CAMARO GENUINE CHEVROLET

OWNER'S MANUAL

Downloaded from www.Manualslib.com manuals search engine

The 1996 Chevrolet Camaro Owner's Manual

Seats and Restraint Systems **1-1**
This section tells you how to use your seats and safety belts properly. It also explains the "SIR" system.

Features and Controls **2-1**
This section explains how to start and operate your Chevrolet.

Comfort Controls and Audio Systems **3-1**
This section tells you how to adjust the ventilation and comfort controls and how to operate your audio system.

Your Driving and the Road **4-1**
Here you'll find helpful information and tips about the road and how to drive under different conditions.

Problems on the Road **5-1**
This section tells you what to do if you have a problem while driving, such as a flat tire or overheated engine, etc.

Service and Appearance Care **6-1**
Here the manual tells you how to keep your Chevrolet running properly and looking good.

Maintenance Schedule **7-1**
This section tells you when to perform vehicle maintenance and what fluids and lubricants to use.

Customer Assistance Information **8-1**
This section tells you how to contact Chevrolet for assistance and how to get service and owner publications. It also gives you information on "Reporting Safety Defects" on page 8-8.

Index **9-1**
Here's an alphabetical listing of almost every subject in this manual. You can use it to quickly find something you want to read.

The Heritage of Chevrolet

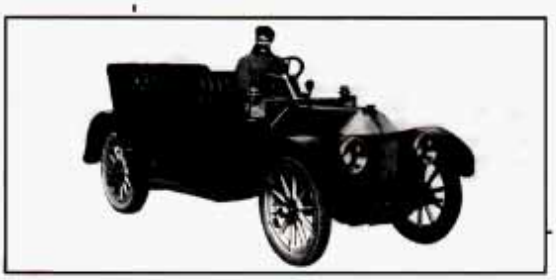

The dynamic William C. "Billy" Durant shifted gears from making carriages to making cars, forming half the team that gave birth to Chevrolet.

Welcome to the largest automotive family in the world -- the family of Chevrolet owners. You have selected a vehicle designed, engineered and crafted by teamwork, a vehicle backed by a proud history of performance and value. Since the first "Classic Six" rolled off the line in 1912, more than 110 million Chevrolet cars and trucks have worn the Chevrolet marque.

That kind of reception from auto owners is unmatched by any other car manufacturer in the world.

The Chevrolet blend of value and performance has

Louis Chevrolet, the other half of the team, at the wheel of his experimental "Classic Six," which entered production in 1912. That year 2999 vehicles were produced.

Downloaded from www.Manualslib.com manuals search engine

become an American tradition -- whether bred for the racetrack like the legendary Corvette and Camaro, or created for the pleasure of the open road.

Every decade, Chevrolet has reinforced its heritage of affordable performance with quality and value crafted into each vehicle. It's not surprising that for 80 years "Genuine Chevrolet" has been America's automobile.

We're proud to continue that heritage in your Chevrolet, and we are pledged to make ownership of your

In 1932 Chevrolet introduced the Synchro-Mesh transmission and offered a host of accessories -- including such niceties as a clock!

The legacy of America's favorite sportscar began in 1953, when 319 hand-assembled white Corvettes launched the first use of a fiberglass body in a production car.

Downloaded from www.Manualslib.com manuals search engine

The 1957 Chevy started a romance with the American public -- and was powered by an available fuel-injected V8.

Chevrolet an enjoyable and rewarding experience.

Jim Perkins,
General Manager

Your new Chevrolet continues a tradition of quality and value.

60's automotive excitement included Chevrolet landmarks like the Corvette Sting Ray, the sporty Camaro, and powerplants like the legendary 327 V8.

How to Use This Manual

Many people read their owner's manual from beginning to end when they first receive their new vehicle. If you do this, it will help you learn about the features and controls for your vehicle. In this manual, you'll find that pictures and words work together to explain things quickly.

Index

A good place to look for what you need is the Index in the back of the manual. It's an alphabetical list of all that's in the manual, and the page number where you'll find it.

Safety Warnings and Symbols

You will find a number of safety cautions in this book. We use a box and the word CAUTION to tell you about things that could hurt you if you were to ignore the warning.

⚠ CAUTION:

These mean there is something that could hurt you or other people.

In the caution area, we tell you what the hazard is. Then we tell you what to do to help avoid or reduce the hazard. Please read these cautions. If you don't, you or others could be hurt.

You will also find a circle with a slash through it in this book. This safety symbol means "Don't," "Don't do this," or "Don't let this happen."

Downloaded from www.Manualslib.com manuals search engine

Vehicle Damage Warnings

Also, in this book you will find these notices:

NOTICE:

These mean there is something that could damage your vehicle.

In the notice area, we tell you about something that can damage your vehicle. Many times, this damage would not be covered by your warranty, and it could be costly. But the notice will tell you what to do to help avoid the damage.

When you read other manuals, you might see CAUTION and NOTICE warnings in different colors or in different words.

You'll also see warning labels on your vehicle. They use the same words, CAUTION or NOTICE.

Downloaded from www.Manualslib.com manuals search engine

Vehicle Symbols

These are some of the symbols you may find on your vehicle.

For example, these symbols are used on an original battery:

- CAUTION POSSIBLE INJURY 
- PROTECT EYES BY SHIELDING 
- CAUSTIC BATTERY ACID COULD CAUSE BURNS 
- AVOID SPARKS OR FLAMES 
- SPARK OR FLAME COULD EXPLODE BATTERY 

These symbols are important for you and your passengers whenever your vehicle is driven:

- DOOR LOCK UNLOCK 
- FASTEN SEAT BELTS 
- POWER WINDOW 
- AIR BAG 

These symbols have to do with your lights:

- MASTER LIGHTING SWITCH 
- TURN SIGNALS 
- PARKING LAMPS 
- HAZARD WARNING FLASHER 
- DAYTIME RUNNING LAMPS 
- FOG LAMPS 

These symbols are on some of your controls:

- WINDSHIELD WIPER 
- WINDSHIELD WASHER 
- WINDSHIELD DEFROSTER 
- REAR WINDOW DEFOGGER 
- VENTILATING FAN 

These symbols are used on warning and indicator lights:

- ENGINE COOLANT TEMP 
- BATTERY CHARGING SYSTEM 
- BRAKE 
- COOLANT 
- ENGINE OIL PRESSURE 
- ANTI-LOCK BRAKES 

Here are some other symbols you may see:

- FUSE 
- LIGHTER 
- HORN 
- SPEAKER 
- FUEL 

Downloaded from www.Manualslib.com manuals search engine

NOTES

Downloaded from www.Manualslib.com manuals search engine

NOTES

Downloaded from www.Manualslib.com manuals search engine

Section 1 Seats and Restraint Systems

Here you'll find information about the seats in your Chevrolet and how to use your safety belts properly. You can also learn about some things you should *not* do with air bags and safety belts.

Seats and Seat Controls

This section tells you about the seats -- how to adjust them, and also about reclining front seatbacks, seatback latches and the folding rear seatback.

Manual Front Seat

⚠ CAUTION:

You can lose control of the vehicle if you try to adjust a manual driver's seat while the vehicle is moving. The sudden movement could startle and confuse you, or make you push a pedal when you don't want to. Adjust the driver's seat only when the vehicle is not moving.

Downloaded from www.Manualslib.com manuals search engine

Move the lever under the passenger's front seat to unlock it.

Slide the seat to where you want it. Then release the lever and try to move the seat with your body to make sure the seat is locked into place. Be sure the lever returns to its original position after moving the seat.

4-Way Manual Seat

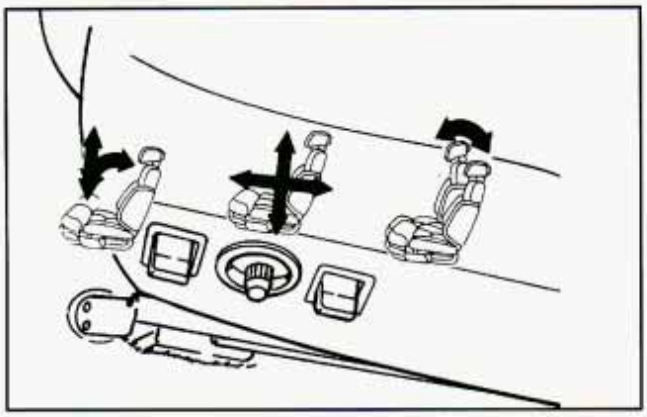

There are two levers at the front of the driver's seat. The left lever adjusts the seat forward and rearward. The right lever adjusts the angle of the front of the seat.

To adjust the seats forward and rearward, lift the lever under the left front of the seat. Slide the seat to where you want it. Then release the lever and try to move the seat with your body to make sure the seat is locked into place.

To raise or lower the front of the seat, lift the right lever and lean forward or backward.

Downloaded from www.Manualslib.com manuals search engine

6-Way Power Seat (Option)

The driver's seat has three controls on the left side.

The front control makes the front of the seat go up and down.

The back control makes the back of the seat go up and down.

The center control makes the whole seat go up and down or forward and backward.

Reclining Front Seatbacks

To adjust the seatback, lift the lever on the outer side of the seat. Release the lever to lock the seatback where you want it. Pull up on the lever, and the seat will go to its original upright position.

Downloaded from www.Manualslib.com manuals search engine

But don't have a seatback reclined if your vehicle is moving.

⚠ CAUTION:

Sitting in a reclined position when your vehicle is in motion can be dangerous. Even if you buckle up, your safety belts can't do their job when you're reclined like this.

The shoulder belt can't do its job. In a crash you could go into it, receiving neck or other injuries.

The lap belt can't do its job either. In a crash the belt could go up over your abdomen. The belt forces would be there, not at your pelvic bones. This could cause serious internal injuries.

For proper protection when the vehicle is in motion, have the seatback upright. Then sit well back in the seat and wear your safety belt properly.

Head Restraints

Slide the head restraint up or down so that the top of the restraint is closest to the top of your ears. This position reduces the chance of a neck injury in a crash.

Downloaded from www.Manualslib.com manuals search engine

Front Seatback Latches

The front seatbacks fold forward to let people get into the back seat.

To fold a seatback forward, push the seatback toward the rear as you lift the latch located on the lower backside of the seatback. Then the seatback will fold forward.

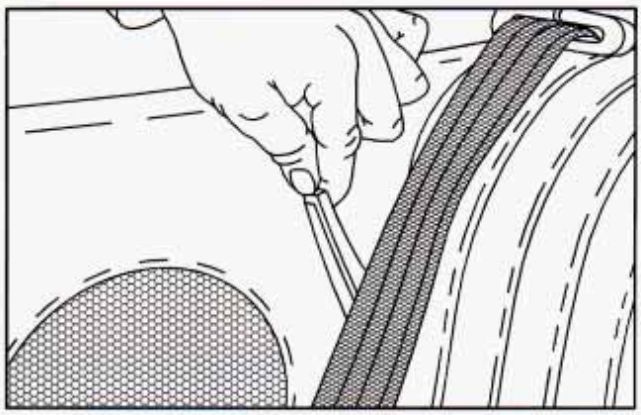

When you return the seatback to its original position, make sure the seatback is locked. The latch must be down for the seat to work properly.

⚠ CAUTION:

If the seatback isn't locked, it could move forward in a sudden stop or crash. That could cause injury to the person sitting there. Always press rearward on the seatback to be sure it is locked.

Downloaded from www.Manualslib.com manuals search engine

Folding Rear Seatback

The rear seatback in your Camaro folds down to provide more storage space.

To fold the seatback down:

1. Pull forward on both levers.
2. Fold the seatback down.

To raise the seatback:

1. Pull it up to the locked, upright position.
2. Be sure both latches hold the seatback in place. Have them fixed if they don't.

Downloaded from www.Manualslib.com manuals search engine

Safety Belts: They're for Everyone

This part of the manual tells you how to use safety belts properly. It also tells you some things you should not do with safety belts.

And it explains the Supplemental Inflatable Restraint (SIR), or air bag system.

⚠ CAUTION:

Don't let anyone ride where he or she can't wear a safety belt properly. If you are in a crash and you're not wearing a safety belt, your injuries can be much worse. You can hit things inside the vehicle or be ejected from it. You can be seriously injured or killed. In the same crash, you might not be if you are buckled up. Always fasten your safety belt, and check that your passengers' belts are fastened properly too.

Your vehicle has a light that comes on as a reminder to buckle up. (See "Safety Belt Reminder Light" in the Index.)

In most states and Canadian provinces, the law says to wear safety belts. Here's why: *They work.*

You never know if you'll be in a crash. If you do have a crash, you don't know if it will be a bad one.

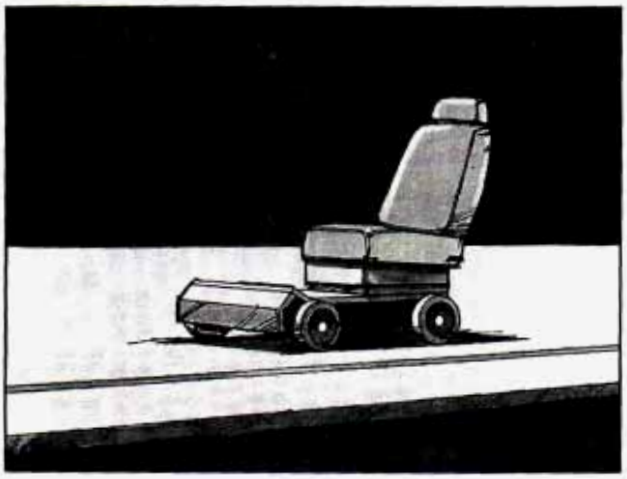

A few crashes are mild, and some crashes can be so serious that even buckled up a person wouldn't survive. But most crashes are in between. In many of them, people who buckle up can survive and sometimes walk away. Without belts they could have been badly hurt or killed.

After more than 25 years of safety belts in vehicles, the facts are clear. In most crashes buckling up does matter ... a lot!

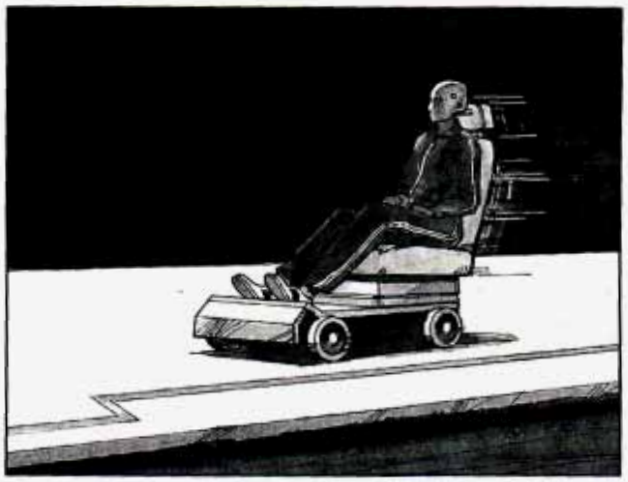

Downloaded from www.Manualslib.com manuals search engine

Why Safety Belts Work

When you ride in or on anything, you go as fast as it goes.

Take the simplest vehicle. Suppose it's just a seat on wheels.

Put someone on it.

Downloaded from www.Manualslib.com manuals search engine

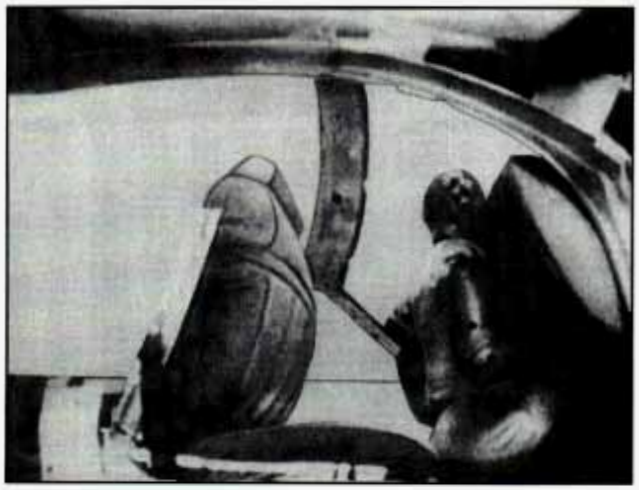

Get it up to speed. Then stop the vehicle. The rider doesn't stop.

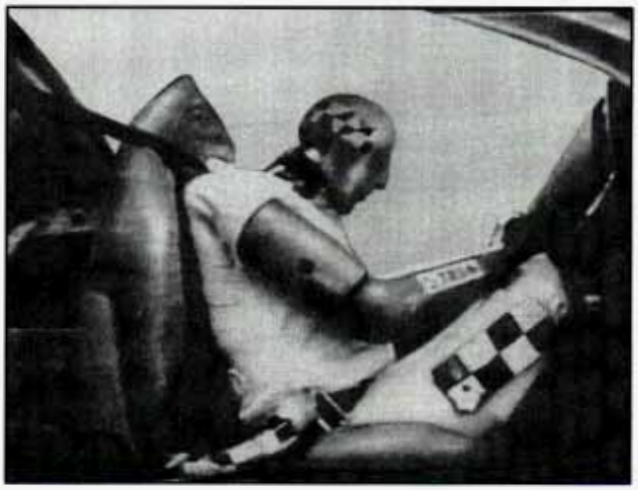

The person keeps going until stopped by something. In a real vehicle, it could be the windshield ...

Downloaded from www.Manualslib.com manuals search engine

or the instrument panel ...

or the safety belts!

With safety belts, you slow down as the vehicle does. You get more time to stop. You stop over more distance, and your strongest bones take the forces. That's why safety belts make such good sense.

Downloaded from www.Manualslib.com manuals search engine

Here Are Questions Many People Ask About Safety Belts -- and the Answers

Q: Won't I be trapped in the vehicle after an accident if I'm wearing a safety belt?

A: You *could* be -- whether you're wearing a safety belt or not. But you can unbuckle a safety belt, even if you're upside down. And your chance of being conscious during and after an accident, so you *can* unbuckle and get out, is *much* greater if you are belted.

Q: If my vehicle has air bags, why should I have to wear safety belts?

A: Air bags are in many vehicles today and will be in most of them in the future. But they are supplemental systems only; so they work *with* safety belts -- not instead of them. Every air bag system ever offered for sale has required the use of safety belts. Even if you're in a vehicle that has air bags, you still have to buckle up to get the most protection. That's true not only in frontal collisions, but especially in side and other collisions.

Q: If I'm a good driver, and I never drive far from home, why should I wear safety belts?

A: You may be an excellent driver, but if you're in an accident -- even one that isn't your fault -- you and your passengers can be hurt. Being a good driver doesn't protect you from things beyond your control, such as bad drivers.

Most accidents occur within 25 miles (40 km) of home. And the greatest number of serious injuries and deaths occur at speeds of less than 40 mph (65 km/h).

Safety belts are for everyone.

Downloaded from www.Manualslib.com manuals search engine

How to Wear Safety Belts Properly

Adults

This part is only for people of adult size.

Be aware that there are special things to know about safety belts and children. And there are different rules for smaller children and babies. If a child will be riding in your Chevrolet, see the part of this manual called "Children." Follow those rules for everyone's protection.

First, you'll want to know which restraint systems your vehicle has.

We'll start with the driver position.

Driver Position

This part describes the driver's restraint system.

Lap-Shoulder Belt

The driver has a lap-shoulder belt. Here's how to wear it properly.

1. Close and lock the door.
2. Adjust the seat (to see how, see "Seats" in the Index) so you can sit up straight.

3. Pick up the latch plate and pull the belt across you. Don't let it get twisted.

   On convertible models, the shoulder belt may lock if you pull the belt across you very quickly. If this happens, let the belt go back slightly to unlock it. Then pull the belt across you more slowly.
4. Push the latch plate into the buckle until it clicks.

Downloaded from www.Manualslib.com manuals search engine

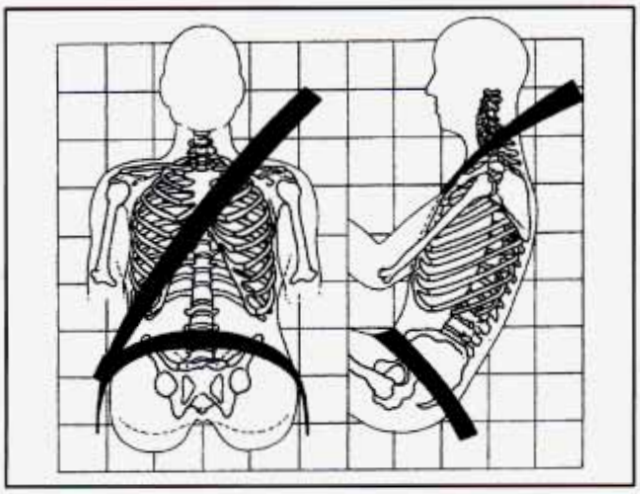

If the belt stops before it reaches the buckle, tilt the latch plate and keep pulling until you can buckle the belt.

Pull up on the latch plate to make sure it is secure. If the belt isn't long enough, see "Safety Belt Extender" at the end of this section.

Make sure the release button on the buckle is positioned so you would be able to unbuckle the safety belt quickly if you ever had to.

5. To make the lap part tight, pull down on the buckle end of the belt as you pull up on the shoulder belt.

Downloaded from www.Manualslib.com manuals search engine

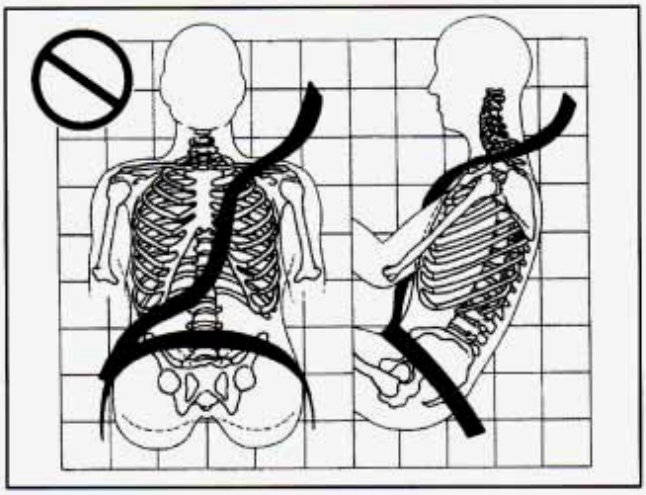

The lap part of the belt should be worn low and snug on the hips, just touching the thighs. In a crash, this applies force to the strong pelvic bones. And you'd be less likely to slide under the lap belt. If you slid under it, the belt would apply force at your abdomen. This could cause serious or even fatal injuries. The shoulder belt should go over the shoulder and across the chest. These parts of the body are best able to take belt restraining forces.

The safety belt locks if there's a sudden stop or crash. On convertible models, the safety belt also locks if you pull the belt very quickly out of the retractor.

Downloaded from www.Manualslib.com manuals search engine

Q: **What's wrong with this?**

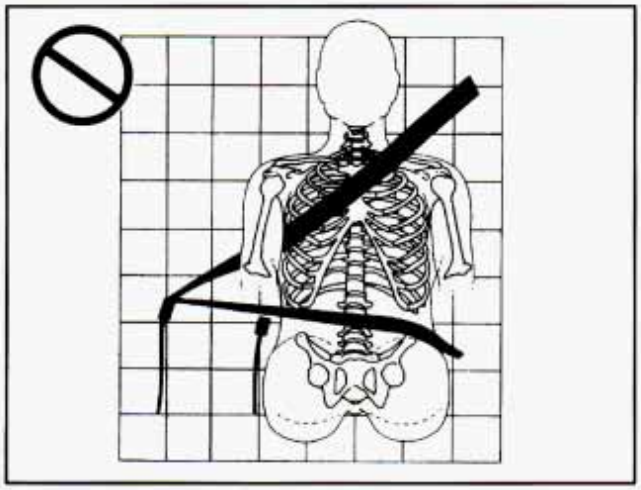

A: The shoulder belt is too loose. It won't give nearly as much protection this way.

⚠ CAUTION:

You can be seriously hurt if your shoulder belt is too loose. In a crash, you would move forward too much, which could increase injury. The shoulder belt should fit against your body.

Downloaded from www.Manualslib.com manuals search engine

Q: **What's wrong with this?**

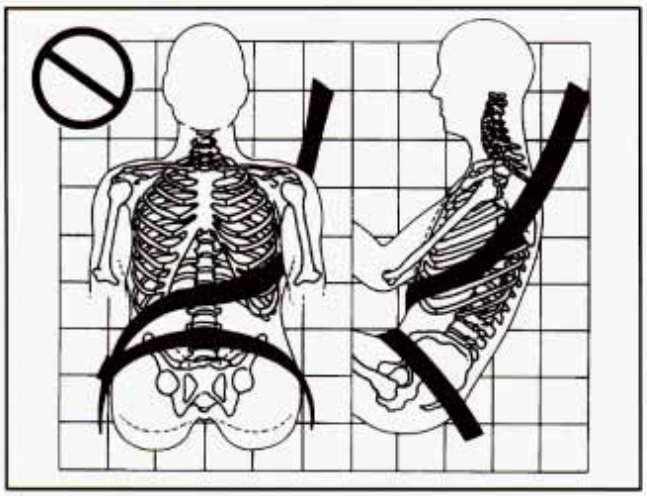

A: The belt is buckled in the wrong place.

⚠ CAUTION:

You can be seriously injured if your belt is buckled in the wrong place like this. In a crash, the belt would go up over your abdomen. The belt forces would be there, not at the pelvic bones. This could cause serious internal injuries. Always buckle your belt into the buckle nearest you.

Downloaded from www.Manualslib.com manuals search engine

Q: **What's wrong with this?**

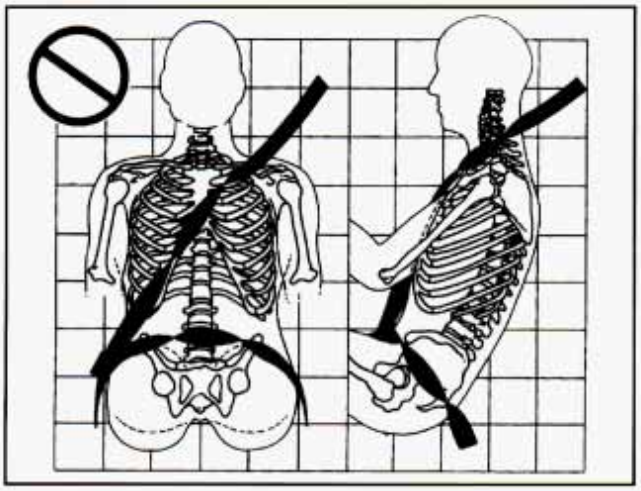

A: The shoulder belt is worn under the arm. It should be worn over the shoulder at all times.

⚠ CAUTION:

You can be seriously injured if you wear the shoulder belt under your arm. In a crash, your body would move too far forward, which would increase the chance of head and neck injury. Also, the belt would apply too much force to the ribs, which aren't as strong as shoulder bones. You could also severely injure internal organs like your liver or spleen.

Downloaded from www.Manualslib.com manuals search engine

Q: **What's wrong with this?**

A: The belt is twisted across the body.

⚠ CAUTION:

You can be seriously injured by a twisted belt. In a crash, you wouldn't have the full width of the belt to spread impact forces. If a belt is twisted, make it straight so it can work properly, or ask your dealer to fix it.

Downloaded from www.Manualslib.com manuals search engine

To unlatch the belt, just push the button on the buckle. The belt should go back out of the way.

Before you close the door, be sure the belt is out of the way. If you slam the door on it, you can damage both the belt and your vehicle.

Supplemental Inflatable Restraint (SIR) System

This part explains the Supplemental Inflatable Restraint (SIR) system or air bag system.

Your Chevrolet has two air bags -- one air bag for the driver and another air bag for the right front passenger.

Downloaded from www.Manualslib.com manuals search engine

Here are the most important things to know about the air bag system:

⚠ CAUTION:

You can be severely injured or killed in a crash if you aren't wearing your safety belt -- even if you have an air bag. Wearing your safety belt during a crash helps reduce your chance of hitting things inside the vehicle or being ejected from it. The air bag is only a "supplemental restraint." That is, it works with safety belts but doesn't replace them. Air bags are designed to work only in moderate to severe crashes where the front of your vehicle hits something. They aren't designed to inflate at all in rollover, rear, side or low-speed frontal crashes. Everyone in your vehicle, including the driver, should wear a safety belt properly -- whether or not there's an air bag for that person.

⚠ CAUTION:

Air bags inflate with great force, faster than the blink of an eye. If you're too close to an inflating air bag, it could seriously injure you. Safety belts help keep you in position for an air bag inflation in a crash. Always wear your safety belt, even with an air bag. The driver should sit as far back as possible while still maintaining control of the vehicle.

⚠ CAUTION:

An inflating air bag can seriously injure small children. Always secure children properly in your vehicle. To read how, see the part of this manual called "Children" and the caution label on the right front passenger's safety belt.

Downloaded from www.Manualslib.com manuals search engine

There is an air bag readiness light on the instrument panel, which shows AIR BAG.

The system checks the air bag's electrical system for malfunctions. The light tells you if there is an electrical problem. See "Air Bag Readiness Light" in the Index for more information.

How the Air Bag System Works

Where is the air bag?

The driver's air bag is in the middle of the steering wheel.

Downloaded from www.Manualslib.com manuals search engine

The right front passenger's air bag is in the instrument panel on the passenger's side.

⚠ CAUTION:

Don't put anything on, or attach anything to, the steering wheel or instrument panel. Also, don't put anything (such as pets or objects) between any occupant and the steering wheel or instrument panel. If something is between an occupant and an air bag, it could affect the performance of the air bag -- or worse, it could cause injury.

Downloaded from www.Manualslib.com manuals search engine

When should an air bag inflate?

The air bag is designed to inflate in moderate to severe frontal or near-frontal crashes. The air bag will inflate only if the impact speed is above the system's designed "threshold level." If your vehicle goes straight into a wall that doesn't move or deform, the threshold level is about 9 to 15 mph (14 to 24 km/h). The threshold level can vary, however, with specific vehicle design, so that it can be somewhat above or below this range. If your vehicle strikes something that will move or deform, such as a parked car, the threshold level will be higher. The air bag is not designed to inflate in rollovers, side impacts or rear impacts, because inflation would not help the occupant.

In any particular crash, no one can say whether an air bag should have inflated simply because of the damage to a vehicle or because of what the repair costs were. Inflation is determined by the angle of the impact and the vehicle's deceleration. Vehicle damage is only one indication of this.

What makes an air bag inflate?

In a frontal or near-frontal impact of sufficient severity, the air bag sensing system detects that the vehicle is suddenly stopping as a result of a crash. The sensing system triggers a chemical reaction of the sodium azide sealed in the inflator. The reaction produces nitrogen gas, which inflates the air bag. The inflator, air bag and related hardware are all part of the air bag modules packed inside the steering wheel and in the instrument panel in front of the right front passenger.

How does an air bag restrain?

In moderate to severe frontal or near-frontal collisions, even belted occupants can contact the steering wheel or the instrument panel. The air bag supplements the protection provided by safety belts. Air bags distribute the force of the impact more evenly over the occupant's upper body, stopping the occupant more gradually. But air bags would not help you in many types of collisions, including rollovers, rear impacts and side impacts, primarily because an occupant's motion is not toward the air bag. Air bags should never be regarded as anything more than a supplement to safety belts, and then only in moderate to severe frontal or near-frontal collisions.

Downloaded from www.Manualslib.com manuals search engine

What will you see after an air bag inflates?

After the air bag inflates, it quickly deflates. This occurs so quickly that some people may not even realize the air bag inflated. Some components of the air bag module in the steering wheel hub for the driver's air bag, or the instrument panel for the right front passenger's bag, will be hot for a short time. The part of the bag that comes into contact with you may be warm, but it will never be too hot to touch. There will be some smoke and dust coming from vents in the deflated air bags. Air bag inflation will not prevent the driver from seeing or from being able to steer the vehicle, nor will it stop people from leaving the vehicle.

⚠ CAUTION:

When an air bag inflates, there is dust in the air. This dust could cause breathing problems for people with a history of asthma or other breathing trouble. To avoid this, everyone in the vehicle should get out as soon as it is safe to do so. If you have breathing problems but can't get out of the vehicle after an air bag inflates, then get fresh air by opening a window or door.

In many crashes severe enough to inflate an air bag, windshields are broken by vehicle deformation. Additional windshield breakage may also occur from the right front passenger air bag.

- The air bags are designed to inflate only once. After they inflate, you'll need some new parts for your air bag system. If you don't get them, the air bag system won't be there to help protect you in another crash. A new system will include air bag modules and possibly other parts. The service manual for your vehicle covers the need to replace other parts.

Downloaded from www.Manualslib.com manuals search engine

- Your vehicle is equipped with a crash sensing and diagnostic module, which records information about the air bag system. The module records information about the readiness of the system, when the sensors are activated and driver's safety belt usage at deployment.
- Let only qualified technicians work on your air bag system. Improper service can mean that your air bag system won't work properly. See your dealer for service.

NOTICE:

If you damage the cover for the driver's or the right front passenger's air bag, they may not work properly. You may have to replace the air bag module in the steering wheel or both the air bag module and the instrument panel for the right front passenger's air bag. Do not open or break the air bag covers.

Servicing Your Air Bag-Equipped Chevrolet

Air bags affect how your Chevrolet should be serviced. There are parts of the air bag system in several places around your vehicle. You don't want the system to inflate while someone is working on your vehicle. Your Chevrolet dealer and the Camaro Service Manual have information about servicing your vehicle and the air bag system. To purchase a service manual, see "Service and Owner Publications" in the Index.

⚠ CAUTION:

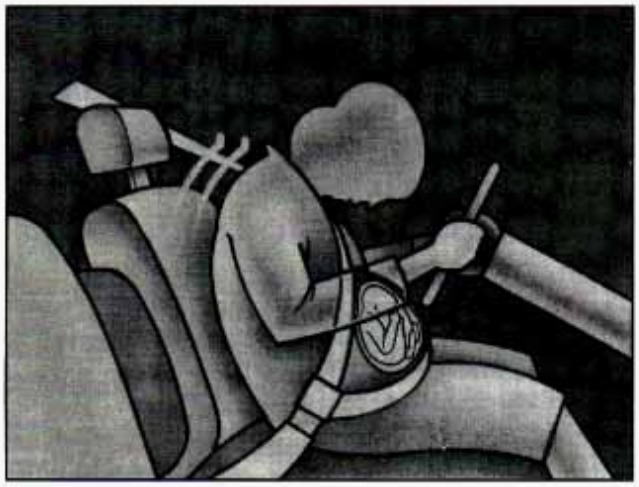

For up to 10 minutes after the ignition key is turned off and the battery is disconnected, an air bag can still inflate during improper service. You can be injured if you are close to an air bag when it inflates. Avoid wires wrapped with yellow tape or yellow connectors. They are probably part of the air bag system. Be sure to follow proper service procedures, and make sure the person performing work for you is qualified to do so.

The air bag system does not need regular maintenance.

Downloaded from www.Manualslib.com manuals search engine

Safety Belt Use During Pregnancy

Safety belts work for everyone, including pregnant women. Like all occupants, they are more likely to be seriously injured if they don't wear safety belts.

A pregnant woman should wear a lap-shoulder belt, and the lap portion should be worn as low as possible, below the rounding, throughout the pregnancy.

The best way to protect the fetus is to protect the mother. When a safety belt is worn properly, it's more likely that the fetus won't be hurt in a crash. For pregnant women, as for anyone, the key to making safety belts effective is wearing them properly.

Right Front Passenger Position

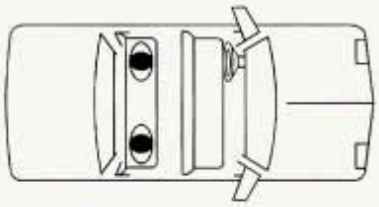

The right front passenger's safety belt works the same way as the driver's safety belt. See "Driver Position," earlier in this section.

Downloaded from www.Manualslib.com manuals search engine

Rear Seat Passengers

It's very important for rear seat passengers to buckle up! Accident statistics show that unbelted people in the rear seat are hurt more often in crashes than those who are wearing safety belts.

Rear passengers who aren't safety belted can be thrown out of the vehicle in a crash. And they can strike others in the vehicle who are wearing safety belts.

Lap-Shoulder Belt

The rear seats have lap-shoulder belts. Here's how to wear one properly.

1. Pick up the latch plate and pull the belt across you. Don't let it get twisted.

   On convertible models, the shoulder belt may lock if you pull the belt across you very quickly. If this happens, let the belt go back slightly to unlock it. Then pull the belt across you more slowly.

2. Push the latch plate into the buckle until it clicks.

Downloaded from www.Manualslib.com manuals search engine

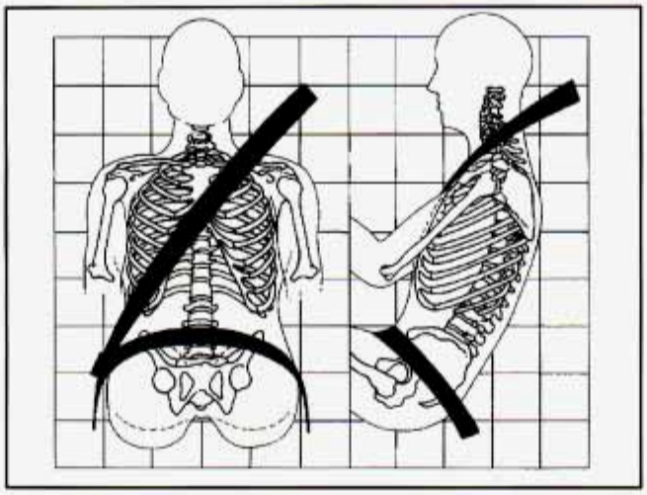

If the belt stops before it reaches the buckle, tilt the latch plate and keep pulling until you can buckle it.

Pull up on the latch plate to make sure it is secure.

If the belt is not long enough, see "Safety Belt Extender" at the end of this section. Make sure the release button on the buckle is positioned so you would be able to unbuckle the safety belt quickly if you ever had to.

3. To make the lap part tight, pull down on the buckle end of the belt as you pull up on the shoulder part.

Downloaded from www.Manualslib.com manuals search engine

The lap part of the belt should be worn low and snug on the hips, just touching the thighs. In a crash, this applies force to the strong pelvic bones. And you'd be less likely to slide under the lap belt. If you slid under it, the belt would apply force at your abdomen. This could cause serious or even fatal injuries. The shoulder belt should go over the shoulder and across the chest. These parts of the body are best able to take belt restraining forces.

The safety belt locks if there's a sudden stop or a crash.

On convertible models, the safety belt also locks if you pull the belt very quickly out of the retractor.

⚠ CAUTION:

You can be seriously hurt if your shoulder belt is too loose. In a crash, you would move forward too much, which could increase injury. The shoulder belt should fit against your body.

Downloaded from www.Manualslib.com manuals search engine

To unlatch the belt, just push the button on the buckle.

Children

Everyone in a vehicle needs protection! That includes infants and all children smaller than adult size. In fact, the law in every state in the United States and in every Canadian province says children up to some age must be restrained while in a vehicle.

Smaller Children and Babies

⚠ CAUTION:

Smaller children and babies should always be restrained in a child or infant restraint. The instructions for the restraint will say whether it is the right type and size for your child. A very young child's hip bones are so small that a regular belt might not stay low on the hips, as it should. Instead, the belt will likely be over the child's abdomen. In a crash, the belt would apply force right on the child's abdomen, which could cause serious or fatal injuries. So, be sure that any child small enough for one is always properly restrained in a child or infant restraint.

Downloaded from www.Manualslib.com manuals search engine

⚠ CAUTION:

Never hold a baby in your arms while riding in a vehicle. A baby doesn't weigh much -- until a crash. During a crash a baby will become so heavy you can't hold it. For example, in a crash

CAUTION: (Continued)

CAUTION: (Continued)

at only 25 mph (40 km/h), a 12-lb. (5.5 kg) baby will suddenly become a 240-lb. (110 kg) force on your arms. The baby would be almost impossible to hold.

Secure the baby in an infant restraint.

Downloaded from www.Manualslib.com manuals search engine

Child Restraints

Be sure the child restraint is designed to be used in a vehicle. If it is, it will have a label saying that it meets Federal Motor Vehicle Safety Standards.

Then follow the instructions for the restraint. You may find these instructions on the restraint itself or in a booklet, or both. These restraints use the belt system in your vehicle, but the child also has to be secured within the restraint to help reduce the chance of personal injury. The instructions that come with the infant or child restraint will show you how to do that.

Where to Put the Restraint

Accident statistics show that children are safer if they are restrained in the rear rather than the front seat. We at General Motors therefore recommend that you put your child restraint in the rear seat. *Never* put a rear-facing child restraint in the front passenger seat. Here's why:

⚠ CAUTION:

A child in a rear-facing child restraint can be seriously injured if the right front passenger's air bag inflates. This is because the back of a rear-facing child restraint would be very close to the inflating air bag. Always secure a rear-facing child restraint in the rear seat.

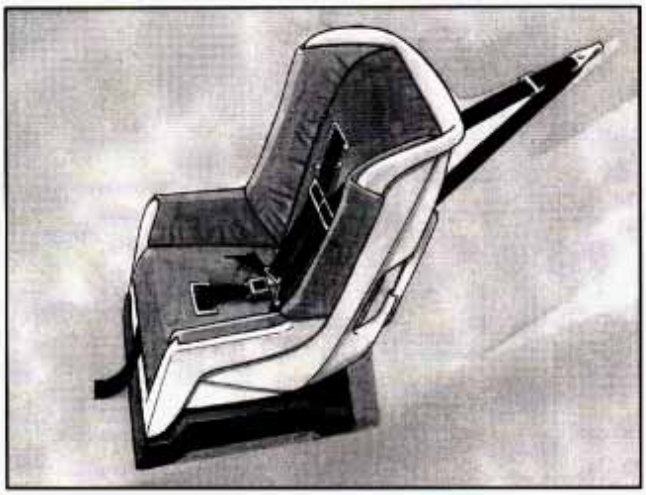

You may, however, secure a forward-facing child restraint in the right front seat. Before you secure a forward-facing child restraint, always move the front passenger seat as far back as it will go. Or, secure the child restraint in the rear seat.

Wherever you install it, be sure to secure the child restraint properly.

Keep in mind that an unsecured child restraint can move around in a collision or sudden stop and injure people in the vehicle. Be sure to properly secure any child restraint in your vehicle -- even when no child is in it.

Downloaded from www.Manualslib.com manuals search engine

Top Strap

If your child restraint has a top strap, it should be anchored. If you need to have an anchor installed, you can ask your Chevrolet dealer to put it in for you. If you want to install an anchor yourself, your dealer can tell you how to do it.

If you have a convertible, don't use a restraint that has a top strap in your vehicle because the top strap anchor cannot be installed properly.

⚠ CAUTION:

The place where the anchor has to go is quite close to your fuel tank. If the anchor isn't installed correctly, it can make a hole in the fuel tank -- either then, or in a later collision. Gasoline could leak out and be ignited, and people in the vehicle or outside it could be badly burned. Don't install the anchor yourself unless you know you can do it correctly.

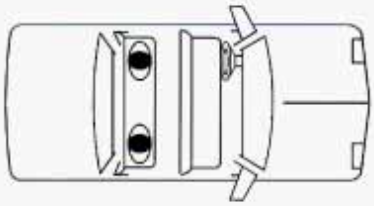

For cars first sold in Canada, child restraints with a top strap must be anchored according to Canadian law.

Your dealer can obtain the hardware kit and install it for you, or you may install it yourself using the instructions provided in the kit.

Use the tether hardware kit available from the dealer. The hardware and installation instructions were specifically designed for this vehicle.

Downloaded from www.Manualslib.com manuals search engine

Securing a Child Restraint in a Rear Seat Position

You'll be using the lap-shoulder belt. See the earlier part about the top strap if the child restraint has one.

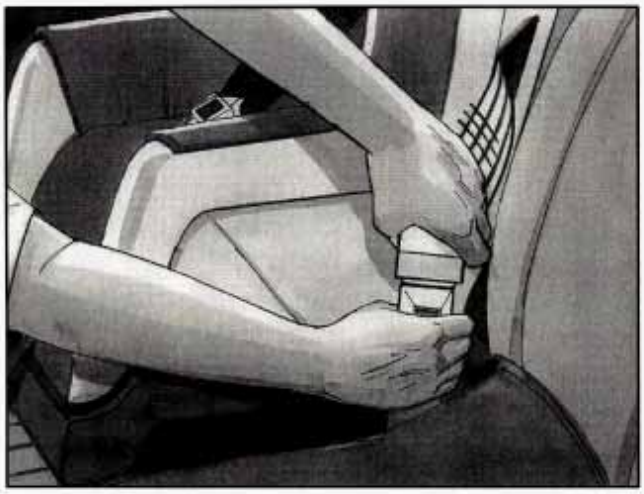

1. Put the restraint on the seat. Follow the instructions for the child restraint.
2. Secure the child in the child restraint as the instructions say.
3. Pick up the latch plate, and run the lap and shoulder portions of the vehicle's safety belt through or around the restraint. The child restraint instructions will show you how.

Tilt the latch plate to adjust the belt if needed.

If the shoulder belt goes in front of the child's face or neck, put it behind the child restraint.

Downloaded from www.Manualslib.com manuals search engine

4. Buckle the belt. Make sure the release button is positioned so you would be able to unbuckle the safety belt quickly if you ever had to.

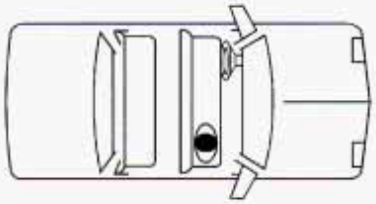

5. To tighten the belt, pull up on the shoulder belt while you push down on the child restraint.
6. Push and pull the child restraint in different directions to be sure it is secure.

To remove the child restraint, just unbuckle the vehicle's safety belt and let it go back all the way. The safety belt will move freely again and be ready to work for an adult or larger child passenger.

Downloaded from www.Manualslib.com manuals search engine

Securing a Child Restraint in the Right Front Seat Position

Your vehicle has a right front passenger air bag. *Never* put a rear-facing child restraint in this seat. Here's why:

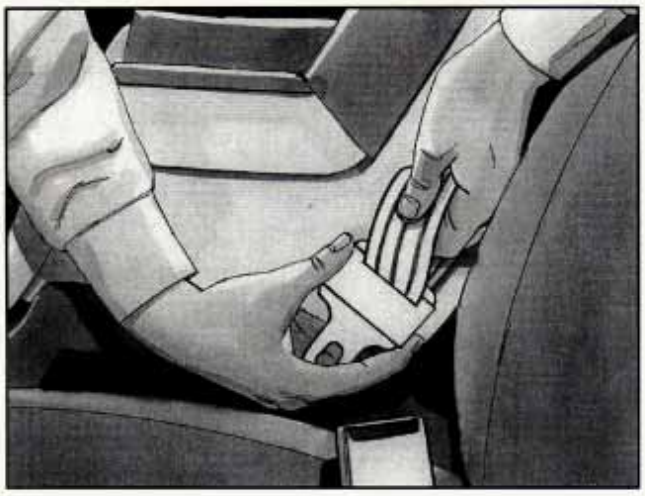

⚠ CAUTION:

A child in a rear-facing child restraint can be seriously injured if the right front passenger's air bag inflates. This is because the back of a rear-facing child restraint would be very close to the inflating air bag. Always secure a rear-facing child restraint in the rear seat.

You'll be using the lap-shoulder belt. See the earlier part about the top strap if the child restraint has one.

1. Because your vehicle has a right front passenger air bag, always move the seat as far back as it will go before securing a forward-facing child restraint. (See "Seats" in the Index.)
2. Put the restraint on the seat. Follow the instructions for the child restraint.
3. Secure the child in the child restraint as the instructions say.
4. Pick up the latch plate, and run the lap and shoulder portions of the vehicle's safety belt through or around the restraint. The child restraint instructions will show you how.

Downloaded from www.Manualslib.com manuals search engine

Tilt the latch plate to adjust the belt if needed.

If the shoulder belt goes in front of the child's face or neck, put it behind the child restraint.

5. Buckle the belt. Make sure the release button is positioned so you would be able to unbuckle the safety belt quickly if you ever had to.

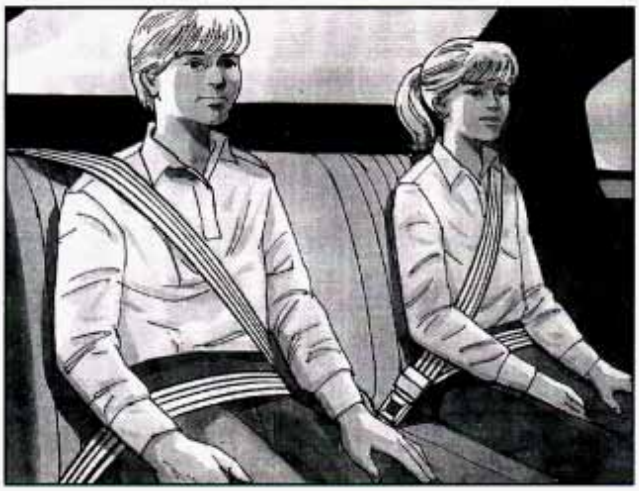

Downloaded from www.Manualslib.com manuals search engine

6. To tighten the belt, pull up on the shoulder belt while you push down on the child restraint.
7. Push and pull the child restraint in different directions to be sure it is secure.

To remove the child restraint, just unbuckle the vehicle's safety belt and let it go back all the way. The safety belt will move freely again and be ready to work for an adult or larger child passenger.

Larger Children

Children who have outgrown child restraints should wear the vehicle's safety belts.

Downloaded from www.Manualslib.com manuals search engine

Accident statistics show that children are safer if they are restrained in the rear seat. But they need to use the safety belts properly.

- Children who aren't buckled up can be thrown out in a crash.
- Children who aren't buckled up can strike other people who are.

⚠ CAUTION:

Never do this.

Here two children are wearing the same belt. The belt can't properly spread the impact forces. In a crash, the two children can be crushed together and seriously injured. A belt must be used by only one person at a time.

Q: **What if a child is wearing a lap-shoulder belt, but the child is so small that the shoulder belt is very close to the child's face or neck?**

A: Move the child toward the center of the vehicle, but be sure that the shoulder belt still is on the child's shoulder, so that in a crash the child's upper body would have the restraint that belts provide.

Downloaded from www.Manualslib.com manuals search engine

⚠ CAUTION:

Never do this.

Here a child is sitting in a seat that has a lap-shoulder belt, but the shoulder part is behind the child. If the child wears the belt in this way, in a crash the child might slide under the belt. The belt's force would then be applied right on the child's abdomen. That could cause serious or fatal injuries.

Wherever the child sits, the lap portion of the belt should be worn low and snug on the hips, just touching the child's thighs. This applies belt force to the child's pelvic bones in a crash.

Downloaded from www.Manualslib.com manuals search engine

Safety Belt Extender

If the vehicle's safety belt will fasten around you, you should use it.

But if a safety belt isn't long enough to fasten, your dealer will order you an extender. It's free. When you go in to order it, take the heaviest coat you will wear, so the extender will be long enough for you. The extender will be just for you, and just for the seat in your vehicle that you choose. Don't let someone else use it, and use it only for the seat it is made to fit. To wear it, just attach it to the regular safety belt.

Checking Your Restraint Systems

Now and then, make sure the safety belt reminder light and all your belts, buckles, latch plates, retractors and anchorages are working properly. Look for any other loose or damaged safety belt system parts. If you see anything that might keep a safety belt system from doing its job, have it repaired.

Torn or frayed safety belts may not protect you in a crash. They can rip apart under impact forces. If a belt is torn or frayed, get a new one right away.

Also look for any opened or broken air bag covers, and have them repaired or replaced. (The air bag system does not need regular maintenance.)

Replacing Restraint System Parts After a Crash

If you've had a crash, do you need new belts?

After a very minor collision, nothing may be necessary. But if the belts were stretched, as they would be if worn during a more severe crash, then you need new belts.

If belts are cut or damaged, replace them. Collision damage also may mean you will need to have safety belt or seat parts repaired or replaced. New parts and repairs may be necessary even if the belt wasn't being used at the time of the collision.

If an air bag inflates, you'll need to replace air bag system parts. See the part on the air bag system earlier in this section.

NOTES

Downloaded from www.Manualslib.com manuals search engine

Section 2 Features and Controls

Here you can learn about the many standard and optional features on your Chevrolet, and information on starting, shifting and braking. Also explained are the instrument panel and the warning systems that tell you if everything is working properly -- and what to do if you have a problem.

Keys

⚠ CAUTION:

Leaving young children in a vehicle with the ignition key is dangerous for many reasons. A child or others could be badly injured or even killed.

They could operate power windows or other controls or even make the vehicle move. Don't leave the keys in a vehicle with young children.

Downloaded from www.Manualslib.com manuals search engine

The ignition keys are for the ignition only.

The door keys are for the doors and all other locks.

When a new Camaro is delivered, the dealer removes the plugs from the keys, and gives them to the first owner.

Each plug has a code on it that tells your dealer or a qualified locksmith how to make extra door keys. Keep the plugs in a safe place. If you lose your door keys, you'll be able to have new ones made using these plugs.

The ignition keys don't have plugs. Instead, they have bar-coded key tags. These tags may be removed by your dealer or even before the vehicle is delivered to your dealer.

If you need a new ignition key, go to your Chevrolet dealer, who can obtain the correct key code. In an emergency, call Chevrolet Roadside Assistance at 1-800-CHEV-USA.

NOTICE:

Your Chevrolet has a number of features that can help prevent theft. But you can have a lot of trouble getting into your vehicle if you ever lock your keys inside. You may even have to damage your vehicle to get in. So be sure you have extra keys.

Downloaded from www.Manualslib.com manuals search engine

Door Locks

⚠ CAUTION:

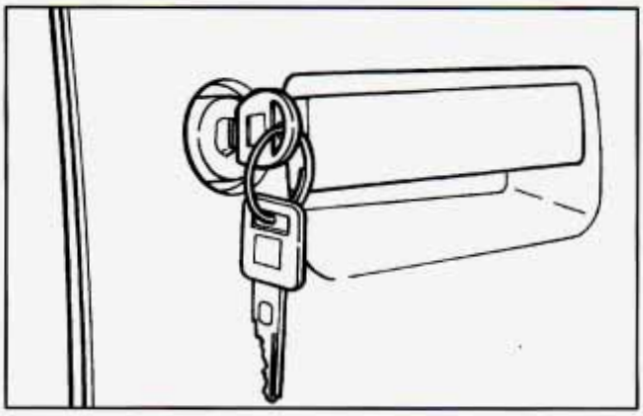

Unlocked doors can be dangerous.

Passengers -- especially children -- can easily open the doors and fall out. When a door is locked, the inside handle won't open it.

Outsiders can easily enter through an unlocked door when you slow down or stop your vehicle.

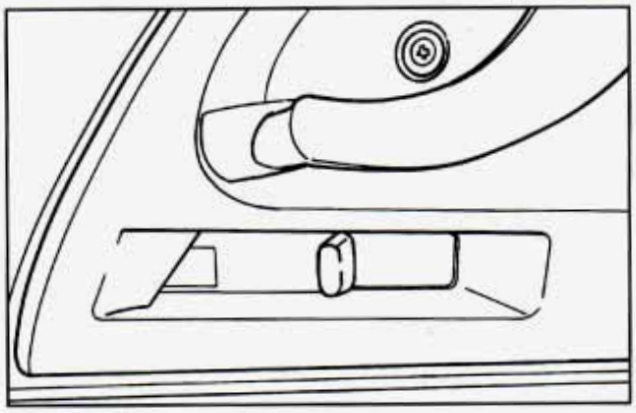

This may not be so obvious: You increase the chance of being thrown out of the vehicle in a crash if the doors aren't locked. Wear safety belts properly, lock your doors, and you will be far better off whenever you drive your vehicle.

There are several ways to lock and unlock your vehicle.

From the outside use your door key. (If your vehicle has the Vehicle and Content Theft-Deterrent/Alarm System and it is armed, unlocking and opening a door this way will set off the alarm. See "Vehicle and Content Theft-Deterrent/Alarm System" in the Index.)

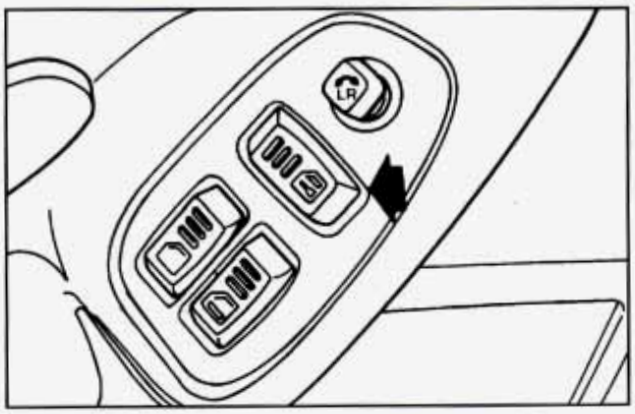

Downloaded from www.Manualslib.com manuals search engine

From the inside to lock the door, move the lock control on the door backward.

To unlock the door, move the lock control on the door forward.

Power Door Locks (Option)

Push the power door lock switch to lock or unlock both doors at once. Note: Operating the power locks may affect the Vehicle and Content Theft-Deterrent/Alarm System (if you have this option). See "Vehicle and Content Theft-Deterrent /Alarm System" in the Index.

The lock switch works at all times, except during "Lockout Prevention" (if that feature is programmed). The unlock switch only works in RUN, ACC and RAP. (See "Retained Accessory Power" in the Index.)

Downloaded from www.Manualslib.com manuals search engine

Last Door Closed Locking (Option)

If you have power door locks, you can program a last door closed locking feature for your vehicle. This feature allows for a delayed locking of the doors so that you or your passengers may exit the vehicle after you've pressed the power door lock switch and still have the doors locked once everyone has gotten out of the vehicle.

When the power door lock switch is pressed, a chime will sound three times, indicating that last door closed locking has been activated. Pressing the LOCK switch again will lock the doors immediately. Pressing the UNLOCK switch will cancel a previously requested last door closed locking.

This feature is shipped from the factory in the off position. To turn this feature on, see "Feature Customization" in the Index.

Lockout Prevention (Option)

To protect you from locking your keys in the vehicle, this feature stops the power door locks from locking when the keys are in the ignition and a door is open. If the power lock switch is pressed when a door is open, a chime will sound five times as a reminder to take the keys out of the ignition before locking the door. This feature is shipped from the factory in the on position. If you would like to turn this feature off, see "Feature Customization" in the Index.

Leaving Your Vehicle

If you are leaving the vehicle, take your keys, open your door and set the locks from inside. Then get out and close the door.

Remote Lock Control (Option)

If your Chevrolet has this option, you can lock and unlock your doors or unlock your trunk from up to 30 feet (9 m) away using the key chain transmitter supplied with your vehicle.

Downloaded from www.Manualslib.com manuals search engine

3-Button Transmitter

4-Button Transmitter

Your Remote Lock Control operates on a radio frequency subject to Federal Communications Commission (FCC) Rules.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

Should interference to this system occur, try this:

- Check to determine if battery replacement is necessary. See the instructions on battery replacement.
- Check the distance. You may be too far from your vehicle. This product has a maximum range.
- Check the location. Other vehicles or objects may be blocking the signal.
- See your Chevrolet dealer or a qualified technician for service.

Changes or modifications to this system by other than an authorized service facility could void authorization to use this equipment.

Downloaded from www.Manualslib.com manuals search engine

Operation

The driver's door will unlock automatically when UNLOCK is pressed. If UNLOCK is pressed again within five seconds, the passenger door will also unlock. All doors will lock when LOCK is pressed.

The hatch will unlock when the button with the trunk symbol is pressed, as long as the ignition is turned to the OFF position. If the ignition is on, the trunk button will only work if the transmission is in PARK (P) for an automatic transmission, or if the parking brake is set on a manual transmission.

The system will turn on the interior lamps for about 40 seconds (or until the ignition switch is turned to the RUN position), when you unlock the doors or hatch. The interior lamps will go off when you lock the doors.

Operating the Remote Lock Control transmitter may interact with the Vehicle and Content Theft-Deterrent/Alarm System (if you have this option). See "Vehicle and Content Theft-Deterrent/Alarm System" in the Index.

Alarm/Panic Mode

If your vehicle is equipped with the Vehicle and Content Theft-Deterrent/Alarm System, you will have a fourth button on your transmitter. This button is the panic button. If you are involved in a panic situation, press this button and your vehicle's horn will sound and the headlamps will flash. This will draw needed attention to you and your vehicle. To turn this feature off, either push the panic button again or turn the ignition to the RUN position. Note: This feature will not work if your ignition is on or if the transmitter is 30 feet (9 m) or more away from your vehicle.

Resynchronizing Your Transmitter

If your vehicle does not respond to your transmitter, do the following to determine what's wrong:

1. Get closer to the vehicle and try pressing a button again. Your battery may be low (If so, see "Battery Replacement" in the Index).
2. While close to your vehicle, press the LOCK and UNLOCK buttons on your transmitter at the same time and hold for eight seconds. This will attempt to match your Remote Lock Control transmitter and the transmitter receiver security codes.
3. If neither Steps 1 or 2 is successful, your transmitter may need to be matched to your vehicle. See "Matching Transmitter(s) to Your Vehicle" in the Index.

Downloaded from www.Manualslib.com manuals search engine

Transmitter Verification (Option)

This feature provides feedback to the holder of the Remote Lock Control transmitter that a command has been received by the Remote Lock Control receiver. The parking lamps will flash on every lock and unlock command and the horn will sound only if the LOCK button is pushed twice within five seconds. This allows for silent operation of locking and unlocking, unless a confirming horn chirp is desired. Other options may be selected for this feature (see "Feature Customization" in the Index).

Matching Transmitter(s) To Your Vehicle

Each key chain transmitter is coded to prevent another transmitter from unlocking your vehicle. If a transmitter is lost or stolen, a replacement can be purchased through your dealer. Remember to bring any remaining transmitters with you when you go to your dealer. When the dealer matches the replacement transmitter to your vehicle, any remaining transmitters must also be matched. Once the new transmitter is coded, the lost transmitter will not unlock your vehicle. Each vehicle can have only four transmitters matched to it.

Have each transmitter you intend to match ready for the next steps. To match transmitters to your vehicle:

- Turn the ignition switch from the RUN position to the OFF position. This will disarm the Vehicle and Content Theft-Deterrent/Alarm System (if your vehicle has this option).
- Remove RADIO fuse. This fuse is located in the main fuse block, located on the left side of your instrument panel. See "Fuses and Circuit Breakers" in the Index.
- Turn the ignition switch from the OFF to the RUN position three times quickly (within five seconds.) The vehicle will respond by locking the doors, unlocking the driver's doors and releasing the hatch. Your transmitter is now ready to match your vehicle.
- Press and hold the LOCK and UNLOCK buttons on the first transmitter for 15 seconds. The vehicle will respond as in Step 3.
- Repeat Step 4 for the remaining transmitters.
- When you have finished matching all of your transmitters, replace the RADIO fuse.
- Check that all transmitters work by pressing their buttons.

If the transmitters don't work, or if you'd rather not match the transmitters yourself, See your Chevrolet dealer.

Downloaded from www.Manualslib.com manuals search engine

Battery Replacement

Under normal use, the battery in your Remote Lock Control transmitter should last about two years.

You can tell the battery is weak if the transmitter won't work at the normal range in any location. If you have to get close to your vehicle before the transmitter works, it's probably time to change the battery.

Use one battery, type CR2032, or a similar type.

To replace the battery in the Remote Lock Control transmitter:

1. Carefully pry off the cover by inserting a dime (or similar object) in a slot between the covers and twist.
2. Lift off the back cover.
3. Remove and replace the battery. Use one battery, type CR2032, or a similar type. Put new battery in printed side down.
4. Replace the front cover. Make sure the cover is on tightly so water won't get in.
5. Check the transmitter operation.

Downloaded from www.Manualslib.com manuals search engine

Hatch

⚠ CAUTION:

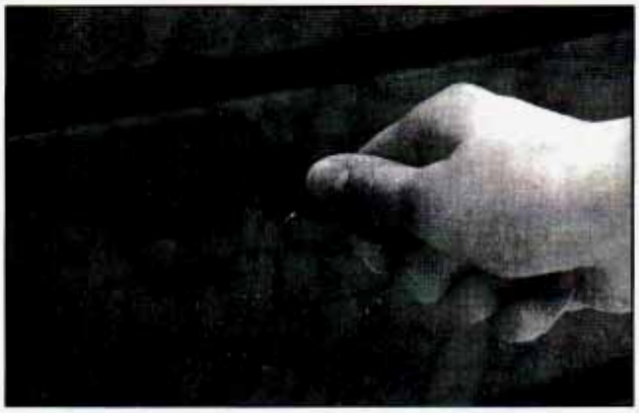

It can be dangerous to drive with the hatch open because carbon monoxide (CO) gas can come into your vehicle. You can't see or smell CO. It can cause unconsciousness and even death.

If you must drive with the hatch open or if electrical wiring or other cable connections must pass through the seal between the body and the hatch:

- **Make sure all windows are shut.**
- **Turn the fan on your heating or cooling system to its highest speed with the setting on VENT. That will force outside air into your vehicle. See "Comfort Controls" in the Index.**
- **If you have air outlets on or under the instrument panel, open them all the way.**

See "Engine Exhaust" in the Index.

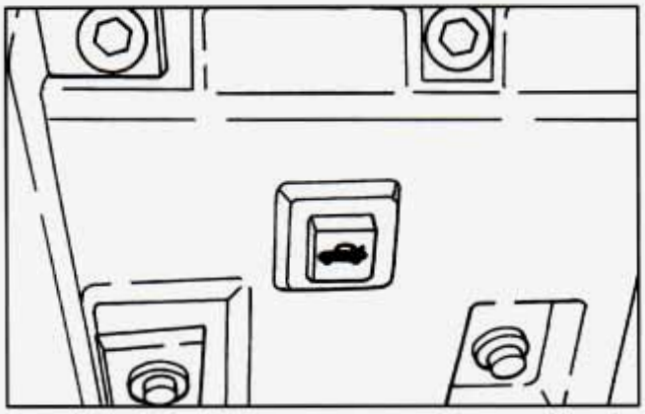

Hatch Release

Your door key opens the hatch. If your vehicle has the Vehicle and Content Theft-Deterrent/Alarm System and it is armed, use the transmitter, not the key to open the hatch or the alarm will sound.

Downloaded from www.Manualslib.com manuals search engine

Remote Hatch Release (Option)

Press the switch in your glove box to unlock the hatch from inside your vehicle. If you have an automatic transmission, your shift lever must be in PARK (P) or NEUTRAL (N) to use the switch. If you have a manual transmission and the ignition switch is in RUN, you must set the parking brake before you can use the switch.

The switch only works when the ignition switch is in RUN or ACC, or when RAP is present. (See "Retained Accessory Power" in the Index.)

NOTICE:

If you put things in the hatchback area, be sure they won't break the glass when you close it. Never slam the hatch down. You could break the glass or damage the defogger grid (if equipped).

On vehicles with the Vehicle and Content Theft-Deterrent/Alarm System: The hatch switch will not work while the system is armed. See "Vehicle and Content Theft-Deterrent/Alarm System" in the Index.

Downloaded from www.Manualslib.com manuals search engine

Theft

Vehicle theft is big business, especially in some cities. Although your Chevrolet has a number of theft-deterrent features, we know that nothing we put on it can make it impossible to steal. However, there are ways you can help.

Key in the Ignition

If you leave your vehicle with the keys inside, it's an easy target for joy riders or professional thieves -- so don't do it.

When you park your Chevrolet and open the driver's door, you'll hear a tone reminding you to remove your key from the ignition and take it with you. Always do this. Your steering wheel will be locked, and so will your ignition. If you have an automatic transmission, taking your key out also locks your transmission. And remember to lock the doors.

Parking at Night

Park in a lighted spot, close all windows and lock your vehicle. Remember to keep your valuables out of sight. Put them in a storage area, or take them with you.

Parking Lots

If you park in a lot where someone will be watching your vehicle, it's best to lock it up and take your keys. But what if you have to leave your ignition key? What if you have to leave something valuable in your vehicle?

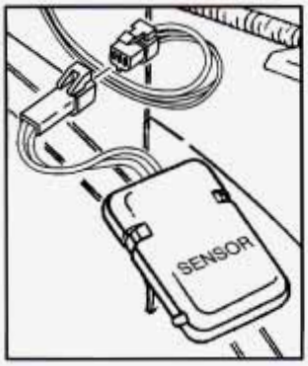

- Put your valuables in a storage area, like your glove box.
- Lock the glove box.
- Lock all the doors except the driver's.
- Then take the door key with you.

Downloaded from www.Manualslib.com manuals search engine

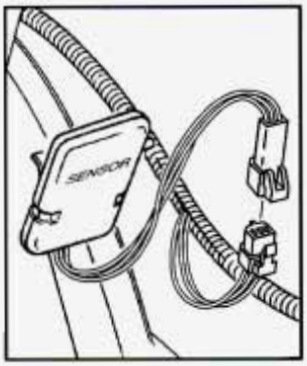

Vehicle and Content
Theft-Deterrent/Alarm System (Option)

If your vehicle has this option, it has a theft-deterrent alarm system. Once armed, the system will sound the horn and flash the parking lamps if the vehicle is broken into.

Shock Sensor

Coupe

Convertible

The shock sensor is what triggers the alarm when it detects a blow to your vehicle. It is located over the right rear wheelhouse near the spare tire in the hatch area. There are two levels of alarms via the shock sensor: Two horn blasts and parking lamp flashes for non-threatening blows to the vehicle and a full two minute alarm for harder blows to the vehicle. Its sensitivity can be adjusted if more or less sensitivity is desired. (Note: If sensitivity increased too much, it may give false alarms caused by gusts of wind or other natural events that may shake the vehicle).

To adjust, remove the label covering the adjustment knob and adjust as desired. The shock sensor is ignored by the alarm system during ignition on, when the hatch is open, when the alarm is disarmed, when customized to be ignored and for five seconds after the horn sounds an alarm or chirp. The shock sensor is ignored after triggering three full alarms until the system is rearmed.

Downloaded from www.Manualslib.com manuals search engine

Arming the System

The alarm system can be armed to detect break-ins by locking your vehicle using the Remote Lock Control transmitter or by locking the doors with the power door lock switch. Passive arming is also available, if you would like the system to arm all by itself after the doors have been closed for a short time. When the system is armed, a red light will flash briefly once every two seconds. (Note: If you return to your vehicle and the red light is flashing two brief flashes every two seconds, the system is armed and the shock sensor had triggered a two minute alarm. If the red light is flashing three times every two seconds, the system is armed and there was an intrusion that sounded the alarm). Horn chirps and parking lamp flashes can be set to your choice.

Remote Lock Control Transmitter Locking

If all the doors are closed, locking the vehicle this way will immediately arm the system. The horn will chirp twice and the parking lamps will flash, confirming that the system is armed. If any door is open when the transmitter LOCK button is pressed, the system goes into an armed wait mode, waiting for the doors to close. Once they are closed, the system will arm, chirp the horns twice and flash the parking lamps. If the hatch is open or ajar at the time the system is arming, the horn will only chirp once.

Power Door Lock Switch Locking

If any door is open when the power door lock switch is pressed, the system goes into an armed wait mode, waiting for the doors to close. Once they are closed, the system will arm and flash the parking lamps. If all of the doors are closed when the lock switch is pressed, the system assumes you are inside of the vehicle, so it will not arm. Note: Locking the doors by using the manual door locks will not arm the system.

Passive Arming

If the ignition was just turned off and a door was opened, the system will arm six seconds after all doors are closed, whether or not you lock them. In all other cases, the system will wait 30 seconds after all doors are closed before arming, allowing you time to get into the vehicle and the key in the ignition. The parking lamps will flash when the system arms.

Disarming the System

There are two ways to disarm the system:

1. Press the UNLOCK button on the Remote Lock Control transmitter, OR if the horn chirps two or three times when you unlock the car, the alarm sounded in your absence. Two chirps means that the shock sensor was set off and three chirps means

Downloaded from www.Manualslib.com manuals search engine

that there may have been a blow to the doors or the hatch areas.

2. Turn the ignition to the RUN position with the proper key.

For more information on customizing the features mentioned here, see "Feature Customization" in the Index.

Turning Off the Alarm

If you started the alarm by pressing the panic button on the Remote Lock Control transmitter, you must either push that button again or turn the ignition switch to the RUN position to stop the alarm.

If the alarm is sounding due to the shock sensor or a door or hatch opening, it can be turned off by either turning the ignition switch with a proper key inserted or by pressing any button on the Remote Lock Control transmitter. If you use your Remote Lock Control transmitter to silence the alarm, additional things will happen depending upon which button you press.

- Pressing the UNLOCK button will turn the alarm off, will unlock the driver's door and disarm the system.
- Pressing the LOCK button will turn the alarm off, keep the doors locked and keep the system armed.
- Pressing the trunk symbol button will turn the alarm off and will unlock and disarm the hatch only.
- Pressing the panic button will turn the alarm off, keep the doors locked and keep the system armed.

If the alarm is sounding because an incorrect ignition key was used, press any button on the Remote Lock Control transmitter to turn the alarm off.

The alarm will stop by itself after two minutes.

Downloaded from www.Manualslib.com manuals search engine

PASS-Key® II

Your vehicle is equipped with the PASS-Key II (Personalized Automotive Security System) theft-deterrent system. PASS-Key II is a passive theft-deterrent system. It works when you insert or remove the key from the ignition.

PASS-Key II uses a resistor pellet in the ignition key that matches a decoder in your vehicle.

When the PASS-Key II system senses that someone is using the wrong key, it shuts down the vehicle's starter and fuel systems. For about three minutes, the starter won't work and fuel won't go to the engine. If someone tries to start your vehicle again or uses another key during this time, the vehicle will not start. This discourages someone from randomly trying different keys with different resistor pellets in an attempt to make a match.

The ignition key must be clean and dry before it's inserted in the ignition or the engine may not start. If the engine does not start and the SECURITY light stays on when you try to start the vehicle, the key may be dirty or wet. Turn the ignition off. Clean and dry the key. Wait about three minutes and try again. The SECURITY light will remain on during this time. If the starter still won't work, and the key appears to be clean and dry, wait about three minutes and try another ignition key. At this time, you may also want to check the fuses (see "Fuses and Circuit Breakers" in the Index). If the starter won't work with the other key, your vehicle needs service. If your vehicle does start, the first ignition key may be faulty. See your Chevrolet dealer or a locksmith who can service the PASS-Key II.

If you accidentally use a key that has a damaged or missing resistor pellet, the starter won't work and the SECURITY light will flash. But you don't have to wait three minutes before trying another ignition key.

See your Chevrolet dealer or a locksmith who can service the PASS-Key II to have a new key made.

If you're ever driving and the SECURITY light comes on and stays on, you will be able to restart your engine if you turn it off. Your PASS-Key II system, however, is not working properly and must be serviced by your Chevrolet dealer. Your vehicle is not protected by the PASS-Key II system.

If you lose or damage a PASS-Key II ignition key, see your Chevrolet dealer or a locksmith who can service PASS-Key II to have a new key made. In an emergency, call the Chevrolet Roadside Assistance Program at 1-800-CHEV-USA (1-800-243-8872).

Downloaded from www.Manualslib.com manuals search engine

Feature Customization (Option)

Your Chevrolet's locks and lighting systems can be programmed with several different features. The features you can program depend upon the options that came with your vehicle. The following list tells you the features that can be programmed. Listed next to each feature is the option you need to have on your vehicle in order to be able to program that particular feature.

- Exit Lighting (available for all)
- Delayed Illumination (available for all)
- Last Door Closed Locking (if equipped with power door locks)
- Lockout Prevention (if equipped with power door locks)
- Remote Lock Control Verification (if equipped with Vehicle and Content Theft-Deterrent/Alarm System)
- Theft-Deterrent Arming Method (if equipped with Vehicle and Content Theft-Deterrent/Alarm System)
- Theft-Deterrent Arming Verification (if equipped with Vehicle and Content Theft-Deterrent/Alarm System)
- Driver's Door Alarm Delay (if equipped with Vehicle and Content Theft-Deterrent/Alarm System)
- Shock Sensor Enable (if equipped with Vehicle and Content Theft-Deterrent/Alarm System)

To program features, your vehicle must be in the programming mode. Follow these steps:

1. Put your key in the ignition.
2. Turn the ignition to the RUN position to disarm the Vehicle and Content Theft-Deterrent/Alarm System.
3. Turn the ignition to the OFF position.
4. Remove the RADIO fuse. This fuse is in the main fuse block, located on the left side of your instrument panel. See "Fuses and Circuit Breakers" in the Index.
5. Put the ignition in the ACC position.

   You should hear a chime to verify that the system is in programming mode. If the chime sounds once, you will be able to program Exit Lighting, Delayed Illumination, Last Door Closed Locking and Lockout Prevention only. If the chime sounds twice and your vehicle is equipped with the Vehicle and Content Theft-Deterrent System, you will also be able to set Remote Lock Control Verification, Arming Method, Arming Verification, Driver's Door Delay and Shock Sensor Enable.

Downloaded from www.Manualslib.com manuals search engine

Exit Lighting and Delayed Illumination

Your vehicle comes with this feature set in Mode 4. This means that your interior lamps will go on when the key is removed from the ignition switch and stay on for 25 seconds after closing the doors to help in exiting the vehicle. To change the factory setting, do the following:

1. Turn the courtesy lamps ON by turning the instrument panel brightness control knob all the way up.
2. Count the number of chimes you hear. The number of chimes tells you which mode your vehicle is set for.
3. Turn the courtesy lamp switch to OFF.
4. Turn the courtesy lamp switch from ON to OFF until you hear the number of chimes that correspond to the mode selection you want.

Mode 1: Both Off (Interior lamps will turn on or off at the same instant that a door is opened or closed).

Mode 2: Delayed Illumination Only (Interior lamps will stay on for 25 seconds after the doors are closed).

Mode 3: Exit Lighting Only (Interior lamps will come on whenever you remove the ignition key).

Mode 4: Both On (This combines Mode 2 and 3).

Last Door Closed Locking and Lockout Prevention

Your vehicle comes with this feature set in Mode 2. This means that your power door locks will not lock when the keys are in the ignition and a door is open. To change the factory setting, do the following:

1. Press the LOCK switch on the door.
2. Count the number of chimes you hear. The number of chimes tells you which mode your vehicle is set for.
3. Press the LOCK switch on the door until you hear the number of chimes that correspond to the mode selection you want.

Mode 1: Both Off (Doors will lock/unlock when you press the power door lock switch).

Mode 2: Lockout Prevention Only (If you leave your keys in the ignition and get out the driver's door, you won't be able to lock the doors with the power door lock switch).

Mode 3: Last Door Closed Locking Only (If the power door lock switch is used to lock the vehicle while any door is open, you will hear three chimes. The doors will not lock until after all doors are closed).

Mode 4: Both On (This combines Mode 2 and 3).

Downloaded from www.Manualslib.com manuals search engine

Remote Lock Control Verification

Your vehicle comes with this feature set in Mode 5. This means that when you use the Remote Lock Control transmitter to lock/unlock your vehicle, your parking lamps will flash briefly upon the first push on LOCK. Your horn will sound briefly, your parking lamps will flash briefly upon the second push on LOCK and your parking lamps will flash briefly upon any push on UNLOCK. To change the factory setting, do the following:

1. Press the UNLOCK switch on the Remote Lock Control transmitter.
2. Count the number of chimes you hear. The number of chimes tells you which mode your vehicle is set for.
3. Press the UNLOCK switch on the Remote Lock Control transmitter until you hear the number of chimes that correspond to the mode selection you want.

Mode 1: All Off (The headlamps will not flash and the horn will not sound to provide you feedback that a lock/unlock command has been received by the Remote Lock Control transmitter).

Mode 2: Horn and Lamps/Lamps (Your horn will sound briefly and your parking lamps will flash when you press LOCK on the Remote Lock Control transmitter. Only your parking lamps will flash when you press UNLOCK).

Mode 3: Horn and Lamps (Your horn will sound briefly and your parking lamps will flash every time you push LOCK and UNLOCK).

Mode 4: Lamps (Your parking lamps will flash every time you push LOCK and UNLOCK).

Mode 5: Lamps/Horn and Lamps/Lamps (Your lamps will flash upon the first push on LOCK, your lamps will flash and your horn will sound upon the second push on LOCK and your lamps will flash upon any push on UNLOCK).

Downloaded from www.Manualslib.com manuals search engine

Theft-Deterrent Arming Method

Your vehicle comes with this feature set in Mode 3. This means that both your Remote Lock Control transmitter and the power door lock switch will actively arm the system. To change the factory setting, do the following:

1. Press the UNLOCK switch on the door.
2. Count the number of chimes you hear. The number of chimes tells you which mode your vehicle is set for.
3. Press the UNLOCK switch on the door until you hear the number of chimes that correspond to the mode selection you want.

Mode 1: Alarm System Off (The System will not arm).

Mode 2: Remote Lock Control Transmitter Lock (When you lock your doors using the transmitter, the system will arm itself).

Mode 3: Remote Lock Control Transmitter/Power Door Lock Switch (If you use either the Remote Lock Control transmitter or the power door lock switch to lock the doors, the system will arm itself).

Mode 4: Remote Lock Control Transmitter/Power Door Lock Switch Arming (The system will arm itself after all doors are closed).

Theft-Deterrent Arming Verification

Your vehicle comes with this feature set in Mode 3. This means that if you arm the system using the Remote Lock Control transmitter, your parking lamps will flash and your horn will chirp twice to verify that the system is armed. If it only chirps once, the hatch is open or unlatched. If you arm the system using either the power door lock switch or by passive arming, only the parking lamps will flash for verification.) To change the factory setting, do the following:

1. Press the LOCK switch on the Remote Lock Control transmitter.
2. Count the number of chimes you hear. The number of chimes tells you which mode your vehicle is set for.
3. Press the LOCK switch on the transmitter until you hear the number of chimes that correspond to the mode selection you want.

Mode 1: All Off (No horn chirps or parking lamp flash).

Mode 2: Horn and Lamps (Your parking lamps will flash and your horn will chirp twice to verify the system is armed using any arming method).

Downloaded from www.Manualslib.com manuals search engine

Mode 3: Horn and Lamps/Lamps (If you use the transmitter to arm the system, your parking lamps will flash and your horn will chirp twice to verify that the system is armed. If you use either the power door lock switch or passive arming, only your lamps will flash for verification).

Mode 4: Lamps (When your vehicle arms, only your parking lamps will flash for verification).

Driver's Door Alarm Delay and Shock Sensor Enable

Your vehicle comes with this feature set in Mode 4. This means that if you open the driver's door using your key, the alarm will not sound for eight seconds. Also the shock sensor, able to detect sharp blows to your vehicle is active. To change the factory setting, do the following:

1. Turn the parking lamps on and off.
2. Count the number of chimes you hear. The number of chimes tells you which mode your vehicle is set for.
3. Turn the parking lamps on and off until you hear the number of chimes that correspond to the mode selection you want.

Mode 1: Zero Delay and Shock Sensor Disabled (The alarm will sound immediately if the driver's door is opened with your key and the shock sensor will not be available to measure sharp blows to your vehicle).

Mode 2: Eight Second Delay and Shock Sensor Disabled (The alarm will sound eight seconds after the driver's door is opened with your key and the shock sensor will not be available to measure sharp blows to your vehicle).

Mode 3: Zero Delay and Shock Sensor Enabled (The alarm will sound immediately after the driver's door is opened with your key and the shock sensor will be available to measure sharp blows to your vehicle).

Mode 4: Eight Second Delay and Shock Sensor Enabled (The alarm will sound eight seconds after the driver's door is opened with your key and the shock sensor will be available to measure sharp blows to your vehicle).

Leaving Programming Mode

When programming is done, turn the ignition switch to the OFF position and replace the RADIO fuse.

Downloaded from www.Manualslib.com manuals search engine

New Vehicle "Break-In"

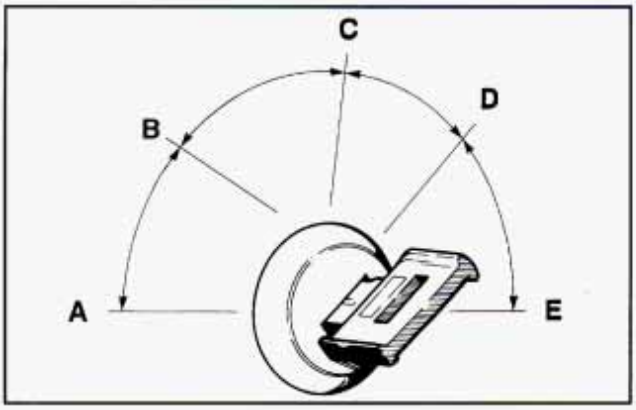

NOTICE:

Your modern Chevrolet doesn't need an elaborate "break-in." But it will perform better in the long run if you follow these guidelines:

- **Keep your speed at 55 mph (88 km/h) or less for the first 500 miles (804 km).**
- **Don't drive at any one speed -- fast or slow -- for the first 500 miles (804 km). Don't make full-throttle starts.**
- **Avoid making hard stops for the first 200 miles (322 km) or so. During this time your new brake linings aren't yet broken in. Hard stops with new linings can mean premature wear and earlier replacement. Follow this breaking-in guideline every time you get new brake linings.**
- **Don't tow a trailer during break-in. See "Towing a Trailer" in the Index for more information.**

Ignition Positions

With the ignition key in the ignition switch, you can turn the switch to five positions:

ACC (A): Position in which you can operate your electrical power accessories. Press in the ignition switch as you turn the top of it toward you.

LOCK (B): The only position in which you can remove the key. This locks your steering wheel, ignition and automatic transmission.

Downloaded from www.Manualslib.com manuals search engine

If you have an automatic transmission, the ignition switch can't be turned to LOCK unless the shift lever is in the PARK (P) position.

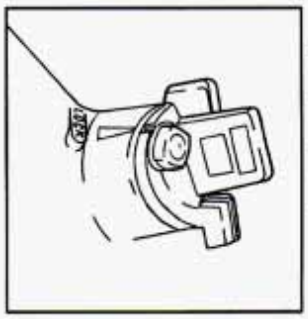

OFF (C): Unlocks the steering wheel, ignition and automatic transmission, but does not send electrical power to any accessories. Use this position if your vehicle must be pushed or towed. A warning tone will sound if you open the driver's door when the ignition is in OFF and the key is in the ignition.

RUN (D): Position to which the switch returns after you start your engine and release the switch. The switch stays in the RUN position when the engine is running. But even when the engine is not running, you can use RUN to operate your electrical power accessories and to display some instrument panel warning and indicator lights.

START (E): Starts the engine. When the engine starts, release the key. The ignition switch will return to RUN for normal driving.

Note that even if the engine is not running, ACC and RUN allow you to operate your electrical accessories, such as the radio and ventilation fan.

Key Release Button

If you have a manual transmission, your ignition lock has a key release button. You must press the button before you can take your key out of the ignition lock.

⚠ CAUTION:

On manual transmission vehicles, turning the key to LOCK will lock the steering column and result in a loss of ability to steer the vehicle. This could cause a collision. If you need to turn the engine off while the vehicle is moving, turn the key only to OFF. Don't press the key release button while the vehicle is moving.

Downloaded from www.Manualslib.com manuals search engine

NOTICE:

If your key seems stuck in LOCK and you can't turn it, be sure it is all the way in. If it is, then turn the steering wheel left and right while you turn the key hard. But turn the key only with your hand. Using a tool to force it could break the key or the ignition switch. If none of this works, then your vehicle needs service.

Starting Your Engine

Engines start differently. The 8th digit of your Vehicle Identification Number (VIN) shows the code letter or number for your engine. You will find the VIN at the top left of your instrument panel. (See "Vehicle Identification Number" in the Index.) Follow the proper steps to start the engine.

Automatic transmission

Move your shift lever to PARK (P) or NEUTRAL (N). Your engine won't start in any other position -- that's a safety feature. To restart when you're already moving, use NEUTRAL (N) only.

NOTICE:

Don't try to shift to PARK (P) if your Chevrolet is moving. If you do, you could damage the transmission. Shift to PARK (P) only when your vehicle is stopped.

Manual transmission

The gear selector should be in NEUTRAL (N). Hold the clutch pedal to the floor and start the engine. Your vehicle won't start if the clutch pedal is not all the way down -- that's a safety feature.

Downloaded from www.Manualslib.com manuals search engine

Starting Your 3.8 Liter Engine

1. Without pushing the accelerator pedal, turn your ignition key to START. When the engine starts, let go of the key. The idle speed will go down as your engine gets warm.

NOTICE:

Holding your key in START for longer than 15 seconds at a time will cause your battery to be drained much sooner. And the excessive heat can damage your starter motor.

2. If it doesn't start right away, hold your key in START for about three to five seconds at a time until your engine starts. Wait about 15 seconds between each try to help avoid draining your battery.

3. If your engine still won't start (or starts but then stops), it could be flooded with too much gasoline. Try pushing your accelerator pedal all the way to the floor and holding it there as you hold the key in START for about three seconds. If the vehicle starts briefly but then stops again, do the same thing, but this time keep the pedal down for five or six seconds. This clears the extra gasoline from the engine. After waiting about 15 seconds, repeat the normal starting procedure.

NOTICE:

Your engine is designed to work with the electronics in your vehicle. If you add electrical parts or accessories, you could change the way the engine operates. Before adding electrical equipment, check with your dealer. If you don't, your engine might not perform properly.

If you ever have to have your vehicle towed, see the part of this manual that tells how to do it without damaging your vehicle. See "Towing Your Vehicle" in the Index.

Downloaded from www.Manualslib.com manuals search engine

Starting Your 5.7 Liter LT1 Engine

1. Without pushing the accelerator pedal, turn the ignition key to START. When the engine starts, let go of the key. The idle speed will go down as your engine gets warm.

NOTICE:

Holding your key in START for longer than 15 seconds at a time will cause your battery to be drained much sooner. And the excessive heat can damage your starter motor.

2. If it doesn't start within 10 seconds, push the accelerator pedal all the way to the floor, while you hold the ignition key in START. When the engine starts, let go of the key and let up on the accelerator pedal. Wait about 15 seconds between each try to help avoid draining your battery.

When starting your engine in very cold weather (below 0°F or -18°C), do this:

1. With your foot off the accelerator pedal, turn the ignition key to START and hold it there. When the engine starts, let go of the key. Use the accelerator pedal to maintain engine speed, if you have to, until your engine has run for a while.
2. If your engine still won't start (or starts but then stops), it could be flooded with too much gasoline. Try pushing your accelerator pedal all the way to the floor and holding it there as you hold the key in START for about three seconds. If the vehicle starts briefly but then stops again, do the same thing, but this time keep the pedal down for five or six seconds. This clears the extra gasoline from the engine.

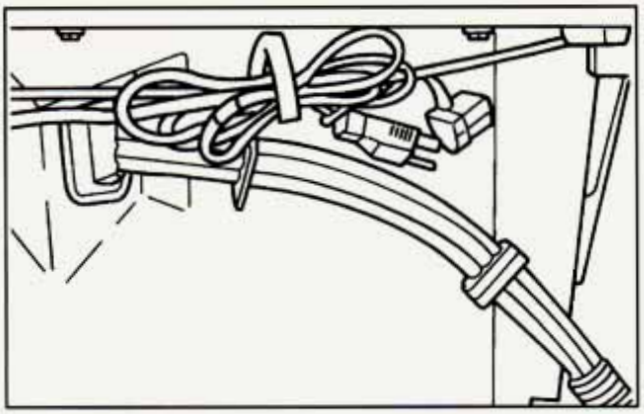

NOTICE:

Your engine is designed to work with the electronics in your vehicle. If you add electrical parts or accessories, you could change the way the engine operates. Before adding electrical equipment, check with your dealer. If you don't, your engine might not perform properly.

If you ever have to have your vehicle towed, see the part of this manual that tells how to do it without damaging your vehicle. See "Towing Your Vehicle" in the Index.

Downloaded from www.Manualslib.com manuals search engine

Engine Coolant Heater (Option)

In very cold weather, 0°F (-18°C) or colder, the engine coolant heater can help. You'll get easier starting and better fuel economy during engine warm-up. Usually, the coolant heater should be plugged in a minimum of four hours prior to starting your vehicle.

To Use the Coolant Heater

1. Turn off the engine.
2. Open the hood and unwrap the electrical cord.
3. Plug it into a normal, grounded 110-volt AC outlet.

⚠ CAUTION:

Plugging the cord into an ungrounded outlet could cause an electrical shock. Also, the wrong kind of extension cord could overheat and cause a fire. You could be seriously injured. Plug the cord into a properly grounded three-prong 110-volt AC outlet. If the cord won't reach, use a heavy-duty three-prong extension cord rated for at least 15 amps.

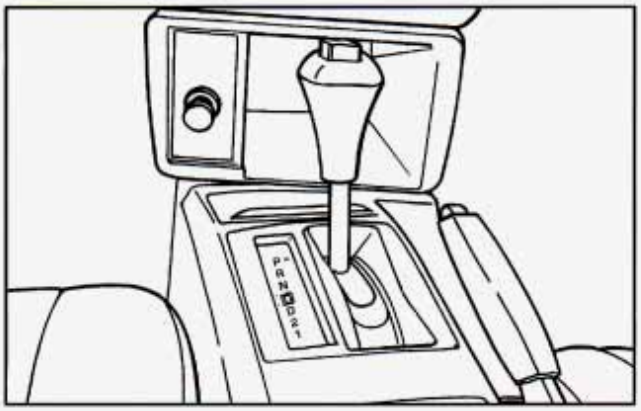

4. After you've used the coolant heater, be sure to store the cord as it was before to keep it away from moving engine parts. If you don't, it could be damaged.

How long should you keep the coolant heater plugged in? The answer depends on the outside temperature, the kind of oil you have, and some other things. Instead of trying to list everything here, we ask that you contact your Chevrolet dealer in the area where you'll be parking your vehicle. The dealer can give you the best advice for that particular area.

Downloaded from www.Manualslib.com manuals search engine

Automatic Transmission Operation

There are several different positions for your shift lever.

PARK (P): This locks your rear wheels. It's the best position to use when you start your engine because your vehicle can't move easily.

⚠ CAUTION:

It is dangerous to get out of your vehicle if the shift lever is not fully in PARK (P) with the parking brake firmly set. Your vehicle can roll.

Don't leave your vehicle when the engine is running unless you have to. If you have left the engine running, the vehicle can move suddenly. You or others could be injured. To be sure your vehicle won't move, even when you're on fairly level ground, always set your parking brake and move the shift lever to PARK (P).

See "Shifting Into PARK (P)" in the Index. If you're pulling a trailer, see "Towing a Trailer" in the Index.

Downloaded from www.Manualslib.com manuals search engine

Ensure the shift lever is fully in PARK (P) range before starting the engine. Your Chevrolet has a brake-transmission shift interlock. You have to fully apply your regular brakes before you can shift from PARK (P) when the ignition key is in the RUN position. If you cannot shift out of PARK (P), ease pressure on the shift lever -- push the shift lever all the way into PARK (P) and also release the shift lever button on floor shift console models as you maintain brake application. Then move the shift lever into the gear you wish. (Press the shift lever button before moving the shift lever on floor shift console models.) See "Shifting Out of PARK (P)" in this section.

REVERSE (R): Use this gear to back up.

NOTICE:

Shifting to REVERSE (R) while your vehicle is moving forward could damage your transmission. Shift to REVERSE (R) only after your vehicle is stopped.

To rock your vehicle back and forth to get out of snow, ice or sand without damaging your transmission, see "Stuck: In Sand, Mud, Ice or Snow in the Index.

NEUTRAL (N): In this position, your engine doesn't connect with the wheels. To restart when you're already moving, use NEUTRAL (N) only. Also, use NEUTRAL (N) when your vehicle is being towed.

⚠ CAUTION:

Shifting out of PARK (P) or NEUTRAL (N) while your engine is "racing" (running at high speed) is dangerous. Unless your foot is firmly on the brake pedal, your vehicle could move very rapidly. You could lose control and hit people or objects. Don't shift out of PARK (P) or NEUTRAL (N) while your engine is racing.

Downloaded from www.Manualslib.com manuals search engine

NOTICE:

Damage to your transmission caused by shifting out of PARK (P) or NEUTRAL (N) with the engine racing isn't covered by your warranty.

AUTOMATIC OVERDRIVE (Ⓓ): This position is for normal driving. If you need more power for passing, and you're:

- Going less than about 35 mph (56 km/h), push your accelerator pedal about halfway down.
- Going about 35 mph (56 km/h) or more, push the accelerator all the way down.

You'll shift down to the next gear and have more power.

DRIVE (D): This position is also used for normal driving, however, it offers more power and lower fuel economy than AUTOMATIC OVERDRIVE (Ⓓ).

Here are some times you might choose DRIVE (D) instead of AUTOMATIC OVERDRIVE (Ⓓ):

- When driving on hilly, winding roads.
- When towing a trailer, so there is less shifting between gears.
- When going down a steep hill.

SECOND (2): This position gives you more power but lower fuel economy. You can use SECOND (2) on hills. It can help control your speed as you go down steep mountain roads, but then you would also want to use your brakes off and on.

NOTICE:

Don't drive in SECOND (2) for more than 25 miles (40 km), or at speeds over 55 mph (88 km/h), or you can damage your transmission. Use AUTOMATIC OVERDRIVE (Ⓓ) or DRIVE (D) as much as possible.

Don't shift into SECOND (2) unless you are going slower than 65 mph (105 km/h), or you can damage your engine.

Downloaded from www.Manualslib.com manuals search engine

FIRST (1): This position gives you even more power (but lower fuel economy) than SECOND (2). You can use it on very steep hills, or in deep snow or mud. If the selector lever is put in FIRST (1), the transmission won't shift into first gear until the vehicle is going slowly enough.

NOTICE:

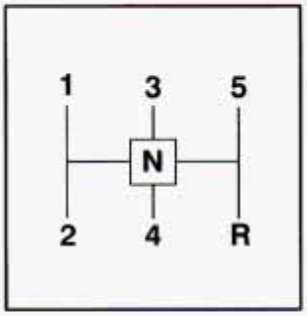

If your rear wheels can't rotate, don't try to drive. This might happen if you were stuck in very deep sand or mud or were up against a solid object. You could damage your transmission.

Also, if you stop when going uphill, don't hold your vehicle there with only the accelerator pedal. This could overheat and damage the transmission. Use your brakes or shift into PARK (P) to hold your vehicle in position on a hill.

Maximum engine speed is limited to protect driveline components from improper operation.

Manual Transmission

5-Speed

This is your shift pattern. Here's how to operate your transmission:

FIRST (1): Press the clutch pedal and shift into FIRST (1). Then, slowly let up on the clutch pedal as you press the accelerator pedal.

You can shift into FIRST (1) when you're going less than 20 mph (32 km/h). If you've come to a complete stop and it's hard to shift into FIRST (1), put the shift lever in NEUTRAL (N) and let up on the clutch. Press the clutch pedal back down. Then shift into FIRST (1).

Downloaded from www.Manualslib.com manuals search engine

SECOND (2): Press the clutch pedal to the floor as you let up on the accelerator pedal and shift into SECOND (2). Then, slowly let up on the clutch pedal as you press the accelerator pedal.

THIRD (3), FOURTH (4) AND FIFTH (5): Shift into THIRD (3), FOURTH (4) and FIFTH (5) the same way you do for SECOND (2). Slowly let up on the clutch pedal as you press the accelerator pedal.

To Stop, let up on the accelerator pedal and press the brake pedal. Just before the vehicle stops, press the clutch pedal and the brake pedal, and shift to NEUTRAL (N).

NEUTRAL (N): Use this position when you start or idle your engine.

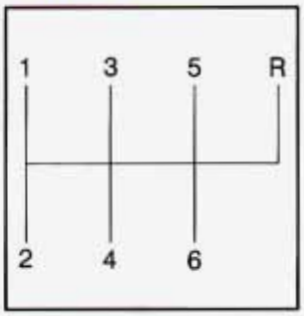

REVERSE (R): To back up, press down the clutch pedal and shift into REVERSE (R). Let up on the clutch pedal slowly while pressing the accelerator pedal.

NOTICE:

Shift to REVERSE (R) only after your vehicle is stopped. Shifting to REVERSE (R) while your vehicle is moving could damage your transmission.

Also, use REVERSE (R), along with the parking brake, for parking your vehicle.

6-Speed

This is your shift pattern. Here's how to operate your transmission:

FIRST (1): Press the clutch pedal and shift into FIRST (1). Then, slowly let up on the clutch pedal as you press the accelerator pedal.

You can shift into FIRST (1) when you're going less than 20 mph (30 km/h). If you've come to a complete stop and it's hard to shift into FIRST (1), put the shift lever in NEUTRAL (N) and let up on the clutch. Press the clutch pedal back down. Then shift into FIRST (1).

Downloaded from www.Manualslib.com manuals search engine

SECOND (2): Press the clutch pedal as you let up on the accelerator pedal and shift into SECOND (2). Then, slowly let up on the clutch pedal as you press the accelerator pedal.

THIRD (3), FOURTH (4), FIFTH (5) AND SIXTH (6): Shift into THIRD (3), FOURTH (4), FIFTH (5) AND SIXTH (6) gear the same way you do for SECOND (2). Slowly let up on the clutch pedal as you press the accelerator pedal.

To Stop, let up on the accelerator pedal and press the brake pedal. Just before the vehicle stops, press the clutch pedal and the brake pedal, and shift to NEUTRAL (N).

NEUTRAL (N): Use this position when you start or idle your engine.

REVERSE (R): To back up, press down the clutch pedal and shift into REVERSE (R). Let up on the clutch pedal slowly while pressing the accelerator pedal. If you shift from SIXTH (6) into REVERSE (R), the shift lever must be first placed in the NEUTRAL (N) position centered between SECOND (2) and THIRD (3) prior to shifting into REVERSE (R).

Your six-speed manual transmission has a feature that allows you to safely shift into REVERSE (R) while the vehicle is rolling (at less than 5 mph (8 km/h)). You will be locked-out if you try to shift into REVERSE (R) while your vehicle is moving faster than 5 mph (8 km/h).

If you have turned your ignition off and wish to park your car in REVERSE (R), you will have to move the shift lever quickly to the right, "crashing" through the high-load spring and then into gear.

Downloaded from www.Manualslib.com manuals search engine

Skip Shift Light (5.7L LT1 Engine)

When this light comes on, you can only shift from FIRST (1) to FOURTH (4) instead of FIRST (1) to SECOND (2). This helps you to get the best possible fuel economy.

This light will come on under these conditions:

- The engine coolant temperature is greater than 170°F (77°C),
- You are going 15 to 20 mph (24 to 32 km/h), and
- You are at 35 percent throttle or less.

When this light is on, the gear shift lever will let you shift from FIRST (1) to FOURTH (4) only. Once you are in FOURTH (4), you can press the clutch again and shift into another gear.

Follow the shift speeds on this chart when the SKIP SHIFT light is on.

Computer Aided Manual Transmission Shift Speeds:

1st to 4th . . . 15 mph (24 km/h)

4th to 5th . . . 25 mph (40 km/h)*

5th to 6th . . . 40 mph (64 km/h)**

Each time you come to a stop, the engine's Electronic Control Module (ECM) determines when to activate the SKIP SHIFT upshift system. Use SECOND (2) gear only when you accelerate very quickly from a stop. You can then follow the full gear shift pattern.

***30 mph (48 km/h) when accelerating to highway speeds.**

****45 mph (72km/h) when accelerating to highway speeds.**

Downloaded from www.Manualslib.com manuals search engine

Shift Speeds

⚠ CAUTION:

If you skip more than one gear when you downshift, you could lose control of your vehicle. And you could injure yourself or others. Don't shift from SIXTH (6) to THIRD (3), or FIFTH (5) to SECOND (2) or FOURTH (4) to FIRST (1).

MANUAL TRANSMISSION RECOMMENDED SHIFT SPEEDS, IN MPH (km/h)

Engine	Acceleration Shift Speed				
	1 to 2	2 to 3	3 to 4	4 to 5	5 to 6
3800 L36 (Code K)	13–16 (21–25)	21–28 (34–35)	32–37 (51–59)	45–47 (72–75)	N/A
5.7L LT1 (Code P)	15 (24)	25 (40)	40 (64)	45 (72)	50 (80)

This chart shows when to shift the next higher gear for best fuel economy.

If your speed drops below 20 mph (30 km/h), or if the engine is not running smoothly, you should downshift to the next lower gear. You may have to downshift two or more gears to keep the engine running smoothly or for good performance.

NOTICE:

If you skip more than one gear when you down shift, or if you race the engine when you downshift, you can damage the clutch or transmission.

Downloaded from www.Manualslib.com manuals search engine

Second-Gear Start (Option)

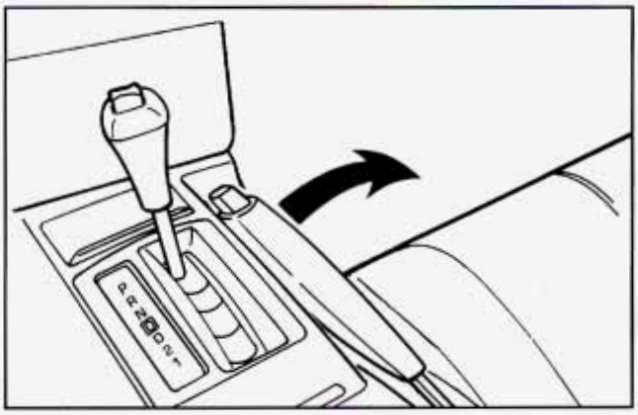

Your vehicle may be quipped with a Second-Gear Start feature. Press 2ND GEAR START to provide more traction when you are starting on ice or other slippery surfaces. The 2ND gear light on the cluster will illuminate when 2nd gear start is selected. The transmission will be in SECOND (2) gear when the vehicle begins to move. After starting in SECOND (2) the vehicle will upshift normally.

This feature is only for improved traction when the road surface is slippery and is not intended for continuous use. Always use NORMAL for normal road conditions. You may press 2ND GEAR START again to turn off this feature. Whenever you start your vehicle, the transmission is in the NORMAL mode.

Limited-Slip Rear Axle

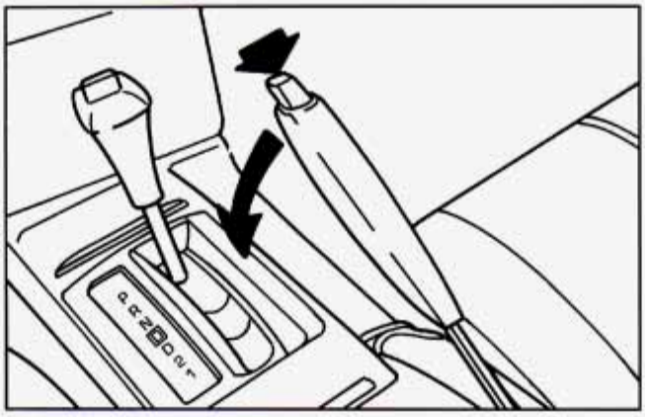

If you have this feature, your rear axle can give you additional traction on snow, mud, ice, sand or gravel. It works like a standard axle most of the time, but when one of the rear wheels has no traction and the other does, the limited-slip feature will allow the wheel with traction to move the vehicle.

Parking Brake

To set the parking brake, hold the brake pedal down and pull up on the parking brake lever. If the ignition is on, the brake system warning light will come on.

Downloaded from www.Manualslib.com manuals search engine

To release the parking brake, hold the brake pedal down. Pull the parking brake lever up until you can push in the release button. Hold the release button in as you move the brake lever all the way down.

NOTICE:

Driving with the parking brake on can cause your rear brakes to overheat. You may have to replace them, and you could also damage other parts of your vehicle.

If you are towing a trailer and are parking on any hill, see "Towing a Trailer" in the Index. That section shows what to do first to keep the trailer from moving.

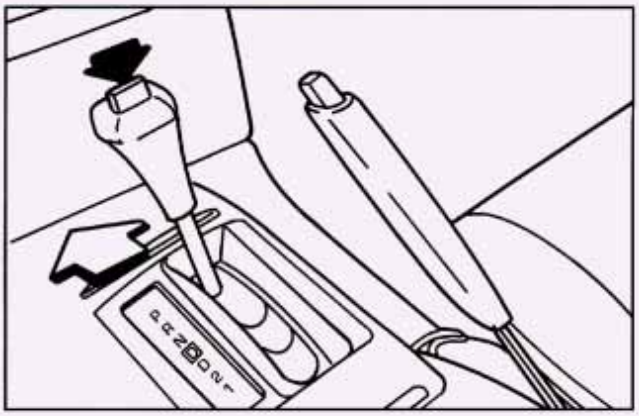

Downloaded from www.Manualslib.com manuals search engine

Shifting Into PARK (P) (Automatic Transmission Models Only)

⚠ CAUTION:

It can be dangerous to get out of your vehicle if the shift lever is not fully in PARK (P) with the parking brake firmly set. Your vehicle can roll.

If you have left the engine running, the vehicle can move suddenly. You or others could be injured. To be sure your vehicle won't move, even when you're on fairly level ground, use the steps that follow. If you're pulling a trailer, see "Towing a Trailer" in the Index.

1. Hold the brake pedal down with your right foot and set the parking brake.
2. Move the shift lever into PARK (P) position by holding in the button on the lever and push the lever all the way toward the front of your vehicle.
3. Move the ignition key to the LOCK position.
4. Remove the key and take it with you. If you can leave your vehicle with the key in your hand, your vehicle is in PARK (P).

Downloaded from www.Manualslib.com manuals search engine

Leaving Your Vehicle With the Engine Running (Automatic Transmission Models Only)

⚠ CAUTION:

It can be dangerous to leave your vehicle with the engine running. Your vehicle could move suddenly if the shift lever is not fully in PARK (P) with the parking brake firmly set. And, if you leave the vehicle with the engine running, it could overheat and even catch fire. You or others could be injured. Don't leave your vehicle with the engine running unless you have to.

If you have to leave your vehicle with the engine running, be sure your vehicle is in PARK (P) and your parking brake is firmly set before you leave it. After you've moved the shift lever into the PARK (P) position, hold the regular brake pedal down. Then, see if you can move the shift lever away from PARK (P) without first pushing the button. If you can, it means that the shift lever wasn't fully locked into PARK (P).

Torque Lock (Automatic Transmission)

If you are parking on a hill and you don't shift your transmission into PARK (P) properly, the weight of the vehicle may put too much force on the parking pawl in the transmission. You may find it difficult to pull the shift lever out of PARK (P). This is called "torque lock." To prevent torque lock, set the parking brake and then shift into PARK (P) properly before you leave the driver's seat. To find out how, see "Shifting Into PARK (P)" in the Index.

When you are ready to drive, move the shift lever out of PARK (P) *before* you release the parking brake.

If torque lock does occur, you may need to have another vehicle push yours a little uphill to take some of the pressure from the transmission, so you can pull the shift lever out of PARK (P).

Parking Your Vehicle (Manual Transmission)

Before you get out of your vehicle, put your manual transmission in REVERSE (R) and firmly apply the parking brake.

If your vehicle is equipped to tow a trailer, see "Towing a Trailer" in the Index.

Downloaded from www.Manualslib.com manuals search engine

Shifting Out of PARK (P) (Automatic Transmission)

Your Chevrolet has a brake-transmission shift interlock. You have to fully apply your regular brake before you can shift from PARK (P) when the ignition is in the RUN position. See "Automatic Transmission Operation" in the Index.

If you cannot shift out of PARK (P), ease pressure on the shift lever -- push the shift lever all the way into PARK (P) and release the shift lever button as you maintain brake application. Then press the shift lever button and move the shift lever into the gear you wish.

If you ever hold the brake pedal down but still can't shift out of PARK (P), try this:

1. Turn the key to the OFF position.
2. Apply and hold the brake.
3. Shift to NEUTRAL (N).
4. Start the engine and then shift to the drive gear you want.
5. Have the vehicle fixed as soon as you can.

Parking Over Things That Burn

⚠ CAUTION:

Things that can burn could touch hot exhaust parts under your vehicle and ignite. Don't park over papers, leaves, dry grass or other things that can burn.

Downloaded from www.Manualslib.com manuals search engine

Engine Exhaust

⚠ CAUTION:

Engine exhaust can kill. It contains the gas carbon monoxide (CO), which you can't see or smell. It can cause unconsciousness and death.

You might have exhaust coming in if:

- **Your exhaust system sounds strange or different.**
- **Your vehicle gets rusty underneath.**
- **Your vehicle was damaged in a collision.**
- **Your vehicle was damaged when driving over high points on the road or over road debris.**
- **Repairs weren't done correctly.**
- **Your vehicle or exhaust system had been modified improperly.**

If you ever suspect exhaust is coming into your vehicle:

- **Drive it only with all the windows down to blow out any CO; and**
- **Have your vehicle fixed immediately.**

Running Your Engine While You're Parked (Automatic Transmission)

It's better not to park with the engine running. But if you ever have to, here are some things to know.

⚠ CAUTION:

Idling the engine with the air system control off could allow dangerous exhaust into your vehicle (see the earlier Caution under "Engine Exhaust").

Also, idling in a closed-in place can let deadly carbon monoxide (CO) into your vehicle even if the fan switch is at the highest setting. One place this can happen is a garage. Exhaust -- with CO -- can come in easily. NEVER park in a garage with the engine running.

Another closed-in place can be a blizzard. (See "Blizzard" in the Index.)

Downloaded from www.Manualslib.com manuals search engine

⚠ CAUTION:

It can be dangerous to get out of your vehicle if the shift lever is not fully in PARK (P) with the parking brake firmly set. Your vehicle can roll. Don't leave your vehicle when the engine is running unless you have to. If you've left the engine running, the vehicle can move suddenly. You or others could be injured. To be sure your vehicle won't move, even when you're on fairly level ground, always set your parking brake and move the shift lever to PARK (P).

Follow the proper steps to be sure your vehicle won't move. See "Shifting Into PARK (P)" in the Index.

If you are parking on a hill and if you're pulling a trailer, also see "Towing a Trailer" in the Index.

Windows

Manual Windows

Rotate the window crank handle to open and close each door window.

Power Windows

With power windows, switches on the door control each window when the ignition is on or when RAP is present. (See "Retained Accessory Power" in the Index.)

You can open the passenger's window any amount by pressing the switch and releasing it when the window has lowered to the position you want.

The switch for the driver's window has an express-down feature. Quickly press and release the switch for the driver's window and the window will lower completely.

You can also open the driver's window any amount by pressing the switch again while the window is in the express-down mode when it has lowered to the position you want.

Horn

To sound the horn, press either horn symbol on your steering wheel.

If your horn sounds two or three chirps when unlocking your vehicle with the Remote Lock Control transmitter (if you have that option), the alarm was triggered while you were away. Check the vehicle before entering.

Downloaded from www.Manualslib.com manuals search engine

Tilt Steering Wheel

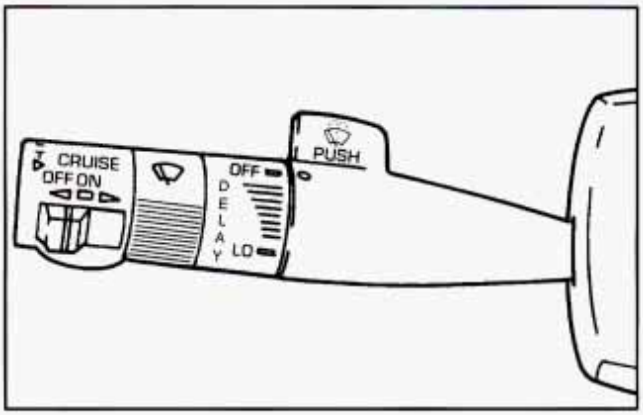

A tilt steering wheel allows you to adjust the steering wheel before you drive.

You can also raise it to the highest level to give your legs more room when you exit and enter the vehicle.

To tilt the wheel, hold the steering wheel and pull the lever. Move the steering wheel to a comfortable level, then release the lever to lock the wheel in place.

Turn Signal/Multifunction Lever

The lever on the left side of the steering column includes your:

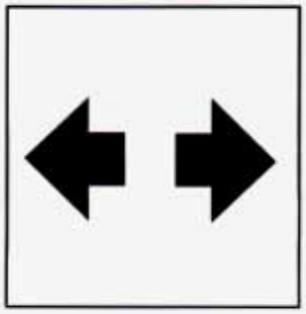

- Turn Signal and Lane Change Indicator
- Headlamp High/Low Beam Changer and Passing Signal
- Windshield Wipers
- Windshield Washer
- Cruise Control (Option)

Downloaded from www.Manualslib.com manuals search engine

Turn Signal and Lane Change Indicator

The turn signal has two upward (for right) and two downward (for left) positions. These positions allow you to signal a turn or a lane change.

To signal a turn, move the lever all the way up or down. When the turn is finished, the lever will return automatically.

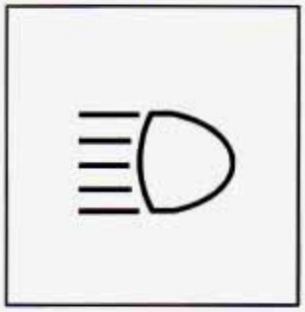

An arrow on the instrument panel will flash in the direction of the turn or lane change.

To signal a lane change, just raise or lower the lever until the arrow starts to flash. Hold it there until you complete your lane change. The lever will return by itself when you release it.

As you signal a turn or a lane change, if the arrows don't flash but just stay on, a signal bulb may be burned out and other drivers won't see your turn signal.

If a bulb is burned out, replace it to help avoid an accident. If the arrows don't go on at all when you signal a turn, check the fuse (see "Fuses and Circuit Breakers" in the Index).

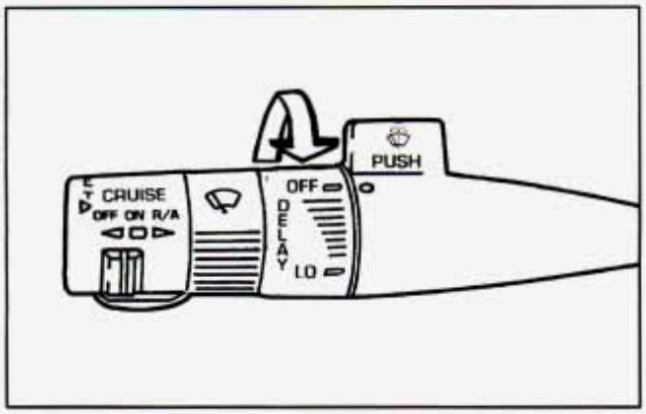

Headlamp High/Low Beam Changer

To change the headlamps from low beam to high or high to low, pull the turn signal lever all the way toward you. Then release it. When the high beams are on, this light on the instrument panel also will be on.

Downloaded from www.Manualslib.com manuals search engine

Windshield Wipers

You control the windshield wipers by turning the band with the wiper symbol on it.

For a single wiping cycle, turn the band to MIST. Hold it there until the wipers start, then let go. The wipers will stop after one cycle. If you want more cycles, hold the band on MIST longer.

You can set the wiper speed for a long or short delay between wipes. This can be very useful in light rain or snow. Turn the band to choose the delay time. The closer to LO, the shorter the delay.

For steady wiping at low speed, turn the band away from you to the LO position. For high-speed wiping, turn the band further, to HI. To stop the wipers, move the band to OFF.

Damaged wiper blades may prevent you from seeing well enough to drive safely. To avoid damage, be sure to clear ice and snow from the wipers blades before using them. If they're frozen to the windshield, carefully loosen or thaw them. If your blades do become damaged, get new blades or blade inserts.

Heavy snow or ice can overload your wipers. A circuit breaker will stop them until the motor cools. Clear away snow or ice to prevent an overload.

Downloaded from www.Manualslib.com manuals search engine

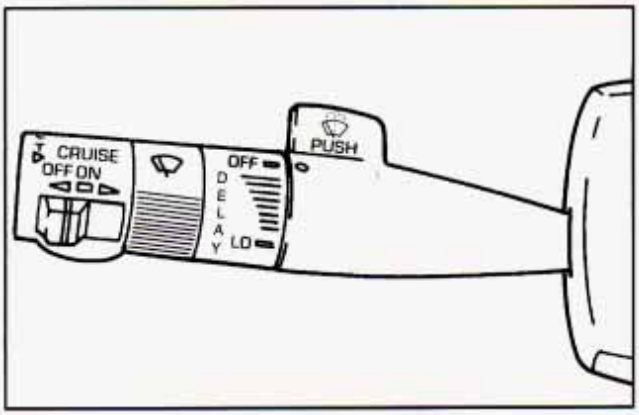

Windshield Washer

At the top of the turn signal/multifunction lever, there's a paddle with the word PUSH on it. To spray washer fluid on the windshield, just push the paddle. The washer will continue to spray until you release the paddle for less than a second. The wipers will clear the window and wipe a few more times before stopping or returning to the previous setting.

⚠ CAUTION:

In freezing weather, don't use your washer until the windshield is warmed. Otherwise the washer fluid can form ice on the windshield, blocking your vision.

Cruise Control (Option)

With cruise control, you can maintain a speed of about 25 mph (40 km/h) or more without keeping your foot on the accelerator. This can really help on long trips. Cruise control does not work at speeds below about 25 mph (40 km/h).

Downloaded from www.Manualslib.com manuals search engine

When you apply your brakes, or push the clutch pedal, if you have a manual transmission, the cruise control shuts off.

⚠ CAUTION:

- **Cruise control can be dangerous where you can't drive safely at a steady speed. So, don't use your cruise control on winding roads or in heavy traffic.**
- **Cruise control can be dangerous on slippery roads. On such roads, fast changes in tire traction can cause needless wheel spinning, and you could lose control. Don't use cruise control on slippery roads.**

If your vehicle is in cruise control when the optional ASR system begins to limit wheel spin, the cruise control will automatically disengage. (See "ASR System" in the Index.) When road conditions allow you to safely use it again, you may turn the cruise control back on.

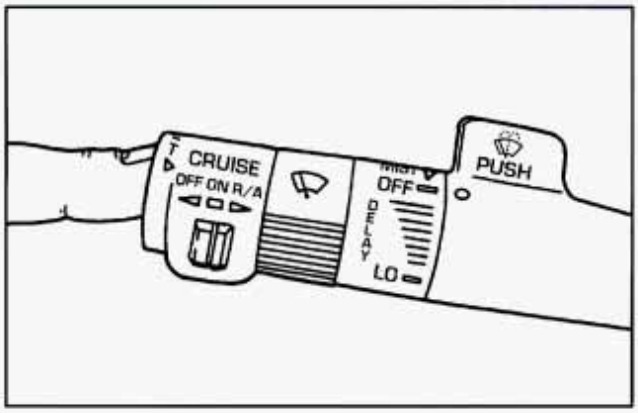

Setting Cruise Control

⚠ CAUTION:

If you leave your cruise control switch on when you're not using cruise, you might hit a button and go into cruise when you don't want to. You could be startled and even lose control. Keep the cruise control switch OFF until you want to use it.

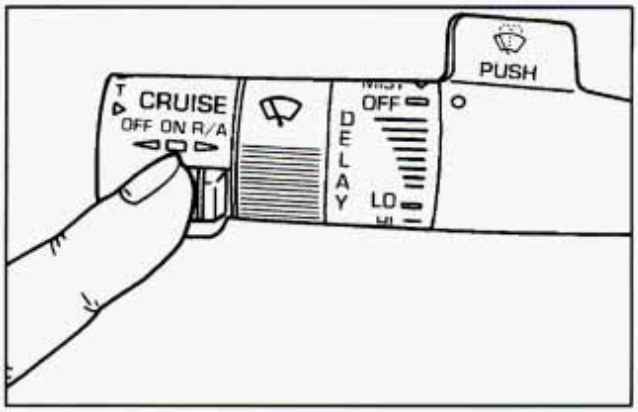

1. Move the cruise control switch to ON.

Downloaded from www.Manualslib.com manuals search engine

2. Get up to the speed you want.
3. Push in the SET button at the end of the lever and release it.
4. Take your foot off the accelerator pedal.

Resuming a Set Speed

Suppose you set your cruise control at a desired speed and then apply the brake or clutch pedal. This, of course, shuts off the cruise control. But you don't need to reset it. Once you're going about 25 mph (40 km/h) or more, you can move the cruise control switch from ON to R/A (Resume/Accelerate) for about half a second.

You'll go right back up to your chosen speed and stay there.

Downloaded from www.Manualslib.com manuals search engine

Increasing Speed While Using Cruise Control

There are two ways to go to a higher speed:

- Use the accelerator pedal to get to the higher speed. Push the button at the end of the lever, then release the button and the accelerator pedal. You'll now cruise at the higher speed.
- Move the cruise switch from ON to R/A. Hold it there until you get up to the speed you want, and then release the switch. (To increase your speed in very small amounts, move the switch to R/A for less than half a second and then release it. Each time you do this, your vehicle will go about 1 mph (1.6 km/h) faster.)

Reducing Speed While Using Cruise Control

There are two ways to reduce your speed while using cruise control:

- Push in the button at the end of the lever until you reach the lower speed you want, then release it.
- To slow down in very small amounts, push the button for less than half a second. Each time you do this, you'll go 1 mph (1.6 km/h) slower.

Passing Another Vehicle While Using Cruise Control

Use the accelerator pedal to increase your speed. When you take your foot off the pedal, your vehicle will slow down to the cruise control speed you set earlier.

Using Cruise Control on Hills

How well your cruise control will work on hills depends upon your speed, load and the steepness of the hills. When going up steep hills, you may have to step on the accelerator pedal to maintain your speed. When going downhill, you may have to brake or shift to a lower gear to keep your speed down. Of course, applying the brake takes you out of cruise control. Many drivers find this to be too much trouble and don't use cruise control on steep hills.

Ending Out of Cruise Control

There are several ways to turn off the cruise control:

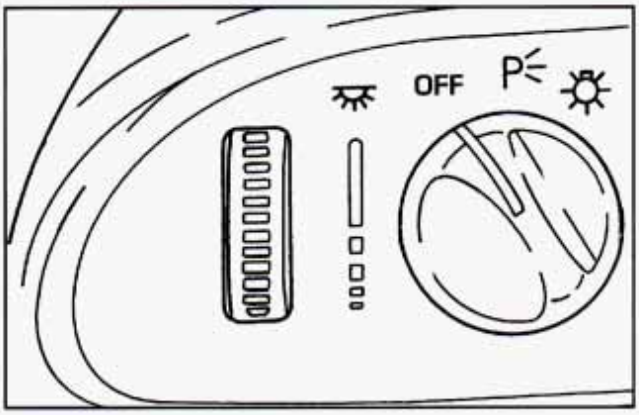

- Step lightly on the brake pedal or push the clutch pedal, if you have a manual transmission ; OR
- Move the cruise switch to OFF.

Erasing Speed Memory

When you turn off the cruise control or the ignition, your cruise control set speed memory is erased.

Downloaded from www.Manualslib.com manuals search engine

Lamps

The main lamp control is a knob that works these lamps:

- Headlamps
- Taillamps
- Parking Lamps
- License Lamps
- Sidemarker Lamps
- Instrument Panel Lights

Turn the knob to this position to turn on your headlamps and other operating lamps.

Turn the knob to this position to turn on your parking lamps without your headlamps

Turn the knob to OFF to turn off the lamps.

Headlamps On Reminder

If you turn the ignition to the OFF position and leave the lamps on, you will hear a chime, lasting up to five seconds. If the lamps are still on when you open the driver's door, the chime will sound again.

Daytime Running Lamps (Option)

Daytime Running Lamps (DRL) can make it easier for others to see the front of your vehicle during the day. DRL can be helpful in many different driving conditions, but they can be especially helpful in the short periods after dawn and before sunset.

A light sensor on top of the instrument panel makes the DRL work, so be sure it isn't covered.

Downloaded from www.Manualslib.com manuals search engine

The DRL system will make your front turn signal lamps come on when:

- The ignition is on,
- The headlamp switch is OFF, and
- The parking brake is released.

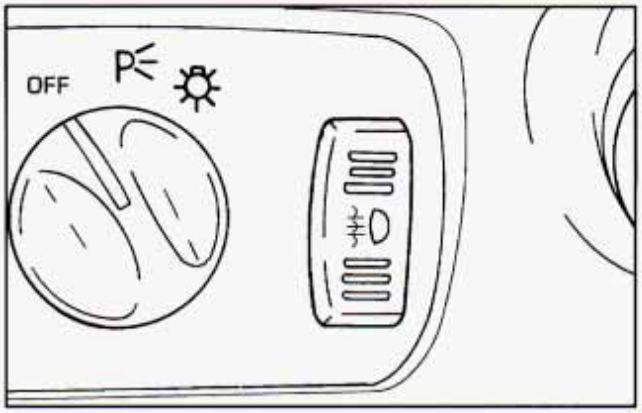

When the DRL are on, only your front turn signal lamps will be on. The taillamps, sidemarker and other lamps won't be on. Your instrument panel won't be lit up either.

When it's dark enough outside, your front turn signal lamps will go out and your headlamps will come on. The other lamps that come on with your headlamps will also come on.

When it's bright enough outside, the regular lamps will go off, and your front turn signal lamps will come on.

As with any vehicle, you should turn on the regular headlamp system when you need it.

Fog Lamps (Option)

Use your fog lamps for better vision in foggy or misty conditions. Your parking lamps must be on or your fog lamps won't work.

Downloaded from www.Manualslib.com manuals search engine

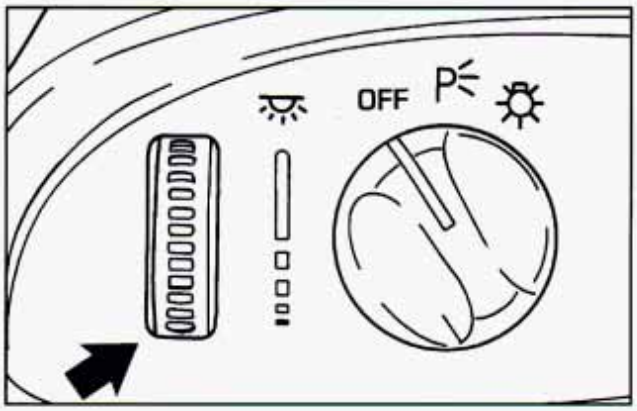

To turn the fog lamps on, push the top of the fog lamp switch. Push the bottom of the switch to turn the fog lamps off. A light on the switch will come on when the fog lamps are on.

Fog lamps will go off whenever your high beams come on. When the high beams go off, the fog lamps will come on again.

If your vehicle is equipped with the Vehicle and Content Theft-Deterrent/Alarm System and your fog lamp switch is on, the fog lamps may flash, along with the parking lamps, to indicate operation of the Vehicle and Content Theft-Deterrent/Alarm System. See "Vehicle and Content Theft-Deterrent/Alarm System" in the Index.

Interior Lamps

Instrument Panel Brightness Control

This switch controls the brightness of your instrument panel lights. Turn the switch to brighten or dim the lights. If you turn the switch all the way up, your courtesy lamps will come on.

Downloaded from www.Manualslib.com manuals search engine

Courtesy Lamps

When any door is opened, several interior lamps go on. These lamps are courtesy lamps. They make it easier for you to enter and leave your vehicle.

Courtesy lamps include the dome lamp and other lamps throughout the interior of your vehicle.

To prevent battery rundown, your interior lamps will be disabled about 10 minutes after the ignition is turned to the OFF position. The 10 minute timer will be restarted if you do any of the following:

1. Turn the ignition on.
2. Open either door.
3. Press any button on your Remote Lock Control transmitter.
4. Turn the interior lamp switch from OFF to ON.
5. Open the hatch.

Delayed Illumination (Option)

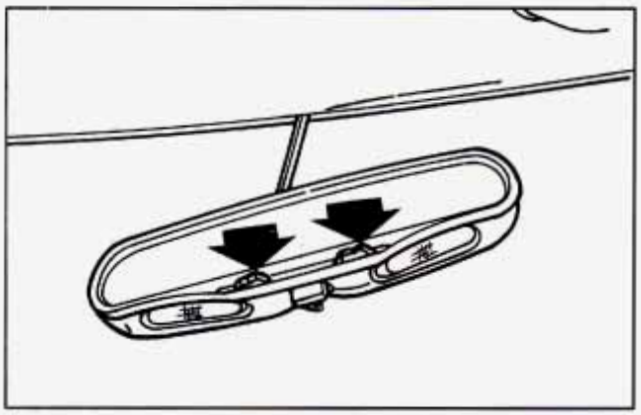

With delayed illumination, when you open a door, your courtesy lamps will come on and stay on for 25 seconds after the doors are closed. The 25 seconds is shortened if the ignition is turned to the RUN position or if the power locks are activated. To turn this feature on or off, see "Feature Customization" in the Index.

Exit Lighting (Option)

With exit lighting, the interior lamps will come on when you remove the key from the ignition to help you see while exiting the vehicle. To turn this feature on or off, see "Feature Customization" in the Index.

Downloaded from www.Manualslib.com manuals search engine

Front Map Lamps

Your inside rearview mirror includes two map lamps. Each lamp has its own switch. Use the switch closest to the lamp to turn it on. The lamps will also go on when a door is opened.

Courtesy lamps include the dome lamp and other lamps throughout the interior of your vehicle.

Retained Accessory Power (RAP)

Your vehicle is equipped with a Retained Accessory Power (RAP) feature which will allow certain features of your vehicle to continue to work up to 10 minutes after the ignition key is turned to the OFF position.

Your electric mirrors, power windows, and audio system will work when the ignition key is in the RUN or ACC positions. Once the key is turned from RUN to OFF, these features will continue to work for up to 10 minutes or until either door is opened.

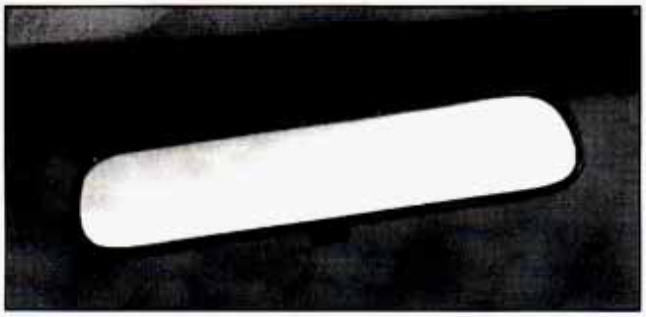

Your power door unlock and remote hatch release features will work when the ignition key is in the RUN or ACC positions or if either door is open. Once the key is turned to OFF, these features will continue to work for up to 10 minutes. If either door is open and the ignition key is OFF, these features will continue to work until both doors have been closed for about 30 seconds or until the theft-deterrent system arms. At that time, both the power door unlock and remote hatch release features will be disabled to enhance the security of the vehicle.

The power door lock function will work at all times except during Lockout Prevention (if this feature is enabled). See "Lockout Prevention" in the Index.

Downloaded from www.Manualslib.com manuals search engine

Mirrors

Inside Day/Night Rearview Mirror

An inside rearview mirror is attached to your windshield. The mirror has pivots so that you can adjust it.

You can adjust the mirror for day or night driving. Pull the tab for night driving to reduce glare. Push the tab for daytime driving.

Outside Manual Adjustable Mirror

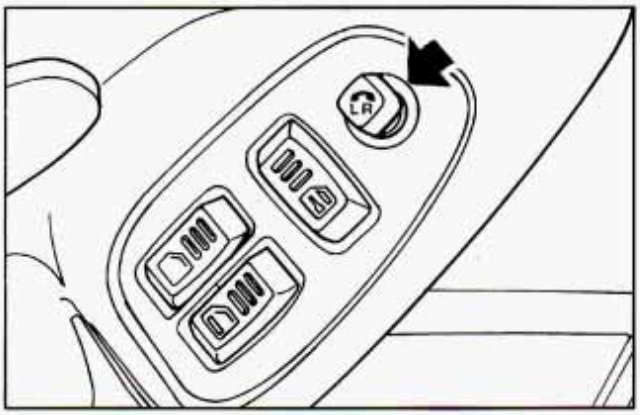

Adjust the passenger's side outside mirror by hand so that you can just see the side of your vehicle when you are sitting in a comfortable driving position.

Manual Remote Control Mirror

Adjust the driver's side outside mirror with the lever on the door. Adjust the mirror so that you can just see the side of your vehicle when you are sitting in a comfortable driving position.

Downloaded from www.Manualslib.com manuals search engine

Power Remote Control Mirror (Option)

The power mirror control is on the driver's door. To adjust either mirror, turn the switch to left (L) or right (R). Then use the control to adjust the mirror.

The control only works when the ignition switch is in the RUN or ACC positions, or when RAP is present. (See "Retained Accessory Power" in the Index.)

Convex Outside Mirror

Your passenger's side mirror is convex. A convex mirror's surface is curved so you can see more from the driver's seat.

⚠ CAUTION:

A convex mirror can make things (like other vehicles) look farther away than they really are. If you cut too sharply into the right lane, you could hit a vehicle on your right. Check your inside mirror or glance over your shoulder before changing lanes.

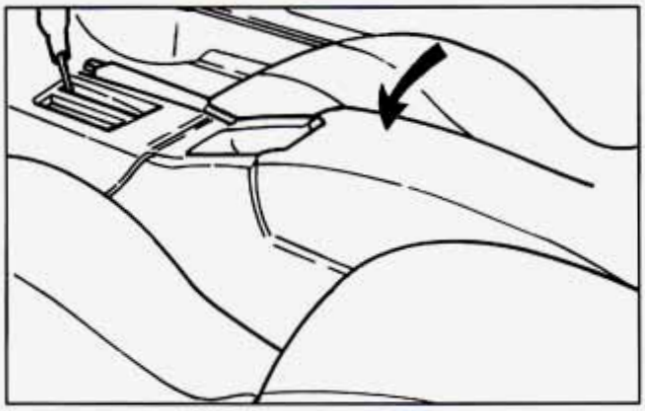

Downloaded from www.Manualslib.com manuals search engine

Storage Compartments

Glove Box

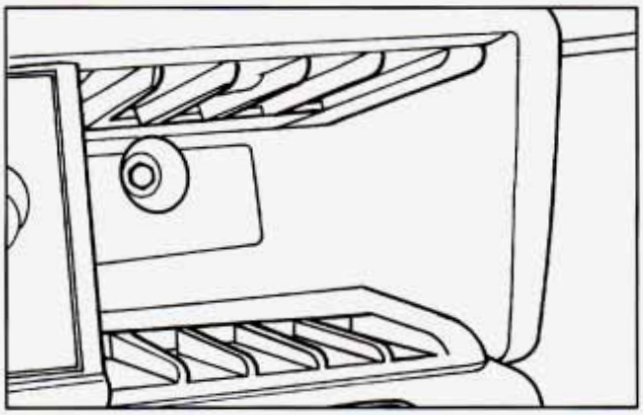

To open the glove box, lift up on the lever. Use your door key to lock and unlock it. The glove box has a light inside.

Front Console

To use the storage area, pull up on the front end of the console. There is a cupholder and lamp in the console.

Cassette and Compact Disc Storage

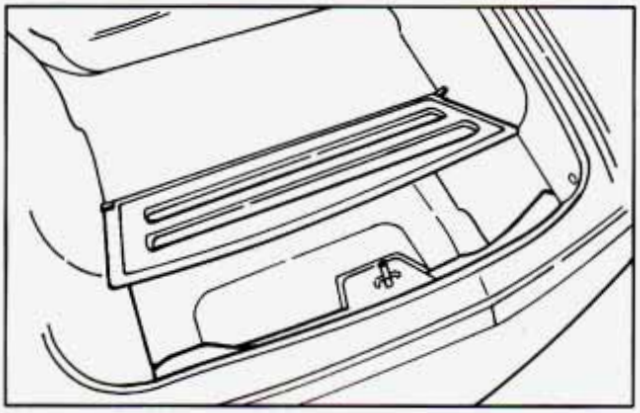

You have a storage area for cassette tapes.

If you have a compact disc player, you will have a storage area for compact discs in your console.

Downloaded from www.Manualslib.com manuals search engine

Close-Out Panel

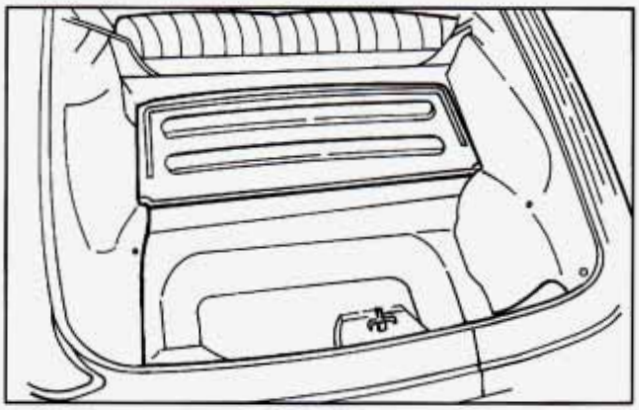

The close-out panel can be closed for hidden storage in the rear area of your vehicle.

Removing the Close-Out Panel

1. Close the panel. If the close-out panel is not closed and resting on the trim panel, it cannot be removed.
2. Pull the panel toward you to unsnap it. Then slide the close-out panel along the groove in the trim panel.

Reverse the steps to install the panel.

When carrying large or heavy items, it is a good idea to open the panel and place the items in the rear area.

Downloaded from www.Manualslib.com manuals search engine

⚠ CAUTION:

An improperly stored close-out panel could be thrown about the vehicle during a collision or sudden maneuver. You or others could be injured. If you remove the cover, always store it outside your vehicle. When you put it back, always be sure that it is securely reattached.

Ashtray and Lighter

Lift up the cover to open the ashtray. To remove it, lift up on the right side of the ashtray. If you have an automatic transmission, the ashtray is near the front of your console. If you have a manual transmission, the ashtray is near your cupholder.

NOTICE:

Don't put papers and other things that burn into your ashtrays. If you do, cigarettes or other smoking materials could set them on fire, causing damage.

To use the lighter, push it in all the way and let go. When it's ready, it will pop back by itself.

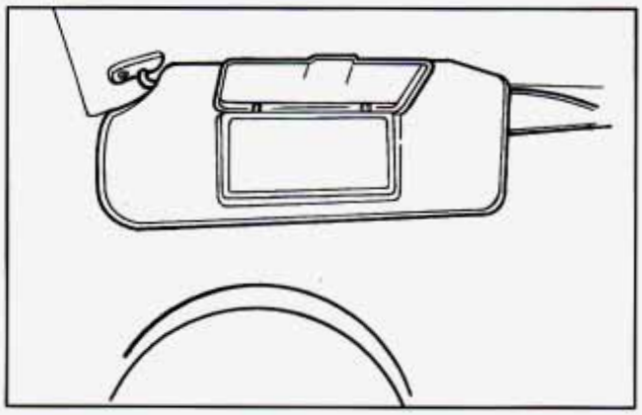

NOTICE:

Don't hold a cigarette lighter in with your hand while it is heating. If you do, it won't be able to back away from the heating element when it's ready. That can make it overheat, damaging the lighter and the heating element.

If you plug accessories into your cigarette lighter, such as heating devices or air compressors, these accessories should have a rated current of less than 15 amps. Exceeding this limit will result in a blown fuse.

Downloaded from www.Manualslib.com manuals search engine

Sun Visors

To block out glare, you can swing down the visors. You can also swing them to the side. The elastic bands on your visor provide extra storage for maps or papers.

Covered Visor Vanity Mirror

Pull down the sun visor and lift the cover to expose the vanity mirror.

Accessory Plug

This plug is located inside the front section ahead of the shift lever in the console. The plug can be used to connect electrical equipment such as a cellular phone or CB radio. Be sure to follow the installation instructions included with the equipment.

The plug has three separate wires:

- The orange wire connects to the battery.
- The pink wire connects to the ignition. Power is only available with the ignition in the RUN position.
- The black wire connects to the ground.

NOTICE:

When using the accessory plug:

- **The maximum load of any electrical equipment should not exceed three amps.**
- **Be sure to turn off any electrical equipment when not in use. Leaving electrical equipment on for extended periods can drain your battery.**

We recommend that you see a qualified technician or your dealer for the proper installation of your equipment.

Downloaded from www.Manualslib.com manuals search engine

Floor Mats

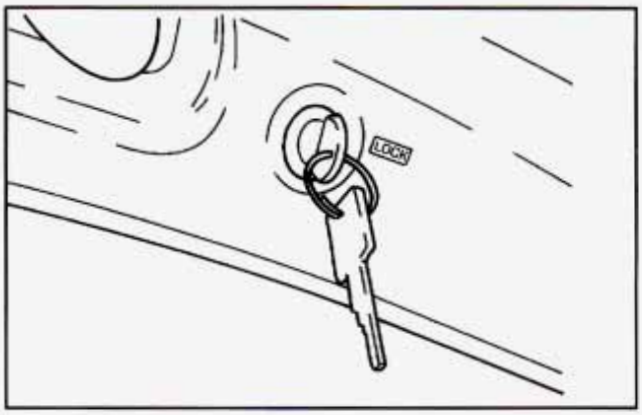

Your Chevrolet's floor mats are custom-fitted to the foot wells. Be sure the driver's floor mat is in place. If it isn't, it could interfere with the accelerator or brake pedals.

Twin Lift-Off Roof Panels (Option)

If you have this option, you can remove one or both lift-off roof panels.

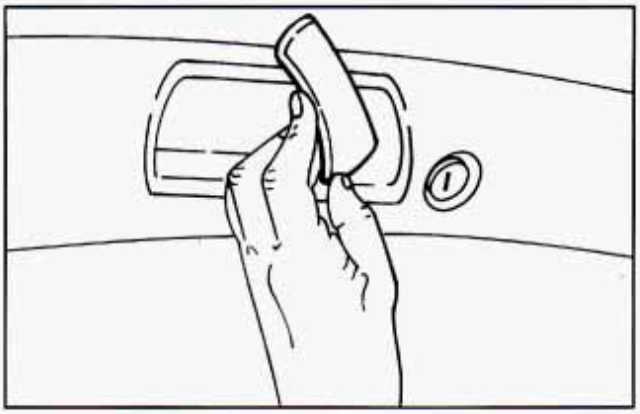

⚠ CAUTION:

Don't try to remove the T-top panels while the vehicle is moving. Trying to remove a T-top panel while the vehicle is moving could cause an accident. The panel could fall into the vehicle and cause you to lose control, or it could fly off and strike another vehicle. You or others could be injured. Remove a T-top panel only when the vehicle is parked.

The door key unlocks the panels. Turn the key to the left to unlock the panel.

Downloaded from www.Manualslib.com manuals search engine

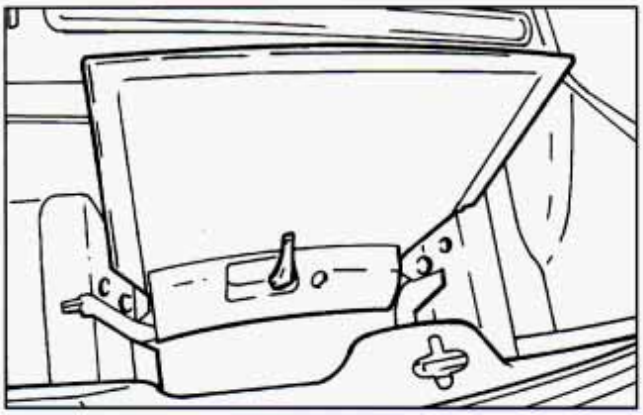

Then pull on the release handle to unlatch the panel. Lift the outer edge of the panel and pull it toward you. Then carry the panel to the rear of the vehicle for storage.

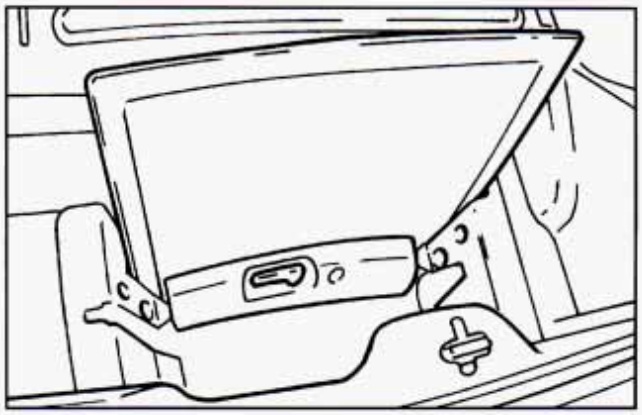

⚠ CAUTION:

If a T-top panel is not stored properly, it could be thrown about the vehicle in a crash or sudden maneuver. People in the vehicle could be injured. Whenever you store a T-top panel in the vehicle, always be sure that it is stored securely in the proper storage slot at the rear of the vehicle.

Downloaded from www.Manualslib.com manuals search engine

Open the close-out panel completely. Place the panel in the correct slot (driver's or passenger's) in the rear area of your vehicle. Make sure the handle is open and facing you when you put it in the storage slot.

Push the handle closed to secure the panel in the slot. To lock each panel in the storage area, use your door key.

Downloaded from www.Manualslib.com manuals search engine

⚠ CAUTION:

An improperly installed T-Top panel may fall into or fly off the vehicle. You or others could be injured. After installing a T-Top panel, always check that it is firmly attached by pushing up on the underside of the panel.

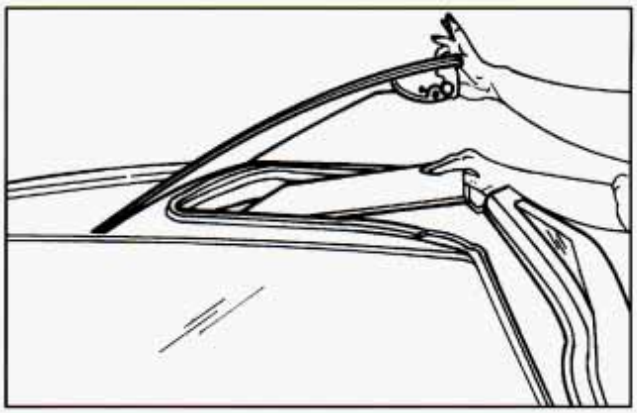

Reverse the steps above to install the T-top panels.

When installing panels, be sure to align weatherstrips properly. Panels incorrectly installed may leak.

NOTICE:

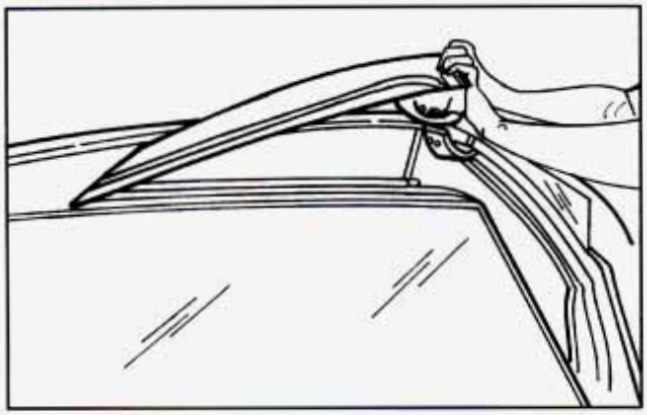

High pressure car washes may cause water to enter your vehicle. Never spray water directly at the roof panel joints. This will cause leaks.

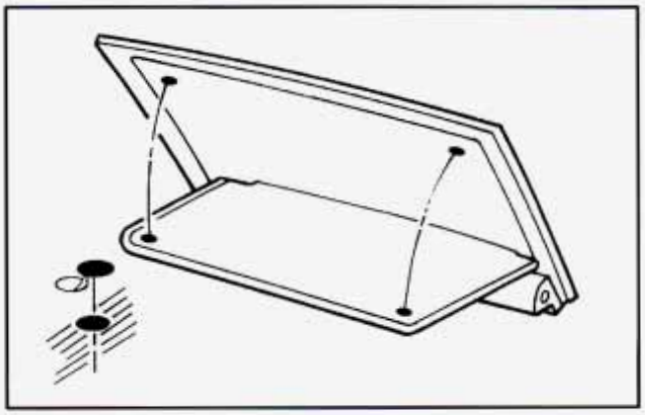

T-Top Sunshades

1. Start with the panel marked DRIVER FRONT. Unlatch the driver's side T-top, raise it halfway and close the latch handle.
2. With the top raised and resting on the center roof rail, slide the flat edge of the sunshade panel (with the vinyl side to the glass) between the glass and plastic trim, making sure the edge marked DRIVER FRONT is pointing to the front of the vehicle.

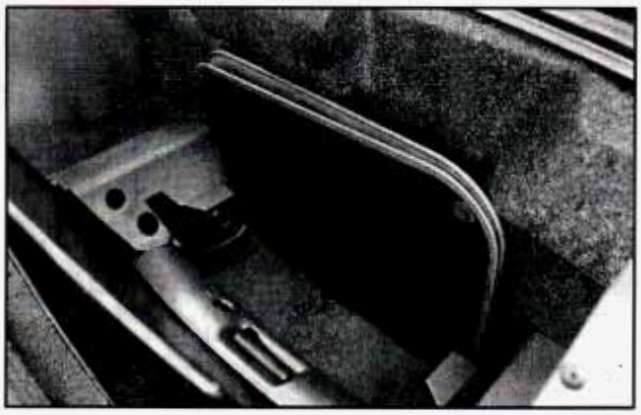

Downloaded from www.Manualslib.com manuals search engine

3. Open the latch and close the T-top. Check to see if there are any gaps showing. Unlatch the T-top and adjust the sunshade as required.
4. Once the sunshade is installed properly, you can stick the velcro® buttons on the glass for a proper fit every time you install the sunshades. To do this, first remove the T-top with the sunshade installed and place it upside down on a table or bench. Take care not to scratch the glass.
5. Pull the sunshade back a little and remove the backing paper from the velcro buttons. Push the sunshade back into place, sticking the velcro to the glass.
6. Install the T-top, close the latch and lock the T-top. Repeat the above steps for the passenger-side sunshade.

Downloaded from www.Manualslib.com manuals search engine

You can store the sunshades two different ways:

- When the T-tops are in use, store the sunshades in their storage area in the rear of the vehicle, and make sure the close-out panel is in its closed, upright position.
- When you have the T-tops off and in their storage slots, store the sunshades on the T-tops, in their installed position.

Convertible Top

The following procedures explain the proper operation of your convertible top.

Lowering Your Convertible Top

NOTICE:

Don't leave your convertible out with the top down for any long periods of time. The sun and the rain can damage your seat material and other things inside your vehicle.

1. Park on a level surface. Set the parking brake firmly. Shift an automatic transmission into PARK (P) or a manual transmission into REVERSE (R). The ignition must be in the ACC or RUN position. Lower both sun visors.

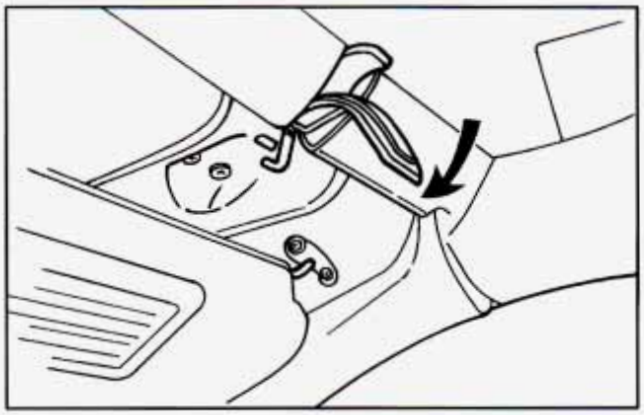

Downloaded from www.Manualslib.com manuals search engine

NOTICE:

Don't lower the top if it is damp or wet. When the top is down, trapped water can cause stains, mildew and damage to the inside of your vehicle. Be sure to dry off the top before you lower it.

NOTICE:

It is not recommended to lower the top if the vehicle is out in cold weather, 0°F (-18°C) or lower. Or you may damage top components.

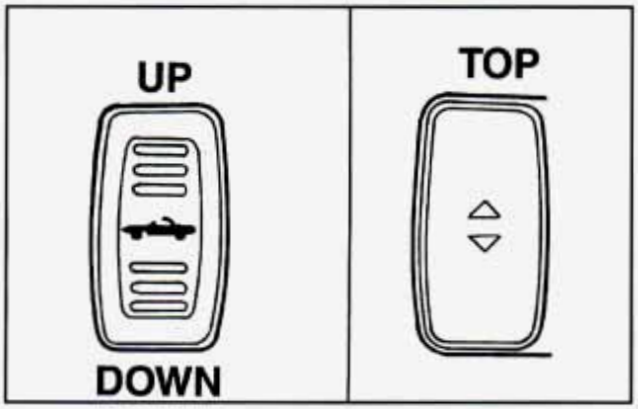

NOTICE:

Before lowering the convertible top into the storage area, be sure there are no objects in the way of the folded, stored top. The weight of a stored top on items in the storage area will cause the convertible top back glass to break.

Downloaded from www.Manualslib.com manuals search engine

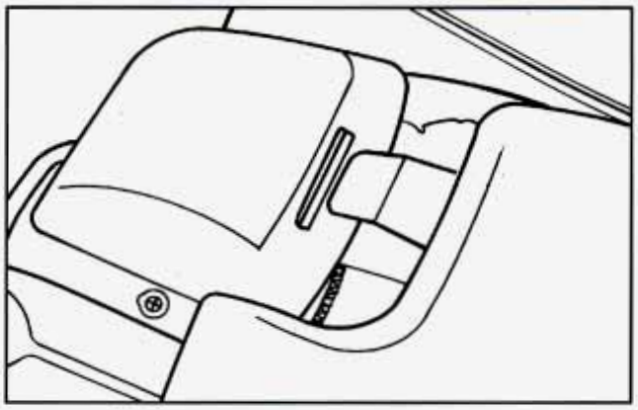

2. Unlock the front of the convertible top by pushing on the smaller part of the latch, then pulling down on the larger part of the latch. Be sure the hook on the latch that attaches into the hole at the windshield releases.

3. Be sure no one or nothing is on or around the top. Push and hold DOWN or ▼ on the convertible top switch. The switch is below your cigarette lighter. The top will automatically lower into the storage area.

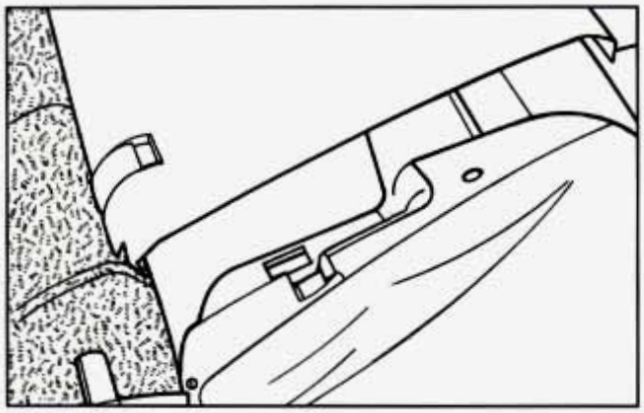

Installing the Boot Cover

After lowering the convertible top, you'll want to install the boot cover. The three-piece boot cover is stored in a bag in the trunk.

1. Open the trunk and remove the two side covers from the storage bag.
2. Install the two side covers by engaging the tab into the front seatbelt cover. Lower covers onto vehicle.

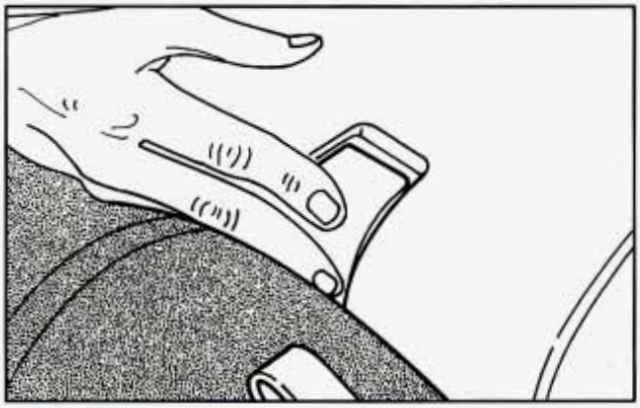

Downloaded from www.Manualslib.com manuals search engine

3. Install the middle section of the cover by sliding tabs into slots on right side cover. Lower the cover and engage latch.
4. Close the trunk.

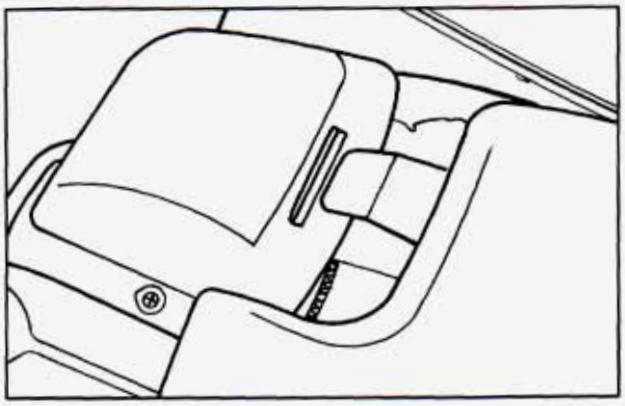

Raising Your Convertible Top

1. Park on a level surface. Set the parking brake firmly. If you have an automatic transmission, shift into PARK (P). If you have a manual transmission, shift into REVERSE (R). The ignition must be in the ACC or RUN position. Then lower both sun visors and lower both windows at least 3 inches (8 cm). If the boot cover is in place, it must be removed first.

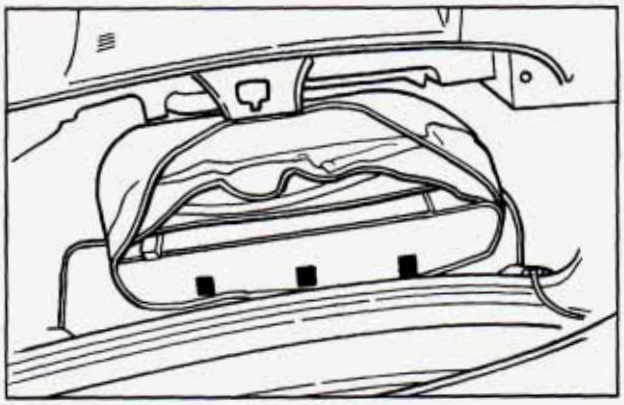

2. Open the trunk. Remove the middle piece of the cover by pushing in on the latch and lifting up on the cover.

Downloaded from www.Manualslib.com manuals search engine

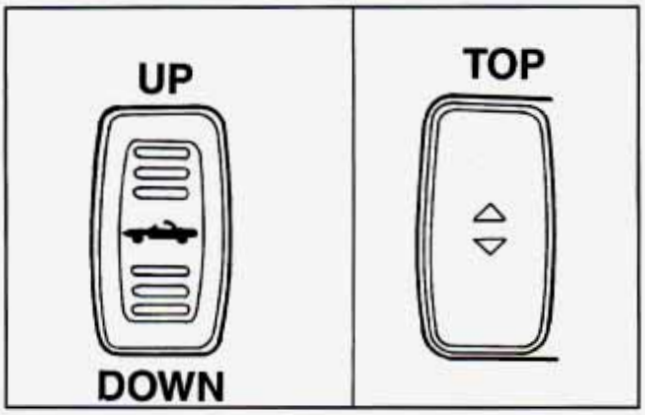

3. Remove the two side pieces of the boot cover by lifting the rear of cover and sliding them out of their slots.

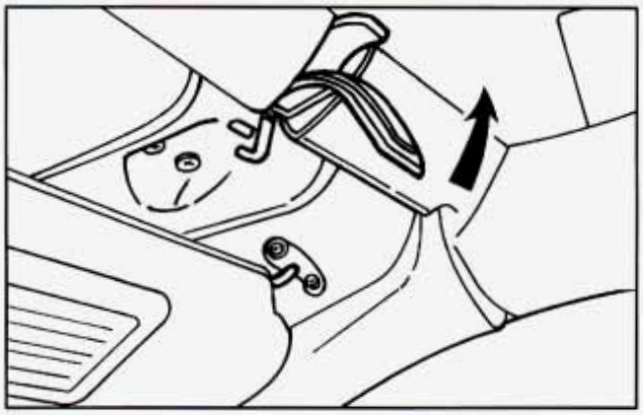

4. Store each piece of the cover in its separate compartment in the storage bag, store the bag in the trunk and close the trunk.

Downloaded from www.Manualslib.com manuals search engine

5. Push and hold UP or ▲ on the convertible top switch.

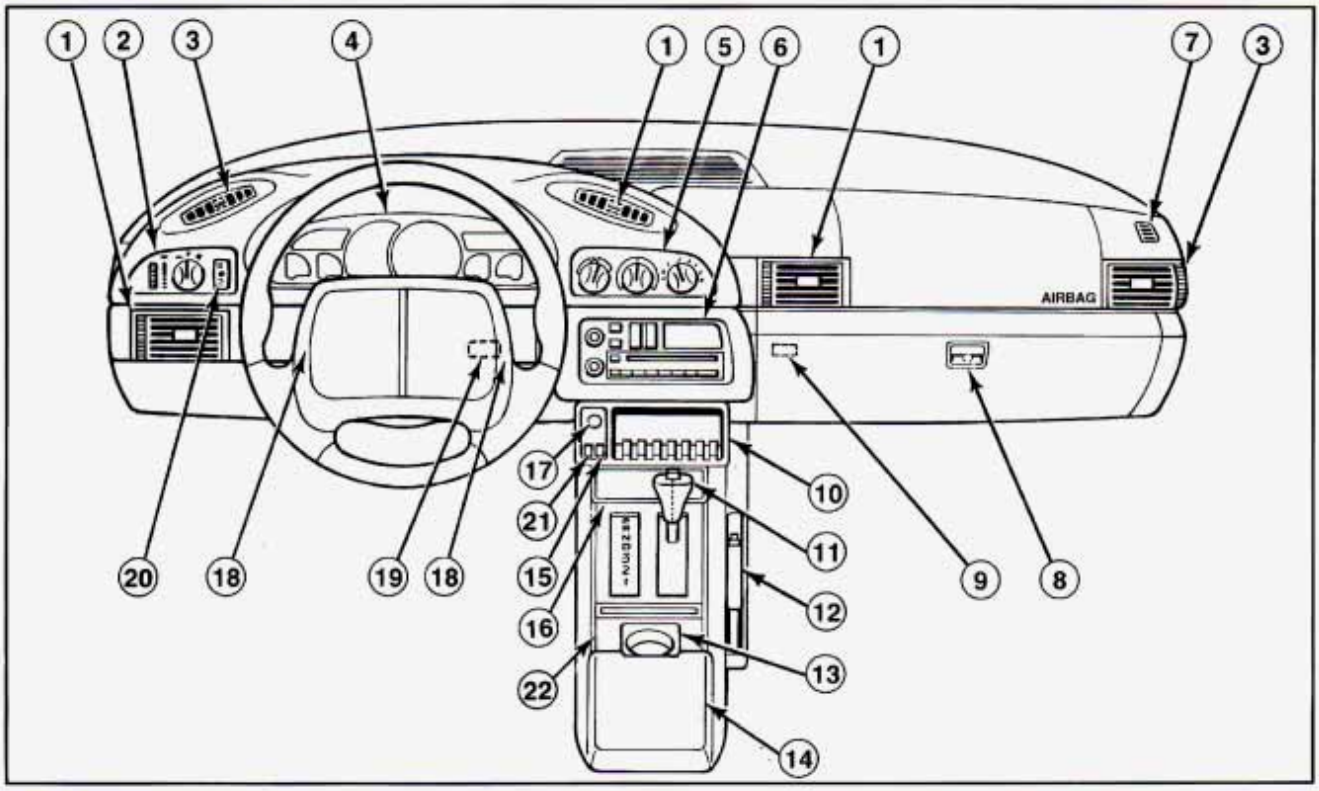

6. Pull down on the latches and align hooks with holes. Push forward on the larger part of the latch until it clicks. Do not force the latch. If it is hard to lock, the top is not properly aligned.

If your vehicle suffers a power loss, such as a dead battery, you can still raise the top manually by rotating the valve in the left side of the trunk.

Open the trunk and find the tab along the left side trim panel. Lift up the tab and turn the valve clockwise to release the hydraulic pressure. Turn the ignition key to the LOCK position. You can now raise or lower your top manually. Be sure to close the valve after installing your top so you can raise or lower it electronically later.

Downloaded from www.Manualslib.com manuals search engine

Instrument Panel

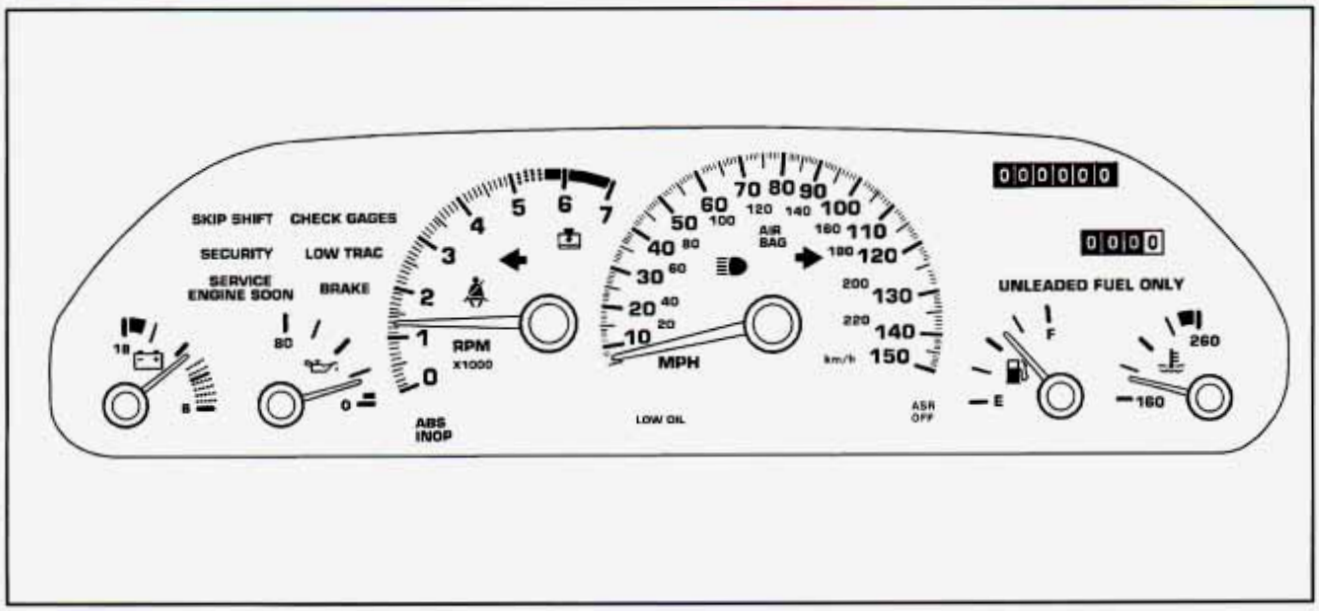

Downloaded from www.Manualslib.com manuals search engine

1. Instrument Panel Air Deflector
2. Main Light Control
3. Instrument Panel Center Air Deflector
4. Instrument Cluster

Instrument Panel Cluster

Your instrument cluster is designed to let you know at a glance how your vehicle is running. You'll know how fast you're going, your engine's rpms, about how much fuel you have left and many other things you'll need to know to drive safely and economically.

Downloaded from www.Manualslib.com manuals search engine

Speedometer and Odometer

Your speedometer lets you see your speed in both miles per hour (mph) and kilometers per hour (km/h). Your odometer shows how far your vehicle has been driven, in either miles (used in the United States) or kilometers (used in Canada).

Your Chevrolet's odometer is tamper-resistent, If you can see silver lines between the numbers, probably someone has tried to turn it back. The numbers may not be true.

You may wonder what happens if your Chevrolet needs a new odometer installed. If possible, the new one has to be set to the same reading the old one had. If it can't be, then it's set at zero, but a label on the driver's door must show the old reading and when the new one was installed.

Trip Odometer

The trip odometer can tell you how far your car has been driven since you last set the trip odometer to zero.

To set the trip odometer to zero, press the knob.

Tachometer

The tachometer displays the engine speed in thousands of revolutions per minute (rpm).

NOTICE:

Do not operate the engine with the tachometer in the red area, or engine damage may occur.

Warning Lights, Gages and Indicators

This part describes the warning lights and gages that may be on your vehicle. The pictures will help you locate them.

Warning lights and gages can signal that something is wrong before it becomes serious enough to cause an expensive repair or replacement. Paying attention to your warning lights and gages could also save you or others from injury.

Downloaded from www.Manualslib.com manuals search engine

Warning lights come on when there may be or is a problem with one of your vehicle's functions. As you will see in the details on the next few pages, some warning lights come on briefly when you start the engine just to let you know they're working. If you are familiar with this section, you should not be alarmed when this happens.

Gages can indicate when there may be or is a problem with one of your vehicle's functions. Often gages and warning lights work together to let you know when there's a problem with your vehicle.

When one of the warning lights comes on and stays on when you are driving, or when one of the gages shows there may be a problem, check the section that tells you what to do about it. Please follow this manual's advice. Waiting to do repairs can be costly -- and even dangerous. So please get to know your warning lights and gages. They're a big help.

Safety Belt Reminder Light

When the key is turned to RUN or START, a tone will come on for about eight seconds to remind people to fasten their safety belts, unless the driver's safety belt is already buckled.

The safety belt light will also come on and stay on until the driver's belt is buckled.

Downloaded from www.Manualslib.com manuals search engine

Air Bag Readiness Light

There is an air bag readiness light on the instrument panel, which shows AIR BAG. The system checks the air bag's electrical system for malfunctions. The light tells you if there is an electrical problem. The system check includes the air bag sensors, the air bag modules, the wiring and the crash sensing and diagnostic module. For more information on the air bag system, see "Air Bag" in the Index.

You will see this light flash for a few seconds when you turn your ignition to RUN or START. Then the light should go out. This means the system is ready.

If the air bag readiness light doesn't come on when you start your vehicle, or stays on, or comes on when you are driving, your air bag system may not work properly. Have your vehicle serviced right away.

Voltmeter

You can read battery voltage on your voltmeter. If it reads less than 11 volts or more than 16 volts while your engine is running, and it stays there, you may have a problem with the electrical charging system.

Have it checked right away. Driving with the voltmeter reading in a warning zone could drain your battery.

If you idle your engine for a while, the voltmeter reading might move into the low voltage zone (indicated by red dots). If the reading stays in the low voltage zone while you are driving, you may have a problem with the electrical charging system. Have it checked. While the voltmeter reads in the low voltage zone, your battery may not be able to power certain electrical accessories, like ABS. (If this happens, your ABS INOP light will come on. See "Anti-Lock Brake System Warning Light" in this section.)

If you must drive a short distance with the voltmeter reading in a warning zone, turn off all your accessories, including your air conditioning system and audio system.

Downloaded from www.Manualslib.com manuals search engine

Brake System Warning Light

Your Chevrolet's hydraulic brake system is divided into two parts. If one part isn't working, the other part can still work and stop you. For good braking, though, you need both parts working well.

If the warning light comes on, there could be a brake problem. Have your brake system inspected right away.

This light should come on briefly when you turn the ignition key to RUN. If it doesn't come on then, have it fixed so it will be ready to warn you if there's a problem.

If the light comes on while you are driving, pull off the road and stop carefully. You may notice that the pedal is harder to push. Or, the pedal may go closer to the floor. It may take longer to stop. If the light is still on, or if the anti-lock brake system warning light is flashing, have the vehicle towed for service. (See "Anti-Lock Brake System Warning Light" and "Towing Your Vehicle" in the Index.)

⚠ CAUTION:

Your brake system may not be working properly if the brake system warning light is on. Driving with the brake system warning light on can lead to an accident. If the light is still on or if the anti-lock brake system warning light is flashing after you've pulled off the road and stopped carefully, have the vehicle towed for service.

When the ignition is on, the brake system warning light will also come on when you set your parking brake. The light will stay on if your parking brake doesn't release fully. If it stays on after your parking brake is fully released, it means you have a brake problem.

Downloaded from www.Manualslib.com manuals search engine

Anti-Lock Brake System Warning Light

With the anti-lock brake system, this light will come on when you start your engine and it will stay on for three seconds. That's normal.

If the light flashes when you're driving, you don't have anti-lock brakes and there could be a problem with your regular brakes. Pull off the road and stop carefully. You may notice that the pedal is harder to push. Or, the pedal may go closer to the floor. It may take longer to stop. Have the vehicle towed for service. (See "Towing Your Vehicle" in the Index.)

⚠ CAUTION:

Your regular brake system may not be working properly if the anti-lock brake system warning light is flashing. Driving with the anti-lock brake system warning light flashing can lead to an accident. After you've pulled off the road and stopped carefully, have the vehicle towed for service.

If the anti-lock brake system warning light stays on longer than normal after you've started your engine, turn the ignition off. Or, if the light comes on and stays on when you're driving, stop as soon as possible and turn the ignition off. Then start the engine again to reset the system. If the light still stays on, or comes on again while you're driving, your Chevrolet needs service. If the light is on but not flashing and the regular brake system warning light isn't on, you still have brakes, but you don't have anti-lock brakes.

The anti-lock brake system warning light should come on briefly when you turn the ignition key to RUN. If the light doesn't come on then, have it fixed so it will be ready to warn you if there is a problem.

Downloaded from www.Manualslib.com manuals search engine

ASR (Acceleration Slip Regulation) System Warning Light (Option)

This warning light should come on briefly as you start the engine. If the warning light doesn't come on then, have it fixed so it will be ready to warn you if there's a problem.

If it stays on, or comes on when you're driving, there may be a problem with your ASR system and your vehicle may need service. When this warning light is on, the system will not limit wheel spin. Adjust your driving accordingly.

If your brakes begin to overheat, the brake portion of the ASR system will shut down, but the throttle and engine spark control will continue to work. The warning light will not come on when this happens.

The ASR system warning light may come on for the following reasons:

- If you turn the system off by pressing the button located on the console near the cigarette lighter, the warning light will come on and stay on. To turn the system back on, press the button again. The warning light should go off. (See "ASR System" in the Index for more information.)
- If the temperature of the throttle control begins to rise, the system will turn off and the warning light will come on until the system cools down. The system does this to prevent damage from overheating.

If the ASR system warning light comes on and stays on for an extended period of time when the system is turned on, your vehicle needs service.

Downloaded from www.Manualslib.com manuals search engine

Low Traction Light

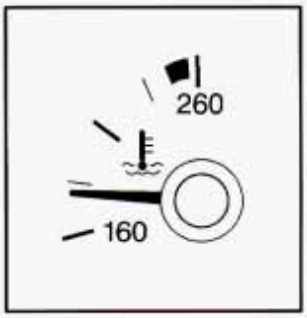

When your anti-lock system is adjusting brake pressure to help avoid a braking skid, this light will come on.

If you have the ASR system, this light will also come on when the system is limiting wheel spin. Slippery road conditions may exist if the low traction light comes on, so adjust your driving accordingly. The light will stay on for a few seconds after the anti-lock system stops adjusting brake pressure or the ASR system stops limiting wheel spin.

The low traction light also comes on briefly when you turn the ignition key to RUN. If the light doesn't come on then, have it fixed so it will be there to tell you when the anti-lock brake system or ASR system is active.

Engine Coolant Temperature Gage

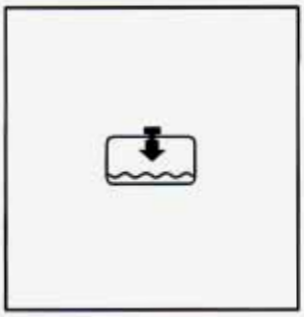

This gage shows the engine coolant temperature. If the gage pointer moves into the red area, your engine is too hot! It means that your engine coolant has overheated.

If you have been operating your vehicle under normal driving conditions, you should pull off the road, stop your vehicle and turn off the engine as soon as possible.

In "Problems on the Road," this manual shows what to do. See "Engine Overheating" in the Index.

Downloaded from www.Manualslib.com manuals search engine

Low Coolant Light (V8 Engine)

This warning light should come on while you are starting your engine. If the light doesn't come on, have it repaired.

Your Camaro is equipped with a LOW COOLANT indicator that is designed to detect when the coolant level drops below the set limit. If the low coolant level sensor (on the radiator) detects that the level drops while the engine is running, the LOW COOLANT indicator will light and remain lit until the ignition switch is turned to the OFF position. Check the coolant level and add coolant as needed.

The LOW COOLANT light might stay on after filling the radiator. Turn the ignition switch to the OFF position, then restart the engine to verify that the LOW COOLANT light goes out. See "Engine Coolant" in the Index.

NOTICE:

Driving with the LOW COOLANT light on could cause your Chevrolet to overheat. See "Engine Overheating" in the Index. Your Chevrolet could be damaged, and it wouldn't be covered by your warranty.

Downloaded from www.Manualslib.com manuals search engine

Malfunction Indicator Lamp (Service Engine Soon Light)

Your Chevrolet is equipped with a computer which monitors operation of the fuel, ignition and emission control systems.

This system is called OBD II (On-Board Diagnostics-Second Generation) and is intended to assure that emissions are at acceptable levels for the life of the vehicle, helping to produce a cleaner environment. (In Canada, OBD II is replaced by Enhanced Diagnostics.) The SERVICE ENGINE SOON light comes on to indicate that there is a problem and service is required. Malfunctions often will be indicated by the system before any problem is apparent, which may prevent more serious damage to your vehicle. This system is also designed to assist your service technician in correctly diagnosing any malfunction.

NOTICE:

If you keep driving your vehicle with this light on, after a while, your emission controls may not work as well, your fuel economy may not be as good and your engine may not run as smoothly. This could lead to costly repairs that may not be covered by your warranty.

This light should come on, as a check to show you it is working, when the ignition is on and the engine is not running. If the light doesn't come on, have it repaired. This light will also come on during a malfunction in one of two ways:

- **Light Flashing** -- A misfire condition has been detected. A misfire increases vehicle emissions and may damage the emission control system on your vehicle. Dealer or qualified service center diagnosis and service is required.
- **Light On Steady** -- An emission control system malfunction has been detected on your vehicle. Dealer or qualified service center diagnosis and service may be required.

Downloaded from www.Manualslib.com manuals search engine

If the Light Is Flashing

The following may prevent more serious damage to your vehicle:

- Reduce vehicle speed.
- Avoid hard accelerations.
- Avoid steep uphill grades.
- If towing a trailer, reduce the amount of cargo being hauled as soon as it is possible.

If the light stops flashing and remains on steady, see "If the Light Is On Steady" following.

If the light continues to flash, when it is safe to do so, *stop the vehicle*. Put your vehicle in PARK (P). Turn the key off, wait at least 10 seconds and restart the engine. If the light remains on steady, see "If the Light Is On Steady" following. If the light is still flashing follow the previous steps, and drive the vehicle to your dealer or qualified service center for service.

If the Light Is On Steady

You may be able to correct the emission system malfunction by considering the following:

Did you just put fuel into your vehicle?

If so, reinstall the fuel cap, making sure to fully install the cap. The diagnostic system can determine if the fuel cap has been left off or improperly installed. This will allow fuel to evaporate into the atmosphere. A few driving trips should turn the light off.

Did you just drive through a deep puddle of water?

If so, your electrical system may be wet. The condition will usually be corrected when the electrical system dries out. A few driving trips should turn the light off.

Are you low on fuel?

As your engine starts to run out of fuel, your engine may not run as efficiently as designed since small amounts of air are sucked into the fuel line causing a misfire. The system can detect this. Adding fuel should correct this condition. Make sure to install the fuel cap properly. It will take a few driving trips to turn the light off.

Downloaded from www.Manualslib.com manuals search engine

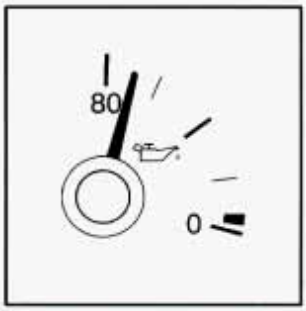

Have you recently changed brands of fuel?

If so, be sure to fuel your vehicle with quality fuel (see "Fuel" in the Index). Poor fuel quality will cause your engine not to run as efficiently as designed. You may notice this as stalling after start-up, stalling when you put the vehicle into gear, misfiring, hesitation on acceleration or stumbling on acceleration. (These conditions may go away once the engine is warmed up.) This will be detected by the system and cause the light to turn on.

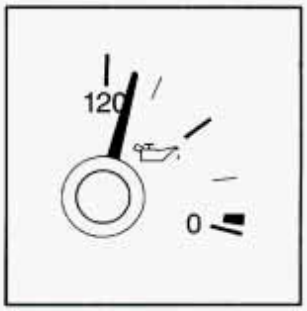

If you experience this condition, change the fuel brand you use. It will require at least one full tank of the proper fuel to turn the light off.

If none of the above steps have made the light turn off, have your dealer or qualified service center check the vehicle. Your dealer has the proper test equipment and diagnostic tools to fix any mechanical or electrical problems that may have developed.

Engine Oil Pressure Gage

5.7L LT1 Engine

3800 L36 Engine

This gage tells you if there could be a problem with your engine oil pressure.

The engine oil pressure gage shows the engine oil pressure in psi (pounds per square inch) in the United States, or kPa (kilopascals) in Canada, when the engine is running. Oil pressure should be 20 to 80 psi (140 to 550 kPa). On the 3.8L engine, the oil pressure should be between 20 and 120 psi (140 to 827 kPa). It may vary with engine speed, outside temperature and oil viscosity,

Downloaded from www.Manualslib.com manuals search engine

but readings above the red area show the normal operating range. Readings in the red area tell you that the engine is low on oil, or that you might have some other oil problem. See "Engine Oil" in the Index.

⚠ CAUTION:

Don't keep driving if the oil pressure is low. If you do, your engine can become so hot that it catches fire. You or others could be burned. Check your oil as soon as possible and have your vehicle serviced.

NOTICE:

Damage to your engine from neglected oil problems can be costly and is not covered by your warranty.

Low Oil Light

This warning light should come on while you are starting your engine. If the light doesn't come on, have it repaired.

If the light stays on after starting your engine, your engine oil level may be too low. You may need to add oil. See "Engine Oil" in the Index.

NOTICE:

The oil level monitoring system only checks the oil level when you are starting your engine. It does not keep monitoring the level once the engine is running. Also, the oil level check only works when the engine has been turned off long enough for the oil to drain back into the oil pan.

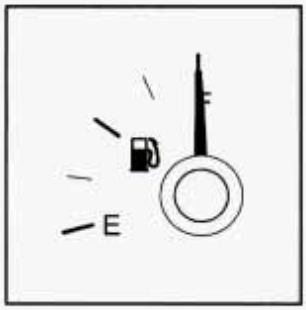

Downloaded from www.Manualslib.com manuals search engine

Check Gages Light

This warning light will come on briefly when you are starting the engine. If the light comes on and stays on while you are driving, check your gages to see if they are in the warning areas.

Fuel Gage

Your fuel gage shows about how much fuel is in your tank. The fuel gage works only when the ignition switch is in the RUN position.

When the gage pointer first indicates EMPTY (E) you still have a little fuel left (about one to two gallons), but you need to get more right away.

Here are four concerns some owners have had about the fuel gage. All these situations are normal and do not indicate that anything is wrong with the fuel gage.

- At the gas station, the gas pump shuts off before the gage reads FULL (F).
- It takes more (or less) gas to fill up than the gage reads. For example, the gage reads half full, but it took more (or less) than half of the tank's capacity to fill it.
- The gage moves a little when you turn, stop or speed up.
- When you turn the engine off, the gage doesn't go back to EMPTY (E).

Downloaded from www.Manualslib.com manuals search engine

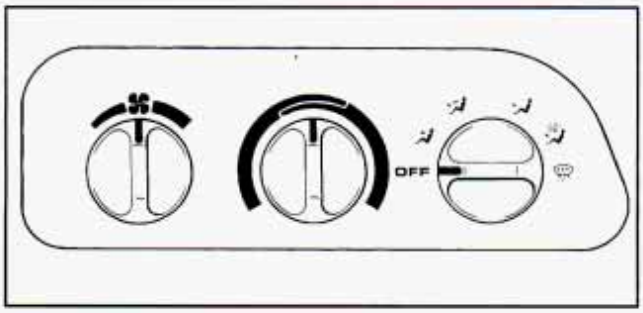

NOTES

Downloaded from www.Manualslib.com manuals search engine

Section 3 Comfort Controls and Audio Systems

In this section you'll find out how to operate the comfort control and audio systems offered with your Chevrolet. Be sure to read about the particular systems supplied with your vehicle.

Comfort Controls

With this system, you can control the heating and ventilation in your Chevrolet. If you have the air conditioning option, you can also control cooling.

Your vehicle also has the flow-through ventilation system described later in this section.

Fan Control Knob

FAN: Turn this knob to select the force of air you want.

Temperature Control Knob

Turn the knob to change the temperature of the air flowing from the heating system. Turn it to the right for warmer air and to the left for cooler air. The temperature of the air cannot be less than the temperature of the outside air.

Downloaded from www.Manualslib.com manuals search engine

Air Control Knob

OFF: The system is off.

VENT: Air flows through the upper air vents.

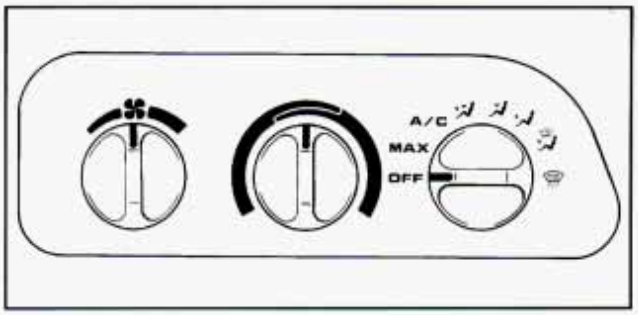

BI-LEVEL: Air is directed through the upper air vents and the heater ducts.

HEATER: This setting directs most of the air through the heater ducts and some of the air through the windshield defroster vents.

BLEND: Air is directed through the windshield defroster vents and the heater ducts.

DEFROST: This setting directs most of the air through the windshield defroster vents and some of the air through the heater ducts.

Air Conditioning (Option)

The air conditioning system uses the same controls as the heating system, except that the air control knob has two extra settings, described below.

MAX: Provides maximum cooling or quick cool-down on very hot days. This setting recirculates most of the air inside your vehicle. If it is used for long periods of time, the air may become dry. This setting directs air through the upper air vents.

A/C: Use for normal cooling on hot days. This setting cools outside air and directs it through the upper air vents.

Downloaded from www.Manualslib.com manuals search engine

The air conditioner compressor operates in MAX, A/C, BI-LEVEL, BLEND and DEFROST when the outside temperature is above freezing. When the air conditioner is on, you may sometimes notice slight changes in your vehicle's engine speed and power. This is normal, because the compressor uses power and the system is designed to cycle the compressor on and off to keep the desired cooling and help fuel economy.

Cooling

The air conditioner works best if you keep your windows closed. On very hot days, open the windows just long enough for the hot air to escape.

1. Turn the air control knob to A/C for normal cooling. For faster cooling, move the knob to MAX.
2. Turn the temperature control knob to a comfortable setting.
3. Turn the fan control knob to the desired speed.

Heating

The heater works best if you keep your windows closed while using it.

1. Turn the air control knob to HEATER.
2. Turn the fan control knob to the desired speed.
3. Turn the temperature control knob to a comfortable setting.

If your vehicle is equipped with an optional engine coolant heater, you can use it in cold weather (around 20°F/-8°C or lower) to improve heater performance on initial start up. Because an engine coolant heater warms the engine coolant, your vehicles heating system can more quickly and efficiently provide heat for your vehicle's passenger area. See "Engine Coolant Heater" in the Index.

Bi-Level Heating

You may want to use bi-level heating on cool, but sunny days. This setting directs cool air toward your body and warmer air toward your feet.

1. Turn the air control knob to BI-LEVEL.
2. Turn the temperature control knob to a comfortable setting.
3. Turn the fan control knob to the desired speed.

Downloaded from www.Manualslib.com manuals search engine

Ventilation System

Adjust the direction of airflow by moving the louvered vents.

Your Chevrolet's flow-through ventilation system supplies outside air into the vehicle when it is moving. Outside air will also enter the vehicle when the blower fan is running.

For mild outside temperatures when little heating or cooling is needed, you can still direct outside air through your vehicle.

1. Turn the air control knob to VENT.
2. Turn the temperature control knob to a comfortable setting.
3. Turn the fan control knob to the desired speed.

Ventilation Tips

- Keep the hood and front air inlet free of ice, snow or any other obstruction (such as leaves). The heater and defroster will work far better, reducing the chance of fogging the inside of your windows.
- When you enter a vehicle in cold weather, turn the fan control knob to the right for a few moments before driving off. This helps clear the intake ducts of snow and moisture, and reduces the chance of fogging the inside of your windows.
- Keep the air path under the front seats clear of objects. This helps air to circulate throughout your vehicle.

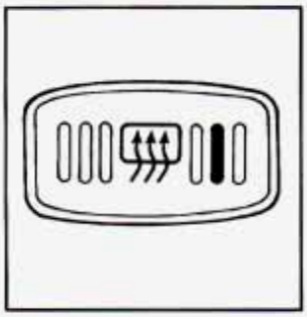

Defogging and Defrosting

1. Turn the air control knob to DEFROST.
2. Turn the temperature control knob to the desired setting.
3. Turn the fan control knob to the desired speed.

The side window defogging works equally as well in the HEATER, BLEND and DEFROST modes.

Downloaded from www.Manualslib.com manuals search engine

Rear Window Defogger (Option)

The rear window defogger uses a warming grid to remove fog from the rear window.

Press the right side of the switch to turn on the defogger. An indicator light will come on to remind you that the defogger is on. The defogger will turn off automatically after about 10 minutes of use. If you turn it on again, the defogger will operate for about five minutes only. You can also turn the defogger off by pressing the left side of the switch.

Do not attach anything like a temporary vehicle license or a decal across the defogger grid on the rear window.

NOTICE:

Don't use a razor blade or something else sharp on the inside of the rear window. If you do, you could cut or damage the warming grid, and the repairs wouldn't be covered by your warranty.

Downloaded from www.Manualslib.com manuals search engine

Audio Systems

Your Delco® audio system has been designed to operate easily and give years of listening pleasure. You will get the most enjoyment out of it if you acquaint yourself with it first. Find out what your Delco system can do and how to operate all its controls, to be sure you're getting the most out of the advanced engineering that went into it.

If you have power door locks, your vehicle has a feature called Retained Accessory Power (RAP). With RAP you can play your audio system even after the ignition is off. See "Retained Accessory Power" in the Index.

Setting the Clock for AM-FM Stereo with Cassette Tape Player

Press SET. Within five seconds, press and hold the SEEK down arrow until the correct hour appears. Press and hold the SEEK up arrow until the correct minute appears.

Setting the Clock for Delco-Bose® AM-FM Stereo with Cassette Tape Player

Press SET. Within five seconds, press and hold SEEK down arrow until the correct hour appears. Press and hold SEEK up arrow until the correct minute appears.

Setting the Clock for AM-FM Stereo with Compact Disc Player

Press SET. Within five seconds, press SCAN until the correct hour appears. Press and hold the SEEK left or right arrow until the correct minute appears.

Downloaded from www.Manualslib.com manuals search engine

AM-FM Stereo with Cassette Tape Player

Playing the Radio

VOL: Turn the upper knob to turn the system on or off, and to adjust the volume.

RCL: Press the knob to recall the station being played or to display the clock.

Finding a Station

AM-FM: Press the lower knob to get AM or FM. Your selection will show on the display.

TUNE: Turn the lower knob to choose radio stations.

SEEK: Press the SEEK up or down arrows and the radio will tune to the next higher or lower station and stay there.

SCAN: The scan function uses the same two buttons as the seek function.

Press and hold the up arrow and then the down arrow to hear the next higher station for a few seconds. The radio will go to a station, stop for a few seconds, then go on to the next station.

Press and hold the down arrow and then the up arrow to hear the next lower station for a few seconds. The radio will go to a station, stop for a few seconds, then go on to the next station.

Press the up or down arrow to stop scanning.

Downloaded from www.Manualslib.com manuals search engine

PUSHBUTTONS: The four numbered pushbuttons let you return to your previously played stations. You can set up to 14 stations (seven AM and seven FM).

1. Find the station you want by using TUNE.
2. Press SET. (The SET indicator will appear briefly on the display.)
3. Press one of the four pushbuttons, within five seconds. Whenever you press that numbered button, the station you set will return.
4. Repeat the steps for each pushbutton.

In addition to the four stations set as above, up to three additional stations may be preset on each band by pressing two adjoining buttons at the same time. Just:

1. Tune in the desired station.
2. Press SET. (The SET indicator will appear on the display.)
3. Press any two adjoining pushbuttons at the same time (within five seconds).
4. Whenever you press the same buttons, the station you set will return.

Setting the Tone

BASS: Slide the lever up to hear more bass.

TREB: Slide the lever up to hear more treble. Slide the lever down to reduce noise if a station is weak or noisy.

Adjusting the Speakers

BAL: Turn the control behind the upper knob to adjust the sound between the right and left speakers.

FADE: Turn the control behind the lower knob to move the sound between the front and rear speakers.

Playing a Cassette Tape

REVERSE: Press the SEEK arrow that is opposite of the lit direction arrow to reverse the tape. The tape will rapidly reverse until STOP-EJECT is pressed lightly.

FORWARD: Press the SEEK arrow that is the same as the lit direction arrow to advance the tape rapidly. The tape will rapidly reverse until STOP-EJECT is pressed lightly.

Downloaded from www.Manualslib.com manuals search engine

APS: This stands for Automatic Program Search. When you press this button, it changes the function of the SEEK arrow buttons.

When the APS button is pressed, press the SEEK arrow that is opposite of the lit direction arrow to repeat the current selection or skip to the previous selection. The tape will rapidly reverse until it reaches the beginning of a selection. Once it finds the selection, it will change to play mode.

Press the SEEK arrow button that is the same as the lit direction arrow to skip to the next selection. The tape will rapidly advance until it reaches the beginning of a selection. Once it finds the selection, it will change to play mode.

PROG-RCL: Press the upper knob to change tape direction when a tape is inserted.

STOP-EJECT: Press this button to remove the tape or stop playing the tape and switch to the radio.

AM-FM Stereo with Compact Disc Player

Playing the Radio

VOL-BAL: Turn the upper knob to turn the system on or off, and to adjust the volume. Volume increases when you turn the knob to the right and decreases when you turn the knob to the left.

RCL: Press the knob to recall the station being played or to display the clock. RCL may be pressed with the ignition off to display the time.

Downloaded from www.Manualslib.com manuals search engine

Finding a Station

AM-FM: Press the lower knob to get AM or FM. Your selection will show on the display.

TUNE: Turn the lower knob to choose radio stations.

SEEK: Press the right arrow to tune to the next higher station and stay there. Press the left arrow to tune to the next lower station and stay there.

SCAN: Press this button to hear each station for a few seconds. The radio will go to a station, stop for a few seconds, then go on to the next station. Press SCAN again if you hear something you like and want to stay there. SC will appear on the display while scanning.

PUSHBUTTONS: The five numbered pushbuttons let you return to your previously played stations. You can set up to 10 stations (five AM and five FM).

1. Find the station you want by using TUNE.
2. Press SET. (The SET indicator will appear briefly on the display.)
3. Press one of the five pushbuttons, within five seconds. Whenever you press that numbered button, the station you set will return.
4. Repeat the steps for each pushbutton.

Setting the Tone

BASS: Press the up arrow to hear more bass and the down arrow to hear less bass. Press the center of the button for the factory-preset position. BASS will appear briefly on the display whenever BASS is pressed.

TREB: Press the up arrow to hear more treble and the down arrow to hear less treble. Press the center of the button for the factory-preset position. TREB will appear briefly on the display whenever TREB is pressed.

Adjusting the Speakers

BAL: Turn the control behind the upper knob to adjust the sound between the right and left speakers.

FADE: Turn the fade control behind the lower knob to move the sound between the front and rear speakers.

Playing a Compact Disc

Insert a disc partway into the slot, label side up. The player will pull it in. The disc should begin playing.

Downloaded from www.Manualslib.com manuals search engine

If you're driving on a very rough road or if it's very hot, the disc may not play and ERR (error) may appear on the display. Press RECALL to take ERR off the display. When things get back to normal, the disc should play. If the disc comes out, it could be that:

- The disc is upside down.
- It is dirty, scratched or wet.
- It is very humid. (If so, wait about an hour and try again.)

RCL: Press this button to see which track is playing. Press it again within five seconds to see how long it has been playing. The track number will also appear on the display when you change volume or when a new track starts playing.

COMP: Press this button to make loud and soft passages more nearly equal in volume. COMP will appear on the display.

RDM: Press this button to hear the tracks in random, rather than sequential, order. RDM will appear on the display. Press this button again to return to normal sequence.

REV: Press and hold this button to return to a previously played passage rapidly. Release the button to play the passage. The counter reading will appear on the display.

FWD: Press and hold this button to fast forward or advance through passages. Release the button to play the passage.

SCAN: Press this button to listen to each track for about 10 seconds. Press RDM or SCAN to stop scanning.

PREV: Press this button to hear a track again. If you press and hold this button or press it more than once, the disc will return to previous tracks.

NEXT: Press this button to hear the next track now instead of waiting until the current track is finished playing.

Stopping the Disc Player

Turn the power off or turn the ignition key off. The disc stays in the player and will resume playing at the point where it stopped.

ST-PL: Press this button to stop playing the disc and switch to the radio. Press it again to restart the disc at the point where it stopped.

EJCT: Press this button to eject the disc and switch to the radio. The disc will start playing track one when you reinsert it.

Downloaded from www.Manualslib.com manuals search engine

Delco-Bose AM-FM Stereo with Cassette Tape Player

Playing the Radio

VOLUME: Turn the upper knob to turn the system on or off, and to adjust the volume. Volume increases when you turn the knob to the right and decreases when you turn the knob to the left.

PROG-RCL: Press the knob to recall the station being played or to display the clock. PROG-RCL may be pressed with the ignition off to display the time.

Finding a Station

AM-FM: Press the lower knob to get AM or FM.

TUNE: Turn the lower knob to choose radio stations.

SEEK: Press the SEEK up or down arrows and the radio will tune to the next higher or lower station and stay there.

SCAN: The scan function uses the same two buttons as the seek function.

Press and hold the up arrow and then the down arrow to hear the next higher station for a few seconds. The radio will go to a station, stop for a few seconds, then go on to the next station.

Press and hold the down arrow and then the up arrow to hear the next lower station for a few seconds. The radio will go to a station, stop for a few seconds, then go on to the next station.

Press the up or down arrow to stop scanning.

Downloaded from www.Manualslib.com manuals search engine

PUSHBUTTONS: The four numbered pushbuttons let you return to your previously played stations. You can set up to 14 stations (seven AM and seven FM).

1. Find the station you want by using TUNE.
2. Press SET. (The SET indicator will appear briefly on the display.)
3. Press one of the four pushbuttons, within five seconds. Whenever you press that numbered button, the station you set will return.
4. Repeat the steps for each pushbutton.

In addition to the four stations set as above, up to three additional stations may be preset on each band by pressing two adjoining buttons at the same time. Just:

1. Tune in the desired station.
2. Press SET. (The SET indicator will appear on the display.)
3. Press any two adjoining pushbuttons at the same time (within five seconds).
4. Whenever you press the same buttons, the station you set will return.

Setting the Tone

BASS: Slide the lever down to reduce bass.

TREB: The top position is the default position. Slide the lever up to hear more treble. Slide the lever down to reduce noise if a station is weak or noisy.

Adjusting the Speakers

BAL: Turn the control behind the upper knob to adjust the sound between the right and left speakers.

FADE: Turn the control behind the lower knob to move the sound between the front and rear speakers.

The Delco-Bose premium speaker system only includes three speakers. It does not include speakers in the panel behind the grilles next to the rear seat.

Downloaded from www.Manualslib.com manuals search engine

Playing a Cassette Tape

Your tape player is built to work best with tapes that are 30 to 45 minutes long on each side. Tapes longer than that are so thin they may not work well in this player.

Once the tape is playing, use the knobs for VOLUME, FADE and BAL, just as you do for radio. The arrows by the TAPE indicator tell you which side of the tape is playing.

REVERSE: Press the SEEK arrow that is opposite of the lit direction arrow to reverse the tape. The tape will rapidly reverse until STOP-EJECT is pressed lightly.

FORWARD: Press the SEEK arrow that is the same as the lit direction arrow to advance the tape rapidly. The tape will rapidly reverse until STOP-EJECT is pressed lightly.

APS: This stands for Automatic Program Search. When you press this button, it changes the function of the SEEK arrow buttons.

When the APS button is pressed, press the SEEK arrow that is opposite of the lit direction arrow to repeat the current selection or skip to the previous selection. The tape will rapidly reverse until it reaches the beginning of a selection. Once it finds the selection, it will change to play mode.

Press the SEEK arrow button that is the same as the lit direction arrow to skip to the next selection. The tape will rapidly advance until it reaches the beginning of a selection. Once it finds the selection, it will change to play mode.

PROG-RCL: Press the upper knob to change tape direction when a tape is inserted.

STOP-EJECT: Press this button to remove the tape or stop playing the tape and switch to the radio.

CrO_2: This button lets you set the system for the type of cassette being used. Press this button when playing high-bias chrome or metal tapes. If you are using standard tapes, make sure CrO_2 is out.

Noise Reduction: Your audio system has automatic Dolby® B Noise Reduction.

Dolby Noise Reduction is manufactured under a license from Dolby Laboratories Licensing Corporation. Dolby and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.

Downloaded from www.Manualslib.com manuals search engine

Delco-Bose AM-FM Stereo with Compact Disc Player

Playing the Radio

VOL-BAL: Turn the upper knob to turn the system on or off, and to adjust the volume. Volume increases when you turn the knob to the right and decreases when you turn the knob to the left.

RCL: Press the knob to recall the station being played or to display the clock. RCL may be pressed with the ignition off to display the time.

Finding a Station

AM-FM: Press the lower knob to get AM, FM1 or FM2. Your selection will show on the display.

TUNE: Turn the lower knob to choose radio stations.

SEEK: Press the right arrow to tune to the next higher station and stay there. Press the left arrow to tune to the next lower station and stay there.

SCAN: Press this button to hear each station for a few seconds. The radio will go to a station, stop for a few seconds, then go on to the next station. Press SCAN again if you hear something you like and want to stay there. SC will appear on the display while scanning.

PUSHBUTTONS: The five numbered pushbuttons let you return to your previously played stations. You can set up to 15 stations (five AM, five FM1 and five FM2).

1. Press AM-FM to get AM, FM1 or FM2.
2. Find the station you want by using TUNE or SEEK.
3. Press SET. (The SET indicator will appear briefly on the display.)
4. Press one of the five pushbuttons, within five seconds. Whenever you press that numbered button, the station you set will return.
5. Repeat the steps for each pushbutton.

Downloaded from www.Manualslib.com manuals search engine

Setting the Tone

BASS: Press the up arrow to hear more bass and the down arrow to hear less bass. Press the center of the button for the factory-preset position. BASS will appear briefly on the display whenever BASS is pressed.

TREB: Press the up arrow to hear more treble and the down arrow to hear less treble. Press the center of the button for the factory-preset position. TREB will appear briefly on the display whenever TREB is pressed.

Adjusting the Speakers

BAL: Turn the control behind the upper knob to adjust the sound between the right and left speakers.

FADE: Turn the fade control behind the lower knob to move the sound between the front and rear speakers.

Playing a Compact Disc

Don't use the mini-discs (three-inch singles). They will eject, but they won't play. Use only full-size compact discs.

Insert a disc partway into the slot, label side up. The player will pull it in. The disc should begin playing.

If you're driving on a very rough road or if it's very hot, the disc may not play and ERR (error) may appear on the display. Press RECALL to take ERR off the display. When things get back to normal, the disc should play. If the disc comes out, it could be that:

- The disc is upside down.
- It is dirty, scratched or wet.
- It is very humid. (If so, wait about an hour and try again.)

RCL: Press this button to see which track is playing. Press it again within five seconds to see how long it has been playing. The track number will also appear on the display when you change volume or when a new track starts playing.

COMP: Press this button to make loud and soft passages more nearly equal in volume. COMP will appear on the display.

RDM: Press this button to hear the tracks in random, rather than sequential, order. RDM will appear on the display. Press this button again to return to normal sequence.

REV: Press and hold this button to return to a previously played passage rapidly. Release the button to play the passage. The counter reading will appear on the display.

Downloaded from www.Manualslib.com manuals search engine

FWD: Press and hold this button to fast forward or advance through passages. Release the button to play the passage.

SCAN: Press this button to listen to each track for about 10 seconds. Press RDM or SCAN to stop scanning.

PREV: Press this button to hear a track again. If you press and hold this button or press it more than once, the disc will return to previous tracks.

NEXT: Press this button to hear the next track now instead of waiting until the current track is finished playing.

Stopping the Disc Player

Turn the power off or turn the ignition key off. The disc stays in the player and will resume playing at the point where it stopped.

ST-PL: Press this button to stop playing the disc and switch to the radio. Press it again to restart the disc at the point where it stopped.

EJCT: Press this button to eject the disc and switch to the radio. The disc will start playing track one when you reinsert it.

Theft-Deterrent Feature

Delco-Loc II® is a security feature for the compact disc player. It may be used or ignored. If ignored, the system plays normally and the radio is not protected by the feature. If Delco-Loc II is activated, your radio will not operate if stolen.

If your vehicle loses battery power for any reason, you must enter your secret code again before the system will turn on.

Activating the Theft-Deterrent Feature

The instructions which follow explain how to enter your secret code to activate the Delco-Loc II system. It is recommended that you read through all of the steps before starting the procedure.

NOTE: If you allow more than 15 seconds to elapse between any steps, the radio automatically reverts to time and you must start the procedure over at Step 4.

1. Write down any six-digit number and keep it in a safe place separate from the vehicle.
2. Turn the ignition to the ACC or RUN position.

Downloaded from www.Manualslib.com manuals search engine

3. Press the 1 and 4 buttons together. Hold them down until --- shows on the display. Next you will use the secret code number which you have written down.
4. Press SET and 000 will appear on the display.
5. Press SCAN to make the first digit of your code appear.
6. Press the SEEK right or left arrow to make the second and third digits of your code appear.
7. Press AM-FM and 000 will appear on the display again. Now you are ready to enter the last three digits of your code.
8. Press SCAN to make the fourth digit of your code appear.
9. Press the SEEK right or left arrow to make the last two digits of your code appear.
10. Press AM-FM and REP will appear on the display for five seconds, and then 000 will appear on the display.
11. For verification, repeat Steps 6 through 11. If SEC appears on the display, your audio system is secured. If --- shows on the display, your system is not secured. You must restart the entire procedure again from Step 4.

Unlocking the Theft-Deterrent Feature After a Power Loss

Enter your secret code as follows; pause no more than 15 seconds between steps:

1. Turn the ignition on. (The radio should be off. LOC will appear on the display.)
2. Press SET and 000 will appear on the display.
3. Press the SCAN to make the first digit of your code appear.
4. Press the SEEK right or left arrow to make the second and third digits of your code appear.
5. Press AM-FM and 000 will appear on the display again. Now you are ready to enter the last three digits of your code.
6. Press SCAN to make the fourth digit of your code appear.
7. Press the SEEK right or left arrow to make the last two digits of your code appear.
8. Press AM-FM. If the time appears, the unlocking sequence was successful. If the display shows SEC, the digits did not match and the unit is still secured.

If you lose or forget your code, contact your dealer.

Downloaded from www.Manualslib.com manuals search engine

Disabling the Theft-Deterrent Feature

1. Turn the ignition on.
2. Turn the radio off.
3. Press the 1 and 4 buttons together. Hold them down until SEC shows on the display.
4. Press SET and 000 will appear on the display.
5. Press SCAN to make the first digit of your code appear.
6. Press the SEEK right or left arrow to make the second and third digits of your code appear.
7. Press AM-FM and 000 will appear on the display again. Now you are ready to enter the last three digits of your code.
8. Enter the last three digits of your code. The display will show the numbers as entered.
9. Press AM-FM after you have confirmed that the code matches the secret code you have written down. The display will show ---, indicating that the radio is no longer secured.

If the code entered is incorrect, SEC will appear on the display. The radio will remain secured until the correct code is entered.

When battery power is given to a secured radio, the radio won't turn on and LOC will appear on the display.

Understanding Radio Reception

FM Stereo

FM stereo will give you the best sound. But FM signals will reach only about 10 to 40 miles (16 to 65 km). Tall buildings or hills can interfere with FM signals, causing the sound to come and go.

AM

The range for most AM stations is greater than for FM, especially at night. The longer range, however, can cause stations to interfere with each other. AM can pick up noise from things like storms and power lines. Try reducing the treble to reduce this noise if you ever get it.

Tips About Your Audio System

Hearing damage from loud noise is almost undetectable until it is too late. Your hearing can adapt to higher volumes of sound. Sound that seems normal can be loud and harmful to your hearing. Take precautions by adjusting the volume control on your radio to a safe sound level before your hearing adapts to it.

Downloaded from www.Manualslib.com manuals search engine

To help avoid hearing loss or damage:

- Adjust the volume control to the lowest setting.
- Increase volume slowly until you hear comfortably and clearly.

NOTICE:

Before you add any sound equipment to your vehicle -- like a tape player, CB radio, mobile telephone or two-way radio -- be sure you can add what you want. If you can, it's very important to do it properly. Added sound equipment may interfere with the operation of your vehicle's engine, Delco radio or other systems, and even damage them. Your vehicle's systems may interfere with the operation of sound equipment that has been added improperly.

So, before adding sound equipment, check with your dealer and be sure to check Federal rules covering mobile radio and telephone units.

Care of Your Cassette Tape Player

A tape player that is not cleaned regularly can cause reduced sound quality, ruined cassettes or a damaged mechanism. Cassette tapes should be stored in their cases away from contaminants, direct sunlight and extreme heat. If they aren't, they may not operate properly or may cause failure of the tape player.

Your tape player should be cleaned regularly after every 50 hours of use. If you notice a reduction in sound quality, try a known good cassette to see if the tape or the tape player is at fault. If this other cassette has no improvement in sound quality, clean the tape player.

Cleaning may be done with a scrubbing action, non-abrasive cleaning cassette with pads which scrub the tape head as the hubs of the cleaner cassette turn. It is normal for the cassette to eject while cleaning. Insert the cassette at least three times to ensure thorough cleaning. A scrubbing action cleaning cassette is available through your Chevrolet dealer.

You may also choose a non-scrubbing action, wet-type cleaner which uses a cassette with a fabric belt to clean the tape head. This type of cleaning cassette will not eject. It may not clean as thoroughly as the scrubbing type cleaner.

Downloaded from www.Manualslib.com manuals search engine

Cassettes are subject to wear and the sound quality may degrade over time. Always make sure that the cassette tape is in good condition before you have your tape player serviced.

Care of Your Compact Discs

Handle discs carefully. Store them in their original cases or other protective cases and away from direct sunlight and dust. If the surface of a disc is soiled, dampen a clean, soft cloth in a mild, neutral detergent solution and clean it, wiping from the center to the edge.

Be sure never to touch the signal surface when handling discs. Pick up discs by grasping the outer edges or the edge of the hole and the outer edge.

Fixed Mast Antenna

The fixed mast antenna can withstand most car washes without being damaged. If the mast should ever become slightly bent, you can straighten it out by hand. If the mast is badly bent, as it might be by vandals, you should replace it.

Check every once in a while to be sure the mast is still tightened to the rear quarter panel.

NOTES

Downloaded from www.Manualslib.com manuals search engine

Section 4 Your Driving and the Road

Here you'll find information about driving on different kinds of roads and in varying weather conditions. We've also included many other useful tips on driving.

Defensive Driving

The best advice anyone can give about driving is: Drive defensively.

Please start with a very important safety device in your Chevrolet: Buckle up. (See "Safety Belts" in the Index.)

Defensive driving really means "be ready for anything." On city streets, rural roads or freeways, it means "always expect the unexpected."

Assume that pedestrians or other drivers are going to be careless and make mistakes. Anticipate what they might do. Be ready for their mistakes.

Rear-end collisions are about the most preventable of accidents. Yet they are common. Allow enough following distance. It's the best defensive driving maneuver, in both city and rural driving. You never know when the vehicle in front of you is going to brake or turn suddenly.

Downloaded from www.Manualslib.com manuals search engine

Drunken Driving

Death and injury associated with drinking and driving is a national tragedy. It's the number one contributor to the highway death toll, claiming thousands of victims every year.

Alcohol affects four things that anyone needs to drive a vehicle:

- Judgment
- Muscular Coordination
- Vision
- Attentiveness.

Police records show that almost half of all motor vehicle-related deaths involve alcohol. In most cases, these deaths are the result of someone who was drinking and driving. In recent years, some 18,000 annual motor vehicle-related deaths have been associated with the use of alcohol, with more than 300,000 people injured.

Many adults -- by some estimates, nearly half the adult population -- choose never to drink alcohol, so they never drive after drinking. For persons under 21, it's against the law in every U.S. state to drink alcohol. There are good medical, psychological and developmental reasons for these laws.

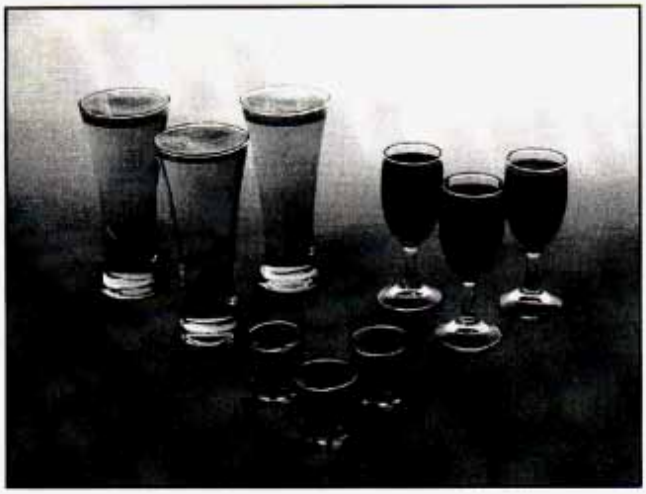

The obvious way to solve this highway safety problem is for people never to drink alcohol and then drive. But what if people do? How much is "too much" if the driver plans to drive? It's a lot less than many might think. Although it depends on each person and situation, here is some general information on the problem.

The Blood Alcohol Concentration (BAC) of someone who is drinking depends upon four things:

- The amount of alcohol consumed
- The drinker's body weight
- The amount of food that is consumed before and during drinking
- The length of time it has taken the drinker to consume the alcohol.

According to the American Medical Association, a 180-lb. (82 kg) person who drinks three 12-ounce (355 ml) bottles of beer in an hour will end up with a BAC of about 0.06 percent. The person would reach the same BAC by drinking three 4-ounce (120 ml) glasses of wine or three mixed drinks if each had 1-1/2 ounces (45 ml) of a liquor like whiskey, gin or vodka.

Downloaded from www.Manualslib.com manuals search engine

It's the amount of alcohol that counts. For example, if the same person drank three double martinis (3 ounces or 90 ml of liquor each) within an hour, the person's BAC would be close to 0.12 percent. A person who consumes food just before or during drinking will have a somewhat lower BAC level.

There is a gender difference, too. Women generally have a lower relative percentage of body water than men. Since alcohol is carried in body water, this means that a woman generally will reach a higher BAC level than a man of her same body weight when each has the same number of drinks.

The law in many U.S. states sets the legal limit at a BAC of 0.10 percent. In a growing number of U.S. states, and throughout Canada, the limit is 0.08 percent. In some other countries, it's even lower. The BAC limit for all commercial drivers in the United States is 0.04 percent.

The BAC will be over 0.10 percent after three to six drinks (in one hour). Of course, as we've seen, it depends on how much alcohol is in the drinks, and how quickly the person drinks them.

But the ability to drive is affected well below a BAC of 0.10 percent. Research shows that the driving skills of many people are impaired at a BAC approaching 0.05 percent, and that the effects are worse at night. All drivers are impaired at BAC levels above 0.05 percent. Statistics show that the chance of being in a collision increases sharply for drivers who have a BAC of 0.05 percent or above. A driver with a BAC level of 0.06 percent has doubled his or her chance of having a collision. At a BAC level of 0.10 percent, the chance of this driver having a collision is 12 times greater; at a level of 0.15 percent, the chance is 25 times greater!

Downloaded from www.Manualslib.com manuals search engine

The body takes about an hour to rid itself of the alcohol in one drink. No amount of coffee or number of cold showers will speed that up. "I'll be careful" isn't the right answer. What if there's an emergency, a need to take sudden action, as when a child darts into the street? A person with even a moderate BAC might not be able to react quickly enough to avoid the collision.

There's something else about drinking and driving that many people don't know. Medical research shows that alcohol in a person's system can make crash injuries worse, especially injuries to the brain, spinal cord or heart. This means that when anyone who has been drinking -- driver or passenger -- is in a crash, that person's chance of being killed or permanently disabled is higher than if the person had not been drinking.

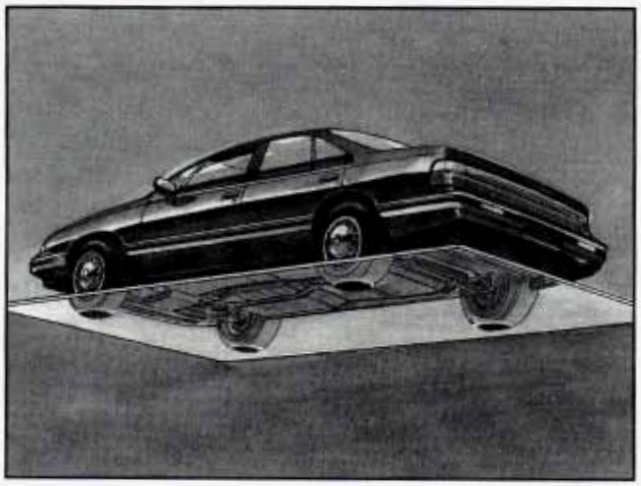

⚠ CAUTION:

Drinking and then driving is very dangerous. Your reflexes, perceptions, attentiveness and judgment can be affected by even a small amount of alcohol. You can have a serious -- or even fatal -- collision if you drive after drinking. Please don't drink and drive or ride with a driver who has been drinking. Ride home in a cab; or if you're with a group, designate a driver who will not drink.

Downloaded from www.Manualslib.com manuals search engine

Control of a Vehicle

You have three systems that make your vehicle go where you want it to go. They are the brakes, the steering and the accelerator. All three systems have to do their work at the places where the tires meet the road.

Sometimes, as when you're driving on snow or ice, it's easy to ask more of those control systems than the tires and road can provide. That means you can lose control of your vehicle.

Braking

Braking action involves *perception time* and *reaction time.*

First, you have to decide to push on the brake pedal. That's *perception time.* Then you have to bring up your foot and do it. That's *reaction time.*

Average *reaction time* is about 3/4 of a second. But that's only an average. It might be less with one driver and as long as two or three seconds or more with another. Age, physical condition, alertness, coordination and eyesight all play a part. So do alcohol, drugs and frustration. But even in 3/4 of a second, a vehicle moving at 60 mph (100 km/h) travels 66 feet (20 m). That could be a lot of distance in an emergency, so keeping enough space between your vehicle and others is important.

And, of course, actual stopping distances vary greatly with the surface of the road (whether it's pavement or gravel); the condition of the road (wet, dry, icy); tire tread; and the condition of your brakes.

Downloaded from www.Manualslib.com manuals search engine

Avoid needless heavy braking. Some people drive in spurts -- heavy acceleration followed by heavy braking -- rather than keeping pace with traffic. This is a mistake. Your brakes may not have time to cool between hard stops. Your brakes will wear out much faster if you do a lot of heavy braking. If you keep pace with the traffic and allow realistic following distances, you will eliminate a lot of unnecessary braking. That means better braking and longer brake life.

If your engine ever stops while you're driving, brake normally but don't pump your brakes. If you do, the pedal may get harder to push down. If your engine stops, you will still have some power brake assist. But you will use it when you brake. Once the power assist is used up, it may take longer to stop and the brake pedal will be harder to push.

Anti-Lock Brakes

Your vehicle has anti-lock brakes (ABS). ABS is an advanced electronic braking system that will help prevent a braking skid.

When you start your engine, or when you begin to drive away, your anti-lock brake system will check itself. You may hear a momentary motor or clicking noise while this test is going on, and you may even notice that your brake pedal moves a little. This is normal.

If there's a problem with the anti-lock brake system, this warning light will stay on or flash. See "Anti-Lock Brake System Warning Light" in the Index.

Downloaded from www.Manualslib.com manuals search engine

Here's how anti-lock works. Let's say the road is wet. You're driving safely. Suddenly an animal jumps out in front of you.

You slam on the brakes. Here's what happens with ABS.

A computer senses that wheels are slowing down. If one of the wheels is about to stop rolling, the computer will separately work the brakes at each front wheel and at the rear wheels.

The anti-lock system can change the brake pressure faster than any driver could. The computer is programmed to make the most of available tire and road conditions.

You can steer around the obstacle while braking hard.

As you brake, your computer keeps receiving updates on wheel speed and controls braking pressure accordingly.

Downloaded from www.Manualslib.com manuals search engine

Remember: Anti-lock doesn't change the time you need to get your foot up to the brake pedal or always decrease stopping distance. If you get too close to the vehicle in front of you, you won't have time to apply your brakes if that vehicle suddenly slows or stops. Always leave enough room up ahead to stop, even though you have anti-lock brakes.

Using Anti-Lock

Don't pump the brakes. Just hold the brake pedal down and let anti-lock work for you. You may feel the system working, or you may notice some noise, but this is normal.

When your anti-lock system is adjusting brake pressure to help avoid a braking skid, this light will come on. See "Low Traction Light" in the Index.

ASR (Acceleration Slip Regulation) System (Option: LT1 V8 Engine)

Your vehicle may have a traction control system called ASR that limits wheel spin. This is especially useful in slippery road conditions. The system operates only if it senses that one or both of the rear wheels are spinning or beginning to lose traction. When this happens, the system works the rear brakes and reduces engine power (by closing the throttle and managing engine spark) to limit wheel spin.

This light will come on when your ASR system is limiting wheel spin. See "Low Traction Light" in the Index. You may feel or hear the system working, but this is normal.

The ASR system may operate on dry roads under some conditions, and you may notice a reduction in acceleration when this happens. This is normal and doesn't mean there's a problem with your vehicle.

Downloaded from www.Manualslib.com manuals search engine

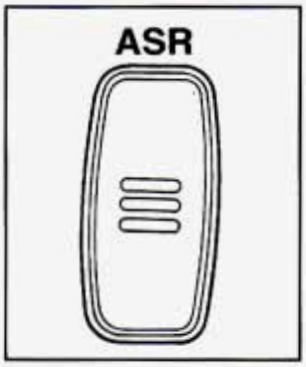

Examples of these conditions include a hard acceleration in a turn, or an abrupt upshift or downshift. Also, when the compact spare tire is on the rear axle, the ASR system will cycle and limit acceleration for about the first 15 seconds of driving after each engine start.

If your vehicle is in cruise control when the ASR system begins to limit wheel spin, the cruise control will automatically disengage. When road conditions allow you to safely use it again, you may re-engage the cruise control. (See "Cruise Control" in the Index.)

When the system is on, this warning light will come on to let you know if there's a problem with your ASR system. See "ASR System Warning Light" in the Index. When this warning light is on, the system will not limit wheel spin. Adjust your driving accordingly.

The ASR system automatically comes on whenever you start your vehicle. To limit wheel spin, especially in slippery road conditions, you should always leave the system on. But you can turn the ASR system off if you ever need to. (You should turn the system off if your vehicle ever gets stuck in sand, mud, ice or snow. See "Rocking Your Vehicle" in the Index.)

To turn the system off, press the button on the console near the cigarette lighter.

The ASR system warning light will come on and stay on. If the ASR system is limiting wheel spin when you press the button, the warning light will come on -- but the system won't turn off right away. It will wait until there's no longer a current need to limit wheel spin.

Downloaded from www.Manualslib.com manuals search engine

You can turn the system back on at any time by pressing the button again. The ASR system warning light should go off.

If your car is equipped with P245/50ZR16 tires, the ASR system will automatically turn off at speeds above 108 mph (174 km/h). (The ASR system warning light will not come on.) When the vehicle speed drops below 103 mph (166 km/h) the system will automatically come on again.

Braking in Emergencies

Use your anti-lock braking system when you need to. With anti-lock, you can steer and brake at the same time. In many emergencies, steering can help you more than even the very best braking.

Steering

Power Steering

If you lose power steering assist because the engine stops or the system is not functioning, you can steer but it will take much more effort.

Steering Tips

Driving on Curves

It's important to take curves at a reasonable speed.

A lot of the "driver lost control" accidents mentioned on the news happen on curves. Here's why:

Experienced driver or beginner, each of us is subject to the same laws of physics when driving on curves. The traction of the tires against the road surface makes it possible for the vehicle to change its path when you turn the front wheels. If there's no traction, inertia will keep the vehicle going in the same direction. If you've ever tried to steer a vehicle on wet ice, you'll understand this.

The traction you can get in a curve depends on the condition of your tires and the road surface, the angle at which the curve is banked, and your speed. While you're in a curve, speed is the one factor you can control.

Suppose you're steering through a sharp curve. Then you suddenly accelerate. Both control systems -- steering and acceleration -- have to do their work where the tires meet the road. Unless you have ASR and the system is on, adding the sudden acceleration can demand too much of those places. You can lose control.

Downloaded from www.Manualslib.com manuals search engine

What should you do if this ever happens? Ease up on the accelerator pedal, steer the vehicle the way you want it to go, and slow down.

Speed limit signs near curves warn that you should adjust your speed. Of course, the posted speeds are based on good weather and road conditions. Under less favorable conditions you'll want to go slower.

If you need to reduce your speed as you approach a curve, do it before you enter the curve, while your front wheels are straight ahead.

Try to adjust your speed so you can "drive" through the curve. Maintain a reasonable, steady speed. Wait to accelerate until you are out of the curve, and then accelerate gently into the straightaway.

Steering in Emergencies

There are times when steering can be more effective than braking. For example, you come over a hill and find a truck stopped in your lane, or a car suddenly pulls out from nowhere, or a child darts out from between parked cars and stops right in front of you. You can avoid these problems by braking -- if you can stop in time. But sometimes you can't; there isn't room. That's the time for evasive action -- steering around the problem.

Your Chevrolet can perform very well in emergencies like these. First apply your brakes. (See "Braking in Emergencies" earlier in this section.) It is better to remove as much speed as you can from a possible collision. Then steer around the problem, to the left or right depending on the space available.

Downloaded from www.Manualslib.com manuals search engine

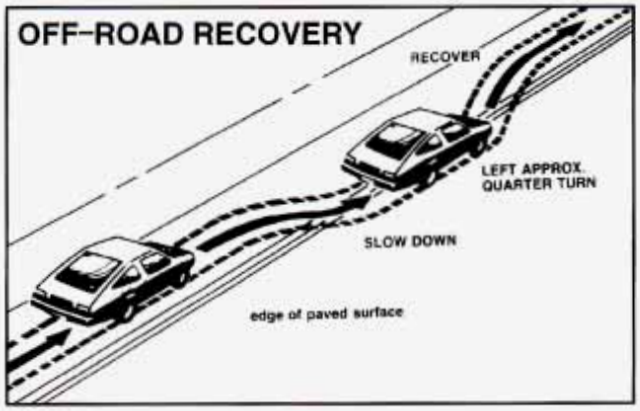

An emergency like this requires close attention and a quick decision. If you are holding the steering wheel at the recommended 9 and 3 o'clock positions, you can turn it a full 180 degrees very quickly without removing either hand. But you have to act fast, steer quickly, and just as quickly straighten the wheel once you have avoided the object.

The fact that such emergency situations are always possible is a good reason to practice defensive driving at all times and wear safety belts properly.

Off-Road Recovery

You may find sometime that your right wheels have dropped off the edge of a road onto the shoulder while you're driving.

If the level of the shoulder is only slightly below the pavement, recovery should be fairly easy. Ease off the accelerator and then, if there is nothing in the way, steer so that your vehicle straddles the edge of the pavement. You can turn the steering wheel up to one-quarter turn until the right front tire contacts the pavement edge. Then turn your steering wheel to go straight down the roadway.

Downloaded from www.Manualslib.com manuals search engine

Passing

The driver of a vehicle about to pass another on a two-lane highway waits for just the right moment, accelerates, moves around the vehicle ahead, then goes back into the right lane again. A simple maneuver?

Not necessarily! Passing another vehicle on a two-lane highway is a potentially dangerous move, since the passing vehicle occupies the same lane as oncoming traffic for several seconds. A miscalculation, an error in judgment, or a brief surrender to frustration or anger can suddenly put the passing driver face to face with the worst of all traffic accidents -- the head-on collision.

So here are some tips for passing:

- "Drive ahead." Look down the road, to the sides and to crossroads for situations that might affect your passing patterns. If you have any doubt whatsoever about making a successful pass, wait for a better time.
- Watch for traffic signs, pavement markings and lines. If you can see a sign up ahead that might indicate a turn or an intersection, delay your pass. A broken center line usually indicates it's all right to pass (providing the road ahead is clear). Never cross a solid line on your side of the lane or a double solid line, even if the road seems empty of approaching traffic.
- Do not get too close to the vehicle you want to pass while you're awaiting an opportunity. For one thing, following too closely reduces your area of vision, especially if you're following a larger vehicle. Also, you won't have adequate space if the vehicle ahead suddenly slows or stops. Keep back a reasonable distance.
- When it looks like a chance to pass is coming up, start to accelerate but stay in the right lane and don't get too close. Time your move so you will be increasing speed as the time comes to move into the other lane. If the way is clear to pass, you will have a "running start" that more than makes up for the distance you would lose by dropping back. And if something happens to cause you to cancel your pass, you need only slow down and drop back again and wait for another opportunity.
- If other cars are lined up to pass a slow vehicle, wait your turn. But take care that someone isn't trying to pass you as you pull out to pass the slow vehicle. Remember to glance over your shoulder and check the blind spot.

Downloaded from www.Manualslib.com manuals search engine

- Check your mirrors, glance over your shoulder, and start your left lane change signal before moving out of the right lane to pass. When you are far enough ahead of the passed vehicle to see its front in your inside mirror, activate your right lane change signal and move back into the right lane. (Remember that your right outside mirror is convex. The vehicle you just passed may seem to be farther away from you than it really is.)
- Try not to pass more than one vehicle at a time on two-lane roads. Reconsider before passing the next vehicle.
- Don't overtake a slowly moving vehicle too rapidly. Even though the brake lamps are not flashing, it may be slowing down or starting to turn.
- If you're being passed, make it easy for the following driver to get ahead of you. Perhaps you can ease a little to the right.

Loss of Control

Let's review what driving experts say about what happens when the three control systems (brakes, steering and acceleration) don't have enough friction where the tires meet the road to do what the driver has asked.

In any emergency, don't give up. Keep trying to steer and constantly seek an escape route or area of less danger.

Skidding

In a skid, a driver can lose control of the vehicle. Defensive drivers avoid most skids by taking reasonable care suited to existing conditions, and by not "overdriving" those conditions. But skids are always possible.

The three types of skids correspond to your Chevrolet's three control systems. In the braking skid, your wheels aren't rolling. In the steering or cornering skid, too much speed or steering in a curve causes tires to slip and lose cornering force. And in the acceleration skid, too much throttle causes the driving wheels to spin.

A cornering skid is best handled by easing your foot off the accelerator pedal.

If you have the ASR system, remember: It helps avoid only the acceleration skid.

If you do not have ASR, or if the system is off, then an acceleration skid is also best handled by easing your foot off the accelerator pedal.

If your vehicle starts to slide, ease your foot off the accelerator pedal and quickly steer the way you want the vehicle to go. If you start steering quickly enough, your vehicle may straighten out. Always be ready for a second skid if it occurs.

Downloaded from www.Manualslib.com manuals search engine

Of course, traction is reduced when water, snow, ice, gravel or other material is on the road. For safety, you'll want to slow down and adjust your driving to these conditions. It is important to slow down on slippery surfaces because stopping distance will be longer and vehicle control more limited.

While driving on a surface with reduced traction, try your best to avoid sudden steering, acceleration or braking (including engine braking by shifting to a lower gear). Any sudden changes could cause the tires to slide. You may not realize the surface is slippery until your vehicle is skidding. Learn to recognize warning clues -- such as enough water, ice or packed snow on the road to make a "mirrored surface" -- and slow down when you have any doubt.

Remember: Any anti-lock brake system (ABS) helps avoid only the braking skid.

Driving at Night

Night driving is more dangerous than day driving. One reason is that some drivers are likely to be impaired -- by alcohol or drugs, with night vision problems, or by fatigue.

Downloaded from www.Manualslib.com manuals search engine

Here are some tips on night driving.

- Drive defensively.
- Don't drink and drive.
- Adjust your inside rearview mirror to reduce the glare from headlamps behind you.
- Since you can't see as well, you may need to slow down and keep more space between you and other vehicles.
- Slow down, especially on higher speed roads. Your headlamps can light up only so much road ahead.
- In remote areas, watch for animals.
- If you're tired, pull off the road in a safe place and rest.

Night Vision

No one can see as well at night as in the daytime. But as we get older these differences increase. A 50-year-old driver may require at least twice as much light to see the same thing at night as a 20-year-old.

What you do in the daytime can also affect your night vision. For example, if you spend the day in bright sunshine you are wise to wear sunglasses. Your eyes will have less trouble adjusting to night. But if you're driving, don't wear sunglasses at night. They may cut down on glare from headlamps, but they also make a lot of things invisible.

You can be temporarily blinded by approaching headlamps. It can take a second or two, or even several seconds, for your eyes to readjust to the dark. When you are faced with severe glare (as from a driver who doesn't lower the high beams, or a vehicle with misaimed headlamps), slow down a little. Avoid staring directly into the approaching headlamps.

Downloaded from www.Manualslib.com manuals search engine

Keep your windshield and all the glass on your vehicle clean -- inside and out. Glare at night is made much worse by dirt on the glass. Even the inside of the glass can build up a film caused by dust. Dirty glass makes lights dazzle and flash more than clean glass would, making the pupils of your eyes contract repeatedly.

Remember that your headlamps light up far less of a roadway when you are in a turn or curve. Keep your eyes moving; that way, it's easier to pick out dimly lighted objects. Just as your headlamps should be checked regularly for proper aim, so should your eyes be examined regularly. Some drivers suffer from night blindness -- the inability to see in dim light -- and aren't even aware of it.

Driving in Rain and on Wet Roads

Rain and wet roads can mean driving trouble. On a wet road, you can't stop, accelerate or turn as well because your tire-to-road traction isn't as good as on dry roads. And, if your tires don't have much tread left, you'll get even less traction. It's always wise to go slower and be cautious if rain starts to fall while you are driving. The surface may get wet suddenly when your reflexes are tuned for driving on dry pavement.

Downloaded from www.Manualslib.com manuals search engine

The heavier the rain, the harder it is to see. Even if your windshield wiper blades are in good shape, a heavy rain can make it harder to see road signs and traffic signals, pavement markings, the edge of the road and even people walking.

It's wise to keep your windshield wiping equipment in good shape and keep your windshield washer tank filled with washer fluid. Replace your windshield wiper inserts when they show signs of streaking or missing areas on the windshield, or when strips of rubber start to separate from the inserts.

Driving too fast through large water puddles or even going through some car washes can cause problems, too. The water may affect your brakes. Try to avoid puddles. But if you can't, try to slow down before you hit them.

⚠ CAUTION:

Wet brakes can cause accidents. They won't work well in a quick stop and may cause pulling to one side. You could lose control of the vehicle.

After driving through a large puddle of water or a car wash, apply your brake pedal lightly until your brakes work normally.

Downloaded from www.Manualslib.com manuals search engine

Hydroplaning

Hydroplaning is dangerous. So much water can build up under your tires that they can actually ride on the water. This can happen if the road is wet enough and you're going fast enough. When your vehicle is hydroplaning, it has little or no contact with the road.

Hydroplaning doesn't happen often. But it can if your tires haven't much tread or if the pressure in one or more is low. It can happen if a lot of water is standing on the road. If you can see reflections from trees, telephone poles or other vehicles, and raindrops "dimple" the water's surface, there could be hydroplaning.

Hydroplaning usually happens at higher speeds. There just isn't a hard and fast rule about hydroplaning. The best advice is to slow down when it is raining.

Driving Through Deep Standing Water

NOTICE:

If you drive too quickly through deep puddles or standing water, water can come in through your engine's air intake and badly damage your engine. Never drive through water that is slightly lower than the underbody of your vehicle. If you can't avoid deep puddles or standing water, drive through them very slowly.

Some Other Rainy Weather Tips

- Turn on your low-beam headlamps -- not just your parking lamps -- to help make you more visible to others.
- Besides slowing down, allow some extra following distance. And be especially careful when you pass another vehicle. Allow yourself more clear room ahead, and be prepared to have your view restricted by road spray.
- Have good tires with proper tread depth. (See "Tires" in the Index.)

Downloaded from www.Manualslib.com manuals search engine

City Driving

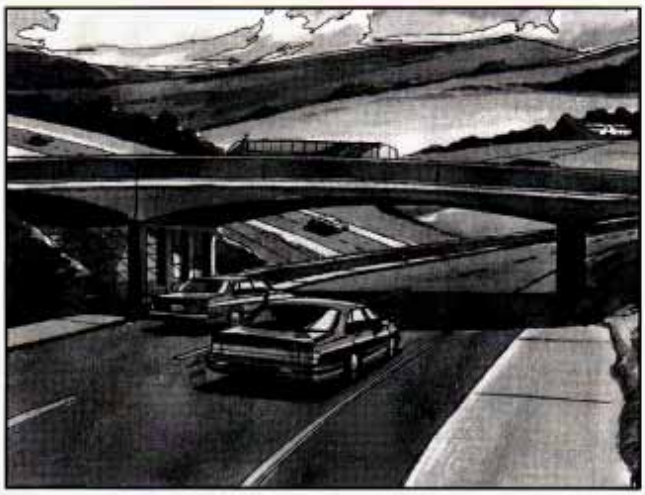

One of the biggest problems with city streets is the amount of traffic on them. You'll want to watch out for what the other drivers are doing and pay attention to traffic signals.

Here are ways to increase your safety in city driving:

- Know the best way to get to where you are going. Get a city map and plan your trip into an unknown part of the city just as you would for a cross-country trip.
- Try to use the freeways that rim and crisscross most large cities. You'll save time and energy. (See the next part, "Freeway Driving.")
- Treat a green light as a warning signal. A traffic light is there because the corner is busy enough to need it. When a light turns green, and just before you start to move, check both ways for vehicles that have not cleared the intersection or may be running the red light.

Downloaded from www.Manualslib.com manuals search engine

Freeway Driving

Mile for mile, freeways (also called thruways, parkways, expressways, turnpikes or superhighways) are the safest of all roads. But they have their own special rules.

The most important advice on freeway driving is: Keep up with traffic and keep to the right. Drive at the same speed most of the other drivers are driving. Too-fast or too-slow driving breaks a smooth traffic flow. Treat the left lane on a freeway as a passing lane.

At the entrance, there is usually a ramp that leads to the freeway. If you have a clear view of the freeway as you drive along the entrance ramp, you should begin to check traffic. Try to determine where you expect to blend with the flow. Try to merge into the gap at close to the prevailing speed. Switch on your turn signal, check your mirrors and glance over your shoulder as often as necessary. Try to blend smoothly with the traffic flow.

Once you are on the freeway, adjust your speed to the posted limit or to the prevailing rate if it's slower. Stay in the right lane unless you want to pass.

Before changing lanes, check your mirrors. Then use your turn signal.

Just before you leave the lane, glance quickly over your shoulder to make sure there isn't another vehicle in your "blind" spot.

Once you are moving on the freeway, make certain you allow a reasonable following distance. Expect to move slightly slower at night.

When you want to leave the freeway, move to the proper lane well in advance. If you miss your exit, do not, under any circumstances, stop and back up. Drive on to the next exit.

The exit ramp can be curved, sometimes quite sharply.

Downloaded from www.Manualslib.com manuals search engine

The exit speed is usually posted.

Reduce your speed according to your speedometer, not to your sense of motion. After driving for any distance at higher speeds, you may tend to think you are going slower than you actually are.

Before Leaving on a Long Trip

Make sure you're ready. Try to be well rested. If you must start when you're not fresh -- such as after a day's work -- don't plan to make too many miles that first part of the journey. Wear comfortable clothing and shoes you can easily drive in.

Is your vehicle ready for a long trip? If you keep it serviced and maintained, it's ready to go. If it needs service, have it done before starting out. Of course, you'll find experienced and able service experts in Chevrolet dealerships all across North America. They'll be ready and willing to help if you need it.

Here are some things you can check before a trip:

- *Windshield Washer Fluid:* Is the reservoir full? Are all windows clean inside and outside?
- *Wiper Blades:* Are they in good shape?
- *Fuel, Engine Oil, Other Fluids:* Have you checked all levels?
- *Lamps:* Are they all working? Are the lenses clean?
- *Tires:* They are vitally important to a safe, trouble-free trip. Is the tread good enough for long-distance driving? Are the tires all inflated to the recommended pressure?
- *Weather Forecasts:* What's the weather outlook along your route? Should you delay your trip a short time to avoid a major storm system?
- *Maps:* Do you have up-to-date maps?

Downloaded from www.Manualslib.com manuals search engine

Highway Hypnosis

Is there actually such a condition as "highway hypnosis"? Or is it just plain falling asleep at the wheel? Call it highway hypnosis, lack of awareness, or whatever.

There is something about an easy stretch of road with the same scenery, along with the hum of the tires on the road, the drone of the engine, and the rush of the wind against the vehicle that can make you sleepy. Don't let it happen to you! If it does, your vehicle can leave the road in *less than a second*, and you could crash and be injured.

What can you do about highway hypnosis? First, be aware that it can happen.

Then here are some tips:

- Make sure your vehicle is well ventilated, with a comfortably cool interior.
- Keep your eyes moving. Scan the road ahead and to the sides. Check your rearview mirrors and your instruments frequently.
- If you get sleepy, pull off the road into a rest, service or parking area and take a nap, get some exercise, or both. For safety, treat drowsiness on the highway as an emergency.

Hill and Mountain Roads

Driving on steep hills or mountains is different from driving in flat or rolling terrain.

If you drive regularly in steep country, or if you're planning to visit there, here are some tips that can make your trips safer and more enjoyable.

Downloaded from www.Manualslib.com manuals search engine

- Keep your vehicle in good shape. Check all fluid levels and also the brakes, tires, cooling system and transmission. These parts can work hard on mountain roads.
- Know how to go down hills. The most important thing to know is this: let your engine do some of the slowing down. Shift to a lower gear when you go down a steep or long hill.

⚠ CAUTION:

If you don't shift down, your brakes could get so hot that they wouldn't work well. You would then have poor braking or even none going down a hill. You could crash. Shift down to let your engine assist your brakes on a steep downhill slope.

⚠ CAUTION:

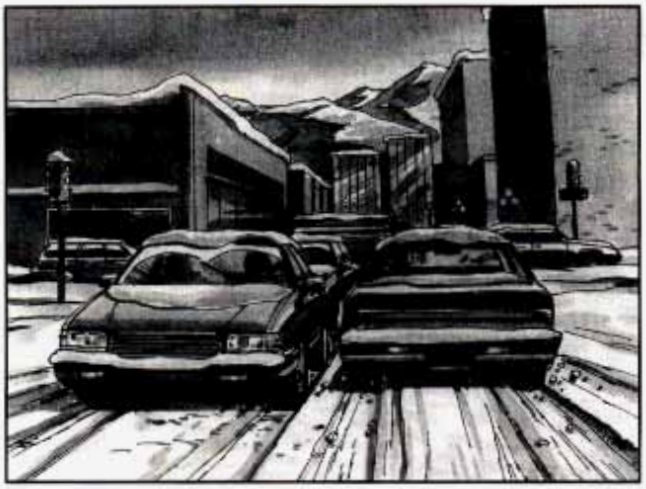

Coasting downhill in NEUTRAL (N) or with the ignition off is dangerous. Your brakes will have to do all the work of slowing down. They could get so hot that they wouldn't work well. You would then have poor braking or even none going down a hill. You could crash. Always have your engine running and your vehicle in gear when you go downhill.

- Know how to go uphill. You may want to shift down to a lower gear. The lower gears help cool your engine and transmission, and you can climb the hill better.
- Stay in your own lane when driving on two-lane roads in hills or mountains. Don't swing wide or cut across the center of the road. Drive at speeds that let you stay in your own lane.
- As you go over the top of a hill, be alert. There could be something in your lane, like a stalled car or an accident.

Downloaded from www.Manualslib.com manuals search engine

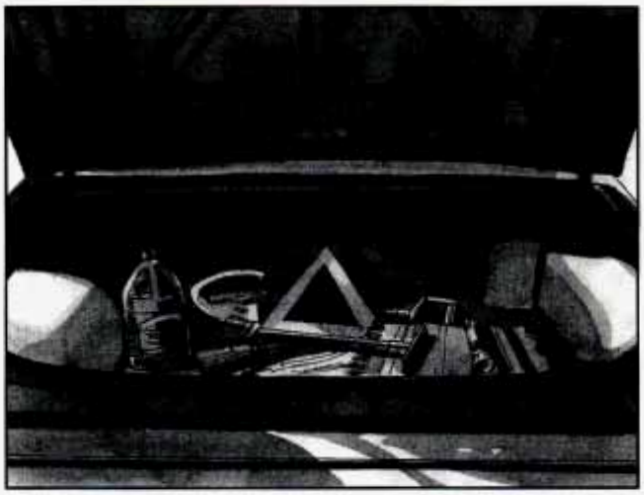

- You may see highway signs on mountains that warn of special problems. Examples are long grades, passing or no-passing zones, a falling rocks area or winding roads. Be alert to these and take appropriate action.

Winter Driving

Here are some tips for winter driving:

- Have your Chevrolet in good shape for winter.
- You may want to put winter emergency supplies in your trunk.

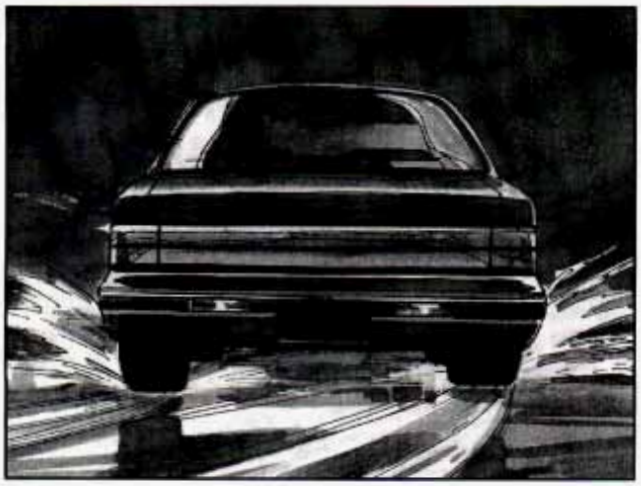

Include an ice scraper, a small brush or broom, a supply of windshield washer fluid, a rag, some winter outer clothing, a small shovel, a flashlight, a red cloth and a couple of reflective warning triangles. And, if you will be driving under severe conditions, include a small bag of sand, a piece of old carpet or a couple of burlap bags to help provide traction. Be sure you properly secure these items in your vehicle.

Downloaded from www.Manualslib.com manuals search engine

Driving on Snow or Ice

Most of the time, those places where your tires meet the road probably have good traction.

However, if there is snow or ice between your tires and the road, you can have a very slippery situation. You'll have a lot less traction or "grip" and will need to be very careful.

What's the worst time for this? "Wet ice." Very cold snow or ice can be slick and hard to drive on. But wet ice can be even more trouble because it may offer the least traction of all. You can get wet ice when it's about freezing (32°F; 0°C) and freezing rain begins to fall. Try to avoid driving on wet ice until salt and sand crews can get there.

Whatever the condition -- smooth ice, packed, blowing or loose snow -- drive with caution.

If you have ASR, keep the system on. It will improve your ability to accelerate when driving on a slippery road. Even though your vehicle has the ASR system, you'll want to slow down and adjust your driving to the road conditions. See "ASR System" in the Index.

If you don't have the ASR system, accelerate gently. Try not to break the fragile traction. If you accelerate too fast, the drive wheels will spin and polish the surface under the tires even more.

Downloaded from www.Manualslib.com manuals search engine

Your anti-lock brakes improve your vehicle's stability when you make a hard stop on a slippery road. Even though you have the anti-lock braking system, you'll want to begin stopping sooner than you would on dry pavement. See "Anti-Lock" in the Index.

- Allow greater following distance on any slippery road.
- Watch for slippery spots. The road might be fine until you hit a spot that's covered with ice. On an otherwise clear road, ice patches may appear in shaded areas where the sun can't reach: around clumps of trees, behind buildings or under bridges. Sometimes the surface of a curve or an overpass may remain icy when the surrounding roads are clear. If you see a patch of ice ahead of you, brake before you are on it. Try not to brake while you're actually on the ice, and avoid sudden steering maneuvers.

If You're Caught in a Blizzard

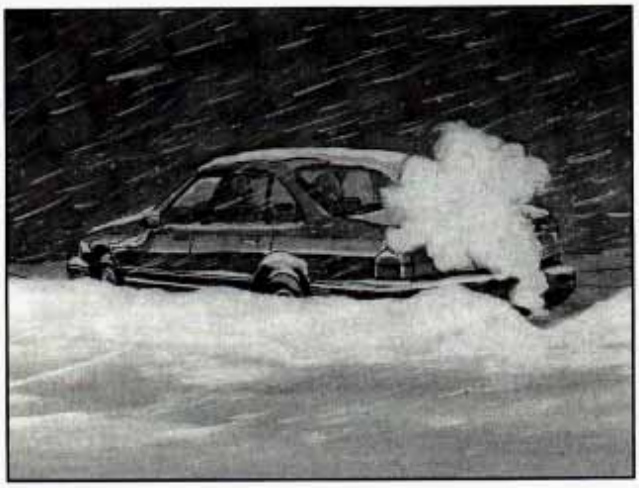

If you are stopped by heavy snow, you could be in a serious situation. You should probably stay with your vehicle unless you know for sure that you are near help and you can hike through the snow. Here are some things to do to summon help and keep yourself and your passengers safe:

- Turn on your hazard flashers.

Downloaded from www.Manualslib.com manuals search engine

- Tie a red cloth to your vehicle to alert police that you've been stopped by the snow.
- Put on extra clothing or wrap a blanket around you. If you have no blankets or extra clothing, make body insulators from newspapers, burlap bags, rags, floor mats -- anything you can wrap around yourself or tuck under your clothing to keep warm.

You can run the engine to keep warm, but be careful.

⚠ CAUTION:

Snow can trap exhaust gases under your vehicle. This can cause deadly CO (carbon monoxide) gas to get inside. CO could overcome you and kill you. You can't see it or smell it, so you might not know it is in your vehicle. Clear away snow from around the base of your vehicle, especially any that is blocking your exhaust pipe. And check around again from time to time to be sure snow doesn't collect there.

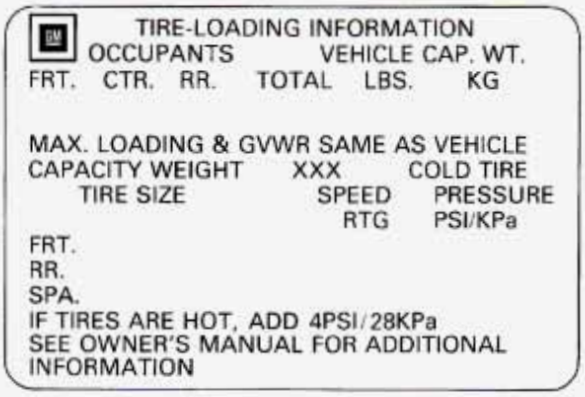

Open a window just a little on the side of the vehicle that's away from the wind. This will help keep CO out.

Downloaded from www.Manualslib.com manuals search engine

Run your engine only as long as you must. This saves fuel. When you run the engine, make it go a little faster than just idle. That is, push the accelerator slightly. This uses less fuel for the heat that you get and it keeps the battery charged. You will need a well-charged battery to restart the vehicle, and possibly for signaling later on with your headlamps. Let the heater run for awhile.

Then, shut the engine off and close the window almost all the way to preserve the heat. Start the engine again and repeat this only when you feel really uncomfortable from the cold. But do it as little as possible. Preserve the fuel as long as you can. To help keep warm, you can get out of the vehicle and do some fairly vigorous exercises every half hour or so until help comes.

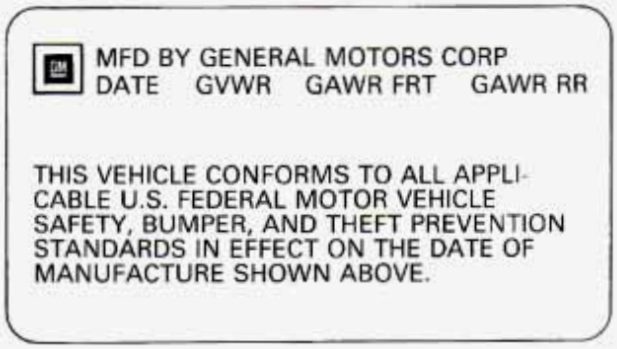

Loading Your Vehicle

TIRE-LOADING INFORMATION
OCCUPANTS VEHICLE CAP. WT.
FRT. CTR. RR. TOTAL LBS. KG

MAX. LOADING & GVWR SAME AS VEHICLE
CAPACITY WEIGHT XXX COLD TIRE
TIRE SIZE SPEED PRESSURE
RTG PSI/KPa
FRT.
RR.
SPA.
IF TIRES ARE HOT, ADD 4PSI/28KPa
SEE OWNER'S MANUAL FOR ADDITIONAL
INFORMATION

Two labels on your vehicle show how much weight it may properly carry. The Tire-Loading Information label found on the rear edge of the driver's door tells you the proper size, speed rating and recommended inflation pressures for the tires on your vehicle. It also gives you important information about the number of people that can be in your vehicle and the total weight that you can carry. This weight is called the vehicle capacity weight and includes the weight of all occupants, cargo and all nonfactory-installed options.

Downloaded from www.Manualslib.com manuals search engine

The other label, is the Certification label, found on the rear edge of the driver's door. It tells you the gross weight capacity of your vehicle, called the GVWR (Gross Vehicle Weight Rating). The GVWR includes the weight of the vehicle, all occupants, fuel and cargo. Never exceed the GVWR for your vehicle, or the Gross Axle Weight Rating GAWR for either the front or rear axle.

And, if you do have a heavy load, you should spread it out. Don't carry more than 100 lbs. (45 kg) in your rear area.

⚠ CAUTION:

Do not load your vehicle any heavier than the GVWR, or either the maximum front or rear GAWR. If you do, parts on your vehicle can break, or it can change the way your vehicle handles. These could cause you to lose control. Also, overloading can shorten the life of your vehicle.

If you put things inside your vehicle -- like suitcases, tools, packages or anything else -- they will go as fast as the vehicle goes. If you have to stop or turn quickly, or if there is a crash, they'll keep going.

Downloaded from www.Manualslib.com manuals search engine

⚠ CAUTION:

Things you put inside your vehicle can strike and injure people in a sudden stop or turn, or in a crash.

- **Put things in the rear area of your vehicle. Try to spread the weight evenly.**
- **Never stack heavier things, like suitcases, inside the vehicle so that some of them are above the tops of the seats.**
- **Don't leave an unsecured child restraint in your vehicle.**
- **When you carry something inside the vehicle, secure it whenever you can.**
- **Don't leave a seat folded down unless you need to.**

Towing a Trailer

⚠ CAUTION:

If you don't use the correct equipment and drive properly, you can lose control when you pull a trailer. For example, if the trailer is too heavy, the brakes may not work well -- or even at all. You and your passengers could be seriously injured. Pull a trailer only if you have followed all the steps in this section. Ask your Chevrolet dealer for advice and information about towing a trailer with your vehicle.

NOTICE:

Pulling a trailer improperly can damage your vehicle and result in costly repairs not covered by your warranty. To pull a trailer correctly, follow the advice in this part, and see your Chevrolet dealer for important information about towing a trailer with your vehicle.

Downloaded from www.Manualslib.com manuals search engine

Your car can tow a trailer if it is equipped with either the 3800 V6 or the 5.7L LT1 engine and proper trailer towing equipment. To identify what the vehicle trailering capacity is for your vehicle, you should read the information in "Weight of the Trailer" that appears later in this section. But trailering is different than just driving your vehicle by itself. Trailering means changes in handling, durability, and fuel economy. Successful, safe trailering takes correct equipment, and it has to be used properly.

That's the reason for this part. In it are many time-tested, important trailering tips and safety rules. Many of these are important for your safety and that of your passengers. So please read this section carefully before you pull a trailer.

Load-pulling components such as the engine, transmission, rear axle, wheel assemblies and tires are forced to work harder against the drag of the added weight. The engine is required to operate at relatively higher speeds and under greater loads, generating extra heat. What's more, the trailer adds considerably to wind resistance, increasing the pulling requirements.

If You Do Decide To Pull A Trailer

If you do, here are some important points:

- There are many different laws, including speed limit restrictions, having to do with trailering. Make sure your rig will be legal, not only where you live but also where you'll be driving. A good source for this information can be state or provincial police.
- Consider using a sway control. You can ask a hitch dealer about sway controls.
- Don't tow a trailer at all during the first 1,000 miles (1 600 km) your new vehicle is driven. Your engine, axle or other parts could be damaged.
- Then, during the first 500 miles (800 km) that you tow a trailer, don't drive over 50 mph (80 km/h) and don't make starts at full throttle. This helps your engine and other parts of your vehicle wear in at the heavier loads.
- Obey speed limit restrictions when towing a trailer. Don't drive faster than the maximum posted speed for trailers (or no more than 55 mph (90 km/h)) to save wear on your vehicle's parts.

Downloaded from www.Manualslib.com manuals search engine

Three important considerations have to do with weight:
the weight of the trailer,
the weight of the trailer tongue
and the total weight on your vehicle's tires.

Weight of the Trailer

How heavy can a trailer safely be?

It should never weigh more than 1,500 lbs. (680 kg) under normal driving conditions. It should never weigh more than 1,000 lbs. (450 kg) when driven on long grades at high ambient temperatures. But even that can be too heavy.

It depends on how you plan to use your rig. For example, speed, altitude, road grades, outside temperature and how much your vehicle is used to pull a trailer are all important. And, it can also depend on any special equipment that you have on your vehicle.

You can ask your dealer for our trailering information or advice, or you can write us at:

Chevrolet Motor Division
Customer Assistance Department
P.O. Box 7047
Troy, MI 48007-7047

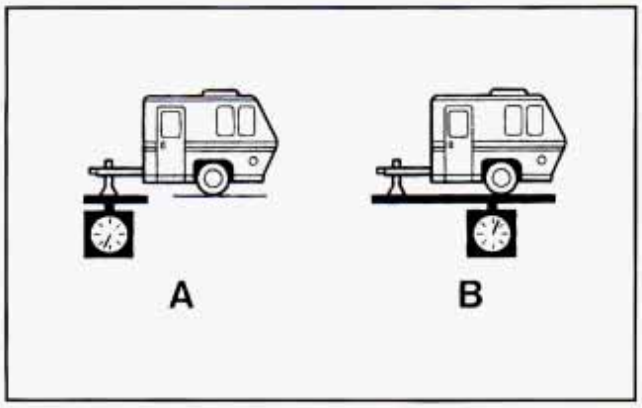

In Canada, write to:

General Motors of Canada Limited
Customer Assistance Center
1908 Colonel Sam Drive
Oshawa, Ontario L1H 8P7

Downloaded from www.Manualslib.com manuals search engine

Weight of the Trailer Tongue

The tongue load (A) of any trailer is an important weight to measure because it affects the total capacity weight of your vehicle. The capacity weight includes the curb weight of the vehicle, any cargo you may carry in it, and the people who will be riding in the vehicle. And if you will tow a trailer, you must subtract the tongue load from your vehicle's capacity weight because your vehicle will be carrying that weight, too. See "Loading Your Vehicle" in the Index for more information about your vehicle's maximum load capacity.

If you're using a weight-carrying hitch, the trailer tongue (A) should weigh 10% of the total loaded trailer weight (B). If you have a weight-distributing hitch, the trailer tongue (A) should weigh 12% of the total loaded trailer weight (B).

After you've loaded your trailer, weigh the trailer and then the tongue, separately, to see if the weights are proper. If they aren't, you may be able to get them right simply by moving some items around in the trailer.

Total Weight on Your Vehicle's Tires

Be sure your vehicle's tires are inflated to the recommended pressure for cold tires. You'll find these numbers on the Certification label at the rear edge of the driver's door or see "Loading Your Vehicle" in the Index. Then be sure you don't go over the GVW limit for your vehicle, including the weight of the trailer tongue.

Downloaded from www.Manualslib.com manuals search engine

Hitches

It's important to have the correct hitch equipment. Crosswinds, large trucks going by and rough roads are a few reasons why you'll need the right hitch. Here are some rules to follow:

- Will you have to make any holes in the body of your vehicle when you install a trailer hitch? If you do, then be sure to seal the holes later when you remove the hitch. If you don't seal them, deadly carbon monoxide (CO) from your exhaust can get into your vehicle (see "Carbon Monoxide" in the Index). Dirt and water can, too.
- The bumpers on your vehicle are not intended for hitches. Do not attach rental hitches or other bumper-type hitches to them. Use only a frame-mounted hitch that does not attach to the bumper.

Safety Chains

You should always attach chains between your vehicle and your trailer. Cross the safety chains under the tongue of the trailer so that the tongue will not drop to the road if it becomes separated from the hitch. Instructions about safety chains may be provided by the hitch manufacturer or by the trailer manufacturer. Follow the manufacturer's recommendation for attaching safety chains and do not attach them to the bumper. Always leave just enough slack so you can turn with your rig. And, never allow safety chains to drag on the ground.

Trailer Brakes

If your trailer weighs more than 1,000 lbs. (450 kg) loaded, then it needs its own brakes -- and they must be adequate. Be sure to read and follow the instructions for the trailer brakes so you'll be able to install, adjust and maintain them properly. Because you have anti-lock brakes, do not try to tap into your vehicle's brake system. If you do, both brake systems won't work well, or at all.

Downloaded from www.Manualslib.com manuals search engine

Driving with a Trailer

Towing a trailer requires a certain amount of experience. Before setting out for the open road, you'll want to get to know your rig. Acquaint yourself with the feel of handling and braking with the added weight of the trailer. And always keep in mind that the vehicle you are driving is now a good deal longer and not nearly as responsive as your vehicle is by itself.

Before you start, check the trailer hitch and platform (and attachments), safety chains, electrical connector, lamps, tires and mirror adjustment. If the trailer has electric brakes, start your vehicle and trailer moving and then apply the trailer brake controller by hand to be sure the brakes are working. This lets you check your electrical connection at the same time.

During your trip, check occasionally to be sure that the load is secure, and that the lamps and any trailer brakes are still working.

Following Distance

Stay at least twice as far behind the vehicle ahead as you would when driving your vehicle without a trailer. This can help you avoid situations that require heavy braking and sudden turns.

Passing

You'll need more passing distance up ahead when you're towing a trailer. And, because you're a good deal longer, you'll need to go much farther beyond the passed vehicle before you can return to your lane.

Backing Up

Hold the bottom of the steering wheel with one hand. Then, to move the trailer to the left, just move that hand to the left. To move the trailer to the right, move your hand to the right. Always back up slowly and, if possible, have someone guide you.

Downloaded from www.Manualslib.com manuals search engine

Making Turns

NOTICE:

Making very sharp turns while trailering could cause the trailer to come in contact with the vehicle. Your vehicle could be damaged. Avoid making very sharp turns while trailering.

When you're turning with a trailer, make wider turns than normal. Do this so your trailer won't strike soft shoulders, curbs, road signs, trees or other objects. Avoid jerky or sudden maneuvers. Signal well in advance.

Turn Signals When Towing a Trailer

When you tow a trailer, your vehicle may need a different turn signal flasher and/or extra wiring. Check with your Chevrolet dealer. The green arrows on your instrument panel will flash whenever you signal a turn or lane change. Properly hooked up, the trailer lamps will also flash, telling other drivers you're about to turn, change lanes or stop.

When towing a trailer, the green arrows on your instrument panel will flash for turns even if the bulbs on the trailer are burned out. Thus, you may think drivers behind you are seeing your signal when they are not. It's important to check occasionally to be sure the trailer bulbs are still working.

Downloaded from www.Manualslib.com manuals search engine

Driving On Grades

Reduce speed and shift to a lower gear *before* you start down a long or steep downgrade. If you don't shift down, you might have to use your brakes so much that they would get hot and no longer work well.

On a long uphill grade, shift down and reduce your speed to around 45 mph (70 km/h) to reduce the possibility of engine and transmission overheating.

If you are towing a trailer and you have an automatic transmission with overdrive, you may prefer to drive in DRIVE (D) instead of AUTOMATIC OVERDRIVE (Ⓓ) or, as you need to, a lower gear). Or, if you have a manual transmission with FIFTH (5) or SIXTH (6) gear. It is better not to use FIFTH (5) or SIXTH (6) gear. Just drive in FOURTH (4) gear (FIFTH (5) gear if you have a six-speed manual transmission) (or, as you need to, a lower gear).

Parking on Hills

You really should not park your vehicle, with a trailer attached, on a hill. If something goes wrong, your rig could start to move. People can be injured, and both your vehicle and the trailer can be damaged.

But if you ever have to park your rig on a hill, here's how to do it:

1. Apply your regular brakes, but don't shift into PARK (P) yet, or into gear for a manual transmission.
2. Have someone place chocks under the trailer wheels.
3. When the wheel chocks are in place, release the regular brakes. Then apply your parking brakes until the chocks absorb the load.
4. Reapply the regular brakes. Then apply your parking brake and then shift to PARK(P) or REVERSE (R) for a manual transmission.
5. Release the regular brakes.

Downloaded from www.Manualslib.com manuals search engine

When You Are Ready to Leave After Parking on a Hill

1. Apply your regular brakes and hold the pedal down while you:
   - Start your engine;
   - Shift into a gear; and
   - Release the parking brake.
2. Let up on the brake pedal.
3. Drive slowly until the trailer is clear of the chocks.
4. Stop and have someone pick up and store the chocks.

Maintenance When Trailer Towing

Your vehicle will need service more often when you're pulling a trailer. See the Maintenance Schedule for more on this. Things that are especially important in trailer operation are automatic transmission fluid (don't overfill), engine oil, axle lubricant, belt, cooling system and brake adjustment. Each of these is covered in this manual, and the Index will help you find them quickly. If you're trailering, it's a good idea to review these sections before you start your trip.

Check periodically to see that all hitch nuts and bolts are tight.

NOTES

Downloaded from www.Manualslib.com manuals search engine

Section 5 Problems on the Road

Here you'll find what to do about some problems that can occur on the road.

Hazard Warning Flashers

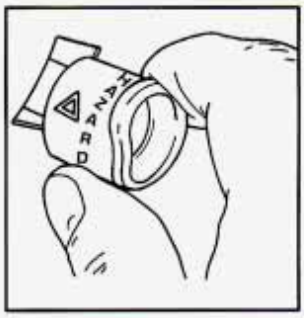

Your hazard warning flashers let you warn others. They also let police know you have a problem. Your front and rear turn signal lamps will flash on and off.

Press the button in to make your front and rear turn signal lamps flash on and off.

Your hazard warning flashers work no matter what position your key is in, and even if the key isn't in.

Downloaded from www.Manualslib.com manuals search engine

To turn off the flashers, pull out on the collar.

When the hazard warning flashers are on, your turn signals won't work.

Other Warning Devices

If you carry reflective triangles, you can set one up at the side of the road about 300 feet (100 m) behind your vehicle.

Jump Starting

If your battery has run down, you may want to use another vehicle and some jumper cables to start your Chevrolet. But please follow the steps below to do it safely.

⚠ CAUTION:

Batteries can hurt you. They can be dangerous because:

- **They contain acid that can burn you.**
- **They contain gas that can explode or ignite.**
- **They contain enough electricity to burn you.**

If you don't follow these steps exactly, some or all of these things can hurt you.

Downloaded from www.Manualslib.com manuals search engine

NOTICE:

Ignoring these steps could result in costly damage to your vehicle that wouldn't be covered by your warranty.

Trying to start your Chevrolet by pushing or pulling it could damage your vehicle, even if you have a manual transmission. And if you have an automatic transmission, it won't start that way.

1. Check the other vehicle. It must have a 12-volt battery with a negative ground system.

NOTICE:

If the other system isn't a 12-volt system with a negative ground, both vehicles can be damaged.

2. Get the vehicles close enough so the jumper cables can reach, but be sure the vehicles aren't touching each other. If they are, it could cause a ground connection you don't want. You wouldn't be able to start your Chevrolet, and the bad grounding could damage the electrical systems.
3. Turn off the ignition on both vehicles. Unplug unnecessary accessories plugged into the cigarette lighter. Turn off all lamps that aren't needed as well as radios. This will avoid sparks and help save both batteries. And it could save your radio!

NOTICE:

If you leave your radio on, it could be badly damaged. The repairs wouldn't be covered by your warranty.

Downloaded from www.Manualslib.com manuals search engine

4. Open the hoods and locate the batteries.

   Find the positive (+) and negative (-) terminals on each battery.

⚠ CAUTION:

An electric fan can start up even when the engine is not running and can injure you. Keep hands, clothing and tools away from any underhood electric fan.

⚠ CAUTION:

Using a match near a battery can cause battery gas to explode. People have been hurt doing this, and some have been blinded. Use a flashlight if you need more light.

Be sure the battery has enough water. You don't need to add water to the Delco Freedom® battery installed in every new GM vehicle. But if a battery has filler caps, be sure the right amount of fluid is there. If it is low, add water to take care of that first. If you don't, explosive gas could be present.

Battery fluid contains acid that can burn you. Don't get it on you. If you accidentally get it in your eyes or on your skin, flush the place with water and get medical help immediately.

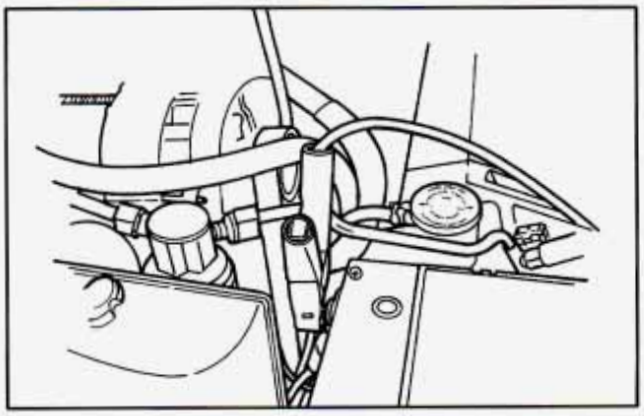

Downloaded from www.Manualslib.com manuals search engine

5. Check that the jumper cables don't have loose or missing insulation. If they do, you could get a shock. The vehicles could be damaged, too.

   Before you connect the cables, here are some basic things you should know. Positive (+) will go to positive (+) and negative (-) will go to negative (-) or a metal engine part. Don't connect positive (+) to negative (-) or you'll get a short that would damage the battery and maybe other parts, too.

⚠ CAUTION:

Fans or other moving engine parts can injure you badly. Keep your hands away from moving parts once the engines are running.

6. Connect the red positive (+) cable to the positive (+) terminal of the vehicle with the dead battery. Use a remote positive (+) terminal if the vehicle has one.

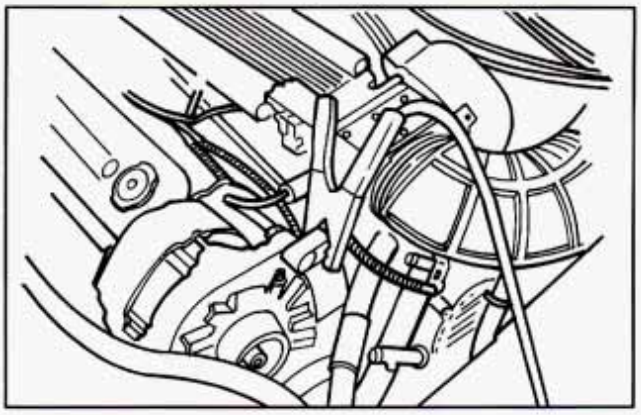

Downloaded from www.Manualslib.com manuals search engine

7. Don't let the other end touch metal. Connect it to the positive (+) terminal of the good battery. Use a remote positive (+) terminal if the vehicle has one. But don't use the junction block on your Chevrolet.

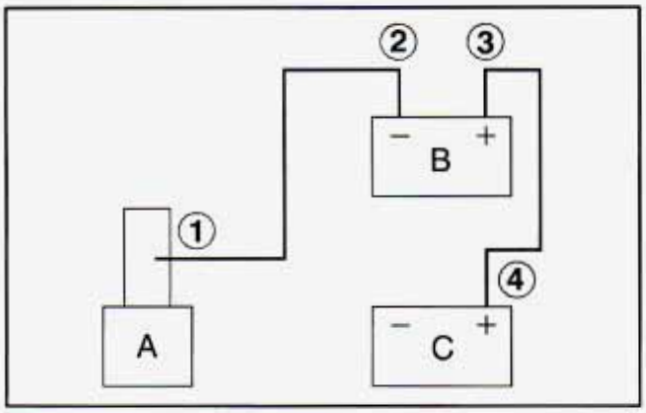

8. Now connect the black negative (-) cable to the good battery's negative (-) terminal. Don't let the other end touch anything until the next step. The other end of the negative (-) cable doesn't go to the dead battery. It goes to a heavy unpainted metal part on the engine of the vehicle with the dead battery.

9. Attach the cable at least 18 inches (45 cm) away from the dead battery, but not near engine parts that move. The electrical connection is just as good there, but the chance of sparks getting back to the battery is much less.
10. Now start the vehicle with the good battery and run the engine for a while.
11. Try to start the vehicle with the dead battery. If it won't start after a few tries, it probably needs service.

Downloaded from www.Manualslib.com manuals search engine

12. Remove the cables in reverse order to prevent electrical shorting. Take care that they don't touch each other or any other metal.

A. Heavy Metal Engine Part

B. Good Battery

C. Dead Battery

Towing Your Vehicle

Try to have a Chevrolet dealer or a professional towing service tow your Camaro.

If your vehicle has been changed or modified since it was factory-new by adding aftermarket items like fog lamps, aero skirting, or special tires and wheels, these instructions and illustrations may not be correct.

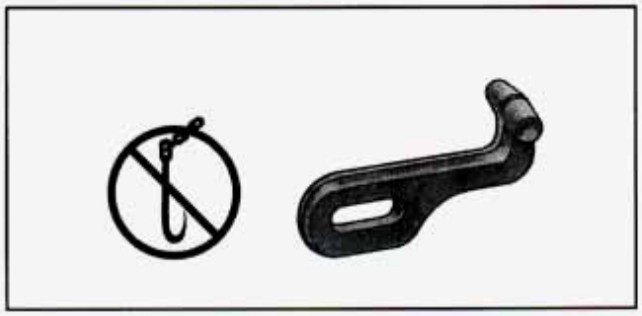

Before you do anything, turn on the hazard warning flashers.

When you call, tell the towing service:

- That your vehicle cannot be towed from the front or rear with sling-type equipment.
- That your vehicle has rear-wheel drive.
- The make, model and year of your vehicle.
- Whether you can still move the shift lever.
- If there was an accident, what was damaged.

Downloaded from www.Manualslib.com manuals search engine

When the towing service arrives, let the tow operator know that this manual contains detailed towing instructions and illustrations. The operator may want to see them.

⚠ CAUTION:

To help avoid injury to you or others:

- **Never let passengers ride in a vehicle that is being towed.**
- **Never tow faster than safe or posted speeds.**
- **Never tow with damaged parts not fully secured.**
- **Never get under your vehicle after it has been lifted by the tow truck.**
- **Always secure the vehicle on each side with separate safety chains when towing it.**
- **Never use J-hooks. Use T-hooks instead.**

Downloaded from www.Manualslib.com manuals search engine

⚠ CAUTION:

A vehicle can fall from a car carrier if it isn't adequately secured. This can cause a collision, serious personal injury and vehicle damage. The vehicle should be tightly secured with chains or steel cables before it is transported.

Don't use substitutes (ropes, leather straps, canvas webbing, etc.) that can be cut by sharp edges underneath the towed vehicle. Always use T-hooks inserted in the T-hook slots. Never use J-hooks. They will damage drivetrain and suspension components.

When your vehicle is being towed, have the ignition key turned to the OFF position. The steering wheel should be clamped in a straight-ahead position, with a clamping device designed for towing service. Do not use the vehicle's steering column lock for this. The transmission should be in NEUTRAL (N) and the parking brake released.

Don't have your vehicle towed on the drive wheels, unless you must. If the vehicle must be towed on the drive wheels, be sure to follow the speed and distance restrictions later in this section or your transmission will be damaged. If these limitations must be exceeded, then the drive wheels have to be supported on a dolly.

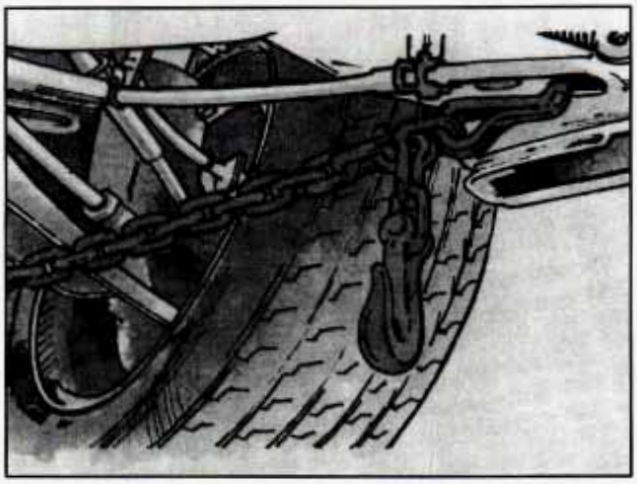

Downloaded from www.Manualslib.com manuals search engine

Front Towing

Tow Limits -- 35 mph (55 km/h), 50 miles (80 km)

Do not tow with sling-type equipment or fascia/fog lamp damage will occur.

Use wheel lift or car carrier equipment. Additional ramping may be required for car carrier equipment. Use safety chains and wheel straps.

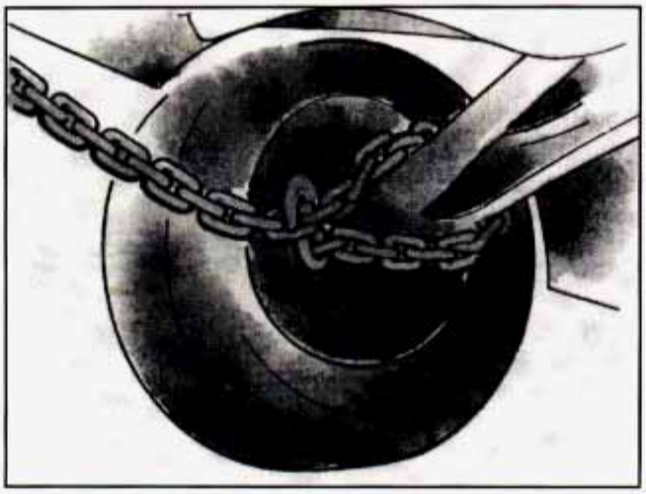

Attach T-hook chains to slots in frame, rearward of front wheels, on both sides.

NOTICE:

Do not attach winch cables or J-hooks to suspension components when using car carrier equipment. Always use T-hooks inserted in the T-hook slots.

Downloaded from www.Manualslib.com manuals search engine

Attach a separate safety chain around outboard end of each lower control arm.

NOTICE:

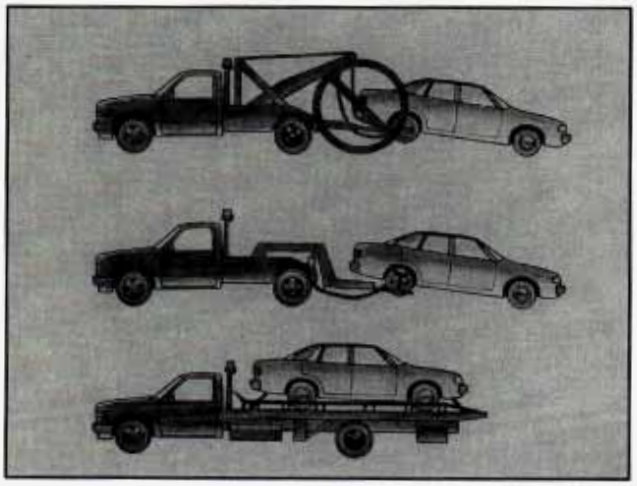

Take care not to damage the brake pipes and hoses or the ABS sensor and wiring.

NOTICE:

Towing a vehicle over rough surfaces could damage a vehicle. Damage can occur from vehicle to ground or vehicle-to wheel-lift equipment-contact. To help avoid damage, install a towing dolly and raise vehicle until adequate clearance is obtained between the ground and/or wheel-lift equipment.

Downloaded from www.Manualslib.com manuals search engine

Rear Towing

NOTICE:

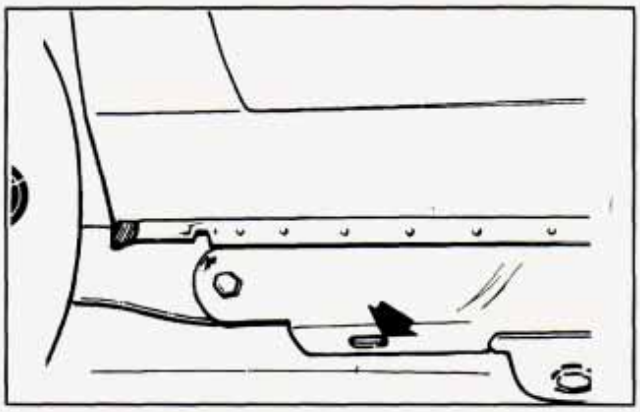

Do not attach winch cables or J-hooks to suspension components when using car carrier equipment. Always use T-hooks inserted in the T-hook slots. Do not tow with sling-type equipment or rear bumper valance will be damaged.

Use wheel lift or car carrier equipment. Additional ramping may be required for car carrier equipment.

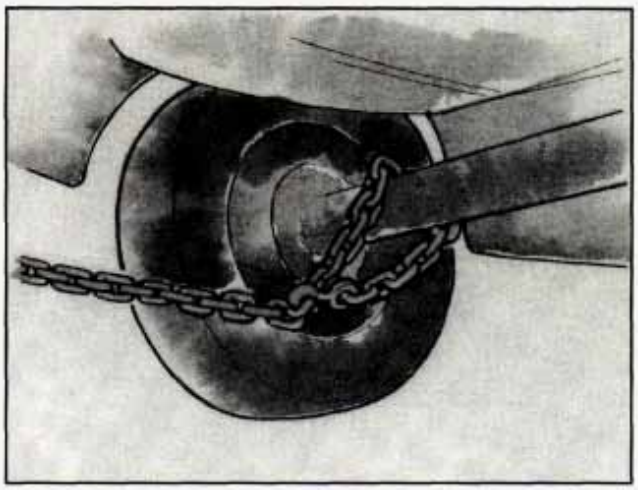

Use safety chains and wheel straps.

Towing a vehicle over rough surfaces could damage a vehicle. Damage can occur from vehicle to ground or vehicle to wheel-lift equipment contact. To help avoid damage, install a towing dolly and raise vehicle until adequate clearance is obtained between the ground and/or wheel-lift equipment.

Downloaded from www.Manualslib.com manuals search engine

Attach T-hook chains in front of rear wheels, in the bottom of frame rail, on both sides.

Attach a separate safety chain around each outboard end of the rear axle.

NOTICE:

Take care not to damage the brake pipes and cables.

Downloaded from www.Manualslib.com manuals search engine

Engine Overheating

You will find a coolant temperature gage on your Chevrolet's instrument panel. You may also find a LOW COOLANT warning light on your Chevrolet's instrument panel.

If Steam Is Coming From Your Engine

⚠ CAUTION:

Steam from an overheated engine can burn you badly, even if you just open the hood. Stay away from the engine if you see or hear steam coming from it. Just turn it off and get everyone away from the vehicle until it cools down. Wait until there is no sign of steam or coolant before opening the hood.

If you keep driving when your engine is overheated, the liquids in it can catch fire. You or others could be badly burned. Stop your engine if it overheats, and get out of the vehicle until the engine is cool.

NOTICE:

If your engine catches fire because you keep driving with no coolant, your vehicle can be badly damaged. The costly repairs would not be covered by your warranty.

Downloaded from www.Manualslib.com manuals search engine

If No Steam Is Coming From Your Engine

If you get the overheat warning but see or hear no steam, the problem may not be too serious. Sometimes the engine can get a little too hot when you:

- Climb a long hill on a hot day.
- Stop after high-speed driving.
- Idle for long periods in traffic.
- Tow a trailer.

If you get the overheat warning with no sign of steam, try this for a minute or so:

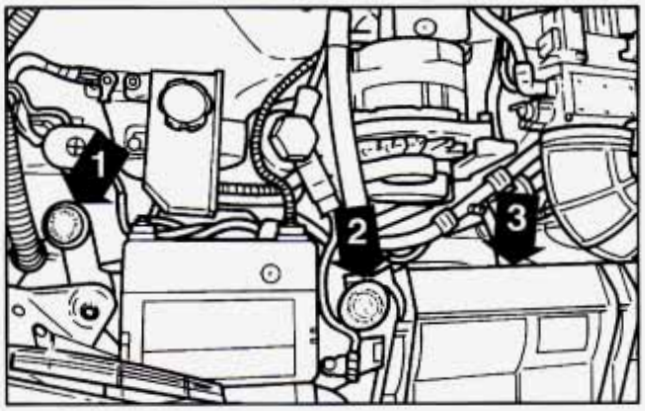

1. If you have an air conditioner, turn it off.
2. Turn on your heater to full hot at the highest fan speed and open the window as necessary.
3. If you're in a traffic jam, shift to NEUTRAL (N); otherwise, shift to the highest gear while driving -- AUTOMATIC OVERDRIVE (Ⓓ) or DRIVE (D) for automatic transmissions.

If you no longer have the overheat warning, you can drive. Just to be safe, drive slower for about 10 minutes. If the warning doesn't come back on, you can drive normally.

If the warning continues, pull over, stop, and park your vehicle right away.

If there's still no sign of steam, you can idle the engine for two or three minutes while you're parked, to see if the warning stops. But then, if you still have the warning, *turn off the engine and get everyone out of the vehicle* until it cools down.

You may decide not to lift the hood but to get service help right away.

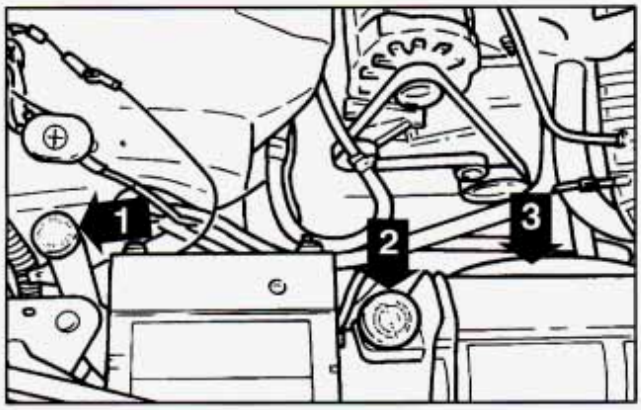

V8 Engine

Downloaded from www.Manualslib.com manuals search engine

When you decides it's safe to lift the hood, here's what you'll see:

1. Coolant Recovery Tank
2. Radiator Pressure Cap
3. Electric Engine Fan

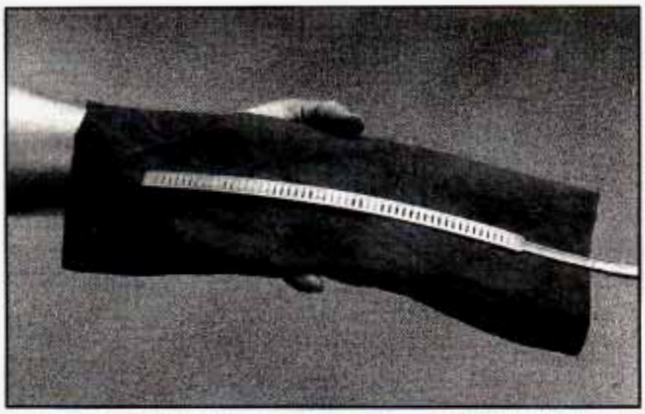

V6 Engine

⚠ CAUTION:

An electric fan under the hood can start up even when the engine is not running and can injure you. Keep hands, clothing and tools away from any underhood electric fan.

If the coolant inside the coolant recovery tank is boiling, don't do anything else until it cools down.

Downloaded from www.Manualslib.com manuals search engine

When it is cool, remove the coolant recovery tank cap and look at the dipstick.

The coolant level should be FULL COLD. If it isn't, you may have a leak in the radiator hoses, heater hoses, radiator, water pump or somewhere else in the cooling system.

⚠ CAUTION:

Heater and radiator hoses, and other engine parts, can be very hot. Don't touch them. If you do, you can be burned.

Don't run the engine if there is a leak. If you run the engine, it could lose all coolant. That could cause an engine fire, and you could be burned. Get any leak fixed before you drive the vehicle.

NOTICE:

Engine damage from running your engine without coolant isn't covered by your warranty.

If there seems to be no leak, with the engine on, check to see if the electric engine fan is running. If the engine is overheating, the fan should be running. If it isn't, your vehicle needs service.

Downloaded from www.Manualslib.com manuals search engine

How to Add Coolant to the Coolant Recovery Tank

If you haven't found a problem yet, but the coolant level isn't at FULL COLD, add a 50/50 mixture of *clean water* (preferably distilled) and DEX-COOL™ (orange-colored, silicate-free) antifreeze at the coolant recovery tank. (See "Engine Coolant" in the Index for more information.)

⚠ CAUTION:

Adding only plain water to your cooling system can be dangerous. Plain water, or some other liquid like alcohol, can boil before the proper coolant mix will. Your vehicle's coolant warning system is set for the proper coolant mix. With

CAUTION: (Continued)

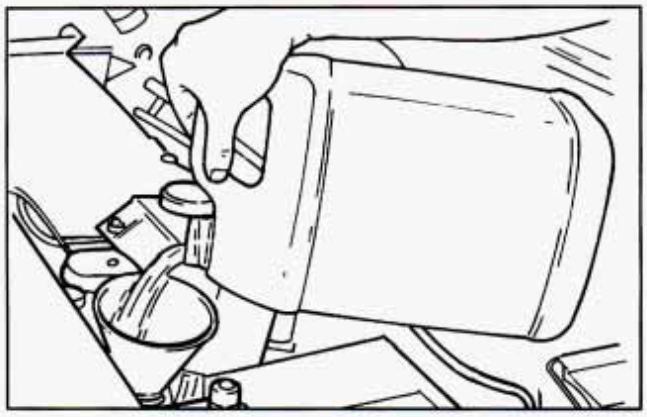

CAUTION: (Continued)

plain water or the wrong mix, your engine could get too hot but you wouldn't get the overheat warning. Your engine could catch fire and you or others could be burned. Use a 50/50 mix of clean water and DEX-COOL™ antifreeze.

NOTICE:

In cold weather, water can freeze and crack the engine, radiator, heater core and other parts. Use the recommended coolant and the proper coolant mix.

Downloaded from www.Manualslib.com manuals search engine

⚠ CAUTION:

You can be burned if you spill coolant on hot engine parts. Coolant contains ethylene glycol and it will burn if the engine parts are hot enough. Don't spill coolant on a hot engine.

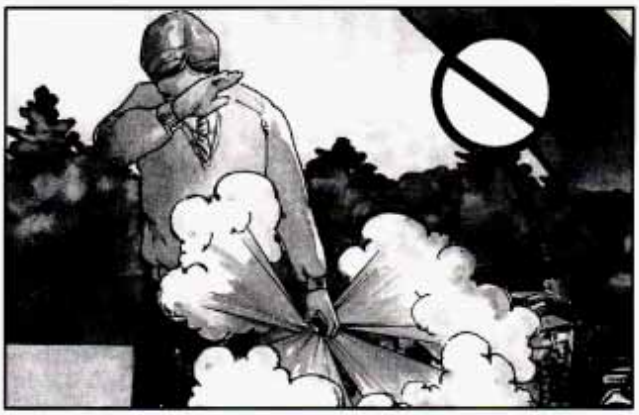

When the coolant in the coolant recovery tank is at FULL COLD, start your vehicle.

If the overheat warning continues, there's one more thing you can try. You can add the proper coolant mix directly to the radiator, but be sure the cooling system is cool before you do it.

Downloaded from www.Manualslib.com manuals search engine

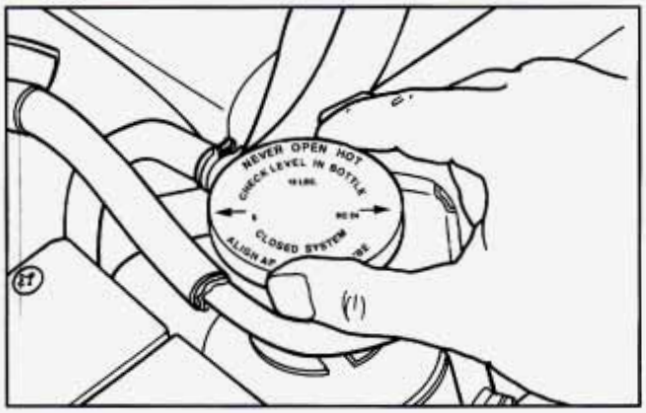

⚠ CAUTION:

Steam and scalding liquids from a hot cooling system can blow out and burn you badly. They are under pressure, and if you turn the radiator pressure cap -- even a little -- they can come out at high speed. Never turn the cap when the cooling system, including the radiator pressure cap, is hot. Wait for the cooling system and radiator pressure cap to cool if you ever have to turn the pressure cap.

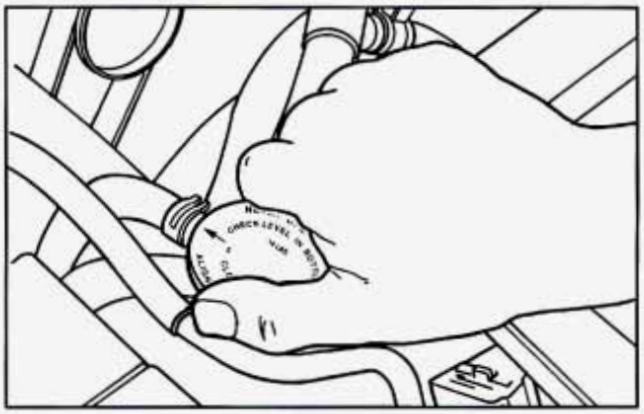

Downloaded from www.Manualslib.com manuals search engine

How to Add Coolant to the Radiator (V6 Engine) Only

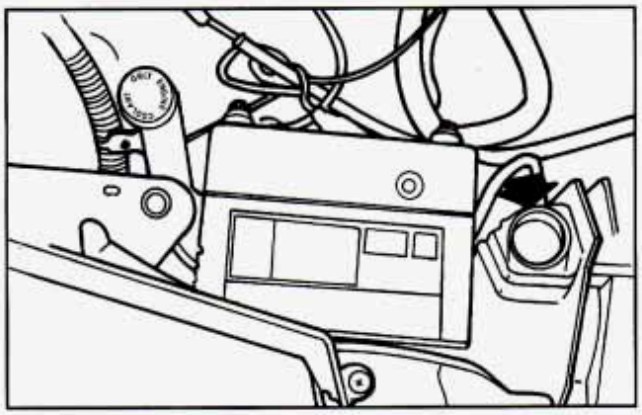

1. You can remove the radiator pressure cap when the cooling system, including the radiator pressure cap and upper radiator hose, is no longer hot. Turn the pressure cap slowly counterclockwise until it first stops. (Don't press down while turning the pressure cap.)

   If you hear a hiss, wait for that to stop. A hiss means there is still some pressure left.

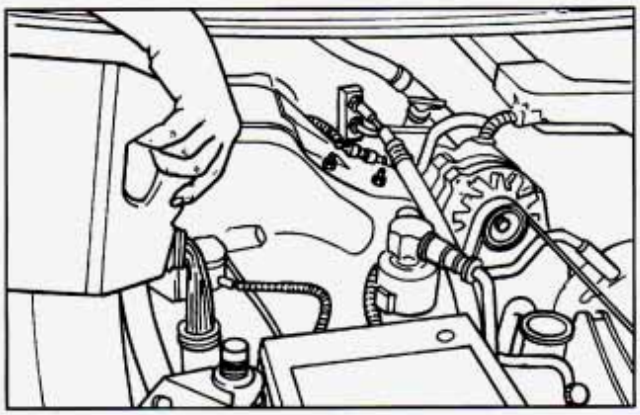

2. Then keep turning the pressure cap, but now push down as you turn it. Remove the pressure cap.

Downloaded from www.Manualslib.com manuals search engine

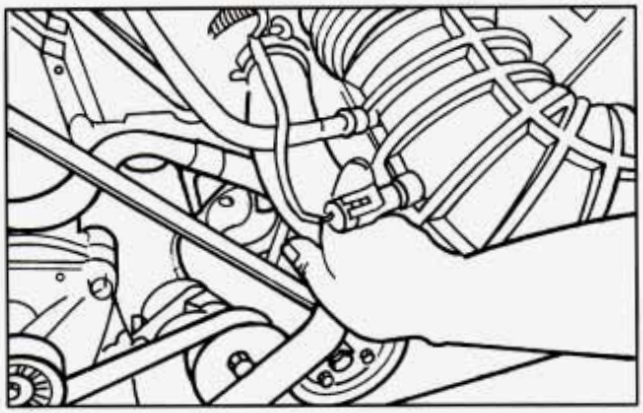

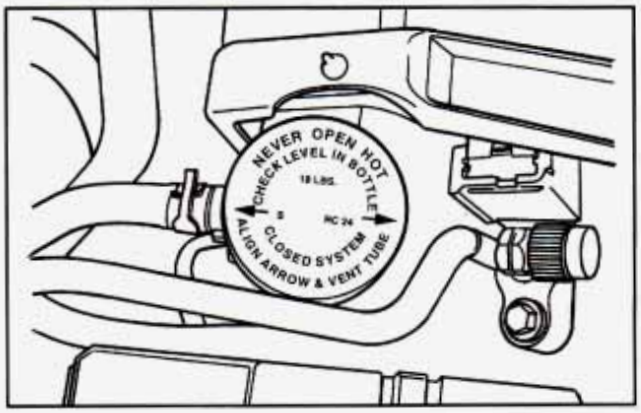

3. Fill the radiator with the proper mix, up to the base of the filler neck.

4. Then fill the coolant recovery tank to FULL COLD.
5. Put the cap back on the coolant recovery tank, but leave the radiator pressure cap off.

Downloaded from www.Manualslib.com manuals search engine

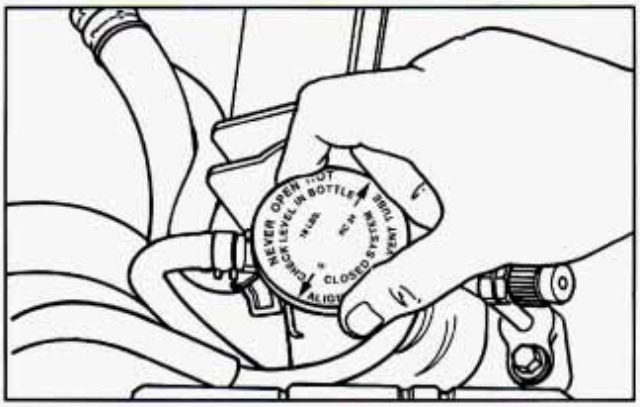

6. Start the engine and let it run until you can feel the upper radiator hose getting hot. Watch out for the engine fan.
7. By this time the coolant level inside the radiator filler neck may be lower. If the level is lower, add more of the proper mix through the filler neck until the level reaches the base of the filler neck.
8. Then replace the pressure cap. At any time during this procedure if coolant begins to flow out of the filler neck, reinstall the pressure cap. Be sure the arrows on the pressure cap line up like this.

Downloaded from www.Manualslib.com manuals search engine

How to Add Coolant to the Radiator (V8 Engine Only)

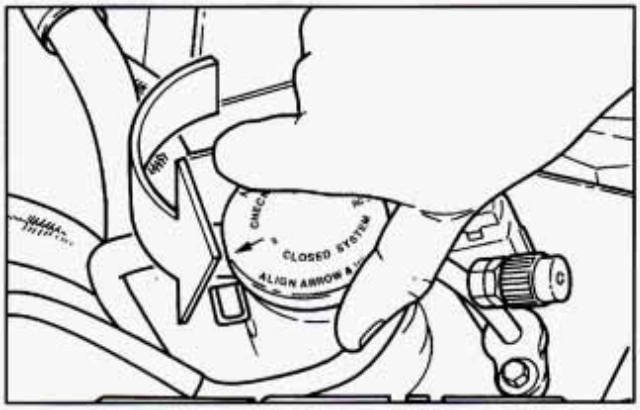

NOTICE:

The LT1 Engine (Code P) has a specific radiator fill procedure. Failure to follow this procedure could cause your engine to overheat and be severely damaged.

1. You can remove the radiator pressure cap when the cooling system, including the radiator pressure cap and upper radiator hose, is no longer hot. Turn the pressure cap slowly counterclockwise until it first stops. (Don't press down while turning the pressure cap.)

   If you hear a hiss, wait for that to stop. A hiss means there is still some pressure left.

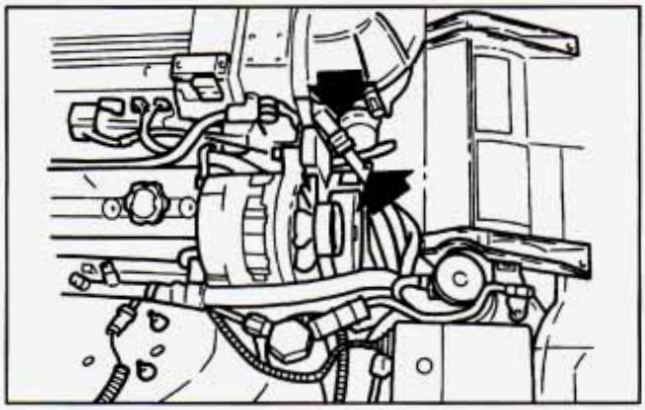

2. Then keep turning the pressure cap, but now push down as you turn it. Remove the pressure cap.

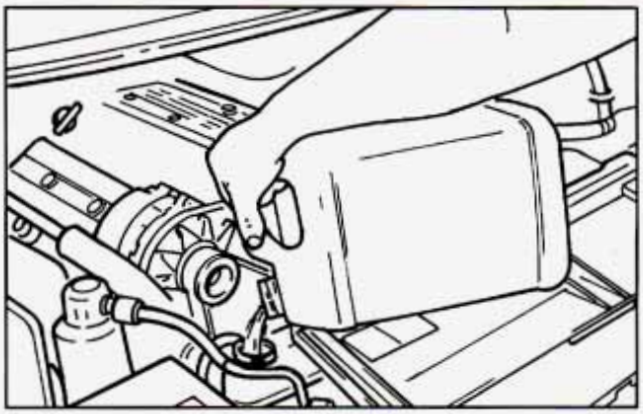

Downloaded from www.Manualslib.com manuals search engine

⚠ CAUTION:

You can be burned if you spill coolant on hot engine parts. Coolant contains ethylene glycol, and it will burn if the engine parts are hot enough. Don't spill coolant on a hot engine.

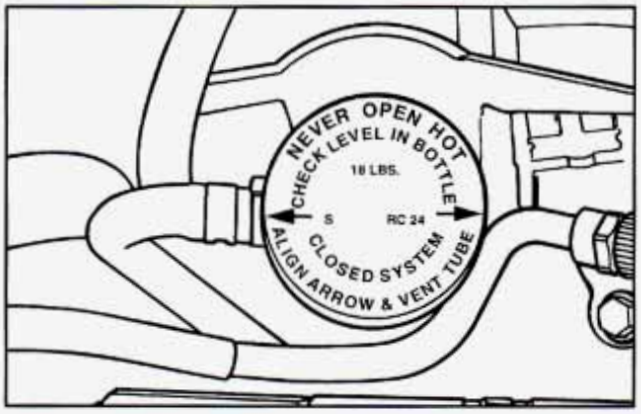

3. After the engine cools, open the air bleed valves on the heater return hose and water pump inlet.

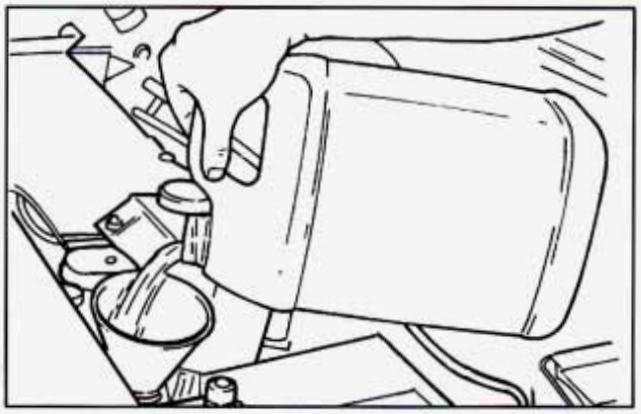

4. Fill with the proper mix. Add coolant until you see a steady stream of coolant coming from the bleed valves.
5. Close the bleed valves.
6. Continue to fill the radiator up to the base of the filler neck.
7. Rinse or wipe the spilled coolant from the engine and compartment.
8. Start the engine and allow it to run in idle for approximately four minutes. By this time, the coolant level inside the radiator will be lower. Add more of the proper mix through the filler neck until the level reaches the base of the filler neck.

Downloaded from www.Manualslib.com manuals search engine

9. Shut the engine off and replace the pressure cap. Be sure the arrows on the cap line up like this.

10. Then fill the coolant recovery tank to the proper level.

For a complete drain, flush and refill, see your Chevrolet dealer or a Chevrolet Service Manual. To purchase a service manual, see "Service and Owner Publications" in the Index.

Downloaded from www.Manualslib.com manuals search engine

If a Tire Goes Flat

It's unusual for a tire to "blow out" while you're driving, especially if you maintain your tires properly. If air goes out of a tire, it's much more likely to leak out slowly. But if you should ever have a "blowout," here are a few tips about what to expect and what to do:

If a front tire fails, the flat tire will create a drag that pulls the vehicle toward that side. Take your foot off the accelerator pedal and grip the steering wheel firmly. Steer to maintain lane position, and then gently brake to a stop well out of the traffic lane.

A rear blowout, particularly on a curve, acts much like a skid and may require the same correction you'd use in a skid. In any rear blowout, remove your foot from the accelerator pedal. Get the vehicle under control by steering the way you want the vehicle to go. It may be very bumpy and noisy, but you can still steer. Gently brake to a stop -- well off the road if possible.

If a tire goes flat, the next part shows how to use your jacking equipment to change a flat tire safely.

Changing a Flat Tire

If a tire goes flat, avoid further tire and wheel damage by driving slowly to a level place. Turn on your hazard warning flashers.

⚠ CAUTION:

Changing a tire can cause an injury. The vehicle can slip off the jack and roll over you or other people. You and they could be badly injured. Find a level place to change your tire. To help prevent the vehicle from moving:

1. **Set the parking brake firmly.**
2. **Put an automatic transmission shift lever in PARK (P), or shift a manual transmission to FIRST (1) or REVERSE (R).**
3. **Turn off the engine.**

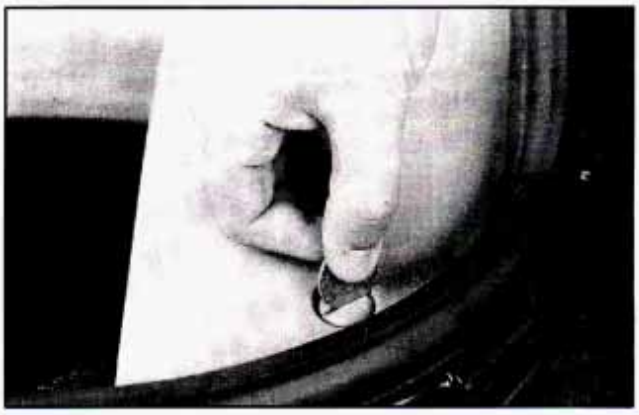

To be even more certain the vehicle won't move, you can put blocks at the front and rear of the tire farthest away from the one being changed. That would be the tire on the other side of the vehicle, at the opposite end.

Downloaded from www.Manualslib.com manuals search engine

The following steps will tell you how to use the jack and change a tire.

Removing the Spare Tire and Tools

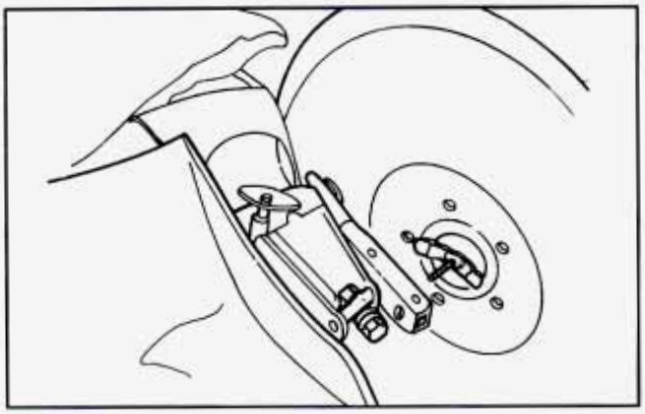

The equipment you'll need is in the right (passenger) rear area behind the trim panel.

First you must remove the close-out panel. See "Close-Out Panel" in the Index.

Find the plastic screw heads in the trim panel over the spare tire. Use a coin or a key to turn the screw heads until the slots point front and back to the unlock position. Gently lift the trim panel front forward edge and move it out of the way.

Downloaded from www.Manualslib.com manuals search engine

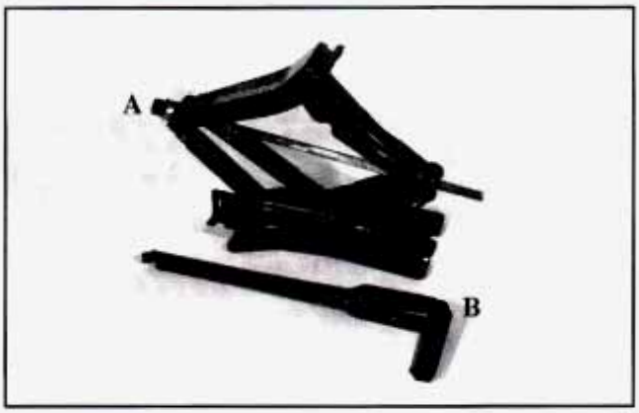

Remove the wing nut and adapter and pull out the spare. See "Compact Spare Tire" later in this section for more information about the compact spare.

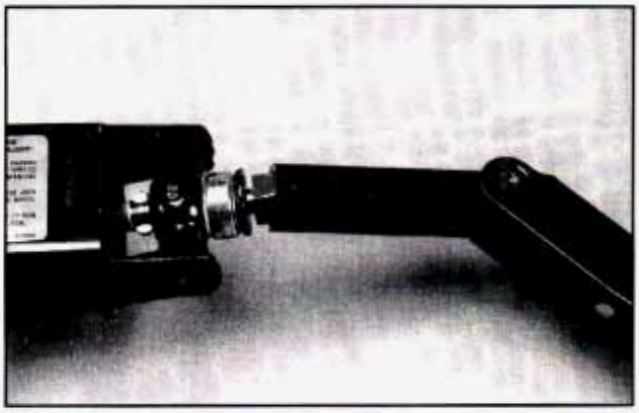

To remove the jack and wheel wrench, loosen and remove the bolt and remove the plastic cover.

Downloaded from www.Manualslib.com manuals search engine

The tools you'll be using include the jack (A) and wheel wrench (B).

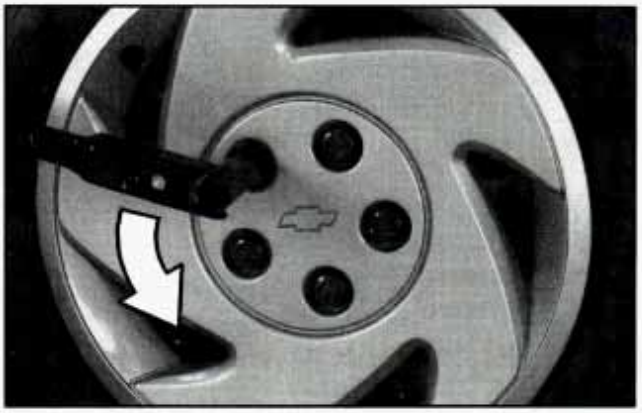

The jack has a bolt at the end. Attach the wheel wrench to the jack bolt.

Turn the wheel wrench to the right to raise the lift head a little.

Downloaded from www.Manualslib.com manuals search engine

If your wheel has a center cap, pry it off using the wheel wrench.

If your vehicle has a bolt-on wheel cover, loosen the plastic caps using the wheel wrench and remove the wheel cover.

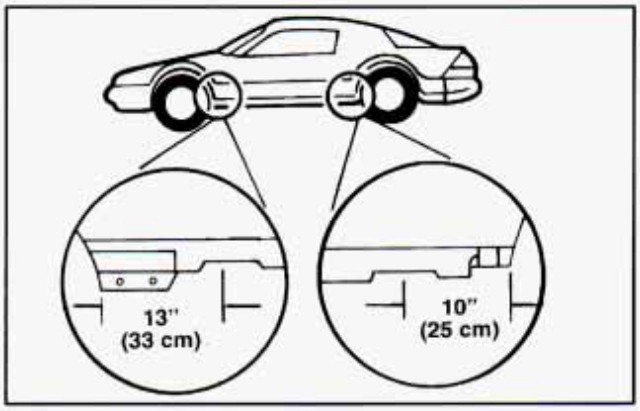

Downloaded from www.Manualslib.com manuals search engine

If your vehicle has optional alloy wheels, each wheel may have one locknut in place of the standard wheel nut. A special wheel lock key (removal tool) and instructions are located in the center console. Attach the wheel lock key to the socket of the wheel wrench. Remove the locking wheel nut by turning counterclockwise.

Removing the Flat Tire and Installing the Spare Tire

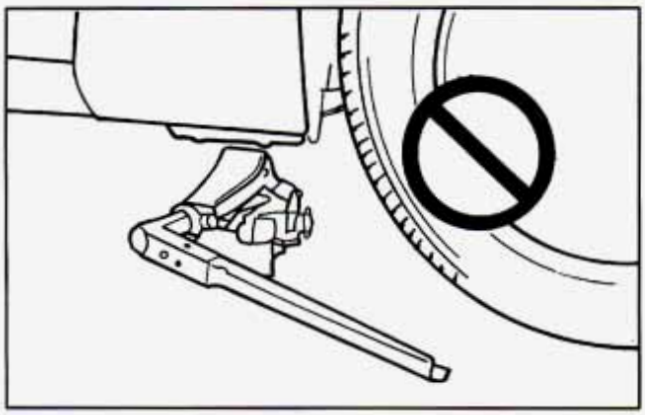

1. Using the wheel wrench, loosen all the wheel nuts. Don't remove them yet.

2. Position the jack under the vehicle. There is a notch in the vehicle's rocker flange. Raise the jack head until it fits firmly into the notch nearest the flat tire.

   On convertible models, place the jack in a similar location.

Downloaded from www.Manualslib.com manuals search engine

Stay away from the moldings or fender flanges to avoid damaging them.

Put the compact spare tire near you.

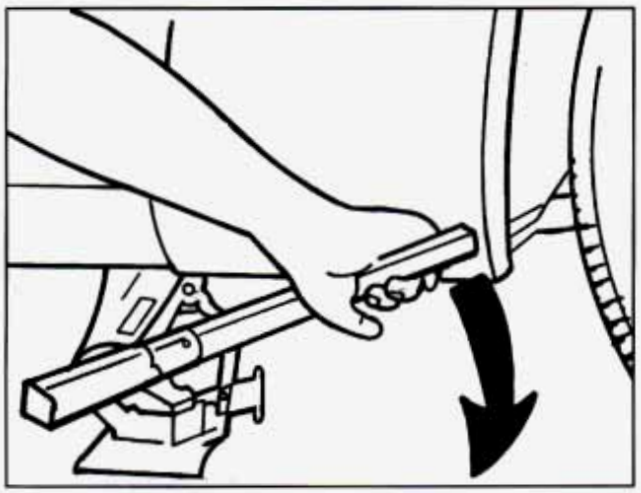

⚠ CAUTION:

Getting under a vehicle when it is jacked up is dangerous. If the vehicle slips off the jack, you could be badly injured or killed. Never get under a vehicle when it is supported only by a jack.

NOTICE:

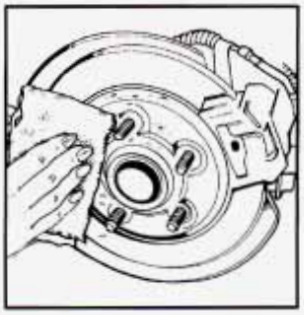

Raising your vehicle with the jack improperly positioned will damage the vehicle or may allow the vehicle to fall off the jack. Be sure to fit the jack lift head into the proper location before raising your vehicle.

Downloaded from www.Manualslib.com manuals search engine

3. Raise the vehicle by rotating the wheel wrench clockwise. Raise the vehicle far enough off the ground so there is enough room for the spare tire to fit.

   Remove all the wheel nuts and take off the flat tire.

4. Remove any rust or dirt from the wheel bolts, mounting surfaces and spare wheel.

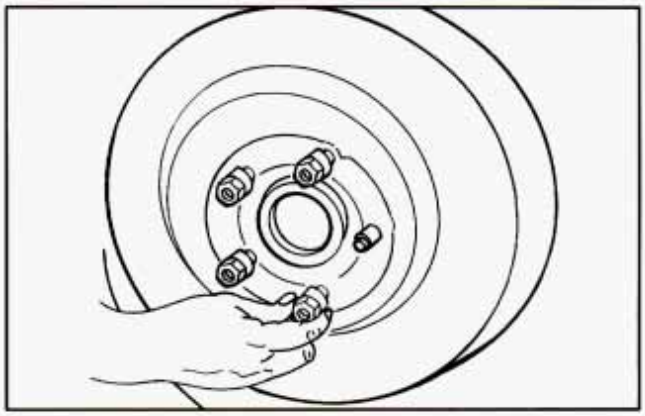

Downloaded from www.Manualslib.com manuals search engine

⚠ CAUTION:

Rust or dirt on the wheel, or on the parts to which it is fastened, can make the wheel nuts become loose after a time. The wheel could come off and cause an accident. When you change a wheel, remove any rust or dirt from the places where the wheel attaches to the vehicle. In an emergency, you can use a cloth or a paper towel to do this; but be sure to use a scraper or wire brush later, if you need to, to get all the rust or dirt off.

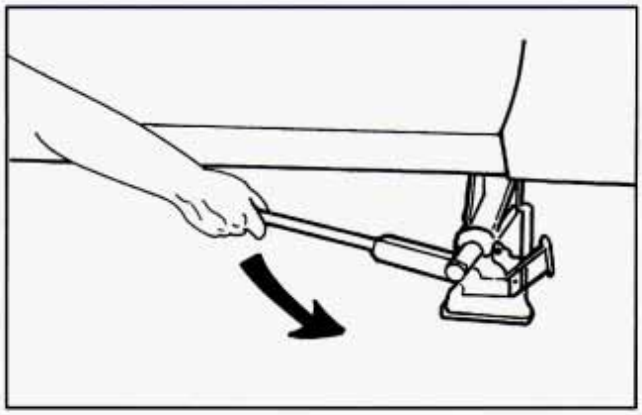

⚠ CAUTION:

Never use oil or grease on studs or nuts. If you do, the nuts might come loose. Your wheel could fall off, causing a serious accident.

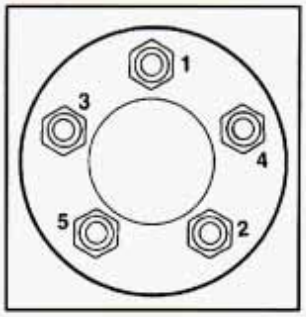

Replace the wheel nuts with the rounded end of the nuts toward the wheel. Tighten each nut by hand until the wheel is held against the hub.

Downloaded from www.Manualslib.com manuals search engine

5. Lower the vehicle by rotating the wheel wrench counterclockwise. Lower the jack completely.

Tighten the wheel nuts firmly in a criss-cross sequence as shown.

⚠ CAUTION:

Incorrect wheel nuts or improperly tightened wheel nuts can cause the wheel to become loose and even come off. This could lead to an accident. Be sure to use the correct wheel nuts. If you have to replace them, be sure to get new GM original equipment wheel nuts.

Stop somewhere as soon as you can and have the nuts tightened with a torque wrench to 100 lb-ft (140 N·m).

Downloaded from www.Manualslib.com manuals search engine

NOTICE:

Improperly tightened wheel nuts can lead to brake pulsation and rotor damage. To avoid expensive brake repairs, evenly tighten the wheel nuts in the proper sequence and to the proper torque specification.

Don't try to put a wheel cover on your compact spare tire. It won't fit. Store the wheel cover in the rear area until you have the flat tire repaired or replaced.

NOTICE:

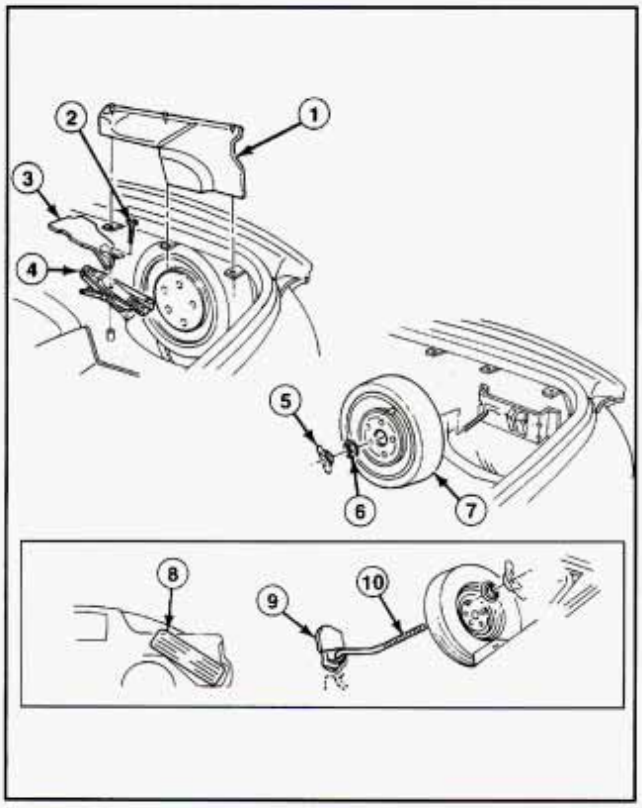

Wheel covers won't fit on your compact spare. If you try to put a wheel cover on your compact spare, you could damage the cover or the spare.

Storing a Flat or Spare Tire and Tools

⚠ CAUTION:

Storing a jack, a tire or other equipment in the passenger compartment of the vehicle could cause injury. In a sudden stop or collision, loose equipment could strike someone. Store all these in the proper place.

Downloaded from www.Manualslib.com manuals search engine

Replace the jack, wheel wrench and flat tire using the storage instructions. When you replace the trim panel, be sure to tuck it under the weatherstrip.

1. Trim Panel
2. Bolt
3. Cover
4. Jack
5. Wing Nut
6. Adapter
7. Compact Spare Tire
8. Full-Size Tire
9. Carpet Flap
10. Tire Storage Bolt

Downloaded from www.Manualslib.com manuals search engine

Compact Spare Tire

Although the compact spare tire was fully inflated when your vehicle was new, it can lose air after a time. Check the inflation pressure regularly. It should be 60 psi (420 kPa).

After installing the compact spare on your vehicle, you should stop as soon as possible and make sure your spare tire is correctly inflated. The compact spare is made to perform well at posted speed limits for distances up to 3,000 miles (5 000 km), so you can finish your trip and have your full-size tire repaired or replaced where you want. Of course, it's best to replace your spare with a full-size tire as soon as you can. Your spare will last longer and be in good shape in case you need it again.

When the compact spare is on the rear axle, the optional ASR system will cycle and limit acceleration for about the first 15 seconds of driving after each engine start.

NOTICE:

When the compact spare is installed, don't take your vehicle through an automatic car wash with guide rails. The compact spare can get caught on the rails. That can damage the tire and wheel, and maybe other parts of your vehicle.

NOTICE:

If the compact spare is used as a rear tire, do not drive faster than 50 mph (80 km/h). Damage to the rear axle may occur if the compact spare is driven faster than 50 mph (80 km/h). This speed limitation does not apply when the compact spare is used as a front tire.

Downloaded from www.Manualslib.com manuals search engine

Don't use your compact spare on other vehicles.

And don't mix your compact spare tire or wheel with other wheels or tires. They won't fit. Keep your spare tire and its wheel together.

NOTICE:

Tire chains won't fit your compact spare. Using them can damage your vehicle and can damage the chains too. Don't use tire chains on your compact spare.

If You're Stuck: In Sand, Mud, Ice or Snow

What you don't want to do when your vehicle is stuck is to spin your wheels too fast. The method known as "rocking" can help you get out when you're stuck, but you must use caution.

⚠ CAUTION:

If you let your tires spin at high speed, they can explode, and you or others could be injured. And, the transmission or other parts of the vehicle can overheat. That could cause an engine compartment fire or other damage. When you're stuck, spin the wheels as little as possible. Don't spin the wheels above 35 mph (55 km/h) as shown on the speedometer.

Downloaded from www.Manualslib.com manuals search engine

NOTICE:

Spinning your wheels can destroy parts of your vehicle as well as the tires. If you spin the wheels too fast while shifting your transmission back and forth, you can destroy your transmission.

For information about using tire chains on your vehicle, see "Tire Chains" in the Index.

Rocking Your Vehicle to Get it Out

First, turn your steering wheel left and right. That will clear the area around your front wheels. If your vehicle has ASR, you should turn the system off. (See "ASR System" in the Index.) Then shift back and forth between REVERSE (R) and a forward gear (or with a manual transmission, between FIRST (1) or SECOND (2) and REVERSE (R)), spinning the wheels as little as possible. Release the accelerator pedal while you shift, and press lightly on the accelerator pedal when the transmission is in gear. If that doesn't get you out after a few tries, you may need to be towed out. If you do need to be towed out, see "Towing Your Vehicle" in the Index.

NOTES

Downloaded from www.Manualslib.com manuals search engine

NOTES

Downloaded from www.Manualslib.com manuals search engine

Section 6 Service and Appearance Care

Here you will find information about the care of your Chevrolet. This section begins with service and fuel information, and then it shows how to check important fluid and lubricant levels. There is also technical information about your vehicle, and a part devoted to its appearance care.

Service

Your Chevrolet dealer knows your vehicle best and wants you to be happy with it. We hope you'll go to your dealer for all your service needs. You'll get genuine GM parts and GM-trained and supported service people.

We hope you'll want to keep your GM vehicle all GM. Genuine GM parts have one of these marks:

Downloaded from www.Manualslib.com manuals search engine

Doing Your Own Service Work

If you want to do some of your own service work, you'll want to get the proper Chevrolet Service Manual. It tells you much more about how to service your Chevrolet than this manual can. To order the proper service manual, see "Service and Owner Publications" in the Index.

Your vehicle has an air bag system. Before attempting to do your own service work, see "Servicing Your Air Bag-Equipped Chevrolet" in the Index.

You should keep a record with all parts receipts and list the mileage and the date of any service work you perform. See "Maintenance Record" in the Index.

⚠ CAUTION:

You can be injured and your vehicle could be damaged if you try to do service work on a vehicle without knowing enough about it.

- **Be sure you have sufficient knowledge, experience, and the proper replacement parts and tools before you attempt any vehicle maintenance task.**
- **Be sure to use the proper nuts, bolts and other fasteners. "English" and "metric" fasteners can be easily confused. If you use the wrong fasteners, parts can later break or fall off. You could be hurt.**

Downloaded from www.Manualslib.com manuals search engine

Fuel

The 8th digit of your vehicle identification number (VIN) shows the code letter for your engine. You will find the VIN at the top left of your instrument panel. (See "Vehicle Identification Number" in the Index.)

If you don't have the 5.7L Code P engine, use regular unleaded gasoline rated at 87 octane or higher.

If you have the 5.7L Code P engine, use premium unleaded gasoline rated at 91 octane or higher for best performance. You may use middle grade or regular unleaded gasolines, but your vehicle may not accelerate as well.

At a minimum, the gasoline you use should meet specifications ASTM D4814 in the United States and CGSB 3.5-M93 in Canada. Improved gasoline specifications have been developed by the American Automobile Manufacturers Association (AAMA) for better vehicle performance and engine protection. Gasolines meeting the AAMA specification could provide improved driveability and emission control system protection compared to other gasolines.

Be sure the posted octane for premium is at least 91 (at least 89 for middle grade and 87 for regular). If the octane is less than 87, you may get a heavy knocking noise when you drive. If it's bad enough, it can damage your engine.

If you're using fuel rated at the recommended octane or higher and you still hear heavy knocking, your engine needs service. But don't worry if you hear a little pinging noise when you're accelerating or driving up a hill. That's normal, and you don't have to buy a higher octane fuel to get rid of pinging. It's the heavy, constant knock that means you have a problem.

If your vehicle is certified to meet California Emission Standards (indicated on the underhood tune-up label), it is designed to operate on fuels that meet California specifications. If such fuels are not available in states adopting California emissions standards, your vehicle will operate satisfactorily on fuels meeting federal specifications, but emission control system performance may be affected. The malfunction indicator lamp on your instrument panel may turn on and/or your vehicle may fail a smog-check test. If this occurs, return to your authorized Chevrolet dealer for diagnosis to determine the cause of failure. In the event it is determined that the cause of the condition is the type of fuels used, repairs may not be covered by your warranty.

Downloaded from www.Manualslib.com manuals search engine

In Canada, some gasolines contain an octane enhancing additive called MMT. If such fuels are used, your emission control system performance may be affected. The malfunction indicator lamp on your instrument panel may also turn on. If this occurs, return to your authorized Chevrolet dealer for service.

To provide cleaner air, all gasolines are now required to contain additives that will help prevent deposits from forming in your engine and fuel system, allowing your emission control system to function properly. Therefore, you should not have to add anything to the fuel. In addition, gasolines containing oxygenates, such as ethers and ethanol, and reformulated gasolines may be available in your area to help clean the air. General Motors recommends that you use these gasolines if they comply with the specifications described earlier.

NOTICE:

Your vehicle was not designed for fuel that contains methanol. Don't use it. It can corrode metal parts in your fuel system and also damage plastic and rubber parts. That damage wouldn't be covered under your warranty.

Fuels in Foreign Countries

If you plan on driving in another country outside the United States or Canada, the proper fuel may be hard to find. Never use leaded gasoline or any other fuel not recommended in the previous text on fuel. Costly repairs caused by use of improper fuel wouldn't be covered by your warranty.

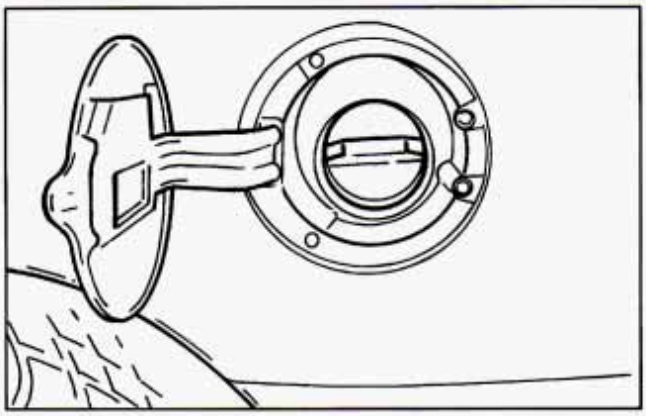

To check on fuel availability, ask an auto club, or contact a major oil company that does business in the country where you'll be driving.

You can also write us at the following address for advice. Just tell us where you're going and give your Vehicle Identification Number (VIN).

General Motors Overseas Distribution Corporation
North American Export Sales (NAES)
1908 Colonel Sam Drive
Oshawa, Ontario L1H 8P7

Downloaded from www.Manualslib.com manuals search engine

Filling Your Tank

The cap is behind a hinged door on the left side of your vehicle.

⚠ CAUTION:

Gasoline vapor is highly flammable. It burns violently, and that can cause very bad injuries. Don't smoke if you're near gasoline or refueling your vehicle. Keep sparks, flames, and smoking materials away from gasoline.

To take off the cap, turn it slowly to the left (counterclockwise).

⚠ CAUTION:

If you get gasoline on yourself and then something ignites it, you could be badly burned. Gasoline can spray out on you if you open the fuel filler cap too quickly. This spray can happen if your tank is nearly full, and is more likely in hot weather. Open the fuel filler cap slowly and wait for any "hiss" noise to stop. Then unscrew the cap all the way.

Downloaded from www.Manualslib.com manuals search engine

Be careful not to spill gasoline. Clean gasoline from painted surfaces as soon as possible. See "Cleaning the Outside of Your Chevrolet" in the Index.

When you put the cap back on, turn it to the right until you hear at least three clicks. Make sure you fully install the cap. The diagnostic system can determine if the fuel cap has been left off or improperly installed. This would allow fuel to evaporate into the atmosphere. See "Malfunction Indicator Lamp" in the Index.

NOTICE:

If you need a new cap, be sure to get the right type. Your dealer can get one for you. If you get the wrong type, it may not fit and your fuel tank and emissions system might be damaged.

Checking Things Under the Hood

⚠ CAUTION:

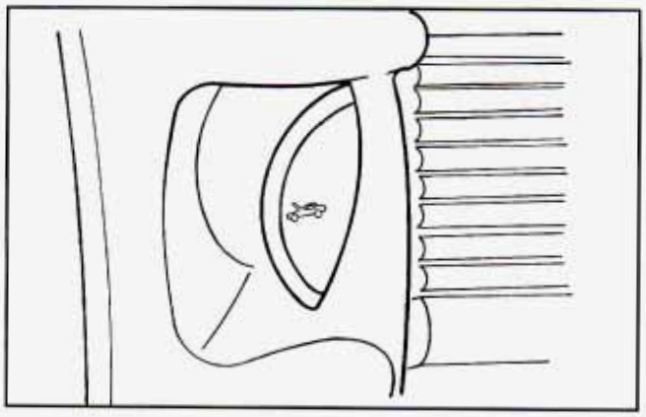

An electric fan under the hood can start up and injure you even when the engine is not running. Keep hands, clothing and tools away from any underhood electric fan.

⚠ CAUTION:

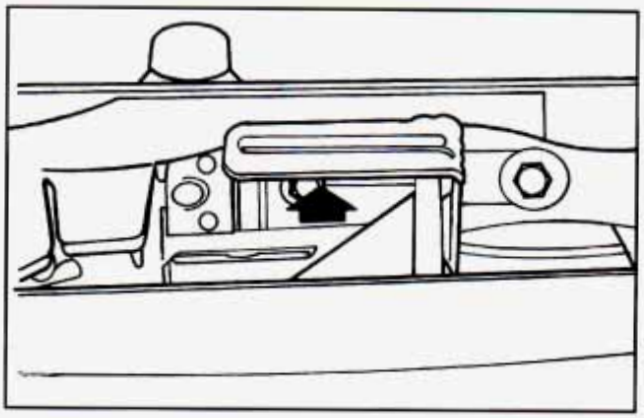

Things that burn can get on hot engine parts and start a fire. These include liquids like gasoline, oil, coolant, brake fluid, windshield washer and other fluids, and plastic or rubber. You or others could be burned. Be careful not to drop or spill things that will burn onto a hot engine.

Downloaded from www.Manualslib.com manuals search engine

Hood Release

To open the hood, first pull the handle inside the lower left side of your vehicle.

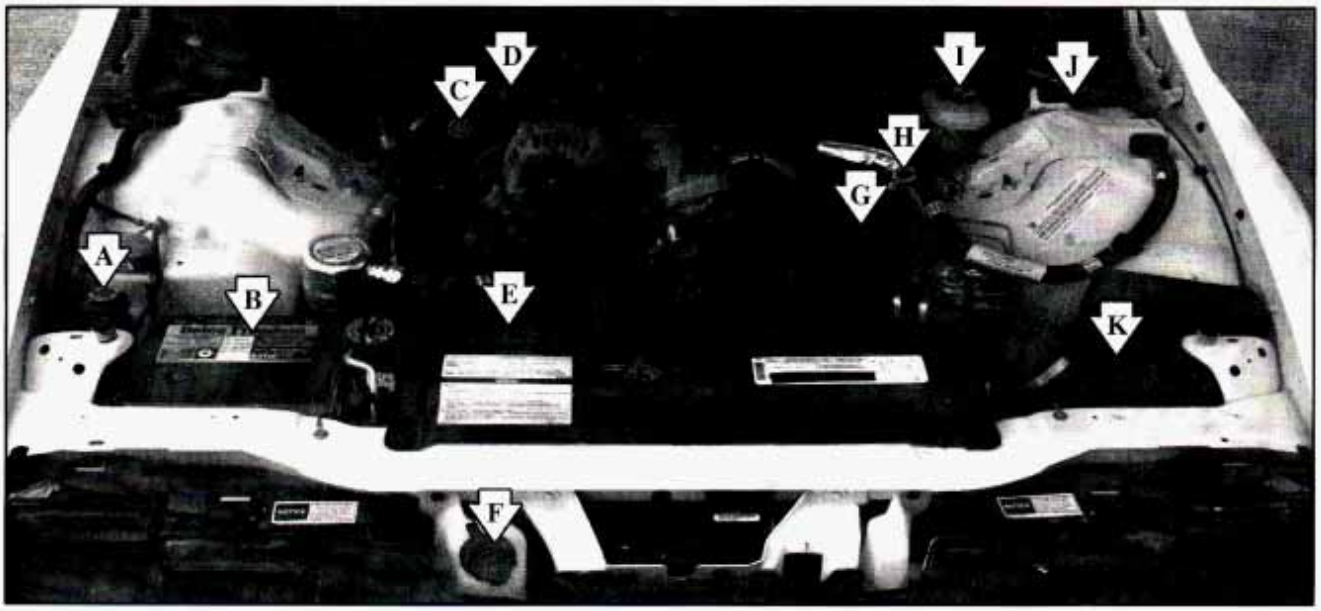

Then go to the front of the vehicle and pull up on the hood release located at the center area of the hood.

Lift the hood.

Downloaded from www.Manualslib.com manuals search engine

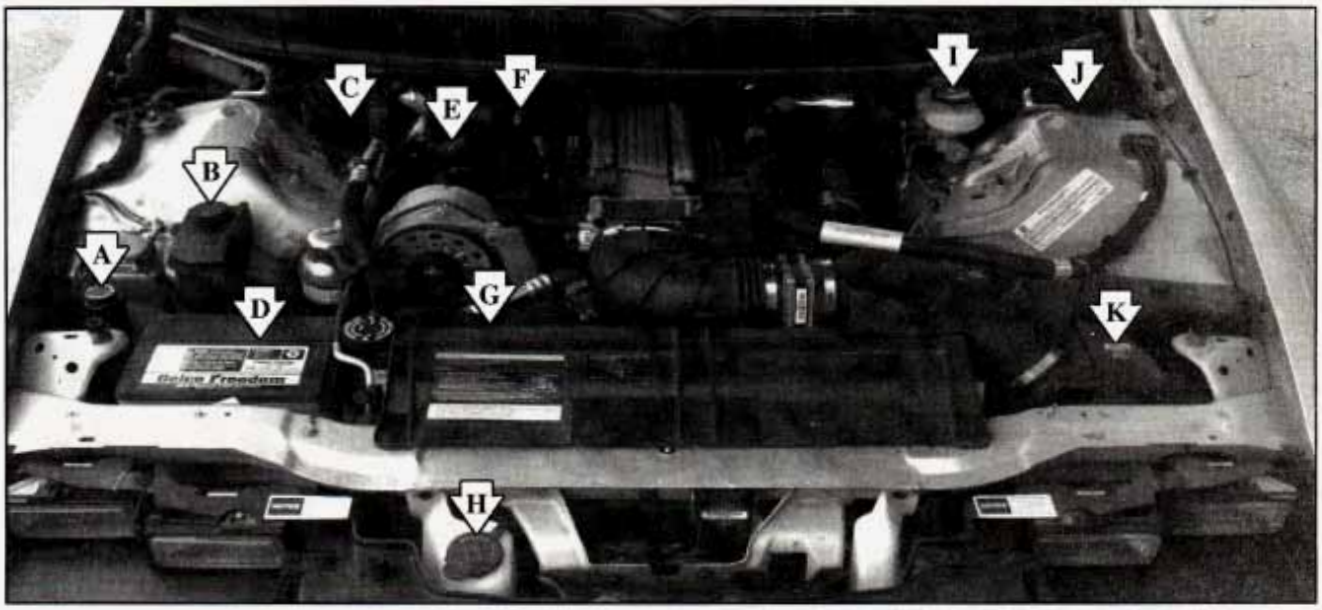

When you open the hood of the 3800 L36 (Code K) you'll see:

A. Engine Coolant Reservoir
B. Battery
C. Oil Fill Cap
D. Automatic Transmission Dipstick (Option)
E. Engine Fan
F. Windshield Washer Reservoir
G. Power Steering Reservoir
H. Engine Oil Dipstick
I. Brake Fluid Reservoir
J. Clutch Fluid Reservoir (if equipped)
K. Air Cleaner

Downloaded from www.Manualslib.com manuals search engine

When you open the hood of the 5.7L LT1 (Code P) you'll see:

A. Engine Coolant Reservoir
B. Power Steering Reservoir
C. Engine Oil Dipstick
D. Battery
E. Engine Oil Fill Cap
F. Automatic Transmission Dipstick (Option)
G. Fan
H. Windshield Washer Reservoir
I. Brake Fluid Reservoir
J. Clutch Fluid Reservoir (if equipped)
K. Air Cleaner

Downloaded from www.Manualslib.com manuals search engine

Before closing the hood, be sure all the filler caps are on. Then just pull the hood down and close it firmly.

Engine Oil

If the LOW OIL light on the instrument panel comes on, it means you need to check your engine oil level right away. For more information, see "Low Oil Light" in the Index. You should check your engine oil level regularly; this is an added reminder.

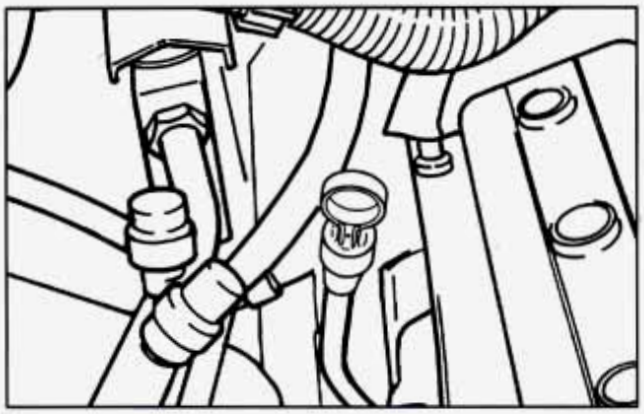

The engine oil dipstick handle is the yellow loop near the back of the engine.

It's a good idea to check your engine oil every time you get fuel. In order to get an accurate reading, the oil must be warm and the vehicle must be on level ground.

3800 L36 (Code K) Oil Dipstick

Downloaded from www.Manualslib.com manuals search engine

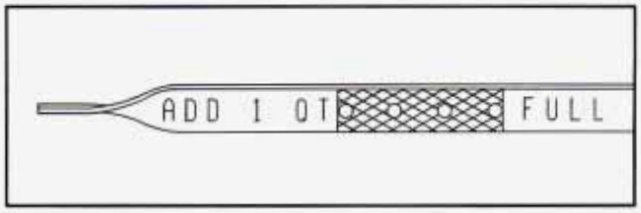

5.7L LT1 (Code P) Oil Dipstick

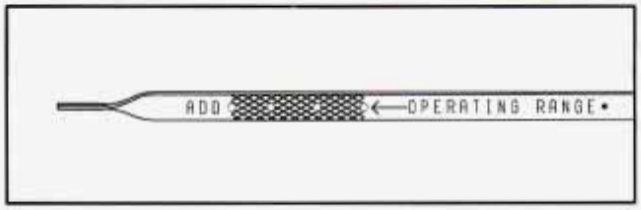

Turn off the engine and give the oil a few minutes to drain back into the oil pan. If you don't, the oil dipstick might not show the actual level.

Checking Engine Oil

Pull out the dipstick and clean it with a paper towel or cloth, then push it back in all the way. Remove it again, keeping the tip down, and check the level.

3800 L36 (Code K)

5.7L LT1 (Code P)

Downloaded from www.Manualslib.com manuals search engine

When to Add Oil

If the oil is at or below the ADD line, then you'll need to add some oil. But you must use the right kind. This part explains what kind of oil to use. For crankcase capacity, see "Capacities and Specifications" in the Index.

NOTICE:

Don't add too much oil. If your engine has so much oil that the oil level gets above the cross-hatched area that shows the proper operating range, your engine could be damaged.

The oil fill cap is located on the valve cover near the oil dipstick.

Just fill it enough to put the level somewhere in the proper operating range. Push the dipstick all the way back in when you're through.

What Kind of Oil to Use

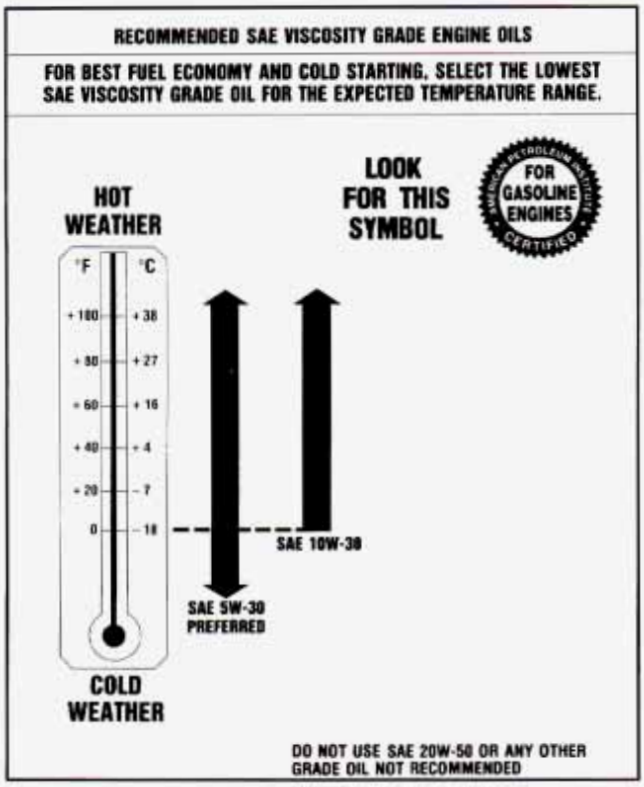

Oils recommended for your vehicle can be identified by looking for the "Starburst" symbol. This symbol indicates that the oil has been certified by the American Petroleum Institute (API). Do not use any oil which does not carry this Starburst symbol.

If you change your own oil, be sure you use oil that has the Starburst symbol on the front of the oil container. If you have your oil changed for you, be sure the oil put into your engine is American Petroleum Institute certified for gasoline engines.

You should also use the proper viscosity oil for your vehicle, as shown in the following chart:

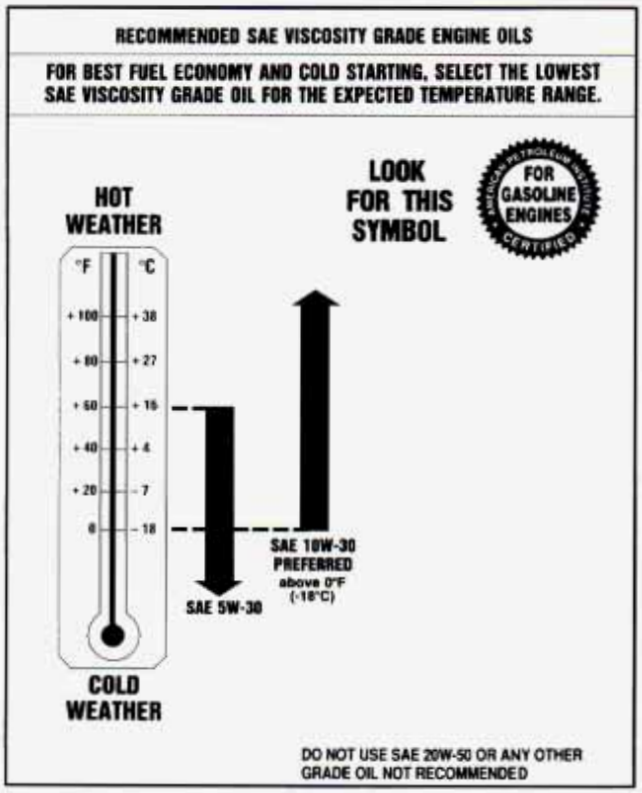

Downloaded from www.Manualslib.com manuals search engine

5.7L LT1 (Code P)

As shown in the chart, unless you have the 3.8L engine, SAE 5W-30 is best for your vehicle. However, you can use SAE 10W-30 if it's going to be 0°F (-18°C) or above. These numbers on an oil container show its viscosity, or thickness. Do not use other viscosity oils, such as SAE 20W-50.

Downloaded from www.Manualslib.com manuals search engine

3800 L36 (Code K)

As shown in the chart, if you have the 3.8L engine, SAE 10W-30 is best for your vehicle. However, you can use SAE 5W-30 if it's going to be colder than 60°F (16°C) before your next oil change. When it's very cold, you should use SAE 5W-30. These numbers on an oil container show its viscosity, or thickness. Do not use other viscosity oils, such as SAE 20W-50.

NOTICE:

Use only engine oil with the American Petroleum Institute Certified For Gasoline Engines "Starburst" symbol. Failure to use the recommended oil can result in engine damage not covered by your warranty.

GM Goodwrench® oil meets all the requirements for your vehicle.

Downloaded from www.Manualslib.com manuals search engine

Engine Oil Additives

Don't add anything to your oil. Your Chevrolet dealer is ready to advise if you think something should be added.

When to Change Engine Oil

See if any one of these is true for you:

- Most trips are less than 5 to 10 miles (8 to 16 km). This is particularly important when outside temperatures are below freezing.
- Most trips include extensive idling (such as frequent driving in stop-and-go traffic).
- Most trips are through dusty areas.
- You frequently tow a trailer or use a carrier on top of your car.
- The vehicle is used for delivery service, police, taxi or other commercial application.

Driving under these conditions causes engine oil to break down sooner. If any one of these is true for your vehicle, then you need to change your oil and filter every 3,000 miles (5 000 km) or 3 months -- whichever occurs first.

If none of them is true, change the oil and filter every 7,500 miles (12 500 km) or 12 months -- whichever occurs first. Driving a vehicle with a fully warmed engine under highway conditions causes engine oil to break down slower.

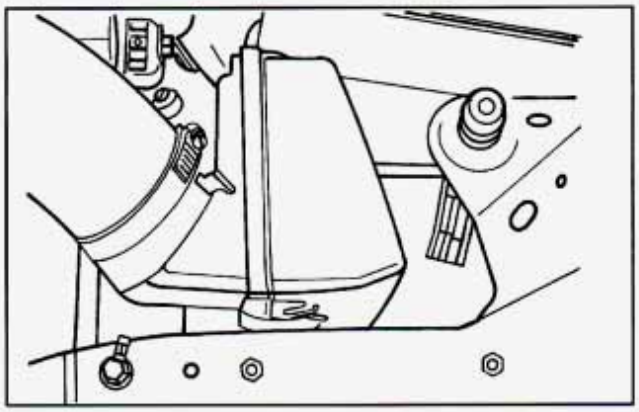

What to Do with Used Oil

Did you know that used engine oil contains certain elements that may be unhealthy for your skin and could even cause cancer? Don't let used oil stay on your skin for very long. Clean your skin and nails with soap and water, or a good hand cleaner. Wash or properly throw away clothing or rags containing used engine oil. (See the manufacturer's warnings about the use and disposal of oil products.)

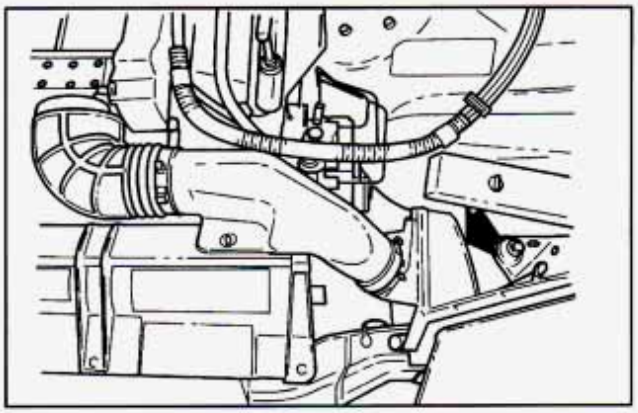

Used oil can be a real threat to the environment. If you change your own oil, be sure to drain all free-flowing oil from the filter before disposal. Don't ever dispose of oil by putting it in the trash, pouring it on the ground, into sewers, or into streams or bodies of water. Instead, recycle it by taking it to a place that collects used oil. If you have a problem properly disposing of your used oil, ask your dealer, a service station or a local recycling center for help.

Downloaded from www.Manualslib.com manuals search engine

Air Cleaner

3800 L36 (Code K)

5.7L LT1 (Code P)

Refer to the Maintenance Schedule to determine when to replace the air filter.

See "Scheduled Maintenance Services" in the Index.

Downloaded from www.Manualslib.com manuals search engine

⚠ CAUTION:

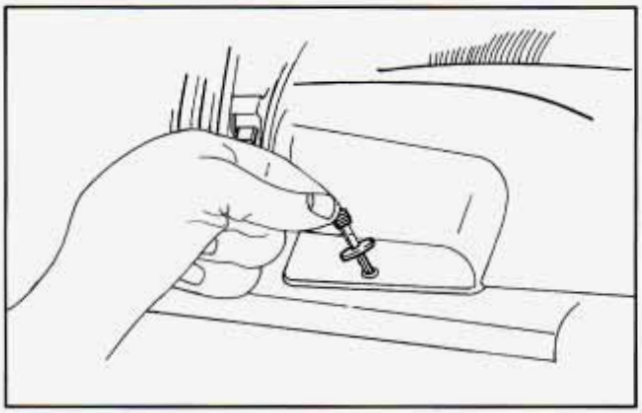

Operating the engine with the air cleaner off can cause you or others to be burned. The air cleaner not only cleans the air, it stops flame if the engine backfires. If it isn't there, and the engine backfires, you could be burned. Don't drive with it off, and be careful working on the engine with the air cleaner off.

NOTICE:

If the air cleaner is off, a backfire can cause a damaging engine fire. And, dirt can easily get into your engine, which will damage it. Always have the air cleaner in place when you're driving.

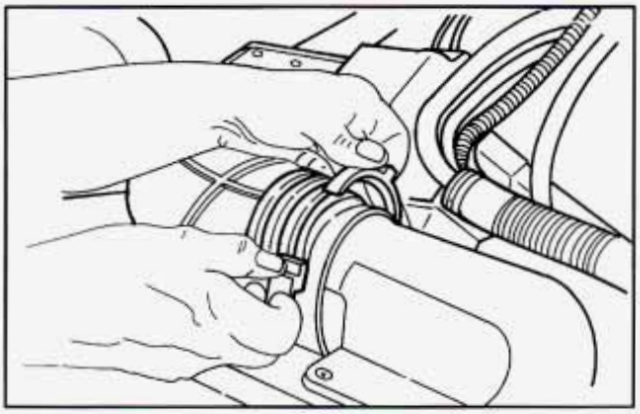

Air Filter Replacement

To remove the air filter:

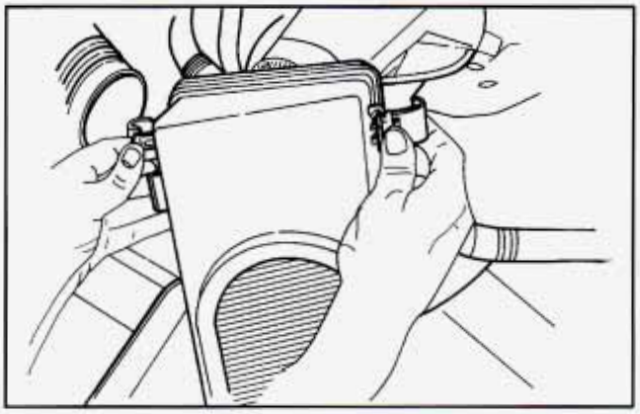

1. Remove the two plastic pins by pulling them straight up.

Downloaded from www.Manualslib.com manuals search engine

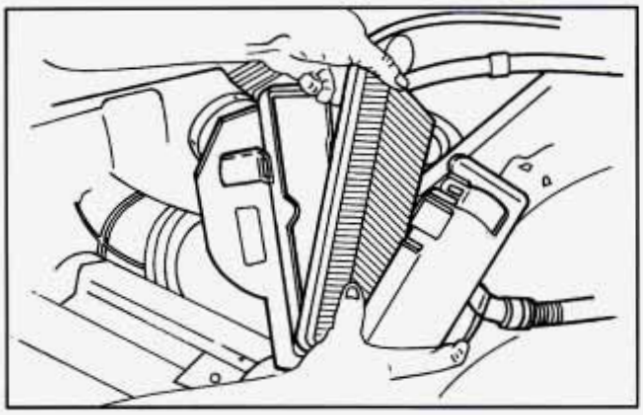

2. Disconnect the plastic clamp on the duct. Pull apart the connection.

3. Pull the air cleaner straight up. Unclamp the metal clips.

Downloaded from www.Manualslib.com manuals search engine

4. Open the air cleaner and remove the filter.

Automatic Transmission Fluid

When to Check and Change

A good time to check your automatic transmission fluid level is when the engine oil is changed.

Change both the fluid and filter every 15,000 miles (25 000 km) if the vehicle is mainly driven under one or more of these conditions:

- In heavy city traffic where the outside temperature regularly reaches 90°F (32°C) or higher.
- In hilly or mountainous terrain.
- When doing frequent trailer towing.
- Uses such as found in taxi, police or delivery service.

If you do not use your vehicle under any of these conditions, change the fluid and filter at 100,000 miles (166 000 km).

See "Scheduled Maintenance Services" in the Index.

Downloaded from www.Manualslib.com manuals search engine

How to Check

Because this operation can be a little difficult, you may choose to have this done at your Chevrolet dealership Service Department.

If you do it yourself, be sure to follow all the instructions here, or you could get a false reading on the dipstick.

NOTICE:

Too much or too little fluid can damage your transmission. Too much can mean that some of the fluid could come out and fall on hot engine parts or exhaust system parts, starting a fire. Be sure to get an accurate reading if you check your transmission fluid.

Wait at least 30 minutes before checking the transmission fluid level if you have been driving:

- When outside temperatures are above 90°F (32°C).
- At high speed for quite a while.
- In heavy traffic -- especially in hot weather.
- While pulling a trailer.

To get the right reading, the fluid should be at normal operating temperature, which is 180°F to 200°F (82°C to 93°C).

Checking Transmission Fluid Hot

Get the vehicle warmed up by driving about 15 miles (24 km) when outside temperatures are above 50°F (10°C). If it's colder than 50°F (10°C), drive the vehicle in DRIVE (D) until the engine temperature gage moves and then remains steady for 10 minutes. Then follow the hot check procedures.

Checking Transmission Fluid Cold

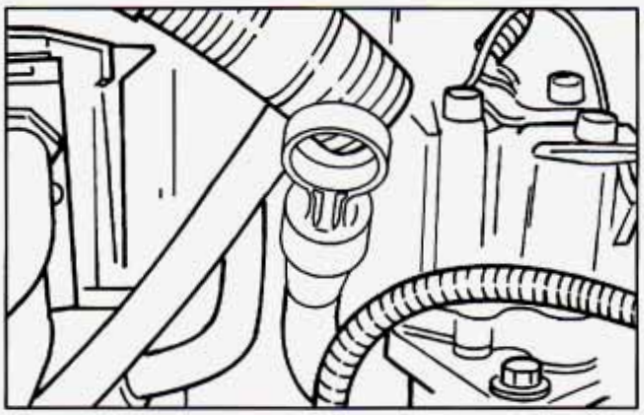

A cold check is made after the vehicle has been sitting for eight hours or more with the engine off and is used only as a reference. Let the engine run at idle for five minutes if outside temperatures are 50°F (10°C) or more. If it's colder than 50°F (10°C), you may have to idle the engine longer. Should the fluid level be low during a cold check, you *must* perform a hot check before adding fluid. This will give you a more accurate reading of the fluid level.

Downloaded from www.Manualslib.com manuals search engine

Checking the Fluid Hot or Cold

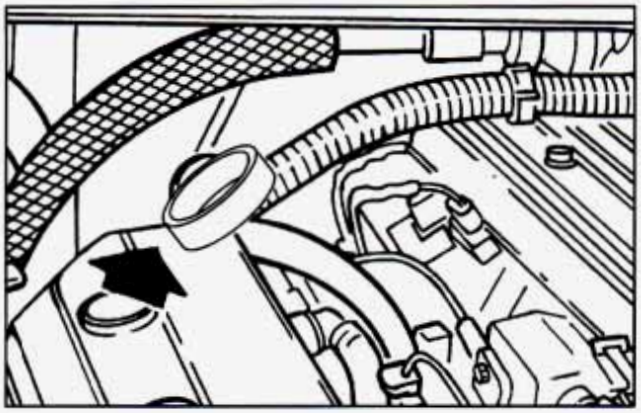

- Park your vehicle on a level place. Keep the engine running.
- With the parking brake applied, place the shift lever in PARK (P).
- With your foot on the brake pedal, move the shift lever through each gear range, pausing for about three seconds in each range. Then, position the shift lever in PARK (P).
- Let the engine run at idle for three minutes or more.

Then, without shutting off the engine, follow these steps:

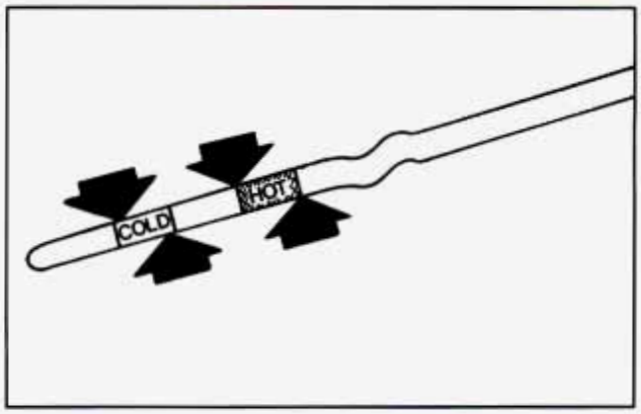

3800 L36 Engine Transmission Dipstick

Downloaded from www.Manualslib.com manuals search engine

5.7L LT1 Engine Transmission Dipstick

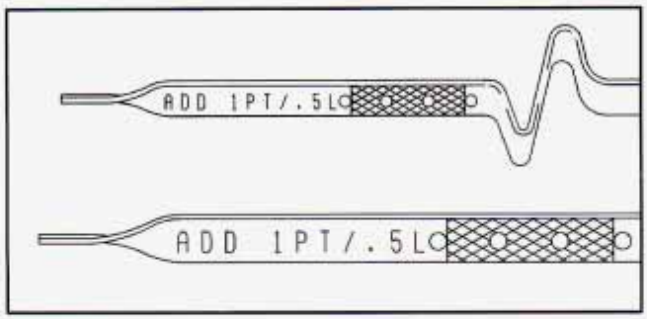

5.7L LT1 Engine Transmission Dipstick

The transaxle fluid handle is the red loop near the back of the engine.

1. Pull out the dipstick and wipe it with a clean rag or paper towel.
2. Push it back in all the way, wait three seconds and then pull it back out again.

Downloaded from www.Manualslib.com manuals search engine

3800 L36 Engine Transmission Dipstick

3. Check both sides of the dipstick, and read the lower level. The fluid level must be in the COLD area for a cold check or in the HOT area or cross-hatched area for a hot check.
4. If the fluid level is in the acceptable range, push the dipstick back in all the way.

How to Add Fluid

Refer to the Maintenance Schedule to determine what kind of transmission fluid to use. See "Recommended Fluids and Lubricants" in the Index.

Add fluid only after checking the transmission fluid HOT. (A COLD check is used only as a reference.) If the fluid level is low, add only enough of the proper fluid to bring the level up to the HOT area for a hot check. It doesn't take much fluid, generally less than a pint (0.5 L). *Don't overfill.* We recommend you use only fluid labeled DEXRON®-III, because fluid with that label is made especially for your automatic transmission. Damage caused by fluid other than DEXRON-III is not covered by your new vehicle warranty.

- After adding fluid, recheck the fluid level as described under "How to Check."
- When the correct fluid level is obtained, push the dipstick back in all the way.

Downloaded from www.Manualslib.com manuals search engine

Manual Transmission Fluid

When to Check

A good time to have it checked is when the engine oil is changed. However, the fluid in your manual transmission doesn't require changing.

How to Check

Because this operation can be difficult, you may choose to have this done at your Chevrolet dealership Service Department.

If you do it yourself, be sure to follow all the instructions here, or you could get a false reading.

NOTICE:

Too much or too little fluid can damage your transmission. Too much can mean that some of the fluid could come out and fall on hot engine parts or exhaust system parts, starting a fire. Be sure to get an accurate reading if you check your transmission fluid.

Check the fluid level only when your engine is off, the vehicle is parked on a level place and the transmission is cool enough for you to rest your fingers on the transmission case.

Then, follow these steps:

1. Remove the filler plug.
2. Check that the lubricant level is up to the bottom of the filler plug hole.
3. If the fluid level is good, install the plug and be sure it is fully seated. If the fluid level is low, add more fluid as described in the next steps.

How to Add Fluid

Here's how to add fluid. Refer to the Maintenance Schedule to determine what kind of fluid to use. See "Recommended Fluids and Lubricants" in the Index.

1. Remove the filler plug.
2. Add fluid at the filler plug hole. Add only enough fluid to bring the fluid level up to the bottom of the filler plug hole.
3. Install the filler plug. Be sure the plug is fully seated.

Downloaded from www.Manualslib.com manuals search engine

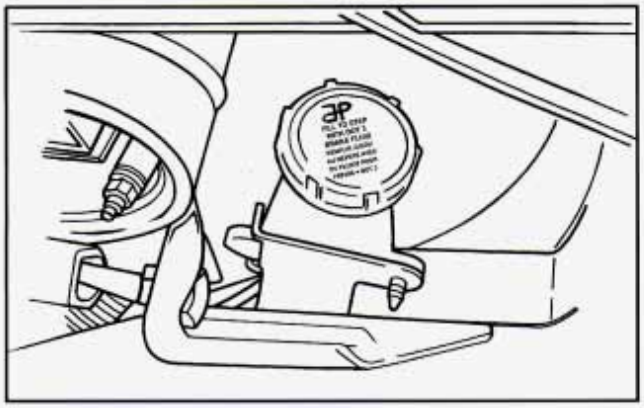

Hydraulic Clutch

The hydraulic clutch linkage in your vehicle is self-adjusting. The clutch master cylinder reservoir is filled with hydraulic clutch fluid.

It isn't a good idea to "top off" your clutch fluid. Adding fluid won't correct a leak.

A fluid loss in this system could indicate a problem. Have the system inspected and repaired.

When to Check and What to Use

Refer to the Maintenance Schedule to determine how often you should check the fluid level in your clutch master cylinder reservoir and for the proper fluid. See "Owner Checks and Services" and "Recommended Fluids and Lubricants" in the Index.

How to Check

The proper fluid should be added if the level is below the STEP mark on the reservoir. See the instructions on the reservoir cap.

Rear Axle

When to Check and Change Lubricant

Refer to the Maintenance Schedule to determine how often to check the lubricant and when to change it. See "Scheduled Maintenance Services" in the Index.

How to Check Lubricant

If the level is below the bottom of the filler plug hole, you'll need to add some lubricant. Add enough lubricant to raise the level to the bottom of the filler plug hole.

Downloaded from www.Manualslib.com manuals search engine

What to Use

Standard Differential

Use Axle Lubricant (GM Part No. 1052271) or SAE 80W-90 GL-5 gear lubricant.

Limited-Slip Differential

To add lubricant when the level is low, use Axle Lubricant (GM Part No. 12345977). To completely refill after draining, add 2 ounces (59 ml) of Limited-Slip Differential Lubricant Additive (GM Part No. 1052358). Then fill to the bottom of the filler plug hole with Axle Lubricant (GM Part No. 12345977).

Engine Coolant

The cooling system in your vehicle is filled with new DEX-COOL™ (orange-colored, silicate-free) engine coolant. This coolant is designed to remain in your vehicle for 5 years or 100,000 miles (166 000 km), whichever occurs first.

The following explains your cooling system and how to add coolant when it is low. If you have a problem with engine overheating or if you need to add coolant to your radiator, see "Engine Overheating" in the Index.

A 50/50 mixture of water and the proper coolant for your Chevrolet will:

- Give freezing protection down to -34°F (-37°C).
- Give boiling protection up to 265°F (129°C).
- Protect against rust and corrosion.
- Help keep the proper engine temperature.
- Let the warning lights and gages work as they should.

NOTICE:

When adding coolant it is important that you use DEX-COOL™ (orange-colored, silicate-free) coolant meeting GM Specification 6277M.

If *silicated* coolant is added to the system, premature engine, heater core or radiator corrosion may result. In addition, the engine coolant will require change sooner -- at 30,000 miles (50 000 km) or 24 months, whichever occurs first.

Downloaded from www.Manualslib.com manuals search engine

What to Use

Use a mixture of one-half *clean water* (preferably distilled) and one-half DEX-COOL™ (orange-colored, silicate-free) antifreeze that meets GM Specification 6277M, which won't damage aluminum parts. Use GM Engine Coolant Supplement (sealer) (GM Part No. 3634621) with any complete coolant change. If you use this mixture, you don't need to add anything else.

⚠ CAUTION:

Adding only plain water to your cooling system can be dangerous. Plain water, or some other liquid like alcohol, can boil before the proper coolant mix will. Your vehicle's coolant warning system is set for the proper coolant mix. With plain water or the wrong mix, your engine could get too hot but you wouldn't get the overheat warning. Your engine could catch fire and you or others could be burned. Use a 50/50 mix of clean water and DEX-COOL™ (orange-colored, silicate-free) antifreeze.

NOTICE:

If you use an improper coolant mix, your engine could overheat and be badly damaged. The repair cost wouldn't be covered by your warranty. Too much water in the mix can freeze and crack the engine, radiator, heater core and other parts.

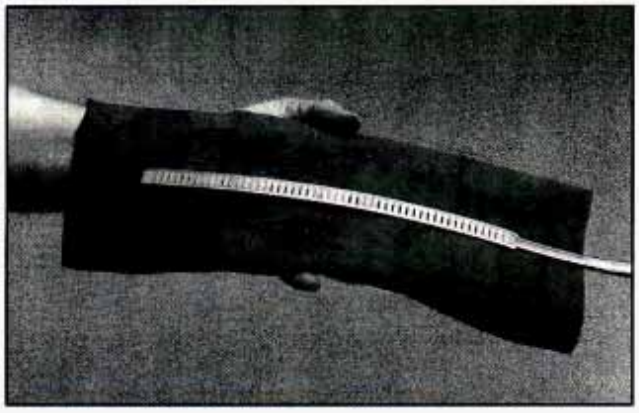

If you have to add coolant more than four times a year, have your dealer check your cooling system.

NOTICE:

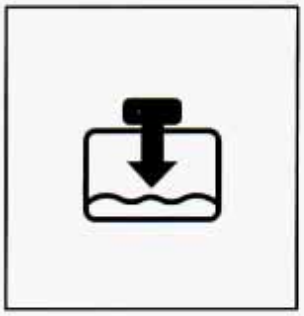

If you use the proper coolant, you don't have to add extra inhibitors or additives which claim to improve the system. These can be harmful.

Downloaded from www.Manualslib.com manuals search engine

Checking Coolant

When your engine is cold, check the dipstick on the cap of the coolant recovery tank. The coolant level should be at COLD, or a little higher. When your engine is warm, the level on the dipstick should be up to HOT, or a little higher.

If this light comes on, it means you're low on engine coolant.

5.7L LT1 Engine Only

Adding Coolant to the Recovery Tank

If you need more coolant, add the proper mix *at the coolant recovery tank,* but only when your engine is cool. If the tank is very low or empty, also add coolant to the radiator. See "Engine Overheating" in the Index for information.

Downloaded from www.Manualslib.com manuals search engine

⚠ CAUTION:

Turning the radiator pressure cap when the engine and radiator are hot can allow steam and scalding liquids to blow out and burn you badly. Never turn the pressure cap -- even a little -- when the engine and radiator are hot.

Add coolant mix at the recovery tank, but be careful not to spill it.

⚠ CAUTION:

You can be burned if you spill coolant on hot engine parts. Coolant contains ethylene glycol, and it will burn if the engine parts are hot enough. Don't spill coolant on a hot engine.

Radiator Pressure Cap (All Engines)

NOTICE:

Your radiator cap is an 18 psi (124 kPa) pressure-type cap and must be tightly installed to prevent coolant loss and possible engine damage from overheating. Be sure the arrows on the cap line up with the overflow tube on the radiator filler neck.

When you replace your radiator pressure cap, an AC® cap is recommended.

Downloaded from www.Manualslib.com manuals search engine

Thermostat

Engine coolant temperature is controlled by a thermostat in the engine coolant system. The thermostat stops the flow of coolant through the radiator until the coolant reaches a preset temperature.

When you replace your thermostat, an AC® thermostat is recommended.

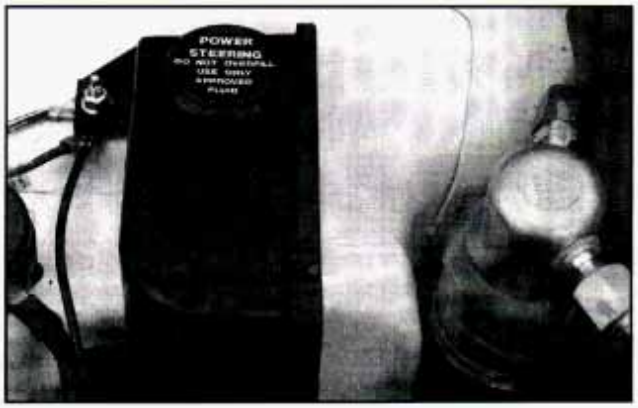

Power Steering Fluid

3800 L36 Engine

When to Check Power Steering Fluid

It is not necessary to regularly check power steering fluid unless you suspect there is a leak in the system or you hear an unusual noise. A fluid loss in this system could indicate a problem. Have the system inspected and repaired.

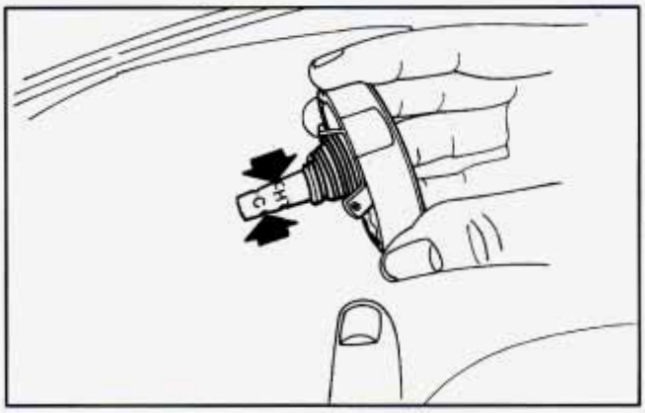

5.7L LT1 Engine

Downloaded from www.Manualslib.com manuals search engine

How To Check Power Steering Fluid

When the engine compartment is cool, unscrew the cap and wipe the dipstick with a clean rag. Replace the cap and completely tighten it. Then remove the cap again and look at the fluid level on the dipstick.

- When the engine compartment is hot, the level should be at the H or HOT mark.
- When the engine compartment is cool, the level should be at the C or FULL COLD mark.

What to Use

Refer to the Maintenance Schedule to determine what kind of fluid to use. See "Recommended Fluids and Lubricants" in the Index. Always use the proper fluid. Failure to use the proper fluid can cause leaks and damage hoses and seals.

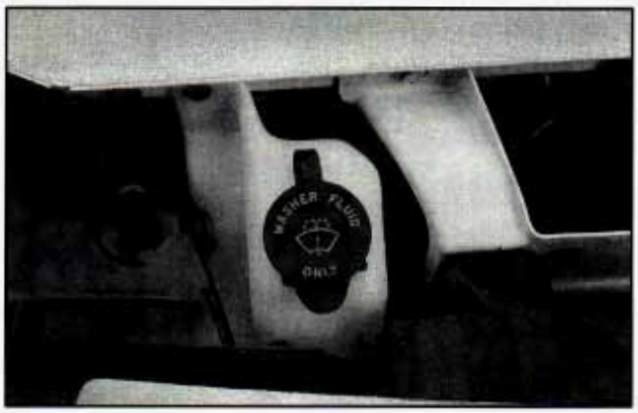

Windshield Washer Fluid

What to Use

When you need windshield washer fluid, be sure to read the manufacturer's instructions before use. If you will be operating your vehicle in an area where the temperature may fall below freezing, use a fluid that has sufficient protection against freezing.

Downloaded from www.Manualslib.com manuals search engine

Adding Washer Fluid

Open the cap labeled WASHER FLUID ONLY. Add washer fluid until the tank is full.

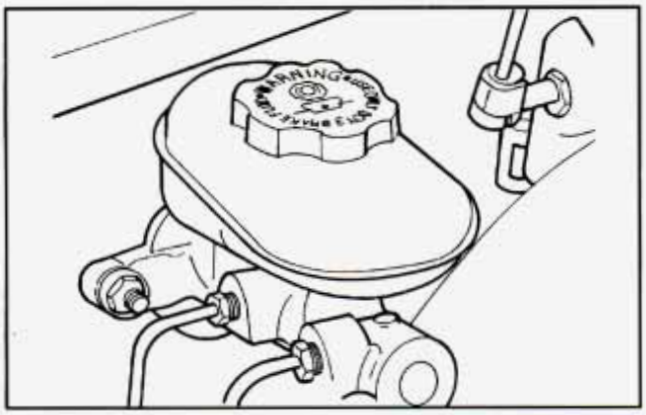

NOTICE:

- **When using concentrated washer fluid, follow the manufacturer's instructions for adding water.**
- **Don't mix water with ready-to-use washer fluid. Water can cause the solution to freeze and damage your washer fluid tank and other parts of the washer system. Also, water doesn't clean as well as washer fluid.**
- **Fill your washer fluid tank only three-quarters full when it's very cold. This allows for expansion, which could damage the tank if it is completely full.**
- **Don't use radiator antifreeze in your windshield washer. It can damage your washer system and paint.**

Downloaded from www.Manualslib.com manuals search engine

Brakes

Brake Fluid

Your brake master cylinder reservoir is here. It is filled with DOT-3 brake fluid.

There are only two reasons why the brake fluid level in the reservoir might go down. The first is that the brake fluid goes down to an acceptable level during normal brake lining wear. When new linings are put in, the fluid level goes back up. The other reason is that fluid is leaking out of the brake system. If it is, you should have your brake system fixed, since a leak means that sooner or later your brakes won't work well, or won't work at all.

So, it isn't a good idea to "top off" your brake fluid. Adding brake fluid won't correct a leak. If you add fluid when your linings are worn, then you'll have too much fluid when you get new brake linings. You should add (or remove) brake fluid, as necessary, only when work is done on the brake hydraulic system.

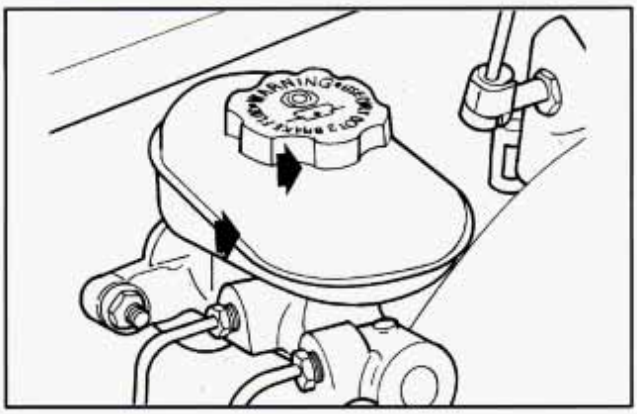

⚠ CAUTION:

If you have too much brake fluid, it can spill on the engine. The fluid will burn if the engine is hot enough. You or others could be burned, and your vehicle could be damaged. Add brake fluid only when work is done on the brake hydraulic system.

Refer to the Maintenance Schedule to determine when to check your brake fluid. See "Periodic Maintenance Inspections" in the Index.

Downloaded from www.Manualslib.com manuals search engine

Checking Brake Fluid

You can check the brake fluid without taking off the cap. Just look at the brake fluid reservoir. The fluid level should be above the plastic seam in the reservoir. If it isn't, have your brake system checked to see if there is a leak.

After work is done on the brake hydraulic system, make sure the level is above the plastic seam, near the base of the filler neck.

What to Add

When you do need brake fluid, use only DOT-3 brake fluid -- such as Delco Supreme 11® (GM Part No. 1052535). Use new brake fluid from a sealed container only, and always clean the brake fluid reservoir cap before removing it.

⚠ CAUTION:

With the wrong kind of fluid in your brake system, your brakes may not work well, or they may not even work at all. This could cause a crash. Always use the proper brake fluid.

Downloaded from www.Manualslib.com manuals search engine

NOTICE:

- **Using the wrong fluid can badly damage brake system parts. For example, just a few drops of mineral-based oil, such as engine oil, in your brake system can damage brake system parts so badly that they'll have to be replaced. Don't let someone put in the wrong kind of fluid.**
- **If you spill brake fluid on your vehicle's painted surfaces, the paint finish can be damaged. Be careful not to spill brake fluid on your vehicle. If you do, wash it off immediately. See "Appearance Care" in the Index.**

Brake Wear

Unless you have the four-wheel disc brake option, your Chevrolet has front disc brakes and rear drum brakes.

Disc brake pads have built-in wear indicators that make a high-pitched warning sound when the brake pads are worn and new pads are needed. The sound may come and go or be heard all the time your vehicle is moving (except when you are pushing on the brake pedal firmly).

⚠ CAUTION:

The brake wear warning sound means that sooner or later your brakes won't work well. That could lead to an accident. When you hear the brake wear warning sound, have your vehicle serviced.

NOTICE:

Continuing to drive with worn-out brake pads could result in costly brake repair.

Downloaded from www.Manualslib.com manuals search engine

Some driving conditions or climates may cause a brake squeal when the brakes are first applied or lightly applied. This does not mean something is wrong with your brakes.

If you have rear drum brakes, they don't have wear indicators, but if you ever hear a rear brake rubbing noise, have the rear brake linings inspected. Also, the rear brake drums should be removed and inspected each time the tires are removed for rotation or changing. When you have the front brakes replaced, have the rear brakes inspected, too.

Brake linings should always be replaced as complete axle sets.

Brake Pedal Travel

See your dealer if the brake pedal does not return to normal height, or if there is a rapid increase in pedal travel. This could be a sign of brake trouble.

Brake Adjustment

Every time you make a moderate brake stop, your disc brakes adjust for wear. If you rarely make a moderate or heavier stop, then your brakes might not adjust correctly. If you drive in that way, then -- very carefully -- make a few moderate brake stops about every 1,000 miles (1 600 km), so your brakes will adjust properly.

If your brake pedal goes down farther than normal, your rear drum brakes may need adjustment. Adjust them by backing up and firmly applying the brakes a few times.

Replacing Brake System Parts

The braking system on a modern vehicle is complex. Its many parts have to be of top quality and work well together if the vehicle is to have really good braking. Vehicles we design and test have top-quality GM brake parts in them, as your Chevrolet does when it is new. When you replace parts of your braking system -- for example, when your brake linings wear down and you have to have new ones put in -- be sure you get new genuine GM replacement parts. If you don't, your brakes may no longer work properly. For example, if someone puts in brake linings that are wrong for your vehicle, the balance between your front and rear brakes can change -- for the worse. The braking performance you've come to expect can change in many other ways if someone puts in the wrong replacement brake parts.

Downloaded from www.Manualslib.com manuals search engine

Battery

Every new Chevrolet has a Delco Freedom® battery. You never have to add water to one of these. When it's time for a new battery, we recommend a Delco Freedom battery. Get one that has the replacement number shown on the original battery's label.

Vehicle Storage

If you're not going to drive your vehicle for 25 days or more, take off the black, negative (-) cable from the battery. This will help keep your battery from running down.

⚠ CAUTION:

Batteries have acid that can burn you and gas that can explode. You can be badly hurt if you aren't careful. See "Jump Starting" in the Index for tips on working around a battery without getting hurt.

Contact your dealer to learn how to prepare your vehicle for longer storage periods.

Also, for your audio system, see "Theft-Deterrent Feature" in the Index.

Bulb Replacement

For the proper type of replacement bulb, see "Replacement Bulbs" in the Index.

Halogen Bulbs

⚠ CAUTION:

Halogen bulbs have pressurized gas inside and can burst if you drop or scratch the bulb. You or others could be injured. Take special care when handling and disposing of halogen bulbs.

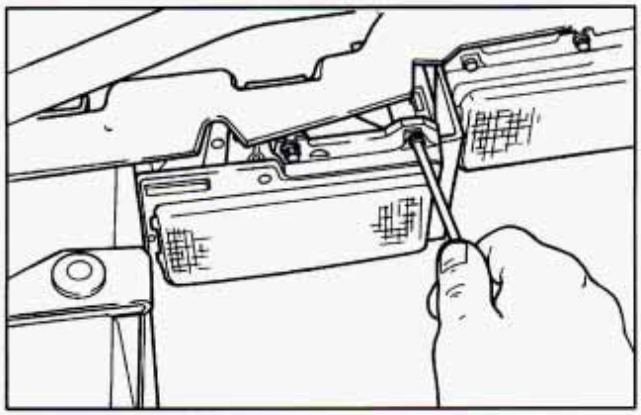

Headlamps

Before replacing a headlamp that does not light, check to make sure that the wiring connector is securely fastened to it.

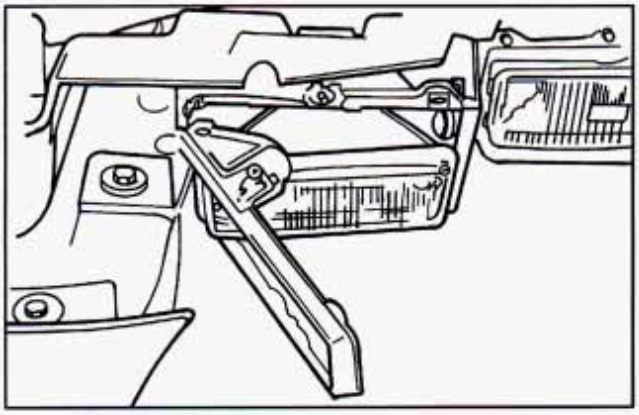

See "Replacement Bulbs" in the Index to check the size and type of headlamp you need to use before you begin to replace the headlamp. You must replace a headlamp with one that is exactly the same.

Be careful not to move the aiming screws when you replace the headlamp. If the headlamp being replaced was properly aimed, the new one will be also if it is properly installed.

Downloaded from www.Manualslib.com manuals search engine

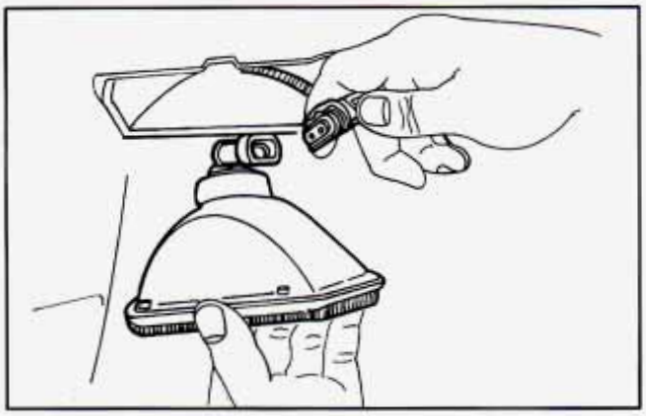

1. Remove the Torx® head screws at the end of the aiming ring.

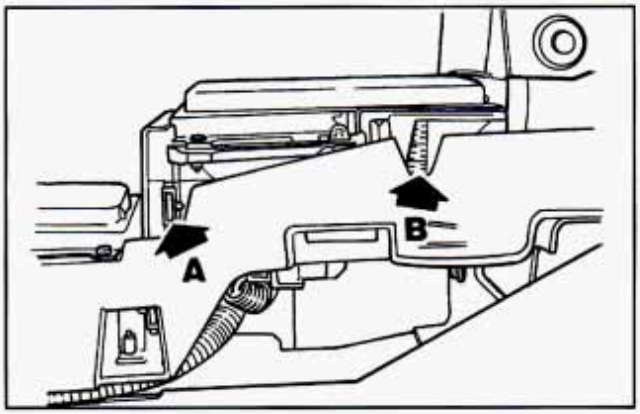

2. The aiming ring will swing open like a gate. Remove the aiming ring from the assembly. Place it face down, with the aim indicator up. Be careful not to damage the aiming bubble.

Downloaded from www.Manualslib.com manuals search engine

3. Pull the headlamp out of the assembly. Remove the wiring connector from the headlamp socket by lifting the plastic locking tabs on the connector and pulling it from the socket.
4. Check the new headlamp again. The number on the lamp must match the number of the headlamp being replaced. The letter U or L must also match.
5. Plug the wiring connector into the headlamp socket. Snap the locking tabs onto the socket.
6. Place the new headlamp in the headlamp assembly. The socket must be pointing in the same direction the socket on the burned out bulb was.
7. Insert the tabs on the aiming ring into the tabs in the headlamp assembly.
8. Hold the aiming ring closed, insert the screws at the end of the ring. Tighten the screws until the aiming ring touches the plastic nuts on both the top and bottom. Do not overtighten. Do not damage the vertical aiming bubble.

Downloaded from www.Manualslib.com manuals search engine

9. Check the headlamp aim indicators. The horizontal indicator (A) should be on 0 (zero). If the vehicle is level, the vertical indicator (B) should also be on 0 (zero). If the vehicle isn't level, check the vertical aim on a level surface as soon as you can. If either indicator doesn't read 0 (zero), adjust the headlamp aim. See "Adjusting Headlamp Aim" in the Index.

If your vehicle is damaged in an accident and the headlamp aim seems to be affected, see your Chevrolet dealer. Headlamps on damaged vehicles may require recalibration of the horizontal aim by your Chevrolet dealer.

Headlamp Aiming

Your vehicle has the 55 x 135 mini-quad headlamp system. These headlamps have horizontal and vertical aim indicators. The aim has been pre-set at the factory and should need no further adjustment.

If your vehicle is damaged in an accident and the headlamp aim seems to be affected, see your Chevrolet dealer. Headlamps on damaged vehicles may require recalibration of the horizontal aim by your Chevrolet dealer.

To check the aim, the vehicle should be properly prepared as follows:

- The vehicle must have all four tires on a perfectly level surface.
- The vehicle should not have any snow, ice or mud attached to it.
- There should not be any cargo or loading of the vehicle, except it should have a full tank of gas and one person or 160 lbs. (75 kg) on the driver's seat.
- Tires should be properly inflated.
- The horizontal indicator should read "0."

Downloaded from www.Manualslib.com manuals search engine

NOTICE:

To make sure your headlamps are aimed properly, read all the instructions before beginning. Failure to follow these instructions could cause damage to headlamp parts.

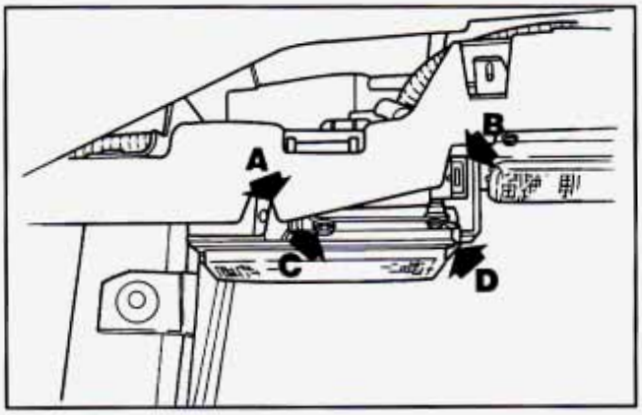

State inspection stations will allow a vertical reading of plus 0.76 degrees or minus 0.76 degrees from the center of the bubble.

It is recommended that the upper limit not exceed plus 0.4 degrees from the center of the bubble. Other drivers may flash their high beams at you if your adjustment is much above plus 0.4 degrees.

If you find that the headlamp aiming needs adjustment, follow these steps:

To adjust the aim of your headlamps:

1. Move your vehicle to a level surface. Use a spirit level to be sure. Be sure to remove any items that are not part of your original equipment from the trunk and passenger areas. No one should be seated in the vehicle and your fuel tank should be about half full. Check to be sure your tires are at the correct pressure.

There are four headlamps. Each one has its own vertical and horizontal aim position indicator. Each indicator has its own aiming screw.

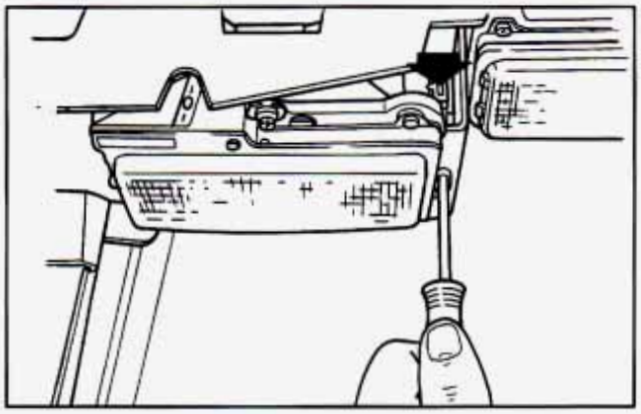

A. Vertical Indicator

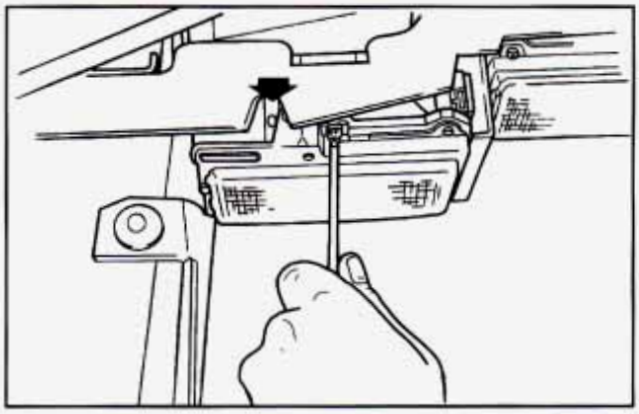

B. Horizontal Indicator

C. Vertical Aiming Screw

D. Horizontal Aiming Screw

Downloaded from www.Manualslib.com manuals search engine

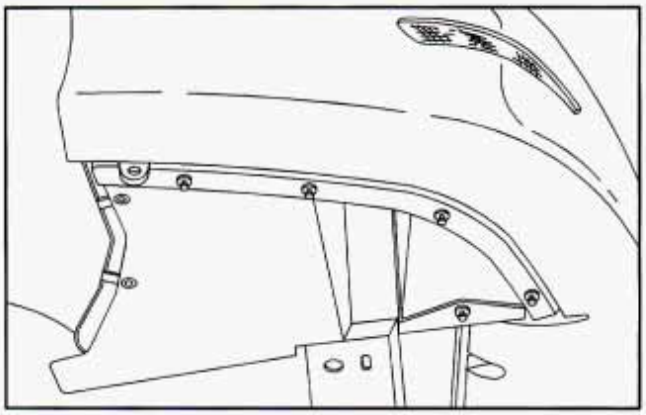

2. Start with the horizontal (left and right) headlamp aim. Don't try to adjust the vertical (up and down) aim first.
3. Check the horizontal aim for each headlamp and adjust it as necessary.
4. Turn the horizontal aiming screw until the pointer is lined up with the 0 (zero).
5. Now adjust the vertical aim. Check the vertical aim for each headlamp and adjust it as necessary.
6. Turn the vertical aiming screw until the bubble in the level is centered at 0 (zero).
7. If the gage readings are not centered, repeat Steps 2 and 3.

Try not to touch threaded parts other than the vertical and horizontal aiming screws.

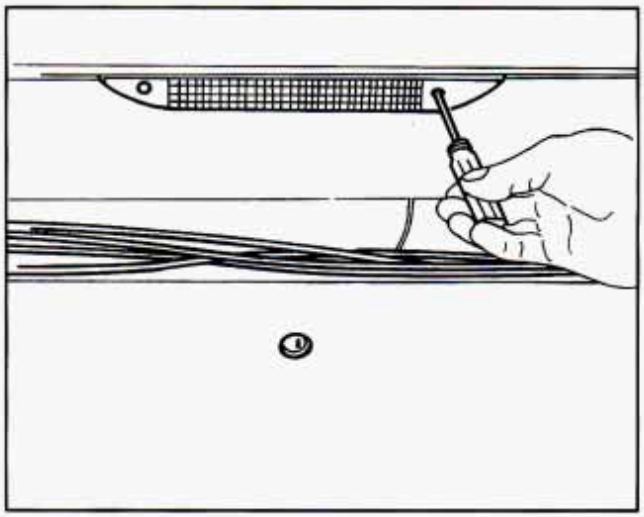

Downloaded from www.Manualslib.com manuals search engine

Front Turn Signal

1. Using a screwdriver, remove the plastic screws from the deflector under the vehicle. Move the deflector out of the way.
2. Turn and pull out the socket and the bulb.
3. Pull out the bulb.
4. Reverse the steps with a new bulb.

Center High-Mounted Stoplamp

Replacing the bulb:

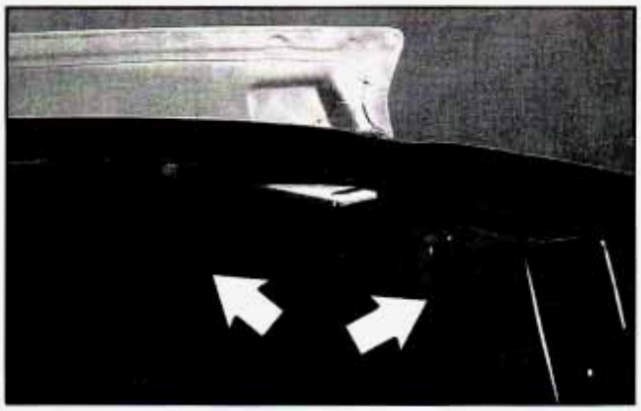

1. Remove the two screws in the stoplamp lens.
2. Gently pull assembly out and remove bulb from the back of the assembly.
3. Reverse the steps with a new bulb.

Downloaded from www.Manualslib.com manuals search engine

Rear Lamps

To change any rear bulb, you have to remove the entire housing.

1. Remove the trim panel from the side that you are replacing the bulb.

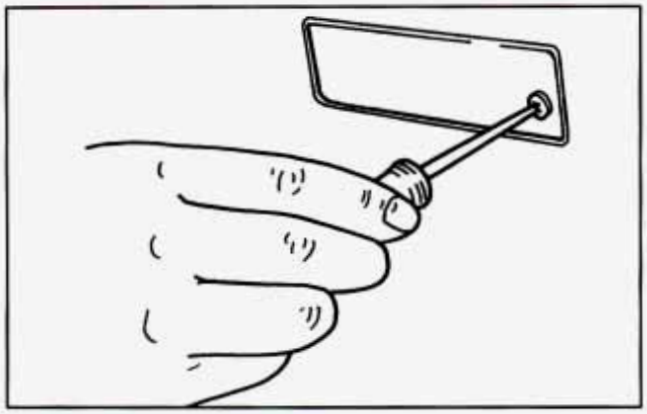

2. Pull the carpet back.
3. Remove the wing nuts.

4. Pull the assembly off from the outside.
5. To remove a socket with a tab, press the tab and turn the socket counterclockwise. To remove a socket without a tab, turn the socket counterclockwise.
6. To remove the bulb, push in and turn it counterclockwise, then pull it out.
7. Reverse the steps with a new bulb.

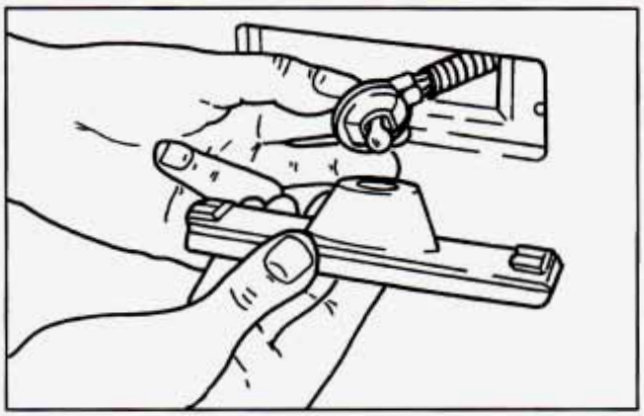

Downloaded from www.Manualslib.com manuals search engine

Rear Sidemarker

Replacing a rear sidemarker bulb:

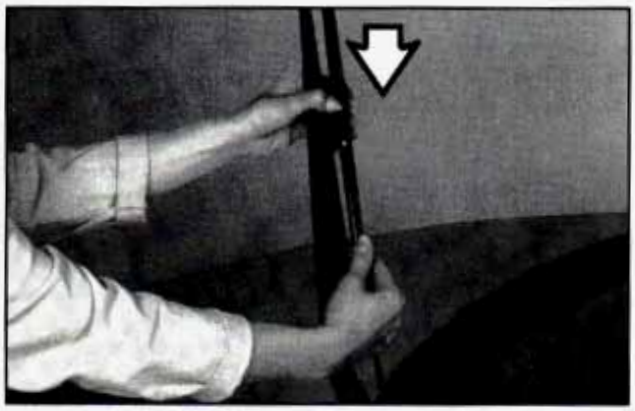

1. Remove the screw from the sidemarker assembly.
2. To pull out the bulb housing, tilt the housing to remove the tabbed end.

3. Turn counterclockwise and pull out the socket and the bulb.
4. Pull out the bulb.
5. Reverse the steps with a new bulb.

Downloaded from www.Manualslib.com manuals search engine

Wiper Blade Assembly Replacement

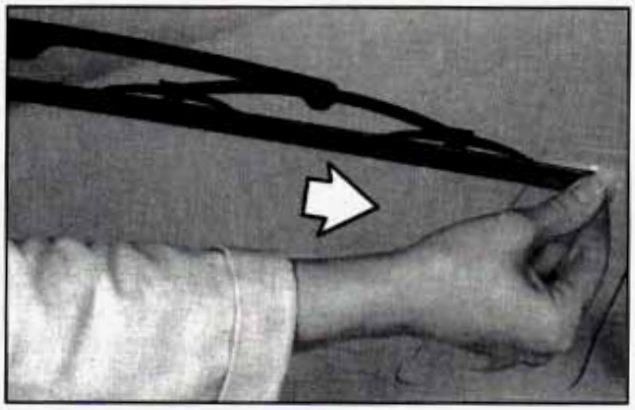

Replacement blades come in different types and are removed in different ways.

To remove the wiper blade assembly:

1. Lift the wiper arm until it locks into an upright position.
2. Press the locking tab down while sliding the blade assembly down.

Wiper Blade Element Replacement

To replace the wiper blade element, refer to the wiper blade assembly replacement instructions. To replace the element follow these steps:

1. Locate the heel end of the wiper blade assembly that has the two notches held by the wiper blade claw.
2. Hold the wiper blade assembly with one hand and pull the element gently with the other hand. (Replacement blade elements have three plastic caps which retain two metal flexor strips. Do not remove these caps before the element is installed).

Downloaded from www.Manualslib.com manuals search engine

3. At the heel end of the wiper blade assembly, notched end of blade element last, slide the blade element into the blade claw sets. The plastic retainer caps will be forced off as element is fully inserted. Make sure that all the claw sets are properly engaged in the slots of the blade element.
4. Install wiper blade assembly on wiper arm.

For information on wiper blade replacement length and type, see "Capacities and Specifications" in the Index.

Tires

We don't make tires. Your new Chevrolet comes with high-quality tires made by a leading tire manufacturer. If you ever have questions about your tire warranty and where to obtain service, see your Chevrolet Warranty booklet for details.

⚠ CAUTION:

Poorly maintained and improperly used tires are dangerous.

- **Overloading your tires can cause overheating as a result of too much friction. You could**

CAUTION: (Continued)

CAUTION: (Continued)

have an air-out and a serious accident. See "Loading Your Vehicle" in the Index.

- **Underinflated tires pose the same danger as overloaded tires. The resulting accident could cause serious injury. Check all tires frequently to maintain the recommended pressure. Tire pressure should be checked when your tires are cold.**
- **Overinflated tires are more likely to be cut, punctured or broken by a sudden impact -- such as when you hit a pothole. Keep tires at the recommended pressure.**
- **Worn, old tires can cause accidents. If your tread is badly worn, or if your tires have been damaged, replace them.**

See "Inflation -- Tire Pressure" in this section for inflation pressure adjustment for higher speed driving.

Downloaded from www.Manualslib.com manuals search engine

Inflation -- Tire Pressure

The Tire-Loading Information label, located on the driver's door, shows the correct inflation pressures for your tires when they're cold. "Cold" means your vehicle has been sitting for at least three hours or driven no more than 1 mile (1.6 km).

If you'll be driving at speeds higher than 100 mph (160 km/h) where it is legal, raise the cold inflation pressure of each tire to 35 psi (240 kPa). When you end this very high-speed driving, reduce the cold inflation pressures to those listed on the Tire-Loading Information label.

NOTICE:

Don't let anyone tell you that underinflation or overinflation is all right. It's not. If your tires don't have enough air (underinflation), you can get the following:

- **Too much flexing**
- **Too much heat**
- **Tire overloading**
- **Bad wear**

NOTICE: (Continued)

NOTICE: (Continued)

- **Bad handling**
- **Bad fuel economy.**

If your tires have too much air (overinflation), you can get the following:

- **Unusual wear**
- **Bad handling**
- **Rough ride**
- **Needless damage from road hazards.**

When to Check

Check your tires once a month or more.

Don't forget your compact spare tire. It should be at 60 psi (420 kPa).

Downloaded from www.Manualslib.com manuals search engine

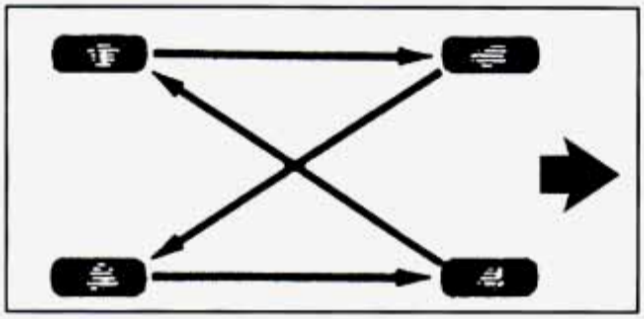

How to Check

Use a good quality pocket-type gage to check tire pressure. You can't tell if your tires are properly inflated simply by looking at them. Radial tires may look properly inflated even when they're underinflated.

Be sure to put the valve caps back on the valve stems. They help prevent leaks by keeping out dirt and moisture.

Tire Inspection and Rotation

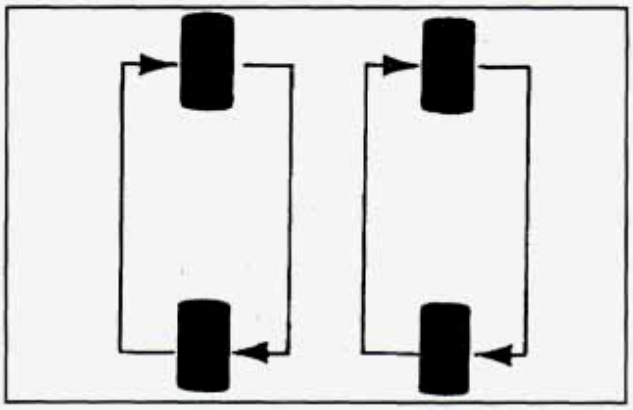

Tires should be inspected every 6,000 to 8,000 miles (10 000 to 13 000 km) for any signs of unusual wear. If unusual wear is present, rotate your tires as soon as possible and check wheel alignment. Also check for damaged tires or wheels. See "When It's Time for New Tires" and "Wheel Replacement" later in this section for more information.

The purpose of regular rotation is to achieve more uniform wear for all tires on the vehicle. The first rotation is the most important. See "Scheduled Maintenance Services" in the Index for scheduled rotation intervals.

If you don't have P245/50ZR16 Goodyear Eagle GS-C tires, use the rotation pattern shown above for your tires.

Downloaded from www.Manualslib.com manuals search engine

If you have P245/50ZR16 Goodyear Eagle GS-C tires, they must roll in a certain direction for the best overall performance. The direction is shown by an arrow on the sidewall. Because these tires are directional, they should be rotated as shown here. These tires should only be moved from front to rear and rear to front on the same side of the vehicle.

Don't include the compact spare tire in your tire rotation.

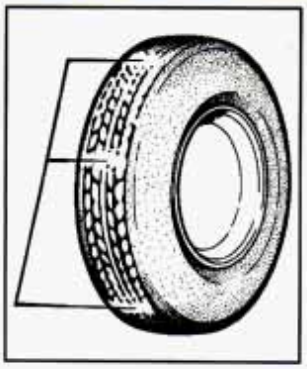

After the tires have been rotated, adjust the front and rear inflation pressures as shown on the Tire-Loading Information label. Make certain that all wheel nuts are properly tightened. See "Wheel Nut Torque" in the Index.

⚠ CAUTION:

Rust or dirt on a wheel, or on the parts to which it is fastened, can make wheel nuts become loose after a time. The wheel could come off and cause an accident. When you change a wheel, remove any rust or dirt from places where the wheel attaches to the vehicle. In an emergency, you can use a cloth or a paper towel to do this; but be sure to use a scraper or wire brush later, if you need to, to get all the rust or dirt off. (See "Changing a Flat Tire" in the Index.)

Downloaded from www.Manualslib.com manuals search engine

When It's Time for New Tires

One way to tell when it's time for new tires is to check the treadwear indicators, which will appear when your tires have only 1/16 inch (1.6 mm) or less of tread remaining.

You need a new tire if any of the following statements are true:

- You can see the indicators at three or more places around the tire.
- You can see cord or fabric showing through the tire's rubber.
- The tread or sidewall is cracked, cut or snagged deep enough to show cord or fabric.
- The tire has a bump, bulge or split.
- The tire has a puncture, cut or other damage that can't be repaired well because of the size or location of the damage.

Buying New Tires

To find out what kind and size of tires you need, look at the Tire-Loading Information label.

The tires installed on your vehicle when it was new had a Tire Performance Criteria Specification (TPC Spec) number on each tire's sidewall. When you get new tires, get ones with that same TPC Spec number. That way your vehicle will continue to have tires that are designed to give proper endurance, handling, speed rating, traction, ride and other things during normal service on your vehicle. If your tires have an all-season tread design, the TPC number will be followed by an "MS" (for mud and snow).

If you ever replace your tires with those not having a TPC Spec number, make sure they are the same size, load range, speed rating and construction type (bias, bias-belted or radial) as your original tires.

Downloaded from www.Manualslib.com manuals search engine

⚠ CAUTION:

Mixing tires could cause you to lose control while driving. If you mix tires of different sizes or types (radial and bias-belted tires), the vehicle may not handle properly, and you could have a crash. Using tires of different sizes may also cause damage to your vehicle. Be sure to use the same size and type tires on all wheels.

It's all right to drive with your compact spare, though. It was developed for use on your vehicle.

Uniform Tire Quality Grading

The following information relates to the system developed by the United States National Highway Traffic Safety Administration, which grades tires by treadwear, traction and temperature performance. (This applies only to vehicles sold in the United States.) The grades are molded on the sidewalls of most passenger car tires. The Uniform Tire Quality Grading system does not apply to deep tread, winter-type snow tires, space-saver or temporary use spare tires, tires with nominal rim diameters of 10 to 12 inches (25 to 30 cm), or to some limited-production tires.

While the tires available on General Motors passenger cars and light trucks may vary with respect to these grades, they must also conform to Federal safety requirements and additional General Motors Tire Performance Criteria (TPC) standards.

Treadwear

The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and a half (1 1/2) times as well on the government course as a tire graded 100. The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate.

Downloaded from www.Manualslib.com manuals search engine

Traction -- A, B, C

The traction grades, from highest to lowest, are A, B, and C, and they represent the tire's ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

Warning: The traction grade assigned to this tire is based on braking (straightahead) traction tests and does not include cornering (turning) traction.

Temperature -- A, B, C

The temperature grades are A (the highest), B, and C, representing the tire's resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Vehicle Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

Warning: The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause heat buildup and possible tire failure.

Wheel Alignment and Tire Balance

The wheels on your vehicle were aligned and balanced carefully at the factory to give you the longest tire life and best overall performance.

In most cases, you will not need to have your wheels aligned again. However, if you notice unusual tire wear or your vehicle pulling one way or the other, the alignment may need to be reset. If you notice your vehicle vibrating when driving on a smooth road, your wheels may need to be rebalanced.

Downloaded from www.Manualslib.com manuals search engine

Wheel Replacement

Replace any wheel that is bent, cracked, or badly rusted or corroded. If wheel nuts keep coming loose, the wheel, wheel bolts and wheel nuts should be replaced. If the wheel leaks air, replace it (except some aluminum wheels, which can sometimes be repaired). See your Chevrolet dealer if any of these conditions exist.

Your dealer will know the kind of wheel you need.

Each new wheel should have the same load-carrying capacity, diameter, width, offset and be mounted the same way as the one it replaces.

If you need to replace any of your wheels, wheel bolts or wheel nuts, replace them only with new GM original equipment parts. This way, you will be sure to have the right wheel, wheel bolts and wheel nuts for your Chevrolet model.

⚠ CAUTION:

Using the wrong replacement wheels, wheel bolts or wheel nuts on your vehicle can be dangerous. It could affect the braking and handling of your vehicle, make your tires lose air and make you lose control. You could have a collision in which you or others could be injured. Always use the correct wheel, wheel bolts and wheel nuts for replacement.

NOTICE:

The wrong wheel can also cause problems with bearing life, brake cooling, speedometer or odometer calibration, headlamp aim, bumper height, vehicle ground clearance and tire or tire chain clearance to the body and chassis.

See "Changing a Flat Tire" in the Index for more information.

Downloaded from www.Manualslib.com manuals search engine

Used Replacement Wheels

⚠ CAUTION:

Putting a used wheel on your vehicle is dangerous. You can't know how it's been used or how many miles it's been driven. It could fail suddenly and cause an accident. If you have to replace a wheel, use a new GM original equipment wheel.

Tire Chains

NOTICE:

If your Chevrolet has P235/55R16 or P245/50ZR16 size tires, don't use tire chains. They can damage your vehicle.

If you have other tires, use tire chains only where legal and only when you must. Use only SAE Class "S" type chains that are the proper size for your tires. Install them on the rear tires and tighten them as tightly as possible with the ends securely fastened. Drive slowly and follow the chain manufacturer's instructions. If you can hear the chains contacting your vehicle, stop and retighten them. If the contact continues, slow down until it stops. Driving too fast or spinning the wheels with chains on will damage your vehicle.

Downloaded from www.Manualslib.com manuals search engine

Appearance Care

Remember, cleaning products can be hazardous. Some are toxic. Others can burst into flame if you strike a match or get them on a hot part of the vehicle. Some are dangerous if you breathe their fumes in a closed space. When you use anything from a container to clean your Chevrolet, be sure to follow the manufacturer's warnings and instructions. And always open your doors or windows when you're cleaning the inside.

Never use these to clean your vehicle:

- Gasoline
- Benzene
- Naphtha
- Carbon Tetrachloride
- Acetone
- Paint Thinner
- Turpentine
- Lacquer Thinner
- Nail Polish Remover

They can all be hazardous -- some more than others -- and they can all damage your vehicle, too.

Don't use any of these unless this manual says you can. In many uses, these will damage your vehicle:

- Alcohol
- Laundry Soap
- Bleach
- Reducing Agents

Cleaning the Inside of Your Chevrolet

Use a vacuum cleaner often to get rid of dust and loose dirt. Wipe vinyl or leather with a clean, damp cloth.

Your Chevrolet dealer has two GM cleaners, a solvent-type spot lifter and a foam-type powdered cleaner. They will clean normal spots and stains very well. Do not use them on vinyl or leather.

Here are some cleaning tips:

- Always read the instructions on the cleaner label.
- Clean up stains as soon as you can -- before they set.
- Use a clean cloth or sponge, and change to a clean area often. A soft brush may be used if stains are stubborn.
- Use solvent-type cleaners in a well-ventilated area only. If you use them, don't saturate the stained area.
- If a ring forms after spot cleaning, clean the entire area immediately or it will set.

Downloaded from www.Manualslib.com manuals search engine

Using Foam-Type Cleaner on Fabric

1. Vacuum and brush the area to remove any loose dirt.
2. Always clean a whole trim panel or section. Mask surrounding trim along stitch or welt lines.
3. Mix Multi-Purpose Powdered Cleaner following the directions on the container label.
4. Use suds only and apply with a clean sponge.
5. Don't saturate the material.
6. Don't rub it roughly.
7. As soon as you've cleaned the section, use a sponge to remove the suds.
8. Rinse the section with a clean, wet sponge.
9. Wipe off what's left with a slightly damp paper towel or cloth.
10. Then dry it immediately with a blow dryer.
11. Wipe with a clean cloth.

Using Solvent-Type Cleaner on Fabric

First, see if you have to use solvent-type cleaner at all. Some spots and stains will clean off better with just water and mild soap.

If you need to use a solvent:

- Gently scrape excess soil from the trim material with a clean, dull knife or scraper. Use very little cleaner, light pressure and clean cloths (preferably cheesecloth). Cleaning should start at the outside of the stain, "feathering" toward the center. Keep changing to a clean section of the cloth.
- When you clean a stain from fabric, immediately dry the area with a blow dryer to help prevent a cleaning ring.

Fabric Protection

Your Chevrolet has upholstery and carpet that has been treated with Scotchgard™ Fabric Protector, a 3M product. It protects fabrics by repelling oil and water, which are the carriers of most stains. Even with this protection, you still need to clean your upholstery and carpet often to keep it looking new.

Further information on cleaning is available by calling 1-800-433-3296 (in Minnesota, 1-800-642-6167).

Downloaded from www.Manualslib.com manuals search engine

Special Cleaning Problems

Greasy or Oily Stains

Stains caused by grease, oil, butter, margarine, shoe polish, coffee with cream, chewing gum, cosmetic creams, vegetable oils, wax crayon, tar and asphalt can be removed as follows:

1. Carefully scrape off excess stain.
2. Follow the solvent-type instructions described earlier.
3. Shoe polish, wax crayon, tar and asphalt will stain if left on a vehicle's seat fabric. They should be removed as soon as possible. Be careful, because the cleaner will dissolve them and may cause them to spread.

Non-Greasy Stains

Stains caused by catsup, coffee (black), egg, fruit, fruit juice, milk, soft drinks, wine, vomit, urine and blood can be removed as follows:

1. Carefully scrape off excess stain, then sponge the soiled area with cool water.
2. If a stain remains, follow the foam-type instructions described earlier.
3. If an odor lingers after cleaning vomit or urine, treat the area with a water/baking soda solution: 1 teaspoon (5 ml) of baking soda to 1 cup (250 ml) of lukewarm water.
4. If needed, clean lightly with solvent-type cleaner.

Combination Stains

Stains caused by candy, ice cream, mayonnaise, chili sauce and unknown stains can be removed as follows:

- Carefully scrape off excess stain, then clean with cool water and allow to dry.
- If a stain remains, clean it with solvent-type cleaner.

Cleaning Vinyl

Use warm water and a clean cloth.

- Rub with a clean, damp cloth to remove dirt. You may have to do it more than once.
- Things like tar, asphalt and shoe polish will stain if you don't get them off quickly. Use a clean cloth and a GM Vinyl/Leather Cleaner or equivalent product.

Downloaded from www.Manualslib.com manuals search engine

Cleaning Leather

Use a soft cloth with lukewarm water and a mild soap or saddle soap.

- For stubborn stains, use a GM Vinyl/Leather Cleaner or equivalent product.
- *Never* use oils, varnishes, solvent-based or abrasive cleaners, furniture polish or shoe polish on leather.
- Soiled leather should be cleaned immediately. If dirt is allowed to work into the finish, it can harm the leather.

Cleaning the Top of the Instrument Panel

Use only mild soap and water to clean the top surfaces of the instrument panel. Sprays containing silicones or waxes may cause annoying reflections in the windshield and even make it difficult to see through the windshield under certain conditions.

Care of Safety Belts

Keep belts clean and dry.

⚠ CAUTION:

Do not bleach or dye safety belts. If you do, it may severely weaken them. In a crash, they might not be able to provide adequate protection. Clean safety belts only with mild soap and lukewarm water.

Glass

Glass should be cleaned often. GM Glass Cleaner (GM Part No. 1050427) or a liquid household glass cleaner will remove normal tobacco smoke and dust films.

Don't use abrasive cleaners on glass, because they may cause scratches. Avoid placing decals on the inside rear window, since they may have to be scraped off later. If abrasive cleaners are used on the inside of the rear window, an electric defogger element may be damaged. Any temporary license should not be attached across the defogger grid.

Downloaded from www.Manualslib.com manuals search engine

Cleaning the Outside of the Windshield and Wiper Blades

If the windshield is not clear after using the windshield washer, or if the wiper blade chatters when running, wax or other material may be on the blade or windshield.

Clean the outside of the windshield with GM Windshield Cleaner, Bon-Ami Powder® (GM Part No. 1050011). The windshield is clean if beads do not form when you rinse it with water.

Clean the blade by wiping vigorously with a cloth soaked in full-strength windshield washer solvent. Then rinse the blade with water.

Wiper blades should be checked on a regular basis and replaced when worn.

Weatherstrips

Silicone grease on weatherstrips will make them last longer, seal better, and not stick or squeak. Apply silicone grease with a clean cloth at least every six months. During very cold, damp weather more frequent application may be required. (See "Recommended Fluids and Lubricants" in the Index.)

Cleaning a Removable Roof Panel

Special care is necessary when cleaning, removing and/or storing the roof panel.

- Flush with water to remove dust and dirt, then dry the panel.
- Clean the panel with GM Glass Cleaner. Leave the cleaner on the panel for one minute, then wipe the panel with a soft, lint-free cloth.
- Don't use abrasive cleaning materials.

Downloaded from www.Manualslib.com manuals search engine

Cleaning the Outside of Your Chevrolet

The paint finish on your vehicle provides beauty, depth of color, gloss retention and durability.

Washing Your Vehicle

The best way to preserve your vehicle's finish is to keep it clean by washing it often with lukewarm or cold water.

Don't wash your vehicle in the direct rays of the sun. Don't use strong soaps or chemical detergents. Use liquid hand, dish or car washing (mild detergent) soaps. Don't use cleaning agents that are petroleum based, or that contain acid or abrasives. All cleaning agents should be flushed promptly and not allowed to dry on the surface, or they could stain. Dry the finish with a soft, clean chamois or a 100% cotton towel to avoid surface scratches and water spotting.

High pressure car washes may cause water to enter your vehicle.

Finish Care

Occasional waxing or mild polishing of your Chevrolet by hand may be necessary to remove residue from the paint finish. You can get GM-approved cleaning products from your dealer. (See "Appearance Care and Materials" in the Index.)

Your Chevrolet has a "basecoat/clearcoat" paint finish. The clearcoat gives more depth and gloss to the colored basecoat. Always use waxes and polishes that are non-abrasive and made for a basecoat/clearcoat paint finish.

NOTICE:

Machine compounding or aggressive polishing on a basecoat/clearcoat paint finish may dull the finish or leave swirl marks.

Foreign materials such as calcium chloride and other salts, ice melting agents, road oil and tar, tree sap, bird droppings, chemicals from industrial chimneys, etc., can damage your vehicle's finish if they remain on painted surfaces. Wash the vehicle as soon as possible. If necessary, use non-abrasive cleaners that are marked safe for painted surfaces to remove foreign matter.

Exterior painted surfaces are subject to aging, weather and chemical fallout that can take their toll over a period of years. You can help to keep the paint finish looking new by keeping your Chevrolet garaged or covered whenever possible.

Downloaded from www.Manualslib.com manuals search engine

Cleaning Your Convertible Top

Your convertible top should be cleaned often. If you use an automatic car wash, use one with water jets and hanging cloths.

When you hand wash the top, do it in partial shade. Use a mild soap, lukewarm water and a soft sponge. A chamois or cloth may leave lint on the top, and a brush can chafe the threads in the top fabric. Don't use detergents, harsh cleaners, solvents or bleaching agents.

When you clean the top, put one hand under it to support it. Wet the entire vehicle and wash the top evenly to avoid spots or rings. Let the soap remain on the fabric for a few minutes. When the top is really dirty, use a mild foam-type cleaner. Thoroughly rinse the entire vehicle, then let the top dry in direct sunlight.

To protect the convertible top:

- After you wash the vehicle, make sure the top is completely dry before you lower it.
- Don't get any cleaner on the vehicle's painted finish; it could leave streaks.
- If you decide to go through an automatic car wash, ask the manager if the equipment could damage your top.

Aluminum Wheels (If So Equipped)

Keep your wheels clean using a soft clean cloth with mild soap and water. Rinse with clean water. After rinsing thoroughly, dry with a soft clean towel. A wax may then be applied.

The surface of these wheels is similar to the painted surface of your car. Don't use strong soaps, chemicals, abrasive polishes, abrasive cleaners or abrasive cleaning brushes on them because you could damage the surface.

Don't take your vehicle through an automatic car wash that has silicon carbide tire cleaning brushes. These brushes can also damage the surface of these wheels.

Tires

To clean your tires, use a stiff brush with a tire cleaner.

NOTICE:

When applying a tire dressing always take care to wipe off any overspray or splash from all painted surfaces on the body or wheels of the vehicle. Petroleum-based products may damage the paint finish.

Downloaded from www.Manualslib.com manuals search engine

Sheet Metal Damage

If your vehicle is damaged and requires sheet metal repair or replacement, make sure the body repair shop applies anti-corrosion material to the parts repaired or replaced to restore corrosion protection.

Finish Damage

Any stone chips, fractures or deep scratches in the finish should be repaired right away. Bare metal will corrode quickly and may develop into a major repair expense.

Minor chips and scratches can be repaired with touch-up materials available from your dealer or other service outlets. Larger areas of finish damage can be corrected in your dealer's body and paint shop.

Underbody Maintenance

Chemicals used for ice and snow removal and dust control can collect on the underbody. If these are not removed, accelerated corrosion (rust) can occur on the underbody parts such as fuel lines, frame, floor pan and exhaust system even though they have corrosion protection.

At least every spring, flush these materials from the underbody with plain water. Clean any areas where mud and other debris can collect. Dirt packed in closed areas of the frame should be loosened before being flushed. Your dealer or an underbody car washing system can do this for you.

Chemical Paint Spotting

Some weather and atmospheric conditions can create a chemical fallout. Airborne pollutants can fall upon and attack painted surfaces on your vehicle. This damage can take two forms: blotchy, ringlet-shaped discolorations, and small irregular dark spots etched into the paint surface.

Although no defect in the paint job causes this, Chevrolet will repair, at no charge to the owner, the surfaces of new vehicles damaged by this fallout condition within 12 months or 12,000 miles (20 000 km) of purchase, whichever occurs first.

Appearance Care Materials Chart

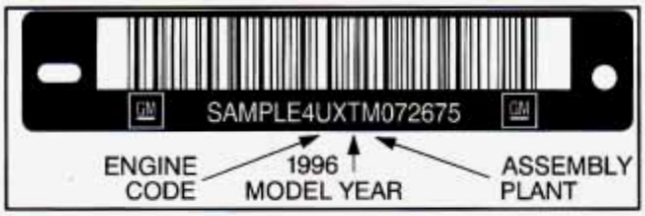

PART NUMBER	SIZE	DESCRIPTION	USAGE
1050004	2.75 sq. ft.	Chamois	Shines vehicle without scratching
1050172	16 oz. (0.473 L)	Tar and Road Oil Remover	Also removes old waxes and polishes
1050173	16 oz. (0.473 L)	Chrome Cleaner and Polish	Removes rust and corrosion
1050174	16 oz. (0.473 L)	White Sidewall Tire Cleaner	Removes soil and black marks
1050201	16 oz. (0.473 L)	Magic Mirror Cleaner Polish	Exterior cleaner and polish
1050214	32 oz. (0.946 L)	Vinyl and Leather Cleaner	Spot and stain removal
1050427	23 oz. (0.680 L)	Glass Cleaner	Cleans grease, grime and smoke film
1050429	6 lbs. (2.72 kg)	Multi-Purpose Powdered Cleaner	Cleans vinyl, cloth, tires and mats
1051398*	8 oz. (0.237 L)	Spot Lifter	For cloth
1051515	32 oz. (0.946 L)	Optikleen	Windshield washer solvent and antifreeze
1052870	16 oz. (0.473 L)	Wash and Wax Concentrate	Exterior wash
1052918**	8 oz. (0.237 L)	Armor All™ Protector	Protects vinyl, leather and rubber
1052929	16 oz. (0.473 L)	Wheel Cleaner	Spray on wheel cleaner
1052930	8 oz. (0.237 L)	Capture Dry Spot Remover	Attracts and absorbs soils
12345002**	16 oz. (0.473 L)	Armor All™ Cleaner	Cleans vinyl, leather and rubber
12345725	12 oz. (0.354 L)	Silicone Tire Shine	Shines tires

See your General Motors Parts Department for these products.
See "Fluids and Lubricants" in the Index.

* Not recommended for pigskin suede leather.
** Not recommended for use on instrument panel vinyl.

Downloaded from www.Manualslib.com manuals search engine

Vehicle Identification Number (VIN)

This is the legal identifier for your Chevrolet. It appears on a plate in the front corner of the instrument panel, on the driver's side. You can see it if you look through the windshield from outside your vehicle. The VIN also appears on the Vehicle Certification and Service Parts labels and the certificates of title and registration.

Engine Identification

The eighth character in your VIN is the engine code. This code will help you identify your engine, specifications and replacement parts.

Service Parts Identification Label

You'll find this label inside your console storage compartment. It's very helpful if you ever need to order parts. On this label is:

- your VIN,
- the model designation,
- paint information, and
- a list of all production options and special equipment.

Be sure that this label is not removed from the vehicle.

Downloaded from www.Manualslib.com manuals search engine

Electrical System

Add-On Electrical Equipment

NOTICE:

Don't add anything electrical to your Chevrolet unless you check with your dealer first. Some electrical equipment can damage your vehicle and the damage wouldn't be covered by your warranty. Some add-on electrical equipment can keep other components from working as they should.

Your vehicle has an air bag system. Before attempting to add anything electrical to your Chevrolet, see "Servicing Your Air Bag-Equipped Chevrolet" in the Index.

Headlamps

The headlamp wiring is protected by a circuit breaker. An electrical overload will cause the lamps to go on and off, or in some cases to remain off. If this happens, have your headlamp wiring checked right away.

Windshield Wipers

The windshield wiper motor is protected by a circuit breaker and a fuse. If the motor overheats due to heavy snow, etc., the wiper will stop until the motor cools. If the overload is caused by some electrical problem and not snow, etc., be sure to get it fixed.

Power Windows and Other Power Options

Circuit breakers protect the power windows and other power accessories. When the current load is too heavy, the circuit breaker opens and closes, protecting the circuit until the problem is fixed or goes away.

Downloaded from www.Manualslib.com manuals search engine

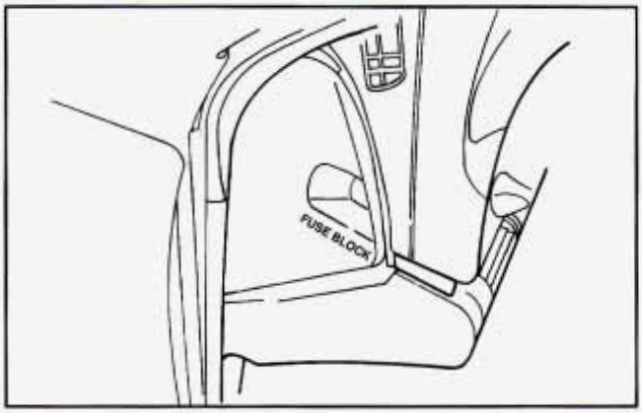

Fuses and Circuit Breakers

The wiring circuits in your vehicle are protected from short circuits by a combination of fuses, circuit breakers, and fusible thermal links in the wiring itself. This greatly reduces the chance of fires caused by electrical problems.

Look at the silver-colored band inside the fuse. If the band is broken or melted, replace the fuse. Be sure you replace a bad fuse with a new one of the correct size.

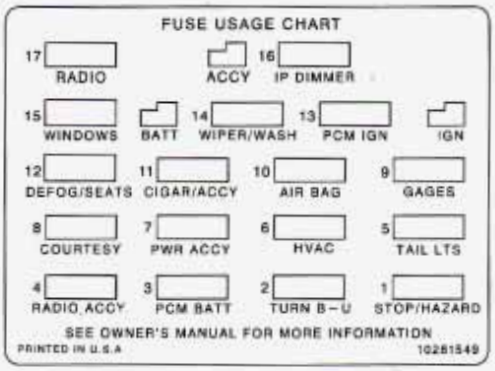

If you ever have a problem on the road and don't have a spare fuse, you can borrow one of the correct value. Just pick some feature of your vehicle that you can get along without -- like the radio or cigarette lighter -- and use its fuse, if it is the size you need. Replace it as soon as you can.

Main Fuse Block

The main fuse block is located on the left side of your instrument panel. Open the cover to expose the fuses.

Downloaded from www.Manualslib.com manuals search engine

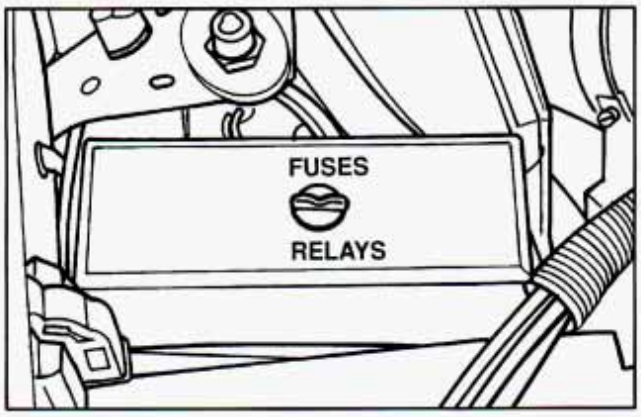

Fuse	Usage
STOP/HAZARD	Hazard Flasher, Brake Switch Assembly
TURN B-U	Performance/Traction Control Switch, Transmission Range Switch, Back-Up Lamp Switch, Turn Flasher, Daytime Running Lamps (DRL) Module

NOTES

Downloaded from www.Manualslib.com manuals search engine

Section 7 Maintenance Schedule

IMPORTANT:
KEEP ENGINE OIL AT THE PROPER LEVEL AND CHANGE AS RECOMMENDED

This section covers the maintenance required for your Chevrolet. Your vehicle needs these services to retain its safety, dependability and emission control performance.

GM Protection Plan

Have you purchased the GM Protection Plan? The Plan supplements your new vehicle warranties. See your Warranty and Owner Assistance booklet, or your Chevrolet dealer for details.

Introduction

Your Vehicle and the Environment

Proper vehicle maintenance not only helps to keep your vehicle in good working condition, but also helps the environment. All recommended maintenance procedures are important. Improper vehicle maintenance can even affect the quality of the air we breathe. Improper fluid levels or the wrong tire inflation can increase the level of emissions from your vehicle. To help protect our environment, and to keep your vehicle in good condition, please maintain your vehicle properly.

Downloaded from www.Manualslib.com manuals search engine

How This Section is Organized

The remainder of this section is divided into five parts:

"Part A: Scheduled Maintenance Services" shows what to have done and how often. Some of these services can be complex, so unless you are technically qualified and have the necessary equipment, you should let your dealer's service department or another qualified service center do these jobs.

> **⚠ CAUTION:**
>
> **Performing maintenance work on a vehicle can be dangerous. In trying to do some jobs, you can be seriously injured. Do your own maintenance work only if you have the required know-how and the proper tools and equipment for the job. If you have any doubt, have a qualified technician do the work.**

If you are skilled enough to do some work on your vehicle, you will probably want to get the service information GM publishes. See "Service and Owner Publications" in the Index.

"Part B: Owner Checks and Services" tells you what should be checked whenever you stop for fuel. It also explains what you can easily do to help keep your vehicle in good condition.

"Part C: Periodic Maintenance Inspections" explains important inspections that your Chevrolet dealer's service department or another qualified service center should perform.

"Part D: Recommended Fluids and Lubricants" lists some products GM recommends to help keep your vehicle properly maintained. These products, or their equivalents, should be used whether you do the work yourself or have it done.

"Part E: Maintenance Record" provides a place for you to record the maintenance performed on your vehicle. Whenever any maintenance is performed, be sure to write it down in this part. This will help you determine when your next maintenance should be done. In addition, it is a good idea to keep your maintenance receipts. They may be needed to qualify your vehicle for warranty repairs.

Downloaded from www.Manualslib.com manuals search engine

Part A: Scheduled Maintenance Services

Using Your Maintenance Schedule

We at General Motors want to help you keep your vehicle in good working condition. But we don't know exactly how you'll drive it. You may drive very short distances only a few times a week. Or you may drive long distances all the time in very hot, dusty weather. You may use your vehicle in making deliveries. Or you may drive it to work, to do errands or in many other ways.

Because of all the different ways people use their GM vehicles, maintenance needs vary. You may even need more frequent checks and replacements than you'll find in the schedules in this section. So please read this section and note how you drive. If you have any questions on how to keep your vehicle in good condition, see your Chevrolet dealer.

This part tells you the maintenance services you should have done and when you should schedule them. If you go to your dealer for your service needs, you'll know that GM-trained and supported service people will perform the work using genuine GM parts.

The proper fluids and lubricants to use are listed in Part D. Make sure whoever services your vehicle uses these. All parts should be replaced and all necessary repairs done before you or anyone else drives the vehicle.

These schedules are for vehicles that:

- carry passengers and cargo within recommended limits. You will find these limits on your vehicle's Tire-Loading Information label. See "Loading Your Vehicle" in the Index.
- are driven on reasonable road surfaces within legal driving limits.
- use the recommended fuel. See "Fuel" in the Index.

Selecting the Right Schedule

First you'll need to decide which of the two schedules is right for your vehicle. Here's how to decide which schedule to follow:

Downloaded from www.Manualslib.com manuals search engine

Maintenance Schedule

Short Trip/City Definition

Follow the Short Trip/City Maintenance Schedule if any one of these conditions is true for your vehicle:

- Most trips are less than 5 to 10 miles (8 to 16 km). This is particularly important when outside temperatures are below freezing.
- Most trips include extensive idling (such as frequent driving in stop-and-go traffic).
- Most trips are through dusty areas.
- You frequently tow a trailer or use a carrier on top of your vehicle.
- If the vehicle is used for delivery service, police, taxi or other commercial application.

One of the reasons you should follow this schedule if you operate your vehicle under any of these conditions is that these conditions cause engine oil to break down sooner.

Short Trip/City Intervals

Every 3,000 Miles (5 000 km): Engine Oil and Filter Change (or 3 months, whichever occurs first).

Every 6,000 Miles (10 000 km): Chassis Lubrication (or 6 months, whichever occurs first).

Short Trip/City Intervals

At 6,000 Miles (10 000 km) -- Then Every 12,000 Miles (20 000 km): Tire Rotation.

Every 6,000 Miles (10 000 km) of Trailering: Rear Axle Fluid Change (Vehicles Towing Trailers).

At the First 6,000 Miles (10 000 km): Rear Axle Fluid Change (Limited-Slip Differential).

Every 15,000 Miles (25 000 km): Air Cleaner Filter Inspection, if driving in dusty conditions. Automatic Transmission Service (severe conditions only).

Every 30,000 Miles (50 000 km): Air Cleaner Filter Replacement. Fuel Tank, Cap and Lines Inspection.

Every 60,000 Miles (100 000 km): Engine Accessory Drive Belt Inspection.

Every 100,000 Miles (166 000 km): Cooling System Service (or every 60 months, whichever occurs first). Spark Plug Wire Inspection. Spark Plug Replacement. Automatic Transmission Service (normal conditions).

These intervals only summarize maintenance services. Be sure to follow the complete maintenance schedule on the following pages.

Downloaded from www.Manualslib.com manuals search engine

Maintenance Schedule

Long Trip/Highway Definition

Follow this maintenance schedule *only* if none of the conditions from the Short Trip/City Maintenance Schedule is true.

Driving a vehicle with a fully warmed engine under highway conditions causes engine oil to break down slower.

Long Trip/Highway Intervals

Every 7,500 Miles (12 500 km): Engine Oil and Filter Change (or every 12 months, whichever occurs first). Chassis Lubrication (or every 12 months, whichever occurs first).

At the First 7,500 Miles (12 500 km): Rear Axle Fluid Change (Limited-Slip Differential).

At 7,500 Miles (12 500 km) -- Then Every 15,000 Miles (25 000 km): Tire Rotation.

Every 15,000 Miles (25 000 km): Automatic Transmission Service (severe conditions only).

Every 30,000 Miles (50 000 km): Air Cleaner Filter Replacement. Fuel Tank, Cap and Lines Inspection.

Every 60,000 Miles (100 000 km): Engine Accessory Drive Belt Inspection.

Every 100,000 Miles (166 000 km): Cooling System Service (or every 60 months, whichever occurs first). Spark Plug Wire Inspection. Spark Plug Replacement. Automatic Transmission Service (normal conditions).

These intervals only summarize maintenance services. Be sure to follow the complete maintenance schedule on the following pages.

Downloaded from www.Manualslib.com manuals search engine

Short Trip/City Maintenance Schedule

The services shown in this schedule up to 100,000 miles (166 000 km) should be performed after 100,000 miles (166 000 km) at the same intervals.

Footnotes

† The U.S. Environmental Protection Agency or the California Air Resources Board has determined that the failure to perform this maintenance item will not nullify the emission warranty or limit recall liability prior to the completion of the vehicle's useful life. We, however, urge that all recommended maintenance services be performed at the indicated intervals and the maintenance be recorded.

3,000 Miles (5 000 km)

☐ Change engine oil and filter (or every 3 months, whichever occurs first).
An Emission Control Service.

DATE	ACTUAL MILEAGE	SERVICED BY:

Downloaded from www.Manualslib.com manuals search engine

Downloaded from www.Manualslib.com manuals search engine

Short Trip/City Maintenance Schedule

48,000 Miles (80 000 km)

- ☐ Change engine oil and filter (or every 3 months, whichever occurs first).
  An Emission Control Service.
- ☐ Lubricate the steering linkage (or every 6 months, whichever occurs first).
- ☐ Change the rear axle gear lubricant if vehicle is used to pull a trailer.

DATE	ACTUAL MILEAGE	SERVICED BY:

51,000 Miles (85 000 km)

- ☐ Change engine oil and filter (or every 3 months, whichever occurs first).
  An Emission Control Service.

DATE	ACTUAL MILEAGE	SERVICED BY:

Downloaded from www.Manualslib.com manuals search engine

Short Trip/City Maintenance Schedule

54,000 Miles (90 000 km)

- ☐ Change engine oil and filter (or every 3 months, whichever occurs first).
  An Emission Control Service.
- ☐ Lubricate the steering linkage (or every 6 months, whichever occurs first).
- ☐ Rotate tires. See "Tire Inspection and Rotation" in the Index for proper rotation pattern and additional information.
- ☐ Change the rear axle gear lubricant if vehicle is used to pull a trailer.

DATE	ACTUAL MILEAGE	SERVICED BY:

57,000 Miles (95 000 km)

- ☐ Change engine oil and filter (or every 3 months, whichever occurs first).
  An Emission Control Service.

DATE	ACTUAL MILEAGE	SERVICED BY:

Downloaded from www.Manualslib.com manuals search engine

Short Trip/City Maintenance Schedule

60,000 Miles (100 000 km)

☐ Change engine oil and filter (or every 3 months, whichever occurs first).
An Emission Control Service.

☐ Lubricate the steering linkage (or every 6 months, whichever occurs first).

☐ Change the rear axle gear lubricant if vehicle is used to pull a trailer.

☐ Change automatic transmission fluid and filter if the vehicle is mainly driven under one or more of these conditions:

- In heavy city traffic where the outside temperature regularly reaches 90°F (32°C) or higher.
- In hilly or mountainous terrain.
- When doing frequent trailer towing.
- Uses such as found in taxi, police or delivery service.

If you do not use your vehicle under any of these conditions, change the fluid and filter at 100,000 miles (166 000 km).

Manual transmission fluid doesn't require change.

☐ Inspect engine accessory drive belt.

☐ Replace air cleaner filter.
An Emission Control Service.

☐ Inspect fuel tank, cap and lines for damage or leaks. Inspect fuel cap gasket for any damage. Replace parts as needed.
An Emission Control Service. †

Short Trip/City Maintenance Schedule

100,000 Miles (166 000 km)

- ☐ Drain, flush and refill cooling system (or every 60 months since last service, whichever occurs first). See "Engine Coolant" in the Index for what to use. Inspect hoses. Clean radiator, condenser, pressure cap and neck. Pressure test cooling system and pressure cap.
  An Emission Control Service. †
- ☐ Inspect spark plug wires.
  An Emission Control Service.
- ☐ Replace spark plugs.
  An Emission Control Service.
- ☐ If you haven't used your vehicle under severe service conditions listed previously and, therefore, haven't changed your automatic transmission fluid, change both the fluid and filter.

DATE	ACTUAL MILEAGE	SERVICED BY:

Downloaded from www.Manualslib.com manuals search engine

Long Trip/Highway Maintenance Schedule

The services shown in this schedule up to 100,000 miles (166 000 km) should be performed after 100,000 miles (166 000 km) at the same intervals.

Footnotes

† The U.S. Environmental Protection Agency or the California Air Resources Board has determined that the failure to perform this maintenance item will not nullify the emission warranty or limit recall liability prior to the completion of the vehicle's useful life. We, however, urge that all recommended maintenance services be performed at the indicated intervals and the maintenance be recorded.

7,500 Miles (12 500 km)

- ☐ Change engine oil and filter (or every 12 months, whichever occurs first).
  An Emission Control Service.
- ☐ Lubricate the steering linkage (or every 12 months, whichever occurs first).
- ☐ Change the rear axle gear lubricant if the vehicle has limited-slip differential.
- ☐ Rotate tires. See "Tire Inspection and Rotation" in the Index for proper rotation pattern and additional information.

DATE	ACTUAL MILEAGE	SERVICED BY:

Downloaded from www.Manualslib.com manuals search engine

Long Trip/Highway Maintenance Schedule

15,000 Miles (25 000 km)

☐ Change engine oil and filter (or every 12 months, whichever occurs first).
An Emission Control Service.

☐ Lubricate the steering linkage (or every 12 months, whichever occurs first).

☐ Change automatic transmission fluid and filter if the vehicle is mainly driven under one or more of these conditions:

- In heavy city traffic where the outside temperature regularly reaches 90°F (32°C) or higher.
- In hilly or mountainous terrain.
- When doing frequent trailer towing.
- Uses such as found in taxi, police or delivery service.

If you do not use your vehicle under any of these conditions, change the fluid and filter at 100,000 miles (166 000 km).

Manual transmission fluid doesn't require change.

DATE	ACTUAL MILEAGE	SERVICED BY:

Downloaded from www.Manualslib.com manuals search engine

Long Trip/Highway Maintenance Schedule

22,500 Miles (37 500 km)

☐ Change engine oil and filter (or every 12 months, whichever occurs first).
An Emission Control Service.

☐ Lubricate the steering linkage (or every 12 months, whichever occurs first).

☐ Rotate tires. See "Tire Inspection and Rotation" in the Index for proper rotation pattern and additional information.

DATE	ACTUAL MILEAGE	SERVICED BY:

30,000 Miles (50 000 km)

☐ Change engine oil and filter (or every 12 months, whichever occurs first).
An Emission Control Service.

☐ Lubricate the steering linkage (or every 12 months, whichever occurs first).

☐ Change automatic transmission fluid and filter if the vehicle is mainly driven under one or more of these conditions:

- In heavy city traffic where the outside temperature regularly reaches 90°F (32°C) or higher.
- In hilly or mountainous terrain.
- When doing frequent trailer towing.
- Uses such as found in taxi, police or delivery service.

Downloaded from www.Manualslib.com manuals search engine

Long Trip/Highway Maintenance Schedule

If you do not use your vehicle under any of these conditions, change the fluid and filter at 100,000 miles (166 000 km).

Manual transmission fluid doesn't require change.

Part B: Owner Checks and Services

Listed below are owner checks and services which should be performed at the intervals specified to help ensure the safety, dependability and emission control performance of your vehicle.

Be sure any necessary repairs are completed at once. Whenever any fluids or lubricants are added to your vehicle, make sure they are the proper ones, as shown in Part D.

At Each Fuel Fill

It is important for you or a service station attendant to perform these underhood checks at each fuel fill.

Engine Oil Level Check

Check the engine oil level and add the proper oil if necessary. See "Engine Oil" in the Index for further details.

Engine Coolant Level Check

Check the engine coolant level and add the proper coolant mix if necessary. See "Engine Coolant" in the Index for further details.

Windshield Washer Fluid Level Check

Check the windshield washer fluid level in the windshield washer tank and add the proper fluid if necessary. See "Windshield Washer Fluid" in the Index for further details.

At Least Once a Month

Tire Inflation Check

Make sure tires are inflated to the correct pressures. See "Tires" in the Index for further details.

Cassette Deck Service

Clean cassette deck. Cleaning should be done every 50 hours of tape play. See "Audio Systems" in the Index for further details.

Downloaded from www.Manualslib.com manuals search engine

At Least Twice a Year

Restraint System Check

Make sure the safety belt reminder light and all your belts, buckles, latch plates, retractors and anchorages are working properly. Look for any other loose or damaged safety belt system parts. If you see anything that might keep a safety belt system from doing its job, have it repaired. Have any torn or frayed safety belts replaced.

Also look for any opened or broken air bag covers, and have them repaired or replaced. (The air bag system does not need regular maintenance.)

Manual Transmission Check

Check the transmission fluid level; add if needed. See "Manual Transmission" in the Index. A fluid loss may indicate a problem. Check the system and repair if needed.

Automatic Transmission Check

Check the transmission fluid level; add if needed. See "Automatic Transmission" in the Index. A fluid loss may indicate a problem. Check the system and repair if needed.

Hydraulic Clutch System Check

Check the fluid level in the clutch reservoir. See "Hydraulic Clutch Fluid" in the Index. A fluid loss in this system could indicate a problem. Have the system inspected and repaired at once.

At Least Once a Year

Key Lock Cylinders Service

Lubricate the key lock cylinders with the lubricant specified in Part D.

Body Lubrication Service

Lubricate all hinges and latches, including those for the hood, rear compartment, console doors and any folding seat hardware. Part D tells you what to use. More frequent lubrication may be required when exposed to a corrosive environment.

Downloaded from www.Manualslib.com manuals search engine

Starter Switch Check

⚠ CAUTION:

When you are doing this check, the vehicle could move suddenly. If it does, you or others could be injured. Follow the steps below.

1. Before you start, be sure you have enough room around the vehicle.
2. Firmly apply both the parking brake (see "Parking Brake" in the Index if necessary) and the regular brake.

   NOTE: Do not use the accelerator pedal, and be ready to turn off the engine immediately if it starts.
3. On automatic transmission vehicles, try to start the engine in each gear. The starter should work only in PARK (P) or NEUTRAL (N). If the starter works in any other position, your vehicle needs service.

   On manual transmission vehicles, put the shift lever in NEUTRAL (N), push the clutch down halfway and try to start the engine. The starter should work only when the clutch is pushed down all the way to the floor. If the starter works when the clutch isn't pushed all the way down, your vehicle needs service.

Brake-Transmission Shift Interlock (BTSI) Check (Automatic Transmission)

⚠ CAUTION:

When you are doing this check, the vehicle could move suddenly. If it does, you or others could be injured. Follow the steps below.

1. Before you start, be sure you have enough room around the vehicle. It should be parked on a level surface.
2. Firmly apply the parking brake (see "Parking Brake" in the Index if necessary).

   NOTE: Be ready to apply the regular brake immediately if the vehicle begins to move.
3. With the engine off, turn the key to the RUN position, but don't start the engine. Without applying the regular brake, try to move the shift lever out of PARK (P) with normal effort. If the shift lever moves out of PARK (P), your vehicle's BTSI needs service.

Downloaded from www.Manualslib.com manuals search engine

Steering Column Lock Check

While parked, and with the parking brake set, try to turn the key to LOCK in each shift lever position.

- With an automatic transmission, the key should turn to LOCK only when the shift lever is in PARK (P).
- With a manual transmission, the key should turn to LOCK only when the shift lever is in REVERSE (R).

On vehicles with a key release button, try to turn the key to LOCK without pressing the button. The key should turn to LOCK only when you press the key button.

On all vehicles, the key should come out only in LOCK.

Parking Brake and Automatic Transmission PARK (P) Mechanism Check

⚠ CAUTION:

When you are doing this check, your vehicle could begin to move. You or others could be injured and property could be damaged. Make sure there is room in front of your vehicle in case it begins to roll. Be ready to apply the regular brake at once should the vehicle begin to move.

Park on a fairly steep hill, with the vehicle facing downhill. Keeping your foot on the regular brake, set the parking brake.

- To check the parking brake: With the engine running and transmission in NEUTRAL (N), slowly remove foot pressure from the regular brake pedal. Do this until the vehicle is held by the parking brake only.
- To check the PARK (P) mechanism's holding ability: Shift to PARK (P). Then release all brakes.

Underbody Flushing Service

At least every spring, use plain water to flush any corrosive materials from the underbody. Take care to clean thoroughly any areas where mud and other debris can collect.

Downloaded from www.Manualslib.com manuals search engine

Part C: Periodic Maintenance Inspections

Listed below are inspections and services which should be performed at least twice a year (for instance, each spring and fall). You should let your GM dealer's service department or other qualified service center do these jobs. Make sure any necessary repairs are completed at once.

Proper procedures to perform these services may be found in a Chevrolet Service Manual. See "Service and Owner Publications" in the Index.

Steering and Suspension Inspection

Inspect the front and rear suspension and steering system for damaged, loose or missing parts, signs of wear or lack of lubrication. Inspect the power steering lines and hoses for proper hook-up, binding, leaks, cracks, chafing, etc.

Exhaust System Inspection

Inspect the complete exhaust system. Inspect the body near the exhaust system. Look for broken, damaged, missing or out-of-position parts as well as open seams, holes, loose connections or other conditions which could cause a heat build-up in the floor pan or could let exhaust fumes into the vehicle. See "Engine Exhaust" in the Index.

Radiator and Heater Hose Inspection

Inspect the hoses and have them replaced if they are cracked, swollen or deteriorated. Inspect all pipes, fittings and clamps; replace as needed.

Throttle Linkage Inspection

Inspect the throttle linkage for interference or binding, and for damage or missing parts. Replace parts as needed. Replace any cables that have high effort or excessive wear. Do not lubricate accelerator and cruise control cables.

Rear Axle Service

Check the gear lubricant level in the rear axle and add if needed. See "Rear Axle" in the Index. A fluid loss may indicate a problem. Check the axle and repair it if needed.

Brake System Inspection

Inspect the complete system. Inspect brake lines and hoses for proper hook-up, binding, leaks, cracks, chafing, etc. Inspect disc brake pads for wear and rotors for surface condition. Also inspect drum brake linings for wear and cracks. Inspect other brake parts, including drums, wheel cylinders, calipers, parking brake, etc. The parking brake is self-adjusting and no manual adjustment is required. You may need to have your brakes inspected more often if your driving habits or conditions result in frequent braking.

Downloaded from www.Manualslib.com manuals search engine

Part D: Recommended Fluids and Lubricants

NOTE: Fluids and lubricants identified below by name, part number or specification may be obtained from your GM dealer.

USAGE	FLUID/LUBRICANT
Engine Oil	Engine oil with the American Petroleum Institute Certified For Gasoline Engines "Starburst" symbol of the proper viscosity. To determine the preferred viscosity for your vehicle's engine, see "Engine Oil" in the Index.
Engine Coolant	50/50 mixture of clean water (preferably distilled) and GM Goodwrench® DEX-COOL™ or Havoline® DEX-COOL™ (orange-colored, silicate-free) antifreeze conforming to GM Specification 6277M. See "Engine Coolant" in the Index.
Coolant Supplement Sealer	GM Part No. 3634621 or equivalent with a complete flush and refill.
Hydraulic Brake System	Delco Supreme 11® Brake Fluid (GM Part No. 1052535 or equivalent DOT-3 brake fluid).
Hydraulic Clutch System	Hydraulic Clutch Fluid (GM Part No. 12345347 or equivalent).
Power Steering System	GM Power Steering Fluid (GM Part No. 1052884 - 1 pt., 1050017 - 1 qt., or equivalent).
Manual Transmission	DEXRON®-III Automatic Transmission Fluid.
Automatic Transmission	DEXRON®-III Automatic Transmission Fluid.
Key Lock Cylinders	Multi-Purpose Lubricant, Superlube® (GM Part No. 12346241 or equivalent).

Downloaded from www.Manualslib.com manuals search engine

USAGE	FLUID/LUBRICANT
Clutch Linkage Pivot Points	Engine oil.
Floor Shift Linkage	Lubriplate Lubricant aerosol (GM Part No. 12346293 or equivalent) or lubricant meeting requirements of NLGI Grade 2 Category LB or GC-LB.
Chassis Lubrication	Chassis lubricant (GM Part No. 1052497 or equivalent) or lubricant meeting requirements of NLGI Grade 2, Category LB or GC-LB.
Rear Axle (Standard Differential)	Axle Lubricant (GM Part No. 12345977) or SAE 80W-90 GL-5 Gear Lubricant.
Rear Axle (Limited-Slip Differential)	Axle Lubricant (GM Part No. 12345977) and 2 ounces (59 ml) of Limited-Slip Differential Lubricant Additive (GM Part No. 1052358 or equivalent) where required. See "Rear Axle" in the Index.

USAGE	FLUID/LUBRICANT
Windshield Washer Solvent	GM Optikleen® Washer Solvent (GM Part No. 1051515) or equivalent.
Hood Latch Assembly Pivots, Spring Anchor and Release Pawl	Lubriplate lubricant aerosol (GM Part No. 12346293 or equivalent) or lubricant meeting requirements of NLGI Grade 2, Category LB or GC-LB.
Hood and Door Hinges	Multi-purpose lubricant, Superlube® (GM Part No. 12346241 or equivalent).
Weatherstrip Conditioning	Dielectric Silicone Grease (GM Part No. 12345579 or equivalent).

See "Replacement Parts" in the Index for recommended replacement filters and spark plugs.

Downloaded from www.Manualslib.com manuals search engine

Part E: Maintenance Record

After the scheduled services are performed, record the date, odometer reading and who performed the service in the boxes provided after the maintenance interval. Any additional information from "Owner Checks and Services" or "Periodic Maintenance" can be added on the following record pages. Also, you should retain all maintenance receipts. Your owner information portfolio is a convenient place to store them.

Section 8 Customer Assistance Information

Here you will find out how to contact Chevrolet if you need assistance. This section also tells you how to obtain service publications and how to report any safety defects.

This section includes information on:

- The Customer Satisfaction Procedure
- Customer Assistance for Text Telephone (TTY) Users
- Roadside Assistance
- Courtesy Transportation
- BBB Auto Line -- Alternative Dispute Resolution Program
- Reporting Safety Defects
- Service and Owner Publications

Customer Satisfaction Procedure

Downloaded from www.Manualslib.com manuals search engine

Your satisfaction and goodwill are important to your dealer and Chevrolet. Normally, any concern you may have with your vehicle can be handled by your selling or servicing dealer. Your dealer has the facility, trained technicians, special tools and up-to-date information to promptly address any issue which may arise. Chevrolet has empowered its dealers to make decisions and repair vehicles, and they are eager to resolve your concern to your complete satisfaction. If your concern has not been resolved to your satisfaction, take the following steps:

STEP ONE -- Discuss your concern with a member of dealership management. Normally, concerns can be quickly resolved at that level. If the matter has already been reviewed with the Sales, Service, or Parts Manager, contact the owner of the dealership or the General Manager.

STEP TWO -- If after contacting a member of dealership management, it appears your concern cannot be resolved by the dealership without further help, contact the Chevrolet Customer Assistance Center by calling 1-800-222-1020. In Canada, contact GM of Canada Customer Assistance Center in Oshawa by calling 1-800-263-3777 (English) or 1-800-263-7854 (French).

For help outside of the United States and Canada, call the following numbers as appropriate:

- In Mexico: (525) 625-3256
- In Puerto Rico: 1-800-496-9992 (English) or 1-800-496-9993 (Spanish)
- In the U.S. Virgin Islands: 1-800-496-9994
- In the Dominican Republic: 1-800-751-4135 (English) or 1-800-751-4136 (Spanish)
- In the Bahamas: 1-800-389-0009
- In Bermuda, Barbados, Antigua and the British Virgin Islands: 1-800-534-0122
- In all other Caribbean countries: 1-809-763-1315
- In other overseas locations, call GM North American Export Sales in Canada at: 1-905-644-4112

Downloaded from www.Manualslib.com manuals search engine

For prompt assistance, please have the following information available to give the Customer Assistance Representative:

- Your name, address, home and business telephone numbers
- Vehicle Identification Number (This is available from the vehicle registration or title, or the plate at the top left of the instrument panel and visible through the windshield.)
- Dealership name and location
- Vehicle delivery date and present mileage
- Nature of concern

We encourage you to call us so we can give your inquiry prompt attention. However, if you wish to write Chevrolet, write to:

Chevrolet Motor Division
Chevrolet Customer Assistance Center
P.O. Box 7047
Troy, MI 48007-7047

Refer to your Warranty and Owner Assistance Information booklet for addresses of Canadian and GM Overseas offices.

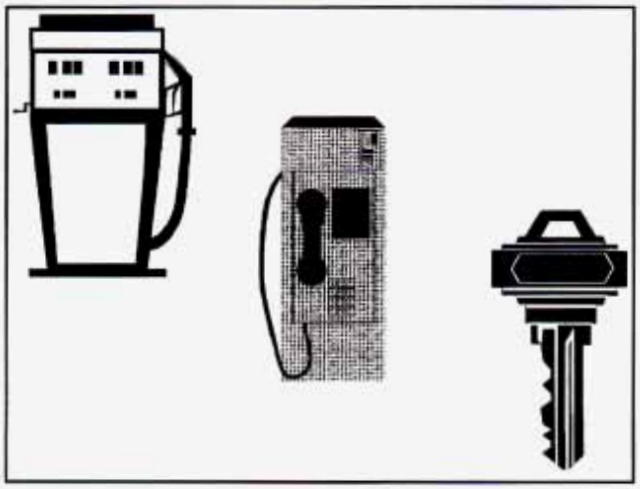

When contacting Chevrolet, please remember that your concern will likely be resolved in the dealership, using the dealer's facilities, equipment and personnel. That is why we suggest you follow Step One first if you have a concern.

Customer Assistance for Text Telephone (TTY) Users

To assist customers who are deaf, hard of hearing, or speech-impaired and who use Text Telephones (TTYs), Chevrolet has TTY equipment available at its Customer Assistance Center. Any TTY user can communicate with Chevrolet by dialing: 1-800-833-CHEV. (TTY users in Canada can dial 1-800-263-3830.)

Downloaded from www.Manualslib.com manuals search engine

Chevrolet Roadside Assistance Program

To enhance Chevrolet's strong commitment to customer satisfaction, Chevrolet is excited to announce the establishment of the Chevrolet/Geo Roadside Assistance Center. As the owner of a 1996 Chevrolet/Geo, membership in Roadside Assistance is free.

Roadside Assistance is available 24 hours a day, 365 days a year, by calling 1-800-CHEV-USA (1-800-243-8872). This toll-free number will provide you over-the-phone roadside assistance with minor mechanical problems. If your problem cannot be resolved over the phone, our advisors have access to a nationwide network of dealer recommended service providers. Roadside membership is free, however some services may incur costs.

Roadside offers two levels of service to the customer, *Basic Care* and *Courtesy™ Care*:

- Toll-free number, 1-800-CHEV-USA
- Free towing for warranty repairs
- Basic over-the-phone technical advice
- Available dealer services at reasonable costs (ie., wrecker services, locksmith/key service, glass repair, etc.)

ROADSIDE *Courtesy™ Care* PROVIDES:

- Roadside *Basic Care* services (as outlined above) Plus:
- FREE Non-Warranty Towing (to the closest dealer from a legal roadway)

Downloaded from www.Manualslib.com manuals search engine

- FREE Locksmith/Key Service (when keys are lost on the road or locked inside)
- FREE Flat Tire Service (spare installed on the road)
- FREE Jump Start (at home or on the road)
- FREE Fuel Delivery ($5 of fuel delivered on the road)

Chevrolet/Geo offers Courtesy Transportation for customers needing warranty service. Courtesy Transportation will be offered in conjunction with the coverage provided by the Bumper to Bumper New Vehicle Limited Warranty to eligible purchasers of 1996 Chevrolet/Geo passenger car and light duty trucks. (Please see your selling dealer for details.)

Note: *Courtesy Care* is available to Retail and Retail Lease Customers operating 1996 and newer Chevrolet/Geo vehicles for a period of 3 years/36,000 miles, whichever occurs first. All *Courtesy Care* services must be pre-arranged by Chevrolet Roadside or dealer Service Management.

Basic Care and *Courtesy Care* are not part of or included in the coverage provided by the New Vehicle Limited Warranty. Chevrolet reserves the right to modify or discontinue *Basic Care* and *Courtesy Care* at any time.

For complete program details, see your Chevrolet/Geo dealer to obtain a Roadside Assistance Center brochure.

The Roadside Assistance Center uses companies that will provide you with quality and priority service. When roadside services are required, our advisors will explain any payment obligations that may be incurred for utilizing outside services.

For prompt assistance when calling, please have the following available to give to the advisor:

- Vehicle Identification Number
- License plate number
- Vehicle color
- Vehicle location
- Telephone number where you can be reached
- Vehicle mileage
- Description of problem

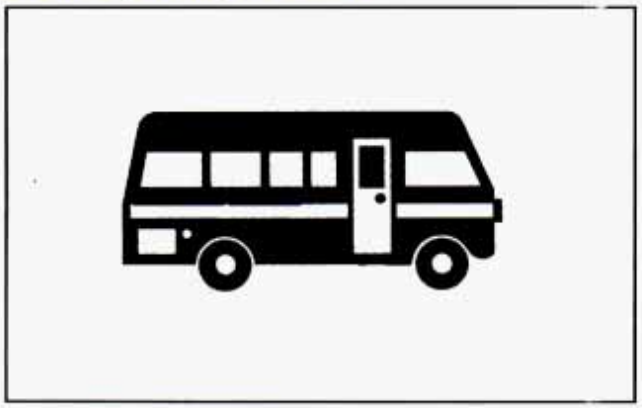

Please refer to the Roadside Assistance brochure inside your owner information portfolio for full program details.

Downloaded from www.Manualslib.com manuals search engine

Canadian Roadside Assistance

Vehicles purchased in Canada have an extensive Roadside Assistance program accessible from anywhere in Canada or the United States. Please refer to the separate brochure provided by the dealer or call 1-800-268-6800 for emergency services.

Courtesy Transportation

Chevrolet/Geo offers Courtesy Transportation for customers needing warranty service. Courtesy Transportation will be offered in conjunction with the coverage provided by the Bumper to Bumper New Vehicle Limited Warranty to retail purchasers of 1996 Chevrolet/Geo passenger cars and light duty trucks (please see your selling dealer for details).

Courtesy Transportation includes:

- One way shuttle ride for any warranty repair completed during the same day.
- Up to $30 maximum daily vehicle rental allowance for any overnight warranty repair up to five days, OR
- Up to $30 maximum daily cab, bus or other transportation allowance in lieu of rental for any overnight warranty repair up to five days, OR
- Up to $10 daily fuel allowance for rides provided by another person (i.e., friend, neighbor, etc.) in lieu of rental for any overnight warranty repair up to five days.

  Note: All Courtesy Transportation arrangements will be administered by your Chevrolet/Geo dealer service management. Claim amounts should reflect all actual costs.
- Chevrolet/Geo Courtesy Transportation is not part of the Bumper to Bumper New Vehicle Limited Warranty. Chevrolet/Geo reserves the right to make any changes or discontinue Courtesy Transportation at any time without notification.
- For additional program details, contact your Chevrolet/Geo dealer.

Downloaded from www.Manualslib.com manuals search engine

In Canada, please consult your GM dealer for information on Courtesy Transportation.

For warranty repairs during the Complete Vehicle Coverage period in the New Vehicle Limited Warranty, interim transportation may be available under the Courtesy Transportation Program. Please consult your dealer for details. The Roadside Assistance program is available only in the United States and Canada.

GM Participation in BBB AUTO LINE -- Alternative Dispute Resolution Program*

*This program may not be available in all states, depending on state law. Canadian owners refer to your Warranty and Owner Assistance Information booklet. General Motors reserves the right to change eligibility limitations and/or to discontinue its participation in this program.

Both Chevrolet and your Chevrolet dealer are committed to making sure you are completely satisfied with your new vehicle. Our experience has shown that, if a situation arises where you feel your concern has not been adequately addressed, the Customer Satisfaction Procedure described earlier in this section is very successful.

There may be instances where an impartial third party can assist in arriving at a solution to a disagreement regarding vehicle repairs or interpretation of the New Vehicle Limited Warranty. To assist in resolving these disagreements, Chevrolet voluntarily participates in BBB AUTO LINE.

BBB AUTO LINE is an out-of-court program administered by the Better Business Bureau system to settle disputes between customers and automobile manufacturers. This program is available free of charge to customers who currently own or lease a GM vehicle.

If you are not satisfied after following the Customer Satisfaction Procedure, you may contact the BBB using the toll-free telephone number, or write them at the following address:

BBB AUTO LINE
Council of Better Business Bureaus
4200 Wilson Boulevard
Suite 800
Arlington, VA 22203

Telephone: 1-800-955-5100

Downloaded from www.Manualslib.com manuals search engine

To file a claim, you will be asked to provide your name and address, your Vehicle Identification Number (VIN), and a statement of the nature of your complaint. Eligibility is limited by vehicle age and mileage, and other factors.

We prefer you utilize the Customer Satisfaction Procedure before you resort to AUTO LINE, but you may contact the BBB at any time. The BBB will attempt to resolve the complaint serving as an intermediary between you and Chevrolet. If this mediation is unsuccessful, an informal hearing will be scheduled where eligible customers may present their case to an impartial third-party arbitrator.

The arbitrator will make a decision which you may accept or reject. If you accept the decision, GM will be bound by that decision. The entire dispute resolution procedure should ordinarily take about 40 days from the time you file a claim until a decision is made.

Some state laws may require you to use this program before filing a claim with a state-run arbitration program or in the courts. For further information, contact the BBB at 1-800-955-5100 or the Chevrolet Customer Assistance Center at 1-800-222-1020.

REPORTING SAFETY DEFECTS TO THE UNITED STATES GOVERNMENT

If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA), in addition to notifying General Motors.

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or General Motors.

To contact NHTSA, you may either call the Auto Safety Hotline toll-free at 1-800-424-9393 (or 366-0123 in the Washington, D.C. area) or write to:

NHTSA, U.S. Department of Transportation
Washington, D.C. 20590

You can also obtain other information about motor vehicle safety from the Hotline.

Downloaded from www.Manualslib.com manuals search engine

REPORTING SAFETY DEFECTS TO THE CANADIAN GOVERNMENT

If you live in Canada, and you believe that your vehicle has a safety defect, you should immediately notify Transport Canada, in addition to notifying General Motors of Canada Limited. You may write to:

Transport Canada
Box 8880
Ottawa, Ontario K1G 3J2

REPORTING SAFETY DEFECTS TO GENERAL MOTORS

In addition to notifying NHTSA (or Transport Canada) in a situation like this, we certainly hope you'll notify us. Please call us at 1-800-222-1020 or write:

Chevrolet Motor Division
Chevrolet Customer Assistance Center
P.O. Box 7047
Troy, Michigan 48007-7047

In Canada, please call us at 1-800-263-3777 (English) or 1-800-263-7854 (French). Or, write:

General Motors of Canada Limited
Customer Assistance Center
1908 Colonel Sam Drive
Oshawa, Ontario L1H 8P7

Service and Owner Publications

Service manuals, service bulletins, owner's manuals and other service literature are available for purchase for all current and many past model General Motors vehicles.

Toll-free telephone numbers for ordering information:

United States 1-800-551-4123

Canada 1-800-668-5539

Downloaded from www.Manualslib.com manuals search engine

Service Manuals

Service manuals contain diagnostic and repair information for all chassis and body systems. They may be useful for owners who wish to get a greater understanding of their vehicle. They are also useful for owners with the appropriate skill level or training who wish to perform "do-it-yourself" service. These are authentic General Motors service manuals meant for professional, qualified technicians.

Service Bulletins

Service bulletins covering various subjects are regularly sent to all General Motors dealerships. GM monitors product performance in the field. When service methods are found which promote better service on GM vehicles, bulletins are created to help the technician perform better service. Service bulletins may involve any number of vehicles. Some will describe inexpensive service; others will describe expensive service. Some will advise of new or unexpected conditions, and others may help avoid future costly repairs. Service bulletins are meant for qualified technicians. In some cases bulletins refer to service manuals, specialized tools, equipment and safety procedures necessary to service the vehicle. Since these bulletins are issued throughout the model year and beyond, an index is required and published quarterly to help identify specific bulletins. Subscriptions are available. You can order an index at the toll-free numbers listed previously, or ask a GM dealer to see an index or individual bulletin.

Owner Publications

Owner's manuals, warranty folders and various owner assistance booklets provide owners with general operation and maintenance information.
