

FOREWORD

It is regrettable to say that we have found some erroneous entries in the first version of the J2 series Service Manual which was published in February 2006. Therefore, we have decided to publish the corrected version this time. In this version, corrections have been mainly made to the tightening torques for the bolts and nuts as well as to the harness connector identification codes. Moreover, concerning the DTC of the EFI system an additional item has been made to the Supplement. We would appreciate it very much if you could perform the checks and repairs appropriately in accordance with the contents of this corrected version.

Corrected version published in July 2006

This service manual has been prepared to provide information covering general service repairs for the model J2 series (J200, J210 and J211) manufactured in February, 2006 afterward. For the service specifications and repair procedures of the model J2 series other than those listed in this manual, refer to the following manuals.
All information used in this service manual was in effect at time when the manual was printed. However, the specifications and procedures may be revised owing to continuing improvements in design without advance notice and without incurring any obligation to us.

First version published in February 2006
