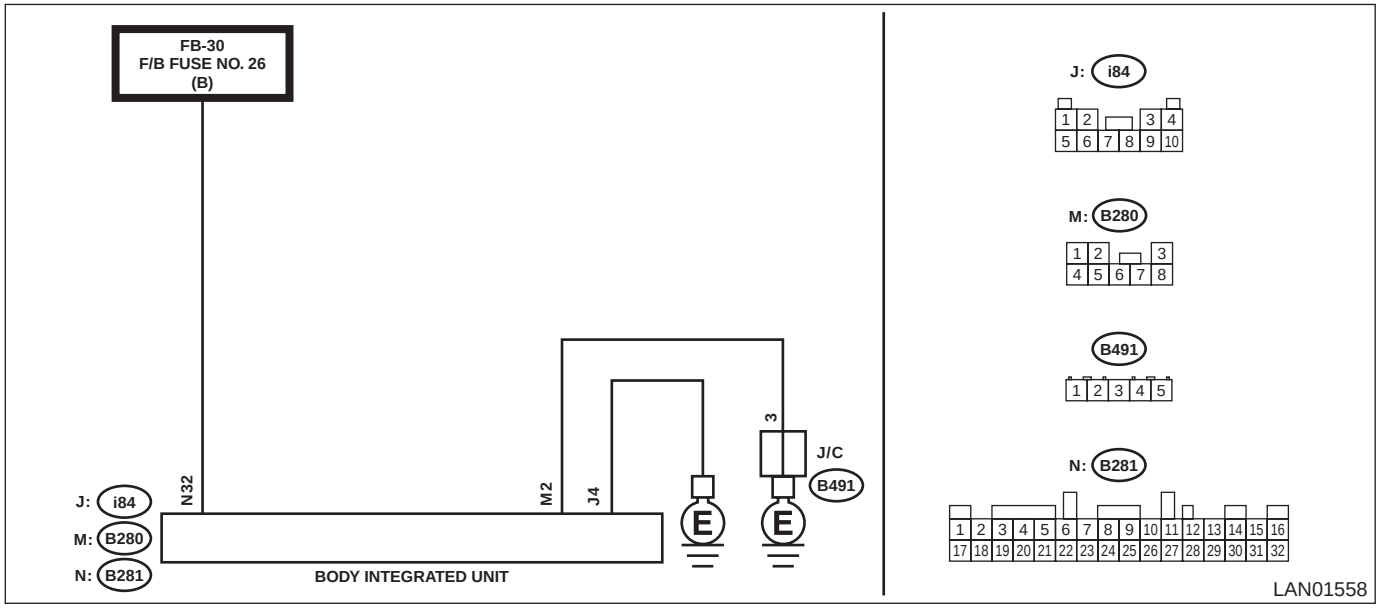
Functions of body integrated unit stop.

NOTE:

When B1012 BATT P/SUPPLY MALFUNCTION BACKUP is output at the same time, all the function of body integrated unit may not operate.

Wiring diagram:

Immobilizer system <Ref. to WI-253, WIRING DIAGRAM, Immobilizer System.>



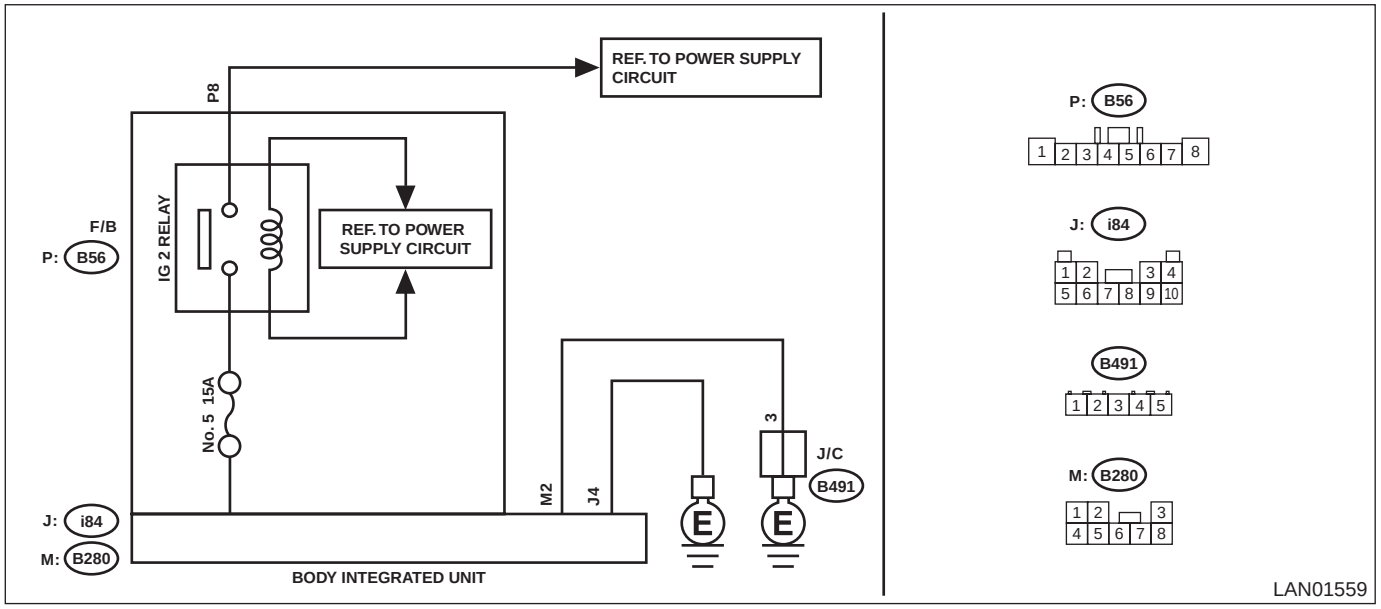
Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC B1011 displayed? (Current malfunction)	Go to step **2**.	Go to step **5**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect and then connect the body integrated unit connector. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC B1011 displayed? (Current malfunction)	Go to step **3**.	Go to step **5**.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **4**.	Replace the defective fuse.
4	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B280) No. 7 (+) — Chassis ground (–):***	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Repair the harness between body integrated unit and fuse.

	Step	Check	Yes	No
5	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

C: DTC B1012 BATTERY BACKUP POWER SUPPLY

DTC detecting condition:
Voltage failure caused by poor contact of battery power supply backup circuits
BAT (back-up) voltage was outside the range of 8.3 — 16.7 V, when the BAT (back-up) power supply was ON.
Time needed for diagnosis:
40 s or more
Trouble symptom:
Illuminations for the keyless entry, map light, luggage light, trunk light, room light, and ignition switch do not turn on.

NOTE:
When B1011 BATTERY CONTROL POWER SUPPLY is output at the same time, all the function of body integrated unit may not operate.
Wiring diagram:
Immobilizer system <Ref. to WI-253, WIRING DIAGRAM, Immobilizer System.>

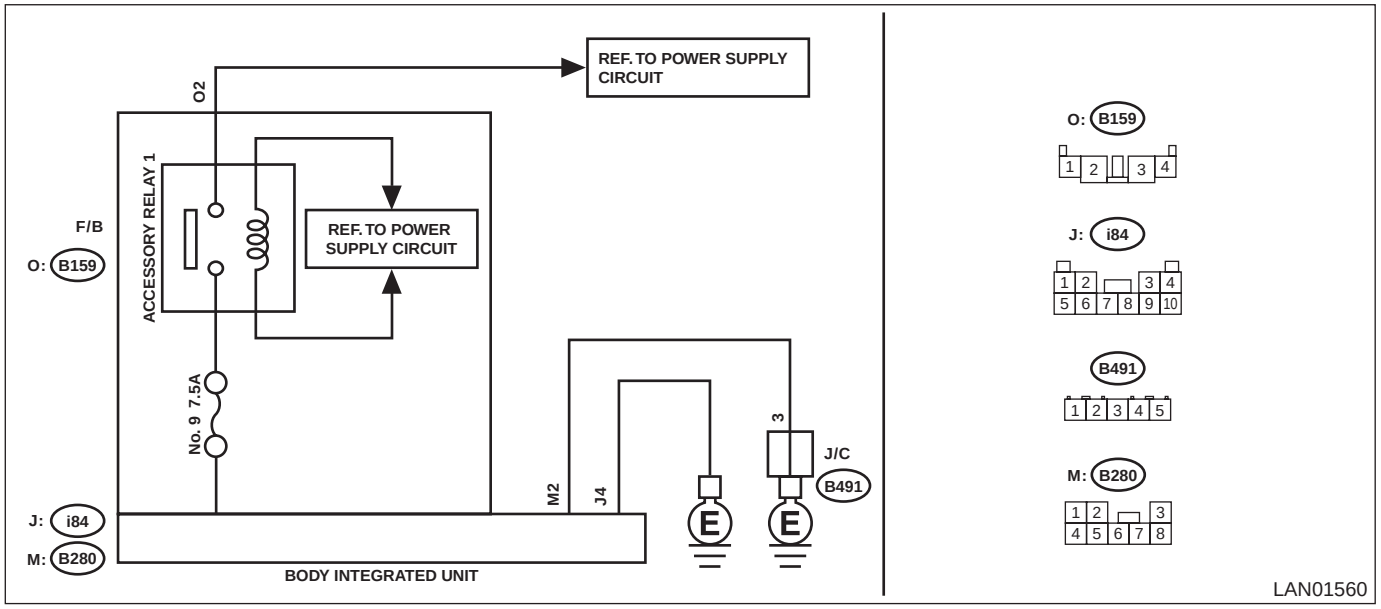


Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC B1012 displayed? (Current malfunction)	Go to step **2**.	Go to step **5**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect and then connect the body integrated unit connector. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC B1012 displayed? (Current malfunction)	Go to step **3**.	Go to step **5**.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **4**.	Replace the defective fuse.

	Step	Check	Yes	No
4	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B281) No. 32 (+) — Chassis ground (–):***	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Repair the harness between body integrated unit and fuse.
5	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

D: DTC B1013 IGNITION POWER

DTC detecting condition:
Voltage failure caused by poor contact of IGN power supply circuits
IGN voltage was outside the range of 8.3 — 16.7 V, when the IGN power supply was ON.
Time needed for diagnosis:
40 s or more
Trouble symptom:
Symptoms such as shift lock or wiper not operating may occur.
Wiring diagram:
Shift lock control system <Ref. to WI-341, WIRING DIAGRAM, Shift Lock Control System.>

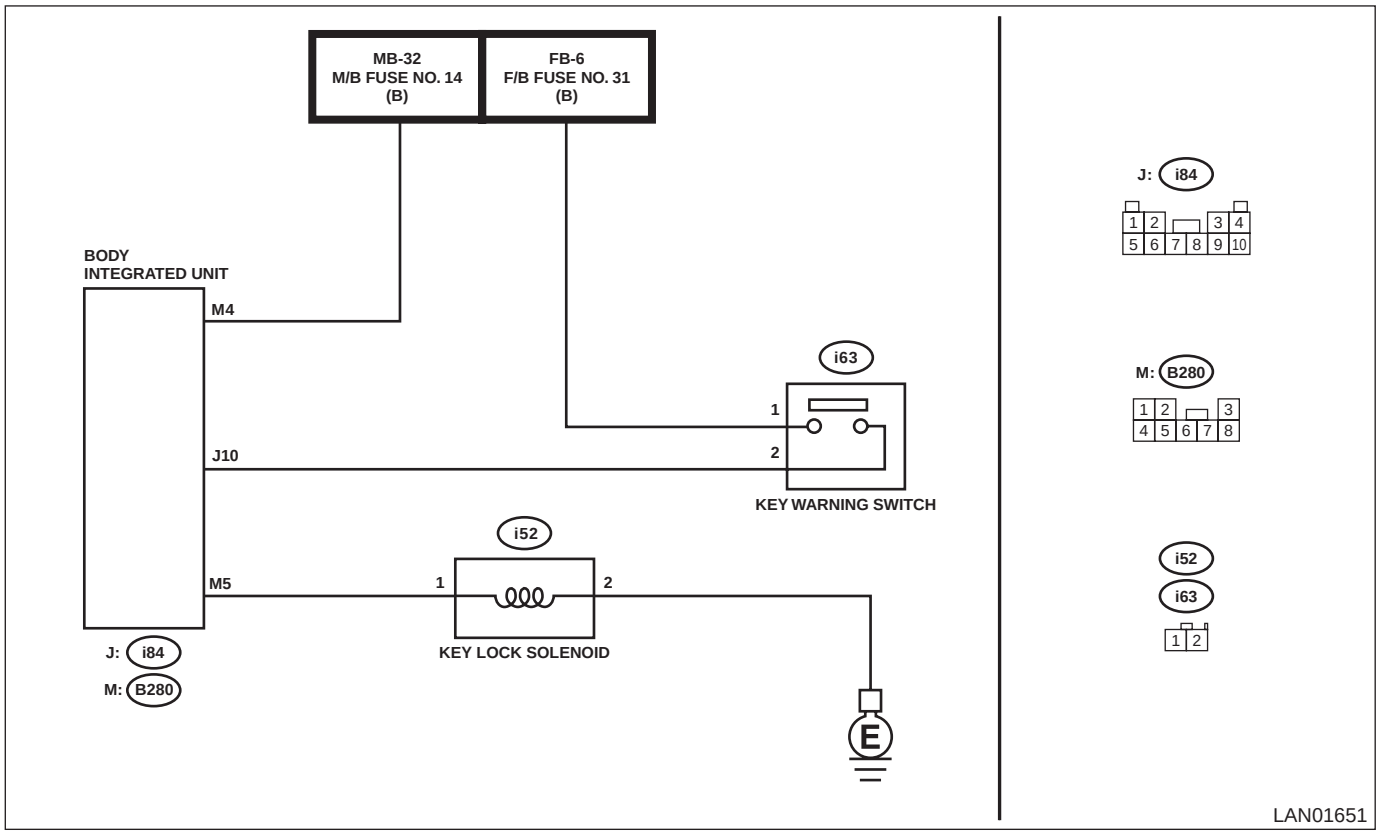


Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC B1013 displayed? (Current malfunction)	Go to step **2**.	Go to step **6**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect and then connect the body integrated unit connector. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC B1013 displayed? (Current malfunction)	Go to step **3**.	Go to step **6**.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **4**.	Replace the defective fuse.
4	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***F/B fuse No. 5 (+) — Chassis ground (–):***	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Go to step **5**.
5	**CHECK IG2 RELAY.** Perform individual inspection of IG2 relay. <Ref. to SL-9, Relay and Fuse.>	Is there any fault?	Replace the relay.	Repair the harness between F/B and M/B.

	Step	Check	Yes	No
6	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

E: DTC B1014 ACC POWER

DTC detecting condition:
Voltage failure caused by poor contact of ACC power supply circuit
ACC voltage was outside the range of 8.3 — 16.7 V, when ACC power supply was ON.
Time needed for diagnosis:
40 s or more
Trouble symptom:
DRL may not illuminate.
Wiring diagram:
Shift lock control system <Ref. to WI-341, WIRING DIAGRAM, Shift Lock Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC B1014 displayed? (Current malfunction)	Go to step **2**.	Go to step **6**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect and then connect the body integrated unit connector. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC B1014 displayed? (Current malfunction)	Go to step **3**.	Go to step **6**.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **4**.	Replace the defective fuse.
4	**CHECK HARNESS.** 1) Turn the ignition switch to ACC. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***F/B fuse No. 9 (+) — Chassis ground (–):***	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Go to step **5**.
5	**CHECK ACCESSORY 1 RELAY.** Perform individual inspection of the accessory 1 relay. <Ref. to SL-9, Relay and Fuse.>	Is there any fault?	Replace the relay.	Repair the harness between F/B and M/B.

	Step	Check	Yes	No
6	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

F: DTC B1015 KEY INTERLOCK CIRCUIT

DTC detecting condition:
Short to ground in key interlock circuit
Key interlock output monitor is OFF, while BAT power supply voltage is 8.3 V or more and key lock operation judgment condition is met.
Time needed for diagnosis:
50 ms or more
Trouble symptom:
Key interlock does not keep lock condition.
Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Shift lock control system <Ref. to WI-341, WIRING DIAGRAM, Shift Lock Control System.>

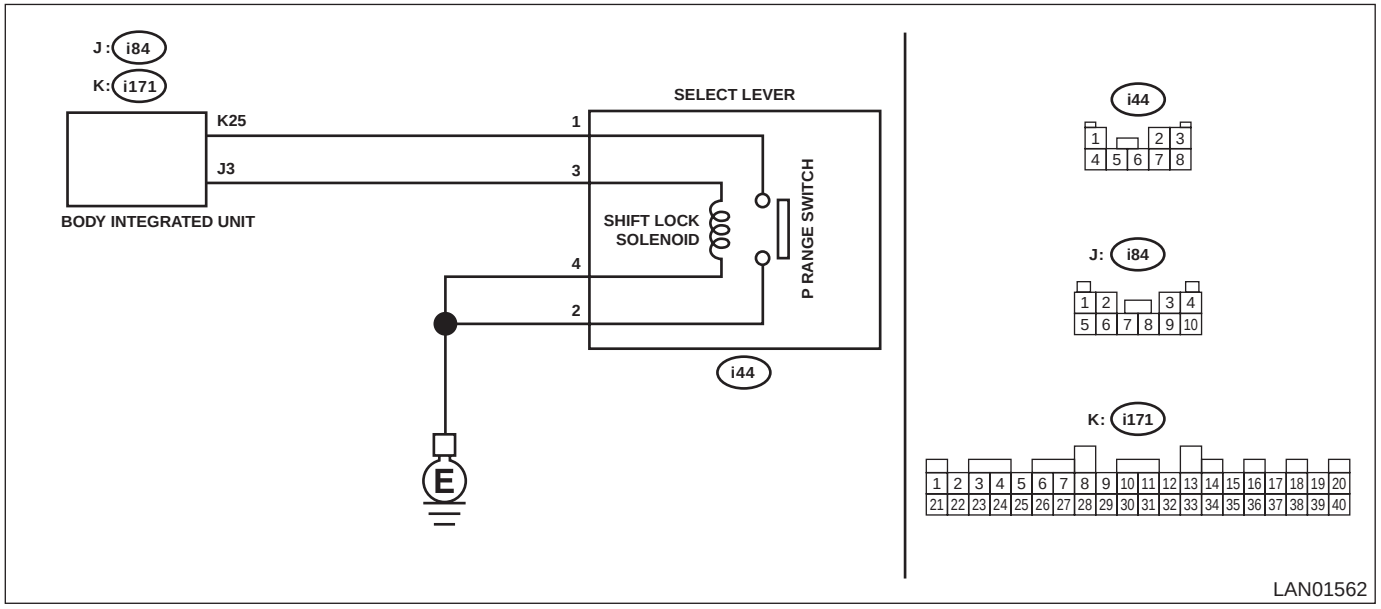
	Step	Check	Yes	No
1	**CHECK DTC.** 1) Insert the ignition key. 2) Turn the ignition switch to ON. 3) Shift to the Neutral range. 4) Shift into P range. 5) Shift to the Neutral range. 6) Shift into P range. 7) Shift to the Neutral range. 8) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC B1015 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK KEY LOCK SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the key lock solenoid connector (i52). 3) Measure the resistance between the key lock solenoid connector. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 103 — 115 Ω?	Go to step **3**.	Replace the key lock solenoid. <Ref. to SL-73, Key Lock Cylinders.>
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Disconnect the body integrated unit connector. 2) Measure the resistance between body integrated unit and chassis ground using tester. ***Connector & terminal*** ***(B280) No. 5 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector.	Is there poor contact at disconnected connector terminal?	Repair the terminal where poor contact exists, or replace harness.	Go to step **5**.
5	**CHECK DTC.** 1) Insert the ignition key. 2) Turn the ignition switch to ON. 3) Shift to the Neutral range. 4) Shift into P range. 5) Shift to the Neutral range. 6) Shift into P range. 7) Shift to the Neutral range. 8) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC B1015 displayed? (Current malfunction)	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

G: DTC B1016 SHIFT LOCK CIRCUIT

DTC detecting condition:

- Shift lock circuit is open, or shorted to power or ground.
- Shift lock solenoid output monitor is OFF, while BAT power supply voltage is 8.3 V or more and shift lock solenoid output is ON.*1
- Shift lock solenoid output monitor is ON, while BAT power supply voltage is 8.3 V or more and shift lock solenoid output is OFF.*2

Time needed for diagnosis:



*1: 50 ms or more
*2: 3 s or more

Trouble symptom:

Shift lock does not be released or remain locked.

Wiring diagram:

Shift lock control system <Ref. to WI-341, WIRING DIAGRAM, Shift Lock Control System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Maintain the shift lever in P range for five seconds or more. 3) Maintain the brake pedal depressed for one second or more. 4) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC B1016 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the shift lock solenoid connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i44) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK SHIFT LOCK SOLENOID.** Using a tester, measure the resistance between shift lock solenoid terminals. ***Terminals*** ***No. 3 — No. 4:***	Is the resistance between 27.6 — 30.5 Ω?	Go to step **4**.	Replace the shift lock solenoid. <Ref. to CS-49, REMOVAL, AT Shift Lock Solenoid and "P" Range Switch.>
4	**CHECK HARNESS (OPEN CIRCUIT).** Use a tester to measure the resistance between harness terminals. ***Connector & terminal*** ***(i44) No. 3 — (i84) No. 3:*** NOTE: If body integrated unit and shift lock connector are not disconnected, disconnect them first and then perform measurement.	Is the resistance less than 10 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between body integrated unit and chassis ground using a tester. ***Connector & terminal*** ***(i84) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair or replace the ground short circuit of the harness.
6	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between body integrated unit and chassis ground using a tester. ***Connector & terminal*** ***(i84) No. 3 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **7**.	Repair or replace the short circuit to power supply of the harness.
7	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector and shift lock connector.	Is there poor contact of connector terminal?	Repair or replace the poor contact of terminal.	Go to step **8**.
8	**CHECK DTC.** 1) Connect all the disconnected connectors. 2) Turn the ignition switch to ON. 3) Maintain the shift lever in P range and the brake pedal depressed for five seconds or more. 4) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC B1016 displayed? (Current malfunction)	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

H: DTC B1107 CAN COMMUNICATION (BIU) STUCK

DTC DETECTING CONDITION:
CAN message in the body integrated unit stuck in register
Time Needed for Diagnosis:
Immediately
TROUBLE SYMPTOM:
CAN communication can not be executed normally.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Check DTC indicated by body integrated unit. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC B1017 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC B1017 displayed? (Current malfunction)	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

I: DTC B1401 METER COLLATION

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-23, DTC B1401 METER COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

J: DTC B1402 IMMOBILIZER KEY COLLATION

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-23, DTC B1402 IMMOBILIZER KEY COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

K: DTC B1407 MET COMMUNICATION

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-24, DTC B1407 MET COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

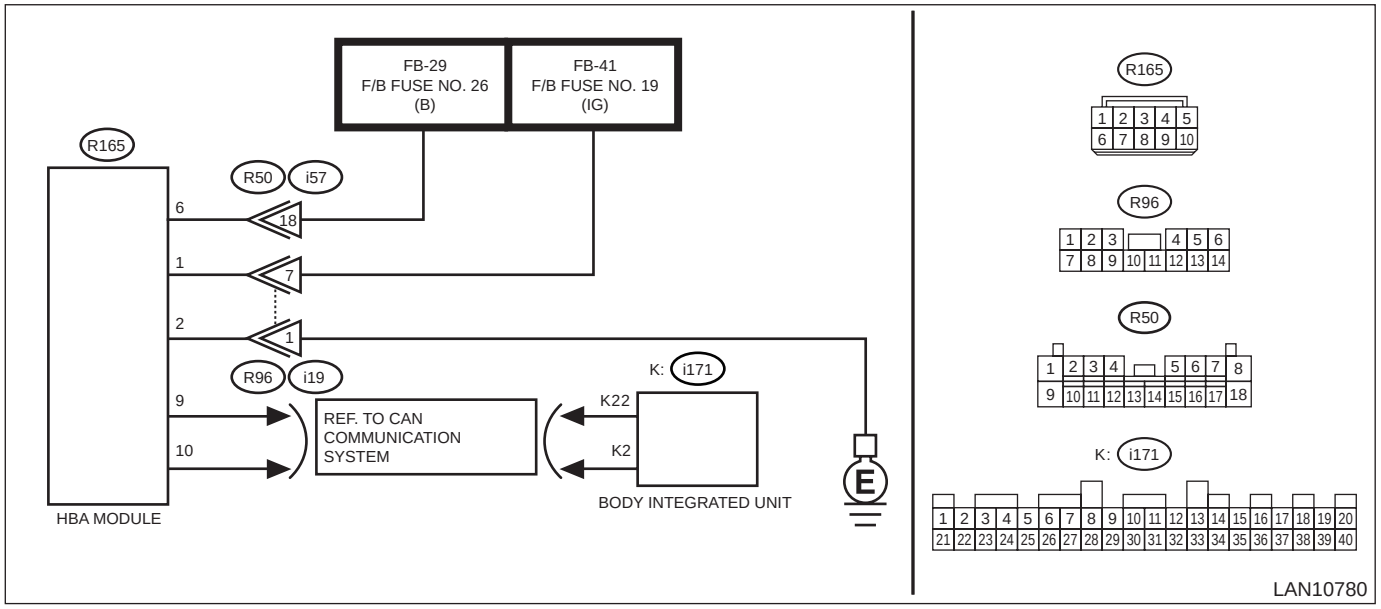
L: DTC B1408 METER NON-VOLATILE MEMORY

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-25, DTC B1408 METER NON-VOLATILE MEMORY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

M: DTC B1410 TRANSPONDER COMMUNICATION

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-25, DTC B1410 TRANSPONDER COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

N: DTC B1411 IMMOBILIZER ANTENNA



For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-25, DTC B1411 IMMOBILIZER ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

O: DTC B2680 HIGH BEAM ASSIST SENSOR

DTC detecting condition:
When the communication with the ECM fails due to a high beam assist camera malfunction.
Trouble symptom:
- High beam assist failure indicator illuminates, and failure message is displayed.
- High beam assist indicator does not illuminate.

Wiring diagram:

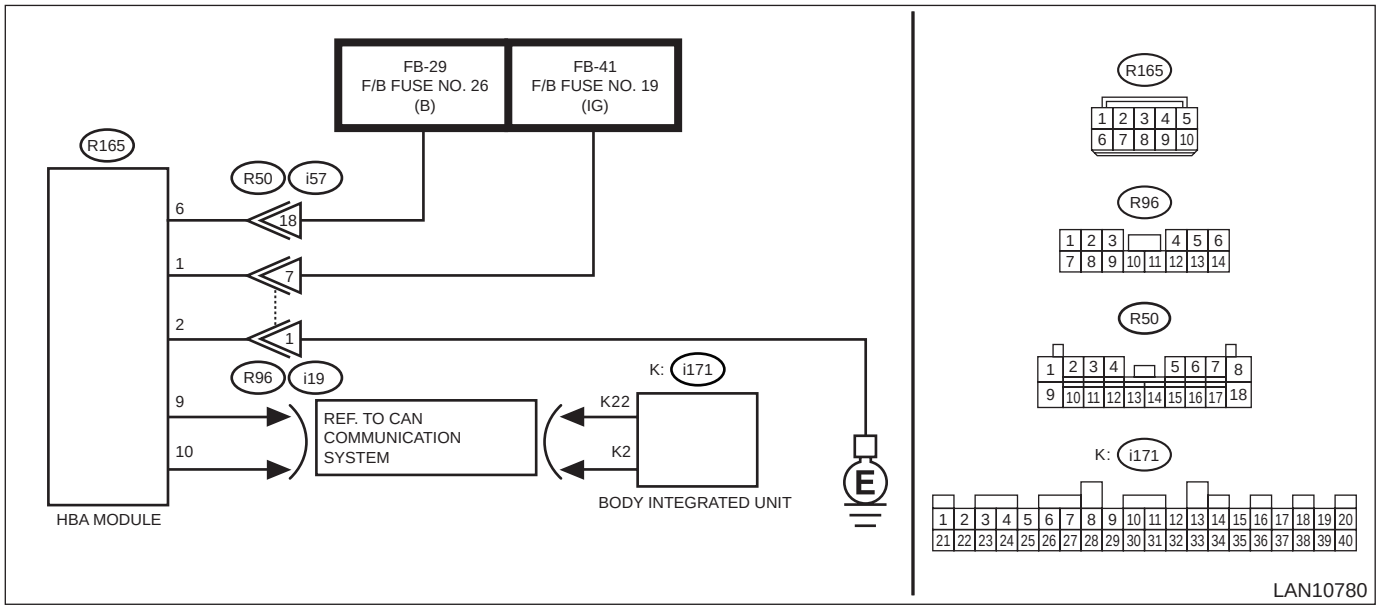
NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Headlight system <Ref. to WI-248, WIRING DIAGRAM, Headlight System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is B2680 current malfunction?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK CURRENT DATA.** 1) Turn the ignition switch to OFF. 2) Turn the ignition switch to ON and wait for at least 15 seconds. 3) Check the current data «<HBA>High Beam Assist Camera» of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-25, Read Current Data.>	Is «FAIL» displayed?	Replace the high beam assist module. <Ref. to GW-67, Rearview Mirror.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK POWER SUPPLY VOLTAGE.** 1) Turn the ignition switch to OFF. 2) Disconnect the high beam assist module connector. <Ref. to GW-67, Rearview Mirror.> 3) Start the engine. 4) Use a tester to measure the voltage between the terminals. ***Connector & terminal*** ***(R165) No. 1 (+) — (R165) No. 2 (–):***	Is the voltage 10 V or more?	Go to step **7**.	Go to step **4**.
4	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **5**.	Replace the defective fuse. When the replaced fuse is blown, check the power supply circuit for short-circuited.
5	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the high beam assist module connector. <Ref. to GW-67, Rearview Mirror.> 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R165) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK CURRENT DATA.** 1) Connect the disconnected connectors. 2) Turn the ignition switch to ON and wait for at least 15 seconds. 3) Check the current data «<HBA>High Beam Assist Camera» of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-25, Read Current Data.>	Is «FAIL» displayed?	Replace the high beam assist module. <Ref. to GW-67, Rearview Mirror.>	Go to step **7**.
7	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is B2680 current malfunction?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

P: DTC B2681 HIGH BEAM ASSIST CONTROL MODULE

DTC detecting condition:



- EEPROM malfunction.
- RAM malfunction.
- Ambient light sensor malfunction.

Trouble symptom:

- High beam assist failure indicator illuminates, and failure message is displayed.
- High beam assist indicator does not illuminate.

Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Headlight system <Ref. to WI-248, WIRING DIAGRAM, Headlight System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is B2681 current malfunction?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK CURRENT DATA.** 1) Turn the ignition switch to OFF. 2) Turn the ignition switch to ON and wait for at least 15 seconds. 3) Check the current data «<HBA> ECU» of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-25, Read Current Data.>	Is «FAIL» displayed?	Replace the high beam assist module. <Ref. to GW-67, Rearview Mirror.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK POWER SUPPLY VOLTAGE.** 1) Turn the ignition switch to OFF. 2) Disconnect the high beam assist module connector. <Ref. to GW-67, Rearview Mirror.> 3) Start the engine. 4) Use a tester to measure the voltage between the terminals. ***Connector & terminal*** ***(R165) No. 1 (+) — (R165) No. 2 (–):***	Is the voltage 10 V or more?	Go to step **7**.	Go to step **4**.
4	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **5**.	Replace the defective fuse. When the replaced fuse is blown, check the power supply circuit for short-circuited.
5	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the high beam assist module connector. <Ref. to GW-67, Rearview Mirror.> 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R165) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK CURRENT DATA.** 1) Connect the disconnected connectors. 2) Turn the ignition switch to ON and wait for at least 15 seconds. 3) Check the current data «<HBA>High Beam Assist Camera» of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-25, Read Current Data.>	Is «FAIL» displayed?	Replace the high beam assist module. <Ref. to GW-67, Rearview Mirror.>	Go to step **7**.
7	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is B2681 current malfunction?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Q: DTC B2682 HIGH BEAM ASSIST UNIT FIELD OF VIEW

DTC detecting condition:
The vehicle attitude is not upright enough, or the camera installation angle is deviated widely.
Trouble symptom:
- High beam assist failure indicator illuminates, and failure message is displayed.
- High beam assist indicator does not illuminate.

Step		Check	Yes	No
1	**VISUAL CHECK ON VEHICLE.** Visually check the vehicle attitude and the angle of the high beam assist camera.	Does the vehicle attitude tilt sideways or forward/backward? Is the high beam assist camera angle misaligned with the front of the vehicle? (Check from the exterior and interior of the vehicle).	Repair the faulty part.	Go to step **2**.
2	**CHECK CURRENT DATA.** 1) Turn the ignition switch to OFF. 2) Turn the ignition switch to ON and wait for at least 15 seconds. 3) Check the current data «<HBA>Camera Position Correlation» of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-25, Read Current Data.>	Is «FAIL» displayed?	Go to step **3**.	Go to step **4**.
3	**CORRECTION OF VEHICLE ATTITUDE.** 1) Adjust the tire pressure to the specified value. 2) Unload the cargo. 3) Empty the vehicle (no occupants). 4) Turn the ignition switch to ON and wait for at least 15 seconds. 5) Check the current data «<HBA>Camera Position Correlation» of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-25, Read Current Data.>	Is «FAIL» displayed?	Replace the high beam assist module. <Ref. to GW-67, Rearview Mirror.>	Go to step **4**.
4	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Turn the ignition switch to ON and wait for at least 15 seconds. 3) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is B2682 current malfunction?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Perform the inspection mode. If the fault is not detected, the system is normal. <Ref. to BC(diag)-20, Inspection Mode.>

R: DTC B2683 VEHICLE SPECIFICATION INFORMATION REGISTRATION

DTC detecting condition:
When the vehicle information cannot be received properly after operating the ignition switch.
Trouble symptom:
High beam assist indicator does not illuminate.

NOTE:
If the combination meter is defective, diagnose the combination meter first.

Step		Check	Yes	No
1	**CHECK DTC.** Using the Subaru Select Monitor, read all DTCs. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is a DTC related to the combination meter or the body integrated unit displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK CURRENT DATA.** Using Subaru Select Monitor, check the current data of body integrated unit listed below. <Ref. to BC(diag)-25, Read Current Data.> • «<HBA>Head Lamp Low Beam Specification» • «<HBA>Head Lamp High Beam Specification»	Does it match the vehicle specification?	Go to step **3**.	Check the customize settings of the body integrated unit. When the setting of the body integrated unit is correct, replace the high beam assist module. <Ref. to GW-67, Rearview Mirror.>
3	**CHECK CURRENT DATA.** 1) Turn the ignition switch to OFF. 2) Turn the ignition switch to ON and wait for at least 15 seconds. 3) Check the current data «<HBA> Adjustment» of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-25, Read Current Data.>	Is «Complete» displayed?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the high beam assist module. <Ref. to GW-67, Rearview Mirror.>

S: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when malfunction occurs in CAN line. (Bus off)

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

T: DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF

Detected when malfunction occurs in BODY-CAN line. (Bus off)

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

U: DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

No data is received from ECM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

V: DTC U0101 LOST COMMUNICATION WITH TCM

No data is received from TCM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

W: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

No data is received from VDC CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

X: DTC U0128 LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE

No data is received from VDC CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Y: DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE

No data is received from EPS CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Z: DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE

No data is received from airbag CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AA:DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

No data is received from combination meter.

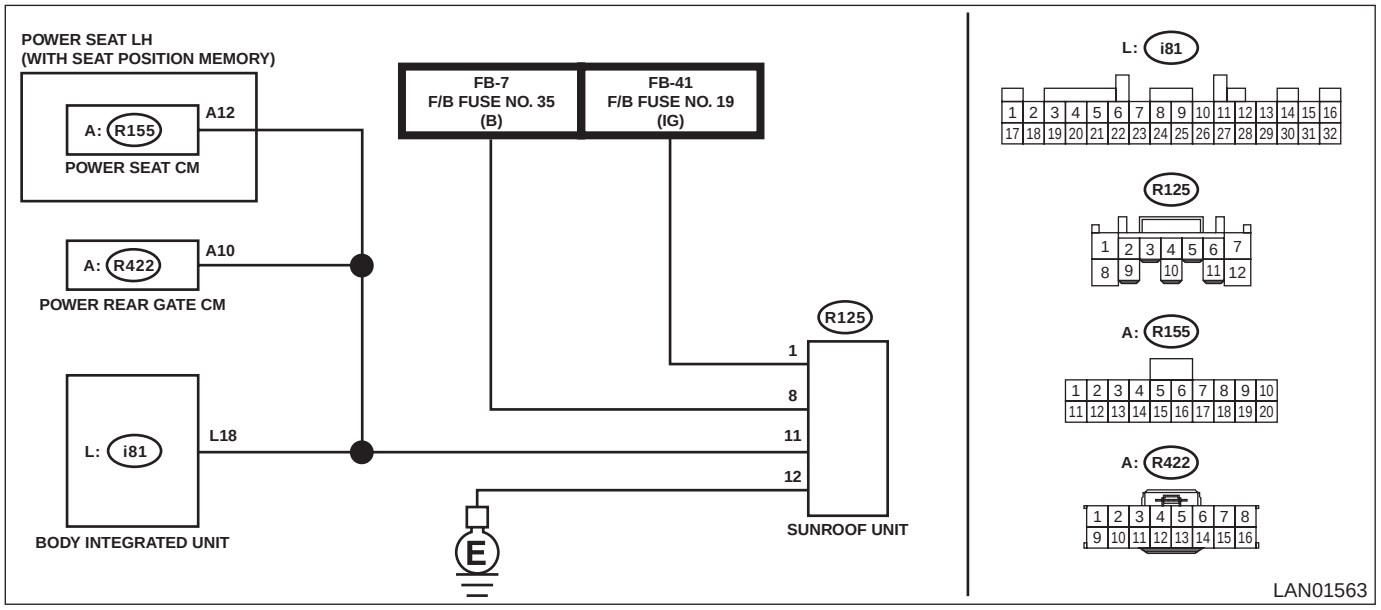
NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AB:DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE

No data is received from A/C CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AC:DTC U0167 LOST COMMUNICATION WITH IMMOBILIZER CONTROL MODULE



No data is received from immobilizer CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AD:DTC U0169 LOST COMMUNICATION WITH SUNROOF CONTROL MODULE

DTC DETECTING CONDITION:
No data is received from sunroof unit.
TROUBLE SYMPTOM:
The sunroof does not operate normally.
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Sunroof Control System <Ref. to WI-353, WIRING DIAGRAM, Sunroof Control System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC U0169 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the sunroof unit connector and body integrated unit connector. 3) Connect the disconnected connectors. 4) Read the DTC of the CAN system using the Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC U0169 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the sunroof unit and body integrated unit connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R125) No. 11 — (i81) No. 18:*** ***(R125) No. 12 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair the open circuit of harness.
4	**CHECK HARNESS.** 1) Disconnect the power rear gate CM connector. (With power rear gate) 2) Disconnect the power seat CM connector. (With power seat (with memory)) 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R125) No. 11 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **5**.	Repair the shorted portion of harness.
5	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(R125) No. 11 — Chassis ground:***	Is the voltage less than 1 V?	Go to step **6**.	Repair the shorted portion of harness.
6	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(R125) No. 1 (+) — Chassis ground (–):*** ***(R125) No. 8 (+) — Chassis ground (–):***	Is the voltage 9 V or more?	Go to step **7**.	Repair the open circuit of harness.
7	**CHECK CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Replace the sunroof unit with a properly functioning part. <Ref. to SR-20, Sunroof Motor.> 3) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC U0169 displayed? (Current malfunction)	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	For model without power rear gate and without power seat (with memory), malfunction occurred in the sunroof unit. For models with power rear gate or with power seat (with memory), Go to step **8**.

	Step	Check	Yes	No
8	**CHECK CONTROL MODULE.** NOTE: For models without power rear gate, Go to step **9**. 1) Connect the power rear gate CM connector. 2) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC U0169 displayed? (Current malfunction)	Replace the power rear gate CM. <Ref. to PRG-6, Power Rear Gate Control Module.>	Go to step **9**.
9	**CHECK CONTROL MODULE.** 1) Connect the power seat CM connector. 2) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC U0170 displayed? (Current malfunction)	Replace the power seat CM. <Ref. to SE-53, POWER SEAT CONTROL MODULE (SEAT WITH MEMORY FUNCTION), REMOVAL, Power Seat System.>	Malfunction occurred in the sunroof unit.

AE:DTC U0208 LOST COMMUNICATION WITH SEAT MEMORY

DTC detecting condition:
No data is received from power seat CM.
Trouble symptom:
The power seat does not operate normally.
Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Power seat system <Ref. to WI-301, WIRING DIAGRAM, Power Seat System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC U0208 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the power seat CM connector and the body integrated unit connector. 3) Connect the disconnected connectors. 4) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC U0208 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the power seat CM connector and the body integrated unit connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R155) No. 12 — (i81) No. 18:*** ***(R156) No. 12 — Chassis ground:*** ***(R156) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair the open circuit of harness.
4	**CHECK HARNESS.** 1) Disconnect the power rear gate CM connector. (With power rear gate) 2) Disconnect the sunroof unit connector. (With sunroof) 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R155) No. 12 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **5**.	Repair the shorted portion of harness.
5	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(R155) No. 12 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair the shorted portion of harness.
6	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(R155) No. 10 (+) — Chassis ground (–):*** ***(R155) No. 11 (+) — Chassis ground (–):*** ***(R156) No. 3 (+) — Chassis ground (–):*** ***(R156) No. 8 (+) — Chassis ground (–):***	Is the voltage 9 V or more?	Go to step **7**.	Repair the open circuit of harness.

	Step	Check	Yes	No
7	**CHECK CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Replace the sunroof unit with a properly functioning part. <Ref. to SR-20, Sunroof Motor.> 3) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC U0208 displayed? (Current malfunction)	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	For models without power rear gate and without sunroof, malfunction occurred in the power seat CM. For models with power rear gate or with sunroof, Go to step **8**.
8	**CHECK CONTROL MODULE.** NOTE: For models without power rear gate, Go to step **9**. 1) Connect the power rear gate CM connector. 2) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC U0208 displayed? (Current malfunction)	Replace the power rear gate CM. <Ref. to PRG-6, Power Rear Gate Control Module.>	Go to step **9**.
9	**CHECK CONTROL MODULE.** 1) Connect the sunroof unit connector. 2) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC U0170 displayed? (Current malfunction)	Malfunction occurred in the sunroof unit.	Malfunction occurred in the power seat CM.

AF:DTC U0230 LOST COMMUNICATION WITH POWER REAR GATE CONTROL MODULE

DTC DETECTING CONDITION:
No data is received from the power rear gate CM.
TROUBLE SYMPTOM:
The power rear gate does not operate normally.
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Power rear gate system <Ref. to WI-298, WIRING DIAGRAM, Power Rear Gate System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC U0230 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the power rear gate CM connector and the body integrated unit connector, and then reconnect them. 3) Turn the ignition switch to ON. 4) Wait for 5 seconds. 5) Read the DTC. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC U0230 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(R422) No. 12 (+) — Chassis ground (–):*** ***(R423) No. 6 (+) — Chassis ground (–):***	Is the voltage 9 V or more?	Go to step **4**.	Repair the open circuit of harness.
4	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the power rear gate connector and the body integrated unit connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R422) No. 10 — (i81) No. 18:*** ***(R423) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the open circuit of harness.
5	**CHECK DTC.** 1) Connect the power rear gate CM connector and the body integrated unit connector. 2) Turn the ignition switch to ON. 3) Wait for 5 seconds. 4) Read the DTC. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Are DTCs U0230, U0231, U0208, U0169 displayed? (Current malfunction)	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Replace the power rear gate CM. <Ref. to PRG-6, Power Rear Gate Control Module.>

AG:DTC U0327 SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE

No data is received from keyless access CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AH:DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”

Received error data from ECM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AI: DTC U0402 INVALID DATA RECEIVED FROM TCM

Received error data from TCM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AJ:DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

Received error data from VDC CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AK:DTC U0417 INVALID DATA RECEIVED FROM PARK BRAKE CONTROL MODULE

Received error data from VDC CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AL:DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

Received error data from combination meter.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AM:DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE

Received error data from A/C CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AN:DTC U0426 INVALID DATA RECEIVED FROM IMMOBILIZER CONTROL MODULE

Received error data from immobilizer CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AO:DTC U0427 INVALID DATA RECEIVED FROM VEHICLE SECURITY CONTROL MODULE

Received error data from keyless access CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AP:DTC U111F <HBA>LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

High beam assist module cannot receive data from VDC.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AQ:DTC U1145 <HBA>LOST COMMUNICATION WITH BODY CONTROL MODULE

High beam assist module does not receive data from body integrated unit.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AR:DTC U115A <HBA>LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

High beam assist module cannot receive data from combination meter.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AS:DTC U123C LOST COMMUNICATION WITH HIGH BEAM ASSIST CONTROL MODULE

No data is received from high beam assist module.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AT:DTC U141A <HBA>INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

High beam assist module receives incorrect data from VDC.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AU:DTC U142A <HBA>INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

High beam assist module receives incorrect data from combination meter.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AV:DTC U1446 <HBA>INVALID DATA RECEIVED FROM BODY CONTROL MODULE

High beam assist module receives incorrect data from body integrated unit.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AW:DTC U153D INVALID DATA RECEIVED FROM HIGH BEAM ASSIST CONTROL MODULE

Incorrect data is received from high beam assist module.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

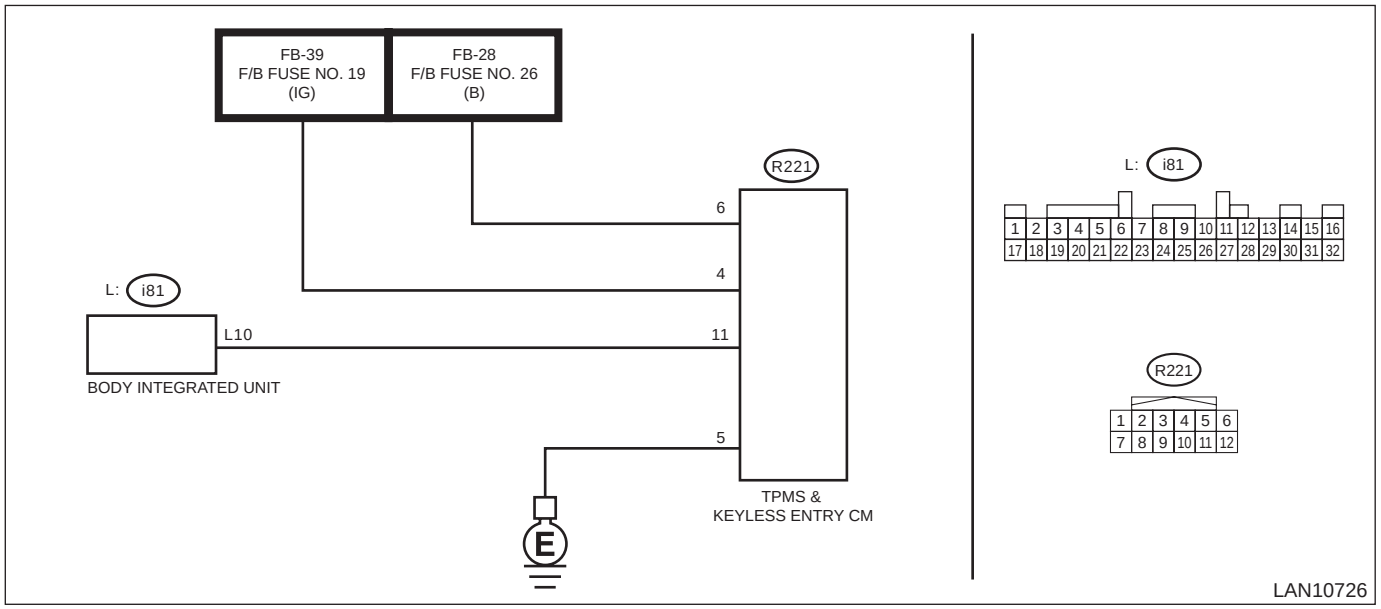
AX:DTC U1500 KEYLESS UART COM. MALFUNCTION

1. WITHOUT KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

DTC detecting condition:

- UART between the TPMS & keyless entry CM and the body integrated unit is open or shorted, or has communication failure.
- Communication with TPMS & keyless entry CM is faulty.

Time needed for diagnosis:



10 times

Trouble symptom:

Door lock does not operate with keyless.

Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Keyless entry system <Ref. to WI-273, WIRING DIAGRAM, Keyless Entry System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Insert the ignition key to the ignition key cylinder and remove. 2) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC U1500 displayed? (Current malfunction)	Go to step **2**.	Go to step **7**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit and the TPMS & keyless entry CM connector. 3) Connect the disconnected connectors. 4) Insert the ignition key to the ignition key cylinder and remove. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC U1500 displayed? (Current malfunction)	Go to step **3**.	Go to step **7**.

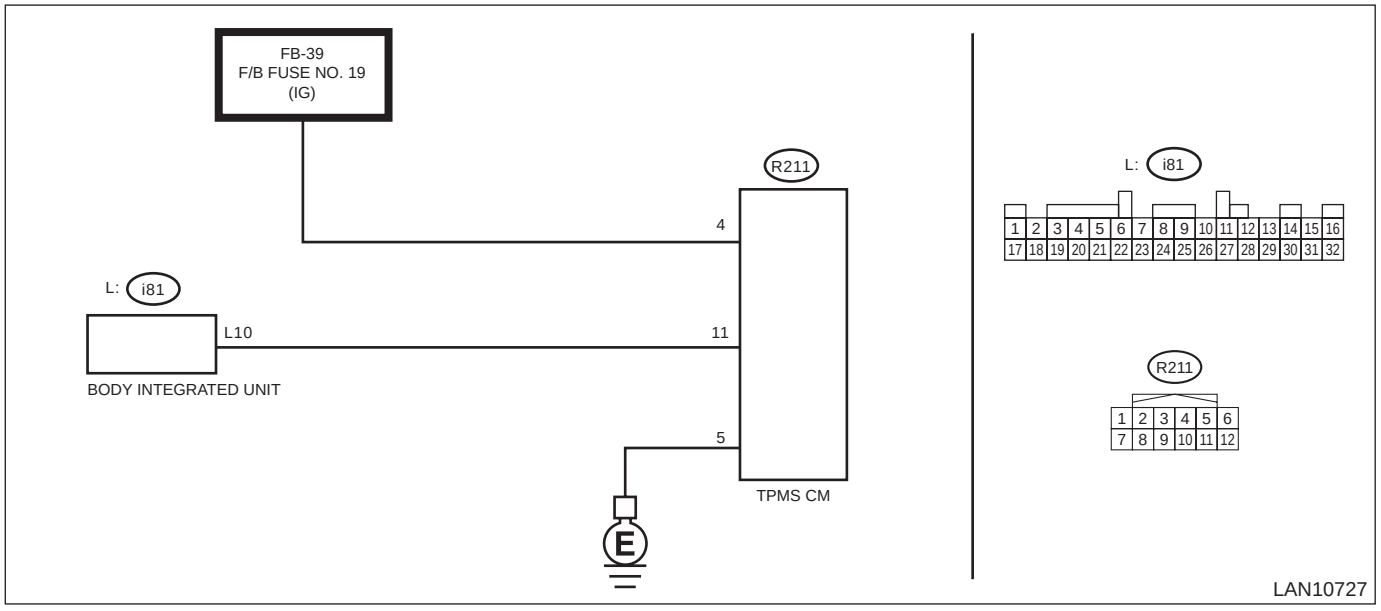
	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit and the TPMS & keyless entry CM connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i81) No. 10 — (R221) No. 11:***	Is the resistance 10 Ω or less?	Go to step **4**.	Repair the open circuit of harness or replace harness.
4	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Use a tester to measure the voltage between the terminals. ***Connector & terminal*** ***(R221) No. 4 (+) — Chassis ground (–):*** ***(R221) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R221) No. 5 — Chassis ground:***	Is the resistance 10 Ω or less?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK DTC.** 1) Connect all the disconnected connectors. 2) Turn the ignition switch to ON. 3) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is any DTC other than U1500 displayed?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Replace the TPMS & keyless entry CM. <Ref. to SL-80, REMOVAL, Keyless Entry Control Module.>
7	**CHECK CONNECTOR.** Check for a poor contact between the body integrated unit and the TPMS & keyless entry CM connector.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. WITH KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

DTC detecting condition:

- UART between the TPMS CM and the body integrated unit is open or shorted, or has communication failure.
- Communication with TPMS CM is faulty.

Time needed for diagnosis:



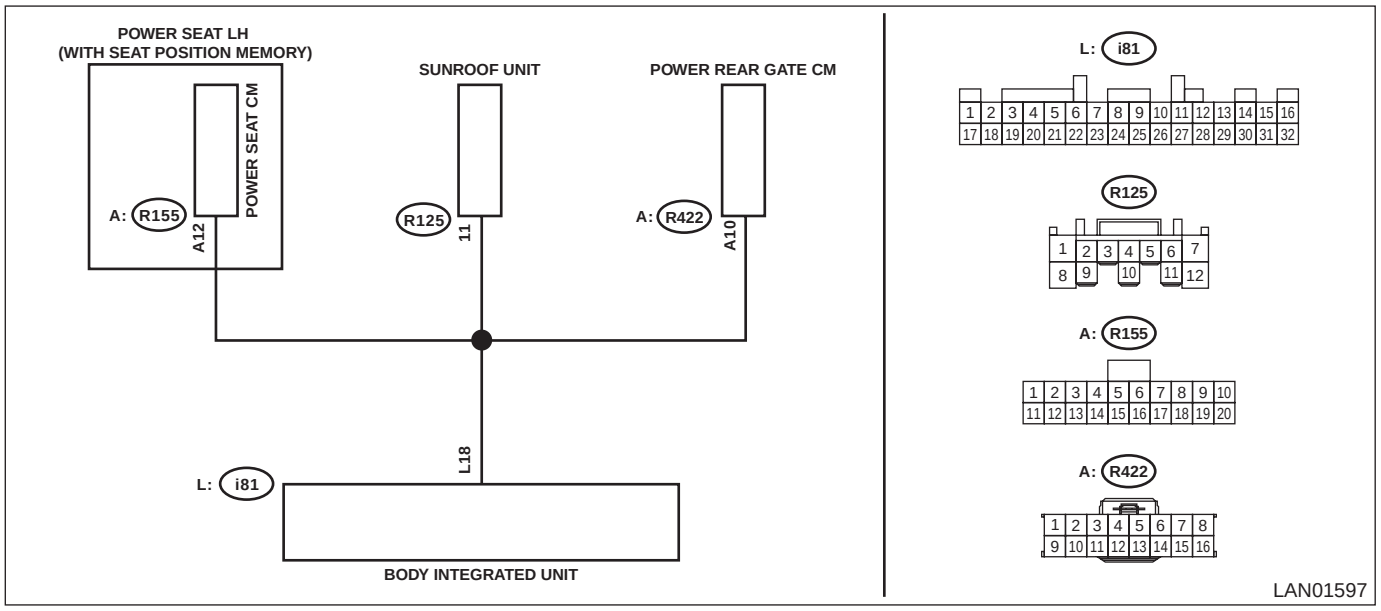
10 times

Trouble symptom:

Door lock does not operate with keyless.

Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Tire Pressure Monitoring System <Ref. to WI-360, WIRING DIAGRAM, Tire Pressure Monitoring System.>



Step		Check	Yes	No
1	**CHECK DTC.** 1) With the access key in the vehicle, press the push button ignition switch twice without depressing the brake to turn the ignition switch to ON. 2) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC U1500 displayed? (Current malfunction)	Go to step **2**.	Go to step **7**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit and the TPMS CM connector. 3) Connect the disconnected connectors. 4) With the access key in the vehicle, press the push button ignition switch twice without depressing the brake to turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC U1500 displayed? (Current malfunction)	Go to step **3**.	Go to step **7**.

	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit and the TPMS CM connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i81) No. 10 — (R211) No. 11:***	Is the resistance 10 Ω or less?	Go to step **4**.	Repair the open circuit of harness or replace harness.
4	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Use a tester to measure the voltage between the terminals. ***Connector & terminal*** ***(R211) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R211) No. 5 — Chassis ground:***	Is the resistance 10 Ω or less?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK DTC.** 1) Connect all the disconnected connectors. 2) Turn the ignition switch to ON. 3) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is any DTC other than U1500 displayed?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Replace the TPMS CM. <Ref. to SL-80, REMOVAL, Keyless Entry Control Module.>
7	**CHECK CONNECTOR.** Check for a poor contact between the body integrated unit and the TPMS CM connector.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

AY:DTC U1673 LIN COMMUNICATION BUS ERROR BODY CONTROL MODULE

DTC DETECTING CONDITION:
Integrated unit communication is shut down because of LIN error.
TROUBLE SYMPTOM:
LIN communication is not normal.
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
- Sunroof Control System <Ref. to WI-353, WIRING DIAGRAM, Sunroof Control System.>
- Power seat system <Ref. to WI-301, WIRING DIAGRAM, Power Seat System.>
- Power rear gate system <Ref. to WI-298, WIRING DIAGRAM, Power Rear Gate System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Turn the ignition switch to ON. 3) Wait for 5 seconds. 4) Read the DTC. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC U1673 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Disconnect the power rear gate CM connector. 3) Turn the ignition switch to ON. 4) Wait for 5 seconds. 5) Read the DTC. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC U1673 displayed? (Current malfunction)	Go to step **3**.	Replace the power rear gate CM. <Ref. to PRG-6, Power Rear Gate Control Module.>

	Step	Check	Yes	No
3	**CHECK CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Disconnect the power seat memory CM connector. (With the power rear gate CM connector disconnected) 3) Turn the ignition switch to ON. 4) Wait for 5 seconds. 5) Read the DTC. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC U1673 displayed? (Current malfunction)	Go to step **4**.	Replace the power seat memory CM. <Ref. to SE-53, POWER SEAT CONTROL MODULE (SEAT WITH MEMORY FUNCTION), REMOVAL, Power Seat System.>
4	**CHECK CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Disconnect the sunroof unit connector. (With the power rear gate CM connector and power seat memory CM connector disconnected) 3) Turn the ignition switch to ON. 4) Wait for 5 seconds. 5) Read the DTC. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC U1673 displayed? (Current malfunction)	Go to step **5**.	Replace the sunroof unit. <Ref. to SR-20, Sunroof Motor.>
5	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Measure the resistance between body integrated unit connector and each unit connector. ***Connector & terminal*** ***(i81) No. 18 — (R422) No. 10:*** ***(i81) No. 18 — (R155) No. 12:*** ***(i81) No. 18 — (R125) No. 11:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair the open circuit of harness.
6	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between each unit connector and chassis ground. ***Connector & terminal*** ***(i81) No. 18 (+) — Chassis ground (–):*** ***(R422) No. 10 (+) — Chassis ground (–):*** ***(R155) No. 12 (+) — Chassis ground (–):*** ***(i125) No. 11 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **7**.	Repair the short circuit to power supply.
7	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between each unit connector and chassis ground. ***Connector & terminal*** ***(i81) No. 18 — Chassis ground:*** ***(R422) No. 10 — Chassis ground:*** ***(R155) No. 12 — Chassis ground:*** ***(i125) No. 11 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Repair the ground short circuit of harness.

16.General Diagnostic Table

A: INSPECTION

Read the DTC using Subaru Select Monitor. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>
Or check the following data under the current data display screen.

Item	Operation	Specifications		Note
		YES	NO	
Diagnostic code	DTC is not displayed when inspecting all DTCs.	DTC is not displayed.	Perform the diagnosis for the displayed DTCs.	—
Clearance light (Low beam) (High beam)	Clearance light and low/high beams illuminate normally when the switch is operated. Indicator in the meter illuminates at the same time.	System is normal.	Check the lighting system, combination meter system and LAN system.	—
Auto light	When the area around the light control sensor is darkened after the ignition switch and the lighting switch (AUTO) are turned to ON, the clearance light and the low beam illuminate after 15 seconds. Indicator in the combination meter illuminates at the same time.	System is normal.	Check the lighting system, combination meter system and LAN system.	—
	When the ignition switch and the lighting switch (AUTO) are turned to ON after the area around the light control sensor is darkened, the clearance light and the low beam illuminate immediately. Indicator in the combination meter illuminates at the same time.			—
Fog light	Front fog light illuminates when the switch is operated. Indicator in the meter illuminates at the same time.	System is normal.	Check the lighting system, combination meter system and LAN system.	—
Rear defogger	Rear defogger operates when the switch is operated. The indicator illuminates at the same time.	System is normal.	Check the rear window defogger system and A/C system.	—
Wiper deicer	Wiper deicer operates by operating the switch. The indicator illuminates at the same time. When the ambient temperature is 5°C (41°F) or higher, press the switch 3 seconds or more to forcibly activate the system.	System is normal.	Check the wiper deicer system and A/C system.	Wiper deicer operates when “Wiper deicer setting” of the body integrated unit is set to on.
DRL	After starting the engine and releasing the parking brake with shift lever in other than P range, the DRL illuminates.	System is normal.	Check the lighting system and LAN system.	—
Rear wiper	Rear wiper operates when the switch is operated.	System is normal.	Check wiper or washer system.	Depending on user customizing “Sedan/Wagon Setting” of the body integrated unit, vehicle sensory time varies.
Key interlock	• Key cannot be removed in other than P range. • Key can be removed in P range.	System is normal.	Check the body control system.	—

Item	Operation	Specifications		Note
		YES	NO	
Shift lock	The select lever can be moved from the P range to other ranges only when the brake pedal is depressed with IG ON.	System is normal.	Check the body control system.	—
Door lock	The doors lock/unlock when the door switch is operated. Rear gate/ trunk opens when the rear gate/ trunk release switch is operated.	System is normal.	Check the security & lock and body control system.	If user customizing “Sedan/Wagon Setting” is different, trunk and rear gate do not open.
Keyless entry	The lock locks/unlocks when the keyless transmitter is operated. Trunk/rear gate unlocks when trunk/ rear gate unlock button is operated.	System is normal.	Check the keyless entry and body control system.	—
Keyless access with push button start system	The lock locks/unlocks when the access key is operated. With the access key held, the touch sensor (lock) operation locks/touch sensor (unlock) operation unlocks. Rear gate unlocks by operating the rear gate unlock button.	System is normal.	Check the keyless access with push button start system and the body control system.	—
Answer back	Answer-back operates when the keyless entry / keyless access with push button start system locks/ unlocks.	System is normal.	Check the security & lock, keyless access with push button start system, and LAN system.	—
Room light	Turns ON/OFF according to the door open/close operation, the lock/ unlock operation with the keyless entry/keyless access with push button start system, and the ignition operation.	System is normal.	Check the room light system, security & lock, keyless access with push button start system, and LAN system.	For vehicle with the keyless access with push button start system, the room light blinks when “Factory mode” is selected. For vehicles with the keyless entry, the room light blinks when the keyless registration mode is selected.
Map light	Turns ON/OFF according to the door open/close operation, the lock/ unlock operation with the keyless entry/keyless access with push button start system, and the ignition operation. (Except for rear gate)	System is normal.	Check the spot map light, security & lock, keyless access with push button start system, and LAN system.	For vehicle with the keyless access with push button start system, the map light blinks when “Factory mode” is selected. For vehicles with the keyless entry, the map light blinks when the keyless registration mode is selected.
Luggage room light	The light illuminates/goes off according to the rear gate open/ close. The light goes off, when the doors are locked with the keyless entry/keyless access with push button start system, or the ignition is turned to ON, while the light is illuminating.	System is normal.	Check the lighting system (interior light system), security & lock, keyless access with push button start system, and LAN system.	—

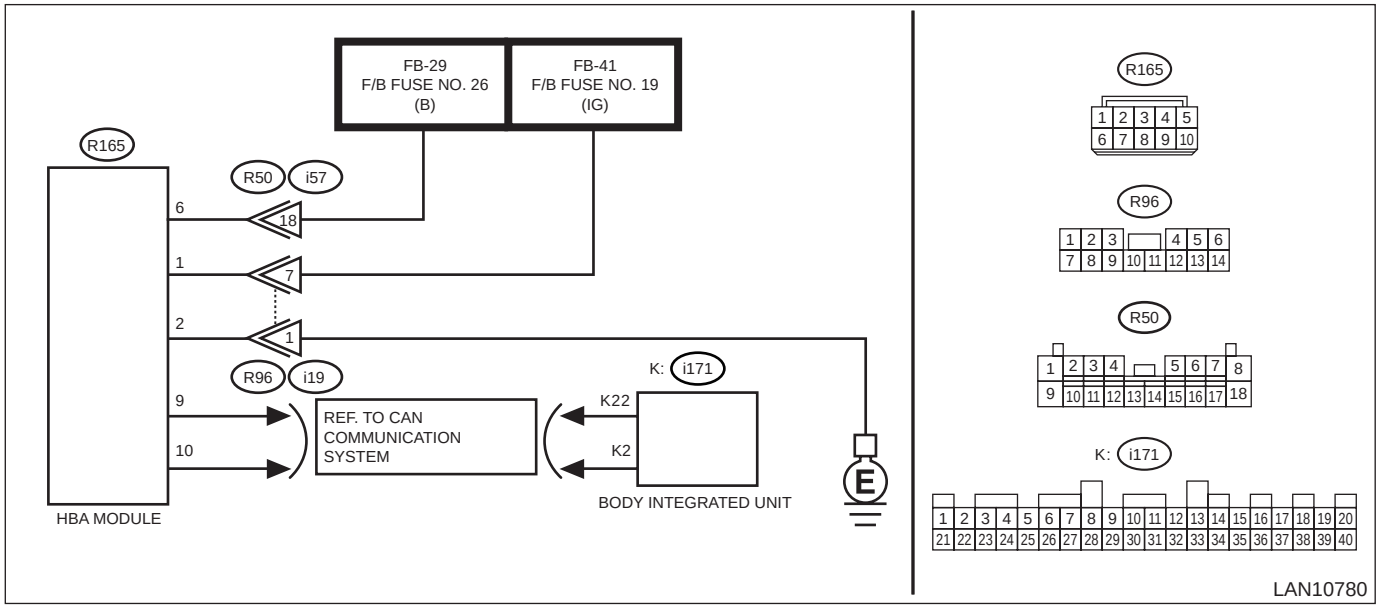
Item	Operation	Specifications		Note
		YES	NO	
Trunk room light	The light illuminates/goes off according to the trunk open/close.	System is normal.	Check the lighting system (interior light system), security & lock, keyless access with push button start system, and LAN system.	—
Key illumination	The light illuminates/goes off according to the driver's door open/close. The light goes off, when the doors are locked with the keyless entry/keyless access with push button start system and the ignition is turned ON while illuminating.	System is normal.	Check the ignition switch illumination, security & lock, and LAN system.	For vehicles with keyless entry, the key illumination blinks when "Factory" mode is selected.
Turn signal & hazard	Each turn signal light illuminates, when the turn signal switch is turned ON. The hazard light and indicator in the combination meter blink, when the hazard switch is turned ON.	System is normal.	Check the lighting system (turn signal light and hazard light system).	—
Engine start	Engine starts.	System is normal.	Check the engine system, immobilizer, and LAN system.	Model without keyless access with push button start system
Vehicle security	Security monitoring/security canceling can be performed by operating the keyless entry/keyless access with push button start system.	System is normal.	Check the security & lock, keyless access with push button start system, and LAN system.	Security monitoring starts and at the same time the warning buzzer sounds, when impact sensor is not connected and user customizing "Impact Sensor" of the body integrated unit is set to on.
Welcome lighting (enter)	When dimming out around the light control sensor after turning the lighting switch (AUTO) to ON, use keyless transmitter or access key to unlock. At this time, the clearance light and headlight low beam illuminates for the preset time. And, use keyless transmitter or access key to lock. At this time, the clearance light and headlight low beam go off.	System is normal.	Check the lighting system (auto light), security & lock (keyless entry) or keyless access with push button start system.	Operates when user customization item "Illumination Sensor Setting" in body integrated unit is set to ON and "Welcome Light Off Delay Time(Approaching)" is set to other than OFF.
Welcome lighting (exit)	The clearance light and headlight low beam continues to illuminate, when the ignition switch is OFF (or when the key is removed for vehicles without keyless access with push button start system) while the auto light function is operating. Use keyless transmitter or access key to lock two consecutive times. At this time, the clearance light and headlight low beam go off.	System is normal.	Check the lighting system (auto light), security & lock (keyless entry) or keyless access with push button start system.	Operates when user customization item "Illumination Sensor Setting" in body integrated unit is set to ON and "Welcome Light Off Delay Time(Exiting)" is set to other than OFF.

17.Diagnostics with Phenomenon

A: LIST

1. HIGH BEAM ASSIST SYSTEM

Symptoms	Note
High beam assist indicator does not illuminate.	<Ref. to BC(diag)-86, HIGH BEAM ASSIST INDICATOR DOES NOT ILLUMINATE, INSPECTION, Diagnostics with Phenomenon.>
High beam light does not turn on automatically	<Ref. to BC(diag)-88, HIGH BEAM LIGHT DOES NOT TURN ON AUTOMATICALLY, INSPECTION, Diagnostics with Phenomenon.>
High beam light does not go off automatically.	<Ref. to BC(diag)-89, HIGH BEAM LIGHT DOES NOT GO OFF AUTOMATICALLY, INSPECTION, Diagnostics with Phenomenon.>
Suspend state is not released.	<Ref. to BC(diag)-89, SUSPEND STATE IS NOT RELEASED, INSPECTION, Diagnostics with Phenomenon.>
High beam light ON/OFF switching timing is delayed	<Ref. to BC(diag)-90, HIGH BEAM LIGHT ON/OFF SWITCHING TIMING IS DELAYED, INSPECTION, Diagnostics with Phenomenon.>



B: INSPECTION

1. HIGH BEAM ASSIST INDICATOR DOES NOT ILLUMINATE

Trouble symptom:
High beam assist indicator light does not illuminate though the operating conditions for the high beam assist are met.
(When Lo beam illuminates with the light SW position at Auto when «High Beam Assist Current Setting» or «High Beam Assist Function» is OFF in the body integrated unit, Hi beam illuminates with dimmer Hi SW ON. In this case, check the customize setting of the body integrated unit. <Ref. to BC(diag)-35, User Customizing.>)

NOTE:
If the combination meter is defective, diagnose the combination meter first.
Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Headlight system <Ref. to WI-248, WIRING DIAGRAM, Headlight System.>

	Step	Check	Yes	No
1	**CHECK DTC EXCEPT FOR HIGH BEAM ASSIST SYSTEM.** Using the Subaru Select Monitor, read all DTCs. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK POWER SUPPLY VOLTAGE.** 1) Disconnect the high beam assist module connector. <Ref. to GW-67, Rearview Mirror.> 2) Turn the ignition switch to ON. 3) Use a tester to measure the voltage between the terminals. ***Connector & terminal*** ***(R165) No. 1 (+) — (R165) No. 2 (–):***	Is the voltage 10 V or more?	Go to step **3**.	Check the power supply line.
3	**EXECUTION OF RESTARTING.** 1) Clear the DTC. <Ref. to BC(diag)-19, Clear Memory Mode.> 2) Turn the ignition switch to ON and wait for at least 15 seconds. 3) Meet the following conditions for the high beam assist operation. • Light SW position: Auto • Dimmer Hi SW: ON • Shade the illumination sensor for the vehicle auto lighting. NOTE: If the headlight Lo illuminates without shading the illumination sensor while the Light SW position is Auto, the auto lighting system may be faulty.	Does the high beam assist indicator illuminate?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK CURRENT DATA.** Using Subaru Select Monitor, check the current data of body integrated unit listed below. <Ref. to BC(diag)-25, Read Current Data.> • «<HBA>Head Lamp Low Beam Specification» • «<HBA>Head Lamp High Beam Specification»	Does it match the vehicle specification?	Go to step **5**.	Check the customize settings of the body integrated unit. When the customize settings for the body integrated unit are correct, replace the high beam assist module. <Ref. to GW-67, Rearview Mirror.>
5	**CHECK CURRENT DATA.** 1) Turn the ignition switch to OFF. 2) Turn the ignition switch to ON and wait for at least 15 seconds. 3) Check the current data «<HBA> Adjustment» of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-25, Read Current Data.>	Is «Complete» displayed?	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>	Replace the high beam assist module. <Ref. to GW-67, Rearview Mirror.>

2. HIGH BEAM LIGHT DOES NOT TURN ON AUTOMATICALLY

Trouble symptom:

High beam light does not turn on while the high beam assist indicator is illuminating, even when there is no object in front of the vehicle.

	Step	Check	Yes	No
1	**CHECK HIGH BEAM ACTIVATION (CHECK BY MANUAL OPERATION).** Check for the activation of the high beam. • Light SW position: Second notch • Dimmer Hi SW: ON	Does the high beam light come on?	Go to step **2**.	Check the headlight system. <Ref. to LI-7, Headlight System.>
2	**CHECK DTC.** Using the Subaru Select Monitor, read all DTCs. <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **3**.
3	**CHECK CURRENT DATA.** 1) Cover the ambient light sensor with a tape or the like. 2) Turn the ignition switch OFF → ON and wait for at least 15 seconds. 3) Check the current data «<HBA>High Beam Assist Status» of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-25, Read Current Data.>	Is «Speed Under Threshold» displayed? (If the display shows «Day Detect», the ambient light sensor is not shaded enough.)	Go to step **4**.	Replace the high beam assist module. <Ref. to GW-67, Rearview Mirror.>
4	**PERFORM RECOGNITION TEST.** 1) Cover the ambient light sensor with a tape or the like. 2) Input a vehicle speed of 45 km/h (28 MPH) or more. 3) Shade the camera. 4) Check the current data «<HBA>High Beam Assist Status» of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-25, Read Current Data.> NOTE: Make sure to check within 60 seconds after shading the camera. (Otherwise the system will go into suspend mode after a certain period of time has elapsed with no image input to the camera, because it determines that the problem occurs due to obstacles.)	Is «Nothing Sensed» displayed?	System is normal. It is considered that the conditions for the high beam activation are not satisfied enough for an environmental reason.	Replace the high beam assist module. <Ref. to GW-67, Rearview Mirror.>

3. HIGH BEAM LIGHT DOES NOT GO OFF AUTOMATICALLY

Trouble symptom:
High beam light does not go off automatically even when the high beam assist indicator is illuminating.

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Direct the light of LED light or the like to the ambient light sensor. 2) Check the current data «<HBA>High Beam Assist Status» of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-25, Read Current Data.>	Is «Day Detect» displayed?	Go to step **2**.	Replace the high beam assist module. <Ref. to GW-67, Rearview Mirror.>
2	**CHECK CURRENT DATA.** 1) Direct the light of LED light or the like to the ambient light sensor. 2) Check the current data «<HBA>High Beam Request Status» of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-25, Read Current Data.>	Is «Request» displayed?	Replace the high beam assist module. <Ref. to GW-67, Rearview Mirror.>	Replace the body integrated unit. <Ref. to SL-84, Body Integrated Unit.>

4. SUSPEND STATE IS NOT RELEASED

Trouble symptom:
The high beam assist function cannot be used because the high beam assist “Halt” display remains on in the combination meter.

	Step	Check	Yes	No
1	**CHECK WINDSHIELD GLASS.** Check the windshield glass.	Are there any obstacles such as a sticker or dirt that shades the camera?	Remove the foreign matters.	Go to step **2**.
2	**CHECK CAMERA SURROUNDINGS.** Check the surroundings of the camera.	Is the camera lens covered by a dislocated mount cover or accessories around the camera?	Correct the mount cover position. Remove the accessories, etc.	Go to step **3**.
3	**CHECK CAMERA LENS.** Check the camera lens for dirt, etc.	Is there any dirt, foreign objects, fog or condensation?	Clean the camera lens. <Ref. to BC(diag)-8, CAMERA LENS MAINTENANCE, INSPECTION, General Description.>	Go to step **4**.
4	**CHECK CAMERA LENS.** Check the camera lens for cracking.	Does the camera lens have any cracks?	Replace the high beam assist module. <Ref. to GW-67, Rearview Mirror.>	If no fault is found by performing the inspection mode, it is normal at present. If the function does not recover, perform the inspection for DTCs. <Ref. to BC(diag)-24, CAMERA VIEW ANGLE INSPECTION MODE, PROCEDURE, Inspection Mode.>

5. HIGH BEAM LIGHT ON/OFF SWITCHING TIMING IS DELAYED

Trouble symptom:
With the high beam assist indicator ON, the high beam light comes on/goes off automatically, but the timing of high beam light off operation is delayed when preceding/oncoming vehicles are detected.

NOTE:
If the operation is normal, the high beam light goes off by recognizing preceding/oncoming vehicles ahead of approx. 400 m. However, detection of a preceding vehicle may be delayed near street lights or signs.

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** Check the current data «<HBA>High Beam Assist Status» of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-25, Read Current Data.>	Is «SAE Mode» displayed?	High beam assist is in low sensitivity mode. Turn the ignition switch to OFF → ON, check that the indicator light illuminates.	If no fault is found by performing the inspection mode, it is normal at present. If it does not operate normally, replace the high beam assist module. <Ref. to BC(diag)-24, CAMERA VIEW ANGLE INSPECTION MODE, PROCEDURE, Inspection Mode.> NOTE: The high beam assist may have been in low sensitivity mode due to long press of the rear view mirror power switch.

TELEMATICS SYSTEM (DIAGNOSTICS)

TEL(diag)

Page

1. Basic Diagnostic Procedure 2
2. Check List for Interview 3
3. General Description 5
4. Electrical Component Location 6
5. Control Module I/O Signal 8
6. Subaru Select Monitor 10
7. Read Current Data 12
8. Diagnostic Code(s) Display 15
9. Clear Memory Mode 17
10. Inspection Mode 18
11. System Operation Check Mode 20
12. Diagnostic Procedure with Diagnostic Trouble Code (DTC) 21
13. Diagnostics with Phenomenon 52

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Using the Check List for Interview, ask the customer the condition of how the trouble occurred. <Ref. to TEL(diag)-3, CHECK, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Interview the customer. <Ref. to TEL(diag)-3, CHECK, Check List for Interview.>
2	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** Using the Subaru Select Monitor, check whether communication to the telematics system can be executed. NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. (Refer to "Communication for initializing impossible".) <Ref. to TEL(diag)-10, INSPECTION, Subaru Select Monitor.>	Is the check result OK?	Go to step **3**.	Check the communication circuit.
3	**CHECK TELEMATICS.** Using the Subaru Select Monitor, read DTC of the telematics system. <Ref. to TEL(diag)-15, OPERATION, Diagnostic Code(s) Display.> NOTE: If DTC is detected, only RED LED will illuminate. For details, refer to "LED operation status list". <Ref. to TEL(diag)-4, LED ILLUMINATION STATUS LIST, CHECK, Check List for Interview.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>	Go to step **4**.
4	**CHECK DIAGNOSTICS WITH PHENOMENON.** Check the list of Diagnostics with Phenomenon. <Ref. to TEL(diag)-52, Diagnostics with Phenomenon.>	Does the symptom apply?	Perform diagnosis according to the procedures in the diagnostics with phenomenon.	Go to step **5**.
5	**CHECK TROUBLE PHENOMENON.** 1) Perform the basic inspection and function check. <Ref. to TEL(diag)-5, INSPECTION, General Description.> 2) Check the data communication module. <Ref. to TEL(diag)-8, Control Module I/O Signal.> 3) Perform check of current data. <Ref. to TEL(diag)-12, Read Current Data.> 4) Perform a unit check.	Was the trouble cause found?	Perform the Clear Memory after repairing or replacing the cause of trouble. <Ref. to TEL(diag)-17, Clear Memory Mode.>	System is normal.

2. Check List for Interview

A: CHECK

1. CHECK LIST FOR INTERVIEW

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

<table>
<tr><td colspan="2">Telematics Check List for Interview</td><td colspan="3">Received Year Month Date</td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td colspan="3">Registration No. Initial year of registration
Year Month Date</td></tr>

Diagnostic code	

2. LED ILLUMINATION STATUS LIST

LED	Light OFF	Blink	Light ON
RED	Communication with the server and DCM are operating normally (communication failure with the STARLINK server. DTCs are not found within the vehicle unit.)	It is possible that communication with the server/DCM are malfunctioning.	It is possible that communication with the server/DCM are malfunctioning.
GREEN	—	Connection to the server is being attempted and in progress.	Communication status with the server is READY.
RED and GREEN	Telematics function is not activated.	Collation with the server is in progress.	Collation with the server failed. It is possible that the server/DCM are malfunctioning.

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

CAUTION:
- **Do not use the electrical test equipment on all airbag harnesses and connector circuits.**
- **Be careful not to damage the airbag harness.**

B: INSPECTION

1. BASIC INSPECTION

Before performing the diagnosis, check the following items which may affect the problems relating to the telematics system.
1) Check the battery. <Ref. to SC(H4DO)-60, INSPECTION, Battery.> <Ref. to SC(H6DO)-2, General Description.>
2) Check the relay and fuse condition. <Ref. to ET-7, Relay and Fuse.> <Ref. to SC(H6DO)-2, General Description.>
3) Check the connecting condition of harness and harness connector.

C: PREPARATION TOOL

1. SPECIAL TOOL

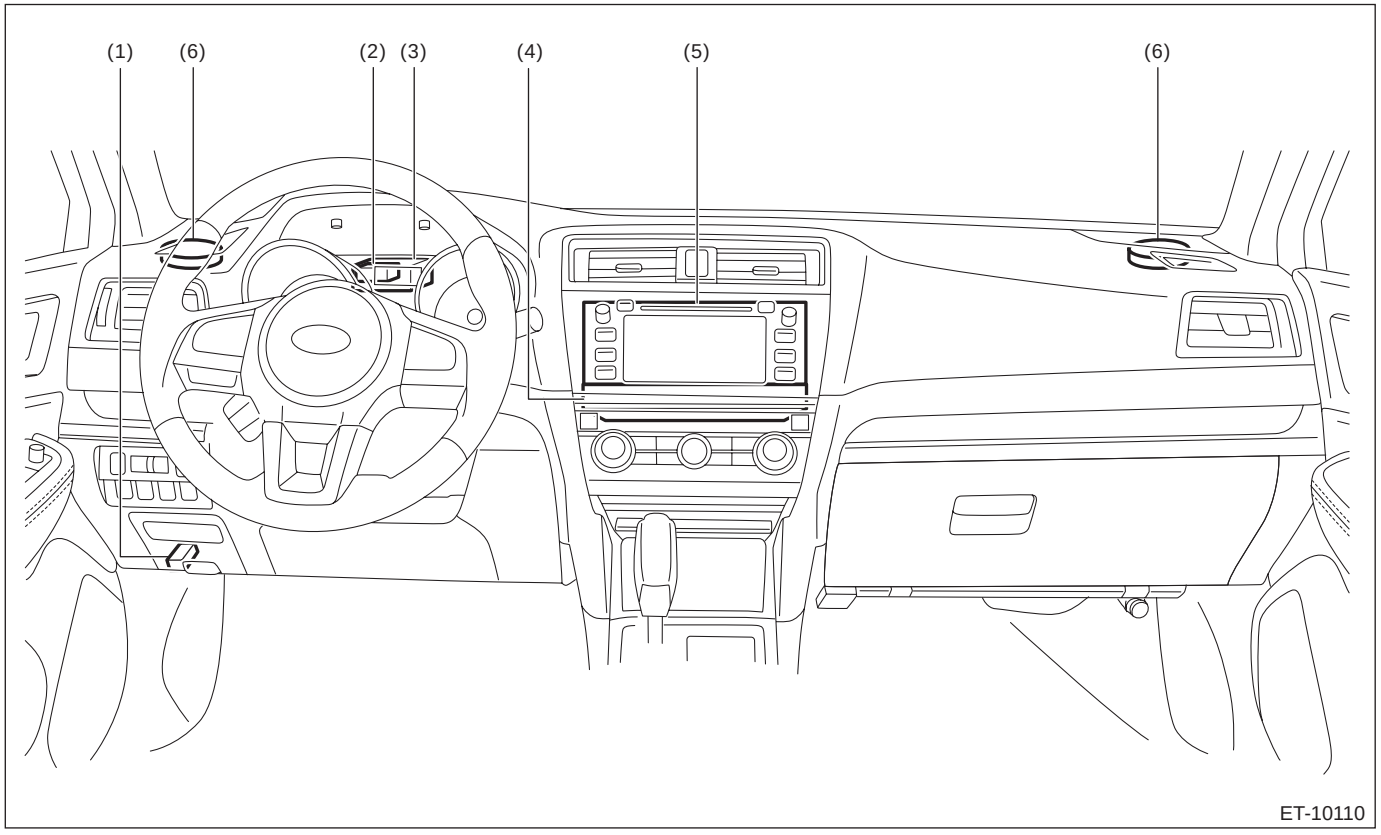

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
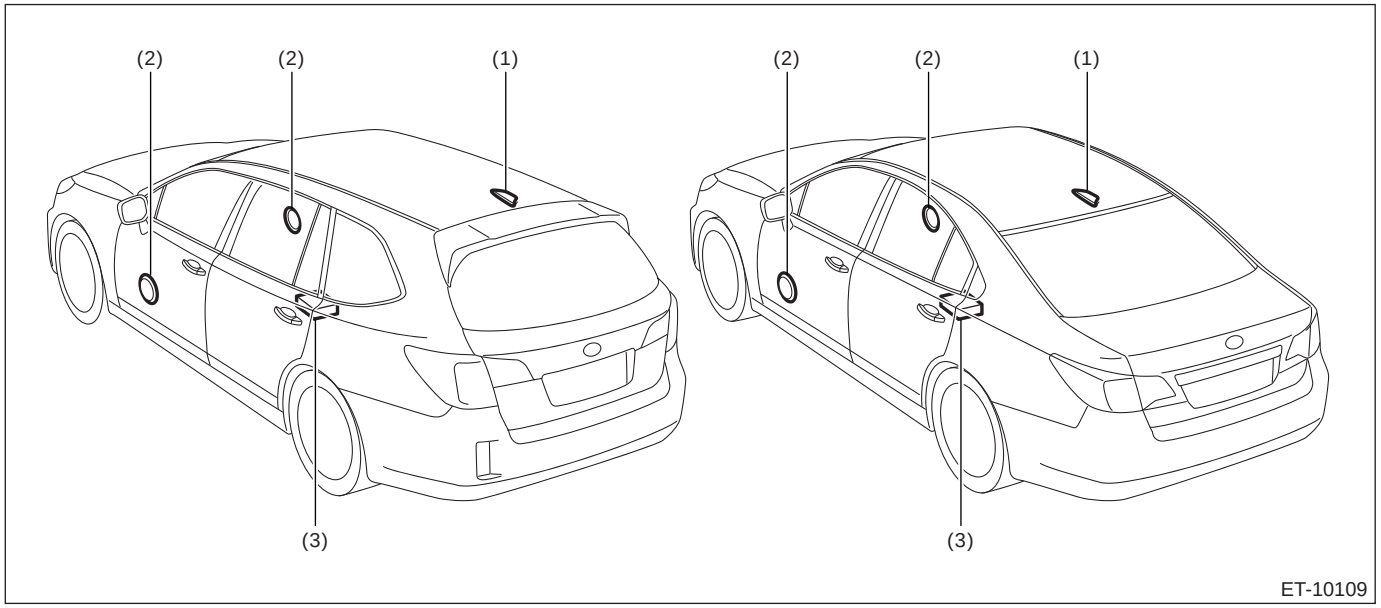
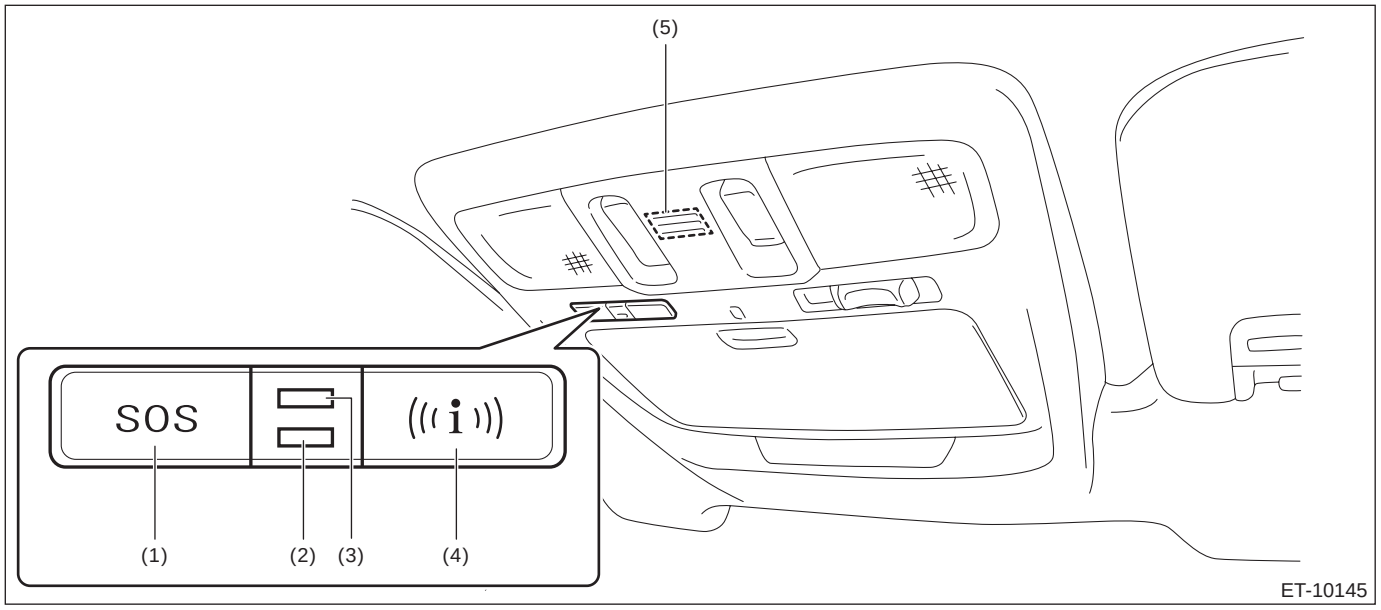
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL



TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

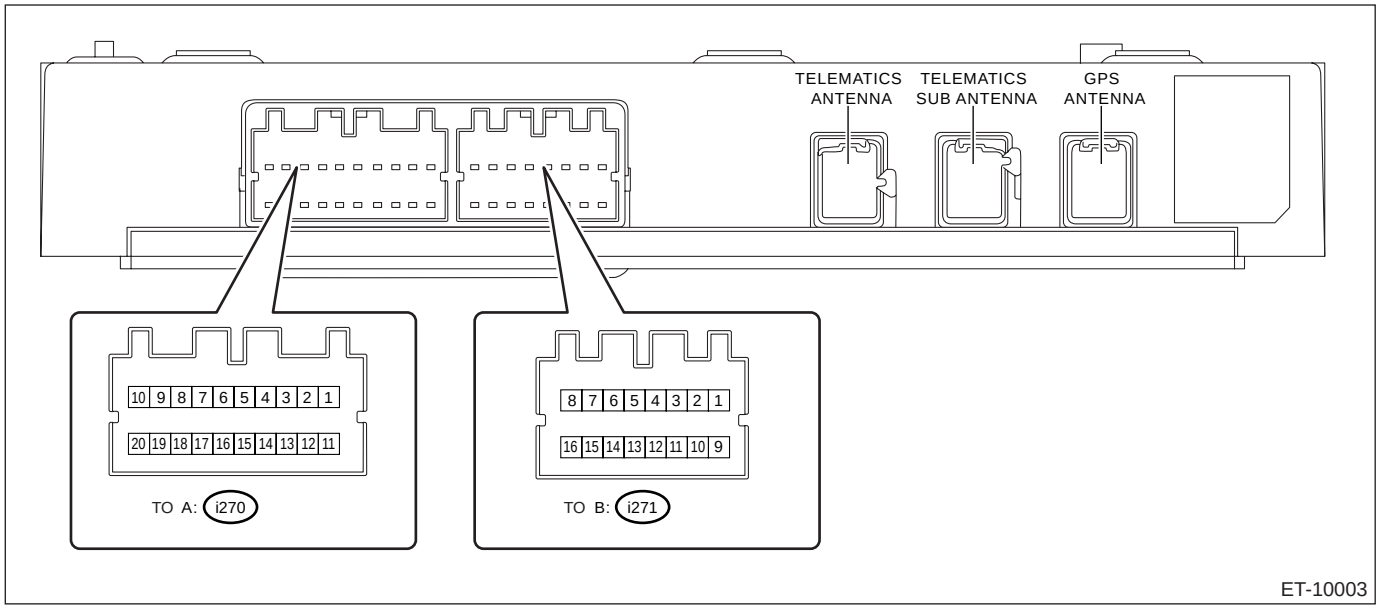
4. Electrical Component Location



A: LOCATION

(1) Data link connector
(2) GPS antenna
(3) Telematics sub antenna
(4) Data communication module (DCM)
(5) Audio or navigation
(6) Instrument panel speaker (standard and H/K specifications)

(1) Telematics antenna
(2) Door speaker (standard specification)
(3) Airbag CM



(1) SOS button
(2) RED LED
(3) GREEN LED
(4) i-button
(5) Microphone

NOTE:
For the LED operation condition, refer to "LED operation condition" in "Check List for Interview". <Ref. to TEL(diag)-4, LED ILLUMINATION STATUS LIST, CHECK, Check List for Interview.>

5. Control Module I/O Signal

B: WIRING DIAGRAM

Refer to “TELEMATICS SYSTEM” in the wiring diagram. <Ref. to WI-354, WIRING DIAGRAM, Telematics System.>

C: SYSTEM BLOCK DIAGRAM

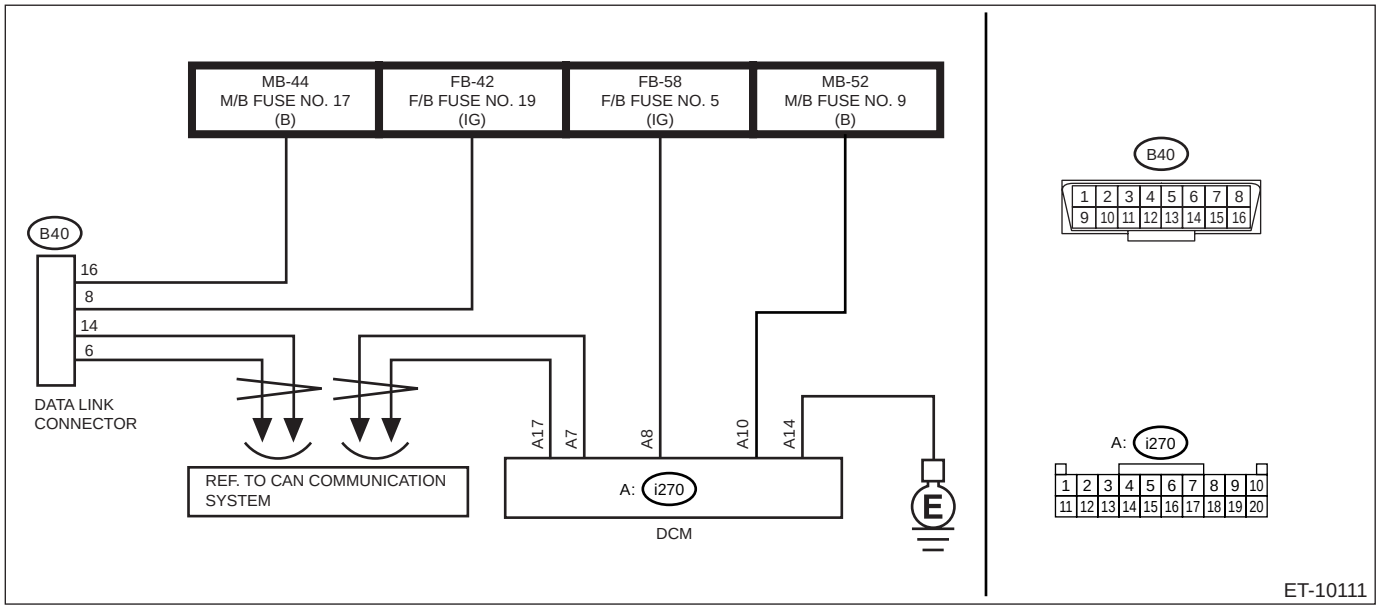
Main signals used between DCM and relevant CM

6. Subaru Select Monitor

A: OPERATION

- For detailed operation procedures, refer to “Application help”.
- When DCM cannot establish communication with Subaru Select Monitor, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to TEL(diag)-10, INSPECTION, Subaru Select Monitor.>

B: INSPECTION



1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

When communication with DCM is impossible
Detecting condition:
- Defective harness connector
- Power supply circuit malfunction
- Defective DCM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:
Communication is impossible between DCM and Subaru Select Monitor.

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>
Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Telematics <Ref. to WI-354, WIRING DIAGRAM, Telematics System.>

Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse of the DCM.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the fuse — DCM connector.

	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the DCM connector. 2) Turn the ignition switch to ON. 3) Using a tester, measure the voltage between DCM connector (harness side) and the chassis ground. ***Connector & terminal*** ***(i270) No. 8 (+) — Chassis ground (–):*** ***(i270) No. 10 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the open circuit in the wiring harness between fuse and DCM connector.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Using a tester, measure the resistance between DCM connector (harness side) and the chassis ground. ***Connector & terminal*** ***(i270) No. 14 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **4**.	Repair the open circuit in the wiring harness between fuse and DCM connector.
4	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **5**.	Perform the inspection according to the diagnosis for LAN system.
5	**CHECK TELEMATICS.** Using the Subaru Select Monitor, communicate with the telematics system.	Is communication possible?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the DCM. <Ref. to ET-51, Data Communication Module.>

7. Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Telematics» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Display	Content	Reference value	Unit

8. Diagnostic Code(s) Display

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Telematics» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to the List of Diagnostic Trouble Codes (DTC). <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>

B: LIST

DTC	Item	Note
U0073	CONTROL MODULE COMMUNICATION BUS OFF	<Ref. to TEL(diag)-21, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

B2A0F	BACKUP BATTERY DEGRADATION	<Ref. to TEL(diag)-50, DTC B2A0F BACKUP BATTERY DEGRADATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A10	BATTERY VOLTAGE HIGH	<Ref. to TEL(diag)-51, DTC B2A10 BATTERY VOLTAGE HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

9. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Telematics» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

10.Inspection Mode

A: PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode.
After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

DTC	Item	Note
U0073	CONTROL MODULE COMMUNICATION BUS OFF	<Ref. to TEL(diag)-21, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0074	CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF	<Ref. to TEL(diag)-21, DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0100	LOST COMMUNICATION WITH ECM/PCM “A”	<Ref. to TEL(diag)-21, DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	<Ref. to TEL(diag)-21, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	<Ref. to TEL(diag)-21, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0151	LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE	<Ref. to TEL(diag)-21, DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	<Ref. to TEL(diag)-21, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0401	INVALID DATA RECEIVED FROM ECM/PCM “A”	<Ref. to TEL(diag)-21, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	<Ref. to TEL(diag)-21, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0452	INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE	<Ref. to TEL(diag)-22, DTC U0452 INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A00	VIN READING	<Ref. to TEL(diag)-23, DTC B2A00 VIN READING, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A01	LTE1 ANTENNA CIRCUIT	<Ref. to TEL(diag)-24, DTC B2A01 LTE1 ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A02	LTE2 ANTENNA CIRCUIT	<Ref. to TEL(diag)-26, DTC B2A02 LTE2 ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A03	GPS ANTENNA CIRCUIT	<Ref. to TEL(diag)-27, DTC B2A03 GPS ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A07	BACKUP BATTERY CHARGE SYSTEM PERFORMANCE	<Ref. to TEL(diag)-36, DTC B2A07 BACKUP BATTERY CHARGE SYSTEM PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A08	SOS BUTTON CIRCUIT	<Ref. to TEL(diag)-37, DTC B2A08 SOS BUTTON CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A09	I-CALL BUTTON CIRCUIT	<Ref. to TEL(diag)-39, DTC B2A09 I-CALL BUTTON CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A0C	DCM INTERNAL FAULT	<Ref. to TEL(diag)-45, DTC B2A0C DCM INTERNAL FAULT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A0D	AIRBAG SIGNAL	<Ref. to TEL(diag)-46, DTC B2A0D AIRBAG SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
B2A0E	MUTE LINE CIRCUIT	<Ref. to TEL(diag)-48, DTC B2A0E MUTE LINE CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A0F	BACKUP BATTERY DEGRADATION	<Ref. to TEL(diag)-50, DTC B2A0F BACKUP BATTERY DEGRADATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A10	BATTERY VOLTAGE HIGH	<Ref. to TEL(diag)-51, DTC B2A10 BATTERY VOLTAGE HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Inspection steps:
1) Perform the Clear Memory Mode. <Ref. to TEL(diag)-17, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Turn the ignition switch to OFF.
4) Turn the ignition switch to ON, and wait for 5 seconds or more.
5) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

2. INSPECTION MODE 2

DTC	Item	Note
B2A04	MIC CIRCUIT	<Ref. to TEL(diag)-28, DTC B2A04 MIC CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A05	LEFT SPEAKER/AUDIO CIRCUIT	<Ref. to TEL(diag)-30, DTC B2A05 LEFT SPEAKER/AUDIO CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A06	RIGHT SPEAKER/AUDIO CIRCUIT	<Ref. to TEL(diag)-33, DTC B2A06 RIGHT SPEAKER/AUDIO CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A0A	RED LED CIRCUIT	<Ref. to TEL(diag)-41, DTC B2A0A RED LED CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A0B	GREEN LED CIRCUIT	<Ref. to TEL(diag)-43, DTC B2A0B GREEN LED CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Inspection steps:
1) Perform the Clear Memory Mode. <Ref. to TEL(diag)-17, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Turn the ignition switch to OFF.
4) Close all doors. (The vehicle enters CAN sleep state.)
5) Wait for approx. 1 minute. After the indicator goes off, wait for another 1 minute. (DCM standby mode)
6) Turn the ignition switch to ON, and wait for 5 seconds or more.
7) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

11.System Operation Check Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Telematics» and then select «Enter».
5) On «Select Function» display, select «Active Test».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

System operation check mode	Note
GREEN LED Lighting	GREEN LED illuminates/flashes/goes off.
GREEN LED Flashing	
GREEN LED OFF	
RED LED Lighting	RED LED illuminates/flashes/goes off.
RED LED Flashing	
RED LED OFF	
Speaker ON	Outputs to speaker.

12.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF

Detected when CAN line abnormality is detected.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

Detected when CAN data from ECM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data is not received from body integrated unit.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

F: DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE

Detected when CAN data is not received from airbag CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

G: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from combination meter does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

H: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”

Detected when CAN data from ECM is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

I: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

This is detected when CAN data from VDC is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

J: DTC U0452 INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE

Detected when CAN data from airbag CM is abnormal.

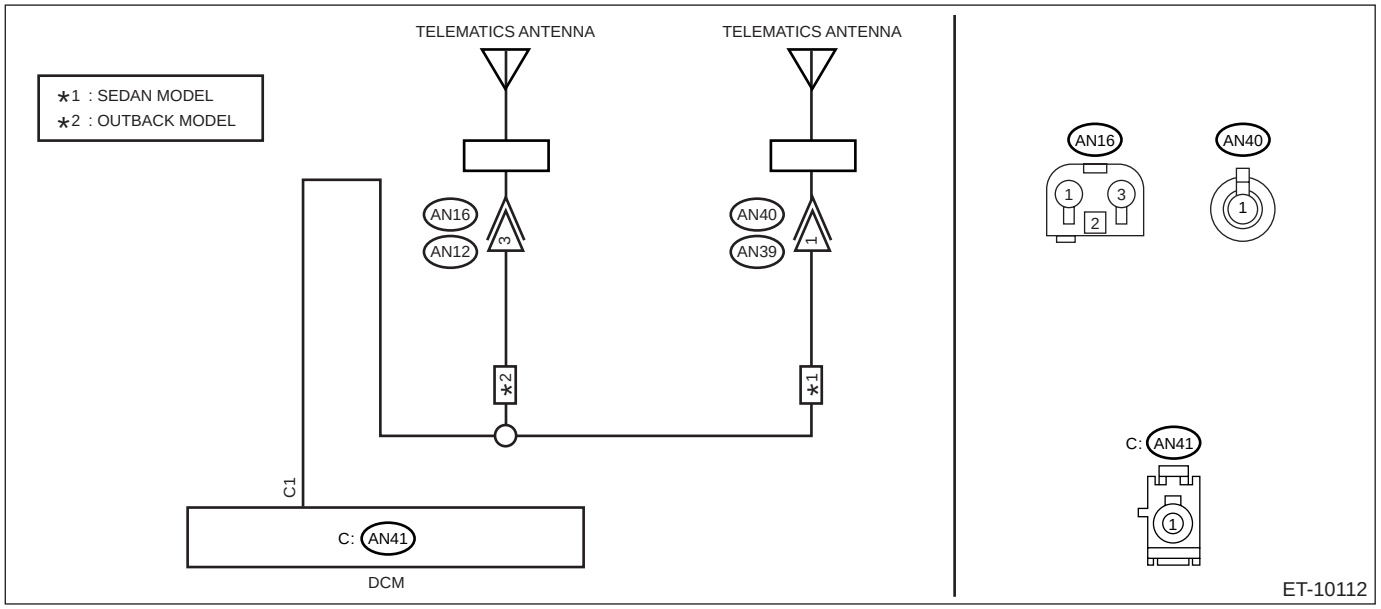
NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

K: DTC B2A00 VIN READING

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
When ignition switch is ON, VIN information (CAN) sent from ECM cannot be read.
Trouble symptom:
- Telematics function cannot be used.
- RED LED illuminates.

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A00 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK DTC.** Check DTCs in the following systems. • Telematics <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.> • Engine <Ref. to EN(H4DO)(diag)-65, Read Diagnostic Trouble Code (DTC).> <Ref. to EN(H6DO)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed? (Current malfunction)	Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK CURRENT DATA.** Confirm VIN information from the engine OBD mode. <Ref. to EN(H4DO)(diag)-45, MODE $09 (REQUEST VEHICLE INFORMATION), OPERATION, General Scan Tool.> <Ref. to EN(H6DO)(diag)-52, MODE $09 (REQUEST VEHICLE INFORMATION), OPERATION, General Scan Tool.>	Is VIN information displayed?	Replace the DCM. <Ref. to ET-51, Data Communication Module.>	Replace the ECM. <Ref. to FU(H4DO)-82, Engine Control Module (ECM).> <Ref. to FU(H6DO)-84, Engine Control Module (ECM).>



L: DTC B2A01 LTE1 ANTENNA CIRCUIT

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
Any of the followings continues for 5 seconds or more.
- LTE1 impedance is more than 1 MΩ. (Detached antenna, etc.)
- LTE1 impedance is less than 1 kΩ. (Short-circuited antenna, etc.)

Trouble symptom:
- Telematics function cannot be used.
- RED LED illuminates.

Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Telematics <Ref. to WI-354, WIRING DIAGRAM, Telematics System.>

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A01 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Step		Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the antenna connector. 3) Disconnect the DCM connector. 4) Disconnect the PRG DU connector. 5) Measure the resistance between antenna connector and DCM connector. ***Connector & terminal*** ***OUTBACK model*** ***(AN41) No. 1 — (AN12) No. 3:*** ***Sedan model*** ***(AN41) No. 1 — (AN39) No. 1:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(AN41) No. 1 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(AN41) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK ANTENNA.** Check the telematics antenna. <Ref. to ET-32, Antenna.>	Is the check result OK?	Replace the DCM. <Ref. to ET-51, Data Communication Module.>	Replace the telematics antenna. <Ref. to ET-32, Antenna.>

M: DTC B2A02 LTE2 ANTENNA CIRCUIT

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
Any of the followings continues for 5 seconds or more.
- LTE2 impedance is more than 1 MΩ. (Detached antenna, etc.)
- LTE2 impedance is less than 1 kΩ. (Short-circuited antenna, etc.)

Trouble symptom:
- Telematics function cannot be used.
- RED LED illuminates.

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A02 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK ANTENNA.** Visually check the telematics sub antenna. <Ref. to ET-32, Antenna.>	Is the check result OK?	Replace the DCM. <Ref. to ET-51, Data Communication Module.>	Replace the telematics sub antenna. <Ref. to ET-32, Antenna.>

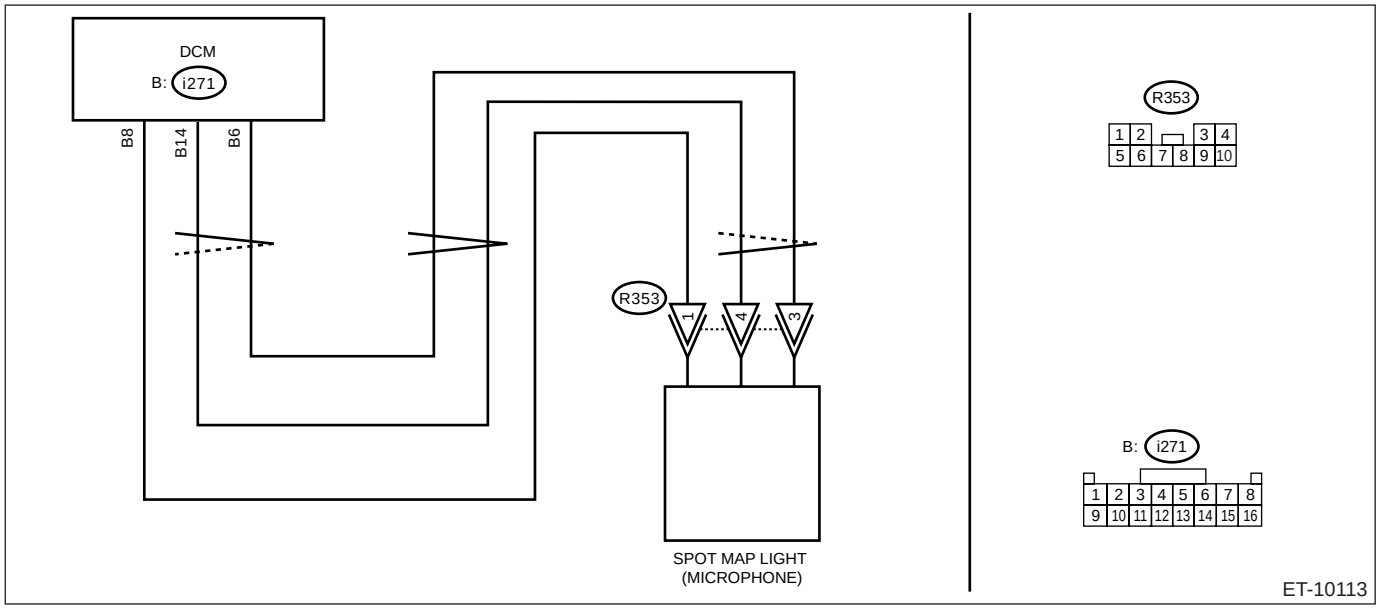
N: DTC B2A03 GPS ANTENNA CIRCUIT

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
Any of the followings continues for 5 seconds or more.
- GPS antenna impedance is more than 1 MΩ. (Detached antenna, etc.)
- GPS antenna impedance is less than 10 Ω. (Short-circuited antenna, etc.)

Trouble symptom:
- Telematics function cannot be used.
- RED LED illuminates.

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A03 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK GPS ANTENNA.** Visually check the GPS antenna. <Ref. to ET-49, GPS Antenna.>	Is the check result OK?	Replace the DCM. <Ref. to ET-51, Data Communication Module.>	Replace the GPS antenna. <Ref. to ET-49, GPS Antenna.>



O: DTC B2A04 MIC CIRCUIT

Diagnosis start condition:
When ACC is ON.
DTC detecting condition:
Any of the followings continues for 1 second or more.
- MIC impedance is more than 10 kΩ. (Detached MIC, etc.)
- MIC impedance is less than 10 Ω. (Short-circuited MIC, etc.)

Trouble symptom:
- Call function cannot be used.
- RED LED illuminates.

Wiring diagram:

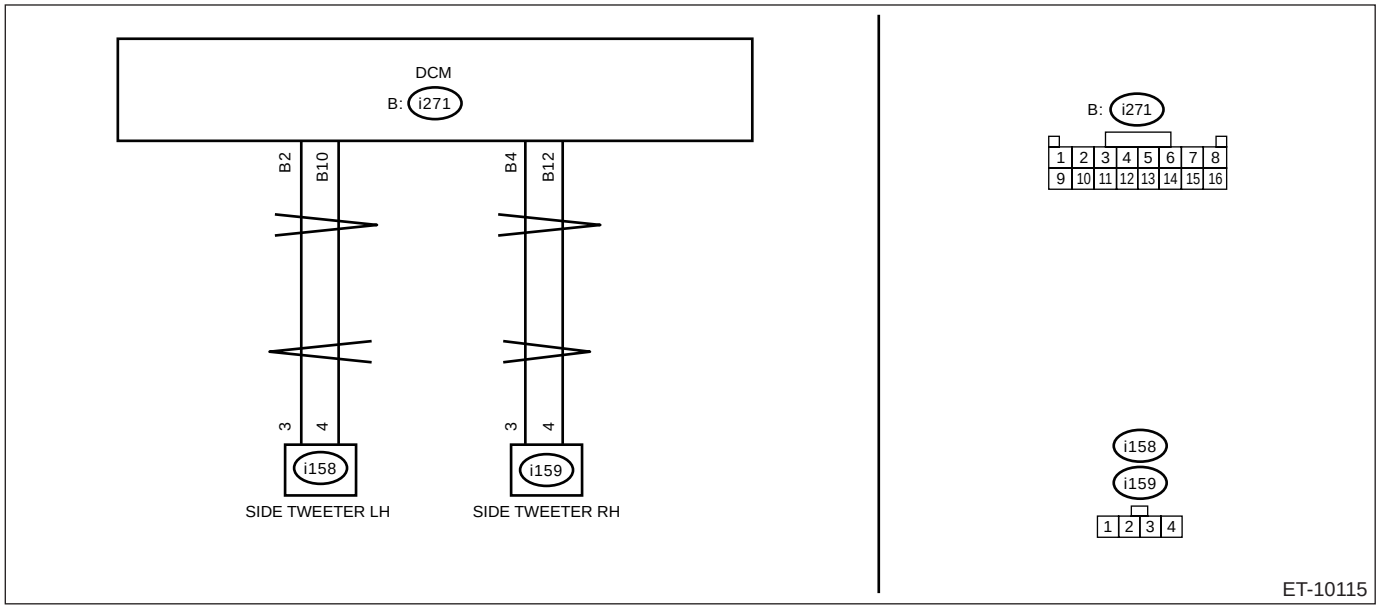
NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Telematics <Ref. to WI-354, WIRING DIAGRAM, Telematics System.>

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A04 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the microphone connector. 3) Disconnect the DCM connector. 4) Measure the resistance between microphone connector and DCM connector. ***Connector & terminal*** ***(R353) No. 1 — (i271) No. 8:*** ***(R353) No. 4 — (i271) No. 14:*** ***(R353) No. 3 — (i271) No. 6:***	Is the resistance 1 Ω or less?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i271) No. 8 — Chassis ground:*** ***(i271) No. 14 — Chassis ground:*** ***(i271) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i271) No. 8 (+) — Chassis ground (–):*** ***(i271) No. 14 (+) — Chassis ground (–):*** ***(i271) No. 6 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK MICROPHONE.** Confirm the microphone voice input.	Is the check result OK?	Replace the DCM. <Ref. to ET-51, Data Communication Module.>	Replace the microphone. <Ref. to ET-47, Microphone.>

P: DTC B2A05 LEFT SPEAKER/AUDIO CIRCUIT



Diagnosis start condition:
When ACC is ON.
DTC detecting condition:
Speaker impedance is more than 10 kΩ for 100 mS. (Detached speaker connection, etc.)
Trouble symptom:
- Call function cannot be used.
- RED LED illuminates.

Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Telematics <Ref. to WI-354, WIRING DIAGRAM, Telematics System.>
- Without audio amplifier

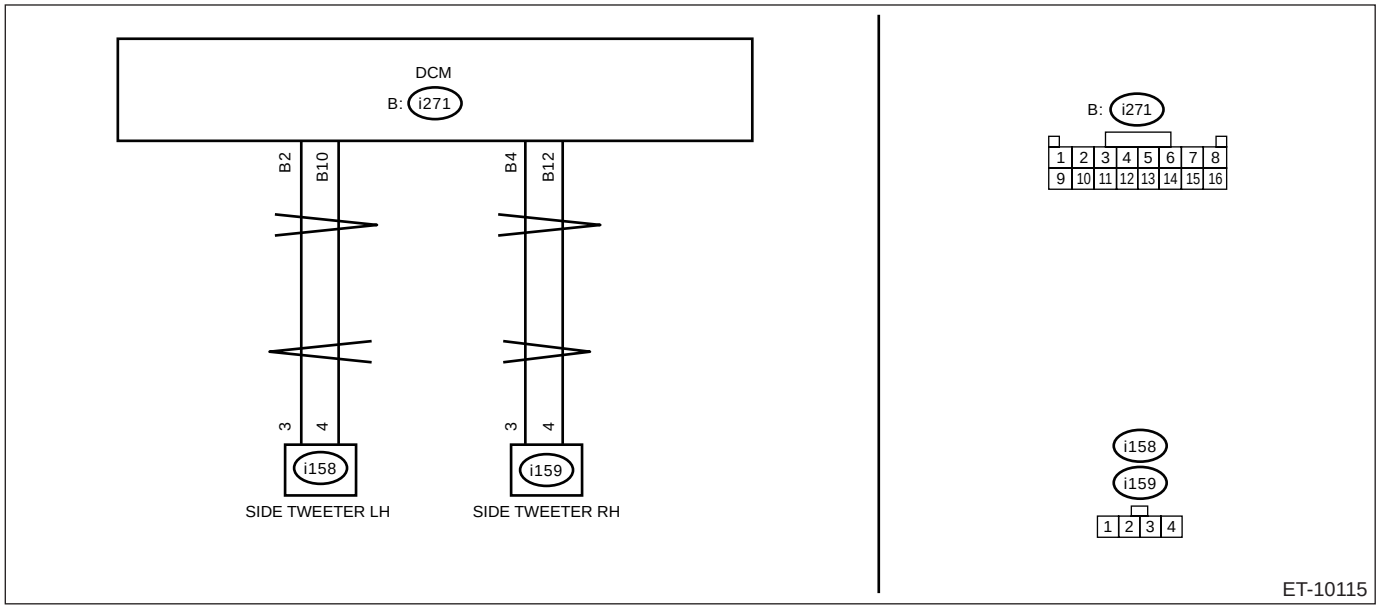
- With audio amplifier

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A05 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**PERFORM THE SYSTEM OPERATION CHECK.** Perform the System Operation Check Mode «Speaker ON». <Ref. to TEL(diag)-20, System Operation Check Mode.>	Does it sound?	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the speaker connector and tweeter connector. 3) Disconnect the DCM connector. 4) Measure the resistance between speaker connector and tweeter connector and DCM connector. ***Connector & terminal*** ***Without audio amplifier*** ***(i271) No. 2 — (D12) No. 2:*** ***(i271) No. 2 — (i158) No. 1:*** ***(i271) No. 10 — (D12) No. 1:*** ***(i271) No. 10 — (i158) No. 3:*** ***With audio amplifier*** ***(i271) No. 2 — (i158) No. 3:*** ***(i271) No. 10 — (i158) No. 4:***	Is the resistance 1 Ω or less?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i271) No. 2 — Chassis ground:*** ***(i271) No. 10 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i271) No. 2 (+) — Chassis ground (–):*** ***(i271) No. 10 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK THE SPEAKER.** Perform the inspection of speaker unit and tweeter unit. <Ref. to ET-25, Front Speaker.> <Ref. to ET-28, Rear Speaker.>	Is the check result OK?	Replace the DCM. <Ref. to ET-51, Data Communication Module.>	Replace the speaker and tweeter. <Ref. to ET-25, Front Speaker.> <Ref. to ET-28, Rear Speaker.>

Q: DTC B2A06 RIGHT SPEAKER/AUDIO CIRCUIT



Diagnosis start condition:
When ACC is ON.
DTC detecting condition:
Speaker impedance is more than 10 kΩ for 100 ms. (Detached speaker connection, etc.)
Trouble symptom:
- Call function cannot be used.
- RED LED illuminates.

Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Telematics <Ref. to WI-354, WIRING DIAGRAM, Telematics System.>
- Without audio amplifier

- With audio amplifier

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A06 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**PERFORM THE SYSTEM OPERATION CHECK.** Perform the System Operation Check Mode «Speaker ON». <Ref. to TEL(diag)-20, System Operation Check Mode.>	Does it sound?	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

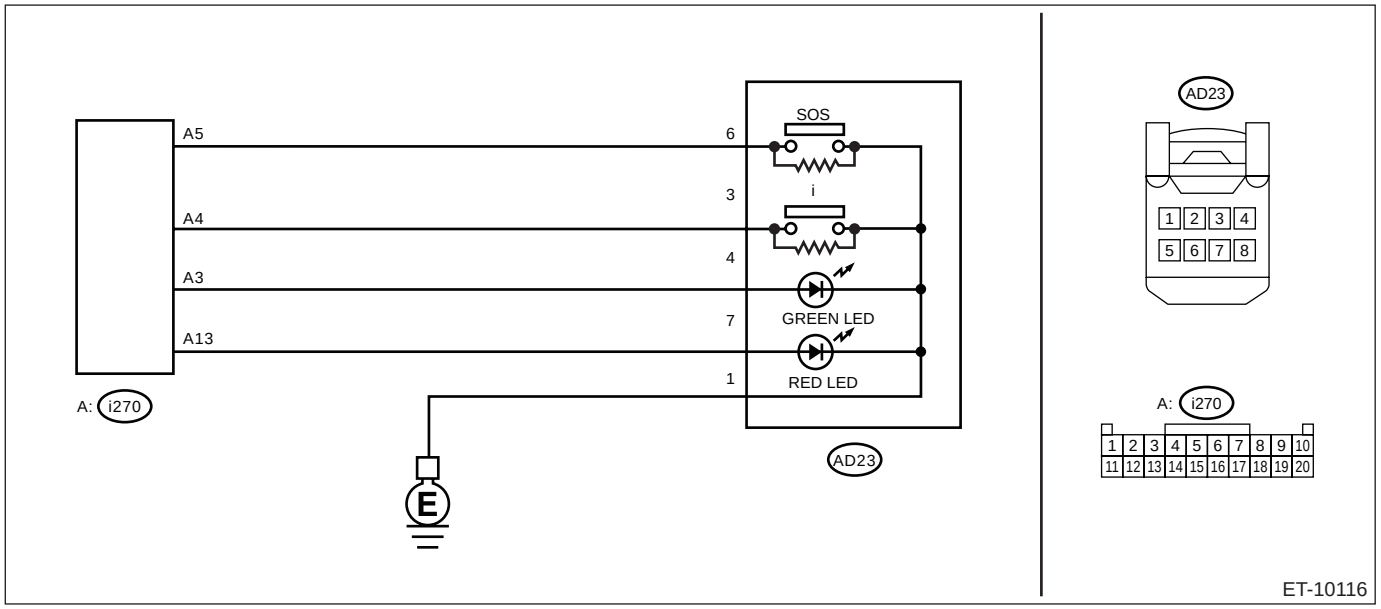
	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the speaker connector and tweeter connector. 3) Disconnect the DCM connector. 4) Measure the resistance between speaker connector and tweeter connector and DCM connector. ***Connector & terminal*** ***Without audio amplifier*** ***(i271) No. 4 — (D2) No. 2:*** ***(i271) No. 4 — (i159) No. 1:*** ***(i271) No. 12 — (D2) No. 1:*** ***(i271) No. 12 — (i159) No. 3:*** ***With audio amplifier*** ***(i271) No. 4 — (i159) No. 3:*** ***(i271) No. 12 — (i159) No. 4:***	Is the resistance 1 Ω or less?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i271) No. 4 — Chassis ground:*** ***(i271) No. 12 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i271) No. 4 (+) — Chassis ground (–):*** ***(i271) No. 12 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK THE SPEAKER.** Perform the inspection of speaker unit and tweeter unit. <Ref. to ET-25, Front Speaker.> <Ref. to ET-28, Rear Speaker.>	Is the check result OK?	Replace the DCM. <Ref. to ET-51, Data Communication Module.>	Replace the speaker and tweeter. <Ref. to ET-25, Front Speaker.> <Ref. to ET-28, Rear Speaker.>

R: DTC B2A07 BACKUP BATTERY CHARGE SYSTEM PERFORMANCE

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
Backup battery is disconnected for at least 5 seconds when the ignition switch is turned ON. (Detached back-up battery connection, etc.)
Trouble symptom:
- ACN/SOS function cannot be used when the main battery is disconnected.
- RED LED illuminates.

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A07 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK THE BACKUP BATTERY.** 1) Remove the DCM. <Ref. to ET-51, Data Communication Module.> 2) Remove the backup battery cover. 3) Disconnect the backup battery connector. 4) Measure the backup battery voltage.	Is the voltage 2.0 V or more?	Replace the DCM. <Ref. to ET-51, Data Communication Module.>	Replace the backup battery. <Ref. to ET-51, Data Communication Module.>



S: DTC B2A08 SOS BUTTON CIRCUIT

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
The following conditions occur for at least 50 ms.
- SOS button impedance is more than 10 kΩ.
- SOS button is stuck for at least 60 seconds.

Trouble symptom:
- SOS function cannot be used.
- RED LED illuminates.

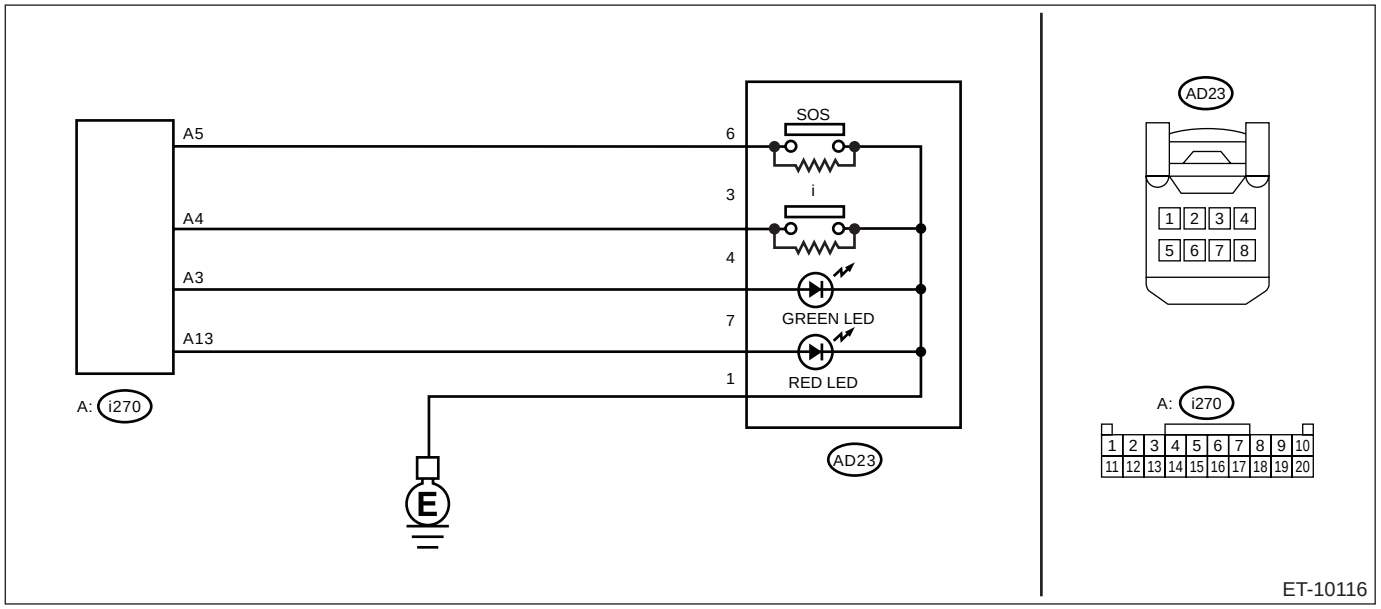
Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Telematics <Ref. to WI-354, WIRING DIAGRAM, Telematics System.>

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A08 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the telematics button connector. 3) Disconnect the DCM connector. 4) Measure the resistance between telematics button connector and DCM connector. ***Connector & terminal*** ***(i270) No. 5 — (AD23) No. 6:*** ***(AD23) No. 1 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 5 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 5 (+) — Chassis ground (–):*** ***(AD23) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK THE SOS BUTTON UNIT.** Measure the resistance of the SOS button unit. ***Terminals*** ***No. 6 — No. 1:***	Is the resistance 1 Ω or less when SOS button is ON, and 1.6 (±5%) kΩ or more when SOS button is OFF?	Replace the DCM. <Ref. to ET-51, Data Communication Module.>	Replace the telematics button. <Ref. to ET-44, Switches and Harness.>



T: DTC B2A09 I-CALL BUTTON CIRCUIT

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
The following conditions occur for at least 50 ms.
- i-button impedance is more than 10 kΩ.
- i-button is stuck for at least 60 seconds.

Trouble symptom:
- i-Call function cannot be used.
- RED LED illuminates.

Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Telematics <Ref. to WI-354, WIRING DIAGRAM, Telematics System.>

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A09 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the telematics button connector. 3) Disconnect the DCM connector. 4) Measure the resistance between telematics button connector and DCM connector. ***Connector & terminal*** ***(i270) No. 4 — (AD23) No. 3:*** ***(AD23) No. 1 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 4 (+) — Chassis ground (–):*** ***(AD23) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK THE I-BUTTON.** Measure the resistance of the i-button unit. ***Terminals*** ***No. 3 — No. 1:***	Is the resistance 1 Ω or less when i-button is ON, and 1.6 (±5%) kΩ or more when i-button is OFF?	Replace the DCM. <Ref. to ET-51, Data Communication Module.>	Replace the telematics button. <Ref. to ET-44, Switches and Harness.>

U: DTC B2A0A RED LED CIRCUIT

Diagnosis start condition:
When ACC is ON.
DTC detecting condition:
- Current in LED is less than 1 mA. (Improper LED connection, etc.)
- Current is more than 200 mA for at least 50 ms. (Short-circuited LED, etc.)

Trouble symptom:
LED does not illuminate.
Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Telematics <Ref. to WI-354, WIRING DIAGRAM, Telematics System.>

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A0A displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**PERFORM THE SYSTEM OPERATION CHECK.** Perform «RED LED Lighting» in the system operation check mode. <Ref. to TEL(diag)-20, System Operation Check Mode.>	Does it sound?	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the telematics button connector. 3) Disconnect the DCM connector. 4) Measure the resistance between telematics button connector and DCM connector. ***Connector & terminal*** ***(i270) No. 13 — (AD23) No. 7:*** ***(AD23) No. 1 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 13 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 13 (+) — Chassis ground (–):*** ***(AD23) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK THE TELEMATICS BUTTON (LED) UNIT.** Measure the resistance of the telematics button (LED) unit. ***Terminals*** ***No. 7 — No. 1:***	Is there continuity?	Replace the DCM. <Ref. to ET-51, Data Communication Module.>	Replace the telematics button. <Ref. to ET-44, Switches and Harness.>

V: DTC B2A0B GREEN LED CIRCUIT

Diagnosis start condition:
When ACC is ON.
DTC detecting condition:
- Current in LED is less than 1 mA. (Improper LED connection, etc.)
- Current is more than 200 mA for at least 50 ms. (Short-circuited LED, etc.)

Trouble symptom:
RED LED illuminates.
Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Telematics <Ref. to WI-354, WIRING DIAGRAM, Telematics System.>

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A0B displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

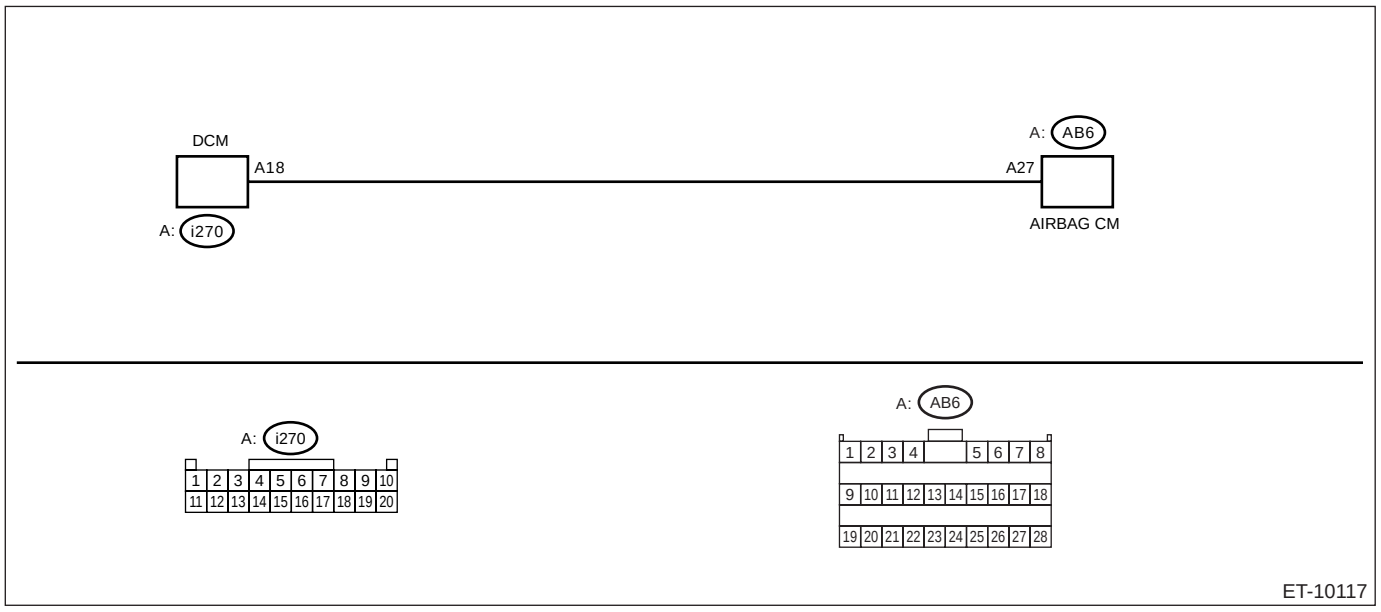
	Step	Check	Yes	No
2	**PERFORM THE SYSTEM OPERATION CHECK.** Perform «GREEN LED Lighting» in the system operation check mode. <Ref. to TEL(diag)-20, System Operation Check Mode.>	Does it sound?	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the telematics button connector. 3) Disconnect the DCM connector. 4) Measure the resistance between telematics button connector and DCM connector. ***Connector & terminal*** ***(i270) No. 3 — (AD23) No. 4:*** ***(AD23) No. 1 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 3 (+) — Chassis ground (–):*** ***(AD23) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK THE TELEMATICS BUTTON (LED) UNIT.** Measure the resistance of the telematics button (LED) unit. ***Terminals*** ***No. 4 — No. 1:***	Is there continuity?	Replace the DCM. <Ref. to ET-51, Data Communication Module.>	Replace the telematics button. <Ref. to ET-44, Switches and Harness.>

W: DTC B2A0C DCM INTERNAL FAULT

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
- Main microcomputer and communication circuit IC cannot communicate. (Defective IPC)
- SIM (communication chip) cannot be read. (Defective SIM)

Trouble symptom:
- Telematics function cannot be used.
- RED LED illuminates.

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A0C displayed? (Current malfunction)	Replace the DCM. <Ref. to ET-51, Data Communication Module.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

X: DTC B2A0D AIRBAG SIGNAL

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
Either the regular signal or collision detection signal cannot be detected from the airbag CM for at least 30 seconds.
Trouble symptom:
- ACN function does not operate.
- RED LED illuminates.

Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Telematics <Ref. to WI-354, WIRING DIAGRAM, Telematics System.>

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A0D displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK DTC.** Read DTC of the airbag. <Ref. to AB(diag)-29, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed? (Current malfunction)	Perform the diagnosis for the displayed DTCs of airbag.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the airbag CM connector. 3) Disconnect the DCM connector. 4) Measure the resistance between airbag CM connector and DCM connector. **CAUTION:** **To measure the voltage and resistance of airbag system component, be sure to use the specified test harness. <Ref. to AB(diag)-4, General Description.>** ***Connector & terminal*** ***(i270) No. 18 — (AB6) No. 27:***	Is the resistance 1 Ω or less?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 18 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 18 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Replace the DCM. <Ref. to ET-51, Data Communication Module.>	Repair or replace the short circuit of the harness.

Y: DTC B2A0E MUTE LINE CIRCUIT

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
Any of the following conditions occurs continuously for five seconds or more after the ignition switch is turned to ON when DCM does not mute the audio or navigation system.
- Current in the mute line is less than 1 mA. (Improper line connection, etc.)
- Current exceeds 50 mA. (Short-circuited line, etc.)

Trouble symptom:
- The mute function of audio or navigation system does not operate.
- RED LED illuminates.

Wiring diagram:
Telematics <Ref. to WI-354, WIRING DIAGRAM, Telematics System.>

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A0E displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the audio or navigation connector. 3) Disconnect the DCM connector. 4) Measure the resistance between audio or navigation connector and DCM connector. ***Connector & terminal*** ***(i270) No. 19 — (i272) No. 8:***	Is the resistance 1 Ω or less?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 19 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 19 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Replace the DCM. <Ref. to ET-51, Data Communication Module.>	Repair or replace the short circuit of the harness.

Z: DTC B2A0F BACKUP BATTERY DEGRADATION

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
The voltage does not reach 4.1 V after the backup battery is charged for 7 hours in total (not continuously).
Trouble symptom:
RED LED illuminates.

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A0F displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK THE BACKUP BATTERY.** Check the backup battery unit. <Ref. to ET-51, Data Communication Module.>	Is the check result OK?	Replace the DCM. <Ref. to ET-51, Data Communication Module.>	Replace the backup battery. <Ref. to ET-51, Data Communication Module.>

AA:DTC B2A10 BATTERY VOLTAGE HIGH

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
DCM battery power supply input of 16 V or more continues for 5 seconds.
Trouble symptom:
RED LED illuminates.

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A10 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK CURRENT DATA.** Check the current data «Battery Voltage» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is «Battery Voltage» OK?	Replace the DCM. <Ref. to ET-51, Data Communication Module.>	Go to step **3**.
3	**CHECK BATTERY.** Check the battery unit. <Ref. to SC(H4DO)-60, INSPECTION, Battery.> <Ref. to SC(H6DO)-2, SPECIFICATION, General Description.>	Is the check result OK?	Replace the DCM. <Ref. to ET-51, Data Communication Module.>	Replace the battery. <Ref. to SC(H4DO)-58, Battery.> <Ref. to SC(H6DO)-2, General Description.>

13.Diagnostics with Phenomenon

A: LIST

No.	Symptoms	Reference
1	The system does not notify the Telematics Service Provider Center automatically after collision.	<Ref. to TEL(diag)-53, THE SYSTEM DOES NOT NOTIFY THE TELEMATICS SERVICE PROVIDER CENTER AUTOMATICALLY AFTER COLLISION, INSPECTION, Diagnostics with Phenomenon.>
2	The system does not notify the center even if the SOS button is pressed.	<Ref. to TEL(diag)-55, THE SYSTEM DOES NOT NOTIFY THE CENTER EVEN IF THE SOS BUTTON IS PRESSED, INSPECTION, Diagnostics with Phenomenon.>
3	The system places an SOS call unintentionally during driving.	<Ref. to TEL(diag)-56, THE SYSTEM PLACES AN SOS CALL UNINTENTIONALLY DURING DRIVING, INSPECTION, Diagnostics with Phenomenon.>
4	The system places an I-CALL unintentionally during driving.	<Ref. to TEL(diag)-56, THE SYSTEM PLACES AN I-CALL UNINTENTIONALLY DURING DRIVING, INSPECTION, Diagnostics with Phenomenon.>
5	The system does not notify the center even if the i-button is pressed upon vehicle malfunction.	<Ref. to TEL(diag)-56, THE SYSTEM DOES NOT NOTIFY THE CENTER EVEN IF THE I-BUTTON IS PRESSED UPON VEHICLE MALFUNCTION, INSPECTION, Diagnostics with Phenomenon.>
6	Remote Vehicle Locator cannot locate the vehicle.	<Ref. to TEL(diag)-57, REMOTE VEHICLE LOCATOR CANNOT LOCATE THE VEHICLE, INSPECTION, Diagnostics with Phenomenon.>
7	Remote Vehicle Locator indicates an incorrect location and therefore the vehicle cannot be located.	<Ref. to TEL(diag)-58, REMOTE VEHICLE LOCATOR INDICATES AN INCORRECT LOCATION FOR THE VEHICLE, INSPECTION, Diagnostics with Phenomenon.>
8	Remote Door Lock does not lock the doors of the vehicle.	<Ref. to TEL(diag)-59, REMOTE DOOR LOCK DOES NOT LOCK THE DOORS OF THE VEHICLE, INSPECTION, Diagnostics with Phenomenon.>
9	The doors lock unintentionally.	<Ref. to TEL(diag)-61, THE DOORS LOCK UNINTENTIONALLY, INSPECTION, Diagnostics with Phenomenon.>
10	The doors unlock unintentionally.	<Ref. to TEL(diag)-61, THE DOORS UNLOCK UNINTENTIONALLY, INSPECTION, Diagnostics with Phenomenon.>
11	Remote Horn & HAZARD Lights do not operate upon request.	<Ref. to TEL(diag)-62, REMOTE HORN & HAZARD LIGHTS DO NOT OPERATE UPON REQUEST, INSPECTION, Diagnostics with Phenomenon.>
12	When the Vehicle Security Alarm is activated, notification is not sent.	<Ref. to TEL(diag)-63, WHEN THE VEHICLE SECURITY ALARM IS ACTIVATED, NOTIFICATION IS NOT SENT, INSPECTION, Diagnostics with Phenomenon.>
13	When a Malfunction indicator light/warning light is lit, notification is not sent.	<Ref. to TEL(diag)-65, WHEN A MALFUNCTION INDICATOR LIGHT/WARNING LIGHT IS LIT, NOTIFICATION IS NOT SENT, INSPECTION, Diagnostics with Phenomenon.>
14	Maintenance Notifications are not sent.	<Ref. to TEL(diag)-65, MAINTENANCE NOTIFICATIONS ARE NOT SENT, INSPECTION, Diagnostics with Phenomenon.>
15	The LED does not display the status. (LED malfunction)	<Ref. to TEL(diag)-66, THE LED DOES NOT DISPLAY THE STATUS. (LED MALFUNCTION), INSPECTION, Diagnostics with Phenomenon.>
16	Phone conversation is not possible. (The microphone does not respond to a voice. No sound is heard from the speaker.)	<Ref. to TEL(diag)-68, PHONE CONVERSATION IS NOT POSSIBLE. (THE MICROPHONE DOES NOT RESPOND TO A VOICE. NO SOUND IS HEARD FROM THE SPEAKER.), INSPECTION, Diagnostics with Phenomenon.>

B: INSPECTION

1. THE SYSTEM DOES NOT NOTIFY THE TELEMATICS SERVICE PROVIDER CENTER AUTOMATICALLY AFTER COLLISION

NOTE:
Perform the diagnostics for "Phone conversation is not possible. (The microphone does not respond to a voice. No sound is heard from the speaker.)". <Ref. to TEL(diag)-68, PHONE CONVERSATION IS NOT POSSIBLE. (THE MICROPHONE DOES NOT RESPOND TO A VOICE. NO SOUND IS HEARD FROM THE SPEAKER.), INSPECTION, Diagnostics with Phenomenon.>

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK COLLISION TYPE.** Check the type of collision of the vehicle.	Is it a frontal collision, or a side collision, or a rollover?	Go to step **2**.	For rear collision, Go to step **4**.
2	**CHECK AIRBAG WARNING LIGHT.** Check the airbag warning light.	Does the airbag warning light illuminate at all times?	Go to step **3**.	There is no malfunction in the airbag system. Since the airbag CM does not transmit the collision detection signal in the event of a minor collision, it is normal that the automatic notification function does not work.
3	**CHECK DTCS.** Read DTC of the airbag. <Ref. to AB(diag)-29, Read Diagnostic Trouble Code (DTC).>	Is DTC any of «Front Impact Deployment», «Side Impact Deployment» or «Rollover Ignition»?	There is no malfunction in the airbag system. Go to step **7**.	Perform the diagnosis for the airbag system. <Ref. to AB(diag)-2, Basic Diagnostic Procedure.>
4	**CHECK COLLISION DETECTION SIGNAL RECEPTION STATUS.** Display the current data «Timestamp at Emergency Notification Event» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is a time stamp recorded?	Go to step **7**. (Rear collision detection was activated)	Go to step **5**.
5	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>	Go to step **6**.
6	**CHECK AIRBAG WARNING LIGHT.** Check the airbag warning light.	Does the airbag warning light illuminate at all times?	Perform the diagnosis for the airbag system. <Ref. to AB(diag)-2, Basic Diagnostic Procedure.>	There is no malfunction in the airbag system. Since the airbag CM does not transmit the collision detection signal in the event of a minor collision, it is normal that the automatic notification function does not work.

	Step	Check	Yes	No
7	**CHECK THE SUBSCRIPTION STATUS.** Display the current data «ACN Active» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the data «TRUE»?	Go to step **8**.	The user does not have a service subscription; therefore, it is not a failure.
8	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>	Go to step **9**.
9	**CHECK THE RECEIVED SIGNAL STRENGTH AT THE TIME OF THE ACCIDENT. (CHECK THE CURRENT DATA.).** Display the current data «Signal Strength at Emergency Notification Event» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the data 26% or more?	Go to step **11**.	Go to step **10**.
10	**CHECK THE AT&T CELLULAR COVERAGE AREA.** 1) Check whether the collision occurred within the cellular coverage area. 2) Display the current data «GPS Data at ACN Event» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the displayed positional data located within the AT&T coverage area? (For the AT&T coverage area, refer to the AT&T website. This system operates on 3G and 4G mobile communication technology.)	Go to step **11**.	The collision occurred outside the cellular coverage area.
11	**CHECK THE COMMUNICATION STATUS AT THE TIME OF THE ACCIDENT. (CHECK THE CURRENT DATA.).** Display the current data «Call Status at Emergency Notification Event» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	If the data shows «Call Started» or «Call Connected»; Go to A. If the data shows «Call Not Started»; Go to B. If the data shows «No Network Service»; Go to C. If the data shows «Call Ended by SXM»; Go to D.	A: Go to step **12**. B: Replace the DCM. <Ref. to ET-51, Data Communication Module.> C: Replace the antenna. <Ref. to ET-32, Antenna.> D: The connection ended due to a server-side reason; therefore, there is no failure on the vehicle.	—
12	**CHECK THE TIME OF THE ACCIDENT. (CHECK THE CURRENT DATA.).** Display the current data «Timestamp at Emergency Notification Event» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.> NOTE: The time stamp is displayed in the Coordinated Universal Time (UTC), which is different from actual time at each location. Therefore, time difference needs to be corrected for use. Example: [12/22 01:30 in UTC time] is corrected as [12/21 20:30 in New York time].	Does the time of the accident match with the data?	Replace the antenna. <Ref. to ET-32, Antenna.>	Replace the DCM. <Ref. to ET-51, Data Communication Module.>

2. THE SYSTEM DOES NOT NOTIFY THE CENTER EVEN IF THE SOS BUTTON IS PRESSED

NOTE:
Perform the diagnostics for "Phone conversation is not possible. (The microphone does not respond to a voice. No sound is heard from the speaker.)". <Ref. to TEL(diag)-68, PHONE CONVERSATION IS NOT POSSIBLE. (THE MICROPHONE DOES NOT RESPOND TO A VOICE. NO SOUND IS HEARD FROM THE SPEAKER.), INSPECTION, Diagnostics with Phenomenon.>

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK THE SUBSCRIPTION STATUS.** Display the current data «SOS Active» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the data «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.
2	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>	Go to step **3**.
3	**CHECK THE RECEIVED SIGNAL STRENGTH WHEN THE SOS BUTTON WAS PRESSED. (CHECK THE CURRENT DATA.).** Display the current data «RSSI at SOS/ICALL(1)» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the data 26% or more?	Go to step **5**.	Go to step **4**.
4	**CHECK THE AT&T CELLULAR COVERAGE AREA.** 1) Check whether the SOS button was pressed within the cellular coverage area. 2) Display the current data «GPS Data at Time of Button Push(1)» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the displayed positional data located within the AT&T coverage area? (For the AT&T coverage area, refer to the AT&T website. This system operates on 3G and 4G mobile communication technology.)	Go to step **5**.	The SOS button was pressed outside the cellular coverage area.
5	**CHECK THE COMMUNICATION STATUS OF WHEN THE SOS BUTTON WAS PRESSED. (CHECK THE CURRENT DATA.).** Display the current data «Call status at SOS/ICALL Event(1)» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	If the data shows «Call Started» or «Call Connected»; Go to A. If the data shows «Call Not Started»; Go to B. If the data shows «No Network Service»; Go to C. If the data shows «Call Ended by SXM»; Go to D.	A: Go to step **6**. B: Go to step **7**. C: Replace the antenna. <Ref. to ET-32, Antenna.> D: The connection ended due to a server-side reason; therefore, there is no failure on the vehicle.	—
6	**CHECK THE TIME OF WHEN THE SOS BUTTON WAS PRESSED. (CHECK THE CURRENT DATA.).** Display the current data «Timestamp at Time of Button Push(1)» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.> NOTE: The time stamp is displayed in the Coordinated Universal Time (UTC), which is different from actual time at each location. Therefore, time difference needs to be corrected for use. Example: [12/22 01:30 in UTC time] is corrected as [12/21 20:30 in New York time].	Does the time of the SOS button operation match with the data?	Go to step **7**.	Replace the DCM. <Ref. to ET-51, Data Communication Module.>

	Step	Check	Yes	No
7	**CHECK THE SOS BUTTON.** Check the SOS button. <Ref. to TEL(diag)-37, DTC B2A08 SOS BUTTON CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Is the check result OK?	Replace the DCM. <Ref. to ET-51, Data Communication Module.>	Replace the SOS button. <Ref. to ET-44, Switches and Harness.>

3. THE SYSTEM PLACES AN SOS CALL UNINTENTIONALLY DURING DRIVING

	Step	Check	Yes	No
1	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>	Check the SOS button. <Ref. to ET-44, Switches and Harness.>

4. THE SYSTEM PLACES AN I-CALL UNINTENTIONALLY DURING DRIVING

	Step	Check	Yes	No
1	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>	Check the i-button. <Ref. to ET-44, Switches and Harness.>

5. THE SYSTEM DOES NOT NOTIFY THE CENTER EVEN IF THE I-BUTTON IS PRESSED UPON VEHICLE MALFUNCTION

NOTE:
Perform the diagnostics for "Phone conversation is not possible. (The microphone does not respond to a voice. No sound is heard from the speaker.)".

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK THE SUBSCRIPTION STATUS.** Display the current data «ICALL Active» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the data «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.
2	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>	Go to step **3**.
3	**CHECK THE RECEIVED SIGNAL STRENGTH WHEN THE I-BUTTON WAS PRESSED. (CHECK THE CURRENT DATA.).** Display the current data «RSSI at SOS/ICALL(1)» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the data 26% or more?	Go to step **5**.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK THE AT&T CELLULAR COVERAGE AREA.** 1) Check whether the i-button was pressed within the cellular coverage area. 2) Display the current data «GPS Data at Time of Button Push(1)» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the displayed positional data located within the AT&T coverage area? (For the AT&T coverage area, refer to the AT&T website. This system operates on 3G and 4G mobile communication technology.)	Go to step **5**.	The i-button was pressed outside the cellular coverage area.
5	**CHECK THE COMMUNICATION STATUS OF WHEN THE I-BUTTON WAS PRESSED. (CHECK THE CURRENT DATA.).** Display the current data «Call status at SOS/ ICALL Event(1)» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	If the data shows «Call Started» or «Call Connected»; Go to A. If the data shows «Call Not Started»; Go to B. If the data shows «No Network Service»; Go to C. If the data shows «Call Ended by SXM»; Go to D.	A: Go to step **6**. B: Go to step **7**. C: Replace the antenna. <Ref. to ET-32, Antenna.> D: The connection ended due to a server-side reason; therefore, there is no failure on the vehicle.	—
6	**CHECK THE COMMUNICATION STATUS OF WHEN THE I-BUTTON WAS PRESSED. (CHECK THE CURRENT DATA.).** Display the current data «Timestamp at Time of Button Push(1)» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.> NOTE: The time stamp is displayed in the Coordinated Universal Time (UTC), which is different from actual time at each location. Therefore, time difference needs to be corrected for use. Example: [12/22 01:30 in UTC time] is corrected as [12/21 20:30 in New York time].	Does the time of the i-button operation match with the data?	Go to step **7**.	Replace the DCM. <Ref. to ET-51, Data Communication Module.>
7	**CHECK THE I-BUTTON.** Check the i-button. <Ref. to TEL(diag)-39, DTC B2A09 I-CALL BUTTON CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Is the check result OK?	Replace the DCM. <Ref. to ET-51, Data Communication Module.>	Replace the i-button. <Ref. to ET-44, Switches and Harness.>

6. REMOTE VEHICLE LOCATOR CANNOT LOCATE THE VEHICLE

	Step	Check	Yes	No
1	**CHECK THE SUBSCRIPTION STATUS.** Display the current data «Account Status» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the data «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.
2	**CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.** Check that the user's smartphone can be connected to the Internet.	Can it be connected to the Internet?	Go to step **3**.	The user's smartphone or the Internet environment has a problem.
3	**CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.** Check that the user's smartphone can display the current location.	Is the current location displayed?	Currently no failure is found. If the current location is not displayed, the user's Internet environment (radio waves, etc.) possibly had a problem.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK THE CURRENT RECEIVED SIGNAL STRENGTH. (CHECK THE CURRENT DATA.).** Display the current data «Signal Strength» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the data 26% or more?	Go to step **6**.	Go to step **5**.
5	**CHECK THE AT&T CELLULAR COVERAGE AREA.** Ask the user where he/she operated the remote control.	Is the location of the remote control operation located within the AT&T coverage area? (For the AT&T coverage area, refer to the AT&T website. This system operates on 3G and 4G mobile communication technology.)	Go to step **6**.	The location of the remote control operation was outside the cellular coverage area.
6	**CHECK DTCS.** Check DTCs in the following systems. • Body control <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).> • Telematics <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs of body control, or of telematics. <Ref. to BC(diag)-42, LIST, List of Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

7. REMOTE VEHICLE LOCATOR INDICATES AN INCORRECT LOCATION FOR THE VEHICLE

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.** Check that the user's smartphone can display the current location.	Can the current location be displayed correctly? (Is the deviation range 100 m (328 ft) or less?)	Currently no failure is found. When the user had a problem, there was a failure with the GPS antenna reception environment, etc.	Go to step **3**.
3	**CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.** Check again that the user's smartphone can display the current location in a place where the sky is open.	Can the current location be displayed correctly? (Is the deviation range 100 m (328 ft) or less?)	Currently no failure is found. When the user had a problem, there was a failure with the GPS antenna reception environment, etc.	Replace the DCM. <Ref. to ET-51, Data Communication Module.>

8. REMOTE DOOR LOCK DOES NOT LOCK THE DOORS OF THE VEHICLE

	Step	Check	Yes	No
1	**CHECK THE SUBSCRIPTION STATUS.** Display the current data «Account Status» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the data «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.
2	**CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.** Check that the user's smartphone can be connected to the Internet.	Can it be connected to the Internet?	Go to step **3**.	The user's smartphone or the Internet environment has a problem.
3	**CHECK THE DOOR LOCK FUNCTION.** Check that the user' smartphone can lock the doors in the current situation.	Are the doors locked?	Currently no failure is found. When the user had a problem, there was a failure with the Internet connection environment, etc.	Go to step **4**.
4	**CHECK THE CURRENT RECEIVED SIGNAL STRENGTH. (CHECK THE CURRENT DATA.).** Display the current data «Signal Strength» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the data 26% or more?	Go to step **6**.	Go to step **5**.
5	**CHECK THE AT&T CELLULAR COVERAGE AREA.** Ask the user where he/she operated the remote control.	Is the location of the remote control operation located within the AT&T coverage area? (For the AT&T coverage area, refer to the AT&T website. This system operates on 3G and 4G mobile communication technology.)	Go to step **6**.	The location of the remote control operation was outside the cellular coverage area.

	Step	Check	Yes	No
6	**CHECK THE DOOR LOCK FUNCTION.** Check that the keyless transmitter can lock the doors of the vehicle.	Are the doors locked?	Go to step **7**.	Perform the diagnosis according to the inspection for the door lock control system. <Ref. to SL-11, INSPECTION, Door Lock Control System.>
7	**CHECK DTCS.** Check DTCs in the following systems. • Body control <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).> • Telematics <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs of body control, or of telematics. <Ref. to BC(diag)-42, LIST, List of Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

9. THE DOORS LOCK UNINTENTIONALLY

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check the door lock switch. <Ref. to SL-11, INSPECTION, Door Lock Control System.>	Is the check result OK?	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.	Perform the diagnosis according to the inspection for the door lock switch. <Ref. to SL-11, INSPECTION, Door Lock Control System.>

10.THE DOORS UNLOCK UNINTENTIONALLY

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check the door unlock switch. <Ref. to SL-11, INSPECTION, Door Lock Control System.>	Is the check result OK?	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.	Perform the diagnosis according to the inspection for the door lock switch. <Ref. to SL-11, INSPECTION, Door Lock Control System.>

11.REMOTE HORN & HAZARD LIGHTS DO NOT OPERATE UPON REQUEST

	Step	Check	Yes	No
1	**CHECK THE SUBSCRIPTION STATUS.** Display the current data «Account Status» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Does the data display «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.
2	**CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.** Check that the user's smartphone can be connected to the Internet.	Can it be connected to the Internet?	Go to step **3**.	The user's smartphone or the Internet environment has a problem.
3	**CHECK THE HORN AND HAZARD LIGHT FUNCTIONS.** Check that the horn and hazard light currently operate by the user's smartphone.	Do the horn and hazard light operate?	Currently no failure is found. When the user had a problem, there was a failure with the Internet connection environment, etc.	Go to step **4**.
4	**CHECK THE CURRENT RECEIVED SIGNAL STRENGTH. (CHECK THE CURRENT DATA.).** Display the current data «Signal Strength» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Does the data indicate 26% or more?	Go to step **6**.	Go to step **5**.
5	**CHECK THE AT&T CELLULAR COVERAGE AREA.** Ask the user where he/she operated the remote control.	Is the location of the remote control operation located within the AT&T coverage area? (For the AT&T coverage area, refer to the AT&T website. This system operates on 3G and 4G mobile communication technology.)	Go to step **6**.	The location of the remote control operation was outside the cellular coverage area.
6	**CHECK THE HORN AND HAZARD LIGHT FUNCTIONS.** Check that the horn and hazard light operate by the keyless transmitter. (Press the lock button three times.)	Do the horn and hazard light operate?	Go to step **8**.	Go to step **7**.
7	**CHECK HORN OPERATION.** Activate the function check «Horn Output» of the body integrated unit. <Ref. to BC(diag)-41, Function Check.>	Does the horn sound?	Check the keyless transmitter. <Ref. to SL-86, Keyless Transmitter.><Ref. to SL-88, Access Key.>	Check the horn circuit. <Ref. to WI-252, Horn System.>

	Step	Check	Yes	No
8	**CHECK DTCS.** Check DTCs in the following systems. • Body control <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).> • Telematics <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs of body control, or of telematics. <Ref. to BC(diag)-42, LIST, List of Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

12.WHEN THE VEHICLE SECURITY ALARM IS ACTIVATED, NOTIFICATION IS NOT SENT

	Step	Check	Yes	No
1	**CHECK THE SUBSCRIPTION STATUS.** Display the current data «Account Status» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Does the data display «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.
2	**CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.** Check that the user's smartphone can be connected to the Internet.	Can it be connected to the Internet?	Go to step **3**.	The user's smartphone or the Internet environment has a problem.
3	**CHECK THE SECURITY ALERT SYSTEM.** Operate the security alert system.	Does it operate?	Go to step **4**.	Check the security alert system. <Ref. to SL-28, INSPECTION, Security System.>
4	**CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.** Check that a notification is sent to the user's smartphone after the security alert is activated.	Does the smartphone receive a notification?	Currently no failure is found.	Go to step **5**.
5	**CHECK THE CURRENT RECEIVED SIGNAL STRENGTH. (CHECK THE CURRENT DATA.).** Display the current data «Signal Strength» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Does the data indicate 26% or more?	Go to step **7**.	Go to step **6**.

	Step	Check	Yes	No
6	**CHECK THE AT&T CELLULAR COVERAGE AREA.** Ask the user where he/she operated the remote control.	Is the location of the remote control operation located within the AT&T coverage area? (For the AT&T coverage area, refer to the AT&T website. This system operates on 3G and 4G mobile communication technology.)	Go to step **7**.	The location of the remote control operation was outside the cellular coverage area.
7	**CHECK DTCS.** Check DTCs in the following systems. • Body control <Ref. to BC(diag)-18, Read Diagnostic Trouble Code (DTC).> • Telematics <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs of body control, or of telematics. <Ref. to BC(diag)-42, LIST, List of Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

13.WHEN A MALFUNCTION INDICATOR LIGHT/WARNING LIGHT IS LIT, NOTIFICATION IS NOT SENT

	Step	Check	Yes	No
1	**CHECK THE SUBSCRIPTION STATUS.** Display the current data «Diagnostic Alert Active» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Does the data display «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.
2	**CHECK WARNING LIGHT.** Check if the warning light illuminates.	Does it Illuminate?	Go to step **3**.	Currently no failure is found. Since the warning light is not lit, notification is not sent.
3	**CHECK DTCS.** Check the DTC of telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>	Go to step **4**.
4	**CHECK THE AT&T CELLULAR COVERAGE AREA.** Ask the user where he/she turned the ignition switch to OFF after the warning light was lit.	After the warning light comes on, is the location where the user turned the ignition switch to OFF located within the AT&T coverage area? (For the AT&T coverage area, refer to the AT&T website. This system operates on 3G and 4G mobile communication technology.)	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.	The location where the ignition switch was turned to OFF (where warning light illumination information was sent) was outside the cellular coverage area.

14.MAINTENANCE NOTIFICATIONS ARE NOT SENT

	Step	Check	Yes	No
1	**CHECK THE SUBSCRIPTION STATUS.** Display the current data «Maintenance Alert Active» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Does the data display «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.

	Step	Check	Yes	No
2	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TEL(diag)-15, LIST, Diagnostic Code(s) Display.>	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

15.THE LED DOES NOT DISPLAY THE STATUS. (LED MALFUNCTION)

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-23, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK THE SUBSCRIPTION STATUS.** Display the current data «Account Status» of the Telematics. <Ref. to TEL(diag)-12, Read Current Data.>	Is the data «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure. (Both LEDs are turned off.)
2	**CHECK THE LED.** 1) Turn the ignition switch to ON. 2) Check the LED condition.	Does the RED LED go off and the GREEN LED illuminate?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A0A or B2A0B displayed?	Perform the diagnosis for the displayed DTC B2A0A or B2A0B. <Ref. to TEL(diag)-41, DTC B2A0A RED LED CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-43, DTC B2A0B GREEN LED CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK THE LED ILLUMINATION CONDITION.** Perform the telematics system operation check. <Ref. to TEL(diag)-20, System Operation Check Mode.>	Is the LED turned on or off?	Go to step **5**.	Go to step **6**.
5	**CHECK THE LED.** 1) Turn the ignition switch to ON. 2) Check the LED condition.	Does the RED LED go off and the GREEN LED illuminate?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the DCM. <Ref. to ET-51, Data Communication Module.>
6	**CHECK THE LED.** Measure the continuity of the telematics button (LED) unit. ***Terminals*** ***No. 7 — No. 1:*** ***No. 4 — No. 1:***	Is there continuity?	Replace the DCM. <Ref. to ET-51, Data Communication Module.>	Replace the telematics button. <Ref. to ET-44, Switches and Harness.>

16.PHONE CONVERSATION IS NOT POSSIBLE. (THE MICROPHONE DOES NOT RESPOND TO A VOICE. NO SOUND IS HEARD FROM THE SPEAKER.)

Step		Check	Yes	No
1	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-15, Diagnostic Code(s) Display.>	Is DTC B2A04, B2A05 or B2A06 displayed?	Perform the diagnosis for the displayed DTC B2A04, B2A05 or B2A06. <Ref. to TEL(diag)-28, DTC B2A04 MIC CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-30, DTC B2A05 LEFT SPEAKER/AUDIO CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-33, DTC B2A06 RIGHT SPEAKER/AUDIO CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK THE SPEAKER OPERATION.** Perform «Speaker ON» in the telematics system operation check. <Ref. to TEL(diag)-20, System Operation Check Mode.>	Does it sound?	Go to step **3**.	Go to step **4**.
3	**CHECK MICROPHONE.** Perform the microphone voice input.	Is the voice recognized?	Go to step **4**.	Replace the microphone.
4	**CHECK THE SPEAKER.** Check the speaker.	Is the check result OK?	Go to step **5**.	Replace the speaker.
5	**CHECK THE TELEPHONE CALL.** 1) Place the mobile phone in the vehicle. 2) Establish a Bluetooth connection between the mobile phone in the vehicle and the vehicle unit. 3) Make a call from outside to the mobile phone in the vehicle. 4) Check that a telephone call is available through the in-vehicle microphone with the hands-free function.	Is a telephone call successful?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Perform the diagnosis according to inspection for DTC B2A04 MIC CIRCUIT. <Ref. to TEL(diag)-28, DTC B2A04 MIC CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

WIRING SYSTEM SECTION

WIRING SYSTEM WI

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. Basic Diagnostic Procedure

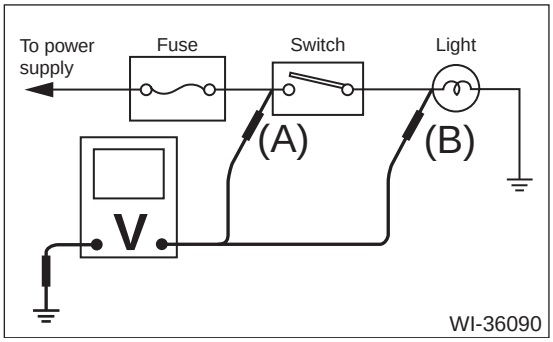
A: BASIC PROCEDURES

1. GENERAL DESCRIPTION

The most important purpose of diagnostics is to quickly determine which fault is the root cause of the symptom, to save time and labor.

2. IDENTIFICATION OF TROUBLE CAUSE

1) Using the diagnostics, narrow down the causes.
2) Refer to the wiring diagram and check the system's circuit. If necessary, use a voltmeter, ohmmeter, etc.
3) Before replacing component parts, check for fuse blowout, open wiring harness on the power supply circuit and the ground circuit, and poor connectors, switches, relays, etc. If no problem is encountered, check the component parts.

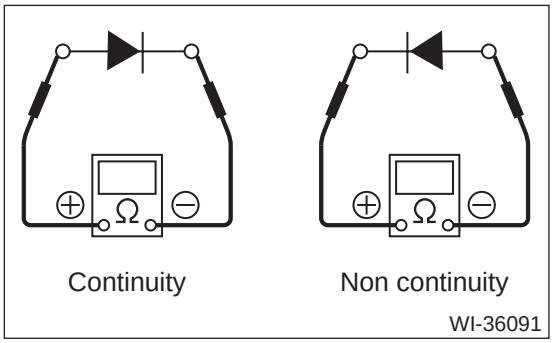


3. SYSTEM OPERATION CHECK

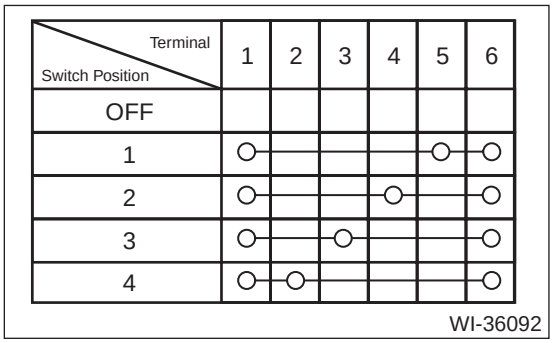
After inspection and repair, ensure that the system operates properly.

B: BASIC INSPECTION

1. VOLTAGE MEASUREMENT



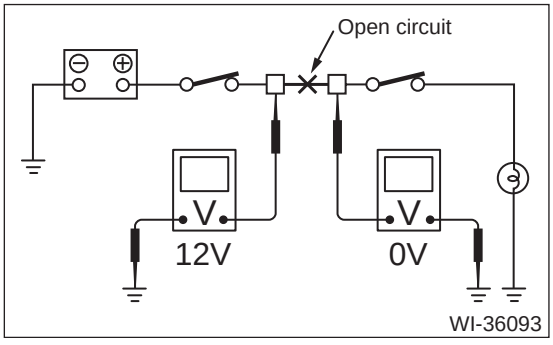
1) Using a voltmeter, connect the negative lead to a good ground point or negative battery terminal. Connect the positive lead to the connector or component terminal.
2) Contact the positive lead of the voltmeter on connector (A). The voltmeter will indicate a voltage.
3) Shift the positive lead contacting the connector (A) to the connector (B). The voltmeter will indicate no voltage.
4) Turn the switch to ON with the positive lead contacting the connector (B).
The voltmeter will indicate a voltage and, at the same time, the light will illuminate.
5) The circuit is normal. If a problem such as a light failing to illuminate occurs, use the procedures above to track down the malfunction.



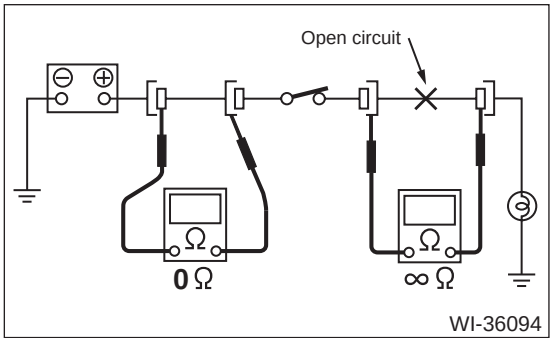
2. CONTINUITY CHECK

1) Disconnect the battery terminal or connector so there is no voltage between the check points.
Contact the leads of an ohmmeter between the check points, and check that there is continuity.
2) When checking the diode continuity using an ohmmeter, allow the positive lead to contact the diode positive side and the negative lead to the negative side. At this time, there must be continuity. Also, when contacting the leads in reverse, there should be no continuity.

NOTE:
Some testers have reverse polarity, therefore, refer to the instruction manual of the tester.

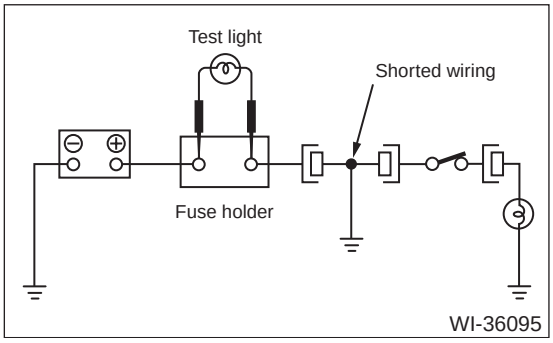


3) When checking switch continuity using an ohmmeter, perform the check while the switch operates. For example, when a switch position is at 3, continuity exists among terminals 1, 3 and 6, as shown below.

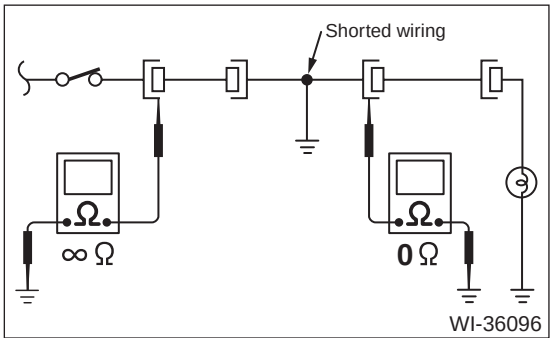


3. HOW TO IDENTIFY AN OPEN CIRCUIT

1) With voltmeter:
An open circuit is determined by measuring the voltage between respective connectors and ground using a voltmeter, starting with the connector closest to the power supply. The power supply must be turned ON so that current flows in the circuit. If voltage is not present between a particular connector and ground, the circuit between that connector and the previously checked point is open.

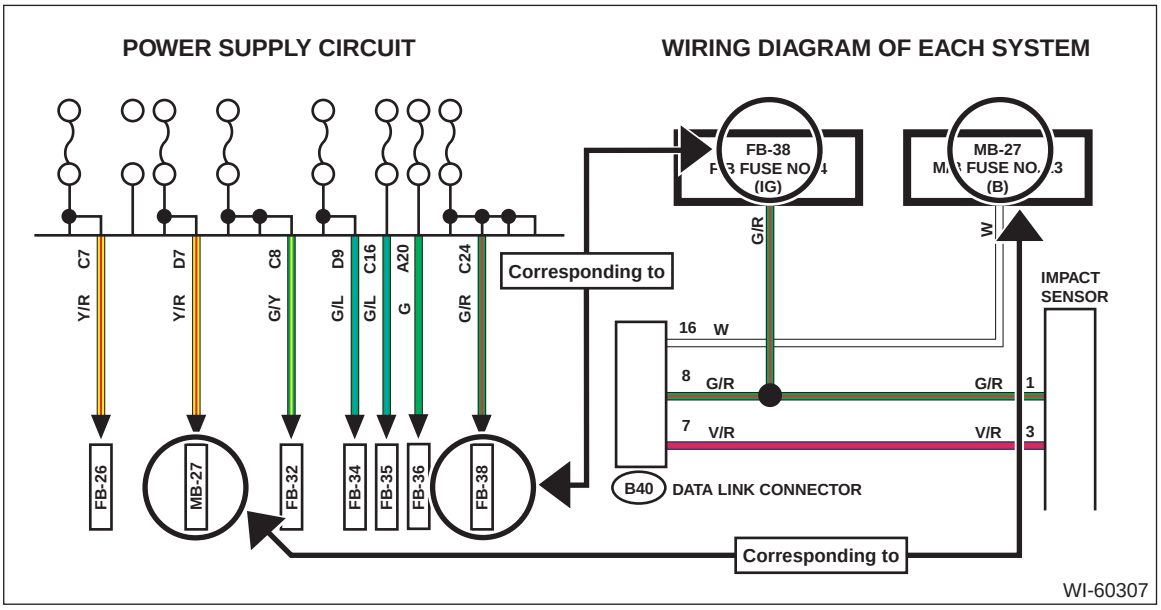


2) With ohmmeter:
Disconnect all connectors affected, and check continuity in the harness between adjacent connectors. When the ohmmeter indicates “infinite”, the harness is open.



4. HOW TO DETERMINE A SHORT CIRCUIT

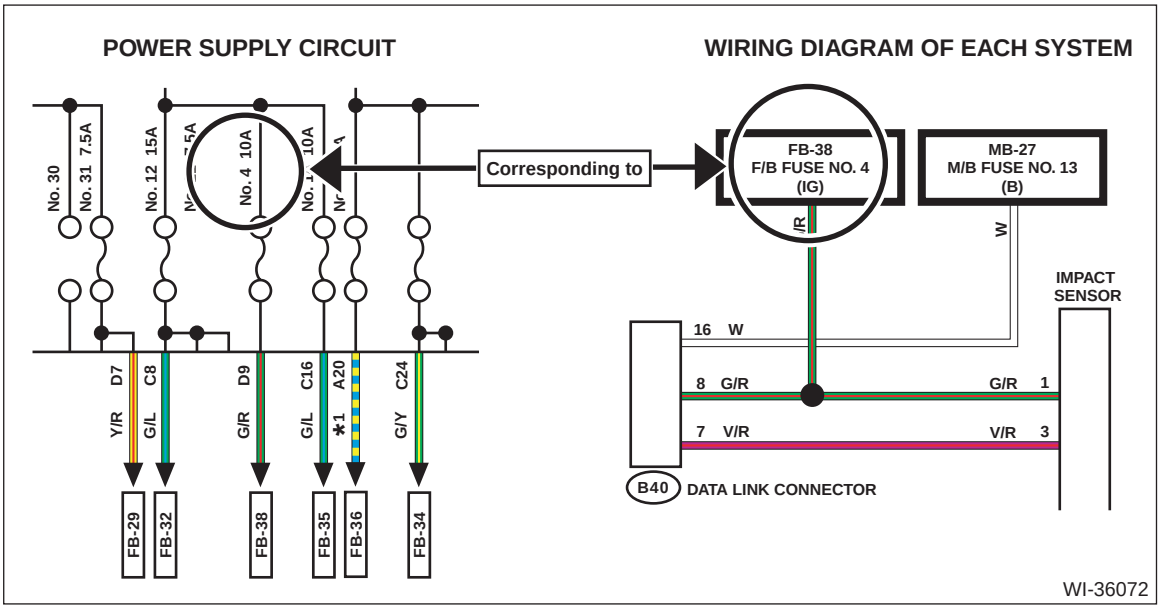
1) With test light:
Connect a test light (rated at approx. 3 watts) in place of the blown fuse and allow current to flow through the circuit. Disconnect one connector at a time. At that time, always start with the connector located farthest from the power supply. If the test light goes out when a connector is disconnected, the harness between that connector and the next connector (farther from the power supply) is shorted.



2) With ohmmeter:
Disconnect all affected connectors, and check continuity between each connector and ground. When the ohmmeter indicates continuity between a particular connector and a ground, that connector is shorted.

C: HOW TO READ WIRING DIAGRAMS

1. POWER SUPPLY CIRCUIT

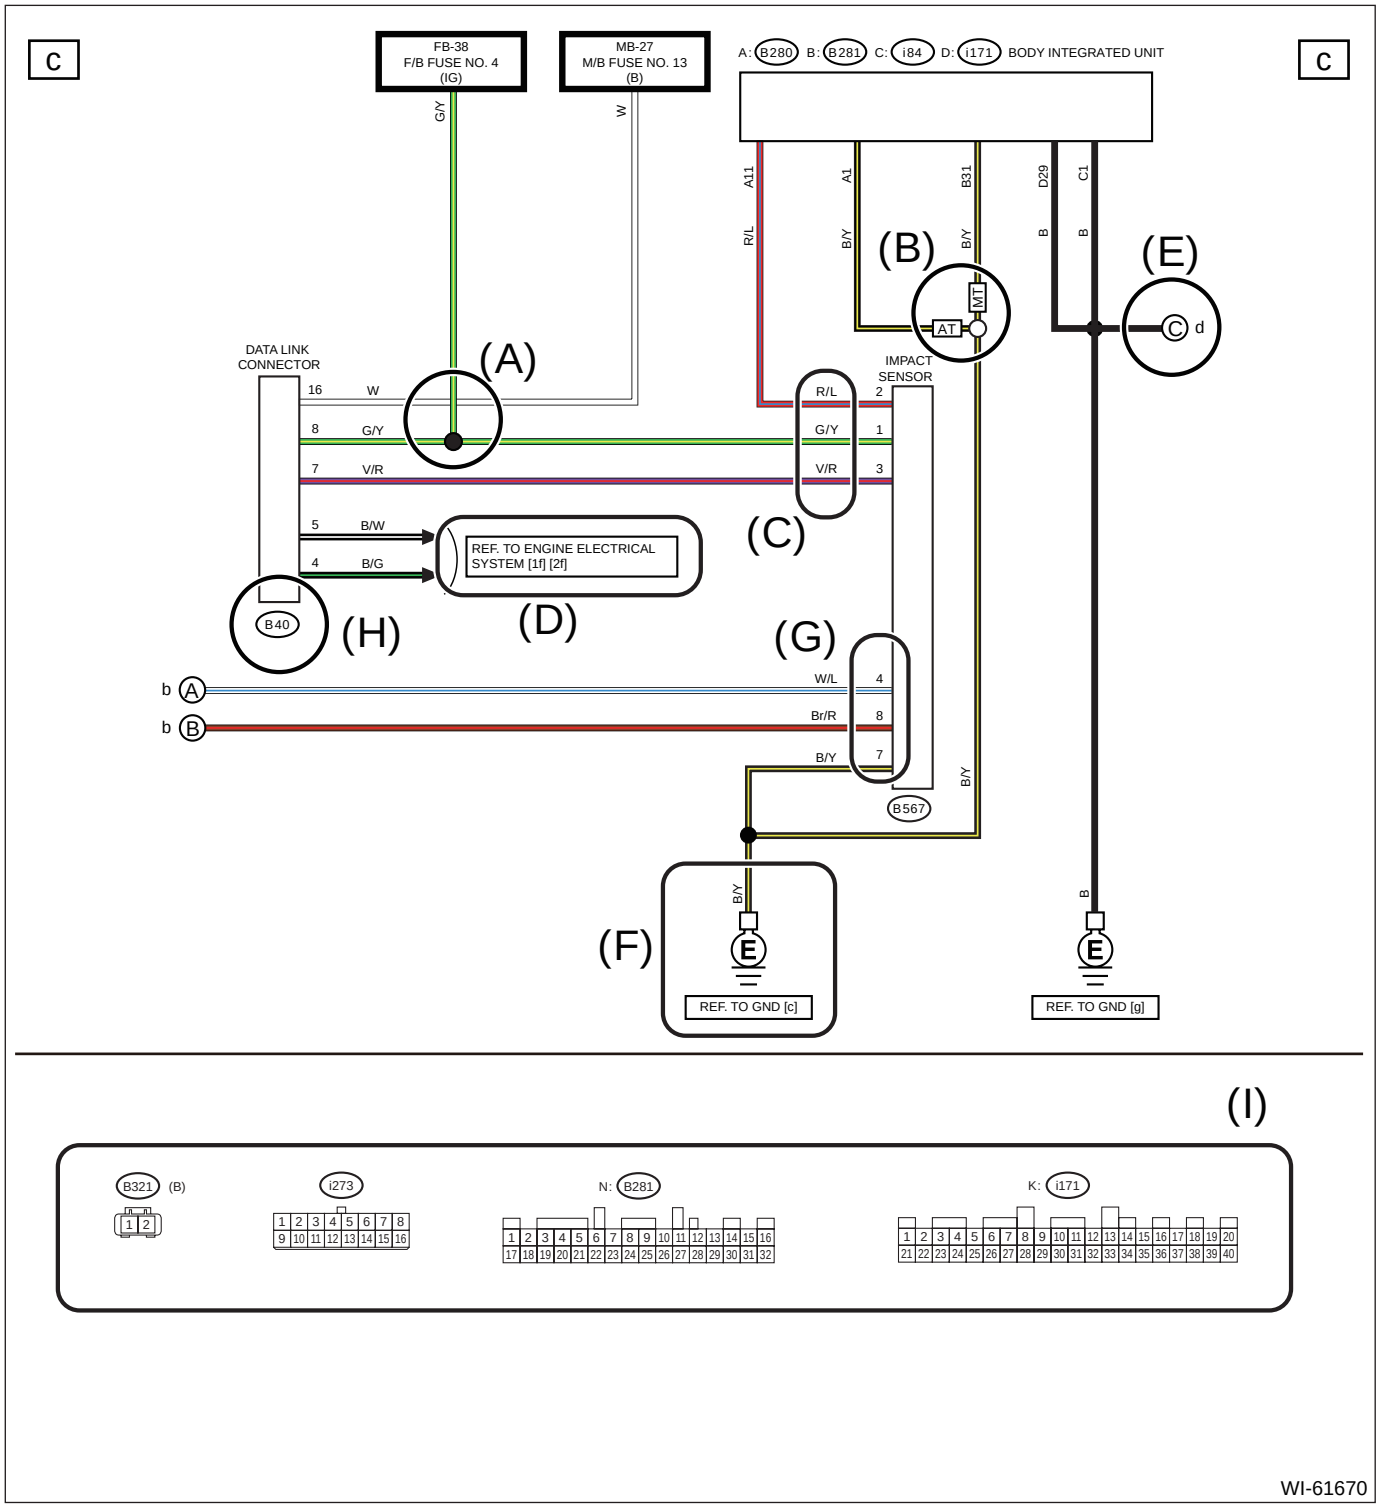


Circuits are described to indicate the power supply in the wiring diagram of each system. “MB-5”, “MB-6”, etc., which are used as power- supply symbols throughout the text, correspond with those shown in the “DC POWER SUPPLY CIRCUIT” in the wiring diagram of each system. Accordingly, using the DC power supply circuit and the wiring diagram of each system permits service personnel to understand the entire electrical arrangement of the system.

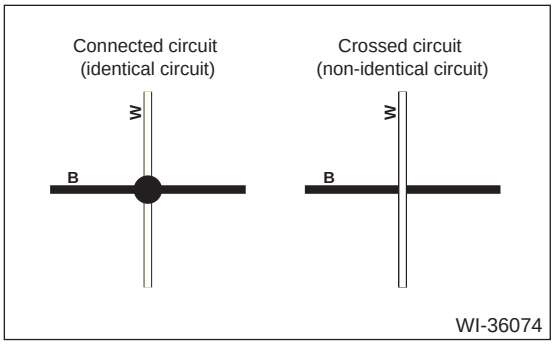
2. WIRING DIAGRAM OF EACH SYSTEM

1. **Fuse No. & rating**

The “Fuse No. & rating” is the same description as that in the DC power supply circuit, and corresponds with that used in the vehicle.



2. **Wiring diagram of each system**



To help figure out the route from the DC power supply circuit, wiring diagrams are classified and described in each system.

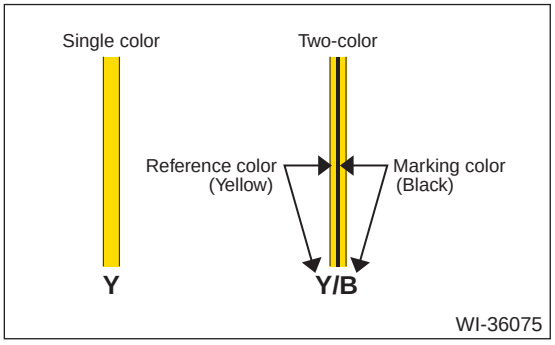
NOTE:

This manual includes harness information. Information of parts that are not routed via harness and adapter code is described as a reference. If no information is described in this manual, refer to each section.

- (A):Wire connection and crossing in a circuit

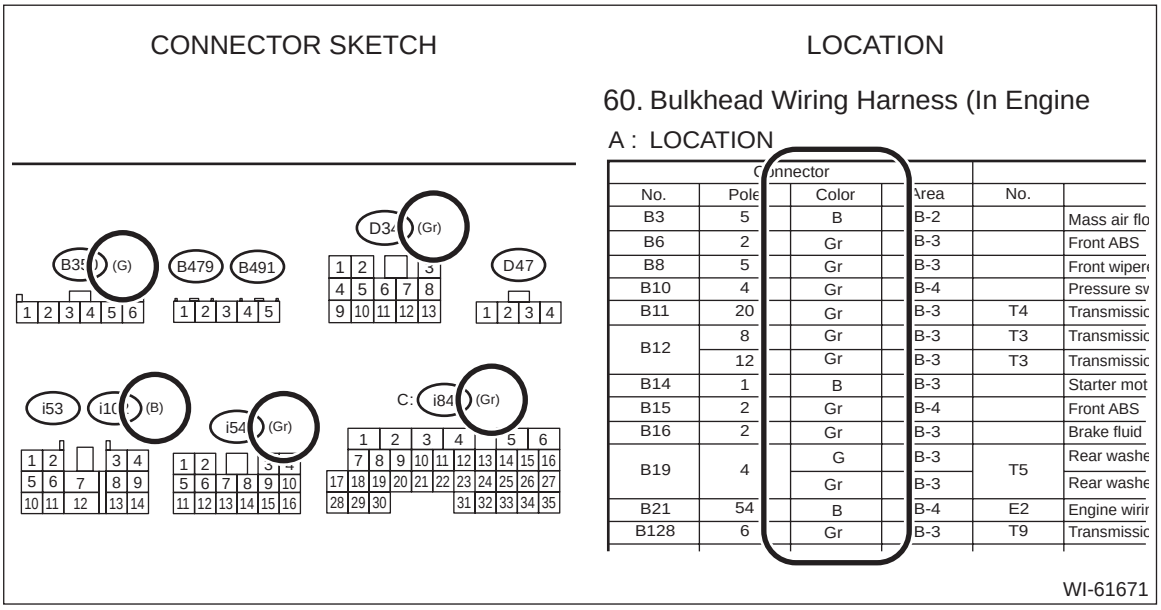
- (B):Classification by specifications

If a circuit differs from another circuit according to vehicle specifications, the specification difference is indicated with abbreviations.



- (C):Color code

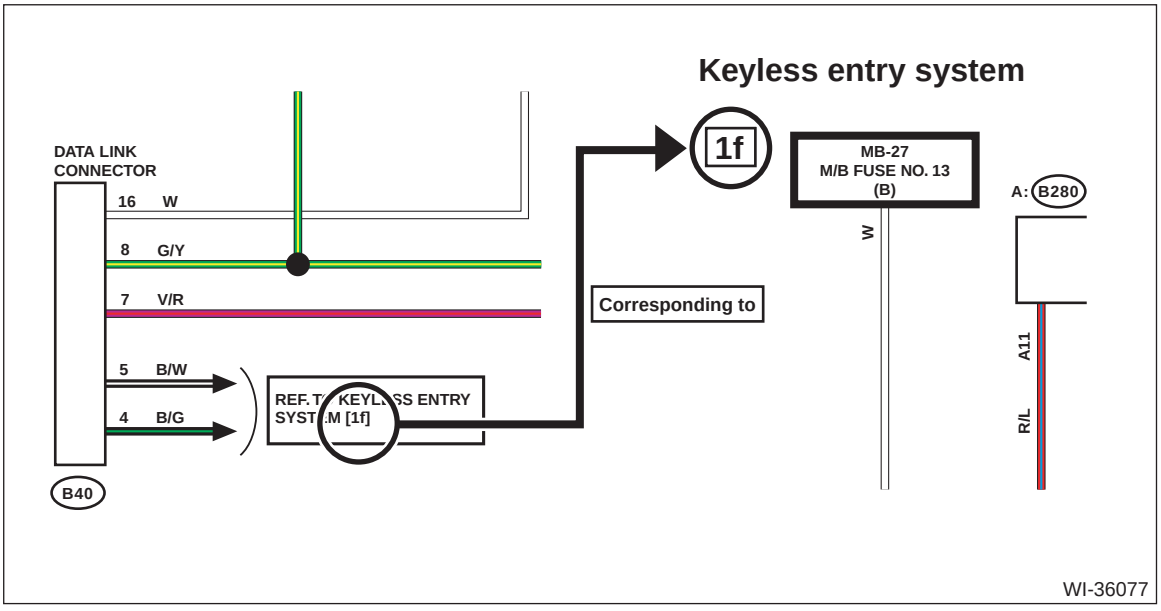
Indicates the color of harness and connector housing.



Color code	Color	Color code	Color	Color code	Color
B	Black	S	Shield line	Gr	Gray
G	Green	V	Violet	Lg	Light green
L	Blue	W	White	Sb	Light blue
Or	Orange	Y	Yellow	★	White or natural color
P	Pink	Be	Beige		
R	Red	Br	Brown		

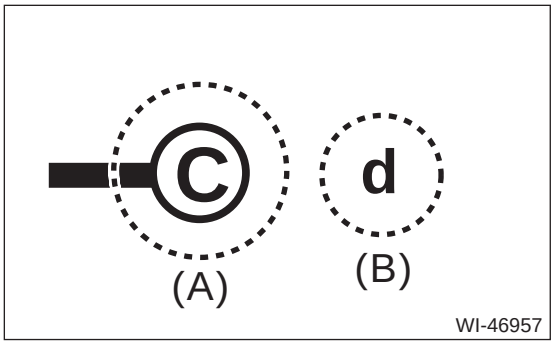
(Color code of harness)

Single color is indicated with a color code, and double colors are indicated with “standard color / marking color”.



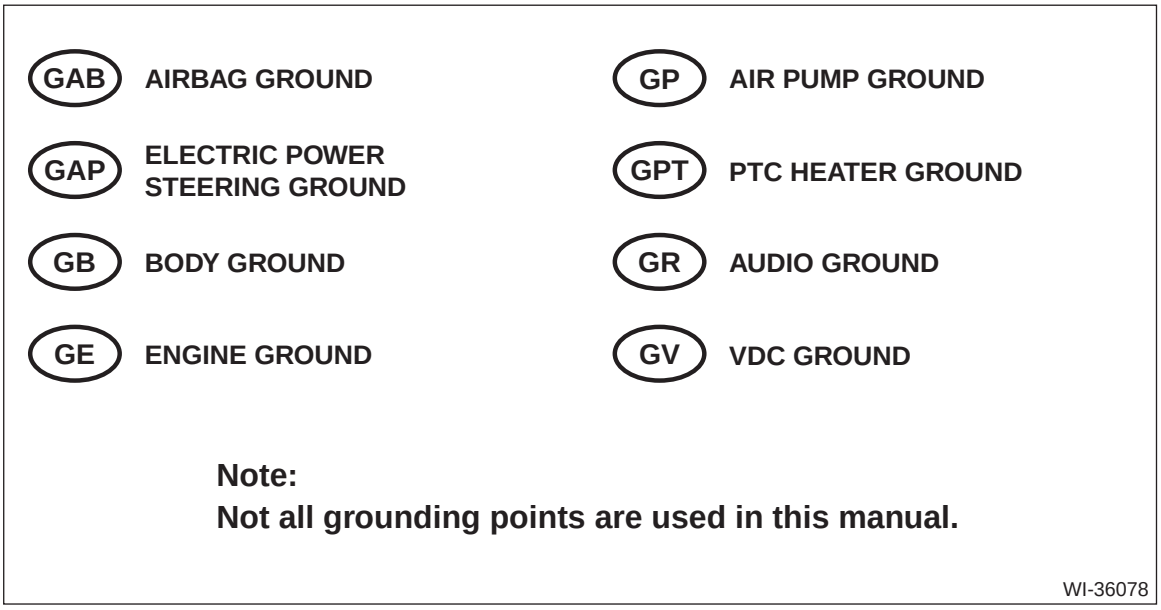
(Color code of connector housing)
Used in the connector sketch and the locations.

Connector No.	Pole	Color	Area	No.	
B3	5	B	B-2		Mass air flo
B6	2	Gr	B-3		Front ABS
B8	5	Gr	B-3		Front wiper
B10	4	Gr	B-4		Pressure sv
B11	20	Gr	B-3	T4	Transmissic
B12	8	Gr	B-3	T3	Transmissic
	12	Gr	B-3	T3	Transmissic
B14	1	B	B-3		Starter mot
B15	2	Gr	B-4		Front ABS
B16	2	Gr	B-3		Brake fluid
B19	4	G	B-3	T5	Rear washe
		Gr	B-3		Rear washe
B21	54	B	B-4	E2	Engine wirir
B128	6	Gr	B-3	T9	Transmissic

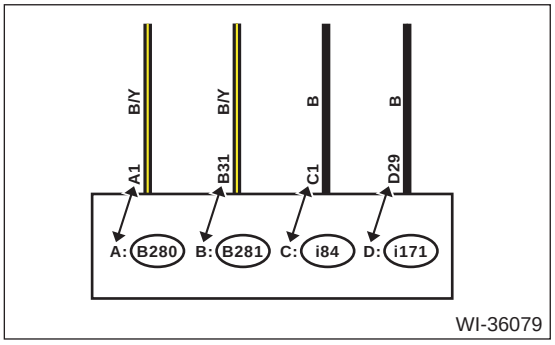


- (D):Connection to another system in the same circuit

Indicates the connecting to with alphanumeric characters, which correspond to the descriptions shown on the upper section of each page.



- (E):Connections in the system

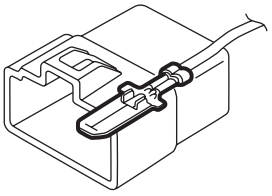


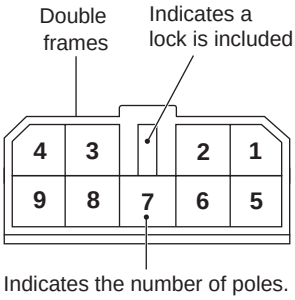
(A) indicates destination of this circuit, and (B) indicates a page corresponding to the destination.

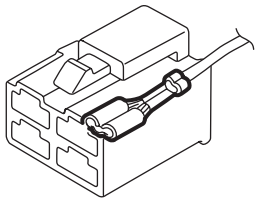
• (F):Ground
The ground points shown in the ground circuit refer to the following, which correspond to the locations.

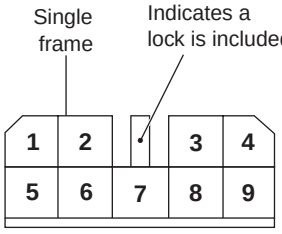
• (G):Terminal No.
Indicates the terminal number of the connector to be connected. If several connectors are connected to a component, they are identified with alphabetic characters.

• (H):Connector No.
The first alphabetic characters of the connector number correspond with the following symbols that indicate harnesses or systems.





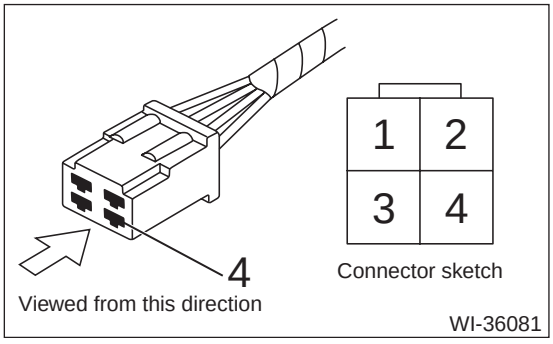




Symbol	Harness/cord	Symbol	Harness/cord
AB	Airbag wiring harness	F	Front wiring harness
AD	Adapter cord		Generator cord
AT/T	Transmission cord	i	Instrument panel Wiring harness
B	Bulkhead wiring harness		
D	Door cord / Rear gate code	R	Rear wiring harness
E	Engine wiring harness		Fuel cord / Roof cord
	Oxygen sensor cord		Rear gate cord / Trunk lid cord
ST	Steering cord		

• (I) Connector sketch
The connector sketch at the bottom shows the connectors used in the wiring diagram.

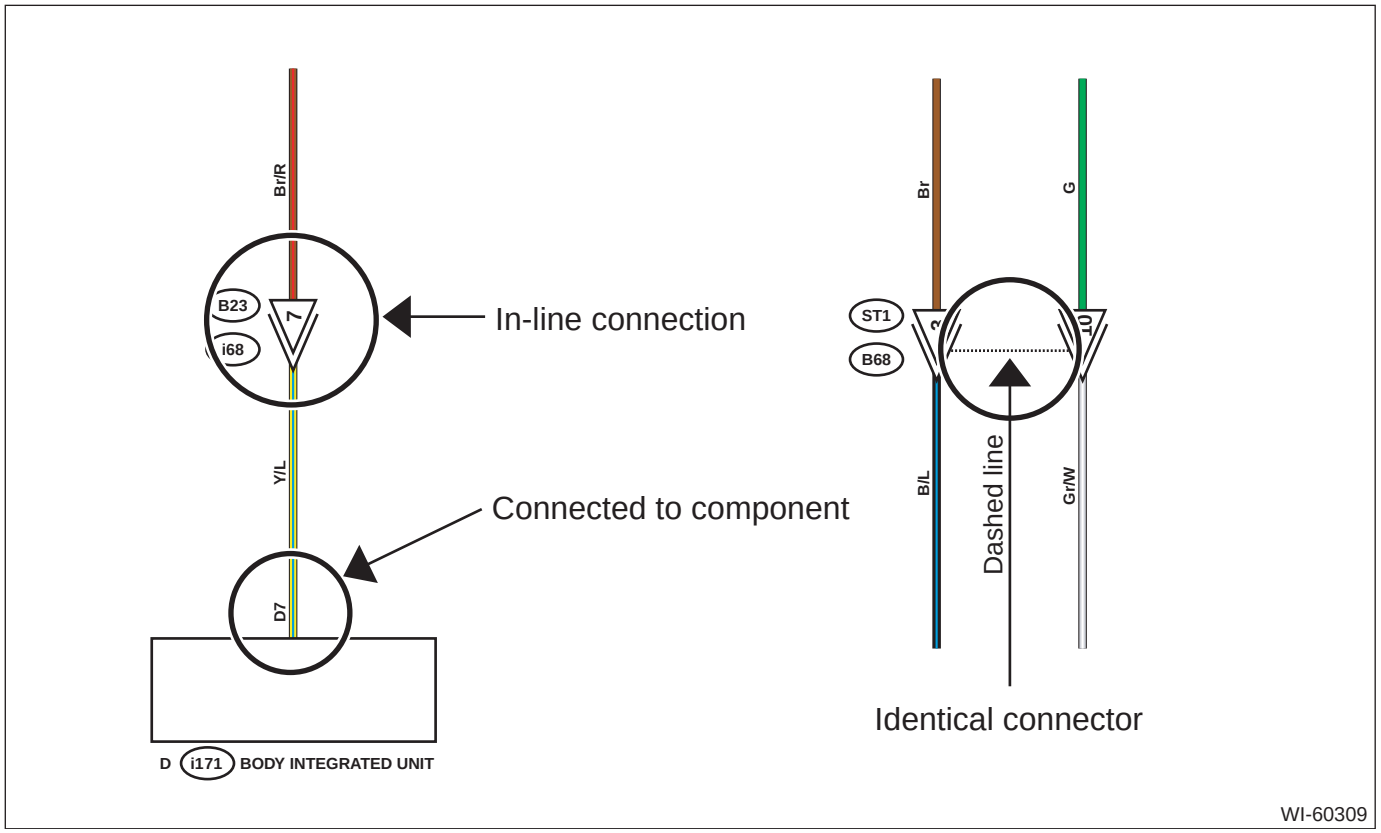
3. **Connector**



The following shows the connector shape, lock position, connection and terminal number that are used in this manual.

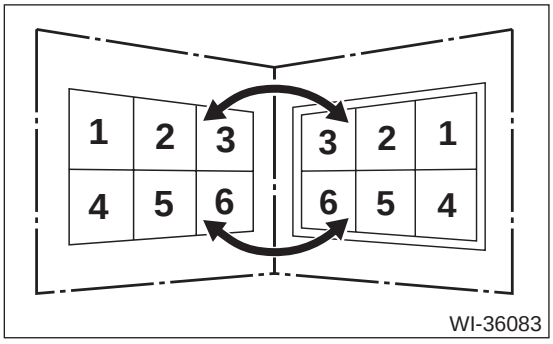
For connector shape, refer to the connector sketch.

Connector used in vehicle	Connector shown in wiring diagram		
	Connector sketch	Wiring diagram symbol	Terminal arrangement order
 Male connector			Numbered in order from upper right to lower left.
 Female connector			Numbered in order from upper left to lower right.



WI-41116

• The sketch of the connector and the terminal number are indicated in a disconnected state which is viewed from the terminal side.



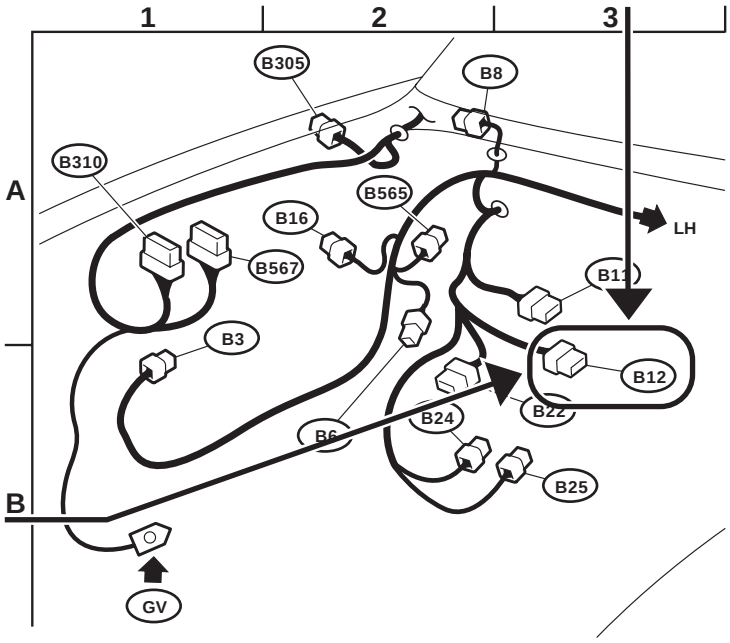
• The connector sketch usually indicates a female connector.

• The connector used in the wiring diagram of the system indicates only the intermediate connection, therefore, no parts, J/Cs and grounds are described. In addition, if the different circuits are connected with the same connector, a dot line is used to indicate that these are the same.

• When connecting the connector, the terminals with the same number are jointed. When the connector is disconnected, the terminal location is symmetrical.

3. LOCATION

In this manual, the location is classified in each harness, and the connector location is indicated using coordinates.



CONNECTOR LOCATION CHART

60. Bulkhead Wiring Harness (In Engine Com

A : LOCATION

Connector					
No.	Pole	Color	Area	No.	
B3	5	B	B-2		Mass air fl
B6	2	Gr	B-3		Front ABS
B8	5	Gr	B-3		Front wipe
B10	4	Gr	B-4		Pressure s
B11	20	Gr	B-3	T4	Transmissi
B12	8	Gr	B-3	T3	Transmissi
	12	Gr	B-3	T3	Transmissi
B14	1	B	B-3		Starter mo
B15	2	Gr	B-3		Front ABS
B16	2	Gr	B-3		Brake fluid

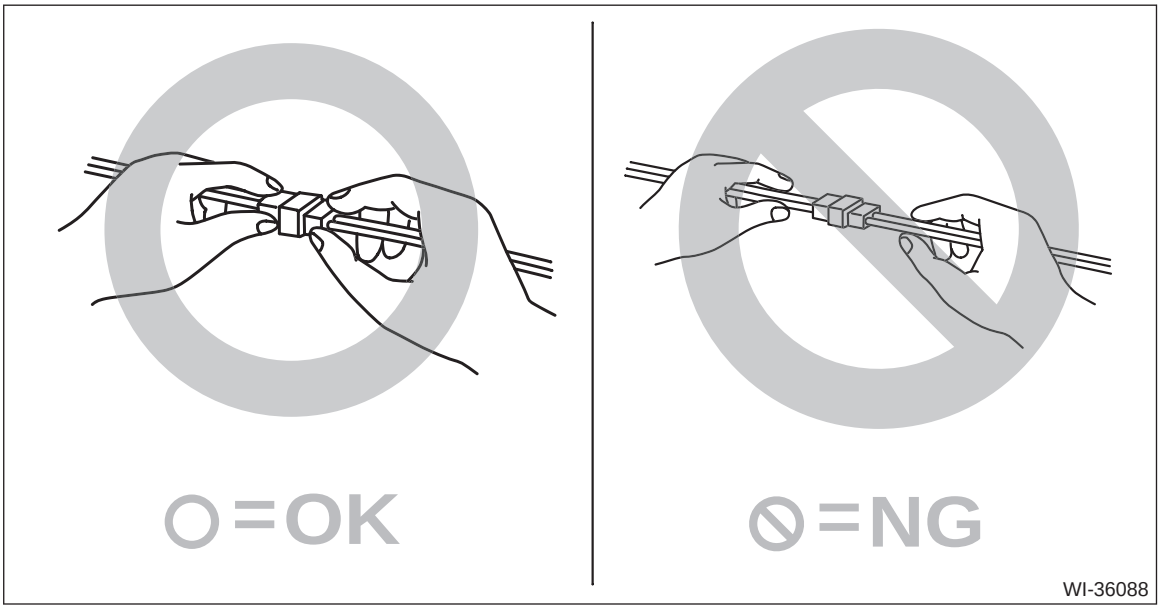
5. ABBREVIATIONS IN THIS MANUAL

Abbr.	Full name
ABS	Anti-lock Brake System
ACC	Accessory
A/C	Air Conditioner
ASSY	Assembly
A/F	Air/Fuel (air fuel ratio sensor)
ATF	Automatic Transmission Fluid
AUX	Auxiliary Audio Input Terminal
AWD	All Wheel Drive
B, BAT	Battery
BSD/RCTA	Blind Spot Detection/Rear Cross Traffic Alert
CAN	Controller Area Network
CL	Close
CM	Control Module
CVT	Continuously Variable Transmission
D	Drive range or Down
DC/DC	Direct Current / Direct Current (converter)
DN	Down
E	Ground
ECM	Engine Control Module
EEPROM	Electrically Erasable Programmable Read-Only Memory
EGR	Exhaust Gas Recirculation
EPB	Electronic Parking Brake
F	Front
F/B	Fuse & Relay Box
FL	Front Left
FR	Front Right
G	Gravity (G sensor)
GPS	Global Positioning System
H/L	Headlight
HI	High
I/F	Interface
IG	Ignition
INT	Intermittent
ISO	International Organization for Standardization
J/C	Joint Connector
LCD	Liquid Crystal Display
L, LH	Left Hand
LO	Low
LWR	Lower
M	Motor
M/B	Main Fuse Box
MFD	Multi Function Display
MIST	Wiper for mist
MT	Manual Transmission
N	Neutral Range
OP	Optional Parts or Open

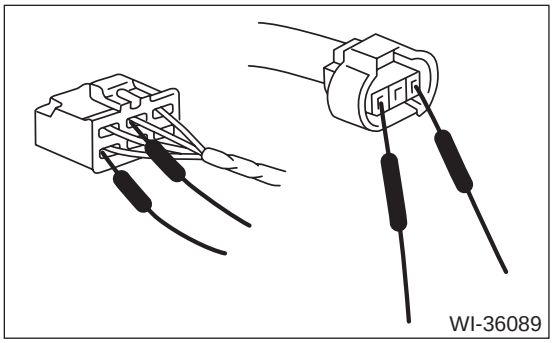
Abbr.	Full name
P	Parking or Parking range
PASS	Passing
R	Reverse Range
RAB	Reverse Automatic Braking
RES	Reset
R, RH	Rear or Right Hand
RL	Rear Left
RR	Rear Right
SBF	Slow Blow Fuse
SRF	Steering Responsive Fog Lights
ST	Starter
SW	Switch
TCM	Transmission Control Module
TEL	Telephone
TFT	Thin Film Transistor
TPMS	Tire Pressure Monitor System
UP	Up
UPR	Upper
VDC	Vehicle Dynamics Control
WASH	Washer



2. Working Precautions

A: PRECAUTIONS WHEN WORKING WITH THE PARTS MOUNTED ON THE VEHICLE

1) Always refer to “CAUTION” and “NOTE” of “General Description” in the same model’s service manual before starting the service.
2) When working under a vehicle which is jacked-up, always be sure to use rigid rack.
3) The parking brake must always be applied during working. Also, in automatic transmission vehicles, keep the select lever set to the P (Parking) range.
4) Be sure the workshop is properly ventilated when running the engine.
5) Be careful not to touch the rotating parts such as a belt or a fan while the engine is operating.
6) Be careful not to touch hot metal parts immediately after the engine has been turned on or off.

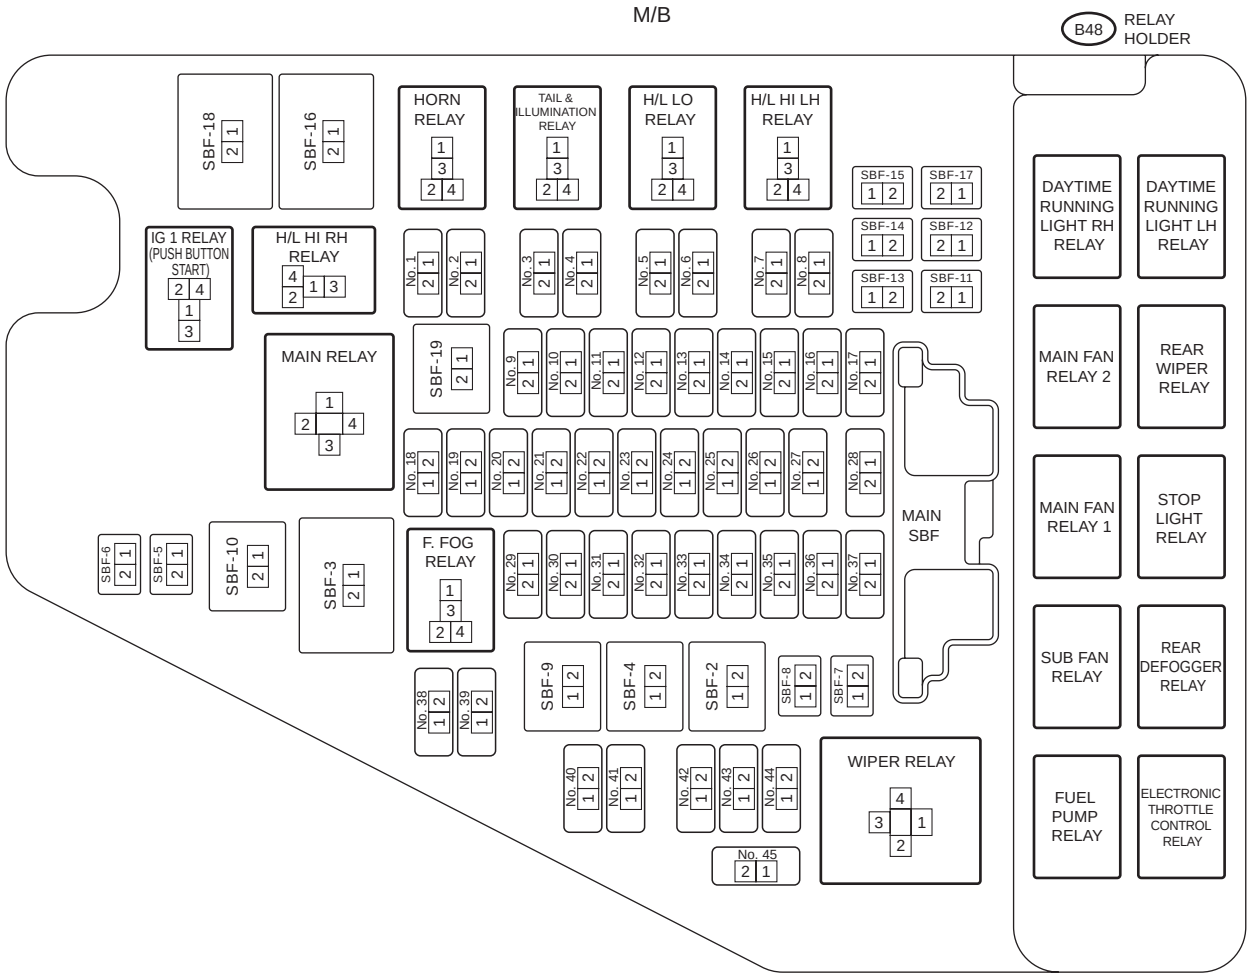


B: PRECAUTIONS IN TROUBLE DIAGNOSIS AND REPAIR OF ELECTRIC PARTS

1) Always refer to “CAUTION” and “NOTE” of “General Description” in the same models service manual before starting the diagnostics and repair.
2) Always refer to the cautions of each section when diagnosing and repairing each system and component.
3) The battery cable must be disconnected from the negative terminal after the ignition switch is set to the OFF position, unless otherwise required by the diagnostics.
4) When disconnecting a connector, do not pull the harness, but pull while holding the connector housing.

5) Confirm the locking shape completely before disconnecting a connector. In addition, firmly push in the connector until a click sounds when connecting a connector.
6) When checking continuity between connector terminals, or measuring voltage across the terminal and ground, always touch tester probe (s) to terminals from the harness side.
If the probe is too thick to gain access to the terminal, do not push it in forcibly but use a mini test lead.
7) When measuring the voltage or resistance of individual sensor or all electrical control modules, use a tapered pin with a diameter of 0.6 mm (0.024 in) or less and touch it to the tip of terminal. Never insert the tapered pin into the terminal at this time. Doing so may cause internal deformation and a malfunction can occur.

8) To check water-proof connectors (which are not measurable from the harness side), touch tester probes on the terminal side and be very careful not to bend or damage the terminals.



9) Securely fasten the harness with clamps and clips so that the harness does not interfere with the body end parts, edges, bolts or screws.
10) When installing a harness and a component, be careful not to catch them on the harness.
11) Sensors, relays, units, etc., are sensitive to strong impacts. Handle them with extra care so that they are not dropped or mishandled.
12) Because the HID headlight uses high voltage, be sure to confirm that the power supply is turned off before diagnostics and repair. Furthermore, do not perform diagnostics and repair with wet hands because there is a possibility of electrical shock.
13) When inspecting the airbag system, in order to avoid malfunction, always refer to “CAUTION” of “General Description” of the airbag system in the same model’s service manual.
