
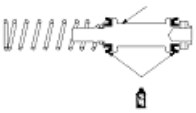
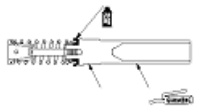
- Clean all parts in brake fluid and air dry; blow out all passages with compressed air.
- Before reassembling, check that all the parts are free of dirt and other foreign particles.
- Replace parts with new ones whenever specified to do so.
- Use only genuine DOT 3 or DOT 4 Honda Brake Fluid. Non-Honda brake fluid can cause corrosion and shorten the life of the system.
- Replace the master cylinder if the bore is damaged or worn. Do not hone or attempt to refinish the bore.
- Coat the piston cups, pressure cup and master cylinder bore with clean brake fluid.
- Use recommended greases in the master cylinder seal set.
- When you apply the silicone grease, make sure not to adhere to the terminal part of connectors and surrounding switches. Also do not touch the switches and the terminal part of connector by hands or glove that adheres the silicone grease.
- The illustrations show RHD model.

1. Install the reservoir seal in the groove of the reservoir cap.
2. Install the strainer, assembled reservoir cap on the reservoir tank.

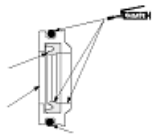
3. Coat the cups (A) of a new primary piston (B) with clean brake fluid, then install the primary piston into the master cylinder.



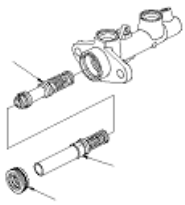
4. Coat the cup (A) of a new secondary piston (B) with clean brake fluid, and apply the silicone grease to the piston surface (C).



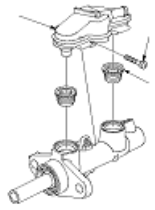
5. Apply the rubber grease to the piston guide (A), a new O-ring (B) and a new secondary cup (C).



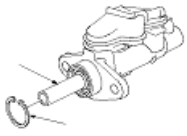
6. Install the primary piston (A), secondary piston (B) and piston guide (C) into the master cylinder. Make sure the direction of piston guide.



7. Install the new grommets (A) and subreservoir (B) to the master cylinder.



8. Install the new circlip (A) while pushing in the secondary piston (B). Be careful not to scratched damage on the piston surface with the circlip edges.



9. Install the reservoir tank (A) and the reservoir tank hose (B) to the subreservoir (C).
   NOTE:
   - Align the "△" mark (D) on the reservoir and subreservoir with the paint mark (E) on the hose.
   - Position the direction of the clamp (F).

10. Apply the silicone grease to a new rod seal, and install the seal onto the master cylinder.

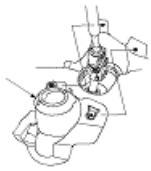
Steering Gearbox Removal and Installation

Special Tools Required



Ball joint remover, 28 mm
07MAC-SL00201

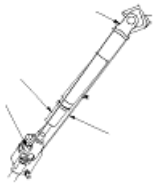
Engine support hanger
AAR-T1256-J00*
*: This special tool is available from Snap-on Tools International, LLC.
Note these items during removal:

- Use solvent and a brush, wash any oil and dirt off the end of the steering gearbox. Avoid any electrical parts. Blow dry with compressed air.
- Be sure to remove the steering wheel before disconnecting the steering joint. Damage to the cable reel can occur.
- Lower the front subframe from the body and remove the steering gearbox through the gap produced by lowering the front subframe.
- The illustrations show RHD model, LHD model is similar for items not shown in this section.

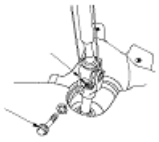
Removal

1. Do the battery terminal disconnection procedure.
2. Raise the vehicle on a lift, and support it with safety stands in the proper locations.
3. Remove the front wheels.
4. Release the lock lever, and adjust the steering column to the full tilt up position, and to the full telescopic in position.
5. Tighten the lock lever.
6. Remove the driver's airbag and the steering wheel.
7. Remove the steering joint cover (A).

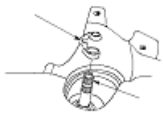
8. Hold the lower slide shaft (A) on the column with a piece of wire (B) between the joint yoke (C) of the lower slide shaft and joint yoke (D) of the upper shaft to prevent the lower slide from pulling out.
9. Release the lock lever, and adjust the steering column to the full telescopic out position, then tighten the lock lever.



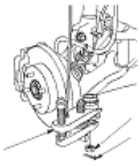
10. Remove the steering joint bolt (A).
11. Disconnect the steering joint (B) by moving the steering joint toward the column.



12. Remove the center guide (A) (if equipped) from top of the pinion shaft (B), and discard it. The center guide is for factory assembly use only.



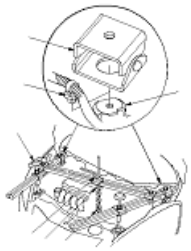
13. Remove the cotter pin (A) from the tie-rod ball joint, then remove the nut (B).
14. Separate the tie-rod ball joint and knuckle using the ball joint remover.



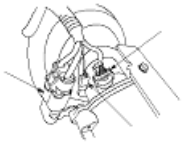
15. Remove the clip (A) from the castle nut (B), and remove the nut.
16. Separate the lower arm ball joint and the knuckle using the ball joint remover.
17. Remove the stabilizer link from the stabilizer bar.
18. Remove the air cleaner.

19. Install the hanger adapter (A) to the threaded hole (B) in the cylinder head using the 8 mm bolt.

20. On the left side, remove the harness clip (A) from the harness clamp bracket (B).
21. Place the cross arm foot (C) to the harness clamp bracket on both side.
22. Install the engine support hanger (AAR-T1256-J00) to the vehicle, and attach the hook (D) to the hanger adapter (E). Tighten the wing nut (F) by hand, and lift and support the engine.

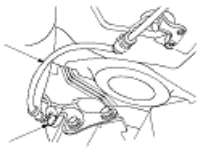


23. RHD model: Disconnect the motor 2P connector (A), torque sensor 3P connector (B), and steering gearbox 1P connector (C) from the torque sensor.



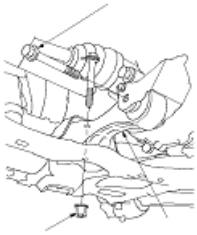
24. LHD model: Disconnect the motor 2P connector (A), and torque sensor 4P connector (B) from the torque sensor.
25. Wrap the connectors with the vinyl tape to avoid the contamination from grease or water.

26. RHD model: Remove the secondary HO2S wire (A) from the clamp (B) on steering gearbox. Do not disconnect secondary HO2S 4P connector and secondary HO2S.

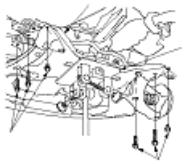


27. LHD model: Remove the secondary HO2S wire clamp (A) on steering gearbox. Do not disconnect secondary HO2S 4P connector and secondary HO2S.
28. Raise the vehicle on a lift.
29. Remove the splash shield.

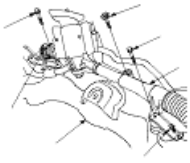
30. Remove the lower torque rod (A).



31. Attach a jack (A) to the center of the front subframe (B) and support the front subframe securely by raising the jack.
32. Remove the front subframe mounting bolts (C).
33. Lower the front subframe and steering gearbox as an assembly by lowering the jack slowly.

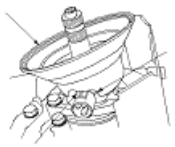


34. Remove the steering gearbox (A) from the front subframe (B).



35. Remove the pinion shaft grommet (A) from the top of the torque sensor.

Installation

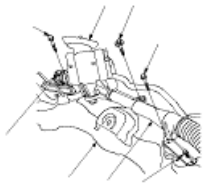


1. Before installing the steering gearbox, make sure that no grease is on the mating surface of the steering gearbox and the front subframe. To prevent the gearbox mounting bolts from loosening after the installation, remove any grease from the bolt holes.
2. Install the pinion shaft grommet (A). Align the cutout portion (B) in the pinion shaft grommet with the lug portion (C) on the torque sensor 3P connector. The grommet must not have a gap at the mating surface of the grommet and torque sensor.

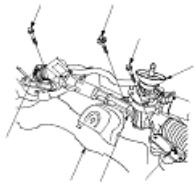
---

3. Place the steering gearbox (A) on the front subframe (B).
4. Loosely install the stiffener plates, and new gearbox mounting bolts, then tighten the bolts to the specified torque in the sequence shown.
5. Turn the lip (C) of the pinion shaft grommet to ease installation.

RHD model

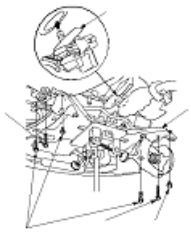


LHD model



---

6. Set the front subframe (A) mounting with the steering gearbox on the transmission jack and support it.
7. Carefully raise the front subframe with the jack, and pass the pinion shaft into the cabin. Return the lip (B) of the pinion shaft grommet.
   NOTE:
   - Be sure that the pinion shaft grommet is securely in place. Check whether the pinion shaft grommet is not turning up. Incorrect installation can cause leakage of water, mud, or noise.
   - Take care not to damage the lower arm ball joint boot with the edge of the knuckle, etc.
8. Loosely install new front subframe mounting bolts, then tighten the bolts to the specified torque in the sequence shown.

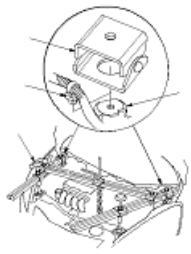


---

9. Install the lower torque rod (A) with new mounting bolts and new mounting nut, and tighten them to the specified torque.
   NOTE: Make sure the stopper (B) of flange bolt securely installed.
10. Install the splash shield.
11. Lower the vehicle.
12. Remove the engine support hanger (AAR-T1256-J00) from the vehicle.

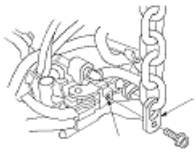
---

13. Remove the cross arm foot (A), then install the harness clip (B) to the harness clamp bracket (C) on the left side.



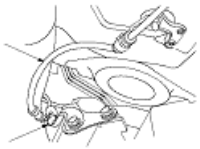
---

14. Remove the hanger adapter (A) from the threaded hole (B) in the cylinder head.
15. Install the air cleaner.

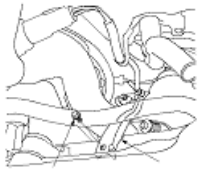


---

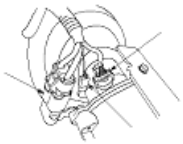
16. RHD model: Install the secondary HO2S wire (A) to the clamp (B) on steering gearbox.



17. LHD model: Install the secondary HO2S wire clamp (A) to the steering gearbox.
18. Remove the vinyl tape from the connectors.

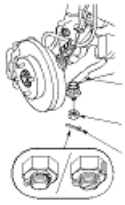


19. RHD model: Connect the motor 2P connector (A), torque sensor 3P connector (B), and steering gearbox 1P connector (C) to the torque sensor.



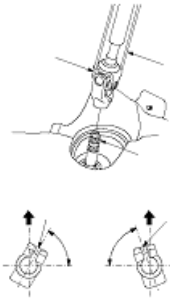
20. LHD model: Connect the motor 2P connector (A), and torque sensor 4P connector (B) to the torque sensor.
21. Connect the stabilizer links.

22. Wipe off any grease contamination from the tapered section and the threads of the ball joint. Connect the tie-rod ends (A) to the knuckles with a nut, then tighten it to the specified torque.
23. Install the new cotter pin (B), and bend it as shown.

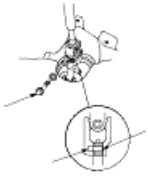


24. Wipe off any grease contamination from the tapered section and threads of the lower arm ball joint. Then reconnect the lower arm (A) to the knuckle. Install the new castle nut (B) and tighten it.
    NOTE:
    - Be careful not to damage the lower ball joint boot (C). Check the ball joint boot for deformation before connecting the knuckle.
    - Torque the castle nut to the lower torque specification, then tighten it only far enough to align the slot with the joint pin clip hole. Do not align the castle nut by loosening it.
25. Install the clip (D).
26. Install the front wheels, then set the wheels in the straight ahead position.
    NOTE: Before installing the wheel, clean the mating surfaces of the brake disc and the inside of the wheel.

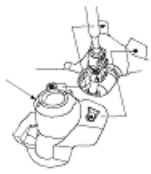
27. Cut the wire (A).
28. Slip the lower end of the steering joint (B) onto the pinion shaft (C) taking care to align the gap (D) within the angle shown.
29. Release the lock lever, and adjust the steering column to the full tilt down position, and to the full telescopic out position, then tighten the lock lever.



30. Align the bolt hole (A) on the steering joint with the groove (B) around the pinion shaft, then loosely install the lower steering joint bolt (C). Be sure that the joint bolt is securely in the groove in the pinion shaft.
31. Pull on the steering joint to make sure that the steering joint is fully seated, then tighten the lower joint bolt to the specified torque.



32. Install the steering joint cover (A).



33. Install the steering wheel and the driver's airbag.

34. With the tyres raised off the ground, check for the following symptoms by turning the steering wheel fully to the right and left several times.

Symptom	Probable cause
Rubbing sound coming from the lower steering column area.	Steering column joint is contacting the cover.
Grating sound from the lower steering column area, or a rough feeling during steering.	Poor engagement of the pinion shaft serrations.
Noise from around the steering wheel during steering.	Poor engagement of the SRS cable reel with the steering wheel, or a damaged cable reel.

35. Do the battery terminal reconnection procedure, and do these tasks:
    - Turn the ignition switch to ON (II) and check that the SRS indicator should came on for about 6 seconds and then go off.
    - Make sure the horn and turn signal switches work properly.
    - Make sure the steering wheel switches work properly.

36. After installation, do these checks:
    - Start the engine, allow it to idle, and turn the steering wheel from lock-to-lock several times.
    - Check that the EPS indicator does not come on.
    - Check the steering wheel spoke angle. If steering spoke angles to the right and left are not equal (steering wheel and rack are not centered), correct the engagement of the joint/pinion shaft serrations, then adjust the front toe by turning the tie-rod ends, if necessary.

37. Do the memorizing the torque sensor neutral position.

38. Check the wheel alignment, and adjust it if necessary.

Steering Wheel Disassembly/Reassembly

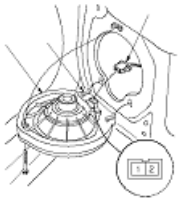
Speaker Test/Replacement

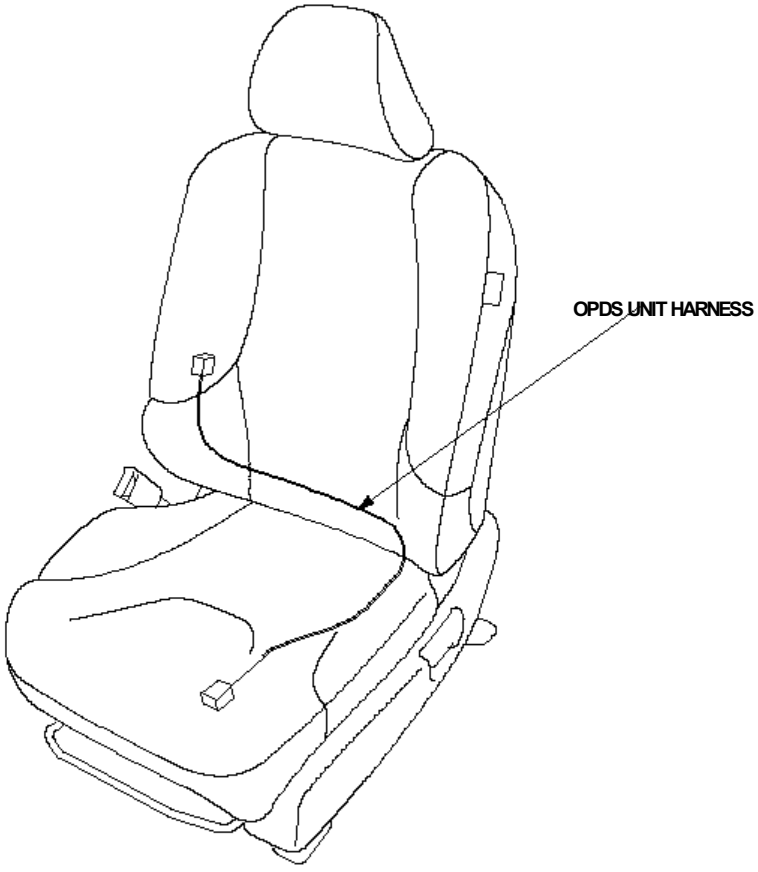
Front/Rear Door Speaker



1. Remove the door panel:
   - Front
   - Rear
2. Remove the bolt. Then lift the speaker (A) straight up to release the lower clips (B).
   NOTICE
   If you pull the speaker out too far from the door, you will damage the lower clips.
3. Disconnect the 2P connector (C), and remove the speaker.
4. Measure the resistance between the terminals No. 1 and No. 2. There should be about 4 Ω.
5. If the resistance is not as specified, replace the door speaker.

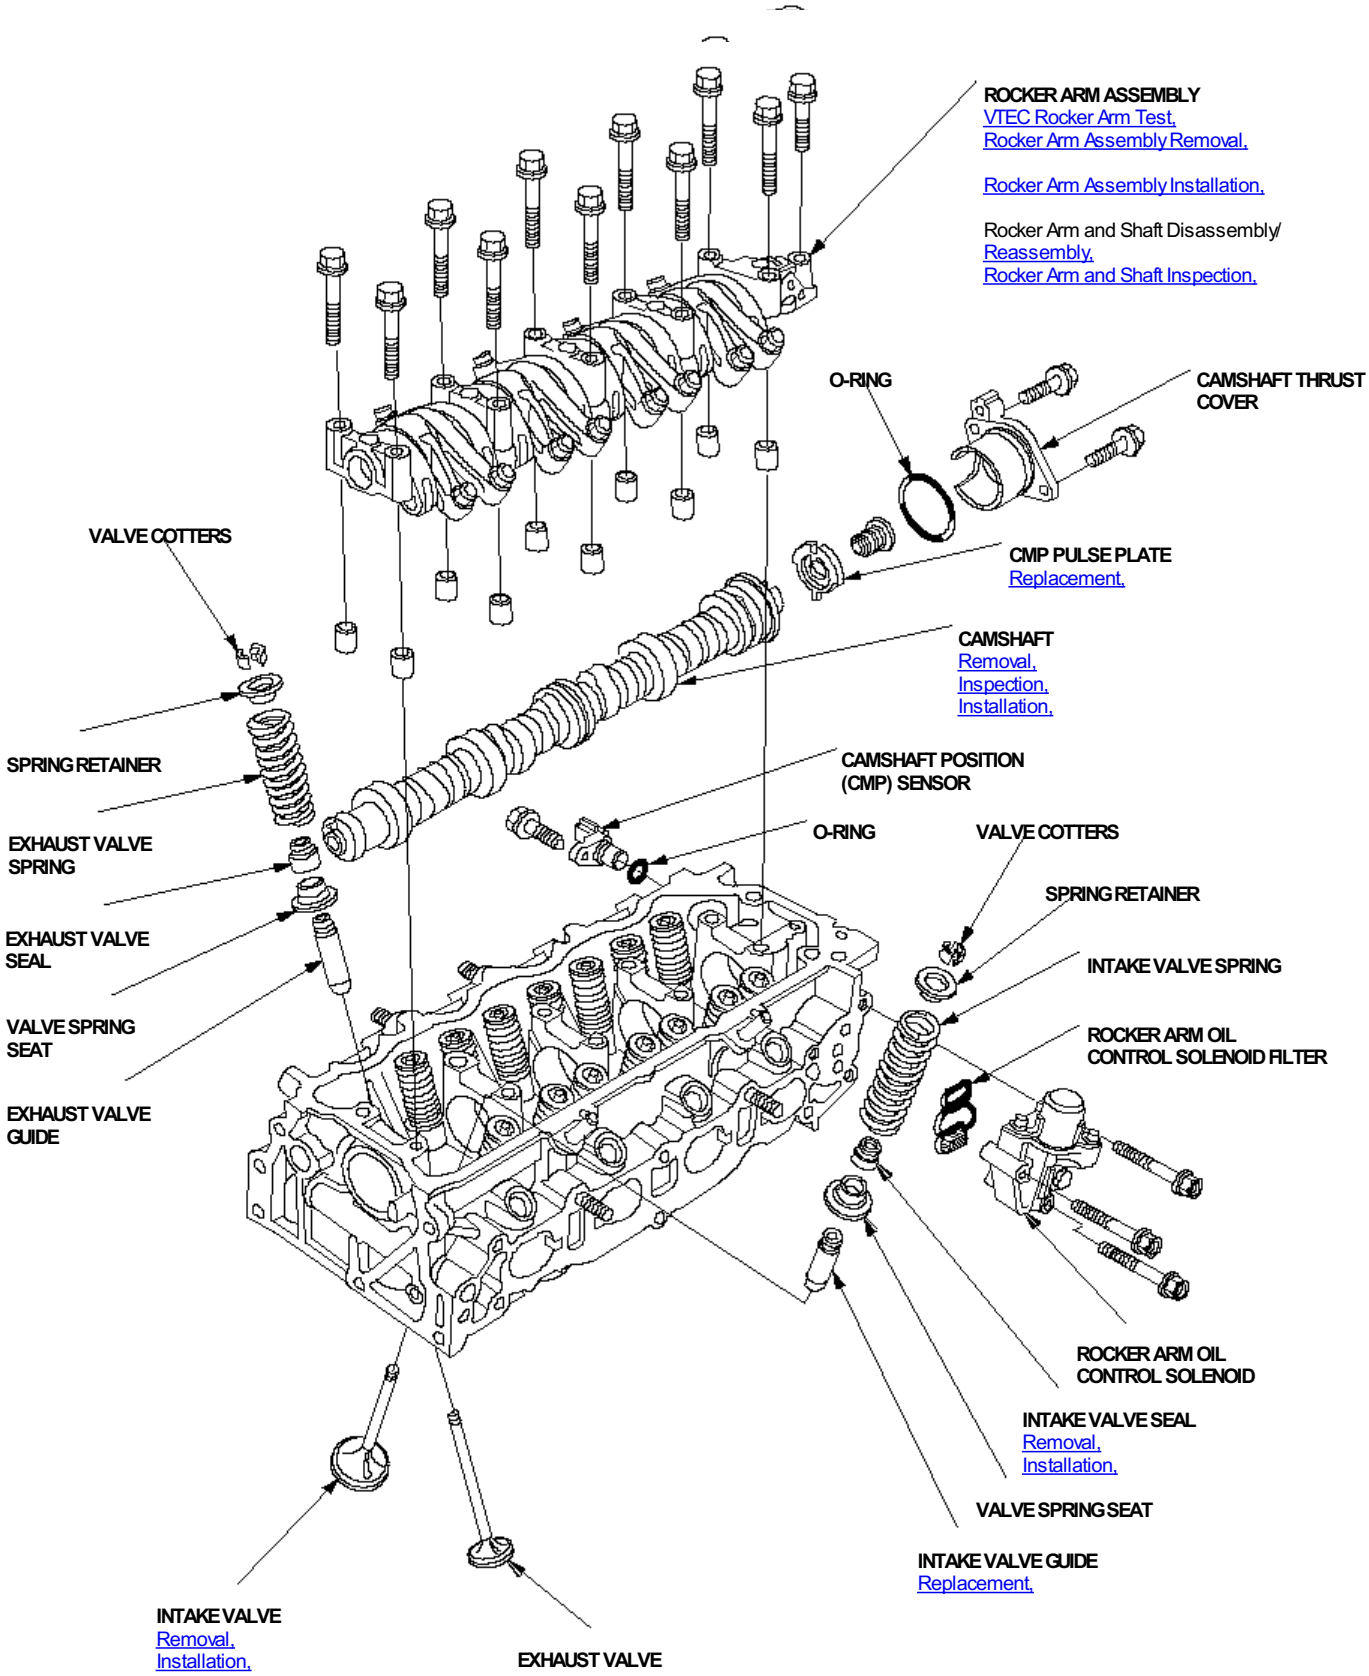
OPDS Unit Harness Locations

FRONT PASSENGER'S SEAT



RHD model is shown, LHD model is symmetrical.

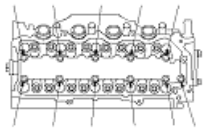
Cylinder Head Component Location Index



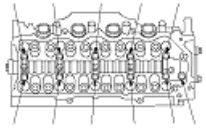
Camshaft Inspection

1. Remove the camshaft sprocket.
2. Remove the rocker arm assembly, then disassemble the rocker arm.
3. Put the rocker shaft holder bridge/rocker shaft holders on the cylinder head, then tighten the bolts to the specified torque.
   Specified Torque
   6 x 1.0 mm
   (1)–(10): 15 N·m (1.5 kgf·m, 11 lbf·ft)
   (11): 9.8 N·m (1.0 kgf·m, 7.2 lbf·ft)
4. Seat the camshaft by pushing it toward the rear of the cylinder head.

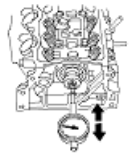
L15A7 engine



L13Z1 engine

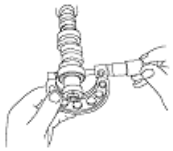


5. Zero the dial indicator against the end of the camshaft. Push the camshaft back and forth, and read the end play. If the end play is beyond the service limit, replace the thrust cover and recheck. If it is still beyond the service limit, replace the camshaft.
   Camshaft End Play
   Standard (New): 0.05–0.25 mm (0.002–0.010 in.)
   Service Limit: 0.5 mm (0.02 in.)



6. Remove the camshaft.
7. Wipe the camshaft clean, then inspect the lift ramps. Replace the camshaft if any lobes are pitted, scored, or excessively worn.

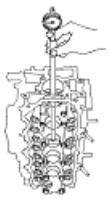
8. Measure the diameter of each camshaft journal.



9. Zero the gauge to the journal diameter.

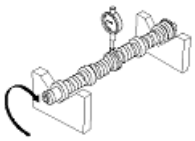
10. Clean the camshaft bearing surfaces in the cylinder head. Measure the inside diameter of each camshaft bearing surface, and check for an out-of-round condition.
    - If the camshaft-to-holder clearance is within limits, go to Step 12 .
    - If the camshaft-to-holder clearance is beyond the service limit, and the camshaft has been replaced, replace the cylinder head.
    - If the camshaft-to-holder clearance is beyond the service limit, and the camshaft has not been replaced, go to Step 11 .

    Camshaft-to-Holder Oil Clearance
    Standard (New): 0.045–0.084 mm (0.0018–0.0033 in.)
    Service Limit: 0.100 mm (0.004 in.)

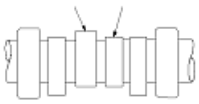


11. Check the total runout with the camshaft supported on V-blocks.
    - If the total runout of the camshaft is within the service limit, replace the cylinder head.
    - If the total runout is beyond the service limit, replace the camshaft, and recheck the oil clearance. If the oil clearance is still out of tolerance, replace the cylinder head.

    Camshaft Total Runout
    Standard (New): 0.03 mm (0.001 in.) max.
    Service Limit: 0.04 mm (0.002 in.)



12. Measure the cam lobe height.



Cam Lobe Height Standard (New):

		INTAKE	EXHAUST
L15A7 engine	PRI	35.241 mm (1.3874 in.)	35.471 mm (1.3965 in.)
	SEC	36.173 mm (1.4241 in.)	
L13Z1 engine	PRI	34.290 mm (1.3500 in.)	35.047 mm (1.3798 in.)
	SEC	30.529 mm (1.2019 in.)	

PRI: Primary SEC: Secondary IN: Intake
EX: Exhaust C/C: Cam Chain

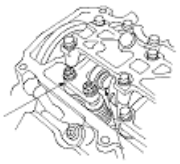
VTEC Rocker Arm Test

Special Tools Required

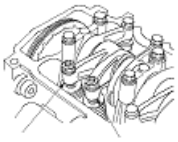
Air supply, 3/8
07LAJ-PR30102

Air adapter, M10 x 1.0
070AJ-0010101

L15A7 engine



L13Z1 engine

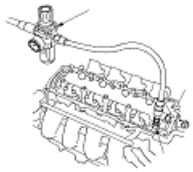


1. Start the engine, and let it run for 5 minutes, then turn the ignition switch to LOCK (0).
2. Remove the cylinder head cover.
3. Rotate the crankshaft clockwise, and visually check that all the primary rocker arms (A) and secondary rocker arms (B) move freely.
   - If the primary rocker arm and secondary rocker arm move together, remove the primary and secondary rocker arms as an assembly, and check that the pistons in the primary and secondary rocker arms move smoothly. If any rocker arm needs replacing, replace the primary and secondary rocker arms as an assembly, then retest.
   - If all the primary rocker arms and secondary rocker arms move freely, go to Step 4 .
4. Check that the air pressure on the shop air compressor gauge indicates over 400 kPa (4 kgf/cm ^{2}, 57 psi).
5. Inspect the valve clearance.

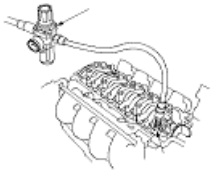
---

6. Install the air adapter (A) to the inspection hole, then connect the valve inspection set (B).
7. Loosen the valve on the regulator, and apply the specified air pressure.
   Specified Air Pressure:
   340 kPa (3.5 kgf/cm ^{2}, 50 psi)

L15A7 engine



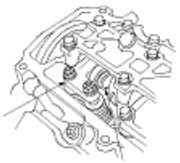
L13Z1 engine



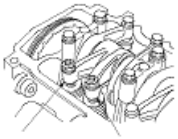
---

8. With the specified air pressure applied, rotate the crankshaft clockwise, and visually check that all the primary rocker arms (A) and secondary rocker arms (B) move together.
   If the primary rocker arm and secondary rocker arm move freely and independently of each other, remove the primary and secondary rocker arms as an assembly, and check that the pistons in the primary and secondary rocker arms move smoothly. If any rocker arm needs replacing, replace the primary and secondary rocker arms as an assembly, and test.
9. Remove the air supply and the VTEC adapter.
10. Install the cylinder head cover.

L15A7 engine



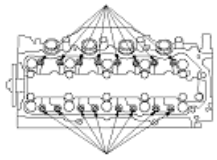
L13Z1 engine



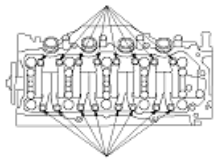
Cylinder Head Rocker Arm Assembly Removal

1. Remove the cylinder head cover.
2. Loosen the rocker arm adjusting screws (A).

L15A7 engine

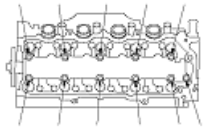


L13Z1 engine

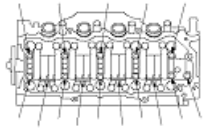


3. Unscrew the rocker shaft mounting bolts two turns at a time, in sequence below.
   NOTE: With L13Z1 engine: Bundle the intake rocker arms with rubber bands (A) to keep them together as a set.

L15A7 engine

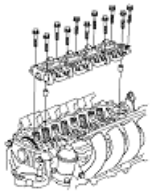


L13Z1 engine

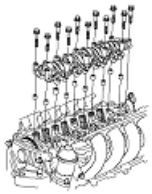


4. Remove the rocker shaft mounting bolts, then remove the rocker arm assembly (A).

L15A7 engine



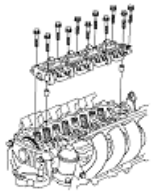
L13Z1 engine



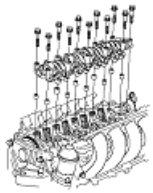
Cylinder Head Rocker Arm Assembly Installation

1. Install the rocker arm assembly (A).

L15A7 engine

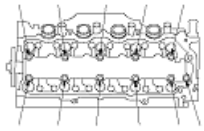


L13Z1 engine

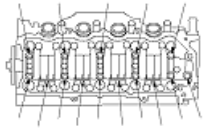


2. Tighten each bolts two turns at a time in sequence.
   NOTE: With L13Z1 engine: Remove the rubber bands (A) from the intake rocker arms.
   Specified Torque
   6 x 1.0 mm
   (1)–(10): 15 N·m (1.5 kgf·m, 11 lbf·ft)
   (11): 9.8 N·m (1.0 kgf·m, 7.2 lbf·ft)

L15A7 engine



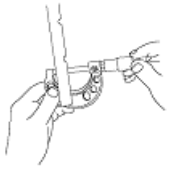
L13Z1 engine



3. Adjust the valve clearance.
4. Install the cylinder head cover.

Cylinder Head Rocker Arm and Shaft Inspection

1. Remove the rocker arm assembly.
2. Disassemble the rocker arm assembly.
3. Measure the diameter of the shaft at the first rocker location.



4. Zero the gauge (A) to the shaft diameter.

5. Measure the inside diameter of the rocker arm, and check it for an out-of-round condition.

Rocker Arm-to-Shaft Clearance

L15A7 engine:	
Intake:	
Standard (New):	**0.017–0.048 mm (0.0007–0.0019 in.)**
Service Limit:	**0.08 mm (0.0031 in.)**
Exhaust:	
Standard (New):	**0.019–0.050 mm (0.0007–0.0020 in.)**
Service Limit:	**0.08 mm (0.0031 in.)**
Intake:	
Standard (New):	**0.019–0.050 mm (0.0007–0.0020 in.)**
Service Limit:	**0.08 mm (0.0031 in.)**
Exhaust:	
Standard (New):	**0.019–0.050 mm (0.0007–0.0020 in.)**
Service Limit:	**0.08 mm (0.0031 in.)**

6. Repeat for all rockers and shaft. If the clearance is beyond the service limit, replace the rocker shaft and all out of service limit rocker arms. If any VTEC rocker arm needs replacement, replace the rocker arms as an assembly.

VTEC Rocker Arms

7. Inspect the rocker arm pistons (B). Push on them manually. If they do not move smoothly, replace the rocker arm set.
   NOTE:
   - Apply new engine oil to the rocker arm pistons when reassembling.
   - When reassembling the secondary rocker arm A, carefully apply air pressure to the oil passage of the rocker arm.
8. Reassemble the rocker arm assembly.
9. Install the rocker arm assembly.

L15A7 engine

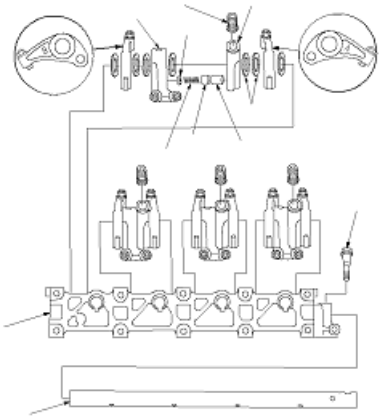
L13Z1 engine

Cylinder Head Rocker Arm and Shaft Disassembly/Reassembly

L15A7 engine

NOTE:

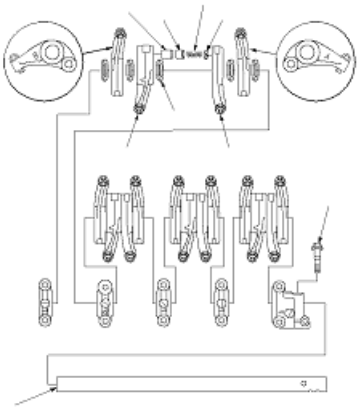
- Identify each part as it is removed so that each item can be reinstalled in its original position.
- Inspect the rocker arm shaft and the rocker arms.
- If reused, the rocker arms must be installed in the their original location.
- Remove the rocker shaft bolt before removing the rocker shaft from the rocker shaft holder bridge.
- Prior to reassembling, clean all the parts in solvent, dry them, and apply new engine oil to any contact points.
- When replacing the rocker arm assembly, remove the fastening hardware from the new rocker arm assembly.



L13Z1 engine

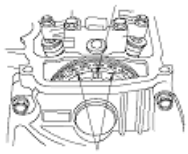
NOTE:

- Identify each part as it is removed so that each item can be reinstalled in its original position.
- Inspect the rocker arm shaft and the rocker arms.
- If reused, the rocker arms must be installed in the their original location.
- Remove the rocker shaft bolt before removing the rocker shaft from the No. 5 rocker shaft holder.
- Prior to reassembling, clean all the parts in solvent, dry them, and apply new engine oil to any contact points.
- When replacing the rocker arm assembly, remove the fastening hardware from the new rocker arm assembly.
- When reassembling the rocker arm and shaft assembly, position the arrows on the rocker shaft holders facing the cam chain side.

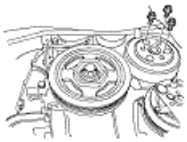


Cam Chain Removal

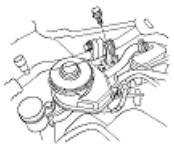
NOTE: Keep the cam chain away from magnetic fields.



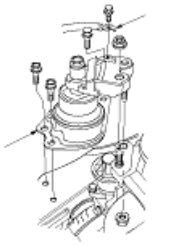
1. Remove the cylinder head cover.
2. Set the No. 1 piston at top dead center (TDC). The ‘‘UP" mark (A) on the camshaft sprocket should be at the top, and the TDC grooves (B) on the camshaft sprocket should line up with the top edge of the head.
3. Remove the right front wheel.
4. Remove the right side splash shield.
5. Loosen the water pump pulley mounting bolts.
6. Remove the drive belt.



7. Remove the water pump pulley.
8. Remove the crankshaft pulley.
9. Remove the drive belt auto-tensioner.



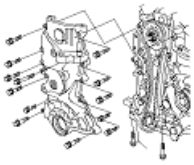
10. Remove the A/C line bracket mounting bolt.
11. Support the engine with a jack and wood block under the oil pan.



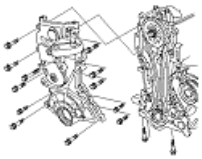
12. Remove the ground cable (A), then remove the side engine mount/bracket assembly (B).

13. Remove the chain case.

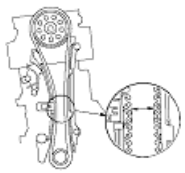
L15A7 engine



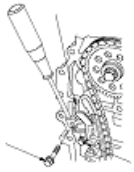
L13Z1 engine



14. Measure the cam chain separation. If the distance is less than the service limit, replace the cam chain and cam chain tensioner.
    Standard Distance: 19 mm (0.75 in.)
    Service Limit: 15 mm (0.59 in.)



15. Apply new engine oil to the sliding surface of the cam chain tensioner slider (A).
16. Hold the cam chain tensioner slider with the screwdriver, then remove the bolt (B), and loosen the bolt (C).



17. Remove the cam chain tensioner slider.

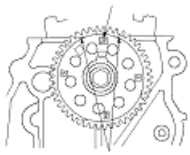
18. Remove the cam chain tensioner (A) and the cam chain guide (B).
19. Remove the cam chain.

Cam Chain Installation

NOTE: Keep the cam chain away from magnetic fields.

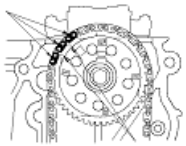
1. Set the crankshaft to top dead center (TDC). Align the TDC mark (A) on the crankshaft sprocket with the pointer (B) on the oil pump.
2. Remove the crankshaft sprocket.

3. Set the camshaft to TDC. The “UP" mark (A) on the camshaft sprocket should be at the top, and the TDC grooves (B) on the camshaft sprocket should line up with the top edge of the head.

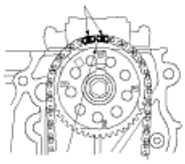


4. Install the cam chain on the crankshaft sprocket with the colored piece (A) aligned with the TDC mark (B) on the crankshaft sprocket, then install the crankshaft sprocket to the crankshaft.

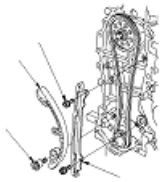
5. With L15A7 engine: Install the cam chain on the camshaft sprocket with the pointers (A) aligned with the three colored pieces (B) as shown.



6. With L13Z1 engine: Install the cam chain on the camshaft sprocket with the pointer (A) aligned with the center of the two colored pieces (B).

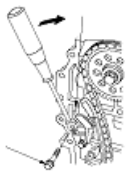


7. Install the cam chain tensioner (A) and the cam chain guide (B).

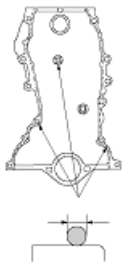


8. Install the cam chain tensioner slider, and tighten the bolt loosely.

9. Apply new engine oil to the sliding surface of the cam chain tensioner slider (A).
10. Rotate the cam chain tensioner slider clockwise to compress the cam chain tensioner, and install the remaining bolt, then tighten the bolts.
11. Check the chain case oil seal for damage. If the oil seal is damaged, replace the chain case oil seal.
12. Remove the all of the old liquid gasket from the chain case mating surfaces, the bolts, and the bolt holes.
13. Clean and dry the chain case mating surfaces.

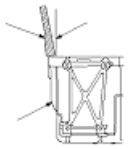


14. Apply liquid gasket (P/N 08C70-K0234M, 08C70-K0334M, or 08C70-X0331S) to the engine block mating surface of the chain case and to the inner threads of the bolt holes.
NOTE: Apply liquid gasket about 2.5 mm (0.098 in.) diameter bead along the broken line (A).



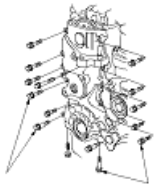
15. Apply liquid gasket (P/N 08C70-K0234M, 08C70-K0334M, or 08C70-X0331S) to the oil pan mating surface of the chain case and to the inner threads of the bolt holes.
NOTE:
    - Apply liquid gasket about 2.5 mm (0.098 in.) diameter bead along the broken line (A).
    - Apply liquid gasket about 5.0 mm (0.20 in.) diameter bead to the shaded area (B).
    - Do not install components if 5 minutes or more have passed after applying the liquid gasket. Instead, remove the old residue and reapply the liquid gasket.

16. Set the edge of the chain case (A) to the edge of the oil pan (B), then install the chain case on the engine block (C).
NOTE:
    - When installing the chain case, do not slide the bottom surface onto the oil pan mounting surface.
    - Wait at least 30 minutes before filling the engine with oil.
    - Do not run the engine for at least 3 hours after installing the chain case.

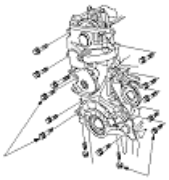


17. Tighten the chain case mounting bolts. Wipe off the excess liquid gasket on the oil pan and the chain case mating area.

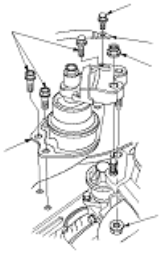
L15A7 engine



L13Z1 engine

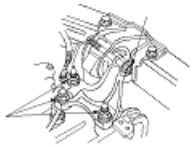


18. Install the side engine mount/bracket assembly (A), then tighten the new side engine mount/bracket assembly mounting bolts (B).
19. Loosely tighten the new side engine mount/bracket assembly mounting nuts (C).
20. Install the ground cable (D).
21. Remove the air cleaner housing assembly.

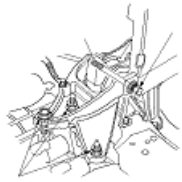


22. Loosen the transmission mount bracket mounting bolts and nuts (A).
23. Raise the vehicle on the lift to full height.

M/T model



A/T model

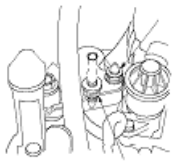


24. Loosen the torque rod mounting bolt and nut (A).
25. Lower the vehicle on the lift.

M/T model

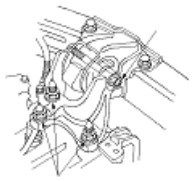
A/T model

26. Tighten the side engine mount/bracket assembly mounting nuts in the numbered sequence shown.



27. Tighten the transmission mount mounting bolts and nuts in the numbered sequence shown.
28. Raise the vehicle on the lift to full height.

M/T model



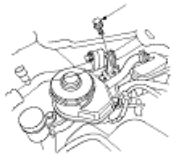
A/T model

29. Tighten the torque rod mounting bolt and nut in the numbered sequence shown.
30. Lower the vehicle on the lift.
31. Install the air cleaner housing assembly.

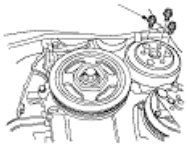
M/T model

A/T model

32. Install the A/C line bracket mounting bolt.
33. Install the cylinder head cover.
34. Install the drive belt auto-tensioner.
35. Install the crankshaft pulley.



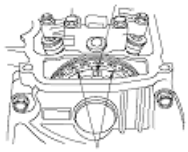
36. Install the water pump pulley.
37. Install the drive belt.
38. Tighten the water pump pulley mounting bolts.
39. Install the right side splash shield.
40. Install the right front wheel.
41. Do the crankshaft position (CKP) pattern clear/CKP pattern learn procedure.



Cylinder Head Valve Clearance Adjustment

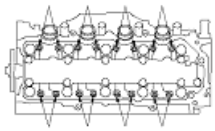
NOTE: Adjust the valves only when the cylinder head temperature is less than 38 °C (100 °F).

1. Remove the cylinder head cover.
2. Set the No. 1 piston at top dead center (TDC). The "UP" mark (A) on the camshaft sprocket should be at the top, and the TDC grooves (B) on the camshaft sprocket should line up with the top edge of the head.

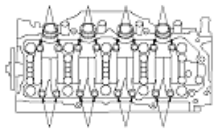


3. Select the correct thickness feeler gauge for the valves you are going to check.
   Valve Clearance
   Intake: 0.15–0.19 mm (0.006–0.007 in.)
   Exhaust: 0.26–0.30 mm (0.010–0.012 in.)

L15A7 engine

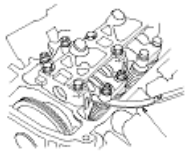


L13Z1 engine

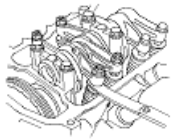


4. Insert the feeler gauge (A) between the adjusting screw and the end of the valve stem on No. 1 cylinder and slide it back and forth; you should feel a slight amount of drag.

L15A7 engine

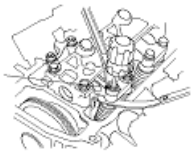


L13Z1 engine

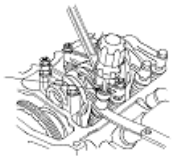


5. If you feel too much or too little drag, loosen the locknut, and turn the adjusting screw (A) until the drag on the feeler gauge is correct.
6. Tighten the locknut and recheck the clearance. Repeat the adjustment, if necessary.
7. Tighten the locknut to the specified torque, and recheck the valve clearance. Repeat the adjustment if necessary.
   Specified Torque
   7 x 0.75 mm 14 N·m (1.4 kgf·m, 10 lbf·ft)
   Apply new engine oil to the nut threads.

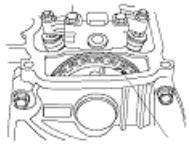
L15A7 engine



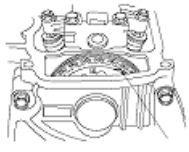
L13Z1 engine



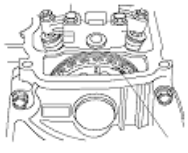
8. Rotate the crankshaft clockwise. Align the No. 3 piston TDC groove (A) on the camshaft sprocket with the top edge of the head.
9. Check, and if necessary, adjust the valve clearance on the No. 3 cylinder.



10. Rotate the crankshaft clockwise. Align the No. 4 piston TDC groove (A) on the camshaft sprocket with the top edge of the head.
11. Check, and if necessary, adjust the valve clearance on the No. 4 cylinder.

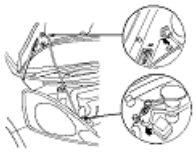


12. Rotate the crankshaft clockwise. Align the No. 2 piston TDC groove (A) on the camshaft sprocket with the top edge of the head.
13. Check, and if necessary, adjust the valve clearance on the No. 2 cylinder.
14. Install the cylinder head cover.



Engine Removal

Special Tools Required



Engine tilt hanger set
07KAK-SJ40101

Engine hanger stay
07KAK-SJ40200

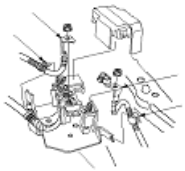
Sub hanger stay
07MAK-PY30100

NOTE:

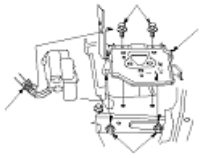
- Use fender covers to avoid damaging painted surfaces.
- To avoid damaging the wiring and terminals, unplug the wiring connectors carefully while holding the connector portion.
- Mark all wiring and hoses to avoid misconnection. Also, be sure that they do not contact other wiring or hoses, or interfere with other parts.

1. Remove the hood support rod, then use it as shown to prop the hood in the wide-open position.
2. Relieve fuel pressure.
3. Do the battery removal procedure.
4. Remove the under-cowl panel.
5. Remove the air cleaner housing assembly.

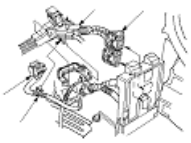
6. Remove the battery cables (A) from the battery terminal fuse box.
7. Remove the harness clamps (B).



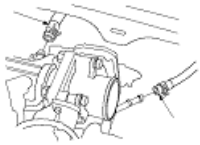
8. With M/T model: Remove the harness clamp (A). Remove the two bolts (B) and loosen the two bolts (C), then remove the battery base (D).



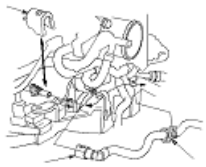
9. Disconnect the engine control module (ECM)/ powertrain control module (PCM) connectors (A) and the engine wire harness connector (B).
10. Remove the harness clamp (C) and harness holder (D).



11. Disconnect the evaporative emission (EVAP) canister hose (A) and brake booster vacuum hose (B).

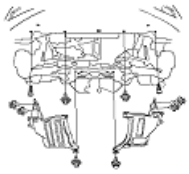


12. Remove the fuel feed hose clamp (A) and the quick-connect fitting cover (B), then disconnect the fuel feed hose (C).



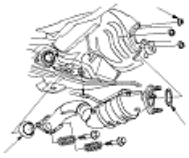
13. Disconnect the secondary heated oxygen sensor (secondary HO2S) connector (A), then remove the secondary HO2S harness from the clamps (B).
14. M/T model: Remove the shift cable.
15. M/T model: Remove the clutch slave cylinder, and clutch line bracket mounting bolt.
16. Remove the radiator cap.
17. Raise the vehicle on the lift to full height.
18. Remove the front wheels.

19. Remove the splash shields.
20. Remove the drive belt.
21. Loosen the drain plug in the radiator, and drain the engine coolant.
22. Drain the engine oil.
23. Drain the transmission fluid:
    - Manual transmission
    - Automatic transmission



---

24. Remove the under-floor three way catalytic converter (under-floor TWC).
25. A/T model: Remove the shift cable.
26. Remove the stabilizer links from the stabilizer.
27. Separate the knuckles from the lower arms.

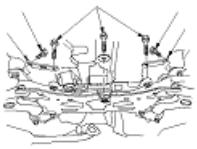


---

28. Remove the driveshaft heat shield.
29. Remove the driveshafts. Coat all precision-finished surfaces with clean engine oil. Tie a plastic bags over the driveshaft ends.

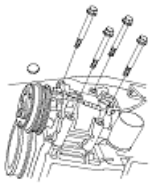
---

30. Remove the bolts (A) securing the steering gearbox, then remove the steering gearbox stiffeners (B).



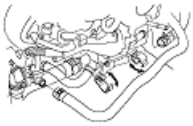
---

31. Remove the A/C compressor without disconnecting the A/C hoses.
32. Lower the vehicle on the lift.
33. Remove the radiator.



---

34. Disconnect the heater hoses.
35. Raise the vehicle on the lift to full height.
36. Support the transmission with a jack and wood block under the transmission.



---

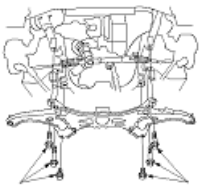
37. Remove the torque rod.
38. Remove the jack.

M/T model

A/T model

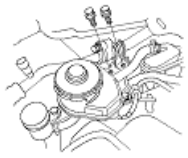
---

39. Remove the front subframe.
40. Lower the vehicle on the lift.



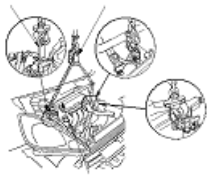
---

41. With RHD model: Remove the brake fluid reservoir tank bracket mounting bolts.



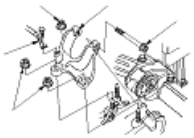
42. Install the sub hanger stay.

43. Attach the special tools to the engine/transmission as shown.

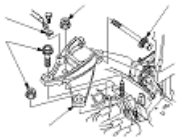


44. Remove the ground cable (A), then remove the transmission mount bracket (B).

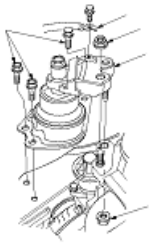
M/T model



A/T model

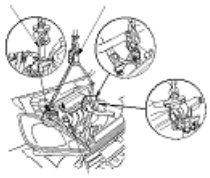


45. Remove the ground cable (A), then remove the side engine mount/bracket assembly (B).
46. Check that the engine/transmission is completely free of vacuum hoses, fuel and coolant hoses, and electrical wiring.
47. Slowly lower the engine/transmission about 150 mm (6 in.). Check once again that all hoses and electrical wiring are disconnected and free from the engine/transmission, then lower it all the way.
48. Disconnect the chain hoist from the engine/transmission.
49. Raise the vehicle, and remove the engine/ transmission from under the vehicle.



Engine Installation

Special Tools Required



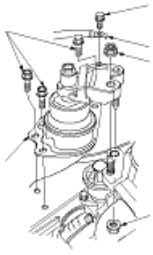
Engine tilt hanger set
07KAK-SJ40101

Engine hanger stay
07KAK-SJ40200

Sub hanger stay
07MAK-PY30100

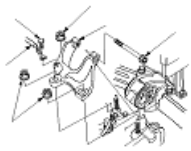
1. Raise the vehicle on the lift, and position the engine/transmission under the vehicle. Lower the vehicle, and attach the special tools to the engine/transmission, then lift the engine/transmission into position in the vehicle.
   NOTE: Reinstall the mounting bolts and support nuts in the sequence given in the following steps. Failure to follow this sequence may cause excessive noise and vibration, and reduce engine mount life.

2. Install the side engine mount/bracket assembly (A), then tighten the new side engine mount/bracket assembly mounting bolts (B).
3. Loosely tighten the new side engine mount/bracket assembly mounting nuts (C).
4. Install the ground cable (D).

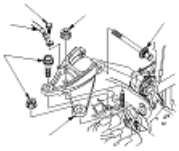


5. Install the transmission mount bracket (A), and loosely tighten the new transmission mount bracket mounting bolts and nuts (B).
6. Install the ground cable (C).
7. Remove the engine tilt hanger set from the engine/transmission

M/T model

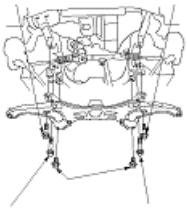


A/T model



8. Remove the sub hanger stay.
9. Raise the vehicle on the lift to full height.

10. Install the front subframe, then tighten the new front subframe mounting bolts in the numbered sequence shown.

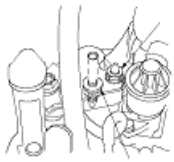


11. Install the torque rod (A). Install the new bolt with the tab (B) on the bolt head aligned with the guide (C) on the front subframe, then loosely tighten the new torque rod mounting bolt and nut (D).
12. Lower the vehicle on the lift.

M/T model

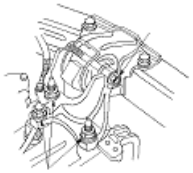
A/T model

13. Tighten the side engine mount/bracket assembly mounting nuts in the numbered sequence shown.



14. Tighten the transmission mount mounting bolts and nuts in the numbered sequence shown.
15. Raise the vehicle on the lift to full height.

M/T model

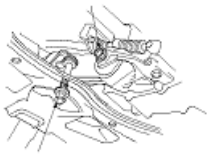


A/T model

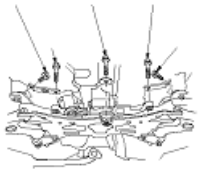
16. Tighten the torque rod mounting bolt and nut in the numbered sequence shown.

M/T model

A/T model

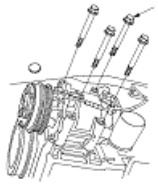


17. Install the securing the steering gearbox and the steering gearbox stiffeners, then tighten the new bolts in the numbered sequence shown.
18. Install a new set ring on the end of each driveshaft, then install the driveshafts. Make sure each ring ‘‘clicks" into place in the differential and the intermediate shaft.

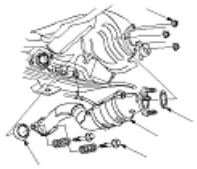


19. Install the driveshaft heat shield.
20. Connect the lower arms to the knuckles.
21. Install the stabilizer links to the stabilizer.
22. A/T model: Install the shift cable.

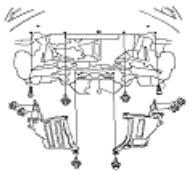
23. Install the A/C compressor.
24. Install the drive belt.



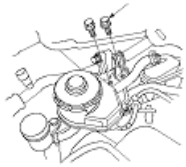
25. Install the under-floor three way catalytic converter (under-floor TWC) (A). Use new gaskets (B) and new self locking nuts (C).



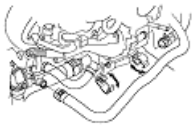
26. Install the splash shields.
27. Lower the vehicle on the lift.



28. With RHD model: Install the brake fluid reservoir tank bracket mounting bolts.

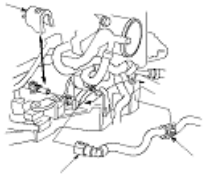


29. Install the heater hoses.
30. Install the radiator.
31. M/T model: Install the clutch slave cylinder, and clutch line bracket mounting bolt.
32. M/T model: Install the shift cable.

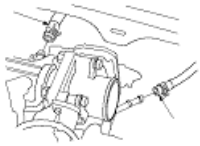


33. Connect the secondary heated oxygen sensor (secondary HO2S) connector (A), then install the secondary HO2S harness to the clamps (B).

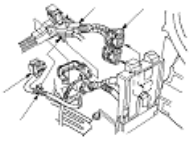
34. Connect the fuel feed hose (A) , then install the quick-connect fitting cover (B) and the fuel feed hose clamp (C).



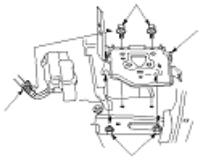
35. Install the evaporative emission (EVAP) canister hose (A) and brake booster vacuum hose (B).



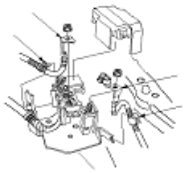
36. Install the harness holder (A), then install the harness clamp (B).
37. Connect the engine wire harness connector (C) and the engine control module (ECM)/powertrain control module (PCM) connectors (D).



38. With M/T model: Install the battery base (A), then install the harness clamp (B).

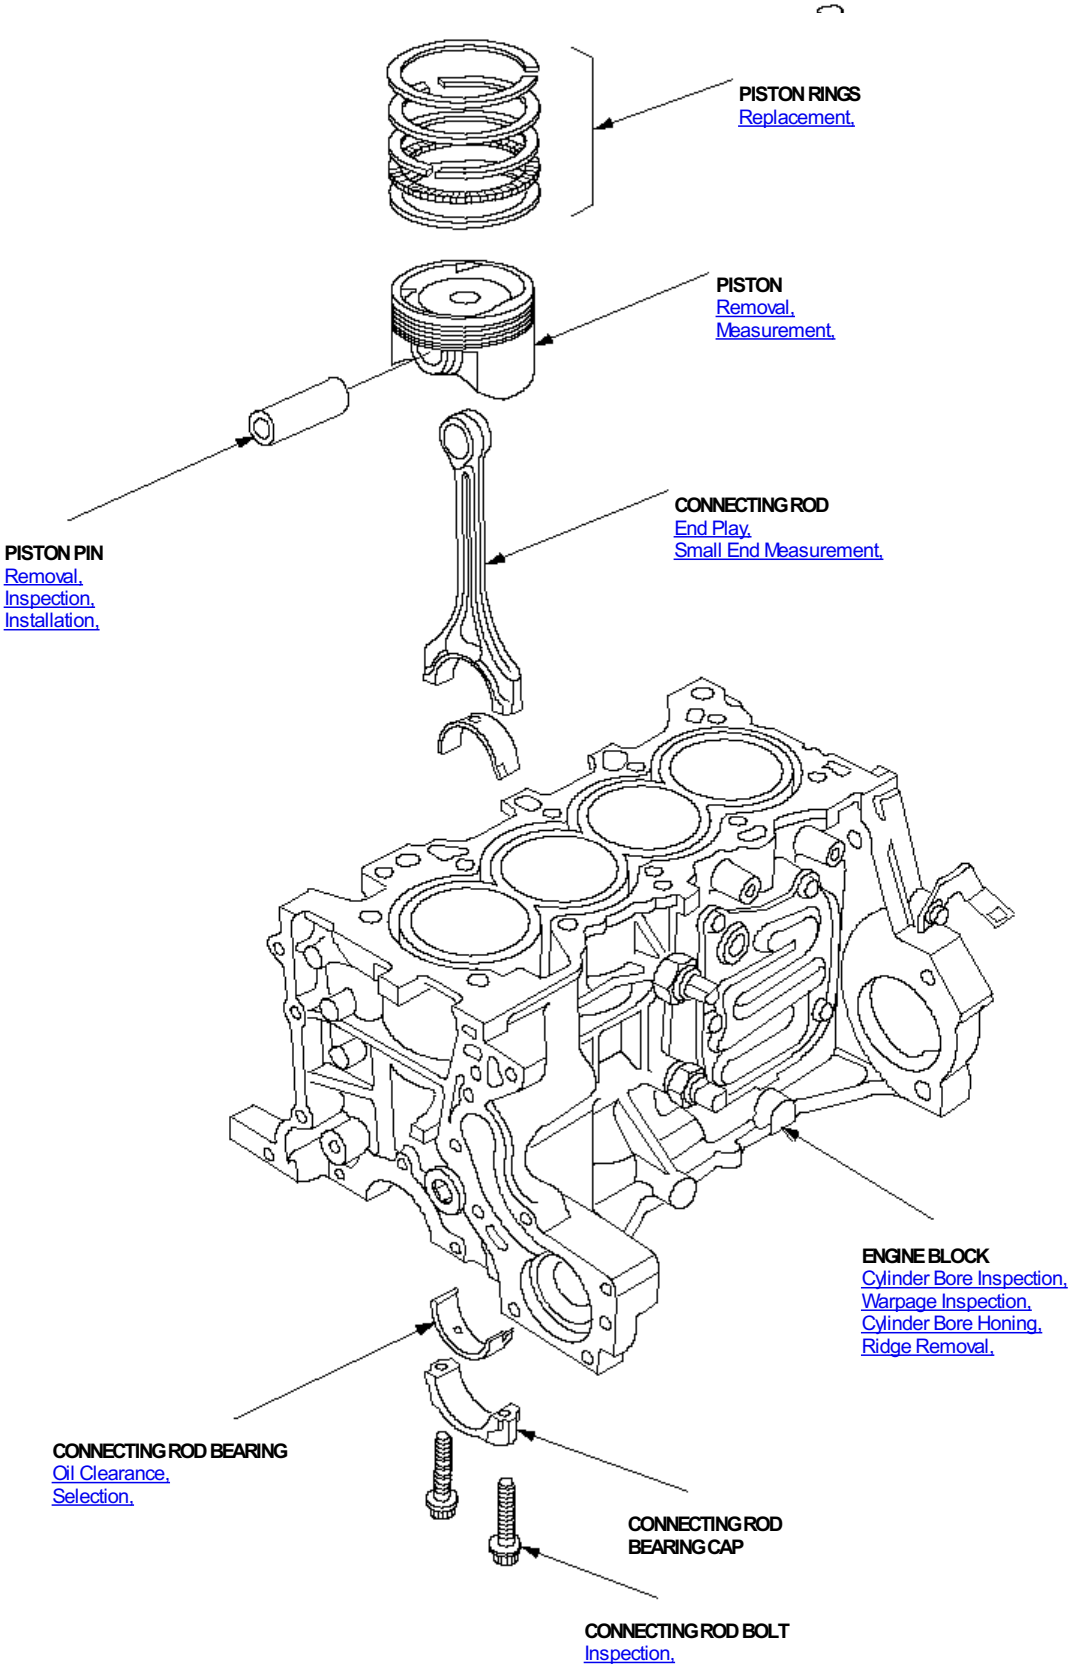


39. Install the battery cables (A) to the battery terminal fuse box.
40. Install the harness clamps (B).
41. Install the front wheels.
42. Install the under-cowl panel.
43. Do the battery installation procedure.
44. Refill the transmission with fluid:
    - Manual transmission
    - Automatic transmission
45. Install the air cleaner housing assembly.
46. A/T model: Move the shift lever to each gear, and verify that the A/T gear position indicator follows the transmission range switch.
47. M/T model: Check that the transmission shifts into all gear smoothly.
48. Inspect for fuel leaks. Turn the ignition switch to ON (II) (do not operate the starter) so the fuel pump runs for about 2 seconds and pressurizes the fuel line. Repeat this operation three times, then check for fuel leakage at any point in the fuel line.
49. Refill the radiator with engine coolant, and bleed air from the cooling system with the heater valve open.
50. Refill the engine with engine oil.
51. Do the ECM/PCM reset procedure.
52. Do the crankshaft position (CKP) pattern clear/CKP pattern learn procedure.
53. Inspect the idle speed.
54. Inspect the ignition timing.



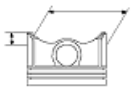
Engine Block Component Location Index

L15A7 engine



Engine Block and Piston Inspection

1. Remove the crankshaft and the pistons.
2. Check the piston for distortion or cracks.

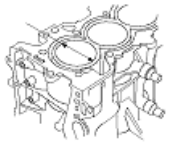


3. Measure the piston diameter (A) at a point 16 mm (0.6 in.) from the bottom of the skirt.

Piston Diameter
L15A7 engine:
Standard (New): **72.980−72.990 mm (2.8732−2.8736 in.)**
Service Limit: **72.97 mm (2.8728 in.)**
L13Z1 engine:
Standard (New): **72.972−72.982 mm (2.8729−2.8733 in.)**
Service Limit: **72.97 mm (2.8728 in.)**

Oversize Piston Diameter
L15A7 engine:
0.25: **73.230−73.240 mm (2.88307−2.88346 in.)**
L13Z1 engine:
0.25: **73.222−73.232 mm (2.88275−2.88314 in.)**

4. Measure wear and taper in direction Y at three levels in each cylinder as shown. If measurements in any cylinder are beyond the Oversize Bore Service Limit, replace the engine block. If the engine block is to be rebored, refer to Step 7 after reboring.



Cylinder Bore Size

Standard (New): **73.000−73.015 mm (2.8740−2.8746 in.)**
Service Limit: **73.065 mm (2.8766 in.)**

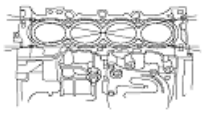
Oversize
0.25: **73.250−73.265 mm (2.8839−2.8844 in.)**

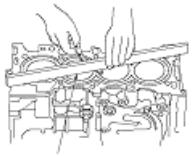
Reboring limit: **0.25 mm (0.01 in.) max.**

Bore Taper
Limit: **(Difference between first and third measurement) 0.05 mm (0.002 in.)**

5. Scored or scratched cylinder bores must be honed.

6. Check the top of the engine block for warpage. Measure along the edges and across the center as shown.

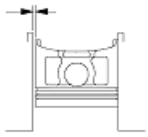




Engine Block Warpage

Standard (New): **0.07 mm (0.003 in.) max.**
Service Limit: **0.10 mm (0.004 in.)**

7. Calculate the difference between the cylinder bore diameter and the piston diameter. If the clearance is near or exceeds the service limit, inspect the piston and engine block for excessive wear.

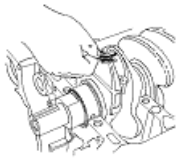


Piston-to-Cylinder Clearance

L15A7 engine:
Standard (New): **0.010−0.035 mm (0.0004−0.0014 in.)**
Service Limit: **0.05 mm (0.002 in.)**
L13Z1 engine:
Standard (New): **0.018−0.043 mm (0.0007−0.0017 in.)**
Service Limit: **0.05 mm (0.002 in.)**

Connecting Rod Bearing Replacement

Rod Bearing Clearance Inspection

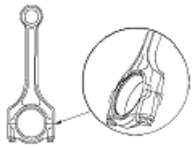


1. To check rod bearing-to-journal oil clearance, remove the bearing cap bridge.
2. Remove the connecting rod cap and bearing half.
3. Clean the crankshaft rod journal and bearing half with a clean shop towel.
4. Place plastigage across the rod journal.
5. Reinstall the bearing half and cap, and torque the bolts to 9.8 N·m (1.0 kgf·m, 7.2 lbf·ft) +90 °.
   NOTE: Do not rotate the crankshaft during inspection.
6. Remove the rod cap and bearing half, and measure the widest part of the plastigage.
   Connecting Rod Bearing-to-Journal Oil Clearance

L15A7 engine:	
Standard (New):	**0.020–0.038 mm (0.0008–0.0015 in.)**
Service Limit:	**0.050 mm (0.0020 in.)**
L13Z1 engine:	
Standard (New):	**0.026–0.044 mm (0.0010–0.0017 in.)**
Service Limit:	**0.050 mm (0.0020 in.)**

7. If the plastigage measures too wide or too narrow, remove the upper half of the bearing, install a new, complete bearing with the same color code(s), and recheck the clearance. Do not file, shim, or scrape the bearings or the caps to adjust clearance.
8. If the plastigage shows the clearance is still incorrect, try the next larger or smaller bearing (the color listed above or below the current one), and check clearance again. If the proper clearance cannot be obtained by using the appropriate larger or smaller bearing, replace the crankshaft and start over.

Rod Bearing Selection



1. Inspect each connecting rod for cracks and heat damage.

Connecting Rod Big End Bore Code Locations

2. Each rod falls into one of four tolerance ranges (from 0 to 0.024 mm (0.0009 in.), in 0.006 mm (0.0002 in.) increments) depending on the size of its big end bore. It's then stamped with a number or bar (1, 2, 3, or 4) indicating the range. You may find any combination of 1, 2, 3, or 4 in any engine.
   If the codes are indecipherable because of an accumulation of dirt and dust, do not scrub them with a wire brush or scraper. Clean them only with solvent or detergent.

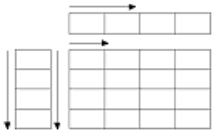
Normal Bore Size:	**43.0 mm (1.69 in.)**

Connecting Rod Journal Code Location

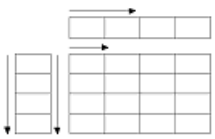
3. The connecting rod journal codes are stamped on the crankshaft.

4. Use the big end bore codes and rod journal codes to select appropriate replacement bearings from the following table.
   NOTE: Color code is on the edge of the bearing.

L15A7 engine

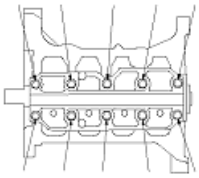


L13Z1 engine



Crankshaft Main Bearing Replacement

Main Bearing Clearance Inspection



1. To check main bearing-to-journal oil clearance, remove the bearing cap bridge and bearing halves.
2. Clean each main journal and bearing half with a clean shop towel.
3. Place one strip of plastigage across each main journal.
4. Reinstall the bearings and bearing cap bridge, then tighten the bearing cap bolts to 25 N·m (2.5 kgf·m, 18 lbf·ft) in the proper sequence.
   NOTE: Do not rotate the crankshaft during inspection.
5. Tighten the bearing cap bolts an additional 40 °.

6. Remove the bearing cap bridge and bearings again, and measure the widest part of the plastigage.

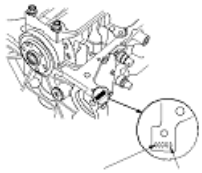
Main Bearing-to-Journal Oil Clearance

Standard (New):	**0.018–0.036 mm (0.0007–0.0014 in.)**
Service Limit:	**0.050 mm (0.0020 in.)**

7. If the plastigage measures too wide or too narrow, remove the crankshaft, and remove the upper half of the bearing. Install a new, complete bearing with the same color code(s), and recheck the clearance. Do not file, shim, or scrape the bearings or the caps to adjust clearance.
8. If the plastigage shows the clearance is still incorrect, try the next larger or smaller bearing (the color listed above or below the current one), and check again. If the proper clearance cannot be obtained by using the appropriate larger or smaller bearings, replace the crankshaft and start over.

Main Bearing Selection

Crankshaft Bore Code Location



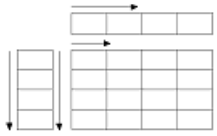
1. Letters have been stamped on the end of the block as a code for the size of each of the five main journal bores. Write down the crank bore codes.
   If you can't read the codes because of accumulated dirt and dust, do not scrub them with a wire brush or scraper. Clean them only with solvent or detergent.

Main Journal Code Location

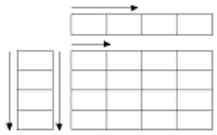
2. The main journal codes are stamped on the crankshaft.

3. Use the crank bore codes and crank journal codes to select the appropriate replacement bearings from the following table.
   NOTE: Color code is on the edge of the bearing.

L15A7 engine

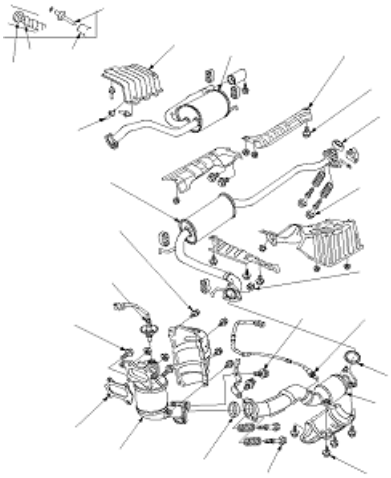


L13Z1 engine



Exhaust Pipe and Muffler Replacement

NOTE: Use new gaskets and self-locking nuts when reassembling.

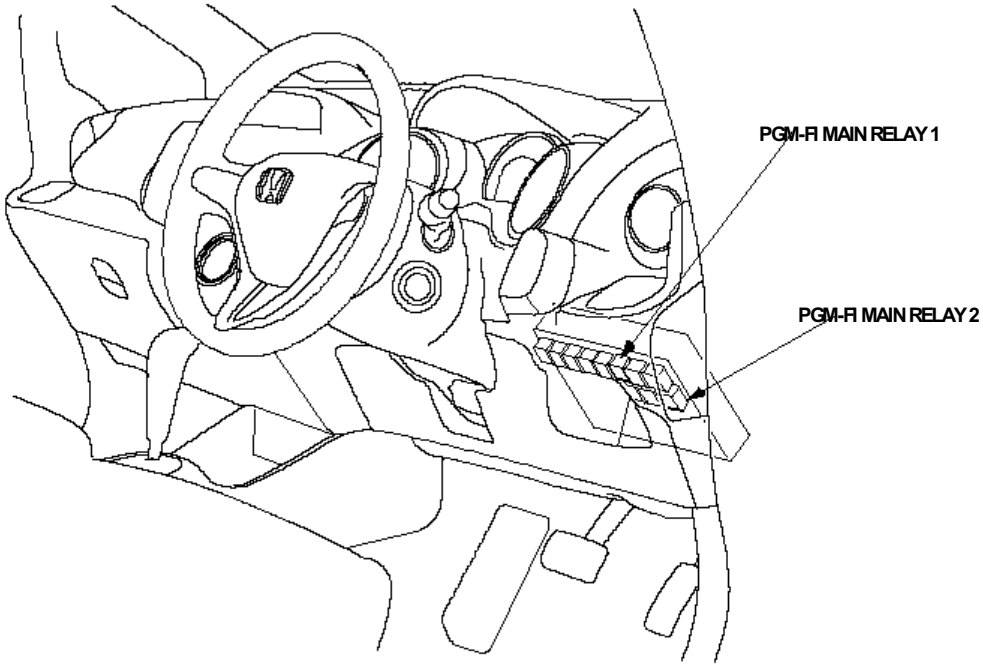


Fuel and Emissions System Description - Vacuum Lines

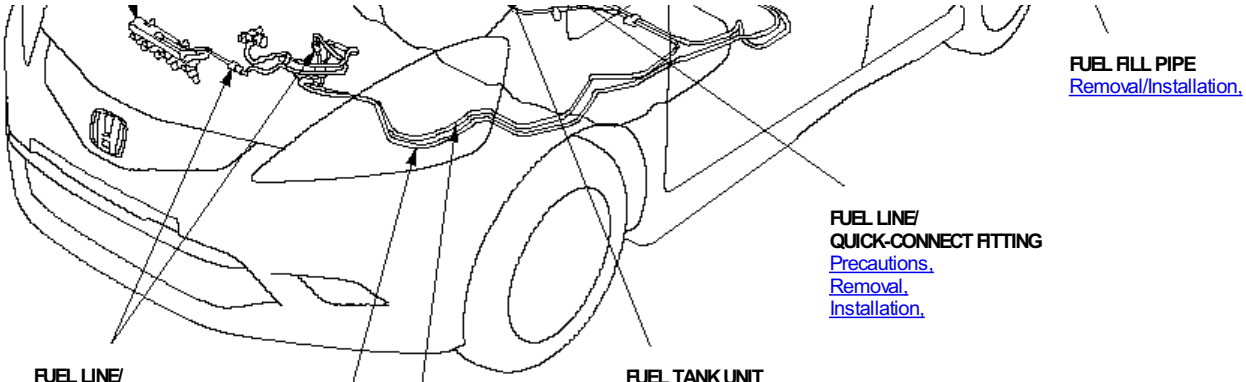
[Vacuum Hose Routing]
[Vacuum Distribution]

Fuel Supply System Component Location Index

RHD model



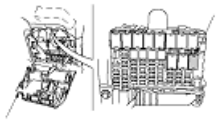
*: This illustration shows RHD model.



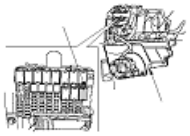
Fuel Pump Circuit Troubleshooting

If you suspect a problem with the fuel pump, check that the fuel pump actually runs; when it is on, you will hear some noise if you listen to the fuel fill port with the fuel fill cap removed. The fuel pump should run for 2 seconds when the ignition switch is turned on. If the fuel pump does not make noise, check as follows:

RHD model



LHD model



1. Turn the ignition switch to LOCK (0).
2. Open the fuse lid (A), then remove PGM-FI main relay 2 (B) from the under-dash fuse/relay box.
3. Turn the ignition switch to ON (II).

4. Measure the voltage between PGM-FI main relay 2 4P connector terminal No. 4 and body ground.

Is there battery voltage?

YES - Go to Step 5 .

NO -
- Replace the under-dash fuse/relay box. ■
- Replace the PGM-FI main relay 1 .■

5. Measure the voltage between PGM-FI main relay 2 4P connector terminal No. 2 and body ground.

Is there battery voltage?

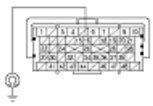
YES - Go to Step 6

NO -
- Check the No. 20 FUEL PUMP (15 A) fuse in the under-dash fuse/relay box.■
- If the fuse is OK, replace the under-dash fuse/relay box. ■

6. Turn the ignition switch to LOCK (0).

7. Connect PGM-FI main relay 2 4P connector terminal No. 3 to body ground with a jumper wire.
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector A (49P).

10. Check for continuity between body ground and ECM/PCM connector terminal A16.



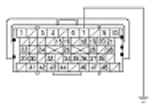
Is there continuity?

YES - Go to Step 11 .

NO - Repair open in the wire between PGM-FI main relay 2 and the ECM/PCM (A16).■

11. Reinstall PGM-FI main relay 2.

12. Connect ECM/PCM connector terminal A7 to body ground with a jumper wire.
13. Turn the ignition switch to ON (II).



14. Measure the voltage between ECM/PCM connector terminal A16 and body ground.

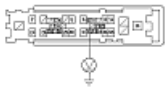
Is there battery voltage?

YES - Go to Step 15 .

NO -
- Repair open in the wire between the under-dash fuse/relay box and the ECM/PCM (A7, A16).■
- Replace PGM-FI main relay 2. ■

15. Turn the ignition switch to LOCK (0).
16. Reconnect ECM/PCM connector A (49P).

17. Turn the ignition switch to ON (II), and measure the voltage between under-dash fuse/relay box connector B (36P) terminal No. 32 and body ground within 2 seconds.

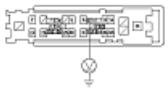


Is there battery voltage?

YES - Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM, then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM. ■

NO - Go to Step 18 .

18. Turn the ignition switch to ON (II), and measure the voltage between under-dash fuse/relay box connector B (36P) terminal No. 32 and body ground after 2 seconds.



Is there battery voltage?
YES - Go to Step 19 .
NO - If needed, replace the under-dash fuse/relay box, then go to Step 19 .

19. Turn the ignition switch to LOCK (0).

20. Remove the center console.

21. Remove the parking brake lever, then remove the access panel from the floor.

---

22. Turn the ignition switch to ON (II), and measure the voltage between fuel tank unit 4P connector terminal No. 2 and body ground within 2 seconds.

Is there battery voltage?
YES - Go to Step 27 .
NO - Go to Step 23 .

23. Turn the ignition switch to LOCK (0).

24. Remove PGM-FI main relay 2.

---

25. Connect PGM-FI main relay 2 4P connector terminals No. 1 and No. 2 with a jumper wire.

---

26. Turn the ignition switch to ON (II), and measure the voltage between fuel tank unit 4P connector terminal No. 2 and body ground.

Is there battery voltage?
YES - Replace PGM-FI main relay 2 .■
NO - Repair open in the wire between PGM-FI main relay 2 and the fuel tank unit 4P connector.■

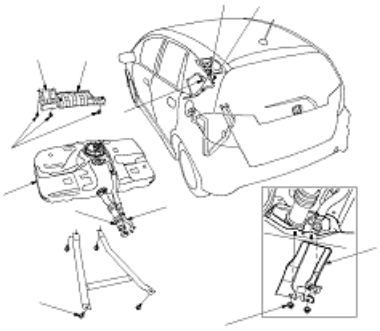
27. Turn the ignition switch to LOCK (0).

---

28. Check for continuity between fuel tank unit 4P connector terminal No. 4 and body ground.

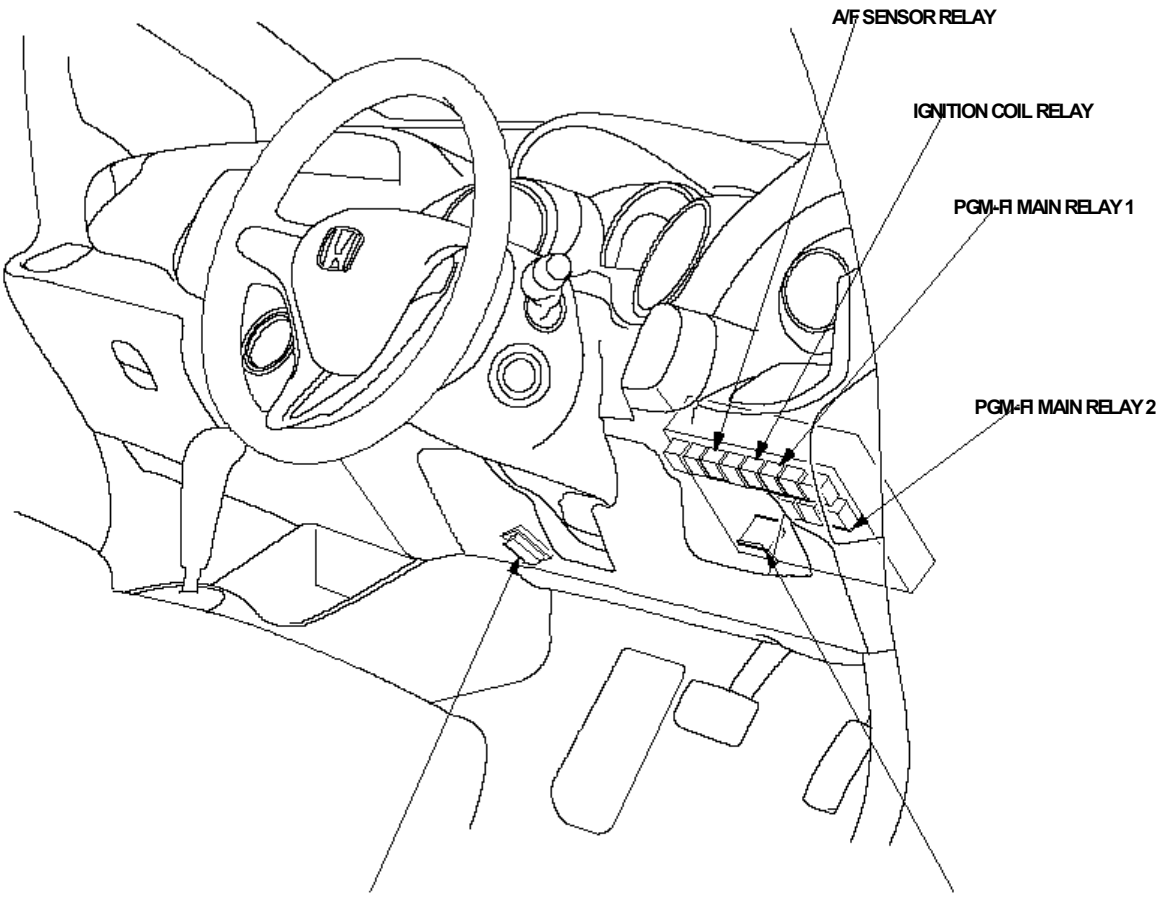
Is there continuity?
YES - Replace the fuel pump. ■
NO - Repair open in the wire between the fuel tank unit 4P connector and G502. ■

Fuel Tank Replacement

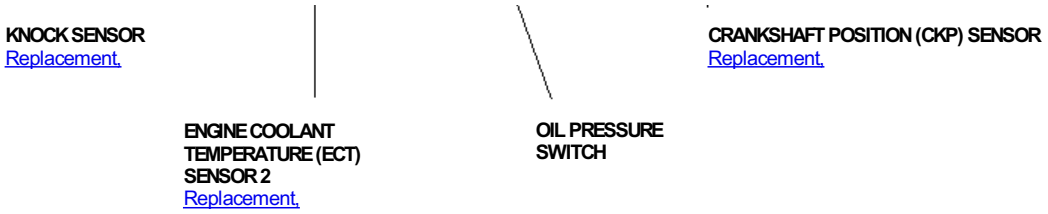


1. Drain the fuel tank, then disconnect the fuel tank unit 4P connector (A), the fuel vapor hose (B), and the quick-connect fittings (C).
2. Lift the vehicle, and support it with jackstands.
3. Remove the fill neck tube cover (D), then disconnenct the fuel fill tube (E) and the suction hose (F). Slide back the clamps, then twist the hoses as you pull to avoid damaging them.
4. Remove the fuel tank guard bracket (G) and the fuel tank protector (H).
5. Place a jack or other support under the tank (I).
6. Remove the strap bolts and the straps (J).
7. Remove the fuel tank.
8. Install the parts in the reverse order of removal.

PGM-FI System Component Location Index



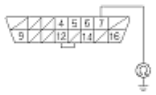
*: This illustration shows RHD model.



*: This illustration shows RHD model.

DLC Circuit Troubleshooting

NOTE: Make sure the HDS and its DLC cable are working properly.



1. Turn the ignition switch to LOCK (0).
2. Connect the HDS to the DLC.
   NOTE: Make sure the HDS is properly connected to the DLC.
3. Turn the ignition switch to ON (II), and read the HDS.

   Does the HDS identify the vehicle?
   YES - Go to Step 4 .
   NO - Go to Step 21 .
4. Check for Temporary DTCs or DTCs in the PGM-FI system with the HDS.

   Are any Temporary DTCs or DTCs indicated?
   YES - Go to the indicated DTC's troubleshooting.■
   NO -
   - If the HDS does not communicate with the SRS system, go to Step 5 .
   - If the HDS does not communicate with the ABS system, go to Step 7 .
   - If the HDS does not communicate with the EPS system, go to Step 9 .
   - If the HDS does not communicate with the IMMOBI (immobilizer) system, go to Step 11 .
   - If the HDS does not communicate with the BODY ELECTRICAL system, go to Step 13 .
5. Turn the ignition switch to LOCK (0).
6. Turn the ignition switch to ON (II), and watch the SRS indicator.

   Does the SRS indicator stay on?
   YES - Go to the SRS system's general troubleshooting information. ■
   NO - Go to Step 13 .
7. Turn the ignition switch to LOCK (0).
8. Turn the ignition switch to ON (II), and watch the ABS indicator.

   Does the ABS indicator stay on?
   YES - Go to the ABS system's general troubleshooting information. ■
   NO - Go to Step 13 .
9. Turn the ignition switch to LOCK (0).
10. Turn the ignition switch to ON (II), and watch the EPS indicator.

    Does the EPS indicator stay on?
    YES - Go to the EPS system's general troubleshooting information. ■
    NO - Go to Step 13 .
11. Turn the ignition switch to LOCK (0).
12. Turn the ignition switch to ON (II), and watch the immobilizer indicator.

    Does the immobilizer indicator stay on or flash?
    YES - Go to the immobilizer system's troubleshooting. ■
    NO - Go to Step 13 .
13. Do the gauge self-diagnostic function.
14. Check the gauge display.

    Is Error 2 indicated?
    YES - Check for B-CAN system DTCs.■
    NO - Go to Step 15 .
15. Turn the ignition switch to LOCK (0).
16. Disconnect the HDS from the DLC.
17. Check for continuity between DLC terminal No. 7 and body ground.

    Is there 5 Ω or less?
    YES - Go to Step 18 .
    NO - Go to Step 19 .
18. Continue to check for continuity between DLC terminal No. 7 and body ground, while disconnecting these parts, one at a time:
    - SRS unit connector A (39P)
    - ABS modulator-control unit 25P connector
    - EPS control unit connector C (16P)
    - Immobilizer-keyless control unit 7P connector
    - Audio unit 24P connector

- Under-dash fuse/relay box (Q) (16P) connector

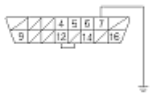
Does continuity go away when one of the above components is disconnected?

YES - Replace the part caused an open when it was disconnected.■

NO - Repair short in the wire between the DLC (K-line) and the ABS control unit, the SRS unit, the EPS control unit, the immobilizer-keyless control unit, the audio unit, the under-dash fuse/relay box, or the ECM/PCM.■

---

19. Connect DLC terminal No. 7 to body ground with a jumper wire.



20. Check for continuity between body ground and these connector terminals:

Connector	Terminal
SRS unit A (39P)	No. 18 (BLU)
ABS control unit 25P	No. 10 (BLU)
EPS control unit C (16P)	No. 16 (BLU)
Immobilizer-keyless control unit 7P	No. 5 (BLU)
Audio unit 24P	No. 3 (BLU)
Under-dash fuse/relay box (Q) (16P)	No. 2 (BLU)

Is there continuity between the DLC terminal and each of the terminals in the chart?

YES - Replace the part that does not communicate with the HDS.■

NO - Repair open in the wire between the DLC (K-line) and the appropriate connector.■

21. Check for B-CAN system DTCs without the HDS.

Is DTC U0029 and/or U0100 indicated?

YES - Go to Step 34 .

NO - Go to Step 22 .

22. Turn the ignition switch to LOCK (0).

23. Disconnect the HDS from the DLC.

---

24. Measure the voltage between DLC terminal No. 16 and body ground.

Is there battery voltage?

YES - Go to Step 25 .

NO - Repair open in the wire between DLC terminal No. 16 and the No. 1 BACK UP (7.5 A) fuse in the under-dash fuse/relay box.■

---

25. Measure the voltage between DLC terminals No. 4 and No. 16.

Is there battery voltage?

YES - Go to Step 26 .

NO - Repair open in the wire between DLC terminal No. 4 and body ground (G502).■

26. Connect the HDS to the DLC.

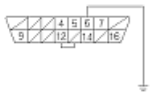
27. Jump the SCS line with the HDS.

28. Disconnect ECM/PCM connector A (49P).

29. Disconnect the HDS from the DLC.

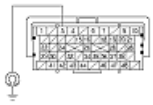
---

30. Connect DLC terminal No. 6 to body ground with a jumper wire.



---

31. Check for continuity between ECM/PCM connector terminal A3 and body ground.



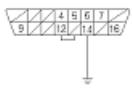
Is there continuity?

YES - Go to Step 32 .

NO - Repair open in the wire between the ECM/PCM (A3) and DLC terminal No. 6.■

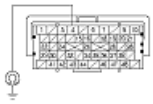
---

32. Connect DLC terminal No. 14 to body ground with a jumper wire.



---

33. Check for continuity between ECM/PCM connector terminal A4 and body ground.



Is there continuity?

YES - Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM, then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM. ■

NO - Repair open in the wire between the ECM/PCM (A4) and DLC terminal No. 14.■

34. Try to start the engine.

Does the engine start and idle smoothly?

YES - Go to F-CAN circuit troubleshooting. ■

NO - Go to Step 35 .

35. Turn the ignition switch to LOCK (0).

36. Check the No. 60 IGSW (50 A) fuse in the under-dash fuse/relay box.

Is the fuse OK?

YES - Repair open in the wire the No. 60 IGSW (50 A) fuse and the ignition switch. If the wire is OK go to Step 37 .

NO - Repair short in the wire the No. 60 IGSW (50 A) fuse and the under-dash fuse/relay box. Also replace the No. 60 IGSW (50 A) fuse.■

37. Inspect the No. 39 IGP (15 A) fuse in the under-dash fuse/relay box.

Is the fuse OK?

YES - Go to Step 44 .

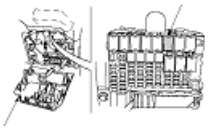
NO - Go to Step 38 .

38. Remove the blown No. 39 IGP (15 A) fuse from the under-dash fuse/relay box.

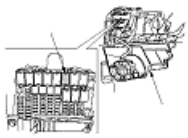
---

39. Open the fuse lid (A), then remove the PGM-FI main relay 1 (B) from the under-dash fuse/relay box.

RHD model



LHD model



---

40. Check for continuity between body ground and PGM-FI main relay 1 4P connector terminals No. 2 and No. 3 individually.

Is there continuity?

YES - Replace the under-dash fuse/relay box. ■

NO - Go to Step 41 .

---

41. While disconnecting each of the parts or connectors below, one at a time, check for continuity between PGM-FI main relay 1 4P connector terminal No. 1 and body ground.

- PGM-FI main relay 2
- ECM/PCM connector A (49P)
- Each injector 2P connector
- Camshaft position (CMP) sensor 3P connector
- Crankshaft position (CKP) sensor 3P connector
- Electronic throttle control system (ETCS) control relay

Does continuity go away when one of the above components is disconnected?

YES - Replace the part that made the short to body ground go away when disconnected. If the part is the ECM/PCM, update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM, then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM. Also replace the No. 39 IGP (15 A) fuse.■

NO - Go to Step 42 .

42. Disconnect these parts or connectors:
    - PGM-FI main relay 2
    - ECM/PCM connector A
    - Injectors
    - Camshaft position (CMP) sensor
    - Crankshaft position (CKP) sensor
    - Electronic throttle control system (ETCS) control relay

---

43. Check for continuity between PGM-FI main relay 1 4P connector terminal No. 2 and body ground.

Is there continuity?
YES - Repair short in the wire between PGM-FI main relay 1 and each item. Also replace the No. 39 IGP (15 A) fuse.■
NO - Replace PGM-FI main relay 1. Also replace the No. 39 IGP (15 A) fuse.■

44. Inspect the No. 20 FUEL PUMP (15 A) fuse in the under-dash fuse/relay box.

Is the fuse OK?
YES - Go to Step 54 .
NO - Go to Step 45 .

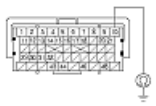
45. Remove the blown No. 20 FUEL PUMP (15 A) fuse from the under-dash fuse/relay box.

46. Jump the SCS line with the HDS.

47. Disconnect ECM/PCM connector C (49P).

---

48. Check for continuity between ECM/PCM connector terminal C10 and body ground.

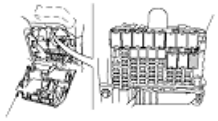


Is there continuity?
YES - Go to Step 49 .
NO - Replace the No. 20 FUEL PUMP (15 A) fuse, and update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM, then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM. ■

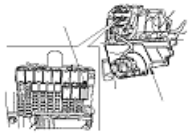
---

49. Open the fuse lid (A), then remove the PGM-FI main relay 2 (B) from the under-dash fuse/relay box.

RHD model

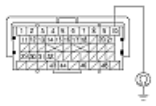


LHD model



---

50. Check for continuity between ECM/PCM connector terminal C10 and body ground.



Is there continuity?
YES - Repair short in the wire between the No. 20 FUEL PUMP (15 A) fuse and the ECM/PCM (C10), or PGM-FI main relay 2. Also replace the No. 20 FUEL PUMP (15 A) fuse.■
NO - Go to Step 51 .

51. Disconnect the fuel pump 4P connector.

---

52. Check for continuity between fuel pump 4P connector terminal No. 2 and body ground.

Is there continuity?
YES - Repair short in the wire between the fuel pump and PGM-FI main relay 2. Also replace the No. 20 FUEL PUMP (15 A) fuse.■
NO - Go to Step 53 .

53. Test PGM-FI main relay 2.

Is the relay OK?
YES - Check the fuel pump, and replace it if necessary. Also replace the No. 20 FUEL PUMP (15 A) fuse.■
NO - Replace PGM-FI main relay 2. Also replace the No. 20 FUEL PUMP (15 A) fuse.■

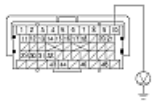
54. Jump the SCS line with the HDS.

55. Disconnect ECM/PCM connectors A (49P) and C (49P).

56. Turn the ignition switch to ON (II).

---

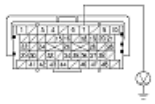
57. Measure the voltage between ECM/PCM connector terminal C10 and body ground.



Is there battery voltage?
YES - Go to Step 58 .
NO - Repair open in the wire between the No. 20 FUEL PUMP (15 A) fuse and the ECM/PCM (C10).■

---

58. Measure the voltage between ECM/PCM connector terminal A7 and body ground.



Is there battery voltage?

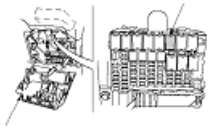
YES - Go to Step 64 .
NO - Go to Step 59 .

59. Turn the ignition switch to LOCK (0).

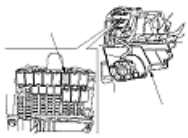
---

60. Open the fuse lid (A), then remove the PGM-FI main relay 1 (B) from the under-dash fuse/relay box.

RHD model



LHD model



---

61. Measure the voltage between PGM-FI main relay 1 4P connector terminal No. 3 and body ground.

Is there battery voltage?

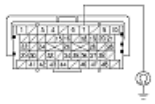
YES - Go to Step 62 .
NO - Replace the under-dash fuse/relay box.

---

62. Connect PGM-FI main relay 1 4P connector terminal No. 4 to body ground with a jumper wire.

---

63. Check for continuity between ECM/PCM connector terminal A7 and body ground.



Is there battery voltage?

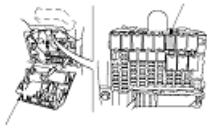
YES - Test PGM-FI main relay 1. If the relay is OK, update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM, then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM. ■
NO - Repair open in the wire between the ECM/PCM (A7) and PGM-FI main relay 1.■

64. Turn the ignition switch to LOCK (0).

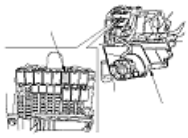
---

65. Open the fuse lid (A), then remove the PGM-FI main relay 1 (B) from the under-dash fuse/relay box.

RHD model



LHD model



---

66. Measure the voltage between PGM-FI main relay 1 4P connector terminal No. 2 and body ground.

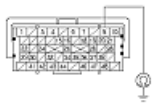
Is there battery voltage?

YES - Go to Step 67 .
NO - Replace the under-dash fuse/relay box. ■

---

67. Connect PGM-FI main relay 1 4P connector terminal No. 1 to body ground with a jumper wire.

68. Check for continuity between ECM/PCM connector terminal A9 and body ground.



Is there continuity?

YES - Go to Step 69 .
NO - Repair open in the wire between the ECM/PCM (A9) and PGM-FI main relay 1.■

69. Test PGM-FI main relay 1.

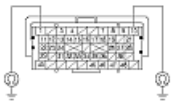
Is PGM-FI main relay 1 OK?

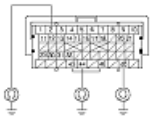
YES - Go to Step 70 .
NO - Replace the PGM-FI main relay 1 .■

70. Disconnect ECM/PCM connector B (49P).

---

71. Check for continuity between body ground and ECM/PCM connector terminals B1, B10, C2, C44, and C48 individually.



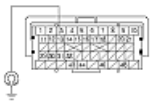


Is there continuity?

YES - Go to Step 72 .
NO - Repair open in the wire between the ECM/PCM (B1, B10, C2, C44, C48) and G101.■

---

72. Check for continuity between ECM/PCM connector terminal C13 and body ground.



Is there continuity?

YES - Go to Step 73 .
NO - Go to Step 74 .

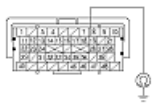
73. Continue to check for continuity between ECM/PCM connector terminal C13 and body ground, while disconnecting these parts, one at a time:
    - MAP sensor 3P connector
    - Output shaft (countershaft) speed sensor 3P connector

Does continuity go away when one of the above components is disconnected?

YES - Repair the part that caused an open when it was disconnected.■
NO - Repair short in the between the ECM/PCM (C13) and the MAP sensor or the output shaft (countershaft) speed sensor.■

---

74. Check for continuity between ECM/PCM connector terminal B19 and body ground.



Is there continuity?

YES - Go to Step 75 .
NO - Go to Step 76 .

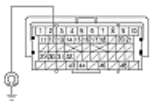
75. Continue to check for continuity between ECM/PCM connector terminal B19 and body ground, while disconnecting the input shaft (mainshaft) speed sensor 3P connector.

Is there continuity?

YES - Repair short in the wire between the ECM/PCM (B19) and the input shaft (mainshaft) speed sensor.■
NO - Replace the input shaft (mainshaft) speed sensor. ■

---

76. Check for continuity between ECM/PCM connector terminal C12 and body ground.



Is there continuity?

YES - Go to Step 77 .
NO - Go to Step 78 .

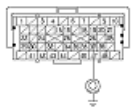
77. Continue to check for continuity between ECM/PCM connector terminal C12 and body ground, while disconnecting the throttle body 6P connector.

Is there continuity?

YES - Repair short in the wire between the ECM/PCM (C12) and the throttle body.■
NO - Replace the throttle body. ■

---

78. Check for continuity between ECM/PCM connector terminal A26 and body ground.



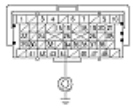
Is there continuity?
YES - Go to Step 79 .
NO - Go to Step 80 .

79. Continue to check for continuity between ECM/PCM connector terminal A26 and body ground, while disconnecting the APP sensor 6P connector.

Is there continuity?
YES - Repair short in the wire between the ECM/PCM (A26) and APP sensor A.■
NO - Replace the accelerator pedal module. ■

---

80. Check for continuity between ECM/PCM connector terminal A25 and body ground.



Is there continuity?
YES - Go to Step 81 .
NO - Go to Step 82 .

81. Continue to check for continuity between ECM/PCM connector terminal A25 and body ground, while disconnecting the APP sensor 6P connector.

Is there continuity?
YES - Repair short in the wire between the ECM/PCM (A25) and APP sensor B.■
NO - Replace the accelerator pedal module. ■

---

82. Check for continuity between ECM/PCM connector terminal A20 and body ground.

Is there continuity?
YES - Go to Step 83 .
NO - Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM, then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM. ■

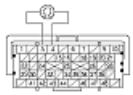
83. Continue to check for continuity between ECM/PCM connector terminal A20 and body ground, while disconnecting the temperature control dial 6P connector.

Is there continuity?
YES - Repair short in the wire between the ECM/PCM (A20) and the temperature control dial.■
NO - Replace the temperature control dial. ■

F-CAN Circuit Troubleshooting

NOTE: Information marked with an asterisk (*) applies to the CANL line.

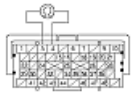
1. Turn the ignition switch to LOCK (0).
2. Jump the SCS line with the HDS.
3. Disconnect ECM/PCM connector A (49P), then disconnect the HDS.
4. Measure the resistance between ECM/PCM connector terminals A3 and A4.



Is there about 95−116 Ω?
YES - Go to Step 27 .
NO - Go to Step 5 .

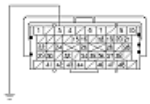
5. Disconnect these connectors:
   - Gauge control module 32P
   - ABS modulator-control unit 25P
   - EPS control unit C (16P)
   - SRS unit A (39P)

6. Check for continuity between ECM/PCM connector terminals A3 and A4.



Is there continuity?
YES - Repair short in the wire between ECM/PCM terminals A3 and A4 * .■
NO - Go to Step 7 .

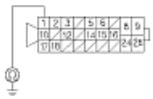
7. Connect ECM/PCM connector terminal A3 to body ground with a jumper wire.



8. Check for continuity between gauge control module 32P connector terminal No. 30 and body ground.

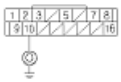
Is there continuity?
YES - Go to Step 9 .
NO - Repair open in the wire between the ECM/PCM (A3) and the gauge control module.■

9. Check for continuity between ABS modulator-control unit 25P connector terminal No. 1 and body ground.



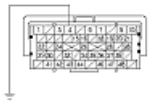
Is there continuity?
YES - Go to Step 10 .
NO - Repair open in the wire between the ECM/PCM (A3) and the ABS modulator-control unit.■

10. Check for continuity between EPS control unit connector C (16P) terminal No. 10 and body ground.



Is there continuity?
YES - Go to Step 11 .
NO - Repair open in the wire between the ECM/PCM (A3) and the EPS control unit.■

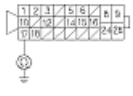
11. Remove the jumper wire from ECM/PCM connector A (49P).
12. Connect ECM/PCM connector terminal A4 to body ground with a jumper wire.



13. Check for continuity between gauge control module 32P connector terminal No. 29 and body ground.

Is there continuity?
YES - Go to Step 14 .
NO - Repair open in the wire between the ECM/PCM (A4) and the gauge control module.■

14. Check for continuity between ABS modulator-control unit 25P connector terminal No. 17 and body ground.



Is there continuity?
YES - Go to Step 15 .
NO - Repair open in the wire between the ECM/PCM (A4) and the ABS modulator-control unit.■

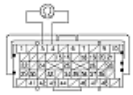
15. Check for continuity between EPS control unit connector C (16P) terminal No. 9 and body ground.

Is there continuity?
YES - Go to Step 16 .
NO - Repair open in the wire between the ECM/PCM (A4) and the EPS control unit.■

16. Reconnect the gauge control module 32P connector.

---

17. Measure the resistance between ECM/PCM connector terminals A3 and A4.



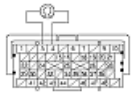
Is there about 108−132 Ω?
YES - Go to Step 18 .
NO - Substitute a known-good gauge control module, If the HDS identifies the vehicle, replace the original gauge control module. ■

18. Disconnect the gauge control module 32P connector.

19. Reconnect the ABS modulator-control unit 25P connector.

---

20. Measure the resistance between ECM/PCM connector terminals A3 and A4.



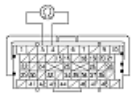
Is there about 2.34−2.86 kΩ?
YES - Go to Step 21 .
NO - Substitute a known-good ABS modulator-control unit, If the HDS identifies the vehicle, replace the original ABS modulator-control unit. ■

21. Disconnect the ABS modulator-control unit 46P connector.

22. Reconnect EPS control unit connector C (16P).

---

23. Measure the resistance between ECM/PCM connector terminals A3 and A4.



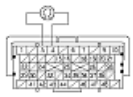
Is there about 2.34−2.86 kΩ?
YES - Go to Step 24 .
NO - Substitute a known-good EPS control unit, If the HDS identifies the vehicle, replace the original EPS control unit. ■

24. Disconnect EPS control unit connector C (16P).

25. Reconnect SRS unit connector A (39P).

---

26. Measure the resistance between ECM/PCM connector terminals A3 and A4.

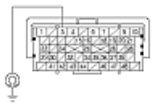


Is there about 2.34−2.86 kΩ?
YES - Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM, then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM. ■
NO - Substitute a known-good SRS unit. If the HDS identifies the vehicle, replace the original SRS unit. ■

27. Disconnect these connectors:
- Gauge control module 32P
- ABS modulator-control unit 25P
- EPS control unit C (16P)
- SRS unit A (39P)

---

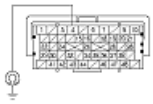
28. Check for continuity between ECM/PCM connector terminal A3 and body ground.



Is there continuity?
YES - Repair short in the wire between ECM/PCM terminals A3 and the gauge control module, the ABS modulator-control unit, the EPS control unit, the SRS unit, or the DLC.■
NO - Go to Step 29 .

---

29. Check for continuity between ECM/PCM connector terminal A4 and body ground.



Is there continuity?
YES - Repair short in the wire between ECM/PCM terminals A4 and the gauge control module, the ABS modulator-control unit, the EPS control unit, the SRS unit, or the DLC.■
NO - Go to Step 30 .

30. Reconnect all connectors.

31. Connect the HDS to the DLC.

32. Disconnect the gauge control module 32P connector.

33. Turn the ignition switch to ON (II), and read the HDS.

Does the HDS identify the vehicle?
YES - Replace the gauge control module. ■
NO - Go to Step 34 .

34. Turn the ignition switch to LOCK (0).

35. Reconnect the gauge control module 32P connector.

36. Disconnect the ABS modulator-control unit 25P connector.

37. Turn the ignition switch to ON (II), and read the HDS.

Does the HDS identify the vehicle?
YES - Replace the ABS modulator-control unit. ■
NO - Go to Step 38 .

38. Turn the ignition switch to LOCK (0).

39. Reconnect the ABS modulator-control unit 25P connector.

40. Disconnect EPS control unit connector C (16P).

41. Turn the ignition switch to ON (II), and read the HDS.

Does the HDS identify the vehicle?
YES - Replace the EPS control unit. ■
NO - Go to Step 42 .

42. Turn the ignition switch to LOCK (0).

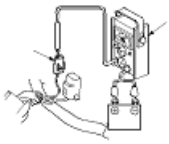
43. Reconnect EPS control unit connector D (28P).

44. Disconnect SRS unit connector A (39P).

45. Turn the ignition switch to ON (II), and read the HDS.

Does the HDS identify the vehicle?
YES - Replace the SRS unit. ■
NO - Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM, then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM. ■

Idle Speed Inspection



NOTE:

- Before checking the idle speed, check these items:
  - The malfunction indicator lamp (MIL) has not been reported on, and there are no DTCs.
  - Ignition timing
  - Spark plugs
  - Air cleaner
  - PCV system
  - Headlight OFF

1. Disconnect the evaporative emission (EVAP) canister purge valve connector.
2. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard, or a tachometer (B) to the test tachometer connector (C).
3. When using the HDS, make sure the HDS communicates with the ECM/PCM. If it doesn't, go to the DLC circuit troubleshooting.
4. Start the engine. Hold the engine speed at 3,000 rpm (min $^{-1}$) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.
5. Check the idle speed without load conditions: headlights, blower fan, radiator fan, and air conditioner off.
   Idle speed should be:

L13Z1 engine

M/T	**650±50 rpm (min $^{-1}$)**
A/T	**700±50 rpm (min $^{-1}$) (in N or P)**

L15A7 engine

M/T	**700±50 rpm (min $^{-1}$)**
A/T	**700±50 rpm (min $^{-1}$) (in N or P)**

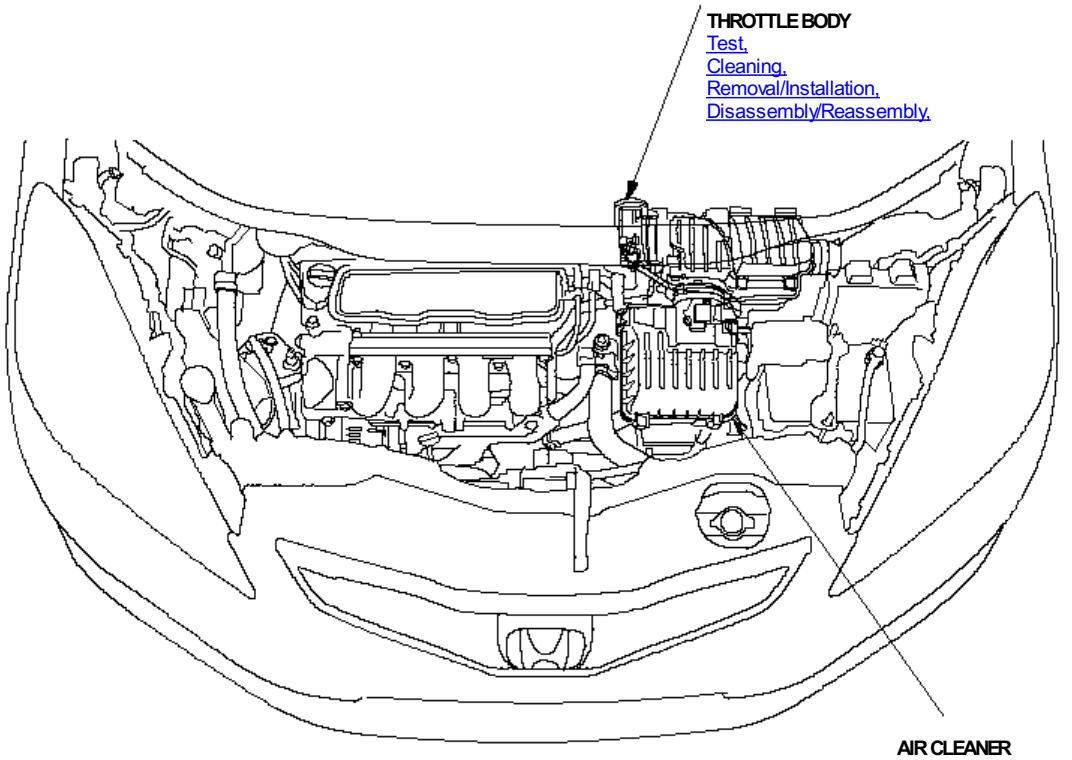
6. Let the engine idle for 1 minute with high electric load (A/C switch on, temperature set to max cool, blower fan on High, and headlights on high beam).
   Idle speed should be:

M/T	**790±50 rpm (min $^{-1}$)**
A/T	**790±50 rpm (min $^{-1}$) (in N or P)**

   NOTE: If the idle speed is not within specification, do the ECM/PCM idle learn procedure. If the idle speed is still not within specification, go to symptom troubleshooting.

7. Reconnect the EVAP canister purge valve connector.

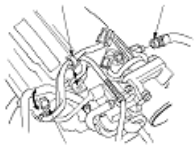
Intake Air System Component Location Index



*: This illustration shows RHD model.

Intake Manifold Chamber Removal and Installation

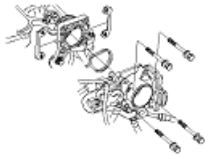
Exploded View



Removal

1. Remove the under-cowl panel.
2. Remove the air cleaner housing assembly.
3. Remove the engine wire harness connectors and wire harness clamps from the intake manifold chamber.
   - Throttle actuator connector
   - Manifold absolute pressure (MAP) sensor connector
4. Remove the brake booster vacuum hose (A) and the harness clamp (B).
5. Remove the water bypass hose from the clamp (C).

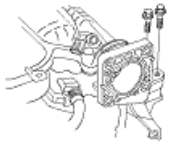
6. Remove the throttle body without disconnecting the water bypass hoses.



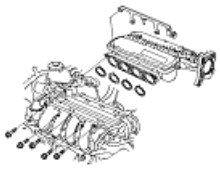
7. Remove the intake manifold bracket mounting bolts.

L15A7 engine

L13Z1 engine

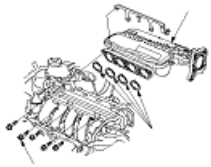


8. Remove the intake manifold chamber.

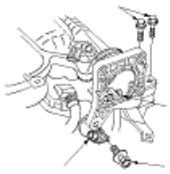


Installation

1. Install the intake manifold chamber (A) with a new gaskets (B), and tighten the bolts in a crisscross pattern in three steps, beginning with the inner bolt.



2. With L15A7 engine: Loosen the intake manifold bracket mounting bolt (A), (B). Tighten the mounting bolts (C), then tighten the mounting bolt (A). Loosely tighten the mounting bolt (D), and tighten the mounting bolt (B), then tighten the mounting bolt (D).

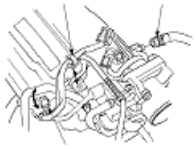


3. With L13Z1 engine: Loosen the intake manifold bracket mounting bolt (A). Tighten the mounting bolts (B), then tighten the mounting bolt (A).

4. Install the throttle body (A) with a new gasket (B).

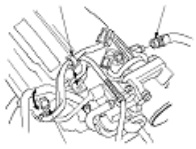
---

5. Install the water bypass hose to the clamp (A).
6. Install the brake booster vacuum hose (B) and the harness clamp (C).
7. Install the engine wire harness connectors and wire harness clamps to the intake manifold chamber.
   - Throttle actuator connector
   - MAP sensor connector
8. Install the air cleaner housing assembly.
9. Install the under-cowl panel.



Intake Manifold/Chamber Assembly Removal and Installation

Exploded View

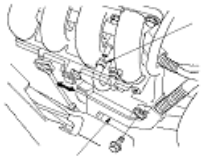


Removal

1. Remove the under-cowl panel.
2. Remove the air cleaner housing assembly.
3. Remove the engine wire harness connectors and wire harness clamps from the intake manifold chamber.
   - Throttle actuator connector
   - Manifold absolute pressure (MAP) sensor connector
   - Exhaust gas recirculation (EGR) valve connector
4. Remove the brake booster vacuum hose (A) and the harness clamp (B).
5. Remove the water bypass hose from the clamp (C).

6. Remove the throttle body without disconnecting the water bypass hoses.

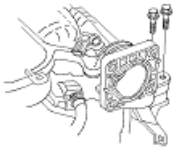
7. Remove the harness holder mounting bolt, then remove the harness holder (A) from the bracket.
8. Remove the positive crankcase ventilation (PCV) hose (B).
9. Remove the dipstick.



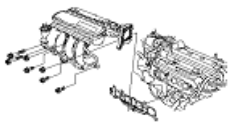
10. Remove the intake manifold bracket mounting bolts.

L15A7 engine

L13Z1 engine

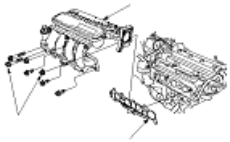


11. Remove the intake manifold/chamber assembly.



Installation

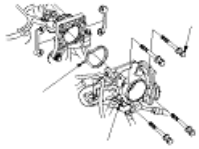
1. Install the intake manifold/chamber assembly (A) with a new gasket (B), and tighten the bolts and nuts in a crisscross pattern in three steps, beginning with the inner bolt.



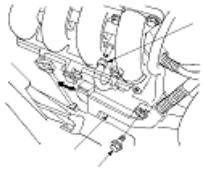
2. With L15A7 engine: Loosen the intake manifold bracket mounting bolt (A), (B). Tighten the mounting bolts (C), then tighten the mounting bolt (A). Loosely tighten the mounting bolt (D), and tighten the mounting bolt (B), then tighten the mounting bolt (D).

3. With L13Z1 engine: Loosen the intake manifold bracket mounting bolt (A). Tighten the mounting bolts (B), then tighten the mounting bolt (A).

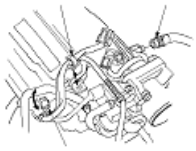
4. Install the throttle body (A) with a new gasket (B).
5. Install the dipstick.



6. Install the PCV hose (A) and harness holder (B).



7. Install the water bypass hose to the clamp (A).
8. Install the brake booster vacuum hose (B) and the harness clamp (C).
9. Install the engine wire harness connectors and wire harness clamps to the intake manifold chamber.
    - Throttle actuator connector
    - MAP sensor connector
    - EGR valve connector



10. Install the air cleaner housing assembly.
11. Install the under-cowl panel.

Engine Oil Pump Overhaul

Exploded View

Special Tools Required

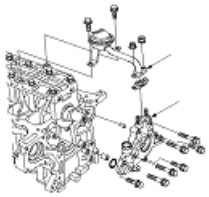
Sub hanger stay
07MAK-PY30100

Removal

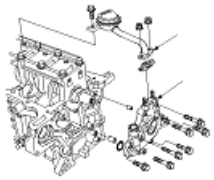
1. Remove the cam chain.
2. Remove the alternator mounting bolt, then install the sub hanger stay.
3. Attach the chain to the sub hanger stay. Lift and support the engine with the chain.
4. Remove the oil pan.

5. Remove the oil screen (A), then remove the oil pump (B).

L15A7 engine



L13Z1 engine

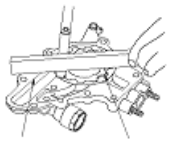


Inspection

1. Remove the screws from the oil pump housing, then separate the pump housing and pump cover.
2. Check the inner-to-outer rotor radial clearance between the inner rotor (A) and the outer rotor (B). If the inner-to-outer rotor clearance exceeds the service limit, replace the oil pump assembly.

Inner Rotor-to-Outer Rotor Radial Clearance

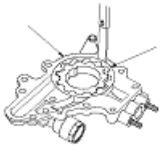
Standard (New):	**0.06–0.16 mm (0.002–0.006 in.)**
Service Limit:	**0.20 mm (0.008 in.)**



3. Check the pump housing-to-rotor axial clearance between the rotors (A) and pump housing (B). If the pump housing-to-rotor axial clearance exceeds the service limit, replace the oil pump assembly.

Housing-to-Rotor Axial Clearance

Standard (New):	**0.02–0.06 mm (0.001–0.002 in.)**
Service Limit:	**0.15 mm (0.006 in.)**



4. Check the pump housing-to-outer rotor radial clearance between the outer rotor (A) and the pump housing (B). If the pump housing-to-outer rotor radial clearance exceeds the service limit, replace the oil pump assembly.

Pump Housing-to-Outer Rotor Radial Clearance

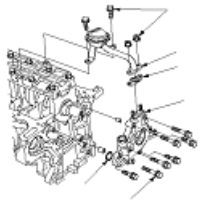
Standard (New):	**0.100–0.175 mm (0.0039–0.0069 in.)**
Service Limit:	**0.20 mm (0.008 in.)**

5. Inspect both rotors and the pump housing for scoring or other damage. Replace the parts, if necessary.
6. Check that the oil pump turns freely.

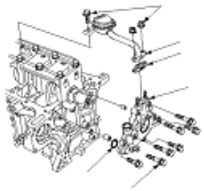
Installation

1. Clean the O-ring groove and the mating surface of the engine block.
2. Install the oil pump (A) with a new O-ring (B).
3. Install the oil screen (C) with a new gasket (D).
4. Install the oil pan.
5. Support the engine with a jack and wood block under the oil pan.

L15A7 engine

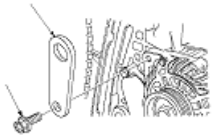


L13Z1 engine



---

6. Remove the chain and sub hanger stay, then tighten the alternator mounting bolt.
7. Install the cam chain.



Safety Messages

Safety Messages

Your safety, and the safety of others, is very important. To help you make informed decisions, we have provided safety messages, and other safety information throughout this manual. Of course, it is not practical or possible to warn you about all the hazards associated with servicing this vehicle. You must use your own good judgment.
You will find important safety information in a variety of forms including:

- **Safety Labels –** on the vehicle.
- **Safety Messages –** preceded by a safety alert symbol and one of three signal words, DANGER, WARNING, or CAUTION.
  These signal words mean:

  You WILL be KILLED or SERIOUSLY HURT if you don't follow instructions.
  You CAN be KILLED or SERIOUSLY HURT if you don't follow instructions.
  You CAN be HURT if you don't follow instructions.

- **Instructions –** how to service this vehicle correctly and safely.

All information contained in this manual is based on the latest product information available at the time of printing. We reserve the right to make changes at anytime without notice. No part of this publication may be reproduced, or stored in a retrieval system, or transmitted, in any form by any means, electronic, mechanical, photocopying, recording, or otherwise, without the prior written permission of the publisher. This includes text, figures, and tables.

Maintenance Schedule for Normal and Severe Conditions - KM model

This Maintenance Schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
Follow the Normal Conditions Maintenance Schedule if the severe driving conditions specified in the Severe Conditions Maintenance Schedule do not apply.
The following items must be used for "Severe Conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to E.

- Engine oil and engine oil filter: A/B/C/D/E
- Manual transmission fluid: B/D

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.

Service at the indicated distance or time whichever comes first		km x 1,000	20	40	60	80	100	120	140	160	180	200
		miles x 1,000	12.5	25.0	37.5	50.0	62.5	75.0	87.5	100.0	112.5	125.0
		months	12	24	36	48	60	72	84	96	108	120
Replace engine oil	Normal Conditions		Every 10,000 km (6,250 miles) or 1 year									
	Severe Conditions		Every 5,000 km (3,125 miles) or 6 months									
Replace engine oil filter	Normal Conditions		●	●	●	●	●	●	●	●	●	●
	Severe Conditions		Every 10,000 km (6,250 miles) or 6 months									
Replace air cleaner element			Every 30,000 km (18,750 miles)									
Inspect the valve clearance			Every 40,000 km (25,000 miles)									
Replace fuel filter Have a qualified technician change the fuel filter. Since the fuel system is under pressure, fuel can spray out and create a hazard if all fuel line connections are not handled correctly.			Every 10,000 km (6,250 miles)									
Replace spark plugs	Iridium type		Every 10,000 km (62,500 miles)									
Inspect idle speed								●				
Replace engine coolant Use genuine Honda All Season Antifreeze/Coolant Type 2.			At 200,000 km (120,000 miles) or 10 years, thereafter every 100,000 km (60,000 miles) or 5 years									
Replace manual transmission fluid (MTF) Use genuine Honda MTF.	Normal Conditions							●				
	Severe Conditions				●			●			●	
Replace automatic transmission fluid Use genuine Honda ATF-Z1.	Normal Conditions							●				●
	Severe Conditions				●		●		●		●	

Service at the indicated distance or time whichever comes first	km x 1,000	20	40	60	80	100	120	140	160	180	200
	miles x 1,000	12.5	25.0	37.5	50.0	62.5	75.0	87.5	100.0	112.5	125.0
	months	12	24	36	48	60	72	84	96	108	120
Check front and rear brakes • Check the front brake pad and disc thickness. Check for damage. • Check the wheel cylinder for leaks. • Check the brake linings for cracking, glazing, wear, and contamination. • Check the caliper for damage, leaks, and tightness.	Every 10,000 km (6,250 miles) or 6 months										
Replace brake fluid • Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid. • Check the brake fluid level is between the upper and lower marks on the reservoir.	Every 3 years										
Check parking brake adjustment Check the parking brake operation.	●	●		●		●		●		●	
Replace dust and pollen filter	●	●	●	●	●	●	●	●	●	●	
Rotate tyres (Check tyre inflation and condition at least once per month)	Every 10,000 km (6,250 miles)										
Visually inspect the following items • Check for correct installation and position, check for cracks, deterioration, rust, and leaks. • Check tightness of screws, nuts, and joints. If necessary, retighten.											
Tie-rod ends, steering gearbox, and boots • Check steering linkage. • Check the boot for damage and leaking grease.	Every 10,000 km (6,250 miles) or 6 months										
Suspension components • Check the bolts for tightness. • Check all dust covers for deterioration and damage.											
Driveshaft boots • Check boot and boot band for cracks. • Check boots for leaking grease.											

Service at the indicated distance or time whichever comes first	km x 1,000	20	40	60	80	100	120	140	160	180	200
	miles x 1,000	12.5	25.0	37.5	50.0	62.5	75.0	87.5	100.0	112.5	125.0
	months	12	24	36	48	60	72	84	96	108	120
Brake hoses and lines (including ABS) Check the master cylinder and ABS modulator-control unit for damage and leakage.		●	●	●	●	●	●	●	●	●	●
All fluid levels and condition of fluid • Engine coolant • MTF • ATF • Clutch fluid • Brake fluid • Windshield washer fluid											
Exhaust system Check the catalytic converter heat shield, exhaust pipe, and muffler for damage, leaks, and tightness.											
Fuel lines and connections • Check fuel lines for loose connections, cracks, and deterioration. • Retighten loose connections and replace any damaged parts.											

Maintenance Schedule for Normal and Severe Conditions - Except KM model

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first		km x 1,000	20	40	60	80	100	120	140	160	180	200
		miles x 1,000	12.5	25.0	37.5	50.0	62.5	75.0	87.5	100.0	112.5	125.0
		months	12	24	36	48	60	72	84	96	108	120
Replace engine oil *	Normal Conditions		Every 10,000 km (6,250 miles) or 1 year									
	Severe Conditions		Every 5,000 km (3,125 miles) or 6 months									
Replace engine oil filter *	Normal Conditions		●	●	●	●	●	●	●	●	●	●
	Severe Conditions		Every 10,000 km (6,250 miles) or 6 months									
Replace air cleaner element			Every 30,000 km (18,750 miles)									
Inspect valve clearance			Every 40,000 km (25,000 miles)									
Replace fuel filter						●				●		
Replace spark plugs			Every 100,000 km (62,500 miles)									
Inspect and adjust drive belt Look for cracks and damage, then check the deflection and tension.				●		●		●		●		●
Inspect idle speed								●				
Replace engine coolant Use genuine Honda All Season Antifreeze/Coolant Type 2.			At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years									
Replace Manual Transmission Fluid Use genuine Honda MTF.	Normal Conditions							●				
	Severe Conditions				●			●			●	
Replace Automatic Transmission Fluid Use genuine Honda ATF-Z1.	Normal Conditions							●				●
	Severe Conditions				●		●		●		●	

Service at the indicated distance or time whichever comes first	km x 1,000	20	40	60	80	100	120	140	160	180	200

Design Specifications

Item	Measurement		Qualification	Specification
DIMENSION	Overall length		Except VTIHI, VTIHI-B	3,900 mm (153.5 in.)
			VTIHI, VTIHI-B	3,920 mm (154.3 in.)
	Overall width			1,695 mm (66.7 in.)
	Overall height			1,525 mm (60.0 in.)
	Wheelbase			2,500 mm (98.4 in.)
	Track	15 inch wheel model	Front	1,490 mm (58.7 in.)
			Rear	1,475 mm (58.1 in.)
		16 inch wheel model	Front	1,475 mm (58.1 in.)
			Rear	1,460 mm (57.5 in.)
	Seating capacity			Five (5)
WEIGHT	Curb weight		M/T	1,050−1,095 kg (2,315−2,414 lbs)
			A/T	1,089−1,135 kg (2,401−2,502 lbs)
	Max. permissible weight			1,510 kg (3,329 lbs)
ENGINE	Type			Water-cooled, 4-stroke SOHC i-VTEC engine
	Cylinder arrangement			Inline 4-cylinder, transverse
	Bore and stroke		L13Z1, L13Z3	73 x 80 mm (2.87 x 3.15 in.)
			L15A7, L15A8	73 x 89.4 mm (2.87 x 3.52 in.)
	Displacement		L13Z1, L13Z3	1,339 cm ^{3} (82 cu in.)
			L15A7, L15A8	1,497 cm ^{3} (91 cu in.)
	Compression ratio		L13Z1, L13Z3	10.5
			L15A7, L15A8	10.4
	Valve train			Chain drive, SOHC 2 valves per cylinder
	Lubrication system			Forced, wet sump, with trochoid pump
	Fuel required		KM model	UNLEADED petrol and alcohol
			Except KM model	UNLEADED petrol with 91 Research Octane Number or higher
STARTER	Type			Gear reduction
	Normal output		Except L13Z1 (M/T), L13Z3 (M/T), L15A8 (M/T)	0.7 kW
			L13Z1 (M/T), L13Z3 (M/T), L15A8 (M/T)	0.6 kW
	Hour rating			30 seconds
	Rotation direction			Clockwise as viewed from drive end
CLUTCH	Type			Single plate dry, diaphragm spring

Item	Measurement	Qualification	Specification
MANUAL TRANSMISSION	Type		Synchronized, five-speed forward, one reverse
	Primary reduction		Direct 1:1
	Gear ratio (L13Z1, L13Z3)	1st	3.307
		2nd	1.750
		3rd	1.171
		4th	0.923
		5th	0.767
		Reverse	3.307
		Final	4.625
	Gear ratio (L15A7, L15A8)	1st	3.307
		2nd	1.750
		3rd	1.235
		4th	0.948
		5th	0.809
		Reverse	3.307
		Final	4.625
	Final reduction	Type	Single helical gear
AUTOMATIC TRANSMISSION	Type		Electronically controlled automatic, five-speed forward, one reverse, three-element torque converter with lock-up clutch
	Primary reduction		Direct 1:1
	Gear ratio	1st	2.995
		2nd	1.678
		3rd	1.066
		4th	0.760
		5th	0.551
		Reverse	1.956
		Final	4.562

Item	Measurement	Qualification	Specification
	Final reduction	Type	Single helical gear
STEERING	Type		Electrical power-assisted rack and pinion
	Overall ratio		16.09
	Turns, lock-to-lock		3.29
	Steering wheel diameter		370 mm (14.6 in.)
SUSPENSION	Type	Front	Independent strut with stabilizer, coil spring
		Rear	Torsion beam, coil spring
	Shock absorber	Front and rear	Telescopic, hydraulic, nitrogen gas-filled
TYRES	Size		See tyre information label attached to the doorjambs
BRAKES	Type of service brake	Front	Power-assisted self-adjusting ventilated disc
		Rear (disc)	Power-assisted self-adjusting solid disc
		Rear (drum)	Power-assisted self-adjusting solid drum
	Type of parking brake		Mechanical actuating, rear wheels
	Pad friction surface area (swept area)	Front	40.6 cm^2 (6.29 sq in.) x 2
		Rear	21.0 cm^2 (3.26 sq in.) x 2
	Shoe friction surface area	Rear	57.6 cm^2 (8.93 sq in.) x 2

Item	Measurement	Qualification	Specification
AIR CONDITIONING	Compressor	Type	Scroll
		Capacity	77.1 mL (4.7 cu in.)/rev.
		Maximum speed	10,000 rpm (min^{-1})
		Lubricant capacity	80 mL (2 2/3 fl·oz, 2.8 Imp·oz)
		Lubricant type	SP-10
	Condenser	Type	Corrugated fin
	Evaporator	Type	Corrugated fin
	Blower	Type	Radial
		Motor type	170 W/12 V
		Speed control (without climate control)	4 speed
		Speed control (with climate control)	Infinitely variable
		Maximum capacity	400 m^3 (14,126 cu ft)/h
	Temperature control		Air-mix type
	Compressor clutch	Type	Dry, single plate, Poly V-belt drive
		Electrical power consumption at 20 °C (68 °F)	42 W maximum at 12 V
	Refrigerant	Type	HFC-134a (R-134a)
		Capacity	370−420 g (13.1−14.8 oz)
ELECTRICAL RATINGS	Battery		12 V−40 Ah/20 HR (12 V−32 Ah/5 HR)
	Fuses	Battery terminal fuse box	100 A, 60 A, 20 A
		Under-dash fuse/relay box	50 A, 30 A, 20 A, 15 A, 10 A, 7.5 A
	Light bulbs	Headlight high/low beam	12 V−60/55 W
		Front turn signal lights	12 V−21 W
		Front fog lights	12 V−55 W
		Mirror turn signal lights	LED
		Side turn signal lights	12 V−5 W
		Front position lights	12 V−5 W
		Rear turn signal lights	12 V−21 W
		Rear fog lights	12 V−21 W
		Brake/taillights	LED
		High mount brake light	LED
		Back-up lights	12 V−21 W
		License plate lights	12 V−5 W
		Ceiling lights	12 V−8 W
		Cargo area light	12 V−5 W
		Front individual map lights	12 V−8 W
		Gauge lights	LED
		Indicator lights	12 V−0.84 W
	Washer reservoir	Capacity	2.5 L (2.6 US qt, 2.2 Imp qt)

			Exhaust	0.019–0.058 mm (0.0007–0.0023 in.)	0.08 mm (0.0031 in.)
		L13Z3	Intake	0.019–0.050 mm (0.0007–0.0020 in.)	0.08 mm (0.0031 in.)
			Exhaust	0.019–0.050 mm (0.0007–0.0020 in.)	0.08 mm (0.0031 in.)
		L15A8	Intake	0.017–0.067 mm (0.0007–0.0026 in.)	0.08 mm (0.0031 in.)
			Exhaust	0.019–0.050 mm (0.0007–0.0020 in.)	0.08 mm (0.0031 in.)

Engine Block

Item	Measurement	Qualification	Standard or New	Service Limit
Block	Warpage of deck		0.07 mm (0.003 in.) max.	0.10 mm (0.004 in.)
	Bore diameter		73.000–73.015 mm (2.8740–2.8746 in.)	73.065 mm (2.8776 in.)
	Bore taper		———	0.05 mm (0.002 in.)
	Reboring limit		———	0.25 mm (0.01 in.)
Piston	Skirt O.D. at 16 mm (0.6 in.) from bottom of skirt	L13Z1, L13Z3	72.972–72.982 mm (2.8729–2.8733 in.)	72.97 mm (2.8728 in.)
		L15A7, L15A8	72.980–72.990 mm (2.8732–2.8736 in.)	72.97 mm (2.8728 in.)
	Clearance in cylinder	L13Z1, L13Z3	0.018–0.043 mm (0.007–0.0017 in.)	0.05 mm (0.002 in.)
		L15A7, L15A8	0.010–0.035 mm (0.0004–0.0014 in.)	0.05 mm (0.002 in.)
Piston ring	Ring-to-groove clearance	Top	0.065–0.090 mm (0.0026–0.0035 in.)	0.15 mm (0.006 in.)
		Second	0.030–0.055 mm (0.0012–0.0022 in.)	0.12 mm (0.005 in.)
	Ring end gap	Top	0.15–0.30 mm (0.006–0.012 in.)	0.60 mm (0.024 in.)
		Second	0.30–0.42 mm (0.012–0.017 in.)	0.65 mm (0.026 in.)
		Oil	0.20–0.70 mm (0.008–0.028 in.)	0.80 mm (0.031 in.)
Piston pin	O.D.		17.996–18.000 mm (0.7085–0.7087 in.)	———
	Pin-to-piston clearance		0.010–0.017 mm (0.0004–0.0007 in.)	———
Connecting rod	Pin-to-rod interference		0.019–0.036 mm (0.007–0.0014 in.)	———
	Small-end bore diameter		17.964–17.977 mm (0.707–0.708 in.)	———
	Large-end bore diameter		43.0 mm (1.69 in.)	———
	End play installed on crankshaft		0.15–0.35 mm (0.006–0.014 in.)	0.40 mm (0.016 in.)
Crankshaft	Main journal diameter		49.976–50.000 mm (1.9676–1.9685 in.)	———
	Rod journal diameter		39.976–40.000 mm (1.5739–1.5748 in.)	———
	Rod/main journal taper		0.005 mm (0.0002 in.)	0.010 mm (0.0004 in.)
	Rod/main journal out-of-round		0.005 mm (0.0002 in.)	0.010 mm (0.0004 in.)
	End play		0.10–0.35 mm (0.004–0.014 in.)	0.45 mm (0.018 in.)
	Runout		0.03 mm (0.0012 in.) max.	0.04 mm (0.0016 in.)
Crankshaft bearing	Main bearing-to-journal oil clearance		0.018–0.036 mm (0.0007–0.0014 in.)	0.050 mm (0.0020 in.)
	Rod bearing clearance	L15A7, L15A8	0.020–0.038 mm (0.0008–0.0015 in.)	0.050 mm (0.0020 in.)
		L13Z1, L13Z3	0.026–0.044 mm (0.0010–0.0017 in.)	0.050 mm (0.0020 in.)

Engine Lubrication

Item	Measurement	Qualification	Standard or New	Service Limit
Engine oil	Capacity	Engine overhaul	4.2 L (4.4 US qt, 3.7 Imp qt)	———
		Oil change including oil filter	3.6 L (3.8 US qt, 3.2 Imp qt)	———
		Oil change without oil filter	3.4 L (3.6 US qt, 3.0 Imp qt)	———
Oil pump	Inner rotor-to-outer rotor clearance		0.06–0.16 mm (0.002–0.006 in.)	0.20 mm (0.008 in.)
	Pump housing-to-outer rotor clearance		0.100–0.175 mm (0.0039–0.0069 in.)	0.20 mm (0.008 in.)
	Pump housing-to-rotor axial clearance		0.02–0.06 mm (0.001–0.002 in.)	0.15 mm (0.006 in.)
Relief valve	Relief valve, oil pressure with oil temperature at 80 °C (176 °F)	At idle	70 kPa (0.7 kgf/cm ^{2}, 10 psi) min.	———
		At 3,000 rpm (min $^{-1}$)	340 kPa (3.5 kgf/cm ^{2}, 50 psi) min.	———

Cooling System

Item	Measurement	Qualification			Standard or New
Radiator	Coolant capacity (Includes engine, heater, hoses, and reservoir) Use genuine Honda All Season Antifreeze/Coolant Type 2	L13Z1, L13Z3 (Brazil Factory)	M/T	Engine overhaul	5.05 L (1.334 US gal, 1.111 lmp gal)
				Coolant change	4.56 L (1.205 US gal, 1.003 lmp gal)
			A/T	Engine overhaul	4.98 L (1.316 US gal, 1.096 lmp gal)
				Coolant change	4.49 L (1.186 US gal, 0.988 lmp gal)
		L15A7, L15A8 (Brazil Factory)	M/T	Engine overhaul	5.06 L (1.337 US gal, 1.113 lmp gal)
				Coolant change	4.57 L (1.207 US gal, 1.005 lmp gal)
			A/T	Engine overhaul	4.99 L (1.318 US gal, 1.098 lmp gal)
				Coolant change	4.50 L (1.189 US gal, 0.990 lmp gal)
Coolant reservoir	Coolant capacity				0.44 L (0.116 US qt, 0.097 lmp qt)
Radiator cap	Opening pressure				93–123 kPa (0.95–1.25 kgf/cm ^{2}, 14–18 psi)
Thermostat	Opening temperature	Begins to open			76–80 °C (169–176 °F)
		Fully open			90 °C (194 °F)
	Valve lift at fully open				8.0 mm (0.31 in.) min.

Fuel and Emissions (FFV)

Item	Measurement	Qualification	Standard or New
Fuel pressure regulator	Pressure with fuel pressure gauge connected		380–430 kPa (3.9–4.4 kgf/cm ^{2}, 55–63 psi)
Subfuel pressure	Pressure with fuel pressure gauge connected		200–250 kPa (2.0–2.5 kgf/cm ^{2}, 28–36 psi)
Fuel tank	Capacity		42 L (11.0 US gal, 9.2 lmp gal)
Subfuel tank	Capacity		0.76 L (0.20 US gal, 0.17 lmp gal)
Engine idle	Idle speed without load	M/T (in neutral)	700±50 rpm
		A/T (in N or P)	
	Idle speed with high electrical load (A/C switch ON, temperature set to max cool, blower fan on High, rear window defogger ON, and headlights on high beam)	M/T (in neutral), A/T (in N or P)	790±50 rpm
	Idle CO		0.1 % max

Fuel and Emissions (Except FFV)

Item	Measurement	Qualification	Standard or New
Fuel pressure regulator	Pressure with fuel pressure gauge connected		320–370 kPa (3.3–3.8 kgf/cm ^{2}, 47–54 psi)
Fuel tank	Capacity		42 L (11.0 US gal, 9.2 lmp gal)
Engine idle	Idle speed without load (L13Z1)	M/T (in neutral)	650±50 rpm (min $^{-1}$)
		A/T (in N or P)	700±50 rpm (min $^{-1}$)
	Idle speed without load (L15A7)	M/T (in neutral), A/T (in N or P)	700±50 rpm (min $^{-1}$)
	Idle speed with high electrical load (A/C switch ON, temperature set to max cool, blower fan on High, rear window defogger ON, and headlights on high beam)	M/T (in neutral), A/T (in N or P)	790±50 rpm (min $^{-1}$)
	Idle CO		0.1 % max.

Clutch

Item	Measurement	Qualification	Standard or New	Service Limit
Clutch pedal	Height from the floor		150 mm (5.91 in.)	———
	Stroke		120–130 mm (4.72–5.12 in.)	———
Flywheel	Runout on clutch mating surface		0.05 mm (0.002 in.) max.	0.15 mm (0.006 in.)
Clutch disc	Rivet head depth		1.00–1.50 mm (0.039–0.059 in.)	0.2 mm (0.008 in.)
	Thickness		7.25–7.95 mm (0.285–0.313 in.)	5.0 mm (0.20 in.)
Pressure plate	Warpage		0.03 mm (0.001 in.) max.	0.15 mm (0.006 in.)
	Height difference of diaphragm spring fingers measured with dial indicator		0.6 mm (0.02 in.) max.	1.0 mm (0.04 in.)

Steering

Item	Measurement	Qualification	Standard or New
Steering wheel	Rotational play measured at outside edge with engine running		0−10 mm (0−0.39 in.)
	Initial turning load measured at outside edge with engine running		29 N (3.0 kgf, 6.6 lbf)
Gearbox	Angle of rack guide screw loosened from locked position		10±3 °

Suspension

Item	Measurement	Qualification	Standard or New	Service Limit
Wheel alignment	Camber	Front	0 ° 07 ′±1 °	
		Rear	−1 ° 00 ′±1 °	
	Caster	Front	3 ° 13 ′±1 °	
	Total toe-in	Front	0±3 mm (0±0.12 in.)	
		Rear	2.5±2.5 mm (0.10±0.10 in.)	
	Front wheel turning angle	Inward	40 ° 38 ′±2 °	
		Outward (reference)	33 ° 30 ′±1 °	
Wheel	Steel wheel runout	Axial	0−1.0 mm (0−0.04 in.)	2.0 mm (0.08 in.)
		Radial	0−1.0 mm (0−0.04 in.)	1.5 mm (0.06 in.)
	Aluminium wheel runout	Axial	0−0.7 mm (0−0.03 in.)	2.0 mm (0.08 in.)
		Radial	0−0.7 mm (0−0.03 in.)	1.5 mm (0.06 in.)
Wheel bearing	End play	Front	0−0.05 mm (0−0.002 in.)	
		Rear	0−0.05 mm (0−0.002 in.)	

Brakes

Item	Measurement	Qualification	Standard or New		Service Limit
Parking brake	Distance traveled when lever pulled with 196 N (20 kgf, 44 lbf) of force		6 to 8 clicks		
Brake pedal	Pedal height (carpet moved aside)	M/T	139 mm (5.5 in.)		
		A/T	138 mm (5.4 in.)		
	Free play		1−5 mm (0.04−0.20 in.)		
Brake disc	Thickness	Front	20.9−21.1 mm (0.82−0.83 in.)		19.0 mm (0.75 in.)
		Rear	8.9−9.1 mm (0.35−0.36 in.)		8.0 mm (0.31 in.)
	Runout		———		0.04 mm (0.0016 in.)
	Parallelism		———		0.015 mm (0.0006 in.)
Brake pad	Thickness	Front	10.5−11.0 mm (0.41−0.43 in.)		1.5 mm (0.06 in.)
		Rear	6.8−7.5 mm (0.27−0.30 in.)		1.6 mm (0.06 in.)
Rear brake (drum brake)	Brake drum I.D.		199.9−200.0 mm (7.870−7.874 in.)		201 mm (7.91 in.)
	Brake shoe lining thickness		4.3 mm (0.17 in.)		1.0 mm (0.04 in.)
Brake booster	Master cylinder oil pressure	Vacuum booster Vacuum kPa (mmHg, in.Hg)	Brake pedal pressure N (kgf, lbf)	Master cylinder oil pressure kPa (kgf/cm ^{2} , psi)	
		0 (0, 0)	98 (10, 22)	0 (0, 0)	
			196 (20, 44)	A/T	577 (5.9, 84)
				M/T	501 (51, 73)
		66.7 (500, 19.7)	98 (10, 22)	A/T	4,523 (46.1, 656)
				M/T	4,235 (43.2, 614)
			196 (20, 44)	A/T	9,538 (97.3, 1.383)
				M/T	9,468 (96.5, 1.373)

Air Conditioning

Item	Measurement	Qualification	Standard or New
Refrigerant	Type		HFC-134a (R-134a)
	Capacity of system		370−420 g (13.1−14.8 oz)
Refrigerant oil	Type		SP-10 (P/N 38897-P13-003, 38898-P13-003, or 38899-P13-A01)
	Capacity of components	Condenser	25 mL (5/6 fl·oz, 0.9 Imp·oz)
		Evaporator	35 mL (1 1/6 fl·oz, 1.2 Imp·oz)
		Each line and hose	10 mL (1/3 fl·oz, 0.4 Imp·oz)
		Receiver/Dryer	10 mL (1/3 fl·oz, 0.4 Imp·oz)

Item	Measurement	Qualification	Standard or New
		Compressor	80−90 mL (2 2/3−3 fl·oz, 2.8−3.2 Imp·oz)
Compressor	Field coil resistance	At 20 °C (68 °F)	3.15−3.45 Ω
	Pulley-to-armature plate clearance		0.35−0.65 mm (0.014−0.026 in.)

Abbreviations

List of automotive abbreviations which may be used in shop manual.

ABS	Anti-lock Brake System
A/C	Air Conditioning, Air Conditioner
ACC	Adaptive Cruise Control
ACEA	Association des Constructeurs Europeens d' Automobiles
ACL	Air Cleaner
A/F	Air Fuel Ratio
AHB	Advanced Hydraulic Booster
ALR	Automatic Locking Retractor
ALT	Alternator
AMP	Ampere(s)
ANT	Antenna
API	American Petroleum Institute
APP	Accelerator Pedal Position
APPROX	Approximately
ASSY	Assembly
A/T	Automatic Transmission
ATDC	After Top Dead Center
ATF	Automatic Transmission Fluid
ATT	Attachment
AUTO	Automatic
AUX	Auxiliary
BARO	Barometric
BAT	Battery
BCM	Battery Condition Monitor
BDC	Bottom Dead Center
BTDC	Before Top Dead Center
CARB	Carburetor
CAT or CATA	Catalytic Converter
CD	Compact Disc
CHG	Charge
CKF	Crankshaft Speed Fluctuation
CKP	Crankshaft Position
CLV	Calculated Load Value
CMBS	Collision Mitigation Brake System
CMP	Camshaft Position
CO	Carbon Monoxide
COMP	Complete
CPB	Clutch Pressure Back up
CPC	Clutch Pressure Control
CPU	Central Processing Unit
CVT	Continuously Variable Transmission
CVTF	Continuously Variable Transmission Fluid
CYL	Cylinder
CYP	Cylinder Position
DIFF	Differential
DLC	Data Link Connector
DLI	Distributor Less Ignition
DOHC	Double Overhead Camshaft
DOT	Department of Transportation
DPF	Diesel Particulate Filter
DPI	Dual Point Injection
DPSF	Dual Pump System Fluid
DTC	Diagnostic Trouble Code
EBD	Electronic Brake Distribution
ECM	Engine Control Module
ECT	Engine Coolant Temperature
EGR	Exhaust Gas Recirculation
EGT	Exhaust Gas Temperature
ELD	Electrical Load Detector
EPR	Evaporator Pressure Regulator
EPS	Electrical Power Steering
ETCS	Electronic Throttle Control System
EVAP	Evaporative Emission
EX	Exhaust
F	Front
FIA	Fuel Injection Air
FL	Front Left
FP	Fuel Pump
FR	Front Right

FRP	Fuel Rail Pressure
FSR	Fail Safe Relay
FWD	Front Wheel Drive
GAL	Gallon
GND	Ground
GPS	Global Positioning System
H/B	Hatchback
HBA	Hydraulic Brake Assist
HC	Hydrocarbons
HDS	Honda Diagnostic System
HFT	Hands Free Telephone
HID	High Intensity Discharge
HIM	Honda Interface Module
HO2S	Heated Oxygen Sensor
HPS	Hydraulic Power Steering
HVAC	Heating, Ventilation, and Air Conditioning
IAB	Intake Air Bypass
IAC	Idle Air Control
IACV	Idle Air Control Valve
IAR	Intake Air Resonator
IAT	Intake Air Temperature
ICM	Ignition Control Module
ID	Identification
ID or I.D.	Inside Diameter
i-DSI	Intelligent-Dual & Sequential Ignition
IG or IGN	Ignition
IMA	Idle Mixture Adjustment Integrated Motor Assisted
IMMOBI.	Immobilizer (Immobiliser)
IMRC	Intake Manifold Runner Control
IMT	Intake Manifold Tuning
IN	Intake
INJ	Injection
INT	Intermittent
IQA	Injector Quantity Adjustment (Diesel model)
ISV	Intake Shutter Valve
KS	Knock Sensor
L	Left
L/C	Lock-up Clutch
LCD	Liquid Crystal Display
LED	Light Emitting Diode
LEV	Low Emission Vehicle
LF	Left Front
LH	Left Handle
LHD	Left Handle Drive
LR	Left Rear
LSD	Limited Slip Differential
L4	In-line Four Cylinder (engine)
MAF	Mass Air Flow
MAP	Manifold Absolute Pressure
MAX	Maximum
MBS	Mainshaft Brake System
MCK	Motor Check
MCM	Motor Control Module
MCU	Moment Control Unit
MICS	Multiplex Integrated Control System
MICU	Multiplex Integrated Control Unit
MIL	Malfunction Indicator Lamp
MIN.	Minimum
MPI	Multi Point Injection
M/S	Manual Steering
M/T	Manual Transmission
MTF	Manual Transmission Fluid
NOx	Oxides of Nitrogen
OBD	On-board Diagnostic
OD or O.D.	Outside Diameter
OPDS	Occupant Position Detection System
O2S	Oxygen Sensor
PAIR	Pulsed Secondary Air Injection
PCM	Powertrain Control Module
PCV	Positive Crankcase Ventilation Proportioning Control Valve

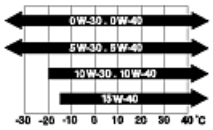
PDU	Power Drive Unit
PGM-FI	Programmed-fuel Injection
PGM-IG	Programmed Ignition
PH	Pressure High
PL	Pilot Light or Pressure Low
PMR	Pump Motor Relay
P/N	Part Number
PRI	Primary
P/S	Power Steering
PSF	Power Steering Fluid
PSP	Power Steering Pressure
PSW	Pressure Switch
Qty	Quantity
R	Right
REF	Reference
RH	Right Handle
RHD	Right Handle Drive
RL	Rear Left
RON	Research Octane Number
RR	Rear Right
SAE	Society of Automotive Engineers
SCS	Service Check Signal
SEC	Second, Secondary
SOHC	Single Overhead Camshaft
SOL	Solenoid
SPEC	Specification
S/R	Sun Roof
SRS	Supplemental Restraint System
STD	Standard
SW	Switch
T	Torque
TB	Throttle Body
T/B	Timing Belt
TC	Torque Converter
TCM	Transmission Control Module
TCS	Traction Control System
TDC	Top Dead Center
TFT	Thin Film Transistor
T/N	Tool Number
TP	Throttle Position
TPMS	Tyre Pressure Monitoring System
TWC	Three Way Catalytic Converter
VC	Viscous Coupling
VCM	Variable Cylinder Management
VIN	Vehicle Identification Number
VSA	Vehicle Stability Assist
VSS	Vehicle Speed Sensor
VTEC	Variable Valve Timing & Valve Lift Electronic Control
VVIS	Variable Volume Intake System
V6	V-engine Six Cylinder (engine)
W	With
W/O	Without
WOT	Wide Open Throttle
2WD	Two Wheel Drive
4WD	Four Wheel Drive
4AT	4-speed Automatic Transmission
5AT	5-speed Automatic Transmission
5MT	5-speed Manual Transmission
6MT	6-speed Manual Transmission
P	Park
R	Reverse
N	Neutral
D4	Drive (1st through 4th gear)
D3	Drive (1st through 3rd gear)
D	Drive
M	Manual mode
S	Second
L	Low
O/D	Over Drive
1ST	Low (gear)
2ND	Second (gear)
3RD	Third (gear)

4TH	Fourth (gear)
5TH	Fifth (gear)
6TH	Sixth (gear)

Lubricants and Fluids

⚠CAUTION

Used engine oil may cause skin cancer if repeatedly left in contact with the skin for prolonged periods. Although this is unlikely unless you handle used oil on a daily basis, it is still advisable to thoroughly wash your hands with soap and water as soon as possible after handling used oil.



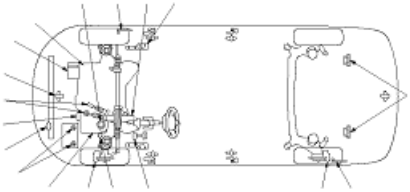
For the details of the lubrication points and the type of lubricants to be applied, refer to the illustrated index and the various work procedures (such as Assembly/Reassembly, Replacement, Overhaul, Installation, etc.) contained in each section.

	Application	Lubricant or Fluid
A	Engine	Always use API service grade SL or higher SAE viscosity: See chart.
B	Manual transmission	Honda Manual Transmission Fluid (MTF) Always use genuine Honda MTF *. Using motor oil can cause stiffer shifting because it does not contain the proper additives.
	Automatic transmission	Honda ATF-Z1 Always use genuine Honda ATF-Z1. Using a non-Honda ATF can affect shift quality.
C D	Brake system (including ABS lines) Clutch system (manual transmission)	Brake Fluid DOT 3 or DOT 4 We recommend genuine Honda Brake Fluid. Using a non-Honda brake fluid can cause corrosion and decrease the life of the system.
E F G H I J K L	Release fork (manual transmission) Battery terminals Brake booster clevis pin Clutch master cylinder clevis pin (manual transmission) Fuel fill door Front fuel fill door (FFV Model) Hood hinges and hood latch Tailgate hinges	Multipurpose Grease
M	Caliper piston boot	Rubber Grease
N O	Caliper piston seal, caliper pins and boots Shift cable ends (manual transmission)	Silicone Grease
P	Air conditioning compressor	Compressor Oil:SP-10 (P/N 38897-P13-003 or 38899-P13-A01) for refrigerant HFC-134a (R-134a)
Q	Cooling system	Always use genuine Honda All Season Antifreeze/Coolant Type 2

If genuine Honda MTF is not available, use API service SL or higher grade motor oil with a viscosity of SAE 10W-30 or 10W-40 as a temporary replacement.

NOTE:

- Lubricate the following grease using the recommended lubricants and fluids.
- In corrosive area, more frequent lubrication is necessary.



Alternator

Item	Measurement	Qualification	Standard or New	Service Limit
Alternator	Output	At 13.5 V and normal engine temperature	95 A	
	Coil (rotor) resistance	At 20 °C (68 °F)	2.1−2.3 Ω	
	Slip ring O.D.		22.7 mm (0.89 in.)	21.2 mm (0.83 in.)
	Brush length		23.0 mm (0.91 in.)	18.0 mm (0.71 in.)
	Brush spring tension		4.1−5.3 N (0.42−0.54 kgf, 0.93−1.19 lbf)	

Drive belt

Item	Measurement	Qualification	Standard or New	Service Limit
Drive belt	Tension		Auto-tensioner

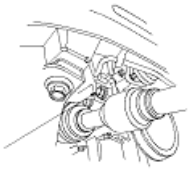
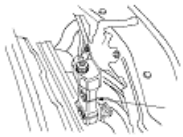
Coolant Replacement

1. Start the engine. Set the heater temperature control dial to maximum heat, then turn the ignition switch to LOCK (0). Make sure the engine and radiator are cool to the touch.
2. Remove the radiator cap.
3. Loosen the drain plug (A), and drain the coolant.

4. Remove the drain bolt (A) located at the rear of the engine block.
5. After the coolant has drained, then reinstall the bolt with a new washer and tighten it securely.
6. Tighten the radiator drain plug securely.
7. Remove, drain, and reinstall the coolant reservoir.



8. Fill the coolant reservoir to the MAX mark (A) with genuine Honda Long Life Antifreeze/Coolant Type 2 (P/N OL999-9001).



9. Pour genuine Honda Long Life Antifreeze/Coolant Type 2 into the radiator up to the base of the filler neck.
   NOTE:
   - Always use genuine Honda Long Life Antifreeze/Coolant Type 2 (P/N OL999-9001). Using a non-Honda coolant can result in corrosion, causing the cooling system to malfunction or fail.
   - Genuine Honda Long Life Antifreeze/Coolant Type 2 is a mixture of 50 % antifreeze and 50 % water. Do not add water.

   Engine Coolant Capacities (Including the coolant reservoir capacity of 0.44 L (0.116 US gal, 0.097 Imp gal)):
   L15A7, L15A8 engine (Brazil Factory): M/T model: At Coolant Change: 4.57 L (1.207 US gal, 1.005 Imp gal)
   After Engine Overhaul: 5.06 L (1.337 US gal, 1.113 Imp gal)
   A/T model: At Coolant Change: 4.50 L (1.189 US gal, 0.990 Imp gal)
   After Engine Overhaul: 4.99 L (1.318 US gal, 1.098 Imp gal)
   L13Z1, L13Z3 engine (Brazil Factory): M/T model: At Coolant Change: 4.56 L (1.205 US gal, 1.003 Imp gal)
   After Engine Overhaul: 5.05 L (1.334 US gal, 1.111 Imp gal)
   A/T model: At Coolant Change: 4.49 L (1.186 US gal, 0.988 Imp gal)
   After Engine Overhaul: 4.98 L (1.316 US gal, 1.096 Imp gal)

10. Loosely install the radiator cap.
11. Start the engine, and let it run until it warms up (the radiator fan comes on at least twice).
12. Turn off the engine. Check the level in the radiator and add genuine Honda Long Life Antifreeze/ Coolant Type 2, if needed.
13. Put the radiator cap on tightly, then start the engine again, and check for leaks.
14. Clean up any spilled engine coolant.

Coolant reservoir

Item	Measurement	Qualification	Standard or New
Coolant reservoir	Coolant capacity		0.44 L (0.116 US qt, 0.097 Imp qt)

Radiator

Item	Measurement	Qualification			Standard or New
Radiator	Coolant capacity (Includes engine, heater, hoses, and reservoir) Use genuine Honda All Season Antifreeze/Coolant Type 2	L13Z1, L13Z3 (Brazil Factory)	M/T	Engine overhaul	5.05 L (1.334 US gal, 1.111 Imp gal)
				Coolant change	4.56 L (1.205 US gal, 1.003 Imp gal)
			A/T	Engine overhaul	4.98 L (1.316 US gal, 1.096 Imp gal)
				Coolant change	4.49 L (1.186 US gal, 0.988 Imp gal)
		L15A7, L15A8 (Brazil Factory)	M/T	Engine overhaul	5.06 L (1.337 US gal, 1.113 Imp gal)
				Coolant change	4.57 L (1.207 US gal, 1.005 Imp gal)
			A/T	Engine overhaul	4.99 L (1.318 US gal, 1.098 Imp gal)
				Coolant change	4.50 L (1.189 US gal, 0.990 Imp gal)

Radiator cap

Item	Measurement	Qualification	Standard or New
Radiator cap	Opening pressure		93−123 kPa (0.95−1.25 kgf/cm ^{2}, 14−18 psi)

Thermostat

Item	Measurement	Qualification	Standard or New
Thermostat	Opening temperature	Begins to open	76−80 °C (169−176 °F)
		Fully open	90 °C (194 °F)
	Valve lift at fully open		8.0 mm (0.31 in.) min.

Head

Item	Measurement	Qualification	Standard or New	Service Limit
Head	Warpage		0.07 mm (0.0028 in.)	0.08 mm (0.003 in.)
	Height		119.9−120.1 mm (4.720−4.728 in.)	———

Camshaft

Item	Measurement	Qualification		Standard or New	Service Limit
Camshaft	End play			0.05–0.25 mm (0.002–0.010 in.)	0.5 mm (0.02 in.)
	Camshaft-to-holder oil clearance			0.045–0.084 mm (0.0018–0.0033 in.)	0.100 mm (0.004 in.)
	Total runout			0.03 mm (0.001 in.) max.	0.04 mm (0.002 in.)
	Cam lobe height	L13Z1L13Z8	Intake, primary	34.290 mm (1.3500 in.)	———
			Intake, secondary	30.529 mm (1.2019 in.)	———
			Exhaust	35.047 mm (1.3798 in.)	———
		L15A7	Intake, primary	35.241 mm (1.3874 in.)	———
			Intake, secondary	36.173 mm (1.4241 in.)	———
			Exhaust	35.471 mm (1.3964 in.)	———
		L15A8	Intake, primary	35.162 mm (1.3843 in.)	———
			Intake, secondary	30.529 mm (1.2019 in.)	———

		Exhaust	5.45−5.46 mm (0.2146−0.2150 in.)	5.42 mm (0.213 in.)
	Stem-to-guide clearance	Intake	0.020−0.050 mm (0.0008−0.0020 in.)	0.08 mm (0.003 in.)
		Exhaust	0.050−0.080 mm (0.0020−0.0031 in.)	0.11 mm (0.004 in.)

Valve guide

Item	Measurement	Qualification	Standard or New	Service Limit
Valve guide	I.D.	Intake	5.51−5.53 mm (0.217−0.218 in.)	5.55 mm (0.219 in.)
		Exhaust	5.51−5.53 mm (0.217−0.218 in.)	5.55 mm (0.219 in.)
	Installed height	Intake	15.85−16.35 mm (0.624−0.644 in.)	———
		Exhaust	15.85−16.35 mm (0.624−0.644 in.)	———

Valve spring

Item	Measurement	Qualification		Standard or New	Service Limit
Valve spring	Free length	L13Z1 L13Z3	Intake	51.17 mm (2.014 in.)	———
			Exhaust	57.26 mm (2.254 in.)	———
		L15A7 L15A8	Intake	48.55 mm (1.911 in.)	———
			Exhaust	54.52 mm (2.146 in.)	———

Valve seat

Item	Measurement	Qualification	Standard or New	Service Limit
Valve seat	Width	Intake	0.850−1.150 mm (0.0335−0.0453 in.)	1.60 mm (0.063 in.)
		Exhaust	1.250−1.550 mm (0.0492−0.0610 in.)	2.00 mm (0.079 in.)
	Stem installed height	Intake	46.1−46.5 mm (1.815−1.831 in.)	46.8 mm (1.843 in.)
		Exhaust	46.2−46.6 mm (1.819−1.835 in.)	46.9 mm (1.846 in.)

Compression

Item	Measurement	Qualification	Standard or New	Service Limit
Compression	Pressure check at 250 rpm (min^{-1}) with wide open throttle (See Design Specs for ratio)	Minimum	980 kPa (10.0 kgf/cm^2, 142 psi)	———
		Maximum variation	200 kPa (2.0 kgf/cm^2, 28 psi)	———

Block

Item	Measurement	Qualification	Standard or New	Service Limit
Block	Warpage of deck		0.07 mm (0.003 in.) max.	0.10 mm (0.004 in.)
	Bore diameter		73.000−73.015 mm (2.8740−2.8746 in.)	73.065 mm (2.8776 in.)
	Bore taper		———	0.05 mm (0.002 in.)
	Reboring limit		———	0.25 mm (0.01 in.)

Connecting rod

Item	Measurement	Qualification	Standard or New	Service Limit
Connecting rod	Pin-to-rod interference		0.019−0.036 mm (0.007−0.0014 in.)	———
	Small-end bore diameter		17.964−17.977 mm (0.707−0.708 in.)	———
	Large-end bore diameter		43.0 mm (1.69 in.)	———
	End play installed on crankshaft		0.15−0.35 mm (0.006−0.014 in.)	0.40 mm (0.016 in.)

Crankshaft

Item	Measurement	Qualification	Standard or New	Service Limit
Crankshaft	Main journal diameter		49.976−50.000 mm (1.9676−1.9685 in.)	———
	Rod journal diameter		39.976−40.000 mm (1.5739−1.5748 in.)	———
	Rod/main journal taper		0.005 mm (0.0002 in.)	0.010 mm (0.0004 in.)
	Rod/main journal out-of-round		0.005 mm (0.0002 in.)	0.010 mm (0.0004 in.)
	End play		0.10−0.35 mm (0.004−0.014 in.)	0.45 mm (0.018 in.)
	Runout		0.03 mm (0.0012 in.) max.	0.04 mm (0.0016 in.)

Crankshaft bearing

Item	Measurement	Qualification	Standard or New	Service Limit
Crankshaft bearing	Main bearing-to-journal oil clearance		0.018−0.036 mm (0.0007−0.0014 in.)	0.050 mm (0.0020 in.)
	Rod bearing clearance	L15A7, L15A8	0.020−0.038 mm (0.0008−0.0015 in.)	0.050 mm (0.0020 in.)
		L13Z1, L13Z3	0.026−0.044 mm (0.0010−0.0017 in.)	0.050 mm (0.0020 in.)

Piston

Item	Measurement	Qualification	Standard or New	Service Limit
Piston	Skirt O.D. at 16 mm (0.6 in.) from bottom of skirt	L13Z1, L13Z3	72.972−72.982 mm (2.8729−2.8733 in.)	72.97 mm (2.8728 in.)
		L15A7, L15A8	72.980−72.990 mm (2.8732−2.8736 in.)	72.97 mm (2.8728 in.)
	Clearance in cylinder	L13Z1, L13Z3	0.018−0.043 mm (0.007−0.0017 in.)	0.05 mm (0.002 in.)
		L15A7, L15A8	0.010−0.035 mm (0.0004−0.0014 in.)	0.05 mm (0.002 in.)

Piston pin

Item	Measurement	Qualification	Standard or New	Service Limit
Piston pin	O.D.		17.996−18.000 mm (0.7085−0.7087 in.)	———
	Pin-to-piston clearance		0.010−0.017 mm (0.0004−0.0007 in.)	———

Piston ring

Item	Measurement	Qualification	Standard or New	Service Limit
Piston ring	Ring-to-groove clearance	Top	0.065−0.090 mm (0.0026−0.0035 in.)	0.15 mm (0.006 in.)
		Second	0.030−0.055 mm (0.0012−0.0022 in.)	0.12 mm (0.005 in.)
	Ring end gap	Top	0.15−0.30 mm (0.006−0.012 in.)	0.60 mm (0.024 in.)
		Second	0.30−0.42 mm (0.012−0.017 in.)	0.65 mm (0.026 in.)
		Oil	0.20−0.70 mm (0.008−0.028 in.)	0.80 mm (0.031 in.)

Ignition timing

Item	Measurement	Qualification	Standard or New	Service Limit
Ignition timing		At idle (check the *white* mark)	M/T (in neutral): 0±2 ° BTDC	
			A/T (in N or P): 0±2 ° BTDC	

Ignition coil

Item	Measurement	Qualification	Standard or New	Service Limit
Ignition coil	Rated voltage		12 V	
	Firing order		1−3−4−2	

Spark plug

Item	Measurement	Qualification	Standard or New	Service Limit
Spark plug	Type		NGK: IZFR6K13 DENSO: SKJ20DR-M13	
	Gap		1.2−1.3 mm (0.047−0.051 in.)	———

Oil pump

Item	Measurement	Qualification	Standard or New	Service Limit
Oil pump	Inner rotor-to-outer rotor clearance		0.06−0.16 mm (0.002−0.006 in.)	0.20 mm (0.008 in.)
	Pump housing-to-outer rotor clearance		0.100−0.175 mm (0.0039−0.0069 in.)	0.20 mm (0.008 in.)
	Pump housing-to-rotor axial clearance		0.02−0.06 mm (0.001−0.002 in.)	0.15 mm (0.006 in.)

Relief valve

Item	Measurement	Qualification	Standard or New	Service Limit
Relief valve	Relief valve, oil pressure with oil temperature at 80 °C (176 °F)	At idle	70 kPa (0.7 kgf/cm ^{2}, 10 psi) min.	———
		At 3,000 rpm (min $^{-1}$)	340 kPa (3.5 kgf/cm ^{2}, 50 psi) min.	———

Engine oil

Item	Measurement	Qualification	Standard or New	Service Limit
Engine oil	Capacity	Engine overhaul	4.2 L (4.4 US qt, 3.7 Imp qt)	———
		Oil change including oil filter	3.6 L (3.8 US qt, 3.2 Imp qt)	———
		Oil change without oil filter	3.4 L (3.6 US qt, 3.0 Imp qt)	———

Starter

Item	Measurement	Qualification	Standard or New	Service Limit
Starter	Output	Except L13Z1 (M/T), L13Z3 (M/T), L15A8 (M/T)	0.7 kW	
		L13Z1 (M/T), L13Z3 (M/T), L15A8 (M/T)	0.6 kW	
	Commutator mica depth		0.45−0.75 mm (0.018−0.030 in.)	0.20 mm (0.008 in.)
	Commutator runout		0.05 mm (0.002 in.) max.	0.4 mm (0.02 in.)
	Commutator O.D.		27.9−28.0 mm (1.098−1.102 in.)	27.0 mm (1.06 in.)
	Brush length		9.7−10.3 mm (0.38−0.41 in.)	6.0 mm (0.20 in.)

Wheel Alignment

Special Tool Required

Wheel alignment gauge attachment, 56 x 62 mm
07NAJ-SS00301

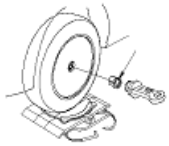
The suspension can be adjusted for front camber and front toe. However, each of these adjustments are interrelated to each other. For example, when you adjust the camber, the toe will change. Therefore, you must adjust the front wheel alignment whenever you adjust camber or toe.

Pre-Alignment Checks

For proper inspection and adjustment of the wheel alignment, do these checks:

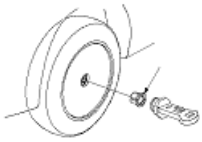
1. Release the parking brake to avoid an incorrect measurement.
2. Make sure the suspension is not modified.
3. Make sure the fuel tank is full, and that the spare tyre or the temporary repair kit, the jack, and the tools are in place on the vehicle.
4. Check the tyre size and tyre pressure according to tyre information.
5. Check the runout of the wheels and tyres.
6. Check the suspension ball joints.
   - Ball joint boot inspection.
   - Lower arm ball joint inspection.
7. Before doing alignment inspections, be sure to remove all extra weight from the vehicle, and no one should be inside the vehicle (driver or passengers).
8. Bounce the vehicle up and down several times to stabilize the suspension.
9. Check that the steering column is set at the center tilt and telescopic position.

Front Caster Inspection



1. Raise the front of the vehicle, and remove the wheel caps.
   NOTE: Push out the cap on the aluminum wheel from the inside after removing the wheel.
2. Set the turning radius gauges beneath the front wheels, and place the boards under the rear wheels the same thickness as the turning radius gauges, then lower the vehicle.
   NOTE: Be sure that the vehicle is level with the wheels on the turning radius gauges and the boards.
3. Install the wheel alignment gauge attachment (A) and camber/caster gauge on the wheel hub, and apply the front brake.
4. Turn the front wheel 20 ° outward, then turn the adjusting screw of the camber/caster gauge to set the bubble at 0 °.
5. Turn the wheel 20 ° inward and read the caster angle on the gauge with the bubble at the center of the gauge.
   Front caster angle: 3 ° 13 '± 1 °
   - If the measurement is within specifications, measure the front camber angle.
   - If the measurement is not within specifications, check for bent or damaged suspension components.

Front Camber Inspection

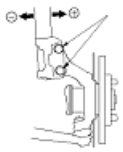


1. Turn the front wheels to the straight ahead position.
2. Raise the front of the vehicle, and remove the wheel caps.
   NOTE: Push out the cap on the aluminum wheel from the inside after removing the wheel.
3. Install the wheel alignment gauge attachment (A) and camber/caster gauge on the wheel hub.
4. Read the camber angle on the gauge with the bubble at the center of the gauge.
   Front camber angle: 0 ° 07 '± 1 °
   (Maximum difference between the right and left side: 0 ° 45 ')
   - If the measurement is within specifications, measure the rear camber.
   - If the measurement for the front camber is not within specifications, go to the front camber adjustment.

Front Camber Adjustment

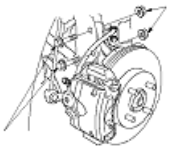
The front camber can be adjusted by exchanging one or both of the damper pinch bolts with the smaller diameter adjusting bolt(s). The difference between the adjusting bolt diameter and the pinch bolt hole diameter allows for a small range of adjustment.

1. Raise the front of the vehicle, and support it with safety stands in the proper locations.
2. Remove the front wheels.
3. Loosen the damper pinch bolts (A), and adjust the camber angle by moving the bottom of the damper within the range of the damper pinch bolt free play.
4. Tighten the damper pinch bolts to the specified torque.
5. Clean the mating surfaces of the brake disc and the inside of the wheel, then install the front wheels.
6. Lower the vehicle to the ground, and bounce the front of the vehicle up and down several times to settle the suspension.
7. Measure the camber angle.
   - If the measurement is within specification, measure the rear camber.
   - If the measurement is not within specification, go to Step 8 .
8. Raise the front of the vehicle, and support it with safety stands in the proper locations.
9. Remove the front wheels.



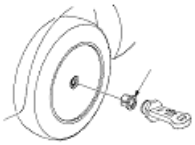
---

10. Replace the damper pinch bolts with the adjusting bolts (A), and adjust the camber angle.
    NOTE:
    - The camber angle can be adjusted up to ±20 ' (center of tolerance) by replacing one damper pinch bolt with the adjusting bolt.
    - The camber angle can be adjusted up to ±40 ' by replacing both the damper pinch bolts with the adjusting bolts.
11. Tighten the adjusting bolts to the specified torque value.
12. Clean the mating surfaces of the brake disc and the inside of the wheel, then install the front wheels.
13. Lower the vehicle to the ground, and bounce the front of the vehicle up and down several times to settle the suspension.
14. Measure the camber angle. If the camber angle is not within specification, repeat Step 8 through 13 to readjust the camber angle. If the camber measurement is correct, measure the toe-in, and adjust it if necessary.



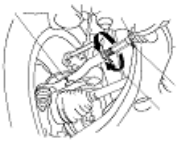
Rear Camber Inspection

1. Raise the rear of the vehicle, and remove the wheel caps.
   NOTE: Push out the cap on the aluminum wheel from the inside after removing the wheel.
2. Install the wheel alignment gauge attachment (A) and camber/caster gauge on the wheel hub.
3. Read the camber angle on the gauge with the bubble at the center of the gauge.
   Rear camber angle: −1 ° 00 '±1 °
   (Maximum difference between the right and left side: 0 ° 45 ')
   - If the measurement is within specifications, measure the toe-in.
   - If the measurement is not within specifications, check for bent or damaged suspension components.



Front Toe Inspection/Adjustment

1. Set the steering column to the middle tilt and telescopic positions. Center the steering wheel spokes, and hold it.
2. Check the toe with the wheels pointed straight ahead.
   Front toe-in: 0±3 mm (0±0.12 in.)
   - If adjustment is required, go to Step 3 .
   - If no adjustment is required, go to rear toe inspection.
3. Loosen the tie-rod locknuts (A) while holding the flat surface sections (B) of the tie-rod end with a wrench, and turn both tie-rods (C) until the front toe is within specifications.
4. After adjusting, tighten the tie-rod locknuts to the specified torque value. Reposition the rack end boot if it is twisted or displaced.
5. Go to rear toe inspection.
   NOTE: Adjust both the right and left wheels at the same time by the same amount in opposite directions to obtain the correct toe and to keep the steering wheel straight.



Rear Toe Inspection

1. Release the parking brake to avoid and incorrect measurement.
2. Check the toe.
   Rear toe-in: **2.5±2.5 mm (0.10±0.10 in.)**

   - If the measurement is within specifications, measure the turning angle.
   - If the measurement is not within specifications, check for bent or damaged suspension components.

Turning Angle Inspection

1. Raise the vehicle and set the turning radius gauges beneath the front wheels, and place the boards under the rear wheels the same thickness as the turning radius gauges, then lower the vehicle.
   NOTE: Be sure that the vehicle is level with the wheels on the turning radius gauges and the boards.
2. Turn the wheel right and left while applying the brake, and measure the turning angle of the both wheels.
   Turning angle:

Inward:	**40 ° 38 '±2 °**
Outward (reference):	**33 ° 30 '±1 °**

3. If the measurement is not within the specifications, even up both sides of the tie-rod threaded section length while adjusting the front toe. If it is correct, but the turning angle is not within the specifications, check for bent or damaged suspension components.

Wheel alignment

Item	Measurement	Qualification	Standard or New	Service Limit
Wheel alignment	Camber	Front	0 ° 07 ′±1 °	
		Rear	−1 ° 00 ′±1 °	
	Caster	Front	3 ° 13 ′±1 °	
	Total toe-in	Front	0±3 mm (0±0.12 in.)	
		Rear	2.5±2.5 mm (0.10±0.10 in.)	
	Front wheel turning angle	Inward	40 ° 38 ′±2 °	
		Outward (reference)	33 ° 30 ′±1 °	

Wheel bearing

Item	Measurement	Qualification	Standard or New	Service Limit
Wheel bearing	End play	Front	0−0.05 mm (0−0.002 in.)	
		Rear	0−0.05 mm (0−0.002 in.)	

Wheel

Item	Measurement	Qualification	Standard or New	Service Limit
Wheel	Steel wheel runout	Axial	0−1.0 mm (0−0.04 in.)	2.0 mm (0.08 in.)
		Radial	0−1.0 mm (0−0.04 in.)	1.5 mm (0.06 in.)
	Aluminium wheel runout	Axial	0−0.7 mm (0−0.03 in.)	2.0 mm (0.08 in.)
		Radial	0−0.7 mm (0−0.03 in.)	1.5 mm (0.06 in.)

Parking brake

Item	Measurement	Qualification	Standard or New	Service Limit
Parking brake	Distance traveled when lever pulled with 196 N (20 kgf, 44 lbf) of force		6 to 8 clicks

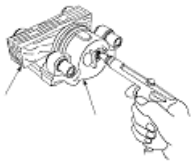
Brake booster

Item	Measurement	Qualification	Standard or New		Service Limit
Brake booster	Master cylinder oil pressure	Vacuum booster Vacuum kPa (mmHg, in.Hg)	Brake pedal pressure N (kgf, lbf)	Master cylinder oil pressure kPa (kgf/cm ^{2} , psi)	
		0 (0, 0)	98 (10, 22)	0 (0, 0)	
			196 (20, 44)	A/T	577 (5.9, 84)
				M/T	501 (51, 73)
		66.7 (500, 19.7)	98 (10, 22)	A/T	4,523 (46.1, 656)
				M/T	4,235 (43.2, 614)
			196 (20, 44)	A/T	9,538 (97.3, 1.383)
				M/T	9,468 (96.5, 1.373)

Front Brake Caliper Overhaul

Exploded View



⚠CAUTION

Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- Avoid breathing dust particles.
- Never use an air hose or brush to clean brake assemblies. Use an appropriate vacuum cleaner.

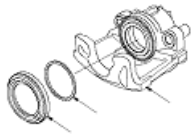
NOTE:
Upper caliper pin B and lower caliper pin A are different. If these caliper pins are installed in the wrong location, it will cause vibration, uneven or rapid pad wear, and possibly uneven tyre wear.

- Do not spill brake fluid on the vehicle; it may damage the paint; if brake fluid gets on the paint, wash it off immediately with water.
- To prevent dripping brake fluid, cover disconnected hose joints with rags or shop towels.
- Clean all parts in brake fluid and air dry; blow out all passages with compressed air.
- Before reassembling, check that all parts are free of dirt and other foreign particles.
- Replace parts with new ones as specified in the illustration.
- Make sure no dirt or other foreign matter gets in the brake fluid.
- Make sure no grease or oil gets on the brake discs or the brake pads.
- When reusing brake pads, always reinstall them in their original positions to prevent loss of braking efficiency.
- Do not reuse drained brake fluid. Use only clean genuine Honda DOT 3 or DOT 4 Brake Fluid from an unopened container. Using a non-Honda brake fluid can cause corrosion and shorten the life of the system.
- Coat the piston, the piston seal groove, and the caliper bore with clean brake fluid.
- Replace all rubber parts with new ones whenever disassembled.
- After installing the caliper, check the brake hose and line for leaks, interference, and twisting.
- Make sure not to get any silicone grease on the terminal part of the connectors and switches, especially if you have silicone grease on your hands or gloves.

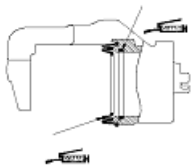
Disassembly

1. Remove the caliper body.
2. Set the wooden block (A) or several shop towels to the caliper body (B) as shown. Blow out the piston with compressed air gradually, and remove the piston from the caliper body.
   NOTE: Do not put the hand into the caliper body because the piston will come out hardly from the caliper body.

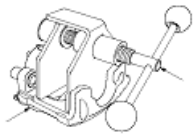
3. Remove the piston boot (A) and the piston seal (B) from the caliper body (C).
   NOTE: Be careful not to damage the inner surface of the cylinder wall with the tool.



Reassembly



1. Apply a thin coat of rubber grease to the new piston seal (A), then install it into the groove in the caliper body.
2. Apply the brake fluid to the new piston boot (B), then install it into the groove in the caliper body.
3. Apply the brake fluid to the outer surface of the piston, then set the piston in place on the caliper body.



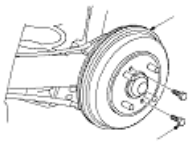
4. Mount the commercially available brake caliper piston compressor tool (A) on the caliper body (B).
5. Press in the piston with the brake caliper piston compressor tool. Make sure that the piston boot is properly positioned into the groove of the piston.
   NOTE:
   - Do not press the piston diagonally, and do not press it forcibly.
   - Be careful not to damage the piston boot when press the piston.
6. Install the caliper body.
7. Bleed the brake system.

Brake disc

Item	Measurement	Qualification	Standard or New	Service Limit
Brake disc	Thickness	Front	20.9−21.1 mm (0.82−0.83 in.)	19.0 mm (0.75 in.)
		Rear	8.9−9.1 mm (0.35−0.36 in.)	8.0 mm (0.31 in.)
	Runout		———	0.04 mm (0.0016 in.)
	Parallelism		———	0.015 mm (0.0006 in.)

Rear Drum Brake Replacement

NOTE: Keep any grease off the brake drum and brake shoes.



1. Raise the rear of the vehicle, and support it with safety stands in the proper locations.
2. Remove the rear wheel.
3. Remove the parking brake, and remove the brake drum (A) from the hub bearing unit.
   NOTE:
   - If necessary, pry the parking brake lever (B) with a flat-tip screw driver (C).
   - If the brake drum stuck to the hub bearing unit. Thread two 8 x 1.25 mm bolts (D) into the brake drum to push it away from the hub bearing unit. Turn each bolt 90 degrees at a time to prevent the brake drum from binding.
   - After installation, press the brake pedal several times to make sure the brakes work and self adjust the brake shoes.

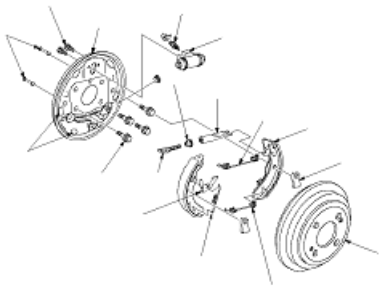
4. Install the brake drum in the reverse order of removal.
   NOTE: Before installing the brake drum, clean the mating surfaces of the rear hub and the inside of the brake drum.
5. Clean the mating surfaces of the brake drum and the inside of the wheel, then install the rear wheel.

Rear Drum Brake Inspection

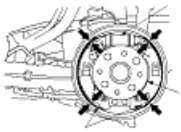
⚠CAUTION

Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

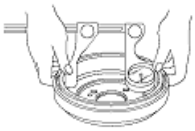
- Avoid breathing dust particles.
- Never use an air hose or brush to clean brake assemblies. Use an appropriate vacuum cleaner.



1. Raise the rear of the vehicle, and support it with safety stands in the proper locations.
2. Remove the rear wheels.
3. Release the parking brake, and remove the brake drum.



4. Check the wheel cylinder (A) for leakage.
5. Check the brake linings (B) for cracking, glazing, wear, and contamination.
   NOTE: Contaminated brake linings or drums reduce stopping ability.
6. Measure the brake lining thickness (C). Measurement does not include brake shoe thickness.
   Brake lining thickness:
   Standard: 4.3 mm (0.17 in.)
   Service limit: 1.0 mm (0.04 in.)
7. If the brake lining thickness is less than the service limit, replace the brake shoes as a set.
8. Check the hub (D) for smooth operation. If it requires servicing, replace the hub bearing unit.

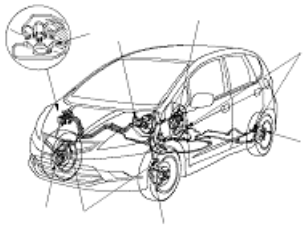


9. Measure the inside diameter of the brake drum with inside vernier calipers.
   Drum inside diameter:
   Standard: 199.9–200 mm (7.870–7.874 in.)
   Service limit: 201 mm (7.91 in.)
10. If the inside diameter of the brake drum is more than the service limit, replace the brake drum.
11. Check the brake drum for scoring, grooves, corrosion, and cracks.
12. Install the brake drum.
    NOTE: Before installing the brake drum, clean the mating surfaces of the rear hub and the inside of the brake drum.
13. Clean the mating surfaces of the brake drum and the inside of the wheel, then install the rear wheel.

Rear brake (drum brake)

Item	Measurement	Qualification	Standard or New	Service Limit
Rear brake (drum brake)	Brake drum I.D.		199.9−200.0 mm (7.870−7.874 in.)	201 mm (7.91 in.)
	Brake shoe lining thickness		4.3 mm (0.17 in.)	1.0 mm (0.04 in.)

Brake Hose and Line Inspection



1. Inspect the brake hoses for damage, deterioration, leaks, interference, and twisting.
2. Check the brake lines for damage, rusting, and leaks. Also check for bent brake lines.
3. Check for leaks at hose and line joints and connections, and retighten if necessary.
4. Check the master cylinder and the ABS modulator-control unit or the proportioning valve for damage and leaks.

Connection Point	Component	Connected to	Specified Torque Value	Note
A	Front brake caliper	Brake hose	35 N·m (3.6 kgf·m, 26 lbf·ft)	Banjo bolt
		Bleed screw	6 N·m (0.6 kgf·m, 4.3 lbf·ft)	
B	Rear brake caliper (Rear disc brake type)	Brake hose	35 N·m (3.6 kgf·m, 26 lbf·ft)	Banjo bolt
		Bleed screw	9 N·m (0.9 kgf·m, 7 lbf·ft)	
	Rear wheel cylinder (Rear drum brake type)	Brake pipe	15 N·m (1.5 kgf·m, 11 lbf·ft)	Flare nut
		Bleed screw	6 N·m (0.6 kgf·m, 4.3 lbf·ft)	
C	Brake hose	Brake line	15 N·m (1.5 kgf·m, 11 lbf·ft)	Flare nut
D	Master cylinder	Brake line	15 N·m (1.5 kgf·m, 11 lbf·ft)	Flare nut
E	ABS modulator-control unit	Brake line	15 N·m (1.5 kgf·m, 11 lbf·ft)	Flare nut
F	Proportioning valve	Brake line	15 N·m (1.5 kgf·m, 11 lbf·ft)	Flare nut

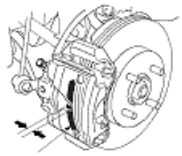
Front Brake Pad Inspection and Replacement

⚠CAUTION

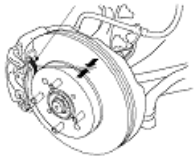
Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- Avoid breathing dust particles.
- Never use an air hose or brush to clean brake assemblies. Use an appropriate vacuum cleaner.

Inner pad



Outer pad



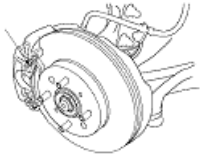
Inspection

1. Raise the front of the vehicle, and support it with safety stands in the proper locations.
2. Remove the front wheels.
3. Check the thickness (A) of the inner pad (B) and the outer pad (C). Do not include the thickness of the backing plate.
   Brake pad thickness:

Standard:	**10.5–11.0 mm (0.41–0.43 in.)**
Service limit:	**1.5 mm (0.06 in.)**

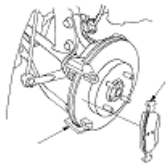
4. If the brake pad thickness of any of the pads is less than the service limit, replace the front brake pads as a set.
5. Clean the mating surfaces of the brake disc and the inside of the wheel, then install the front wheels.

Replacement



1. Remove some brake fluid from the master cylinder.
2. Raise the front of the vehicle, and support it with safety stands in the proper locations.
3. Remove the front wheels.
4. Remove the housing clip (A).

5. Remove the brake hose mounting bolt (A).
6. Remove the pin bolts (B), then remove the caliper body (C).



7. Remove the outer pad (A) from the caliper bracket (B).
8. Clean the caliper bracket thoroughly; remove any rust, and check for grooves and cracks.
9. Inspect the brake disc, and check for damage and cracks.

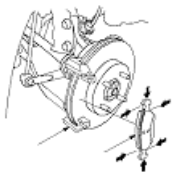
10. Remove the inner pad (A) from the caliper body (B).
11. Clean the caliper body thoroughly; remove any rust, and check for grooves and cracks.

12. Mount a commercially available brake caliper piston compressor tool (A) on the caliper body (B).
13. Press in the piston with the brake caliper piston compressor tool so the caliper will fit over the brake pads. Make sure the piston boot is in position to prevent damaging it when pivoting the caliper body.
    NOTE: Be careful when pressing in the piston; brake fluid might overflow from the master cylinder's reservoir. If brake fluid gets on any painted surface, wash it off immediately with water.
14. Remove the brake caliper piston compressor tool.

15. Apply Plastilube to the areas indicated by the arrows. Wipe excess grease off the brake pads (A). Keep grease off the brake discs and the brake pads. Contaminated brake discs or the brake pads reduce stopping ability.
16. Install the inner pad to the caliper body (B), and install the outer pad to the caliper bracket (C). If you are reusing the brake pads, always reinstall the brake pads in their original positions to prevent a momentary loss of braking efficiency.

Inner pad

Outer pad

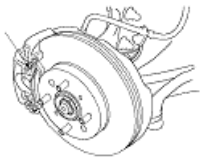


---

17. Install the caliper body (A) into position, then install the pin bolts (B).
18. Install the brake hose mounting bolt (D).

---

19. Install the housing clip (A).
20. Clean the mating surfaces of the brake disc and the inside of the wheel, then install the front wheels.
21. Press the brake pedal several times to make sure the brakes work.
    NOTE: Engagement may require a greater pedal stroke immediately after the brake pads have been replaced as a set. Several applications of the brake pedal will restore the normal pedal stroke.
22. Add brake fluid as needed.
23. After installation, check for leaks at hose and line joints or connections, and retighten if necessary.
    Test-drive the vehicle, then recheck for leaks.



Brake pad

Item	Measurement	Qualification	Standard or New	Service Limit
Brake pad	Thickness	Front	10.5−11.0 mm (0.41−0.43 in.)	1.5 mm (0.06 in.)
		Rear	6.8−7.5 mm (0.27−0.30 in.)	1.6 mm (0.06 in.)

Brake pedal

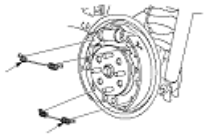
Item	Measurement	Qualification	Standard or New	Service Limit
Brake pedal	Pedal height (carpet moved aside)	M/T	139 mm (5.5 in.)	
		A/T	138 mm (5.4 in.)	
	Free play		1−5 mm (0.04−0.20 in.)	

Rear Brake Shoe Replacement

⚠CAUTION

Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- Avoid breathing dust particles.
- Never use an air hose or brush to clean brake assemblies. Use an approved vacuum cleaner.



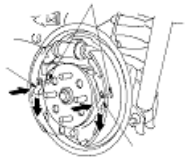
NOTE:

- Contaminated brake linings or drums reduce stopping ability.
- Block the front wheels before jacking up the rear of the vehicle.

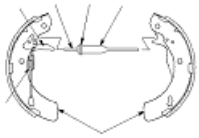
Disassembly

1. Raise the rear of the vehicle, and support it with safety stands in the proper locations.
2. Remove the rear wheels.
3. Release the parking brake, and remove the brake drum.
4. Remove the upper return spring (A) and lower return spring (B).

5. Remove the tension pins (A) by turning them while pushing each retainer spring (B).
6. Disconnect the parking brake cable from the parking brake lever, and remove the brake shoes from the backing plate.

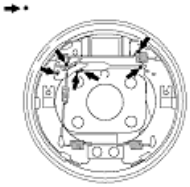


7. Remove the push rod female (A), adjuster nut (B), and push rod male (C), and separate the brake shoes (D).
8. Remove the self-adjuster spring (E) and self-adjuster lever (F).

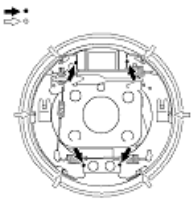


Reassembly

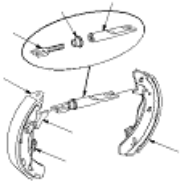
1. Apply a thin coat of rubber grease to the connecting rod ends (A), and the sliding surfaces (B) as shown. Wipe off any excess. Keep grease off the brake linings.



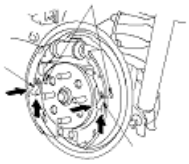
2. Apply a thin coat of Molykote 44 MA grease to the shoe ends (A) and the edge of the shoe surfaces (B) that contact the backing plate as shown. Wipe off any excess. Keep grease off the brake linings.



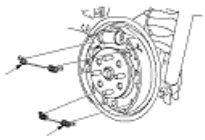
3. Install the self-adjuster lever (A) and self-adjuster spring (B) on the front side brake shoe (C).
4. Connect the parking brake cable to the rear side brake shoe (D), and assemble the brake shoes with the push rod female (E), adjuster nut (F), and push rod male (G).
5. Install the shoes on the backing plate, fitting the top of the brake shoes on the wheel cylinder pistons and the bottom of the brake shoes on the locating plate.



6. Install the tension pins (A), and secure them with the retainer springs by turning them while pushing each retainer spring (B).



7. Install the upper return spring (A) and lower return spring (B).



8. Install the brake drum.
   NOTE: Before installing the brake drum, clean the mating surface of the rear hub and the inside of the brake drum.
9. Clean the mating surfaces of the brake drum and the inside of the wheel, then install the rear wheel.
10. Press the brake pedal several times to make sure the brakes work and to set the self-adjusting brake.
    NOTE: Engagement of the brakes may require a greater pedal stroke immediately after the brake shoes have been replaced as a set. Several applications of the brake pedal will restore the normal pedal stoke.
11. Adjust the parking brake.

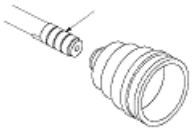
Driveshaft Reassembly



Exploded View
M/T model

Exploded View
A/T model

Special Tools Required

Boot band tool,
KD-3191

or equivalent commercially available
Boot band pincers,
Kent-Moore J-35910

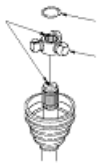
or equivalent commercially available
Boot band pliers,
commercially available

NOTE: Refer to the Exploded View as needed during this procedure.

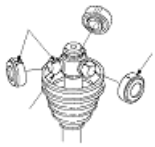
Inboard Joint Side

1. Wrap the splines with vinyl tape (A) to prevent damaging the inboard boot.
2. Install the inboard boot onto the driveshaft, then remove the vinyl tape. Be careful not to damage the inboard boot.

3. Install the spider (A) onto the driveshaft by aligning the marks (B) you made on the spider and the end of the driveshaft.
4. Install a new circlip (C) into the driveshaft groove. Always rotate the circlip in its groove to make sure it is fully seated.



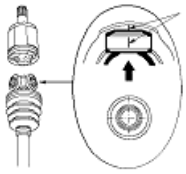
5. Fit the rollers (A) onto the spider (B) with the high shoulders facing outward, and note these items:
   - Reinstall the rollers in their original positions on the spider by aligning the marks (C) you made.
   - Hold the driveshaft pointed up to prevent the rollers from falling off.



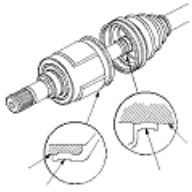
6. Pack the inboard joint with the joint grease included in the new inboard boot set.

Model	Left/Right Driveshaft	Grease quantity Inboard joint
M/T	Left	98−118 g (3.5−4.2 oz)
	Right	117−137 g (4.1−4.8 oz)
A/T	Left	98−118 g (3.5−4.2 oz)
	Right	112−132 g (4.0−4.7 oz)

7. Fit the inboard joint onto the driveshaft and note these items:
   - Reinstall the inboard joint onto the driveshaft by aligning the marks (A) you made on the inboard joint and the rollers.
   - Hold the driveshaft so the inboard joint is pointing up to prevent it from falling off.

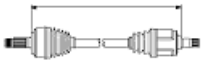


8. Fit the boot ends (A) onto the driveshaft (B) and the inboard joint (C).



9. Adjust the length (A) of the driveshafts to the figure as shown, then adjust the boots to halfway between full compression and full extension. Bleed excess air from the boots by inserting a flat-tipped screwdriver between the boot and the joint.

Driveshaft type 1



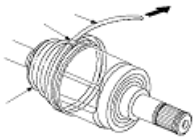
Driveshaft type 2

Model	Left/Right Driveshaft	Driveshaft Type	Specified Length (A)
M/T	Left	1	525.5−530.5 mm (20.69−20.89 in.)
	Right	1	787−792 mm (30.98−31.18 in.)
A/T	Left	1	525.5−530.5 mm (20.69−20.89 in.)
	Right	2	484−489 mm (19.06−19.25 in.)

10. Install the new boot bands.
    - For the double loop type, go to Step 11 .
    - For the low profile type, go to Step 20 .

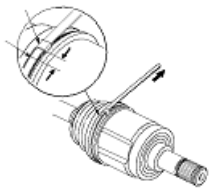
---

11. Fit the boot ends onto the driveshaft and the inboard joint, then install a new double loop band (A) onto the boot (B). NOTE: Pass the end of the new double loop band through the clip (C) twice in the direction of the forward rotation of the driveshaft.
12. Pull up the slack in the band by hand.



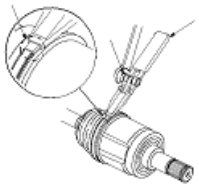
---

13. Mark a position (A) on the band 10−14 mm (0.4−0.6 in.) from the clip (B).



---

14. Thread the free end of the band through the nose section of the commercially available boot band tool KD-3191 or equivalent (A), and into the slot on the winding mandrel (B).
15. Using a wrench on the winding mandrel of the boot band tool, tighten the band until the marked spot (C) on the band meets the edge of the clip.

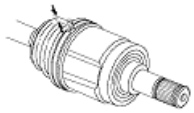


---

16. Lift up the boot band tool to bend the free end of the band 90 degrees to the clip. Center-punch the clip, then fold over the remaining tail onto the clip.

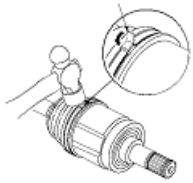
---

17. Unwind the boot band tool, and cut off the excess free end of the band to leave a 5−10 mm (0.2−0.4 in.) tail protruding from the clip.



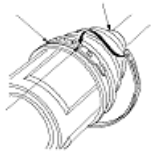
---

18. Bend the band end (A) by tapping it down with a hammer.
    NOTE:
    - Make sure the band and the clip do not interfere with anything on the vehicle and the band does not move.
    - Clean any grease remaining on the surrounding surfaces.
19. Repeat Step 11 through 18 for the band on the other end of the boot.



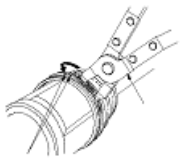
---

20. Install a new low profile band (A) onto the boot (B), then hook the tab (C) of the band.

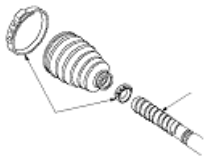


---

21. Close the hook portion of the band with a commercially available boot band pincers (A), then hook the tabs (B) of the band.
22. Install the boot band on the other end of the boot, and repeat Step 20 through 21.



Outboard Joint Side

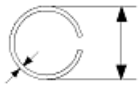


1. Wrap the splines with vinyl tape (A) to prevent damaging the outboard boot.
2. Install the new ear clamp bands (B) and the outboard boot, then remove the vinyl tape. Be careful not to damage the outboard boot.

---

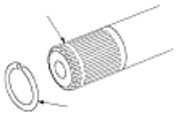
3. Make sure to check the size of a new stop ring.
   NOTICE
   To avoid driveshaft and vehicle damage, make sure you install a new stop ring.
   Stop ring specifications

Overall diameter (A):	**22.2 mm (0.87 in.)**
Wire diameter (B):	**1.6 mm (0.06 in.)**



---

4. Install a new stop ring (A) into the driveshaft groove (B).

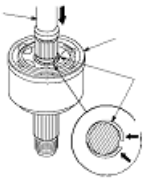


---

5. Pack about 35 g (1.2 oz) grease included in the new outboard boot set into the driveshaft hole in the outboard joint.
   NOTE: If you are installing a new outboard joint, the grease is already installed.

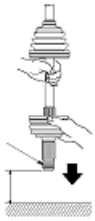
---

6. Insert the driveshaft (A) into the outboard joint (B) until the stop ring (C) is close to the joint.



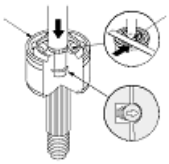
---

7. To completely seat the outboard joint, pick up the driveshaft and joint, and tap or hit them from a height of about 10 cm (4 in.) onto a hard surface.
   NOTE: Do not use a hammer as excessive force may damage the driveshaft. Be careful not to damage the threaded section (A) of the outboard joint.



---

8. Check the alignment of the paint mark (A) you made with the outboard joint rim (B).
   NOTICE
   To avoid driveshaft and vehicle damage, the shaft must be all the way into the outboard joint to ensure the stop ring is properly seated.

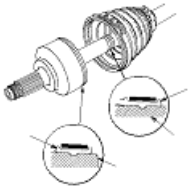


---

9. Pack the outboard joint (A) with the remaining joint grease included in the new outboard boot set.
   Total grease quantity
   Outboard joint: 107−127 g (3.8−4.5 oz)

---

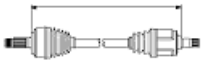
10. Fit the boot ends (A) onto the driveshaft (B) and the outboard joint (C). Bleed any excess air from the boot by inserting a flat-tipped screwdriver between the boot and the joint.



---

11. Inspect the length (A) of the driveshafts to the figure as shown, then adjust the boots to halfway between full compression and full extension.

Driveshaft type 1

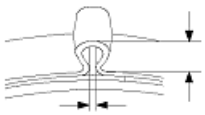


Driveshaft type 2

Model	Left/Right Driveshaft	Driveshaft Type	Specified Length (A)
M/T	Left	1	525.5−530.5 mm (20.69−20.89 in.)
	Right	1	787−792 mm (30.98−31.18 in.)
A/T	Left	1	525.5−530.5 mm (20.69−20.89 in.)
	Right	2	484−489 mm (19.06−19.25 in.)

12. Close the ear portion (A) of the band with commercially available boot band pliers Kent-Moore J-35910 or equivalent (B).

13. Check the clearance between the closed ear portion of the band. If the clearance is not within the standard, close the ear portion of the band tighter.



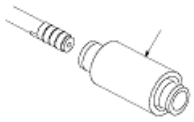
14. Repeat Step 12 and 13 for the band on the other end of the boot.

Driveshaft Dynamic Damper Replacement

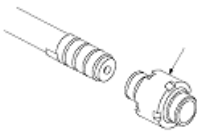
1. Remove the inboard joint.
2. Remove the dynamic damper band.
3. Remove the dynamic damper (A).
4. Install the new dynamic damper.
   NOTE: Be careful not to swap the dynamic dampers. Check the type of dynamic damper by its shape.

Model	Left/Right Driveshaft	Dynamic Damper (A) Type
M/T	Left	———
	Right	1
A/T	Left	2
	Right	2

Dynamic damper type 1



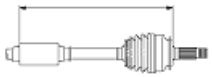
Dynamic damper type 2



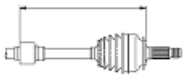
5. Adjust the specified distance (A) between the outboard joint side and the dynamic damper edge.
   NOTE: Check the type of dynamic damper by its shape.

Model	Left/Right Driveshaft	Dynamic Damper Type	Specified Distance (A)
M/T	Left	———	———
	Right	1	287.5−291.5 mm (11.32−11.48 in.)
A/T	Left	2	251−255 mm (9.88−10.04 in.)
	Right	2	

Dynamic damper type 1



Dynamic damper type 2



6. Install the dynamic damper band.
7. Install the inboard joint.

Gearbox

Item	Measurement	Qualification	Standard or New
Gearbox	Angle of rack guide screw loosened from locked position		10±3 °

Steering wheel

Item	Measurement	Qualification	Standard or New
Steering wheel	Rotational play measured at outside edge with engine running		0−10 mm (0−0.39 in.)
	Initial turning load measured at outside edge with engine running		29 N (3.0 kgf, 6.6 lbf)

Refrigerant

Item	Measurement	Qualification	Standard or New
Refrigerant	Type		HFC-134a (R-134a)
	Capacity of system		370−420 g (13.1−14.8 oz)

Refrigerant oil

Item	Measurement	Qualification	Standard or New
Refrigerant oil	Type		SP-10 (P/N 38897-P13-003, 38898-P13-003, or 38899-P13-A01)
	Capacity of components	Condenser	25 mL (5/6 fl·oz, 0.9 Imp·oz)
		Evaporator	35 mL (1 1/6 fl·oz, 1.2 Imp·oz)
		Each line and hose	10 mL (1/3 fl·oz, 0.4 Imp·oz)
		Receiver/Dryer	10 mL (1/3 fl·oz, 0.4 Imp·oz)
		Compressor	80–90 mL (2 2/3–3 fl·oz, 2.8–3.2 Imp·oz)

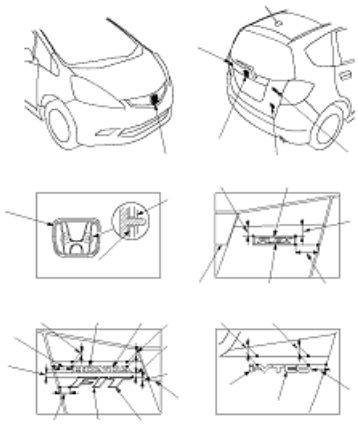
Compressor

Item	Measurement	Qualification	Standard or New
Compressor	Field coil resistance	At 20 °C (68 °F)	3.15−3.45 Ω
	Pulley-to-armature plate clearance		0.35−0.65 mm (0.014−0.026 in.)

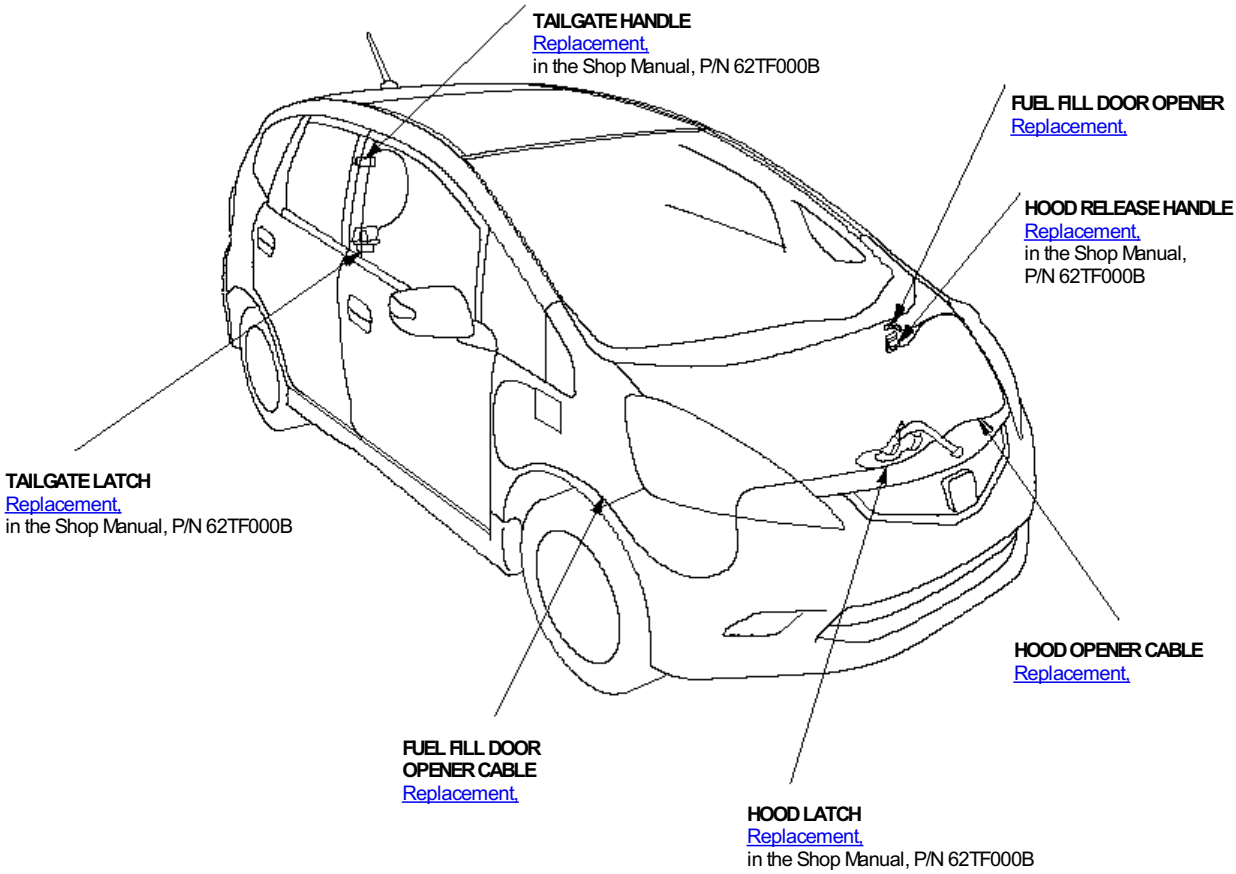
Emblem/Sticker Replacement

NOTE: When removing the emblems, take care not to scratch the body.

1. To remove the front “H" emblem, remove the upper front grille.
2. To remove the rear “H" emblem, remove the rear license trim.
3. Clean the body surface with a sponge dampened in isopropyl alcohol. After cleaning, keep oil, grease, and water from getting on the surface.
4. Apply the emblems where shown.

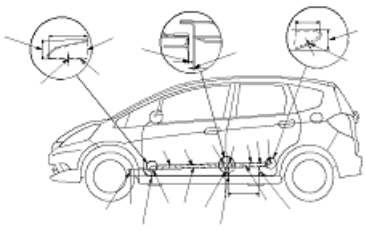


Openers Component Location Index



Door Molding Replacement

For Some Models



NOTE:

- Be careful not to pry too far or you may bend the molding.
- Put on gloves to protect your hands.
- When removing the moldings, take care not to scratch the body.

1. Gently pry the front door molding (A) or rear door molding (B) away from the door while separating the adhesive tape (C, D, E, F, G, H, I).

2. Clean the bonding surface with a sponge dampened in isopropyl alcohol. After cleaning, keep oil, grease, and water from getting on the surface.

3. Apply the moldings where shown and press the molding into place.

Adhesive tape (C):	**Thickness 1.2 mm (0.047 in.) Width 38 mm (1.50 in.) Length 66.5 mm (2.62 in.)**
Adhesive tape (D):	**Thickness 1.2 mm (0.047 in.) Width 10 mm (0.39 in.) Length 888 mm (34.96 in.)**
Adhesive tape (E):	**Thickness 1.2 mm (0.047 in.) Width 30 mm (1.18 in.) Length 30 mm (1.18 in.)**
Adhesive tape (F):	**Thickness 1.2 mm (0.047 in.) Width 37 mm (1.46 in.) Length 40 mm (1.57 in.)**
Adhesive tape (G):	**Thickness 1.2 mm (0.047 in.) Width 10 mm (0.39 in.) Length 505 mm (19.88 in.)**
Adhesive tape (H):	**Thickness 1.2 mm (0.047 in.) Width 10 mm (0.39 in.) Length 460 mm (18.11 in.)**
Adhesive tape (I):	**Thickness 1.2 mm (0.047 in.) Width 36.5 mm (1.44 in.) Length 51 mm (2.01 in.)**

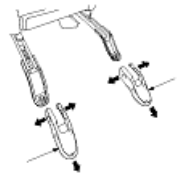
Front Seat Removal/Installation

SRS components are located in this area. Review the SRS component locations and the precautions and procedures before doing repairs or service.
NOTE:

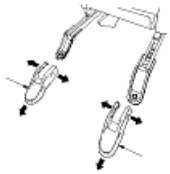
- Put on gloves to protect your hands.
- When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.
- Take care not to scratch the body or tear the seat covers.
- When removing components, use the trim tools or equivalent.

1. Tilt the steering wheel all the way up, and telescope it all the way in.
2. Slide the front seat all the way forward, then remove the rear inner seat track end covers (A) and rear outer seat track end covers (B) from the rear of both seat tracks.

Driver's seat

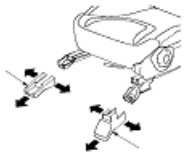


Passenger's seat

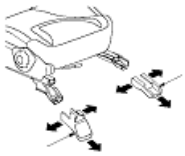


3. Slide the front seat rearward fully, then remove the front inner seat track end covers (A) and front outer seat track end covers (B) from the front of driver's seat tracks.
4. Slide the seat about half way to the rear so you can access the seat mounting bolts. If you remove the manual height adjustable seat, fully raise the seat.

Driver's seat



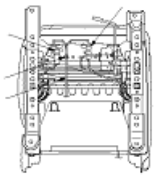
Passenger's seat



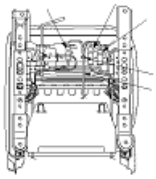
5. Remove the bolts.
6. Do the battery terminal disconnection procedure, then wait at least 3 minutes before removing the seat.

7. Lift up the front seat, then detach the harness clip (A) of the floor wire harness (B), and disconnect the seat belt buckle switch connector (C) and the side airbag connector (D) (for some models). On passenger's seat, disconnect the OPDS unit harness connector (E) (for some model).
8. Remove the head restraint.
9. With the help of an assistant, carefully remove the front seat through the front door opening.

Driver's seat



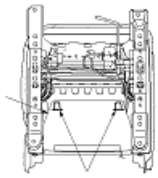
Passenger's seat



10. Install the seat in the reverse order of removal, and note these items:
    - Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten (1) and (2), then slide it forward and tighten (3) and (4). The driver's seat on LHD model is shown, the passenger's seat on LHD model is symmetrical.
    - Make sure each connector is plugged in properly.
    - Tighten the bolts by hand first, then tighten them to specification with a torque wrench.
    - Do the battery terminal reconnection procedure.
    - Check for any DTCs that may have been set during repairs, and clear them.

Front Seat Cushion Cover/Pad Replacement - Without Seat Heater

SRS components are located in this area. Review the SRS component locations and the precautions and procedures before doing repairs or service.
NOTE:

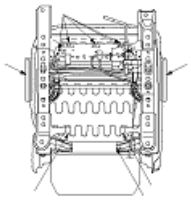


- Put on gloves to protect your hands.
- Take care not to tear the seams or damage the seat covers.
- Do not repair any tear or frayed spots of the seat cover.
- When removing components, use the trim tools or equivalent.

1. Remove the front seat.
2. Remove the front seat recline cover.
3. From under the seat cushion, release the hook (A) from the seat cushion frame spring. Pull the cushion cover (B) back.

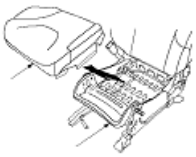
---

4. From under seat cushion, release the hook strips (A, B, C, D) from the seat cushion frame.



---

5. Remove the seat cushion cover/pad (A) from the seat frame (B).



6. Install the cover in the reverse order of removal, and note these items:
   - To prevent wrinkles when installing a seat cushion cover, make sure the material is stretched evenly over the pad before securing the hook strips.
   - If the clips are damaged or stress-whitened, replace them with new ones.

Front Seat Recline Cover Removal/Installation

SRS components are located in this area. Review the SRS component locations and the precautions and procedures before doing repairs or service.
NOTE:

- Put on gloves to protect your hands.
- Take care not to tear the seams or damage the seat covers.
- When removing components, use the trim tools or equivalent.

1. Remove the front seat.

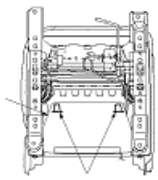
2. Remove the screw and the clip, then remove the center cover (A).

3. Remove the recline cover (A).
   -1. Driver's seat: Using a trim tool, remove the cap (B) and remove the pin (C), then remove the height handle (D).
   -2. Remove the push nut (E) then remove the recline handle (F).
   -3. Remove the screws (G) and clip (H) and release the hook (I), then remove the recline cover.

4. Install the cover in the reverse order of removal and note these items.
   - If the clips are damaged or stress-whitened, replace them with new ones.
   - Replace the push nut with a new one. Make sure the push nut is installed correctly.
   - Make sure the connecting pipe (A) is installed through the seat back cover (B).

Front Seat-back Cover/Pad Replacement - Without Seat Heater

SRS components are located in this area. Review the SRS component locations and the precautions and procedures before doing repairs or service.
NOTE:

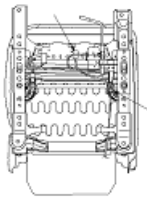


- Do not repair any tears or frayed spots of the seat-back cover. If necessary, replace the seat-back cover.
- Take care not to tear the seams or damage the seat covers.
- Passenger's seat: Do not touch the OPDS sensor in the seat-back pad, and keep it away from oil.
- Put on gloves to protect your hands.
- When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.
- When removing components, use the trim tools or equivalent.

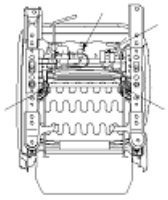
1. Remove the front seat.
2. Driver's seat: If equipped, remove the front seat armrest.
3. From under the seat cushion, release the hook (A) from the seat cushion frame spring. Pull the cushion cover back (B).
4. Remove the recline handle.

5. From under the seat cushion, remove the wire ties (A) and connector(s), then pull it to out side of the seat.
   - Driver's seat:
     - For some models: Side airbag connector (B)
   - Passenger's seat:
     - For some models: Side airbag connector (B)
     - For some models: OPDS unit harness connector (C)

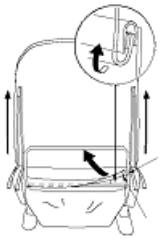
Driver's seat



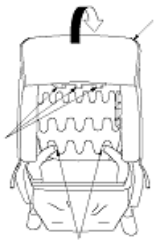
Passenger's seat



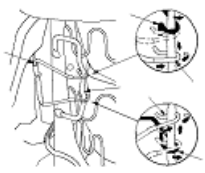
6. From behind the seat-back, release the hook (A), and unzip the seat-cover (B).



7. Pull back the seat-back cover (A), then release the hook strips (B) from the seat-back frame.

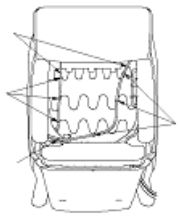


8. Release airbag wire A and airbag wire B from the seat-back frame (C).



9. Passenger's seat: Remove the OPDS unit cover (A).
   -1. Turn over the seat-back cover and the pad (B) as needed.
   -2. Release the cover from the lower hooks (C).
   -3. Pull the cover upward to release it from the upper hook (D).
10. Passenger's seat: Disconnect the OPDS sensor connectors (E) from the OPDS unit (F).

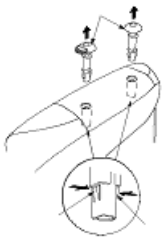
11. Passenger's seat: Remove the wire ties (A), and detach the harness clip (B) fastening the OPDS sensor harnesses (C).



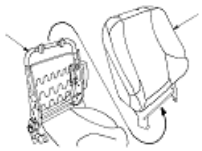
12. Passenger's seat: Pull the side airbag harness (A) and OPDS unit harness (B) out through the harness hole (C) in the seat-back cover.

13. Driver's seat: Pull the side airbag harness (A) out through the harness hole (B) in the seat-back cover (C).

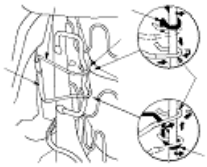
14. Pull out the head restraint guides (A) while pinching the tabs (B) on the end of the guides, and remove them.



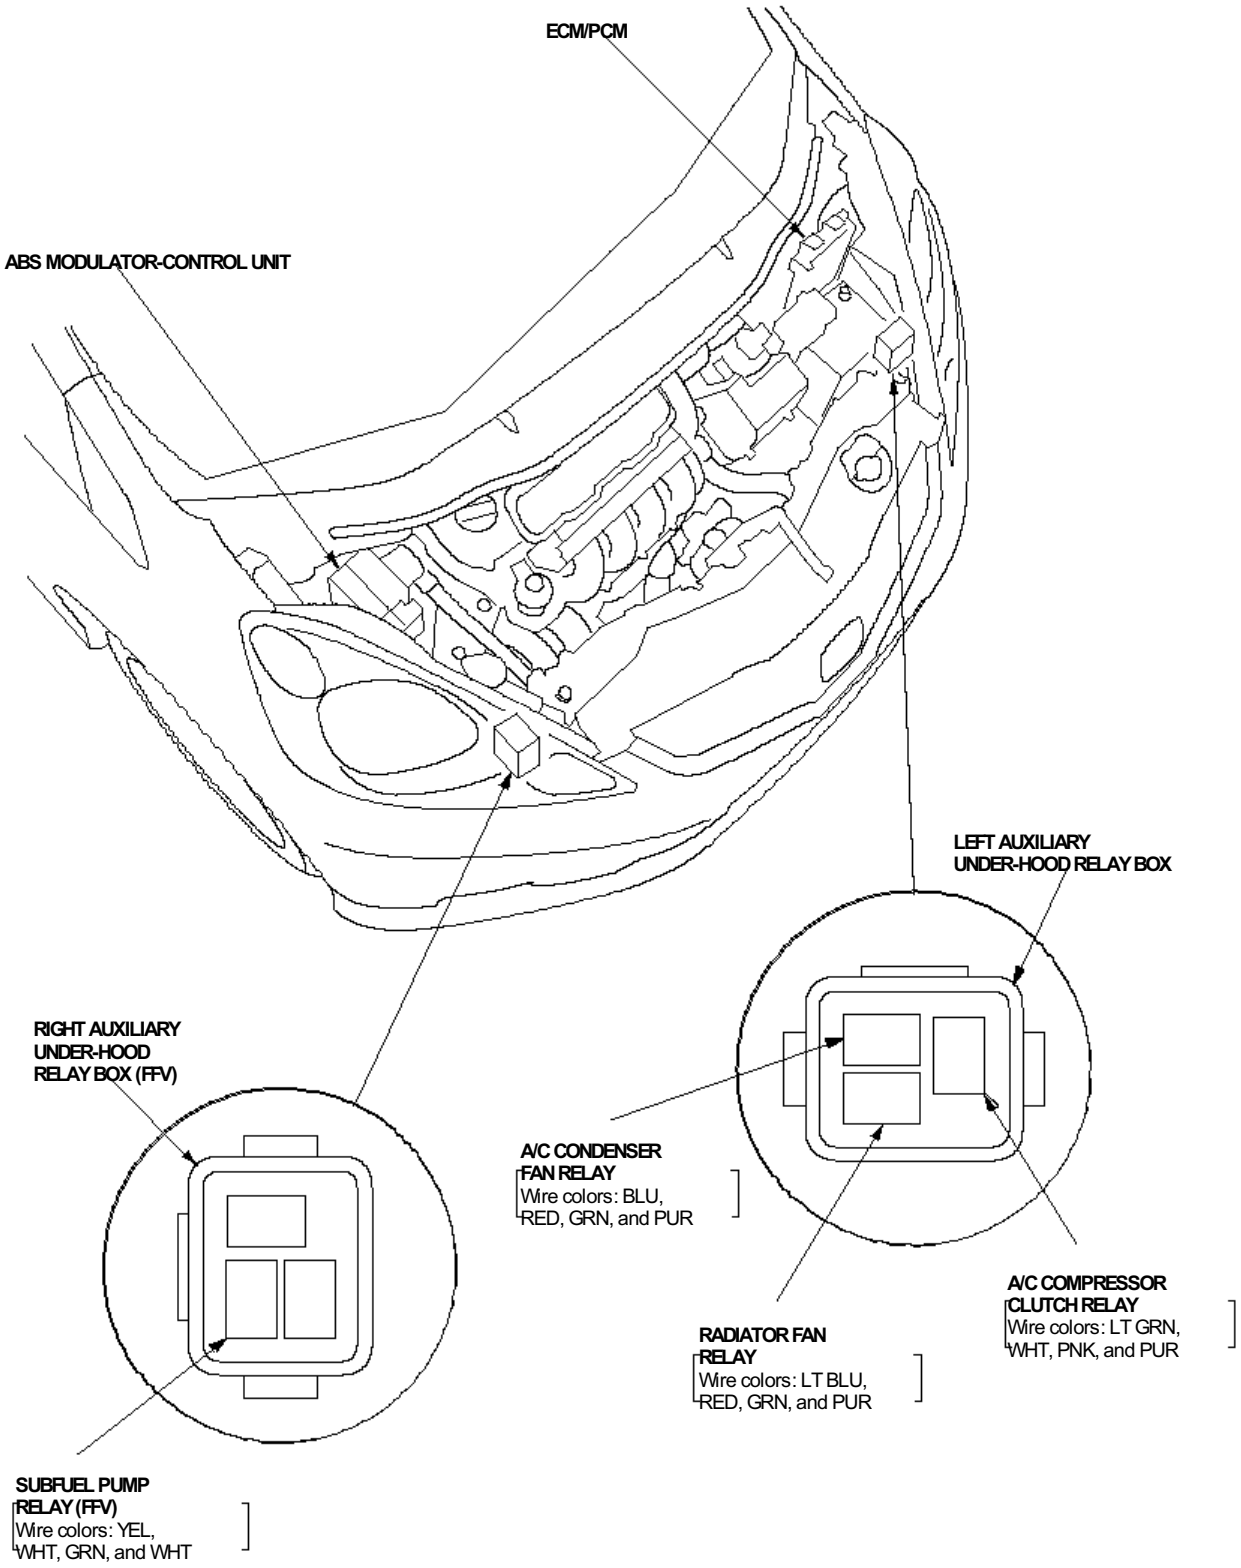
15. Remove the seat-back cover/pad (A) from the seat-back frame (B).



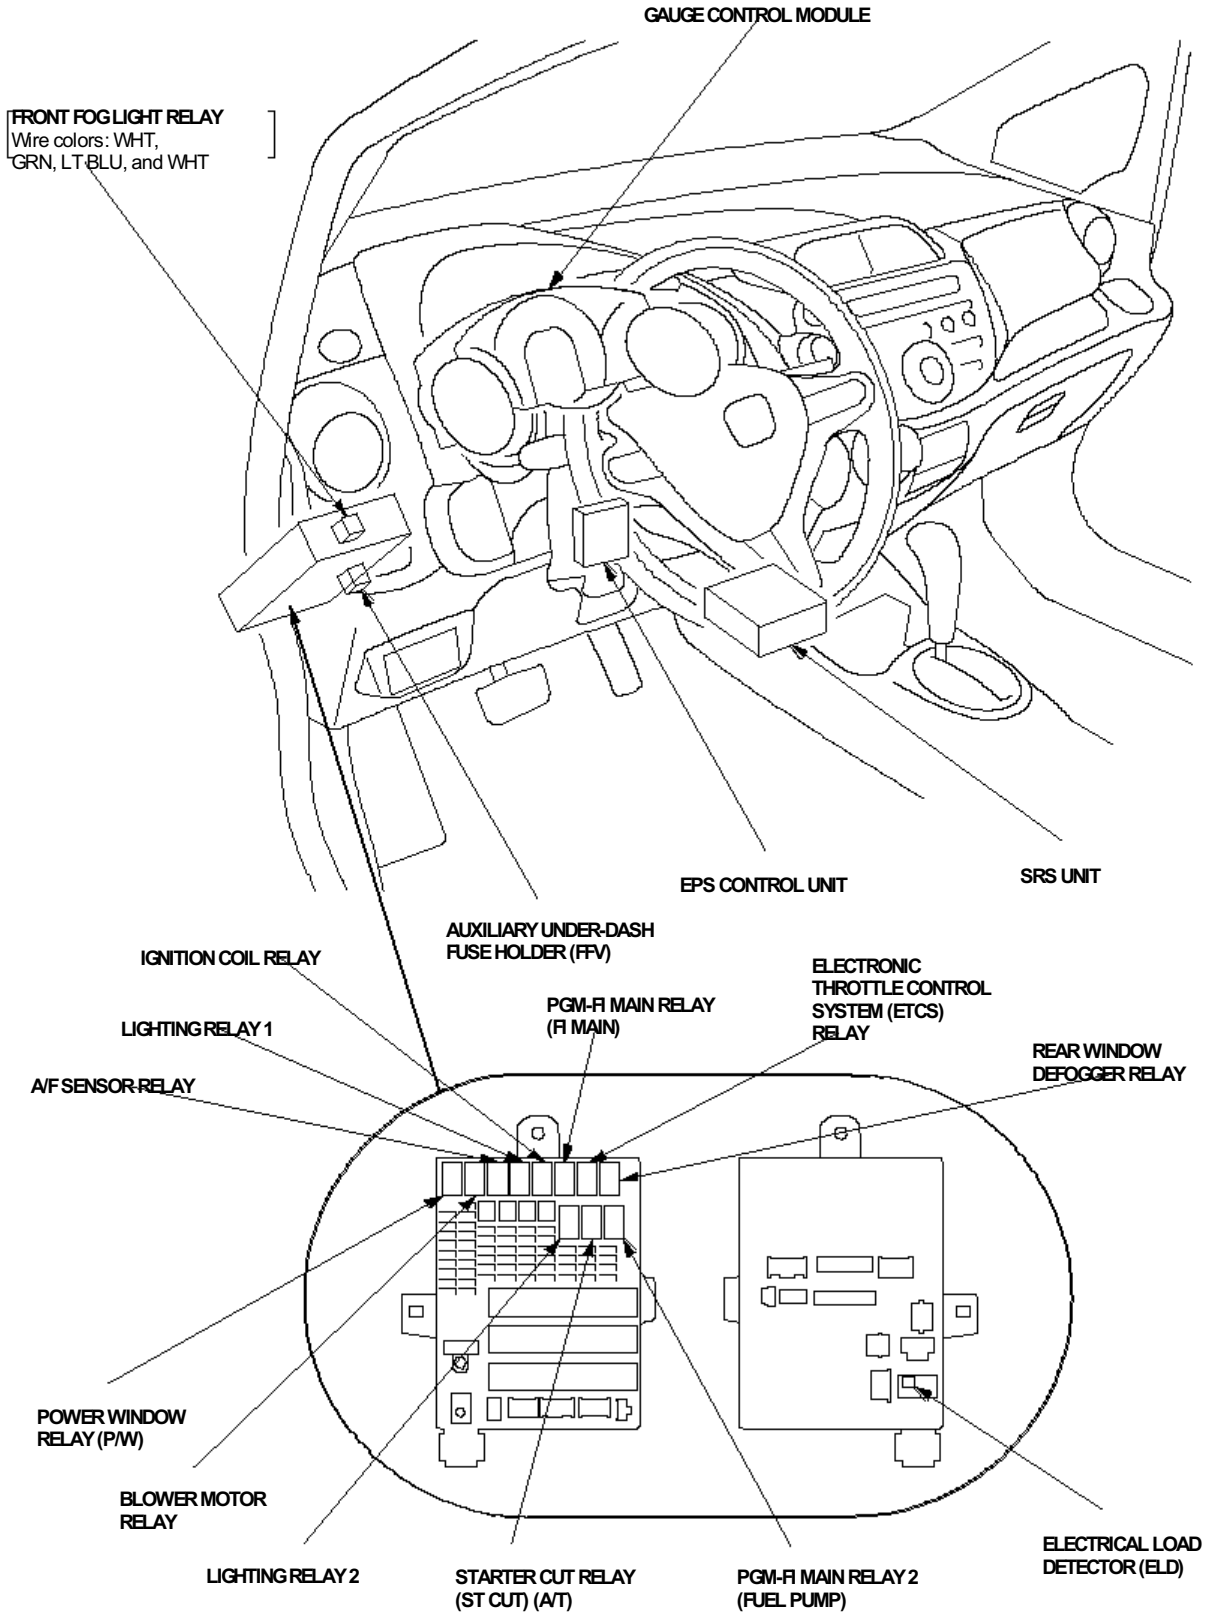
16. Install the cover/pad in the reverse order of removal, and note these items:
    - Reinitialize the OPDS unit.
    - Before installing the seat-back cover/pad, make sure airbag wires (A, B) are installed to the reinforcing cloths (C) correctly, and wire A and wire B are securely assembled.
    - Use only original Honda replacement seat-back cover/pads.
    - Make sure the side airbag harness and the OPDS unit harness (passenger's seat) are routed properly.



Relay and Control Unit Locations - Engine Compartment



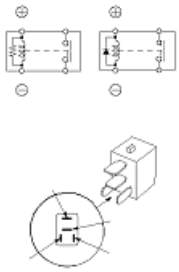
Relay and Control Unit Locations - Dashboard 1



Power Relay Test

Use this chart to identify the type of relay, then do the test listed for it.

Relay	Test
A/C compressor clutch relay	Normally-open type
A/C condenser fan relay	
A/F sensor relay	
Blower motor relay	
ETCS control relay	
Front fog light relay	
Horn relay	
Ignition coil relay	
Lighting relay 1	
Lighting relay 2	
PGM-FI main relay 1 (FI MAIN)	
PGM-FI main relay 2 (FUEL PUMP)	
Power window relay (P/W)	
Radiator fan relay	
Rear window defogger relay	
Starter cut relay (ST CUT)	
Subfuel pump relay	

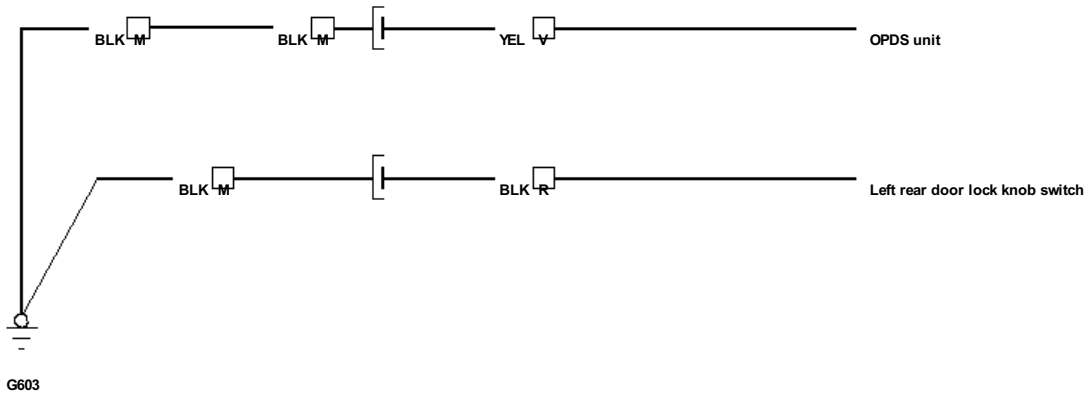


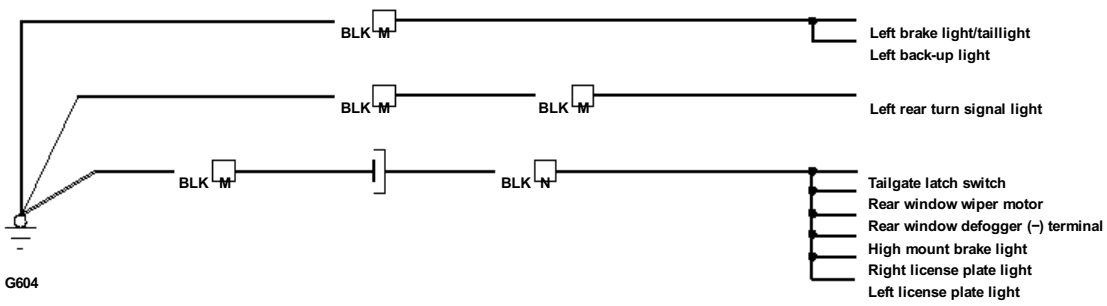
Normally-open type

Check for continuity between the terminals:

- There should be continuity between the No. 1 and No. 2 terminals when battery power is connected to the No. 4 terminal, and body ground is connected to the No. 3 terminal.
- There should be no continuity between the No. 1 and No. 2 terminals when power is disconnected.

Ground Circuit Identification





M : Floor wire harness

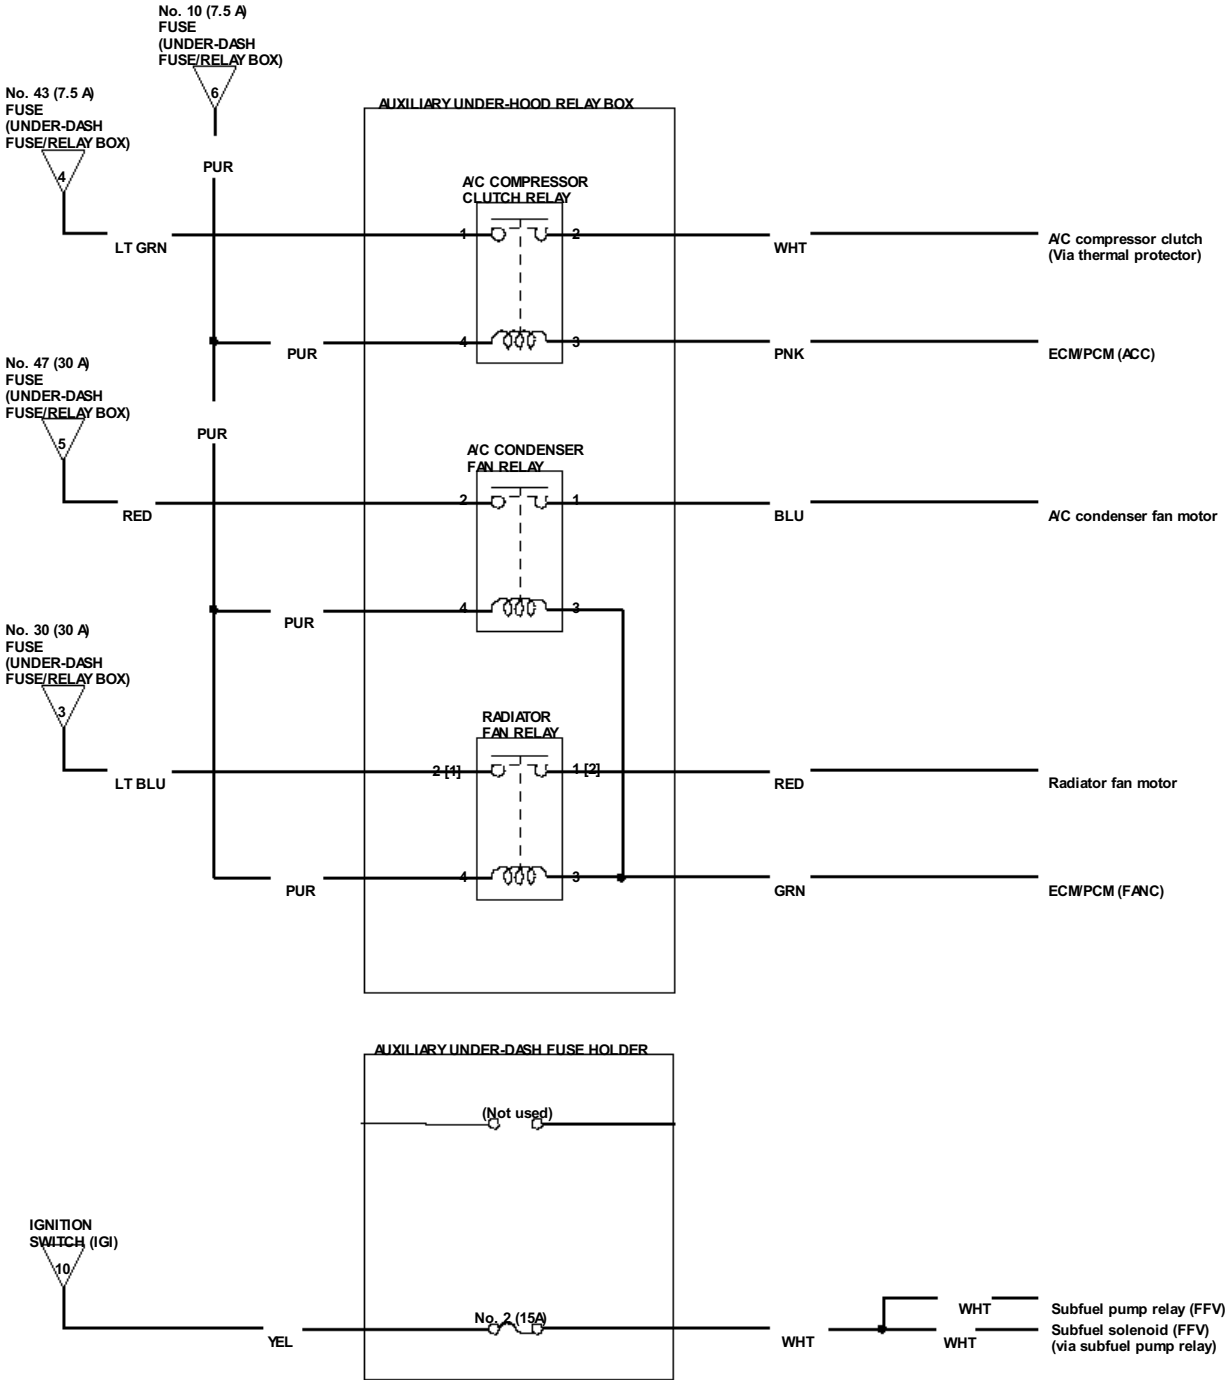
N : Tailgate wire harness

R : Left rear door wire harness

: Reminder wire harness

: OPDS unit harness

Power Circuit Identification



Under-dash Fuse/Relay Box

Fuse Number	Amps	Component(s) or Circuit(s) Protected
1	10 A	Audio unit, Cargo area light, Ceiling light, Data link connector (DLC), Gauge control module, Immobilizer-keyless control unit, Individual map light, MICU (+B BACK UP)

Replacement,
in the Shop Manual, P/N 62TF000B

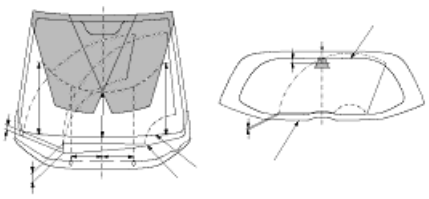
Wiper Arm/Nozzle Adjustment

Wiper arms stop position



1. When the wiper arms stop at the automatic stop position, make sure that they are at the standard position.

Windshield

a: Position at about 82 mm (3.0 in.) from the top of cowl cover (A).
b: Position at about 53 mm (1.5 in.) from the top of cowl cover (A).

Rear window

c: Position at about 10 mm (0.4 in.) from the black ceramic area (D).

Washer nozzle position

2. When you turn on the washers, make sure 50 % or more of the washer fluid lands within the splay area. If the splay area is not within the standard positions, adjust the nozzles.

Windshield

d: Position at about 591 mm (23 in.) from the top of the black ceramic area (B) at the lower windshield.
e: Position at about 386 mm (15 in.) from the top of the black ceramic area (B) at the lower windshield.
f: Position at about 591 mm (23 in.) from the top of the black ceramic area (B) at the lower windshield.
g: Position at about 250 mm (9.8 in.) from the windshield center line (C).
h: Position at about 250 mm (9.8 in.) from the windshield center line (C).

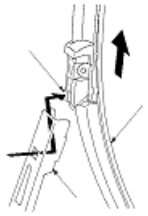
Rear Window

j: Position at about 24.7 mm (1.0 in.) from the top of the black ceramic area (E).

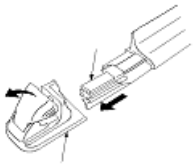
Wiper Blade Replacement

Windshield

NOTE: Always pull up the driver's side wiper blade first.

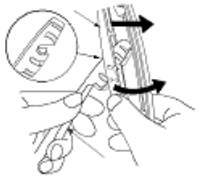


1. Pull up the wiper arms from the windshield.
2. Push the tab (A) and remove the wiper blade (B) from the wiper arm (C).

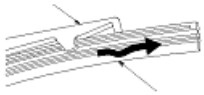


3. Remove the stopper (A), then pull and remove the old rubber (B).
4. Install a new rubber in the reverse order of removal.
5. Install the wiper blades onto the windshield wiper arms in the reverse order of removal.
6. Test by turning on the wipers. If the blades slip, turn off the wipers and seat the attachments more firmly.

Rear Window



1. Turn the wiper blade (A), and remove the lock from the wiper arm (B).



2. Pull the rubber (A) up, and slide it out from the wiper blade (B).
3. Install a new rubber in the reverse order of removal.
4. Install the wiper blade onto the wiper arm in the reverse order of removal.
5. Test the wiper operation. If the blades slip, turn the wiper switch OFF, and reinstall the blades securely.

Engine will not start (MIL works OK, no DTCs set)

Diagnostic procedure

1. Test the battery.
2. Test the starter.
3. Check the fuel pressure.
4. Troubleshoot the fuel pump circuit.

Also check for

- Low compression
- No ignition spark
- Intake vacuum leaks
- Locked up engine
- Broken cam chain
- Fuel contamination

Engine will not start (MIL comes on and stays on, no DTCs set)

Diagnostic procedure

1. Troubleshoot the DLC circuit.

Also check for

- Low compression
- No ignition spark
- Intake vacuum leaks
- Locked up engine
- Broken cam chain
- Fuel contamination
- No power to ECM/PCM
- No ground to ECM/PCM
- Shorted reference voltage

MIL comes on and stays on, or never comes on at all, no DTCs set

Diagnostic procedure

1. Troubleshoot the MIL circuit.

Engine will not start (MIL works OK, no DTCs set, immobilizer indicator stays on or flashes)

Diagnostic procedure

1. Check the immobilizer system.

Engine starts but stalls immediately (MIL works OK, no DTCs set, immobilizer indicator stays on or flashes)

Diagnostic procedure

1. Check the immobilizer system.

Also check for

- Camshaft timing
- Low compression
- Intake vacuum leaks
- Fuel contamination
- Weak spark

Engine is hard starting (MIL works OK, no DTCs set)

Diagnostic procedure

1. Test the battery.
2. Check the fuel pressure.
3. Test the throttle body.

Also check for

- Low compression
- Intake air leaks
- Fuel contamination
- Weak spark

Cold fast idle too low (MIL works OK, no DTCs set)

Diagnostic procedure

1. Do the ECM/PCM idle learn procedure.
2. Check the idle speed.
3. Throttle body cleaning.

Also check for

- Incorrect valve adjustment

Cold fast idle too high (MIL works OK, no DTCs set)

Diagnostic procedure

1. Do the ECM/PCM idle learn procedure.
2. Check the idle speed.
3. Test the throttle body.

Also check for

- Incorrect valve adjustment

After warming up, idle speed is below specifications without load (MIL works OK, no DTCs set)

Diagnostic procedure

1. Troubleshoot the alternator FR signal circuit.
2. Test the throttle body.

Also check for

- Intake vacuum leaks
- Incorrect valve adjustment

After warming up, idle speed is above specifications without load (MIL works OK, no DTCs set)

Diagnostic procedure

1. Troubleshoot the alternator FR signal circuit.
2. Inspect the APP sensor.

Also check for

- Intake vacuum leaks

Idle speed fluctuates (MIL works OK, no DTCs set)

Diagnostic procedure

1. Do the ECM/PCM idle learn procedure.
2. Test the fuel pressure.
3. Except KP (Argentina), KX models: Test the injectors.
4. Troubleshoot the alternator FR signal circuit.
5. Inspect the PCV valve.
6. Test the throttle body.
7. Troubleshoot the A/C signal circuit.
8. Troubleshoot the VTEC system oil pressure.

Also check for

- Fuel contamination
- Intake vacuum leaks

Misfire or rough running (MIL works OK, no DTCs set)

Diagnostic procedure

1. Check the spark plugs.
2. Test the fuel pressure.
3. Test the injectors.
4. Troubleshoot the fuel pump circuit.
5. Troubleshoot the VTEC system oil pressure.

Also check for

- Low compression
- Valve clearance
- Fuel contamination

Fails emission test (MIL works OK, no DTCs set)

Diagnostic procedure

1. Except KP (Argentina), KX models: Inspect the three way catalytic converter (TWC).
2. Except KP (Argentina), KX models: Check the spark plugs.
3. Test the fuel pressure.
4. Except KP (Argentina), KX models: Test the injectors.
5. Check the EVAP system.
6. Troubleshoot the VTEC system oil pressure.

Also check for

- Fuel contamination
- Low compression
- Broken cam chain

Low power (MIL works OK, no DTCs set)

Diagnostic procedure

1. Test the fuel pressure.
2. Check the air cleaner element.
3. Test the throttle body.
4. Except KP (Argentina), KX models: Inspect the three way catalytic converter (TWC).
5. Except KP (Argentina), KX models: Test the injectors.
6. Troubleshoot the VTEC system oil pressure.

Also check for

- Fuel contamination
- Low compression
- Camshaft timing
- Engine oil level

Engine stalls (MIL works OK, no DTCs set)

Diagnostic procedure

1. Do the ECM/PCM idle learn procedure.
2. Test the fuel pressure.
3. Check the idle speed.
4. Troubleshoot the brake pedal position switch signal circuit.
5. Except KP (Argentina), KX models: Check the spark plugs.
6. Troubleshoot the VTEC system oil pressure.

Also check for

- Intake vacuum leaks
- Faulty harness and sensor connections
- Fuel contamination

Difficult to refuel

Diagnostic procedure

1. Inspect the breather line and the suction line.

HDS does not communicate with the ECM/PCM or the vehicle

Diagnostic procedure

1. Troubleshoot the DLC circuit.

Fuel and Emissions Systems Symptom Troubleshooting Index

When the vehicle has one of these symptoms, check for a diagnostic trouble code (DTC) with the HDS. If there is no DTC, do the diagnostic procedure for the symptom, in the sequence listed, until you find the cause.

Symptom	Diagnostic procedure	Also check for
Engine will not start (MIL works OK, no DTCs set)	1.Test the battery. 2.Test the starter. 3.Check the fuel pressure. 4.Troubleshoot the fuel pump circuit.	• Low compression • No ignition spark • Intake vacuum leaks • Locked up engine • Broken cam chain • Fuel contamination
Engine will not start (MIL comes on and stays on, no DTCs set)	Troubleshoot the DLC circuit.	• Low compression • No ignition spark • Intake vacuum leaks • Locked up engine • Broken cam chain • Fuel contamination • No power to ECM/PCM • No ground to ECM/PCM • Shorted reference voltage
MIL comes on and stays on, or never comes on at all, no DTCs set	Troubleshoot the MIL circuit.	
Engine will not start (MIL works OK, no DTCs set, immobilizer indicator stays on or flashes)	Check the immobilizer system.	
Engine starts but stalls immediately (MIL works OK, no DTCs set, immobilizer indicator stays on or flashes)	Check the immobilizer system.	• Camshaft timing • Low compression • Intake vacuum leaks • Fuel contamination • Weak spark
Engine is hard starting (MIL works OK, no DTCs set)	1.Test the battery. 2.Check the fuel pressure. 3.Test the throttle body.	• Low compression • Intake air leaks • Fuel contamination • Weak spark
Cold fast idle too low (MIL works OK, no DTCs set)	1.Do the ECM/PCM idle learn procedure. 2.Check the idle speed. 3.Throttle body cleaning.	Incorrect valve adjustment
Cold fast idle too high (MIL works OK, no DTCs set)	1.Do the ECM/PCM idle learn procedure. 2.Check the idle speed. 3.Test the throttle body.	Incorrect valve adjustment
After warming up, idle speed is below specifications without load (MIL works OK, no DTCs set)	1.Troubleshoot the alternator FR signal circuit. 2.Test the throttle body.	• Intake vacuum leaks • Incorrect valve adjustment
After warming up, idle speed is above specifications without load (MIL works OK, no DTCs set)	1.Troubleshoot the alternator FR signal circuit. 2.Inspect the APP sensor.	Intake vacuum leaks
Idle speed fluctuates (MIL works OK, no DTCs set)	1.Do the ECM/PCM idle learn procedure. 2.Test the fuel pressure. 3.Except KP (Argentina), KX models: Test the injectors. 4.Troubleshoot the alternator FR signal circuit. 5.Inspect the PCV valve. 6.Test the throttle body. 7.Troubleshoot the A/C signal circuit. 8.Troubleshoot the VTEC system oil pressure.	• Fuel contamination • Intake vacuum leaks
Misfire or rough running (MIL works OK, no DTCs set)	1.Check the spark plugs. 2.Test the fuel pressure. 3.Test the injectors. 4.Troubleshoot the fuel pump circuit. 5.Troubleshoot the VTEC system oil pressure.	• Low compression • Valve clearance • Fuel contamination
Fails emission test (MIL works OK, no DTCs set)	1.Except KP (Argentina), KX models: Inspect the three way catalytic converter (TWC). 2.Except KP (Argentina), KX models: Check the spark plugs. 3.Test the fuel pressure. 4.Except KP (Argentina), KX models: Test the injectors. 5.Check the EVAP system. 6.Troubleshoot the VTEC system oil pressure.	• Fuel contamination • Low compression • Broken cam chain
Low power (MIL works OK, no DTCs set)	1.Test the fuel pressure. 2.Check the air cleaner element. 3.Test the throttle body. 4.Except KP (Argentina), KX models: Inspect the three way catalytic converter (TWC). 5.Except KP (Argentina), KX models: Test the injectors. 6.Troubleshoot the VTEC system oil pressure.	• Fuel contamination • Low compression • Camshaft timing • Engine oil level

Symptom	Diagnostic procedure	Also check for
Engine stalls (MIL works OK, no DTCs set)	1. Do the ECM/PCM idle learn procedure. 2. Test the fuel pressure. 3. Check the idle speed. 4. Troubleshoot the brake pedal position switch signal circuit. 5. Except KP (Argentina), KX models: Check the spark plugs. 6. Troubleshoot the VTEC system oil pressure.	• Intake vacuum leaks • Faulty harness and sensor connections • Fuel contamination
Difficult to refuel	Inspect the breather line and the suction line.	
HDS does not communicate with the ECM/PCM or the vehicle	Troubleshoot the DLC circuit.	

Fuel pressure regulator

Item	Measurement	Qualification	Standard or New
Fuel pressure regulator	Pressure with fuel pressure gauge connected		320−370 kPa (3.3−3.8 kgf/cm ^{2} , 47−54 psi)

Fuel tank

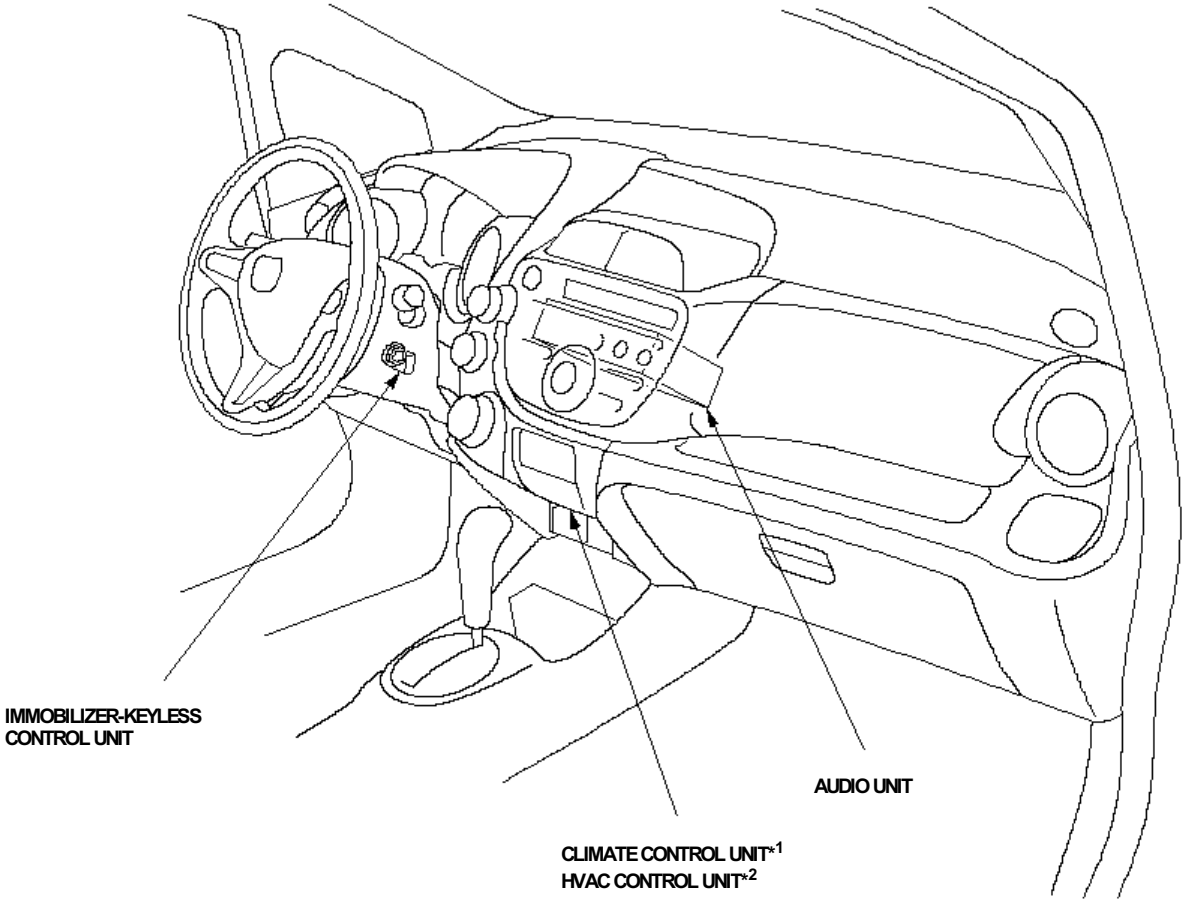
Item	Measurement	Qualification	Standard or New
Fuel tank	Capacity		42 L (11.0 US gal, 9.2 Imp gal)

Engine idle

Item	Measurement	Qualification	Standard or New
Engine idle	Idle speed without load (L13Z1)	M/T (in neutral)	650±50 rpm (min^{-1})
		A/T (in N or P)	700±50 rpm (min^{-1})
	Idle speed without load (L15A7)	M/T (in neutral), A/T (in N or P)	700±50 rpm (min^{-1})
	Idle speed with high electrical load (A/C switch ON, temperature set to max cool, blower fan on High, rear window defogger ON, and headlights on high beam)	M/T (in neutral), A/T (in N or P)	790±50 rpm (min^{-1})
	Idle CO		0.1 % max.

Relay and Control Unit Locations - Dashboard 2

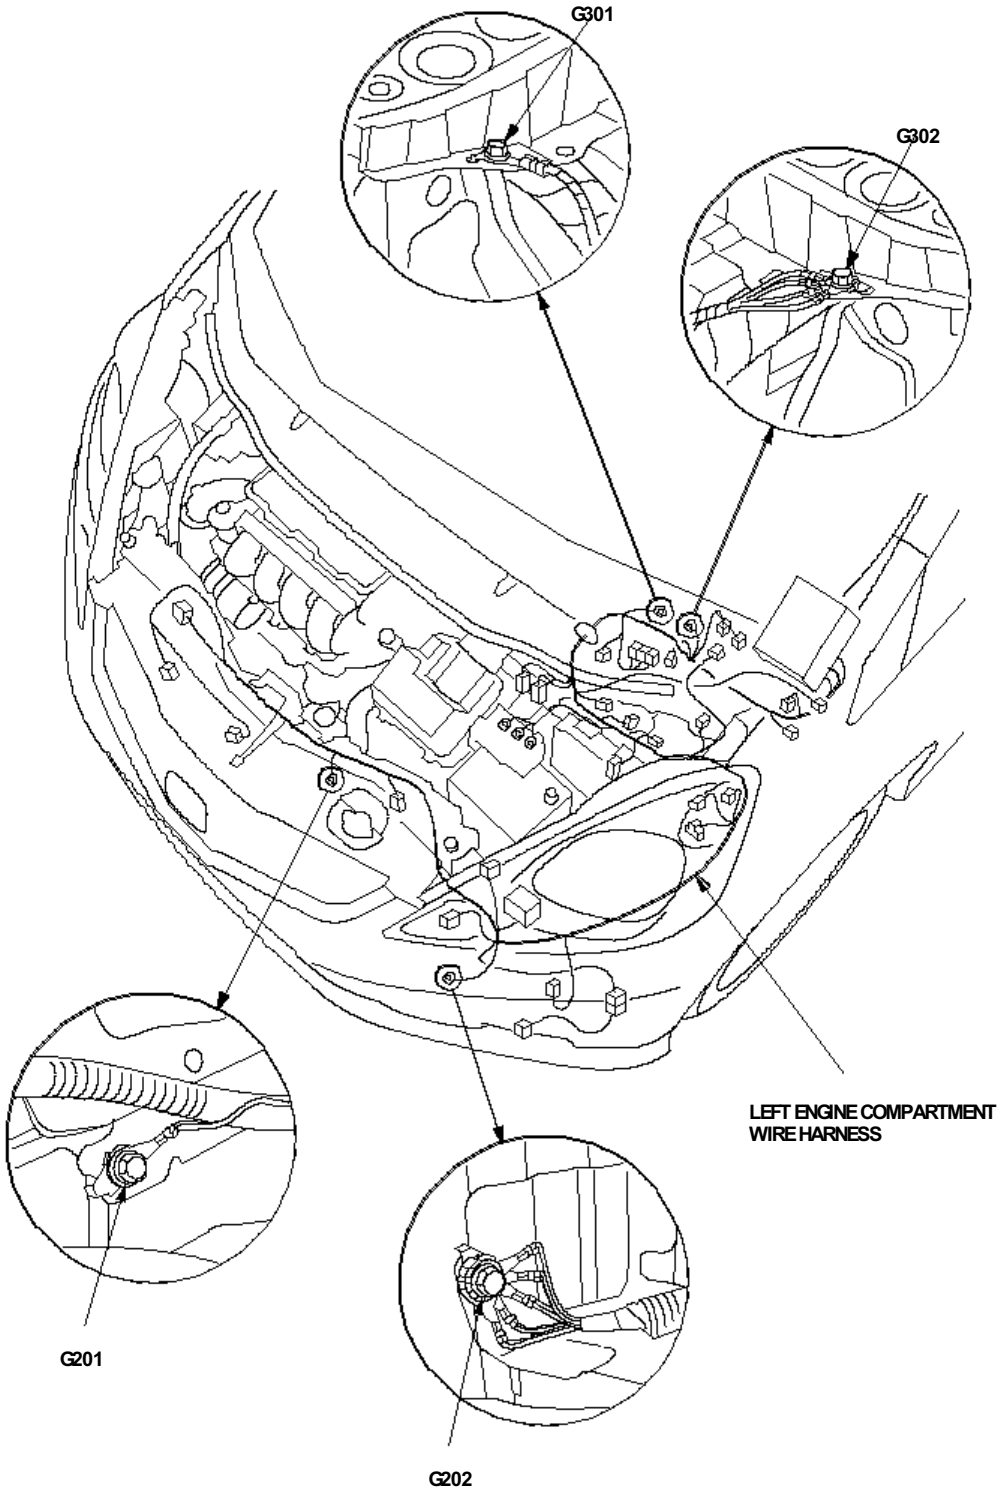
LHD model



*1: With climate control
*2: With HVAC control (push button type)

Left Engine Compartment Wire Harness Locations

LHD model



Brake Booster Replacement

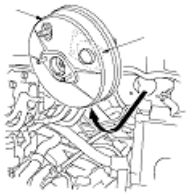
LHD Model

1. Remove the air cleaner cover, and the air cleaner case.
2. Remove the master cylinder.
3. Disconnect the brake booster vacuum hose (A) from the brake booster.

4. Remove the brake lines (A) from the clamp (B).

5. Remove the engine wire harness clamp (A).
6. Remove the driver's dashboard undercover.

7. Remove the lock pin (A) and the joint pin (B), then disconnect the yoke from the brake pedal.
8. Remove the brake booster mounting nuts (C).

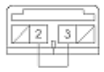


9. Remove the brake booster (A) from the engine compartment.
   NOTICE
   - Be careful not to damage the booster surfaces and threads of the booster stud bolts.
   - Be careful not to bend or damage the brake lines or other components hoses and lines.

   NOTE: Use new booster gasket (B) reassembly.
10. Install the brake booster in the reverse order of removal, and note these items:
    - Install the master cylinder after installing the brake booster.
    - Check the brake pedal height and free play after installing the master cylinder, and adjust it if necessary.
    - Bleed the brake system.

SRS DTC Troubleshooting: 11-1x, 11-2x

DTC 11-1x ("x" can be 0 thru 9 or A thru F):
Open in the Driver's Airbag Inflator (LHD model)
DTC 11-2x ("x" can be 0 thru 9 or A thru F):
Increased Resistance in the Driver's Airbag Inflator (LHD model)
NOTE:



- Before doing this troubleshooting procedure, review SRS Precautions and Procedures and General Troubleshooting Information.
- Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software and retest.

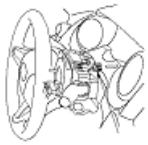
1. Clear the DTC memory.
2. Turn the ignition switch to ON (II), then wait for 10 seconds.
3. Read the DTC.

   Is DTC 11-1x or 11-2x indicated?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time. Go to Troubleshooting Intermittent Failures. If another DTC is indicated, troubleshoot the DTC.
4. Turn the ignition switch to LOCK (0).
5. Do the battery terminal disconnection procedure , then wait for 3 minutes.
6. Disconnect the driver's airbag 4P connector from the cable reel.
7. Install a jumper wire between the No. 2 and the No. 3 terminals of the cable reel 4P connector.
8. Do the battery terminal reconnection procedure.
9. Clear the DTC memory.
10. Turn the ignition switch to ON (II), then wait for 10 seconds.
11. Read the DTC.

    Is DTC 11-1x or 11-2x indicated?
    YES - Go to Step 12 .
    NO - Faulty driver's airbag; replace the driver's airbag. ■
12. Turn the ignition switch to LOCK (0).
13. Do the battery terminal disconnection procedure , then wait for 3 minutes.

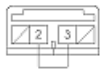
---

14. Remove the column cover , then disconnect the dashboard wire harness 4P connector (A) from the cable reel.



---

15. Install a jumper wire between the No. 2 and the No. 3 terminals of the dashboard wire harness 4P connector.
16. Do the battery terminal reconnection procedure.



17. Read the DTC.

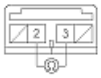
    Is DTC 11-1x or 11-2x indicated?
    YES - Go to Step 18 .
    NO - Open or increased resistance in the cable reel; replace the cable reel. ■
18. Turn the ignition switch to LOCK (0).
19. Do the battery terminal disconnection procedure , then wait for 3 minutes.
20. Remove a jumper wire from the dashboard wire harness 4P connector.
21. Disconnect SRS unit connector A (39P) from the SRS unit.

---

22. Install a jumper wire between the No. 3 and the No. 4 terminals of SRS unit connector A (39P).

---

23. Measure the resistance between the No. 2 and the No. 3 terminals of the dashboard wire harness 4P connector. There should be 0−1.0Ω.



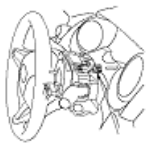
Is the resistance as specified?

YES - Faulty SRS unit or poor connection at SRS unit connector A (39P) and the SRS unit. Check the connection between the connector and the SRS unit. If the connection is OK, replace the SRS unit. ■

NO - Open or increased resistance in the dashboard wire harness; replace the dashboard wire harness.■

SRS DTC Troubleshooting: 11-3x

DTC 11-3x (‘‘x" can be 0 thru 9 or A thru F):
Short to Another Wire or Decreased Resistance in the Driver's Airbag Inflator (LHD model)
NOTE:



- Before doing this troubleshooting procedure, review SRS Precautions and Procedures and General Troubleshooting Information.
- Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software and retest.

1. Clear the DTC memory.
2. Turn the ignition switch to ON (II), then wait for 10 seconds.
3. Read the DTC.

   Is DTC 11-3x indicated?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time. Go to Troubleshooting Intermittent Failures. If another DTC is indicated, troubleshoot the DTC.
4. Turn the ignition switch to LOCK (0).
5. Do the battery terminal disconnection procedure , then wait for 3 minutes.
6. Disconnect the driver's airbag 4P connector from the cable reel.
7. Do the battery terminal reconnection procedure.
8. Clear the DTC memory.
9. Turn the ignition switch to ON (II), then wait for 10 seconds.
10. Read the DTC.

    Is DTC 11-3x indicated?
    YES - Go to Step 11 .
    NO - Faulty driver's airbag; replace the driver's airbag. ■
11. Turn the ignition switch to LOCK (0).
12. Do the battery terminal disconnection procedure , then wait for 3 minutes.
13. Remove the column cover , then disconnect the dashboard wire harness 4P connector (A) from the cable reel.
14. Do the battery terminal reconnection procedure.
15. Clear the DTC memory.
16. Turn the ignition switch to ON (II), then wait for 10 seconds.
17. Read the DTC.

    Is DTC 11-3x indicated?
    YES - Go to Step 18 .
    NO - Short in the cable reel; replace the cable reel. ■
18. Turn the ignition switch to LOCK (0).
19. Do the battery terminal disconnection procedure , then wait for 3 minutes.
20. Disconnect SRS unit connector A (39P) from the SRS unit.
21. Connect an SRS short canceller (070AZ-SAA0100) to the No. 3 and the No. 4 terminals of the SRS unit connector A (39P).

---

22. Measure the resistance between the No. 3 and the No. 4 terminals of SRS unit connector A (39P). There should be 0−1.0 Ω.

    Is the resistance as specified?
    YES - Short in the dashboard wire harness; replace the dashboard wire harness.■
    NO - Faulty SRS unit; replace the SRS unit. ■

SRS DTC Troubleshooting: 11-8x

DTC 11-8x (“x" can be 0 thru 9 or A thru F):
Short to Power in the Driver's Airbag Inflator (LHD model)
NOTE:

- Before doing this troubleshooting procedure, review SRS Precautions and Procedures and General Troubleshooting Information.
- Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software and retest.

1. Clear the DTC memory.
2. Turn the ignition switch to ON (II), then wait for 10 seconds.
3. Read the DTC.

   Is DTC 11-8x indicated?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time. Go to Troubleshooting Intermittent Failures. If another DTC is indicated, troubleshoot the DTC.
4. Turn the ignition switch to LOCK (0).
5. Do the battery terminal disconnection procedure , then wait for 3 minutes.
6. Disconnect SRS unit connector A (39P) from the SRS unit.
7. Connect an SRS short canceller (070AZ-SAA0100) to the No. 3 and the No. 4 terminals of SRS unit connector A (39P).
8. Do the battery terminal reconnection procedure.
9. Turn the ignition switch to ON (II), then wait for 10 seconds.
10. Measure the voltage between the No. 3 and the No. 4 terminals of SRS unit connector A (39P) and body ground. There should be less than 1 V.

    Is the voltage as specified?
    YES - Faulty SRS unit; replace the SRS unit. ■
    NO - Go to Step 11 .
11. Turn the ignition switch to LOCK (0).
12. Do the battery terminal disconnection procedure , then wait for 3 minutes.
13. Disconnect the driver's airbag 4P connector from the cable reel.
14. Do the battery terminal reconnection procedure.
15. Turn the ignition switch to ON (II), then wait for 10 seconds.

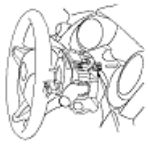
---

16. Measure the voltage between the No. 3 and the No. 4 terminals of SRS unit connector A (39P) and body ground. There should be less than 1 V.

    Is the voltage as specified?
    YES - Faulty driver's airbag; replace the driver's airbag. ■
    NO - Go to Step 17 .
17. Turn the ignition switch to LOCK (0).
18. Do the battery terminal disconnection procedure , then wait for 3 minutes.

---

19. Remove the column cover , then disconnect the dashboard wire harness 4P connector (A) from the cable reel.



20. Do the battery terminal reconnection procedure.
21. Turn the ignition switch to ON (II), then wait for 10 seconds.

---

22. Measure the voltage between the No. 3 and the No. 4 terminals of SRS unit connector A (39P) and body ground. There should be less than 1 V.

    Is the voltage as specified?
    YES - Short to power in the cable reel; replace the cable reel. ■
    NO - Short to power in the dashboard wire harness; replace the dashboard wire harness.■

SRS DTC Troubleshooting: 11-9x

DTC 11-9x (“x" can be 0 thru 9 or A thru F):
Short to Ground in the Driver's Airbag Inflator (LHD model)
NOTE:

- Before doing this troubleshooting procedure, review SRS Precautions and Procedures and General Troubleshooting Information.
- Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software and retest.

1. Clear the DTC memory.
2. Turn the ignition switch to ON (II), then wait for 10 seconds.
3. Read the DTC.

   Is DTC 11-9x indicated?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time. Go to Troubleshooting Intermittent Failures. If another DTC is indicated, troubleshoot the DTC.
4. Turn the ignition switch to LOCK (0).
5. Do the battery terminal disconnection procedure , then wait for 3 minutes.
6. Disconnect SRS unit connector A (39P) from the SRS unit.
7. Measure the resistance between the No. 3 and the No. 4 terminals of SRS unit connector A (39P) and body ground. There should be 0−1.0 Ω.

   Is the resistance as specified?
   YES - Go to Step 8 .
   NO - Faulty SRS unit; replace the SRS unit. ■
8. Disconnect the driver's airbag 4P connector from the cable reel.

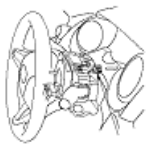
---

9. Measure the resistance between the No. 3 and the No. 4 terminals of SRS unit connector A (39P) and body ground. There should be 0−1.0 Ω.

   Is the resistance as specified?
   YES - Go to Step 10 .
   NO - Faulty driver's airbag; replace the driver's airbag. ■

---

10. Remove the column cover , then disconnect the dashboard wire harness 4P connector (A) from the cable reel.



---

11. Measure the resistance between the No. 3 and the No. 4 terminals of SRS unit connector A (39P) and body ground. There should be 0−1.0 Ω.

    Is the resistance as specified?
    YES - Short to ground in the dashboard wire harness: replace the dashboard wire harness.■
    NO - Short to ground in the cable reel; replace the cable reel. ■

Fuel and Emissions System Description - ECM/PCM Inputs and Outputs

ECM/PCM Inputs and Outputs at Connector A (□) (49P)
ECM/PCM Inputs and Outputs at Connector A (□) (49P)
ECM/PCM Inputs and Outputs at Connector A (□) (49P)
ECM/PCM Inputs and Outputs at Connector B (△) (49P)
ECM/PCM Inputs and Outputs at Connector B (△) (49P)
ECM/PCM Inputs and Outputs at Connector B (△) (49P)
ECM/PCM Inputs and Outputs at Connector C (○) (49P)
ECM/PCM Inputs and Outputs at Connector C (○) (49P)

ECM/PCM Replacement

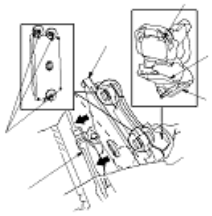
NOTE:

- Make sure the HDS is loaded with the latest software version.
- If you are replacing the ECM/PCM after substituting a known-good ECM/PCM, reinstall the original ECM/PCM, then do this procedure.

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the ECM/PCM and other vehicle systems. If it doesn't, go to the DLC circuit troubleshooting.
4. Select the READ DATA in the REPLACE ECM MENU with the HDS.
   NOTE: If the READ DATA fails, ask the customer about the fuel grade (alcohol contained level) in the fuel tank (main), then go to Step 5 .
5. Jump the SCS line with the HDS.
6. Turn the ignition switch to LOCK (0).

7. Remove the ECM/PCM cover (A).

8. Remove the battery setting plate, and reposition the battery (D) away from the ECM/PCM.
   NOTE: Do not disconnect the battery terminals.



9. Remove the bolts (E).
10. Disconnect ECM/PCM connectors A, B, and C, then remove the ECM/PCM (E).
    NOTE: ECM/PCM connectors A, B, and C have symbols (A=□, B=△, C=○) embossed on them for identification.
11. Install a known-good ECM/PCM in the reverse order of removal.
12. Turn the ignition switch to ON (II).
    NOTE: DTC P0630 "VIN Not Programmed or Mismatch" may be stored because the VIN has not been programmed into the ECM/PCM; ignore it, and continue this procedure.
13. Manually input the VIN to the ECM/PCM with the HDS.
14. Select the IMMOBI SYSTEM with the HDS.
15. Enter the immobilizer code using the ECM/PCM replacement procedure in the HDS; it allows you to start the engine.
16. Select PGM-FI system and reset the ECM/PCM with the HDS.
17. Update the ECM/PCM if it does not have the latest software.
18. Start the engine.
    - If the engine starts, go to Step 30 .
    - If the engine does not start, go to Step 19 .
19. Select MAIN FUEL TANK ALCOHOL CONTENT in the ADJUSTMENT MENU with the HDS.
20. Select the appropriate ALCOHOL CONTENT in the HDS screen by the customer's information on Step 4 .
    NOTE: If the customer did not remember about it, go to Step 21 .
21. Try to start the engine.
    - If the engine starts, go to Step 30 .
    - If the engine does not start, go to Step 22 .
22. Select LOW ALCOHOL CONTENT and try to start the engine.
    - If the engine starts, go to Step 30 .
    - If the engine does not start, go to Step 23 .
23. Select 50 % ALCOHOL CONTENT and try to start the engine.
    - If the engine starts, go to Step 30 .
    - If the engine does not start, go to Step 24 .
24. Select 90 % ALCOHOL CONTENT and try to start the engine.
    - If the engine starts, go to Step 30 .
    - If the engine does not start, go to Step 25 .
25. Select 100 % ALCOHOL CONTENT and try to start the engine.
    - If the engine starts, go to Step 30 .
    - If the engine does not start, go to Step 26 .
26. Drain the fuel tank.
27. Relieve the fuel pressure.
28. Fill the fuel tank (main) with a gasoline.
29. Select LOW ALCOHOL CONTENT and try to start the engine.
30. Do the ECM/PCM idle learn procedure.
31. Do the CKP pattern learn procedure.

ECM/PCM Update

Special Tools Required

- Honda diagnostic system (HDS)
- Honda interface module (HIM)
- HDS pocket tester

NOTE:

- Use this procedure when you need to update the ECM/PCM at anytime.
- Make sure the HDS/HIM has the latest software version.
- Before you update the ECM/PCM, make sure the battery in the vehicle is fully charged, and connect a jumper battery (not a battery charger) to maintain system voltage.
- Never turn the ignition switch to LOCK (0) or ACC (I) during the update. If there is a problem with the update, leave the ignition switch to ON.
- To prevent ECM/PCM damage, do not operate anything electrical (headlights, audio system, brakes, A/C, power windows, moonroof (if equipped), door locks, etc.) during the update.
- To ensure the latest program is installed, do an ECM/PCM update whenever the ECM/PCM is substituted or replaced.
- You cannot update an ECM/PCM with a program it already has. It will only accept a new program.
- High temperature in the engine compartment might cause the ECM/PCM to become too hot to run the update. If the engine has been running before this procedure, open the hood and cool the engine compartment.
- If you need to diagnose the Honda interface module (HIM) because the HIM's red (#3) light came on or was flashing during the update, leave the ignition switch in the ON (II) position when you disconnect the HIM from the data link connector (DLC). This will prevent ECM/PCM damage.

1. Turn the ignition switch to ON (II), but do not start the engine.
2. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
3. Make sure the HDS communicates with the ECM/PCM and other vehicle systems. If it doesn't, go to the DLC circuit troubleshooting.
4. Exit the HDS diagnostic system, then select the update mode, and follow the screen prompts to update the ECM/PCM.
5. If the software in the ECM/PCM is the latest, disconnect the HDS/HIM from the DLC, and go back to the procedure that you were doing. If the software in the ECM/PCM is not the latest, follow the instructions on the screen. If prompted to choose the PGM-FI system or the A/T system (A/T), make sure you update both.
   NOTE: If the ECM/PCM update system requires you to cool the ECM/PCM, follow the instructions on screen. If you run into a problem during the update procedure (programming takes over 15 minutes, status bar goes over 100 %, D (A/T) or immobilizer indicator flashes, HDS tablet freezes, etc.), follow these steps to minimize the chance of damaging the ECM/PCM:
   - Leave the ignition switch in the ON (II) position.
   - Connect a jumper battery (do not connect a battery charger).
   - Shut down the HDS.
   - Disconnect the HDS from the DLC.
   - Reboot the HDS.
   - Reconnect the HDS to the DLC, and try the update procedure again.
6. Do the ECM/PCM idle learn procedure.
7. Do the CKP learn procedure.

How to Troubleshoot the Fuel and Emissions Systems

Intermittent Failures

The term ‘‘intermittent failure" means a system may have had a failure, but it checks OK now. If the malfunction indicator lamp (MIL) on the dash does not come on, check for poor connections or loose terminals at all connectors related to the circuit that you are troubleshooting. If the MIL was on but then went out, the original problem may have been intermittent.

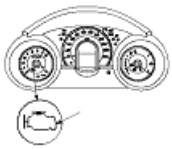
Service Information

Periodically, new ECM/PCM software or new service procedures may become available. Always check online for the latest software or service information related to the DTCs or symptoms you are troubleshooting.

Opens and Shorts

‘‘Open" and ‘‘short" are common electrical terms. An open is a break in a wire or at a connection. A short is an accidental connection of a wire to ground or to another wire. In simple electronics, this usually means something won't work at all. With complex electronics (such as ECMs or PCMs) this can sometimes mean something works, but not the way it's supposed to.

How to Use the HDS (Honda Diagnostic System)



If the MIL (malfunction indicator lamp) has come on

1. Start the engine, and check the MIL (A).

2. If the MIL stays on, connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
3. Turn the ignition switch to ON (II).
4. Make sure the HDS communicates with the ECM/PCM and other vehicle systems. If it doesn't, go to the DLC circuit troubleshooting.
5. Check the diagnostic trouble code (DTC) and note it. Also check the freeze data and/or on-board snapshot data, and download any data found. Then refer to the indicated DTC's troubleshooting, and begin the appropriate troubleshooting procedure.
   NOTE:
   - Freeze data indicates the engine conditions when the first system malfunction, misfire, or fuel trim malfunction that activated the MIL was detected.
   - The HDS can read the DTC, freeze data, on-board snapshot, current data, and other engine control module (ECM) or powertrain control module (PCM) data.
   - For specific operations, refer to the user's manual that came with the HDS.
6. If no DTCs are found, go to MIL circuit troubleshooting.

If the MIL did not stay on

If the MIL did not stay on but there is a driveability problem, do the symptom troubleshooting.

If you can't duplicate the DTC

Some of the troubleshooting requires you to reset the ECM/PCM and try to duplicate the DTC. If the problem is intermittent and you can't duplicate the code, do not continue through the procedure. To do so will only result in confusion and possibly, a needlessly replaced ECM/PCM.

HDS Clear Command

The ECM/PCM stores various specific data to correct the system even if there is no electrical power such as when the battery negative terminal is disconnected. Stored data based on failed parts should be cleared by using the ‘‘CLEAR COMMAND" of the HDS, if parts are replaced.
The HDS has three kinds of clear commands to meet this purpose. They are clear DTCs, ECM/PCM reset, and CKP pattern clear. DTC clear command erases all stored DTC codes, freeze data, and on-board snapshot. This must be done with the HDS after reproducing the DTC during troubleshooting.
The ECM/PCM reset command erases all stored DTC codes, freeze data, on-board snapshot, and all specific data to correct the system except CKP pattern. If the CKP pattern data in the ECM/PCM was cleared, you must do the CKP pattern learn procedure. The CKP pattern clear command erases only CKP pattern data. This command is for repair of a misfire or the CKP sensor.

Scan Tool Clear Command

If you are using a generic scan tool to clear commands, be aware that there is only one setting for clearing the ECM/PCM, and it clears all commands at the same time (CKP pattern learn, idle learn, freeze data, on-board snapshot, and DTCs). After you clear all commands, you then need to do these procedures, in this order: ECM/PCM idle learn procedure; CKP pattern learn procedure.

DTC Clear

1. Clear the DTC with the HDS while the engine is stopped.
2. Turn the ignition switch to LOCK (0).
3. Turn the ignition switch to ON (II), and wait 30 seconds.
4. Turn the ignition switch to LOCK (0), and disconnect the HDS from the DLC.

ECM/PCM Reset

1. Reset the ECM/PCM with the HDS while the engine is stopped.
2. Turn the ignition switch to LOCK (0).
3. Turn the ignition switch to ON (II), and wait 30 seconds.
4. Turn the ignition switch to LOCK (0), and disconnect the HDS from the DLC.
5. Do the ECM/PCM idle learn procedure.

CKP Pattern Clear/CKP Pattern Learn

Clear/Learn Procedure (with the HDS)

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the ECM/PCM and other vehicle systems. If it doesn't, go to the DLC circuit troubleshooting.
4. Select CRANK PATTERN in the ADJUSTMENT MENU with the HDS.
5. Select CRANK PATTERN LEARNING with the HDS, and follow the screen prompts.
6. The CKP pattern learn procedure is complete.

Learn Procedure (without the HDS)

1. Start the engine. Hold the engine speed at 3,000 rpm (min^{-1}) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
2. Test-drive the vehicle on a level road: Decelerate (with the throttle fully closed) from an engine speed of 2,500 rpm (min^{-1}) down to 1,000 rpm (min^{-1}) with the A/T in 2 position, or the M/T in 1st gear.
3. Repeat Step 2 several times.
4. Turn the ignition switch to LOCK (0).
5. Turn the ignition switch to ON (II), and wait 30 seconds. The CKP pattern learn procedure is complete.

How to End a Troubleshooting Session (required after any troubleshooting)

1. Reset the ECM/PCM with the HDS.
2. Do the ECM/PCM idle learn procedure.
3. Turn the ignition switch to LOCK (0).
4. Disconnect the HDS from the DLC.
   NOTE: The ECM/PCM is part of the immobilizer system. If you replace the ECM/PCM, it will have a different immobilizer code. In order for the engine to start, you must rewrite the immobilizer code with the HDS (immobilizer system section).

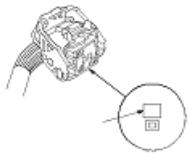
How to Troubleshoot Circuits at the ECM/PCM Connectors

NOTE: The ECM/PCM stays on up to about 15 minutes after the ignition switch is turned to LOCK (0). Jumping the SCS line after turning the ignition switch to LOCK (0) cancels this function. Disconnecting the ECM/PCM during this function, without jumping the SCS line first, can damage the ECM/PCM.

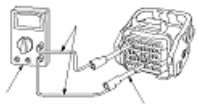
1. Jump the SCS line with the HDS.
2. Disconnect ECM/PCM connectors A, B, and C.
   NOTE: ECM/PCM connectors A, B, and C have symbols (A=□, B=△, C=○) embossed on them for identification.

---

3. When diagnosis/troubleshooting is done at the ECM/PCM connector, use the terminal test port (A) above the terminal you need to check.



4. Connect one side of the patch cord (A) terminals to a commercially available digital multimeter (B), and connect the other side of the patch cord terminals to a commercially available banana jack (Pomona Electronics Tool No. 3563 or equivalent) (C).



5. Gently contact the pin probe (male) at test port from the terminal side. Do not force the tips into the terminals.

NOTICE

- For accurate results, always use the pin probe (male).
- To prevent damage to the connector terminals, do not insert test equipment probes, paper clips, or other substitutes as they can damage the terminals. Damaged terminals cause a poor connection and an incorrect measurement.
- Do not puncture the insulation on a wire. Punctures can cause poor or intermittent electrical connections.

Substituting the ECM/PCM

Special Tools Required

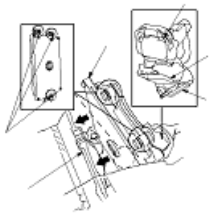
- Honda diagnostic system (HDS)
- Honda interface module (HIM)
- HDS pocket tester

NOTE: Use this procedure when you have to substitute a known-good ECM/PCM during troubleshooting procedure.

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the ECM/PCM and other vehicle systems. If it doesn't, go to the DLC circuit troubleshooting.
4. Select the READ DATA in the REPLACE ECM/PCM MENU with the HDS.
   NOTE: If the READ DATA fails, ask the customer about the fuel grade (alcohol contained level) in the fuel tank (main), and go to Step 5 .
5. Jump the SCS line with the HDS.
6. Turn the ignition switch to LOCK (0).

7. Remove the ECM/PCM cover (A).

8. Remove the battery setting plate, and reposition the battery (D) away from the ECM/PCM.
   NOTE: Do not disconnect the battery terminals.



9. Remove the bolts (E).
10. Disconnect ECM/PCM connectors A, B, and C, then remove the ECM/PCM (F).
    NOTE: ECM/PCM connectors A, B, and C have symbols (A=□, B=△, C=○) embossed on them for identification.
11. Install a known-good ECM/PCM in the reverse order of removal.
12. Turn the ignition switch to ON (II).
    NOTE: DTC P0630 "VIN Not Programmed or Mismatch" may be stored because the VIN has not been programmed into the ECM/PCM; ignore it, and continue this procedure.
13. Manually input the VIN to the ECM/PCM with the HDS.
14. Select the IMMOBI SYSTEM with the HDS.
15. Enter the immobilizer code using the ECM/PCM replacement procedure in the HDS; it allows you to start the engine.
16. Reset the ECM/PCM with the HDS.
17. Update the ECM/PCM if it does not have the latest software.
18. Start the engine.
    - If the engine starts, go to Step 30 .
    - If the engine does not start, go to Step 19 .
19. Select MAIN FUEL TANK ALCOHOL CONTENT in the ADJUSTMENT MENU with the HDS.
20. Select the appropriate ALCOHOL CONTENT in the HDS screen by the customer's information on Step 4 .
    NOTE: If the customer did not remember about it, go to Step 21 .
21. Try to start the engine.
    - If the engine starts, go to Step 30 .
    - If the engine does not start, go to Step 22 .
22. Select LOW ALCOHOL CONTENT and try to start the engine.
    - If the engine starts, go to Step 30 .
    - If the engine does not start, go to Step 23 .
23. Select 50 % ALCOHOL CONTENT and try to start the engine.
    - If the engine starts, go to Step 30 .
    - If the engine does not start, go to Step 24 .
24. Select 90 % ALCOHOL CONTENT and try to start the engine.
    - If the engine starts, go to Step 30 .
    - If the engine does not start, go to Step 25 .
25. Select 100 % ALCOHOL CONTENT and try to start the engine.
    - If the engine starts, go to Step 30 .
    - If the engine does not start, go to Step 26 .
26. Drain the fuel tank.
27. Relieve the fuel pressure.
28. Fill the fuel tank (main) with a gasoline.
29. Select LOW ALCOHOL CONTENT and try to start the engine.
30. Do the ECM/PCM idle learn procedure.
31. Do the CKP pattern learn procedure.

OBD Status

The OBD status shows the current system status of each DTC and all of the parameters. This function is used to see if the repair was successfully completed. The results of diagnostic tests for the DTC are displayed as:

- PASSED: The on board diagnosis is successfully finished.
- FAILED: The on board diagnosis has finished but failed.
- EXECUTING: The vehicle is in enable criteria conditions for the DTC and the on board diagnosis is running.
- NOT COMPLETED: The on board diagnosis was running but is out for the enable conditions for the DTC.
- OUT OF CONDITION: The vehicle has stayed out of the enable conditions for the DTC.

DTC Troubleshooting: P0102 (50)

DTC P0102:
MAF Sensor Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II), and wait 2 seconds.
2. Check the MAF SENSOR in the DATA LIST with the HDS.

   Is about 0 gm/s, or 0.1 V or less indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAF sensor and the ECM/PCM.■
3. Check the No. 12 ALTERNATOR (10 A) fuse in the under-dash fuse/relay box.

   Is the fuse OK?
   YES - Go to Step 4 .
   NO - Repair short in the wire between the MAF sensor and the No. 12 ALTERNATOR (10 A) fuse. Also replace the No. 12 ALTERNATOR (10 A) fuse, then go to Step 20 .
4. Turn the ignition switch to LOCK (0).
5. Disconnect the MAF sensor/IAT sensor 5P connector.
6. Turn the ignition switch to ON (II).
7. Measure the voltage between MAF sensor/IAT sensor 5P connector terminal No. 5 and body ground.

   Is there battery voltage?
   YES - Go to Step 8 .
   NO - Repair open in the wire between the No. 12 ALTERNATOR (10 A) fuse and the MAF sensor, then go to Step 20 .
8. Turn the ignition switch to LOCK (0).

---

9. Measure the resistance between MAF sensor/IAT sensor 5P connector terminal No. 3 and body ground.

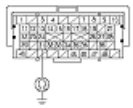
   Is there 190−210 kΩ?
   YES - Go to Step 14 .
   NO - Go to Step 10 .

10. Jump the SCS line with the HDS.
11. Disconnect ECM/PCM connector B (49P).

---

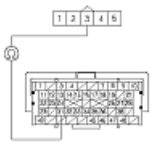
12. Check for continuity between ECM/PCM connector terminal B31 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM/PCM (B31) and the MAF sensor, then go to Step 21 .
    NO - Go to Step 13 .



---

13. Check for continuity between MAF sensor/IAT sensor 5P connector terminal No. 3 and ECM/PCM connector terminal B31.



Is there continuity?
YES - Go to Step 26 .
NO - Repair open in the wire between the ECM/PCM (B31) and the MAF sensor, then go to Step 21 .

14. Substitute a known-good MAF sensor/IAT sensor.
15. Reconnect all connectors.
16. Turn the ignition switch to ON (II).
17. Clear the DTC with the HDS.
18. Start the engine. Hold the engine speed at 2,000 rpm (min^{-1}) without load (A/T in P or N, M/T in neutral).
19. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0102 indicated?
YES - Go to Step 27 .
NO - Replace the original MAF sensor/IAT sensor, then go to Step 20 .

20. Turn the ignition switch to LOCK (0).
21. Reconnect all connectors.
22. Turn the ignition switch to ON (II).
23. Reset the ECM/PCM with the HDS.
24. Do the ECM/PCM idle learn procedure.
25. Check for Temporary DTCs or DTCs with the HDS.

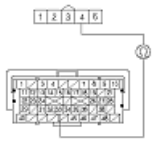
Is DTC P0102 indicated?
YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

26. Reconnect all connectors.
27. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
28. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0102 indicated?
YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0103 (50)

DTC P0103:
MAF Sensor Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.



1. Turn the ignition switch to ON (II), and wait 2 seconds.
2. Check the MAF SENSOR in the DATA LIST with the HDS.

   Is about 202 gm/s, or 4.89 V or more indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAF sensor and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Jump the SCS line with the HDS.
5. Disconnect the MAF sensor/IAT sensor 5P connector.
6. Disconnect ECM/PCM connector B (49P).
7. Check for continuity between MAF sensor/IAT sensor 5P connector terminal No. 4 and ECM/PCM connector terminal B33.

   Is there continuity?
   YES - Go to Step 8 .
   NO - Repair open in the wire between the ECM/PCM (B33) and the MAF sensor, then go to Step 15 .
8. Reconnect ECM/PCM connector B (49P).

---

9. Connect MAF sensor/IAT sensor 5P connector terminals No. 3 and No. 4 with a jumper wire.
10. Turn the ignition switch to ON (II).

11. Clear the DTC with the HDS.
12. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0103 indicated?
    YES - Go to Step 20 .
    NO - Go to Step 13 .
13. Turn the ignition switch to LOCK (0).
14. Replace the MAF sensor/IAT sensor.
15. Reconnect all connectors.
16. Turn the ignition switch to ON (II).
17. Reset the ECM/PCM with the HDS.
18. Do the ECM/PCM idle learn procedure.
19. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0103 indicated?
    YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the ECM/PCM, then go to Step 1 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■
20. Reconnect all connectors.
21. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
22. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0103 indicated?
    YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0107 (3)

DTC P0107:
MAP Sensor Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check the MAP SENSOR in the DATA LIST with the HDS.

   Is about 3 kPa (26 mmHg, 1.0 in.Hg), or 0.23 V or less indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAP sensor and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the MAP sensor 3P connector.
5. Turn the ignition switch to ON (II).
6. Check the MAP SENSOR in the DATA LIST with the HDS.

   Is about 3 kPa (26 mmHg, 1.0 in.Hg), or 0.23 V or less indicated?
   YES - Go to Step 12 .
   NO - Go to Step 7 .
7. Measure the voltage between MAP sensor 3P connector terminals No. 1 and No. 3.

   Is there about 5 V?
   YES - Go to Step 16 .
   NO - Go to Step 8 .
8. Turn the ignition switch to LOCK (0).
9. Jump the SCS line with the HDS.
10. Disconnect ECM/PCM connector C (49P).

---

11. Check for continuity between ECM/PCM connector terminal C13 and MAP sensor 3P connector terminal No. 1.

    
    Is there continuity?
    YES - Go to Step 23 .
    NO - Repair open in the wire between the ECM/PCM (C13) and the MAP sensor, then go to Step 18 .
12. Turn the ignition switch to LOCK (0).
13. Jump the SCS line with the HDS.
14. Disconnect ECM/PCM connector C (49P).

15. Check for continuity between MAP sensor 3P connector terminal No. 2 and body ground.

Is there continuity?

YES - Repair short in the wire between the ECM/PCM (C11) and the MAP sensor, then go to Step 18 .

NO - Go to Step 23 .

16. Turn the ignition switch to LOCK (0).
17. Replace the MAP sensor.
18. Reconnect all connectors.
19. Turn the ignition switch to ON (II).
20. Reset the ECM/PCM with the HDS.
21. Do the ECM/PCM idle learn procedure.
22. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0107 indicated?

YES - Check for poor connections or loose terminals at the MAP sensor and the ECM/PCM, then go to Step 1 .

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

23. Reconnect all connectors.
24. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
25. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0107 indicated?

YES - Check for poor connections or loose terminals at the MAP sensor and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .

NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0108 (3)

DTC P0108:
MAP Sensor Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check the MAP SENSOR in the DATA LIST with the HDS.

   Is about 160 kPa (1,197 mmHg, 47.1 in.Hg), or 4.49 V or more indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAP sensor and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the MAP sensor 3P connector.
5. Connect MAP sensor 3P connector terminals No. 2 and No. 3 with a jumper wire.
6. Turn the ignition switch to ON (II).
7. Check the MAP SENSOR in the DATA LIST with the HDS.

   Is about 160 kPa (1,197 mmHg, 47.1 in.Hg), or 4.49 V or more indicated?
   YES - Go to Step 8 .
   NO - Go to Step 20 .
8. Turn the ignition switch to LOCK (0).
9. Remove the jumper wire from the MAP sensor 3P connector.
10. Turn the ignition switch to ON (II).

---

11. Measure the voltage between MAP sensor 3P connector terminals No. 1 and No. 3.

    Is there about 5 V?
    YES - Go to Step 16 .
    NO - Go to Step 12 .
12. Turn the ignition switch to LOCK (0).
13. Jump the SCS line with the HDS.
14. Disconnect ECM/PCM connector C (49P).

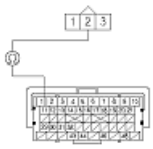
---

15. Check for continuity between ECM/PCM connector terminal C14 and MAP sensor 3P connector terminal No. 3.

    Is there continuity?
    YES - Go to Step 27 .
    NO - Repair open in the wire between the ECM/PCM (C14) and the MAP sensor, then go to Step 22 .
16. Turn the ignition switch to LOCK (0).
17. Jump the SCS line with the HDS.
18. Disconnect ECM/PCM connector C (49P).

---

19. Check for continuity between ECM/PCM connector terminal C11 and MAP sensor 3P connector terminal No. 2.



Is there continuity?
YES - Go to Step 27 .
NO - Repair open in the wire between the ECM/PCM (C11) and the MAP sensor, then go to Step 22 .

20. Turn the ignition switch to LOCK (0).
21. Replace the MAP sensor.
22. Reconnect all connectors.
23. Turn the ignition switch to ON (II).
24. Reset the ECM/PCM with the HDS.
25. Do the ECM/PCM idle learn procedure.
26. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0108 indicated?
YES - Check for poor connections or loose terminals at the MAP sensor and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

27. Reconnect all connectors.
28. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0108 indicated?
YES - Check for poor connections or loose terminals at the MAP sensor and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0112 (10)

DTC P0112:
IAT Sensor Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check the IAT SENSOR in the DATA LIST with the HDS.

   Is about 180 °C (356 °F) or more, or 0.08 V or less indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the IAT sensor and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the MAF sensor/IAT sensor 5P connector.
5. Turn the ignition switch to ON (II).
6. Check the IAT SENSOR in the DATA LIST with the HDS.

   Is about 180 °C (356 °F) or more, or 0.08 V or less indicated?
   YES - Go to Step 7 .
   NO - Go to Step 11 .
7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector B (49P).
10. Check for continuity between MAF sensor/IAT sensor 5P connector terminal No. 2 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the IAT sensor and the ECM/PCM (B32), then go to Step 13 .
    NO - Go to Step 18 .
11. Turn the ignition switch to LOCK (0).
12. Replace the MAF sensor/IAT sensor.
13. Reconnect all connectors.
14. Turn the ignition switch to ON (II).
15. Reset the ECM/PCM with the HDS.
16. Do the ECM/PCM idle learn procedure.
17. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0112 indicated?
    YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the ECM/PCM, then go to Step 1 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■
18. Reconnect all connectors.
19. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
20. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0112 indicated?
    YES - Check for poor connections or loose terminals at the IAT sensor and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0113 (10)

DTC P0113:
IAT Sensor Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check the IAT SENSOR in the DATA LIST with the HDS.

   Is about −40 °C (−40 °F) or less, or 4.90 V or higher indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the IAT sensor and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the MAF sensor/IAT sensor 5P connector.
5. Connect MAF sensor/IAT sensor 5P connector terminals No. 1 and No. 2 with a jumper wire.
6. Turn the ignition switch to ON (II).
7. Check the IAT SENSOR in the DATA LIST with the HDS.

   Is about −40 °C (−40 °F) or less, or 4.90 V or higher indicated?
   YES - Go to Step 8 .
   NO - Go to Step 20 .
8. Turn the ignition switch to LOCK (0).
9. Remove the jumper wire from the MAF sensor/IAT sensor 5P connector.
10. Turn the ignition switch to ON (II).

---

11. Measure the voltage between MAF sensor/IAT sensor 5P connector terminal No. 2 and body ground.

    Is there about 5 V?
    YES - Go to Step 12 .
    NO - Go to Step 16 .
12. Turn the ignition switch to LOCK (0).
13. Jump the SCS line with the HDS.
14. Disconnect ECM/PCM connector B (49P).

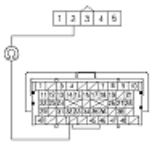
---

15. Check for continuity between MAF sensor/IAT sensor 5P connector terminal No. 1 and ECM/PCM connector terminal B34.

    Is there continuity?
    YES - Go to Step 27 .
    NO - Repair open in the wire between the ECM/PCM (B34) and the IAT sensor, then go to Step 22 .
16. Turn the ignition switch to LOCK (0).
17. Jump the SCS line with the HDS.
18. Disconnect ECM/PCM connector B (49P).

---

19. Check for continuity between MAF sensor/IAT sensor 5P connector terminal No. 2 and ECM/PCM connector terminal B32.



Is there continuity?

YES - Go to Step 27 .

NO - Repair open in the wire between the ECM/PCM (B32) and the IAT sensor, then go to Step 22 .

20. Turn the ignition switch to LOCK (0).
21. Replace the MAF sensor/IAT sensor.
22. Reconnect all connectors.
23. Turn the ignition switch to ON (II).
24. Reset the ECM/PCM with the HDS.
25. Do the ECM/PCM idle learn procedure.
26. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0113 indicated?

YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the ECM/PCM, then go to Step 1 .

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

27. Reconnect all connectors.
28. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0113 indicated?

YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .

NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0117 (6)

DTC P0117:
ECT Sensor 1 Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check ECT SENSOR 1 in the DATA LIST with the HDS.

   Is about 180 °C (356 °F) or more, or 0.08 V or less indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1 and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the ECT sensor 1 2P connector.
5. Turn the ignition switch to ON (II).
6. Check ECT SENSOR 1 in the DATA LIST with the HDS.

   Is about 180 °C (356 °F) or more, or 0.08 V or less indicated?
   YES - Go to Step 7 .
   NO - Go to Step 11 .
7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector B (49P).
10. Check for continuity between ECT sensor 1 2P connector terminal No. 1 and body ground.

    Is there continuity?
    YES - Repair short in the wire between ECT sensor 1 and the ECM/PCM (B24), then go to Step 13 .
    NO - Go to Step 18 .
11. Turn the ignition switch to LOCK (0).
12. Replace ECT sensor 1.
13. Reconnect all connectors.
14. Turn the ignition switch to ON (II).
15. Reset the ECM/PCM with the HDS.
16. Do the ECM/PCM idle learn procedure.
17. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0117 indicated?
    YES - Check for poor connections or loose terminals at ECT sensor 1 and the ECM/PCM, then go to Step 1 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■
18. Reconnect all connectors.
19. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
20. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0117 indicated?
    YES - Check for poor connections or loose terminals at ECT sensor 1 and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0118 (6)

DTC P0118:
ECT Sensor 1 Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check ECT SENSOR 1 in the DATA LIST with the HDS.

   Is about −40 °C (−40 °F) or less, or 4.90 V or higher indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1 and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the ECT sensor 1 2P connector.
5. Connect ECT sensor 1 2P connector terminals No. 1 and No. 2 with a jumper wire.
6. Turn the ignition switch to ON (II).
7. Check ECT SENSOR 1 in the DATA LIST with the HDS.

   Is about −40 °C (−40 °F) or less, or 4.90 V or higher indicated?
   YES - Go to Step 8 .
   NO - Go to Step 20 .
8. Turn the ignition switch to LOCK (0).
9. Remove the jumper wire from ECT sensor 1 2P connector.
10. Turn the ignition switch to ON (II).

---

11. Measure the voltage between ECT sensor 1 2P connector terminal No. 1 and body ground.

    Is there about 5 V?
    YES - Go to Step 12 .
    NO - Go to Step 16 .
12. Turn the ignition switch to LOCK (0).
13. Jump the SCS line with the HDS.
14. Disconnect ECM/PCM connector B (49P).

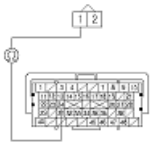
---

15. Check for continuity between ECT sensor 1 2P connector terminal No. 2 and ECM/PCM connector terminal B34.

    Is there continuity?
    YES - Go to Step 27 .
    NO - Repair open in the wire between the ECM/PCM (B34) and ECT sensor 1, then go to Step 22 .
16. Turn the ignition switch to LOCK (0).
17. Jump the SCS line with the HDS.
18. Disconnect ECM/PCM connector B (49P).

---

19. Check for continuity between ECT sensor 1 2P connector terminal No. 1 and ECM/PCM connector terminal B24.



Is there continuity?
YES - Go to Step 27 .
NO - Repair open in the wire between the ECM/PCM (B24) and ECT sensor 1, then go to Step 22 .

20. Turn the ignition switch to LOCK (0).
21. Replace ECT sensor 1.
22. Reconnect all connectors.
23. Turn the ignition switch to ON (II).
24. Reset the ECM/PCM with the HDS.
25. Do the ECM/PCM idle learn procedure.
26. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0118 indicated?
YES - Check for poor connections or loose terminals at ECT sensor 1 and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

27. Reconnect all connectors.
28. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0118 indicated?
YES - Check for poor connections or loose terminals at ECT sensor 1 and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0122 (7)

DTC P0122:
TP Sensor A Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Check TP SENSOR A in the DATA LIST with the HDS.

   Is there about 0.3 V or less?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the ECM/PCM.■
4. Check for Temporary DTCs or DTCs with the HDS.

   Are DTC P0122 and P0222 indicated at the same time?
   YES - Go to Step 10 .
   NO - Go to Step 5 .
5. Turn the ignition switch to LOCK (0).
6. Disconnect the throttle body 6P connector.
7. Jump the SCS line with the HDS.
8. Disconnect ECM/PCM connector C (49P).
9. Check for continuity between throttle body 6P connector terminal No. 1 and body ground.

   Is there continuity?
   YES - Repair short in the wire between the throttle body and the ECM/PCM (C20), then go to Step 18 .
   NO - Go to Step 23 .

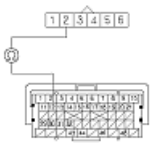
---

10. Measure the voltage between throttle body 6P connector terminal No. 2 and body ground.

    Is there about 5 V?
    YES - Go to Step 16 .
    NO - Go to Step 11 .
11. Turn the ignition switch to LOCK (0).
12. Jump the SCS line with the HDS.
13. Disconnect ECM/PCM connector C (49P).
14. Disconnect the throttle body 6P connector.

---

15. Check for continuity between ECM/PCM connector terminal C12 and throttle body 6P connector terminal No. 2.



Is there continuity?
YES - Go to Step 23 .
NO - Repair open in the wire between the throttle body and the ECM/PCM (C12), then go to Step 18 .

16. Turn the ignition switch to LOCK (0).
17. Replace the throttle body.
18. Reconnect all connectors.
19. Turn the ignition switch to ON (II).
20. Reset the ECM/PCM with the HDS.
21. Do the ECM/PCM idle learn procedure.
22. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0122 indicated?
YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

23. Reconnect all connectors.
24. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
25. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0122 indicated?
YES - Check for poor connections or loose terminals at TP sensor A and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0123 (7)

DTC P0123:
TP Sensor A Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Check TP SENSOR A in the DATA LIST with the HDS.

   Is there about 4.8 V or more?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the ECM/PCM.■
4. Check for Temporary DTCs or DTCs with the HDS.

   Are DTC P0123 and P0223 indicated at the same time?
   YES - Go to Step 13 .
   NO - Go to Step 5 .
5. Turn the ignition switch to LOCK (0).
6. Disconnect the throttle body 6P connector.
7. Turn the ignition switch to ON (II).
8. Measure the voltage between throttle body 6P connector terminal No. 1 and body ground.

   Is there about 5 V?
   YES - Go to Step 18 .
   NO - Go to Step 9 .
9. Turn the ignition switch to LOCK (0).
10. Jump the SCS line with the HDS.
11. Disconnect ECM/PCM connector C (49P).

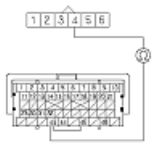
---

12. Check for continuity between ECM/PCM connector terminal C20 and throttle body 6P connector terminal No. 1.

    
    Is there continuity?
    YES - Go to Step 25 .
    NO - Repair open in the wire between the throttle body and the ECM/PCM (C20), then go to Step 20 .
13. Turn the ignition switch to LOCK (0).
14. Disconnect the throttle body 6P connector.
15. Jump the SCS line with the HDS.
16. Disconnect ECM/PCM connector C (49P).

---

17. Check for continuity between ECM/PCM connector terminal C43 and throttle body 6P connector terminal No. 4.



Is there continuity?
YES - Go to Step 25 .
NO - Repair open in the wire between the throttle body and the ECM/PCM (C43), then go to Step 20 .

18. Turn the ignition switch to LOCK (0).

19. Replace the throttle body.

20. Reconnect all connectors.

21. Turn the ignition switch to ON (II).

22. Reset the ECM/PCM with the HDS.

23. Do the ECM/PCM idle learn procedure.

24. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0123 indicated?
YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

25. Reconnect all connectors.

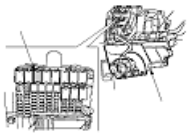
26. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.

27. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0123 indicated?
YES - Check for poor connections or loose terminals at TP sensor A and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0135 (41)

DTC P0135:
A/F Sensor (Sensor 1) Heater Circuit Malfunction
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.



1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm (min $^{-1}$) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0135 indicated?
   YES - Go to Step 5.
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1), A/F sensor relay, and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Check the No. 26 A/F SENSOR (10A) fuse in the under-dash fuse/relay box.

   Is the fuse OK?
   YES - Go to Step 7.
   NO - Go to Step 21.
7. Open the fuse lid (A), then remove the A/F sensor relay (B) from the under-dash fuse/relay box.
8. Test the A/F sensor relay.

   Is the A/F sensor relay OK?
   YES - Go to Step 9.
   NO - Replace the A/F sensor relay, then go to Step 25.
9. Disconnect the A/F sensor (Sensor 1) 4P connector.

---

10. At sensor side, measure the resistance between A/F sensor (Sensor 1) 4P connector terminals No. 3 and No. 4.

    Is there 1.9–2.7 Ω at room temperature?
    YES - Go to Step 11.
    NO - Go to Step 24.

---

11. At sensor side, check for continuity between A/F sensor (Sensor 1) 4P connector terminals No. 2 and No. 3, and between terminals No. 2 and No. 4 individually.

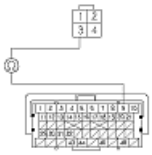
    Is there continuity?
    YES - Go to Step 24.
    NO - Go to Step 12.

12. Jump the SCS line with the HDS.
13. Disconnect ECM/PCM connector C (49P).

---

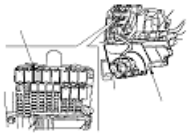
14. Check for continuity between A/F sensor (Sensor 1) 4P connector terminal No. 3 and ECM/PCM connector terminal C9.

    Is there continuity?
    YES - Go to Step 15.
    NO - Repair open in the wire between the ECM/PCM (C9) and the A/F sensor (Sensor 1), then go to Step 25.



---

15. Open the fuse lid (A), then remove the A/F sensor relay (B) from the under-dash fuse/relay box.



---

16. Connect A/F sensor (Sensor 1) 4P connector terminal No. 4 to body ground with a jumper wire.

---

17. Check for continuity between A/F sensor relay 4P connector terminal No. 1 and body ground.

Is there continuity?
YES - Go to Step 18 .
NO - Repair open in the wire between the A/F sensor (Sensor 1) and the A/F sensor relay, then go to Step 25 .

18. Disconnect ECM/PCM connector A (49P).

---

19. Connect ECM/PCM connector terminal A22 to body ground with a jumper wire.

---

20. Check for continuity between A/F sensor relay 4P connector terminal No. 3 and body ground.

Is there continuity?
YES - Go to Step 31 .
NO - Repair open in the wire between the ECM/PCM (A22) and the A/F sensor relay, then go to Step 25 .

---

21. Open the fuse lid (A), then remove the A/F sensor relay (B) from the under-dash fuse/relay box.
22. Disconnect the A/F sensor (Sensor 1) 4P connector.

---

23. Check for continuity between A/F sensor (Sensor 1) 4P connector terminal No. 4 and body ground.

Is there continuity?

YES - Repair short in the wire between the A/F sensor relay and the A/F sensor (Sensor 1). Also replace the No. 26 A/F SENSOR (10 A) fuse, then go to Step 25 .

NO - Replace the under-dash fuse/relay box, then go to Step 25 .

24. Replace the A/F sensor (Sensor 1).

25. Reconnect all connectors.

26. Turn the ignition switch to ON (II).

27. Reset the ECM/PCM with the HDS.

28. Do the ECM/PCM idle learn procedure.

29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0135 indicated?

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1), A/F sensor relay, and the ECM/PCM, then go to Step 1 .

NO - Go to Step 30 .

30. Monitor the OBD STATUS for DTC P0135 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 26 , go to the indicated DTC's troubleshooting.■

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1), A/F sensor relay, and the ECM/PCM, then go to Step 1 . If the screen indicates NOT COMPLETED, go to Step 28 .

31. Reconnect all connectors.

32. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.

33. Start the engine.

34. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0135 indicated?

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1), A/F sensor relay, and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 33 . If the ECM/PCM was substituted, go to Step 1 .

NO - Go to Step 35 .

35. Monitor the OBD STATUS for DTC P0135 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 34 , go to the indicated DTC's troubleshooting.■

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1), PGM-FI subrelay, and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 30 . If the ECM/PCM was substituted, go to Step 1 . If the screen indicates NOT COMPLETED, keep idling until a result comes on.

DTC Troubleshooting: P0137 (63)

DTC P0137:
Secondary HO2S (Sensor 2) Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, and let it idle without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
4. Check the HO2S S2 in the DATA LIST with the HDS.

   Does the voltage stay at 0.05 V or less?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Disconnect the secondary HO2S (Sensor 2) 4P connector.
7. Turn the ignition switch to ON (II).
8. Check the HO2S S2 in the DATA LIST with the HDS.

   Does the voltage stay at 0.05 V or less?
   YES - Go to Step 9 .
   NO - Go to Step 14 .
9. Turn the ignition switch to LOCK (0).
10. Remove the cowl cover and under cowl-cover.
11. Jump the SCS line with the HDS.
12. Disconnect ECM/PCM connector B (49P).
13. Check for continuity between secondary HO2S (Sensor 2) 4P connector terminal No. 2 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM/PCM (B36) and the secondary HO2S (Sensor 2), then go to Step 16 .
    NO - Go to Step 24 .
14. Turn the ignition switch to LOCK (0).
15. Replace the secondary HO2S (Sensor 2).
16. Reconnect all connectors.
17. Turn the ignition switch to ON (II).
18. Reset the ECM/PCM with the HDS.
19. Do the ECM/PCM idle learn procedure.
20. Start the engine, and let it idle without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
21. Test-drive under these conditions:
    - Engine coolant temperature (ECT SENSOR 1) above 70 °C (158 °F)
    - A/T in D (M/T in 4th gear)
    - Engine speed between 1,500–3,000 rpm (min^{-1})
    - Drive about 1 minute or more
22. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0137 indicated?
    YES - Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to Step 1 .
    NO - Go to Step 23 .
23. Monitor the OBD STATUS for DTC P0137 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?
    YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 22 , go to the indicated DTC's troubleshooting.■
    NO - If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to Step 1 . If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION or NOT COMPLETED, go to Step 20 .
24. Reconnect all connectors.

25. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.

26. Start the engine, and let it idle without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.

27. Test-drive under these conditions:
    - Engine coolant temperature (ECT SENSOR 1) above 70 °C (158 °F)
    - A/T in D (M/T in 4th gear)
    - Engine speed between 1,500−3,000 rpm (min^{-1})
    - Drive 1 minute or more

28. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0137 indicated?

    YES - Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 26. If the ECM/PCM was substituted, go to Step 1.

    NO - Go to Step 29.

29. Monitor the OBD STATUS for DTC P0137 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 28, go to the indicated DTC's troubleshooting.■

    NO - If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 26. If the ECM/PCM was substituted, go to Step 1. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION or NOT COMPLETED, go to Step 26.

DTC Troubleshooting: P0138 (63)

DTC P0138:
Secondary HO2S (Sensor 2) Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, and let it idle without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
4. Check the HO2S S2 in the DATA LIST with the HDS.

   Does the voltage stay at 1.27 V or more?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Remove the cowl cover and under cowl-cover.
7. Disconnect the secondary HO2S (Sensor 2) 4P connector.
8. Connect secondary HO2S (Sensor 2) 4P connector terminals No. 1 and No. 2 with a jumper wire.
9. Turn the ignition switch to ON (II).
10. Check the HO2S S2 in the DATA LIST with the HDS.

    Does the voltage stay at 1.27 V or more?
    YES - Go to Step 11 .
    NO - Go to Step 20 .
11. Turn the ignition switch to LOCK (0).
12. Remove the jumper wire from the secondary HO2S (Sensor 2) 4P connector.

---

13. Connect secondary HO2S (Sensor 2) 4P connector terminal No. 2 to body ground with a jumper wire.
14. Turn the ignition switch to ON (II).

15. Check the HO2S S2 in the DATA LIST with the HDS.

    Does the voltage stay at 1.27 V or more?
    YES - Go to Step 16 .
    NO - Repair open in the wire between the ECM/PCM (B34) and the secondary HO2S (Sensor 2), then go to Step 22 .
16. Turn the ignition switch to LOCK (0).
17. Jump the SCS line with the HDS.
18. Disconnect ECM/PCM connector B (49P).

---

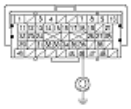
19. Check for continuity between ECM/PCM connector terminal B36 and body ground.



Is there continuity?

YES - Go to Step 30 .

NO - Repair open in the wire between the ECM/PCM (B36) and the secondary HO2S (Sensor 2), then go to Step 22 .

20. Turn the ignition switch to LOCK (0).
21. Replace the secondary HO2S (Sensor 2).
22. Reconnect all connectors.
23. Turn the ignition switch to ON (II).
24. Reset the ECM/PCM with the HDS.
25. Do the ECM/PCM idle learn procedure.
26. Start the engine, and let it idle without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
27. Test-drive under these conditions:
    - Engine coolant temperature (ECT SENSOR 1) above 70 °C (158 °F)
    - A/T in D (M/T in 4th gear)
    - Engine speed between 1,500−3,000 rpm (min $^{-1}$)
    - Drive about 1 minute or more
28. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0138 indicated?

YES - Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to Step 1 .

NO - Go to Step 29 .

29. Monitor the OBD STATUS for DTC P0138 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 28 , go to the indicated DTC's troubleshooting.■

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to Step 1 . If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION or NOT COMPLETED, go to Step 26 .

30. Reconnect all connectors.
31. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
32. Start the engine, and let it idle without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
33. Test-drive under these conditions:
    - Engine coolant temperature (ECT SENSOR 1) above 70 °C (158 °F)
    - A/T in D (M/T in 4th gear)
    - Engine speed between 1,500−3,000 rpm (min $^{-1}$)
    - Drive about 1 minute or more
34. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0138 indicated?

YES - Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 32 . If the ECM/PCM was substituted, go to Step 1 .

NO - Go to Step 35 .

35. Monitor the OBD STATUS for DTC P0138 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 34 , go to the indicated DTC's troubleshooting.■

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 32 . If the ECM/PCM was substituted, go to Step 1 . If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION or NOT COMPLETED, go to Step 30 .

DTC Troubleshooting: P0141 (65)

DTC P0141:
Secondary HO2S (Sensor 2) Heater Circuit Malfunction
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0141 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Check the No. 12 ALTERNATOR (10 A) fuse in the under-dash fuse/relay box.

   Is the fuse OK?
   YES - Go to Step 7 .
   NO - Repair short in the wire between the secondary HO2S (Sensor 2) and the No. 12 ALTERNATOR (10 A) fuse. Also replace the No. 12 ALTERNATOR (10 A) fuse, then go to Step 23 .
7. Remove the cowl cover and under cowl-cover panel.
8. Disconnect the secondary HO2S (Sensor 2) 4P connector.
9. At the secondary HO2S (Sensor 2) side, measure the resistance between secondary HO2S (Sensor 2) 4P connector terminals No. 3 and No. 4.

   Is there 5.4–7.3 Ω at room temperature?
   YES - Go to Step 10 .
   NO - Go to Step 22 .

---

10. At the secondary HO2S (Sensor 2) side, check for continuity between body ground and secondary HO2S (Sensor 2) 4P connector terminals No. 3 and No. 4 individually.

    Is there continuity?
    YES - Go to Step 22 .
    NO - Go to Step 11 .
11. Turn the ignition switch to ON (II).

---

12. Measure the voltage between secondary HO2S (Sensor 2) 4P connector terminals No. 3 and No. 4.

    Is there battery voltage?
    YES - Go to Step 13 .
    NO - Go to Step 17 .
13. Turn the ignition switch to LOCK (0).
14. Jump the SCS line with the HDS.
15. Disconnect ECM/PCM connector B (49P).

---

16. Check for continuity between ECM/PCM connector terminal B4 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM/PCM (B4) and the secondary HO2S (Sensor 2), then go to Step 23 .
    NO - Go to Step 29 .

---

17. Measure the voltage between secondary HO2S (Sensor 2) 4P connector terminal No. 3 and body ground.

    Is there battery voltage?
    YES - Go to Step 18 .
    NO - Repair open in the wire between the secondary HO2S (Sensor 2) and the No. 12 ALTERNATOR (10 A) fuse, then go to Step 23 .
18. Turn the ignition switch to LOCK (0).
19. Jump the SCS line with the HDS.
20. Disconnect ECM/PCM connector B (49P).

---

21. Check for continuity between ECM/PCM connector terminal B4 and secondary HO2S (Sensor 2) 4P connector terminal No. 4.

Is there continuity?
YES - Go to Step 29 .
NO - Repair open in the wire between the ECM/PCM (B4) and the secondary HO2S (Sensor 2), then go to Step 23 .

22. Replace the secondary HO2S (Sensor 2).

23. Reconnect all connectors.

24. Turn the ignition switch to ON (II).

25. Reset the ECM/PCM with the HDS.

26. Do the ECM/PCM idle learn procedure.

27. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0141 indicated?
YES - Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to Step 1 .
NO - Go to Step 28 .

28. Monitor the OBD STATUS for DTC P0141 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 27 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to Step 1 . If the screen indicates NOT COMPLETED, keep idling until a result comes on.

29. Reconnect all connectors.

30. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.

31. Start the engine, and let it idle.

32. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0141 indicated?
YES - Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 31 . If the ECM/PCM was substituted, go to Step 1 .
NO - Go to Step 33 .

33. Monitor the OBD STATUS for DTC P0141 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 32 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 31 . If the ECM/PCM was substituted, go to Step 1 . If the screen indicates NOT COMPLETED, keep idling until a result comes on.

DTC Troubleshooting: P0201 (71), P0202 (72), P0203 (73), P0204 (74)

DTC P0201:
No. 1 Cylinder Injector Circuit Malfunction
DTC P0202:
No. 2 Cylinder Injector Circuit Malfunction
DTC P0203:
No. 3 Cylinder Injector Circuit Malfunction
DTC P0204:
No. 4 Cylinder Injector Circuit Malfunction
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, and let it idle for 20 seconds.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0201, P0202, P0203, or P0204 indicated?
   YES - Go to Step 5.
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the injectors and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Disconnect the injector 2P connector from problem cylinder.
7. At the injector side, measure the resistance between injector 2P connector terminals No. 1 and No. 2.

   Is there 9.78–10.82 Ω?
   YES - Go to Step 8.
   NO - Go to Step 18.
8. Turn the ignition switch to ON (II).

---

9. Measure the voltage between the injector 2P connector terminal No. 1 and body ground.

   Is there battery voltage?
   YES - Go to Step 10.
   NO - Repair open in the wire between the injector and PGM-FI main relay 1, the go to Step 19.

10. Turn the ignition switch to LOCK (0).

---

11. Check for continuity between body ground and the appropriate injector connector terminal (see table).

PROBLEM CYLINDER	DTC	WIRE COLOR
No. 1	P0201	BRN
No. 2	P0202	RED
No. 3	P0203	BLU
No. 4	P0204	YEL

   Is there continuity?
   YES - Go to Step 12.
   NO - Go to Step 15.
12. Jump the SCS line with the HDS.
13. Disconnect ECM/PCM connector C (49P).

---

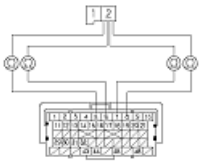
14. Check for continuity between body ground and the appropriate injector connector terminal (see table).

PROBLEM CYLINDER	DTC	WIRE COLOR
No. 1	P0201	BRN
No. 2	P0202	RED
No. 3	P0203	BLU
No. 4	P0204	YEL

   Is there continuity?
   YES - Repair short in the wire between the ECM/PCM and the injector, then go to Step 19.
   NO - Go to Step 24.
15. Jump the SCS line with the HDS.
16. Disconnet ECM/PCM connector C (49P).

---

17. Check for continuity between appropriate injector 2P conenctor terminal No. 2 and the appropriate ECM/PCM connector terminal of the problem cylinder (see table).



PROBLEM CYLINDER	DTC	ECM/PCM TERMINAL	WIRE COLOR
No. 1	P0201	C5	BRN
No. 2	P0202	C6	RED
No. 3	P0203	C7	BLU
No. 4	P0204	C8	YEL

Is there continuity?

YES - Go to Step 24 .

NO - Repair open in the wire between the ECM/PCM and the injector, then go to Step 19 .

18. Replace the problem injector.
19. Reconnect all connectors.
20. Turn the ignition switch to ON (II).
21. Reset the ECM/PCM with the HDS.
22. Do the ECM/PCM idle learn procedure.
23. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0201, P0202, P0203, or P0204 indicated?

YES - Check for poor connections or loose terminals at the injector and the ECM/PCM, then go to Step 1 .

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

24. Reconnect all connectors.
25. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
26. Start the engine, and let it idle for 20 seconds.
27. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0201, P0202, P0203, or P0204 indicated?

YES - Check for poor connections or loose terminals at the injector and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 26 . If the ECM/PCM was substituted, go to Step 1 .

NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0222 (7)

DTC P0222:
TP Sensor B Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Check TP SENSOR B in the DATA LIST with the HDS.

   Is there about 0.3 V or less?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the ECM/PCM.■
4. Check for Temporary DTCs or DTCs with the HDS.

   Are DTC P0122 and P0222 indicated at the same time?
   YES - Go to Step 10 .
   NO - Go to Step 5 .
5. Turn the ignition switch to LOCK (0).
6. Disconnect the throttle body 6P connector.
7. Jump the SCS line with the HDS.
8. Disconnect ECM/PCM connector C (49P).
9. Check for continuity between throttle body 6P connector terminal No. 3 and body ground.

   Is there continuity?
   YES - Repair short in the wire between the throttle body and the ECM/PCM (C21), then go to Step 18 .
   NO - Go to Step 23 .

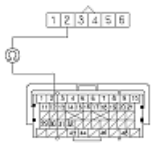
---

10. Measure the voltage between throttle body 6P connector terminal No. 2 and body ground.

    Is there about 5 V?
    YES - Go to Step 16 .
    NO - Go to Step 11 .
11. Turn the ignition switch to LOCK (0).
12. Jump the SCS line with the HDS.
13. Disconnect ECM/PCM connector C (49P).
14. Disconnect the throttle body 6P connector.

---

15. Check for continuity between ECM/PCM connector terminal C12 and throttle body 6P connector terminal No. 2.



Is there continuity?
YES - Go to Step 23 .
NO - Repair open in the wire between the throttle body and the ECM/PCM (C12), then go to Step 18 .

16. Turn the ignition switch to LOCK (0).
17. Replace the throttle body.
18. Reconnect all connectors.
19. Turn the ignition switch to ON (II).
20. Reset the ECM/PCM with the HDS.
21. Do the ECM/PCM idle learn procedure.
22. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0222 indicated?
YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

23. Reconnect all connectors.
24. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
25. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0222 indicated?
YES - Check for poor connections or loose terminals at TP sensor B and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0223 (7)

DTC P0223:
TP Sensor B Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Check TP SENSOR B in the DATA LIST with the HDS.

   Is there about 4.8 V or more?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the ECM/PCM.■
4. Check for Temporary DTCs or DTCs with the HDS.

   Are DTC P0123 and P0223 indicated at the same time?
   YES - Go to Step 13 .
   NO - Go to Step 5 .
5. Turn the ignition switch to LOCK (0).
6. Disconnect the throttle body 6P connector.
7. Turn the ignition switch to ON (II).
8. Measure the voltage between throttle body 6P connector terminal No. 3 and body ground.

   Is there about 5 V?
   YES - Go to Step 18 .
   NO - Go to Step 9 .
9. Turn the ignition switch to LOCK (0).
10. Jump the SCS line with the HDS.
11. Disconnect ECM/PCM connector C (49P).

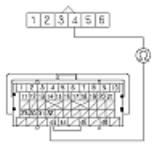
---

12. Check for continuity between ECM/PCM connector terminal C21 and throttle body 6P connector terminal No. 3.

    
    Is there continuity?
    YES - Go to Step 25 .
    NO - Repair open in the wire between the throttle body and the ECM/PCM (C21), then go to Step 20 .
13. Turn the ignition switch to LOCK (0).
14. Disconnect the throttle body 6P connector.
15. Jump the SCS line with the HDS.
16. Disconnect ECM/PCM connector C (49P).

---

17. Check for continuity between ECM/PCM connector terminal C43 and throttle body 6P connector terminal No. 4.



Is there continuity?
YES - Go to Step 25 .
NO - Repair open in the wire between the throttle body and the ECM/PCM (C43), then go to Step 20 .

18. Turn the ignition switch to LOCK (0).

19. Replace the throttle body.

20. Reconnect all connectors.

21. Turn the ignition switch to ON (II).

22. Reset the ECM/PCM with the HDS.

23. Do the ECM/PCM idle learn procedure.

24. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0223 indicated?
YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

25. Reconnect all connectors.

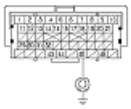
26. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.

27. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0223 indicated?
YES - Check for poor connections or loose terminals at TP sensor B and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0325 (23)

DTC P0325:
Knock Sensor Circuit Malfunction
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.



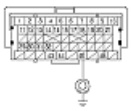
1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed 3,000 rpm (min $^{-1}$) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
4. Hold the engine speed between 3,000−4,000 rpm (min $^{-1}$) for at least 10 seconds.
5. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0325 indicated?
   YES - Go to Step 6 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the knock sensor and the ECM/PCM.■
6. Turn the ignition switch to LOCK (0).
7. Jump the SCS line with the HDS.
8. Disconnect the knock sensor 1P connector.
9. Disconnect ECM/PCM connector C (49P).
10. Check for continuity between ECM/PCM connector terminal C46 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM/PCM (C46) and the knock sensor, then go to Step 14 .
    NO - Go to Step 11 .

11. Connect the knock sensor 1P connector terminal to body ground with a jumper wire.

12. Check for continuity between ECM/PCM connector terminal C46 and body ground.



Is there continuity?
YES - Go to Step 13 .
NO - Repair open in the wire between the ECM/PCM (C46) and the knock sensor, then go to Step 14 .

13. Replace the knock sensor.

14. Reconnect all connectors.

15. Turn the ignition switch to ON (II).

16. Reset the ECM/PCM with the HDS.

17. Do the ECM/PCM idle learn procedure.

18. Hold the engine speed between 3,000−4,000 rpm (min $^{-1}$) for at least 10 seconds.

19. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0325 indicated?
YES - Go to Step 21 .
NO - Go to Step 20 .

20. Monitor the OBD STATUS for DTC P0325 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 19 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the knock sensor and the ECM/PCM, then go to Step 1 . If the screen indicates NOT COMPLETED, go to Step 18 and recheck.

21. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.

22. Hold the engine speed between 3,000−4,000 rpm (min $^{-1}$) for at least 10 seconds.

23. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0325 indicated?

YES - Check for poor connections or loose terminals at the knock sensor and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 22 . If the ECM/PCM was substituted, go to Step 1 .
NO - Go to Step 24 .

24. Monitor the OBD STATUS for DTC P0325 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 23 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the knock sensor and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 22 . If the ECM/PCM was substituted, go to Step 1 . If the screen indicates NOT COMPLETED, go to Step 22 .

DTC Troubleshooting: P0335 (4)

DTC P0335:
CKP Sensor No Signal
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0335 indicated?
   YES - Go to Step 5.
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the CKP sensor and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Disconnect the CKP sensor 3P connector.
7. Turn the ignition switch to ON (II).
8. Measure the voltage between CKP sensor 3P connector terminal No. 1 and body ground.

   Is there battery voltage?
   YES - Go to Step 9.
   NO - Repair open in the wire between the CKP sensor and PGM-FI main relay 1, then go to Step 19.

9. Measure the voltage between CKP sensor 3P connector terminal No. 3 and body ground.

   Is there about 5 V?
   YES - Go to Step 10.
   NO - Go to Step 11.

10. Measure the voltage between CKP sensor 3P connector terminals No. 1 and No. 2.

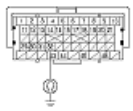
    Is there battery voltage?
    YES - Go to Step 17.
    NO - Repair open in the wire between the CKP sensor and G101, then go to Step 19.
11. Turn the ignition switch to LOCK (0).
12. Jump the SCS line with the HDS.
13. Disconnect ECM/PCM connector C (49P).

14. Check for continuity between ECM/PCM connector terminal C32 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM/PCM (C32) and the CKP sensor, then go to Step 19.
    NO - Go to Step 15.

15. Connect CKP sensor 3P connector terminal No. 3 to body ground with a jumper wire.

16. Check for continuity between ECM/PCM connector terminal C32 and body ground.



Is there continuity?
YES - Go to Step 26 .
NO - Repair open in the wire between the ECM/PCM (C32) and the CKP sensor, then go to Step 19 .

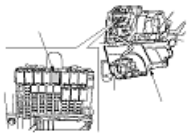
17. Turn the ignition switch to LOCK (0).
18. Replace the CKP sensor.
19. Reconnect all connectors.
20. Turn the ignition switch to ON (II).
21. Reset the ECM/PCM with the HDS.
22. Clear the crank pattern with the HDS.
23. Do the ECM/PCM idle learn procedure.
24. Do the CKP pattern learn procedure.
25. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0335 indicated?
YES - Check for poor connections or loose terminals at the CKP sensor and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

26. Reconnect all connectors.
27. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
28. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0335 indicated?
YES - Check for poor connections or loose terminals at the CKP sensor and the ECM/PCM, then go to Step 1 . If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0351 (71), P0352 (72), P0353 (73), P0354 (74)



DTC P0351:
No. 1 Cylinder Ignition Coil Circuit Malfunction
DTC P0352:
No. 2 Cylinder Ignition Coil Circuit Malfunction
DTC P0353:
No. 3 Cylinder Ignition Coil Circuit Malfunction
DTC P0354:
No. 4 Cylinder Ignition Coil Circuit Malfunction
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0351, P0352, P0353, and/or P0354 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the ignition coil and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Exchange the ignition coil from the problem cylinder with one from another cylinder.
7. Start the engine.
8. Check for Temporary DTCs or DTCs with the HDS.

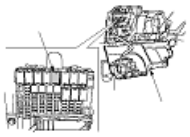
   Is DTC indicated at the exchanged cylinder position?
   YES - Replace the faulty ignition coil, then go to Step 25 .
   NO - Go to Step 9 .
9. Turn the ignition switch to LOCK (0).
10. Check the No. 33 IGNITION COIL (15 A) fuse in the under-dash fuse/relay box.

    Is the fuse OK?
    YES - Go to Step 11 .
    NO - Go to Step 12 .
11. Open the fuse lid (A), then test the ignition coil relay (B) in the under-dash fuse/relay box.

    Is the ignition coil relay OK?
    YES - Go to Step 15 .
    NO - Replace the ignition coil relay, then go to Step 25 .

---

12. Open the fuse lid (A), then remove the ignition coil relay (B) from the under-dash fuse/relay box.
13. Disconnect all ignition coil 3P connectors.



---

14. Check for continuity between No. 1 ignition coil 3P connector terminal No. 3 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ignition coils and the ignition coil relay. Also replace the No. 33 IGNITION COIL (15 A) fuse, then go to Step 25 .
    NO - Check the under-dash fuse/relay box, and replace it if needed, then go to Step 25 .
15. Reinstall the ignition coil relay.
16. Disconnect the ignition coil 3P connector from the problem cylinder.
17. Turn the ignition switch to ON (II).

---

18. Measure the voltage between ignition coil 3P connector terminal No. 3 of the problem cylinder and body ground (see table).

PROBLEM CYLINDER	DTC
No. 1	P0351
No. 2	P0352
No. 3	P0353
No. 4	P0354

Is there battery voltage?

YES - Go to Step 19 .

NO - Repair open in the wire between the ignition coil and the ignition coil relay, then go to Step 25 .

19. Turn the ignition switch to LOCK (0).

---

20. Check for continuity between ignition coil 3P connector terminal No. 2 of the problem cylinder and body ground (see table).

PROBLEM CYLINDER	DTC
No. 1	P0351
No. 2	P0352
No. 3	P0353
No. 4	P0354

Is there continuity?

YES - Go to Step 21 .

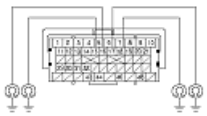
NO - Repair open in the wire between the ignition coil and G101, then go to Step 25 .

21. Jump the SCS line with the HDS.

22. Disconnect ECM/PCM connector C (49P).

---

23. Check for continuity between body ground and the appropriate ECM/PCM connector terminal of the problem cylinder (see table).



PROBLEM CYLINDER	DTC	ECM/PCM TERMINAL	WIRE COLOR
No. 1	P0351	C15	WHT
No. 2	P0352	C16	WHT/GRN
No. 3	P0353	C17	WHT/BLK
No. 4	P0354	C18	WHT/BLU

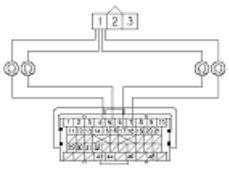
Is there continuity?

YES - Repair short in the wire between the ECM/PCM and the ignition coil, then go to Step 25 .

NO - Go to Step 24 .

---

24. Check for continuity between appropriate ignition coil 3P connector terminal No. 1 and the appropriate ECM/PCM connector terminal of the problem cylinder (see table).



PROBLEM CYLINDER	DTC	ECM/PCM TERMINAL	WIRE COLOR
No. 1	P0351	C15	WHT
No. 2	P0352	C16	WHT/GRN
No. 3	P0353	C17	WHT/BLK
No. 4	P0354	C18	WHT/BLU

Is there continuity?

YES - Go to Step 31 .

NO - Repair open in the wire between the ECM/PCM and the ignition coil, then go to Step 25 .

25. Turn the ignition switch to LOCK (0).
26. Reconnect all connectors.
27. Turn the ignition switch to ON (II).
28. Reset the ECM/PCM with the HDS.
29. Do the ECM/PCM idle learn procedure.
30. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0351, P0352, P0353, and/or P0354 indicated?

YES - Check for poor connections or loose terminals at the ignition coil and the ECM/PCM, then go to Step 1 .

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

31. Reconnect all connectors.
32. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
33. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0351, P0352, P0353, and/or P0354 indicated?

YES - Check for poor connections or loose terminals at the ignition coil and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .

NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0365 (8)

DTC P0365:
CMP Sensor No Signal
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0365 indicated?
   YES - Go to Step 5.
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the CMP sensor and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Disconnect the CMP sensor 3P connector.
7. Turn the ignition switch to ON (II).
8. Measure the voltage between CMP sensor 3P connector terminal No. 3 and body ground.

   Is there battery voltage?
   YES - Go to Step 9.
   NO - Repair open in the wire between the CMP sensor and PGM-FI main relay 1, then go to Step 18.

---

9. Measure the voltage between CMP sensor 3P connector terminal No. 1 and body ground.

   Is there about 5 V?
   YES - Go to Step 10.
   NO - Go to Step 11.

---

10. Measure the voltage between CMP sensor 3P connector terminals No. 2 and No. 3.

    Is there battery voltage?
    YES - Go to Step 16.
    NO - Repair open in the wire between the CMP sensor and G101, then go to Step 18.
11. Turn the ignition switch to LOCK (0).
12. Jump the SCS line with the HDS.
13. Disconnect ECM/PCM connector C (49P).

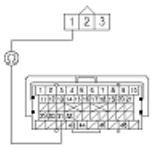
---

14. Check for continuity between ECM/PCM connector terminal C31 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM/PCM (C31) and the CMP sensor, then go to Step 18.
    NO - Go to Step 15.

---

15. Check for continuity between CMP sensor 3P connector terminal No. 1 and ECM/PCM connector terminal C31.



Is there continuity?
YES - Go to Step 23 .
NO - Repair open in the wire between the ECM/PCM (C31) and the CMP sensor, then go to Step 18 .

16. Turn the ignition switch to LOCK (0).

17. Replace the CMP sensor.

18. Reconnect all connectors.

19. Turn the ignition switch to ON (II).

20. Reset the ECM/PCM with the HDS.

21. Do the ECM/PCM idle learn procedure.

22. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0365 indicated?
YES - Check for poor connections or loose terminals at the CMP sensor and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

23. Reconnect all connectors.

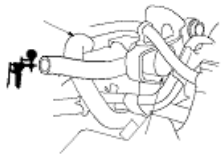
24. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.

25. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0365 indicated?
YES - Check for poor connections or loose terminals at the CMP sensor and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0443 (92)

DTC P0443:
EVAP Canister Purge Valve Circuit Malfunction
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.



1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm (min $^{-1}$) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0443 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the EVAP canister purge valve and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0), and allow the engine to cool below 60 °C (140 °F).
6. Disconnect the vacuum hose (A) from the EVAP canister purge valve (B) in the engine compartment, and connect a vacuum pump/gauge to the hose.
7. Start the engine, and let it idle.

   Is there vacuum?
   YES - Go to Step 8 .
   NO - Go to Step 14 .
8. Turn the ignition switch to LOCK (0).
9. Disconnect the EVAP canister purge valve 2P connector.

---

10. Check for continuity between EVAP canister purge valve 2P connector terminal No. 2 and body ground.

    Is there continuity?
    YES - Go to Step 11 .
    NO - Go to Step 23 .
11. Jump the SCS line with the HDS.
12. Disconnect ECM/PCM connector B (49P).

---

13. Check for continuity between EVAP canister purge valve 2P connector terminal No. 2 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the EVAP canister purge valve and the ECM/PCM (B3), then go to Step 24 .
    NO - Go to Step 30 .
14. Turn the ignition switch to LOCK (0).
15. Disconnect the EVAP canister purge valve 2P connector.
16. Turn the ignition switch to ON (II).

---

17. Measure the voltage between EVAP canister purge valve 2P connector terminal No. 1 and body ground.

    Is there battery voltage?
    YES - Go to Step 18 .
    NO - Repair open in the wire between the EVAP canister purge valve and the No. 12 ALTERNATOR (10 A) fuse in the under-dash fuse/relay box, then go to Step 24 .
18. Turn the ignition switch to LOCK (0).
19. Jump the SCS line with the HDS.
20. Disconnect ECM/PCM connector B (49P).

---

21. Check for continuity between ECM/PCM connector terminal B3 and EVAP canister purge valve 2P connector terminal No. 2.

    
    Is there continuity?
    YES - Go to Step 22 .
    NO - Repair open in the wire between the EVAP canister purge valve and the ECM/PCM (B3), then go to Step 24 .

---

22. Measure the resistance between EVAP canister purge valve 2P connector terminals No. 1 and No. 2.

Is there about 25 Ω at room temperature?
YES - Go to Step 30 .
NO - Go to Step 23 .

23. Replace the EVAP canister purge valve.

24. Reconnect all connectors.

25. Turn the ignition switch to ON (II).

26. Reset the ECM/PCM with the HDS.

27. Do the ECM/PCM idle learn procedure.

28. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0443 indicated?
YES - Check for poor connections or loose terminals at the EVAP canister purge valve and the ECM/PCM, then go to Step 1 .
NO - Go to Step 29 .

29. Monitor the OBD STATUS for DTC P0443 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 28 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the EVAP canister purge valve and the ECM/PCM, then go to Step 1 . If the screen indicates EXECUTING, OUT OF CONDITION, or NOT COMPLETED, keep idling until a result comes on.

30. Reconnect all connectors.

31. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.

32. Start the engine.

33. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0443 indicated?
YES - Check for poor connections or loose terminals at the EVAP canister purge valve and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 32 . If the ECM/PCM was substituted, go to Step 1 .
NO - Go to Step 34 .

34. Monitor the OBD STATUS for DTC P0443 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 23 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the EVAP canister purge valve and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 32 . If the ECM/PCM was substituted, go to Step 1 . If the screen indicates EXECUTING, OUT OF CONDITION, or NOT COMPLETED, keep idling until a result comes on.

DTC Troubleshooting: P0462

DTC P0462:
Fuel Level Sensor (Fuel Gauge Sending Unit) Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

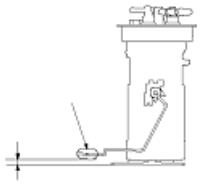
1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS, and wait 5 seconds.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0462 indicated?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the gauge control module and the fuel gauge sending unit.■
4. Turn the ignition switch to LOCK (0).
5. Remove the center console.
6. Remove the access panel from the floor.
7. Disconnect the fuel tank unit 4P connector.
8. Turn the ignition switch to ON (II).
9. Clear the DTC with the HDS, and wait 5 seconds.
10. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0463 indicated?
    YES - Replace the fuel gauge sending unit, then go to Step 22 .
    NO - Go to Step 11 .
11. Turn the ignition switch to LOCK (0).
12. Remove the gauge control module.
13. Disconnect the gauge control module 32P connector.
14. Check for continuity between fuel tank unit 4P connector terminal No. 1 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the gauge control module (signal line) and the fuel gauge sending unit, then go to Step 23 .
    NO - Go to Step 15 .
15. Reconnect the gauge control module 32P connector.
16. Remove the fuel tank unit.
17. Connect the fuel tank unit 4P connector.
18. Turn the ignition switch to ON (II).
19. Clear the DTC with the HDS.

20. Set the float (A) to the E position (B).



21. Check the fuel gauge.

    Does the gauge move to the empty position?
    YES - Go to Step 29 .
    NO - Replace the gauge control module, then go to Step 22 .

22. Turn the ignition switch to LOCK (0).

23. Reconnect all connectors.

24. Install the parts in the reverse order of removal.

25. Turn the ignition switch to ON (II).

26. Reset the ECM/PCM with the HDS.

27. Do the ECM/PCM idle learn procedure.

28. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?
    YES - If DTC P0462 is indicated, check for poor connections or loose terminals at the gauge control module and the fuel gauge sending unit, then go to Step 1 . If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.
    NO - Troubleshooting is complete.■

29. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.

30. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?
    YES - If DTC P0462 is indicated, check for poor connections or loose terminals at the gauge control module and the fuel gauge sending unit, then go to Step 1 . If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. ■

DTC Troubleshooting: P0463

DTC P0463:
Fuel Level Sensor (Fuel Gauge Sending Unit) Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS, and wait 5 seconds.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0463 indicated?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the gauge control module and the fuel gauge sending unit.■
4. Turn the ignition switch to LOCK (0).
5. Remove the center console.
6. Remove the access panel from the floor.
7. Disconnect the fuel tank unit 4P connector.
8. Connect fuel tank unit 4P connector terminal No. 3 to body ground with a jumper wire.
9. Remove the gauge control module.
10. Disconnect the gauge control module 32P connector.

---

11. Check for continuity between gauge control module 32P connector terminal No. 28 and body ground.

    Is there continuity?
    YES - Go to Step 12 .
    NO - Repair open in the wire between the gauge control module (GND line) and the fuel gauge sending unit, then go to Step 24 .

---

12. Connect fuel tank unit 4P connector terminal No. 1 to body ground with a jumper wire.

---

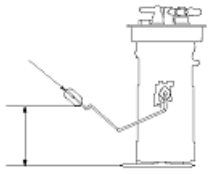
13. Check for continuity between gauge control module 32P connector terminal No. 27 and body ground.

    Is there continuity?
    YES - Go to Step 14 .
    NO - Repair open in the wire between the gauge control module (signal line) and the fuel gauge sending unit, then go to Step 24 .
14. Remove the jumper wire from the fuel tank unit 4P connector.
15. Remove the fuel tank unit.
16. Test the fuel gauge sending unit.

    Is the fuel gauge sending unit OK?
    YES - Go to Step 17 .
    NO - Replace the fuel gauge sending unit, then go to Step 23 .
17. Reconnect the fuel tank unit 4P connector.
18. Reconnect the gauge control module 32P connector.
19. Turn the ignition switch to ON (II).
20. Clear the DTC with the HDS.

---

21. Set the float (A) to the F position (B).



22. Check the fuel gauge.

    Does the gauge move to the full position?
    YES - Go to Step 30 .
    NO - Replace the gauge control module , then go to Step 23 .

23. Turn the ignition switch to LOCK (0).

24. Reconnect all connectors.

25. Install the parts in the reverse order of removal.

26. Turn the ignition switch to ON (II).

27. Reset the ECM/PCM with the HDS.

28. Do the ECM/PCM idle learn procedure.

29. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?
    YES - If DTC P0463 is indicated, check for poor connections or loose terminals at the gauge control module and the fuel gauge sending unit, then go to Step 1 . If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.
    NO - Troubleshooting is complete.■

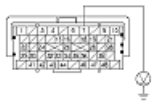
30. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.

31. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?
    YES - If DTC P0463 is indicated, check for poor connections or loose terminals at the gauge control module and the fuel gauge sending unit, then go to Step 1 . If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. ■

DTC Troubleshooting: P0563

DTC P0563:
ECM/PCM Power Source Circuit Unexpected Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.



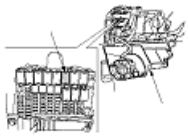
1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0).
4. Wait 10 seconds.
5. Turn the ignition switch to ON (II).
6. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0563 indicated?
   YES - Go to Step 7 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at PGM-FI main relay 1 and the ECM/PCM.■
7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector A (49P).
10. Measure the voltage between ECM/PCM connector terminal A7 and body ground.

    Is there battery voltage?
    YES - Go to Step 13 .
    NO - Go to Step 11 .

---

11. Open the fuse lid (A), then remove PGM-FI main relay 1 (B) from the under-dash fuse/relay box.



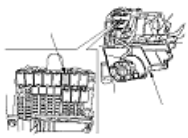
---

12. Check for continuity between ECM/PCM connector terminal A7 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM/PCM (A7) and PGM-FI main relay 1, then go to Step 16 .
    NO - Go to Step 15 .

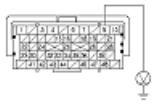
---

13. Open the fuse lid (A), then remove PGM-FI main relay 1 (B) from the under-dash fuse/relay box.



---

14. Measure the voltage between ECM/PCM connector terminal A9 and body ground.



Is there battery voltage?

YES - Repair short to power in the wire between the ECM/PCM (A9) and PGM-FI main relay 1, then go to Step 16 .

NO - Go to Step 15 .

15. Test PGM-FI main relay 1.

Is PGM-FI main relay 1 OK?

YES - Go to Step 23 .

NO - Replace PGM-FI main relay 1, then go to Step 16 .

16. Reconnect all connectors.

17. Turn the ignition switch to ON (II).

18. Reset the ECM/PCM with the HDS.

19. Do the ECM/PCM idle learn procedure.

20. Turn the ignition switch to LOCK (0).

21. Wait 10 seconds.

22. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0563 indicated?

YES - Check for poor connections or loose terminals at PGM-FI main relay 1 and the ECM/PCM, then go to Step 1 .

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

23. Reconnect all connectors.

24. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.

25. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0563 indicated?

YES - Check for poor connections or loose terminals at PGM-FI main relay 1 and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 20 . If the ECM/PCM was substituted, go to Step 1 .

NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0602 (196)

DTC P0602:
ECM/PCM Programming Error
NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.
- This DTC is indicated when an ECM/PCM update is not completed.
- Do not turn the ignition switch to LOCK (0) or ACC (I) while updating the ECM/PCM. If you turn the ignition switch to LOCK (0) or ACC (I) before completion, the ECM/PCM can be damaged.

1. Do the ECM/PCM update procedure.

2. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0602 indicated?
   YES - Replace the original ECM/PCM. ■
   NO - The update is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0606 (0)

DTC P0606:
ECM/PCM Processor Malfunction
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0).
4. Turn the ignition switch to ON (II).
5. Wait 40 seconds.
6. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0606 indicated?
   YES - Go to Step 7 .
   NO - Intermittent failure, the system is OK at this time.■
7. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
8. Turn the ignition switch to LOCK (0).
9. Turn the ignition switch to ON (II).
10. Wait 40 seconds.
11. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0606 indicated?
    YES - If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 8 . If the ECM/PCM was substituted, go to Step 1 .
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P062F (131)

DTC P062F:
ECM/PCM Internal Control Module Keep Alive Memory (KAM) Error
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P062F indicated?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time.■
4. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
5. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P062F indicated?
   YES - If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
   NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0630 (139)

DTC P0630:
VIN Not Programmed or Mismatch
NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.
- This DTC is stored only when the ECM/PCM does not have the VIN information of the vehicle. Use the HDS to input the missing VIN information.

1. Turn the ignition switch to ON (II).
2. Check the VIN with the HDS.

   Does the HDS show the vehicle's VIN?
   YES - Go to Step 5 .
   NO - Go to Step 3 .
3. Input the VIN to the ECM/PCM with the HDS.

   Does the screen show COMPLETE?
   YES - Go to Step 5 .
   NO - Go to Step 4 .
4. Check for DTCs with the HDS.

   Is DTC P062F indicated?
   YES - Go to the DTC P062F troubleshooting. ■
   NO - Go to Step 9 .
5. Clear the DTC with the HDS.
6. Turn the ignition switch to LOCK (0).
7. Turn the ignition switch to ON (II), and wait 5 seconds.
8. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0630 indicated?
   YES - Go to Step 9 .
   NO - Intermittent failure, the system is OK at this time.■
9. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
10. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0630 indicated?
    YES - If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0685 (135)

DTC P0685:
ECM/PCM Power Control Circuit/Internal Circuit Malfunction
NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.
- If the problem doesn't return after you clear the DTC, or it this DTC is stored intermittently, check for loose terminals at the IGP line connectors before replacing the ECM/PCM.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, then let it idle for 30 seconds.
4. Turn the ignition switch to LOCK (0).
5. Start the engine, then let it idle for 30 seconds.
6. Turn the ignition switch to LOCK (0).
7. Turn the ignition switch to ON (II).
8. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0685 indicated?
   YES - Go to Step 9 .
   NO - Intermittent failure, the system is OK at this time.■
9. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
10. Start the engine, then let it idle for 30 seconds.
11. Turn the ignition switch to LOCK (0).
12. Start the engine, then let it idle for 30 seconds.
13. Turn the ignition switch to LOCK (0).
14. Turn the ignition switch to ON (II).
15. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0685 indicated?
    YES - If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 10 . If the ECM/PCM was substituted, go to Step 1 .
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0720 (122)

DTC P0720:
Output Shaft (Countershaft) Speed Sensor Circuit Malfunction (M/T model)
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Start the engine. Hold the engine speed at 3,000 rpm (min $^{-1}$) without load (in neutral) until the radiator fan comes on, then let it idle.
2. Test-drive for several minutes.
3. Check the C SHAFT SPD in the DATA LIST with the HDS.

   Is any vehicle speed indicated?
   YES - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the output shaft (countershaft) speed sensor and the ECM.■
   NO - Go to Step 4 .
4. Turn the ignition switch to LOCK (0).
5. Disconnect the output shaft (countershaft) speed sensor 3P connector.
6. Turn the ignition switch to ON (II).
7. Measure the voltage between output shaft (countershaft) speed sensor 3P connector terminal No. 1 and body ground.

   Is there about 5 V?
   YES - Go to Step 8 .
   NO - Repair open in the wire between the ECM (C13) and the output shaft (countershaft) speed sensor, then go to Step 18 .

8. Measure the voltage between output shaft (countershaft) speed sensor 3P connector terminal No. 2 and body ground.

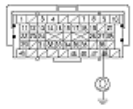
   Is there about 5 V?
   YES - Go to Step 9 .
   NO - Go to Step 10 .

9. Measure the voltage between output shaft (countershaft) speed sensor 3P connector terminals No. 1 and No. 3.

   Is there about 5 V?
   YES - Go to Step 16 .
   NO - Repair open in the wire between the ECM (C14) and the output shaft (countershaft) speed sensor, then go to Step 18 .
10. Turn the ignition switch to LOCK (0).
11. Jump the SCS line with the HDS.
12. Disconnect ECM connector B (49P).
13. Check for continuity between ECM connector terminal B38 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM (B38) and the output shaft (countershaft) speed sensor, then go to Step 18 .
    NO - Go to Step 14 .
14. Connect output shaft (countershaft) speed sensor 3P connector terminal No. 2 to body ground with a jumper wire.

15. Check for continuity between ECM connector terminal B38 and body ground.



Is there continuity?
YES - Go to Step 25 .
NO - Repair open in the wire between the ECM (B38) and the output shaft (countershaft) speed sensor, then go to Step 18 .

16. Turn the ignition switch to LOCK (0).
17. Replace the output shaft (countershaft) speed sensor.
18. Reconnect all connectors.
19. Turn the ignition switch to ON (II).
20. Reset the ECM with the HDS.
21. Do the ECM idle learn procedure.
22. Test-drive under these conditions:
    - Engine coolant temperature (ECT SENSOR 1) above 80 °C (176 °F)
    - Transmission in 5th gear
    - ENGINE SPEED between 2,000−3,000 rpm (min $^{-1}$)
    - Drive for several minutes, then decelerate (with the throttle fully closed) for 8 seconds
23. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0720 indicated?
YES - Check for poor connections or loose terminals at the output shaft (countershaft) speed sensor and the ECM, then go to Step 1 .
NO - Go to Step 24 .

24. Monitor the OBD STATUS for DTC P0720 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 23 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the output shaft (countershaft) speed sensor and the ECM, then go to Step 1 . If the screen indicates NOT COMPLETED, go to Step 22 .

25. Reconnect all connectors.
26. Update the ECM if it does not have the latest software, or substitute a known-good ECM.
27. Test-drive under these conditions:
    - Engine coolant temperature (ECT SENSOR 1) above 80 °C (176 °F)
    - Transmission in 5th gear
    - ENGINE SPEED between 2,000−3,000 rpm (min $^{-1}$)
    - Drive for several minutes, then decelerate (with the throttle fully closed) for 8 seconds
28. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0720 indicated?
YES - Check for poor connections or loose terminals at the output shaft (countershaft) speed sensor and the ECM. If the ECM was updated, substitute a known-good ECM, then go to Step 27 . If the ECM was substituted, go to Step 1 .
NO - Go to Step 29 .

29. Monitor the OBD STATUS for DTC P0720 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - If the ECM was updated, troubleshooting is complete. If the ECM was substituted, replace the original ECM. If any other Temporary DTCs or DTCs were indicated in Step 28 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the output shaft (countershaft) speed sensor and the ECM. If the ECM was updated, substitute a known-good ECM, then go to Step 27 . If the ECM was substituted, go to Step 1 . If the screen indicates NOT COMPLETED, go to Step 27 .

DTC Troubleshooting: P102A (120)

DTC P102A:
Subfuel Solenoid Circuit Malfunction
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with HDS.
3. Start the engine.
4. Select SUBFUEL SOLENOID ON in the INSPECTION MENU with the HDS.
5. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P102A indicated?
   YES - Go to Step 6 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the subfuel solenoid, the subfuel pump relay, and the ECM/PCM.■
6. Turn the ignition switch to LOCK (0).
7. Remove the subfuel pump relay from the relay holder.
8. Test the subfuel pump relay.

   Is the subfuel pump relay OK?
   YES - Go to Step 9 .
   NO - Replace the subfuel pump relay, then go to Step 34 .
9. Check the SUBFUEL PUMP (15 A) fuse in the auxiliary under-dash fuse holder.

   Is the fuse OK?
   YES - Go to Step 13 .
   NO - Go to Step 10 .
10. Disconnect the SUBFUEL PUMP (15 A) fuse from the auxiliary under-dash fuse holder.
11. Disconnect the subfuel solenoid 2P connector.
12. Check for continuity between subfuel solenoid 2P connector terminal No. 1 and body ground.

    Is there continuity?
    YES -
    - Repair short in the wire between the subfuel pump, the subfuel pump relay, and the subfuel solenoid. Also replace the SUBFUEL PUMP (15 A) fuse, then go to Step 34 .
    - Check the subfuel pump, and replace it if necessary. Also replace the SUBFUEL PUMP (15 A) fuse, then go to Step 34 .

    NO - Repair short in the wire between the SUBFUEL PUMP (15 A) fuse and the subfuel pump relay. Also replace the SUBFUEL PUMP (15 A) fuse, then go to Step 34 .
13. Reconnect the subfuel pump relay to the auxiliary under-hood relay box.
14. Disconnect the subfuel solenoid 2P connector.

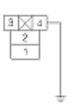
---

15. Turn the ignition switch to ON (II), and measure the voltage between subfuel solenoid 2P connector terminal No. 1 and body ground within 2 seconds.

    Is there battery voltage?
    YES - Go to Step 22 .
    NO - Go to Step 16 .
16. Turn the ignition switch to LOCK (0).
17. Remove the subfuel pump relay (A) from the auxiliary under-hood relay box.
18. Jump the SCS line with the HDS.
19. Disconnect ECM/PCM connector A (49P).

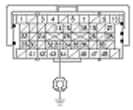
---

20. Connect subfuel pump relay 4P connector terminal No. 3 to body ground with a jumper wire.



---

21. Check for continuity between ECM/PCM connector terminal A33 and body ground.



Is there continuity?

YES -
- Repair open in the wire between the subfuel pump relay and the subfuel solenoid, then go to Step 34 .
- Repair open in the wire between the SUBFUEL PUMP (15 A) fuse and the subfuel pump relay, then go to Step 34 .

NO - Repair open in the wire between the ECM/PCM (A33) and the subfuel pump relay, then go to Step 34 .

22. Turn the ignition switch to LOCK (0).

---

23. At the subfuel solenoid side, measure the resistance between subfuel solenoid 2P connector terminals No. 1 and No. 2.

Is there about 9.78−10.82 Ω at room temperature?

YES - Go to Step 24 .

NO - Go to Step 32 .

---

24. At the subfuel solenoid side, check for continuity between body ground and subfuel solenoid 2P connector terminals No. 1 and No. 2 individually.

Is there continuity?

YES - Go to Step 32 .

NO - Go to Step 25 .

25. Jump the SCS line with the HDS.

26. Disconnect ECM/PCM connector C (49P).

---

27. Check for continuity between subfuel solenoid 2P connector terminal No. 2 and body ground.

Is there continuity?

YES - Repair short in the wire between the ECM/PCM (C19) and the subfuel solenoid, then go to Step 34 .

NO - Go to Step 28 .

28. Turn the ignition switch to ON (II).

---

29. Measure the voltage between subfuel solenoid 2P connector terminal No. 2 and body ground.

Is there battery voltage?

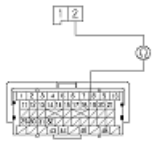
YES - Repair short to power in the wire between the ECM/PCM (C19) and the subfuel solenoid, then go to Step 33 .

NO - Go to Step 30 .

30. Turn the ignition switch to LOCK (0).

---

31. Check for continuity between subfuel solenoid 2P connector terminal No. 2 and ECM/PCM connector terminal C19.



Is there continuity?
YES - Go to Step 41 .
NO - Repair open in the wire between the ECM/PCM (C19) and the subfuel solenoid, then go to Step 34 .

32. Replace the subfuel solenoid.
33. Turn the ignition switch to LOCK (0).
34. Reconnect all connectors.
35. Turn the ignition switch to ON (II).
36. Reset the ECM/PCM with the HDS.
37. Do the ECM/PCM idle learn procedure.
38. Start the engine.
39. Select SUBFUEL SOLENOID ON in the INSPECTION MENU with the HDS.
40. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?
YES - If DTC P102A is indicated, check for poor connections or loose terminals at the subfuel solenoid, the subfuel pump relay, and the ECM/PCM, then go to Step 1 . If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.
NO - Troubleshooting is complete.■

41. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
42. Start the engine.
43. Select SUBFUEL SOLENOID ON in the INSPECTION MENU with the HDS.
44. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?
YES - If DTC P102A is indicated, check for poor connections or loose terminals at the subfuel solenoid, the subfuel pump relay, and the ECM/PCM, then go to Step 1 . If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. ■

DTC Troubleshooting: P1109 (13)

DTC P1109:
BARO Sensor Circuit Out of Range High
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

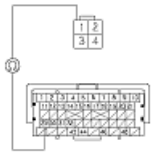
1. Reset the ECM/PCM with the HDS.
2. Start the engine.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P1109 indicated?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time.■
4. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
5. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P1109 indicated?
   YES - If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
   NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P1157 (48)

DTC P1157:
A/F Sensor (Sensor 1) Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

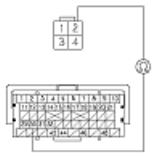


1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, and wait 1 minute.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P1157 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Jump the SCS line with the HDS.
7. Disconnect the A/F sensor (Sensor 1) 4P connector.
8. Disconnect ECM/PCM connector C (49P).
9. Check for continuity between A/F sensor (Sensor 1) 4P connector terminal No. 1 and ECM/PCM connector terminal C29.

   Is there continuity?
   YES - Go to Step 10 .
   NO - Repair open in the wire between the ECM/PCM (C29) and the A/F sensor (Sensor 1), then go to Step 12 .

10. Check for continuity between A/F sensor (Sensor 1) 4P connector terminal No. 2 and ECM/PCM connector terminal C30.



Is there continuity?
YES - Go to Step 11 .
NO - Repair open in the wire between the ECM/PCM (C30) and the A/F sensor (Sensor 1), then go to Step 12 .

11. Replace the A/F sensor (Sensor 1).
12. Reconnect all connectors.
13. Turn the ignition switch to ON (II).
14. Reset the ECM/PCM with the HDS.
15. Do the ECM/PCM idle learn procedure.
16. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1157 indicated?
YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to Step 1 . If the connector and terminal fits are OK, go to Step 18 .
NO - Go to Step 17 .

17. Monitor the OBD STATUS for DTC P1157 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 16 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to Step 1 . If the screen indicates NOT COMPLETED, go to Step 15 .

18. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
19. Start the engine, and let it idle.
20. Check for Temporary DTCs or DTCs with the HDS.

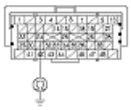
Is DTC P1157 indicated?
YES - If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 19 . If the ECM/PCM was substituted, go to Step 1 .
NO - Go to Step 21 .

21. Monitor the OBD STATUS for DTC P1157 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 20 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, go to Step 1 . If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 19 . If the ECM/PCM was substituted, go to Step 1 . If the screen indicates NOT COMPLETED, let the until a result comes on.

DTC Troubleshooting: P1297

DTC P1297:
ELD Circuit Low Voltage



NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check the ELD in the DATA LIST with the HDS.

   Is 72 A or more indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the ELD and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the ELD 3P connector.
5. Turn the ignition switch to ON (II).
6. Check the ELD in the DATA LIST with the HDS.

   Is 72 A or more indicated?
   YES - Go to Step 7 .
   NO - Go to Step 11 .
7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector A (49P).
10. Check for continuity between ECM/PCM connector terminal A24 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM/PCM (A24) and the ELD, then go to Step 13 .
    NO - Go to Step 20 .
11. Turn the ignition switch to LOCK (0).
12. Replace the ELD.
13. Reconnect all connectors.
14. Turn the ignition switch to ON (II).
15. Reset the ECM/PCM with the HDS.
16. Do the ECM/PCM idle learn procedure.
17. Start the engine.
18. Turn on the headlights.
19. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P1297 indicated?
    YES - Check for poor connections or loose terminals at the ELD and the ECM/PCM, then go to Step 1 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■
20. Reconnect all connectors.
21. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
22. Start the engine.
23. Turn on the headlights.
24. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P1297 indicated?
    YES - Check for poor connections or loose terminals at the ELD and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 22 . If the ECM/PCM was substituted, go to Step 1 .
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P1298

DTC P1298:
ELD Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check the ELD in the DATA LIST with the HDS.

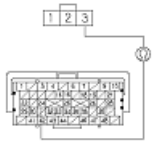
   Is 0.2 A or less indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the ELD and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the ELD 3P connector.
5. Turn the ignition switch to ON (II).
6. Measure the voltage between ELD 3P connector terminal No. 1 and body ground.

   Is there battery voltage?
   YES - Go to Step 7 .
   NO - Check the No. 22 METER (7.5 A) fuse in the under-dash fuse/relay box. If the fuse is OK, repair open in the wire between the No. 22 METER (7.5 A) fuse and the ELD, then go to Step 12 .
7. Jump the SCS line with the HDS.
8. Disconnect ECM/PCM connector A (49P).

---

9. Check for continuity between ELD 3P connector terminal No. 3 and ECM/PCM connector terminal A24.

   Is there continuity?
   YES - Go to Step 10 .
   NO - Repair open in the wire between the ECM/PCM (A24) and the ELD, then go to Step 12 .



---

10. Check for continuity between ELD 3P connector terminal No. 2 and body ground.

    Is there continuity?
    YES - Go to Step 11 .
    NO - Repair open in the wire between the ELD and G501, then go to Step 12 .

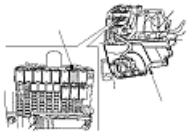
11. Replace the ELD.
12. Reconnect all connectors.
13. Turn the ignition switch to ON (II).
14. Reset the ECM/PCM with the HDS.
15. Do the ECM/PCM idle learn procedure.
16. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P1298 indicated?
    YES - Go to Step 17 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■
17. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
18. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P1298 indicated?
    YES - Check for poor connections or loose terminals at the ELD and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P1658 (40)

DTC P1658:
ETCS Control Relay ON Malfunction
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.



1. Turn the ignition switch to ON (II).
2. Do the ETCS TEST in the INSPECTION MENU with the HDS.

   Is the RELAY circuit OK?
   YES - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the ETCS control relay and the ECM/PCM.■
   NO - Go to Step 3 .
3. Turn the ignition switch to LOCK (0).
4. Open the fuse lid (A), then remove the ETCS control relay (B) from the under-dash fuse/relay box.
5. Test the ETCS control relay.

   Is the ETCS control relay OK?
   YES - Go to Step 6 .
   NO - Replace the ETCS control relay, then go to Step 13 .
6. Jump the SCS line with the HDS.
7. Disconnect ECM/PCM connector A (49P).

---

8. Check for continuity between ECM/PCM connector terminal A21 and body ground.

   Is there continuity?
   YES - Repair short in the wire between the ECM/PCM (A21) and the ETCS control relay, then go to Step 13 .
   NO - Go to Step 9 .
9. Disconnect ECM/PCM connector C (49P).
10. Turn the ignition switch to ON (II).

---

11. Measure the voltage between ECM/PCM connector terminal C1 and body ground.

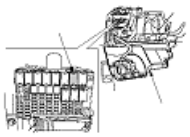
    Is there battery voltage?
    YES - Repair short to power in the wire between the ECM/PCM (C1) and the ETCS control relay, then go to Step 12 .
    NO - Go to Step 18 .
12. Turn the ignition switch to LOCK (0).
13. Reconnect all connectors.
14. Turn the ignition switch to ON (II).
15. Reset the ECM/PCM with the HDS.
16. Do the ECM/PCM idle learn procedure.
17. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P1658 indicated?
    YES - Check for poor connections or loose terminals at the ETCS control relay and the ECM/PCM, then go to Step 1 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■
18. Turn the ignition switch to LOCK (0).
19. Reconnect all connectors.
20. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
21. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P1658 indicated?
    YES - Check for poor connections or loose terminals at the ETCS control relay and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P1659 (40)

DTC P1659:
Electronic Throttle Control System (ETCS) Control Relay OFF Malfunction
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.



1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P1659 indicated?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the ETCS control relay and the ECM/PCM.■
4. Turn the ignition switch to LOCK (0).
5. Check the No. 52 ETCS (15 A) fuse in the under-dash fuse/relay box.

   Is the fuse OK?
   YES - Go to Step 6 .
   NO - Go to Step 19 .
6. Open the fuse lid (A), then remove the ETCS control relay (B) from the under-dash fuse/relay box.
7. Test the ETCS control relay.

   Is the ETCS control relay OK?
   YES - Go to Step 8 .
   NO - Replace the ETCS control relay, then go to Step 25 .
8. Turn the ignition switch to ON (II).

---

9. Measure the voltage between ETCS control relay 4P connector terminal No. 3 and body ground.

   Is there battery voltage?
   YES - Go to Step 10 .
   NO - Replace the under-dash fuse/relay box, then go to Step 24 .

---

10. Measure the voltage between ETCS control relay 4P connector terminal No. 2 and body ground.

    Is there battery voltage?
    YES - Go to Step 11 .
    NO - Replace the under-dash fuse/relay box, then go to Step 24 .
11. Turn the ignition switch to LOCK (0).
12. Jump the SCS line with the HDS.
13. Disconnect ECM/PCM connector C (49P).

---

14. Connect ETCS control relay 4P connector terminal No. 1 to body ground with the jumper wire.

---

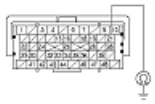
15. Check for continuity between ECM/PCM connector terminal C1 and body ground.

    Is there continuity?
    YES - Go to Step 16 .
    NO - Repair open in the wire between the ECM/PCM (C1) and the ETCS control relay, then go to Step 25 .
16. Disconnect ECM/PCM connector A (49P).

---

17. Connect ETCS control relay 4P connector terminal No. 4 to body ground with the jumper wire.

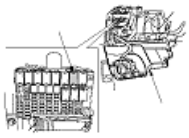
18. Check for continuity between ECM/PCM connector terminal A21 and body ground.



Is there continuity?
YES - Go to Step 30 .
NO - Repair open in the wire between the ECM/PCM (A21) and the ETCS control relay, then go to Step 25 .

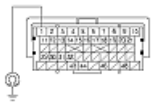
---

19. Open the fuse lid (A), then remove the ETCS control relay (B) from the under-dash fuse/relay box.
20. Jump the SCS line with the HDS.
21. Disconnect ECM/PCM connector C (49P).



---

22. Check for continuity between ECM/PCM connector terminal C1 and body ground.



Is there continuity?
YES - Repair short in the wire between the ECM/PCM (C1) and the ETCS control relay, then go to Step 25 .
NO - Go to Step 23 .

---

23. Check for continuity between ETCS control relay 4P connector terminal No. 2 and body ground.

Is there continuity?
YES - Replace the under-hood fuse/relay box, then go to Step 25 .
NO - Go to Step 30 .
24. Turn the ignition switch to LOCK (0).
25. Reconnect all connectors.
26. Turn the ignition switch to ON (II).
27. Reset the ECM/PCM with the HDS.
28. Do the ECM/PCM idle learn procedure.
29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1659 indicated?
YES - Check for poor connections or loose terminals at the ETCS control relay and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

30. Reconnect all connectors.
31. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
32. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1659 indicated?
YES - Check for poor connections or loose terminals at the ETCS control relay and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P1683 (40)

DTC P1683:
Throttle Valve Default Position Spring Performance Problem

⚠CAUTION

Do not insert your fingers into the installed throttle body when you turn the ignition switch to ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm (min^{-1}) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.
4. Turn the ignition switch to LOCK (0), and wait 10 seconds.
5. Turn the ignition switch to ON (II).
6. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P1683 indicated?
   YES - Go to Step 7 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the ECM/PCM.■
7. Turn the ignition switch to LOCK (0).
8. Remove the air cleaner.
9. Push the throttle valve closed as shown.
10. Release the throttle valve.

    Does the throttle valve return?
    YES - Clean the throttle body, then go to Step 12 .
    NO - Go to Step 11 .
11. Replace the throttle body.
12. Turn the ignition switch to ON (II).
13. Reset the ECM/PCM with the HDS.
14. Do the ECM/PCM idle learn procedure.
15. Turn the ignition switch to LOCK (0), and wait 10 seconds.
16. Turn the ignition switch to ON (II).
17. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P1683 indicated?
    YES - If the throttle body was cleaned, go to Step 11 . If the throttle body was replaced, check for poor connections or loose terminals at the throttle body and the ECM/PCM, then go to Step 1 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P1684 (40)

DTC P1684:
Throttle Valve Return Spring Performance Problem

⚠CAUTION

Do not insert your fingers into the installed throttle body when you turn the ignition switch to ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm (min^{-1}) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.
4. Turn the ignition switch to LOCK (0), and wait 10 seconds.
5. Turn the ignition switch to ON (II).
6. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P1684 indicated?
   YES - Go to Step 7 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the ECM/PCM.■
7. Turn the ignition switch to LOCK (0).
8. Remove the air cleaner.
9. Push the throttle valve open as shown.
10. Release the throttle valve.

    Does the throttle valve return?
    YES - Clean the throttle body, then go to Step 12 .
    NO - Go to Step 11 .
11. Replace the throttle body.
12. Turn the ignition switch to ON (II).
13. Reset the ECM/PCM with the HDS.
14. Do the ECM/PCM idle learn procedure.
15. Turn the ignition switch to LOCK (0), and wait 10 seconds.
16. Turn the ignition switch to ON (II).
17. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P1684 indicated?
    YES - If the throttle body was cleaned, go to Step 11 . If the throttle body was replaced, check for poor connections or loose terminals at the throttle body and the ECM/PCM, then go to Step 1 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P16BC

DTC P16BC:
Alternator FR Terminal Circuit/IGP Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Check for poor connections or loose terminals at the alternator 4P connector.

   Are the connections and terminals OK?
   YES - Go to Step 2 .
   NO - Repair the connector or terminals, then go to Step 18 .

2. Check the alternator mounting surfaces for corrosion.

   Are the mounting surfaces corroded?
   YES - Remove the alternator. Clean all of its mounting surface and reinstall the alternator, then go to Step 18 .
   NO - Go to Step 3 .

3. Turn the ignition switch to ON (II).
4. Clear the DTC with the HDS.
5. Start the engine.
6. Check under these conditions:
   - A/C on
   - Temperature control at maximum cool
   - Blower fan at maximum speed
   - Rear window defogger on
   - Headlights on high beam
7. Hold the engine speed 2,000 rpm (min $^{-1}$) (A/T in P or N, M/T in neutral) for 1 minute.
8. Check for Temporary DTCs or DTCs with the HDS.

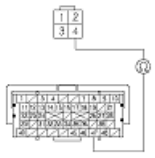
   Is DTC P16BC indicated?
   YES - Go to Step 9 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the alternator.■
9. Turn the ignition switch to LOCK (0).
10. Disconnect the alternator 4P connector.
11. Turn the ignition switch to ON (II).
12. Measure the voltage between alternator 4P connector terminal No. 1 and body ground.

    Is there battery voltage?
    YES - Go to Step 13 .
    NO - Repair open in the wire between the alternator (IG1 line) and the No. 12 ALTERNATOR (10 A) fuse in the under-dash fuse/relay box, then go to Step 18 .

13. Measure the voltage between alternator 4P connector terminal No. 4 and body ground.

    Is there about 5 V?
    YES - Replace the alternator, then go to Step 18 .
    NO - Go to Step 14 .
14. Turn the ignition switch to LOCK (0).
15. Jump the SCS line with the HDS.
16. Disconnect ECM/PCM connector B (49P).

17. Check for continuity between alternator 4P connector terminal No. 4 and ECM/PCM connector terminal B47.



Is there continuity?

YES - Go to Step 27 .

NO - Repair open in the wire between the ECM/PCM (B47) and the alternator, then go to Step 18 .

18. Turn the ignition switch to LOCK (0).
19. Reconnect all connectors.
20. Turn the ignition switch to ON (II).
21. Reset the ECM/PCM with the HDS.
22. Do the ECM/PCM idle learn procedure.
23. Start the engine.
24. Check under these conditions:
    - A/C on
    - Temperature control at maximum cool
    - Blower fan at maximum speed
    - Rear window defogger on
    - Headlights on high beam
25. Hold the engine speed at 2,000 rpm (min $^{-1}$) (A/T in P or N, M/T in neutral) for 1 minute.
26. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P16BC indicated?

YES - Check for poor connections or loose terminals at the alternator and the ECM/PCM, then go to Step 1 .

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

27. Reconnect all connectors.
28. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
29. Start the engine.
30. Check under these conditions:
    - A/C on
    - Temperature control at maximum cool
    - Blower fan at maximum speed
    - Rear window defogger on
    - Headlights on high beam
31. Hold the engine speed 2,000 rpm (min $^{-1}$) (A/T in P or N, M/T in neutral) for 1 minute.
32. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P16BC indicated?

YES - Check for poor connections or loose terminals at the alternator and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 29 . If the ECM/PCM was substituted, go to Step 1 .

NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2101 (40)

DTC P2101:
ETCS Malfunction

⚠CAUTION

Do not insert your fingers into the installed throttle body when you turn the ignition switch to ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

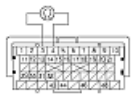
1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Do the ETCS TEST in the INSPECTION MENU with the HDS.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2101 indicated?
   YES - Go to Step 7 .
   NO - Go to Step 5 .
5. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
   - ENGINE SPEED
   - VSS
   - APP SENSOR A
6. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2101 indicated?
   YES - Go to Step 7 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the ECM/PCM, then clean the throttle body. ■
7. Turn the ignition switch to LOCK (0).
8. Remove the air cleaner.
9. Turn the ignition switch to ON (II).
10. Clear the DTC with the HDS.
11. Do the ETCS TEST in the INSPECTION MENU with the HDS.
12. Visually check the throttle valve operation.

    Does the throttle valve operate smoothly?
    YES - Clean the throttle body, then go to Step 22 and recheck. If DTC P2101 is indicated, go to Step 19 .
    NO - Go to Step 13 .
13. Turn the ignition switch to LOCK (0).
14. Disconnect the throttle body 6P connector.
15. Jump the SCS line with the HDS.
16. Disconnect ECM/PCM connector C (49P).
17. Connect throttle body 6P connector terminals No. 5 and No. 6 with a jumper wire.

18. Check for continuity between ECM/PCM connector terminals C3 and C4.



Is there continuity?
YES - Go to Step 27 .
NO - Repair open in the wires between the throttle body and the ECM/PCM (C3, C4), then go to Step 21 .

19. Turn the ignition switch to LOCK (0).

20. Replace the throttle body.

21. Reconnect all connectors.

22. Turn the ignition switch to ON (II).

23. Reset the ECM/PCM with the HDS.

24. Do the ECM/PCM idle learn procedure.

25. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
    - ENGINE SPEED
    - VSS
    - APP SENSOR A

26. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2101 indicated?
YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM, then clean the throttle body, and go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

27. Reconnect all connectors.

28. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.

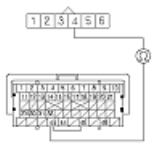
29. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
    - ENGINE SPEED
    - VSS
    - APP SENSOR A

30. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2101 indicated?
YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 28 . If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2118 (40)

DTC P2118:
Throttle Actuator Current Range/Performance Problem
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.



1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Slowly press the accelerator pedal to the floor.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2118 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Jump the SCS line with the HDS.
7. Disconnect the throttle body 6P connector.
8. Disconnect ECM/PCM connector C (49P).
9. Check for continuity between ECM/PCM connector terminal C43 and throttle body 6P connector terminal No. 4.

   Is there continuity?
   YES - Go to Step 10 .
   NO - Repair open in the wire between the throttle body and the ECM/PCM (C43), then go to Step 14 .

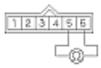
10. Check for continuity between throttle body 6P connector terminals No. 5 and No. 6.

    Is there continuity?
    YES - Repair short in the wires between throttle body 6P connector terminals No. 5 (ETCS− line) and No. 6 (ETCS+ line), then go to Step 14 .
    NO - Go to Step 11 .

11. Check for continuity between body ground and throttle body 6P connector terminals No. 5 and No. 6 individually.

    Is there continuity?
    YES - Repair short in the wire between the throttle body 6P connector and body ground, then go to Step 14 .
    NO - Go to Step 12 .

12. At the throttle body side, measure the resistance between throttle body 6P connector terminals No. 5 and No. 6 with the throttle fully closed.



Is there about 1.0 Ω or less?
YES - Go to Step 13 .
NO - Go to Step 22 .

13. Replace the throttle body.
14. Reconnect all connectors.
15. Turn the ignition switch to ON (II).
16. Reset the ECM/PCM with the HDS.
17. Do the ECM/PCM idle learn procedure.
18. Turn the ignition switch to LOCK (0).
19. Turn the ignition switch to ON (II).
20. Slowly press the accelerator pedal to the floor.
21. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2118 indicated?
YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

22. Reconnect all connectors.
23. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
24. Turn the ignition switch to LOCK (0).
25. Turn the ignition switch to ON (II).
26. Slowly press the accelerator pedal to the floor.
27. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2118 indicated?
YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 24 . If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2122 (37)

DTC P2122:
APP Sensor A (TP Sensor D) Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check APP SENSOR A in the DATA LIST with the HDS.

   Is there about 0.2 V or less?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at APP sensor A and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the APP sensor 6P connector.
5. Turn the ignition switch to ON (II).
6. Measure the voltage between APP sensor 6P connector terminals No. 1 and No. 2.

   Is there about 5 V?
   YES - Go to Step 7 .
   NO - Go to Step 17 .
7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector A (49P).

---

10. Check for continuity between APP sensor 6P connector terminal No. 3 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM/PCM (A18) and APP sensor A, then go to Step 24 .
    NO - Go to Step 11 .

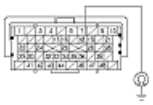
---

11. Connect APP sensor 6P connector terminal No. 3 to body ground with a jumper wire.

---

12. Check for continuity between ECM/PCM connector terminal A18 and body ground.

    Is there continuity?
    YES - Go to Step 13 .
    NO - Repair open in the wire between the ECM/PCM (A18) and APP sensor A, then go to Step 24 .
13. Reconnect ECM/PCM connector A (49P).



---

14. Connect APP sensor 6P connector terminals No. 1 and No. 3 with a jumper wire.
15. Turn the ignition switch to ON (II).
16. Check APP SENSOR A in the DATA LIST with the HDS.

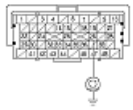
    Is there about 0.2 V or less?
    YES - Go to Step 29 .
    NO - Go to Step 22 .
17. Turn the ignition switch to LOCK (0).
18. Jump the SCS line with the HDS.
19. Disconnect ECM/PCM connector A (49P).

---

20. Connect APP sensor 6P connector terminal No. 1 to body ground with a jumper wire.

---

21. Check for continuity between ECM/PCM connector terminal A26 and body ground.



Is there continuity?

YES - Go to Step 29 .
NO - Repair open in the wire between the ECM/PCM (A26) and APP sensor A, then go to Step 24 .

22. Turn the ignition switch to LOCK (0).
23. Replace the accelerator pedal module.
24. Reconnect all connectors.
25. Turn the ignition switch to ON (II).
26. Reset the ECM/PCM with the HDS.
27. Do the ECM/PCM idle learn procedure.
28. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2122 indicated?

YES - Check for poor connections or loose terminals at APP sensor A and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

29. Turn the ignition switch to LOCK (0).
30. Reconnect all connectors.
31. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
32. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2122 indicated?

YES - Check for poor connections or loose terminals at APP sensor A and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2123 (37)

DTC P2123:
APP Sensor A (TP Sensor D) Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check APP SENSOR A in the DATA LIST with the HDS.

   Is there about 4.9 V or more?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at APP sensor A and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the APP sensor 6P connector.
5. Turn the ignition switch to ON (II).
6. Measure the voltage between APP sensor 6P connector terminals No. 1 and No. 2.

   Is there about 5 V?
   YES - Go to Step 12 .
   NO - Go to Step 7 .
7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector A (49P).

---

10. Connect APP sensor 6P connector terminal No. 2 to body ground with a jumper wire.

---

11. Check for continuity between ECM/PCM connector terminal A36 and body ground.

    
    Is there continuity?
    YES - Go to Step 19 .
    NO - Repair open in the wire between the ECM/PCM (A36) and APP sensor A, then go to Step 14 .
12. Turn the ignition switch to LOCK (0).
13. Replace the accelerator pedal module.
14. Reconnect all connectors.
15. Turn the ignition switch to ON (II).
16. Reset the ECM/PCM with the HDS.
17. Do the ECM/PCM idle learn procedure.
18. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P2123 indicated?
    YES - Check for poor connections or loose terminals at APP sensor A and the ECM/PCM, then go to Step 1 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■
19. Reconnect all connectors.
20. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
21. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P2123 indicated?
    YES - Check for poor connections or loose terminals at APP sensor A and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2127 (37)

DTC P2127:
APP Sensor B (TP Sensor E) Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check APP SENSOR B in the DATA LIST with the HDS.

   Is there about 0.2 V or less?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at APP sensor B and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the APP sensor 6P connector.
5. Turn the ignition switch to ON (II).
6. Measure the voltage between APP sensor 6P connector terminals No. 4 and No. 5.

   Is there about 5 V?
   YES - Go to Step 7 .
   NO - Go to Step 17 .
7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector A (49P).

---

10. Check for continuity between APP sensor 6P connector terminal No. 6 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM/PCM (A19) and APP sensor B, then go to Step 24 .
    NO - Go to Step 11 .

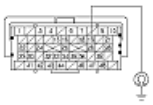
---

11. Connect APP sensor 6P connector terminal No. 6 to body ground with a jumper wire.

---

12. Check for continuity between ECM/PCM connector terminal A19 and body ground.

    Is there continuity?
    YES - Go to Step 13 .
    NO - Repair open in the wire between the ECM/PCM (A19) and APP sensor B, then go to Step 24 .
13. Reconnect ECM/PCM connector A (49P).



---

14. Connect APP sensor 6P connector terminals No. 4 and No. 6 with a jumper wire.
15. Turn the ignition switch to ON (II).
16. Check APP SENSOR B in the DATA LIST with the HDS.

    Is there about 0.2 V or less?
    YES - Go to Step 29 .
    NO - Go to Step 22 .
17. Turn the ignition switch to LOCK (0).
18. Jump the SCS line with the HDS.
19. Disconnect ECM/PCM connector A (49P).

---

20. Connect APP sensor 6P connector terminal No. 4 to body ground with a jumper wire.

---

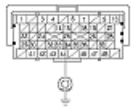
21. Check for continuity between ECM/PCM connector terminal A25 and body ground.



Is there continuity?

YES - Go to Step 29 .
NO - Repair open in the wire between the ECM/PCM (A25) and APP sensor B, then go to Step 24 .

22. Turn the ignition switch to LOCK (0).
23. Replace the accelerator pedal module.
24. Reconnect all connectors.
25. Turn the ignition switch to ON (II).
26. Reset the ECM/PCM with the HDS.
27. Do the ECM/PCM idle learn procedure.
28. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2127 indicated?

YES - Check for poor connections or loose terminals at APP sensor B and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

29. Turn the ignition switch to LOCK (0).
30. Reconnect all connectors.
31. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
32. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2127 indicated?

YES - Check for poor connections or loose terminals at APP sensor B and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2128 (37)

DTC P2128:
APP Sensor B (TP Sensor E) Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check APP SENSOR B in the DATA LIST with the HDS.

   Is there about 4.9 V or more?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals APP sensor B and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the APP sensor 6P connector.
5. Turn the ignition switch to ON (II).
6. Measure the voltage between APP sensor 6P connector terminals No. 4 and No. 5.

   Is there about 5 V?
   YES - Go to Step 12 .
   NO - Go to Step 7 .
7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector A (49P).

---

10. Connect APP sensor 6P connector terminal No. 5 to body ground with a jumper wire.

---

11. Check for continuity between ECM/PCM connector terminal A35 and body ground.

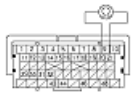
   Is there continuity?
   YES - Go to Step 19 .
   NO - Repair open in the wire between the ECM/PCM (A35) and APP sensor B, then go to Step 14 .
12. Turn the ignition switch to LOCK (0).
13. Replace the accelerator pedal module.
14. Reconnect all connectors.
15. Turn the ignition switch to ON (II).
16. Reset the ECM/PCM with the HDS.
17. Do the ECM/PCM idle learn procedure.
18. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2128 indicated?
   YES - Check for poor connections or loose terminals at APP sensor B and the ECM/PCM, then go to Step 1 .
   NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■
19. Reconnect all connectors.
20. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
21. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2128 indicated?
   YES - Check for poor connections or loose terminals at APP sensor B and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
   NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2135 (7)

DTC P2135:
TP Sensor A/B Incorrect Voltage Correlation



⚠CAUTION
Do not insert your fingers into the installed throttle body when you turn the ignition switch to ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Do the ETCS TEST in the INSPECTION MENU with the HDS.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2135 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Disconnect the intake air duct from the throttle body.
7. Turn the ignition switch to ON (II).
8. Clear the DTC with the HDS.
9. Visually check the throttle valve operation.

   Does the valve temporarily move to its fully closed position?
   YES - Go to Step 16 .
   NO - Go to Step 10 .
10. Turn the ignition switch to LOCK (0).
11. Jump the SCS line with the HDS.
12. Disconnect ECM/PCM connector C (44P).
13. Check for continuity between ECM/PCM connector terminals C20 and C21.

    Is there continuity?
    YES - Go to Step 14 .
    NO - Go to Step 23 .
14. Disconnect the throttle body 6P connector.

15. Check for continuity between ECM/PCM connector terminals C20 and C21.

Is there continuity?

YES - Repair short in the wire between the ECM/PCM connector terminals C20 (TPSA line) and C21 (TPSB line), then go to Step 18 .

NO - Go to Step 16 .

16. Turn the ignition switch to LOCK (0).
17. Replace the throttle body.
18. Reconnect all connectors.
19. Turn the ignition switch to ON (II).
20. Reset the ECM/PCM with the HDS.
21. Do the ECM/PCM idle learn procedure.
22. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2135 indicated?

YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM, then go to Step 1 .

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

23. Reconnect all connectors.
24. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
25. Check for Temporary DTCs or DTCs with the HDS.

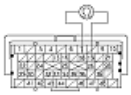
Is DTC P2135 indicated?

YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .

NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2138 (37)

DTC P2138:
APP Sensor A/B (TP Sensor D/E) Incorrect Voltage Correlation
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.



1. Turn the ignition switch to ON (II).
2. Clear the DTC with HDS.
3. Press the accelerator pedal to the floor.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2138 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the APP sensor and the ECM/PCM.■
5. Check APP SENSOR A and APP SENSOR B in the DATA LIST with the HDS.

   Are they the same voltage?
   YES - Go to Step 6 .
   NO - Go to Step 12 .
6. Turn the ignition switch to LOCK (0).
7. Jump the SCS line with the HDS.
8. Disconnect ECM/PCM connector A (49P).
9. Check for continuity between ECM/PCM connector terminals A18 and A19.

   Is there continuity?
   YES - Go to Step 10 .
   NO - Go to Step 22 .
10. Disconnect the APP sensor 6P connector.

11. Check for continuity between ECM/PCM connector terminals A18 and A19.

Is there continuity?

YES - Repair short in the wires between ECM/PCM connector terminals A18 (APSA line) and A19 (APSB line), then go to Step 14 .

NO - Go to Step 13 .

12. Turn the ignition switch to LOCK (0).
13. Replace the accelerator pedal module.
14. Reconnect all connectors.
15. Turn the ignition switch to ON (II).
16. Reset the ECM/PCM with the HDS.
17. Do the ECM/PCM idle learn procedure.
18. Turn the ignition switch to LOCK (0).
19. Turn the ignition switch to ON (II).
20. Press the accelerator pedal to the floor.
21. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2138 indicated?

YES - Check for poor connections or loose terminals at APP sensor A/B and the ECM/PCM, then go to Step 1 .

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

22. Reconnect all connectors.
23. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
24. Turn the ignition switch to LOCK (0).
25. Turn the ignition switch to ON (II).
26. Press the accelerator pedal to the floor.
27. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2138 indicated?

YES - Check for poor connections or loose terminals at APP sensor A/B and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 23 . If the ECM/PCM was substituted, go to Step 1 .

NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2176 (40)

DTC P2176:
Throttle Actuator Control System Idle Position Not Learned

⚠CAUTION

Do not insert your fingers into the installed throttle body when you turn the ignition switch to ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.
- If DTC P2135 is stored at the same time as DTC P2176, troubleshoot DTC P2135 first, then recheck for DTC P2176.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0).
4. Turn the ignition switch to ON (II), and wait 10 seconds.
5. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2176 indicated?
   YES - Go to Step 6 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the ECM/PCM, then clean the throttle body. ■
6. Turn the ignition switch to LOCK (0).
7. Remove the air cleaner.
8. Turn the ignition switch to ON (II).
9. Clear the DTC with the HDS.
10. Visually check the throttle valve operation while performing the ETCS TEST in the INSPECTION MENU with the HDS.

    Does the throttle valve move to its fully closed position?
    YES - Go to Step 11 .
    NO - Go to Step 12 .
11. Check for sludge or carbon on the throttle valve.

    Is there sludge or carbon on the throttle valve?
    YES - Clean the throttle body, then go to Step 21 .
    NO - Go to Step 18 .
12. Turn the ignition switch to LOCK (0).
13. Disconnect the throttle body 6P connector.
14. Jump the SCS line with the HDS.
15. Disconnect ECM/PCM connector C (49P).
16. Connect throttle body 6P connector terminals No. 5 and No. 6 with a jumper wire.

17. Check for continuity between ECM/PCM connector terminals C3 and C4.

Is there continuity?
YES - Go to Step 27 .
NO - Repair open in the wires between the throttle body and the ECM/PCM (C3, C4), then go to Step 20 .

18. Turn the ignition switch to LOCK (0).
19. Replace the throttle body.
20. Reconnect all connectors.
21. Turn the ignition switch to ON (II).
22. Reset the ECM/PCM with the HDS.
23. Do the ECM/PCM idle learn procedure.
24. Turn the ignition switch to LOCK (0).
25. Turn the ignition switch to ON (II), and wait 10 seconds.
26. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2176 indicated?
YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM, then clean the throttle body, and go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

27. Reconnect all connectors.
28. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2176 indicated?
YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2184 (192)

DTC P2184:
ECT Sensor 2 Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check ECT SENSOR 2 in the DATA LIST with the HDS.

   Is about 180 °C (356 °F) or more, or 0.08 V or less indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 2 and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the ECT sensor 2 2P connector.
5. Turn the ignition switch to ON (II).
6. Check ECT SENSOR 2 in the DATA LIST with the HDS.

   Is about 180 °C (356 °F) or more, or 0.08 V or less indicated?
   YES - Go to Step 7 .
   NO - Go to Step 11 .
7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector A (49P).
10. Check for continuity between ECT sensor 2 2P connector terminal No. 2 and body ground.

    Is there continuity?
    YES - Repair short in the wire between ECT sensor 2 and the ECM/PCM (A34), then go to Step 13 .
    NO - Go to Step 18 .
11. Turn the ignition switch to LOCK (0).
12. Replace ECT sensor 2.
13. Reconnect all connectors.
14. Turn the ignition switch to ON (II).
15. Reset the ECM/PCM with the HDS.
16. Do the ECM/PCM idle learn procedure.
17. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P2184 indicated?
    YES - Check for poor connections or loose terminals at ECT sensor 2 and the ECM/PCM, then go to Step 1 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■
18. Reconnect all connectors.
19. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
20. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P2184 indicated?
    YES - Check for poor connections or loose terminals at ECT sensor 2 and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2185 (192)

DTC P2185:
ECT Sensor 2 Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check ECT SENSOR 2 in the DATA LIST with the HDS.

   Is about −40 °C (−40 °F) or less, or 4.90 V or more indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 2 and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the ECT sensor 2 2P connector.
5. Connect ECT sensor 2 2P connector terminals No. 1 and No. 2 with a jumper wire.
6. Turn the ignition switch to ON (II).
7. Check ECT SENSOR 2 in the DATA LIST with the HDS.

   Is about −40 °C (−40 °F) or less, or 4.90 V or more indicated?
   YES - Go to Step 8 .
   NO - Go to Step 20 .
8. Turn the ignition switch to LOCK (0).
9. Remove the jumper wire from ECT sensor 2 2P connector.
10. Turn the ignition switch to ON (II).

---

11. Measure the voltage between ECT sensor 2 2P connector terminal No. 2 and body ground.

    Is there about 5 V?
    YES - Go to Step 12 .
    NO - Go to Step 16 .
12. Turn the ignition switch to LOCK (0).
13. Jump the SCS line with the HDS.
14. Disconnect ECM/PCM connector A (49P).

---

15. Check for continuity between ECT sensor 2 2P connector terminal No. 1 and ECM/PCM connector terminal A10.

    Is there continuity?
    YES - Go to Step 27 .
    NO - Repair open in the wire between the ECM/PCM (A10) and ECT sensor 2, then go to Step 22 .
16. Turn the ignition switch to LOCK (0).
17. Jump the SCS line with the HDS.
18. Disconnect ECM/PCM connector A (49P).

---

19. Check for continuity between ECT sensor 2 2P connector terminal No. 2 and ECM/PCM connector terminal A34.

Is there continuity?
YES - Go to Step 27 .
NO - Repair open in the wire between the ECM/PCM (A34) and ECT sensor 2, then go to Step 22 .

20. Turn the ignition switch to LOCK (0).
21. Replace ECT sensor 2.
22. Reconnect all connectors.
23. Turn the ignition switch to ON (II).
24. Reset the ECM/PCM with the HDS.
25. Do the ECM/PCM idle learn procedure.
26. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2185 indicated?
YES - Check for poor connections or loose terminals at ECT sensor 2 and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

27. Reconnect all connectors.
28. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2185 indicated?
YES - Check for poor connections or loose terminals at ECT sensor 2 and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2228 (13)

DTC P2228:
BARO Sensor Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check the BARO SENSOR in the DATA LIST with the HDS.

   Is about 43 kPa (323 mmHg, 12.7 in.Hg), or 1.3 V or less indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time.■
3. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2228 indicated?
   YES - Check for poor connections or loose terminals at the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
   NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2229 (13)

DTC P2229:
BARO Sensor Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

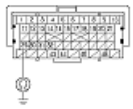
1. Turn the ignition switch to ON (II).
2. Check the BARO SENSOR in the DATA LIST with the HDS.

   Is about 160 kPa (1,200 mmHg, 47.2 in.Hg), or 4.5 V or more indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time.■
3. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2229 indicated?
   YES - Check for poor connections or loose terminals at the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
   NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2238 (48)

DTC P2238:
A/F Sensor (Sensor 1) AFS+ Line Low Voltage



NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2238 indicated?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM.■
4. Turn the ignition switch to LOCK (0).
5. Jump the SCS line with the HDS.
6. Remove the cowl cover and under cowl-cover panel.
7. Disconnect the A/F sensor (Sensor 1) 4P connector.
8. Disconnect ECM/PCM connector C (49P).
9. Check for continuity between ECM/PCM connector terminal C29 and body ground.

   Is there continuity?
   YES - Repair short in the wire between the ECM/PCM (C29) and the A/F sensor (Sensor 1), then go to Step 11 .
   NO - Go to Step 10 .
10. Replace the A/F sensor (Sensor 1).
11. Reconnect all connectors.
12. Turn the ignition switch to ON (II).
13. Reset the ECM/PCM with the HDS.
14. Do the ECM/PCM idle learn procedure.
15. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P2238 indicated?
    YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to Step 1 . If the connector and terminal fits are OK, go to Step 17 .
    NO - Go to Step 16 .
16. Monitor the OBD STATUS for DTC P2238 in the DTCs MENU with the HDS.

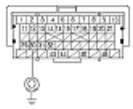
    Does the screen indicate PASSED?
    YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 15 , go to the indicated DTC's troubleshooting.■
    NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to Step 1 . If the screen indicates NOT COMPLETED, go to Step 13 .
17. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
18. Start the engine, and let it idle.
19. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P2238 indicated?
    YES - If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 18 . If the ECM/PCM was substituted, go to Step 1 .
    NO - Go to Step 20 .
20. Monitor the OBD STATUS for DTC P2238 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?
    YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 19 , go to the indicated DTC's troubleshooting.■
    NO - If the screen indicates FAILED, go to Step 1 . If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 18 . If the ECM/PCM was substituted, go to Step 1 . If the screen indicates NOT COMPLETED, keep idling until a result come on.

DTC Troubleshooting: P2252 (48)

DTC P2252:
A/F Sensor (Sensor 1) AFS− Line Low Voltage



NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2252 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Jump the SCS line with the HDS.
7. Remove the cowl cover and under cowl-cover panel.
8. Disconnect the A/F sensor (Sensor 1) 4P connector.
9. Disconnect ECM/PCM connector C (49P).
10. Check for continuity between ECM/PCM connector terminal C30 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM/PCM (C30) and the A/F sensor (Sensor 1), then go to Step 12 .
    NO - Go to Step 11 .
11. Replace the A/F sensor (Sensor 1).
12. Reconnect all connectors.
13. Turn the ignition switch to ON (II).
14. Reset the ECM/PCM with the HDS.
15. Do the ECM/PCM idle learn procedure.
16. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P2252 indicated?
    YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to Step 1 . If the connector and terminal fits are OK, go to Step 18 .
    NO - Go to Step 17 .
17. Monitor the OBD STATUS for DTC P2252 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?
    YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 16 , go to the indicated DTC's troubleshooting.■
    NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to Step 1 . If the screen indicates NOT COMPLETED, go to Step 14 .
18. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
19. Start the engine, and let it idle.
20. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P2252 indicated?
    YES - If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 19 . If the ECM/PCM was substituted, go to Step 1 .
    NO - Go to Step 21 .
21. Monitor the OBD STATUS for DTC P2252 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?
    YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 20 , go to the indicated DTC's troubleshooting.■
    NO - If the screen indicates FAILED, go to Step 1 . If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 19 . If the ECM/PCM was substituted, go to Step 1 . If the screen indicates NOT COMPLETED, keep idling until a result come on.

DTC Troubleshooting: P2610 (132)

DTC P2610:
ECM/PCM Ignition Off Internal Timer Performance Problem
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2610 indicated?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time.■
4. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
5. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2610 indicated?
   YES - If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
   NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2648 (21)

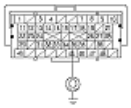
DTC P2648:
Rocker Arm Oil Control Solenoid Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Select the VTEC TEST in the INSPECTION MENU with in the HDS.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2648 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the rocker arm oil control solenoid and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Disconnect the rocker arm oil control solenoid 2P connector.
7. Measure the resistance between the rocker arm oil control solenoid 2P connector terminals No. 1 and No. 2.

   Is there 14−30 Ω at room temperature?
   YES - Go to Step 8 .
   NO - Go to Step 11 .
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector B (49P).

10. Check for continuity between ECM/PCM connector terminal B35 and body ground.



Is there continuity?
YES - Repair short in the wire between the ECM/PCM (B35) and the rocker arm oil control solenoid, then go to Step 12 .
NO - Go to Step 19 .

11. Replace the rocker arm oil control valve.
12. Reconnect all connectors.
13. Turn the ignition switch to ON (II).
14. Reset the ECM/PCM with the HDS.
15. Do the ECM/PCM idle learn procedure.
16. Do the VTEC TEST in the INSPECTION MENU with the HDS.
17. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2648 indicated?
YES - Check for poor connections or loose terminals at the rocker arm oil control solenoid and the ECM/PCM, then go to Step 1 .
NO - Go to Step 18 .

18. Monitor the OBD STATUS for DTC P2648 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 17 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the rocker arm oil control solenoid and the ECM/PCM, then go to Step 1 . If the screen indicates NOT COMPLETED, go to Step 16 .

19. Reconnect all connectors.
20. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
21. Do the VTEC TEST in the INSPECTION MENU with the HDS.
22. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2648 indicated?
YES - Check for poor connections or loose terminals at the rocker arm oil control solenoid and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 21 . If the ECM/PCM was substituted, go to Step 1 .
NO - Go to Step 23 .

23. Monitor the OBD STATUS for DTC P2648 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 22 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the rocker arm oil control solenoid and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 21 . If the ECM/PCM was substituted, go to Step 1 . If the screen indicates NOT COMPLETED, go to Step 21 .

DTC Troubleshooting: P2649 (21)

DTC P2649:
Rocker Arm Oil Control Solenoid Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm (min $^{-1}$) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.
4. Check for Temporary DTCs or DTCs with the HDS.

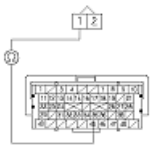
   Is DTC P2649 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the rocker arm oil control solenoid and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Disconnect the rocker arm oil control solenoid 2P connector.
7. At the solenoid side, measure the resistance between rocker arm oil control solenoid 2P connector terminals No. 1 and No. 2.

   Is there 14−30 Ω at room temperature?
   YES - Go to Step 8 .
   NO - Go to Step 11 .

8. Check for continuity between rocker arm oil control solenoid 2P connector terminal No. 2 and body ground.

   Is there continuity?
   YES - Go to Step 9 .
   NO - Repair open in the wire between the rocker arm oil control solenoid and G101, then go to Step 13 .
9. Jump the SCS line with the HDS.
10. Disconnect ECM/PCM connector B (49P).

11. Check for continuity between ECM/PCM connector terminal B35 and rocker arm oil control solenoid 2P connector terminal No. 1.



Is there continuity?
YES - Go to Step 19 .
NO - Repair open in the wire between the ECM/PCM (B35) and the rocker arm oil control solenoid, then go to Step 13 .

12. Replace the rocker arm oil control valve.
13. Reconnect all connectors.
14. Turn the ignition switch to ON (II).
15. Reset the ECM/PCM with the HDS.
16. Do the ECM/PCM idle learn procedure.
17. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2649 indicated?
YES - Check for poor connections or loose terminals at the rocker arm oil control solenoid and the ECM/PCM, then go to Step 1 .
NO - Go to Step 18 .

18. Monitor the OBD STATUS for DTC P2649 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 17 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, go to Step 1 and recheck. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

19. Reconnect all connectors.
20. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
21. Start the engine, and let it idle.
22. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2649 indicated?
YES - Check for poor connections or loose terminals at the rocker arm oil control solenoid and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 21 . If the ECM/PCM was substituted, go to Step 1 .
NO - Go to Step 23 .

23. Monitor the OBD STATUS for DTC P2649 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 21 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the rocker arm oil control solenoid and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 21 . If the ECM/PCM was substituted, go to Step 1 . If the screen indicates NOT COMPLETED, keep idling until a result comes on.

DTC Troubleshooting: U0029 (126)

DTC U0029:
F-CAN Malfunction (BUS-OFF (ECM/PCM))
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

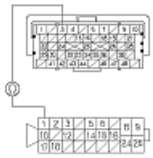
1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC U0029 indicated?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time.■
4. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
5. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC U0029 indicated?
   YES - If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
   NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: U0121 - PGM-FI System

DTC U0121:
F-CAN Malfunction (ECM/PCM-ABS Modulator-Control Unit)
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.



1. Turn the ignition switch to ON (II).
2. Check for Temporary DTCs or DTCs with the HDS.

   Are DTC U0029 and U0121 indicated at the same time?
   YES - Go to the troubleshooting for DTC U0029.■
   NO - Go to Step 3 .
3. Clear the DTC with the HDS.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC U0121 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the ABS modulator-control unit, and the ECM/PCM.■
5. Check for communication to the ABS system with the HDS.

   Does the HDS communicate with the ABS modulator-control unit?
   YES - Go to Step 6 .
   NO - Go to the DLC circuit troubleshooting. ■
6. Turn the ignition switch to LOCK (0).
7. Jump the SCS line with the HDS.
8. Disconnect the ABS modulator-control unit 25P connector.
9. Disconnect ECM/PCM connector A (49P).
10. Check for continuity between ECM/PCM connector terminal A3 and ABS modulator-control unit 25P connector terminal No. 1.

    Is there continuity?
    YES - Go to Step 11 .
    NO - Repair open in the wire between the ECM/PCM (A3) and the ABS modulator-control unit, then go to Step 12 .

---

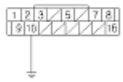
11. Check for continuity between ECM/PCM connector terminal A4 and ABS modulator-control unit 25P connector terminal No. 17.

    Is there continuity?
    YES - Substitute a known-good ABS modulator-control unit, then go to Step 12 and recheck. If DTC U0121 is not indicated after substitution, replace the original ABS modulator-control unit, then go to Step 12 .
    NO - Repair open in the wire between the ECM/PCM (A4) and the ABS modulator-control unit, then go to Step 12 .
12. Reconnect all connectors.
13. Turn the ignition switch to ON (II).
14. Reset the ECM/PCM with the HDS.
15. Do the ECM/PCM idle learn procedure.
16. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC U0122 indicated?
    YES - Check for poor connections or loose terminals at the gauge control module, the ABS modulator-control unit, and the ECM/PCM, then go to Step 1 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: U0131

DTC U0131:
F-CAN Malfunction (ECM/PCM-EPS Control Unit)
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.



1. Turn the ignition switch to ON (II).
2. Check for Temporary DTCs or DTCs with the HDS.

   Are DTC U0029 and U0131 indicated at the same time?
   YES - Go to the troubleshooting for DTC U0029.■
   NO - Go to Step 3 .
3. Clear the DTC with the HDS.
4. Check for Temporary DTCs or DTCs with the HDS.

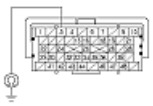
   Is DTC U0131 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the EPS control unit and the ECM/PCM.■
5. Check for communication to the EPS system with the HDS.

   Does the HDS communicate with the EPS control unit?
   YES - Go to Step 6 .
   NO - Go to the DLC circuit troubleshooting. ■
6. Turn the ignition switch to LOCK (0).
7. Jump the SCS line with the HDS.
8. Disconnect EPS control unit connector C (16P).
9. Disconnect ECM/PCM connector A (49P).
10. Connect EPS control unit connector terminal C10 to body ground with a jumper wire.

---

11. Check for continuity between ECM/PCM connector terminal A3 and body ground.

    Is there continuity?
    YES - Go to Step 12 .
    NO - Repair open in the wire between the ECM/PCM (A3) and the EPS control unit, then go to Step 14 .



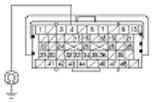
---

12. Connect EPS control unit connector terminal C9 to body ground with a jumper wire.

---

13. Check for continuity between ECM/PCM connector terminal A4 and body ground.

    Is there continuity?
    YES - Substitute a known-good EPS control unit, then go to Step 14 and recheck. If DTC U0131 is not indicated after substitution, replace the original EPS control unit, then go to Step 14 .
    NO - Repair open in the wire between the ECM/PCM (A4) and the EPS control unit, then go to Step 14 .



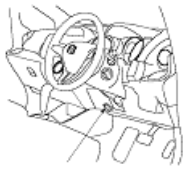
14. Reconnect all connectors.
15. Turn the ignition switch to ON (II).
16. Reset the ECM/PCM with the HDS.
17. Do the ECM/PCM idle learn procedure.
18. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC U0131 indicated?
    YES - Check for poor connections or loose terminals at the EPS control unit and the ECM/PCM, then go to Step 1 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

ECM/PCM Replacement

NOTE:

- Make sure the HDS is loaded with the latest software version.
- If you are replacing the ECM/PCM after substituting a known-good ECM/PCM, reinstall the original ECM/PCM, then do this procedure.



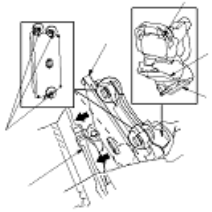
1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the ECM/PCM and other vehicle systems. If it doesn't, go to the DLC circuit troubleshooting.
4. Jump the SCS line with the HDS.
5. Turn the ignition switch to LOCK (0).

---

6. Remove the ECM/PCM cover (A).

---

7. Remove the battery setting plate, and reposition the battery (D) away from the ECM/PCM.
   NOTE: Do not disconnect the battery terminals.
8. Remove the bolts (E).
9. Disconnect ECM/PCM connectors A, B, and C, then remove the ECM/PCM (E).
   NOTE: ECM/PCM connectors A, B, and C have symbols (A=□, B=△, C=○) embossed on them for identification.
10. Install a parts in the reverse order of removal.
11. Turn the ignition switch to ON (II).
    NOTE: DTC P0630 ‘‘VIN Not Programmed or Mismatch" may be stored because the VIN has not been programmed into the ECM/PCM; ignore it, and continue this procedure.
12. Manually input the VIN to the ECM/PCM with the HDS.
13. Select the IMMOBI SYSTEM with the HDS.
14. Enter the immobilizer code using the ECM/PCM replacement procedure in the HDS; it allows you to start the engine.
15. Select PGM-FI system and reset the ECM/PCM with the HDS.
16. Update the ECM/PCM if it does not have the latest software.
17. Do the ECM/PCM idle learn procedure.
18. Do the CKP pattern learn procedure.



ECM/PCM Update

Special Tools Required

- Honda diagnostic system (HDS)
- Honda interface module (HIM)
- HDS pocket tester

NOTE:

- Use this procedure when you need to update the ECM/PCM at anytime.
- Make sure the HDS/HIM has the latest software version.
- Before you update the ECM/PCM, make sure the battery in the vehicle is fully charged, and connect a jumper battery (not a battery charger) to maintain system voltage.
- Never turn the ignition switch to LOCK (0) or ACC (I) during the update. If there is a problem with the update, leave the ignition switch to ON.
- To prevent ECM/PCM damage, do not operate anything electrical (headlights, audio system, brakes, A/C, power windows, moonroof (if equipped), door locks, etc.) during the update.
- To ensure the latest program is installed, do an ECM/PCM update whenever the ECM/PCM is substituted or replaced.
- You cannot update an ECM/PCM with a program it already has. It will only accept a new program.
- High temperature in the engine compartment might cause the ECM/PCM to become too hot to run the update. If the engine has been running before this procedure, open the hood and cool the engine compartment.
- If you need to diagnose the Honda interface module (HIM) because the HIM's red (#3) light came on or was flashing during the update, leave the ignition switch in the ON (II) position when you disconnect the HIM from the data link connector (DLC). This will prevent ECM/PCM damage.

1. Turn the ignition switch to ON (II), but do not start the engine.
2. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
3. Make sure the HDS communicates with the ECM/PCM and other vehicle systems. If it doesn't, go to the DLC circuit troubleshooting.
4. Exit the HDS diagnostic system, then select the update mode, and follow the screen prompts to update the ECM/PCM.
5. If the software in the ECM/PCM is the latest, disconnect the HDS/HIM from the DLC, and go back to the procedure that you were doing. If the software in the ECM/PCM is not the latest, follow the instructions on the screen. If prompted to choose the PGM-FI system or the A/T system (A/T), make sure you update both.
   NOTE: If the ECM/PCM update system requires you to cool the ECM/PCM, follow the instructions on screen. If you run into a problem during the update procedure (programming takes over 15 minutes, status bar goes over 100 %, D (A/T) or immobilizer indicator flashes, HDS tablet freezes, etc.), follow these steps to minimize the chance of damaging the ECM/PCM:
   - Leave the ignition switch in the ON (II) position.
   - Connect a jumper battery (do not connect a battery charger).
   - Shut down the HDS.
   - Disconnect the HDS from the DLC.
   - Reboot the HDS.
   - Reconnect the HDS to the DLC, and try the update procedure again.
6. Do the ECM/PCM idle learn procedure.
7. Do the CKP learn procedure.

DTC Troubleshooting: P0102 (50)

DTC P0102:
MAF Sensor Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II), and wait 2 seconds.
2. Check the MAF SENSOR in the DATA LIST with the HDS.

   Is about 0 gm/s, or 0.1 V or less indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAF sensor and the ECM/PCM.■
3. Check the No. 12 ALTERNATOR (10 A) fuse in the under-dash fuse/relay box.

   Is the fuse OK?
   YES - Go to Step 4 .
   NO - Repair short in the wire between the MAF sensor and the No. 12 ALTERNATOR (10 A) fuse. Also replace the No. 12 ALTERNATOR (10 A) fuse, then go to Step 20 .
4. Turn the ignition switch to LOCK (0).
5. Disconnect the MAF sensor/IAT sensor 5P connector.
6. Turn the ignition switch to ON (II).
7. Measure the voltage between MAF sensor/IAT sensor 5P connector terminal No. 5 and body ground.

   Is there battery voltage?
   YES - Go to Step 8 .
   NO - Repair open in the wire between the No. 12 ALTERNATOR (10 A) fuse and the MAF sensor, then go to Step 20 .
8. Turn the ignition switch to LOCK (0).

---

9. Measure the resistance between MAF sensor/IAT sensor 5P connector terminal No. 3 and body ground.

   Is there 190−210 kΩ?
   YES - Go to Step 14 .
   NO - Go to Step 10 .
10. Jump the SCS line with the HDS.
11. Disconnect ECM/PCM connector B (49P).

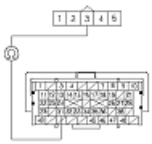
---

12. Check for continuity between ECM/PCM connector terminal B31 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM/PCM (B31) and the MAF sensor, then go to Step 21 .
    NO - Go to Step 13 .

---

13. Check for continuity between MAF sensor/IAT sensor 5P connector terminal No. 3 and ECM/PCM connector terminal B31.



Is there continuity?
YES - Go to Step 26 .
NO - Repair open in the wire between the ECM/PCM (B31) and the MAF sensor, then go to Step 21 .

14. Substitute a known-good MAF sensor/IAT sensor.
15. Reconnect all connectors.
16. Turn the ignition switch to ON (II).
17. Clear the DTC with the HDS.
18. Start the engine. Hold the engine speed at 2,000 rpm (min^{-1}) without load (A/T in P or N, M/T in neutral).
19. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0102 indicated?
YES - Go to Step 27 .
NO - Replace the original MAF sensor/IAT sensor, then go to Step 20 .

20. Turn the ignition switch to LOCK (0).
21. Reconnect all connectors.
22. Turn the ignition switch to ON (II).
23. Reset the ECM/PCM with the HDS.
24. Do the ECM/PCM idle learn procedure.
25. Check for Temporary DTCs or DTCs with the HDS.

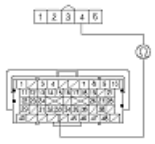
Is DTC P0102 indicated?
YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

26. Reconnect all connectors.
27. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
28. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0102 indicated?
YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0103 (50)

DTC P0103:
MAF Sensor Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.



1. Turn the ignition switch to ON (II), and wait 2 seconds.
2. Check the MAF SENSOR in the DATA LIST with the HDS.

   Is about 202 gm/s, or 4.89 V or more indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAF sensor and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Jump the SCS line with the HDS.
5. Disconnect the MAF sensor/IAT sensor 5P connector.
6. Disconnect ECM/PCM connector B (49P).
7. Check for continuity between MAF sensor/IAT sensor 5P connector terminal No. 4 and ECM/PCM connector terminal B33.

   Is there continuity?
   YES - Go to Step 8 .
   NO - Repair open in the wire between the ECM/PCM (B33) and the MAF sensor, then go to Step 15 .
8. Reconnect ECM/PCM connector B (49P).

---

9. Connect MAF sensor/IAT sensor 5P connector terminals No. 3 and No. 4 with a jumper wire.
10. Turn the ignition switch to ON (II).

11. Clear the DTC with the HDS.
12. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0103 indicated?
    YES - Go to Step 20 .
    NO - Go to Step 13 .
13. Turn the ignition switch to LOCK (0).
14. Replace the MAF sensor/IAT sensor.
15. Reconnect all connectors.
16. Turn the ignition switch to ON (II).
17. Reset the ECM/PCM with the HDS.
18. Do the ECM/PCM idle learn procedure.
19. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0103 indicated?
    YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the ECM/PCM, then go to Step 1 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■
20. Reconnect all connectors.
21. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
22. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0103 indicated?
    YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0107 (3)

DTC P0107:
MAP Sensor Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check the MAP SENSOR in the DATA LIST with the HDS.

   Is about 3 kPa (26 mmHg, 1.0 in.Hg), or 0.23 V or less indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAP sensor and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the MAP sensor 3P connector.
5. Turn the ignition switch to ON (II).
6. Check the MAP SENSOR in the DATA LIST with the HDS.

   Is about 3 kPa (26 mmHg, 1.0 in.Hg), or 0.23 V or less indicated?
   YES - Go to Step 12 .
   NO - Go to Step 7 .
7. Measure the voltage between MAP sensor 3P connector terminals No. 1 and No. 3.

   Is there about 5 V?
   YES - Go to Step 16 .
   NO - Go to Step 8 .
8. Turn the ignition switch to LOCK (0).
9. Jump the SCS line with the HDS.
10. Disconnect ECM/PCM connector C (49P).

---

11. Check for continuity between ECM/PCM connector terminal C13 and MAP sensor 3P connector terminal No. 1.

    
    Is there continuity?
    YES - Go to Step 23 .
    NO - Repair open in the wire between the ECM/PCM (C13) and the MAP sensor, then go to Step 18 .
12. Turn the ignition switch to LOCK (0).
13. Jump the SCS line with the HDS.
14. Disconnect ECM/PCM connector C (49P).

15. Check for continuity between MAP sensor 3P connector terminal No. 2 and body ground.

Is there continuity?

YES - Repair short in the wire between the ECM/PCM (C11) and the MAP sensor, then go to Step 18 .

NO - Go to Step 23 .

16. Turn the ignition switch to LOCK (0).
17. Replace the MAP sensor.
18. Reconnect all connectors.
19. Turn the ignition switch to ON (II).
20. Reset the ECM/PCM with the HDS.
21. Do the ECM/PCM idle learn procedure.
22. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0107 indicated?

YES - Check for poor connections or loose terminals at the MAP sensor and the ECM/PCM, then go to Step 1 .

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

23. Reconnect all connectors.
24. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
25. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0107 indicated?

YES - Check for poor connections or loose terminals at the MAP sensor and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .

NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0108 (3)

DTC P0108:
MAP Sensor Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check the MAP SENSOR in the DATA LIST with the HDS.

   Is about 160 kPa (1,197 mmHg, 47.1 in.Hg), or 4.49 V or more indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAP sensor and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the MAP sensor 3P connector.
5. Connect MAP sensor 3P connector terminals No. 2 and No. 3 with a jumper wire.
6. Turn the ignition switch to ON (II).
7. Check the MAP SENSOR in the DATA LIST with the HDS.

   Is about 160 kPa (1,197 mmHg, 47.1 in.Hg), or 4.49 V or more indicated?
   YES - Go to Step 8 .
   NO - Go to Step 20 .
8. Turn the ignition switch to LOCK (0).
9. Remove the jumper wire from the MAP sensor 3P connector.
10. Turn the ignition switch to ON (II).

---

11. Measure the voltage between MAP sensor 3P connector terminals No. 1 and No. 3.

    Is there about 5 V?
    YES - Go to Step 16 .
    NO - Go to Step 12 .
12. Turn the ignition switch to LOCK (0).
13. Jump the SCS line with the HDS.
14. Disconnect ECM/PCM connector C (49P).

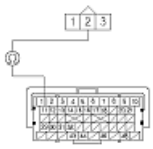
---

15. Check for continuity between ECM/PCM connector terminal C14 and MAP sensor 3P connector terminal No. 3.

    Is there continuity?
    YES - Go to Step 27 .
    NO - Repair open in the wire between the ECM/PCM (C14) and the MAP sensor, then go to Step 22 .
16. Turn the ignition switch to LOCK (0).
17. Jump the SCS line with the HDS.
18. Disconnect ECM/PCM connector C (49P).

---

19. Check for continuity between ECM/PCM connector terminal C11 and MAP sensor 3P connector terminal No. 2.



Is there continuity?
YES - Go to Step 27 .
NO - Repair open in the wire between the ECM/PCM (C11) and the MAP sensor, then go to Step 22 .

20. Turn the ignition switch to LOCK (0).
21. Replace the MAP sensor.
22. Reconnect all connectors.
23. Turn the ignition switch to ON (II).
24. Reset the ECM/PCM with the HDS.
25. Do the ECM/PCM idle learn procedure.
26. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0108 indicated?
YES - Check for poor connections or loose terminals at the MAP sensor and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

27. Reconnect all connectors.
28. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0108 indicated?
YES - Check for poor connections or loose terminals at the MAP sensor and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0112 (10)

DTC P0112:
IAT Sensor Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check the IAT SENSOR in the DATA LIST with the HDS.

   Is about 180 °C (356 °F) or more, or 0.08 V or less indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the IAT sensor and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the MAF sensor/IAT sensor 5P connector.
5. Turn the ignition switch to ON (II).
6. Check the IAT SENSOR in the DATA LIST with the HDS.

   Is about 180 °C (356 °F) or more, or 0.08 V or less indicated?
   YES - Go to Step 7 .
   NO - Go to Step 11 .
7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector B (49P).
10. Check for continuity between MAF sensor/IAT sensor 5P connector terminal No. 2 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the IAT sensor and the ECM/PCM (B32), then go to Step 13 .
    NO - Go to Step 18 .
11. Turn the ignition switch to LOCK (0).
12. Replace the MAF sensor/IAT sensor.
13. Reconnect all connectors.
14. Turn the ignition switch to ON (II).
15. Reset the ECM/PCM with the HDS.
16. Do the ECM/PCM idle learn procedure.
17. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0112 indicated?
    YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the ECM/PCM, then go to Step 1 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■
18. Reconnect all connectors.
19. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
20. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0112 indicated?
    YES - Check for poor connections or loose terminals at the IAT sensor and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0113 (10)

DTC P0113:
IAT Sensor Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check the IAT SENSOR in the DATA LIST with the HDS.

   Is about −40 °C (−40 °F) or less, or 4.90 V or higher indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the IAT sensor and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the MAF sensor/IAT sensor 5P connector.
5. Connect MAF sensor/IAT sensor 5P connector terminals No. 1 and No. 2 with a jumper wire.
6. Turn the ignition switch to ON (II).
7. Check the IAT SENSOR in the DATA LIST with the HDS.

   Is about −40 °C (−40 °F) or less, or 4.90 V or higher indicated?
   YES - Go to Step 8 .
   NO - Go to Step 20 .
8. Turn the ignition switch to LOCK (0).
9. Remove the jumper wire from the MAF sensor/IAT sensor 5P connector.
10. Turn the ignition switch to ON (II).

---

11. Measure the voltage between MAF sensor/IAT sensor 5P connector terminal No. 2 and body ground.

    Is there about 5 V?
    YES - Go to Step 12 .
    NO - Go to Step 16 .
12. Turn the ignition switch to LOCK (0).
13. Jump the SCS line with the HDS.
14. Disconnect ECM/PCM connector B (49P).

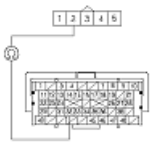
---

15. Check for continuity between MAF sensor/IAT sensor 5P connector terminal No. 1 and ECM/PCM connector terminal B34.

    Is there continuity?
    YES - Go to Step 27 .
    NO - Repair open in the wire between the ECM/PCM (B34) and the IAT sensor, then go to Step 22 .
16. Turn the ignition switch to LOCK (0).
17. Jump the SCS line with the HDS.
18. Disconnect ECM/PCM connector B (49P).

---

19. Check for continuity between MAF sensor/IAT sensor 5P connector terminal No. 2 and ECM/PCM connector terminal B32.



Is there continuity?

YES - Go to Step 27 .

NO - Repair open in the wire between the ECM/PCM (B32) and the IAT sensor, then go to Step 22 .

20. Turn the ignition switch to LOCK (0).
21. Replace the MAF sensor/IAT sensor.
22. Reconnect all connectors.
23. Turn the ignition switch to ON (II).
24. Reset the ECM/PCM with the HDS.
25. Do the ECM/PCM idle learn procedure.
26. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0113 indicated?

YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the ECM/PCM, then go to Step 1 .

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

27. Reconnect all connectors.
28. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0113 indicated?

YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .

NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0117 (6)

DTC P0117:
ECT Sensor 1 Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check ECT SENSOR 1 in the DATA LIST with the HDS.

   Is about 180 °C (356 °F) or more, or 0.08 V or less indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1 and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the ECT sensor 1 2P connector.
5. Turn the ignition switch to ON (II).
6. Check ECT SENSOR 1 in the DATA LIST with the HDS.

   Is about 180 °C (356 °F) or more, or 0.08 V or less indicated?
   YES - Go to Step 7 .
   NO - Go to Step 11 .
7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector B (49P).
10. Check for continuity between ECT sensor 1 2P connector terminal No. 1 and body ground.

    Is there continuity?
    YES - Repair short in the wire between ECT sensor 1 and the ECM/PCM (B24), then go to Step 13 .
    NO - Go to Step 18 .
11. Turn the ignition switch to LOCK (0).
12. Replace ECT sensor 1.
13. Reconnect all connectors.
14. Turn the ignition switch to ON (II).
15. Reset the ECM/PCM with the HDS.
16. Do the ECM/PCM idle learn procedure.
17. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0117 indicated?
    YES - Check for poor connections or loose terminals at ECT sensor 1 and the ECM/PCM, then go to Step 1 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■
18. Reconnect all connectors.
19. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
20. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0117 indicated?
    YES - Check for poor connections or loose terminals at ECT sensor 1 and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0118 (6)

DTC P0118:
ECT Sensor 1 Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check ECT SENSOR 1 in the DATA LIST with the HDS.

   Is about −40 °C (−40 °F) or less, or 4.90 V or higher indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1 and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the ECT sensor 1 2P connector.
5. Connect ECT sensor 1 2P connector terminals No. 1 and No. 2 with a jumper wire.
6. Turn the ignition switch to ON (II).
7. Check ECT SENSOR 1 in the DATA LIST with the HDS.

   Is about −40 °C (−40 °F) or less, or 4.90 V or higher indicated?
   YES - Go to Step 8 .
   NO - Go to Step 20 .
8. Turn the ignition switch to LOCK (0).
9. Remove the jumper wire from ECT sensor 1 2P connector.
10. Turn the ignition switch to ON (II).

---

11. Measure the voltage between ECT sensor 1 2P connector terminal No. 1 and body ground.

    Is there about 5 V?
    YES - Go to Step 12 .
    NO - Go to Step 16 .
12. Turn the ignition switch to LOCK (0).
13. Jump the SCS line with the HDS.
14. Disconnect ECM/PCM connector B (49P).

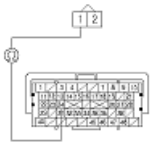
---

15. Check for continuity between ECT sensor 1 2P connector terminal No. 2 and ECM/PCM connector terminal B34.

    Is there continuity?
    YES - Go to Step 27 .
    NO - Repair open in the wire between the ECM/PCM (B34) and ECT sensor 1, then go to Step 22 .
16. Turn the ignition switch to LOCK (0).
17. Jump the SCS line with the HDS.
18. Disconnect ECM/PCM connector B (49P).

---

19. Check for continuity between ECT sensor 1 2P connector terminal No. 1 and ECM/PCM connector terminal B24.



Is there continuity?
YES - Go to Step 27 .
NO - Repair open in the wire between the ECM/PCM (B24) and ECT sensor 1, then go to Step 22 .

20. Turn the ignition switch to LOCK (0).
21. Replace ECT sensor 1.
22. Reconnect all connectors.
23. Turn the ignition switch to ON (II).
24. Reset the ECM/PCM with the HDS.
25. Do the ECM/PCM idle learn procedure.
26. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0118 indicated?
YES - Check for poor connections or loose terminals at ECT sensor 1 and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

27. Reconnect all connectors.
28. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0118 indicated?
YES - Check for poor connections or loose terminals at ECT sensor 1 and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0122 (7)

DTC P0122:
TP Sensor A Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Check TP SENSOR A in the DATA LIST with the HDS.

   Is there about 0.3 V or less?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the ECM/PCM.■
4. Check for Temporary DTCs or DTCs with the HDS.

   Are DTC P0122 and P0222 indicated at the same time?
   YES - Go to Step 10 .
   NO - Go to Step 5 .
5. Turn the ignition switch to LOCK (0).
6. Disconnect the throttle body 6P connector.
7. Jump the SCS line with the HDS.
8. Disconnect ECM/PCM connector C (49P).
9. Check for continuity between throttle body 6P connector terminal No. 1 and body ground.

   Is there continuity?
   YES - Repair short in the wire between the throttle body and the ECM/PCM (C20), then go to Step 18 .
   NO - Go to Step 23 .

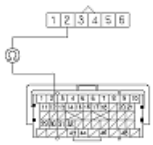
---

10. Measure the voltage between throttle body 6P connector terminal No. 2 and body ground.

    Is there about 5 V?
    YES - Go to Step 16 .
    NO - Go to Step 11 .
11. Turn the ignition switch to LOCK (0).
12. Jump the SCS line with the HDS.
13. Disconnect ECM/PCM connector C (49P).
14. Disconnect the throttle body 6P connector.

---

15. Check for continuity between ECM/PCM connector terminal C12 and throttle body 6P connector terminal No. 2.



Is there continuity?
YES - Go to Step 23 .
NO - Repair open in the wire between the throttle body and the ECM/PCM (C12), then go to Step 18 .

16. Turn the ignition switch to LOCK (0).
17. Replace the throttle body.
18. Reconnect all connectors.
19. Turn the ignition switch to ON (II).
20. Reset the ECM/PCM with the HDS.
21. Do the ECM/PCM idle learn procedure.
22. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0122 indicated?
YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

23. Reconnect all connectors.
24. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
25. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0122 indicated?
YES - Check for poor connections or loose terminals at TP sensor A and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0123 (7)

DTC P0123:
TP Sensor A Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Check TP SENSOR A in the DATA LIST with the HDS.

   Is there about 4.8 V or more?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the ECM/PCM.■
4. Check for Temporary DTCs or DTCs with the HDS.

   Are DTC P0123 and P0223 indicated at the same time?
   YES - Go to Step 13 .
   NO - Go to Step 5 .
5. Turn the ignition switch to LOCK (0).
6. Disconnect the throttle body 6P connector.
7. Turn the ignition switch to ON (II).
8. Measure the voltage between throttle body 6P connector terminal No. 1 and body ground.

   Is there about 5 V?
   YES - Go to Step 18 .
   NO - Go to Step 9 .
9. Turn the ignition switch to LOCK (0).
10. Jump the SCS line with the HDS.
11. Disconnect ECM/PCM connector C (49P).

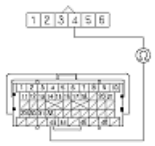
---

12. Check for continuity between ECM/PCM connector terminal C20 and throttle body 6P connector terminal No. 1.

    Is there continuity?
    YES - Go to Step 25 .
    NO - Repair open in the wire between the throttle body and the ECM/PCM (C20), then go to Step 20 .
13. Turn the ignition switch to LOCK (0).
14. Disconnect the throttle body 6P connector.
15. Jump the SCS line with the HDS.
16. Disconnect ECM/PCM connector C (49P).

---

17. Check for continuity between ECM/PCM connector terminal C43 and throttle body 6P connector terminal No. 4.



Is there continuity?
YES - Go to Step 25 .
NO - Repair open in the wire between the throttle body and the ECM/PCM (C43), then go to Step 20 .

18. Turn the ignition switch to LOCK (0).

19. Replace the throttle body.

20. Reconnect all connectors.

21. Turn the ignition switch to ON (II).

22. Reset the ECM/PCM with the HDS.

23. Do the ECM/PCM idle learn procedure.

24. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0123 indicated?
YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

25. Reconnect all connectors.

26. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.

27. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0123 indicated?
YES - Check for poor connections or loose terminals at TP sensor A and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0125 (86)

DTC P0125:
ECT Sensor 1 Malfunction/Slow Response
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Start the engine, and let it idle for 5 minutes or more.
2. Check the ECT SENSOR 1 in the DATA LIST with the HDS.

   Is about −18 °C (0 °F) or less indicated?
   YES - Check for poor connection or loose terminals at ECT SENSOR 1, ECT SENSOR 2, and the ECM/PCM. If they are OK, replace ECT SENSOR 1.
   NO - Go to Step 3 .
3. Turn the ignition switch to LOCK (0).
4. Allow the engine to cool 40 °C (104 °F) or less.
5. Make sure the temperature difference of ECT SENSOR 1 and ECT SENSOR 2 is between about 10 °C (50 °F) in the DATA LIST with the HDS.
6. Start the engine, and let it idle until ECT sensor 1goes up around 70 °C (158 °F).

   Dose ECT sensor 2 also show about 70 °C (158 °F)?
   YES - Go to Step 7 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the ECM/PCM.■
7. Check the thermostat.

   Is the thermostat OK?
   YES - Check for poor connection or loose terminals at ECT SENSOR1, ECT SENSOR 2, and the ECM/PCM. If they are OK, replace ECT SENSOR 1, then go to Step 8 .
   NO - Replace the thermostat, then go to Step 8 .
8. Turn the ignition switch to LOCK (0).
9. Allow the engine to cool 40 °C (104 °F) or less.
10. Check the temperature difference of ECT SENSOR 1 and ECT SENSOR 2 is between about 10 °C (50 °F) in the DATA LIST with the HDS.
11. Start the engine, and let it idle until ECT sensor 1goes up around 70 °C (158 °F).

    Dose ECT sensor 2 also show about 70 °C (158 °F)?
    YES - Go to Step 1 and recheck.
    NO - Troubleshooting is complete.■

DTC Troubleshooting: P0133 (61)

DTC P0133:
A/F Sensor (Sensor 1) Responce Malfunction/Slow Response
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm (min^{-1}) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.
4. Test-drive under these conditions:
   - Engine coolant temperature (ECT SENSOR 1) above 70 °C (158 °F)
   - A/T in D, M/T in 3rd or 4th
   - Drive the vehicle at 40 km/h (25 mph) or less for 5 minutes, then drive at a steady speed about 52 km/h (32 mph) or more
5. Monitor the OBD STATUS for DTC P0133 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?
   YES - Go to Step 6 .
   NO - If the screen indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION or NOT COMPLETED, go to Step 3 and recheck.
6. Turn the ignition switch to LOCK (0).
7. Replace the A/F sensor (Sensor 1).
8. Turn the ignition switch to ON (II).
9. Reset the ECM/PCM with the HDS.
10. Do the ECM/PCM idle learn procedure.
11. Start the engine. Hold the engine speed at 3,000 rpm (min^{-1}) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.
12. Test-drive under these conditions:
    - Engine coolant temperature (ECT SENSOR 1) above 70 °C (158 °F)
    - A/T in D, M/T in 3rd or 4th
    - Drive the vehicle at 40 km/h (25 mph) or less for 5 minutes, then drive at a steady speed about 52 km/h (32 mph) or more
13. Check for Temporary DTCs or DTCs with the HDS.

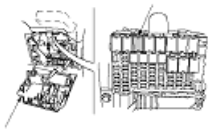
    Is DTC P0133 indicated?
    YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to Step 1 .
    NO - Go to Step 14 .
14. Monitor the OBD STATUS for DTC P0133 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?
    YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 13 , go to the indicated DTC's troubleshooting.■
    NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to Step 1 . If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION or NOT COMPLETED, go to Step 11 .

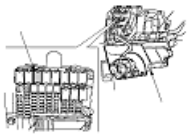
DTC Troubleshooting: P0135 (41)

DTC P0135:
A/F Sensor (Sensor 1) Heater Circuit Malfunction
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

RHD model



LHD model



1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm (min $^{-1}$) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0135 indicated?
   YES - Go to Step 5.
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1), A/F sensor relay, and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Check the No. 26 A/F SENSOR (10A) fuse in the under-dash fuse/relay box.

   Is the fuse OK?
   YES - Go to Step 7.
   NO - Go to Step 21.
7. Open the fuse lid (A), then remove the A/F sensor relay (B) from the under-dash fuse/relay box.
8. Test the A/F sensor relay.

   Is the A/F sensor relay OK?
   YES - Go to Step 9.
   NO - Replace the A/F sensor relay, then go to Step 25.
9. Disconnect the A/F sensor (Sensor 1) 4P connector.

---

10. At sensor side, measure the resistance between A/F sensor (Sensor 1) 4P connector terminals No. 3 and No. 4.

    Is there 1.9–2.7 Ω at room temperature?
    YES - Go to Step 11.
    NO - Go to Step 24.

---

11. At sensor side, check for continuity between A/F sensor (Sensor 1) 4P connector terminals No. 2 and No. 3, and between terminals No. 2 and No. 4 individually.

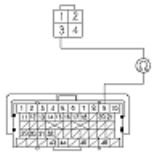
    Is there continuity?
    YES - Go to Step 24.
    NO - Go to Step 12.

12. Jump the SCS line with the HDS.
13. Disconnect ECM/PCM connector C (49P).

---

14. Check for continuity between A/F sensor (Sensor 1) 4P connector terminal No. 3 and ECM/PCM connector terminal C9.

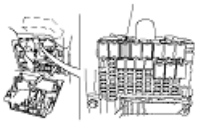
    Is there continuity?
    YES - Go to Step 15.
    NO - Repair open in the wire between the ECM/PCM (C9) and the A/F sensor (Sensor 1), then go to Step 25.



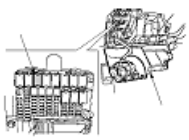
---

15. Open the fuse lid (A), then remove the A/F sensor relay (B) from the under-dash fuse/relay box.

RHD model



LHD model



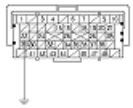
16. Connect A/F sensor (Sensor 1) 4P connector terminal No. 4 to body ground with a jumper wire.

17. Check for continuity between A/F sensor relay 4P connector terminal No. 1 and body ground.

Is there continuity?
YES - Go to Step 18 .
NO - Repair open in the wire between the A/F sensor (Sensor 1) and the A/F sensor relay, then go to Step 25 .

18. Disconnect ECM/PCM connector A (49P).

19. Connect ECM/PCM connector terminal A22 to body ground with a jumper wire.

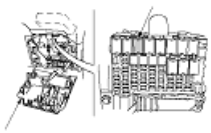


20. Check for continuity between A/F sensor relay 4P connector terminal No. 3 and body ground.

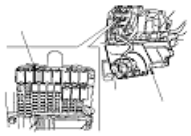
Is there continuity?
YES - Go to Step 31 .
NO - Repair open in the wire between the ECM/PCM (A22) and the A/F sensor relay, then go to Step 25 .

21. Open the fuse lid (A), then remove the A/F sensor relay (B) from the under-dash fuse/relay box.
22. Disconnect the A/F sensor (Sensor 1) 4P connector.

RHD model



LHD model



23. Check for continuity between A/F sensor (Sensor 1) 4P connector terminal No. 4 and body ground.

Is there continuity?

YES - Repair short in the wire between the A/F sensor relay and the A/F sensor (Sensor 1). Also replace the No. 26 A/F SENSOR (10 A) fuse, then go to Step 25 .

NO - Replace the under-dash fuse/relay box, then go to Step 25 .

24. Replace the A/F sensor (Sensor 1).

25. Reconnect all connectors.

26. Turn the ignition switch to ON (II).

27. Reset the ECM/PCM with the HDS.

28. Do the ECM/PCM idle learn procedure.

29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0135 indicated?

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1), A/F sensor relay, and the ECM/PCM, then go to Step 1 .

NO - Go to Step 30 .

30. Monitor the OBD STATUS for DTC P0135 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 26 , go to the indicated DTC's troubleshooting.■

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1), A/F sensor relay, and the ECM/PCM, then go to Step 1 . If the screen indicates NOT COMPLETED, go to Step 28 .

31. Reconnect all connectors.

32. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.

33. Start the engine.

34. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0135 indicated?

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1), A/F sensor relay, and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 33 . If the ECM/PCM was substituted, go to Step 1 .

NO - Go to Step 35 .

35. Monitor the OBD STATUS for DTC P0135 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 34 , go to the indicated DTC's troubleshooting.■

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1), PGM-FI subrelay, and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 30 . If the ECM/PCM was substituted, go to Step 1 . If the screen indicates NOT COMPLETED, keep idling until a result comes on.

DTC Troubleshooting: P0137 (63)

DTC P0137:
Secondary HO2S (Sensor 2) Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, and let it idle without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
4. Check the HO2S S2 in the DATA LIST with the HDS.

   Does the voltage stay at 0.05 V or less?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Disconnect the secondary HO2S (Sensor 2) 4P connector.
7. Turn the ignition switch to ON (II).
8. Check the HO2S S2 in the DATA LIST with the HDS.

   Does the voltage stay at 0.05 V or less?
   YES - Go to Step 9 .
   NO - Go to Step 14 .
9. Turn the ignition switch to LOCK (0).
10. Remove the cowl cover and under cowl-cover.
11. Jump the SCS line with the HDS.
12. Disconnect ECM/PCM connector B (49P).
13. Check for continuity between secondary HO2S (Sensor 2) 4P connector terminal No. 2 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM/PCM (B36) and the secondary HO2S (Sensor 2), then go to Step 16 .
    NO - Go to Step 24 .
14. Turn the ignition switch to LOCK (0).
15. Replace the secondary HO2S (Sensor 2).
16. Reconnect all connectors.
17. Turn the ignition switch to ON (II).
18. Reset the ECM/PCM with the HDS.
19. Do the ECM/PCM idle learn procedure.
20. Start the engine, and let it idle without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
21. Test-drive under these conditions:
    - Engine coolant temperature (ECT SENSOR 1) above 70 °C (158 °F)
    - A/T in D (M/T in 4th gear)
    - Engine speed between 1,500–3,000 rpm (min^{-1})
    - Drive about 1 minute or more
22. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0137 indicated?
    YES - Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to Step 1 .
    NO - Go to Step 23 .
23. Monitor the OBD STATUS for DTC P0137 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?
    YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 22 , go to the indicated DTC's troubleshooting.■
    NO - If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to Step 1 . If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION or NOT COMPLETED, go to Step 20 .
24. Reconnect all connectors.

25. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.

26. Start the engine, and let it idle without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.

27. Test-drive under these conditions:
    - Engine coolant temperature (ECT SENSOR 1) above 70 °C (158 °F)
    - A/T in D (M/T in 4th gear)
    - Engine speed between 1,500−3,000 rpm (min^{-1})
    - Drive 1 minute or more

28. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0137 indicated?

    YES - Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 26. If the ECM/PCM was substituted, go to Step 1.

    NO - Go to Step 29.

29. Monitor the OBD STATUS for DTC P0137 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 28, go to the indicated DTC's troubleshooting.■

    NO - If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 26. If the ECM/PCM was substituted, go to Step 1. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION or NOT COMPLETED, go to Step 26.

DTC Troubleshooting: P0138 (63)

DTC P0138:
Secondary HO2S (Sensor 2) Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, and let it idle without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
4. Check the HO2S S2 in the DATA LIST with the HDS.

   Does the voltage stay at 1.27 V or more?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Remove the cowl cover and under cowl-cover.
7. Disconnect the secondary HO2S (Sensor 2) 4P connector.
8. Connect secondary HO2S (Sensor 2) 4P connector terminals No. 1 and No. 2 with a jumper wire.
9. Turn the ignition switch to ON (II).
10. Check the HO2S S2 in the DATA LIST with the HDS.

    Does the voltage stay at 1.27 V or more?
    YES - Go to Step 11 .
    NO - Go to Step 20 .
11. Turn the ignition switch to LOCK (0).
12. Remove the jumper wire from the secondary HO2S (Sensor 2) 4P connector.

---

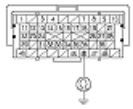
13. Connect secondary HO2S (Sensor 2) 4P connector terminal No. 2 to body ground with a jumper wire.
14. Turn the ignition switch to ON (II).

15. Check the HO2S S2 in the DATA LIST with the HDS.

    Does the voltage stay at 1.27 V or more?
    YES - Go to Step 16 .
    NO - Repair open in the wire between the ECM/PCM (B34) and the secondary HO2S (Sensor 2), then go to Step 22 .
16. Turn the ignition switch to LOCK (0).
17. Jump the SCS line with the HDS.
18. Disconnect ECM/PCM connector B (49P).

---

19. Check for continuity between ECM/PCM connector terminal B36 and body ground.



Is there continuity?

YES - Go to Step 30 .

NO - Repair open in the wire between the ECM/PCM (B36) and the secondary HO2S (Sensor 2), then go to Step 22 .

20. Turn the ignition switch to LOCK (0).
21. Replace the secondary HO2S (Sensor 2).
22. Reconnect all connectors.
23. Turn the ignition switch to ON (II).
24. Reset the ECM/PCM with the HDS.
25. Do the ECM/PCM idle learn procedure.
26. Start the engine, and let it idle without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
27. Test-drive under these conditions:
    - Engine coolant temperature (ECT SENSOR 1) above 70 °C (158 °F)
    - A/T in D (M/T in 4th gear)
    - Engine speed between 1,500−3,000 rpm (min $^{-1}$)
    - Drive about 1 minute or more
28. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0138 indicated?

YES - Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to Step 1 .

NO - Go to Step 29 .

29. Monitor the OBD STATUS for DTC P0138 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 28 , go to the indicated DTC's troubleshooting.■

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to Step 1 . If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION or NOT COMPLETED, go to Step 26 .

30. Reconnect all connectors.
31. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
32. Start the engine, and let it idle without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
33. Test-drive under these conditions:
    - Engine coolant temperature (ECT SENSOR 1) above 70 °C (158 °F)
    - A/T in D (M/T in 4th gear)
    - Engine speed between 1,500−3,000 rpm (min $^{-1}$)
    - Drive about 1 minute or more
34. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0138 indicated?

YES - Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 32 . If the ECM/PCM was substituted, go to Step 1 .

NO - Go to Step 35 .

35. Monitor the OBD STATUS for DTC P0138 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 34 , go to the indicated DTC's troubleshooting.■

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 32 . If the ECM/PCM was substituted, go to Step 1 . If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION or NOT COMPLETED, go to Step 30 .

DTC Troubleshooting: P0139 (63)

DTC P0139:
Secondary HO2S (Sensor 2) Slow Response
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, and let it idle without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
4. Test-drive under these conditions:
   - Engine coolant temperature (ECT SENSOR 1) above 70 °C (158 °F)
   - A/T in D, M/T in 4th
   - Drive at a steady speed between 88−120 km/h (55−75 mph) for 1 minute, then decelerate (with throttle fully closed) for 10 seconds
5. Monitor the OBD STATUS for DTC P0139 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?
   YES - Go to Step 6 .
   NO - If the screen indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION or NOT COMPLETED, go to Step 3 and recheck.
6. Turn the ignition switch to LOCK (0).
7. Replace the secondary HO2S (Sensor 2).
8. Turn the ignition switch to ON (II).
9. Reset the ECM/PCM with the HDS.
10. Do the ECM/PCM idle learn procedure.
11. Start the engine, and let it idle without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
12. Test-drive under these conditions:
    - Engine coolant temperature (ECT SENSOR 1) above 70 °C (158 °F)
    - A/T in D, M/T in 4th
    - Drive at a steady speed between 88−120 km/h (55−75 mph) for 1 minute, then decelerate (with throttle fully closed) for 10 seconds
13. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0139 indicated?
    YES - Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to Step 1 .
    NO - Go to Step 14 .
14. Monitor the OBD STATUS for DTC P0139 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?
    YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 13 , go to the indicated DTC's troubleshooting.■
    NO - If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to Step 1 . If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION or NOT COMPLETED, go to Step 11 .

DTC Troubleshooting: P0141 (65)

DTC P0141:
Secondary HO2S (Sensor 2) Heater Circuit Malfunction
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0141 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Check the No. 12 ALTERNATOR (10 A) fuse in the under-dash fuse/relay box.

   Is the fuse OK?
   YES - Go to Step 7 .
   NO - Repair short in the wire between the secondary HO2S (Sensor 2) and the No. 12 ALTERNATOR (10 A) fuse. Also replace the No. 12 ALTERNATOR (10 A) fuse, then go to Step 23 .
7. Remove the cowl cover and under cowl-cover panel.
8. Disconnect the secondary HO2S (Sensor 2) 4P connector.
9. At the secondary HO2S (Sensor 2) side, measure the resistance between secondary HO2S (Sensor 2) 4P connector terminals No. 3 and No. 4.

   Is there 5.4–7.3 Ω at room temperature?
   YES - Go to Step 10 .
   NO - Go to Step 22 .

---

10. At the secondary HO2S (Sensor 2) side, check for continuity between body ground and secondary HO2S (Sensor 2) 4P connector terminals No. 3 and No. 4 individually.

    Is there continuity?
    YES - Go to Step 22 .
    NO - Go to Step 11 .
11. Turn the ignition switch to ON (II).

---

12. Measure the voltage between secondary HO2S (Sensor 2) 4P connector terminals No. 3 and No. 4.

    Is there battery voltage?
    YES - Go to Step 13 .
    NO - Go to Step 17 .
13. Turn the ignition switch to LOCK (0).
14. Jump the SCS line with the HDS.
15. Disconnect ECM/PCM connector B (49P).

---

16. Check for continuity between ECM/PCM connector terminal B4 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM/PCM (B4) and the secondary HO2S (Sensor 2), then go to Step 23 .
    NO - Go to Step 29 .

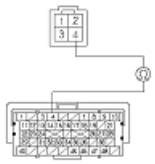
---

17. Measure the voltage between secondary HO2S (Sensor 2) 4P connector terminal No. 3 and body ground.

    Is there battery voltage?
    YES - Go to Step 18 .
    NO - Repair open in the wire between the secondary HO2S (Sensor 2) and the No. 12 ALTERNATOR (10 A) fuse, then go to Step 23 .
18. Turn the ignition switch to LOCK (0).
19. Jump the SCS line with the HDS.
20. Disconnect ECM/PCM connector B (49P).

---

21. Check for continuity between ECM/PCM connector terminal B4 and secondary HO2S (Sensor 2) 4P connector terminal No. 4.



Is there continuity?
YES - Go to Step 29 .
NO - Repair open in the wire between the ECM/PCM (B4) and the secondary HO2S (Sensor 2), then go to Step 23 .

22. Replace the secondary HO2S (Sensor 2).

23. Reconnect all connectors.

24. Turn the ignition switch to ON (II).

25. Reset the ECM/PCM with the HDS.

26. Do the ECM/PCM idle learn procedure.

27. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0141 indicated?
YES - Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to Step 1 .
NO - Go to Step 28 .

28. Monitor the OBD STATUS for DTC P0141 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 27 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to Step 1 . If the screen indicates NOT COMPLETED, keep idling until a result comes on.

29. Reconnect all connectors.

30. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.

31. Start the engine, and let it idle.

32. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0141 indicated?
YES - Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 31 . If the ECM/PCM was substituted, go to Step 1 .
NO - Go to Step 33 .

33. Monitor the OBD STATUS for DTC P0141 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 32 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 31 . If the ECM/PCM was substituted, go to Step 1 . If the screen indicates NOT COMPLETED, keep idling until a result comes on.

DTC Troubleshooting: P0222 (7)

DTC P0222:
TP Sensor B Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Check TP SENSOR B in the DATA LIST with the HDS.

   Is there about 0.3 V or less?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the ECM/PCM.■
4. Check for Temporary DTCs or DTCs with the HDS.

   Are DTC P0122 and P0222 indicated at the same time?
   YES - Go to Step 10 .
   NO - Go to Step 5 .
5. Turn the ignition switch to LOCK (0).
6. Disconnect the throttle body 6P connector.
7. Jump the SCS line with the HDS.
8. Disconnect ECM/PCM connector C (49P).
9. Check for continuity between throttle body 6P connector terminal No. 3 and body ground.

   Is there continuity?
   YES - Repair short in the wire between the throttle body and the ECM/PCM (C21), then go to Step 18 .
   NO - Go to Step 23 .

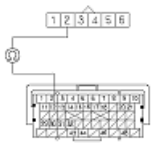
---

10. Measure the voltage between throttle body 6P connector terminal No. 2 and body ground.

    Is there about 5 V?
    YES - Go to Step 16 .
    NO - Go to Step 11 .
11. Turn the ignition switch to LOCK (0).
12. Jump the SCS line with the HDS.
13. Disconnect ECM/PCM connector C (49P).
14. Disconnect the throttle body 6P connector.

---

15. Check for continuity between ECM/PCM connector terminal C12 and throttle body 6P connector terminal No. 2.



Is there continuity?
YES - Go to Step 23 .
NO - Repair open in the wire between the throttle body and the ECM/PCM (C12), then go to Step 18 .

16. Turn the ignition switch to LOCK (0).
17. Replace the throttle body.
18. Reconnect all connectors.
19. Turn the ignition switch to ON (II).
20. Reset the ECM/PCM with the HDS.
21. Do the ECM/PCM idle learn procedure.
22. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0222 indicated?
YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

23. Reconnect all connectors.
24. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
25. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0222 indicated?
YES - Check for poor connections or loose terminals at TP sensor B and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0223 (7)

DTC P0223:
TP Sensor B Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Check TP SENSOR B in the DATA LIST with the HDS.

   Is there about 4.8 V or more?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the ECM/PCM.■
4. Check for Temporary DTCs or DTCs with the HDS.

   Are DTC P0123 and P0223 indicated at the same time?
   YES - Go to Step 13 .
   NO - Go to Step 5 .
5. Turn the ignition switch to LOCK (0).
6. Disconnect the throttle body 6P connector.
7. Turn the ignition switch to ON (II).
8. Measure the voltage between throttle body 6P connector terminal No. 3 and body ground.

   Is there about 5 V?
   YES - Go to Step 18 .
   NO - Go to Step 9 .
9. Turn the ignition switch to LOCK (0).
10. Jump the SCS line with the HDS.
11. Disconnect ECM/PCM connector C (49P).

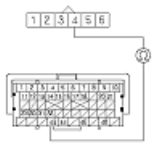
---

12. Check for continuity between ECM/PCM connector terminal C21 and throttle body 6P connector terminal No. 3.

    
    Is there continuity?
    YES - Go to Step 25 .
    NO - Repair open in the wire between the throttle body and the ECM/PCM (C21), then go to Step 20 .
13. Turn the ignition switch to LOCK (0).
14. Disconnect the throttle body 6P connector.
15. Jump the SCS line with the HDS.
16. Disconnect ECM/PCM connector C (49P).

---

17. Check for continuity between ECM/PCM connector terminal C43 and throttle body 6P connector terminal No. 4.



Is there continuity?
YES - Go to Step 25 .
NO - Repair open in the wire between the throttle body and the ECM/PCM (C43), then go to Step 20 .

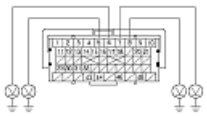
18. Turn the ignition switch to LOCK (0).
19. Replace the throttle body.
20. Reconnect all connectors.
21. Turn the ignition switch to ON (II).
22. Reset the ECM/PCM with the HDS.
23. Do the ECM/PCM idle learn procedure.
24. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0223 indicated?
YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

25. Reconnect all connectors.
26. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
27. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0223 indicated?
YES - Check for poor connections or loose terminals at TP sensor B and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0301 (71), P0302 (72), P0303 (73), P0304 (74)



DTC P0301:
No. 1 Cylinder Misfire Detected
DTC P0302:
No. 2 Cylinder Misfire Detected
DTC P0303:
No. 3 Cylinder Misfire Detected
DTC P0304:
No. 4 Cylinder Misfire Detected
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, and let it idle without load (A/T in P or N, M/T in neutral).
4. Monitor the OBD STATUS for DTC P0301, P0302, P0303, or P0304 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?
   YES - Go to Step 9.
   NO - If the screen indicates PASSED, go to Step 5. If the screen indicates EXECUTING, keep idling until a result comes on. If the screen indicates OUT OF CONDITION or NOT COMPLETED, wait for several minutes, and recheck.
5. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE in the DATA LIST for 10 minutes with the HDS.

   Does the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE show misfire counts?
   YES - Go to Step 9.
   NO - Go to Step 6.
6. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
   - ENGINE SPEED
   - VSS
   - REL TP SENSOR
   - CLV (calculated load value)
   - APP SENSOR
7. Monitor the OBD STATUS for DTC P0301, P0302, P0303, or P0304 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?
   YES - Go to Step 9.
   NO - If the screen indicates PASSED, go to Step 8. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION or NOT COMPLETED, go to Step 6 and recheck.
8. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE in the DATA LIST for 10 minutes with the HDS.

   Does the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE show misfire counts?
   YES - Go to Step 9.
   NO - Intermittent failure, the system is OK at this time. Check for loose wires or poor connections in the fuel system circuit.■
9. Turn the ignition switch to LOCK (0).
10. Exchange the ignition coil from the problem cylinder with one from another cylinder.
11. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
    - ENGINE SPEED
    - VSS
    - REL TP SENSOR
    - CLV (calculated load value)
    - APP SENSOR
12. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE in the DATA LIST for 10 minutes with the HDS.

    Does the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE show misfire counts?
    YES - Go to Step 13.
    NO - Intermittent misfire due to poor contact at the ignition coil connector (no misfire at this time). Check for poor connections or loose terminals at the ignition coil.■
13. Determine which cylinder had the misfire.

    Does the misfire occur in the cylinder where the ignition coil was exchanged?
    YES - Replace the faulty ignition coil, then go to Step 40.
    NO - Go to Step 14.
14. Turn the ignition switch to LOCK (0).

15. Exchange the spark plug from the problem cylinder with one from another cylinder.

16. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
    - ENGINE SPEED
    - VSS
    - REL TP SENSOR
    - CLV (calculated load value)
    - APP SENSOR

17. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE in the DATA LIST for 10 minutes with the HDS.

    Does the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE show misfire counts?
    YES - Go to Step 18 .
    NO - Intermittent misfire due to spark plug fouling (no misfire at this time).■

18. Determine which cylinder had the misfire.

    Does the misfire occur in the cylinder where the spark plug was exchanged?
    YES - Replace the faulty spark plug, then go to Step 40 .
    NO - Go to Step 19 .

19. Turn the ignition switch to LOCK (0).

20. Exchange the injector from the problem cylinder with one from the another cylinder.

21. Start the engine, and let it idle for 2 minutes.

22. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
    - ENGINE SPEED
    - VSS
    - REL TP SENSOR
    - CLV (calculated load value)
    - APP SENSOR

23. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE in the DATA LIST for 10 minutes with the HDS.

    Does the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE show misfire counts?
    YES - Go to Step 24 .
    NO - Intermittent misfire due to bad contact at the injector connector (no misfire at this time). Check for poor connections or loose terminals at the injector.■

24. Determine which cylinder had the misfire.

    Does the misfire occur in the cylinder where the injector was exchanged?
    YES - Replace the faulty injector, then go to Step 40 .
    NO - Go to Step 25 .

25. Do an engine compression and a cylinder leakdown test.

    Did the engine pass both tests?
    YES - Go to Step 26 .
    NO - Repair the engine, then go to Step 40 .

26. Do the VTEC rocker arm test.

    Did the engine pass the test?
    YES - Go to Step 27 .
    NO - Repair the VTEC rocker arm, then go to Step 40 .

27. Turn the ignition switch to LOCK (0).

28. Jump the SCS line with the HDS.

29. Disconnect ECM/PCM connector C (49P).

30. Turn the ignition switch to ON (II).

31. Measure the voltage between body ground and the appropriate ECM/PCM connector terminal of the problem cylinder (see table).

PROBLEM CYLINDER	DTC	ECM/PCM TERMINAL	WIRE COLOR
No. 1	P0301	C5	BRN
No. 2	P0302	C6	RED
No. 3	P0303	C7	BLU
No. 4	P0304	C8	YEL

    Is there battery voltage?
    YES - Go to Step 39 .
    NO - Go to Step 32 .

32. Turn the ignition switch to LOCK (0).
33. Disconnect the injector 2P connector from the problem cylinder.
34. Turn the ignition switch to ON (II).

---

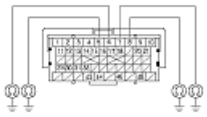
35. Measure the voltage between injector 2P connector terminal No. 1 and body ground.

Is there battery voltage?
YES - Go to Step 36 .
NO - Repair open in the wire between the injector and PGM-FI main relay 1, then go to Step 40 .

36. Turn the ignition switch to LOCK (0).

---

37. Check for continuity between body ground and the ECM/PCM connector terminal of the problem cylinder (see table).

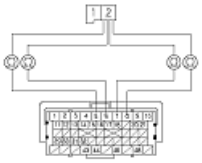


PROBLEM CYLINDER	DTC	ECM/PCM TERMINAL	WIRE COLOR
No. 1	P0301	C5	BRN
No. 2	P0302	C6	RED
No. 3	P0303	C7	BLU
No. 4	P0304	C8	YEL

Is there continuity?
YES - Repair short in the wire between the ECM/ PCM and the injector, then go to Step 40 .
NO - Go to Step 38 .

---

38. Check for continuity between appropriate injector 2P connector terminal No. 2 and the ECM/PCM connector terminal of the problem cylinder (see table).



PROBLEM CYLINDER	DTC	ECM/PCM TERMINAL	WIRE COLOR
No. 1	P0301	C5	BRN
No. 2	P0302	C6	RED
No. 3	P0303	C7	BLU
No. 4	P0304	C8	YEL

Is there continuity?
YES - Go to Step 39 .
NO - Repair open in the wire between the ECM/ PCM and the injector, then go to Step 40 .

---

39. At the injector side, measure the resistance between injector 2P connector terminals No. 1 and No. 2.

Is there 10−13 Ω?
YES - Go to Step 50 .
NO - Replace the injector, then go to Step 40 .

40. Turn the ignition switch to LOCK (0).

41. Reconnect all connectors, and install the parts in the reverse order of removal.

42. Turn the ignition switch to ON (II).

43. Reset the ECM/PCM with the HDS.

44. Clear the CKP pattern with the HDS.

45. Do the ECM/PCM idle learn procedure.

46. Do the CKP pattern learn procedure.

47. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
    - ENGINE SPEED
    - VSS
    - REL TP SENSOR
    - CLV (calculated load value)
    - APP SENSOR

48. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0301, P0302, P0303, or P0304 indicated?
YES - Check for poor connections or loose terminals at the ignition coils, the injectors, and the ECM/PCM, then go to the troubleshooting DTC P0300, P0301, P0302, P0303, or P0304.
NO - Go to Step 49 .

49. Monitor the OBD STATUS for DTC P0301, P0302, P0303, or P0304 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 48 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the ignition coils, the injectors, and the ECM/PCM, then go to Step 1 . If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION or NOT COMPLETED, go to Step 47 .

50. Reconnect all connectors.

51. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.

52. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
    - ENGINE SPEED
    - VSS
    - REL TP SENSOR
    - CLV (calculated load value)
    - APP SENSOR

53. Check for Temporary DTCs or DTCs with the HDS.

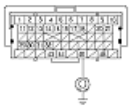
Is DTC P0301, P0302, P0303, or P0304 indicated?
YES - Check for poor connections or loose terminals at the ignition coils, the injectors, and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 52 . If the ECM/PCM was substituted, go to Step 1 .
NO - Go to Step 54 .

54. Monitor the OBD STATUS for DTC P0301, P0302, P0303, or P0304 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 53 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the ignition coils, the injectors, and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 52 . If the ECM/PCM was substituted, go to Step 1 . If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION or NOT COMPLETED, go to Step 52 .

DTC Troubleshooting: P0325 (23)

DTC P0325:
Knock Sensor Circuit Malfunction
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.



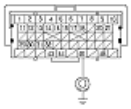
1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed 3,000 rpm (min $^{-1}$) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
4. Hold the engine speed between 3,000−4,000 rpm (min $^{-1}$) for at least 10 seconds.
5. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0325 indicated?
   YES - Go to Step 6 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the knock sensor and the ECM/PCM.■
6. Turn the ignition switch to LOCK (0).
7. Jump the SCS line with the HDS.
8. Disconnect the knock sensor 1P connector.
9. Disconnect ECM/PCM connector C (49P).
10. Check for continuity between ECM/PCM connector terminal C46 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM/PCM (C46) and the knock sensor, then go to Step 14 .
    NO - Go to Step 11 .

11. Connect the knock sensor 1P connector terminal to body ground with a jumper wire.

12. Check for continuity between ECM/PCM connector terminal C46 and body ground.



Is there continuity?
YES - Go to Step 13 .
NO - Repair open in the wire between the ECM/PCM (C46) and the knock sensor, then go to Step 14 .

13. Replace the knock sensor.

14. Reconnect all connectors.

15. Turn the ignition switch to ON (II).

16. Reset the ECM/PCM with the HDS.

17. Do the ECM/PCM idle learn procedure.

18. Hold the engine speed between 3,000−4,000 rpm (min $^{-1}$) for at least 10 seconds.

19. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0325 indicated?
YES - Go to Step 21 .
NO - Go to Step 20 .

20. Monitor the OBD STATUS for DTC P0325 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 19 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the knock sensor and the ECM/PCM, then go to Step 1 . If the screen indicates NOT COMPLETED, go to Step 18 and recheck.

21. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.

22. Hold the engine speed between 3,000−4,000 rpm (min $^{-1}$) for at least 10 seconds.

23. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0325 indicated?

YES - Check for poor connections or loose terminals at the knock sensor and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 22 . If the ECM/PCM was substituted, go to Step 1 .
NO - Go to Step 24 .

24. Monitor the OBD STATUS for DTC P0325 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 23 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the knock sensor and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 22 . If the ECM/PCM was substituted, go to Step 1 . If the screen indicates NOT COMPLETED, go to Step 22 .

DTC Troubleshooting: P0335 (4)

DTC P0335:
CKP Sensor No Signal
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0335 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the CKP sensor and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Disconnect the CKP sensor 3P connector.
7. Turn the ignition switch to ON (II).
8. Measure the voltage between CKP sensor 3P connector terminal No. 1 and body ground.

   Is there battery voltage?
   YES - Go to Step 9 .
   NO - Repair open in the wire between the CKP sensor and PGM-FI main relay 1, then go to Step 19 .

9. Measure the voltage between CKP sensor 3P connector terminal No. 3 and body ground.

   Is there about 5 V?
   YES - Go to Step 10 .
   NO - Go to Step 11 .

10. Measure the voltage between CKP sensor 3P connector terminals No. 1 and No. 2.

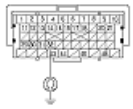
    Is there battery voltage?
    YES - Go to Step 17 .
    NO - Repair open in the wire between the CKP sensor and G101; AT model, MT model, then go to Step 19 .
11. Turn the ignition switch to LOCK (0).
12. Jump the SCS line with the HDS.
13. Disconnect ECM/PCM connector C (49P).

14. Check for continuity between ECM/PCM connector terminal C32 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM/PCM (C32) and the CKP sensor, then go to Step 19 .
    NO - Go to Step 15 .

15. Connect CKP sensor 3P connector terminal No. 3 to body ground with a jumper wire.

16. Check for continuity between ECM/PCM connector terminal C32 and body ground.



Is there continuity?
YES - Go to Step 26 .
NO - Repair open in the wire between the ECM/PCM (C32) and the CKP sensor, then go to Step 19 .

17. Turn the ignition switch to LOCK (0).
18. Replace the CKP sensor.
19. Reconnect all connectors.
20. Turn the ignition switch to ON (II).
21. Reset the ECM/PCM with the HDS.
22. Clear the crank pattern with the HDS.
23. Do the ECM/PCM idle learn procedure.
24. Do the CKP pattern learn procedure.
25. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0335 indicated?
YES - Check for poor connections or loose terminals at the CKP sensor and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

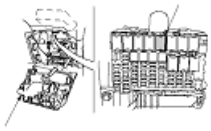
26. Reconnect all connectors.
27. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
28. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0335 indicated?
YES - Check for poor connections or loose terminals at the CKP sensor and the ECM/PCM, then go to Step 1 . If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

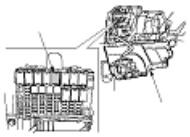
DTC Troubleshooting: P0351 (71), P0352 (72), P0353 (73), P0354 (74)

DTC P0351:
No. 1 Cylinder Ignition Coil Circuit Malfunction
DTC P0352:
No. 2 Cylinder Ignition Coil Circuit Malfunction
DTC P0353:
No. 3 Cylinder Ignition Coil Circuit Malfunction
DTC P0354:
No. 4 Cylinder Ignition Coil Circuit Malfunction
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

RHD model



LHD model



1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0351, P0352, P0353, and/or P0354 indicated?
   YES - Go to Step 5.
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the ignition coil and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Exchange the ignition coil from the problem cylinder with one from another cylinder.
7. Start the engine.
8. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC indicated at the exchanged cylinder position?
   YES - Replace the faulty ignition coil, then go to Step 25.
   NO - Go to Step 9.
9. Turn the ignition switch to LOCK (0).
10. Check the No. 33 IGNITION COIL (15 A) fuse in the under-dash fuse/relay box.

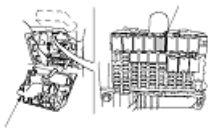
    Is the fuse OK?
    YES - Go to Step 11.
    NO - Go to Step 12.
11. Open the fuse lid (A), then test the ignition coil relay (B) in the under-dash fuse/relay box.

    Is the ignition coil relay OK?
    YES - Go to Step 15.
    NO - Replace the ignition coil relay, then go to Step 25.

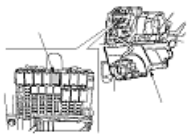
---

12. Open the fuse lid (A), then remove the ignition coil relay (B) from the under-dash fuse/relay box.
13. Disconnect all ignition coil 3P connectors.

RHD model



LHD model



---

14. Check for continuity between No. 1 ignition coil 3P connector terminal No. 3 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ignition coils and the ignition coil relay. Also replace the No. 33 IGNITION COIL (15 A) fuse, then go to Step 25.
    NO - Check the under-dash fuse/relay box, and replace it if needed, then go to Step 25.
15. Reinstall the ignition coil relay.
16. Disconnect the ignition coil 3P connector from the problem cylinder.
17. Turn the ignition switch to ON (II).

---

18. Measure the voltage between ignition coil 3P connector terminal No. 3 of the problem cylinder and body ground (see table).

PROBLEM CYLINDER	DTC
No. 1	P0351
No. 2	P0352
No. 3	P0353
No. 4	P0354

Is there battery voltage?

YES - Go to Step 19 .

NO - Repair open in the wire between the ignition coil and the ignition coil relay, then go to Step 25 .

19. Turn the ignition switch to LOCK (0).

---

20. Check for continuity between ignition coil 3P connector terminal No. 2 of the problem cylinder and body ground (see table).

PROBLEM CYLINDER	DTC
No. 1	P0351
No. 2	P0352
No. 3	P0353
No. 4	P0354

Is there continuity?

YES - Go to Step 21 .

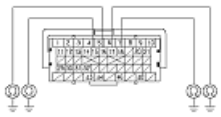
NO - Repair open in the wire between the ignition coil and G101, then go to Step 25 .

21. Jump the SCS line with the HDS.

22. Disconnect ECM/PCM connector C (49P).

---

23. Check for continuity between body ground and the appropriate ECM/PCM connector terminal of the problem cylinder (see table).



PROBLEM CYLINDER	DTC	ECM/PCM TERMINAL	WIRE COLOR
No. 1	P0351	C15	WHT
No. 2	P0352	C16	WHT/GRN
No. 3	P0353	C17	WHT/BLK
No. 4	P0354	C18	WHT/BLU

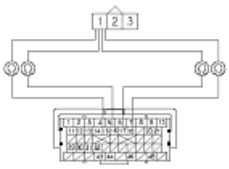
Is there continuity?

YES - Repair short in the wire between the ECM/PCM and the ignition coil, then go to Step 25 .

NO - Go to Step 24 .

---

24. Check for continuity between appropriate ignition coil 3P connector terminal No. 1 and the appropriate ECM/PCM connector terminal of the problem cylinder (see table).



PROBLEM CYLINDER	DTC	ECM/PCM TERMINAL	WIRE COLOR
No. 1	P0351	C15	WHT
No. 2	P0352	C16	WHT/GRN
No. 3	P0353	C17	WHT/BLK
No. 4	P0354	C18	WHT/BLU

Is there continuity?

YES - Go to Step 31 .

NO - Repair open in the wire between the ECM/PCM and the ignition coil, then go to Step 25 .

25. Turn the ignition switch to LOCK (0).
26. Reconnect all connectors.
27. Turn the ignition switch to ON (II).
28. Reset the ECM/PCM with the HDS.
29. Do the ECM/PCM idle learn procedure.
30. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0351, P0352, P0353, and/or P0354 indicated?

YES - Check for poor connections or loose terminals at the ignition coil and the ECM/PCM, then go to Step 1 .

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

31. Reconnect all connectors.
32. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
33. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0351, P0352, P0353, and/or P0354 indicated?

YES - Check for poor connections or loose terminals at the ignition coil and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .

NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0365 (8)

DTC P0365:
CMP Sensor No Signal
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0365 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the CMP sensor and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Disconnect the CMP sensor 3P connector.
7. Turn the ignition switch to ON (II).
8. Measure the voltage between CMP sensor 3P connector terminal No. 3 and body ground.

   Is there battery voltage?
   YES - Go to Step 9 .
   NO - Repair open in the wire between the CMP sensor and PGM-FI main relay 1, then go to Step 18 .

---

9. Measure the voltage between CMP sensor 3P connector terminal No. 1 and body ground.

   Is there about 5 V?
   YES - Go to Step 10 .
   NO - Go to Step 11 .

---

10. Measure the voltage between CMP sensor 3P connector terminals No. 2 and No. 3.

    Is there battery voltage?
    YES - Go to Step 16 .
    NO - Repair open in the wire between the CMP sensor and G101; AT model, MT model, then go to Step 18 .
11. Turn the ignition switch to LOCK (0).
12. Jump the SCS line with the HDS.
13. Disconnect ECM/PCM connector C (49P).

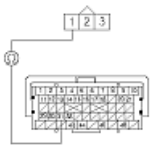
---

14. Check for continuity between ECM/PCM connector terminal C31 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM/PCM (C31) and the CMP sensor, then go to Step 18 .
    NO - Go to Step 15 .

---

15. Check for continuity between CMP sensor 3P connector terminal No. 1 and ECM/PCM connector terminal C31.



Is there continuity?
YES - Go to Step 23 .
NO - Repair open in the wire between the ECM/PCM (C31) and the CMP sensor, then go to Step 18 .

16. Turn the ignition switch to LOCK (0).
17. Replace the CMP sensor.
18. Reconnect all connectors.
19. Turn the ignition switch to ON (II).
20. Reset the ECM/PCM with the HDS.
21. Do the ECM/PCM idle learn procedure.
22. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0365 indicated?
YES - Check for poor connections or loose terminals at the CMP sensor and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

23. Reconnect all connectors.
24. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
25. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0365 indicated?
YES - Check for poor connections or loose terminals at the CMP sensor and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0420 (67)

DTC P0420:
Catalyst System Efficiency Below Threshold
NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.
- If some of the DTCs listed below are stored at the same time as DTC P0420, troubleshoot them first, then recheck for DTC P0420.
  P0137, P0138: Secondary HO2S (Sensor 2)
  P0141: Secondary HO2S (Sensor 2) heater
- P0300: Random misfire
  P0301−P0304: No. 1, No. 2, No. 3, or No. 4 cylinder misfire detected
- Poor quality fuel may cause this DTC.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm (min^{-1}) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.
4. Test-drive under these conditions:
   - Engine coolant temperature (ECT SENSOR 1) above 70 °C (158 °F)
   - A/T in D, M/T in 4th or 5th
   - Vehicle speed between 72−120 km/h (45−75 mph) for 5 minutes or more with cruise control set
   - Vehicle speed between 88−120 km/h (55−75 mph) for 10 seconds, then decelerate (with throttle fully closed). Repeat this 3 times or more
   - Maintain the vehicle speed at 88 km/h (55 mph) for 5 minutes or more with cruise control set
5. Monitor the OBD STATUS for DTC P0420 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?
   YES - Go to Step 6 .
   NO - If the screen indicates PASSED, intermittent failure, the system is OK at this time. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION or NOT COMPLETED, go to Step 4 and recheck.
6. Turn the ignition switch to LOCK (0).
7. Replace the WU-TWC.
8. Turn the ignition switch to ON (II).
9. Reset the ECM/PCM with the HDS.
10. Do the ECM/PCM idle learn procedure.
11. Start the engine. Hold the engine speed at 3,000 rpm (min^{-1}) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.
12. Test-drive for about 10 minutes, varying the vehicle speed.
13. Check the CATA MONITOR CONDITION in the DATA LIST with the HDS.

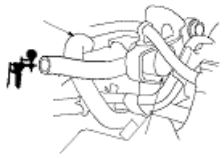
    Is the temperature OK?
    YES - Go to Step 14 .
    NO - Go to Step 11 and recheck.
14. Test-drive under these conditions:
    - Engine coolant temperature (ECT SENSOR 1) above 70 °C (158 °F)
    - Vehicle speed between 88−120 km/h (55−75 mph) for 10 seconds, then decelerate (with throttle fully closed). Repeat this 3 times or more
    - Maintain the vehicle speed at 88 km/h (55 mph) for 5 minutes or more with cruise control set
15. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0420 indicated?
    YES - Check the fuel quality, then go to Step 1 .
    NO - Go to Step 16 .
16. Monitor the OBD STATUS for DTC P0420 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?
    YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 15 , go to the indicated DTC's troubleshooting.■
    NO - If the screen indicates FAILED, check the fuel quality, then go to Step 1 . If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION or NOT COMPLETED, go to Step 11 .

DTC Troubleshooting: P0443 (92)

DTC P0443:
EVAP Canister Purge Valve Circuit Malfunction
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.



1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm (min $^{-1}$) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0443 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the EVAP canister purge valve and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0), and allow the engine to cool below 60 °C (140 °F).
6. Disconnect the vacuum hose (A) from the EVAP canister purge valve (B) in the engine compartment, and connect a vacuum pump/gauge to the hose.
7. Start the engine, and let it idle.

   Is there vacuum?
   YES - Go to Step 8 .
   NO - Go to Step 14 .
8. Turn the ignition switch to LOCK (0).
9. Disconnect the EVAP canister purge valve 2P connector.

---

10. Check for continuity between EVAP canister purge valve 2P connector terminal No. 2 and body ground.

    Is there continuity?
    YES - Go to Step 11 .
    NO - Go to Step 23 .
11. Jump the SCS line with the HDS.
12. Disconnect ECM/PCM connector B (49P).

---

13. Check for continuity between EVAP canister purge valve 2P connector terminal No. 2 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the EVAP canister purge valve and the ECM/PCM (B3), then go to Step 24 .
    NO - Go to Step 30 .
14. Turn the ignition switch to LOCK (0).
15. Disconnect the EVAP canister purge valve 2P connector.
16. Turn the ignition switch to ON (II).

---

17. Measure the voltage between EVAP canister purge valve 2P connector terminal No. 1 and body ground.

    Is there battery voltage?
    YES - Go to Step 18 .
    NO - Repair open in the wire between the EVAP canister purge valve and the No. 12 ALTERNATOR (10 A) fuse in the under-dash fuse/relay box, then go to Step 24 .
18. Turn the ignition switch to LOCK (0).
19. Jump the SCS line with the HDS.
20. Disconnect ECM/PCM connector B (49P).

---

21. Check for continuity between ECM/PCM connector terminal B3 and EVAP canister purge valve 2P connector terminal No. 2.

    
    Is there continuity?
    YES - Go to Step 22 .
    NO - Repair open in the wire between the EVAP canister purge valve and the ECM/PCM (B3), then go to Step 24 .

---

22. Measure the resistance between EVAP canister purge valve 2P connector terminals No. 1 and No. 2.

Is there about 25 Ω at room temperature?
YES - Go to Step 30 .
NO - Go to Step 23 .

23. Replace the EVAP canister purge valve.

24. Reconnect all connectors.

25. Turn the ignition switch to ON (II).

26. Reset the ECM/PCM with the HDS.

27. Do the ECM/PCM idle learn procedure.

28. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0443 indicated?
YES - Check for poor connections or loose terminals at the EVAP canister purge valve and the ECM/PCM, then go to Step 1 .
NO - Go to Step 29 .

29. Monitor the OBD STATUS for DTC P0443 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 28 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the EVAP canister purge valve and the ECM/PCM, then go to Step 1 . If the screen indicates EXECUTING, OUT OF CONDITION, or NOT COMPLETED, keep idling until a result comes on.

30. Reconnect all connectors.

31. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.

32. Start the engine.

33. Check for Temporary DTCs or DTCs with the HDS.

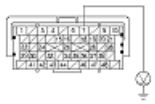
Is DTC P0443 indicated?
YES - Check for poor connections or loose terminals at the EVAP canister purge valve and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 32 . If the ECM/PCM was substituted, go to Step 1 .
NO - Go to Step 34 .

34. Monitor the OBD STATUS for DTC P0443 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 23 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the EVAP canister purge valve and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 32 . If the ECM/PCM was substituted, go to Step 1 . If the screen indicates EXECUTING, OUT OF CONDITION, or NOT COMPLETED, keep idling until a result comes on.

DTC Troubleshooting: P0563

DTC P0563:
ECM/PCM Power Source Circuit Unexpected Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.



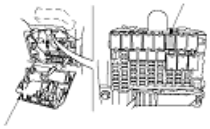
1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0).
4. Wait 10 seconds.
5. Turn the ignition switch to ON (II).
6. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0563 indicated?
   YES - Go to Step 7 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at PGM-FI main relay 1 and the ECM/PCM.■
7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector A (49P).
10. Measure the voltage between ECM/PCM connector terminal A7 and body ground.

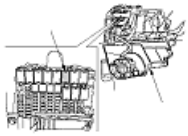
    Is there battery voltage?
    YES - Go to Step 13 .
    NO - Go to Step 11 .

11. Open the fuse lid (A), then remove PGM-FI main relay 1 (B) from the under-dash fuse/relay box.

RHD model



LHD model

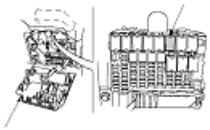


12. Check for continuity between ECM/PCM connector terminal A7 and body ground.

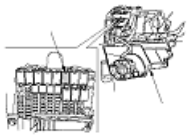
    Is there continuity?
    YES - Repair short in the wire between the ECM/PCM (A7) and PGM-FI main relay 1, then go to Step 16 .
    NO - Go to Step 15 .

13. Open the fuse lid (A), then remove PGM-FI main relay 1 (B) from the under-dash fuse/relay box.

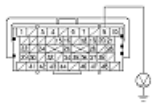
RHD model



LHD model



14. Measure the voltage between ECM/PCM connector terminal A9 and body ground.



Is there battery voltage?
YES - Repair short to power in the wire between the ECM/PCM (A9) and PGM-FI main relay 1, then go to Step 16 .
NO - Go to Step 15 .

15. Test PGM-FI main relay 1.

Is PGM-FI main relay 1 OK?
YES - Go to Step 23 .
NO - Replace PGM-FI main relay 1, then go to Step 16 .

16. Reconnect all connectors.

17. Turn the ignition switch to ON (II).

18. Reset the ECM/PCM with the HDS.

19. Do the ECM/PCM idle learn procedure.

20. Turn the ignition switch to LOCK (0).

21. Wait 10 seconds.

22. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0563 indicated?
YES - Check for poor connections or loose terminals at PGM-FI main relay 1 and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

23. Reconnect all connectors.

24. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.

25. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0563 indicated?
YES - Check for poor connections or loose terminals at PGM-FI main relay 1 and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 20 . If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P062F (131)

DTC P062F:
ECM/PCM Internal Control Module Keep Alive Memory (KAM) Error
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P062F indicated?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time.■
4. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
5. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P062F indicated?
   YES - If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
   NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0630 (139)

DTC P0630:
VIN Not Programmed or Mismatch
NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.
- This DTC is stored only when the ECM/PCM does not have the VIN information of the vehicle. Use the HDS to input the missing VIN information.

1. Turn the ignition switch to ON (II).
2. Check the VIN with the HDS.

   Does the HDS show the vehicle's VIN?
   YES - Go to Step 5 .
   NO - Go to Step 3 .
3. Input the VIN to the ECM/PCM with the HDS.

   Does the screen show COMPLETE?
   YES - Go to Step 5 .
   NO - Go to Step 4 .
4. Check for DTCs with the HDS.

   Is DTC P062F indicated?
   YES - Go to the DTC P062F troubleshooting. ■
   NO - Go to Step 9 .
5. Clear the DTC with the HDS.
6. Turn the ignition switch to LOCK (0).
7. Turn the ignition switch to ON (II), and wait 5 seconds.
8. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0630 indicated?
   YES - Go to Step 9 .
   NO - Intermittent failure, the system is OK at this time.■
9. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
10. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0630 indicated?
    YES - If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0685 (135)

DTC P0685:
ECM/PCM Power Control Circuit/Internal Circuit Malfunction
NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.
- If the problem doesn't return after you clear the DTC, or it this DTC is stored intermittently, check for loose terminals at the IGP line connectors before replacing the ECM/PCM.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, then let it idle for 30 seconds.
4. Turn the ignition switch to LOCK (0).
5. Start the engine, then let it idle for 30 seconds.
6. Turn the ignition switch to LOCK (0).
7. Turn the ignition switch to ON (II).
8. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0685 indicated?
   YES - Go to Step 9 .
   NO - Intermittent failure, the system is OK at this time.■
9. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
10. Start the engine, then let it idle for 30 seconds.
11. Turn the ignition switch to LOCK (0).
12. Start the engine, then let it idle for 30 seconds.
13. Turn the ignition switch to LOCK (0).
14. Turn the ignition switch to ON (II).
15. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0685 indicated?
    YES - If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 10 . If the ECM/PCM was substituted, go to Step 1 .
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0720 (122)

DTC P0720:
Output Shaft (Countershaft) Speed Sensor Circuit Malfunction (M/T model)
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Start the engine. Hold the engine speed at 3,000 rpm (min $^{-1}$) without load (in neutral) until the radiator fan comes on, then let it idle.
2. Test-drive for several minutes.
3. Check the C SHAFT SPD in the DATA LIST with the HDS.

   Is any vehicle speed indicated?
   YES - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the output shaft (countershaft) speed sensor and the ECM.■
   NO - Go to Step 4 .
4. Turn the ignition switch to LOCK (0).
5. Disconnect the output shaft (countershaft) speed sensor 3P connector.
6. Turn the ignition switch to ON (II).
7. Measure the voltage between output shaft (countershaft) speed sensor 3P connector terminal No. 1 and body ground.

   Is there about 5 V?
   YES - Go to Step 8 .
   NO - Repair open in the wire between the ECM (C13) and the output shaft (countershaft) speed sensor, then go to Step 18 .

8. Measure the voltage between output shaft (countershaft) speed sensor 3P connector terminal No. 2 and body ground.

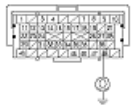
   Is there about 5 V?
   YES - Go to Step 9 .
   NO - Go to Step 10 .

9. Measure the voltage between output shaft (countershaft) speed sensor 3P connector terminals No. 1 and No. 3.

   Is there about 5 V?
   YES - Go to Step 16 .
   NO - Repair open in the wire between the ECM (C14) and the output shaft (countershaft) speed sensor, then go to Step 18 .
10. Turn the ignition switch to LOCK (0).
11. Jump the SCS line with the HDS.
12. Disconnect ECM connector B (49P).
13. Check for continuity between ECM connector terminal B38 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM (B38) and the output shaft (countershaft) speed sensor, then go to Step 18 .
    NO - Go to Step 14 .
14. Connect output shaft (countershaft) speed sensor 3P connector terminal No. 2 to body ground with a jumper wire.

15. Check for continuity between ECM connector terminal B38 and body ground.



Is there continuity?
YES - Go to Step 25 .
NO - Repair open in the wire between the ECM (B38) and the output shaft (countershaft) speed sensor, then go to Step 18 .

16. Turn the ignition switch to LOCK (0).
17. Replace the output shaft (countershaft) speed sensor.
18. Reconnect all connectors.
19. Turn the ignition switch to ON (II).
20. Reset the ECM with the HDS.
21. Do the ECM idle learn procedure.
22. Test-drive under these conditions:
    - Engine coolant temperature (ECT SENSOR 1) above 80 °C (176 °F)
    - Transmission in 5th gear
    - ENGINE SPEED between 2,000−3,000 rpm (min $^{-1}$)
    - Drive for several minutes, then decelerate (with the throttle fully closed) for 8 seconds
23. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0720 indicated?
YES - Check for poor connections or loose terminals at the output shaft (countershaft) speed sensor and the ECM, then go to Step 1 .
NO - Go to Step 24 .

24. Monitor the OBD STATUS for DTC P0720 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 23 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the output shaft (countershaft) speed sensor and the ECM, then go to Step 1 . If the screen indicates NOT COMPLETED, go to Step 22 .

25. Reconnect all connectors.
26. Update the ECM if it does not have the latest software, or substitute a known-good ECM.
27. Test-drive under these conditions:
    - Engine coolant temperature (ECT SENSOR 1) above 80 °C (176 °F)
    - Transmission in 5th gear
    - ENGINE SPEED between 2,000−3,000 rpm (min $^{-1}$)
    - Drive for several minutes, then decelerate (with the throttle fully closed) for 8 seconds
28. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0720 indicated?
YES - Check for poor connections or loose terminals at the output shaft (countershaft) speed sensor and the ECM. If the ECM was updated, substitute a known-good ECM, then go to Step 27 . If the ECM was substituted, go to Step 1 .
NO - Go to Step 29 .

29. Monitor the OBD STATUS for DTC P0720 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - If the ECM was updated, troubleshooting is complete. If the ECM was substituted, replace the original ECM. If any other Temporary DTCs or DTCs were indicated in Step 28 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the output shaft (countershaft) speed sensor and the ECM. If the ECM was updated, substitute a known-good ECM, then go to Step 27 . If the ECM was substituted, go to Step 1 . If the screen indicates NOT COMPLETED, go to Step 27 .

DTC Troubleshooting: P1109 (13)

DTC P1109:
BARO Sensor Circuit Out of Range High
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

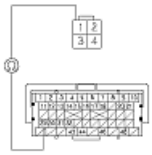
1. Reset the ECM/PCM with the HDS.
2. Start the engine.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P1109 indicated?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time.■
4. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
5. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P1109 indicated?
   YES - If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
   NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P1157 (48)

DTC P1157:
A/F Sensor (Sensor 1) Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

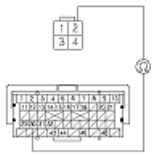


1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, and wait 1 minute.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P1157 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Jump the SCS line with the HDS.
7. Disconnect the A/F sensor (Sensor 1) 4P connector.
8. Disconnect ECM/PCM connector C (49P).
9. Check for continuity between A/F sensor (Sensor 1) 4P connector terminal No. 1 and ECM/PCM connector terminal C29.

   Is there continuity?
   YES - Go to Step 10 .
   NO - Repair open in the wire between the ECM/PCM (C29) and the A/F sensor (Sensor 1), then go to Step 12 .

10. Check for continuity between A/F sensor (Sensor 1) 4P connector terminal No. 2 and ECM/PCM connector terminal C30.



Is there continuity?
YES - Go to Step 11 .
NO - Repair open in the wire between the ECM/PCM (C30) and the A/F sensor (Sensor 1), then go to Step 12 .

11. Replace the A/F sensor (Sensor 1).
12. Reconnect all connectors.
13. Turn the ignition switch to ON (II).
14. Reset the ECM/PCM with the HDS.
15. Do the ECM/PCM idle learn procedure.
16. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1157 indicated?
YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to Step 1 . If the connector and terminal fits are OK, go to Step 18 .
NO - Go to Step 17 .

17. Monitor the OBD STATUS for DTC P1157 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 16 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to Step 1 . If the screen indicates NOT COMPLETED, go to Step 15 .

18. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
19. Start the engine, and let it idle.
20. Check for Temporary DTCs or DTCs with the HDS.

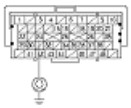
Is DTC P1157 indicated?
YES - If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 19 . If the ECM/PCM was substituted, go to Step 1 .
NO - Go to Step 21 .

21. Monitor the OBD STATUS for DTC P1157 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 20 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, go to Step 1 . If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 19 . If the ECM/PCM was substituted, go to Step 1 . If the screen indicates NOT COMPLETED, let the until a result comes on.

DTC Troubleshooting: P1297

DTC P1297:
ELD Circuit Low Voltage



NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check the ELD in the DATA LIST with the HDS.

   Is 72 A or more indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the ELD and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the ELD 3P connector.
5. Turn the ignition switch to ON (II).
6. Check the ELD in the DATA LIST with the HDS.

   Is 72 A or more indicated?
   YES - Go to Step 7 .
   NO - Go to Step 11 .
7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector A (49P).
10. Check for continuity between ECM/PCM connector terminal A24 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM/PCM (A24) and the ELD, then go to Step 13 .
    NO - Go to Step 20 .
11. Turn the ignition switch to LOCK (0).
12. Replace the ELD.
13. Reconnect all connectors.
14. Turn the ignition switch to ON (II).
15. Reset the ECM/PCM with the HDS.
16. Do the ECM/PCM idle learn procedure.
17. Start the engine.
18. Turn on the headlights.
19. Check for Temporary DTCs or DTCs with the HDS.

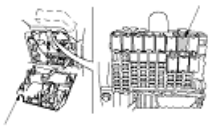
    Is DTC P1297 indicated?
    YES - Check for poor connections or loose terminals at the ELD and the ECM/PCM, then go to Step 1 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■
20. Reconnect all connectors.
21. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
22. Start the engine.
23. Turn on the headlights.
24. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P1297 indicated?
    YES - Check for poor connections or loose terminals at the ELD and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 22 . If the ECM/PCM was substituted, go to Step 1 .
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

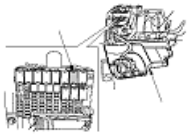
DTC Troubleshooting: P1658 (40)

DTC P1658:
ETCS Control Relay ON Malfunction
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

RHD model



LHD model



1. Turn the ignition switch to ON (II).
2. Do the ETCS TEST in the INSPECTION MENU with the HDS.

   Is the RELAY circuit OK?
   YES - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the ETCS control relay and the ECM/PCM.■
   NO - Go to Step 3 .
3. Turn the ignition switch to LOCK (0).
4. Open the fuse lid (A), then remove the ETCS control relay (B) from the under-dash fuse/relay box.
5. Test the ETCS control relay.

   Is the ETCS control relay OK?
   YES - Go to Step 6 .
   NO - Replace the ETCS control relay, then go to Step 13 .
6. Jump the SCS line with the HDS.
7. Disconnect ECM/PCM connector A (49P).

---

8. Check for continuity between ECM/PCM connector terminal A21 and body ground.

   Is there continuity?
   YES - Repair short in the wire between the ECM/PCM (A21) and the ETCS control relay, then go to Step 13 .
   NO - Go to Step 9 .
9. Disconnect ECM/PCM connector C (49P).
10. Turn the ignition switch to ON (II).

---

11. Measure the voltage between ECM/PCM connector terminal C1 and body ground.

    Is there battery voltage?
    YES - Repair short to power in the wire between the ECM/PCM (C1) and the ETCS control relay, then go to Step 12 .
    NO - Go to Step 18 .
12. Turn the ignition switch to LOCK (0).
13. Reconnect all connectors.
14. Turn the ignition switch to ON (II).
15. Reset the ECM/PCM with the HDS.
16. Do the ECM/PCM idle learn procedure.
17. Check for Temporary DTCs or DTCs with the HDS.

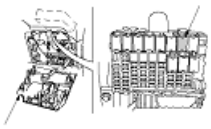
    Is DTC P1658 indicated?
    YES - Check for poor connections or loose terminals at the ETCS control relay and the ECM/PCM, then go to Step 1 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■
18. Turn the ignition switch to LOCK (0).
19. Reconnect all connectors.
20. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
21. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P1658 indicated?
    YES - Check for poor connections or loose terminals at the ETCS control relay and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

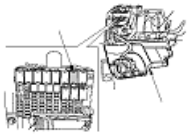
DTC Troubleshooting: P1659 (40)

DTC P1659:
Electronic Throttle Control System (ETCS) Control Relay OFF Malfunction
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

RHD model



LHD model



1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P1659 indicated?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the ETCS control relay and the ECM/PCM.■
4. Turn the ignition switch to LOCK (0).
5. Check the No. 52 ETCS (15 A) fuse in the under-dash fuse/relay box.

   Is the fuse OK?
   YES - Go to Step 6 .
   NO - Go to Step 19 .
6. Open the fuse lid (A), then remove the ETCS control relay (B) from the under-dash fuse/relay box.
7. Test the ETCS control relay.

   Is the ETCS control relay OK?
   YES - Go to Step 8 .
   NO - Replace the ETCS control relay, then go to Step 25 .
8. Turn the ignition switch to ON (II).

---

9. Measure the voltage between ETCS control relay 4P connector terminal No. 3 and body ground.

   Is there battery voltage?
   YES - Go to Step 10 .
   NO - Replace the under-dash fuse/relay box, then go to Step 24 .

---

10. Measure the voltage between ETCS control relay 4P connector terminal No. 2 and body ground.

    Is there battery voltage?
    YES - Go to Step 11 .
    NO - Replace the under-dash fuse/relay box, then go to Step 24 .
11. Turn the ignition switch to LOCK (0).
12. Jump the SCS line with the HDS.
13. Disconnect ECM/PCM connector C (49P).

---

14. Connect ETCS control relay 4P connector terminal No. 1 to body ground with the jumper wire.

---

15. Check for continuity between ECM/PCM connector terminal C1 and body ground.

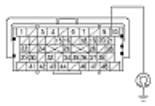
    Is there continuity?
    YES - Go to Step 16 .
    NO - Repair open in the wire between the ECM/PCM (C1) and the ETCS control relay, then go to Step 25 .
16. Disconnect ECM/PCM connector A (49P).

---

17. Connect ETCS control relay 4P connector terminal No. 4 to body ground with the jumper wire.

---

18. Check for continuity between ECM/PCM connector terminal A21 and body ground.

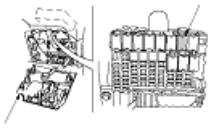


Is there continuity?
YES - Go to Step 30 .
NO - Repair open in the wire between the ECM/PCM (A21) and the ETCS control relay, then go to Step 25 .

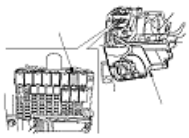
---

19. Open the fuse lid (A), then remove the ETCS control relay (B) from the under-dash fuse/relay box.
20. Jump the SCS line with the HDS.
21. Disconnect ECM/PCM connector C (49P).

RHD model

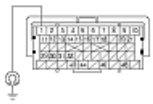


LHD model



---

22. Check for continuity between ECM/PCM connector terminal C1 and body ground.



Is there continuity?
YES - Repair short in the wire between the ECM/PCM (C1) and the ETCS control relay, then go to Step 25 .
NO - Go to Step 23 .

---

23. Check for continuity between ETCS control relay 4P connector terminal No. 2 and body ground.

Is there continuity?
YES - Replace the under-hood fuse/relay box, then go to Step 25 .
NO - Go to Step 30 .

24. Turn the ignition switch to LOCK (0).
25. Reconnect all connectors.
26. Turn the ignition switch to ON (II).
27. Reset the ECM/PCM with the HDS.
28. Do the ECM/PCM idle learn procedure.
29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1659 indicated?
YES - Check for poor connections or loose terminals at the ETCS control relay and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

30. Reconnect all connectors.
31. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
32. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1659 indicated?
YES - Check for poor connections or loose terminals at the ETCS control relay and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P1683 (40)

DTC P1683:
Throttle Valve Default Position Spring Performance Problem

⚠CAUTION

Do not insert your fingers into the installed throttle body when you turn the ignition switch to ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm (min^{-1}) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.
4. Turn the ignition switch to LOCK (0), and wait 10 seconds.
5. Turn the ignition switch to ON (II).
6. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P1683 indicated?
   YES - Go to Step 7 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the ECM/PCM.■
7. Turn the ignition switch to LOCK (0).
8. Remove the air cleaner.
9. Push the throttle valve closed as shown.
10. Release the throttle valve.

    Does the throttle valve return?
    YES - Clean the throttle body, then go to Step 12 .
    NO - Go to Step 11 .
11. Replace the throttle body.
12. Turn the ignition switch to ON (II).
13. Reset the ECM/PCM with the HDS.
14. Do the ECM/PCM idle learn procedure.
15. Turn the ignition switch to LOCK (0), and wait 10 seconds.
16. Turn the ignition switch to ON (II).
17. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P1683 indicated?
    YES - If the throttle body was cleaned, go to Step 11 . If the throttle body was replaced, check for poor connections or loose terminals at the throttle body and the ECM/PCM, then go to Step 1 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P1684 (40)

DTC P1684:
Throttle Valve Return Spring Performance Problem

⚠CAUTION

Do not insert your fingers into the installed throttle body when you turn the ignition switch to ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm (min^{-1}) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.
4. Turn the ignition switch to LOCK (0), and wait 10 seconds.
5. Turn the ignition switch to ON (II).
6. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P1684 indicated?
   YES - Go to Step 7 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the ECM/PCM.■
7. Turn the ignition switch to LOCK (0).
8. Remove the air cleaner.
9. Push the throttle valve open as shown.
10. Release the throttle valve.

    Does the throttle valve return?
    YES - Clean the throttle body, then go to Step 12 .
    NO - Go to Step 11 .
11. Replace the throttle body.
12. Turn the ignition switch to ON (II).
13. Reset the ECM/PCM with the HDS.
14. Do the ECM/PCM idle learn procedure.
15. Turn the ignition switch to LOCK (0), and wait 10 seconds.
16. Turn the ignition switch to ON (II).
17. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P1684 indicated?
    YES - If the throttle body was cleaned, go to Step 11 . If the throttle body was replaced, check for poor connections or loose terminals at the throttle body and the ECM/PCM, then go to Step 1 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P16BC

DTC P16BC:
Alternator FR Terminal Circuit/IGP Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Check for poor connections or loose terminals at the alternator 4P connector.

   Are the connections and terminals OK?
   YES - Go to Step 2 .
   NO - Repair the connector or terminals, then go to Step 18 .

2. Check the alternator mounting surfaces for corrosion.

   Are the mounting surfaces corroded?
   YES - Remove the alternator. Clean all of its mounting surface and reinstall the alternator, then go to Step 18 .
   NO - Go to Step 3 .

3. Turn the ignition switch to ON (II).
4. Clear the DTC with the HDS.
5. Start the engine.
6. Check under these conditions:
   - A/C on
   - Temperature control at maximum cool
   - Blower fan at maximum speed
   - Rear window defogger on
   - Headlights on high beam
7. Hold the engine speed 2,000 rpm (min $^{-1}$) (A/T in P or N, M/T in neutral) for 1 minute.
8. Check for Temporary DTCs or DTCs with the HDS.

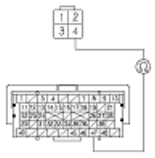
   Is DTC P16BC indicated?
   YES - Go to Step 9 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the alternator.■
9. Turn the ignition switch to LOCK (0).
10. Disconnect the alternator 4P connector.
11. Turn the ignition switch to ON (II).
12. Measure the voltage between alternator 4P connector terminal No. 1 and body ground.

    Is there battery voltage?
    YES - Go to Step 13 .
    NO - Repair open in the wire between the alternator (IG1 line) and the No. 12 ALTERNATOR (10 A) fuse in the under-dash fuse/relay box, then go to Step 18 .

13. Measure the voltage between alternator 4P connector terminal No. 4 and body ground.

    Is there about 5 V?
    YES - Replace the alternator, then go to Step 18 .
    NO - Go to Step 14 .
14. Turn the ignition switch to LOCK (0).
15. Jump the SCS line with the HDS.
16. Disconnect ECM/PCM connector B (49P).

17. Check for continuity between alternator 4P connector terminal No. 4 and ECM/PCM connector terminal B47.



Is there continuity?

YES - Go to Step 27 .

NO - Repair open in the wire between the ECM/PCM (B47) and the alternator, then go to Step 18 .

18. Turn the ignition switch to LOCK (0).
19. Reconnect all connectors.
20. Turn the ignition switch to ON (II).
21. Reset the ECM/PCM with the HDS.
22. Do the ECM/PCM idle learn procedure.
23. Start the engine.
24. Check under these conditions:
    - A/C on
    - Temperature control at maximum cool
    - Blower fan at maximum speed
    - Rear window defogger on
    - Headlights on high beam
25. Hold the engine speed at 2,000 rpm (min $^{-1}$) (A/T in P or N, M/T in neutral) for 1 minute.
26. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P16BC indicated?

YES - Check for poor connections or loose terminals at the alternator and the ECM/PCM, then go to Step 1 .

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

27. Reconnect all connectors.
28. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
29. Start the engine.
30. Check under these conditions:
    - A/C on
    - Temperature control at maximum cool
    - Blower fan at maximum speed
    - Rear window defogger on
    - Headlights on high beam
31. Hold the engine speed 2,000 rpm (min $^{-1}$) (A/T in P or N, M/T in neutral) for 1 minute.
32. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P16BC indicated?

YES - Check for poor connections or loose terminals at the alternator and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 29 . If the ECM/PCM was substituted, go to Step 1 .

NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2101 (40)

DTC P2101:
ETCS Malfunction

⚠CAUTION

Do not insert your fingers into the installed throttle body when you turn the ignition switch ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

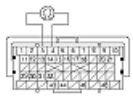
1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Do the ETCS TEST in the INSPECTION MENU with the HDS.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2101 indicated?
   YES - Go to Step 7 .
   NO - Go to Step 5 .
5. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
   - ENGINE SPEED
   - VSS
   - APP SENSOR A
6. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2101 indicated?
   YES - Go to Step 7 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the ECM/PCM, then clean the throttle body. ■
7. Turn the ignition switch to LOCK (0).
8. Remove the air cleaner.
9. Turn the ignition switch to ON (II).
10. Clear the DTC with the HDS.
11. Do the ETCS TEST in the INSPECTION MENU with the HDS.
12. Visually check the throttle valve operation.

    Does the throttle valve operate smoothly?
    YES - Clean the throttle body, then go to Step 22 and recheck. If DTC P2101 is indicated, go to Step 19 .
    NO - Go to Step 13 .
13. Turn the ignition switch to LOCK (0).
14. Disconnect the throttle body 6P connector.
15. Jump the SCS line with the HDS.
16. Disconnect ECM/PCM connector C (49P).
17. Connect throttle body 6P connector terminals No. 5 and No. 6 with a jumper wire.

18. Check for continuity between ECM/PCM connector terminals C3 and C4.



Is there continuity?
YES - Go to Step 27 .
NO - Repair open in the wires between the throttle body and the ECM/PCM (C3, C4), then go to Step 21 .

19. Turn the ignition switch to LOCK (0).

20. Replace the throttle body.

21. Reconnect all connectors.

22. Turn the ignition switch to ON (II).

23. Reset the ECM/PCM with the HDS.

24. Do the ECM/PCM idle learn procedure.

25. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
    - ENGINE SPEED
    - VSS
    - APP SENSOR A

26. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2101 indicated?
YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM, then clean the throttle body, and go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

27. Reconnect all connectors.

28. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.

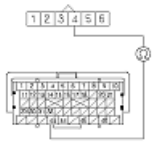
29. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
    - ENGINE SPEED
    - VSS
    - APP SENSOR A

30. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2101 indicated?
YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 28 . If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2118 (40)

DTC P2118:
Throttle Actuator Current Range/Performance Problem
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.



1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Slowly press the accelerator pedal to the floor.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2118 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Jump the SCS line with the HDS.
7. Disconnect the throttle body 6P connector.
8. Disconnect ECM/PCM connector C (49P).
9. Check for continuity between ECM/PCM connector terminal C43 and throttle body 6P connector terminal No. 4.

   Is there continuity?
   YES - Go to Step 10 .
   NO - Repair open in the wire between the throttle body and the ECM/PCM (C43), then go to Step 14 .

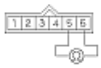
10. Check for continuity between throttle body 6P connector terminals No. 5 and No. 6.

    Is there continuity?
    YES - Repair short in the wires between throttle body 6P connector terminals No. 5 (ETCS− line) and No. 6 (ETCS+ line), then go to Step 14 .
    NO - Go to Step 11 .

11. Check for continuity between body ground and throttle body 6P connector terminals No. 5 and No. 6 individually.

    Is there continuity?
    YES - Repair short in the wire between the throttle body 6P connector and body ground, then go to Step 14 .
    NO - Go to Step 12 .

12. At the throttle body side, measure the resistance between throttle body 6P connector terminals No. 5 and No. 6 with the throttle fully closed.



Is there about 1.0 Ω or less?
YES - Go to Step 13 .
NO - Go to Step 22 .

13. Replace the throttle body.
14. Reconnect all connectors.
15. Turn the ignition switch to ON (II).
16. Reset the ECM/PCM with the HDS.
17. Do the ECM/PCM idle learn procedure.
18. Turn the ignition switch to LOCK (0).
19. Turn the ignition switch to ON (II).
20. Slowly press the accelerator pedal to the floor.
21. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2118 indicated?
YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

22. Reconnect all connectors.
23. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
24. Turn the ignition switch to LOCK (0).
25. Turn the ignition switch to ON (II).
26. Slowly press the accelerator pedal to the floor.
27. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2118 indicated?
YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 24 . If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2122 (37)

DTC P2122:
APP Sensor A (TP Sensor D) Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check APP SENSOR A in the DATA LIST with the HDS.

   Is there about 0.2 V or less?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at APP sensor A and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the APP sensor 6P connector.
5. Turn the ignition switch to ON (II).
6. Measure the voltage between APP sensor 6P connector terminals No. 1 and No. 2.

   Is there about 5 V?
   YES - Go to Step 7 .
   NO - Go to Step 17 .
7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector A (49P).

---

10. Check for continuity between APP sensor 6P connector terminal No. 3 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM/PCM (A18) and APP sensor A, then go to Step 24 .
    NO - Go to Step 11 .

---

11. Connect APP sensor 6P connector terminal No. 3 to body ground with a jumper wire.

---

12. Check for continuity between ECM/PCM connector terminal A18 and body ground.

    Is there continuity?
    YES - Go to Step 13 .
    NO - Repair open in the wire between the ECM/PCM (A18) and APP sensor A, then go to Step 24 .
13. Reconnect ECM/PCM connector A (49P).

---

14. Connect APP sensor 6P connector terminals No. 1 and No. 3 with a jumper wire.
15. Turn the ignition switch to ON (II).
16. Check APP SENSOR A in the DATA LIST with the HDS.

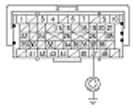
    Is there about 0.2 V or less?
    YES - Go to Step 29 .
    NO - Go to Step 22 .
17. Turn the ignition switch to LOCK (0).
18. Jump the SCS line with the HDS.
19. Disconnect ECM/PCM connector A (49P).

---

20. Connect APP sensor 6P connector terminal No. 1 to body ground with a jumper wire.

---

21. Check for continuity between ECM/PCM connector terminal A26 and body ground.



Is there continuity?

YES - Go to Step 29 .
NO - Repair open in the wire between the ECM/PCM (A26) and APP sensor A, then go to Step 24 .

22. Turn the ignition switch to LOCK (0).
23. Replace the accelerator pedal module.
24. Reconnect all connectors.
25. Turn the ignition switch to ON (II).
26. Reset the ECM/PCM with the HDS.
27. Do the ECM/PCM idle learn procedure.
28. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2122 indicated?

YES - Check for poor connections or loose terminals at APP sensor A and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

29. Turn the ignition switch to LOCK (0).
30. Reconnect all connectors.
31. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
32. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2122 indicated?

YES - Check for poor connections or loose terminals at APP sensor A and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2123 (37)

DTC P2123:
APP Sensor A (TP Sensor D) Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check APP SENSOR A in the DATA LIST with the HDS.

   Is there about 4.9 V or more?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at APP sensor A and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the APP sensor 6P connector.
5. Turn the ignition switch to ON (II).
6. Measure the voltage between APP sensor 6P connector terminals No. 1 and No. 2.

   Is there about 5 V?
   YES - Go to Step 12 .
   NO - Go to Step 7 .
7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector A (49P).

---

10. Connect APP sensor 6P connector terminal No. 2 to body ground with a jumper wire.

---

11. Check for continuity between ECM/PCM connector terminal A36 and body ground.

    
    Is there continuity?
    YES - Go to Step 19 .
    NO - Repair open in the wire between the ECM/PCM (A36) and APP sensor A, then go to Step 14 .
12. Turn the ignition switch to LOCK (0).
13. Replace the accelerator pedal module.
14. Reconnect all connectors.
15. Turn the ignition switch to ON (II).
16. Reset the ECM/PCM with the HDS.
17. Do the ECM/PCM idle learn procedure.
18. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P2123 indicated?
    YES - Check for poor connections or loose terminals at APP sensor A and the ECM/PCM, then go to Step 1 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■
19. Reconnect all connectors.
20. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
21. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P2123 indicated?
    YES - Check for poor connections or loose terminals at APP sensor A and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2127 (37)

DTC P2127:
APP Sensor B (TP Sensor E) Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check APP SENSOR B in the DATA LIST with the HDS.

   Is there about 0.2 V or less?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at APP sensor B and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the APP sensor 6P connector.
5. Turn the ignition switch to ON (II).
6. Measure the voltage between APP sensor 6P connector terminals No. 4 and No. 5.

   Is there about 5 V?
   YES - Go to Step 7 .
   NO - Go to Step 17 .
7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector A (49P).

---

10. Check for continuity between APP sensor 6P connector terminal No. 6 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM/PCM (A19) and APP sensor B, then go to Step 24 .
    NO - Go to Step 11 .

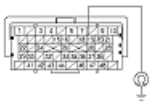
---

11. Connect APP sensor 6P connector terminal No. 6 to body ground with a jumper wire.

---

12. Check for continuity between ECM/PCM connector terminal A19 and body ground.

    Is there continuity?
    YES - Go to Step 13 .
    NO - Repair open in the wire between the ECM/PCM (A19) and APP sensor B, then go to Step 24 .
13. Reconnect ECM/PCM connector A (49P).



---

14. Connect APP sensor 6P connector terminals No. 4 and No. 6 with a jumper wire.
15. Turn the ignition switch to ON (II).
16. Check APP SENSOR B in the DATA LIST with the HDS.

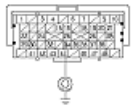
    Is there about 0.2 V or less?
    YES - Go to Step 29 .
    NO - Go to Step 22 .
17. Turn the ignition switch to LOCK (0).
18. Jump the SCS line with the HDS.
19. Disconnect ECM/PCM connector A (49P).

---

20. Connect APP sensor 6P connector terminal No. 4 to body ground with a jumper wire.

---

21. Check for continuity between ECM/PCM connector terminal A25 and body ground.



Is there continuity?

YES - Go to Step 29 .
NO - Repair open in the wire between the ECM/PCM (A25) and APP sensor B, then go to Step 24 .

22. Turn the ignition switch to LOCK (0).
23. Replace the accelerator pedal module.
24. Reconnect all connectors.
25. Turn the ignition switch to ON (II).
26. Reset the ECM/PCM with the HDS.
27. Do the ECM/PCM idle learn procedure.
28. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2127 indicated?

YES - Check for poor connections or loose terminals at APP sensor B and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

29. Turn the ignition switch to LOCK (0).
30. Reconnect all connectors.
31. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
32. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2127 indicated?

YES - Check for poor connections or loose terminals at APP sensor B and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2128 (37)

DTC P2128:
APP Sensor B (TP Sensor E) Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check APP SENSOR B in the DATA LIST with the HDS.

   Is there about 4.9 V or more?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals APP sensor B and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the APP sensor 6P connector.
5. Turn the ignition switch to ON (II).
6. Measure the voltage between APP sensor 6P connector terminals No. 4 and No. 5.

   Is there about 5 V?
   YES - Go to Step 12 .
   NO - Go to Step 7 .
7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector A (49P).

---

10. Connect APP sensor 6P connector terminal No. 5 to body ground with a jumper wire.

---

11. Check for continuity between ECM/PCM connector terminal A35 and body ground.

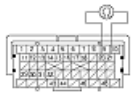
   Is there continuity?
   YES - Go to Step 19 .
   NO - Repair open in the wire between the ECM/PCM (A35) and APP sensor B, then go to Step 14 .
12. Turn the ignition switch to LOCK (0).
13. Replace the accelerator pedal module.
14. Reconnect all connectors.
15. Turn the ignition switch to ON (II).
16. Reset the ECM/PCM with the HDS.
17. Do the ECM/PCM idle learn procedure.
18. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2128 indicated?
   YES - Check for poor connections or loose terminals at APP sensor B and the ECM/PCM, then go to Step 1 .
   NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■
19. Reconnect all connectors.
20. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
21. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2128 indicated?
   YES - Check for poor connections or loose terminals at APP sensor B and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
   NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2135 (7)

DTC P2135:
TP Sensor A/B Incorrect Voltage Correlation



⚠CAUTION

Do not insert your fingers into the installed throttle body when you turn the ignition switch to ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

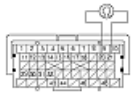
1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Do the ETCS TEST in the INSPECTION MENU with the HDS.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2135 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Disconnect the intake air duct from the throttle body.
7. Turn the ignition switch to ON (II).
8. Clear the DTC with the HDS.
9. Visually check the throttle valve operation.

   Does the valve temporarily move to its fully closed position?
   YES - Go to Step 16 .
   NO - Go to Step 10 .
10. Turn the ignition switch to LOCK (0).
11. Jump the SCS line with the HDS.
12. Disconnect ECM/PCM connector C (44P).
13. Check for continuity between ECM/PCM connector terminals C20 and C21.

    Is there continuity?
    YES - Go to Step 14 .
    NO - Go to Step 23 .
14. Disconnect the throttle body 6P connector.

15. Check for continuity between ECM/PCM connector terminals C20 and C21.



Is there continuity?

YES - Repair short in the wire between the ECM/PCM connector terminals C20 (TPSA line) and C21 (TPSB line), then go to Step 18 .

NO - Go to Step 16 .

16. Turn the ignition switch to LOCK (0).
17. Replace the throttle body.
18. Reconnect all connectors.
19. Turn the ignition switch to ON (II).
20. Reset the ECM/PCM with the HDS.
21. Do the ECM/PCM idle learn procedure.
22. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2135 indicated?

YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM, then go to Step 1 .

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

23. Reconnect all connectors.
24. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
25. Check for Temporary DTCs or DTCs with the HDS.

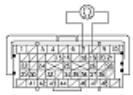
Is DTC P2135 indicated?

YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .

NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2138 (37)

DTC P2138:
APP Sensor A/B (TP Sensor D/E) Incorrect Voltage Correlation
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.



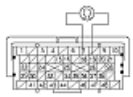
1. Turn the ignition switch to ON (II).
2. Clear the DTC with HDS.
3. Press the accelerator pedal to the floor.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2138 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the APP sensor and the ECM/PCM.■
5. Check APP SENSOR A and APP SENSOR B in the DATA LIST with the HDS.

   Are they the same voltage?
   YES - Go to Step 6 .
   NO - Go to Step 12 .
6. Turn the ignition switch to LOCK (0).
7. Jump the SCS line with the HDS.
8. Disconnect ECM/PCM connector A (49P).
9. Check for continuity between ECM/PCM connector terminals A18 and A19.

   Is there continuity?
   YES - Go to Step 10 .
   NO - Go to Step 22 .
10. Disconnect the APP sensor 6P connector.

11. Check for continuity between ECM/PCM connector terminals A18 and A19.



Is there continuity?

YES - Repair short in the wires between ECM/PCM connector terminals A18 (APSA line) and A19 (APSB line), then go to Step 14 .

NO - Go to Step 13 .

12. Turn the ignition switch to LOCK (0).
13. Replace the accelerator pedal module.
14. Reconnect all connectors.
15. Turn the ignition switch to ON (II).
16. Reset the ECM/PCM with the HDS.
17. Do the ECM/PCM idle learn procedure.
18. Turn the ignition switch to LOCK (0).
19. Turn the ignition switch to ON (II).
20. Press the accelerator pedal to the floor.
21. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2138 indicated?

YES - Check for poor connections or loose terminals at APP sensor A/B and the ECM/PCM, then go to Step 1 .

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

22. Reconnect all connectors.
23. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
24. Turn the ignition switch to LOCK (0).
25. Turn the ignition switch to ON (II).
26. Press the accelerator pedal to the floor.
27. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2138 indicated?

YES - Check for poor connections or loose terminals at APP sensor A/B and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 23 . If the ECM/PCM was substituted, go to Step 1 .

NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2176 (40)

DTC P2176:
Throttle Actuator Control System Idle Position Not Learned

⚠CAUTION

Do not insert your fingers into the installed throttle body when you turn the ignition switch to ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.
- If DTC P2135 is stored at the same time as DTC P2176, troubleshoot DTC P2135 first, then recheck for DTC P2176.

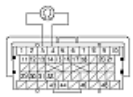
1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0).
4. Turn the ignition switch to ON (II), and wait 10 seconds.
5. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2176 indicated?
   YES - Go to Step 6 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the ECM/PCM, then clean the throttle body. ■
6. Turn the ignition switch to LOCK (0).
7. Remove the air cleaner.
8. Turn the ignition switch to ON (II).
9. Clear the DTC with the HDS.
10. Visually check the throttle valve operation while performing the ETCS TEST in the INSPECTION MENU with the HDS.

    Does the throttle valve move to its fully closed position?
    YES - Go to Step 11 .
    NO - Go to Step 12 .
11. Check for sludge or carbon on the throttle valve.

    Is there sludge or carbon on the throttle valve?
    YES - Clean the throttle body, then go to Step 21 .
    NO - Go to Step 18 .
12. Turn the ignition switch to LOCK (0).
13. Disconnect the throttle body 6P connector.
14. Jump the SCS line with the HDS.
15. Disconnect ECM/PCM connector C (49P).
16. Connect throttle body 6P connector terminals No. 5 and No. 6 with a jumper wire.

17. Check for continuity between ECM/PCM connector terminals C3 and C4.



Is there continuity?
YES - Go to Step 27 .
NO - Repair open in the wires between the throttle body and the ECM/PCM (C3, C4), then go to Step 20 .

18. Turn the ignition switch to LOCK (0).

19. Replace the throttle body.

20. Reconnect all connectors.

21. Turn the ignition switch to ON (II).

22. Reset the ECM/PCM with the HDS.

23. Do the ECM/PCM idle learn procedure.

24. Turn the ignition switch to LOCK (0).

25. Turn the ignition switch to ON (II), and wait 10 seconds.

26. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2176 indicated?
YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM, then clean the throttle body, and go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

27. Reconnect all connectors.

28. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.

29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2176 indicated?
YES - Check for poor connections or loose terminals at the throttle body and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2184 (192)

DTC P2184:
ECT Sensor 2 Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check ECT SENSOR 2 in the DATA LIST with the HDS.

   Is about 180 °C (356 °F) or more, or 0.08 V or less indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 2 and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the ECT sensor 2 2P connector.
5. Turn the ignition switch to ON (II).
6. Check ECT SENSOR 2 in the DATA LIST with the HDS.

   Is about 180 °C (356 °F) or more, or 0.08 V or less indicated?
   YES - Go to Step 7 .
   NO - Go to Step 11 .
7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector A (49P).
10. Check for continuity between ECT sensor 2 2P connector terminal No. 2 and body ground.

    Is there continuity?
    YES - Repair short in the wire between ECT sensor 2 and the ECM/PCM (A34), then go to Step 13 .
    NO - Go to Step 18 .
11. Turn the ignition switch to LOCK (0).
12. Replace ECT sensor 2.
13. Reconnect all connectors.
14. Turn the ignition switch to ON (II).
15. Reset the ECM/PCM with the HDS.
16. Do the ECM/PCM idle learn procedure.
17. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P2184 indicated?
    YES - Check for poor connections or loose terminals at ECT sensor 2 and the ECM/PCM, then go to Step 1 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■
18. Reconnect all connectors.
19. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
20. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P2184 indicated?
    YES - Check for poor connections or loose terminals at ECT sensor 2 and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2185 (192)

DTC P2185:
ECT Sensor 2 Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check ECT SENSOR 2 in the DATA LIST with the HDS.

   Is about −40 °C (−40 °F) or less, or 4.90 V or more indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 2 and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the ECT sensor 2 2P connector.
5. Connect ECT sensor 2 2P connector terminals No. 1 and No. 2 with a jumper wire.
6. Turn the ignition switch to ON (II).
7. Check ECT SENSOR 2 in the DATA LIST with the HDS.

   Is about −40 °C (−40 °F) or less, or 4.90 V or more indicated?
   YES - Go to Step 8 .
   NO - Go to Step 20 .
8. Turn the ignition switch to LOCK (0).
9. Remove the jumper wire from ECT sensor 2 2P connector.
10. Turn the ignition switch to ON (II).

---

11. Measure the voltage between ECT sensor 2 2P connector terminal No. 2 and body ground.

    Is there about 5 V?
    YES - Go to Step 12 .
    NO - Go to Step 16 .
12. Turn the ignition switch to LOCK (0).
13. Jump the SCS line with the HDS.
14. Disconnect ECM/PCM connector A (49P).

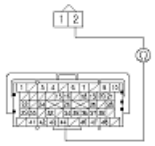
---

15. Check for continuity between ECT sensor 2 2P connector terminal No. 1 and ECM/PCM connector terminal A10.

    Is there continuity?
    YES - Go to Step 27 .
    NO - Repair open in the wire between the ECM/PCM (A10) and ECT sensor 2, then go to Step 22 .
16. Turn the ignition switch to LOCK (0).
17. Jump the SCS line with the HDS.
18. Disconnect ECM/PCM connector A (49P).

---

19. Check for continuity between ECT sensor 2 2P connector terminal No. 2 and ECM/PCM connector terminal A34.



Is there continuity?
YES - Go to Step 27 .
NO - Repair open in the wire between the ECM/PCM (A34) and ECT sensor 2, then go to Step 22 .

20. Turn the ignition switch to LOCK (0).
21. Replace ECT sensor 2.
22. Reconnect all connectors.
23. Turn the ignition switch to ON (II).
24. Reset the ECM/PCM with the HDS.
25. Do the ECM/PCM idle learn procedure.
26. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2185 indicated?
YES - Check for poor connections or loose terminals at ECT sensor 2 and the ECM/PCM, then go to Step 1 .
NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

27. Reconnect all connectors.
28. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2185 indicated?
YES - Check for poor connections or loose terminals at ECT sensor 2 and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2228 (13)

DTC P2228:
BARO Sensor Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check the BARO SENSOR in the DATA LIST with the HDS.

   Is about 43 kPa (323 mmHg, 12.7 in.Hg), or 1.3 V or less indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time.■
3. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2228 indicated?
   YES - Check for poor connections or loose terminals at the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
   NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2229 (13)

DTC P2229:
BARO Sensor Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

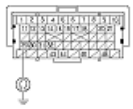
1. Turn the ignition switch to ON (II).
2. Check the BARO SENSOR in the DATA LIST with the HDS.

   Is about 160 kPa (1,200 mmHg, 47.2 in.Hg), or 4.5 V or more indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time.■
3. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2229 indicated?
   YES - Check for poor connections or loose terminals at the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
   NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2238 (48)

DTC P2238:
A/F Sensor (Sensor 1) AFS+ Line Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.



1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2238 indicated?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM.■
4. Turn the ignition switch to LOCK (0).
5. Jump the SCS line with the HDS.
6. Remove the cowl cover and under cowl-cover panel.
7. Disconnect the A/F sensor (Sensor 1) 4P connector.
8. Disconnect ECM/PCM connector C (49P).
9. Check for continuity between ECM/PCM connector terminal C29 and body ground.

   Is there continuity?
   YES - Repair short in the wire between the ECM/PCM (C29) and the A/F sensor (Sensor 1), then go to Step 11 .
   NO - Go to Step 10 .
10. Replace the A/F sensor (Sensor 1).
11. Reconnect all connectors.
12. Turn the ignition switch to ON (II).
13. Reset the ECM/PCM with the HDS.
14. Do the ECM/PCM idle learn procedure.
15. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P2238 indicated?
    YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to Step 1 . If the connector and terminal fits are OK, go to Step 17 .
    NO - Go to Step 16 .
16. Monitor the OBD STATUS for DTC P2238 in the DTCs MENU with the HDS.

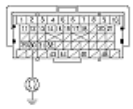
    Does the screen indicate PASSED?
    YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 15 , go to the indicated DTC's troubleshooting.■
    NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to Step 1 . If the screen indicates NOT COMPLETED, go to Step 13 .
17. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
18. Start the engine, and let it idle.
19. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P2238 indicated?
    YES - If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 18 . If the ECM/PCM was substituted, go to Step 1 .
    NO - Go to Step 20 .
20. Monitor the OBD STATUS for DTC P2238 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?
    YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 19 , go to the indicated DTC's troubleshooting.■
    NO - If the screen indicates FAILED, go to Step 1 . If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 18 . If the ECM/PCM was substituted, go to Step 1 . If the screen indicates NOT COMPLETED, keep idling until a result come on.

DTC Troubleshooting: P2252 (48)

DTC P2252:
A/F Sensor (Sensor 1) AFS− Line Low Voltage



NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2252 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Jump the SCS line with the HDS.
7. Remove the cowl cover and under cowl-cover panel.
8. Disconnect the A/F sensor (Sensor 1) 4P connector.
9. Disconnect ECM/PCM connector C (49P).
10. Check for continuity between ECM/PCM connector terminal C30 and body ground.

    Is there continuity?
    YES - Repair short in the wire between the ECM/PCM (C30) and the A/F sensor (Sensor 1), then go to Step 12 .
    NO - Go to Step 11 .
11. Replace the A/F sensor (Sensor 1).
12. Reconnect all connectors.
13. Turn the ignition switch to ON (II).
14. Reset the ECM/PCM with the HDS.
15. Do the ECM/PCM idle learn procedure.
16. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P2252 indicated?
    YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to Step 1 . If the connector and terminal fits are OK, go to Step 18 .
    NO - Go to Step 17 .
17. Monitor the OBD STATUS for DTC P2252 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?
    YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 16 , go to the indicated DTC's troubleshooting.■
    NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to Step 1 . If the screen indicates NOT COMPLETED, go to Step 14 .
18. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
19. Start the engine, and let it idle.
20. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P2252 indicated?
    YES - If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 19 . If the ECM/PCM was substituted, go to Step 1 .
    NO - Go to Step 21 .
21. Monitor the OBD STATUS for DTC P2252 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?
    YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 20 , go to the indicated DTC's troubleshooting.■
    NO - If the screen indicates FAILED, go to Step 1 . If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 19 . If the ECM/PCM was substituted, go to Step 1 . If the screen indicates NOT COMPLETED, keep idling until a result come on.

DTC Troubleshooting: P2610 (132)

DTC P2610:
ECM/PCM Ignition Off Internal Timer Malfunction
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2610 indicated?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time.■
4. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
5. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2610 indicated?
   YES - If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
   NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P2648 (21)

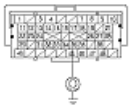
DTC P2648:
Rocker Arm Oil Control Solenoid Circuit Low Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Select the VTEC TEST in the INSPECTION MENU with in the HDS.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2648 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the rocker arm oil control solenoid and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Disconnect the rocker arm oil control solenoid 2P connector.
7. Measure the resistance between the rocker arm oil control solenoid 2P connector terminals No. 1 and No. 2.

   Is there 14−30 Ω at room temperature?
   YES - Go to Step 8 .
   NO - Go to Step 11 .
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector B (49P).

10. Check for continuity between ECM/PCM connector terminal B35 and body ground.



Is there continuity?
YES - Repair short in the wire between the ECM/PCM (B35) and the rocker arm oil control solenoid, then go to Step 12 .
NO - Go to Step 19 .

11. Replace the rocker arm oil control valve.
12. Reconnect all connectors.
13. Turn the ignition switch to ON (II).
14. Reset the ECM/PCM with the HDS.
15. Do the ECM/PCM idle learn procedure.
16. Do the VTEC TEST in the INSPECTION MENU with the HDS.
17. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2648 indicated?
YES - Check for poor connections or loose terminals at the rocker arm oil control solenoid and the ECM/PCM, then go to Step 1 .
NO - Go to Step 18 .

18. Monitor the OBD STATUS for DTC P2648 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 17 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the rocker arm oil control solenoid and the ECM/PCM, then go to Step 1 . If the screen indicates NOT COMPLETED, go to Step 16 .

19. Reconnect all connectors.
20. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
21. Do the VTEC TEST in the INSPECTION MENU with the HDS.
22. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2648 indicated?
YES - Check for poor connections or loose terminals at the rocker arm oil control solenoid and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 21 . If the ECM/PCM was substituted, go to Step 1 .
NO - Go to Step 23 .

23. Monitor the OBD STATUS for DTC P2648 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 22 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the rocker arm oil control solenoid and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 21 . If the ECM/PCM was substituted, go to Step 1 . If the screen indicates NOT COMPLETED, go to Step 21 .

DTC Troubleshooting: P2649 (21)

DTC P2649:
Rocker Arm Oil Control Solenoid Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm (min $^{-1}$) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.
4. Check for Temporary DTCs or DTCs with the HDS.

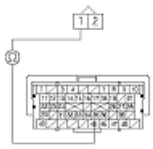
   Is DTC P2649 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the rocker arm oil control solenoid and the ECM/PCM.■
5. Turn the ignition switch to LOCK (0).
6. Disconnect the rocker arm oil control solenoid 2P connector.
7. At the solenoid side, measure the resistance between rocker arm oil control solenoid 2P connector terminals No. 1 and No. 2.

   Is there 14−30 Ω at room temperature?
   YES - Go to Step 8 .
   NO - Go to Step 11 .

8. Check for continuity between rocker arm oil control solenoid 2P connector terminal No. 2 and body ground.

   Is there continuity?
   YES - Go to Step 9 .
   NO - Repair open in the wire between the rocker arm oil control solenoid and G101; AT model, MT model, then go to Step 13 .
9. Jump the SCS line with the HDS.
10. Disconnect ECM/PCM connector B (49P).

11. Check for continuity between ECM/PCM connector terminal B35 and rocker arm oil control solenoid 2P connector terminal No. 1.



Is there continuity?
YES - Go to Step 19 .
NO - Repair open in the wire between the ECM/PCM (B35) and the rocker arm oil control solenoid, then go to Step 13 .

12. Replace the rocker arm oil control valve.
13. Reconnect all connectors.
14. Turn the ignition switch to ON (II).
15. Reset the ECM/PCM with the HDS.
16. Do the ECM/PCM idle learn procedure.
17. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2649 indicated?
YES - Check for poor connections or loose terminals at the rocker arm oil control solenoid and the ECM/PCM, then go to Step 1 .
NO - Go to Step 18 .

18. Monitor the OBD STATUS for DTC P2649 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 17 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, go to Step 1 and recheck. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

19. Reconnect all connectors.
20. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
21. Start the engine, and let it idle.
22. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2649 indicated?
YES - Check for poor connections or loose terminals at the rocker arm oil control solenoid and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 21 . If the ECM/PCM was substituted, go to Step 1 .
NO - Go to Step 23 .

23. Monitor the OBD STATUS for DTC P2649 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?
YES - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs were indicated in Step 21 , go to the indicated DTC's troubleshooting.■
NO - If the screen indicates FAILED, check for poor connections or loose terminals at the rocker arm oil control solenoid and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 21 . If the ECM/PCM was substituted, go to Step 1 . If the screen indicates NOT COMPLETED, keep idling until a result comes on.

DTC Troubleshooting: P2A00 (61)

DTC P2A00:
A/F Sensor (Sensor 1) Circuit Range/Performance Problem
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm (min^{-1}) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.
4. Test-drive under these conditions:
   - Engine coolant temperature (ECT SENSOR 1) above 70 °C (158 °F)
   - A/T in D, M/T in 3rd or 4th
   - Vehicle speed between 40−88 km/h (25−55 mph) for 5 minutes
   - Drive at a steady speed between 88−120 km/h (55−75 mph) for 10 seconds, then decelerate (with throttle fully closed) for 5 seconds
5. Monitor the OBD STATUS for DTC P2A00 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?
   YES - Go to Step 6 .
   NO - If the screen indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION or NOT COMPLETED, go to Step 3 and recheck.
6. Turn the ignition switch to LOCK (0).
7. Replace the A/F sensor (Sensor 1).
8. Turn the ignition switch to ON (II).
9. Reset the ECM/PCM with the HDS.
10. Do the ECM/PCM idle learn procedure.
11. Test-drive under these conditions:
    - Engine coolant temperature (ECT SENSOR 1) above 70 °C (158 °F)
    - A/T in D, M/T in 3rd or 4th
    - Vehicle speed between 40−88 km/h (25−55 mph) for 5 minutes
    - Drive at a steady speed between 88−120 km/h (55−75 mph) for 10 seconds, then decelerate (with throttle fully closed) for 5 seconds
12. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P2A00 indicated?
    YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to Step 1 .
    NO - Go to Step 13 .
13. Monitor the OBD STATUS for DTC P2A00 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?
    YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 12 , go to the indicated DTC's troubleshooting.■
    NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to Step 1 . If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION or NOT COMPLETED, go to Step 11 .

DTC Troubleshooting: U0029 (126)

DTC U0029:
F-CAN Malfunction (BUS-OFF (ECM/PCM))
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

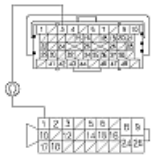
1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC U0029 indicated?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time.■
4. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
5. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC U0029 indicated?
   YES - If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
   NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: U0121 - PGM-FI System

DTC U0121:
F-CAN Malfunction (ECM/PCM-ABS Modulator-Control Unit)
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.



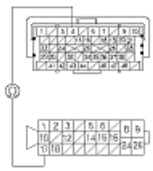
1. Turn the ignition switch to ON (II).
2. Check for Temporary DTCs or DTCs with the HDS.

   Are DTC U0029 and U0121 indicated at the same time?
   YES - Go to the troubleshooting for DTC U0029.■
   NO - Go to Step 3 .
3. Clear the DTC with the HDS.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC U0121 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the ABS modulator-control unit, and the ECM/PCM.■
5. Check for communication to the ABS system with the HDS.

   Does the HDS communicate with the ABS modulator-control unit?
   YES - Go to Step 6 .
   NO - Go to the DLC circuit troubleshooting. ■
6. Turn the ignition switch to LOCK (0).
7. Jump the SCS line with the HDS.
8. Disconnect the ABS modulator-control unit 25P connector.
9. Disconnect ECM/PCM connector A (49P).
10. Check for continuity between ECM/PCM connector terminal A3 and ABS modulator-control unit 25P connector terminal No. 1.

    Is there continuity?
    YES - Go to Step 11 .
    NO - Repair open in the wire between the ECM/PCM (A3) and the ABS modulator-control unit, then go to Step 12 .



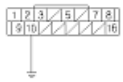
11. Check for continuity between ECM/PCM connector terminal A4 and ABS modulator-control unit 25P connector terminal No. 17.

    Is there continuity?
    YES - Substitute a known-good ABS modulator-control unit, then go to Step 12 and recheck. If DTC U0121 is not indicated after substitution, replace the original ABS modulator-control unit, then go to Step 12 .
    NO - Repair open in the wire between the ECM/PCM (A4) and the ABS modulator-control unit, then go to Step 12 .
12. Reconnect all connectors.
13. Turn the ignition switch to ON (II).
14. Reset the ECM/PCM with the HDS.
15. Do the ECM/PCM idle learn procedure.
16. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC U0122 indicated?
    YES - Check for poor connections or loose terminals at the gauge control module, the ABS modulator-control unit, and the ECM/PCM, then go to Step 1 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: U0131 (126)

DTC U0131:
F-CAN Malfunction (ECM/PCM-EPS Control Unit)
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.



1. Turn the ignition switch to ON (II).
2. Check for Temporary DTCs or DTCs with the HDS.

   Are DTC U0029 and U0131 indicated at the same time?
   YES - Go to the troubleshooting for DTC U0029.■
   NO - Go to Step 3 .
3. Clear the DTC with the HDS.
4. Check for Temporary DTCs or DTCs with the HDS.

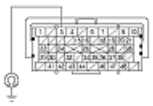
   Is DTC U0131 indicated?
   YES - Go to Step 5 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the EPS control unit and the ECM/PCM.■
5. Check for communication to the EPS system with the HDS.

   Does the HDS communicate with the EPS control unit?
   YES - Go to Step 6 .
   NO - Go to the DLC circuit troubleshooting. ■
6. Turn the ignition switch to LOCK (0).
7. Jump the SCS line with the HDS.
8. Disconnect EPS control unit C (16P) connector.
9. Disconnect ECM/PCM connector A (49P).
10. Connect EPS control unit connector terminal C10 to body ground with a jumper wire.

---

11. Check for continuity between ECM/PCM connector terminal A3 and body ground.

    Is there continuity?
    YES - Go to Step 12 .
    NO - Repair open in the wire between the ECM/PCM (A3) and the EPS control unit, then go to Step 14 .



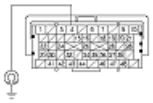
---

12. Connect EPS control unit connector terminal C9 to body ground with a jumper wire.

---

13. Check for continuity between ECM/PCM connector terminal A4 and body ground.

    Is there continuity?
    YES - Substitute a known-good EPS control unit, then go to Step 14 and recheck. If DTC U0131 is not indicated after substitution, replace the original EPS control unit, then go to Step 14 .
    NO - Repair open in the wire between the ECM/PCM (A4) and the EPS control unit, then go to Step 14 .



14. Reconnect all connectors.
15. Turn the ignition switch to ON (II).
16. Reset the ECM/PCM with the HDS.
17. Do the ECM/PCM idle learn procedure.
18. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC U0131 indicated?
    YES - Check for poor connections or loose terminals at the EPS control unit and the ECM/PCM, then go to Step 1 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

Set speed does not cancel (engine rpm stays high) when the clutch pedal is pressed

Diagnostic procedure

1. Check for PGM-FI DTCs.
2. Do the clutch pedal position switch test.
3. Do the cruise control input test. Test the clutch pedal position switch signal input.

Also check for

- Short to ground on the WHT wire
- Faulty clutch pedal position switch

Set speed will not resume when the resume/accel switch is pressed (with the cruise control main switch turned on, and set speed temporarily canceled by pressing the clutch pedal)

Diagnostic procedure

1. Check for PGM-FI DTCs.
2. Check the clutch pedal position switch adjustment.
3. Do the cruise control combination switch test.
4. Do the cruise control input test. Test the cruise control resume/accel switch signal input. Test the clutch pedal position switch signal input.

Also check for

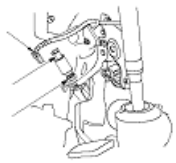
- Faulty clutch pedal position switch
- Open circuit, loose or disconnected terminals: LT GRN/BLK, BLU wire

Clutch Pedal Position Switch Test

1. Disconnect the 2P connector from the clutch pedal position switch.

2. Check for continuity between the terminals according to the table.
   - If the continuity is not as specified, replace the clutch pedal position switch.
   - If OK, install the clutch pedal position switch, and adjust the pedal height.

Clutch Pedal Position Switch Replacement



1. Disconnect the 2P connector (A) from the clutch pedal position switch.
2. Loosen the locknut (B), then remove the clutch pedal position switch (C).
3. Install the clutch pedal position switch, and adjust the pedal height.

Cruise Control (ECM/PCM) Input Test

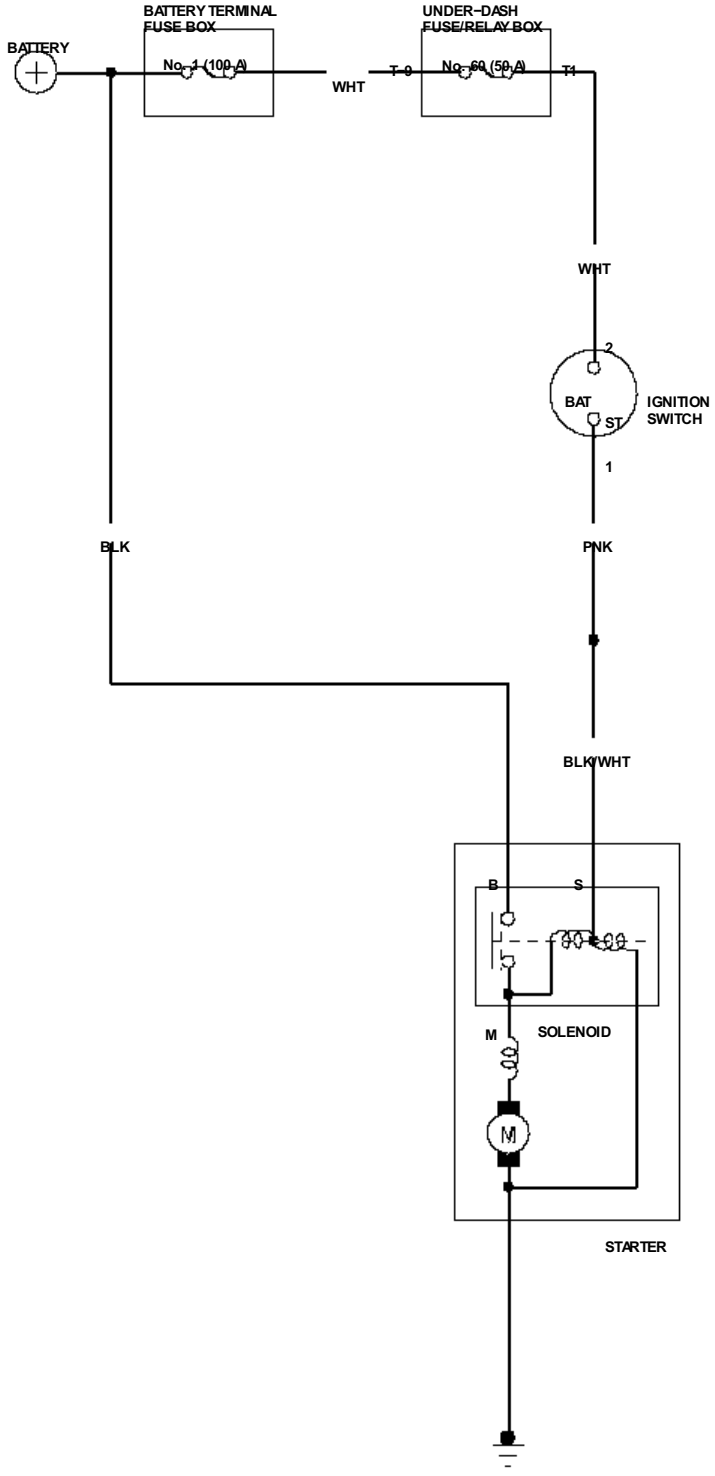
1. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC).
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle and the engine control module (ECM)/powertrain control module (PCM). If it doesn't communicate, troubleshoot the DLC circuit.
4. Go to PGM-FI, and check for DTCs.
5. Do the following tests while monitoring parameters in the PGM-FI DATA LIST with the HDS.
   NOTE: Intermittent failures are often caused by loose circuit connections. While monitoring cruise control inputs, flex their circuits, and note if any of the test results change.

Signal to be tested	Test condition	Parameter: Desired result	Possible cause if result is not obtained
Brake pedal position switch signal	Brake pedal pressed, then released	CRUISE BRAKE SW should indicate OFF when the brake pedal is pressed and ON when the brake pedal is released.	• Faulty brake pedal position switch • Blown No. 24 (10 A) fuse in the under-dash fuse/relay box • An open in the wire between the ECM/PCM and the brake pedal position switch • A wire shorted to ground between the ECM/PCM and the brake pedal position switch
Clutch pedal position switch signal (M/T model)	Clutch pedal pressed, then released	SHIFT/CLUTCH SW should indicate OFF when the clutch pedal is pressed and ON when the clutch pedal is released.	• Faulty clutch pedal position switch • An open in the wire between the ECM and the clutch pedal position switch • A wire shorted to ground between the ECM and the clutch pedal position switch • Poor ground G401
Transmission range switch signal (A/T model)	Shift lever in D and S	SHIFT/CLUTCH SW should indicate ON in P, R, and N and OFF in D and S.	• Faulty transmission range switch • An open in the wire between the PCM and the transmission range switch • A wire shorted to ground between the PCM and the transmission range switch • Poor ground G101
Set switch signal	Set/decel switch pressed and released	CRUISE CONTROL SET SW should indicate ON when the set/decel switch is pressed and OFF when the set/decel switch is released.	• Faulty cruise control combination switch • An open in the wire between the gauge control module and the cruise control combination switch • A wire shorted to ground between the gauge control module and the cruise control combination switch
Resume switch signal	Resume/accel switch pressed and released	CRUISE CONTROL RESUME SW should indicate ON when the resume/accel switch is pressed and OFF when the resume/accel switch is released.	• Faulty cruise control combination switch • An open in the wire between the gauge control module and the cruise control combination switch • A wire shorted to ground between the gauge control module and the cruise control combination switch
Cancel switch signal	Cancel switch pressed and released	CRUISE CONTROL CANCEL SW should indicate ON when the cancel switch is pressed and OFF when the cancel switch is released.	Faulty cruise control combination switch
Cruise control main switch signal	Cruise control main switch ON and OFF	CRUISE CONTROL MAIN SW should indicate ON when the cruise control main switch is turned ON and OFF when the cruise control main switch is turned OFF.	• Faulty cruise control combination switch • An open in the wire between the gauge control module and the cruise control combination switch • A wire shorted to ground between the gauge control module and the cruise control combination switch • An open in the wire between the cruise control combination switch and ground

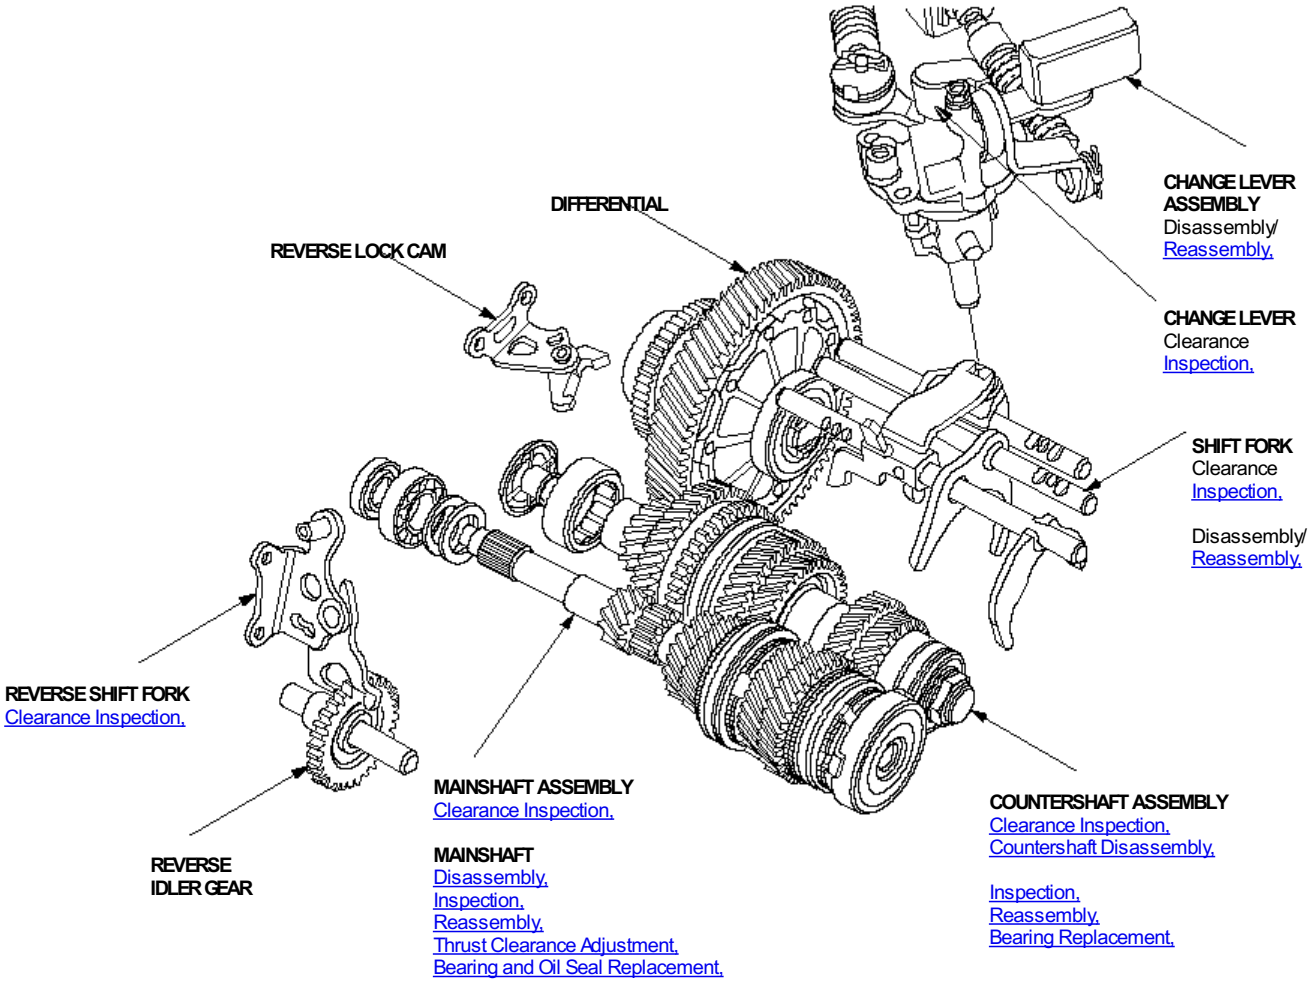
Signal to be tested	Test condition	Parameter: Desired result	Possible cause if result is not obtained
Cruise control indicator signal	Start the engine, turn the cruise control main switch on, and drive the vehicle above 40 km/h (25 mph). Set and cancel the cruise control.	CRUISE INDICATOR should indicate ON when the cruise control is set and OFF when the cruise control is canceled.	Faulty gauge control module

Starting System Circuit Diagram

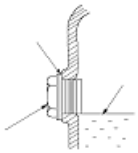
M/T model



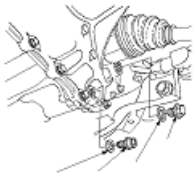
M/T Component Location Index



MTF Inspection and Replacement



1. Park the vehicle on level ground, and turn the engine OFF.
2. Raise the vehicle on a lift and make sure it is securely supported.
3. Remove the splash shield.
4. Remove the filler plug (A) and sealing washer (B), check the condition of the MTF and make sure it is at the proper level (C).



5. If the MTF is dirty, remove the drain plug (A) and drain the MTF.
6. Reinstall the drain plug with a new sealing washer (B), and refill the transmission with MTF to the proper level. Always use Genuine Honda Manual Transmission Fluid (MTF).

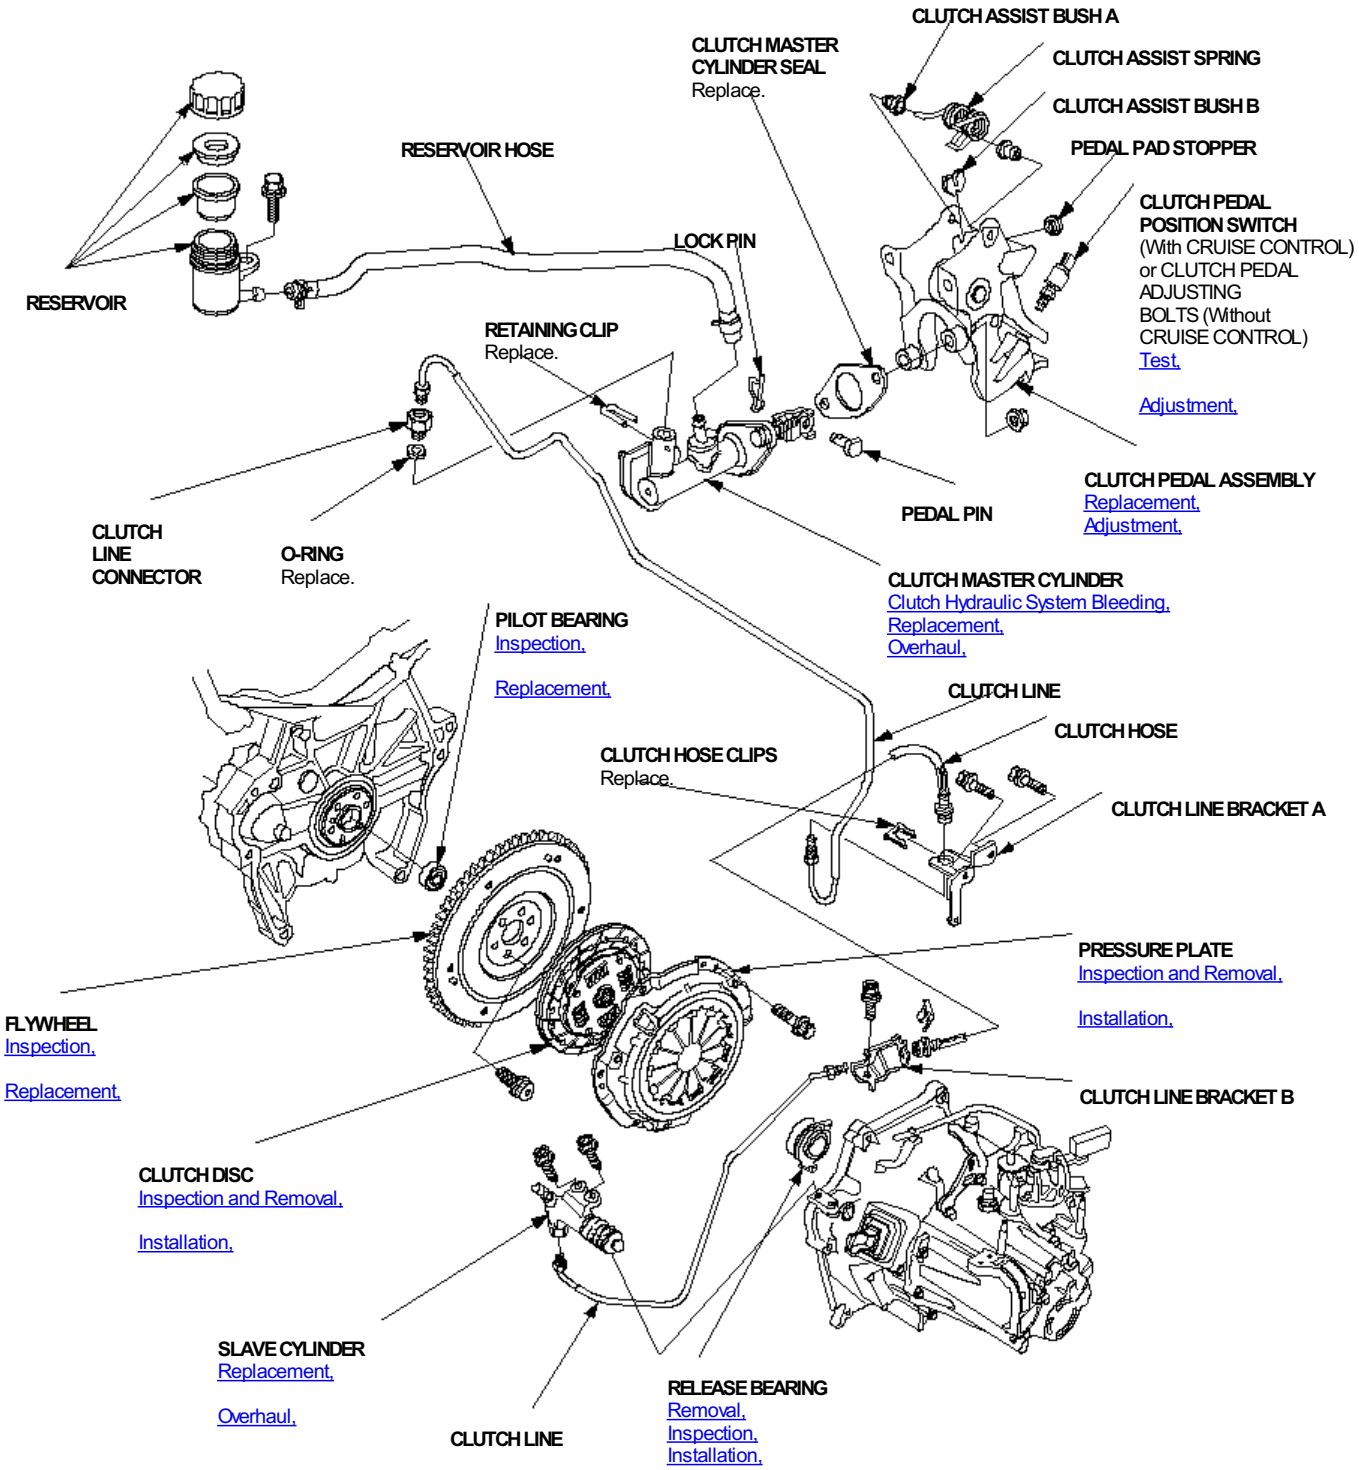
Fluid Capacity

1.5 L (1.6 US qt, 1.3 Imp qt) at fluid change
1.6 L (1.7 US qt, 1.4 Imp qt) at overhaul

7. Install the filler plug (C) with a new sealing washer (D).
8. Install the splash shield.
9. Lower the vehicle on the lift.

Clutch Component Location Index

NOTE: RHD type is shown, LHD type is similar.



Clutch Master Cylinder Replacement

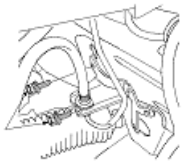
NOTE:

- Use fender covers to avoid damaging painted surfaces.
- Do not spill brake fluid on the vehicle; it may damage the paint or plastic. If brake fluid does contact the paint or plastic, wash it off immediately with water.
- Without cruise control: Clutch pedal adjusting bolt is substituted as clutch pedal position switch.
- Put on gloves to protect your hands.

1. Secure the hood in the wide open position (support rod in the lower hole).
2. Remove the windshield wiper arms.
3. Remove the cowl cover and hood hinge cover.
4. Remove the wiper motor.
5. Remove the under-cowl panel.
6. LHD model: Remove the air cleaner housing.
7. Remove the brake fluid from the clutch master cylinder reservoir with a syringe.
8. Remove the driver's dashboard lower cover; RHD model, LHD model.
9. Pry out the lock pin (A), and pull the pedal pin (B) out of the yoke. Remove the master cylinder mounting nuts (C).

---

10. LHD model: Remove the clutch pipe bracket bolts (A).
11. LHD model: Remove the reservoir hose from two clips.

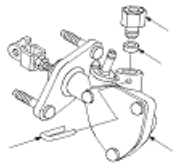


---

12. Disconnect the reservoir hose (A), then remove the clutch line (B) from the clutch master cylinder (C). Plug or wrap the end of the reservoir hose and clutch line with a shop towel to prevent brake fluid from coming out.
    NOTE:
    - Loosen the flare nut (D) while holding the clutch line connector (E) with a wrench.
    - Inspect the hose. If the hose has damage, leaks interference, or twisting, replace it.
13. Remove the clutch master cylinder seal (F) from the clutch master cylinder.

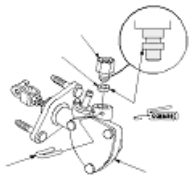
---

14. Remove the retaining clip (A), then remove the clutch line connector (B) and the O-ring (C) from the master cylinder (D).



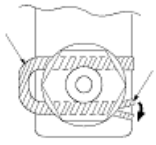
---

15. Install the clutch line connector (A) with a new O-ring (B), then set in a new retaining clip (C) to the master cylinder (D).
    NOTE: Apply the rubber grease on the O-ring and joint part (E) of the clutch line connector.



---

16. To prevent the retaining clip (A) from coming off, pry apart the tip (B) of the clip with a screwdriver.

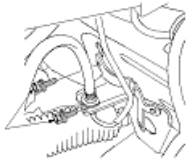


---

17. Install the new clutch master cylinder seal (A) to the clutch master cylinder (B).
18. Connect the clutch line (C), and reservoir hose (D).
    NOTE: Tighten the flare nut (E) while holding the clutch line connector (F) with a wernch.
19. LHD model: Install the two reservoir hose clips.

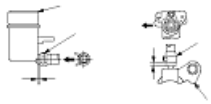
---

20. LHD model: Install the clutch pipe bracket bolts (A).

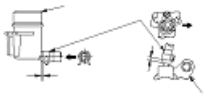


21. Make sure the hose clamps (A) are positioned on the master cylinder (B) and reservoir (C) as shown.
22. LHD model: Install the air cleaner housing.

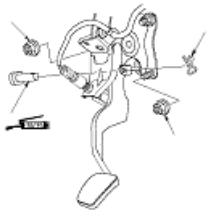
RHD model



LHD model

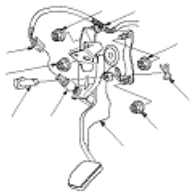


23. Install the master cylinder mounting nuts (A).
24. Apply multipurpose grease to the pedal pin (B), and slide it into the yoke, then install a lock pin (C).
25. Adjust the clutch pedal and clutch pedal position switch.
26. Bleed the clutch hydraulic system.
27. Install the driver dashboard lower cover; RHD model, LHD model.
28. Install the under-cowl panel.
29. Install the wiper motor.
30. Install the cowl cover and hood hinge cover.
31. Install the windshield wiper arms.
32. Check the clutch operation, and check for leaks.
33. Test-drive the vehicle.

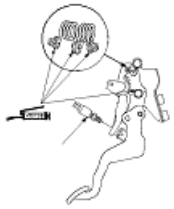


Clutch Pedal Assembly Replacement

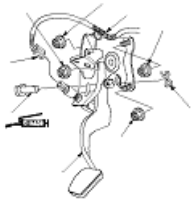
NOTE: Without cruise control: The adjusting bolt is substituted as clutch pedal position switch.



1. Disconnect the clutch pedal position switch connector (A). Remove the harness clip (B).
2. Pry out the lock pin (C), and pull the pedal pin (D) out of the yoke.
3. Remove the master cylinder mounting nuts (E) and clutch pedal mounting nuts (F).
4. Remove the clutch pedal assembly (G).
5. Remove the clutch pedal position switch (H).



6. Install the clutch pedal position switch (A).



7. Install the clutch pedal assembly (A).
8. Install the clutch pedal mounting nuts (B) and master cylinder mounting nuts (C).
9. Apply multipurpose grease to the pedal pin (D), and slide it into the yoke, then install a lock pin (E).
10. Install the harness clip (F). Connect the clutch pedal position switch connector (G).
11. Adjust the clutch pedal and clutch pedal position switch.
12. Check the clutch operation.

Clutch Pedal and Clutch Position Switch Adjustment

NOTE:

- Remove the driver's side floor mat before adjusting the clutch pedal.
- With cruise control: Cruise control, check the clutch pedal position switch.
- Without cruise control: The adjusting bolt is substituted as clutch pedal position switch.
  The clutch pedal height adjustment is same procedure as with the clutch pedal position switch.
- If there is no clearance between the master cylinder piston and push rod, the release bearing will be held against the diaphragm spring, which can result in clutch slippage or other clutch problems.

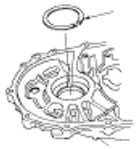
1. Disconnect the clutch pedal position switch connector.
2. Loosen the clutch pedal position switch locknut (A), and back off the clutch pedal position switch (B), it no longer touches the clutch pedal switch pad (C).
3. Loosen pushrod locknut (D), and turn the push rod (E) in or out to get the specified height (F), and the stroke (G) at the clutch pedal.
   Clutch Pedal Height (F):
   RHD model: 145 mm (5.71 in.)
   LHD model: 150 mm (5.91 in.)

   Clutch Pedal Stroke (G): 120−130 mm (4.72−5.12 in.)

4. Tighten the clutch pushrod locknut (A).
5. With the clutch pedal released, turn in the clutch pedal position switch (B) until it contacts the clutch pedal.
6. Turn in the clutch pedal position switch an additional 3/4 to 1 turn.
7. While holding the clutch pedal position switch, tighten the locknut (C).
8. Connect the clutch pedal position switch connector.

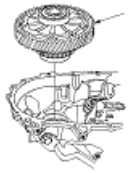
M/T Clutch Housing Differential Thrust Clearance Adjustment

Special Tools Required



Inner driver handle, 40 mm
07746-0030100

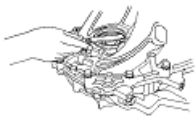
1. Remove the left driveshaft side oil seal.
2. Install the 72 mm or 80 mm shim (A) that's the same size as the one you removed.



3. Install the differential assembly (A) into the clutch housing.
4. Install the transmission housing onto the clutch housing, then tighten the 8 mm flange bolts in a crisscross pattern in several steps.
   8 x 1.25 mm
   27 N·m (2.8 kgf·m, 20 lbf·ft)

5. Use the 40 mm inner driver handle to bottom the differential assembly in the clutch housing.

6. Measure clearance between 72 mm or 80 mm shim and bearing outer race in transmission housing.
   Standard: 0.01–0.1 mm (0.0004–0.004 in.)



7. If the clearance is more than the standard, select a new 72 mm shim or 80 mm shim from the following table. If the clearance measured in Step 6 is within the standard, go to Step 10 .

72 mm Shim: L13Z1 engine

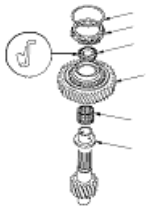
Type	Part Number	Thickness
A	41441-PL3-A000	1.0 mm (0.0394 in.)
B	41442-PL3-A000	1.1 mm (0.0433 in.)
C	41443-PL3-A000	1.2 mm (0.0472 in.)
D	41444-PL3-A000	1.3 mm (0.0512 in.)
E	41445-PL3-A000	1.4 mm (0.0551 in.)
F	41446-PL3-A000	1.5 mm (0.0591 in.)
G	41447-PL3-A000	1.6 mm (0.0630 in.)
H	41448-PL3-A000	1.7 mm (0.0669 in.)
J	41449-PL3-A000	1.8 mm (0.0709 in.)
K	41450-PL3-A000	1.05 mm (0.0413 in.)
L	41451-PL3-A000	1.15 mm (0.0453 in.)
M	41452-PL3-A000	1.25 mm (0.0492 in.)
N	41453-PL3-A000	1.35 mm (0.0531 in.)
P	41454-PL3-A000	1.45 mm (0.0571 in.)
Q	41455-PL3-A000	1.55 mm (0.0610 in.)
R	41456-PL3-A000	1.65 mm (0.0650 in.)
S	41457-PL3-A000	1.75 mm (0.0689 in.)

80 mm Shim: L15A7 engine

Type	Part Number	Thickness
A	41441-PL3-B000	1.0 mm (0.0394 in.)
B	41442-PL3-B000	1.1 mm (0.0433 in.)
C	41443-PL3-B000	1.2 mm (0.0472 in.)
D	41444-PL3-B000	1.3 mm (0.0512 in.)
E	41445-PL3-B000	1.4 mm (0.0551 in.)
F	41446-PL3-B000	1.5 mm (0.0591 in.)
G	41447-PL3-B000	1.6 mm (0.0630 in.)
H	41448-PL3-B000	1.7 mm (0.0669 in.)
J	41449-PL3-B000	1.8 mm (0.0709 in.)
K	41450-PL3-B000	1.05 mm (0.0413 in.)
L	41451-PL3-B000	1.15 mm (0.0453 in.)
M	41452-PL3-B000	1.25 mm (0.0492 in.)
N	41453-PL3-B000	1.35 mm (0.0531 in.)
P	41454-PL3-B000	1.45 mm (0.0571 in.)
Q	41455-PL3-B000	1.55 mm (0.0610 in.)
R	41456-PL3-B000	1.65 mm (0.0650 in.)
S	41457-PL3-B000	1.75 mm (0.0689 in.)

8. Remove the bolts and transmission housing.
9. Replace the thrust shim selected in Step 7 , then recheck the clearance.
10. Install the new left driveshaft side oil seal.
11. Reinstall the transmission housing.

M/T Countershaft Reassembly



Exploded View

Special Tools Required

Inner driver handle, 40 mm
07746-0030100

Inner bearing driver attachment, 25 mm
07746-0030200

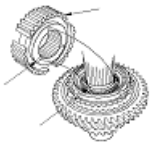
Inner bearing driver attachment, 30 mm
07746-0030300

Inner bearing driver attachment, 35 mm
07746-0030400

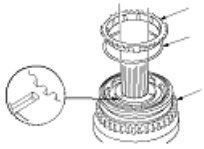
NOTE: Refer to the Exploded View, as needed during this procedure.

1. Clean all parts in solvent, dry them, and apply MTF to all contact surfaces.
2. Install the distance collar (A), with the needle bearing (B), 1st gear (C), and friction damper (D) on the shaft.
3. Install the 1st gear synchro ring (E) and synchro spring (F) on the shaft.

4. Align the fingers (A) on the friction damper with the grooves (B) on the 1st/2nd synchro hub (C), then install the 1st/2nd synchro hub onto the shaft.



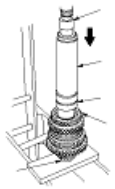
5. Install the reverse gear (A), synchro spring (B), and synchro ring (C) on the shaft.



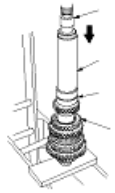
6. Install the distance collar (A) and friction damper (B), then align the fingers (C) on the friction damper and grooves (D) in the 1st/2nd synchro hub.

7. Install the needle bearing (A) and 2nd gear (B).

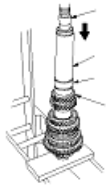
8. Support the countershaft (A) on steel blocks, then press in the 3rd gear (B) using the 40 mm inner driver handle (C), 35 mm inner bearing driver attachment (D), and a press (E).
   NOTE: Do not exceed the maximum pressure during installation.



9. Press in the 4th gear (A) using the 40 mm inner driver handle (B), 30 mm inner bearing driver attachment (C), and a press (D).
   NOTE: Do not exceed the maximum pressure during installation.

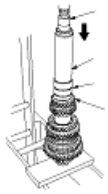


10. Press in the 5th gear (A) using the 40 mm inner driver handle (B), 30 mm inner bearing driver attachment (C), and a press (D).
    NOTE: Do not exceed the maximum pressure during installation.

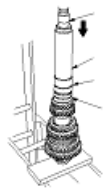


11. Press in the ball bearing * (A) using the 40 mm inner driver handle (B), 25 mm inner bearing driver attachment (C), and a press (D).
    *L15A7 engine: needle bearing

    NOTE: Do not exceed the maximum pressure during installation. Check the ball bearing install direction.



12. Press in the ball bearing (A) using the 40 mm inner driver handle (B), 25 mm inner bearing driver attachment (C), and a press (D).
    NOTE: Do not exceed the maximum pressure during installation.



13. Install the 22 mm spring washer (A) and 22 mm locknut (left-hand threads) (B).
14. Securely clamp the countershaft assembly in a bench vise with wood blocks.
15. Torque the new locknut to 108 N·m (11.0 kgf·m, 79.6 lbf·ft), then loosen it and torque it again to the same value. Stake the locknut tab into the groove.

How to Troubleshoot the Fuel and Emissions Systems

Intermittent Failures

The term ‘‘intermittent failure" means a system may have had a failure, but it checks OK now. If the malfunction indicator lamp (MIL) on the dash does not come on, check for poor connections or loose terminals at all connectors related to the circuit that you are troubleshooting. If the MIL was on but then went out, the original problem may have been intermittent.

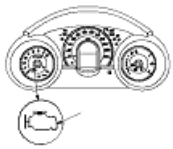
Service Information

Periodically, new ECM/PCM software or new service procedures may become available. Always check online for the latest software or service information related to the DTCs or symptoms you are troubleshooting.

Opens and Shorts

‘‘Open" and ‘‘short" are common electrical terms. An open is a break in a wire or at a connection. A short is an accidental connection of a wire to ground or to another wire. In simple electronics, this usually means something won't work at all. With complex electronics (such as ECMs or PCMs) this can sometimes mean something works, but not the way it's supposed to.

How to Use the HDS (Honda Diagnostic System)



If the MIL (malfunction indicator lamp) has come on

1. Start the engine, and check the MIL (A).

2. If the MIL stays on, connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
3. Turn the ignition switch to ON (II).
4. Make sure the HDS communicates with the ECM/PCM and other vehicle systems. If it doesn't, go to the DLC circuit troubleshooting.
5. Check the diagnostic trouble code (DTC) and note it. Also check the freeze data and/or on-board snapshot data, and download any data found. Then refer to the indicated DTC's troubleshooting, and begin the appropriate troubleshooting procedure.
   NOTE:
   - Freeze data indicates the engine conditions when the first system malfunction, misfire, or fuel trim malfunction that activated the MIL was detected.
   - The HDS can read the DTC, freeze data, on-board snapshot, current data, and other engine control module (ECM) or powertrain control module (PCM) data.
   - For specific operations, refer to the user's manual that came with the HDS.
6. If no DTCs are found, go to MIL troubleshooting.

If the MIL did not stay on

If the MIL did not stay on but there is a driveability problem, do the symptom troubleshooting.

If you can't duplicate the DTC

Some of the troubleshooting requires you to reset the ECM/PCM and try to duplicate the DTC. If the problem is intermittent and you can't duplicate the code, do not continue through the procedure. To do so will only result in confusion and possibly, a needlessly replaced ECM/PCM.

HDS Clear Command

The ECM/PCM stores various specific data to correct the system even if there is no electrical power such as when the battery negative terminal is disconnected. Stored data based on failed parts should be cleared by using the ‘‘CLEAR COMMAND" of the HDS, if parts are replaced.
The HDS has three kinds of clear commands to meet this purpose. They are clear DTCs, ECM/PCM reset, and CKP pattern clear. DTC clear command erases all stored DTC codes, freeze data, and on-board snapshot. This must be done with the HDS after reproducing the DTC during troubleshooting.
The ECM/PCM reset command erases all stored DTC codes, freeze data, on-board snapshot, and all specific data to correct the system except CKP pattern. If the CKP pattern data in the ECM/PCM was cleared, you must do the CKP pattern learn procedure. The CKP pattern clear command erases only CKP pattern data. This command is for repair of a misfire or the CKP sensor.

Scan Tool Clear Command

If you are using a generic scan tool to clear commands, be aware that there is only one setting for clearing the ECM/PCM, and it clears all commands at the same time (CKP pattern learn, idle learn, freeze data, on-board snapshot, and DTCs). After you clear all commands, you then need to do these procedures, in this order: ECM/PCM idle learn procedure; CKP pattern learn procedure.

DTC Clear

1. Clear the DTC with the HDS while the engine is stopped.
2. Turn the ignition switch to LOCK (0).
3. Turn the ignition switch to ON (II), and wait 30 seconds.
4. Turn the ignition switch to LOCK (0), and disconnect the HDS from the DLC.

ECM/PCM Reset

1. Reset the ECM/PCM with the HDS while the engine is stopped.
2. Turn the ignition switch to LOCK (0).
3. Turn the ignition switch to ON (II), and wait 30 seconds.
4. Turn the ignition switch to LOCK (0), and disconnect the HDS from the DLC.
5. Do the ECM/PCM idle learn procedure.

CKP Pattern Clear/CKP Pattern Learn

Clear/Learn Procedure (with the HDS)

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the ECM/PCM and other vehicle systems. If it doesn't, go to the DLC circuit troubleshooting.
4. Select CRANK PATTERN in the ADJUSTMENT MENU with the HDS.
5. Select CRANK PATTERN LEARNING with the HDS, and follow the screen prompts.
6. The CKP pattern learn procedure is complete.

Learn Procedure (without the HDS)

1. Start the engine. Hold the engine speed at 3,000 rpm (min^{-1}) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
2. Test-drive the vehicle on a level road: Decelerate (with the throttle fully closed) from an engine speed of 2,500 rpm (min^{-1}) down to 1,000 rpm (min^{-1}) with the A/T in 2 position, or the M/T in 1st gear.
3. Repeat Step 2 several times.
4. Turn the ignition switch to LOCK (0).
5. Turn the ignition switch to ON (II), and wait 30 seconds. The CKP pattern learn procedure is complete.

How to End a Troubleshooting Session (required after any troubleshooting)

1. Reset the ECM/PCM with the HDS.
2. Do the ECM/PCM idle learn procedure.
3. Turn the ignition switch to LOCK (0).
4. Disconnect the HDS from the DLC.
   NOTE: The ECM/PCM is part of the immobilizer system. If you replace the ECM/PCM, it will have a different immobilizer code. In order for the engine to start, you must rewrite the immobilizer code with the HDS (immobilizer system section).

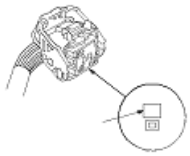
How to Troubleshoot Circuits at the ECM/PCM Connectors

NOTE: The ECM/PCM stays on up to 15 minutes after the ignition switch is turned to LOCK (0). Jumping the SCS line after turning the ignition switch to LOCK (0) cancels this function. Disconnecting the ECM/PCM during this function, without jumping the SCS line first, can damage the ECM/PCM.

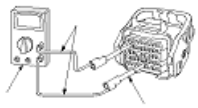
1. Jump the SCS line with the HDS.
2. Disconnect ECM/PCM connectors A, B, and C.
   NOTE: ECM/PCM connectors A, B, and C have symbols (A=□, B=△, C=○) embossed on them for identification.

---

3. When diagnosis/troubleshooting is done at the ECM/PCM connector, use the terminal test port (A) above the terminal you need to check.



4. Connect one side of the patch cord (A) terminals to a commercially available digital multimeter (B), and connect the other side of the patch cord terminals to a commercially available banana jack (Pomona Electronics Tool No. 3563 or equivalent) (C).
5. Gently contact the pin probe (male) at test port from the terminal side. Do not force the tips into the terminals.



NOTICE

- For accurate results, always use the pin probe (male).
- To prevent damage to the connector terminals, do not insert test equipment probes, paper clips, or other substitutes as they can damage the terminals. Damaged terminals cause a poor connection and an incorrect measurement.
- Do not puncture the insulation on a wire. Punctures can cause poor or intermittent electrical connections.

Substituting the ECM/PCM

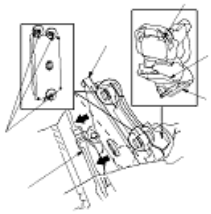
Special Tools Required

- Honda diagnostic system (HDS)
- Honda interface module (HIM)
- HDS pocket tester

NOTE: Use this procedure when you have to substitute a known-good ECM/PCM during troubleshooting procedure.

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the ECM/PCM and other vehicle systems. If it doesn't, go to the DLC circuit troubleshooting.
4. Jump the SCS line with the HDS.
5. Turn the ignition switch to LOCK (0).
6. Remove the ECM/PCM cover (A).

7. Remove the battery setting plate, and reposition the battery (D) away from the ECM/PCM.
   NOTE: Do not disconnect the battery terminals.
8. Remove the bolts (E).
9. Disconnect ECM/PCM connectors A, B, and C, then remove the ECM/PCM (F).
   NOTE: ECM/PCM connectors A, B, and C have symbols (A=□, B=△, C=○) embossed on them for identification.
10. Install a known-good ECM/PCM in the reverse order of removal.
11. Turn the ignition switch to ON (II).
    NOTE: DTC P0630 "VIN Not Programmed or Mismatch" may be stored because the VIN has not been programmed into the ECM/PCM; ignore it, and continue this procedure.
12. Manually input the VIN to the ECM/PCM with the HDS.
13. Select the IMMOBI SYSTEM with the HDS.
14. Enter the immobilizer code using the ECM/PCM replacement procedure in the HDS; it allows you to start the engine.
15. Reset the ECM/PCM with the HDS.
16. Update the ECM/PCM if it does not have the latest software.
17. Do the ECM/PCM idle learn procedure.
18. Do the CKP pattern learn procedure.



OBD Status

The OBD status shows the current system status of each DTC and all of the parameters. This function is used to see if the repair was successfully completed. The results of diagnostic tests for the DTC are displayed as:

- PASSED: The on board diagnosis is successfully finished.
- FAILED: The on board diagnosis has finished but failed.
- EXECUTING: The vehicle is in enable criteria conditions for the DTC and the on board diagnosis is running.
- NOT COMPLETED: The on board diagnosis was running but is out for the enable conditions for the DTC.
- OUT OF CONDITION: The vehicle has stayed out of the enable conditions for the DTC.

DTC Troubleshooting: P0171 (45), P0172 (45)

DTC P0171:
Fuel System Too Lean
DTC P0172:
Fuel System Too Rich
NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.
- If some of the DTCs listed below are indicated at the same time as DTC P0171 and/or P0172, troubleshoot those DTCs first, then recheck for P0171 and/or P0172.
  P0102, P0103: Mass air flow (MAF) sensor
  P0107, P0108: Manifold absolute pressure (MAP) sensor
  P0133, P1157, P2238, P2252, P2A00: Air fuel ratio (A/F) sensor (Sensor 1)
  P0134, P0135: Air fuel ratio (A/F) sensor (Sensor 1) heater
  P0137, P0138, P0139: Secondary HO2S (Sensor 2)
  P0141: Secondary HO2S (Sensor 2) heater
  P2648, P2649: VTEC system
  P0443: EVAP canister purge valve

1. Check the fuel pressure.

   Is the fuel pressure OK?
   YES - Go to Step 2 .
   NO -
   - If the pressure is too high, replace the fuel pressure regulator, then go to Step 10 .
   - If the pressure is too low, check the fuel pump, the fuel feed pipe, and the fuel filter. If they are OK, replace the fuel pressure regulator, then go to Step 10 .

2. Check for vacuum leaks at these parts:
   - PCV valve
   - PCV hose
   - EVAP canister purge valve
   - Throttle body
   - Intake manifold
   - Brake booster hose
   - Brake booster
   - Intake air duct

   Are the parts OK?
   YES - Go to Step 3 .
   NO - Repair or replace parts with leaks, then go to Step 10 .

3. Turn the ignition switch to LOCK (0).

4. Disconnect the vacuum hose (A) from the EVAP canister purge valve (B), and connect a vacuum pump/gauge to the EVAP canister purge valve.

5. Apply vacuum to the hose.

   Does the hold vacuum?
   YES - Go to Step 6 .
   NO - Replace the EVAP canister purge valve, then go to Step 10 .

6. Start the engine. Hold the engine speed at 3,000 rpm (min $^{-1}$) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.

7. Check for these conditions:
   - Engine coolant temperature (ECT SENSOR 1) above 70 °C (158 °F)
   - A/T in P or N (M/T in neutral)
   - All electrical loads off

8. Monitor the ENGINE SPEED in the DATA LIST with the HDS, and hold the engine speed at 2,500 rpm (min $^{-1}$). Once the engine speed is met, hold the accelerator pedal steady for more than 10 seconds.

   Did the engine speed vary more than 100 rpm (min $^{-1}$) from 2,500 rpm (min $^{-1}$)?
   YES - Repeat Step 8 .
   NO - Go to Step 9 .

9. While holding the engine speed at 2,500 rpm (min $^{-1}$), check the MAF SENSOR in the DATA LIST with the HDS.

   Is there about 4.5−5.5 gm/s (L13Z1 engine) or 4.6−5.7 gm/s (L15A7 engine)?
   YES - Check the engine valve clearances and adjust them if needed. If the valve clearances are OK, replace the injectors, then go to Step 10 .
   NO - Replace the MAF sensor/IAT sensor, then go to Step 10 .

10. Turn the ignition switch to ON (II).

11. Reset the ECM/PCM with the HDS.

12. Do the ECM/PCM idle learn procedure.

13. Start the engine. Hold the engine speed at 3,000 rpm (min $^{-1}$) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.

14. Test-drive under these conditions:
    - Engine coolant temperature (ECT SENSOR 1) above 70 °C (158 °F)
    - A/T in D, M/T in 4th
    - Drive at a steady speed between 24−120 km/h (15−75 mph) for 15 minutes

    NOTE: DTC P0171 and/or P0172 may take up to 80 minutes of test driving to set. Using the HDS, monitor the long term fuel trim (LT FUEL TRIM) or the air fuel feed back average (AF FB AVE). If the long term fuel trim/air fuel feed back average stays within 0.80−1.25, there is no problem at this time.

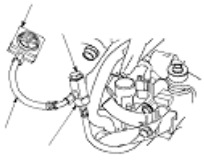
15. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0171 or P0172 indicated?

    YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor, the injectors, the EVAP canister purge valve, and the ECM/PCM, then go to Step 1 .

    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0300 (75) and any combination of P0301 (71), P0302 (72), P0303 (73), P0304 (74)



DTC P0300:
Random Misfire and Any Combination of the Following:
DTC P0301:
No. 1 Cylinder Misfire Detected
DTC P0302:
No. 2 Cylinder Misfire Detected
DTC P0303:
No. 3 Cylinder Misfire Detected
DTC P0304:
No. 4 Cylinder Misfire Detected

Special Tools Required

Oil pressure gauge attachment
07NAJ-P070100

Low pressure gauge assy. 1,000 kpa
07406-0070002

Oil pressure hose
07ZAJ-S5A0200

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.
- If the misfire is frequent enough to trigger detection of increased emissions during two consecutive driving cycles, the MIL will come on, and DTC P0300 (and some of the combination of P0301 through P0304) will be stored.
- If the misfire is frequent enough to damage the catalyst, the MIL will flash whenever the misfire occurs, and DTC P0300 (and some of the combination of P0301 through P0304) will be stored. When the misfire stops, the MIL will remain on.
- If any of the DTCs listed below are indicated at the same time as the random misfire DTCs, troubleshoot those DTCs first, then recheck for random misfire DTCs:
  P0102, P0103: Mass air flow (MAF) sensor
  P0107, P0108: Manifold absolute pressure (MAP) sensor
  P0171, P0172: Fuel system
  P0335, P0339: Crankshaft position (CKP) sensor
  P0365, P0369: Camshaft position (CMP) sensor
  P2648, P2649: VTEC system

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, and let it idle without load (A/T in P or N, M/T in neutral).
4. Monitor the OBD STATUS for DTC P0301, P0302, P0303, or P0304 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?
   YES - Go to Step 9.
   NO - If the screen indicates PASSED, go to Step 5. If the screen indicates EXECUTING, keep idling until a result comes on. If the screen indicates OUT OF CONDITION or NOT COMPLETED, wait for several minutes, then recheck.
5. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE in the DATA LIST for 10 minutes with the HDS.

   Does the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE show misfire counts?
   YES - Go to Step 9.
   NO - Go to Step 6.
6. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
   - ENGINE SPEED
   - VSS
   - REL TP SENSOR
   - CLV (calculated load value)
   - APP SENSOR
7. Monitor the OBD STATUS for DTC P0301, P0302, P0303, or P0304 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?
   YES - Go to Step 9.
   NO - If the screen indicates PASSED, go to Step 8. If the screen indicates EXECUTING, keep driving until a result comes on. if the screen indicates OUT OF CONDITION or NOT COMPLETED, go to Step 6 and recheck.
8. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE in the DATA LIST for 10 minutes with the HDS.

   Does the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE show misfire counts?
   YES - Go to Step 9.
   NO - Intermittent failure, the system is OK at this time.■

9. Turn the ignition switch to LOCK (0).
10. Check the fuel quality.

    Is the quality good?
    YES - Go to Step 11 .
    NO - Drain the tank and fill with a known-good fuel, then go to Step 24 .
11. Inspect the spark plugs. If the spark plugs are fouled or worn, replace them.
12. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
    - ENGINE SPEED
    - VSS
    - REL TP SENSOR
    - CLV (calculated load value)
    - APP SENSOR
13. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE in the DATA LIST for 10 minutes with the HDS.

    Does the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE show misfire counts?
    YES - Go to Step 14 .
    NO - Go to Step 24 .
14. Check the fuel pressure.

    Is the fuel pressure OK?
    YES - Go to Step 15 .
    NO -
    - If the fuel pressure is too high, replace the fuel pressure regulator, then go to Step 24 .
    - If the fuel pressure is too low, check the fuel pump, the fuel feed pipe, and the fuel filter. If they are OK, replace the fuel pressure regulator, then go to Step 24 .
15. Start the engine. Hold the engine speed at 3,000 rpm (min $^{-1}$) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.
16. Check for these conditions:
    - Engine coolant temperature (ECT SENSOR 1) above 80 °C (176 °F)
    - A/T in P or N, M/T in neutral
    - All electrical loads off
17. Monitor the ENGINE SPEED in the DATA LIST with the HDS, and hold the engine speed at 2,500 rpm (min $^{-1}$). Once the engine speed is met, hold the accelerator pedal steady for more than 10 seconds.

    Did the engine speed vary more than 100 rpm (min $^{-1}$) from 2,500 rpm (min $^{-1}$)?
    YES - Repeat Step 17 .
    NO - Go to Step 18 .
18. While holding the engine speed at 2,500 rpm (min $^{-1}$), check the MAF SENSOR in the DATA LIST with the HDS.

    Is there about 4.5–5.5 gm/s (L13Z1 engine), 4.6–5.7 gm/s (L15A7 engine)?
    YES - Go to Step 19 .
    NO - Replace the MAF sensor/IAT sensor, then go to Step 24 .
19. Turn the ignition switch to LOCK (0).
20. Remove rocker arm oil pressure switch.
21. Attach the bolt (A) from the rocker arm oil control valve and connect the special tool as shown, the install the bolt that was removed to the pressure gauge joint attachment.
22. Start the engine. Hold the engine speed at 3,000 rpm (min $^{-1}$) without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.
23. Check the oil pressure at engine speeds of 1,000 rpm (min $^{-1}$) and 2,000 rpm (min $^{-1}$).

    Is the oil pressure below 49 kPa (0.5 kgf/cm ^{2} , 7 psi)?
    YES - Check for air in the fuel line, then go to Step 24 .
    NO - Inspect the VTEC system, then go to Step 24 .
24. Turn the ignition switch to ON (II).
25. Reset the ECM/PCM with the HDS.
26. Clear the CKP pattern with the HDS.
27. Do the ECM/PCM idle learn procedure.
28. Do the CKP pattern learn procedure.
29. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
    - ENGINE SPEED
    - VSS

- REL TP SENSOR
- CLV (calculated load value)
- APP SENSOR

30. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0300, P0301, P0302, P0303, or P0304 indicated?

YES - Check for a poor connections or loose terminals at the ignition coils, the injectors, and the ECM/PCM, then go to the troubleshooting for DTC P0301, P0302, P0303, or P0304.

NO - Go to Step 31 .

31. Monitor the OBD STATUS for DTC P0301, P0302, P0303, or P0304 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in Step 30 , go to the indicated DTC's troubleshooting.■

NO - If the screen indicates FAILED, go to Step 1 and recheck. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION or NOT COMPLETED, go to Step 29 .

DTC Troubleshooting: P060A (131)

DTC P060A:
PCM (A/T system) Internal Control Module Malfunction
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P060A indicated?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time.■
4. Update the PCM if it does not have the latest software, or substitute a known-good PCM.
5. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P060A indicated?
   YES - If the PCM was updated, substitute a known-good PCM, then recheck. If the PCM was substituted, go to Step 1 .
   NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: U0300 (131)

DTC U0300:
PGM-FI System and A/T System Program Version Mismatch
NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.
- Do not turn the ignition switch to LOCK (0) or ACC (I) while updating the PCM. If you turn the ignition switch to LOCK (0) or ACC (I) before completion, the PCM will be damaged.

1. Do the PCM update procedure (PGM-FI system and A/T system).
2. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC U0300 indicated?
   YES - Replace the original PCM. ■
   NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0602 (196)

DTC P0602:
ECM/PCM Programming Error
NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.
- This DTC is indicated when an ECM/PCM update is not completed.
- Do not turn the ignition switch to LOCK (0) or ACC (I) while updating the ECM/PCM. If you turn the ignition switch to LOCK (0) or ACC (I) before completion, the ECM/PCM can be damaged.

1. Do the ECM/PCM update procedure.

2. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0602 indicated?
   YES - Replace the original ECM/PCM. ■
   NO - The update is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P0606 (0)

DTC P0606:
ECM/PCM Processor Malfunction
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0).
4. Turn the ignition switch to ON (II).
5. Wait 40 seconds.
6. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0606 indicated?
   YES - Go to Step 7 .
   NO - Intermittent failure, the system is OK at this time.■
7. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
8. Turn the ignition switch to LOCK (0).
9. Turn the ignition switch to ON (II).
10. Wait 40 seconds.
11. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0606 indicated?
    YES - If the ECM/PCM was updated, substitute a known-good ECM/PCM, then go to Step 8 . If the ECM/PCM was substituted, go to Step 1 .
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P1298

DTC P1298:
ELD Circuit High Voltage
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Check the ELD in the DATA LIST with the HDS.

   Is 0.2 A or less indicated?
   YES - Go to Step 3 .
   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the ELD and the ECM/PCM.■
3. Turn the ignition switch to LOCK (0).
4. Disconnect the ELD 3P connector.
5. Turn the ignition switch to ON (II).
6. Measure the voltage between ELD 3P connector terminal No. 1 and body ground.

   Is there battery voltage?
   YES - Go to Step 7 .
   NO - Check the No. 22 METER (7.5 A) fuse in the under-dash fuse/relay box. If the fuse is OK, repair open in the wire between the No. 22 METER (7.5 A) fuse and the ELD, then go to Step 12 .
7. Jump the SCS line with the HDS.
8. Disconnect ECM/PCM connector A (49P).

---

9. Check for continuity between ELD 3P connector terminal No. 3 and ECM/PCM connector terminal A24.

   
   Is there continuity?
   YES - Go to Step 10 .
   NO - Repair open in the wire between the ECM/PCM (A24) and the ELD, then go to Step 12 .

---

10. Check for continuity between ELD 3P connector terminal No. 2 and body ground.

    Is there continuity?
    YES - Go to Step 11 .
    NO - Repair open in the wire between the ELD and G501, then go to Step 12 .
11. Replace the ELD.
12. Reconnect all connectors.
13. Turn the ignition switch to ON (II).
14. Reset the ECM/PCM with the HDS.
15. Do the ECM/PCM idle learn procedure.
16. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P1298 indicated?
    YES - Go to Step 17 .
    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■
17. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM.
18. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P1298 indicated?
    YES - Check for poor connections or loose terminals at the ELD and the ECM/PCM. If the ECM/PCM was updated, substitute a known-good ECM/PCM, then recheck. If the ECM/PCM was substituted, go to Step 1 .
    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: P060A (131)

DTC P060A:
PCM (A/T system) Internal Control Module Malfunction
NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P060A indicated?
   YES - Go to Step 4 .
   NO - Intermittent failure, the system is OK at this time.■
4. Update the PCM if it does not have the latest software, or substitute a known-good PCM.
5. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P060A indicated?
   YES - If the PCM was updated, substitute a known-good PCM, then recheck. If the PCM was substituted, go to Step 1 .
   NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

DTC Troubleshooting: U0300 (131)

DTC U0300:
PGM-FI System and A/T System Program Version Mismatch
NOTE:

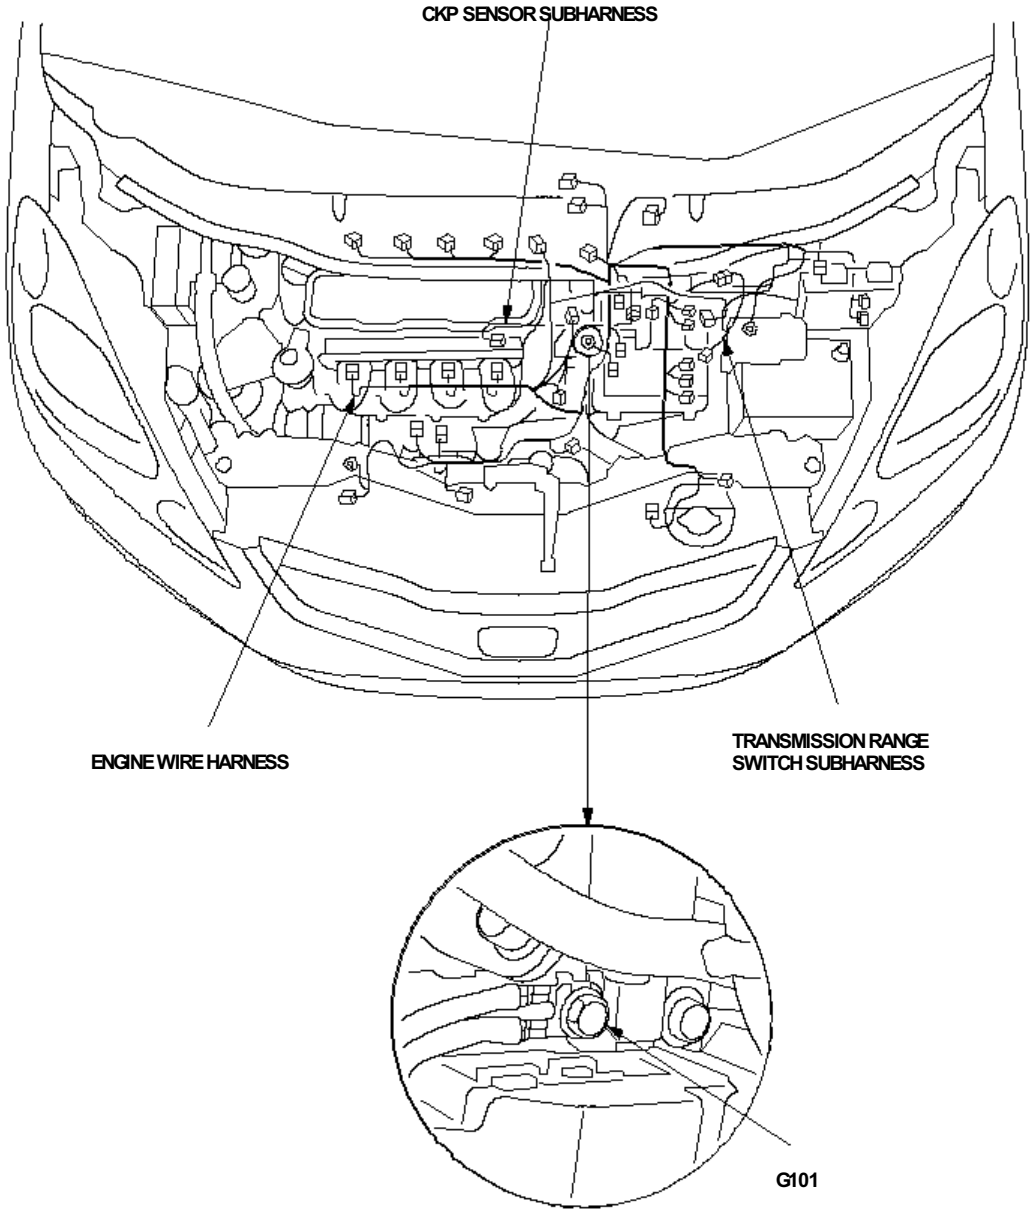
- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information.
- Do not turn the ignition switch to LOCK (0) or ACC (I) while updating the PCM. If you turn the ignition switch to LOCK (0) or ACC (I) before completion, the PCM will be damaged.

1. Do the PCM update procedure (PGM-FI system and A/T system).
2. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC U0300 indicated?
   YES - Replace the original PCM. ■
   NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.■

Engine Wire Harness, CKP Sensor Subharness, Transmission Range Switch Subharness Locations

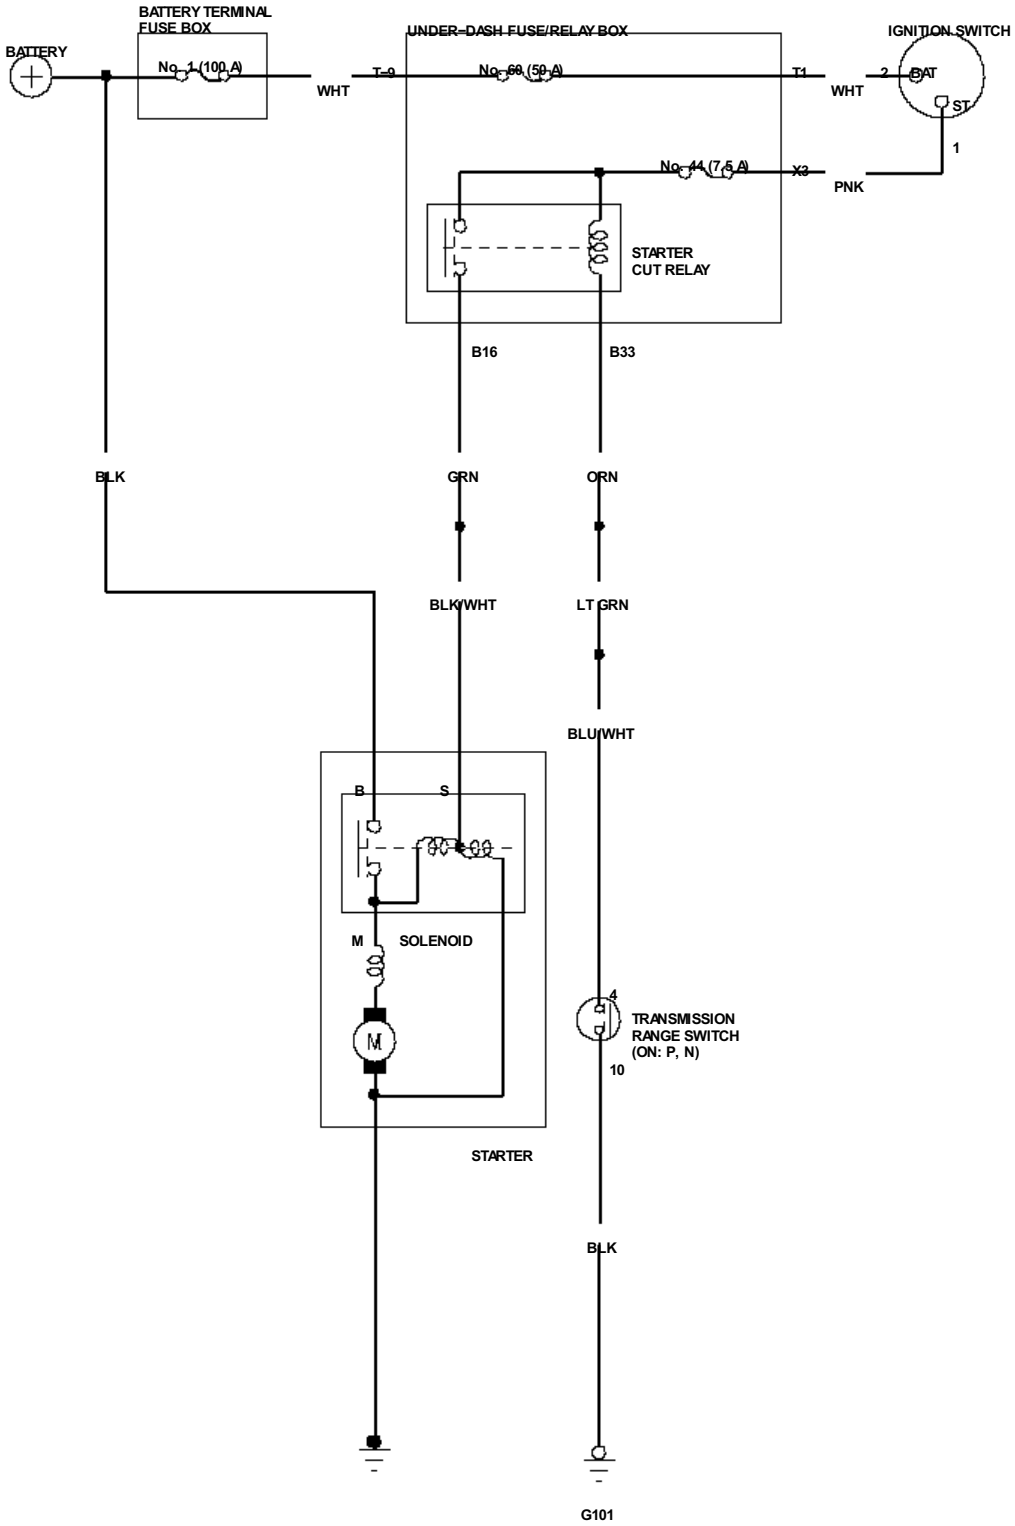
A/T



RHD model is shown, LHD model is similar.

Starting System Circuit Diagram

A/T model



A/T Assembly Removal

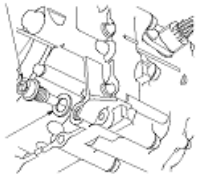
Special Tools Required

Engine support hanger
AAR-T1256-J00
This special tool is available from Snap-on Tools International, LLC.
NOTE:

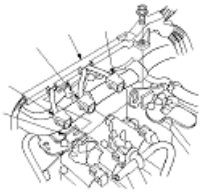
- Use fender covers to avoid damaging painted surfaces.
- Engine support hanger (AAR-T1256-J00) must be used with the side engine mount installed.

1. Remove the windshield wiper arms.
2. Do the battery removal procedure.
3. Remove the battery base.
4. Remove the cowl cover.
5. Fix the hood in a vertical position.
6. Remove the cowl cover stiffener (A), and remove the windshield wiper motor and center-front cowl cover (B).
7. Remove the air cleaner assembly.
8. Raise the vehicle on a lift, and make sure it is securely supported.
9. Remove the wheels.
10. Remove the splash shield.

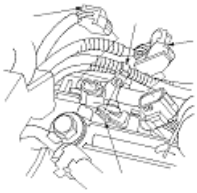
11. Remove the drain plug (A), and drain the automatic transmission fluid (ATF).
12. Reinstall the drain plug with a new sealing washer (B).



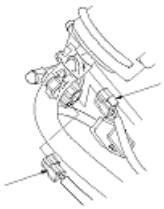
13. Disconnect the A/T clutch pressure control solenoid valve A connector (A), A/T clutch pressure control solenoid valve B connector (B), and A/T clutch pressure control solenoid valve C connector (C).
14. Remove the bolt securing the harness cover (D), and remove the harness cover from its bracket (E).



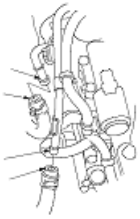
15. Disconnect the transmission range switch connector (A).
16. Disconnect the output shaft (countershaft) speed sensor connector (B), and remove the harness clamp (C) from its bracket (D).



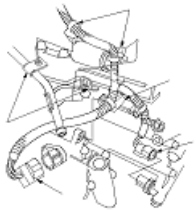
17. Disconnect the input shaft (mainshaft) speed sensor connector (A) and 2nd clutch transmission fluid pressure switch connector (B).



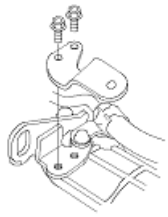
18. Remove the ATF cooler hoses (A) from the ATF cooler lines (B). Turn the ends of the cooler hoses up to prevent ATF from flowing out, then plug the cooler hoses and lines.
19. Check for any signs of leakage at the hose joints.



20. Remove the bolt securing the harness clamp bracket (A).
21. Disconnect the shift solenoid harness connector (B) and 3rd clutch transmission fluid pressure switch connector (C), and remove the harness clamps (D) from the clamp brackets (E).

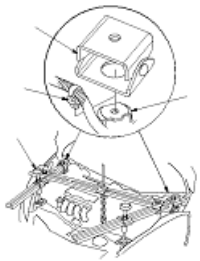


22. Remove the air cleaner housing mounting bracket from the transmission hanger.

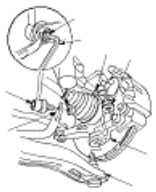


23. Install the hanger plate (A) to the bolt hole (B) at the air cleaner housing mounting bracket with the 8 x 1.25 mm bolt.

24. Remove the harness clamp (A) from its clamp bracket (B) located in front of the left damper top.
25. Set up the engine support hanger (AAR-T1256-J00). Carefully position the engine support hanger to the vehicle; position both cross-arm foot bases (C) over the harness clamp brackets on both sides, and position both front stands on the front bulkhead. Attach the hook to the hanger plate chain, tighten the wing nut by hand, and lift and support the engine.

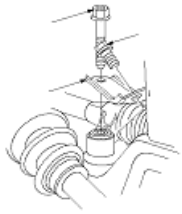


26. Insert a 5 mm Allen wrench (A) in the top of the ball joint pin (B), and remove the nuts (C), then separate the stabilizer link (D) from the stabilizer ends (E).
27. Remove the lock pin (F) and castle nuts (G), and separate the lower arms (H) from the knuckles (I).

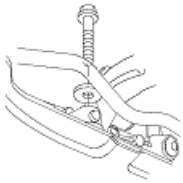


28. Remove the steering gearbox mounting bolt (A), bolt (B), and stiffener (C) on the right.

29. Remove the steering gearbox mounting bolt (A), bolt (B), and stiffener (C) on the left.

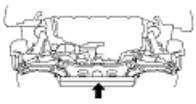


30. Remove the steering gearbox mounting bolt on the middle.

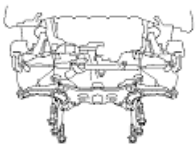


31. Place a jack under the transmission, raise it just enough to take it off of the lower torque rod, and remove the lower torque rod bolt (A) on the transmission.
32. Remove the lower torque rod nut (B) and bolt (C) on the front subframe, and remove the lower torque rod (D).
33. Remove the jack.

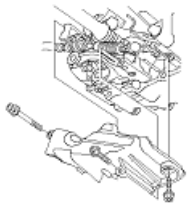
34. Support the front subframe with a wood piece and a jack.



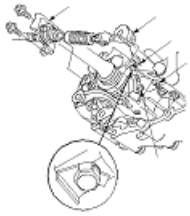
35. Remove the six bolts securing the front subframe.
36. Hang the steering gearbox to the body with a strap.



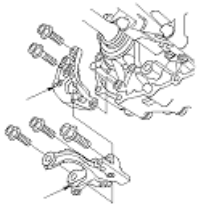
37. Remove the shift cable cover.



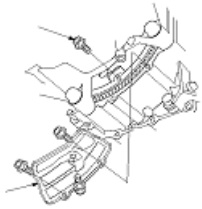
38. Pry up the lock tab of the lock washer (A), and remove the lock bolt (B) and lock washer.
39. Remove the bolts securing the shift cable holder (C), and separate the shift cable (D) from the selector control shaft end (E). Do not bend the shift cable excessively.



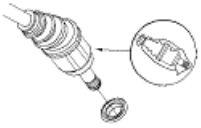
40. Remove the lower torque rod mounting bracket (A) and shift cable holder bracket (B).



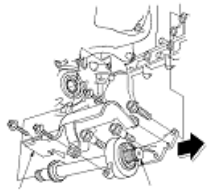
41. Remove the torque converter cover (A), and remove the drive plate bolts (B) (eight bolts) while rotating the crankshaft pulley.



42. Pry out the driveshafts from the differential and the intermediate shaft.
43. Coat all precision machined surfaces with clean engine oil, then put plastic bags over driveshaft ends.



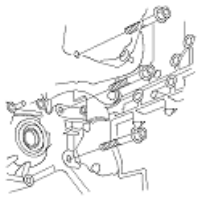
44. Remove the bolts securing the heat shield (A).
45. Remove the intermediate shaft (B) and heat shield.
46. Coat all precision finished surfaces with clean engine oil, then put plastic bags over intermediate shaft ends.



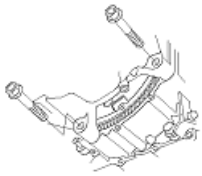
47. Remove the front and upper transmission housing mounting bolts.

48. Remove the transmission ground cable terminal (A) from the transmission mount bracket (B).
49. Place a jack under the transmission, raise it just enough to take it off of the mount, and remove the transmission mount and mount bracket.
50. Remove the jack.

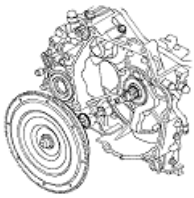
51. Remove the rear transmission housing mounting bolts.
52. Lower the transmission by loosening the wing nut on the engine support hanger, and tilt the engine just enough for the end of the transmission to clear the side frame.
53. Place a jack under the transmission.



54. Remove the lower transmission housing mounting bolts.
55. Slide the transmission away from the engine to remove it from the vehicle.



56. Remove the torque converter and dowel pins.
57. Inspect the drive plate, and replace it if it's damaged.



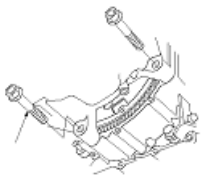
A/T Assembly Installation

Special Tools Required

Engine support hanger
AAR-T1256-J00
This special tool is available from Snap-on Tools International, LLC.
NOTE: Use fender covers to avoid damaging painted surfaces.

1. Install the torque converter (A) on the mainshaft (B) with the new O-ring (C).
2. Install the 14 mm dowel pins (D) in the torque converter housing.
3. Place the transmission on the jack, and raise the transmission to the engine level.

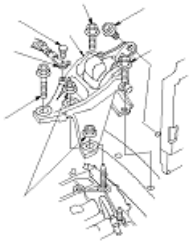
4. Attach the transmission to the engine, and install the lower transmission housing mounting bolts.



5. Install the rear transmission housing mounting bolt.

6. Install the front and upper transmission housing mounting bolts.

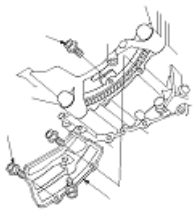
7. Place a jack under the transmission, raise it and secure the transmission mount and mount bracket (A) on the body and transmission housing with the new mounting bolts and new nuts loose.
8. Tighten the transmission mount bolts to the specified torque in the following order; on the middle (B), on the front (C), and on the rear (D).
9. Remove the jack, and tighten the bolt (E) and nuts (F) on the transmission mount bracket to the specified torque.
10. Install the transmission ground cable terminal (G).



11. Install the new set ring (A) on the intermediate shaft (B).
12. Clean the areas where the intermediate shaft contacts the transmission (differential) with solvent, and dry with compressed air. Apply ATF to the intermediate shaft splines, put the heat shield (C) on the intermediate shaft, then install the intermediate shaft; be sure not to allow dust or other foreign particles to enter the transmission.
13. Secure the heat shield with the mounting bolts.

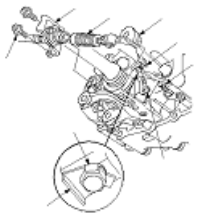
14. Install the new set ring (A) on the left driveshaft (B).
15. Clean the areas where the left driveshaft contacts the transmission (differential) with solvent, and dry with compressed air. Then install the left driveshaft; be sure not to allow dust or other foreign particles to enter the transmission. Turn the steering knuckle fully outward, and slide the driveshaft into the differential until you feel its set ring fully engage the side gear.
16. Apply right driveshaft inboard-joint splines with the recommended grease.
17. Slide the right driveshaft over the intermediate shaft splines until you feel the driveshaft fully engage the intermediate shaft set ring.

18. Attach the torque converter to the drive plate with eight bolts (A). Rotate the crankshaft pulley as necessary to tighten the bolts to 1/2 of the specified torque, then to the final torque, in a crisscross pattern. After tightening the last bolt, check that the crankshaft rotate freely.
19. Install the torque converter cover (B).

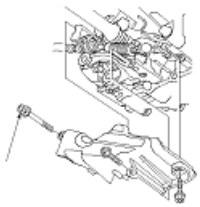


20. Install the shift cable holder bracket (A) and lower torque rod mounting bracket (B) on the transmission.

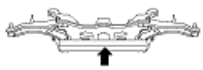
21. Install the control lever (A) over the control shaft (B). Do not twist the boot (C).
22. Secure the shift cable bracket (D) with the bolts.
23. Secure the control lever with the new lock washer (E) and the lock bolt (F); install the flange (G) of the lock washer with facing to control lever, then bend the lock tab (H) of the lock washer against the bolt head securely.



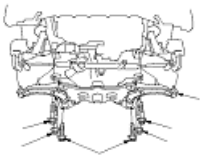
24. Install the shift cable cover.



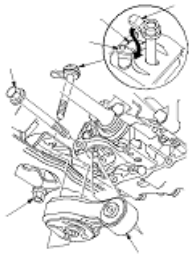
25. Support the front subframe with a wood piece and a jack.



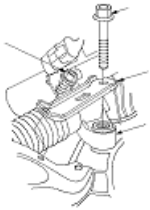
26. Lift the front subframe (A) up to body, and secure it with the new mounting bolts loose.
27. Tighten the right middle mounting bolt (B) first, then the left middle bolt (C), and the four remaining bolts (D) to the specified torque.



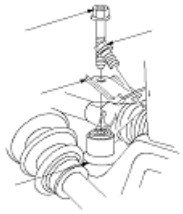
28. Place a jack under the transmission, raise it and attach the lower torque rod (A) in the mounting bracket and front subframe.
29. Install the mounting bolt (B), and set the bolt tongue (C) into the stop (D) through the guide (E), then loosely install the nut (F).
30. Loosely Install the mounting bolt (G).
31. Remove the jack, and tighten the bolt and nut to the specified torque.



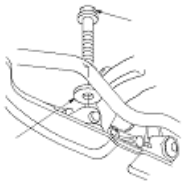
32. On the right side of the steering gearbox, secure the steering gear box (A) and stiffener (B) with the new mounting bolt (C) and the new bolt (D) loose.



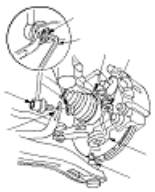
33. On the left side of the steering gearbox, secure the steering gear box (A) and stiffener (B) with the new mounting bolt (C) and the new bolt (D) loose.



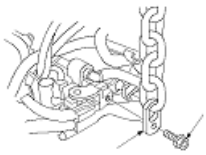
34. Loosely install the steering gearbox mounting bolt (A) and washer (B) on the middle.
35. Tighten the steering gearbox mounting bolts to the specified torque in the following order; on the right side, on the left side, and on the middle.
36. Tighten the bolts to the specified torque securing the right side stiffener, then left side stiffener.



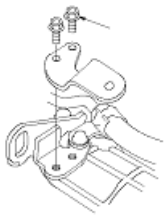
37. Connect the ball joints (A) to both knuckles (B), and install the new ball joint nuts (C). Tighten the nuts, then secure the nuts with the lock pin (D).
38. Connect the stabilizer links (E) to the stabilizer ends (F), and install the nuts (G). Insert a 5 mm Allen wrench (H) in the top of the ball joint pins (I), and tighten the nuts.
39. Remove the engine support hanger, and install the harness clamp in its bracket located in front of the left damper top.



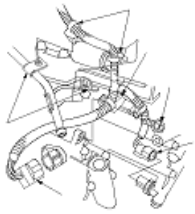
40. Remove the hanger plate (A) and bolt (B).



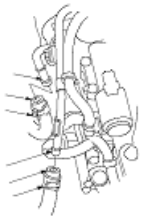
41. Install the air cleaner housing mounting bracket on the transmission hanger.



42. Secure the harness clamp bracket (A) with the bolt.
43. Connect the shift solenoid harness connector (B) and 3rd clutch transmission fluid pressure switch connector (C), and install the harness clamps (D) in the clamp brackets (E).

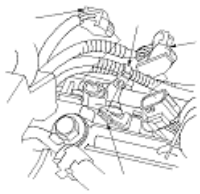


44. Connect the ATF cooler hoses (A) to the ATF cooler lines (B), and secure the hoses with the clips (C).



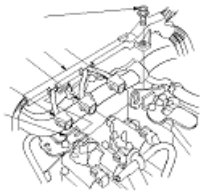
45. Connect the input shaft (mainshaft) speed sensor connector (A) and 2nd clutch transmission fluid pressure switch connector (B).

46. Connect the output shaft (countershaft) speed sensor connector (A), and install the harness clamp (B) on its bracket (C).
47. Connect the transmission range switch connector (D).



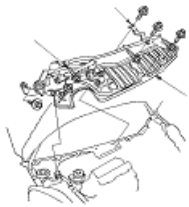
---

48. Install the harness cover (A) on its bracket (B), and secure the cover with the bolt.
49. Connect the A/T clutch pressure control solenoid valve A connector (C), A/T clutch pressure control solenoid valve C connector (D), and A/T clutch pressure control solenoid valve B connector (E).
50. Install the air cleaner assembly.



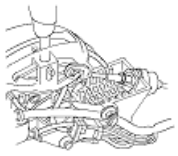
---

51. Install the windshield wiper motor and center-front cowl cover (A), and install the cowl cover stiffener (B).
52. Install the cowl cover.
53. Install the windshield wiper arms.
54. Refill the transmission with ATF.
55. Install the battery base.
56. Do the battery installation procedure.
57. Install the splash shield.
58. Install the wheels.
59. Set the parking brake. Start the engine, and shift the transmission through all positions three times. Check the shift lever operation, A/T gear position indicator operation, and shift cable adjustment.
60. Check and adjust the front wheel alignment.
61. Check the ATF level.
62. Do the road test.

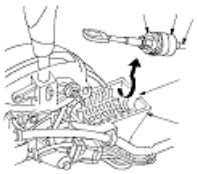


A/T Shift Cable Replacement

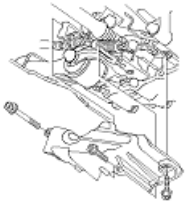
1. Raise the vehicle on a lift, or apply the parking brake, block rear wheels, and raise the front of the vehicle. Make sure it is securely supported.
2. Remove the splash shield.
3. Remove the center console.
4. Shift the transmission to N.
5. Remove the nut securing the shift cable end.



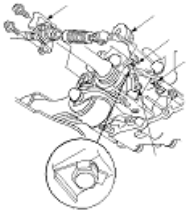
6. Rotate the socket holder (A) on the shift cable (B) a quarter turn; the corner (C) on the socket holder will be in the opening (D) of the shift lever bracket base (E). Then slide the holder to remove the shift cable from the bracket.



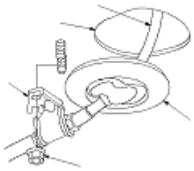
7. Remove the shift cable cover.



8. Pry up the lock tab of the lock washer (A), and remove the lock bolt (B) and lock washer.
9. Remove the bolts securing the shift cable holder (C), and separate the shift cable (D) from the selector control shaft end (E).
10. Remove the heat shield under the body.



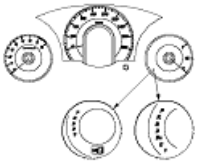
11. Remove the nut securing the shift cable bracket (A).
12. Remove the shift cable grommet (B), and pull out the shift cable (C).
13. Insert the new shift cable through the grommet hole (D), and install the grommet in its hole. Do not bend the shift cable excessively.
14. Secure the shift cable bracket with the nut.
15. Install the heat shield.



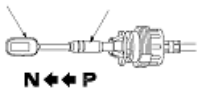
16. Install the control lever (A) over the control shaft (B). Do not twist the boot (C).
17. Secure the shift cable bracket (D) with the bolts.
18. Secure the control lever with the new lock washer (E) and the lock bolt (F); install the flange (G) of the lock washer with facing to the control lever, then bend the lock tab (H) of the lock washer against the bolt head securely.

19. Install the shift cable cover.

20. Turn the ignition switch to ON (II), and check that the N indicator comes on.

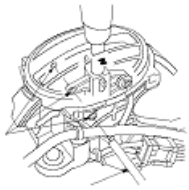


21. If necessary, push the shift cable (A) until it stops, then release it. Pull the shift cable back two steps so that the shift position is in N. Do not hold the shift cable guide (B) to adjust the shift cable.
22. Turn the ignition switch to LOCK (0).



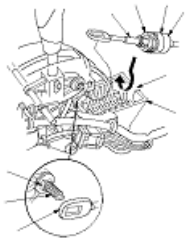
---

23. Insert a 6.0 mm (0.24 in.) pin (A) through the positioning holes (B) on the shift lever bracket base and into the positioning hole on the shift lever. Use only the 6.0 mm pin.
24. Check that the shift lever is secured in N.



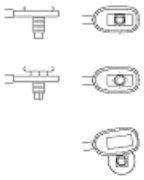
---

25. Rotate the socket holder (A) on the shift cable (B) to place the corner (C) on the holder opposite the opening (D) in the shift lever bracket base (E). Align the holder with the opening in the bracket, then slide the holder into the bracket. Install the shift cable end (F) over the mounting stud (G) by aligning its square hole with the square fitting (H) at the bottom of the stud. Rotate the holder a quarter turn until the holder stops to secure the shift cable. Do not install the shift cable by twisting the shift cable guide (I).



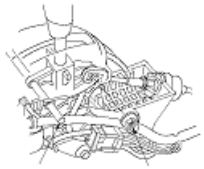
---

26. Check that the shift cable end is properly installed on the mounting stud.
27. If the cable end is out of position on the mounting stud, remove the shift cable from the bracket, and reinstall the shift cable. Do not install the shift cable end on the mounting stud while the shift cable in on the bracket. If the cable end rides on the bottom of the mounting stud, rotate the stud and align the square fitting with the hole.



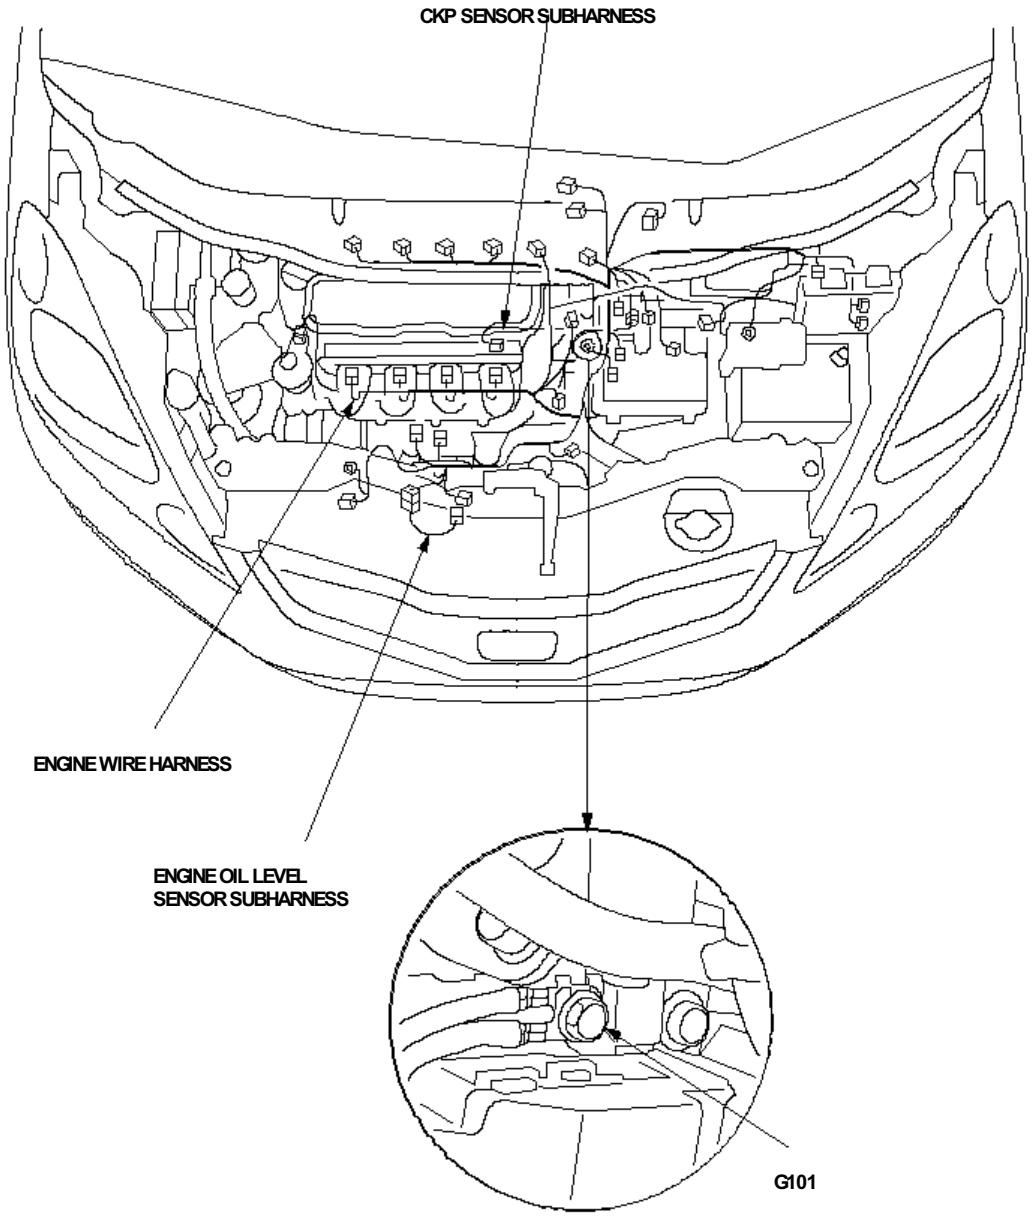
---

28. Secure the shift cable end with the nut (A).
29. Remove the 6.0 mm (0.24 in.) pin (B) that was installed to hold the shift lever.
30. Turn the ignition switch to ON (II). Move the shift lever to each position, and check that the A/T gear position indicator follows the transmission range switch.
31. Shift to P, and check that the shift lock works properly. Push the shift lock release, and check that the shift lever releases, and also check that the shift lever locks when it is shifted back into P.
32. Reinstall the center console.



Engine Wire Harness, CKP Sensor Subharness, and Oil Level Sensor Subharness Locations

M/T



RHD model is shown, LHD model is similar.

Safety Messages

Safety Messages

Your safety, and the safety of others, is very important. To help you make informed decisions, we have provided safety messages, and other safety information throughout this manual. Of course, it is not practical or possible to warn you about all the hazards associated with servicing this vehicle. You must use your own good judgment.
You will find important safety information in a variety of forms including:

- **Safety Labels –** on the vehicle.
- **Safety Messages –** preceded by a safety alert symbol and one of three signal words, DANGER, WARNING, or CAUTION.
  These signal words mean:

  You WILL be KILLED or SERIOUSLY HURT if you don't follow instructions.
  You CAN be KILLED or SERIOUSLY HURT if you don't follow instructions.
  You CAN be HURT if you don't follow instructions.

- **Instructions –** how to service this vehicle correctly and safely.

All information contained in this manual is based on the latest product information available at the time of printing. We reserve the right to make changes at anytime without notice. No part of this publication may be reproduced, or stored in a retrieval system, or transmitted, in any form by any means, electronic, mechanical, photocopying, recording, or otherwise, without the prior written permission of the publisher. This includes text, figures, and tables.
As you read this manual, you will find information that is preceded by a symbol. The purpose of this message is to help prevent damage to your vehicle, other property, or the environment.

Service Precautions

General

⚠CAUTION

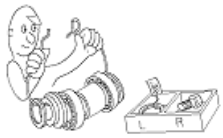
Observe all safety precautions and notes while working.

- Protect all painted surfaces and seats against dirt and scratches with a clean cloth or vinyl cover.

- Work safety and give your work your undivided attention. When either the front or rear wheels are to be raised, block the remaining wheels securely. Communicate at frequently as possible when work involves two or more workers. Do not run the engine unless the shop or working area is well ventilated.

- Before removing or disassembling parts, they must be inspected carefully to isolate the cause for which service is necessary. Observe all safety notes and precautions and follow the proper procedures as described in this manual.

- Mark or place all removed parts in order in a parts rack so they can be reassembled in their original places.



- Use the special tool when use of such a tool is specified.

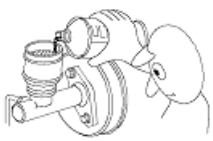
- Parts must be assembled with the proper torque according to the maintenance standards established.
- When tightening a series of bolts or nuts, begin with the center or large diameter bolts and tighten them in crisscross pattern in two or more steps.

- Use new packings, gaskets, O-rings, and cotter pins whenever reassembling.
- Do not reuse parts that must be required to replace. Always replace them.

- Use Honda parts and lubricants or those equivalent. When parts are to be reused, they must be inspected carefully to make sure they are not damaged or deteriorated and are in good usable condition.

- Coat or fill parts with specified grease as specified. Clean all removed parts with solvent upon disassembly.

- Brake fluid and hydraulic components
  - When replenishing the system, use extreme care to prevent dust and dirt from entering the system.
  - Do not mix different brands of fluid as they may not be compatible.
  - Do not reuse drained brake fluid.
  - Because brake fluid can cause damage to painted and resin surfaces, care should be taken not to spill it on such materials. If spilled accidentally, quickly rinse it with water or warm water from painted or resin surfaces.
  - After disconnecting brake hoses or pipes, be sure to plug the openings to prevent loss of brake fluid.
  - Clean all disassembled parts only in clean BRAKE FLUID. Blow open all holes and passages with compressed air.
  - Keep disassembled parts from air-borne dust and abrasives.
  - Check that parts are clean before assembly.



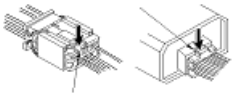
- Avoid oil or grease getting on rubber parts and tubes, unless specified.
- When you apply the silicone grease, make sure not to adhere to the terminal part of connectors and surrounding switches. Also do not touch the switches and the terminal part of connector by hands or glove that adheres the silicone grease.
- When you apply the spray that including the silicone, cover with something such as cloth to avoid not to disperse the terminal part of connectors and surrounding switches.
- Upon assembling, check every part for proper installation and operation.

Electrical Troubleshooting Information

Before Troubleshooting

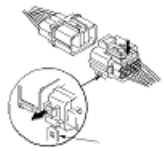
1. Check applicable fuses in the appropriate fuse/relay box.
2. Check the battery for damage, state of charge, and clean and tighten the connections.
   NOTICE
   - Do not quick-charge a battery unless the battery ground cable has been disconnected, otherwise you will damage the alternator diodes.
   - Do not attempt to crank the engine with the battery ground cable loosely connected or you will severely damage the wiring.
3. Check the drive belt tension.

Handling Connectors

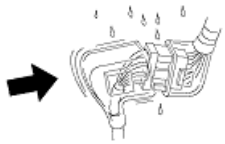


- Make sure the connectors are clean and have no loose wire terminals.
- Make sure multiple cavity connectors are packed with grease (except watertight connectors).
- All connectors have push-down release type locks (A).

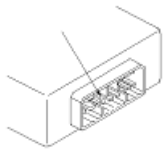
- Some connectors have a clip on their side used to attach them to a mounting bracket on the body or on another component. This clip has a pull type lock.
- Some mounted connectors cannot be disconnected unless you first release the lock and remove the connector from its mount bracket (A).



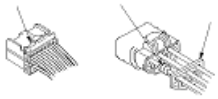
- Never try to disconnect connectors by pulling on their wires; pull on the connector halves instead.
- Always reinstall plastic covers.



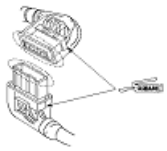
- Before connecting connectors, make sure the terminals (A) are in place and not bent.



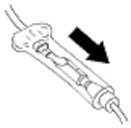
- Check for loose retainer (A) and rubber seals (B).



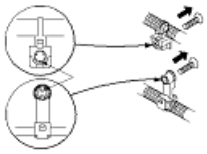
- The backs of some connectors are packed with grease. Add grease if necessary. If the grease is contaminated, replace it.



- Insert the connector all the way and make sure it is securely locked.
- Position wires so that the open end of the cover faces down.

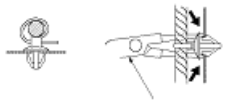


Handling Wires and Harnesses



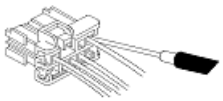
- Secure wires and wire harnesses to the frame with their respective wire ties at the designated locations.
- Remove clips carefully; don't damage their locks (A).

- Slip pliers (A) under the clip base and through the hole at an angle, then squeeze the expansion tabs to release the clip.



- After installing harness clips, make sure the harness doesn't interfere with any moving parts.
- Keep wire harnesses away from exhaust pipes and other hot parts, from sharp edges of brackets and holes, and from exposed screws and bolts.
- Seat grommets in their grooves properly (A). Do not leave grommets distorted (B).

Testing and Repairs



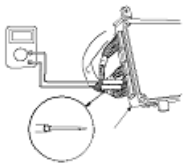
- Do not use wires or harnesses with broken insulation. Replace them or repair them by wrapping the break with electrical tape.
- After installing parts, make sure that no wires are pinched under them.
- When using electrical test equipment, follow the manufacturer's instructions and those described in this manual.
- If possible, insert the probe of the tester from the wire side (except waterproof connector).

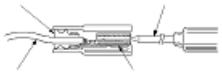
- Use a probe with a tapered tip.
- Refer to the instructions in the Honda Terminal Kit for identification and replacement of connector terminals.

⚠CAUTION

- Puncturing the insulation on a wire can cause poor or intermittent electrical connections.
- For testing at connectors, bring the tester probe into contact with the terminal from the connector side of wire harness connectors in the engine compartment.
  For female connectors, just tough lightly with the tester probe and do not insert the probe.

When checking any control module(s) or unit(s) connector terminals, gently slide the sharp tester probe from the wire side into the connector until it comes in contact with the terminal end of the wire.





Five-step Troubleshooting

1. Verify The Complaint
   Turn on all the components in the problem circuit to verify the customer complaint. Note the symptoms. Do not begin disassembly or testing until you have narrowed down the problem area.

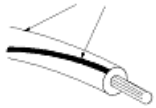
2. Analyze The Schematic
   Look up the schematic for the problem circuit. Determine how the circuit is supposed to work by tracing the current paths from the power feed through the circuit components to ground. If several circuits fail at the same time, the fuse or ground is a likely cause.
   Based on the symptoms and your understanding of the circuit operation, identify one or more possible causes of the problem.

3. Isolate The Problem By Testing The Circuit
   Make circuit tests to check the diagnosis you made in Step 2 . Keep in mind that a logical, simple procedure is the key to efficient troubleshooting. Test for the most likely cause of failure first. Try to make tests at points that are easily accessible.

4. Fix The Problem
   Once the specific problem is identified, make the repair. Be sure to use proper tools and safe procedures.

5. Make Sure The Circuit Works
   Turn on all components in the repaired circuit in all modes to make sure you've fixed the entire problem. If the problem was a blown fuse, be sure to test all of the circuits on the fuse. Make sure no new problems turn up and the original problem does not recur.

Wire Color Codes



The following abbreviations are used to identify wire colors in the circuit schematics:

WHT.	White
YEL.	Yellow
BLK.	Black
BLU.	Blue
GRN.	Green
RED.	Red
ORN.	Orange
PNK.	Pink
BRN.	Brown
GRY.	Gray
PUR.	Purple
LT BLU.	Light Blue
LT GRN.	Light Green

The wire insulation has one color or one color with another color stripe. The second color is the stripe.

Motor noise from sunshade

Diagnostic procedure

1. Check for a loose motor.
2. Check for a worn gear or bearing.
3. Check for a deformed cable assembly.
4. Check for dirt or debris.

Sunshade does not move, but motor turns

Diagnostic procedure

1. Check for foreign matter stuck between the guide rail and the slider.
2. Make sure the cable assembly is attached properly.
3. Check for a loose inner cable.
4. Check for a defective gear or inner cable.
5. Check for a connect shoe.

Sunshade does not move and motor does not turn (sunshade can be moved with 4 mm hexagonal wrench)

Diagnostic procedure

1. Check for a run down battery.
2. Check for a blown fuse.
3. Check for a faulty sunshade switch.
4. Check for a defective motor control unit.

Sunshade does not stop at proper flush closed position

Diagnostic procedure

1. Reset the sunshade control unit.

Sunshade moves in a jerking motion (moves 40 mm (1.57 in.), stops for 0.4 seconds, and repeats)

Diagnostic procedure

1. Reset the sunshade control unit.

During auto close operation, sunshade reverses when no object is trapped

Diagnostic procedure

1. Check for sunshade circuit.
2. Reset the sunshade control unit.

Sunshade moves, but there is no AUTO function

Diagnostic procedure

1. Reset the sunshade control unit.

Glass Roof Sunshade Symptom Troubleshooting Index

Symptom	Diagnostic procedure
Motor noise from sunshade	1Check for a loose motor. 2Check for a worn gear or bearing. 3Check for a deformed cable assembly. 4Check for dirt or debris.
Sunshade does not move, but motor turns	1Check for foreign matter stuck between the guide rail and the slider. 2Make sure the cable assembly is attached properly. 3Check for a loose inner cable. 4Check for a defective gear or inner cable. 5Check for a connect shoe.
Sunshade does not move and motor does not turn (sunshade can be moved with 4 mm hexagonal wrench)	1Check for a run down battery. 2Check for a blown fuse. 3Check for a faulty sunshade switch. 4Check for a defective motor control unit.
Sunshade does not stop at proper flush closed position	Reset the sunshade control unit.
Sunshade moves in a jerking motion (moves 40 mm (1.57 in.), stops for 0.4 seconds, and repeats)	Reset the sunshade control unit.
During auto close operation, sunshade reverses when no object is trapped	1Check for sunshade circuit. 2Reset the sunshade control unit.
Sunshade moves, but there is no AUTO function	Reset the sunshade control unit.

Electronic Control System

The functions of the fuel and emission control systems are managed by the engine control module (ECM) on vehicles with manual transmissions or the powertrain control module (PCM) on vehicles with automatic transmissions.

Self-diagnosis

The ECM/PCM detects the failure of a signal from a sensor or from another control unit and stores a Temporary DTC or a DTC. Depending on the failure, a DTC is stored in either the first or the second drive cycle. When a DTC is stored, the ECM/PCM turns on the malfunction indicator lamp (MIL) by a signal sent to the gauge via F-CAN.

- **One Drive Cycle Detection Method**
  When an abnormality occurs in the signal from a sensor or from another control unit, the ECM/PCM stores a DTC for the failure and turns on the MIL immediately.
- **Two Drive Cycle Detection Method**
  When an abnormality occurs in the signal from a sensor or from another control unit in the first drive cycle, the ECM/PCM stores a Temporary DTC. The MIL does not come on at this time. If the failure continues in the second drive cycle, the ECM/PCM stores a DTC and turns on the MIL.

Fail-safe Function

When an abnormality occurs in the signal from a sensor or from another control unit, the ECM/PCM ignores that signal and substitutes a pre-programmed value, for them that allows the engine to continue running. This causes a DTC to be stored and the MIL to come on.

MIL Bulb Check

When the ignition switch is turned to ON (II), the ECM/PCM turns on the MIL via the F-CAN for 2 seconds to check the bulb condition.

Self Shut Down (SSD) Mode

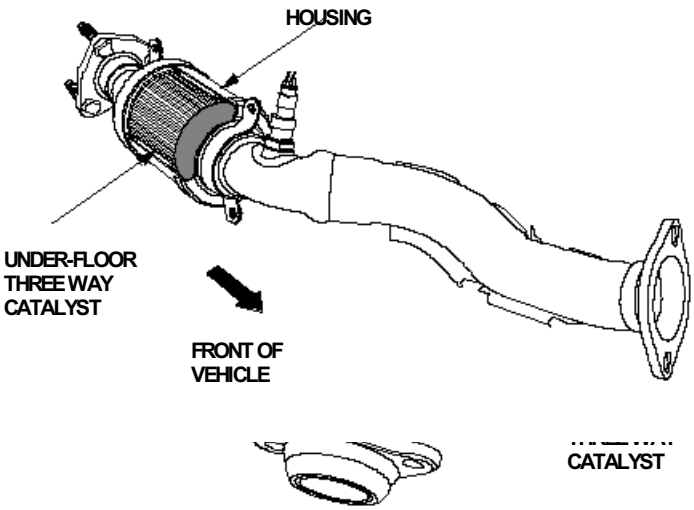
After the ignition switch is turned to LOCK (0), the ECM/PCM stays on (up to 15 minutes). If the ECM/PCM connector is disconnected during this time, the ECM/PCM may be damaged. To cancel this mode, disconnect the negative cable from the battery or jump the SCS line with the HDS after the ignition switch is turned to LOCK (0).

Catalytic Converter System

Warm Up Three Way Catalytic Converter (WU-TWC) and Under-Floor Three Way Catalytic Converter (TWC)

The WU-TWC/TWC converts hydrocarbons (HC), carbon monoxide (CO), and oxides of nitrogen (NOx) in the exhaust gas to carbon dioxide (CO_2), nitrogen (N_2), and water vapor.

WU-TWC (ATTACHED TO THE CYLINDER HEAD)



Exhaust Gas Recirculation (EGR) System

Refer to the system diagram to see a functional layout of the system.

EGR Valve

The EGR valve lowers peak combustion temperatures and reduces oxides of nitrogen emissions (NOx) by recirculating exhaust gas through the intake manifold and into the combustion chambers.

Evaporative Emission (EVAP) Control System

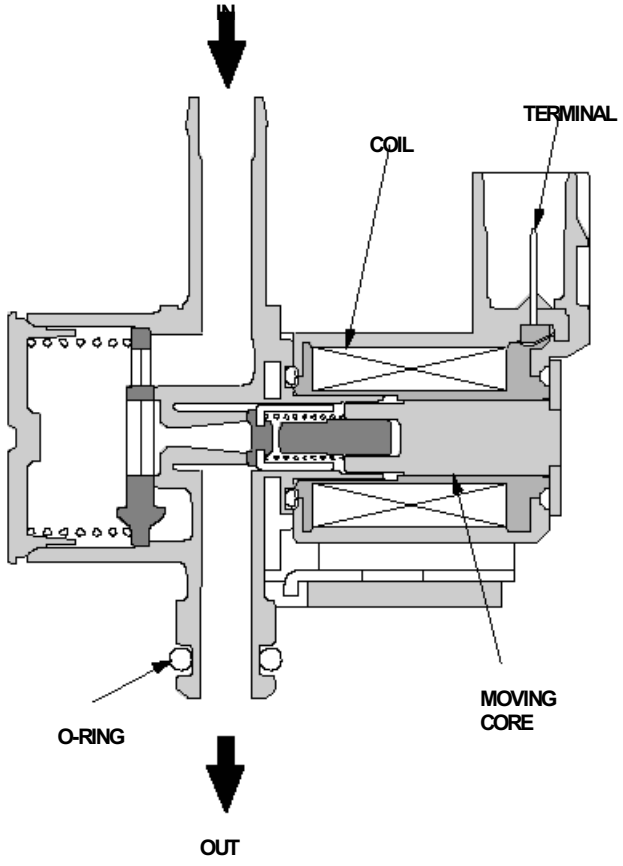
Refer to the system diagram to see a functional layout of the system.

EVAP Canister

The EVAP canister temporarily stores fuel vapor from the fuel tank until it can be purged back into the engine and burned.

EVAP Canister Purge Valve

When the engine coolant temperature is below 60 °C (140 °F), the ECM/PCM turns off the EVAP canister purge valve cutting vacuum to the EVAP canister.

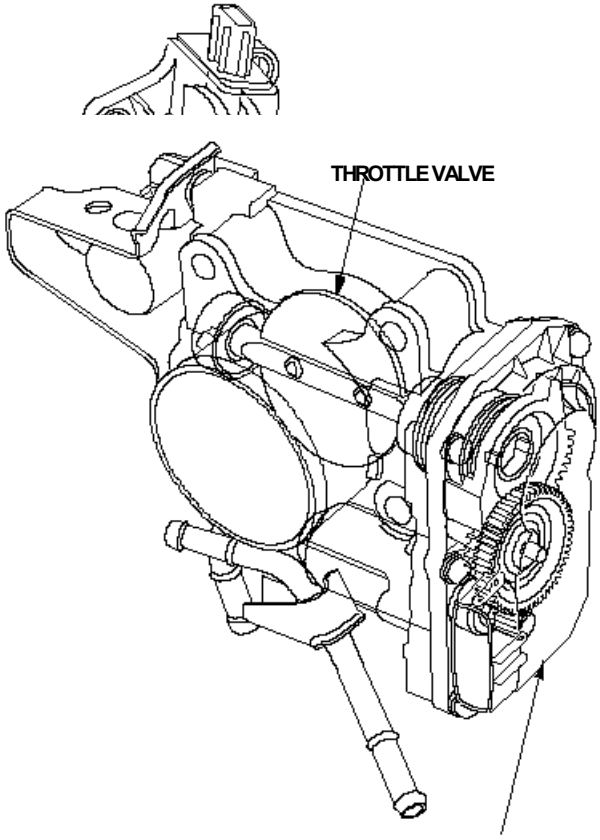


Electronic Throttle Control System

The throttle is electronically controlled by the electronic throttle control system. Refer to the system diagram to see a functional layout of the system.
Idle control: When the engine is idling, the ECM/PCM controls the throttle actuator to maintain the proper idle speed according to engine loads.
Acceleration control: When the accelerator pedal is pressed, the ECM/PCM opens the throttle valve depending on the accelerator pedal position (APP) sensor signal.
Cruise control: The ECM/PCM controls the throttle actuator to maintain set speed when the cruise control is operating. The throttle actuator takes the place of the cruise control actuator.

Accelerator Pedal Position (APP) Sensor

As the accelerator pedal position changes, the sensor varies the signal voltage to the ECM/PCM.

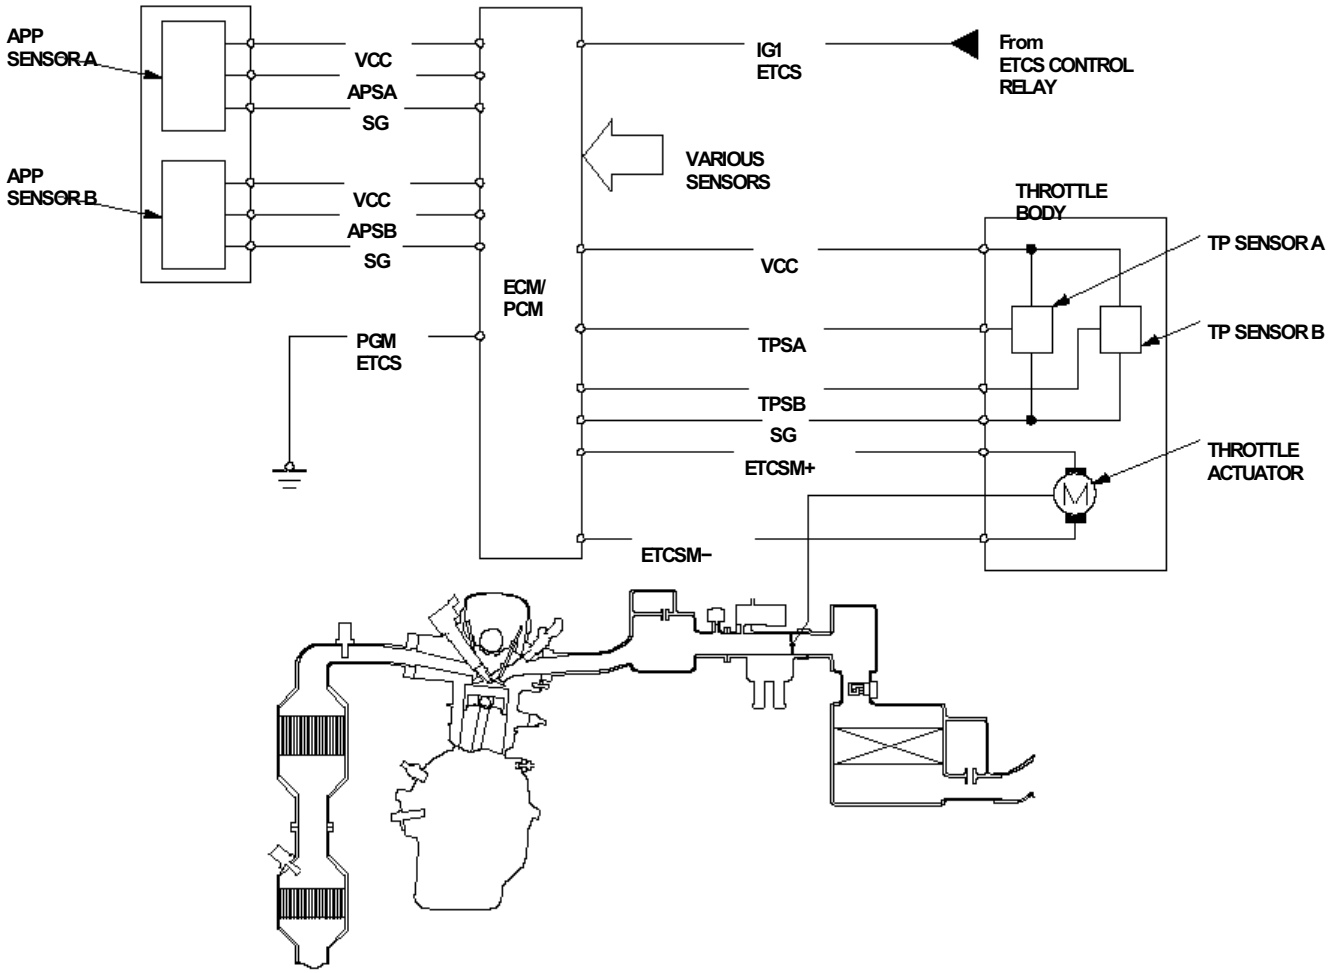


THROTTLE POSITION (TP) SENSOR and THROTTLE ACTUATOR

alve is heated by engine coolant from the cylinder head to prevent

Electronic Throttle Control System Diagram

The electronic throttle control system consists of the throttle actuator, throttle position (TP) sensor A/B, accelerator pedal position (APP) sensor A/B, the electronic throttle control system (ETCS) control relay, and the ECM/PCM.



PGM-FI System

The programmed fuel injection (PGM-FI) system is a sequential multiport fuel injection system.

Alternator Control

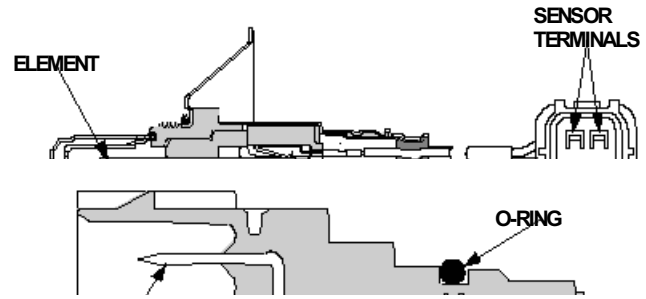
The alternator signals the ECM/PCM during charging.

Air Conditioning (A/C) Compressor Clutch Relay

When the ECM/PCM receives a demand for cooling from the A/C system, it delays the compressor from being energized, and enriches the mixture to assure smooth transition to the A/C mode.

Air Fuel Ratio (A/F) Sensor

The A/F sensor operates over a wide air/fuel range. The A/F sensor is installed upstream of the warm up three way catalytic converter (WU-TWC), and sends signals to the ECM/PCM which varies the duration of fuel injection accordingly.



voltage signal that modifies the basic duration of the fuel injection

ELEMENT
SENSOR TERMINALS
HEATER
HEATER TERMINALS

Idle Control System

When the engine is cold, the A/C compressor is on, the transmission is in gear, the brake pedal is pressed, the power steering load is high, or the alternator is charging, the ECM/PCM controls current to the throttle actuator to maintain the correct idle speed.

Brake Pedal Position Switch

The brake pedal position switch signals the ECM/PCM when the brake pedal is pressed.

Fuel Supply System

Fuel Cutoff Control

During deceleration with the throttle valve closed, current to the injectors is cut off to improve fuel economy at engine speeds over 850 rpm (min^{-1}) (A/T) (M/T: 910 rpm (min^{-1})). Fuel cutoff also occurs when the engine speed exceeds 7,000 rpm (min^{-1}) (L15A7 engine) (L13Z1: 6,600 rpm (min^{-1})), regardless of the position of the throttle valve, to protect the engine from over-rewing. When the vehicle is stopped, the ECM/PCM cuts the fuel at engine speeds over 5,000 rpm (min^{-1}) (A/T), 6,600 rpm (min^{-1}) (L13Z1 engine M/T) (L15A7 engine M/T: 6,800 rpm (min^{-1})). On a cold engine, fuel cut occurs at a lower engine speed.

Fuel Pump Control

When the ignition is turned on, the ECM/PCM grounds PGM-FI main relay 2 which feeds current to the fuel pump for 2 seconds to pressurize the fuel system. With the engine running, the ECM/PCM grounds PGM-FI main relay 2 and feeds current to the fuel pump. When the engine is not running and the ignition is on, the ECM/PCM cuts ground to PGM-FI main relay 2 which cuts current to the fuel pump.

PGM-FI Main Relay 1 and 2

PGM-FI main relay 1 is energized whenever the ignition switch is ON (II) to supply battery voltage to the ECM/PCM, power to the injectors, and power for PGM-FI main relay 2. PGM-FI main relay 2 is energized to supply power to the fuel pump for 2 seconds when the ignition switch is turned to ON (II), and when the engine is cranking or running.

Positive Crankcase Ventilation (PCV) System

The PCV valve prevents blow-by gasses from escaping into the atmosphere by venting them into the intake manifold.

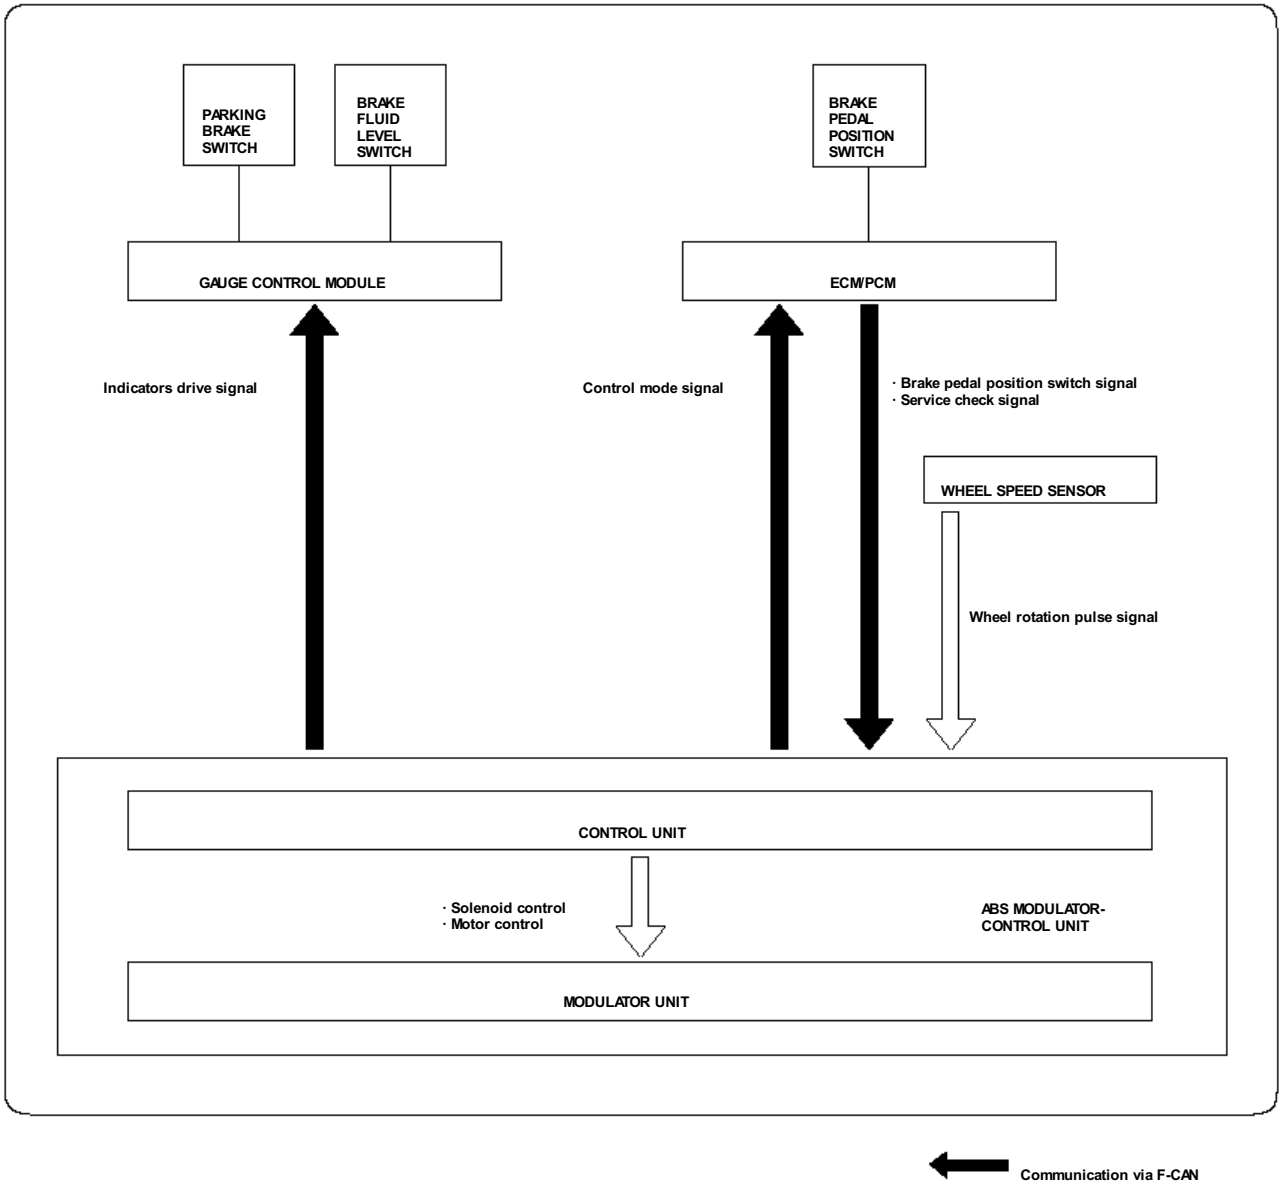
System Outline

This system is composed of the ABS modulator-control unit, the wheel speed sensors, and the system indicators in the gauge control module. The ABS modulator-control unit controls the anti-lock brake and the brakes distribution functions.

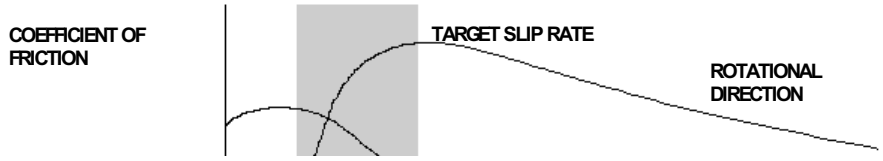


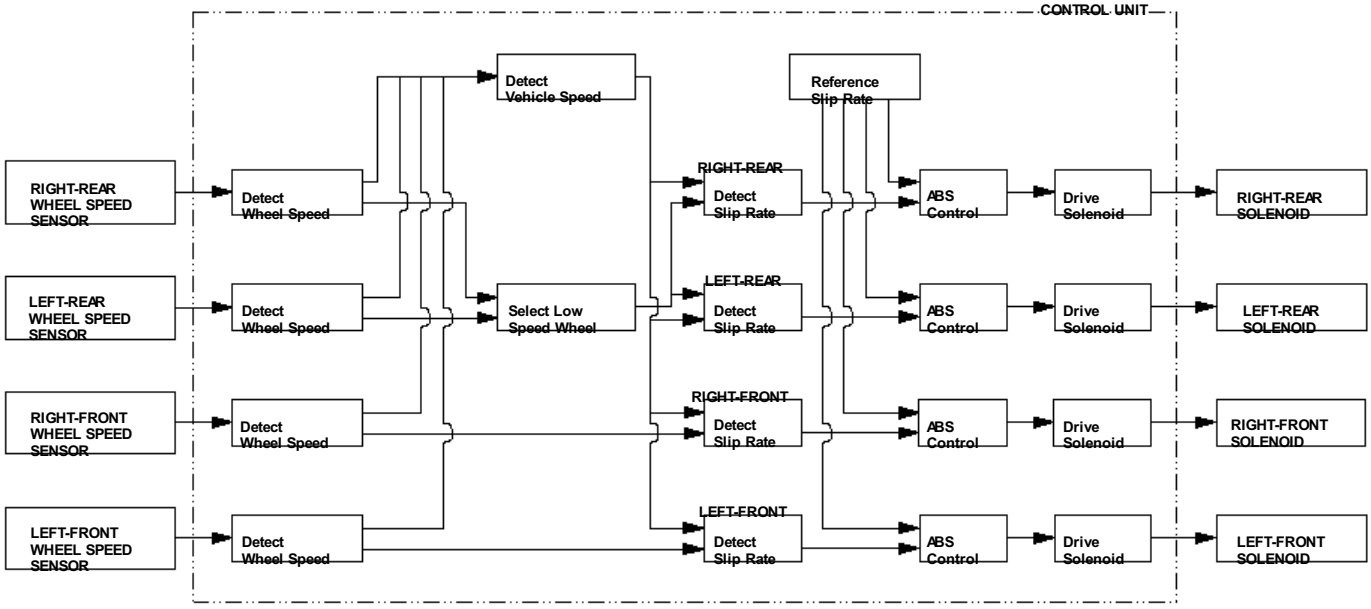
ABS Features

Anti-lock Control

Without ABS, when the brake pedal is pressed while driving, the wheels sometimes lock before the vehicle comes to a stop. In such an event, the maneuverability of the vehicle is reduced if the front wheels are locked, and the stability of the vehicle is reduced if the rear wheels are locked, creating an extremely unstable condition. With ABS, the system precisely controls the slip rate of the wheels to ensure maximum grip force from the tyres, and it thereby ensures maneuverability and stability of the vehicle. The ABS calculates the slip rate of the wheels based on the four wheel speeds, and then it controls the brake fluid pressure to reach the target slip rate.

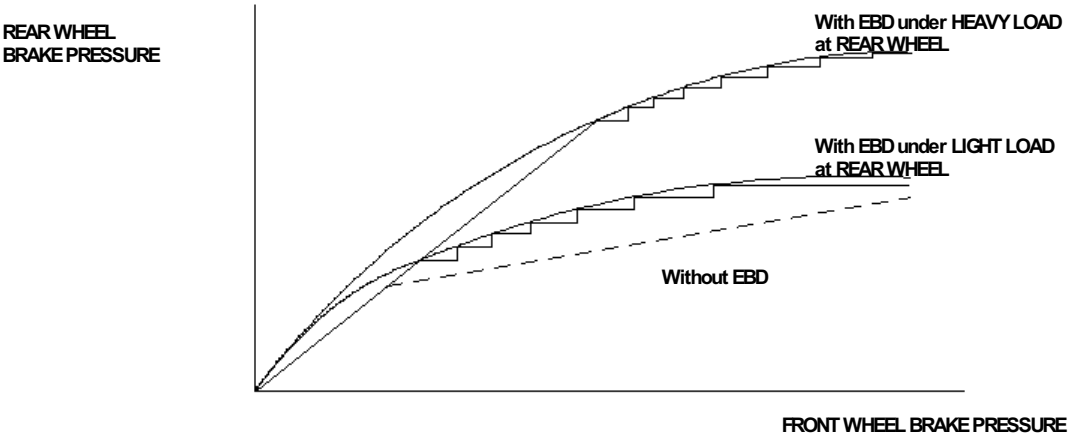
Grip force of tyre and road surface





EBD Features

The electronic brake distribution (EBD) feature helps control vehicle braking by adjusting the rear brake force in accordance with the rear wheel load before the ABS operates. Based on the wheel speed sensor signals, the control unit uses the modulator to control the rear brakes individually. When the rear wheel speed is less than the front wheel speed, the ABS modulator-control unit retains the current rear brake fluid pressure by closing the inlet valve in the modulator. As the rear wheel speed increases and approaches the front wheel speed, the ABS modulator-control unit increases the rear brake fluid pressure by momentarily opening the inlet valve. This whole process is repeated very rapidly. While this is happening, kickback at the brake pedal.



Modulator Unit

The ABS modulator consists of the inlet solenoid valve, the outlet solenoid valve, the reservoir, the pump, the pump motor, and the damping chamber. The modulator reduces the caliper fluid pressure directly. It is a circulating-type modulator because the brake fluid circulates through the caliper, the reservoir, and the master cylinder. The hydraulic control has three modes; pressure intensifying, pressure retaining, and pressure reducing. The hydraulic circuit is an independent four channel type; one channel for each wheel.

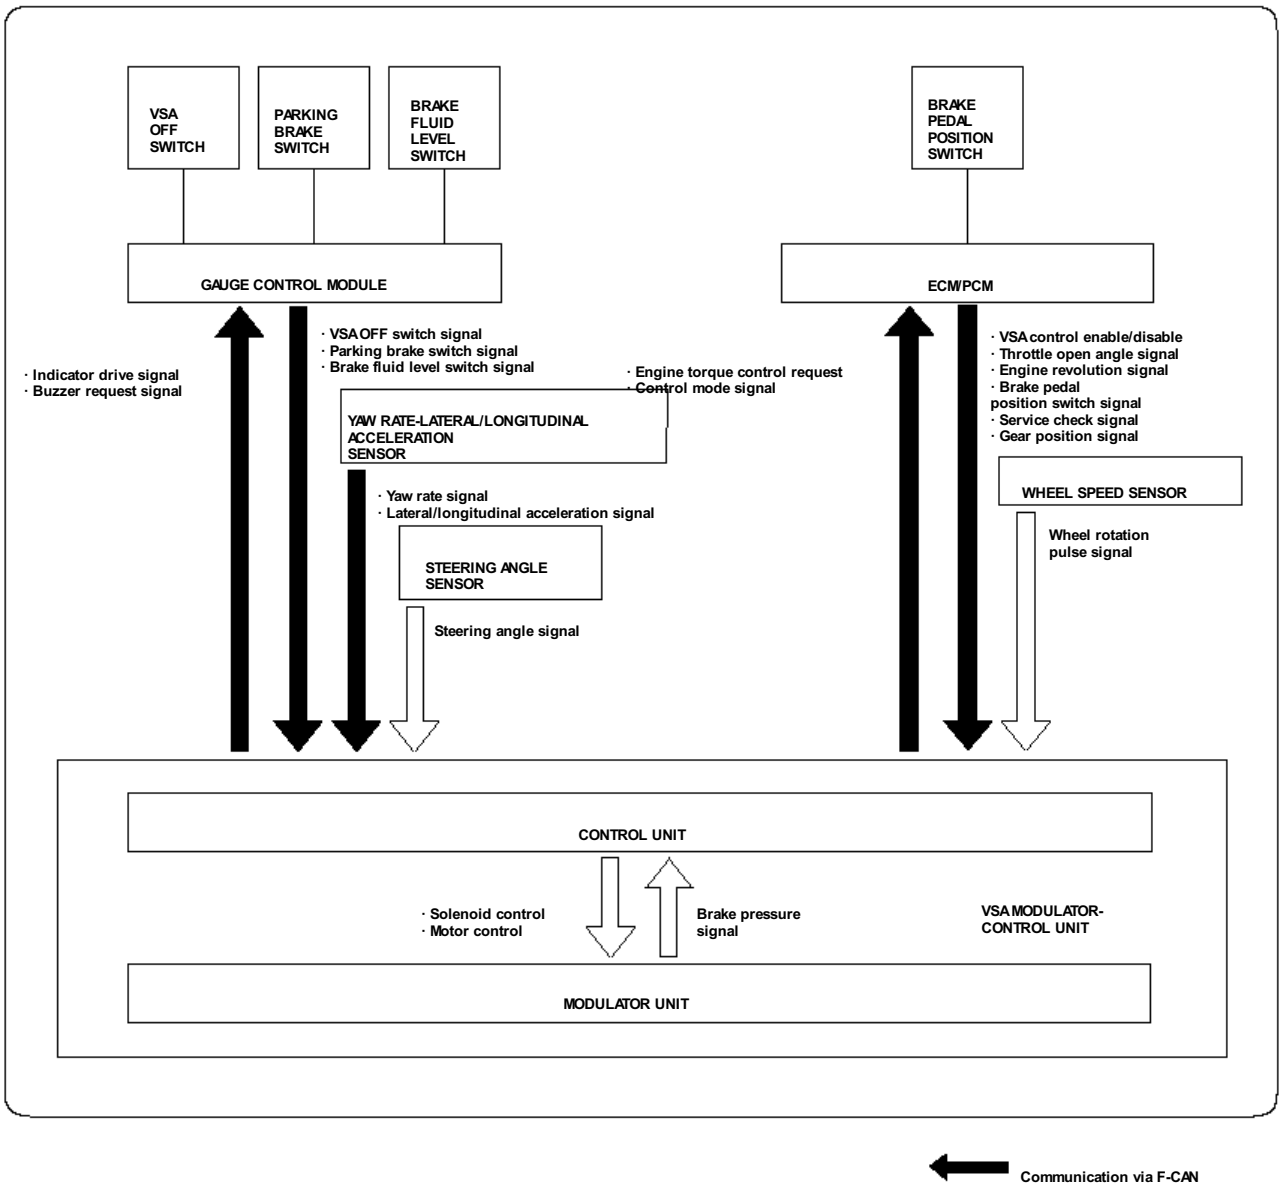
System Outline

This system is composed of the VSA modulator-control unit, the wheel speed sensors, the steering angle sensor, and the yaw rate-lateral/longitudinal acceleration sensor, and the system indicators in the gauge control module. The VSA modulator-control unit controls the ABS, EBD, TCS, VSA, HSA, and brake assist with the brake pressure of each wheel and reduces engine torque.

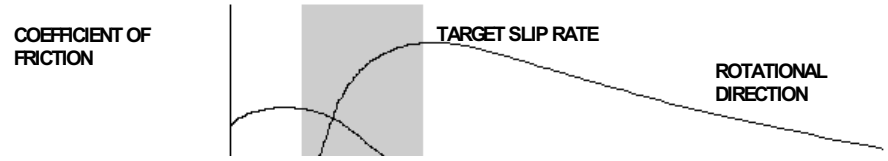


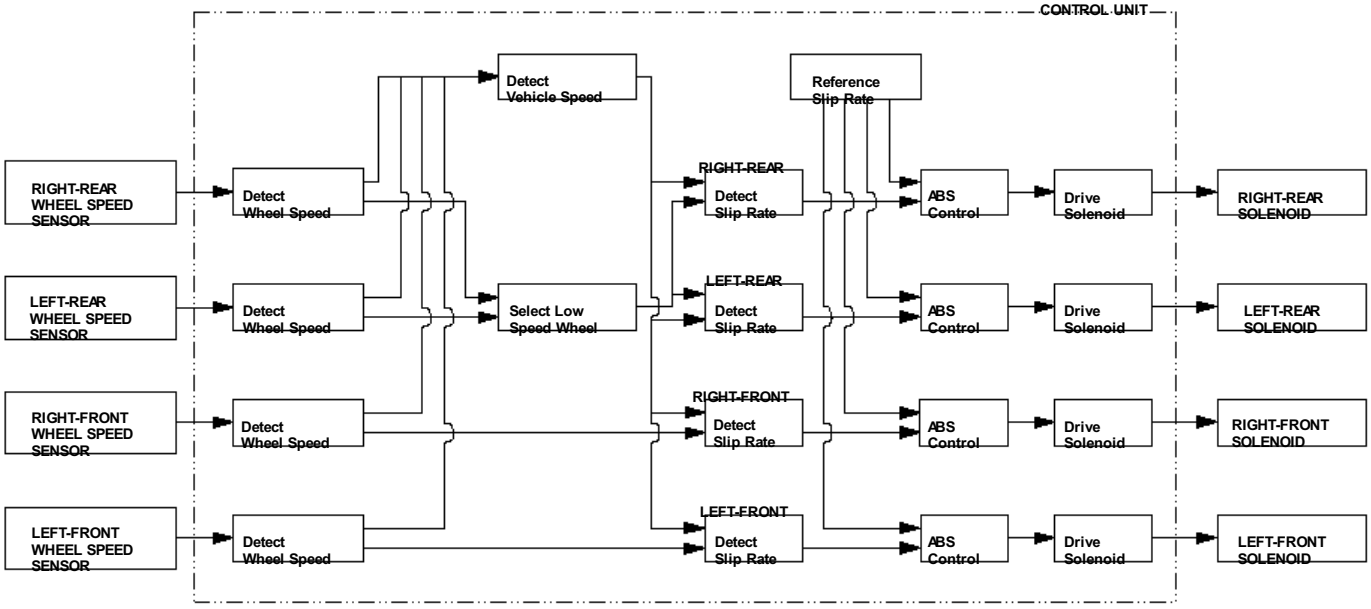
ABS Features

Anti-lock Control

Without ABS, when the brake pedal is pressed while driving, the wheels sometimes lock before the vehicle comes to a stop. In such an event, the maneuverability of the vehicle is reduced if the front wheels are locked, and the stability of the vehicle is reduced if the rear wheels are locked, creating an extremely unstable condition. With ABS, the system precisely controls the slip rate of the wheels to ensure maximum grip force from the tyres, and it thereby ensures maneuverability and stability of the vehicle. The ABS calculates the slip rate of the wheels based on the four wheel speeds, and then it controls the brake fluid pressure to reach the target slip rate.

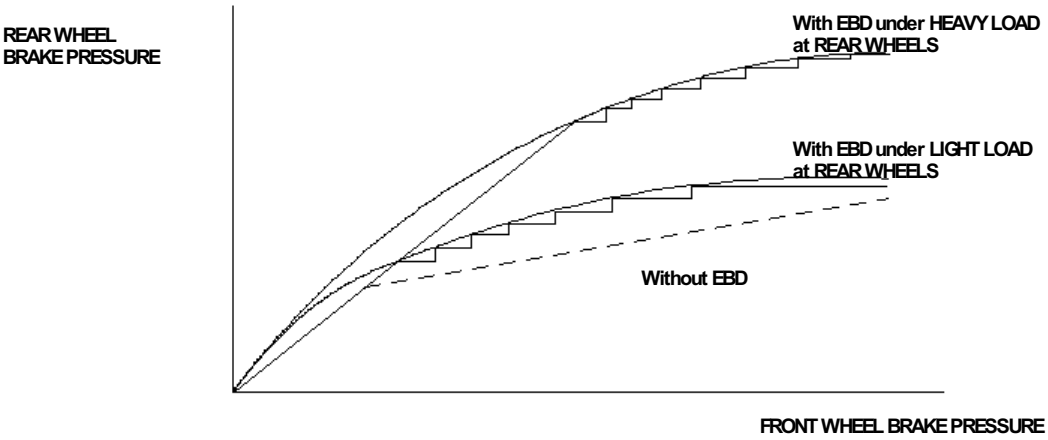
Grip force of tyre and road surface





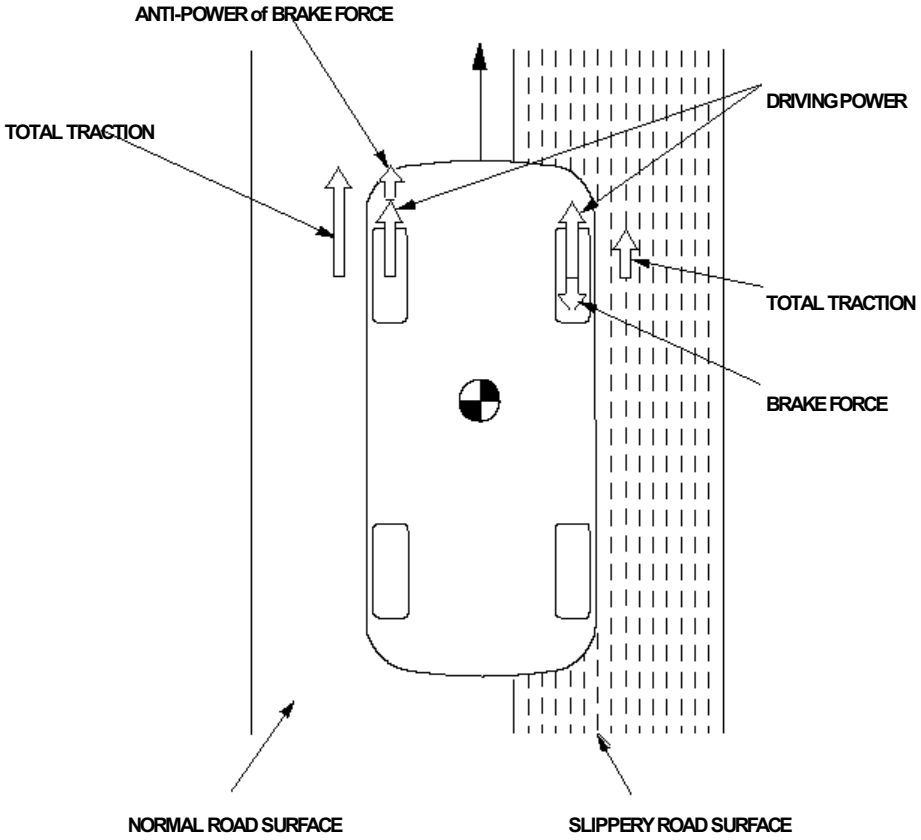
EBD Features

The electronic brake distribution (EBD) feature helps control vehicle braking by adjusting the rear brake force in accordance with the rear wheel load before the ABS operates. Based on the wheel speed sensor signals, the control unit uses the modulator to control the rear brakes individually. When the rear wheel speed is less than the front wheel speed, the VSA modulator-control unit retains the current rear brake fluid pressure by closing the inlet valve in the modulator. As the rear wheel speed increases and approaches the front wheel speed, the VSA modulator-control unit increases the rear brake fluid pressure by momentarily opening the inlet valve. This whole process is repeated very rapidly. While this is happening, kickback may be felt at the brake pedal.



TCS Features

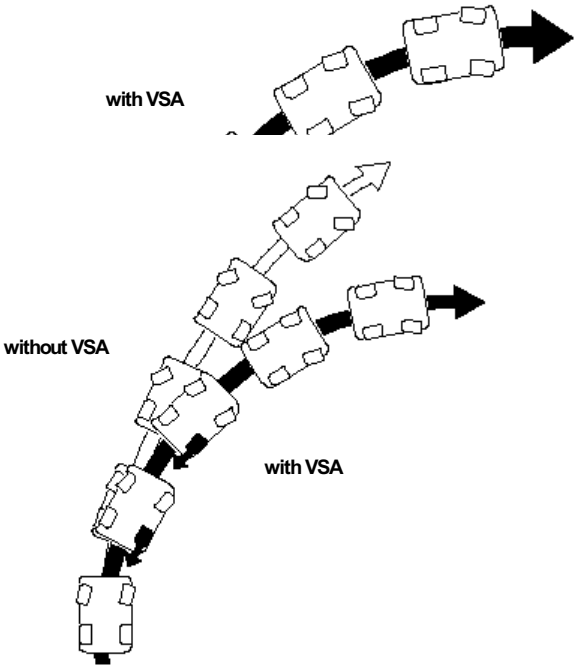
When a drive wheel loses traction on a slippery road surface and starts to spin, the VSA modulator-control unit applies brake pressure to the spinning wheel and sends an engine torque control request to the ECM/PCM to slow the spinning wheel and keep traction.



VSA System Features

Oversteer control

Applies the brake to the front and rear outside wheels



The brake increases the yaw rate toward the turning direction

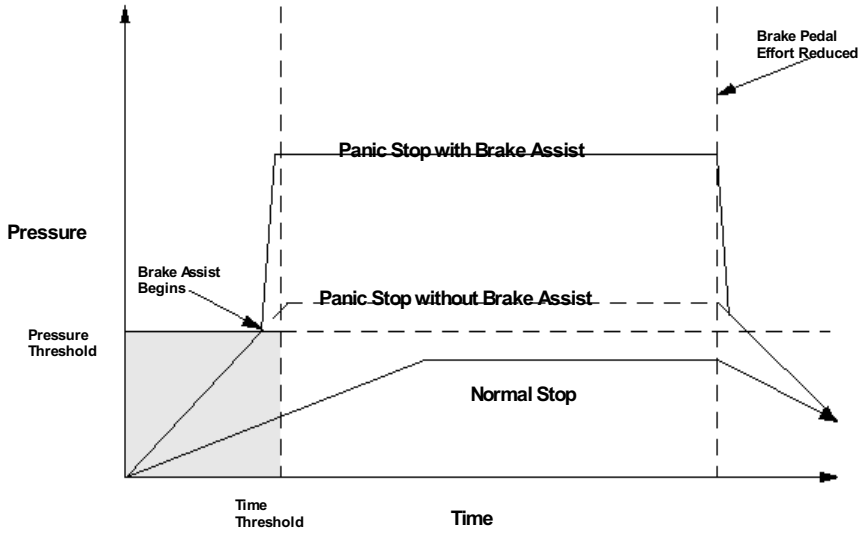
The throttle control effect;
· reduces vehicle speed
· increases cornering force

Brake Assist Features

Brake assist helps ensure that any driver can achieve the full braking potential of the vehicle by increasing brake system pressure in a panic situation, bringing the vehicle into a full ABS stop.

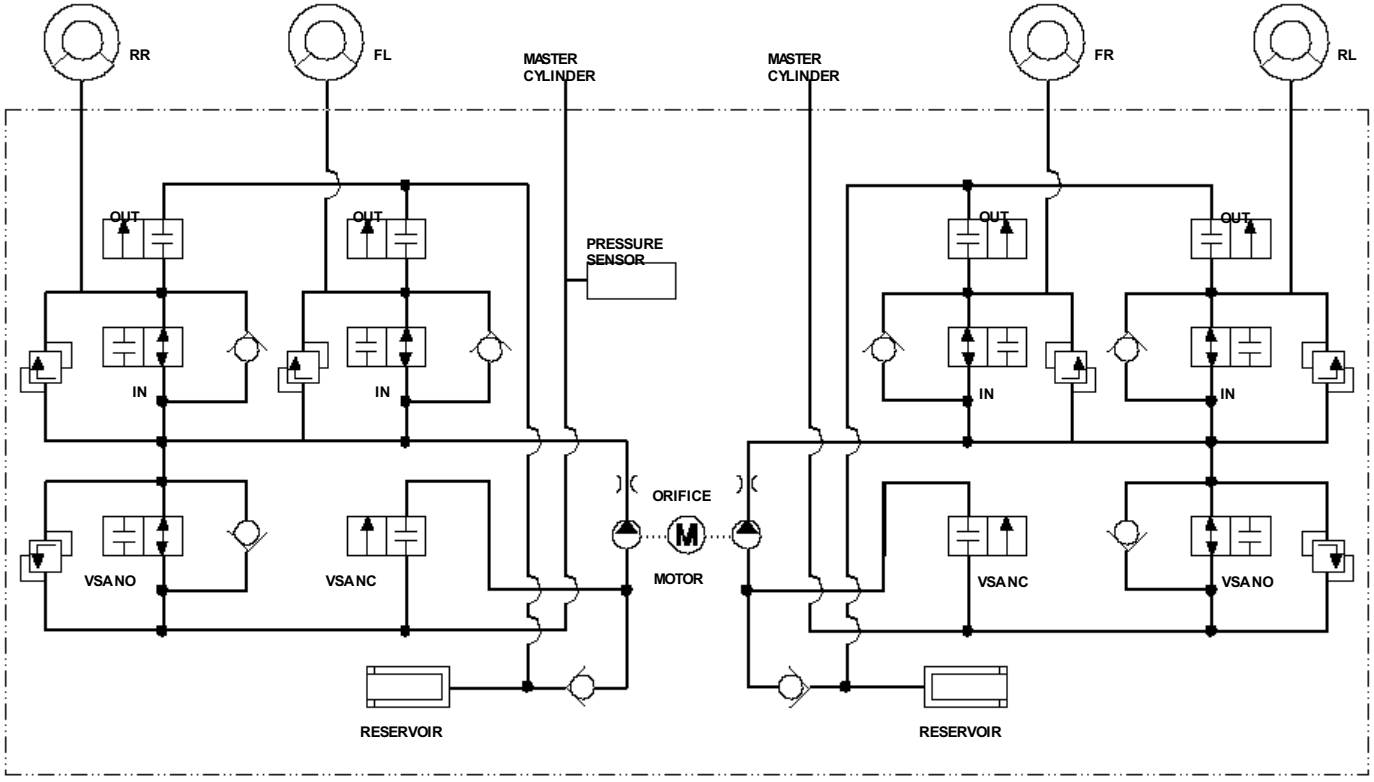
If during a panic stop the VSA modulator-control unit determines that the brake system pressure increases above a threshold in less than a certain amount of time, the VSA modulator-control unit engages brake assist.

Because the brake system pressure crossed the pressure threshold before the time threshold had expired, the VSA modulator-control unit goes into brake assist mode.



Modulator Unit

The modulator unit consists of the inlet solenoid valve, the outlet solenoid valve, the VSA NO (normally open) solenoid valve, the VSA NC (normally closed) solenoid valve, the reservoir, the pump, and the pump motor.
The hydraulic control has three modes of ABS action; pressure intensifying, pressure retaining, and pressure reducing. Pressure intensifying mode (VSA) is a combination of the TCS, VSA, and brake assist action.
The hydraulic circuit is an independent four channel type; one channel for each wheel.



IN: INLET SOLENOID VALVE (NORMALLY OPEN)
OUT: OUTLET SOLENOID VALVE (NORMALLY CLOSED)

HSA (Hill Start Assist) Features

Prevents vehicle from rolling back when changing from brake to accelerator pedal on a hill. Operate an angle of inclination from the yaw rate-lateral/longitudinal acceleration sensor signal after having judged that a vehicle stopped from all wheel speed sensor signals, and calculate the aim fluid pressure that accepted an angle of inclination. When the VSA modulator-control unit recognized that a driver removed brakes from a pressure sensor signal, maintain fluid pressure in constant time.

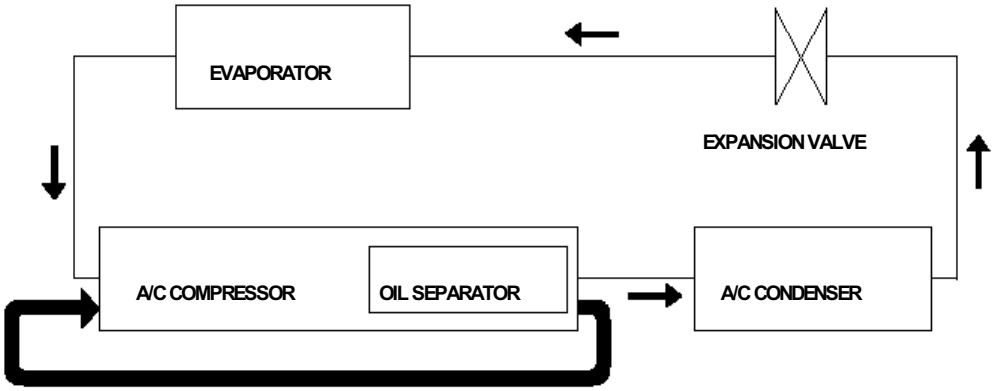
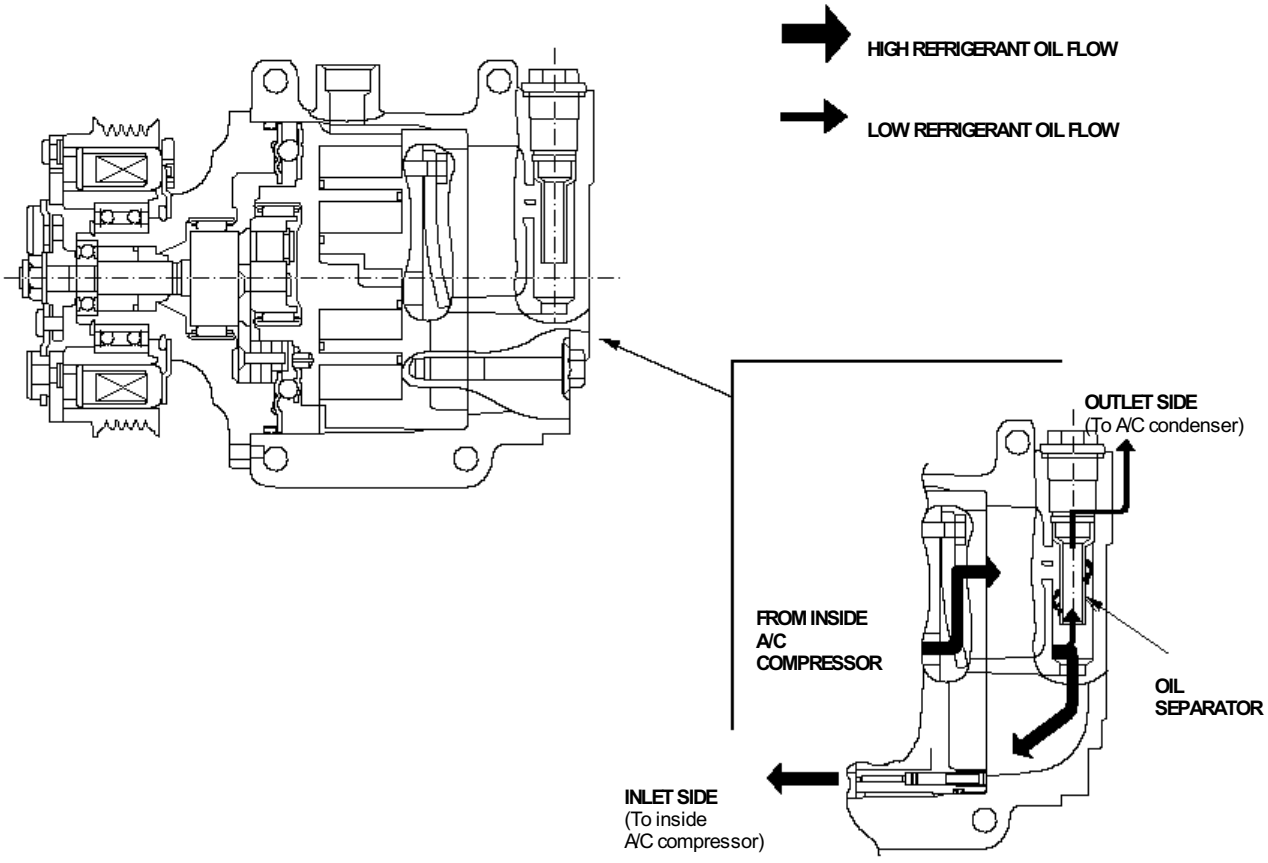
Oil Separator

Oil emission from the A/C compressor to the A/C line is reduced by placing the oil separator in the A/C compressor. This results in a thinner oil film inside of the heat exchangers (A/C condenser and evaporator). Air conditioning efficiency is increased without sacrificing engine performance.





Overview

The audio unit acts as the processor for all audio functions. Select audio functions from the audio unit buttons (on the center panel) or the audio remote switch (on the steering wheel). The audio display provides the current audio status. The audio unit are supporting playback function of compressed audio files (MP3/WMA) recorded on CD-R/RW.
The audio system is equipped with the auxiliary input jack (AUX) in the center panel. The system will accept auxiliary audio input using a 3.5 mm stereo miniplug.
The audio unit has a built-in EEPROM (electrically erasable programmable read-only memory). This memory holds the audio presets (AM/FM radio frequency, sound settings, etc.) even when the battery is disconnected.
For some models, a security signal is daisy-chained between the audio and vehicle components for integration into the vehicle's security system.

Speed-sensitive volume compensation (SVC)

The audio system is equipped with speed-sensitive volume compensation (SVC). The audio unit receives the vehicle speed pulse (VSP) from the ECM/PCM. The system processes the speed input and increases the audio system volume level as the vehicle speed increases to compensate for the various interior noises that occur at higher speeds. When the vehicle slows down, the volume returns to its normal level. The SVC has four settings: SVC OFF, LOW, MID and HIGH that can be adjusted using the audio unit. The SVC comes from the factory with the MID set as the default (see the owner's manual for more information).

USB adapter

The audio system supports the external compressed audio files input using USB adapter. The audio unit is supporting GA-NET address and commands for the USB adapter unit. While connecting the USB audio device to the USB adapter, the audio unit can control the USB audio device, also audio unit can provide power supply to the USB audio device through the USB. For connecting the USB audio device, use the USB adapter cable included with the accessory kit (see owner's manual).

	1 GB have been tested.
Audio remote switch	The switches on the steering wheel that control the audio system.
Auxiliary jack	Allows the customer to use a portable audio device to input audio recordings.
Balance	A control that changes the relative volume of the left and right channels.
Band	A range of frequencies between two definite limits. Bands are assigned by the Federal Communications Commission for specific uses.
Bass	An adjustment for the low frequency sounds of around 160 Hz and below.
Byte	A unit of storage for computer files and memory. A CD holds approximately 700 million bytes.
Cassette	Audio or video magnetic tape container having two reels. Customers can insert it for play back
Compact flash	A standard for small-size (3 x 4 cm), memory cards used in mobile computers, PDAs, digital cameras. Compact flash memory cards are available in size of 32 MB up to 4 GB or more and can be played in the audio PC slot. Sizes above 1 GB have not been tested.
CD (Compact Disc)	A 4.5-inch plastic disc containing digital audio recording that is played optically on a laser equipped player. Never use discs with a paper label. In a hot vehicle, labels can curl up and jam the unit.
CD (audio disc) changer	CD player that can store and play more than one CD. Two types are available. Some units accept CDs fed into the changer one at a time, and others accept a magazine (with CDs stacked in a container).
CD player	A component designed to play compact disc recordings using a laser optical pickup. The signal from a CD player usually requires amplification.
Decibels (db)	A method of measuring sound or radio signal strength received by the audio unit antenna.
Distortion	Inexact reproduction of an audio signal caused by playing music at levels the audio system cannot handle.
Dolby (noise reduction)	A processing system developed by Dolby Laboratories that reduces the background noise on recording media. The result is a cleaner playback from the audio system.
DUET	A serial data communication line used for sub display.
DVD (Digital Versatile Disc)	A 4.5-inch CD-like format used for storing movies with digital audio and video features. The DVD-A format is a DVD format designed for DVD audio systems. Some vehicles can play DVD and DVD-A formats.
Equalizer	A device that changes the relative volume of individual frequency bands to suit personal tastes of the listener.
Fader	The control that adjusts the relative volume levels of front and rear speakers in a four-speaker system.
Format	To prepare a PC Card to receive files this function is done on a PC. Always choose either FAT or FAT32, as the NTFS format is not accepted by the system. Pick the default sectors for the format method selected.
FM (Frequency Modulation)	The form of modulation used for radio and television sound transmission in most of the world. Less prone to interference than AM. The FM broadcast band covers roughly 87.7 to 107.9 MHz.

Audio Glossary

Item	Definition
GA-Net	The GA-Net allows the audio unit to communicate with all the audio and navigation components in a vehicle. If there is an open in the GA-Net, components or the entire audio and navigation system may appear inoperative.
GB (Gigabyte)	A unit of memory or disk storage equal to billion bytes (1000 million bytes).
HDD	Abbreviation for hard disc drive. They are sensitive to heat and it is not recommended that they be used in the PC card slot for playing audio files.
Hertz (HZ)	The unit of frequency equal to one cycle per second (cps). One kilohertz (kHz) equals 1,000 cps; one megahertz (MHz) equals 1 million cps.
Integrated amplifier	A component that combines a pre amp and a power amp into a single unit. A receiver combines an integrated amp and a tuner into a single unit.

Item	Definition
Jewel case	The hard plastic case that contains a compact disc or DVD. Always use a jewel case to prevent scratches on the underside of a CD or DVD.
LCD (Liquid Crystal Display)	A type of digital display that changes reflectance or transmittance when an electrical field is applied to it.
Memory	Circuitry or devices that hold information in electrical or magnetic form, such as the AM/FM radio presets.
MB (Megabyte)	One million bytes. Written as 1 MB. Megabytes are used as a measure of digital storage space. For example, a CD can hold 650 MB.
Mic	An abbreviation for microphone. For vehicles with navigation, the microphone accepts navigation voice commands to control audio and navigation functions.
MP3 music files	MP3 is an audio coding format. MP3 is a popular audio compression format on the Internet and computers. CDs and PC cards with these files can be played on some vehicle's audio system.
Mute	When the navigation gives guidance, the front speakers are muted (no music). When you use the voice control system, all of the speakers are muted.
Noise	Unwanted random sounds like buzzing, hiss, pops, static, whine, etc.
PC card	The slot used for playing MP3 and WMA music files. The PC card is usually a combination of a small flash card in a PCMCIA adaptor that slides into the slot. The ATA, SD, and compact flash types of cards have been tested up to 1 GB.
PCMCIA	A computer standard for the slot that the PC card slides into. Another term for the PC card slot.
Processor	The part of an audio device that performs task/calculations. In the audio unit the processor handles muting to allow the navi to speak voice commands, and the decoding/playback of the sound files etc.
Radio	A head unit that combines a tuner, a preamplifier, and often a power-amplifier.
Route guidance (RG)	Spoken voice used for turn-by-turn navigation from the audio speakers.
SCF (Cold Start Fix) screens	These screens are displayed if the system requires a GPS initialization. The vehicle should be moved outside into an open area away from buildings/power lines.
Stereo	A recording of at least two channels where you can hear sound or music from the left or right side.
SD (Secure Digital) card	This compact type of memory card allows for fast data transfer and has built-in security functions. SD cards have a small write-protection switch on the side.
Shield	A metallic foil or braided wire layer surrounding conductors which are designed to prevent electrostatic or electromagnetic interference (noise) from external sources such as buzzing, or popping sounds heard on the speakers.
Speaker (Loudspeaker)	A device that converts electrical energy into acoustical energy (sound).
Speed-sensitive volume compensation (SVC)	The SVC increases the audio volume to compensate for increased interior noise when the vehicle drivers at freeway speeds.
Subwoofer	A loudspeaker made to reproduce the lowest audio frequencies, approx 25 Hz to 125 Hz.

Audio Glossary

Item	Definition
Track	A sound recording on a CD, tape, or PC card.
Treble	An adjustment to control the volume of the high frequency sounds.
Tuner	A component (or part of a component) that receives radio signals and selects one broadcast from many.
Tweeter	A speaker designed to reproduce the higher frequencies (treble) only.
USB	Universal Serial Bus. USB is used for playing the compressed audio files (MP3, WMA, and AAC) on the external device through the audio unit.
Voice coil	A coil of wire wrapped around a tube and then attached to the speaker cone or diaphragm. When an audio signal is applied, the coil becomes an electromagnet and interacts with the permanent magnet causing the come or diaphragm to vibrate. We interpret this vibrations as sound.
Volume control	Allows you to control the loudness of the music.
WMA music file	Windows Media Audio File. This is an accepted format for music files to be played on either a CD-R, a CD-RW or a PC card.

Security Alarm System

The security alarm system is armed automatically after the doors, hood, and tailgate are closed and locked. For the system to arm, the ignition switch must be off, the key must be removed, and the MICU must receive signals that the doors, hood, and tailgate are closed and locked. The alarm can be disarmed at any time by unlocking the driver's door with the key or pressing the UNLOCK button on the transmitter.

When everything is closed and locked, the only inputs that are grounded, and have 0 V, are the driver's door lock knob switch (LOCK position), and the audio unit. In other words, all of the other switches are open, and have about 5 V with system awake and 1 V in sleep mode. The security indicator in the gauge control module begins to flash immediately after the vehicle is completely closed and locked, and 15 seconds later, the security system arms. If the security indicator does not flash, the system is not arming.

If one of the switches is misadjusted or shorted internally, or there is a short in the circuit, the security system will not arm. As long as the control unit continues to receive a ground signal (0 V) , it senses that the vehicle is not closed and locked , and the system will not arm. A switch that is slightly misadjusted can cause the alarm to sound for no apparent reason. In this case, a significant change in outside air temperature, the vibration of a passing truck, or someone bumping into the vehicle could cause the alarm to sound. There is no glass breakage or motion detector feature.

If anything is opened or improperly unlocked after the system is armed, the control unit receives a ground signal from that switch, and the 1−5 V reference drops to 0 V . If the audio unit connectors is disconnected, the input loses its ground, and the input voltage goes to 1−5 V. The system sounds the alarm when any of these occur:

- A door or the tailgate is forced open
- A door is unlocked without using the key or the transmitter
- The hood is opened
- The audio unit is disconnected

When the system sounds the alarm, the horns sound and the exterior lights flash for 2 minutes. The alarm can be stopped at any time by unlocking the driver's door with the key or by pressing any button on the transmitter.

Keyless Entry System

The keyless entry system is integrated with the MICU . The MICU receives LOCK and UNLOCK signals from the immobilizer-keyless control unit (with built-in receiver).

The keyless entry system allows you to lock and unlock the vehicle with the transmitter. When you press the LOCK button, all doors lock.

2 motion type: When you press the UNLOCK button once, only the driver's door unlocks. The other doors will unlock when you press the button a second time.

NOTE: Using the custom setting with the HDS, the functionality of the system can be changed so that all the doors unlock with the first press of the transmitter UNLOCK button.

1 motion type: When you press the UNLOCK button, all doors unlock.

The doors will not lock with the transmitter if a door is not fully closed , or if the key is in the ignition switch.

When the switch for the ceiling light is in the center (DOOR) position, it will come on when UNLOCK button is pressed. If a door is not opened, the light will go off in about 30 seconds, and the doors will relock. If the doors are locked with the transmitter within 30 seconds, the light will go off immediately.

Ultrasonic System

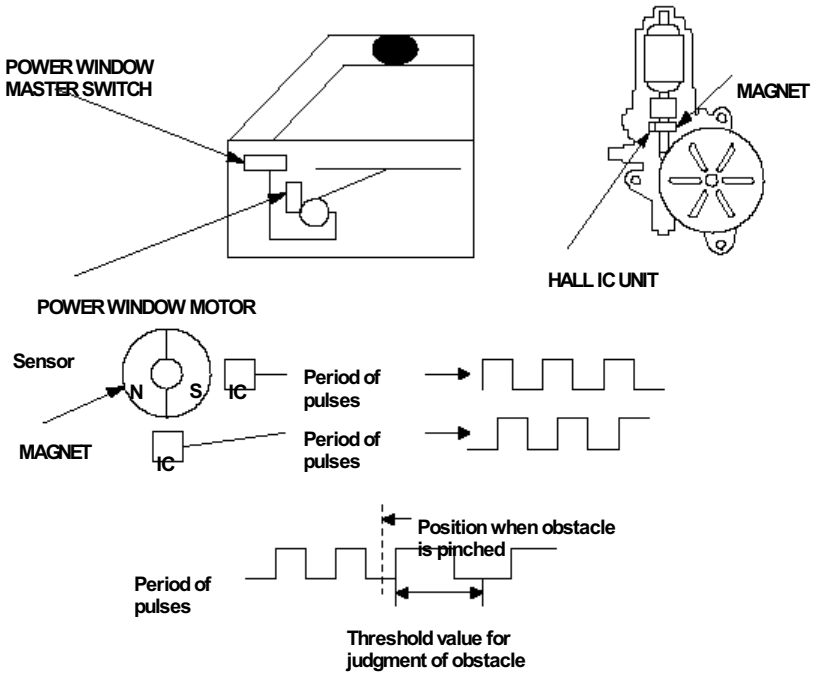
The system consists of the ultrasonic sensor and the alarm control siren that is a combined control unit and self powered siren.
The ultrasonic sensor uses the ultrasonic Doppler technology. It saturates the volume of the vehicle with 40 kHz ultrasounds, convert the received signal that is generated by any moving target inside the volume into a rectangular wave characterized by the Doppler frequency, which is analyzed by a dedicated algorithm, in-built the microcontroller.
The alarm control siren communicates with the ultrasonic sensor and the MICU. If the alarm control siren receives an arm command from the MICU, it enters the arm mode after default period time (stored in EEPROM memory) of 10 seconds.
If the alarm control siren receives alarm command from the ultrasonic sensor or the MICU during arm condition, alarm control siren activates the internal siren.
The system has the power supply line '+B Tamper' function (cutting wire protection). If one or both power supply wires (+B, GND) are tampered during arm condition, the system changes to alarm mode. If the alarm condition remains, the alarm control siren will trigger in alarm 10 times (programmable in EEPROM memory).
The system has the serial line 'alarm comm line tamper' function (not authorized disarm attempt. If wrong identification code is received by the alarm control siren, the system changes to alarm mode. The alarm control siren will generate up to 10 alarm triggers for each arm cycle (programmable in EEPROM memory).
The system has the serial line 'alarm comm line polling' function (connection monitoring). If this wire is interrupted during arm mode the system change to alarm condition. If the alarm condition remains, the alarm control siren will trigger in alarm 10 times (programmable in EEPROM memory).

Door Lock System

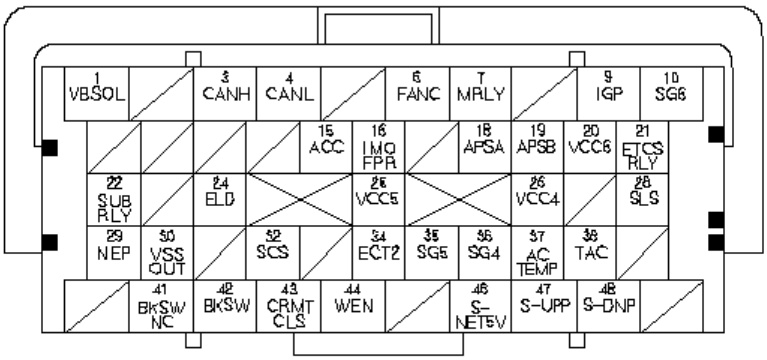
The system has a pair of circuits between door lock actuators (including the tailgate lock actuator and fuel lid lock actuator) and the MICU to improve safety of the system. One if for driver's side door lock actuators and fuel lid lock actuator, and another is for front passenger's side door lock actuators and tailgate lock actuator. Each circuit has two fuses, and even if one of the fuses is blown, at least driver's side and fuel lid, or front passenger's side and tailgate actuators work normally. When one fuse is blown, another fuse in the same circuit must be checked (for example, when the No. 35 fuse is blown, the No. 49 fuse also must be checked).

Auto Reverse Operation

The system is composed of the power window master switch and the driver's power window motor.
The driver's power window motor incorporates a pulser which generates pulses during the motor's operation and sends the pulses to the driver's power window control unit. As soon as the power window control unit detects no pulses from the pulser, the driver's power window control unit makes the power window motor stop and reverse. If the window is more than halfway closed, it will reverse to half open position. If the window is less than halfway closed, it will stop and reverse about 70 mm (2.8 inches). This is to prevent pinching an obstacle during AUTO UP operation. The auto reverse operation is not active when the switch is held in the up position.



ECM/PCM Inputs and Outputs at Connector A (□) (49P)



Terminal side of female terminals

16	BRN	IMOFPR (IMMOBILIZER FUEL PUMP RELAY)	Drives PGM-FI main relay 2	About 0 V for 2 seconds after turning ignition switch ON (II), then battery voltage With the engine running: about 0 V

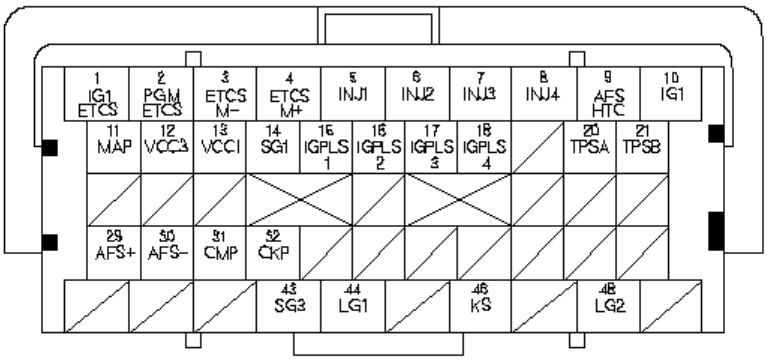
ECM/PCM Inputs and Outputs at Connector C (○) (49P)



Terminal side of female terminals

General Operation

The automatic transmission is a combination of a three-element torque converter and a triple-shaft electronically controlled unit which provides five speeds forward and one reverse. The entire unit is positioned in line with the engine.

Torque Converter, Shafts, Gears, and Clutches

The torque converter consists of a pump, turbine, and stator assembly in a single unit. The converter housing (pump) is connected to the engine crankshaft and turns as the engine runs. Around the outside of the torque converter is a ring gear which meshes with the starter drive gear when the engine is being started. The entire torque converter assembly serves as a flywheel while transmitting power to the transmission mainshaft. The transmission has three parallel shafts; the mainshaft, the countershaft and the secondary shaft. The mainshaft is in line with the engine crankshaft, and includes the 3rd and 5th clutches, and gears for 3rd, 5th, reverse, and idler. The mainshaft reverse gear is integral with the mainshaft 5th gear. The countershaft includes the gears for 1st, 2nd, 3rd, 4th-5th, reverse, park, and the final drive. The countershaft 4th-5th gear enables the shared use of the secondary shaft 4th gear and the mainshaft 5th gear. The countershaft 4th-5th gear and the countershaft reverse gear can be locked to the countershaft providing the 4th, 5th or reverse gear, depending on which way the selector is moved. The final drive gear is integral with the countershaft. The secondary shaft includes the 1st, 2nd, and 4th clutches, and gears for 1st, 2nd, 4th, and idler. The idler gear shaft is located between the mainshaft and secondary shaft, and the idler gear transmits power between the mainshaft and the secondary shaft. The gears on the mainshaft and the secondary shaft are in constant mesh with those on the countershaft. When certain combinations of gears in the transmission are engaged by the clutches, power is transmitted through the mainshaft, to the secondary shaft, then to the countershaft to provide drive.

Electronic Control

The electronic control system consists of the powertrain control module (PCM), sensors, and seven solenoid valves. Shifting and lock-up are electronically controlled for comfortable driving under all conditions. The PCM is located in the engine compartment.

Hydraulic Control

The valve bodies include the main valve body, the regulator valve body, and the servo body. They are bolted to the torque converter housing. The main valve body contains the manual valve, cut valve B, shift valves A, C, and D, the relief valve, the lock-up control valve, the cooler check valve, the servo control valve, and the ATF pump gears. The regulator valve body contains the regulator valve, the torque converter check valve, the lock-up shift valve, the 1st accumulator, and the 3rd accumulator. The servo body contains the servo valve, shift valve B, cut valve A, accumulators for 2nd, 4th, and 5th, and shift solenoid valves A, B, C, and D. Fluid from the regulator passes through the manual valve to the various control valves. The 2nd, 3rd, and 4th clutches receive fluid from their respective feed pipes, and the 1st and the 5th clutches receive fluid from the internal hydraulic circuit.

Shift Control Mechanism

To shift gears, the PCM controls shift solenoid valves A, B, C, and D, and A/T clutch pressure control solenoid valves A, B, and C, while receiving input signals from various sensors and switches located throughout the vehicle. The shift solenoid valves shift the positions of the shift valves to switch the port to send hydraulic pressure to the clutches. A/T clutch pressure control solenoid valves A, B, and C control CPC regulate their respective pressure, and pressurize to the clutches to engage it and its corresponding gear.

Lock-up Mechanism

The lock-up mechanism operates in all five gears in D, in 3rd gear in D3, and in 3rd and 4th gears in S. The pressurized fluid is drained from the back of the torque converter through a fluid passage, causing the torque converter clutch piston to be held against the torque converter cover. As this takes place, the mainshaft rotates at the same speed as the engine crankshaft. Together with hydraulic control, the PCM optimizes the timing and volume of the lock-up mechanism. While shift solenoid valve D is turned on and off by the PCM, shift solenoid valve D pressure switches the lock-up shift valve lock-up on and off. A/T clutch pressure control solenoid valve A and the lock-up control valve control the volume of the lock-up conditions.

Gear Selection - Seven-position Transmission

The shift lever has seven positions; P: PARK, R: REVERSE, N: NEUTRAL, D: DRIVE 1st through 5th gear ranges, D3: DRIVE 1st through 3rd gear ranges, 2: SECOND, and 1: FIRST.

Position	Description
P: PARK	Front wheels locked; park pawl engaged with park gear on countershaft. All clutches are released.
R: REVERSE	Reverse; reverse selector engaged with countershaft reverse gear and 5th clutch engaged.
N: NEUTRAL	All clutches are released.
D: DRIVE (1st through 5th)	General driving; starts off in 1st, shifts automatically to 2nd, 3rd, 4th, then 5th, depending on vehicle speed and accelerator pedal position. Downshifts through 4th, 3rd, 2nd, and 1st on deceleration to stop. The lock-up mechanism operates in all five gears.
D3: DRIVE (1st through 3rd)	Used for rapid acceleration at highway speeds and general driving, up-hill and down-hill driving; starts off in 1st, shifts automatically to 2nd, then 3rd, depending on vehicle speed and accelerator pedal position. Downshifts through 2nd and 1st on deceleration to stop. The lock-up mechanism operates in 3rd gear.
2: SECOND	Used for engine braking or better traction starting off on loose or slippery surfaces; stays in 2nd gear, does not shift up and down.
1: FIRST	Used for engine braking; stays in 1st gear, does not shift up.

Starting is possible only in P and N because of a slide-type neutral-safety switch.

General Operation (cont'd)

Gear Selection - Five-position Transmission

The shift lever has five positions; P: PARK, R: REVERSE, N: NEUTRAL, D: DRIVE 1st through 5th gear ranges, and S: DRIVE 1st through 4th gear ranges with automatic shift mode and 1st through 5th gear ranges with sequential shift mode.

Position		Description
P: PARK		Front wheels locked; park pawl engaged with park gear on countershaft. All clutches are released.
R: REVERSE		Reverse; reverse selector engaged with countershaft reverse gear and 5th clutch engaged.
N: NEUTRAL		All clutches are released.
D: DRIVE (1st through 5th)		General driving; starts off in 1st, shifts automatically to 2nd, 3rd, 4th, then 5th, depending on vehicle speed and accelerator pedal position. Downshifts through 4th, 3rd, 2nd, and 1st on deceleration to stop. D-paddle shift mode is also equipped; the transmission can be shifted gears manually with steering wheel-mounted upshift and downshift paddle shifters under certain particular conditions. The lock-up mechanism operates in all five gears.
S: DRIVE	Automatic shift mode (1st through 4th)	Used for rapid acceleration at highway speeds and general driving, up-hill and down-hill driving; starts off in 1st, shifts automatically to 2nd, 3rd then 4th, depending on vehicle speed and accelerator pedal position. Downshifts through 3rd, 2nd and 1st on deceleration to stop. The lock-up mechanism operates in 3rd and 4th gears.
	Sequential shift mode (1st through 5th)	Manual gear shift driving with steering wheel-mounted upshift and downshift paddle shifters; vehicle can start off in 1st gear, and does not upshift automatically. Vehicle can also start off in 2nd gear, and does not upshift and downshift automatically. Downshifts automatically to 1st on deceleration to stop. The lock-up mechanism operates in 2nd, 3rd, 4th, and 5th gears.

Starting is possible only in P and N because of a slide-type neutral-safety switch.

Automatic Transmission (A/T) Gear Position Indicator

The A/T gear position indicator in the gauge control module shows which shift lever position has been selected without having look down at the console.

Shift Indicator and M indicator - Five-position Transmission

When the transmission is switched into the sequential shift mode, the shift indicator in the gauge control module displays the gear selected, and the M indicator next to the shift indicator comes on. The shift indicator also displays the gear selected in the D-paddle shift mode, but the M indicator does not come on.

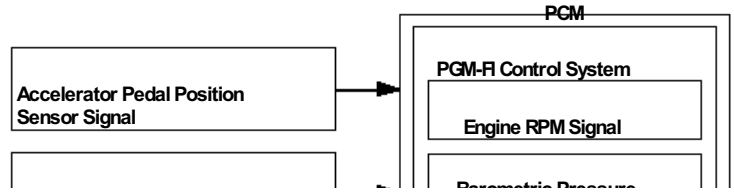
Electronic Control System

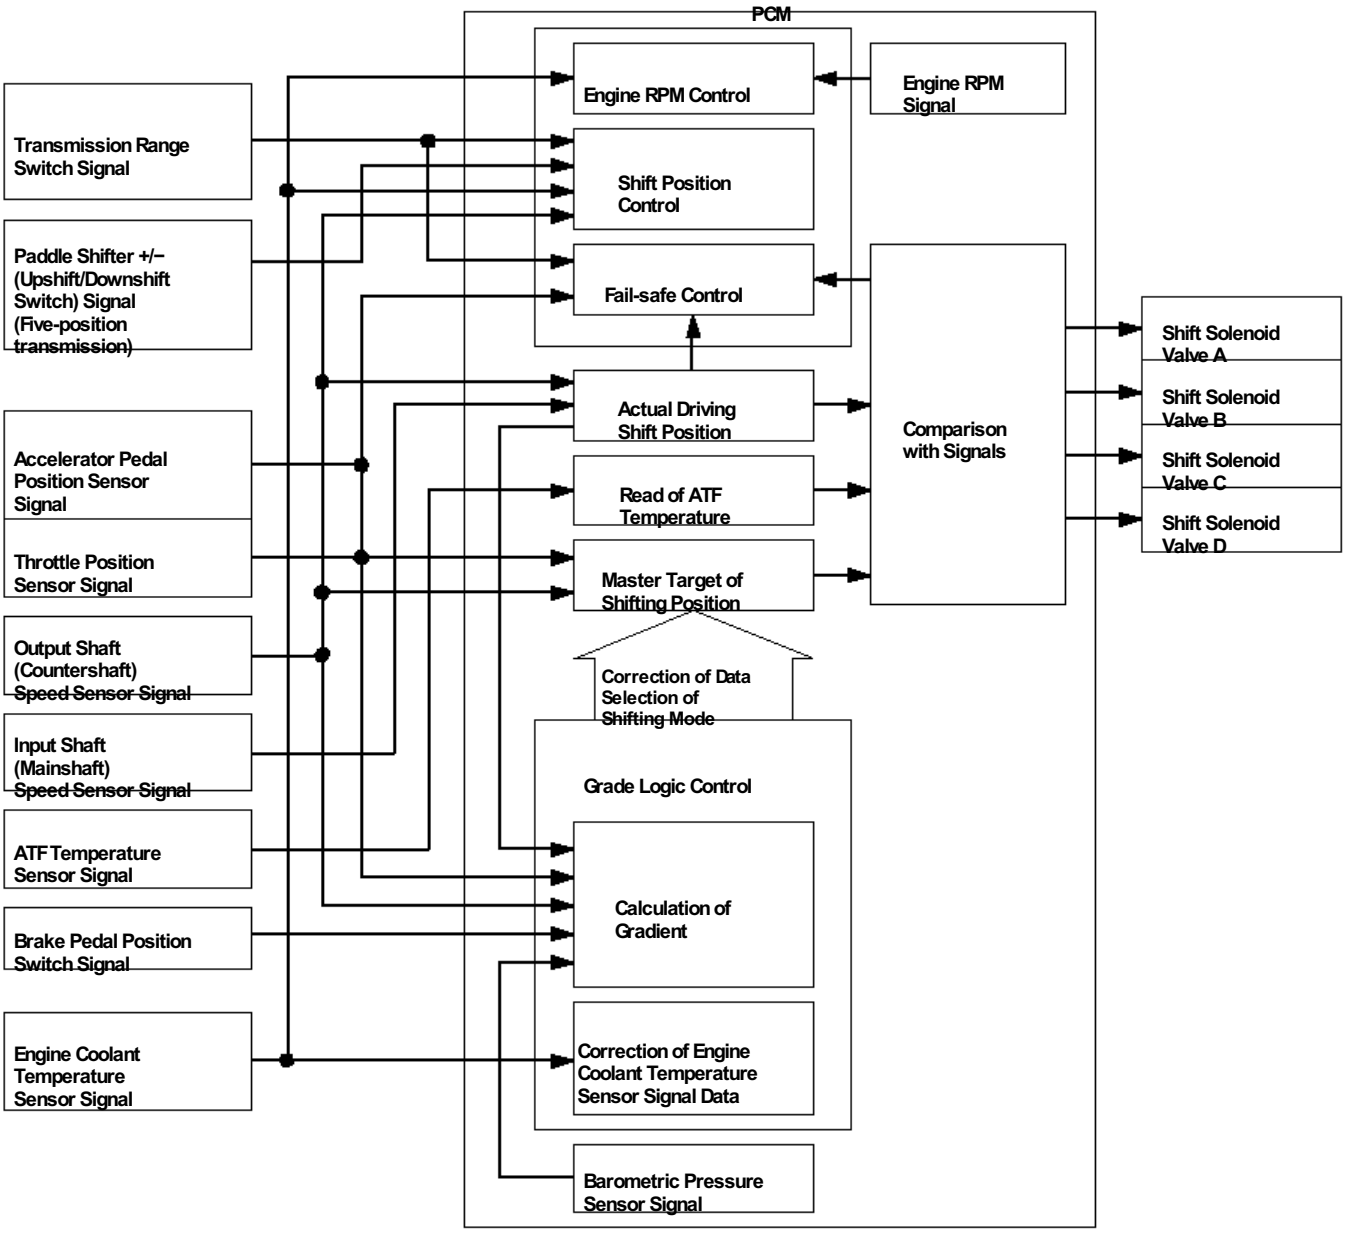
Electronic Control

The electronic control system consists of the powertrain control module (PCM), sensors, and seven solenoid valves. Shifting and lock-up are electronically controlled for comfortable driving under all conditions.

Functional Diagram

The PCM receives input signals from the sensors, switches, and other control units, processes data, and outputs signals for the engine control system and A/T control system. The A/T control system includes shift control, clutch pressure control, and lock-up control. The PCM switches the shift solenoid valves and the A/T clutch pressure control solenoid valves ON and OFF to control gear selection and torque converter clutch lock-up.





Electronic Control System (cont'd)

Shift Control - Shift Solenoid Valves

Shift solenoid valves use the ON-OPEN/OFF-CLOSE type; the shift solenoid valve opens the port of shift solenoid valve pressure while the shift solenoid valve is turned ON by the PCM, and closes the port when shift solenoid valve is OFF.
The combination of driving signals to shift solenoid valves A, B, C, and D are shown in the table.

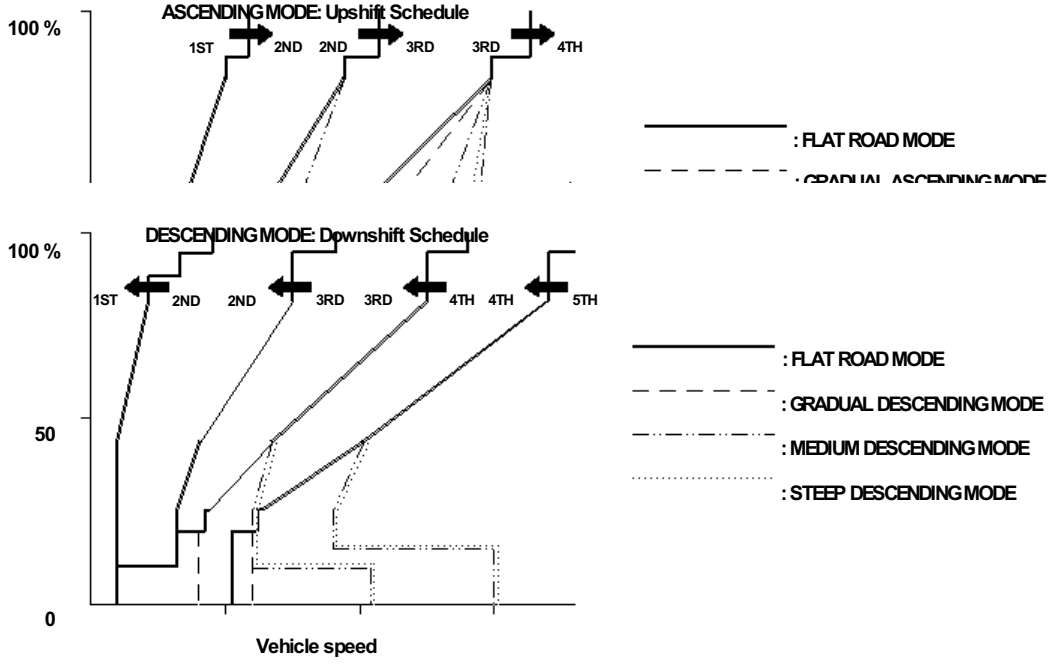
Position	Gear Position	Shift Solenoid Valve			
		A	B	C	D
D, D3, and S	Shifting from N	OFF	OFF	OFF	OFF
	Stays in 1st	OFF	ON	OFF	OFF or ON
	Shifting gears between 1st and 2nd	ON	ON	OFF	OFF or ON
	Stays in 2nd	ON	OFF	OFF	OFF or ON
	Shifting gears between 2nd and 3rd	OFF	OFF	OFF	OFF or ON
	Stays in 3rd	OFF	OFF	ON	OFF or ON
D and S	Shifting gears between 3rd and 4th	ON	OFF	ON	OFF or ON
	Stays in 4th	ON	ON	ON	OFF or ON
D	Shifting gears between 4th and 5th	OFF	ON	ON	OFF or ON
	Stays in 5th	OFF	ON	OFF	OFF or ON
S with sequential shift mode	1st	OFF	ON	OFF	OFF or ON
	2nd	ON	OFF	OFF	OFF or ON
	3rd	OFF	OFF	ON	OFF or ON
	4th	ON	ON	ON	OFF or ON
	5th	OFF	ON	OFF	OFF or ON
2	2nd	ON	OFF	OFF	OFF
1	1st	OFF	ON	OFF	OFF
N	Neutral	OFF	OFF	OFF	OFF
R	Shifting from P and N	OFF	OFF	ON	ON
	Stays in reverse	OFF	ON	ON	ON
	Reverse inhibit control	ON	OFF	ON	OFF
P	Park	OFF	OFF	OFF	ON

Shift Control - Grade Logic Control

The grade logic control system is used to control shifting in D, D3 (seven-position transmission), and S with automatic shift mode (five-position transmission). The PCM compares actual driving conditions with programmed driving conditions, based on the input from the throttle position sensor, the accelerator pedal position sensor, the engine coolant temperature sensor, the barometric pressure sensor, the brake pedal position switch signal, and the shift lever position signal, to control shifting while the vehicle is ascending or descending a slope.

Grade Logic Control: Ascending Control

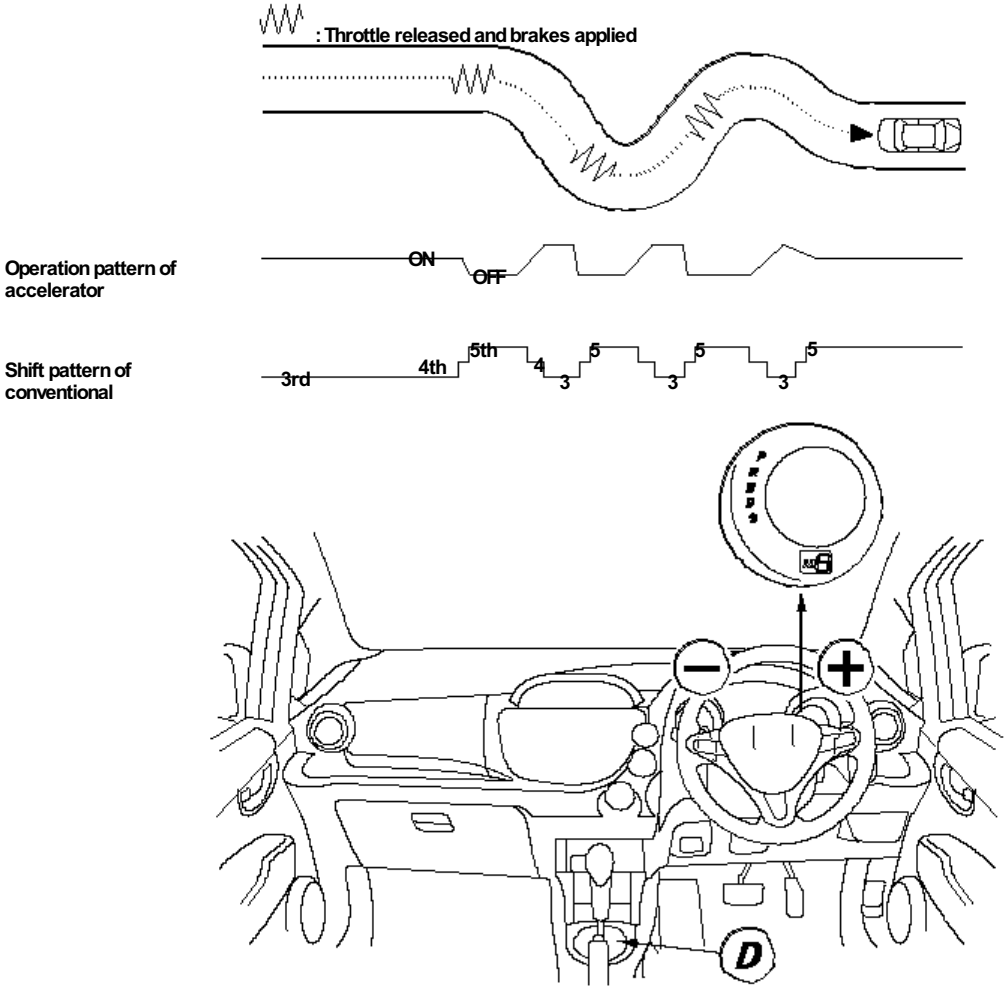
When the PCM determines that the vehicle is climbing a hill in D, D3 (seven-position transmission), and S with automatic shift mode (five-position transmission), the system extends the engagement area of 2nd gear, 3rd gear, and 4th gear to prevent the transmission from frequently shifting between 2nd and 3rd gears, between 3rd and 4th gears, and between 4th and 5th gears, so the vehicle can run smoothly and have more power when needed.
NOTE: Shift commands stored in the PCM between 2nd and 3rd gears, between 3rd and 4th gears, and between 4th and 5th gears, enable the PCM to automatically select the most suitable gear according to the magnitude of a gradient.



Electronic Control System (cont'd)

Shift-Hold Control

When negotiating winding roads, the throttle is suddenly released and the brakes are applied, as is the case when decelerating at the entrance of a corner, Shift-Hold Control keeps the transmission in its current (lower) gear as it negotiates the corner and accelerates out.
When the vehicle is driven aggressively on a winding road, the PCM extends the engagement time of 3rd gear and 4th gear to prevent the transmission from frequently shifting between 3rd, 4th, and 5th gears. This allows the driver to have more control for both acceleration and deceleration.
The PCM monitors the average change in vehicle speed and throttle over time. When these values exceed those for normal driving conditions, the shift-up from 3rd to 4th gear and 4th to 5th gear is delayed. This gives more control over power, and engine braking when the driver is driving aggressively around winding roads. The transmission resumes the normal shift-up pattern after the PCM determines that normal driving has resumed.

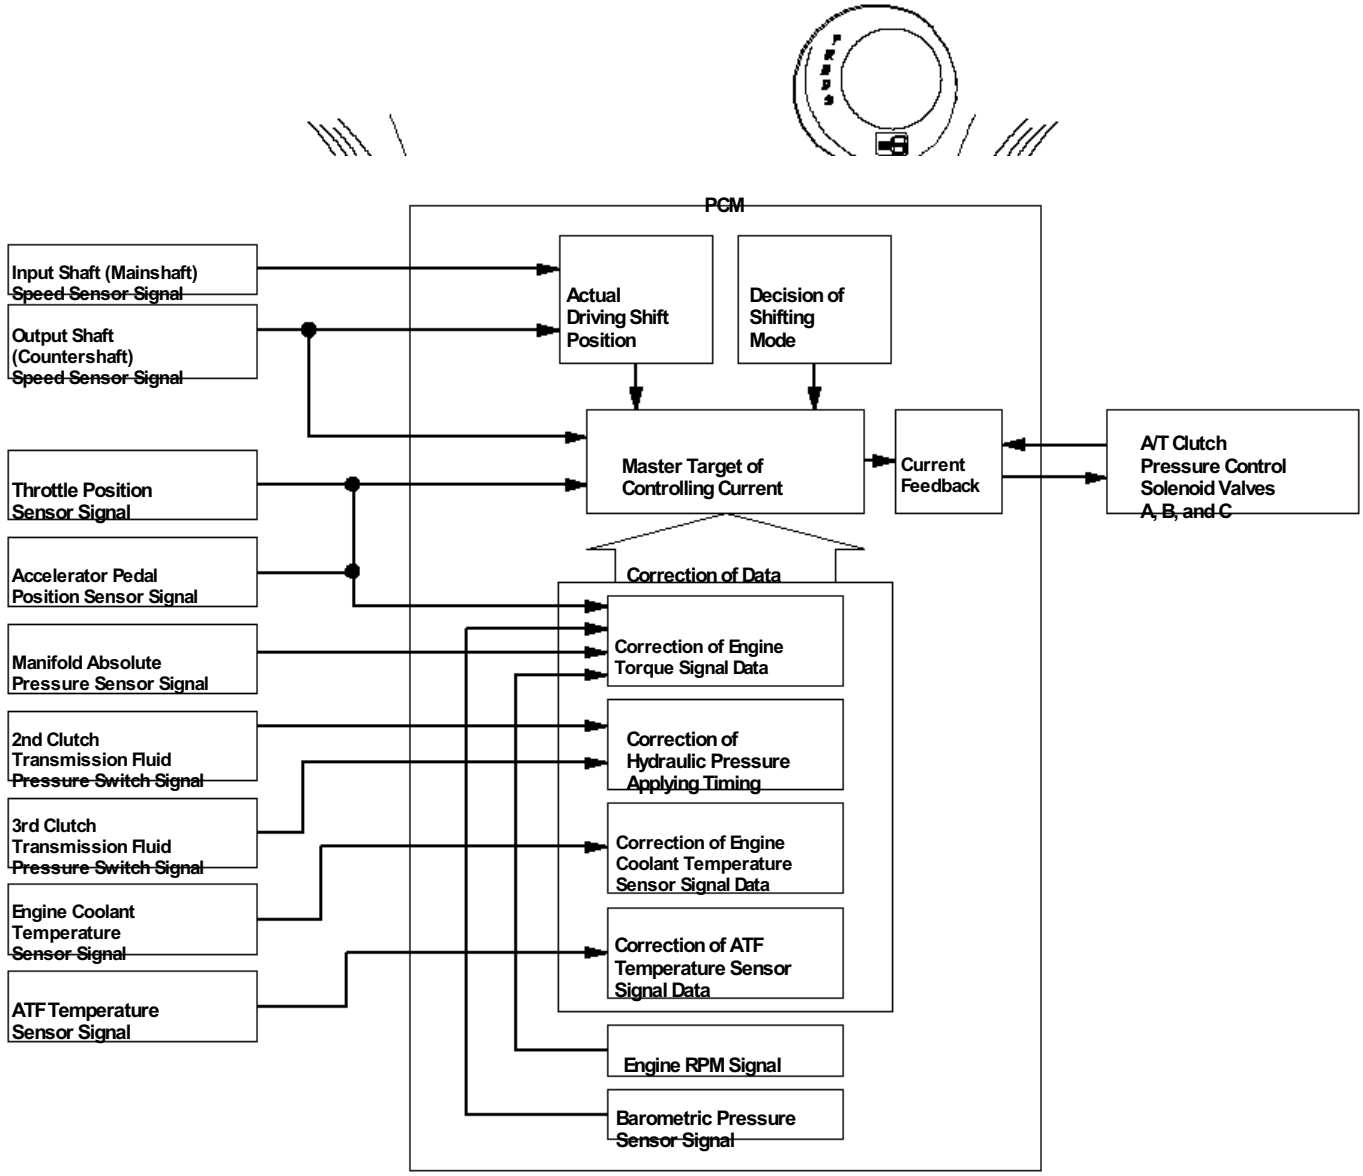


*: This illustration shows RHD model.

Electronic Control System (cont'd)

S Position Automatic Shift Mode and Sequential Shift Mode

The S position has two shifting modes; the automatic shift mode and the sequential shift mode. In the S position automatic shift mode, the transmission upshifts and downshifts automatically from 1st through 4th gear, and the paddle shifters are ready to be activated to switch to the sequential shift mode. In the automatic shift mode, the shift indicator and the M indicator in the gauge control module do not come on.
When the paddle shifter + (upshift switch) or paddle shifter − (downshift switch) is pulled, the automatic shift mode is canceled and the sequential shift mode comes into operation. The shift indicator displays the number of the selected gear, and the M indicator comes on. In the sequential shift mode, the driver can shift up and down manually from 1st through 5th gear by using the paddle shifters, much like a manual transmission. The paddle shifters are mounted on the back of the steering wheel, and the driver can shift gears by pulling the paddle shifters without taking either hand off the steering wheel.
In the sequential shift mode, the transmission must be shifted up and down by pulling the paddle shifters. However, the transmission cannot downshift and stays in the current gear if the paddle shifter − (downshift switch) is pulled while the vehicle is coasting at a speed that would cause the engine to over-rev by downshifting the transmission, and the shift indicator blinks the number of the selected gear several times, then returns to the number of the current gear. If the vehicle speed reaches an appropriate speed while the shift indicator is blinking the number of the selected gear, the transmission downshifts and the shift indicator displays the selected gear. The transmission also cannot upshift and stays in the current gear if the paddle shifter + (upshift switch) is pulled while driving below an appropriate upshifting speed, the shift indicator blinks the number of the selected gear several times, then returns to the number of the current gear. If the vehicle speed reaches the an appropriate upshift speed while the shift indicator is blinking the number of the selected gear, the transmission upshifts and the shift indicator displays the selected gear.
This mode has automatic downshifting areas so the vehicle can run smoothly with more power to cope with upcoming acceleration. When coasting in 5th gear or 4th gear, the transmission downshifts to the next lower gear if the vehicle slows down to the programmed speed, or by pressing the brake pedal.
When the transmission decelerates to a stop, the transmission shifts to 1st gear automatically. The transmission can be shifted to 2nd gear by pulling the paddle shifter + (upshift switch) while the vehicle is stopped, and the vehicle can start off in 2nd gear.
The sequential shift mode is canceled when moving the shift lever to any position other than S.



Electronic Control System (cont'd)

Lock-up Control

Shift solenoid valve D controls the hydraulic pressure to switch the lock-up shift valve ON and OFF. When the PCM actuates shift solenoid valve D and A/T clutch pressure control solenoid valve A ON, lock-up starts. A/T clutch pressure control solenoid valve A regulates and applies hydraulic pressure to the lock-up control valve to control the volume of the lock-up.
The lock-up mechanism operates in all five gears in D, in 3rd gear in D3, and in 3rd and 4th gears in S.

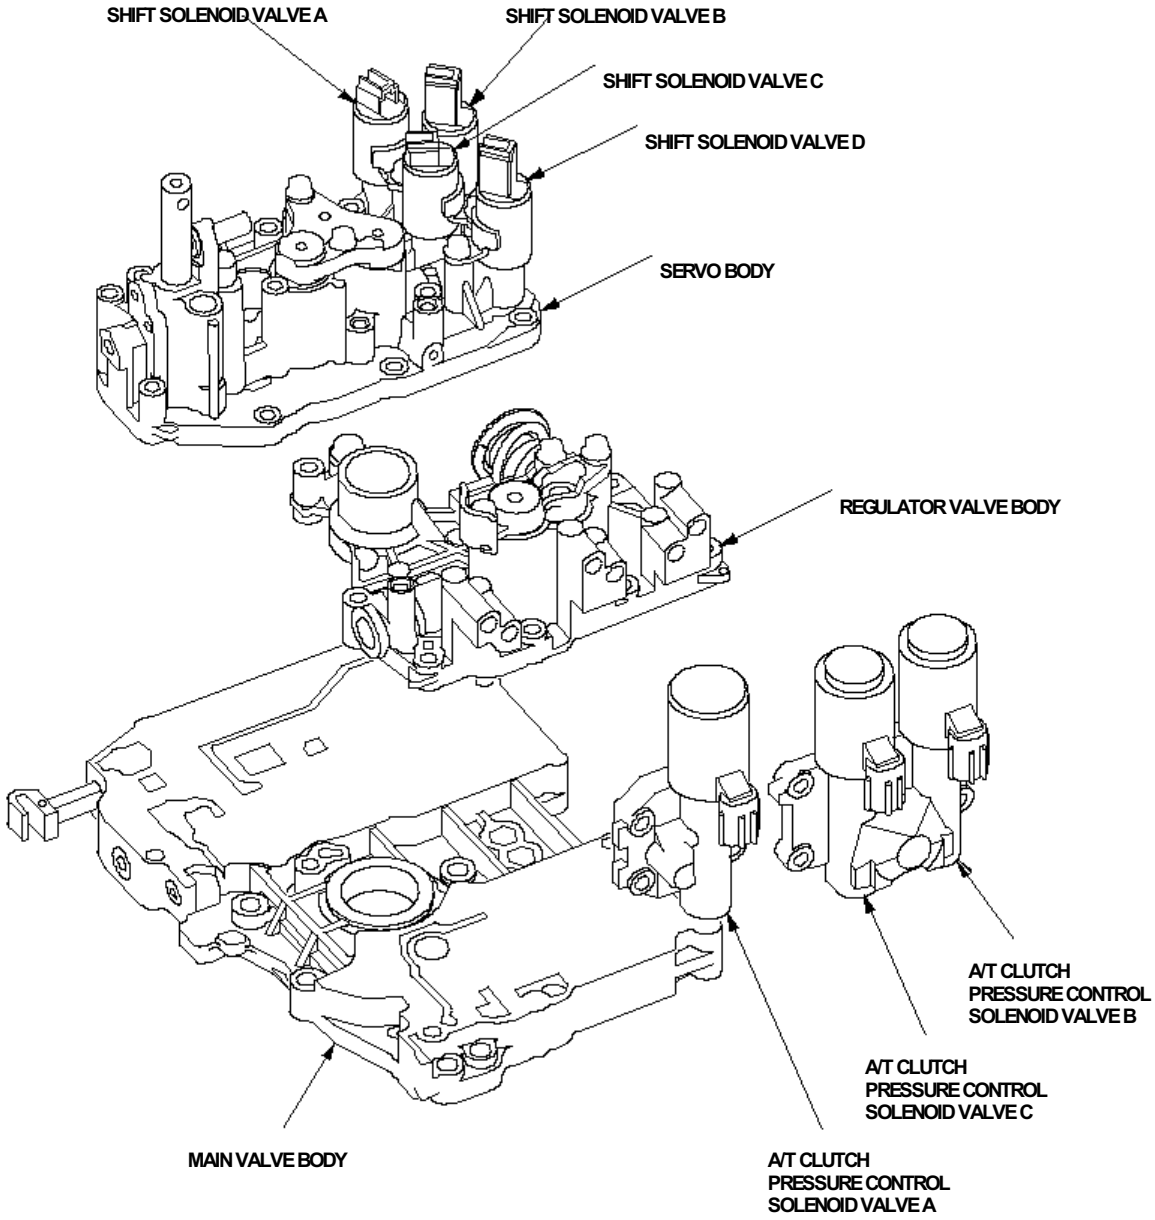
Hydraulic Controls

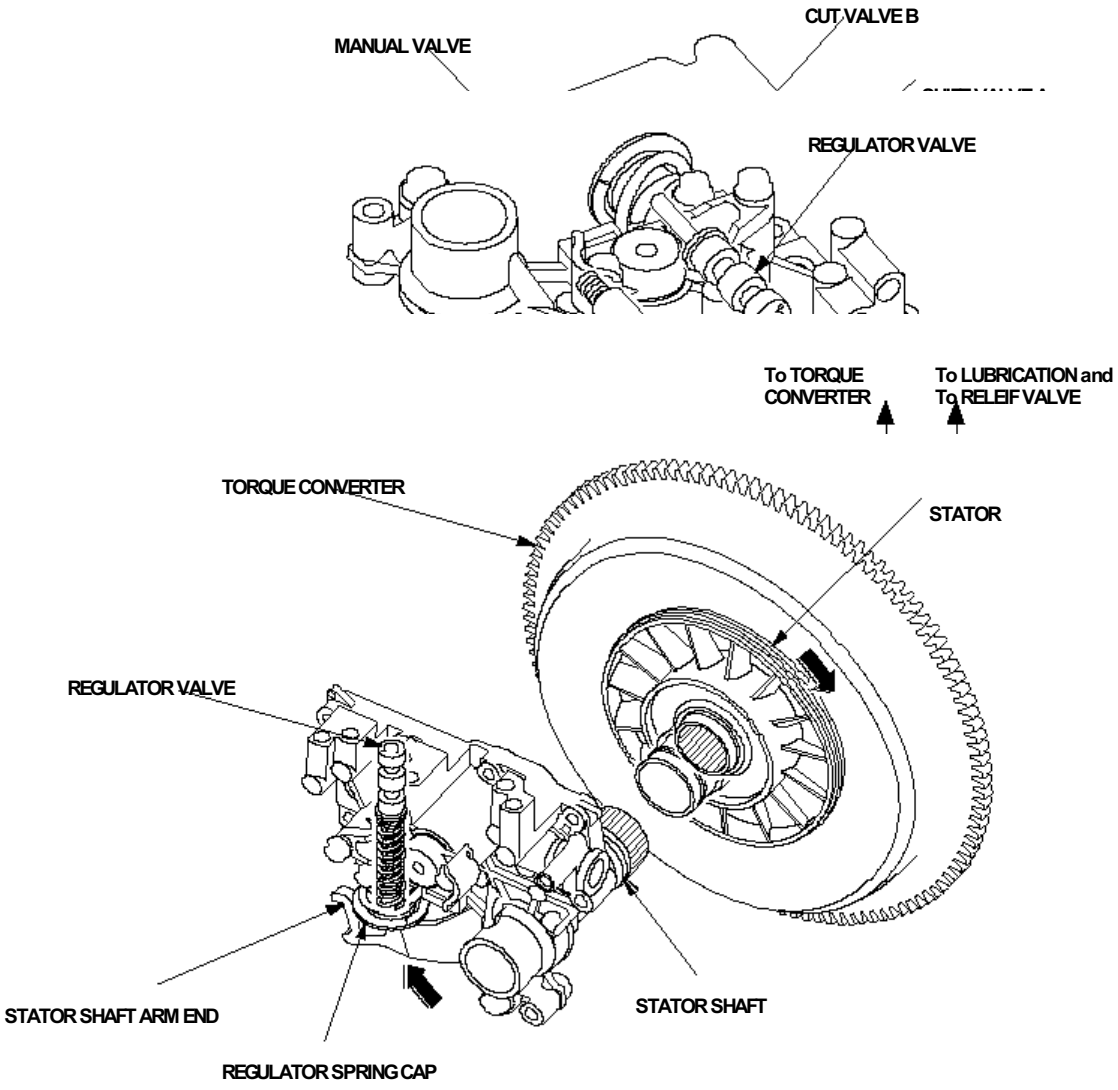
The valve body includes the main valve body, the regulator valve body, and the servo body. The ATF pump is driven by splines on the end of the torque converter which is attached to the engine. Fluid flows through the regulator valve to maintain specified pressure through the main valve body to the manual valve, directing pressure to each of the clutches. Shift solenoid valves A, B, C, and D are mounted on the servo body. A/T clutch pressure control solenoid valves A, B, and C are mounted on the transmission housing.



Hydraulic Controls (cont'd)

Main Valve Body

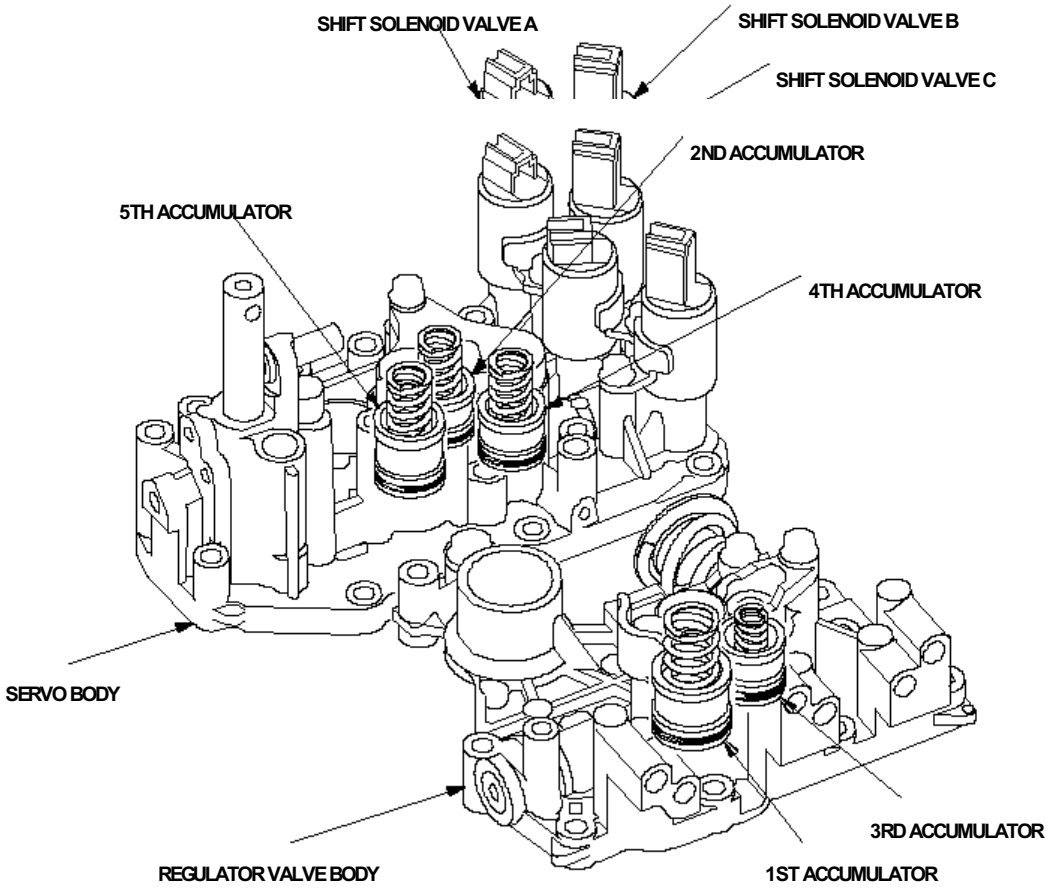
The main valve body contains the manual valve, cut valve B, shift valves A, C, and D, the relief valve, the lock-up control valve, the cooler check valve, the servo control valve, and the ATF pump gears. The primary function of the main valve body is to switch fluid pressure on and off to control hydraulic pressure going to the hydraulic control system.



Hydraulic Controls (cont'd)

Servo Body

The servo body is on the main valve body. The servo body contains the servo valve, shift valve B, cut valve A, accumulators for 2nd, 4th, and 5th, and shift solenoid valves A, B, C, and D.



Hydraulic Flow

Distribution of Hydraulic Pressure

As the engine turns, the ATF pump starts to operate. Automatic transmission fluid (ATF) is drawn through the ATF strainer (filter) and discharged into the hydraulic circuit. Then, ATF flowing from the ATF pump becomes line pressure that is regulated by the regulator valve. Torque converter pressure from the regulator valve enters the torque converter through the lock-up shift valve, and it is discharged from the torque converter. The torque converter check valve prevents torque converter pressure from rising.
The PCM controls the shift solenoid valves ON and OFF. The shift solenoid valve blocks line pressure from the ATF pump via the manual valve when the shift solenoid valve is OFF. When the shift solenoid valve is turned ON by the PCM, line pressure changes to shift solenoid valve pressure at the shift solenoid valve, then the shift solenoid valve pressure flows to the shift valve. Applying shift solenoid pressure to the shift valve moves the position of the shift valve, and switches the port of the hydraulic circuit. The PCM also controls A/T clutch pressure control solenoid valves A, B, and C. The A/T clutch pressure control solenoid valves regulate hydraulic pressure, and apply pressure to the clutches to engage smoothly. The clutches receive optimum clutch pressure which is regulated by the A/T clutch pressure control solenoid valves for comfortable driving and shifting under all conditions.

Hydraulic Pressure at the Port for use in the hydraulic circuit

Port No.	Hydraulic Pressure	Port No.	Hydraulic Pressure
1	Line	5T	A/T clutch pressure control solenoid valve C
3	Line	SA	Shift solenoid valve A

Hydraulic Flow (cont'd)

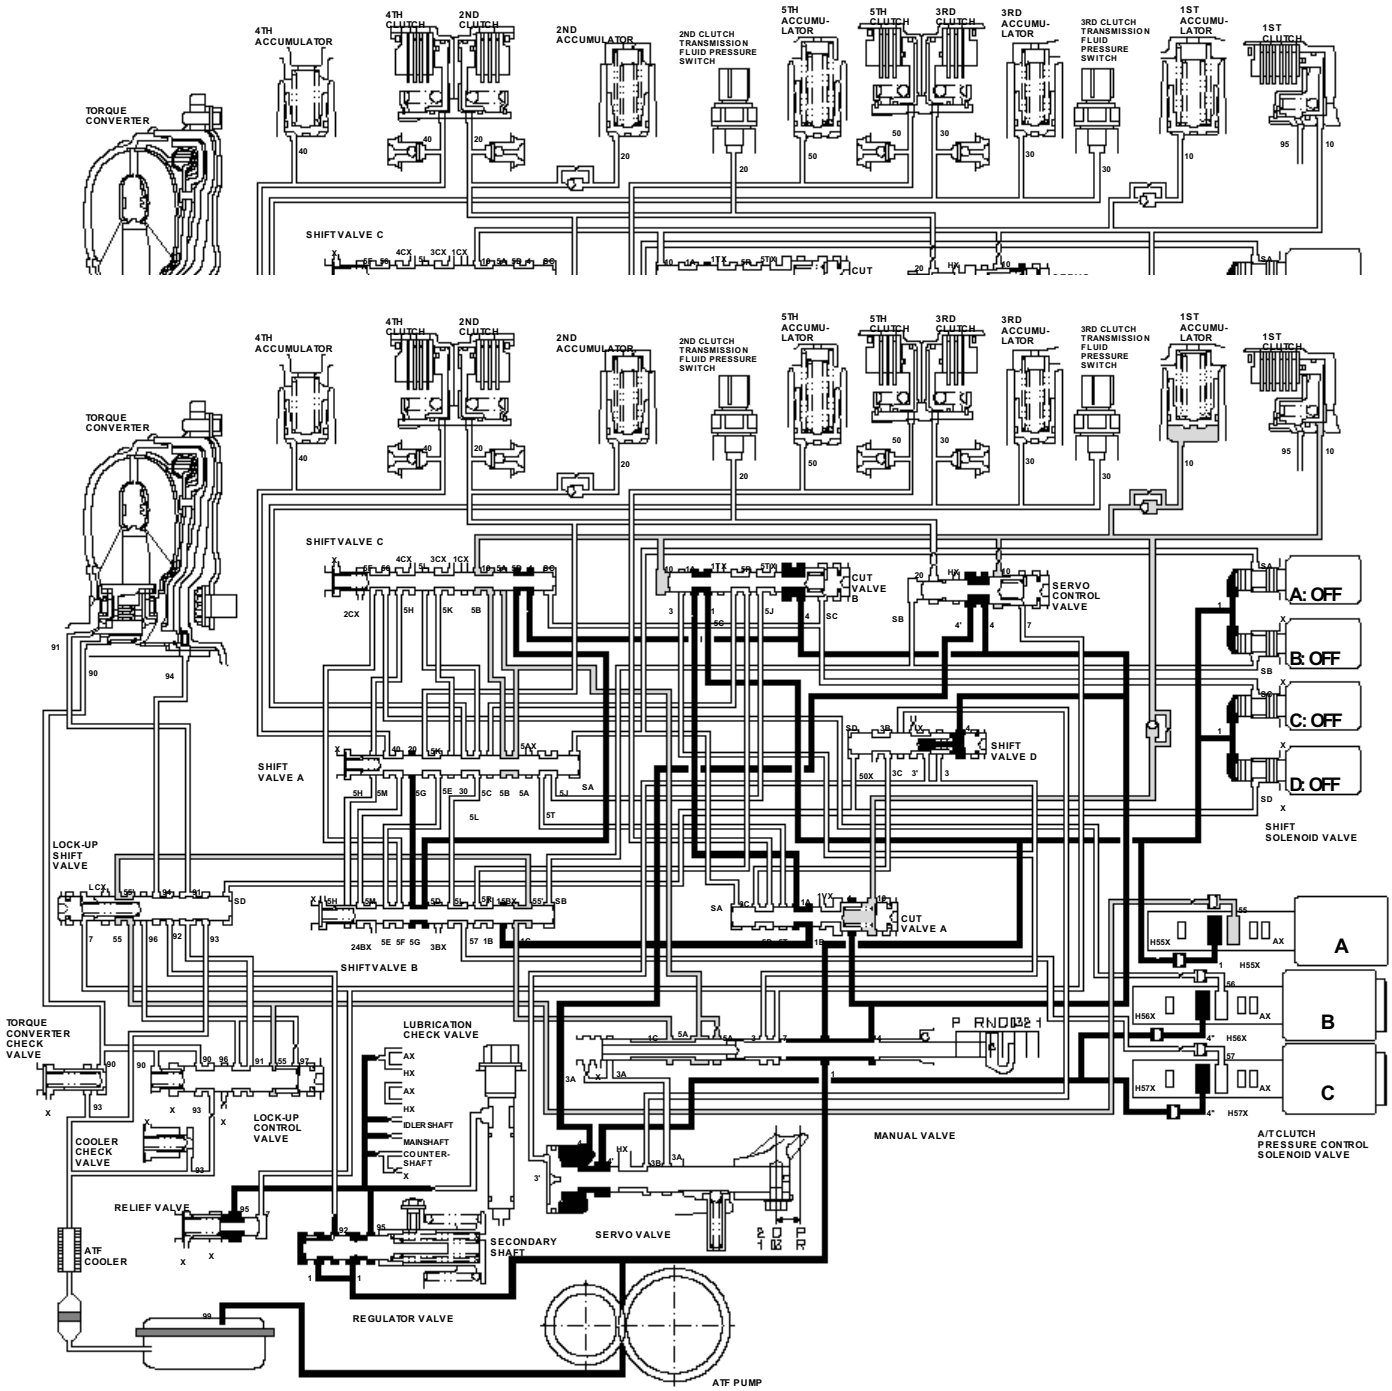
N Position

The PCM controls the shift solenoid valves. The conditions of the shift solenoid valves and the positions of the shift valves are as follows:

- Shift solenoid valve A is turned OFF, shift valve A stays on the right side, and cut valve A stays on the left side.
- Shift solenoid valve B is turned OFF, and shift valve B stays on the right side.
- Shift solenoid valve C is turned OFF, and shift valve C stays on the right side.

Line pressure (1) passes through the manual valve and stops at cut valve B. Line pressure (1) also flows to the shift solenoid valves and A/T clutch pressure control solenoid valve A. Under this condition, hydraulic pressure is not applied to the clutches.
NOTE:

- When used, ‘‘left" or ‘‘right" indicates direction on the hydraulic circuit.
- The illustration shows the seven-position transmission; the five-position transmission: manual-valve-position differs from the seven-position transmission.

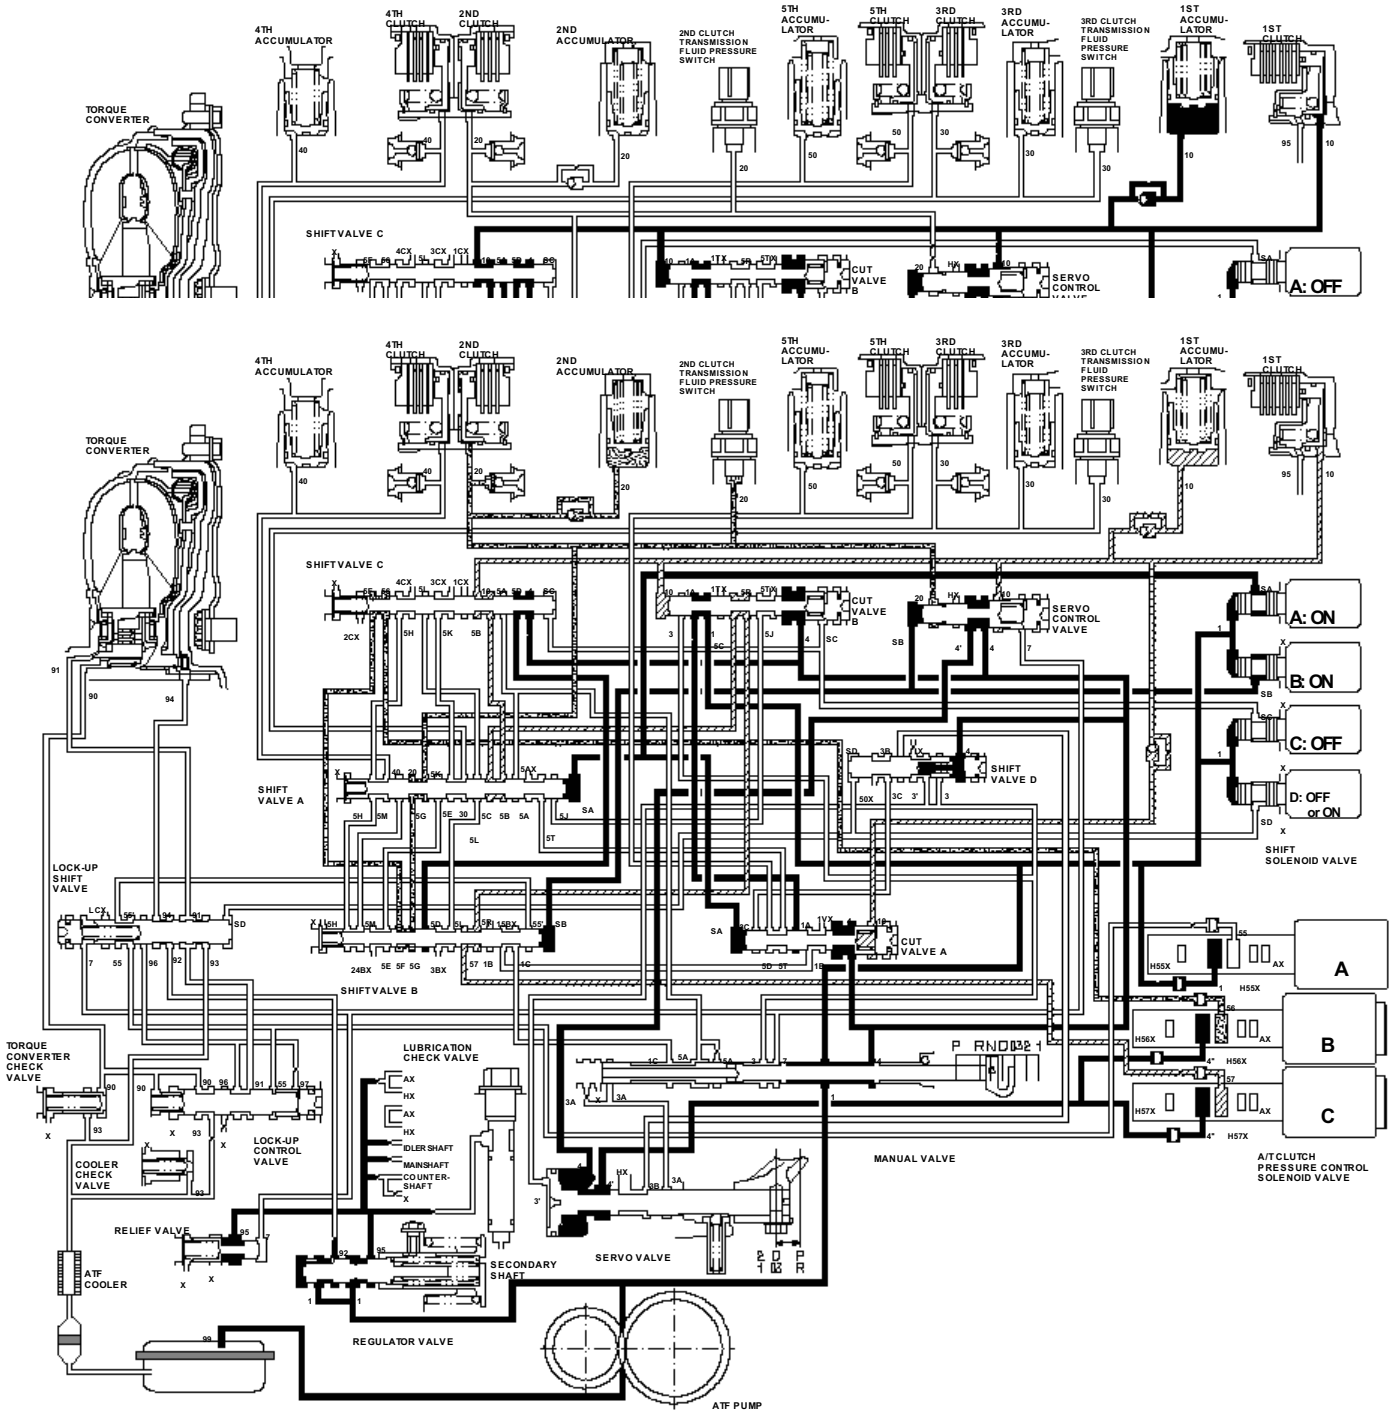


Hydraulic Flow (cont'd)

D Position: Driving in 1st gear

The PCM turns shift solenoid valve B ON, and shift solenoid valves A and C remain OFF. Shift solenoid valve B pressure (SB) is applied to the right end of shift valve B. Shift valve B is moved to the left side to uncover the line pressure port leading to the 1st clutch, and to cover the A/T clutch pressure control solenoid valve A pressure port. Line pressure (1B) passed through shift valve B flows to the manual valve, shift valve A, and shift valve C, and becomes 1st clutch pressure (10). 1st clutch pressure is applied to the 1st clutch, and the 1st clutch is engaged by the line pressure mode.
NOTE:

- When used, ‘‘left" or ‘‘right" indicates direction on the hydraulic circuit.
- The illustration shows the seven-position transmission; the five-position transmission: manual-valve-position differs from the seven-position transmission.

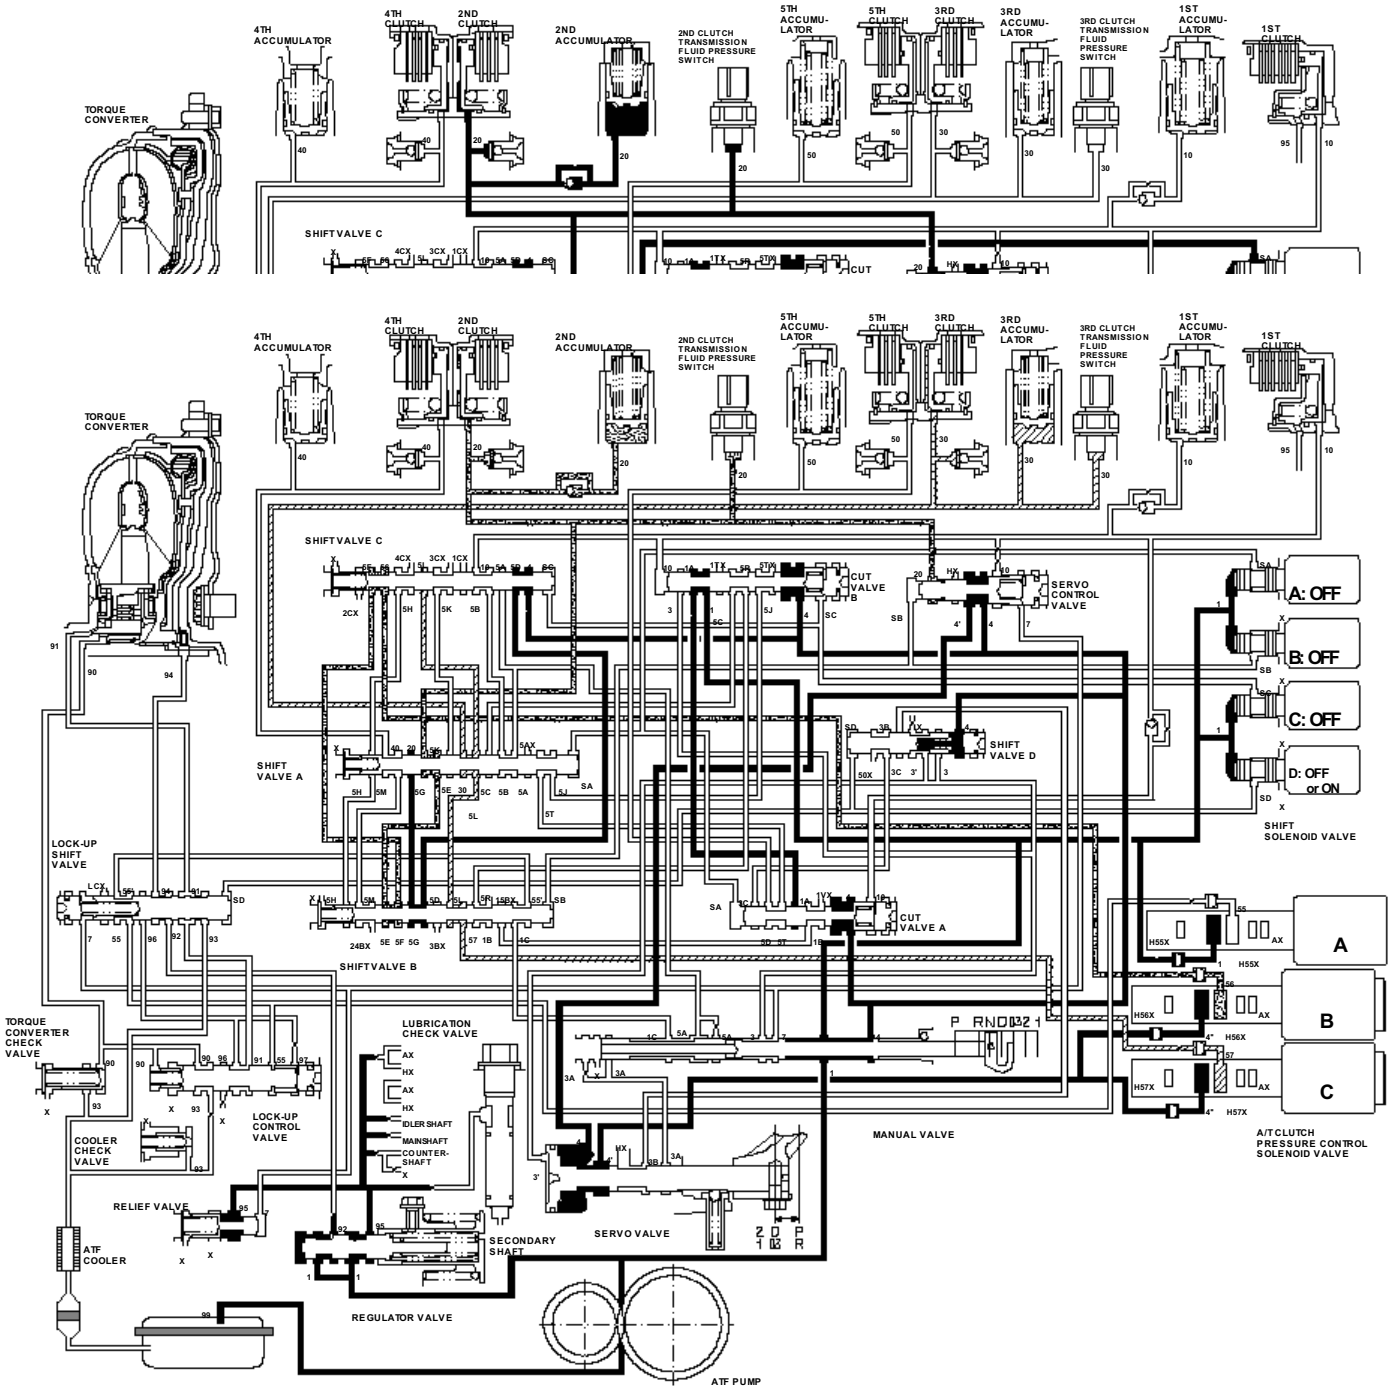


Hydraulic Flow (cont'd)

D Position: Driving in 2nd gear

The PCM turns shift solenoid valve B OFF, shift solenoid valve A remains ON, and shift solenoid valve C remains OFF. Shift solenoid valve B pressure (SB) in the right end of shift valve B and in the left end of the servo control valve is released. Cut valve B and the servo control valve are kept in the right side by line pressure (4) even though hydraulic pressure in the left end is released. Shift valve B is moved to the right side to switch the A/T clutch pressure control solenoid valve B pressure (5F) port to the line pressure (5D) port leading to the 2nd clutch. The 2nd clutch pressure (20) is applied to the 2nd clutch, and the 2nd clutch is engaged by the line pressure mode.
NOTE:

- When used, ‘‘left" or ‘‘right" indicates direction on the hydraulic circuit.
- The illustration shows the seven-position transmission; the five-position transmission: manual-valve-position differs from the seven-position transmission.

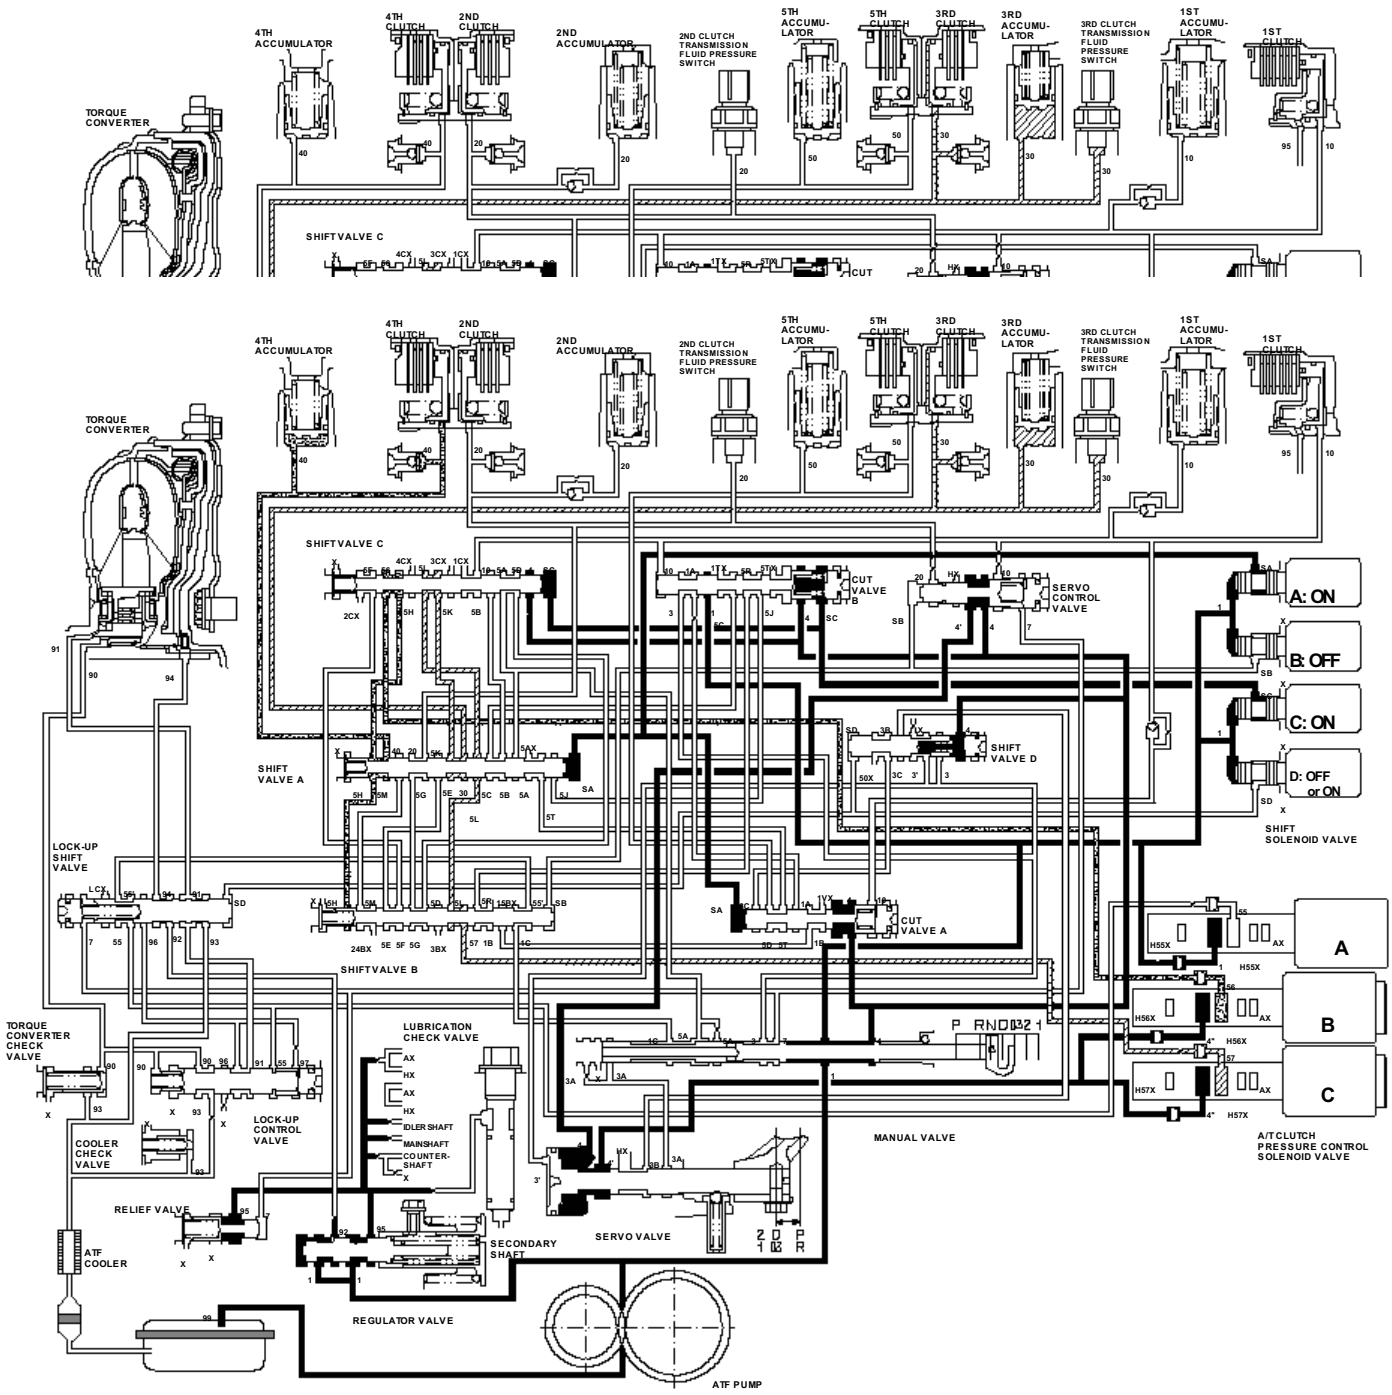


Hydraulic Flow (cont'd)

D Position: Driving in 3rd gear

The PCM turns shift solenoid valve C ON, and shift solenoid valves A and B remain OFF. Shift solenoid valve C pressure (SC) is applied to the right end of shift valve C and cut valve B. Shift valve C is moved to the left side to release 2nd clutch pressure. The 3rd clutch keeps engaging with the A/T clutch pressure control solenoid valve C pressure mode.
NOTE:

- When used, ‘‘left" or ‘‘right" indicates direction on the hydraulic circuit.
- The illustration shows the seven-position transmission; the five-position transmission: manual-valve-position differs from the seven-position transmission.

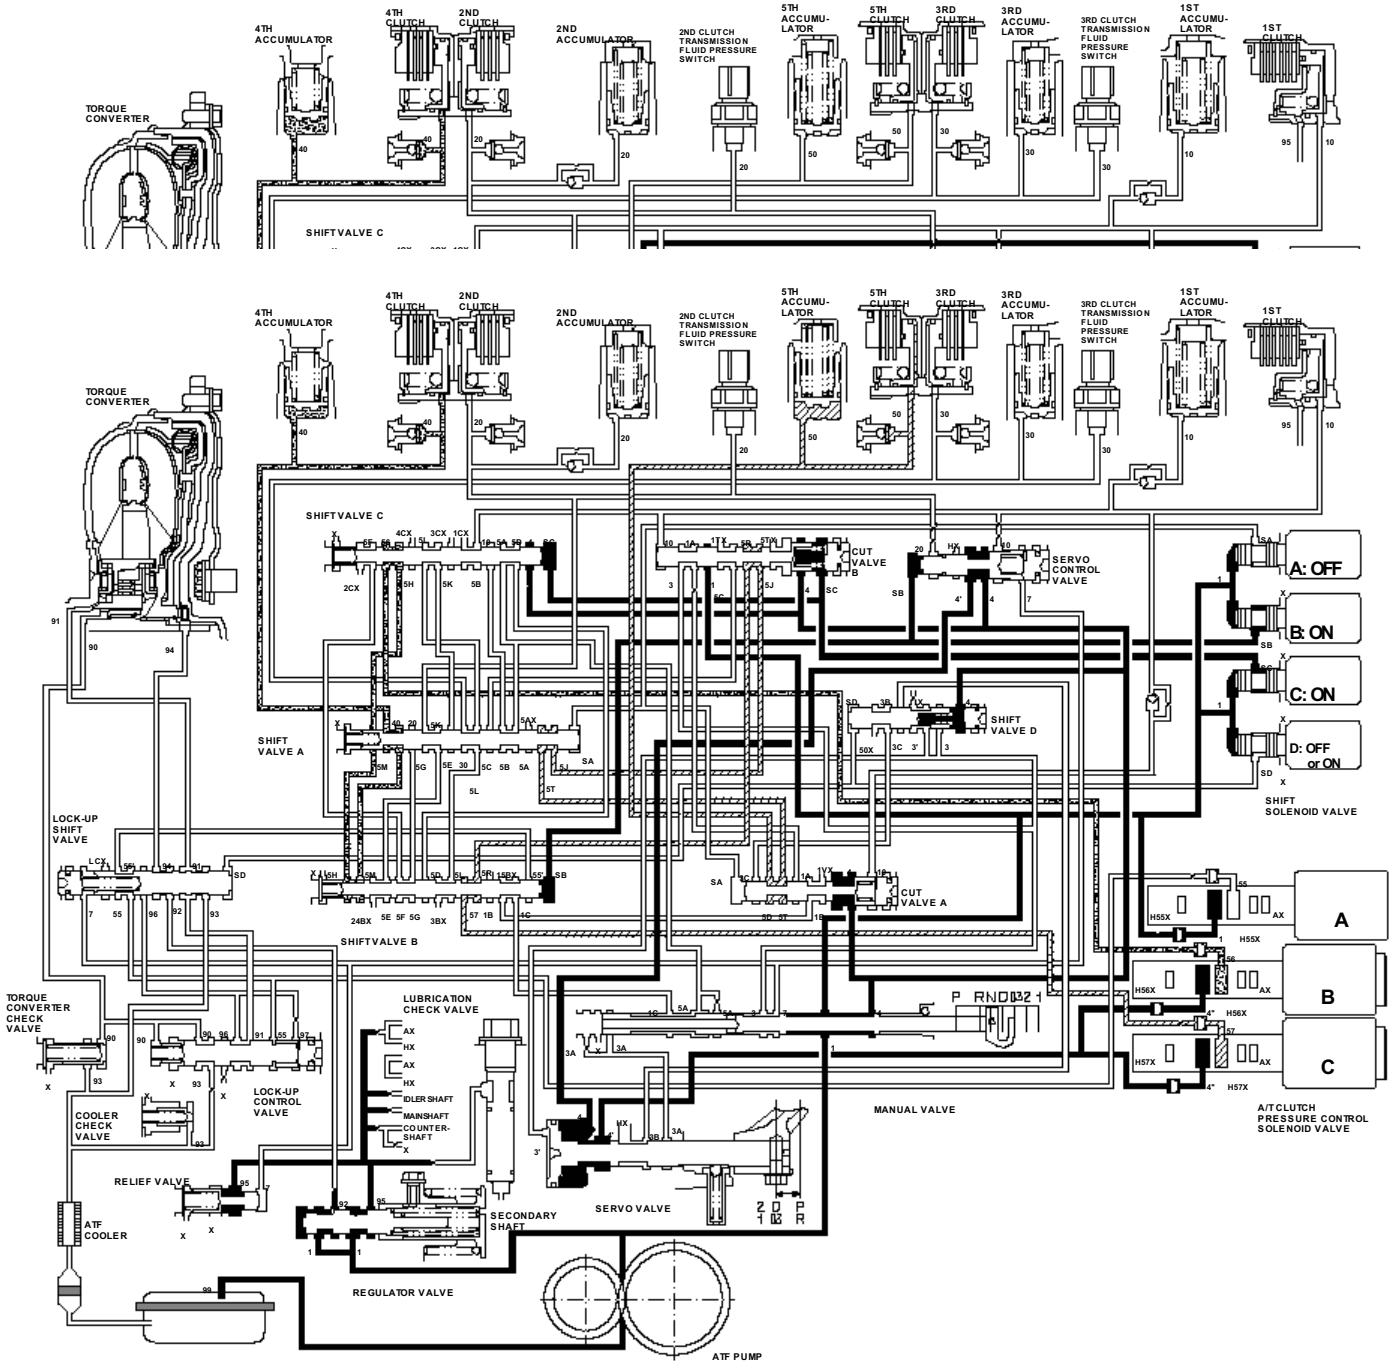


Hydraulic Flow (cont'd)

D Position: Driving in 4th gear

The PCM turns shift solenoid valve B ON, and shift solenoid valves A and B remain ON. Shift solenoid valve B pressure (SB) is applied to the right end of shift valve B and the left end of the servo control valve. Shift valve B is moved to the left side to release 3rd clutch pressure. The 4th clutch keeps engaging with the A/T clutch pressure control solenoid valve B pressure mode.
NOTE:

- When used, ‘‘left" or ‘‘right" indicates direction on the hydraulic circuit.
- The illustration shows the seven-position transmission; the five-position transmission: manual-valve-position differs from the seven-position transmission.

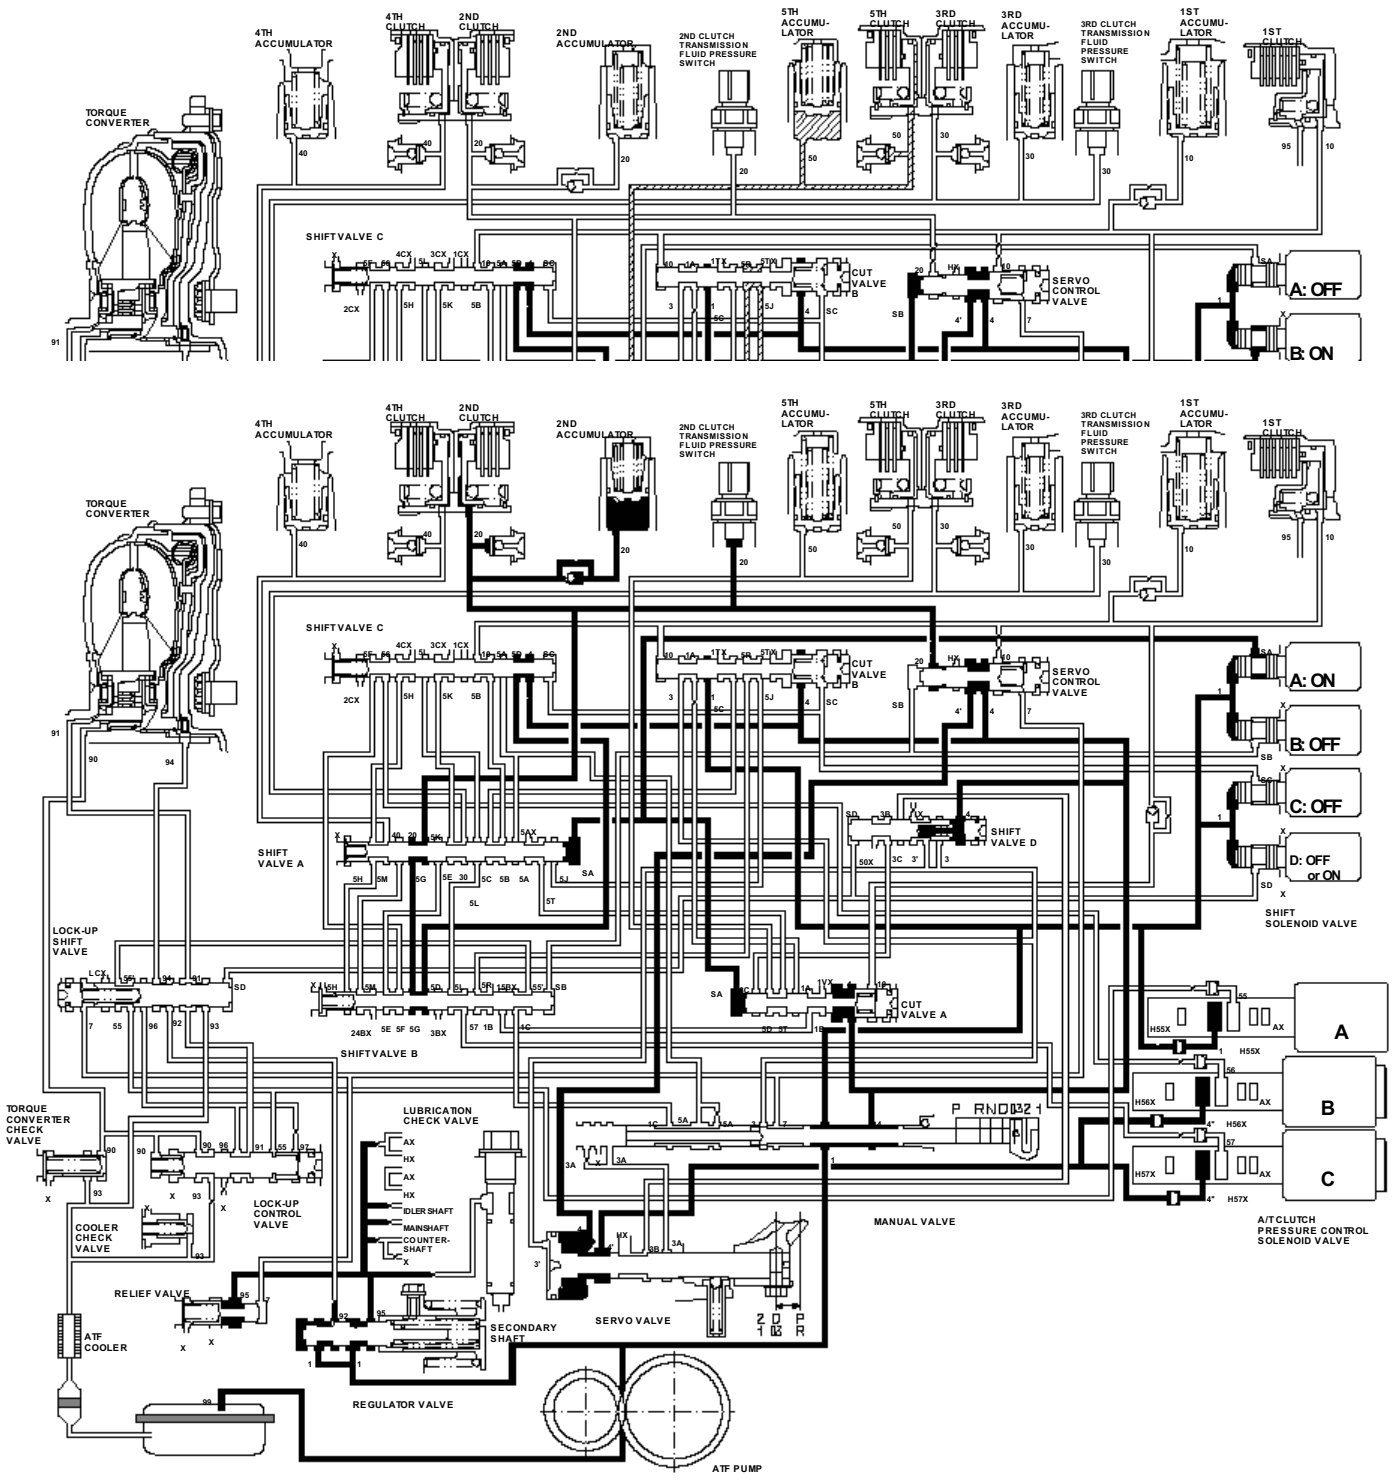


Hydraulic Flow (cont'd)

D Position: Driving in 5th gear

The PCM turns shift solenoid valve C OFF, shift solenoid valve A remains OFF, and shift solenoid valve B remains ON. Shift solenoid valve C is turned OFF, and shift solenoid valve C pressure (SC) in the right end of shift valve C is released. Shift valve C is moved to the right side to release 4th clutch pressure. The 5th clutch keeps engaging with the A/T clutch pressure control solenoid valve C pressure mode.
NOTE:

- When used, ‘‘left" or ‘‘right" indicates direction on the hydraulic circuit.
- The illustration shows the seven-position transmission; the five-position transmission: manual-valve-position differs from the seven-position transmission.



Hydraulic Flow (cont'd)

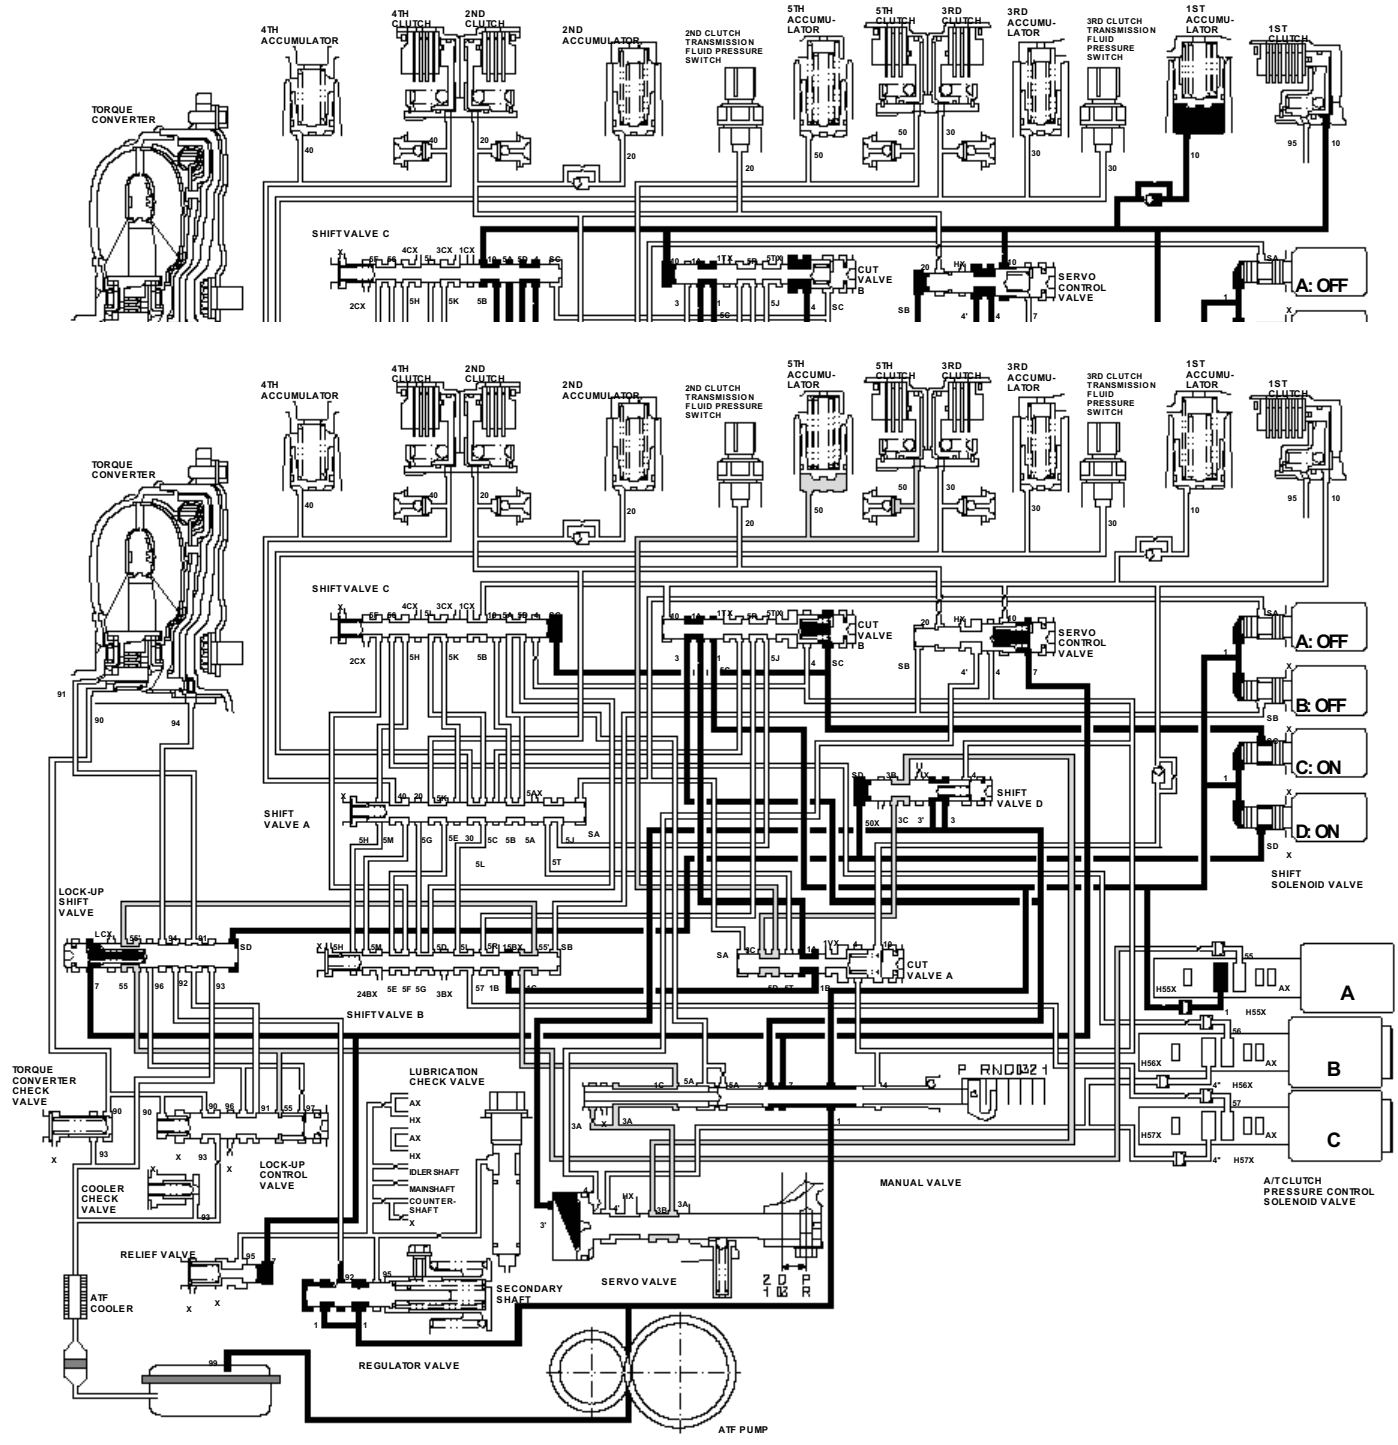
1 Position (Seven-position Transmission)

The PCM controls the shift solenoid valves and the A/T clutch pressure control solenoid valves. The conditions of the shift solenoid valves and the position of the shift valves are as follows:

- Shift solenoid valve A is turned OFF, and shift valve A is in the right side.
- Shift solenoid valve B is turned ON, and shift valve B is moved to the left side.
- Shift solenoid valve C is turned OFF, and shift valve C is in the right side.

Line pressure (1) from the manual valve flows to cut valve B, cut valve A, shift valve B, and becomes line pressure (5A) at the manual valve. Line pressure (5A) passes through shift valve A, flows to shift valve C, and becomes 1st clutch pressure (10). 1st clutch pressure (10) is applied to the 1st clutch, and the 1st clutch is engaged.
NOTE:

- When used, ‘‘left" or ‘‘right" indicates direction on the hydraulic circuit.
- The illustration shows the seven-position transmission; the five-position transmission does have 1.



Hydraulic Flow (cont'd)

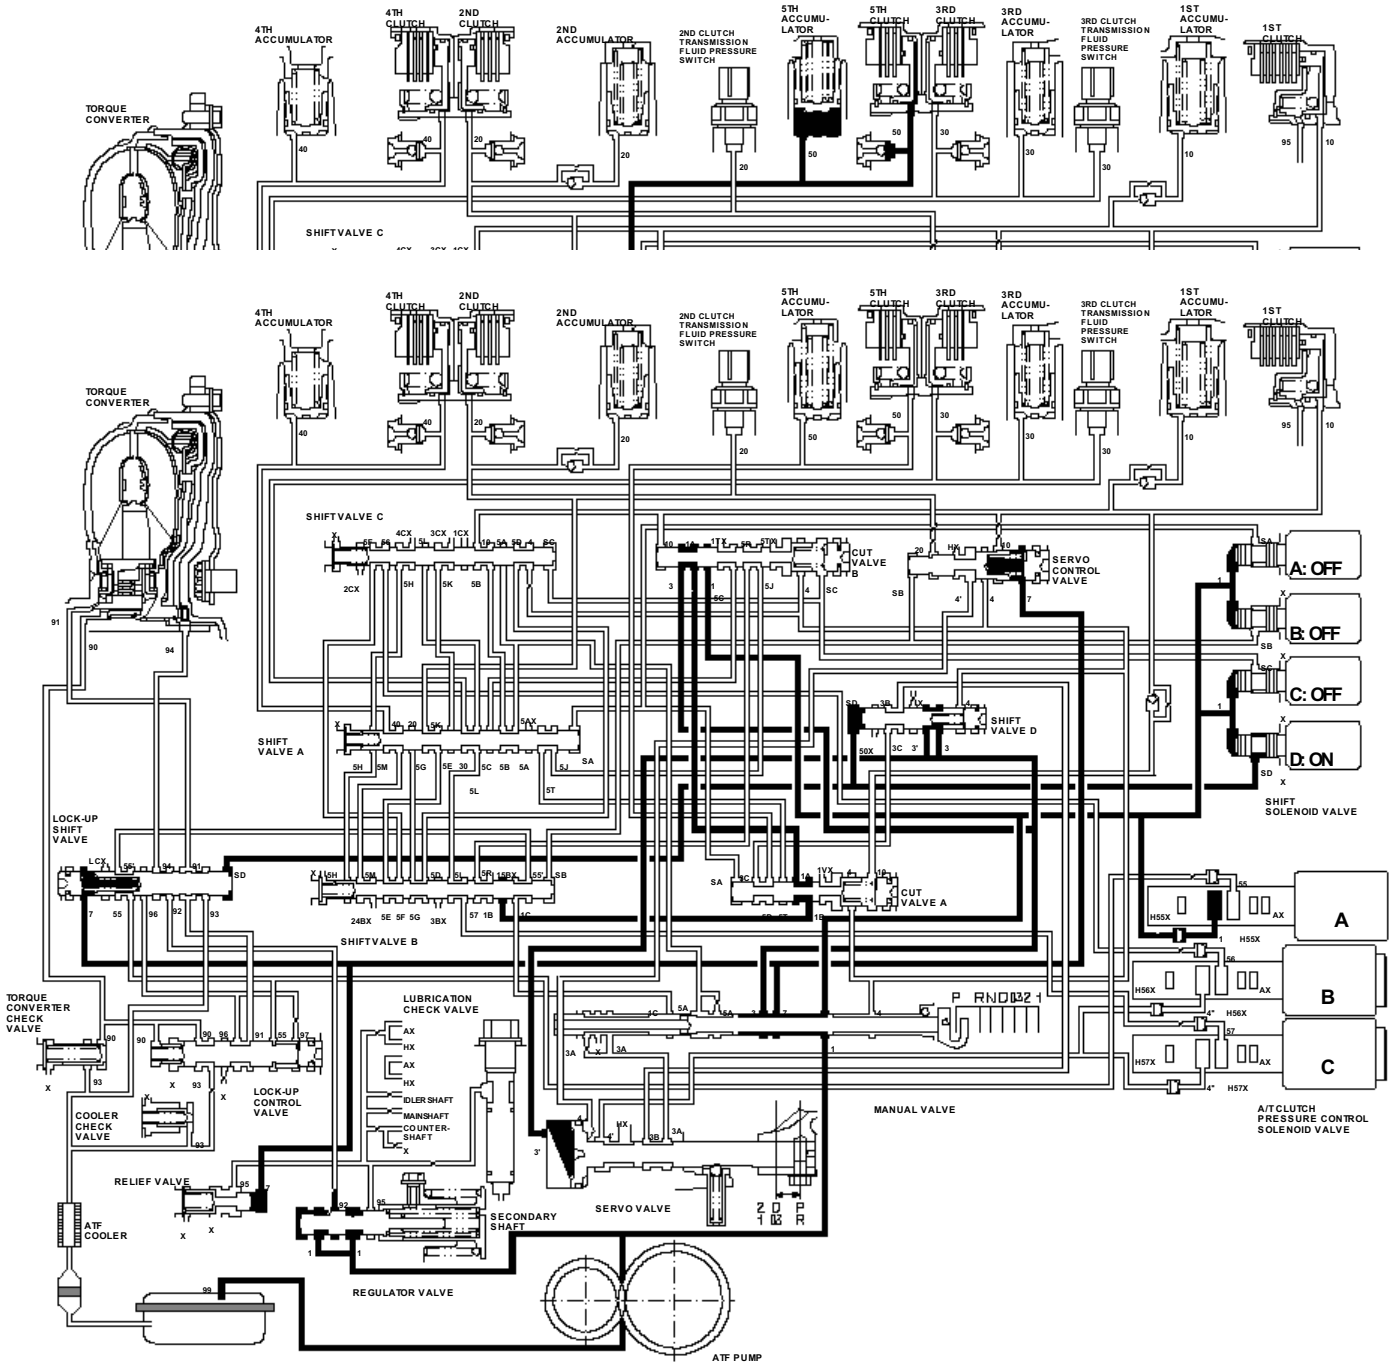
R Position: Driving in reverse gear

As the speed of the vehicle reaches the programmed value, the PCM turns shift solenoid valves B and C ON. Shift solenoid valve A remains OFF, and shift solenoid valve D remains ON. Shift solenoid valve B is turned ON, and shift solenoid valve B pressure (SB) is applied to the right end of shift valve B. Shift valve B is moved to the right side to switch the A/T clutch pressure control solenoid valve A pressure (55') port to the line pressure (1B) port leading to the 5th clutch. The 5th clutch is engaged with the line pressure mode.

Reverse Inhibitor Control

When R is selected while the vehicle is moving forward at a speed over 6 mph (10 km/h), the PCM turns shift solenoid valves A and C ON, and shift solenoid valves B and D OFF. Shift solenoid valve D is kept OFF, and shift valve D is kept in the left side to cover the line pressure (3) port leading to the servo valve. The servo valve is kept in the forward position. Shift solenoid valve A is turned ON, shift valve A is moved to the right side and covers the port to stop line pressure (1A) leading to the 5th clutch. The servo valve is not applied line pressure, the 5th clutch is not applied 5th clutch pressure, as a result, power is not transmitted to the reverse direction.
NOTE:

- When used, ‘‘left" or ‘‘right" indicates direction on the hydraulic circuit.
- The illustration shows the seven-position transmission; the five-position transmission: manual-valve-position differs from the seven-position transmission.



Power Flow

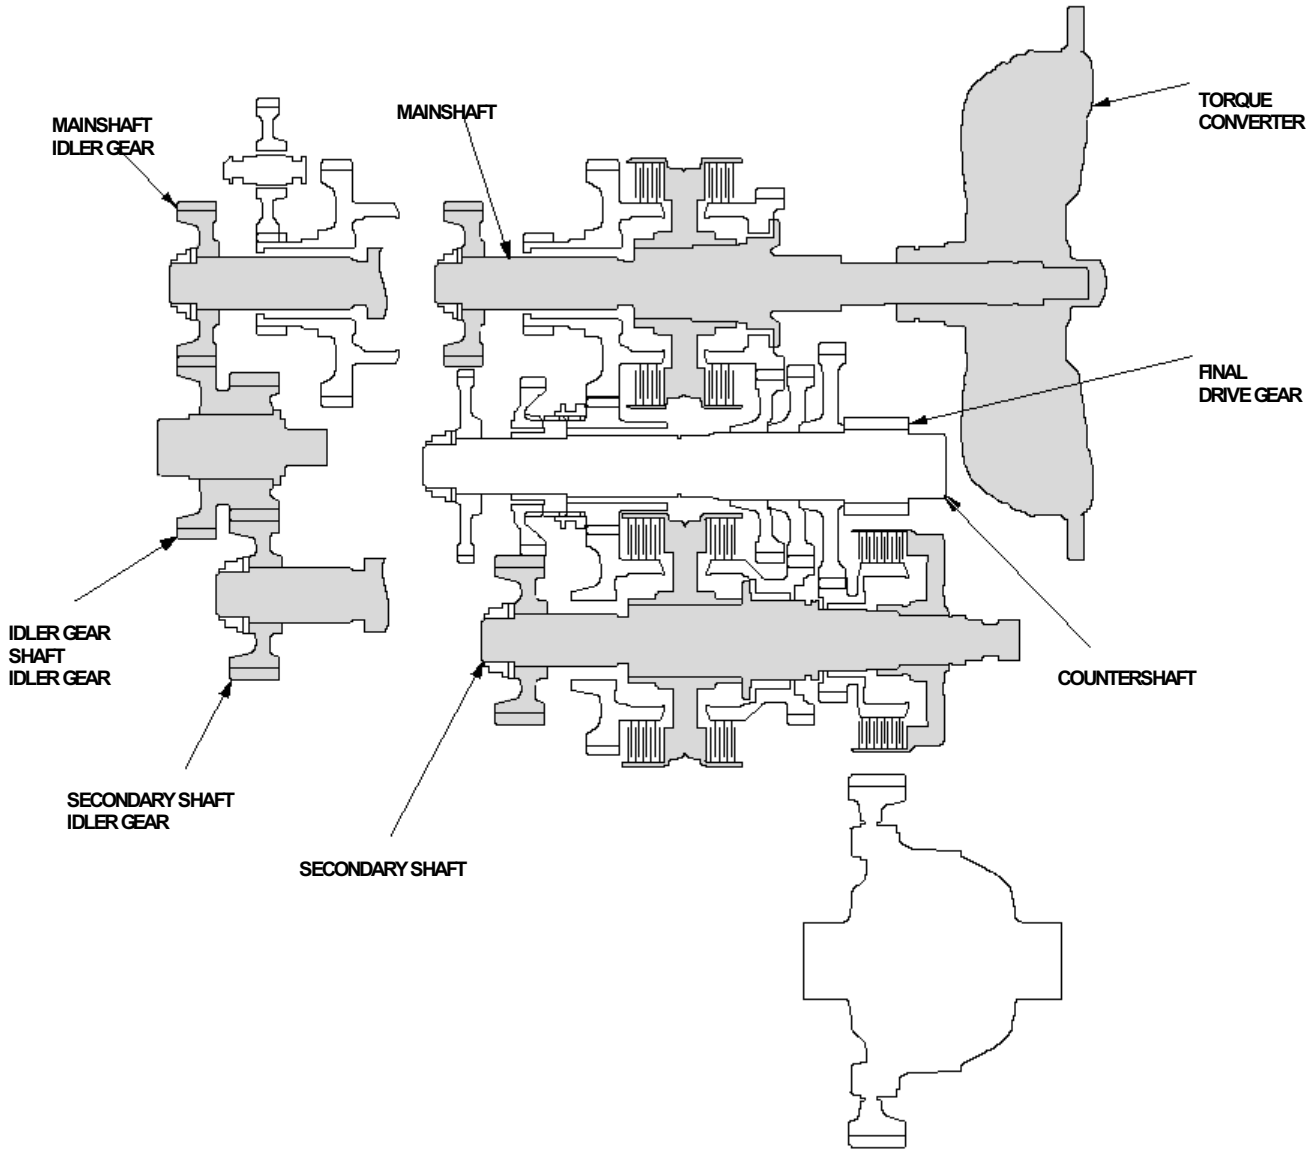
P Position

Hydraulic pressure is not applied to the clutches. Power is not transmitted to the countershaft. The countershaft is locked by the park pawl, interlocking the park gear.

N Position

Engine power transmitted from the torque converter drives the mainshaft idler gear, the idler gear shaft idler gear, and the secondary shaft idler gear, but hydraulic pressure is not applied to the clutches. Power is not transmitted to the countershaft. In this position, the position of the reverse selector differs according to whether the shift lever shifted from D or R:

- When shifted from D, the reverse selector engages with the countershaft 4th-5th gear and the reverse selector hub, and 4th-5th gear engages with the countershaft.
- When shifted from R, the reverse selector engages with the countershaft reverse gear and the reverse selector hub, and the reverse gear engages with the countershaft.



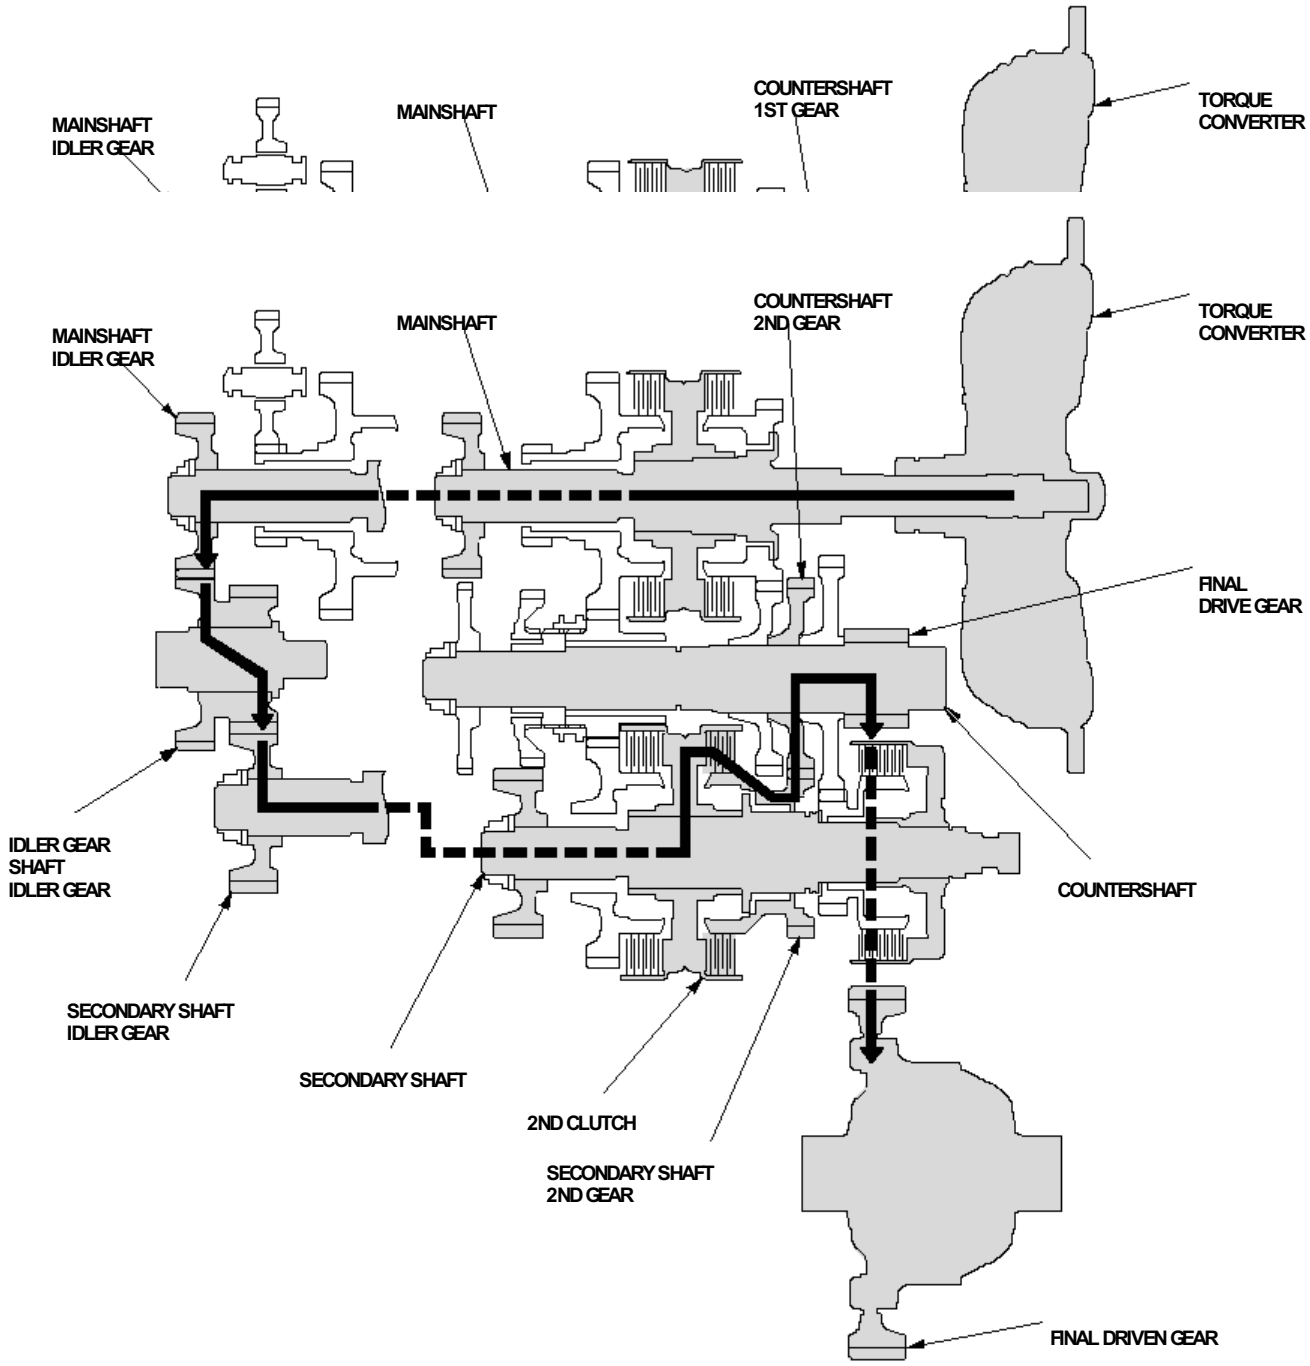
Power Flow (cont'd)

D, D3, and S Position

In D, D3, and S, the optimum gear is automatically selected from 1st, 2nd, 3rd, 4th, and 5th gears in D; 1st, 2nd, and 3rd gears in D3; 1st, 2nd, 3rd, and 4th gears in S in automatic shift mode according to conditions such as the balance between the throttle opening (engine loading) and vehicle speed.

In 1st Gear and 1 Position

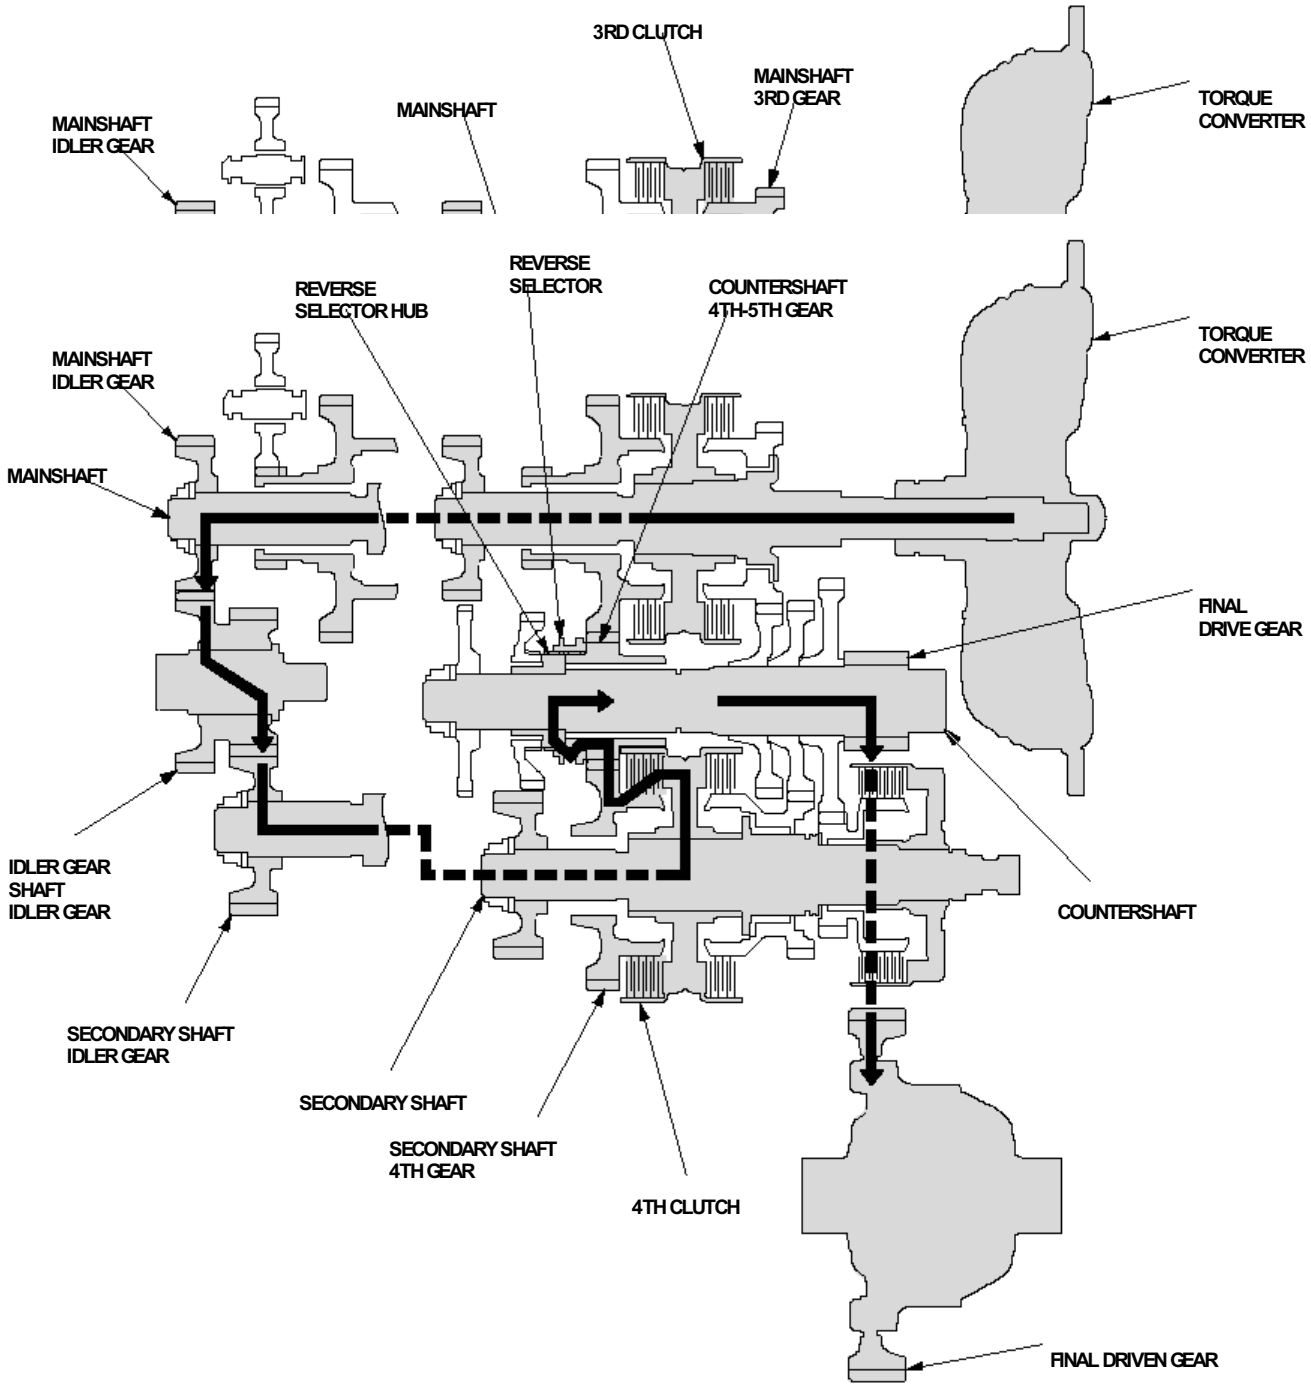
- Hydraulic pressure is applied to the 1st clutch, then the 1st clutch engages the secondary shaft 1st gear with the secondary shaft.
- The mainshaft idler gear drives the secondary shaft via the idler gear shaft idler gear and the secondary shaft idler gear.
- The secondary shaft 1st gear drives the countershaft 1st gear and the countershaft.
- Power is transmitted to the final drive gear, which in turn drives the final driven gear.



Power Flow (cont'd)

In 3rd Gear

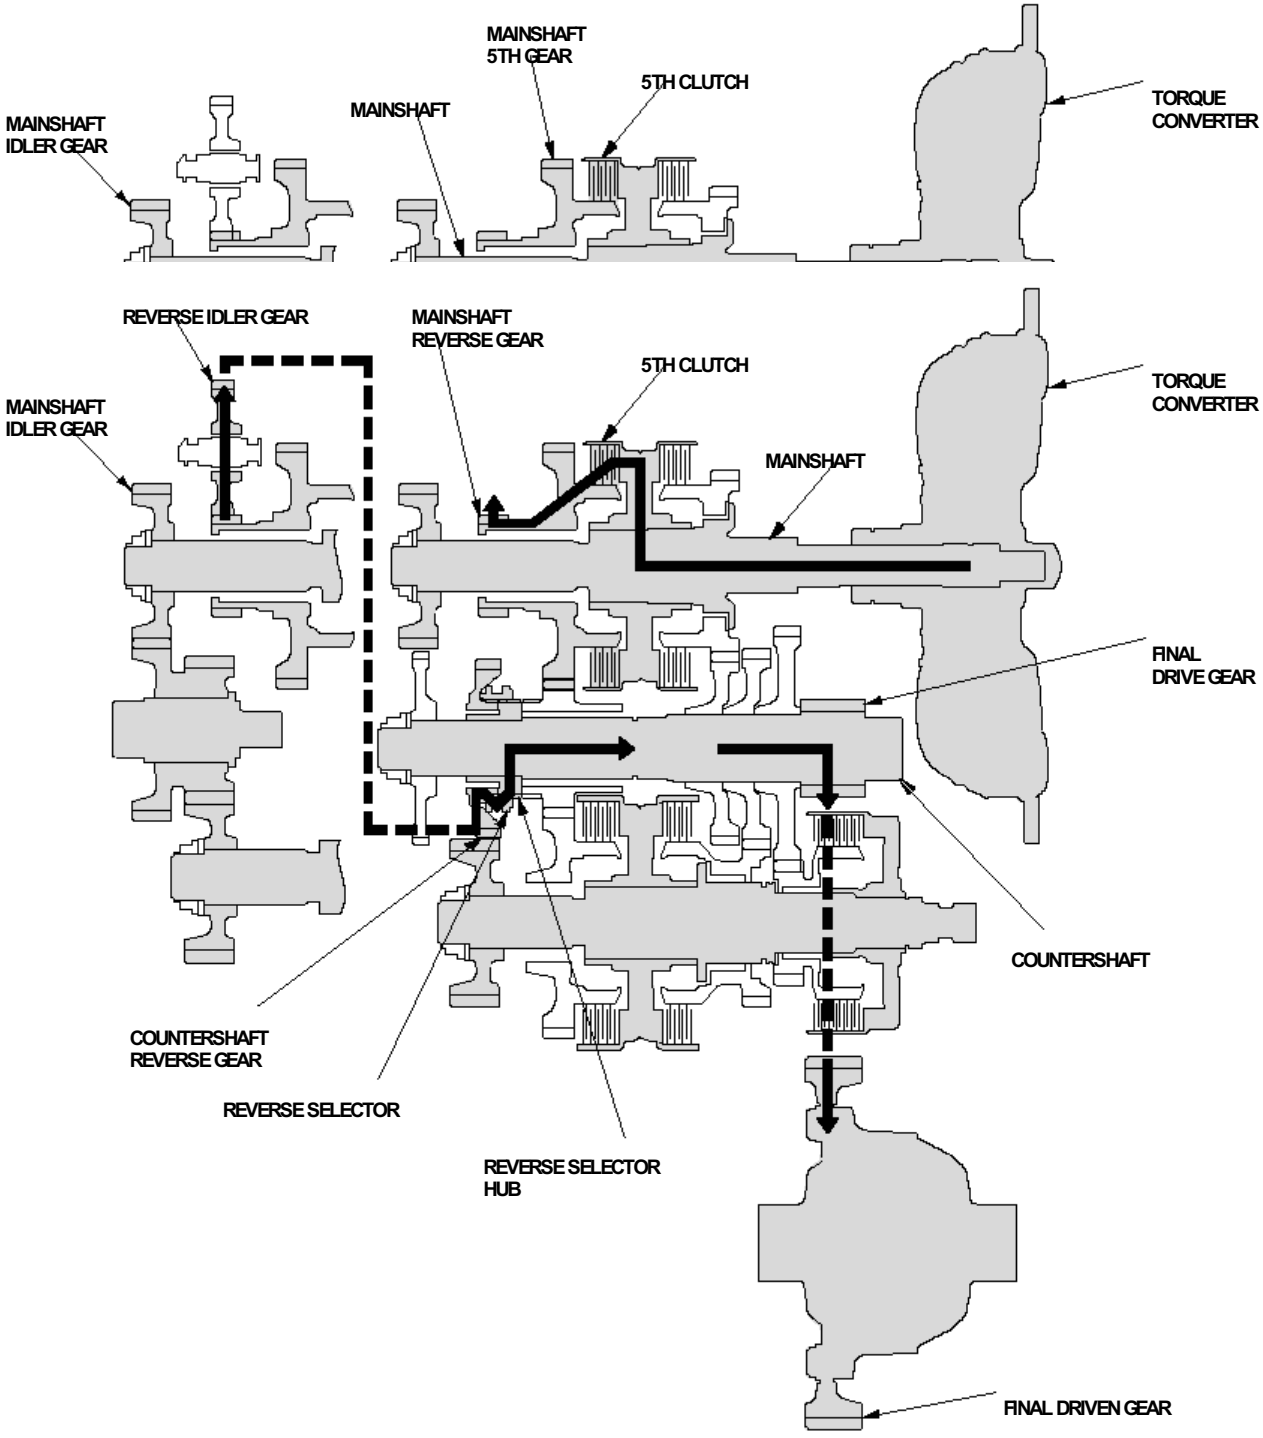
- Hydraulic pressure is applied to the 3rd clutch, then the 3rd clutch engages the mainshaft 3rd gear with the mainshaft.
- The mainshaft 3rd gear drives the countershaft 3rd gear and the countershaft.
- Power is transmitted to the final drive gear, which in turn drives the final driven gear.



Power Flow (cont'd)

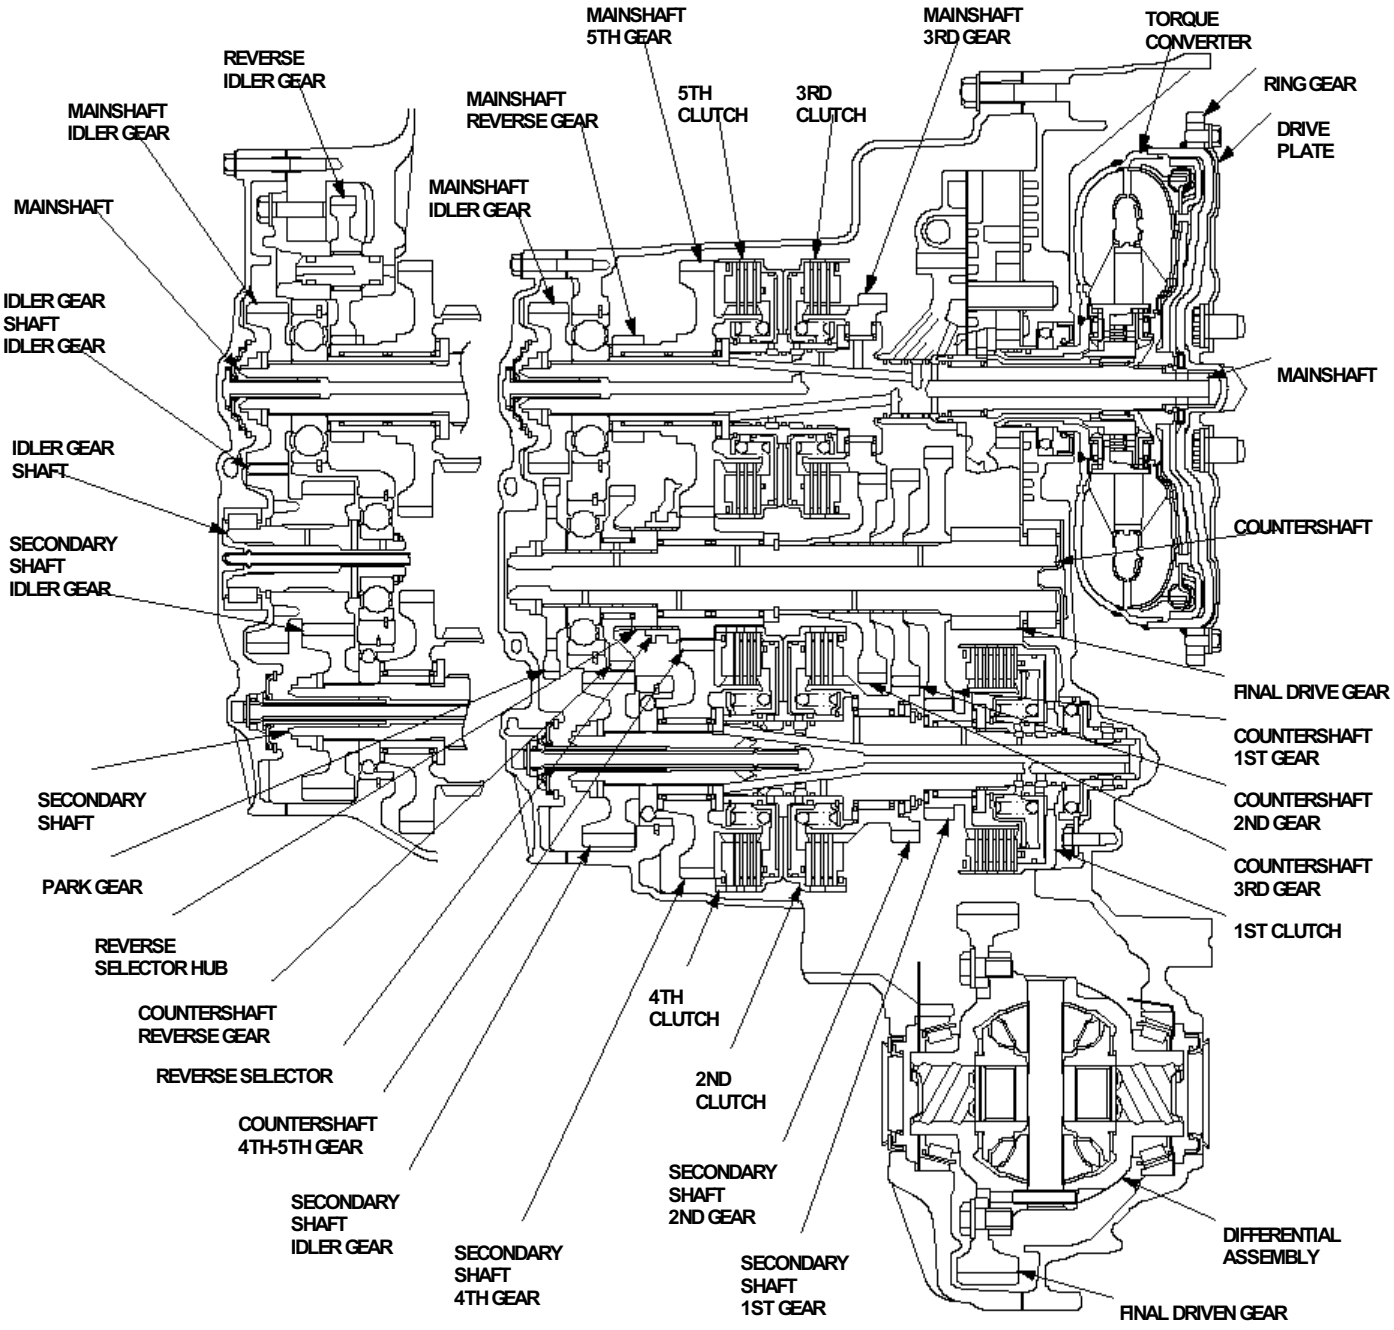
In 5th Gear

- Hydraulic pressure is applied to the servo valve to engage the reverse selector with the countershaft 4th-5th gear and reverse selector hub while the shift lever is in forward range; D, D3, S, 2, and 1.
- Hydraulic pressure is also applied to the 5th clutch, then the 5th clutch engages the mainshaft 5th gear with the mainshaft.
- The mainshaft 5th gear drives the countershaft 4th-5th gear.
- The countershaft 4th-5th gear drives the countershaft via the reverse selector, which drives the reverse selector hub.
- Power is transmitted to the final drive gear, which in turn drives the final driven gear.



Clutches and Gears

The five-speed automatic transmission uses hydraulically-actuated clutches to engage or disengage the transmission gears. When hydraulic pressure is introduced into the clutch drum, the clutch piston moves. This presses the friction discs and steel plates together, locking them so they don't slip. Power is then transmitted through the engaged clutch pack to its hub-mounted gear. Likewise, when the hydraulic pressure is bled from the clutch pack, the piston releases the friction discs and the steel plates, and they are free to slide past each other. This allows the gear to spin independently on its shaft, transmitting no power.



Clutches and Gears (cont'd)

1st Clutch

The 1st clutch engages/disengages 1st gear, and is located at the left end of the secondary shaft, opposite the end cover. The 1st clutch is supplied hydraulic pressure through the mainshaft by a circuit connected to the internal hydraulic circuit.

2nd Clutch

The 2nd clutch engages/disengages 2nd gear, and is located at the middle of the secondary shaft. The 2nd clutch is joined back-to-back to the 4th clutch. The 2nd clutch is supplied hydraulic pressure by its ATF feed pipe within the secondary shaft.

3rd Clutch

The 3rd clutch engages/disengages 3rd gear, and is located at the middle of the mainshaft. The 3rd clutch is joined back-to-back to the 5th clutch. The 3rd clutch is supplied hydraulic pressure through the mainshaft by its ATF feed pipe within the mainshaft.

4th Clutch

The 4th clutch engages/disengages 4th gear, and is located at the middle of the secondary shaft. The 4th clutch is joined back-to-back to the 2nd clutch, and is supplied hydraulic pressure by its ATF feed pipe within the secondary shaft.

5th Clutch

The 5th clutch engages/disengages 5th gear, as well as reverse gear, and is located at the middle of the mainshaft. The 5th clutch is joined back-to-back to the 3rd clutch. The 5th clutch is supplied hydraulic pressure through the mainshaft by a circuit connected to the internal hydraulic circuit.

Gear Operation

Gears on the mainshaft:

- 3rd gear is engaged/disengaged with the mainshaft by the 3rd clutch.
- 5th gear is engaged/disengages with the mainshaft by the 5th clutch.
- Reverse gear is engaged/disengaged with the mainshaft by the 5th clutch.
- Idler gear is splined with the mainshaft, and rotates with the mainshaft.

Gears on the countershaft:

- Final drive gear is integral with the countershaft.
- 1st gear, 2nd gear, and park gear are splined with the countershaft, and rotate with the countershaft.
- 4th-5th gear and reverse gear rotate freely from the countershaft. The reverse selector engages 4th-5th gear and reverse gear with the reverse selector hub. The reverse selector hub is splined to the countershaft so 4th-5th gear and reverse gear engage with the countershaft.

Gears on the secondary shaft:

- 1st gear is engaged/disengaged with the secondary shaft by the 1st clutch.
- 2nd gear is engaged/disengaged with the secondary shaft by the 2nd clutch.
- 4th gear is engaged/disengaged with the secondary shaft by the 4th clutch.
- Idler gear is splined with the secondary shaft, and rotates with the secondary shaft.

The idler gear on the idler gear shaft transmits power between the mainshaft and the secondary shaft.
The reverse idler gear transmits power from the mainshaft reverse gear to the countershaft reverse gear, and changes rotational direction of the countershaft reverse.

Lock-up System

The lock-up mechanism of the torque converter clutch operates in all five gears in D, in 3rd gear in D3, and 3rd and 4th gears in S with the automatic shift mode. The pressurized fluid is drained from the back of the torque converter through a fluid passage, causing the torque converter clutch piston to be held against the torque converter cover. As this takes place, the mainshaft rotates at the same speed as the engine crankshaft. Together with the hydraulic control, the PCM optimizes the timing and amount of the lock-up mechanism. When shift solenoid valve D is turned ON by the PCM, shift solenoid valve D pressure switches the lock-up shift valve lock-up ON and OFF. A/T clutch pressure control solenoid valve A and the lock-up control valve control the amount of lock-up.

Torque Converter Clutch Lock-up ON (Engaging Torque Converter Clutch)

Fluid in the chamber between the torque converter cover and the torque converter clutch piston is drained off, and fluid entering from the chamber between the pump and stator exerts pressure through the torque converter clutch piston against the torque converter cover. The torque converter clutch piston engages with the torque converter cover; the torque converter clutch lock-up is ON, and the mainshaft rotates at the same speed as the engine.

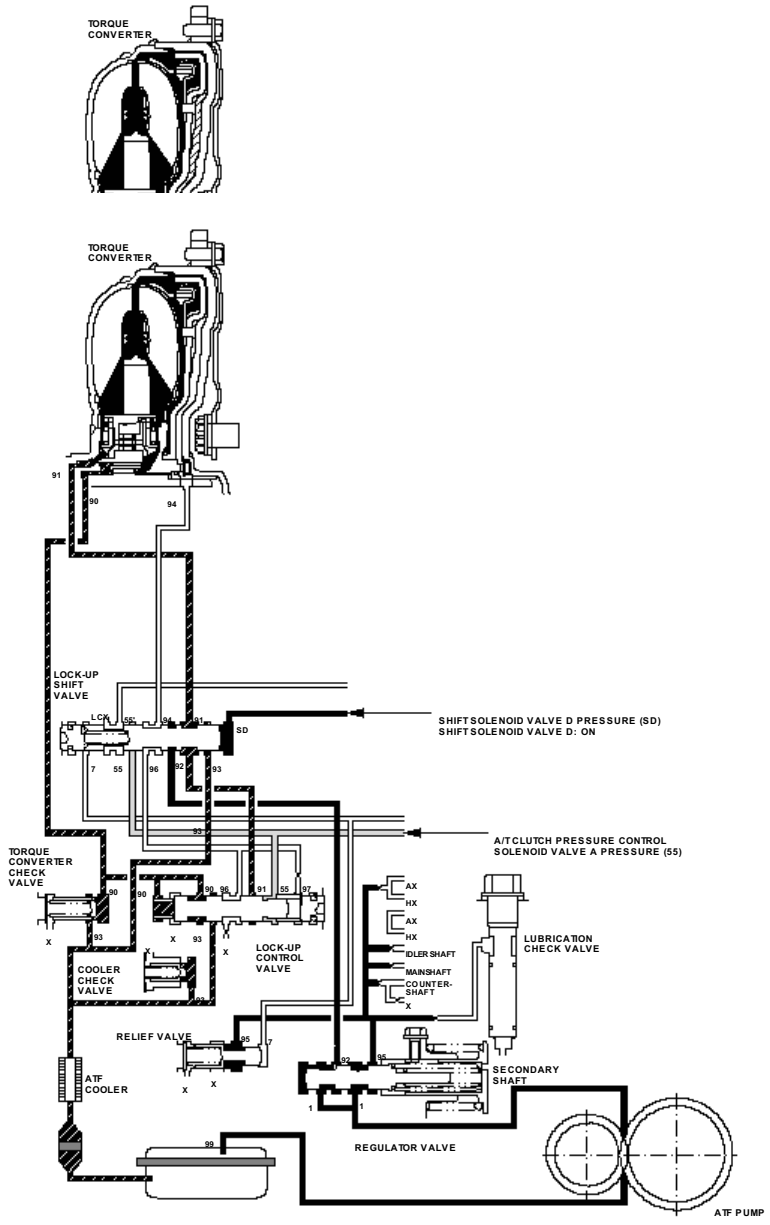
Lock-up System (cont'd)

Partial Lock-up

As the speed of the vehicle reaches the programmed value, the PCM turns shift solenoid valve D ON. Shift solenoid valve D pressure (SD) is applied to the right end of the lock-up shift valve to switch the torque converter pressure port leading to the front of the torque converter. Torque converter pressure (91) enters into the front of the torque converter to engage the torque converter clutch piston. The PCM also controls A/T clutch pressure control solenoid valve A to regulate A/T clutch pressure control solenoid valve A pressure (55), and A/T clutch pressure control solenoid valve A pressure (55) is applied to the lock-up control valve. Torque converter pressure (94) drained from the back of the torque converter is applied to the right side of the lock-up control valve, and torque converter pressure (90) is applied to the left side of the lock-up control valve. The lock-up control valve controls the amount of the lock-up by receiving these pressures. The torque converter clutch is engaged partially when torque converter pressure (90) in the left side of the lock-up control valve is higher, and the torque converter clutch is engaged securely according to the amount of pressure in the right side of the lock-up control valve. Under this condition, the torque converter clutch is engaged by pressure entering into the front side of the torque converter; this condition is partial lock-up.
NOTE: When used, ‘‘left" or ‘‘right" indicates direction on the hydraulic circuit.



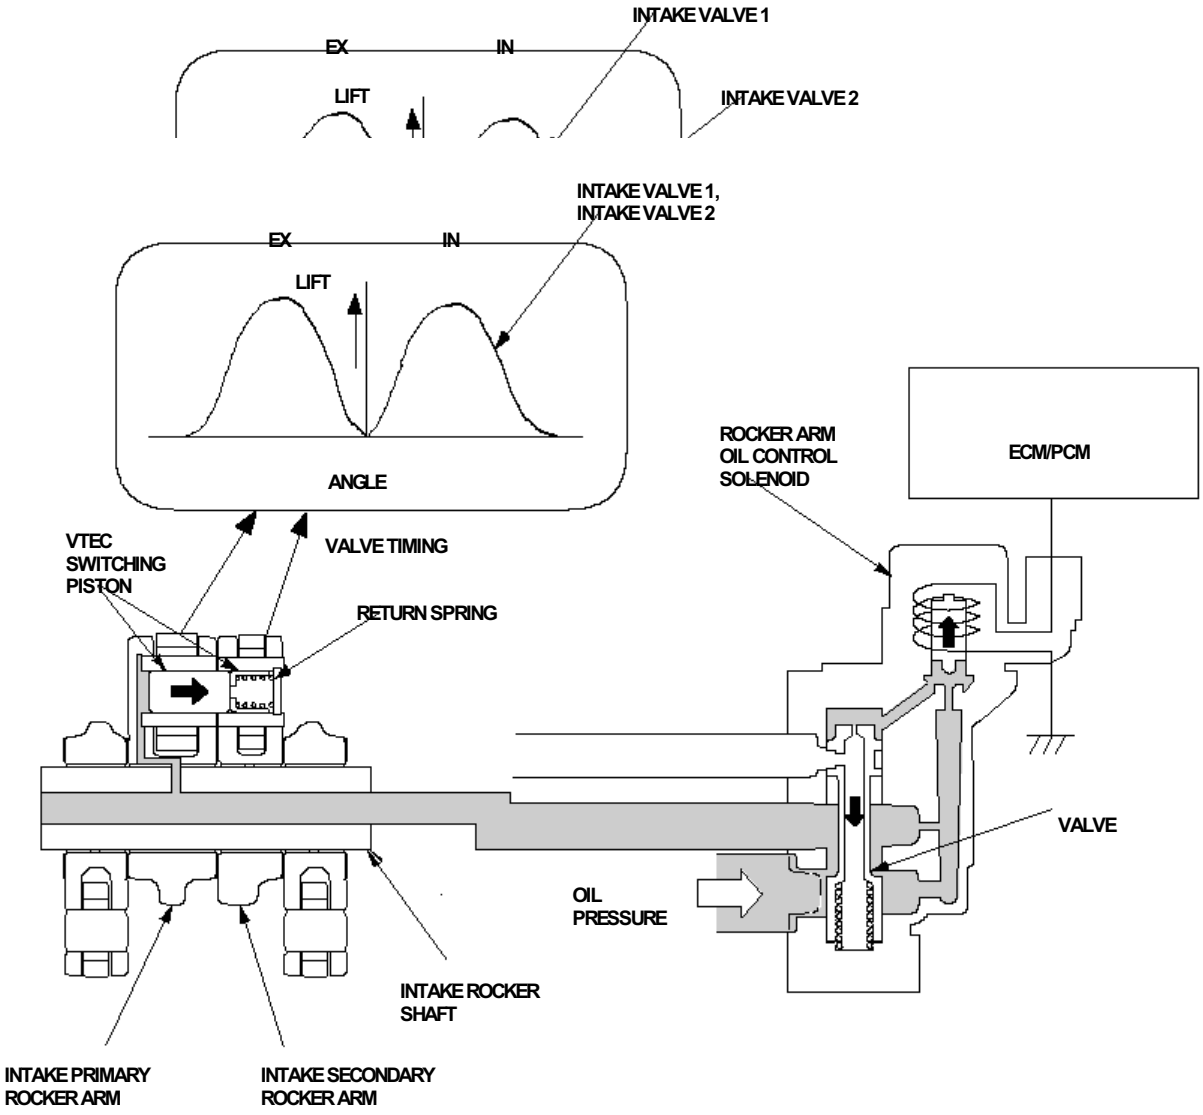
VTEC System (L13Z3 engine)

- This mechanism improves fuel efficiency and reduces exhaust emissions at all levels of engine speed, vehicle speed, and engine load.
- The VTEC system changes the cam profile to correspond to engine speed. It maximizes torque at low engine speed and output at high engine speed.
- The valve pause cam (low lift cam) is used at low engine speeds, and the high lift cam is used at high engine speeds.
- The rocker arm oil control solenoid switches the intake valve side of the VTEC system on and off; the solenoid is controlled by the ECM/PCM.

Operation (L13Z3 engine)

At low engine speed

At low engine speed, the rocker arm oil control solenoid is turned off by the ECM/PCM. Oil pressure from the rocker arm oil control valve does not enter the intake rocker shaft. Each intake rocker arm is separated by a return spring and lifted by each valve pause cam (low lift cam) lobe.



VTEC System (L15A8 engine)

- This mechanism improves fuel efficiency and reduces exhaust emissions at all levels of engine speed, vehicle speed, and engine load.
- The VTEC system changes the cam profile to correspond to engine speed. It maximizes torque at low engine speed and output at high engine speed.
- The valve pause cam (low lift cam) is used at low engine speeds, and the high lift cam is used at high engine speeds.
- The rocker arm oil control solenoid switches the intake valve side of the VTEC system on and off; the solenoid is controlled by the ECM/PCM.

Operation (L15A8 engine)

At low engine speed

At low engine speed, the rocker arm oil control solenoid is turned off by the ECM/PCM. Oil pressure from the rocker arm oil control valve does not enter the intake rocker shaft. Each intake rocker arm is separated by a return spring and lifted by each valve pause cam (low lift cam) lobe.

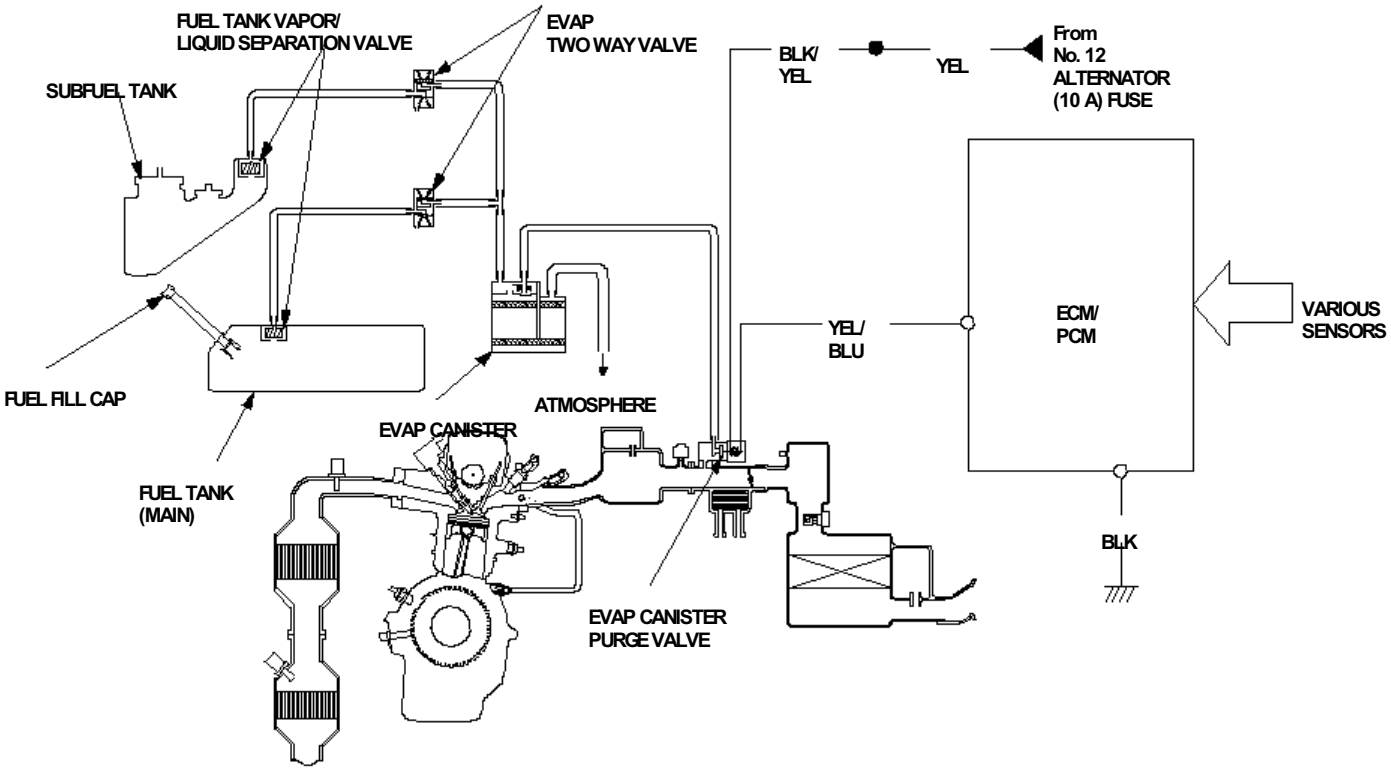
Evaporative Emission (EVAP) Control Diagram

The EVAP controls minimize the amount of fuel vapor escaping to the atmosphere. Vapor from the fuel tank is temporarily stored in the EVAP canister until it can be purged from the EVAP canister into the engine and burned.

- The EVAP canister is purged by drawing fresh air through it and into a port on the intake manifold.
  The purging vacuum is controlled by the EVAP canister purge valve, which is open whenever engine coolant temperature is above 60 °C (140 °F).
- When vapor pressure in the fuel tank and subfuel tank are higher than the set value of the EVAP two way valves, the valve opens and regulates the flow of fuel vapor to the EVAP canister.



Fuel Supply System

Fuel Cutoff Control

During deceleration with the throttle valve closed, current to the injectors is cut off to improve fuel economy at engine speeds over numbers of revolution below, in some conditions.

L13Z3 engine:

	No load	High electrical load	A/C on
M/T	910 rpm (min $^{-1}$)	960 rpm (min $^{-1}$)	1,500 rpm (min $^{-1}$)
A/T(with ABS)	850 rpm (min $^{-1}$)	960 rpm (min $^{-1}$)	1,200 rpm (min $^{-1}$)
A/T(without ABS)	1,500 rpm (min $^{-1}$)	1,500 rpm (min $^{-1}$)	1,500 rpm (min $^{-1}$)

L15A8 engine:

	No load	High electrical load	A/C on
M/T	910 rpm (min $^{-1}$)	960 rpm (min $^{-1}$)	1,200 rpm (min $^{-1}$)
A/T	850 rpm (min $^{-1}$)		1,500 rpm (min $^{-1}$)

Fuel cutoff also occurs at engine speed over numbers of revolution below, regardless of the position of the throttle valve, to protect the engine. On a cold engine, fuel cut occurs at a lower engine speed.

	Vehicle speed over 20 km/h (12 mph)	Vehicle speed under 20 km/h (12 mph)
M/T	6,600 rpm (min $^{-1}$)	4,800 rpm (min $^{-1}$)
A/T		5,000 rpm (min $^{-1}$)

Fuel Pump Control

When the ignition is turned on, the ECM/PCM grounds PGM-FI main relay 2 which feeds current to the fuel pump for 2 seconds to pressurize the fuel system. With the engine running, the ECM/PCM grounds PGM-FI main relay 2 and feeds current to the fuel pump. When the engine is not running and the ignition is on, the ECM/PCM cuts ground to PGM-FI main relay 2 which cuts current to the fuel pump.

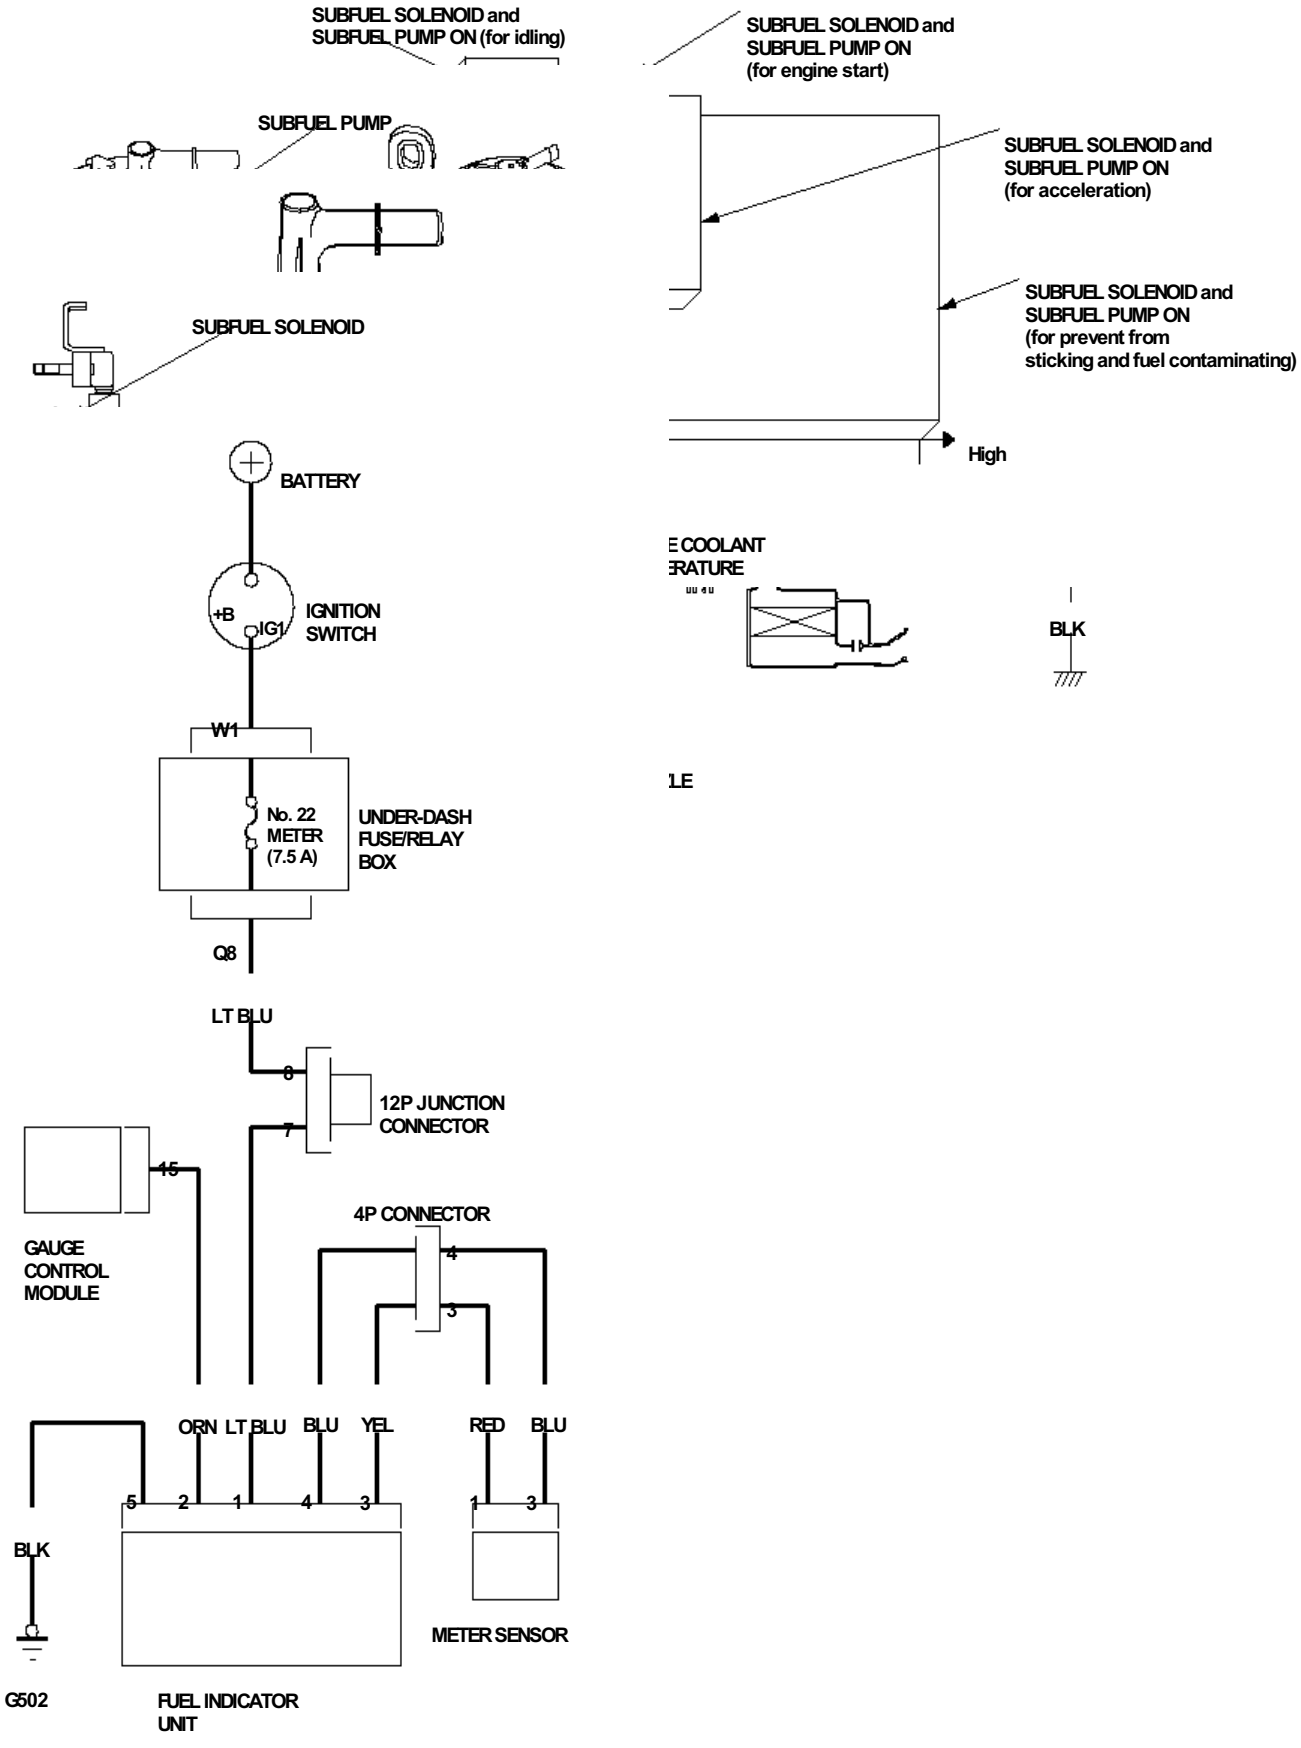
PGM-FI Main Relay 1 and 2

PGM-FI main relay 1 is energized whenever the ignition switch is ON (II) to supply battery voltage to the ECM/PCM, power to the injectors, and power for PGM-FI main relay 2. PGM-FI main relay 2 is energized to supply power to the fuel pump for 2 seconds when the ignition switch is turned to ON (II), and when the engine is cranking or running.

Subfuel Supply System

The subfuel supply system consists of the subfuel pump, the subfuel tank, the subfuel pipe, the subfuel solenoid, the subfuel pipe, the fuel nozzle, the EVAP two way valve, the EVAP canister, and the ECM/PCM.

When engine start in cold temperature, the subfuel solenoid supplies fuel to the intake manifold. When the ignition switch is ON (II), the subfuel pump is ON, to prevent from fuel sticking and contaminating.



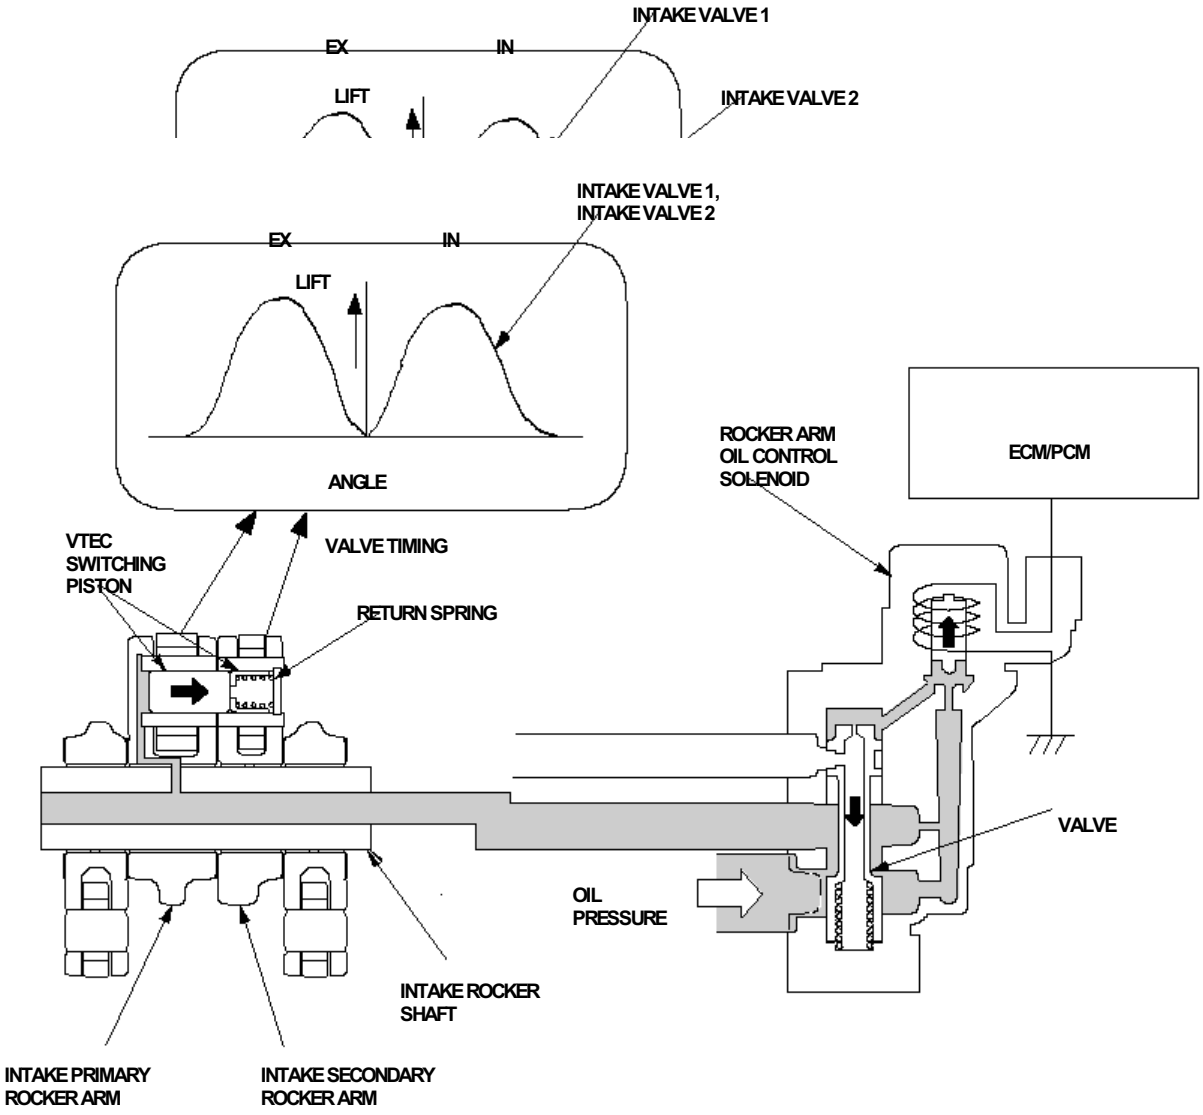
VTEC System (L13Z1 engine)

- This mechanism improves fuel efficiency and reduces exhaust emissions at all levels of engine speed, vehicle speed, and engine load.
- The VTEC system changes the cam profile to correspond to engine speed. It maximizes torque at low engine speed and output at high engine speed.
- The valve pause cam (low lift cam) is used at low engine speeds, and the high lift cam is used at high engine speeds.
- The rocker arm oil control solenoid switches the intake valve side of the VTEC system on and off; the solenoid is controlled by the ECM/PCM.

Operation (L13Z1 engine)

At low engine speed

At low engine speed, the rocker arm oil control solenoid is turned off by the ECM/PCM. Oil pressure from the rocker arm oil control valve does not enter the intake rocker shaft. Each intake rocker arm is separated by a return spring and lifted by each valve pause cam (low lift cam) lobe.



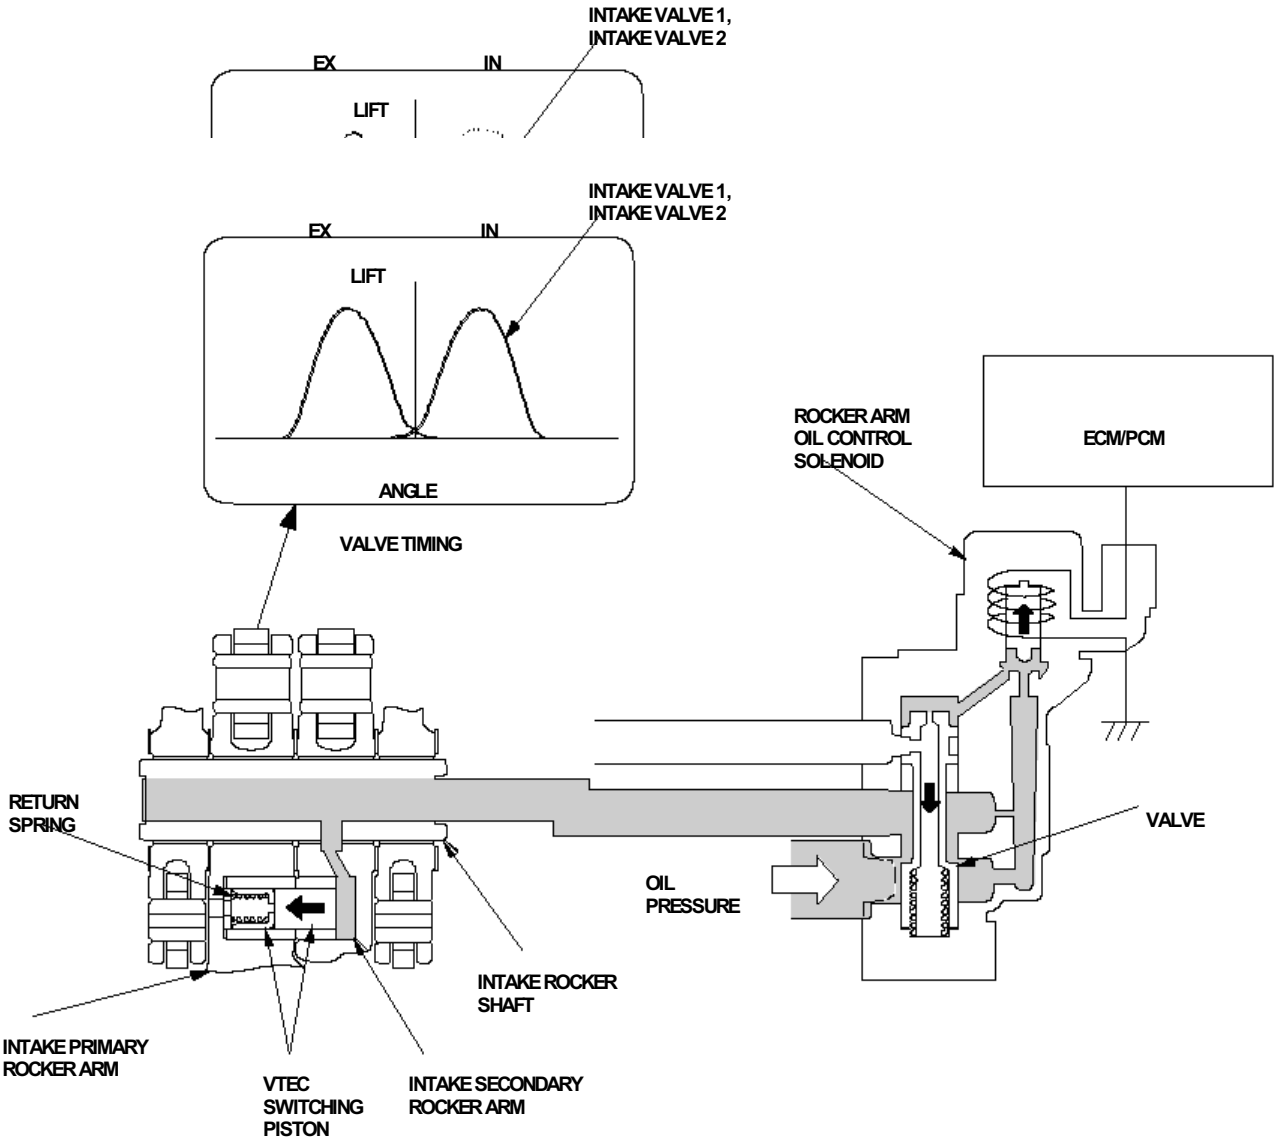
VTEC System (L15A7 engine)

- This mechanism improves fuel efficiency and reduces exhaust emissions at all levels of engine speed, vehicle speed, and engine load.
- The VTEC system changes the cam profile to correspond to engine speed. It maximizes torque at low engine speed and output at high engine speed.
- The low lift cam is used at low engine speeds, and the high lift cam is used at high engine speeds.
- The rocker arm oil control solenoid switch the both intake valves side of the VTEC system on and off; the solenoid is controlled by the ECM/PCM.

Operation (L15A7 engine)

At low engine speed

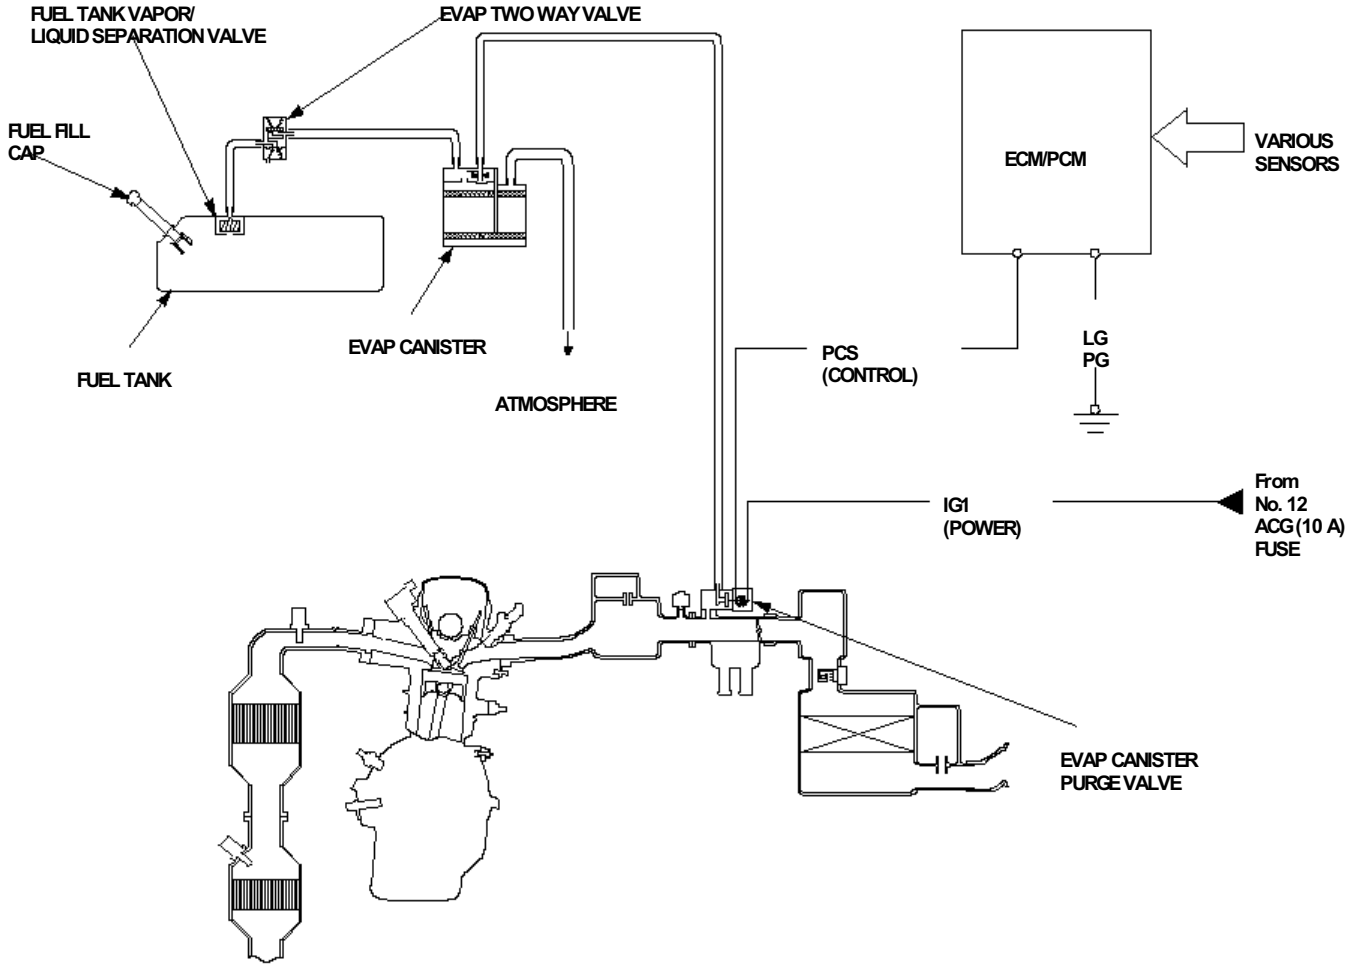
At low engine speed, the rocker arm oil control solenoid is turned off by the ECM/PCM. Oil pressure from the rocker arm oil control valve does not enter the intake rocker shaft. Both intake rocker arms are lifted by low lift cam lobe.



Evaporative Emission (EVAP) Control Diagram

The EVAP controls minimize the amount of fuel vapor escaping to the atmosphere. Vapor from the fuel tank is temporarily stored in the EVAP canister until it can be purged from the EVAP canister into the engine and burned.

- The EVAP canister is purged by drawing fresh air through it and into a port on the intake manifold.
  The purging vacuum is controlled by the EVAP canister purge valve, which is open whenever the engine coolant temperature is above 60 °C (140 °F).
- When vapor pressure in the fuel tank is higher than the set value of the EVAP two way valve, the valve opens and regulates the flow of fuel vapor to the EVAP canister.



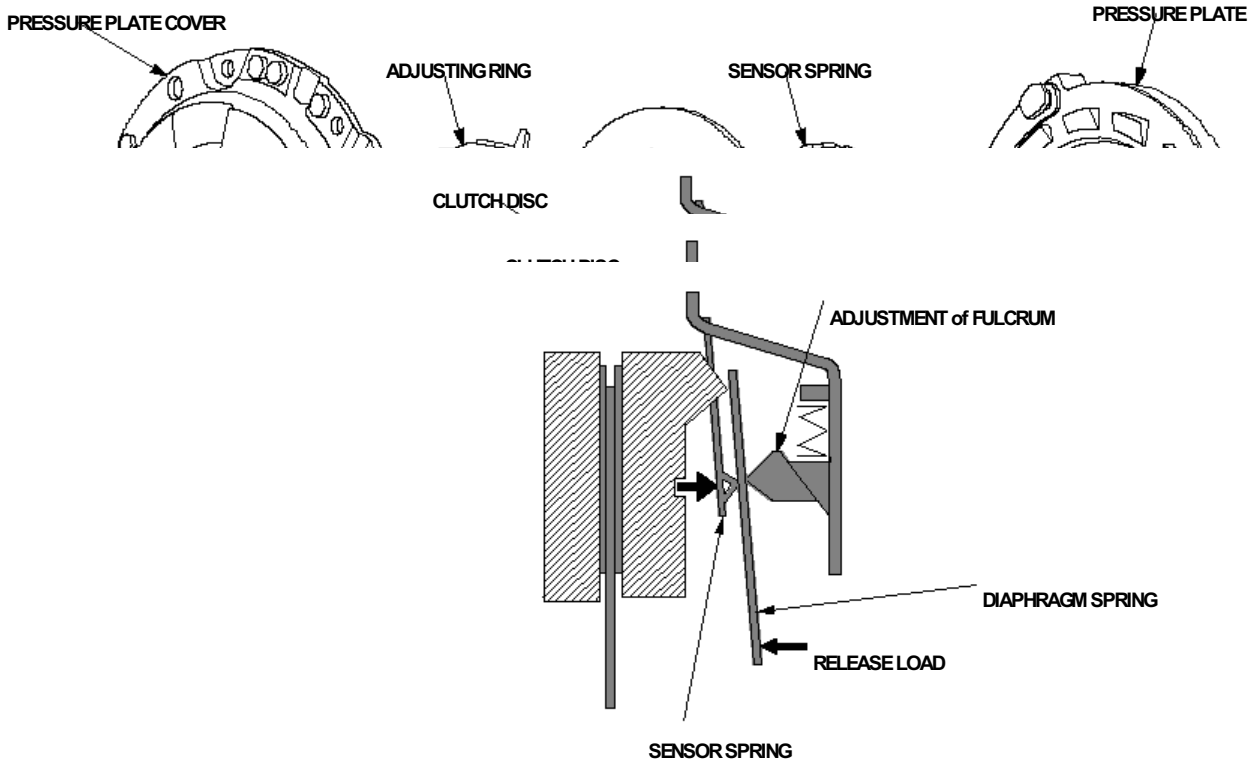
Self-Adjusting Clutch (SAC)

Function

On ordinary clutches, the clutch load increases as the clutch disc wears. The self-adjusting clutch is designed so that the clutch load will not increase even when the clutch disc wears. This is done by automatically adjusting the fulcrum of the diaphragm spring in accordance with the wear of the clutch disc. The clutch load stays consistent even when the clutch disc is worn.

Construction

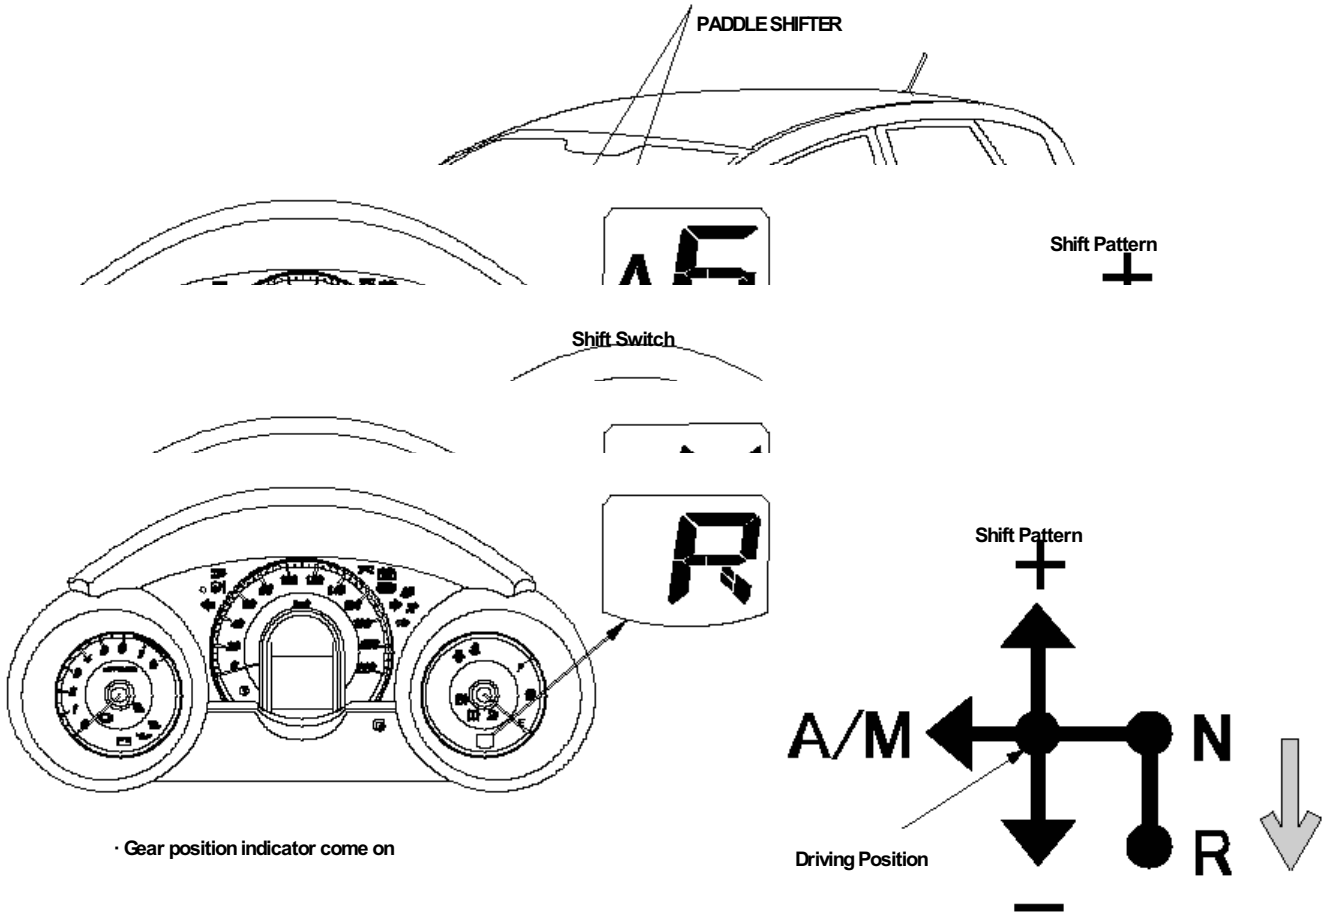
The self-adjusting clutch consists of a pressure plate, a sensor spring, a diaphragm spring, an adjusting ring, three coil springs, a pressure plate cover. They are riveted together and must not be disassembled. If there is problem with any part of the pressure plate or clutch disc, they must be replaced as a set.



i-SHIFT

Function

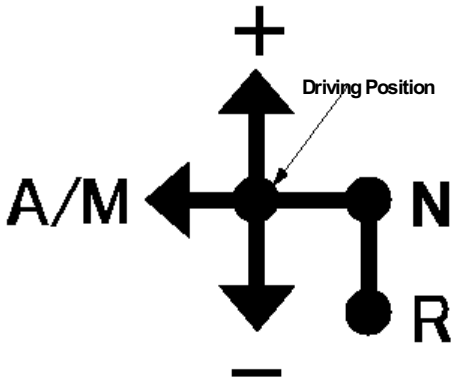
The i-SHIFT system is a system where the Transmission Control Module (TCM) determines the optimal condition based on the vehicle's change of wheel speed due to the operation of the accelerator and brakes, and then the actuator changes the vehicle speed.
i-SHIFT system enables switchover between Auto mode and Manual mode.
In the Auto mode, it automatically shifts gear appropriate for the driving condition, based on the shift transmission characteristics in the Transmission Control Module (TCM).
In the Manual mode, changing gears is done manually by using the shift lever or the paddle shifter.
While driving, the gear range is shown in the speedometer, and if abnormalities or malfunctions occur, a warning is displayed in the i-SHIFT indicator of the gauge control module and the multi-information display.



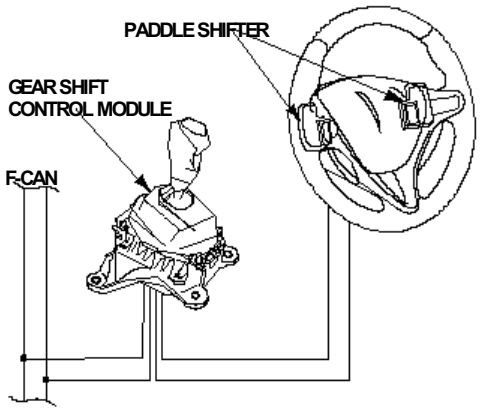
Gear Shift Control Module and Paddle Shifter

Function

The gear shift control module, TCM, and combination meter are communicated through the F-CAN.
The gear shift control module is equipped with magnet and shift lever position sensor that determines the driver's operation of the shift lever, and the gear shift control module sends the shift position signal to the TCM. The TCM sends the gear shifting information to the combination meter.
The paddle shifter at the steering wheel has the same ‘‘+" and ‘‘−" functions as the gear shift control module, and the operation signals passes through the gear shift control module and are sent to the TCM.
The gear shift control module has Detent mechanism that secures a smooth feel when the shift lever is operated.
Shift lever position is kept at ‘‘N", ‘‘R", or Driving Position, and when ‘‘+", ‘‘−", or ‘‘A/M" is selected, it goes to Driving Position.

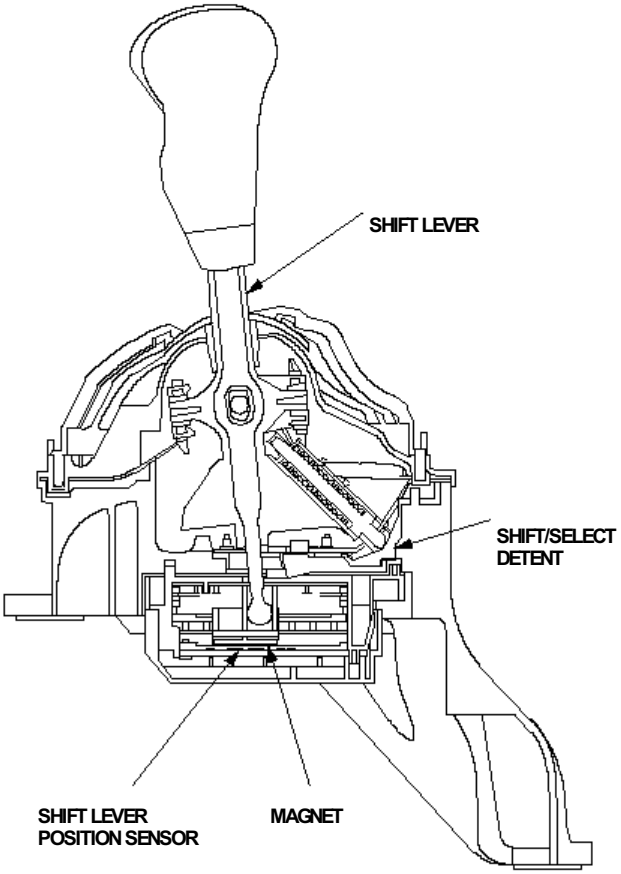


Shift Pattern



Operation

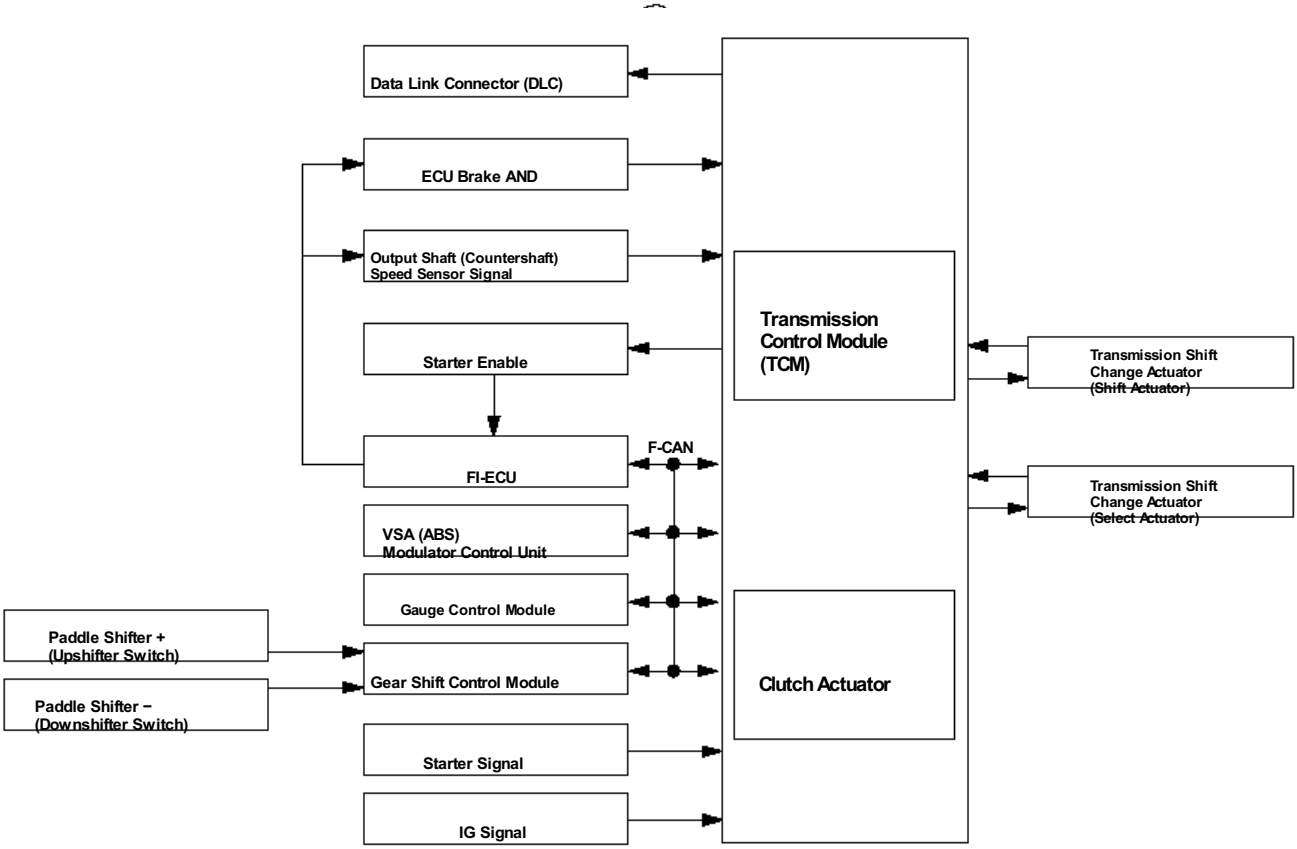
Driver operates the shift lever
↓
The magnet under the shift lever moves
↓
Detect position the magnet by the shift lever position sensor
↓
Judge a position by the CPU inside of the gear shift control module
↓
Output it as a CAN signal



Transmission Control Module (TCM)

Function

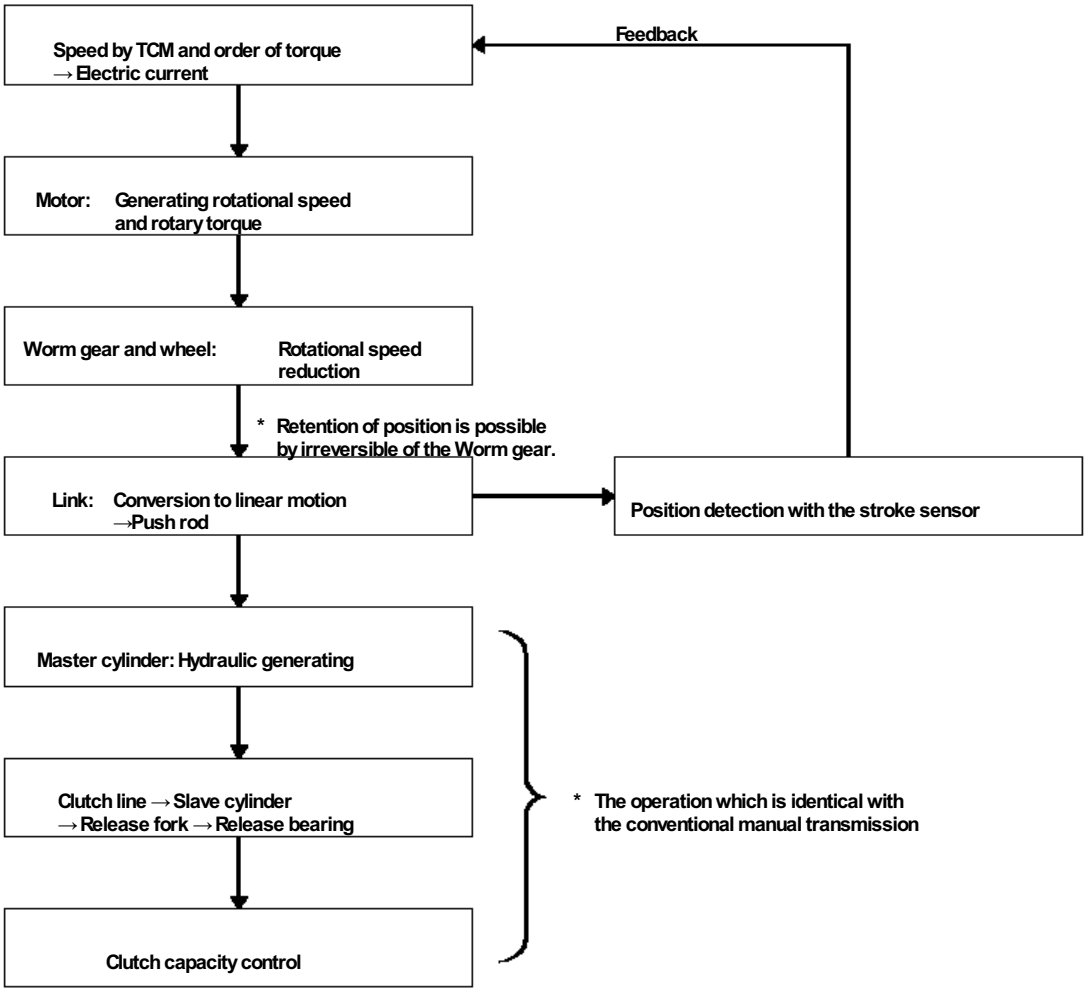
The TCM and Clutch Actuator are integrated in one unit.
The TCM determines the optimal gear-shifting condition based on the inputs from the sensors, switch signals, and F-CAN.



Clutch Actuator

Function

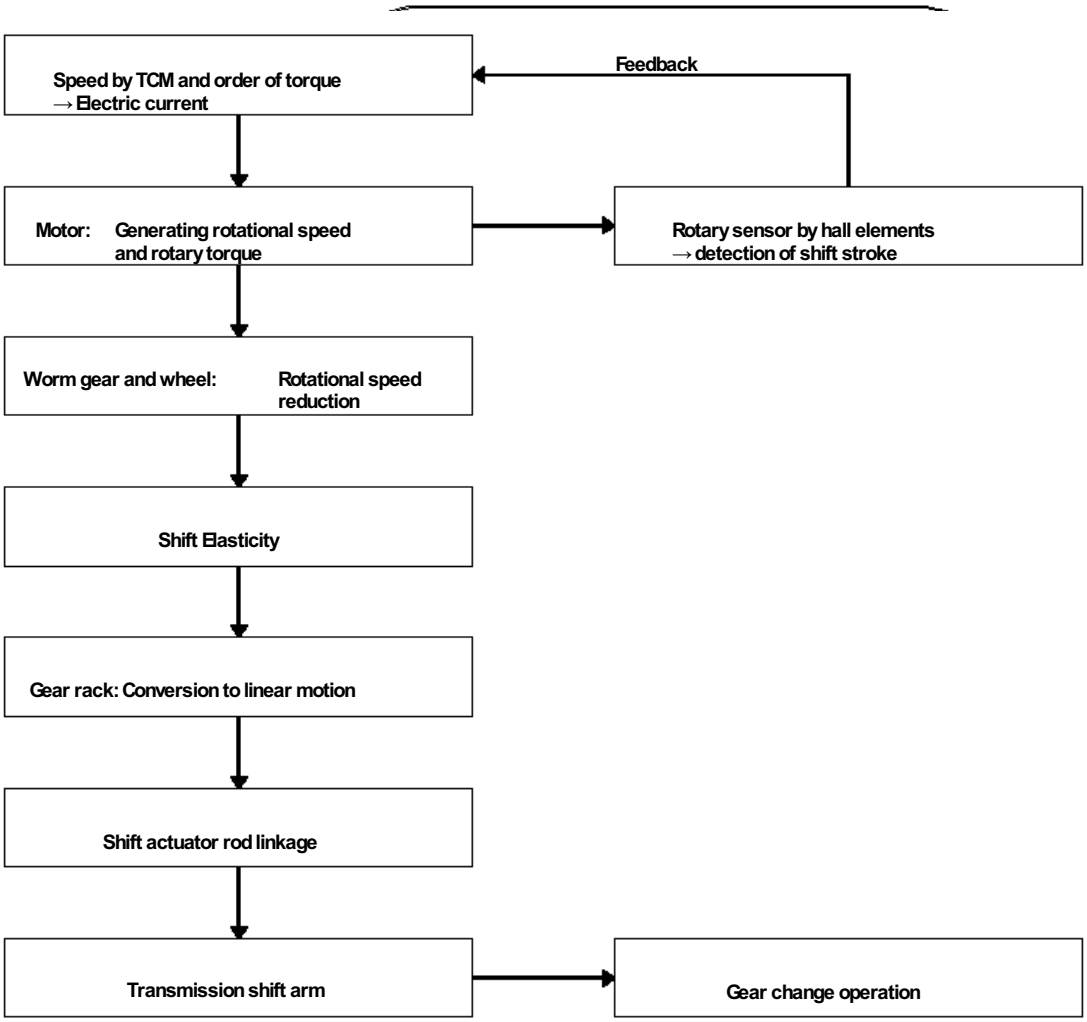
The Clutch Actuator is controlled by the TCM and is integrated in one unit with the TCM.
The Clutch Actuator consists of the clutch actuator motor section, gear/link mechanical section, and the master cylinder section.
Through the control signals from the TCM, the clutch actuator motor operates, then the rotational movement is converted to linear movement through the link mechanism, and the master cylinder is operated. Like the conventional manual transmission, the hydraulic pressure from the master cylinder operates the sleeve cylinder.
In the gear/link mechanical part, by using worm gear and wheel gear, retaining the push rod position is possible, and by detecting the position by the stroke sensor, realizing accurate clutch operation.

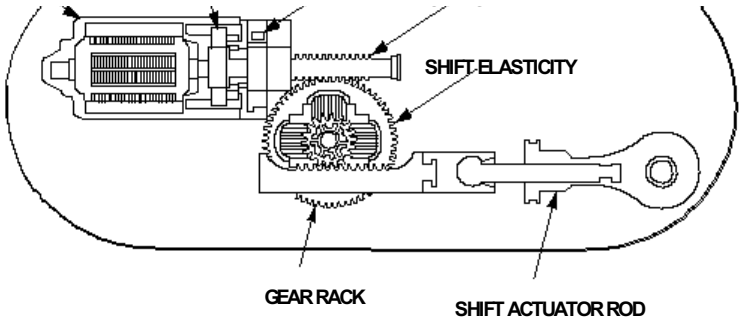


Transmission Shift Change Actuator (Shift Actuator Motor)

Function

The transmission shift change actuator is integrated with the shift actuator in one unit.
The shift actuator is connected to the shift lever of the manual transmission; and is composed of the motor section, gear section, and the shift actuator rod. This replaces the cable operation of the shift lever in conventional manual transmission.
By the control signals from the TCM, the motor operates; and by pushing the shift actuator rod through the gear mechanism, the transmission shift lever is operated. At this point, the position sensor detects the position of the transmission shift lever.
The shift elasticity protects the actuator and transmission by neutralizing the impact load, and shortens operation time.

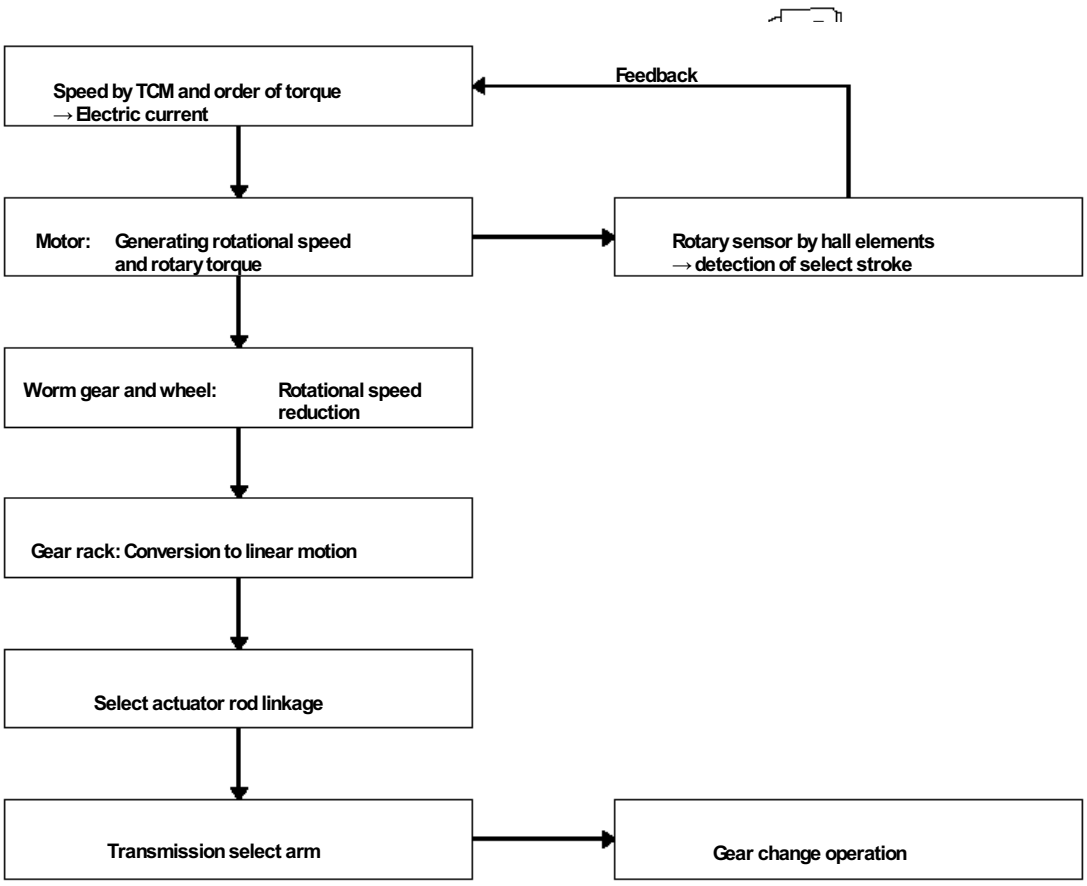




Transmission Shift Change Actuator (Select Actuator Motor)

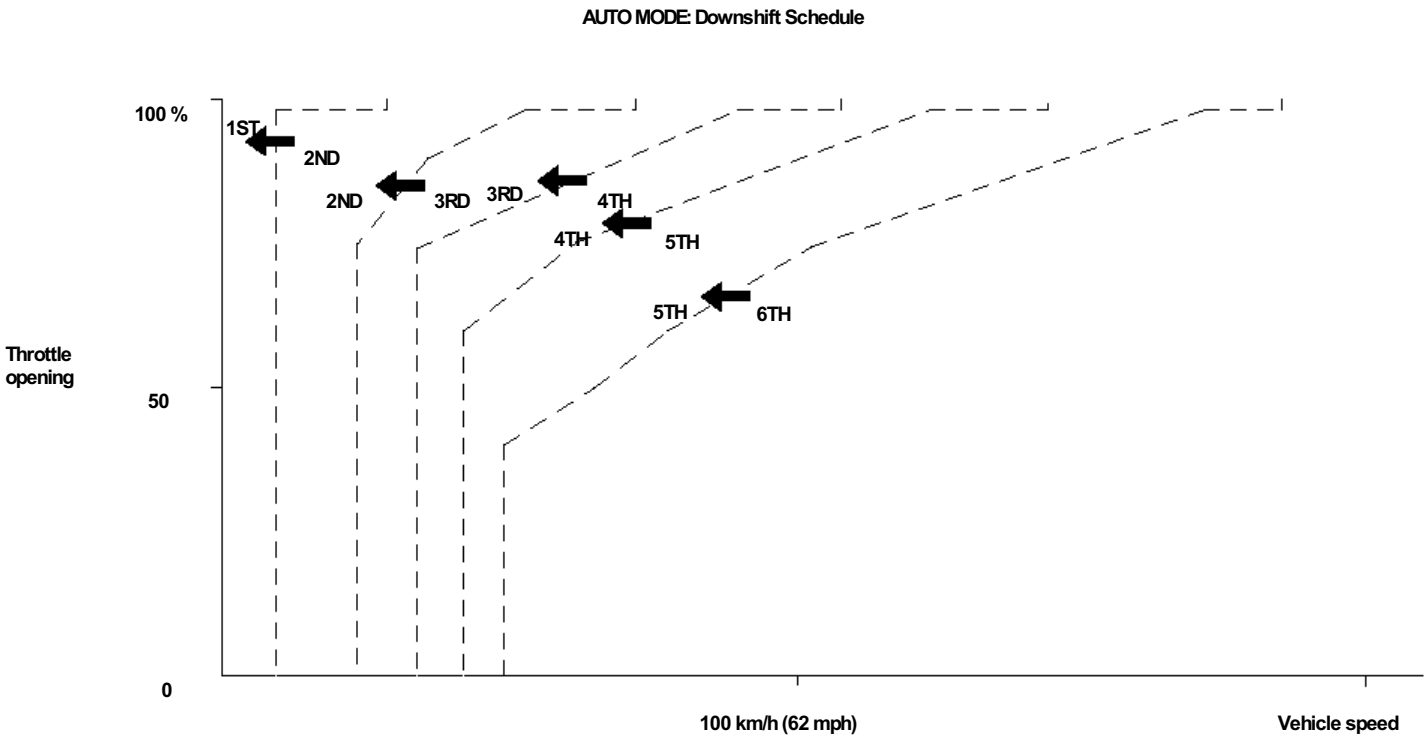
Function

The select actuator is connected to the select lever of the manual transmission; and is composed of the motor section, gear section, and the shift rod. This replaces the cable operation of the select lever in conventional manual transmission.
By the control signals from the TCM, the motor operates; and by pushing the shift rod through the gear mechanism, the Transmission select lever is operated. At this point, the position sensor detects the position of the transmission select lever.



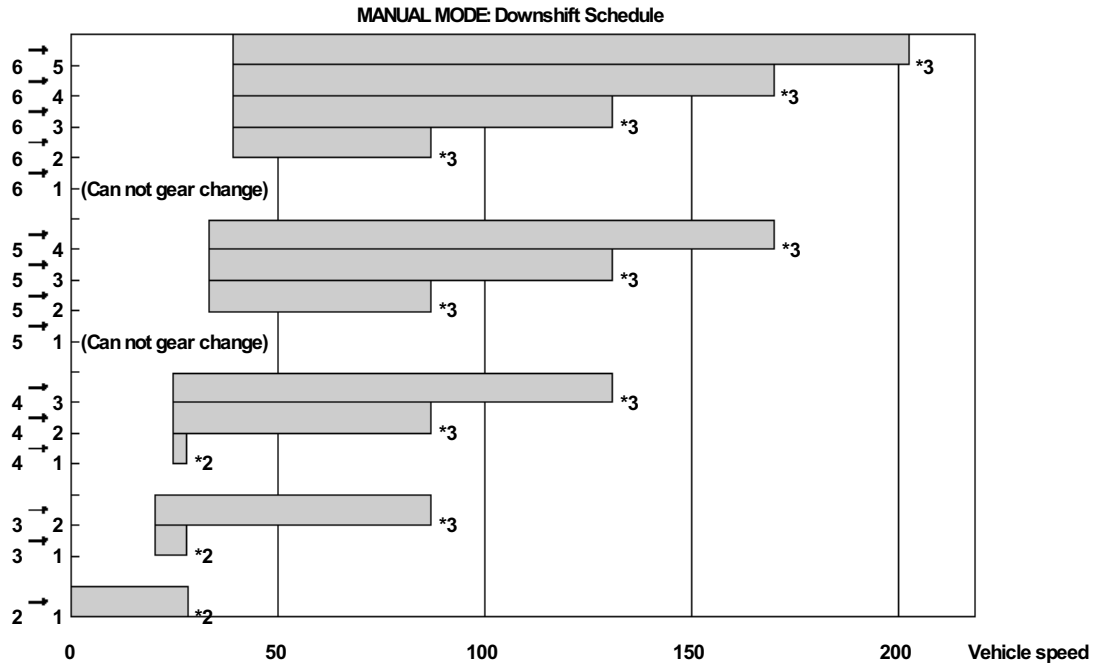
Auto Mode Gear-shifting Map

At Auto Mode, the gear is shifted according to the throttle opening and vehicle speed. The vehicle speed for a throttle opening while driving is shown in the gear-shifting characteristics graph.



Manual Mode Gear-shifting Map

In the Manual Mode, while the driver selects the gear-shifting gear, gear-shift position is regulated so as to protect the system and prevent accident.
The gear shift position for the vehicle speed while driving is shown in the gear-shifting map.
The TCM regulates the shifting of gears according to the driving condition. If operating time is 110 ms (60 ms for ON, 50 ms for OFF) or below, it is taken as a signal noise and shifting gear is not done. Also, in shifting to another gear, skipping a gear is not possible.

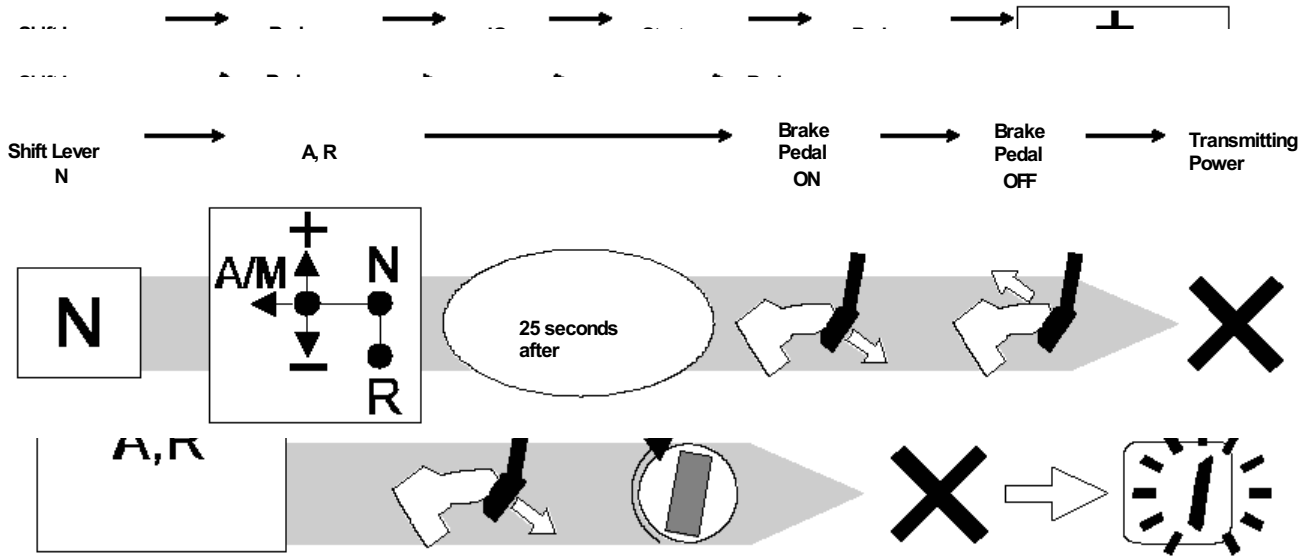


***2. Downshift to 1st gear is possible when the vehicle speed is equal or above the speed when the rotational speed in 1st gear is Rev. limit x 0.6.**

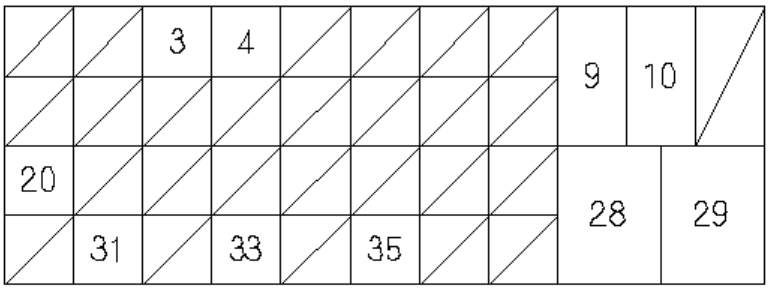
***3. To prevent over-Rev, set the rotational speed after downshift to Rev. limit-500 rpm.**

Prevents Mis-shifting System

Engine startup is impossible if the shift indicator shows an ‘‘I" or ‘‘R" condition, even if shift lever is in driving position. Also, the Position Indicator warns by blinking. When starting the engine, turn the shift position to ‘‘N".

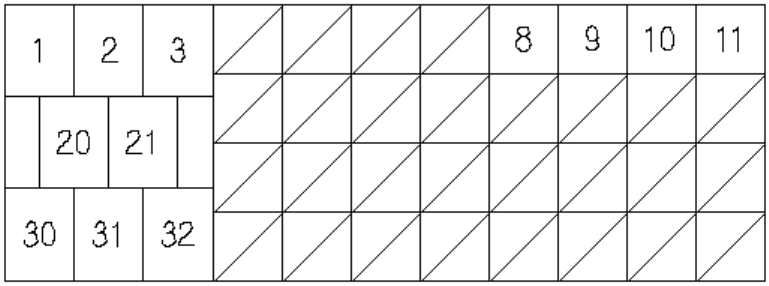


TCM Inputs and Outputs at Connector A (37P)



Terminal side of female terminals

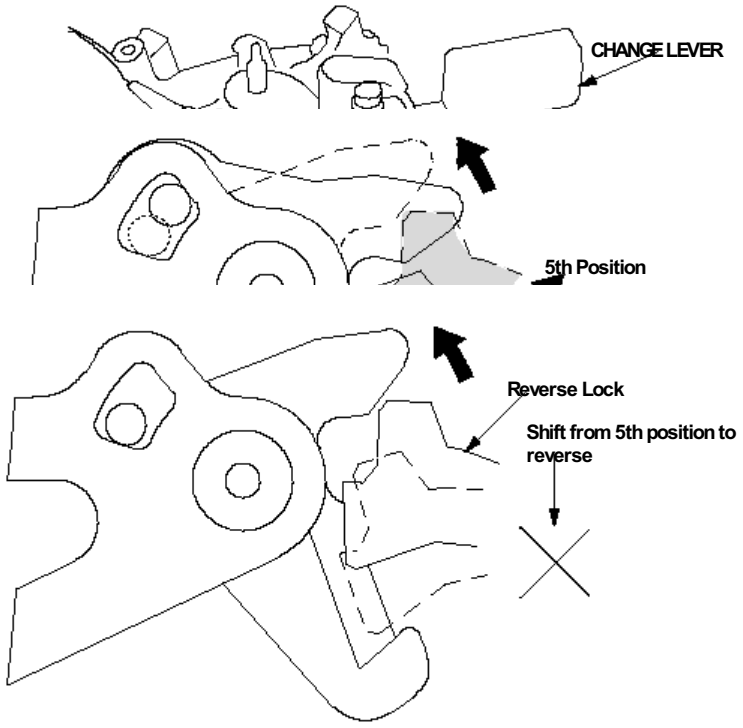
TCM Inputs and Outputs at Connector B (42P)

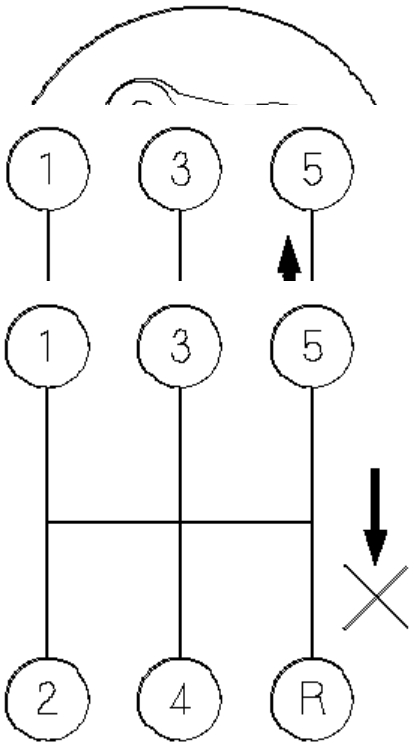


Terminal side of female terminals

Reverse Lockout System

The reverse lockout system prevents an inadvertent shift from 5th gear to reverse.





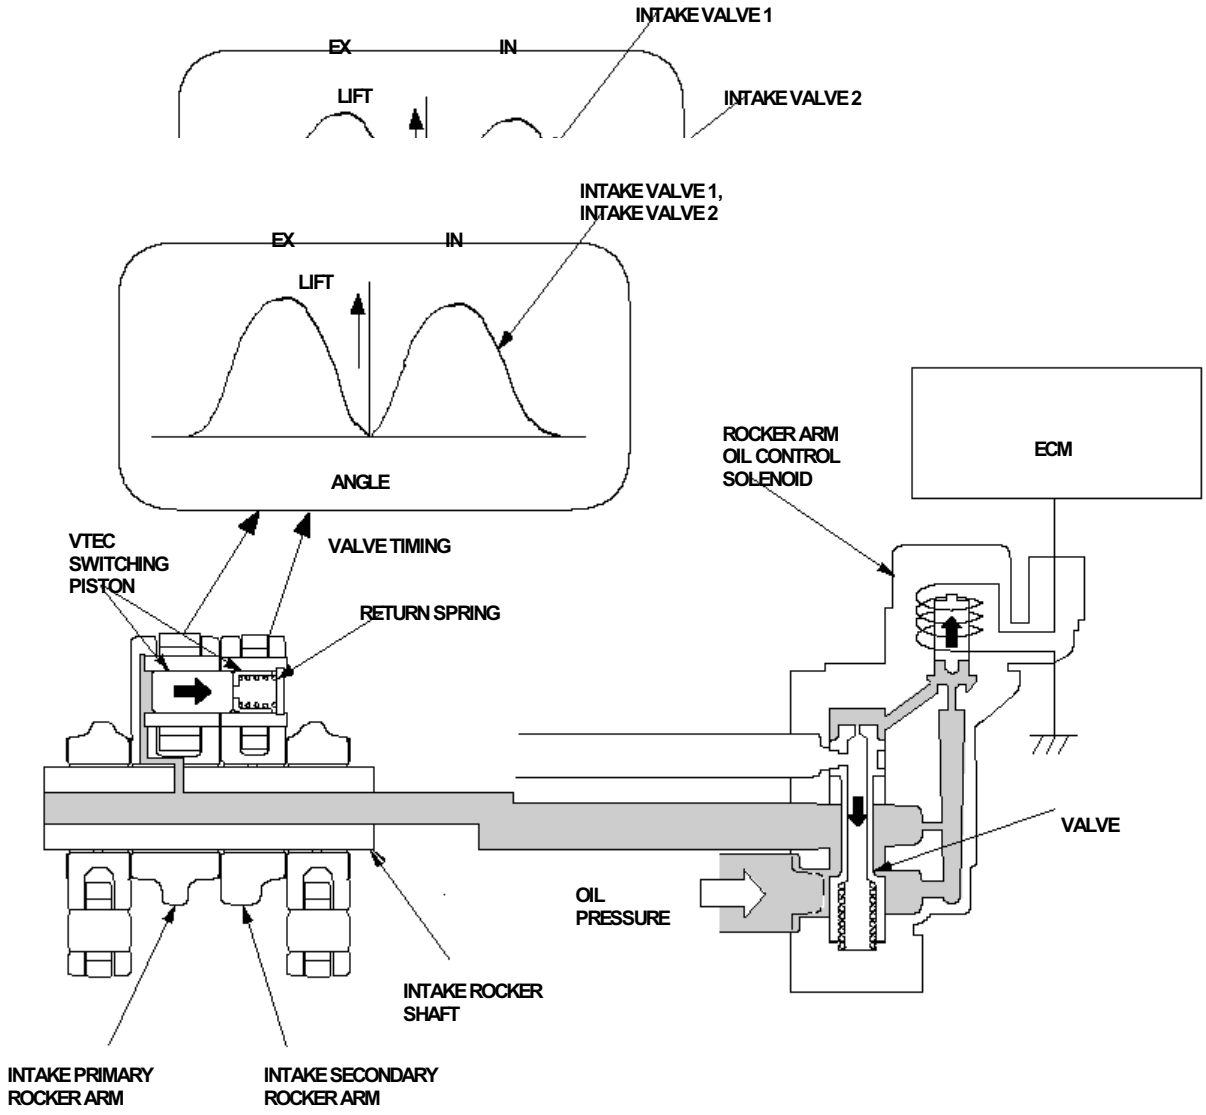
VTEC System (L12B1 engine)

- This mechanism improves fuel efficiency and reduces exhaust emissions at all levels of engine speed, vehicle speed, and engine load.
- The VTEC system changes the cam profile to correspond to engine speed. It maximizes torque at low engine speed and output at high engine speed.
- The valve pause cam (low lift cam) is used at low engine speeds, and the high lift cam is used at high engine speeds.
- The rocker arm oil control solenoid switches the intake valve side of the VTEC system on and off; the solenoid is controlled by the ECM.

Operation (L12B1 engine)

At low engine speed

At low engine speed, the rocker arm oil control solenoid is turned off by the ECM. Oil pressure from the rocker arm oil control valve does not enter the intake rocker shaft. Each intake rocker arm is separated by a return spring and lifted by each valve pause cam (low lift cam) lobe.



Maintenance Schedule for Normal and Severe Conditions - Australia

20,000km(1year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check rack grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Australia

40,000km(2year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- Replace engine oil filter *
- Inspect and adjust drive belt
  Look for cracks and damage, then check the deflection and tension.
- Check parking brake adjustment
  Check the parking brake operation.
- Replace dust and pollen filter

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- Brake hoses and lines (including ABS lines)
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- Exhaust system
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- Fuel lines, and connections
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- Replace engine oil *

Every 5,000 km (3,125 miles) or 6 months

- Replace engine oil *

Every 10,000 km (6,250 miles) or 6 months

- Replace engine oil filter *

Visually inspect the following items:

- Tie-rod ends, steering gearbox, and boots
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- Suspension components
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- Driveshaft boots
  - Check the boot and boot band for cracks.
  - Check rack grease.

Every 30,000 km (18,750 miles)

- Replace air cleaner element

Every 40,000 km (25,000 miles)

- Inspect valve clearance

Every 100,000 km (62,500 miles)

- Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Australia

60,000km(3year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Australia

80,000km(4year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace fuel filter**
- **Inspect and adjust drive belt**
  Look for cracks and damage, then check the deflection and tension.
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check rack grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Australia

100,000km(5year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace Automatic Transmission Fluid**

  Use genuine Honda ATF-Z1.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check rack grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Australia

120,000km(6year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Inspect and adjust drive belt**
  Look for cracks and damage, then check the deflection and tension.
- **Inspect idle speed**
- **Replace Manual Transmission Fluid**
  Use genuine Honda MTF.
- **Replace Manual Transmission Fluid**
  Use genuine Honda MTF.
- **Replace Automatic Transmission Fluid**
  Use genuine Honda ATF-Z1.
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**

- Check the boot and boot band for cracks.
- Check rack grease.

Every 30,000 km (18,750 miles)

Replace air cleaner element

Every 40,000 km (25,000 miles)

Inspect valve clearance

Every 100,000 km (62,500 miles)

Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

Replace engine coolant

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

Check front and rear brakes

- Check the brake pad and disc thickness. Check for damage.
- Check the calipers for damage, leaks, and tightness.

Every 3 years

Replace brake fluid

- Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
- Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

Rotate tyres

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Australia

140,000km(7year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for “severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check rack grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Australia

25,000miles(2year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for “severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- Replace engine oil filter *
- Inspect and adjust drive belt
  Look for cracks and damage, then check the deflection and tension.
- Check parking brake adjustment
  Check the parking brake operation.
- Replace dust and pollen filter

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- Brake hoses and lines (including ABS lines)
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- Exhaust system
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- Fuel lines, and connections
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- Replace engine oil *

Every 5,000 km (3,125 miles) or 6 months

- Replace engine oil *

Every 10,000 km (6,250 miles) or 6 months

- Replace engine oil filter *

Visually inspect the following items:

- Tie-rod ends, steering gearbox, and boots
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- Suspension components
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- Driveshaft boots
  - Check the boot and boot band for cracks.
  - Check rack grease.

Every 30,000 km (18,750 miles)

- Replace air cleaner element

Every 40,000 km (25,000 miles)

- Inspect valve clearance

Every 100,000 km (62,500 miles)

- Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Australia

37,000miles(3year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- Replace engine oil filter *
- Replace Manual Transmission Fluid
  Use genuine Honda MTF.
- Replace Automatic Transmission Fluid
  Use genuine Honda ATF-Z1.
- Replace dust and pollen filter

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- Brake hoses and lines (including ABS lines)
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- Exhaust system
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- Fuel lines, and connections
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- Replace engine oil *

Every 5,000 km (3,125 miles) or 6 months

- Replace engine oil *

Every 10,000 km (6,250 miles) or 6 months

- Replace engine oil filter *

Visually inspect the following items:

- Tie-rod ends, steering gearbox, and boots
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- Suspension components
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- Driveshaft boots
  - Check the boot and boot band for cracks.
  - Check rack grease.

Every 30,000 km (18,750 miles)

- Replace air cleaner element

Every 40,000 km (25,000 miles)

- Inspect valve clearance

Every 100,000 km (62,500 miles)

- Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Australia

50,000miles(4year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace fuel filter**
- **Inspect and adjust drive belt**
  Look for cracks and damage, then check the deflection and tension.
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check rack grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Australia

62,000miles(5year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace Automatic Transmission Fluid**

  Use genuine Honda ATF-Z1.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check rack grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Australia

75,000miles(6year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Inspect and adjust drive belt**
  Look for cracks and damage, then check the deflection and tension.
- **Inspect idle speed**
- **Replace Manual Transmission Fluid**
  Use genuine Honda MTF.
- **Replace Manual Transmission Fluid**
  Use genuine Honda MTF.
- **Replace Automatic Transmission Fluid**
  Use genuine Honda ATF-Z1.
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**

- Check the boot and boot band for cracks.
- Check rack grease.

Every 30,000 km (18,750 miles)

Replace air cleaner element

Every 40,000 km (25,000 miles)

Inspect valve clearance

Every 100,000 km (62,500 miles)

Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

Replace engine coolant

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

Check front and rear brakes

- Check the brake pad and disc thickness. Check for damage.
- Check the calipers for damage, leaks, and tightness.

Every 3 years

Replace brake fluid

- Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
- Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

Rotate tyres

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Australia

87,000miles(7year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Australia

100,000miles(8year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace fuel filter**
- **Inspect and adjust drive belt**
  Look for cracks and damage, then check the deflection and tension.
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check rack grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Australia

112,000miles(9year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- Replace engine oil filter *
- Replace Manual Transmission Fluid

  Use genuine Honda MTF.
- Replace Automatic Transmission Fluid

  Use genuine Honda ATF-Z1.
- Replace dust and pollen filter

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- Brake hoses and lines (including ABS lines)

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- Exhaust system

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- Fuel lines, and connections
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- Replace engine oil *

Every 5,000 km (3,125 miles) or 6 months

- Replace engine oil *

Every 10,000 km (6,250 miles) or 6 months

- Replace engine oil filter *

Visually inspect the following items:

- Tie-rod ends, steering gearbox, and boots
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- Suspension components
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- Driveshaft boots
  - Check the boot and boot band for cracks.
  - Check rack grease.

Every 30,000 km (18,750 miles)

- Replace air cleaner element

Every 40,000 km (25,000 miles)

- Inspect valve clearance

Every 100,000 km (62,500 miles)

- Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Australia

125,000miles(10year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for “severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- Replace engine oil filter *
- Inspect and adjust drive belt
  Look for cracks and damage, then check the deflection and tension.
- Replace Automatic Transmission Fluid
  Use genuine Honda ATF-Z1.
- Check parking brake adjustment
  Check the parking brake operation.
- Replace dust and pollen filter

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- Brake hoses and lines (including ABS lines)
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- Exhaust system
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- Fuel lines, and connections
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- Replace engine oil *

Every 5,000 km (3,125 miles) or 6 months

- Replace engine oil *

Every 10,000 km (6,250 miles) or 6 months

- Replace engine oil filter *

Visually inspect the following items:

- Tie-rod ends, steering gearbox, and boots
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- Suspension components
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- Driveshaft boots
  - Check the boot and boot band for cracks.
  - Check rack grease.

Every 30,000 km (18,750 miles)

- Replace air cleaner element

Every 40,000 km (25,000 miles)

- Inspect valve clearance

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except Australia

20,000km(1year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E

  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Inspect and adjust drive belt**
  Look for cracks and damage, then check the deflection and tension.
- **Inspect idle speed**
- **Replace Manual Transmission Fluid**
  Use genuine Honda MTF.
- **Replace Manual Transmission Fluid**
  Use genuine Honda MTF.
- **Replace Automatic Transmission Fluid**
  Use genuine Honda ATF-Z1.
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**

- Check the boot and boot band for cracks.
- Check rack grease.

Every 30,000 km (18,750 miles)

Replace air cleaner element

Every 40,000 km (25,000 miles)

Inspect valve clearance

Every 100,000 km (62,500 miles)

Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

Replace engine coolant

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

Check front and rear brakes

- Check the brake pad and disc thickness. Check for damage.
- Check the calipers for damage, leaks, and tightness.

Every 3 years

Replace brake fluid

- Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
- Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

Rotate tyres

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except Australia

140,000km(7year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for “severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace Automatic Transmission Fluid**

  Use genuine Honda ATF-Z1.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check rack grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except Australia

180,000km(9year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- Replace engine oil filter *
- Replace Manual Transmission Fluid
  Use genuine Honda MTF.
- Replace Automatic Transmission Fluid
  Use genuine Honda ATF-Z1.
- Replace dust and pollen filter

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- Brake hoses and lines (including ABS lines)
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- Exhaust system
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- Fuel lines, and connections
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- Replace engine oil *

Every 5,000 km (3,125 miles) or 6 months

- Replace engine oil *

Every 10,000 km (6,250 miles) or 6 months

- Replace engine oil filter *

Visually inspect the following items:

- Tie-rod ends, steering gearbox, and boots
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- Suspension components
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- Driveshaft boots
  - Check the boot and boot band for cracks.
  - Check rack grease.

Every 30,000 km (18,750 miles)

- Replace air cleaner element

Every 40,000 km (25,000 miles)

- Inspect valve clearance

Every 100,000 km (62,500 miles)

- Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except Australia

200,000km(10year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Inspect and adjust drive belt**
  Look for cracks and damage, then check the deflection and tension.

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except Australia

25,000miles(2year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- Replace engine oil filter *
- Inspect and adjust drive belt
  Look for cracks and damage, then check the deflection and tension.
- Check parking brake adjustment
  Check the parking brake operation.
- Replace dust and pollen filter

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- Brake hoses and lines (including ABS lines)
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- Exhaust system
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- Fuel lines, and connections
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- Replace engine oil *

Every 5,000 km (3,125 miles) or 6 months

- Replace engine oil *

Every 10,000 km (6,250 miles) or 6 months

- Replace engine oil filter *

Visually inspect the following items:

- Tie-rod ends, steering gearbox, and boots
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- Suspension components
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- Driveshaft boots
  - Check the boot and boot band for cracks.
  - Check rack grease.

Every 30,000 km (18,750 miles)

- Replace air cleaner element

Every 40,000 km (25,000 miles)

- Inspect valve clearance

Every 100,000 km (62,500 miles)

- Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except Australia

37,000miles(3year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- Replace engine oil filter *
- Replace Manual Transmission Fluid
  Use genuine Honda MTF.
- Replace Automatic Transmission Fluid
  Use genuine Honda ATF-Z1.
- Replace dust and pollen filter
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- Brake hoses and lines (including ABS lines)
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- Exhaust system
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- Fuel lines, and connections
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- Replace engine oil *

Every 5,000 km (3,125 miles) or 6 months

- Replace engine oil *

Every 10,000 km (6,250 miles) or 6 months

- Replace engine oil filter *
- ***Visually inspect the following items:***
- Tie-rod ends, steering gearbox, and boots
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- Suspension components
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- Driveshaft boots
  - Check the boot and boot band for cracks.
  - Check rack grease.

Every 30,000 km (18,750 miles)

- Replace air cleaner element

Every 40,000 km (25,000 miles)

- Inspect valve clearance

Every 100,000 km (62,500 miles)

- Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except Australia

50,000miles(4year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace fuel filter**
- **Inspect and adjust drive belt**
  Look for cracks and damage, then check the deflection and tension.
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check rack grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except Australia

62,000miles(5year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for “severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- Replace engine oil filter *
- Replace Automatic Transmission Fluid
  Use genuine Honda ATF-Z1.
- Replace dust and pollen filter

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- Brake hoses and lines (including ABS lines)
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- Exhaust system
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- Fuel lines, and connections
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- Replace engine oil *

Every 5,000 km (3,125 miles) or 6 months

- Replace engine oil *

Every 10,000 km (6,250 miles) or 6 months

- Replace engine oil filter *

Visually inspect the following items:

- Tie-rod ends, steering gearbox, and boots
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- Suspension components
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- Driveshaft boots
  - Check the boot and boot band for cracks.
  - Check rack grease.

Every 30,000 km (18,750 miles)

- Replace air cleaner element

Every 40,000 km (25,000 miles)

- Inspect valve clearance

Every 100,000 km (62,500 miles)

- Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- Replace engine coolant

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except Australia

75,000miles(6year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Inspect and adjust drive belt**
  Look for cracks and damage, then check the deflection and tension.
- **Inspect idle speed**
- **Replace Manual Transmission Fluid**
  Use genuine Honda MTF.
- **Replace Manual Transmission Fluid**
  Use genuine Honda MTF.
- **Replace Automatic Transmission Fluid**
  Use genuine Honda ATF-Z1.
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**

- Check the boot and boot band for cracks.
- Check rack grease.

Every 30,000 km (18,750 miles)

Replace air cleaner element

Every 40,000 km (25,000 miles)

Inspect valve clearance

Every 100,000 km (62,500 miles)

Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

Replace engine coolant

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

Check front and rear brakes

- Check the brake pad and disc thickness. Check for damage.
- Check the calipers for damage, leaks, and tightness.

Every 3 years

Replace brake fluid

- Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
- Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

Rotate tyres

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except Australia

87,000miles(7year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- Replace engine oil filter *
- Replace Manual Transmission Fluid
  Use genuine Honda MTF.
- Replace Automatic Transmission Fluid
  Use genuine Honda ATF-Z1.
- Replace dust and pollen filter

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- Brake hoses and lines (including ABS lines)
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- Exhaust system
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- Fuel lines, and connections
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- Replace engine oil *

Every 5,000 km (3,125 miles) or 6 months

- Replace engine oil *

Every 10,000 km (6,250 miles) or 6 months

- Replace engine oil filter *

Visually inspect the following items:

- Tie-rod ends, steering gearbox, and boots
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- Suspension components
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- Driveshaft boots
  - Check the boot and boot band for cracks.
  - Check rack grease.

Every 30,000 km (18,750 miles)

- Replace air cleaner element

Every 40,000 km (25,000 miles)

- Inspect valve clearance

Every 100,000 km (62,500 miles)

- Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except Australia

125,000miles(10year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- Replace engine oil filter *
- Inspect and adjust drive belt
  Look for cracks and damage, then check the deflection and tension.
- Replace Automatic Transmission Fluid
  Use genuine Honda ATF-Z1.
- Check parking brake adjustment
  Check the parking brake operation.
- Replace dust and pollen filter

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- Brake hoses and lines (including ABS lines)
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- Exhaust system
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- Fuel lines, and connections
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- Replace engine oil *

Every 5,000 km (3,125 miles) or 6 months

- Replace engine oil *

Every 10,000 km (6,250 miles) or 6 months

- Replace engine oil filter *

Visually inspect the following items:

- Tie-rod ends, steering gearbox, and boots
  - Check rack grease and steering linkage.
  - Check the boot for damage and leaking grease.
- Suspension components
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- Driveshaft boots
  - Check the boot and boot band for cracks.
  - Check rack grease.

Every 30,000 km (18,750 miles)

- Replace air cleaner element

Every 40,000 km (25,000 miles)

- Inspect valve clearance

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

MICU Control Function Index

System	Function
Multiplex Control	Sends the switch signal information to the MICU and output the information. The MICU controls the ECUs electric load and communication based upon the information received from the B-CAN.
On-board Diagnosis	The MICU has a gateway function which sends the results of the MICU internal diagnosis and the B-CAN connected ECUs diagnosis to the HDS.
Self-diagnosis	Test mode 1 diagnoses the communication line between the MICU and B-CAN connected unit. Test mode 2 checks the switch inputs connected to the MICU.
Interior Light(s)	The MICU controls the interior lights ON, OFF and dimming based upon the information of the related switches and/or the B-CAN related information.
Sleep Function	The MICU has a sleep function, which it enters during power down mode.

The MICU also controls the function of these circuits:

- Entry lights control (ceiling light, cargo area light)
- Exterior lights control
- Horn
- Interlock system
- Keyless entry
- Power door locks
- Security alarm
- Turn signal/hazard flasher
- Wiper/washer

Hardware Fail-safe Control

Fail-safe Function

When a CPU problem or a abnormal power supply voltage is detected, the MICU moves to the hardware fail-safe mode, and each system output load is set to the pre-programmed fail-safe value.

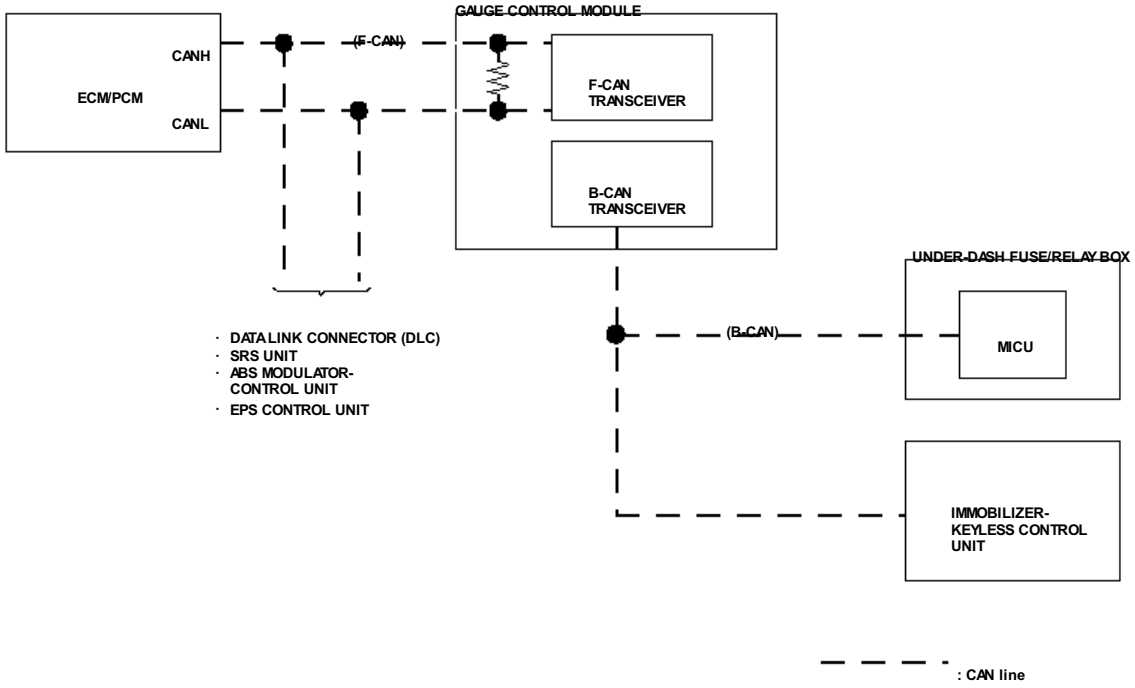
Software Fail-safe Control

When any of the data from the B-CAN circuit cannot be received within a specified time, or an unusual combination of the data is recognized, the MICU moves to the software fail-safe mode. The data that cannot be received is forced to pre-programmed value.

B-CAN

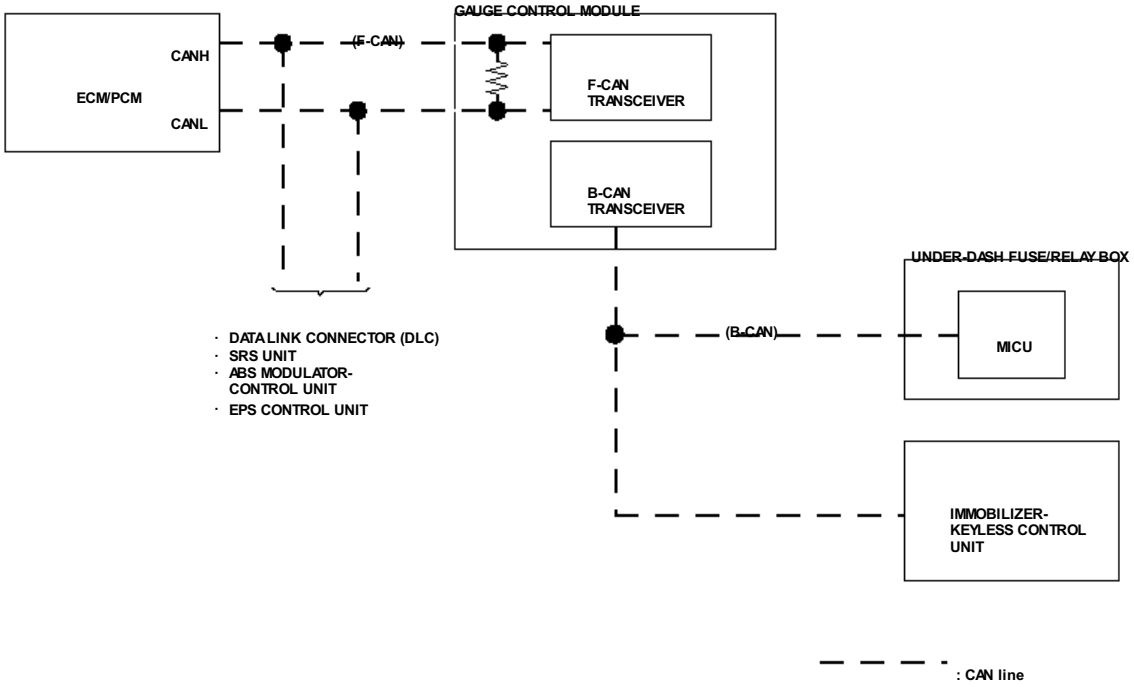
The body controller area network (B-CAN) and the fast controller area network (F-CAN) share information between multiple electronic control units (ECUs). B-CAN communication moves at a slower speed (33.33 kbps) for convenience related items and for other functions. F-CAN information moves at a faster speed (500 kbps) for ‘‘real time" functions such as fuel and emissions data. To allow both systems to share information, the gauge control module translates information from B-CAN to F-CAN and from F-CAN to B-CAN.

- The single wire method is used between the units not requiring the communication to move at a fast speed.
- Using a single wire method reduces the number of the wires used on B-CAN.



Gateway Function

The gauge control module acts as a gateway to allow both systems to share information. The gauge control module translates information from B-CAN to F-CAN and from F-CAN to B-CAN.



Network “Loss of Communication" Error Checking Function

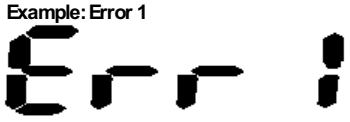
The ECUs on the CAN circuit send messages to each other. If there is any malfunction on the network, the odo/trip display on the gauge control module can indicate the error messages by entering the gauge self-diagnostic function.

Error Code List

Error code	Type of communication line(s) error
Error 1	F-CAN communication
Error 2	B-CAN communication
Error 12	F-CAN and B-CAN communication

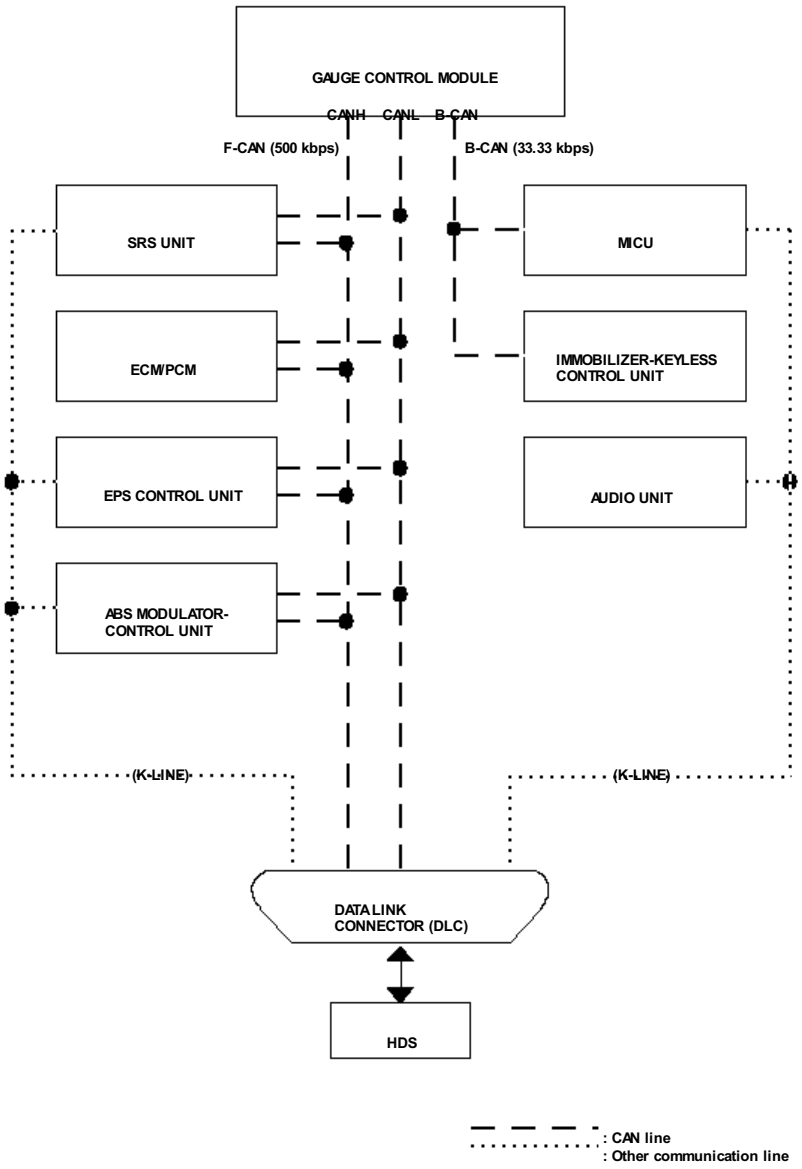
NOTE: For further information about Error indication, refer to the gauge control module self-diagnostic function.

Example: Error 1



Self-diagnostic Function

By connecting the HDS to the data link connector (DLC), the HDS can retrieve and indicate the diagnostic results of each ECU. The diagnostic line called K-LINE is distinguished from the CAN lines, and connected to the CAN related ECUs. The MICU is a gateway between the HDS and B-CAN related ECUs, and sends B-CAN diagnostic results to the HDS.



Wake-up and Sleep Function

The multiplex control system has ‘‘wake-up" and ‘‘sleep" functions to decrease the parasitic draw on the battery when the ignition switch is OFF.

- In the sleep mode, the MICU stops functioning (communication and CPU control) when it is not necessary for the system to operate.
- As soon as any operation is requested (for example, a door is unlocked), the related control unit the sleep mode immediately wakes up and begins to function.
- When the ignition switch is turned OFF, and the driver's door is opened, then closed, there is a delay of about 40 seconds before the control unit goes from the wake-up mode to the sleep mode.
- The sleep mode will not function if any door is opened or if a ignition switch is in the ignition.
- The draw is reduced from 200 mA to less than 35 mA when in the sleep mode.

Fail-safe Function

To prevent improper operation, the MICU has a fail-safe function. In the fail-safe mode, the output signal is fixed when any part of the system malfunctions (for example, a faulty control unit or communication line).
Each control unit has a hardware fail-safe function that fixes the output signal when there is a CPU malfunction, and a software fail-safe function that ignores the signal from a control unit, which allows the system to operate normally.

Power Supply Voltage Monitoring Function

The MICU monitors the power supply voltage (back-up voltage). If the voltage goes below 10 V, the MICU sends a MICU message and will not store DTCs.

	Input	Output
MICU	Battery voltage	
B-CAN		MICU message

Headlights

The MICU controls the headlights based upon the ignition switch (IG1) and the combination light switch signals.

	Input	Output
MICU	IG1 power supply Combination light switch (SMALL) Headlight switch (OFF) Headlight switch (ON) Dimmer switch Passing switch	Headlight (LOW) Headlight (HIGH) Front position lights/Taillights
B-CAN		MICU (RM) massage MICU (HLSW) massage

Turn Signal

The MICU controls the turn signal/hazard flasher lights based upon the input signals from the turn signal switch and the hazard warning switch.

	Input	Output
MICU	IG1 power supply Hazard warning switch Turn signal switch (left) Turn signal switch (right)	Turn signal lights (left) Turn signal lights (right)

Entry Light

The MICU controls the interior lights based upon the input signals of each switches and the B-CAN signals.

	Input	Output
MICU	IG1 power supply Ignition key switch Driver's door switch Front passenger's door switch Left rear door switch Right rear door switch Driver's door lock knob switch (LOCK/UNLOCK)	Individual map light
B-CAN	Keyless LOCK/UNLOCK signal	

Cargo Area Light

The MICU controls the cargo area light based upon the tailgate latch switch signal.

	Input	Output
MICU	Tailgate latch switch	Cargo area light

Windshield Wiper Operation

The MICU controls the windshield wiper motor based upon the signals from each switch and the B-CAN.

	Input	Output
MICU	IG1 power supply Windshield wiper switch (INT/LO) Windshield wiper switch (LO/HI) Windshield wiper switch (MIST) Windshield washer switch Windshield wiper switch (As)	Windshield wiper motor (INT) Windshield wiper motor (HI) Windshield washer motor
B-CAN	IG1 METER signal	

Rear Window Wiper Operation

The MICU controls the rear window wiper motor and washer motor based upon the wiper/washer switch signals.

	Input	Output
MICU	IG1 power supply Rear window wiper switch Rear window washer switch Windshield washer switch Windshield wiper switch (INT) Windshield wiper switch (LO) Windshield wiper switch (HI)	Rear window wiper motor Rear window washer motor

Washer Operation

The MICU controls the windshield and rear window washer motor based upon the washer switch signals.

	Input	Output
MICU	IG1 power supply Windshield washer switch Rear window washer switch	Windshield washer motor Rear window washer motor

Key Interlock

The MICU controls the key interlock solenoid based upon the ignition switch (ACC), the transmission range switch, and the park-pin switch signals.

	Input	Output
MICU	Ignition switch (ACC) Transmission range switch (P) Park-pin switch	Key interlock solenoid

Key-in Reminder

The MICU controls the door lock actuators based upon the ignition key switch, the driver's door switch, and the driver's door lock knob switch signals.

	Input	Output
MICU	Ignition key switch Driver's door switch Driver's door lock knob switch (UNLOCK)	Door lock actuators (LOCK) Door lock actuators (UNLOCK)

Power Window Timer (Key-off operation)

The MICU controls the power window key-off operation based upon the ignition key switch and the driver's door switch, and front passenger's door switch signals.

	Input	Output
MICU	IG1 power supply Ignition key switch Driver's door switch Front passenger's door switch	Power window timer

Collision Detection Signal (CDS)

The MICU controls the door lock actuators based upon the IG1 and the SRS signals.

	Input	Output
MICU	IG1 power supply	Door lock actuators (LOCK/UNLOCK)
B-CAN	Front impact sensor Side impact sensor (first) Side impact sensor (second) SRS unit rollover signal	

Power Door Locks

The MICU controls the door lock actuators based upon the input signals of each switch.

	Input	Output
MICU	IG1 power supply Ignition key switch Driver's door switch Front passenger's door switch Left rear door switch Right rear door switch Tailgate latch switch Driver's door lock switch (LOCK/UNLOCK) Driver's door key cylinder switch (LOCK/UNLOCK) Driver's door lock knob switch (LOCK/UNLOCK)	Door lock actuators (LOCK) Door lock actuators (UNLOCK)

Door Lock Response Operation

The MICU controls the door lock actuators based upon the B-CAN signals.

	Input	Output
MICU		Door lock actuators (LOCK) Door lock actuators (UNLOCK)
B-CAN	Door lock signal	

Keyless Entry System

The MICU controls the door lock actuators based upon the input signals of each switch and the B-CAN signals.

	Input	Output
MICU	IG1 power supply Ignition key switch Driver's door switch Front passenger's door switch Left rear door switch Right rear door switch Tailgate latch switch Driver's door lock knob switch (LOCK/UNLOCK) Driver's door lock switch (LOCK/UNLOCK) Driver's door key cylinder switch (LOCK/UNLOCK)	Door lock actuators (LOCK) Door lock actuators (UNLOCK)
B-CAN	Keyless LOCK/UNLOCK signal	Relock message

Power Door Locks (LOCK operation)

The MICU controls the actuators based upon the input signals of each switch.

	Input	Output
MICU	IG1 power supply Driver's door switch Front passenger's door switch Left rear door switch Right rear door switch Tailgate latch switch Driver's door lock knob switch (UNLOCK) Front passenger's door lock knob switch (UNLOCK) Left rear door lock knob switch (UNLOCK) Right rear door lock knob switch (UNLOCK) Transmission range switch (P position) Brake pedal position switch	Door lock actuators (LOCK)
B-CAN	Vehicle speed pulse signal	

Power Door Locks (UNLOCK operation)

The MICU controls the door lock actuators based upon the input signals of each switch.

	Input	Output
MICU	IG1 power supply Ignition key switch Driver's door switch Front passenger's door switch Left rear door switch Right rear door switch Tailgate latch switch Driver's door lock knob switch (UNLOCK) Front passenger's door lock knob switch (UNLOCK) Left rear door lock knob switch (UNLOCK) Right rear door lock knob switch (UNLOCK) Transmission range switch (P position) Brake pedal position switch	Door lock actuators (UNLOCK) Driver's door lock actuators (UNLOCK)

Security Alarm System

The MICU controls the turn signal lights and the horns based upon the input signals of each switch and the B-CAN signals.

	Input	Output
MICU	IG1 power supply Ignition key switch Audio switch Tailgate latch switch Driver's door switch Front passenger's door switch Left rear door switch Right rear door switch Driver's door key cylinder switch (LOCK/UNLOCK) Driver's door lock knob switch (UNLOCK) Front passenger's door lock knob switch (UNLOCK) Left rear door lock knob switch (UNLOCK) Right rear door lock knob switch (UNLOCK) Tailgate lock knob switch (UNLOCK) Hood switch	Turn signal lights (left) Turn signal lights (right) Horn *
B-CAN	Keyless signal Door lock signal Immobilizer signal	MICU (SET1) message MICU (SET2) message ALARM (ACTION) message

*: Without ultrasonic system

Answer Back Response Operation

The MICU controls the turn signal system based upon the B-CAN signals.

	Input	Output
MICU	IG1 power supply	Turn signal lights (left) Turn signal lights (right)
B-CAN	Answer back signal (Hazard) Vehicle speed pulse signal	

Answer Back Response Operation

The MICU controls the lighting system and horn based upon the B-CAN signals.

	Input	Output
MICU		Horn(s) Headlights (low beam) Position lights and taillights
B-CAN	Answer back signal (headlight low, horn, position lights)	

Ultrasonic System

The MICU communicates with the alarm control siren by the serial communication lines, and the MICU controls the ultra sonic and the inclining sensor system.

	Input	Output
MICU	Security system input signals	Security system output signals
B-CAN	Security system input signals	Security system output signals MICU message

A/C Pressure Switch

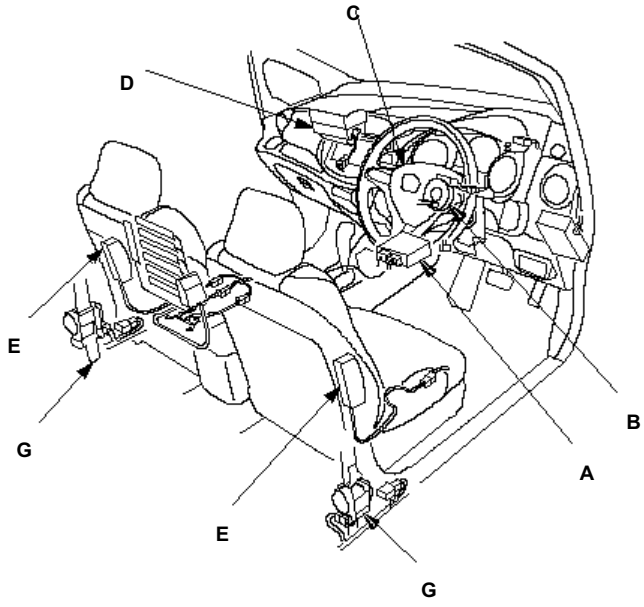
The MICU sends the A/C pressure switch signal based upon the ignition switch and the A/C pressure switch.

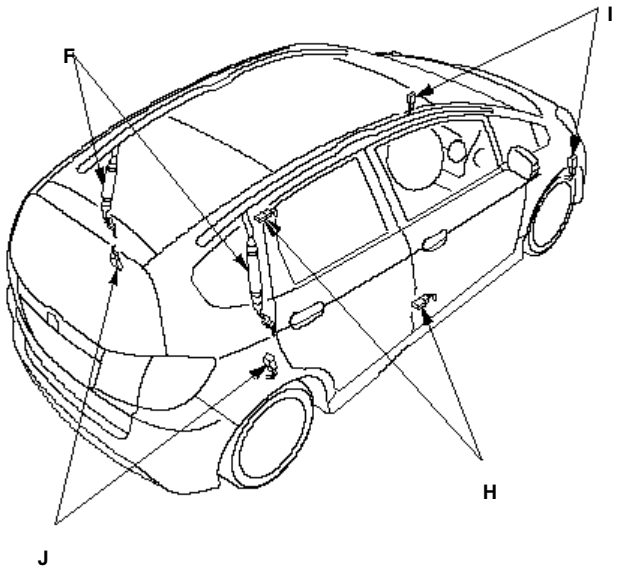
	Input	Output
MICU	IG1 power supply A/C pressure switch	
B-CAN		A/C pressure switch signal

SRS Components

Airbags

The SRS is a safety device which, when used with the seat belt, is designed to help protect the driver and front passenger in a frontal impact exceeding a certain set limit. The system consists of the SRS unit including safing sensor and impact sensor (A), the cable reel (B), the driver's airbag (C), the front passenger's airbag (D), side airbags (E), side curtain airbags (F), seat belt tensioners (G), side impact sensors (first) (H), front impact sensors (I), and side impact sensors (second) (J).
Since the driver's and front passenger's airbags use the same sensors, both normally inflate at the same time. However, it is possible for only one airbag to inflate. This can occur when the severity of a collision is at the margin, or threshold, that the SRS unit determines whether or not the airbags will deploy. In such cases, the seat belt will provide sufficient protection, and the supplemental protection offered by the airbag would be minimal.





Side Airbag Cutoff Indicator/OPDS Operation

The indicator comes on if the front passenger's seat is occupied by a small adult or child who is leaning into the deployment path, or an object (grocery bag, briefcase, purse, etc.) is in the seat. This indicates the passenger's side airbag is off and will not deploy; there is no problem with the side airbag. If the passenger sits upright or moves to another seat, or you remove the object from the seat, the indicator should go off. There will be some delay between the occupant's repositioning, and when the indicator will turn on or off.

SRS Operation

The main circuit in the SRS unit senses and judges the force of impact and, if necessary, ignites the inflator charges. If battery voltage is too low or power is disconnected due to the impact, the voltage regulator and the back-up power circuit will keep voltage at a constant level.

For the SRS to operate

Seat Belt Tensioners

(1) A front impact sensor or side impact sensor must activate and send electric signals to the microprocessor.
(2) The microprocessor must compute the signals and send them to the tensioners.
(3) The charges must ignite and deploy the tensioners.

Driver's and Front Passenger's Airbag(s)

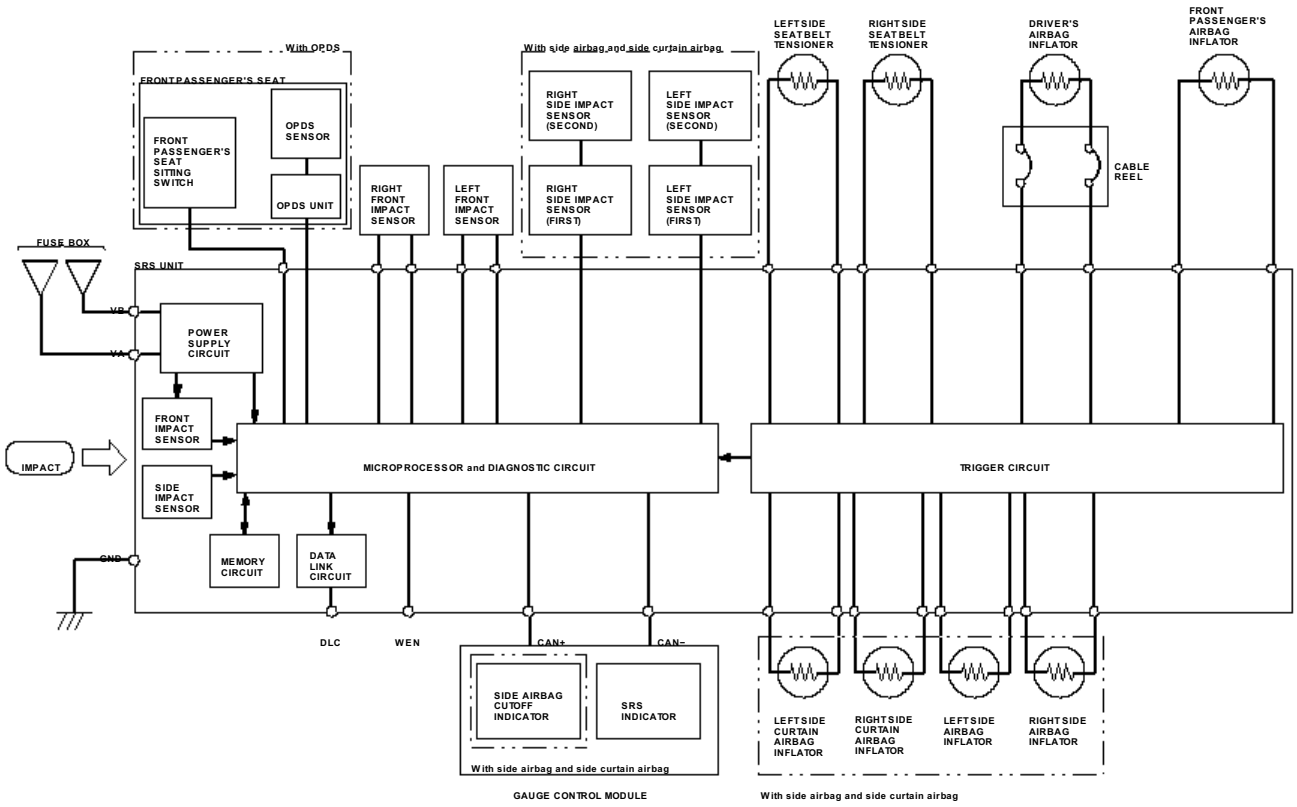
(1) A front impact sensor must activate, and send electric signals to the microprocessor.
(2) The microprocessor must compute the signals, and send them to the airbag inflator(s).
(3) The inflators that received signals must ignite and deploy the airbags.

Side Airbag(s)

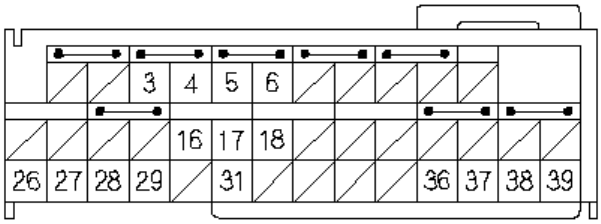
(1) A side impact sensor must activate, and send electric signals to the microprocessor.
(2) The microprocessor must compute the signals and send them to the side airbag inflator(s). However, the microprocessor cuts off the signals to the front passenger's side airbag if the SRS unit determines that the front passenger's head is in the deployment path of the side airbag.
(3) The inflator that receives the signal must ignite and deploy the side airbag.

Side Curtain Airbag(s)

(1) Side impact sensor must activate, and send electrical signals to the microprocessor.
(2) The microprocessor must compute the signals and send them to the side curtain airbag and side airbag inflator(s).
(3) The inflator that receives the signals must ignite and deploy the side curtain airbag and side airbag at the same time.



SRS Unit Inputs and Outputs at Connector A (39P)



Wire side of female terminals

29	BLK *	SRS GND 2	Ground circuit for the SRS unit (G504)
31	RED *	WEN	Data link connector
36	BRN *	LFS−	Ground for the left front impact sensor

*2: With side airbag and side curtain airbag.

Maintenance Schedule for Normal Conditions - for Service Reminder System non-applicable EU countries

20,000km(1year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Replace engine oil filter**
- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**

Visually inspect the following items:

  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Except KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.
- **Tyre condition**

Every 60,000 km (37,500 miles)

- **Replace air cleaner element**

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 120,000 km (75,000 miles) or 8 years

- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

  Use genuine Honda MTF.

Every 3 years

- **Replace brake fluid**

- Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
- Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

- **Inspect vehicle corrosion: refer to the Body Repair Manual**
  - External Paintwork and Panel Corrosion Check
  - Under Body Corrosion Check

Maintenance Schedule for Normal Conditions - for Service Reminder System non-applicable EU countries

40,000km(2year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Replace engine oil filter**
- **Inspect drive belt**

  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**
  - If the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 20,000 km (12,500 miles) or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Except KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.
- **Tyre condition**

Every 60,000 km (37,500 miles)

- **Replace air cleaner element**

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 120,000 km (75,000 miles) or 8 years

- **Replace Manual Transmission Fluid**

- M/T
- i-SHIFT

Use genuine Honda MTF.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

- [ ] **Inspect vehicle corrosion: refer to the Body Repair Manual**
  - External Paintwork and Panel Corrosion Check
  - Under Body Corrosion Check

Maintenance Schedule for Normal Conditions - for Service Reminder System non-applicable EU countries

Every 60,000 km (37,500 miles)

- **Replace air cleaner element**

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 120,000 km (75,000 miles) or 8 years

- **Replace Manual Transmission Fluid**

- M/T
- i-SHIFT

Use genuine Honda MTF.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

- [ ] **Inspect vehicle corrosion: refer to the Body Repair Manual**
  - External Paintwork and Panel Corrosion Check
  - Under Body Corrosion Check

Maintenance Schedule for Normal Conditions - for Service Reminder System non-applicable EU countries

100,000km(5year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Replace engine oil filter**
- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Except KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.
- **Tyre condition**

Every 60,000 km (37,500 miles)

- **Replace air cleaner element**

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 120,000 km (75,000 miles) or 8 years

- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

  Use genuine Honda MTF.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

Inspect vehicle corrosion: refer to the Body Repair Manual

- External Paintwork and Panel Corrosion Check
- Under Body Corrosion Check

Maintenance Schedule for Normal Conditions - for Service Reminder System non-applicable EU countries

120,000km(6year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Replace engine oil filter**
- **Replace fuel filter**
- **Inspect drive belt**

  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Inspect idle speed**
- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**
  - If the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 20,000 km (12,500 miles) or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Except KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.
- **Tyre condition**

Every 60,000 km (37,500 miles)

- **Replace air cleaner element**

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 120,000 km (75,000 miles) or 8 years

- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

Use genuine Honda MTF.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

- **Inspect vehicle corrosion: refer to the Body Repair Manual**
  - External Paintwork and Panel Corrosion Check
  - Under Body Corrosion Check

Maintenance Schedule for Normal Conditions - for Service Reminder System non-applicable EU countries

140,000km(7year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Replace engine oil filter**
- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.

  - Retighten loose connections and replace any damaged parts.
- **Tyre condition**

Every 60,000 km (37,500 miles)

- **Replace air cleaner element**

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 120,000 km (75,000 miles) or 8 years

- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

  Use genuine Honda MTF.

Every 3 years

- **Replace brake fluid**

- Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
- Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

- **Inspect vehicle corrosion: refer to the Body Repair Manual**
  - External Paintwork and Panel Corrosion Check
  - Under Body Corrosion Check

Maintenance Schedule for Normal Conditions - for Service Reminder System non-applicable EU countries

25,000miles(2year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Replace engine oil filter**
- **Inspect drive belt**

  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**
  - If the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 20,000 km (12,500 miles) or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Except KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.
- **Tyre condition**

Every 60,000 km (37,500 miles)

- **Replace air cleaner element**

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 120,000 km (75,000 miles) or 8 years

- **Replace Manual Transmission Fluid**

- M/T
- i-SHIFT

Use genuine Honda MTF.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

- [ ] **Inspect vehicle corrosion: refer to the Body Repair Manual**
  - External Paintwork and Panel Corrosion Check
  - Under Body Corrosion Check

Maintenance Schedule for Normal Conditions - for Service Reminder System non-applicable EU countries

37,000miles(3year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Replace engine oil filter**
- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Except KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.
- **Tyre condition**

Every 60,000 km (37,500 miles)

- **Replace air cleaner element**

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 120,000 km (75,000 miles) or 8 years

- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

  Use genuine Honda MTF.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

Inspect vehicle corrosion: refer to the Body Repair Manual

- External Paintwork and Panel Corrosion Check
- Under Body Corrosion Check

Maintenance Schedule for Normal Conditions - for Service Reminder System non-applicable EU countries

50,000miles(4year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Replace engine oil filter**
- **Inspect drive belt**

  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**
  - If the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 20,000 km (12,500 miles) or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.

  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Except KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.
- **Tyre condition**

Every 60,000 km (37,500 miles)

- **Replace air cleaner element**

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 120,000 km (75,000 miles) or 8 years

- **Replace Manual Transmission Fluid**

- M/T
- i-SHIFT

Use genuine Honda MTF.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

- [ ] **Inspect vehicle corrosion: refer to the Body Repair Manual**
  - External Paintwork and Panel Corrosion Check
  - Under Body Corrosion Check

Maintenance Schedule for Normal Conditions - for Service Reminder System non-applicable EU countries

137,000miles(11year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Replace engine oil filter**
- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Except KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.
- **Tyre condition**

Every 60,000 km (37,500 miles)

- **Replace air cleaner element**

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 120,000 km (75,000 miles) or 8 years

- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

  Use genuine Honda MTF.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

Inspect vehicle corrosion: refer to the Body Repair Manual

- External Paintwork and Panel Corrosion Check
- Under Body Corrosion Check

Maintenance Schedule for Normal Conditions - for Service Reminder System non-applicable EU countries

150,000miles(12year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Replace engine oil filter**
- **Replace fuel filter**
- **Inspect drive belt**

  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Inspect idle speed**
- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**
  - If the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 20,000 km (12,500 miles) or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Except KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.
- **Tyre condition**

Every 60,000 km (37,500 miles)

- **Replace air cleaner element**

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 120,000 km (75,000 miles) or 8 years

- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

Use genuine Honda MTF.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

- **Inspect vehicle corrosion: refer to the Body Repair Manual**
  - External Paintwork and Panel Corrosion Check
  - Under Body Corrosion Check

Maintenance Schedule for Severe Conditions - for Service Reminder System non-applicable EU countries

20,000km(1year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**

  When the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating and air conditioning system is less than normal.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Eexcept KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.
- **Tyre condition**

Replace every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil**

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

  Use normal conditions except in dusty conditions.

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 60,000 km (37,500 miles) or 4 years

- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

  Use genuine Honda MTF.

Every 10,000 km (6,250 miles) or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Visually inspect the following items:

- [ ] **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- [ ] **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- [ ] **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

- [ ] **Inspect vehicle corrosion: refer to the Body Repair Manual**
  - External Paintwork and Panel Corrosion Check
  - Under Body Corrosion Check

Maintenance Schedule for Severe Conditions - for Service Reminder System non-applicable EU countries

40,000km(2year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Inspect drive belt**

  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**

  When the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating and air conditioning system is less than normal.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT

Maintenance Schedule for Severe Conditions - for Service Reminder System non-applicable EU countries

120,000km(6year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Replace fuel filter**
- **Inspect drive belt**

  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Inspect idle speed**
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**

  When the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating and air conditioning system is less than normal.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Eexcept KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.
- **Tyre condition**

Replace every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil**

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

  Use normal conditions except in dusty conditions.

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 60,000 km (37,500 miles) or 4 years

- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

Use genuine Honda MTF.

Every 10,000 km (6,250 miles) or 6 months

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Visually inspect the following items:

- [ ] **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- [ ] **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- [ ] **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

- [ ] **Inspect vehicle corrosion: refer to the Body Repair Manual**
  - External Paintwork and Panel Corrosion Check
  - Under Body Corrosion Check

Maintenance Schedule for Severe Conditions - for Service Reminder System non-applicable EU countries

140,000km(7year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**

  When the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating and air conditioning system is less than normal.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Eexcept KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.
- **Tyre condition**

Replace every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil**

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

  Use normal conditions except in dusty conditions.

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 60,000 km (37,500 miles) or 4 years

- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

  Use genuine Honda MTF.

Every 10,000 km (6,250 miles) or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Visually inspect the following items:

- [ ] **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- [ ] **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- [ ] **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

- [ ] **Inspect vehicle corrosion: refer to the Body Repair Manual**
  - External Paintwork and Panel Corrosion Check
  - Under Body Corrosion Check

Maintenance Schedule for Severe Conditions - for Service Reminder System non-applicable EU countries

160,000km(8year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Inspect drive belt**

  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**

  When the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating and air conditioning system is less than normal.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid

Maintenance Schedule for Severe Conditions - for Service Reminder System non-applicable EU countries

180,000km(9year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**

  When the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating and air conditioning system is less than normal.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Eexcept KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.

Maintenance Schedule for Severe Conditions - for Service Reminder System non-applicable EU countries

12,000miles(1year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**

  When the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating and air conditioning system is less than normal.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Eexcept KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.
- **Tyre condition**

Replace every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil**

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

  Use normal conditions except in dusty conditions.

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 60,000 km (37,500 miles) or 4 years

- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

  Use genuine Honda MTF.

Every 10,000 km (6,250 miles) or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Visually inspect the following items:

- [ ] **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- [ ] **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- [ ] **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

- [ ] **Inspect vehicle corrosion: refer to the Body Repair Manual**
  - External Paintwork and Panel Corrosion Check
  - Under Body Corrosion Check

Maintenance Schedule for Severe Conditions - for Service Reminder System non-applicable EU countries

25,000miles(2year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Inspect drive belt**

  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**

  When the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating and air conditioning system is less than normal.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Eexcept KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.
- **Tyre condition**

Replace every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil**

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

  Use normal conditions except in dusty conditions.

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 60,000 km (37,500 miles) or 4 years

- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

  Use genuine Honda MTF.

Every 10,000 km (6,250 miles) or 6 months

- **Check front and rear brakes**

- Check the brake pad and disc thickness. Check for damage.
- Check the calipers for damage, leaks, and tightness.

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

- **Inspect vehicle corrosion: refer to the Body Repair Manual**
  - External Paintwork and Panel Corrosion Check
  - Under Body Corrosion Check

Maintenance Schedule for Severe Conditions - for Service Reminder System non-applicable EU countries

37,000miles(3year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**

  When the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating and air conditioning system is less than normal.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Eexcept KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.
- **Tyre condition**

Replace every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil**

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

  Use normal conditions except in dusty conditions.

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 60,000 km (37,500 miles) or 4 years

- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

  Use genuine Honda MTF.

Every 10,000 km (6,250 miles) or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Visually inspect the following items:

- [ ] **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- [ ] **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- [ ] **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

- [ ] **Inspect vehicle corrosion: refer to the Body Repair Manual**
  - External Paintwork and Panel Corrosion Check
  - Under Body Corrosion Check

Maintenance Schedule for Severe Conditions - for Service Reminder System non-applicable EU countries

50,000miles(4year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Inspect drive belt**

  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**

  When the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating and air conditioning system is less than normal.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model

Maintenance Schedule for Severe Conditions - for Service Reminder System non-applicable EU countries

87,000miles(7year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**

  When the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating and air conditioning system is less than normal.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Eexcept KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.
- **Tyre condition**

Replace every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil**

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

  Use normal conditions except in dusty conditions.

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 60,000 km (37,500 miles) or 4 years

- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

  Use genuine Honda MTF.

Every 10,000 km (6,250 miles) or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Visually inspect the following items:

- [ ] **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- [ ] **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- [ ] **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

  - External Paintwork and Panel Corrosion Check
  - Under Body Corrosion Check

Maintenance Schedule for Severe Conditions - for Service Reminder System non-applicable EU countries

100,000miles(8year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Inspect drive belt**

  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**

  When the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating and air conditioning system is less than normal.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Eexcept KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.
- **Tyre condition**

Replace every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil**

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

  Use normal conditions except in dusty conditions.

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 60,000 km (37,500 miles) or 4 years

- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

  Use genuine Honda MTF.

Every 10,000 km (6,250 miles) or 6 months

- **Check front and rear brakes**

- Check the brake pad and disc thickness. Check for damage.
- Check the calipers for damage, leaks, and tightness.

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

- **Inspect vehicle corrosion: refer to the Body Repair Manual**
  - External Paintwork and Panel Corrosion Check
  - Under Body Corrosion Check

Maintenance Schedule for Severe Conditions - for Service Reminder System non-applicable EU countries

112,000miles(9year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**

  When the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating and air conditioning system is less than normal.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Eexcept KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.
- **Tyre condition**

Replace every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil**

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

  Use normal conditions except in dusty conditions.

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 60,000 km (37,500 miles) or 4 years

- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

  Use genuine Honda MTF.

Every 10,000 km (6,250 miles) or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Visually inspect the following items:

- [ ] **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- [ ] **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- [ ] **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

- [ ] **Inspect vehicle corrosion: refer to the Body Repair Manual**
  - External Paintwork and Panel Corrosion Check
  - Under Body Corrosion Check

Maintenance Schedule for Severe Conditions - for Service Reminder System non-applicable EU countries

125,000miles(10year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Inspect drive belt**

  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**

  When the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating and air conditioning system is less than normal.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Eexcept KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.
- **Tyre condition**

Replace every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil**

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

  Use normal conditions except in dusty conditions.

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 60,000 km (37,500 miles) or 4 years

- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

  Use genuine Honda MTF.

Every 10,000 km (6,250 miles) or 6 months

- **Check front and rear brakes**

- Check the brake pad and disc thickness. Check for damage.
- Check the calipers for damage, leaks, and tightness.

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

- **Inspect vehicle corrosion: refer to the Body Repair Manual**
  - External Paintwork and Panel Corrosion Check
  - Under Body Corrosion Check

Maintenance Schedule for Severe Conditions - for Service Reminder System non-applicable EU countries

137,000miles(11year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**

  When the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating and air conditioning system is less than normal.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Eexcept KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.
- **Tyre condition**

Replace every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil**

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

  Use normal conditions except in dusty conditions.

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 60,000 km (37,500 miles) or 4 years

- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

  Use genuine Honda MTF.

Every 10,000 km (6,250 miles) or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Visually inspect the following items:

- [ ] **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- [ ] **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- [ ] **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

- [ ] **Inspect vehicle corrosion: refer to the Body Repair Manual**
  - External Paintwork and Panel Corrosion Check
  - Under Body Corrosion Check

Maintenance Schedule for Severe Conditions - for Service Reminder System non-applicable EU countries

150,000miles(12year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Replace fuel filter**
- **Inspect drive belt**

  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Inspect idle speed**
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**

  When the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating and air conditioning system is less than normal.
- **Check lights alignment**

  Check the position of the headlights.
- **Test drive (noise, stability, dashboard operation)**
- **Check expiration date for TRK (Temporary Repair Kit) bottle (if equipped)**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Brake hoses and lines (including ABS/VSA lines)**

  Check the master cylinder and ABS/VSA modulator- control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - M/T
  - i-SHIFT
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Eexcept KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.
- **Tyre condition**

Replace every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil**

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

  Use normal conditions except in dusty conditions.

Every 100,000 km (62,500 miles)

- **Inspect valve clearance**

Every 120,000 km (75,000 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 60,000 km (37,500 miles) or 4 years

- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

Use genuine Honda MTF.

Every 10,000 km (6,250 miles) or 6 months

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Visually inspect the following items:

- [ ] **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- [ ] **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- [ ] **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every year

- [ ] **Inspect vehicle corrosion: refer to the Body Repair Manual**
  - External Paintwork and Panel Corrosion Check
  - Under Body Corrosion Check

Maintenance Schedule for Normal and Severe Conditions - New Zealand

20,000km(1year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*:Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines , and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - New Zealand

40,000km(2year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for “severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*:Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- Replace engine oil filter *
- Inspect drive belt
  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- Check parking brake adjustment
  Check the parking brake operation.
- Replace dust and pollen filter

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- Brake hoses and lines (including ABS lines)
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- Exhaust system
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- Fuel lines , and connections
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- Replace engine oil *

Every 5,000 km (3,125 miles) or 6 months

- Replace engine oil *

Every 10,000 km (6,250 miles) or 6 months

- Replace engine oil filter *

Visually inspect the following items:

- Tie-rod ends, steering gearbox, and boots
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- Suspension components
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- Driveshaft boots
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- Replace air cleaner element

Every 40,000 km (25,000 miles)

- Inspect valve clearance

Every 100,000 km (62,500 miles)

- Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - New Zealand

60,000km(3year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for ‘‘severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*:Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace Manual Transmission Fluid**

  Use genuine Honda MTF.
- **Replace Automatic Transmission Fluid**

  Use genuine Honda ATF-Z1.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines , and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - New Zealand

80,000km(4year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for “severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*:Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace fuel filter**
- **Inspect drive belt**
  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines , and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - New Zealand

100,000km(5year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*:Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- Replace engine oil filter *
- Replace Automatic Transmission Fluid
  Use genuine Honda ATF-Z1.
- Replace dust and pollen filter
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- Brake hoses and lines (including ABS lines)
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- Exhaust system
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- Fuel lines , and connections
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- Replace engine oil *

Every 5,000 km (3,125 miles) or 6 months

- Replace engine oil *

Every 10,000 km (6,250 miles) or 6 months

- Replace engine oil filter *
- ***Visually inspect the following items:***
- Tie-rod ends, steering gearbox, and boots
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- Suspension components
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- Driveshaft boots
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- Replace air cleaner element

Every 40,000 km (25,000 miles)

- Inspect valve clearance

Every 100,000 km (62,500 miles)

- Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- Replace engine coolant

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - New Zealand

120,000km(6year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.

  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - New Zealand

12,000miles(1year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*:Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines , and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - New Zealand

25,000miles(2year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for “severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*:Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Inspect drive belt**
  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines , and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *
- ***Visually inspect the following items:***
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - New Zealand

37,000miles(3year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for “severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*:Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace Manual Transmission Fluid**

  Use genuine Honda MTF.
- **Replace Automatic Transmission Fluid**

  Use genuine Honda ATF-Z1.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines , and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - New Zealand

50,000miles(4year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for “severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*:Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace fuel filter**
- **Inspect drive belt**
  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - New Zealand

100,000miles(8year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*:Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace fuel filter**
- **Inspect drive belt**
  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines , and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - New Zealand

112,000miles(9year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for ‘‘severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*:Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace Manual Transmission Fluid**

  Use genuine Honda MTF.
- **Replace Automatic Transmission Fluid**

  Use genuine Honda ATF-Z1.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines , and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - New Zealand

125,000miles(10year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*:Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Inspect drive belt**
  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Replace Automatic Transmission Fluid**
  Use genuine Honda ATF-Z1.
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines , and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *
- ***Visually inspect the following items:***
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal Conditions - South Africa

15,000km(1year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**
  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**
  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check that brake fluid level between upper and lower marks on the reservoir.

Every 30,000 km or 1 year

- **Replace dust and pollen filter**
  - If the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 15,000 km or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.

Maintenance Schedule for Normal Conditions - South Africa

30,000km(2year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Replace engine oil filter**
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**
  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**
  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check that brake fluid level between upper and lower marks on the reservoir.

Every 30,000 km or 1 year

- **Replace dust and pollen filter**
  - If the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 15,000 km or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.

Maintenance Schedule for Normal Conditions - South Africa

45,000km(3year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Inspect drive belt**

  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check that brake fluid level between upper and lower marks on the reservoir.

Every 30,000 km or 1 year

- **Replace dust and pollen filter**
  - If the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 15,000 km or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.

Maintenance Schedule for Normal Conditions - South Africa

60,000km(4year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Replace engine oil filter**
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**
  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**
  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check that brake fluid level between upper and lower marks on the reservoir.

Every 30,000 km or 1 year

- **Replace dust and pollen filter**
  - If the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 15,000 km or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.

Maintenance Schedule for Normal Conditions - South Africa

75,000km(5year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check that brake fluid level between upper and lower marks on the reservoir.

Every 30,000 km or 1 year

- **Replace dust and pollen filter**
  - If the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 15,000 km or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.

Maintenance Schedule for Normal Conditions - South Africa

90,000km(6year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Replace engine oil filter**
- **Replace fuel filter**

  Replace fuel filter every 45,000 km or 3 years, if the fuel the customer uses is suspected to be contaminated.
- **Inspect drive belt**

  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check that brake fluid level between upper and lower marks on the reservoir.

Every 30,000 km or 1 year

- **Replace dust and pollen filter**
  - If the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 15,000 km or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.

Maintenance Schedule for Normal Conditions - South Africa

105,000km(7year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Inspect idle speed**
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check that brake fluid level between upper and lower marks on the reservoir.

Every 30,000 km or 1 year

- **Replace dust and pollen filter**
  - If the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 15,000 km or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.

Maintenance Schedule for Normal Conditions - South Africa

120,000km(8year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Replace engine oil filter**
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**
  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**
  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check that brake fluid level between upper and lower marks on the reservoir.

Every 30,000 km or 1 year

- **Replace dust and pollen filter**
  - If the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 15,000 km or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.

Maintenance Schedule for Normal Conditions - South Africa

135,000km(9year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Inspect drive belt**

  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Replace Manual Transmission Fluid**
- **Replace Automatic Transmission Fluid** **Use genuine Honda ATF-Z1.**

  Replace 120,000 km or 8 years, then every 75,000 km or 4 years
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check that brake fluid level between upper and lower marks on the reservoir.

Every 30,000 km or 1 year

- **Replace dust and pollen filter**
  - If the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 15,000 km or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.

Maintenance Schedule for Normal Conditions - South Africa

150,000km(10year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Replace engine oil filter**
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**
  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**
  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check that brake fluid level between upper and lower marks on the reservoir.

Every 30,000 km or 1 year

- **Replace dust and pollen filter**
  - If the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 15,000 km or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.

Maintenance Schedule for Normal Conditions - South Africa

9,000miles(1year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**
  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**
  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check that brake fluid level between upper and lower marks on the reservoir.

Every 30,000 km or 1 year

- **Replace dust and pollen filter**
  - If the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 15,000 km or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.

Maintenance Schedule for Normal Conditions - South Africa

18,000miles(2year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Replace engine oil filter**
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**
  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**
  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.

  - If the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 15,000 km or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.

Maintenance Schedule for Normal Conditions - South Africa

46,000miles(5year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check that brake fluid level between upper and lower marks on the reservoir.

Every 30,000 km or 1 year

- **Replace dust and pollen filter**
  - If the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 15,000 km or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.

Maintenance Schedule for Normal Conditions - South Africa

56,000miles(6year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Replace engine oil filter**
- **Replace fuel filter**

  Replace fuel filter every 45,000 km or 3 years, if the fuel the customer uses is suspected to be contaminated.
- **Inspect drive belt**

  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check that brake fluid level between upper and lower marks on the reservoir.

Every 30,000 km or 1 year

- **Replace dust and pollen filter**
  - If the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 15,000 km or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.

Maintenance Schedule for Normal Conditions - South Africa

65,000miles(7year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Inspect idle speed**
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check that brake fluid level between upper and lower marks on the reservoir.

Every 30,000 km or 1 year

- **Replace dust and pollen filter**
  - If the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 15,000 km or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.

Maintenance Schedule for Normal Conditions - South Africa

75,000miles(8year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Replace engine oil filter**
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid

  - If the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 15,000 km or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.

Maintenance Schedule for Normal Conditions - South Africa

84,000miles(9year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Inspect drive belt**

  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Replace Manual Transmission Fluid**
- **Replace Automatic Transmission Fluid** **Use genuine Honda ATF-Z1.**

  Replace 120,000 km or 8 years, then every 75,000 km or 4 years
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check that brake fluid level between upper and lower marks on the reservoir.

Every 30,000 km or 1 year

- **Replace dust and pollen filter**
  - If the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 15,000 km or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.

Maintenance Schedule for Normal Conditions - South Africa

93,000miles(10year)

Follow the normal conditions maintenance schedule if the severe driving conditions specified in the severe conditions maintenance schedule do not apply.

Service at the indicated distance or time whichever comes first

- **Replace engine oil**
- **Replace engine oil filter**
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.
- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**
  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**
  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check that brake fluid level between upper and lower marks on the reservoir.

Every 30,000 km or 1 year

- **Replace dust and pollen filter**
  - If the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace every 15,000 km or 1 year.
  - Replace the filter whenever airflow from the heating and air conditioning system is less than normal.

Maintenance Schedule for Severe Conditions - South Africa

15,000km(1year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km per trip or, in freezing temperatures, driving less than 16 km per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**
  When the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating.
- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system** **Check the exhaust pipe and muffler for damage, leaks, and tightness.**
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 7,500 km

- **Replace engine oil**

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**
  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**
  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 7,500 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level between upper and lower marks on the reservoir.

Maintenance Schedule for Severe Conditions - South Africa

30,000km(2year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km per trip or, in freezing temperatures, driving less than 16 km per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**
  When the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating.
- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system** **Check the exhaust pipe and muffler for damage, leaks, and tightness.**
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 7,500 km

- **Replace engine oil**

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**
  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**
  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 7,500 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level between upper and lower marks on the reservoir.

Maintenance Schedule for Severe Conditions - South Africa

45,000km(3year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km per trip or, in freezing temperatures, driving less than 16 km per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Inspect drive belt**
  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Replace dust and pollen filter**
  When the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating.
- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system** **Check the exhaust pipe and muffler for damage, leaks, and tightness.**
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 7,500 km

- **Replace engine oil**

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**
  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**
  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 7,500 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level between upper and lower marks on the reservoir.

Maintenance Schedule for Severe Conditions - South Africa

60,000km(4year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km per trip or, in freezing temperatures, driving less than 16 km per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Replace Manual Transmission Fluid**
  Use genuine Honda MTF.
- **Replace Automatic Transmission Fluid**
  Use genuine Honda ATF-Z1.
  Replace 60,000 km or 4 years, then every 45,000 km or 3 years
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**
  When the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating.
- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system** **Check the exhaust pipe and muffler for damage, leaks, and tightness.**
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 7,500 km

- **Replace engine oil**

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**
  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**
  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 7,500 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- **Replace brake fluid**

- Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
- Check the brake fluid level between upper and lower marks on the reservoir.

Maintenance Schedule for Severe Conditions - South Africa

75,000km(5year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km per trip or, in freezing temperatures, driving less than 16 km per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Replace dust and pollen filter**

  When the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating.
- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system** **Check the exhaust pipe and muffler for damage, leaks, and tightness.**
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 7,500 km

- **Replace engine oil**

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 7,500 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level between upper and lower marks on the reservoir.

Maintenance Schedule for Severe Conditions - South Africa

90,000km(6year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km per trip or, in freezing temperatures, driving less than 16 km per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Replace fuel filter**

  Replace fuel filter every 45,000 km or 3 years, if the fuel the customer uses is suspected to be contaminated.
- **Inspect drive belt**

  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**

  When the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating.
- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system** **Check the exhaust pipe and muffler for damage, leaks, and tightness.**
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 7,500 km

- **Replace engine oil**

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 7,500 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- **Replace brake fluid**

- Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
- Check the brake fluid level between upper and lower marks on the reservoir.

Maintenance Schedule for Severe Conditions - South Africa

105,000km(7year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km per trip or, in freezing temperatures, driving less than 16 km per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Inspect idle speed**
- **Replace Automatic Transmission Fluid**

  Use genuine Honda ATF-Z1.
  Replace 60,000 km or 4 years, then every 45,000 km or 3 years
- **Replace dust and pollen filter**

  When the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating.
- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system** **Check the exhaust pipe and muffler for damage, leaks, and tightness.**
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 7,500 km

- **Replace engine oil**

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 7,500 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level between upper and lower marks on the reservoir.

Maintenance Schedule for Severe Conditions - South Africa

120,000km(8year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km per trip or, in freezing temperatures, driving less than 16 km per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Replace Manual Transmission Fluid**
  Use genuine Honda MTF.
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**
  When the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating.
- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system** **Check the exhaust pipe and muffler for damage, leaks, and tightness.**
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 7,500 km

- **Replace engine oil**

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**
  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**
  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 7,500 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level between upper and lower marks on the reservoir.

Maintenance Schedule for Severe Conditions - South Africa

135,000km(9year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km per trip or, in freezing temperatures, driving less than 16 km per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Inspect drive belt**
  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Replace dust and pollen filter**
  When the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating.

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system** **Check the exhaust pipe and muffler for damage, leaks, and tightness.**
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 7,500 km

- **Replace engine oil**

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**
  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**
  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 7,500 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level between upper and lower marks on the reservoir.

Maintenance Schedule for Severe Conditions - South Africa

150,000km(10year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km per trip or, in freezing temperatures, driving less than 16 km per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Replace Automatic Transmission Fluid**
  Use genuine Honda ATF-Z1.
  Replace 60,000 km or 4 years, then every 45,000 km or 3 years
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**
  When the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating.
- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system** **Check the exhaust pipe and muffler for damage, leaks, and tightness.**
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 7,500 km

- **Replace engine oil**

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**
  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**
  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 7,500 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level between upper and lower marks on the reservoir.

Maintenance Schedule for Severe Conditions - South Africa

9,000miles(1year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km per trip or, in freezing temperatures, driving less than 16 km per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**
  When the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating.
- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system** **Check the exhaust pipe and muffler for damage, leaks, and tightness.**
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 7,500 km

- **Replace engine oil**

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**
  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level between upper and lower marks on the reservoir.

Maintenance Schedule for Severe Conditions - South Africa

56,000miles(6year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km per trip or, in freezing temperatures, driving less than 16 km per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Replace fuel filter**

  Replace fuel filter every 45,000 km or 3 years, if the fuel the customer uses is suspected to be contaminated.
- **Inspect drive belt**

  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**

  When the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating.
- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system** **Check the exhaust pipe and muffler for damage, leaks, and tightness.**
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 7,500 km

- **Replace engine oil**

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Every 45,000 km

  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level between upper and lower marks on the reservoir.

Maintenance Schedule for Severe Conditions - South Africa

93,000miles(10year)

Follow the severe conditions maintenance schedule if the customer's vehicle is driven MAINLY under one or more of the following conditions:

- Driving less than 8 km per trip or, in freezing temperatures, driving less than 16 km per trip.
- Driving in extremely hot over 35 °C (95 °F) conditions.
- Extensive idling, or long periods of stop-and-go driving.
- Towing trailer, driving with a car-top carrier, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

NOTE: If the vehicle is driven OCCASIONALLY under severe conditions, follow the normal conditions maintenance schedule.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Replace Automatic Transmission Fluid**

  Use genuine Honda ATF-Z1.
  Replace 60,000 km or 4 years, then every 45,000 km or 3 years
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**

  When the vehicle is drive mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter whenever airflow from the heating.
- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system** **Check the exhaust pipe and muffler for damage, leaks, and tightness.**
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 7,500 km

- **Replace engine oil**

Every 15,000 km

- **Replace air cleaner element**
- **Rotate tyres**

  Check tyre inflation and condition at least once per month.

Every 45,000 km

- **Inspect valve clearance**

Every 105,000 km

- **Replace spark plugs**

At 200,000 km or 10 years, then every 100,000 km or 5 years

- **Replace engine coolant**

  Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 7,500 km or 6 months

- **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust cover for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 3 years

- **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level between upper and lower marks on the reservoir.

Maintenance Schedule for Normal and Severe Conditions - Except EU, New Zealand, and South Africa

20,000km(1year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*:Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - i-SHIFT
  - ATF
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Except KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *
- ***Visually inspect the following items:***
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except EU, New Zealand, and South Africa

40,000km(2year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*:Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Inspect drive belt**
  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**
- **Visually inspect the following items:**
  - Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
  - Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - i-SHIFT
  - ATF
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Except KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *
- ***Visually inspect the following items:***
- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- [ ] **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except EU, New Zealand, and South Africa

60,000km(3year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for “severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*:Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

  Use genuine Honda MTF.
- **Replace Automatic Transmission Fluid**

  Use genuine Honda ATF-Z1.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - i-SHIFT
  - ATF
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Except KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- [ ] **Replace air cleaner element**

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**

- Check steering linkage.
- Check the boot for damage and leaking grease.

Suspension components

- Check the bolts for tightness.
- Check all dust covers for deterioration and damage.

Driveshaft boots

- Check the boot and boot band for cracks.
- Check boots for leaking grease.

Every 30,000 km (18,750 miles)

Replace air cleaner element

Every 40,000 km (25,000 miles)

Inspect valve clearance

Every 100,000 km (62,500 miles)

Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

Replace engine coolant

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

Check front and rear brakes

- Check the brake pad and disc thickness. Check for damage.
- Check the calipers for damage, leaks, and tightness.

Every 3 years

Replace brake fluid

- Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
- Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

Rotate tyres

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except EU, New Zealand, and South Africa

140,000km(7year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*:Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace Automatic Transmission Fluid**

  Use genuine Honda ATF-Z1.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - i-SHIFT
  - ATF
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Except KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except EU, New Zealand, and South Africa

160,000km(8year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*:Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace fuel filter**
- **Inspect drive belt**
  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - i-SHIFT
  - ATF
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Except KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- [ ] **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except EU, New Zealand, and South Africa

180,000km(9year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for “severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*:Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

  Use genuine Honda MTF.
- **Replace Automatic Transmission Fluid**

  Use genuine Honda ATF-Z1.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - i-SHIFT
  - ATF
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Except KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- [ ] **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- [ ] **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

Maintenance Schedule for Normal and Severe Conditions - Except EU, New Zealand, and South Africa

37,000miles(3year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for “severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*:Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

  Use genuine Honda MTF.
- **Replace Automatic Transmission Fluid**

  Use genuine Honda ATF-Z1.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.
- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - i-SHIFT
  - ATF
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Except KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- [ ] **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- [ ] **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except EU, New Zealand, and South Africa

50,000miles(4year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*:Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace fuel filter**
- **Inspect drive belt**

  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Check parking brake adjustment**

  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - i-SHIFT
  - ATF
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Except KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- [ ] **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except EU, New Zealand, and South Africa

62,000miles(5year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*:Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace Automatic Transmission Fluid**

  Use genuine Honda ATF-Z1.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - i-SHIFT
  - ATF
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Except KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except EU, New Zealand, and South Africa

75,000miles(6year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*:Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Inspect drive belt**
  Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator.
- **Inspect idle speed**
- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

  Use genuine Honda MTF.
- **Replace Manual Transmission Fluid**
  - M/T
  - i-SHIFT

  Use genuine Honda MTF.
- **Replace Automatic Transmission Fluid**
  Use genuine Honda ATF-Z1.
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - M/T
  - i-SHIFT
  - ATF
  - Brake fluid
  - Clutch fluid M/T , i-SHIFT
  - Windshield washer fluid
- **Exhaust system**
  - KE, KG model
  - Except KE, KG model

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**

- Check steering linkage.
- Check the boot for damage and leaking grease.

Suspension components

- Check the bolts for tightness.
- Check all dust covers for deterioration and damage.

Driveshaft boots

- Check the boot and boot band for cracks.
- Check boots for leaking grease.

Every 30,000 km (18,750 miles)

Replace air cleaner element

Every 40,000 km (25,000 miles)

Inspect valve clearance

Every 100,000 km (62,500 miles)

Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

Replace engine coolant

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

Check front and rear brakes

- Check the brake pad and disc thickness. Check for damage.
- Check the calipers for damage, leaks, and tightness.

Every 3 years

Replace brake fluid

- Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
- Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

Rotate tyres

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except EU, New Zealand, and South Africa

87,000miles(7year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Exhaust Gas Recirculation (EGR) System (KE, KG models)

Refer to the system diagram to see a functional layout of the system.

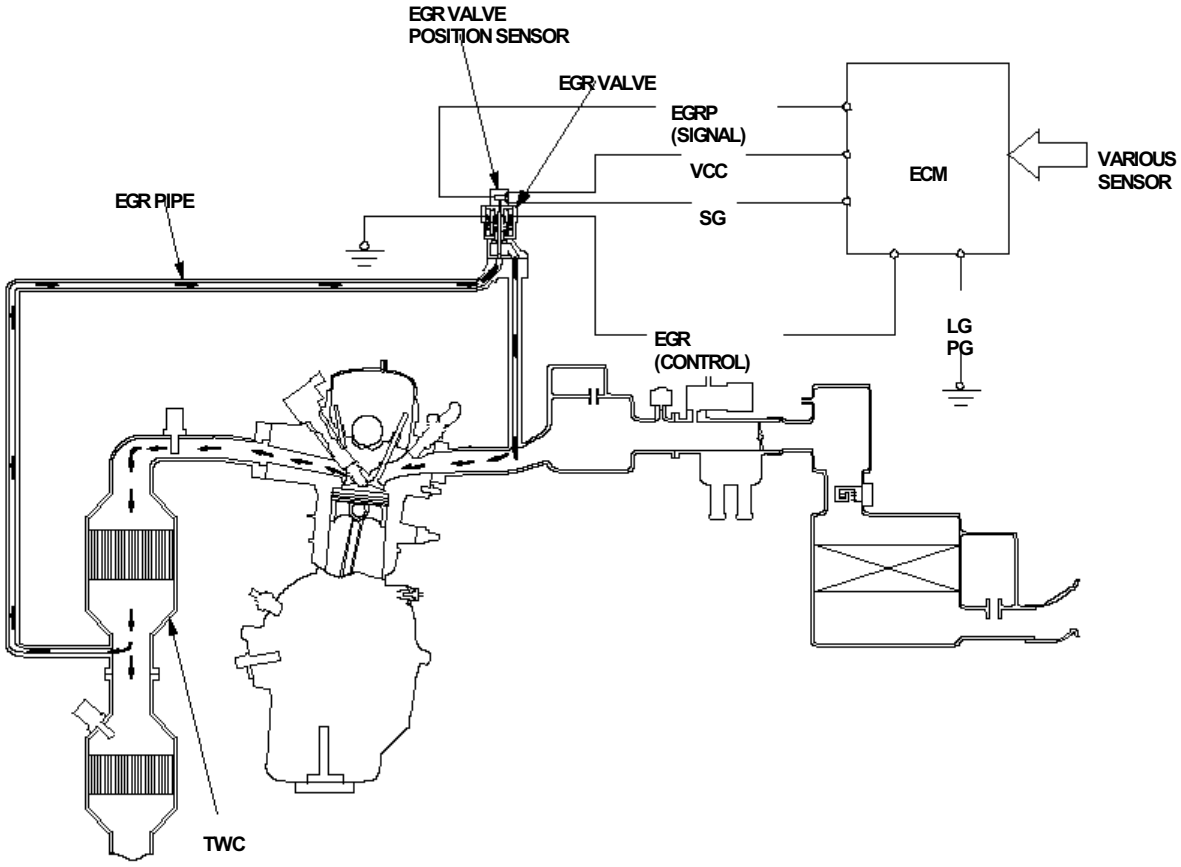
EGR Valve

The EGR valve lowers peak combustion temperatures and reduces oxides of nitrogen emissions (NOx) by recirculating exhaust gas through the intake manifold and into the combustion chambers.

Exhaust Gas Recirculation (EGR) System Diagram (KE, KG models)

The EGR system reduces oxides of nitrogen (NOx) emissions by recirculating exhaust gas through the EGR pipe and the intake manifold, and into the combustion chambers. Routing the exhaust gas through the EGR pipe helps to prevent carbon deposits from forming in the intake manifold and the throttle body. The ECM memory includes the ideal EGR valve position for varying operating conditions.

The EGR valve position sensor detects the amount of EGR valve lift and sends it to the ECM. The ECM then compares it with the ideal lift in its memory (based on signals sent from other sensors). If there is any difference between the two, the ECM cuts current to the EGR valve.



Fuel Supply System

Fuel Cutoff Control

During deceleration with the throttle valve closed, current to the injectors is cut off to improve fuel economy at engine speeds over 850 rpm (min^{-1}) (A/T) (M/T: 910 rpm (min^{-1})) (i-SHIFT: 850 rpm (min^{-1})). Fuel cutoff also occurs when the engine speed exceeds 7,000 rpm (min^{-1}) (L15A7 engine) (L13Z1: 6,600 rpm (min^{-1})) (L12B1: 6,600 rpm (min^{-1})), regardless of the position of the throttle valve, to protect the engine from over-rewing. When the vehicle is stopped, the ECM/PCM cuts the fuel at engine speeds over 5,000 rpm (min^{-1}) (A/T), 6,600 rpm (min^{-1}) (L13Z1 engine M/T) (L12B1 engine M/T: 6,600 rpm (min^{-1})) (L15A7 engine M/T: 6,800 rpm (min^{-1})). On a cold engine, fuel cut occurs at a lower engine speed.

Fuel Pump Control

When the ignition is turned on, the ECM/PCM grounds PGM-FI main relay 2 which feeds current to the fuel pump for 2 seconds to pressurize the fuel system. With the engine running, the ECM/PCM grounds PGM-FI main relay 2 and feeds current to the fuel pump. When the engine is not running and the ignition is on, the ECM/PCM cuts ground to PGM-FI main relay 2 which cuts current to the fuel pump.

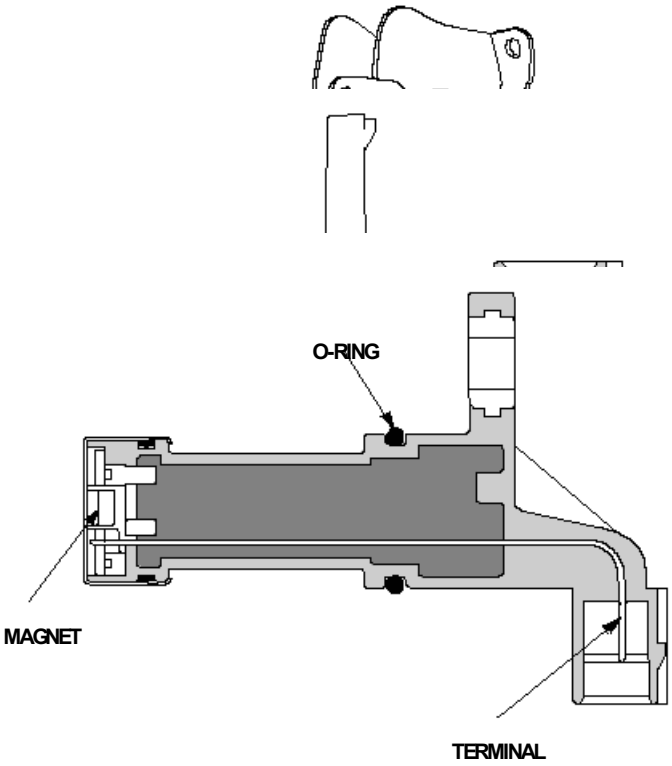
PGM-FI Main Relay 1 and 2

PGM-FI main relay 1 is energized whenever the ignition switch is ON (II) to supply battery voltage to the ECM/PCM, power to the injectors, and power for PGM-FI main relay 2. PGM-FI main relay 2 is energized to supply power to the fuel pump for 2 seconds when the ignition switch is turned to ON (II), and when the engine is cranking or running.

PGM-FI System

Clutch Pedal Position Switch A (KE, KG models (M/T))

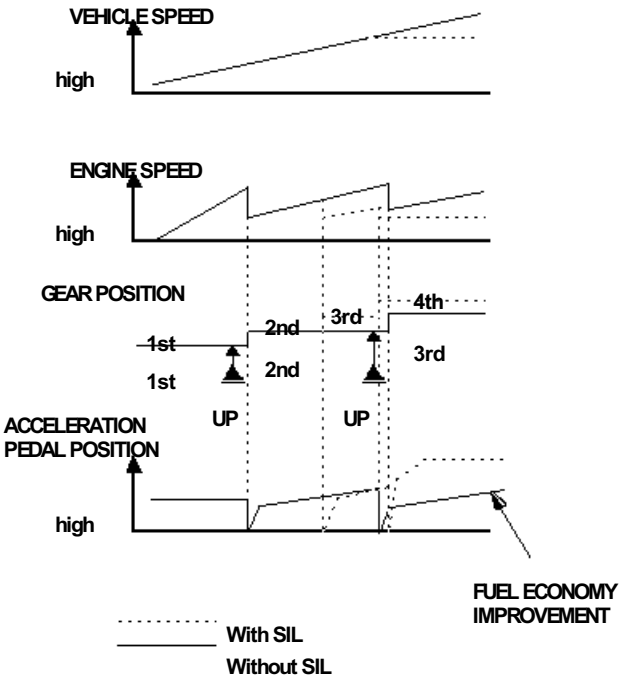
The clutch pedal position switch A signals the ECM when the clutch switch pedal is pressed. When the clutch pedal position switch A is ON, the ECM turned off shift indicator lamp (SIL) via the F -CAN.



Shift Indicator Lamp (SIL) (KE, KG models (M/T))

The shift indicator lamp (SIL) indicates optimal gear shift position in optimal shift timing for better actual fuel consumption.
When prompting to one-gear shift up, shift up indicator lamp illuminate on.
When prompting to one-gear shift down, shift down indicator lamp illuminate on.

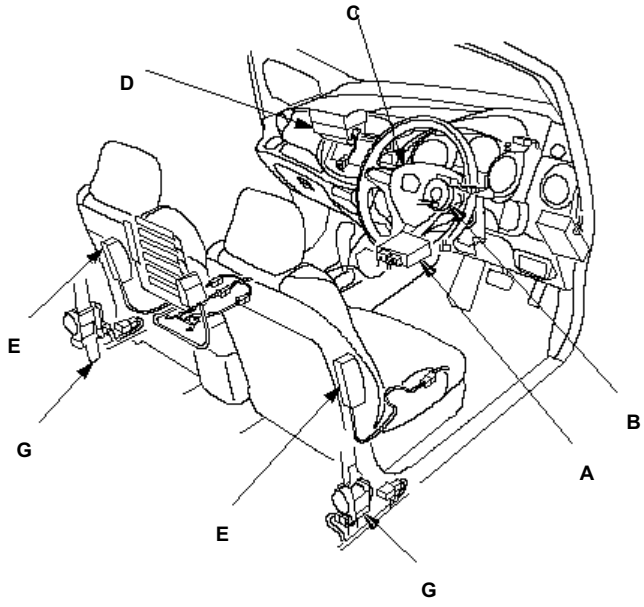
ooking on acceleration pedal
revent excessive footing on acceleration pedal

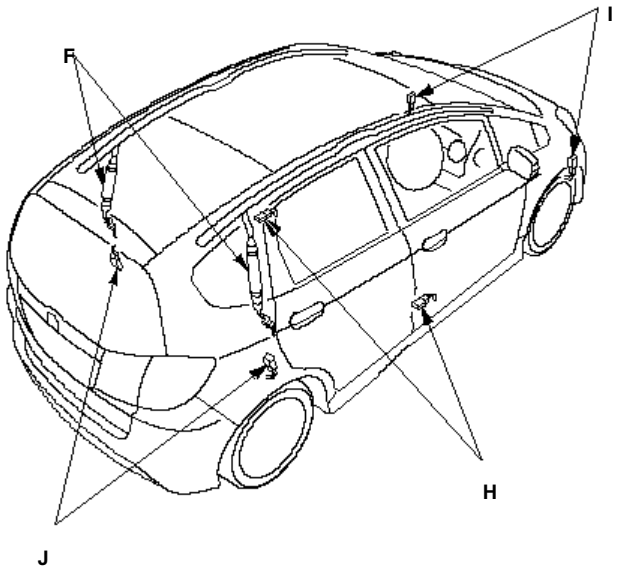


SRS Components

Airbags

The SRS is a safety device which, when used with the seat belt, is designed to help protect the driver and front passenger in a frontal impact exceeding a certain set limit. The system consists of the SRS unit including safing sensor and impact sensor (A), the cable reel (B), the driver's airbag (C), the front passenger's airbag (D), side airbags (E), side curtain airbags (F), seat belt tensioners (G), side impact sensors (first) (H), front impact sensors (I), and side impact sensors (second) (J).
Since the driver's and front passenger's airbags use the same sensors, both normally inflate at the same time. However, it is possible for only one airbag to inflate. This can occur when the severity of a collision is at the margin, or threshold, that the SRS unit determines whether or not the airbags will deploy. In such cases, the seat belt will provide sufficient protection, and the supplemental protection offered by the airbag would be minimal.





Side Airbag Cutoff Indicator/OPDS Operation

The indicator comes on if the front passenger's seat is occupied by a small adult or child who is leaning into the deployment path, or an object (grocery bag, briefcase, purse, etc.) is in the seat. This indicates the passenger's side airbag is off and will not deploy; there is no problem with the side airbag. If the passenger sits upright or moves to another seat, or you remove the object from the seat, the indicator should go off. There will be some delay between the occupant's repositioning, and when the indicator will turn on or off.

SRS Operation

The main circuit in the SRS unit senses and judges the force of impact and, if necessary, ignites the inflator charges. If battery voltage is too low or power is disconnected due to the impact, the voltage regulator and the back-up power circuit will keep voltage at a constant level.

For the SRS to operate

Seat Belt Tensioners

(1) A front impact sensor or side impact sensor must activate and send electric signals to the microprocessor.
(2) The microprocessor must compute the signals and send them to the tensioners.
(3) The charges must ignite and deploy the tensioners.

Driver's and Front Passenger's Airbag(s)

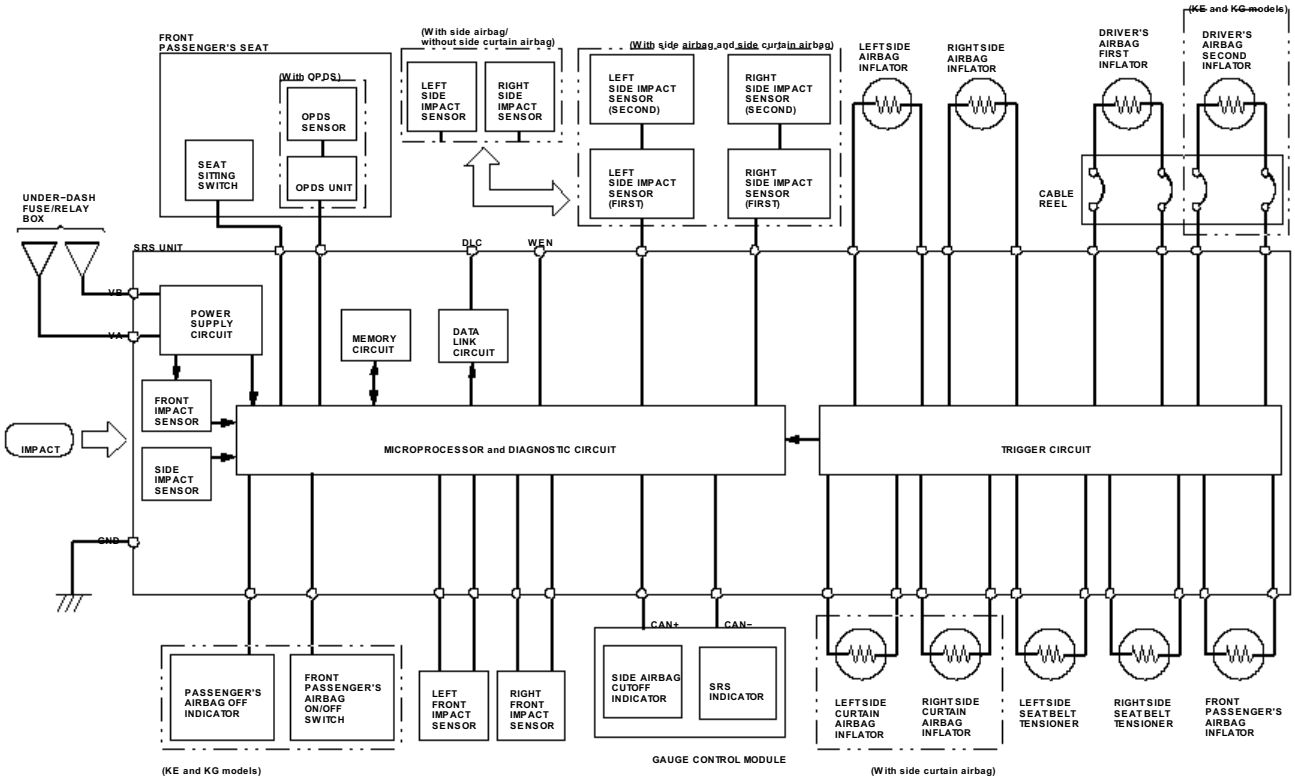
(1) A front impact sensor must activate, and send electric signals to the microprocessor.
(2) The microprocessor must compute the signals, and send them to the airbag inflator(s).
(3) The inflators that received signals must ignite and deploy the airbags.

Side Airbag(s)

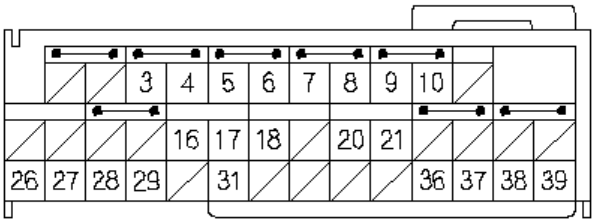
(1) A side impact sensor must activate, and send electric signals to the microprocessor.
(2) The microprocessor must compute the signals and send them to the side airbag inflator(s). However, the microprocessor cuts off the signals to the front passenger's side airbag if the SRS unit determines that the front passenger's head is in the deployment path of the side airbag.
(3) The inflator that receives the signal must ignite and deploy the side airbag.

Side Curtain Airbag(s)

(1) Side impact sensor must activate, and send electrical signals to the microprocessor.
(2) The microprocessor must compute the signals and send them to the side curtain airbag and side airbag inflator(s).
(3) The inflator that receives the signals must ignite and deploy the side curtain airbag and side airbag at the same time.



SRS Unit Inputs and Outputs at Connector A (39P)



Wire side of female terminals

18	BLU *1	K-LINE	Sends and receives scan tool signal (serial data)

Anti-theft Feature

The audio unit has a coded theft protection circuit. Make sure you have the anti-theft security code before:

- Disconnecting the battery.
- Disconnecting the audio unit 24P connector.
- Removing the No. 1 (10 A) fuse from the under-hood fuse/relay box.

When the audio unit is reconnected to the power and the ignition switch is turned to ON (II), ‘‘CODE" will be displayed. Then, enter the 5-digit anti-theft security code.
When replacing the audio unit, be sure to give the customer the new anti-theft security code.

Muting Logic

During HFT mode, HFT voice will be outputted from the front speakers and tweeters, while rear speakers are muted. The outline of the muting logic is shown following table.

Item	Normal	During HFT mode
Left front speaker and tweeter	Audio sound	HFT voice
Right front speaker and tweeter	Audio sound	HFT voice
Left rear speaker	Audio sound	Muted
Right rear speaker	Audio sound	Muted

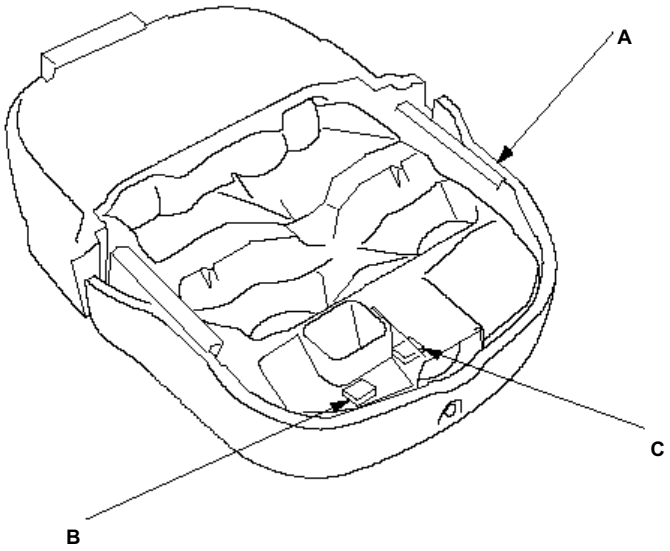
Automatic Lighting System

The automatic lighting system turns on the headlights, all other exterior lights, and the dash lights when the automatic lighting sensor senses low ambient light. The automatic lighting sensor is built into the automatic lighting/rain sensor (A) and located on the windscreen near the rearview mirror, and it operates when the AUTO position of the combination light switch is selected.

The automatic lighting sensor connects to B-CAN and uses the two photodiode sensors. One (B) of the two photodiode sensors is to measure the ambient illuminant, and the other (C) is to measure the forward illuminant.



Daytime Running Lights

The daytime running lights system includes the MICU, the left and right low beam headlights, the daytime running lights relay, the left and right position lights, taillights, and license plate lights. The daytime running lights operate with the ignition switch ON (II) and the combination light switch off.
NOTE:

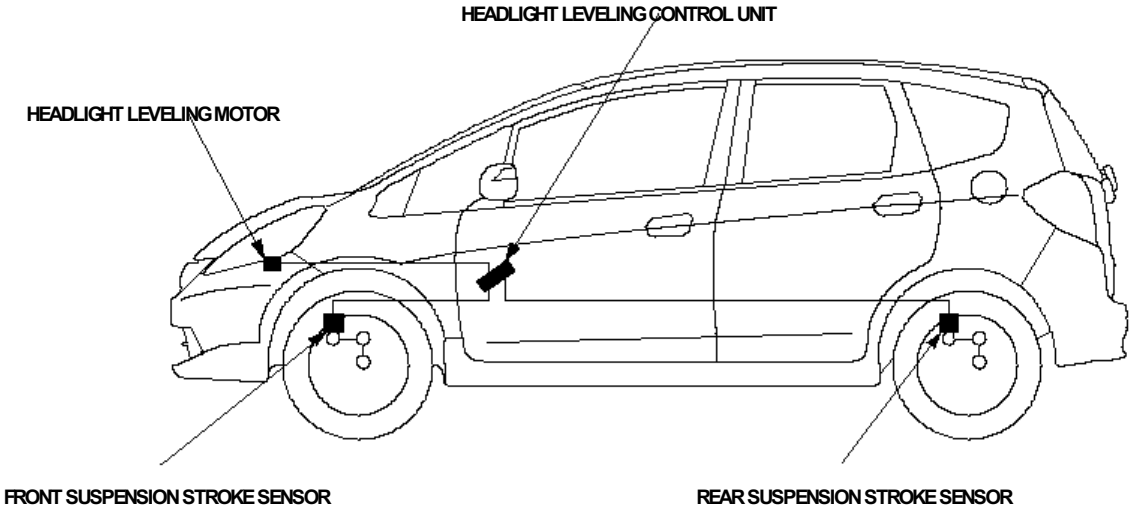
- The daytime running lights are disabled when the ignition switch is turned to LOCK (0).
- The left and right position lights, taillights, and license plate lights revert to normal operation with the combination light switch on.

Headlight Leveling System (With HID)

The headlights leveling system is composed of the headlight leveling control unit, the front and rear suspension stroke sensors, and the left and right headlight leveling motors.

The system uses the front and rear suspension stroke sensors to monitor the vehicle ride height. The ride height is monitored every 1 second while the vehicle is running, and when the vehicle stops with the ignition switch ON (II).

If the control unit detects the ride height change, the control unit controls the headlight leveling motors to adjust the headlight vertical position.



Suspension Stroke Sensors

The headlight leveling system uses the front and rear suspension stroke sensor signals. The front suspension stroke sensor is located at the left front suspension area. A short link connects the arm of the sensor to the lower arm. The rear suspension stroke sensor is located at the left rear suspension area. A short link connects the arm of the sensor to the lower arm.
The sensors detect the vehicle ride height and sends a voltage signal (about 0.5−4.5 V) to the headlight leveling control unit.

Headlight Leveling Control Unit

The headlight leveling control unit is located under the driver's side of the dashboard. The headlight leveling control unit uses the voltage signals it receives from the front and rear suspension stroke sensors to determine the voltage signal (about 2−11 V) it sends to control the left and right leveling motors.

Headlight Leveling Motors

The headlight leveling motors are located behind both headlights, and they adjust the headlights vertically based upon the voltage signals (about 2−11 V) they receive from the headlight leveling control unit.

One-push Turn Signal

When the turn signal lever is pushed to L or R position lightly (for 40±10 or more and less than 350±10 msec) under the condition that the ignition switch is ON (II) and the hazard warning switch is OFF, the left or right turn signal indicator on the gauge control module and the turn signal lights blink three times.

This system is integrated with the MICU. The MICU sends output signal to the left or right turn signal lights based upon the input signals of each switch.

MICU Control Function Index

System	Function
Multiplex Control	Sends the switch signal information to the MICU and output the information. The MICU controls the ECUs electric load and communication based upon the information received from the B-CAN.
On-board Diagnosis	The MICU has a gateway function which sends the results of the MICU internal diagnosis and the B-CAN connected ECUs diagnosis to the HDS.
Self-diagnosis	Test mode 1 diagnoses the communication line between the MICU and B-CAN connected unit. Test mode 2 checks the switch inputs connected to the MICU.
Interior Light(s)	The MICU controls the interior lights ON, OFF and dimming based upon the information of the related switches and/or the B-CAN related information.
Sleep Function	The MICU has a sleep function, which it enters during power down mode.

The MICU also controls the function of these circuits:

- Entry lights control (ceiling light, cargo area light)
- Exterior lights control
- Horn
- Interlock system
- Keyless entry
- Power door locks
- Security alarm
- Turn signal/hazard flasher
- Wiper/washer
- Power window key-off timer

Hardware Fail-safe Control

Fail-safe Function

When a CPU problem or a abnormal power supply voltage is detected, the MICU moves to the hardware fail-safe mode, and each system output load is set to the pre-programmed fail-safe value.

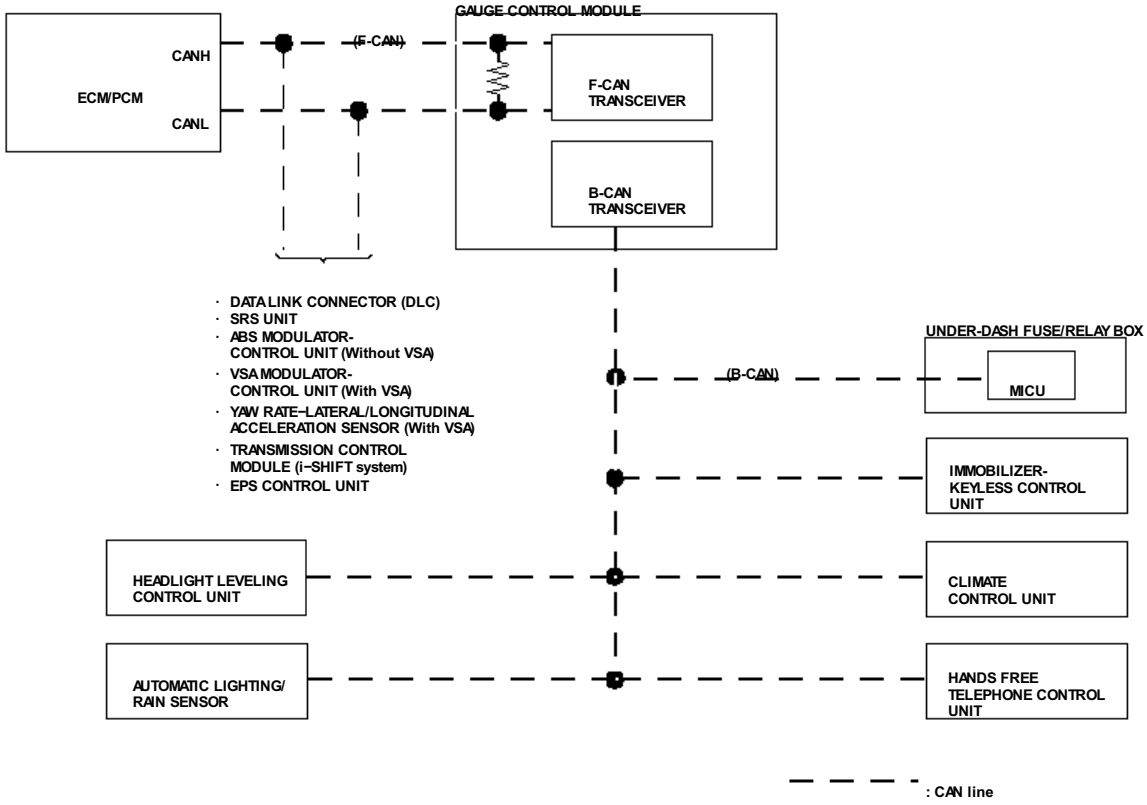
Software Fail-safe Control

When any of the data from the B-CAN circuit cannot be received within a specified time, or an unusual combination of the data is recognized, the MICU moves to the software fail-safe mode. The data that cannot be received is compulsorily fixed to a pre-programmed value.

B-CAN

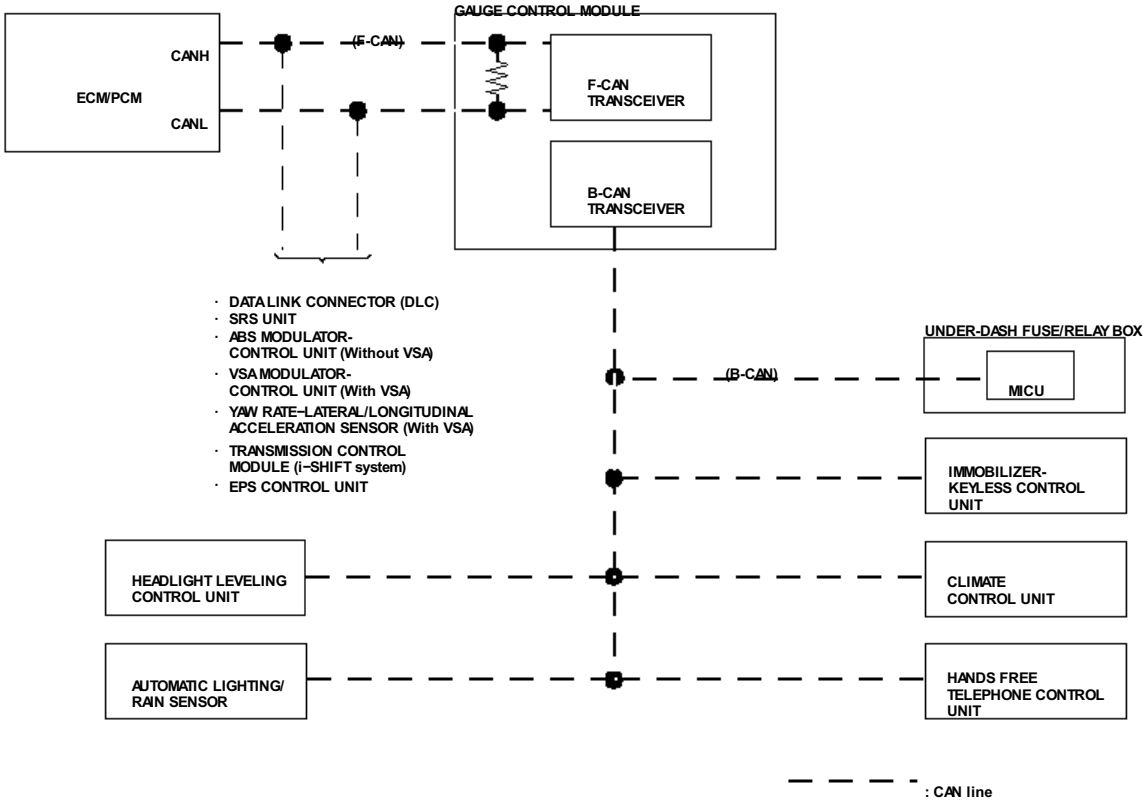
The body controller area network (B-CAN) and the fast controller area network (F-CAN) share information between multiple electronic control units (ECUs). B-CAN communication moves at a slower speed (33.33 kbps) for convenience related items and for other functions. F-CAN information moves at a faster speed (500 kbps) for ‘‘real time" functions such as fuel and emissions data. To allow both systems to share information, the gauge control module translates information from B-CAN to F-CAN and from F-CAN to B-CAN.

- The single wire method is used between the units not requiring the communication to move at a fast speed.
- Using a single wire method reduces the number of the wires used on B-CAN.



Gateway Function

The gauge control module acts as a gateway to allow both systems to share information. The gauge control module translates information from B-CAN to F-CAN and from F-CAN to B-CAN.



Network “Loss of Communication" Error Checking Function

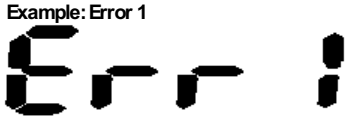
The ECUs on the CAN circuit send messages to each other. If there is any malfunction on the network, the odo/trip display on the gauge control module can indicate the error messages by entering the gauge self-diagnostic function.

Error Code List

Error code	Type of communication line(s) error
Error 1	F-CAN communication
Error 2	B-CAN communication
Error 12	F-CAN and B-CAN communication

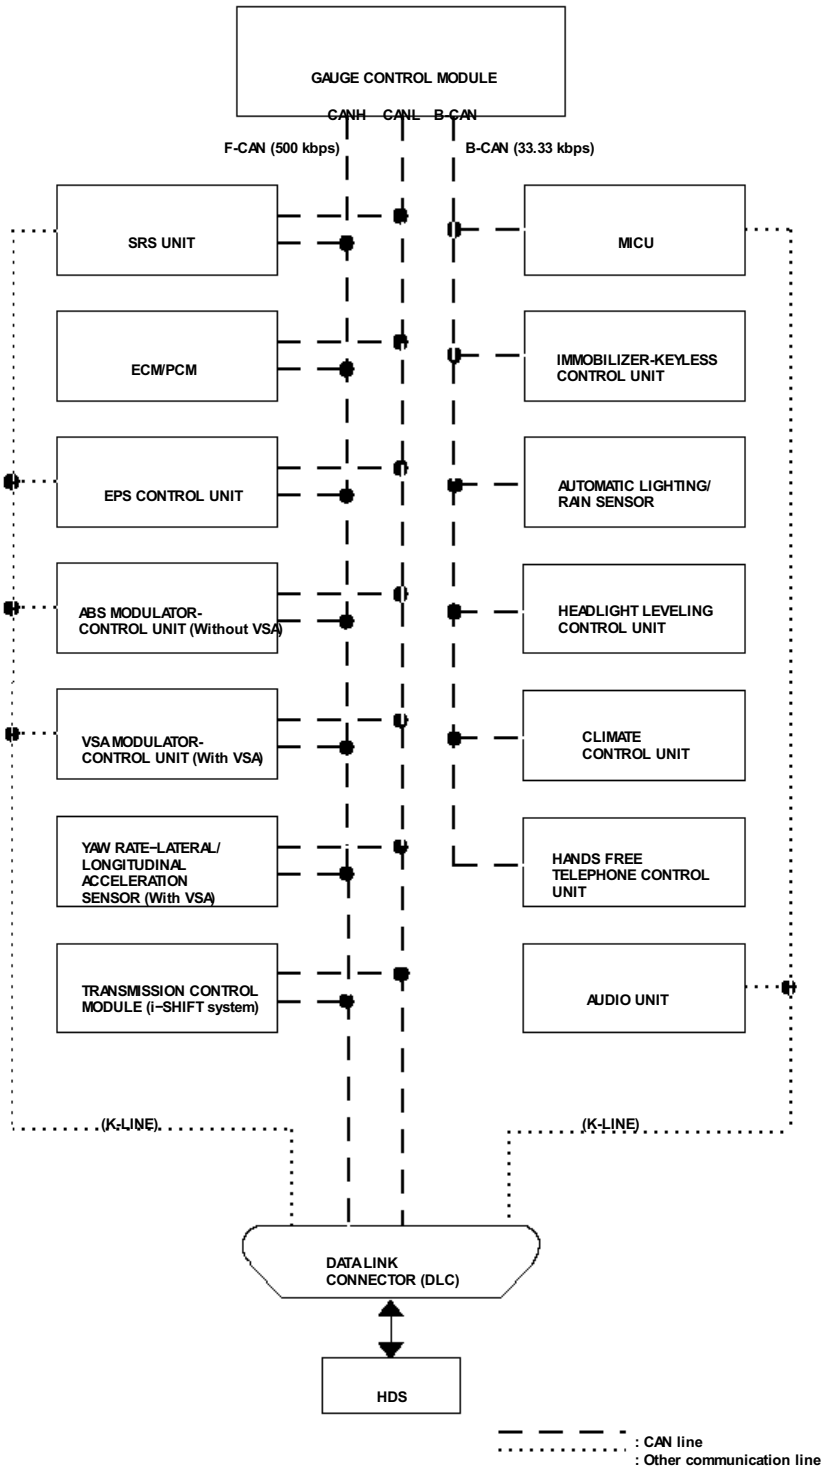
NOTE: For further information about Error indication, refer to the gauge control module self-diagnostic function.

Example: Error 1



Self-diagnostic Function

By connecting the HDS to the data link connector (DLC), the HDS can retrieve and indicate the diagnostic results of each ECU. The diagnostic line called K-LINE is distinguished from the CAN lines, and connected to the CAN related ECUs. The MICU is a gateway between the HDS and B-CAN related ECUs, and sends B-CAN diagnostic results to the HDS.



Wake-up and Sleep Function

The multiplex control system has ‘‘wake-up" and ‘‘sleep" functions to decrease the parasitic draw on the battery when the ignition switch is OFF.

- In the sleep mode, the MICU stops functioning (communication and CPU control) when it is not necessary for the system to operate.
- As soon as any operation is requested (for example, a door is unlocked), the related control unit in the sleep mode immediately wakes up and begins to function.
- When the ignition switch is turned OFF, and the driver's door is opened, then closed, there is a delay of about 40 seconds before the control unit goes from the wake-up mode to the sleep mode.
- The sleep mode will not function if any door is opened or if a ignition switch is in any positions except LOCK (0) position.
- The draw is reduced from 200 mA to less than 35 mA when in the sleep mode.

Fail-safe Function

To prevent improper operation, the MICU has a fail-safe function. In the fail-safe mode, the output signal is fixed when any part of the system malfunctions (for example, a faulty control unit or communication line).
Each control unit has a hardware fail-safe function that fixes the output signal when there is a CPU malfunction, and a software fail-safe function that ignores the signal from a control unit, which allows the system to operate normally.

Power Supply Voltage Monitoring Function

The MICU monitors the power supply voltage (back-up voltage). If the voltage goes below 10 V, the MICU sends a MICU message and will not store DTCs.

	Input	Output
MICU	Battery voltage	
B-CAN		MICU message

Headlights

The MICU controls the headlights based upon the ignition switch (IG1) and the combination light switch signals.

	Input	Output
MICU	IG1 power supply Combination light switch (SMALL) Headlight switch (OFF) Headlight switch (ON) Dimmer switch Passing switch	Headlight (LOW) Headlight (HIGH) Front position lights/Taillights High/Low beam switching solenoid *

Rear Window Wiper/Washer (With reverse linked rear wiper)

The MICU control the rear window wiper motor and rear window washer motor based upon the B-CAN signal and input signals.

	Input	Output
MICU	IG1 power supply Back-up lights switch Windshield washer motor switch Rear window washer motor switch Rear window wiper switch Windshield wiper switch (INT) Windshield wiper switch (LO) Windshield wiper switch (HI)	Rear window wiper motor Rear window washer motor
B-CAN	Automatic wiper (ASREQ) signal Automatic wiper (AHREQ) signal Automatic wiper (ALREQ) signal Automatic wiper (RSFAIL) signal Automatic wiper (RAIN) signal	Rear window wiper switch (RRWIP) message Rear window wiper switch (RRWASH) message

Windshield/Rear Window Washer

The MICU controls the windshield washer and rear window washer motor based upon the IG1 signal and windshield/rear window washer switch signal.

	Input	Output
MICU	IG1 power supply Windshield washer motor switch Rear window washer motor switch	Windshield washer motor Rear window washer motor

Power Window Timer (Key-off operation)

The MICU controls the power window key-off operation based upon the ignition key switch and the driver's door switch, and front passenger's door switch signals.

	Input	Output
MICU	IG1 power supply Ignition key switch Driver's door switch Front passenger's door switch	Power window timer

Collision Detection Signal (CDS)

The MICU controls the door lock actuators based upon the IG1 and the SRS signals.

	Input	Output
MICU	IG1 power supply	Door lock actuators (LOCK/UNLOCK)
B-CAN	Front impact sensor Side impact sensor (first) Side impact sensor (second) SRS unit rollover signal	

Power Door Locks

The MICU controls the door lock actuators based upon the input signals of each switch.

	Input	Output
MICU	IG1 power supply Ignition key switch Driver's door switch Front passenger's door switch Left rear door switch Right rear door switch Tailgate latch switch Driver's door lock switch (LOCK/UNLOCK) Driver's door key cylinder switch (LOCK/UNLOCK) Driver's door lock knob switch (LOCK/UNLOCK)	Door lock actuators (LOCK) Door lock actuators (UNLOCK)

Door Lock Response Operation

The MICU controls the door lock actuators based upon the B-CAN signals.

	Input	Output
MICU		Door lock actuators (LOCK) Door lock actuators (UNLOCK)
B-CAN	Door lock signal	

Keyless Entry System

The MICU controls the door lock actuators based upon the input signals of each switch and the B-CAN signals.

	Input	Output
MICU	IG1 power supply Ignition key switch Driver's door switch Front passenger's door switch Left rear door switch Right rear door switch Tailgate latch switch Driver's door lock knob switch (LOCK/UNLOCK) Driver's door lock switch (LOCK/UNLOCK) Driver's door key cylinder switch (LOCK/UNLOCK)	Door lock actuators (LOCK) Door lock actuators (UNLOCK)

Answer Back Response Operation

The MICU controls the turn signal system based upon the B-CAN signals.

	Input	Output
MICU	IG1 power supply	Turn signal lights (left) Turn signal lights (right)
B-CAN	Answer back signal (Hazard) Vehicle speed pulse signal	

Answer Back Response Operation

The MICU controls the lighting system and horn based upon the B-CAN signals.

	Input	Output
MICU		Horn(s) Headlights (low beam) Position lights and taillights
B-CAN	Answer back signal (headlight low, horn, position lights)	

Super Locking System (KE model)

The MICU controls the super locking system based upon the input signals of each switch and the B-CAN signals.

	Input	Output
MICU	IG1 power supply Ignition key switch Driver's door switch Front passenger's door switch Right rear door switch Left rear door switch Tailgate latch switch Driver's door lock knob switch (UNLOCK) Front passenger's door lock knob switch (UNLOCK) Right rear door lock knob switch (UNLOCK) Left rear door lock knob switch (UNLOCK) Tailgate lock knob switch (UNLOCK) Driver's door key cylinder switch (LOCK/UNLOCK) Driver's door lock switch (LOCK/UNLOCK)	Door lock actuators (LOCK) Door lock actuators (UNLOCK) Super locking SET signal
B-CAN	Keyless LOCK/UNLOCK signal Door lock signal	

A/C Pressure Switch

The MICU sends the A/C pressure switch signal based upon the ignition switch and the A/C pressure switch.

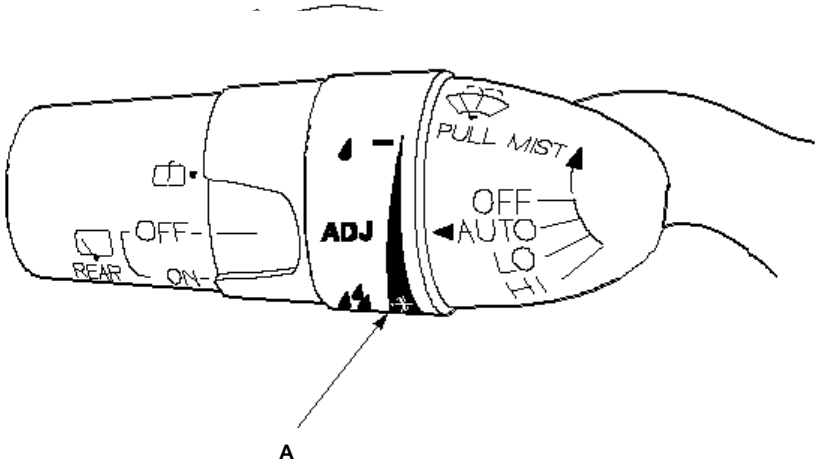
	Input	Output
MICU	IG1 power supply A/C pressure switch	
B-CAN		A/C pressure switch signal

Super locking system

The super locking system is integrated with the MICU. The MICU receives input signals form the switches which are related to the door lock system. Then, the MICU sends output signals to the super locking actuators to set the super locking.
When the super locking is set, all the doors can't be opened from the inside of the vehicle, even though the inner handles or lock knobs are operated.
When the key cylinder is turned to the LOCK position twice within 5 seconds, the super locking is set.
The super locking also can be set with the transmitter. When the LOCK button on the transmitter is pressed twice within 5 seconds, the super locking is set.
To cancel the super locking, unlock the driver's door with the key or the transmitter.

Automatic Wiper System

The automatic wiper system automatically turns on the windshield wipers by sensing rainfall with the rain sensor which is built into the automatic lighting/rain sensor (A) and located on the windscreen near the rearview mirror. The rain sensor operates when the AUTO position of the wiper/washer switch is selected. The rain sensor consists of photodiodes (B) and LEDs (C), connects to B-CAN, senses rainfall, and outputs automatic wiper messages.

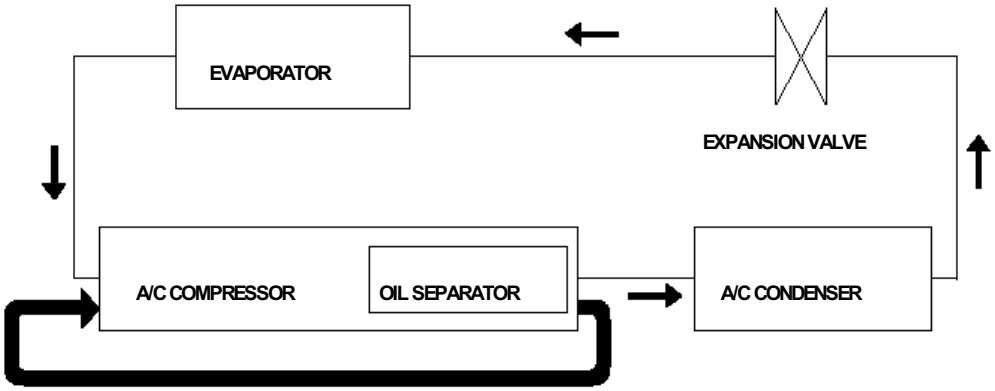


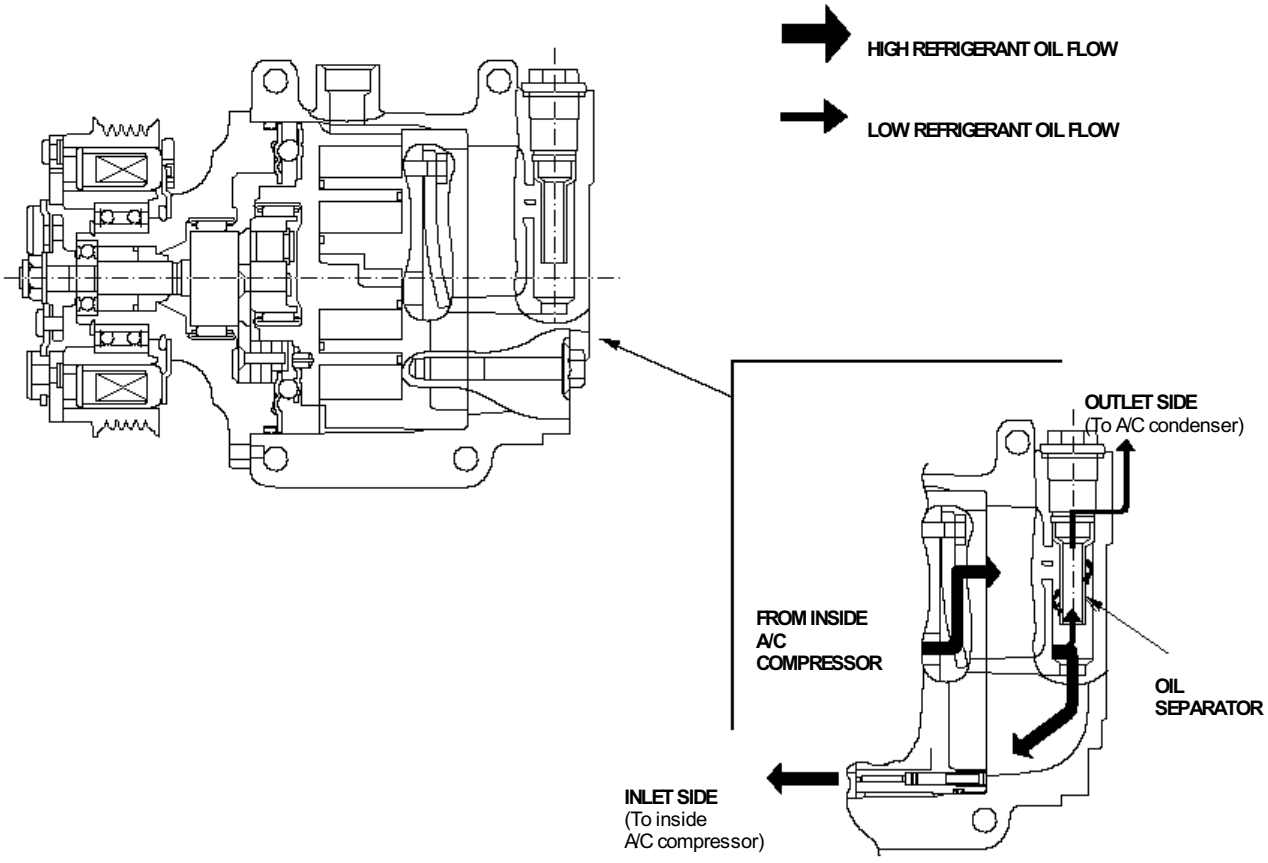
Reverse Linked Rear Wiper

When the shift lever is moved to the Reverse (R) position with the front windshield wiper activated, the rear wiper operates automatically even if the rear wiper switch is off.

Oil Separator

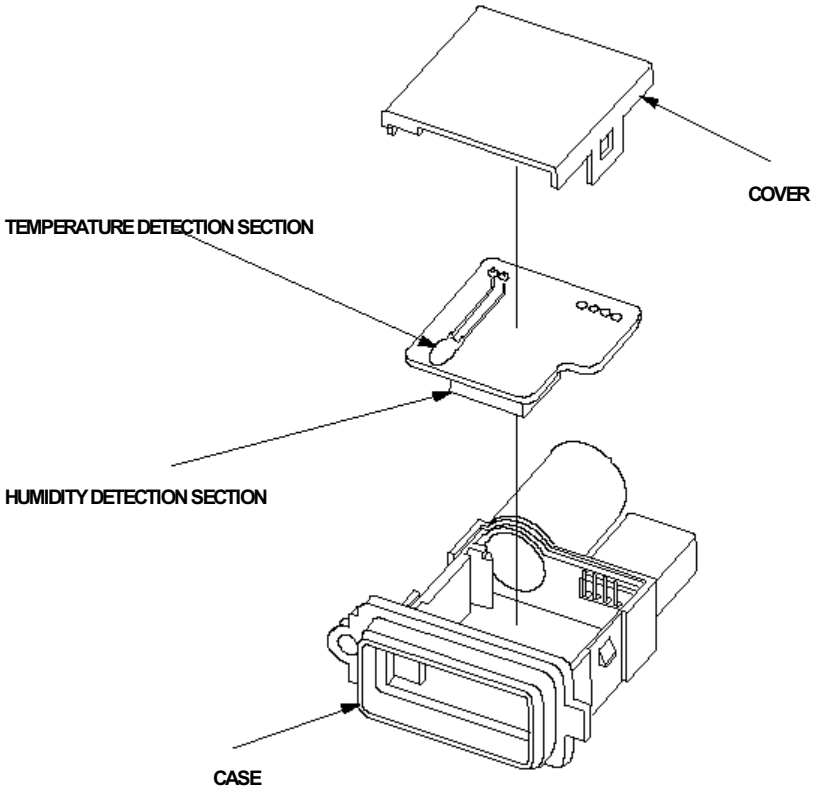
Oil emission from the A/C compressor to the A/C line is reduced by placing the oil separator in the A/C compressor. This results in a thinner oil film inside of the heat exchangers (A/C condenser and evaporator). Air conditioning efficiency is increased without sacrificing engine performance.





Humidity/In-car Temperature Sensor

The humidity sensor consists of the two sensors. One is the humidity detection part and another is the in-car temperature detection part. When the climate control unit receives the signals of the in-car condition from the humidity sensor, and judges that the humidity in the vehicle is very low, the climate control unit controls the compressor for reducing the engine power loss.



Humidity/In-car Temperature Sensor Quality

The resistance of the humidity sensor changes by the adsorption and the evaporation of moisture. The resistance change of humidity sensor changes the output voltage.

Maintenance Schedule for Normal and Severe Conditions - KM model

20,000km(1year)

This Maintenance Schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
Follow the Normal Conditions Maintenance Schedule if the severe driving conditions specified in the Severe Conditions Maintenance Schedule do not apply.
The following items must be used for "Severe Conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to E.

- Engine oil and engine oil filter: A/B/C/D/E
- Manual transmission fluid: B/D

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS)**
  Check the master cylinder and ABS modulator-control unit for damage and leakage.
- **All fluid levels and condition of fluid**
  - Engine coolant
  - MTF
  - ATF
  - Clutch fluid
  - Brake fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the catalytic converter heat shield, exhaust pipe, and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil**

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil**

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter**
- **Check front and rear brakes**
  - Check the front brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.
  - Check the brake linings for cracking, glazing, wear, and contamination.
  - Check the caliper for damage, leaks, and tightness.

Visually inspect the following items

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect the valve clearance**

Every 10,000 km (6,250 miles)

- **Replace fuel filter**

Have a qualified technician change the fuel filter. Since the fuel system is under pressure, fuel can spray out and create a hazard if all fuel line connections are not handled correctly.

- [ ] **Rotate tyres (Check tyre inflation and condition at least once per month)**

Every 10,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, thereafter every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between the upper and lower marks on the reservoir.

Maintenance Schedule for Normal and Severe Conditions - KM model

40,000km(2year)

This Maintenance Schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
Follow the Normal Conditions Maintenance Schedule if the severe driving conditions specified in the Severe Conditions Maintenance Schedule do not apply.
The following items must be used for "Severe Conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to E.

- Engine oil and engine oil filter: A/B/C/D/E
- Manual transmission fluid: B/D

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS)**
  Check the master cylinder and ABS modulator-control unit for damage and leakage.
- **All fluid levels and condition of fluid**
  - Engine coolant
  - MTF
  - ATF
  - Clutch fluid
  - Brake fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the catalytic converter heat shield, exhaust pipe, and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil**

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil**

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter**
- **Check front and rear brakes**
  - Check the front brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.
  - Check the brake linings for cracking, glazing, wear, and contamination.
  - Check the caliper for damage, leaks, and tightness.

Visually inspect the following items

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

Have a qualified technician change the fuel filter. Since the fuel system is under pressure, fuel can spray out and create a hazard if all fuel line connections are not handled correctly.

- [ ] **Rotate tyres (Check tyre inflation and condition at least once per month)**

Every 10,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, thereafter every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between the upper and lower marks on the reservoir.

Maintenance Schedule for Normal and Severe Conditions - KM model

60,000km(3year)

This Maintenance Schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
Follow the Normal Conditions Maintenance Schedule if the severe driving conditions specified in the Severe Conditions Maintenance Schedule do not apply.
The following items must be used for "Severe Conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to E.

- Engine oil and engine oil filter: A/B/C/D/E
- Manual transmission fluid: B/D

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Replace manual transmission fluid (MTF)**

  Use genuine Honda MTF.
- **Replace automatic transmission fluid**

  Use genuine Honda ATF-Z1.
- **Replace dust and pollen filter**

Visually inspect the following items

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS)**

  Check the master cylinder and ABS modulator-control unit for damage and leakage.
- **All fluid levels and condition of fluid**
  - Engine coolant
  - MTF
  - ATF
  - Clutch fluid
  - Brake fluid
  - Windshield washer fluid
- **Exhaust system**

  Check the catalytic converter heat shield, exhaust pipe, and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil**

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil**

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter**
- **Check front and rear brakes**
  - Check the front brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.
  - Check the brake linings for cracking, glazing, wear, and contamination.
  - Check the caliper for damage, leaks, and tightness.

Visually inspect the following items

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect the valve clearance**

Every 10,000 km (6,250 miles)

Replace fuel filter

Have a qualified technician change the fuel filter. Since the fuel system is under pressure, fuel can spray out and create a hazard if all fuel line connections are not handled correctly.

Rotate tyres (Check tyre inflation and condition at least once per month)

Every 10,000 km (62,500 miles)

Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, thereafter every 100,000 km (60,000 miles) or 5 years

Replace engine coolant

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 3 years

Replace brake fluid

- Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
- Check the brake fluid level is between the upper and lower marks on the reservoir.

Maintenance Schedule for Normal and Severe Conditions - KM model

80,000km(4year)

This Maintenance Schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
Follow the Normal Conditions Maintenance Schedule if the severe driving conditions specified in the Severe Conditions Maintenance Schedule do not apply.
The following items must be used for "Severe Conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to E.

- Engine oil and engine oil filter: A/B/C/D/E
- Manual transmission fluid: B/D

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.

Maintenance Schedule for Normal and Severe Conditions - KM model

120,000km(6year)

This Maintenance Schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
Follow the Normal Conditions Maintenance Schedule if the severe driving conditions specified in the Severe Conditions Maintenance Schedule do not apply.
The following items must be used for "Severe Conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to E.

- Engine oil and engine oil filter: A/B/C/D/E
- Manual transmission fluid: B/D

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Inspect idle speed**
- **Replace manual transmission fluid (MTF)**
  Use genuine Honda MTF.
- **Replace manual transmission fluid (MTF)**
  Use genuine Honda MTF.
- **Replace automatic transmission fluid**
  Use genuine Honda ATF-Z1.
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS)**
  Check the master cylinder and ABS modulator-control unit for damage and leakage.
- **All fluid levels and condition of fluid**
  - Engine coolant
  - MTF
  - ATF
  - Clutch fluid
  - Brake fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the catalytic converter heat shield, exhaust pipe, and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil**

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil**

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter**
- **Check front and rear brakes**
  - Check the front brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.
  - Check the brake linings for cracking, glazing, wear, and contamination.
  - Check the caliper for damage, leaks, and tightness.

Visually inspect the following items

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**

- Check boot and boot band for cracks.
- Check boots for leaking grease.

Every 30,000 km (18,750 miles)

Replace air cleaner element

Every 40,000 km (25,000 miles)

Inspect the valve clearance

Every 10,000 km (6,250 miles)

Replace fuel filter

Have a qualified technician change the fuel filter. Since the fuel system is under pressure, fuel can spray out and create a hazard if all fuel line connections are not handled correctly.

Rotate tyres (Check tyre inflation and condition at least once per month)

Every 10,000 km (62,500 miles)

Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, thereafter every 100,000 km (60,000 miles) or 5 years

Replace engine coolant

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 3 years

Replace brake fluid

- Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
- Check the brake fluid level is between the upper and lower marks on the reservoir.

Maintenance Schedule for Normal and Severe Conditions - KM model

140,000km(7year)

This Maintenance Schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
Follow the Normal Conditions Maintenance Schedule if the severe driving conditions specified in the Severe Conditions Maintenance Schedule do not apply.
The following items must be used for "Severe Conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to E.

- Engine oil and engine oil filter: A/B/C/D/E
- Manual transmission fluid: B/D

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Replace automatic transmission fluid**

  Use genuine Honda ATF-Z1.
- **Replace dust and pollen filter**

Visually inspect the following items

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS)**

  Check the master cylinder and ABS modulator-control unit for damage and leakage.
- **All fluid levels and condition of fluid**
  - Engine coolant
  - MTF
  - ATF
  - Clutch fluid
  - Brake fluid
  - Windshield washer fluid
- **Exhaust system**

  Check the catalytic converter heat shield, exhaust pipe, and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil**

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil**

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter**
- **Check front and rear brakes**
  - Check the front brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.
  - Check the brake linings for cracking, glazing, wear, and contamination.
  - Check the caliper for damage, leaks, and tightness.

Visually inspect the following items

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect the valve clearance**

Every 10,000 km (6,250 miles)

- **Replace fuel filter**

Have a qualified technician change the fuel filter. Since the fuel system is under pressure, fuel can spray out and create a hazard if all fuel line connections are not handled correctly.

- [ ] **Rotate tyres (Check tyre inflation and condition at least once per month)**

Every 10,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, thereafter every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between the upper and lower marks on the reservoir.

Maintenance Schedule for Normal and Severe Conditions - KM model

160,000km(8year)

This Maintenance Schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
Follow the Normal Conditions Maintenance Schedule if the severe driving conditions specified in the Severe Conditions Maintenance Schedule do not apply.
The following items must be used for "Severe Conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to E.

- Engine oil and engine oil filter: A/B/C/D/E
- Manual transmission fluid: B/D

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS)**
  Check the master cylinder and ABS modulator-control unit for damage and leakage.
- **All fluid levels and condition of fluid**
  - Engine coolant
  - MTF
  - ATF
  - Clutch fluid
  - Brake fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the catalytic converter heat shield, exhaust pipe, and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil**

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil**

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter**
- **Check front and rear brakes**
  - Check the front brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.
  - Check the brake linings for cracking, glazing, wear, and contamination.
  - Check the caliper for damage, leaks, and tightness.

Visually inspect the following items

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect the valve clearance**

Every 10,000 km (6,250 miles)

- **Replace fuel filter**

Have a qualified technician change the fuel filter. Since the fuel system is under pressure, fuel can spray out and create a hazard if all fuel line connections are not handled correctly.

- [ ] **Rotate tyres (Check tyre inflation and condition at least once per month)**

Every 10,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, thereafter every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between the upper and lower marks on the reservoir.

Maintenance Schedule for Normal and Severe Conditions - KM model

180,000km(9year)

This Maintenance Schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
Follow the Normal Conditions Maintenance Schedule if the severe driving conditions specified in the Severe Conditions Maintenance Schedule do not apply.
The following items must be used for "Severe Conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to E.

- Engine oil and engine oil filter: A/B/C/D/E
- Manual transmission fluid: B/D

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.

Service at the indicated distance or time whichever comes first

- ☐ **Replace engine oil filter**
- ☐ **Replace manual transmission fluid (MTF)**

  Use genuine Honda MTF.
- ☐ **Replace automatic transmission fluid**

  Use genuine Honda ATF-Z1.
- ☐ **Replace dust and pollen filter**

Visually inspect the following items

- ☐ Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- ☐ Check tightness of screws, nuts, and joints. If necessary, retighten.

- ☐ **Brake hoses and lines (including ABS)**

  Check the master cylinder and ABS modulator-control unit for damage and leakage.
- ☐ **All fluid levels and condition of fluid**
  - ☐ Engine coolant
  - ☐ MTF
  - ☐ ATF
  - ☐ Clutch fluid
  - ☐ Brake fluid
  - ☐ Windshield washer fluid
- ☐ **Exhaust system**

  Check the catalytic converter heat shield, exhaust pipe, and muffler for damage, leaks, and tightness.
- ☐ **Fuel lines and connections**
  - ☐ Check fuel lines for loose connections, cracks, and deterioration.
  - ☐ Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- ☐ **Replace engine oil**

Every 5,000 km (3,125 miles) or 6 months

- ☐ **Replace engine oil**

Every 10,000 km (6,250 miles) or 6 months

- ☐ **Replace engine oil filter**
- ☐ **Check front and rear brakes**
  - ☐ Check the front brake pad and disc thickness. Check for damage.
  - ☐ Check the wheel cylinder for leaks.
  - ☐ Check the brake linings for cracking, glazing, wear, and contamination.
  - ☐ Check the caliper for damage, leaks, and tightness.

Visually inspect the following items

- ☐ **Tie-rod ends, steering gearbox, and boots**
  - ☐ Check steering linkage.
  - ☐ Check the boot for damage and leaking grease.
- ☐ **Suspension components**
  - ☐ Check the bolts for tightness.
  - ☐ Check all dust covers for deterioration and damage.
- ☐ **Driveshaft boots**
  - ☐ Check boot and boot band for cracks.
  - ☐ Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- ☐ **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- ☐ **Inspect the valve clearance**

Every 10,000 km (6,250 miles)

Replace fuel filter

Have a qualified technician change the fuel filter. Since the fuel system is under pressure, fuel can spray out and create a hazard if all fuel line connections are not handled correctly.

Rotate tyres (Check tyre inflation and condition at least once per month)

Every 10,000 km (62,500 miles)

Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, thereafter every 100,000 km (60,000 miles) or 5 years

Replace engine coolant

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 3 years

Replace brake fluid

- Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
- Check the brake fluid level is between the upper and lower marks on the reservoir.

Maintenance Schedule for Normal and Severe Conditions - KM model

200,000km(10year)

This Maintenance Schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
Follow the Normal Conditions Maintenance Schedule if the severe driving conditions specified in the Severe Conditions Maintenance Schedule do not apply.
The following items must be used for "Severe Conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to E.

- Engine oil and engine oil filter: A/B/C/D/E
- Manual transmission fluid: B/D

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.

Service at the indicated distance or time whichever comes first

- ☐ **Replace engine oil filter**
- ☐ **Replace automatic transmission fluid**

  Use genuine Honda ATF-Z1.
- ☐ **Check parking brake adjustment**

  Check the parking brake operation.
- ☐ **Replace dust and pollen filter**

Visually inspect the following items

- ☐ Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- ☐ Check tightness of screws, nuts, and joints. If necessary, retighten.

- ☐ **Brake hoses and lines (including ABS)**

  Check the master cylinder and ABS modulator-control unit for damage and leakage.
- ☐ **All fluid levels and condition of fluid**
  - ☐ Engine coolant
  - ☐ MTF
  - ☐ ATF
  - ☐ Clutch fluid
  - ☐ Brake fluid
  - ☐ Windshield washer fluid
- ☐ **Exhaust system**

  Check the catalytic converter heat shield, exhaust pipe, and muffler for damage, leaks, and tightness.
- ☐ **Fuel lines and connections**
  - ☐ Check fuel lines for loose connections, cracks, and deterioration.
  - ☐ Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- ☐ **Replace engine oil**

Every 5,000 km (3,125 miles) or 6 months

- ☐ **Replace engine oil**

Every 10,000 km (6,250 miles) or 6 months

- ☐ **Replace engine oil filter**
- ☐ **Check front and rear brakes**
  - ☐ Check the front brake pad and disc thickness. Check for damage.
  - ☐ Check the wheel cylinder for leaks.
  - ☐ Check the brake linings for cracking, glazing, wear, and contamination.
  - ☐ Check the caliper for damage, leaks, and tightness.

Visually inspect the following items

- ☐ **Tie-rod ends, steering gearbox, and boots**
  - ☐ Check steering linkage.
  - ☐ Check the boot for damage and leaking grease.
- ☐ **Suspension components**
  - ☐ Check the bolts for tightness.
  - ☐ Check all dust covers for deterioration and damage.
- ☐ **Driveshaft boots**
  - ☐ Check boot and boot band for cracks.
  - ☐ Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- ☐ **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- ☐ **Inspect the valve clearance**

Every 10,000 km (6,250 miles)

Replace fuel filter

Have a qualified technician change the fuel filter. Since the fuel system is under pressure, fuel can spray out and create a hazard if all fuel line connections are not handled correctly.

Rotate tyres (Check tyre inflation and condition at least once per month)

Every 10,000 km (62,500 miles)

Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, thereafter every 100,000 km (60,000 miles) or 5 years

Replace engine coolant

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 3 years

Replace brake fluid

- Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
- Check the brake fluid level is between the upper and lower marks on the reservoir.

Maintenance Schedule for Normal and Severe Conditions - KM model

12,000miles(1year)

This Maintenance Schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
Follow the Normal Conditions Maintenance Schedule if the severe driving conditions specified in the Severe Conditions Maintenance Schedule do not apply.
The following items must be used for "Severe Conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to E.

- Engine oil and engine oil filter: A/B/C/D/E
- Manual transmission fluid: B/D

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS)**
  Check the master cylinder and ABS modulator-control unit for damage and leakage.
- **All fluid levels and condition of fluid**
  - Engine coolant
  - MTF
  - ATF
  - Clutch fluid
  - Brake fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the catalytic converter heat shield, exhaust pipe, and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil**

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil**

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter**
- **Check front and rear brakes**
  - Check the front brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.
  - Check the brake linings for cracking, glazing, wear, and contamination.
  - Check the caliper for damage, leaks, and tightness.

Visually inspect the following items

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect the valve clearance**

Every 10,000 km (6,250 miles)

- **Replace fuel filter**

Have a qualified technician change the fuel filter. Since the fuel system is under pressure, fuel can spray out and create a hazard if all fuel line connections are not handled correctly.

- [ ] **Rotate tyres (Check tyre inflation and condition at least once per month)**

Every 10,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, thereafter every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between the upper and lower marks on the reservoir.

Maintenance Schedule for Normal and Severe Conditions - KM model

25,000miles(2year)

This Maintenance Schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
Follow the Normal Conditions Maintenance Schedule if the severe driving conditions specified in the Severe Conditions Maintenance Schedule do not apply.
The following items must be used for "Severe Conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to E.

- Engine oil and engine oil filter: A/B/C/D/E
- Manual transmission fluid: B/D

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS)**
  Check the master cylinder and ABS modulator-control unit for damage and leakage.
- **All fluid levels and condition of fluid**
  - Engine coolant
  - MTF
  - ATF
  - Clutch fluid
  - Brake fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the catalytic converter heat shield, exhaust pipe, and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil**

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil**

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter**
- **Check front and rear brakes**
  - Check the front brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.
  - Check the brake linings for cracking, glazing, wear, and contamination.
  - Check the caliper for damage, leaks, and tightness.

Visually inspect the following items

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect the valve clearance**

Every 10,000 km (6,250 miles)

- **Replace fuel filter**

Have a qualified technician change the fuel filter. Since the fuel system is under pressure, fuel can spray out and create a hazard if all fuel line connections are not handled correctly.

- [ ] **Rotate tyres (Check tyre inflation and condition at least once per month)**

Every 10,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, thereafter every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between the upper and lower marks on the reservoir.

Maintenance Schedule for Normal and Severe Conditions - KM model

37,000miles(3year)

This Maintenance Schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
Follow the Normal Conditions Maintenance Schedule if the severe driving conditions specified in the Severe Conditions Maintenance Schedule do not apply.
The following items must be used for "Severe Conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to E.

- Engine oil and engine oil filter: A/B/C/D/E
- Manual transmission fluid: B/D

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Replace manual transmission fluid (MTF)**

  Use genuine Honda MTF.
- **Replace automatic transmission fluid**

  Use genuine Honda ATF-Z1.
- **Replace dust and pollen filter**

Visually inspect the following items

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS)**

  Check the master cylinder and ABS modulator-control unit for damage and leakage.
- **All fluid levels and condition of fluid**
  - Engine coolant
  - MTF
  - ATF
  - Clutch fluid
  - Brake fluid
  - Windshield washer fluid
- **Exhaust system**

  Check the catalytic converter heat shield, exhaust pipe, and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil**

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil**

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter**
- **Check front and rear brakes**
  - Check the front brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.
  - Check the brake linings for cracking, glazing, wear, and contamination.
  - Check the caliper for damage, leaks, and tightness.

Visually inspect the following items

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect the valve clearance**

Every 10,000 km (6,250 miles)

Replace fuel filter

Have a qualified technician change the fuel filter. Since the fuel system is under pressure, fuel can spray out and create a hazard if all fuel line connections are not handled correctly.

Rotate tyres (Check tyre inflation and condition at least once per month)

Every 10,000 km (62,500 miles)

Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, thereafter every 100,000 km (60,000 miles) or 5 years

Replace engine coolant

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 3 years

Replace brake fluid

- Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
- Check the brake fluid level is between the upper and lower marks on the reservoir.

Maintenance Schedule for Normal and Severe Conditions - KM model

50,000miles(4year)

This Maintenance Schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
Follow the Normal Conditions Maintenance Schedule if the severe driving conditions specified in the Severe Conditions Maintenance Schedule do not apply.
The following items must be used for "Severe Conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to E.

- Engine oil and engine oil filter: A/B/C/D/E
- Manual transmission fluid: B/D

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS)**
  Check the master cylinder and ABS modulator-control unit for damage and leakage.
- **All fluid levels and condition of fluid**
  - Engine coolant
  - MTF
  - ATF
  - Clutch fluid
  - Brake fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the catalytic converter heat shield, exhaust pipe, and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil**

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil**

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter**
- **Check front and rear brakes**
  - Check the front brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.
  - Check the brake linings for cracking, glazing, wear, and contamination.
  - Check the caliper for damage, leaks, and tightness.

Visually inspect the following items

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect the valve clearance**

Every 10,000 km (6,250 miles)

- **Replace fuel filter**

Have a qualified technician change the fuel filter. Since the fuel system is under pressure, fuel can spray out and create a hazard if all fuel line connections are not handled correctly.

- [ ] **Rotate tyres (Check tyre inflation and condition at least once per month)**

Every 10,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, thereafter every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between the upper and lower marks on the reservoir.

Maintenance Schedule for Normal and Severe Conditions - KM model

62,000miles(5year)

This Maintenance Schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
Follow the Normal Conditions Maintenance Schedule if the severe driving conditions specified in the Severe Conditions Maintenance Schedule do not apply.
The following items must be used for "Severe Conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to E.

- Engine oil and engine oil filter: A/B/C/D/E
- Manual transmission fluid: B/D

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Replace automatic transmission fluid**

  Use genuine Honda ATF-Z1.
- **Replace dust and pollen filter**

Visually inspect the following items

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS)**

  Check the master cylinder and ABS modulator-control unit for damage and leakage.
- **All fluid levels and condition of fluid**
  - Engine coolant
  - MTF
  - ATF
  - Clutch fluid
  - Brake fluid
  - Windshield washer fluid
- **Exhaust system**

  Check the catalytic converter heat shield, exhaust pipe, and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil**

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil**

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter**
- **Check front and rear brakes**
  - Check the front brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.
  - Check the brake linings for cracking, glazing, wear, and contamination.
  - Check the caliper for damage, leaks, and tightness.

Visually inspect the following items

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect the valve clearance**

Every 10,000 km (6,250 miles)

- **Replace fuel filter**

Have a qualified technician change the fuel filter. Since the fuel system is under pressure, fuel can spray out and create a hazard if all fuel line connections are not handled correctly.

- [ ] **Rotate tyres (Check tyre inflation and condition at least once per month)**

Every 10,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, thereafter every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between the upper and lower marks on the reservoir.

Maintenance Schedule for Normal and Severe Conditions - KM model

75,000miles(6year)

This Maintenance Schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
Follow the Normal Conditions Maintenance Schedule if the severe driving conditions specified in the Severe Conditions Maintenance Schedule do not apply.
The following items must be used for "Severe Conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to E.

- Engine oil and engine oil filter: A/B/C/D/E
- Manual transmission fluid: B/D

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Inspect idle speed**
- **Replace manual transmission fluid (MTF)**
  Use genuine Honda MTF.
- **Replace manual transmission fluid (MTF)**
  Use genuine Honda MTF.
- **Replace automatic transmission fluid**
  Use genuine Honda ATF-Z1.
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS)**
  Check the master cylinder and ABS modulator-control unit for damage and leakage.
- **All fluid levels and condition of fluid**
  - Engine coolant
  - MTF
  - ATF
  - Clutch fluid
  - Brake fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the catalytic converter heat shield, exhaust pipe, and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil**

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil**

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter**
- **Check front and rear brakes**
  - Check the front brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.
  - Check the brake linings for cracking, glazing, wear, and contamination.
  - Check the caliper for damage, leaks, and tightness.

Visually inspect the following items

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**

- Check boot and boot band for cracks.
- Check boots for leaking grease.

Every 30,000 km (18,750 miles)

Replace air cleaner element

Every 40,000 km (25,000 miles)

Inspect the valve clearance

Every 10,000 km (6,250 miles)

Replace fuel filter

Have a qualified technician change the fuel filter. Since the fuel system is under pressure, fuel can spray out and create a hazard if all fuel line connections are not handled correctly.

Rotate tyres (Check tyre inflation and condition at least once per month)

Every 10,000 km (62,500 miles)

Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, thereafter every 100,000 km (60,000 miles) or 5 years

Replace engine coolant

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 3 years

Replace brake fluid

- Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
- Check the brake fluid level is between the upper and lower marks on the reservoir.

Maintenance Schedule for Normal and Severe Conditions - KM model

87,000miles(7year)

This Maintenance Schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
Follow the Normal Conditions Maintenance Schedule if the severe driving conditions specified in the Severe Conditions Maintenance Schedule do not apply.
The following items must be used for "Severe Conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to E.

- Engine oil and engine oil filter: A/B/C/D/E
- Manual transmission fluid: B/D

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Replace automatic transmission fluid**

  Use genuine Honda ATF-Z1.
- **Replace dust and pollen filter**

Visually inspect the following items

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS)**

  Check the master cylinder and ABS modulator-control unit for damage and leakage.
- **All fluid levels and condition of fluid**
  - Engine coolant
  - MTF
  - ATF
  - Clutch fluid
  - Brake fluid
  - Windshield washer fluid
- **Exhaust system**

  Check the catalytic converter heat shield, exhaust pipe, and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil**

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil**

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter**
- **Check front and rear brakes**
  - Check the front brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.
  - Check the brake linings for cracking, glazing, wear, and contamination.
  - Check the caliper for damage, leaks, and tightness.

Visually inspect the following items

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect the valve clearance**

Every 10,000 km (6,250 miles)

- **Replace fuel filter**

Have a qualified technician change the fuel filter. Since the fuel system is under pressure, fuel can spray out and create a hazard if all fuel line connections are not handled correctly.

- [ ] **Rotate tyres (Check tyre inflation and condition at least once per month)**

Every 10,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, thereafter every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between the upper and lower marks on the reservoir.

Maintenance Schedule for Normal and Severe Conditions - KM model

100,000miles(8year)

This Maintenance Schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
Follow the Normal Conditions Maintenance Schedule if the severe driving conditions specified in the Severe Conditions Maintenance Schedule do not apply.
The following items must be used for "Severe Conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to E.

- Engine oil and engine oil filter: A/B/C/D/E
- Manual transmission fluid: B/D

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS)**
  Check the master cylinder and ABS modulator-control unit for damage and leakage.
- **All fluid levels and condition of fluid**
  - Engine coolant
  - MTF
  - ATF
  - Clutch fluid
  - Brake fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the catalytic converter heat shield, exhaust pipe, and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil**

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil**

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter**
- **Check front and rear brakes**
  - Check the front brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.
  - Check the brake linings for cracking, glazing, wear, and contamination.
  - Check the caliper for damage, leaks, and tightness.

Visually inspect the following items

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect the valve clearance**

Every 10,000 km (6,250 miles)

- **Replace fuel filter**

Have a qualified technician change the fuel filter. Since the fuel system is under pressure, fuel can spray out and create a hazard if all fuel line connections are not handled correctly.

- [ ] **Rotate tyres (Check tyre inflation and condition at least once per month)**

Every 10,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, thereafter every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between the upper and lower marks on the reservoir.

Maintenance Schedule for Normal and Severe Conditions - KM model

112,000miles(9year)

This Maintenance Schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
Follow the Normal Conditions Maintenance Schedule if the severe driving conditions specified in the Severe Conditions Maintenance Schedule do not apply.
The following items must be used for "Severe Conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to E.

- Engine oil and engine oil filter: A/B/C/D/E
- Manual transmission fluid: B/D

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter**
- **Replace manual transmission fluid (MTF)**

  Use genuine Honda MTF.
- **Replace automatic transmission fluid**

  Use genuine Honda ATF-Z1.
- **Replace dust and pollen filter**

Visually inspect the following items

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS)**

  Check the master cylinder and ABS modulator-control unit for damage and leakage.
- **All fluid levels and condition of fluid**
  - Engine coolant
  - MTF
  - ATF
  - Clutch fluid
  - Brake fluid
  - Windshield washer fluid
- **Exhaust system**

  Check the catalytic converter heat shield, exhaust pipe, and muffler for damage, leaks, and tightness.
- **Fuel lines and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil**

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil**

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter**
- **Check front and rear brakes**
  - Check the front brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.
  - Check the brake linings for cracking, glazing, wear, and contamination.
  - Check the caliper for damage, leaks, and tightness.

Visually inspect the following items

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect the valve clearance**

Every 10,000 km (6,250 miles)

Replace fuel filter

Have a qualified technician change the fuel filter. Since the fuel system is under pressure, fuel can spray out and create a hazard if all fuel line connections are not handled correctly.

Rotate tyres (Check tyre inflation and condition at least once per month)

Every 10,000 km (62,500 miles)

Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, thereafter every 100,000 km (60,000 miles) or 5 years

Replace engine coolant

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 3 years

Replace brake fluid

- Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
- Check the brake fluid level is between the upper and lower marks on the reservoir.

Maintenance Schedule for Normal and Severe Conditions - KM model

125,000miles(10year)

This Maintenance Schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
Follow the Normal Conditions Maintenance Schedule if the severe driving conditions specified in the Severe Conditions Maintenance Schedule do not apply.
The following items must be used for "Severe Conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to E.

- Engine oil and engine oil filter: A/B/C/D/E
- Manual transmission fluid: B/D

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.

Service at the indicated distance or time whichever comes first

- ☐ **Replace engine oil filter**
- ☐ **Replace automatic transmission fluid**

  Use genuine Honda ATF-Z1.
- ☐ **Check parking brake adjustment**

  Check the parking brake operation.
- ☐ **Replace dust and pollen filter**

Visually inspect the following items

- ☐ Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- ☐ Check tightness of screws, nuts, and joints. If necessary, retighten.

- ☐ **Brake hoses and lines (including ABS)**

  Check the master cylinder and ABS modulator-control unit for damage and leakage.
- ☐ **All fluid levels and condition of fluid**
  - ☐ Engine coolant
  - ☐ MTF
  - ☐ ATF
  - ☐ Clutch fluid
  - ☐ Brake fluid
  - ☐ Windshield washer fluid
- ☐ **Exhaust system**

  Check the catalytic converter heat shield, exhaust pipe, and muffler for damage, leaks, and tightness.
- ☐ **Fuel lines and connections**
  - ☐ Check fuel lines for loose connections, cracks, and deterioration.
  - ☐ Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- ☐ **Replace engine oil**

Every 5,000 km (3,125 miles) or 6 months

- ☐ **Replace engine oil**

Every 10,000 km (6,250 miles) or 6 months

- ☐ **Replace engine oil filter**
- ☐ **Check front and rear brakes**
  - ☐ Check the front brake pad and disc thickness. Check for damage.
  - ☐ Check the wheel cylinder for leaks.
  - ☐ Check the brake linings for cracking, glazing, wear, and contamination.
  - ☐ Check the caliper for damage, leaks, and tightness.

Visually inspect the following items

- ☐ **Tie-rod ends, steering gearbox, and boots**
  - ☐ Check steering linkage.
  - ☐ Check the boot for damage and leaking grease.
- ☐ **Suspension components**
  - ☐ Check the bolts for tightness.
  - ☐ Check all dust covers for deterioration and damage.
- ☐ **Driveshaft boots**
  - ☐ Check boot and boot band for cracks.
  - ☐ Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- ☐ **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- ☐ **Inspect the valve clearance**

Every 10,000 km (6,250 miles)

Replace fuel filter

Have a qualified technician change the fuel filter. Since the fuel system is under pressure, fuel can spray out and create a hazard if all fuel line connections are not handled correctly.

Rotate tyres (Check tyre inflation and condition at least once per month)

Every 10,000 km (62,500 miles)

Replace spark plugs

At 200,000 km (120,000 miles) or 10 years, thereafter every 100,000 km (60,000 miles) or 5 years

Replace engine coolant

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 3 years

Replace brake fluid

- Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
- Check the brake fluid level is between the upper and lower marks on the reservoir.

Maintenance Schedule for Normal and Severe Conditions - Except KM model

20,000km(1year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.
  - Check the brake linings for cracking, glazing, wear and contamination.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except KM model

40,000km(2year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Inspect and adjust drive belt**
  Look for cracks and damage, then check the deflection and tension.
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.
  - Check the brake linings for cracking, glazing, wear and contamination.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except KM model

60,000km(3year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.

C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- Replace engine oil filter *
- Replace Manual Transmission Fluid
  Use genuine Honda MTF.
- Replace Automatic Transmission Fluid
  Use genuine Honda ATF-Z1.
- Replace dust and pollen filter

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- Brake hoses and lines (including ABS lines)
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- Exhaust system
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- Fuel lines, and connections
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- Replace engine oil *

Every 5,000 km (3,125 miles) or 6 months

- Replace engine oil *

Every 10,000 km (6,250 miles) or 6 months

- Replace engine oil filter *

Visually inspect the following items:

- Tie-rod ends, steering gearbox, and boots
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- Suspension components
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- Driveshaft boots
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- Replace air cleaner element

Every 40,000 km (25,000 miles)

- Inspect valve clearance

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except KM model

160,000km(8year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace fuel filter**
- **Inspect and adjust drive belt**
  Look for cracks and damage, then check the deflection and tension.
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.
  - Check the brake linings for cracking, glazing, wear and contamination.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except KM model

180,000km(9year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace Manual Transmission Fluid**
  Use genuine Honda MTF.
- **Replace Automatic Transmission Fluid**
  Use genuine Honda ATF-Z1.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.
  - Check the brake linings for cracking, glazing, wear and contamination.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except KM model

200,000km(10year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.
  - Check the brake linings for cracking, glazing, wear and contamination.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except KM model

75,000miles(6year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- Replace engine oil filter *
- Inspect and adjust drive belt
  Look for cracks and damage, then check the deflection and tension.
- Inspect idle speed
- Replace Manual Transmission Fluid
  Use genuine Honda MTF.
- Replace Manual Transmission Fluid
  Use genuine Honda MTF.
- Replace Automatic Transmission Fluid
  Use genuine Honda ATF-Z1.
- Check parking brake adjustment
  Check the parking brake operation.
- Replace dust and pollen filter

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- Brake hoses and lines (including ABS lines)
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- Exhaust system
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- Fuel lines, and connections
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- Replace engine oil *

Every 5,000 km (3,125 miles) or 6 months

- Replace engine oil *

Every 10,000 km (6,250 miles) or 6 months

- Replace engine oil filter *

Visually inspect the following items:

- Tie-rod ends, steering gearbox, and boots
  - Check steering linkage.
  - Check the boot for damage and leaking grease.

- Suspension components
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.

- [ ] **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- [ ] **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- [ ] **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.
  - Check the brake linings for cracking, glazing, wear and contamination.
  - Check the calipers for damage, leaks, and tightness.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except KM model

87,000miles(7year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace Automatic Transmission Fluid**

  Use genuine Honda ATF-Z1.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**

  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**

  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**

  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except KM model

100,000miles(8year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace fuel filter**
- **Inspect and adjust drive belt**
  Look for cracks and damage, then check the deflection and tension.
- **Check parking brake adjustment**
  Check the parking brake operation.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.
  - Check the brake linings for cracking, glazing, wear and contamination.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

Maintenance Schedule for Normal and Severe Conditions - Except KM model

112,000miles(9year)

This maintenance schedule outlines the minimum required maintenance that you should perform to ensure the trouble-free operation of the vehicle. Due to regional and climatic differences, some additional service may be required. Please consult the warranty booklet for a more detailed description.
The following items must be used for "severe conditions" indicated on schedule, if the vehicle is driven MAINLY under the specified conditions A to F.

- Engine oil and engine oil filter: A/B/C/D/E
- Transmission fluid
  M/T: B/D
  A/T: B/C/D/F

A: Driving less than 8 km (5 miles) per trip or, in freezing temperatures, driving less than 16 km (10 miles) per trip.
B: Driving in extremely hot over 35 °C (95 °F) conditions.
C: Extensive idling, or long periods of stop-and-go driving.
D: Towing trailer, driving with a loaded roof rack, or driving in mountainous conditions.
E: Driving on muddy, dusty, or de-iced roads.
F: Driving more than 20,000 km (12,500 miles) per year, or driving at high speed frequently.
*: Only severe schedule is required in some countries, refer to local warranty booklet.

Service at the indicated distance or time whichever comes first

- **Replace engine oil filter** *
- **Replace Manual Transmission Fluid**
  Use genuine Honda MTF.
- **Replace Automatic Transmission Fluid**
  Use genuine Honda ATF-Z1.
- **Replace dust and pollen filter**

Visually inspect the following items:

- Check for correct installation and position, check for cracks, deterioration, rust, and leaks.
- Check tightness of screws, nuts, and joints. If necessary, retighten.

- **Brake hoses and lines (including ABS lines)**
  Check the master cylinder and ABS modulator-control unit and leakage.
- **All fluid levels and condition of fluids**
  Check levels and check for leaks. If necessary, add.
  - Engine coolant
  - MTF
  - ATF
  - Brake fluid
  - Clutch fluid
  - Windshield washer fluid
- **Exhaust system**
  Check the exhaust pipe and muffler for damage, leaks, and tightness.
- **Fuel lines, and connections**
  - Check fuel lines for loose connections, cracks, and deterioration.
  - Retighten loose connections and replace any damaged parts.

Every 10,000 km (6,250 miles) or 1 year

- **Replace engine oil** *

Every 5,000 km (3,125 miles) or 6 months

- **Replace engine oil** *

Every 10,000 km (6,250 miles) or 6 months

- **Replace engine oil filter** *

Visually inspect the following items:

- **Tie-rod ends, steering gearbox, and boots**
  - Check steering linkage.
  - Check the boot for damage and leaking grease.
- **Suspension components**
  - Check the bolts for tightness.
  - Check all dust covers for deterioration and damage.
- **Driveshaft boots**
  - Check the boot and boot band for cracks.
  - Check boots for leaking grease.

Every 30,000 km (18,750 miles)

- **Replace air cleaner element**

Every 40,000 km (25,000 miles)

- **Inspect valve clearance**

Every 100,000 km (62,500 miles)

- [ ] **Replace spark plugs**

At 200,000 km (120,000 miles) or 10 years, then every 100,000 km (60,000 miles) or 5 years

- [ ] **Replace engine coolant**

Use genuine Honda All Season Antifreeze/Coolant Type 2.

Every 10,000 km (6,250 miles)

- [ ] **Check front and rear brakes**
  - Check the brake pad and disc thickness. Check for damage.
  - Check the wheel cylinder for leaks.

Every 3 years

- [ ] **Replace brake fluid**
  - Use only DOT 3 or DOT 4 brake fluid. We recommend genuine Honda Brake Fluid.
  - Check the brake fluid level is between upper and lower marks on the reservoir.

Every 10,000 km (6,250 miles)

- [ ] **Rotate tyres**

Check tyre inflation and condition at least once per month.

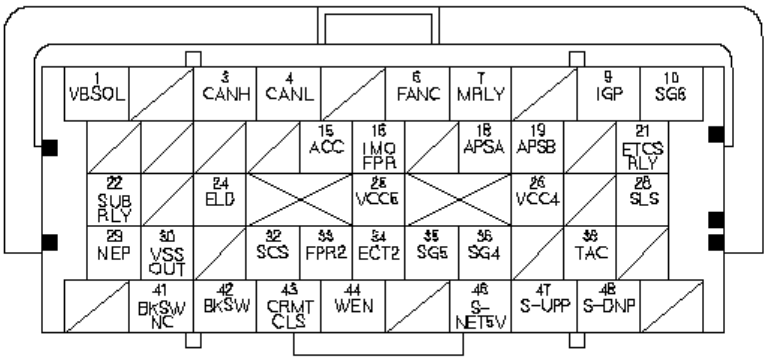
ECM/PCM Inputs and Outputs at Connector A (□) (49P)

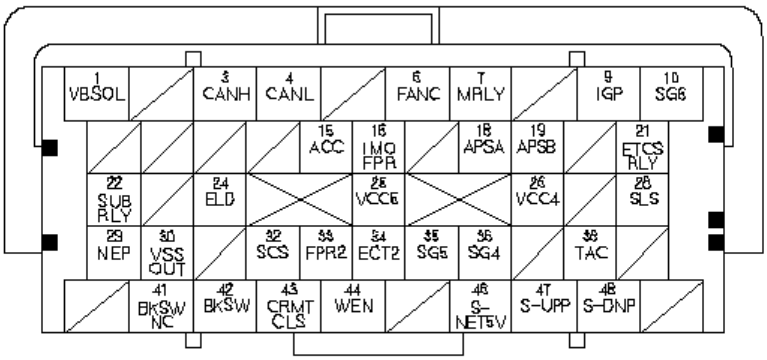


Terminal side of female terminals

16	BRN	IMOFPR (IMMOBILIZER FUEL PUMP RELAY)	Drives PGM-FI main relay 2	About 0 V for 2 seconds after turning ignition switch ON (II), then battery voltage With the engine running: about 0 V
18	ORN	APSA (ACCELERATOR PEDAL POSITION (APP) SENSOR A)	Detects APP sensor A signal	With ignition switch ON (II) and accelerator pedal pressed: about 4.5 V With ignition switch ON (II) and accelerator pedal released: about 1.0 V
19	LT BLU	APSB (ACCELERATOR PEDAL POSITION (APP) SENSOR B)	Detects APP sensor B signal	With ignition switch ON (II) and accelerator pedal pressed: about 2.3 V With ignition switch ON (II) and accelerator pedal released: about 0.5 V
21	RED	ETCSRLY (ELECTRONIC THROTTLE CONTROL SYSTEM (ETCS) CONTROL RELAY)	Drives electronic throttle control system (ETCS) control relay	With ignition switch ON (II): about 0 V
22	ORN	SUBRLY (PGM-FI SUBRELAY)	Drives A/F sensor relay	With ignition switch ON (II): about 0 V
24	PNK	ELD (ELECTRICAL LOAD DETECTOR (ELD))	Detects ELD signal	With ignition switch ON (II): about 0.1−4.8 V (depending on electrical load)

*1: A/T

ECM/PCM Inputs and Outputs at Connector A (□) (49P)

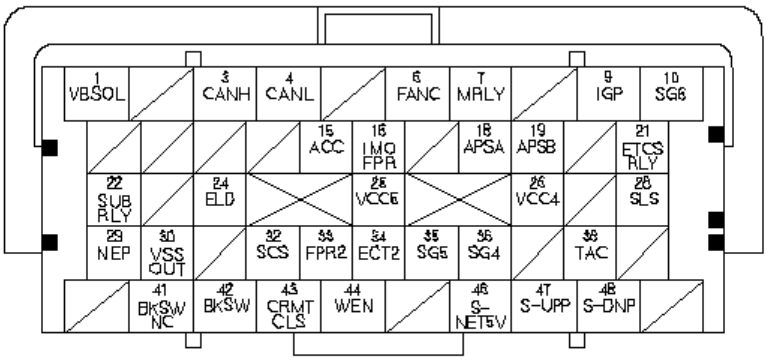


Terminal side of female terminals

36	BLU	SG4 (SENSOR GROUND)	Sensor ground	Less than 0.5 V at all times
38	ORN	TAC (EVAPORATOR TEMPERATURE SENSOR)	Detects evaporator sensor signal	With ignition switch ON (II): about 0.1−4.8 V (depending on evaporator temperature)
41 *2	BRN	BKSWNC (BRAKE PEDAL POSITION SWITCH)	Detects brake pedal position switch signal	With ignition switch ON (II) and brake pedal released: battery voltage With ignition switch ON (II) and brake pedal pressed: about 0 V
42	LT GRN	BKSW (BRAKE PEDAL POSITION SWITCH)	Detects brake pedal position switch signal	With brake pedal released: about 0 V With brake pedal pressed: battery voltage

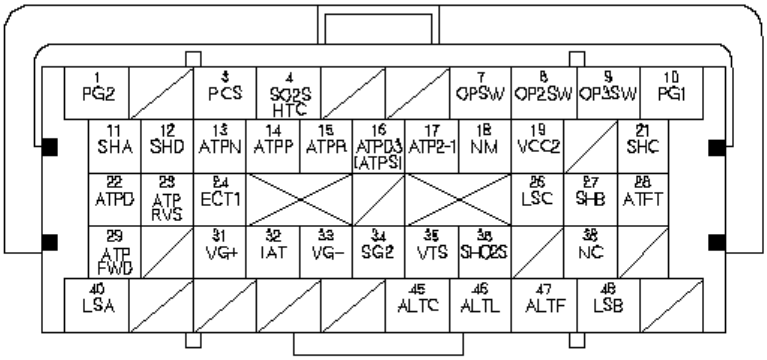
*1: A/T
*2: With cruise control

ECM/PCM Inputs and Outputs at Connector A (□) (49P)



Terminal side of female terminals

ECM/PCM Inputs and Outputs at Connector B (△) (49P)

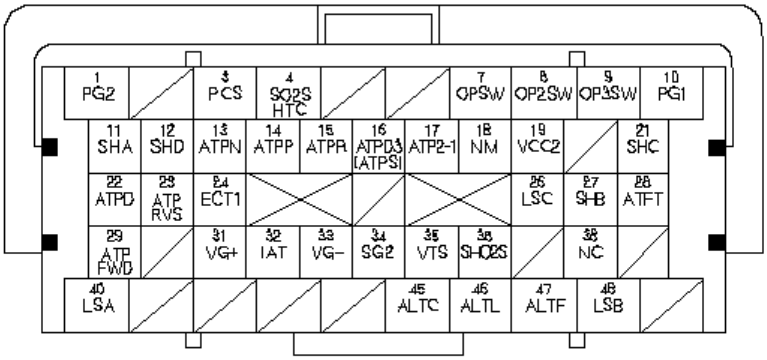


Terminal side of female terminals

		TRANSMISSION FLUID PRESSURE SWITCH)	fluid pressure switch input signal	Without 3rd clutch pressure: about 5.0 V With 3rd clutch pressure: about 0 V
10	BLK	PG1 (POWER GROUND)	Ground circuit for ECM/PCM circuit	Less than 0.5 V at all times
11 *1	BLU/BLK	SHA (SHIFT SOLENOID VALVE A)	Drives shift solenoid valve A	With engine running in D (in 2nd and 4th gears), S (in 2nd and 4th gears), D3 (in 2nd gear), and 2: battery voltage With engine running in P, R, N, 1, D (in 1st, 3rd, and 5th gears), S (in 1st, 3rd, and 5th gears), D3 (in 1st and 3rd gears): about 0 V
12 *1	GRN/RED	SHD (SHIFT SOLENOID VALVE D)	Drives shift solenoid valve D	With engine running in P, R: battery voltage With engine running in N: about 0 V
13 *1	RED/BLK	ATPN (TRANSMISSION RANGE SWITCH N POSITION)	Detects transmission range switch N position input signal	In N: about 0 V In any position other than N: battery voltage
14 *1	BLU/BLK	ATPP (TRANSMISSION RANGE SWITCH P POSITION)	Detects transmission range switch P position input signal	In P: about 0 V In any position other than P: battery voltage
15 *1	WHT	ATPR (TRANSMISSION RANGE SWITCH R POSITION)	Detects transmission range switch R position input signal	In R: about 0 V In any position other than R: battery voltage
16 *7	RED	ATPD3 (TRANSMISSION RANGE SWITCH D3 POSITION)	Detects transmission range switch D3 position input signal	In D3: about 0 V In any position other than D3: battery voltage
16 *6	RED	ATPS (TRANSMISSION RANGE SWITCH S POSITION)	Detects transmission range switch S position input signal	In S: about 0 V In any position other than S: battery voltage

*1: A/T
*6: A/T (with paddle shifter model)
*7: A/T (without paddle shifter model)

ECM/PCM Inputs and Outputs at Connector B (△) (49P)

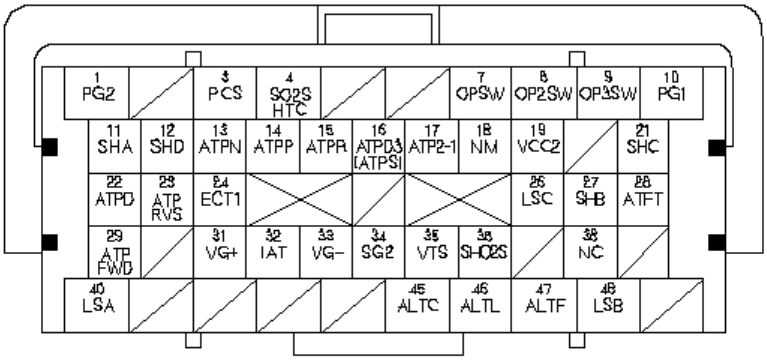


Terminal side of female terminals

24	RED/WHT	ECT1 (ENGINE COOLANT TEMPERATURE (ECT) SENSOR 1)	Detects ECT sensor 1 signal	With ignition switch ON (II): about 0.1–4.8 V (depending on engine coolant temperature)
26 *1	BLU/YEL	LSC (A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE C)	Drives A/T clutch pressure control solenoid valve C	With ignition switch ON (II): duty controlled
27 *1	GRN/WHT	SHB (SHIFT SOLENOID VALVE B)	Drives shift solenoid valve B	With engine running in R, 1, D (in 1st, 4th, and 5th gears), S (in 1st, 4th, and 5th gears), D3 (in 1st gear): battery voltage With engine running in P, N, 2, D (in 2nd and 3rd gears), D3 (in 2nd and 3rd gears), S (in 2nd and 3rd gears): about 0 V
28 *1	RED/YEL	ATFT (ATF TEMPERATURE SENSOR)	Detects ATF temperature signal	With ignition switch ON (II): about 0.2–4.0 V (depending on ATF temperature)
29 *1	BLU/YEL	ATPFWD (TRANSMISSION RANGE SWITCH FWD POSITION)	Detects transmission range switch D, D3, 2, and S positions input signal	In D, D3, 2 and S: about 0 V In any position other than D, D3, 2 and S: battery voltage

*1: A/T
*7: A/T (without paddle shifter model)

ECM/PCM Inputs and Outputs at Connector B (△) (49P)

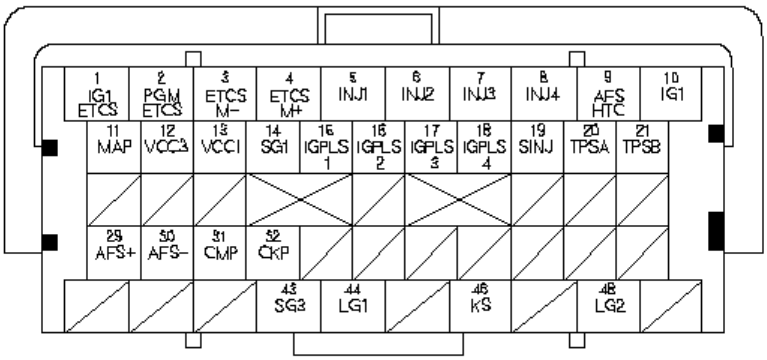


Terminal side of female terminals

		SENSOR)		
40 *1	RED/BLK	LSA (A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A)	Drives A/T clutch pressure control solenoid valve A	With ignition switch ON (II): duty controlled
45	WHT/GRN	ALTC (ALTERNATOR CONTROL)	Sends alternator control signal	With fully warmed up engine running: about 5.0 V(depending on electrical load)
46	WHT/BLU	ALTL (ALTERNATOR L SIGNAL)	Detects alternator L signal	With ignition switch ON (II): about 0 V With engine running: battery voltage
47	WHT/RED	ALTF (ALTERNATOR FR SIGNAL)	Detects alternator FR signal	With engine running: about 2.6−3.4 V (depending on electrical load)
48 *1	BRN/WHT	LSB (A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B)	Drives A/T clutch pressure control solenoid valve B	With ignition switch ON (II): duty controlled

*1: A/T

ECM/PCM Inputs and Outputs at Connector C (○) (49P)



Terminal side of female terminals

10	BLK/RED	IG1 (IGNITION SIGNAL)	Detects ignition signal	With ignition switch ON (II): battery voltage
11	GRN/RED	MAP (MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR)	Detects MAP sensor signal	With ignition switch ON (II): about 3.0 V At idle: about 1.0 V (depending on engine speed)
12	BLU	VCC3 (SENSOR VOLTAGE)	Provides sensor reference voltage	With ignition switch ON (II): about 5.0 V
13	YEL/RED	VCC1 (SENSOR VOLTAGE)	Provides sensor reference voltage	With ignition switch ON (II): about 5.0 V
14	GRN/WHT	SG1 (SENSOR GROUND)	Sensor ground	Less than 0.5 V at all times
15	WHT	IGPLS1 (No. 1 IGNITION COIL PULSE)	Drives No. 1 ignition coil	With ignition switch ON (II): about 0 V With engine running: pulses
16	WHT/GRN	IGPLS2 (No. 2 IGNITION COIL PULSE)	Drives No. 2 ignition coil	
17	WHT/BLK	IGPLS3 (No. 3 IGNITION COIL PULSE)	Drives No. 3 ignition coil	
18	WHT/BLU	IGPLS4 (No. 4 IGNITION COIL PULSE)	Drives No. 4 ignition coil	
19	BLK/RED	SINJ (SUBFUEL SOLENOID)	Drives subfuel solenoid	With ignition switch ON (II): battery voltage
20	RED/BLK	TPSA (THROTTLE POSITION (TP) SENSOR A)	Detects TP sensor A signal	With throttle fully closed: about 0.8 V
21	RED	TPSB (THROTTLE POSITION (TP) SENSOR B)	Detects TP sensor B signal	With throttle fully closed: about 1.7 V

ECM/PCM Inputs and Outputs at Connector C (○) (49P)
