

BATTERY Stores chemical energy and converts it into electrical energy. Provides DC current for the auto's various electrical circuits.	 HEADLIGHTS 1. SINGLE FILAMENT 2. DOUBLE FILAMENT	CAPACITOR (Condenser) A small holding unit for temporary storage of electrical voltage.	  HORN An electric device which sounds a loud audible signal.
CIGARETTE LIGHTER An electric resistance heating element.	  IGNITION COIL Converts low-voltage DC current into high-voltage ignition current for firing the spark plugs.	CIRCUIT BREAKER Basically a reusable fuse, a circuit breaker will heat and open if too much current flows through it. Some units automatically reset when cool, others must be manually reset.	  DIODE A semiconductor which allows current flow in only one direction.
DIODE, ZENER	  LED (LIGHT EMITTING DIODE) Upon current flow, these diodes emit light without producing the heat of a comparable light.	 DIODE, ZENER A diode which allows current flow in one direction but blocks reverse flow only up to a specific voltage. Above that potential, it passes the excess voltage. This acts as a simple voltage regulator.	 METER, ANALOG Current flow activates a magnetic coil which causes a needle to move, thereby providing a relative display against a background calibration.
DISTRIBUTOR, IIA Channels high-voltage current from the ignition coil to the individual spark plugs.	 FUSE A thin metal strip which burns through when too much current flows through it, thereby stopping current flow and protecting a circuit from damage.	 FUSE, ZENER A diode which allows current flow in one direction but blocks reverse flow only up to a specific voltage. Above that potential, it passes the excess voltage. METER, DIGITAL Current flow activates one or many LED's, LCD's, or fluorescent displays, which provide a relative or digital display.

RELAY Basically, an electrically operated switch which may be normally closed (1) or open (2). Current flow through a small coil creates a magnetic field which either opens or closes an attached switch.	 1. NORMALLY CLOSED  2. NORMALLY OPEN	SPEAKER An electromechanical device which creates sound waves from current flow.	SWITCH, MANUAL Opens and closes circuits, thereby stopping (1) or allowing (2) current flow.
RELAY, DOUBLE THROW A relay which passes current through one set of contacts or the other.	 1. NORMALLY OPEN  2. NORMALLY CLOSED	SWITCH, DOUBLE THROW A switch which continuously passes current through one set of contacts or the other.	SWITCH, IGNITION A key operated switch with several positions which allows various circuits, particularly the primary ignition circuit, to become operational.
RESISTOR An electrical component with a fixed resistance, placed in a circuit to reduce voltage to a specific value.	 RESISTOR, TAPPED A resistor which supplies two or more different non adjustable resistance values.	SWITCH, WIPER PARK Automatically returns wipers to the stop position when the wiper switch is turned off.	TRANSISTOR A solidstate device typically used as an electronic relay; stops or passes current depending on the voltage applied at "base".
RESISTOR, VARIABLE or RHEOSTAT A controllable resistor with a variable rate of resistance. Also called a potentiometer or rheostat.	 SENSOR (Thermistor) A resistor which varies its resistance with temperature.	WIRES (1) NOT CONNECTED (2) SPliced	SOLENOID An electromagnetic coil which forms a magnetic field when current flows, to move a plunger, etc.
SHORT PIN Used to provide an unbroken connection within a junction block.	 SOLENOID An electromagnetic coil which forms a magnetic field when current flows, to move a plunger, etc.	WIRES (1) NOT CONNECTED (2) SPliced	SOLENOID An electromagnetic coil which forms a magnetic field when current flows, to move a plunger, etc.
