Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

64 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

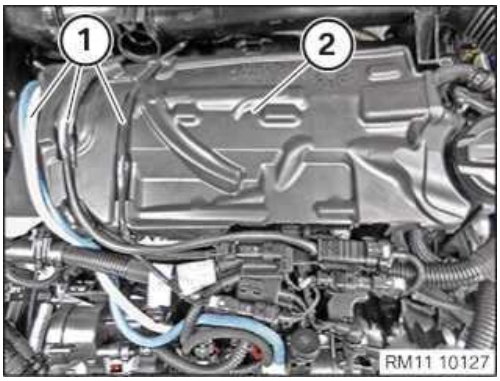
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

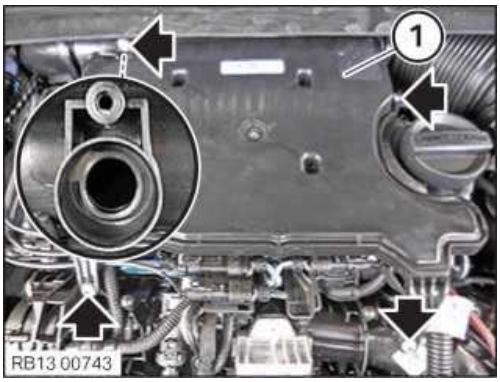
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing



Clamp		Tightening torque	3 Nm

65 – Install the acoustic cover for the injectors

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

66 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

67 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

68 – Install engine

- See additional information.

Additional Information

Overview of Tightening Torques

Special tool to cylinder head Used in step 12

M8		Tightening torque	21,5 Nm

Special tool 2 455 010 to crankcase Used in step 13

M10x30		Tightening torque	38 Nm

cardiagn.com

Special tool 11 8 930 to special tool 00 2 320

Used in step 13

M14x35		Tightening torque	160 Nm

Special tool 2 288 054 to crankshaft

Used in step 34 35

M10		Tightening torque	20 Nm

Gear to counterbalance shaft

Used in step 35

M10	Renew screws.	1. Jointing torque	20 Nm
		2. Angle of rotation	180 °

Idler gear to crankcase

Used in step 35

M12x1.5		Tightening torque	10 Nm
		Angle of rotation	45 °

Oil deflector to crankshaft bearing cap

Used in step 36

M8x14	Replace screws.	Tightening torque	35 Nm
		Release	180 °
		Tightening torque	15 Nm
		Angle of rotation	45 °

Oil deflector to crankcase

Used in step 36

M8x14		Tightening torque	19 Nm

Oil vacuum pump to crankcaseB47

Used in step 37

M8x35		Tightening torque	19 Nm

Rear timing case cover to crankcase

Used in step 38

M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

SCR coolant lines to crankcase end cover

Used in step 38

Hexagon screw M6x16		Tightening torque	8 Nm

Cylinder head to crankcase

Used in step 38

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

Cylinder head bolt to timing case cover

Used in step 38

M8x40		Tightening torque	19 Nm

Oil sump to crankcase

Used in step 38

M8x30		Tightening torque	24 Nm
M8x110		Tightening torque	24 Nm

Transmission to oil sump

Used in step 38 57

M8		Tightening torque	19 Nm

Guide tube for oil dipstick on engine

Used in step 38

M8x16		Tightening torque	19 Nm

cardiagn.com

Flywheel to crankshaft

Used in step 39

M12x1.5	Renew screws.	Tightening torque	120 Nm

Clutch to flywheel

Used in step 40

M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

Vibration damper with belt pulley to crankshaft

Used in step 41

M10x65	Renew screws. Tighten screws crosswise.	1. Jointing torque	40 Nm
		2. Angle of rotation	60 °
		3. Angle of rotation	60 °

Transmission to engine

Used in step 41

M8		Tightening torque	19 Nm

Glow elements to cylinder head

Used in step 44

Glow element		Tightening torque	13 Nm

Camshaft carrier to cylinder head

Used in step 45

M7x35		Tightening torque	13 Nm

Intake and exhaust camshaft in camshaft support

Used in step 46

M6x31		Tightening torque	10 Nm

Bearing journal to cylinder head

Used in step 46

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

Standard screw connection M8

Used in step 46

M8		Tightening torque	19 Nm

Standard screw connection M6

Used in step 46 62

M6			8 Nm

Chain tensioner piston to cylinder head

Used in step 46

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

Camshaft sprocket to camshaft

Used in step 46

M7x17.			17 Nm

Cylinder head cover to cylinder head

Used in step 50

M6		Tightening torque.	8,5 Nm

Clamping claw facing to cylinder head cover

Used in step 51

Screw M6		Tightening torque	8 Nm

Injector to cylinder head cover

Used in step 51

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

Rail on cylinder head cover

Used in step 52

Torx screw M8x25		Tightening torque	19 Nm

cardiagn.com

High pressure line between high pressure pump and rail

Used in step 52

High-pressure pipe		Tightening torque	28 Nm

High pressure lines between injector and rail

Used in step 54

High pressure lines		Tightening torque	28 Nm

Intake plenum to cylinder head

Used in step 55

M6		Tightening torque	11 Nm

Holder to crankcase

Used in step 56

M10		Tightening torque	38 Nm

Transmission to engine

Used in step 57

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

Transfer box to transmission

Used in step 58

M10		Tightening torque	56 Nm

Heat shield to transfer box

Used in step 58

M6	Renew screws.	Tightening torque	6 Nm

Oil filler plug on transfer box (VTG)

Used in step 58

M18x1.5		Tightening torque	35 Nm

Intermediate shaft to transfer box

Used in step 59

M8x35		Tightening torque	19 Nm

Exhaust-gas recirculation cooler to exhaust manifold

Used in step 60 62

M8x28	Replace screws	Tightening torque	32 Nm

Oil return line to turbocharger

Used in step 60 61

M6x12		Tightening torque	8 Nm

Holder to exhaust turbocharger and crankcase

Used in step 60

M8x16		Tightening torque	22 Nm

Exhaust turbocharger to exhaust manifold

Used in step 61

V-band clamp		Tightening torque	19 Nm

Oil feed line to bracket

Used in step 61

Torx screw M6x12		Tightening torque	8 Nm

Holder to exhaust turbocharger and crankcase

Used in step 61

M8x16		Tightening torque	22 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 62

M8x20		Tightening torque	5 Nm
		Release angle	90 °

Intake plenum to exhaust-gas recirculation cooler

Used in step 62

M6		Tightening torque	11 Nm

cardiagn.com

Exhaust-gas recirculation cooler to cylinder head — Used in step 62

M8x20		Tightening torque	19 Nm

Heat shield for exhaust turbocharger — Used in step 62

Torx screw BM 6x12		Tightening torque	10 Nm

Banjo bolt for exhaust pressure pipe to exhaust manifold — Used in step 62

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

Diesel particulate filter V-clip to exhaust turbocharger — Used in step 62

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

Diesel particle filter to holder — Used in step 62

M8 hexagon nut		Tightening torque	19 Nm

Diesel particulate filter holder to gearbox — Used in step 62

M12x75		Tightening torque	66 Nm

Diesel particulate filter bracket to crankcase — Used in step 62

M10x35		Tightening torque	38 Nm

Heat shield for exhaust turbocharger — Used in step 62

Torx screw BM 6x12		Tightening torque	10 Nm

Bracket to oil sump — Used in step 62

M6		Tightening torque	8 Nm

Alternator to component carrier — Used in step 62

M10x75 / M10x125		Tightening torque	38 Nm

Positive battery cable to alternator — Used in step 62

M8		Tightening torque	19 Nm

Air conditioning compressor in component carrier — Used in step 62

M10		Tightening torque	38 Nm

Ground cable to cylinder head — Used in step 62

M6x12		Tightening torque	8 Nm

Wiring harness to cylinder head cover — Used in step 62

TS5x20		Tightening torque	3,5 Nm

Fuel line to intake plenum — Used in step 62

TS6x20		Tightening torque	5 Nm

Differential pressure sensor to holder — Used in step 63

Screw		Tightening torque	4 Nm

Clamp for the pressure hose on the differential pressure sensor — Used in step 63

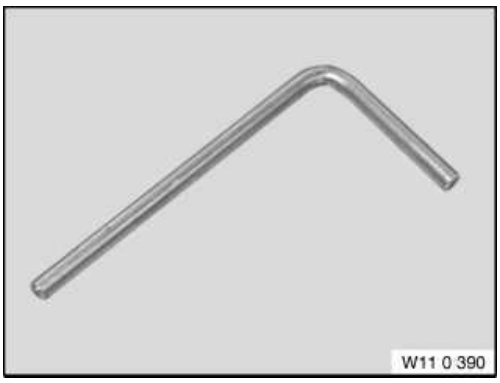
Clamp 15–19mm		Tightening torque	3 Nm

cardiagn.com

Clean air pipe to cylinder head cover Used in step 64

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing Used in step 64

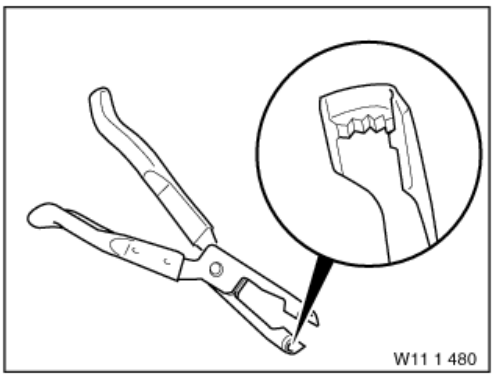


Clamp		Tightening torque	3 Nm

Resonator to manifold and clean air pipe Used in step 66

Screw TS6	Renew screw.	Tightening torque	5 Nm

Overview of Special Tools



0 496 268 (11 0 390) Pin

Common Used in step 7 62

Usage	(roll pin) For securing new tensioning pulley (poly-V belt)
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 15 07 (390)

0 490 796 (11 1 480) Pliers

Common Used in step 7 25

Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

2 459 012 Holder

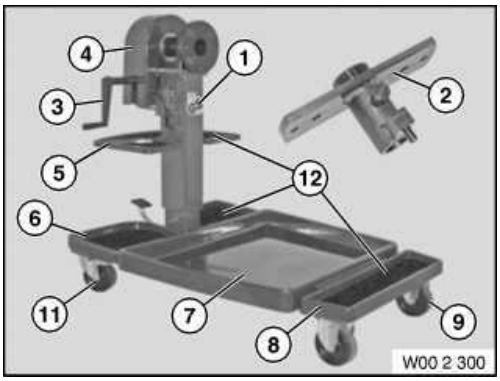
Common Used in step 12 57

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

cardiagn.com

2 455 010 Engine support

Common



Used in step 13 56

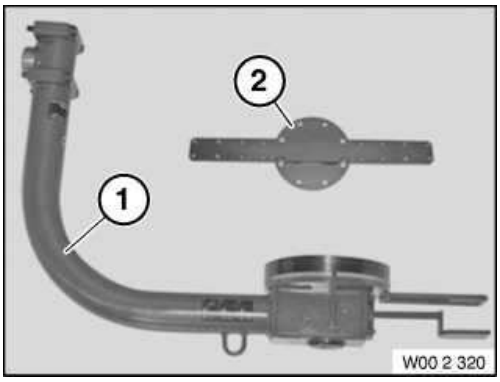
Usage	For accommodating engine on assembly stand. Engine: B3x, B4x, N47.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 495 187 (00 2 300) Assembly stand

Used in step 13

cardiagn.com

Common



Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of

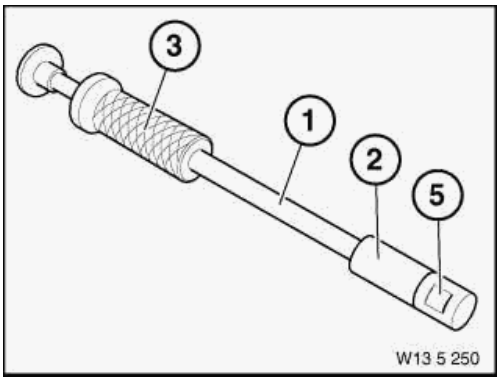
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.	

cardiagn.com

0 495 196 (00 2 320) Support arm

Common

Used in step 13



Usage	(Support arm with fixture) For mounting engines using the engine mounting bracket.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 197 (00 2 321)		**Support arm**	
2	0 495 198 (00 2 322)		**Panel** (take-up plate)	
3	0 495 380 (00 2 323)		**Panel** (fixture) Engine N73	
6	0 496 287 (00 2 326)		**Panel** (fixture) Engine: M73	
5	0 496 288 (00 2 327)	**0 496 373**	**Panel** (fixture) Engine: S62 Replaced by 11 5 420 (0 496 373)	
8	0 496 533 (00 2 328)		**Support** (Engine mount) Engine: N57, N57Top	
9	0 496 579 (00 2 329)	**0 496 680**	**Support** (Engine mount) Engine: N74 Replaced by 116160 (0 496 680)	
4	0 495 379 (00 2 324)		**Panel** (fixture) Engine M67TU	
5	0 495 381 (00 2 325)		**Panel** (fixture) Engine N62, N62TU	

cardiagn.com

0 493 321 (13 5 250) Puller

Common

Used in step 17

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

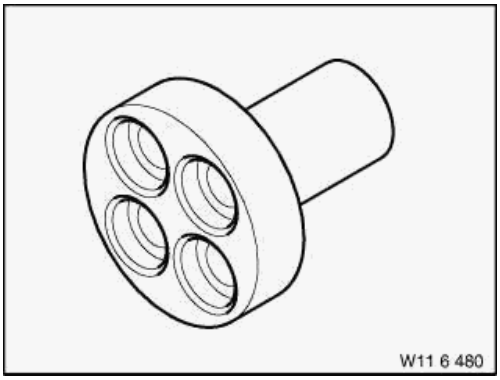
0 493 339 (13 5 252) Bush

Common

Used in step 17

Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com



0 493 340 (13 5 253) Weight

Common Used in step 17

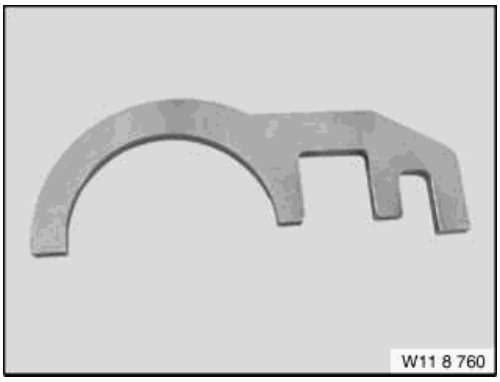
Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 380 (11 6 480) Connector

Common Used in step 20 46 49

Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

2 288 380 Locating stud



Common Used in step 20 46 47 49

Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

cardiagn.com

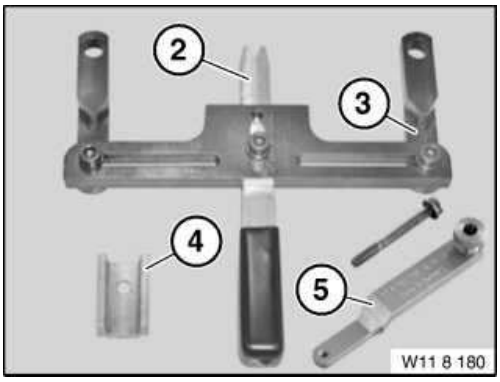
0 496 112 (11 8 760) Gauge

Common Used in step 20 46 48 49

Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 495 105 (11 4 480) oddments tray

Common Used in step 26 27 46



Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

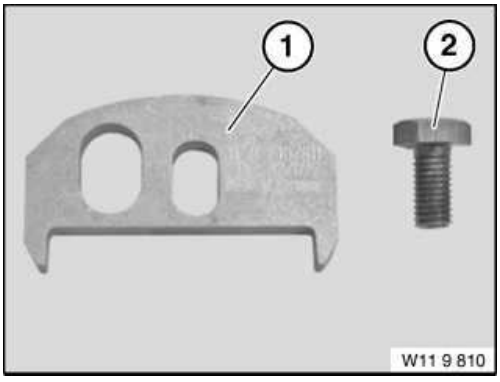
Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

cardiagn.com

0 493 587 (11 8 180) Holder

Common



Used in step 28 41

Usage	(Counter support) Blocking flywheel when releasing and tightening down central bolts on vibration absorber
Included in the tool or work	
Storage location	B45
Replaced by	
In connection with	
SI-Number	01 12 99 (452)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
2	0 494 433 (11 8 182)		**Shaped part** (shaped part)	
5	0 494 716 (11 8 185)		**Adapter** (Adapter with adjusting sleeve) E46 M47TU	
1	0 494 432 (11 8 181)	**0 494 434**	**Basic body** (Basic body) E65/M67, E38/M67 Discontinuation Replaced by 11 8 183 (0 494 434)	
3	0 494 434 (11 8 183)		**Basic body**	
4	0 494 435 (11 8 184)		**Adapter** E65 / M67	

0 496 171 (11 9 811) Holder

Common

Used in step 29 30 39

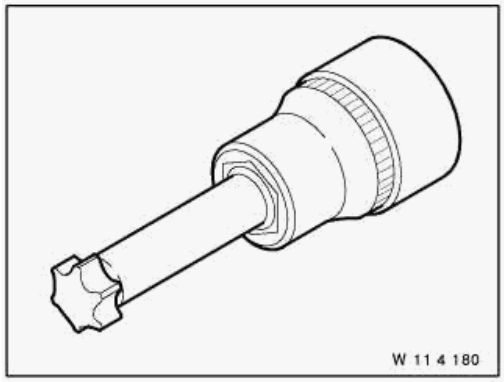
Usage	Available only as a complete tool set 11 9 810 (83 30 0 496 170) - as of 13.01.12
Included in the tool or work	0 496 170
Storage location	C86
Replaced by	
In connection with	
SI-Number	01 07 07 (355)

0 494 793 (11 9 265) Bush

Common

Used in step 29 30 39

Usage	
Included in the tool or work	0 493 938
Storage location	A44
Replaced by	
In connection with	
SI-Number	

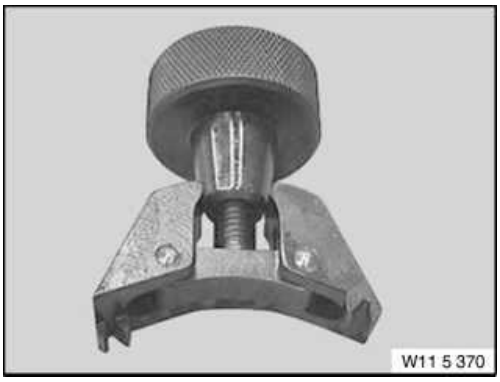


cardiagn.com

2 288 165 Synchronising key

Common	Used in step 29 40
Usage	Conversion kit for 21 2 170, for orders till 02.2014. Orders as of March 2014 do not require the conversion, as the new thrust piece has been accounted for.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 09 14 (088)

0 491 018 (11 4 180) Socket WAF 46



Common	Used in step 30 39
Usage	(screwdriver bit Torx T60) For releasing and tightening down dual-mass flywheel - model year: from Jan 94
Included in the tool or work	
Storage location	C9
Replaced by	
In connection with	
SI-Number	01 02 94 (777)

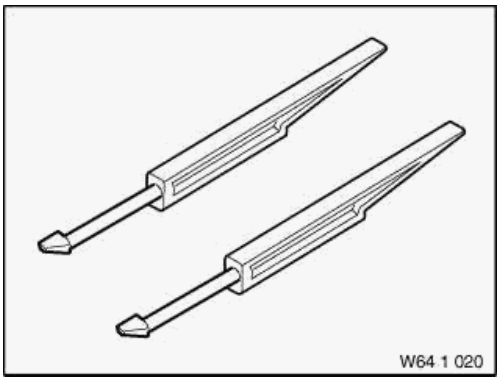
2 288 054 Gauge

Common	Used in step 34 35
Usage	For positioning the counterbalance shafts during installation.
Included in the tool or work	
Storage location	C56
Replaced by	
In connection with	
SI-Number	01 06 14 (076)

0 495 131 (11 5 370) Tool

Common	Used in step 34 35
Usage	(Locating tool) For VANOS exhaust camshaft gear setting.
Included in the tool or work	
Storage location	A71
Replaced by	
In connection with	
SI-Number	01 02 05 (173)

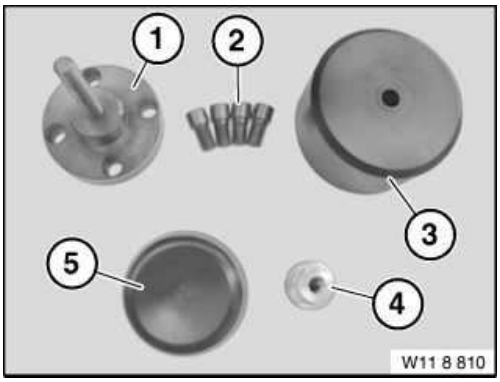
cardiagn.com



2 458 114 Extractor

Common Used in step 34

Usage	For the disassembly of the counterbalance shaft gears. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 21 17 (514)

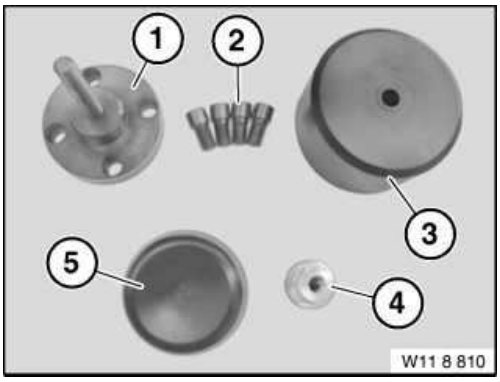


0 493 681 (64 1 020) Hook

Common Used in step 35

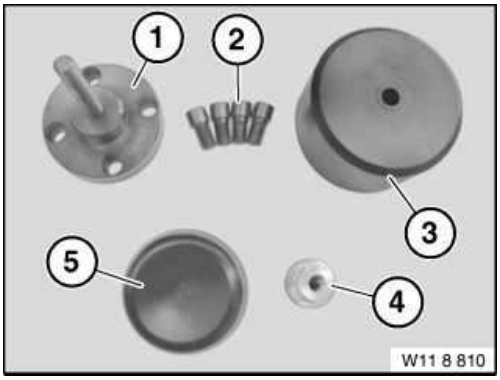
Usage	(release hook) For releasing and removing fresh air grille. For removing various covers.
Included in the tool or work	
Storage location	C2
Replaced by	
In connection with	
SI-Number	01 15 99 (483)

0 496 137 (11 8 815) Holding sleeve



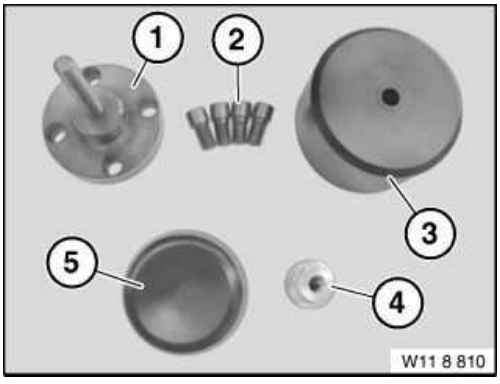
Common Used in step 38

Usage	(Slip sleeve) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)



cardiagn.com

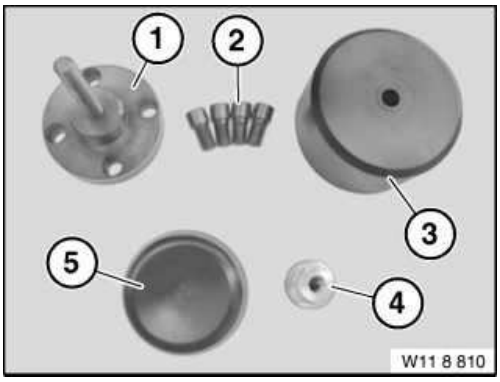
0 496 133 (11 8 811) Basic body



Common	Used in step 38
Usage	Liquidation of existing inventory and then available only as a complete tool set 11 8 810 = 83 30 0 496 132 - as of 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

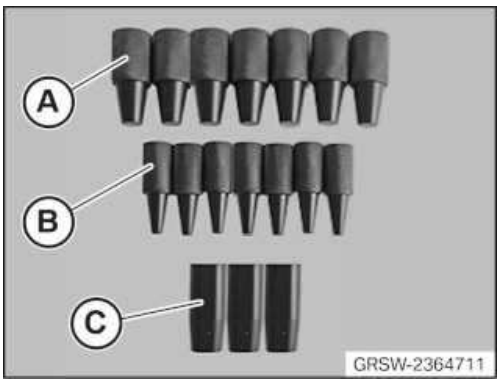
0 496 134 (11 8 812) Screw

Common	Used in step 38
Usage	(Screw set) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)



0 496 135 (11 8 813) Holding sleeve

Common	Used in step 38
Usage	(Thrust sleeve) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

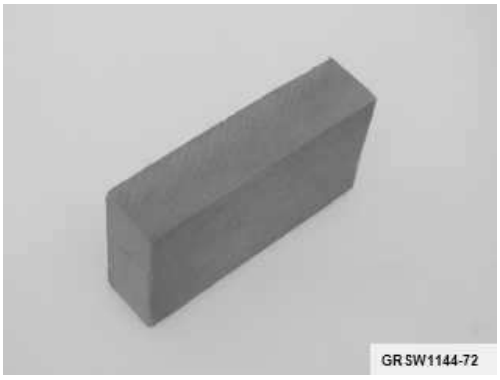


cardiagn.com

0 496 136 (11 8 814) Nut

Common	Used in step 38
Usage	(Nut with bearing) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

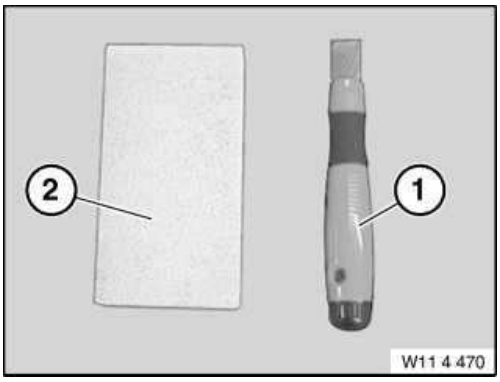
2 364 711 Plug



Common	Used in step 38
Usage	For closing the pressure oil holes for cleaning the cylinder head sealing surfaces.
Included in the tool or work	
Storage location	C20
Replaced by	
In connection with	
SI-Number	01 50 14 (203)

0 495 103 (11 4 471) Scraper

Common	Used in step 38
Usage	
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

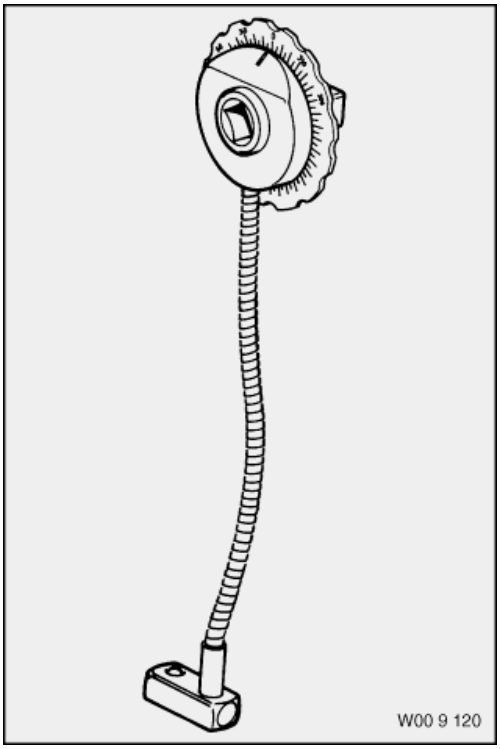


0 495 104 (11 4 472) Extractor

Common	Used in step 38
Usage	(grindstone)
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 102 (11 4 470) Tool



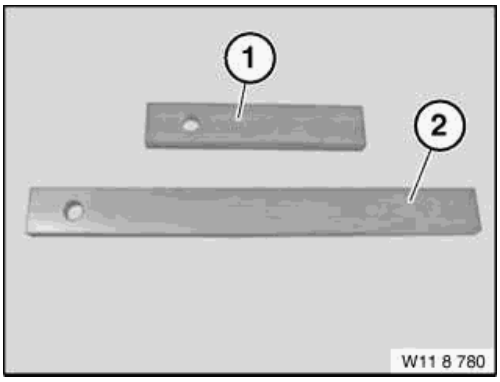
Common Used in step 38 60

Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 103 (11 4 471)		**Scraper**	
2	0 495 104 (11 4 472)		**Extractor** (grindstone)	

0 490 504 (00 9 120) Torque angle measuring dial



Common Used in step 38

Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 496 120 (11 8 780) Plate

Common

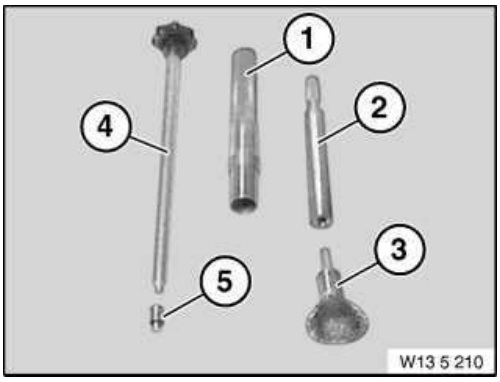
Used in step 38

Usage	(Mounting plates) For securing transmission oil sump when gearbox is removed.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 496 121 (11 8 781)		**Plate** (Mounting plate, short)Discontinued; only available via set 11 8 780 = 0496120.	
2	0 496 122 (11 8 782)		**Plate** (Mounting plate, long) Discontinued; only available via set 11 8 780 = 0496120.	

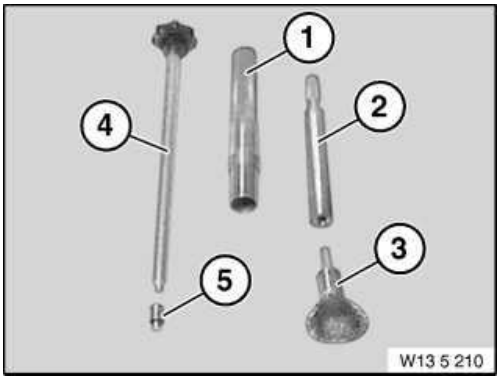
2 285 058 Tool set



Common

Used in step 39

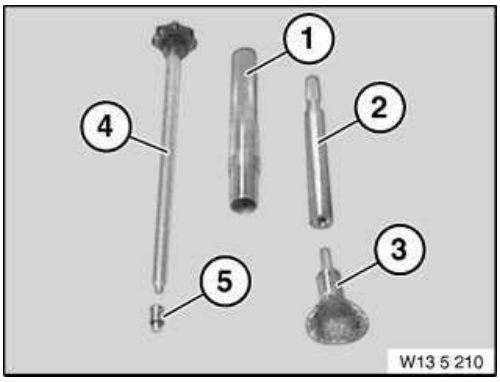
Usage	
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 02 14 (069)



cardiagn.com

0 493 763 (13 5 215) Plug

Common	Used in step 51
Usage	(Seal plug)
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	



0 493 762 (13 5 214) Rod

Common	Used in step 51
Usage	(Mounting rod) For the seal plug

2 184 136 Mobile equipment table lift

Common Used in step 57

Usage	Table lift MHT 1200
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	06 01 10 (649)

cardiagn.com

2 409 025 Puller

Common	Used in step 58
Usage	For disassembly of the outer radial shaft seal of the transmission output shaft, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A76
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

2 411 739 Puller

Common	Used in step 58
Usage	For disassembly of the inner radial shaft seal of the output, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C78
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

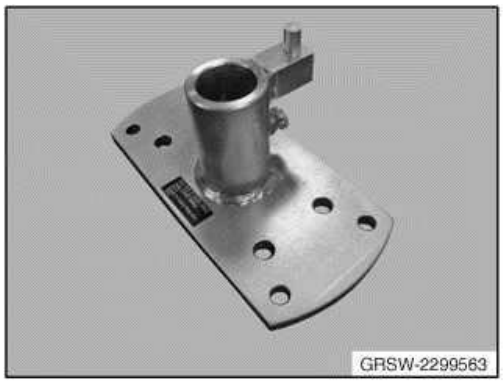
2 408 152 Striking element

Common	Used in step 58
Usage	For installation of the right radial shaft seal transmission output shaft (inner). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)

cardiagn.com

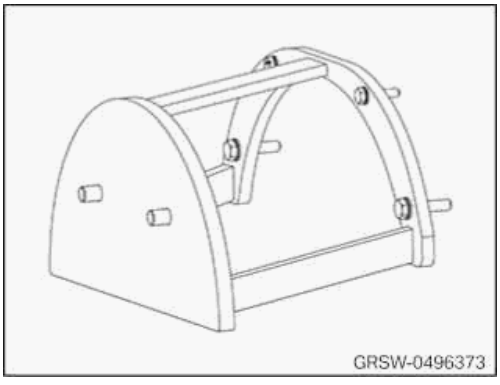
2 413 037 Handle

Common	Used in step 58
Usage	Universal drift handle. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C77
Replaced by	
In connection with	
SI-Number	01 53 14 (211)



2 408 150 Striking element

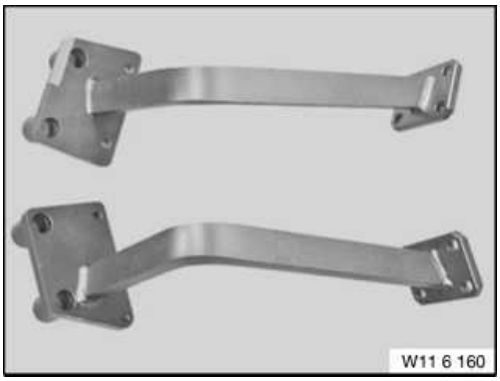
Common	Used in step 58
Usage	For installing the right radial shaft seal transmission output shaft (outer). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)



Replacement tools:

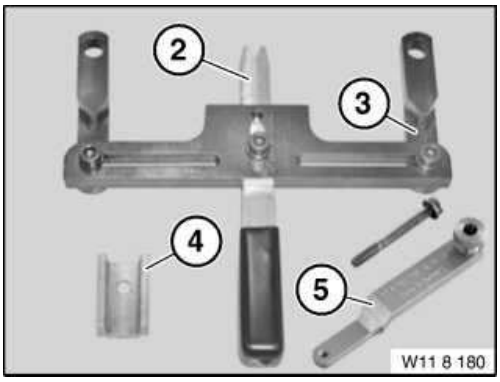
2 299 563 Adapter

Common	Used in step 13
Usage	New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.
Included in the tool or work	0 495 187
Storage location	
Replaced by	
In connection with	
SI-Number	



0 496 373 (11 5 420) Plate

Common	Used in step 13
Usage	(Fixture) Engine S62
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	



cardiagn.com

0 496 680 (11 6 160) Support

Common	Used in step 13
Usage	For mounting N74 engine on the assembly stand. In combination with 00 2 300, 00 2 320
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	00 2 300; 00 2 320 = 0495196
SI-Number	01 31 09 (604)

0 494 434 (11 8 183) Basic body

Common	Used in step 28 41
Usage	
Included in the tool or work	0 493 587
Storage location	
Replaced by	
In connection with	
SI-Number

11 27 030 Remove and install/replace counterbalance shafts

PRELIMINARY WORK

1 – Removing engine

- See additional information.

2 – Removing the acoustic cover

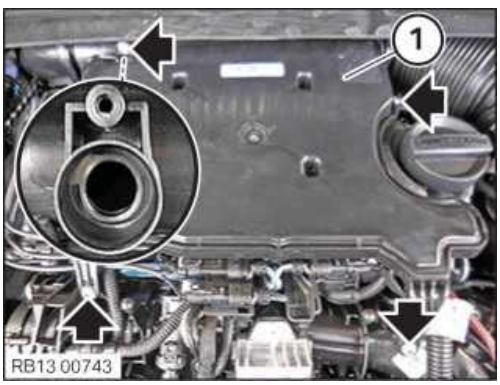
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

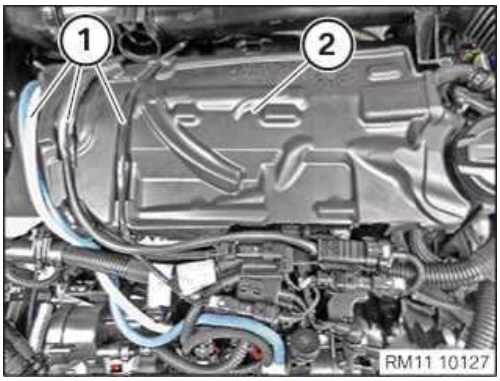


Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

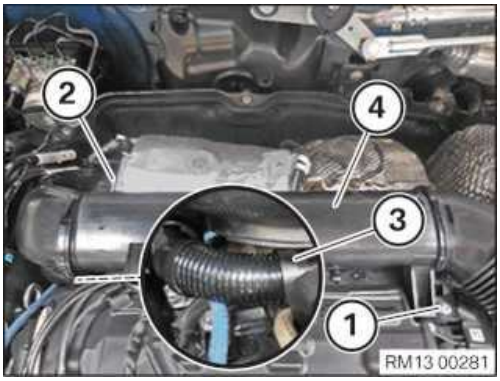


3 – Remove resonator

- Remove screws (arrows).
- Guide out and remove the resonator (1).

4 – Remove the acoustic cover for the injectors

cardiagn.com



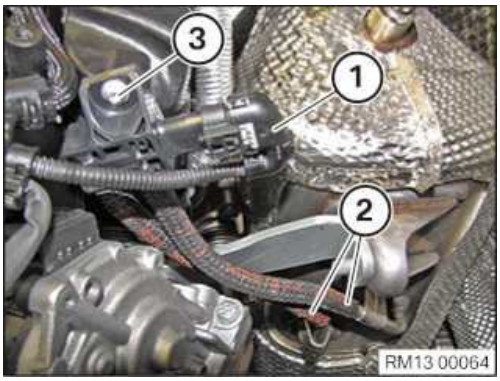
- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

5 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

6 – Remove differential pressure sensor

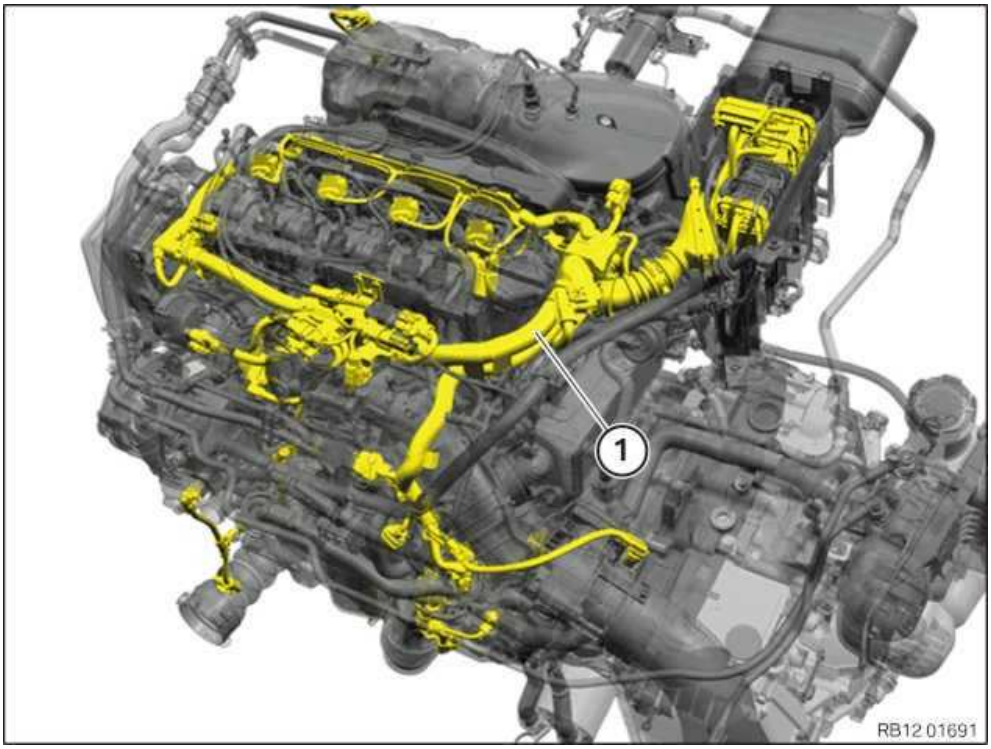


RISK OF DAMAGE

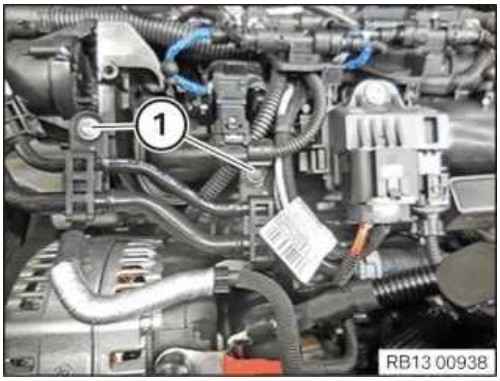
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



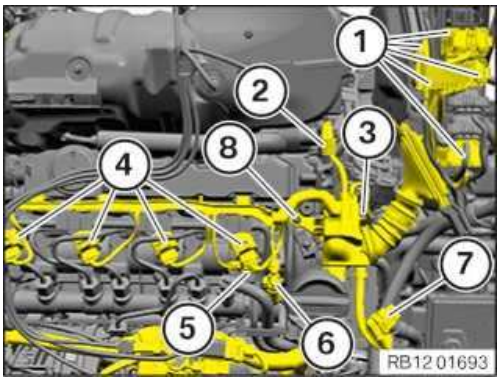
cardiagn.com



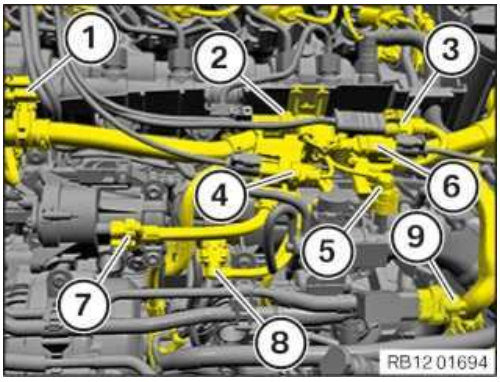
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

7 – Removing assemblies (on lifting table)

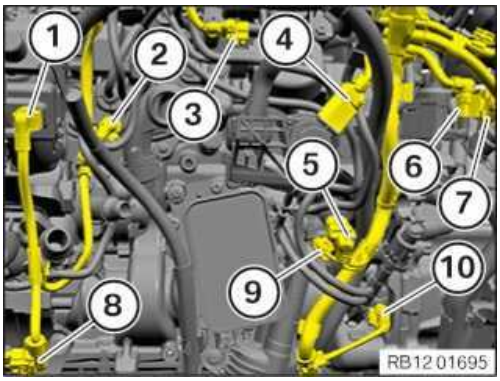
Overview: Wiring harness section for the engine



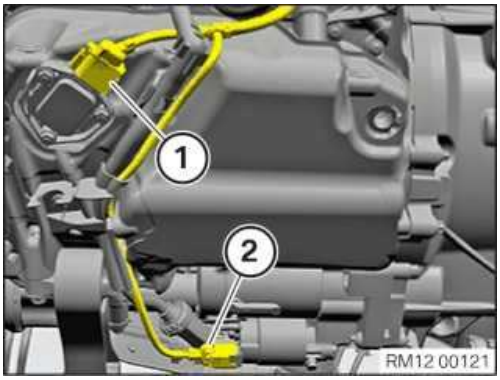
1 Wiring harness section for the engine



- Loosen screws (1).

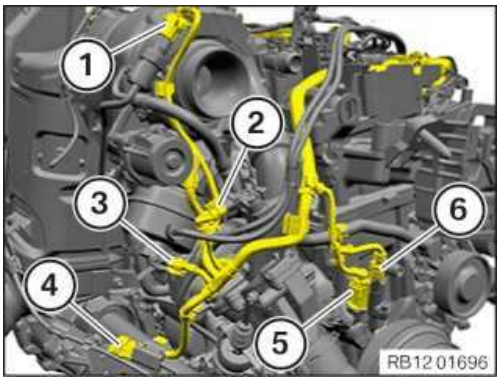


cardiagn.com

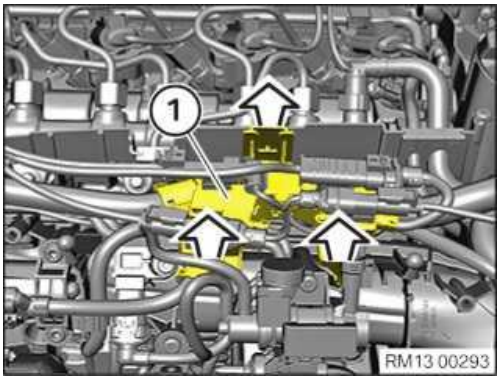


- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).

- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock connector (3) and pull it off from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

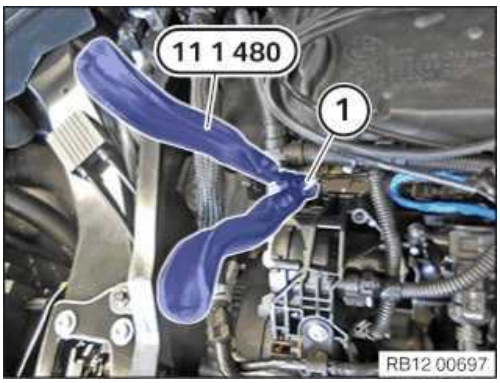


- Unlock and disconnect the connector (1) from the alternator.
- Unlock and disconnect the connector (2) from the electric changeover valve.
- Unlock and disconnect the connector (3) from the electric changeover valve.
- Unlock the connector (4) and pull it off the high pressure pump.
- Unlock the connector (5) and disconnect it from the oil pressure sensor.
- Unlock connector (6) and pull off from throttle body.
- Unlock the connector (7) and disconnect it from the intake air temperature sensor.
- Unlock the connector (8) and disconnect it from the air conditioning compressor.
- Unlock and disconnect the connector (9) from the solenoid valve.
- Unlock the connector (10) and pull it off the crankshaft sensor.

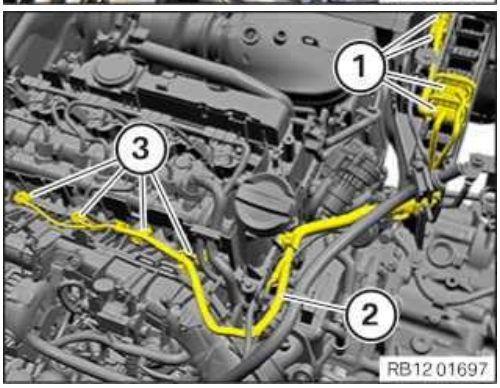


- Unlock the connector (1) and pull off of the oil-level sensor.
- Unlock connector (2) and remove from starter motor.

cardiagn.com



- Unlock the connector (1) and disconnect it from the exhaust gas pressure sensor.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock the connector (3) and pull it off the exhaust turbocharger.
- Unlock the connector (3) and disconnect it from the differential pressure sensor.
- Unlock connector (4) and pull it off from the monitoring oxygen sensor.
- Unlock the connector (5) and pull it off the oil pressure switch .
- Unlock connector (6) and disconnect from switching valve.
- Detach, feed out and remove the wiring harness from the clamps.



▶ **Removing the cable clips from the intake plenum**

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Pull off all connectors (3) from glow element using special tool **0 490 796 (11 1 480)**.
- Loosen screw (2) and remove the ground strap.
- Detach, feed out and remove the wiring harness from the clamps.

▶ **Removing the drive belt for alternator**

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

cardiagn.com

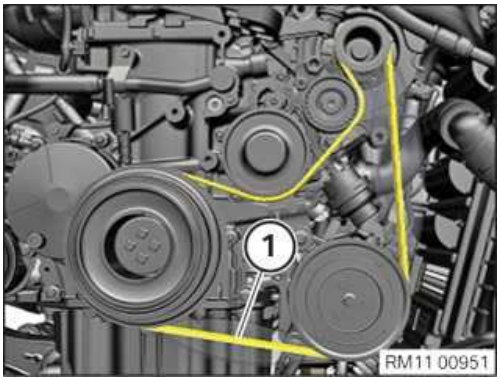
CAUTION

Component with preload.

Danger of injury!

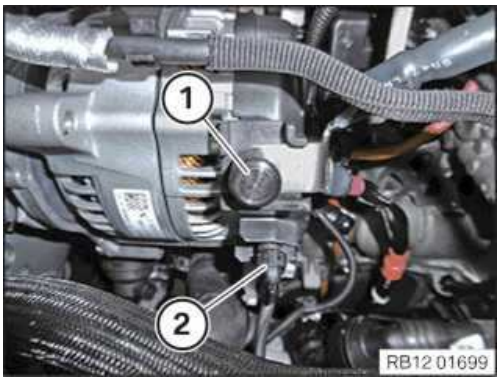
- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION



If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

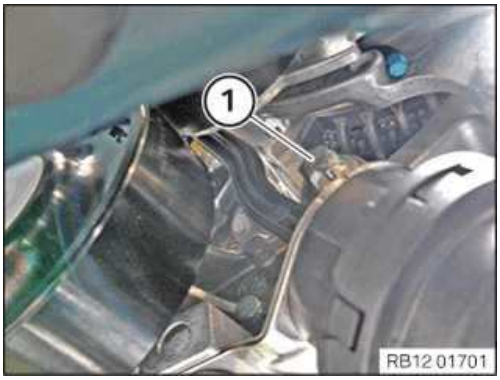
TECHNICAL INFORMATION



The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool **0 496 268 (11 0 390)**.

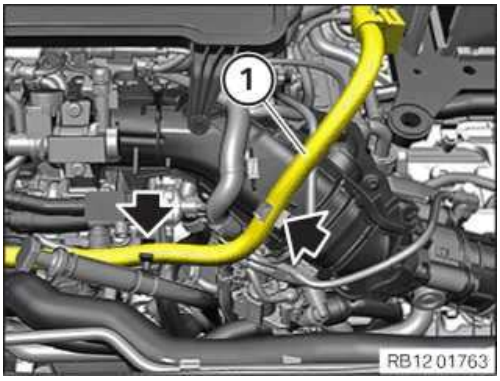
- Guide out the drive belt for the alternator (1) and remove it.



- Remove the cover (1) and loosen the nut below.
- Disconnect positive battery cable from alternator.
- Unlock and disconnect the connector (2) from the alternator.

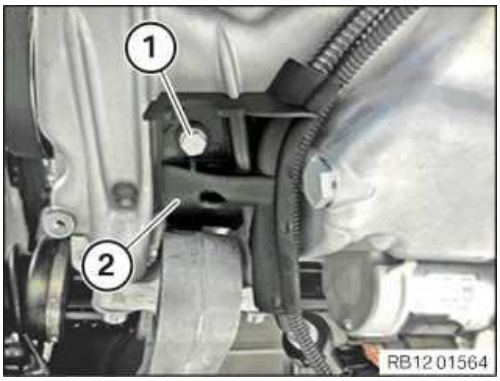
cardiagn.com

- Detach screw (1) on top on the alternator.



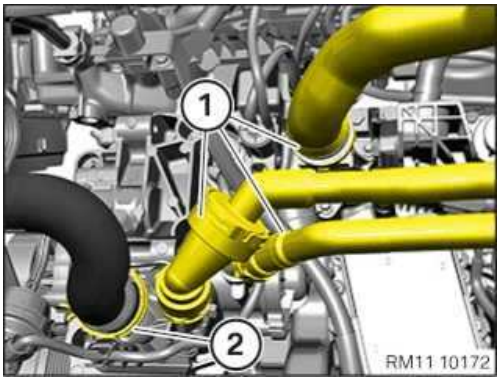
- Detach screw (1) below on the alternator.

- Feed out alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support and remove.



- Loosen screws (1).
- Feed out and remove the air conditioning compressor (2).

- Release the positive battery cable (1) from the clamps (arrows).

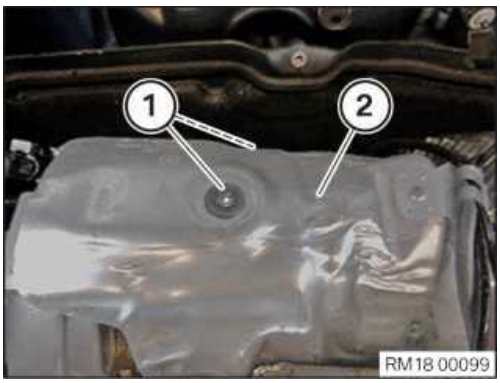


cardiagn.com

- Loosen screw (1).
- Guide out and remove holder (2).

- Feed out positive battery cable from the clamps (1) and remove.

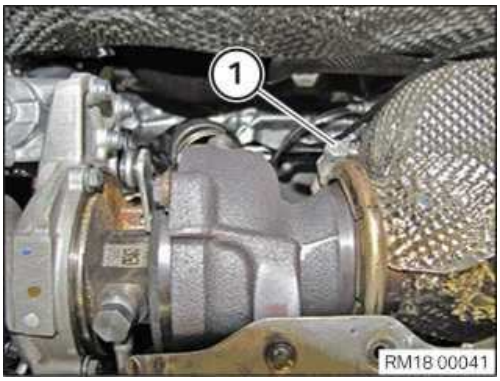
- Unlock and disconnect coolant lines (1).
- Guide out the coolant lines (1) and remove it.
- Detach the clamp (2).
- Guide the coolant hose out and remove.



▶ **Removing heat shield from top exhaust turbocharger**

WARNING

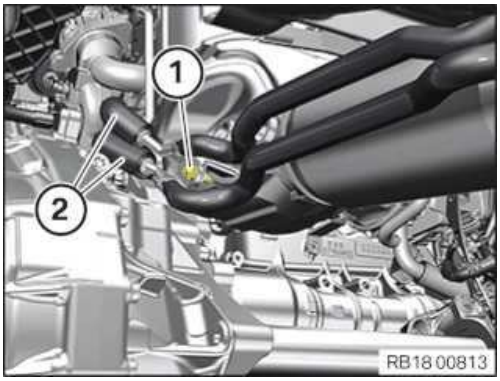
Hot surfaces.



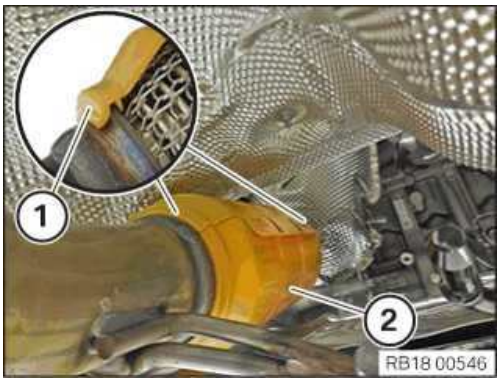
Risk of burning!

- Perform all work only on components that have cooled down.

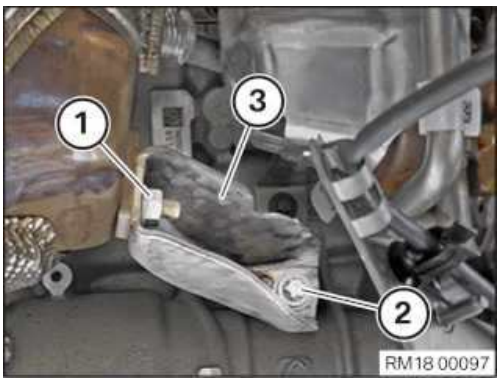
- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).



cardiagn.com

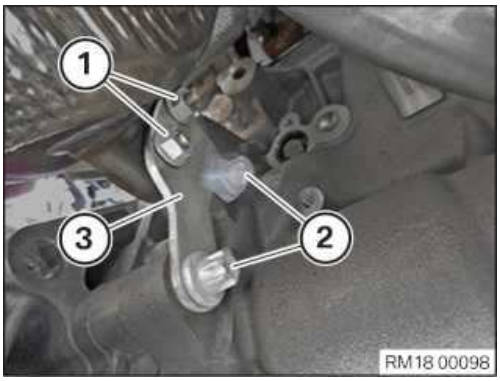


- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



- Loosen nuts (1).

- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

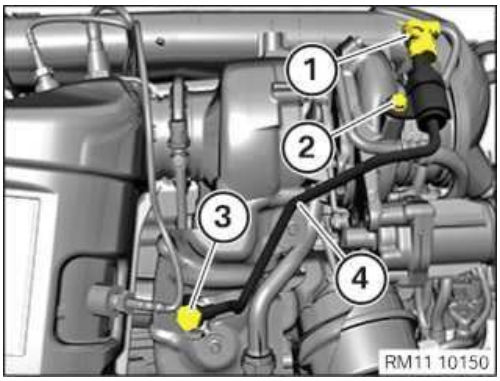


- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.

- Loosen nut (1).
- Loosen screw (2).
- Remove holder (3).

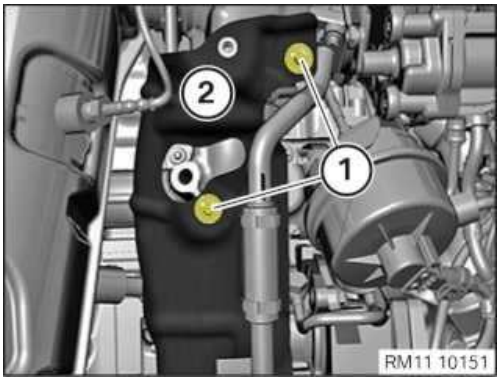
cardiagn.com

- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).
- Guide out and remove diesel particulate filter .



▶ **Remove the heat shield from the exhaust turbocharger at the bottom**

WARNING



Hot surfaces.

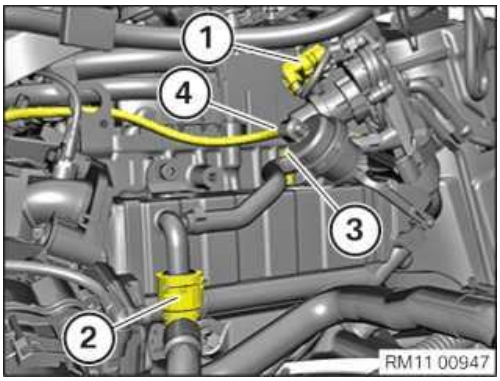
Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).

▶ **Removing the exhaust-gas recirculation cooler**

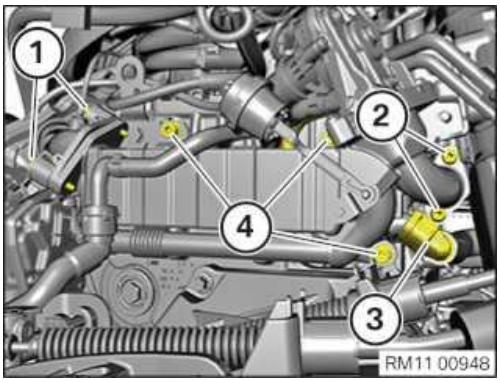


WARNING

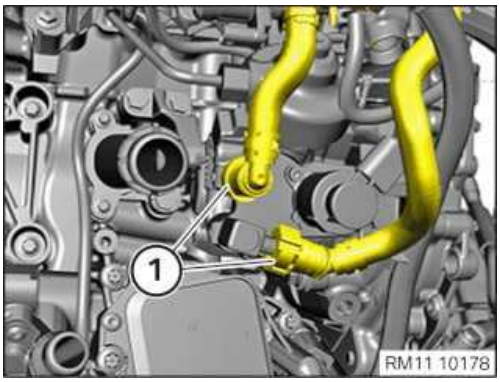
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

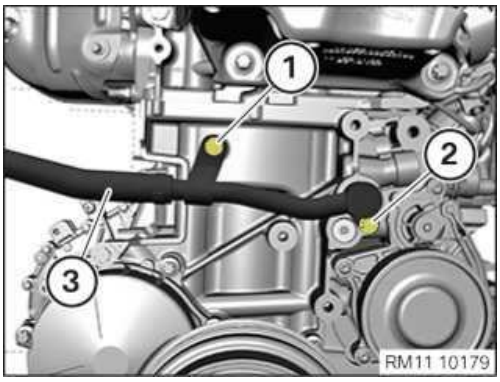


cardiagn.com



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



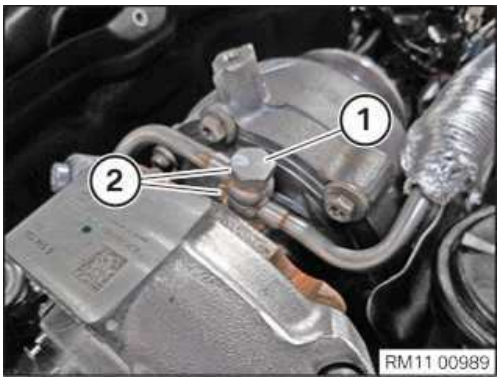
- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

- Unlock the fuel lines (1) and disconnect from the high pressure pump.
- Remove the fuel lines.

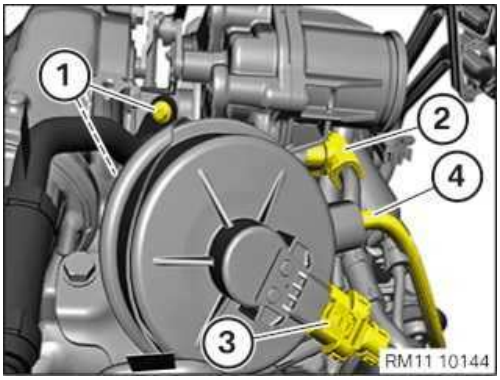
- Loosen screws (1) and (2).
- Remove coolant line (3).

8 – Removing the low-pressure stage turbocharger



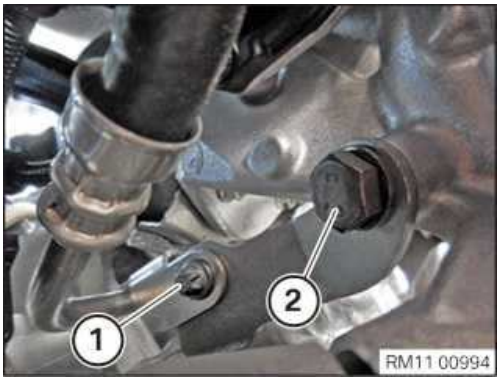
WARNING

Hot surfaces.



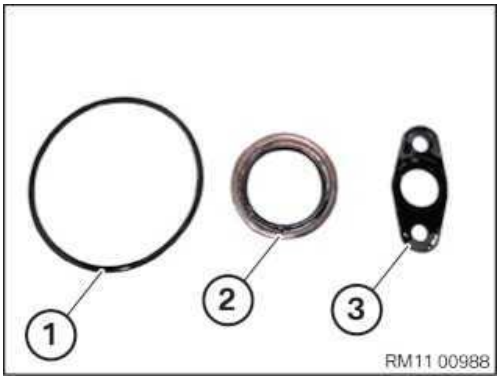
Risk of burning!

- Perform all work only on components that have cooled down.



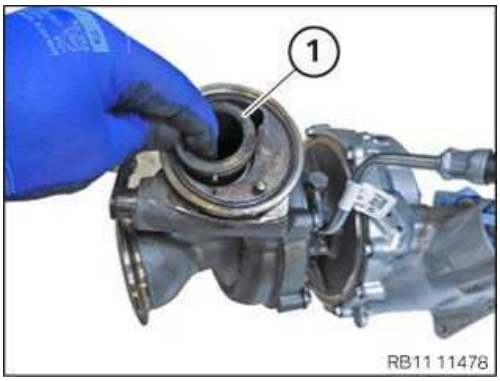
cardiagn.com

- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.



- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.

- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).



- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

cardiagn.com

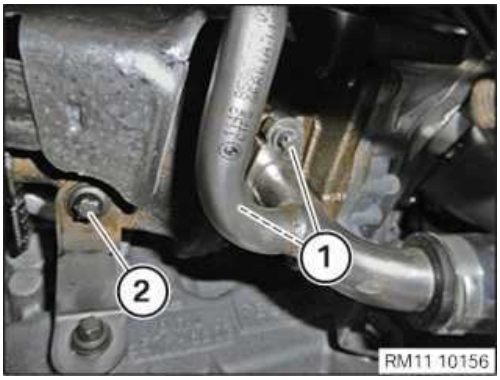
- Remove the spacer ring (1).

9 – Removing the high-pressure stage exhaust turbocharger

WARNING

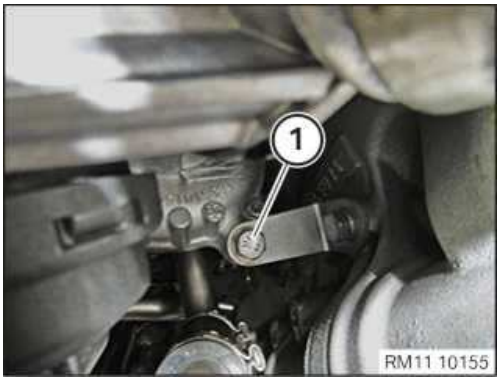
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

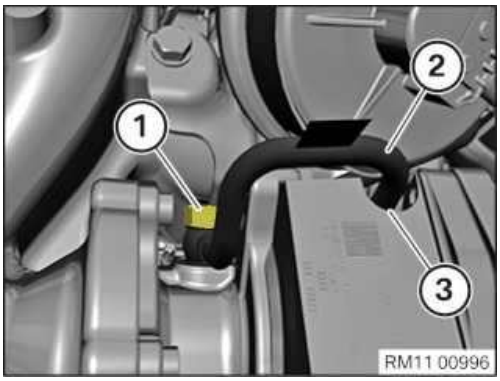
CAUTION



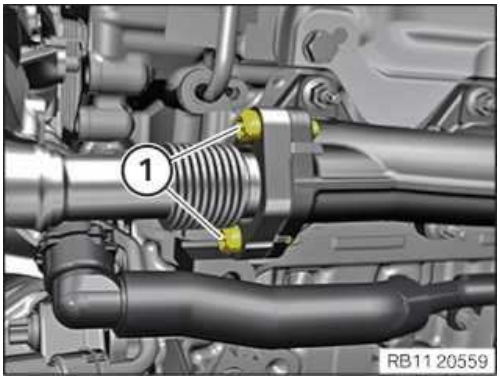
Heavy component.

Heavy components can lead to injury or damage.

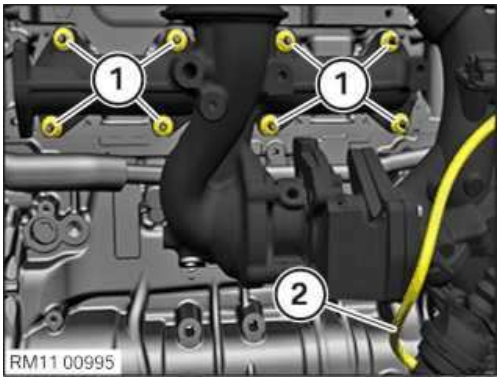
- Remove and install heavy components with the aid of another person/other persons.



- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).

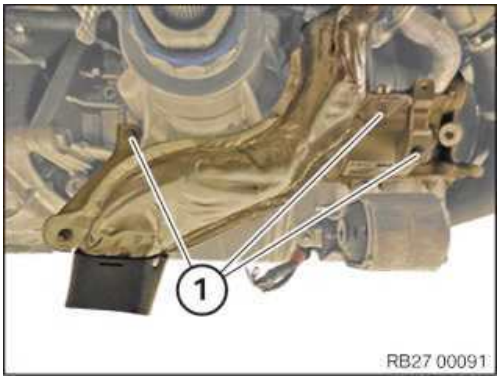


- Release screw (1) from the right wheel arch.

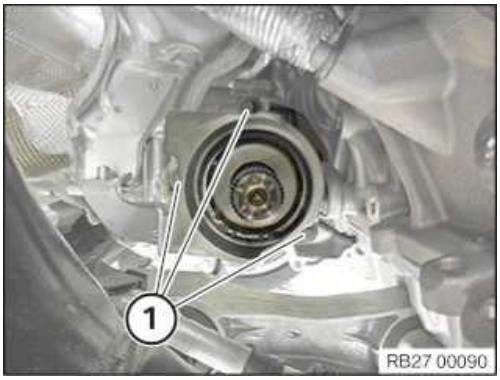


cardiagn.com

- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

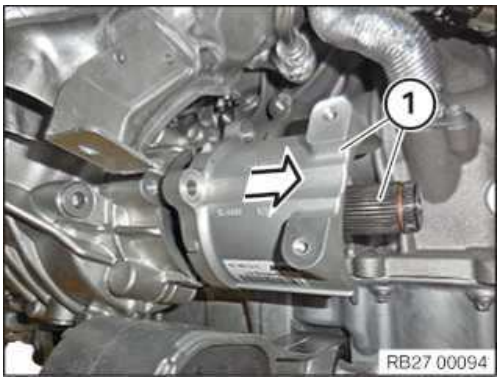


- Loosen screws (1).

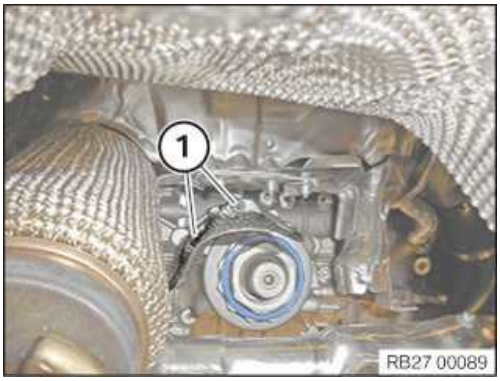


- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

10 – Remove the intermediate shaft with the support tube

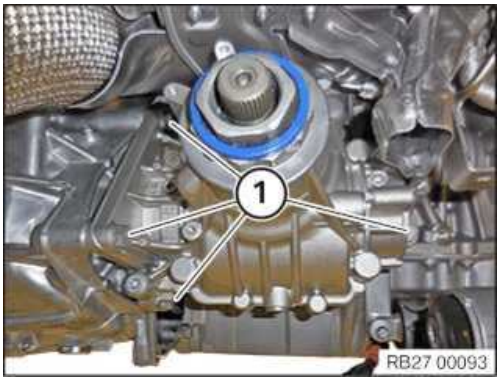


- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).

cardiagn.com



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

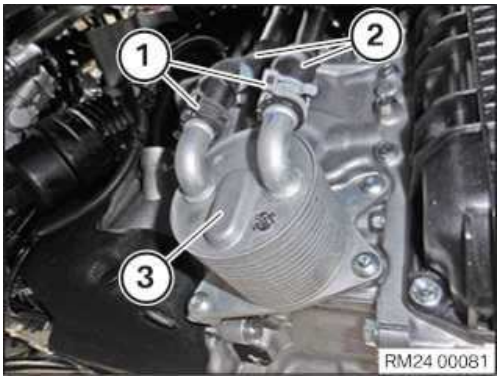
11 – Remove transfer box (VTG)

- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

12 – Detach the engine from the automatic transmission

Prerequisite



Engine has been removed.

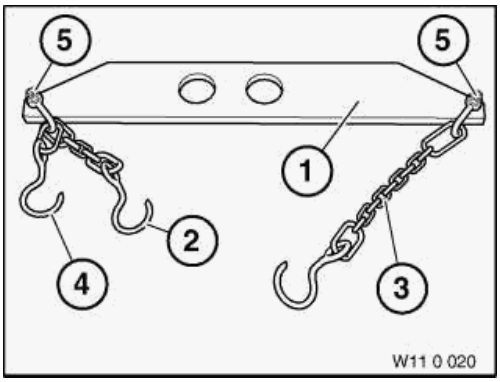
CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Unfasten hose clamps (1).
- Disconnect coolant hoses (2) from transmission oil cooler (3).
- Catch the emerging coolant.



cardiagn.com

- Crank engine with special tool **0 493 380 (11 6 480)** at vibration damper in direction of rotation.
- Unscrew the nut (1) of the torque converter.
- Crank engine further and release remaining 5 nuts.

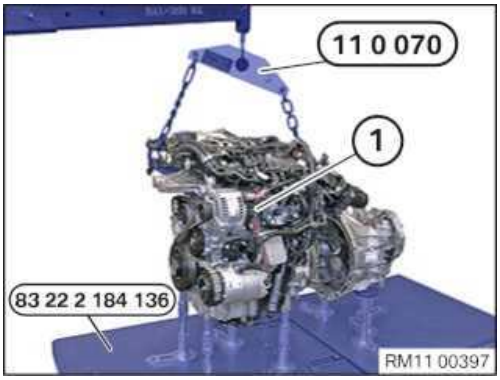
- Stage the workshop crane **2 220 718**.

- Stage the lifting gear .

TECHNICAL INFORMATION

Conduct the following operation with the assistance of a second person.

- Secure the automatic transmission against dropping using a workshop crane **2 220 718** and lifting gear .
- Remove screws (arrows).
- Remove the automatic transmission with help from an auxiliary person and using the workshop crane **2 220 718** including lifting gear and put it to one side.



cardiagn.com

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm

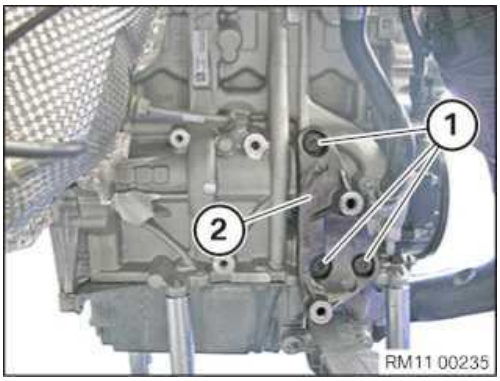
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Attach engine lifter to special tool and lift engine (1) off lifting table.

13 – Mount engine on assembly stand

CAUTION



Heavy component.

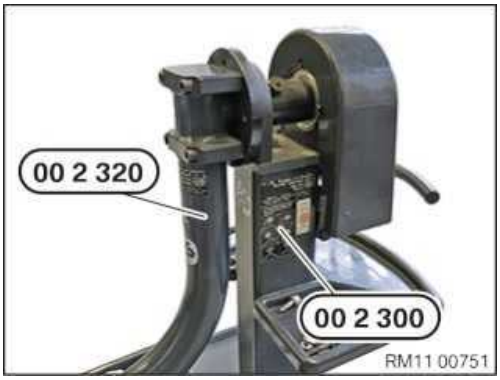
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

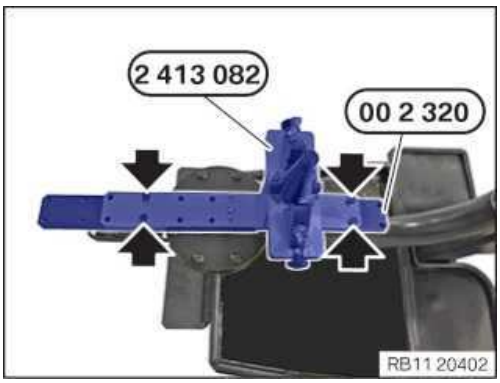
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Loosen screws (1).
- Guide out and remove holder (2).



cardiagn.com

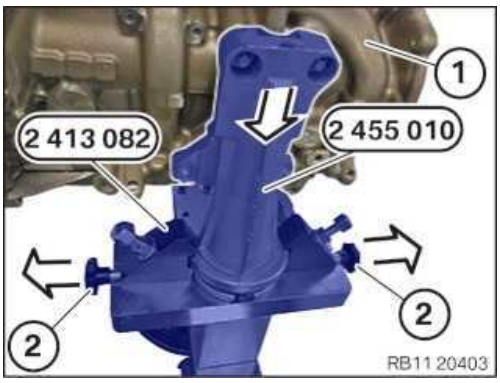


- Position the special tool **2 455 010** on the engine (1).
- Position the standard bolts **M10x30**.
- Tighten the standard bolts (arrows).
-

Special tool 2 455 010 to crankcase

M10x30		Tightening torque	38 Nm

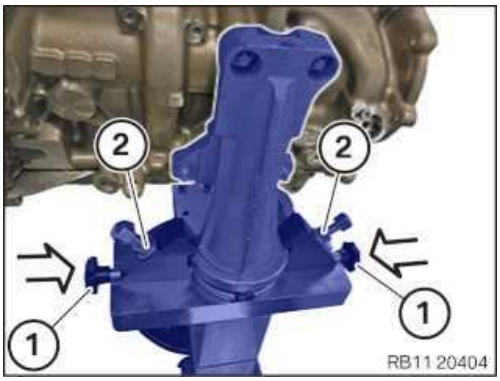
- Prepare the assembly stand **0 495 187 (00 2 300)** with the special tool **0 495 196 (00 2 320)**.



- Screw the special tool to the **0 495 196 (00 2 320)** special tool.
- Tighten screws (arrows).
-

Special tool 11 8 930 to special tool 00 2 320

M14x35		Tightening torque	160 Nm

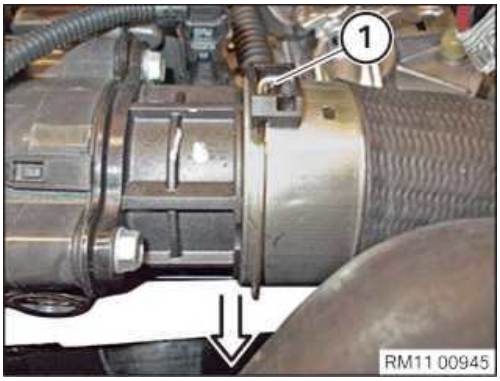


- Position the engine lifter with the special tool and the engine on the special tool **0 495 187 (00 2 300)**.

- Detach the holder (2) in the direction of the arrow.
- Position the engine (1) with the special tool **2 455 010** in the direction of the arrow on the special tool .

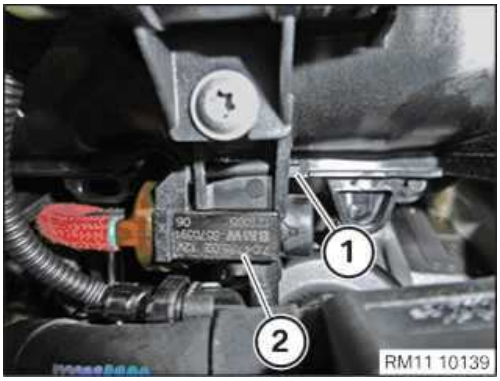
cardiagn.com

- Lock the holder (1) in direction of arrow.
- Tighten nuts (2).



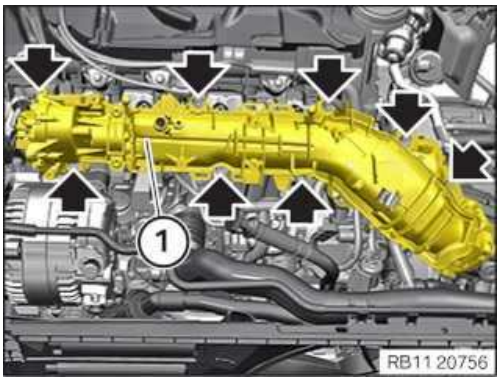
14 – Removing the intake plenum

TECHNICAL INFORMATION

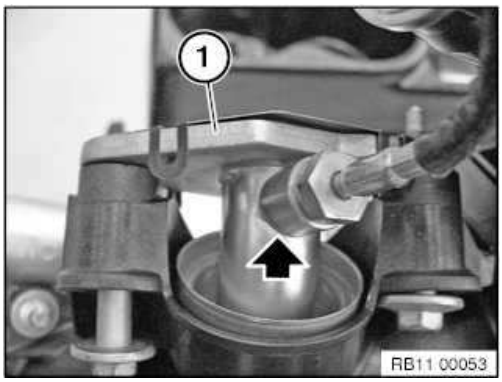


Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.



- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

cardiagn.com

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

15 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

cardiagn.com

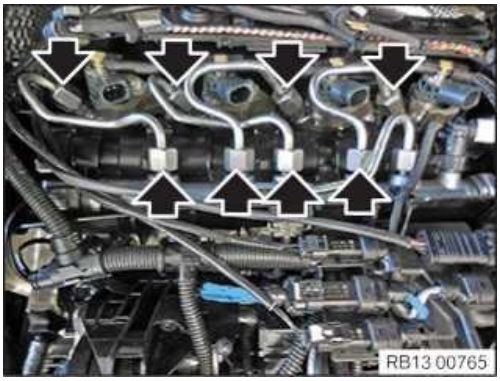
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION



If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

16 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

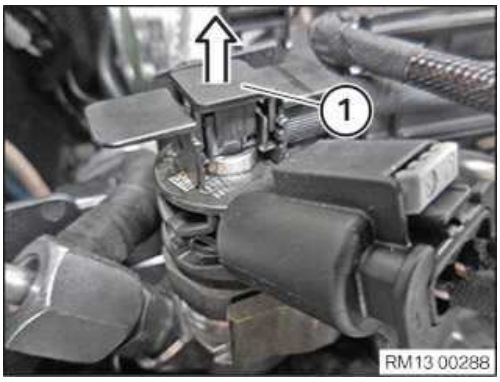
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE



Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

17 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

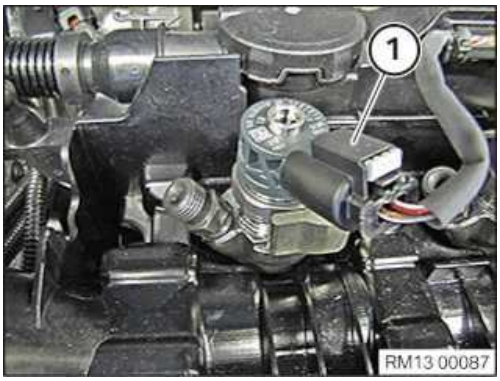
Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

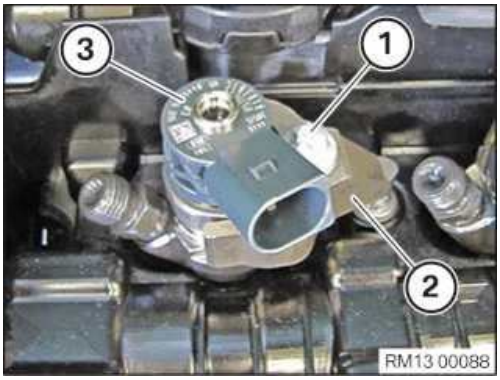
RISK OF DAMAGE

 **Electrostatic discharge.**



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



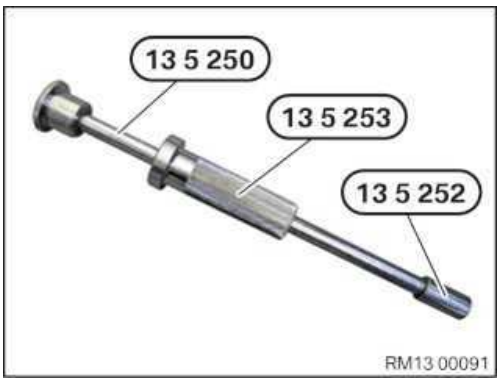
TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

cardiagn.com

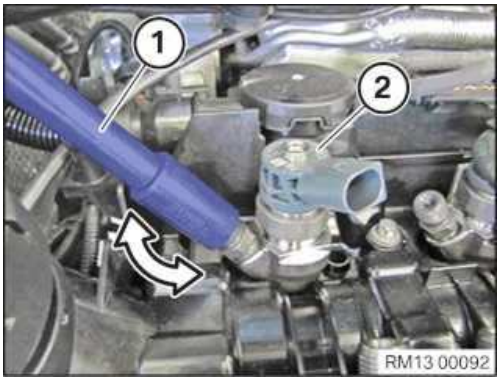
- Unlock and disconnect connector (1).

- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.



▶ **Loosen stuck injectors**

RISK OF DAMAGE



Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)** back onto the special tool **0 493 321 (13 5 250)**.

- Screw the special tool (1) **0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1) **0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

cardiagn.com

WARNING

Working on fuel system.

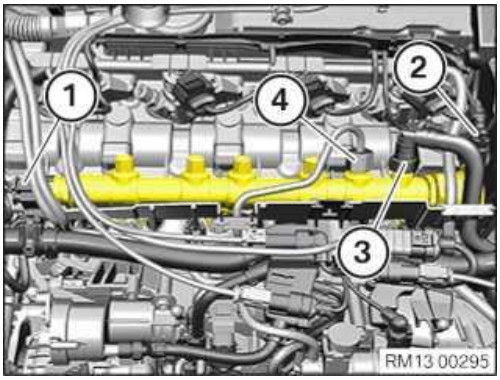
Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

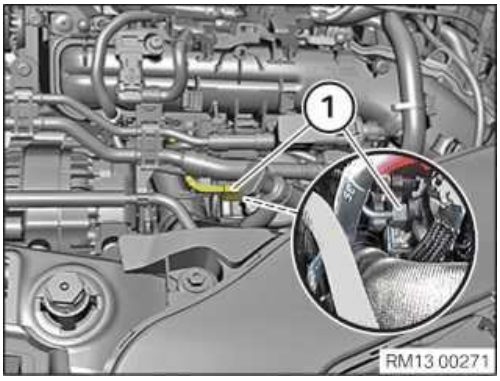
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.



- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

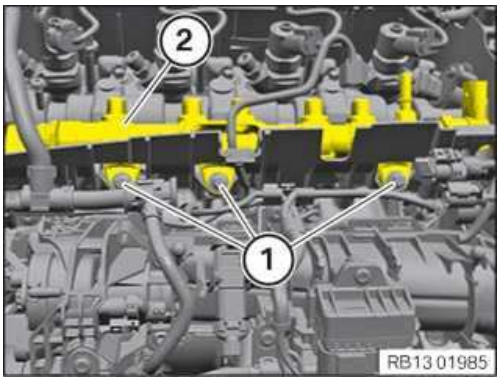
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Unlock and disconnect connector (1).
- Unlock and disconnect connector (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool .
- Reset special tool early on to avoid bending pressure lines.

- Slacken the union nut (1) on the high pressure pump.

cardiagn.com

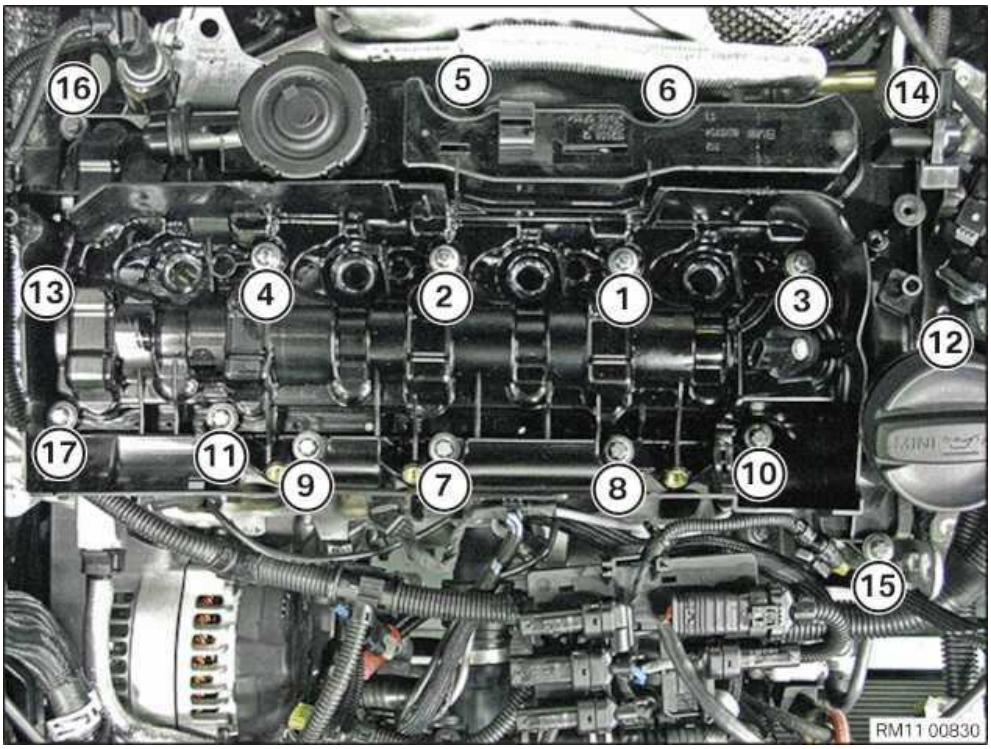
- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

19 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

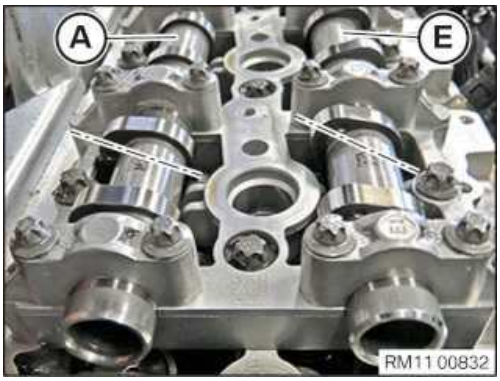
- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

20 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.



The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

21 – Remove chain tensioner piston

cardiagn.com

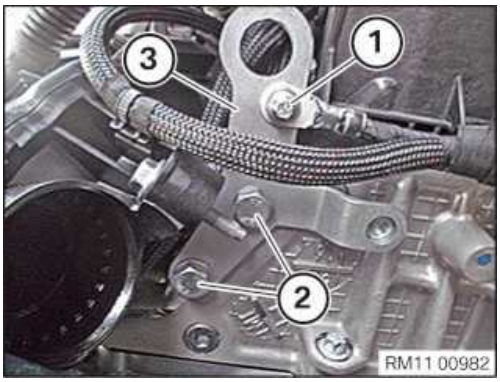
WARNING

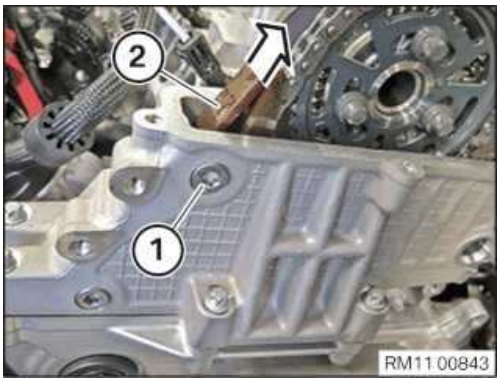
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



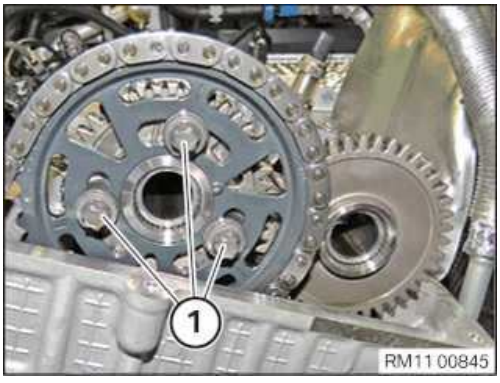
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

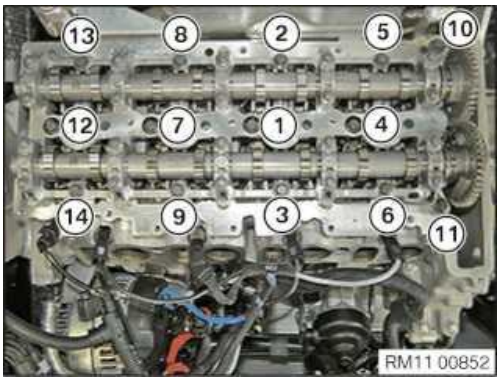
- Remove the chain tensioner piston (1).

22 – Remove the timing chain guide rail



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.



23 – Removing the camshaft sprocket on the intake camshaft

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

24 – Removing the camshaft support

cardiagn.com

- Evenly loosen all screws in a sequence from (14) to (1).
- Loosen and remove all screws in a sequence from (14) to (1).
  Both camshafts can be removed with the camshaft carrier.
- Remove the camshaft support including camshafts towards the top.

25 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

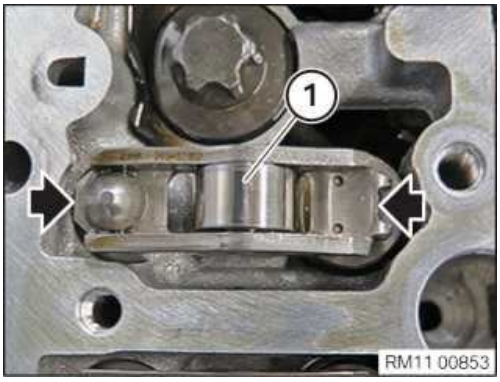
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool or conventional tools.
- Feed out preheating elements and remove.

26 – Remove roller cam followers

- Guide out and remove all roller cam followers (1) (arrows).
- Place all roller cam followers (1) in order in special tool **0 495 105 (11 4 480)**.

  Roller cam followers that have already been used must be installed in same position again.

27 – Removing the hydraulic valve clearance compensating element

cardiagn.com

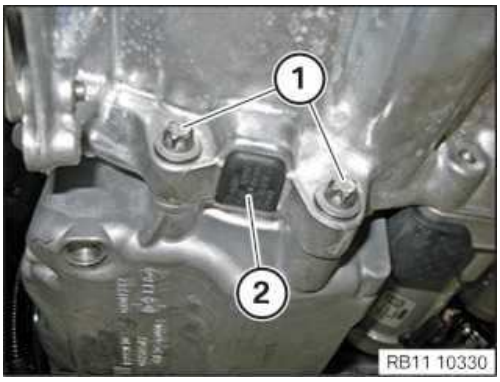
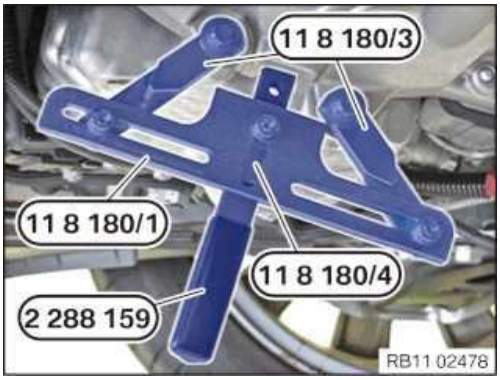
RISK OF DAMAGE

Contaminant or foreign body.

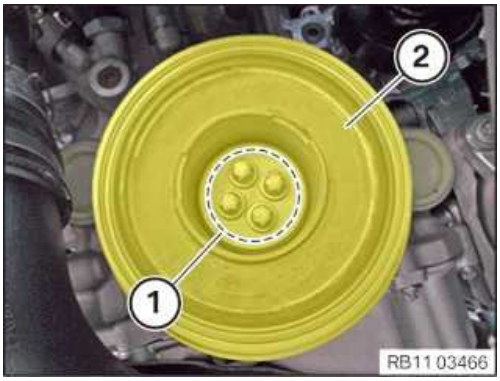


Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.



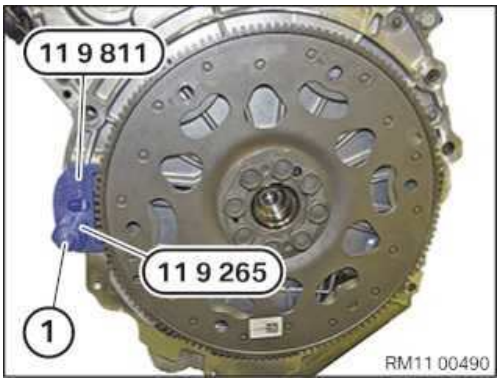
28 – Removing the vibration damper

- Release the transmission bolts (1).
- Remove the protective cap (2).

- Position special tool **0 493 587 (11 8 180)** as illustrated.
- Fasten the special tool **0 493 587 (11 8 180)** to the transmission with transmission bolts.

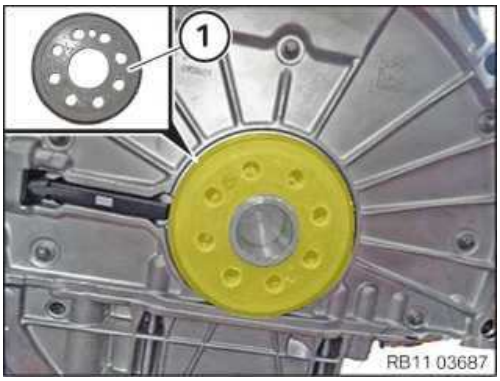
- Loosen screws in the area (1).
- Remove the vibration damper (2).

29 – Removing flywheel



cardiagn.com

CAUTION



Heavy component.

Heavy components can lead to injury or damage.

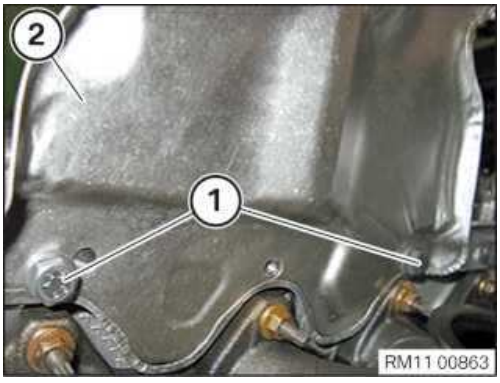
- Remove and install heavy components with the aid of another person/other persons.

- Secure flywheel with a transmission bolt (1) and the special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.
- Unfasten flywheel bolts.
- Remove flywheel.

RISK OF DAMAGE

Electrostatic discharge.

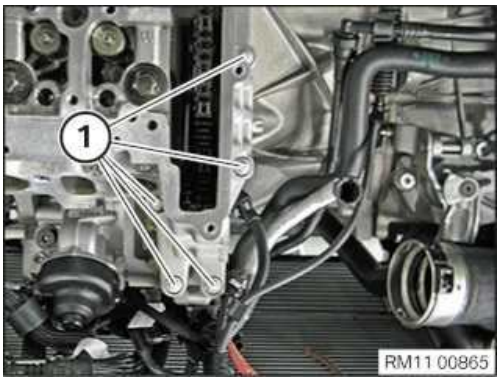
Damage to or destruction of electrical components.



- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Remove the increment wheel (1) from the crankshaft and set correctly.

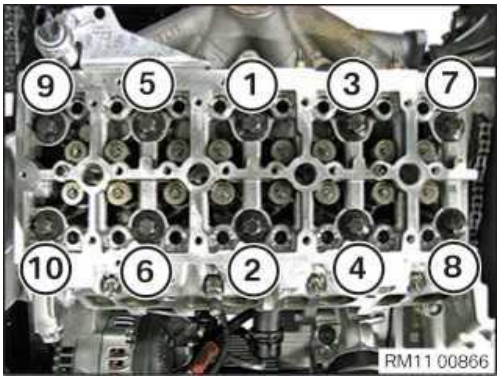
30 – Remove rear timing case cover



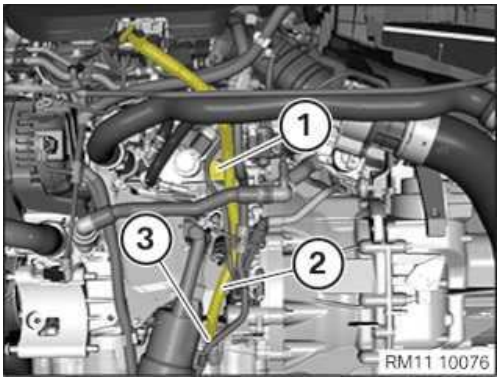
Prerequisite

Transmission is removed.

- Loosen screws (1).
- Feed out the heat shield (2) and place to one side.

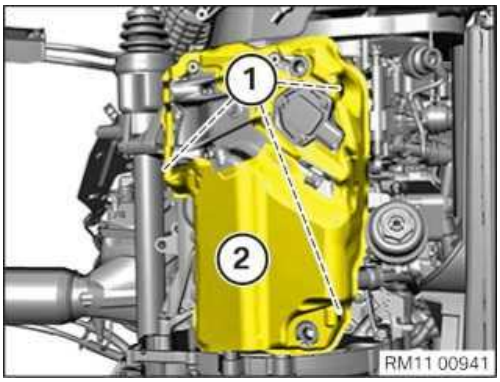


cardiagn.com



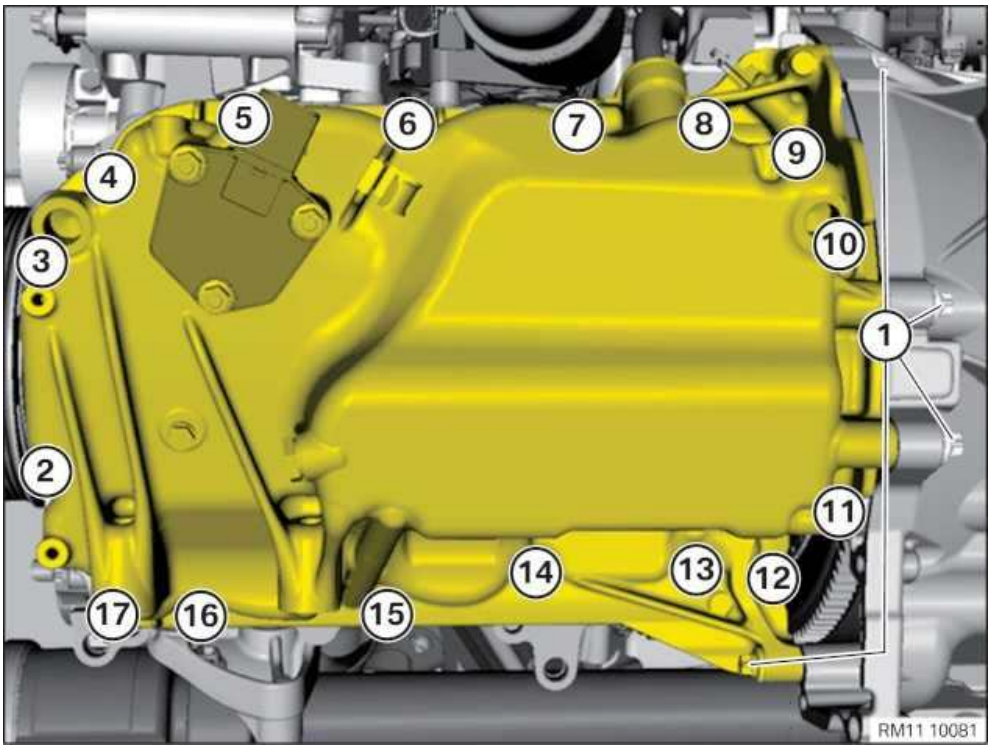
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

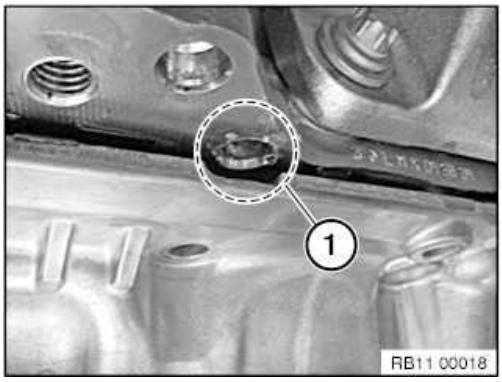


- Loosen screws (1).

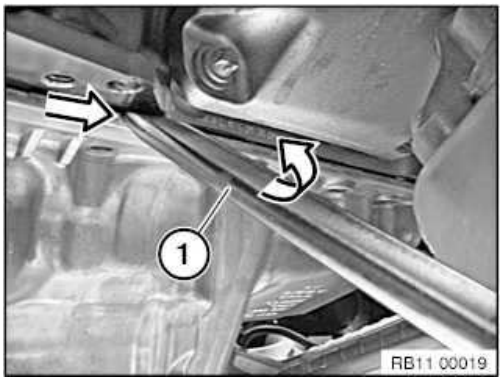
- Loosen the cylinder head bolts in the sequence from (10) to (1).
- Remove cylinder head bolts (1) to (10) with washers.
- Remove cylinder head.



- Loosen screw (1).
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- Remove sealing ring (3) from oil sump if necessary.

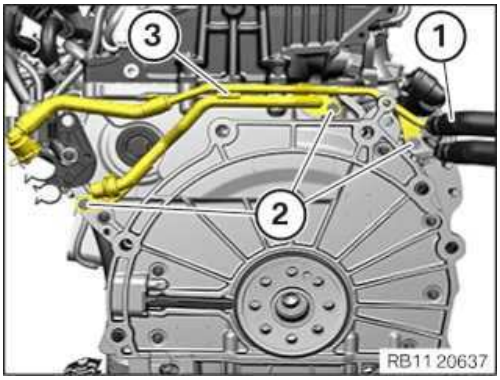


- Expanding rivets (1) on both sides of the acoustic cover (2).
- Feed out and remove the acoustic cover (2).

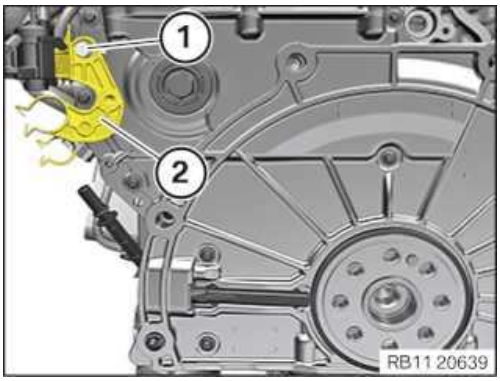


cardiagn.com

- Loosen the transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).

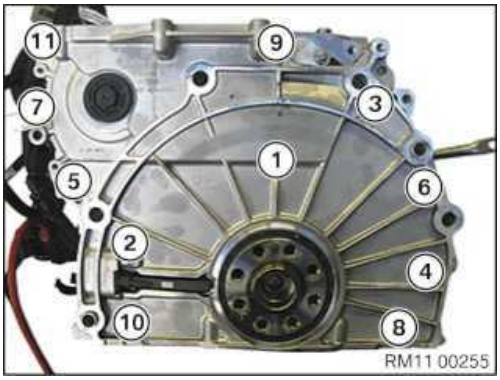


- Release oil sump only in area (1).

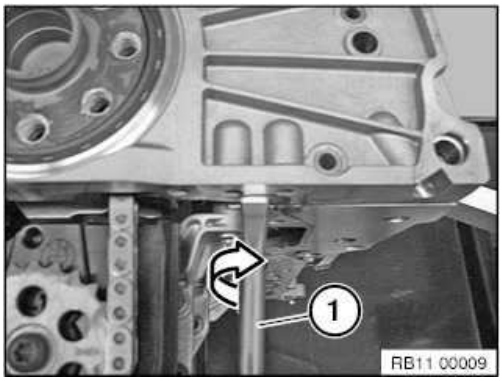


- Detach the oil sump with a suitable mounting lever (1) carefully at the point provided.
- Secure the oil sump against falling.

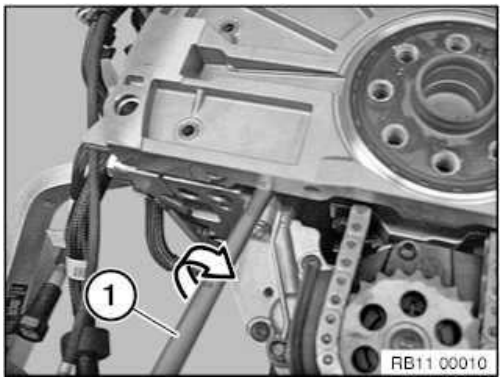
▶ **If installed: Remove coolant line of the SCR metering module**



- Unlock and disconnect the coolant hose (1).
- Loosen screws (2).
- Remove the coolant line (3).



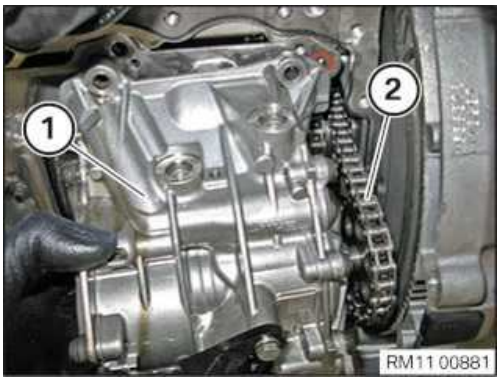
cardiagn.com



- Loosen screw (1).
- Guide out and remove holder (2).

- Loosen screws in the order (11) to (1).

- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.



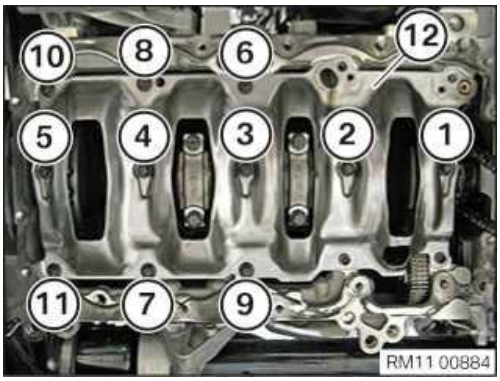
- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.
- Remove the timing case cover.

31 – Remove the oil vacuum pump

- Loosen screws (1) of the oil vacuum pump (2).

cardiagn.com

- Remove oil vacuum pump (1) and remove from the drive chain (2).



32 – Removing the oil deflector

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Loosen screws in the order (11) to (1).
- Guide out and remove the oil deflector (12).

MAIN WORK

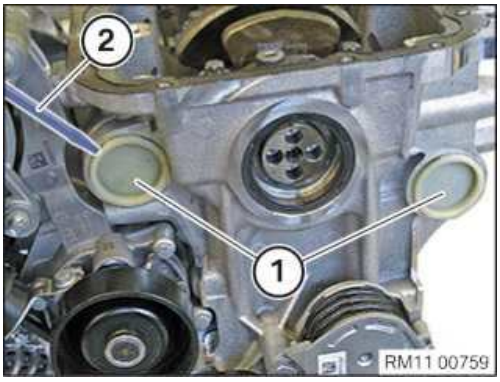
33 – Remove counterbalance shafts

RISK OF DAMAGE

Damage of the engine and mounted parts.

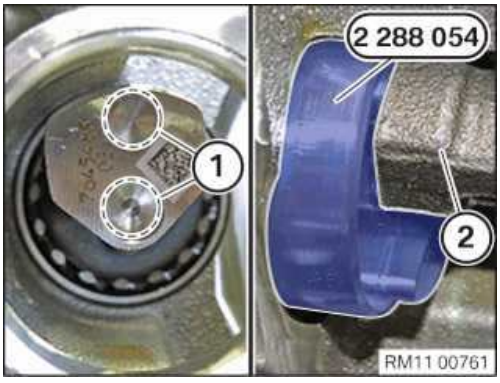
Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

- Comply with the regulations for the installation and disassembly.
- Perform work with care.



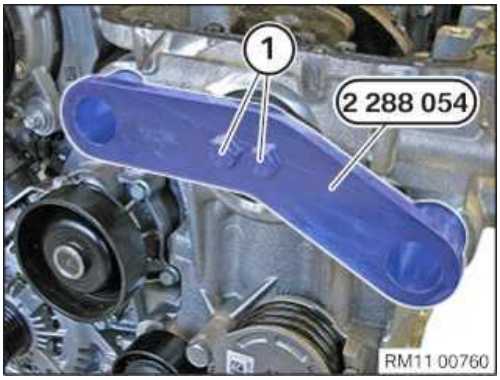
cardiagn.com

RISK OF DAMAGE



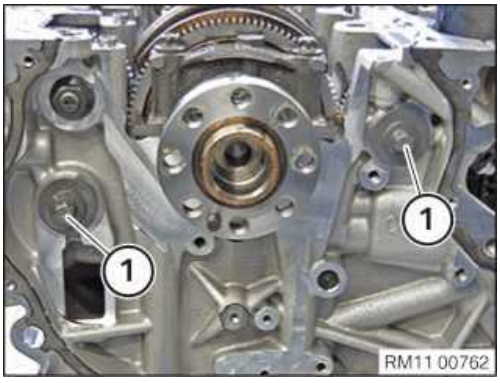
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.



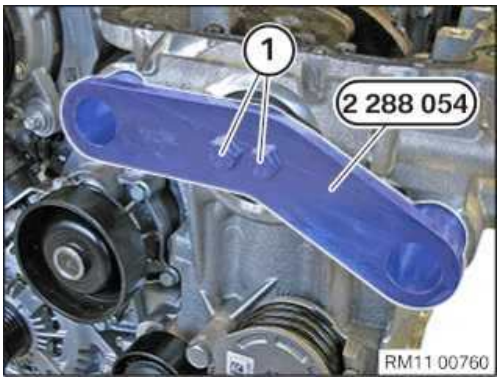
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Remove the sealing cap (1) with a suitable tool (2).



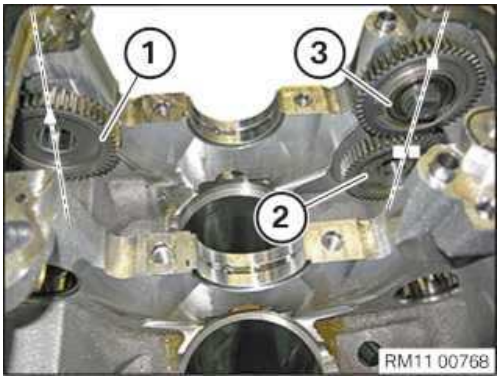
- Rotate the crankshaft to the **TDC of the first cylinder**.
- The special tool **2 288 054** must be positioned in the guides (1) of the counterbalance shafts (2).

- Secure special tool **2 288 054** with screws (1) to the crankshaft.
- Tighten the screws (1).



Special tool 2 288 054 to crankshaft

M10		Tightening torque	20 Nm



- Loosen screws (1).

cardiagn.com

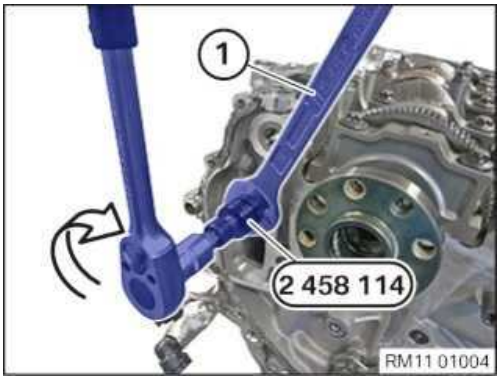
- Loosen screws (1).
- Guide the special tool **2 288 054** out and remove.

NOTICE

To provide a better overview: Illustration of surrounding parts in removed state.

- The identifications on the gears (1) , (2) and (3) must point vertically to the top towards the oil sump sealing surface.

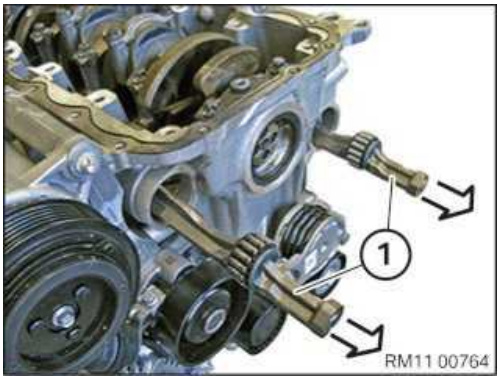
Gear	Identification
1 intake side	Triangle and E
2 exhaust side	Two squares and A
3 exhaust side of intermediate wheel	One square



- The intermediate wheel of the exhaust side consists of a fixed wheel and a moving wheel and it must be pretensioned using special tool **0 495 131 (11 5 370)**.
- Pretension the intermediate wheel of the exhaust side using special tool **0 495 131 (11 5 370)** in the illustrated position.
- When reusing the intermediate wheel of the exhaust side, it must remain pretensioned in special tool **0 495 131 (11 5 370)** until its reinstallation.

- Screw in special tool **2 458 114** into the gear of the counterbalance shaft.

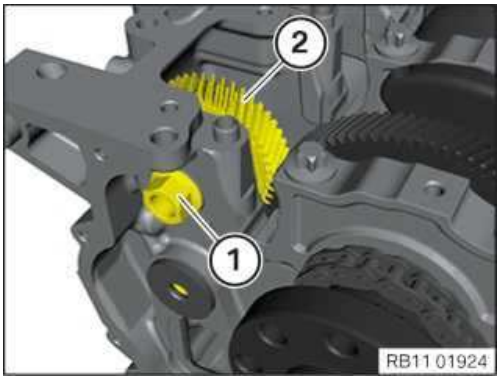
Note: The gears have been pressed onto the counterbalance shaft with a taper and they can exclusively be released using the special tool.



- Counter support special tool **2 458 114** with an open-end spanner (1).
- Screw the bolt of the special tool **2 458 114** in to detach the counterbalance shaft from the gear.

cardiagn.com

- Release the counterbalance shaft of the intake side from the gear using special tool **2 458 114**.



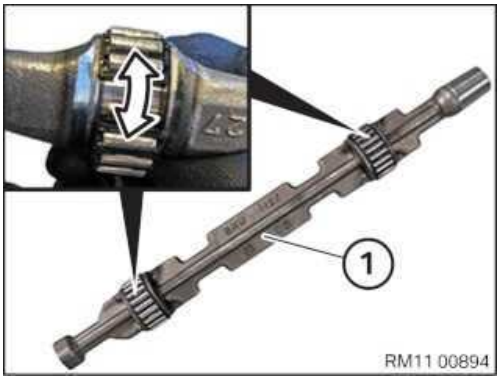
- Feed out the counterbalance shaft (1) in the direction of arrow out of the crankcase and remove.

- Remove the gear (1) of the intake side.

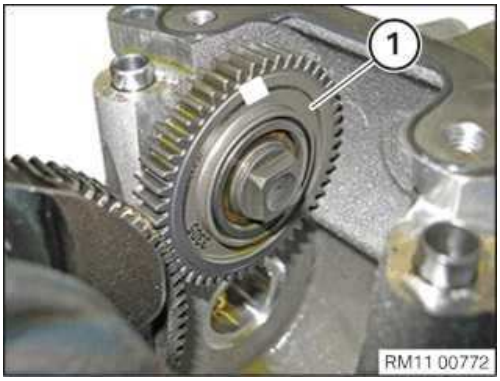
- Remove the gear (1) of the exhaust side.

- Unfasten nut (1).
- Remove the gear (2) using special tool **0 495 131 (11 5 370)**.

34 – Install counterbalance shafts

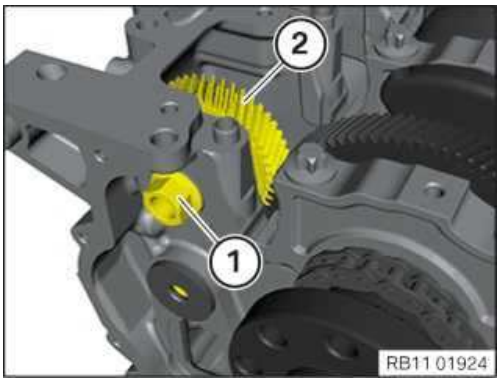


cardiagn.com



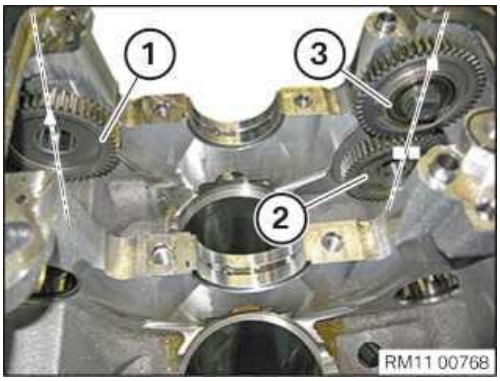
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- If a new gear is installed, the ring gear must remain blocked until installation using the factory-mounted fixation (1) .

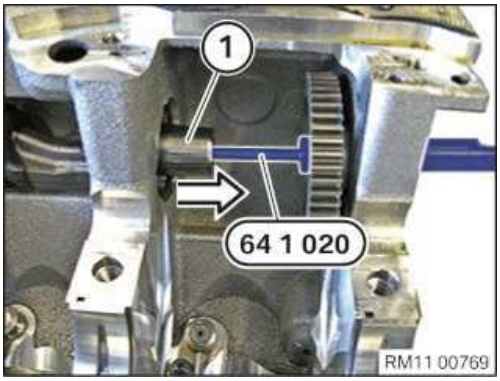
- Check both needle bearings (1) of counterbalance shaft for damage.
- Pull off damaged needle bearing (1) from the counterbalance shaft and renew it.



- Rotate the crankshaft to the **TDC of the first cylinder**.
- Replace the gear (1).
- **Parts:** Gear
- Position the intermediate wheel (1) such that the mark points vertically to the top.

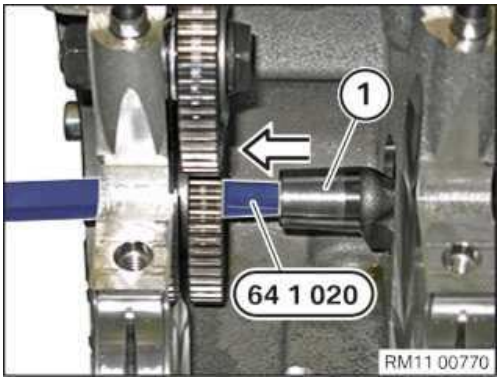
- Tighten the nut (1) on the intermediate wheel (2) hand-tight.

cardiagn.com



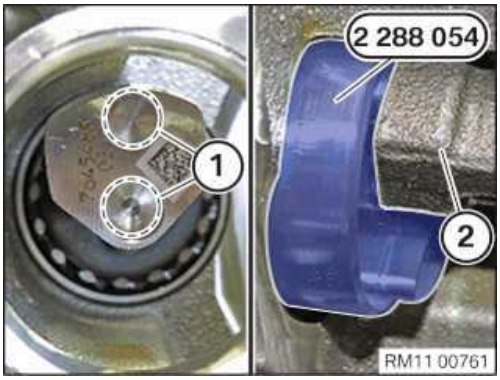
NOTICE

To provide a better overview: Illustration of surrounding parts in removed state.



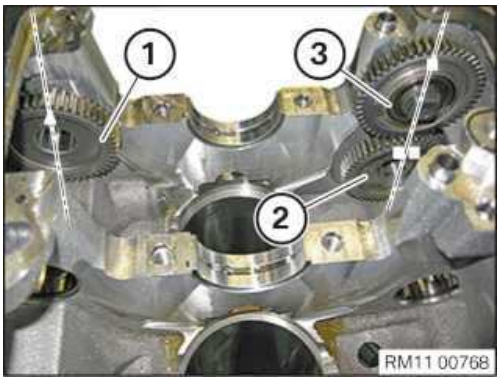
- The identifications on the gears (1) , (2) and (3) must point vertically to the top towards the oil sump sealing surface.

Gear	Marking	Identification
1 intake side	Triangle	E
2 exhaust side	Two rectangles	A
3 exhaust side of intermediate wheel	One square	



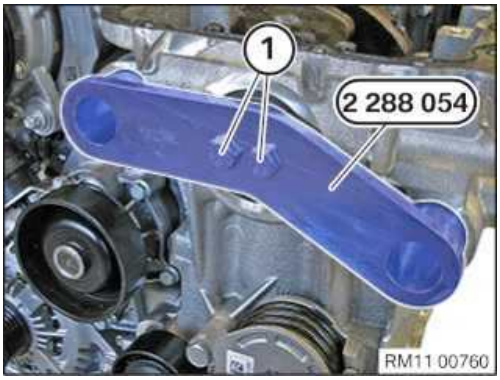
- Install the gear (1) identification **E** such that the marks point vertically to the top.
- Install the gear (2) identification **A** such that the marks point vertically to the top.

- Slide the special tool **0 493 681 (64 1 020)** or another suitable tool through the gear into the counterbalance shaft.
- Carefully insert the counterbalance shaft (1) into the gear on the intake side.



- Slide the special tool **0 493 681 (64 1 020)** or another suitable tool through the gear into the counterbalance shaft.
- Carefully insert the counterbalance shaft (1) into the gear on the exhaust side.

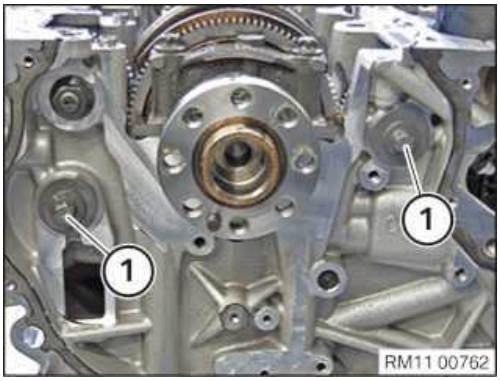
- The crankshaft must be at the **top dead centre of the first cylinder**.
- The special tool **2 288 054** must be positioned in the guides (1) of the counterbalance shafts (2).



cardiagn.com

NOTICE

To provide a better overview: Illustration of surrounding parts in removed state.



- The identifications on the gears (1) , (2) and (3) must point vertically to the top towards the oil sump sealing surface.

- Secure special tool **2 288 054** with screws (1) to the crankshaft.
- Tighten the screws (1).

Special tool 2 288 054 to crankshaft

M10		Tightening torque	20 Nm

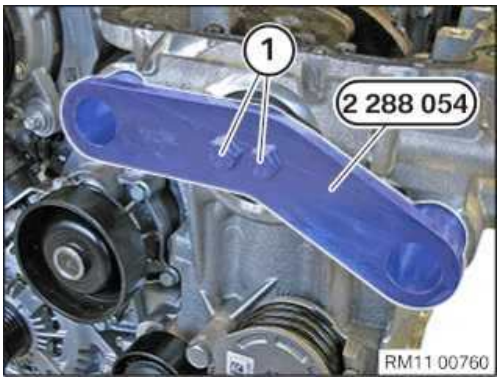
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Gear to counterbalance shaft

M10	Renew screws.	1. Jointing torque	20 Nm
		2. Angle of rotation	180 °

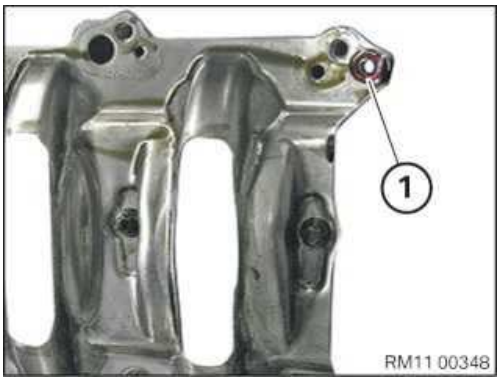
- The gearing of the intermediate wheel engages in the gearing of the crankshaft and the counterbalance shaft.
- Relieve tension on special tool **0 495 131 (11 5 370)** and remove.



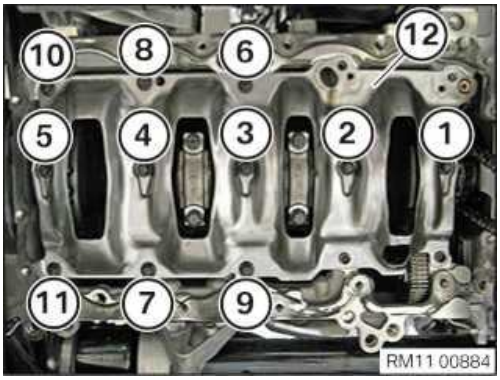
- Move the intermediate wheel (1) in the direction of arrow on the crankshaft (2) to the equipment.
- Tighten nut (3).

Idler gear to crankcase

M12x1.5		Tightening torque	10 Nm
		Angle of rotation	45 °



cardiagn.com



- Unscrew the bolts (1) and remove the special tool **2 288 054**.
-

POSTPROCESSES

35 – Installing the oil deflector

- Check sealing ring (1) for damage and replace oil deflector if necessary.
  Parts: Oil deflector

- Insert and install the oil deflector (12).
- Renew screws (1) to (11).
  Parts: Bolts
- Hand-tighten the bolts (1) to (5).
- Hand-tighten the bolts (6) to (11).
- Tighten the screws (1) to (5).

Oil deflector to crankshaft bearing cap

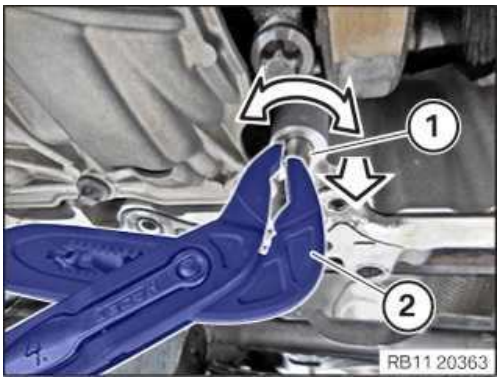
M8x14	Replace screws.	Tightening torque	35 Nm
		Release	180 °
		Tightening torque	15 Nm
		Angle of rotation	45 °

- Tighten the screws (6) to (11).

Oil deflector to crankcase

M8x14		Tightening torque	19 Nm

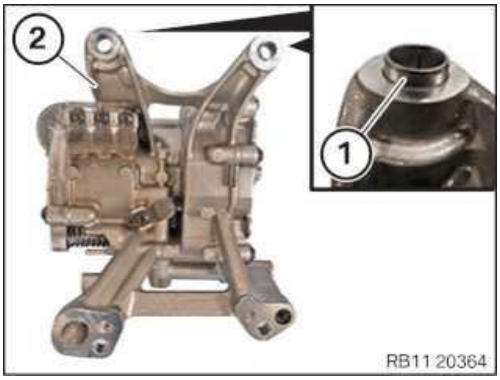
36 – Install the oil vacuum pump



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.



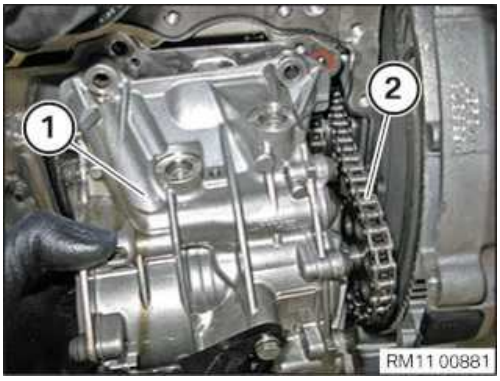
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

- Remove centering sleeves from the crankcase (1) using a standard tool (2).
- Renew the centring sleeves (1).

  Parts: Centring sleeves

- Install centering sleeves (1) in the oil vacuum pump (2).



- Check the sealing ring (1) for damage and renew where required.
- Make sure the sealing ring (1) is installed correctly.

- Check sealing ring (1) for damage and replace oil deflector if necessary.

  Parts: Oil deflector

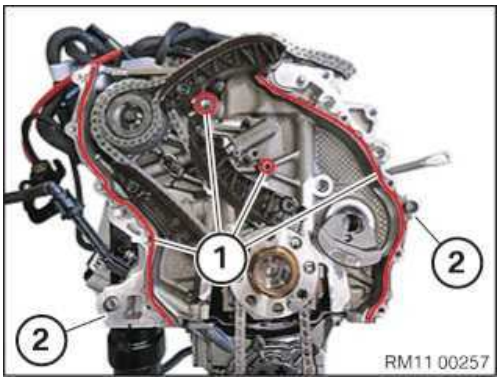
- Insert oil vacuum pump (1) into the drive chain (2).

cardiagn.com

- Renew screws (1).

  Parts: Bolts

- Tighten the screws (1) of the oil vacuum pump (2).



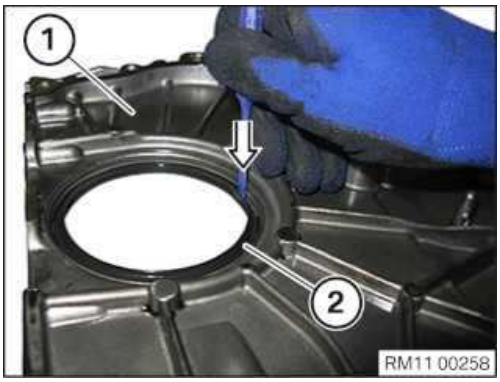
Oil vacuum pump to crankcaseB47

M8x35		Tightening torque	19 Nm

37 – Install the rear timing case cover

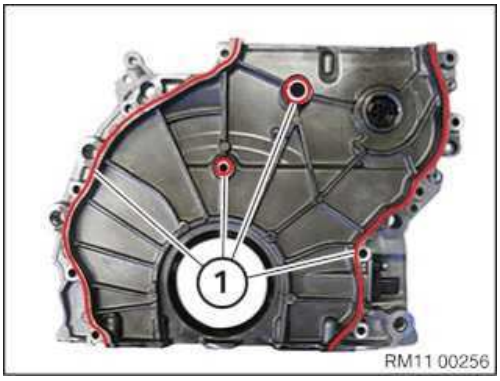
Prerequisite

Transmission is removed.



RISK OF DAMAGE

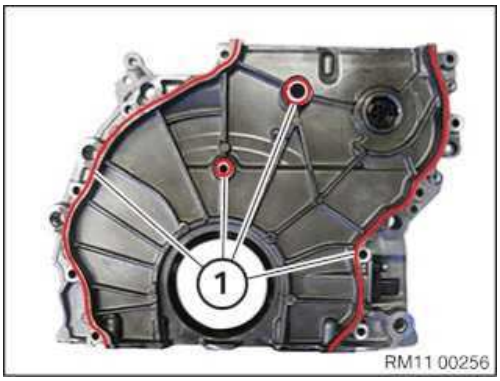
Damage to the surface.

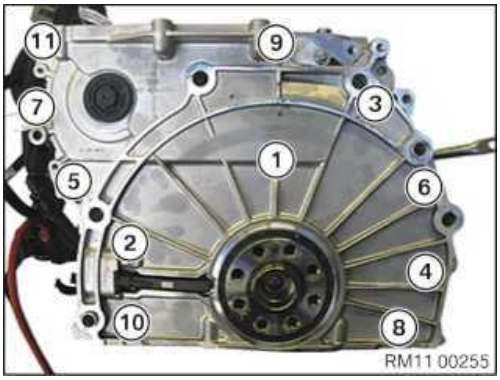


The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.
- Check fitting sleeves (2) for damage and for tight fit; renew if necessary.





- Position the timing case cover (1) underneath.
- Position punch on inner side of crankshaft seal (2).
- Drive out crankshaft seal (2) outwards.

- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.

cardiagn.com

TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Apply sealing bead (1) with a height of approx. 1.5 mm to 2.0 mm on inner side of timing case cover in marked locations. Use liquid sealing compound for this.

  Application time of sealing bead (1) must not exceed 12 minutes.

- Mount the timing case cover without the crankshaft seal.
- Renew screws (1) to (11).

  Parts: Bolts
- Join the bolts in with the sequence (1) to (11).
- Tighten screws in the order (1) to (11).

Rear timing case cover to crankcase

M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

▸ **Installing the rear crankshaft seal**

RISK OF DAMAGE

Radial shaft seal damage.

Touching the sealing lip (inner) on the radial shaft seal with the sharp-edged connector gearing of the output shaft will result in destruction and/or leaks.

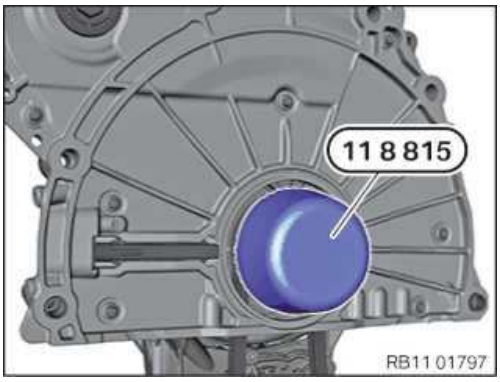
- When inserting the output shaft, make sure that the connector gearing of the output shaft does not touch the sealing lip (inner) of the radial shaft seal.

RISK OF DAMAGE

Radial shaft seal damage.

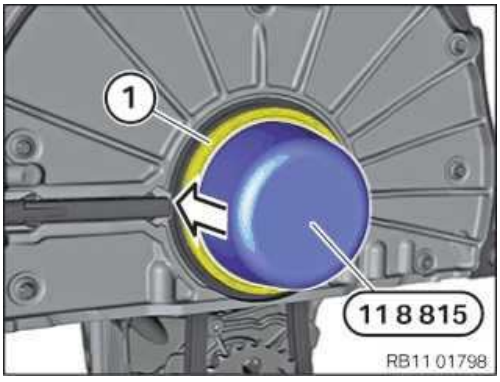
Touching the sealing lip (inner) and applying oil to the radial shaft seal will lead to its destruction.

- Do not touch the sealing lip (inner) of the radial shaft seal.
- Do not apply oil to the radial shaft seal.
- Install the radial shaft seal dry.



cardiagn.com

RISK OF DAMAGE



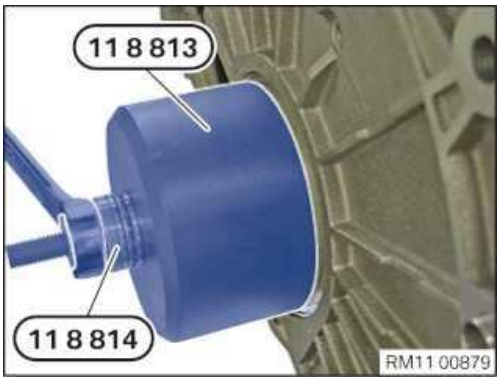
Electrostatic discharge.

Damage to or destruction of electrical components.

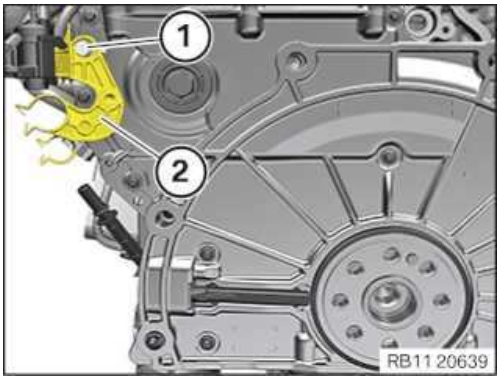
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Position special tool **0 496 137 (11 8 815)** on crankshaft. Make sure that the crankshaft sensor is not damaged.

- Fit the crankshaft seal (1) up to the timing case cover in the direction of the arrow using special tool **0 496 137 (11 8 815)** and position.
- Remove special tool **0 496 137 (11 8 815)**.



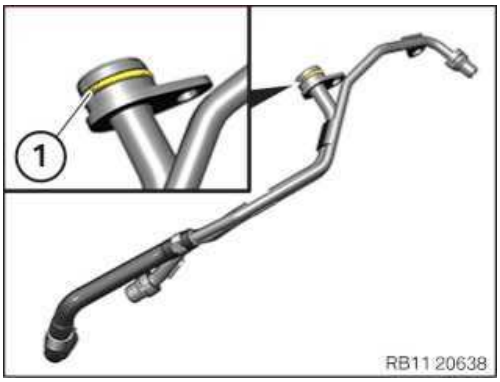
- Secure special tool **0 496 133 (11 8 811)** to the crankshaft using special tool **0 496 134 (11 8 812)**.



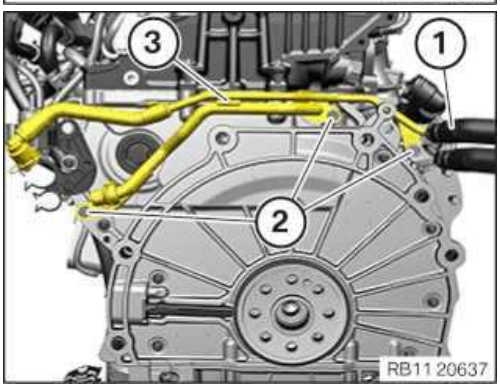
- Check the freedom of movement between the special tool **0 496 135 (11 8 813)** and the crankshaft sensor during installation.

  Otherwise there is a risk that the crankshaft sensor will be damaged.
- Slide on special tool **0 496 135 (11 8 813)**.
- Screw down special tool **0 496 136 (11 8 814)**.

cardiagn.com



- Press in crankshaft seal with special tool **0 496 135 (11 8 813)**.
- Screw in special tool **0 496 135 (11 8 813)** up to timing case cover.



- Insert and install the holder (2).

▶ **If installed: Installing the coolant line of the SCR metering module**

- Renew the O-ring 1.

  Parts: O-ring

- Feed in and install coolant line (3).
- Tighten down screws (2).

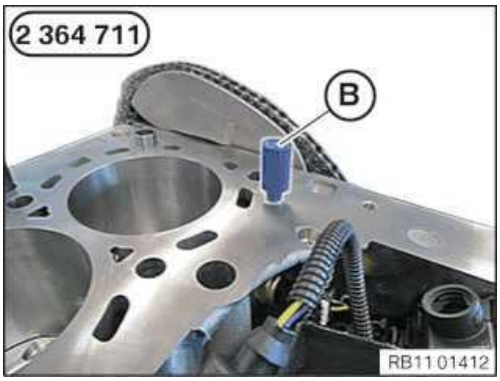
SCR coolant lines to crankcase end cover

Hexagon screw M6x16		Tightening torque	8 Nm

- Connect and lock the coolant line (1).

  Coolant line (1) must audibly engage.

▶ **Cleaning the sealing surface**



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

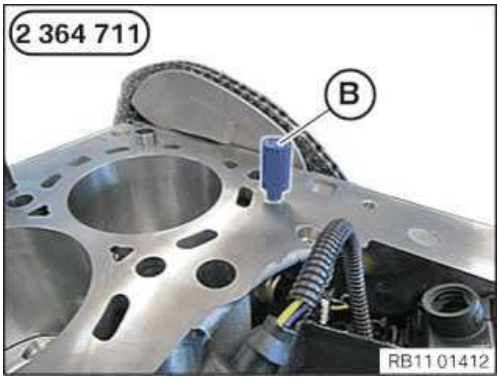
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

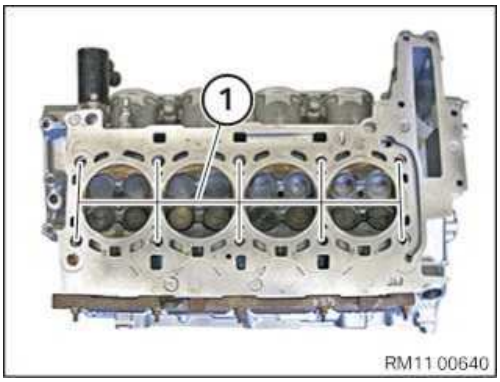
- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.



RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



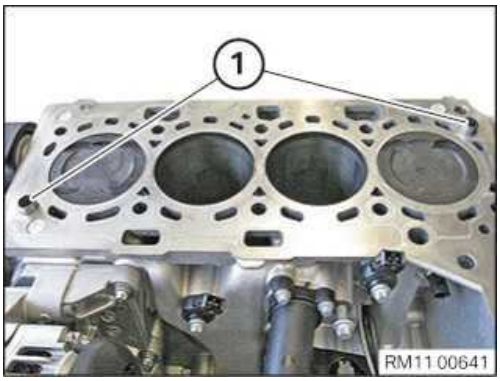
- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.

- Remove special tool (B).

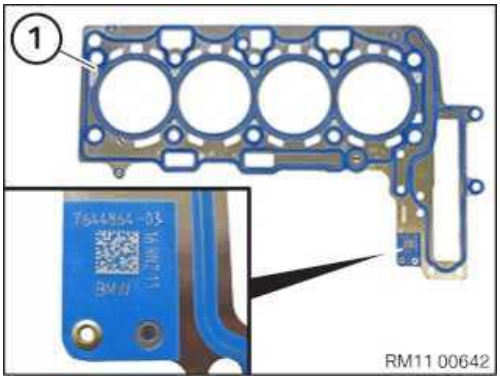
▸ **Renewing the cylinder head gasket**

RISK OF DAMAGE



Damage to the surface.

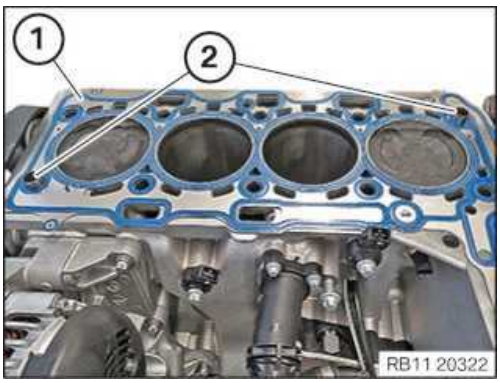
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



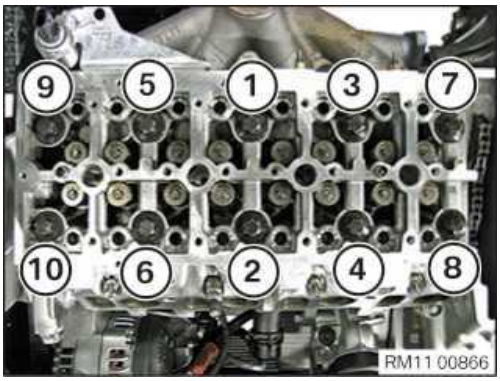
- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).

cardiagn.com



- Check the fitting sleeves (1) for secure fit and damage.



- Identify the cylinder head gasket (1) using the part number.

Note: If the cylinder head is reworked, an additional thicker gasket 0.3 mm is available for service personnel.

- Guide in the cylinder head gasket (1) and install.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Damage to threads.

Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION

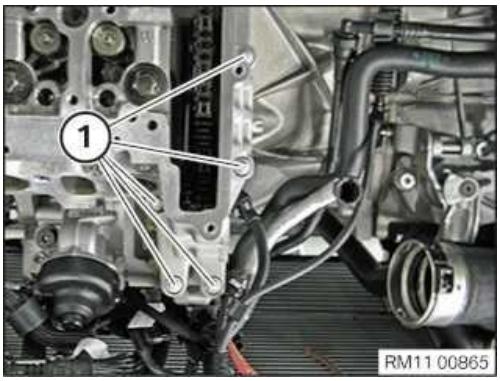
Do not remove bolt coating.

- Renew the cylinder head bolts (1).

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  No coolant, water or engine oil must be present in threaded holes of engine block.

TECHNICAL INFORMATION



When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in cylinder head bolts in sequence (1) to (10).
- Tighten cylinder head bolts using special tools **0 490 504 (00 9 120)** and in sequence (1) to (10).

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

cardiagn.com

- Tighten the cylinder head bolts (1).

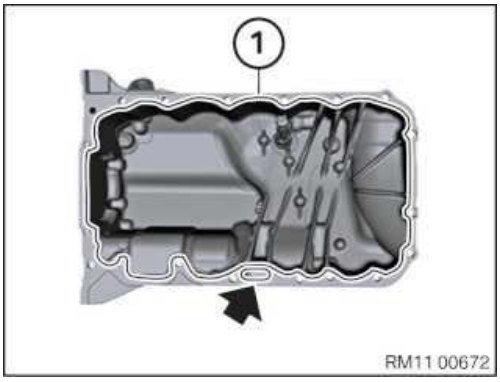
Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

-

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Remove fine sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

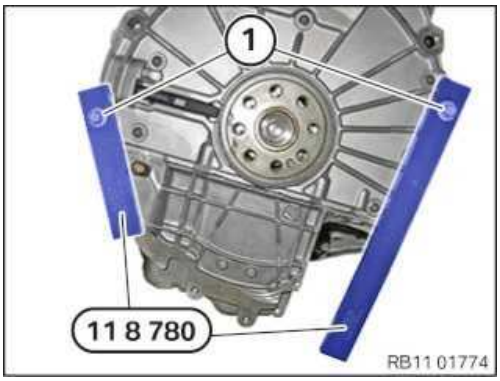
- Remove coarse sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- Apply the sealing compound along the line (1) with a thickness of 2 mm to 2.5 mm.

  Apply the sealing compound along the inner edge.

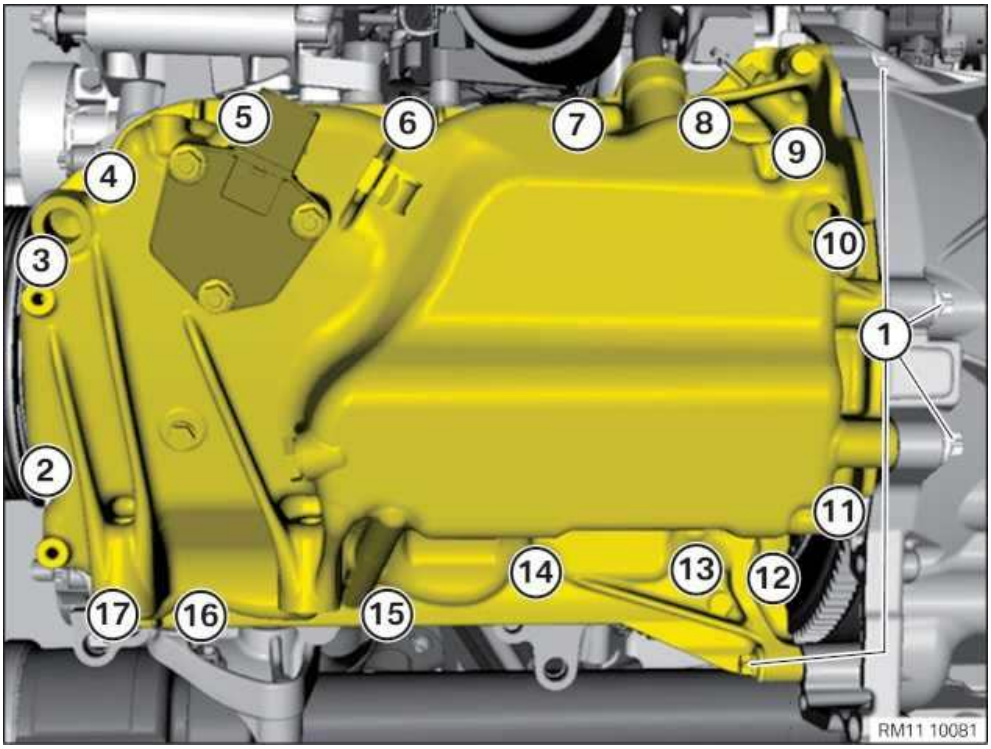


Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

- Completely encircle the oil return orifice (arrow) with the sealing compound.



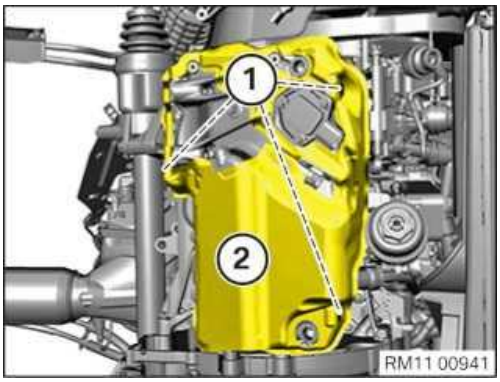
cardiagn.com

TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- If necessary, renew fitting sleeves.

- Position and install oil sump.
- **Hand-tighten** oil sump screws (2) to (17) but do **not** tighten completely.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws(2) to (17) of the oil sump.



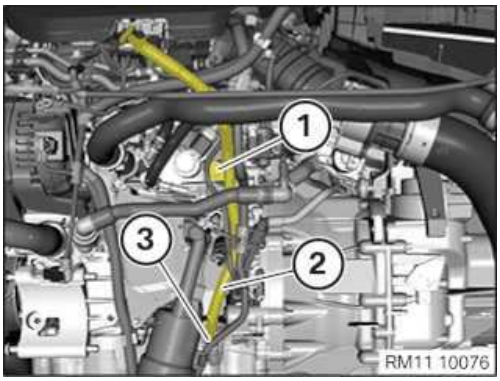
Oil sump to crankcase

M8x30		Tightening torque	2 Nr
M8x110		Tightening torque	2 Nr

- Tighten transmission bolts (1) on oil sump.

Transmission to oil sump

M8		Tightening torque	1 Nr



- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).

- Renew O-ring (1).

  Parts: O-ring

cardiagn.com

- Guide in guide tube (2) for oil dipstick and insert it into oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

Guide tube for oil dipstick on engine

M8x16		Tightening torque	19 Nm

38 – Installing the flywheel

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

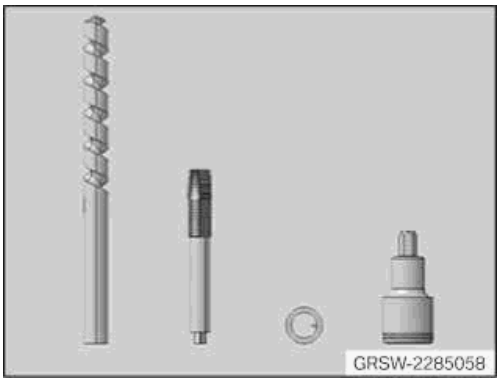
- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



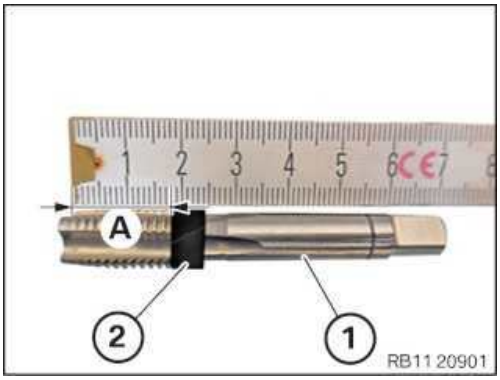
- Check fitting sleeve on the crankshaft for damage and replace if necessary.

TECHNICAL INFORMATION

Clean all threads with a screw tap.

- Clean all the screw threads (1).

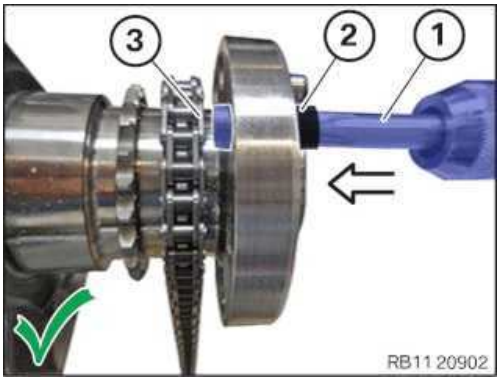
- Use the set of special tools **2 285 058**.



Description
Twist drill
Thread cutter M12x1.5
Depth
Insertion tool

cardiagn.com

- Assemble tool set.



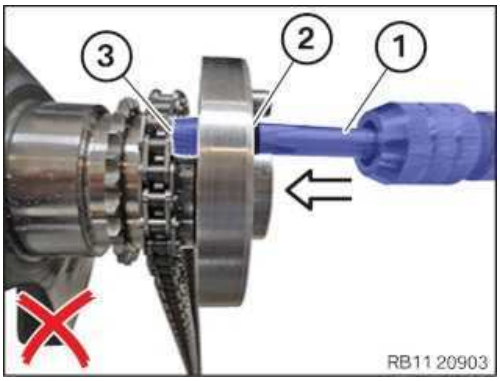
Number	Description
1	Tool holder
2	Thread cutter M12X1,5

- Mark the installation dimension (A) on thread cutter (1) from the set of special tools **2 285 058** using a commonly-available tool (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm

NOTICE



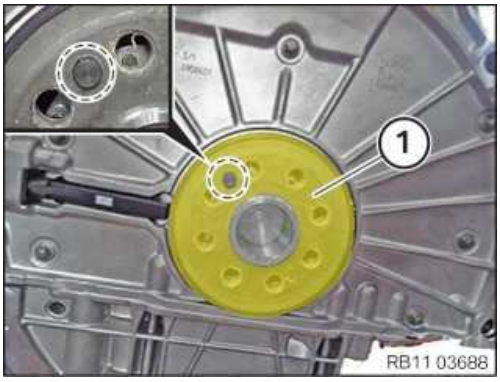
To provide a better overview: Shown with engine removed.

- Screw in the thread cutter (1) from the set of special tools **2 285 058** in direction of arrow up to the installation dimension (2).

Screw-in depth of thread cutter

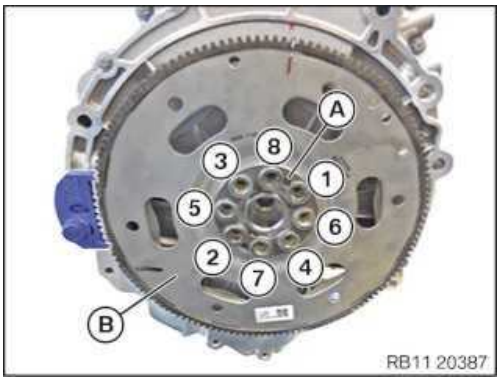
Screw-in depth	18 mm

- Make sure that the thread cutter does (1) **not** rest on the timing chain (3).



TECHNICAL INFORMATION

- **Carefully** handle the timing chain, to protect the timing chain and timing chain drive against damage.

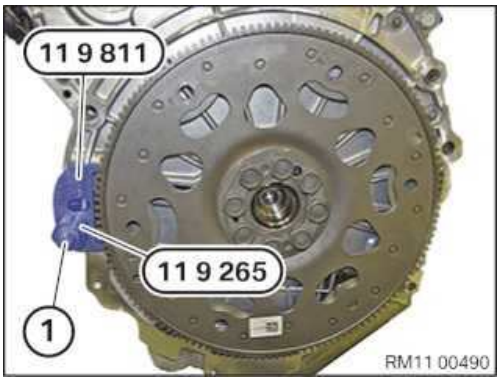


- Make sure the installation dimension (2) of the screw bore (1) is not exceeded.

  The thread cutter (1) may not rest on the timing chain (3).

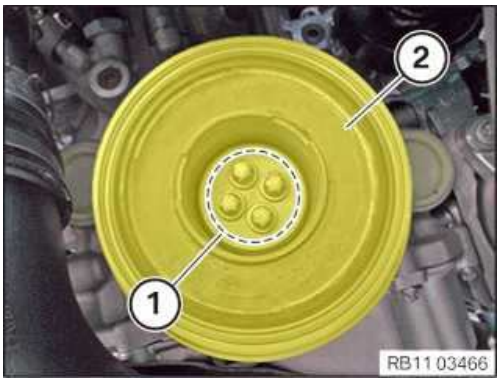
- Important! Observe the marking shown during installation.
- Install special tool (1) on the crankshaft as shown.

cardiagn.com



- Position flywheel (B) .
- Renew flywheel bolts (1) to (8).

  Parts: Flywheel bolts
- Screw in flywheel bolt (1) to (8) by hand.
- Observe tightening sequence. Begin at the dowel pin (A).
- Tighten flywheel bolts in sequence (1) to (8).

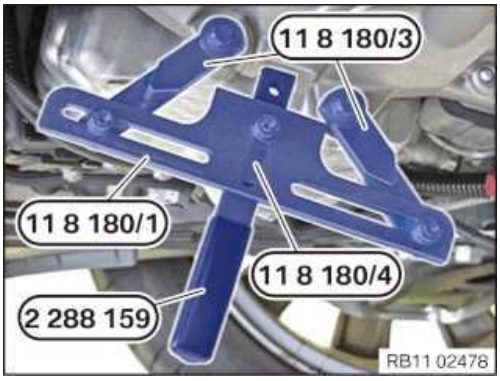


Flywheel to crankshaft

M12x1.5	Renew screws.	Tightening torque	120 Nm

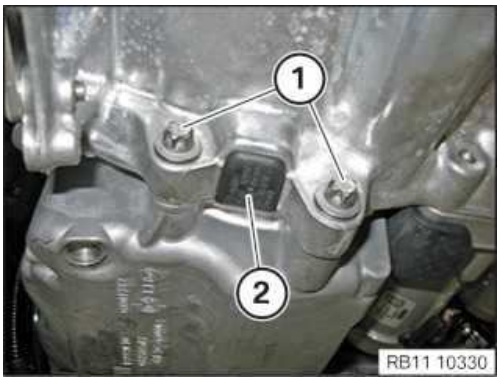
- Loosen the transmission bolt (1).
- Guide out and remove the special tool **0 494 793 (11 9 265)** and **0 496 171 (11 9 811)** with the **standard** washer (5 mm).

39 – Installing the vibration damper



- Position vibration damper (2).
- Renew screws (1).

  Parts: Bolts
- Fasten the vibration damper (2) with the bolts (1).
- Tighten the screws (1).



Vibration damper with belt pulley to crankshaft

M10x65	Renew screws. Tighten screws crosswise.	1. Jointing torque	40 Nm
		2. Angle of rotation	60 °
		3. Angle of rotation	60 °

- Release the transmission bolts and remove the special tool **0 493 587 (11 8 180)**.

cardiagn.com

- Tighten transmission screws (1).

Transmission to engine

M8		Tightening torque	19 Nm

- Install protective cap (2).

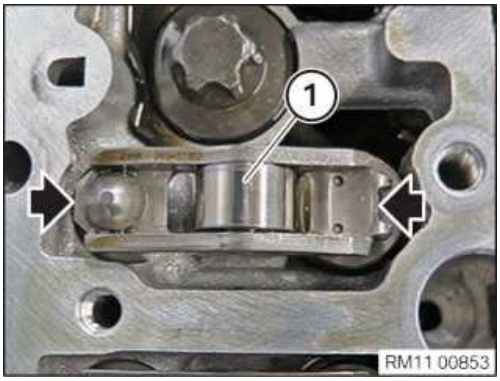
40 – Installing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

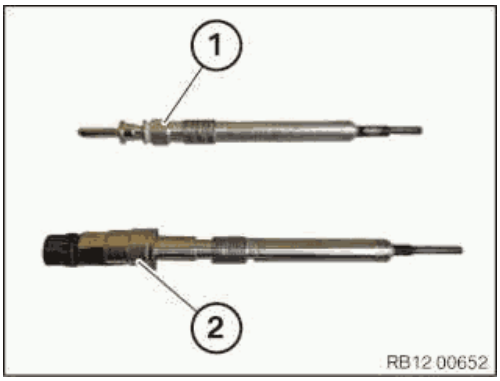


- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

41 – Install the roller cam followers

TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.



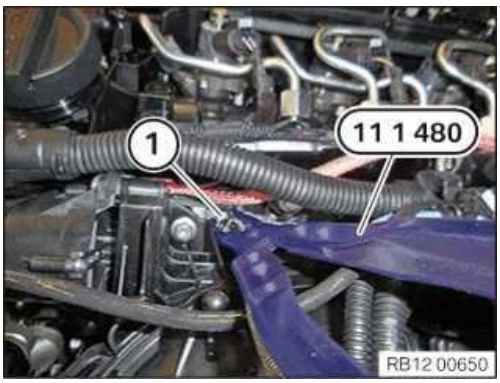
- Check all roller cam followers (1) for damage and replace if necessary.

  Parts: Roller cam followers
- Insert and install all roller cam followers (1).

  Roller cam followers (1) that have already been used must be installed in the same place.
- Note the mounting orientation of the roller cam followers (1).
- Oil all roller cam followers (1).

42 – Install glow elements

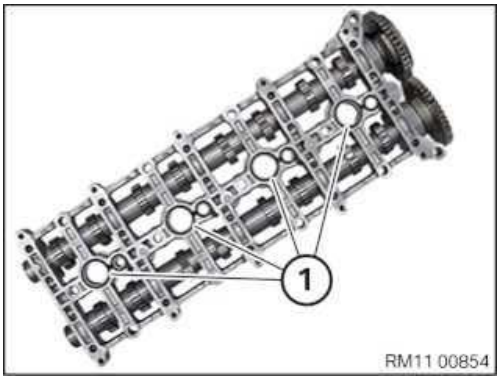
cardiagn.com



- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

- Tighten the glow element with the special tool or conventional tools.

Glow elements to cylinder head



Glow element		Tightening torque	13 Nm

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

43 – Installing the camshaft support

- Renew gaskets (1).

  Parts: gaskets

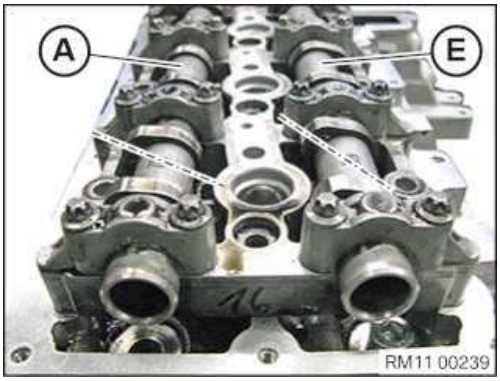
- Position the camshaft support including the camshafts.
- Tighten the screws in a sequence from (1) to (14) in several steps.

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

44 – Adjusting the timing of the camshafts

cardiagn.com

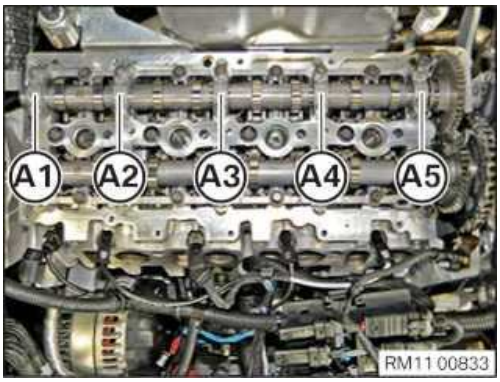


- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

- Slide the special tool **2 288 380** completely into the bore hole of the oil sump.
- Use the special tool to block **2 288 380** the crankshaft in the TDC firing position at the first cylinder.

- The cam of the intake camshaft (E) at the first cylinder points up at an angle.
- The cam of the exhaust camshaft (A) at the first cylinder points outward at an angle.



▶ **Remove exhaust camshaft.**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

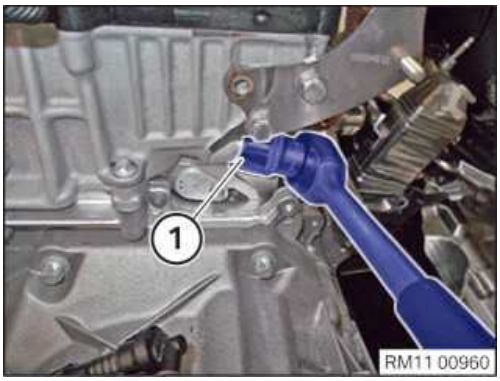
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A5) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components on special tool **0 495 105 (11 4 480)** in a tidy and orderly fashion.

cardiagn.com



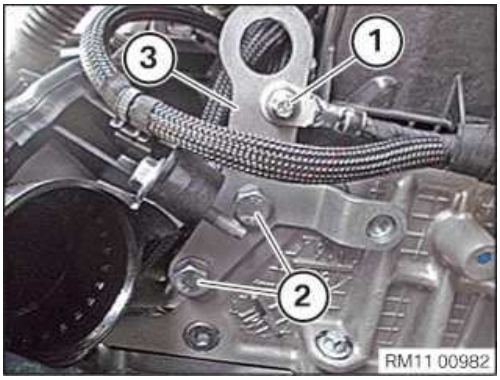
▶ **Remove chain tensioner piston**

WARNING

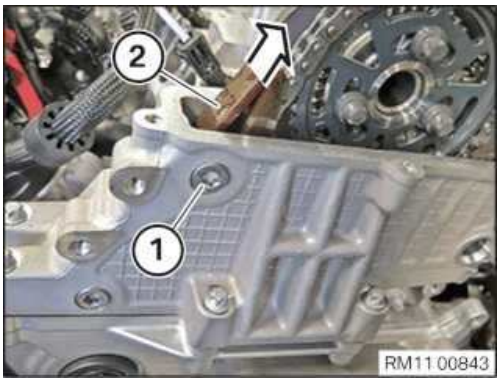
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



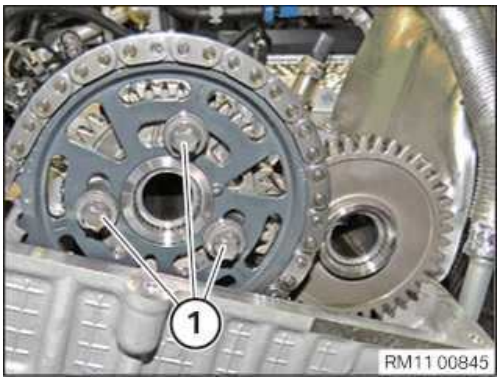
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

▶ **Remove the timing chain guide rail**



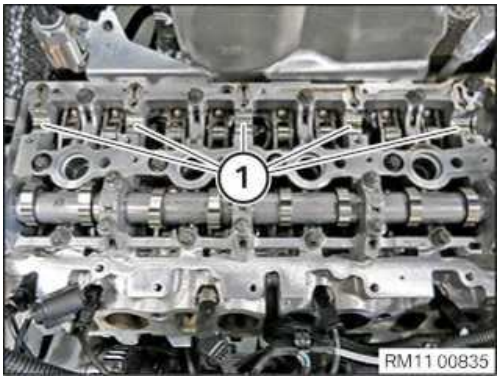
- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

▶ **Removing the camshaft sprocket on the intake camshaft**

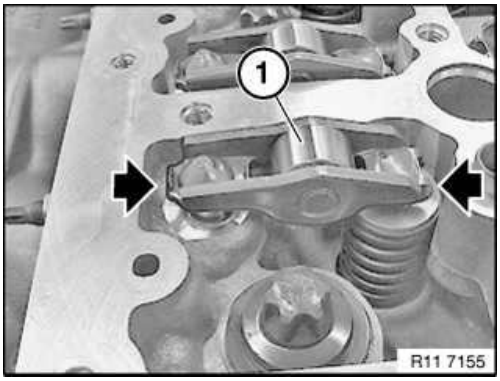
- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

cardiagn.com



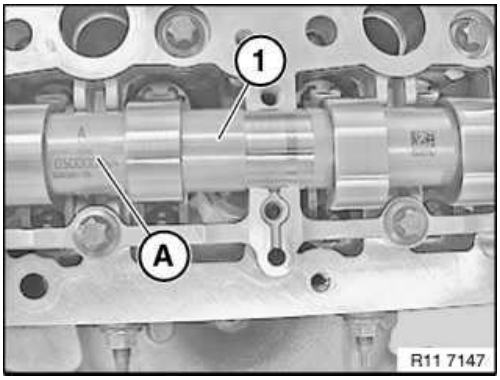
▶ **Install exhaust camshaft**

RISK OF DAMAGE

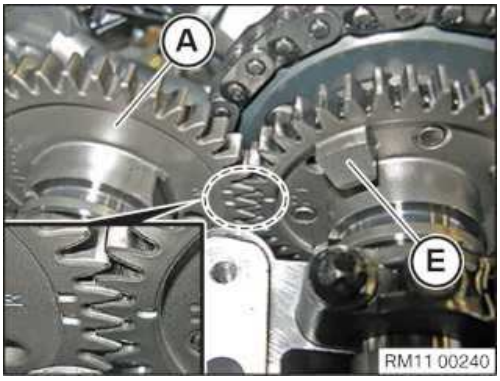


Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

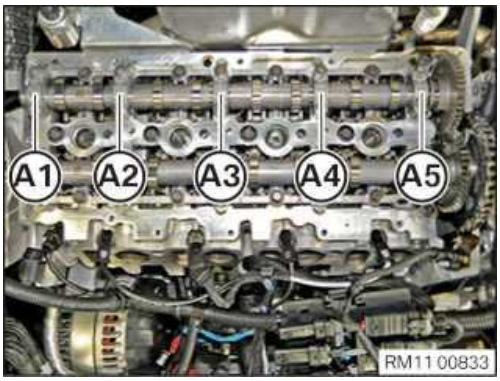


- Comply with the regulations for the installation and disassembly.
- Perform work with care.



- Oil all bearing positions (1).

- Make sure the roller cam followers (1) have the correct mounting orientation.



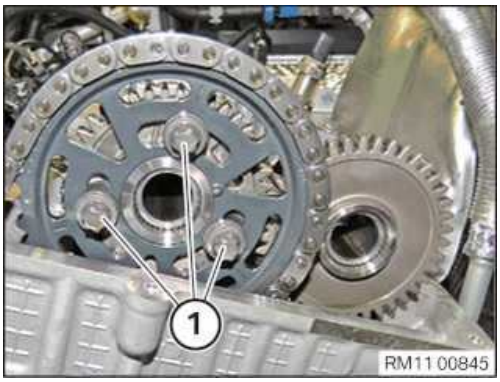
- Insert exhaust camshaft (1) so that the identification (A) points upwards.

- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.

cardiagn.com

- Tighten all exhaust camshaft bearing caps (A1) to (A5) from the inside to the outside by 1/2 a turn at a time.

Intake and exhaust camshaft in camshaft support



M6x31		Tightening torque	10 Nm

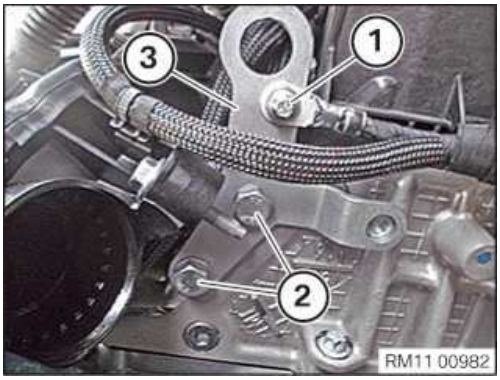
- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

  Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

▶ **Installing the camshaft sprocket on the intake camshaft**

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

▶ **Install the timing chain guide rail**



- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6			8 Nm

cardiagn.com

▶ **Installing the chain tensioner piston**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

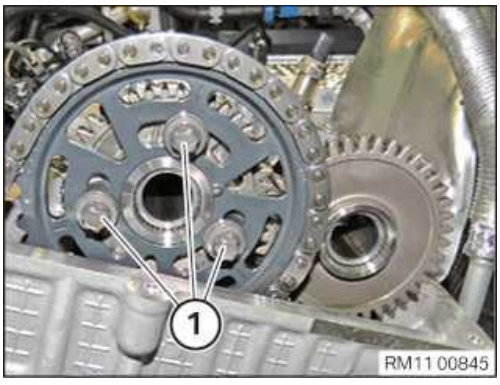
- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

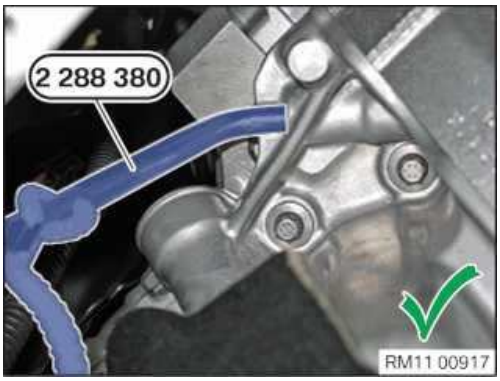


- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

▶ **Tightening the camshaft sprocket on the intake camshaft**



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

45 – Removing the special tool to disconnect the crankshaft

cardiagn.com

- Remove special tool **2 288 380**.

46 – Removing the special tool to secure the exhaust camshaft

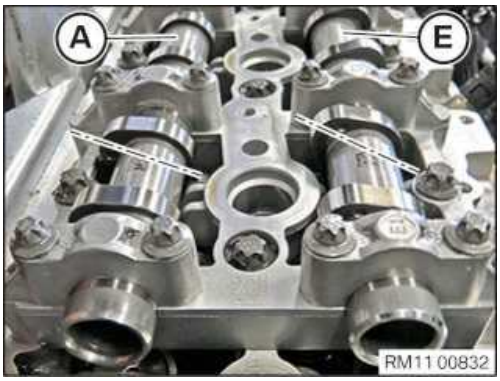
- Remove the special tool **0 496 112 (11 8 760)** to fix the exhaust camshaft.

47 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

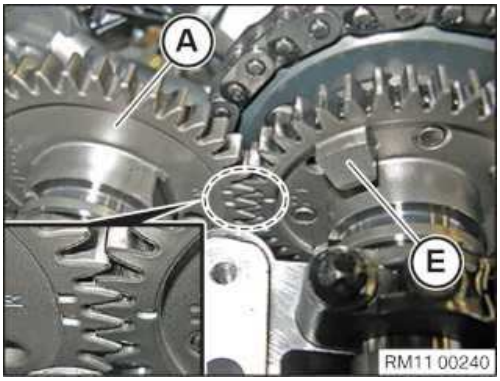


The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

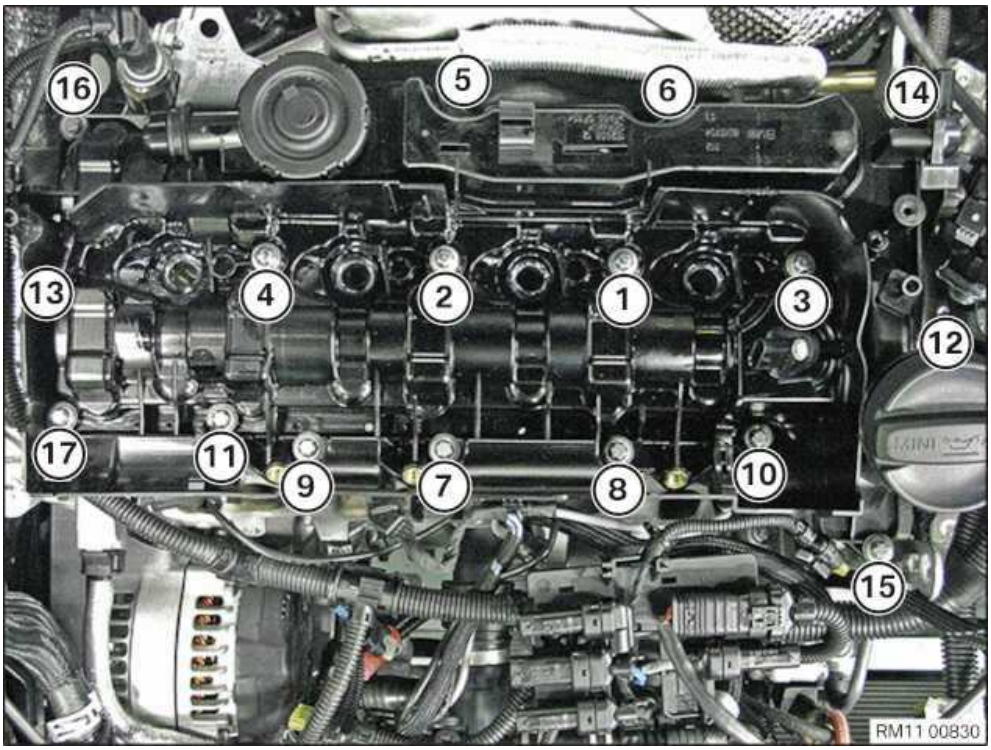
- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

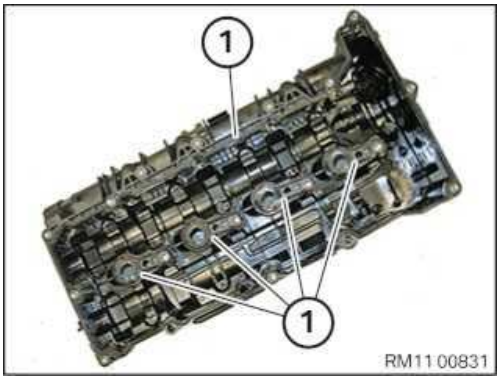
TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.



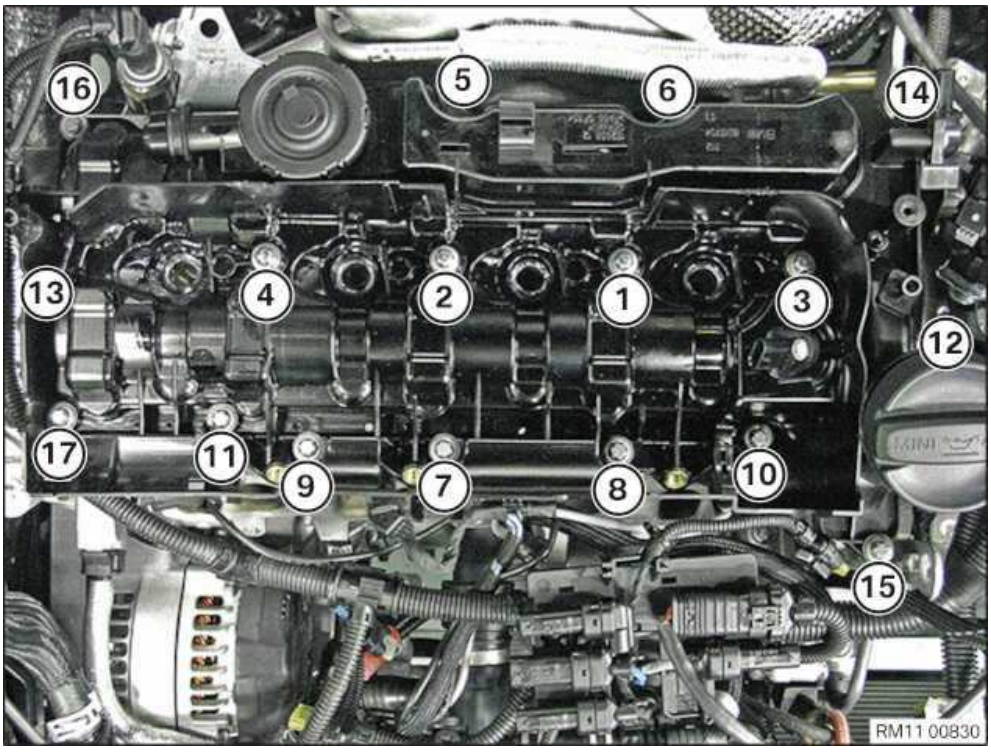
- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.



- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

cardiagn.com

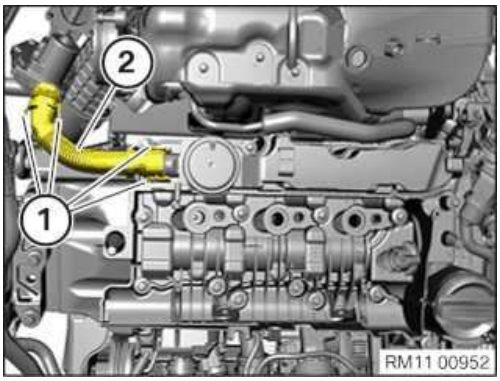
Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket



- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-

cardiagn.com

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

49 – Installing injectors of injection system

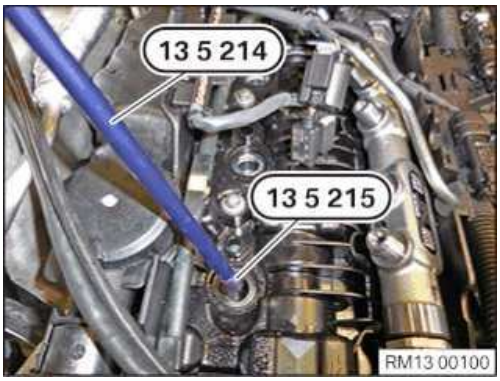
▸ **Cleaning the injector shafts**

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

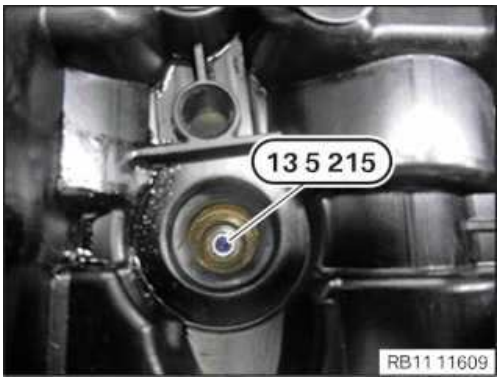
- Collect dirt particles, e.g. when blowing out, use cloth to do so.



- Wear safety goggles.

RISK OF DAMAGE

Contaminant or foreign body.

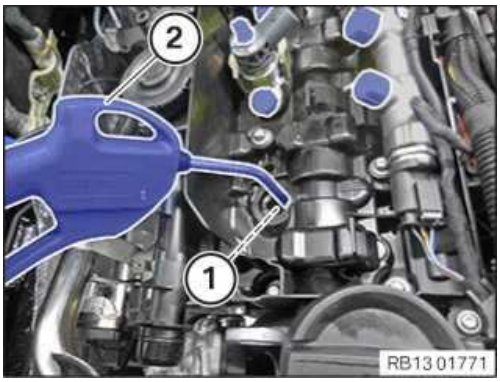


Contamination can result in malfunctions, operating failure or leaks.

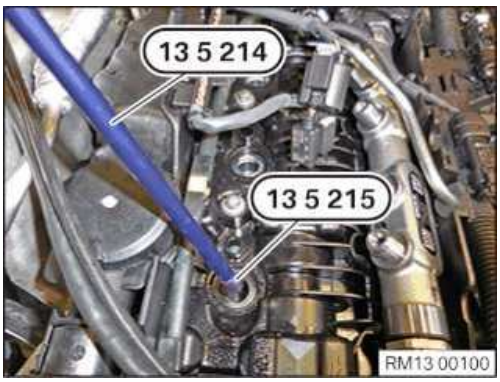
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

cardiagn.com



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.



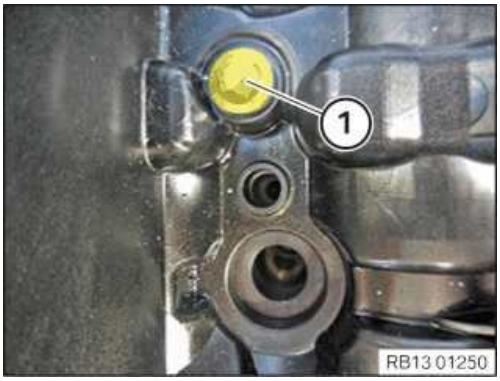
- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

- Blow out injector shaft (1) with air gun (2).

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

► **Check the placement of the clamping claw**



cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

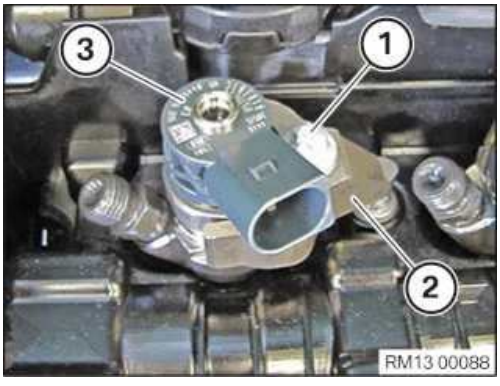
▸ **Prepare the injector for installation**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

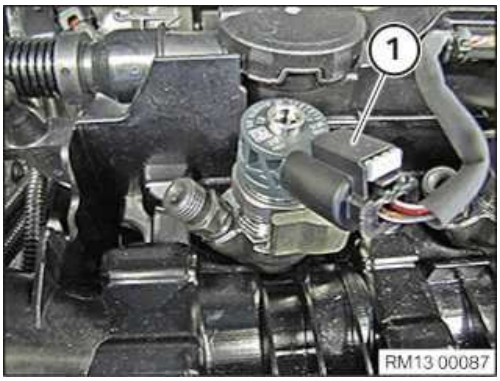


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

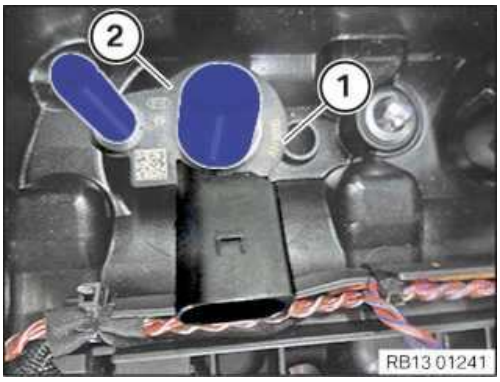
Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

cardiagn.com

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



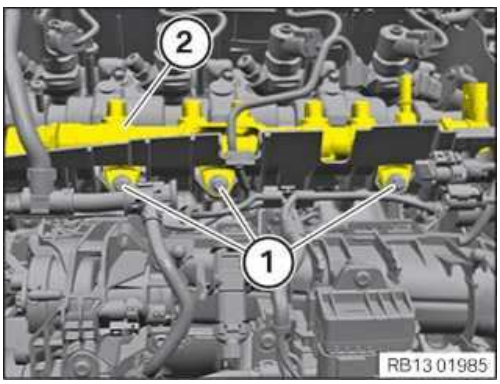
▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

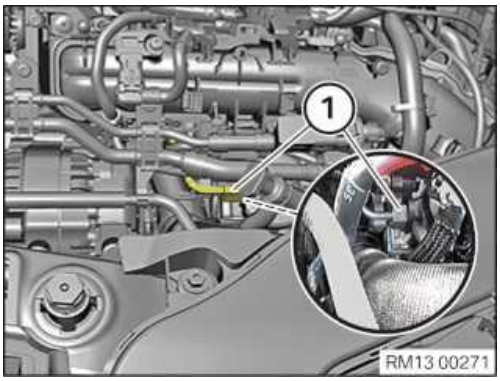
Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

50 – Installing the rail

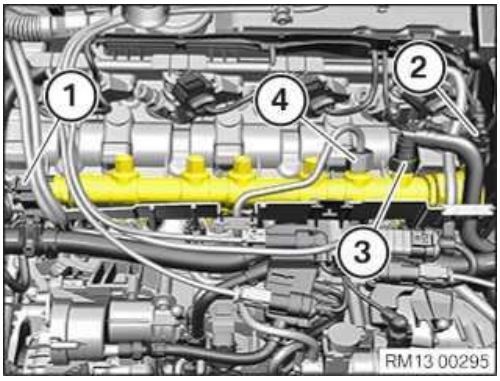


- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm

cardiagn.com



TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

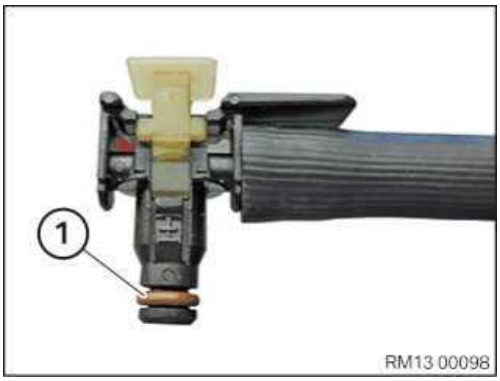
TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool .

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm



- Connect and lock the fuel line (3).

  Fuel line (3) must engage audibly.
- Connect connectors (2) and lock.

  The connector (2) must engage audibly.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

51 – Connect the leakage oil line on the injector

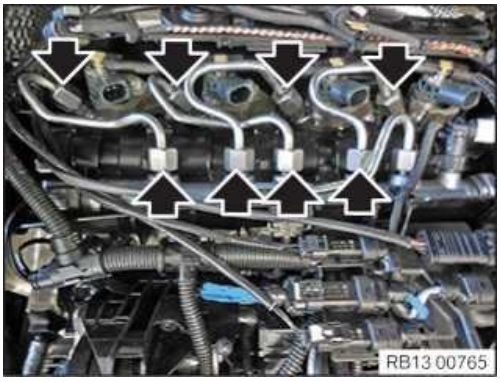
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

cardiagn.com

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.



52 – Installing high pressure lines between rail and injectors

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

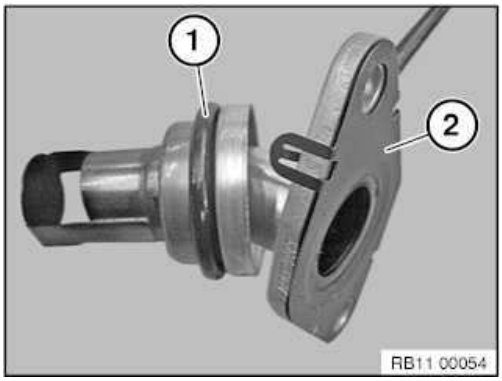
TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.



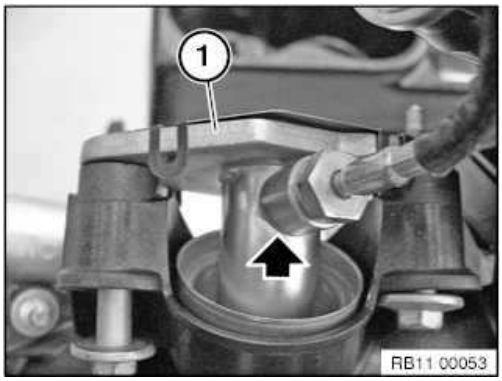
- Tighten the high pressure lines (arrows) with the special tool .

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

53 – Installing the intake plenum

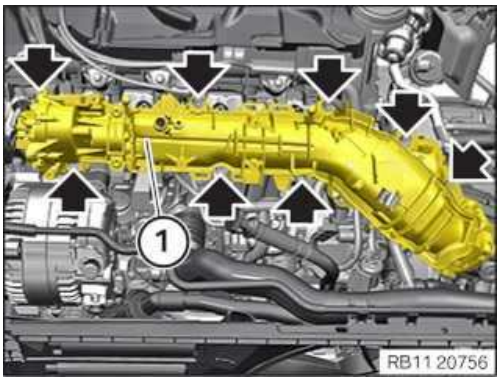


- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position the seal (2) and clip it in.

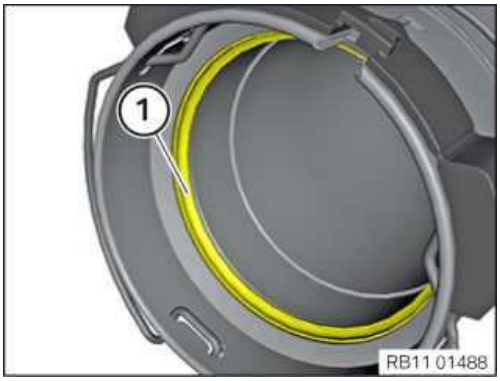
cardiagn.com



- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

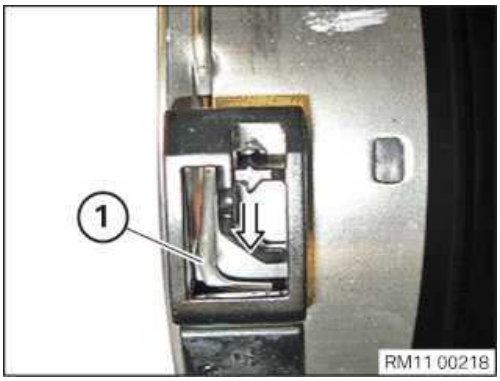
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



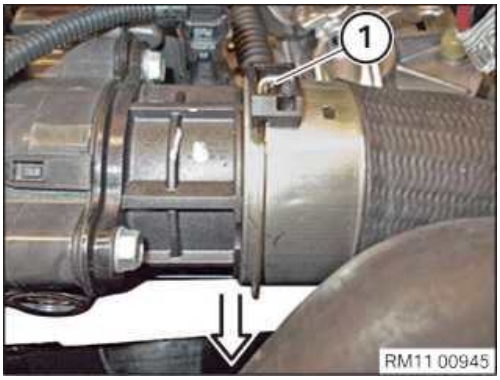
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

cardiagn.com

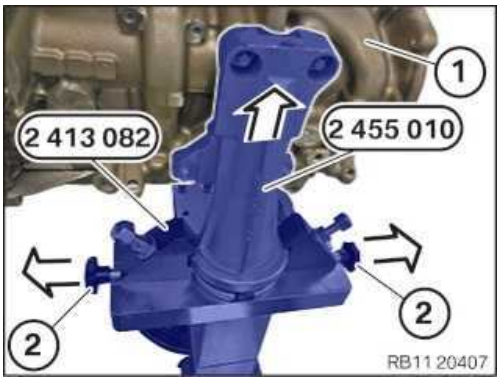
- Engage the lock (1) on the bracket (arrow).

- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

54 – Remove the engine from the assembly stand

CAUTION

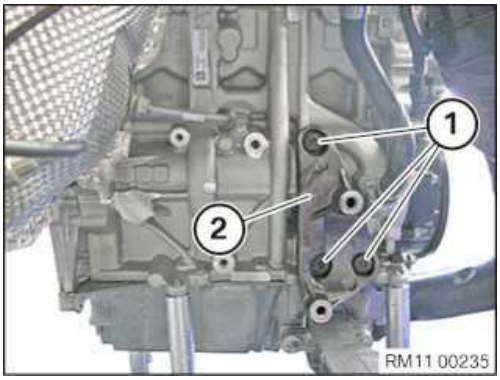


Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Insert engine lifter with special tool and position engine (1).

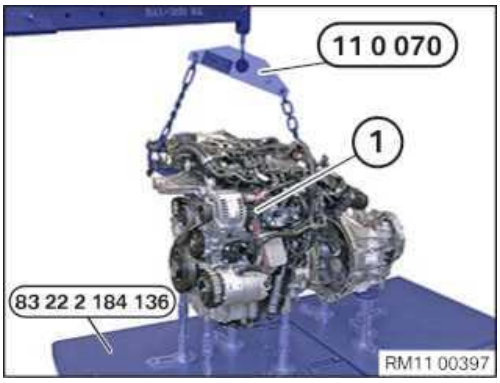


- Unscrew the nuts on special tool .
- Detach the holder (2) in the direction of the arrow.
- Detach the engine (1) with special tool **2 455 010** out of the special tool in the direction of arrow.

cardiagn.com

- Remove conventional screws (arrows).
- Feed out the special tool **2 455 010** on the engine (1) and remove.

- Insert and install the holder (2).
- Tighten the screws (1).



Holder to crankcase

M10		Tightening torque	38 Nm

55 – Mount engine on the automatic transmission

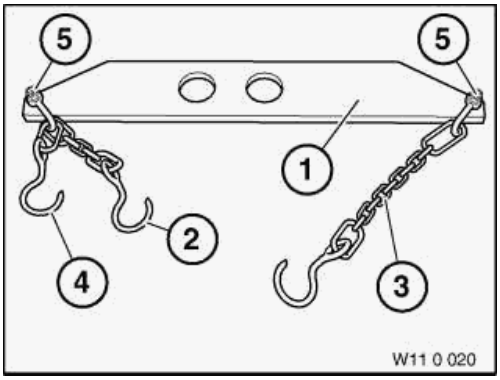
Prerequisite

Engine has been removed.

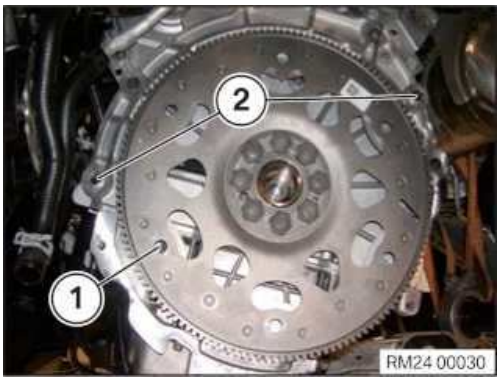
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Position the engine (1) on the lifting table **2 184 136** using the engine lifter and the special tool .
- Feed out engine lifter from engine (1) with special tool and push aside.



- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.



cardiagn.com

- Stage the workshop crane **2 220 718**.

- Stage the lifting gear .

- The bore hole (1) of the flywheel must be accessible from the recess on the oil sump.
- Check for correct fit of fitting sleeves(2).

cardiagn.com

TECHNICAL INFORMATION

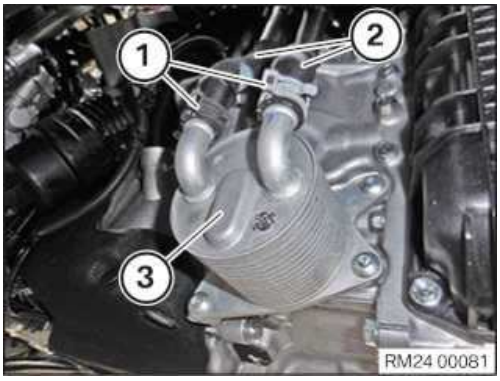
Conduct the following operation with the assistance of a second person.

- Twist torque converter until bore hole in torque converter is flush with bore hole of flywheel.
- Flange-mount and screw automatic transmission on the engine with an auxiliary person and the workshop crane **2 220 718** with the lifting gear .
- Tighten screws (arrows).

Transmission to engine

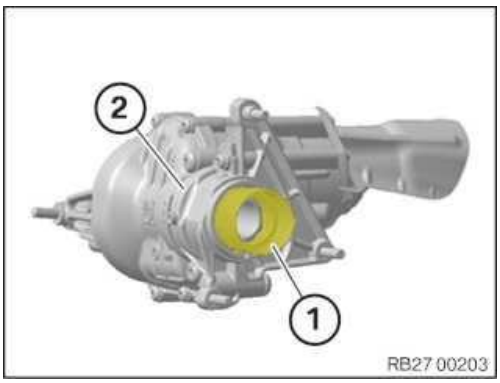
M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

- Feed out workshop crane **2 220 718** with the lifting gear from the automatic transmission and push it aside.



- Crank engine with special tool **0 493 380 (11 6 480)** at vibration damper in direction of rotation.
- Renew nuts (1).

  Parts: Nuts
- Tighten all 6 nuts (1) of the torque converter.



Torque converter to flywheel

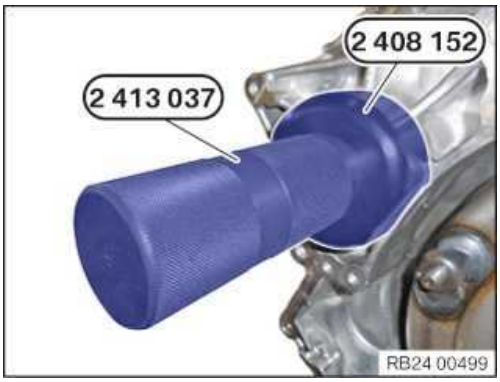
M10	Replace nuts. Remove any adhesive residue from the threads.	Tightening torque	56 Nm

- Slide coolant hoses (1) onto transmission oil cooler (3).
- Secure hose clamps (1).

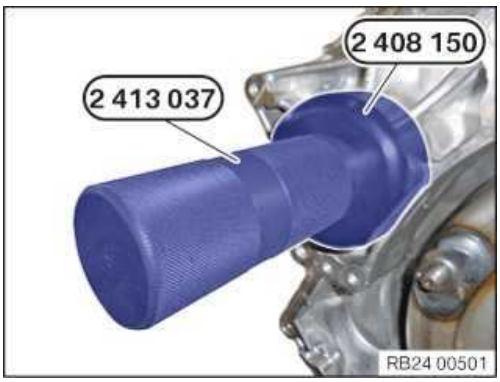
56 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

cardiagn.com

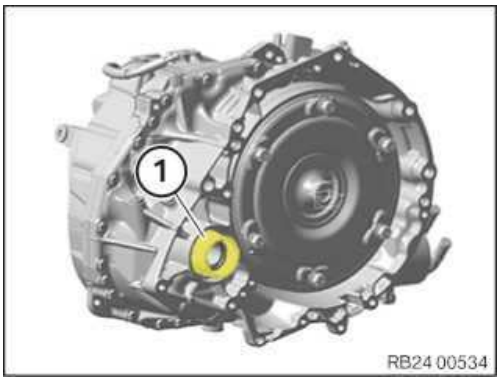


- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.

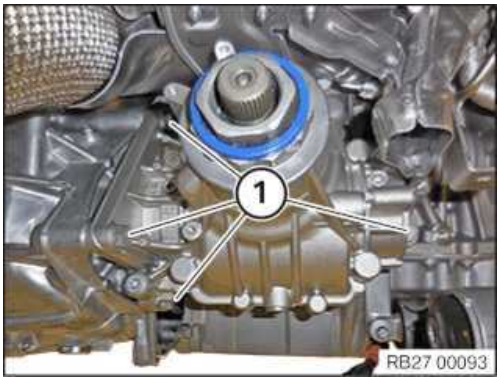
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

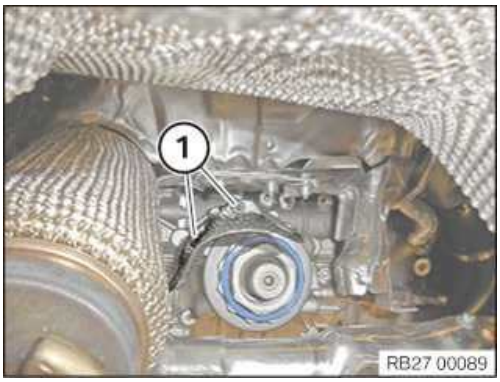
cardiagn.com



- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials



Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

cardiagn.com

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

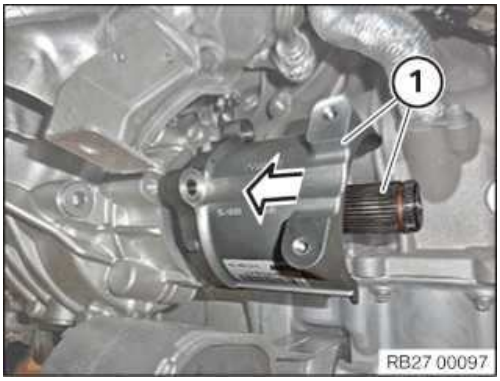
Technically suitable transfer box and electrical transmission oils	

Main group 27

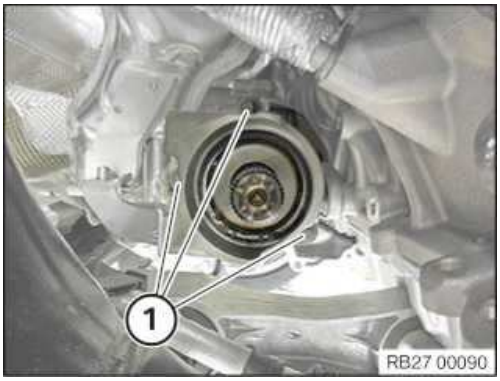
- Tighten the oil filler plug (1).

Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm



57 – Install the intermediate shaft with the support tube



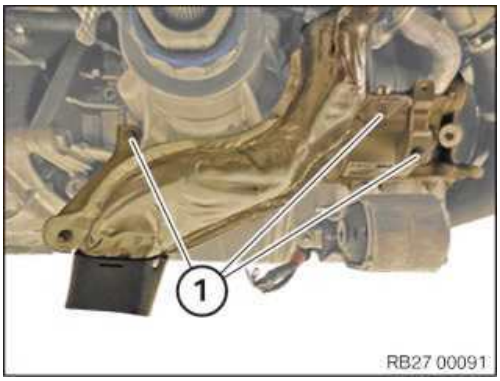
- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

- Position screws (1).



Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

cardiagn.com

- If installed: Install air duct.
- Tighten the screws (1).

58 – Installing the high-pressure stage exhaust turbocharger

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

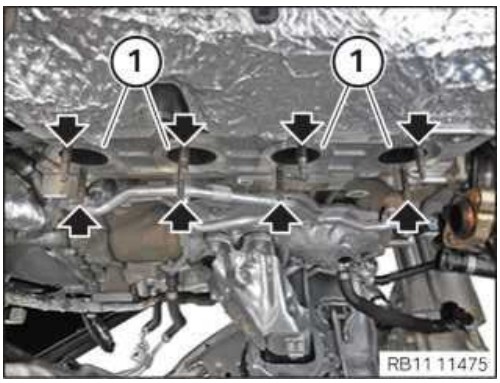
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE



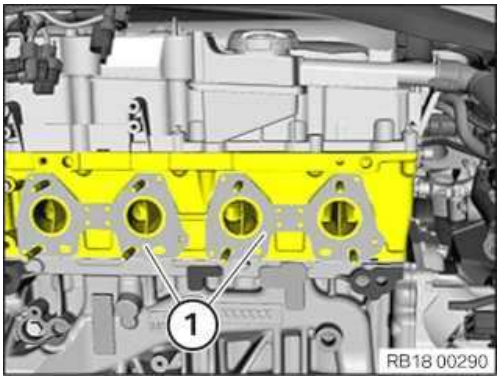
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

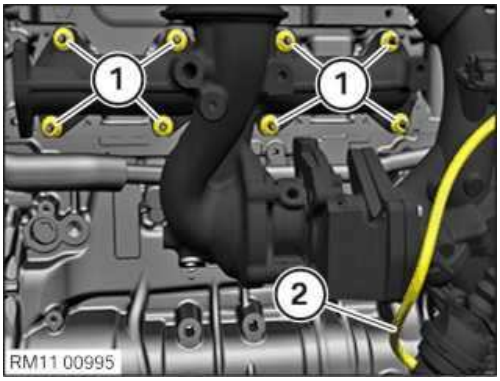
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.

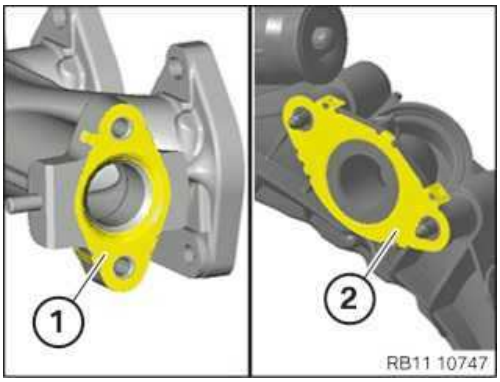
cardiagn.com



- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.

- Renew gasket (1).

  Parts: Gasket

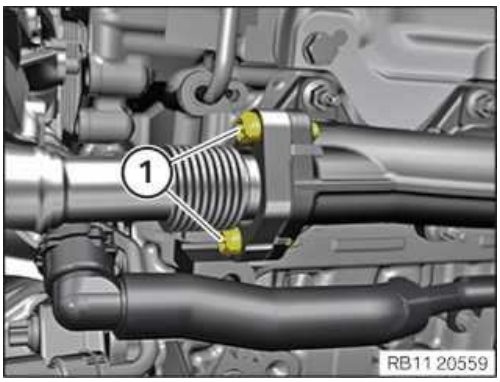


- Install new gasket (1).

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

  Parts: Nuts

- Connect vacuum hose(2).

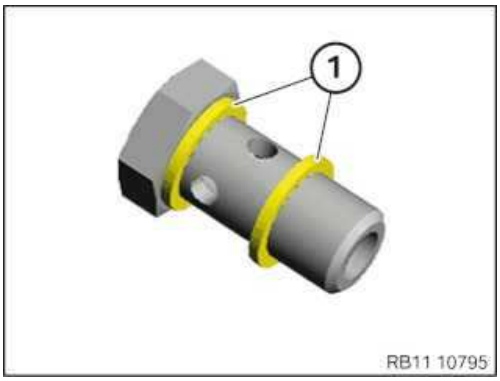


- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

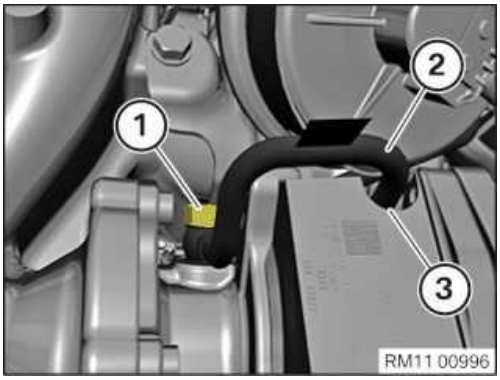
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket



- Tighten the screws (1).

Exhaust-gas recirculation cooler to exhaust manifold



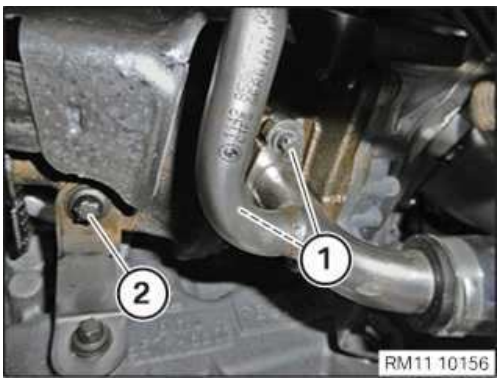
M8x28	Replace screws	Tightening torque	32 Nm

cardiagn.com

- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring

- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).



- Tighten bolt (1) from the right wheel arch.

- Renew seal (1) of oil return line.

  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

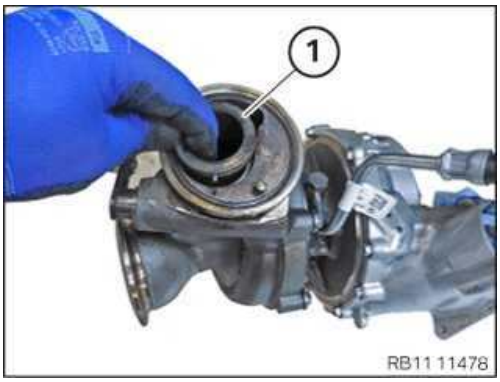
Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

59 – Installing the low-pressure stage turbocharger

cardiagn.com

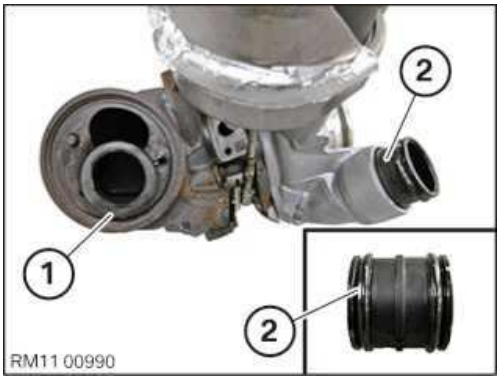
RISK OF DAMAGE



Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.



TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.

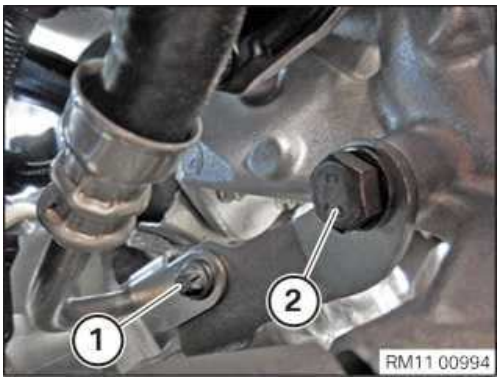
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

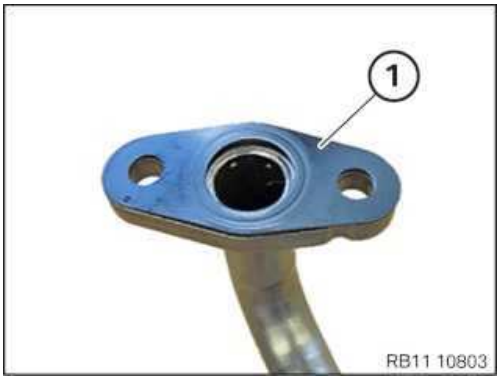
Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

cardiagn.com

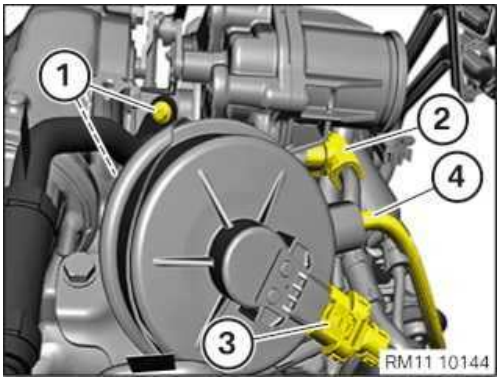
- Tighten down screw (1).



Oil feed line to bracket

Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

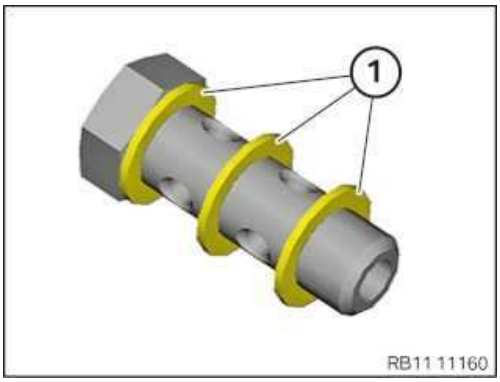


Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

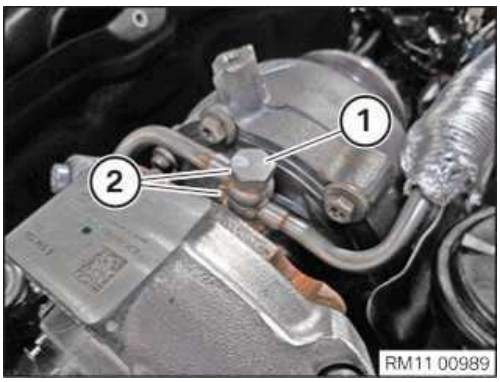
- Renew seal (1) on the oil return line.

  Parts: Gasket



- Position the oil return line with the seal.
- Tighten the screws (1).

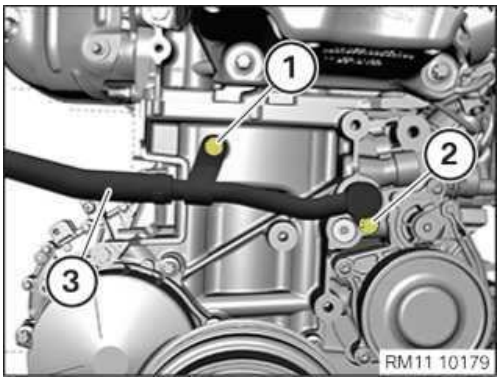
Oil return line to turbocharger



M6x12		Tightening torque	8 Nm

- Connect and lock connectors (2) and (3).

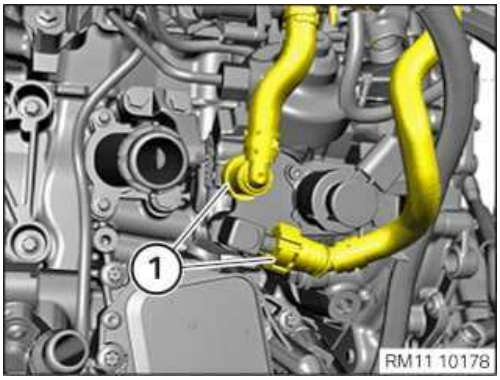
  The locks must engage audibly.
- Connect vacuum hose (4).



- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.

cardiagn.com



- Renew sealing ring of the coolant line (3).

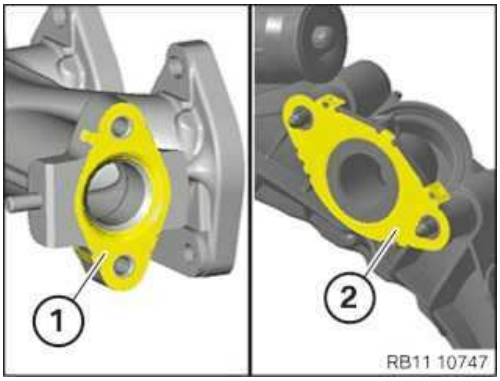
  Parts: Sealing ring
- Coat the sealing ring and install the coolant line (3) .
- Tighten down screws (1) and (2).

Standard screw connection M6

M6		8 Nm

- Connect and lock fuel lines (1).

  The fuel lines (1) must audibly engage.



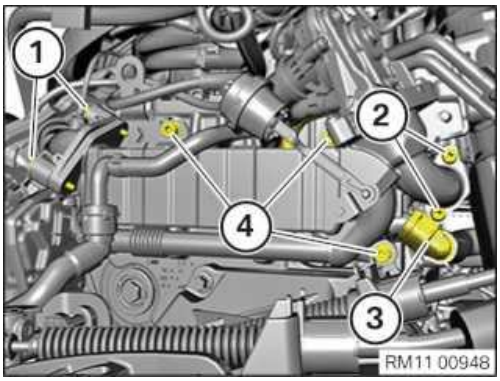
▶ **Installing the exhaust-gas recirculation cooler**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

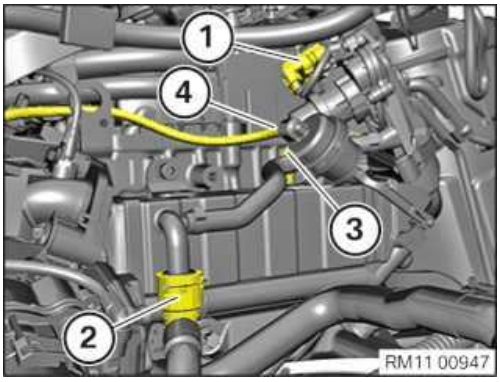
Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold



M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

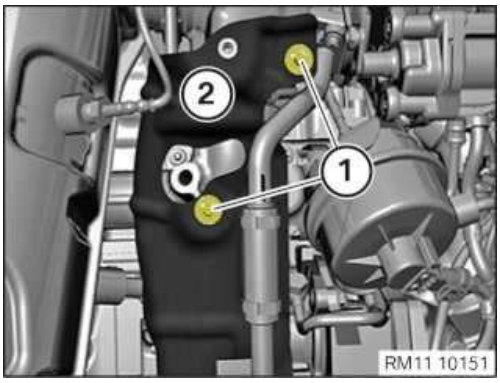
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

▸ **Installing heat shield on exhaust turbocharger at bottom**

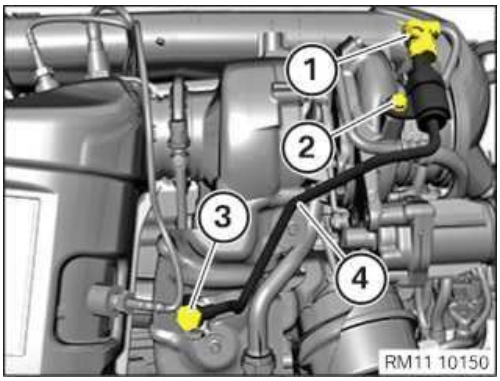


cardiagn.com

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

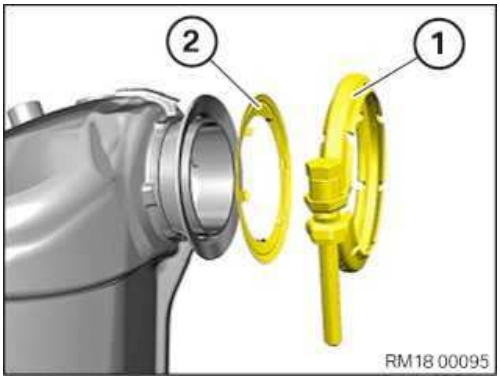
Torx screw BM 6x12		Tightening torque	10 Nm

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm



- Tighten down screw (2).

Standard screw connection M6

M6		8 Nm

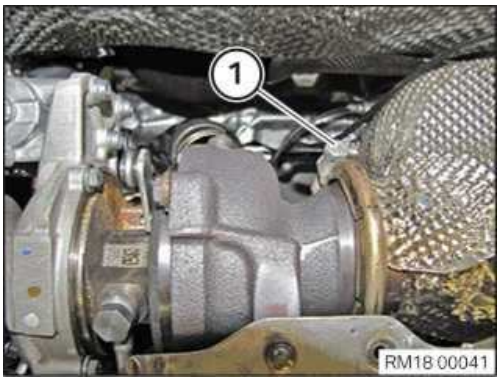
- Connect connectors (1) and lock.

  Lock must audibly engage.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

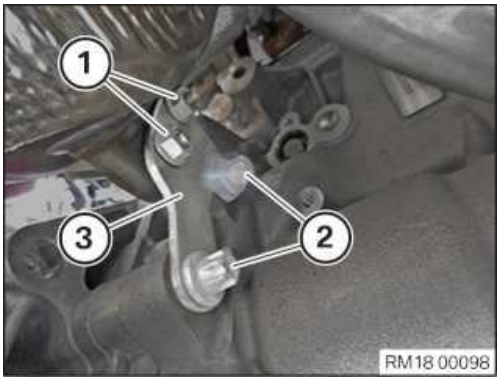


- Remove and install heavy components with the aid of another person/other persons.

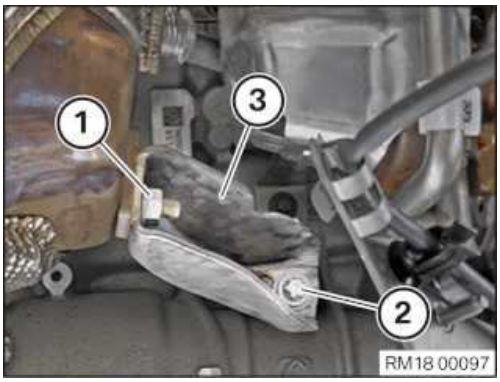
- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket



cardiagn.com



- Carefully insert and install the diesel particulate filter .
- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

- Tighten nuts (1) by hand.

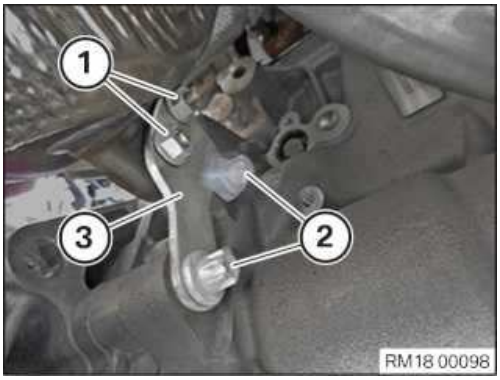
- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.

- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm



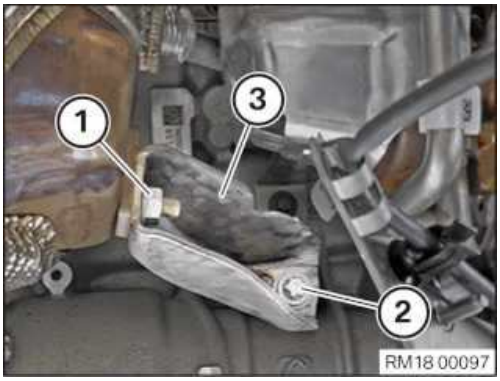
cardiagn.com

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screws (2).



Diesel particulate filter holder to gearbox

M12x75		Tightening torque	66 Nm

- Tighten nuts (1).

Diesel particle filter to holder

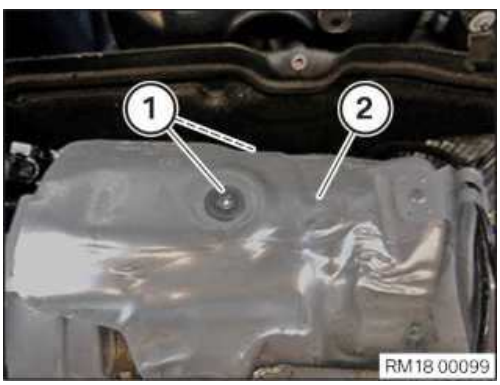
M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screw (2).

Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

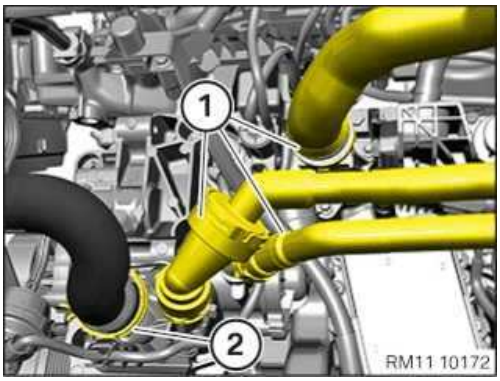


Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Remove fitting aid (1) for the flexible tube.

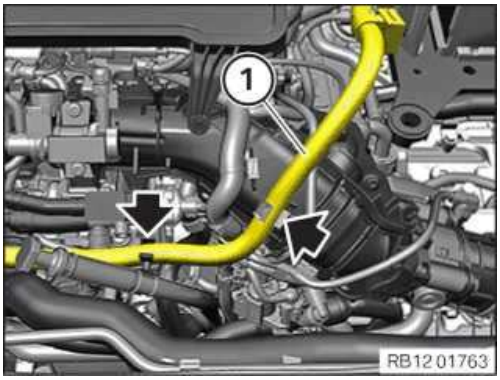
▶ **Install the heat shield on the exhaust turbocharger**



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm



- Fasten the cable at the clips .

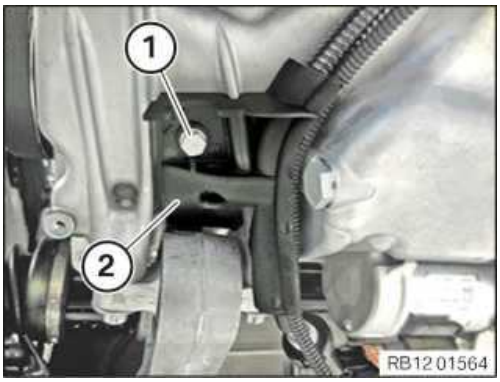
cardiagn.com

- Install the coolant hose and secure with the clamp (2) .
- Connect and lock the coolant lines (1).

  The coolant lines (1) must engage audibly.

CAUTION

Improper routing of the positive battery cable.



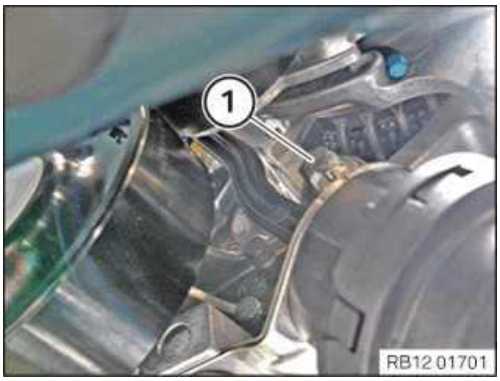
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert the positive battery cable (1) into the clamps (arrows).

- Feed in and install positive battery cable at the clamps (1).

- Insert and install the holder (2).
- Tighten down screw (1).



Bracket to oil sump

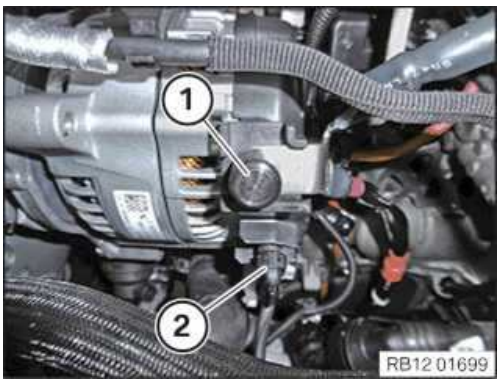
M6		Tightening torque	8 Nm

- Insert and install alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support.

cardiagn.com

- Tighten the screw (1) below on the alternator.

Alternator to component carrier



M10x75 / M10x125		Tightening torque	38 Nm

- Tighten the bolt (1) on top on the alternator.

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm

- Mount positive battery cable to the alternator.
- Tighten nut.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

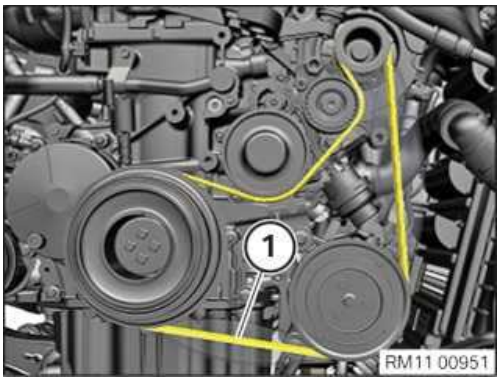
- Mount the cover (1).
- Connect the connector (2) to the alternator and lock audibly.

- Install air conditioning compressor (2) and position it correctly.
- Tighten the screws (1).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

▸ **Installing the drive belt for alternator**



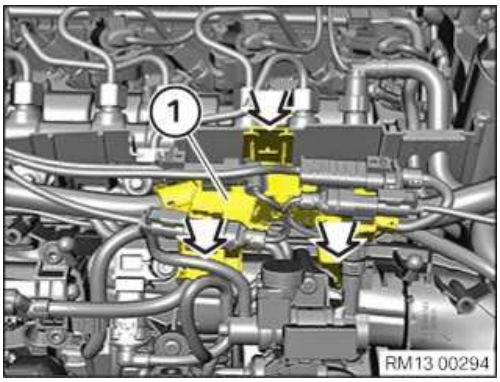
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

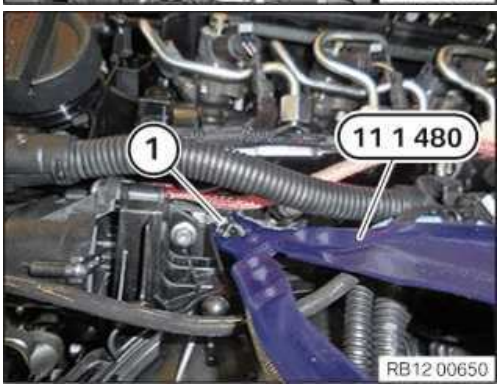
TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

cardiagn.com

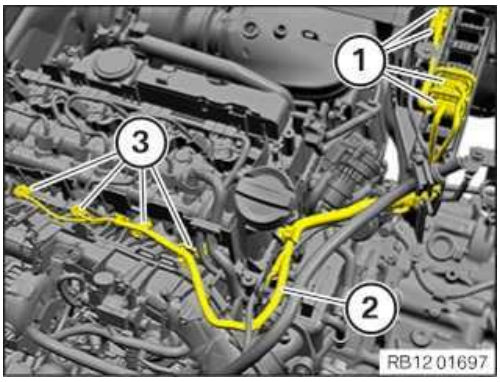


- Feed in the drive belt for the alternator (1) and install it.



- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool **0 496 268 (11 0 390)** out of the belt tensioner and remove it.

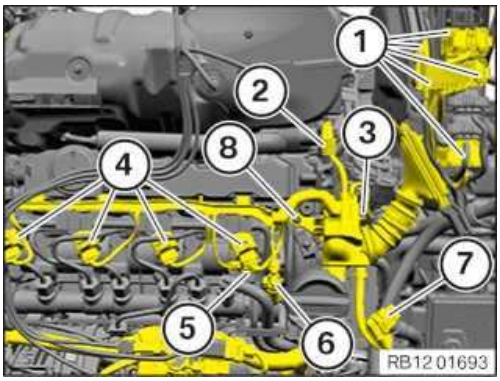
▶ **Installing the cable clip for the intake plenum**



- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.

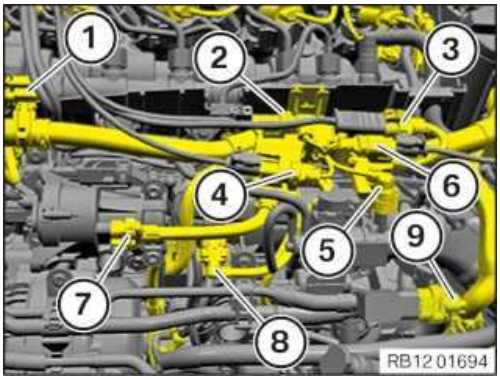
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.



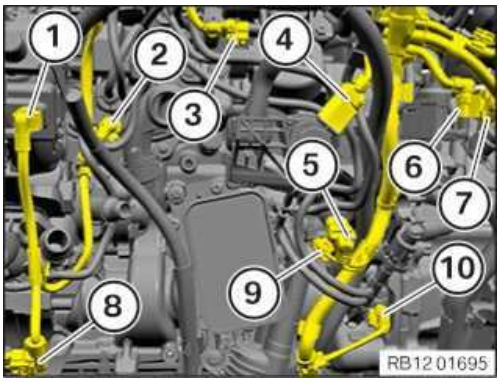
- Lay vehicle wiring harness and fasten with clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Connect all connectors (3) to the glow elements and engage them audibly.
- Mount ground strap and tighten screw (2).

Ground cable to cylinder head

M6x12		Tightening torque	8 Nm

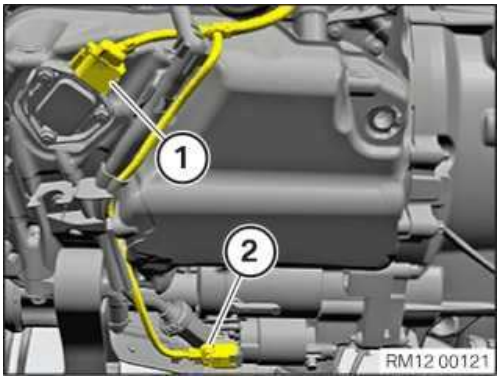


cardiagn.com



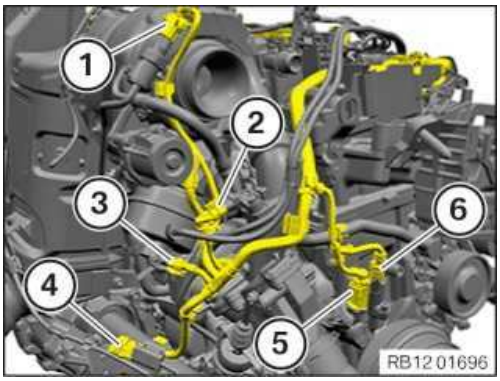
- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

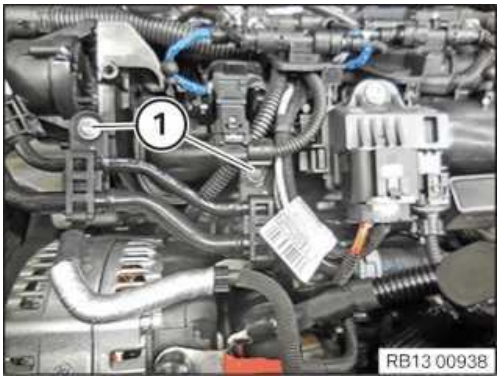


TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.



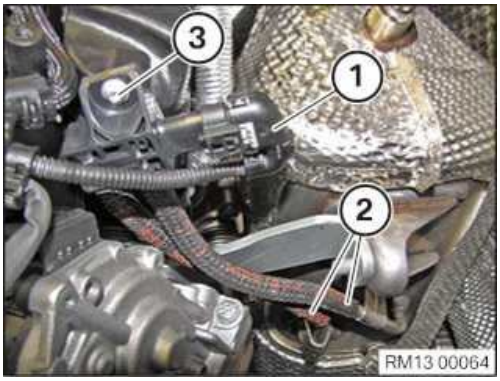
- Connect the connector (1) to the alternator and lock audibly.
- Connect the connector (2) to the electric changeover valve and lock audibly.
- Connect the connector (3) to the electric changeover valve and lock audibly.
- Connect the connector (4) to the high pressure pump and lock audibly.
- Connect the connector (5) to the oil pressure sensor and lock it audibly.
- Attach connector (6) to the throttle bodies and lock it audibly.
- Attach connector (7) to the intake air temperature sensor and lock it audibly.
- Connect the connector (8) to the air conditioning compressor and lock audibly.
- Connect the connector (9) to the solenoid valve and lock audibly.
- Connect the connector (10) to the crankshaft sensor and lock it audibly.



- Connect the connector (1) to the oil-level sensor and lock it audibly.
- Connect connector (2) to the starter motor and lock audibly.

cardiagn.com

- Attach connector (1) to the exhaust turbocharger and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust gas pressure sensor and lock it audibly.
- Connect the connector (4) to the monitoring oxygen sensor and lock audibly.
- Attach connector (5) to the oil pressure switch and lock it audibly.
- Attach connector (6) to the switching valve and lock it audibly.



- Position the fuel line.
- Tighten the screws (1).

Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

61 – Installing differential pressure sensor

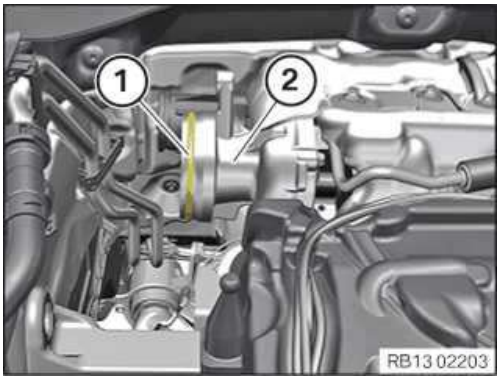
- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.



Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

62 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

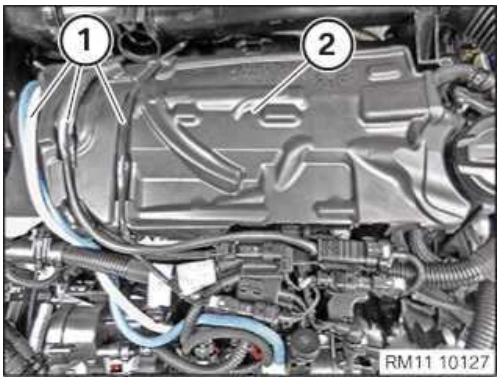
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

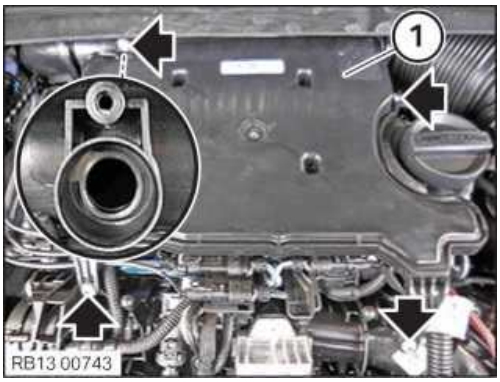
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing



Clamp		Tightening torque	3 Nm

63 – Install the acoustic cover for the injectors

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

64 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

65 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

66 – Install engine

- See additional information.

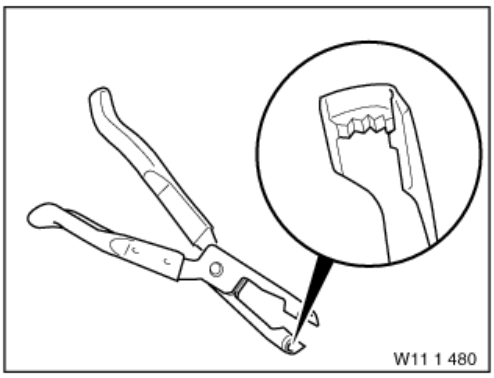
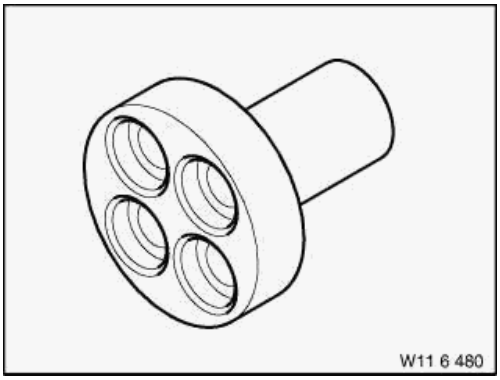
Overview of Special Tools



0 496 268 (11 0 390) Pin

Common Used in step 7 60

Usage	(roll pin) For securing new tensioning pulley (poly-V belt)
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 15 07 (390)



0 490 796 (11 1 480) Pliers

Common Used in step 7 25

Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

0 493 380 (11 6 480) Connector

Common Used in step 12 20 44 47 55

Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

cardiagn.com

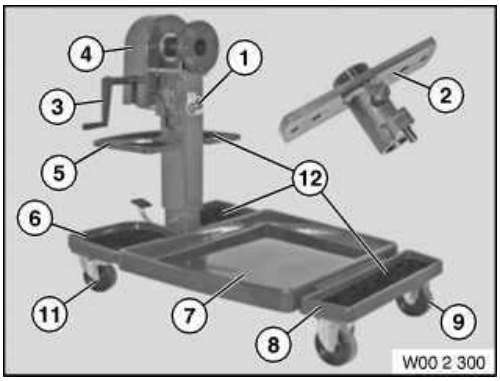
2 220 718 Workshop crane

Common	Used in step 12 55
Usage	WSK 1000
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	06 01 11 (701)

2 459 012 Holder

Common	Used in step 12 55
Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

2 455 010 Engine support



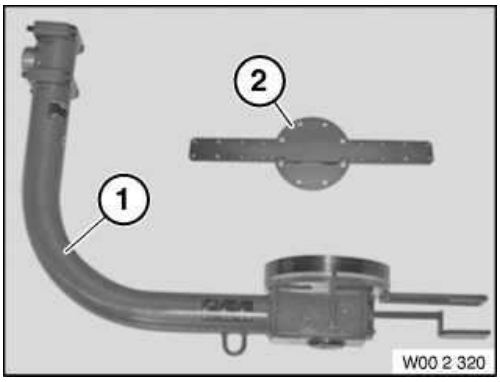
Common	Used in step 13 54
Usage	For accommodating engine on assembly stand. Engine: B3x, B4x, N47.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 495 187 (00 2 300) Assembly stand

Used in step 13

cardiagn.com

Common



Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of

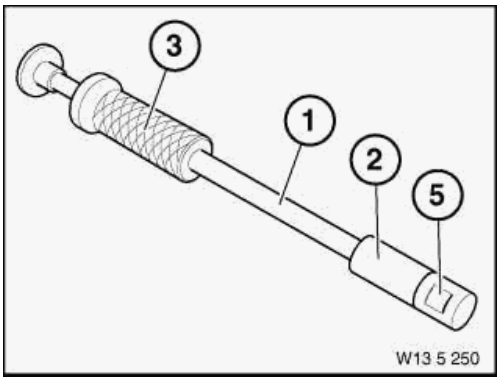
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.	

cardiagn.com

0 495 196 (00 2 320) Support arm

Common

Used in step 13



Usage	(Support arm with fixture) For mounting engines using the engine mounting bracket.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 25 04 (155)

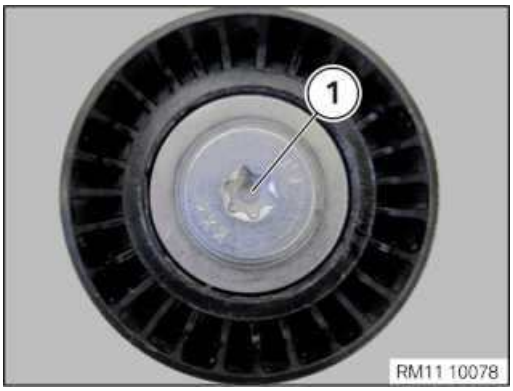
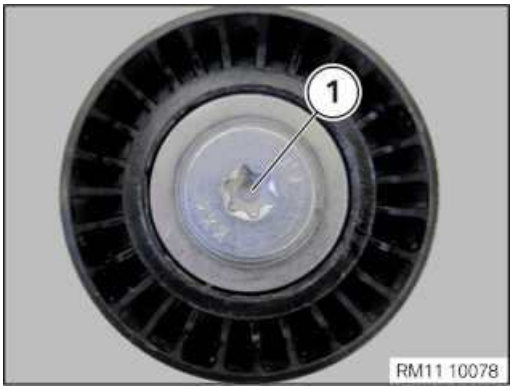
11 28 626 Removing and installing/replacing deflecting element for drive belt (B47)



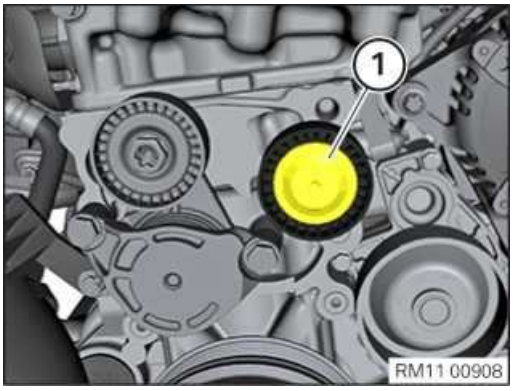
Necessary preliminary tasks:

- Remove engine with gearbox
- Relieve tension on drive belt.

Removal:



Unclip cover (1) from deflecting element.



Release screwÂ (1).
Remove deflecting element.

Installation:

cardiagn.com

Position deflecting element on the engine.
Tighten screw (1).
Tightening torque 11 28 3AZ.

Clip in cover (1).

Required follow-up work:

- Apply tension to drive belt.
- Install engine with gearbox

cardiagn.com

11 28 010 Replace drive belt for alternator ()

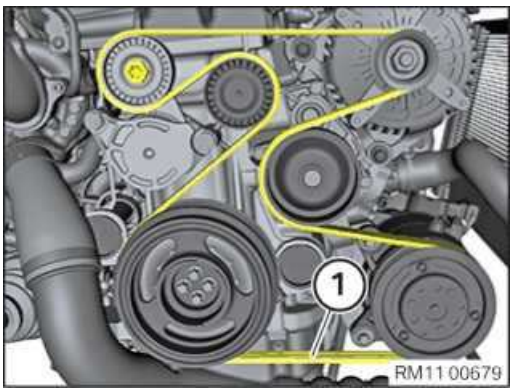
Note:
If the drive belt is to be reused, the direction of rotation must be marked.

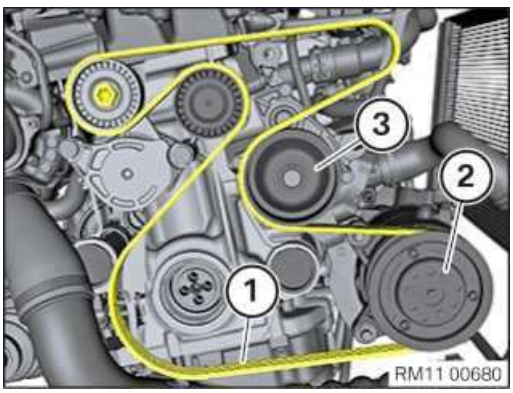
Caution!
Check drive belt for coolant and oil residues, replace if necessary.

Necessary preliminary work:

- Remove alternator
- Remove vibration damper
- Release drive belt for alternator

Removal:





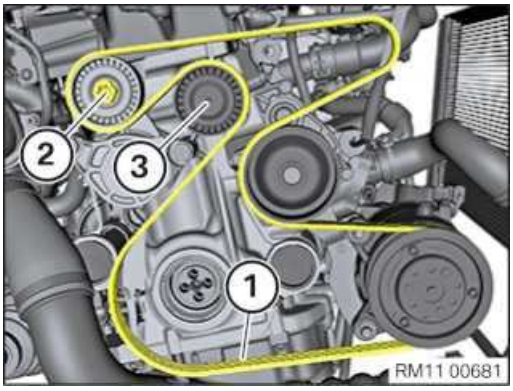


Figure shows the routing of the drive belt (1).

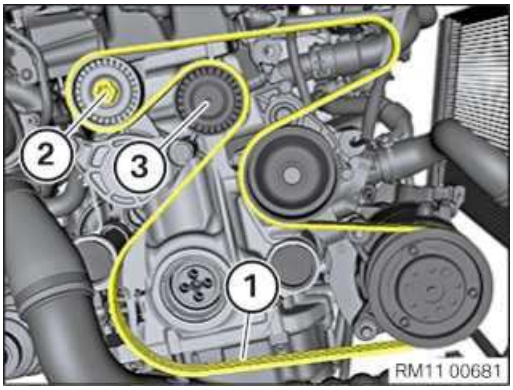
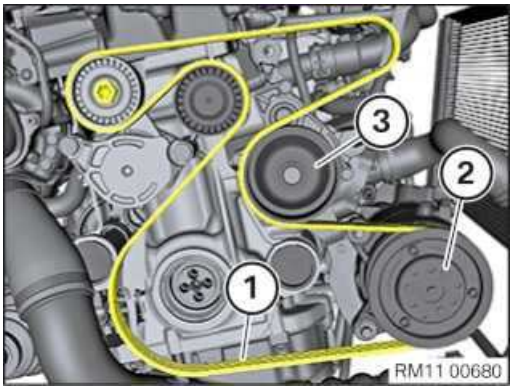


Feed out the drive belt (1) from the top at the air conditioning compressor (2) and the water pump (3).

cardiagn.com



Feed out the drive belt (1) from the bottom at the belt tensioner (2) and the deflecting element (3) and remove.

Installation:

Position drive belt (1) from the bottom over the belt tensioner (2) and the deflecting element (3).

Position drive belt (1) from the top over the air conditioning compressor (2) and the water pump (3).

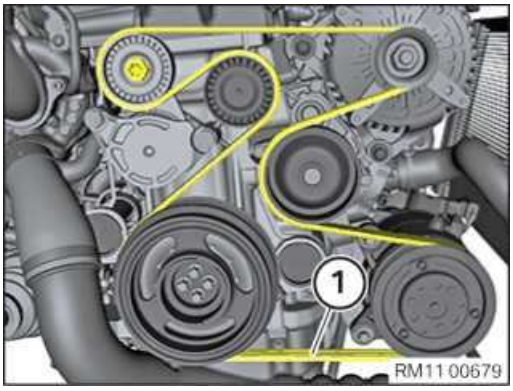


Figure shows the routing of the drive belt (1).

cardiagn.com

Required follow-up work:

- Install alternator
- Install vibration damper
- Tension drive belt for alternator

cardiagn.com

11 28 020 Replace tensioning device for drive belt of the alternator

PRELIMINARY WORK

1 – Disconnecting all battery earth leads

- See additional information.

2 – Removing the acoustic cover

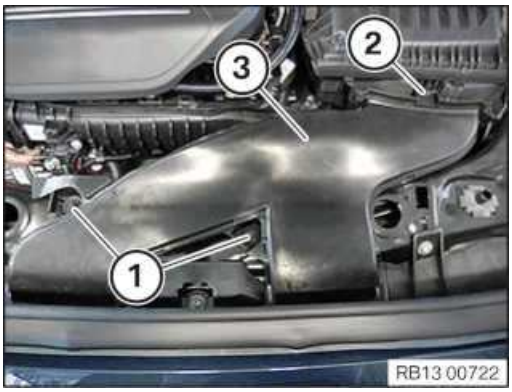
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

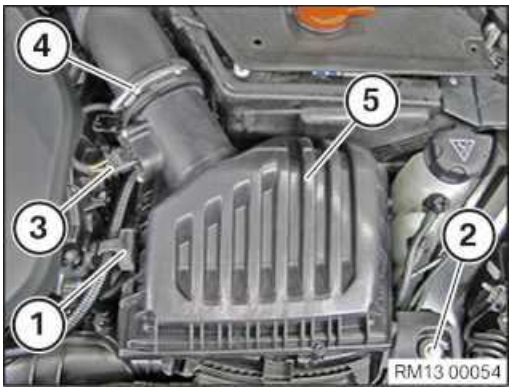


Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

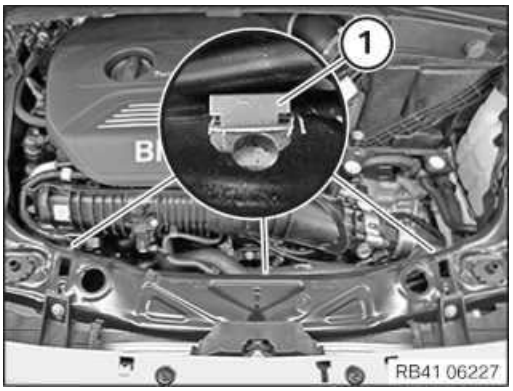
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.



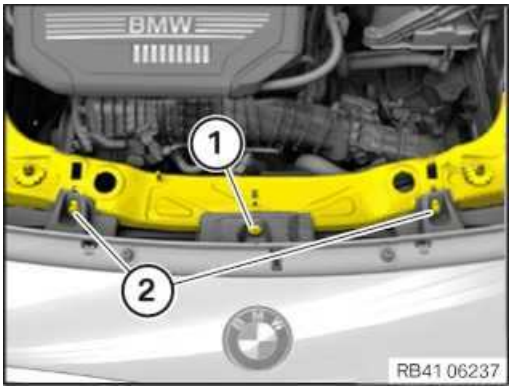
3 – Remove the intake neck for intake silencer housing

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

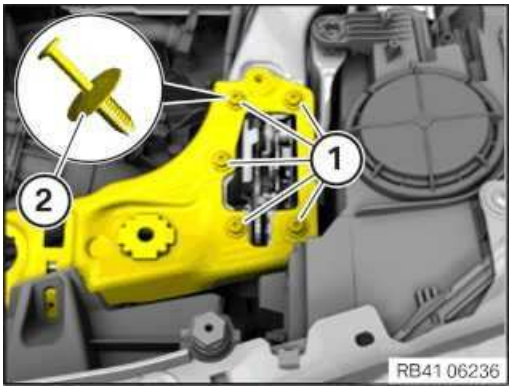


cardiagn.com

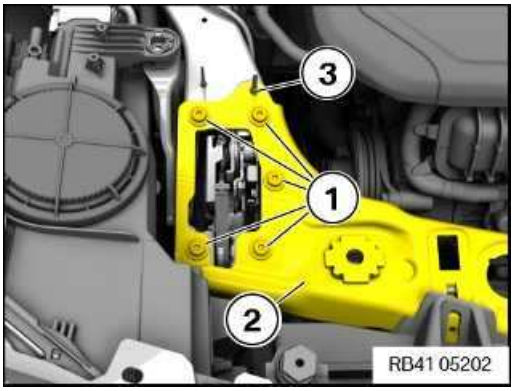
4 – Removing intake silencer housing



- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.



5 – Remove front cross connection



- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

cardiagn.com

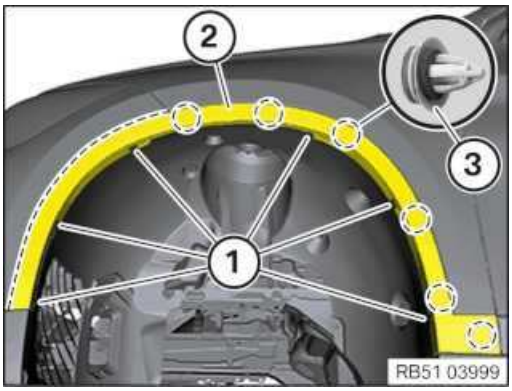
6 – Remove front right wheel

▶ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

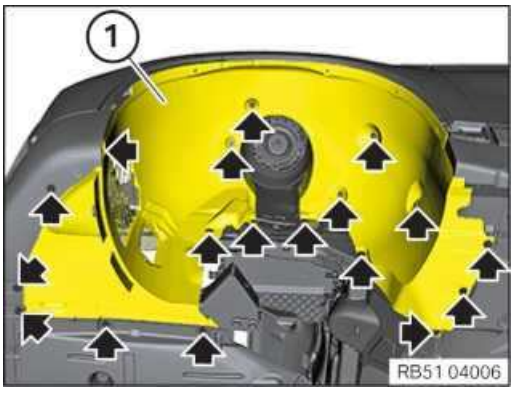
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

7 – Removing the front right wheel arch cover



▶ **Remove the front wheel arch trim**

NOTICE

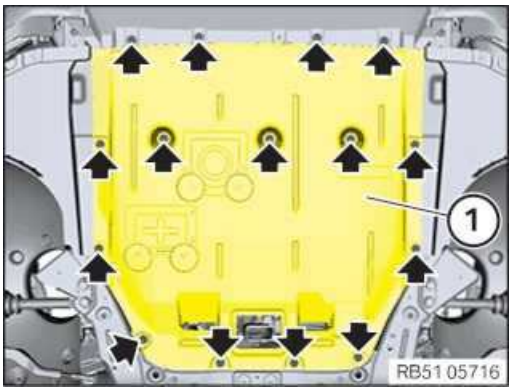


To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

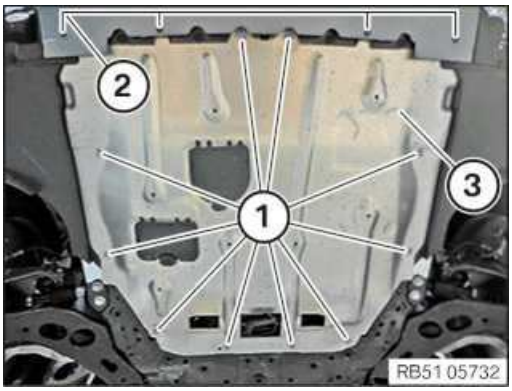
Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.



NOTICE

Description is for left component only. Procedure on the right side is identical.



- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

8 – Removing the front underbody protection

cardiagn.com

- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

9 – Removing the drive belt for alternator

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

CAUTION

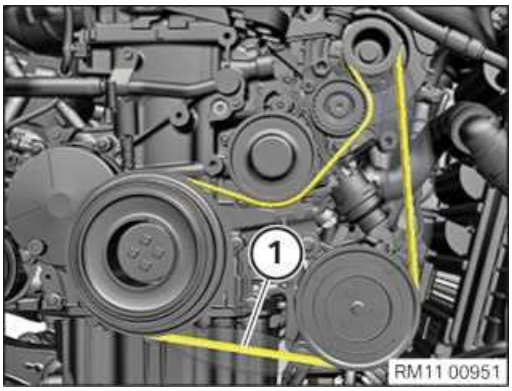
Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

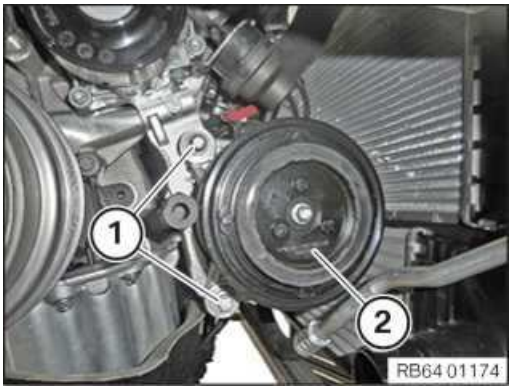


TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

cardiagn.com

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool **0 496 268 (11 0 390)**.

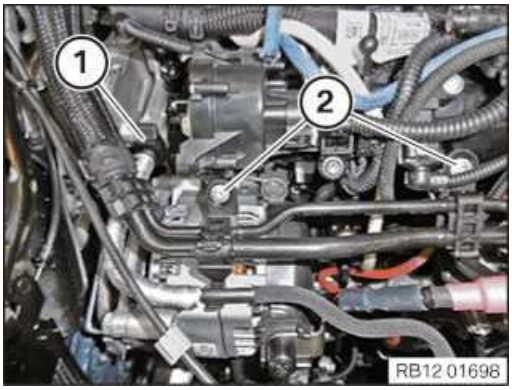


- Guide out the drive belt for the alternator (1) and remove it.

10 – Removing the alternator

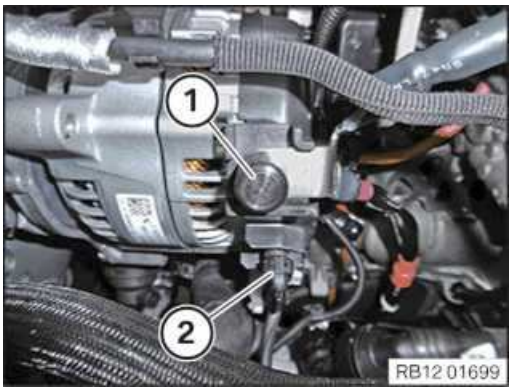
Prerequisite

Battery earth lead is disconnected.



TECHNICAL INFORMATION

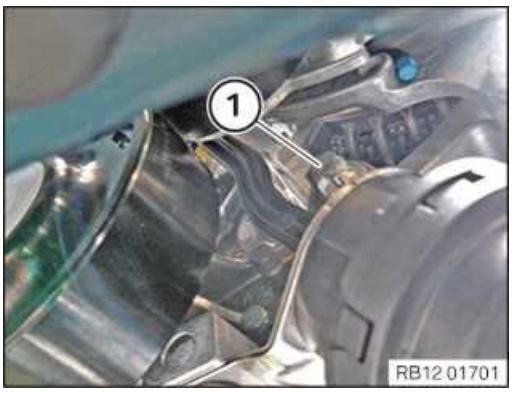
Secure component against falling.



- Loosen screws (1).
- Detach the air conditioning compressor (2) from the component carrier and protect it from falling.

Note: Tie the air conditioning compressor up.

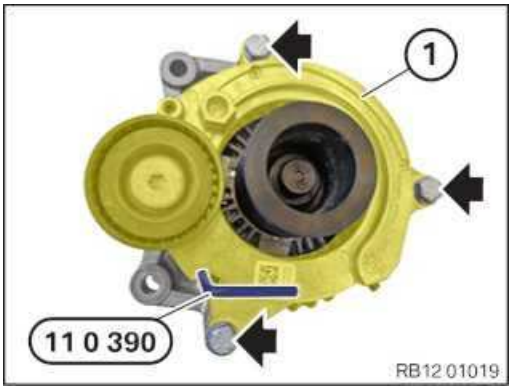
- Unlock the coolant ventilation line (1) and pull it off the cylinder head.
- Catch and dispose of escaping coolant.
- Loosen screws (2).
- Place fuel feed and return line to one side.



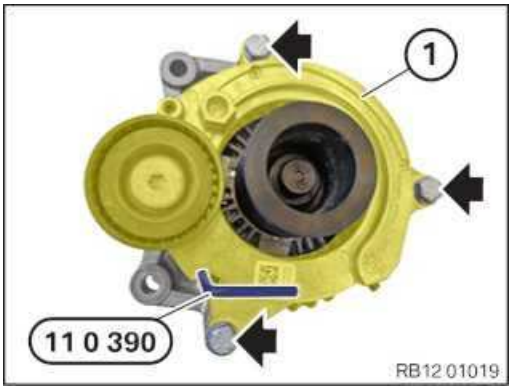
cardiagn.com

- Remove the cover (1) and loosen the nut below.
- Disconnect positive battery cable from alternator.
- Unlock and disconnect the connector (2) from the alternator.

- Detach screw (1) on top on the alternator.



- Detach screw (1) below on the alternator.



- Feed out alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support and remove.

cardiagn.com

11 – Replace the belt tensioner

- Remove screws (arrows).
- Feed out and remove the tensioning device for the drive belt (1) on the alternator.

- Feed in and install the tensioning device for the drive belt (1) on the alternator.
- Tighten screws (arrows).

Belt tensioner to alternator

M8X30		Tightening torque	28 Nm

cardiagn.com

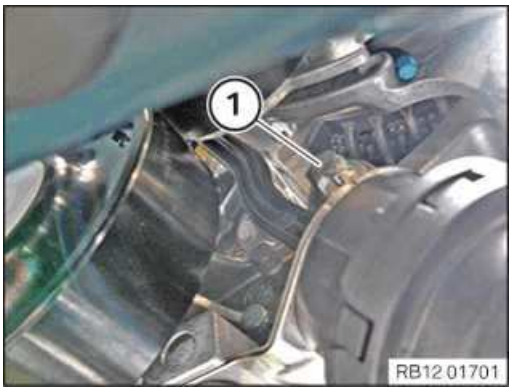
POSTPROCESSES

12 – Installing the alternator

Prerequisite

Battery earth lead is disconnected.

CAUTION



Improper routing of the positive battery cable.

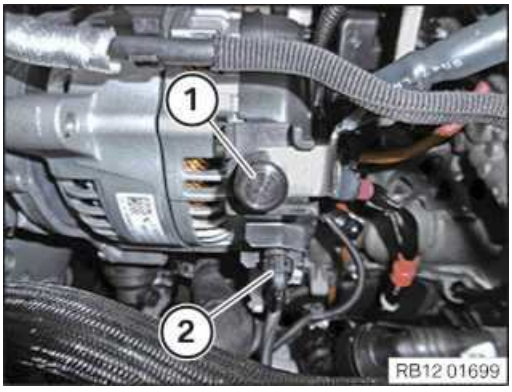
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert and install alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support.

- Tighten the screw (1) below on the alternator.

Alternator to component carrier

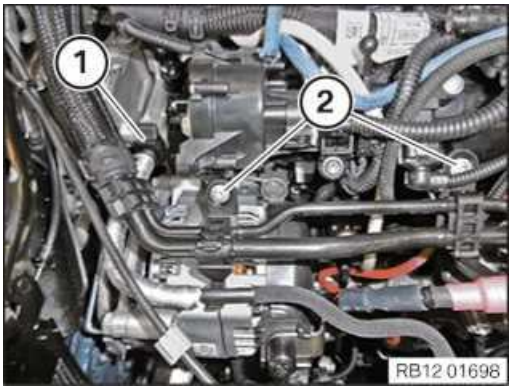


M10x75 / M10x125		Tightening torque	38 Nm

- Tighten the bolt (1) on top on the alternator.

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm

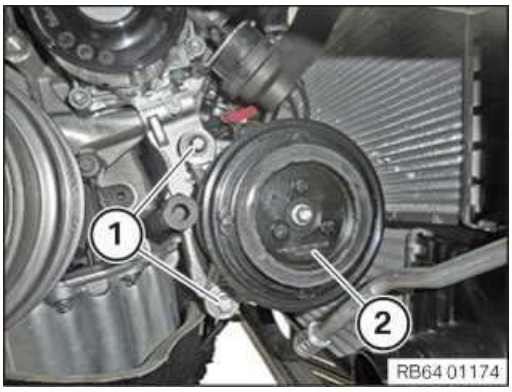


- Mount positive battery cable to the alternator.
- Tighten nut.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

- Mount the cover (1).
- Connect the connector (2) to the alternator and lock audibly.



- Mount fuel supply and return line.
- Tighten down screws (2).

Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

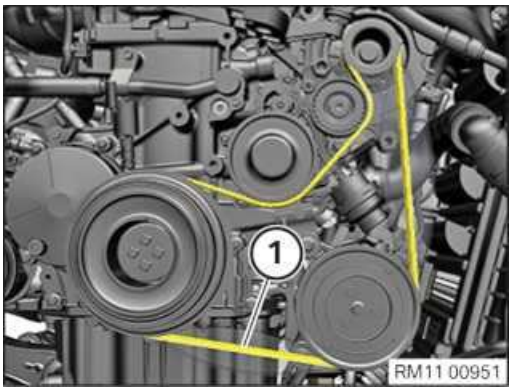
- Connect the coolant ventilation line (1) to the cylinder head and audibly lock.

cardiagn.com

- Correctly position the air conditioning compressor (2).
- Tighten the screws (1).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm



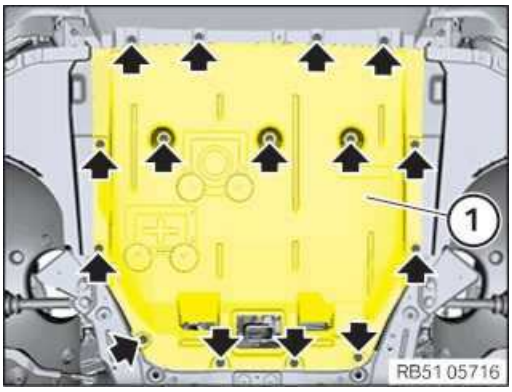
13 – Installing the drive belt for alternator

TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

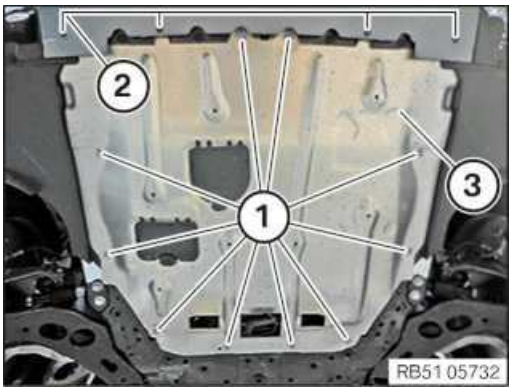
The drive belt must be replaced if contaminated with coolant- and oil residues.



- Feed in the drive belt for the alternator (1) and install it.

- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool **0 496 268 (11 0 390)** out of the belt tensioner and remove it.

14 – Installing the front underbody protection



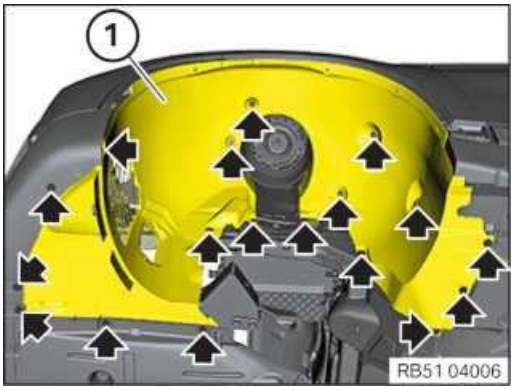
cardiagn.com

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).



Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

15 – Installing the front right wheel arch cover

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

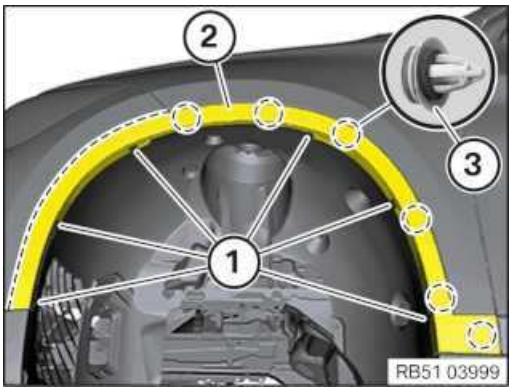
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

cardiagn.com

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

16 – Installing the front right wheel

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

cardiagn.com

- Renew mounting bolt (1).

  Parts: Mounting bolt

- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

cardiagn.com

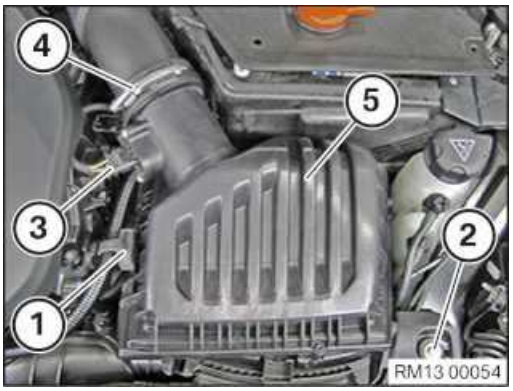
TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.



- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts.
- Check the wheel bolts and threads for damage, renew the wheel bolts if necessary.
- Join and tighten the wheel bolts (arrows).

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

17 – Installing intake silencer housing

- Insert the intake silencer housing (5) into the rubber mounts and install it.

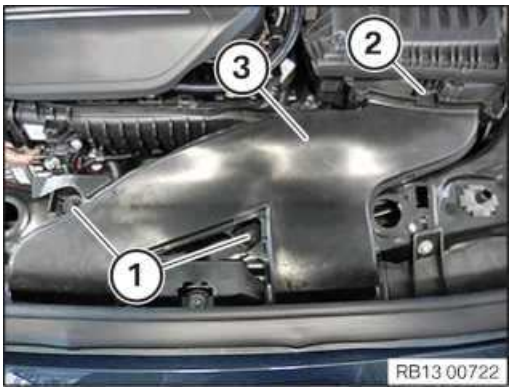
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

Clean air pipe to intake silencer housing



Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

18 – Install the intake neck for the intake filter housing

cardiagn.com

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

19 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

20 – Disconnecting all battery earth leads

cardiagn.com

- See additional information.

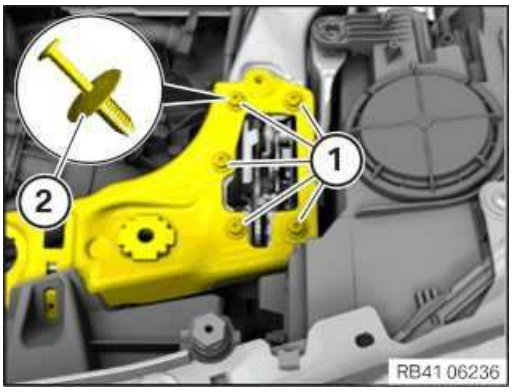
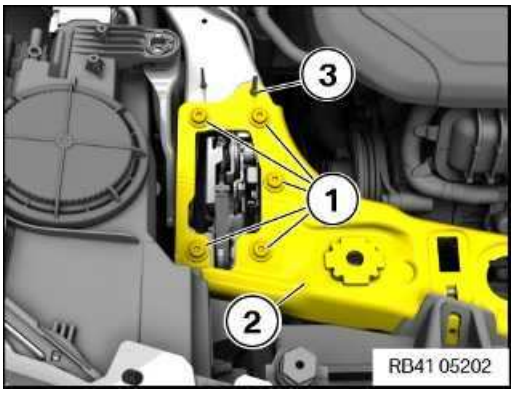
11 28 050 Replacing drive belt for air conditioning compressor

PRELIMINARY WORK



1 – Remove front cross connection



- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

2 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

cardiagn.com

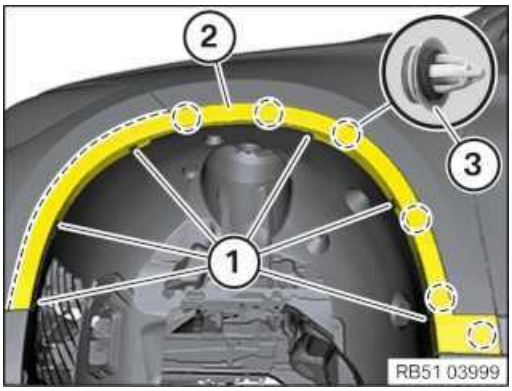
TECHNICAL INFORMATION

Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

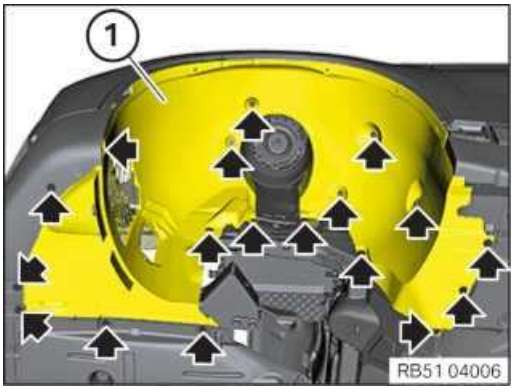
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

3 – Removing the front right wheel arch cover



▶ **Remove the front wheel arch trim**

NOTICE



To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

MAIN WORK

4 – Removing the drive belt for alternator

cardiagn.com

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

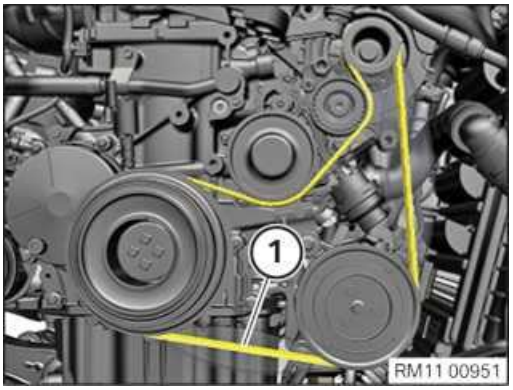
CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION



If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

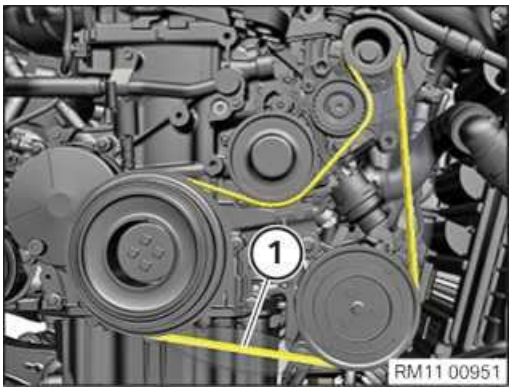
TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool **0 496 268 (11 0 390)**.

- Guide out the drive belt for the alternator (1) and remove it.

5 – Installing the drive belt for alternator



cardiagn.com

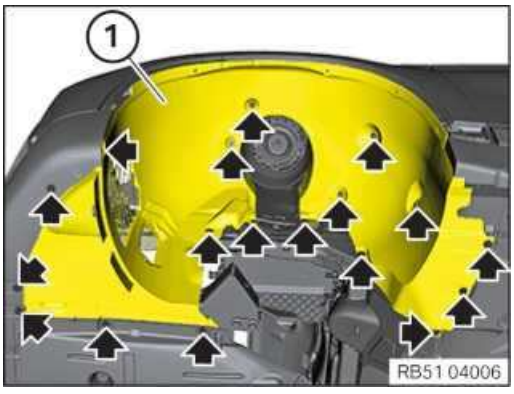
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Feed in the drive belt for the alternator (1) and install it.



- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool **0 496 268 (11 0 390)** out of the belt tensioner and remove it.

POSTPROCESSES

6 – Installing the front right wheel arch cover

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

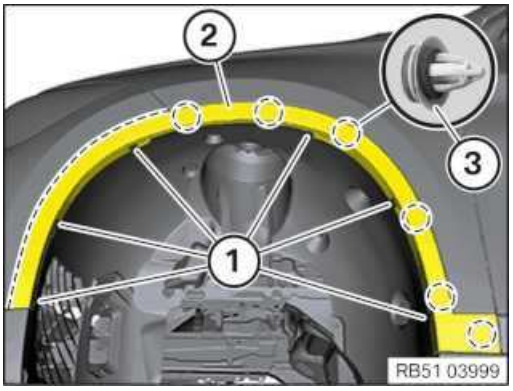
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**



cardiagn.com

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

7 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

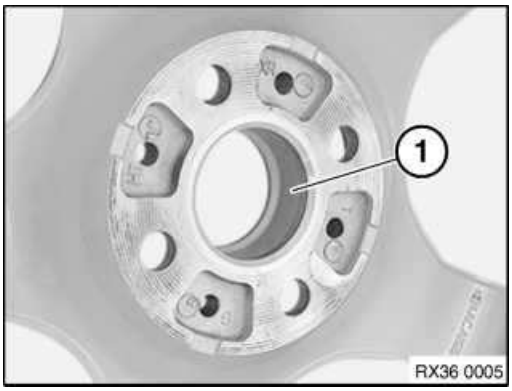
- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

cardiagn.com



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

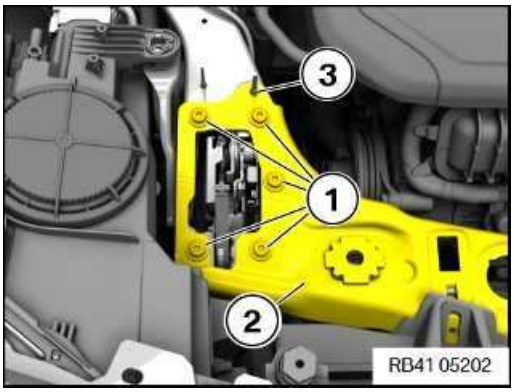
Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts

- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

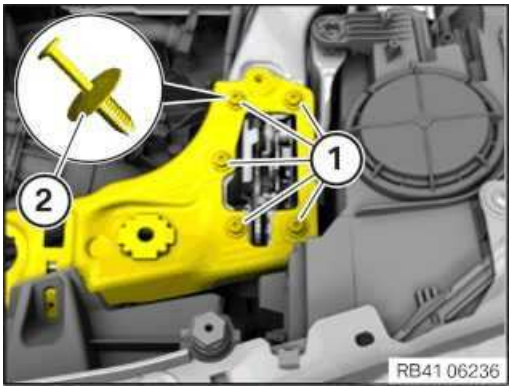
Wheel bolts



M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

8 – Install front cross connection

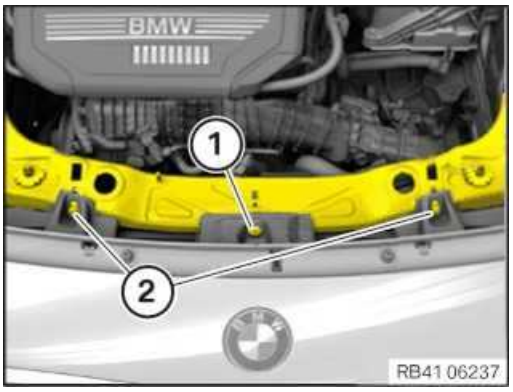
cardiagn.com



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm

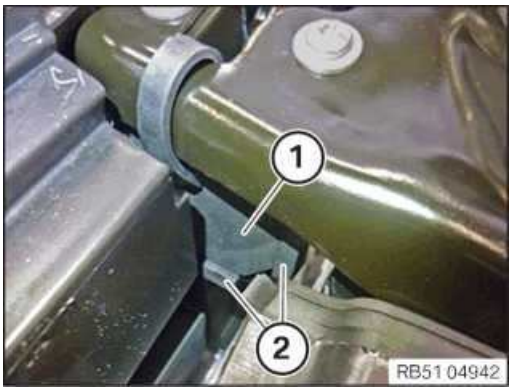
- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

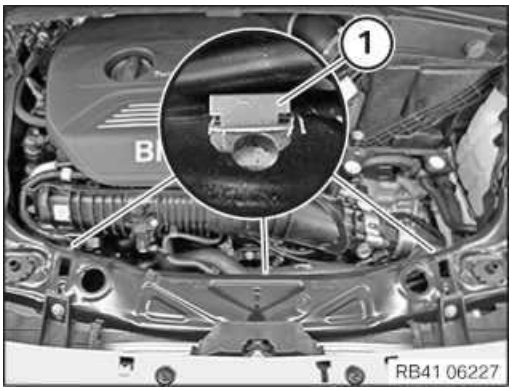
- Tighten down screws (2).

Air duct to upper connection



M6x20 screw		Tightening torque	11,8 Nm

- Tighten down screw (1).



Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm

cardiagn.com

- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

2.0 Grease for wheel centring	7

cardiagn.com

11 28 010 Replacing drive belt for alternator

PRELIMINARY WORK

1 – Removing the acoustic cover

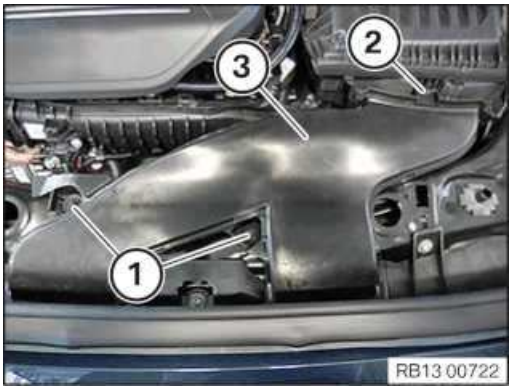
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

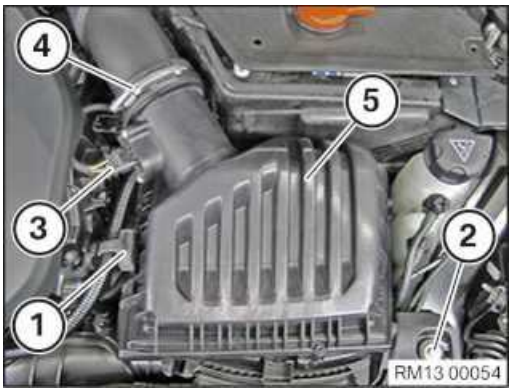
RISK OF DAMAGE



Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

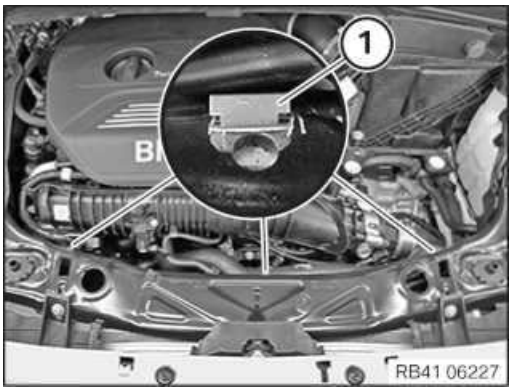
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



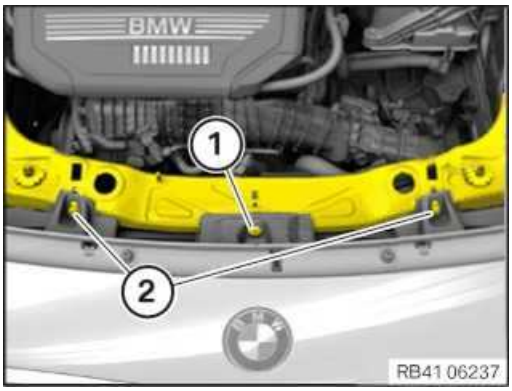
- Unclip the acoustic cover from the marked areas towards the top.

2 – Remove the intake neck for intake silencer housing

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

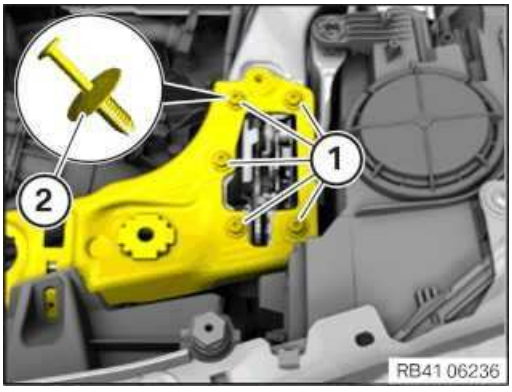


3 – Removing intake silencer housing

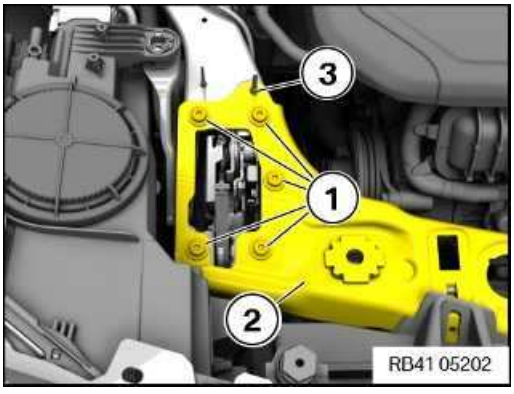


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

cardiagn.com



4 – Remove front cross connection



- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

5 – Remove front right wheel

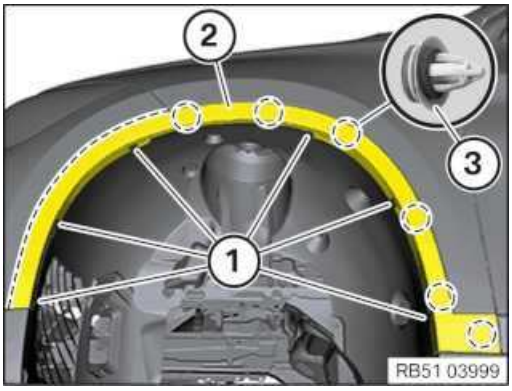
▸ **Removing the wheel**

cardiagn.com

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

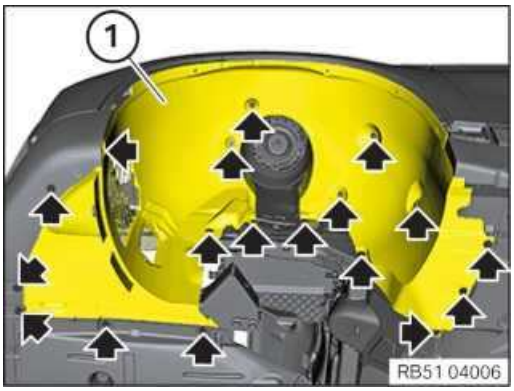
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

6 – Removing the front right wheel arch cover



▶ **Remove the front wheel arch trim**

NOTICE



To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

MAIN WORK

7 – Removing the drive belt for alternator

cardiagn.com

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

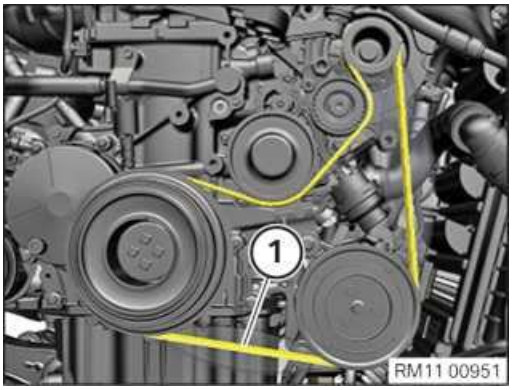
CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION



If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

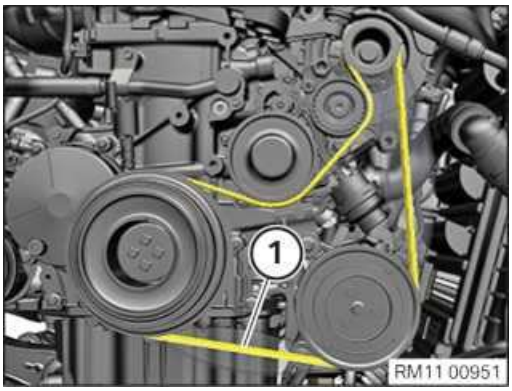
TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool **0 496 268 (11 0 390)**.

- Guide out the drive belt for the alternator (1) and remove it.

8 – Installing the drive belt for alternator



cardiagn.com

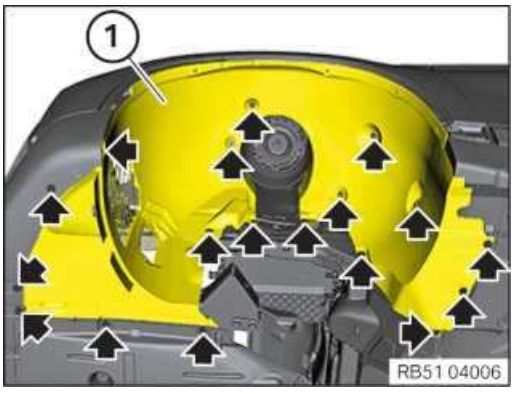
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Feed in the drive belt for the alternator (1) and install it.



- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool **0 496 268 (11 0 390)** out of the belt tensioner and remove it.

POSTPROCESSES

9 – Installing the front right wheel arch cover

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

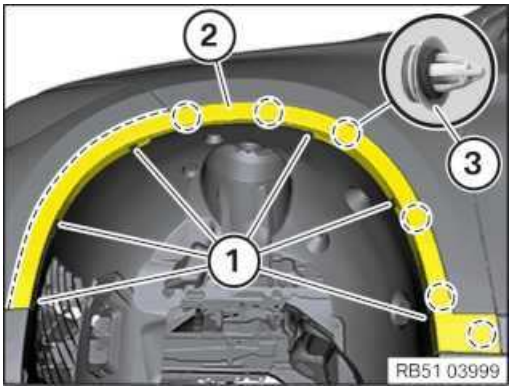
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**



cardiagn.com

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

10 – Installing the front right wheel

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

cardiagn.com

- Renew mounting bolt (1).

  Parts: Mounting bolt

- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts.
- Check the wheel bolts and threads for damage, renew the wheel bolts if necessary.
- Join and tighten the wheel bolts (arrows).

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

cardiagn.com

11 – Installing intake silencer housing

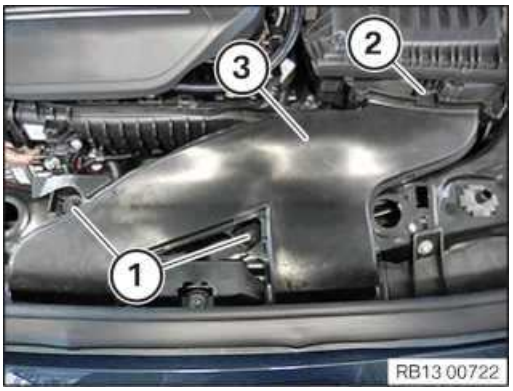
- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

12 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

13 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

cardiagn.com

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

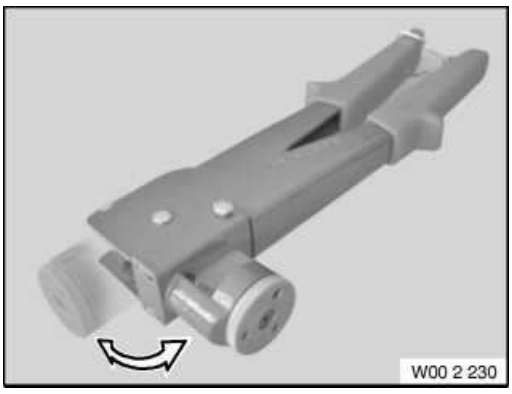
Overview of Special Tools



cardiagn.com

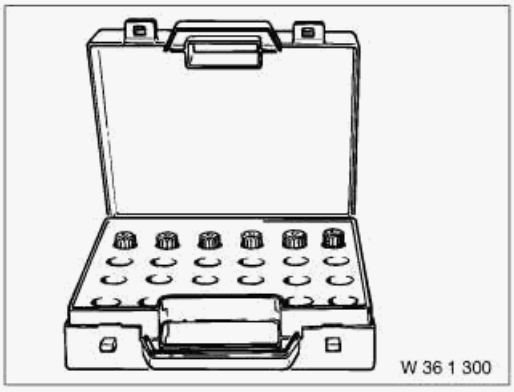
0 496 268 (11 0 390) Pin

Common	Used in step 7 8
Usage	(roll pin) For securing new tensioning pulley (poly-V belt)
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 15 07 (390)

0 496 521 (00 2 230) Pliers

Common	Used in step 9
Usage	(Blind rivet pliers for plastic rivets) For shaft diameters of 3.5 mm, 3.9 mm and 4.5 mm
Included in the tool or work	
Storage location	C25
Replaced by	
In connection with	
SI-Number	01 17 08 (478)

2 344 011 Tool



Common	Used in step 10
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

11 28 060 Replacing tensioning device drive belt for air conditioning compressor

PRELIMINARY WORK

1 – Disconnecting all battery earth leads

- See additional information.

2 – Removing the acoustic cover

WARNING

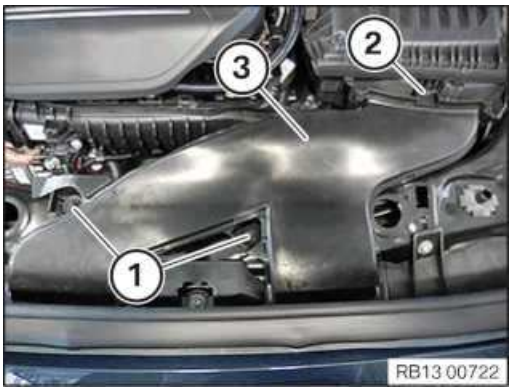
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

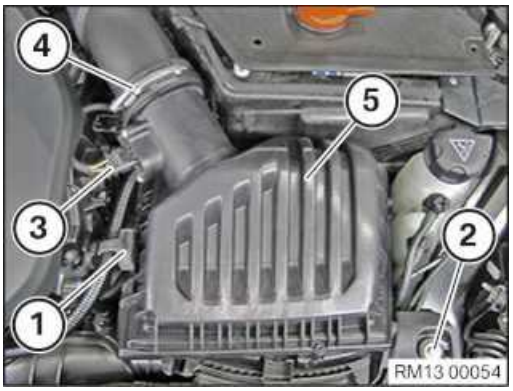
Damage to the acoustic cover.



Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

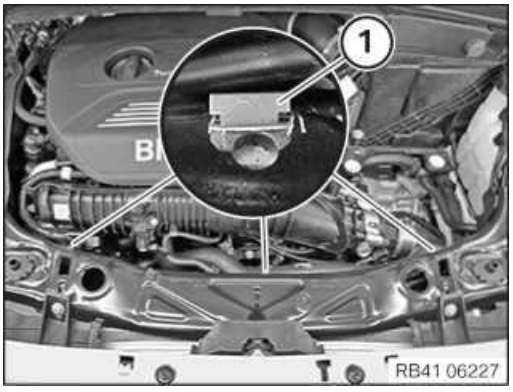
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.



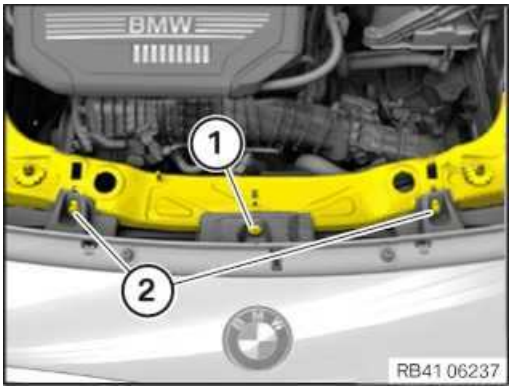
3 – Remove the intake neck for intake silencer housing

cardiagn.com

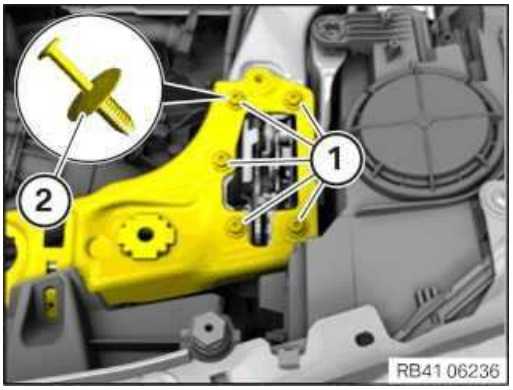


- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

4 – Removing intake silencer housing

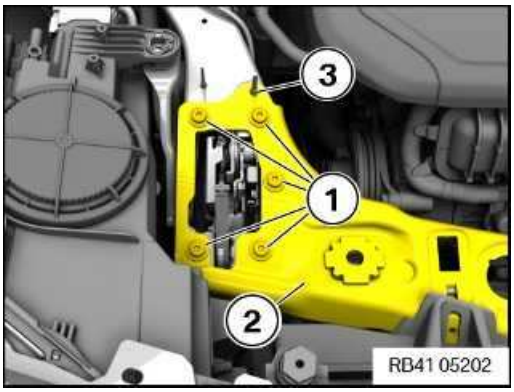


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.



5 – Remove front cross connection

- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.



- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

cardiagn.com

- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

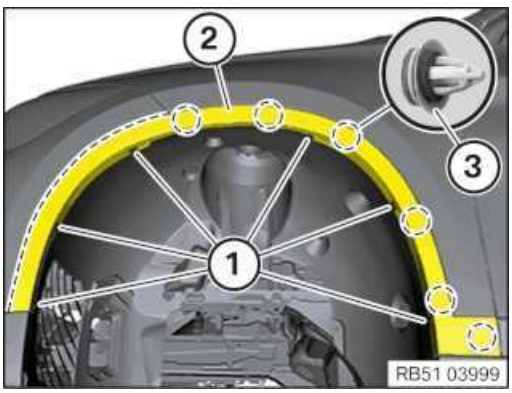
6 – Remove front right wheel

▸ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

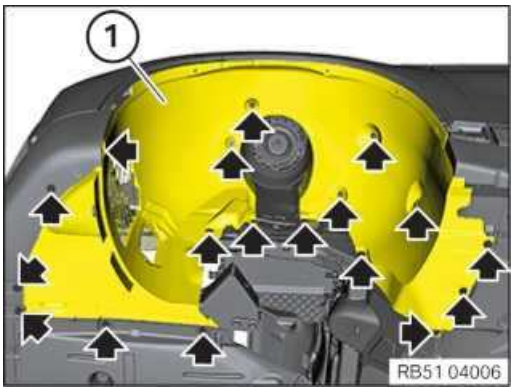
7 – Removing the front right wheel arch cover



▸ **Remove the front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

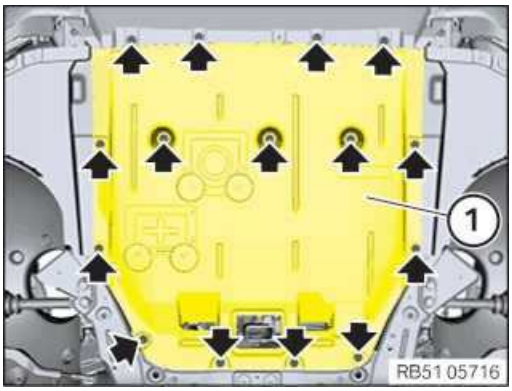


NOTICE

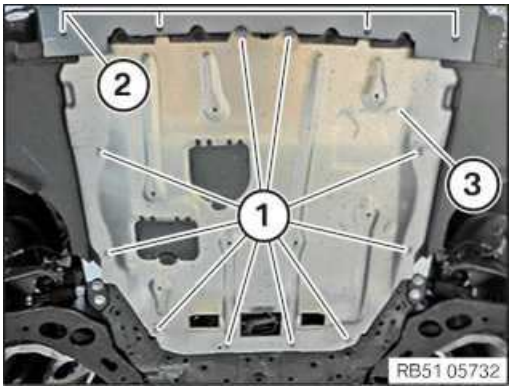
Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

cardiagn.com



NOTICE



Description is for left component only. Procedure on the right side is identical.

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

8 – Removing the front underbody protection

- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

9 – Removing the drive belt for alternator

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

CAUTION

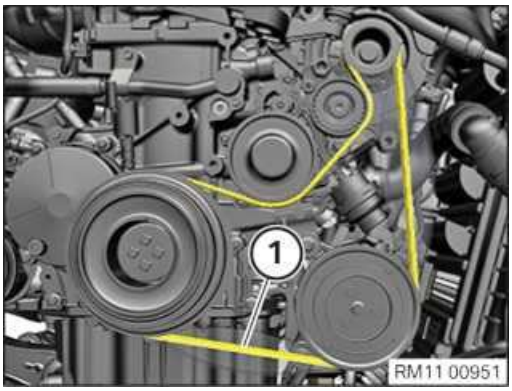
Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

cardiagn.com

TECHNICAL INFORMATION

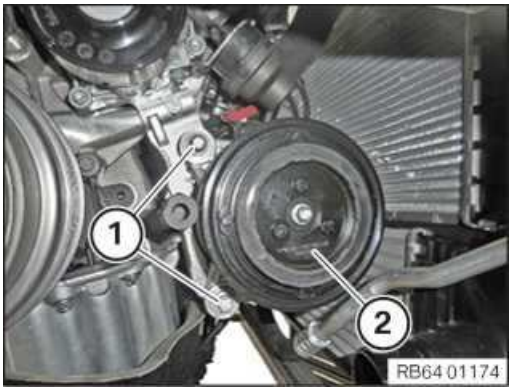


If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool **0 496 268 (11 0 390)**.

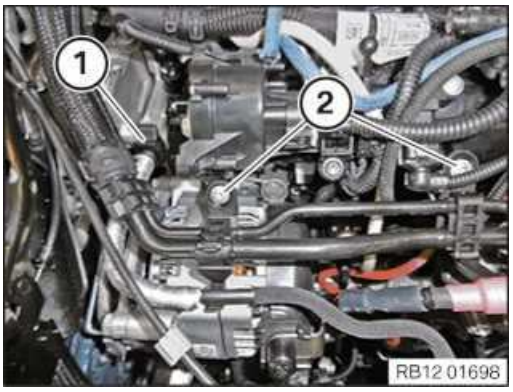


- Guide out the drive belt for the alternator (1) and remove it.

10 – Removing the alternator

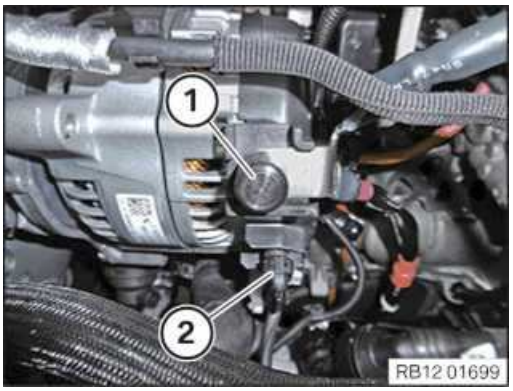
Prerequisite

Battery earth lead is disconnected.



TECHNICAL INFORMATION

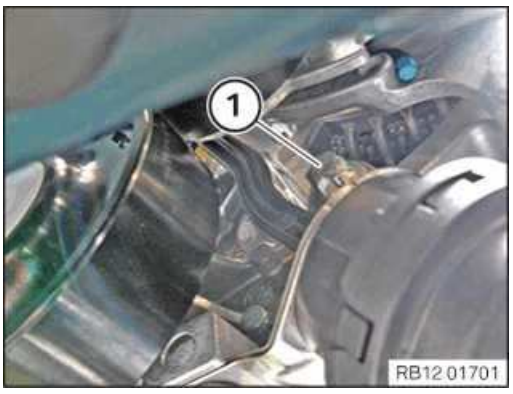
Secure component against falling.



- Loosen screws (1).
- Detach the air conditioning compressor (2) from the component carrier and protect it from falling.

Note: Tie the air conditioning compressor up.

cardiagn.com

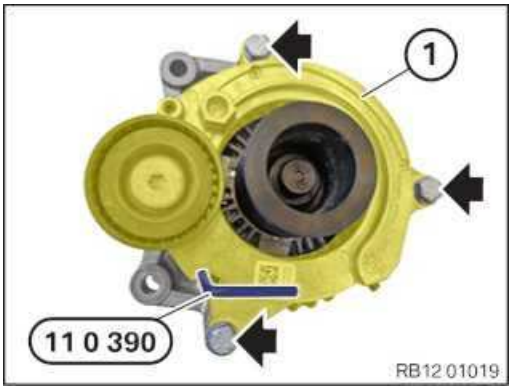


- Unlock the coolant ventilation line (1) and pull it off the cylinder head.
- Catch and dispose of escaping coolant.
- Loosen screws (2).
- Place fuel feed and return line to one side.

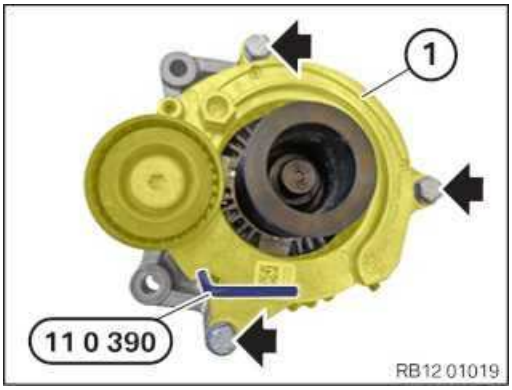
- Remove the cover (1) and loosen the nut below.
- Disconnect positive battery cable from alternator.
- Unlock and disconnect the connector (2) from the alternator.

- Detach screw (1) on top on the alternator.

- Detach screw (1) below on the alternator.



- Feed out alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support and remove.



cardiagn.com

MAIN WORK

11 – Replace the belt tensioner

- Remove screws (arrows).
- Feed out and remove the tensioning device for the drive belt (1) on the alternator.

- Feed in and install the tensioning device for the drive belt (1) on the alternator.
- Tighten screws (arrows).

Belt tensioner to alternator

M8X30		Tightening torque	28 Nm

POSTPROCESSES

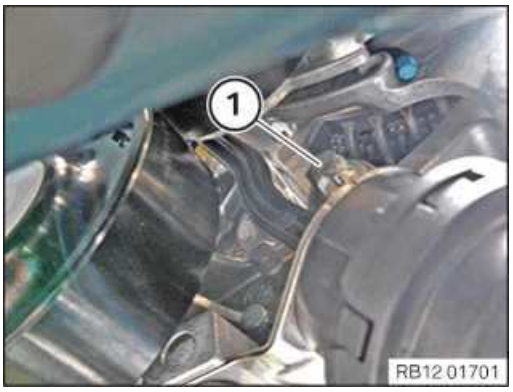
12 – Installing the alternator

Prerequisite

Battery earth lead is disconnected.

CAUTION

Improper routing of the positive battery cable.



Risk of short circuits!

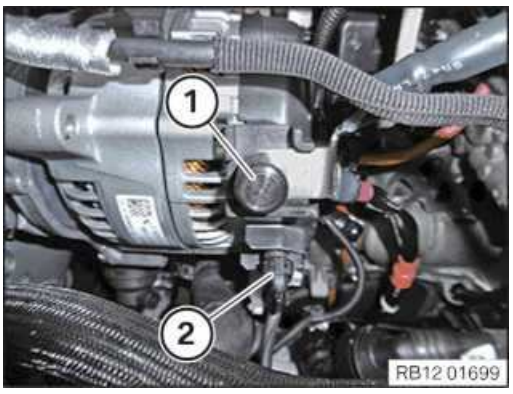
- Route the positive battery cable without abrasions and do not trap.

- Insert and install alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support.

cardiagn.com

- Tighten the screw (1) below on the alternator.

Alternator to component carrier

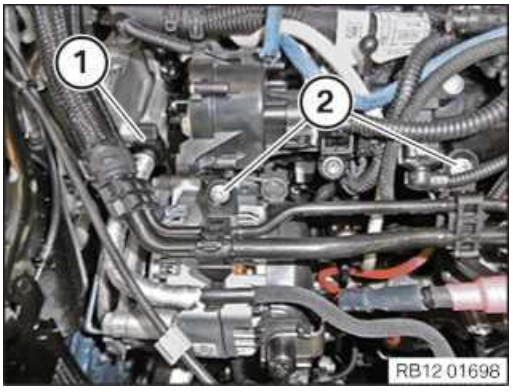


M10x75 / M10x125		Tightening torque	38 Nm

- Tighten the bolt (1) on top on the alternator.

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm



- Mount positive battery cable to the alternator.
- Tighten nut.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

- Mount the cover (1).
- Connect the connector (2) to the alternator and lock audibly.

- Mount fuel supply and return line.
- Tighten down screws (2).

Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

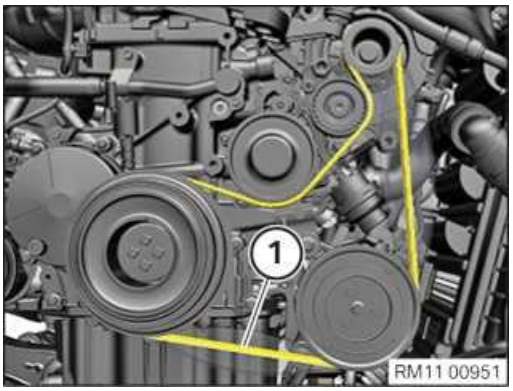
- Connect the coolant ventilation line (1) to the cylinder head and audibly lock.

- Correctly position the air conditioning compressor (2).
- Tighten the screws (1).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

13 – Installing the drive belt for alternator



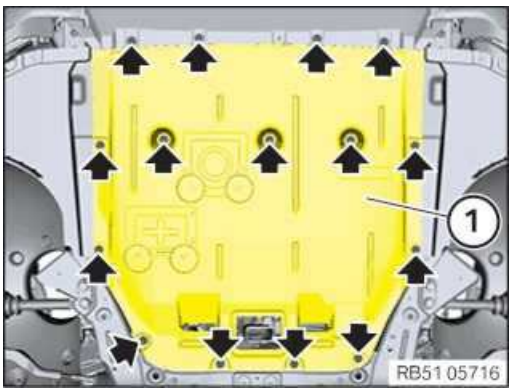
cardiagn.com

TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

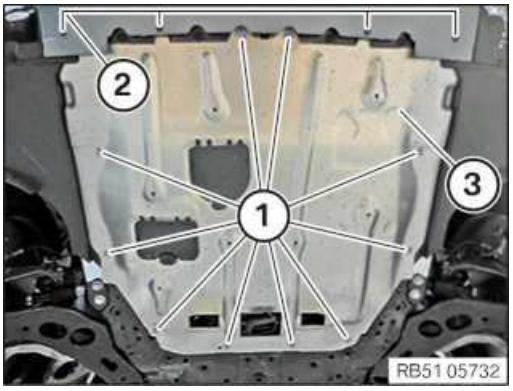
TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.



- Feed in the drive belt for the alternator (1) and install it.

- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool **0 496 268 (11 0 390)** out of the belt tensioner and remove it.



14 – Installing the front underbody protection

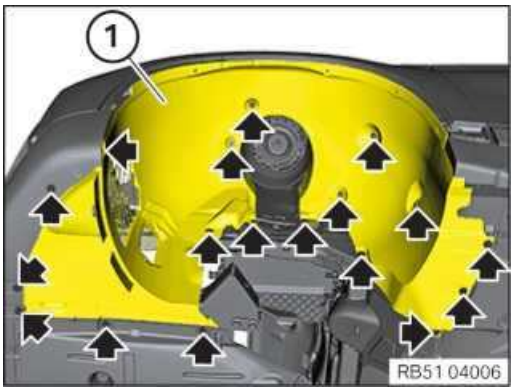
- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front



Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

15 – Installing the front right wheel arch cover

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

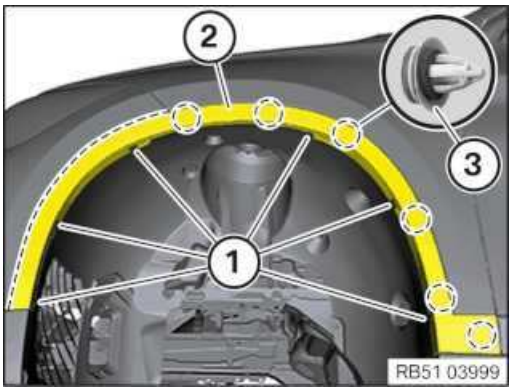
Plastic nut		Tightening torque	3 Nm



▶ **Installing front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

16 – Installing the front right wheel

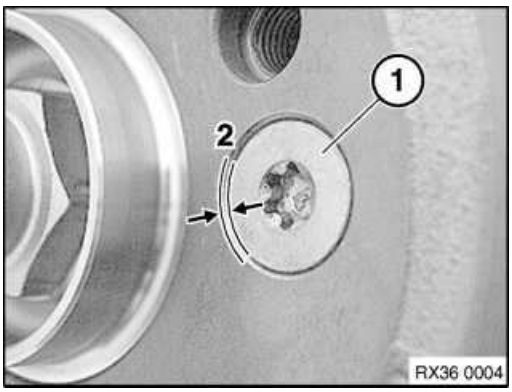
▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

cardiagn.com

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.



- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

- Renew mounting bolt (1).

  Parts: Mounting bolt
- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts

17 – Installing intake silencer housing

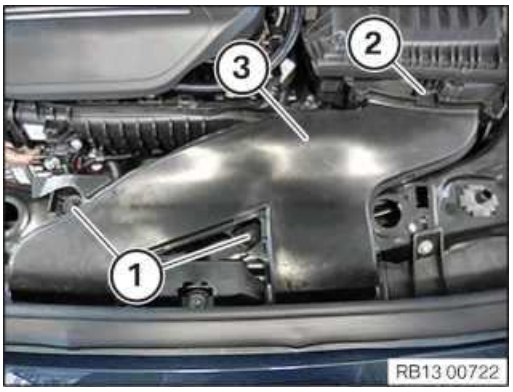
- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

18 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

19 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

20 – Disconnecting all battery earth leads

cardiagn.com

- See additional information.

Plastic nut		Tightening torque	3 Nm

Brake disc to rear wheel hub — Used in step 16

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub — Used in step 16

M8	Renew screw.	Tightening torque	16 Nm

cardiagn.com

Wheel bolts

Used in step 16

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Intake silencer housing to lock bridge

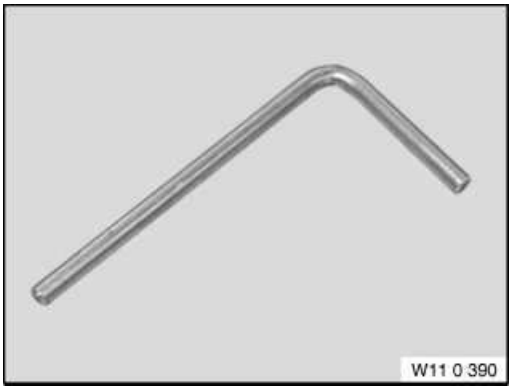
Used in step 17

M6X30		Tightening torque	8 Nm

Clean air pipe to intake silencer housing

Used in step 17

Clamp		Tightening torque	3 Nm

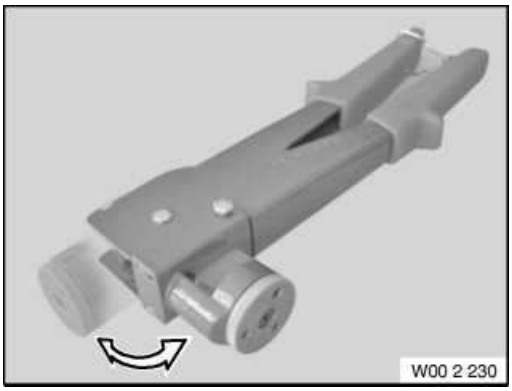


Intake neck to cross connection

Used in step 18

M6		Tightening torque	8 Nm

Overview of Special Tools



0 496 268 (11 0 390) Pin

Common Used in step 9 13

Usage	(roll pin) For securing new tensioning pulley (poly-V belt)
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 15 07 (390)

0 496 521 (00 2 230) Pliers

Common Used in step 15

Usage	(Blind rivet pliers for plastic rivets) For shaft diameters of 3.5 mm, 3.9 mm and 4.5 mm
Included in the tool or work	
Storage location	C25
Replaced by	
In connection with	
SI-Number	01 17 08 (478)

cardiagn.com

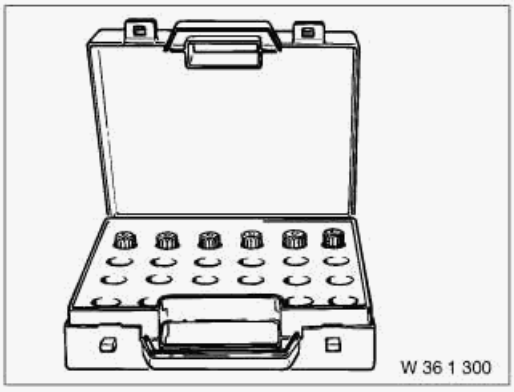
2 344 011 Tool

Common	Used in step 16
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

Replacement tools:

0 495 221 (36 1 323) Wheel stud

Common	Used in step 6
Usage	(Code 30) Code 39 available separately, (see EPC) under 36 13 1 181 259
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	



0 495 224 (36 1 326) Wheel stud

Common	Used in step 6
Usage	(Code 33) With centring bore available separately, (see EPC) under 36 13 6 765 546
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 225 (36 1 327) Wheel stud

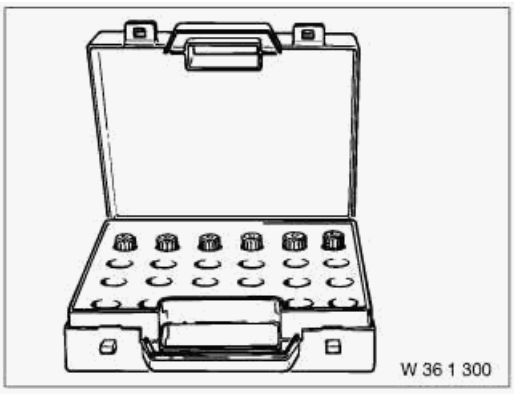
Common	Used in step 6
Usage	(Code 34) With centring bore available separately (see EPC) under 36 13 6 765 547
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 226 (36 1 328) Wheel stud

Common	Used in step 6
Usage	(Code 35) With centring bore available separately, (see EPC) under 36 13 6 762 340
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 227 (36 1 329) Wheel stud

Common	Used in step 6
Usage	(Code 36) With centring bore available separately (see EPC) under 36 13 6 762 341
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	



0 495 228 (36 1 331) Wheel stud

Common	Used in step 6
Usage	(Code 37) With centring bore available separately (see EPC) under 36 13 6 762 342
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 229 (36 1 332) Wheel stud

Common	Used in step 6
Usage	(Code 38) With centring bore available separately (see EPC) under 36 13 6 762 343
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 230 (36 1 333) Wheel stud

Common	Used in step 6
Usage	(Code 40) With centring bore available separately (see EPC) under 36 13 6 762 344
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number

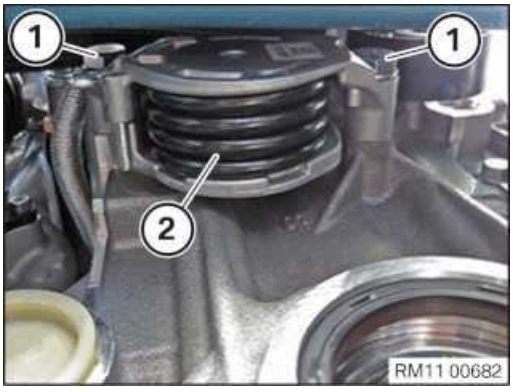
11 28 020 Replacing tensioning device for alternator drive belt (B47)

Warning!
Tensioning device is subject to spring bias **(danger of injury!)**.

Necessary preliminary tasks:



- Remove drive belt

Removal:

Release screws (1) from belt tensioner (2).
Remove belt tensioner (2).

Installation:

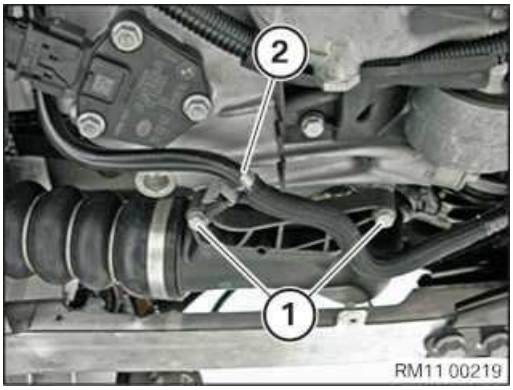
Install belt tensioner (2).
Tighten down screws (1).
Tightening torque: 11 28 1AZ.

Required follow-up work:

- Install drive belt

cardiagn.com

11 28 ... Tensioning/releasing of drive belt for alternator (B47)



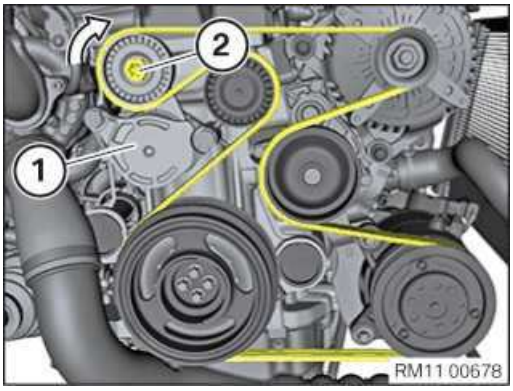
Special tools required:

- 2 365 291
- 11 0 390

Necessary preliminary tasks:

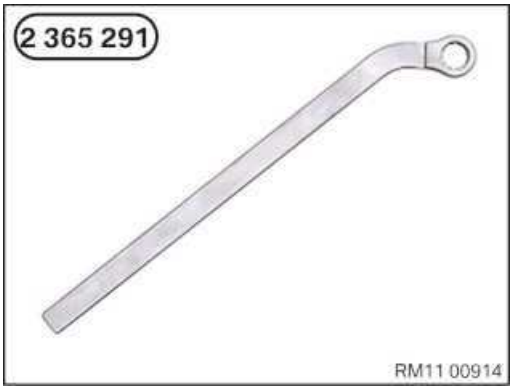
- Remove upper bulkhead cover
- Remove front right wheel arch cover
- Remove front underbody protection

Removal:

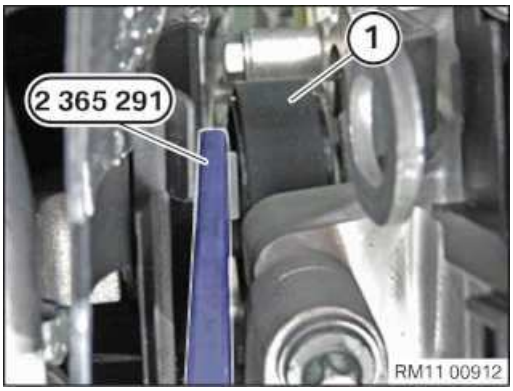


Loosen screws (1).
Unclip line (2).

Release screw (1).



cardiagn.com



Safety information:

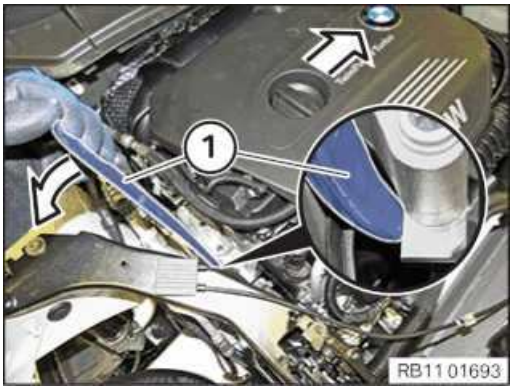
- Danger of injury when tensioning or releasing the drive belt.

Release belt tensioner (1) on screw (2) in direction of arrow (refer to following operations).

Special tool 2 365 291 to relieve belt tensioner.

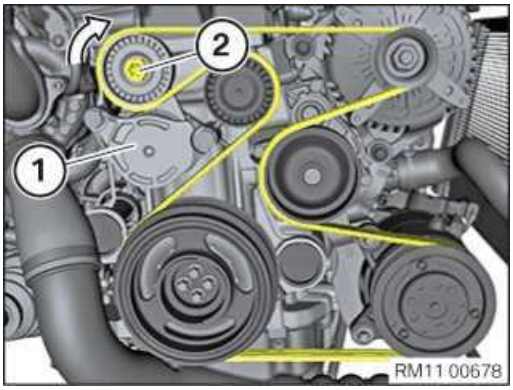
Position special tool 2 365 291 on deflecting element (1) of belt tensioner.

Unclip fuel lines on holder.



Relieve belt tensioner with special tool 2 365 291 in direction of arrow.

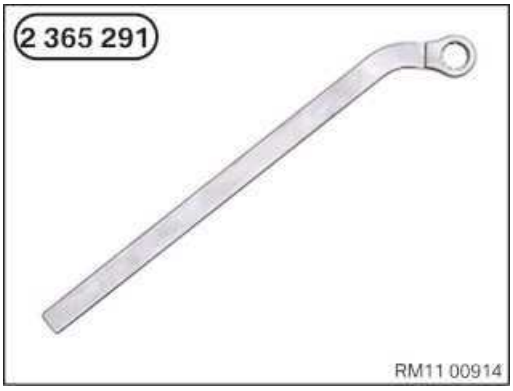
cardiagn.com



Operation needs to be carried out by a second person helping.

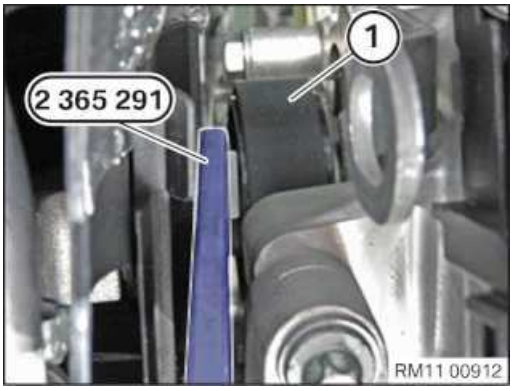
Secure belt tensioner (1) in place with special tool 11 0 390 .

Note:
If the special tool 11 0 390 cannot be mounted, then the engine on the engine mount must be pressed slightly (max. 3 mm) with the mounting lever (1) in the direction of the arrow.



Installation:

Safety information:



- Danger of injury when tensioning or releasing the drive belt.

Release belt tensioner (1) on screw (2) in direction of arrow (refer to following operations).

Special tool 2 365 291 for relieving belt tensioner.

cardiagn.com

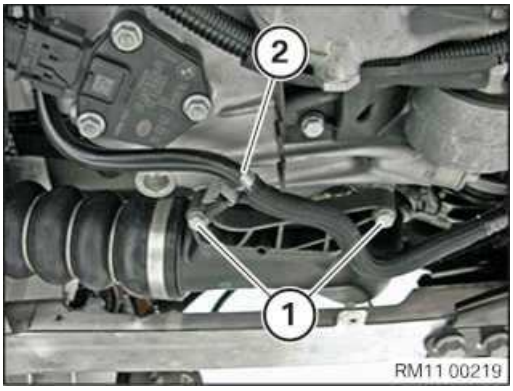
Position special tool 2 365 291 on deflecting element (1) of belt tensioner.

Unclip fuel lines on holder.

Relieve belt tensioner using special tool 2 365 291 in direction of arrow.

Operation needs to be carried out by a second person helping.

Remove special tool 11 0 390 from belt tensioner (1).



Note:
If the special tool 11 0 390 cannot be removed, then the engine on the engine mount must be pressed slightly (max. 3 mm) with the mounting lever (1) in the direction of the arrow.

cardiagn.com

Tighten screw (1).

Tighten down screws (1).
Tightening torque: 11 00 2AZ.
Clip in line (2).

Required follow-up work:

- Install front underbody protection
- Install front right wheel arch cover
- Install upper bulkhead cover

cardiagn.com

11 31 505 Adjusting camshaft timing (B47)

Special tools required:

- 11 6 480
- 2 288 380
- 11 4 480
- 11 8 760

Important!

Risk of damage to engine.

Notes for checking and setting the timing must be observed without fail.

Necessary preliminary tasks:

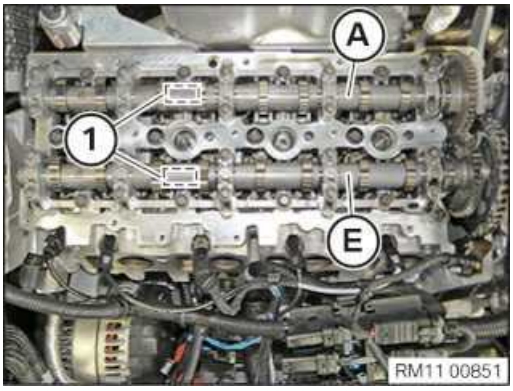
- Remove front right wheel arch panel.
- Remove cylinder head cover.
- Remove exhaust-gas recirculation cooler

Crank engine at central bolt with special tool 11 6 480 **Important!**

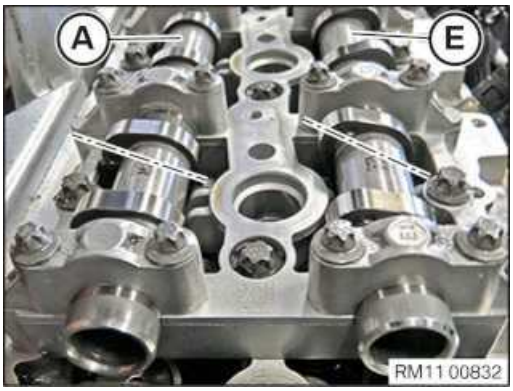
Do not turn the engine back.

Remove protective cap on oil sump.

cardiagn.com



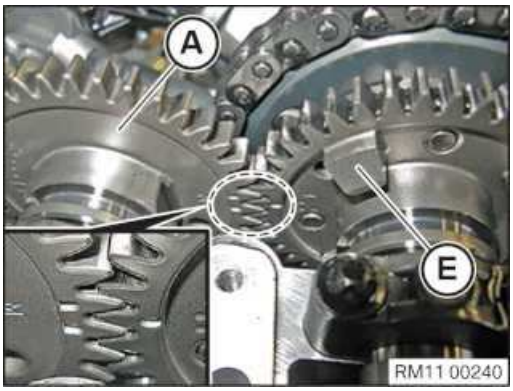
Important!



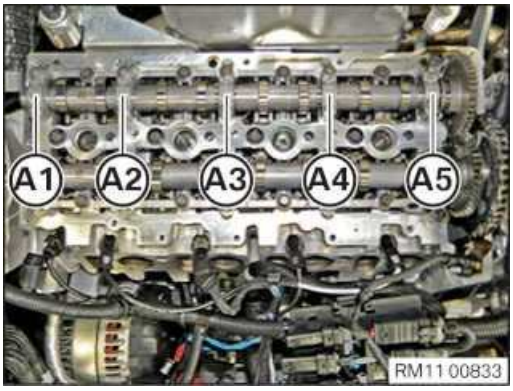
In vehicles with manual gearbox, there is an additional bore hole in front of the dowel hole, which can be confused with the dowel hole.

It must be possible to slide special tool 2 288 380 up to the crank in the oil sump.

Block crankshaft with cylinder no. 1 in TDC firing position with special tool2 288 380 .



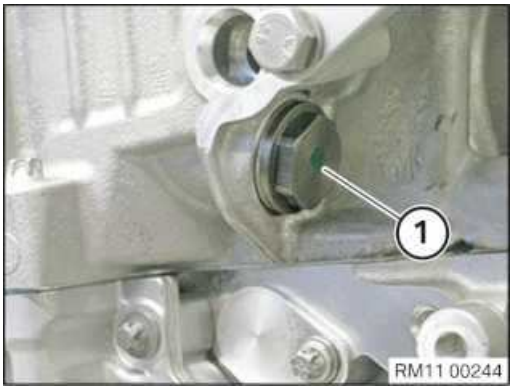
It must be possible to read the part number (1) on the exhaust and intake camshafts (A and E) from above.



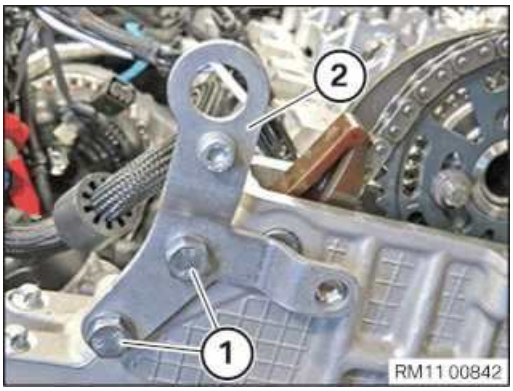
The cam on the intake camshaft (E) points obliquely upwards at cylinder No. 1.

The cam on the exhaust camshaft (A) points obliquely outward to the left at cylinder No. 1.

Marks on both camshafts (A and E) must match up (see graphic).*Note:* The exhaust camshaft must be removed if the marks do not match up (are not aligned).



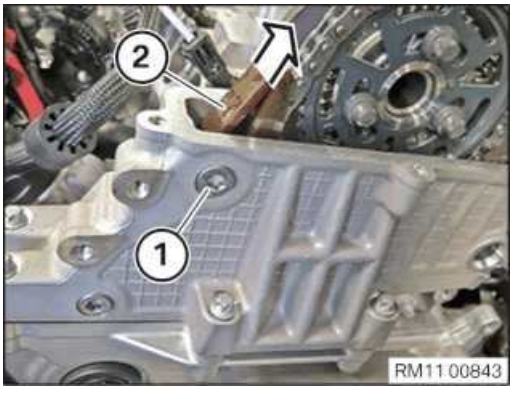
cardiagn.com



If necessary, release all bolts of camshaft bearing caps **A1** to **A5** by 1/2 a turn at a time, working from the outside inwards.

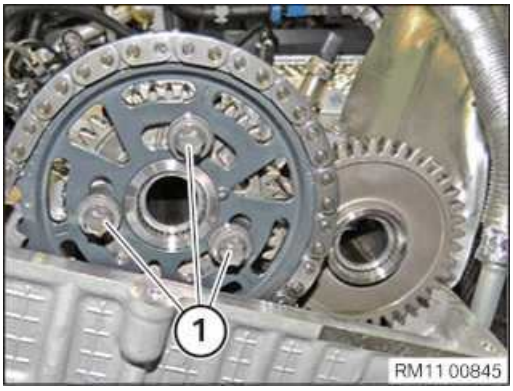
Remove exhaust camshaft in upward direction.

Place all components on special tool 11 4 480 in a tidy and orderly fashion.



Release chain tensioner (1).

Release screws (1).

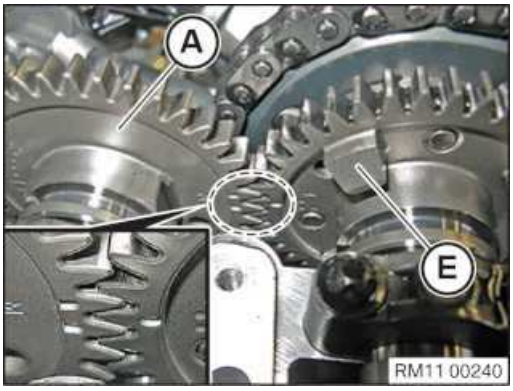


Remove suspension element (2).

Remove bearing journal (1).

Remove guide rail (2) in direction of arrow.

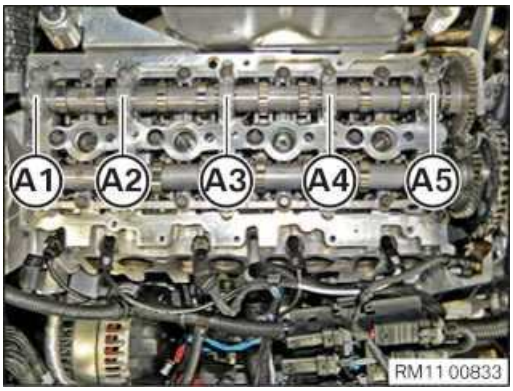
cardiagn.com



Important!

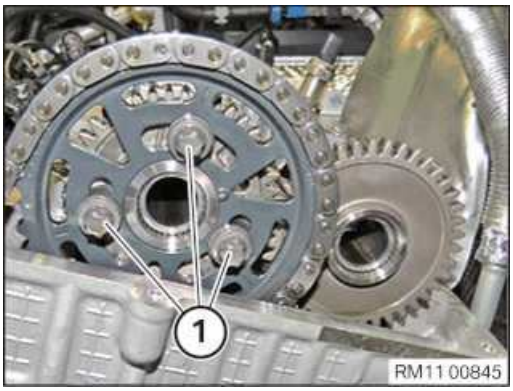
Protect timing chain to prevent it from falling.

Risk of damage to oil spray nozzle.



Remove camshaft bolts (1) and detach camshaft sprocket.

Position camshafts (A and E) accordingly (see graphic).

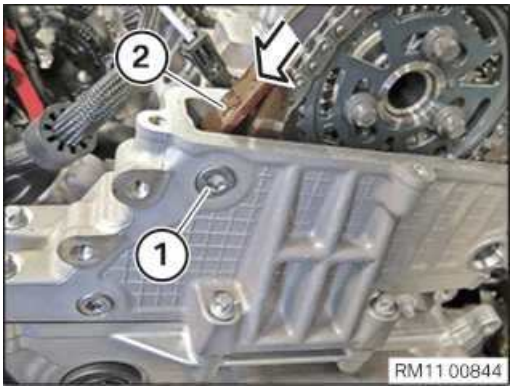


If necessary, insert exhaust camshaft (A) so that both marks match up (see graphic).

Note:
Check installation position of roller cam followers.

Tighten down all camshaft bearing caps **A1** to **A5** by 1/2 a turn at a time, working from the inside outwards.

Tightening torque: 11 31 2AZ.



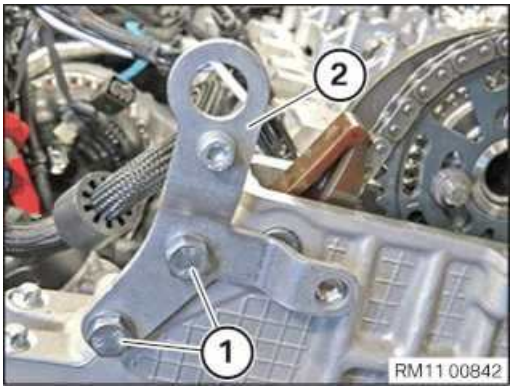
Place the camshaft sprocket with timing chain on the intake camshaft such that bolts (1) are located in the centre of the elongated holes.

Insert bolts (1).

Tighten bolts (1) to 10 Nm.

Release bolts (1) again by a 90° turn.

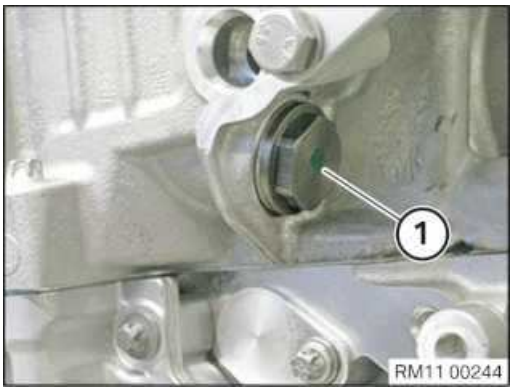
cardiagn.com



Parts: Replace bearing journal.

Install guide rail (2) in the direction of the arrow.

Note:
Make sure guide rail (2) is correctly installed in the lower bearing journal.



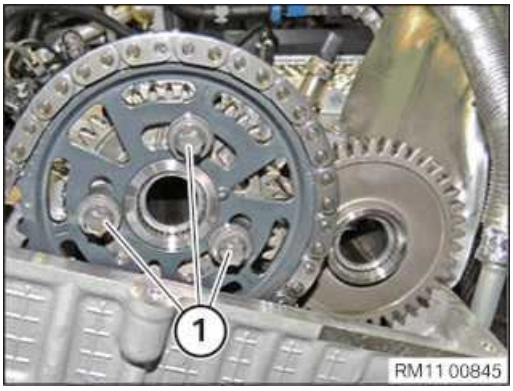
Tightening torque: 11 12 6AZ.

Install suspension element (2).

Tighten down screws (1).

Tightening torque: 11 00 4AZ.

Parts: Replace sealing ring.



Install chain tensioner (1) and tighten down.

Tightening torque: 11 12 5AZ.

Place special tool 11 8 760 on exhaust camshaft.**Note:**
Special tool 11 8 760 must lie flush on cylinder head.

cardiagn.com

Tighten down screws (1).

Tightening torque: 11 31 1AZ.

Crank engine with special tool 11 6 480 twice in direction of rotation.

Check timing of camshafts.

Important!

Do not turn the engine back.

Important!

Special tool 2 288 380 must be removed before starting engine.

Required follow-up work:

- Install exhaust-gas recirculation cooler.
- Install cylinder head cover.
- Install front right wheel arch panel.

cardiagn.com

11 31 505 Adjusting the timing of the camshaft (s) (for work no. 11 31 005/508)

PRELIMINARY WORK

1 – Checking camshaft timing

- See additional information.

2 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

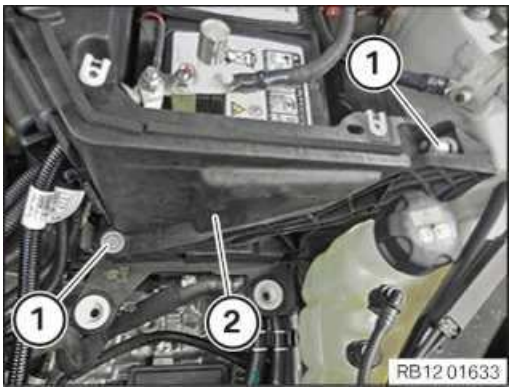
RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

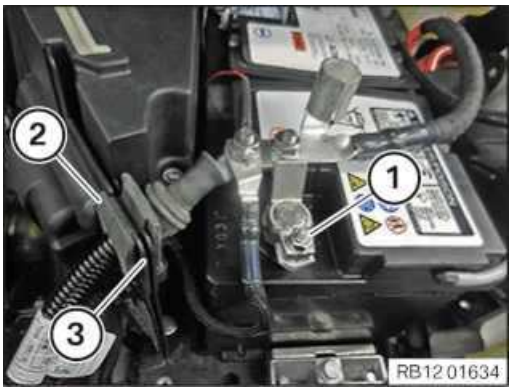
- Do not pull on the wires when disconnecting connectors and plug connections.

TECHNICAL INFORMATION



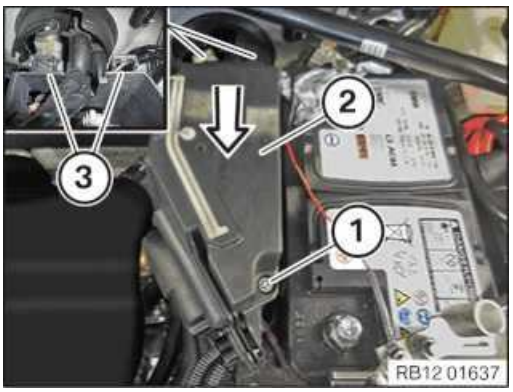
Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units

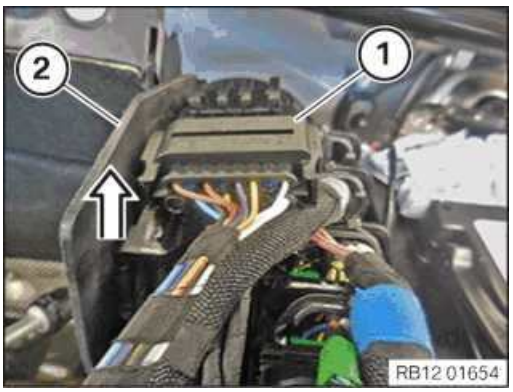


TECHNICAL INFORMATION

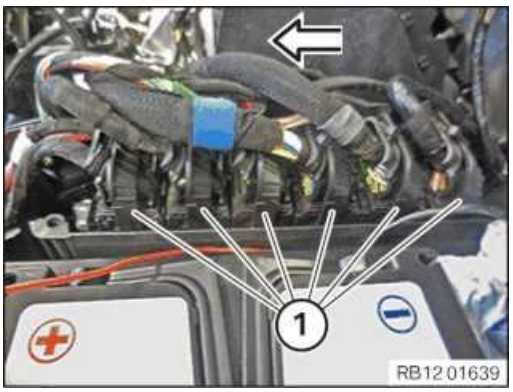
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



cardiagn.com



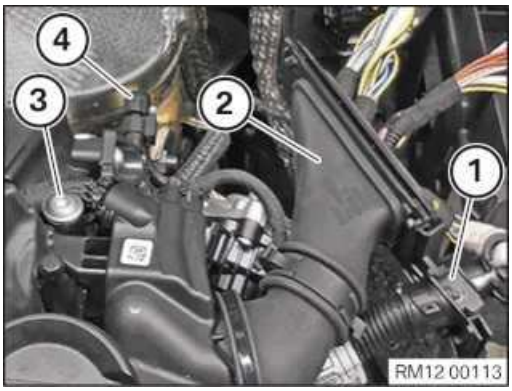
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



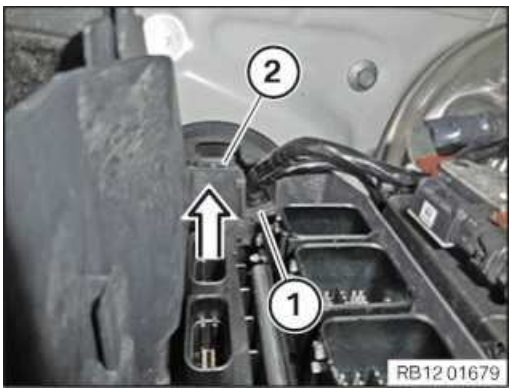
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

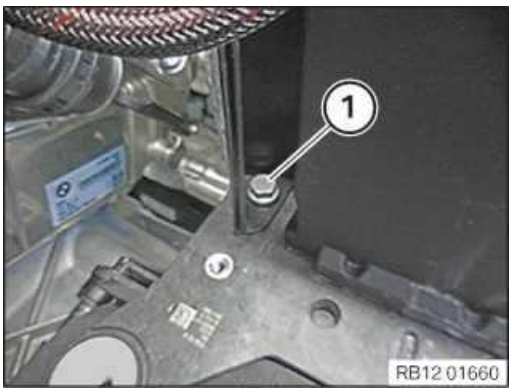
- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).



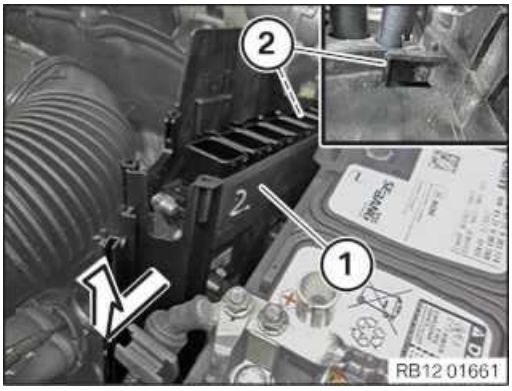
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



cardiagn.com



- Unlock and loosen connector (1).



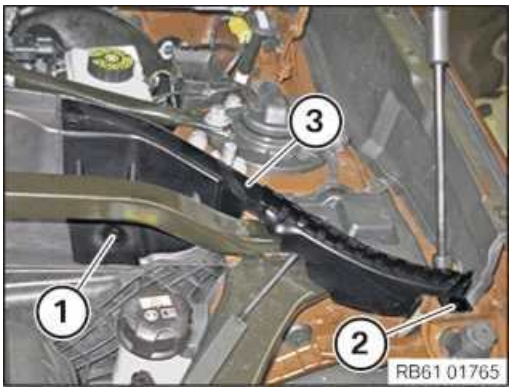
- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

- Loosen screw (1).

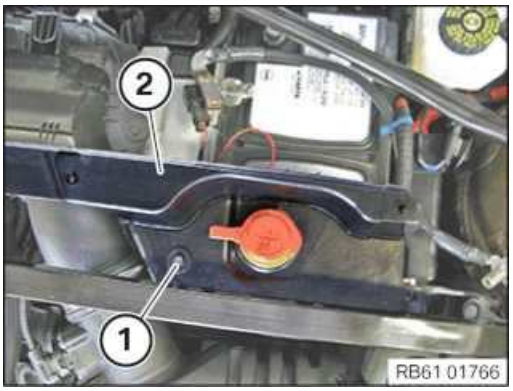
- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

3 – Remove vehicle battery



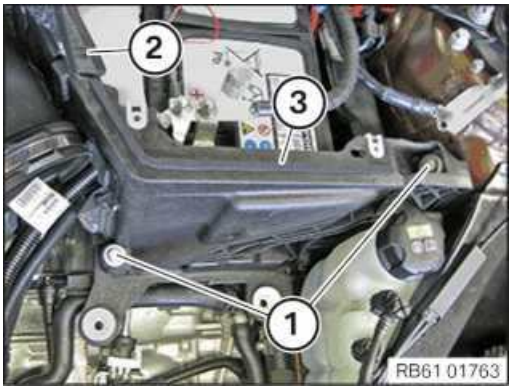
cardiagn.com

WARNING

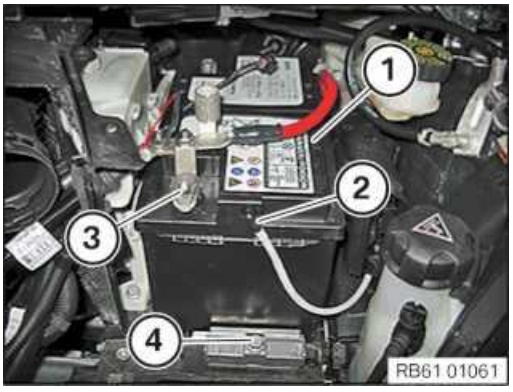


Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!



- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.



- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

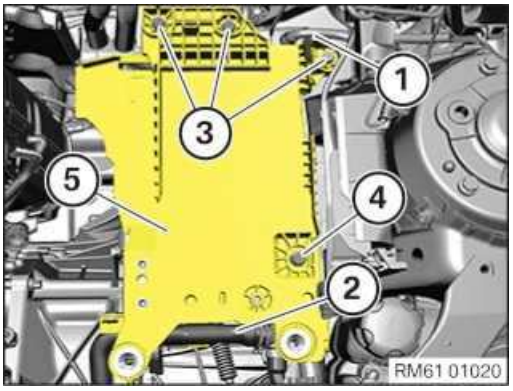
- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING

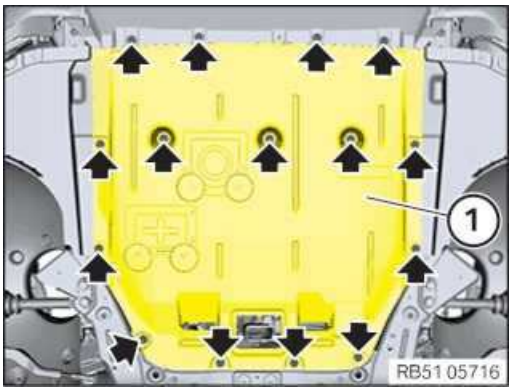
Unprotected battery terminals.



Risk of short circuits! Risk of fire!

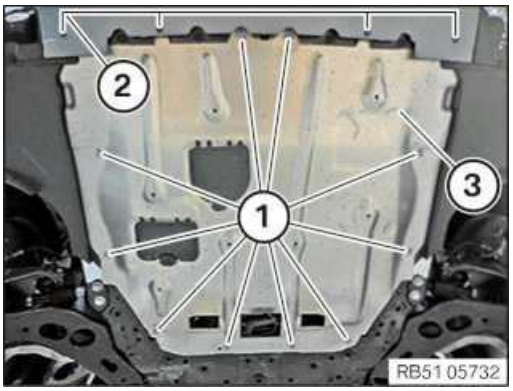
- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).



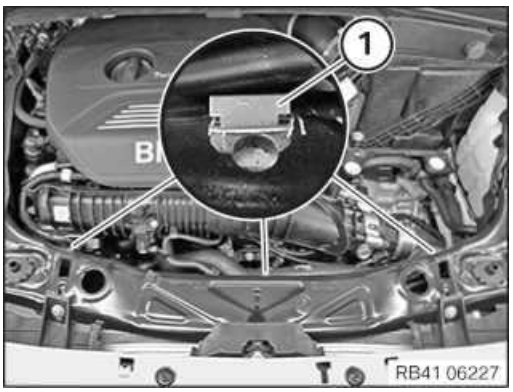
cardiagn.com

4 – Remove battery holder

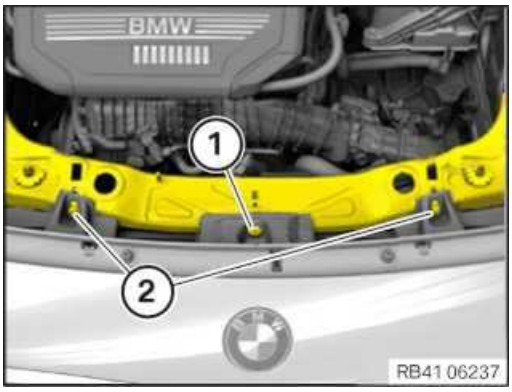


- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

5 – Removing the front underbody protection

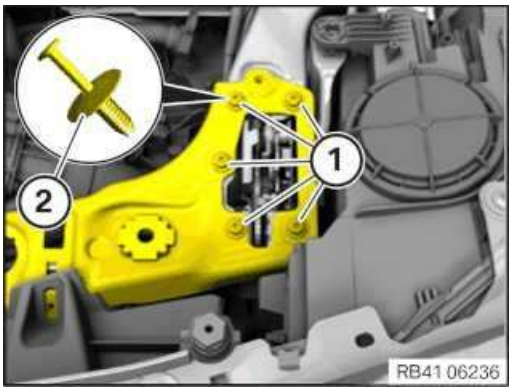


- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

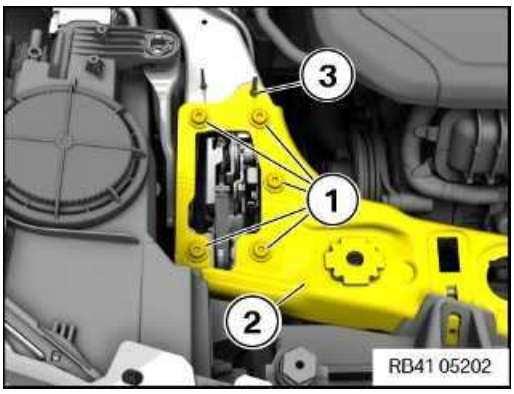


- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

6 – Remove front cross connection



- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.



cardiagn.com

- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

7 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

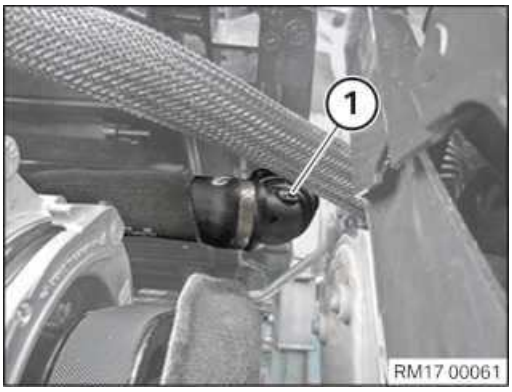
TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

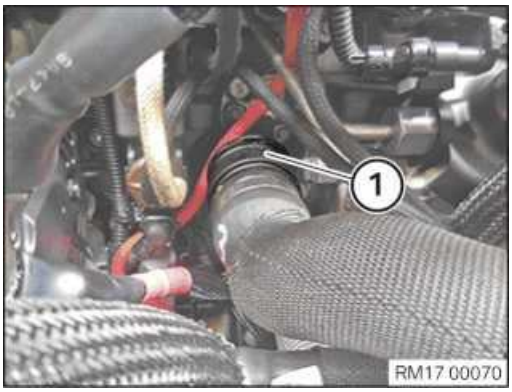
When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.



cardiagn.com

TECHNICAL INFORMATION



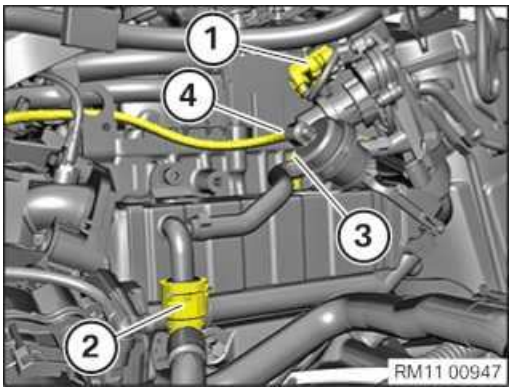
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen sealing cap (1).

- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.

- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.

8 – Removing the exhaust-gas recirculation cooler

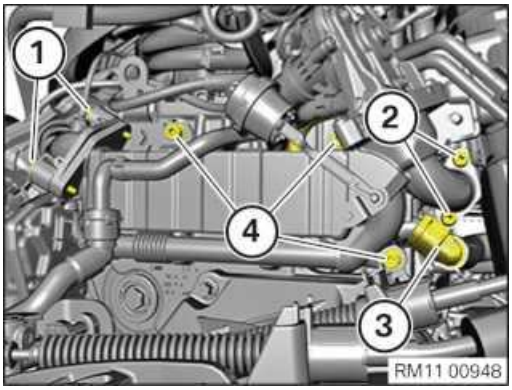


WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



cardiagn.com

TECHNICAL INFORMATION

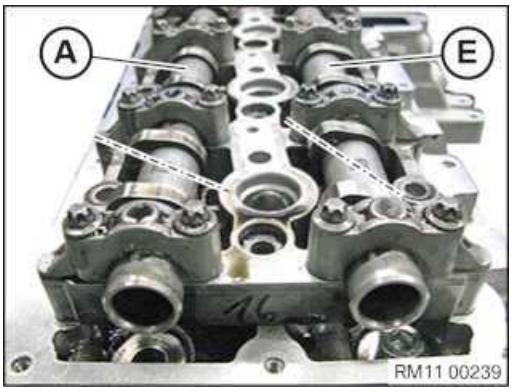
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

MAIN WORK

9 – Adjusting the timing of the camshafts



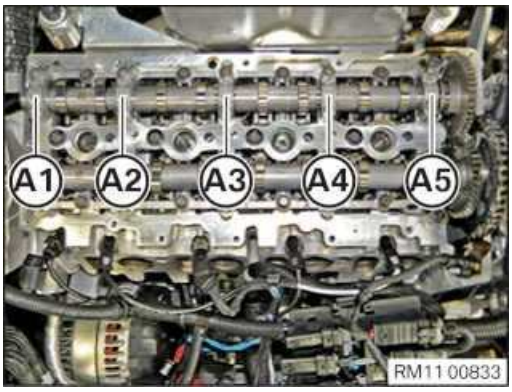
- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

- Slide the special tool **2 288 380** completely into the bore hole of the oil sump.
- Use the special tool to block **2 288 380** the crankshaft in the TDC firing position at the first cylinder.

cardiagn.com

- The cam of the intake camshaft (E) at the first cylinder points up at an angle.
- The cam of the exhaust camshaft (A) at the first cylinder points outward at an angle.



▸ **Remove exhaust camshaft.**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

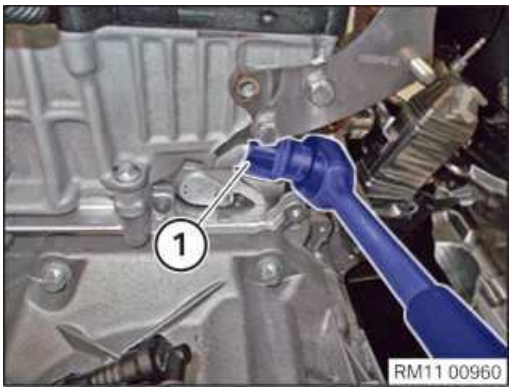
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A5) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components on special tool **0 495 105 (11 4 480)** in a tidy and orderly fashion.

▸ **Remove chain tensioner piston**



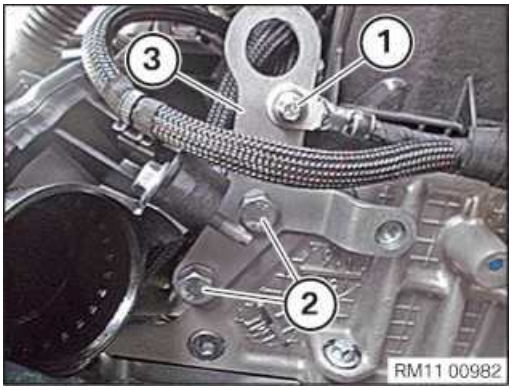
WARNING

Hot surfaces.

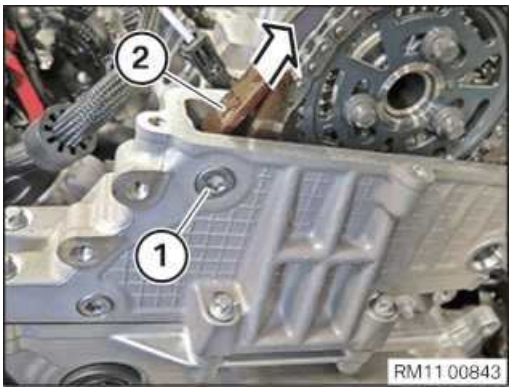
Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



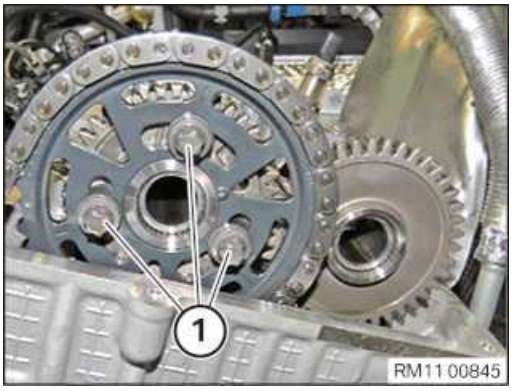
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

▸ **Remove the timing chain guide rail**



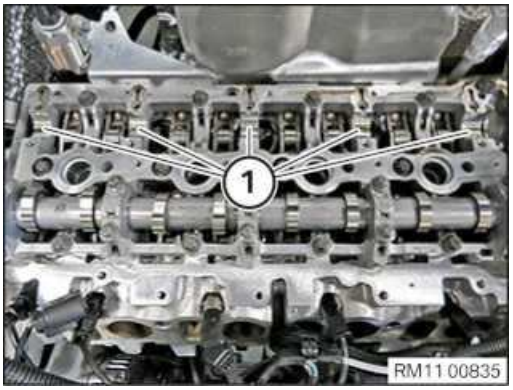
- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

▸ **Removing the camshaft sprocket on the intake camshaft**

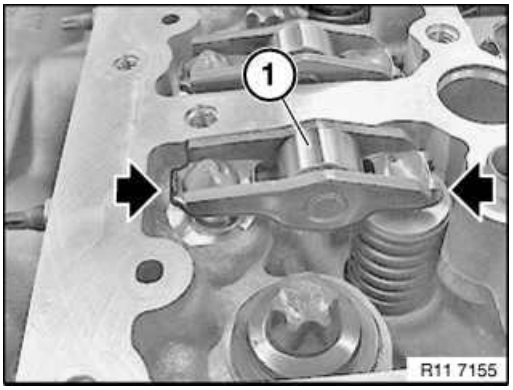
- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

▸ **Install exhaust camshaft**



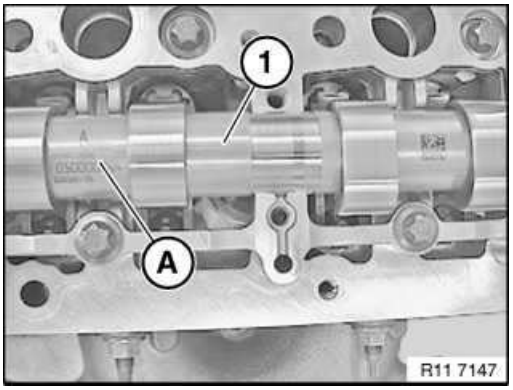
cardiagn.com

RISK OF DAMAGE

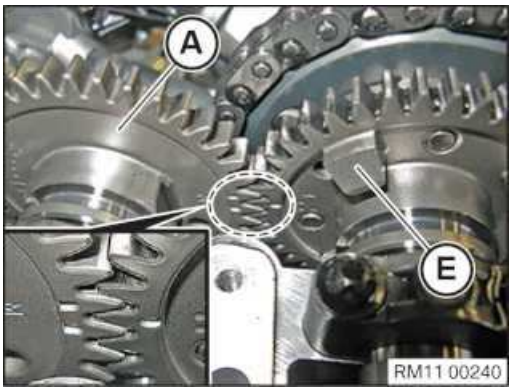


Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

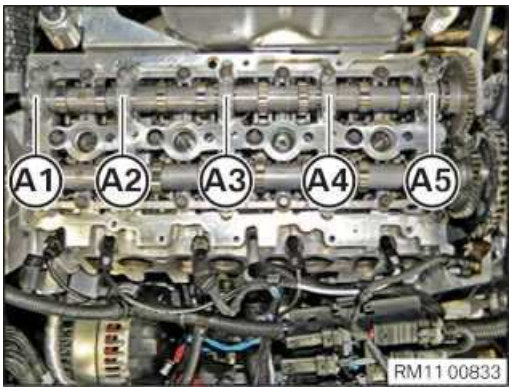


- Comply with the regulations for the installation and disassembly.
- Perform work with care.



- Oil all bearing positions (1).

- Make sure the roller cam followers (1) have the correct mounting orientation.



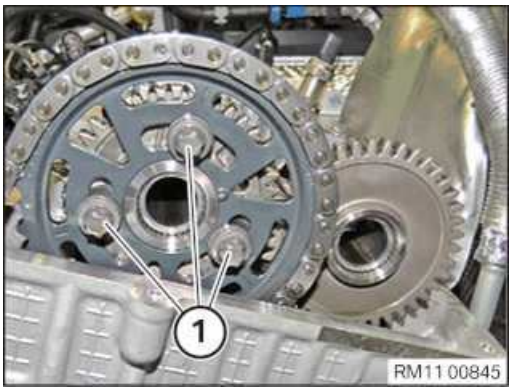
- Insert exhaust camshaft (1) so that the identification (A) points upwards.

- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.

cardiagn.com

- Tighten all exhaust camshaft bearing caps (A1) to (A5) from the inside to the outside by 1/2 a turn at a time.

Intake and exhaust camshaft in camshaft support



M6x31		Tightening torque	10 Nm

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

  Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

▸ **Installing the camshaft sprocket on the intake camshaft**

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

▸ **Install the timing chain guide rail**

- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

cardiagn.com

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

▸ **Installing the chain tensioner piston**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

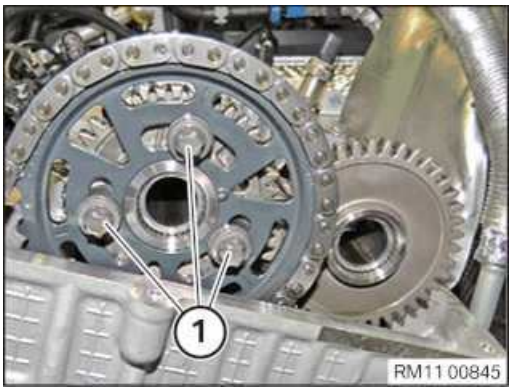
- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.



- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

▸ **Tightening the camshaft sprocket on the intake camshaft**

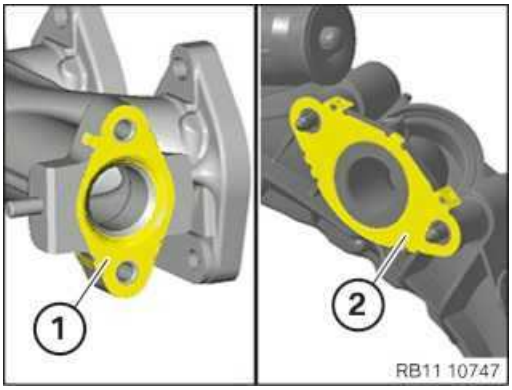
cardiagn.com

- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

POSTPROCESSES



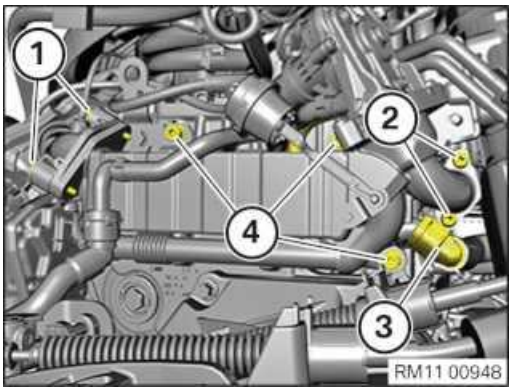
10 – Installing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

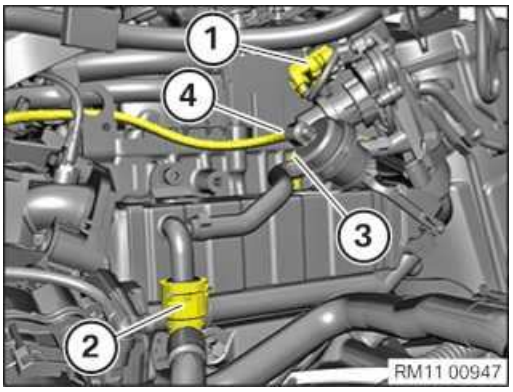
M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm



- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

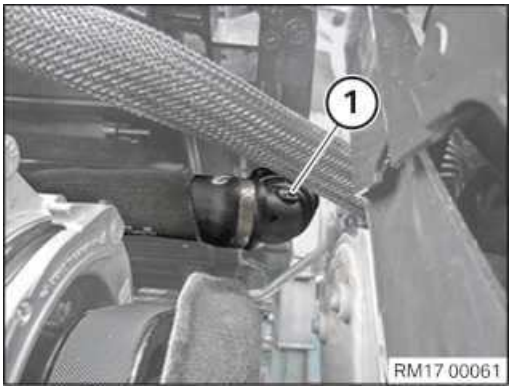
Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

cardiagn.com

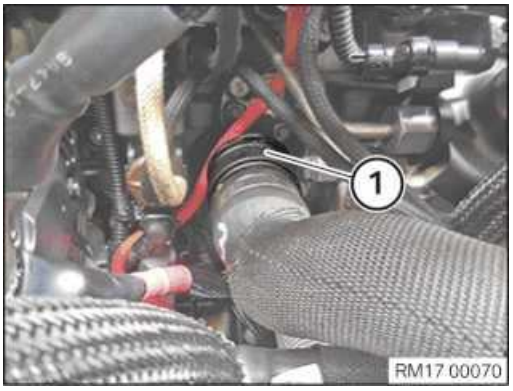
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

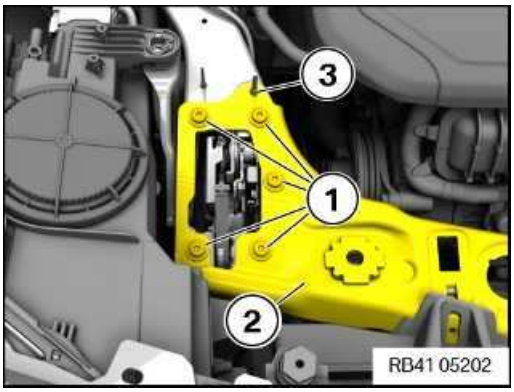


11 – Connect the coolant line

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

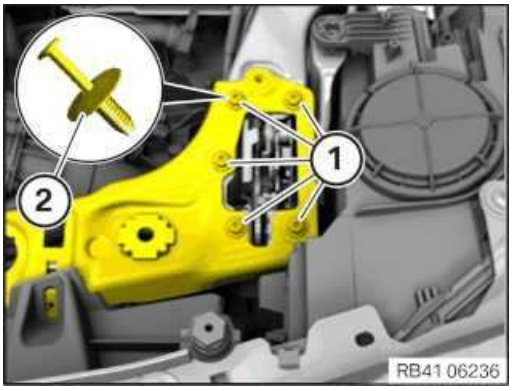
- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the connecting branch and lock audibly.

12 – Install front cross connection

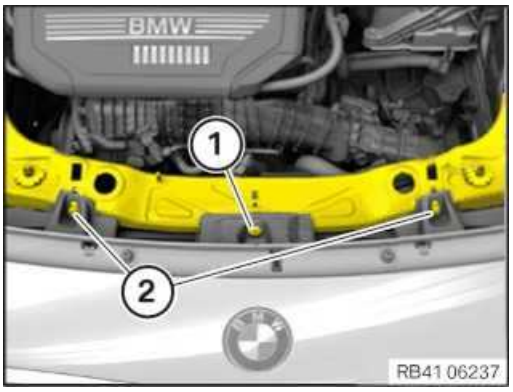
cardiagn.com



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm

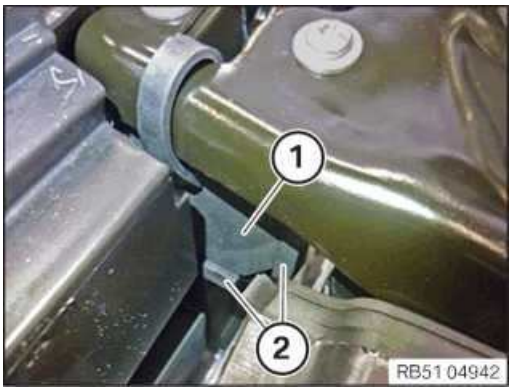
- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

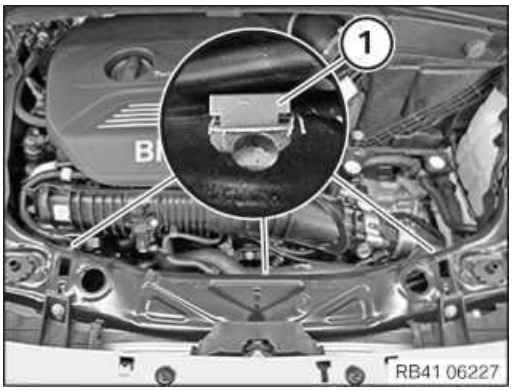
- Tighten down screws (2).

Air duct to upper connection



M6x20 screw		Tightening torque	11,8 Nm

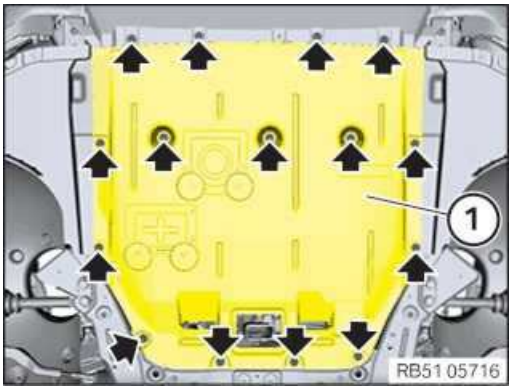
- Tighten down screw (1).



Bracing strut to upper connection

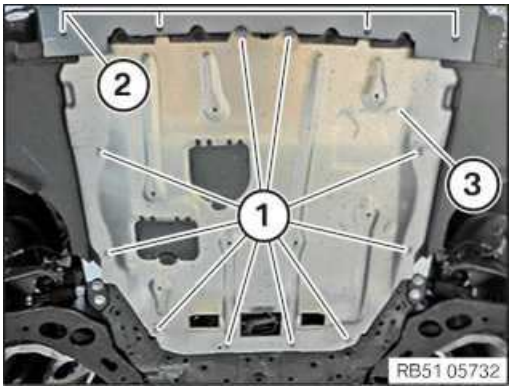
M8x20 screw		Tightening torque	28 Nm

cardiagn.com



- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

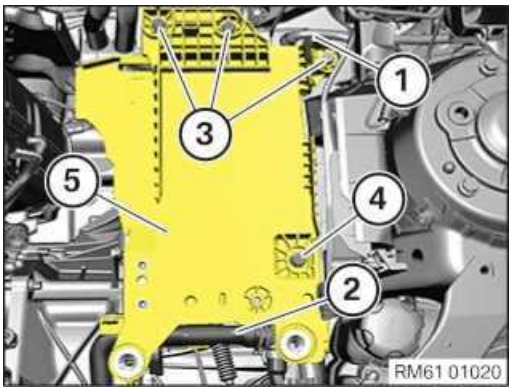


13 – Installing the front underbody protection

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm



- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

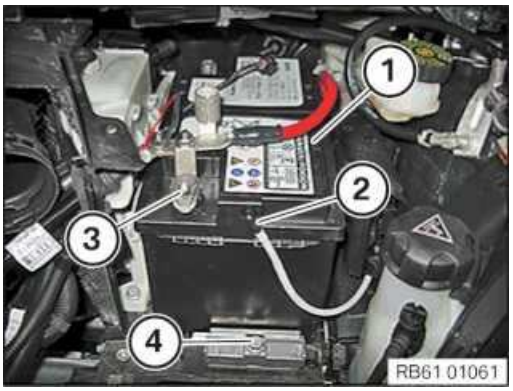
14 – Install the battery holder

cardiagn.com

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm



- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

15 – Install vehicle battery

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

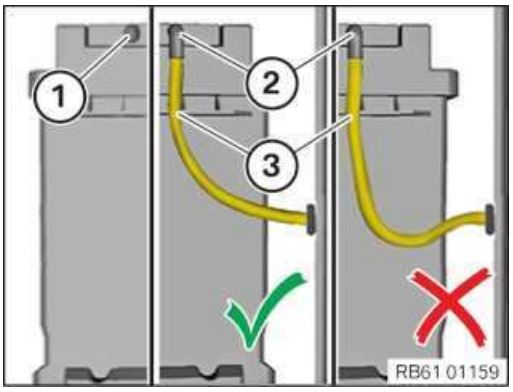
Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

▸ **Check the vent holes of the battery**

WARNING

Gas emission.



Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

cardiagn.com

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

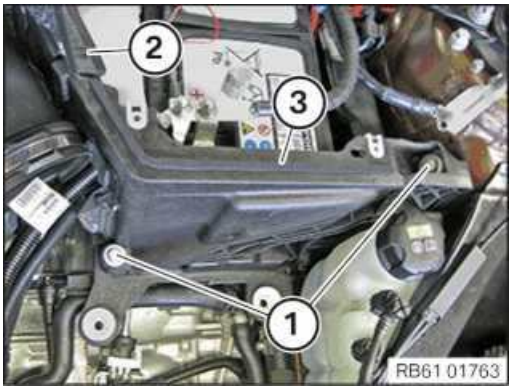
Result

» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

Check



- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).

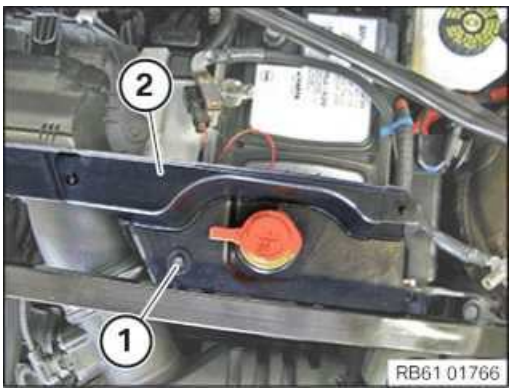
Result

» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

- Insert tension strut (3) and tighten with screws (1).



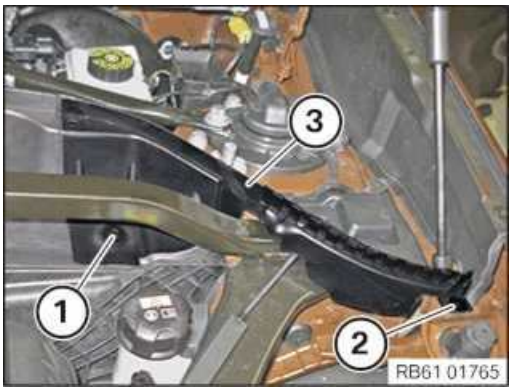
Trailing link

M8		Tightening torque	19 Nm

- Tighten down screw (2).

Battery cover

M8		2,8 Nm



- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

cardiagn.com

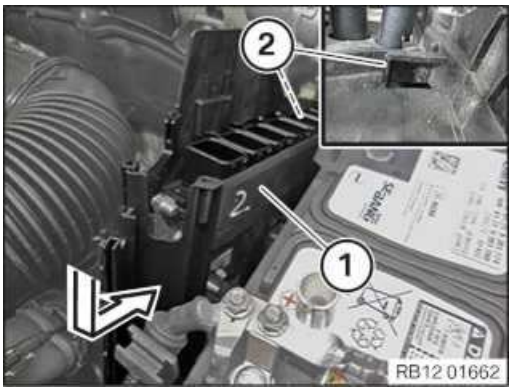
- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

16 – Install electronics box

Prerequisite

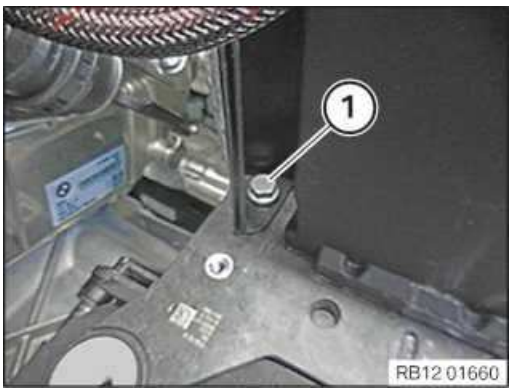


Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

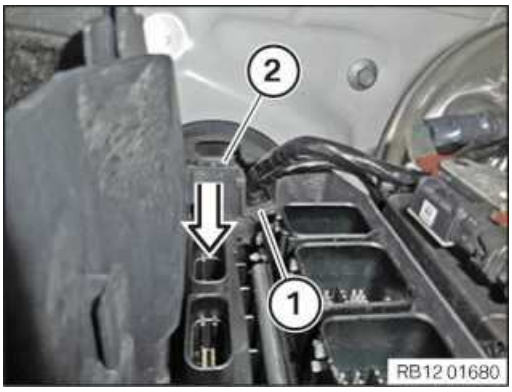
Trapped, crushed or damaged cables may cause short circuits and malfunctions.



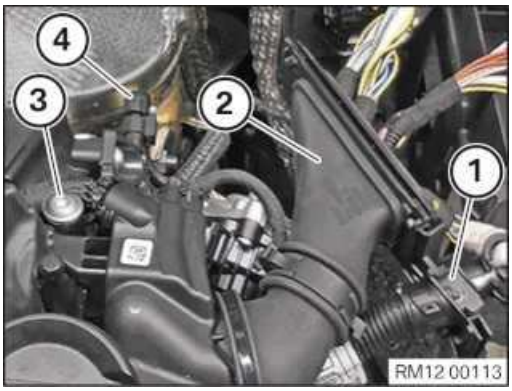
- Route all cables without abrasions, do not trap and crush.

- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



- Tighten down screw (1).

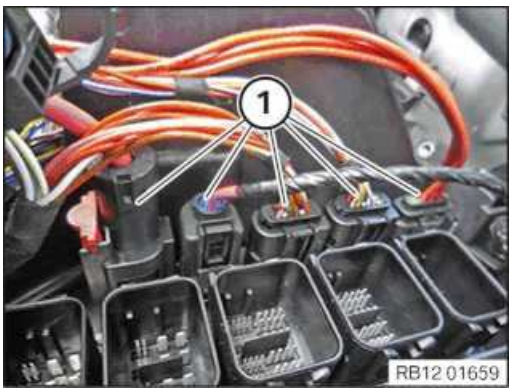


Electronics box to battery tray

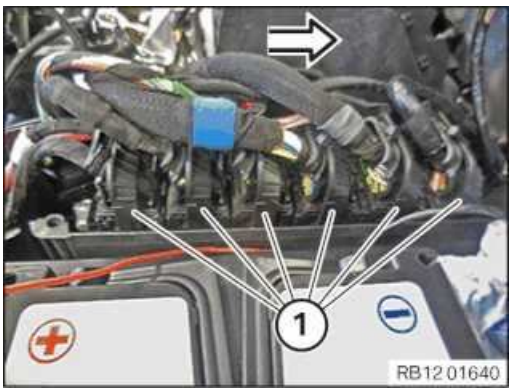
M8X16		Tightening torque	15 Nm

cardiagn.com

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.

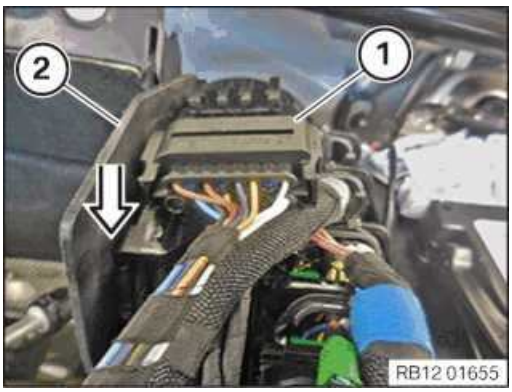


- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).



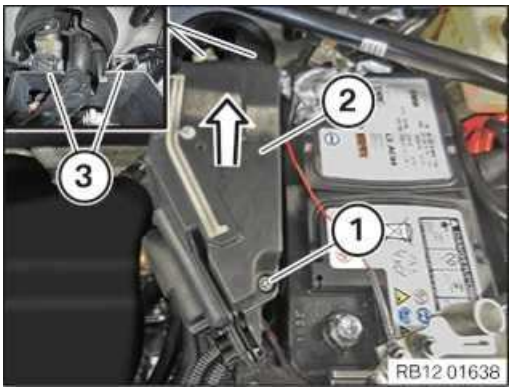
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm



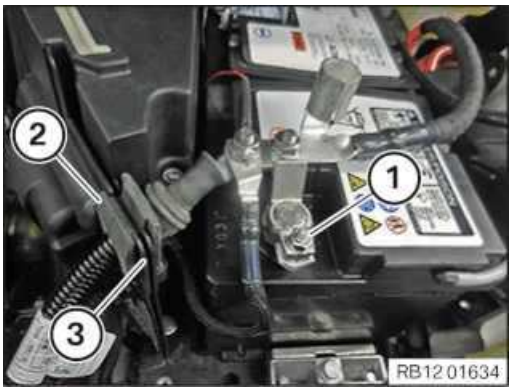
- Attach connector (4) to the differential pressure sensor and lock it audibly.

- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

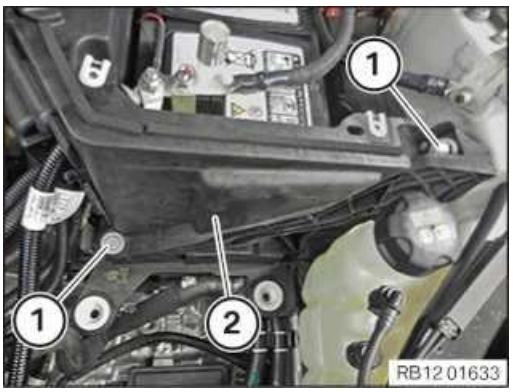
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



cardiagn.com

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box



RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

17 – Fill and bleed the coolant circuit

▶ **Filling and bleed the high-temperature coolant circuit**

- See additional information.

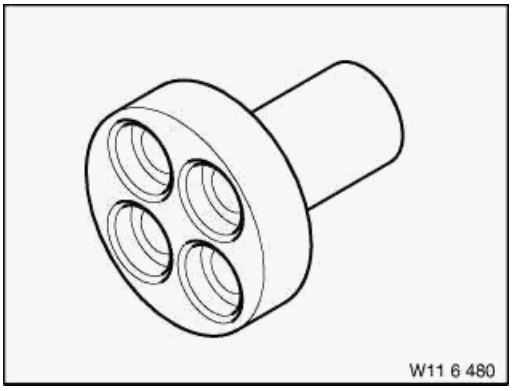
Overview of Special Tools

0 495 105 (11 4 480) oddments tray

Common Used in step 9



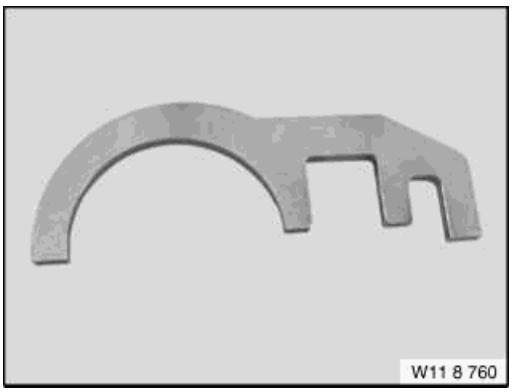
Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

cardiagn.com

0 493 380 (11 6 480) Connector



Common	Used in step 9
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

2 288 380 Locating stud

Common	Used in step 9
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 112 (11 8 760) Gauge

Common	Used in step 9
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

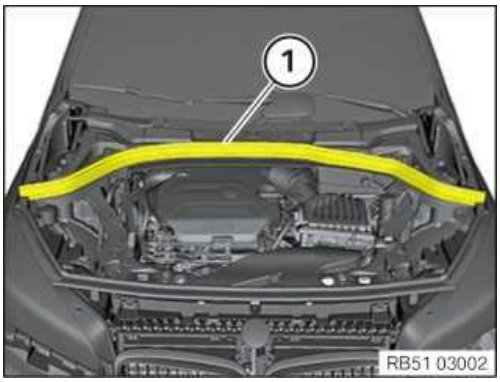
Designation	Used in step
Chain tensioner piston seal on cylinder head	9
Exhaust-gas recirculation cooler seal on exhaust manifold	10
Exhaust-gas recirculation cooler seal on intake plenum	10

cardiagn.com

11 31 005 Check the timing of the camshaft (s)

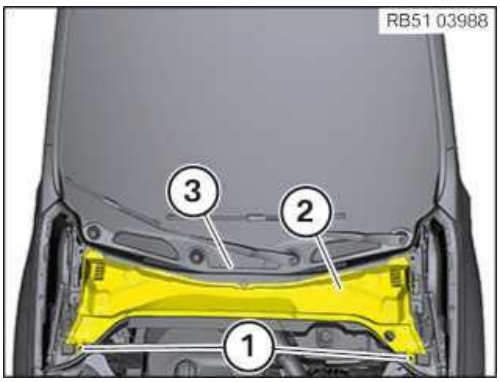
PRELIMINARY WORK

1 – Disconnecting all battery earth leads



- See additional information.

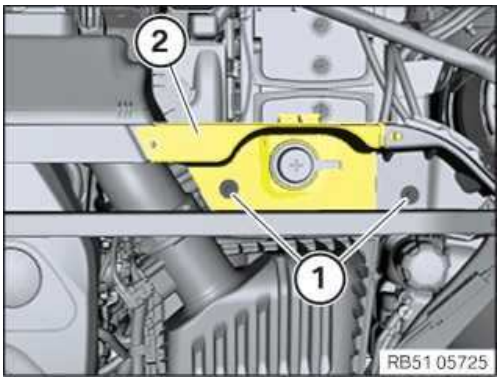
2 – Remove the seal for the rear bonnet



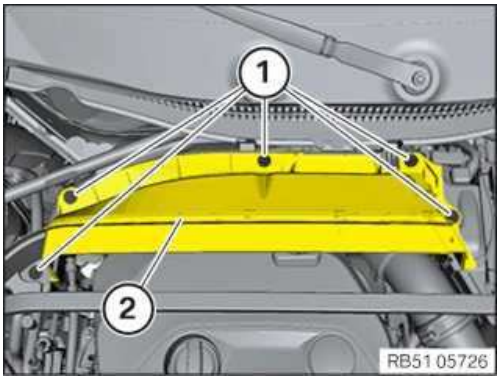
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.



3 – Removing front cowl panel cover

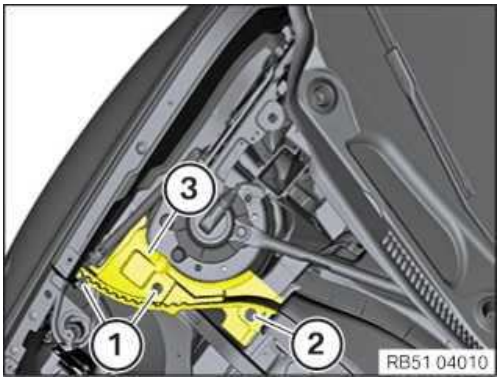


- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

4 – Removing the upper bulkhead cover

cardiagn.com

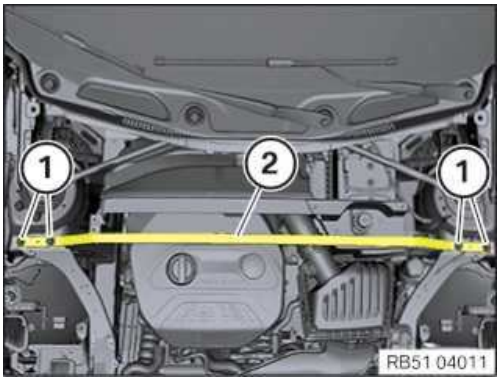
- Loosen screws (1).
- Guide out and remove the cover (2).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

5 – Remove suspension cross-brace

TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

NOTICE

Description is for right component only. The procedure on the left side is identical.

- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).

6 – Removing the acoustic cover

cardiagn.com

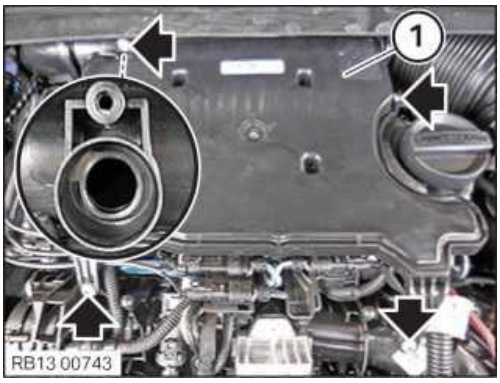
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

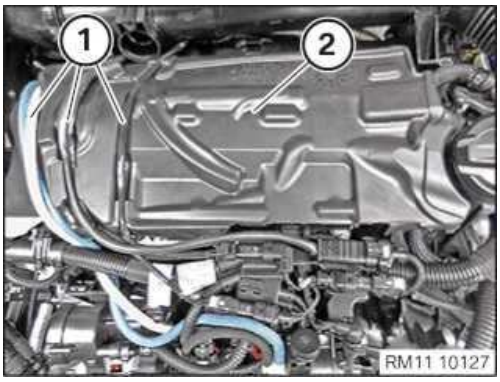
RISK OF DAMAGE



Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

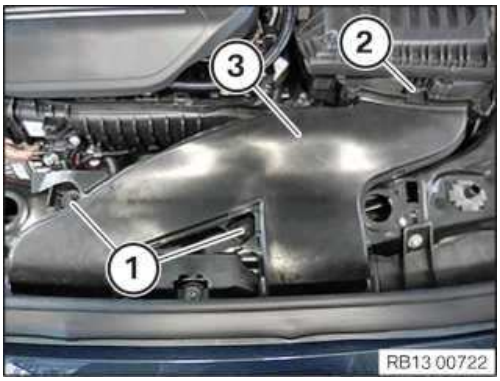
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



- Unclip the acoustic cover from the marked areas towards the top.

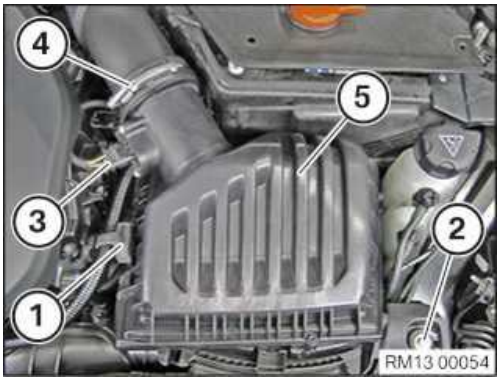
7 – Remove resonator

- Remove screws (arrows).
- Guide out and remove the resonator (1).



8 – Remove the acoustic cover for the injectors

- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

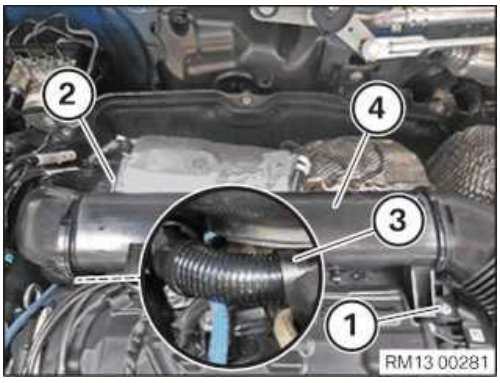


9 – Remove the intake neck for intake silencer housing

cardiagn.com

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

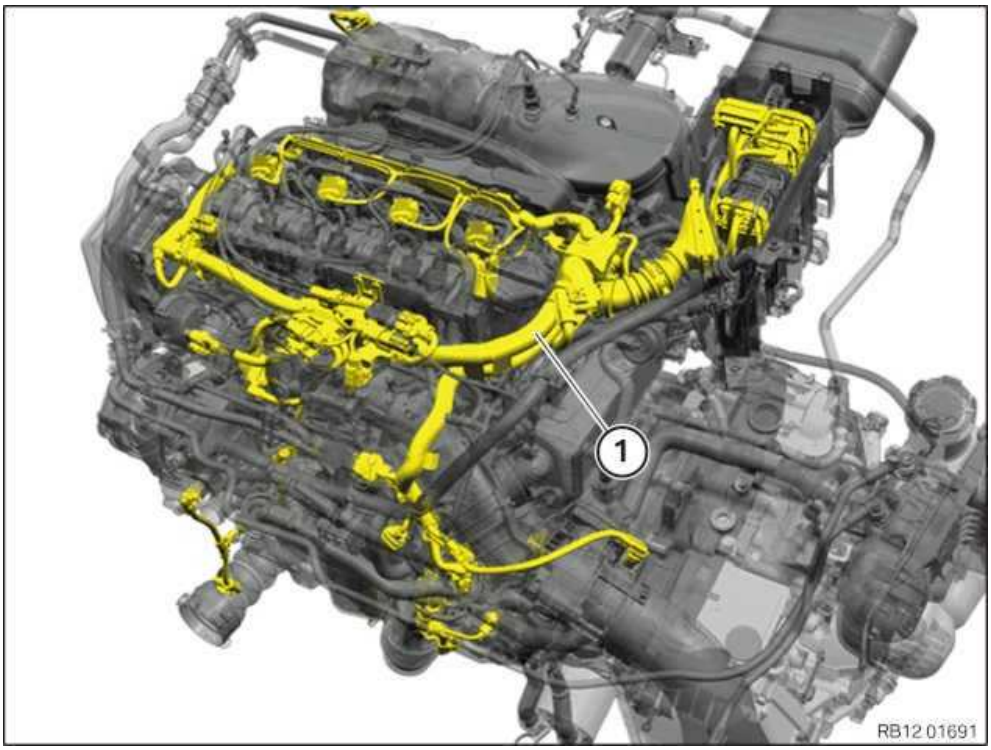
10 – Removing intake silencer housing



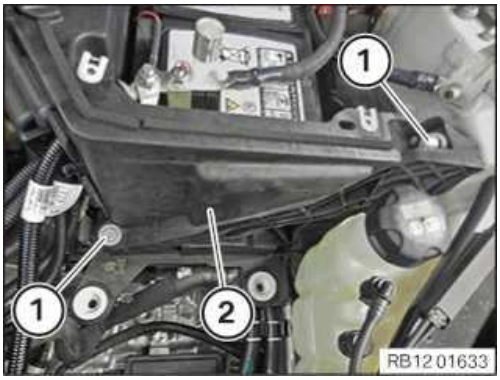
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

11 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

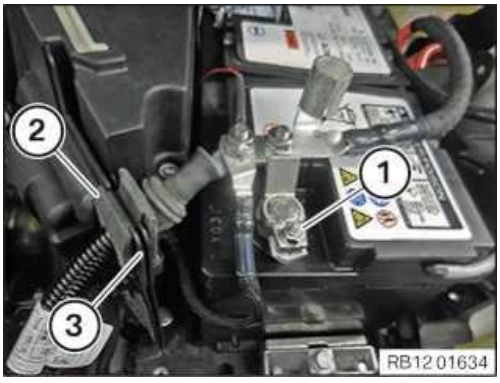


- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

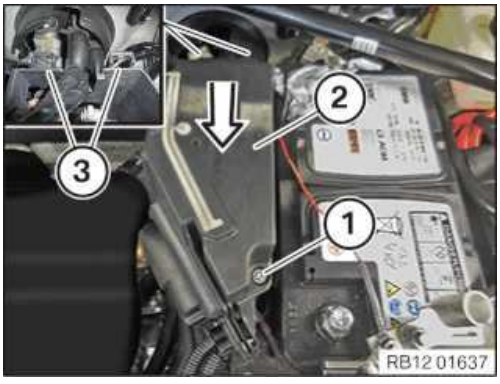


12 – Releasing the wiring harness section for the intake plenum

cardiagn.com

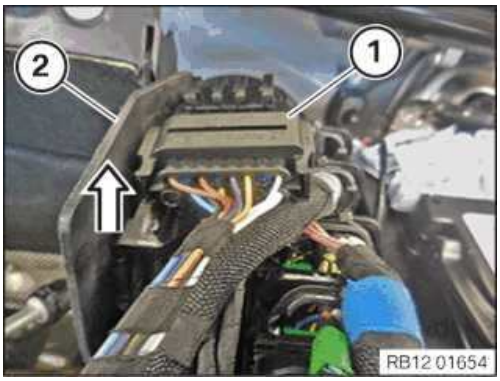


Overview: Wiring harness section for the engine

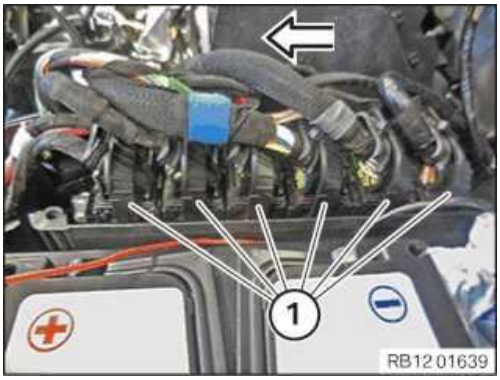


1 Wiring harness section for the engine

- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

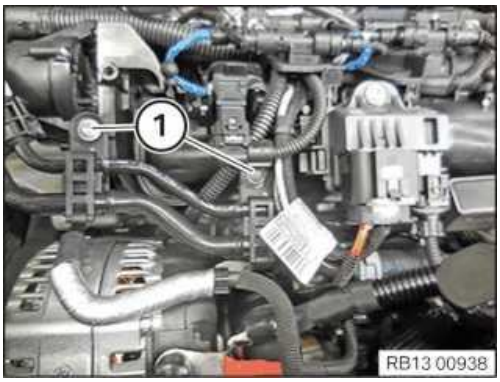


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

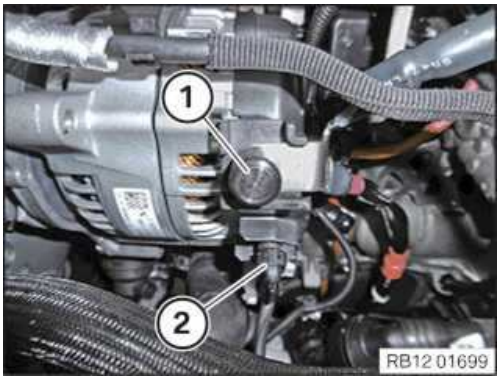


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

cardiagn.com

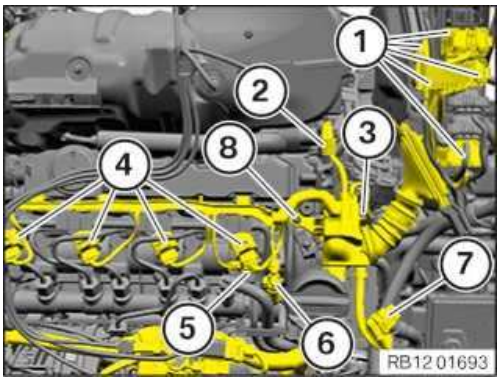


- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).

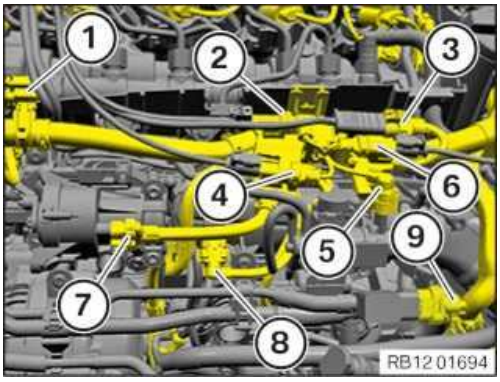


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

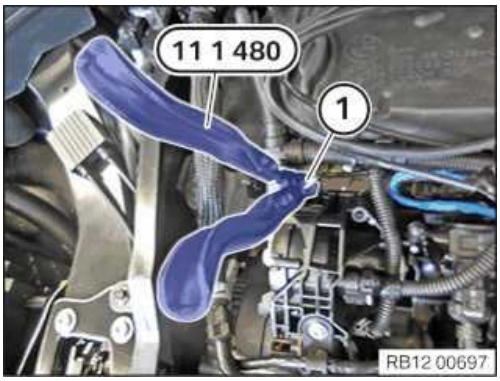
- Unlock and loosen connector (1).



- Loosen screws (1).

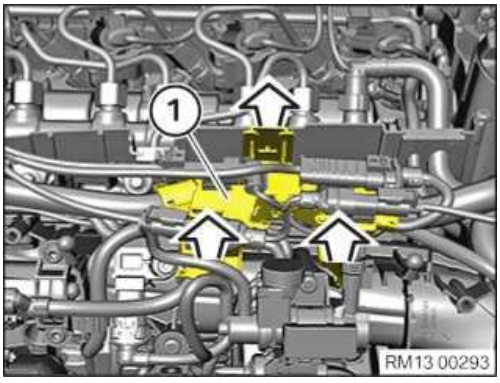


- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.



cardiagn.com

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).



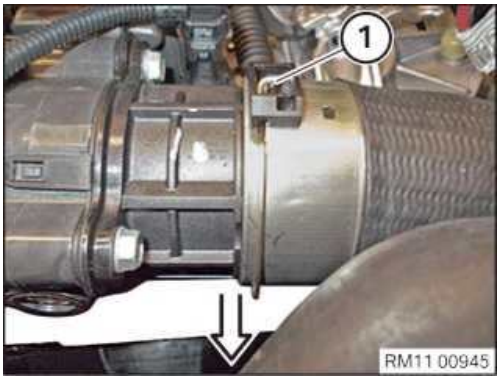
- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock and disconnect the connector (3) from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

▶ **Removing the cable clips from the intake plenum**

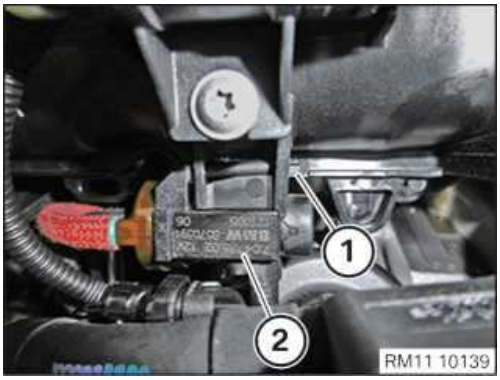
- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

13 – Removing the intake plenum

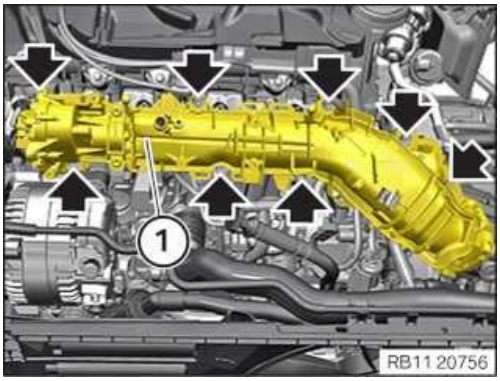


cardiagn.com

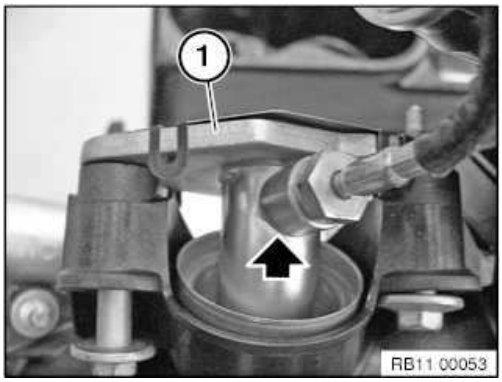
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

cardiagn.com

14 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

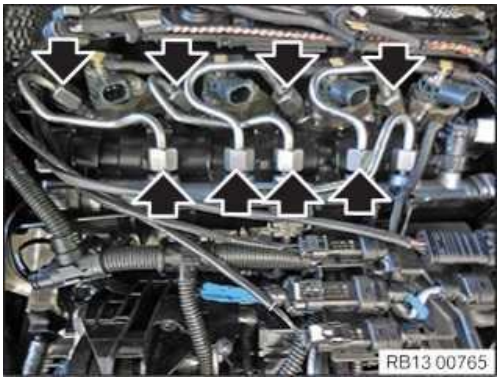
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.



TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

15 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

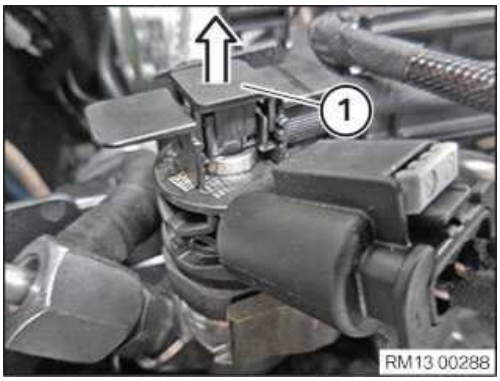
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

16 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

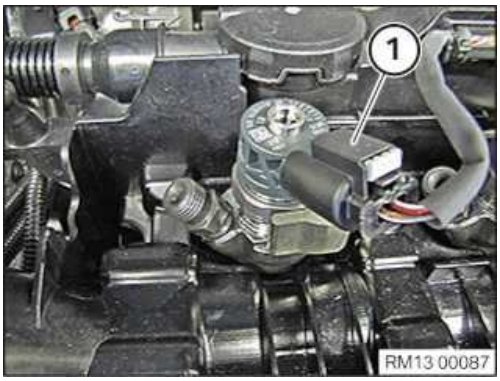
RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

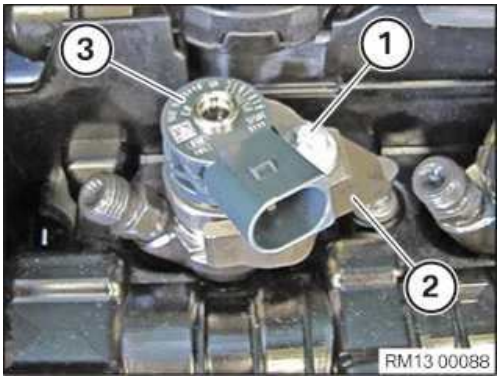
- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.



- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

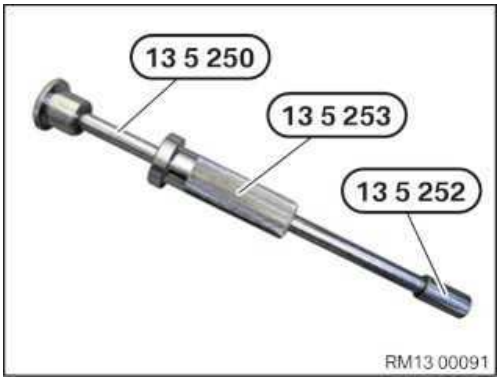
TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

- Unlock and disconnect connector (1).

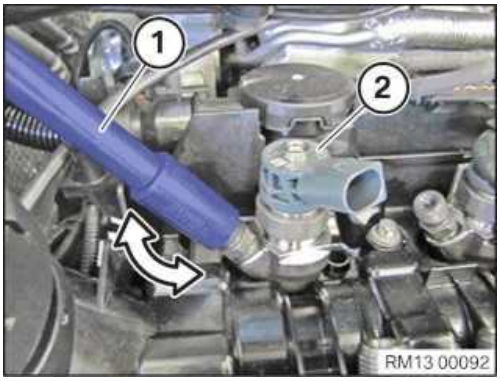
- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

▶ **Loosen stuck injectors**



cardiagn.com

RISK OF DAMAGE



Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)**back onto the special tool **0 493 321 (13 5 250)**.

- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

17 – Remove high-pressure rail

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

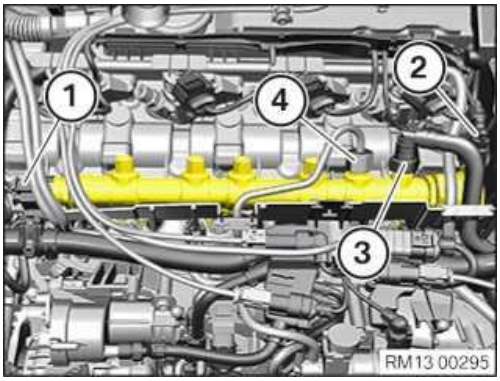
- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

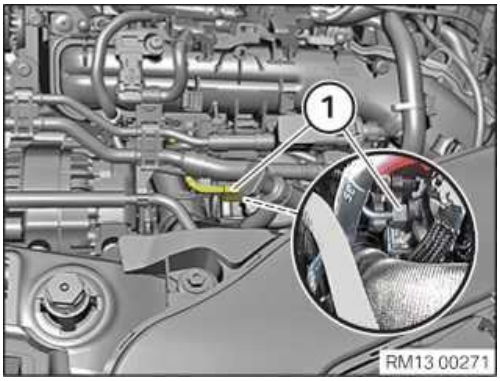
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



cardiagn.com

TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

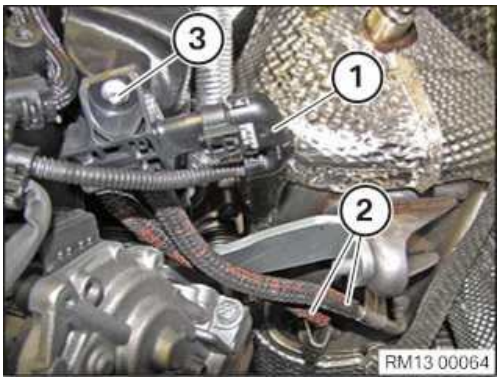
Reset special tool in early to avoid bending pressure lines.

- Unlock and disconnect connector (1).
- Unlock and disconnect connector (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool .
- Reset special tool early on to avoid bending pressure lines.

- Slacken the union nut (1) on the high pressure pump.

- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

18 – Remove differential pressure sensor

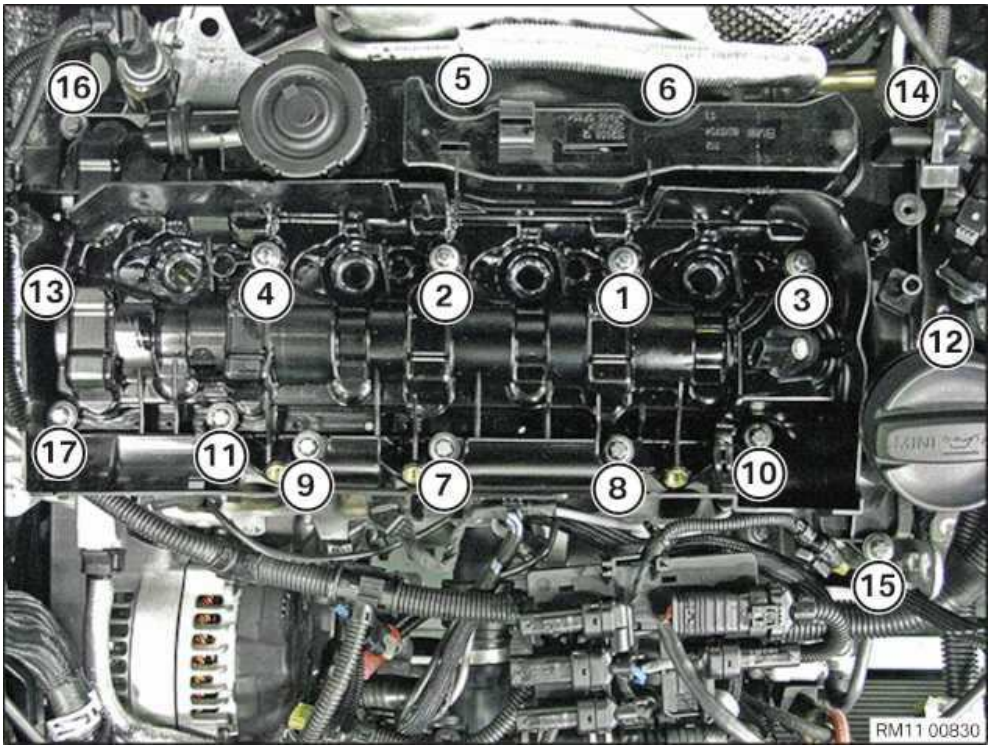


cardiagn.com

RISK OF DAMAGE

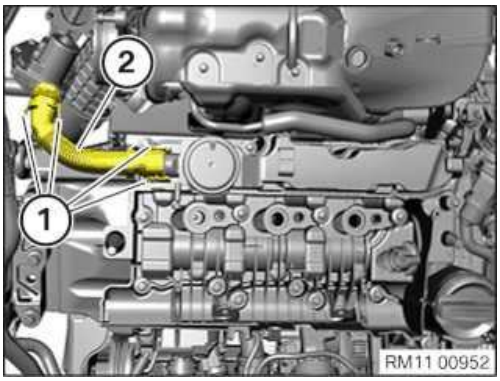
Electrostatic discharge.

Damage to or destruction of electrical components.



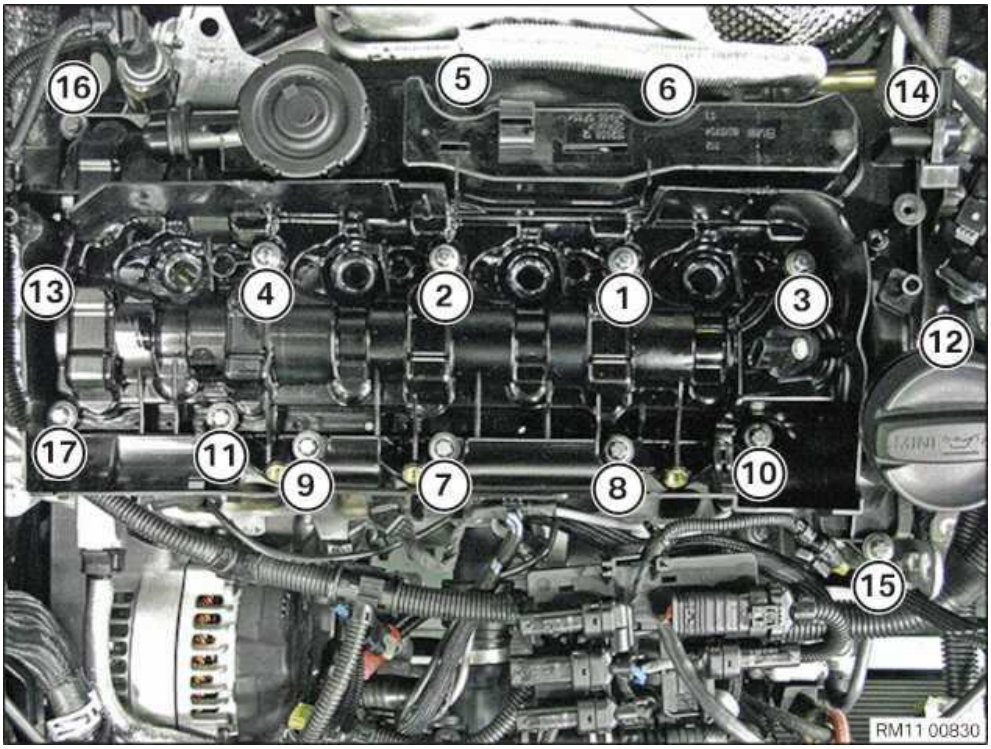
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.



19 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

cardiagn.com

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

20 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

TECHNICAL INFORMATION

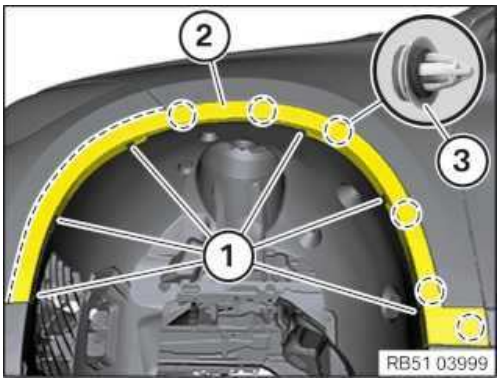
Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

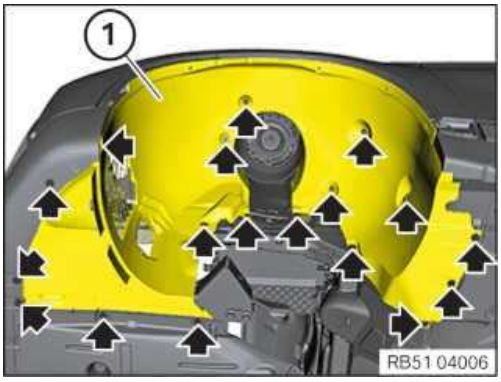
21 – Removing the front right wheel arch cover

cardiagn.com



▶ **Remove the front wheel arch trim**

NOTICE

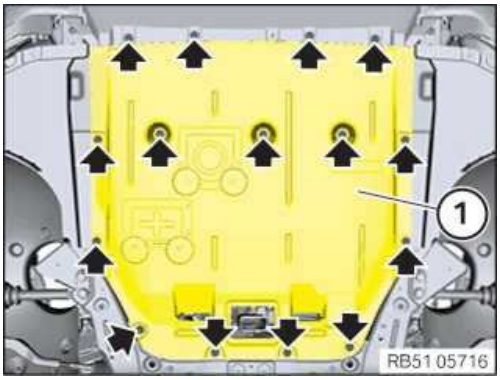


To provide a better overview: Schematic diagram with partially hidden components.

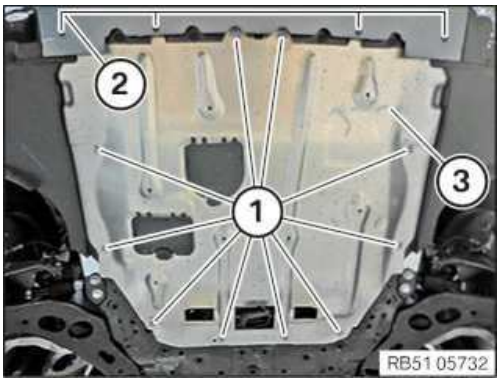
NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.



NOTICE



Description is for left component only. Procedure on the right side is identical.

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

22 – Removing the front underbody protection

- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

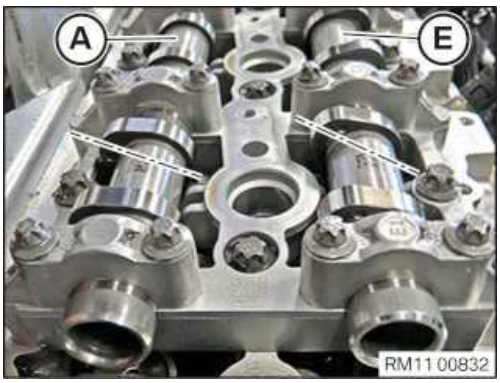
cardiagn.com

23 – Checking camshaft timing

- Remove protective cap (1) from oil sump.

- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE



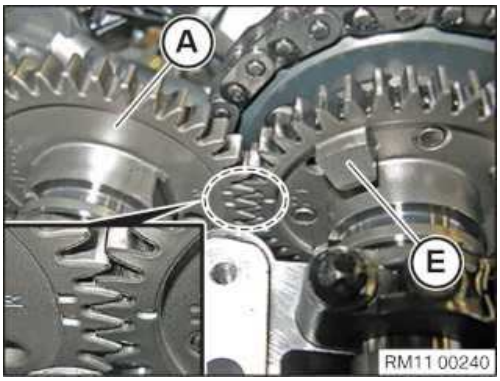
Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

cardiagn.com

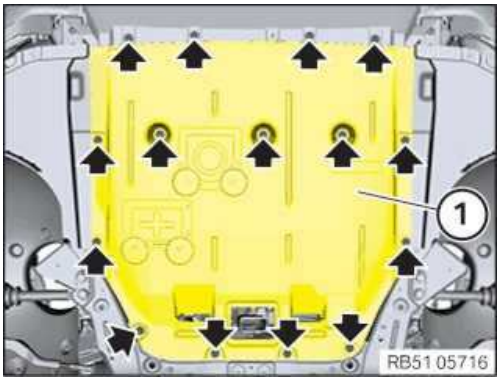
- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

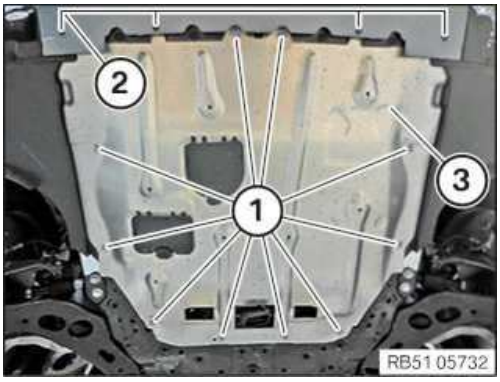
For additional information, see: 1131 ... Adjust the timings of the camshafts.



- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

POSTPROCESSES



24 – Installing the front underbody protection

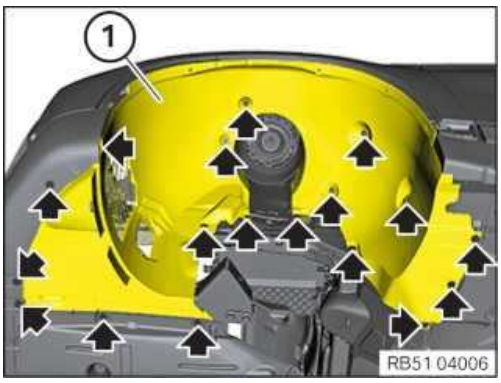
- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front



Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

cardiagn.com

25 – Installing the front right wheel arch cover

NOTICE

Description is for left component only. Procedure on the right side is identical.

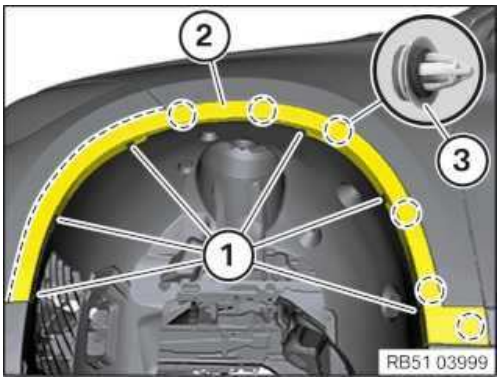
- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm



▸ **Installing front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.
  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

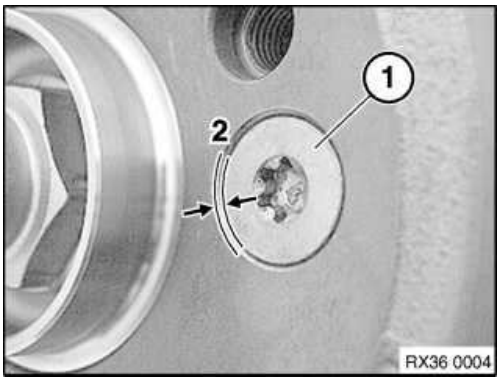
26 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

cardiagn.com

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

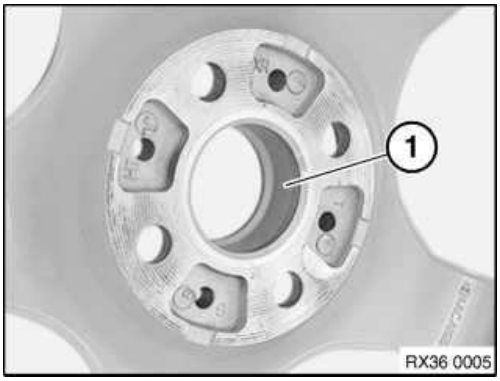


- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

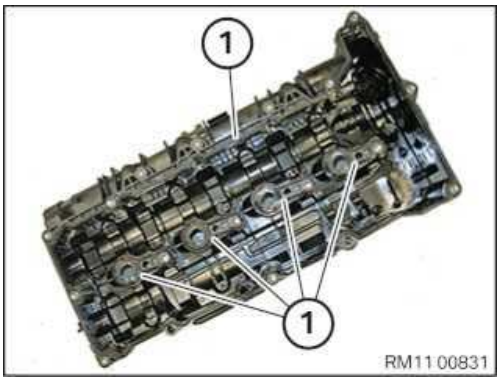
Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

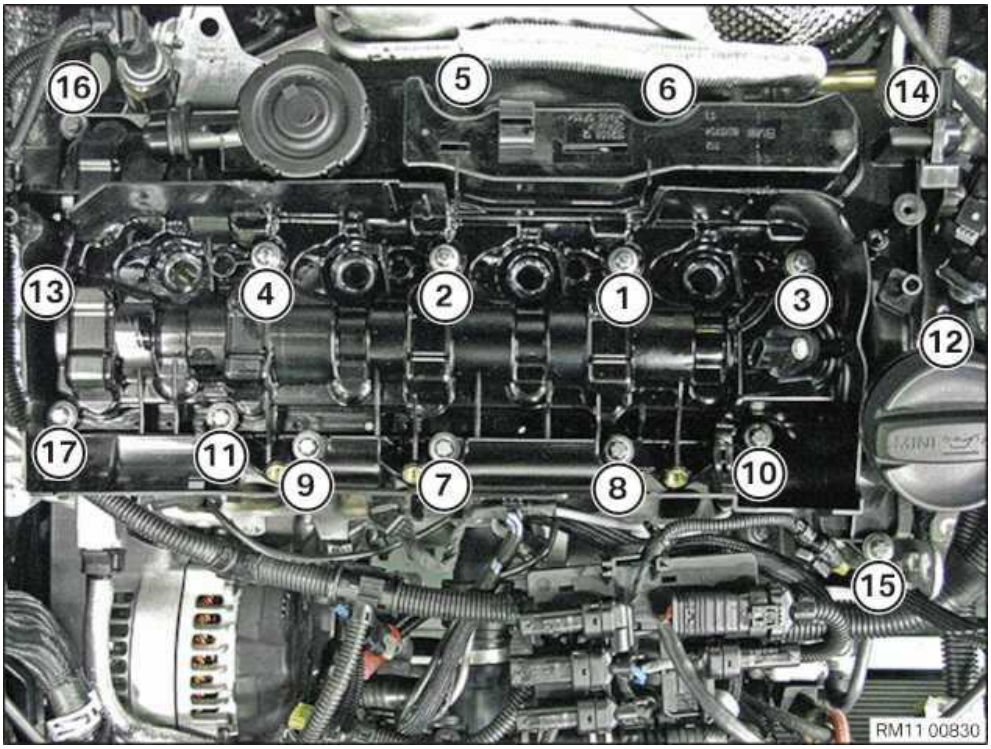
Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		



27 – Installing cylinder head cover

Overview: Screw connection of the cylinder head cover

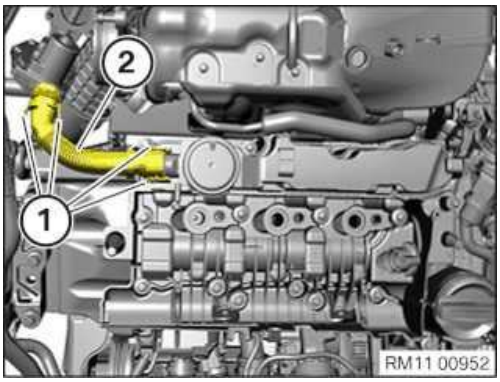


1 to 16 screws of the cylinder head cover.

cardiagn.com

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket

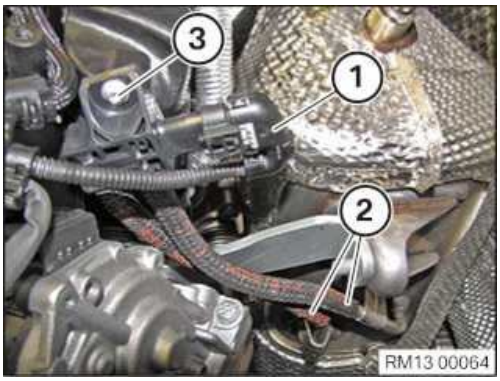


- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-



- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

28 – Installing differential pressure sensor

cardiagn.com

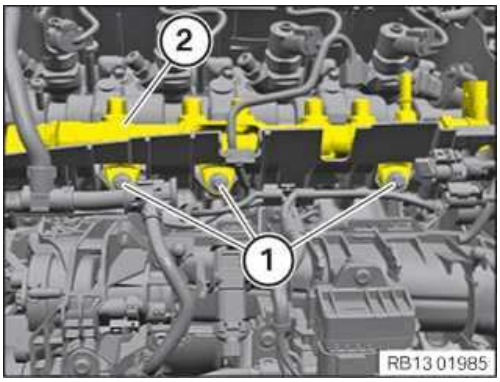
- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

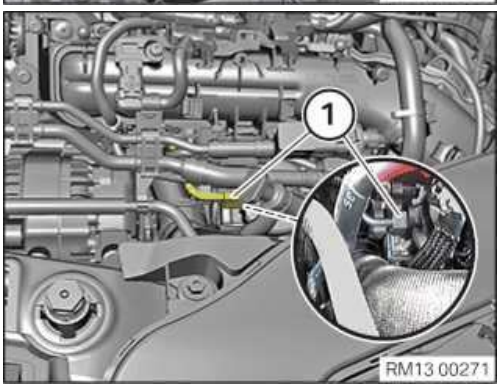


Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.



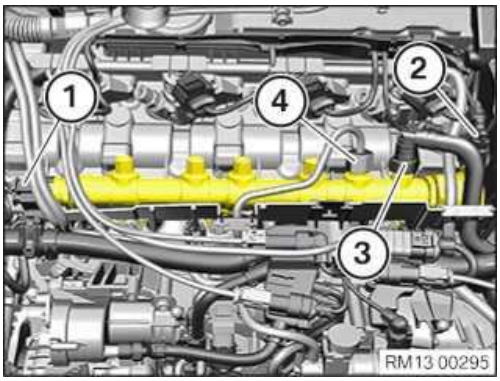
29 – Installing the rail

- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm

TECHNICAL INFORMATION



Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

cardiagn.com

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool .

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Connect and lock the fuel line (3).

  Fuel line (3) must engage audibly.
- Connect connectors (2) and lock.

  The connector (2) must engage audibly.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

30 – Installing injectors of injection system

▸ **Cleaning the injector shafts**

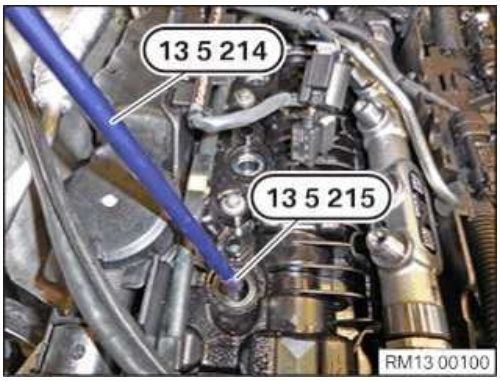
CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

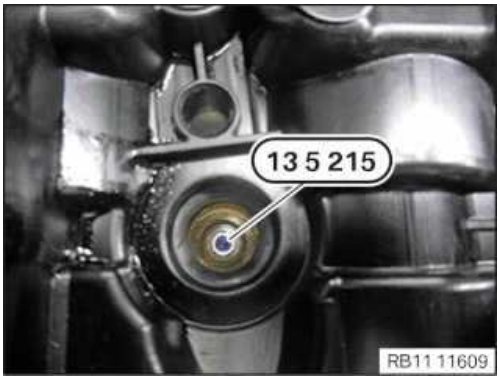
- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.



RISK OF DAMAGE

Contaminant or foreign body.

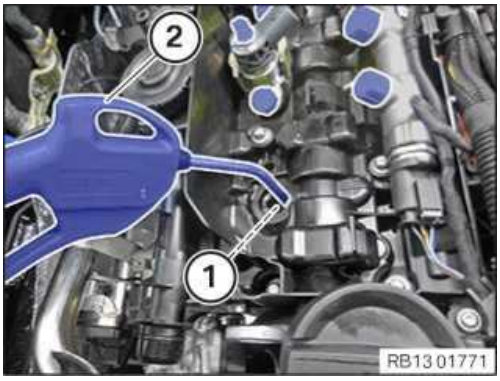


Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

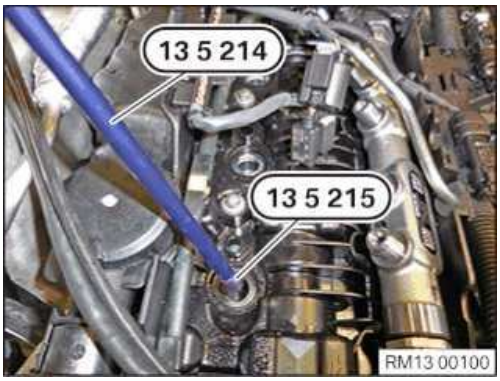
cardiagn.com

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

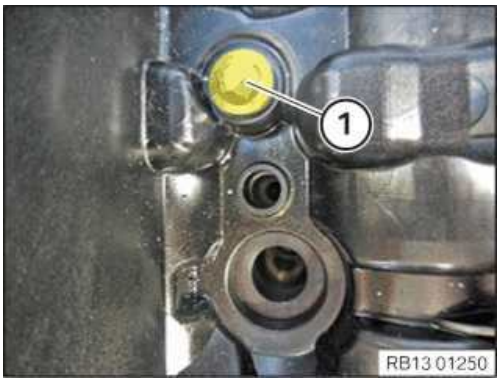


- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

- Blow out injector shaft (1) with air gun (2).

cardiagn.com

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.



▸ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▸ **Prepare the injector for installation**

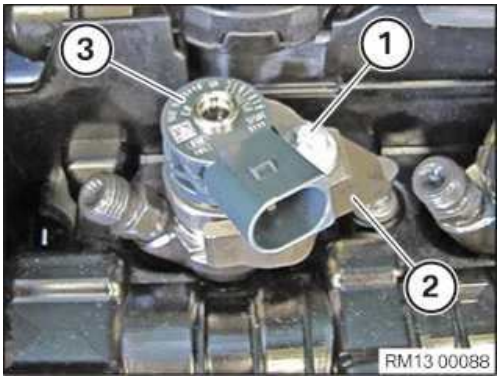
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

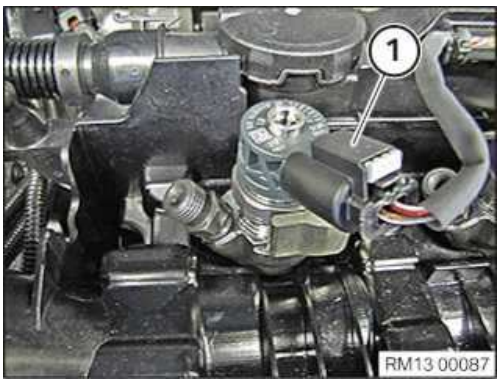


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring

- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials



Injector lubricating grease	50 g, Can	83230441070

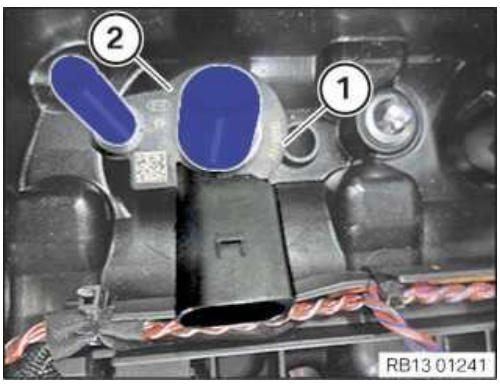
- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



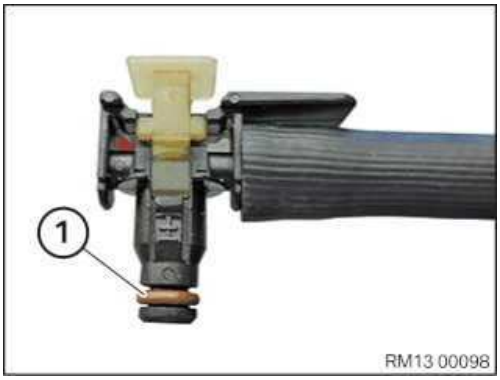
▸ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

cardiagn.com

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

31 – Connect the leakage oil line on the injector

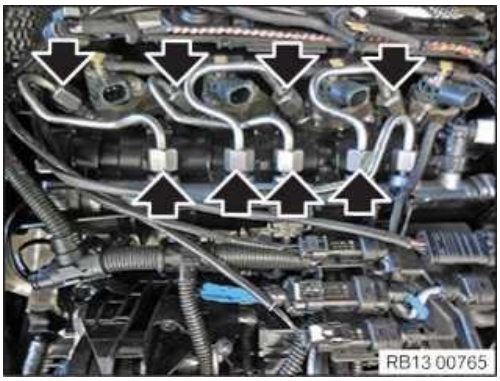
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

32 – Installing high pressure lines between rail and injectors



TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

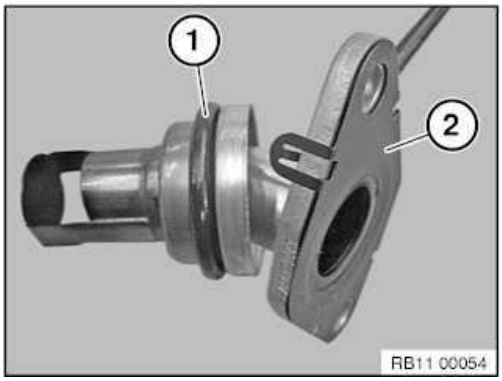
Reset special tool in early to avoid bending pressure lines.

cardiagn.com

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

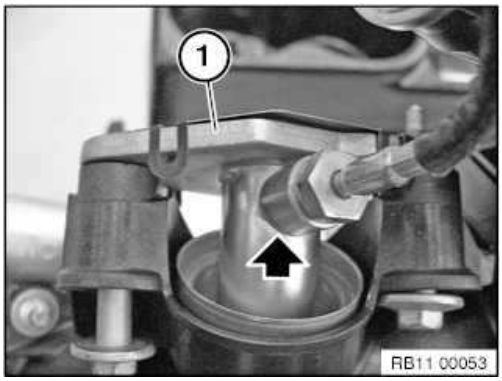


- Tighten the high pressure lines (arrows) with the special tool .

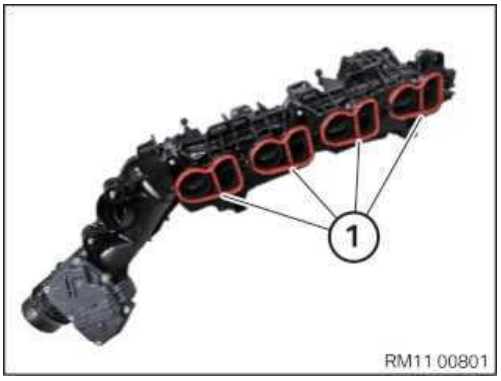
High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).



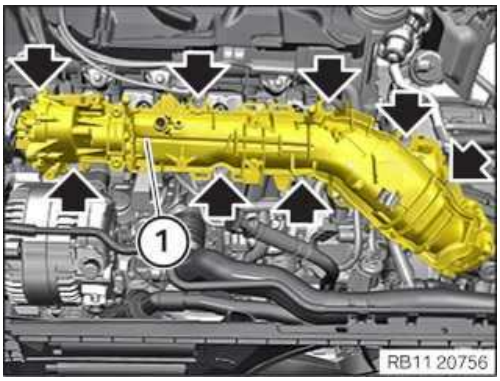
33 – Installing the intake plenum



- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

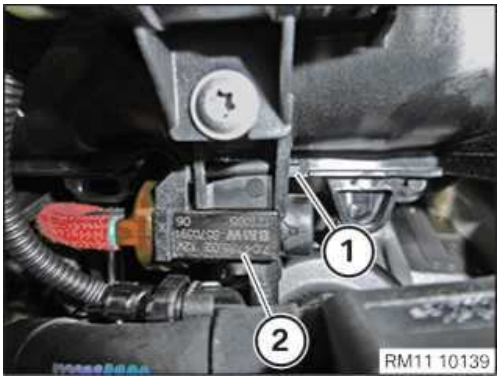
  Parts: Gasket
- Position the seal (2) and clip it in.



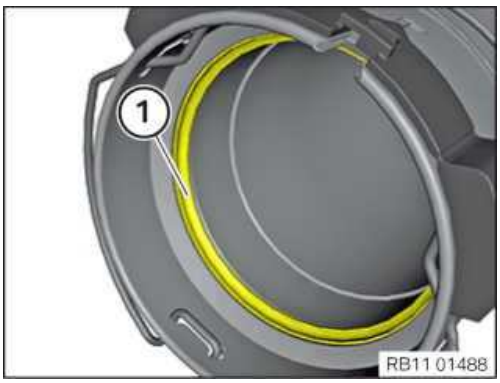
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



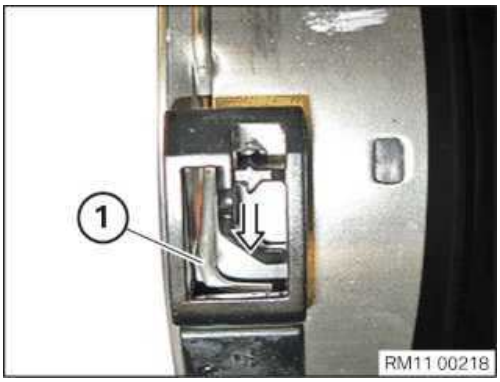
cardiagn.com



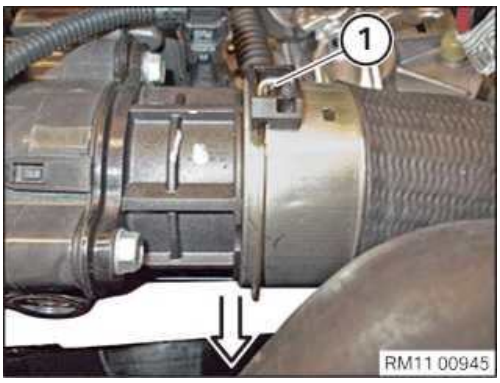
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



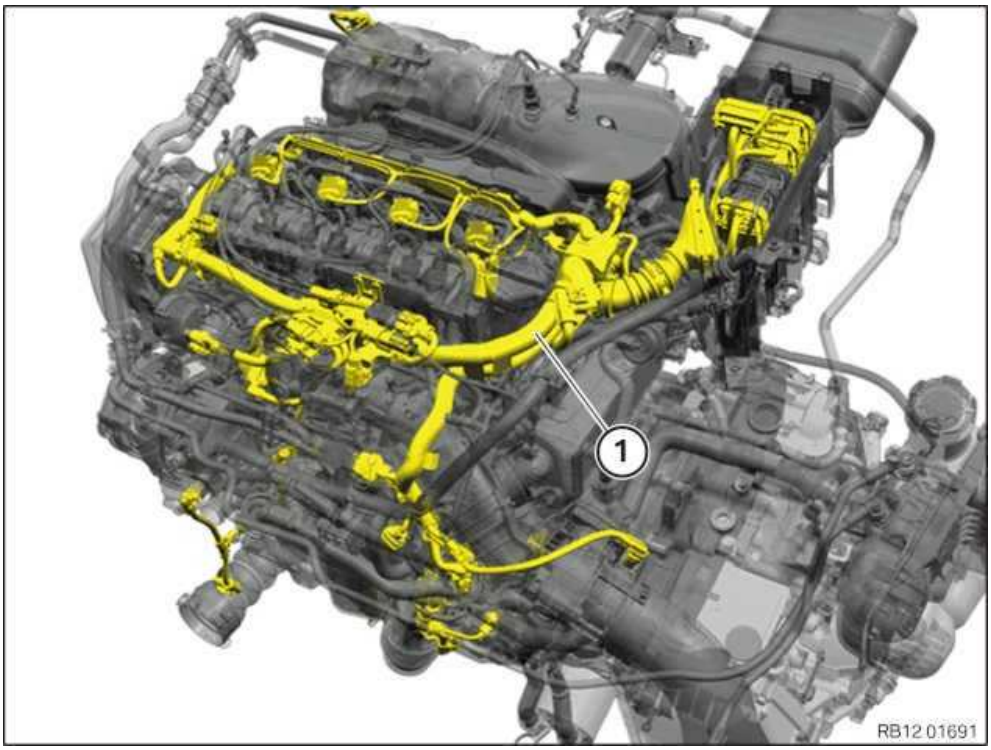
- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

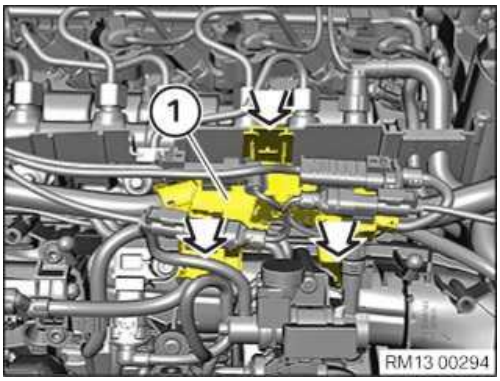
- Engage the lock (1) on the bracket (arrow).



- Connect the charge air line to the throttle valve.

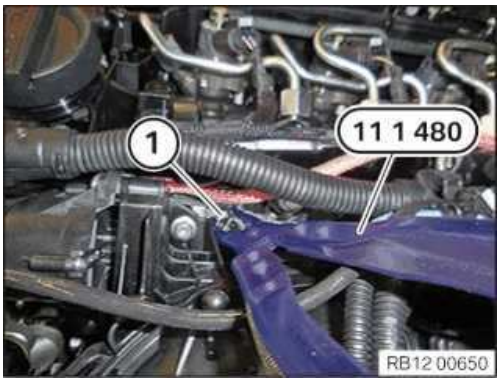
  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

34 – Fastening the wiring harness section for the intake plenum



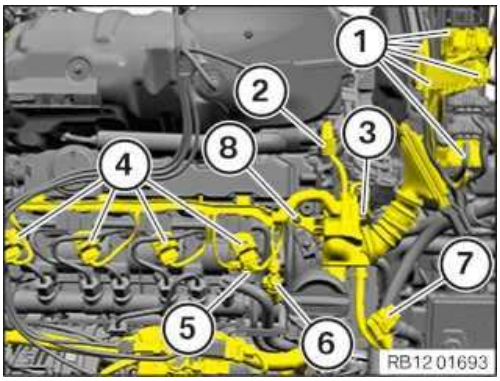
cardiagn.com

Overview: Wiring harness section for the engine



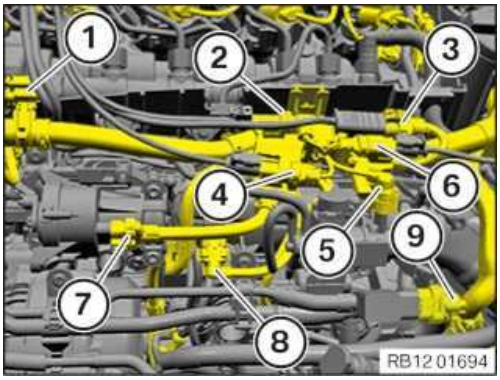
1 Wiring harness section for the engine

▶ **Installing the cable clip for the intake plenum**

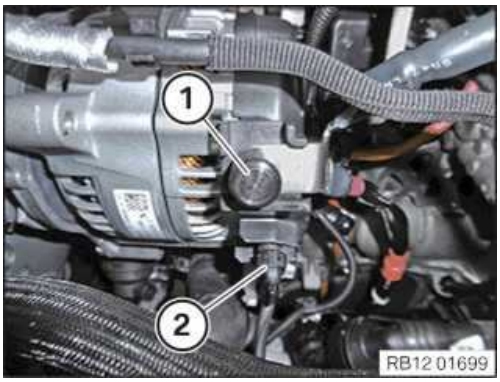


- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.



cardiagn.com

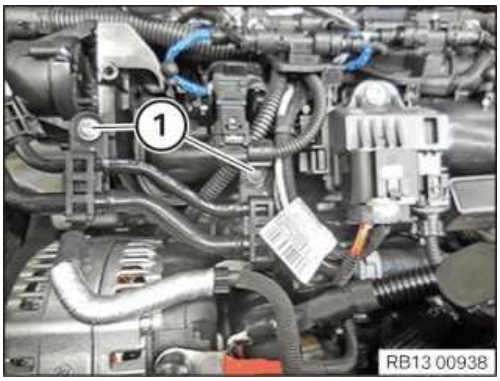


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.

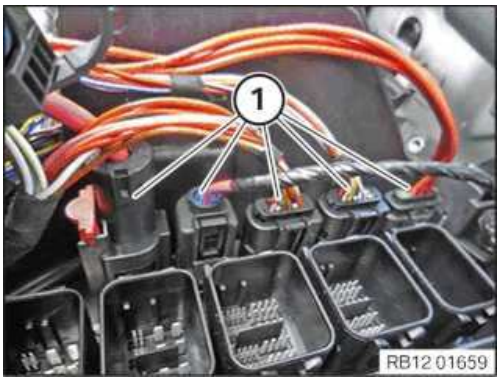


- Connect and lock the connector (2).

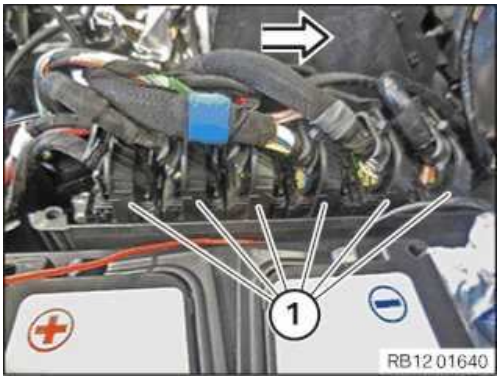
  Lock must snap audibly into place.
- Connect the positive battery cable (1) and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

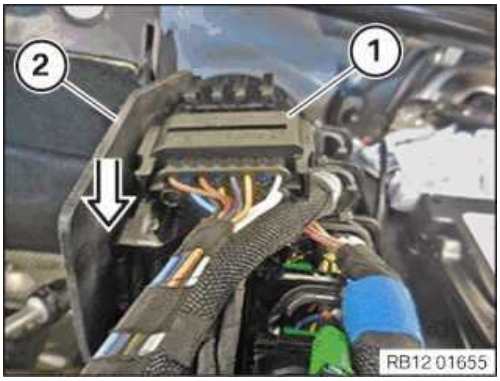


- Position the fuel line.
- Tighten the screws (1).

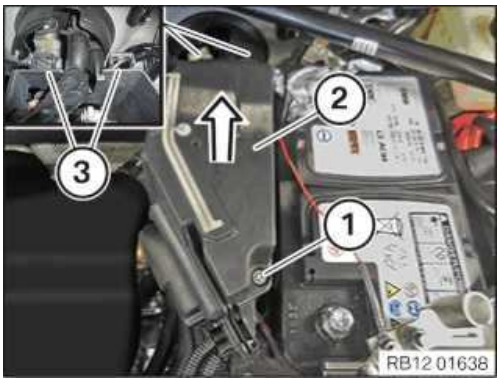


Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

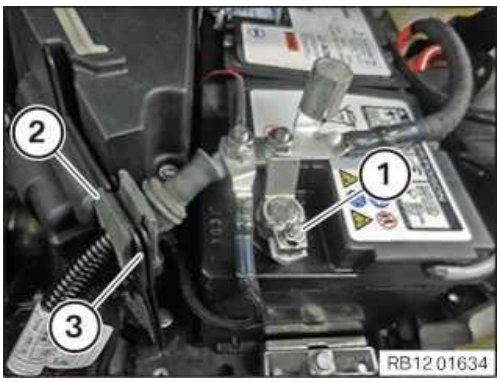


cardiagn.com



- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

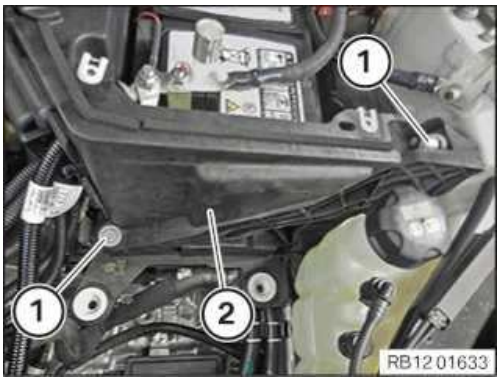


- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm

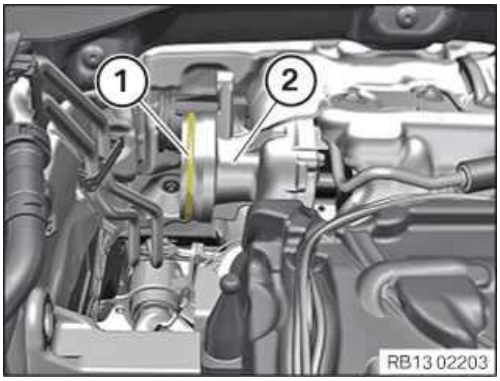


- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

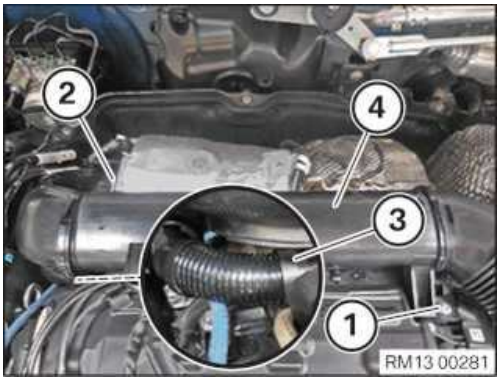
Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

cardiagn.com



- Feed in and install tension strut (2).
- Tighten the screws (1).



Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

35 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

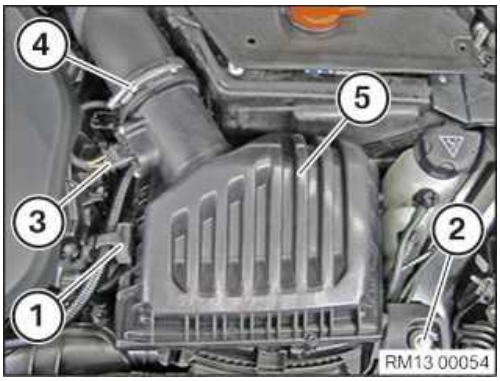
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

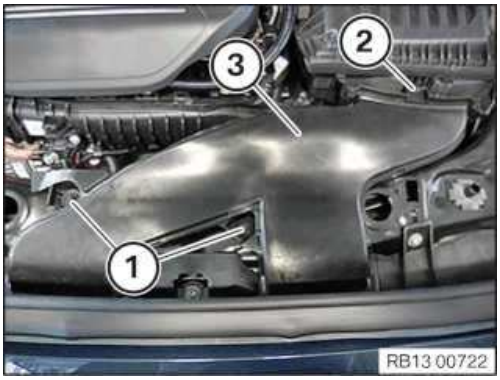
36 – Installing intake silencer housing

cardiagn.com

- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm



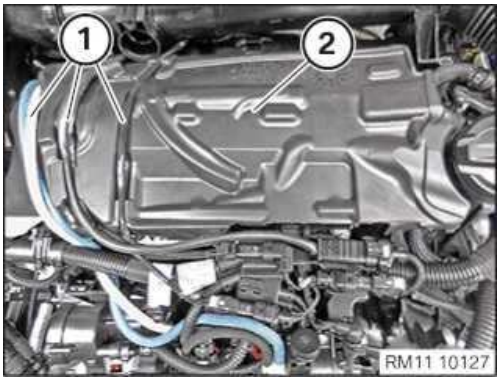
- Tighten clamp (4).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

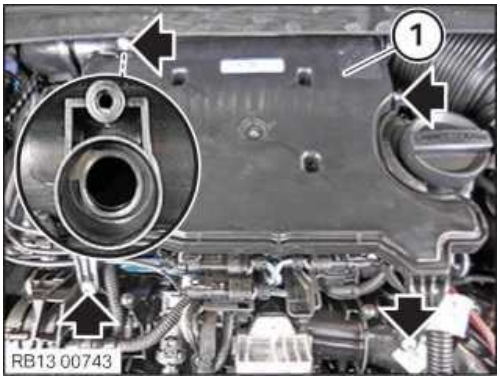
- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

37 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection



M6		Tightening torque	8 Nm

38 – Install the acoustic cover for the injectors

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

39 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).
  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

40 – Install acoustic cover

cardiagn.com

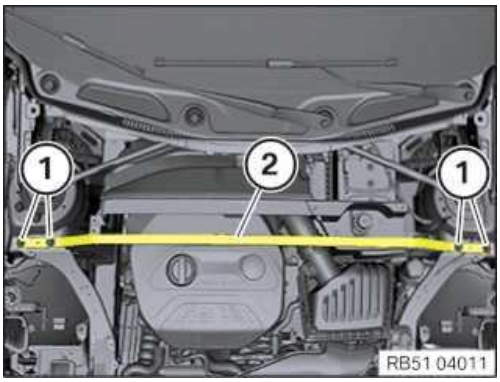
RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

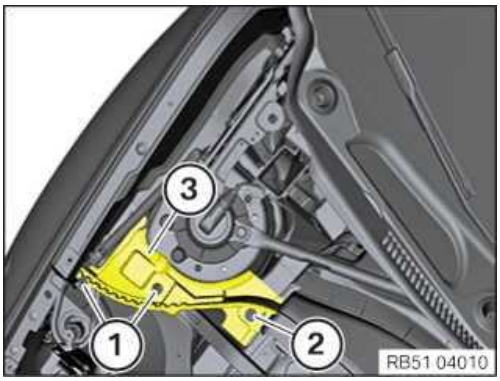


- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

41 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

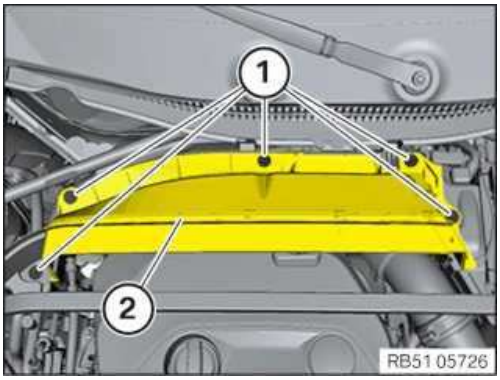
Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

cardiagn.com

NOTICE

Description is for right component only. The procedure on the left side is identical.

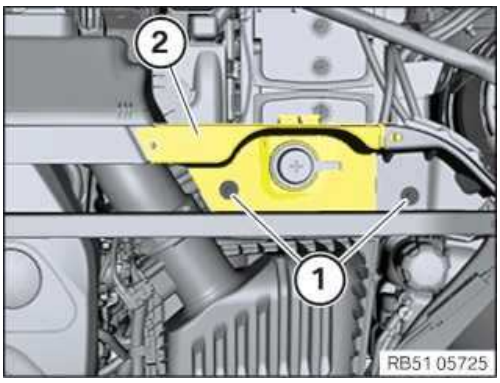


- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

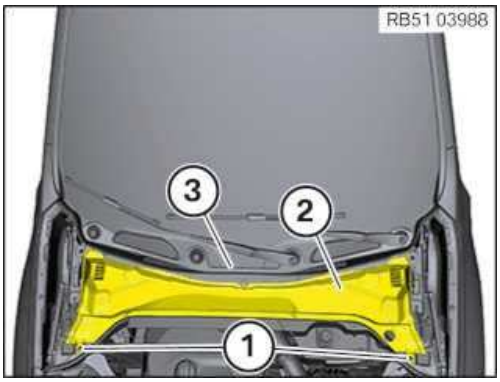


42 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm

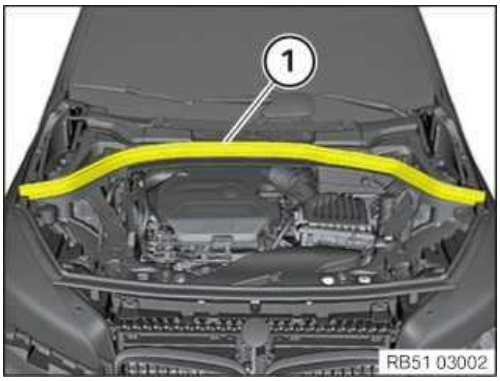


- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

43 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

44 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

45 – Disconnecting all battery earth leads

- See additional information.

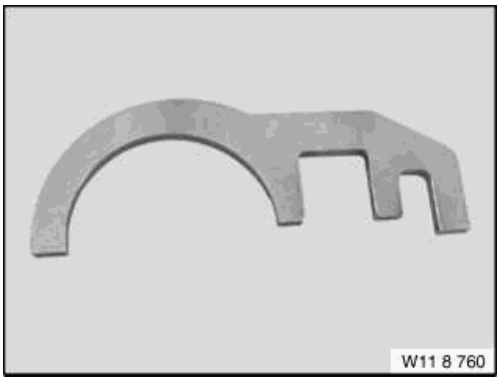
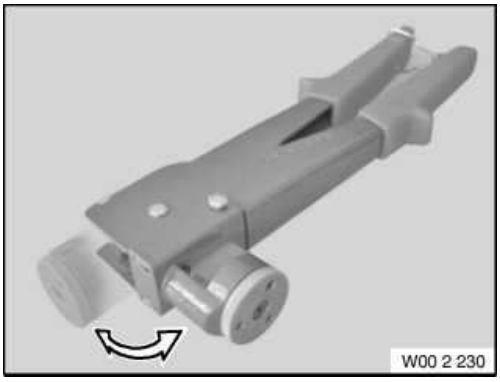
0 493 380 (11 6 480) Connector



Common	Used in step 23
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

2 288 380 Locating stud



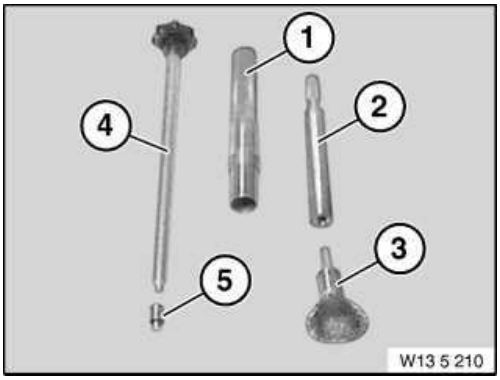
Common	Used in step 23
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 112 (11 8 760) Gauge

Common	Used in step 23
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

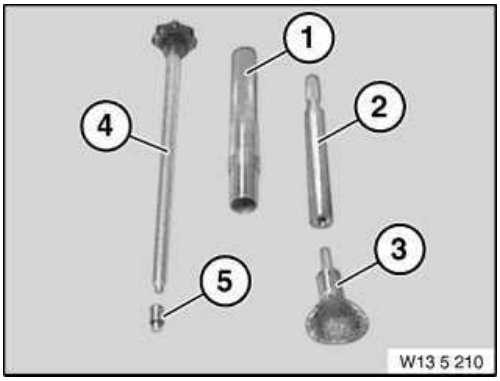
0 496 521 (00 2 230) Pliers

Common	Used in step 25
Usage	(Blind rivet pliers for plastic rivets) For shaft diameters of 3.5 mm, 3.9 mm and 4.5 mm
Included in the tool or work	
Storage location	C25
Replaced by	
In connection with	
SI-Number	01 17 08 (478)



cardiagn.com

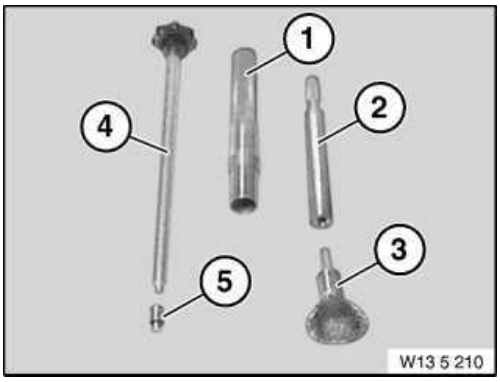
2 344 011 Tool



Common	Used in step 26
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

0 493 763 (13 5 215) Plug

Common	Used in step 30
Usage	(Seal plug)
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	



0 493 762 (13 5 214) Rod

Common	Used in step 30
Usage	(Mounting rod) For the seal plug
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 758 (13 5 210) Tool

Common

Used in step 30

Usage	(Cleaning set) For injector channels
Included in the tool or work	
Storage location	B4
Replaced by	
In connection with	
SI-Number	01 05 00 (574)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 759 (13 5 211)		**Holding sleeve** (Guide sleeve)	
2	0 493 760 (13 5 212)		**Holder** (Brush holder)	
3	0 493 761 (13 5 213)		**Brush head**	
4	0 493 762 (13 5 214)		**Rod** (Mounting rod) For the seal plug	
5	0 493 763 (13 5 215)		**Plug** (Seal plug)

cardiagn.com

11 31 005 Checking camshaft timing (B47)

Special tools required:

- 11 6 480
- 2 288 380
- 11 8 760

Important!

Risk of damage to engine.

Notes for checking and setting the timing must be observed without fail.

Necessary preliminary tasks:

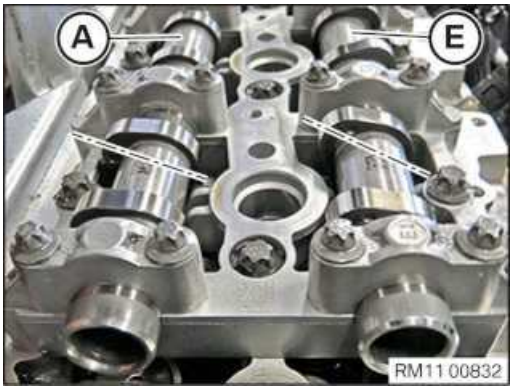
- Remove cylinder head cover.
- Remove front right wheel arch panel.

Crank engine with special tool 11 6 480 to TDC firing position of cylinder no. 1.**Important!**

Do not crank engine back.

Remove protective cap (1) on oil sump.

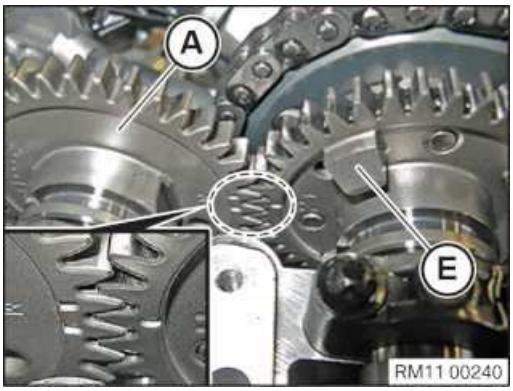
cardiagn.com



Crank engine at central bolt with special tool 11 6 480

Important!

On vehicles with manual gearbox, an additional bore hole that can be confused with dowel hole is located in front of dowel hole.



It must be possible to slide special tool 2 288 380 up to the crank in the oil sump.

Use special tool 2 288 380 to block the crankshaft in the TDC firing position Cylinder 1

The cam on the intake camshaft (E) points obliquely upwards at cylinder No. 1.

The cam on the exhaust camshaft (A) points obliquely outward to the left at cylinder No. 1.

Marks on both camshafts (A and E) must match up (see graphic).

Place special tool 11 8 760 on exhaust camshaft.

Note:

Special tool 11 8 760 must lie flush on cylinder head.

If necessary, adjust camshaft timing.

Important!

2 288 380 Remove special tool before starting engine.

cardiagn.com

Install protective cap (1).

Required follow-up work:

- Install cylinder head cover.
- Install front right wheel arch panel.
- Reassemble the vehicle.

cardiagn.com

11 31 090 Installing and removing or replacing chain tensioner piston (B47)

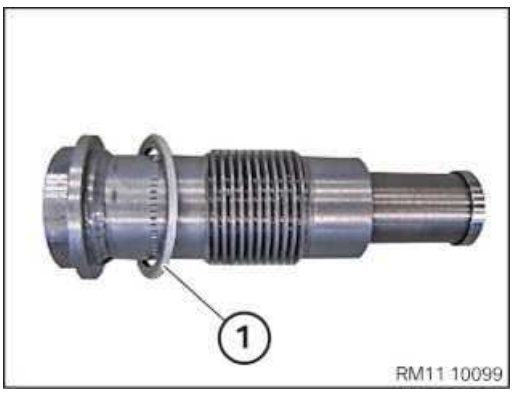
Necessary preliminary tasks:

- Remove exhaust-gas recirculation cooler

Removal:

Release chain tensioner (1).**Important!**

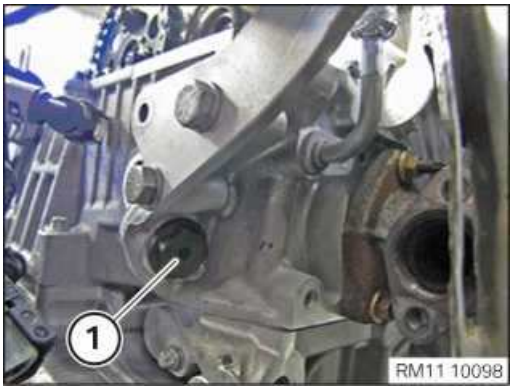
Have a cleaning cloth ready. A small quantity of engine oil will emerge after the screw connection has been released.



Make sure no oil runs into the clutch housing.

Installation:

If the chain tensioner is reused, its oil chamber must be drained. Place chain tensioner on a level support and slowly compress.



Repeat process twice.

Replace the sealing ring.

Part: Replace sealing ring (1).

cardiagn.com

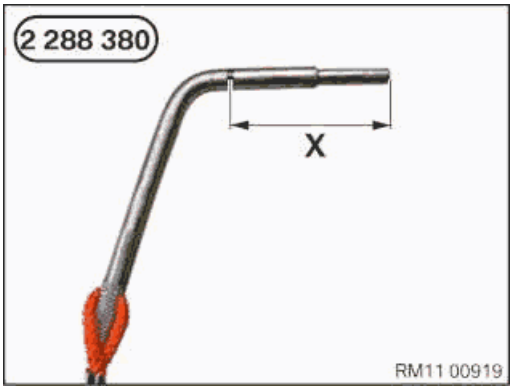
Tighten chain tensioner (1).
Tightening torque: 11 12 5AZ.

Required follow-up work:

- Install exhaust-gas recirculation cooler

cardiagn.com

11 31 ... Notes for checking and adjusting the timings (B37, B38, B47, B48)

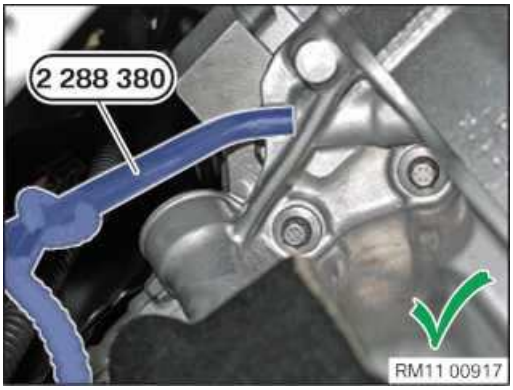


Special tools required:

- 2 288 380

Important!

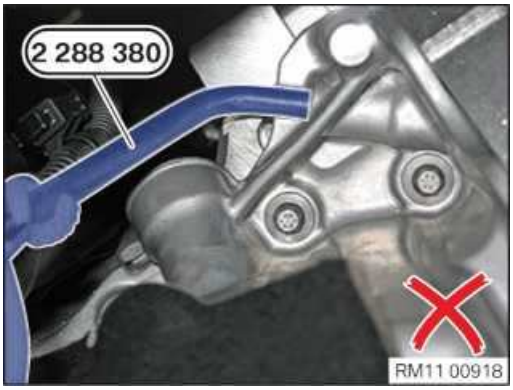
Risk of damage to engine.



The notes for checking and adjusting the timing must be strictly observed!

Vehicles with manual transmission:

Dimension (x) = 56 mm.



Insert the special tool 2 288 380 up to dimension (X) into the dowel hole.

Vehicles with manual transmission:

Special tool 2 288 380 correctly positioned.

The engine is located at the first cylinder at top dead centre.

Vehicles with manual transmission:

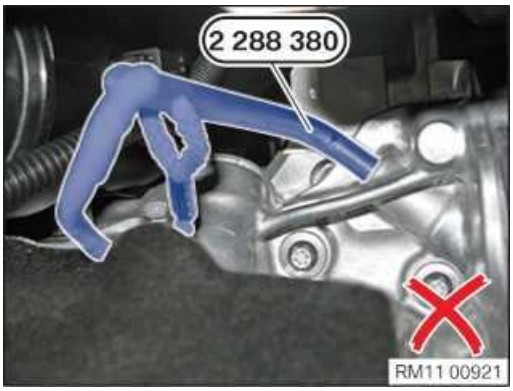
Special tool 2 288 380 incorrectly positioned.

The TDC setting of the first cylinder has not been acheived.

cardiagn.com

Vehicles with automatic transmission:

Dimension (Y) = 66 mm.



Insert the special tool 2 288 380 up to dimension (Y) into the dowel hole.

Vehicles with automatic transmission:

Special tool 2 288 380 correctly positioned.

The engine is located at the first cylinder at top dead centre.

Vehicles with automatic transmission:

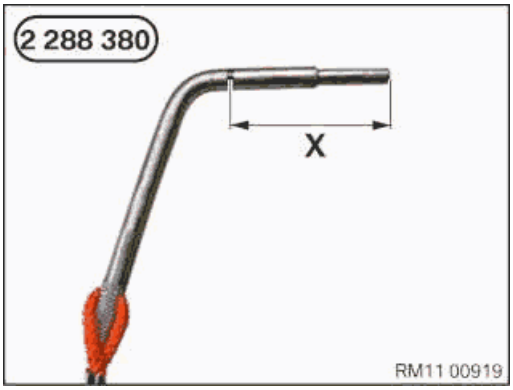
Special tool 2 288 380 incorrectly positioned.

The TDC setting of the first cylinder has not been acheived.

cardiagn.com

11 31 ... Notes on checking and adjusting the timing (B36, B37, B38, B46, B47, B48)

Special tools required:

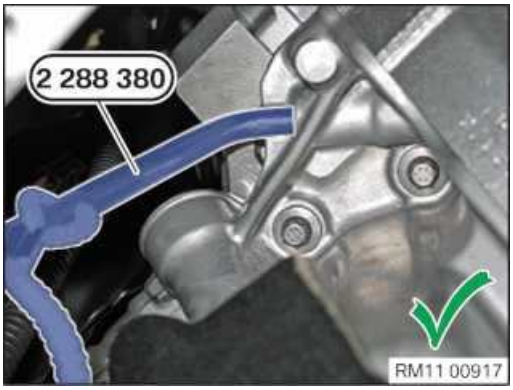


- 2 288 380

Attention!

Risk of damage to engine.

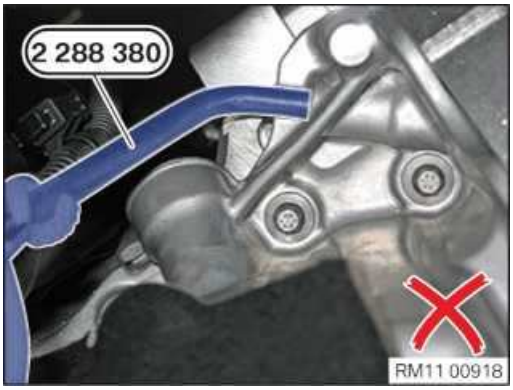
The notes for checking and adjusting the timing must be strictly observed!



If the crankshaft is fixed properly, it is not possible to turn the engine forwards or backwards on the vibration damper.

Vehicles with manual transmission:

Dimension (x) = 56 mm.



Insert the special tool 2 288 380 up to dimension (X) into the dowel hole.

Vehicles with manual transmission:

Special tool 2 288 380 correctly positioned.

The engine is located at the first cylinder at top dead centre.

Vehicles with manual transmission:

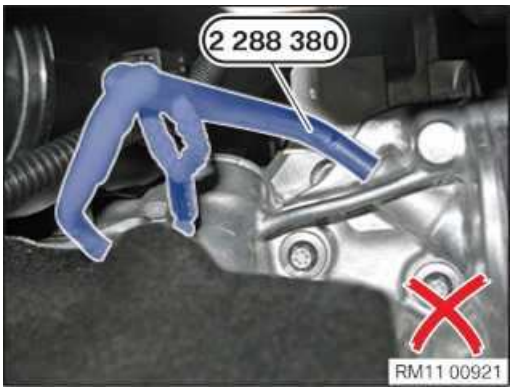
Special tool 2 288 380 incorrectly positioned.

The TDC setting of the first cylinder has not been acheived.

cardiagn.com

Vehicles with automatic transmission:

Dimension (Y) = 66 mm.



Insert the special tool 2 288 380 up to dimension (Y) into the dowel hole.

Vehicles with automatic transmission:

Special tool 2 288 380 correctly positioned.

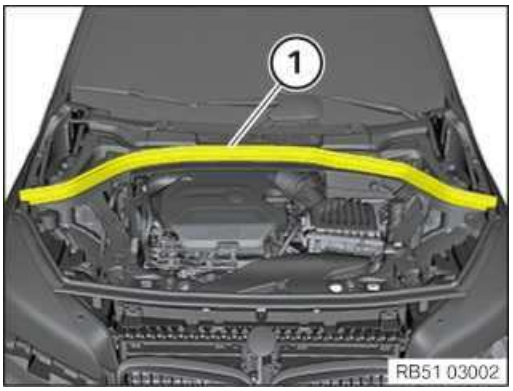
The engine is located at the first cylinder at top dead centre.

Vehicles with automatic transmission:

Special tool 2 288 380 incorrectly positioned.

The TDC setting of the first cylinder has not been acheived.

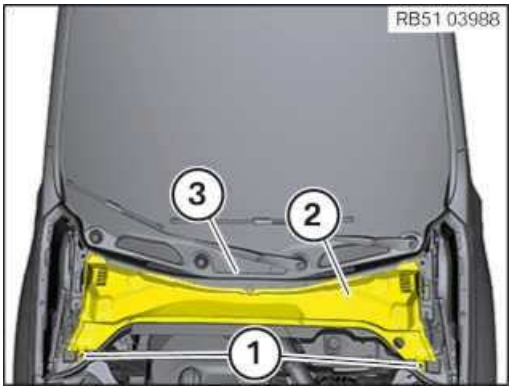
cardiagn.com



11 31 090 Remove and install/replace chain tensioner piston

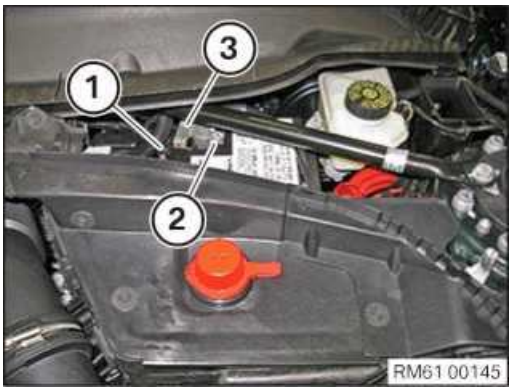
PRELIMINARY WORK

1 – Remove the seal for the rear bonnet



NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

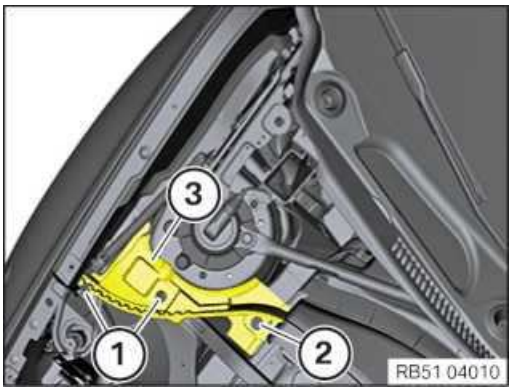


- Pull off rear bonnet seal (1) towards the top and remove.

2 – Removing front cowl panel cover

- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

3 – Disconnecting the battery earth lead

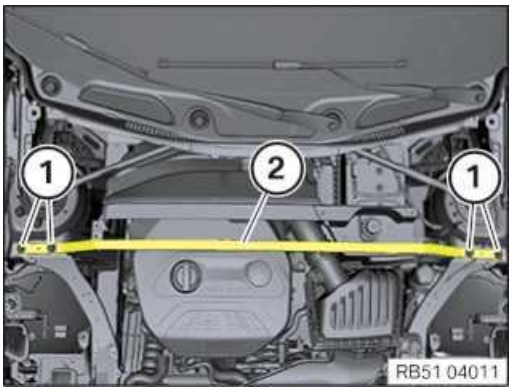


- Unlock plug connection (1) and disconnect.
- Unfasten nut (2).
- Remove the battery earth lead (3) and secure to one side.

4 – Remove suspension cross-brace

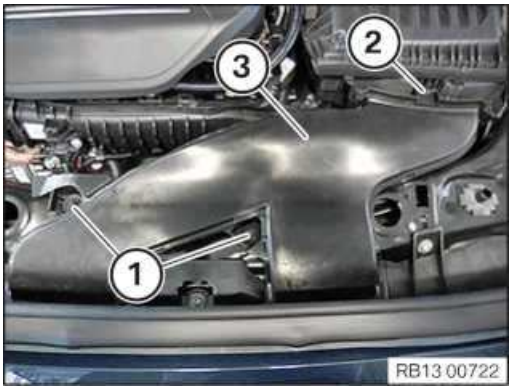
TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



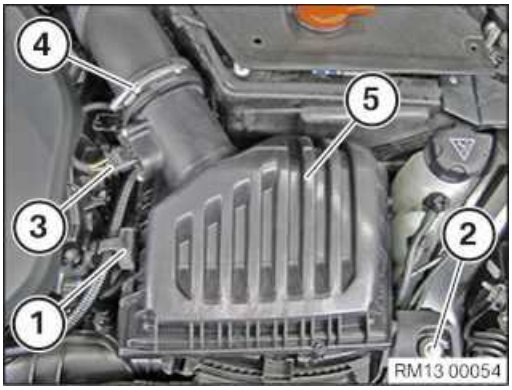
cardiagn.com

NOTICE



Description is for right component only. The procedure on the left side is identical.

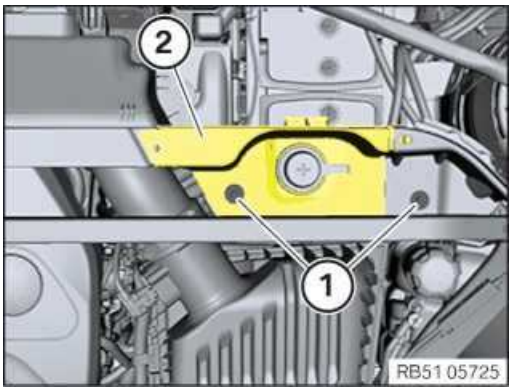
- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).



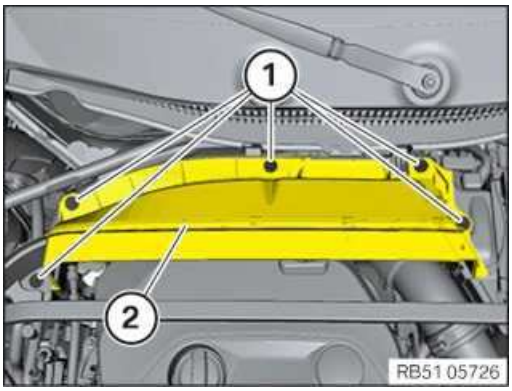
- Loosen screws (1).
- Remove strut brace (2).

5 – Remove the intake neck for intake silencer housing

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.



6 – Removing intake silencer housing



- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

7 – Removing the upper bulkhead cover

cardiagn.com

- Loosen screws (1).
- Guide out and remove the cover (2).

- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

8 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

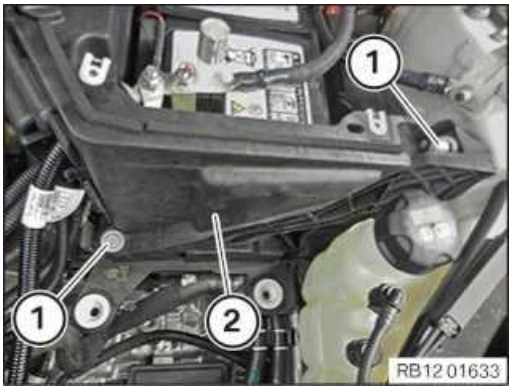
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

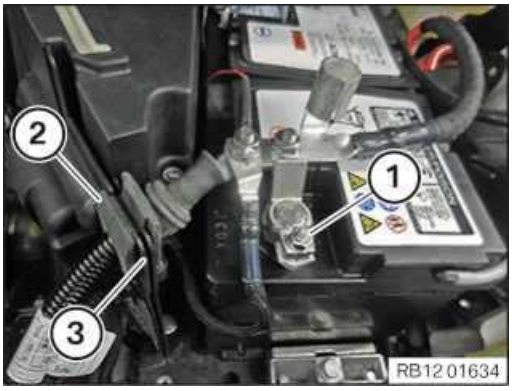
Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.



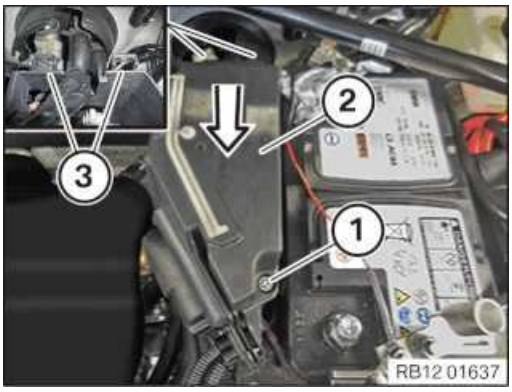
TECHNICAL INFORMATION

Follow instructions for removing and installing control units.
For additional information see: 12 00 ... Notes on removal and installation of control units

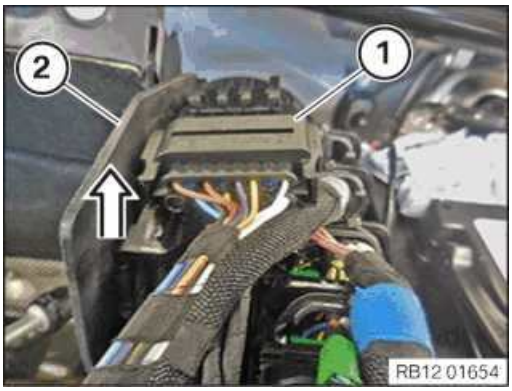


cardiagn.com

TECHNICAL INFORMATION

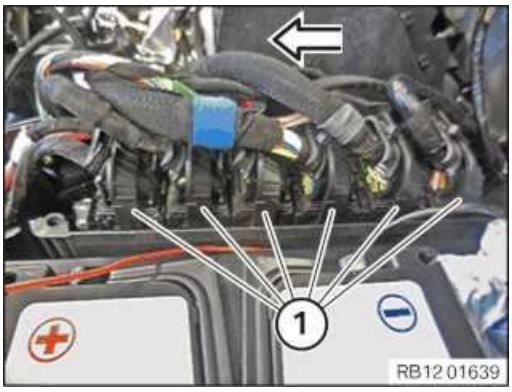


Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.

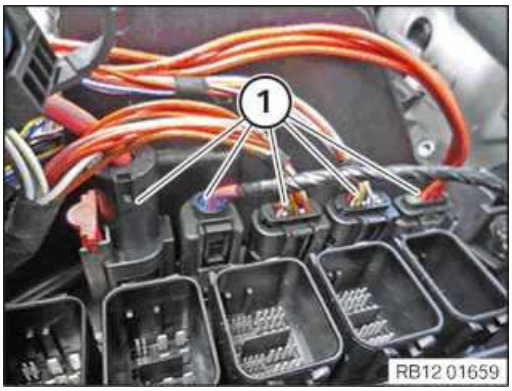


- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

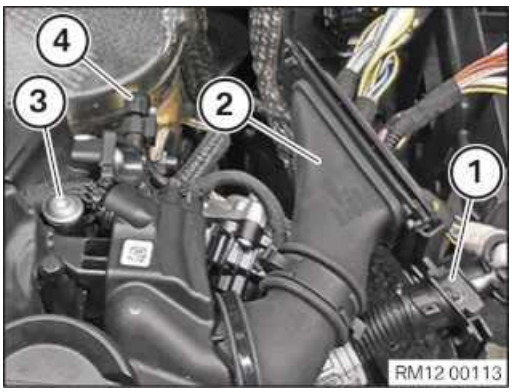
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



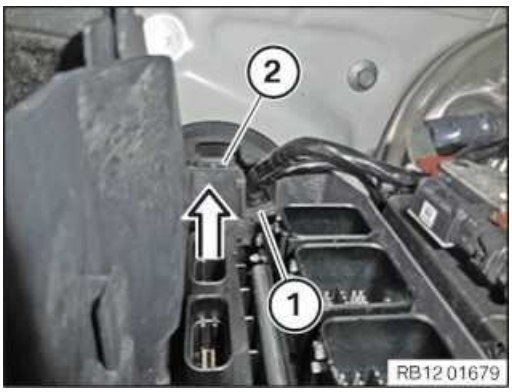
- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.



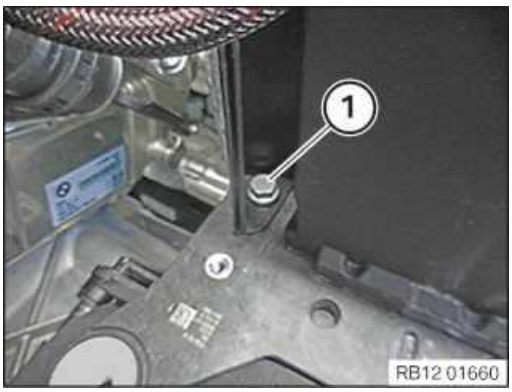
- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).



cardiagn.com

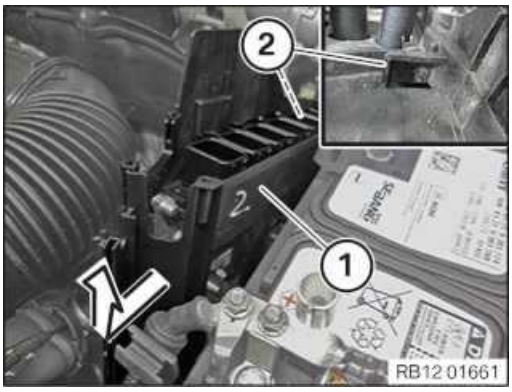


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).

- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

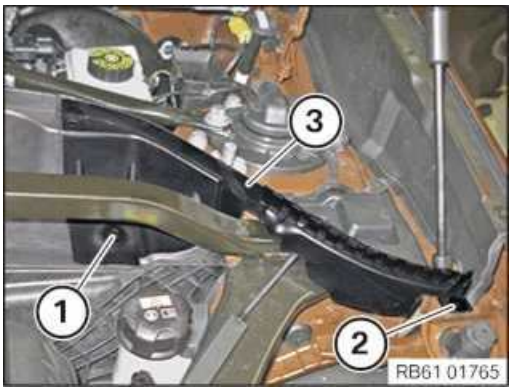


- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

- Loosen screw (1).

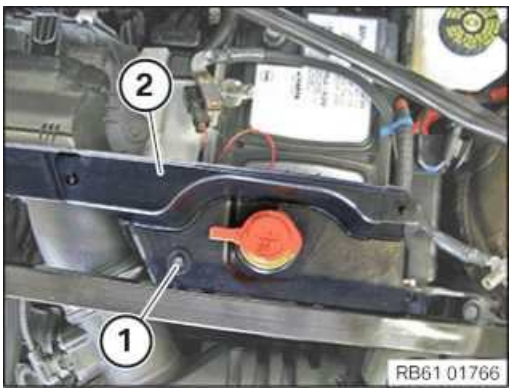
cardiagn.com

- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.



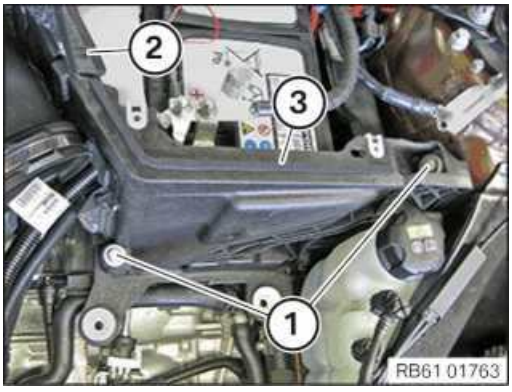
9 – Remove vehicle battery

WARNING



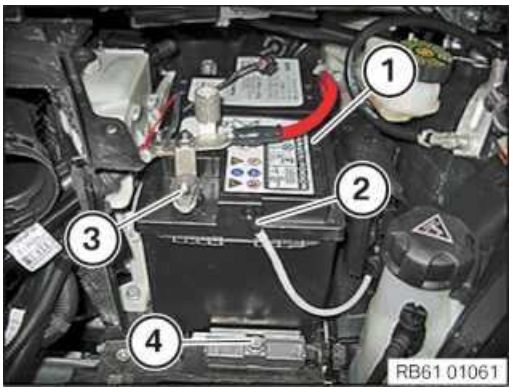
Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!



- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).



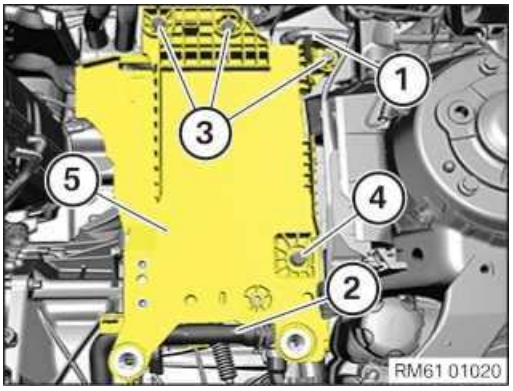
- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

cardiagn.com

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

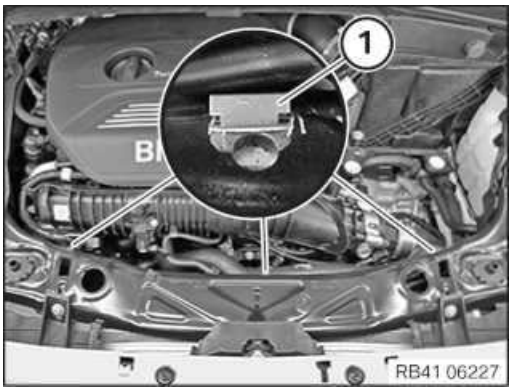
WARNING



Unprotected battery terminals.

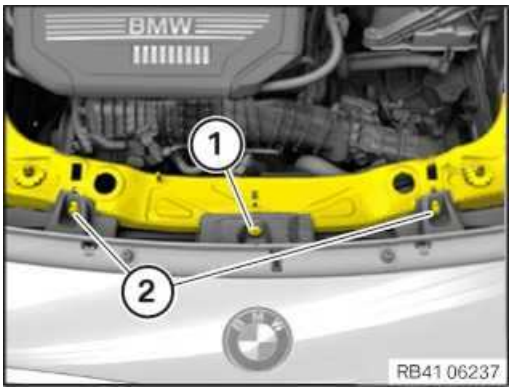
Risk of short circuits! Risk of fire!

- Cover the vehicle battery.



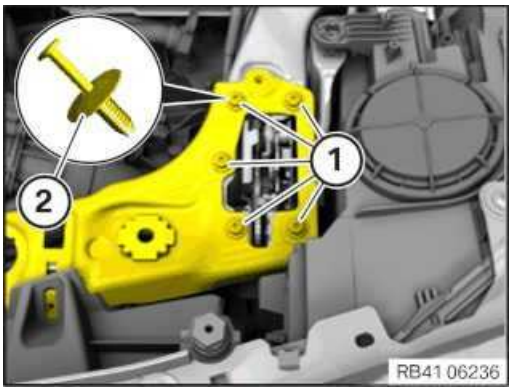
- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

10 – Remove battery holder

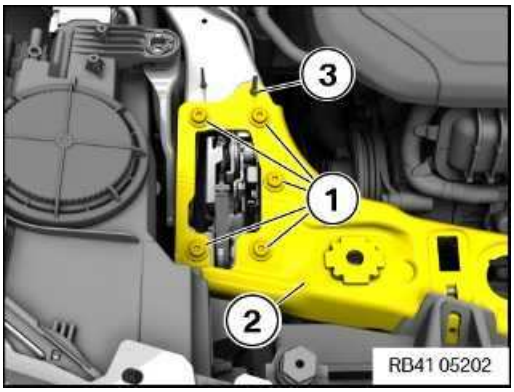


- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

11 – Remove front cross connection

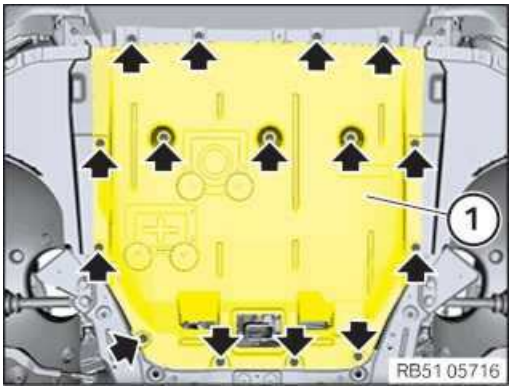


- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

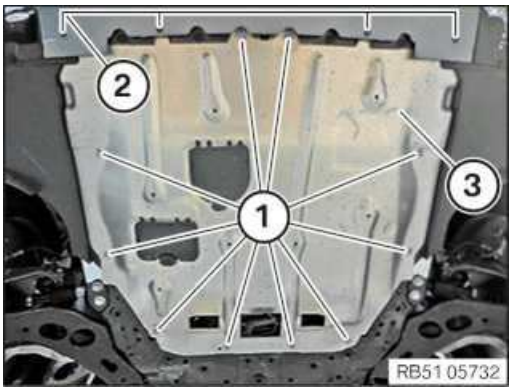


- Loosen screw (1).
- Loosen screws (2).

cardiagn.com



- Loosen screws (1).
- Lever out expanding rivet (2).



- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

12 – Removing the front underbody protection

- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

13 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

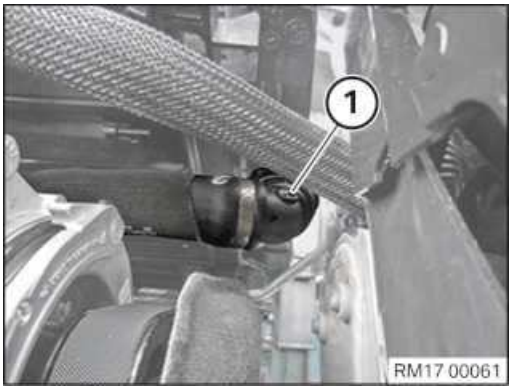
cardiagn.com

TECHNICAL INFORMATION

Life-long fill of coolant!

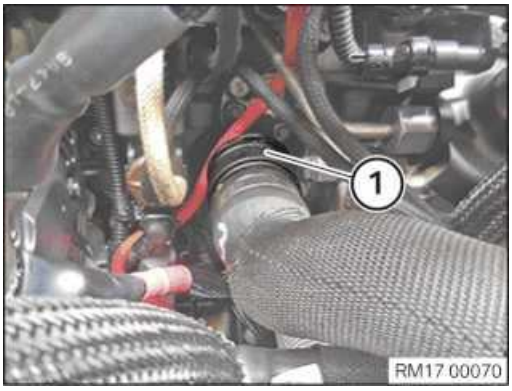
Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.



In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION



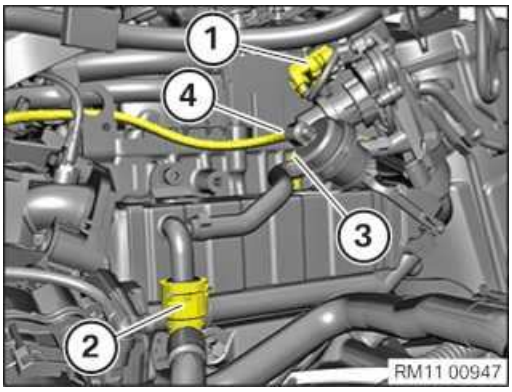
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen sealing cap (1).

- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.

- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.

14 – Removing the exhaust-gas recirculation cooler

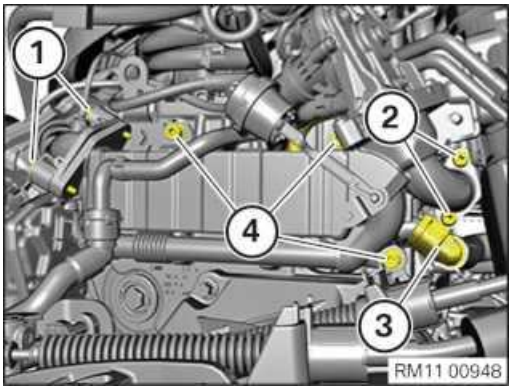


cardiagn.com

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

TECHNICAL INFORMATION

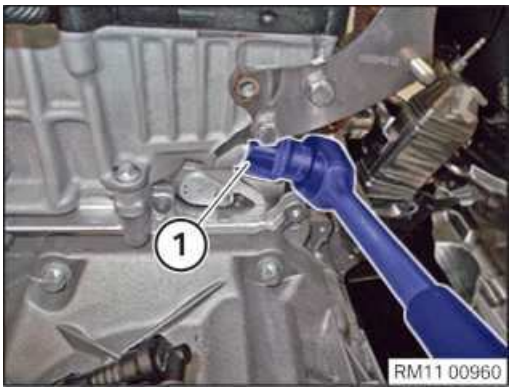
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

MAIN WORK

15 – Remove chain tensioner piston



WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

16 – Installing the chain tensioner piston

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

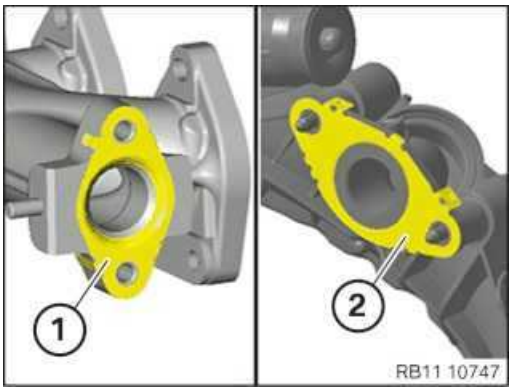
- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

POSTPROCESSES

17 – Installing the exhaust-gas recirculation cooler



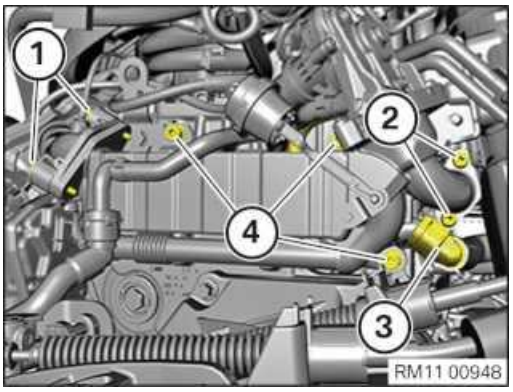
cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

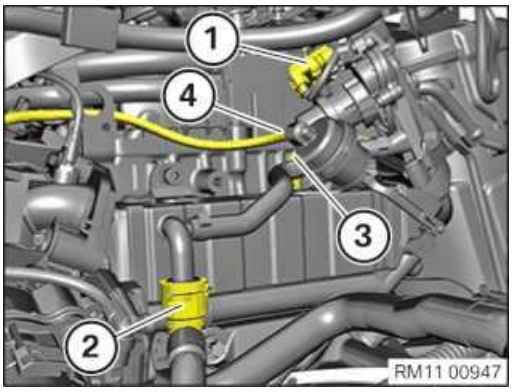
M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm



- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

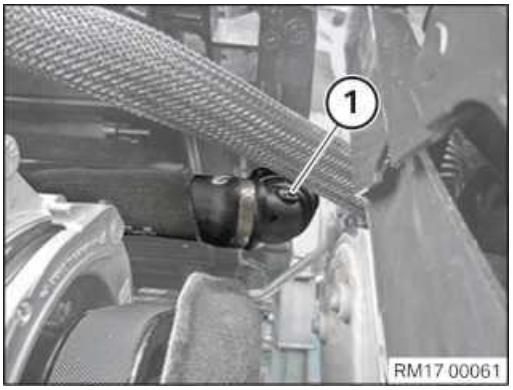
Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

cardiagn.com

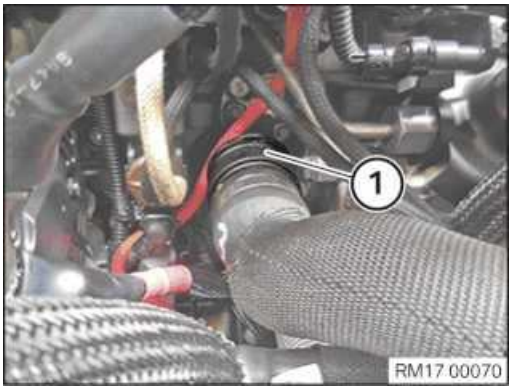
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

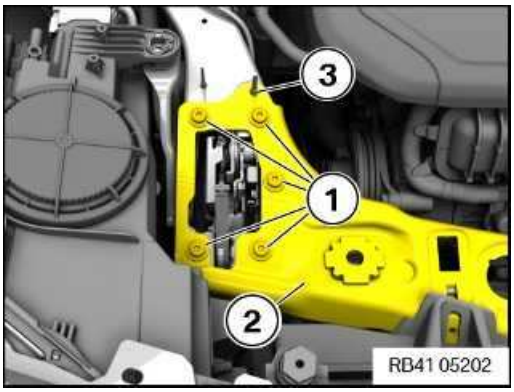


18 – Connect the coolant line

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

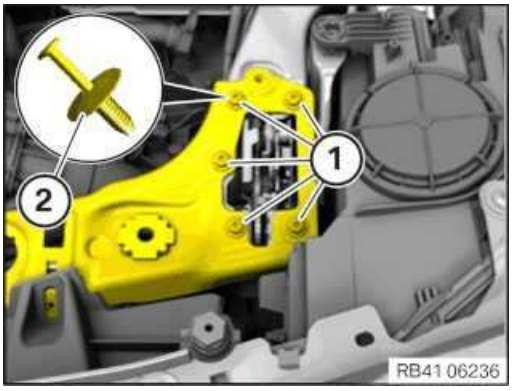
- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the connecting branch and lock audibly.

19 – Install front cross connection

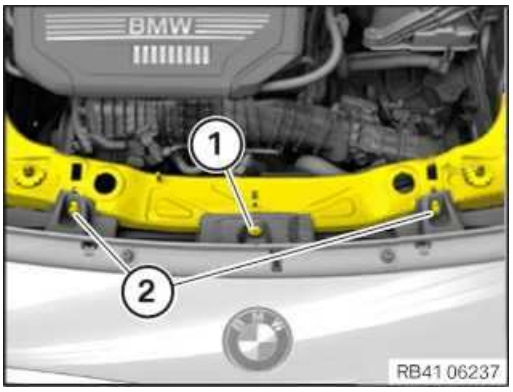
cardiagn.com



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm

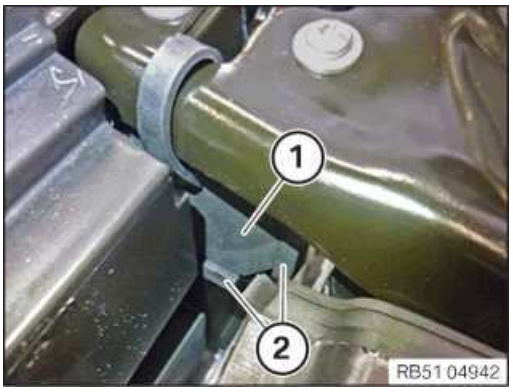
- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

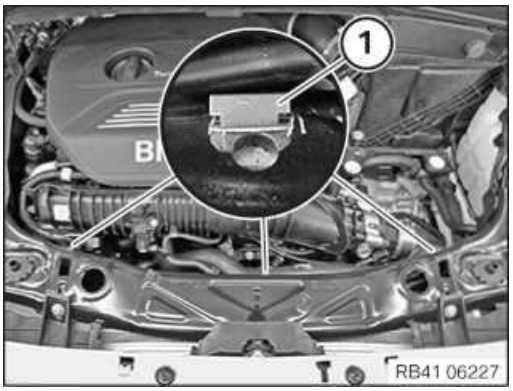
- Tighten down screws (2).

Air duct to upper connection



M6x20 screw		Tightening torque	11,8 Nm

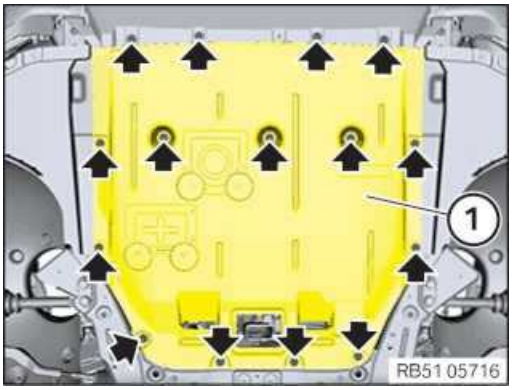
- Tighten down screw (1).



Bracing strut to upper connection

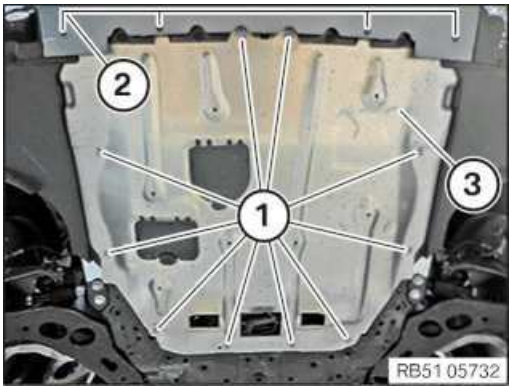
M8x20 screw		Tightening torque	28 Nm

cardiagn.com



- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

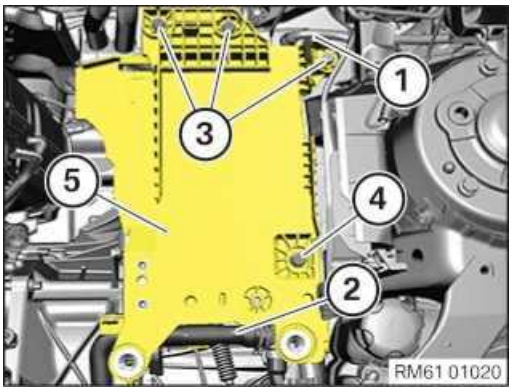


20 – Installing the front underbody protection

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm



- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

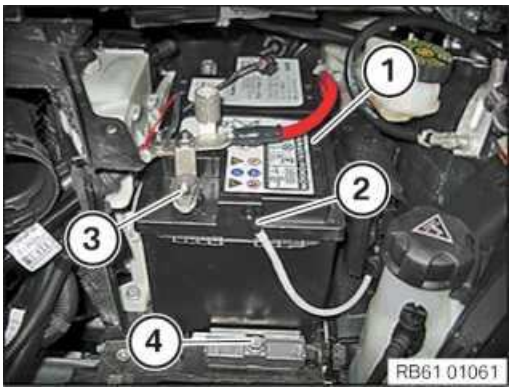
21 – Install the battery holder

cardiagn.com

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm



- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

22 – Install vehicle battery

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

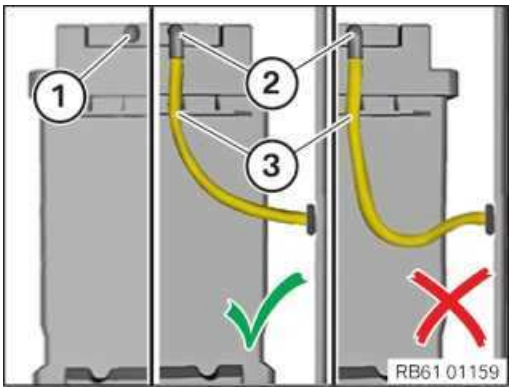
Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

▸ **Check the vent holes of the battery**

WARNING

Gas emission.



Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

cardiagn.com

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

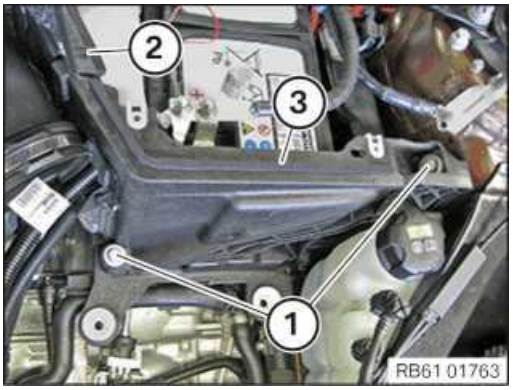
Result

» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

Check



- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).

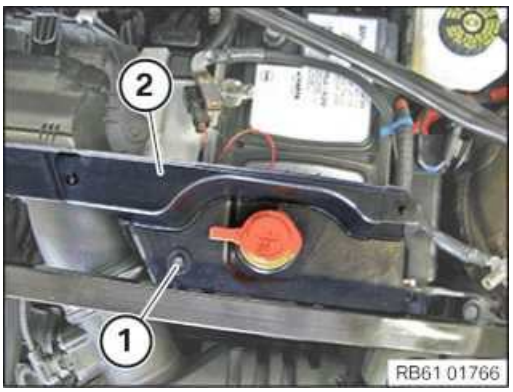
Result

» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

- Insert tension strut (3) and tighten with screws (1).



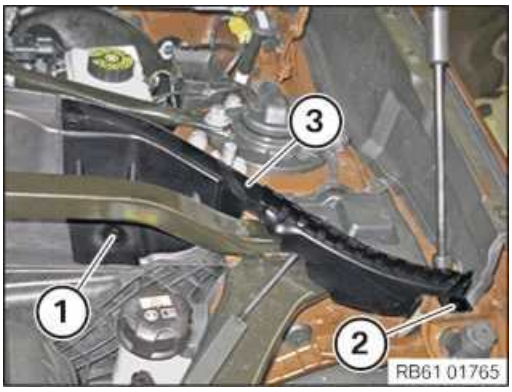
Trailing link

M8		Tightening torque	19 Nm

- Tighten down screw (2).

Battery cover

M8		2,8 Nm



- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

cardiagn.com

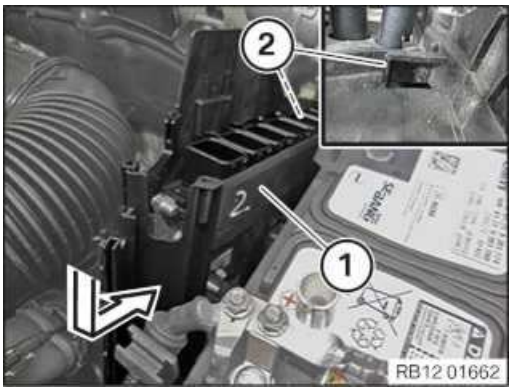
- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

23 – Install electronics box

Prerequisite

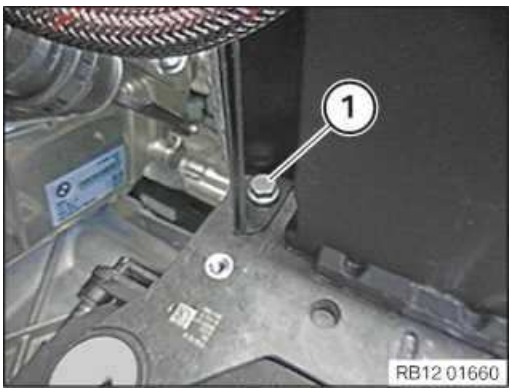


Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

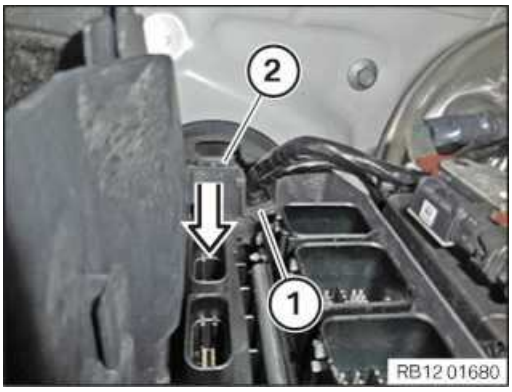
Trapped, crushed or damaged cables may cause short circuits and malfunctions.



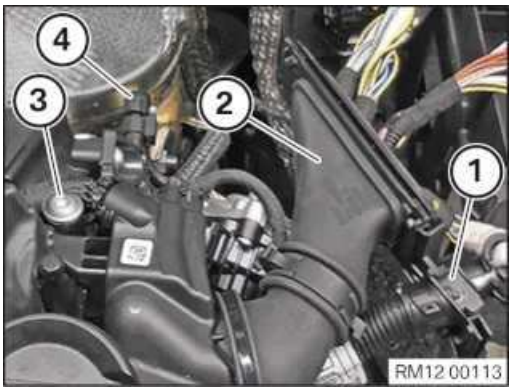
- Route all cables without abrasions, do not trap and crush.

- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



- Tighten down screw (1).

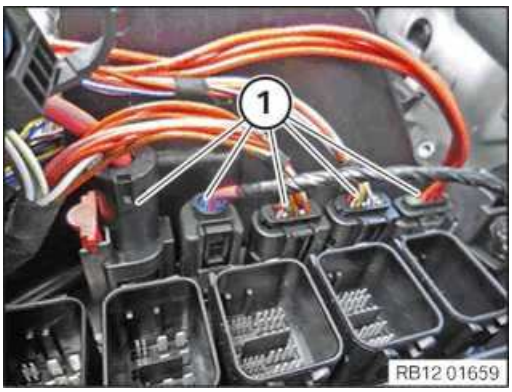


Electronics box to battery tray

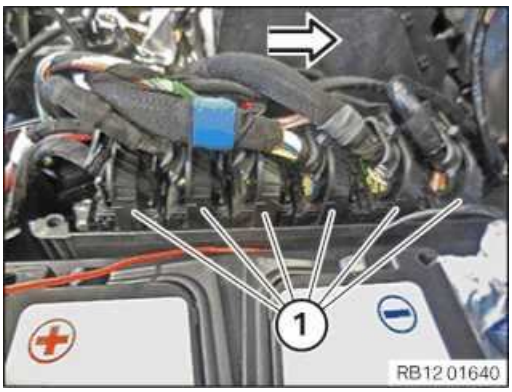
M8X16		Tightening torque	15 Nm

cardiagn.com

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.

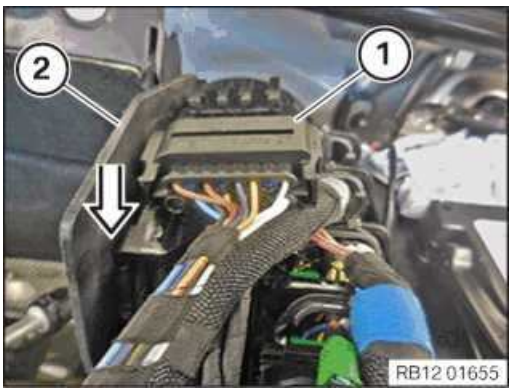


- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).



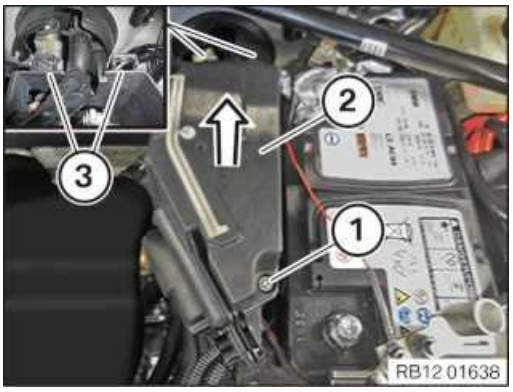
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm



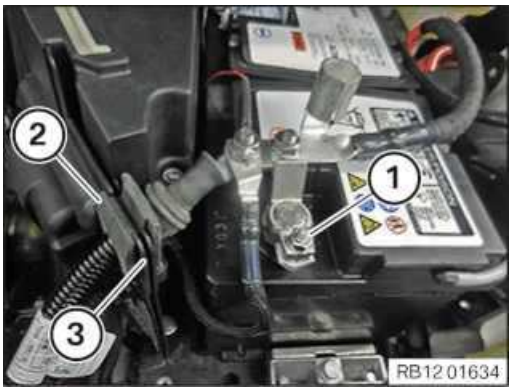
- Attach connector (4) to the differential pressure sensor and lock it audibly.

- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

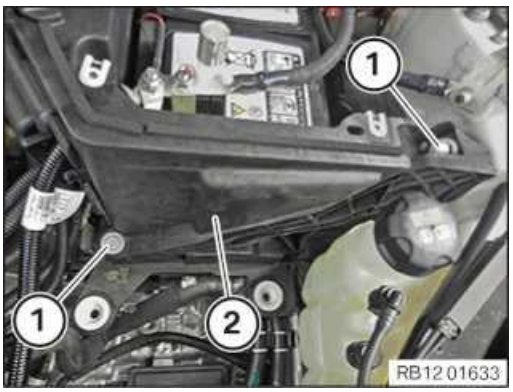
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



cardiagn.com

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

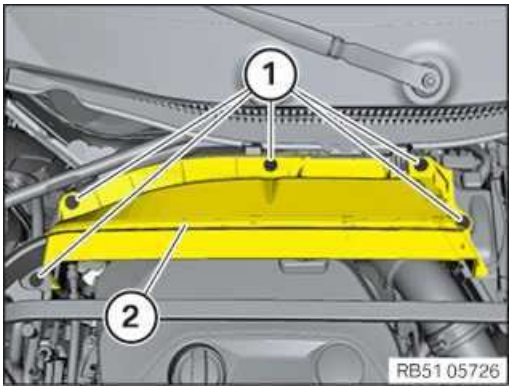


RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

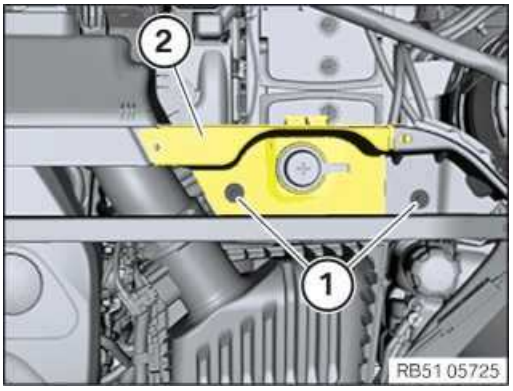
NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

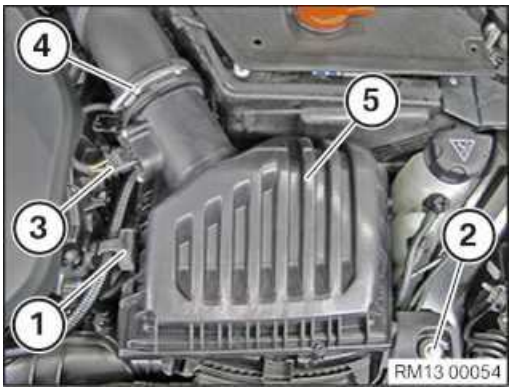


24 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm



- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

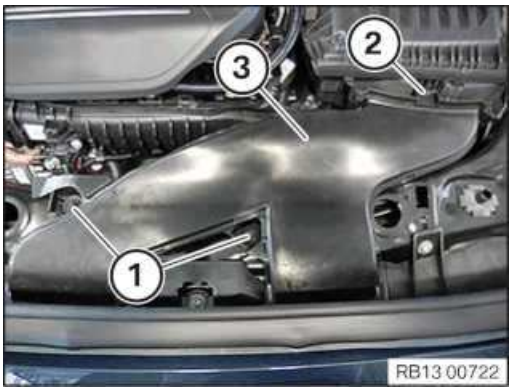
25 – Installing intake silencer housing

cardiagn.com

- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm



- Tighten clamp (4).

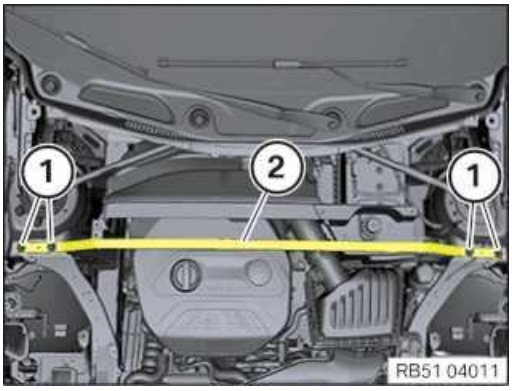
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

26 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).



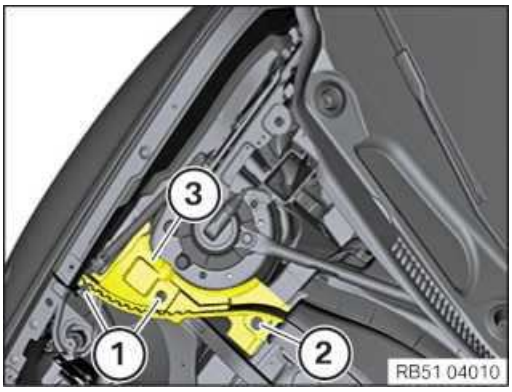
Intake neck to cross connection

M6		Tightening torque	8 Nm

27 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).
  Parts: Bolts
- Tighten the screws (1).

Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

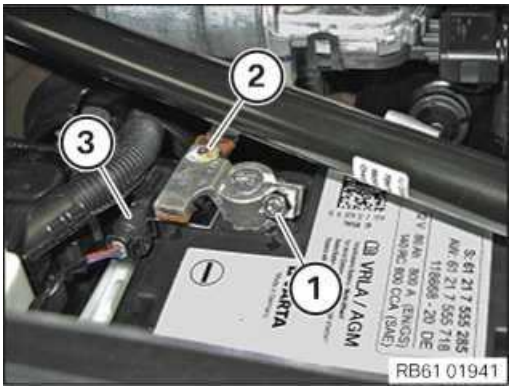
cardiagn.com

NOTICE

Description is for right component only. The procedure on the left side is identical.

- Install the cover (3).
- Tighten down screw (2).

Cover on body



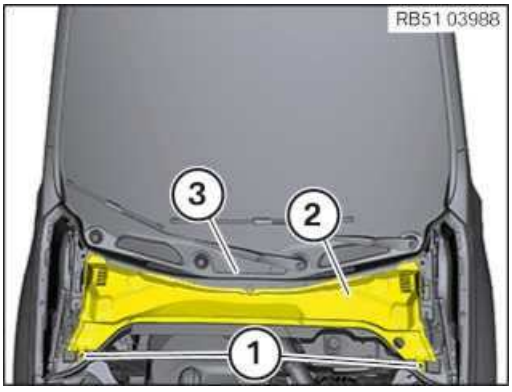
Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

28 – Connecting the battery earth lead

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)



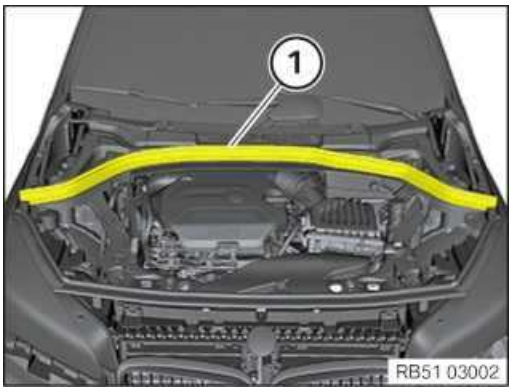
- Remove the protective cover of the positive battery terminal.
- Position the battery earth lead (2).
- Tighten nut (1).

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6			5 Nm

- If required, connect the connector (3).

29 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

30 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

31 – Fill and bleed the coolant circuit

▶ **Filling and bleed the high-temperature coolant circuit**

- See additional information.

Additional Information

Overview of Tightening Torques

Chain tensioner piston to cylinder head — Used in step 16

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

Exhaust-gas recirculation cooler to cylinder head — Used in step 17

M8x20		Tightening torque	5 Nm
		Release angle	90 °

Intake plenum to exhaust-gas recirculation cooler — Used in step 17

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to exhaust manifold — Used in step 17

M8x28	Replace screws	Tightening torque	32 Nm

Exhaust-gas recirculation cooler to cylinder head — Used in step 17

M8x20		Tightening torque	19 Nm

Cross connection to carrier support — Used in step 19

Screws M6x20		Tightening torque	11,8 Nm

Screw connection for rubber mount of coolant radiator to coolant radiator — Used in step 19

Bolt to rubber mount		Tightening torque	8 Nm

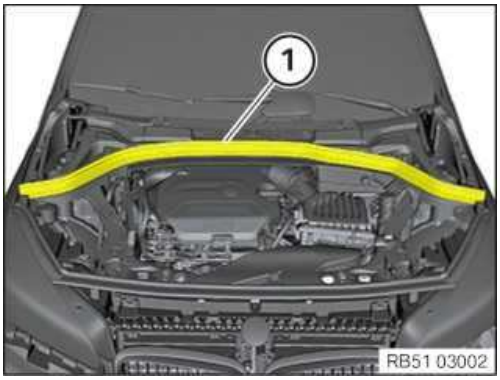
Designation	Used in step
Chain tensioner piston seal on cylinder head	16
Exhaust-gas recirculation cooler seal on exhaust manifold	17
Exhaust-gas recirculation cooler seal on intake plenum	17

cardiagn.com

11 31 028 Removing and installing / replacing exhaust camshaft

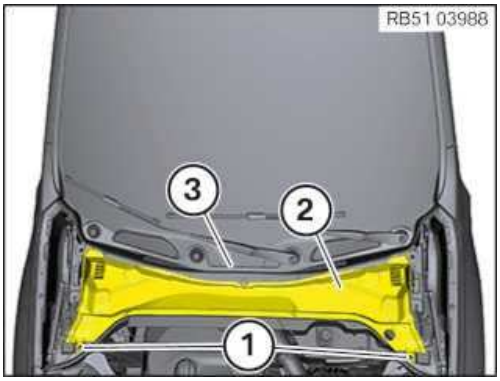
PRELIMINARY WORK

1 – Disconnecting all battery earth leads



- See additional information.

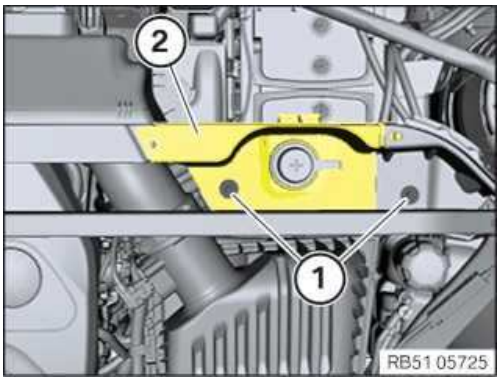
2 – Remove the seal for the rear bonnet



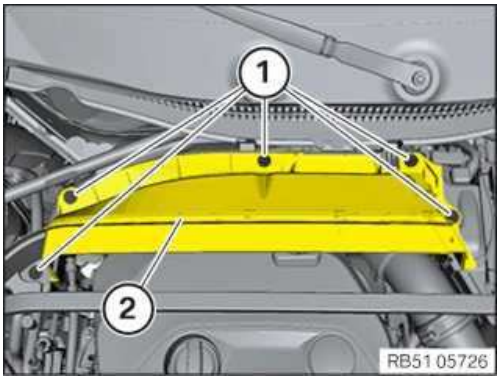
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.



3 – Removing front cowl panel cover

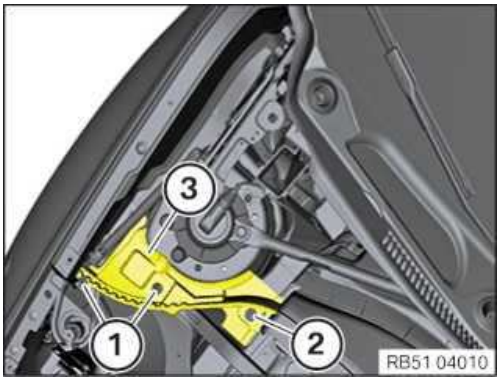


- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

4 – Removing the upper bulkhead cover

cardiagn.com

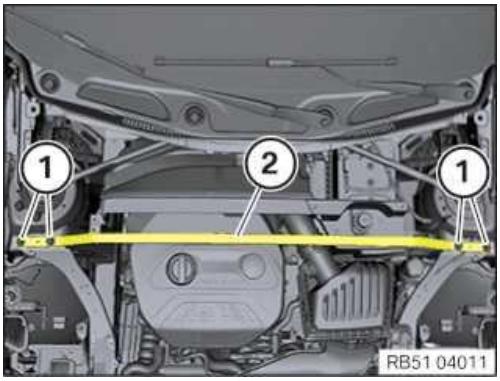
- Loosen screws (1).
- Guide out and remove the cover (2).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

5 – Remove suspension cross-brace

TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

NOTICE

Description is for right component only. The procedure on the left side is identical.

- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).

6 – Removing the acoustic cover

cardiagn.com

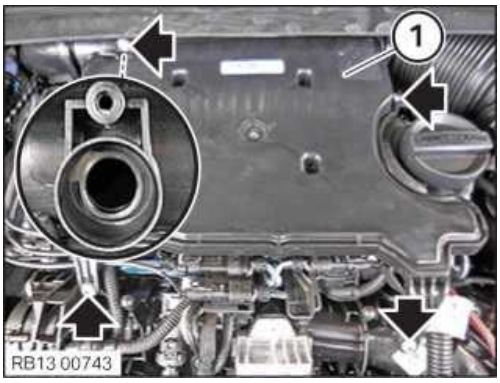
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

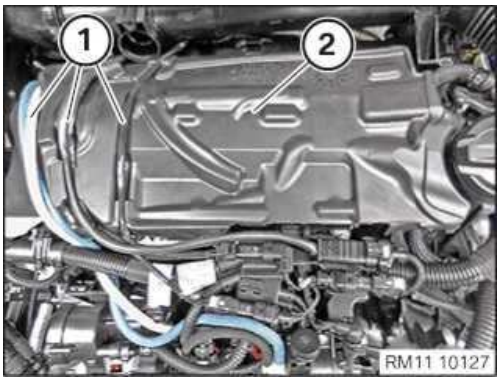
RISK OF DAMAGE



Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

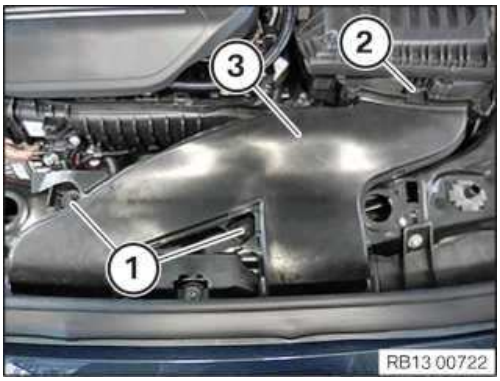
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



- Unclip the acoustic cover from the marked areas towards the top.

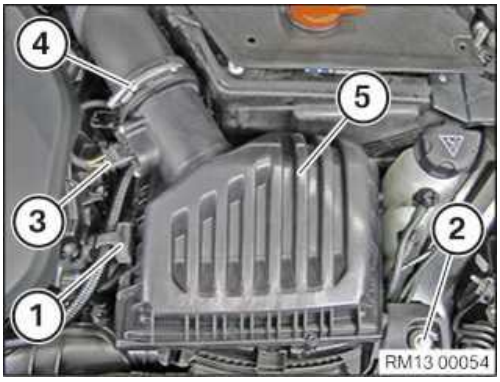
7 – Remove resonator

- Remove screws (arrows).
- Guide out and remove the resonator (1).



8 – Remove the acoustic cover for the injectors

- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

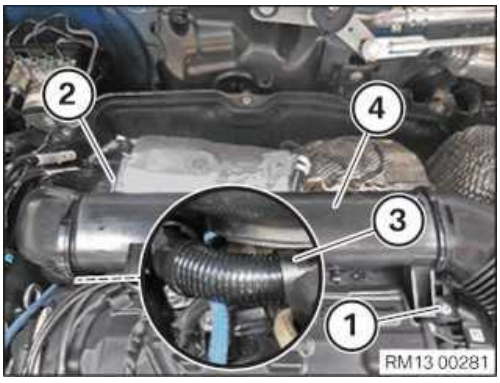


9 – Remove the intake neck for intake silencer housing

cardiagn.com

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

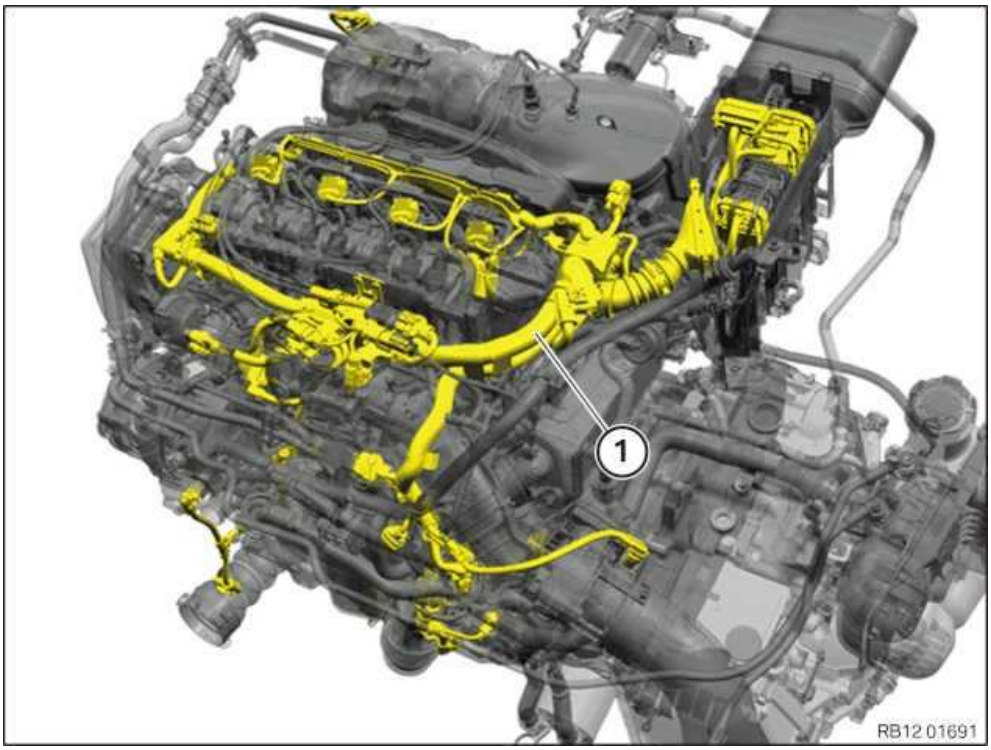
10 – Removing intake silencer housing



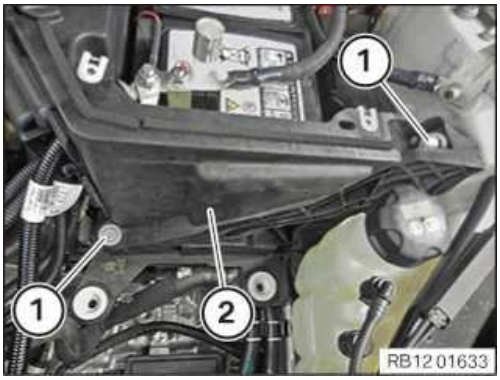
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

11 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

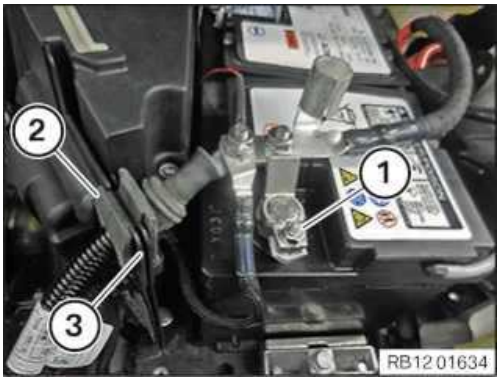


- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

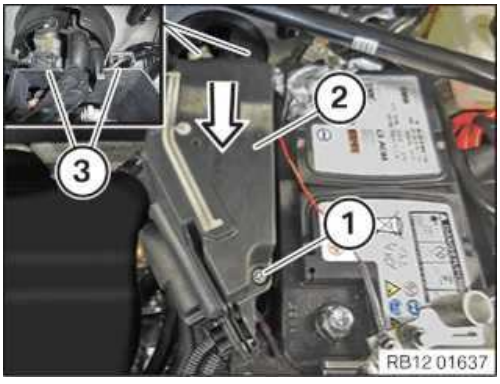


12 – Releasing the wiring harness section for the intake plenum

cardiagn.com

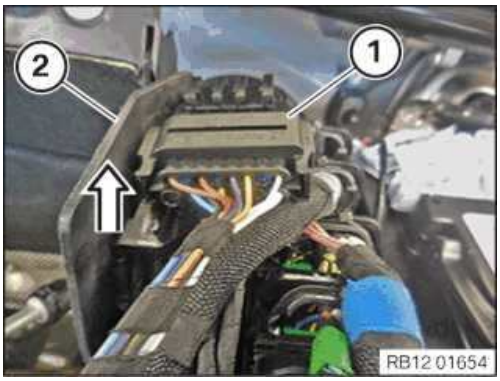


Overview: Wiring harness section for the engine

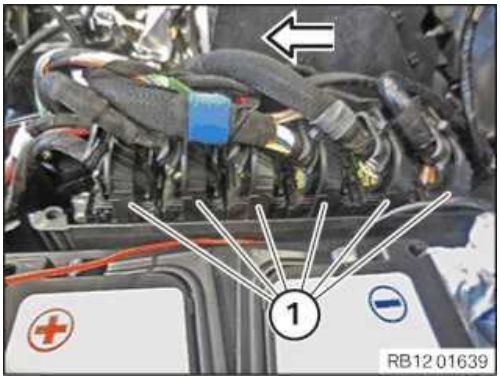


1 Wiring harness section for the engine

- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

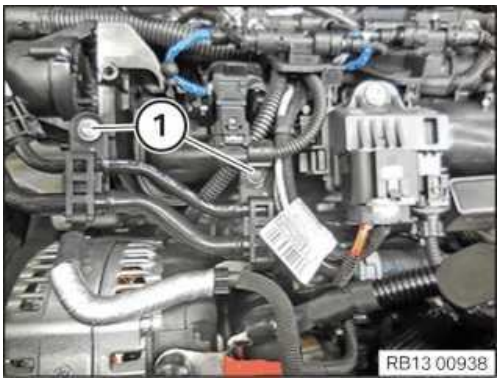


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

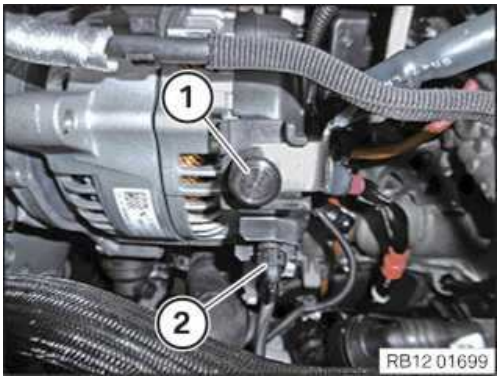


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

cardiagn.com

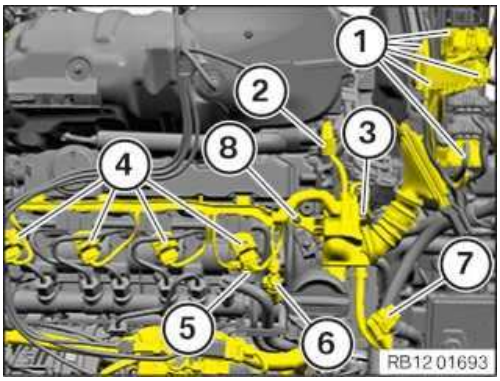


- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).

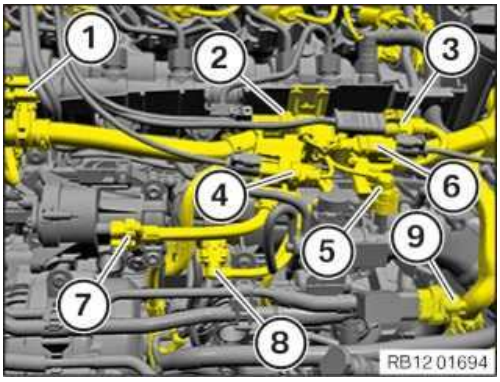


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

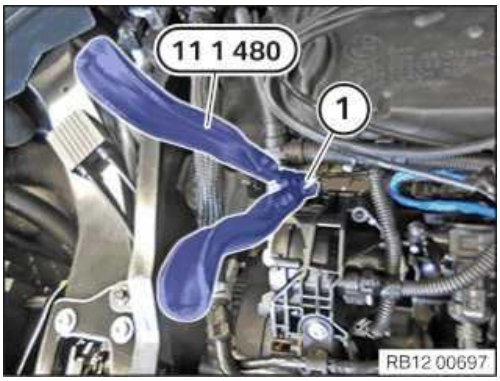
- Unlock and loosen connector (1).



- Loosen screws (1).

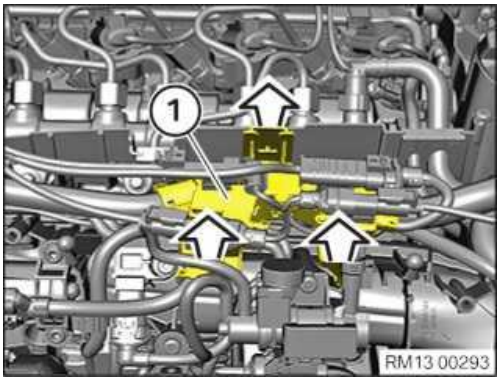


- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.



cardiagn.com

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).



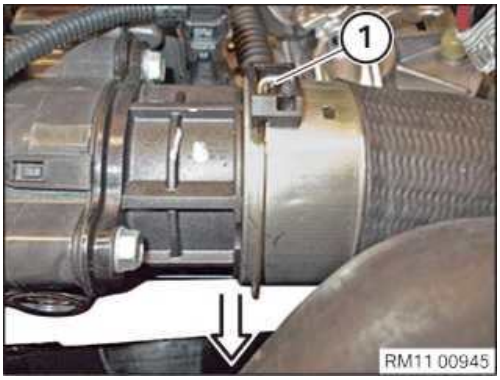
- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock and disconnect the connector (3) from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

▶ **Removing the cable clips from the intake plenum**

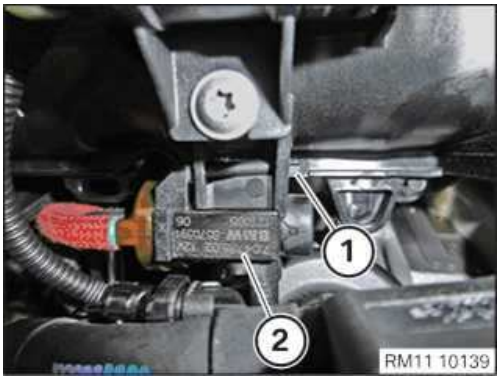
- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

13 – Removing the intake plenum

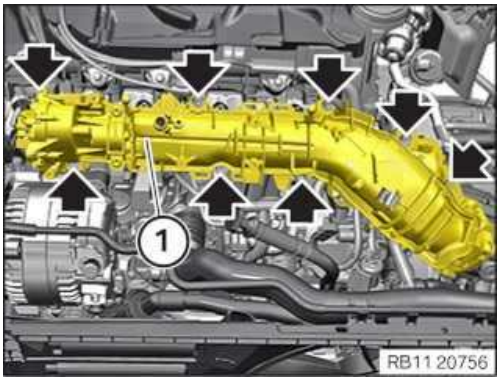


cardiagn.com

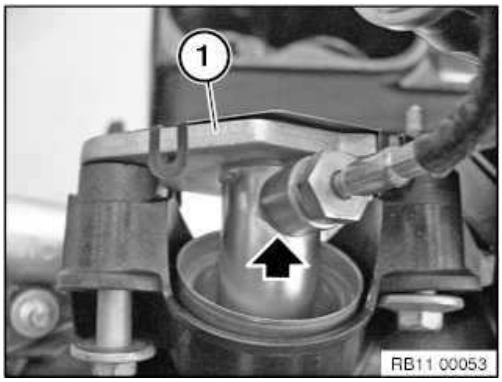
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

cardiagn.com

14 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

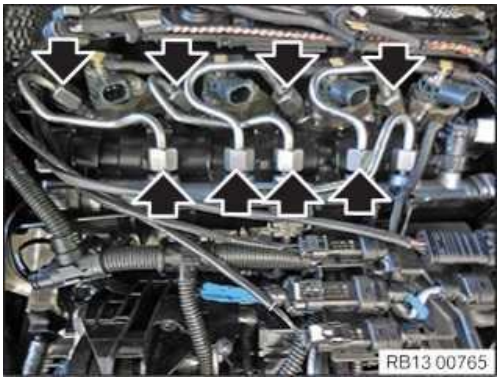
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.



TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

15 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

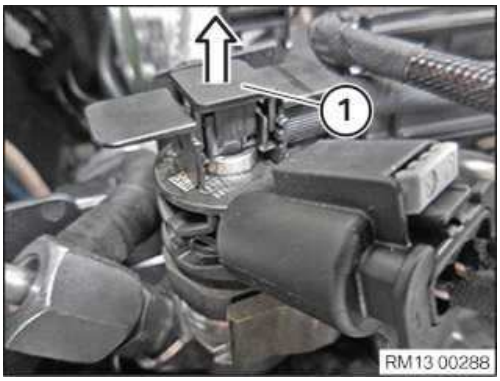
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

16 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

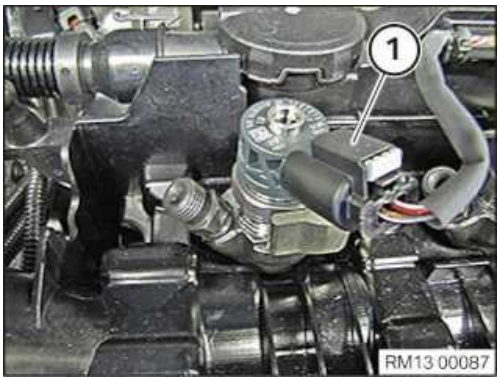
RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

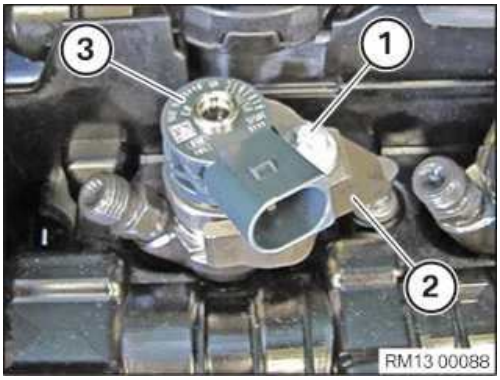
- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.



- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

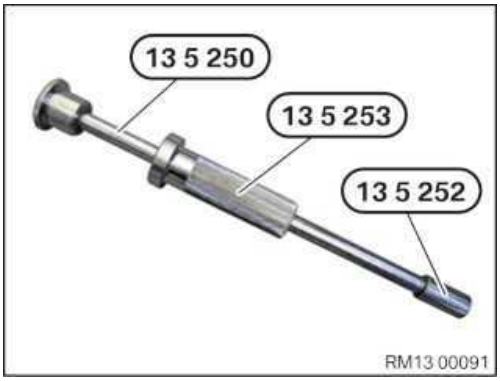
TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

- Unlock and disconnect connector (1).

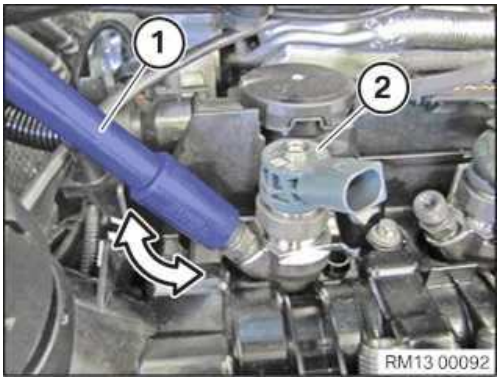
- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

▶ **Loosen stuck injectors**



cardiagn.com

RISK OF DAMAGE



Contaminant or foreign body.

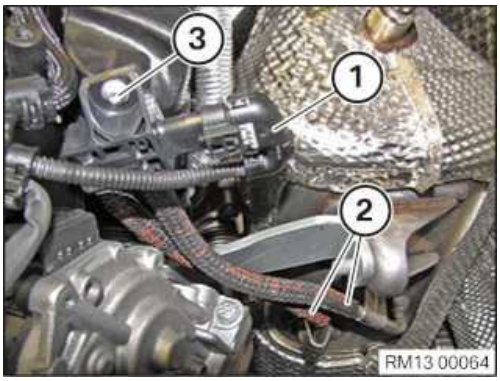
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)**back onto the special tool **0 493 321 (13 5 250)**.

- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

17 – Remove differential pressure sensor

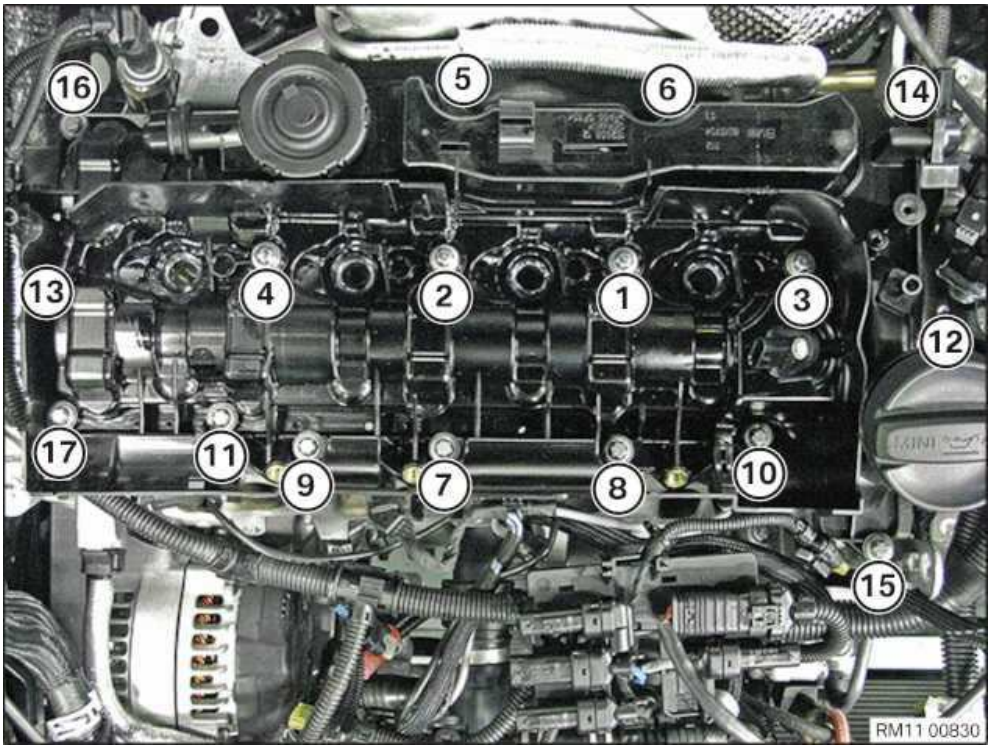


RISK OF DAMAGE

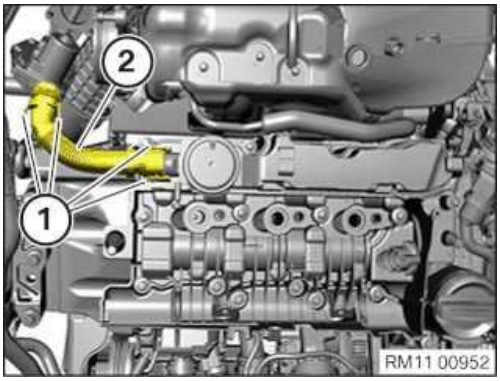
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



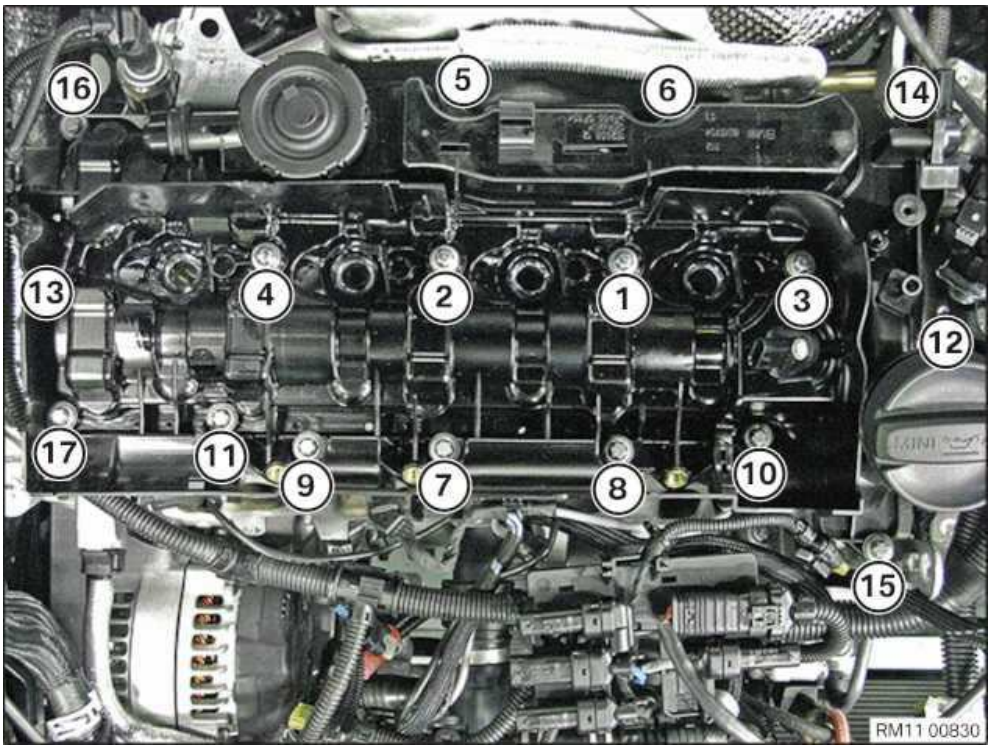
cardiagn.com



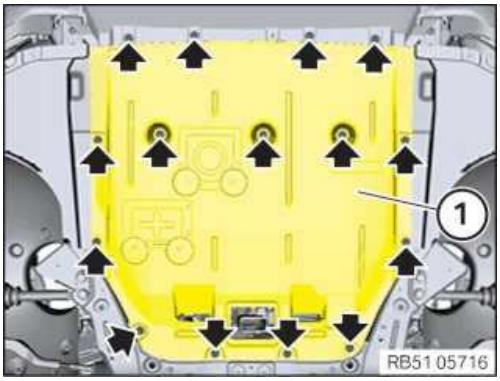
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

18 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover

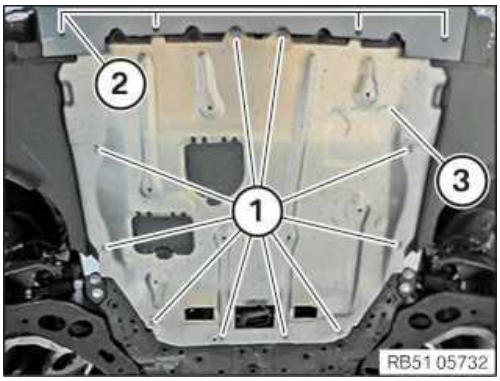


1 to 16 screws of the cylinder head cover.



- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com



- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

19 – Removing the front underbody protection

- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

20 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

TECHNICAL INFORMATION

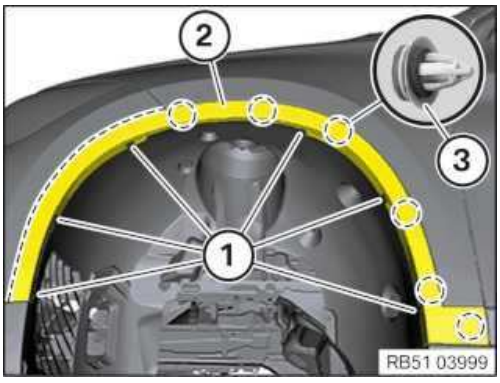
Strictly observe the specified procedure to prevent clamping errors and imbalance.

cardiagn.com

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

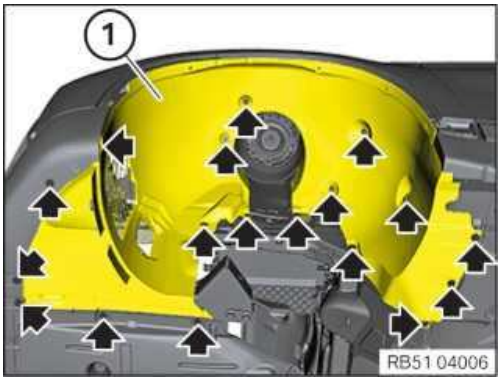
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

21 – Removing the front right wheel arch cover



▶ **Remove the front wheel arch trim**

NOTICE



To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

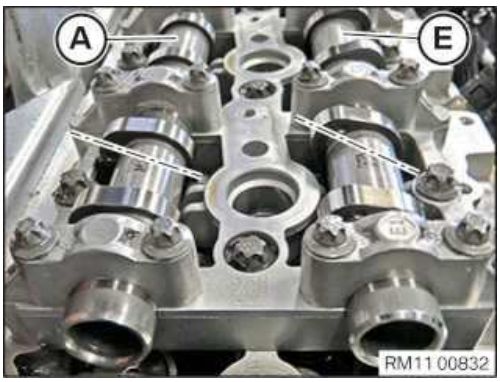
22 – Checking camshaft timing

cardiagn.com

- Remove protective cap (1) from oil sump.

- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE



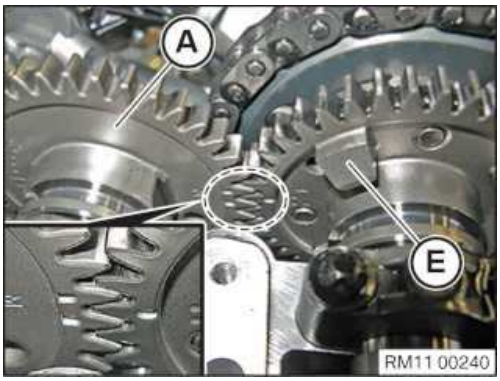
Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

cardiagn.com

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

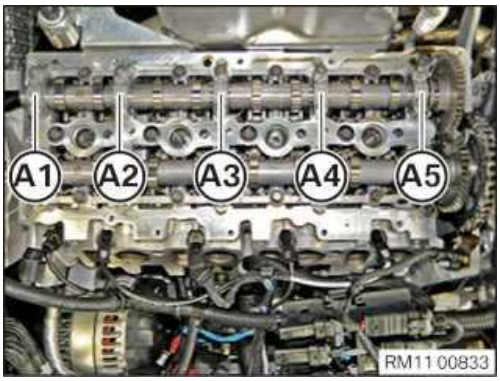
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

MAIN WORK

23 – Remove exhaust camshaft.



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

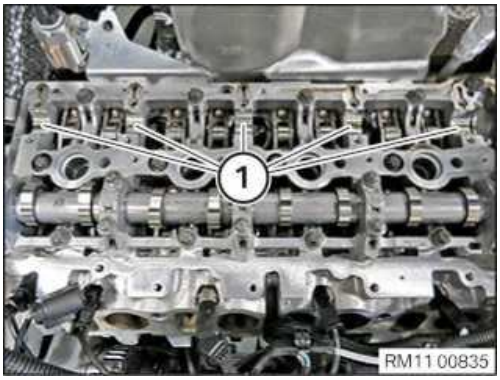
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

TECHNICAL INFORMATION

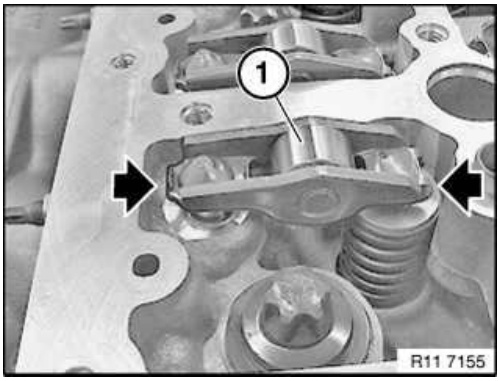
The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A5) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components on special tool **0 495 105 (11 4 480)** in a tidy and orderly fashion.



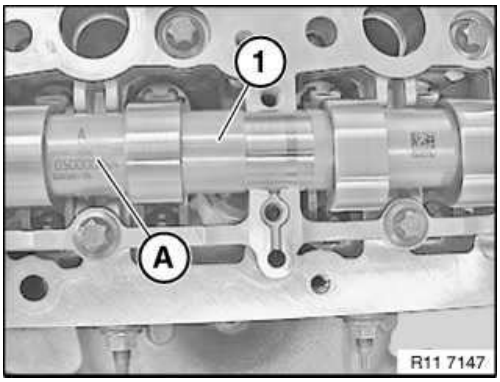
24 – Install exhaust camshaft

RISK OF DAMAGE



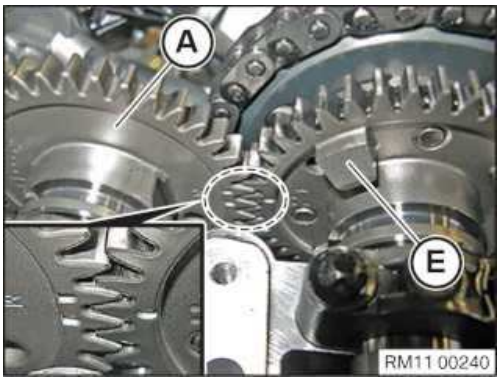
Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

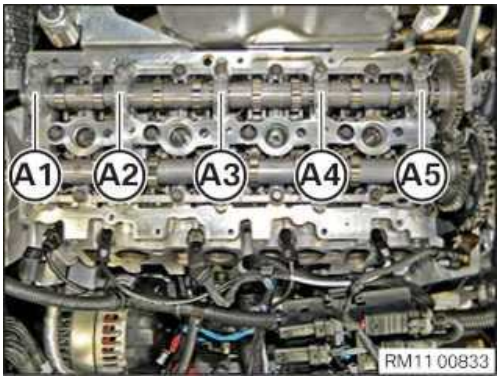


- Comply with the regulations for the installation and disassembly.
- Perform work with care.

- Oil all bearing positions (1).



- Make sure the roller cam followers (1) have the correct mounting orientation.



- Insert exhaust camshaft (1) so that the identification (A) points upwards.

cardiagn.com

- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.

- Tighten all exhaust camshaft bearing caps (A1) to (A5) from the inside to the outside by 1/2 a turn at a time.

Intake and exhaust camshaft in camshaft support

M6x31		Tightening torque	10 Nm

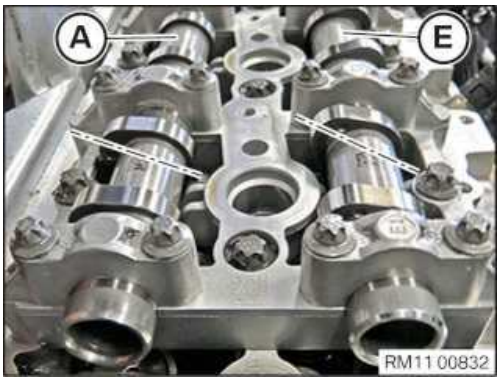
POSTPROCESSES

25 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

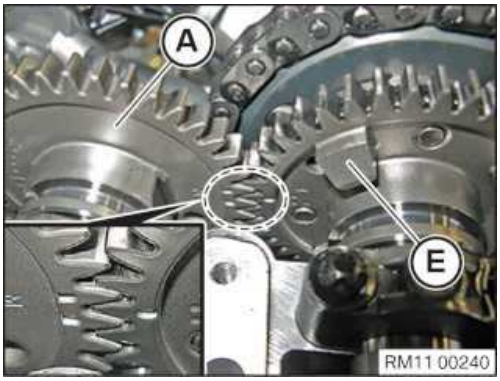


The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

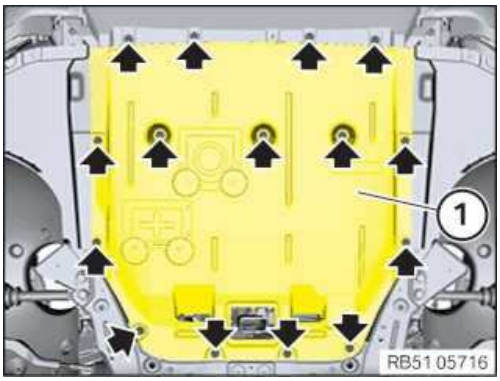
- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

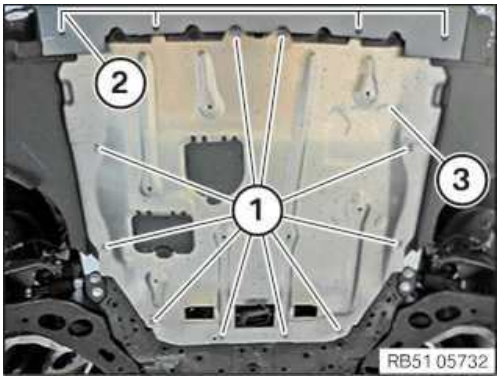
If the check finds that the timings are incorrect, the timings must be adjusted.



For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).



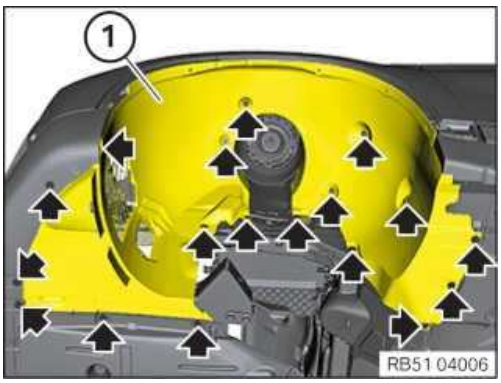
cardiagn.com

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).



Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

27 – Installing the front right wheel arch cover

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

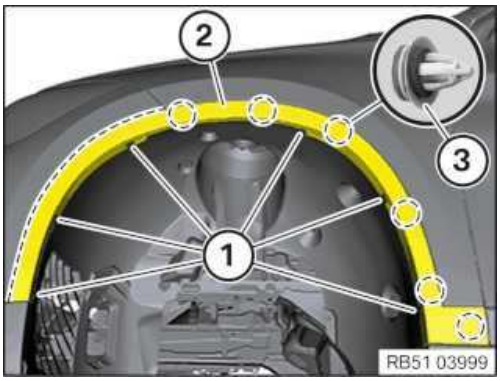
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

cardiagn.com

- Check the clips (3) for damage and renew where required.

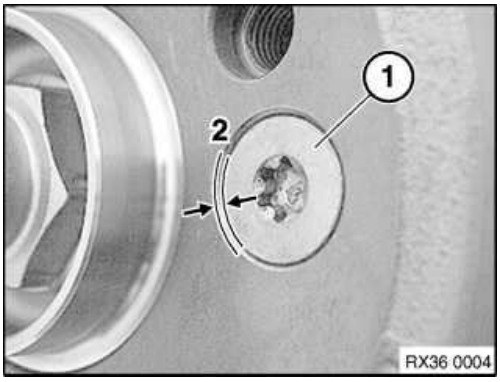
  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

28 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

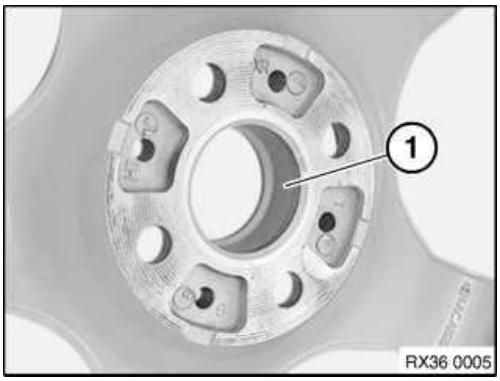


- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

cardiagn.com

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

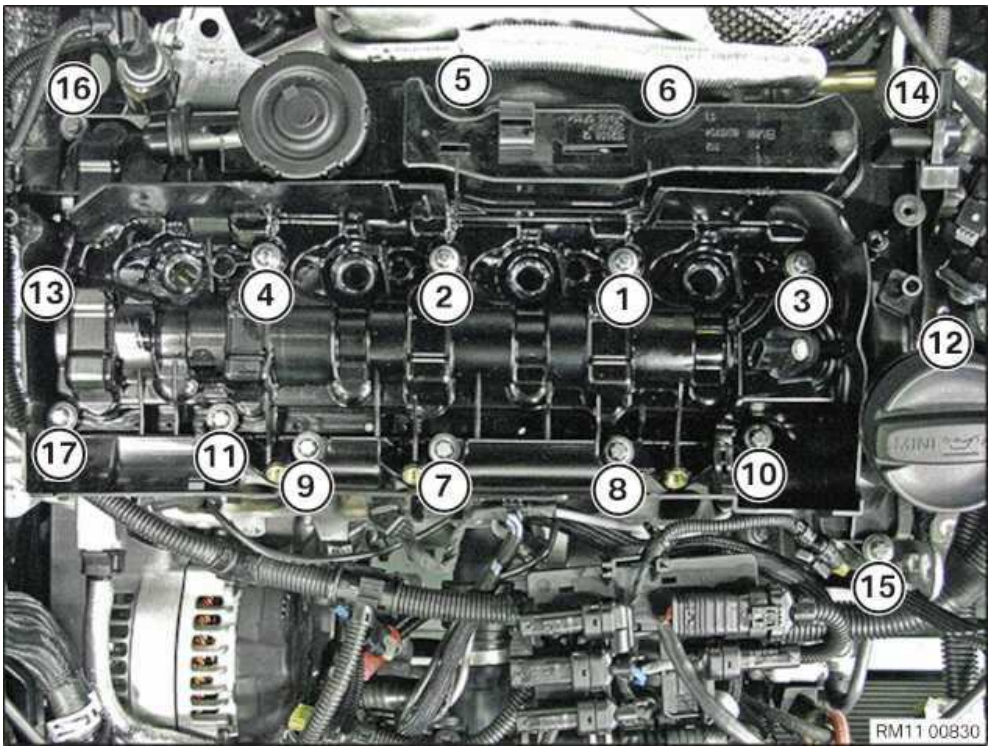
In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

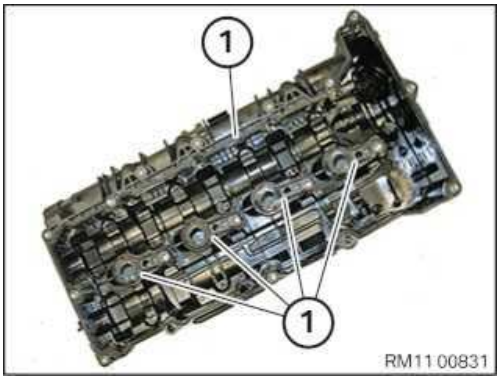
  Parts: Wheel bolts

- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.



Wheel bolts

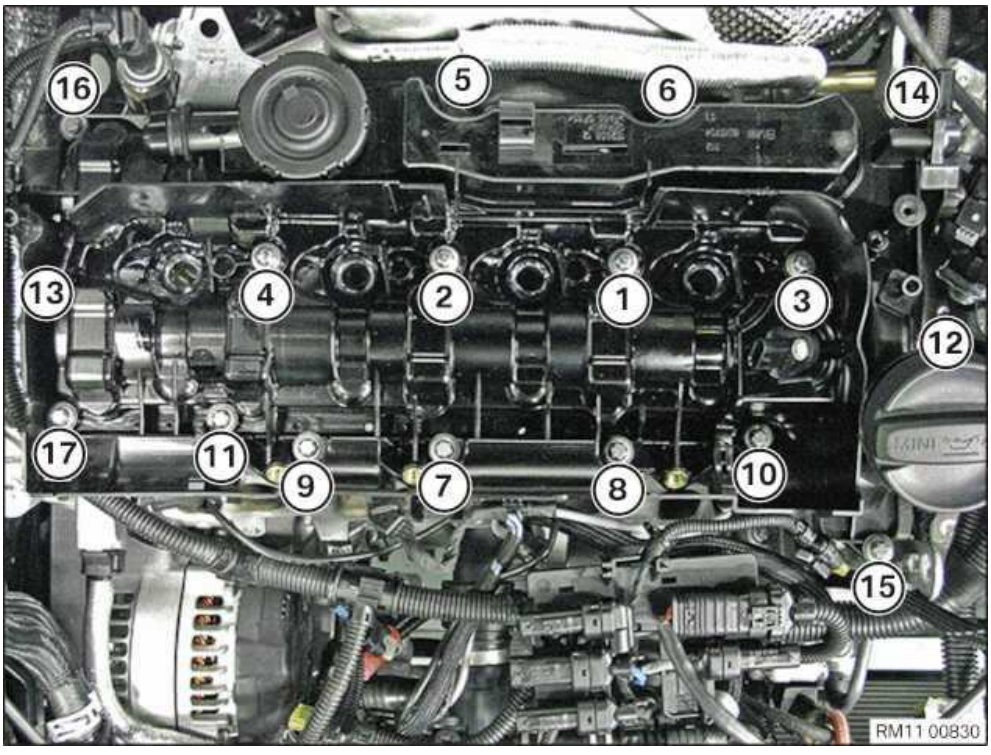
M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm



29 – Installing cylinder head cover

cardiagn.com

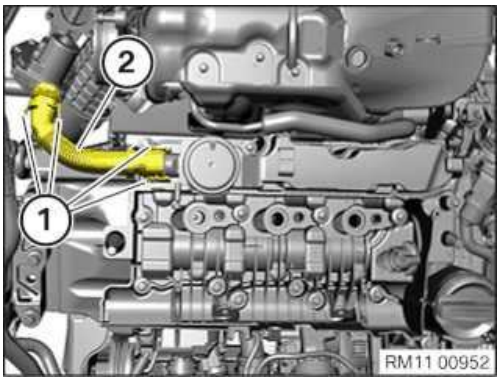
Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket

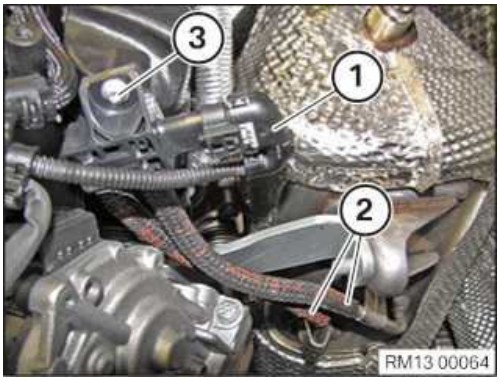


- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-



cardiagn.com

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

30 – Installing differential pressure sensor

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

31 – Installing injectors of injection system

▶ **Cleaning the injector shafts**

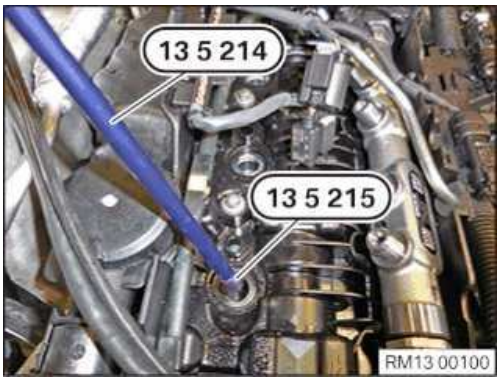
CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

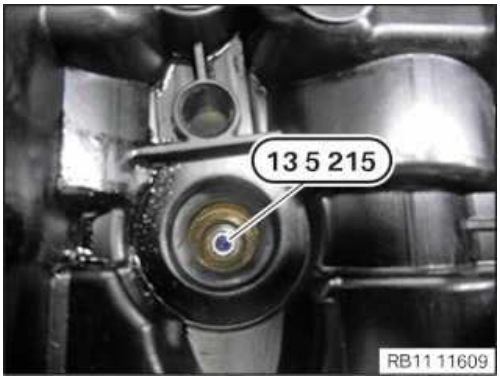
- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.



RISK OF DAMAGE

Contaminant or foreign body.

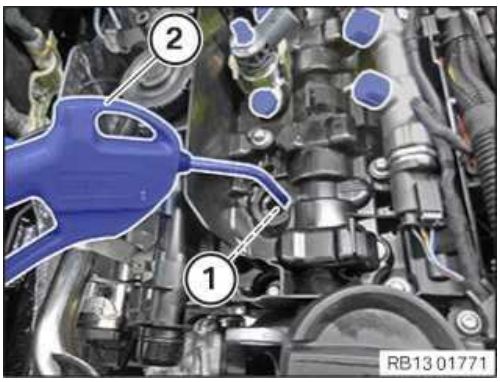


Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

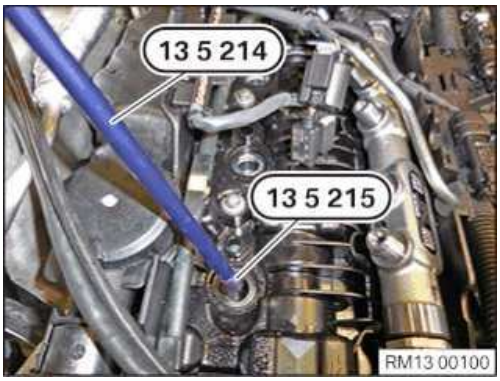
cardiagn.com

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

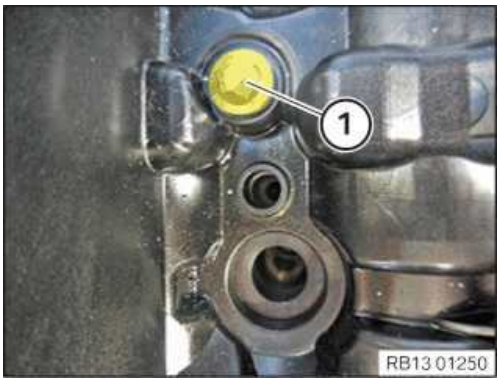


- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

- Blow out injector shaft (1) with air gun (2).

cardiagn.com

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.



▸ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▸ **Prepare the injector for installation**

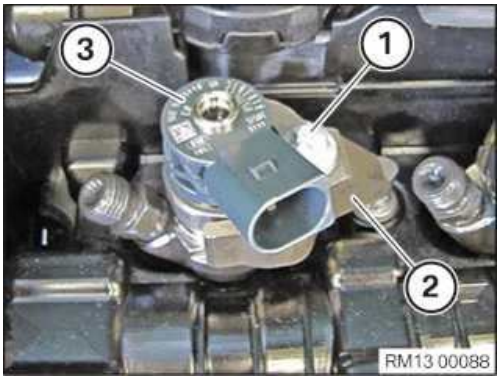
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

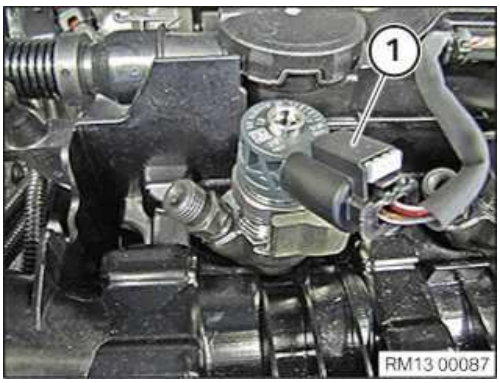


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring

- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials



Injector lubricating grease	50 g, Can	83230441070

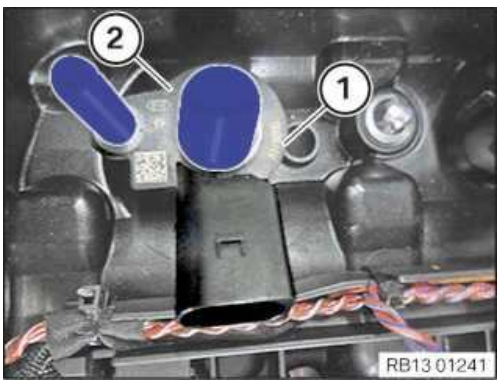
- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



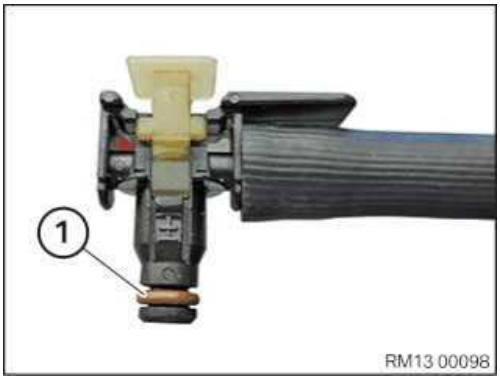
▸ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

cardiagn.com

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

32 – Connect the leakage oil line on the injector

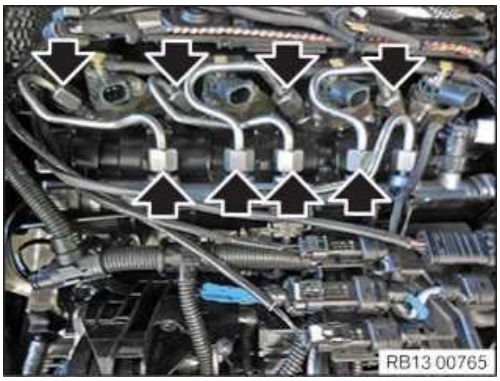
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

33 – Installing high pressure lines between rail and injectors



TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

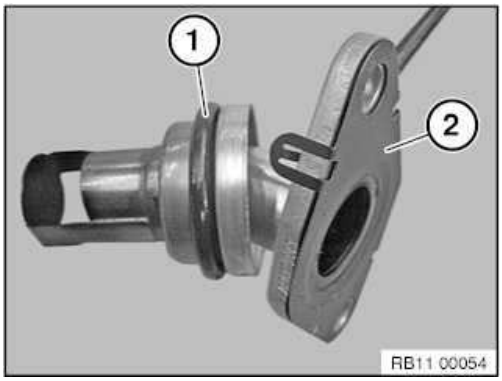
Reset special tool in early to avoid bending pressure lines.

cardiagn.com

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

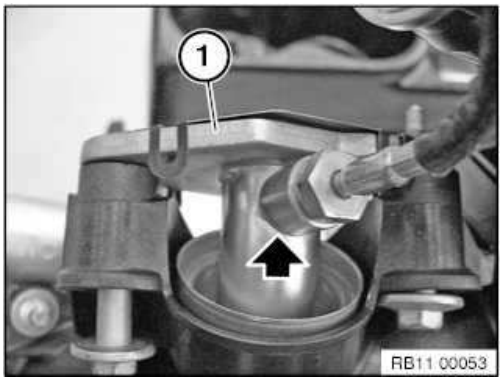


- Tighten the high pressure lines (arrows) with the special tool .

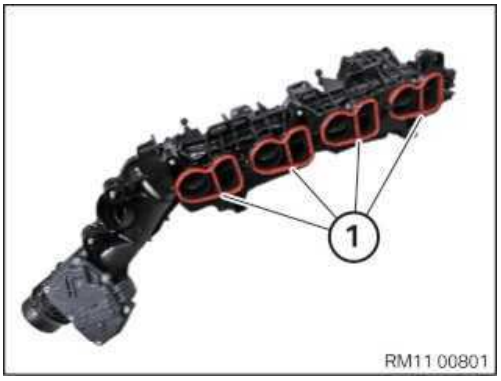
High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).



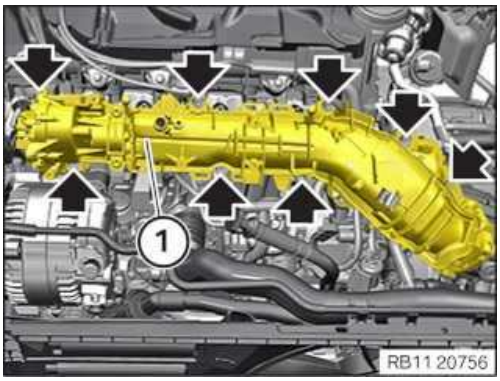
34 – Installing the intake plenum



- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

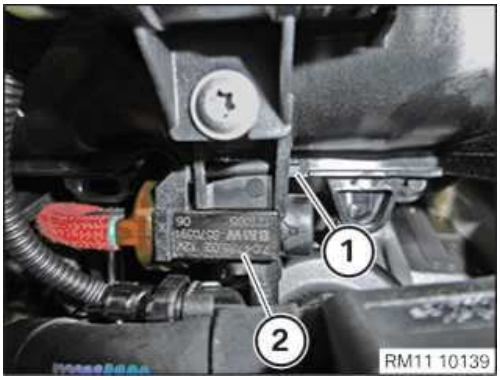
  Parts: Gasket
- Position the seal (2) and clip it in.



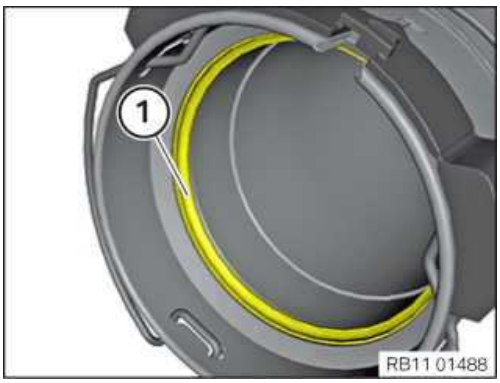
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



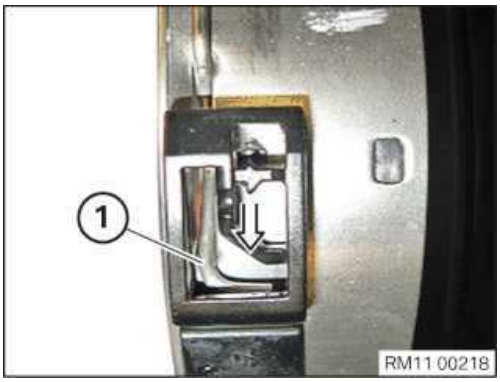
cardiagn.com



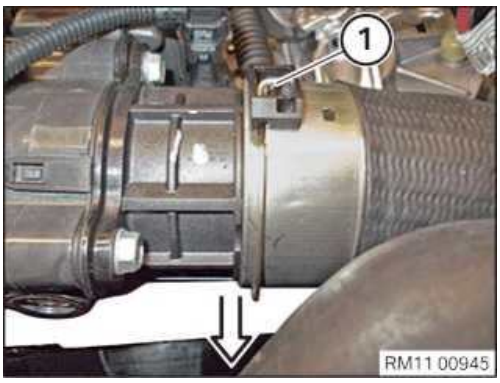
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



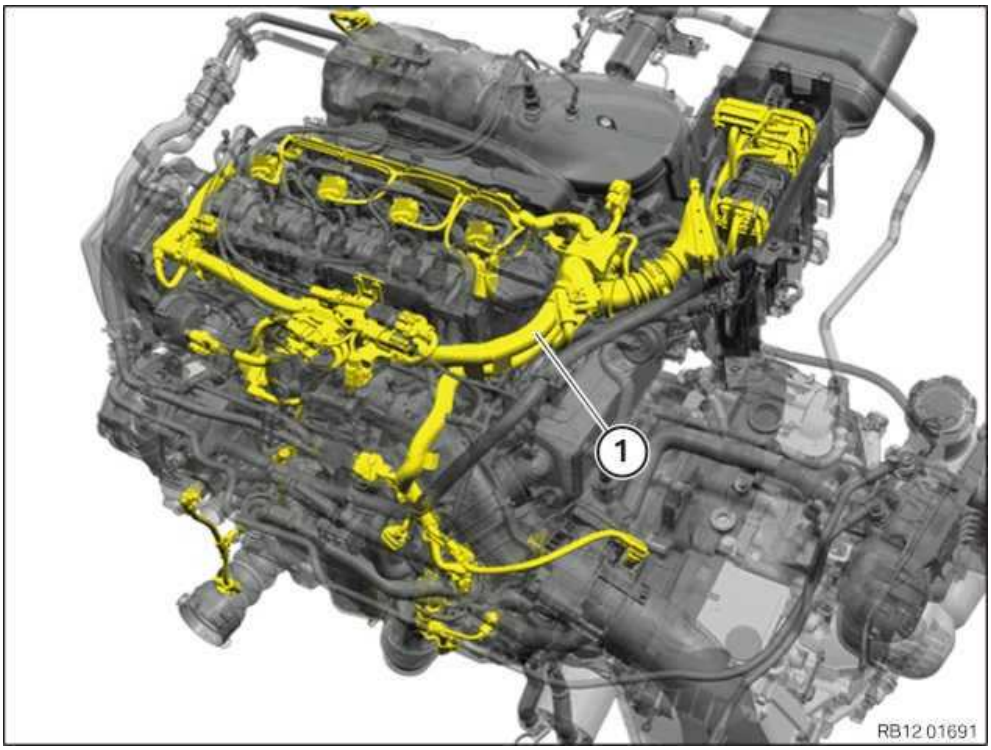
- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

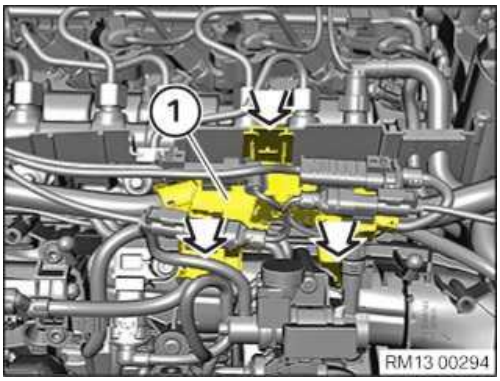
- Engage the lock (1) on the bracket (arrow).



- Connect the charge air line to the throttle valve.

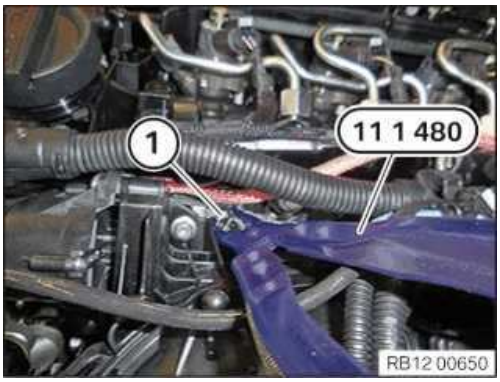
  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

35 – Fastening the wiring harness section for the intake plenum



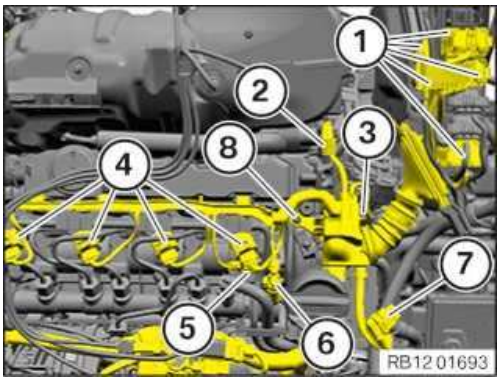
cardiagn.com

Overview: Wiring harness section for the engine



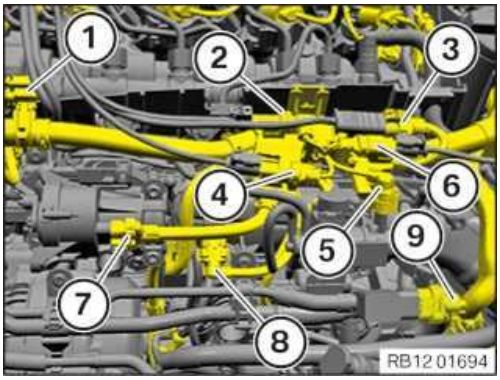
1 Wiring harness section for the engine

▶ **Installing the cable clip for the intake plenum**

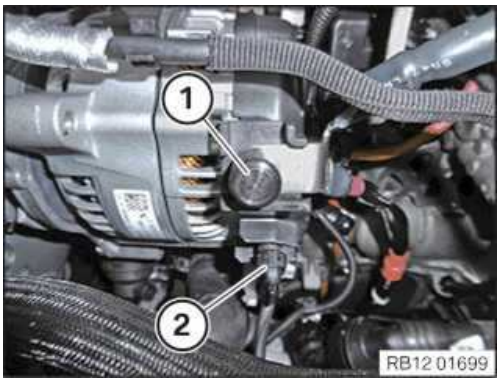


- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.



cardiagn.com

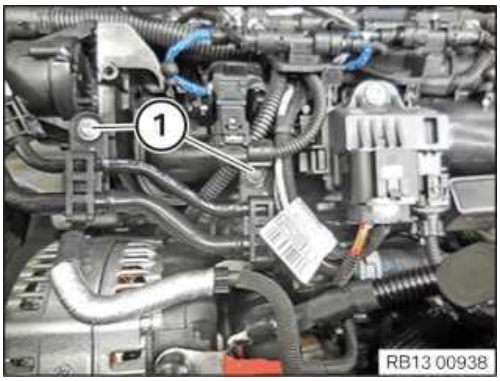


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.

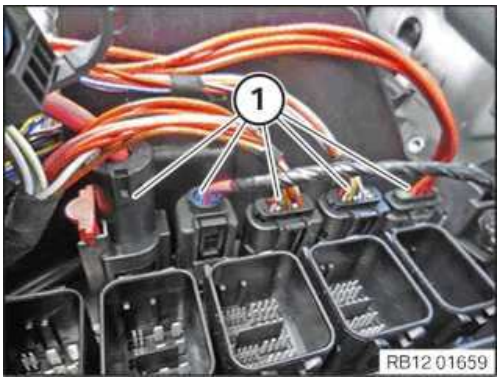


- Connect and lock the connector (2).

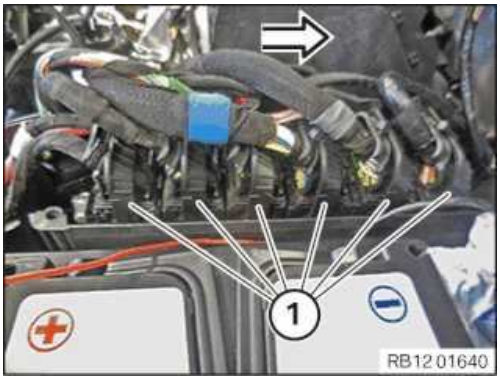
  Lock must snap audibly into place.
- Connect the positive battery cable (1) and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

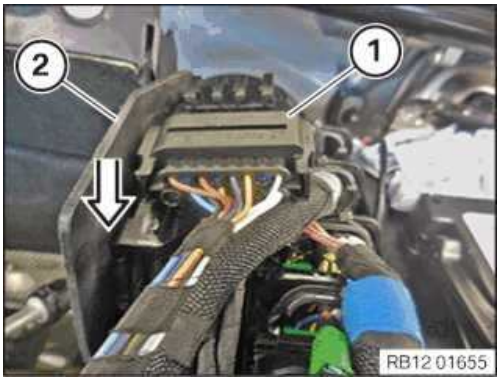


- Position the fuel line.
- Tighten the screws (1).

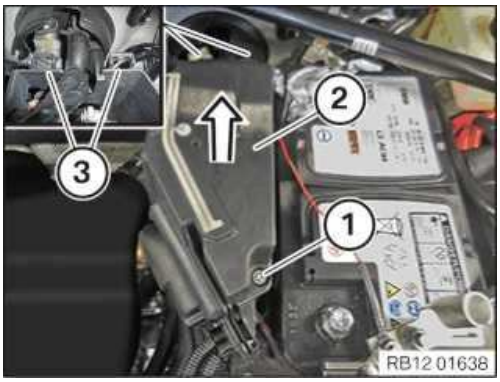


Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

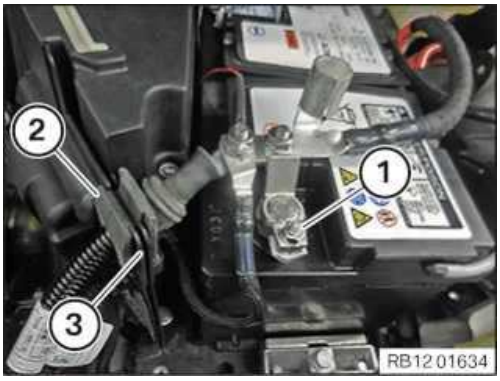


cardiagn.com



- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

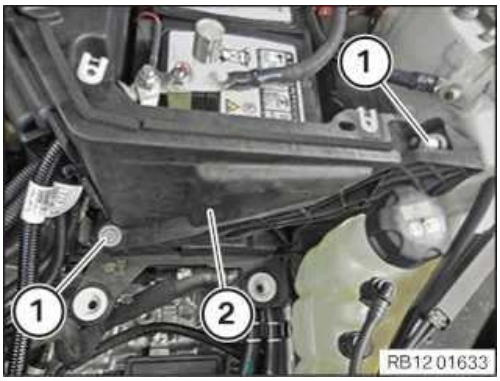


- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm

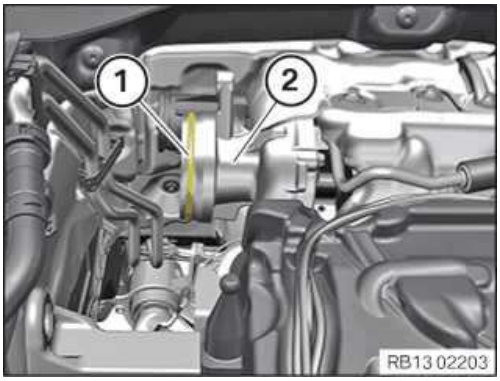


- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

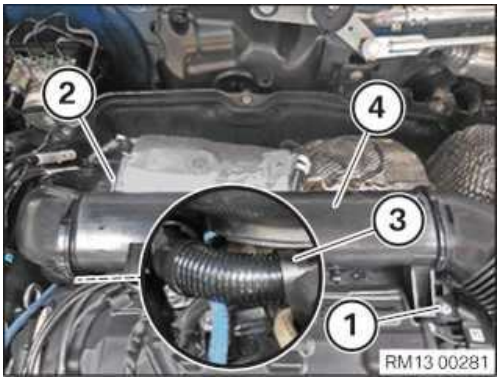
Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

cardiagn.com



- Feed in and install tension strut (2).
- Tighten the screws (1).



Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

36 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

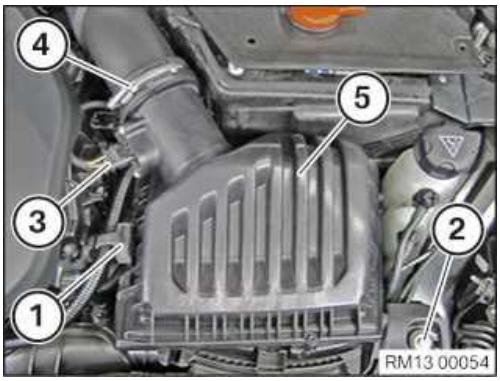
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

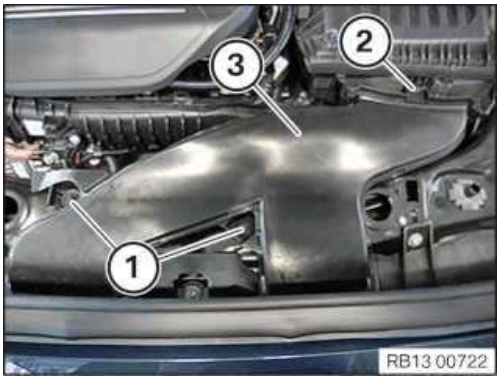
37 – Installing intake silencer housing

cardiagn.com

- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm



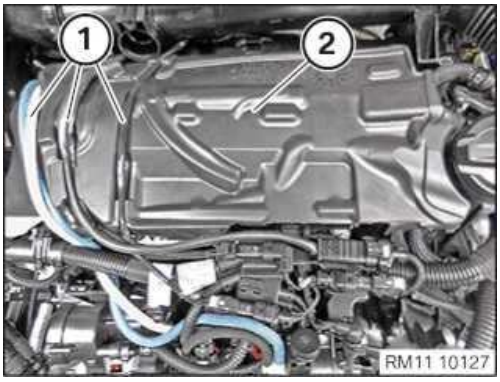
- Tighten clamp (4).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

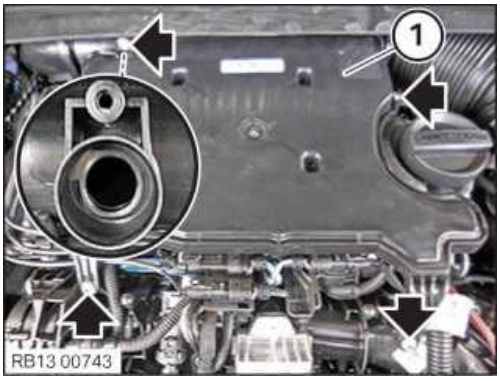
- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

38 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection



M6		Tightening torque	8 Nm

39 – Install the acoustic cover for the injectors

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

40 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).
  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

41 – Install acoustic cover

cardiagn.com

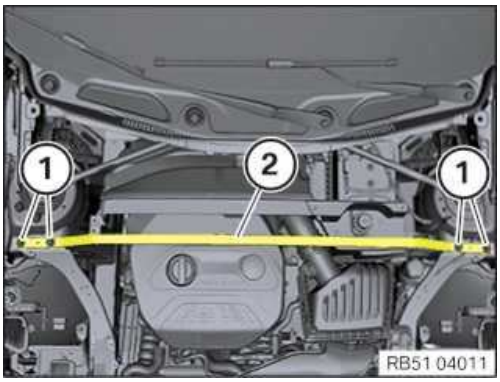
RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

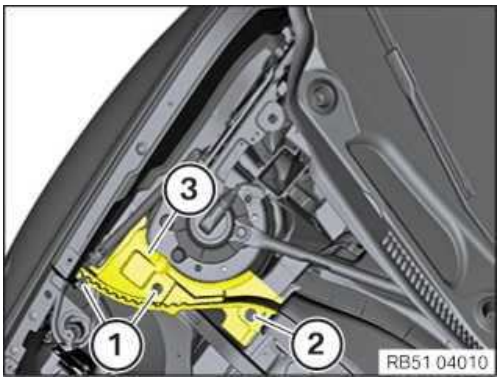


- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

42 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

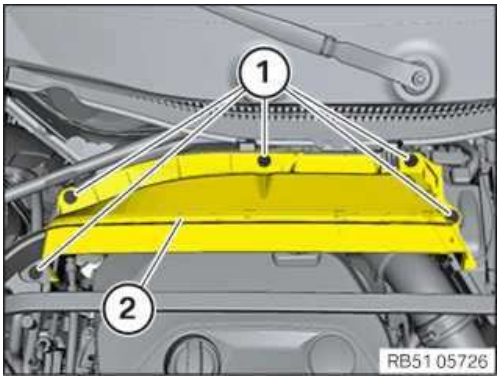
Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

cardiagn.com

NOTICE

Description is for right component only. The procedure on the left side is identical.

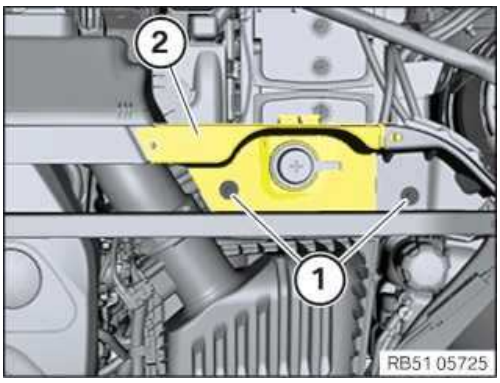


- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

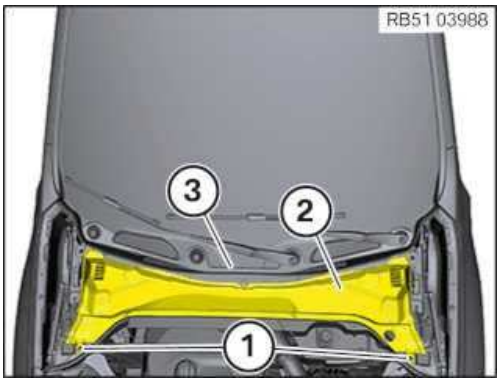


43 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm

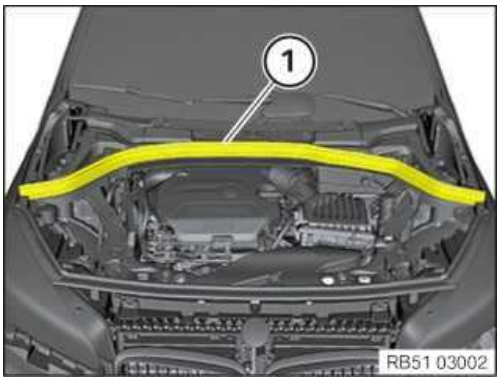


- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

44 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

45 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

46 – Disconnecting all battery earth leads

- See additional information.

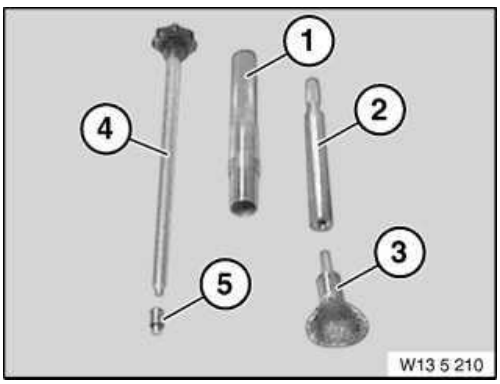
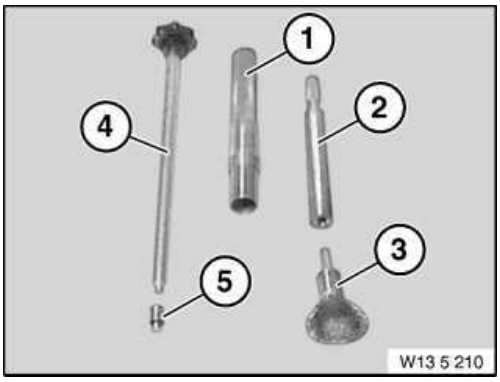
2 344 011 Tool



Common	Used in step 28
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

0 493 763 (13 5 215) Plug

Common	Used in step 31
Usage	(Seal plug)
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	



0 493 762 (13 5 214) Rod

Common	Used in step 31
Usage	(Mounting rod) For the seal plug
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 758 (13 5 210) Tool

Common Used in step 31

Usage	(Cleaning set) For injector channels
Included in the tool or work	
Storage location	B4
Replaced by	
In connection with	
SI-Number	01 05 00 (574)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 759 (13 5 211)		**Holding sleeve** (Guide sleeve)	
2	0 493 760 (13 5 212)		**Holder** (Brush holder)	
3	0 493 761 (13 5 213)		**Brush head**	
4	0 493 762 (13 5 214)		**Rod** (Mounting rod) For the seal plug	
5	0 493 763 (13 5 215)		**Plug** (Seal plug)	

Replacement tools:

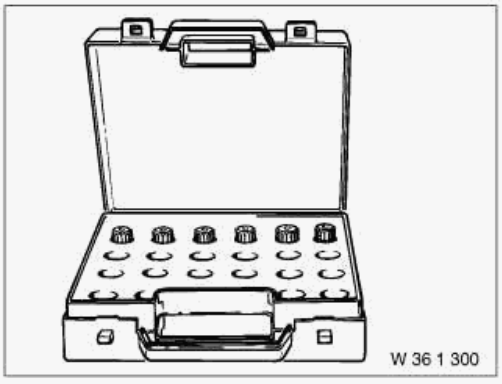
0 495 221 (36 1 323) Wheel stud

Common Used in step 20

Usage	(Code 30) Code 39 available separately, (see EPC) under 36 13 1 181 259
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 224 (36 1 326) Wheel stud



Common	Used in step 20
Usage	(Code 33) With centring bore available separately, (see EPC) under 36 13 6 765 546
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 225 (36 1 327) Wheel stud

Common	Used in step 20
Usage	(Code 34) With centring bore available separately (see EPC) under 36 13 6 765 547
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 226 (36 1 328) Wheel stud

Common	Used in step 20
Usage	(Code 35) With centring bore available separately, (see EPC) under 36 13 6 762 340
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 227 (36 1 329) Wheel stud

Common	Used in step 20
Usage	(Code 36) With centring bore available separately (see EPC) under 36 13 6 762 341
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 228 (36 1 331) Wheel stud

Common	Used in step 20
Usage	(Code 37) With centring bore available separately (see EPC) under 36 13 6 762 342
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 229 (36 1 332) Wheel stud

Common	Used in step 20
Usage	(Code 38) With centring bore available separately (see EPC) under 36 13 6 762 343
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 230 (36 1 333) Wheel stud

Common	Used in step 20
Usage	(Code 40) With centring bore available separately (see EPC) under 36 13 6 762 344
Included in the tool or work	0 492 518

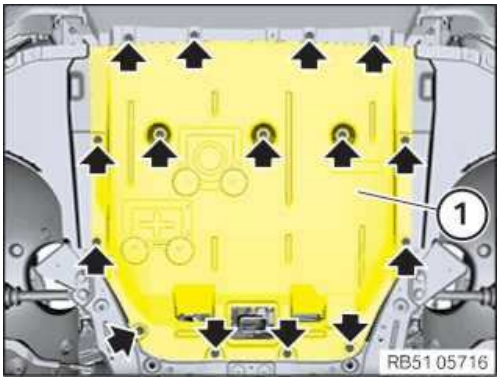
Operating materials	Used in step
2.0 Grease for wheel centring	28

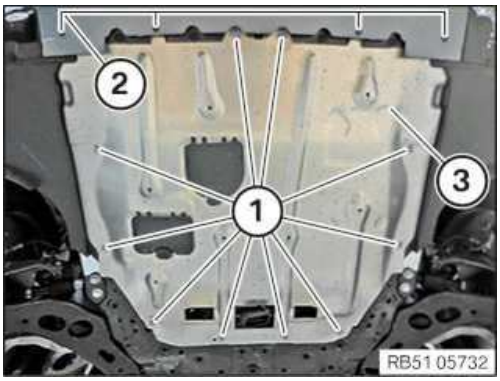
cardiagn.com

11 31 022 Removing and installing/replacing both camshafts



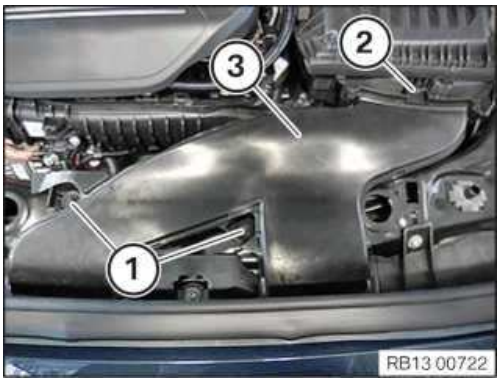
PRELIMINARY WORK

1 – Disconnecting all battery earth leads



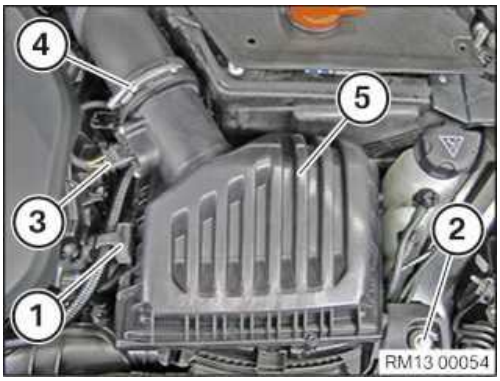
- See additional information.

2 – Removing the front underbody protection



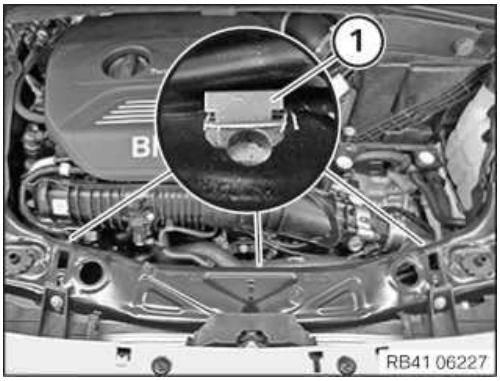
- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).



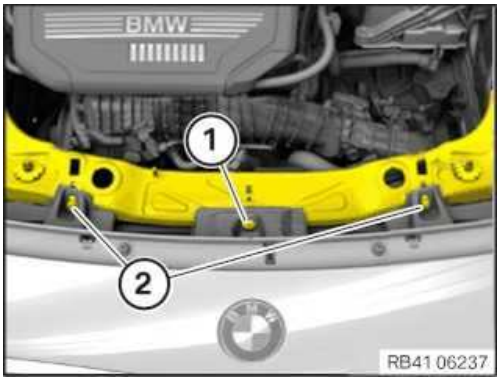
3 – Remove the intake neck for intake silencer housing

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

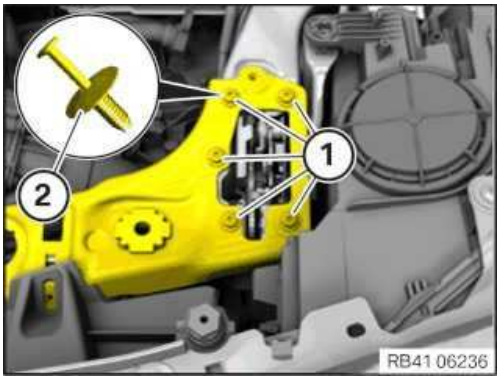


4 – Removing intake silencer housing

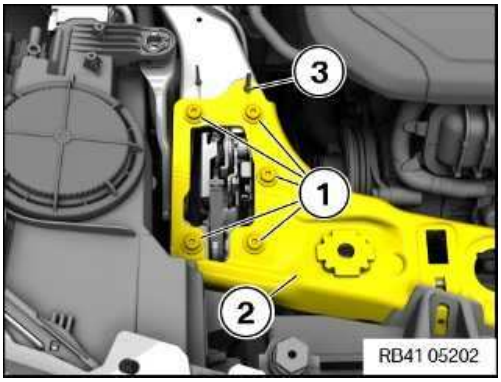
cardiagn.com



- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.



5 – Remove front cross connection



- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

6 – Draining coolant

cardiagn.com

WARNING

Hot fluids.

Risk of scalding!

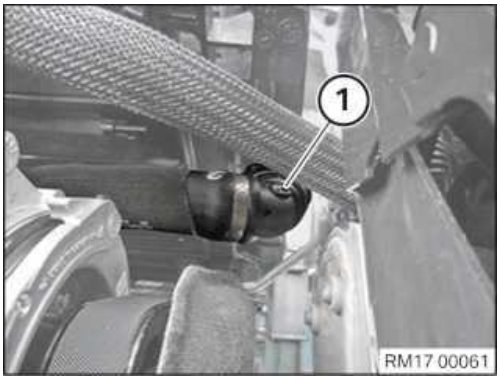
- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

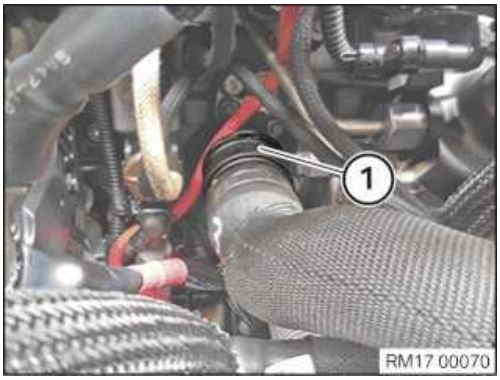
Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.



In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

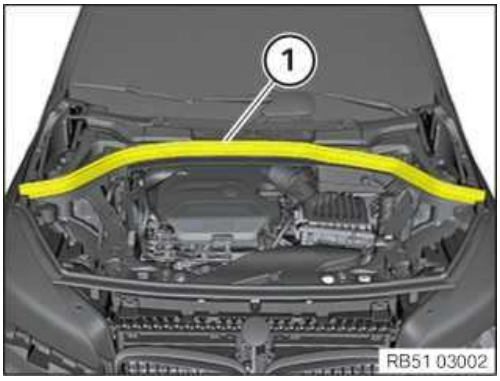
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen sealing cap (1).

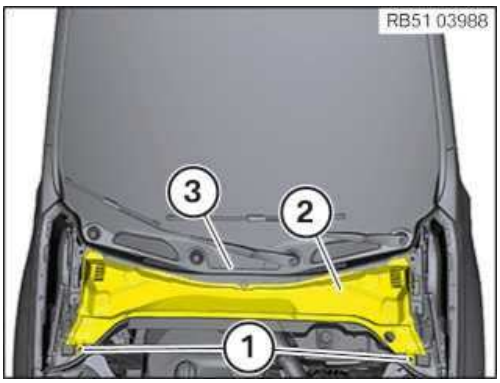
- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.



- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.

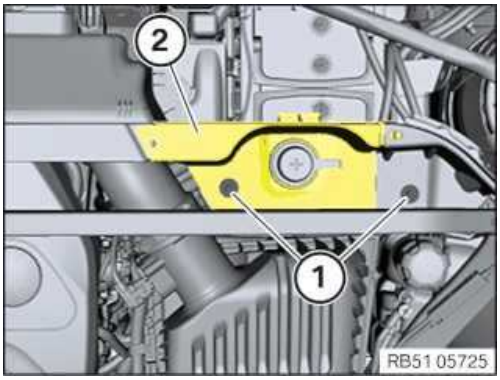
7 – Remove the seal for the rear bonnet

cardiagn.com



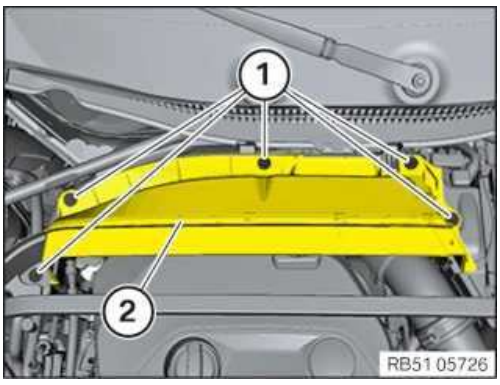
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Pull off rear bonnet seal (1) towards the top and remove.

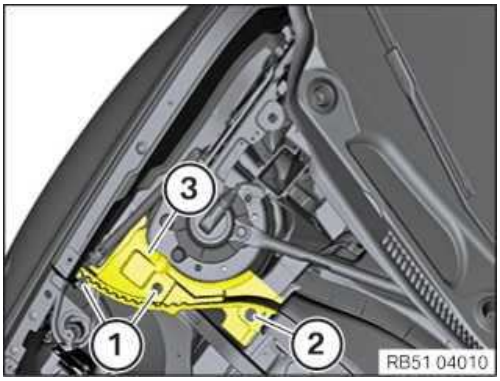
8 – Removing front cowl panel cover



- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

9 – Removing the upper bulkhead cover

- Loosen screws (1).
- Guide out and remove the cover (2).

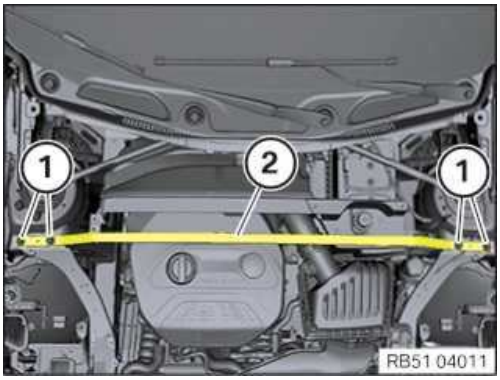


- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

10 – Remove suspension cross-brace

cardiagn.com

TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

NOTICE

Description is for right component only. The procedure on the left side is identical.

- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).

11 – Removing the acoustic cover

WARNING

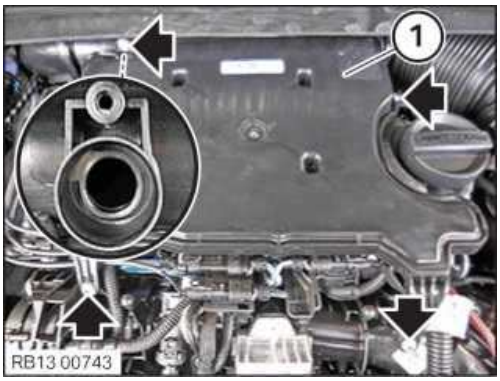
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

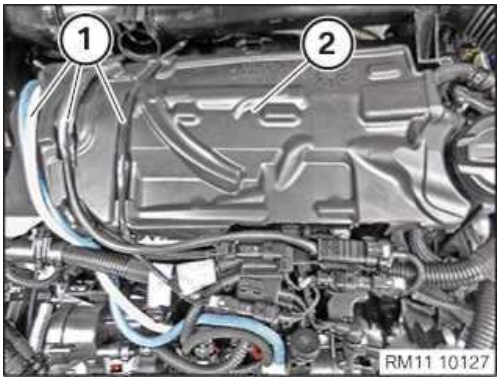
Damage to the acoustic cover.



Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

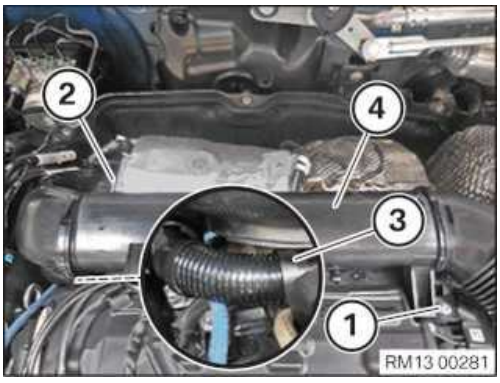


12 – Remove resonator

cardiagn.com

- Remove screws (arrows).
- Guide out and remove the resonator (1).

13 – Remove the acoustic cover for the injectors



- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

14 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

15 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

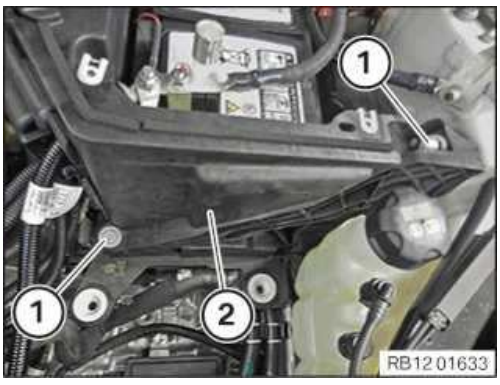
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

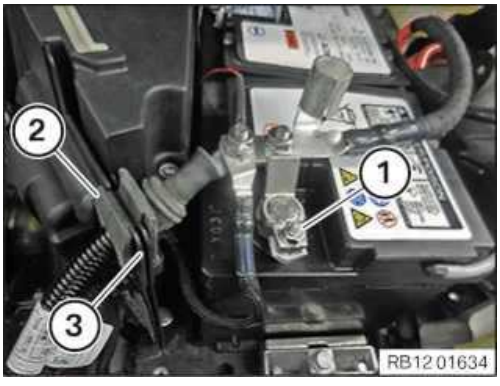
Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.



TECHNICAL INFORMATION

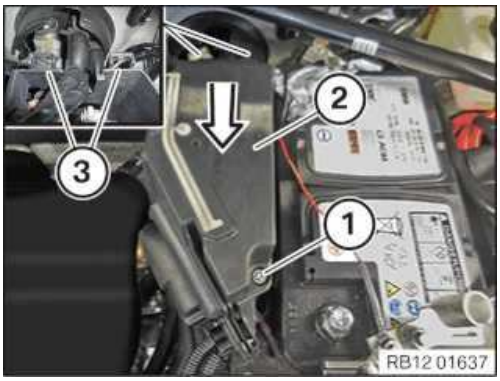
Follow instructions for removing and installing control units.



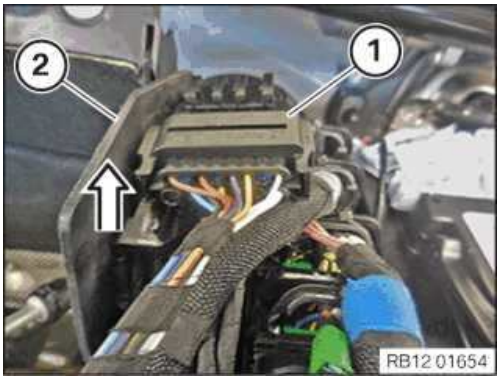
For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

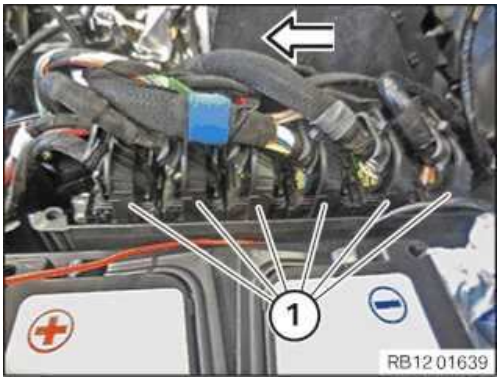
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



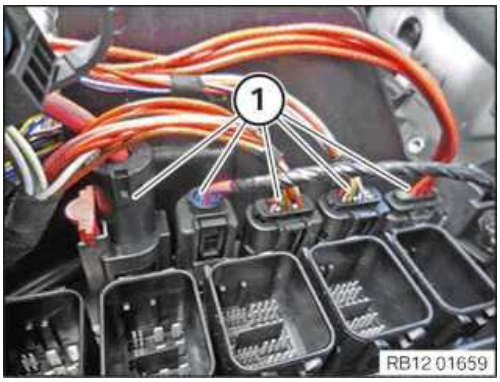
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



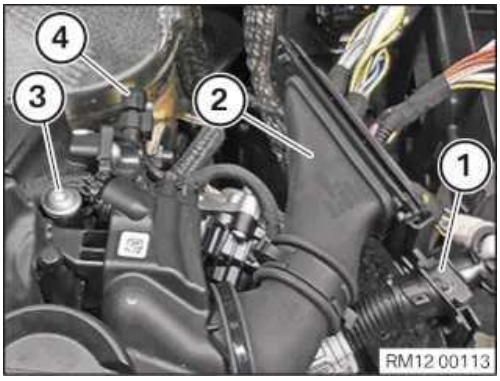
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



cardiagn.com

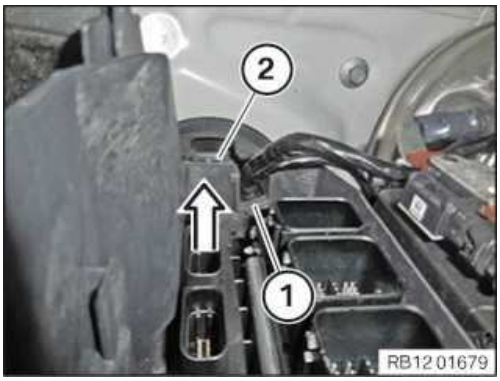


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

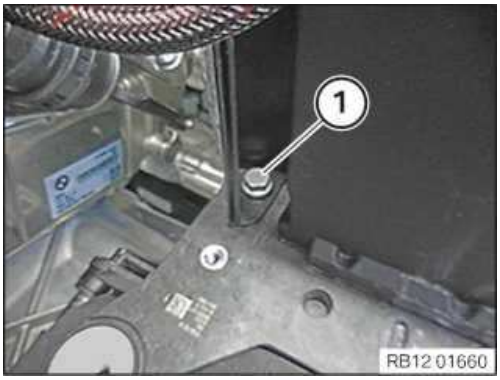


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

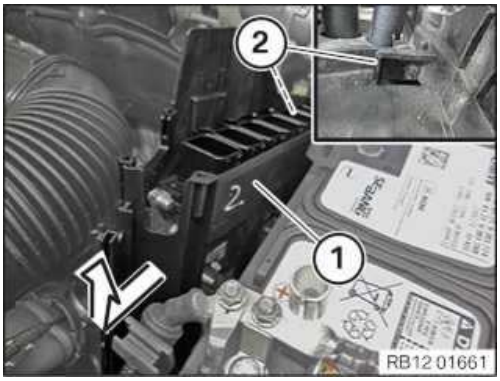
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).



- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

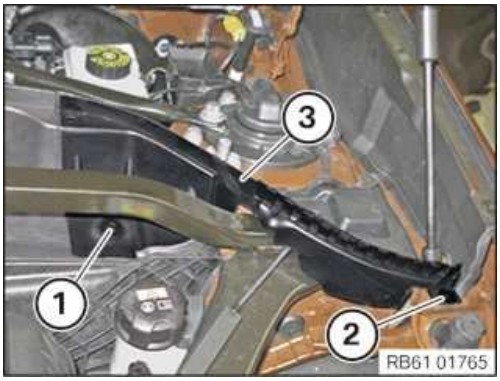


cardiagn.com

- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

- Loosen screw (1).

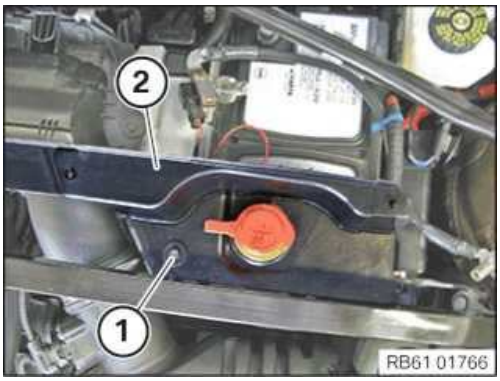
- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.



16 – Remove vehicle battery

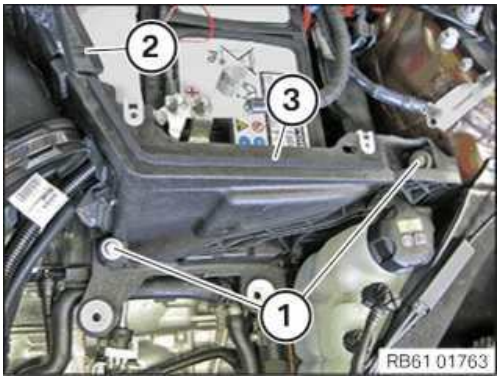
WARNING

Working on 12 V vehicle electrical system.

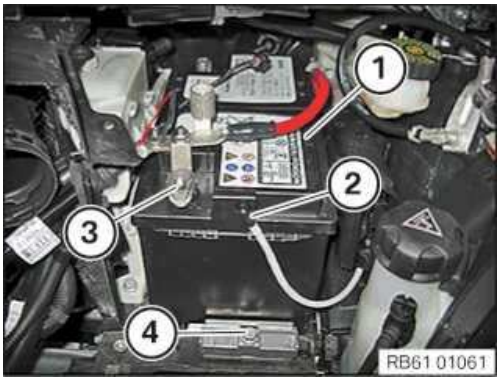


Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.



- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).



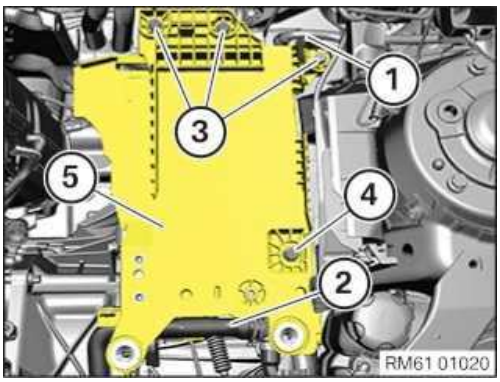
cardiagn.com

- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING



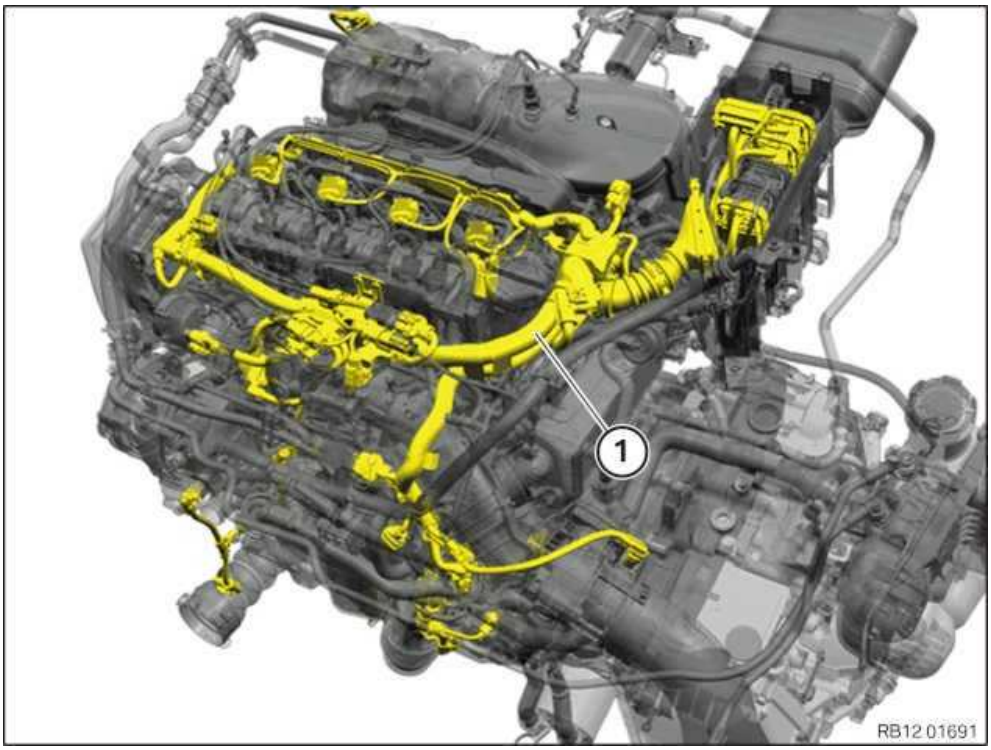
Unprotected battery terminals.

Risk of short circuits! Risk of fire!

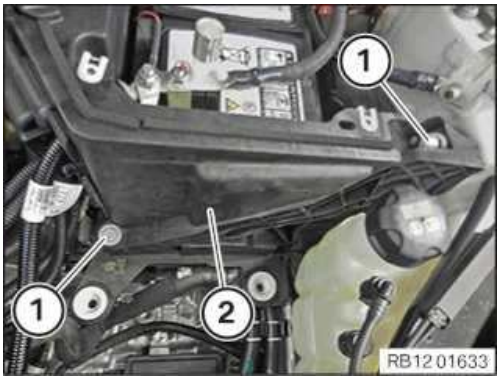
- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

17 – Remove battery holder

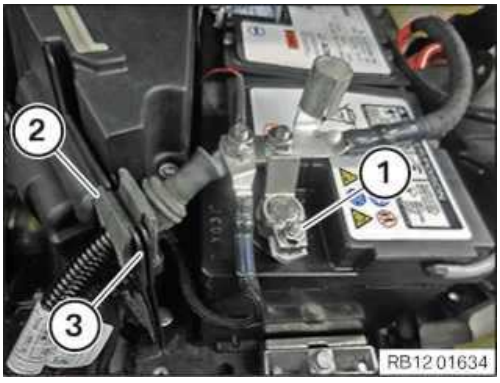


- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

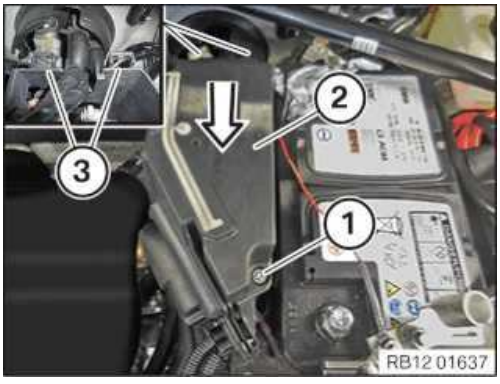


18 – Releasing the wiring harness section for the intake plenum

cardiagn.com

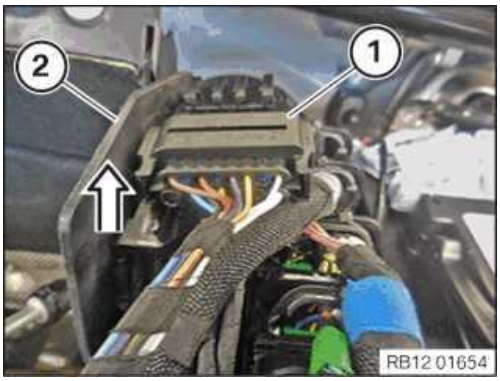


Overview: Wiring harness section for the engine

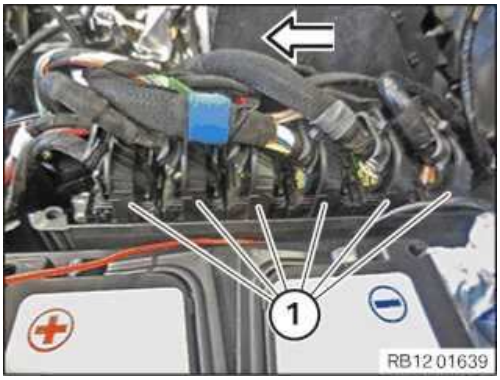


1 Wiring harness section for the engine

- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

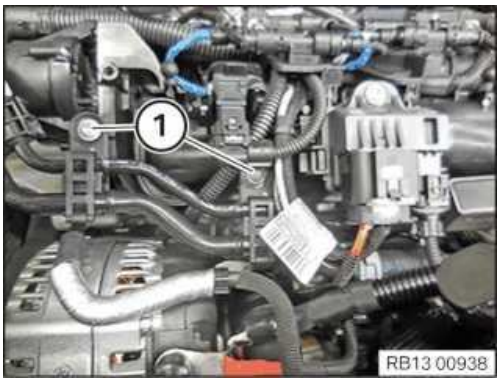


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

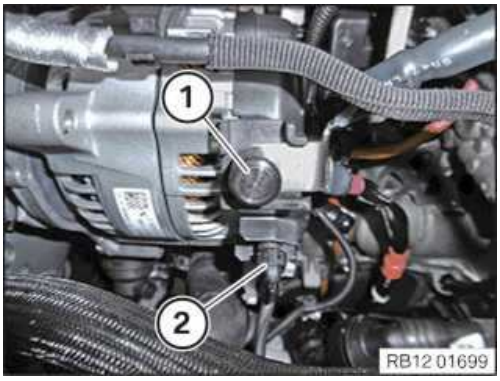


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

cardiagn.com

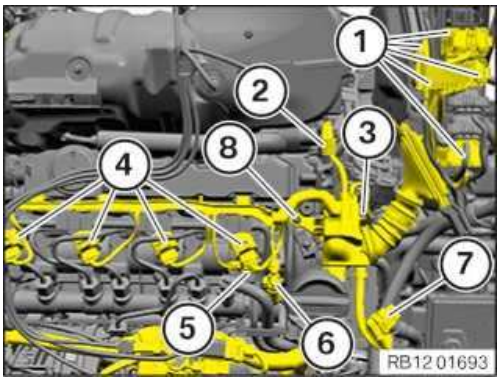


- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).

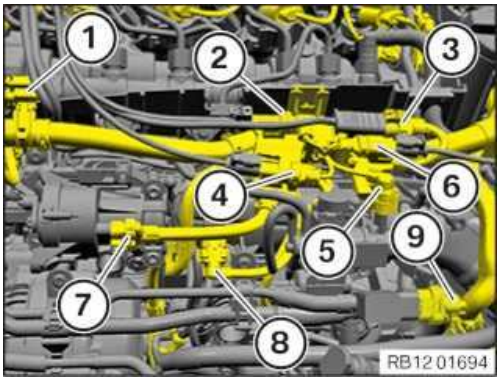


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

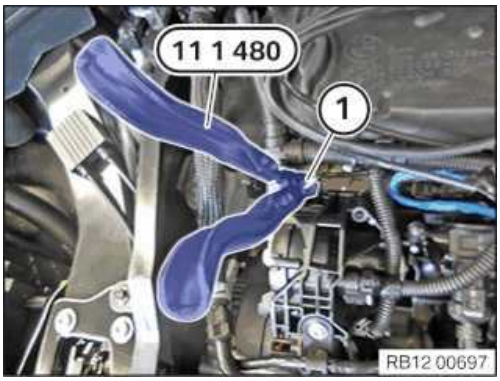
- Unlock and loosen connector (1).



- Loosen screws (1).

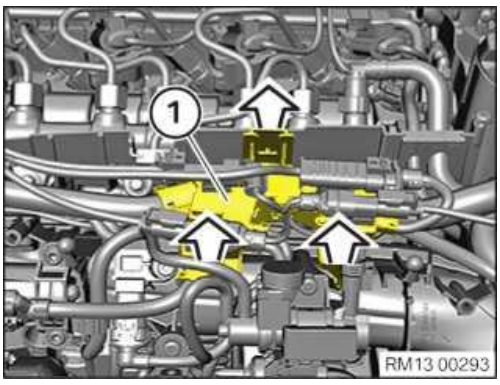


- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.



cardiagn.com

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).



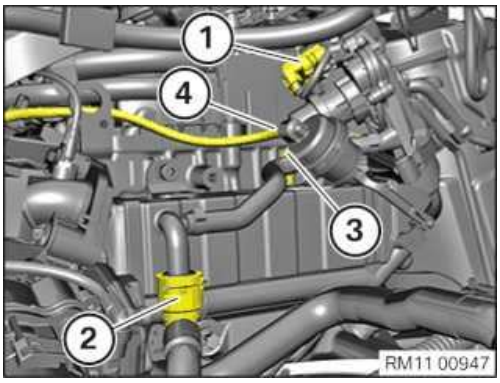
- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock and disconnect the connector (3) from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

▶ **Removing the cable clips from the intake plenum**

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

19 – Removing the exhaust-gas recirculation cooler

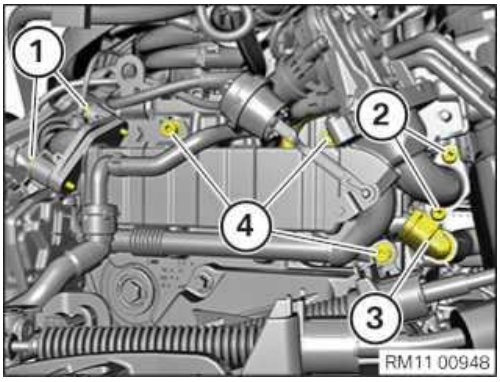


cardiagn.com

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

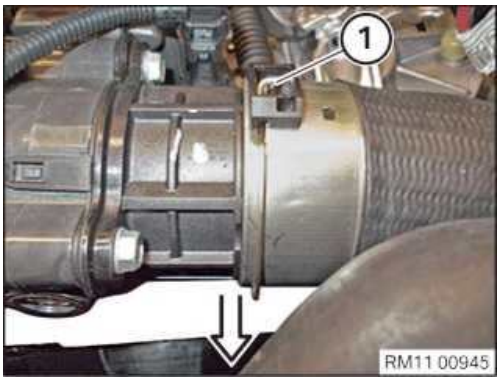
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

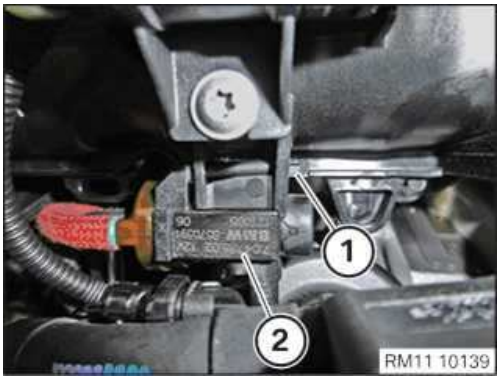
- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

20 – Removing the intake plenum

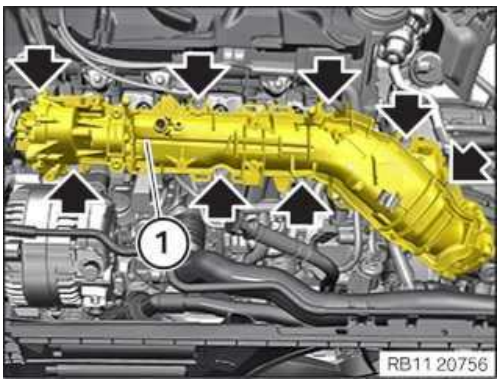


TECHNICAL INFORMATION

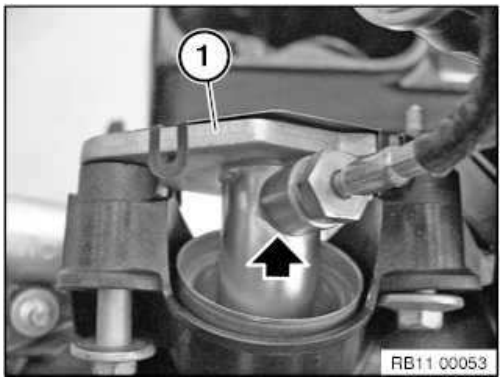
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the lock (1).



cardiagn.com



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

21 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

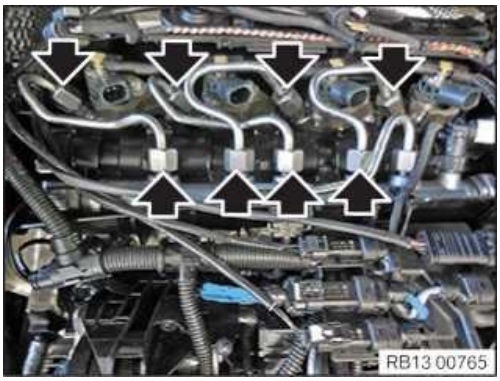
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.



TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

22 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

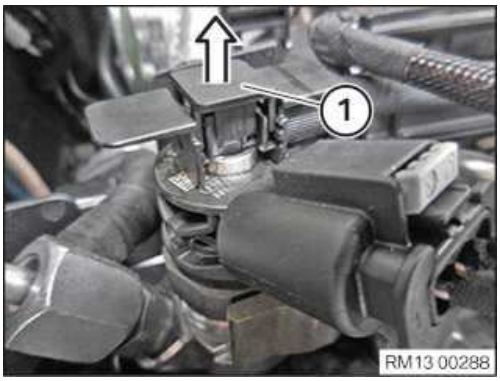
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

23 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

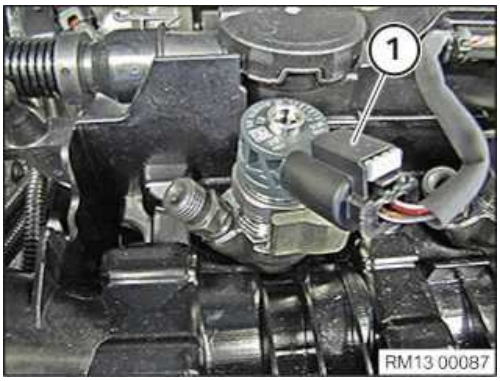
RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

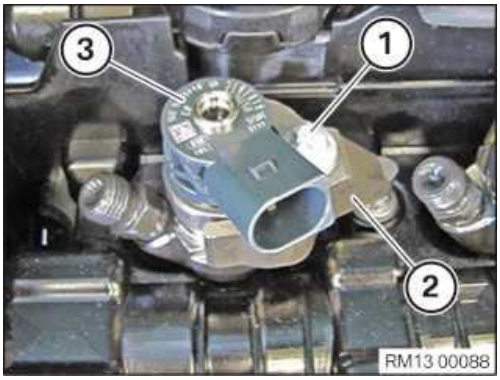
- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.



- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

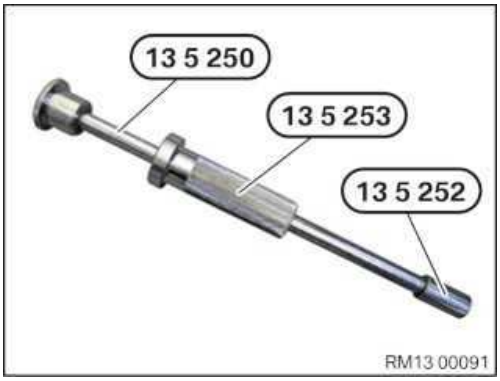
TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

- Unlock and disconnect connector (1).

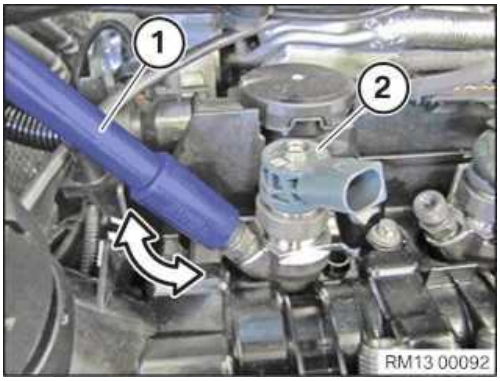
- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

▶ **Loosen stuck injectors**



cardiagn.com

RISK OF DAMAGE



Contaminant or foreign body.

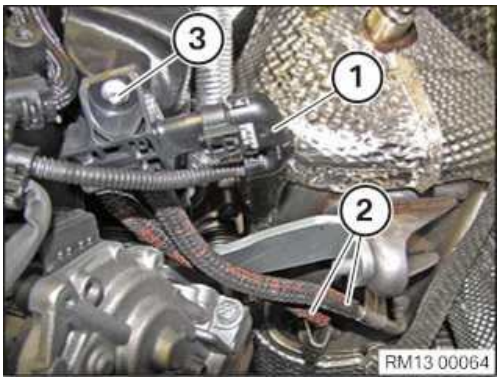
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)**back onto the special tool **0 493 321 (13 5 250)**.

- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

24 – Remove differential pressure sensor

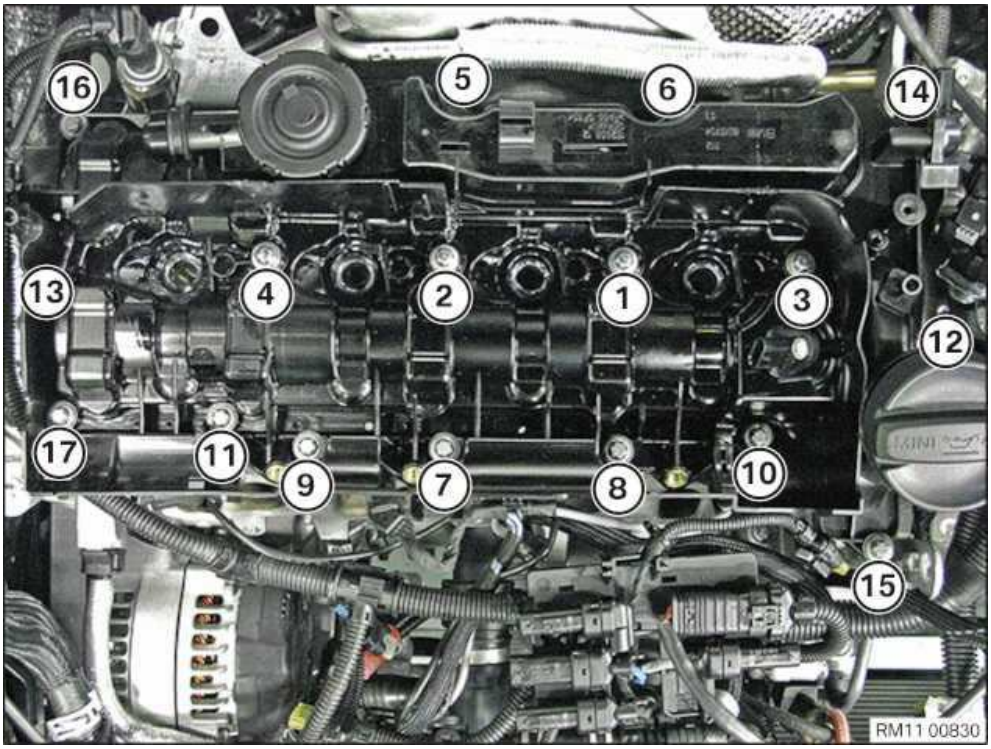


RISK OF DAMAGE

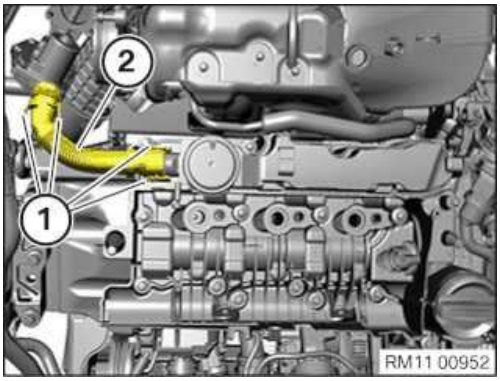
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



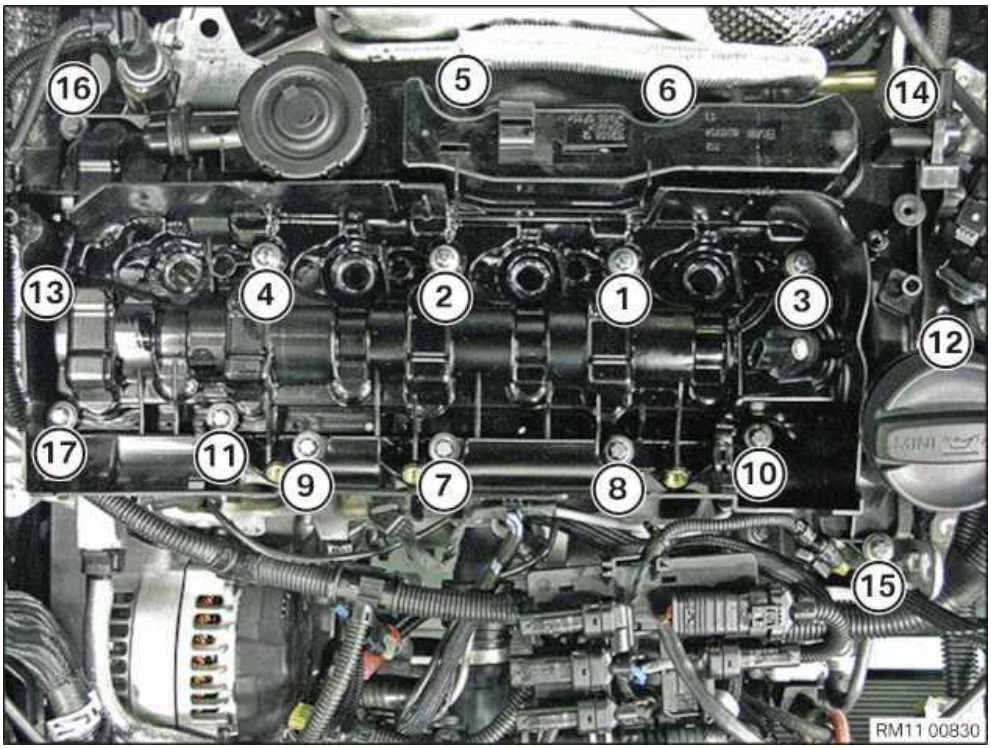
cardiagn.com



- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

25 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

26 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

TECHNICAL INFORMATION

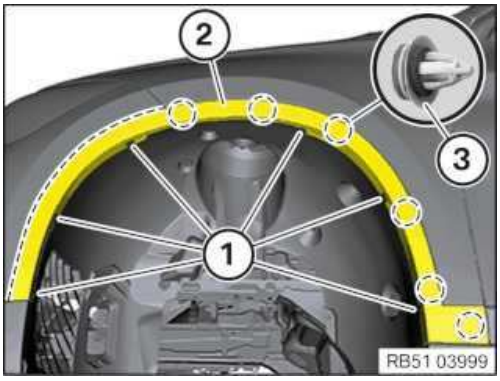
Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

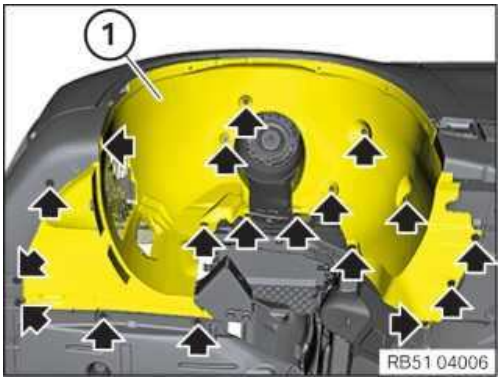
27 – Removing the front right wheel arch cover

▸ **Remove the front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.



cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

NOTICE

Description is for left component only. Procedure on the right side is identical.

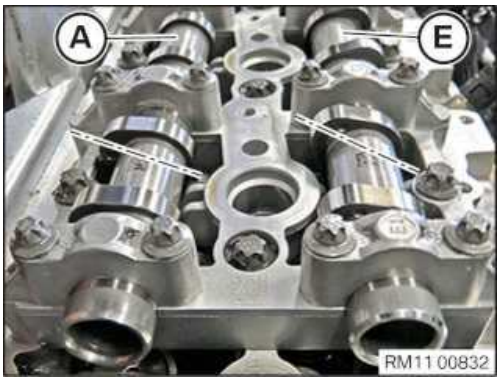
- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

28 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

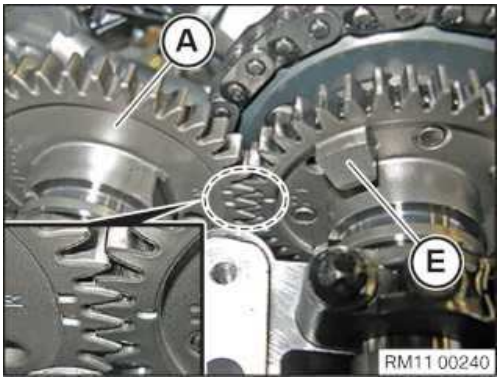


The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

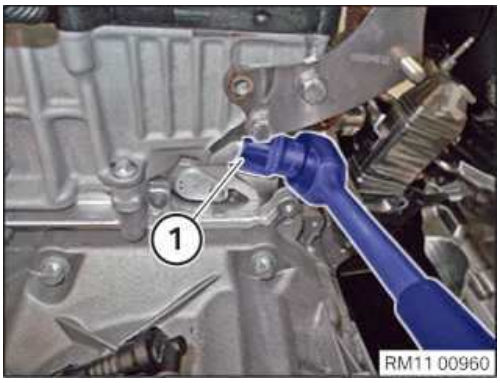
If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

29 – Remove chain tensioner piston



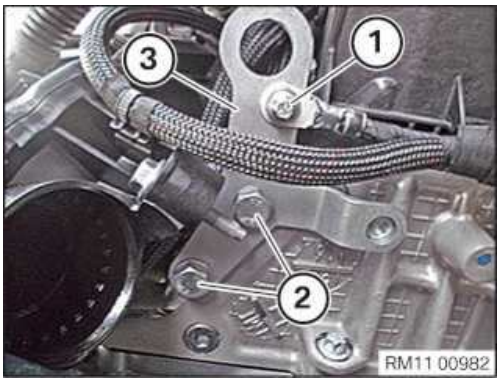
cardiagn.com

WARNING

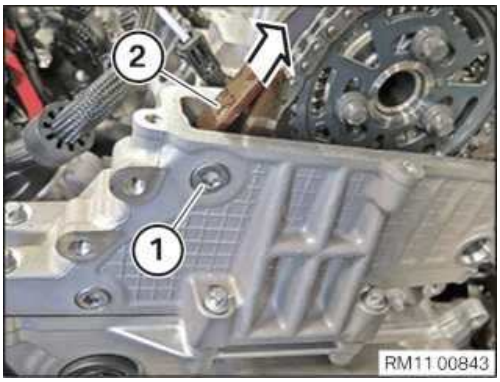
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



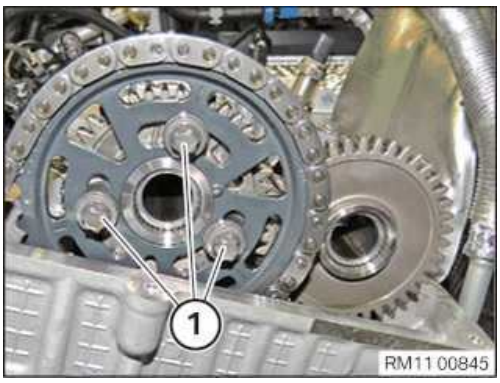
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

30 – Remove the timing chain guide rail



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

31 – Removing the camshaft sprocket on the intake camshaft

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

MAIN WORK

cardiagn.com

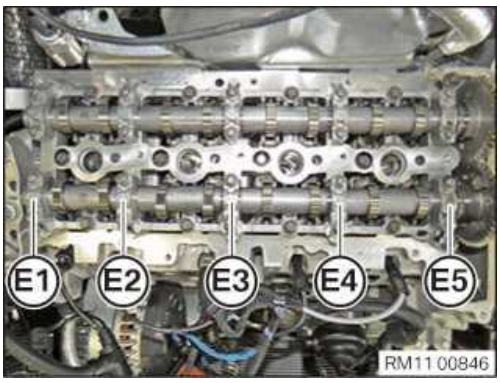
32 – Remove exhaust camshaft.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

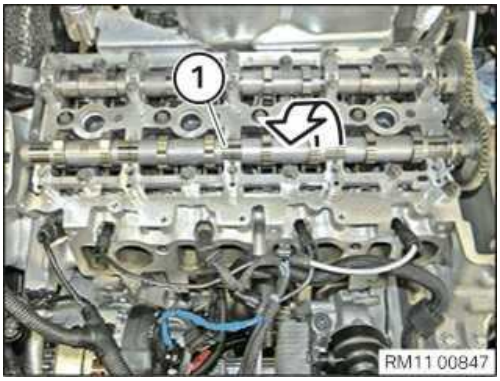
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



TECHNICAL INFORMATION

The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

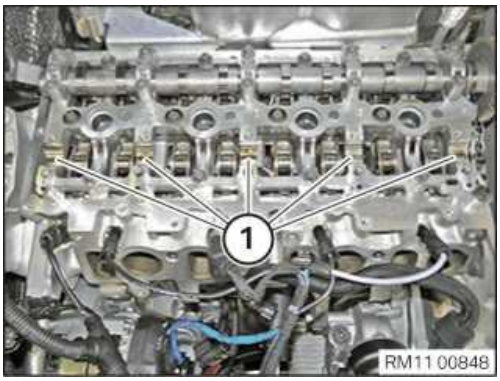
- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A5) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components on special tool **0 495 105 (11 4 480)** in a tidy and orderly fashion.



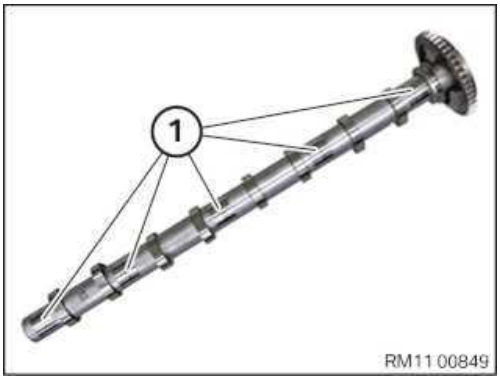
33 – Removing the intake camshafts

TECHNICAL INFORMATION

The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

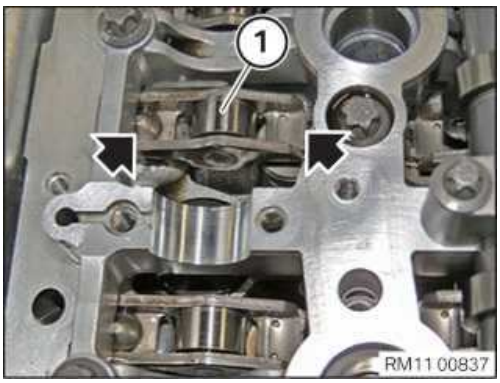


- Loosen all screws of the intake camshaft bearing caps (E1) to (E5) from the outside towards the inside by 1/2 a turn at a time.
- Place all components on special tool **0 495 105 (11 4 480)** in a tidy and orderly fashion.

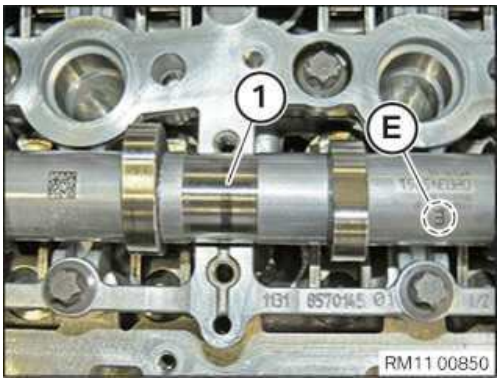


- Remove the intake camshaft (1).

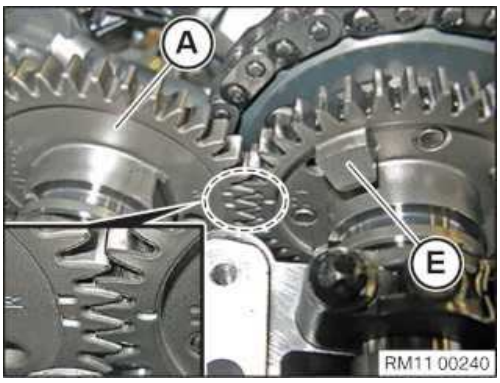
34 – Install intake camshaft



cardiagn.com

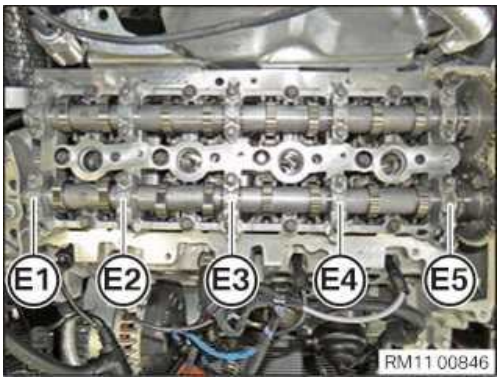


- Oil all bearing positions (1).



- Oil all bearing positions (1) of the intake camshaft.

- Check the installation position of the roller cam followers (1) **(risk of damage!)** .



- Make sure the identification (E) of the intake camshaft points upwards.
- Insert the intake camshaft (1).

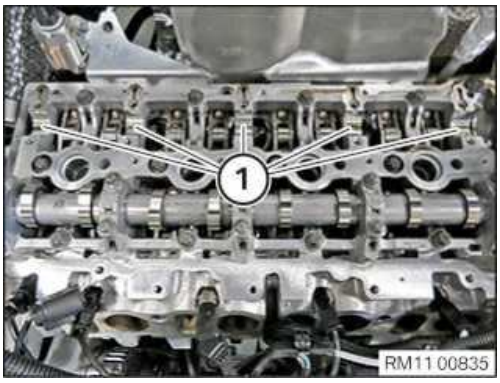
- Insert the intake camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.

cardiagn.com

- Tighten all intake camshaft bearing caps (E1) to (E5) from the inside to the outside by 1/2 a turn at a time.

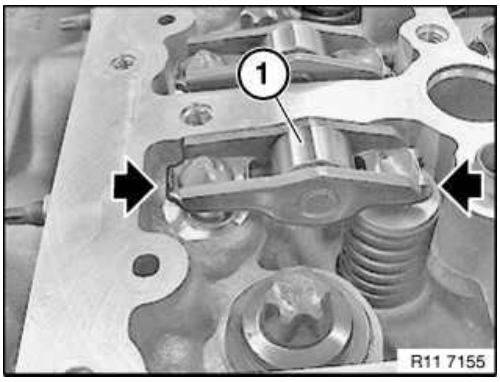
Intake and exhaust camshaft in camshaft support

M6x31		Tightening torque	10 Nm



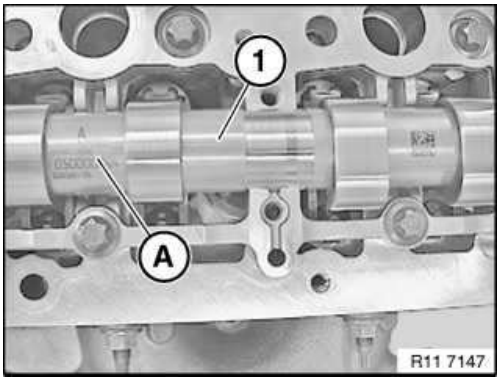
35 – Install exhaust camshaft

RISK OF DAMAGE



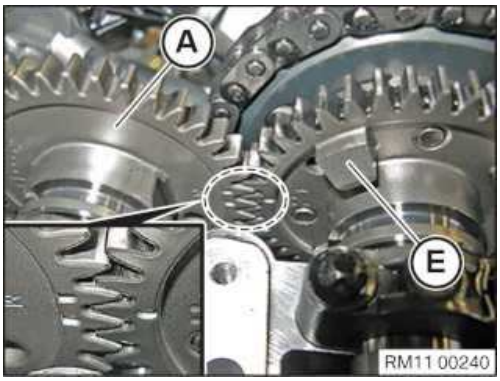
Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

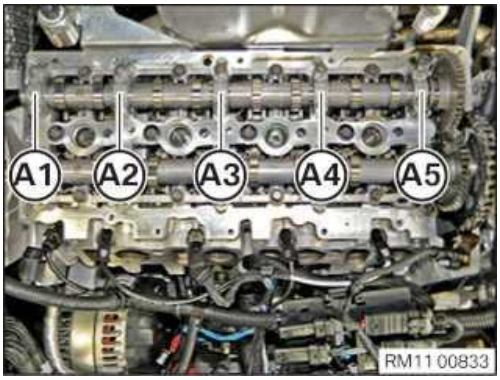


- Comply with the regulations for the installation and disassembly.
- Perform work with care.

- Oil all bearing positions (1).



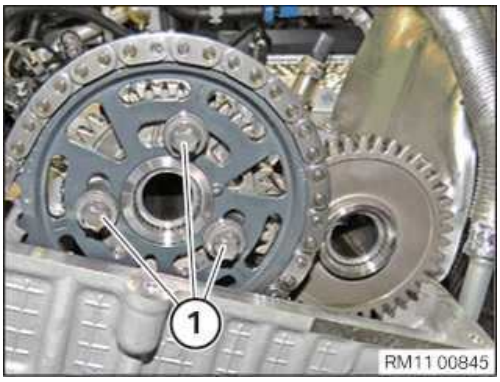
- Make sure the roller cam followers (1) have the correct mounting orientation.



- Insert exhaust camshaft (1) so that the identification (A) points upwards.

cardiagn.com

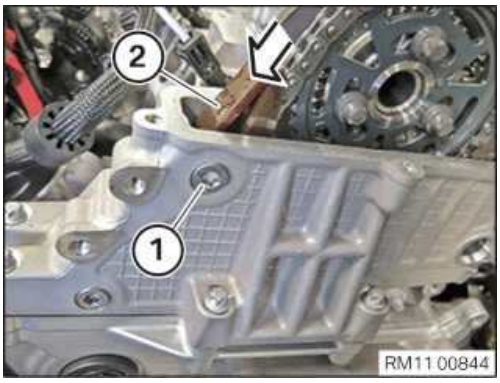
- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.



- Tighten all exhaust camshaft bearing caps (A1) to (A5) from the inside to the outside by 1/2 a turn at a time.

Intake and exhaust camshaft in camshaft support

M6x31		Tightening torque	10 Nm



POSTPROCESSES

36 – Installing the camshaft sprocket on the intake camshaft

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

37 – Install the timing chain guide rail

- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

cardiagn.com

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

38 – Installing the chain tensioner piston

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

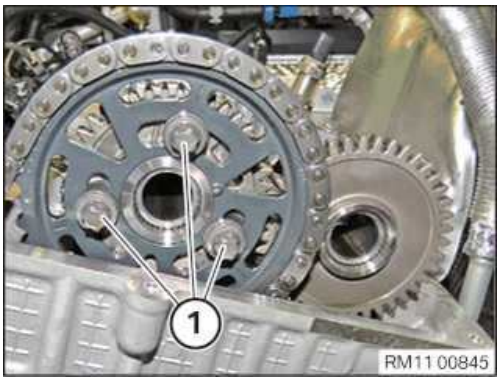
- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.



- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

39 – Tightening the camshaft sprocket on the intake camshaft

cardiagn.com

- Tighten the screws (1).

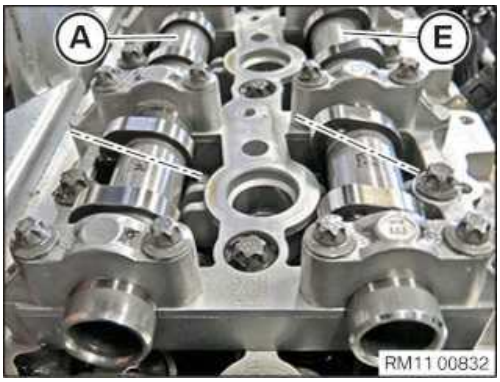
Camshaft sprocket to camshaft

M7x17.			17 Nm

40 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE



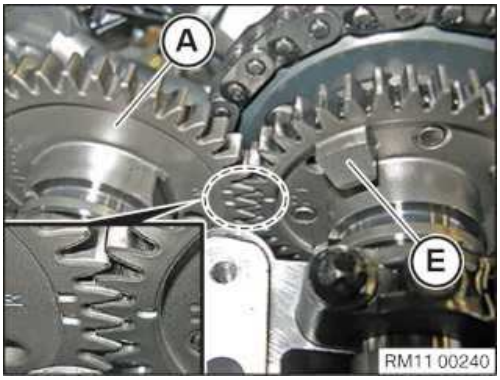
Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

cardiagn.com

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

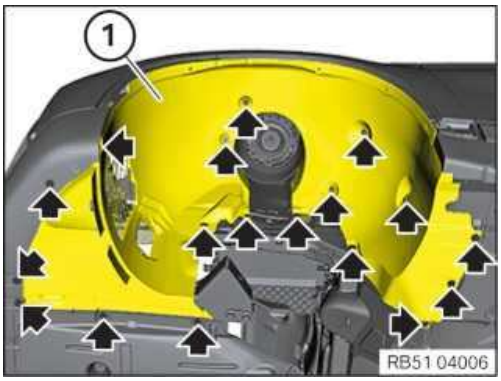
- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.



- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

41 – Installing the front right wheel arch cover

NOTICE

Description is for left component only. Procedure on the right side is identical.

cardiagn.com

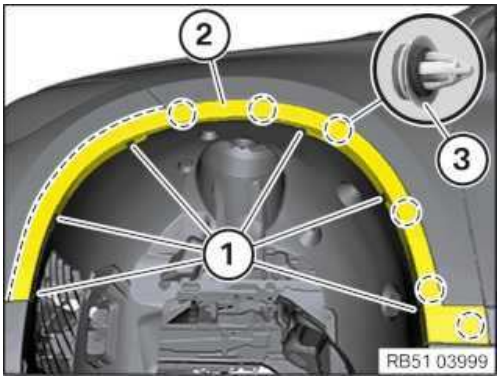
- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm



▸ **Installing front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

42 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

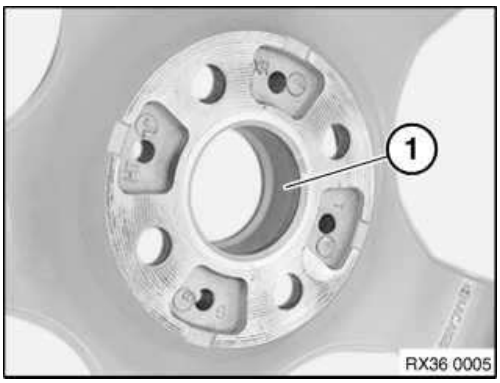
- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

cardiagn.com

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

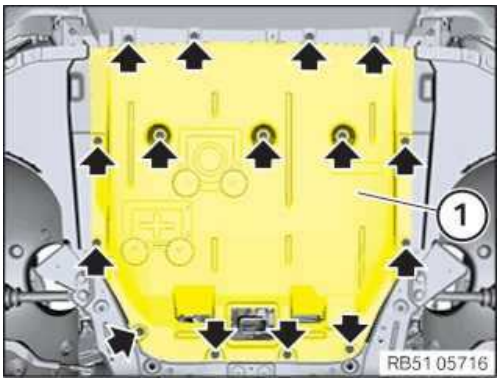
TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

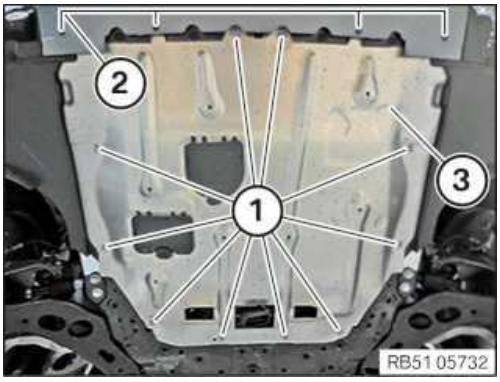


- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		



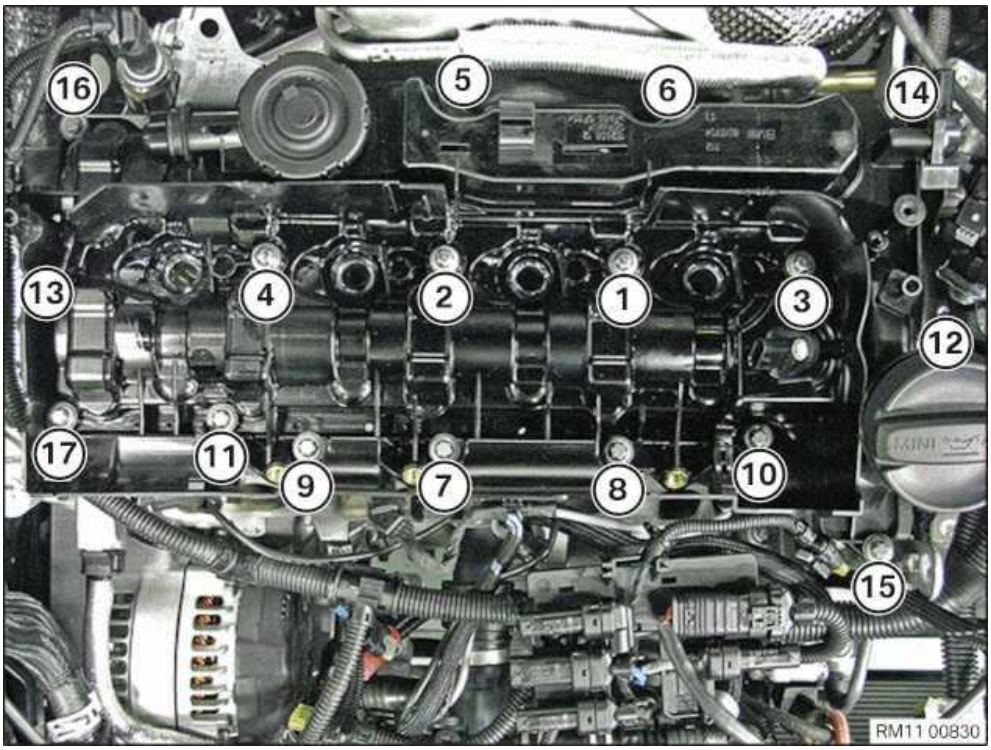
43 – Installing the front underbody protection

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

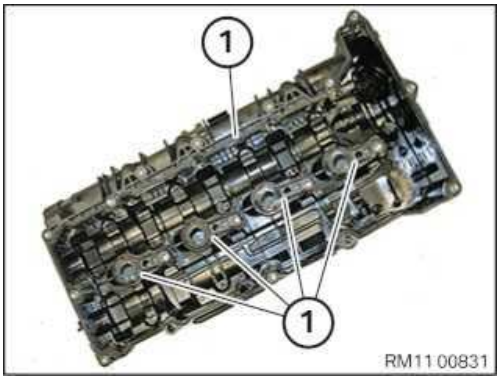
Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).



Underbody protection front

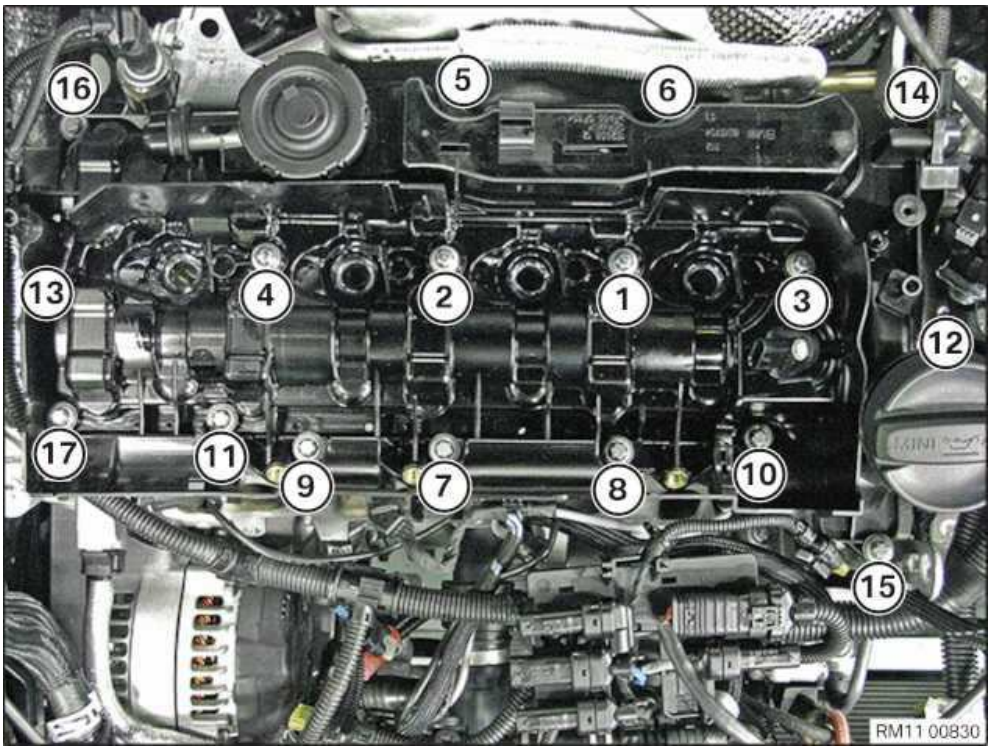
Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm



44 – Installing cylinder head cover

cardiagn.com

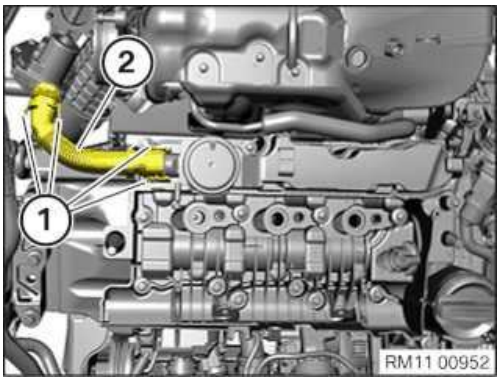
Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket

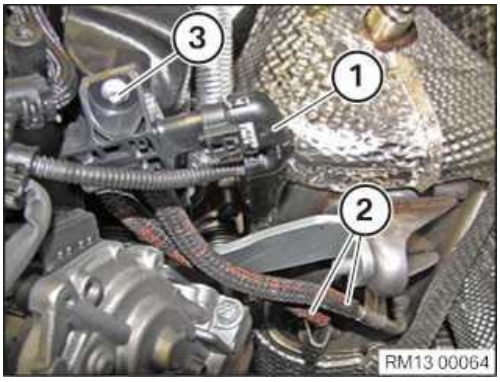


- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-



cardiagn.com

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

45 – Installing differential pressure sensor

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

46 – Installing injectors of injection system

▶ **Cleaning the injector shafts**

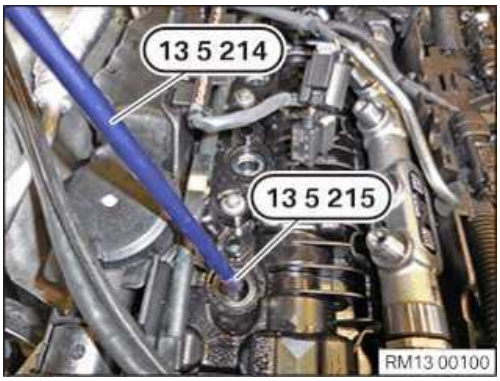
CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

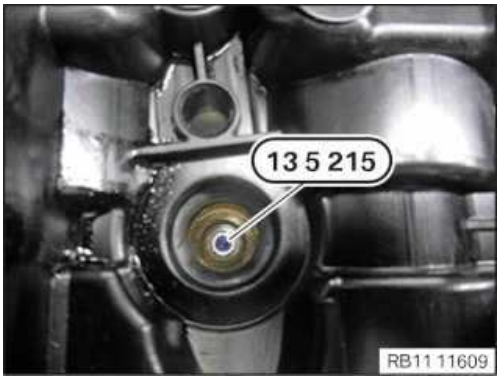
- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.



RISK OF DAMAGE

Contaminant or foreign body.

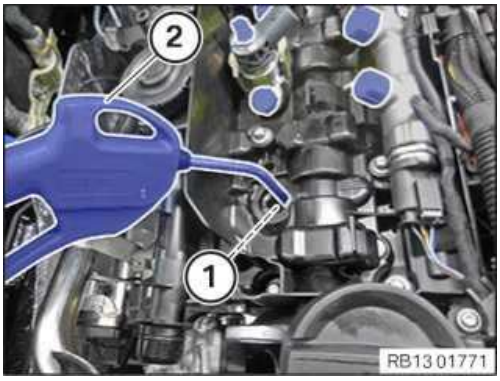


Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

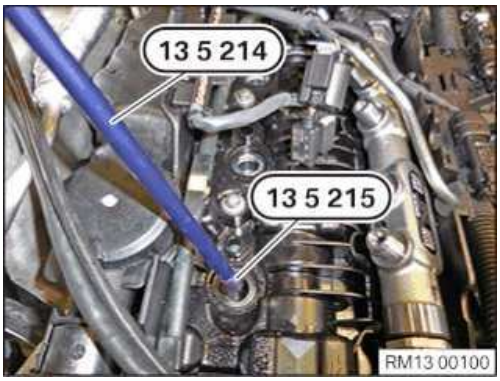
cardiagn.com

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

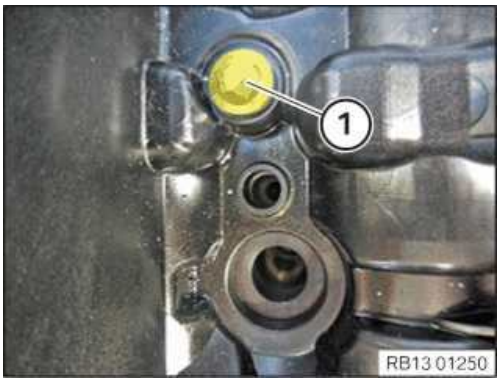


- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

- Blow out injector shaft (1) with air gun (2).

cardiagn.com

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.



▶ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▶ **Prepare the injector for installation**

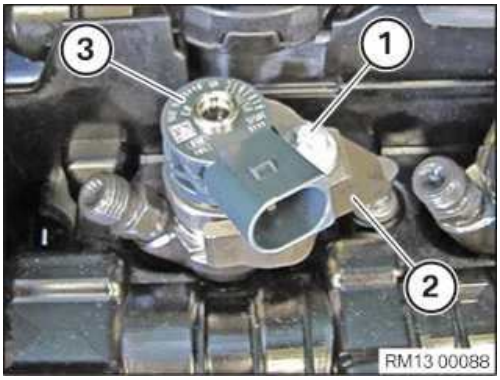
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

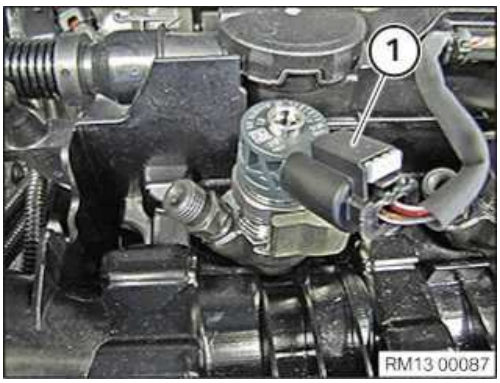


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring

- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials



Injector lubricating grease	50 g, Can	83230441070

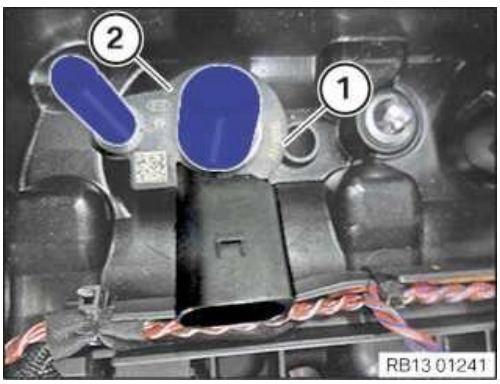
- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



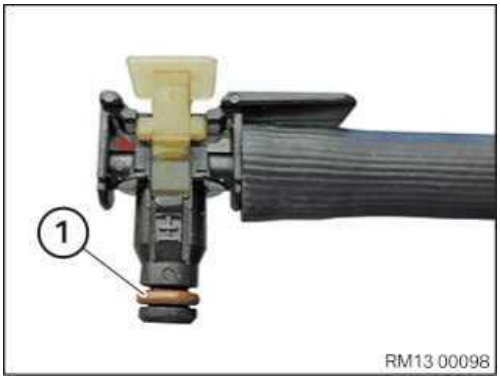
▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

cardiagn.com

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

47 – Connect the leakage oil line on the injector

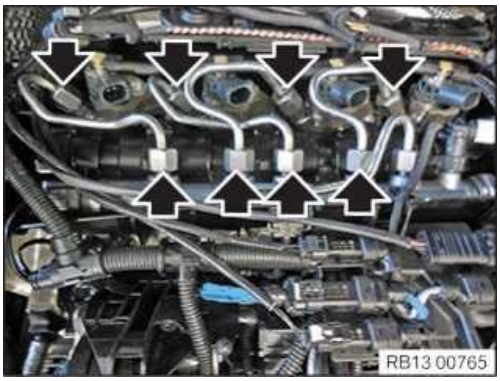
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

48 – Installing high pressure lines between rail and injectors



TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

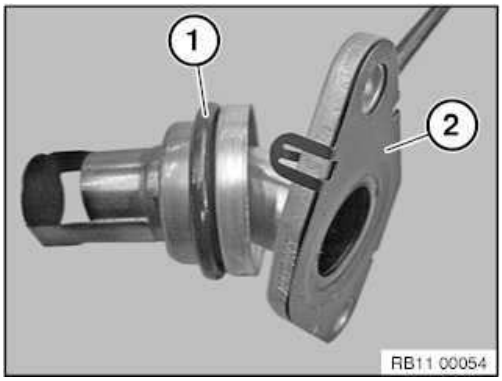
Reset special tool in early to avoid bending pressure lines.

cardiagn.com

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

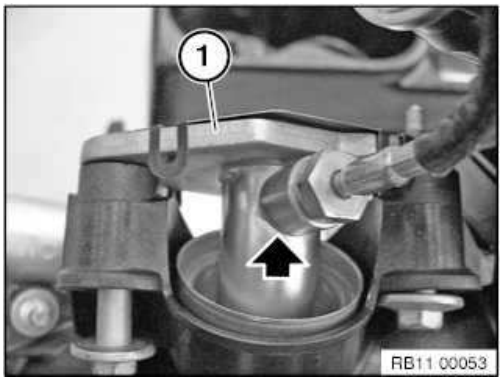


- Tighten the high pressure lines (arrows) with the special tool .

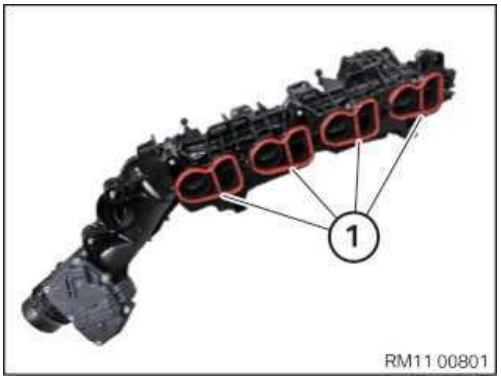
High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).



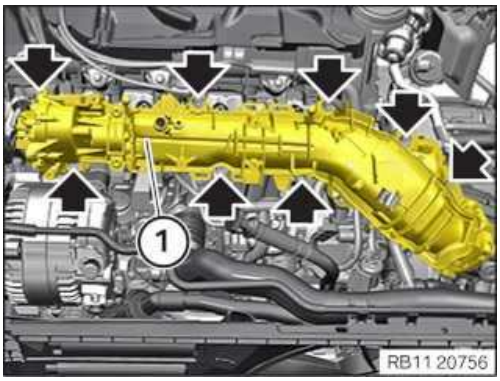
49 – Installing the intake plenum



- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

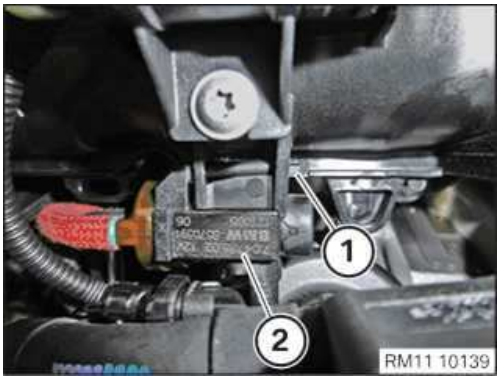
  Parts: Gasket
- Position the seal (2) and clip it in.



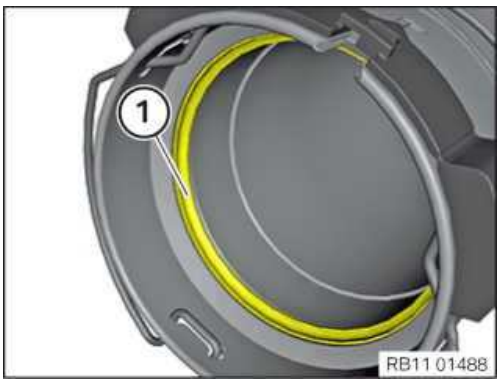
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



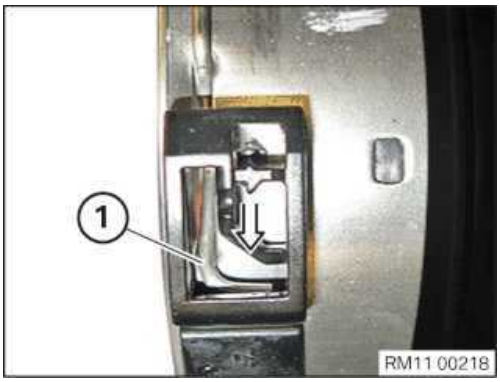
cardiagn.com



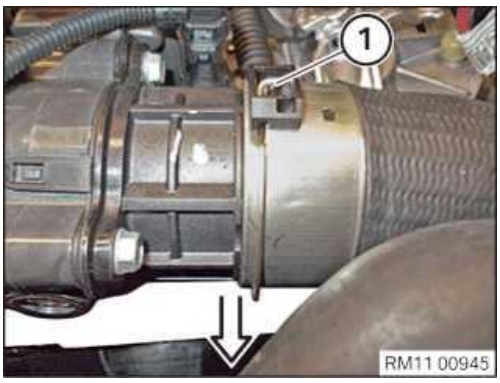
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

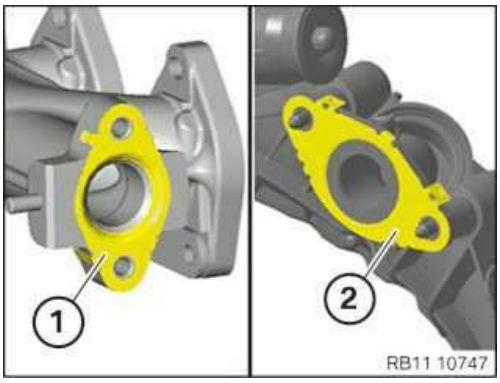
  Parts: Sealing ring

- Engage the lock (1) on the bracket (arrow).

- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

50 – Installing the exhaust-gas recirculation cooler



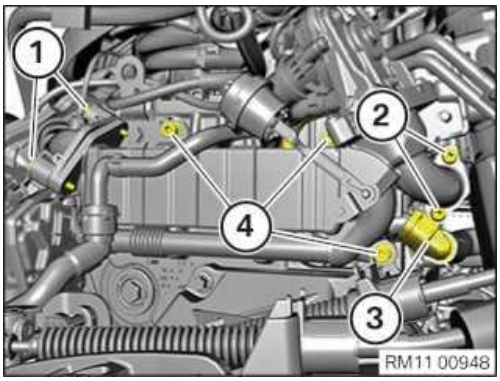
cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts

- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.

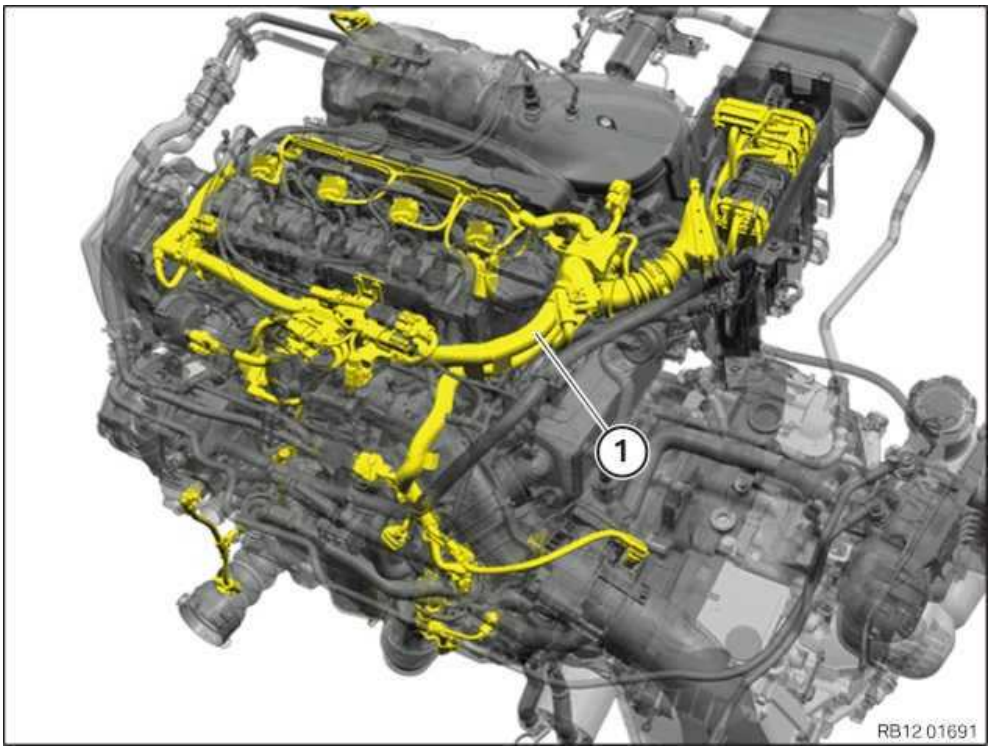
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

cardiagn.com

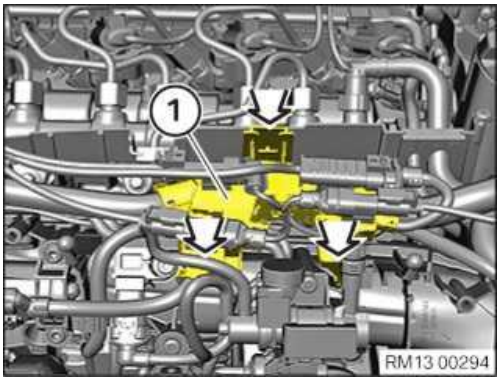
TECHNICAL INFORMATION



Make sure that the connections are locked correctly. The locks must engage audibly.

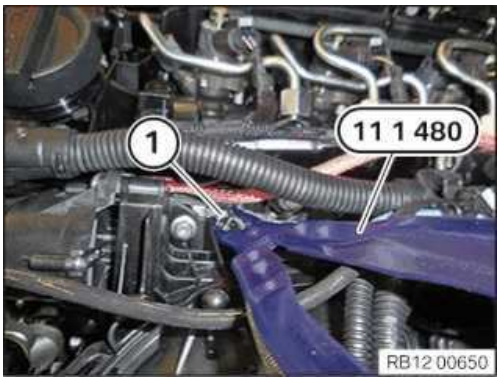
- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.



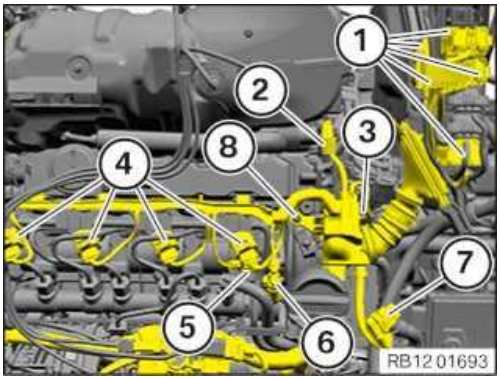
51 – Fastening the wiring harness section for the intake plenum

Overview: Wiring harness section for the engine



1 Wiring harness section for the engine

▶ **Installing the cable clip for the intake plenum**

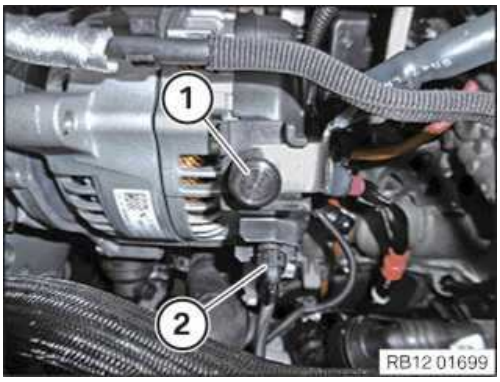


- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

cardiagn.com

- Connect and lock the connector (1) on the glow elements.

  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.

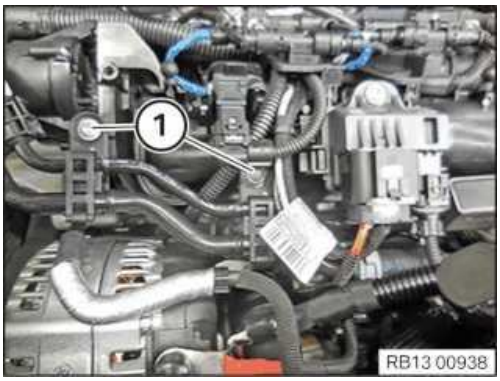


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.

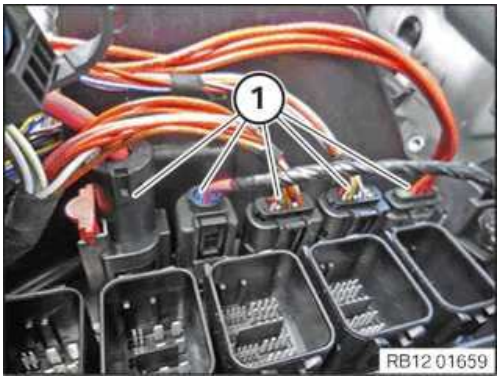


- Connect and lock the connector (2).

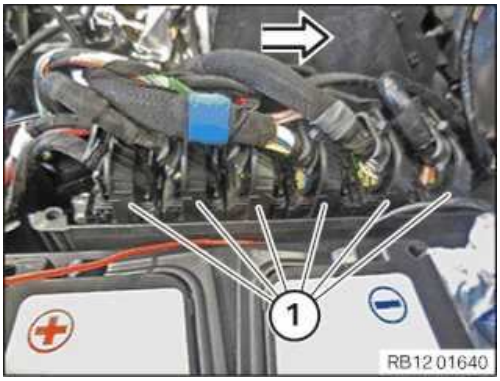
  Lock must snap audibly into place.
- Connect the positive battery cable (1) and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

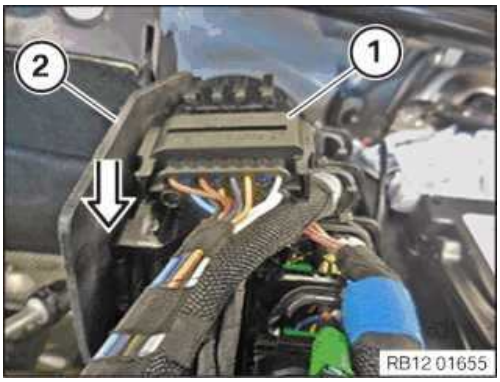


cardiagn.com

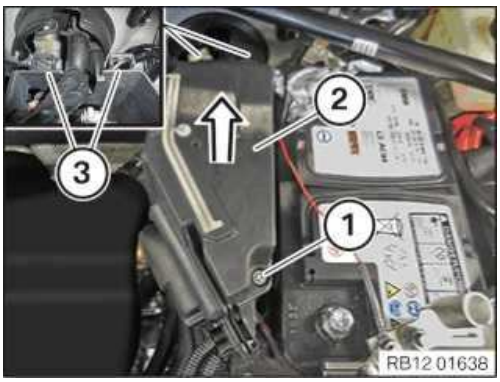


- Position the fuel line.
- Tighten the screws (1).

Fuel line to intake plenum



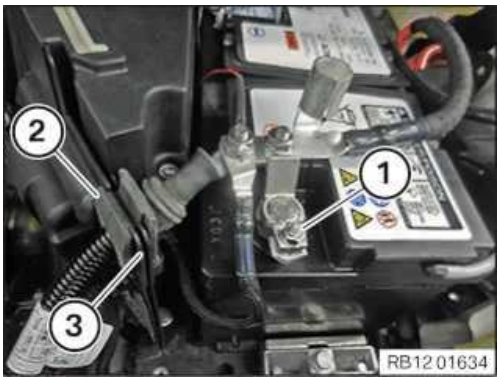
TS6x20		Tightening torque	5 Nm



- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

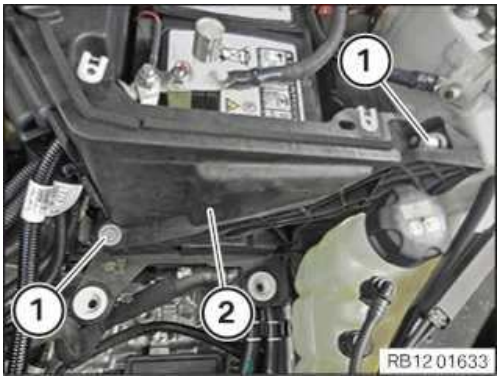
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm

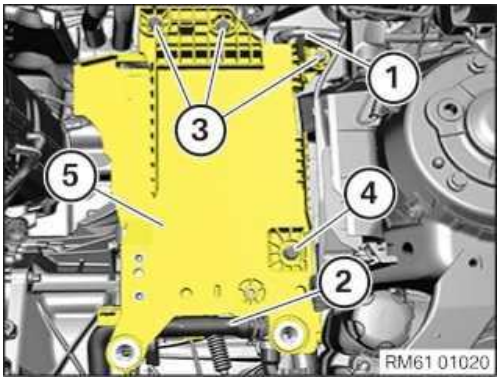


cardiagn.com

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray

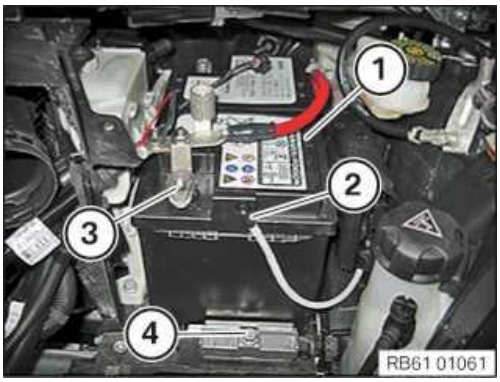
M8		Tightening torque	19 Nm

52 – Install the battery holder

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm



- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

53 – Install vehicle battery

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

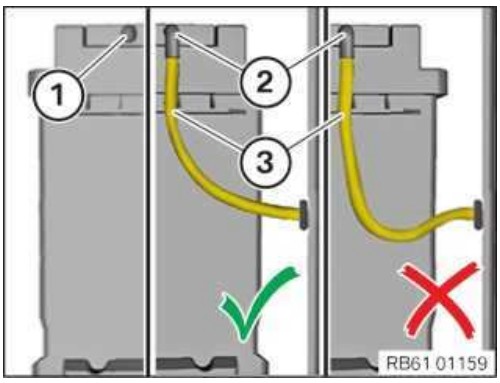
Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

▸ **Check the vent holes of the battery**

cardiagn.com

WARNING



Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

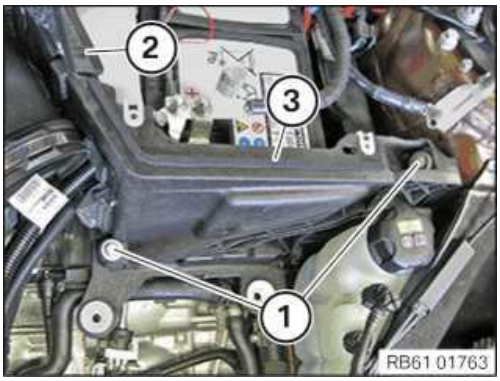
» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

Check

- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).



Result

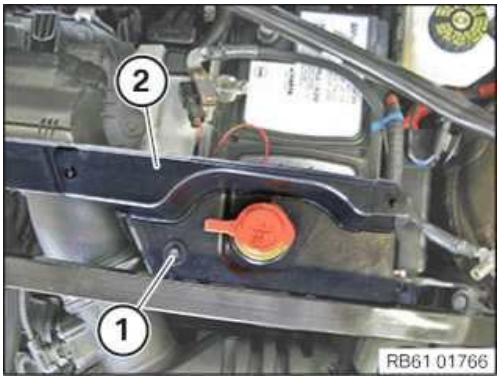
» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

cardiagn.com

- Insert tension strut (3) and tighten with screws (1).

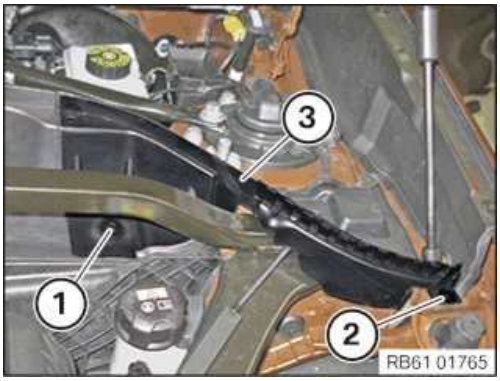


Trailing link

M8		Tightening torque	19 Nm

- Tighten down screw (2).

Battery cover



M8		2,8 Nm

- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

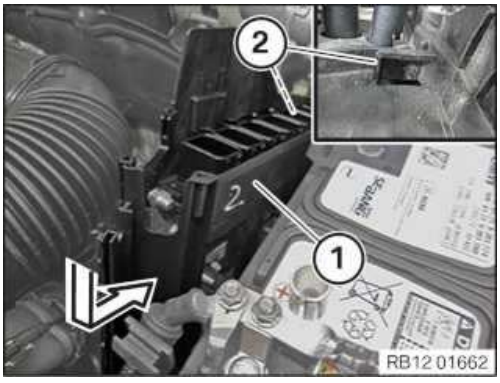
- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

54 – Install electronics box

Prerequisite



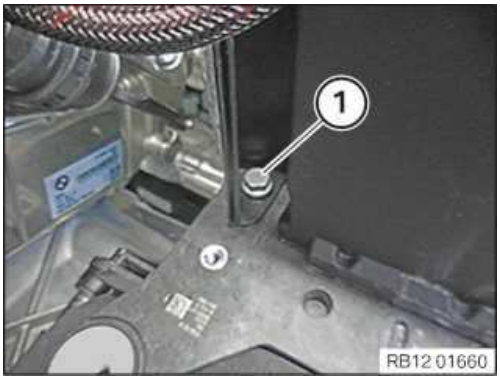
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

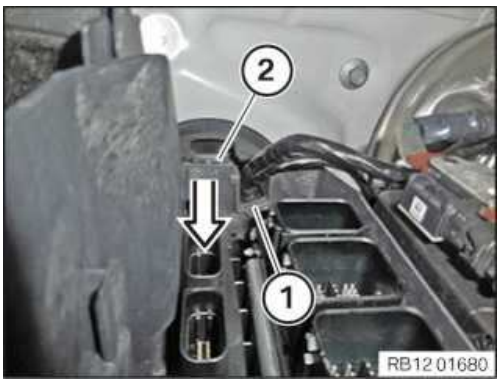
Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

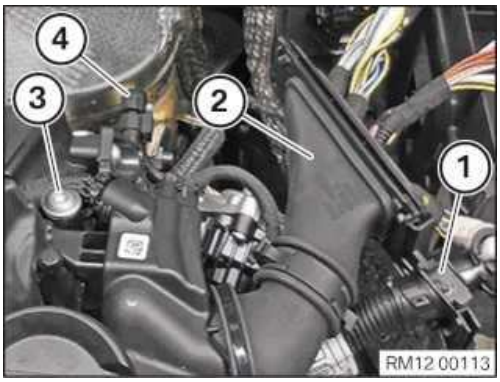


- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

cardiagn.com



- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).

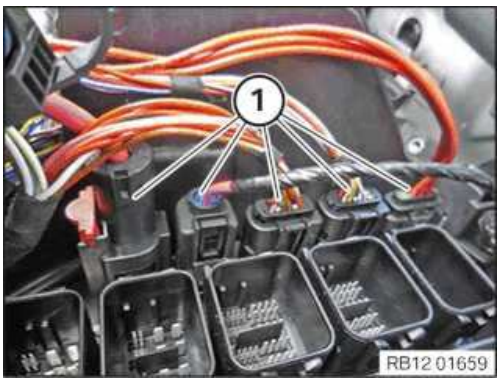


- Tighten down screw (1).

Electronics box to battery tray

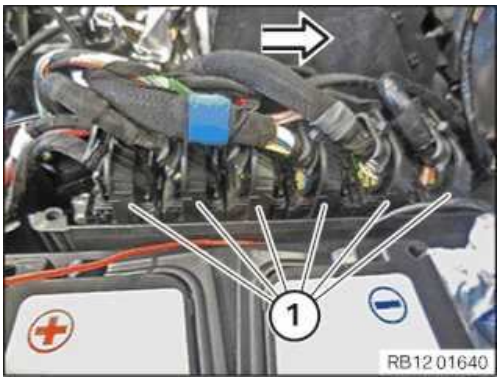
M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



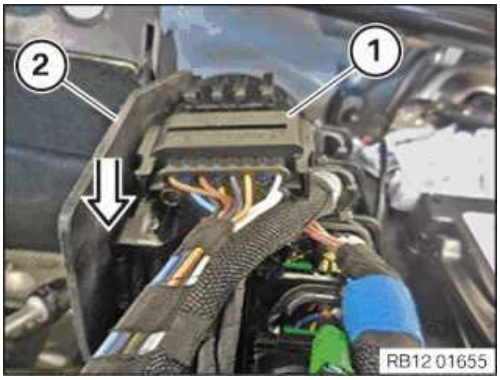
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

Wiring harness to cylinder head cover

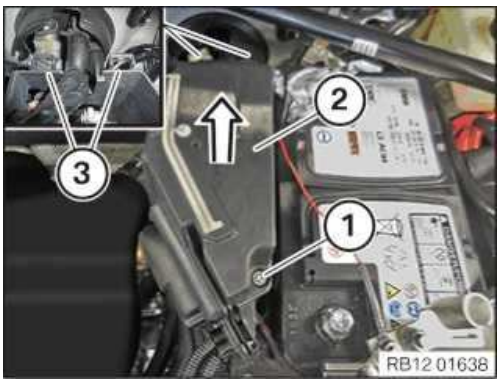


TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

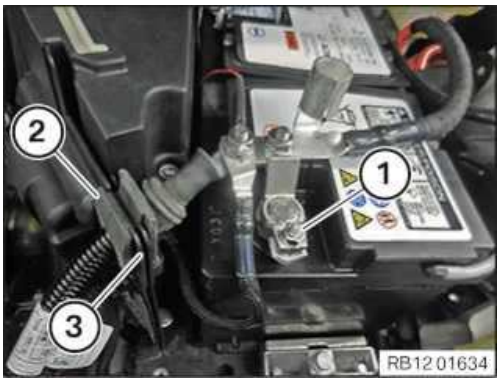


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



cardiagn.com

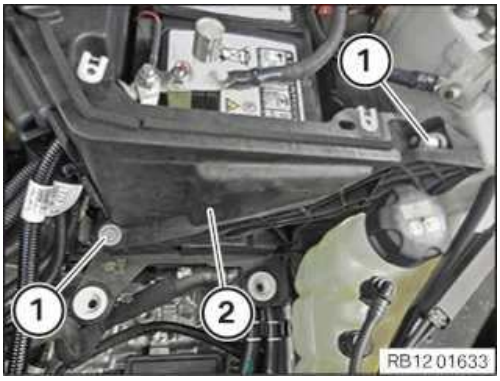
- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box



RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

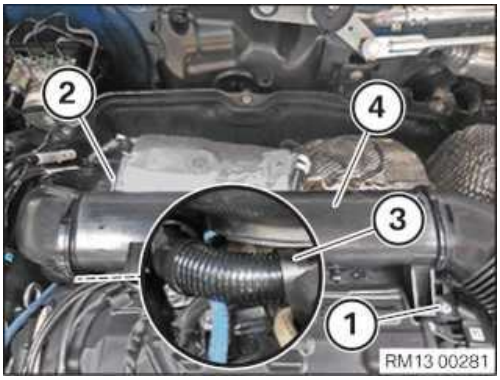
- Tighten the screws (1).



Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

cardiagn.com

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

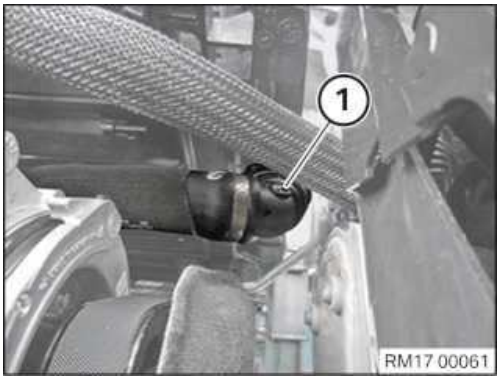
  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.

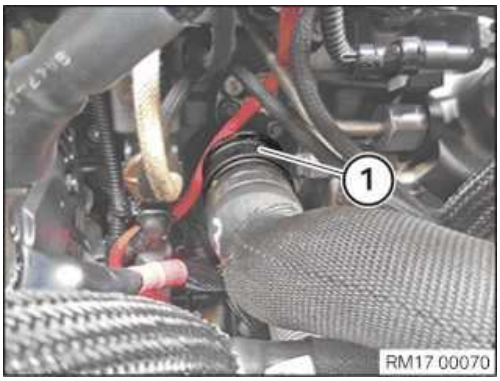
- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

56 – Connect the coolant line



TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect the right coolant line (1) to the radiator and lock audibly.

cardiagn.com

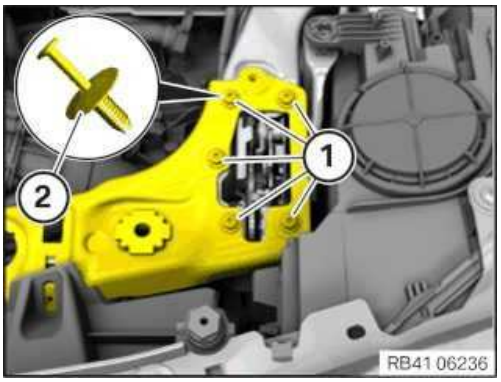
- Connect the coolant line (1) to the connecting branch and lock audibly.

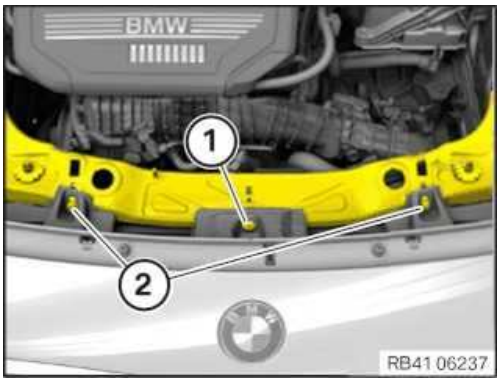
57 – Install front cross connection



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm

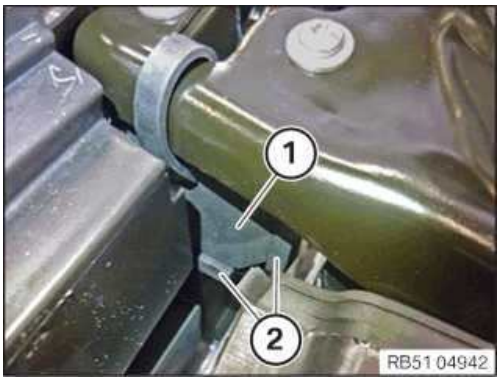
- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

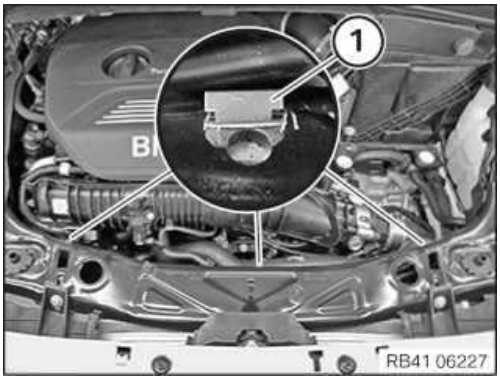
- Tighten down screws (2).

Air duct to upper connection



M6x20 screw		Tightening torque	11,8 Nm

- Tighten down screw (1).



Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm

cardiagn.com

- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

58 – Installing intake silencer housing

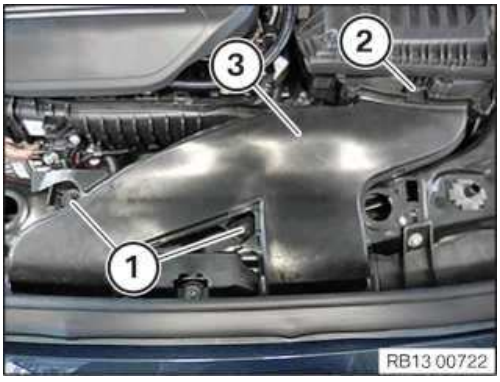
- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

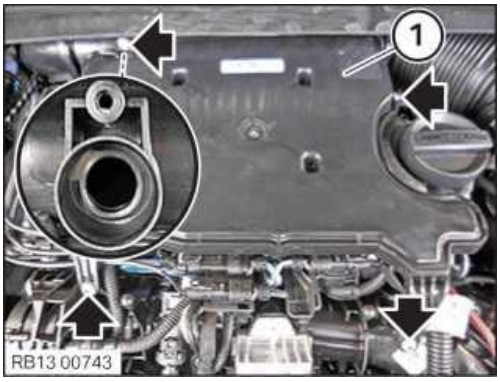
59 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm



60 – Install the acoustic cover for the injectors

cardiagn.com

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

61 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

62 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

cardiagn.com

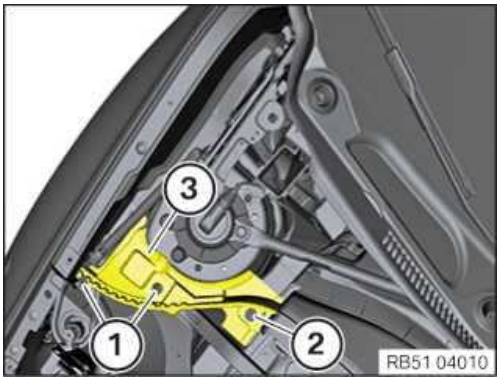
- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

63 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).

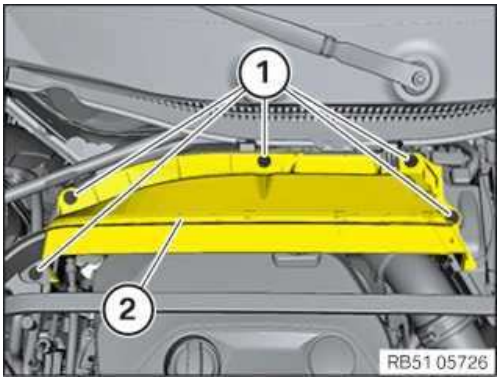
  Parts: Bolts
- Tighten the screws (1).

Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

NOTICE

Description is for right component only. The procedure on the left side is identical.



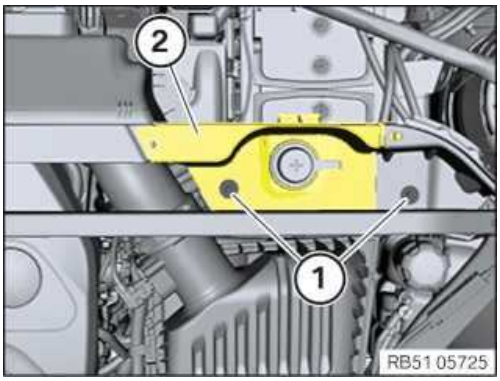
- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

64 – Installing the upper bulkhead cover



- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm

cardiagn.com

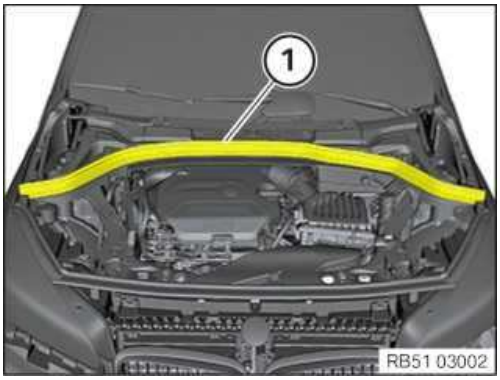
- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

65 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

66 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

67 – Disconnecting all battery earth leads

- See additional information.

68 – Fill and bleed the coolant circuit

▸ **Filling and bleed the high-temperature coolant circuit**

cardiagn.com

- See additional information.

Additional Information

Overview of Tightening Torques

Intake and exhaust camshaft in camshaft support — Used in step 34 35

M6x31		Tightening torque	10 Nm

Bearing journal to cylinder head — Used in step 37

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

Standard screw connection M8 — Used in step 37

M8		Tightening torque	19 Nm

Standard screw connection M6 — Used in step 37

M6			8 Nm

Chain tensioner piston to cylinder head — Used in step 38

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

Camshaft sprocket to camshaft — Used in step 39

M7x17.			17 Nm

Wheel arch cover to body — Used in step 41

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body — Used in step 41

Plastic nut		Tightening torque	3 Nm

Brake disc to front wheel hub — Used in step 42

M8	Renew screw.		16 Nm

Wheel bolts — Used in step 42

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

cardiagn.com

Underbody protection front

Used in step 43

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

Cylinder head cover to cylinder head

Used in step 44

M6		Tightening torque.	8,5 Nm

Differential pressure sensor to holder

Used in step 45

Screw		Tightening torque	4 Nm

Clamp for the pressure hose on the differential pressure sensor

Used in step 45

Clamp 15–19mm		Tightening torque	3 Nm

Clamping claw facing to cylinder head cover

Used in step 46

Screw M6		Tightening torque	8 Nm

Injector to cylinder head cover

Used in step 46

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

High pressure lines between injector and rail

Used in step 48

High pressure lines		Tightening torque	28 Nm

Intake plenum to cylinder head

Used in step 49

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 50

M8x20		Tightening torque	5 Nm
		Release angle	90 °

Intake plenum to exhaust-gas recirculation cooler

Used in step 50

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to exhaust manifold

Used in step 50

M8x28	Replace screws	Tightening torque	32 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 50

M8x20		Tightening torque	19 Nm

Wiring harness to cylinder head cover

Used in step 51 54

TS5x20		Tightening torque	3,5 Nm

Positive battery cable to alternator

Used in step 51

M8		Tightening torque	19 Nm

Fuel line to intake plenum

Used in step 51

TS6x20		Tightening torque	5 Nm

Cover to electronics box

Used in step 51 54

RF5x26.5		Tightening torque	2,5 Nm

cardiagn.com

Positive battery terminal to battery

Used in step 51 54

NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray

Used in step 51 54

M8		Tightening torque	19 Nm

Battery holder to engine support

Used in step 52

Hexagon screw M8x30		Tightening torque	19 Nm

Battery terminal rail to battery tray

Used in step 53

M8			19 Nm

Battery terminal with IBS positive battery terminal / negative battery terminal

Used in step 53

NutM6			5 Nm

Trailing link

Used in step 53

M8		Tightening torque	19 Nm

Battery cover

Used in step 53

M8			2,8 Nm

Electronics box to battery tray

Used in step 54

M8X16		Tightening torque	15 Nm

Clean air pipe to cylinder head cover

Used in step 55

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing

Used in step 55 58

Clamp		Tightening torque	3 Nm

Cross connection to carrier support

Used in step 57

Screws M6x20		Tightening torque	11,8 Nm

Screw connection for rubber mount of coolant radiator to coolant radiator

Used in step 57

Bolt to rubber mount		Tightening torque	8 Nm

Air duct to upper connection

Used in step 57

M6x20 screw		Tightening torque	11,8 Nm

Bracing strut to upper connection

Used in step 57

M8x20 screw		Tightening torque	28 Nm

Intake silencer housing to lock bridge

Used in step 58

M6X30		Tightening torque	8 Nm

Intake neck to cross connection

Used in step 59

M6		Tightening torque	8 Nm

Resonator to manifold and clean air pipe

Used in step 61

Screw TS6	Renew screw.	Tightening torque	5 Nm

cardiagn.com

Cross-brace to spring strut dome

Used in step 63

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

Cover on body

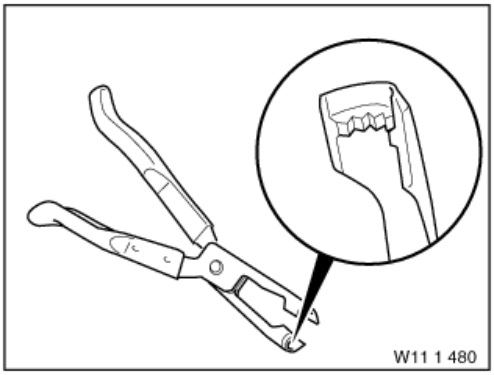
Used in step 63

Hexagon screw		Tightening torque	3 Nm

Cover of top bulkhead

Used in step 64

Screw		Tightening torque	2,6 Nm



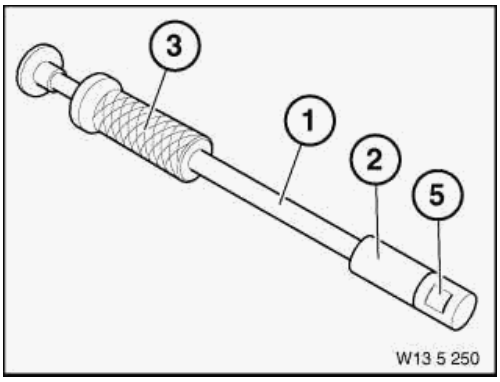
Cover of remote positive terminal

Used in step 64

Screw		Tightening torque	2,6 Nm

Overview of Special Tools

0 490 796 (11 1 480) Pliers



Common

Used in step 18

Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

cardiagn.com

0 493 321 (13 5 250) Puller

Common

Used in step 23

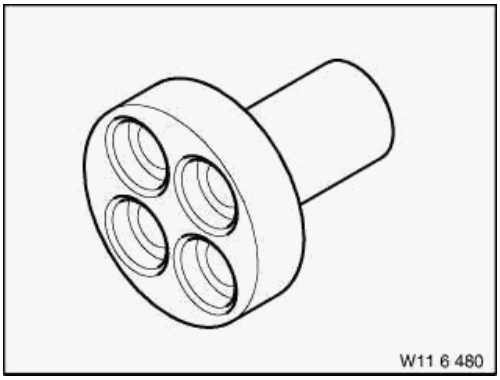
Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

cardiagn.com

0 493 339 (13 5 252) Bush



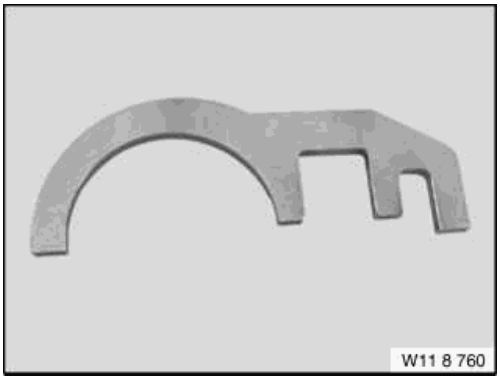
Common	Used in step 23
Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 340 (13 5 253) Weight

Common	Used in step 23
Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 380 (11 6 480) Connector

Common	Used in step 28 40
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)



cardiagn.com

2 288 380 Locating stud

Common	Used in step 28 40
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

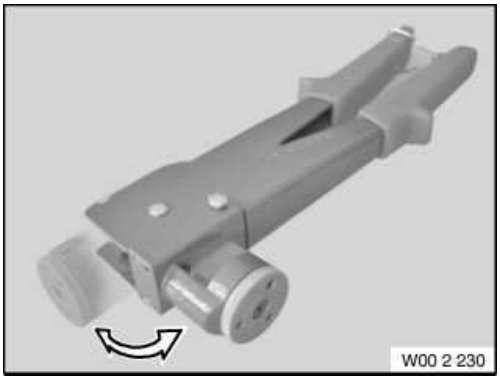
0 496 112 (11 8 760) Gauge

Common	Used in step 28 40
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

cardiagn.com

0 495 105 (11 4 480) oddments tray

Common



Used in step 32 33

Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

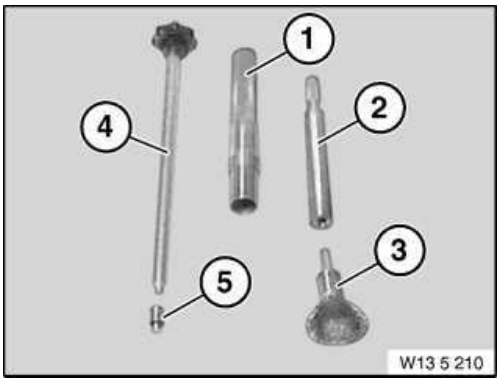
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

0 496 521 (00 2 230) Pliers

Common

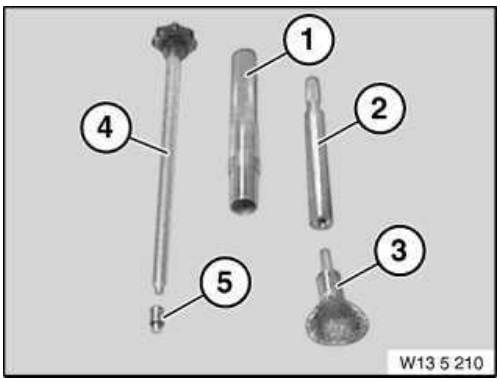
Used in step 41

Usage	(Blind rivet pliers for plastic rivets) For shaft diameters of 3.5 mm, 3.9 mm and 4.5 mm
Included in the tool or work	
Storage location	C25
Replaced by	
In connection with	
SI-Number	01 17 08 (478)



cardiagn.com

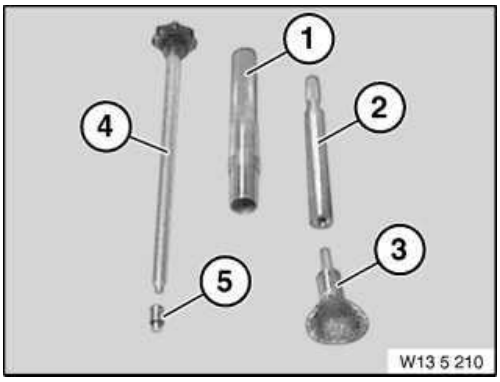
2 344 011 Tool



Common	Used in step 42
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

0 493 763 (13 5 215) Plug

Common	Used in step 46
Usage	(Seal plug)
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	



0 493 762 (13 5 214) Rod

Common	Used in step 46
Usage	(Mounting rod) For the seal plug
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 758 (13 5 210) Tool

Common

Used in step 46

Usage	(Cleaning set) For injector channels
Included in the tool or work	
Storage location	B4
Replaced by	
In connection with	
SI-Number	01 05 00 (574)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 759 (13 5 211)		**Holding sleeve** (Guide sleeve)	
2	0 493 760 (13 5 212)		**Holder** (Brush holder)	
3	0 493 761 (13 5 213)		**Brush head**	
4	0 493 762 (13 5 214)		**Rod** (Mounting rod) For the seal plug	
5	0 493 763 (13 5 215)		**Plug** (Seal plug)

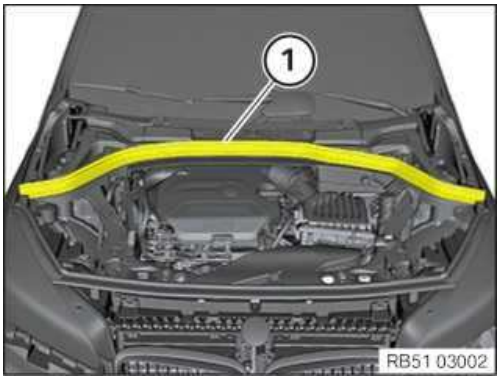
Chain tensioner piston seal on cylinder head	38
Exhaust-gas recirculation cooler seal on exhaust manifold	50
Exhaust-gas recirculation cooler seal on intake plenum	50

cardiagn.com

11 31 025 Removing and installing/replacing intake camshaft

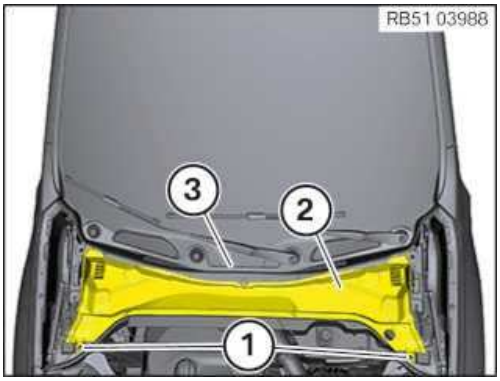
PRELIMINARY WORK

1 – Disconnecting all battery earth leads



- See additional information.

2 – Remove the seal for the rear bonnet

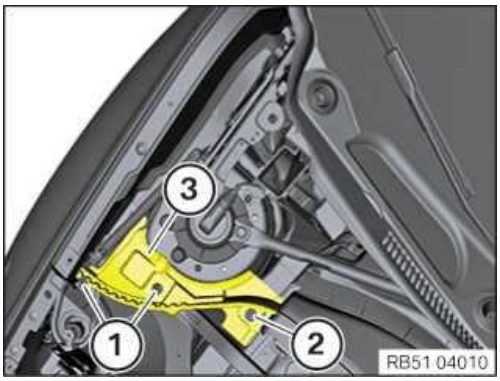


NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.

3 – Removing front cowl panel cover

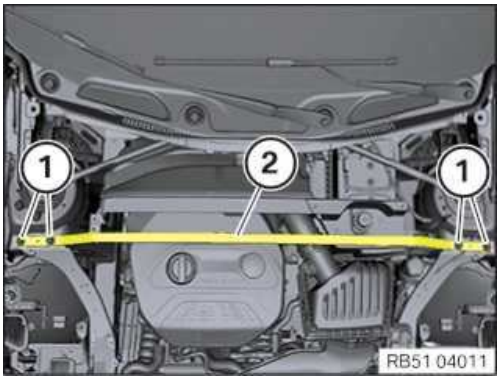


- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

4 – Remove suspension cross-brace

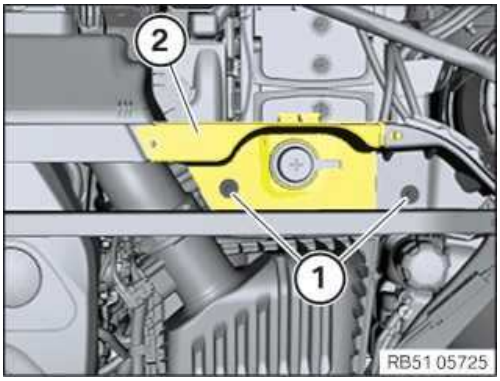
TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



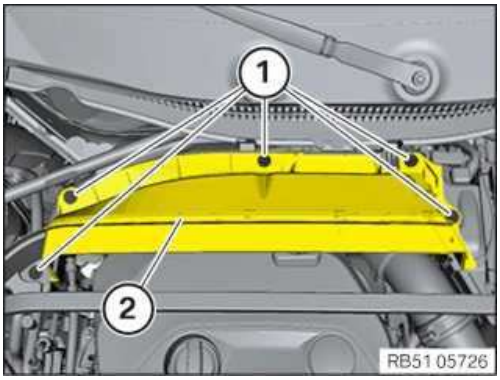
cardiagn.com

NOTICE



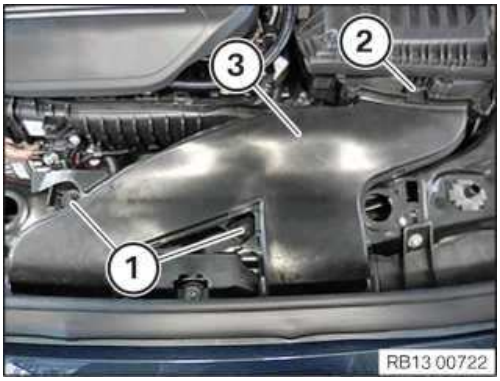
Description is for right component only. The procedure on the left side is identical.

- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).



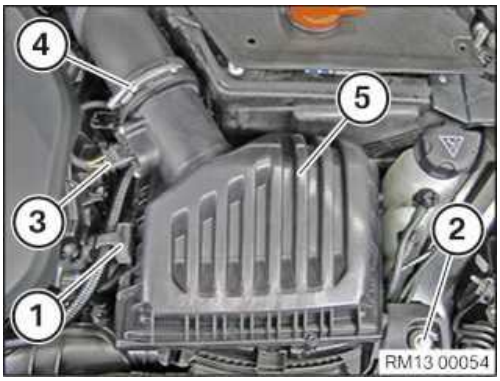
- Loosen screws (1).
- Remove strut brace (2).

5 – Removing the upper bulkhead cover



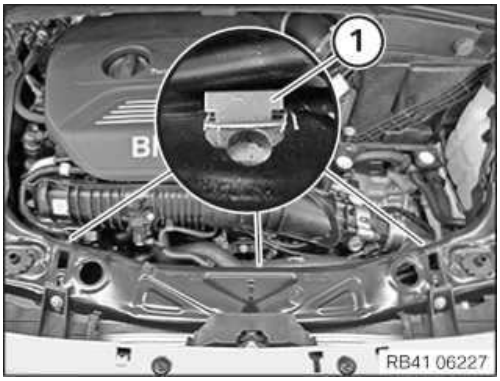
- Loosen screws (1).
- Guide out and remove the cover (2).

- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).



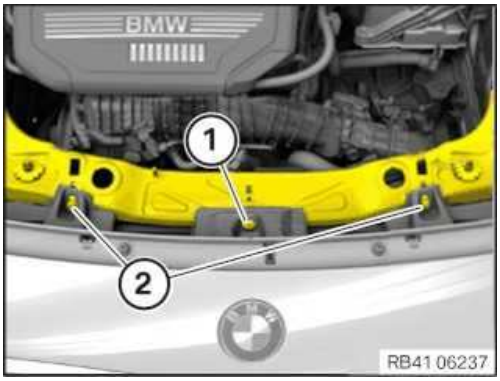
6 – Remove the intake neck for intake silencer housing

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

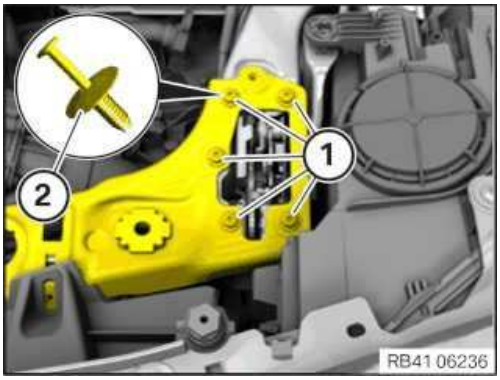


7 – Removing intake silencer housing

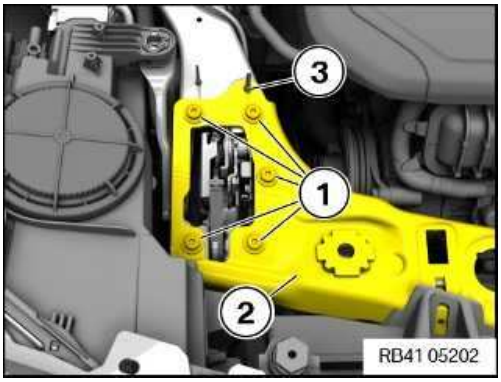
cardiagn.com



- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

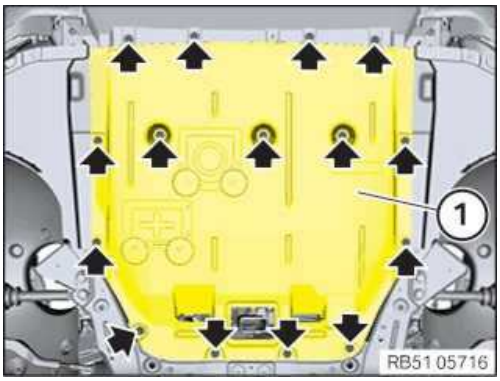


8 – Remove front cross connection

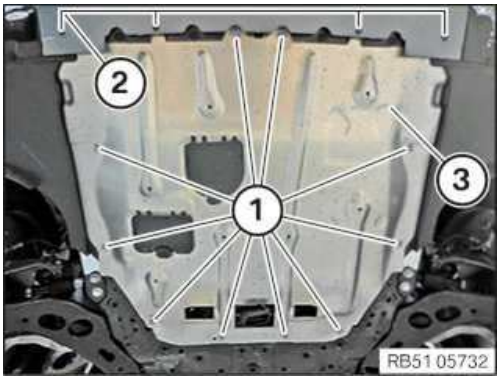


- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

- Loosen screw (1).
- Loosen screws (2).



- Loosen screws (1).
- Lever out expanding rivet (2).



- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

9 – Removing the front underbody protection

cardiagn.com

- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

10 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

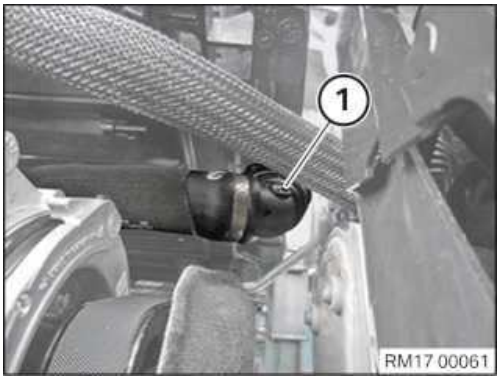
TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

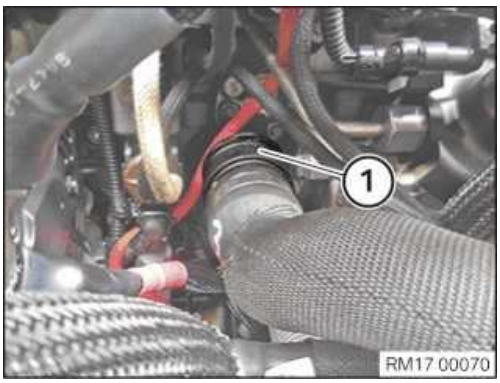
When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



cardiagn.com

- Loosen sealing cap (1).

- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.

- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.

11 – Removing the acoustic cover

WARNING

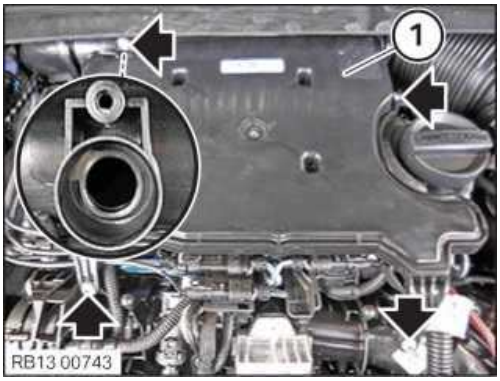
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

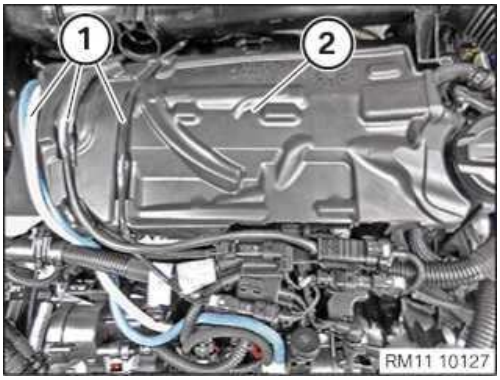
Damage to the acoustic cover.



Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

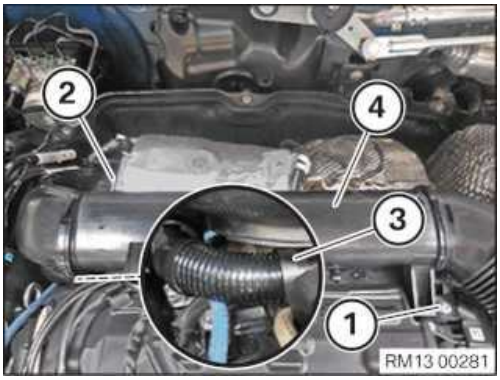


cardiagn.com

12 – Remove resonator

- Remove screws (arrows).
- Guide out and remove the resonator (1).

13 – Remove the acoustic cover for the injectors



- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

14 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

15 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

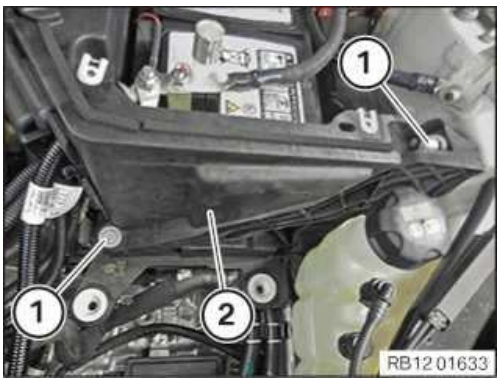
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

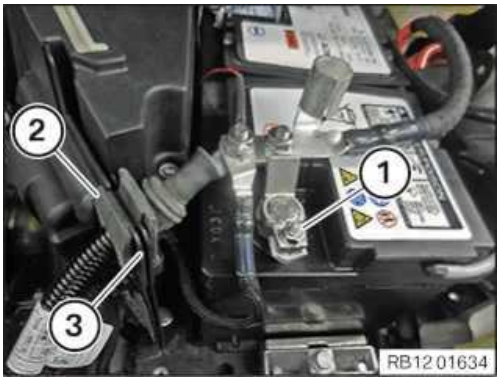
Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.



TECHNICAL INFORMATION

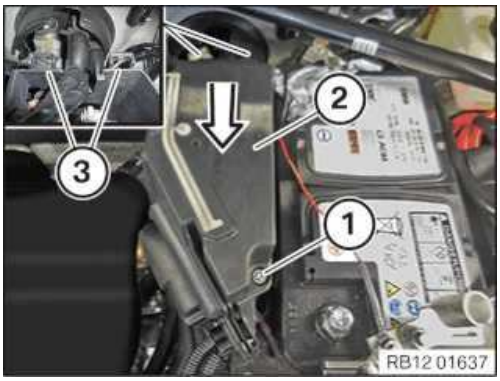
Follow instructions for removing and installing control units.



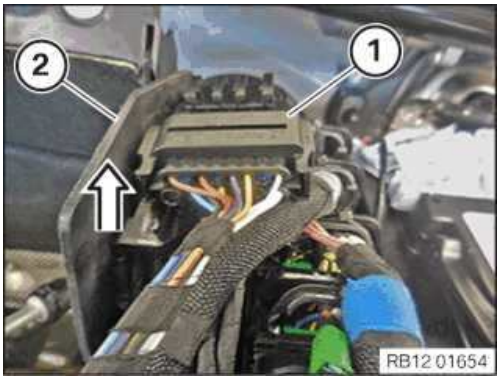
For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

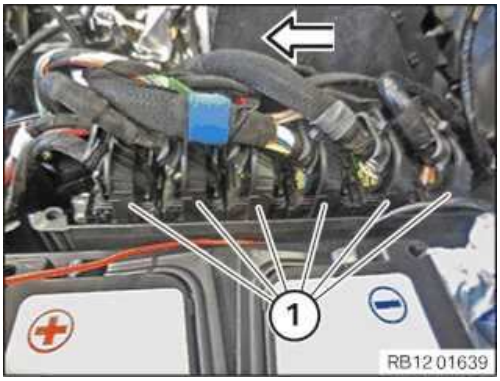
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



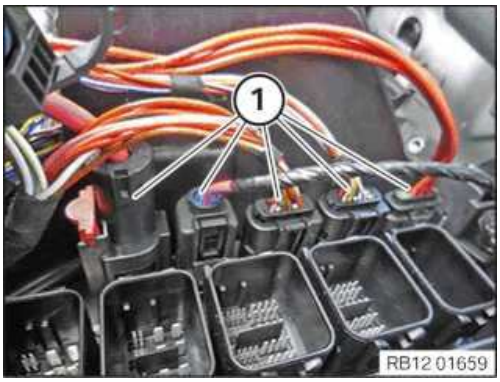
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



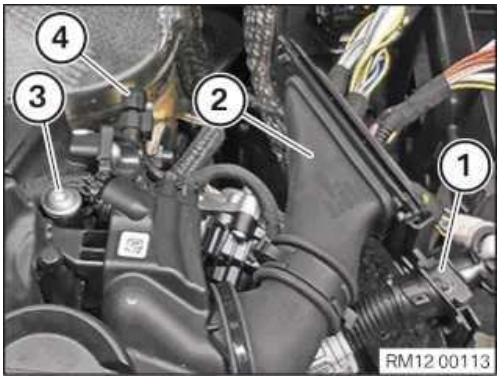
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



cardiagn.com

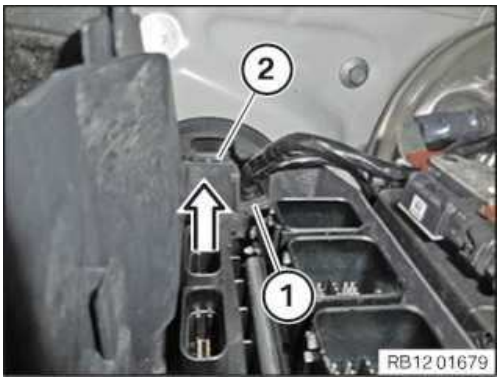


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

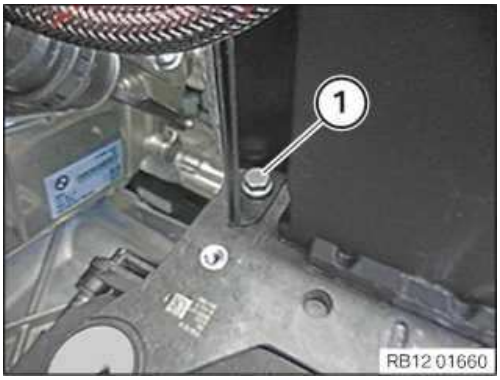


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

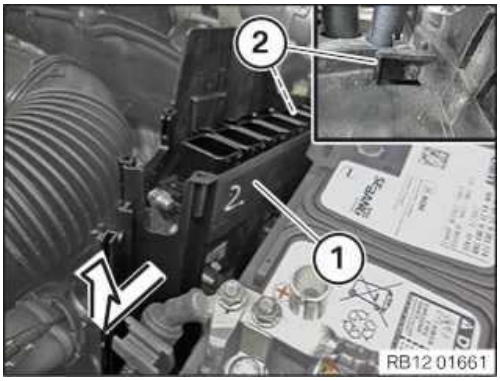
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).



- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

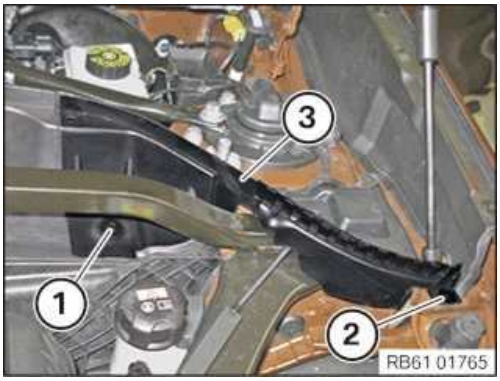


cardiagn.com

- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

- Loosen screw (1).

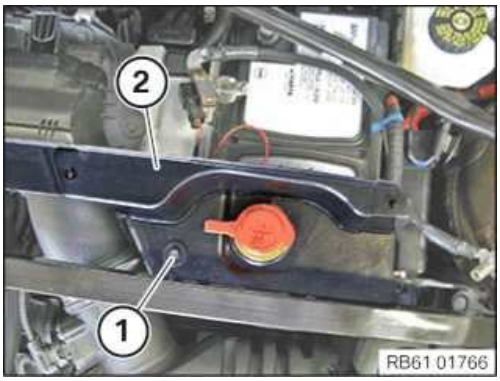
- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.



16 – Remove vehicle battery

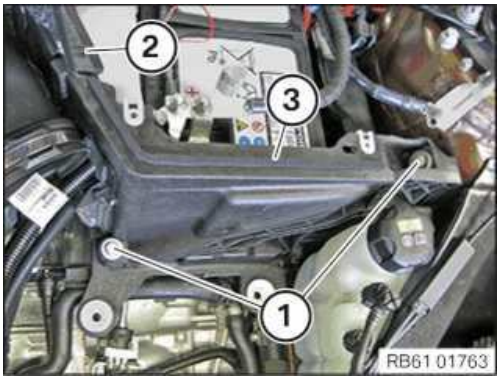
WARNING

Working on 12 V vehicle electrical system.

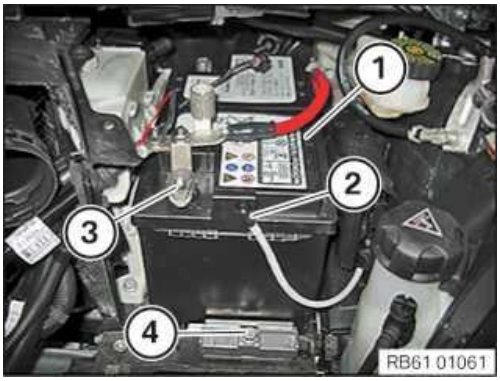


Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.



- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).



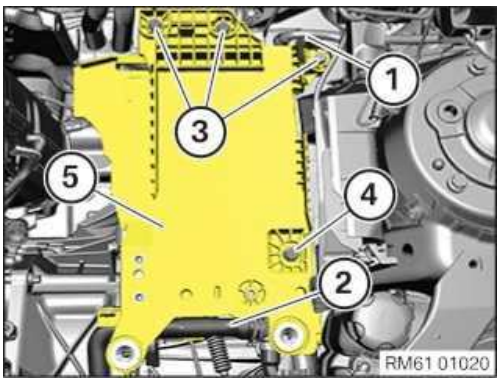
cardiagn.com

- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING



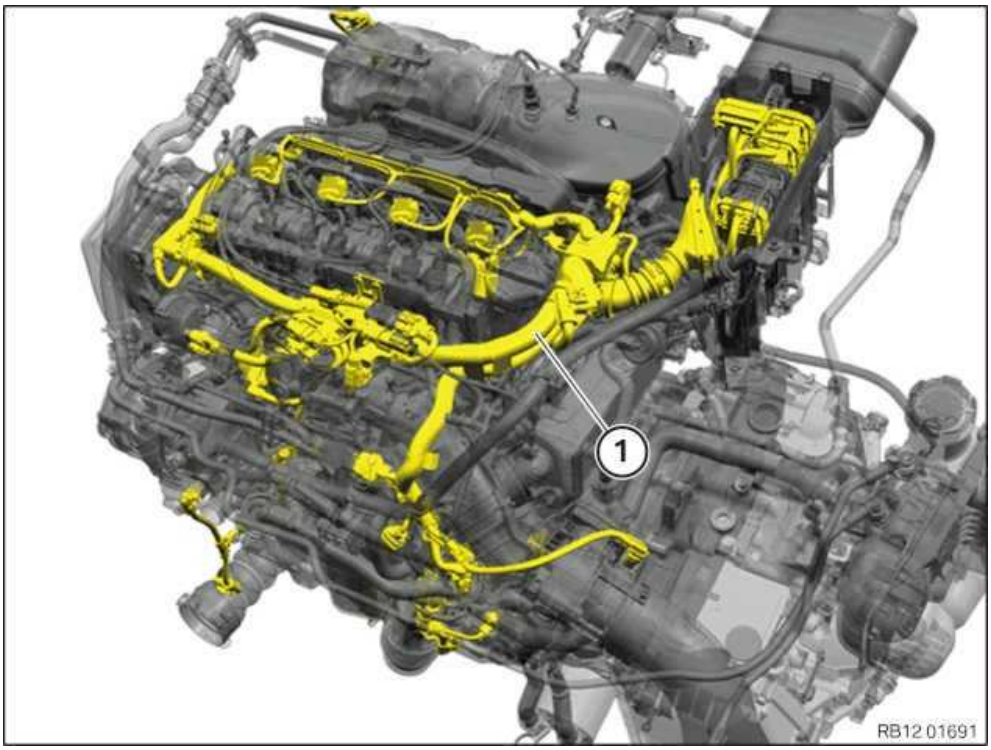
Unprotected battery terminals.

Risk of short circuits! Risk of fire!

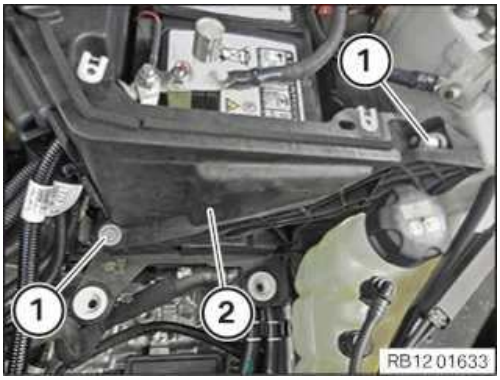
- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

17 – Remove battery holder

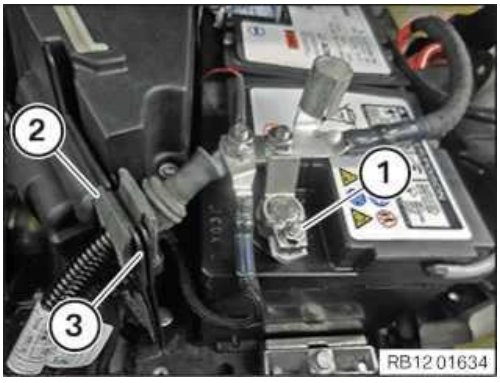


- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

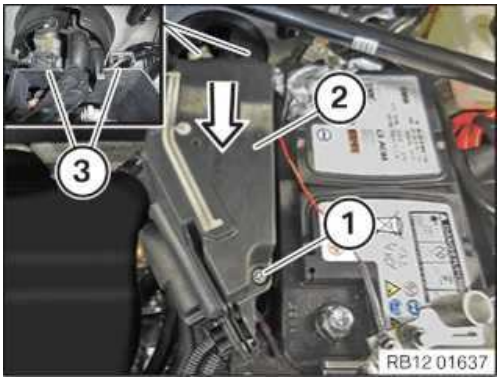


18 – Releasing the wiring harness section for the intake plenum

cardiagn.com

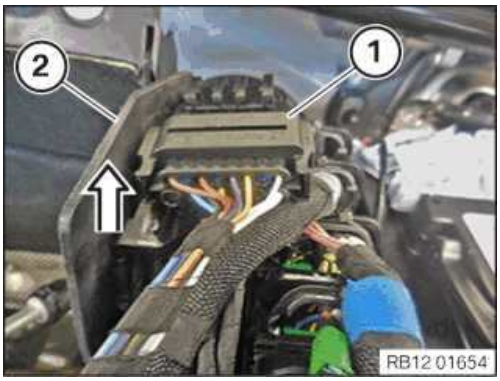


Overview: Wiring harness section for the engine

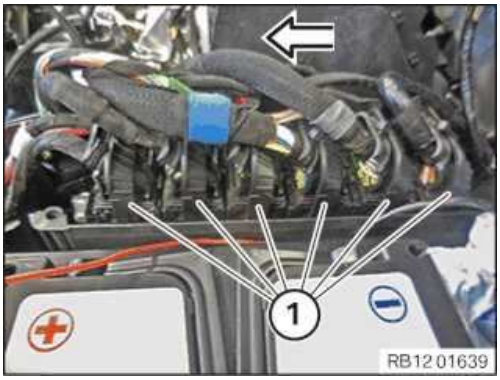


1 Wiring harness section for the engine

- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

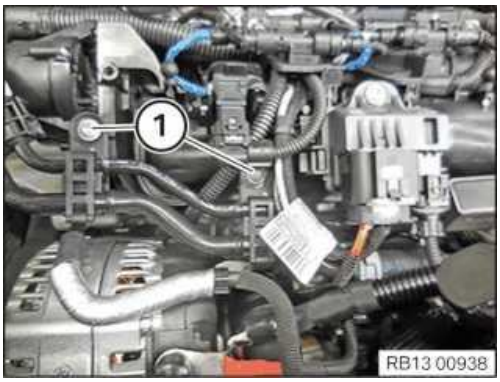


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

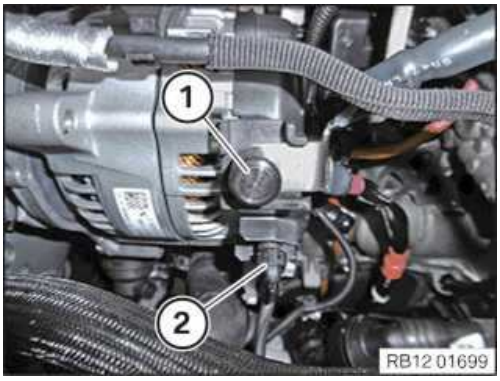


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

cardiagn.com

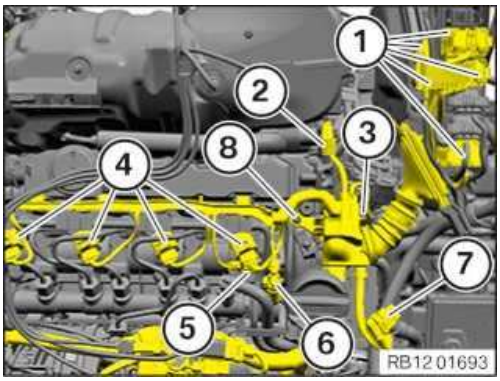


- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).

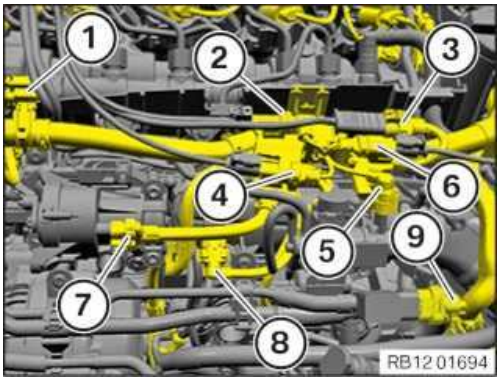


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

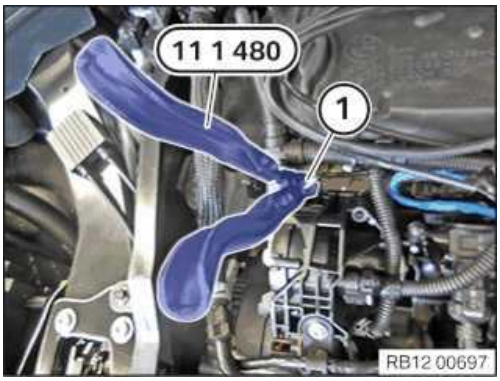
- Unlock and loosen connector (1).



- Loosen screws (1).

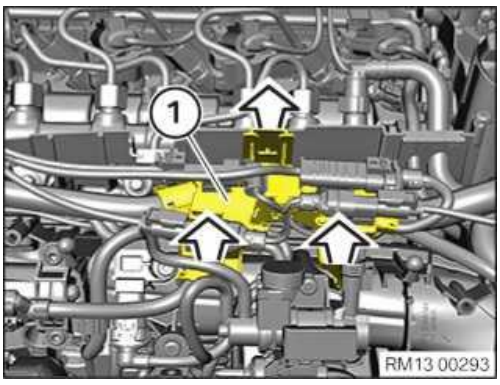


- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.



cardiagn.com

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).



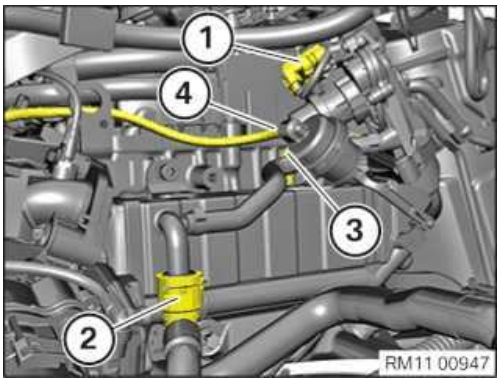
- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock and disconnect the connector (3) from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

▶ **Removing the cable clips from the intake plenum**

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

19 – Removing the exhaust-gas recirculation cooler

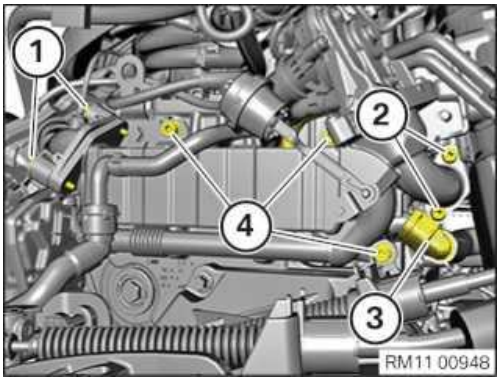


cardiagn.com

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

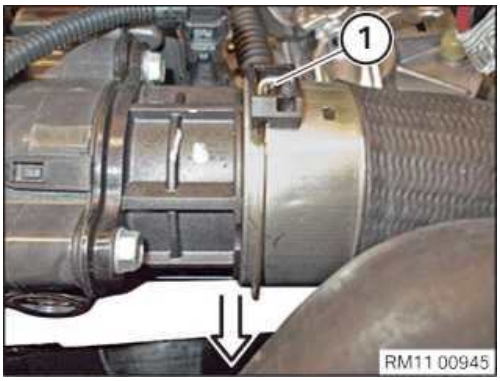
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

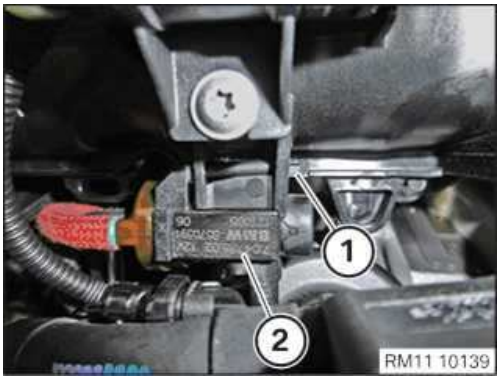
- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

20 – Removing the intake plenum

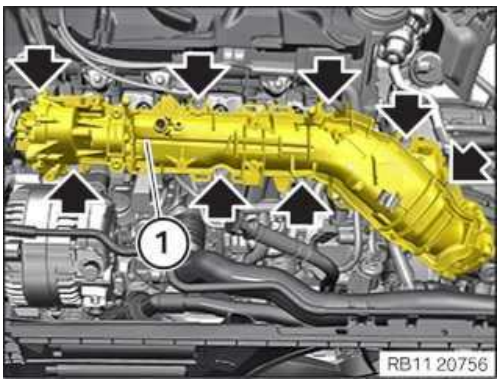


TECHNICAL INFORMATION

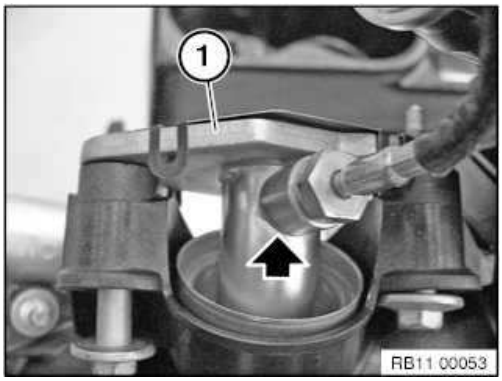
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the lock (1).



cardiagn.com



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

21 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

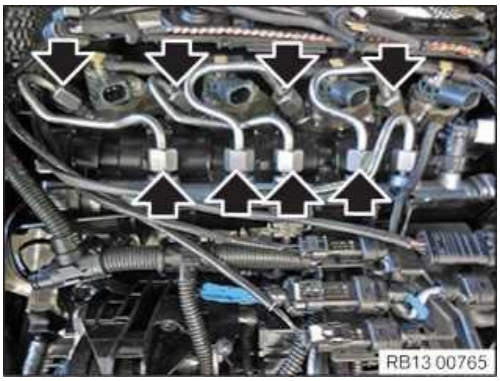
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.



TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

22 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

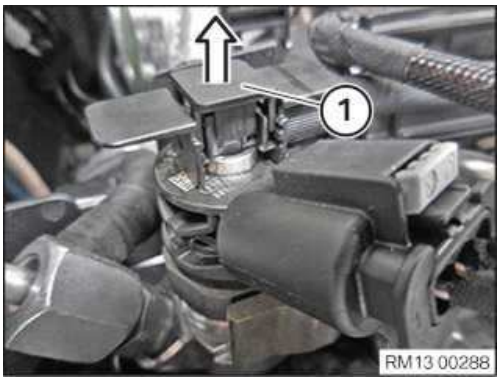
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

23 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

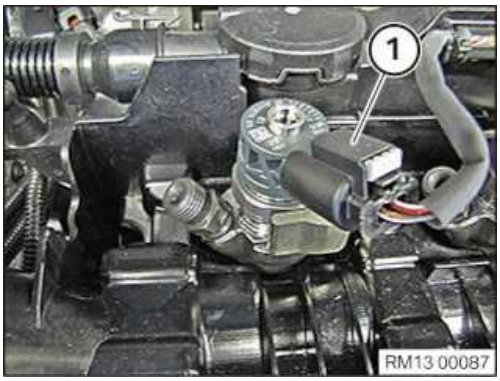
RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

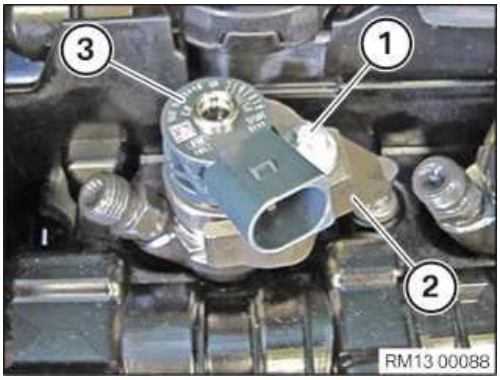
- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.



- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

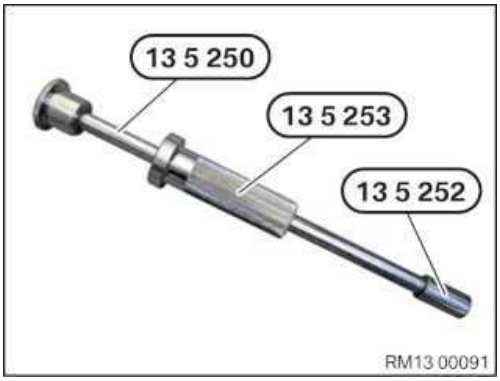
TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

- Unlock and disconnect connector (1).

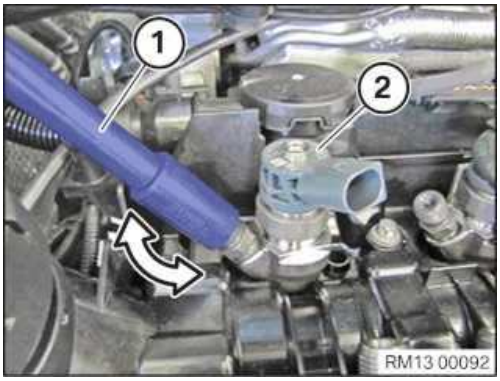
- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

▶ **Loosen stuck injectors**



cardiagn.com

RISK OF DAMAGE



Contaminant or foreign body.

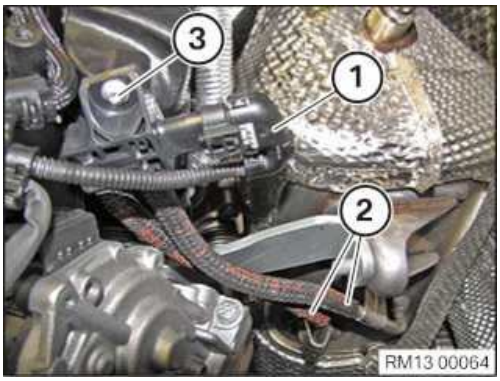
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)**back onto the special tool **0 493 321 (13 5 250)**.

- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

24 – Remove differential pressure sensor

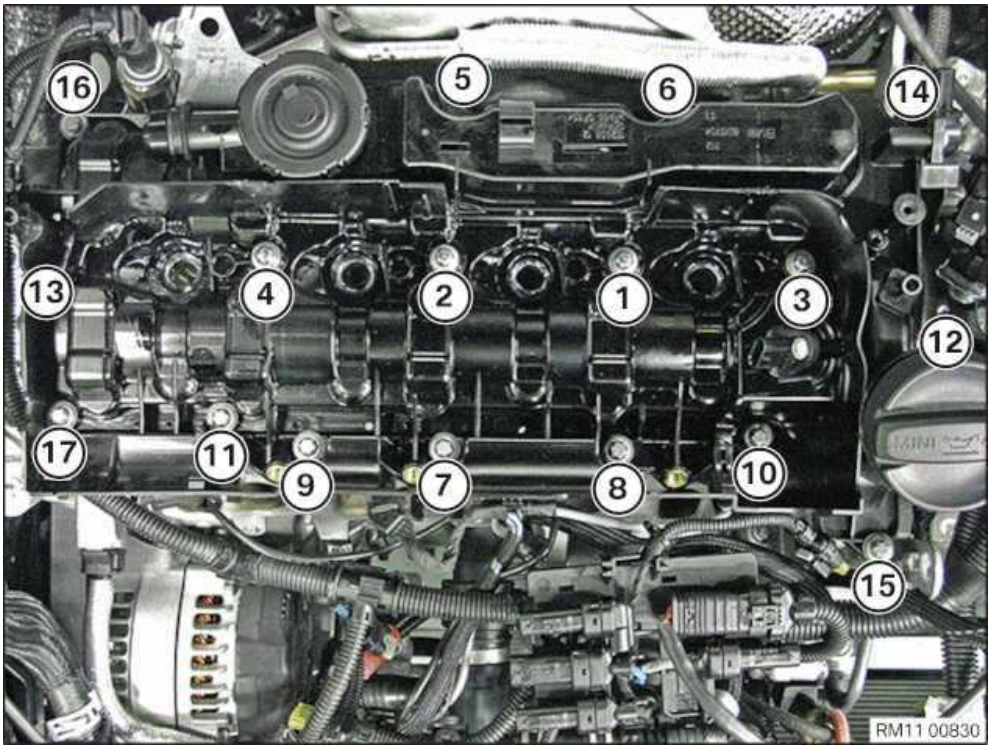


RISK OF DAMAGE

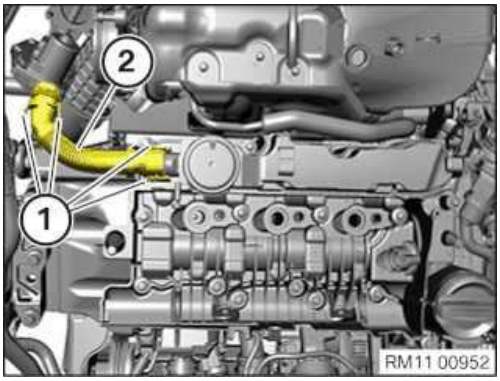
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



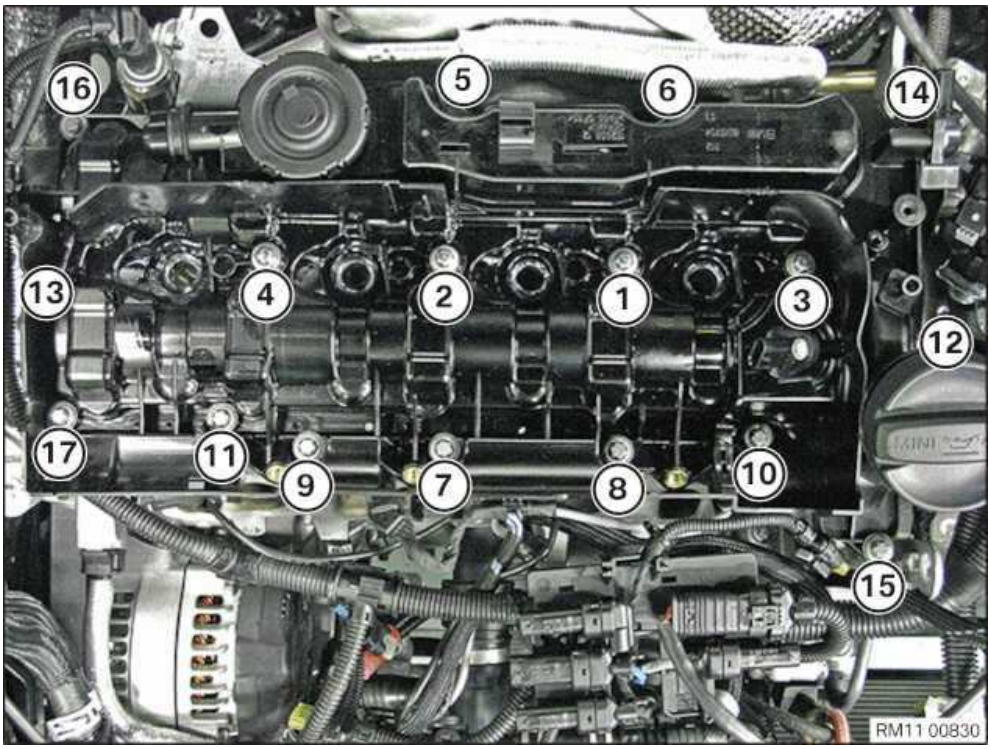
cardiagn.com



- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

25 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

26 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

TECHNICAL INFORMATION

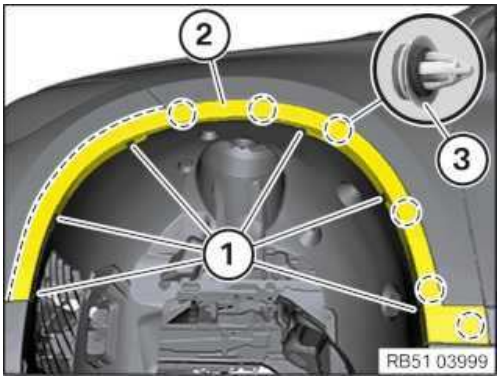
Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

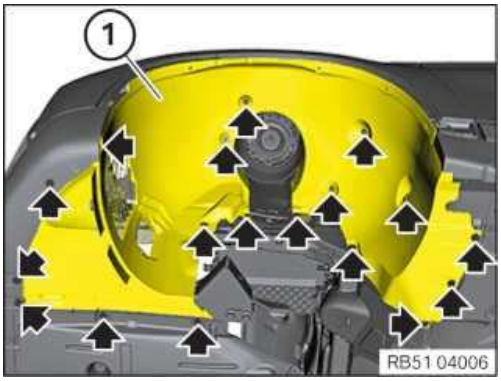
27 – Removing the front right wheel arch cover

▸ **Remove the front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.



cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

NOTICE

Description is for left component only. Procedure on the right side is identical.

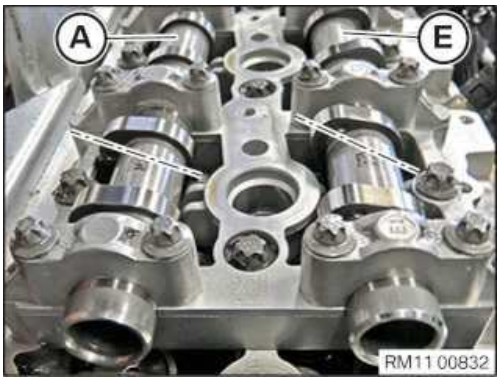
- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

28 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

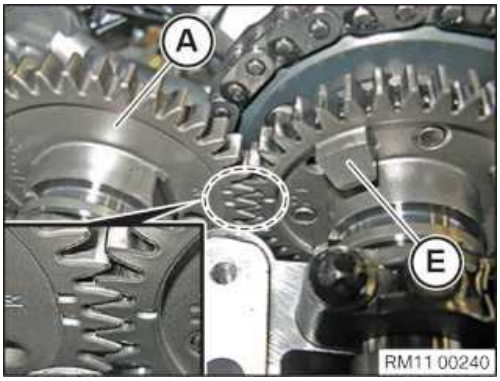


The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

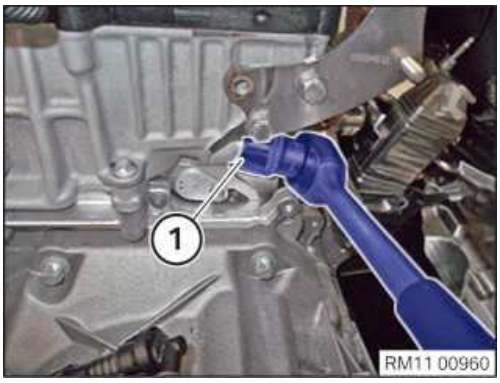
If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

29 – Remove chain tensioner piston



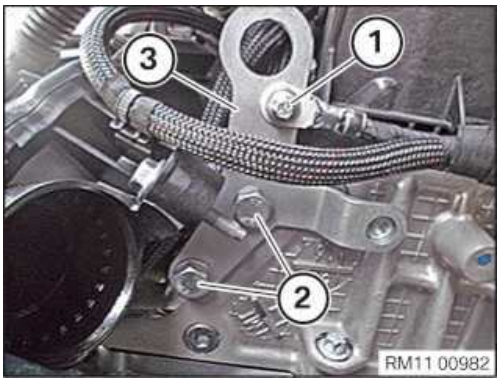
cardiagn.com

WARNING

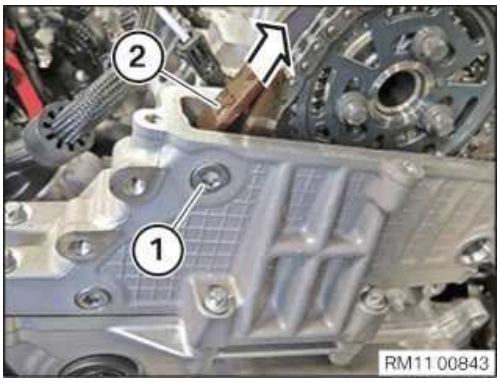
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



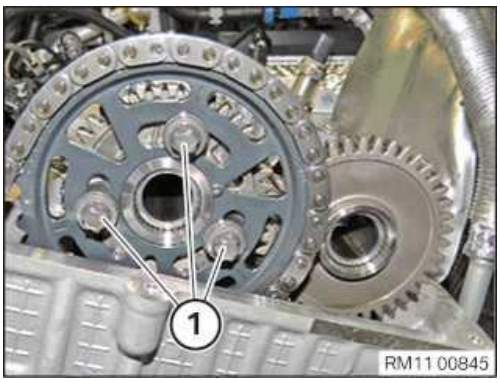
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

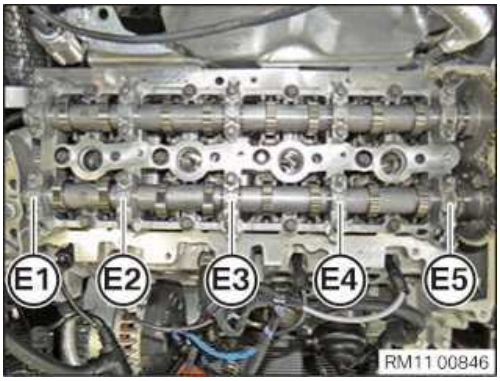
30 – Remove the timing chain guide rail



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

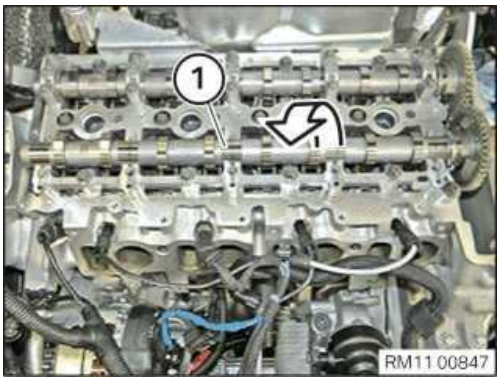
31 – Removing the camshaft sprocket on the intake camshaft



- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

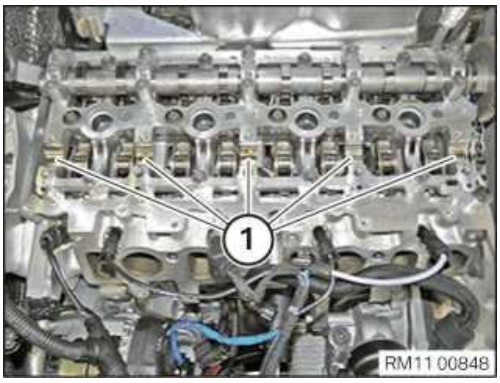
MAIN WORK

cardiagn.com



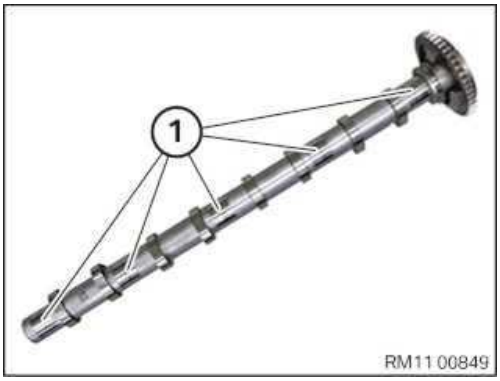
32 – Removing the intake camshafts

TECHNICAL INFORMATION

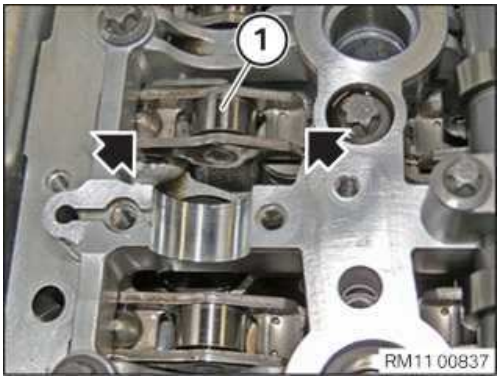


The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

- Loosen all screws of the intake camshaft bearing caps (E1) to (E5) from the outside towards the inside by 1/2 a turn at a time.
- Place all components on special tool **0 495 105 (11 4 480)** in a tidy and orderly fashion.

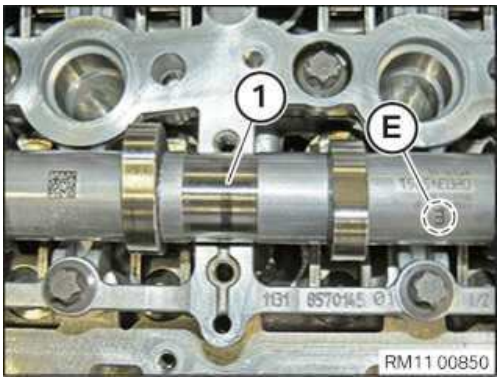


- Remove the intake camshaft (1).

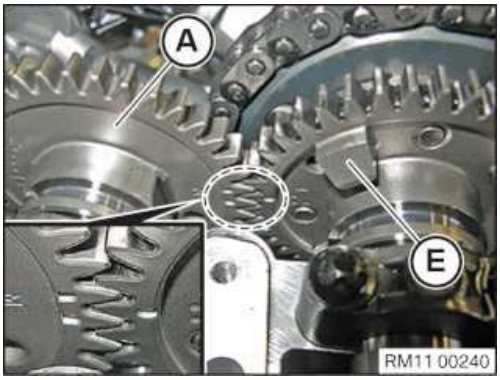


33 – Install intake camshaft

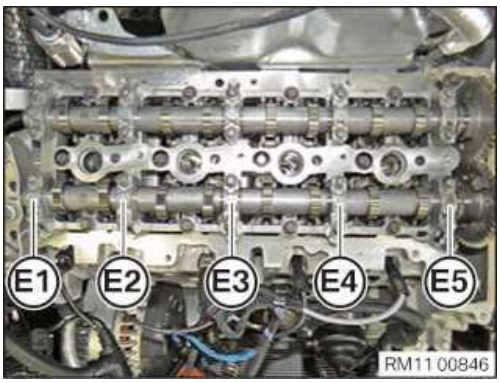
- Oil all bearing positions (1).



- Oil all bearing positions (1) of the intake camshaft.



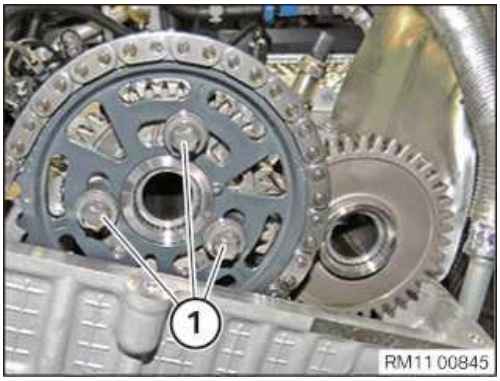
- Check the installation position of the roller cam followers (1) **(risk of damage!)** .



cardiagn.com

- Make sure the identification (E) of the intake camshaft points upwards.
- Insert the intake camshaft (1).

- Insert the intake camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.

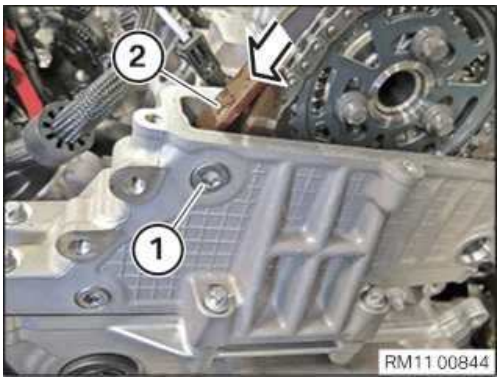


- Tighten all intake camshaft bearing caps (E1) to (E5) from the inside to the outside by 1/2 a turn at a time.

Intake and exhaust camshaft in camshaft support

M6x31		Tightening torque	10 Nm

POSTPROCESSES

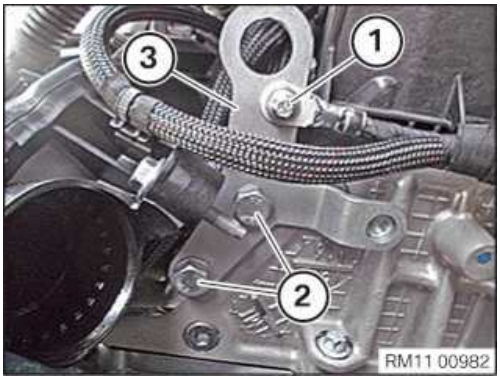


34 – Installing the camshaft sprocket on the intake camshaft

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

35 – Install the timing chain guide rail

cardiagn.com



- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

36 – Installing the chain tensioner piston

WARNING

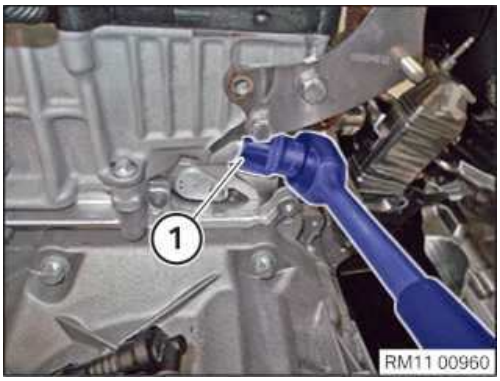
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Renew sealing ring (1).

  Parts: Sealing ring

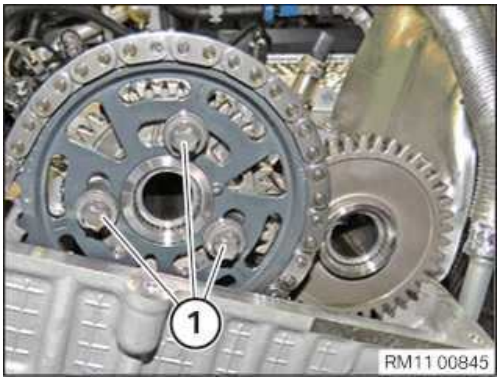


TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

cardiagn.com



- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

37 – Tightening the camshaft sprocket on the intake camshaft

- Tighten the screws (1).

Camshaft sprocket to camshaft

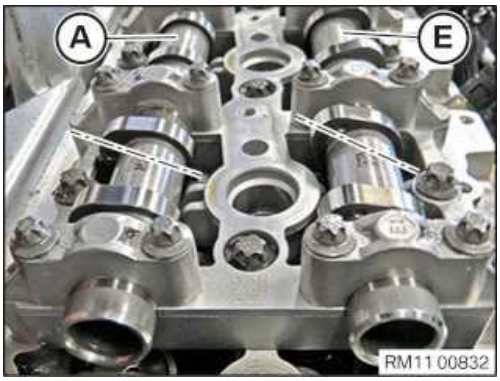
M7x17.			17 Nm

38 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

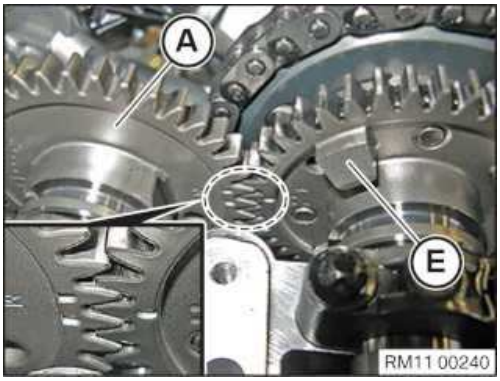


The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

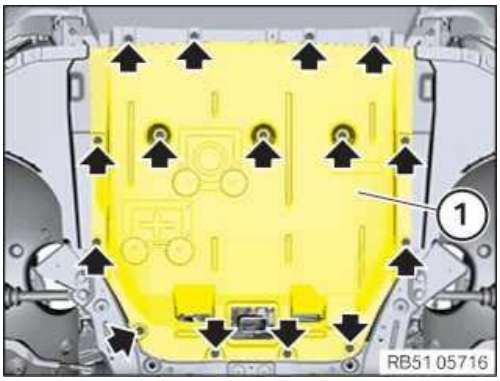
- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

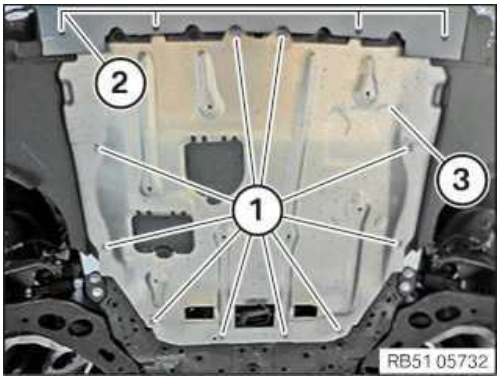
If the check finds that the timings are incorrect, the timings must be adjusted.



For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).



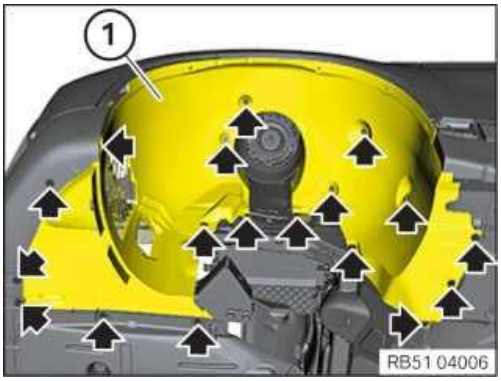
cardiagn.com

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).



Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

40 – Installing the front right wheel arch cover

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

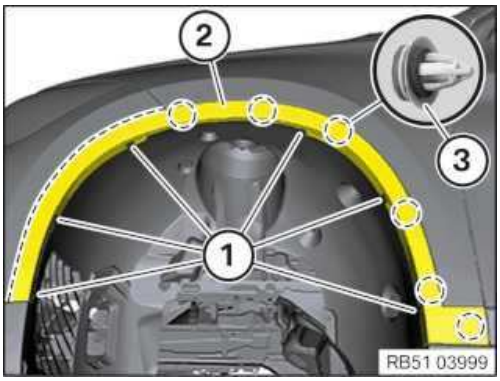
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

cardiagn.com

- Check the clips (3) for damage and renew where required.

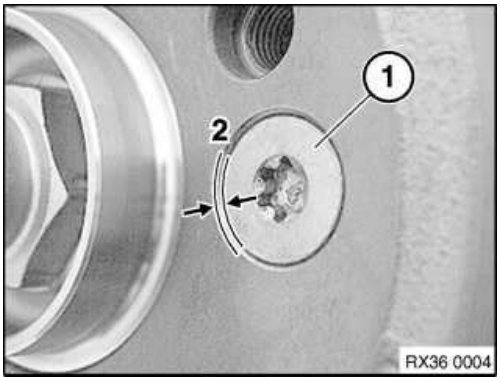
  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

41 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

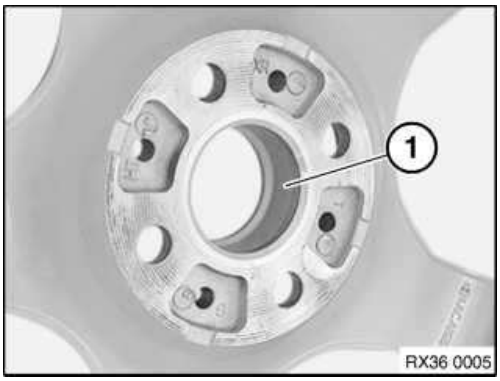


- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

cardiagn.com

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

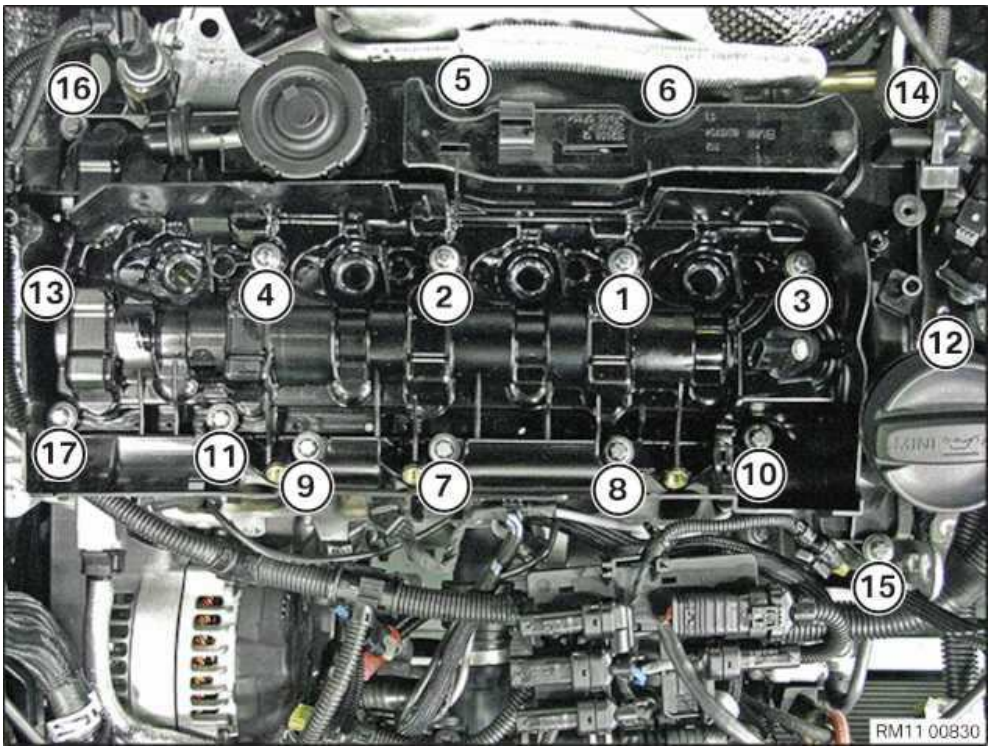
In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

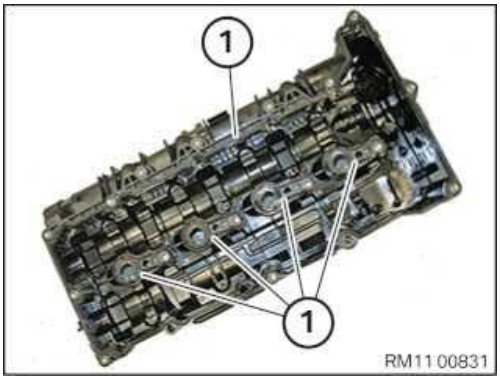
  Parts: Wheel bolts

- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.



Wheel bolts

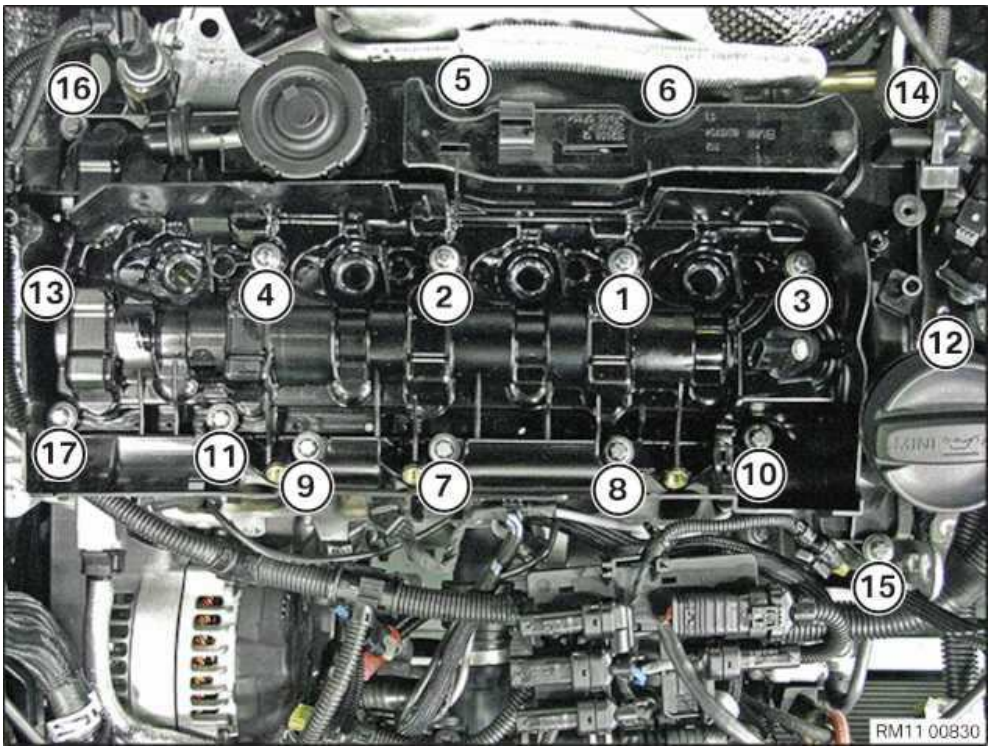
M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		



42 – Installing cylinder head cover

cardiagn.com

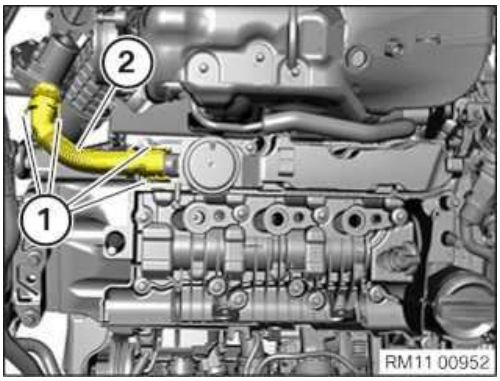
Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket

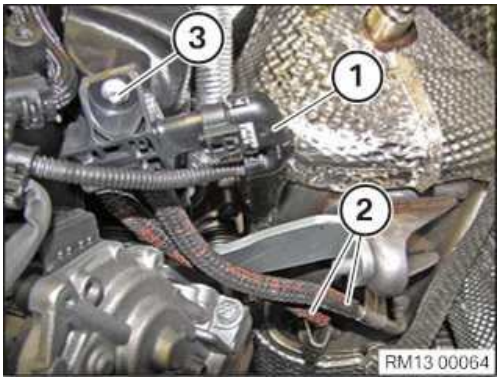


- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-



cardiagn.com

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

43 – Installing differential pressure sensor

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

44 – Installing injectors of injection system

▶ **Cleaning the injector shafts**

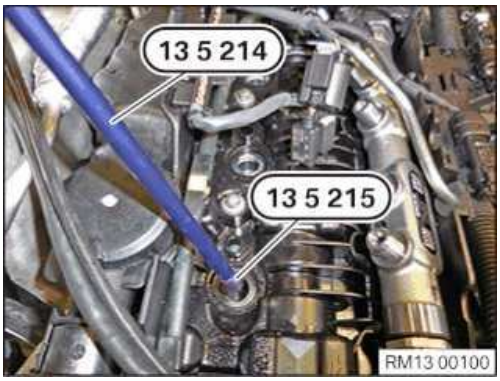
CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

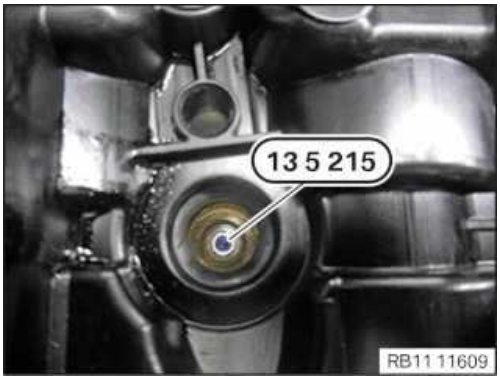
- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.



RISK OF DAMAGE

Contaminant or foreign body.

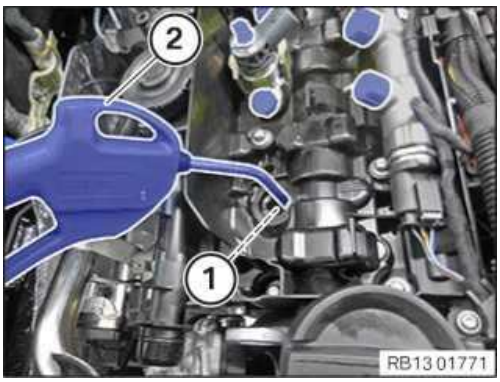


Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

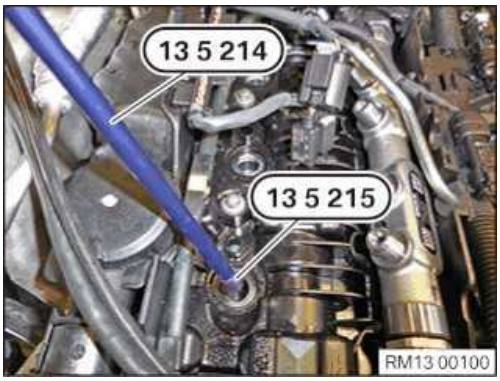
cardiagn.com

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

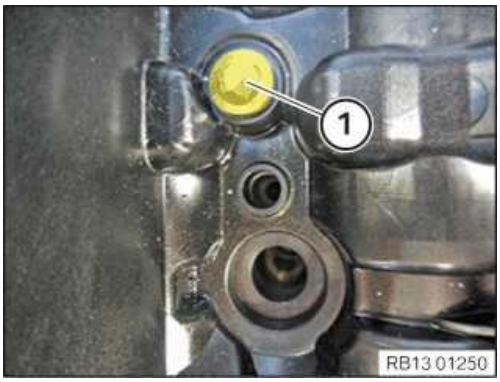


- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

- Blow out injector shaft (1) with air gun (2).

cardiagn.com

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.



▸ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▸ **Prepare the injector for installation**

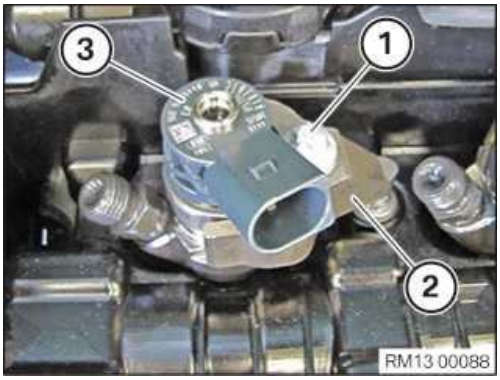
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

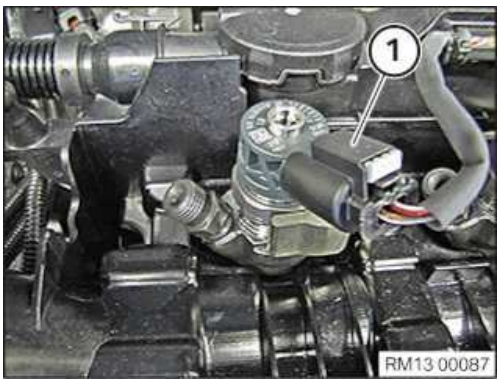


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring

- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials



Injector lubricating grease	50 g, Can	83230441070

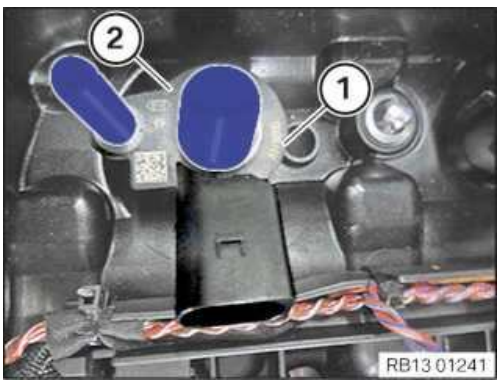
- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



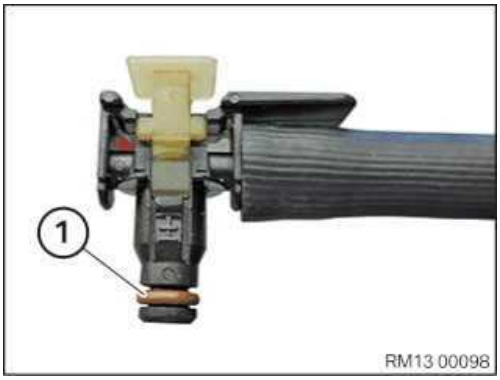
▸ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

cardiagn.com

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

45 – Connect the leakage oil line on the injector

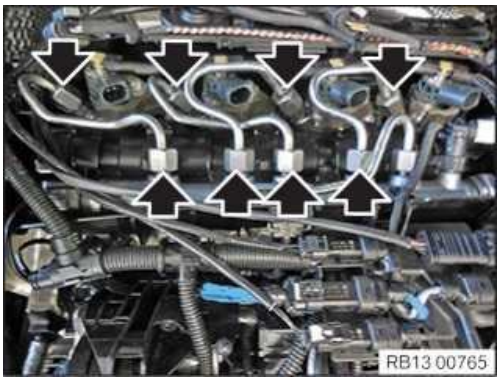
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

46 – Installing high pressure lines between rail and injectors



TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

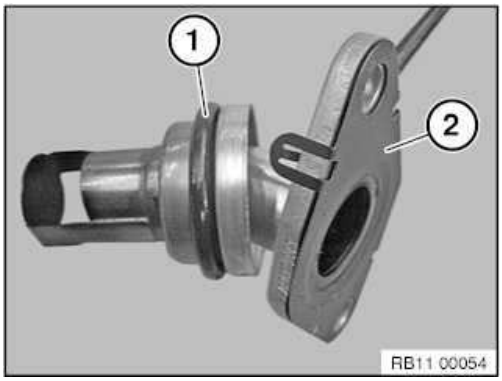
Reset special tool in early to avoid bending pressure lines.

cardiagn.com

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

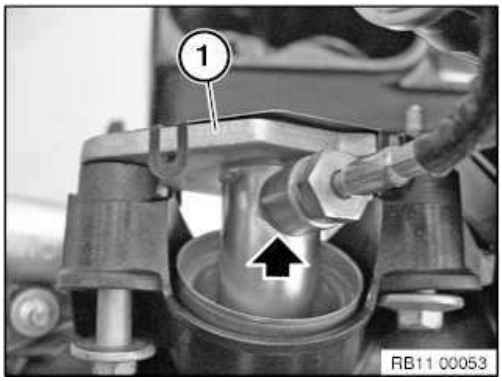


- Tighten the high pressure lines (arrows) with the special tool .

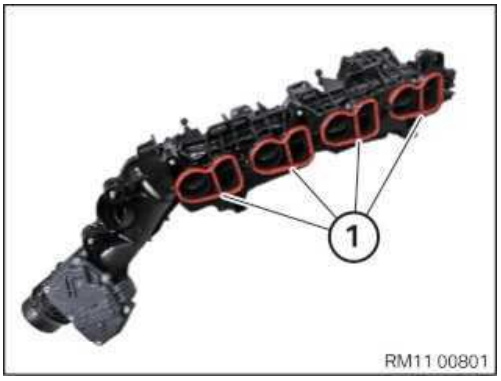
High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).



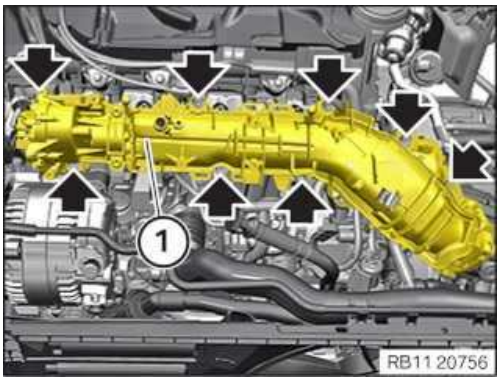
47 – Installing the intake plenum



- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

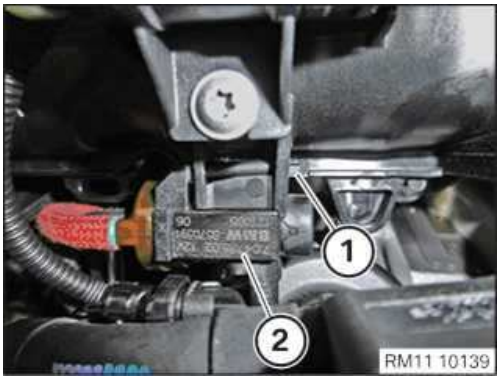
  Parts: Gasket
- Position the seal (2) and clip it in.



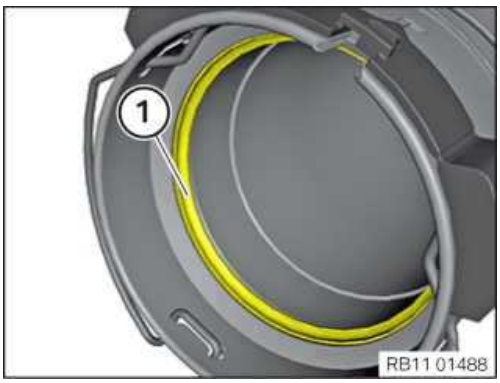
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



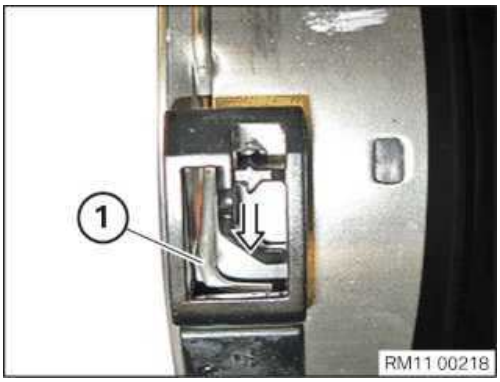
cardiagn.com



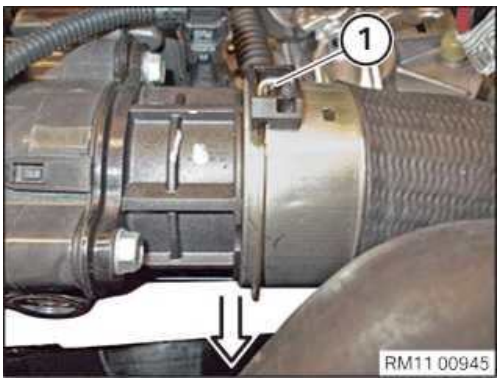
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

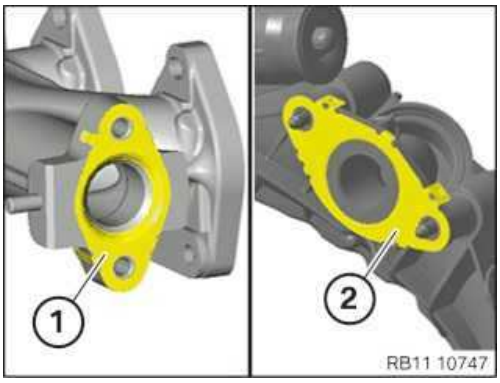
  Parts: Sealing ring

- Engage the lock (1) on the bracket (arrow).

- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

48 – Installing the exhaust-gas recirculation cooler



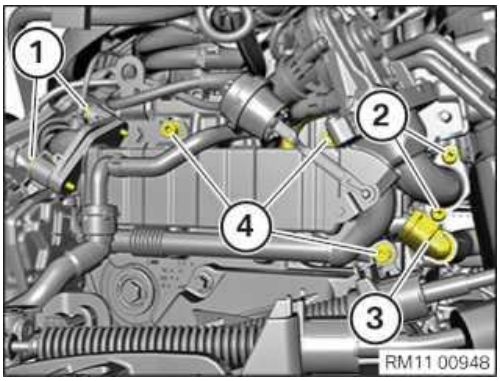
cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts

- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.

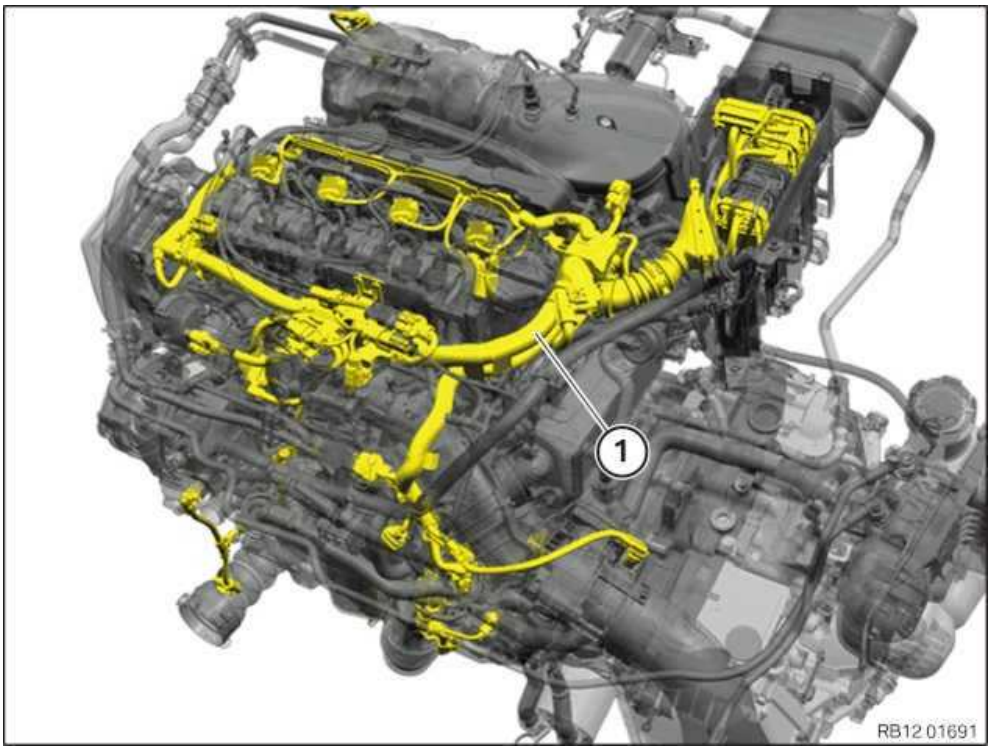
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

cardiagn.com

TECHNICAL INFORMATION



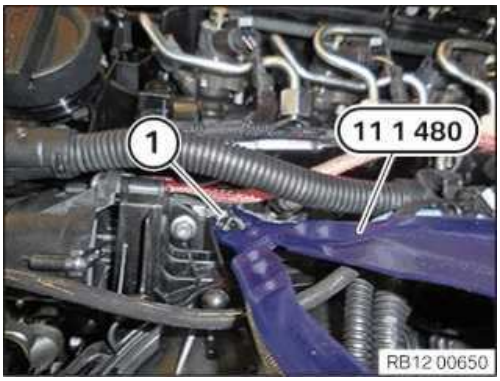
Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

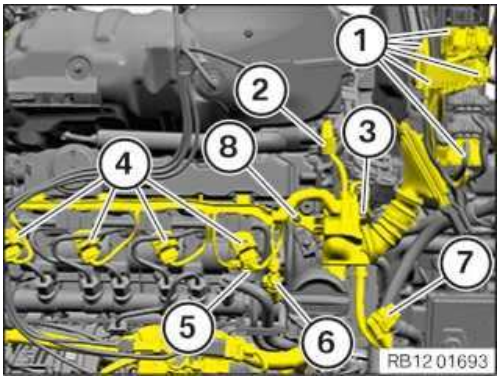
49 – Fastening the wiring harness section for the intake plenum

Overview: Wiring harness section for the engine



1 Wiring harness section for the engine

▸ **Installing the cable clip for the intake plenum**

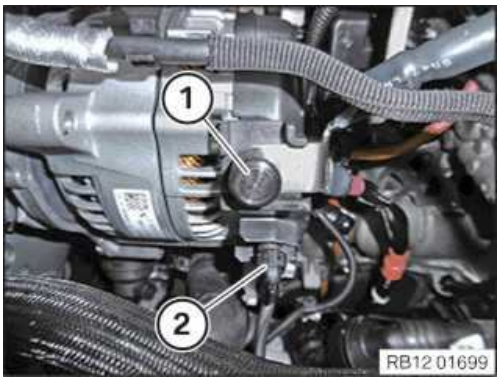


- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

cardiagn.com

- Connect and lock the connector (1) on the glow elements.

  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.

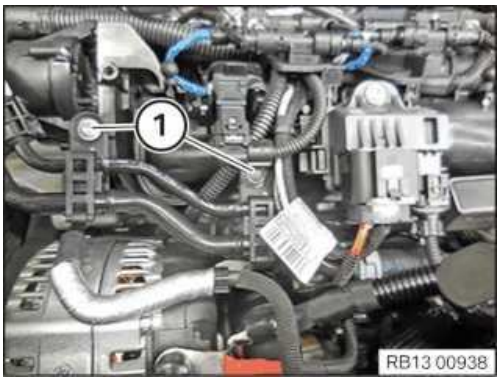


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.

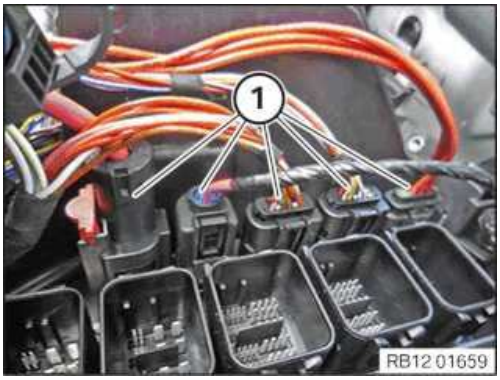


- Connect and lock the connector (2).

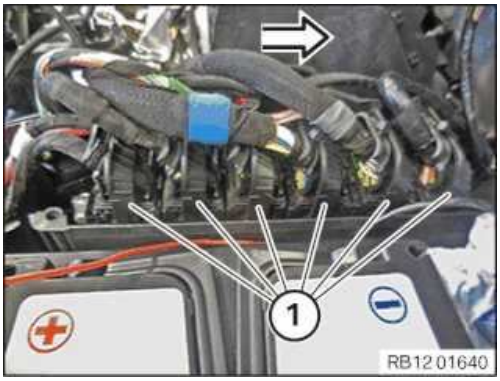
  Lock must snap audibly into place.
- Connect the positive battery cable (1) and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

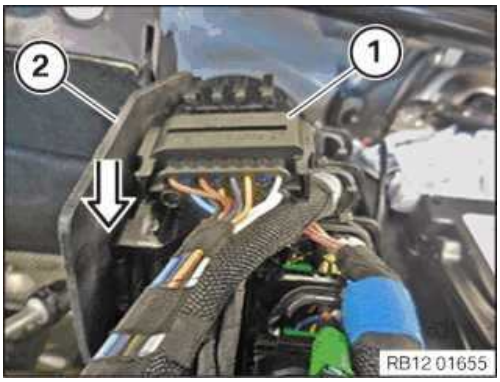


cardiagn.com

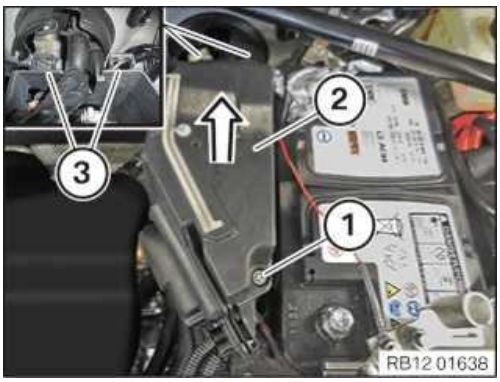


- Position the fuel line.
- Tighten the screws (1).

Fuel line to intake plenum



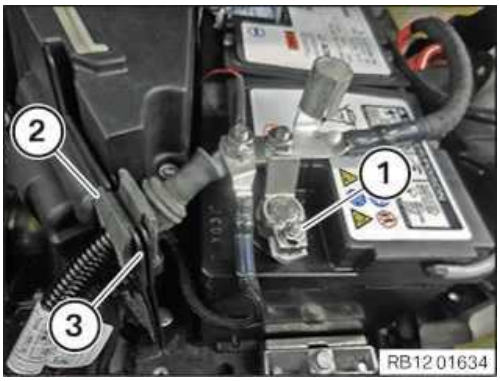
TS6x20		Tightening torque	5 Nm



- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

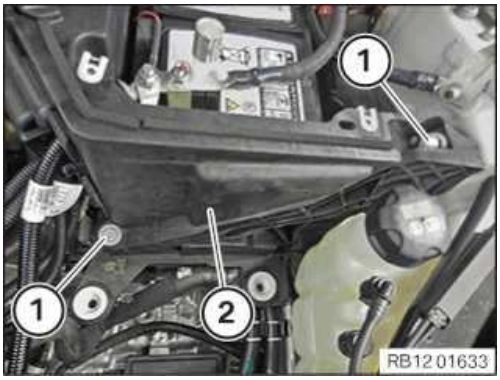
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm

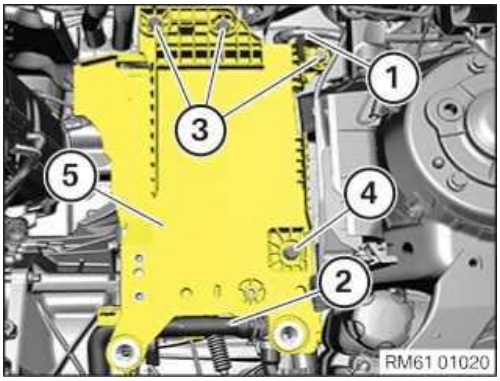


cardiagn.com

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray

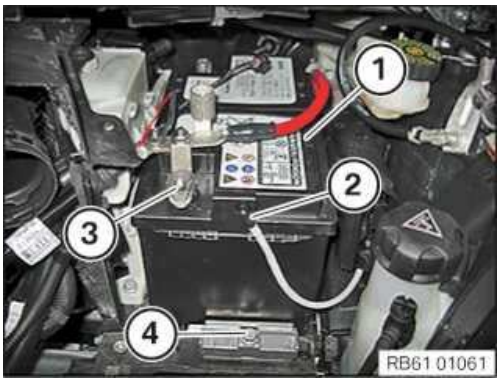
M8		Tightening torque	19 Nm

50 – Install the battery holder

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm



- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

51 – Install vehicle battery

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

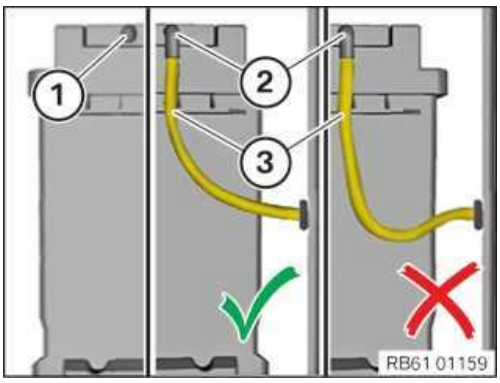
Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

▸ **Check the vent holes of the battery**

cardiagn.com

WARNING



Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

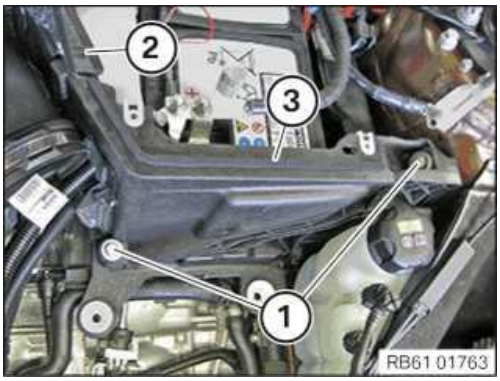
» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

Check

- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).



Result

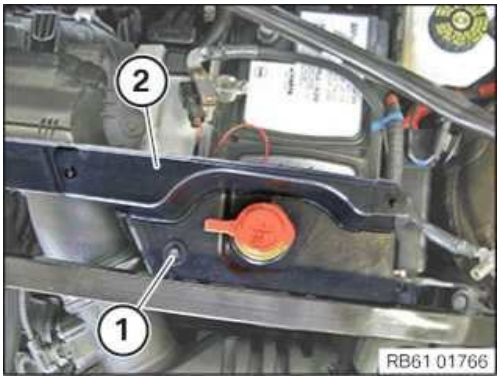
» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

cardiagn.com

- Insert tension strut (3) and tighten with screws (1).

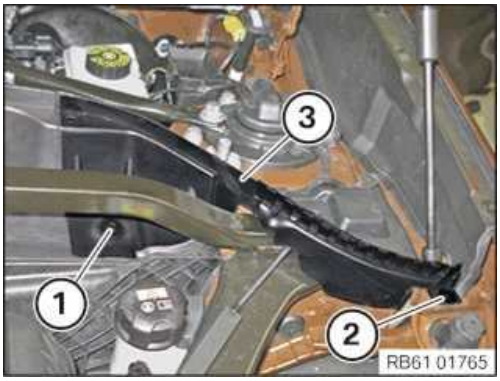


Trailing link

M8		Tightening torque	19 Nm

- Tighten down screw (2).

Battery cover



M8		2,8 Nm

- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

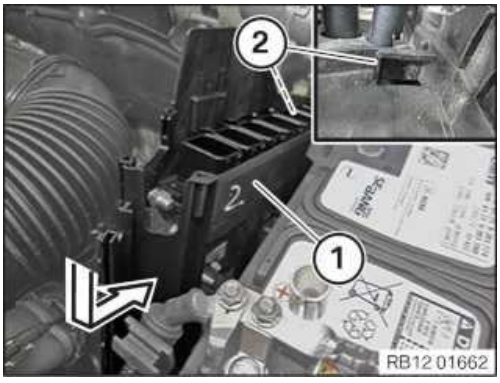
- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

52 – Install electronics box

Prerequisite



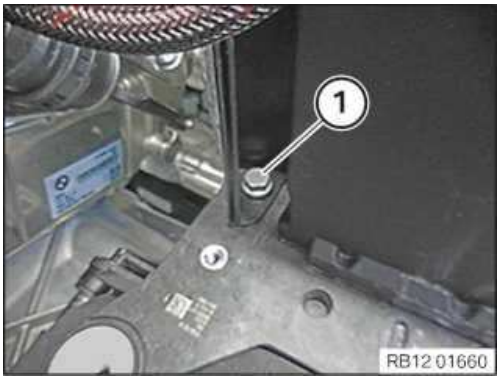
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

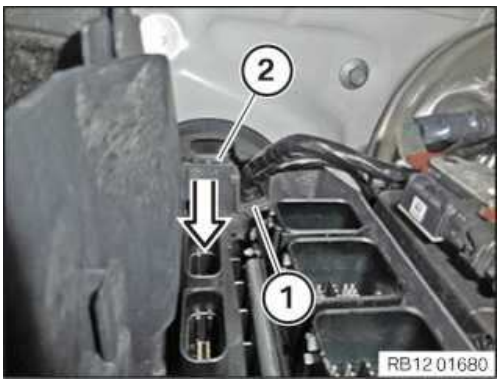
Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

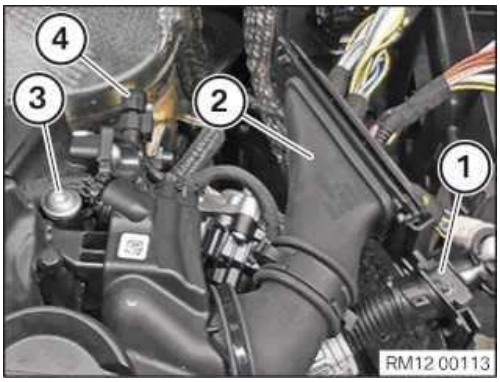


- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

cardiagn.com



- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).

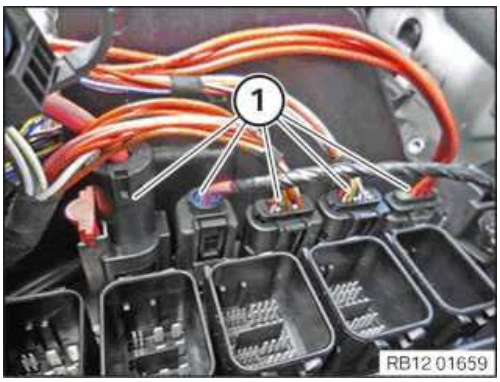


- Tighten down screw (1).

Electronics box to battery tray

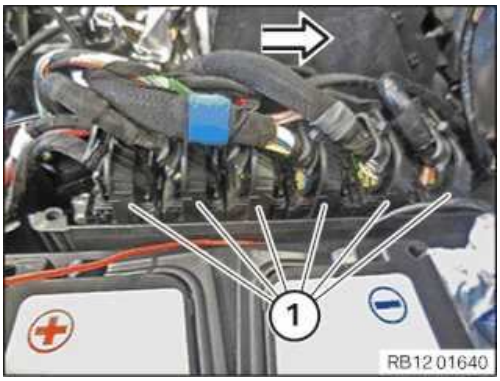
M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



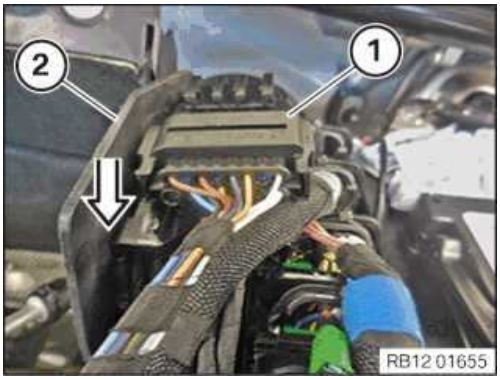
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

Wiring harness to cylinder head cover

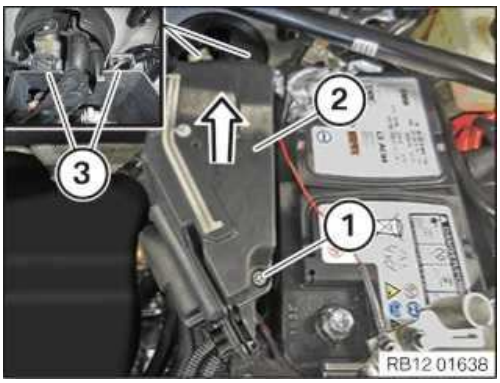


TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

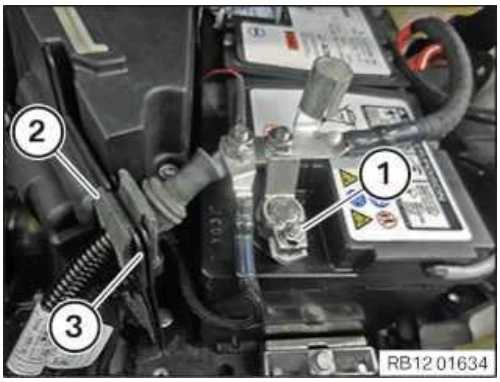


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



cardiagn.com

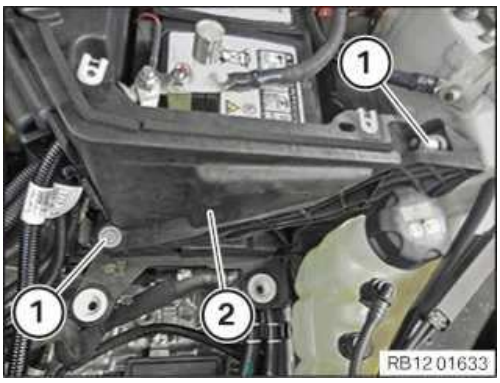
- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

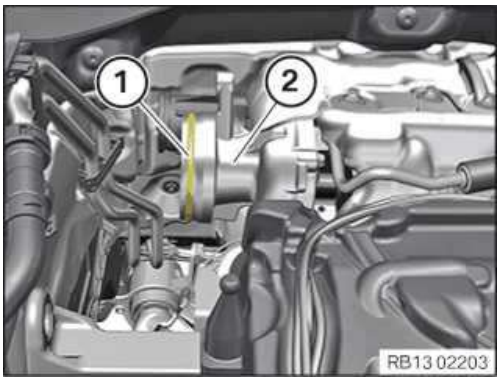


RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

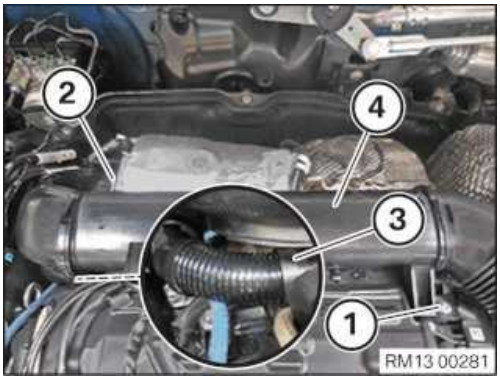
Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray



M8		Tightening torque	19 Nm

53 – Installing clean air pipe

cardiagn.com

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

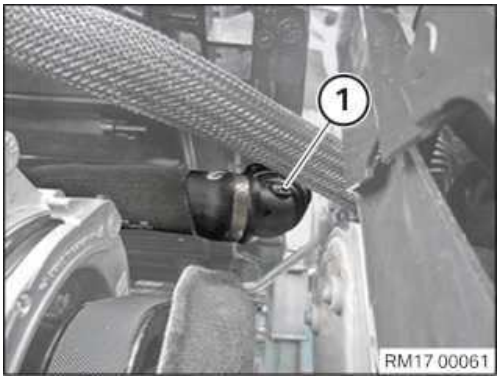
  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.

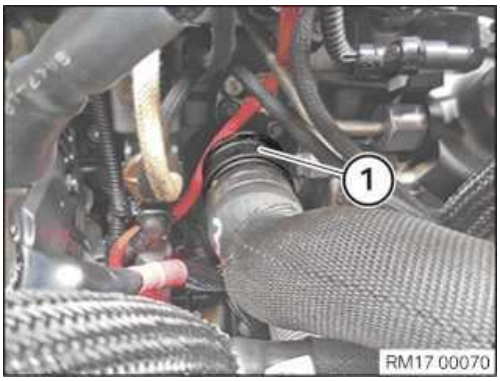
- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

54 – Connect the coolant line

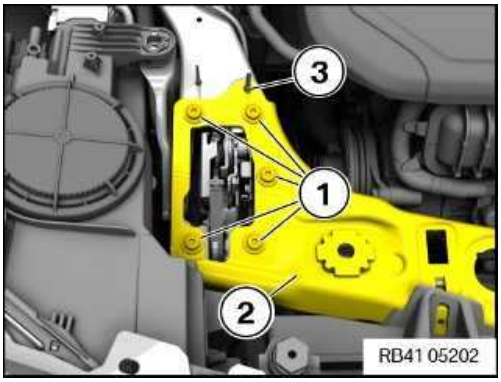


TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

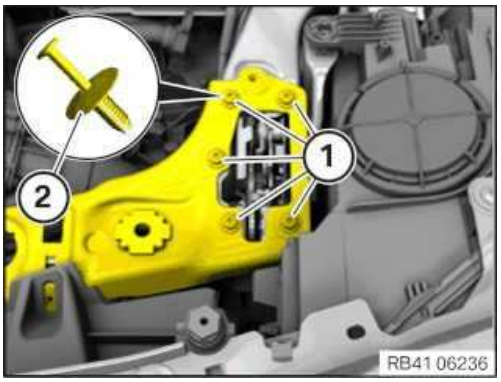
- Connect the right coolant line (1) to the radiator and lock audibly.

cardiagn.com



- Connect the coolant line (1) to the connecting branch and lock audibly.

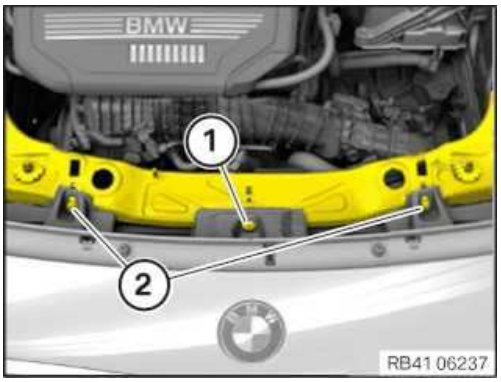
55 – Install front cross connection



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm

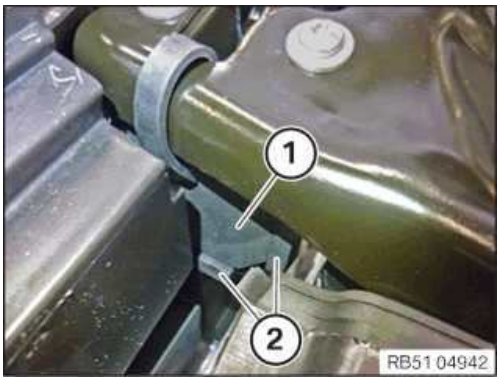
- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

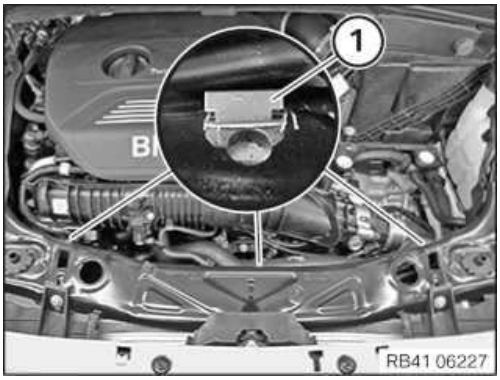
- Tighten down screws (2).

Air duct to upper connection



M6x20 screw		Tightening torque	11,8 Nm

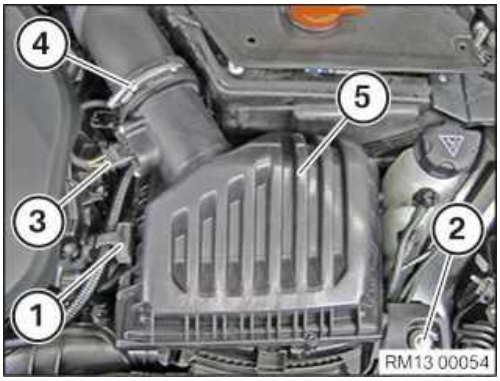
- Tighten down screw (1).



Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm

cardiagn.com



- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

56 – Installing intake silencer housing

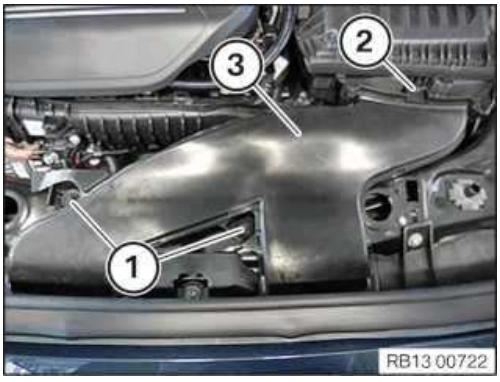
- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

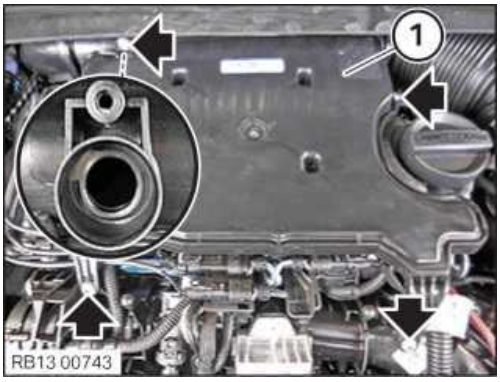
57 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm



58 – Install the acoustic cover for the injectors

cardiagn.com

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

59 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

60 – Install acoustic cover

RISK OF DAMAGE

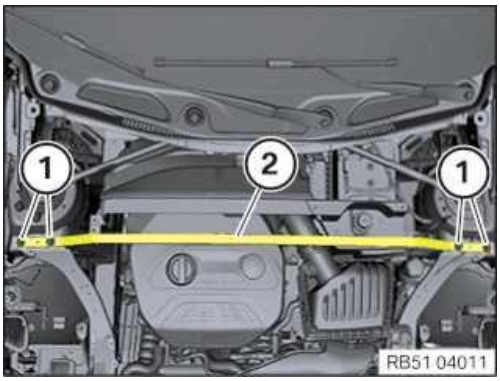
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

cardiagn.com

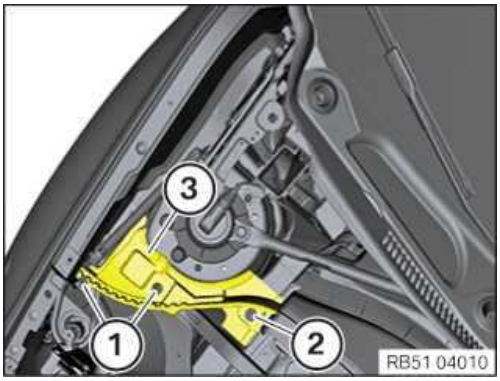


- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

61 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).

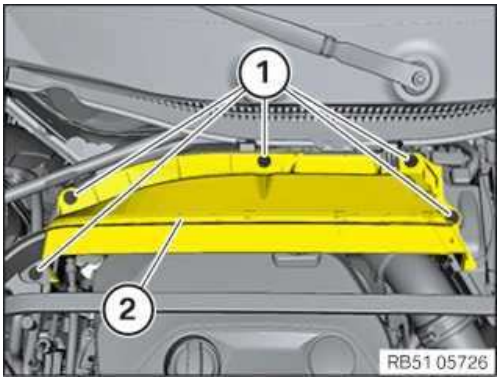
  Parts: Bolts
- Tighten the screws (1).

Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

NOTICE

Description is for right component only. The procedure on the left side is identical.



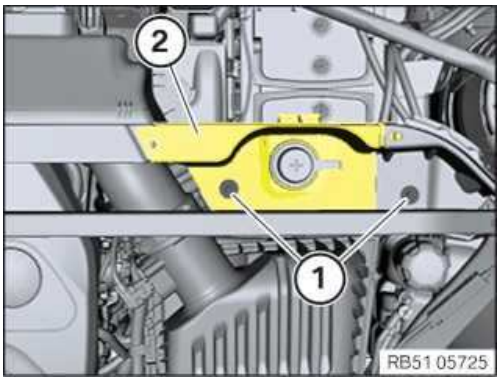
- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

62 – Installing the upper bulkhead cover

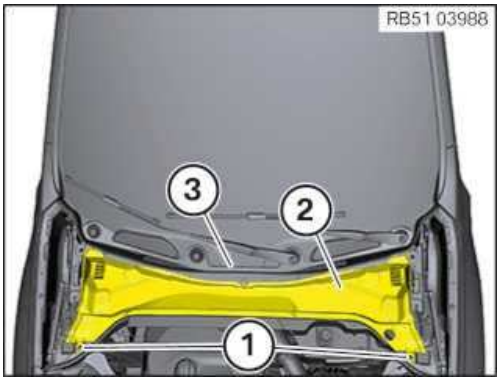


- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm

cardiagn.com

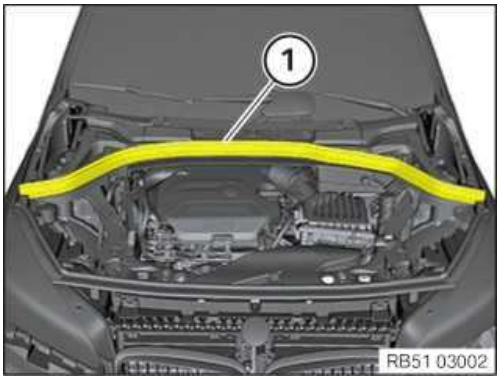


- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

63 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

64 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

65 – Disconnecting all battery earth leads

- See additional information.

66 – Fill and bleed the coolant circuit

▸ **Filling and bleed the high-temperature coolant circuit**

cardiagn.com

- See additional information.

Exhaust-gas recirculation cooler seal on intake plenum	48

cardiagn.com

11 31 091 Removing and installing/replacing the hydraulic chain tensioner

PRELIMINARY WORK

1 – Removing engine

- See additional information.

2 – Removing the acoustic cover

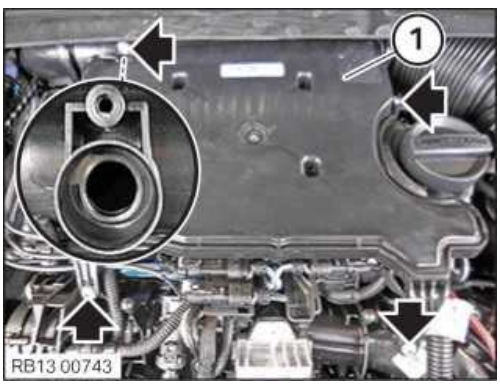
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

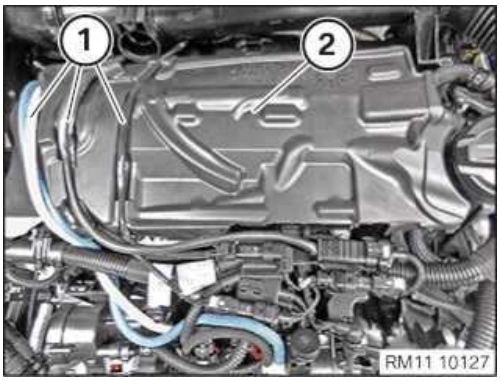


Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

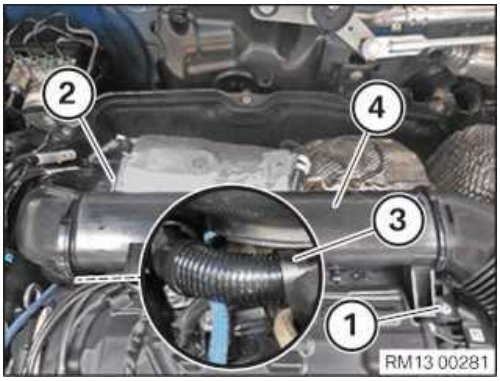


3 – Remove resonator

- Remove screws (arrows).
- Guide out and remove the resonator (1).

4 – Remove the acoustic cover for the injectors

cardiagn.com



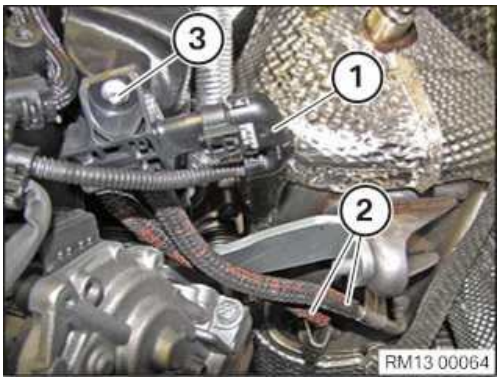
- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

5 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

6 – Remove differential pressure sensor

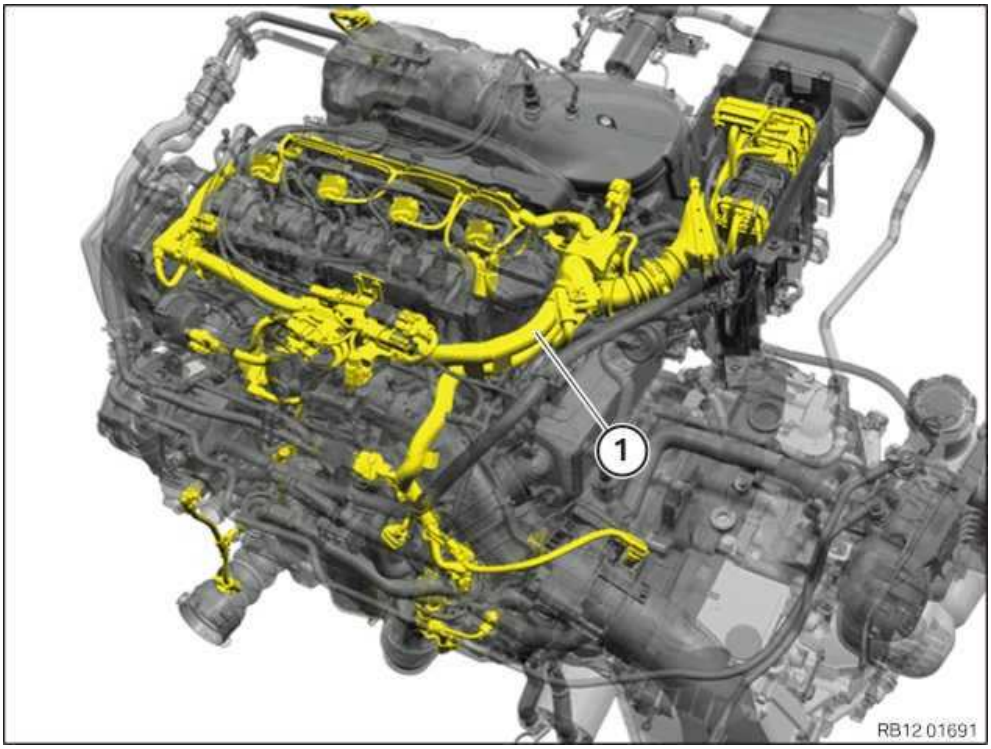


RISK OF DAMAGE

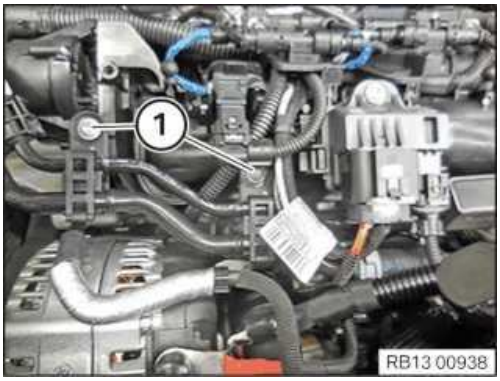
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



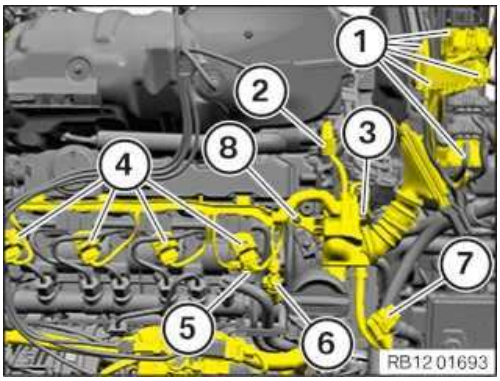
cardiagn.com



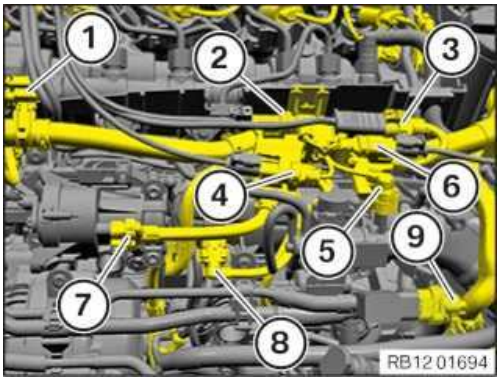
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

7 – Removing assemblies (on lifting table)

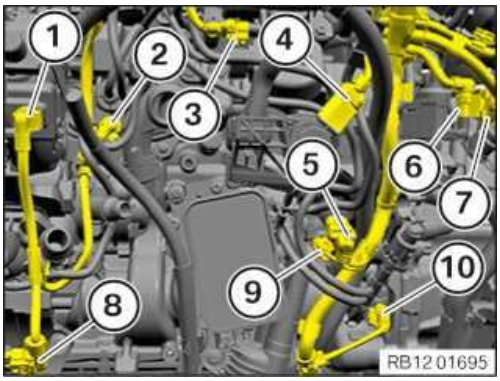
Overview: Wiring harness section for the engine



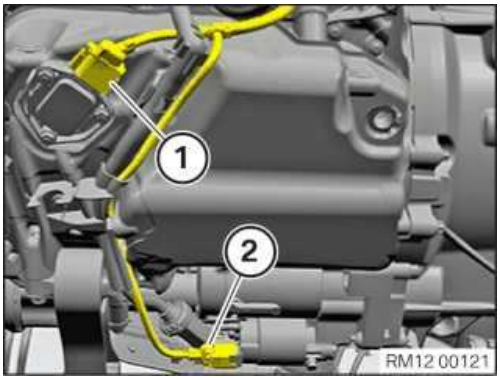
1 Wiring harness section for the engine



- Loosen screws (1).

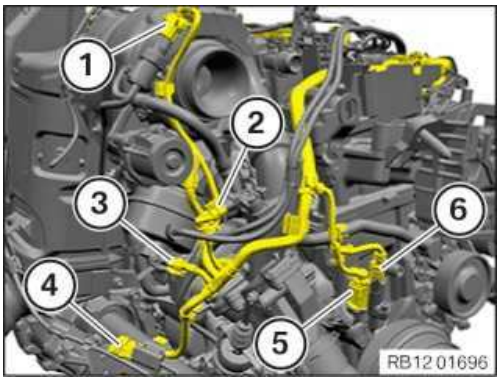


cardiagn.com

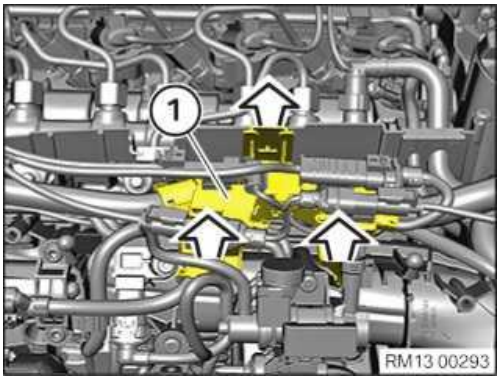


- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).

- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock connector (3) and pull it off from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

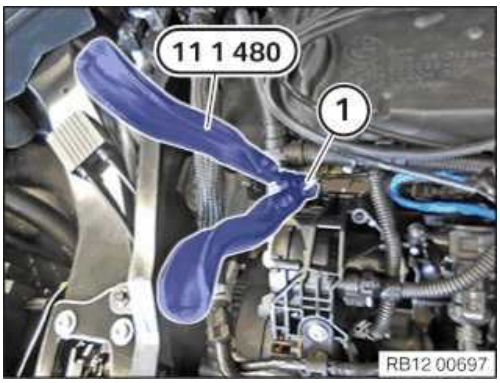


- Unlock and disconnect the connector (1) from the alternator.
- Unlock and disconnect the connector (2) from the electric changeover valve.
- Unlock and disconnect the connector (3) from the electric changeover valve.
- Unlock the connector (4) and pull it off the high pressure pump.
- Unlock the connector (5) and disconnect it from the oil pressure sensor.
- Unlock connector (6) and pull off from throttle body.
- Unlock the connector (7) and disconnect it from the intake air temperature sensor.
- Unlock the connector (8) and disconnect it from the air conditioning compressor.
- Unlock and disconnect the connector (9) from the solenoid valve.
- Unlock the connector (10) and pull it off the crankshaft sensor.

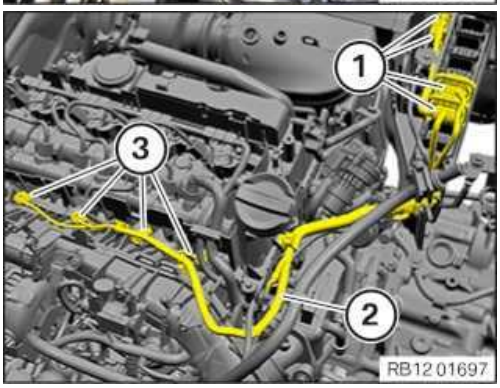


- Unlock the connector (1) and pull off of the oil-level sensor.
- Unlock connector (2) and remove from starter motor.

cardiagn.com



- Unlock the connector (1) and disconnect it from the exhaust gas pressure sensor.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock the connector (3) and pull it off the exhaust turbocharger.
- Unlock the connector (3) and disconnect it from the differential pressure sensor.
- Unlock connector (4) and pull it off from the monitoring oxygen sensor.
- Unlock the connector (5) and pull it off the oil pressure switch .
- Unlock connector (6) and disconnect from switching valve.
- Detach, feed out and remove the wiring harness from the clamps.



▶ **Removing the cable clips from the intake plenum**

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Pull off all connectors (3) from glow element using special tool **0 490 796 (11 1 480)**.
- Loosen screw (2) and remove the ground strap.
- Detach, feed out and remove the wiring harness from the clamps.

▶ **Removing the drive belt for alternator**

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

cardiagn.com

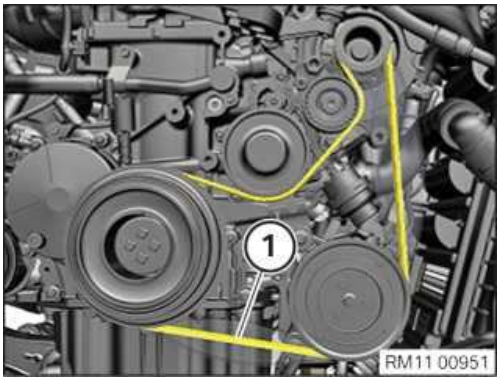
CAUTION

Component with preload.

Danger of injury!

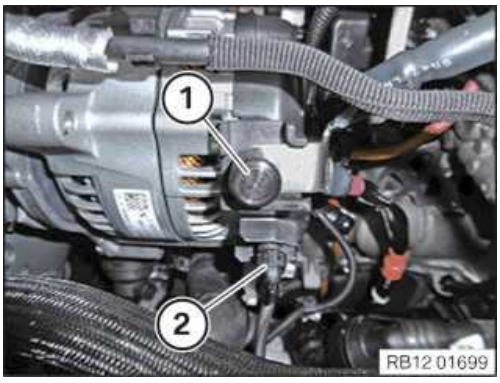
- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION



If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

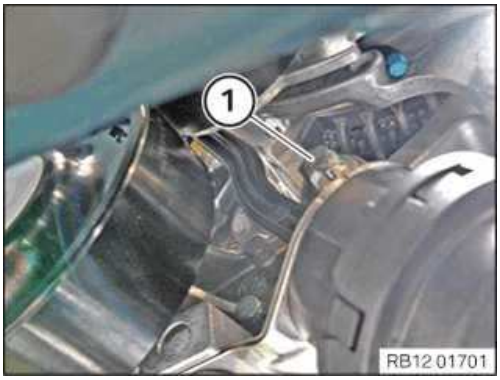
TECHNICAL INFORMATION



The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool **0 496 268 (11 0 390)**.

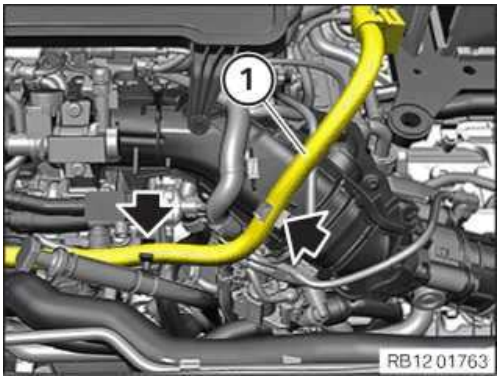
- Guide out the drive belt for the alternator (1) and remove it.



- Remove the cover (1) and loosen the nut below.
- Disconnect positive battery cable from alternator.
- Unlock and disconnect the connector (2) from the alternator.

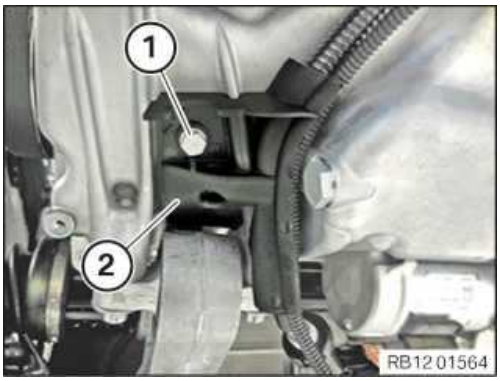
cardiagn.com

- Detach screw (1) on top on the alternator.



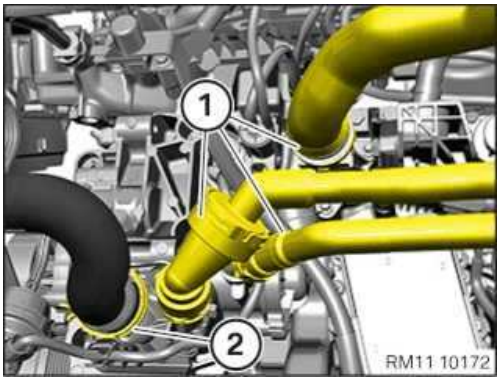
- Detach screw (1) below on the alternator.

- Feed out alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support and remove.



- Loosen screws (1).
- Feed out and remove the air conditioning compressor (2).

- Release the positive battery cable (1) from the clamps (arrows).

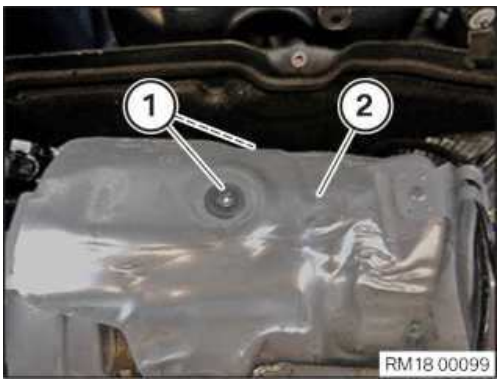


cardiagn.com

- Loosen screw (1).
- Guide out and remove holder (2).

- Feed out positive battery cable from the clamps (1) and remove.

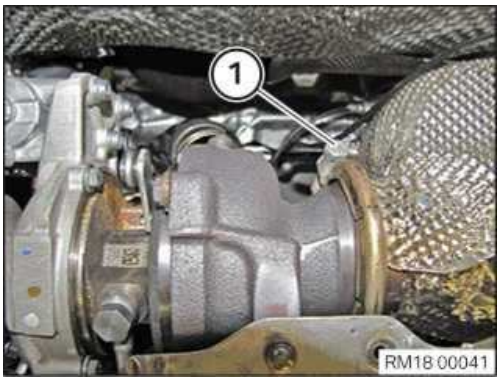
- Unlock and disconnect coolant lines (1).
- Guide out the coolant lines (1) and remove it.
- Detach the clamp (2).
- Guide the coolant hose out and remove.



▶ **Removing heat shield from top exhaust turbocharger**

WARNING

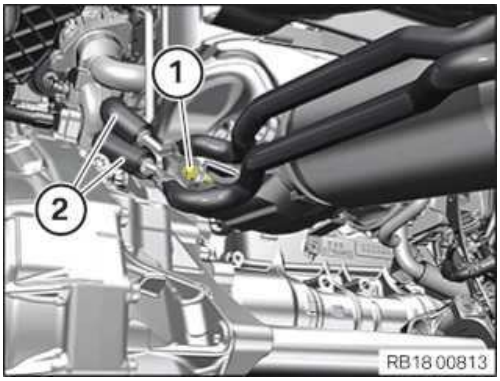
Hot surfaces.



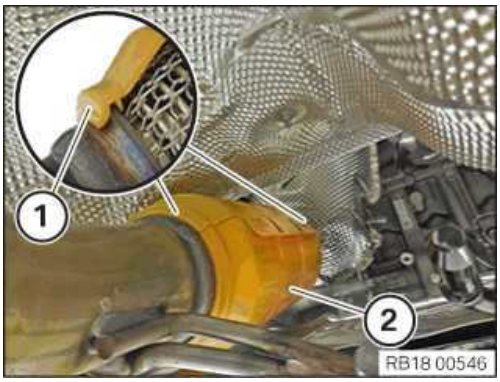
Risk of burning!

- Perform all work only on components that have cooled down.

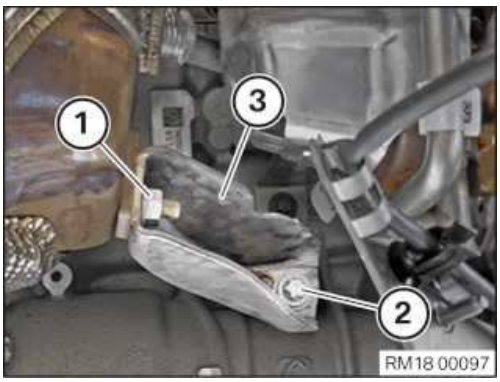
- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).



cardiagn.com

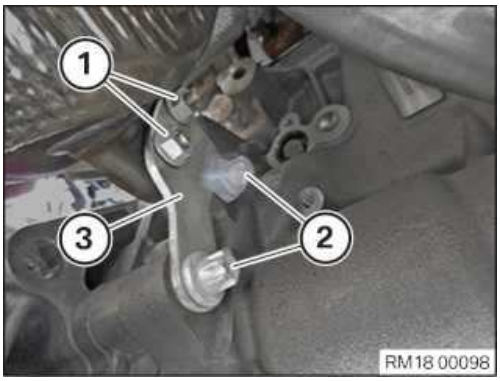


- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



- Loosen nuts (1).

- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

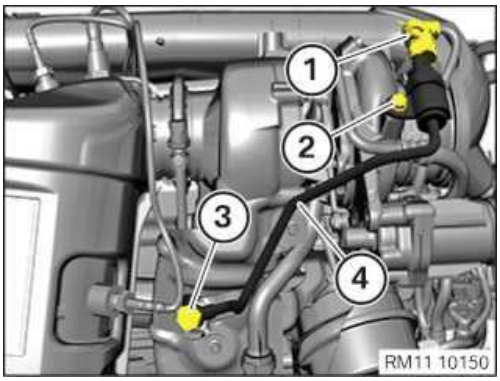


- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.

- Loosen nut (1).
- Loosen screw (2).
- Remove holder (3).

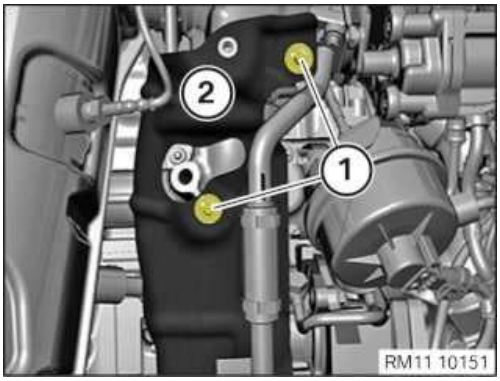
cardiagn.com

- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).
- Guide out and remove diesel particulate filter .



▶ **Remove the heat shield from the exhaust turbocharger at the bottom**

WARNING



Hot surfaces.

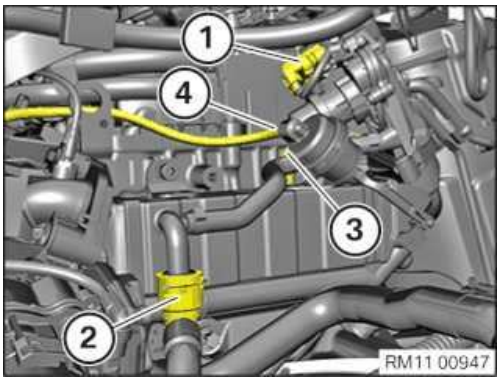
Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).

▶ **Removing the exhaust-gas recirculation cooler**

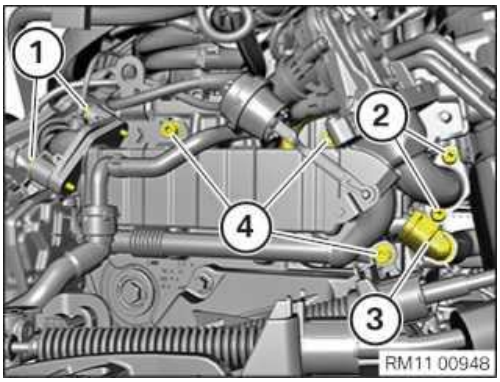


WARNING

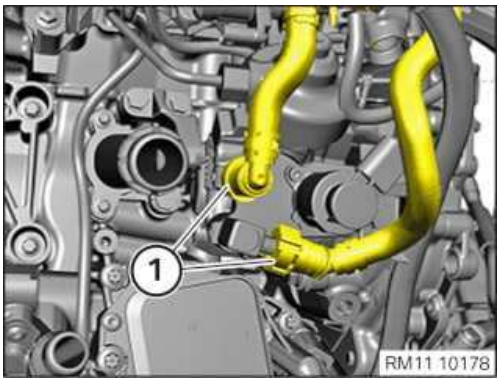
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

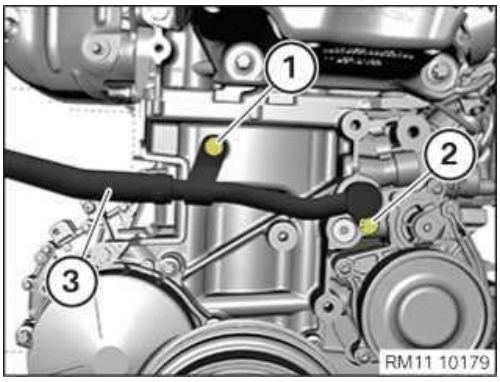


cardiagn.com



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



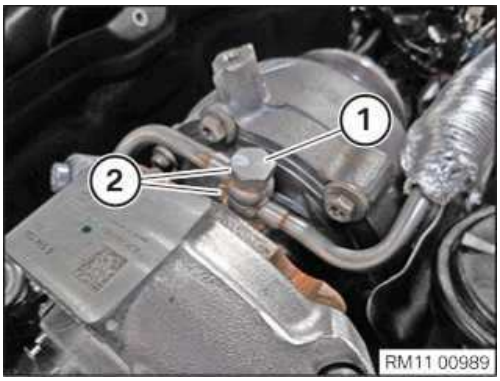
- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

- Unlock the fuel lines (1) and disconnect from the high pressure pump.
- Remove the fuel lines.

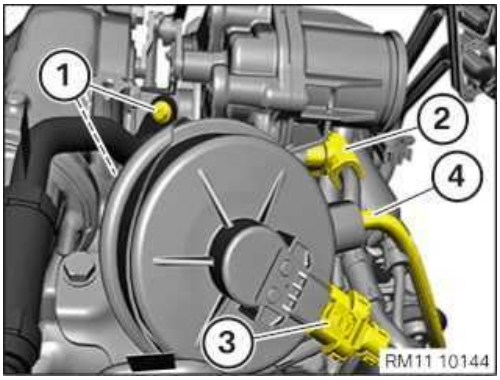
- Loosen screws (1) and (2).
- Remove coolant line (3).

8 – Removing the low-pressure stage turbocharger



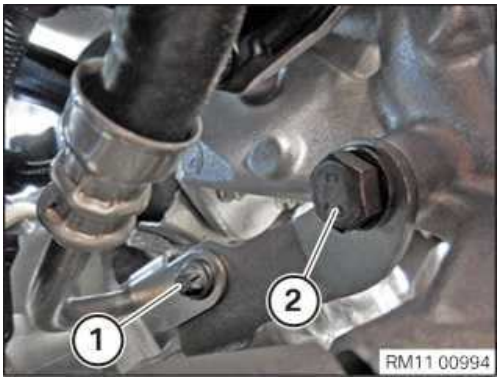
WARNING

Hot surfaces.



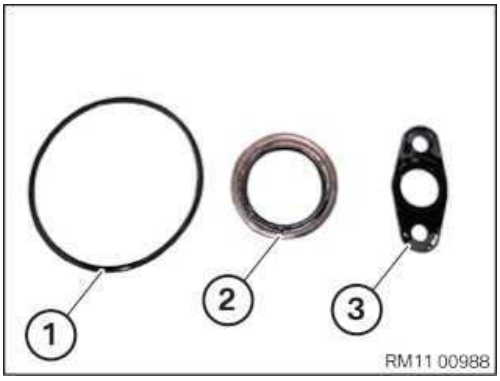
Risk of burning!

- Perform all work only on components that have cooled down.



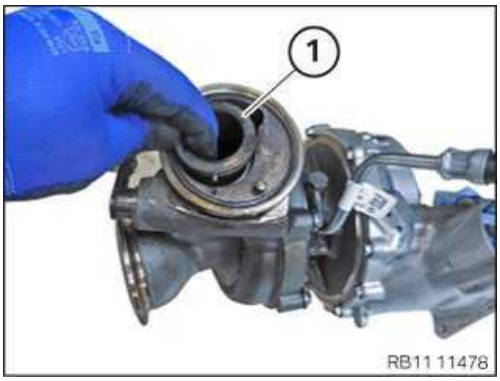
cardiagn.com

- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.



- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.

- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).



- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

cardiagn.com

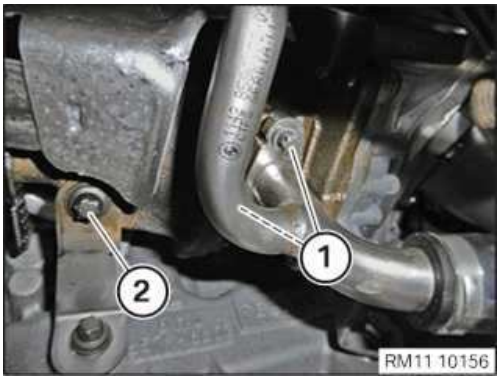
- Remove the spacer ring (1).

9 – Removing the high-pressure stage exhaust turbocharger

WARNING

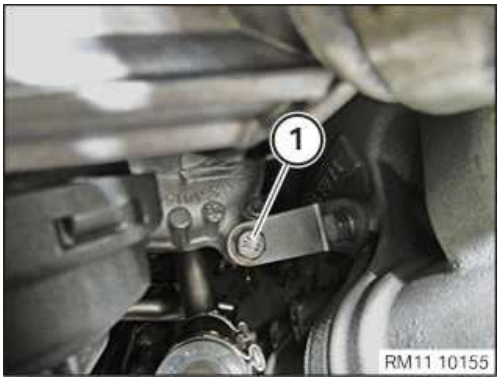
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

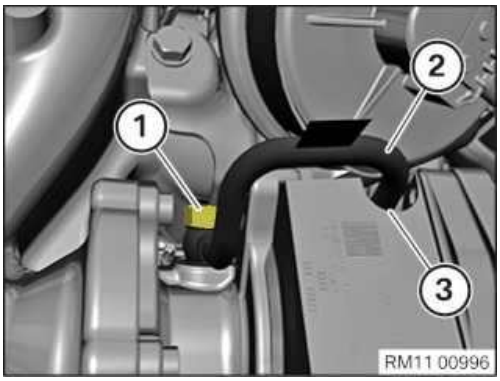
CAUTION



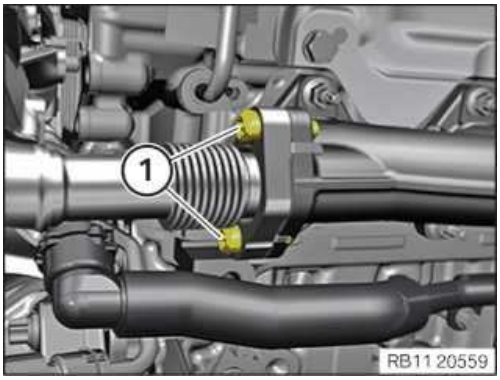
Heavy component.

Heavy components can lead to injury or damage.

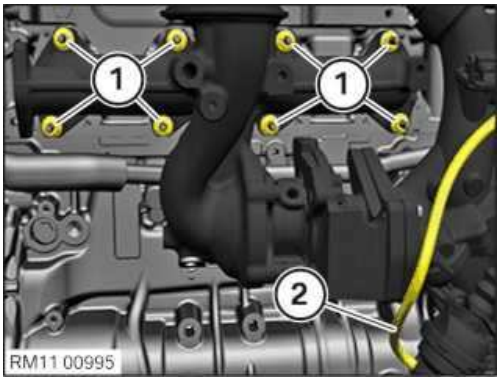
- Remove and install heavy components with the aid of another person/other persons.



- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).

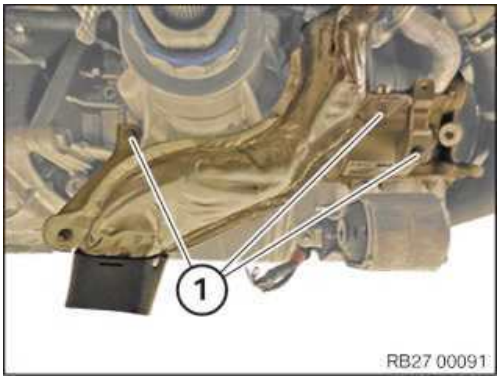


- Release screw (1) from the right wheel arch.

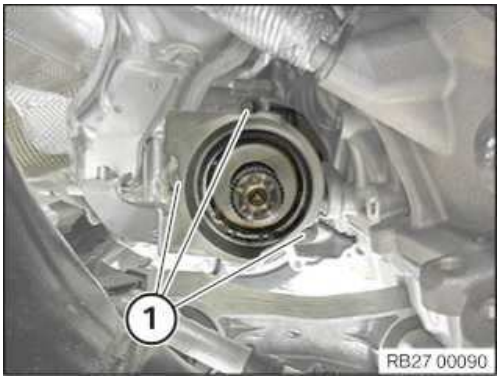


cardiagn.com

- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

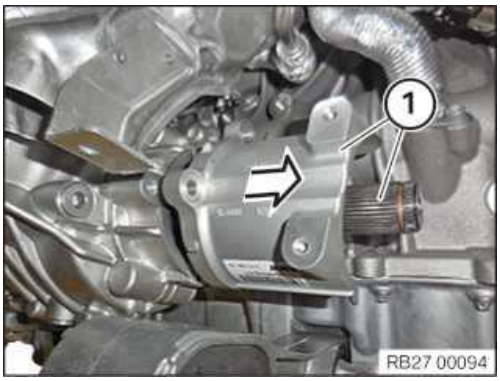


- Loosen screws (1).

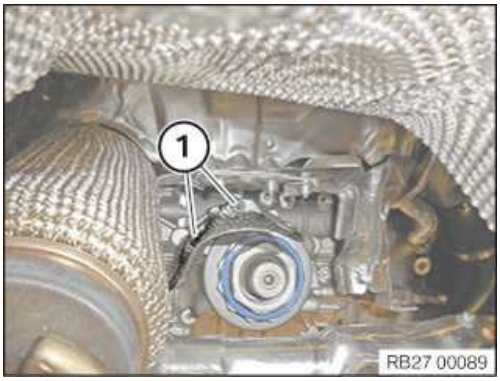


- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

10 – Remove the intermediate shaft with the support tube

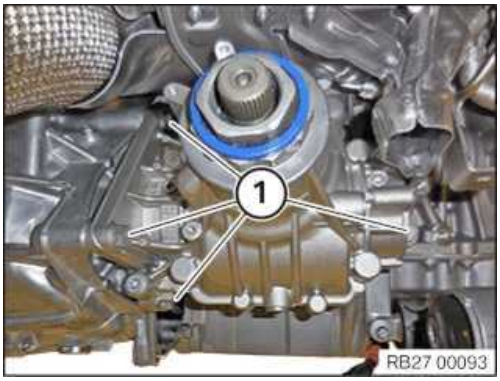


- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).

cardiagn.com



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

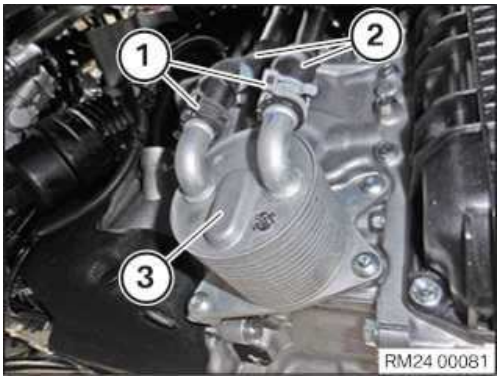
11 – Remove transfer box (VTG)

- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

12 – Detach the engine from the automatic transmission

Prerequisite



Engine has been removed.

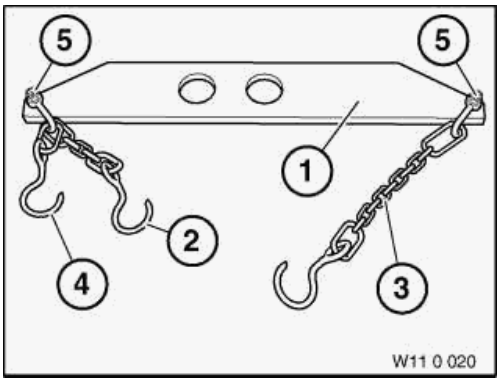
CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Unfasten hose clamps (1).
- Disconnect coolant hoses (2) from transmission oil cooler (3).
- Catch the emerging coolant.



cardiagn.com

- Crank engine with special tool **0 493 380 (11 6 480)** at vibration damper in direction of rotation.
- Unscrew the nut (1) of the torque converter.
- Crank engine further and release remaining 5 nuts.

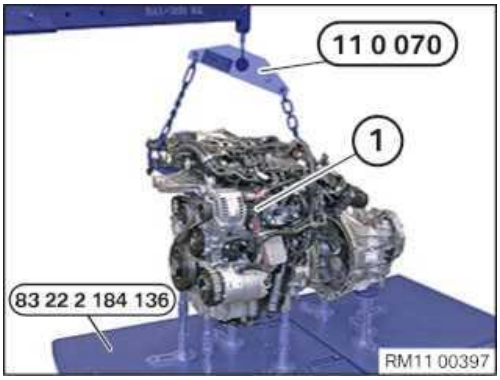
- Stage the workshop crane **2 220 718**.

- Stage the lifting gear .

TECHNICAL INFORMATION

Conduct the following operation with the assistance of a second person.

- Secure the automatic transmission against dropping using a workshop crane **2 220 718** and lifting gear .
- Remove screws (arrows).
- Remove the automatic transmission with help from an auxiliary person and using the workshop crane **2 220 718** including lifting gear and put it to one side.



cardiagn.com

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm

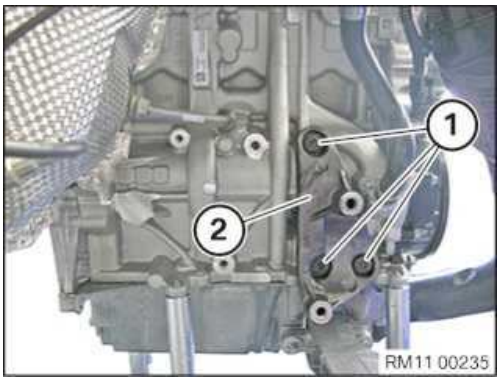
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Attach engine lifter to special tool and lift engine (1) off lifting table.

13 – Mount engine on assembly stand

CAUTION



Heavy component.

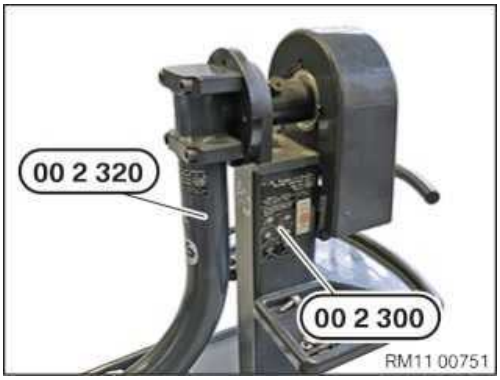
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

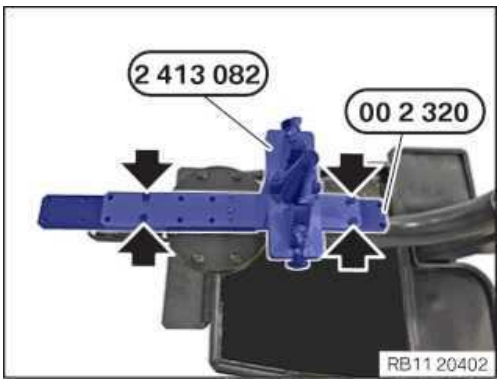
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Loosen screws (1).
- Guide out and remove holder (2).



cardiagn.com

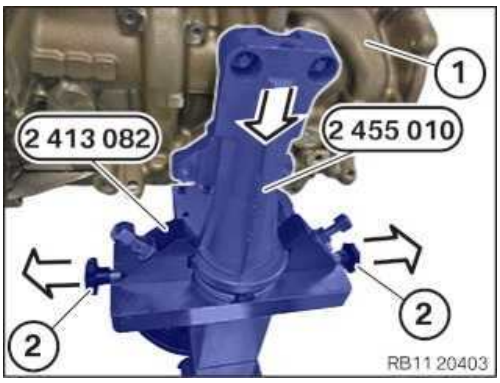


- Position the special tool **2 455 010** on the engine (1).
- Position the standard bolts **M10x30**.
- Tighten the standard bolts (arrows).
-

Special tool 2 455 010 to crankcase

M10x30		Tightening torque	38 Nm

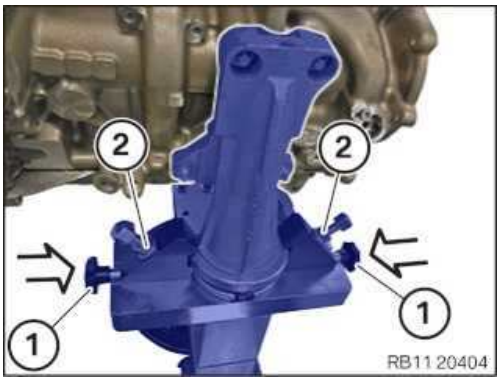
- Prepare the assembly stand **0 495 187 (00 2 300)** with the special tool **0 495 196 (00 2 320)**.



- Screw the special tool to the **0 495 196 (00 2 320)** special tool.
- Tighten screws (arrows).
-

Special tool 11 8 930 to special tool 00 2 320

M14x35		Tightening torque	160 Nm

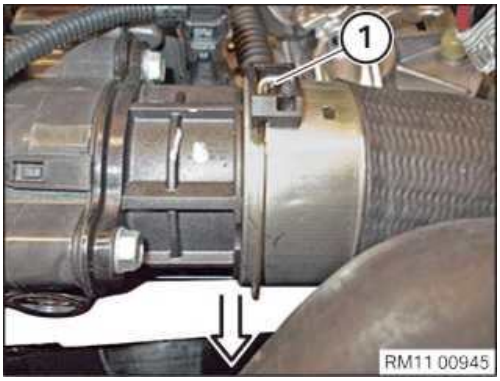


- Position the engine lifter with the special tool and the engine on the special tool **0 495 187 (00 2 300)**.

- Detach the holder (2) in the direction of the arrow.
- Position the engine (1) with the special tool **2 455 010** in the direction of the arrow on the special tool .

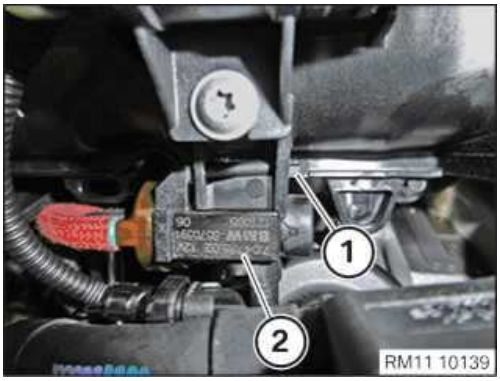
cardiagn.com

- Lock the holder (1) in direction of arrow.
- Tighten nuts (2).



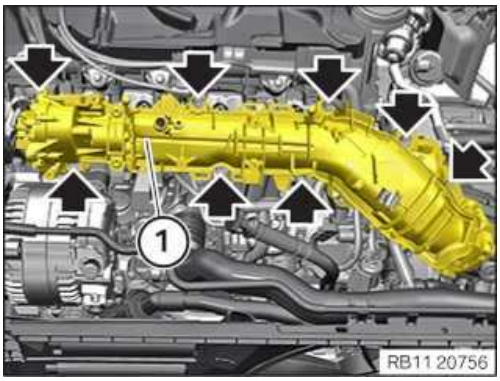
14 – Removing the intake plenum

TECHNICAL INFORMATION

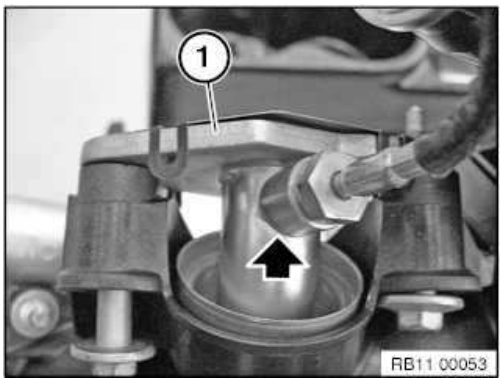


Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.



- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

cardiagn.com

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

15 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

cardiagn.com

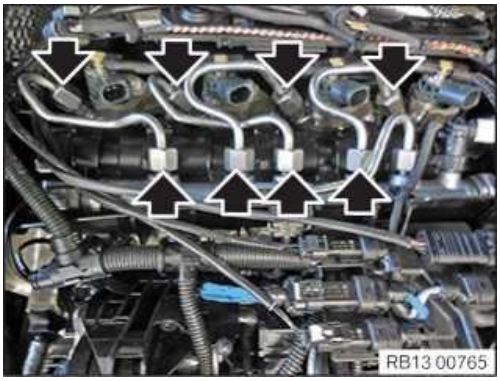
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION



If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

16 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

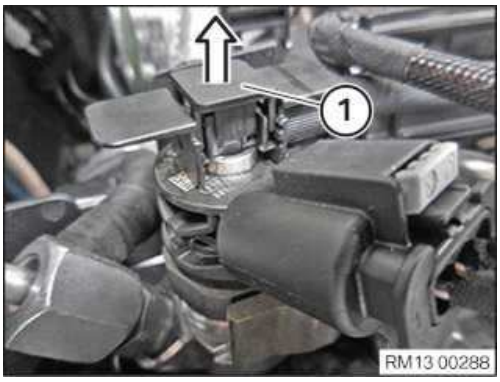
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE



Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

17 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

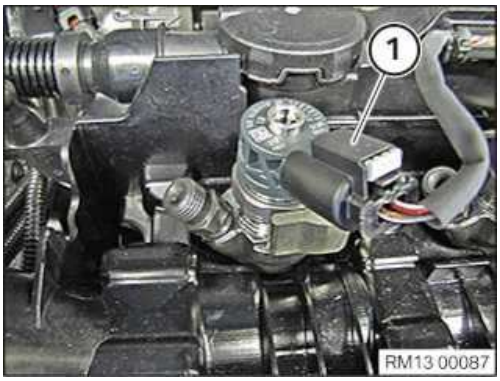
Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

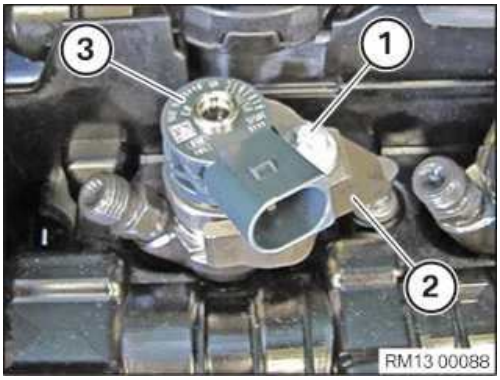
RISK OF DAMAGE

 **Electrostatic discharge.**



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



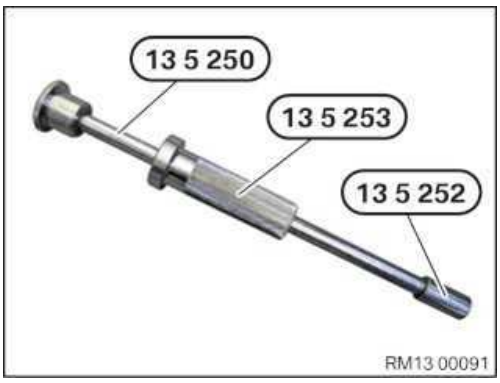
TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

cardiagn.com

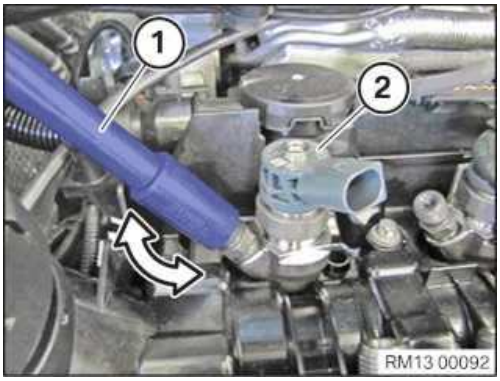
- Unlock and disconnect connector (1).

- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.



▶ **Loosen stuck injectors**

RISK OF DAMAGE



Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)** back onto the special tool **0 493 321 (13 5 250)**.

- Screw the special tool (1) **0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1) **0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

cardiagn.com

WARNING

Working on fuel system.

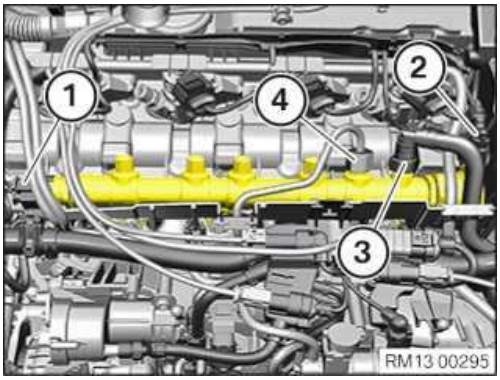
Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

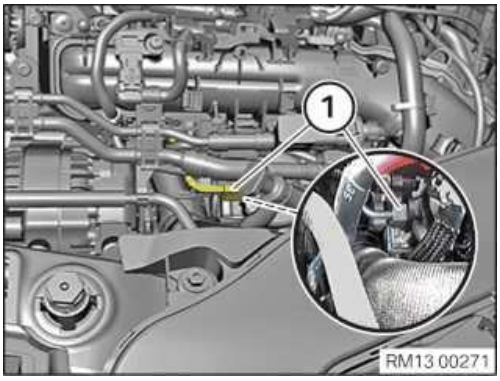
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.



- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

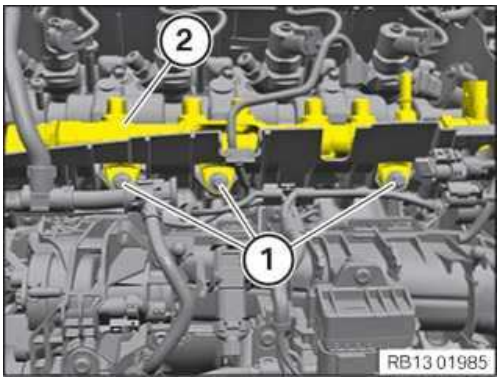
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Unlock and disconnect connector (1).
- Unlock and disconnect connector (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool .
- Reset special tool early on to avoid bending pressure lines.

- Slacken the union nut (1) on the high pressure pump.

cardiagn.com

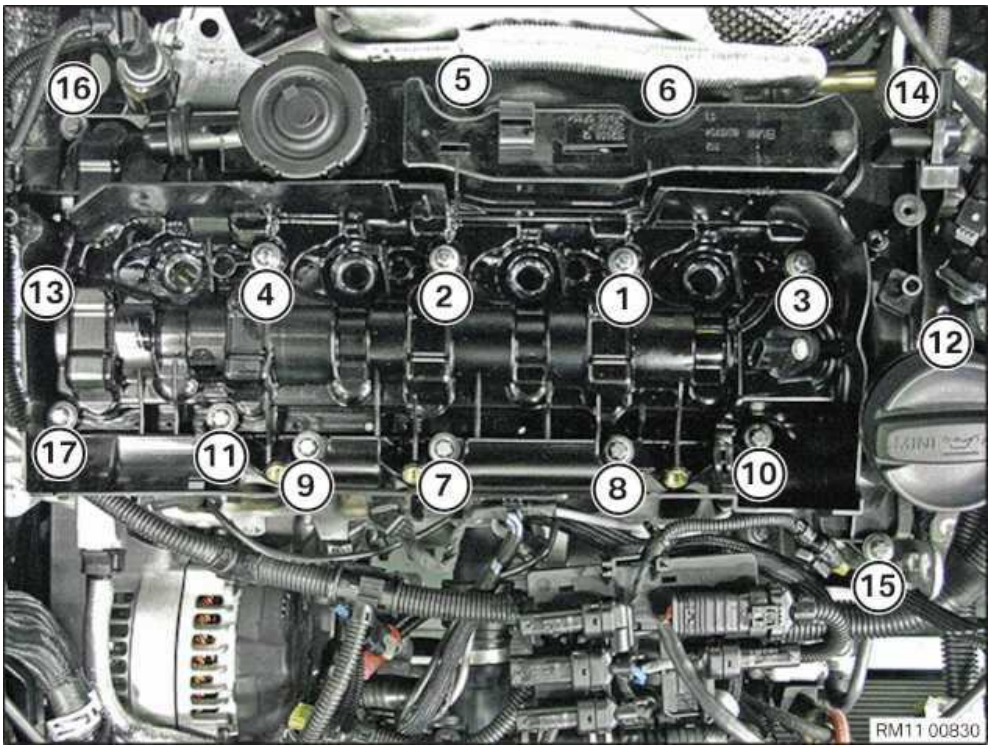
- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

19 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

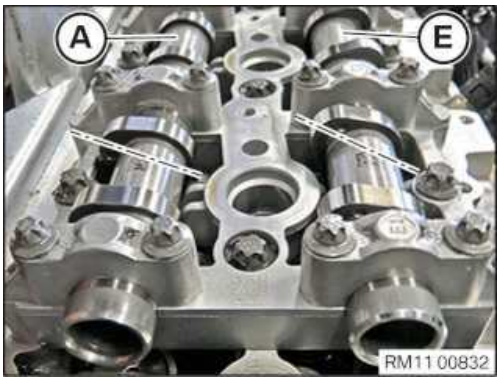
- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

20 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.



The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

21 – Remove chain tensioner piston

cardiagn.com

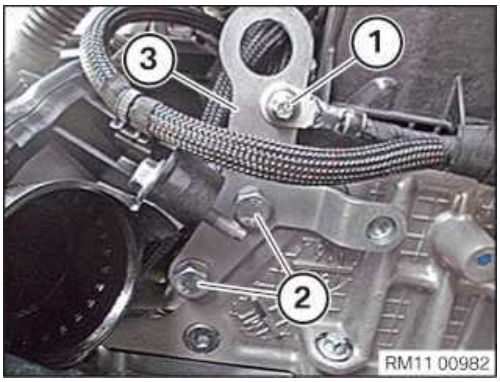
WARNING

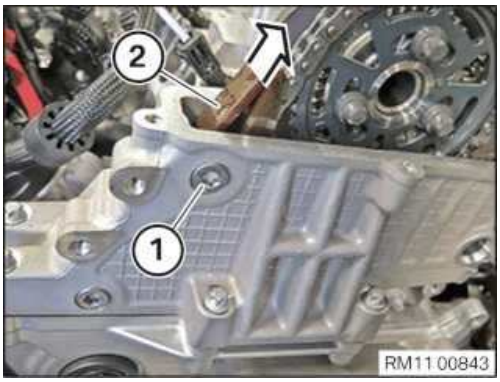
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



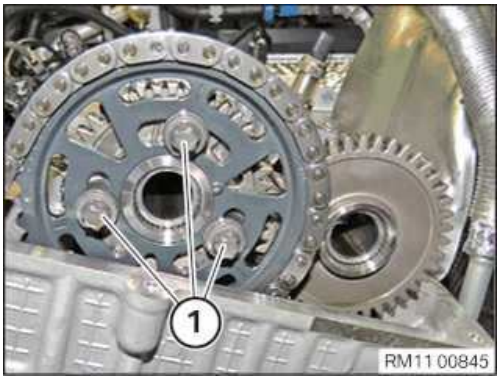
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

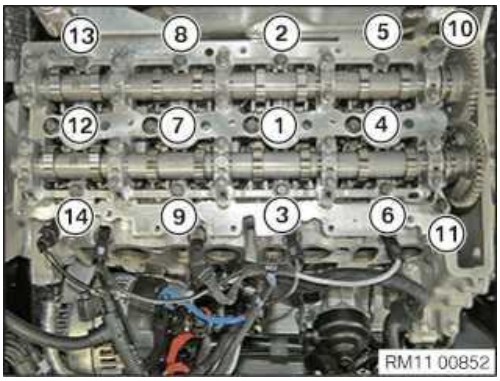
- Remove the chain tensioner piston (1).

22 – Remove the timing chain guide rail



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.



23 – Removing the camshaft sprocket on the intake camshaft

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

24 – Removing the camshaft support

cardiagn.com

- Evenly loosen all screws in a sequence from (14) to (1).
- Loosen and remove all screws in a sequence from (14) to (1).
  Both camshafts can be removed with the camshaft carrier.
- Remove the camshaft support including camshafts towards the top.

25 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

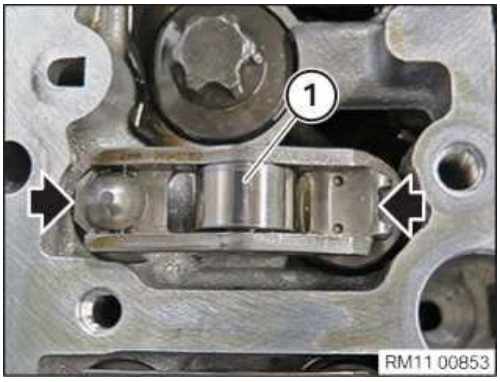
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool or conventional tools.
- Feed out preheating elements and remove.

26 – Remove roller cam followers

- Guide out and remove all roller cam followers (1) (arrows).
- Place all roller cam followers (1) in order in special tool **0 495 105 (11 4 480)**.

  Roller cam followers that have already been used must be installed in same position again.

27 – Removing the hydraulic valve clearance compensating element

cardiagn.com

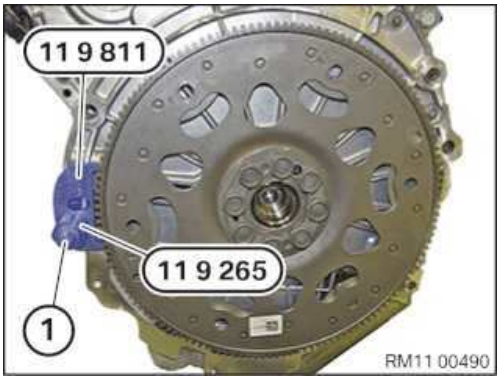
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

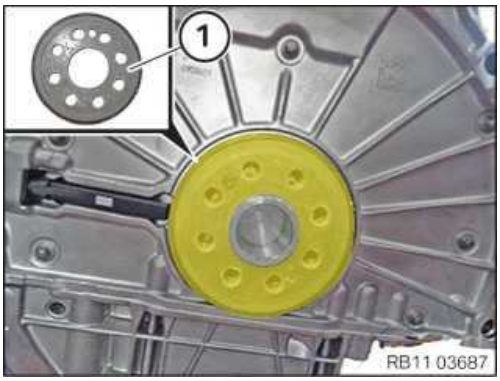
- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.



28 – Removing flywheel

CAUTION

Heavy component.



Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Secure flywheel with a transmission bolt (1) and the special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.
- Unfasten flywheel bolts.
- Remove flywheel.

cardiagn.com

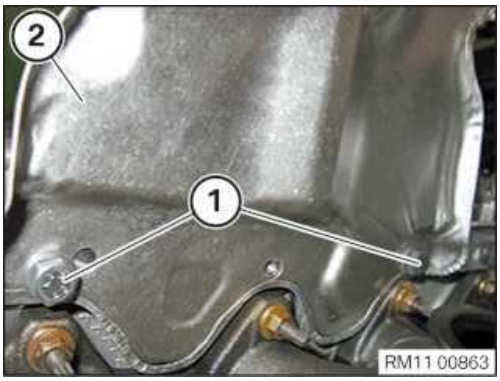
RISK OF DAMAGE

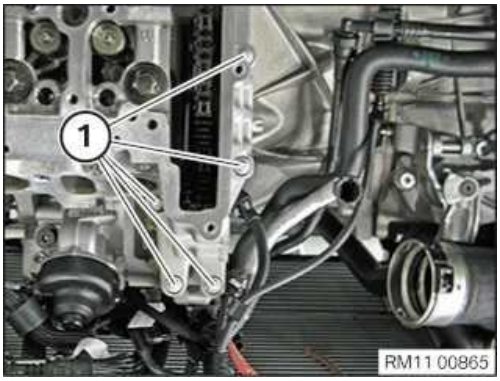
Electrostatic discharge.

Damage to or destruction of electrical components.



- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

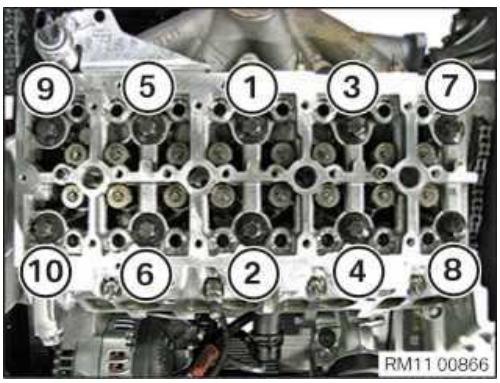
- Remove the increment wheel (1) from the crankshaft and set correctly.



29 – Remove rear timing case cover

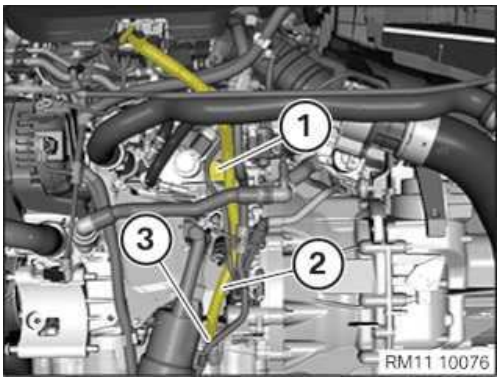
Prerequisite

Transmission is removed.



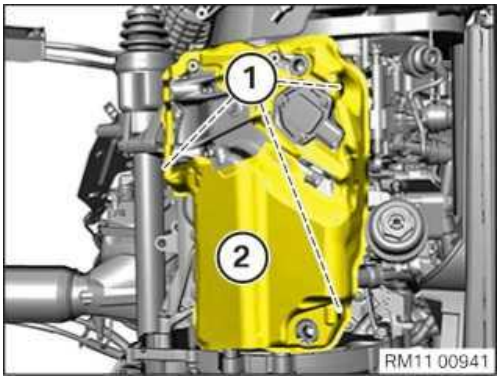
- Loosen screws (1).
- Feed out the heat shield (2) and place to one side.

TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).



- Loosen the cylinder head bolts in the sequence from (10) to (1).
- Remove cylinder head bolts (1) to (10) with washers.
- Remove cylinder head.

cardiagn.com

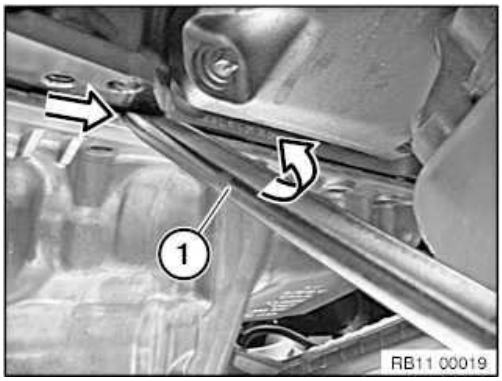
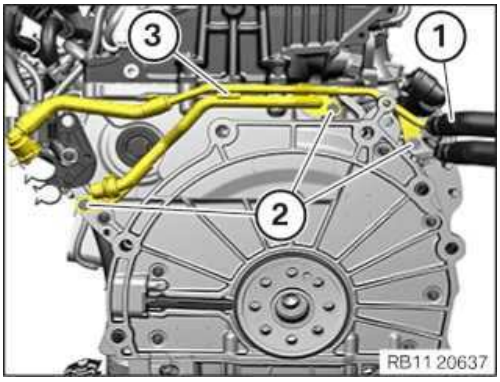
- Loosen screw (1).
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- Remove sealing ring (3) from oil sump if necessary.

- Expanding rivets (1) on both sides of the acoustic cover (2).
- Feed out and remove the acoustic cover (2).



- Loosen the transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).



- Release oil sump only in area (1).

cardiagn.com

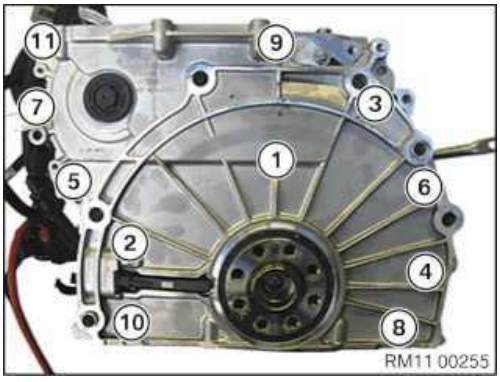
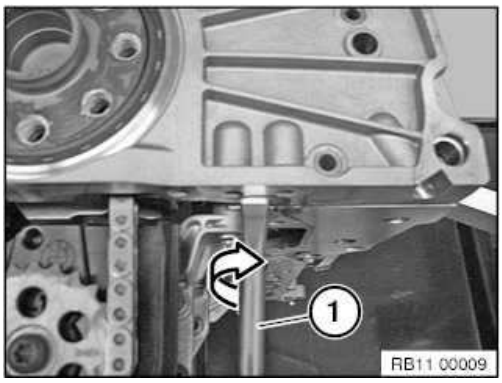
- Detach the oil sump with a suitable mounting lever (1) carefully at the point provided.
- Secure the oil sump against falling.

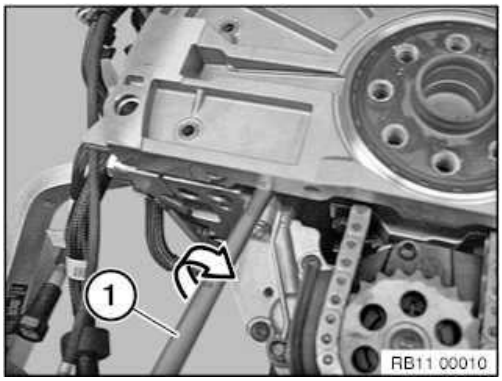


▶ **If installed: Remove coolant line of the SCR metering module**



- Unlock and disconnect the coolant hose (1).
- Loosen screws (2).
- Remove the coolant line (3).

- Loosen screw (1).
- Guide out and remove holder (2).



- Loosen screws in the order (11) to (1).

- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.

cardiagn.com

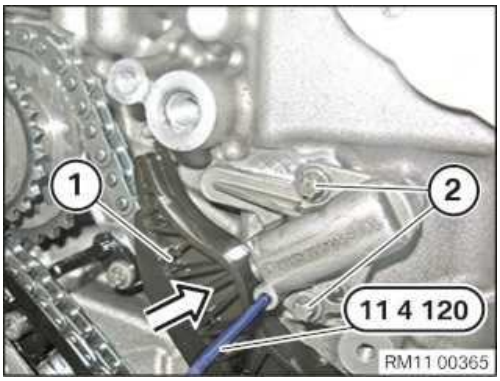
- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.
- Remove the timing case cover.

MAIN WORK



30 – Removing the hydraulic chain tensioner for the bottom timing chain

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

- Press the hydraulic chain tensioner with tensioning rail (1) by hand in the direction of the arrow until the special tool **0 491 012 (11 4 120)** can be positioned.
- Loosen screws (2).
- Remove hydraulic chain tensioner.

31 – Installing the hydraulic chain tensioner for the bottom timing chain

CAUTION

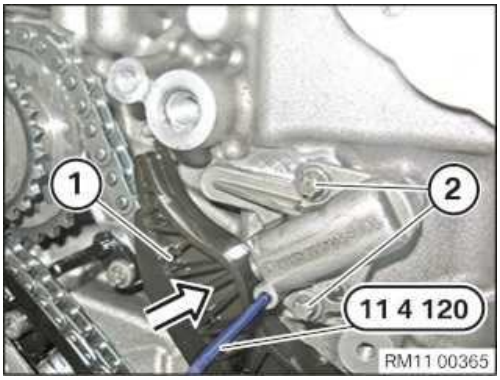
Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

cardiagn.com

CAUTION



Swirling dirt particles caused by compressed air.

Danger of injury!

- Collect dirt particles, e.g. when blowing out, use cloth to do so.

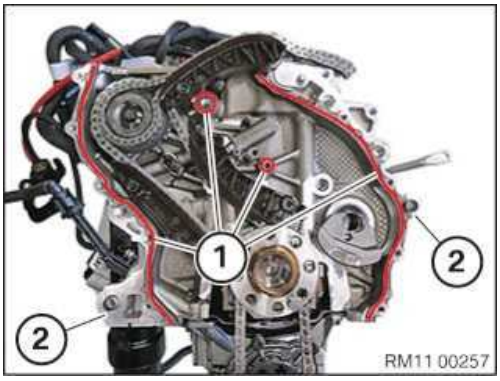
- Wear safety goggles.

- Clean sealing surfaces (1) with compressed air.

- Install the hydraulic chain tensioner.
- Tighten down screws (2).

Hydraulic chain tensioner to crankcase

M6x22		Tightening torque	9 Nm



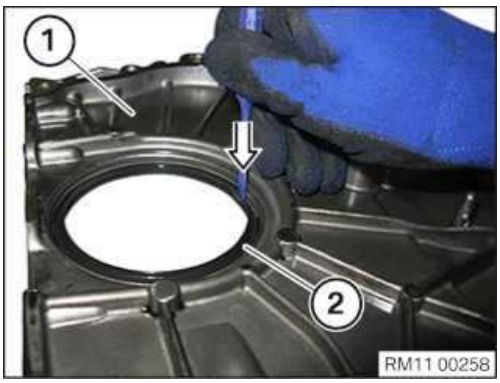
- Press the hydraulic chain tensioner with tensioning rail (1) in the direction of the arrow and remove the special tool **0 491 012 (11 4 120)**.

POSTPROCESSES

32 – Install the rear timing case cover

Prerequisite

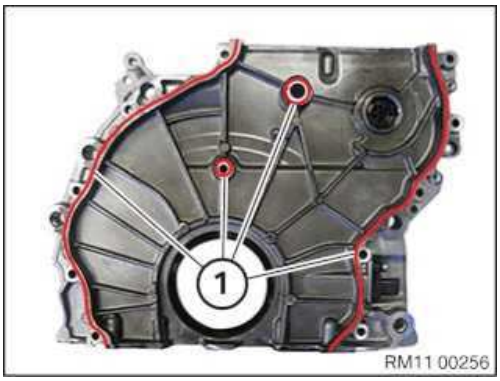
Transmission is removed.



RISK OF DAMAGE

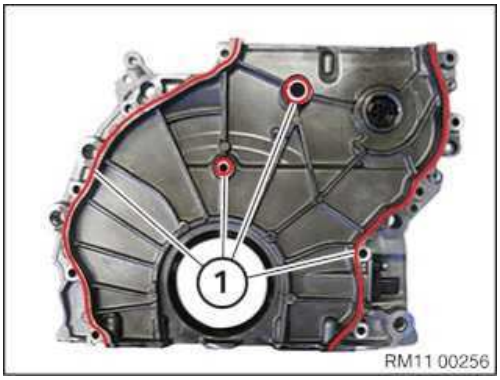
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



- Do not use any metal-cutting tools.

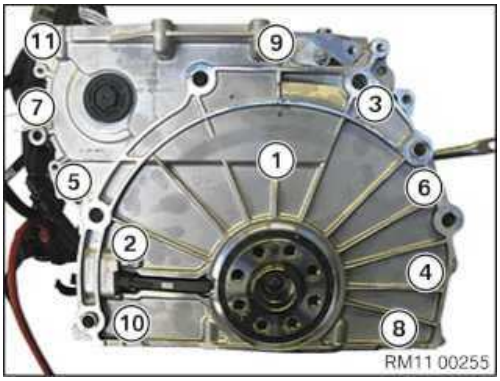
- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.
- Check fitting sleeves (2) for damage and for tight fit; renew if necessary.



- Position the timing case cover (1) underneath.
- Position punch on inner side of crankshaft seal (2).
- Drive out crankshaft seal (2) outwards.

cardiagn.com

- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.



TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Apply sealing bead (1) with a height of approx. 1.5 mm to 2.0 mm on inner side of timing case cover in marked locations. Use liquid sealing compound for this.

  Application time of sealing bead (1) must not exceed 12 minutes.

- Mount the timing case cover without the crankshaft seal.
- Renew screws (1) to (11).

  Parts: Bolts
- Join the bolts in with the sequence (1) to (11).
- Tighten screws in the order (1) to (11).

Rear timing case cover to crankcase

M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

▸ **Installing the rear crankshaft seal**

RISK OF DAMAGE

Radial shaft seal damage.

Touching the sealing lip (inner) on the radial shaft seal with the sharp-edged connector gearing of the output shaft will result in destruction and/or leaks.

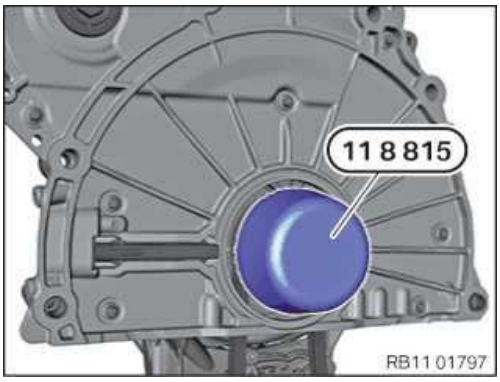
- When inserting the output shaft, make sure that the connector gearing of the output shaft does not touch the sealing lip (inner) of the radial shaft seal.

RISK OF DAMAGE

Radial shaft seal damage.

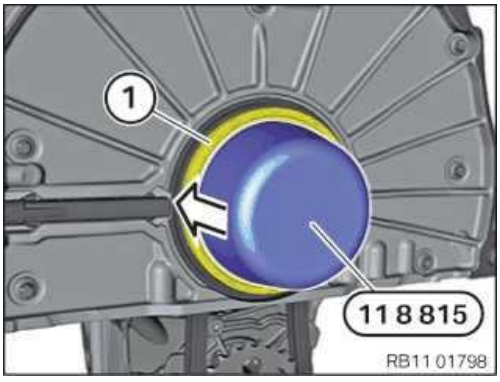
Touching the sealing lip (inner) and applying oil to the radial shaft seal will lead to its destruction.

- Do not touch the sealing lip (inner) of the radial shaft seal.
- Do not apply oil to the radial shaft seal.
- Install the radial shaft seal dry.



cardiagn.com

RISK OF DAMAGE



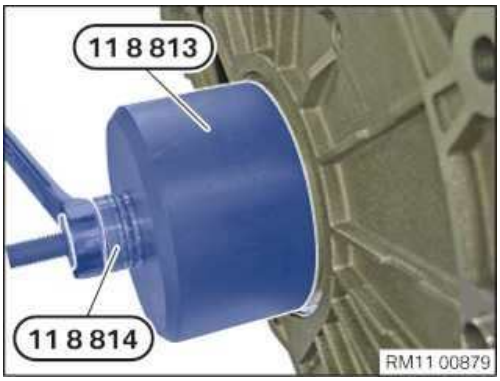
Electrostatic discharge.

Damage to or destruction of electrical components.

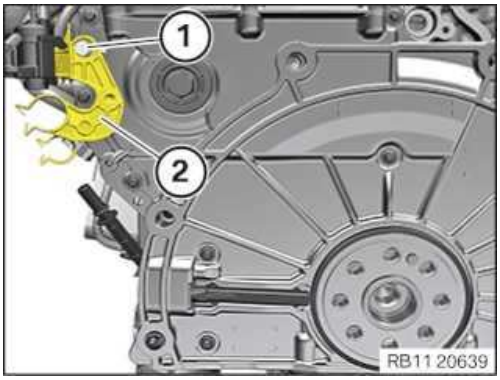
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Position special tool **0 496 137 (11 8 815)** on crankshaft. Make sure that the crankshaft sensor is not damaged.

- Fit the crankshaft seal (1) up to the timing case cover in the direction of the arrow using special tool **0 496 137 (11 8 815)** and position.
- Remove special tool **0 496 137 (11 8 815)**.



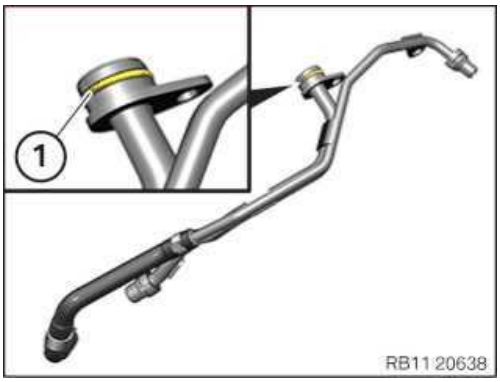
- Secure special tool **0 496 133 (11 8 811)** to the crankshaft using special tool **0 496 134 (11 8 812)**.



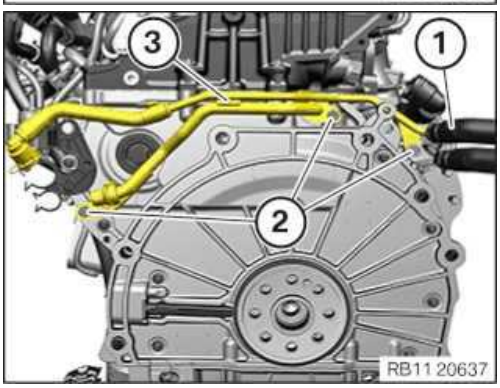
- Check the freedom of movement between the special tool **0 496 135 (11 8 813)** and the crankshaft sensor during installation.

  Otherwise there is a risk that the crankshaft sensor will be damaged.
- Slide on special tool **0 496 135 (11 8 813)**.
- Screw down special tool **0 496 136 (11 8 814)**.

cardiagn.com



- Press in crankshaft seal with special tool **0 496 135 (11 8 813)**.
- Screw in special tool **0 496 135 (11 8 813)** up to timing case cover.



- Insert and install the holder (2).

▶ **If installed: Installing the coolant line of the SCR metering module**

- Renew the O-ring 1.

  Parts: O-ring

- Feed in and install coolant line (3).
- Tighten down screws (2).

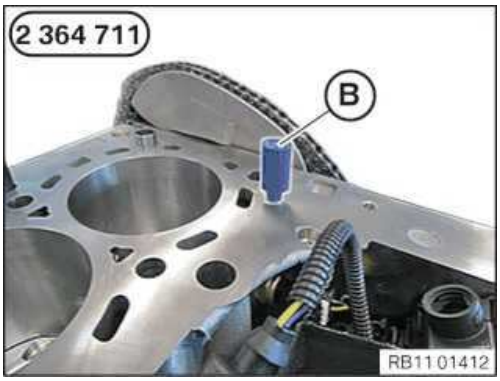
SCR coolant lines to crankcase end cover

Hexagon screw M6x16		Tightening torque	8 Nm

- Connect and lock the coolant line (1).

  Coolant line (1) must audibly engage.

▶ **Cleaning the sealing surface**



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

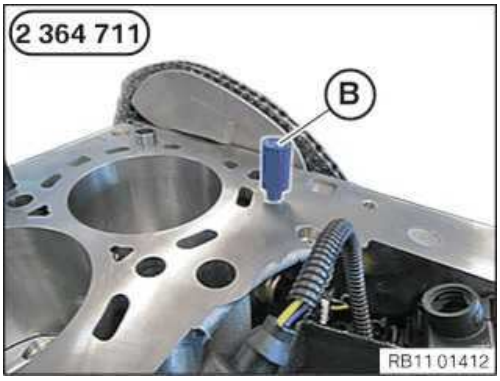
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

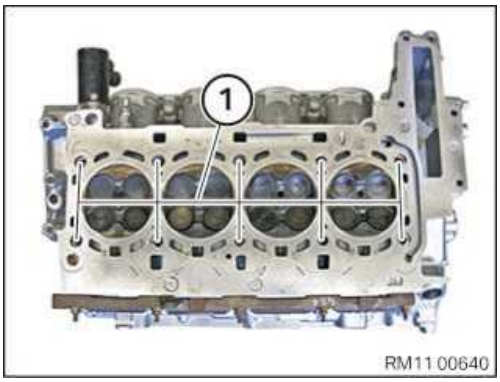
- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.



RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



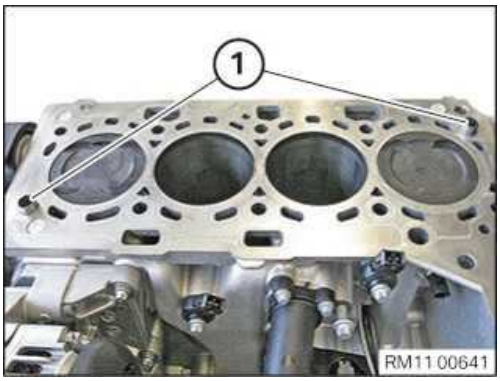
- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.

- Remove special tool (B).

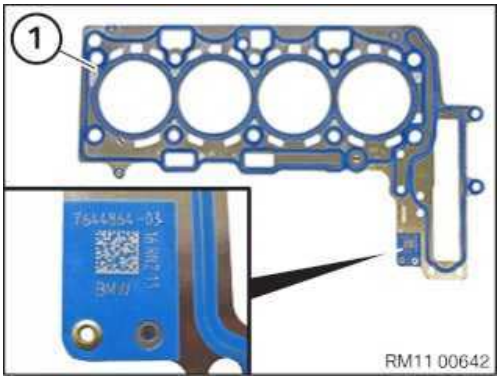
▸ **Renewing the cylinder head gasket**

RISK OF DAMAGE



Damage to the surface.

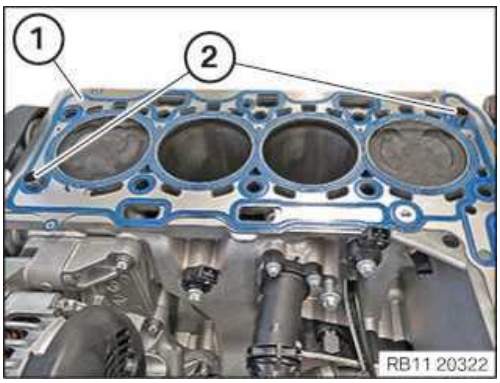
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



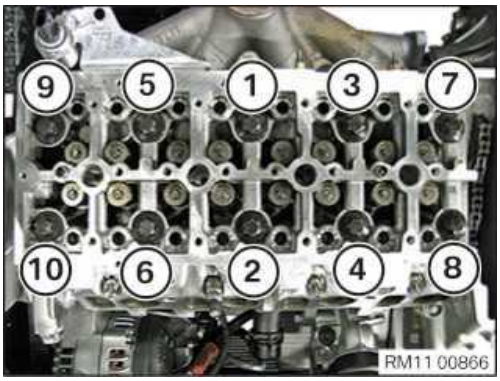
- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).

cardiagn.com



- Check the fitting sleeves (1) for secure fit and damage.



- Identify the cylinder head gasket (1) using the part number.

Note: If the cylinder head is reworked, an additional thicker gasket 0.3 mm is available for service personnel.

- Guide in the cylinder head gasket (1) and install.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Damage to threads.

Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION

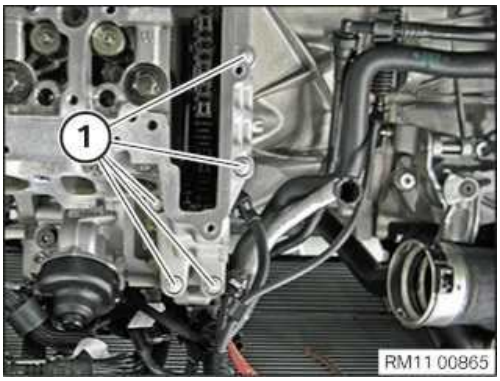
Do not remove bolt coating.

- Renew the cylinder head bolts (1).

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  No coolant, water or engine oil must be present in threaded holes of engine block.

TECHNICAL INFORMATION



When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in cylinder head bolts in sequence (1) to (10).
- Tighten cylinder head bolts using special tools **0 490 504 (00 9 120)** and in sequence (1) to (10).

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

cardiagn.com

- Tighten the cylinder head bolts (1).

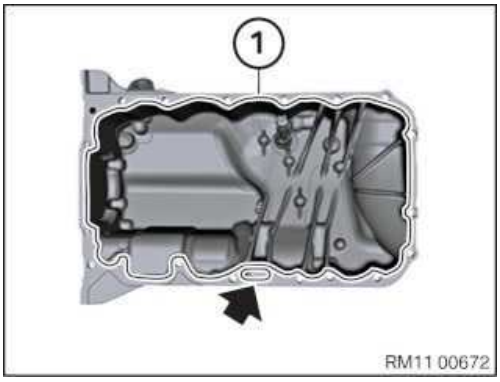
Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

-

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Remove fine sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

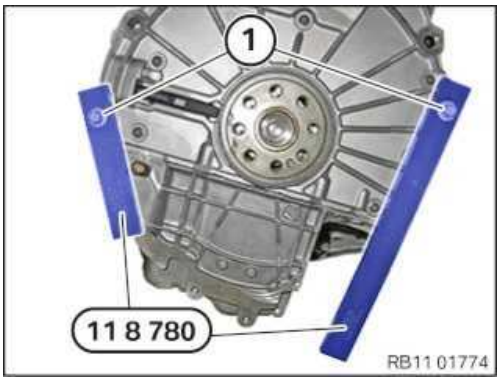
- Remove coarse sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- Apply the sealing compound along the line (1) with a thickness of 2 mm to 2.5 mm.

  Apply the sealing compound along the inner edge.

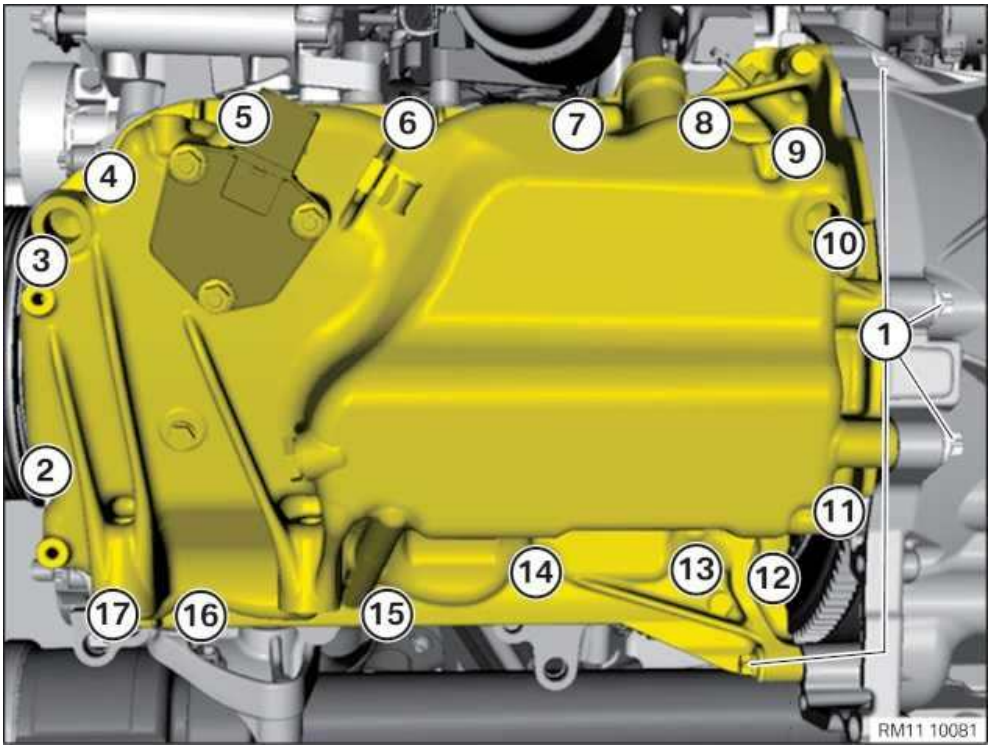


Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

- Completely encircle the oil return orifice (arrow) with the sealing compound.



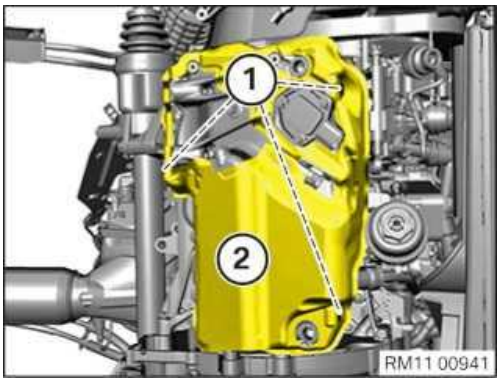
cardiagn.com

TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- If necessary, renew fitting sleeves.

- Position and install oil sump.
- **Hand-tighten** oil sump screws (2) to (17) but do **not** tighten completely.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws(2) to (17) of the oil sump.



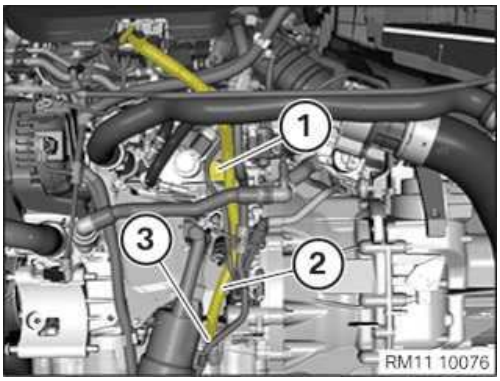
Oil sump to crankcase

M8x30		Tightening torque	2 Nr
M8x110		Tightening torque	2 Nr

- Tighten transmission bolts (1) on oil sump.

Transmission to oil sump

M8		Tightening torque	1 Nr



- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).

- Renew O-ring (1).

  Parts: O-ring

cardiagn.com

- Guide in guide tube (2) for oil dipstick and insert it into oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

Guide tube for oil dipstick on engine

M8x16		Tightening torque	19 Nm

33 – Installing the flywheel

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

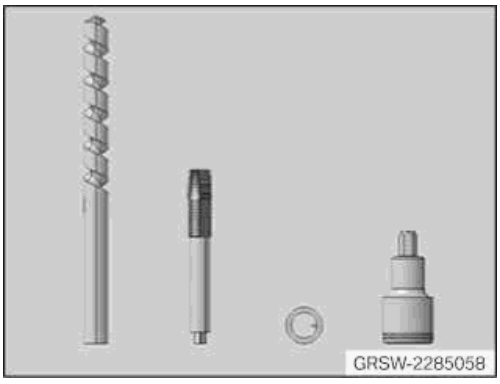
- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



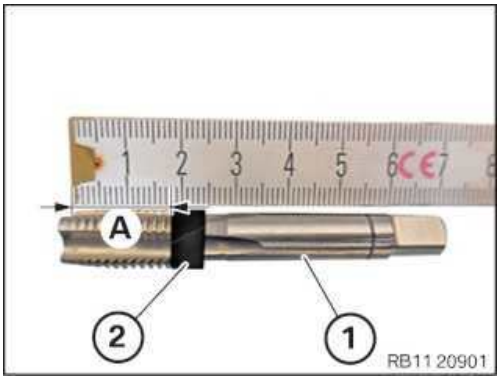
- Check fitting sleeve on the crankshaft for damage and replace if necessary.

TECHNICAL INFORMATION

Clean all threads with a screw tap.

- Clean all the screw threads (1).

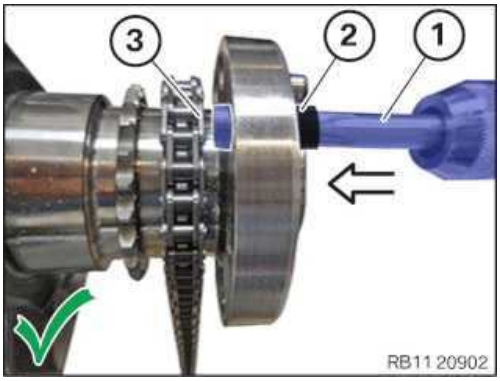
- Use the set of special tools **2 285 058**.



Description
Twist drill
Thread cutter M12x1.5
Depth
Insertion tool

cardiagn.com

- Assemble tool set.



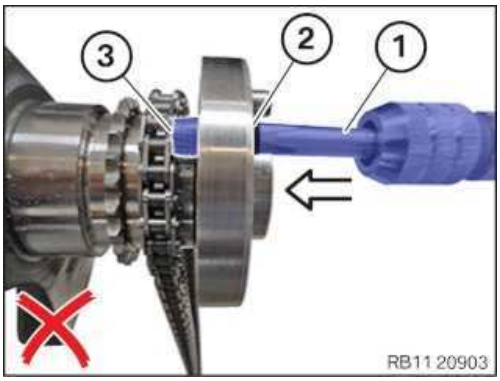
Number	Description
1	Tool holder
2	Thread cutter M12X1,5

- Mark the installation dimension (A) on thread cutter (1) from the set of special tools **2 285 058** using a commonly-available tool (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm

NOTICE



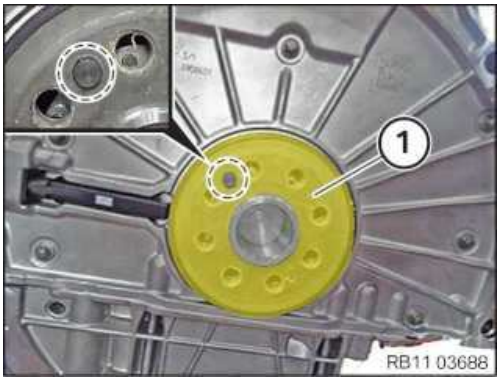
To provide a better overview: Shown with engine removed.

- Screw in the thread cutter (1) from the set of special tools **2 285 058** in direction of arrow up to the installation dimension (2).

Screw-in depth of thread cutter

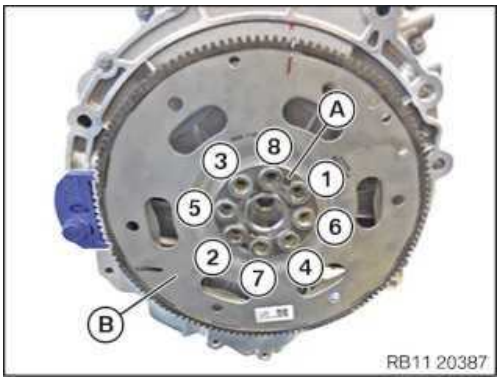
Screw-in depth	18 mm

- Make sure that the thread cutter does (1) **not** rest on the timing chain (3).



TECHNICAL INFORMATION

- **Carefully** handle the timing chain, to protect the timing chain and timing chain drive against damage.

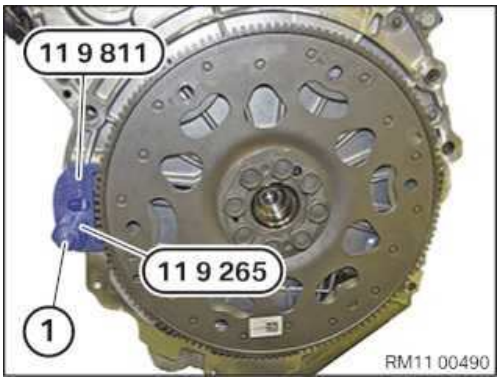


- Make sure the installation dimension (2) of the screw bore (1) is not exceeded.

  The thread cutter (1) may not rest on the timing chain (3).

- Important! Observe the marking shown during installation.
- Install special tool (1) on the crankshaft as shown.

cardiagn.com



- Position flywheel (B) .
- Renew flywheel bolts (1) to (8).

  Parts: Flywheel bolts
- Screw in flywheel bolt (1) to (8) by hand.
- Observe tightening sequence. Begin at the dowel pin (A).
- Tighten flywheel bolts in sequence (1) to (8).

Flywheel to crankshaft

M12x1.5	Renew screws.	Tightening torque	120 Nm

- Loosen the transmission bolt (1).
- Guide out and remove the special tool **0 494 793 (11 9 265)** and **0 496 171 (11 9 811)** with the **standard** washer (5 mm).

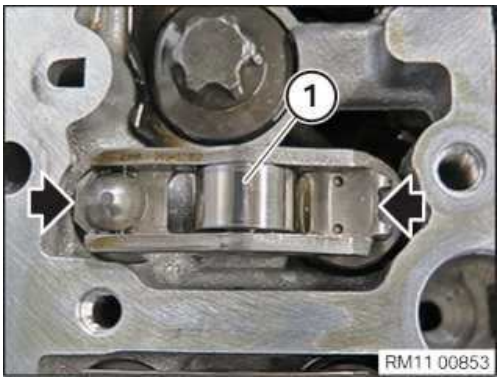
34 – Installing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



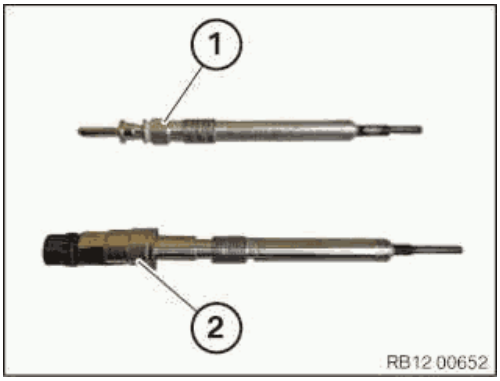
- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

35 – Install the roller cam followers

TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.

cardiagn.com

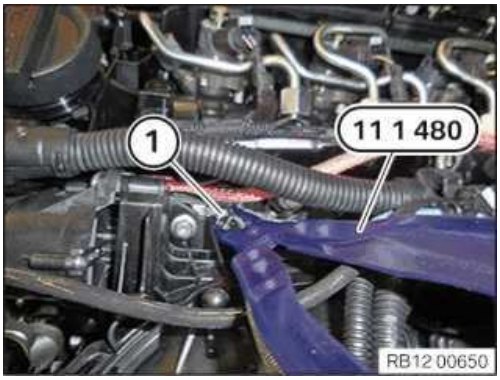


- Check all roller cam followers (1) for damage and replace if necessary.

  Parts: Roller cam followers
- Insert and install all roller cam followers (1).

  Roller cam followers (1) that have already been used must be installed in the same place.
- Note the mounting orientation of the roller cam followers (1).
- Oil all roller cam followers (1).

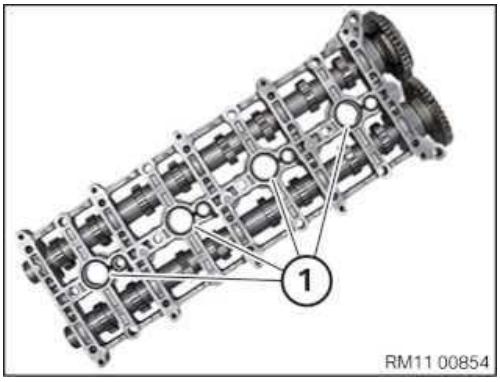
36 – Install glow elements



- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

- Tighten the glow element with the special tool or conventional tools.

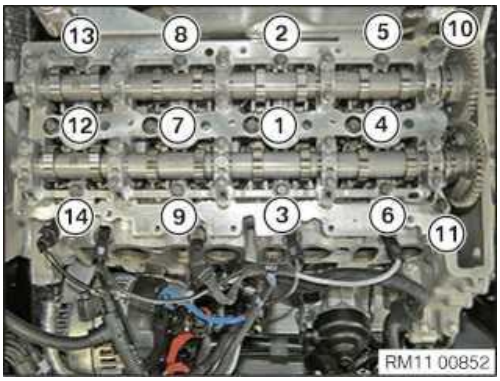
Glow elements to cylinder head



Glow element		Tightening torque	13 Nm

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



37 – Installing the camshaft support

- Renew gaskets (1).

  Parts: gaskets

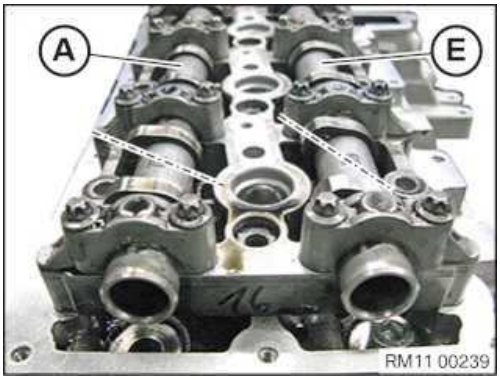
cardiagn.com

- Position the camshaft support including the camshafts.
- Tighten the screws in a sequence from (1) to (14) in several steps.

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

38 – Adjusting the timing of the camshafts



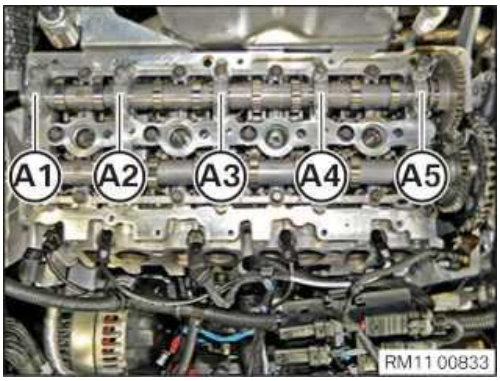
- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

- Slide the special tool **2 288 380** completely into the bore hole of the oil sump.
- Use the special tool to block **2 288 380** the crankshaft in the TDC firing position at the first cylinder.

- The cam of the intake camshaft (E) at the first cylinder points up at an angle.
- The cam of the exhaust camshaft (A) at the first cylinder points outward at an angle.

▶ **Remove exhaust camshaft.**



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

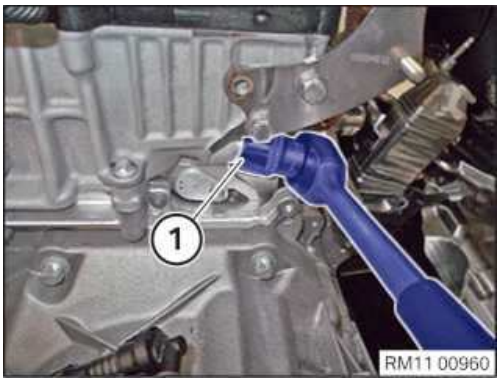
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

TECHNICAL INFORMATION

The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A5) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components on special tool **0 495 105 (11 4 480)** in a tidy and orderly fashion.



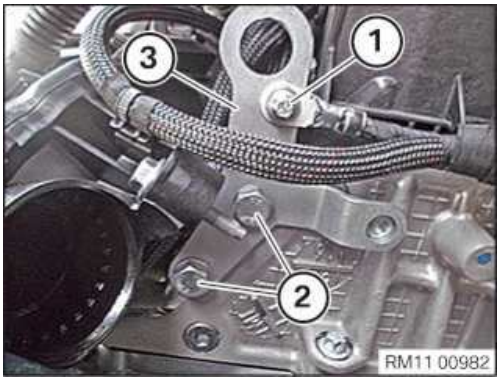
▸ **Remove chain tensioner piston**

WARNING

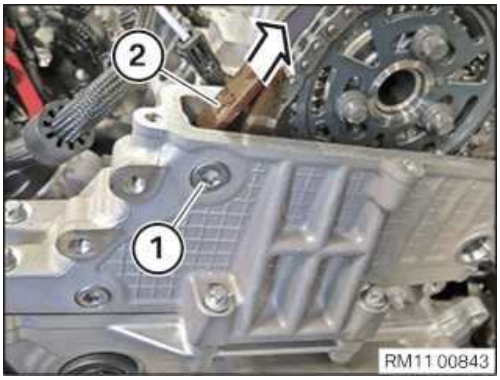
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



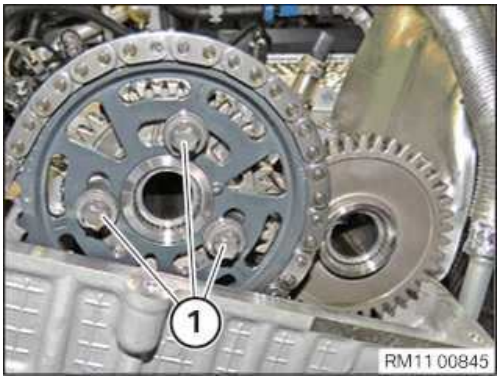
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

▸ **Remove the timing chain guide rail**



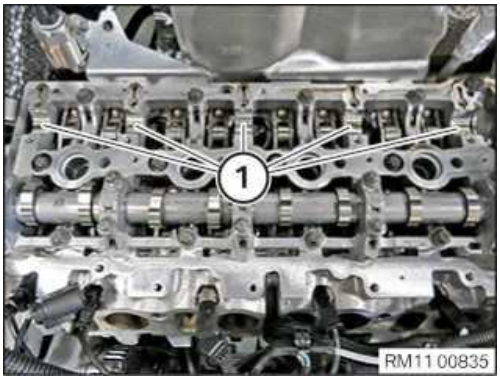
- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

cardiagn.com

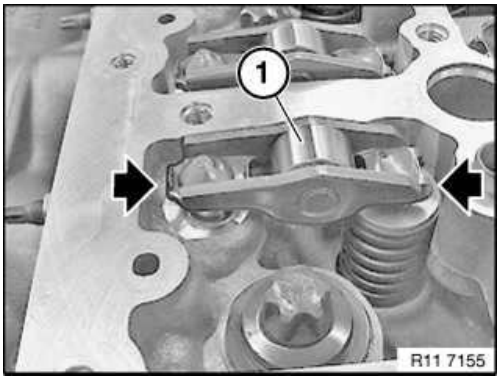
▶ **Removing the camshaft sprocket on the intake camshaft**

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.



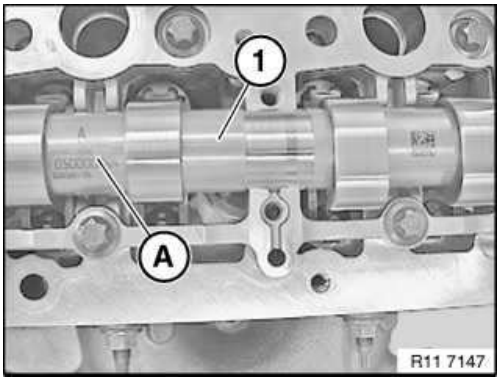
▶ **Install exhaust camshaft**

RISK OF DAMAGE



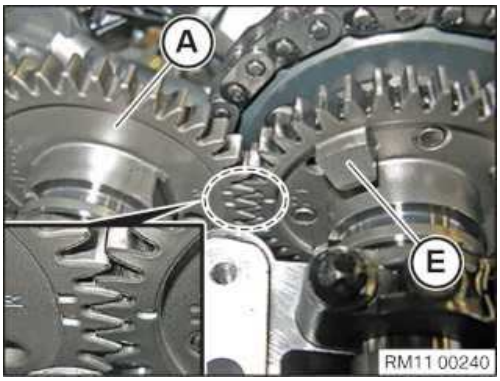
Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

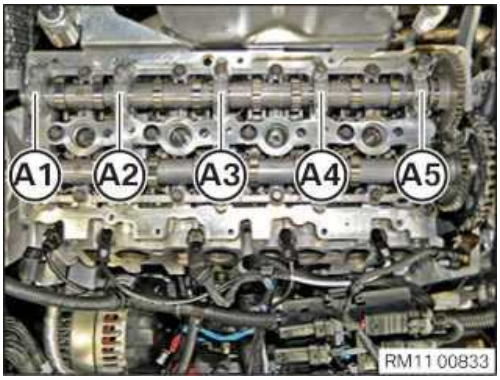


- Comply with the regulations for the installation and disassembly.
- Perform work with care.

- Oil all bearing positions (1).



- Make sure the roller cam followers (1) have the correct mounting orientation.



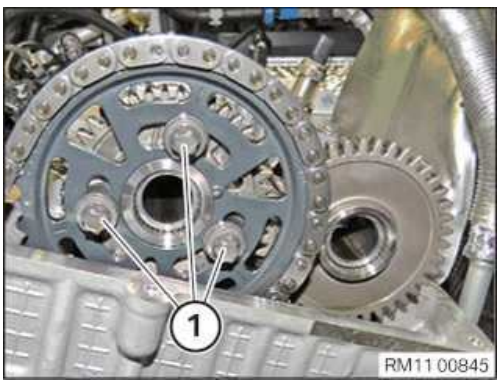
- Insert exhaust camshaft (1) so that the identification (A) points upwards.

cardiagn.com

- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.

- Tighten all exhaust camshaft bearing caps (A1) to (A5) from the inside to the outside by 1/2 a turn at a time.

Intake and exhaust camshaft in camshaft support



M6x31		Tightening torque	10 Nm

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

  Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

▶ **Installing the camshaft sprocket on the intake camshaft**

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

▶ **Install the timing chain guide rail**

- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

cardiagn.com

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

▸ **Installing the chain tensioner piston**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

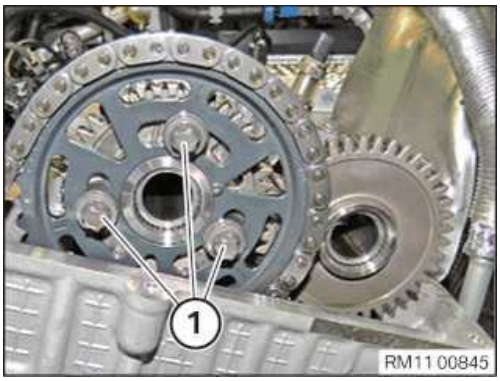
- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.



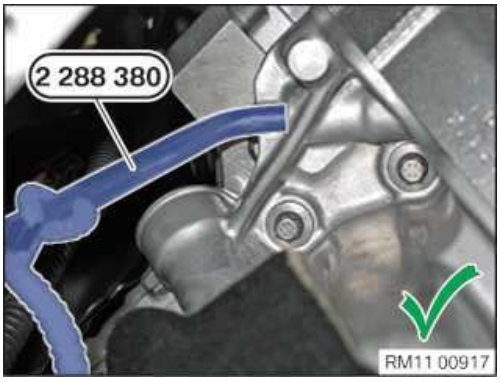
- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

▸ **Tightening the camshaft sprocket on the intake camshaft**

cardiagn.com



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

39 – Removing the special tool to disconnect the crankshaft

- Remove special tool **2 288 380**.

40 – Removing the special tool to secure the exhaust camshaft

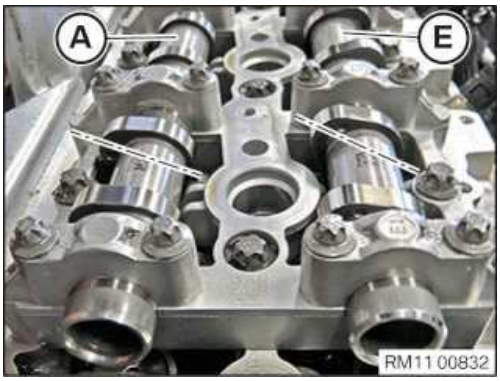
- Remove the special tool **0 496 112 (11 8 760)** to fix the exhaust camshaft.

41 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

cardiagn.com

RISK OF DAMAGE



Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

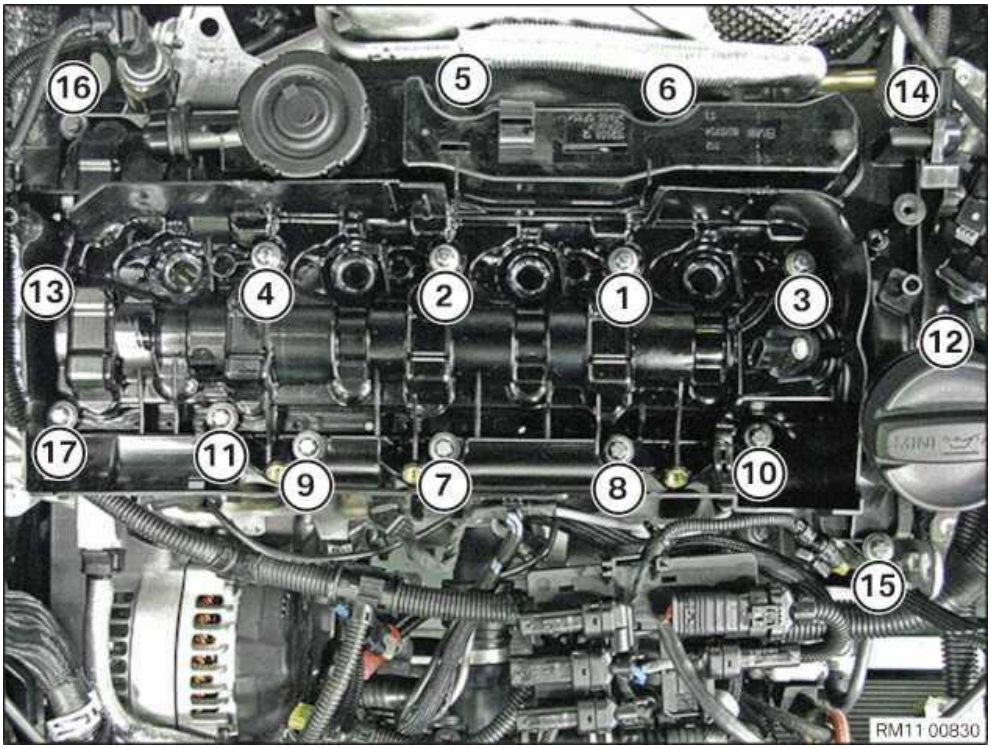
- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

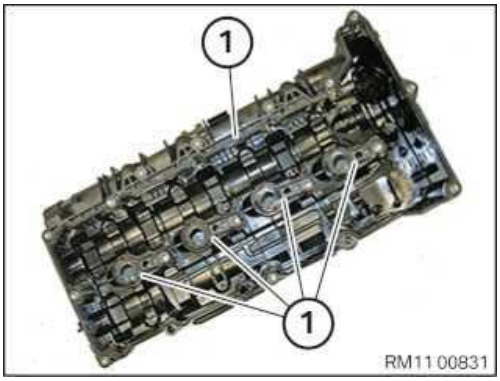
If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.



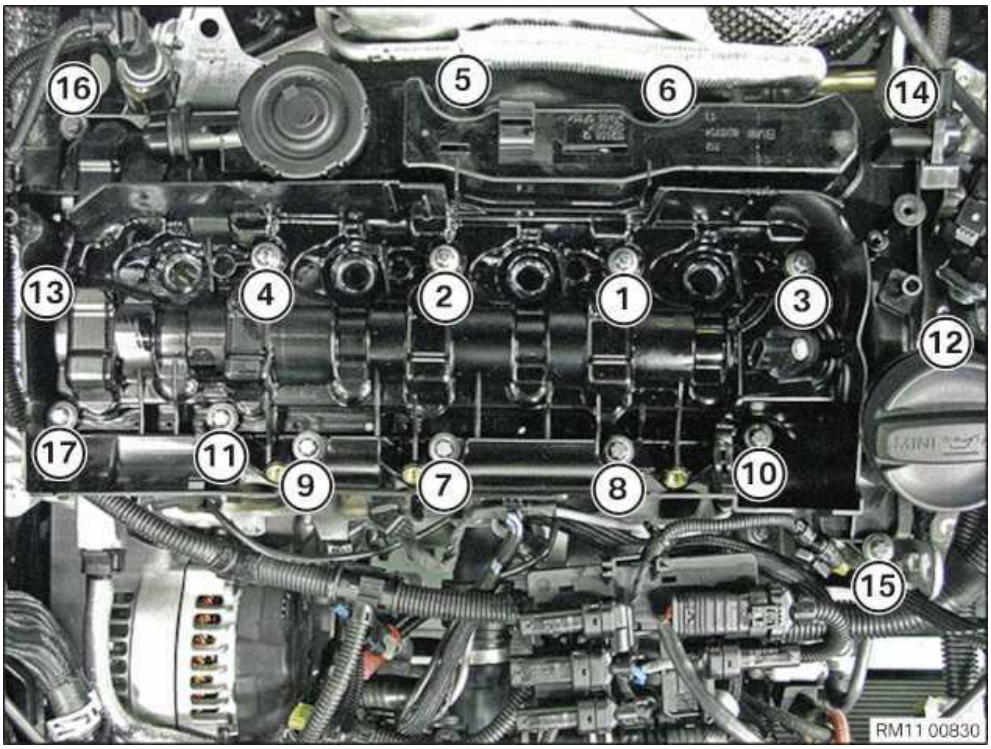
cardiagn.com



- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

42 – Installing cylinder head cover

Overview: Screw connection of the cylinder head cover

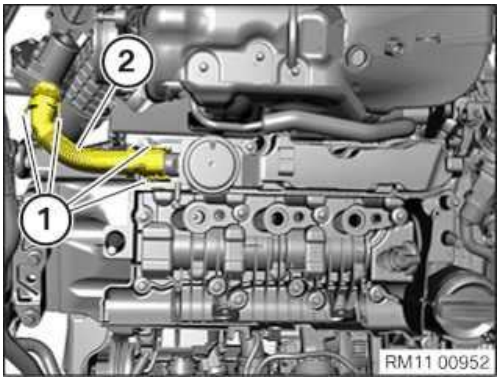


1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket

cardiagn.com



- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

43 – Installing injectors of injection system

▶ Cleaning the injector shafts

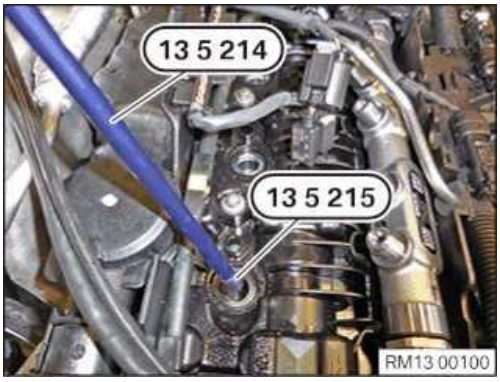
CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

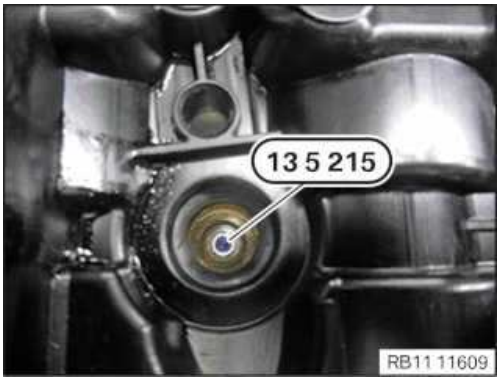
- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.



cardiagn.com

RISK OF DAMAGE



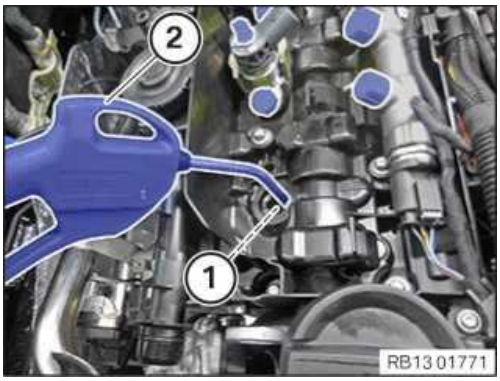
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

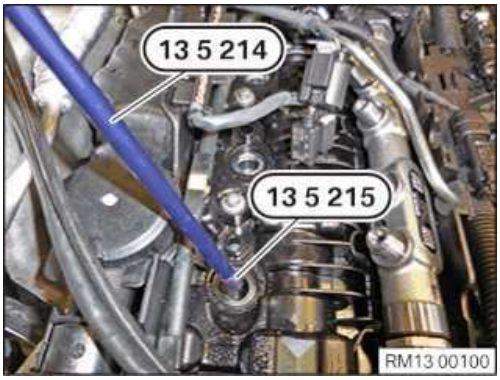
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.



- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

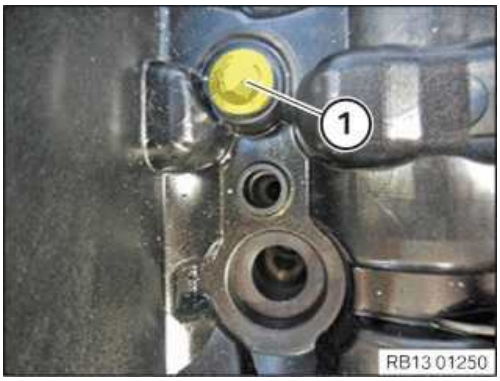


- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

cardiagn.com

- Blow out injector shaft (1) with air gun (2).

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.



▸ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▸ **Prepare the injector for installation**

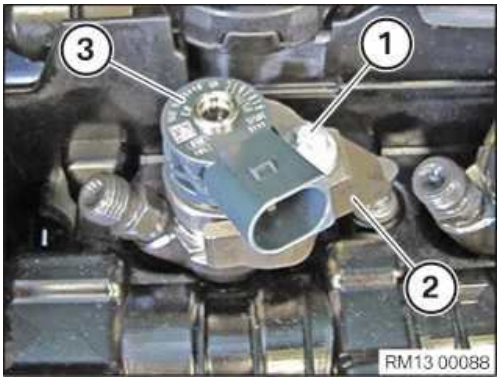
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

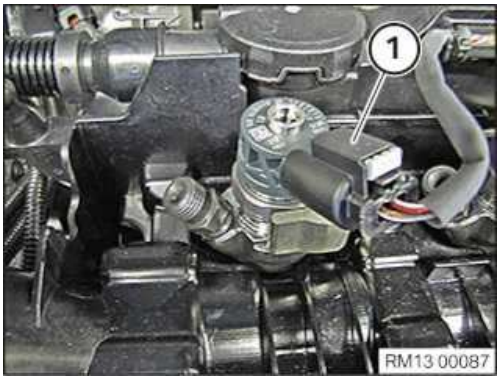
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials



Injector lubricating grease	50 g, Can	83230441070

- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

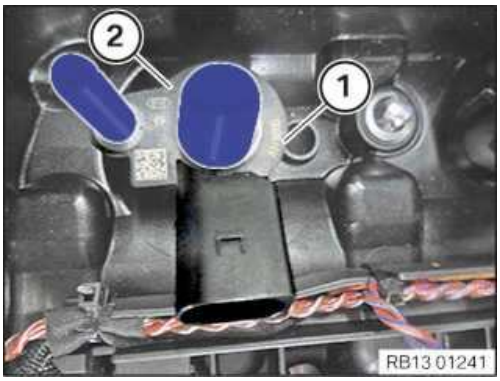
Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

▸ **Replacement: Perform injection quantity compensation**



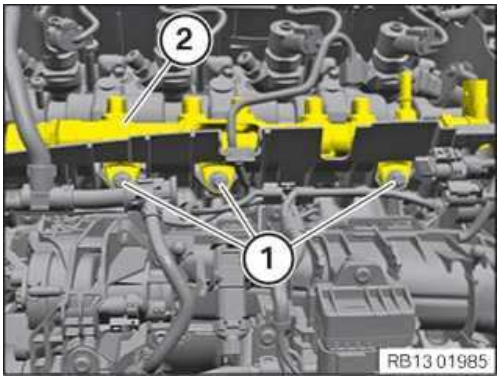
TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

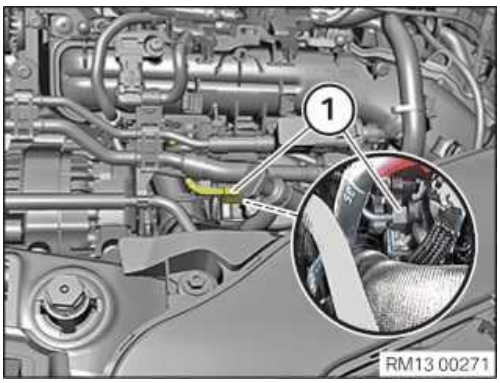
Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.



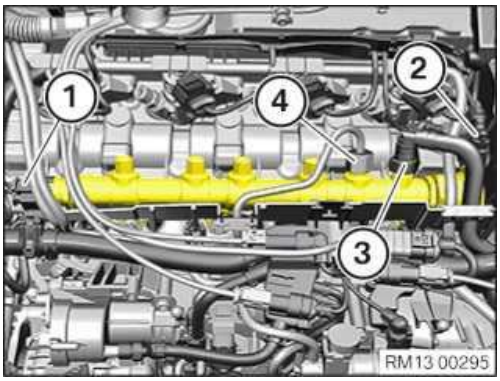
44 – Installing the rail

- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm

TECHNICAL INFORMATION



Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

cardiagn.com

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

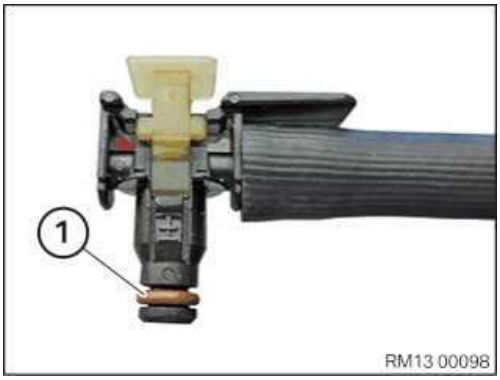
TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool .

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm



- Connect and lock the fuel line (3).

  Fuel line (3) must engage audibly.
- Connect connectors (2) and lock.

  The connector (2) must engage audibly.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

45 – Connect the leakage oil line on the injector

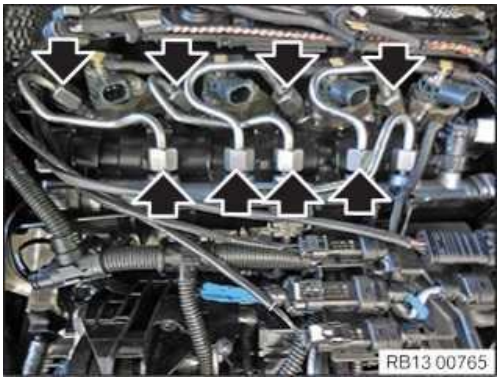
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

46 – Installing high pressure lines between rail and injectors



TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

cardiagn.com

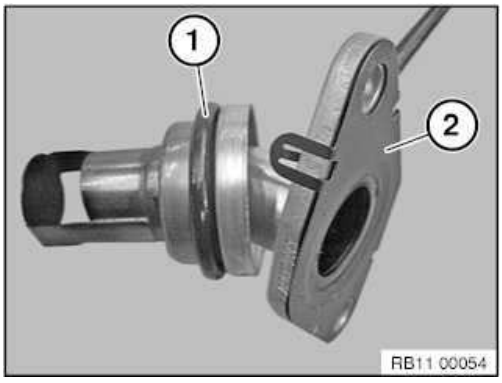
TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

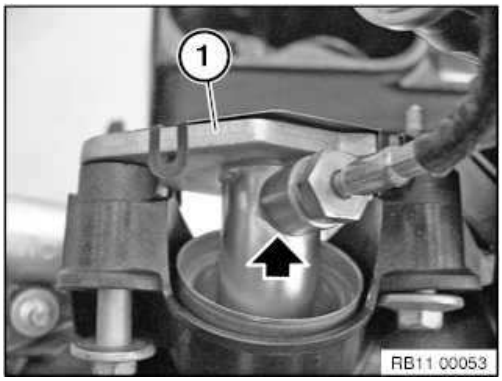


- Tighten the high pressure lines (arrows) with the special tool .

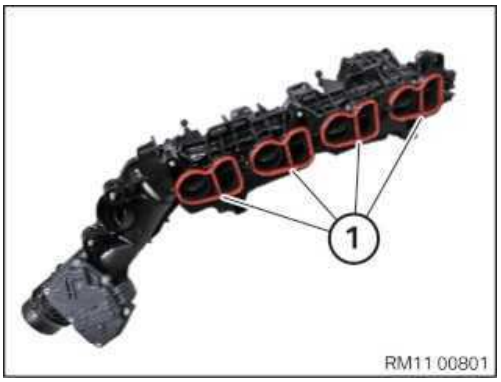
High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).



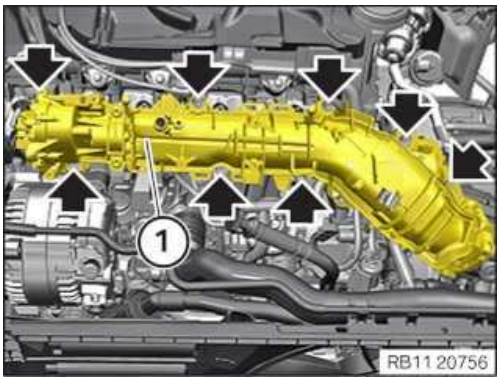
47 – Installing the intake plenum



- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

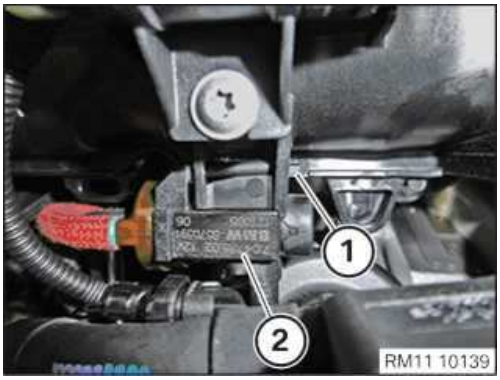
  Parts: Gasket
- Position the seal (2) and clip it in.



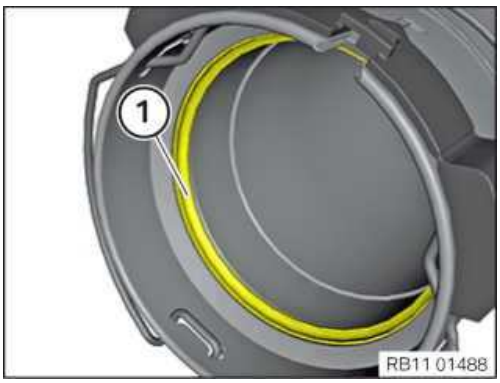
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



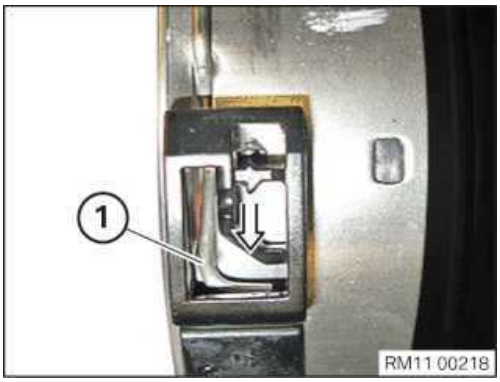
cardiagn.com



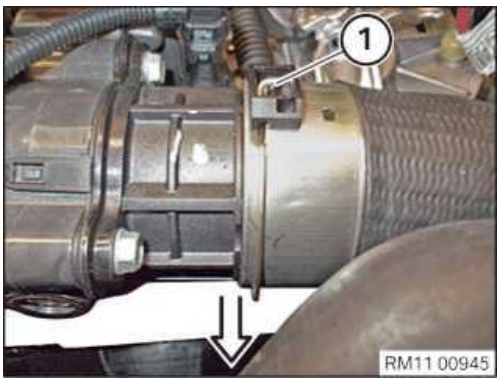
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

- Engage the lock (1) on the bracket (arrow).

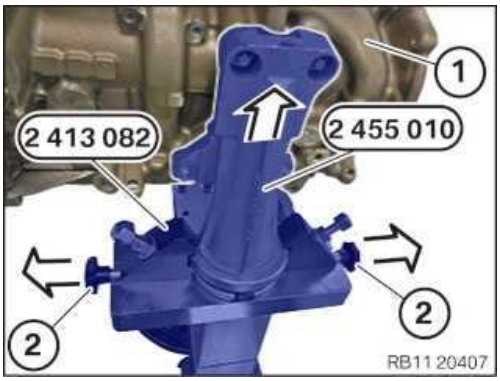
- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

48 – Remove the engine from the assembly stand

cardiagn.com

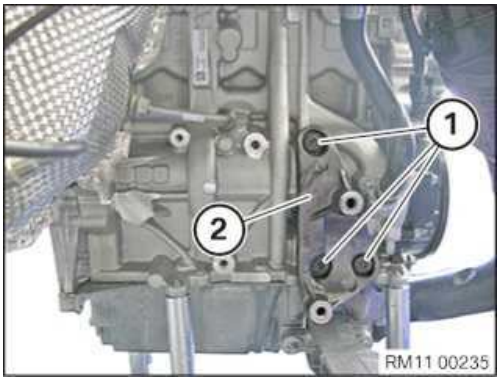
CAUTION



Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



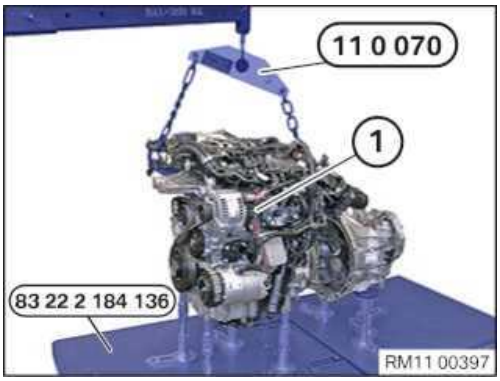
- Insert engine lifter with special tool and position engine (1).

- Unscrew the nuts on special tool .
- Detach the holder (2) in the direction of the arrow.
- Detach the engine (1) with special tool **2 455 010** out of the special tool in the direction of arrow.

- Remove conventional screws (arrows).
- Feed out the special tool **2 455 010** on the engine (1) and remove.

- Insert and install the holder (2).
- Tighten the screws (1).

Holder to crankcase



M10		Tightening torque	38 Nm

49 – Mount engine on the automatic transmission

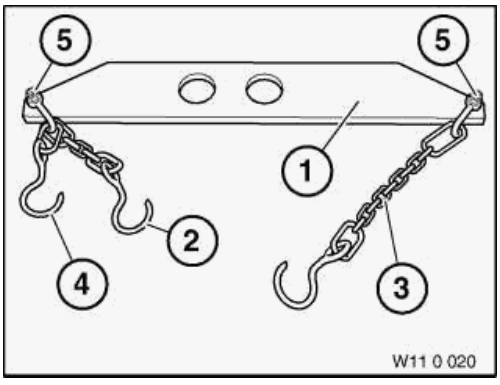
Prerequisite

Engine has been removed.

cardiagn.com

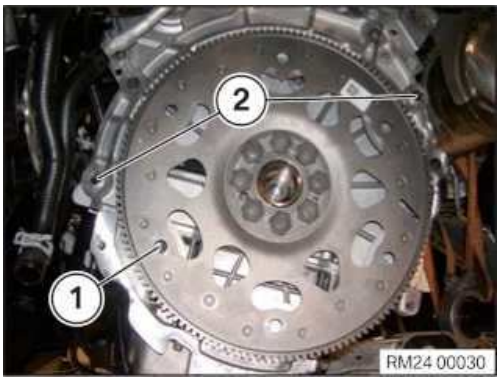
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Position the engine (1) on the lifting table **2 184 136** using the engine lifter and the special tool .
- Feed out engine lifter from engine (1) with special tool and push aside.

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.



- Stage the workshop crane **2 220 718**.

- Stage the lifting gear .

cardiagn.com

- The bore hole (1) of the flywheel must be accessible from the recess on the oil sump.
- Check for correct fit of fitting sleeves(2).

TECHNICAL INFORMATION

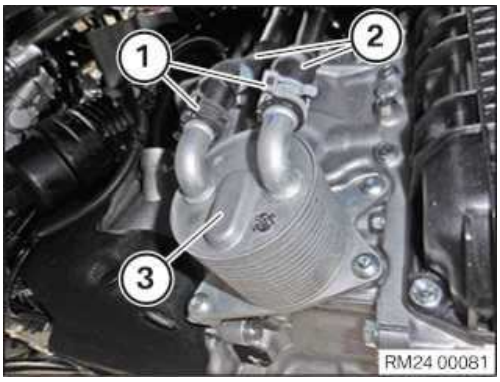
Conduct the following operation with the assistance of a second person.

- Twist torque converter until bore hole in torque converter is flush with bore hole of flywheel.
- Flange-mount and screw automatic transmission on the engine with an auxiliary person and the workshop crane **2 220 718** with the lifting gear .
- Tighten screws (arrows).

Transmission to engine

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

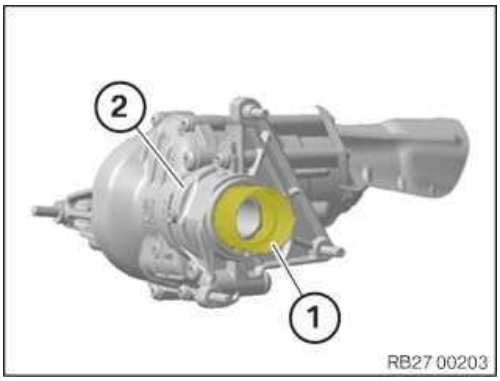
- Feed out workshop crane **2 220 718** with the lifting gear from the automatic transmission and push it aside.



- Crank engine with special tool **0 493 380 (11 6 480)** at vibration damper in direction of rotation.
- Renew nuts (1).

  Parts: Nuts
- Tighten all 6 nuts (1) of the torque converter.

Torque converter to flywheel



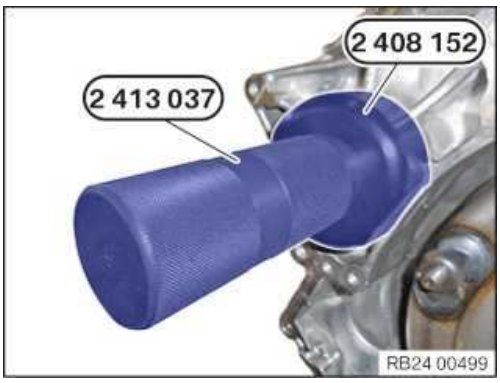
M10	Replace nuts. Remove any adhesive residue from the threads.	Tightening torque	56 Nm

- Slide coolant hoses (1) onto transmission oil cooler (3).
- Secure hose clamps (1).

50 – Install the transfer box (VTG)

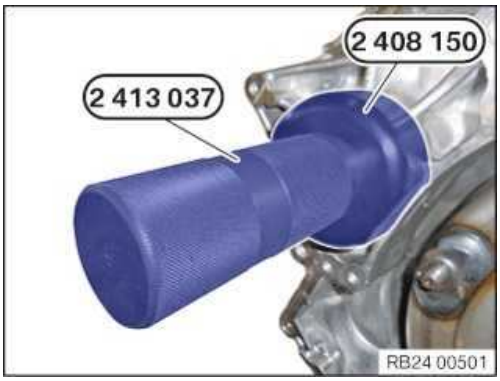
cardiagn.com

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

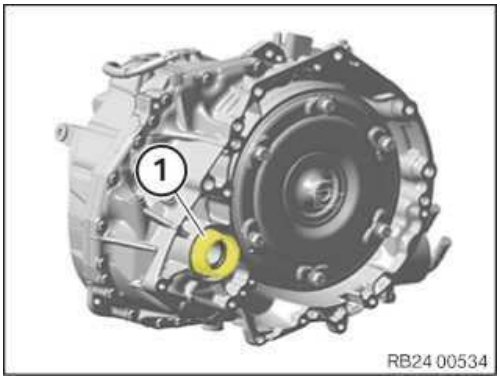


- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.

- Insert special tool **2 411 739** into the inner radial shaft seal.



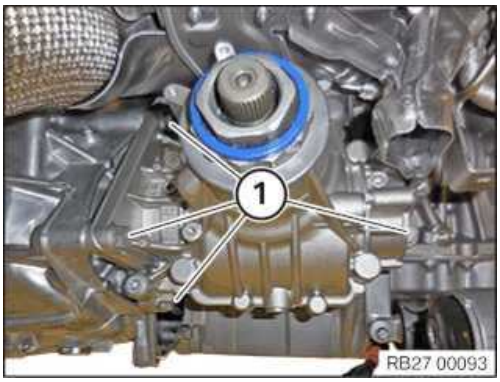
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

cardiagn.com

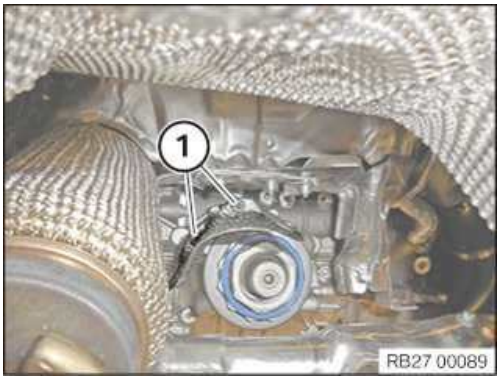
- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.



- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials



Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

cardiagn.com

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

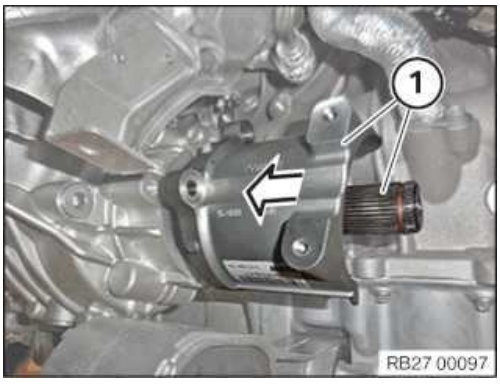
Technically suitable transfer box and electrical transmission oils	

Main group 27

- Tighten the oil filler plug (1).

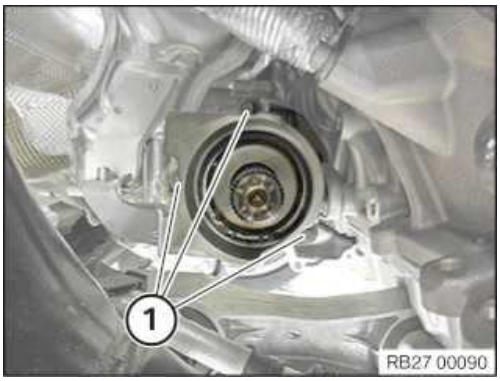
Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm



51 – Install the intermediate shaft with the support tube

- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

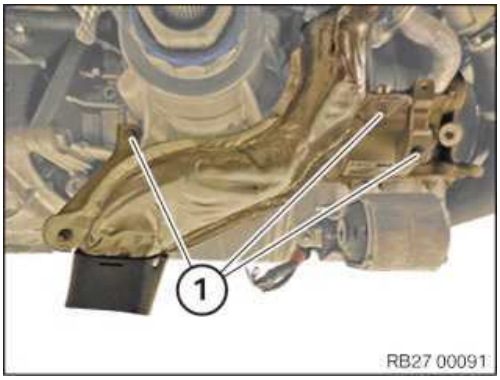


Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

cardiagn.com



- Position screws (1).

Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

- If installed: Install air duct.
- Tighten the screws (1).

52 – Installing the high-pressure stage exhaust turbocharger

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

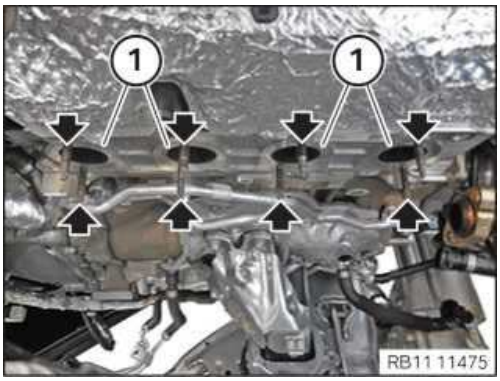
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Damage to the surface.

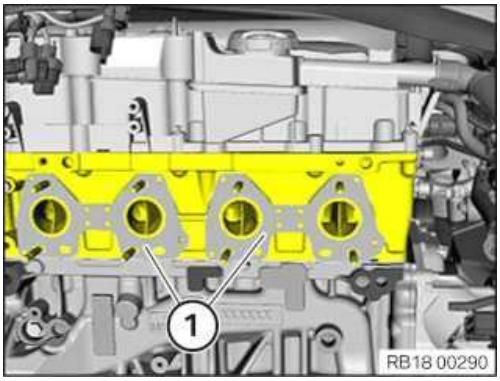


The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

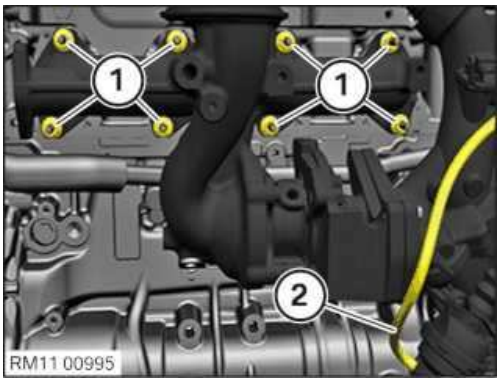
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

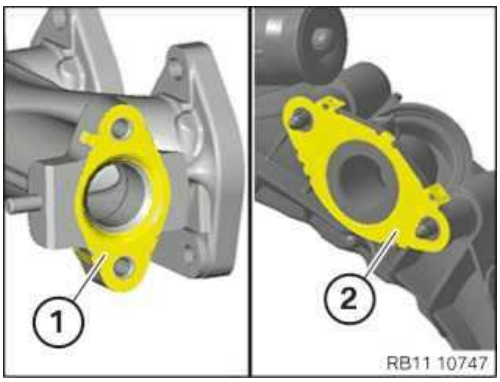


cardiagn.com

- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.



- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.

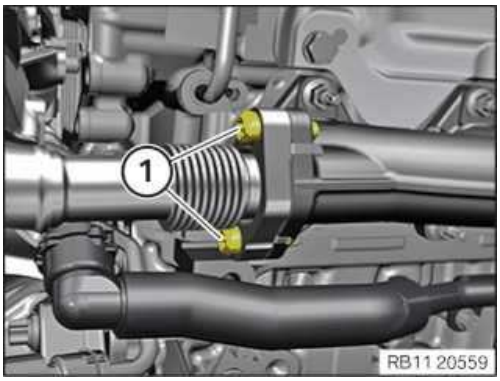


- Renew gasket (1).

  Parts: Gasket
- Install new gasket (1).

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

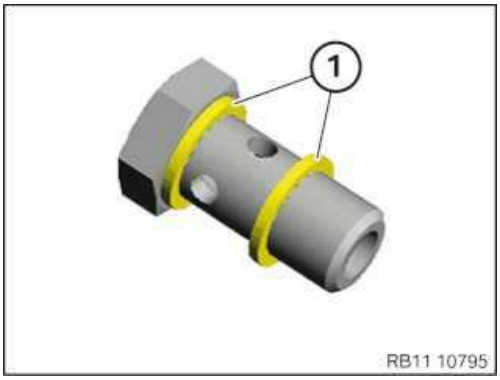
  Parts: Nuts
- Connect vacuum hose(2).



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

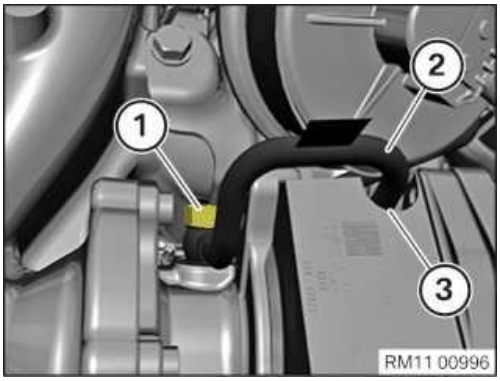
  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket



cardiagn.com

- Tighten the screws (1).



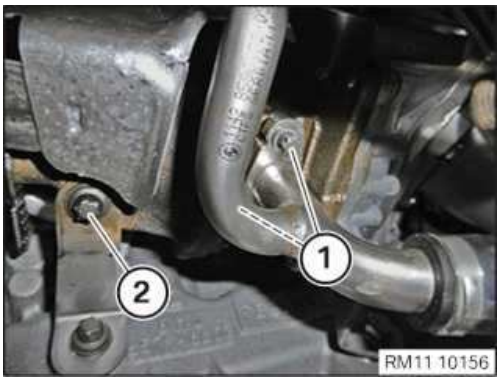
Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring

- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).



- Tighten bolt (1) from the right wheel arch.

- Renew seal (1) of oil return line.

  Parts: Gasket

cardiagn.com

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

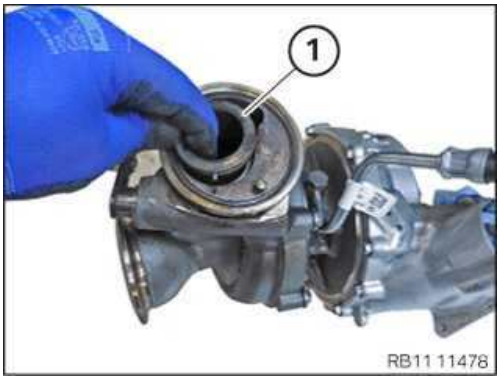
- Tighten down screw (2).

Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

53 – Installing the low-pressure stage turbocharger

RISK OF DAMAGE



Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

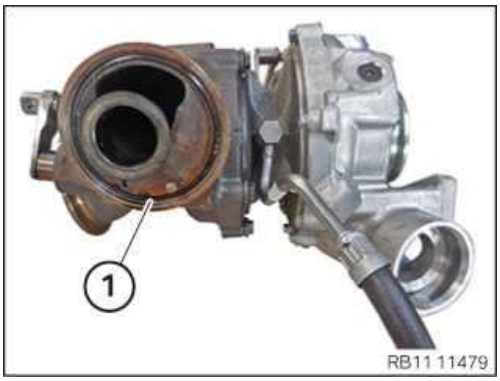
- Do not use any metal-cutting tools.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.



- Renew gasket (1).

  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

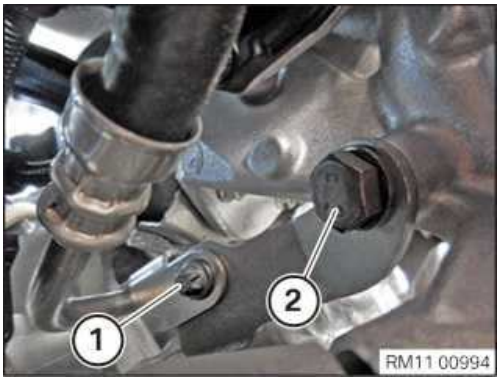
  Parts: Holding sleeve

cardiagn.com

- Renew sealing ring (1).

  Parts: Sealing ring

- Affix the sealing rings on the exhaust turbocharger.



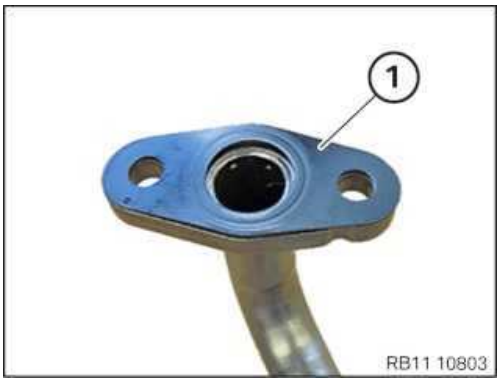
- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

- Tighten down screw (1).



Oil feed line to bracket

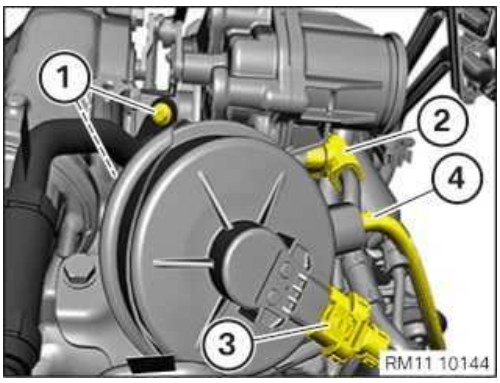
- Tighten down screw (2).



Holder to exhaust turbocharger and crankcase

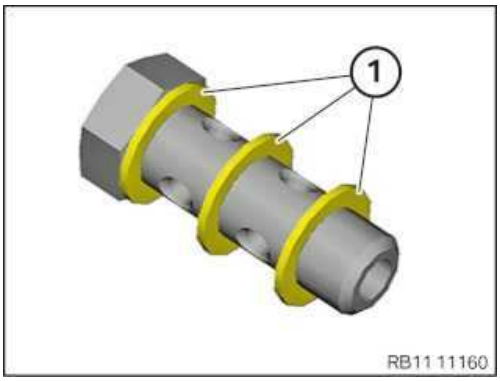
M8x16		Tightening torque	22 Nm

- Renew seal (1) on the oil return line.

  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger



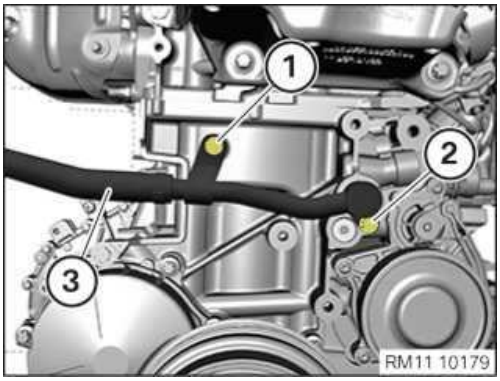
M6x12		Tightening torque	8 Nm

- Connect and lock connectors (2) and (3).

  The locks must engage audibly.

- Connect vacuum hose (4).

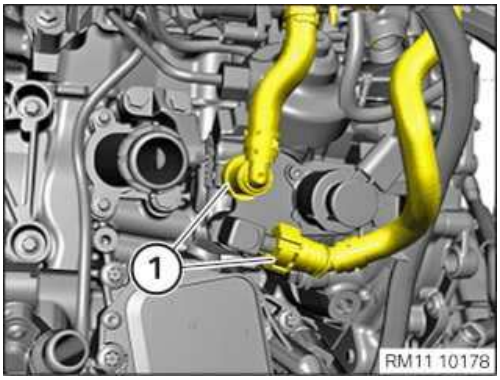
cardiagn.com



- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.

54 – Attaching assemblies (on lifting table)



- Renew sealing ring of the coolant line (3).

  Parts: Sealing ring
- Coat the sealing ring and install the coolant line (3) .
- Tighten down screws (1) and (2).

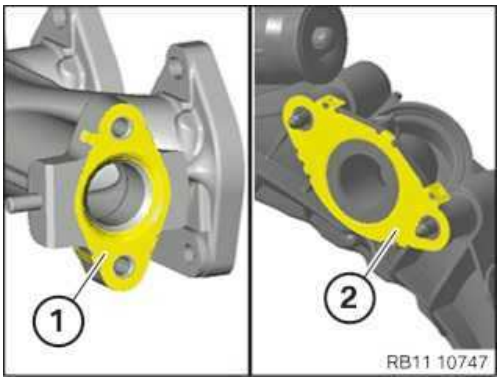
Standard screw connection M6

M6		8 Nm

- Connect and lock fuel lines (1).

  The fuel lines (1) must audibly engage.

▸ **Installing the exhaust-gas recirculation cooler**



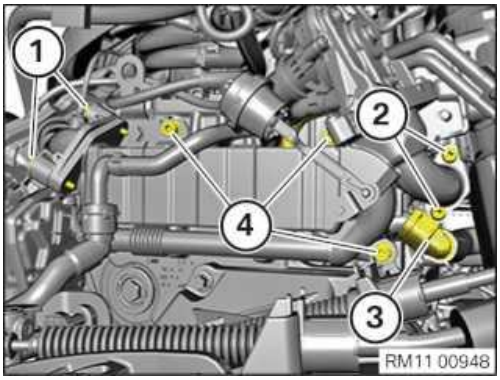
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts

- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.

- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

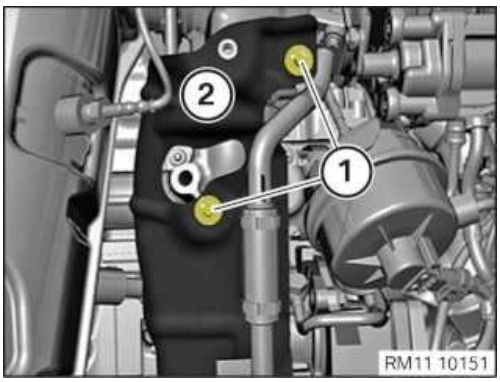
cardiagn.com

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

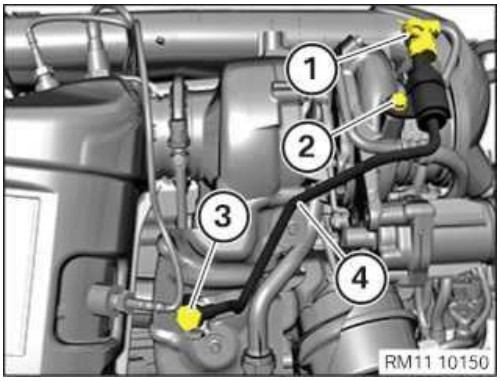


▶ **Installing heat shield on exhaust turbocharger at bottom**

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

- Connect connectors (1) and lock.

  Lock must audibly engage.

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

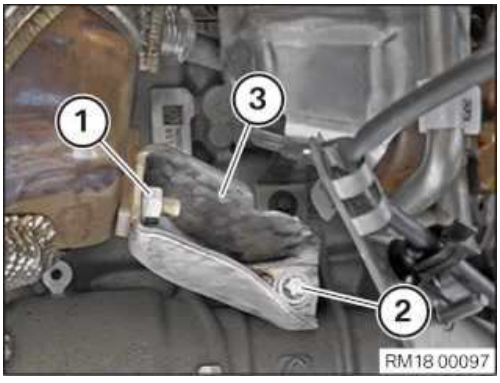
- Remove and install heavy components with the aid of another person/other persons.

- Renew the V-clip (1).

  Parts: V-band clamp

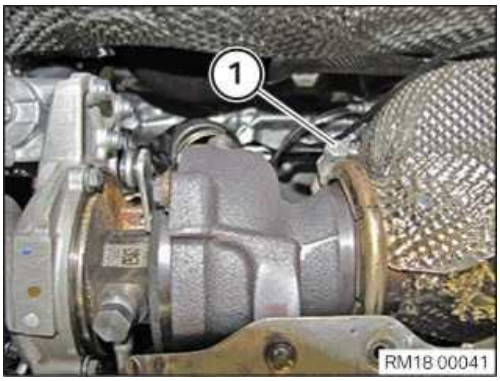
- Renew the gasket (2).

  Parts: Gasket



- Carefully insert and install the diesel particulate filter .
- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

- Tighten nuts (1) by hand.



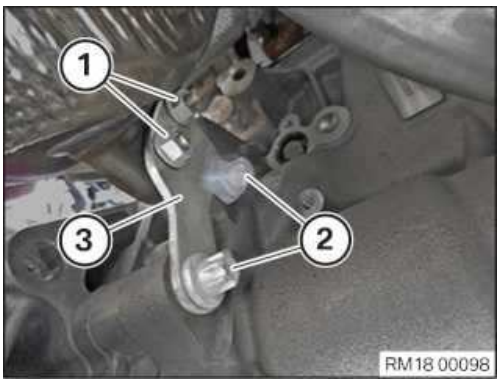
- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.

- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).

cardiagn.com

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger



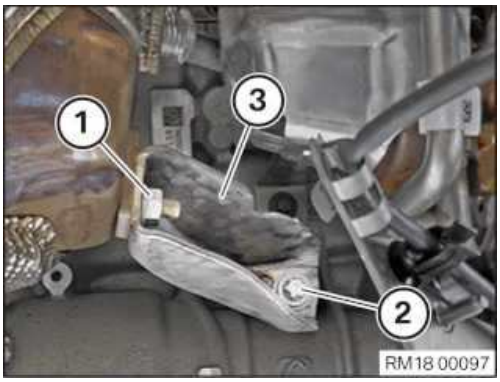
V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screws (2).



Diesel particulate filter holder to gearbox

M12x75		Tightening torque	66 Nm

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screw (2).

Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

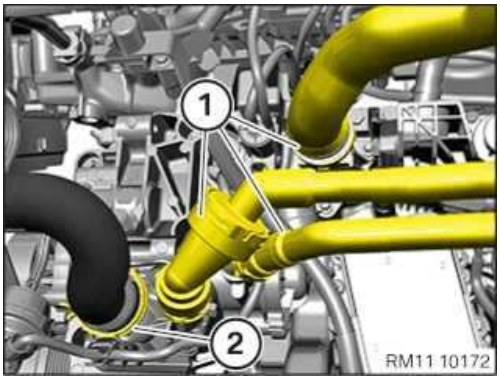
Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Remove fitting aid (1) for the flexible tube.

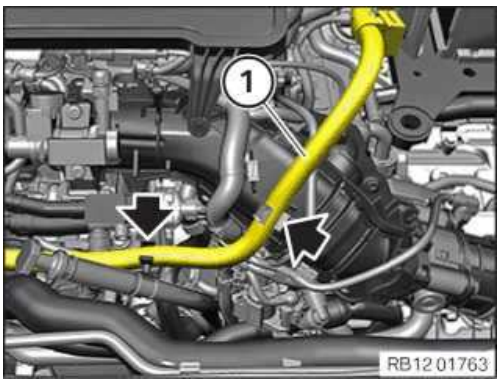
▸ **Install the heat shield on the exhaust turbocharger**

cardiagn.com



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger



Torx screw BM 6x12		Tightening torque	10 Nm

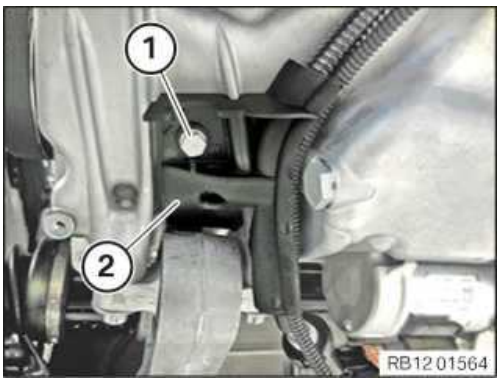
- Fasten the cable at the clips .

- Install the coolant hose and secure with the clamp (2) .
- Connect and lock the coolant lines (1).

  The coolant lines (1) must engage audibly.

CAUTION

Improper routing of the positive battery cable.



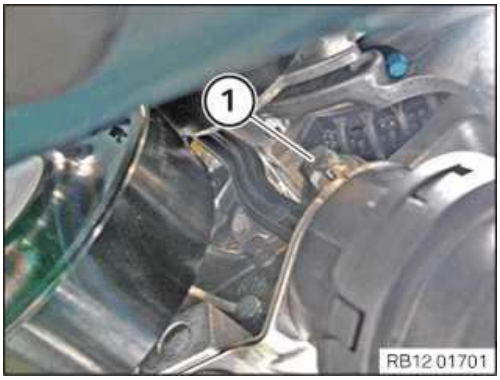
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert the positive battery cable (1) into the clamps (arrows).

- Feed in and install positive battery cable at the clamps (1).

- Insert and install the holder (2).
- Tighten down screw (1).



Bracket to oil sump

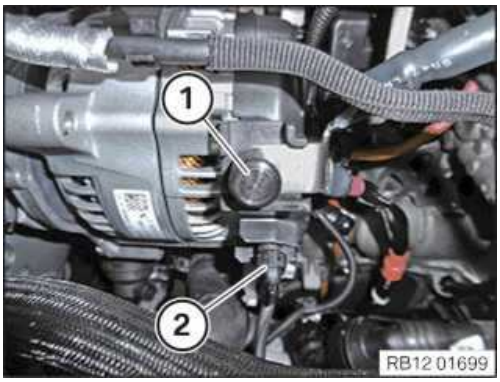
M6		Tightening torque	8 Nm

cardiagn.com

- Insert and install alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support.

- Tighten the screw (1) below on the alternator.

Alternator to component carrier

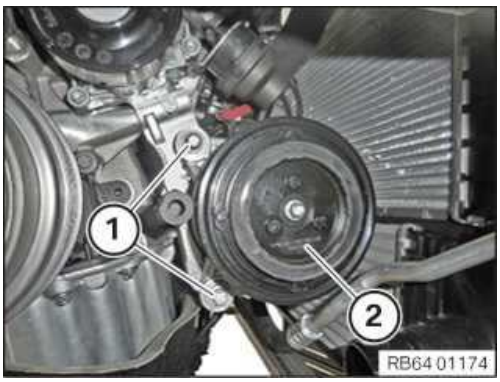


M10x75 / M10x125		Tightening torque	38 Nm

- Tighten the bolt (1) on top on the alternator.

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm



- Mount positive battery cable to the alternator.
- Tighten nut.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

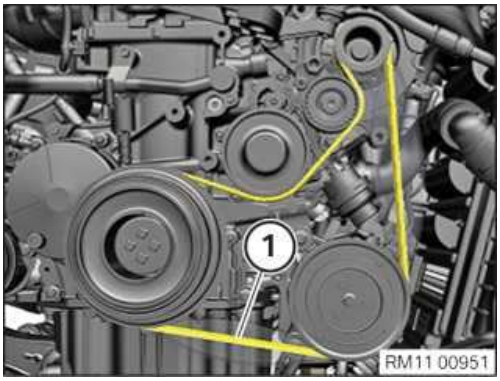
- Mount the cover (1).
- Connect the connector (2) to the alternator and lock audibly.

- Install air conditioning compressor (2) and position it correctly.
- Tighten the screws (1).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

▸ **Installing the drive belt for alternator**



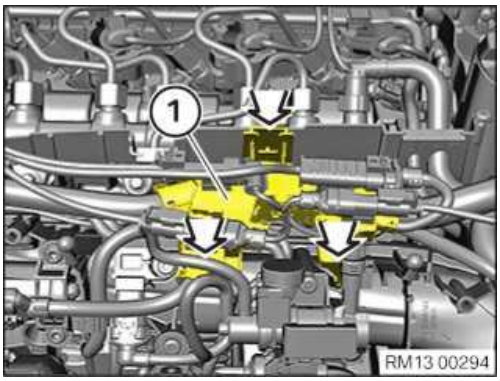
cardiagn.com

TECHNICAL INFORMATION

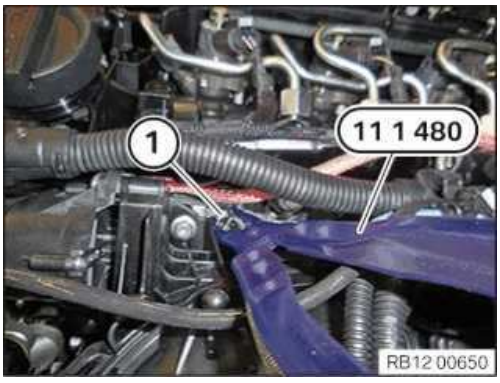
If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

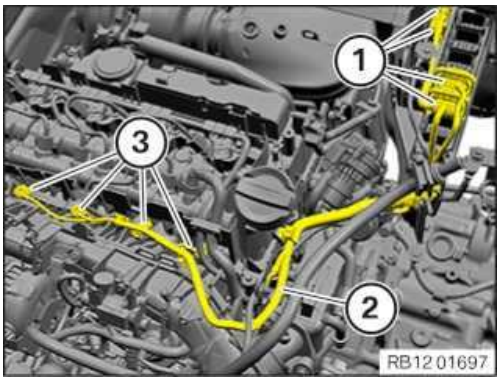


- Feed in the drive belt for the alternator (1) and install it.



- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool **0 496 268 (11 0 390)** out of the belt tensioner and remove it.

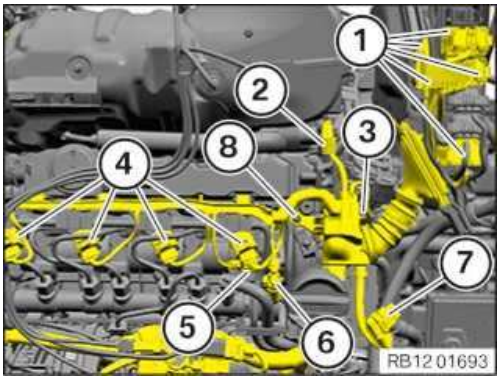
▶ **Installing the cable clip for the intake plenum**



- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.

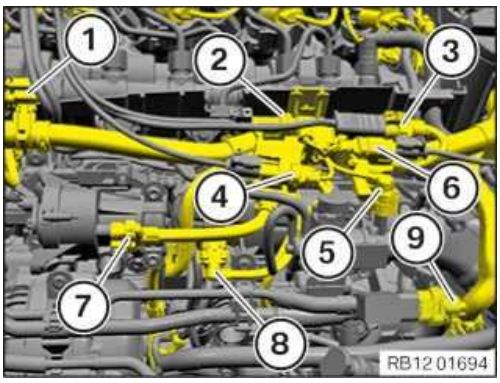
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.



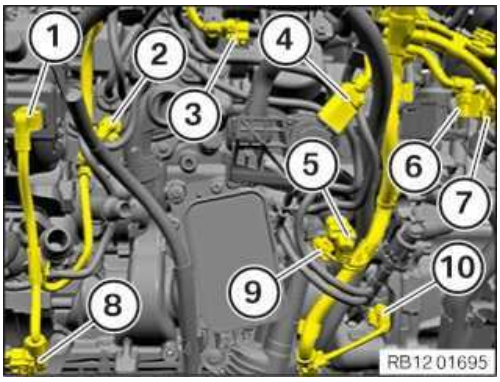
cardiagn.com

- Lay vehicle wiring harness and fasten with clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Connect all connectors (3) to the glow elements and engage them audibly.
- Mount ground strap and tighten screw (2).

Ground cable to cylinder head



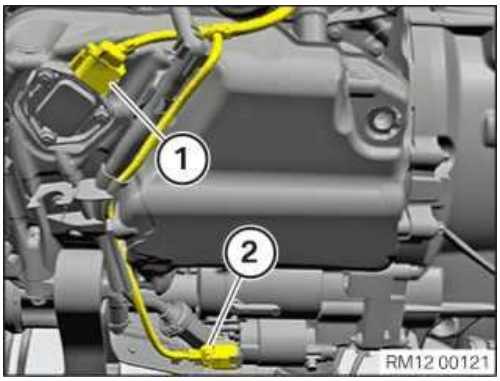
M6x12		Tightening torque	8 Nm



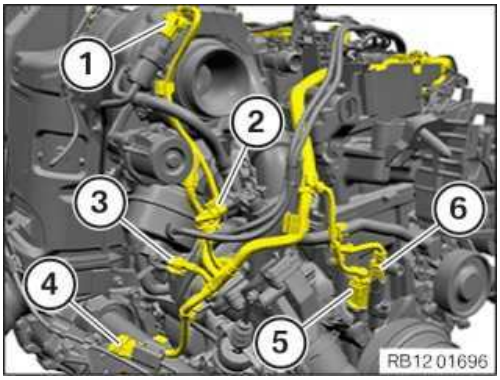
- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

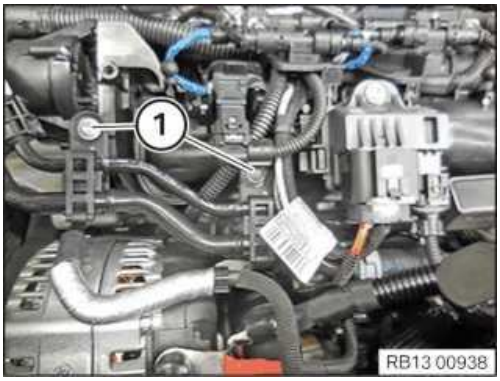
TS5x20		Tightening torque	3,5 Nm



- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.



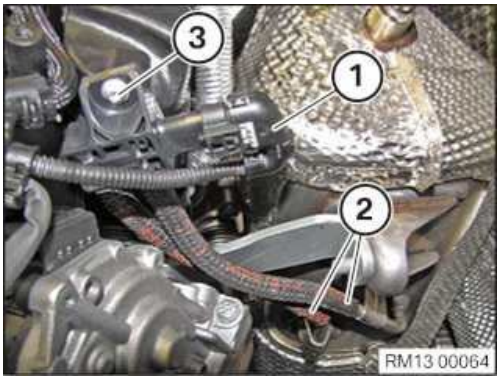
- Connect the connector (1) to the alternator and lock audibly.
- Connect the connector (2) to the electric changeover valve and lock audibly.
- Connect the connector (3) to the electric changeover valve and lock audibly.
- Connect the connector (4) to the high pressure pump and lock audibly.
- Connect the connector (5) to the oil pressure sensor and lock it audibly.
- Attach connector (6) to the throttle bodies and lock it audibly.
- Attach connector (7) to the intake air temperature sensor and lock it audibly.
- Connect the connector (8) to the air conditioning compressor and lock audibly.
- Connect the connector (9) to the solenoid valve and lock audibly.
- Connect the connector (10) to the crankshaft sensor and lock it audibly.



cardiagn.com

- Connect the connector (1) to the oil-level sensor and lock it audibly.
- Connect connector (2) to the starter motor and lock audibly.

- Attach connector (1) to the exhaust turbocharger and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust gas pressure sensor and lock it audibly.
- Connect the connector (4) to the monitoring oxygen sensor and lock audibly.
- Attach connector (5) to the oil pressure switch and lock it audibly.
- Attach connector (6) to the switching valve and lock it audibly.



- Position the fuel line.
- Tighten the screws (1).

Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

55 – Installing differential pressure sensor

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

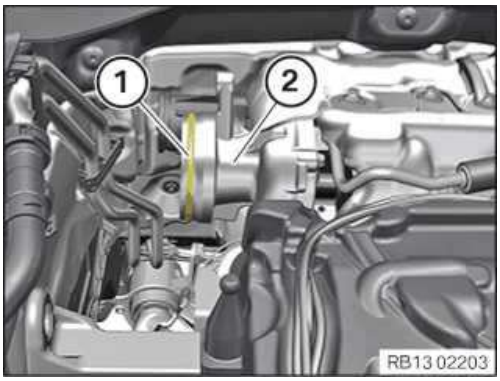
Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor



Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

56 – Installing clean air pipe

cardiagn.com

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

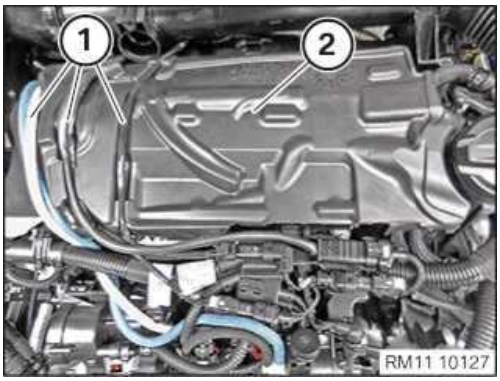
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

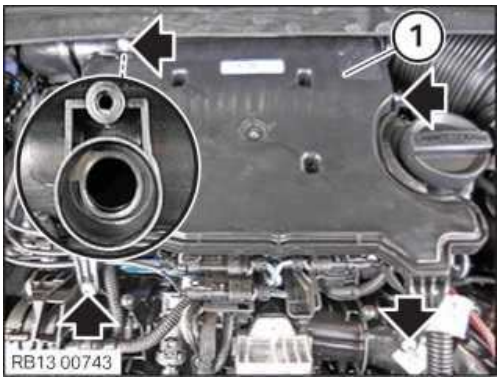
- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm



57 – Install the acoustic cover for the injectors

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

58 – Install resonator

cardiagn.com

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

59 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

60 – Install engine

cardiagn.com

- See additional information.

Additional Information

Overview of Tightening Torques

Special tool to cylinder head — Used in step 12

M8		Tightening torque	21,5 Nm

Special tool 2 455 010 to crankcase — Used in step 13

M10x30		Tightening torque	38 Nm

Special tool 11 8 930 to special tool 00 2 320 — Used in step 13

M14x35		Tightening torque	160 Nm

Hydraulic chain tensioner to crankcase — Used in step 31

M6x22		Tightening torque	9 Nm

Rear timing case cover to crankcase — Used in step 32

M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

SCR coolant lines to crankcase end cover — Used in step 32

Hexagon screw M6x16		Tightening torque	8 Nm

Cylinder head to crankcase — Used in step 32

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

Cylinder head bolt to timing case cover — Used in step 32

M8x40		Tightening torque	19 Nm

Oil sump to crankcase — Used in step 32

M8x30		Tightening torque	24 Nm
M8x110		Tightening torque	24 Nm

Transmission to oil sump — Used in step 32

M8		Tightening torque	19 Nm

Guide tube for oil dipstick on engine — Used in step 32

M8x16		Tightening torque	19 Nm

cardiagn.com

Flywheel to crankshaft

Used in step 33

M12x1.5	Renew screws.	Tightening torque	120 Nm

Glow elements to cylinder head

Used in step 36

Glow element		Tightening torque	13 Nm

Camshaft carrier to cylinder head

Used in step 37

M7x35		Tightening torque	13 Nm

Intake and exhaust camshaft in camshaft support

Used in step 38

M6x31		Tightening torque	10 Nm

Bearing journal to cylinder head

Used in step 38

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

Standard screw connection M8

Used in step 38

M8		Tightening torque	19 Nm

Standard screw connection M6

Used in step 38 54

M6			8 Nm

Chain tensioner piston to cylinder head

Used in step 38

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

Camshaft sprocket to camshaft

Used in step 38

M7x17.			17 Nm

Cylinder head cover to cylinder head

Used in step 42

M6		Tightening torque.	8,5 Nm

Clamping claw facing to cylinder head cover

Used in step 43

Screw M6		Tightening torque	8 Nm

Injector to cylinder head cover

Used in step 43

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

Rail on cylinder head cover

Used in step 44

Torx screw M8x25		Tightening torque	19 Nm

High pressure line between high pressure pump and rail

Used in step 44

High-pressure pipe		Tightening torque	28 Nm

High pressure lines between injector and rail

Used in step 46

High pressure lines		Tightening torque	28 Nm

Intake plenum to cylinder head

Used in step 47

M6		Tightening torque	11 Nm

Holder to crankcase

Used in step 48

M10		Tightening torque	38 Nm

cardiagn.com

Transmission to engine

Used in step 49

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

Torque converter to flywheel

Used in step 49

M10	Replace nuts. Remove any adhesive residue from the threads.	Tightening torque	56 Nm

Transfer box to transmission

Used in step 50

M10		Tightening torque	56 Nm

Heat shield to transfer box

Used in step 50

M6	Renew screws.	Tightening torque	6 Nm

Oil filler plug on transfer box (VTG)

Used in step 50

M18x1.5		Tightening torque	35 Nm

Intermediate shaft to transfer box

Used in step 51

M8x35		Tightening torque	19 Nm

Exhaust-gas recirculation cooler to exhaust manifold

Used in step 52 54

M8x28	Replace screws	Tightening torque	32 Nm

Oil return line to turbocharger

Used in step 52 53

M6x12		Tightening torque	8 Nm

Holder to exhaust turbocharger and crankcase

Used in step 52

M8x16		Tightening torque	22 Nm

Exhaust turbocharger to exhaust manifold

Used in step 53

V-band clamp		Tightening torque	19 Nm

Oil feed line to bracket

Used in step 53

Torx screw M6x12		Tightening torque	8 Nm

Holder to exhaust turbocharger and crankcase

Used in step 53

M8x16		Tightening torque	22 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 54

M8x20		Tightening torque	5 Nm
		Release angle	90 °

Intake plenum to exhaust-gas recirculation cooler

Used in step 54

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 54

M8x20		Tightening torque	19 Nm

Heat shield for exhaust turbocharger

Used in step 54

Torx screw BM 6x12		Tightening torque	10 Nm

cardiagn.com

Banjo bolt for exhaust pressure pipe to exhaust manifold — Used in step 54

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

Diesel particulate filter V-clip to exhaust turbocharger — Used in step 54

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

Diesel particle filter to holder — Used in step 54

M8 hexagon nut		Tightening torque	19 Nm

Diesel particulate filter holder to gearbox — Used in step 54

M12x75		Tightening torque	66 Nm

Diesel particulate filter bracket to crankcase — Used in step 54

M10x35		Tightening torque	38 Nm

Heat shield for exhaust turbocharger — Used in step 54

Torx screw BM 6x12		Tightening torque	10 Nm

Bracket to oil sump — Used in step 54

M6		Tightening torque	8 Nm

Alternator to component carrier — Used in step 54

M10x75 / M10x125		Tightening torque	38 Nm

Positive battery cable to alternator — Used in step 54

M8		Tightening torque	19 Nm

Air conditioning compressor in component carrier — Used in step 54

M10		Tightening torque	38 Nm

Ground cable to cylinder head — Used in step 54

M6x12		Tightening torque	8 Nm

Wiring harness to cylinder head cover — Used in step 54

TS5x20		Tightening torque	3,5 Nm

Fuel line to intake plenum — Used in step 54

TS6x20		Tightening torque	5 Nm

Differential pressure sensor to holder — Used in step 55

Screw		Tightening torque	4 Nm

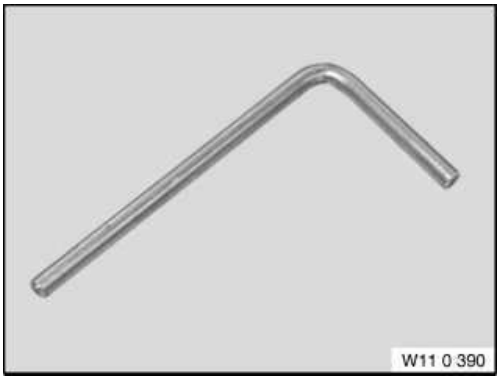
Clamp for the pressure hose on the differential pressure sensor — Used in step 55

Clamp 15–19mm		Tightening torque	3 Nm

Clean air pipe to cylinder head cover — Used in step 56

Oval-head screw	Renew screw.	Tightening torque	8 Nm

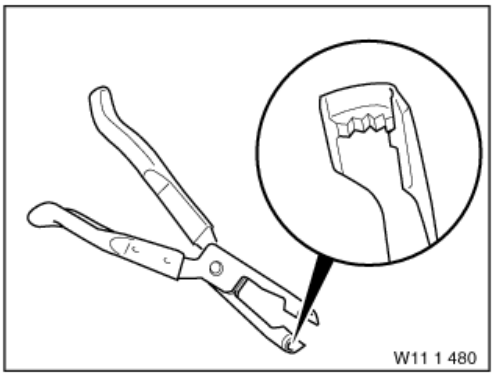
Clean air pipe to intake silencer housing — Used in step 56



Clamp		Tightening torque	3 Nm

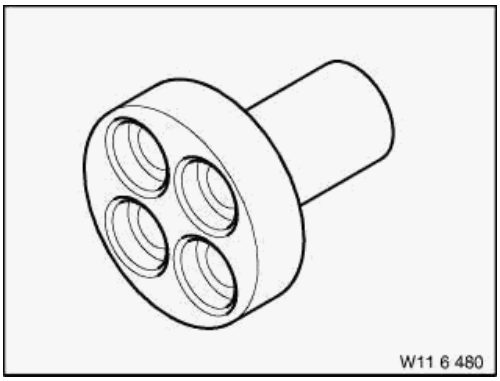
cardiagn.com

Resonator to manifold and clean air pipe			Used in step 58
Screw TS6	Renew screw.	Tightening torque	5 Nm



Overview of Special Tools

0 496 268 (11 0 390) Pin



Common	Used in step 7 54
Usage	(roll pin) For securing new tensioning pulley (poly-V belt)
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 15 07 (390)

0 490 796 (11 1 480) Pliers

Common	Used in step 7 25
Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

0 493 380 (11 6 480) Connector

Common	Used in step 12 20 38 41 49
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

cardiagn.com

2 220 718 Workshop crane

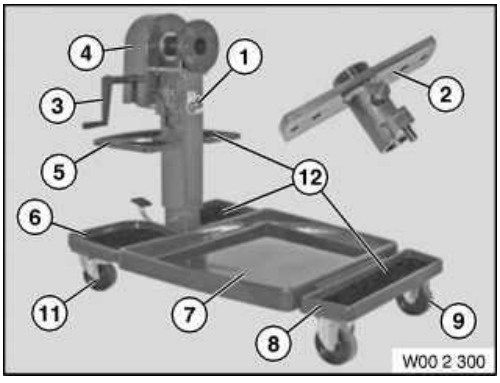
Common	Used in step 12 49
Usage	WSK 1000
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	06 01 11 (701)

cardiagn.com

2 459 012 Holder

Common Used in step 12 49

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)



2 455 010 Engine support

Common Used in step 13 48

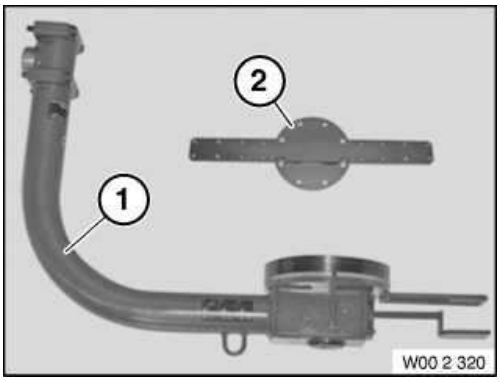
Usage	For accommodating engine on assembly stand. Engine: B3x, B4x, N47.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 495 187 (00 2 300) Assembly stand

Common Used in step 13

Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of



Pos	BMW Order number	Replaced by	Designation	In Connection with

cardiagn.com

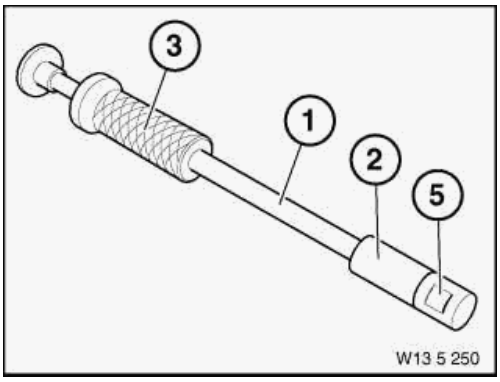
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.	

cardiagn.com

0 495 196 (00 2 320) Support arm

Common

Used in step 13



Usage	(Support arm with fixture) For mounting engines using the engine mounting bracket.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 197 (00 2 321)		**Support arm**	
2	0 495 198 (00 2 322)		**Panel** (take-up plate)	
3	0 495 380 (00 2 323)		**Panel** (fixture) Engine N73	
6	0 496 287 (00 2 326)		**Panel** (fixture) Engine: M73	
5	0 496 288 (00 2 327)	**0 496 373**	**Panel** (fixture) Engine: S62 Replaced by 11 5 420 (0 496 373)	
8	0 496 533 (00 2 328)		**Support** (Engine mount) Engine: N57, N57Top	
9	0 496 579 (00 2 329)	**0 496 680**	**Support** (Engine mount) Engine: N74 Replaced by 116160 (0 496 680)	
4	0 495 379 (00 2 324)		**Panel** (fixture) Engine M67TU	
5	0 495 381 (00 2 325)		**Panel** (fixture) Engine N62, N62TU	

cardiagn.com

0 493 321 (13 5 250) Puller

Common

Used in step 17

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

0 493 339 (13 5 252) Bush

Common

Used in step 17

Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with

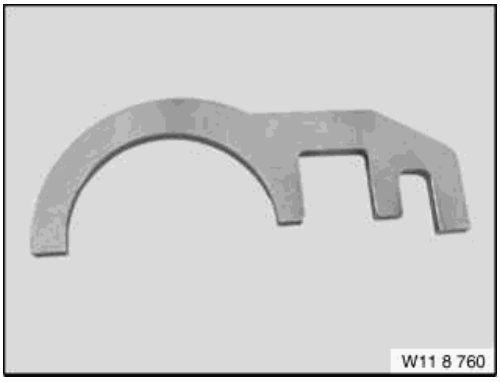
cardiagn.com



2 288 380 Locating stud

Common Used in step 20 38 39 41

Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

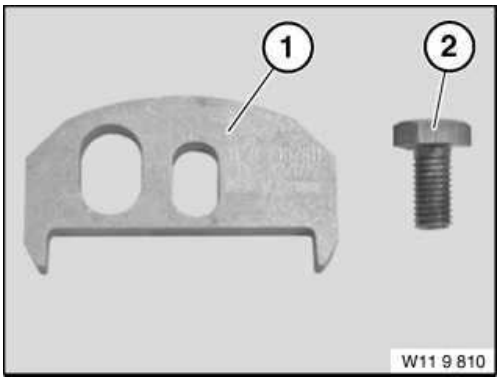
0 496 112 (11 8 760) Gauge

Common Used in step 20 38 40 41

Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 495 105 (11 4 480) oddments tray

Common Used in step 26 27 38



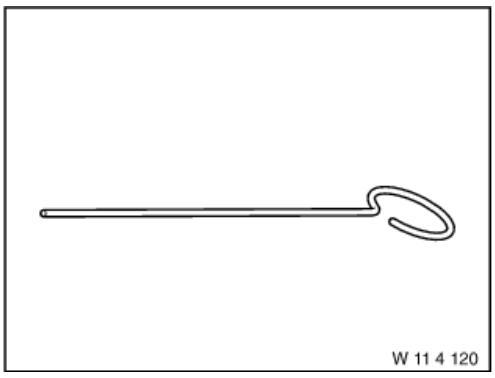
Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

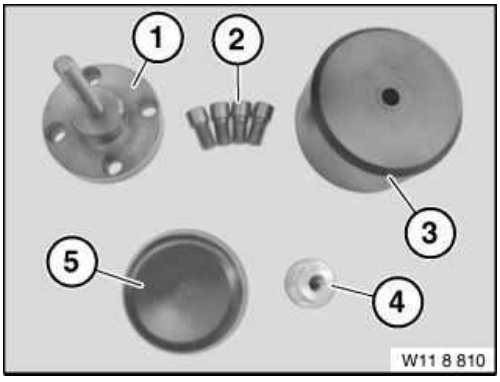
cardiagn.com

0 496 171 (11 9 811) Holder



Common	Used in step 28 33
Usage	Available only as a complete tool set 11 9 810 (83 30 0 496 170) - as of 13.01.12
Included in the tool or work	0 496 170
Storage location	C86
Replaced by	
In connection with	
SI-Number	01 07 07 (355)

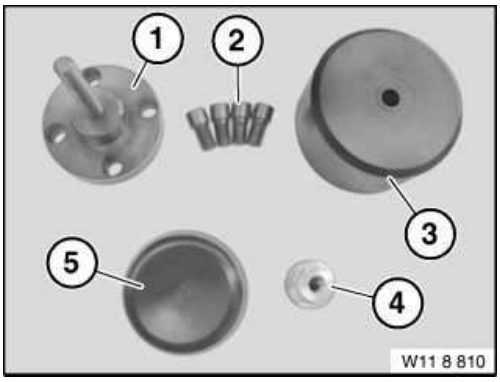
0 494 793 (11 9 265) Bush



Common	Used in step 28 33
Usage	
Included in the tool or work	0 493 938
Storage location	A44
Replaced by	
In connection with	
SI-Number	

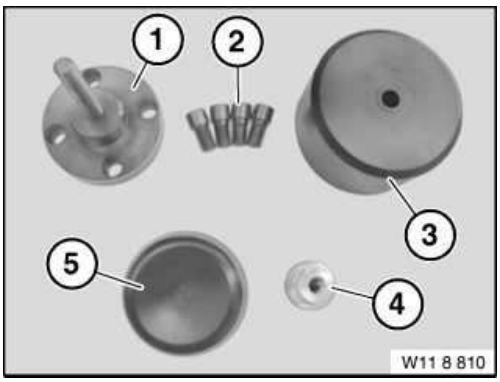
0 491 012 (11 4 120) Pin

Common	Used in step 30 31
Usage	(lock pin) For chain tensioners, for locking the chain tensioner piston (e.g. during cylinder head removal and fitting)
Included in the tool or work	
Storage location	B1
Replaced by	
In connection with	
SI-Number	01 12 93 (701)



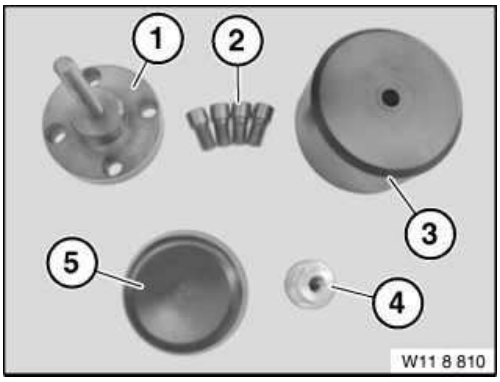
0 496 137 (11 8 815) Holding sleeve

Common	Used in step 32
Usage	(Slip sleeve) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)



cardiagn.com

0 496 133 (11 8 811) Basic body



Common	Used in step 32
Usage	Liquidation of existing inventory and then available only as a complete tool set 11 8 810 = 83 30 0 496 132 - as of 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 496 134 (11 8 812) Screw

Common	Used in step 32
Usage	(Screw set) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132

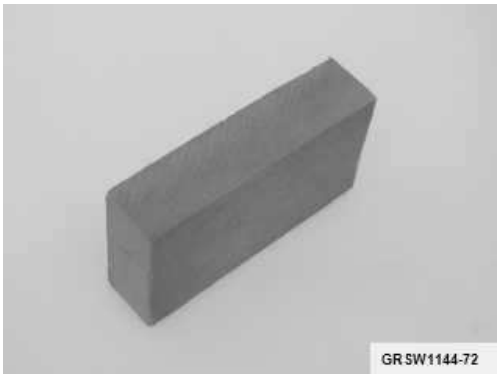
0 496 136 (11 8 814) Nut

Common	Used in step 32
Usage	(Nut with bearing) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

2 364 711 Plug

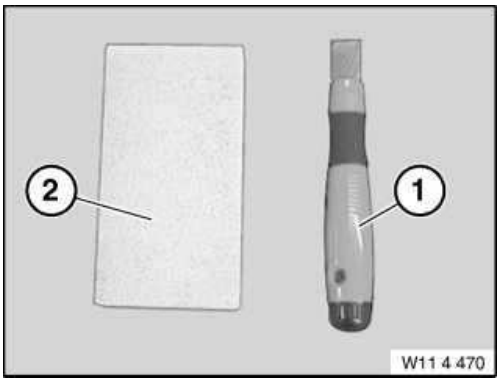
Common	Used in step 32
Usage	For closing the pressure oil holes for cleaning the cylinder head sealing surfaces.
Included in the tool or work	
Storage location	C20
Replaced by	
In connection with	
SI-Number	01 50 14 (203)



0 495 103 (11 4 471) Scraper

Common	Used in step 32
Usage	
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

cardiagn.com



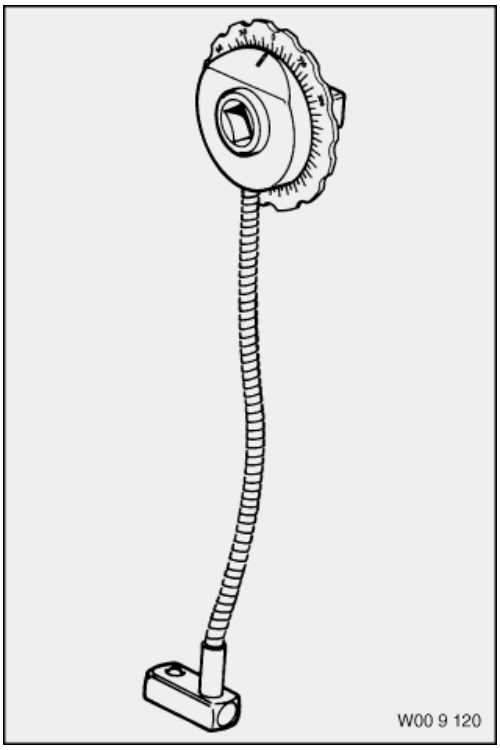
0 495 104 (11 4 472) Extractor

Common Used in step 32

Usage	(grindstone)
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

0 495 102 (11 4 470) Tool

Common Used in step 32 52



Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

cardiagn.com

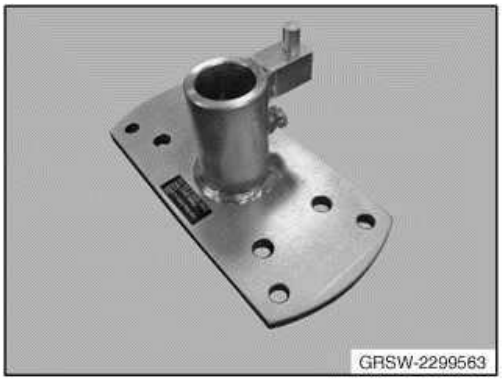
2 408 152 Striking element

Common	Used in step 50
Usage	For installation of the right radial shaft seal transmission output shaft (inner). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)

2 413 037 Handle

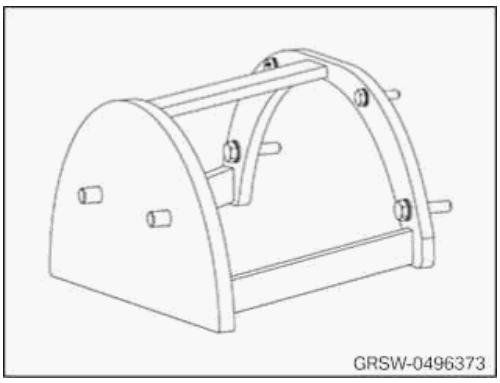
Common	Used in step 50
Usage	Universal drift handle. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C77
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

2 408 150 Striking element



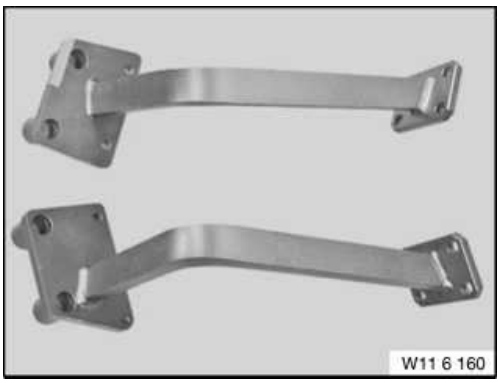
Common	Used in step 50
Usage	For installing the right radial shaft seal transmission output shaft (outer). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)

Replacement tools:



cardiagn.com

2 299 563 Adapter



Common	Used in step 13
Usage	New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.
Included in the tool or work	0 495 187
Storage location	
Replaced by	
In connection with	
SI-Number	

0 496 373 (11 5 420) Plate

Common	Used in step 13
Usage	(Fixture) Engine S62
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	

0 496 680 (11 6 160) Support

Common	Used in step 13
Usage	For mounting N74 engine on the assembly stand. In combination with 00 2 300, 00 2 320
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	00 2 300; 00 2 320 = 0495196
SI-Number	01 31 09 (604)

cardiagn.com

11 31 091 Removing and installing/replacing the hydraulic chain tensioner

PRELIMINARY WORK

1 – Removing engine

- See additional information.

2 – Removing the acoustic cover

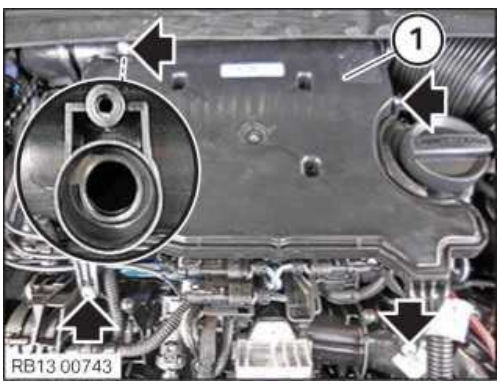
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

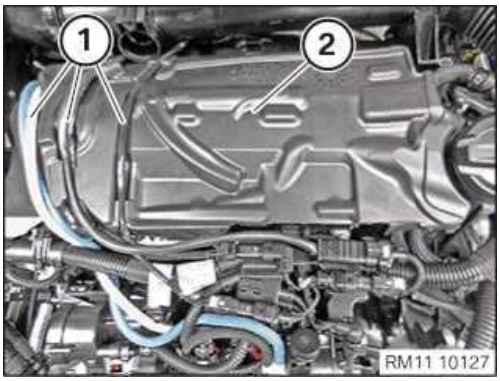


Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

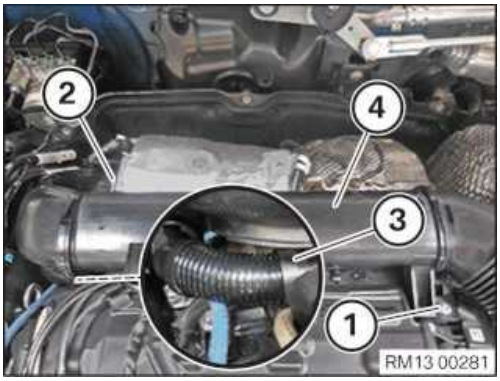


3 – Remove resonator

- Remove screws (arrows).
- Guide out and remove the resonator (1).

4 – Remove the acoustic cover for the injectors

cardiagn.com



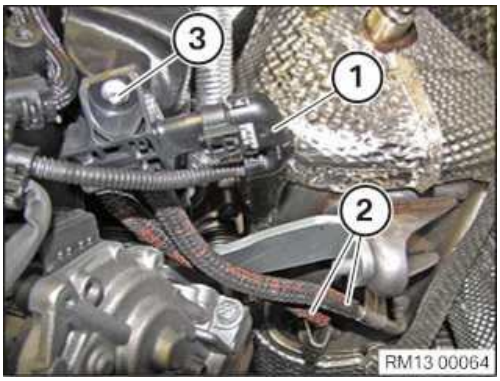
- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

5 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

6 – Remove differential pressure sensor

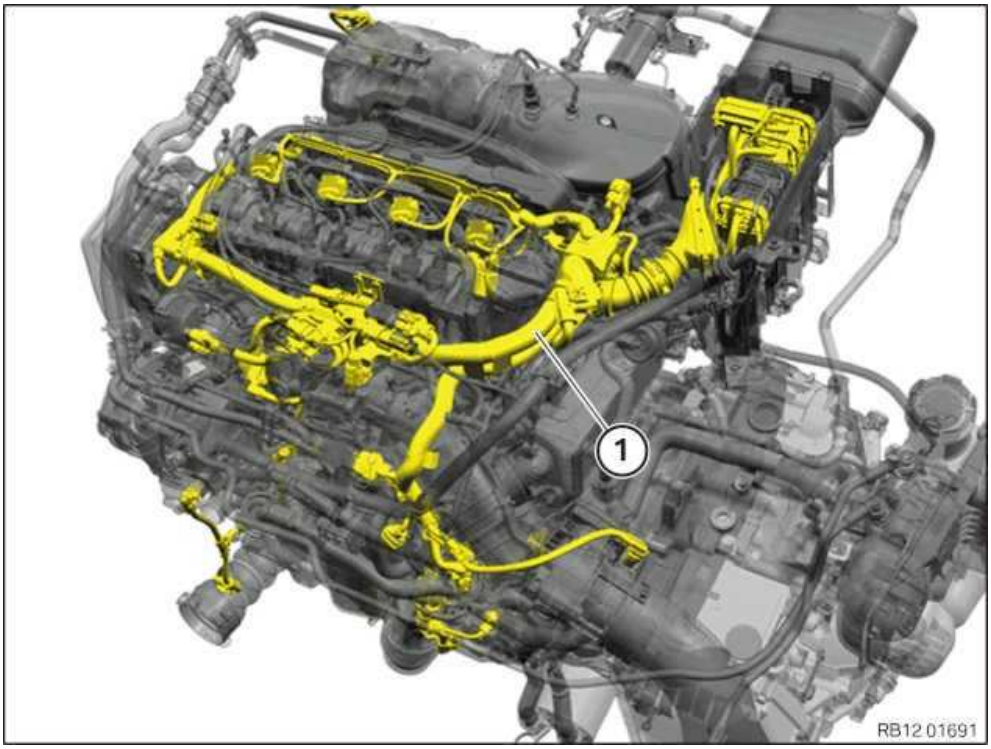


RISK OF DAMAGE

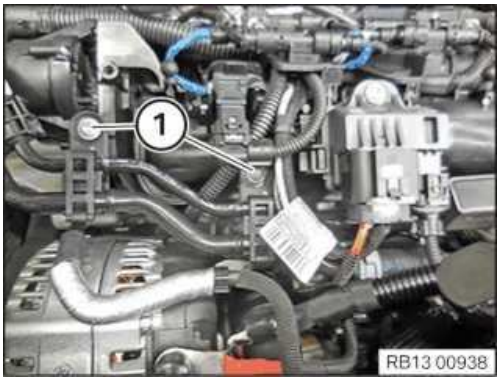
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



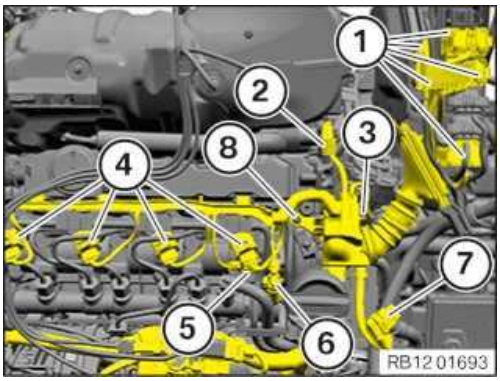
cardiagn.com



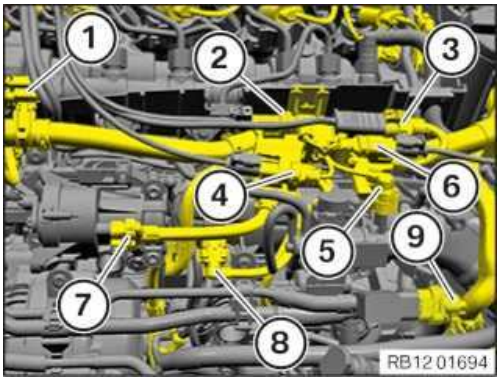
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

7 – Removing assemblies (on lifting table)

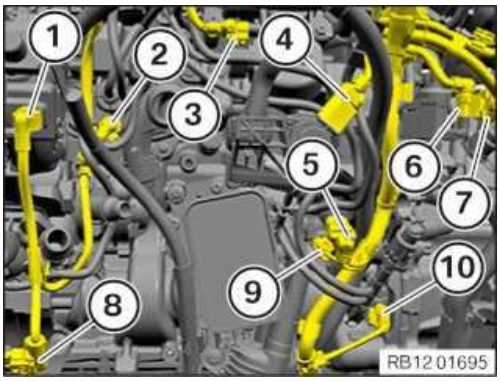
Overview: Wiring harness section for the engine



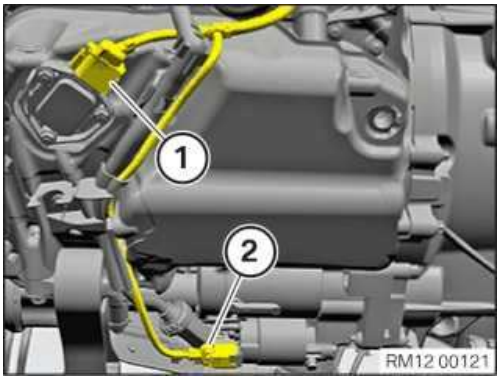
1 Wiring harness section for the engine



- Loosen screws (1).

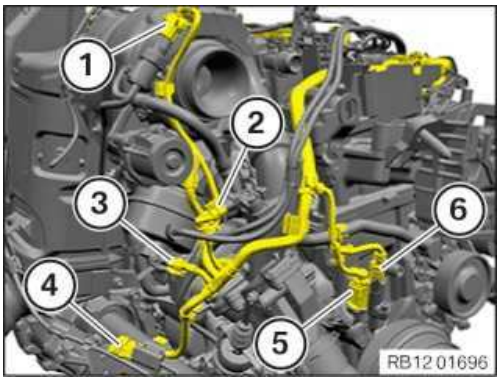


cardiagn.com

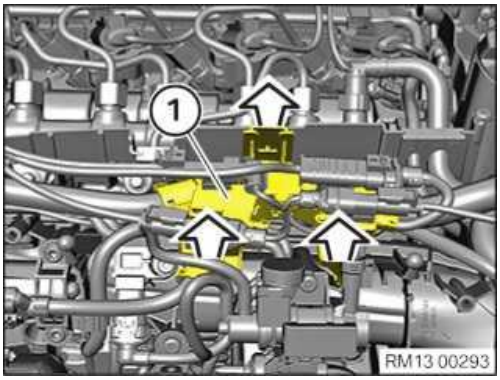


- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).

- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock connector (3) and pull it off from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

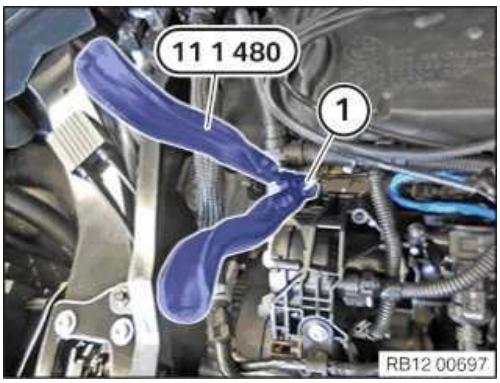


- Unlock and disconnect the connector (1) from the alternator.
- Unlock and disconnect the connector (2) from the electric changeover valve.
- Unlock and disconnect the connector (3) from the electric changeover valve.
- Unlock the connector (4) and pull it off the high pressure pump.
- Unlock the connector (5) and disconnect it from the oil pressure sensor.
- Unlock connector (6) and pull off from throttle body.
- Unlock the connector (7) and disconnect it from the intake air temperature sensor.
- Unlock the connector (8) and disconnect it from the air conditioning compressor.
- Unlock and disconnect the connector (9) from the solenoid valve.
- Unlock the connector (10) and pull it off the crankshaft sensor.

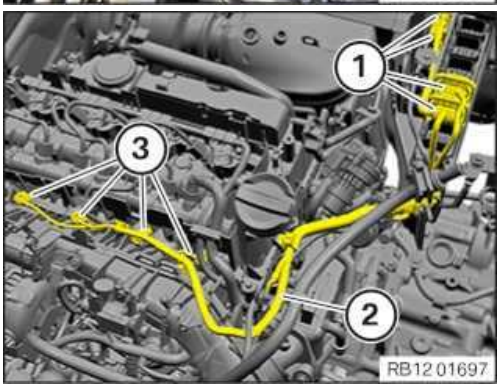


- Unlock the connector (1) and pull off of the oil-level sensor.
- Unlock connector (2) and remove from starter motor.

cardiagn.com



- Unlock the connector (1) and disconnect it from the exhaust gas pressure sensor.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock the connector (3) and pull it off the exhaust turbocharger.
- Unlock the connector (3) and disconnect it from the differential pressure sensor.
- Unlock connector (4) and pull it off from the monitoring oxygen sensor.
- Unlock the connector (5) and pull it off the oil pressure switch .
- Unlock connector (6) and disconnect from switching valve.
- Detach, feed out and remove the wiring harness from the clamps.



▶ **Removing the cable clips from the intake plenum**

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Pull off all connectors (3) from glow element using special tool **0 490 796 (11 1 480)**.
- Loosen screw (2) and remove the ground strap.
- Detach, feed out and remove the wiring harness from the clamps.

▶ **Removing the drive belt for alternator**

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

cardiagn.com

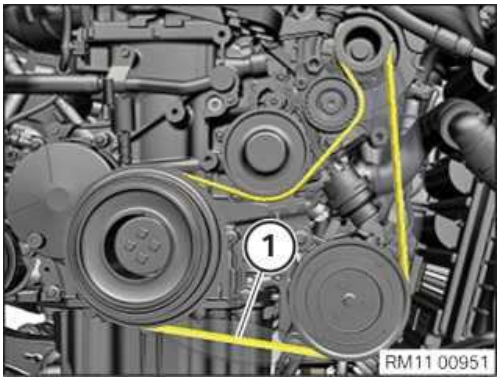
CAUTION

Component with preload.

Danger of injury!

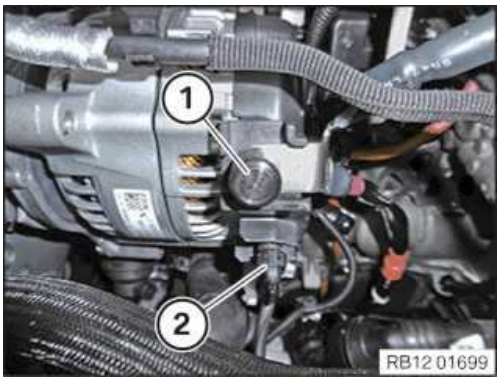
- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION



If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

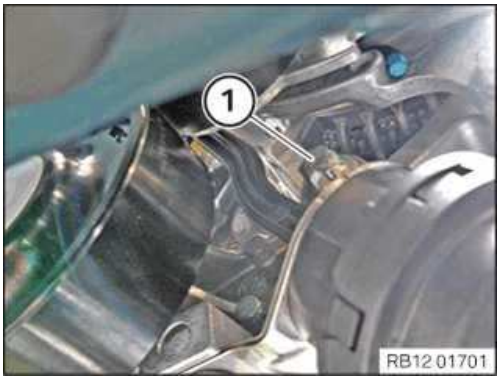
TECHNICAL INFORMATION



The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool **0 496 268 (11 0 390)**.

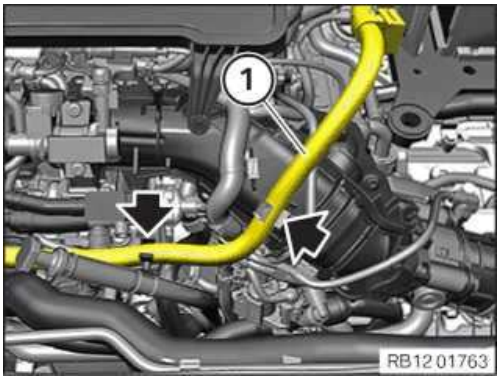
- Guide out the drive belt for the alternator (1) and remove it.



- Remove the cover (1) and loosen the nut below.
- Disconnect positive battery cable from alternator.
- Unlock and disconnect the connector (2) from the alternator.

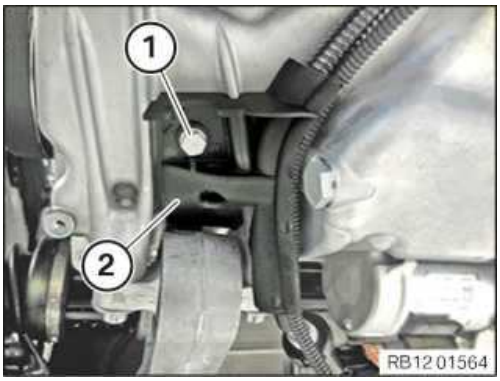
cardiagn.com

- Detach screw (1) on top on the alternator.



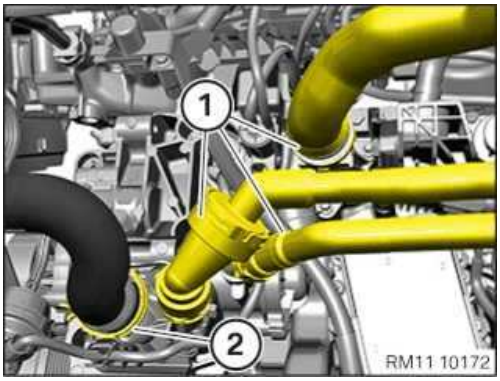
- Detach screw (1) below on the alternator.

- Feed out alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support and remove.



- Loosen screws (1).
- Feed out and remove the air conditioning compressor (2).

- Release the positive battery cable (1) from the clamps (arrows).

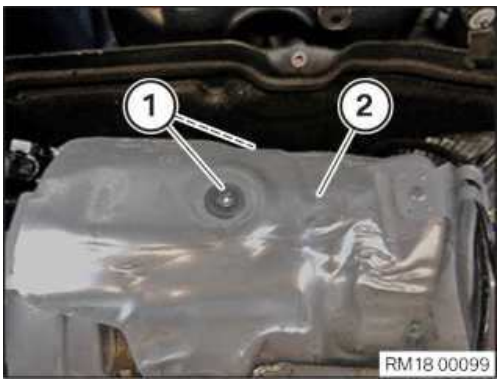


cardiagn.com

- Loosen screw (1).
- Guide out and remove holder (2).

- Feed out positive battery cable from the clamps (1) and remove.

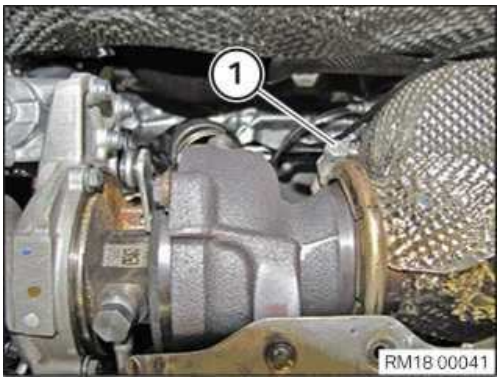
- Unlock and disconnect coolant lines (1).
- Guide out the coolant lines (1) and remove it.
- Detach the clamp (2).
- Guide the coolant hose out and remove.



▶ **Removing heat shield from top exhaust turbocharger**

WARNING

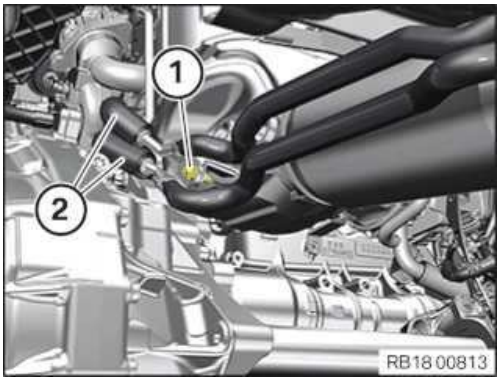
Hot surfaces.



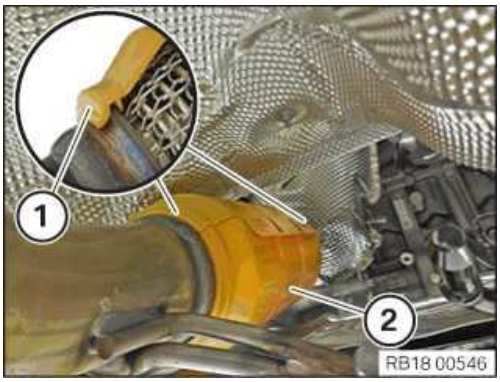
Risk of burning!

- Perform all work only on components that have cooled down.

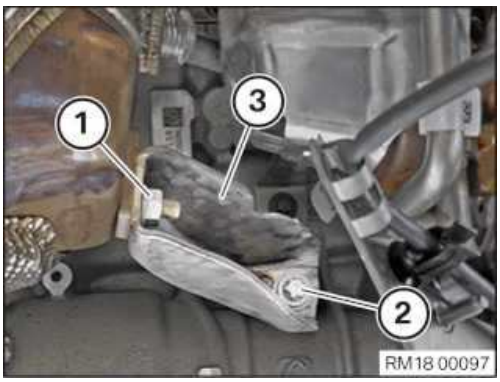
- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).



cardiagn.com

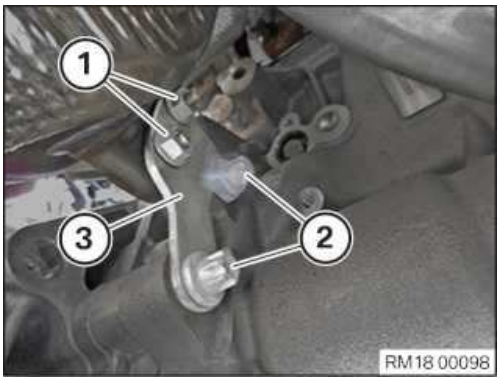


- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



- Loosen nuts (1).

- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

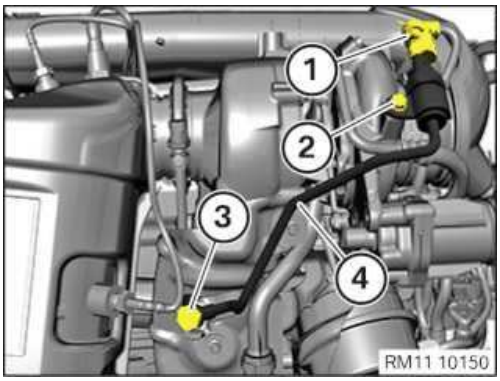


- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.

- Loosen nut (1).
- Loosen screw (2).
- Remove holder (3).

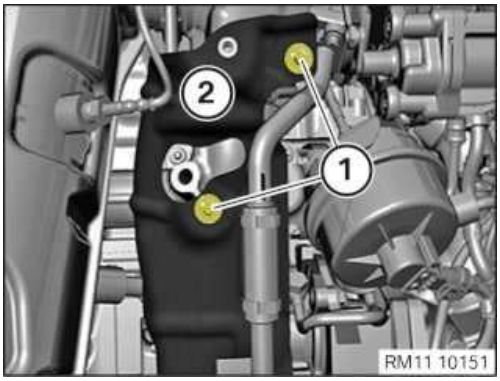
cardiagn.com

- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).
- Guide out and remove diesel particulate filter .



▶ **Remove the heat shield from the exhaust turbocharger at the bottom**

WARNING



Hot surfaces.

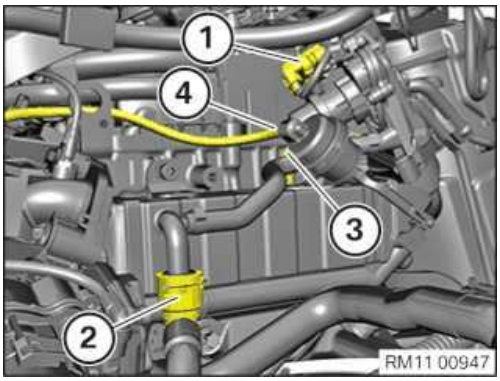
Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).

▶ **Removing the exhaust-gas recirculation cooler**

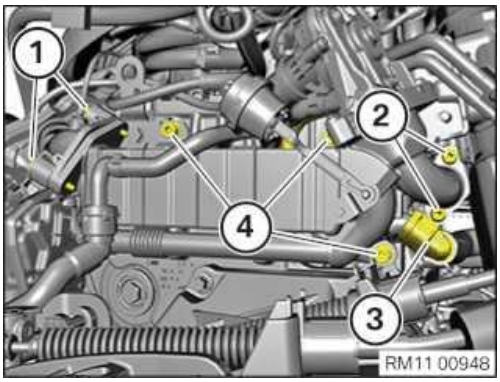


WARNING

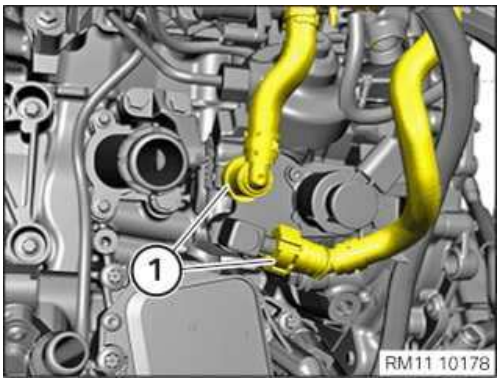
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

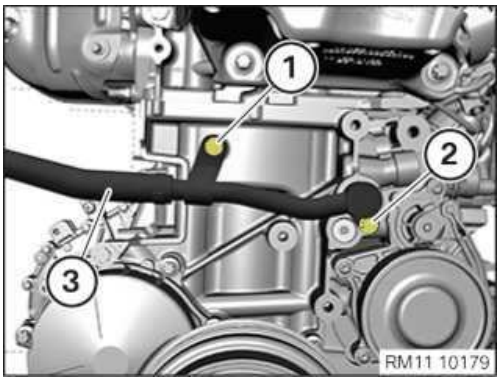


cardiagn.com



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



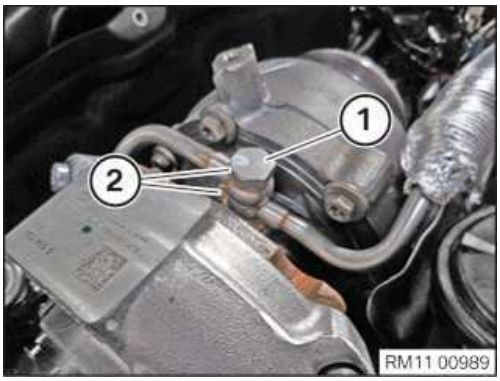
- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

- Unlock the fuel lines (1) and disconnect from the high pressure pump.
- Remove the fuel lines.

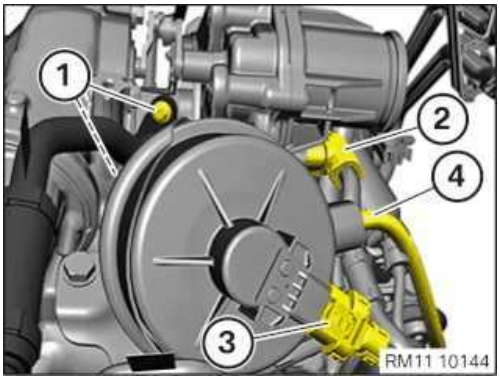
- Loosen screws (1) and (2).
- Remove coolant line (3).

8 – Removing the low-pressure stage turbocharger



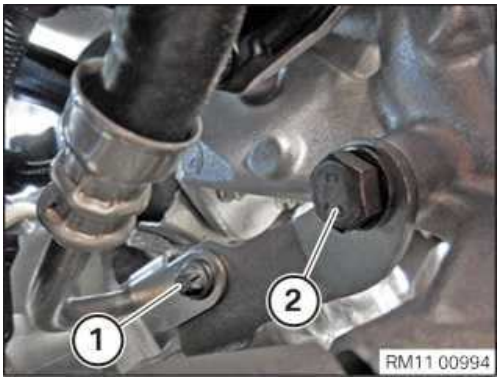
WARNING

Hot surfaces.



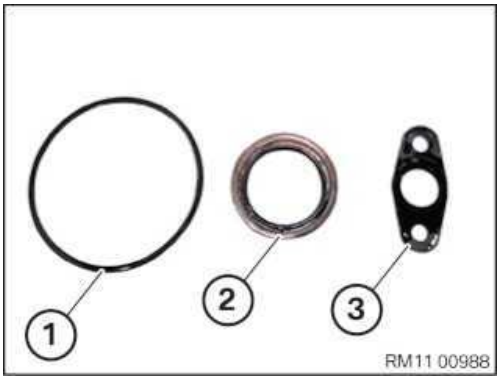
Risk of burning!

- Perform all work only on components that have cooled down.



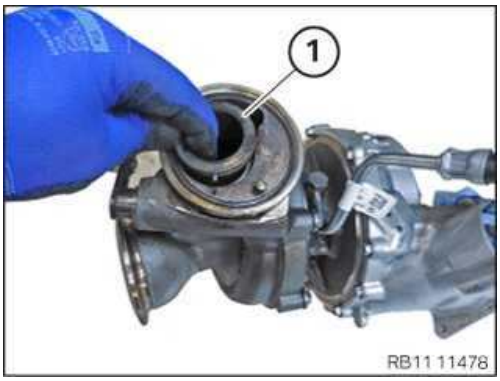
cardiagn.com

- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.



- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.

- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).



- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

cardiagn.com

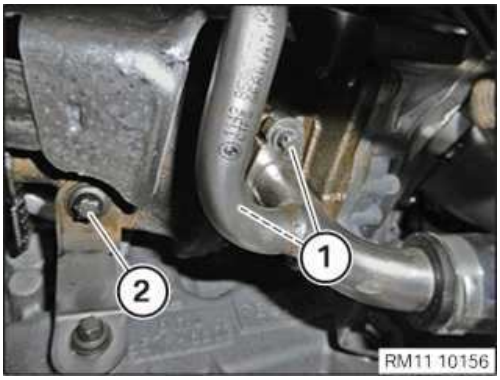
- Remove the spacer ring (1).

9 – Removing the high-pressure stage exhaust turbocharger

WARNING

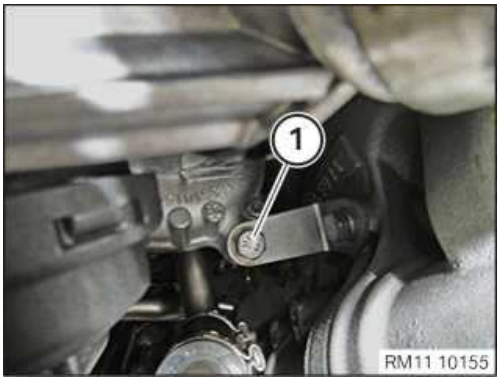
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

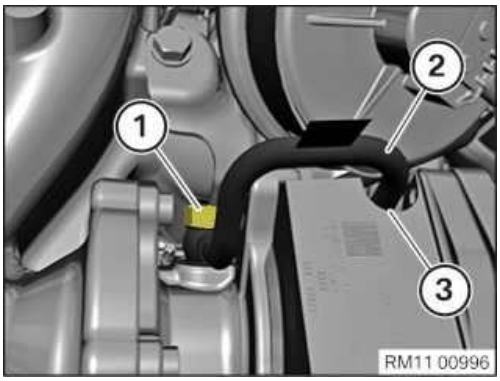
CAUTION



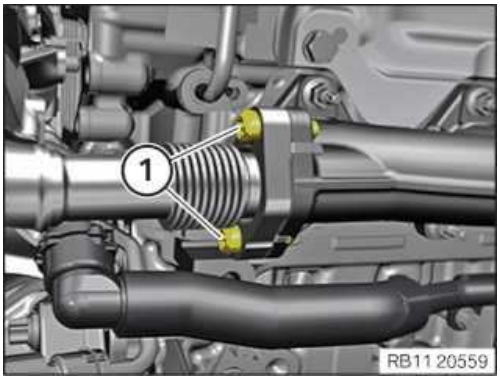
Heavy component.

Heavy components can lead to injury or damage.

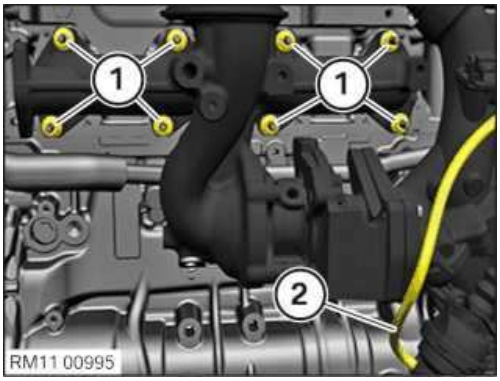
- Remove and install heavy components with the aid of another person/other persons.



- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).

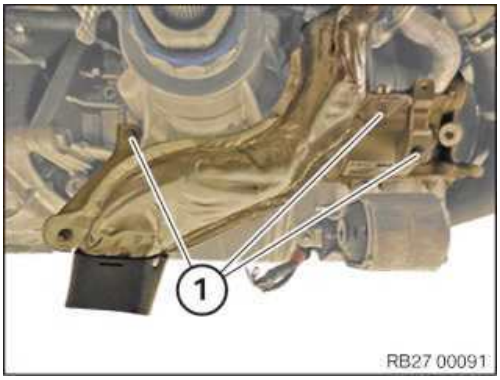


- Release screw (1) from the right wheel arch.

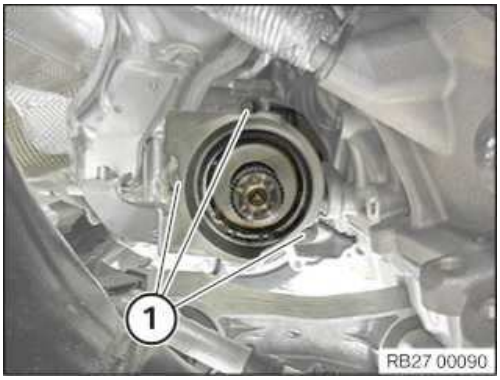


cardiagn.com

- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

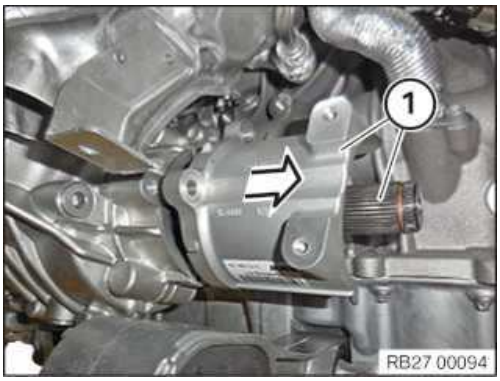


- Loosen screws (1).

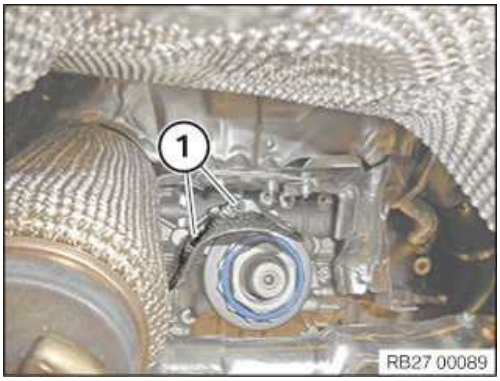


- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

10 – Remove the intermediate shaft with the support tube

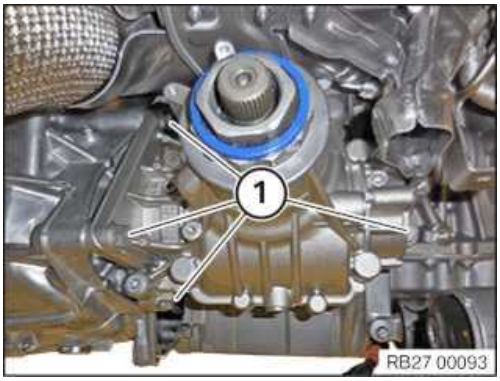


- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).

cardiagn.com



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

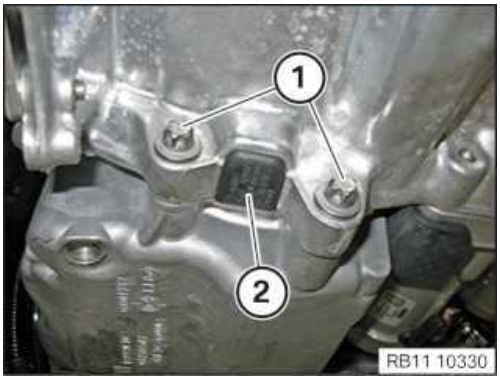
11 – Remove transfer box (VTG)

- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

12 – Detach the engine from the manual gearbox

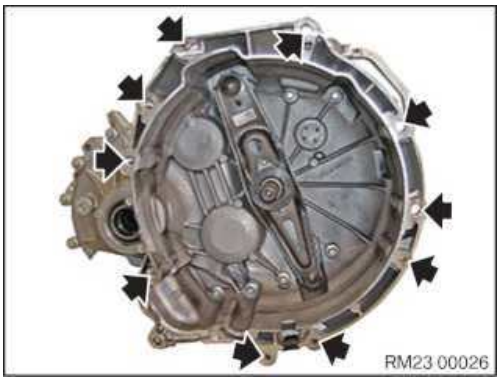
Prerequisite



Engine has been removed.

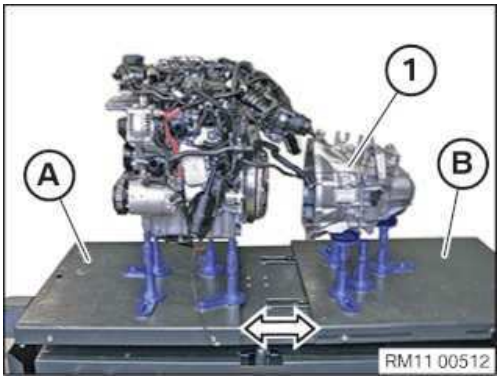
CAUTION

Heavy component.



Heavy components can lead to injury or damage.

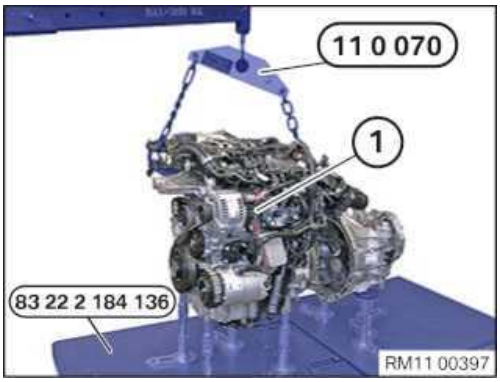
- Remove and install heavy components with the aid of another person/other persons.



- Loosen screws (1).
- Remove protective cap (2).

cardiagn.com

- Remove screws (arrows).



- Slide the table top (B) in the direction of the arrow and slide the manual gearbox (1) to the side.

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

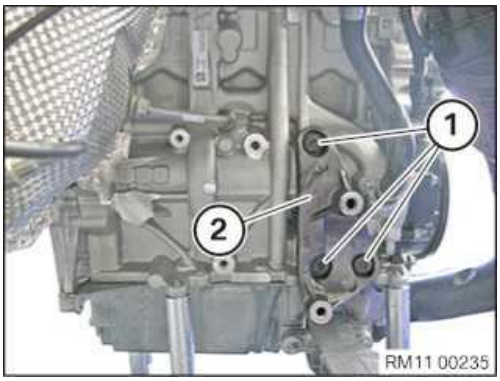
M8		Tightening torque	21,5 Nm

- Attach engine lifter to special tool and lift engine (1) off lifting table.

13 – Mount engine on assembly stand

CAUTION

Heavy component.



Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com

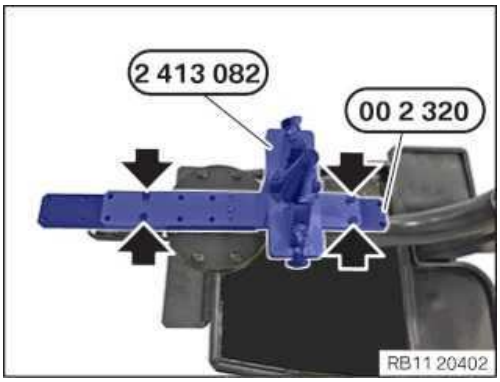
- Loosen screws (1).
- Guide out and remove holder (2).



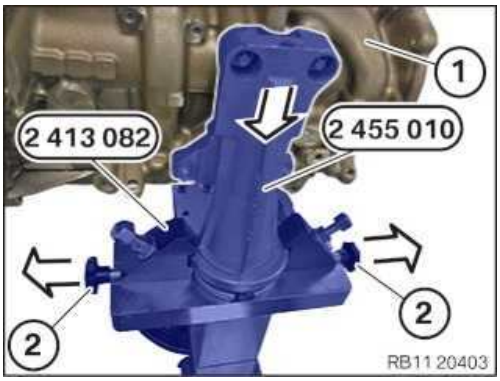
- Position the special tool **2 455 010** on the engine (1).
- Position the standard bolts **M10x30**.
- Tighten the standard bolts (arrows).
-

Special tool 2 455 010 to crankcase

M10x30		Tightening torque	38 Nm

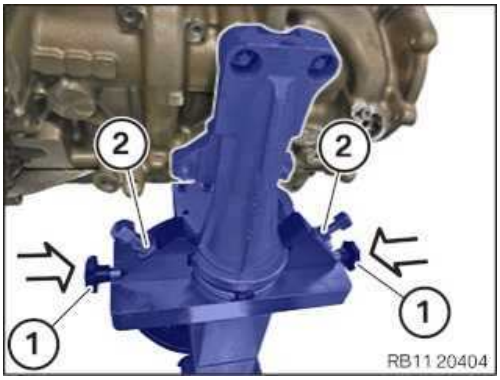
- Prepare the assembly stand **0 495 187 (00 2 300)** with the special tool **0 495 196 (00 2 320)**.

- Screw the special tool to the **0 495 196 (00 2 320)** special tool.
- Tighten screws (arrows).
-



Special tool 11 8 930 to special tool 00 2 320

M14x35		Tightening torque	160 Nm



- Position the engine lifter with the special tool and the engine on the special tool **0 495 187 (00 2 300)**.

cardiagn.com

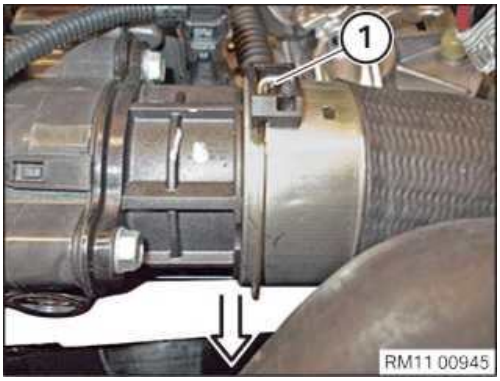
- Detach the holder (2) in the direction of the arrow.
- Position the engine (1) with the special tool **2 455 010** in the direction of the arrow on the special tool .

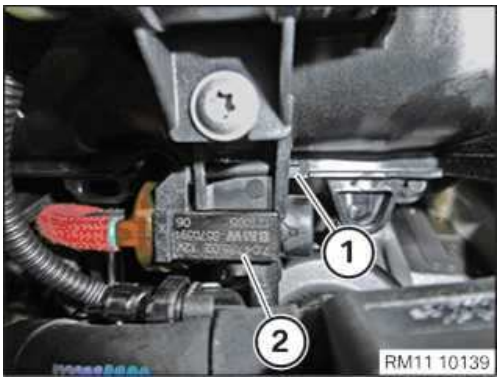
- Lock the holder (1) in direction of arrow.
- Tighten nuts (2).



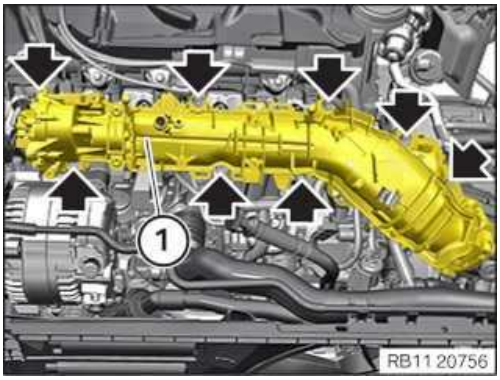
14 – Removing the intake plenum

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

cardiagn.com

- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

15 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

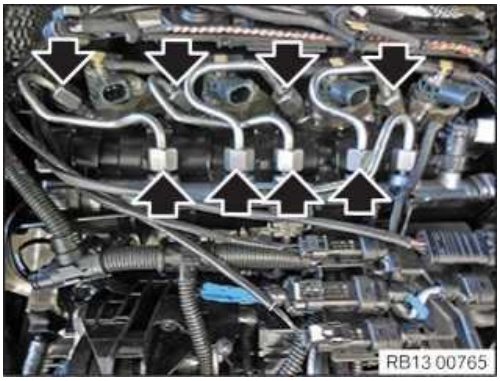
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION



If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

16 – Detaching leakage oil line from injector

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

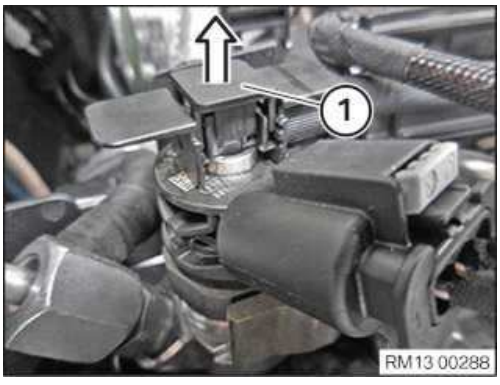
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE



Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

17 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

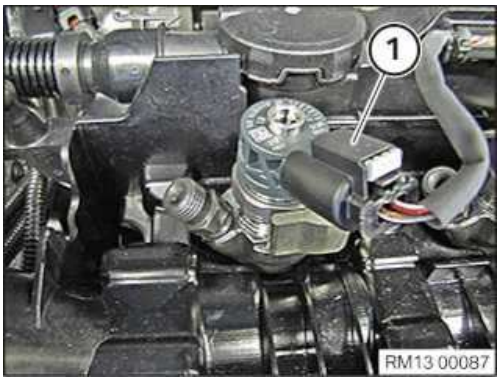
Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

 **Electrostatic discharge.**



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

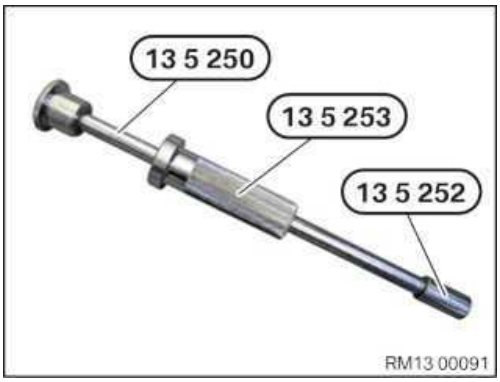
TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

- Unlock and disconnect connector (1).

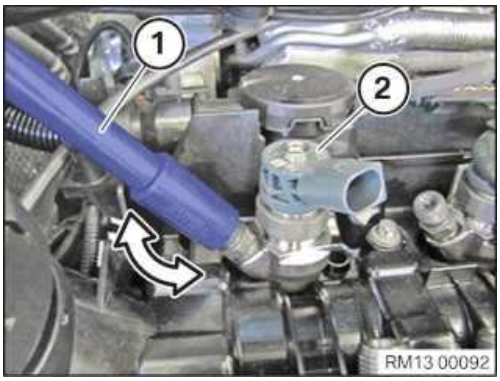
- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.



▶ **Loosen stuck injectors**

RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)** back onto the special tool **0 493 321 (13 5 250)**.

cardiagn.com

- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

18 – Remove high-pressure rail

WARNING

Working on fuel system.

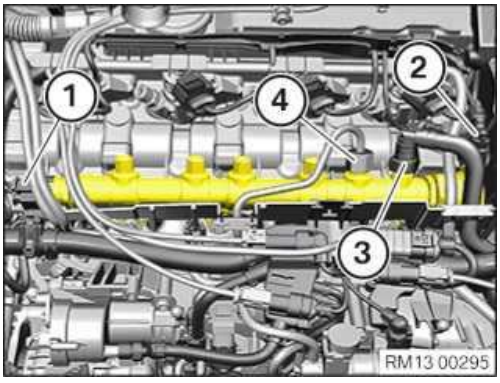
Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

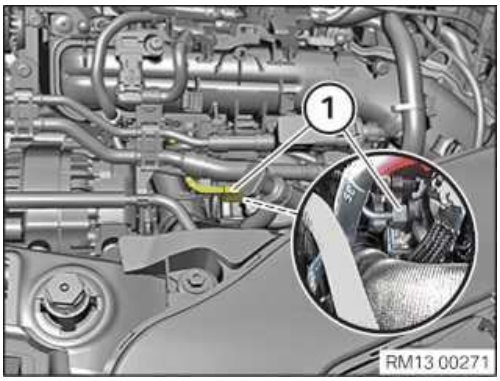
Contamination can result in malfunctions, operating failure or leaks.



- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

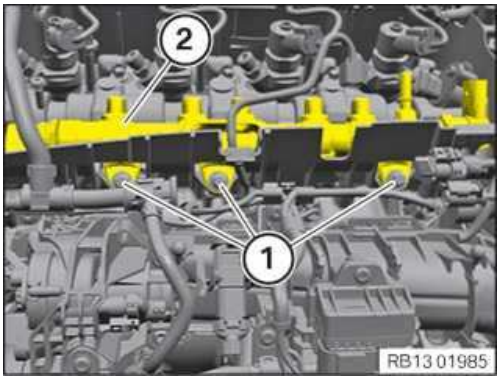
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Unlock and disconnect connector (1).
- Unlock and disconnect connector (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool .
- Reset special tool early on to avoid bending pressure lines.

cardiagn.com

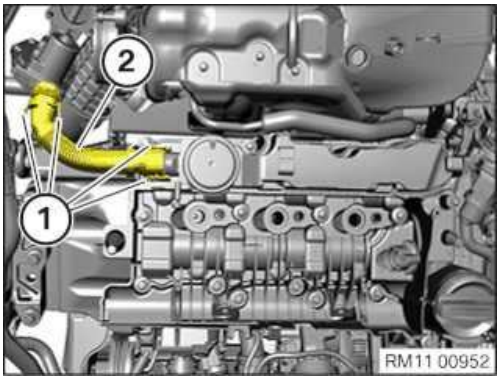
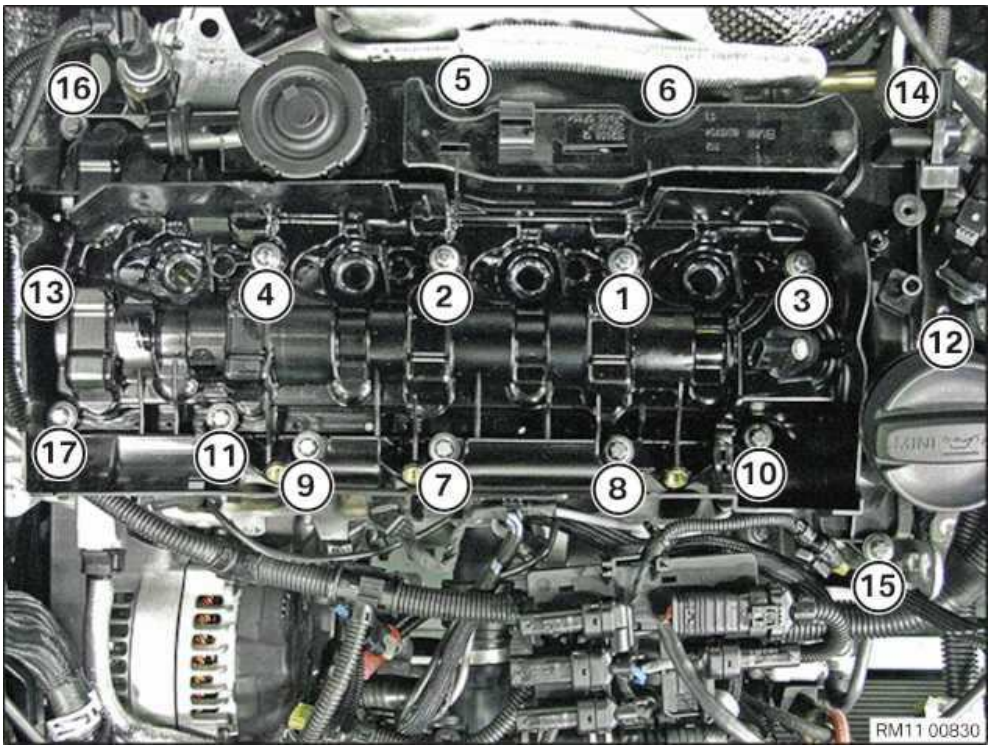
- Slacken the union nut (1) on the high pressure pump.



- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

19 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

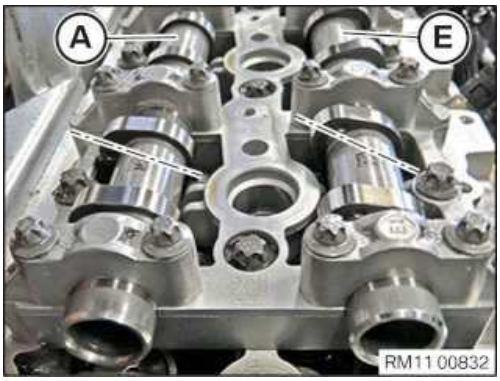
- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

20 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.



The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

21 – Remove chain tensioner piston

cardiagn.com

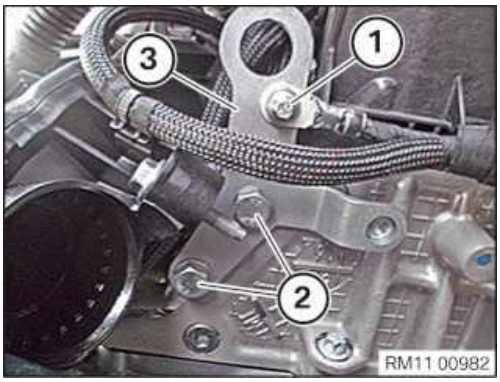
WARNING

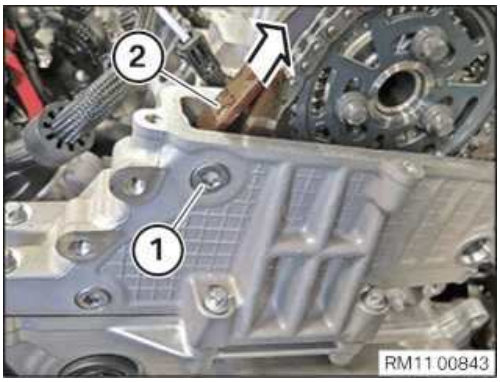
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



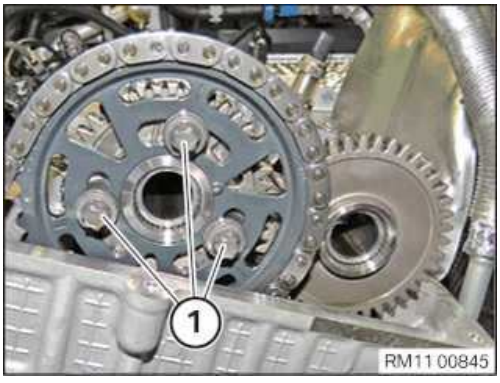
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

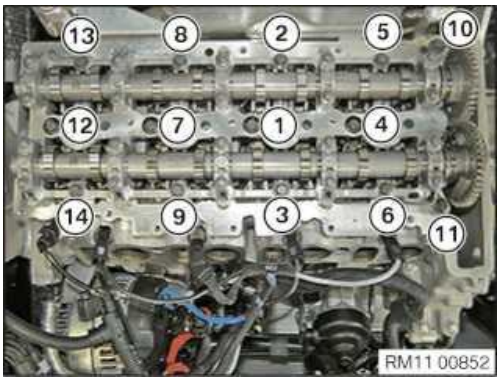
- Remove the chain tensioner piston (1).

22 – Remove the timing chain guide rail



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.



23 – Removing the camshaft sprocket on the intake camshaft

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

24 – Removing the camshaft support

cardiagn.com

- Evenly loosen all screws in a sequence from (14) to (1).
- Loosen and remove all screws in a sequence from (14) to (1).
  Both camshafts can be removed with the camshaft carrier.
- Remove the camshaft support including camshafts towards the top.

25 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

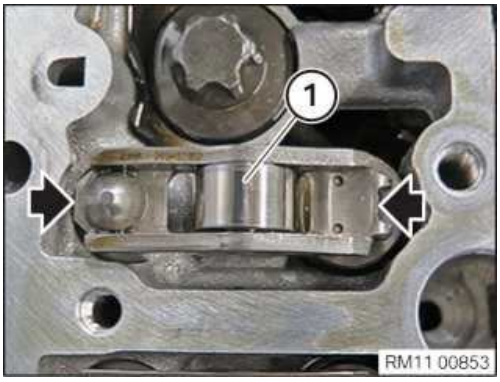
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool or conventional tools.
- Feed out preheating elements and remove.

26 – Remove roller cam followers

- Guide out and remove all roller cam followers (1) (arrows).
- Place all roller cam followers (1) in order in special tool **0 495 105 (11 4 480)**.

  Roller cam followers that have already been used must be installed in same position again.

27 – Removing the hydraulic valve clearance compensating element

cardiagn.com

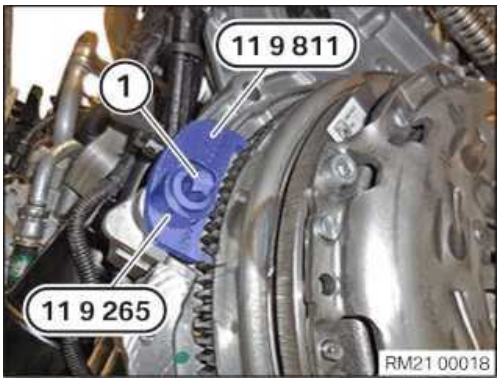
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

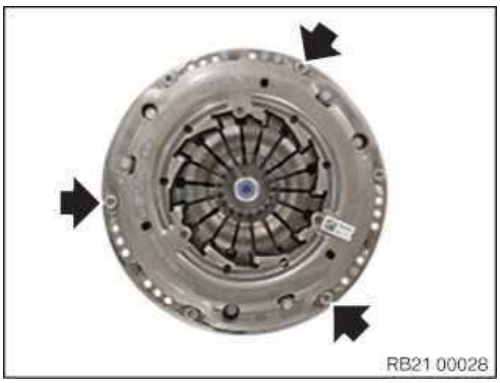
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.



28 – Remove clutch

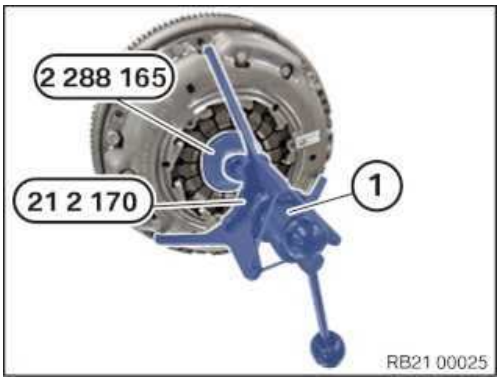
CAUTION



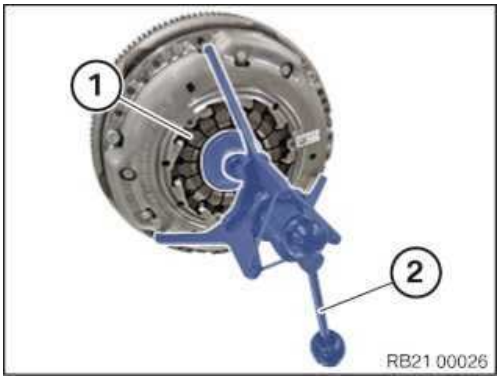
Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.



- Block flywheel with transmission bolt (1) and special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.



- Detach 3 screws to attach special tool and **2 288 165**.

cardiagn.com

- Position special tool and **2 288 165** and tighten on the knurled screw (1).

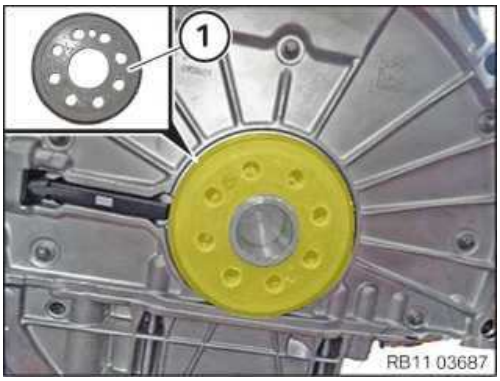
- Screw in the spindle (2) until the diaphragm spring (1) is preloaded and the clutch disc is free of tension.

- Loosen the remaining 3 screws and remove the clutch with clutch disc from the flywheel.

29 – Removing flywheel

CAUTION

Heavy component.



Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Secure the flywheel with a transmission bolt (1) and with special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.
- Unscrew the flywheel bolts with the special tool **0 491 018 (11 4 180)**.
- Remove flywheel.

cardiagn.com

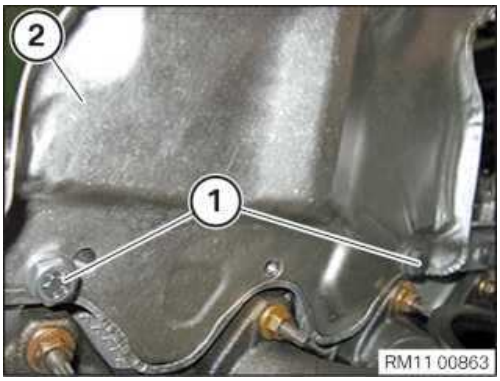
RISK OF DAMAGE

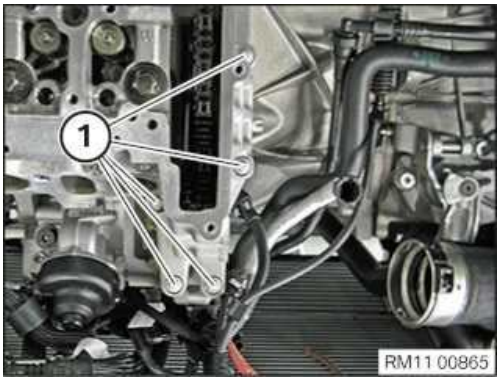
Electrostatic discharge.

Damage to or destruction of electrical components.



- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

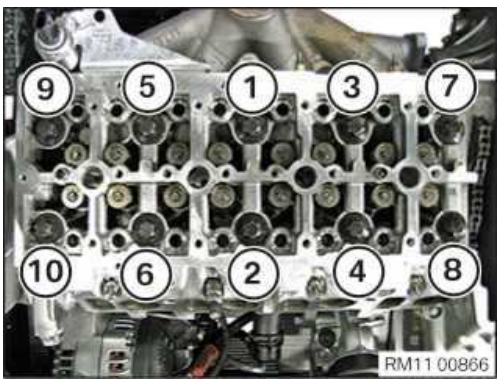
- Remove the increment wheel (1) from the crankshaft and lay it down correctly.



30 – Remove rear timing case cover

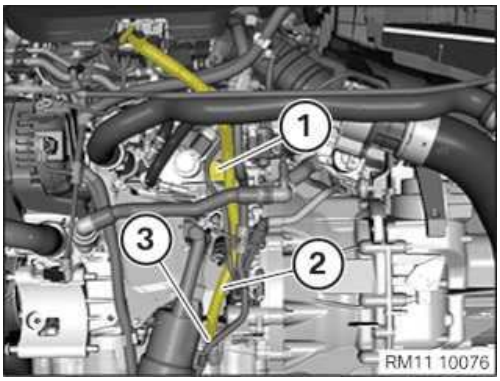
Prerequisite

Transmission is removed.



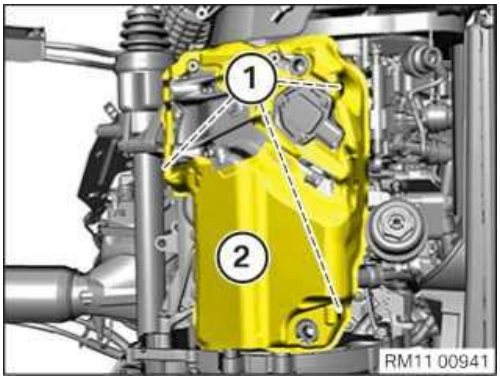
- Loosen screws (1).
- Feed out the heat shield (2) and place to one side.

TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).



- Loosen the cylinder head bolts in the sequence from (10) to (1).
- Remove cylinder head bolts (1) to (10) with washers.
- Remove cylinder head.

cardiagn.com

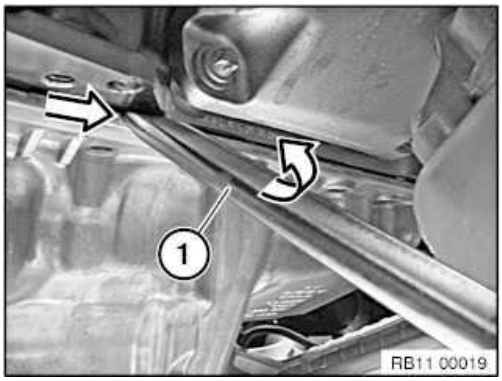
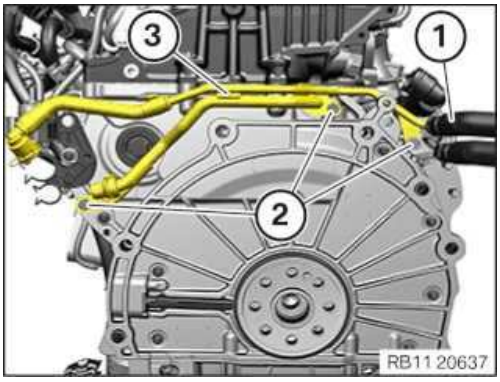
- Loosen screw (1).
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- Remove sealing ring (3) from oil sump if necessary.

- Expanding rivets (1) on both sides of the acoustic cover (2).
- Feed out and remove the acoustic cover (2).



- Loosen the transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).



- Release oil sump only in area (1).

cardiagn.com

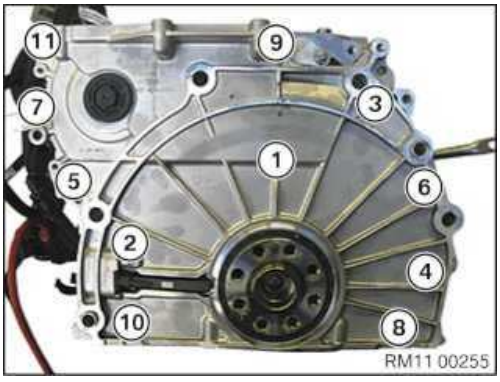
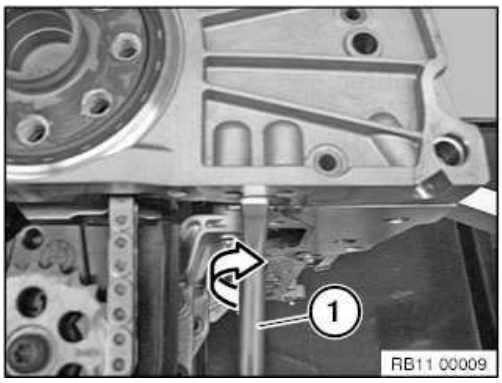
- Detach the oil sump with a suitable mounting lever (1) carefully at the point provided.
- Secure the oil sump against falling.

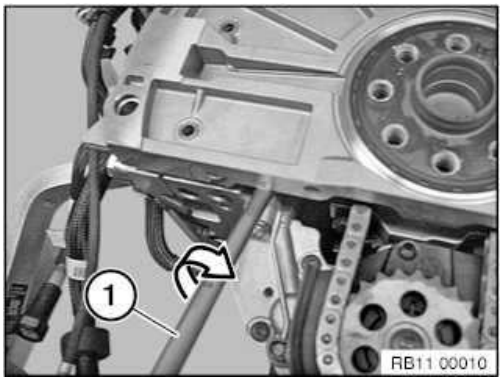


▶ **If installed: Remove coolant line of the SCR metering module**



- Unlock and disconnect the coolant hose (1).
- Loosen screws (2).
- Remove the coolant line (3).

- Loosen screw (1).
- Guide out and remove holder (2).



- Loosen screws in the order (11) to (1).

- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.

cardiagn.com

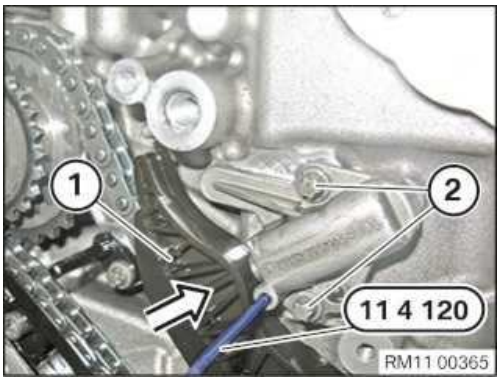
- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.
- Remove the timing case cover.

MAIN WORK



31 – Removing the hydraulic chain tensioner for the bottom timing chain

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

- Press the hydraulic chain tensioner with tensioning rail (1) by hand in the direction of the arrow until the special tool **0 491 012 (11 4 120)** can be positioned.
- Loosen screws (2).
- Remove hydraulic chain tensioner.

32 – Installing the hydraulic chain tensioner for the bottom timing chain

CAUTION

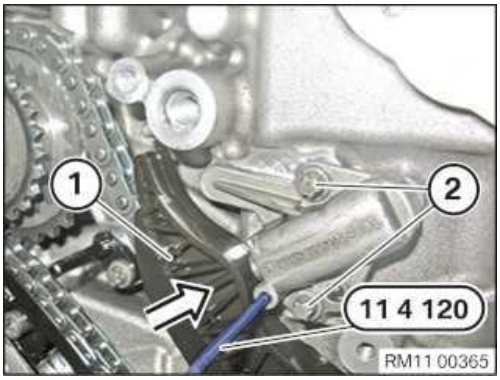
Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

cardiagn.com

CAUTION



Swirling dirt particles caused by compressed air.

Danger of injury!

- Collect dirt particles, e.g. when blowing out, use cloth to do so.

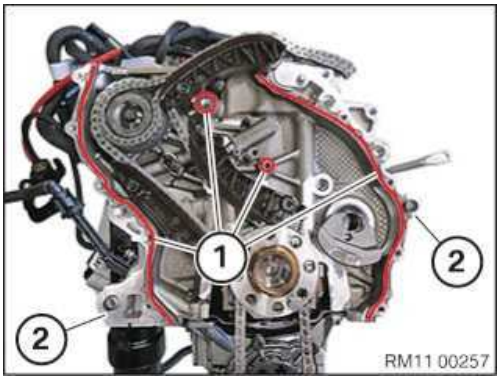
- Wear safety goggles.

- Clean sealing surfaces (1) with compressed air.

- Install the hydraulic chain tensioner.
- Tighten down screws (2).

Hydraulic chain tensioner to crankcase

M6x22		Tightening torque	9 Nm



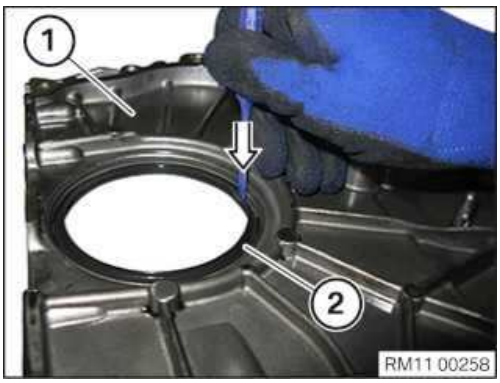
- Press the hydraulic chain tensioner with tensioning rail (1) in the direction of the arrow and remove the special tool **0 491 012 (11 4 120)**.

POSTPROCESSES

33 – Install the rear timing case cover

Prerequisite

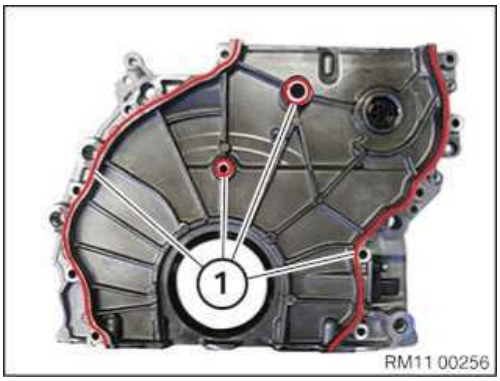
Transmission is removed.



RISK OF DAMAGE

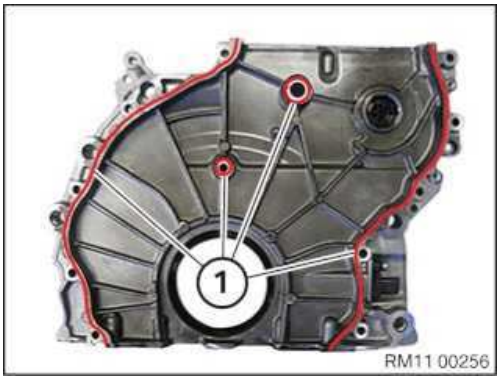
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



- Do not use any metal-cutting tools.

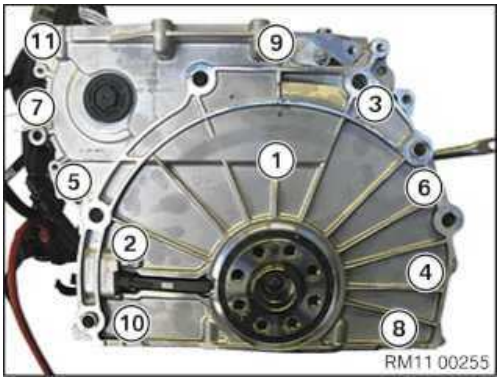
- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.
- Check fitting sleeves (2) for damage and for tight fit; renew if necessary.



- Position the timing case cover (1) underneath.
- Position punch on inner side of crankshaft seal (2).
- Drive out crankshaft seal (2) outwards.

cardiagn.com

- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.



TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Apply sealing bead (1) with a height of approx. 1.5 mm to 2.0 mm on inner side of timing case cover in marked locations. Use liquid sealing compound for this.

  Application time of sealing bead (1) must not exceed 12 minutes.

- Mount the timing case cover without the crankshaft seal.
- Renew screws (1) to (11).

  Parts: Bolts
- Join the bolts in with the sequence (1) to (11).
- Tighten screws in the order (1) to (11).

Rear timing case cover to crankcase

M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

▸ **Installing the rear crankshaft seal**

RISK OF DAMAGE

Radial shaft seal damage.

Touching the sealing lip (inner) on the radial shaft seal with the sharp-edged connector gearing of the output shaft will result in destruction and/or leaks.

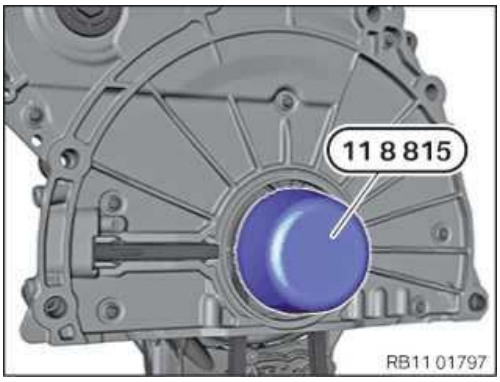
- When inserting the output shaft, make sure that the connector gearing of the output shaft does not touch the sealing lip (inner) of the radial shaft seal.

RISK OF DAMAGE

Radial shaft seal damage.

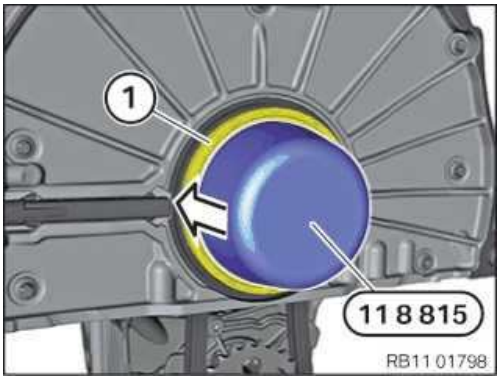
Touching the sealing lip (inner) and applying oil to the radial shaft seal will lead to its destruction.

- Do not touch the sealing lip (inner) of the radial shaft seal.
- Do not apply oil to the radial shaft seal.
- Install the radial shaft seal dry.



cardiagn.com

RISK OF DAMAGE



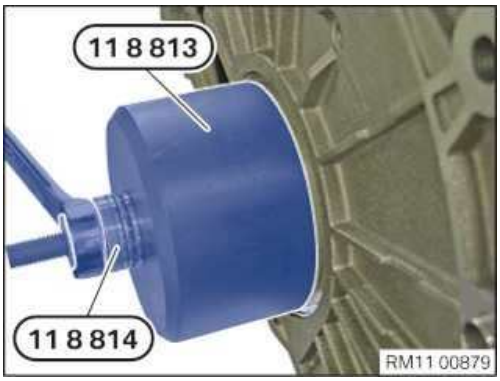
Electrostatic discharge.

Damage to or destruction of electrical components.

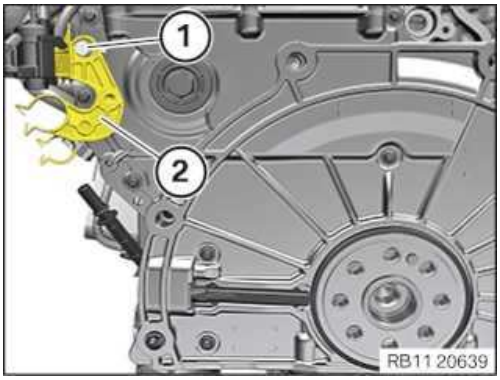
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Position special tool **0 496 137 (11 8 815)** on crankshaft. Make sure that the crankshaft sensor is not damaged.

- Fit the crankshaft seal (1) up to the timing case cover in the direction of the arrow using special tool **0 496 137 (11 8 815)** and position.
- Remove special tool **0 496 137 (11 8 815)**.



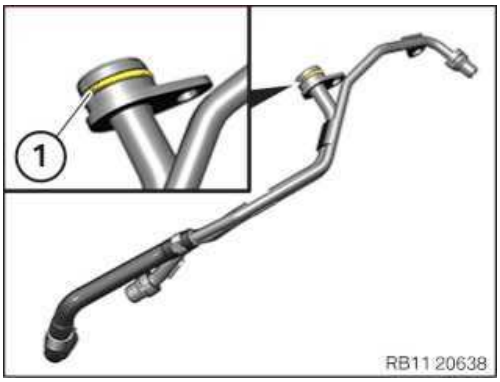
- Secure special tool **0 496 133 (11 8 811)** to the crankshaft using special tool **0 496 134 (11 8 812)**.



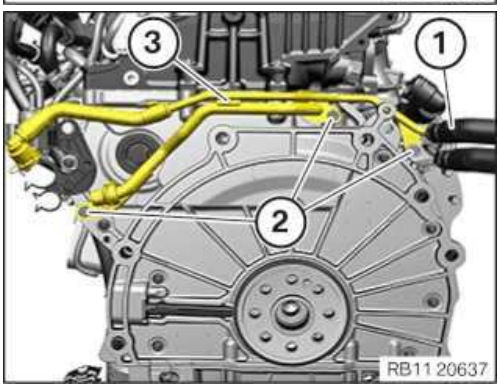
- Check the freedom of movement between the special tool **0 496 135 (11 8 813)** and the crankshaft sensor during installation.

  Otherwise there is a risk that the crankshaft sensor will be damaged.
- Slide on special tool **0 496 135 (11 8 813)**.
- Screw down special tool **0 496 136 (11 8 814)**.

cardiagn.com



- Press in crankshaft seal with special tool **0 496 135 (11 8 813)**.
- Screw in special tool **0 496 135 (11 8 813)** up to timing case cover.



- Insert and install the holder (2).

▶ **If installed: Installing the coolant line of the SCR metering module**

- Renew the O-ring 1.

  Parts: O-ring

- Feed in and install coolant line (3).
- Tighten down screws (2).

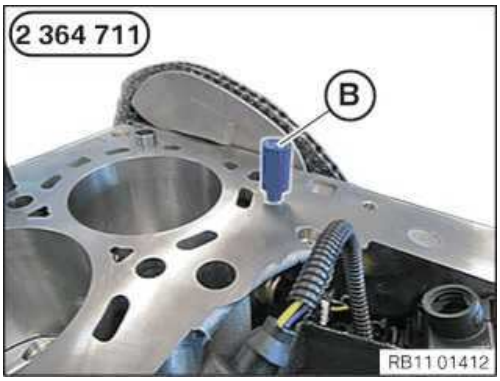
SCR coolant lines to crankcase end cover

Hexagon screw M6x16		Tightening torque	8 Nm

- Connect and lock the coolant line (1).

  Coolant line (1) must audibly engage.

▶ **Cleaning the sealing surface**



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

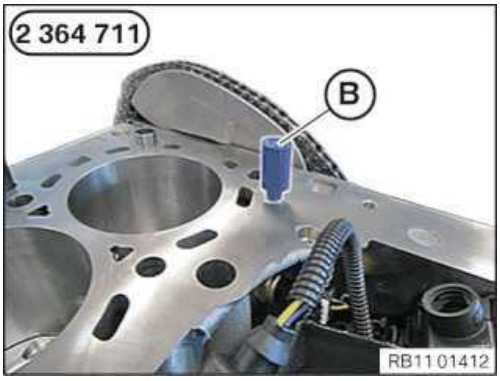
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

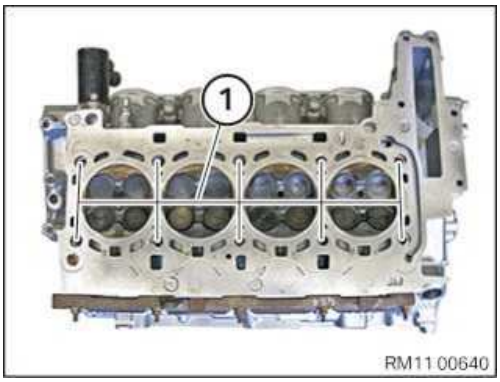
- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.



RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



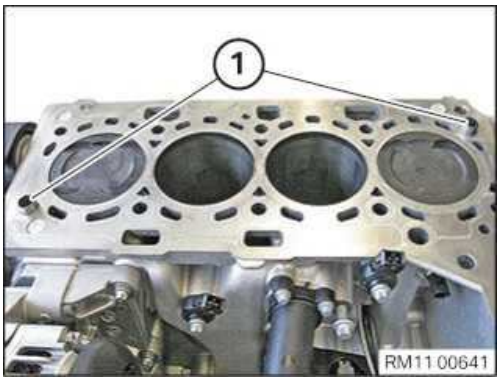
- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.

- Remove special tool (B).

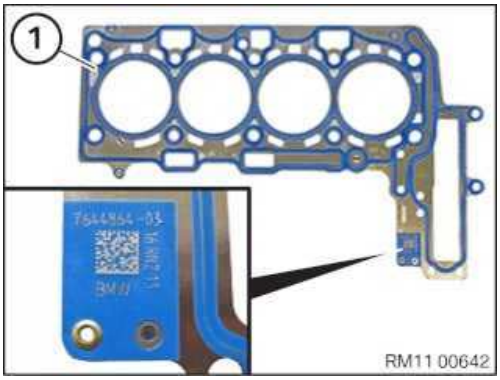
▸ **Renewing the cylinder head gasket**

RISK OF DAMAGE



Damage to the surface.

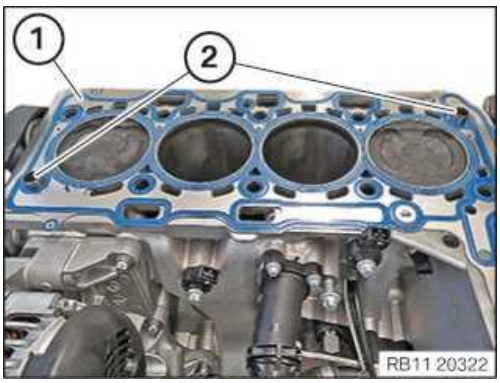
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



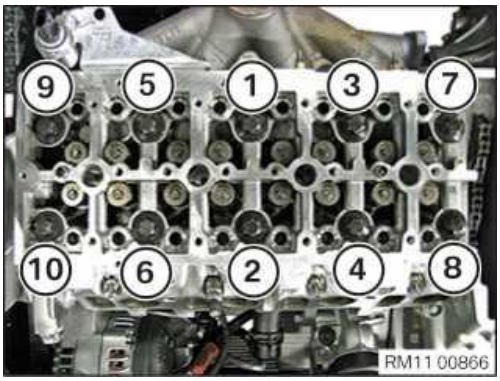
- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).

cardiagn.com



- Check the fitting sleeves (1) for secure fit and damage.



- Identify the cylinder head gasket (1) using the part number.

Note: If the cylinder head is reworked, an additional thicker gasket 0.3 mm is available for service personnel.

- Guide in the cylinder head gasket (1) and install.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Damage to threads.

Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION

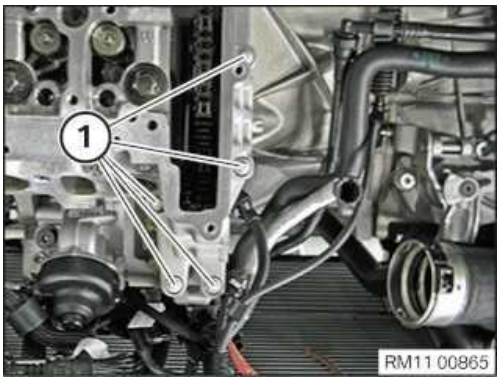
Do not remove bolt coating.

- Renew the cylinder head bolts (1).

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  No coolant, water or engine oil must be present in threaded holes of engine block.

TECHNICAL INFORMATION



When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in cylinder head bolts in sequence (1) to (10).
- Tighten cylinder head bolts using special tools **0 490 504 (00 9 120)** and in sequence (1) to (10).

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

cardiagn.com

- Tighten the cylinder head bolts (1).

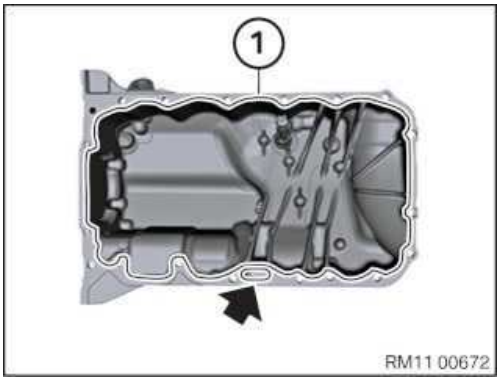
Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

-

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Remove fine sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

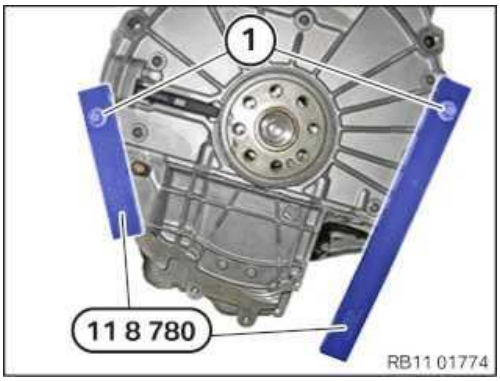
- Remove coarse sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- Apply the sealing compound along the line (1) with a thickness of 2 mm to 2.5 mm.

  Apply the sealing compound along the inner edge.

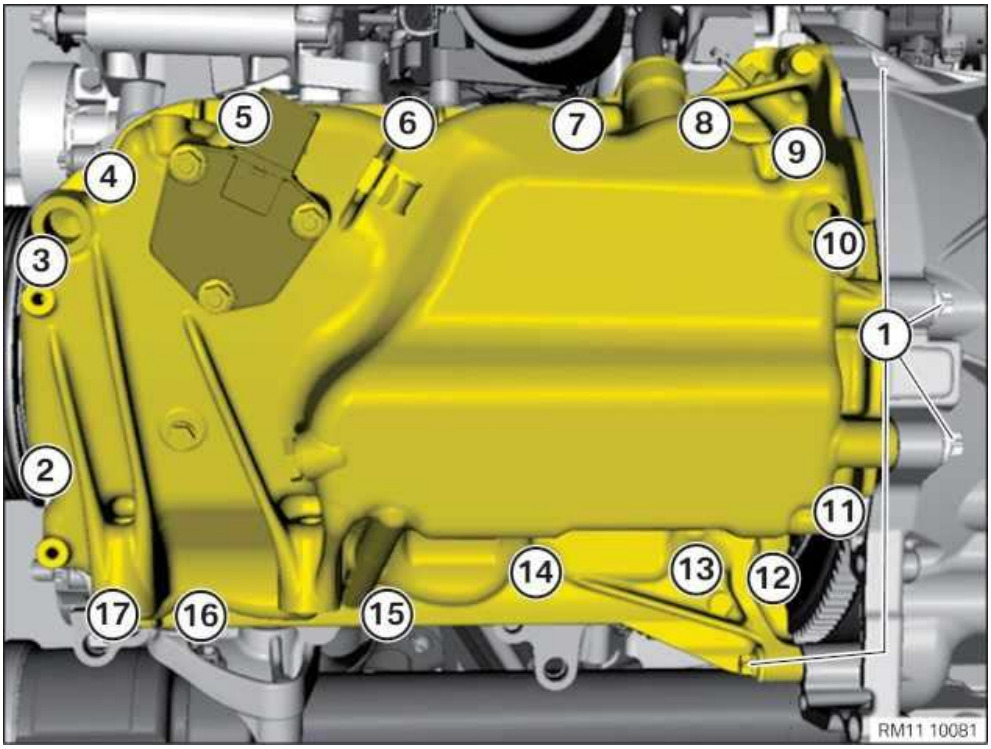


Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

- Completely encircle the oil return orifice (arrow) with the sealing compound.



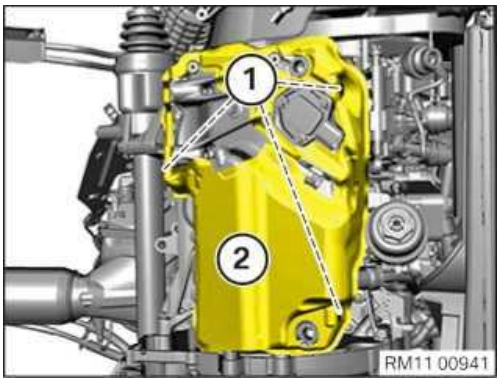
cardiagn.com

TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- If necessary, renew fitting sleeves.

- Position and install oil sump.
- **Hand-tighten** oil sump screws (2) to (17) but do **not** tighten completely.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws(2) to (17) of the oil sump.



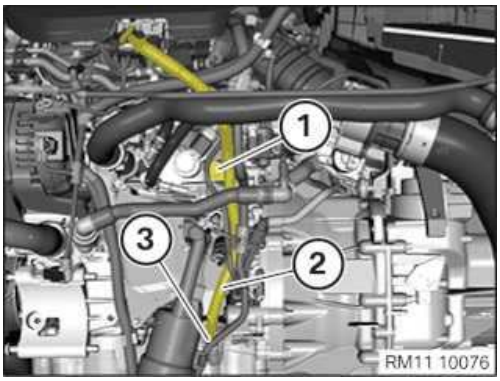
Oil sump to crankcase

M8x30		Tightening torque	2 Nr
M8x110		Tightening torque	2 Nr

- Tighten transmission bolts (1) on oil sump.

Transmission to oil sump

M8		Tightening torque	1 Nr



- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).

- Renew O-ring (1).

  Parts: O-ring

cardiagn.com

- Guide in guide tube (2) for oil dipstick and insert it into oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

Guide tube for oil dipstick on engine

M8x16		Tightening torque	19 Nm

34 – Installing the flywheel

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

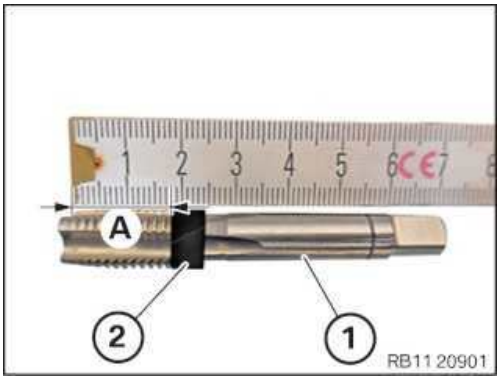
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

Clean all threads with a screw tap.

- Clean all screw threads (1).

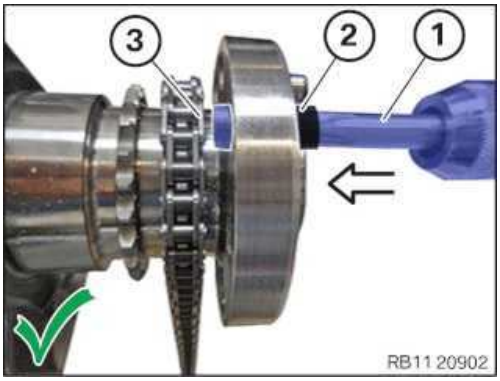
- Use the set of special tools **2 285 058**.



Description
Twist drill
Thread cutter M12x1.5
Depth
Insertion tool

cardiagn.com

- Assemble tool set.



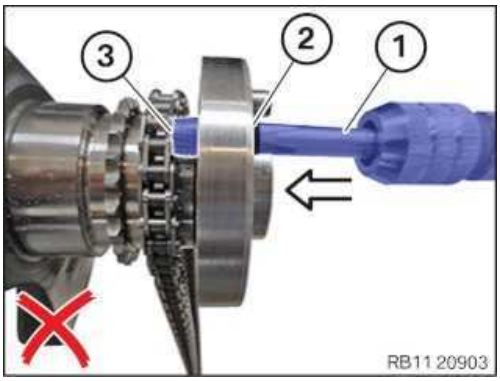
Number	Description
1	Tool holder
2	Thread cutter M12X1,5

- Mark the screw-in depth (A) on thread cutter (1) from the set of special tools **2 285 058** with a standard tool (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm

NOTICE



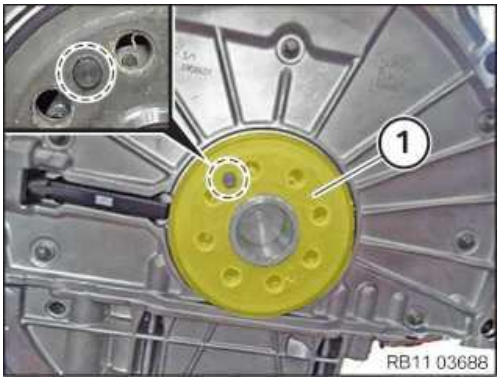
To provide a better overview: Shown with engine removed.

- Screw in the thread cutter (1) from the set of special tools **2 285 058** in direction of arrow up to the screw-in depth (2).

Screw-in depth of thread cutter

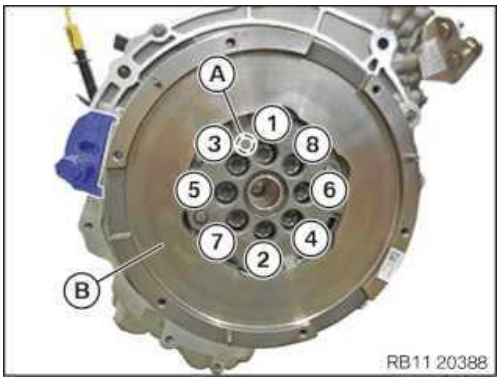
Screw-in depth	18 mm

- Make sure that the thread cutter does (1) **not** rest on the timing chain (3).



TECHNICAL INFORMATION

- **Carefully** handle the timing chain, to protect the timing chain and timing chain drive against damage.

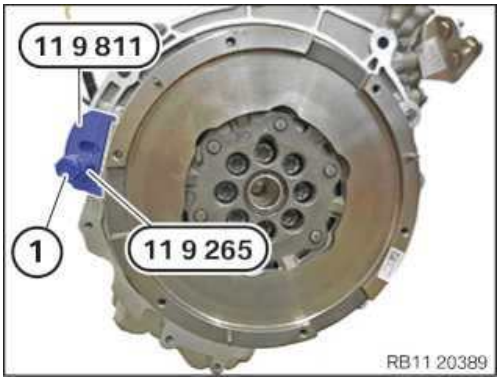


- Make sure that the screw-in depth (2) of the screw tap (1) is not exceeded.

  The thread cutter (1) may not rest on the timing chain (3).

- During the installation, note the mark shown without fail.
- Install special tool (1) on the crankshaft as shown.

cardiagn.com



- Position flywheel (B) .
- Renew flywheel bolts (1) to (8).

  Parts: Flywheel bolts
- Tighten flywheel bolts hand-tight with special tool **0 491 018 (11 4 180)**.
- Observe tightening sequence. While doing so, begin with dowel pin (A).
- Tighten the flywheel bolts using the special tool **0 491 018 (11 4 180)** in sequence (1) to (8).

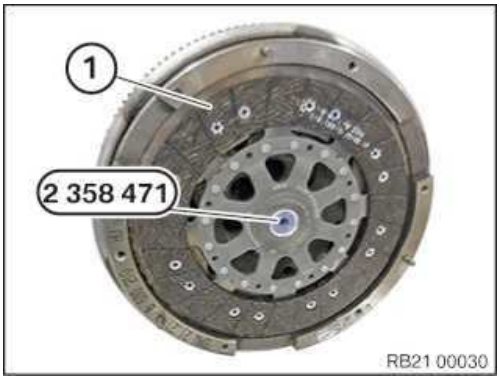
Flywheel to crankshaft

M12x1.5	Renew screws.	Tightening torque	120 Nm

- Loosen the transmission bolt (1).
- Feed out and remove special tools **0 494 793 (11 9 265)** and **0 496 171 (11 9 811)** with the **standard** (5 mm) washer.

35 – Install clutch

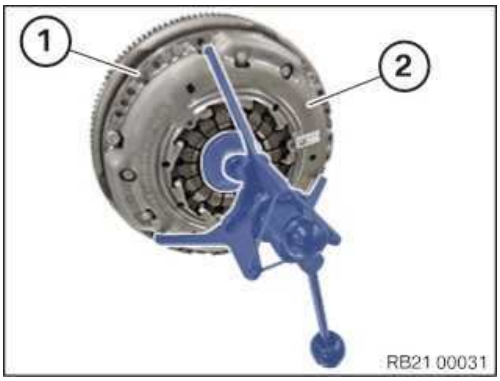
CAUTION



Materials harmful to health.

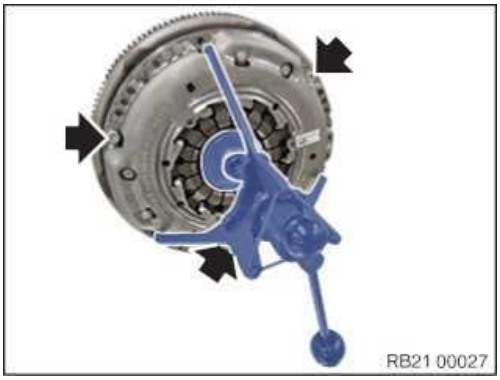
Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.



TECHNICAL INFORMATION

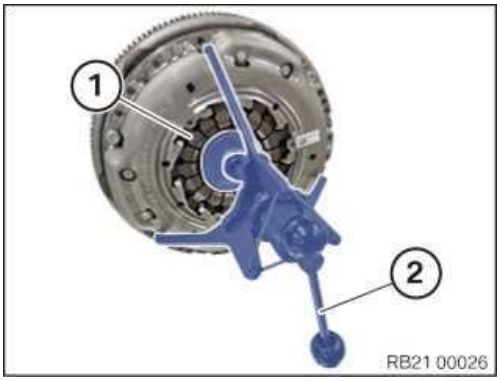
Handle the clutch disc carefully. Install the surfaces of the clutch disc in the correct mounting orientation.
Clean friction surfaces of the flywheel and the pressure plate with BMW-approved brake cleaner.
Note designation for ”engine side” / ”transmission side”.



- Centre the clutch disc (1) using special tool .

cardiagn.com

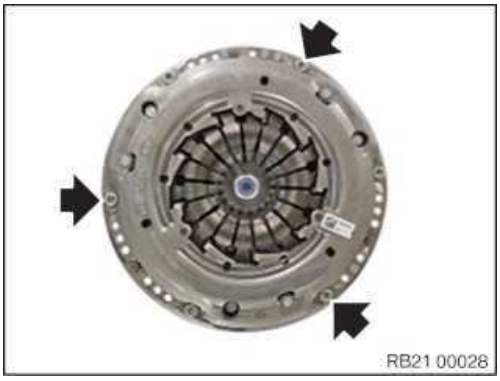
- Mount the clutch (2) together with the special tool to the flywheel.
- Observe the dowel pins (1).
- The clutch (2) must be secured via the dowel pins (1).



- Renew the bolts (arrows).

  Parts: Bolts
- Install and tighten screws (arrows).

Clutch to flywheel



M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

- Loosen the spindle (2) until the diaphragm spring (1) is fully relieved.

- Unscrew the knurled screw (1) and remove the special tool with **2 288 165** from the clutch.

- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Clutch to flywheel

M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

cardiagn.com

- Withdraw special tool from clutch disc with aid of accompanying screw.

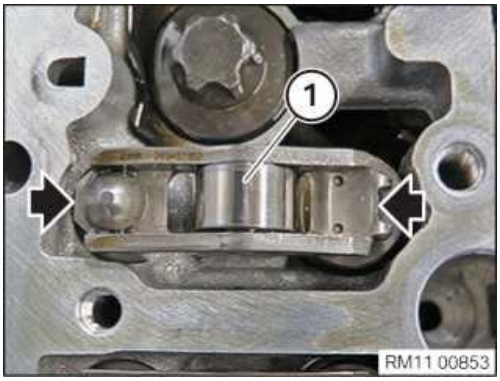
36 – Installing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

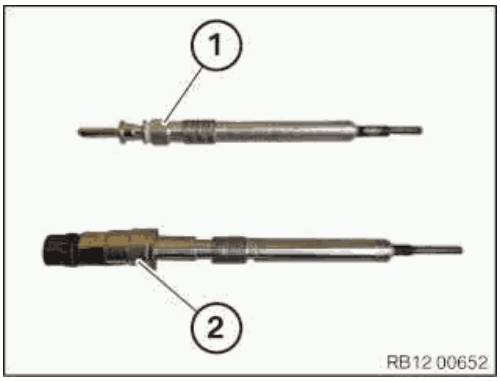


- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

37 – Install the roller cam followers

TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.



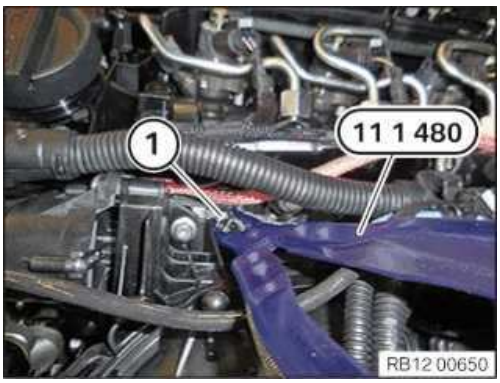
- Check all roller cam followers (1) for damage and replace if necessary.

  Parts: Roller cam followers
- Insert and install all roller cam followers (1).

  Roller cam followers (1) that have already been used must be installed in the same place.
- Note the mounting orientation of the roller cam followers (1).
- Oil all roller cam followers (1).

38 – Install glow elements

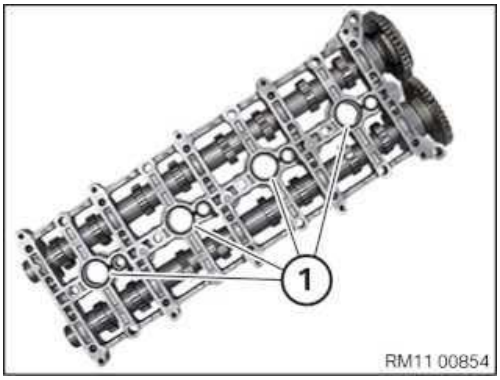
cardiagn.com



- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

- Tighten the glow element with the special tool or conventional tools.

Glow elements to cylinder head



Glow element		Tightening torque	13 Nm

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

39 – Installing the camshaft support

- Renew gaskets (1).

  Parts: gaskets

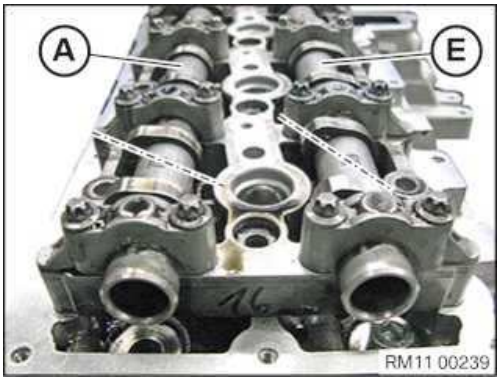
- Position the camshaft support including the camshafts.
- Tighten the screws in a sequence from (1) to (14) in several steps.

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

40 – Adjusting the timing of the camshafts

cardiagn.com

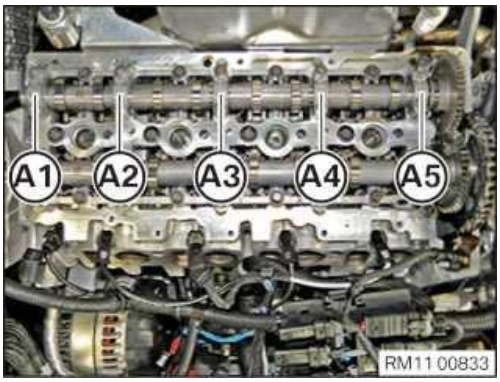


- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

- Slide the special tool **2 288 380** completely into the bore hole of the oil sump.
- Use the special tool to block **2 288 380** the crankshaft in the TDC firing position at the first cylinder.

- The cam of the intake camshaft (E) at the first cylinder points up at an angle.
- The cam of the exhaust camshaft (A) at the first cylinder points outward at an angle.



▸ **Remove exhaust camshaft.**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

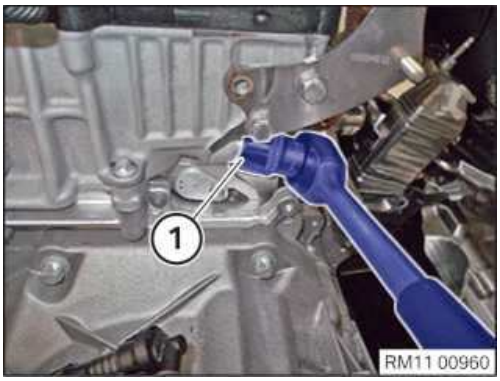
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A5) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components on special tool **0 495 105 (11 4 480)** in a tidy and orderly fashion.

cardiagn.com



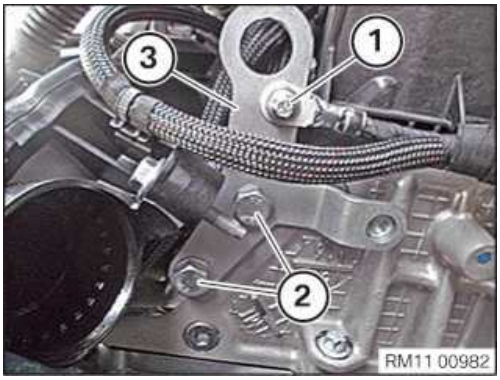
▶ **Remove chain tensioner piston**

WARNING

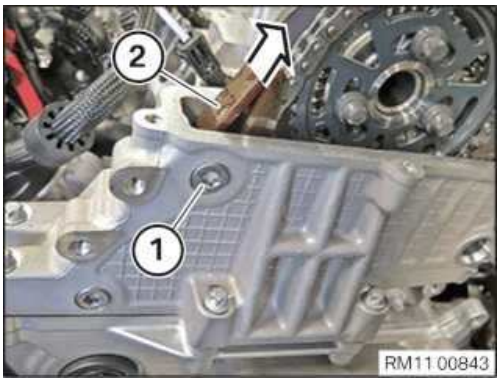
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



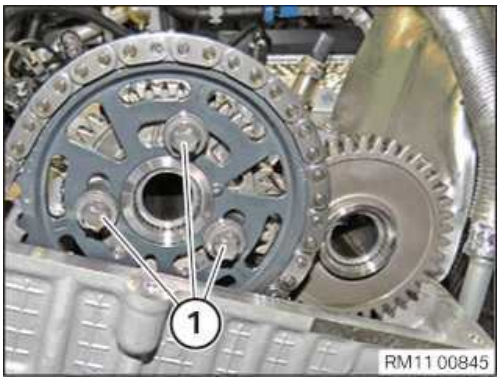
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

▶ **Remove the timing chain guide rail**



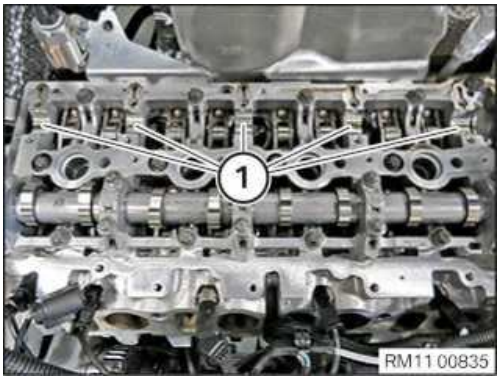
- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

▶ **Removing the camshaft sprocket on the intake camshaft**

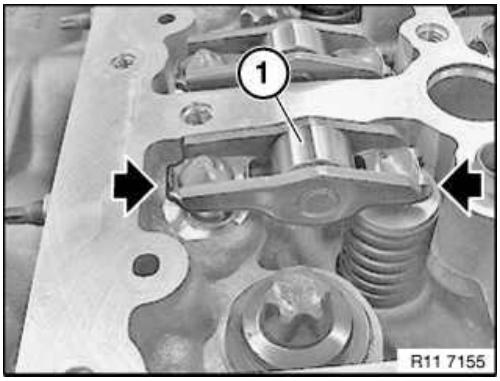
- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

cardiagn.com



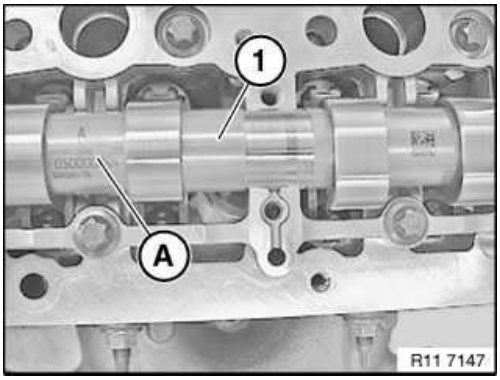
▶ **Install exhaust camshaft**

RISK OF DAMAGE

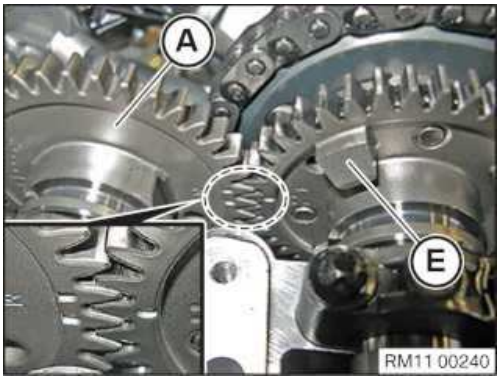


Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

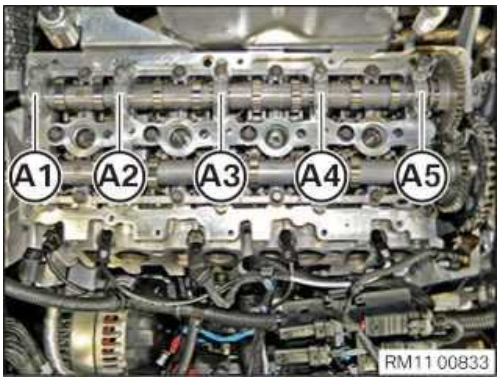


- Comply with the regulations for the installation and disassembly.
- Perform work with care.



- Oil all bearing positions (1).

- Make sure the roller cam followers (1) have the correct mounting orientation.



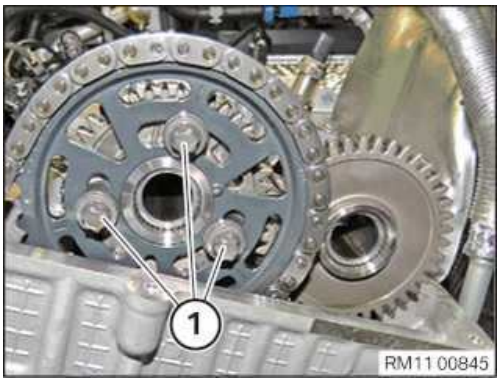
- Insert exhaust camshaft (1) so that the identification (A) points upwards.

- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.

cardiagn.com

- Tighten all exhaust camshaft bearing caps (A1) to (A5) from the inside to the outside by 1/2 a turn at a time.

Intake and exhaust camshaft in camshaft support



M6x31		Tightening torque	10 Nm

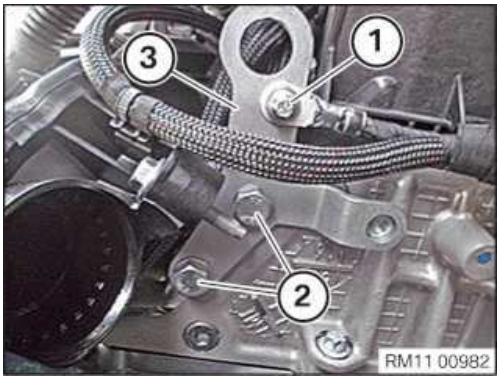
- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

  Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

▶ **Installing the camshaft sprocket on the intake camshaft**

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

▶ **Install the timing chain guide rail**



- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6			8 Nm

cardiagn.com

▶ **Installing the chain tensioner piston**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

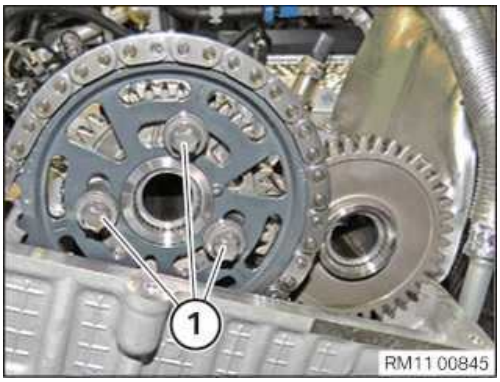
- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

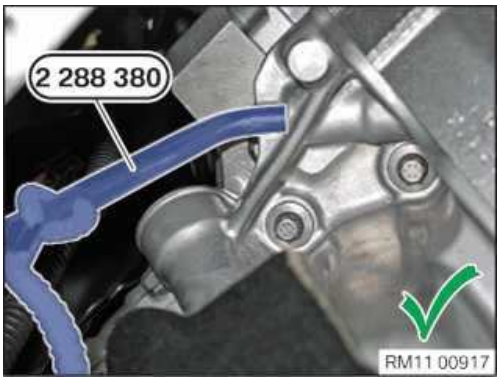


- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

▶ **Tightening the camshaft sprocket on the intake camshaft**



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

41 – Removing the special tool to disconnect the crankshaft

cardiagn.com

- Remove special tool **2 288 380**.

42 – Removing the special tool to secure the exhaust camshaft

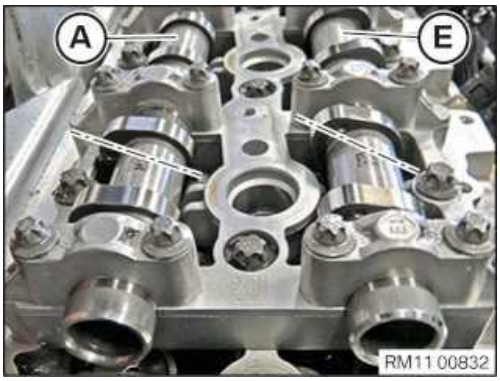
- Remove the special tool **0 496 112 (11 8 760)** to fix the exhaust camshaft.

43 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

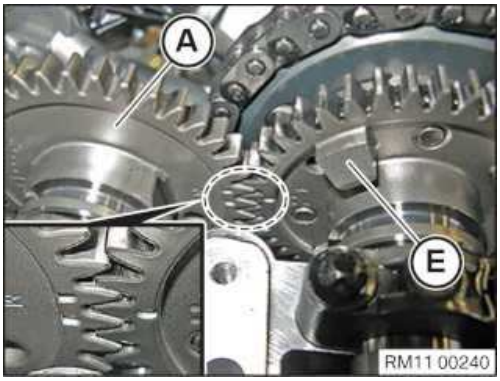


The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

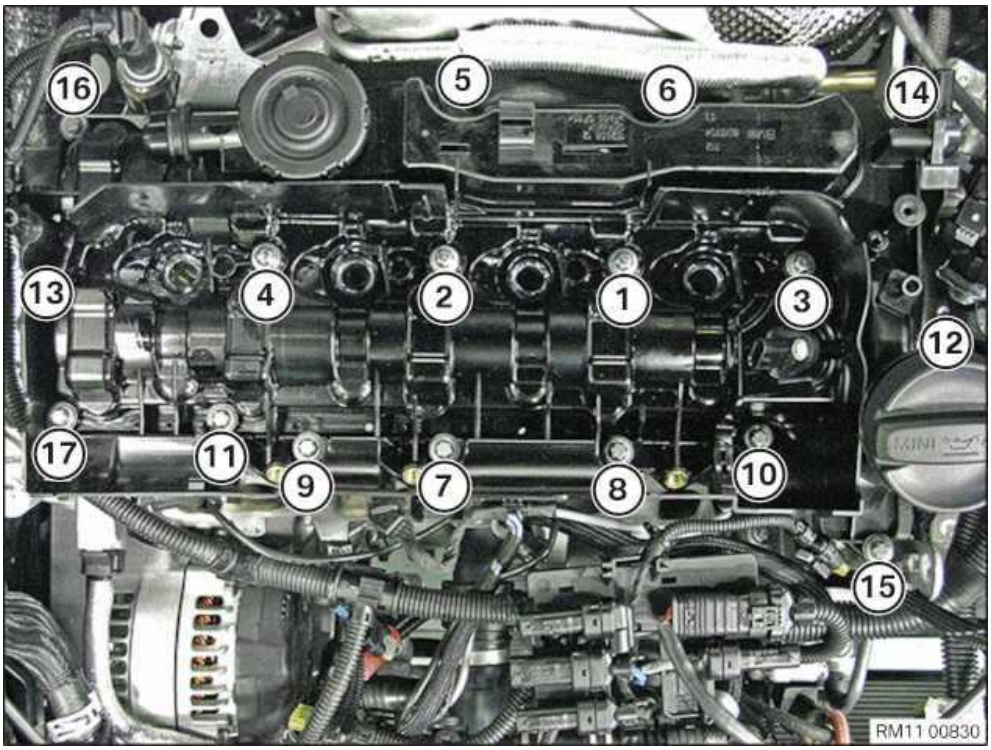
- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

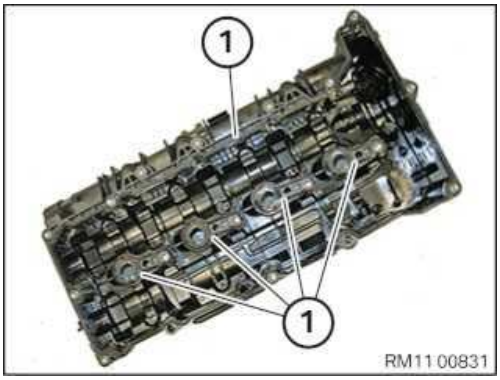
TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.



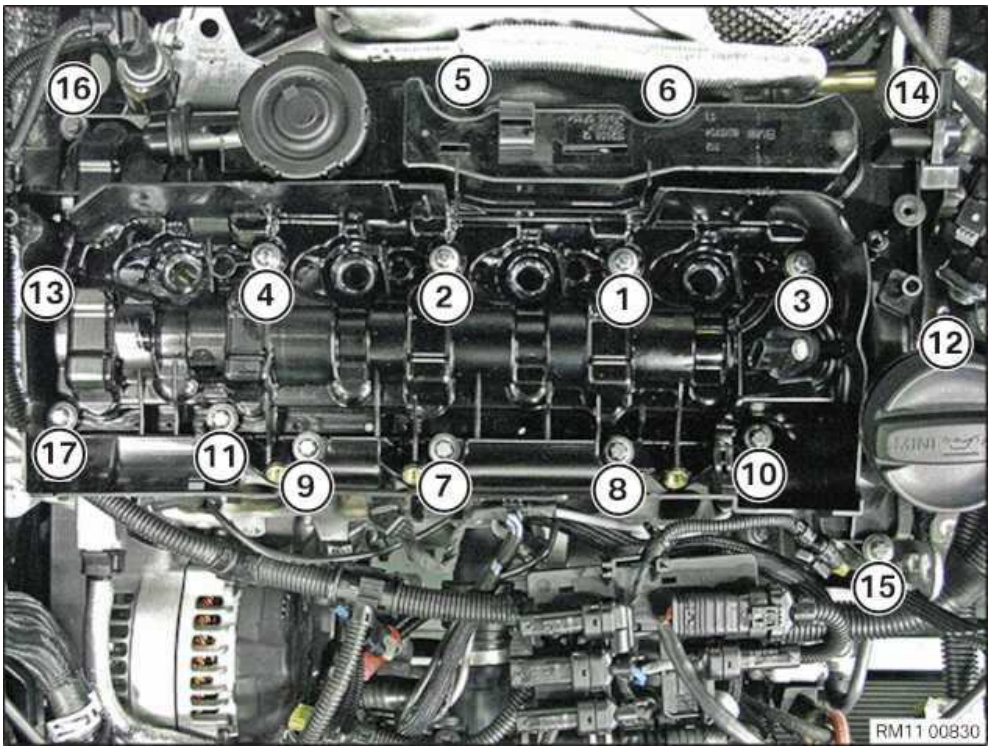
- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.



- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

cardiagn.com

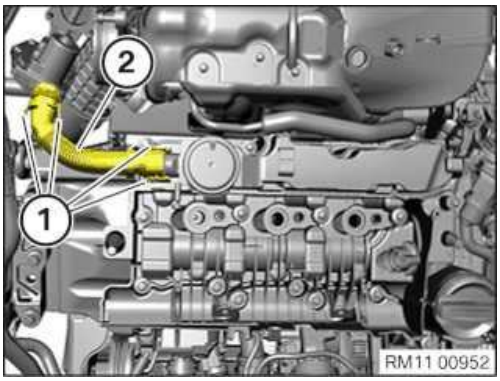
Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket



- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-

cardiagn.com

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

45 – Installing injectors of injection system

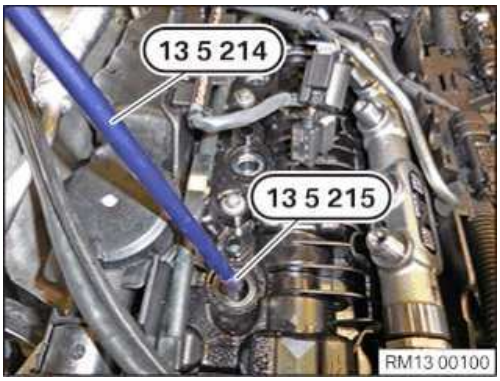
▶ **Cleaning the injector shafts**

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

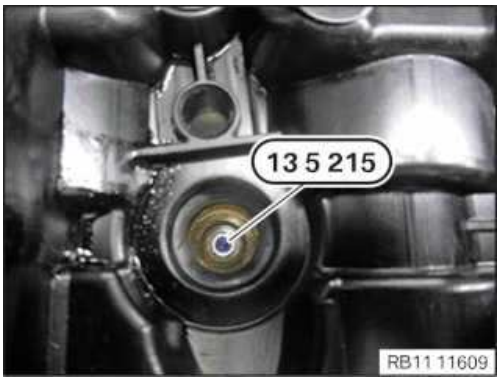
- Collect dirt particles, e.g. when blowing out, use cloth to do so.



- Wear safety goggles.

RISK OF DAMAGE

Contaminant or foreign body.

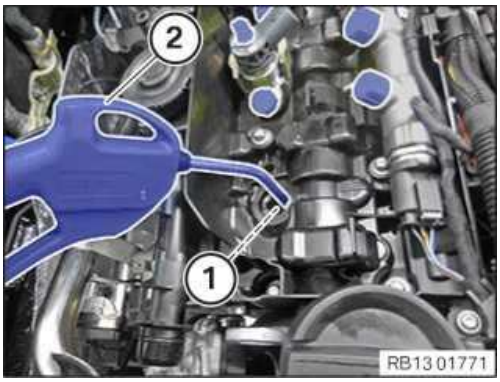


Contamination can result in malfunctions, operating failure or leaks.

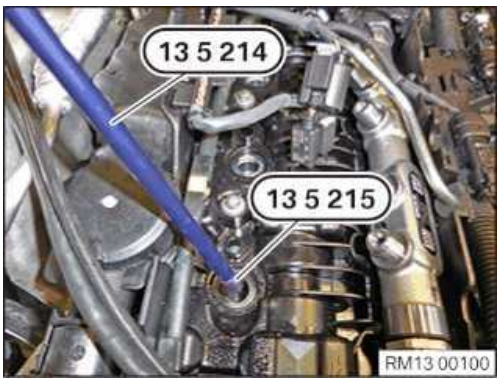
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

cardiagn.com



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.



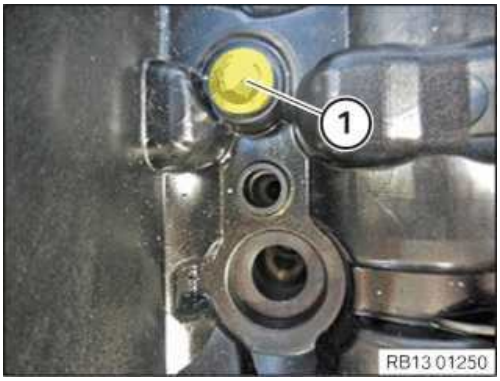
- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

- Blow out injector shaft (1) with air gun (2).

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

► **Check the placement of the clamping claw**



cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

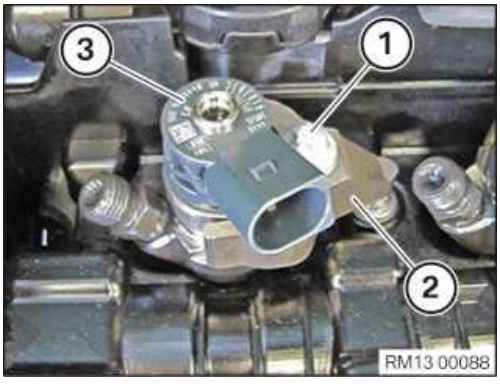
▸ **Prepare the injector for installation**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

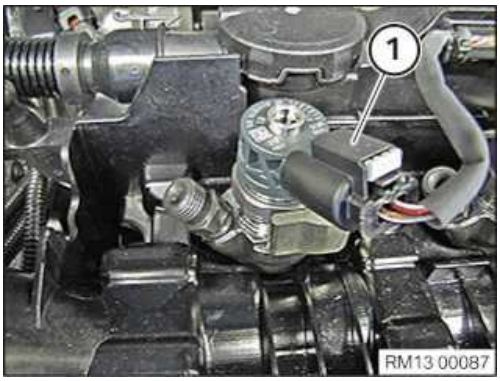


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

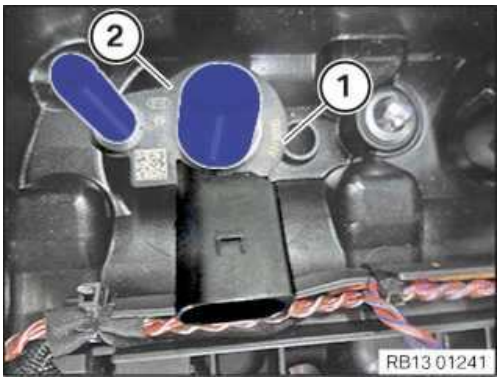
Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

cardiagn.com

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



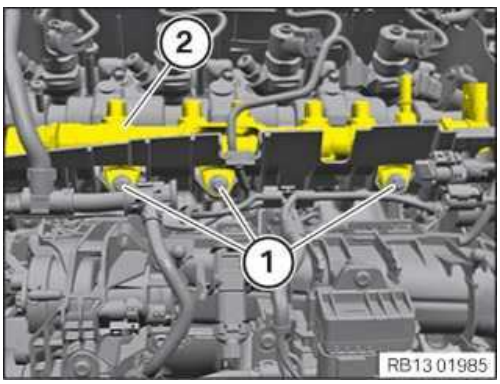
▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

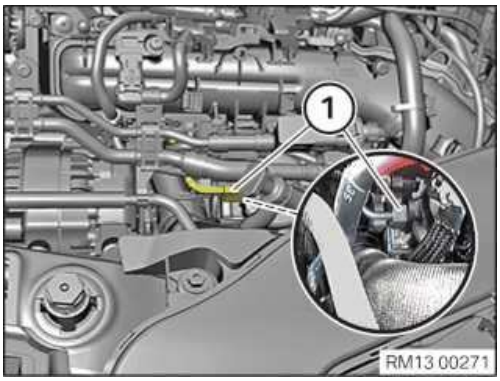
Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

46 – Installing the rail

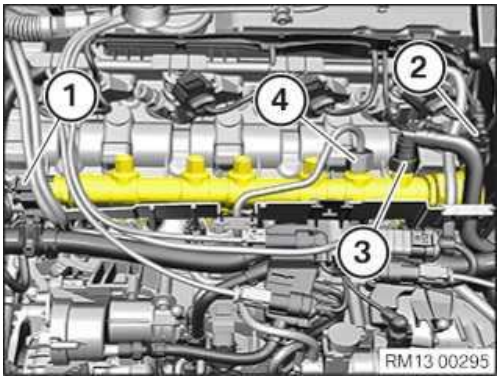


- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm

cardiagn.com



TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

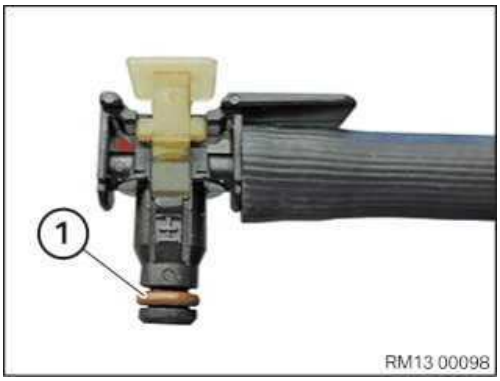
TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool .

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm



- Connect and lock the fuel line (3).

  Fuel line (3) must engage audibly.
- Connect connectors (2) and lock.

  The connector (2) must engage audibly.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

47 – Connect the leakage oil line on the injector

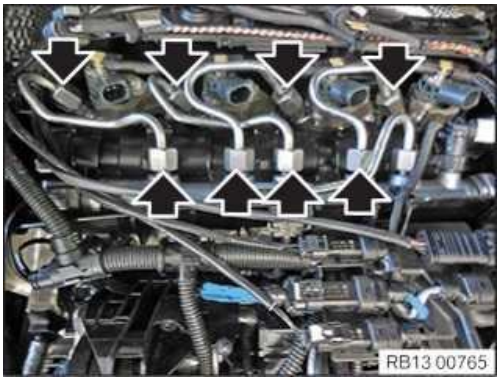
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

cardiagn.com

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.



48 – Installing high pressure lines between rail and injectors

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

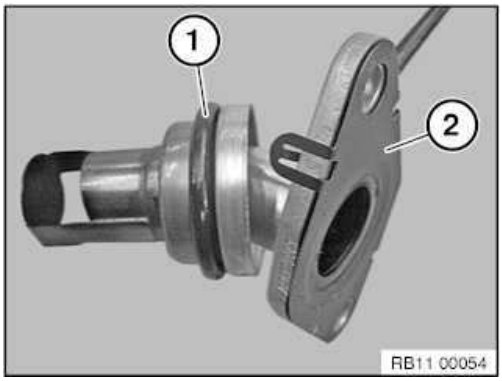
TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.



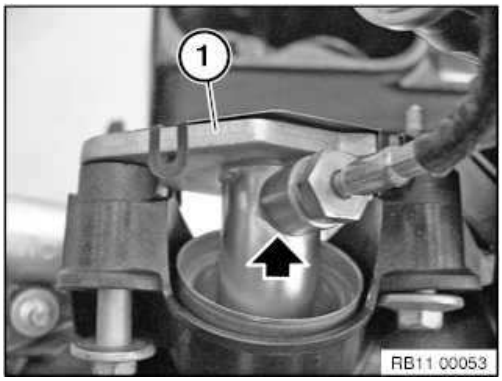
- Tighten the high pressure lines (arrows) with the special tool .

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

49 – Installing the intake plenum

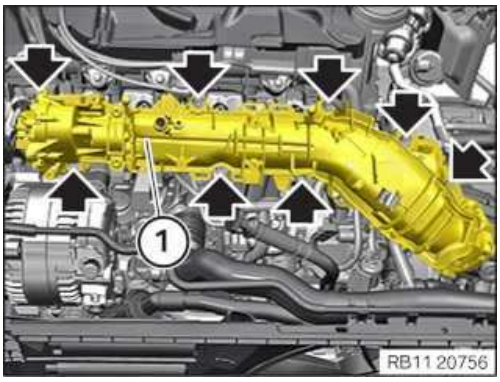


- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position the seal (2) and clip it in.

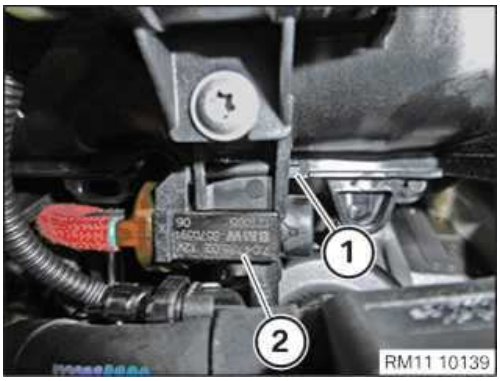
cardiagn.com



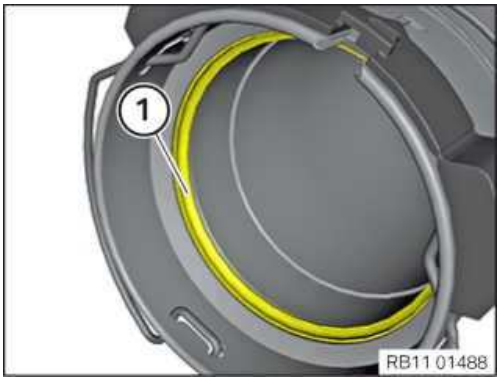
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

  Parts: Gasket



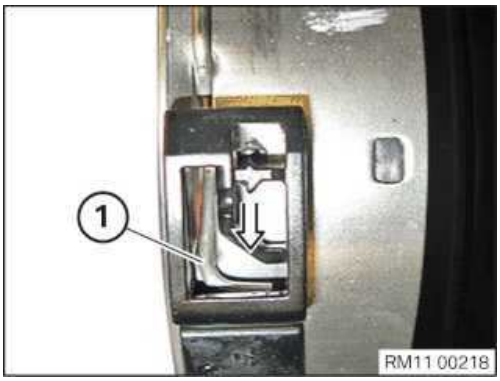
- Ensure that the seal (1) is firmly mounted on the intake plenum.



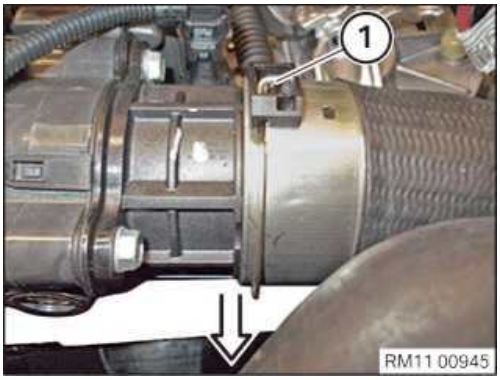
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

cardiagn.com

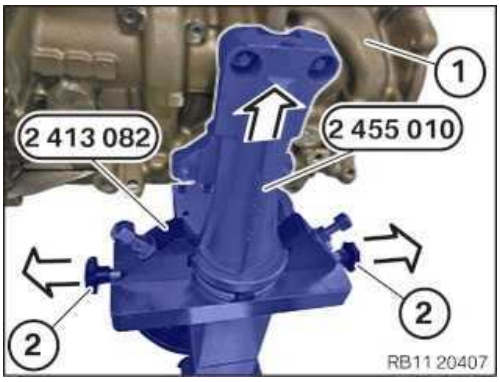
- Engage the lock (1) on the bracket (arrow).

- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

50 – Remove the engine from the assembly stand

CAUTION

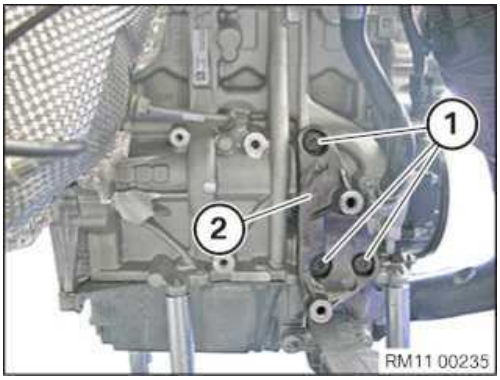


Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Insert engine lifter with special tool and position engine (1).

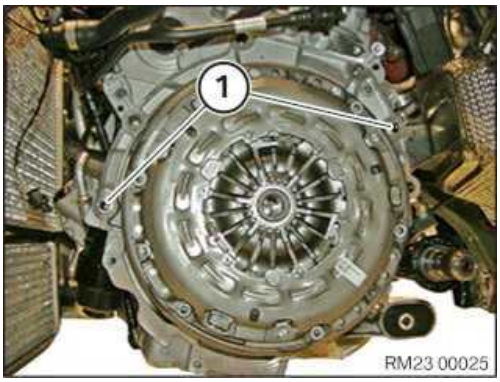


- Unscrew the nuts on special tool .
- Detach the holder (2) in the direction of the arrow.
- Detach the engine (1) with special tool **2 455 010** out of the special tool in the direction of arrow.

cardiagn.com

- Remove conventional screws (arrows).
- Feed out the special tool **2 455 010** on the engine (1) and remove.

- Insert and install the holder (2).
- Tighten the screws (1).

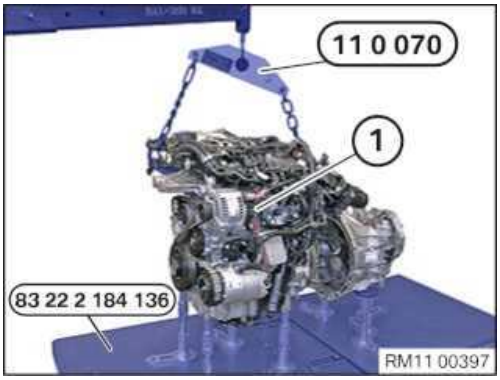


Holder to crankcase

M10		Tightening torque	38 Nm

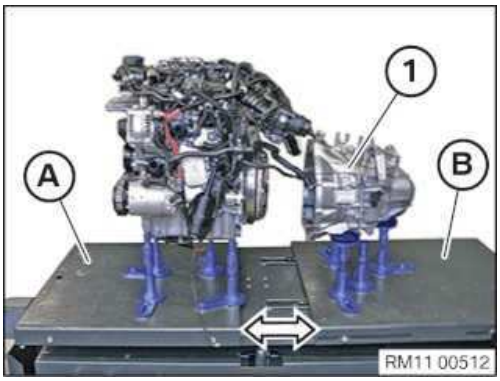
51 – Mounting engine on manual gearbox

Prerequisite

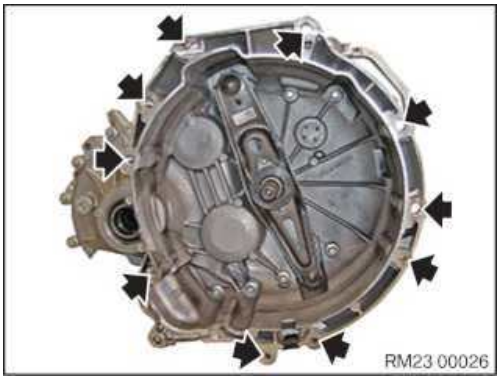


Engine has been removed.

- Check for correct fit of fitting sleeves(1).
- Replace damaged fitting sleeves.

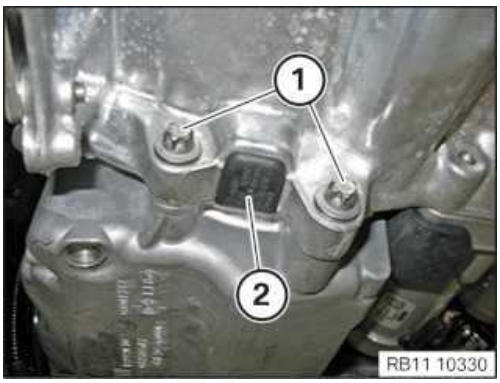


- Remove any grease from the transmission input shaft (arrow) and clean the shaft.
- Do not grease transmission input shaft.
- Check the clutch disc for frictional corrosion in the gearing and renew if necessary.



- Position the engine (1) on the lifting table **2 184 136** using the engine lifter and the special tool .
- Feed out engine lifter from engine (1) with special tool and push aside.

cardiagn.com



- Push table top (B) in direction of arrow and position manual gearbox (1) on engine.

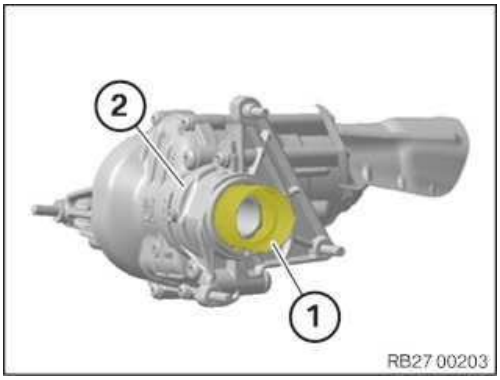
- Tighten screws (arrows).

Transmission to engine

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

- Tighten the screws (1).

Transmission to oil sump



M8		Tightening torque	19 Nm

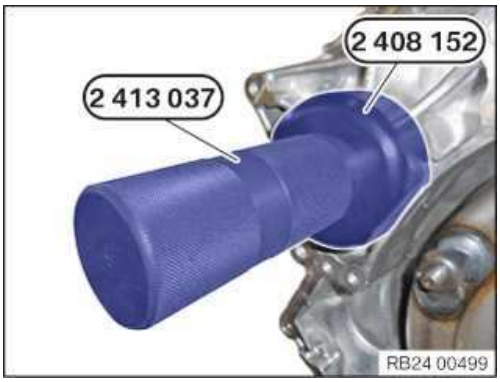
- Install the protective cap (2).

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.

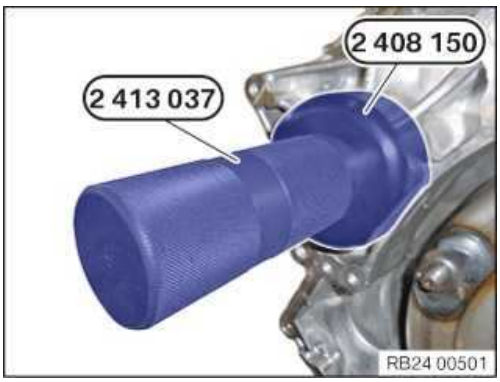
52 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

cardiagn.com

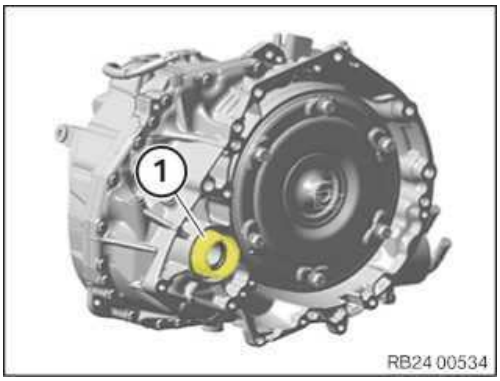


- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.

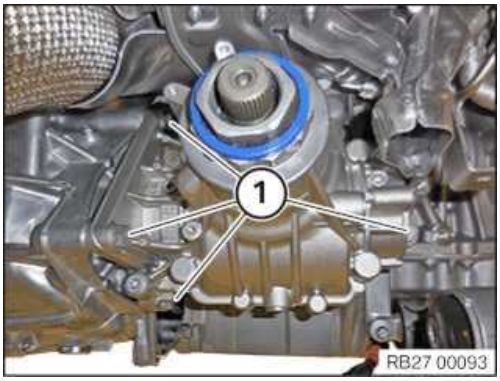
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

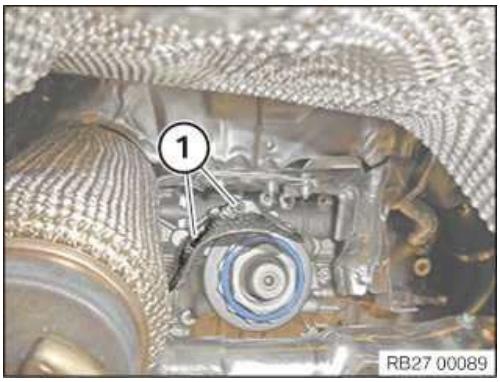
cardiagn.com



- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials



Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

cardiagn.com

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

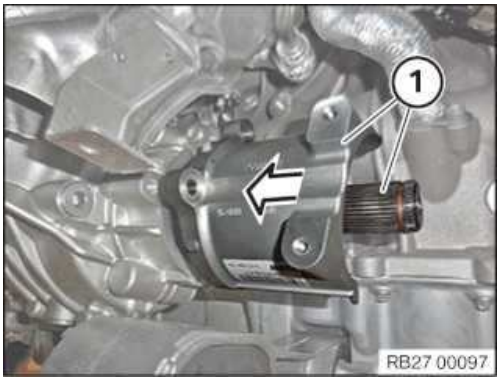
Technically suitable transfer box and electrical transmission oils	

Main group 27

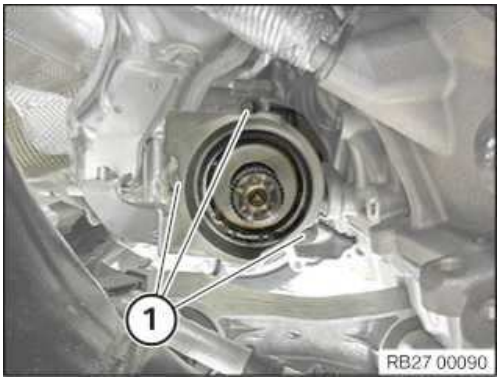
- Tighten the oil filler plug (1).

Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm



53 – Install the intermediate shaft with the support tube



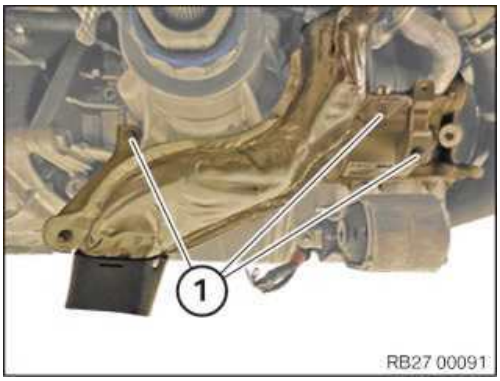
- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

- Position screws (1).



Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

cardiagn.com

- If installed: Install air duct.
- Tighten the screws (1).

54 – Installing the high-pressure stage exhaust turbocharger

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

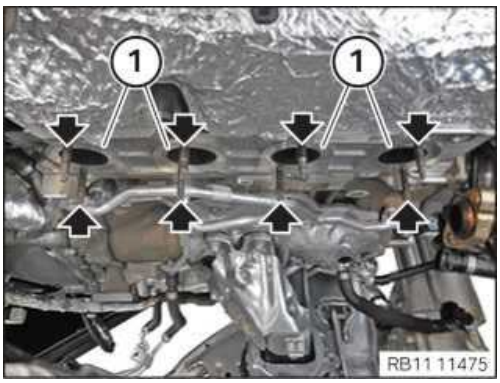
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE



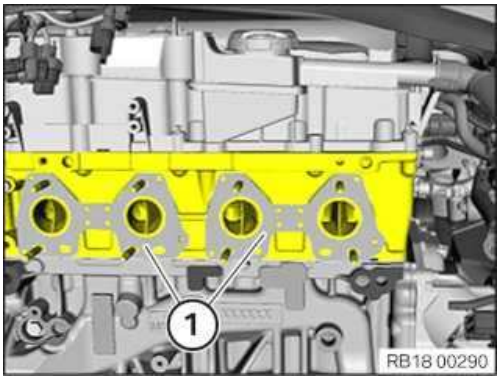
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

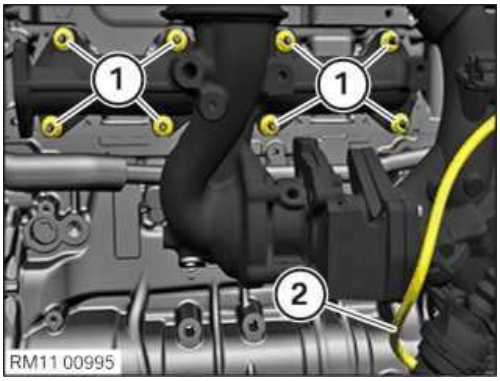
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.

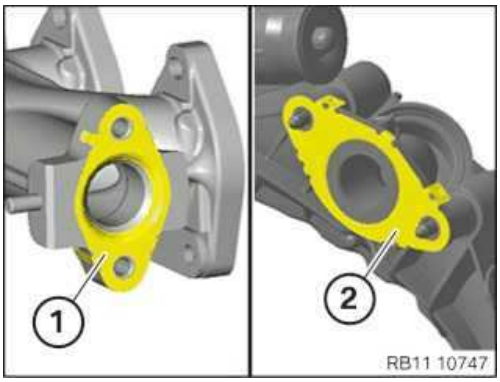
cardiagn.com



- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.

- Renew gasket (1).

  Parts: Gasket

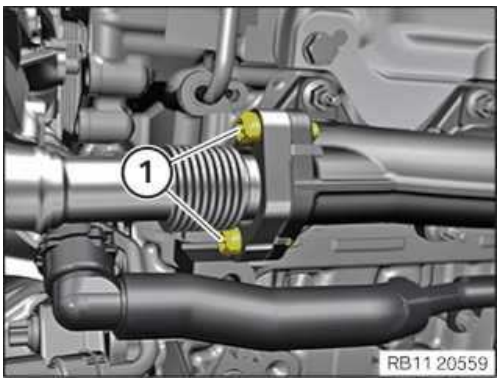


- Install new gasket (1).

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

  Parts: Nuts

- Connect vacuum hose(2).

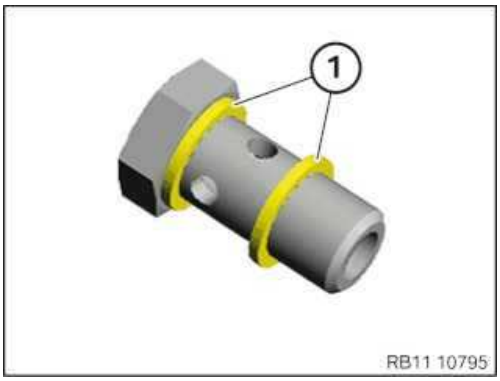


- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

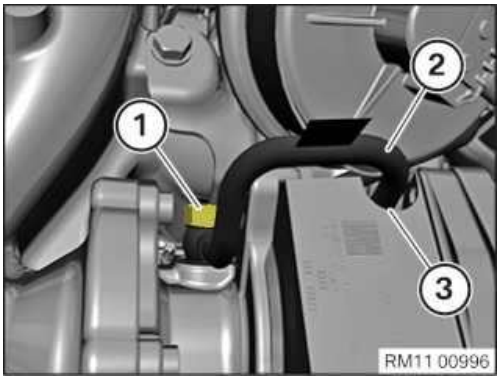
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket



- Tighten the screws (1).

Exhaust-gas recirculation cooler to exhaust manifold



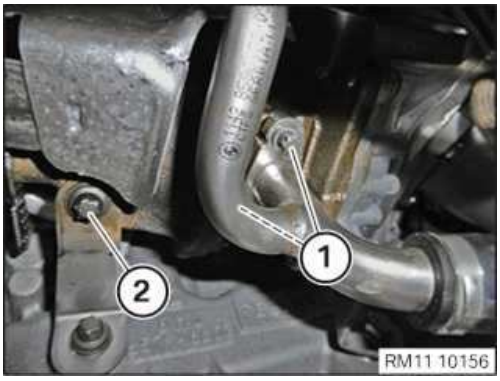
M8x28	Replace screws	Tightening torque	32 Nm

cardiagn.com

- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring

- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).



- Tighten bolt (1) from the right wheel arch.

- Renew seal (1) of oil return line.

  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

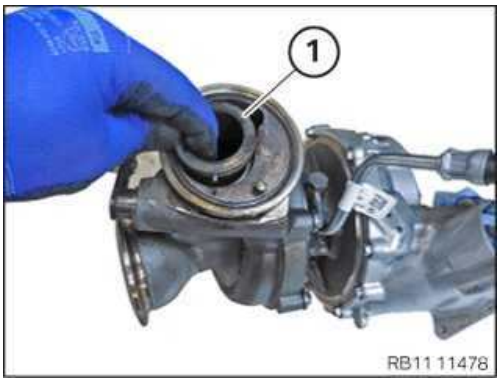
Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

55 – Installing the low-pressure stage turbocharger

cardiagn.com

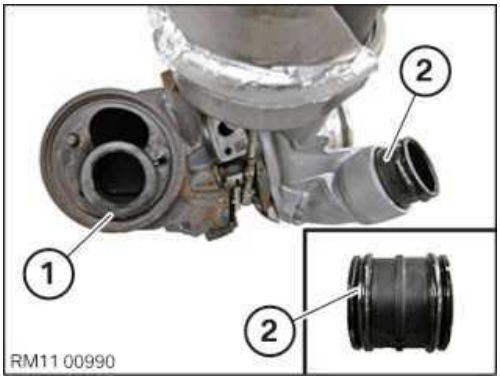
RISK OF DAMAGE



Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.



TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.

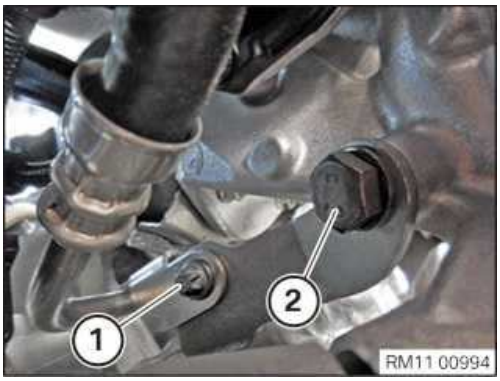
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

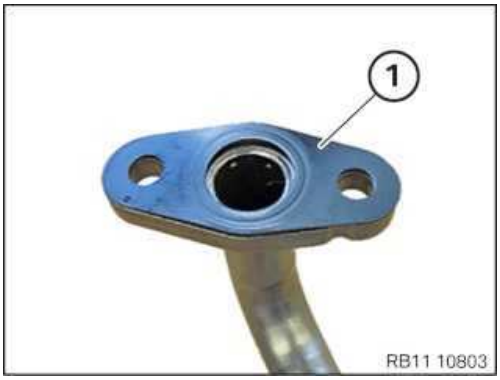
Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

cardiagn.com

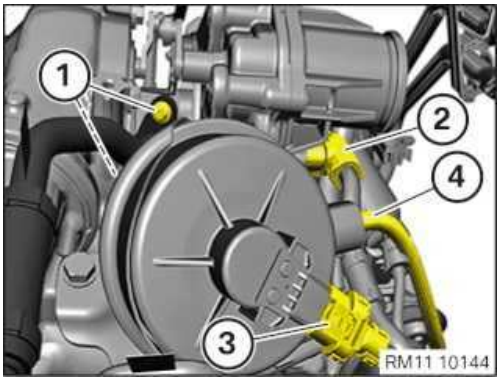
- Tighten down screw (1).



Oil feed line to bracket

Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).



Holder to exhaust turbocharger and crankcase

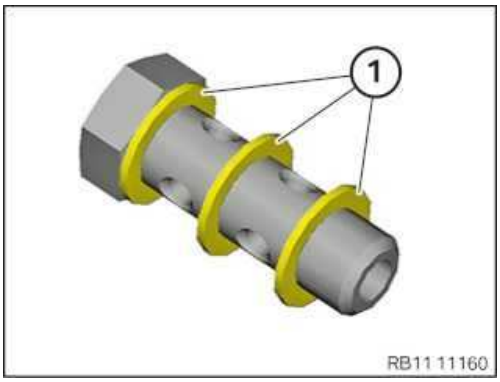
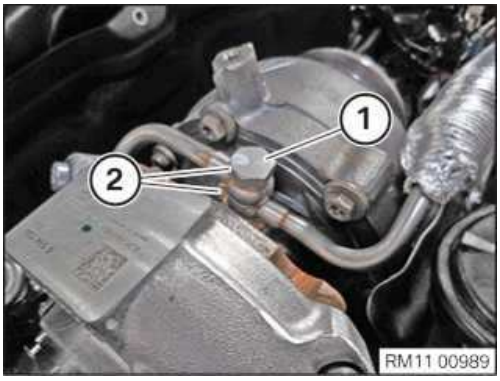
- Renew seal (1) on the oil return line.

  Parts: Gasket



- Position the oil return line with the seal.
- Tighten the screws (1).

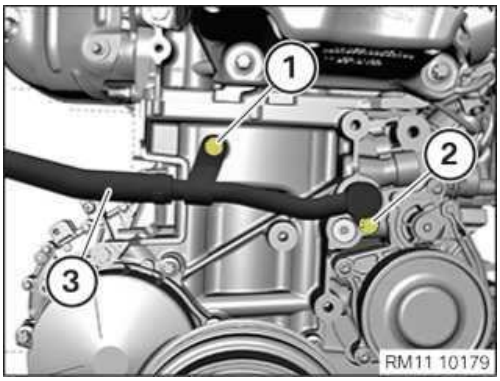
Oil return line to turbocharger



M6x12		Tightening torque	8 Nm

- Connect and lock connectors (2) and (3).

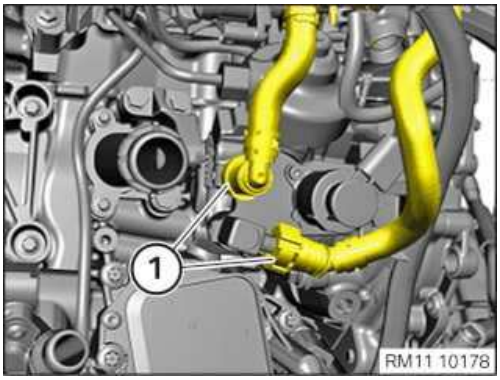
  The locks must engage audibly.
- Connect vacuum hose (4).



- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.

cardiagn.com



- Renew sealing ring of the coolant line (3).

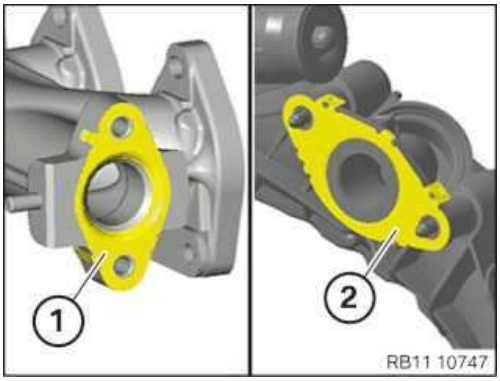
  Parts: Sealing ring
- Coat the sealing ring and install the coolant line (3) .
- Tighten down screws (1) and (2).

Standard screw connection M6

M6		8 Nm

- Connect and lock fuel lines (1).

  The fuel lines (1) must audibly engage.



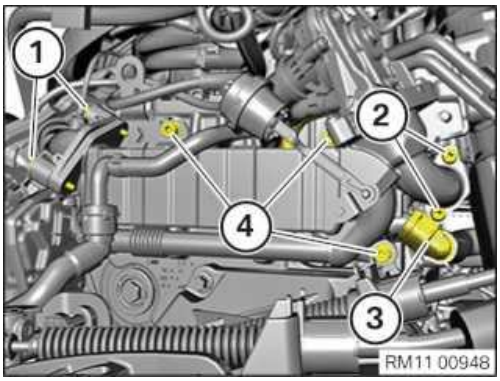
▶ **Installing the exhaust-gas recirculation cooler**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

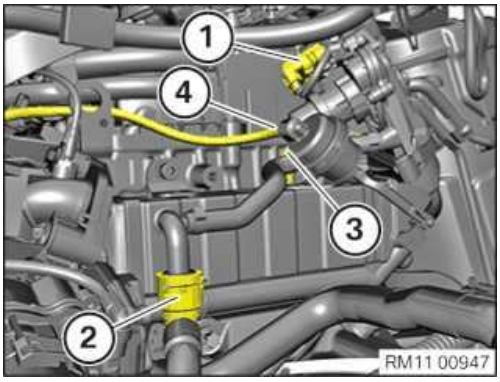
Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold



M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

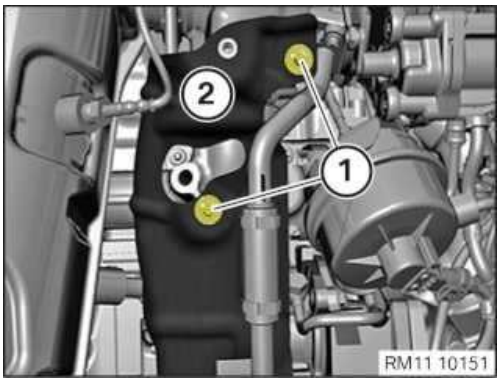
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

▸ **Installing heat shield on exhaust turbocharger at bottom**

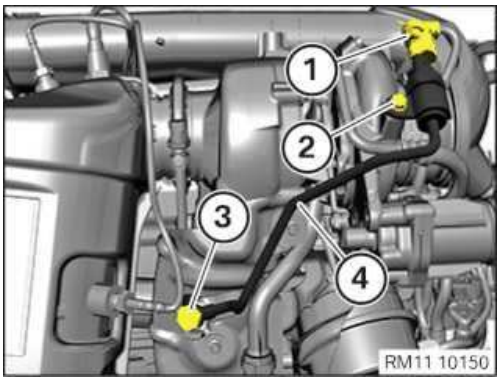


cardiagn.com

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

- Tighten down screw (2).

Standard screw connection M6

M6		8 Nm

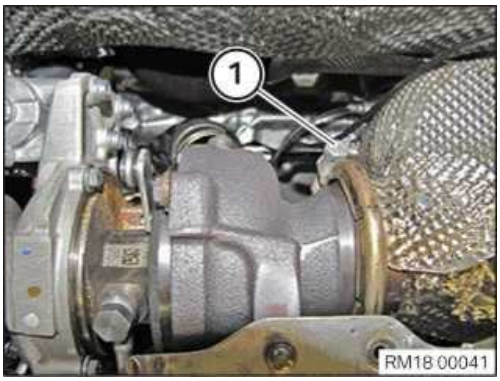
- Connect connectors (1) and lock.

  Lock must audibly engage.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

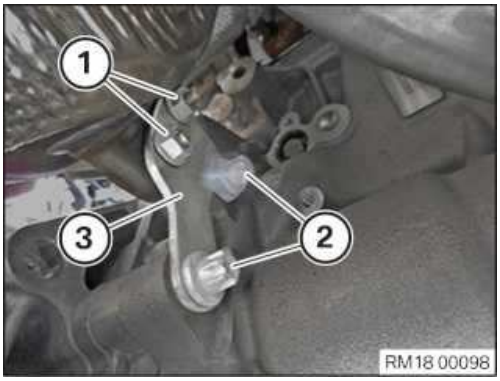


- Remove and install heavy components with the aid of another person/other persons.

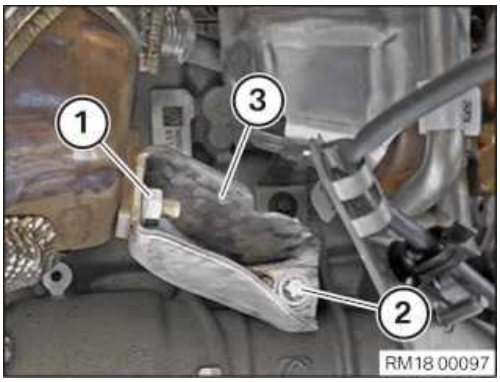
- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket



cardiagn.com



- Carefully insert and install the diesel particulate filter .
- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

- Tighten nuts (1) by hand.

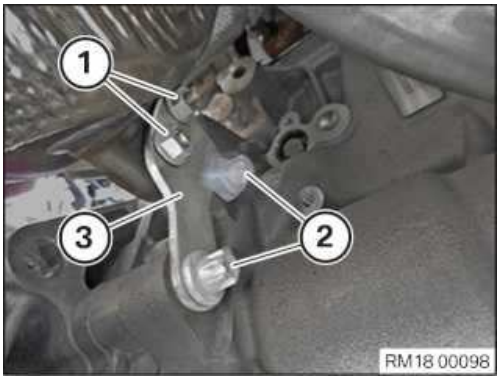
- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.

- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm



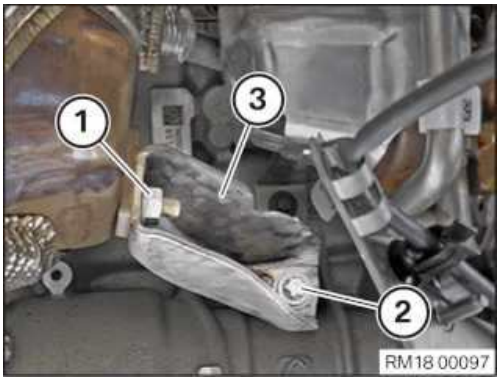
cardiagn.com

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screws (2).



Diesel particulate filter holder to gearbox

M12x75		Tightening torque	66 Nm

- Tighten nuts (1).

Diesel particle filter to holder

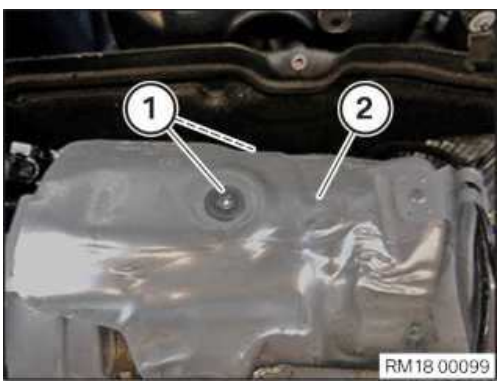
M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screw (2).

Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

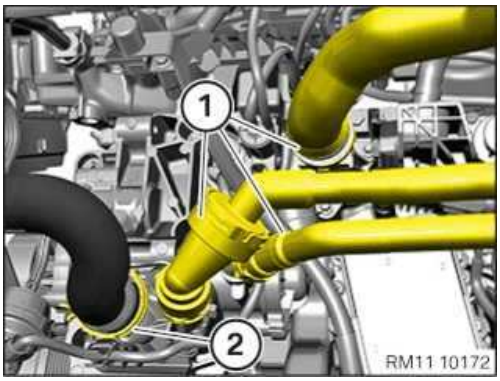


Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Remove fitting aid (1) for the flexible tube.

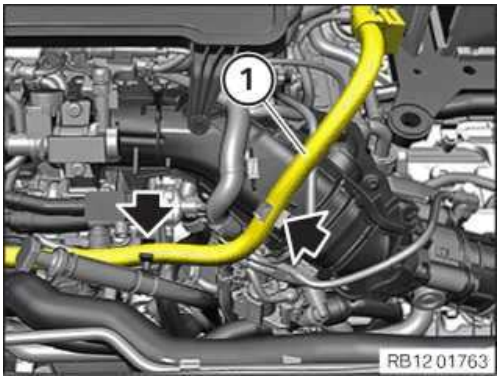
▶ **Install the heat shield on the exhaust turbocharger**



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm



- Fasten the cable at the clips .

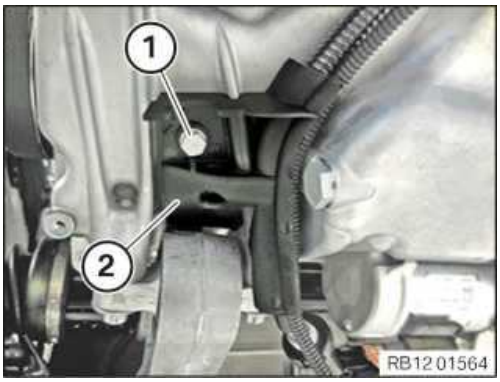
cardiagn.com

- Install the coolant hose and secure with the clamp (2) .
- Connect and lock the coolant lines (1).

  The coolant lines (1) must engage audibly.

CAUTION

Improper routing of the positive battery cable.



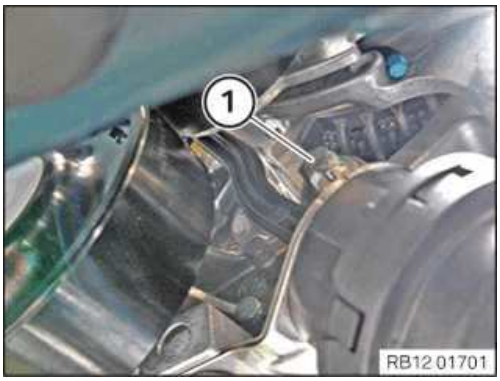
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert the positive battery cable (1) into the clamps (arrows).

- Feed in and install positive battery cable at the clamps (1).

- Insert and install the holder (2).
- Tighten down screw (1).



Bracket to oil sump

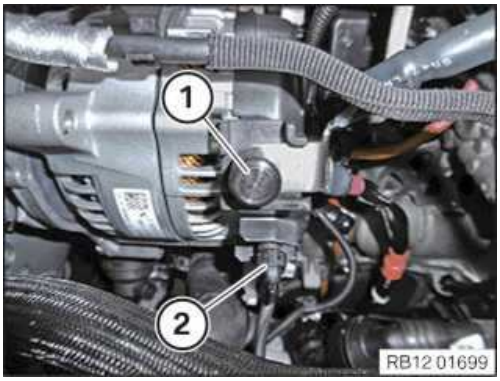
M6		Tightening torque	8 Nm

- Insert and install alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support.

cardiagn.com

- Tighten the screw (1) below on the alternator.

Alternator to component carrier



M10x75 / M10x125		Tightening torque	38 Nm

- Tighten the bolt (1) on top on the alternator.

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm

- Mount positive battery cable to the alternator.
- Tighten nut.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

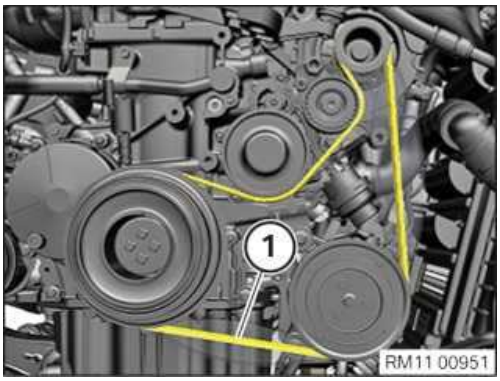
- Mount the cover (1).
- Connect the connector (2) to the alternator and lock audibly.

- Install air conditioning compressor (2) and position it correctly.
- Tighten the screws (1).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

▸ **Installing the drive belt for alternator**



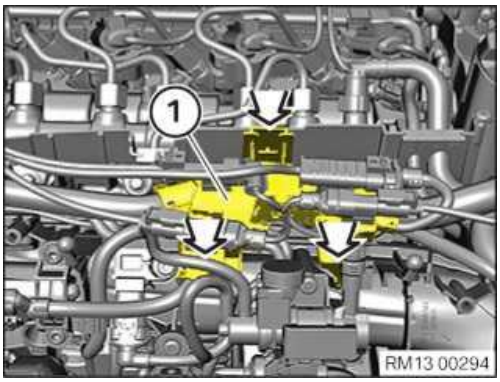
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

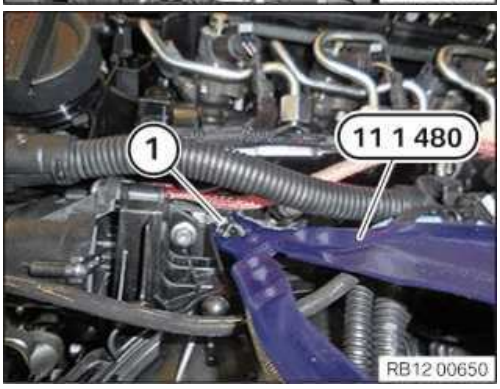
TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

cardiagn.com

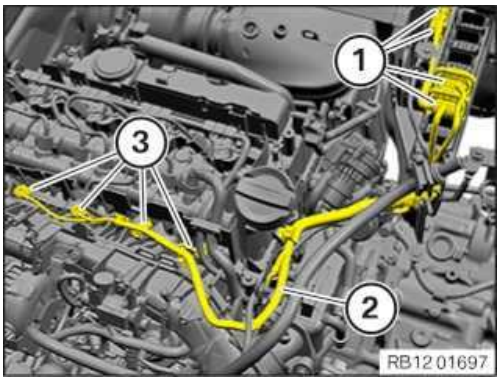


- Feed in the drive belt for the alternator (1) and install it.



- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool **0 496 268 (11 0 390)** out of the belt tensioner and remove it.

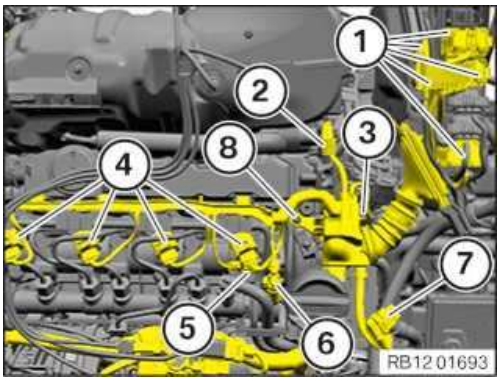
▶ **Installing the cable clip for the intake plenum**



- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.

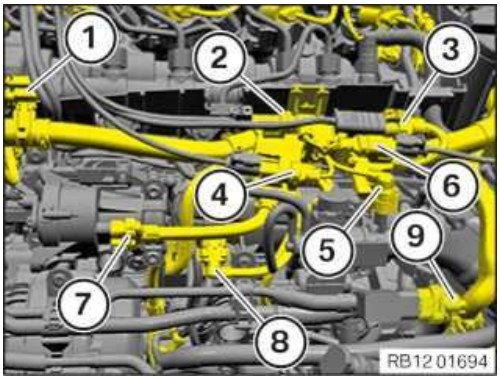
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.



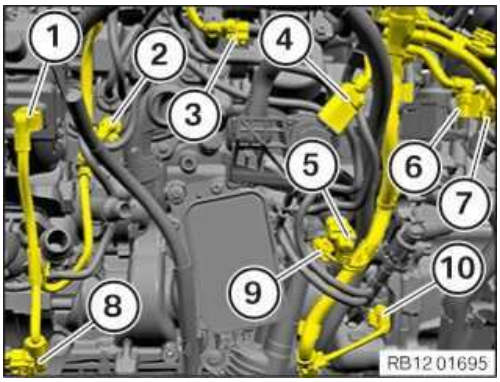
- Lay vehicle wiring harness and fasten with clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Connect all connectors (3) to the glow elements and engage them audibly.
- Mount ground strap and tighten screw (2).

Ground cable to cylinder head

M6x12		Tightening torque	8 Nm

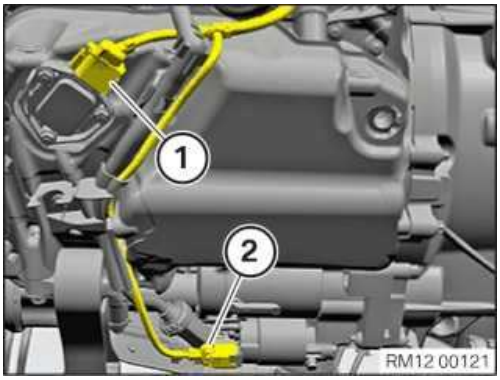


cardiagn.com



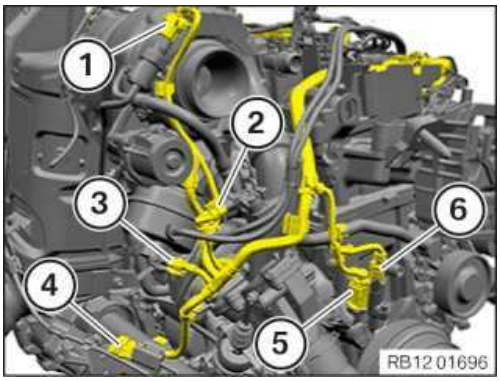
- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

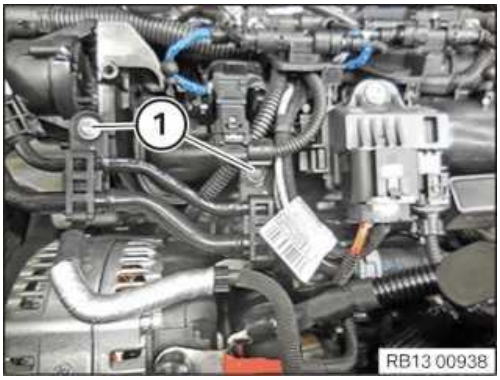


TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.



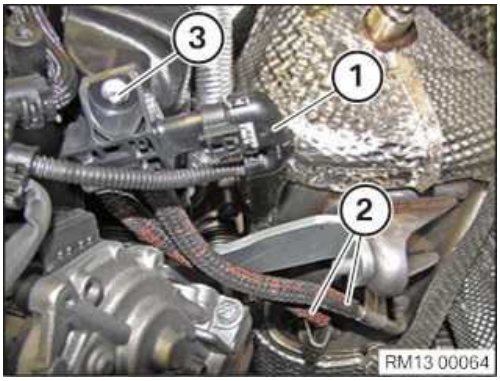
- Connect the connector (1) to the alternator and lock audibly.
- Connect the connector (2) to the electric changeover valve and lock audibly.
- Connect the connector (3) to the electric changeover valve and lock audibly.
- Connect the connector (4) to the high pressure pump and lock audibly.
- Connect the connector (5) to the oil pressure sensor and lock it audibly.
- Attach connector (6) to the throttle bodies and lock it audibly.
- Attach connector (7) to the intake air temperature sensor and lock it audibly.
- Connect the connector (8) to the air conditioning compressor and lock audibly.
- Connect the connector (9) to the solenoid valve and lock audibly.
- Connect the connector (10) to the crankshaft sensor and lock it audibly.



- Connect the connector (1) to the oil-level sensor and lock it audibly.
- Connect connector (2) to the starter motor and lock audibly.

cardiagn.com

- Attach connector (1) to the exhaust turbocharger and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust gas pressure sensor and lock it audibly.
- Connect the connector (4) to the monitoring oxygen sensor and lock audibly.
- Attach connector (5) to the oil pressure switch and lock it audibly.
- Attach connector (6) to the switching valve and lock it audibly.



- Position the fuel line.
- Tighten the screws (1).

Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

57 – Installing differential pressure sensor

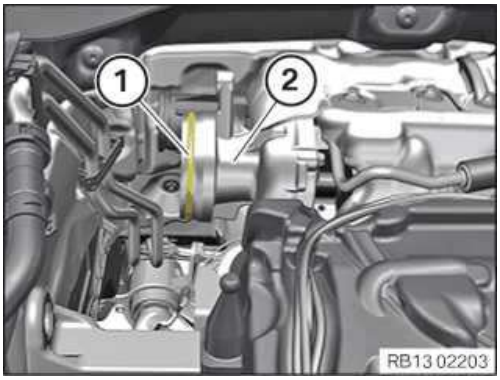
- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.



Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

58 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

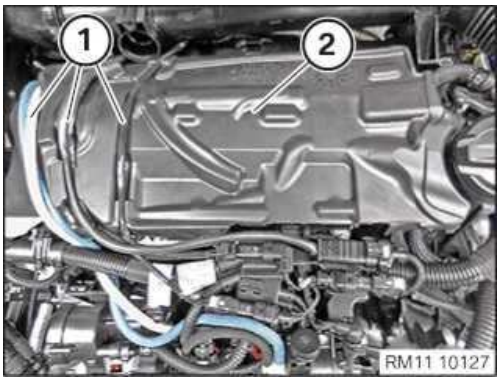
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

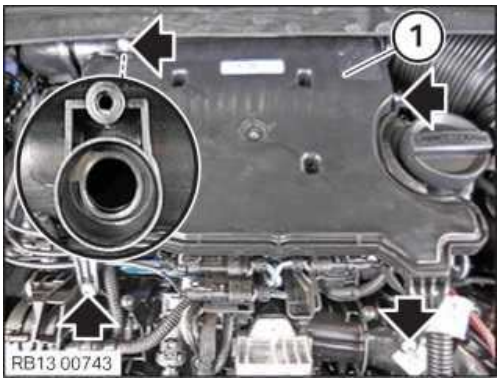
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing



Clamp		Tightening torque	3 Nm

59 – Install the acoustic cover for the injectors

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

60 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

61 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

62 – Install engine

- See additional information.

Additional Information

Overview of Tightening Torques

Special tool to cylinder head Used in step 12

M8		Tightening torque	21,5 Nm

Special tool 2 455 010 to crankcase Used in step 13

M10x30		Tightening torque	38 Nm

cardiagn.com

Special tool 11 8 930 to special tool 00 2 320

Used in step 13

M14x35		Tightening torque	160 Nm

Hydraulic chain tensioner to crankcase

Used in step 32

M6x22		Tightening torque	9 Nm

Rear timing case cover to crankcase

Used in step 33

M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

SCR coolant lines to crankcase end cover

Used in step 33

Hexagon screw M6x16		Tightening torque	8 Nm

Cylinder head to crankcase

Used in step 33

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

Cylinder head bolt to timing case cover

Used in step 33

M8x40		Tightening torque	19 Nm

Oil sump to crankcase

Used in step 33

M8x30		Tightening torque	24 Nm
M8x110		Tightening torque	24 Nm

Transmission to oil sump

Used in step 33 51

M8		Tightening torque	19 Nm

Guide tube for oil dipstick on engine

Used in step 33

M8x16		Tightening torque	19 Nm

Flywheel to crankshaft

Used in step 34

M12x1.5	Renew screws.	Tightening torque	120 Nm

Clutch to flywheel

Used in step 35

M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

Glow elements to cylinder head

Used in step 38

Glow element		Tightening torque	13 Nm

Camshaft carrier to cylinder head

Used in step 39

M7x35		Tightening torque	13 Nm

Intake and exhaust camshaft in camshaft support

Used in step 40

M6x31		Tightening torque	10 Nm

Bearing journal to cylinder head

Used in step 40

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

Standard screw connection M8

Used in step 40

M8		Tightening torque	19 Nm

cardiagn.com

Standard screw connection M6

Used in step 40 56

M6			8 Nm

Chain tensioner piston to cylinder head

Used in step 40

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

Camshaft sprocket to camshaft

Used in step 40

M7x17.			17 Nm

Cylinder head cover to cylinder head

Used in step 44

M6		Tightening torque.	8,5 Nm

Clamping claw facing to cylinder head cover

Used in step 45

Screw M6		Tightening torque	8 Nm

Injector to cylinder head cover

Used in step 45

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

Rail on cylinder head cover

Used in step 46

Torx screw M8x25		Tightening torque	19 Nm

High pressure line between high pressure pump and rail

Used in step 46

High-pressure pipe		Tightening torque	28 Nm

High pressure lines between injector and rail

Used in step 48

High pressure lines		Tightening torque	28 Nm

Intake plenum to cylinder head

Used in step 49

M6		Tightening torque	11 Nm

Holder to crankcase

Used in step 50

M10		Tightening torque	38 Nm

Transmission to engine

Used in step 51

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

Transfer box to transmission

Used in step 52

M10		Tightening torque	56 Nm

Heat shield to transfer box

Used in step 52

M6	Renew screws.	Tightening torque	6 Nm

Oil filler plug on transfer box (VTG)

Used in step 52

M18x1.5		Tightening torque	35 Nm

Intermediate shaft to transfer box

Used in step 53

M8x35		Tightening torque	19 Nm

cardiagn.com

Exhaust-gas recirculation cooler to exhaust manifold

Used in step 54 56

M8x28	Replace screws	Tightening torque	32 Nm

Oil return line to turbocharger

Used in step 54 55

M6x12		Tightening torque	8 Nm

Holder to exhaust turbocharger and crankcase

Used in step 54

M8x16		Tightening torque	22 Nm

Exhaust turbocharger to exhaust manifold

Used in step 55

V-band clamp		Tightening torque	19 Nm

Oil feed line to bracket

Used in step 55

Torx screw M6x12		Tightening torque	8 Nm

Holder to exhaust turbocharger and crankcase

Used in step 55

M8x16		Tightening torque	22 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 56

M8x20		Tightening torque	5 Nm
		Release angle	90 °

Intake plenum to exhaust-gas recirculation cooler

Used in step 56

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 56

M8x20		Tightening torque	19 Nm

Heat shield for exhaust turbocharger

Used in step 56

Torx screw BM 6x12		Tightening torque	10 Nm

Banjo bolt for exhaust pressure pipe to exhaust manifold

Used in step 56

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

Diesel particulate filter V-clip to exhaust turbocharger

Used in step 56

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

Diesel particle filter to holder

Used in step 56

M8 hexagon nut		Tightening torque	19 Nm

Diesel particulate filter holder to gearbox

Used in step 56

M12x75		Tightening torque	66 Nm

Diesel particulate filter bracket to crankcase

Used in step 56

M10x35		Tightening torque	38 Nm

Heat shield for exhaust turbocharger

Used in step 56

Torx screw BM 6x12		Tightening torque	10 Nm

Bracket to oil sump

Used in step 56

M6		Tightening torque	8 Nm

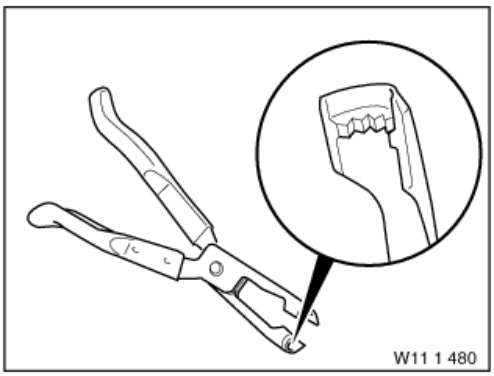
Overview of Special Tools

0 496 268 (11 0 390) Pin



Common — Used in step 7 56

Usage	(roll pin) For securing new tensioning pulley (poly-V belt)
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 15 07 (390)

cardiagn.com

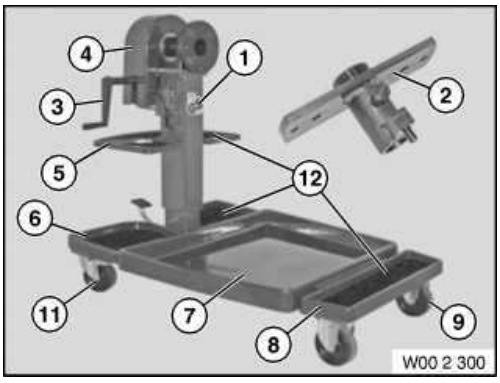
0 490 796 (11 1 480) Pliers

Common	Used in step 7 25
Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

2 459 012 Holder

Common	Used in step 12 51
Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

cardiagn.com



2 455 010 Engine support

Common Used in step 13 50

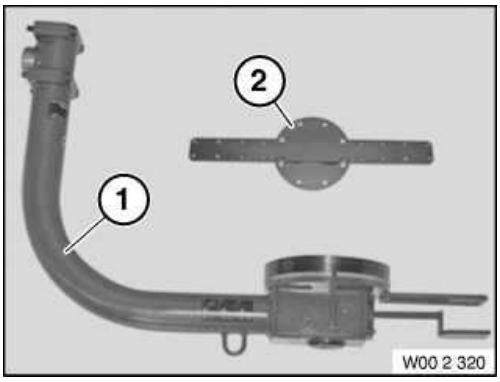
Usage	For accommodating engine on assembly stand. Engine: B3x, B4x, N47.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 495 187 (00 2 300) Assembly stand

Common Used in step 13

Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of



Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	

cardiagn.com

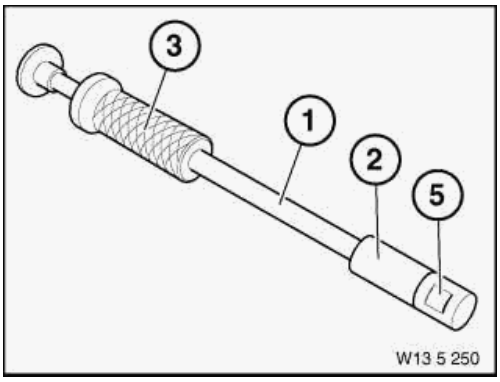
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.	

cardiagn.com

0 495 196 (00 2 320) Support arm

Common

Used in step 13



Usage	(Support arm with fixture) For mounting engines using the engine mounting bracket.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 197 (00 2 321)		**Support arm**	
2	0 495 198 (00 2 322)		**Panel** (take-up plate)	
3	0 495 380 (00 2 323)		**Panel** (fixture) Engine N73	
6	0 496 287 (00 2 326)		**Panel** (fixture) Engine: M73	
5	0 496 288 (00 2 327)	**0 496 373**	**Panel** (fixture) Engine: S62 Replaced by 11 5 420 (0 496 373)	
8	0 496 533 (00 2 328)		**Support** (Engine mount) Engine: N57, N57Top	
9	0 496 579 (00 2 329)	**0 496 680**	**Support** (Engine mount) Engine: N74 Replaced by 116160 (0 496 680)	
4	0 495 379 (00 2 324)		**Panel** (fixture) Engine M67TU	
5	0 495 381 (00 2 325)		**Panel** (fixture) Engine N62, N62TU	

cardiagn.com

0 493 321 (13 5 250) Puller

Common

Used in step 17

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

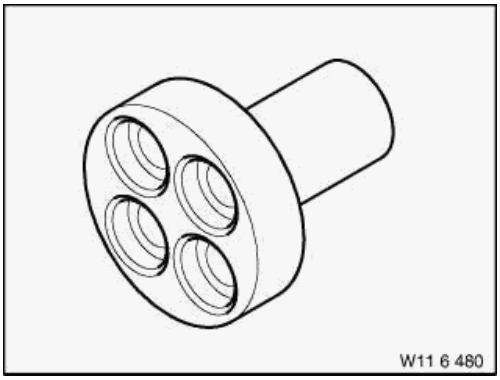
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

0 493 339 (13 5 252) Bush

Common

Used in step 17

Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

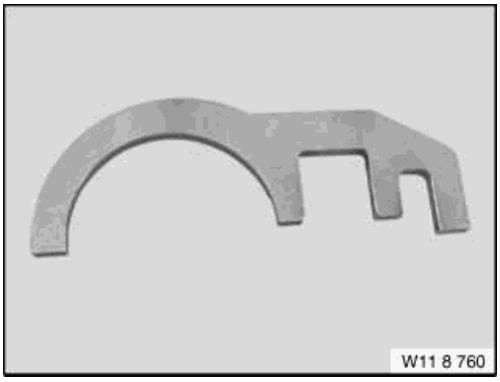


cardiagn.com

0 493 340 (13 5 253) Weight

Common	Used in step 17
Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 380 (11 6 480) Connector



Common	Used in step 20 40 43
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

2 288 380 Locating stud

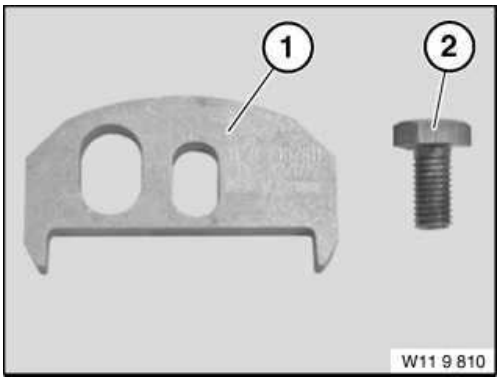
Common	Used in step 20 40 41 43
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 112 (11 8 760) Gauge

Common	Used in step 20 40 42 43
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

cardiagn.com

0 495 105 (11 4 480) oddments tray



Common Used in step 26 27 40

Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

0 496 171 (11 9 811) Holder

Common Used in step 28 29 34

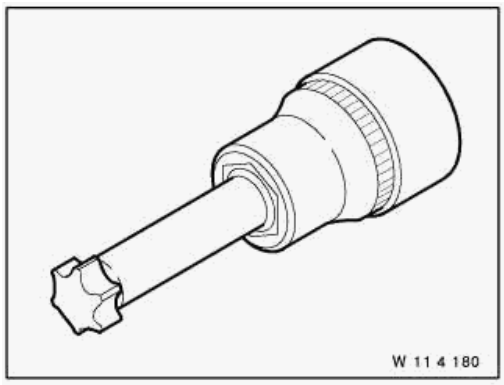
Usage	Available only as a complete tool set 11 9 810 (83 30 0 496 170) - as of 13.01.12
Included in the tool or work	0 496 170
Storage location	C86
Replaced by	
In connection with	
SI-Number	01 07 07 (355)

0 494 793 (11 9 265) Bush

Common Used in step 28 29 34

Usage	
Included in the tool or work	0 493 938
Storage location	A44
Replaced by	
In connection with	
SI-Number	

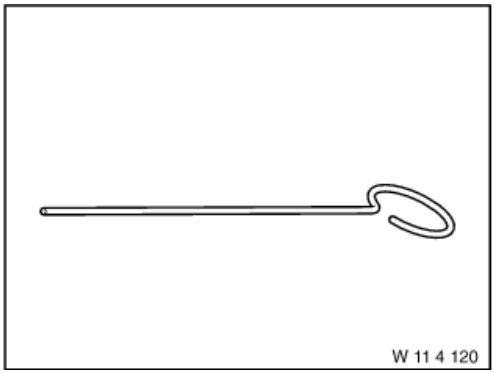
cardiagn.com



2 288 165 Synchronising key

Common Used in step 28 35

Usage	Conversion kit for 21 2 170, for orders till 02.2014. Orders as of March 2014 do not require the conversion, as the new thrust piece has been accounted for.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 09 14 (088)

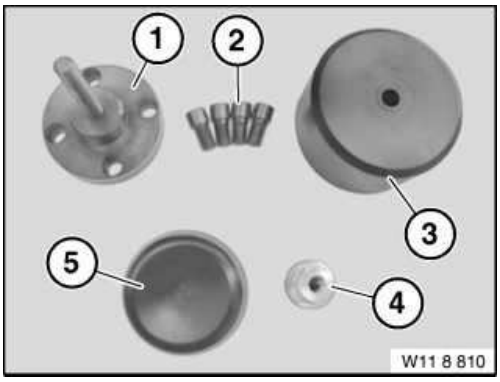


0 491 018 (11 4 180) Socket WAF 46

Common Used in step 29 34

Usage	(screwdriver bit Torx T60) For releasing and tightening down dual-mass flywheel - model year: from Jan 94
Included in the tool or work	
Storage location	C9
Replaced by	
In connection with	
SI-Number	01 02 94 (777)

0 491 012 (11 4 120) Pin



Common Used in step 31 32

Usage	(lock pin) For chain tensioners, for locking the chain tensioner piston (e.g. during cylinder head removal and fitting)
Included in the tool or work	
Storage location	B1
Replaced by

11 31 052 Replacing both timing chains

PRELIMINARY WORK

1 – Removing engine

- See additional information.

2 – Removing the acoustic cover

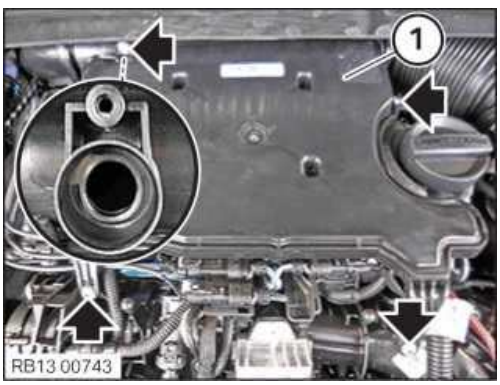
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

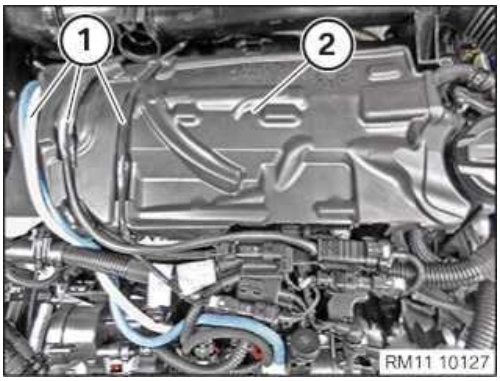


Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

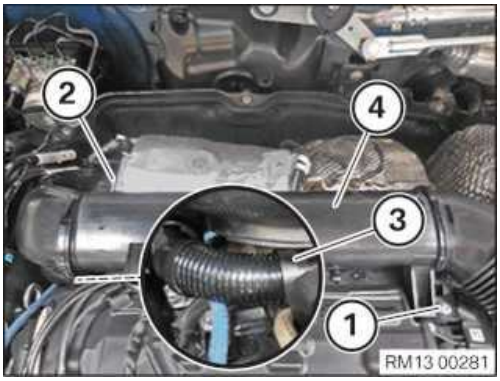


3 – Remove resonator

- Remove screws (arrows).
- Guide out and remove the resonator (1).

4 – Remove the acoustic cover for the injectors

cardiagn.com



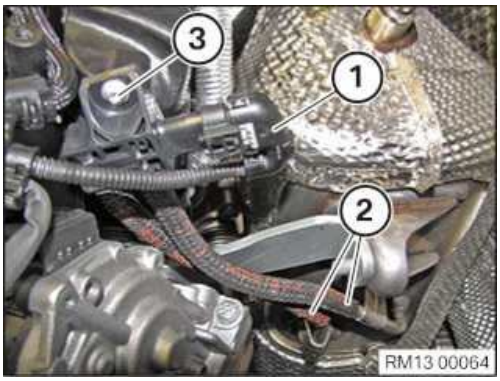
- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

5 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

6 – Remove differential pressure sensor

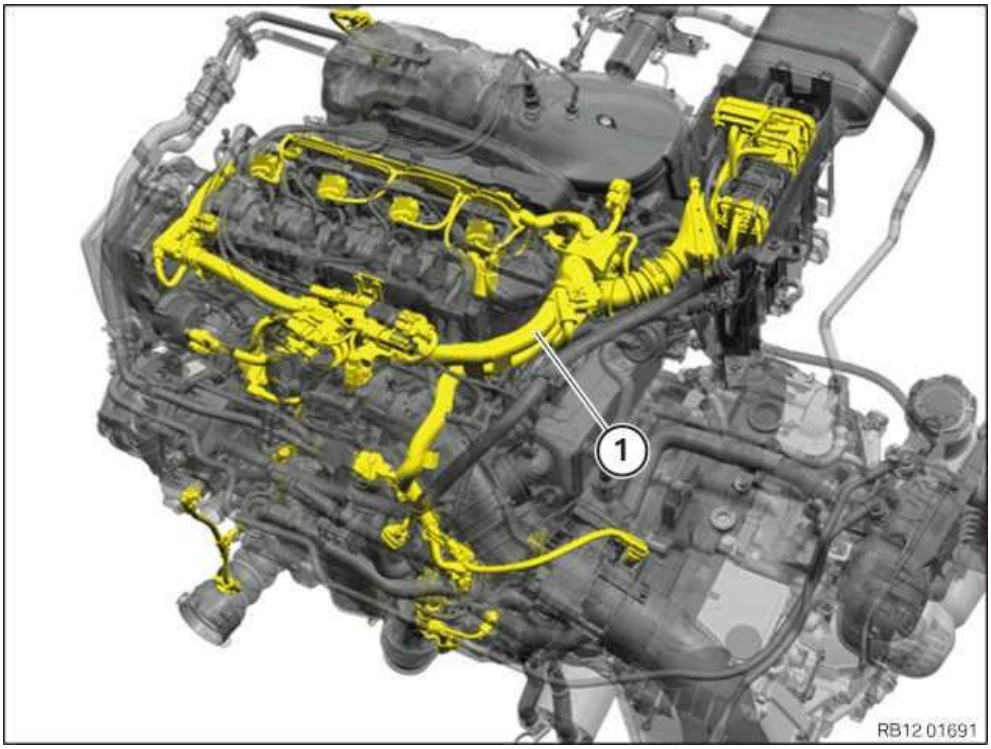


RISK OF DAMAGE

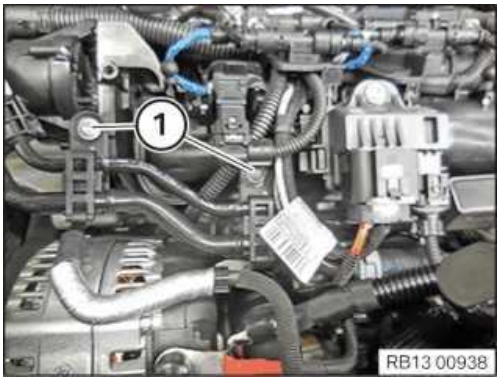
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



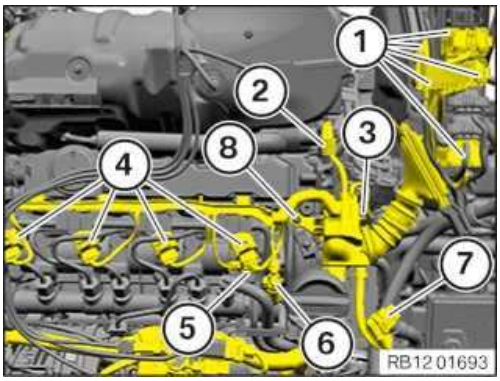
cardiagn.com



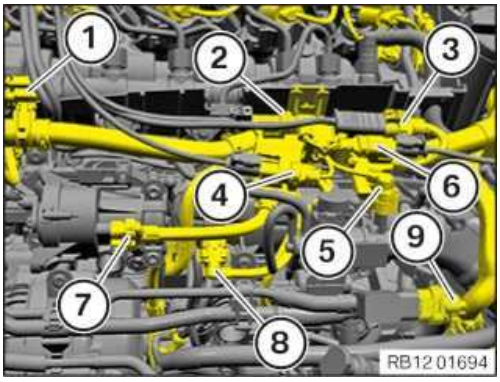
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

7 – Removing assemblies (on lifting table)

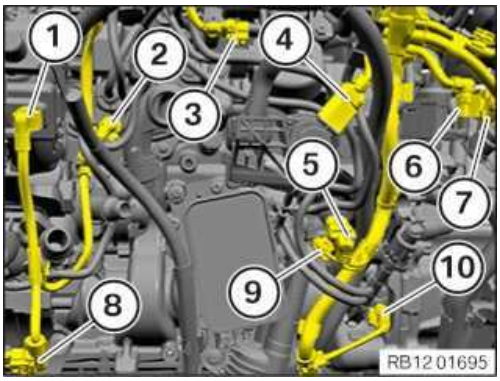
Overview: Wiring harness section for the engine



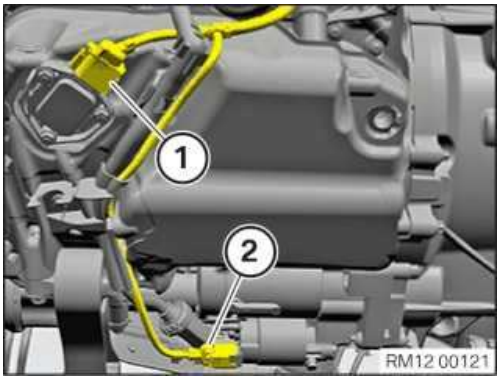
1 Wiring harness section for the engine



- Loosen screws (1).

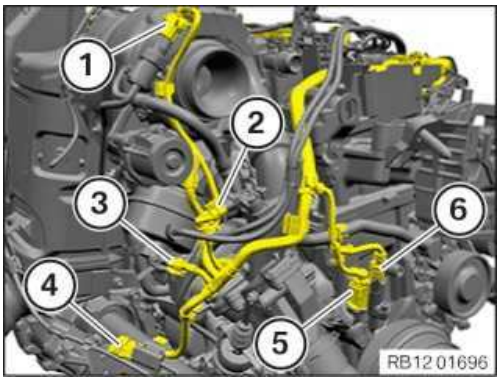


cardiagn.com

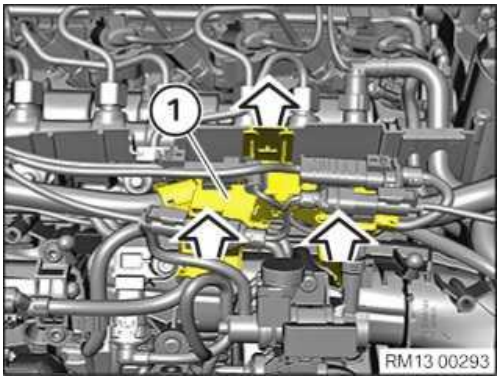


- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).

- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock connector (3) and pull it off from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

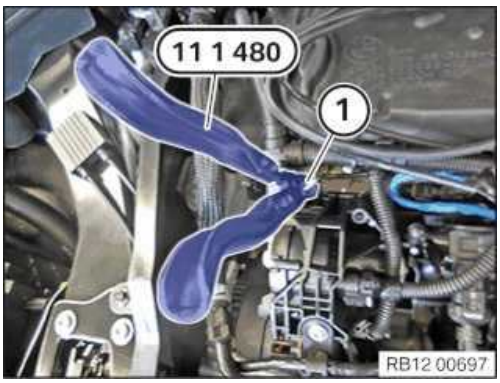


- Unlock and disconnect the connector (1) from the alternator.
- Unlock and disconnect the connector (2) from the electric changeover valve.
- Unlock and disconnect the connector (3) from the electric changeover valve.
- Unlock the connector (4) and pull it off the high pressure pump.
- Unlock the connector (5) and disconnect it from the oil pressure sensor.
- Unlock connector (6) and pull off from throttle body.
- Unlock the connector (7) and disconnect it from the intake air temperature sensor.
- Unlock the connector (8) and disconnect it from the air conditioning compressor.
- Unlock and disconnect the connector (9) from the solenoid valve.
- Unlock the connector (10) and pull it off the crankshaft sensor.

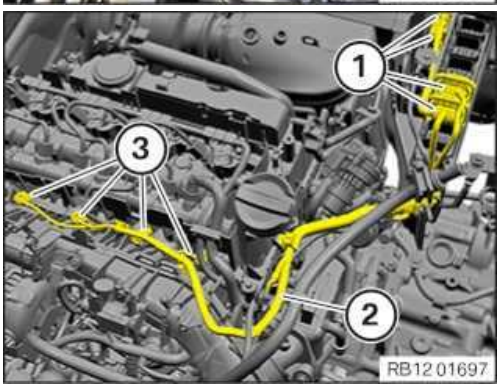


- Unlock the connector (1) and pull off of the oil-level sensor.
- Unlock connector (2) and remove from starter motor.

cardiagn.com



- Unlock the connector (1) and disconnect it from the exhaust gas pressure sensor.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock the connector (3) and pull it off the exhaust turbocharger.
- Unlock the connector (3) and disconnect it from the differential pressure sensor.
- Unlock connector (4) and pull it off from the monitoring oxygen sensor.
- Unlock the connector (5) and pull it off the oil pressure switch .
- Unlock connector (6) and disconnect from switching valve.
- Detach, feed out and remove the wiring harness from the clamps.



▶ **Removing the cable clips from the intake plenum**

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Pull off all connectors (3) from glow element using special tool **0 490 796 (11 1 480)**.
- Loosen screw (2) and remove the ground strap.
- Detach, feed out and remove the wiring harness from the clamps.

▶ **Removing the drive belt for alternator**

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

cardiagn.com

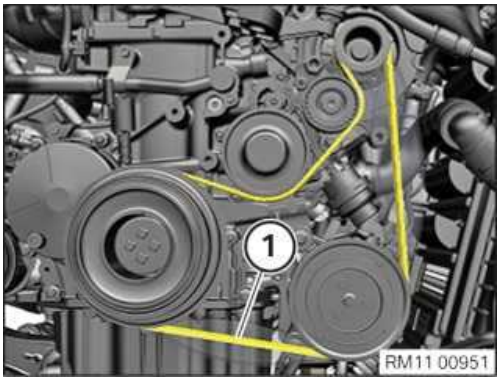
CAUTION

Component with preload.

Danger of injury!

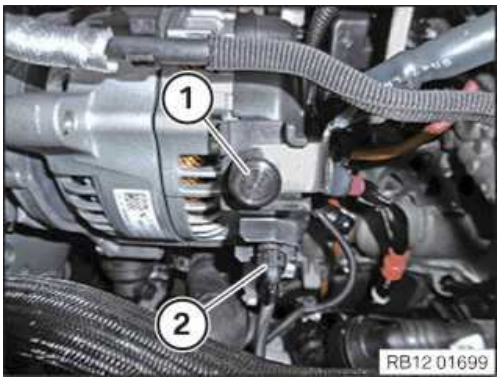
- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION



If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

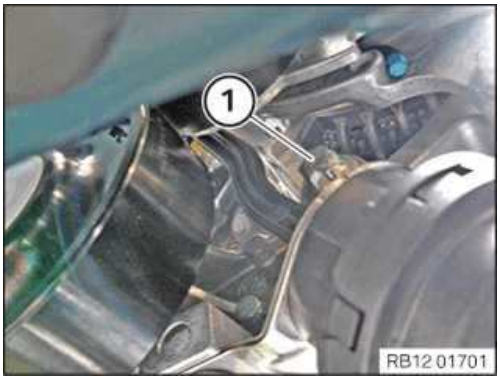
TECHNICAL INFORMATION



The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool **0 496 268 (11 0 390)**.

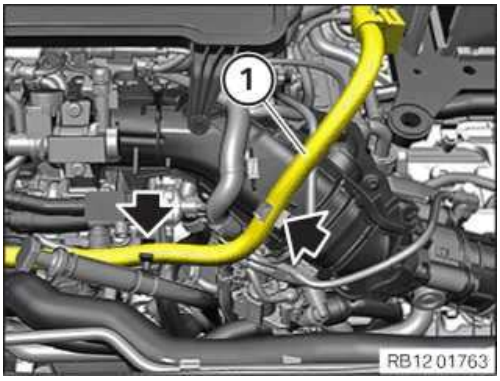
- Guide out the drive belt for the alternator (1) and remove it.



- Remove the cover (1) and loosen the nut below.
- Disconnect positive battery cable from alternator.
- Unlock and disconnect the connector (2) from the alternator.

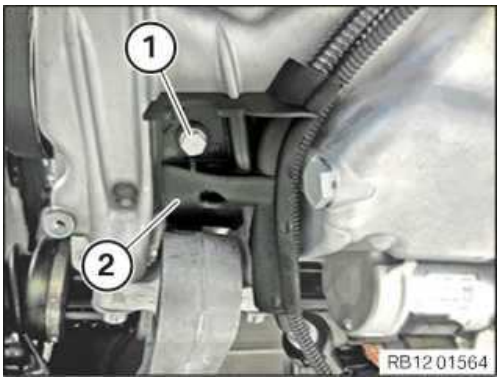
cardiagn.com

- Detach screw (1) on top on the alternator.



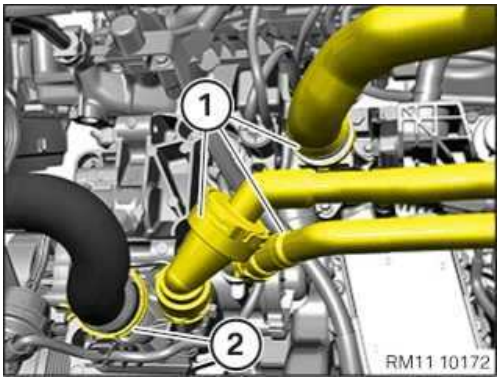
- Detach screw (1) below on the alternator.

- Feed out alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support and remove.



- Loosen screws (1).
- Feed out and remove the air conditioning compressor (2).

- Release the positive battery cable (1) from the clamps (arrows).

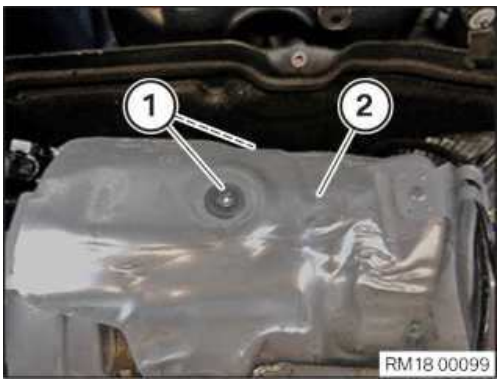


cardiagn.com

- Loosen screw (1).
- Guide out and remove holder (2).

- Feed out positive battery cable from the clamps (1) and remove.

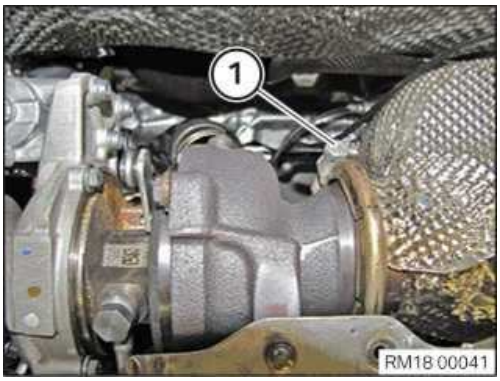
- Unlock and disconnect coolant lines (1).
- Guide out the coolant lines (1) and remove it.
- Detach the clamp (2).
- Guide the coolant hose out and remove.



▶ **Removing heat shield from top exhaust turbocharger**

WARNING

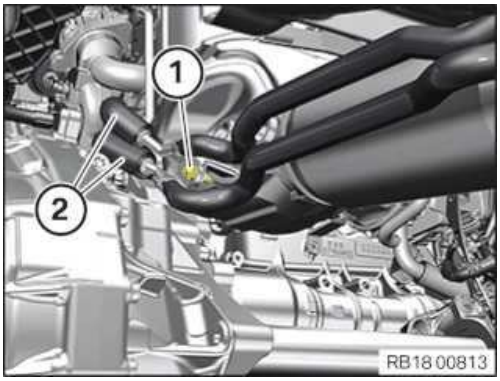
Hot surfaces.



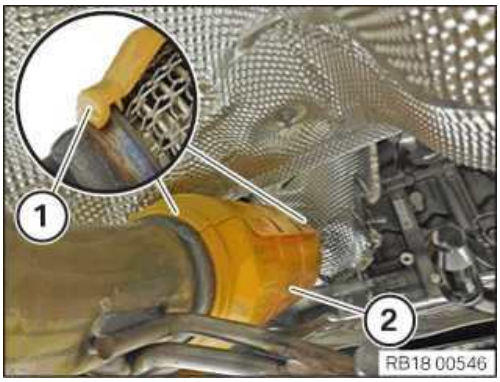
Risk of burning!

- Perform all work only on components that have cooled down.

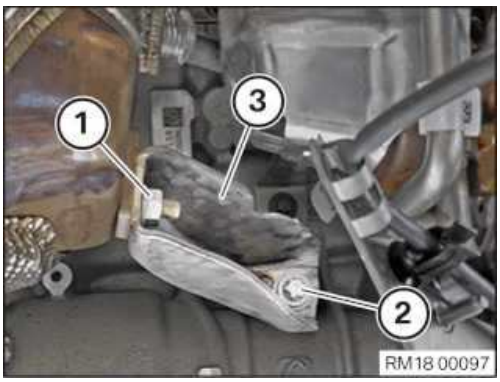
- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).



cardiagn.com

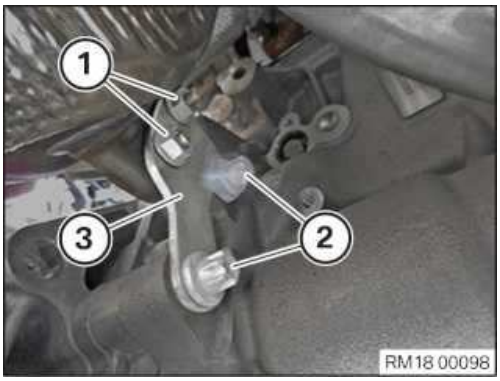


- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



- Loosen nuts (1).

- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

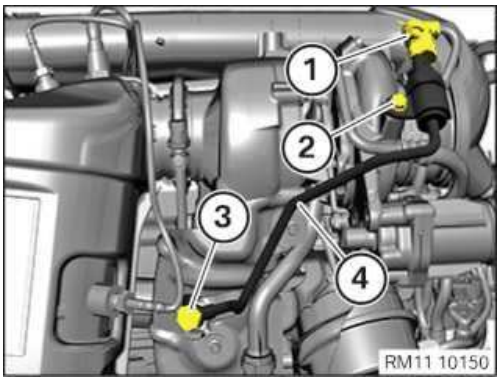


- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.

- Loosen nut (1).
- Loosen screw (2).
- Remove holder (3).

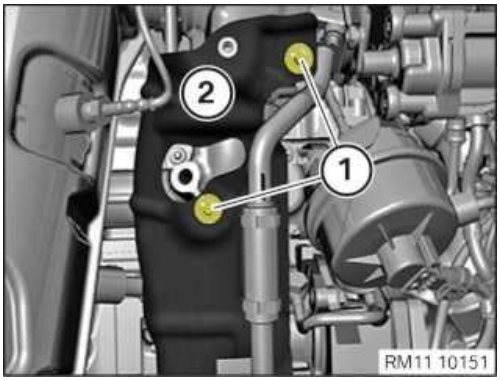
cardiagn.com

- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).
- Guide out and remove diesel particulate filter .



▶ **Remove the heat shield from the exhaust turbocharger at the bottom**

WARNING



Hot surfaces.

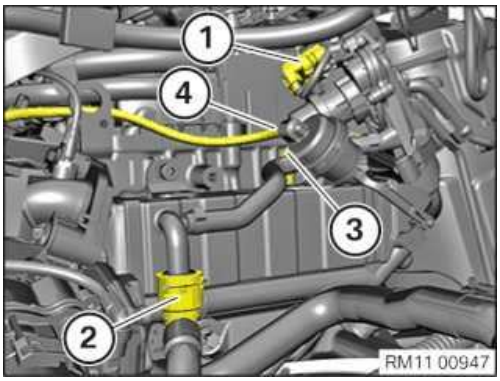
Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).

▶ **Removing the exhaust-gas recirculation cooler**

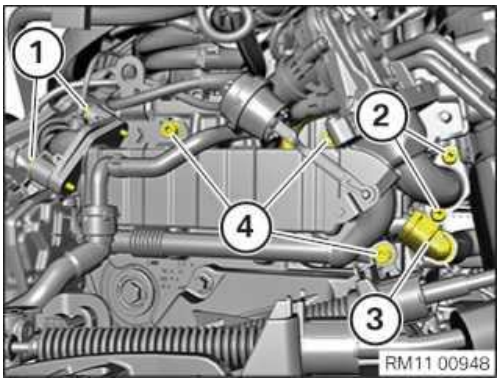


WARNING

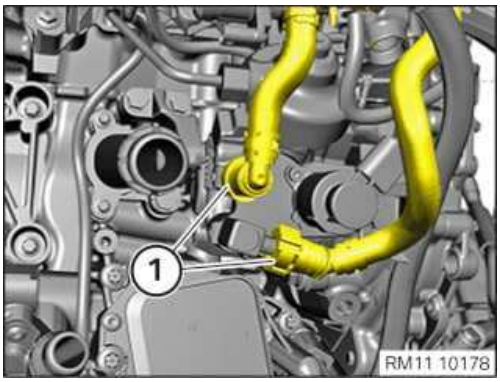
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

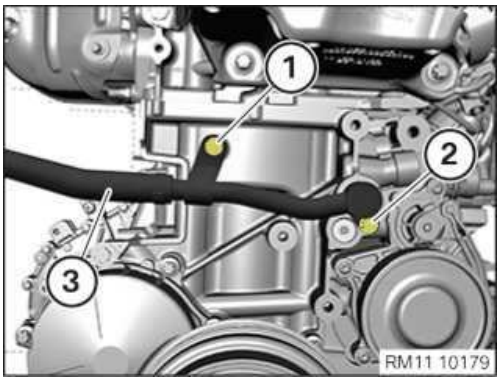


cardiagn.com



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



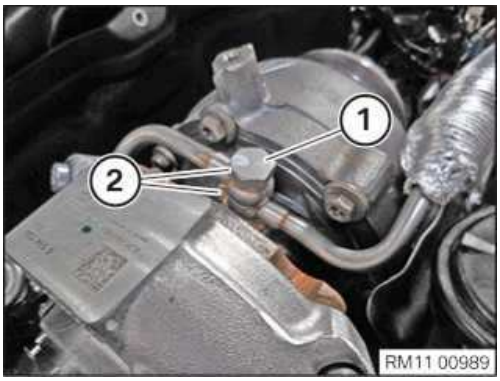
- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

- Unlock the fuel lines (1) and disconnect from the high pressure pump.
- Remove the fuel lines.

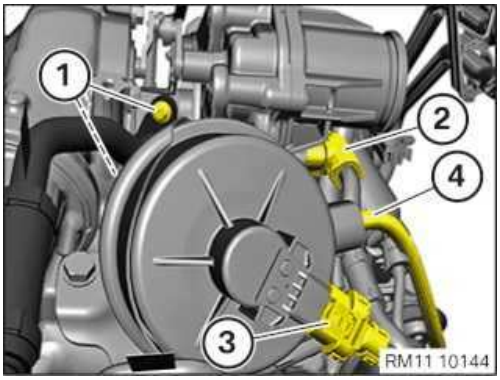
- Loosen screws (1) and (2).
- Remove coolant line (3).

8 – Removing the low-pressure stage turbocharger



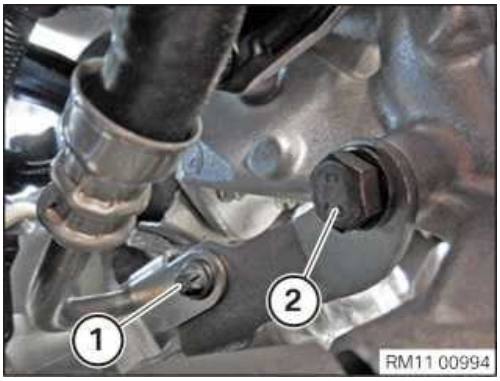
WARNING

Hot surfaces.



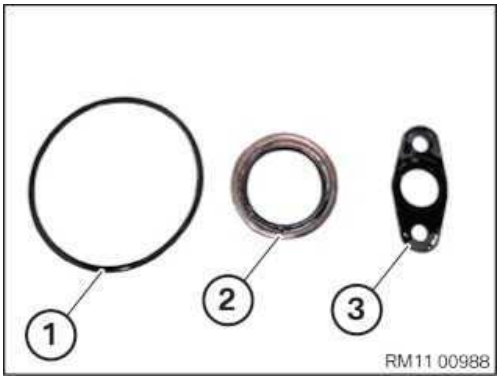
Risk of burning!

- Perform all work only on components that have cooled down.



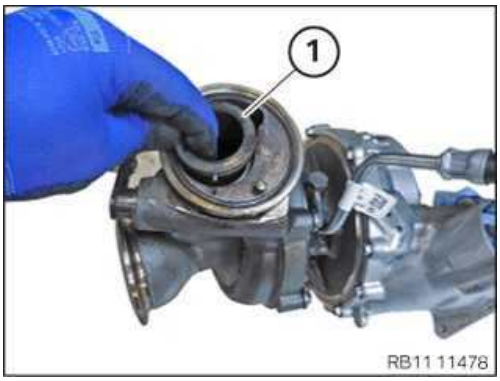
cardiagn.com

- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.



- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.

- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).



- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

cardiagn.com

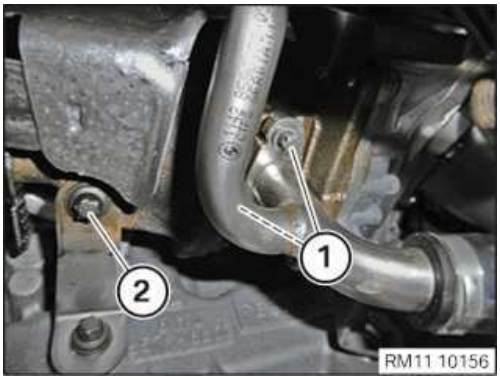
- Remove the spacer ring (1).

9 – Removing the high-pressure stage exhaust turbocharger

WARNING

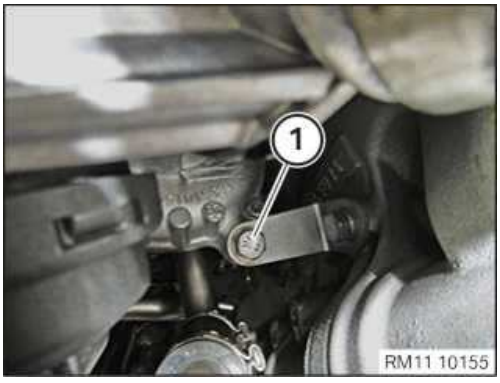
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

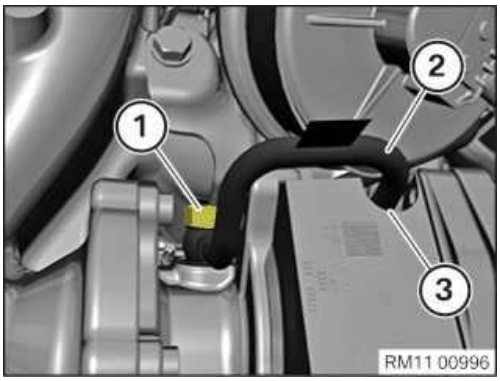
CAUTION



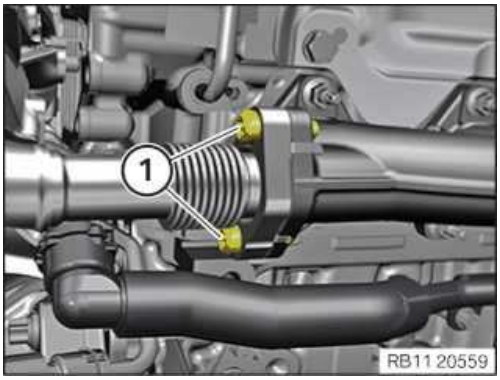
Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).



- Release screw (1) from the right wheel arch.

cardiagn.com

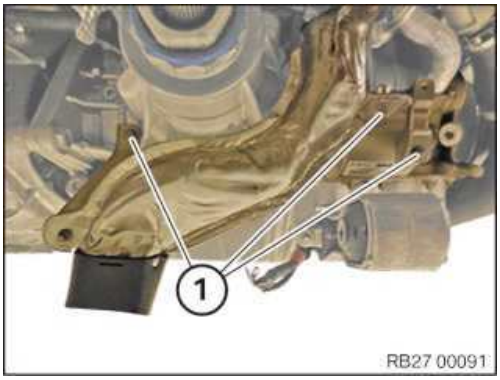
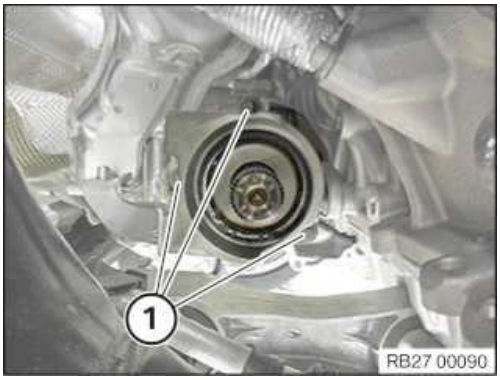
- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

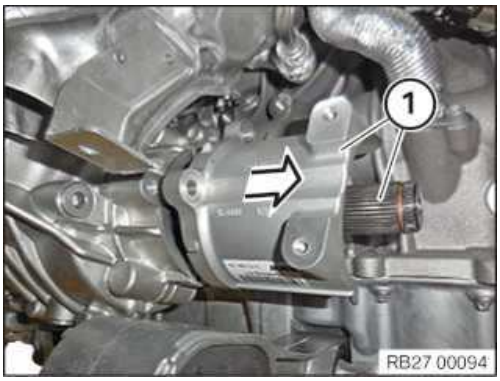


- Loosen screws (1).

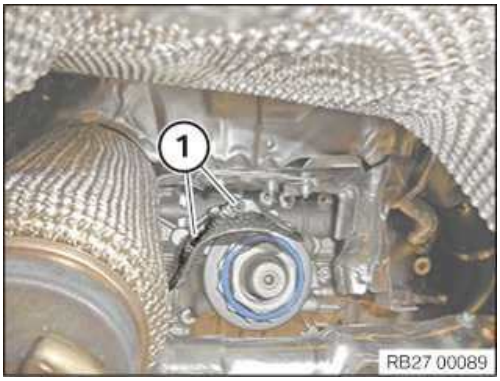


- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

10 – Remove the intermediate shaft with the support tube



- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).

cardiagn.com

- Pull the intermediate shaft with the support tube (1) out of the transfer box.

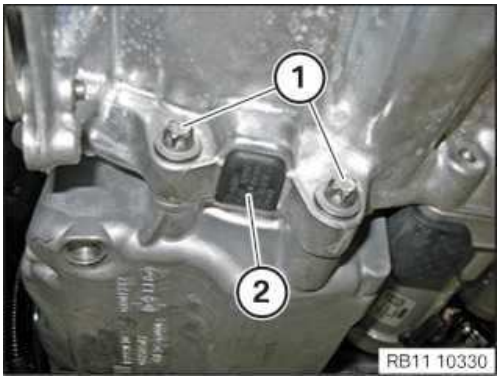
11 – Remove transfer box (VTG)

- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

12 – Detach the engine from the manual gearbox

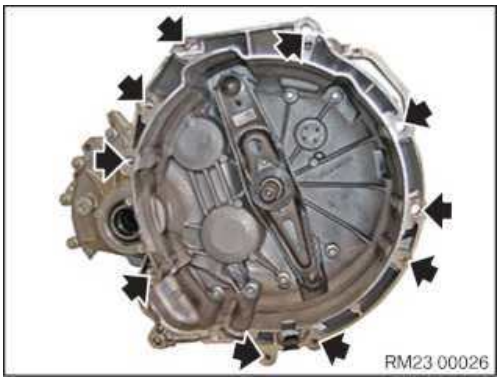
Prerequisite



Engine has been removed.

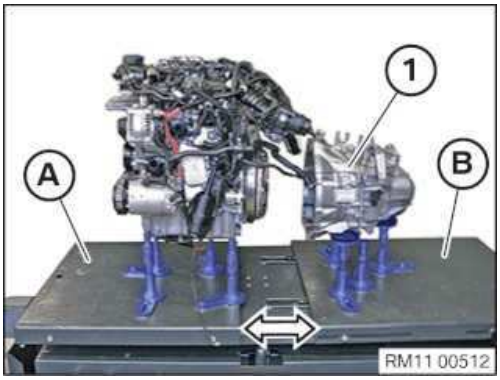
CAUTION

Heavy component.



Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Loosen screws (1).
- Remove protective cap (2).

cardiagn.com

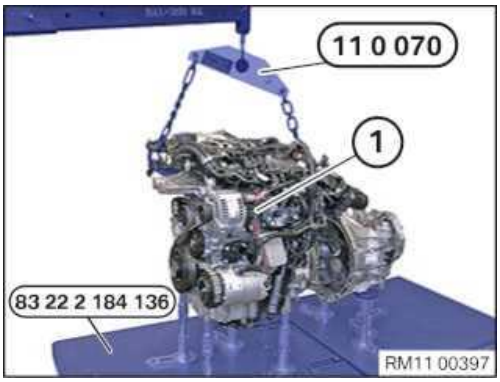
- Remove screws (arrows).



- Slide the table top (B) in the direction of the arrow and slide the manual gearbox (1) to the side.

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

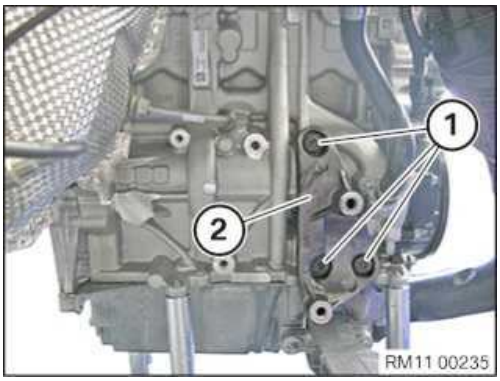
M8		Tightening torque	21,5 Nm

- Attach engine lifter to special tool and lift engine (1) off lifting table.

13 – Mount engine on assembly stand

CAUTION

Heavy component.



Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com

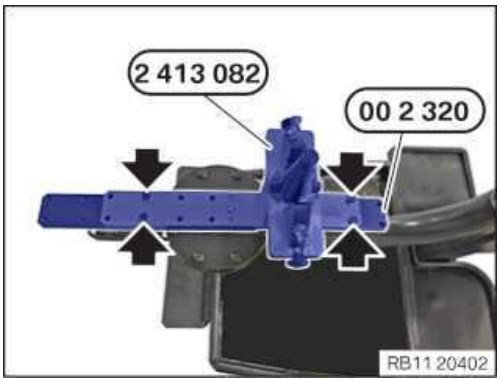
- Loosen screws (1).
- Guide out and remove holder (2).



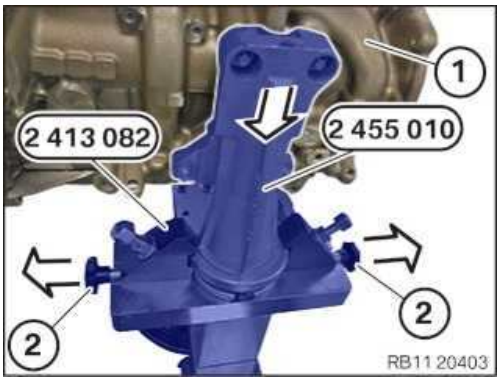
- Position the special tool **2 455 010** on the engine (1).
- Position the standard bolts **M10x30**.
- Tighten the standard bolts (arrows).
-

Special tool 2 455 010 to crankcase

M10x30		Tightening torque	38 Nm

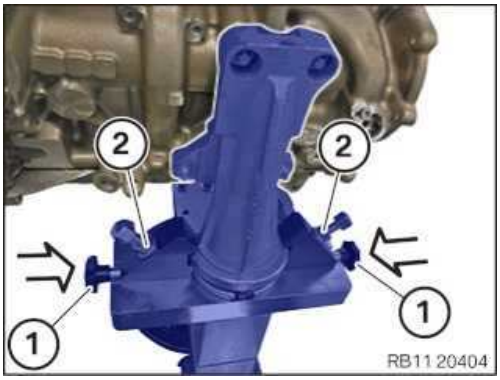
- Prepare the assembly stand **0 495 187 (00 2 300)** with the special tool **0 495 196 (00 2 320)**.

- Screw the special tool to the **0 495 196 (00 2 320)** special tool.
- Tighten screws (arrows).
-



Special tool 11 8 930 to special tool 00 2 320

M14x35		Tightening torque	160 Nm



- Position the engine lifter with the special tool and the engine on the special tool **0 495 187 (00 2 300)**.

cardiagn.com

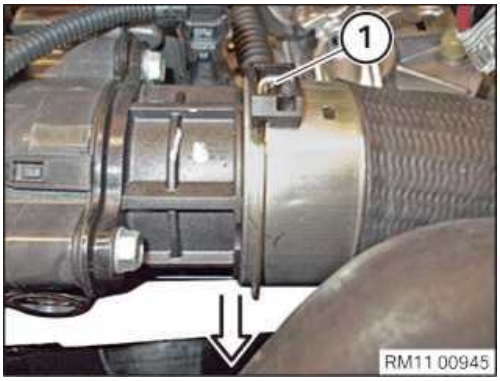
- Detach the holder (2) in the direction of the arrow.
- Position the engine (1) with the special tool **2 455 010** in the direction of the arrow on the special tool .

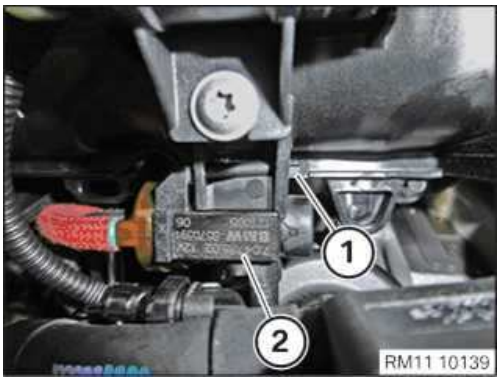
- Lock the holder (1) in direction of arrow.
- Tighten nuts (2).



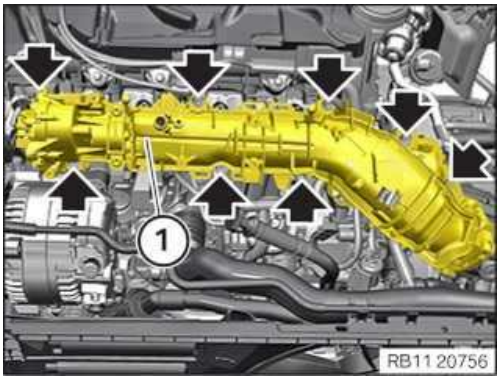
14 – Removing the intake plenum

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

cardiagn.com

- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

15 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

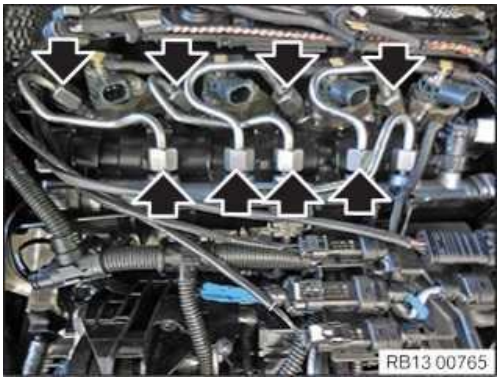
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION



If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

16 – Detaching leakage oil line from injector

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

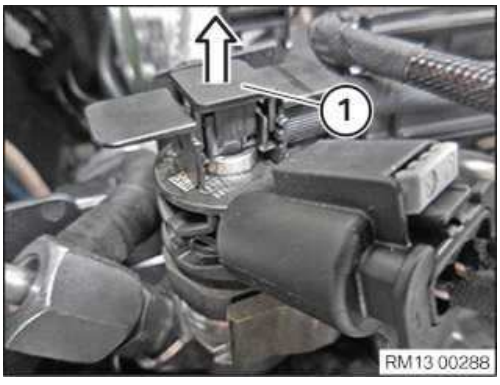
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE



Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

17 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

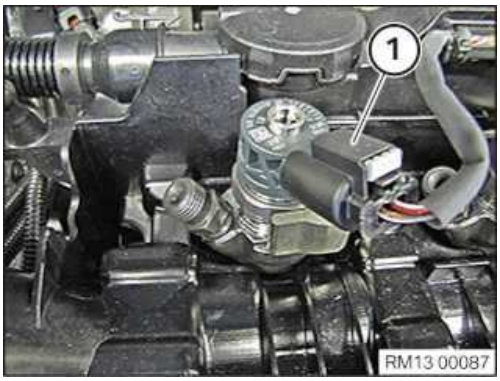
Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

 **Electrostatic discharge.**



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

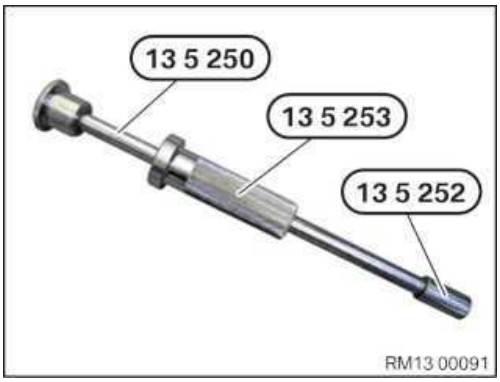
TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

- Unlock and disconnect connector (1).

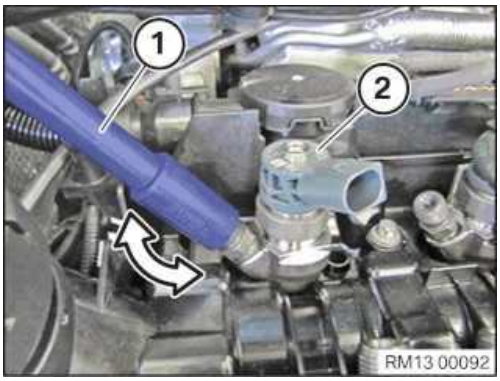
- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.



▶ **Loosen stuck injectors**

RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)** back onto the special tool **0 493 321 (13 5 250)**.

cardiagn.com

- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

18 – Remove high-pressure rail

WARNING

Working on fuel system.

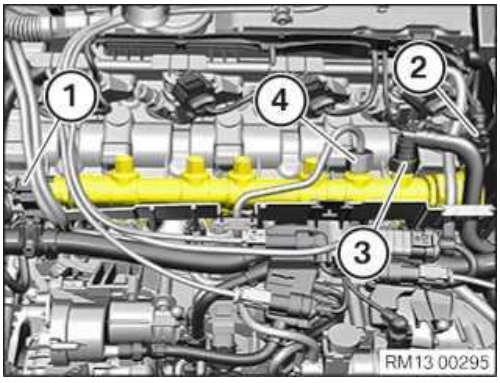
Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

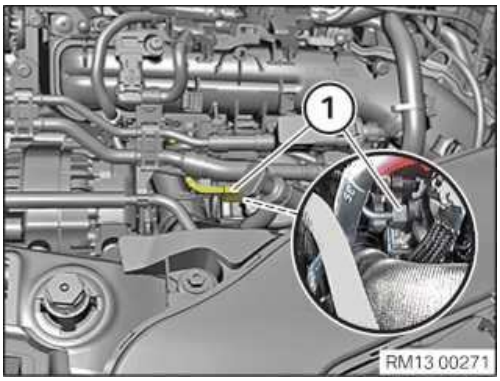
Contamination can result in malfunctions, operating failure or leaks.



- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

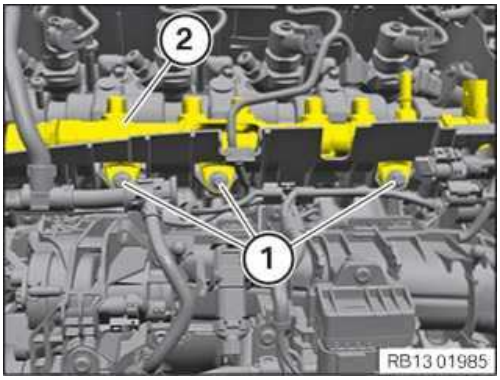
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Unlock and disconnect connector (1).
- Unlock and disconnect connector (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool .
- Reset special tool early on to avoid bending pressure lines.

cardiagn.com

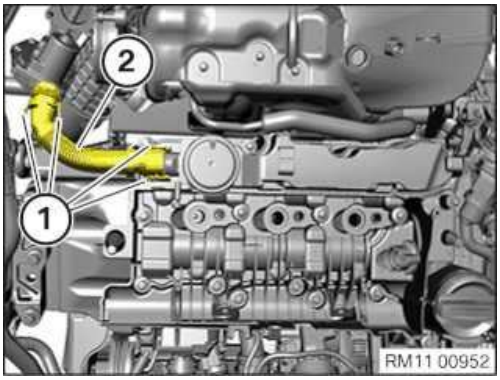
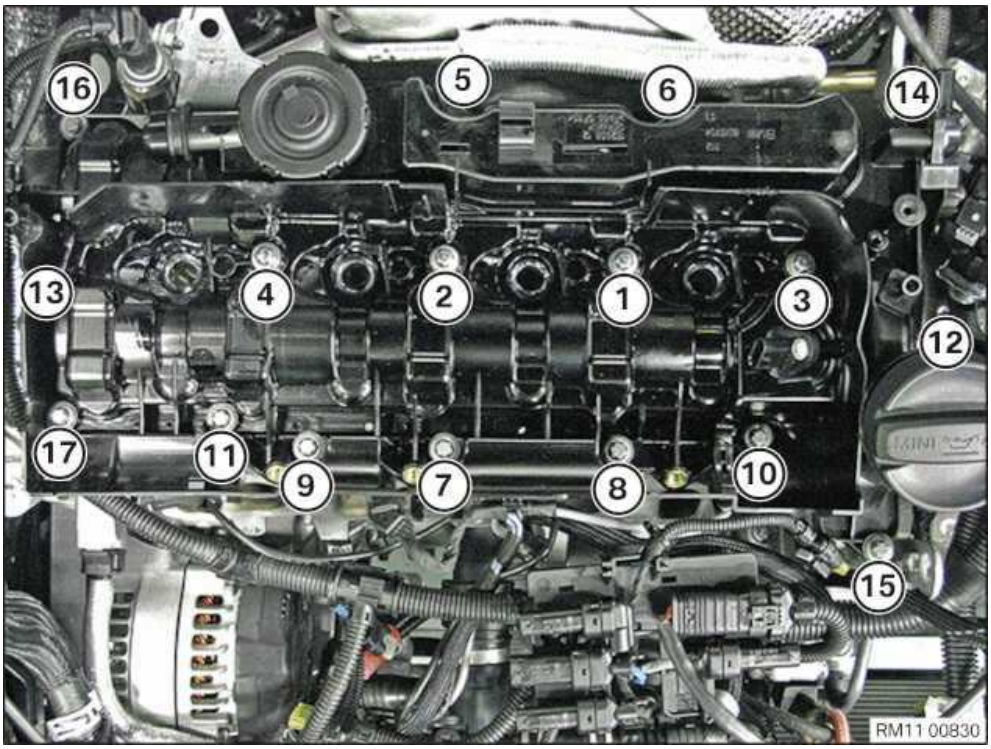
- Slacken the union nut (1) on the high pressure pump.



- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

19 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

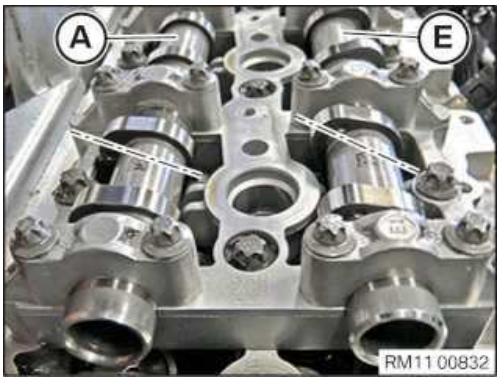
- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

20 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.



The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

21 – Remove chain tensioner piston

cardiagn.com

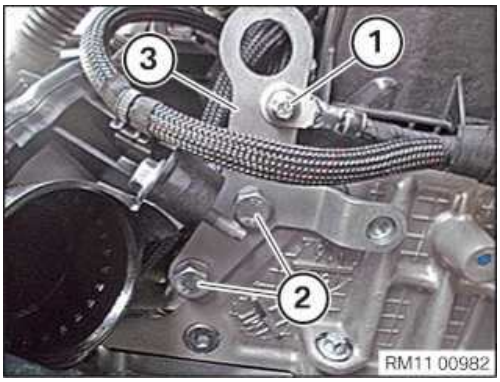
WARNING

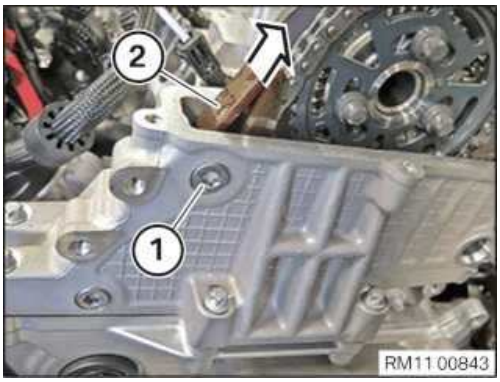
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



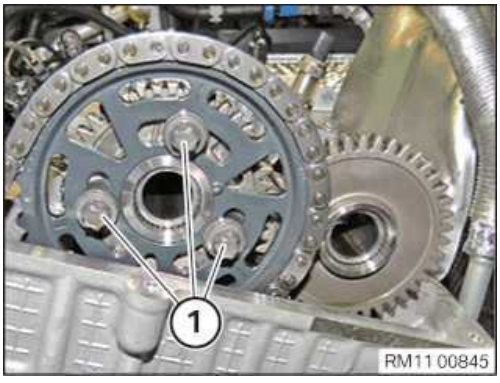
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

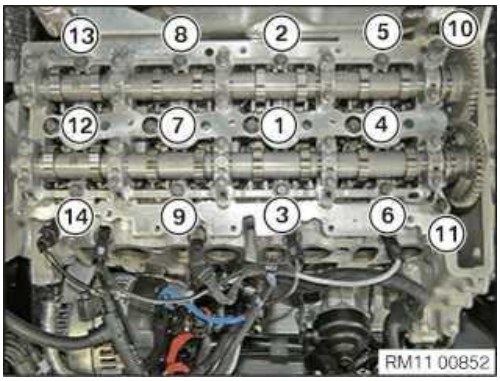
- Remove the chain tensioner piston (1).

22 – Remove the timing chain guide rail



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.



23 – Removing the camshaft sprocket on the intake camshaft

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

24 – Removing the camshaft support

cardiagn.com

- Evenly loosen all screws in a sequence from (14) to (1).
- Loosen and remove all screws in a sequence from (14) to (1).
  Both camshafts can be removed with the camshaft carrier.
- Remove the camshaft support including camshafts towards the top.

25 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

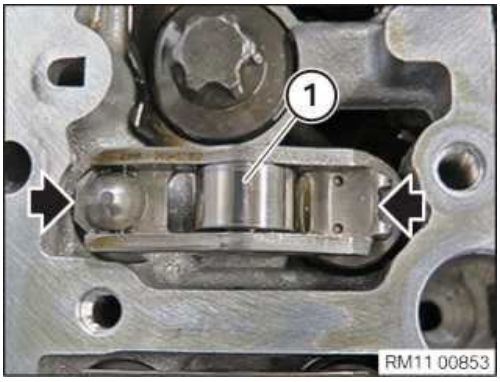
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool or conventional tools.
- Feed out preheating elements and remove.

26 – Remove roller cam followers

- Guide out and remove all roller cam followers (1) (arrows).
- Place all roller cam followers (1) in order in special tool **0 495 105 (11 4 480)**.

  Roller cam followers that have already been used must be installed in same position again.

27 – Removing the hydraulic valve clearance compensating element

cardiagn.com

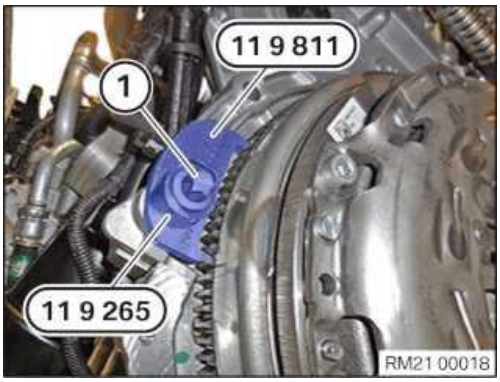
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

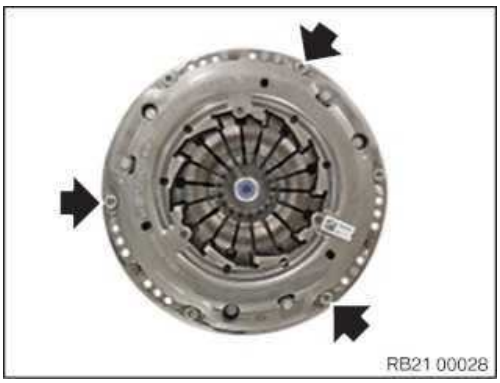
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.



28 – Remove clutch

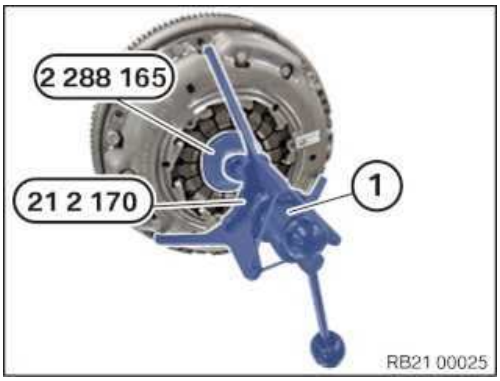
CAUTION



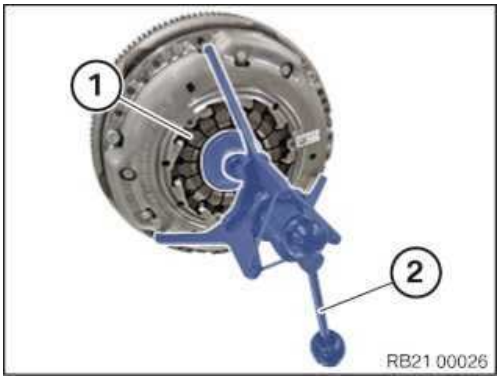
Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.



- Block flywheel with transmission bolt (1) and special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.



- Detach 3 screws to attach special tool and **2 288 165**.

cardiagn.com

- Position special tool and **2 288 165** and tighten on the knurled screw (1).

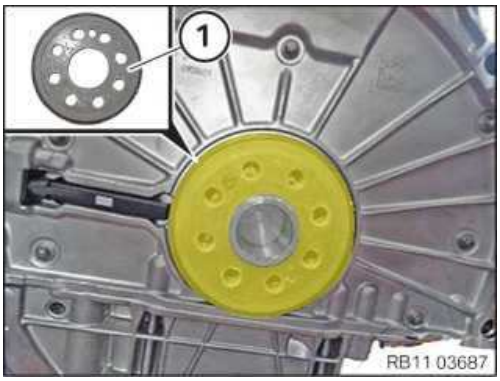
- Screw in the spindle (2) until the diaphragm spring (1) is preloaded and the clutch disc is free of tension.

- Loosen the remaining 3 screws and remove the clutch with clutch disc from the flywheel.

29 – Removing flywheel

CAUTION

Heavy component.



Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Secure the flywheel with a transmission bolt (1) and with special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.
- Unscrew the flywheel bolts with the special tool **0 491 018 (11 4 180)**.
- Remove flywheel.

cardiagn.com

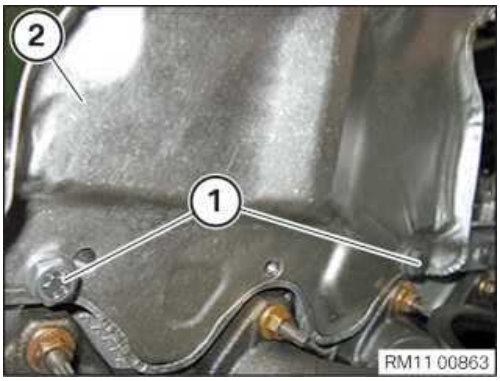
RISK OF DAMAGE

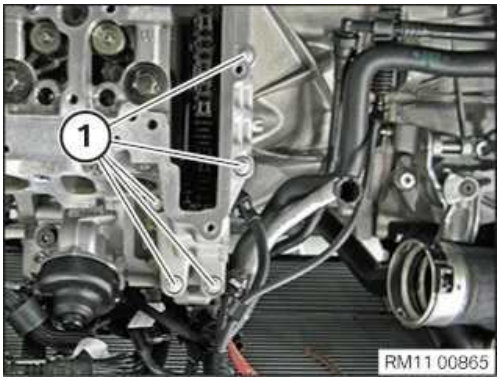
Electrostatic discharge.

Damage to or destruction of electrical components.



- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

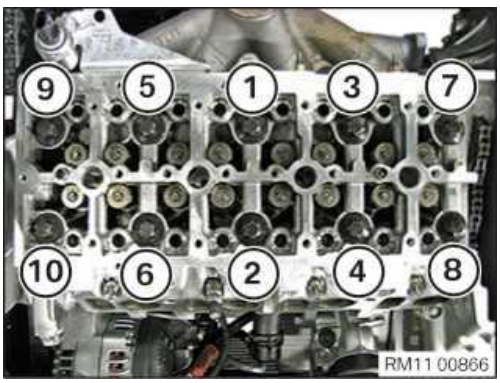
- Remove the increment wheel (1) from the crankshaft and lay it down correctly.



30 – Remove rear timing case cover

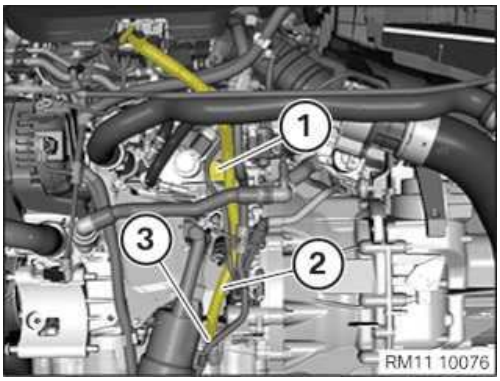
Prerequisite

Transmission is removed.



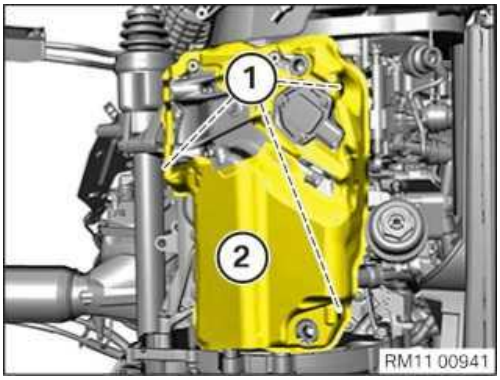
- Loosen screws (1).
- Feed out the heat shield (2) and place to one side.

TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).



- Loosen the cylinder head bolts in the sequence from (10) to (1).
- Remove cylinder head bolts (1) to (10) with washers.
- Remove cylinder head.

cardiagn.com

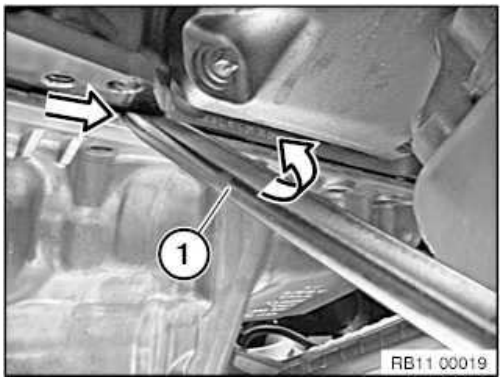
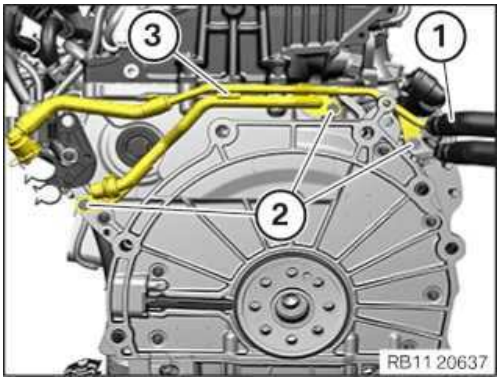
- Loosen screw (1).
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- Remove sealing ring (3) from oil sump if necessary.

- Expanding rivets (1) on both sides of the acoustic cover (2).
- Feed out and remove the acoustic cover (2).



- Loosen the transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).



- Release oil sump only in area (1).

cardiagn.com

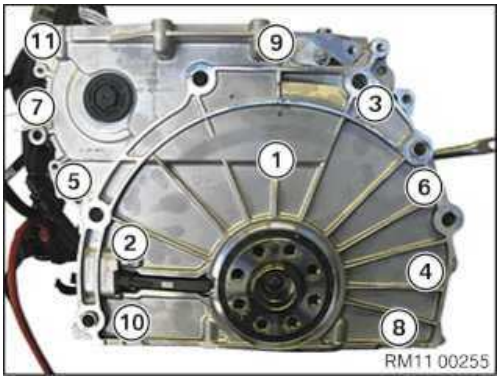
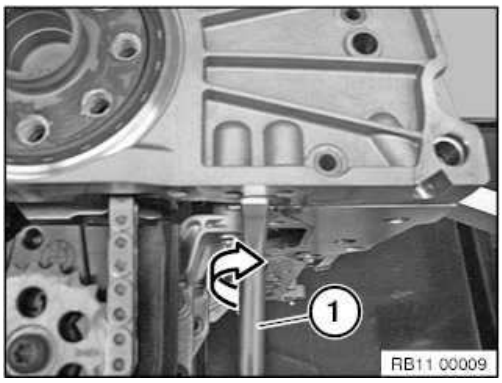
- Detach the oil sump with a suitable mounting lever (1) carefully at the point provided.
- Secure the oil sump against falling.

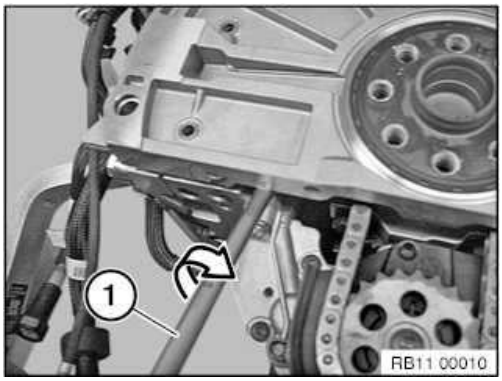


▶ **If installed: Remove coolant line of the SCR metering module**



- Unlock and disconnect the coolant hose (1).
- Loosen screws (2).
- Remove the coolant line (3).

- Loosen screw (1).
- Guide out and remove holder (2).



- Loosen screws in the order (11) to (1).

- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.

cardiagn.com

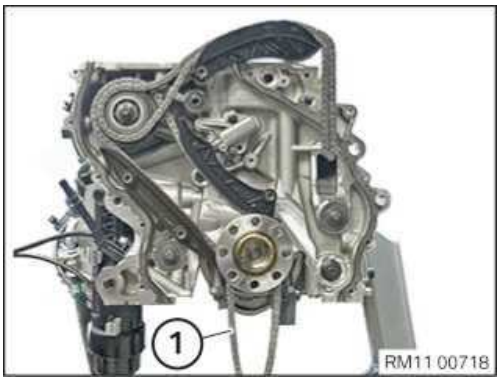
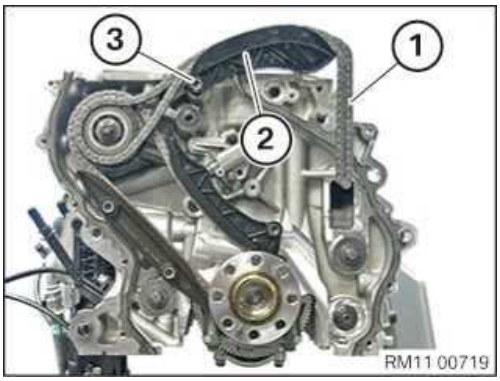
- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.
- Remove the timing case cover.

31 – Remove the oil vacuum pump



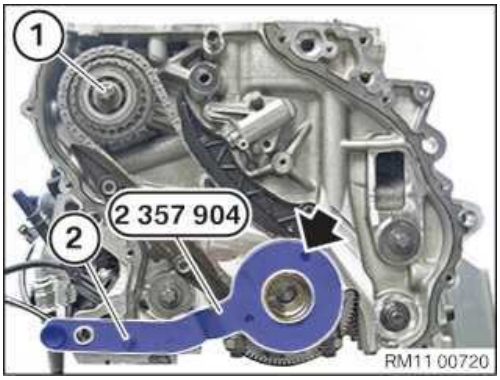
- Loosen screws (1) of the oil vacuum pump (2).

- Remove oil vacuum pump (1) and remove from the drive chain (2).



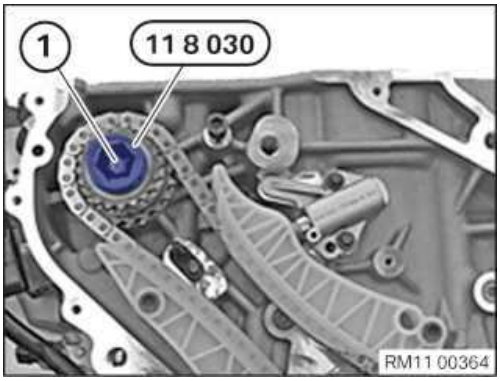
MAIN WORK

32 – Remove both timing chains



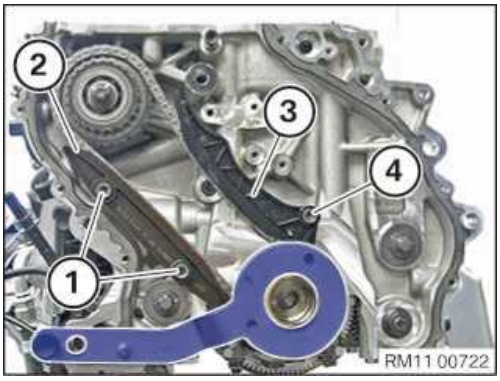
- Remove drive chain (1) for oil pump.

cardiagn.com



- Remove the timing chain (1) for the camshafts.
- Remove the tensioning rail (2) from the bearing journal (3).

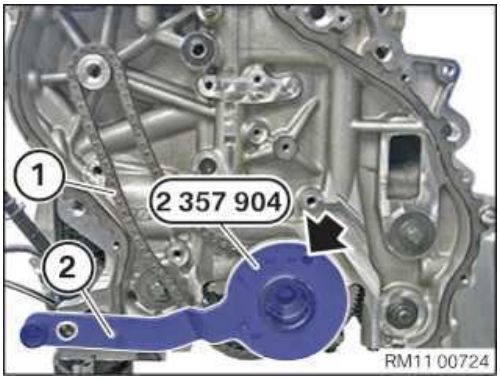
  Bearing journal (3) does not have to be disassembled.



- Secure crankshaft to release central bolt (1) of high pressure pump.
- Position crankshaft with guide pin (arrow).
- Secure special tool **2 357 904** with bolt (2) on crankcase.
- Release central bolt (1) of high pressure pump; do not remove.

- Screw special tool **0 496 725 (11 8 030)** into sprocket of high pressure pump.
- Unscrew central bolt (1) of high pressure pump until central bolt can be supported on special tool **0 496 725 (11 8 030)**.
- Continue turning central bolt (1) until camshaft sprocket is released from high pressure pump shaft.

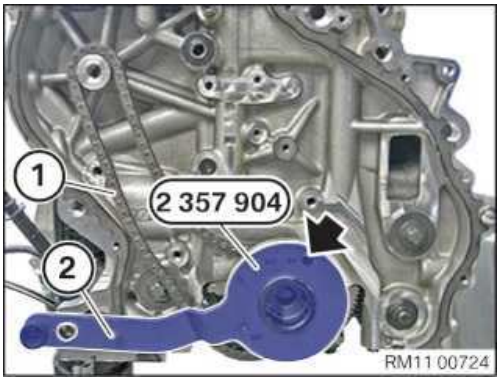
- Press chain tensioner in with tensioning rail (1) by hand in the direction of the arrow until the special tool **0 491 012 (11 4 120)** can be positioned.
- Loosen screws (2).
- Remove chain tensioner.



- Loosen both bearing journals (1).
- Remove the guide rail (2).
- Loosen the bearing journals (4).
- Remove the tensioning rail (3).

cardiagn.com

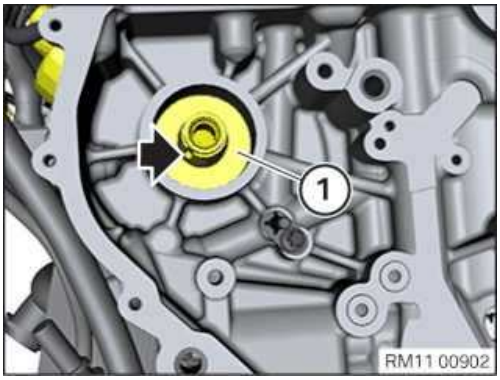
- Remove bolt and camshaft sprocket (1) of high pressure pump.



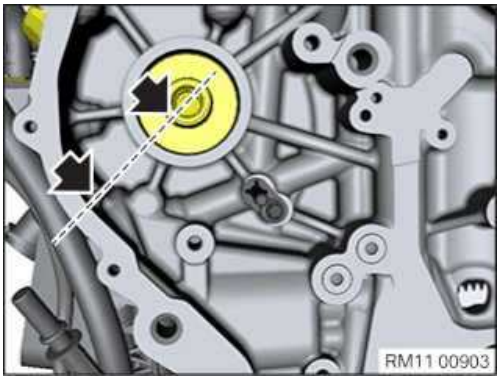
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Unscrew the bolt (2) and remove the special tool **2 357 904**.
- Remove the timing chain (1).



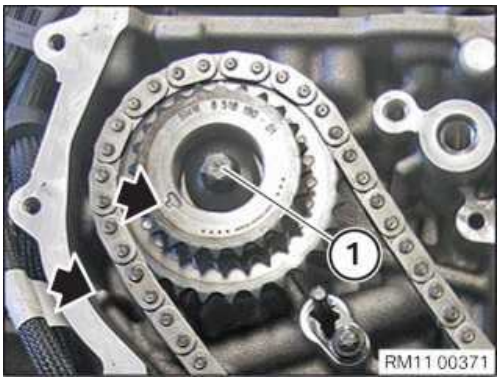
33 – Install both timing chains



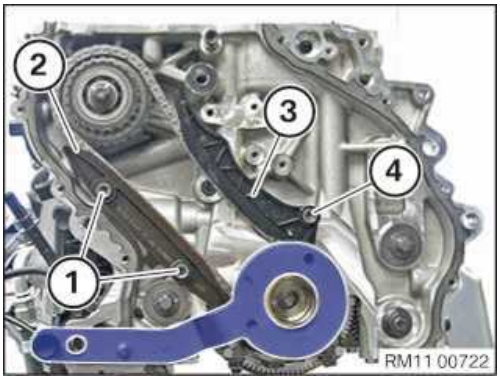
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Position the timing chain (1).
- Secure crankshaft with special tool **2 357 904**.
- Secure special tool **2 357 904** with bolt (2) on crankcase.



- Note spline groove on high pressure pump (1).



- Mark and groove (arrows) on high pressure pump and crankcase must align.

cardiagn.com

- Position the impeller with timing chain on the high pressure pump.
- Screw in and fasten central bolt (1) of high pressure pump.
- Mark and cast lug (arrows) must align.

- Position tensioning rail (3).
- Replace bearing journal.

  Parts: Bearing journal
- Tighten the bearing journals (4).

Bearing journal of tensioning and guide rail

M8	*Replace bearing journal.*	Tightening torque	20 Nm

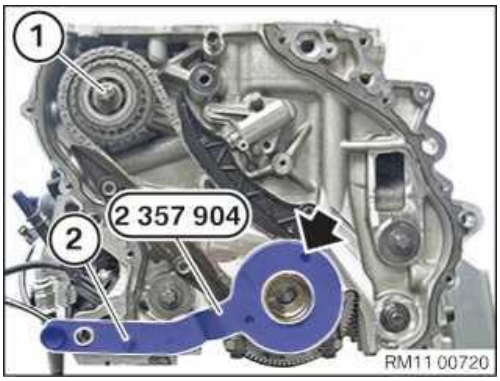
- Position the guide rail (2).
- Replace bearing journal.

  Parts: Bearing journal
- Tighten both bearing journals (1).

Bearing journal of tensioning and guide rail

M8	*Replace bearing journal.*	Tightening torque	20 Nm

- Clean sealing surfaces (1) with compressed air.



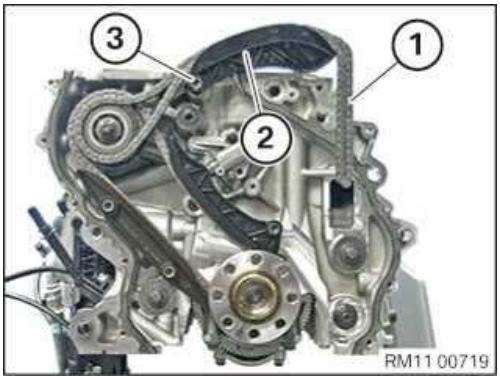
- Position hydraulic chain tensioner.
- Tighten down screws (2).

Chain tensioner to crankcase

M6x22		Tightening torque	10 Nm

- Press chain tensioner in by hand with tensioning rail (1) in direction of arrow until special tool **0 491 012 (11 4 120)** can be removed.

cardiagn.com



- To fasten central bolt (1) of high pressure pump, crankshaft must remain secured with special tool **2 357 904** and bolt (2).
- Renew central bolt (1).

  Parts: Central bolt
- Tighten central bolt (1).

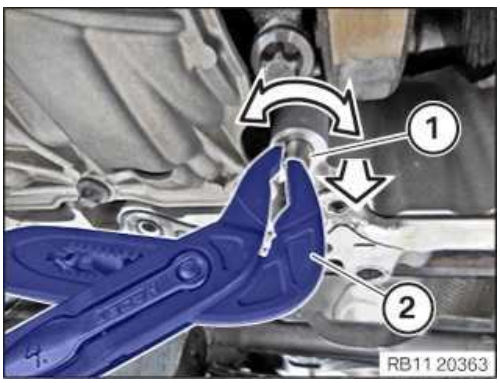
Camshaft sprocket on high pressure pump

M12		Tightening torque	65 Nm

- Position tensioning rail (2) on bearing journal (3).
- Position camshaft timing chain (1).

- Mount drive chain (1) for oil pump on crankshaft.

POSTPROCESSES

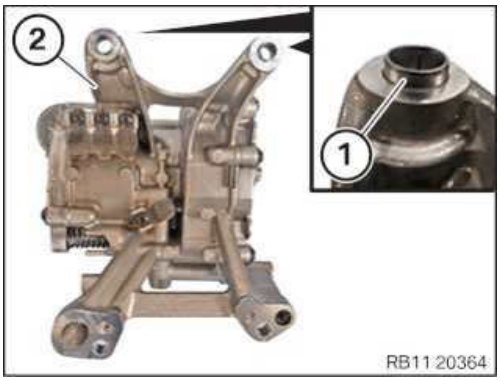


34 – Install the oil vacuum pump

RISK OF DAMAGE

Contaminant or foreign body.

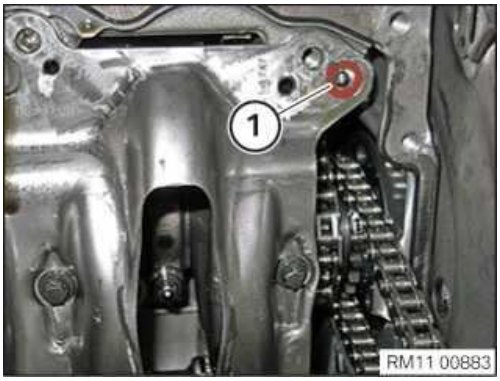
Contamination can result in malfunctions, operating failure or leaks.



- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

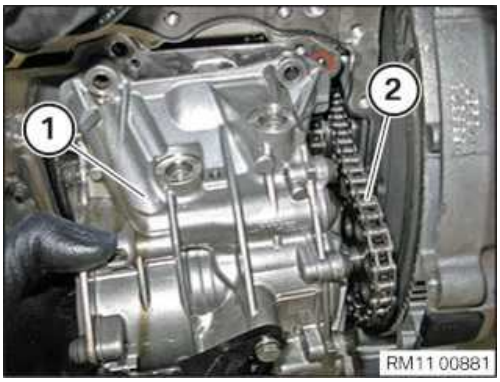
- Remove centering sleeves from the crankcase (1) using a standard tool (2).
- Renew the centring sleeves (1).

  Parts: Centring sleeves



cardiagn.com

- Install centering sleeves (1) in the oil vacuum pump (2).



- Check the sealing ring (1) for damage and renew where required.
- Make sure the sealing ring (1) is installed correctly.

- Check sealing ring (1) for damage and replace oil deflector if necessary.

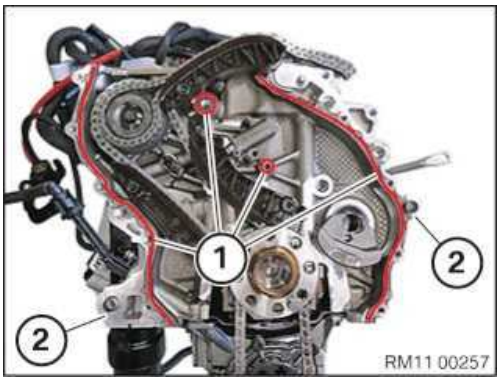
  Parts: Oil deflector

- Insert oil vacuum pump (1) into the drive chain (2).

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1) of the oil vacuum pump (2).

Oil vacuum pump to crankcaseB47



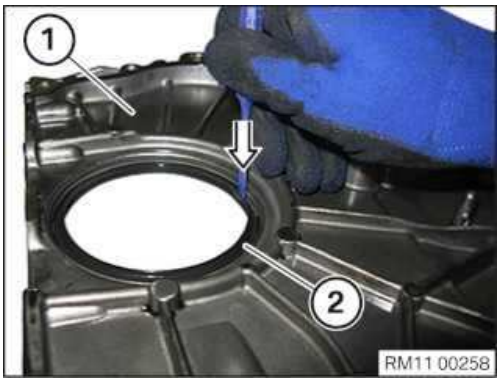
M8x35		Tightening torque	19 Nm

35 – Install the rear timing case cover

Prerequisite

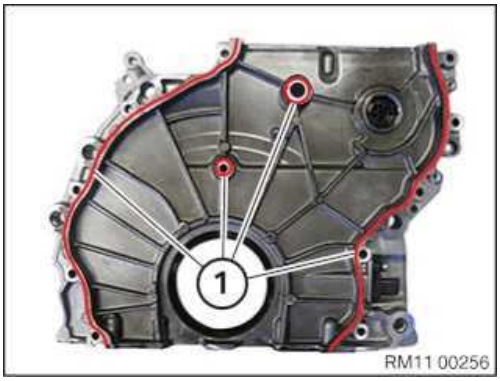
Transmission is removed.

cardiagn.com



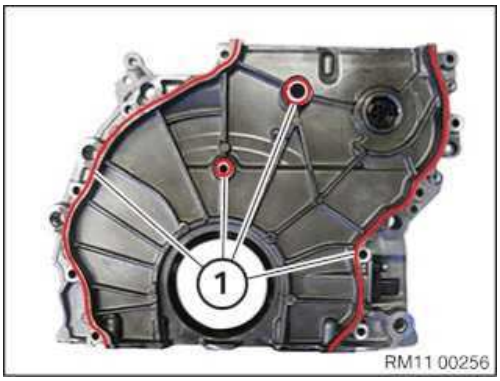
RISK OF DAMAGE

Damage to the surface.



The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

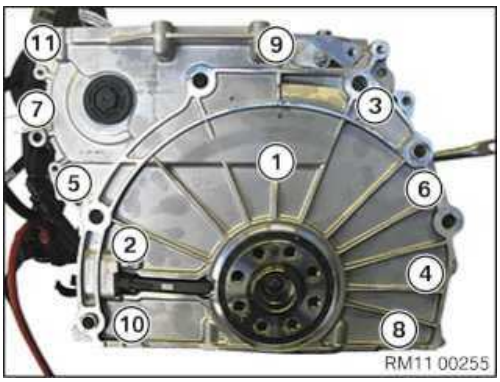
- Do not use any metal-cutting tools.



- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.
- Check fitting sleeves (2) for damage and for tight fit; renew if necessary.

- Position the timing case cover (1) underneath.
- Position punch on inner side of crankshaft seal (2).
- Drive out crankshaft seal (2) outwards.

- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.



TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Apply sealing bead (1) with a height of approx. 1.5 mm to 2.0 mm on inner side of timing case cover in marked locations. Use liquid sealing compound for this.

  Application time of sealing bead (1) must not exceed 12 minutes.

- Mount the timing case cover without the crankshaft seal.
- Renew screws (1) to (11).

  Parts: Bolts
- Join the bolts in with the sequence (1) to (11).
- Tighten screws in the order (1) to (11).

Rear timing case cover to crankcase

M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

▸ **Installing the rear crankshaft seal**

cardiagn.com

RISK OF DAMAGE

Radial shaft seal damage.

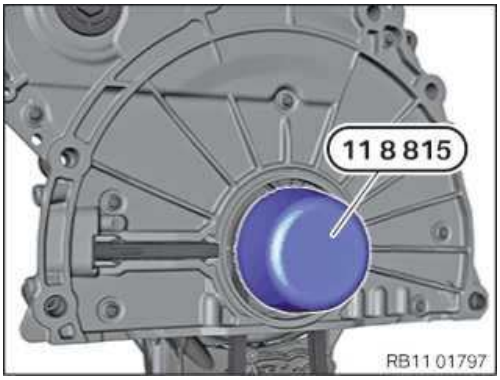
Touching the sealing lip (inner) on the radial shaft seal with the sharp-edged connector gearing of the output shaft will result in destruction and/or leaks.

- When inserting the output shaft, make sure that the connector gearing of the output shaft does not touch the sealing lip (inner) of the radial shaft seal.

RISK OF DAMAGE

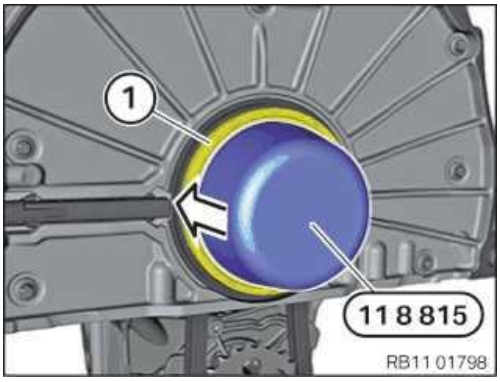
Radial shaft seal damage.

Touching the sealing lip (inner) and applying oil to the radial shaft seal will lead to its destruction.



- Do not touch the sealing lip (inner) of the radial shaft seal.
- Do not apply oil to the radial shaft seal.
- Install the radial shaft seal dry.

RISK OF DAMAGE



Electrostatic discharge.

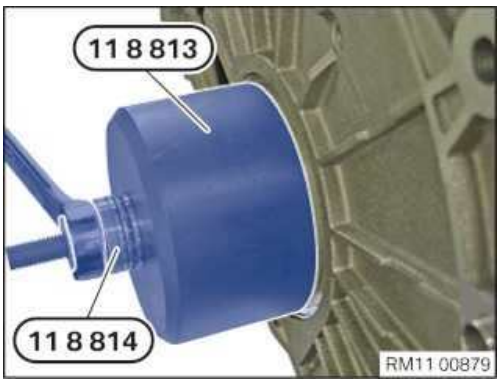
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

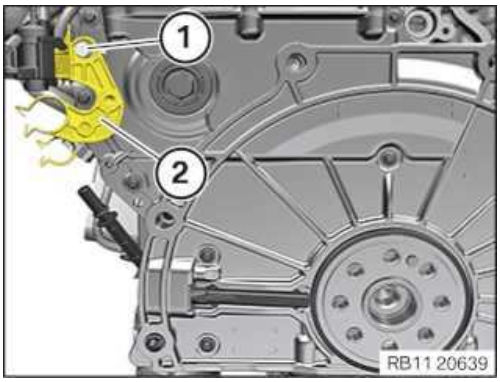
- Position special tool **0 496 137 (11 8 815)** on crankshaft. Make sure that the crankshaft sensor is not damaged.

- Fit the crankshaft seal (1) up to the timing case cover in the direction of the arrow using special tool **0 496 137 (11 8 815)** and position.
- Remove special tool **0 496 137 (11 8 815)**.

cardiagn.com

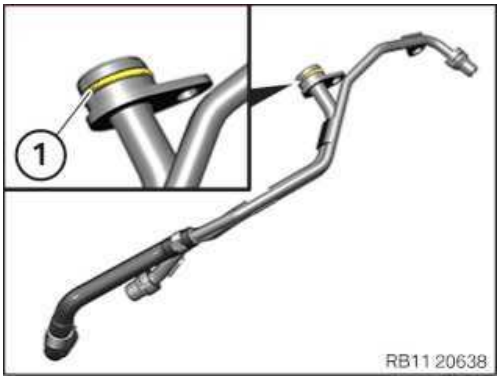


- Secure special tool **0 496 133 (11 8 811)** to the crankshaft using special tool **0 496 134 (11 8 812)**.



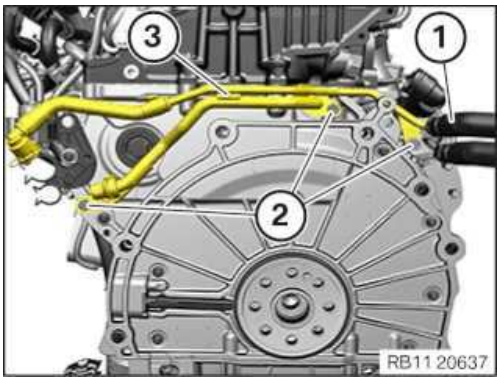
- Check the freedom of movement between the special tool **0 496 135 (11 8 813)** and the crankshaft sensor during installation.

  Otherwise there is a risk that the crankshaft sensor will be damaged.
- Slide on special tool **0 496 135 (11 8 813)**.
- Screw down special tool**0 496 136 (11 8 814)**.



- Press in crankshaft seal with special tool **0 496 135 (11 8 813)**.
- Screw in special tool **0 496 135 (11 8 813)** up to timing case cover.

- Insert and install the holder (2).



▶ **If installed: Installing the coolant line of the SCR metering module**

- Renew the O-ring 1.

  Parts: O-ring

cardiagn.com

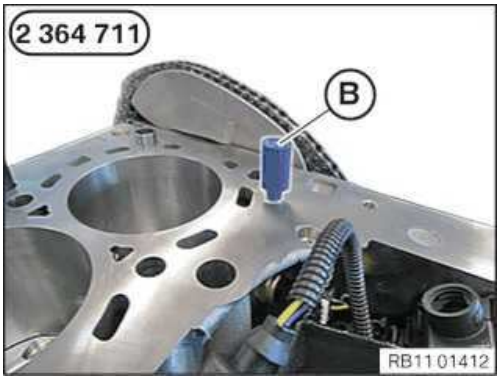
- Feed in and install coolant line (3).
- Tighten down screws (2).

SCR coolant lines to crankcase end cover

Hexagon screw M6x16		Tightening torque	8 Nm

- Connect and lock the coolant line (1).

  Coolant line (1) must audibly engage.



▸ **Cleaning the sealing surface**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

RISK OF DAMAGE

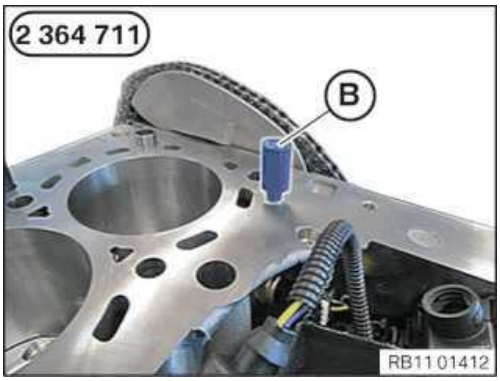
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.

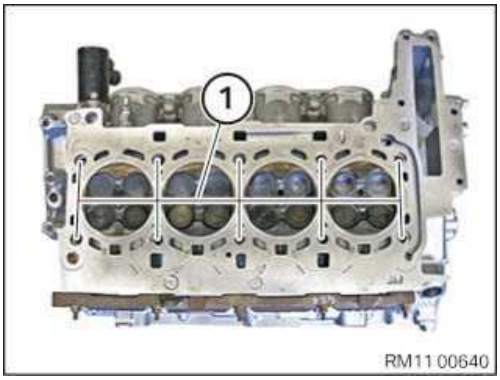
RISK OF DAMAGE



Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

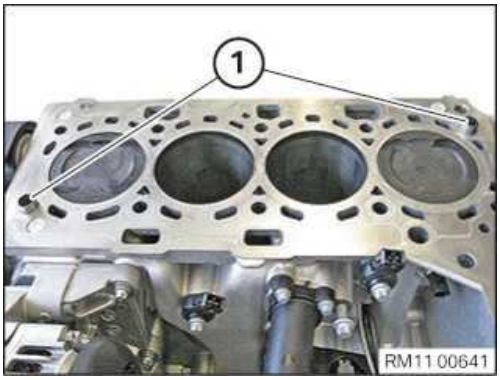


- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.

cardiagn.com

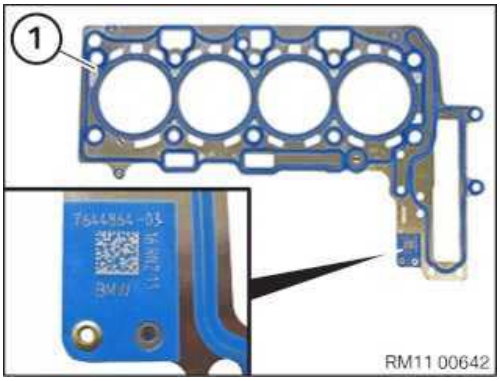
- Remove special tool (B).

▶ **Renewing the cylinder head gasket**



RISK OF DAMAGE

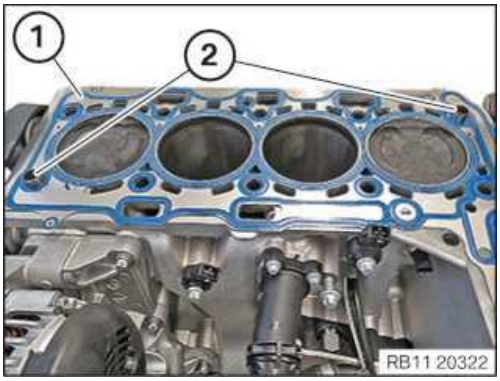
Damage to the surface.



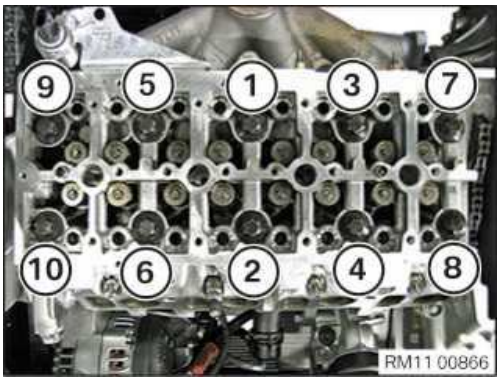
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).



- Check the fitting sleeves (1) for secure fit and damage.



- Identify the cylinder head gasket (1) using the part number.

Note: If the cylinder head is reworked, an additional thicker gasket 0.3 mm is available for service personnel.

- Guide in the cylinder head gasket (1) and install.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Damage to threads.

Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION

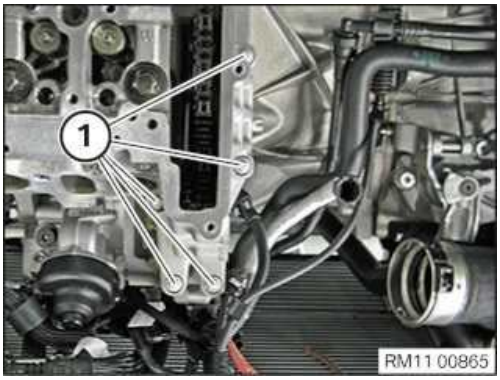
Do not remove bolt coating.

- Renew the cylinder head bolts (1).

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  No coolant, water or engine oil must be present in threaded holes of engine block.

TECHNICAL INFORMATION



When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in cylinder head bolts in sequence (1) to (10).
- Tighten cylinder head bolts using special tools **0 490 504 (00 9 120)** and in sequence (1) to (10).

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

cardiagn.com

- Tighten the cylinder head bolts (1).

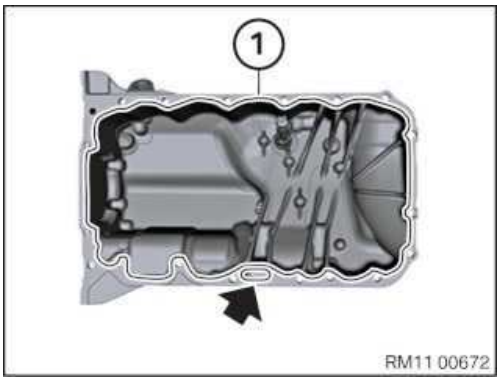
Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

-

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Remove fine sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

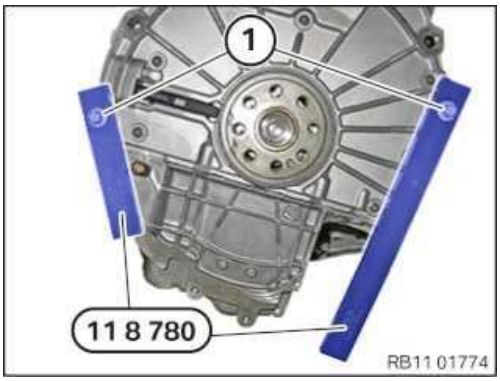
- Remove coarse sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- Apply the sealing compound along the line (1) with a thickness of 2 mm to 2.5 mm.

  Apply the sealing compound along the inner edge.

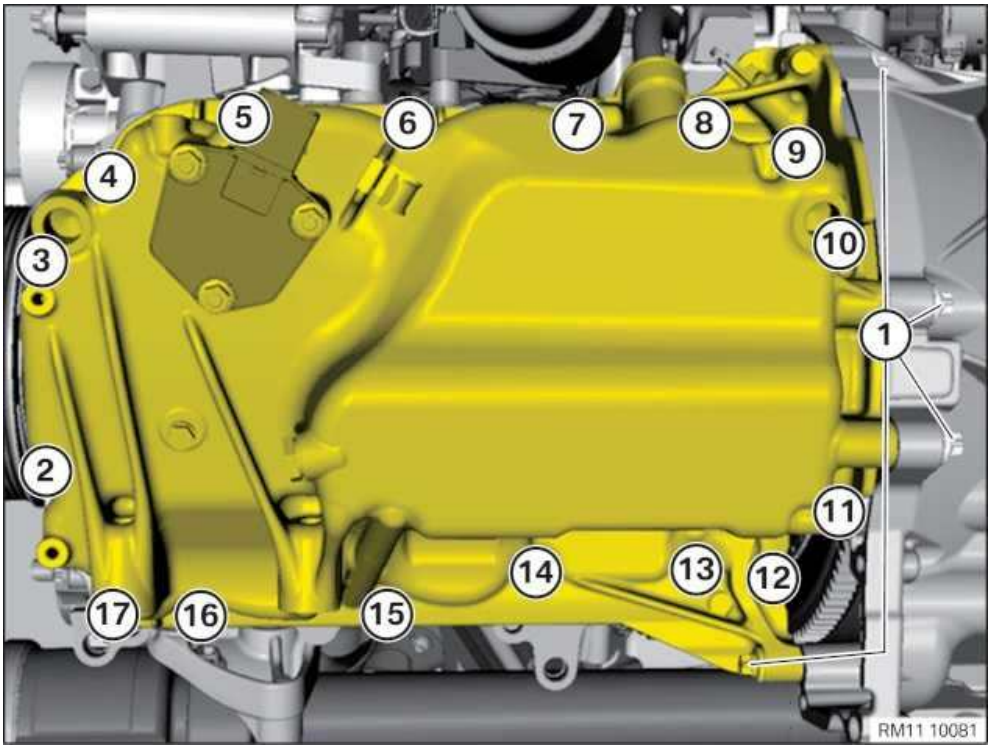


Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

- Completely encircle the oil return orifice (arrow) with the sealing compound.



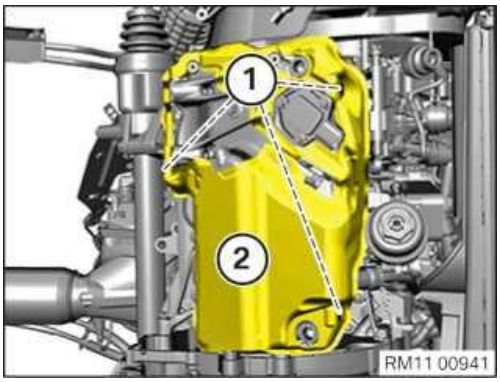
cardiagn.com

TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- If necessary, renew fitting sleeves.

- Position and install oil sump.
- **Hand-tighten** oil sump screws (2) to (17) but do **not** tighten completely.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws(2) to (17) of the oil sump.



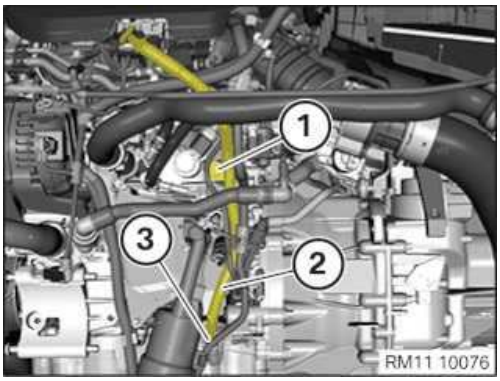
Oil sump to crankcase

M8x30		Tightening torque	2 Nr
M8x110		Tightening torque	2 Nr

- Tighten transmission bolts (1) on oil sump.

Transmission to oil sump

M8		Tightening torque	1 Nr



- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).

- Renew O-ring (1).

  Parts: O-ring

cardiagn.com

- Guide in guide tube (2) for oil dipstick and insert it into oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

Guide tube for oil dipstick on engine

M8x16		Tightening torque	19 Nm

36 – Installing the flywheel

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

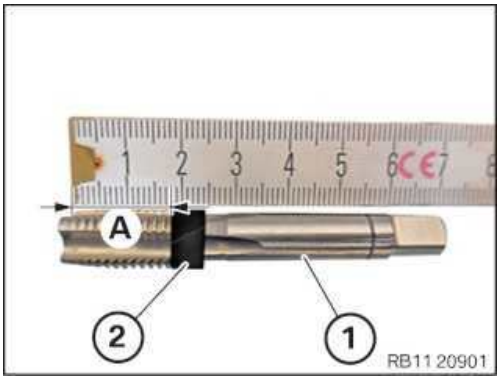
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

Clean all threads with a screw tap.

- Clean all screw threads (1).

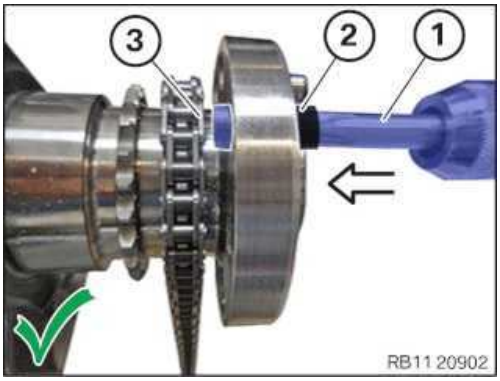
- Use the set of special tools **2 285 058**.



Description
Twist drill
Thread cutter M12x1.5
Depth
Insertion tool

cardiagn.com

- Assemble tool set.



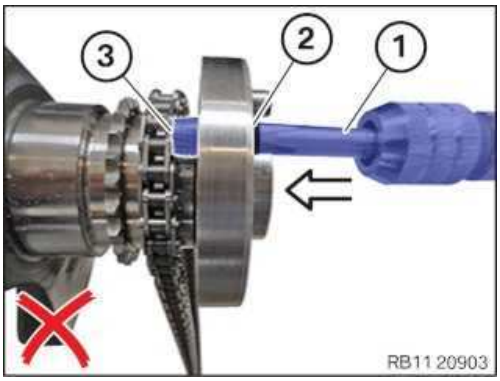
Number	Description
1	Tool holder
2	Thread cutter M12X1,5

- Mark the screw-in depth (A) on thread cutter (1) from the set of special tools **2 285 058** with a standard tool (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm

NOTICE



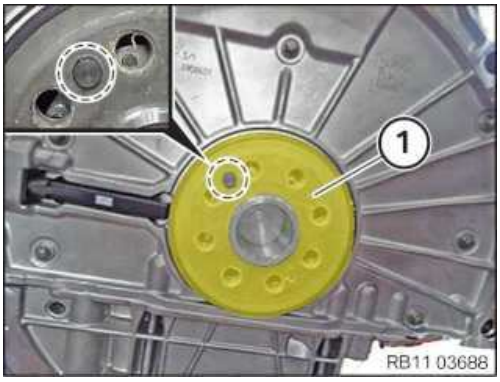
To provide a better overview: Shown with engine removed.

- Screw in the thread cutter (1) from the set of special tools **2 285 058** in direction of arrow up to the screw-in depth (2).

Screw-in depth of thread cutter

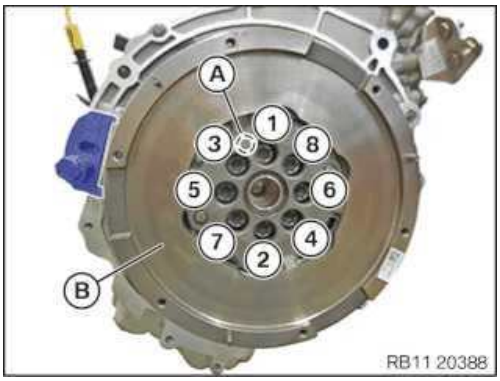
Screw-in depth	18 mm

- Make sure that the thread cutter does (1) **not** rest on the timing chain (3).



TECHNICAL INFORMATION

- **Carefully** handle the timing chain, to protect the timing chain and timing chain drive against damage.

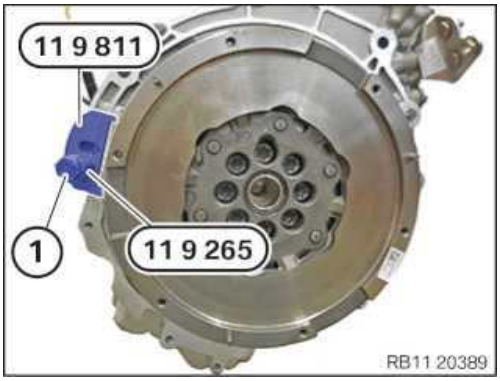


- Make sure that the screw-in depth (2) of the screw tap (1) is not exceeded.

  The thread cutter (1) may not rest on the timing chain (3).

- During the installation, note the mark shown without fail.
- Install special tool (1) on the crankshaft as shown.

cardiagn.com



- Position flywheel (B) .
- Renew flywheel bolts (1) to (8).

  Parts: Flywheel bolts
- Tighten flywheel bolts hand-tight with special tool **0 491 018 (11 4 180)**.
- Observe tightening sequence. While doing so, begin with dowel pin (A).
- Tighten the flywheel bolts using the special tool **0 491 018 (11 4 180)** in sequence (1) to (8).

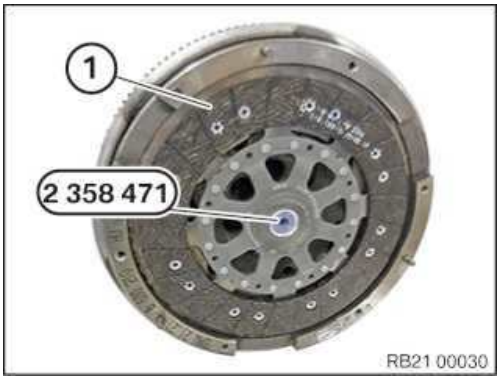
Flywheel to crankshaft

M12x1.5	Renew screws.	Tightening torque	120 Nm

- Loosen the transmission bolt (1).
- Feed out and remove special tools **0 494 793 (11 9 265)** and **0 496 171 (11 9 811)** with the **standard** (5 mm) washer.

37 – Install clutch

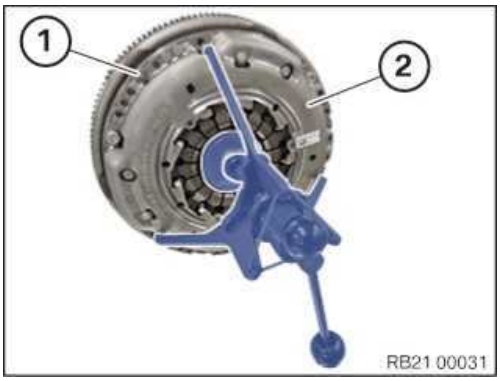
CAUTION



Materials harmful to health.

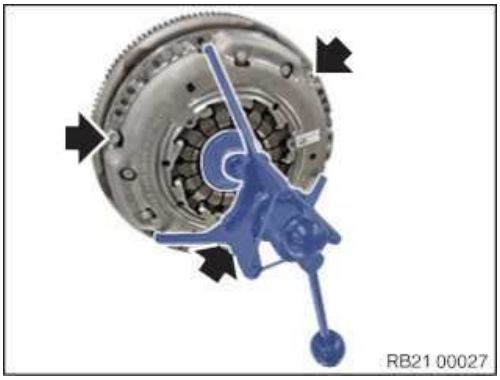
Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.



TECHNICAL INFORMATION

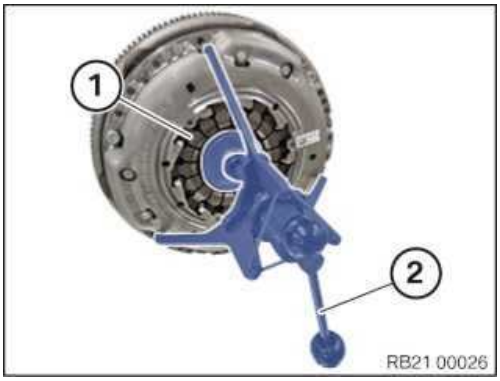
Handle the clutch disc carefully. Install the surfaces of the clutch disc in the correct mounting orientation.
Clean friction surfaces of the flywheel and the pressure plate with BMW-approved brake cleaner.
Note designation for ”engine side” / ”transmission side”.



- Centre the clutch disc (1) using special tool .

cardiagn.com

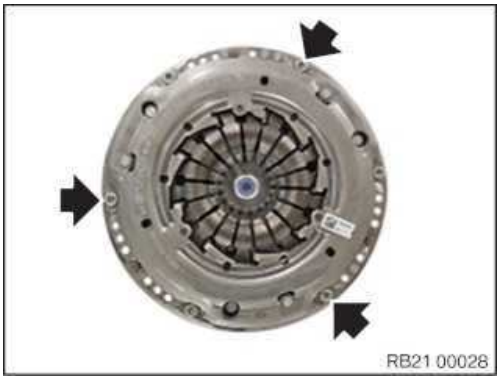
- Mount the clutch (2) together with the special tool to the flywheel.
- Observe the dowel pins (1).
- The clutch (2) must be secured via the dowel pins (1).



- Renew the bolts (arrows).

  Parts: Bolts
- Install and tighten screws (arrows).

Clutch to flywheel



M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

- Loosen the spindle (2) until the diaphragm spring (1) is fully relieved.

- Unscrew the knurled screw (1) and remove the special tool with **2 288 165** from the clutch.

- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Clutch to flywheel

M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

cardiagn.com

- Withdraw special tool from clutch disc with aid of accompanying screw.

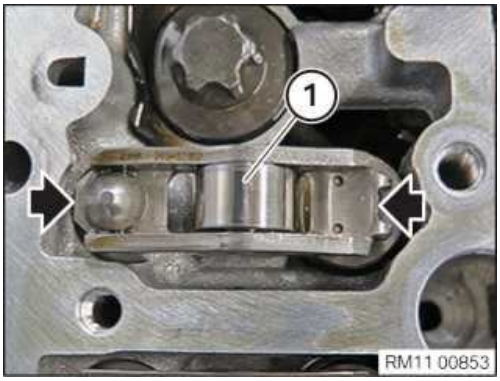
38 – Installing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

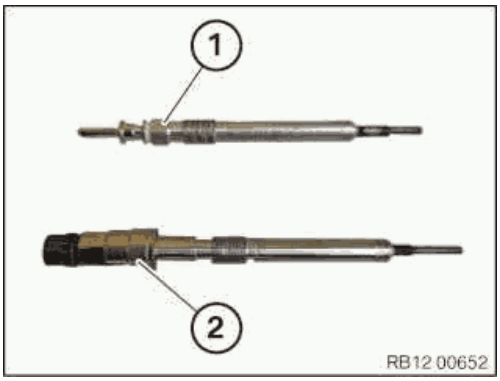


- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

39 – Install the roller cam followers

TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.



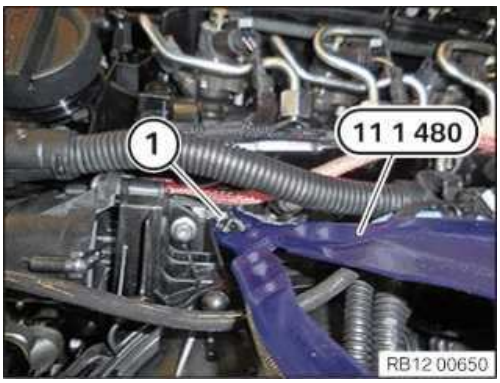
- Check all roller cam followers (1) for damage and replace if necessary.

  Parts: Roller cam followers
- Insert and install all roller cam followers (1).

  Roller cam followers (1) that have already been used must be installed in the same place.
- Note the mounting orientation of the roller cam followers (1).
- Oil all roller cam followers (1).

40 – Install glow elements

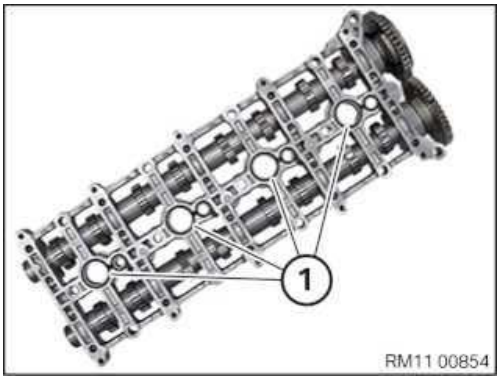
cardiagn.com



- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

- Tighten the glow element with the special tool or conventional tools.

Glow elements to cylinder head



Glow element		Tightening torque	13 Nm

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

41 – Installing the camshaft support

- Renew gaskets (1).

  Parts: gaskets

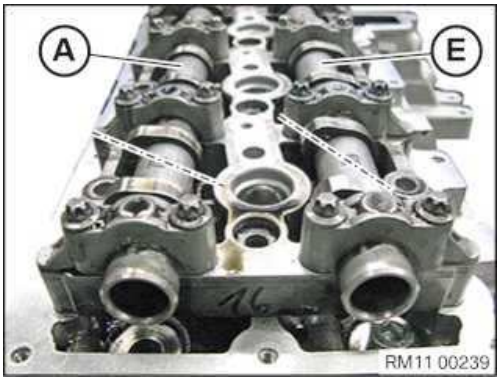
- Position the camshaft support including the camshafts.
- Tighten the screws in a sequence from (1) to (14) in several steps.

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

42 – Adjusting the timing of the camshafts

cardiagn.com

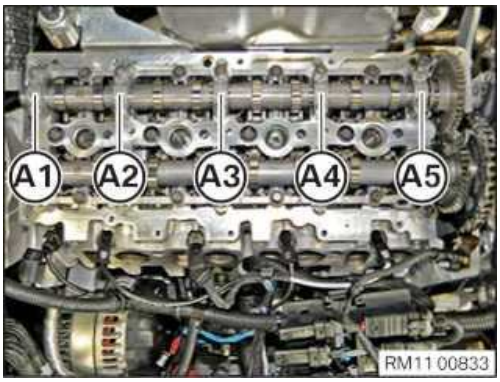


- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

- Slide the special tool **2 288 380** completely into the bore hole of the oil sump.
- Use the special tool to block **2 288 380** the crankshaft in the TDC firing position at the first cylinder.

- The cam of the intake camshaft (E) at the first cylinder points up at an angle.
- The cam of the exhaust camshaft (A) at the first cylinder points outward at an angle.



▸ **Remove exhaust camshaft.**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

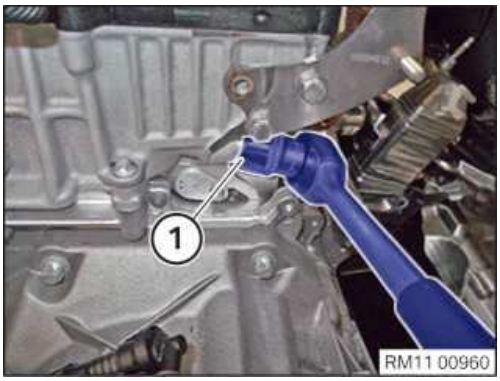
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A5) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components on special tool **0 495 105 (11 4 480)** in a tidy and orderly fashion.

cardiagn.com



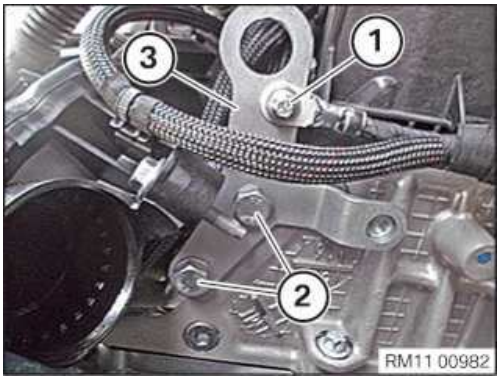
▶ **Remove chain tensioner piston**

WARNING

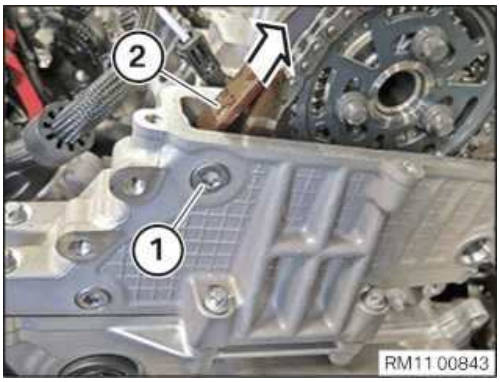
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



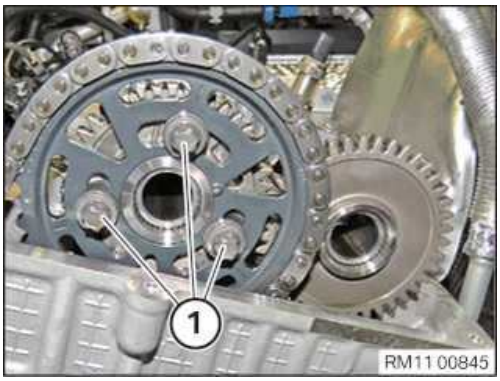
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

▶ **Remove the timing chain guide rail**



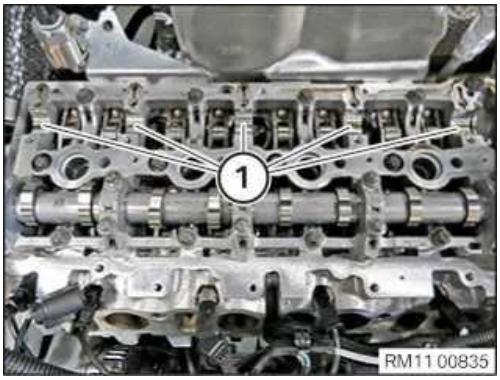
- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

▶ **Removing the camshaft sprocket on the intake camshaft**

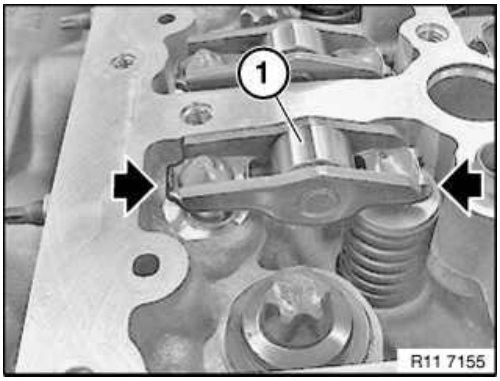
- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

cardiagn.com



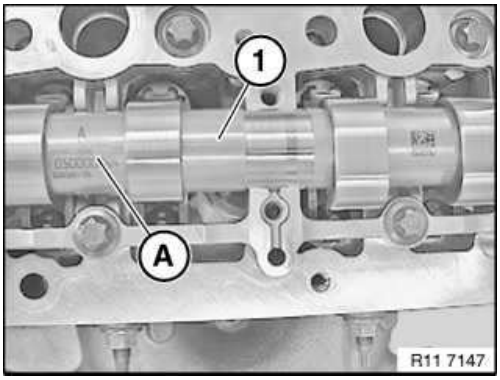
▶ **Install exhaust camshaft**

RISK OF DAMAGE

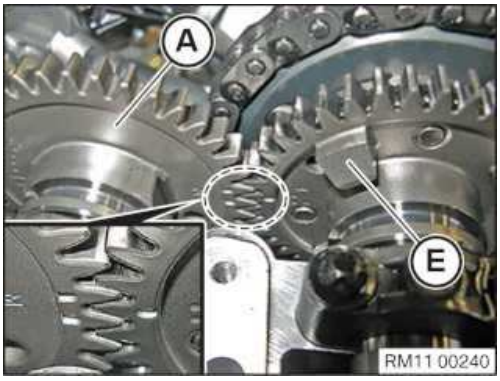


Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

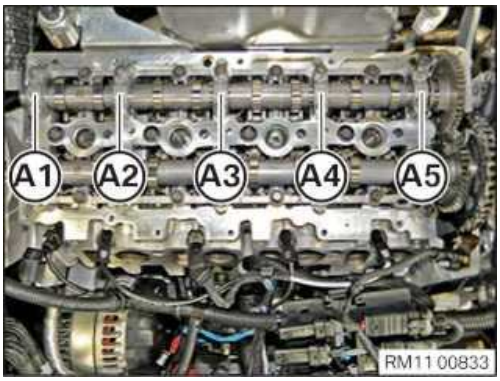


- Comply with the regulations for the installation and disassembly.
- Perform work with care.



- Oil all bearing positions (1).

- Make sure the roller cam followers (1) have the correct mounting orientation.



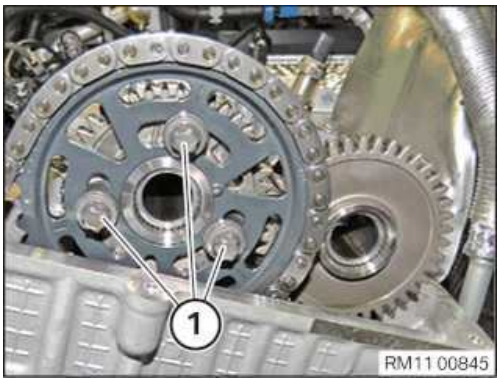
- Insert exhaust camshaft (1) so that the identification (A) points upwards.

- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.

cardiagn.com

- Tighten all exhaust camshaft bearing caps (A1) to (A5) from the inside to the outside by 1/2 a turn at a time.

Intake and exhaust camshaft in camshaft support



M6x31		Tightening torque	10 Nm

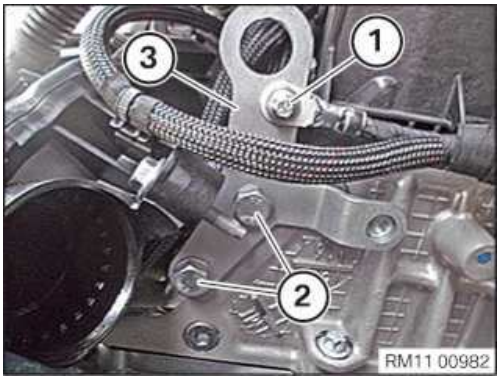
- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

  Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

▶ **Installing the camshaft sprocket on the intake camshaft**

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

▶ **Install the timing chain guide rail**



- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6			8 Nm

cardiagn.com

▶ **Installing the chain tensioner piston**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

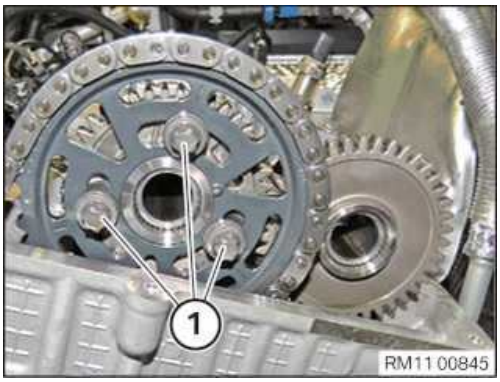
- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

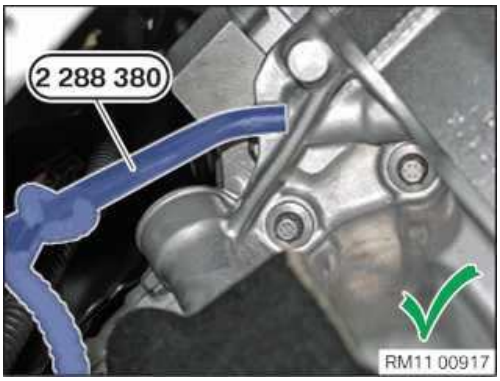


- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

▶ **Tightening the camshaft sprocket on the intake camshaft**



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

43 – Removing the special tool to disconnect the crankshaft

cardiagn.com

- Remove special tool **2 288 380**.

44 – Removing the special tool to secure the exhaust camshaft

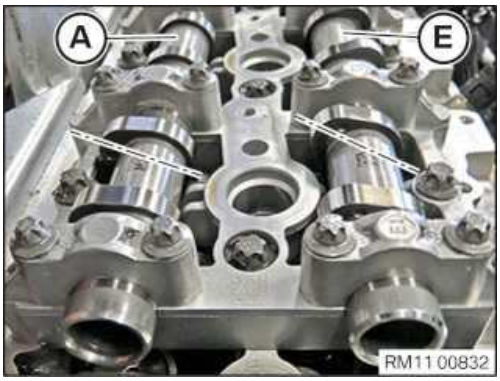
- Remove the special tool **0 496 112 (11 8 760)** to fix the exhaust camshaft.

45 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

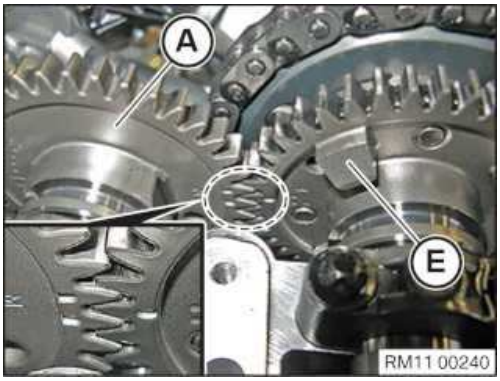


The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

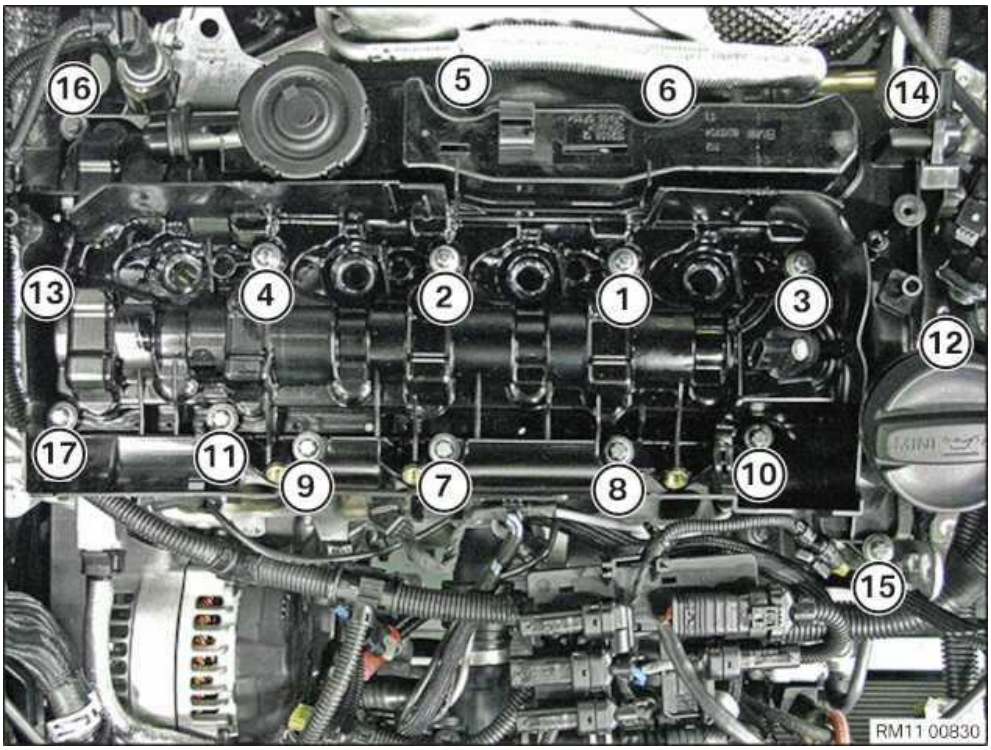
- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

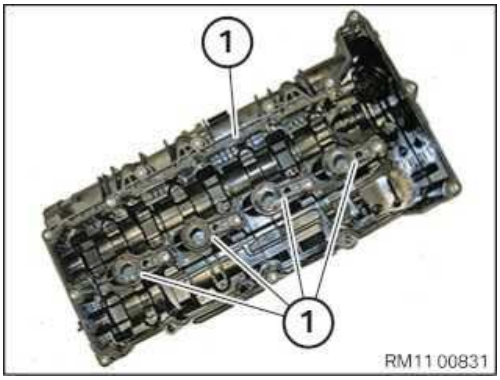
TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.



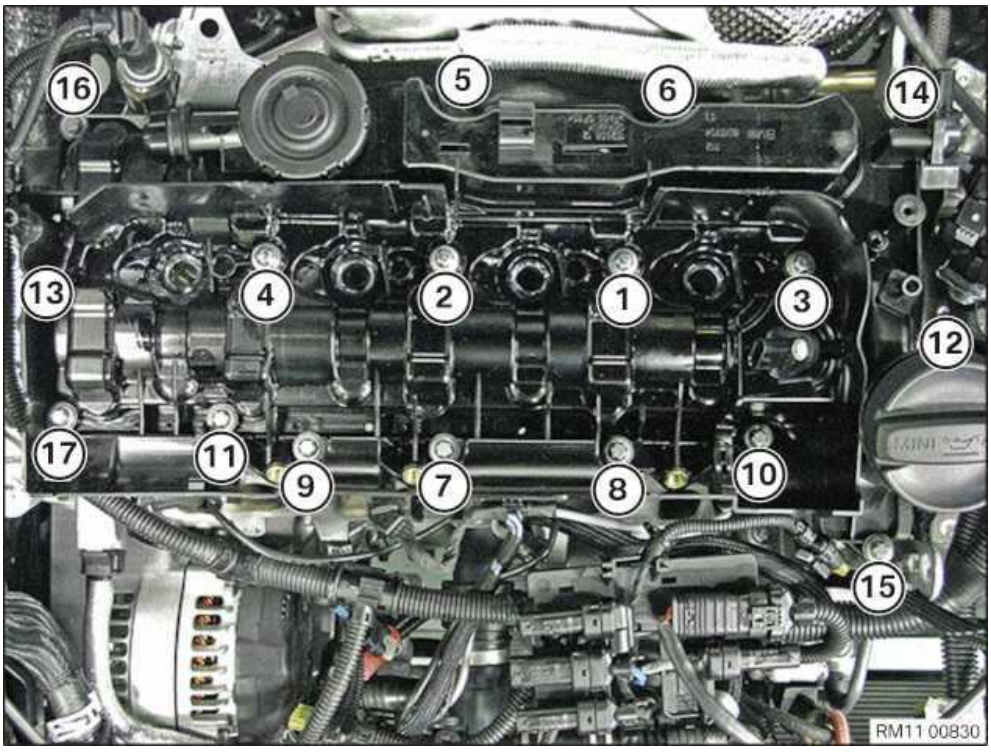
- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.



- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

cardiagn.com

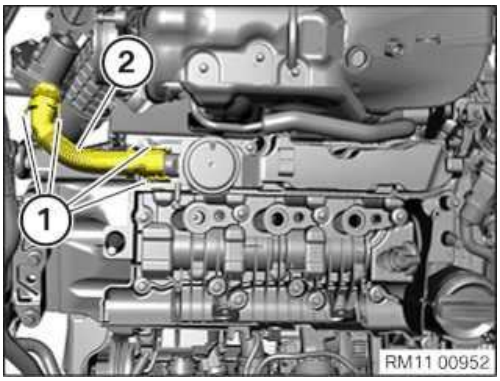
Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket



- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-

cardiagn.com

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

47 – Installing injectors of injection system

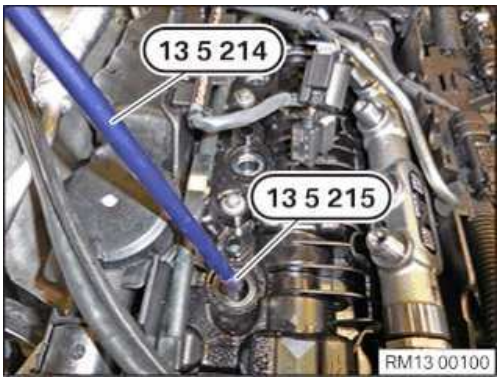
▶ **Cleaning the injector shafts**

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

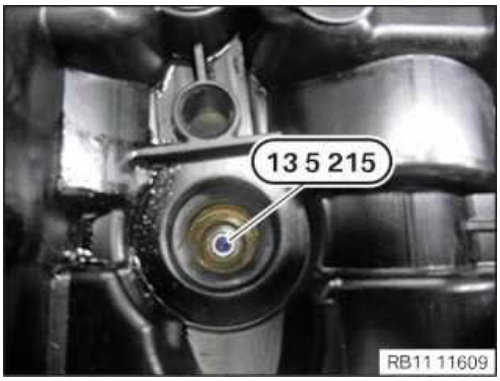
- Collect dirt particles, e.g. when blowing out, use cloth to do so.



- Wear safety goggles.

RISK OF DAMAGE

Contaminant or foreign body.

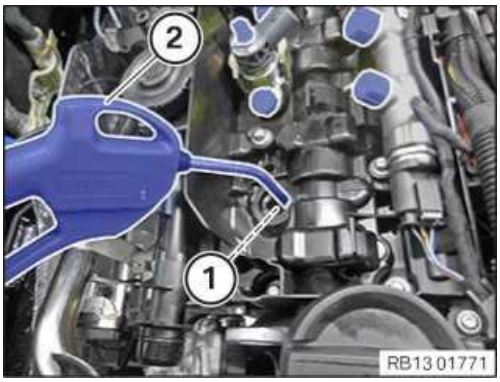


Contamination can result in malfunctions, operating failure or leaks.

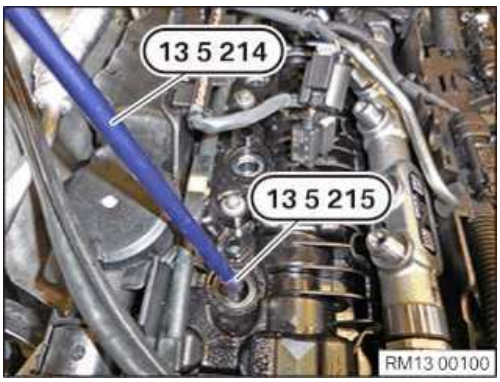
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

cardiagn.com



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.



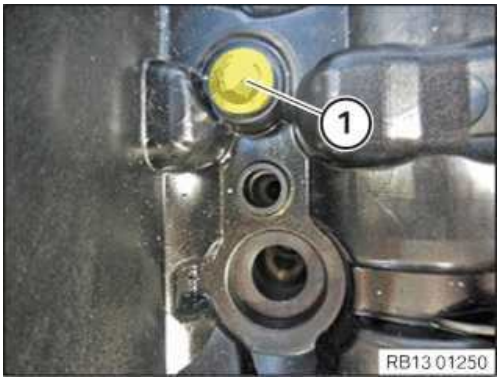
- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

- Blow out injector shaft (1) with air gun (2).

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

► **Check the placement of the clamping claw**



cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

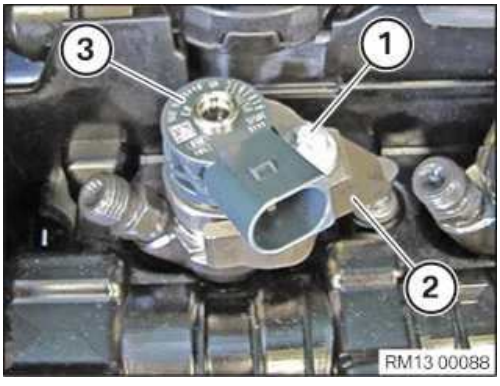
▸ **Prepare the injector for installation**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

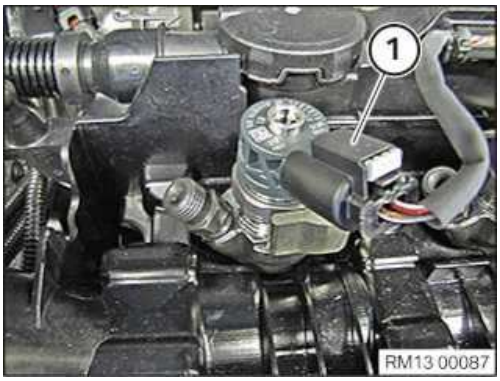


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

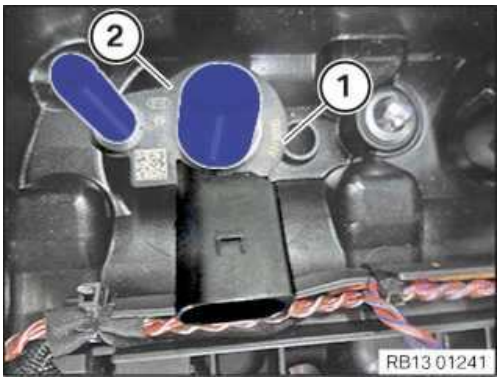
Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

cardiagn.com

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



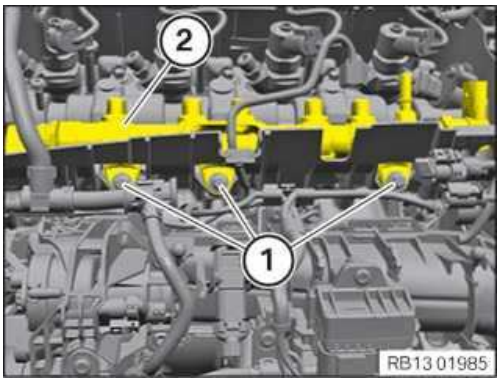
▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

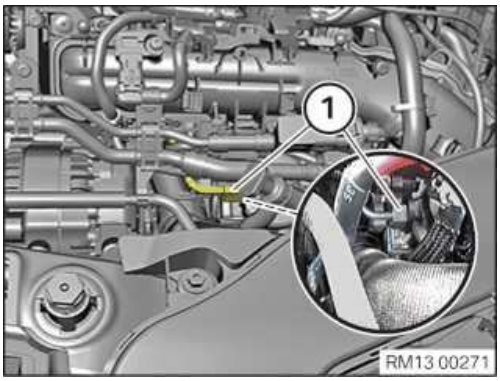
Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

48 – Installing the rail

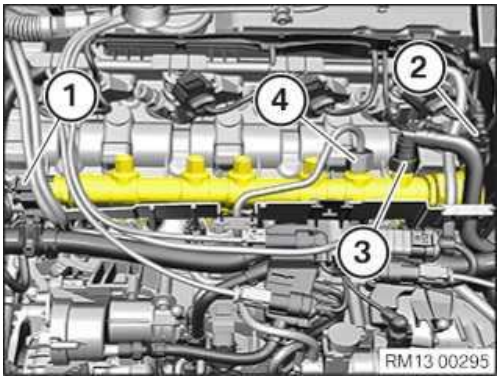


- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm

cardiagn.com



TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

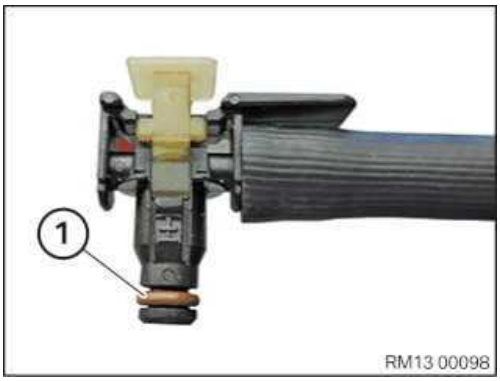
TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool .

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm



- Connect and lock the fuel line (3).

  Fuel line (3) must engage audibly.
- Connect connectors (2) and lock.

  The connector (2) must engage audibly.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

49 – Connect the leakage oil line on the injector

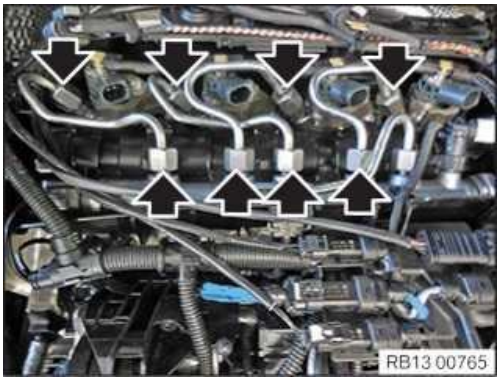
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

cardiagn.com

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.



50 – Installing high pressure lines between rail and injectors

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

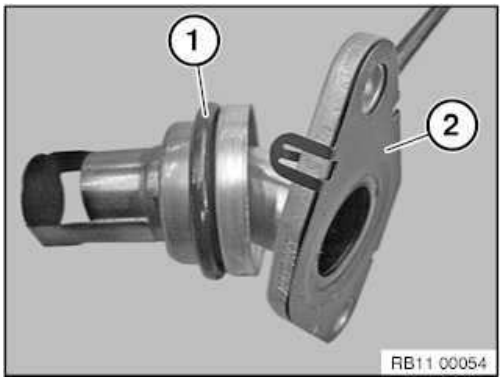
TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.



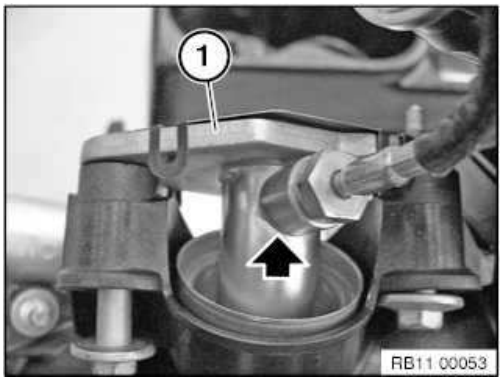
- Tighten the high pressure lines (arrows) with the special tool .

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

51 – Installing the intake plenum

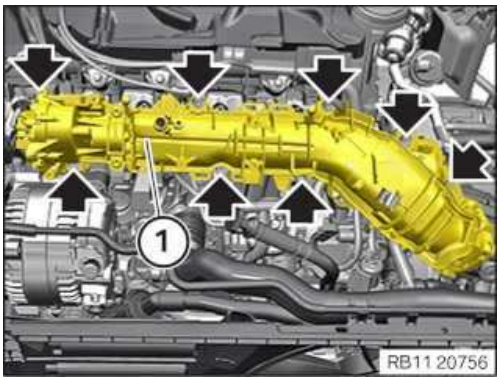


- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position the seal (2) and clip it in.

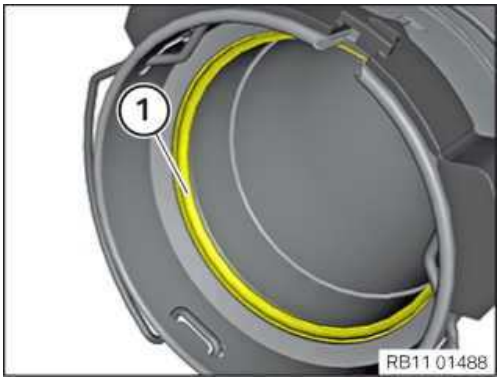
cardiagn.com



- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

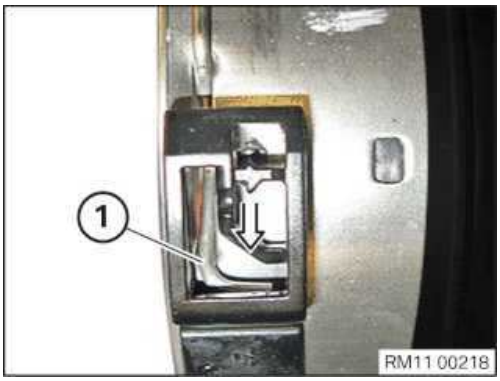
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



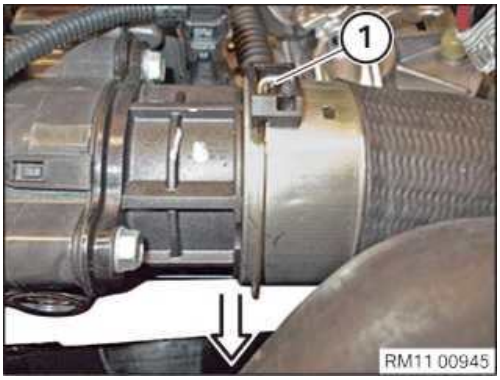
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

cardiagn.com

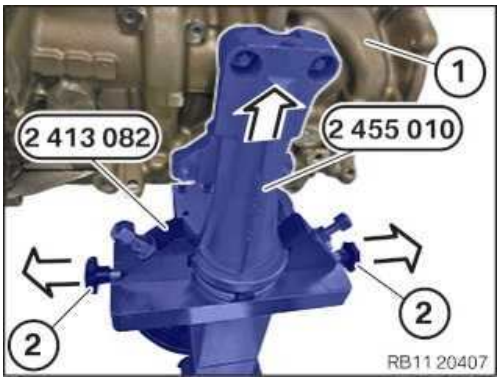
- Engage the lock (1) on the bracket (arrow).

- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

52 – Remove the engine from the assembly stand

CAUTION

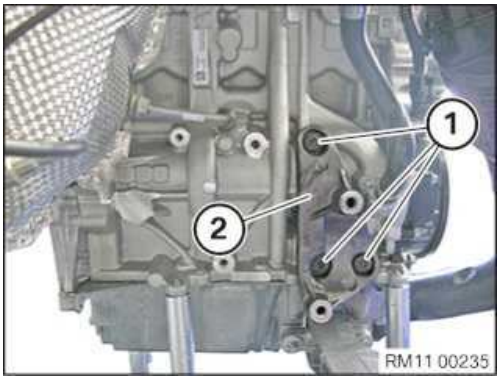


Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Insert engine lifter with special tool and position engine (1).

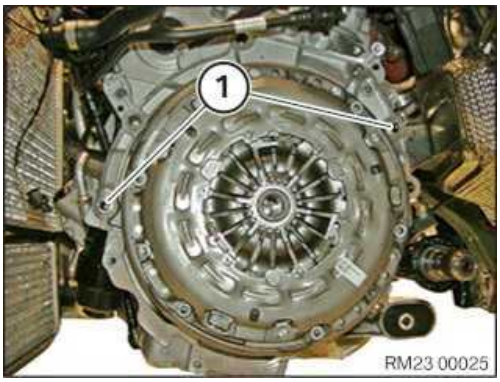


- Unscrew the nuts on special tool .
- Detach the holder (2) in the direction of the arrow.
- Detach the engine (1) with special tool **2 455 010** out of the special tool in the direction of arrow.

cardiagn.com

- Remove conventional screws (arrows).
- Feed out the special tool **2 455 010** on the engine (1) and remove.

- Insert and install the holder (2).
- Tighten the screws (1).

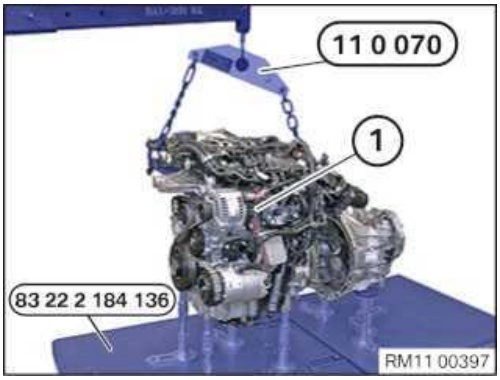


Holder to crankcase

M10		Tightening torque	38 Nm

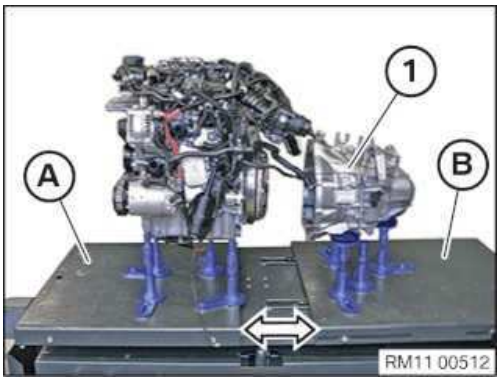
53 – Mounting engine on manual gearbox

Prerequisite

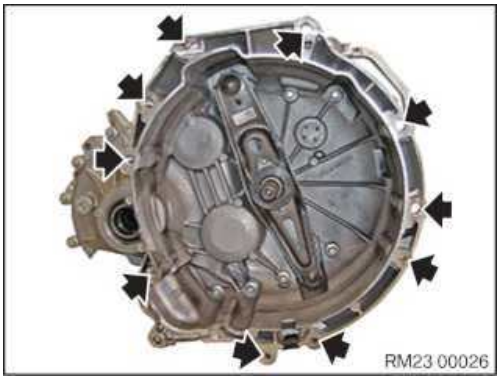


Engine has been removed.

- Check for correct fit of fitting sleeves(1).
- Replace damaged fitting sleeves.

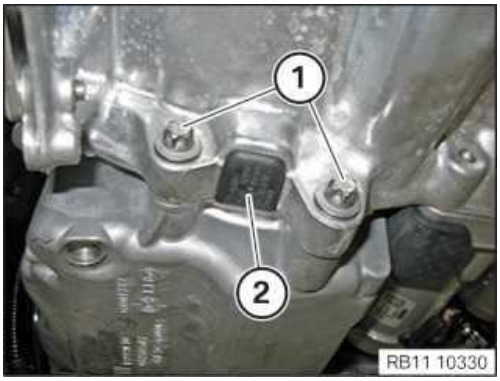


- Remove any grease from the transmission input shaft (arrow) and clean the shaft.
- Do not grease transmission input shaft.
- Check the clutch disc for frictional corrosion in the gearing and renew if necessary.



- Position the engine (1) on the lifting table **2 184 136** using the engine lifter and the special tool .
- Feed out engine lifter from engine (1) with special tool and push aside.

cardiagn.com



- Push table top (B) in direction of arrow and position manual gearbox (1) on engine.

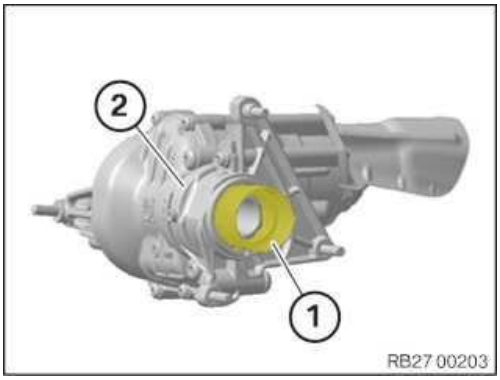
- Tighten screws (arrows).

Transmission to engine

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

- Tighten the screws (1).

Transmission to oil sump



M8		Tightening torque	19 Nm

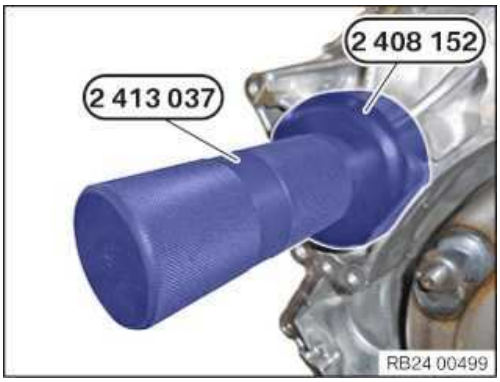
- Install the protective cap (2).

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.

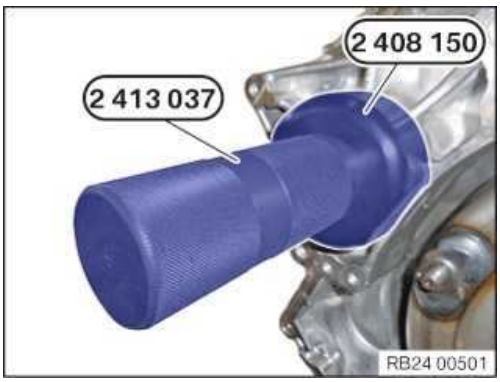
54 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

cardiagn.com

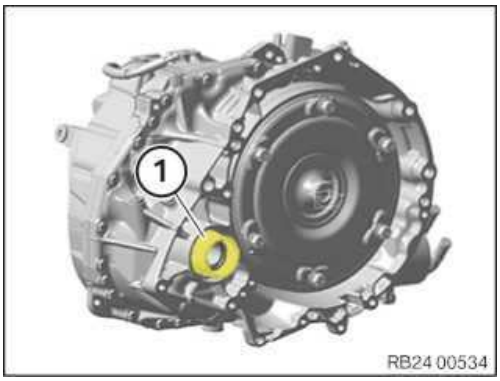


- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.

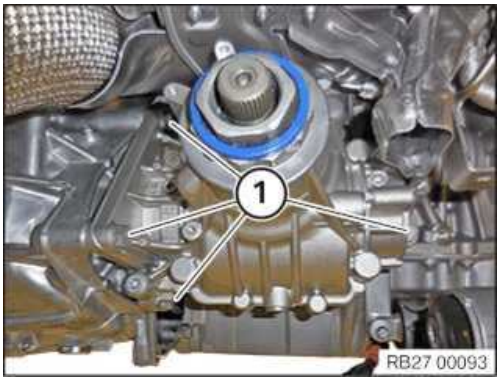
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

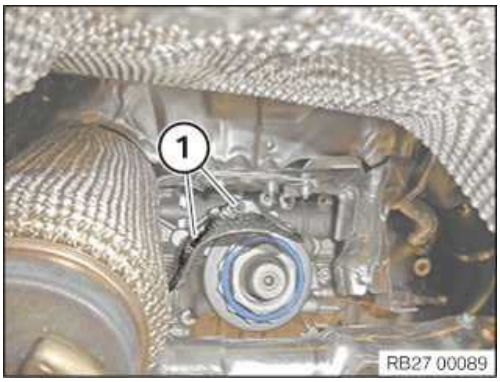
cardiagn.com



- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials



Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

cardiagn.com

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

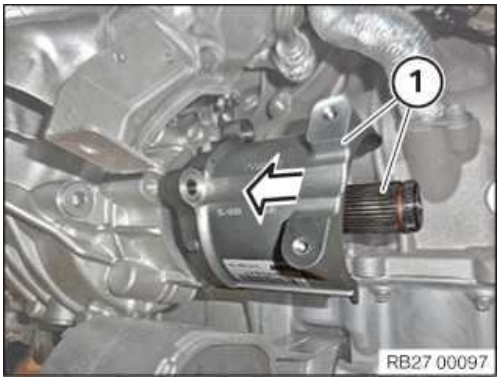
Technically suitable transfer box and electrical transmission oils	

Main group 27

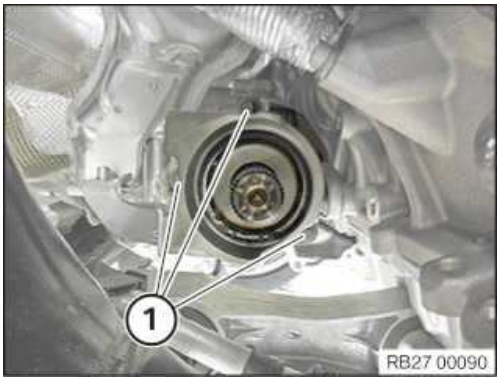
- Tighten the oil filler plug (1).

Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm



55 – Install the intermediate shaft with the support tube



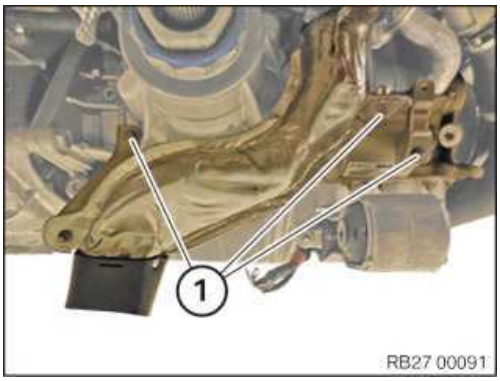
- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

- Position screws (1).



Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

cardiagn.com

- If installed: Install air duct.
- Tighten the screws (1).

56 – Installing the high-pressure stage exhaust turbocharger

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

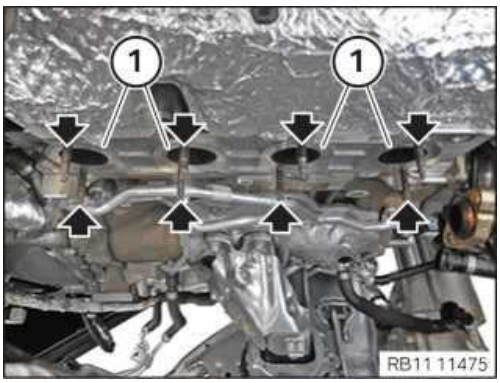
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE



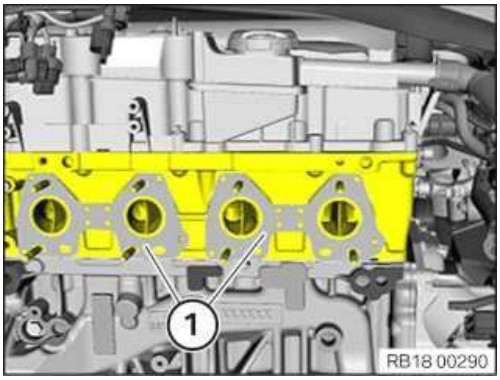
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

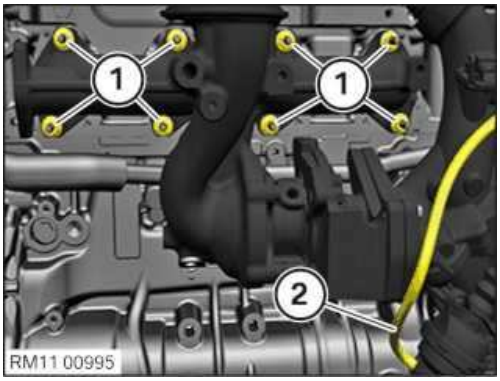
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.

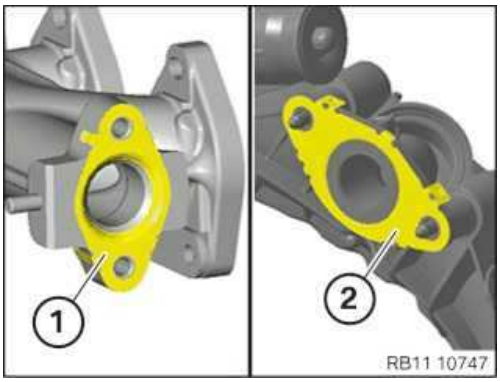
cardiagn.com



- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.

- Renew gasket (1).

  Parts: Gasket

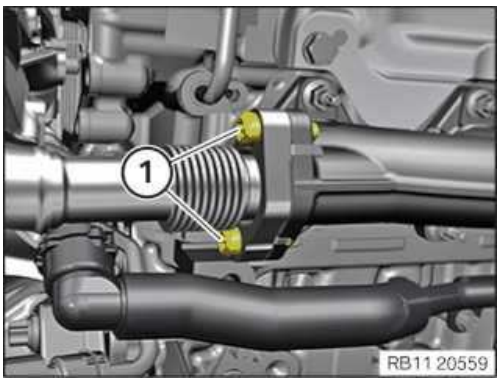


- Install new gasket (1).

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

  Parts: Nuts

- Connect vacuum hose(2).

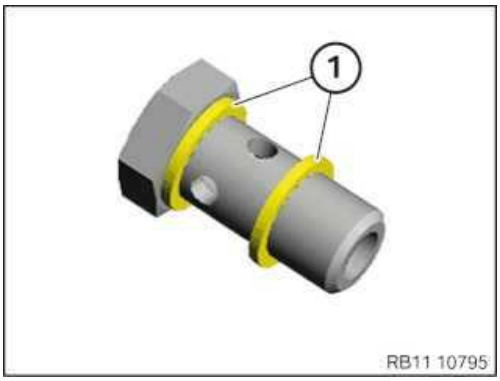


- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

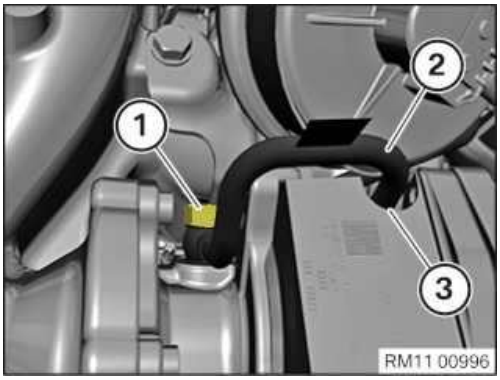
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket



- Tighten the screws (1).

Exhaust-gas recirculation cooler to exhaust manifold



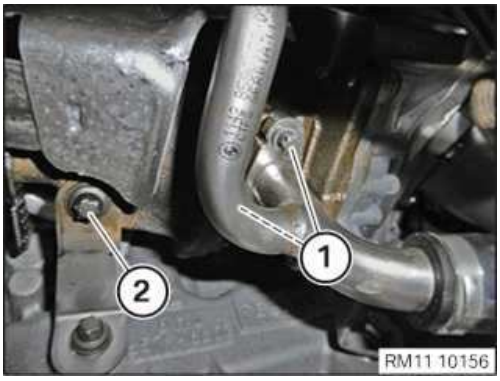
M8x28	Replace screws	Tightening torque	32 Nm

cardiagn.com

- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring

- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).



- Tighten bolt (1) from the right wheel arch.

- Renew seal (1) of oil return line.

  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

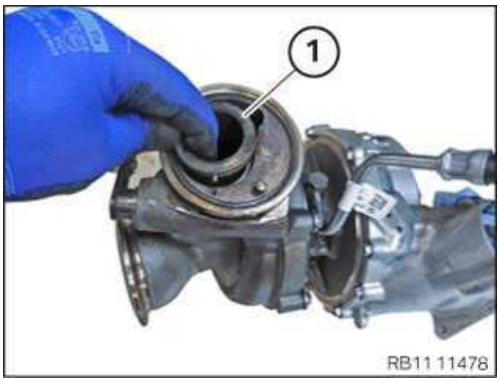
Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

57 – Installing the low-pressure stage turbocharger

cardiagn.com

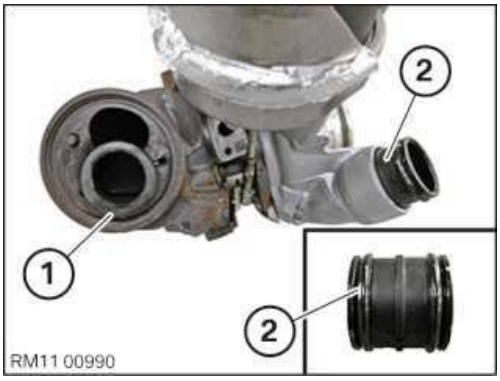
RISK OF DAMAGE



Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.



TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.

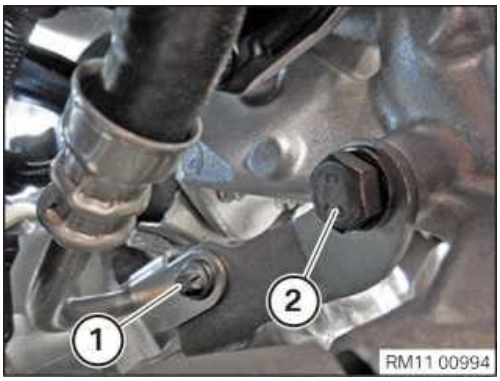
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

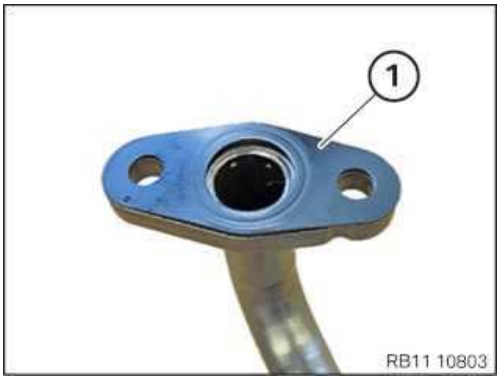
Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

cardiagn.com

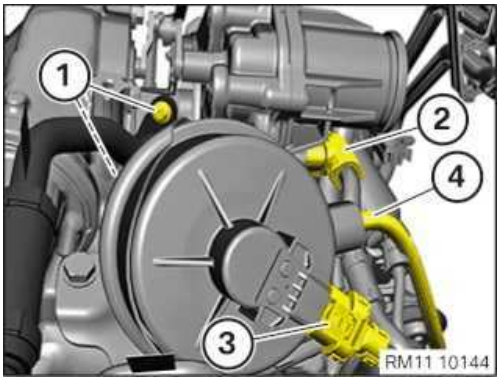
- Tighten down screw (1).



Oil feed line to bracket

Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

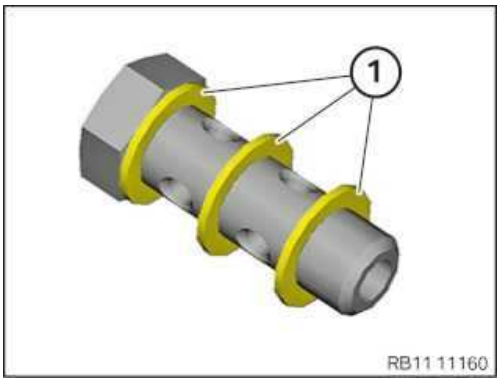


Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

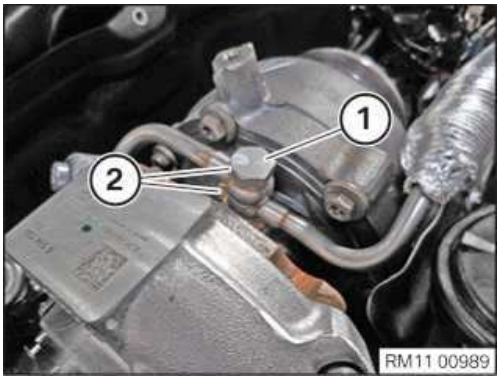
- Renew seal (1) on the oil return line.

  Parts: Gasket



- Position the oil return line with the seal.
- Tighten the screws (1).

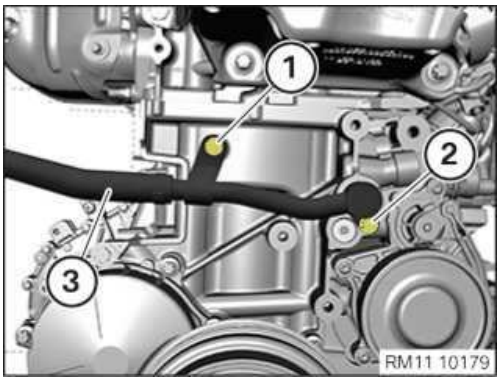
Oil return line to turbocharger



M6x12		Tightening torque	8 Nm

- Connect and lock connectors (2) and (3).

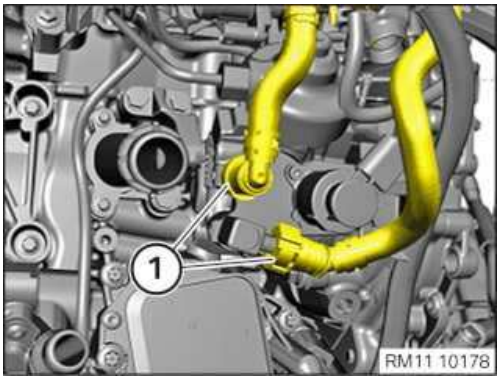
  The locks must engage audibly.
- Connect vacuum hose (4).



- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.

cardiagn.com



- Renew sealing ring of the coolant line (3).

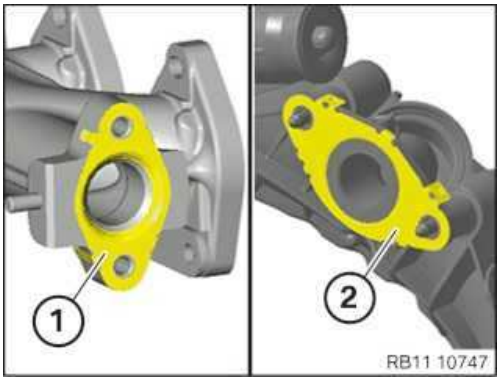
  Parts: Sealing ring
- Coat the sealing ring and install the coolant line (3) .
- Tighten down screws (1) and (2).

Standard screw connection M6

M6		8 Nm

- Connect and lock fuel lines (1).

  The fuel lines (1) must audibly engage.



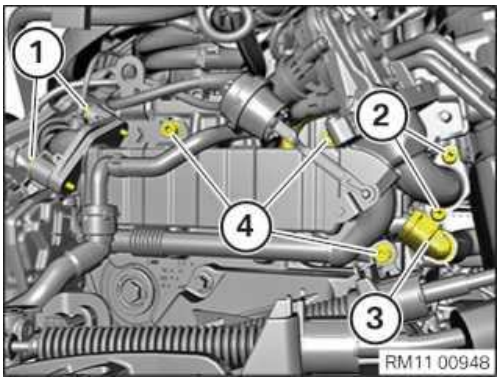
▶ **Installing the exhaust-gas recirculation cooler**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

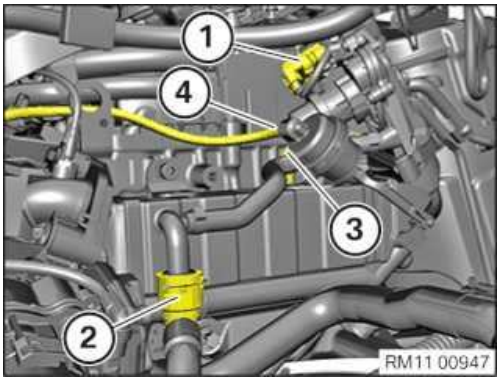
Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold



M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

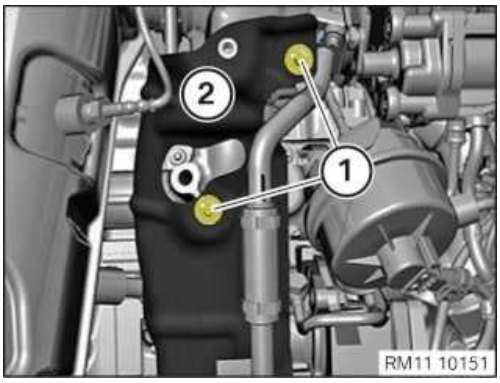
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

▸ **Installing heat shield on exhaust turbocharger at bottom**

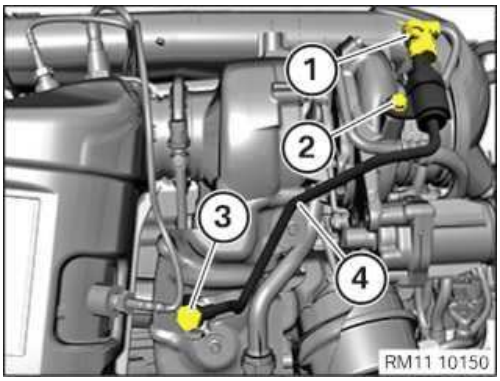


cardiagn.com

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

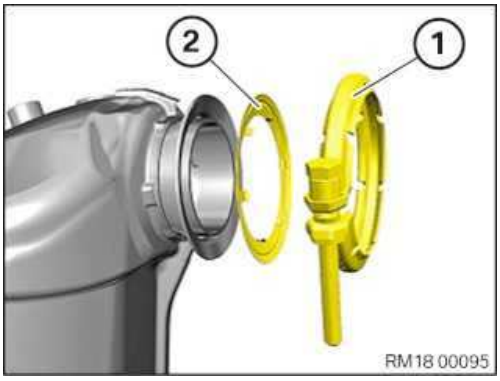
Torx screw BM 6x12		Tightening torque	10 Nm

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm



- Tighten down screw (2).

Standard screw connection M6

M6		8 Nm

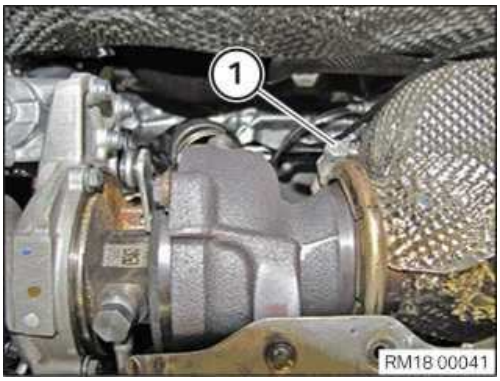
- Connect connectors (1) and lock.

  Lock must audibly engage.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

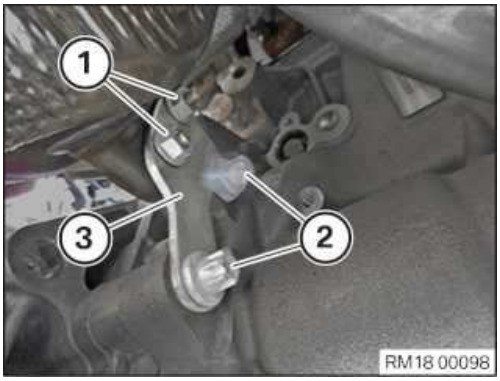


- Remove and install heavy components with the aid of another person/other persons.

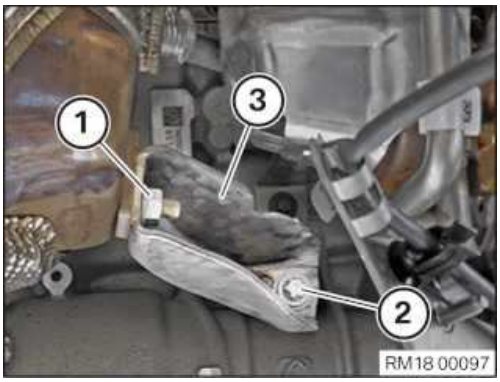
- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket



cardiagn.com



- Carefully insert and install the diesel particulate filter .
- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

- Tighten nuts (1) by hand.

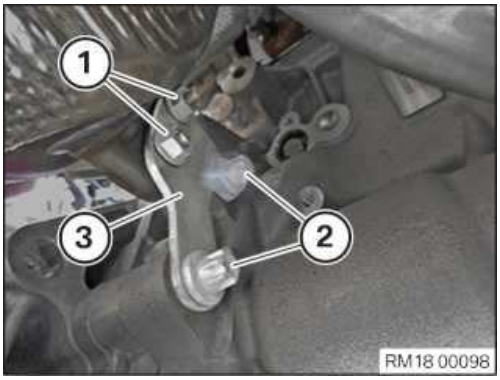
- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.

- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm



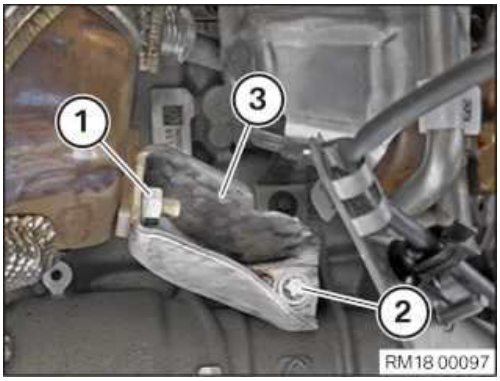
cardiagn.com

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screws (2).



Diesel particulate filter holder to gearbox

M12x75		Tightening torque	66 Nm

- Tighten nuts (1).

Diesel particle filter to holder

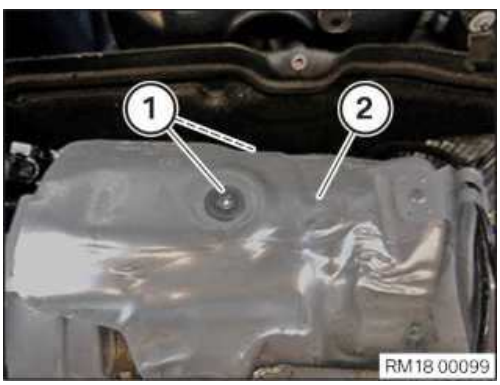
M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screw (2).

Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

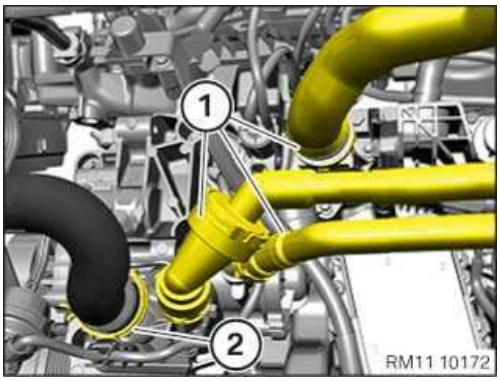


Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Remove fitting aid (1) for the flexible tube.

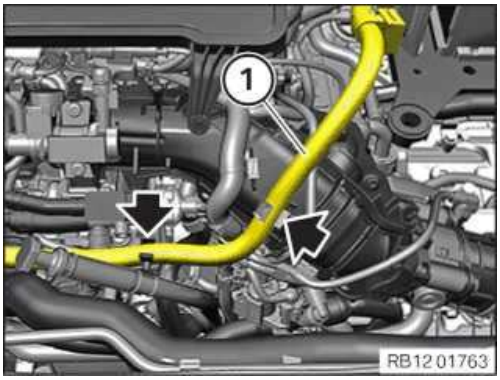
▶ **Install the heat shield on the exhaust turbocharger**



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm



- Fasten the cable at the clips .

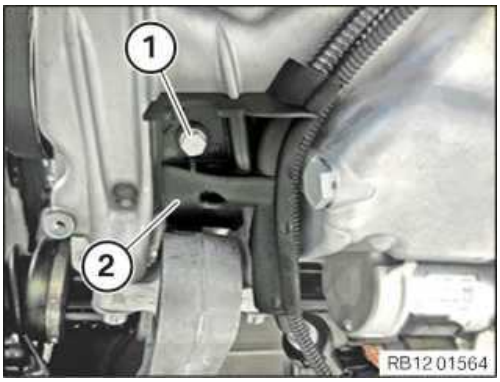
cardiagn.com

- Install the coolant hose and secure with the clamp (2) .
- Connect and lock the coolant lines (1).

  The coolant lines (1) must engage audibly.

CAUTION

Improper routing of the positive battery cable.



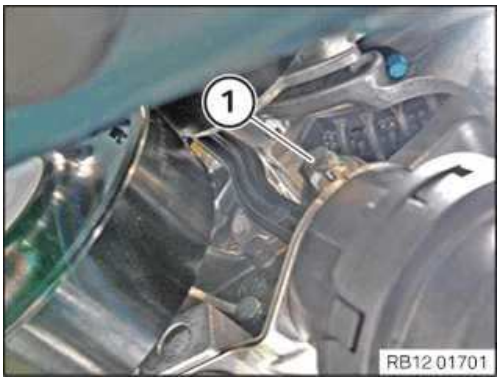
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert the positive battery cable (1) into the clamps (arrows).

- Feed in and install positive battery cable at the clamps (1).

- Insert and install the holder (2).
- Tighten down screw (1).



Bracket to oil sump

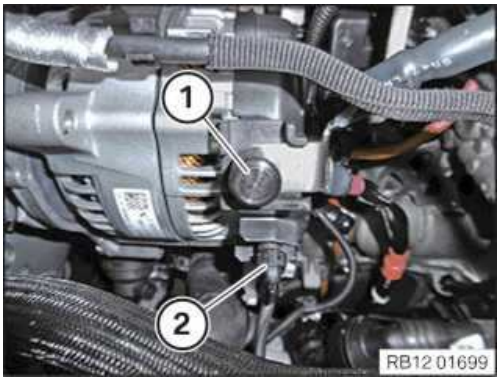
M6		Tightening torque	8 Nm

- Insert and install alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support.

cardiagn.com

- Tighten the screw (1) below on the alternator.

Alternator to component carrier



M10x75 / M10x125		Tightening torque	38 Nm

- Tighten the bolt (1) on top on the alternator.

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm

- Mount positive battery cable to the alternator.
- Tighten nut.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

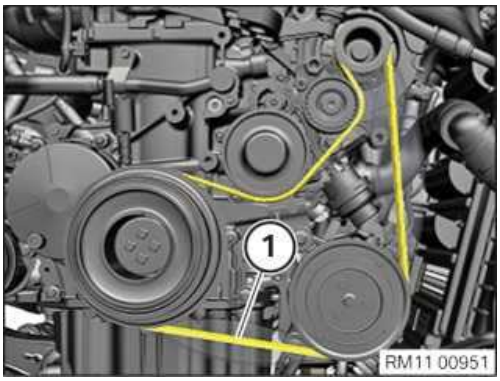
- Mount the cover (1).
- Connect the connector (2) to the alternator and lock audibly.

- Install air conditioning compressor (2) and position it correctly.
- Tighten the screws (1).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

▸ **Installing the drive belt for alternator**



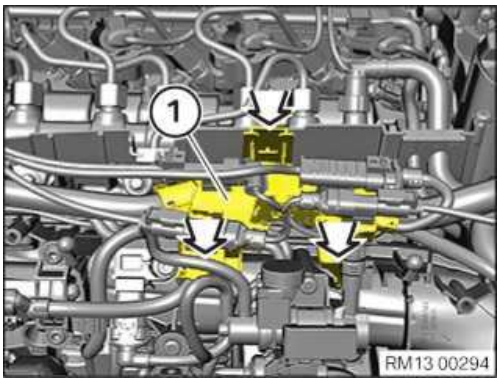
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

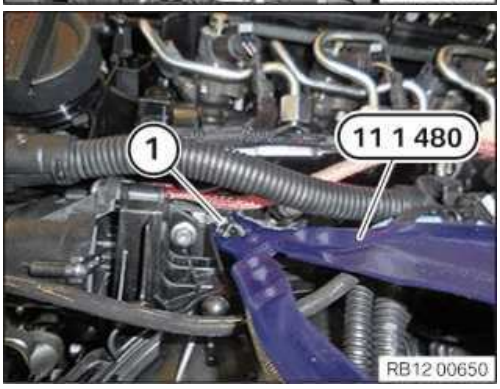
TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

cardiagn.com

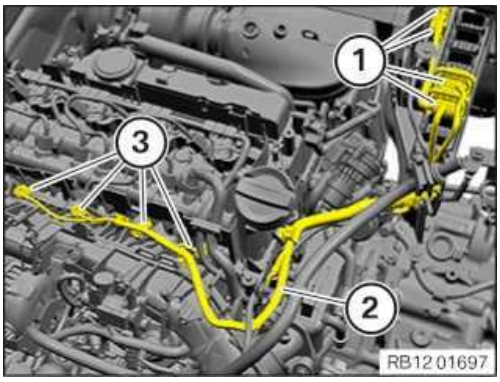


- Feed in the drive belt for the alternator (1) and install it.



- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool **0 496 268 (11 0 390)** out of the belt tensioner and remove it.

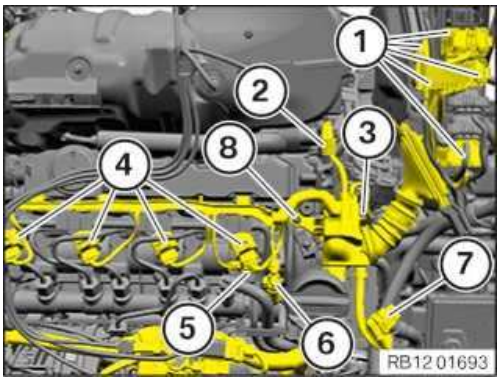
▶ **Installing the cable clip for the intake plenum**



- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.

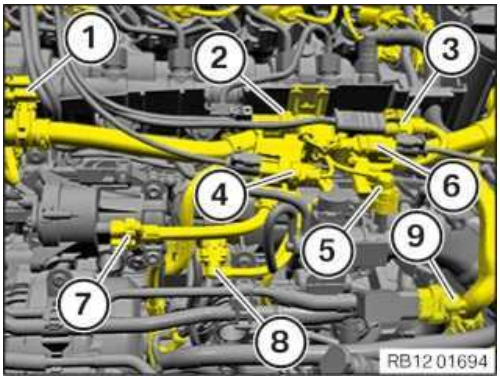
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.



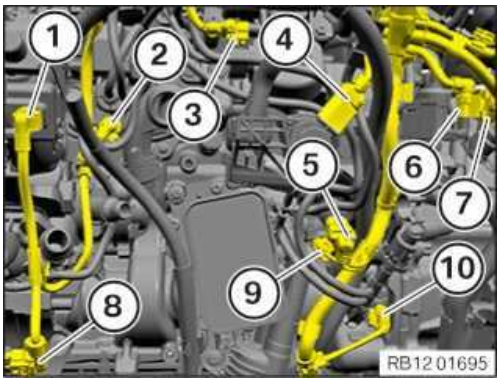
- Lay vehicle wiring harness and fasten with clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Connect all connectors (3) to the glow elements and engage them audibly.
- Mount ground strap and tighten screw (2).

Ground cable to cylinder head

M6x12		Tightening torque	8 Nm

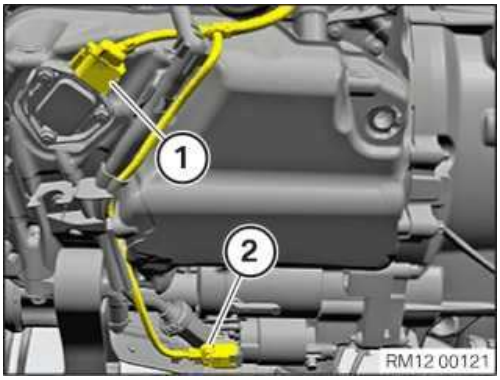


cardiagn.com



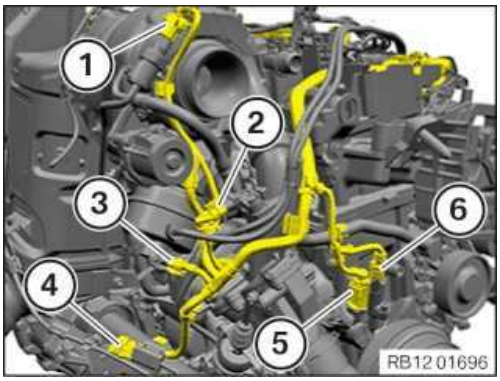
- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

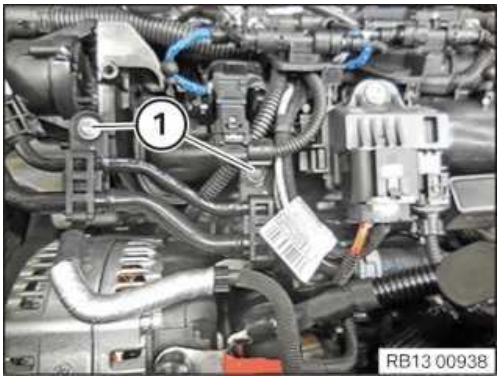


TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.



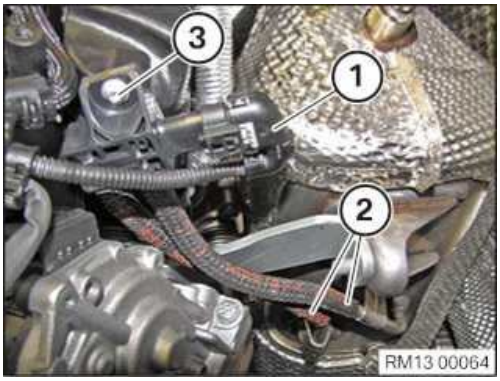
- Connect the connector (1) to the alternator and lock audibly.
- Connect the connector (2) to the electric changeover valve and lock audibly.
- Connect the connector (3) to the electric changeover valve and lock audibly.
- Connect the connector (4) to the high pressure pump and lock audibly.
- Connect the connector (5) to the oil pressure sensor and lock it audibly.
- Attach connector (6) to the throttle bodies and lock it audibly.
- Attach connector (7) to the intake air temperature sensor and lock it audibly.
- Connect the connector (8) to the air conditioning compressor and lock audibly.
- Connect the connector (9) to the solenoid valve and lock audibly.
- Connect the connector (10) to the crankshaft sensor and lock it audibly.



- Connect the connector (1) to the oil-level sensor and lock it audibly.
- Connect connector (2) to the starter motor and lock audibly.

cardiagn.com

- Attach connector (1) to the exhaust turbocharger and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust gas pressure sensor and lock it audibly.
- Connect the connector (4) to the monitoring oxygen sensor and lock audibly.
- Attach connector (5) to the oil pressure switch and lock it audibly.
- Attach connector (6) to the switching valve and lock it audibly.



- Position the fuel line.
- Tighten the screws (1).

Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

59 – Installing differential pressure sensor

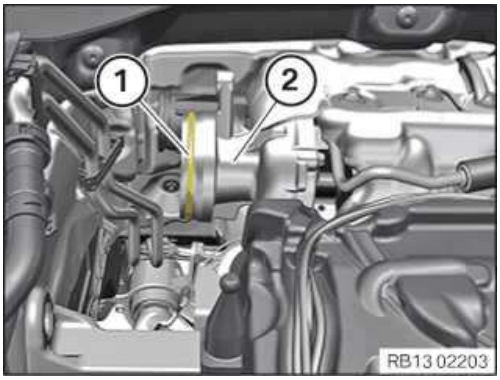
- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.



Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

60 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

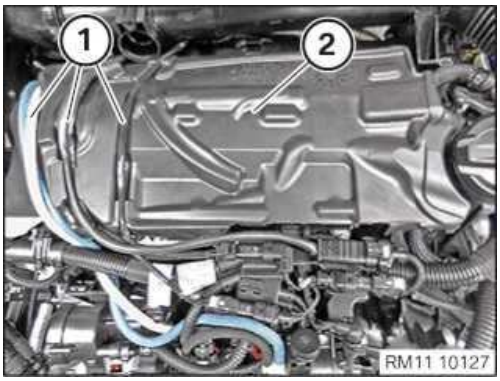
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

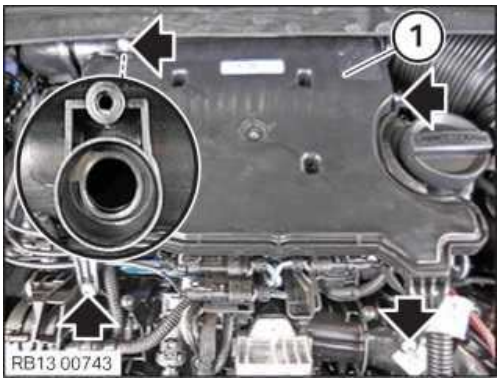
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing



Clamp		Tightening torque	3 Nm

61 – Install the acoustic cover for the injectors

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

62 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

63 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

64 – Install engine

- See additional information.

Additional Information

Overview of Tightening Torques

Special tool to cylinder head Used in step 12

M8		Tightening torque	21,5 Nm

Special tool 2 455 010 to crankcase Used in step 13

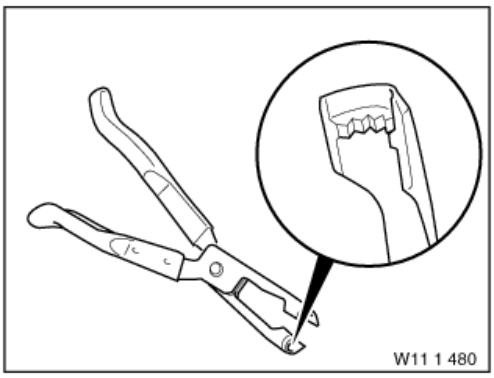
Screw TS6	Renew screw.	Tightening torque	5 Nm

Overview of Special Tools



cardiagn.com

0 496 268 (11 0 390) Pin

Common	Used in step 7 58
Usage	(roll pin) For securing new tensioning pulley (poly-V belt)
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 15 07 (390)

0 490 796 (11 1 480) Pliers

Common	Used in step 7 25
Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

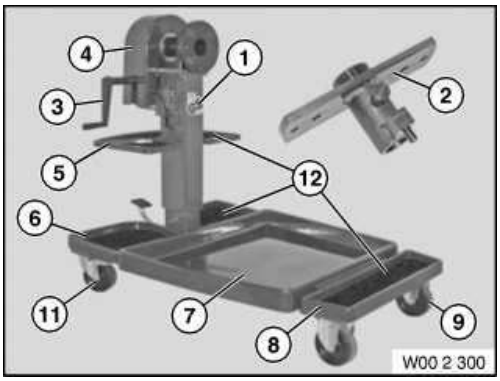
cardiagn.com

2 459 012 Holder

Common Used in step 12 53

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

2 455 010 Engine support



Common Used in step 13 52

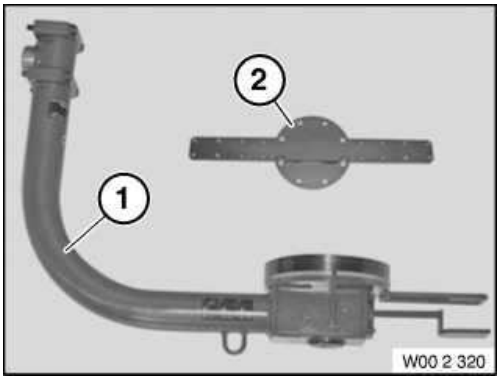
Usage	For accommodating engine on assembly stand. Engine: B3x, B4x, N47.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 495 187 (00 2 300) Assembly stand

Used in step 13

cardiagn.com

Common



Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of

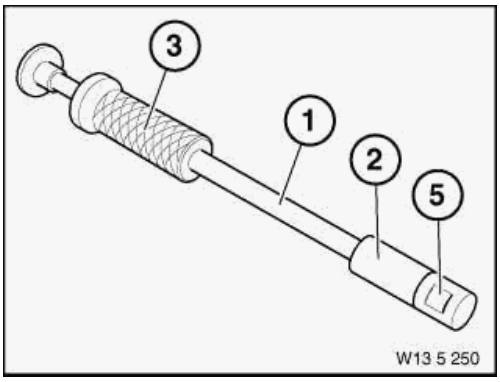
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.	

cardiagn.com

0 495 196 (00 2 320) Support arm

Common

Used in step 13



Usage	(Support arm with fixture) For mounting engines using the engine mounting bracket.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 197 (00 2 321)		**Support arm**	
2	0 495 198 (00 2 322)		**Panel** (take-up plate)	
3	0 495 380 (00 2 323)		**Panel** (fixture) Engine N73	
6	0 496 287 (00 2 326)		**Panel** (fixture) Engine: M73	
5	0 496 288 (00 2 327)	**0 496 373**	**Panel** (fixture) Engine: S62 Replaced by 11 5 420 (0 496 373)	
8	0 496 533 (00 2 328)		**Support** (Engine mount) Engine: N57, N57Top	
9	0 496 579 (00 2 329)	**0 496 680**	**Support** (Engine mount) Engine: N74 Replaced by 116160 (0 496 680)	
4	0 495 379 (00 2 324)		**Panel** (fixture) Engine M67TU	
5	0 495 381 (00 2 325)		**Panel** (fixture) Engine N62, N62TU	

cardiagn.com

0 493 321 (13 5 250) Puller

Common

Used in step 17

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

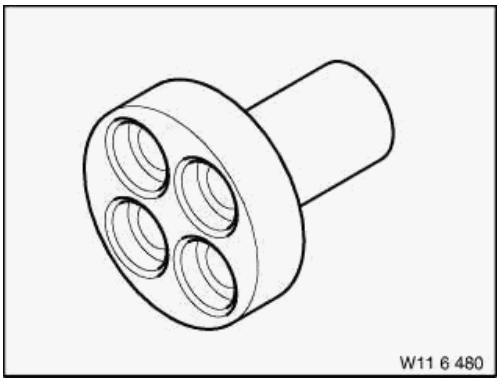
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

0 493 339 (13 5 252) Bush

Common

Used in step 17

Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

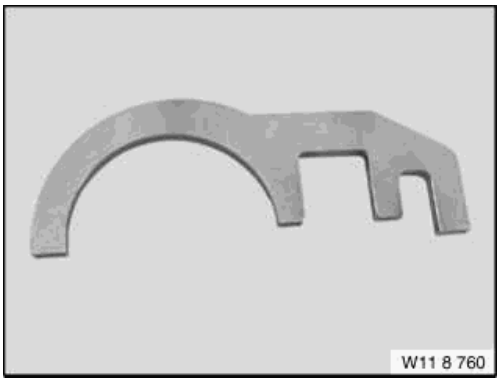


cardiagn.com

0 493 340 (13 5 253) Weight

Common	Used in step 17
Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 380 (11 6 480) Connector



Common	Used in step 20 42 45
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

2 288 380 Locating stud

Common	Used in step 20 42 43 45
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

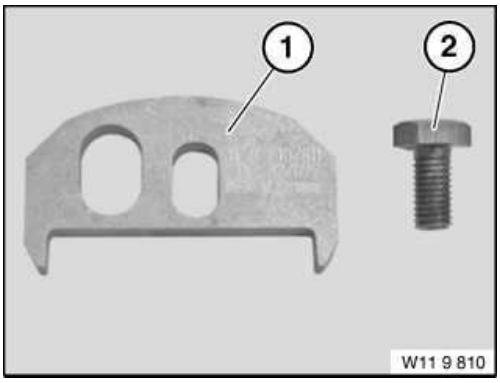
0 496 112 (11 8 760) Gauge

Common	Used in step 20 42 44 45
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

cardiagn.com

0 495 105 (11 4 480) oddments tray

Common



Used in step 26 27 42

Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

0 496 171 (11 9 811) Holder

Common

Used in step 28 29 36

Usage	Available only as a complete tool set 11 9 810 (83 30 0 496 170) - as of 13.01.12
Included in the tool or work	0 496 170
Storage location	C86
Replaced by	
In connection with	
SI-Number	01 07 07 (355)

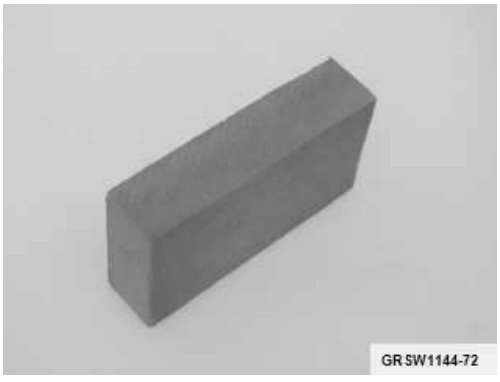
0 496 136 (11 8 814) Nut

Common	Used in step 35
Usage	(Nut with bearing) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

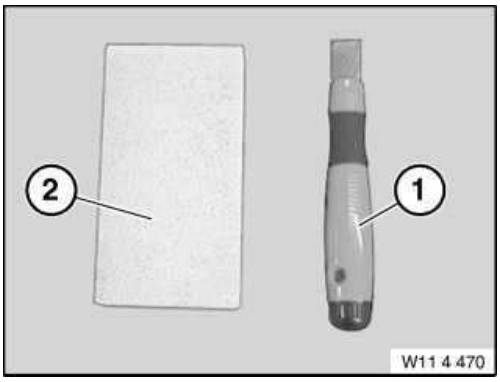
2 364 711 Plug



Common	Used in step 35
Usage	For closing the pressure oil holes for cleaning the cylinder head sealing surfaces.
Included in the tool or work	
Storage location	C20
Replaced by	
In connection with	
SI-Number	01 50 14 (203)

0 495 103 (11 4 471) Scraper

Common	Used in step 35
Usage	
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

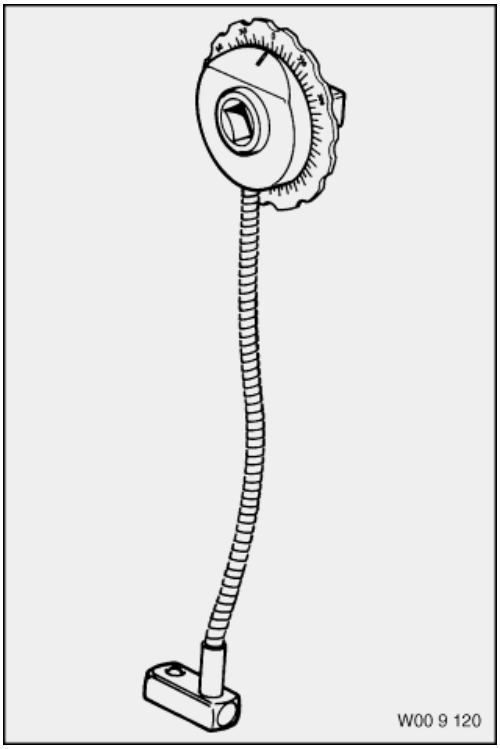


0 495 104 (11 4 472) Extractor

Common	Used in step 35
Usage	(grindstone)
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 102 (11 4 470) Tool



Common Used in step 35 56

Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with

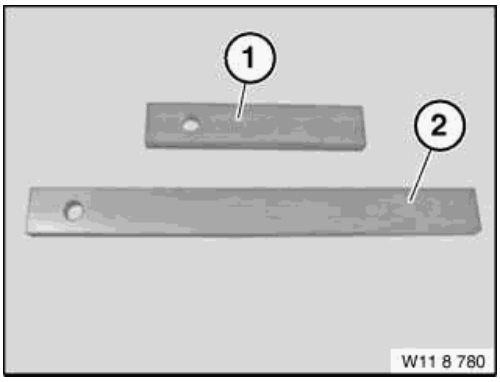
2	0 495 104 (11 4 472)		**Extractor** (grindstone)	

0 490 504 (00 9 120) Torque angle measuring dial



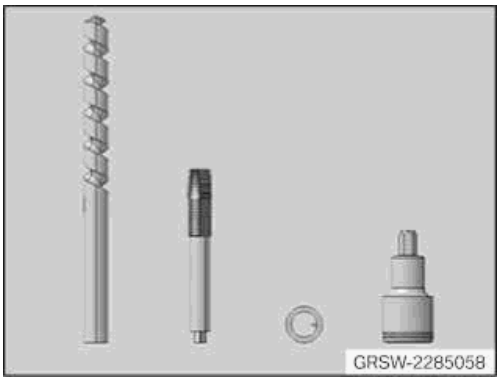
Common Used in step 35

Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 496 120 (11 8 780) Plate

Common



Used in step 35

Usage	(Mounting plates) For securing transmission oil sump when gearbox is removed.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with

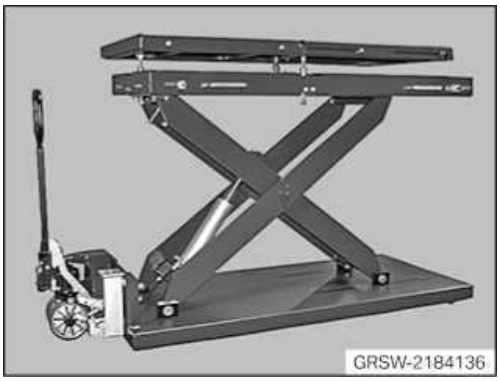
0 493 758 (13 5 210) Tool



Common Used in step 47

Usage	(Cleaning set) For injector channels
Included in the tool or work	
Storage location	B4
Replaced by	
In connection with	
SI-Number	01 05 00 (574)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 759 (13 5 211)		**Holding sleeve** (Guide sleeve)	
2	0 493 760 (13 5 212)		**Holder** (Brush holder)	
3	0 493 761 (13 5 213)		**Brush head**	
4	0 493 762 (13 5 214)		**Rod** (Mounting rod) For the seal plug	
5	0 493 763 (13 5 215)		**Plug** (Seal plug)	

2 184 136 Mobile equipment table lift

Common Used in step 53

Usage	Table lift MHT 1200
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	06 01 10 (649)

cardiagn.com

2 409 025 Puller

Common	Used in step 54
Usage	For disassembly of the outer radial shaft seal of the transmission output shaft, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A76
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

2 411 739 Puller

Common	Used in step 54
Usage	For disassembly of the inner radial shaft seal of the output, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C78
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

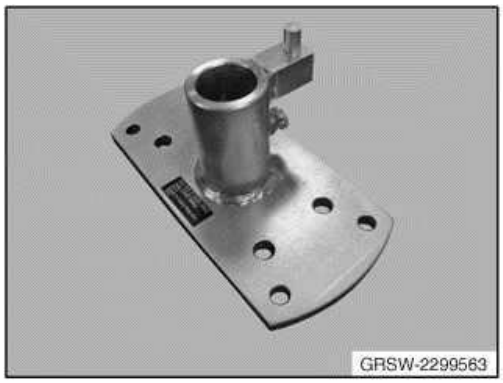
2 408 152 Striking element

Common	Used in step 54
Usage	For installation of the right radial shaft seal transmission output shaft (inner). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)

cardiagn.com

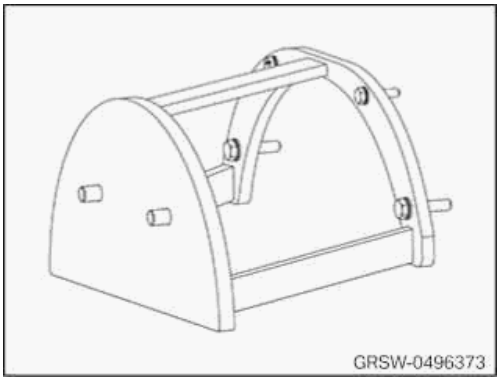
2 413 037 Handle

Common	Used in step 54
Usage	Universal drift handle. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C77
Replaced by	
In connection with	
SI-Number	01 53 14 (211)



2 408 150 Striking element

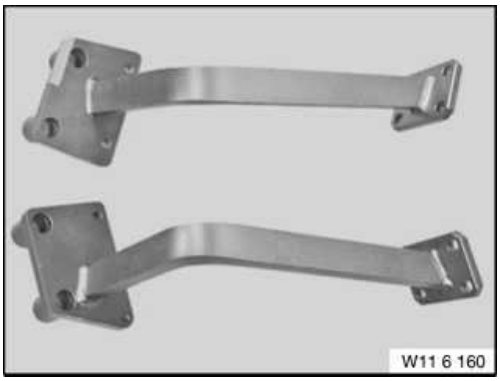
Common	Used in step 54
Usage	For installing the right radial shaft seal transmission output shaft (outer). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)



Replacement tools:

2 299 563 Adapter

Common	Used in step 13
Usage	New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.
Included in the tool or work	0 495 187
Storage location	
Replaced by	
In connection with	
SI-Number	



0 496 373 (11 5 420) Plate

Common	Used in step 13
Usage	(Fixture) Engine S62
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with

11 31 052 Replacing both timing chains

PRELIMINARY WORK

1 – Removing engine

- See additional information.

2 – Removing the acoustic cover

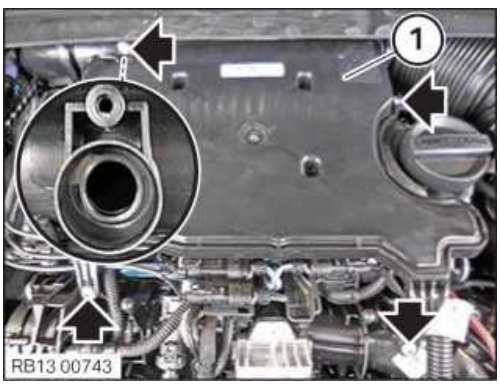
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

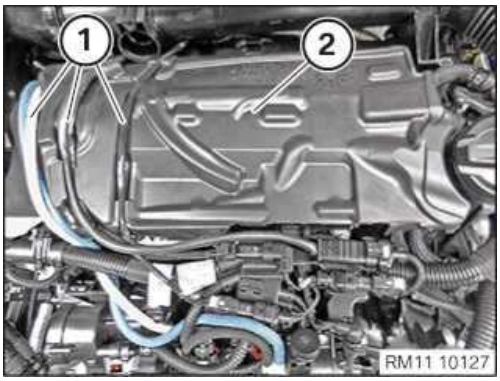


Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

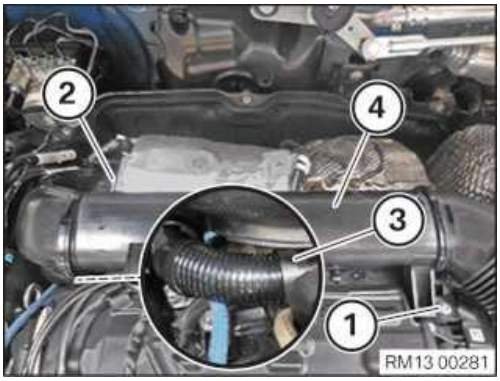


3 – Remove resonator

- Remove screws (arrows).
- Guide out and remove the resonator (1).

4 – Remove the acoustic cover for the injectors

cardiagn.com



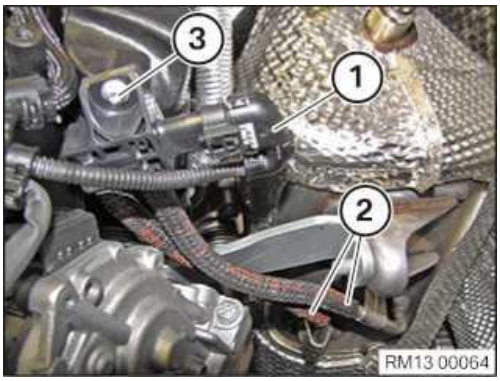
- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

5 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

6 – Remove differential pressure sensor

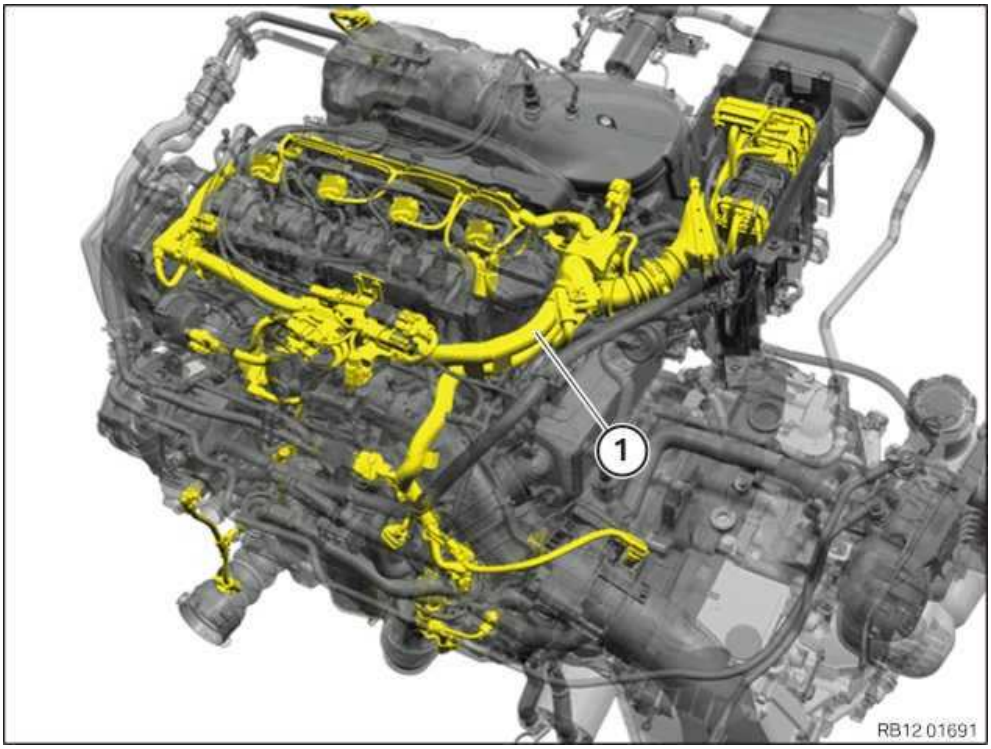


RISK OF DAMAGE

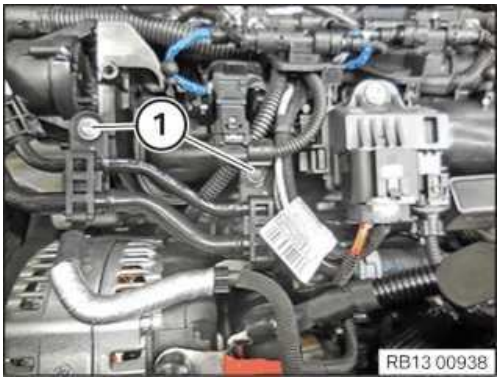
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



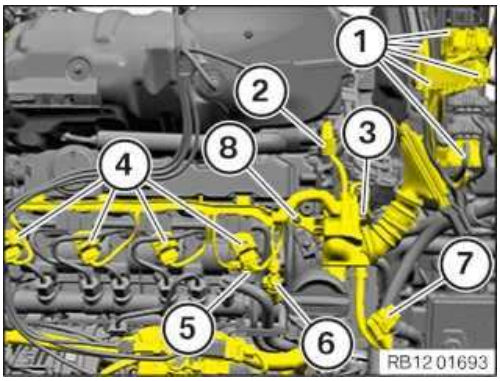
cardiagn.com



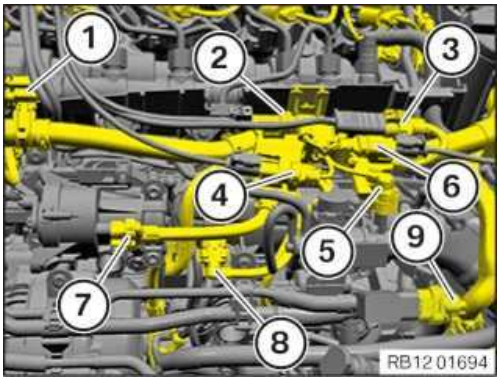
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

7 – Removing assemblies (on lifting table)

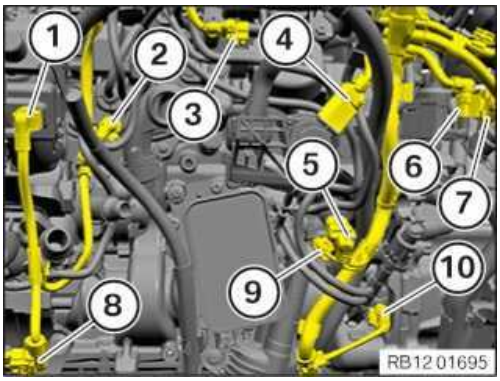
Overview: Wiring harness section for the engine



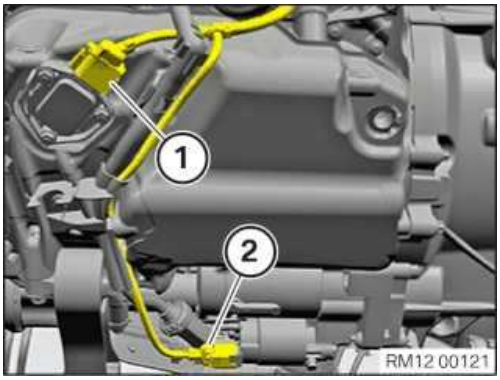
1 Wiring harness section for the engine



- Loosen screws (1).

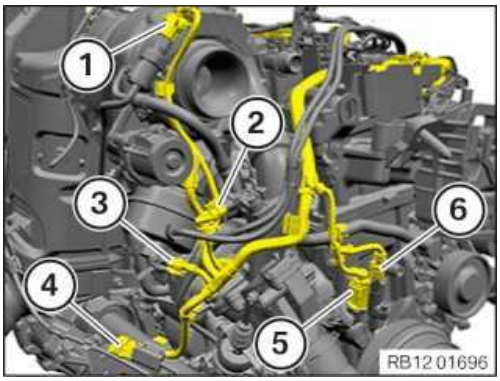


cardiagn.com

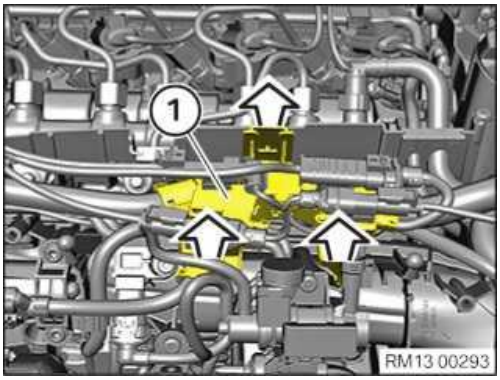


- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).

- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock connector (3) and pull it off from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

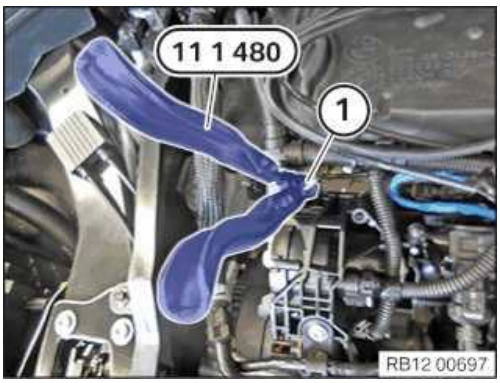


- Unlock and disconnect the connector (1) from the alternator.
- Unlock and disconnect the connector (2) from the electric changeover valve.
- Unlock and disconnect the connector (3) from the electric changeover valve.
- Unlock the connector (4) and pull it off the high pressure pump.
- Unlock the connector (5) and disconnect it from the oil pressure sensor.
- Unlock connector (6) and pull off from throttle body.
- Unlock the connector (7) and disconnect it from the intake air temperature sensor.
- Unlock the connector (8) and disconnect it from the air conditioning compressor.
- Unlock and disconnect the connector (9) from the solenoid valve.
- Unlock the connector (10) and pull it off the crankshaft sensor.

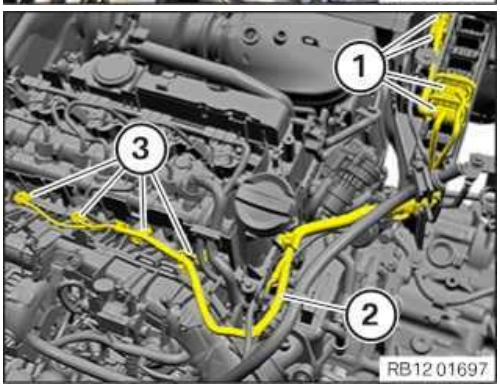


- Unlock the connector (1) and pull off of the oil-level sensor.
- Unlock connector (2) and remove from starter motor.

cardiagn.com



- Unlock the connector (1) and disconnect it from the exhaust gas pressure sensor.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock the connector (3) and pull it off the exhaust turbocharger.
- Unlock the connector (3) and disconnect it from the differential pressure sensor.
- Unlock connector (4) and pull it off from the monitoring oxygen sensor.
- Unlock the connector (5) and pull it off the oil pressure switch .
- Unlock connector (6) and disconnect from switching valve.
- Detach, feed out and remove the wiring harness from the clamps.



▶ **Removing the cable clips from the intake plenum**

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Pull off all connectors (3) from glow element using special tool **0 490 796 (11 1 480)**.
- Loosen screw (2) and remove the ground strap.
- Detach, feed out and remove the wiring harness from the clamps.

▶ **Removing the drive belt for alternator**

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

cardiagn.com

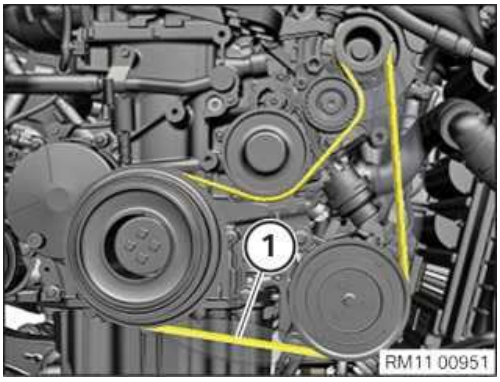
CAUTION

Component with preload.

Danger of injury!

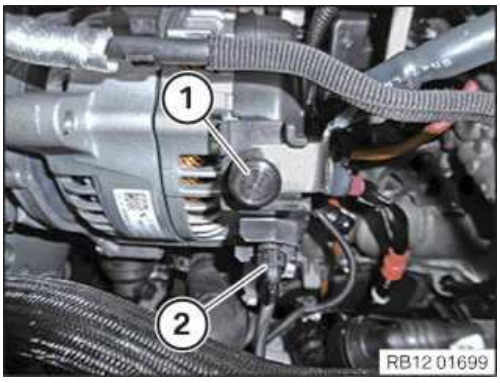
- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION



If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

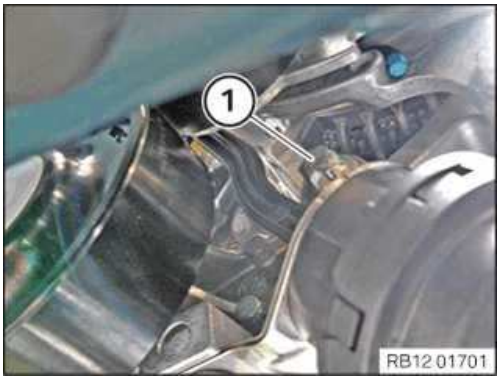
TECHNICAL INFORMATION



The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool **0 496 268 (11 0 390)**.

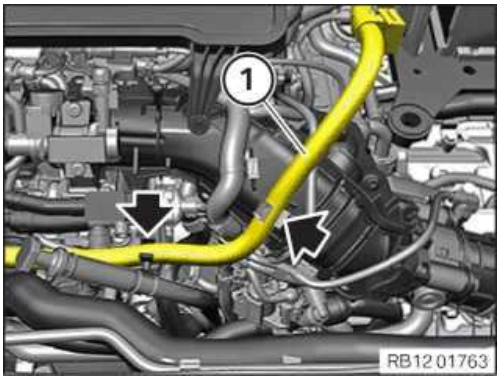
- Guide out the drive belt for the alternator (1) and remove it.



- Remove the cover (1) and loosen the nut below.
- Disconnect positive battery cable from alternator.
- Unlock and disconnect the connector (2) from the alternator.

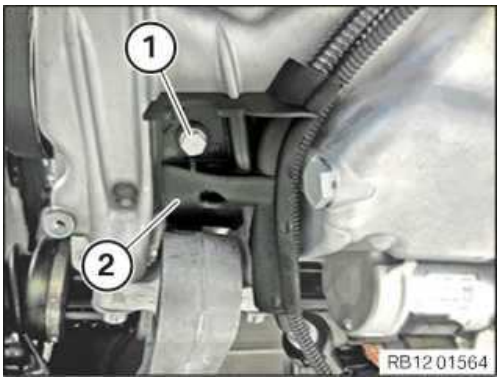
cardiagn.com

- Detach screw (1) on top on the alternator.



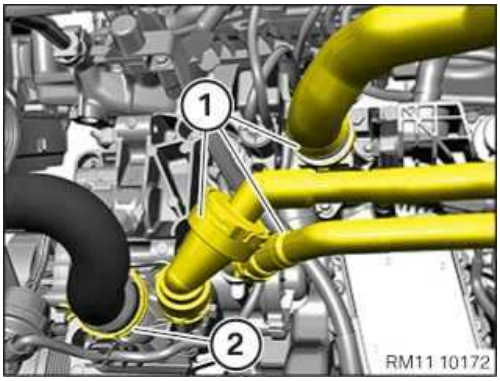
- Detach screw (1) below on the alternator.

- Feed out alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support and remove.



- Loosen screws (1).
- Feed out and remove the air conditioning compressor (2).

- Release the positive battery cable (1) from the clamps (arrows).

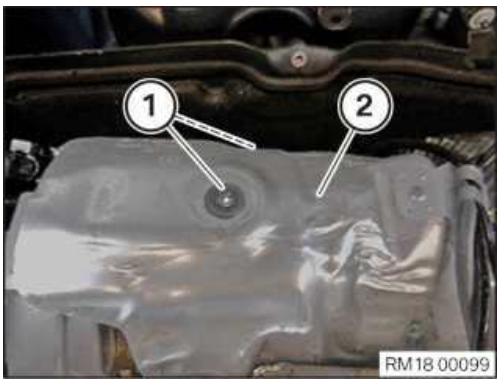


cardiagn.com

- Loosen screw (1).
- Guide out and remove holder (2).

- Feed out positive battery cable from the clamps (1) and remove.

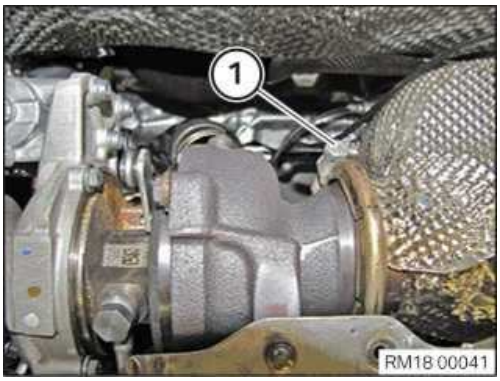
- Unlock and disconnect coolant lines (1).
- Guide out the coolant lines (1) and remove it.
- Detach the clamp (2).
- Guide the coolant hose out and remove.



▶ **Removing heat shield from top exhaust turbocharger**

WARNING

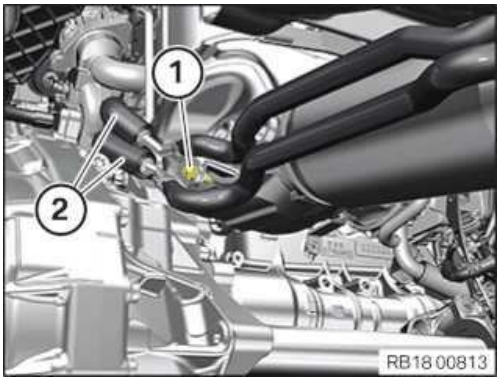
Hot surfaces.



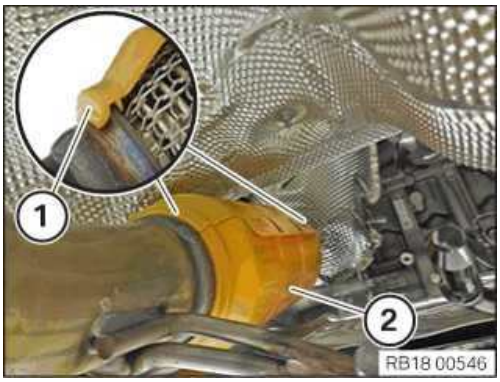
Risk of burning!

- Perform all work only on components that have cooled down.

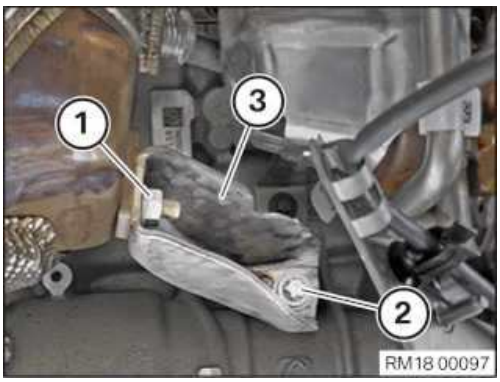
- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).



cardiagn.com

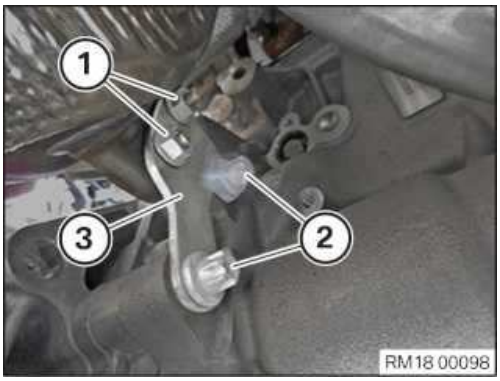


- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



- Loosen nuts (1).

- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

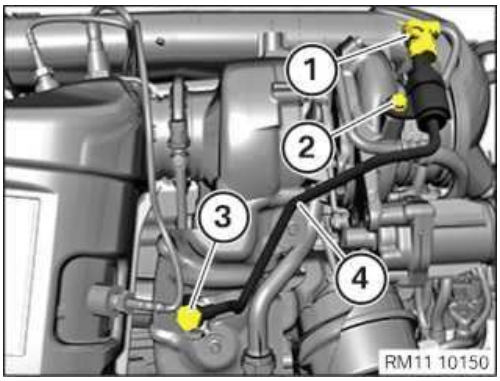


- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.

- Loosen nut (1).
- Loosen screw (2).
- Remove holder (3).

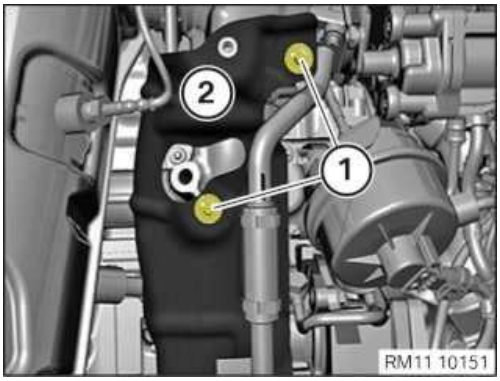
cardiagn.com

- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).
- Guide out and remove diesel particulate filter .



▶ **Remove the heat shield from the exhaust turbocharger at the bottom**

WARNING



Hot surfaces.

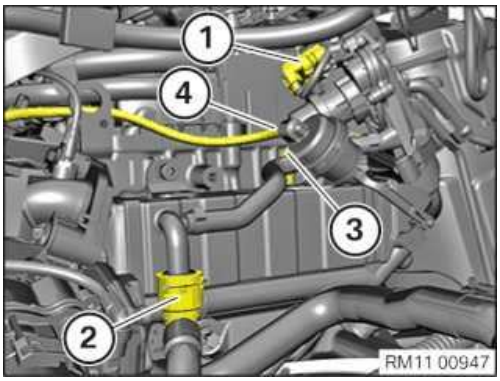
Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).

▶ **Removing the exhaust-gas recirculation cooler**

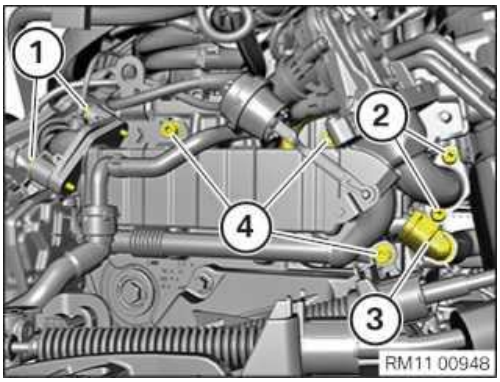


WARNING

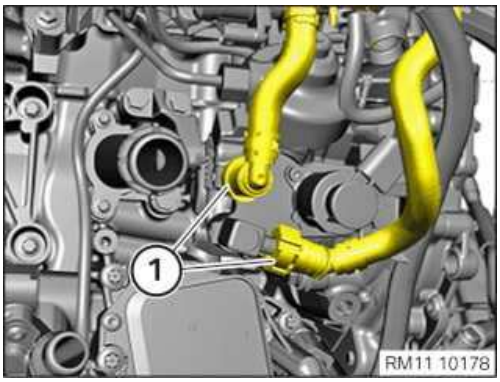
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

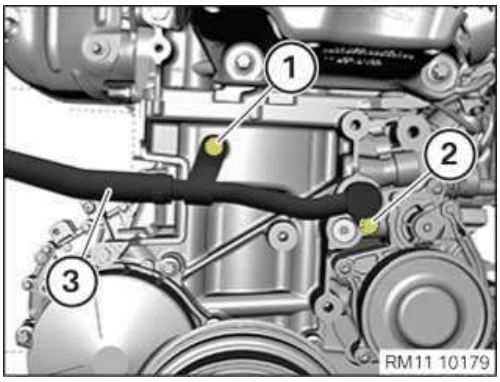


cardiagn.com



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



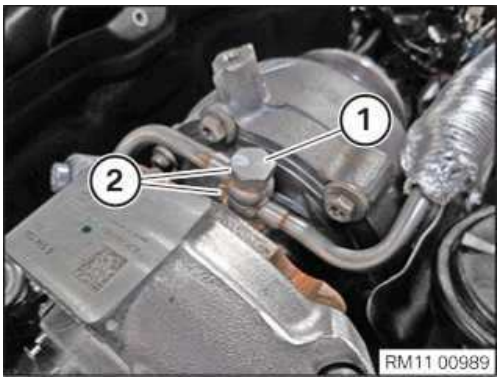
- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

- Unlock the fuel lines (1) and disconnect from the high pressure pump.
- Remove the fuel lines.

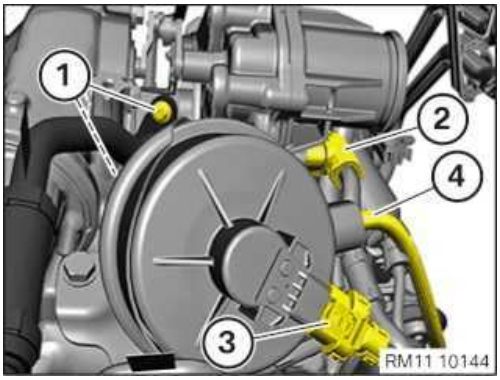
- Loosen screws (1) and (2).
- Remove coolant line (3).

8 – Removing the low-pressure stage turbocharger



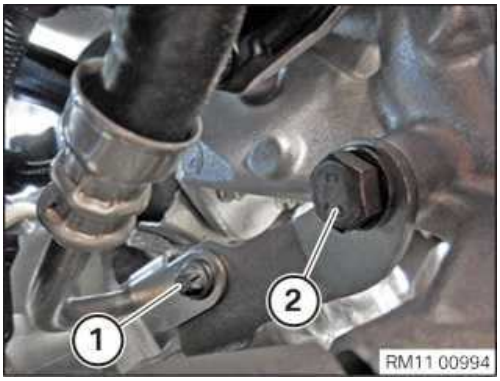
WARNING

Hot surfaces.



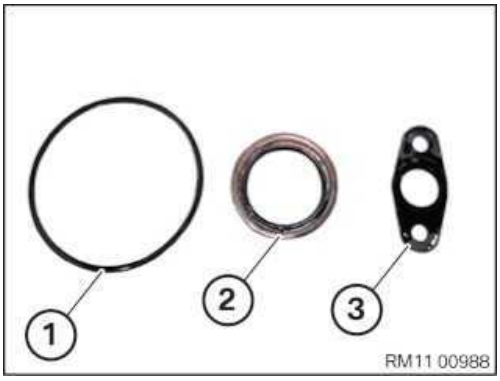
Risk of burning!

- Perform all work only on components that have cooled down.



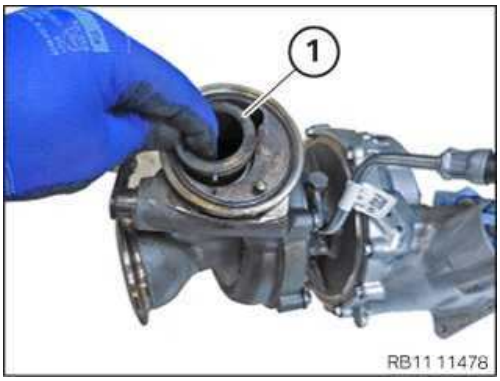
cardiagn.com

- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.



- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.

- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).



- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

cardiagn.com

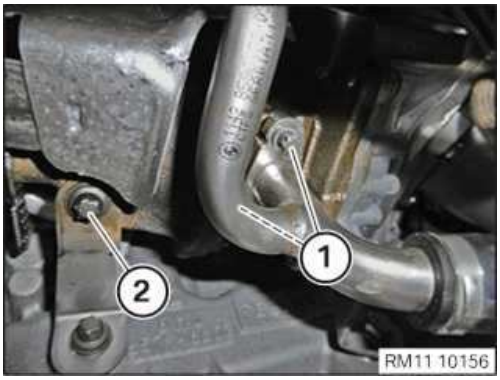
- Remove the spacer ring (1).

9 – Removing the high-pressure stage exhaust turbocharger

WARNING

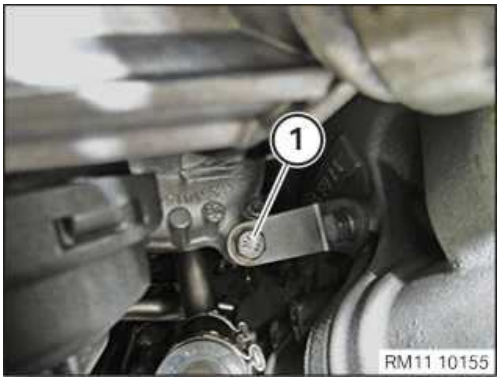
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

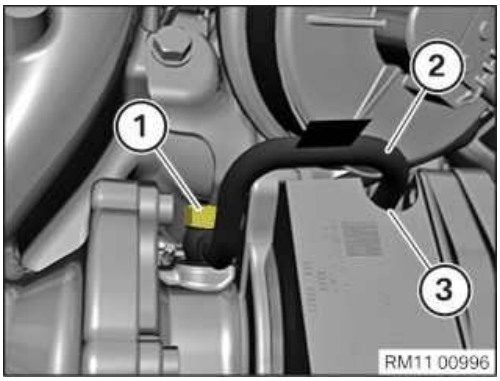
CAUTION



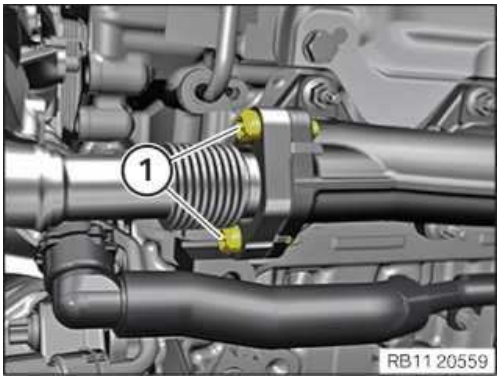
Heavy component.

Heavy components can lead to injury or damage.

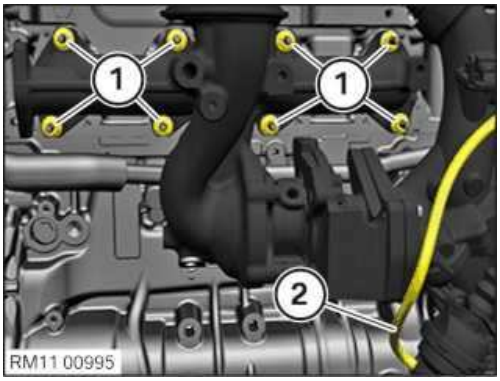
- Remove and install heavy components with the aid of another person/other persons.



- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).

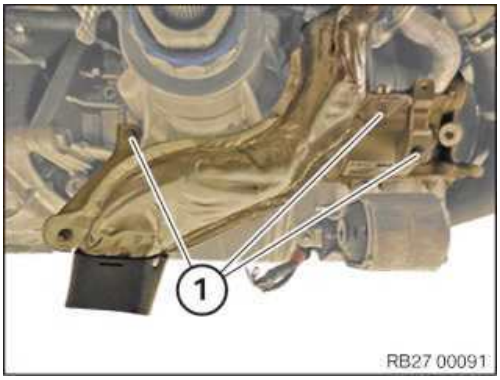


- Release screw (1) from the right wheel arch.

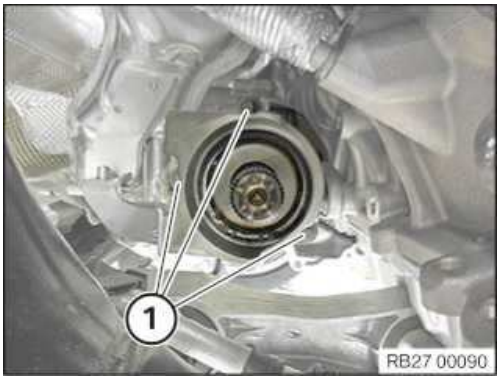


cardiagn.com

- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

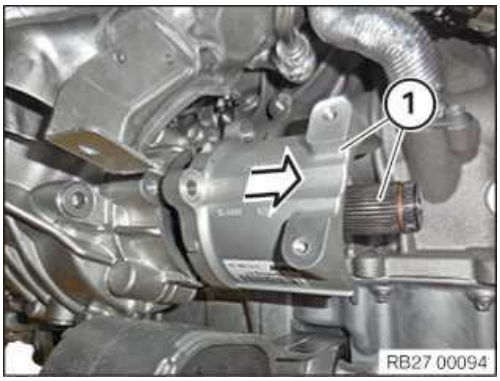


- Loosen screws (1).

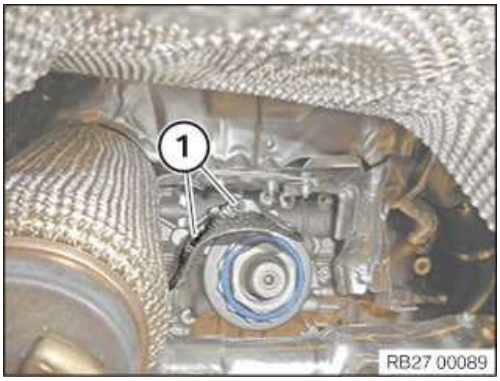


- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

10 – Remove the intermediate shaft with the support tube

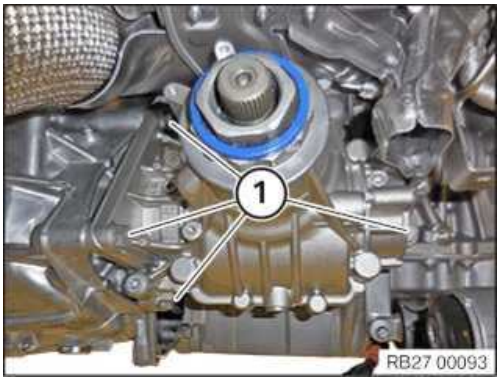


- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).

cardiagn.com



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

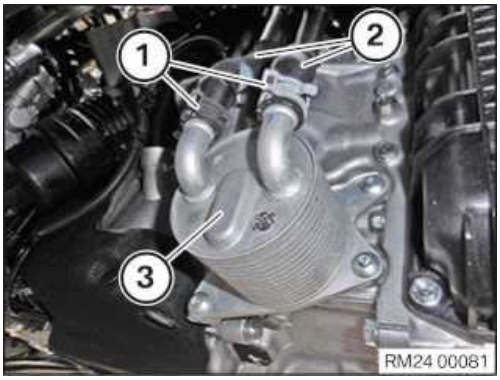
11 – Remove transfer box (VTG)

- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

12 – Detach the engine from the automatic transmission

Prerequisite



Engine has been removed.

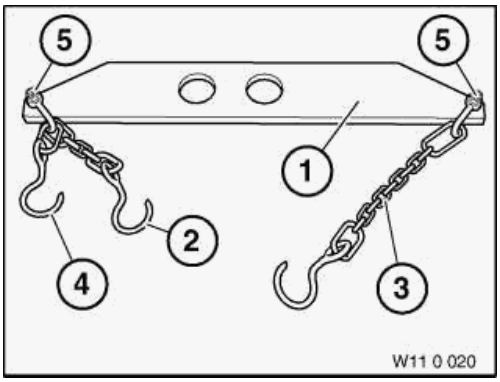
CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Unfasten hose clamps (1).
- Disconnect coolant hoses (2) from transmission oil cooler (3).
- Catch the emerging coolant.



cardiagn.com

- Crank engine with special tool **0 493 380 (11 6 480)** at vibration damper in direction of rotation.
- Unscrew the nut (1) of the torque converter.
- Crank engine further and release remaining 5 nuts.

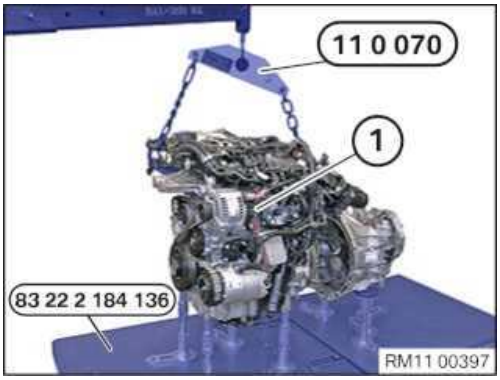
- Stage the workshop crane **2 220 718**.

- Stage the lifting gear .

TECHNICAL INFORMATION

Conduct the following operation with the assistance of a second person.

- Secure the automatic transmission against dropping using a workshop crane **2 220 718** and lifting gear .
- Remove screws (arrows).
- Remove the automatic transmission with help from an auxiliary person and using the workshop crane **2 220 718** including lifting gear and put it to one side.



cardiagn.com

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm

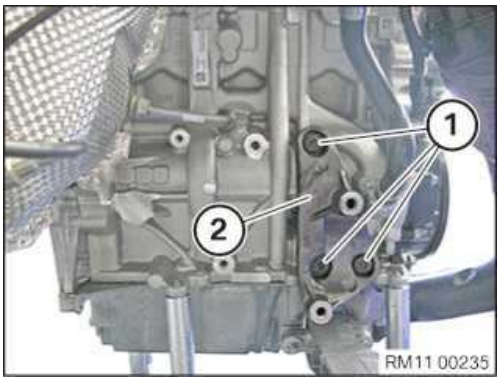
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Attach engine lifter to special tool and lift engine (1) off lifting table.

13 – Mount engine on assembly stand

CAUTION



Heavy component.

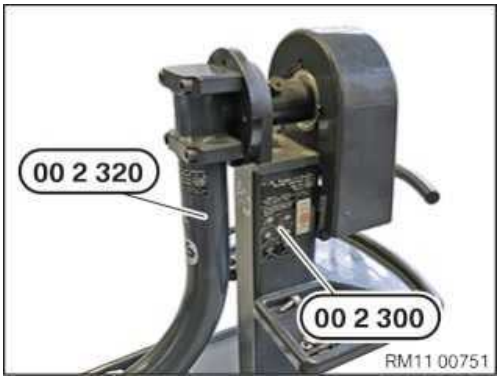
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

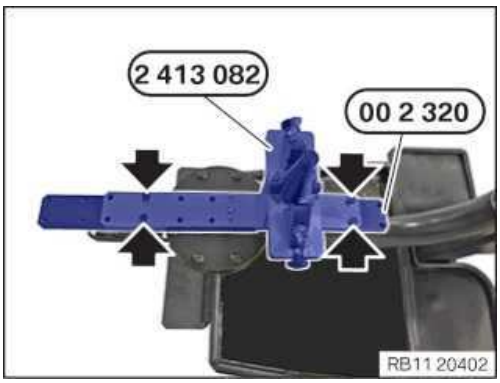
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Loosen screws (1).
- Guide out and remove holder (2).



cardiagn.com

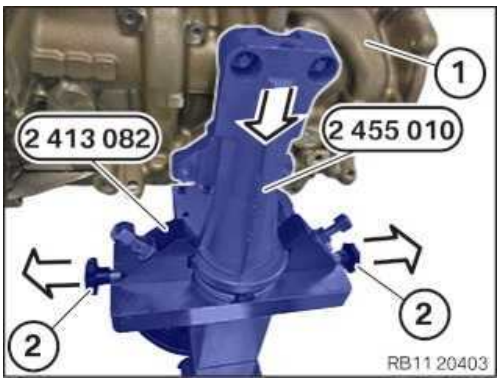


- Position the special tool **2 455 010** on the engine (1).
- Position the standard bolts **M10x30**.
- Tighten the standard bolts (arrows).
-

Special tool 2 455 010 to crankcase

M10x30		Tightening torque	38 Nm

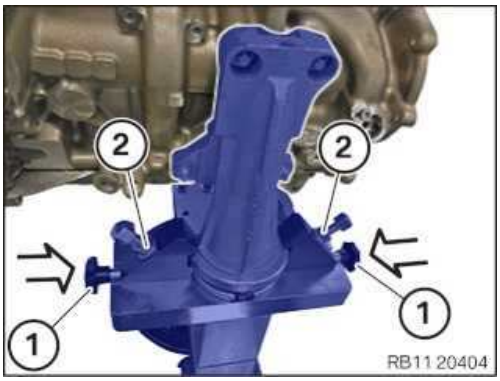
- Prepare the assembly stand **0 495 187 (00 2 300)** with the special tool **0 495 196 (00 2 320)**.



- Screw the special tool to the **0 495 196 (00 2 320)** special tool.
- Tighten screws (arrows).
-

Special tool 11 8 930 to special tool 00 2 320

M14x35		Tightening torque	160 Nm

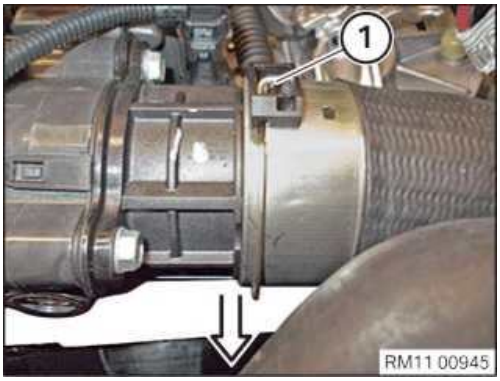


- Position the engine lifter with the special tool and the engine on the special tool **0 495 187 (00 2 300)**.

- Detach the holder (2) in the direction of the arrow.
- Position the engine (1) with the special tool **2 455 010** in the direction of the arrow on the special tool .

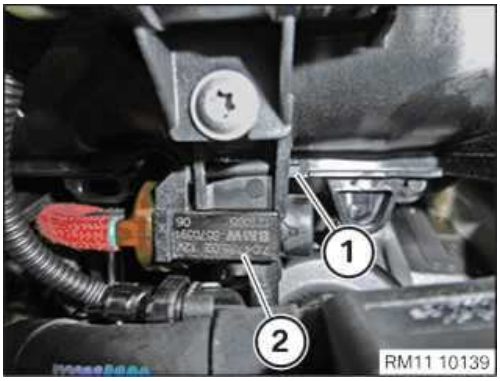
cardiagn.com

- Lock the holder (1) in direction of arrow.
- Tighten nuts (2).



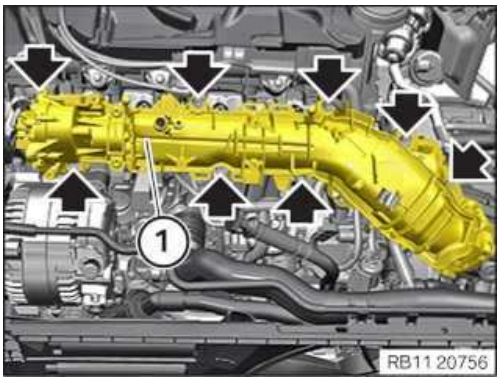
14 – Removing the intake plenum

TECHNICAL INFORMATION

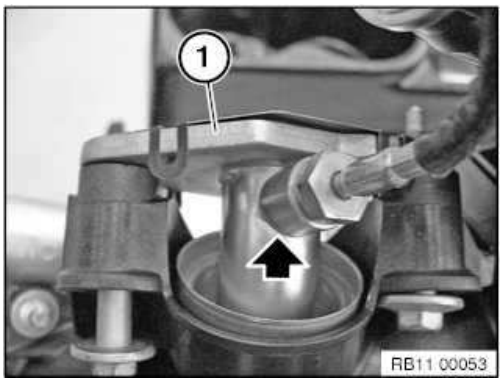


Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.



- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

cardiagn.com

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

15 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

cardiagn.com

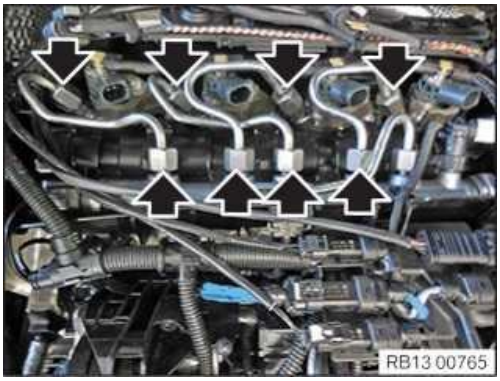
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION



If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

16 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

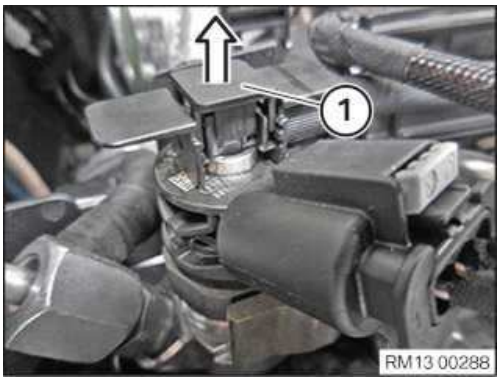
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE



Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

17 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

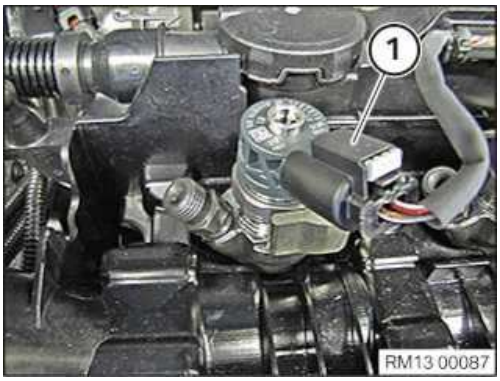
Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

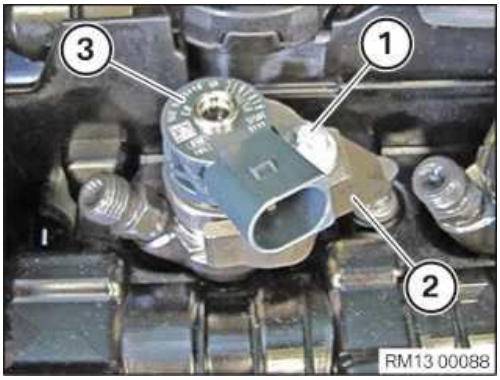
RISK OF DAMAGE

 **Electrostatic discharge.**



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

cardiagn.com

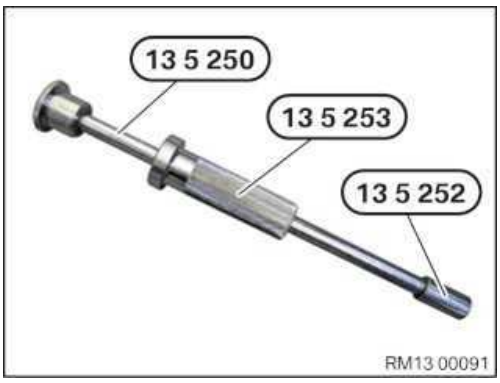
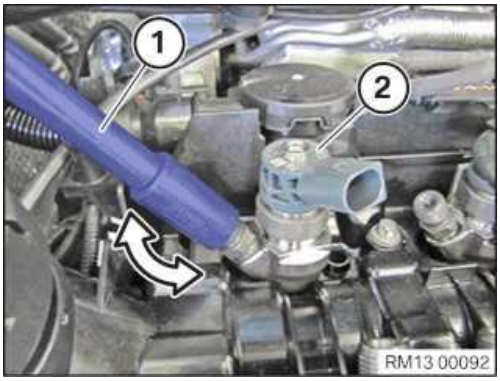
- Unlock and disconnect connector (1).

- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.



▶ **Loosen stuck injectors**

RISK OF DAMAGE



Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)** back onto the special tool **0 493 321 (13 5 250)**.

- Screw the special tool (1) **0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1) **0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

cardiagn.com

WARNING

Working on fuel system.

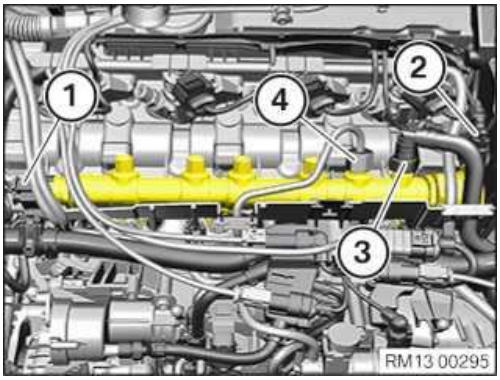
Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

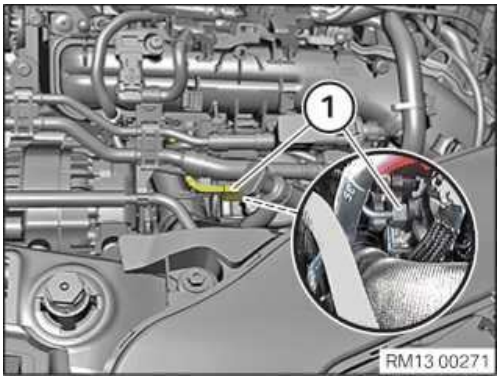
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.



- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

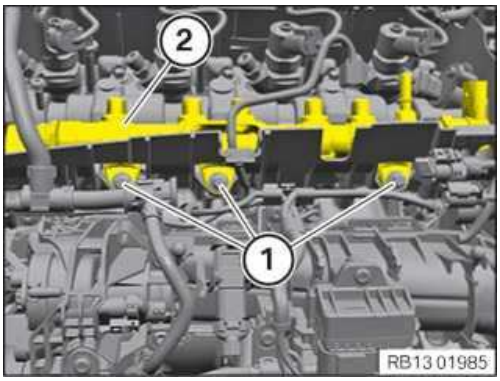
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Unlock and disconnect connector (1).
- Unlock and disconnect connector (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool .
- Reset special tool early on to avoid bending pressure lines.

- Slacken the union nut (1) on the high pressure pump.

cardiagn.com

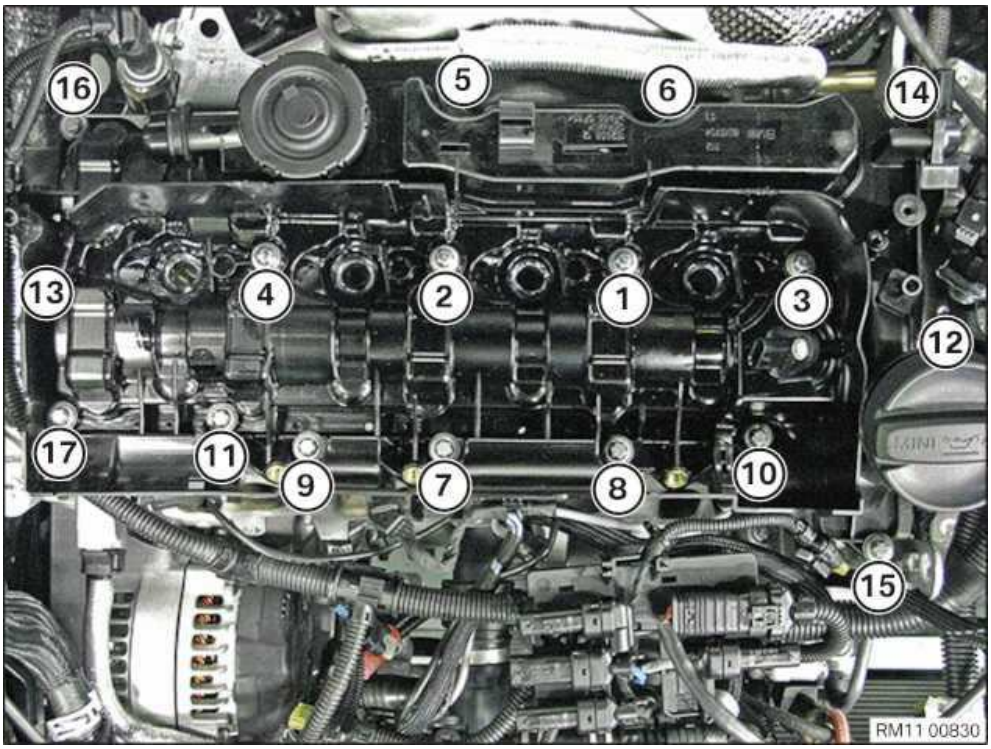
- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

19 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

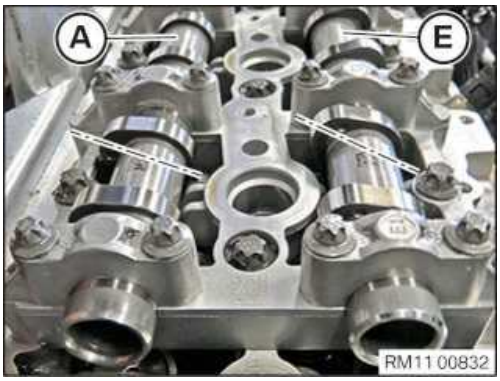
- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

20 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.



The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

21 – Remove chain tensioner piston

cardiagn.com

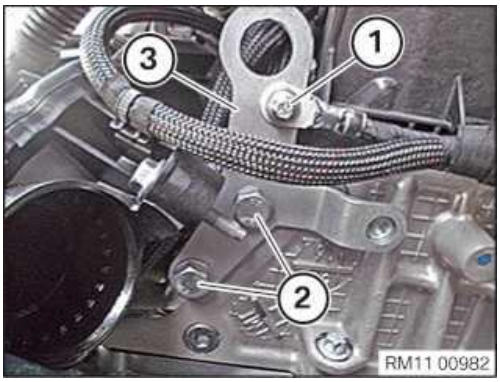
WARNING

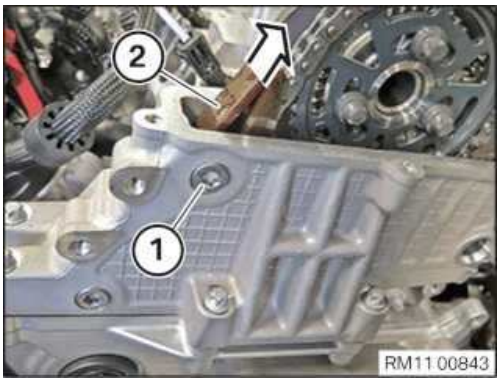
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



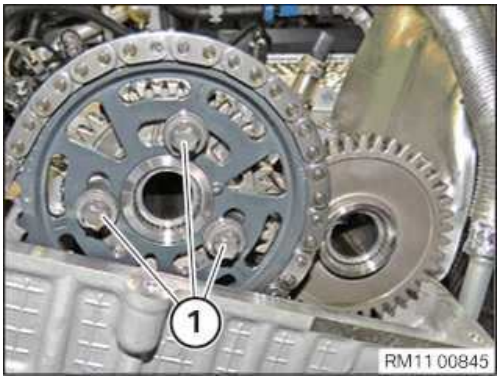
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

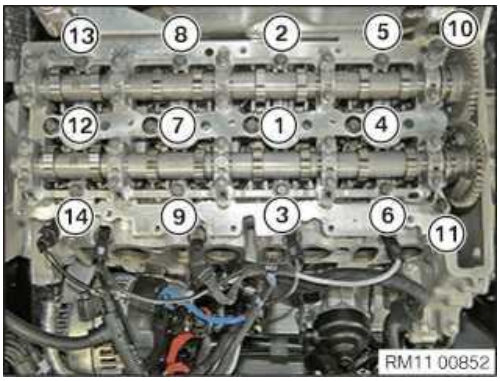
- Remove the chain tensioner piston (1).

22 – Remove the timing chain guide rail



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.



23 – Removing the camshaft sprocket on the intake camshaft

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

24 – Removing the camshaft support

cardiagn.com

- Evenly loosen all screws in a sequence from (14) to (1).
- Loosen and remove all screws in a sequence from (14) to (1).
  Both camshafts can be removed with the camshaft carrier.
- Remove the camshaft support including camshafts towards the top.

25 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

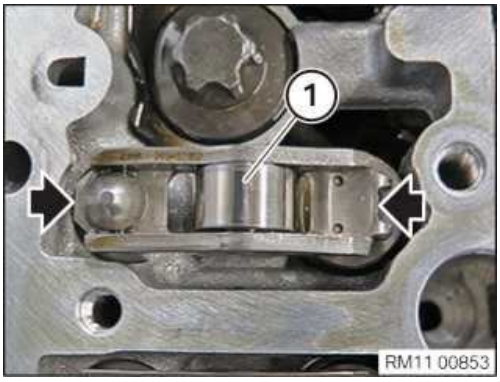
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool or conventional tools.
- Feed out preheating elements and remove.

26 – Remove roller cam followers

- Guide out and remove all roller cam followers (1) (arrows).
- Place all roller cam followers (1) in order in special tool **0 495 105 (11 4 480)**.

  Roller cam followers that have already been used must be installed in same position again.

27 – Removing the hydraulic valve clearance compensating element

cardiagn.com

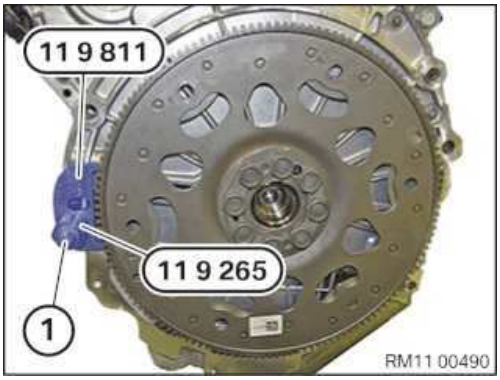
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

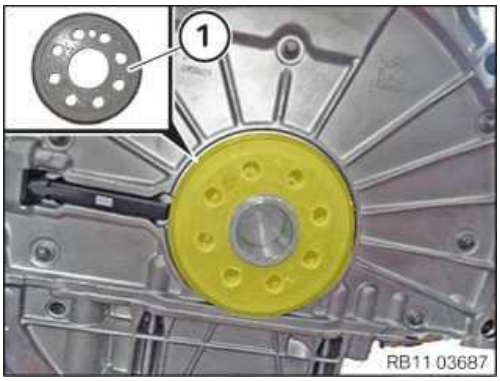
- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.



28 – Removing flywheel

CAUTION

Heavy component.



Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Secure flywheel with a transmission bolt (1) and the special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.
- Unfasten flywheel bolts.
- Remove flywheel.

cardiagn.com

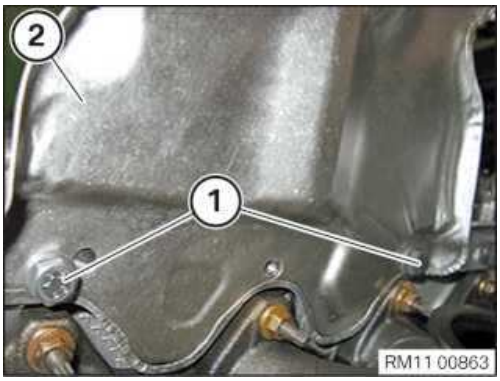
RISK OF DAMAGE

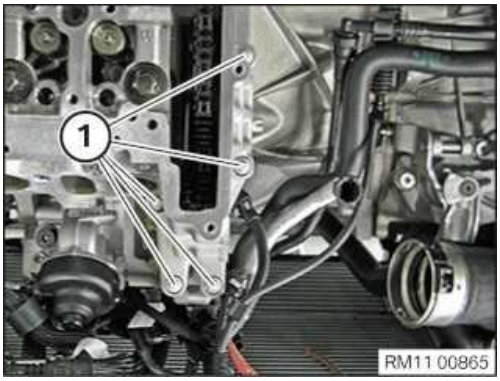
Electrostatic discharge.

Damage to or destruction of electrical components.



- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

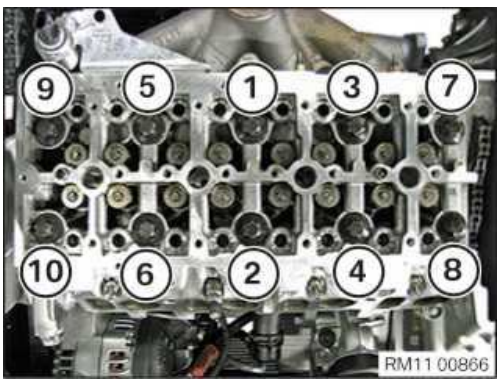
- Remove the increment wheel (1) from the crankshaft and set correctly.



29 – Remove rear timing case cover

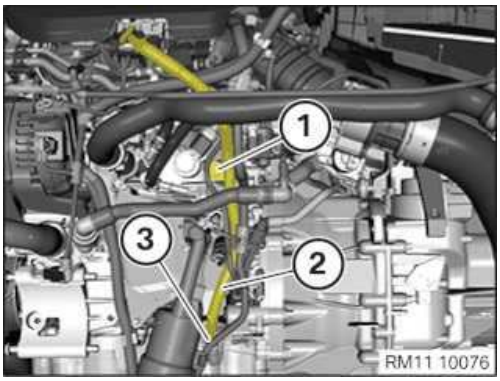
Prerequisite

Transmission is removed.



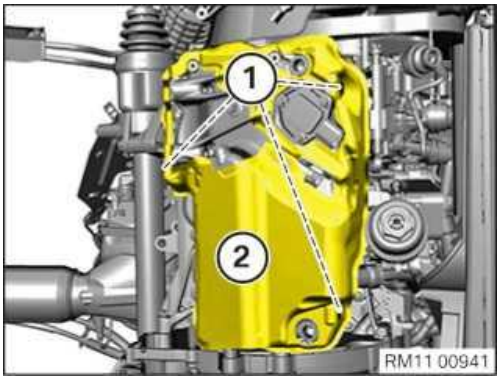
- Loosen screws (1).
- Feed out the heat shield (2) and place to one side.

TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).



- Loosen the cylinder head bolts in the sequence from (10) to (1).
- Remove cylinder head bolts (1) to (10) with washers.
- Remove cylinder head.

cardiagn.com

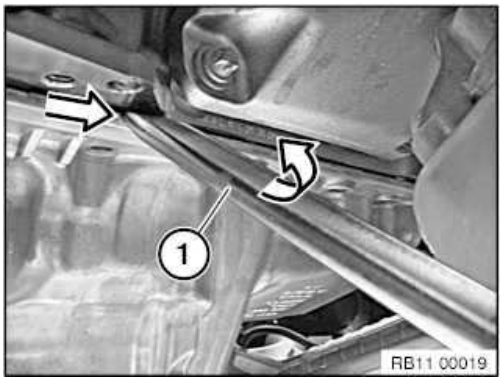
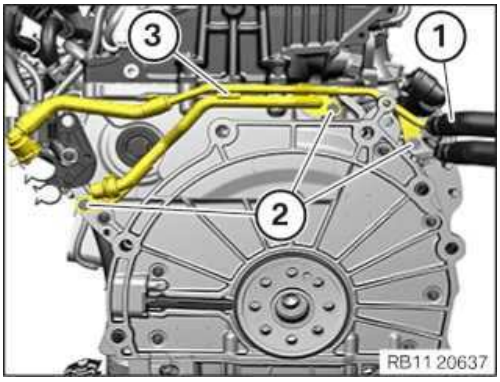
- Loosen screw (1).
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- Remove sealing ring (3) from oil sump if necessary.

- Expanding rivets (1) on both sides of the acoustic cover (2).
- Feed out and remove the acoustic cover (2).



- Loosen the transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).



- Release oil sump only in area (1).

cardiagn.com

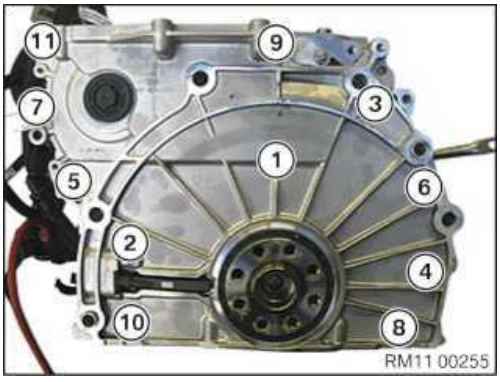
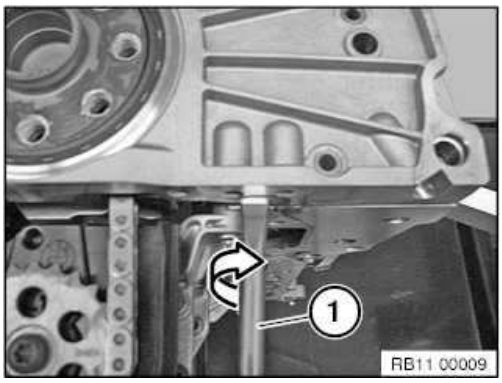
- Detach the oil sump with a suitable mounting lever (1) carefully at the point provided.
- Secure the oil sump against falling.

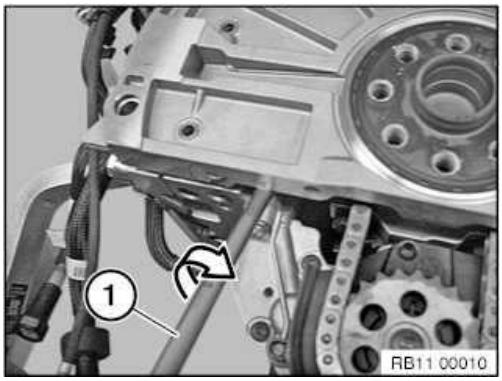


▶ **If installed: Remove coolant line of the SCR metering module**



- Unlock and disconnect the coolant hose (1).
- Loosen screws (2).
- Remove the coolant line (3).

- Loosen screw (1).
- Guide out and remove holder (2).



- Loosen screws in the order (11) to (1).

- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.

cardiagn.com

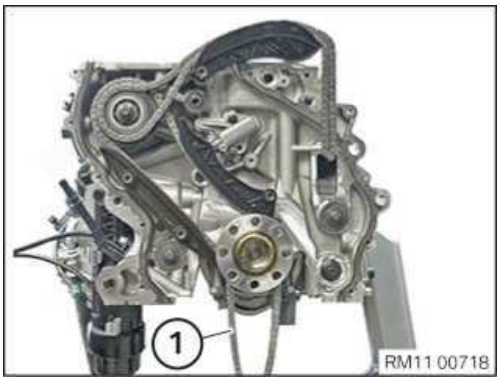
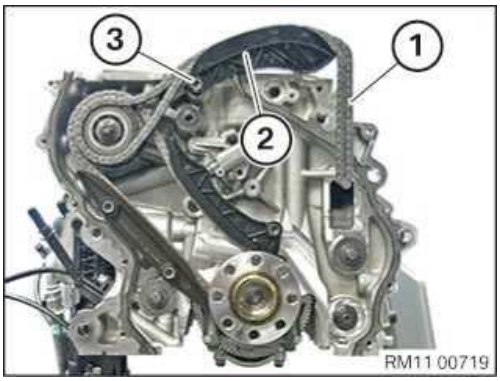
- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.
- Remove the timing case cover.

30 – Remove the oil vacuum pump



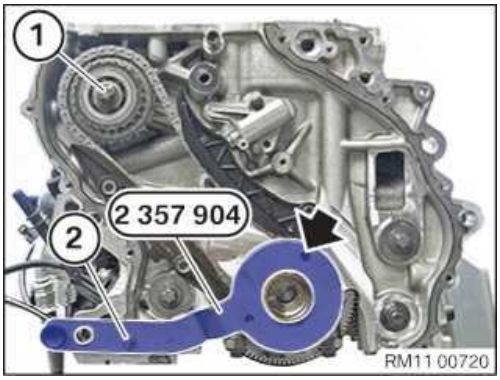
- Loosen screws (1) of the oil vacuum pump (2).

- Remove oil vacuum pump (1) and remove from the drive chain (2).



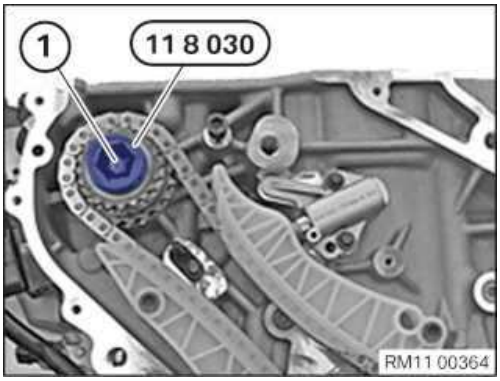
MAIN WORK

31 – Remove both timing chains



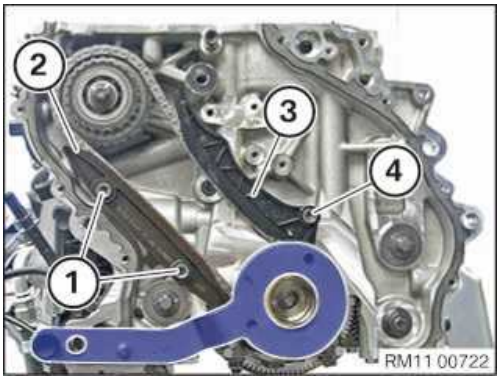
- Remove drive chain (1) for oil pump.

cardiagn.com



- Remove the timing chain (1) for the camshafts.
- Remove the tensioning rail (2) from the bearing journal (3).

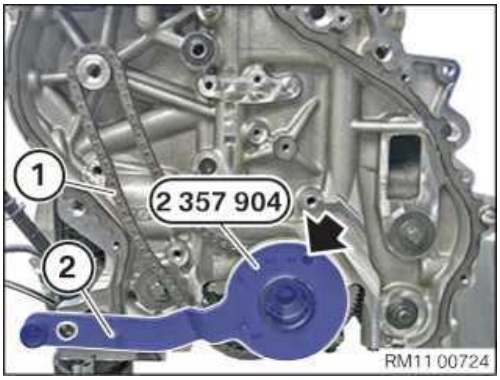
  Bearing journal (3) does not have to be disassembled.



- Secure crankshaft to release central bolt (1) of high pressure pump.
- Position crankshaft with guide pin (arrow).
- Secure special tool **2 357 904** with bolt (2) on crankcase.
- Release central bolt (1) of high pressure pump; do not remove.

- Screw special tool **0 496 725 (11 8 030)** into sprocket of high pressure pump.
- Unscrew central bolt (1) of high pressure pump until central bolt can be supported on special tool **0 496 725 (11 8 030)**.
- Continue turning central bolt (1) until camshaft sprocket is released from high pressure pump shaft.

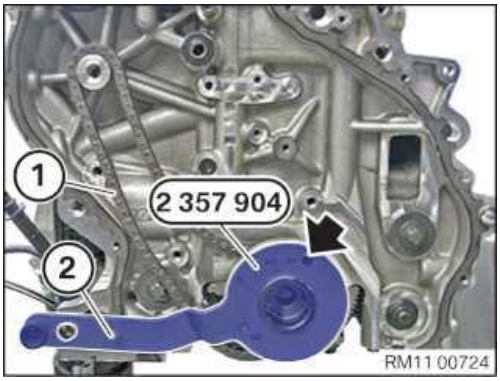
- Press chain tensioner in with tensioning rail (1) by hand in the direction of the arrow until the special tool **0 491 012 (11 4 120)** can be positioned.
- Loosen screws (2).
- Remove chain tensioner.



- Loosen both bearing journals (1).
- Remove the guide rail (2).
- Loosen the bearing journals (4).
- Remove the tensioning rail (3).

cardiagn.com

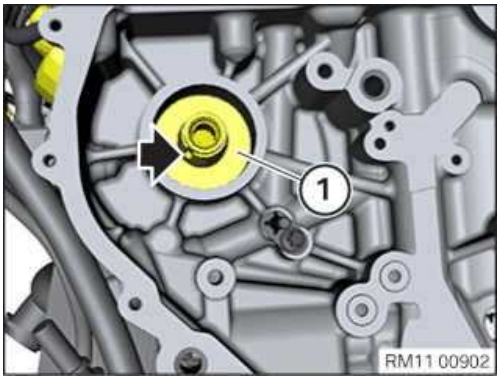
- Remove bolt and camshaft sprocket (1) of high pressure pump.



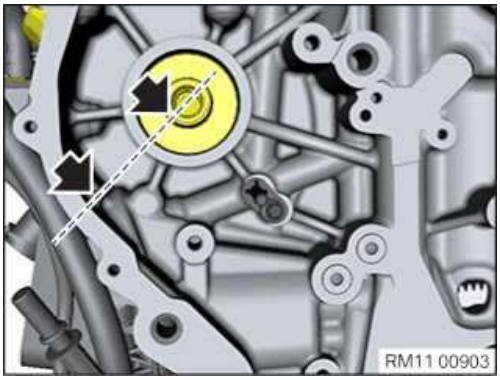
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Unscrew the bolt (2) and remove the special tool **2 357 904**.
- Remove the timing chain (1).



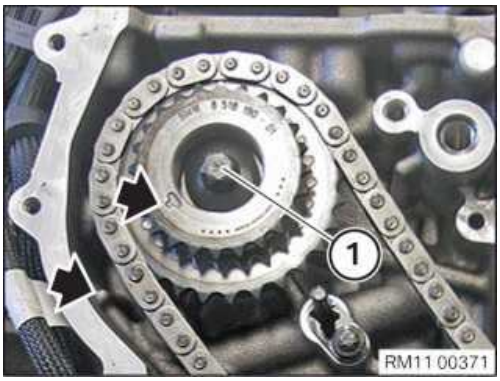
32 – Install both timing chains



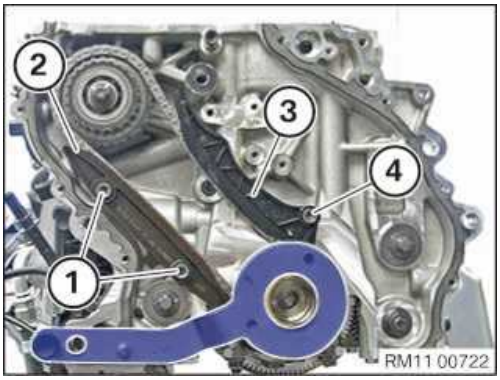
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Position the timing chain (1).
- Secure crankshaft with special tool **2 357 904**.
- Secure special tool **2 357 904** with bolt (2) on crankcase.



- Note spline groove on high pressure pump (1).



- Mark and groove (arrows) on high pressure pump and crankcase must align.

cardiagn.com

- Position the impeller with timing chain on the high pressure pump.
- Screw in and fasten central bolt (1) of high pressure pump.
- Mark and cast lug (arrows) must align.

- Position tensioning rail (3).
- Replace bearing journal.

  Parts: Bearing journal
- Tighten the bearing journals (4).

Bearing journal of tensioning and guide rail

M8	*Replace bearing journal.*	Tightening torque	20 Nm

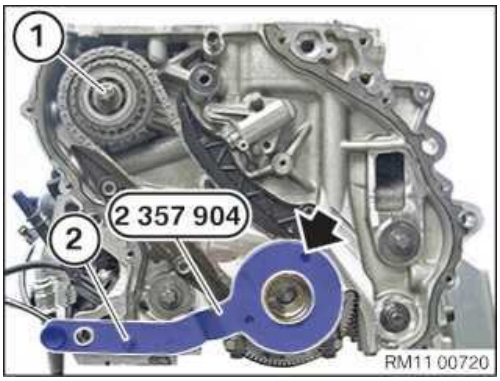
- Position the guide rail (2).
- Replace bearing journal.

  Parts: Bearing journal
- Tighten both bearing journals (1).

Bearing journal of tensioning and guide rail

M8	*Replace bearing journal.*	Tightening torque	20 Nm

- Clean sealing surfaces (1) with compressed air.



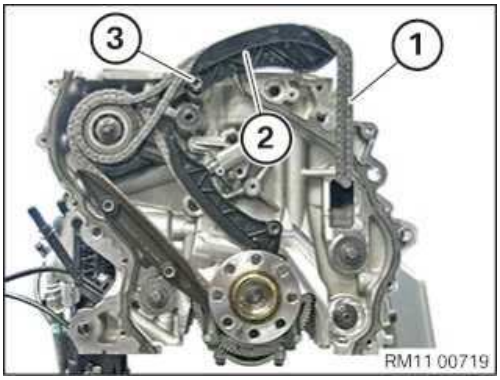
- Position hydraulic chain tensioner.
- Tighten down screws (2).

Chain tensioner to crankcase

M6x22		Tightening torque	10 Nm

- Press chain tensioner in by hand with tensioning rail (1) in direction of arrow until special tool **0 491 012 (11 4 120)** can be removed.

cardiagn.com



- To fasten central bolt (1) of high pressure pump, crankshaft must remain secured with special tool **2 357 904** and bolt (2).
- Renew central bolt (1).

  Parts: Central bolt
- Tighten central bolt (1).

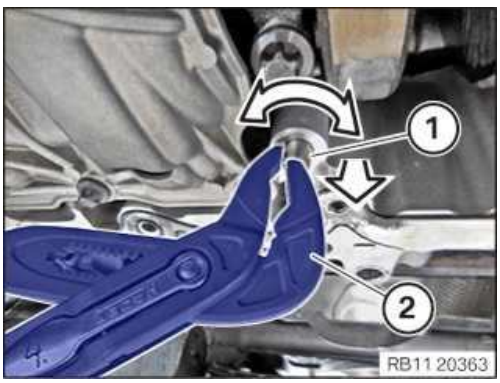
Camshaft sprocket on high pressure pump

M12		Tightening torque	65 Nm

- Position tensioning rail (2) on bearing journal (3).
- Position camshaft timing chain (1).

- Mount drive chain (1) for oil pump on crankshaft.

POSTPROCESSES

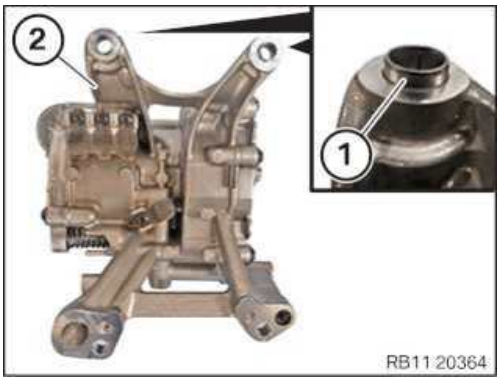


33 – Install the oil vacuum pump

RISK OF DAMAGE

Contaminant or foreign body.

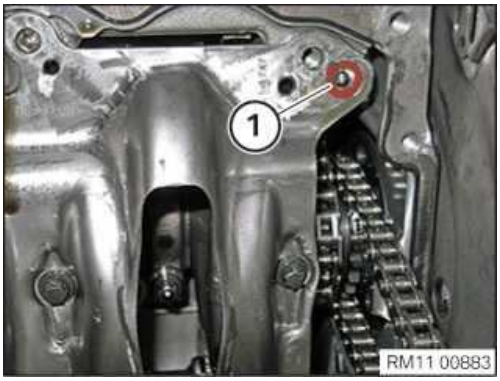
Contamination can result in malfunctions, operating failure or leaks.



- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

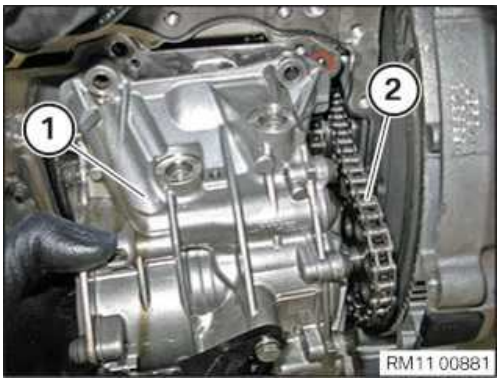
- Remove centering sleeves from the crankcase (1) using a standard tool (2).
- Renew the centring sleeves (1).

  Parts: Centring sleeves



cardiagn.com

- Install centering sleeves (1) in the oil vacuum pump (2).



- Check the sealing ring (1) for damage and renew where required.
- Make sure the sealing ring (1) is installed correctly.

- Check sealing ring (1) for damage and replace oil deflector if necessary.

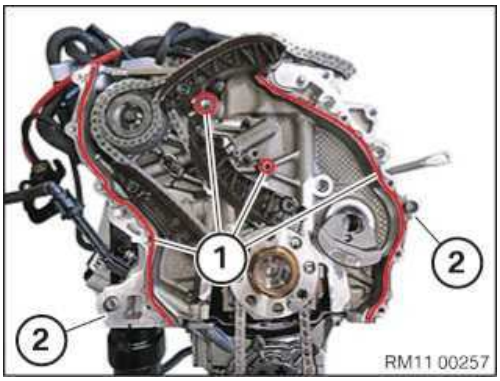
  Parts: Oil deflector

- Insert oil vacuum pump (1) into the drive chain (2).

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1) of the oil vacuum pump (2).

Oil vacuum pump to crankcaseB47



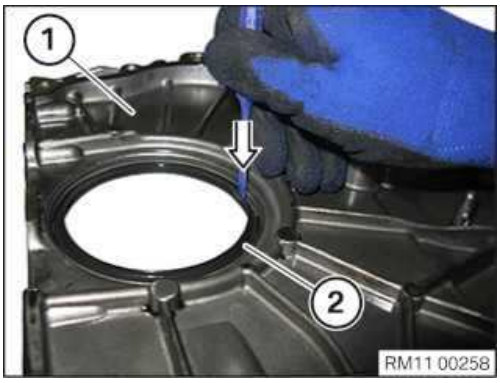
M8x35		Tightening torque	19 Nm

34 – Install the rear timing case cover

Prerequisite

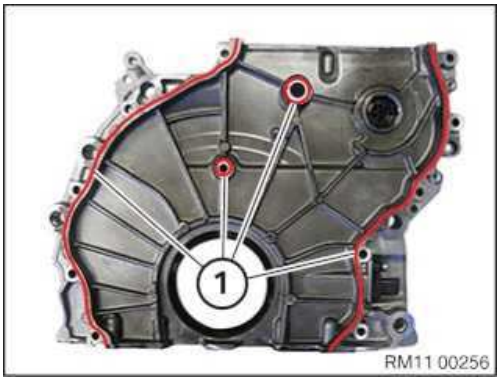
Transmission is removed.

cardiagn.com



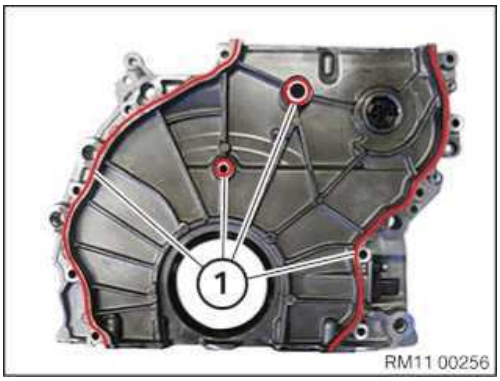
RISK OF DAMAGE

Damage to the surface.



The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

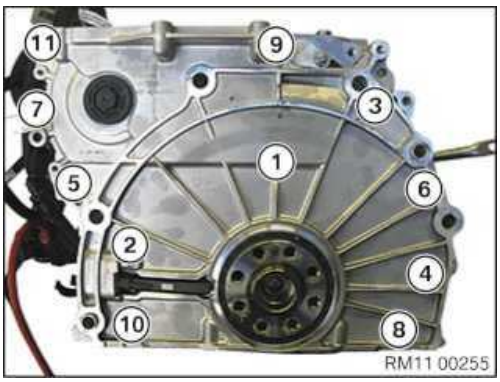
- Do not use any metal-cutting tools.



- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.
- Check fitting sleeves (2) for damage and for tight fit; renew if necessary.

- Position the timing case cover (1) underneath.
- Position punch on inner side of crankshaft seal (2).
- Drive out crankshaft seal (2) outwards.

- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.



TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Apply sealing bead (1) with a height of approx. 1.5 mm to 2.0 mm on inner side of timing case cover in marked locations. Use liquid sealing compound for this.

  Application time of sealing bead (1) must not exceed 12 minutes.

- Mount the timing case cover without the crankshaft seal.
- Renew screws (1) to (11).

  Parts: Bolts
- Join the bolts in with the sequence (1) to (11).
- Tighten screws in the order (1) to (11).

Rear timing case cover to crankcase

M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

▸ **Installing the rear crankshaft seal**

cardiagn.com

RISK OF DAMAGE

Radial shaft seal damage.

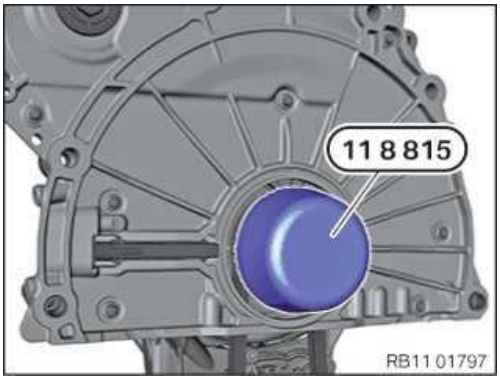
Touching the sealing lip (inner) on the radial shaft seal with the sharp-edged connector gearing of the output shaft will result in destruction and/or leaks.

- When inserting the output shaft, make sure that the connector gearing of the output shaft does not touch the sealing lip (inner) of the radial shaft seal.

RISK OF DAMAGE

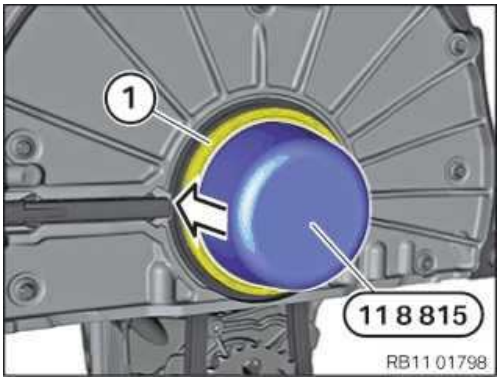
Radial shaft seal damage.

Touching the sealing lip (inner) and applying oil to the radial shaft seal will lead to its destruction.



- Do not touch the sealing lip (inner) of the radial shaft seal.
- Do not apply oil to the radial shaft seal.
- Install the radial shaft seal dry.

RISK OF DAMAGE



Electrostatic discharge.

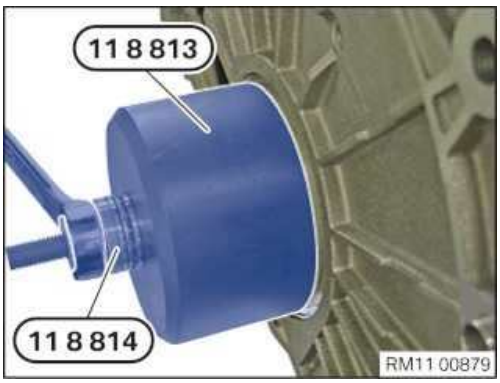
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

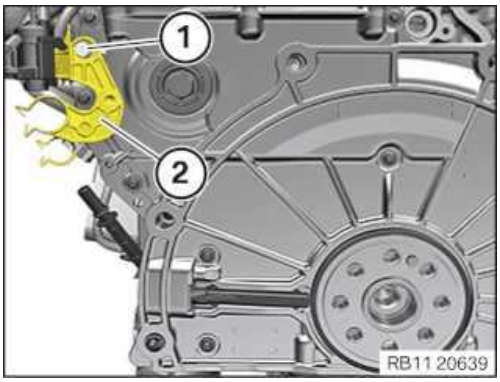
- Position special tool **0 496 137 (11 8 815)** on crankshaft. Make sure that the crankshaft sensor is not damaged.

- Fit the crankshaft seal (1) up to the timing case cover in the direction of the arrow using special tool **0 496 137 (11 8 815)** and position.
- Remove special tool **0 496 137 (11 8 815)**.

cardiagn.com

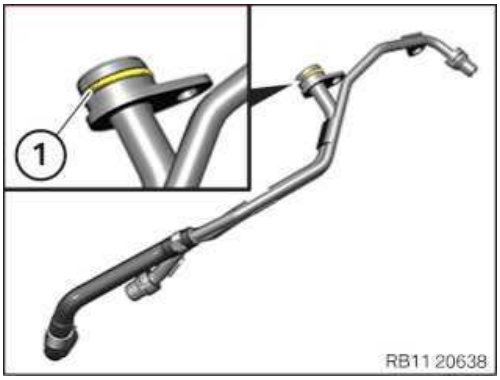


- Secure special tool **0 496 133 (11 8 811)** to the crankshaft using special tool **0 496 134 (11 8 812)**.



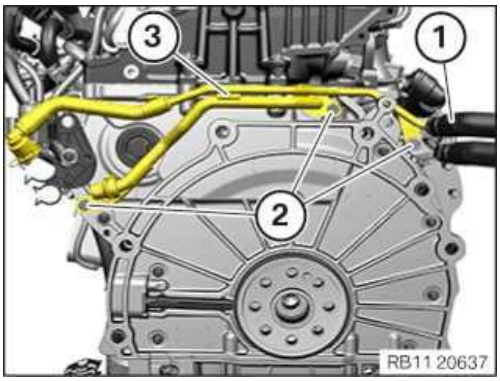
- Check the freedom of movement between the special tool **0 496 135 (11 8 813)** and the crankshaft sensor during installation.

  Otherwise there is a risk that the crankshaft sensor will be damaged.
- Slide on special tool **0 496 135 (11 8 813)**.
- Screw down special tool**0 496 136 (11 8 814)**.



- Press in crankshaft seal with special tool **0 496 135 (11 8 813)**.
- Screw in special tool **0 496 135 (11 8 813)** up to timing case cover.

- Insert and install the holder (2).



▶ **If installed: Installing the coolant line of the SCR metering module**

- Renew the O-ring 1.

  Parts: O-ring

cardiagn.com

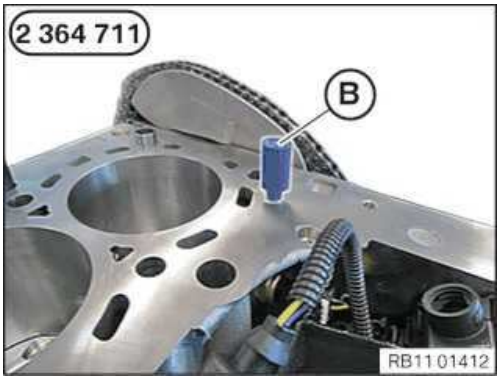
- Feed in and install coolant line (3).
- Tighten down screws (2).

SCR coolant lines to crankcase end cover

Hexagon screw M6x16		Tightening torque	8 Nm

- Connect and lock the coolant line (1).

  Coolant line (1) must audibly engage.



▸ **Cleaning the sealing surface**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

RISK OF DAMAGE

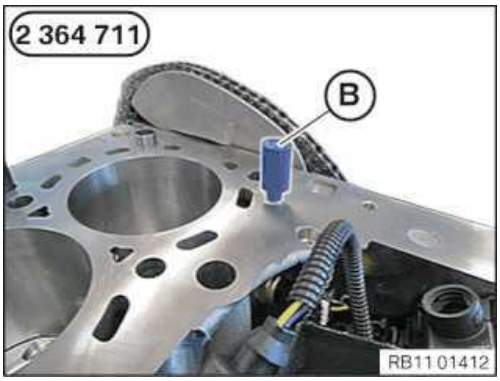
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.

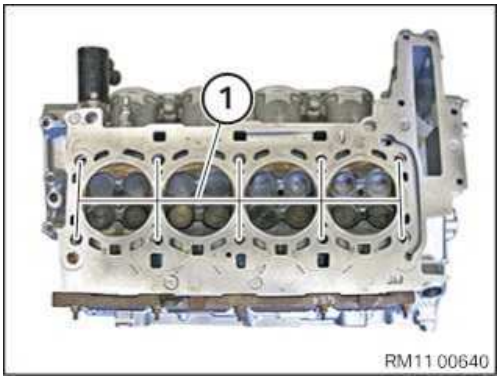
RISK OF DAMAGE



Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

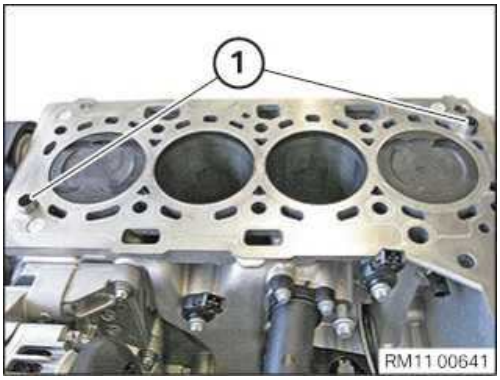


- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.

cardiagn.com

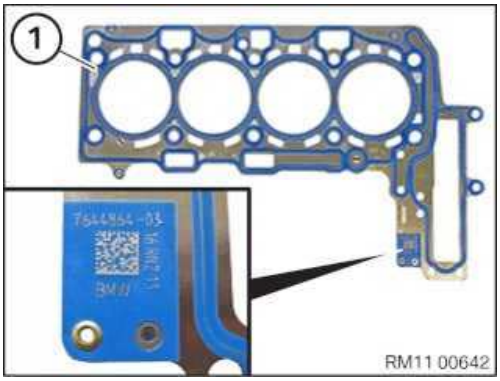
- Remove special tool (B).

▶ **Renewing the cylinder head gasket**



RISK OF DAMAGE

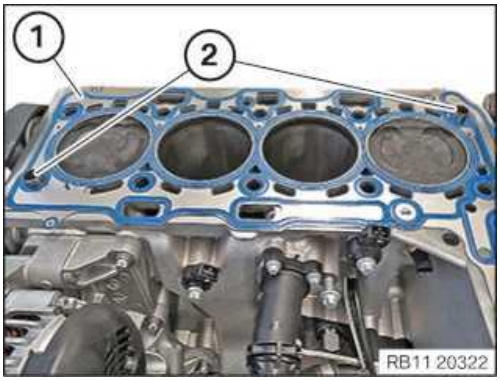
Damage to the surface.



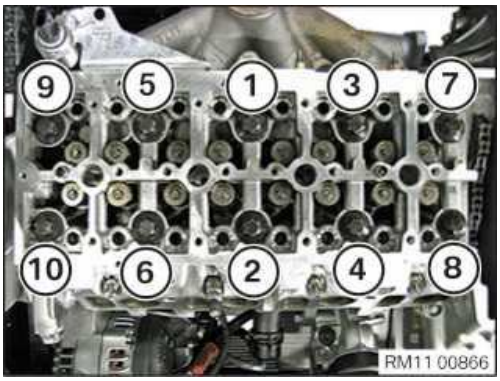
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).



- Check the fitting sleeves (1) for secure fit and damage.



- Identify the cylinder head gasket (1) using the part number.

Note: If the cylinder head is reworked, an additional thicker gasket 0.3 mm is available for service personnel.

- Guide in the cylinder head gasket (1) and install.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Damage to threads.

Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION

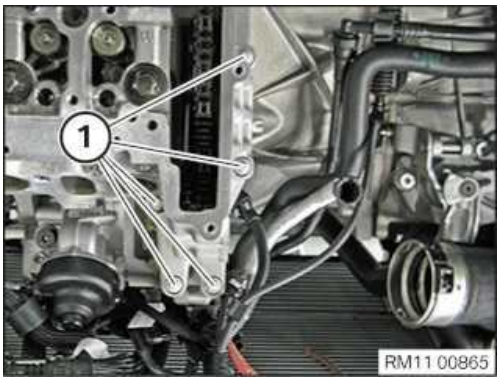
Do not remove bolt coating.

- Renew the cylinder head bolts (1).

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  No coolant, water or engine oil must be present in threaded holes of engine block.

TECHNICAL INFORMATION



When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in cylinder head bolts in sequence (1) to (10).
- Tighten cylinder head bolts using special tools **0 490 504 (00 9 120)** and in sequence (1) to (10).

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

cardiagn.com

- Tighten the cylinder head bolts (1).

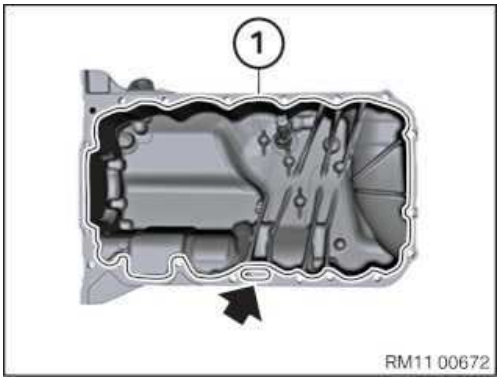
Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

-

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Remove fine sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

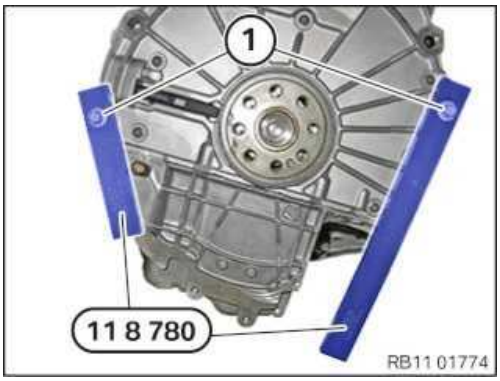
- Remove coarse sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- Apply the sealing compound along the line (1) with a thickness of 2 mm to 2.5 mm.

  Apply the sealing compound along the inner edge.

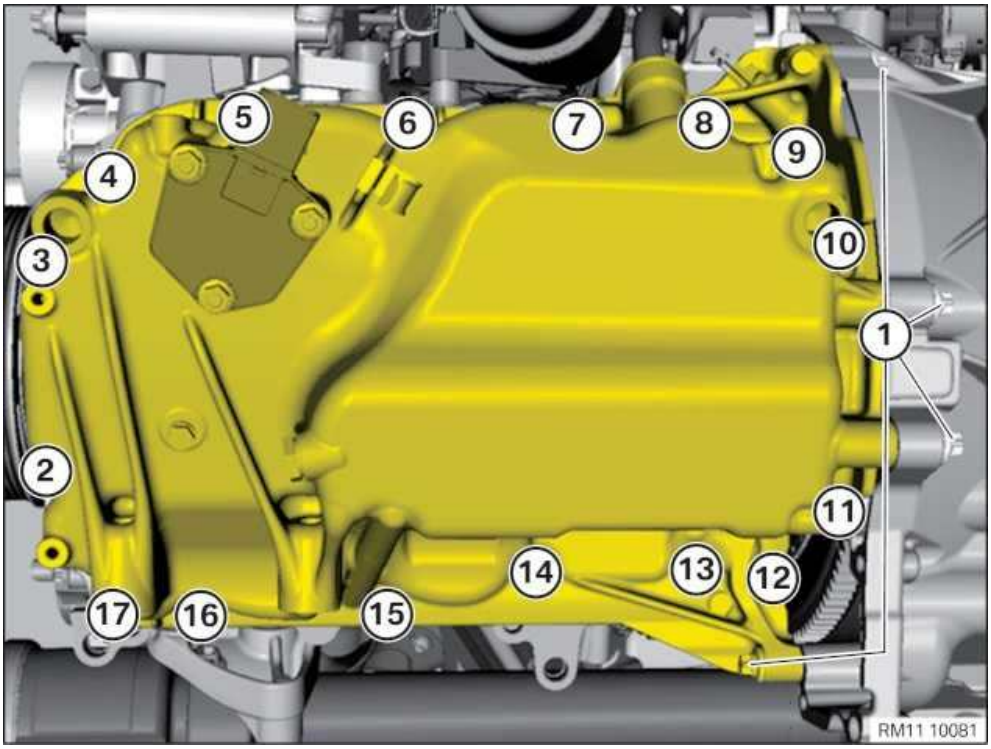


Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

- Completely encircle the oil return orifice (arrow) with the sealing compound.



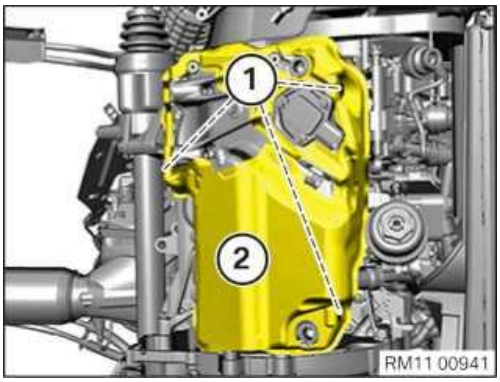
cardiagn.com

TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- If necessary, renew fitting sleeves.

- Position and install oil sump.
- **Hand-tighten** oil sump screws (2) to (17) but do **not** tighten completely.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws(2) to (17) of the oil sump.



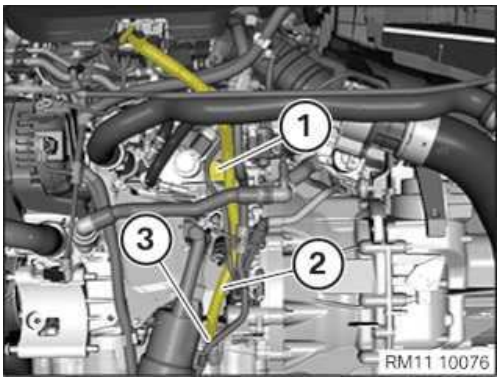
Oil sump to crankcase

M8x30		Tightening torque	2 Nr
M8x110		Tightening torque	2 Nr

- Tighten transmission bolts (1) on oil sump.

Transmission to oil sump

M8		Tightening torque	1 Nr



- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).

- Renew O-ring (1).

  Parts: O-ring

cardiagn.com

- Guide in guide tube (2) for oil dipstick and insert it into oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

Guide tube for oil dipstick on engine

M8x16		Tightening torque	19 Nm

35 – Installing the flywheel

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

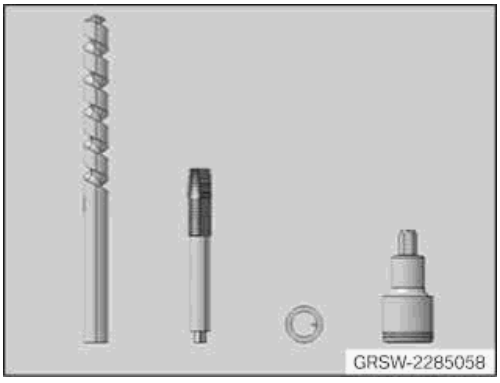
- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



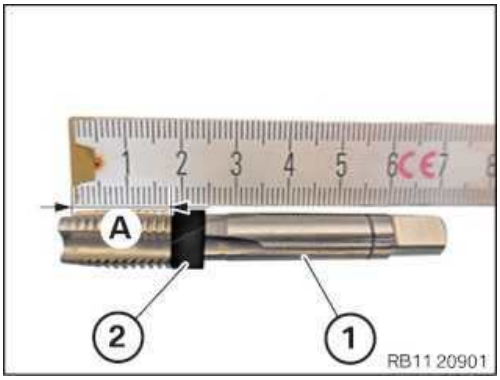
- Check fitting sleeve on the crankshaft for damage and replace if necessary.

TECHNICAL INFORMATION

Clean all threads with a screw tap.

- Clean all the screw threads (1).

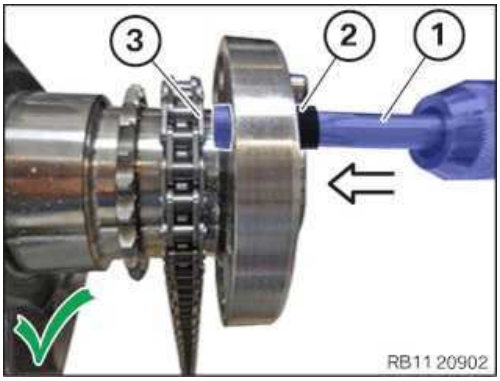
- Use the set of special tools **2 285 058**.



Description
Twist drill
Thread cutter M12x1.5
Depth
Insertion tool

cardiagn.com

- Assemble tool set.



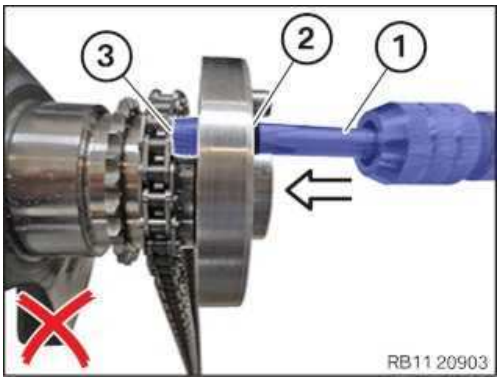
Number	Description
1	Tool holder
2	Thread cutter M12X1,5

- Mark the installation dimension (A) on thread cutter (1) from the set of special tools **2 285 058** using a commonly-available tool (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm

NOTICE



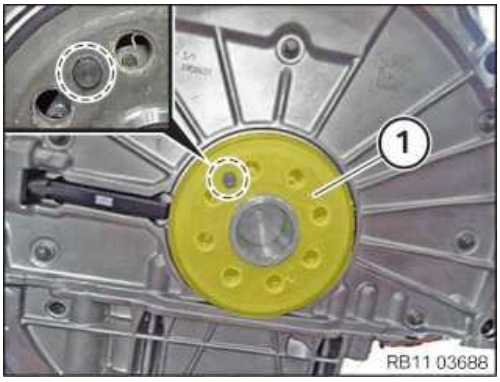
To provide a better overview: Shown with engine removed.

- Screw in the thread cutter (1) from the set of special tools **2 285 058** in direction of arrow up to the installation dimension (2).

Screw-in depth of thread cutter

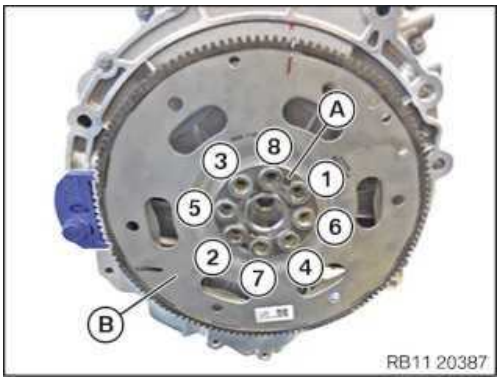
Screw-in depth	18 mm

- Make sure that the thread cutter does (1) **not** rest on the timing chain (3).



TECHNICAL INFORMATION

- **Carefully** handle the timing chain, to protect the timing chain and timing chain drive against damage.

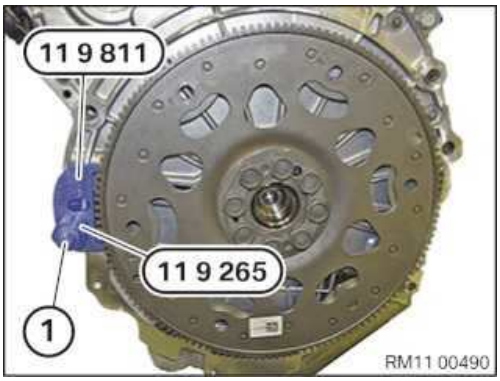


- Make sure the installation dimension (2) of the screw bore (1) is not exceeded.

  The thread cutter (1) may not rest on the timing chain (3).

- Important! Observe the marking shown during installation.
- Install special tool (1) on the crankshaft as shown.

cardiagn.com



- Position flywheel (B) .
- Renew flywheel bolts (1) to (8).

  Parts: Flywheel bolts
- Screw in flywheel bolt (1) to (8) by hand.
- Observe tightening sequence. Begin at the dowel pin (A).
- Tighten flywheel bolts in sequence (1) to (8).

Flywheel to crankshaft

M12x1.5	Renew screws.	Tightening torque	120 Nm

- Loosen the transmission bolt (1).
- Guide out and remove the special tool **0 494 793 (11 9 265)** and **0 496 171 (11 9 811)** with the **standard** washer (5 mm).

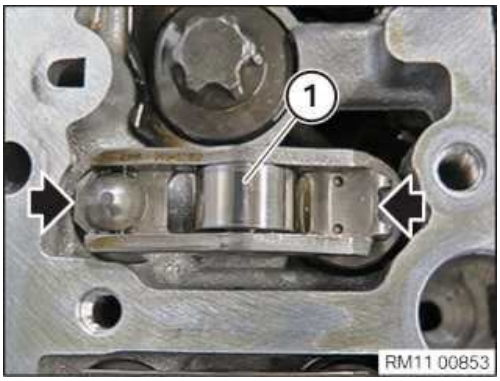
36 – Installing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



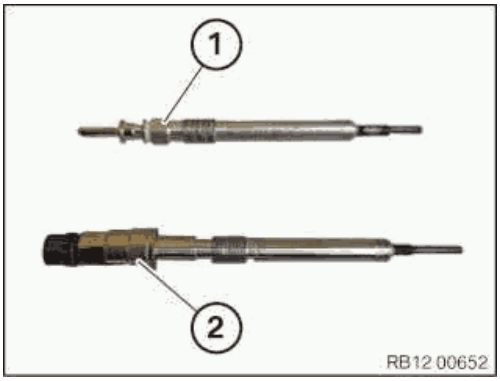
- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

37 – Install the roller cam followers

TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.

cardiagn.com

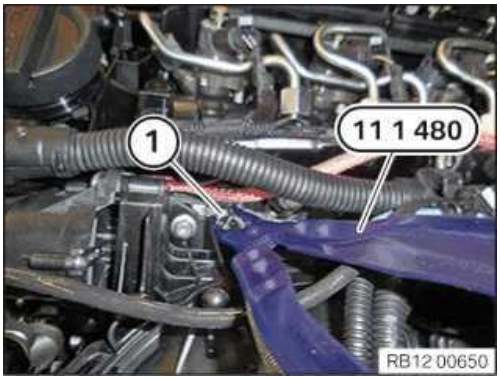


- Check all roller cam followers (1) for damage and replace if necessary.

  Parts: Roller cam followers
- Insert and install all roller cam followers (1).

  Roller cam followers (1) that have already been used must be installed in the same place.
- Note the mounting orientation of the roller cam followers (1).
- Oil all roller cam followers (1).

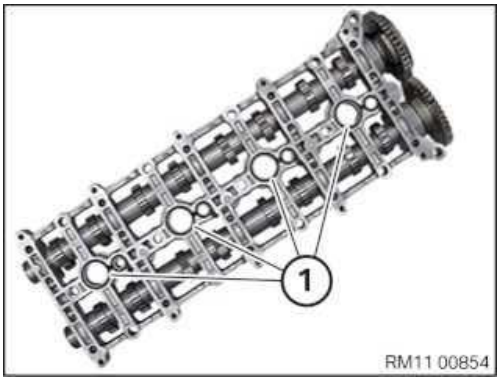
38 – Install glow elements



- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

- Tighten the glow element with the special tool or conventional tools.

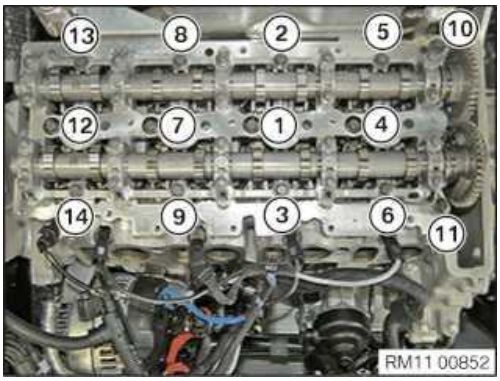
Glow elements to cylinder head



Glow element		Tightening torque	13 Nm

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



39 – Installing the camshaft support

- Renew gaskets (1).

  Parts: gaskets

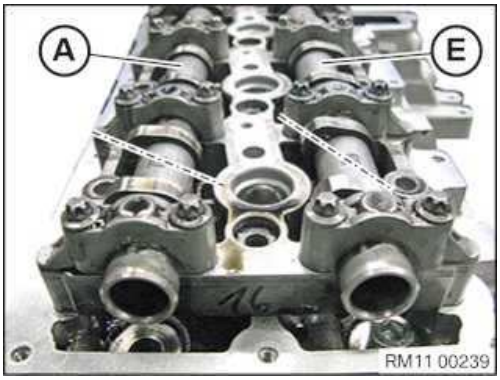
cardiagn.com

- Position the camshaft support including the camshafts.
- Tighten the screws in a sequence from (1) to (14) in several steps.

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

40 – Adjusting the timing of the camshafts



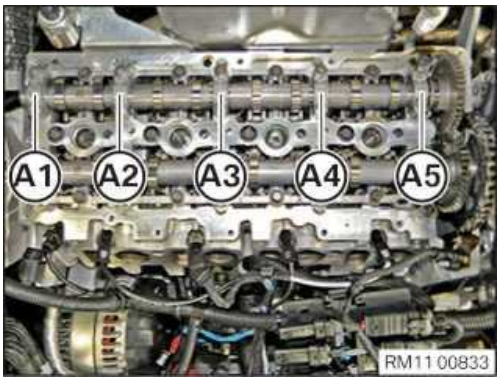
- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

- Slide the special tool **2 288 380** completely into the bore hole of the oil sump.
- Use the special tool to block **2 288 380** the crankshaft in the TDC firing position at the first cylinder.

- The cam of the intake camshaft (E) at the first cylinder points up at an angle.
- The cam of the exhaust camshaft (A) at the first cylinder points outward at an angle.

▶ **Remove exhaust camshaft.**



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

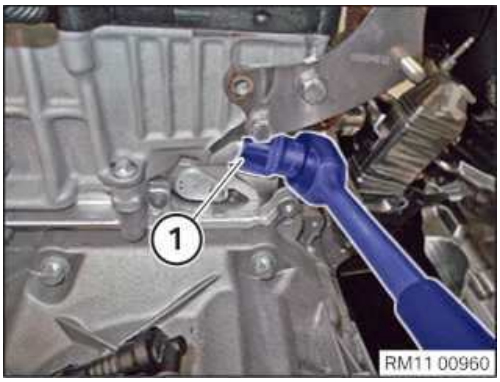
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

TECHNICAL INFORMATION

The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A5) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components on special tool **0 495 105 (11 4 480)** in a tidy and orderly fashion.



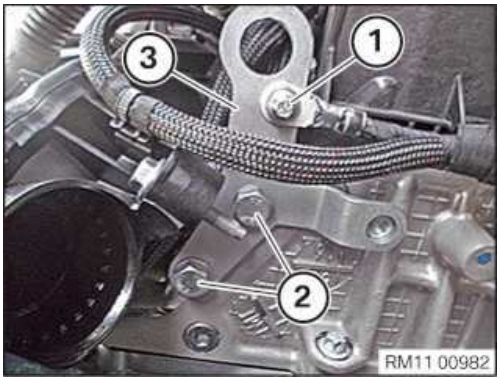
▸ **Remove chain tensioner piston**

WARNING

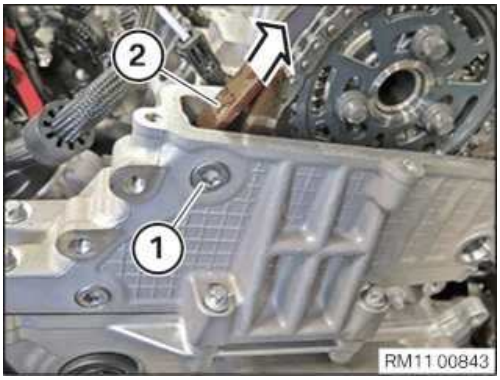
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



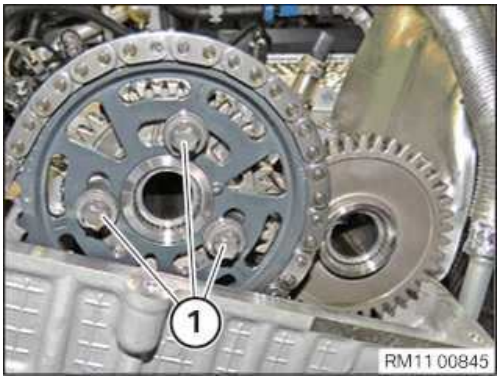
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

▸ **Remove the timing chain guide rail**



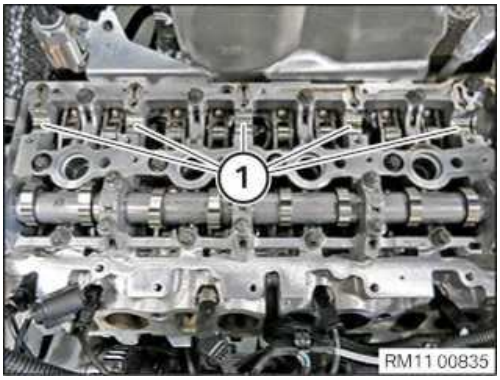
- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

cardiagn.com

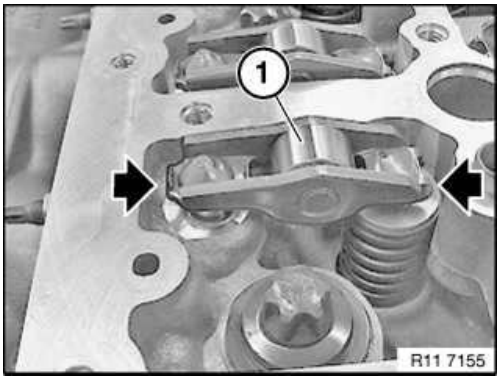
▶ **Removing the camshaft sprocket on the intake camshaft**

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.



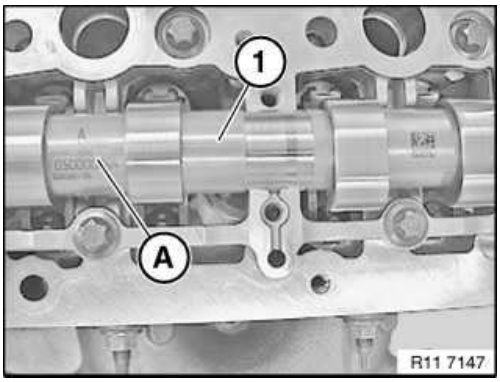
▶ **Install exhaust camshaft**

RISK OF DAMAGE



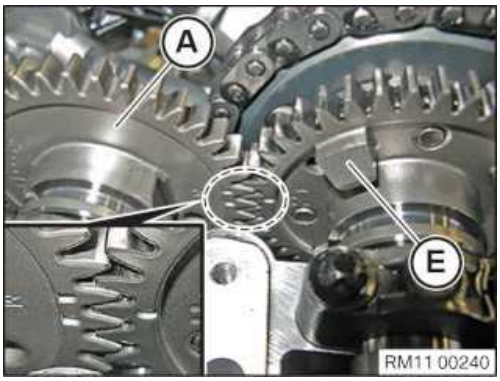
Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

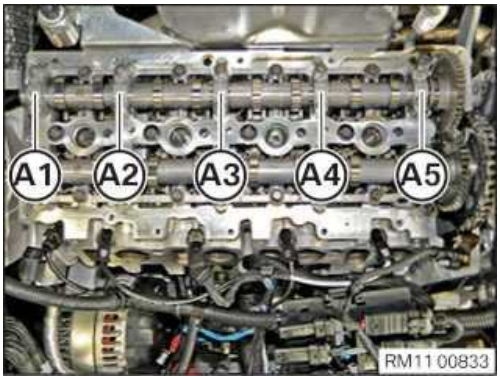


- Comply with the regulations for the installation and disassembly.
- Perform work with care.

- Oil all bearing positions (1).



- Make sure the roller cam followers (1) have the correct mounting orientation.



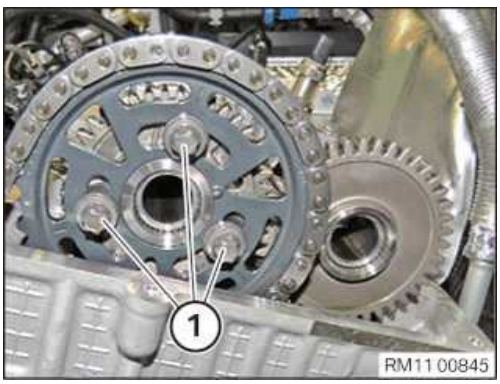
- Insert exhaust camshaft (1) so that the identification (A) points upwards.

cardiagn.com

- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.

- Tighten all exhaust camshaft bearing caps (A1) to (A5) from the inside to the outside by 1/2 a turn at a time.

Intake and exhaust camshaft in camshaft support



M6x31		Tightening torque	10 Nm

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

  Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

▶ **Installing the camshaft sprocket on the intake camshaft**

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

▶ **Install the timing chain guide rail**

- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

cardiagn.com

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

▸ **Installing the chain tensioner piston**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

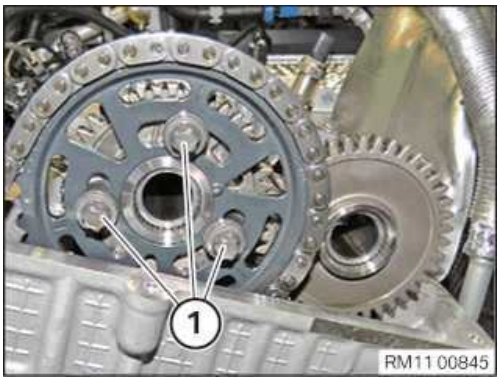
- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.



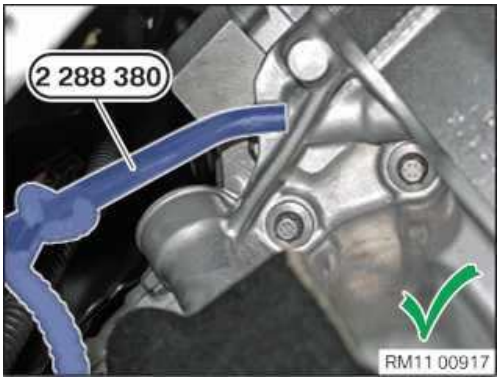
- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

▸ **Tightening the camshaft sprocket on the intake camshaft**

cardiagn.com



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

41 – Removing the special tool to disconnect the crankshaft

- Remove special tool **2 288 380**.

42 – Removing the special tool to secure the exhaust camshaft

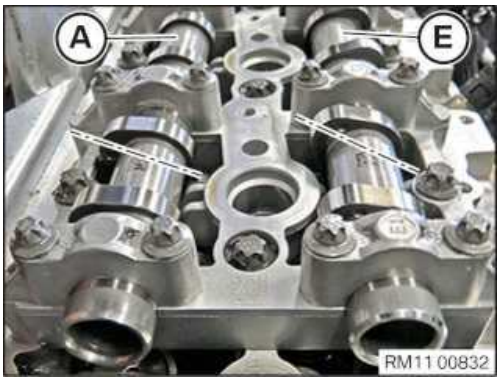
- Remove the special tool **0 496 112 (11 8 760)** to fix the exhaust camshaft.

43 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

cardiagn.com

RISK OF DAMAGE



Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

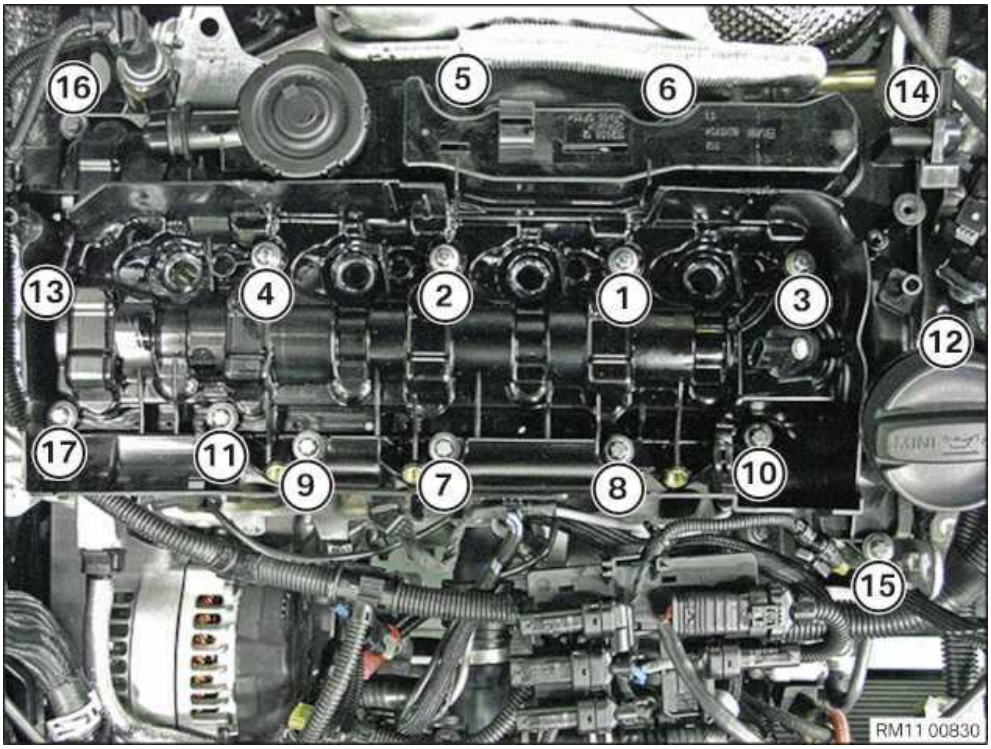
- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

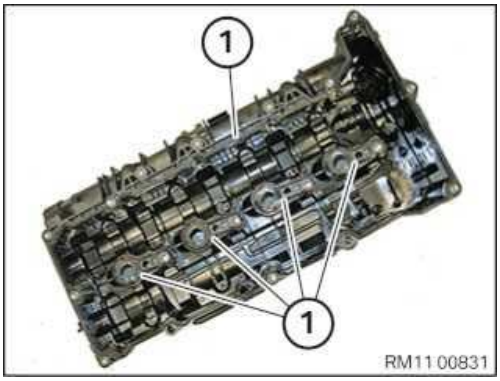
If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.



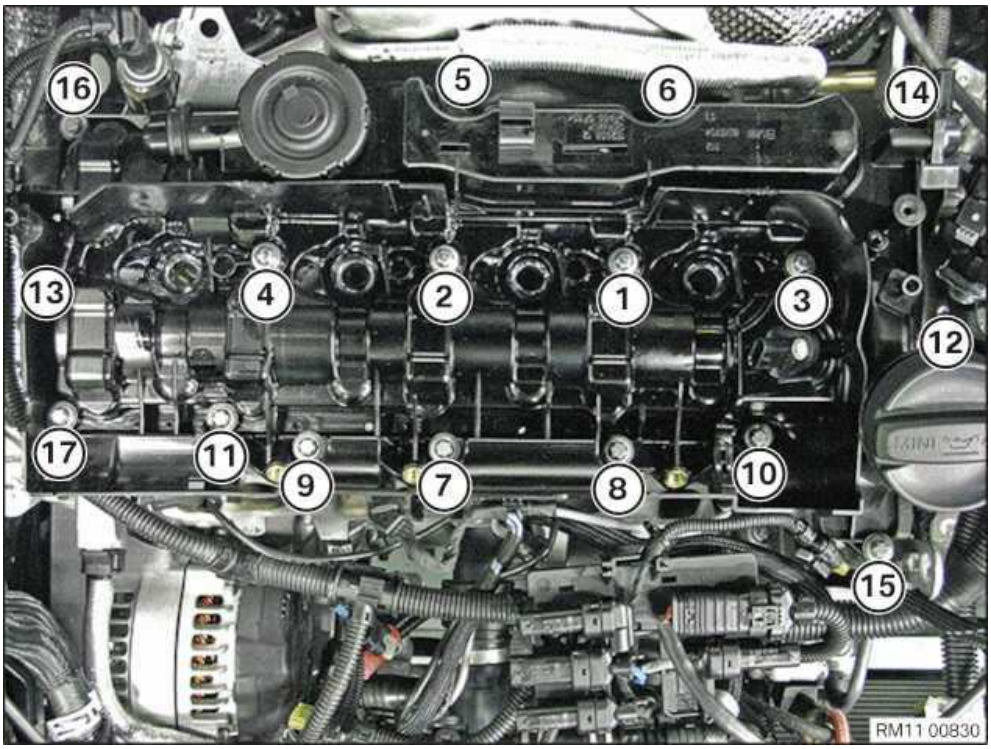
cardiagn.com



- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

44 – Installing cylinder head cover

Overview: Screw connection of the cylinder head cover

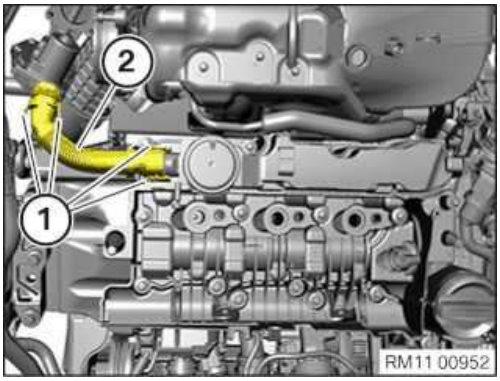


1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket

cardiagn.com



- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

45 – Installing injectors of injection system

▶ Cleaning the injector shafts

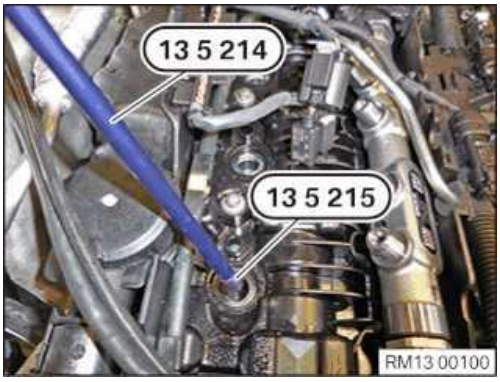
CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

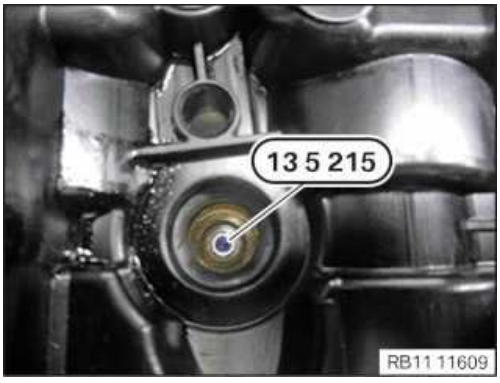
- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.



cardiagn.com

RISK OF DAMAGE



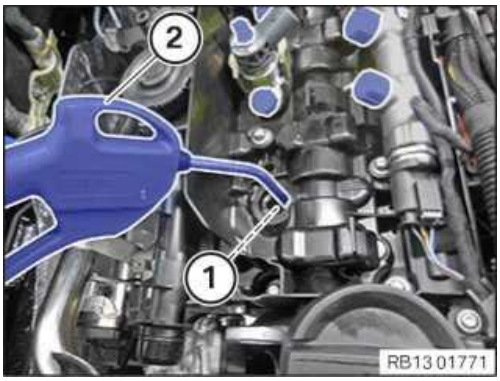
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

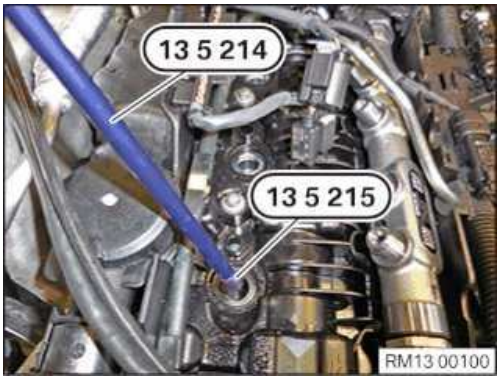
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.



- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

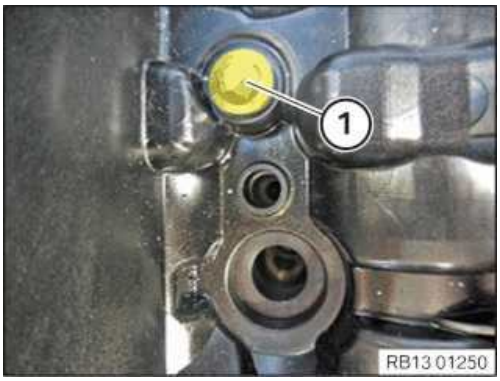


- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

cardiagn.com

- Blow out injector shaft (1) with air gun (2).

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.



▸ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▸ **Prepare the injector for installation**

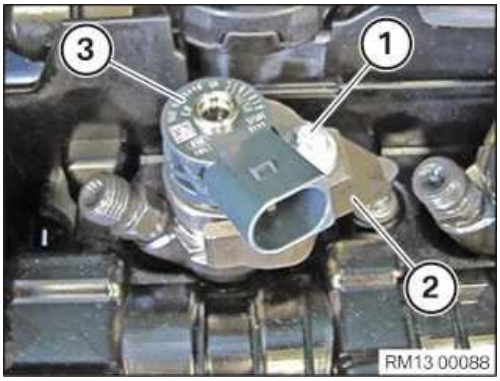
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

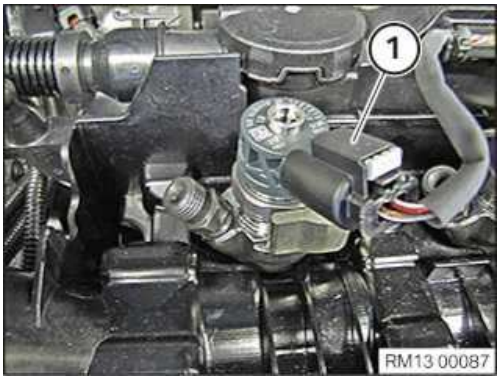
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials



Injector lubricating grease	50 g, Can	83230441070

- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

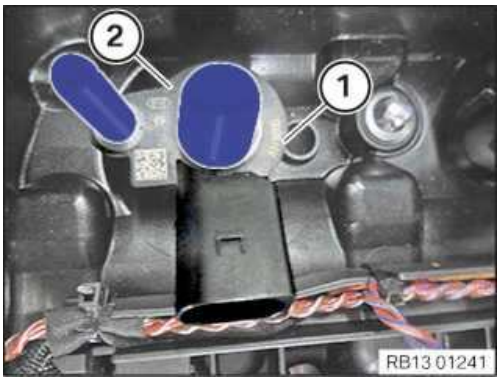
Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

▸ **Replacement: Perform injection quantity compensation**



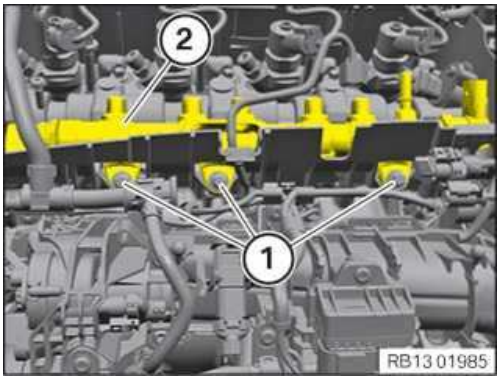
TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

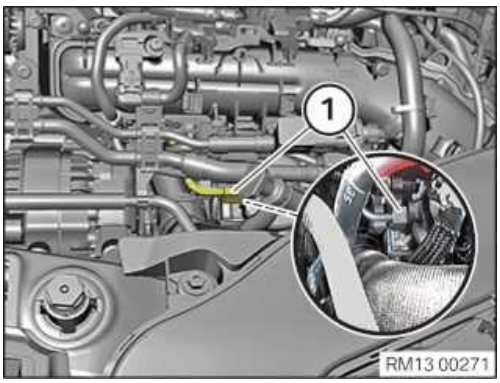
Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.



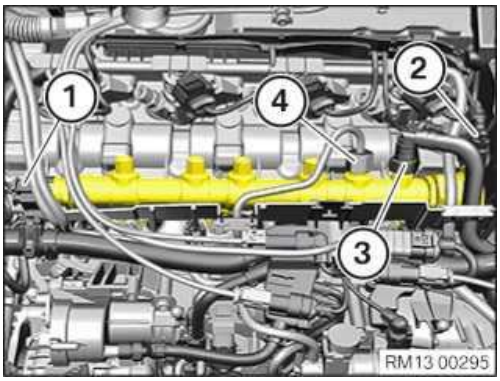
46 – Installing the rail

- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm

TECHNICAL INFORMATION



Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

cardiagn.com

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

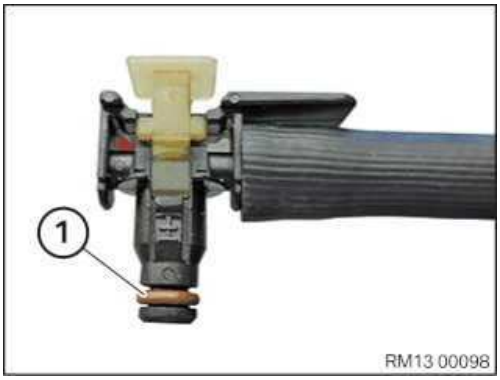
TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool .

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm



- Connect and lock the fuel line (3).

  Fuel line (3) must engage audibly.
- Connect connectors (2) and lock.

  The connector (2) must engage audibly.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

47 – Connect the leakage oil line on the injector

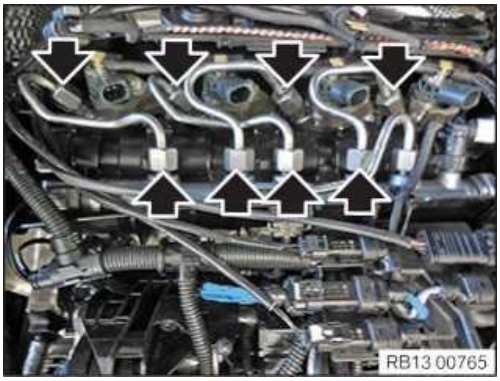
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

48 – Installing high pressure lines between rail and injectors



TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

cardiagn.com

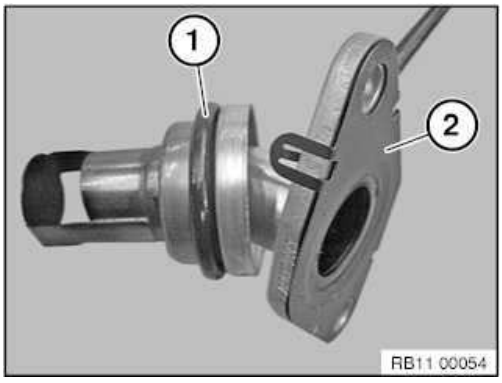
TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

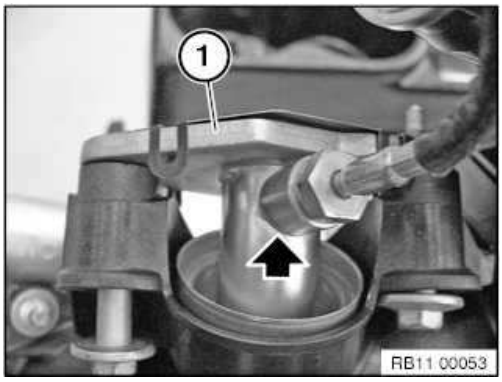


- Tighten the high pressure lines (arrows) with the special tool .

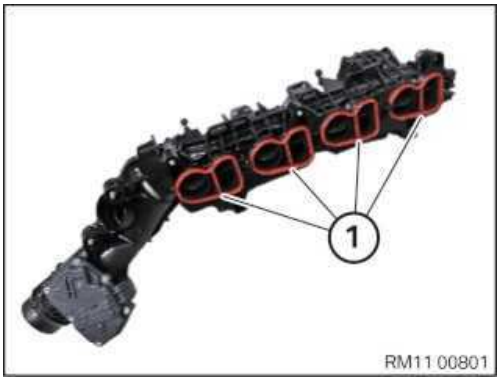
High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).



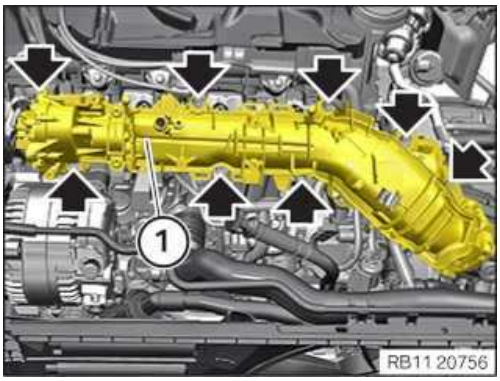
49 – Installing the intake plenum



- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

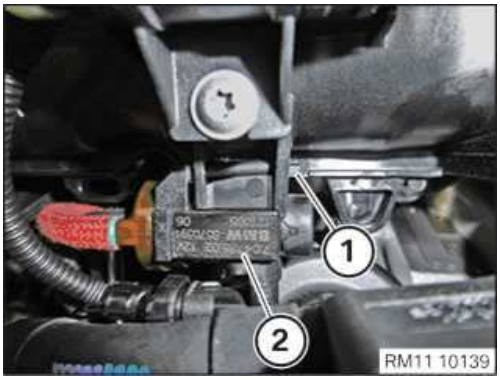
  Parts: Gasket
- Position the seal (2) and clip it in.



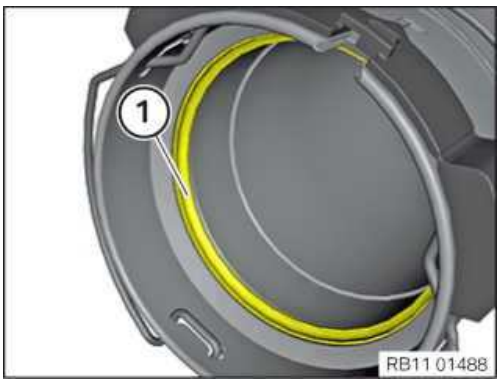
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



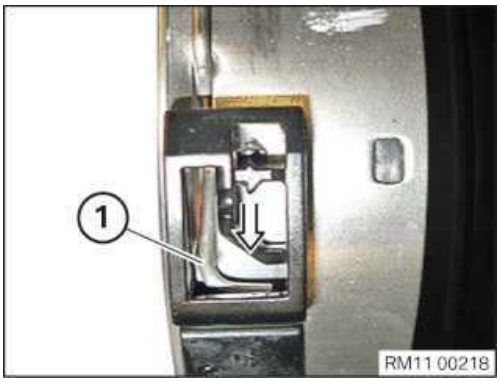
cardiagn.com



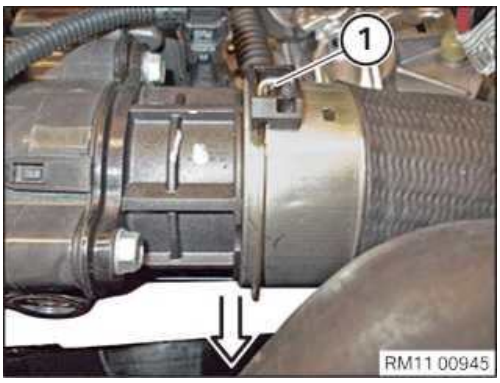
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

- Engage the lock (1) on the bracket (arrow).

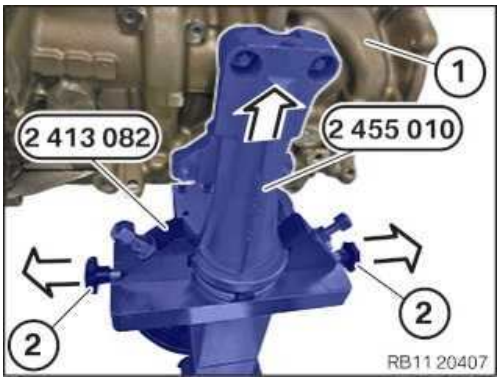
- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

50 – Remove the engine from the assembly stand

cardiagn.com

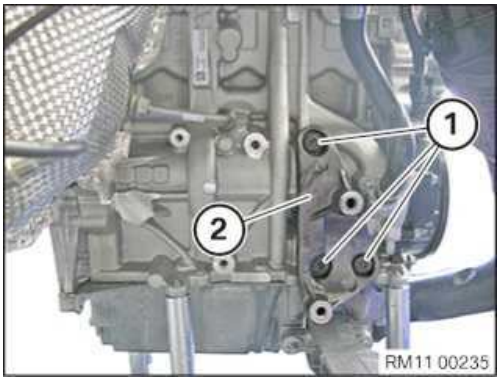
CAUTION



Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



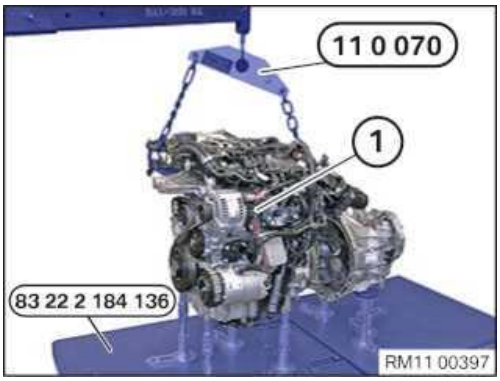
- Insert engine lifter with special tool and position engine (1).

- Unscrew the nuts on special tool .
- Detach the holder (2) in the direction of the arrow.
- Detach the engine (1) with special tool **2 455 010** out of the special tool in the direction of arrow.

- Remove conventional screws (arrows).
- Feed out the special tool **2 455 010** on the engine (1) and remove.

- Insert and install the holder (2).
- Tighten the screws (1).

Holder to crankcase



M10		Tightening torque	38 Nm

51 – Mount engine on the automatic transmission

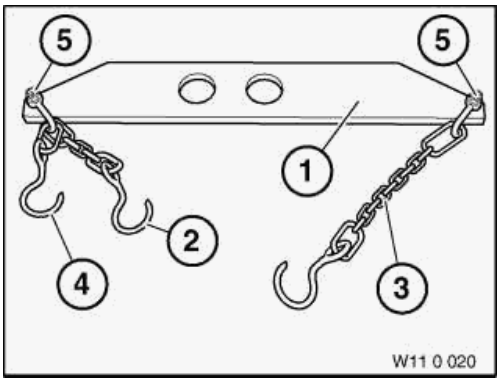
Prerequisite

Engine has been removed.

cardiagn.com

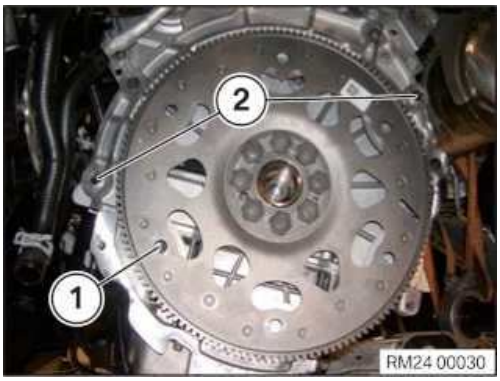
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Position the engine (1) on the lifting table **2 184 136** using the engine lifter and the special tool .
- Feed out engine lifter from engine (1) with special tool and push aside.

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.



- Stage the workshop crane **2 220 718**.

- Stage the lifting gear .

cardiagn.com

- The bore hole (1) of the flywheel must be accessible from the recess on the oil sump.
- Check for correct fit of fitting sleeves(2).

TECHNICAL INFORMATION

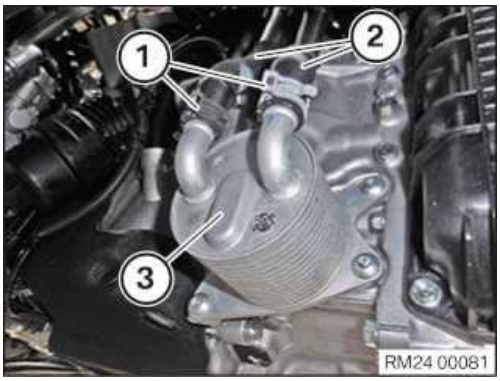
Conduct the following operation with the assistance of a second person.

- Twist torque converter until bore hole in torque converter is flush with bore hole of flywheel.
- Flange-mount and screw automatic transmission on the engine with an auxiliary person and the workshop crane **2 220 718** with the lifting gear .
- Tighten screws (arrows).

Transmission to engine

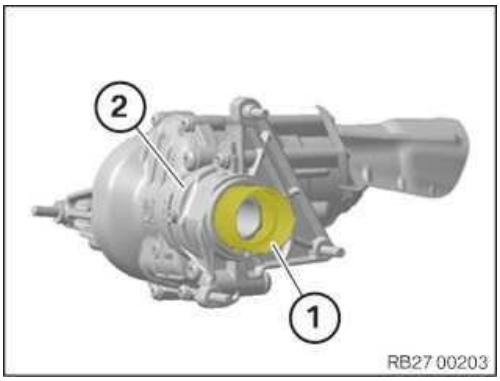
M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

- Feed out workshop crane **2 220 718** with the lifting gear from the automatic transmission and push it aside.



- Crank engine with special tool **0 493 380 (11 6 480)** at vibration damper in direction of rotation.
- Renew nuts (1).

  Parts: Nuts
- Tighten all 6 nuts (1) of the torque converter.



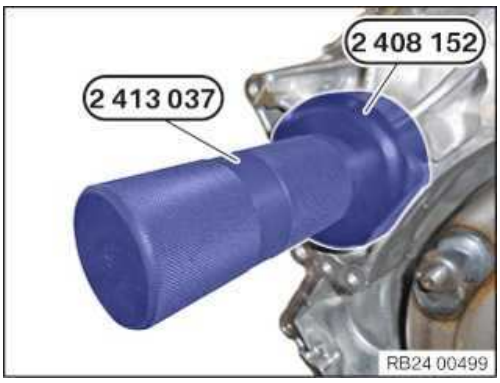
Torque converter to flywheel

M10	Replace nuts. Remove any adhesive residue from the threads.	Tightening torque	56 Nm

- Slide coolant hoses (1) onto transmission oil cooler (3).
- Secure hose clamps (1).

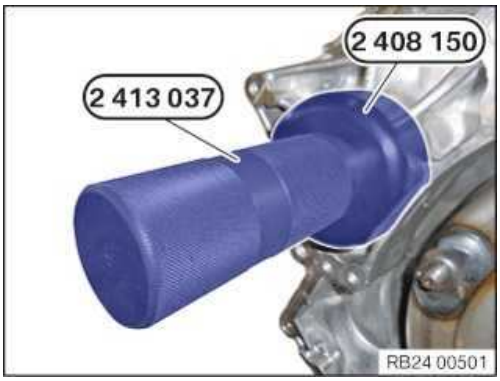
cardiagn.com

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

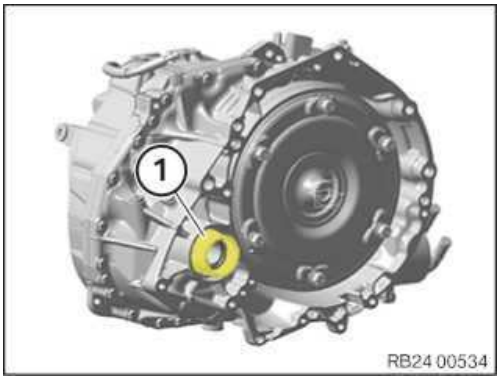


- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.

- Insert special tool **2 411 739** into the inner radial shaft seal.



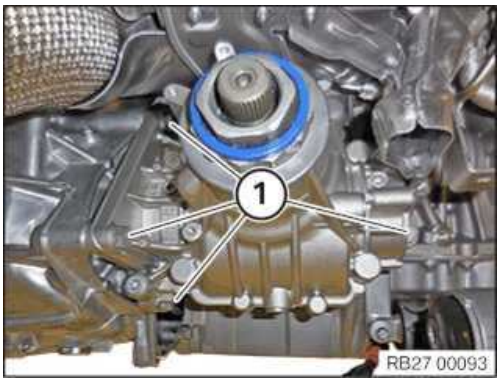
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

cardiagn.com

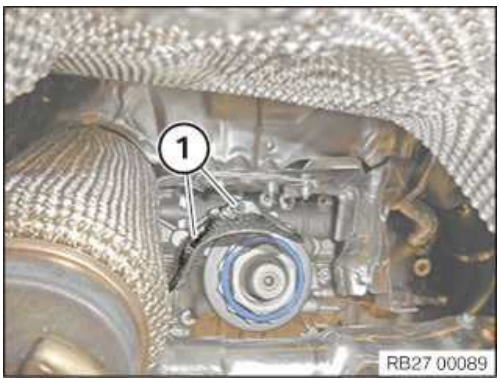
- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.



- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials



Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

cardiagn.com

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

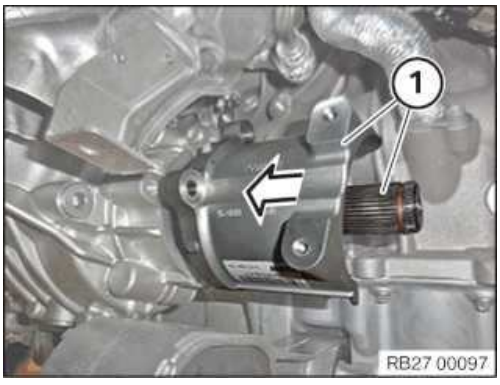
Technically suitable transfer box and electrical transmission oils	

Main group 27

- Tighten the oil filler plug (1).

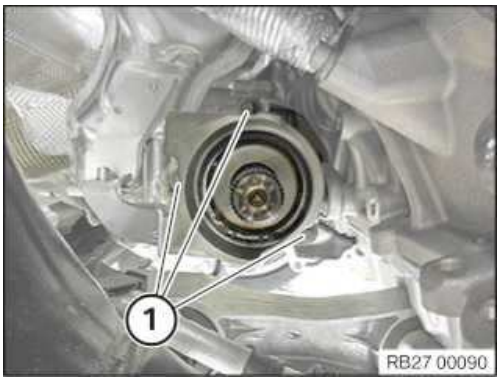
Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm



53 – Install the intermediate shaft with the support tube

- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

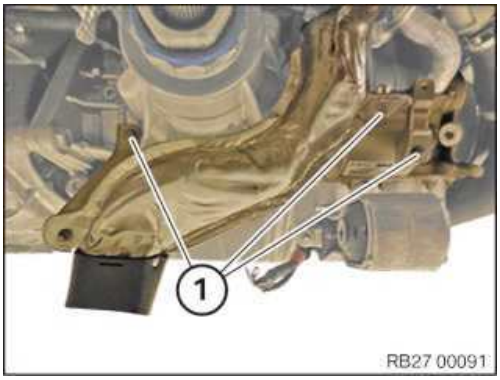


Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

cardiagn.com



- Position screws (1).

Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

- If installed: Install air duct.
- Tighten the screws (1).

54 – Installing the high-pressure stage exhaust turbocharger

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

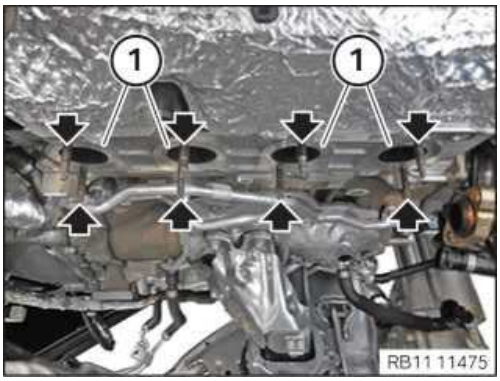
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Damage to the surface.

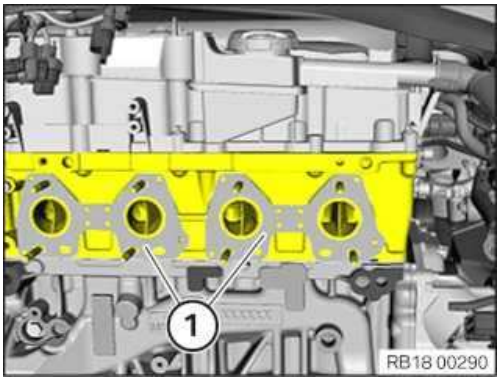


The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

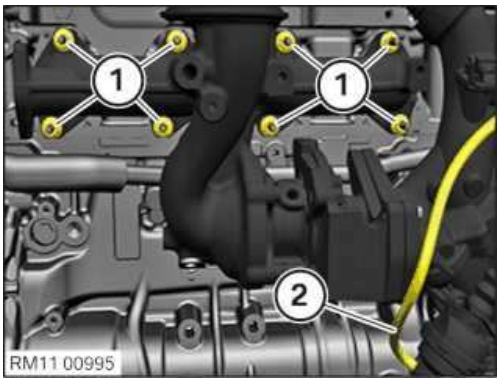
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

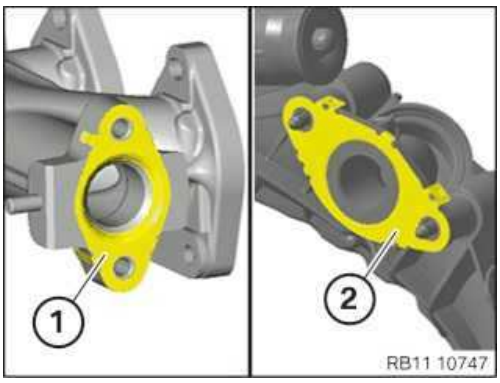


cardiagn.com

- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.



- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.

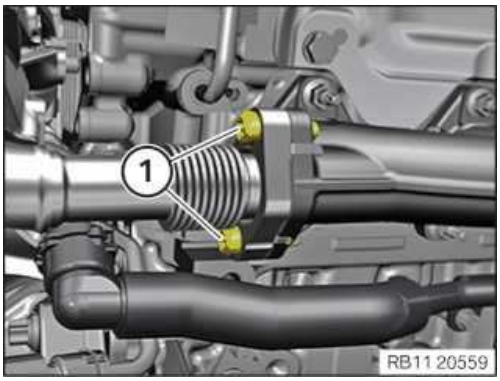


- Renew gasket (1).

  Parts: Gasket
- Install new gasket (1).

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

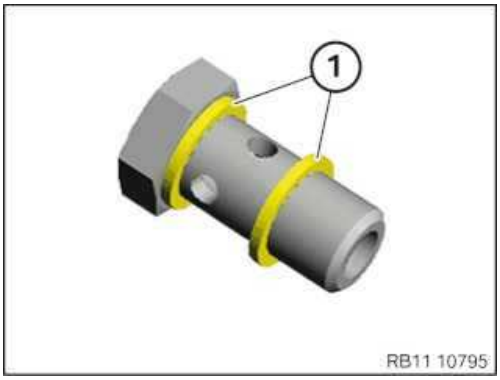
  Parts: Nuts
- Connect vacuum hose(2).



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

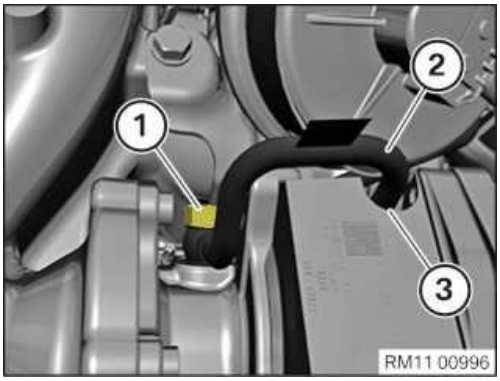
  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket



cardiagn.com

- Tighten the screws (1).



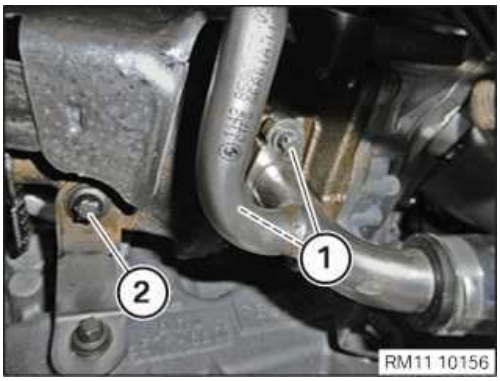
Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring

- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).



- Tighten bolt (1) from the right wheel arch.

- Renew seal (1) of oil return line.

  Parts: Gasket

cardiagn.com

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

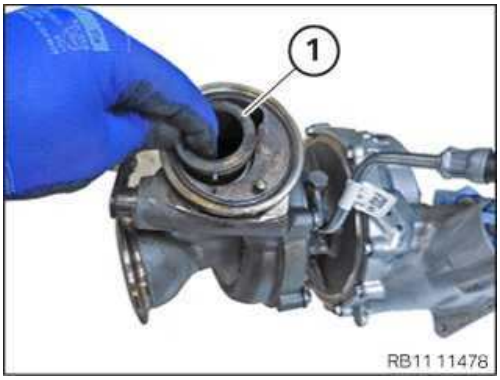
- Tighten down screw (2).

Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

55 – Installing the low-pressure stage turbocharger

RISK OF DAMAGE



Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

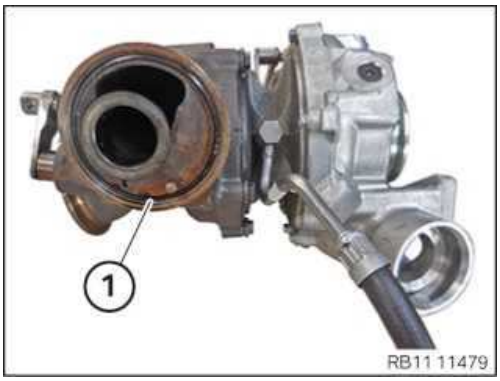
- Do not use any metal-cutting tools.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.



- Renew gasket (1).

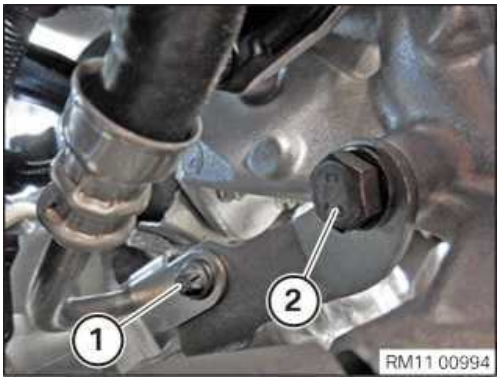
  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

cardiagn.com

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



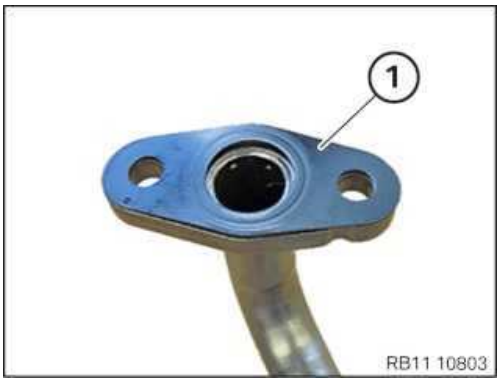
- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

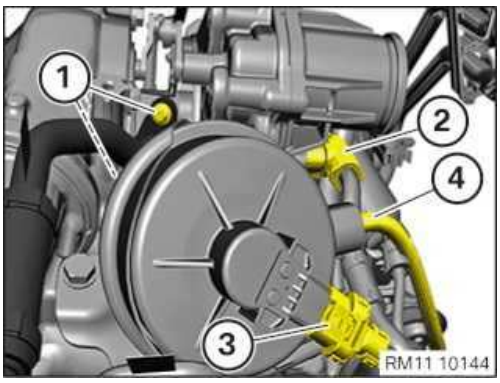
- Tighten down screw (1).



Oil feed line to bracket

Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).



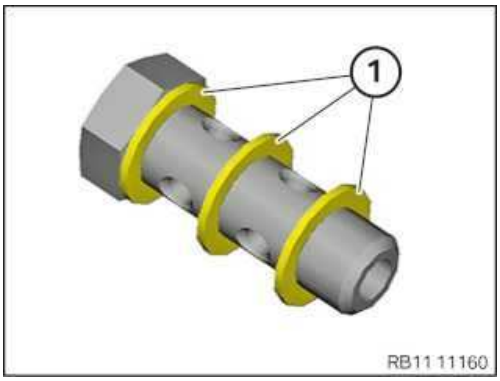
Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

- Renew seal (1) on the oil return line.

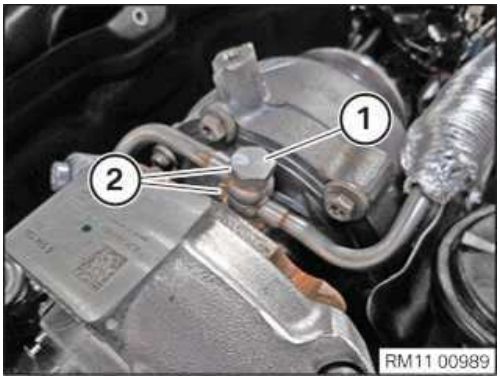
  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).



Oil return line to turbocharger

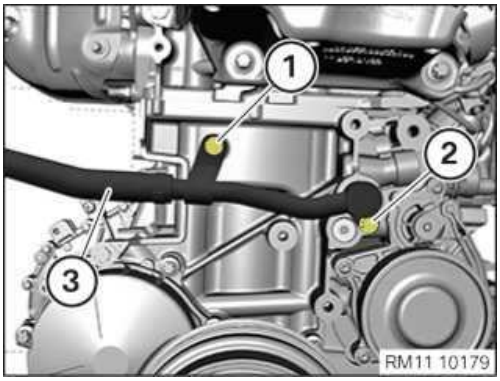
M6x12		Tightening torque	8 Nm



- Connect and lock connectors (2) and (3).

  The locks must engage audibly.
- Connect vacuum hose (4).

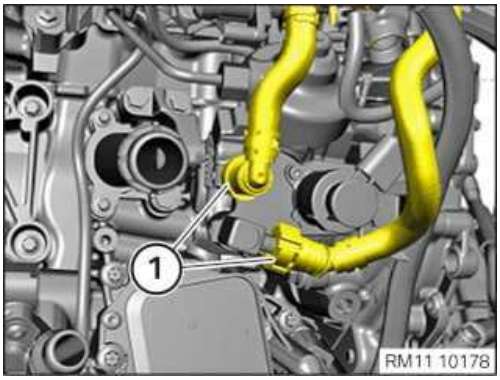
cardiagn.com



- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.

56 – Attaching assemblies (on lifting table)



- Renew sealing ring of the coolant line (3).

  Parts: Sealing ring
- Coat the sealing ring and install the coolant line (3) .
- Tighten down screws (1) and (2).

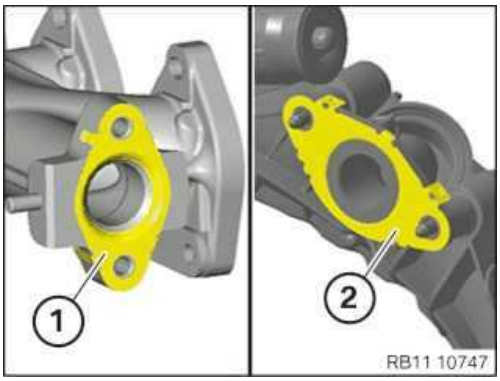
Standard screw connection M6

M6		8 Nm

- Connect and lock fuel lines (1).

  The fuel lines (1) must audibly engage.

▸ **Installing the exhaust-gas recirculation cooler**



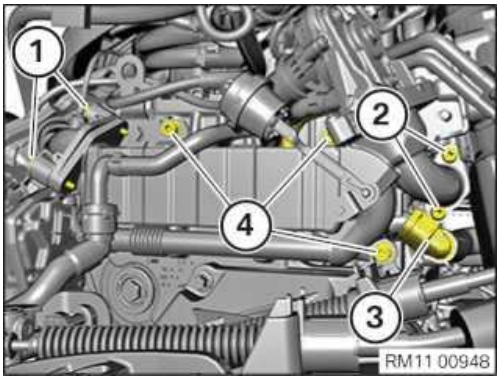
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts

- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.

- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

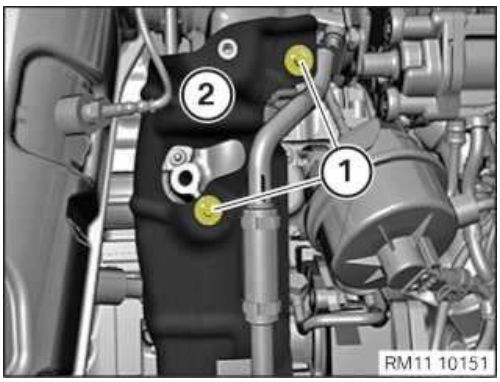
cardiagn.com

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

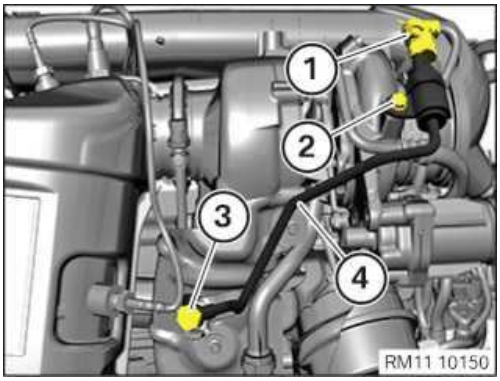


▶ **Installing heat shield on exhaust turbocharger at bottom**

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

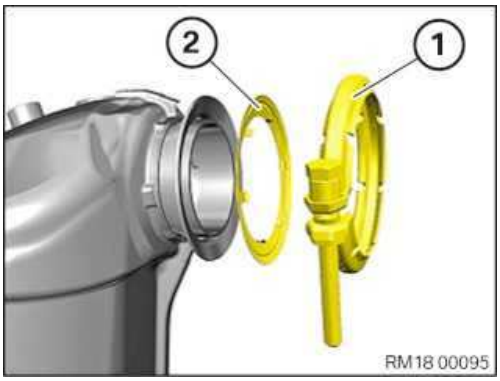
- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

- Tighten down screw (2).



Standard screw connection M6

M6		8 Nm

- Connect connectors (1) and lock.

  Lock must audibly engage.

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

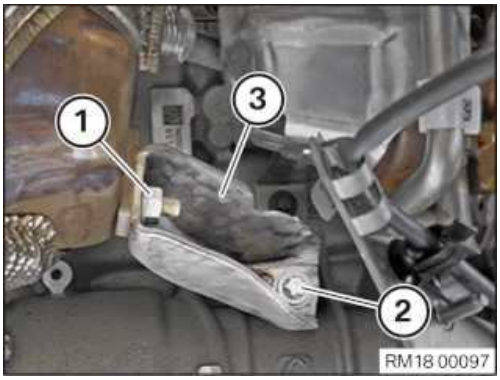
- Remove and install heavy components with the aid of another person/other persons.

- Renew the V-clip (1).

  Parts: V-band clamp

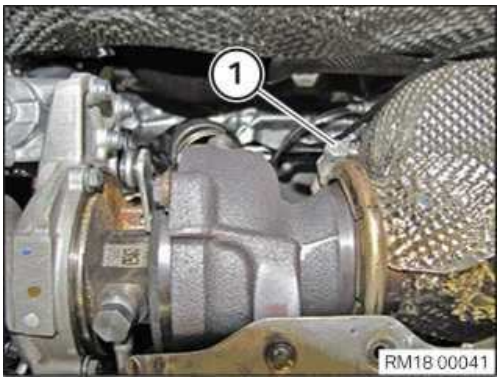
- Renew the gasket (2).

  Parts: Gasket



- Carefully insert and install the diesel particulate filter .
- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

- Tighten nuts (1) by hand.



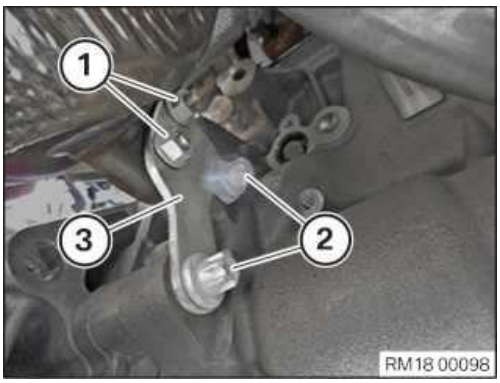
- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.

- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).

cardiagn.com

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger



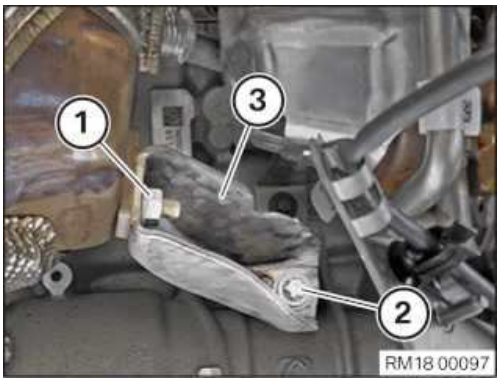
V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screws (2).



Diesel particulate filter holder to gearbox

M12x75		Tightening torque	66 Nm

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screw (2).

Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

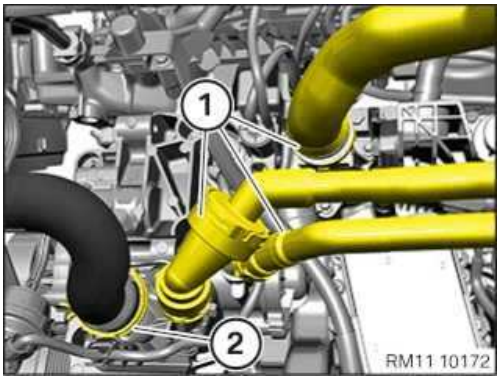
Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Remove fitting aid (1) for the flexible tube.

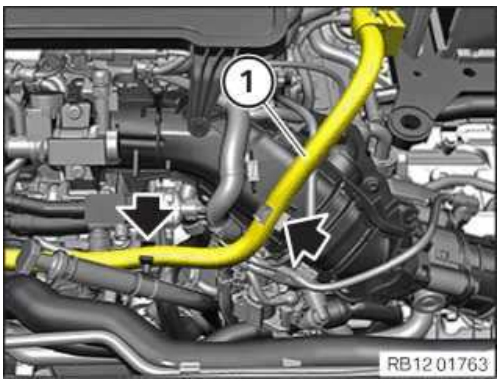
▸ **Install the heat shield on the exhaust turbocharger**

cardiagn.com



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger



Torx screw BM 6x12		Tightening torque	10 Nm

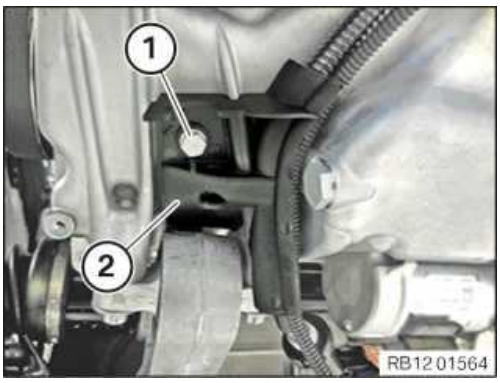
- Fasten the cable at the clips .

- Install the coolant hose and secure with the clamp (2) .
- Connect and lock the coolant lines (1).

  The coolant lines (1) must engage audibly.

CAUTION

Improper routing of the positive battery cable.



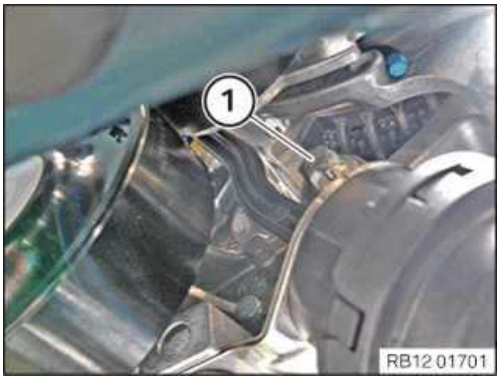
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert the positive battery cable (1) into the clamps (arrows).

- Feed in and install positive battery cable at the clamps (1).

- Insert and install the holder (2).
- Tighten down screw (1).



Bracket to oil sump

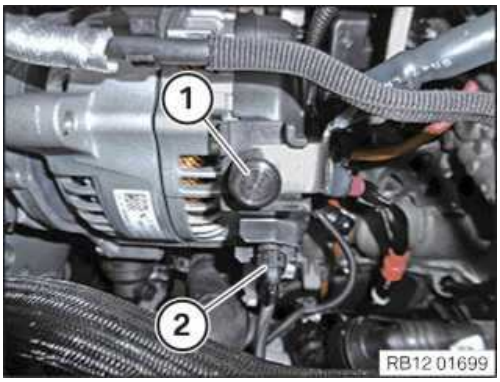
M6		Tightening torque	8 Nm

cardiagn.com

- Insert and install alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support.

- Tighten the screw (1) below on the alternator.

Alternator to component carrier

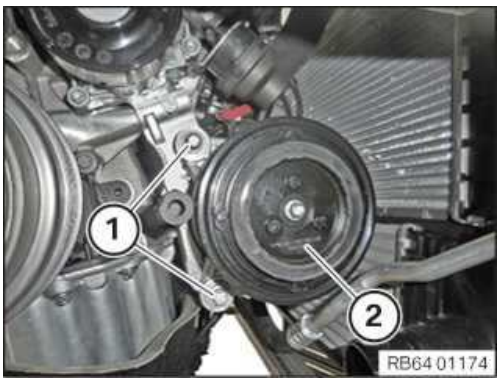


M10x75 / M10x125		Tightening torque	38 Nm

- Tighten the bolt (1) on top on the alternator.

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm



- Mount positive battery cable to the alternator.
- Tighten nut.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

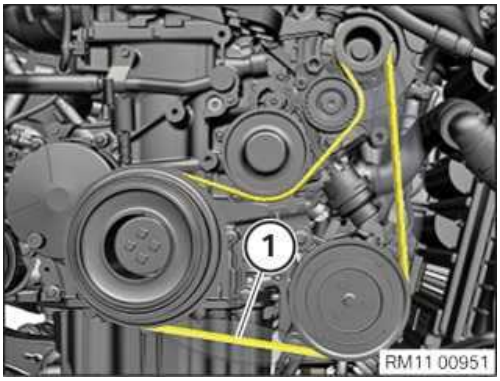
- Mount the cover (1).
- Connect the connector (2) to the alternator and lock audibly.

- Install air conditioning compressor (2) and position it correctly.
- Tighten the screws (1).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

▸ **Installing the drive belt for alternator**



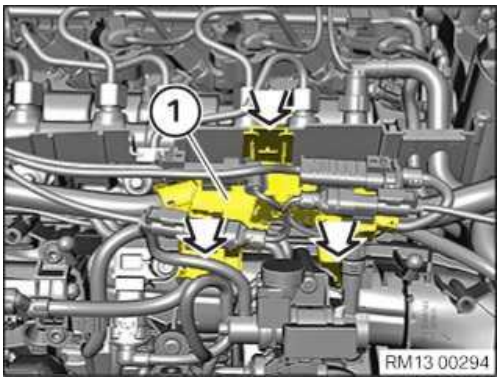
cardiagn.com

TECHNICAL INFORMATION

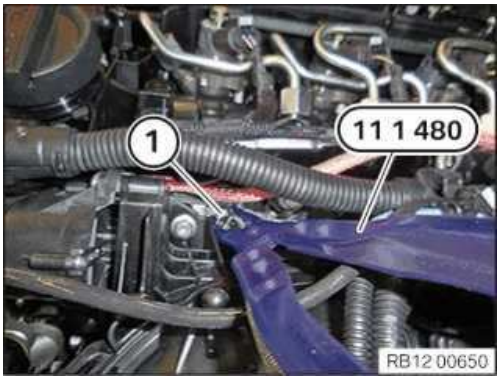
If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

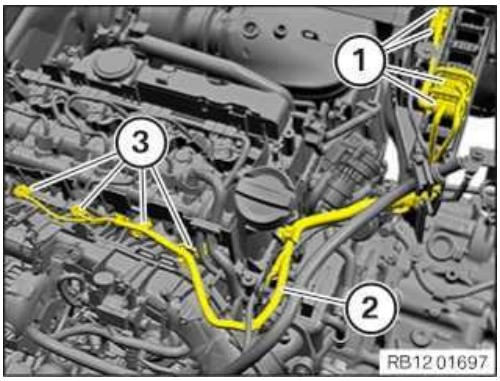


- Feed in the drive belt for the alternator (1) and install it.



- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool **0 496 268 (11 0 390)** out of the belt tensioner and remove it.

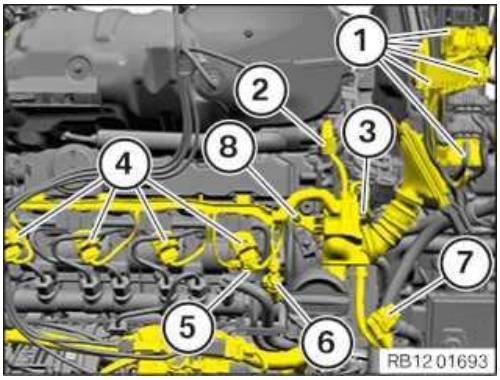
▶ **Installing the cable clip for the intake plenum**



- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.

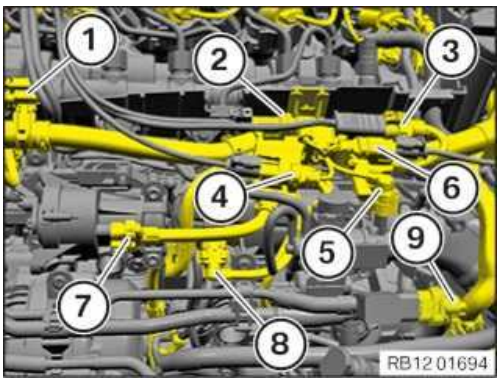
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.



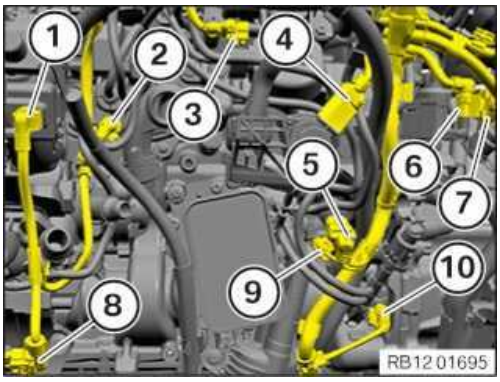
cardiagn.com

- Lay vehicle wiring harness and fasten with clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Connect all connectors (3) to the glow elements and engage them audibly.
- Mount ground strap and tighten screw (2).

Ground cable to cylinder head



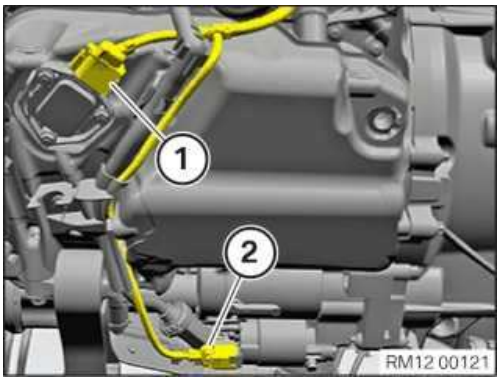
M6x12		Tightening torque	8 Nm



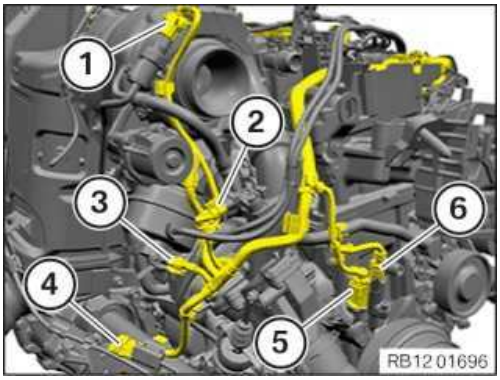
- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

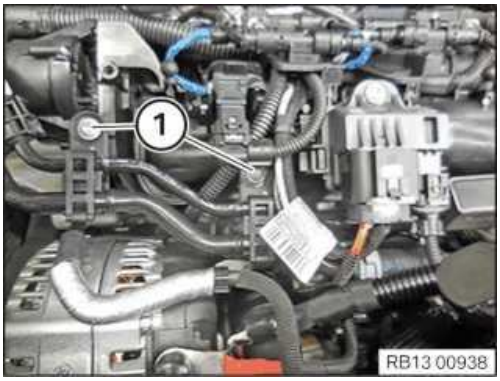
TS5x20		Tightening torque	3,5 Nm



- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.



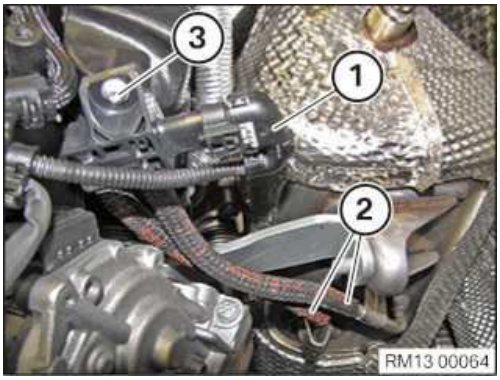
- Connect the connector (1) to the alternator and lock audibly.
- Connect the connector (2) to the electric changeover valve and lock audibly.
- Connect the connector (3) to the electric changeover valve and lock audibly.
- Connect the connector (4) to the high pressure pump and lock audibly.
- Connect the connector (5) to the oil pressure sensor and lock it audibly.
- Attach connector (6) to the throttle bodies and lock it audibly.
- Attach connector (7) to the intake air temperature sensor and lock it audibly.
- Connect the connector (8) to the air conditioning compressor and lock audibly.
- Connect the connector (9) to the solenoid valve and lock audibly.
- Connect the connector (10) to the crankshaft sensor and lock it audibly.



cardiagn.com

- Connect the connector (1) to the oil-level sensor and lock it audibly.
- Connect connector (2) to the starter motor and lock audibly.

- Attach connector (1) to the exhaust turbocharger and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust gas pressure sensor and lock it audibly.
- Connect the connector (4) to the monitoring oxygen sensor and lock audibly.
- Attach connector (5) to the oil pressure switch and lock it audibly.
- Attach connector (6) to the switching valve and lock it audibly.



- Position the fuel line.
- Tighten the screws (1).

Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

57 – Installing differential pressure sensor

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

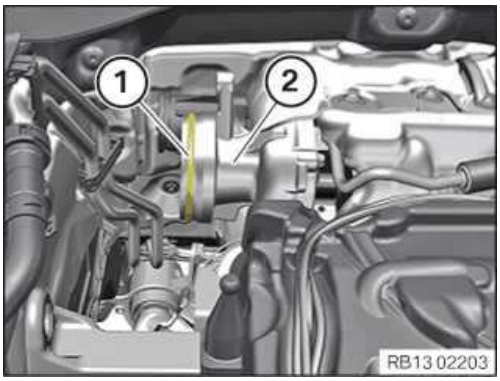
Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor



Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

58 – Installing clean air pipe

cardiagn.com

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

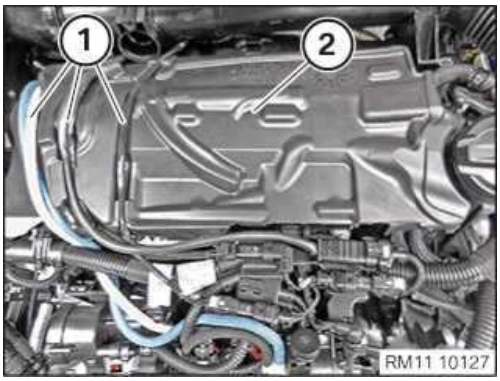
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

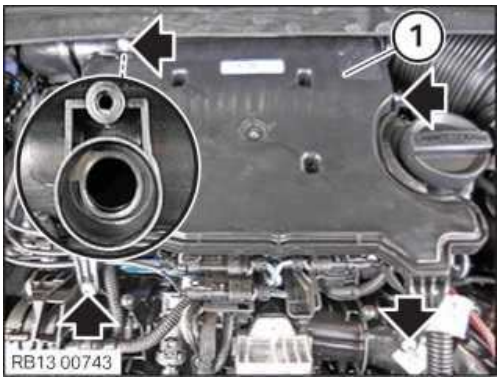
- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm



59 – Install the acoustic cover for the injectors

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

60 – Install resonator

cardiagn.com

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

61 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

62 – Install engine

cardiagn.com

- See additional information.

Additional Information

Overview of Tightening Torques

Special tool to cylinder head — Used in step 12

M8		Tightening torque	21,5 Nm

Special tool 2 455 010 to crankcase — Used in step 13

Differential pressure sensor to holder — Used in step 57

Screw		Tightening torque	4 Nm

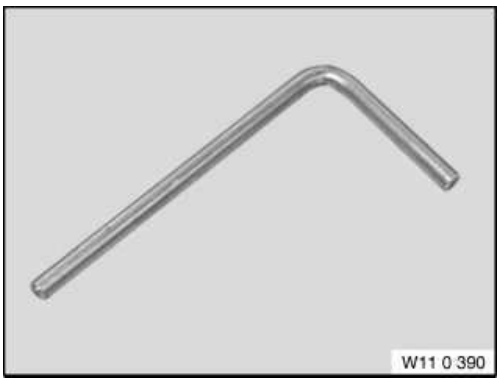
Clamp for the pressure hose on the differential pressure sensor — Used in step 57

Clamp 15–19mm		Tightening torque	3 Nm

Clean air pipe to cylinder head cover — Used in step 58

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing — Used in step 58

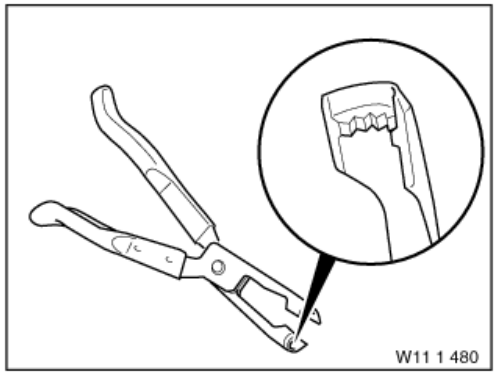


Clamp		Tightening torque	3 Nm

Resonator to manifold and clean air pipe — Used in step 60

Screw TS6	Renew screw.	Tightening torque	5 Nm

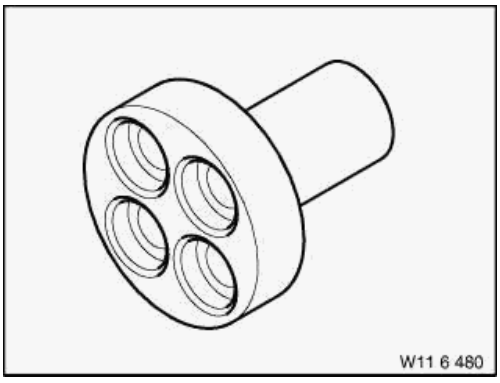
Overview of Special Tools



0 496 268 (11 0 390) Pin

Common — Used in step 7 56

Usage	(roll pin) For securing new tensioning pulley (poly-V belt)
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 15 07 (390)



0 490 796 (11 1 480) Pliers

Common — Used in step 7 25

Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

0 493 380 (11 6 480) Connector

Common — Used in step 12 20 40 43 51

Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

cardiagn.com

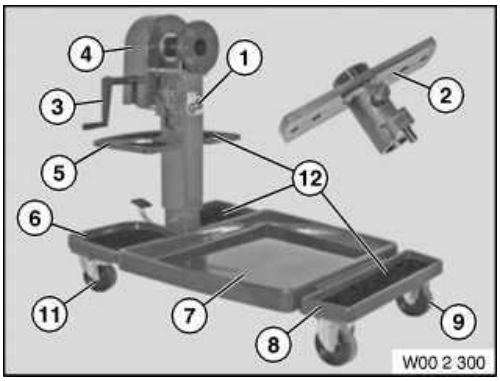
2 220 718 Workshop crane

Common	Used in step 12 51
Usage	WSK 1000
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	06 01 11 (701)

2 459 012 Holder

Common	Used in step 12 51
Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

2 455 010 Engine support



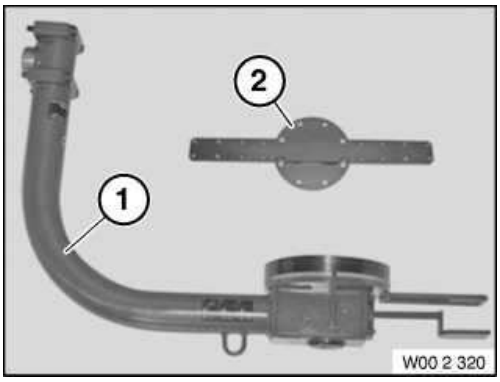
Common	Used in step 13 50
Usage	For accommodating engine on assembly stand. Engine: B3x, B4x, N47.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 495 187 (00 2 300) Assembly stand

Used in step 13

cardiagn.com

Common



Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of

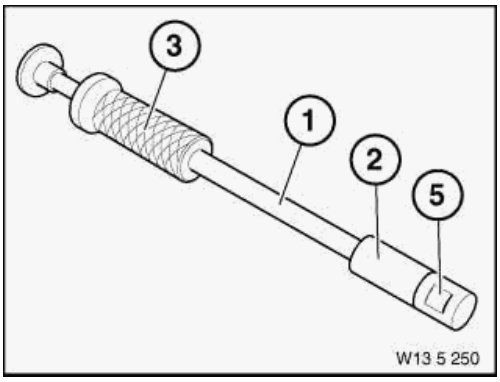
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.	

cardiagn.com

0 495 196 (00 2 320) Support arm

Common

Used in step 13



Usage	(Support arm with fixture) For mounting engines using the engine mounting bracket.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 197 (00 2 321)		**Support arm**	
2	0 495 198 (00 2 322)		**Panel** (take-up plate)	
3	0 495 380 (00 2 323)		**Panel** (fixture) Engine N73	
6	0 496 287 (00 2 326)		**Panel** (fixture) Engine: M73	
5	0 496 288 (00 2 327)	**0 496 373**	**Panel** (fixture) Engine: S62 Replaced by 11 5 420 (0 496 373)	
8	0 496 533 (00 2 328)		**Support** (Engine mount) Engine: N57, N57Top	
9	0 496 579 (00 2 329)	**0 496 680**	**Support** (Engine mount) Engine: N74 Replaced by 116160 (0 496 680)	
4	0 495 379 (00 2 324)		**Panel** (fixture) Engine M67TU	
5	0 495 381 (00 2 325)		**Panel** (fixture) Engine N62, N62TU	

cardiagn.com

0 493 321 (13 5 250) Puller

Common

Used in step 17

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

0 493 339 (13 5 252) Bush

Common

Used in step 17

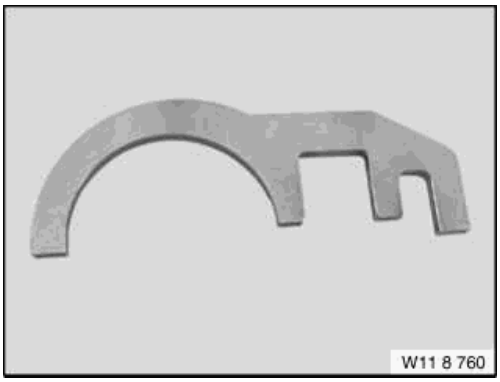
Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 340 (13 5 253) Weight

Common Used in step 17

Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	



2 288 380 Locating stud

Common Used in step 20 40 41 43

Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 112 (11 8 760) Gauge

Common Used in step 20 40 42 43

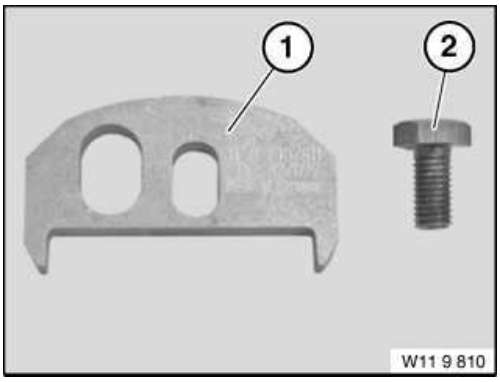
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

cardiagn.com

0 495 105 (11 4 480) oddments tray

Common

Used in step 26 27 40



Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

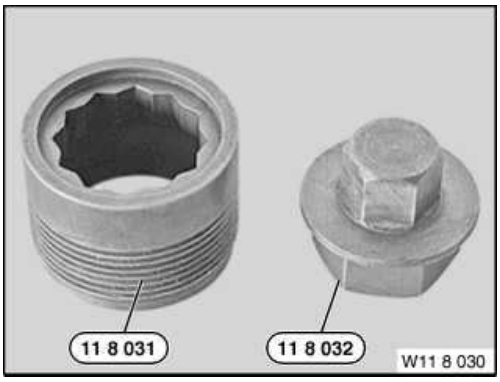
cardiagn.com

0 496 171 (11 9 811) Holder

Common	Used in step 28 35
Usage	Available only as a complete tool set 11 9 810 (83 30 0 496 170) - as of 13.01.12
Included in the tool or work	0 496 170
Storage location	C86
Replaced by	
In connection with	
SI-Number	01 07 07 (355)

0 494 793 (11 9 265) Bush

Common	Used in step 28 35
Usage	
Included in the tool or work	0 493 938
Storage location	A44
Replaced by	
In connection with	
SI-Number	



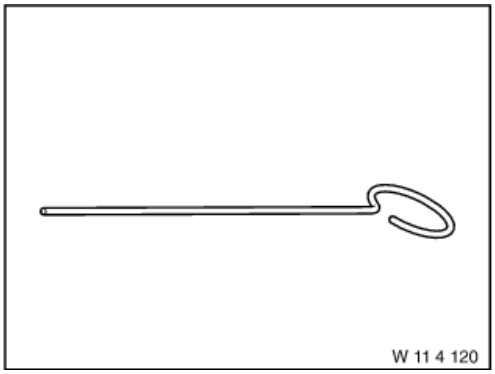
2 357 904 Gauge

Common	Used in step 31 32
Usage	For positioning the high pressure pump to the crankshaft . Replaced by gauge 2420824
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

cardiagn.com

0 496 725 (11 8 030) Extractor

Common



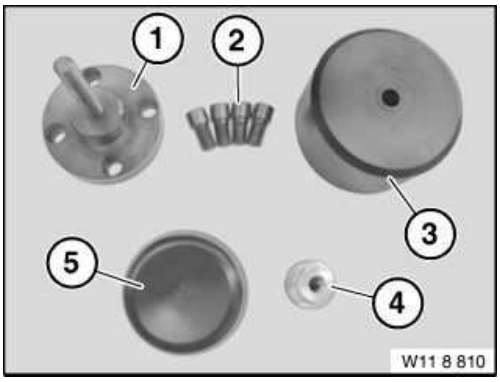
Used in step 31

Usage	for the disassembly of the high pressure pump (replaces SWZ 11 8 740 as of 08/2009) 11 8 740 will be replaced by 83 30 2 448 914.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 496 757 (11 8 031)	**2 448 914**	**Holding sleeve** Replaces SWZ11 8 741 from 08/2009, 09/2011 no longer available individually. From 10/2016, can only be ordered as a new set of special tools 2 448 914.	
2	0 496 758 (11 8 032)	**2 448 914**	**Adapter** Replaces special tool 11 8 742 from 08/2009, 09/2011 remaining inventories will be sold off - no longer available individually. From 10/2016, can only be ordered as a new set of special tools 2 448 914.	

0 491 012 (11 4 120) Pin

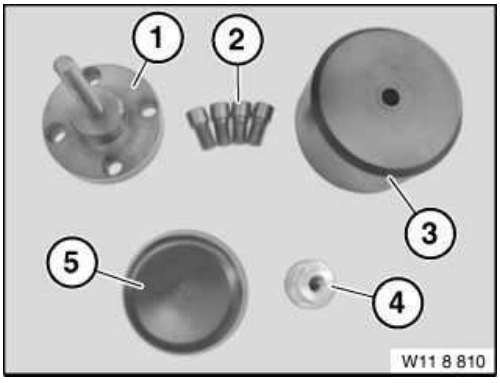


Common

Used in step 31 32

Usage	(lock pin) For chain tensioners, for locking the chain tensioner piston (e.g. during cylinder head removal and fitting)
Included in the tool or work	
Storage location	B1
Replaced by	
In connection with	
SI-Number	01 12 93 (701)

cardiagn.com

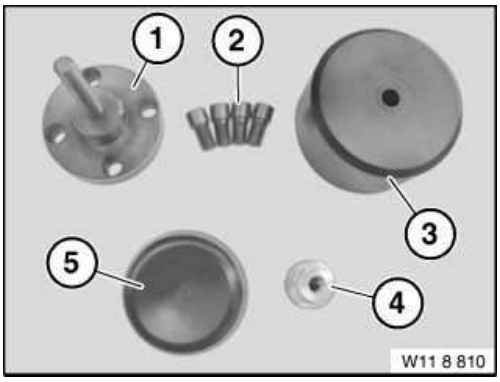


0 496 137 (11 8 815) Holding sleeve

Common Used in step 34

Usage	(Slip sleeve) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

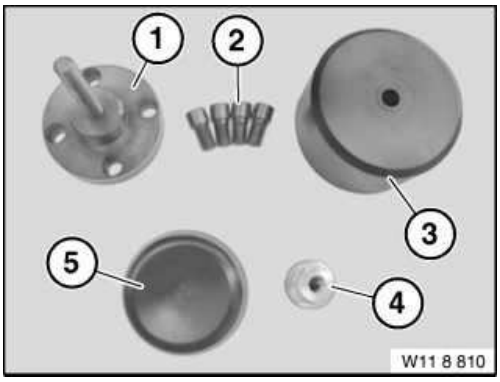
0 496 133 (11 8 811) Basic body



Common Used in step 34

Usage	Liquidation of existing inventory and then available only as a complete tool set 11 8 810 = 83 30 0 496 132 - as of 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

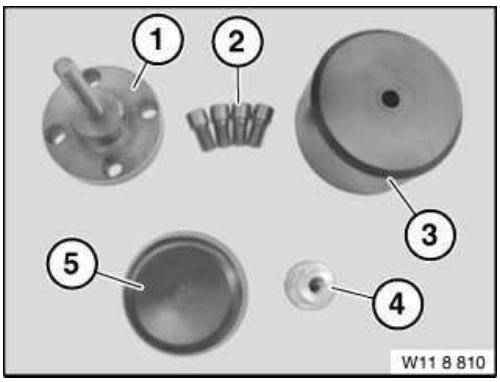
cardiagn.com



0 496 134 (11 8 812) Screw

Common Used in step 34

Usage	(Screw set) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

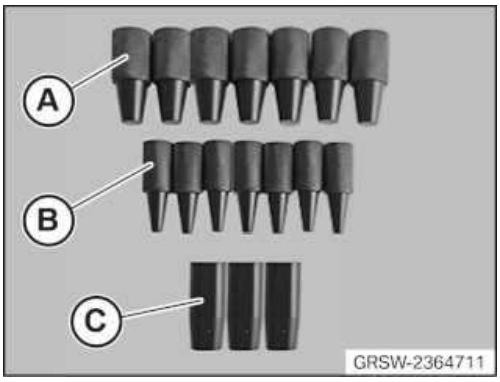


0 496 135 (11 8 813) Holding sleeve

Common Used in step 34

Usage	(Thrust sleeve) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 496 136 (11 8 814) Nut

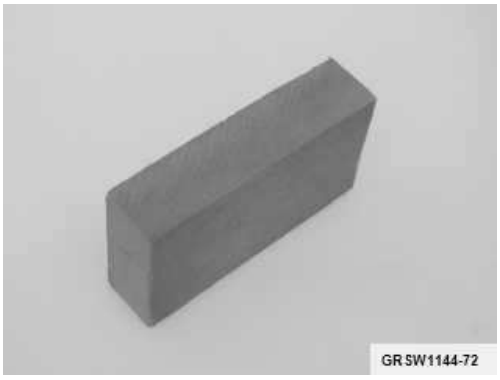


Common Used in step 34

Usage	(Nut with bearing) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

cardiagn.com

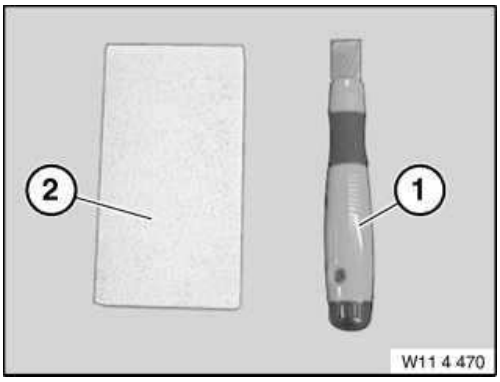
2 364 711 Plug



Common	Used in step 34
Usage	For closing the pressure oil holes for cleaning the cylinder head sealing surfaces.
Included in the tool or work	
Storage location	C20
Replaced by	
In connection with	
SI-Number	01 50 14 (203)

0 495 103 (11 4 471) Scraper

Common	Used in step 34
Usage	
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

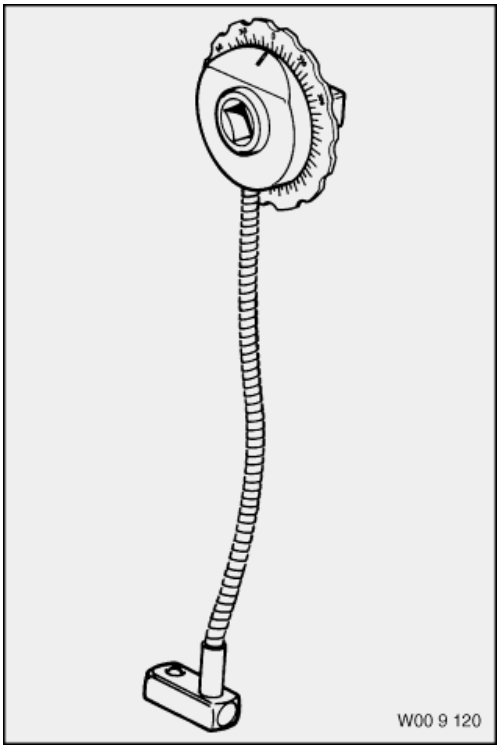


0 495 104 (11 4 472) Extractor

Common	Used in step 34
Usage	(grindstone)
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 102 (11 4 470) Tool



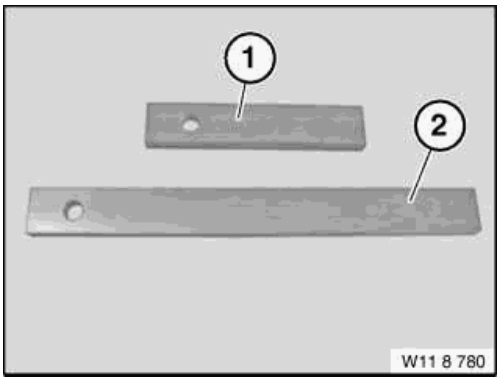
Common Used in step 34 54

Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 103 (11 4 471)		**Scraper**	
2	0 495 104 (11 4 472)		**Extractor** (grindstone)	

0 490 504 (00 9 120) Torque angle measuring dial



Common Used in step 34

Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 496 120 (11 8 780) Plate

Common

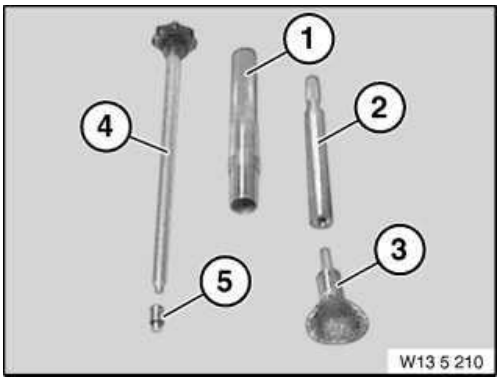
Used in step 34

Usage	(Mounting plates) For securing transmission oil sump when gearbox is removed.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 496 121 (11 8 781)		**Plate** (Mounting plate, short)Discontinued; only available via set 11 8 780 = 0496120.	
2	0 496 122 (11 8 782)		**Plate** (Mounting plate, long) Discontinued; only available via set 11 8 780 = 0496120.	

2 285 058 Tool set

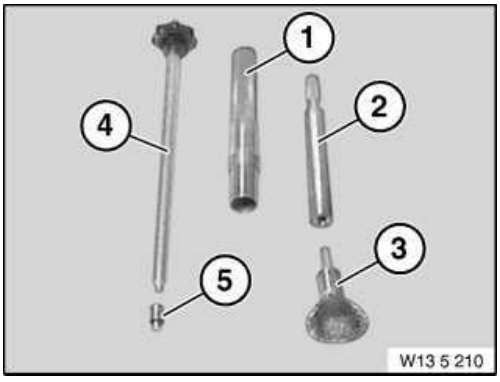


Common

Used in step 35

Usage	
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 02 14 (069)

cardiagn.com

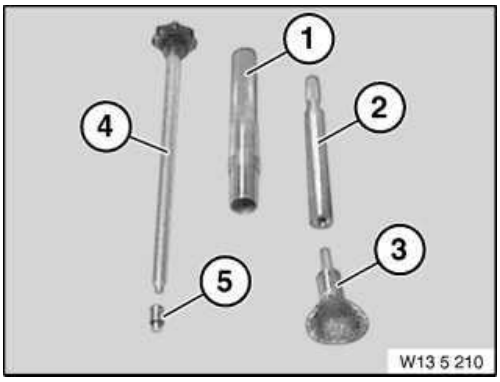


0 493 763 (13 5 215) Plug

Common Used in step 45

Usage	(Seal plug)
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 762 (13 5 214) Rod



Common Used in step 45

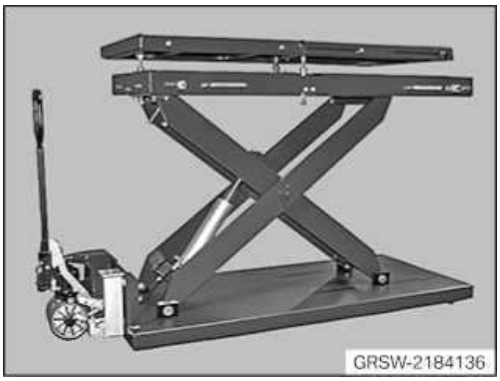
Usage	(Mounting rod) For the seal plug
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 758 (13 5 210) Tool

Common

Used in step 45



Usage	(Cleaning set) For injector channels
Included in the tool or work	
Storage location	B4
Replaced by	
In connection with	
SI-Number	01 05 00 (574)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 759 (13 5 211)		**Holding sleeve** (Guide sleeve)	
2	0 493 760 (13 5 212)		**Holder** (Brush holder)	
3	0 493 761 (13 5 213)		**Brush head**	
4	0 493 762 (13 5 214)		**Rod** (Mounting rod) For the seal plug	
5	0 493 763 (13 5 215)		**Plug** (Seal plug)	

cardiagn.com

2 184 136 Mobile equipment table lift

Common	Used in step 51
Usage	Table lift MHT 1200
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	06 01 10 (649)

2 409 025 Puller

Common	Used in step 52
Usage	For disassembly of the outer radial shaft seal of the transmission output shaft, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A76
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

2 411 739 Puller

Common	Used in step 52
Usage	For disassembly of the inner radial shaft seal of the output, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C78
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

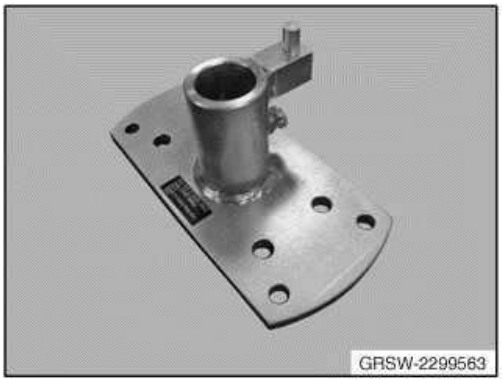
2 408 152 Striking element

Common	Used in step 52
Usage	For installation of the right radial shaft seal transmission output shaft (inner). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)

cardiagn.com

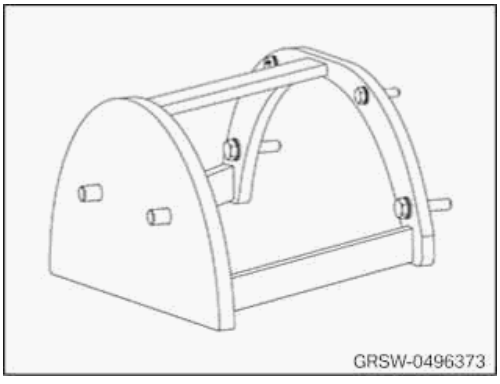
2 413 037 Handle

Common	Used in step 52
Usage	Universal drift handle. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C77
Replaced by	
In connection with	
SI-Number	01 53 14 (211)



2 408 150 Striking element

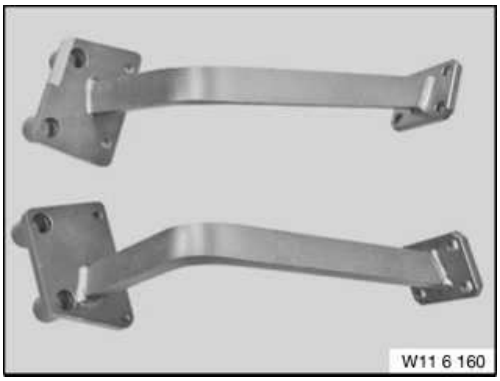
Common	Used in step 52
Usage	For installing the right radial shaft seal transmission output shaft (outer). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)



Replacement tools:

2 299 563 Adapter

Common	Used in step 13
Usage	New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.
Included in the tool or work	0 495 187
Storage location	
Replaced by	
In connection with	
SI-Number	



0 496 373 (11 5 420) Plate

Common	Used in step 13
Usage	(Fixture) Engine S62
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 496 680 (11 6 160) Support

Common	Used in step 13
Usage	For mounting N74 engine on the assembly stand. In combination with 00 2 300, 00 2 320
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	00 2 300; 00 2 320 = 0495196
SI-Number	01 31 09 (604)

2 448 914 Extractor

Common	Used in step 31
Usage	For removing and installing high pressure pump. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A49
Replaced by	
In connection with	
SI-Number	01 15 16 (411)

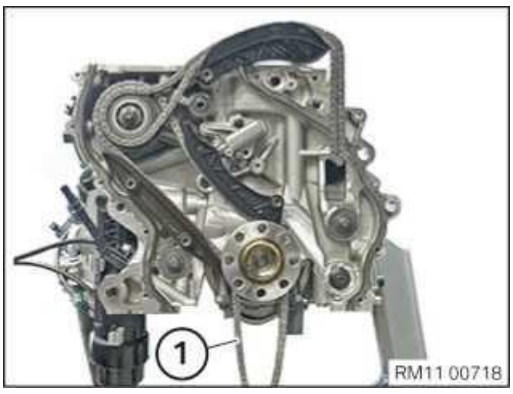
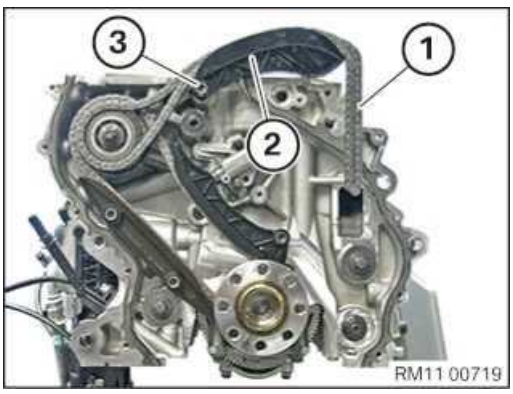
11 31 052 Replacing both timing chains (B47)



Special tools required:

- 2 357 904
- 11 8 030
- 11 4 120

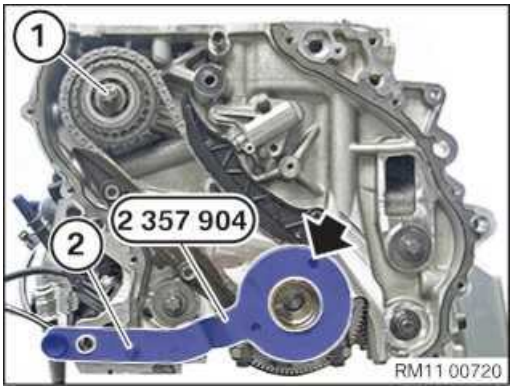


Necessary preliminary tasks:

- Remove engine with transmission
- Remove gearbox
- Mount engine on assembly stand
- Remove flywheel
- Remove cylinder head
- Remove oil pump
- Remove rear timing case cover

Removal:

Remove drive chain (1) for oil pump.

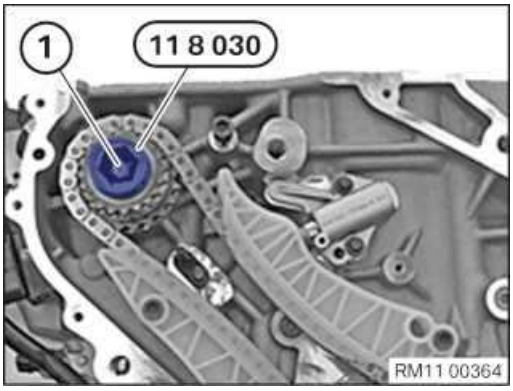


Remove camshaft timing chain (1).

Remove tensioning rail (2) from bearing journal (3).

Note:
Bearing journal (3) does not have to be removed.

cardiagn.com

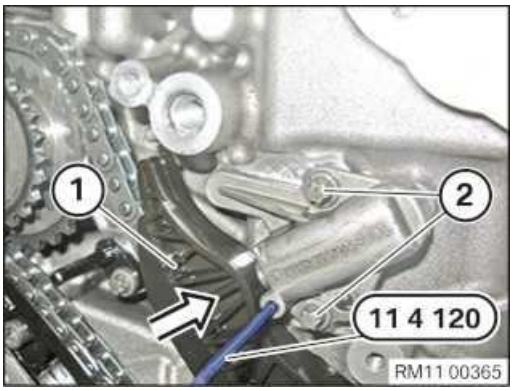


The crankshaft must be blocked in order to release central bolt (1) of the high pressure pump.

Position crankshaft with guide pin. Fix special tool 2 357 904 with screw (2) in position at the crankcase.

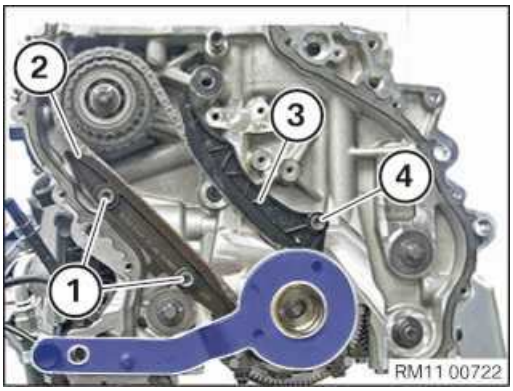
Release central bolt (1) of high pressure pump.

Important!



Merely loosen central bolt (1), do not remove.

Screw special tool11 8 030 into sprocket of high pressure pump.



Unscrew central bolt (1) of high pressure pump so far that central bolt can rest on special tool 11 8 030 .

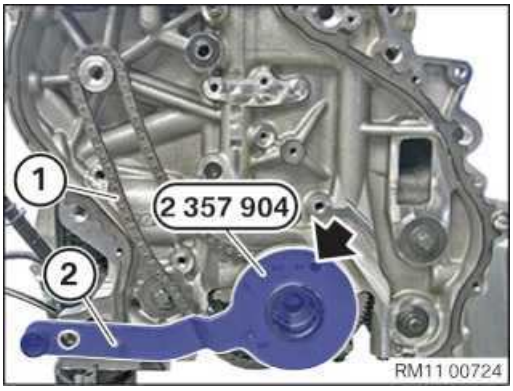
Keep turning the central bolt (1) until the sprocket has come loose from the high pressure pump shaft.

Press chain tensioner in with tensioning rail (1) by hand in the direction of the arrow until the special tool 11 4 120 can be positioned.

Unfasten screws (2). Remove chain tensioner.

Undo both bearing journals (1).

Remove guide rail (2).

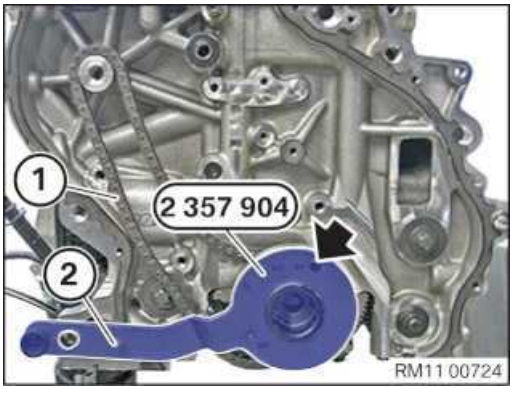


Release bearing journal (4).

Remove tensioning rail (3).

cardiagn.com

Remove screw and camshaft sprocket (1) for high pressure pump.

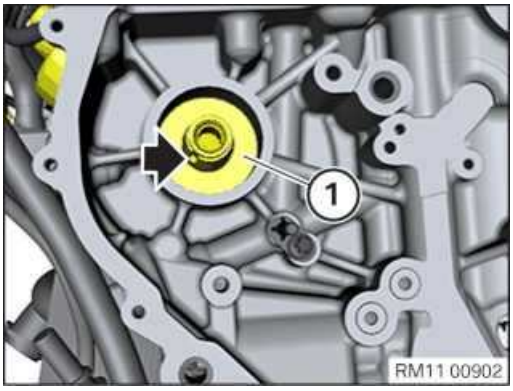


Release screw (2) and remove special tool 2 357 904 .

Remove timing chain (1).

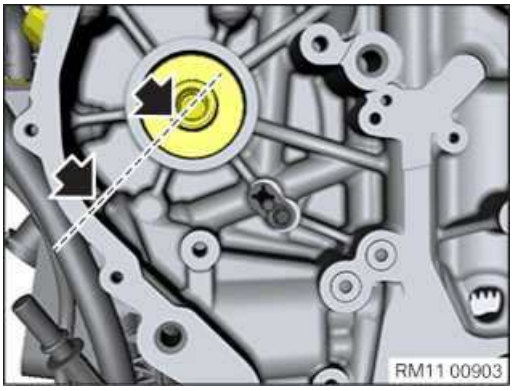
Note:
Graphic B48.

Installation:



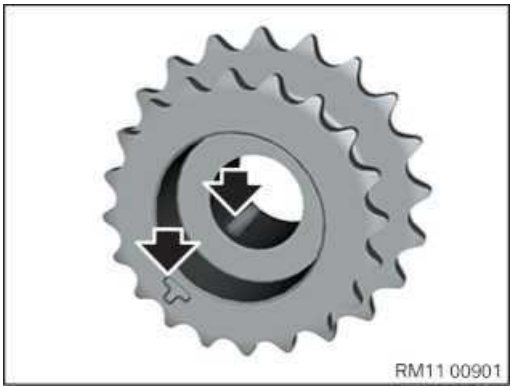
Fit timing chain (1).

Position crankshaft with special tool 2 357 904 .

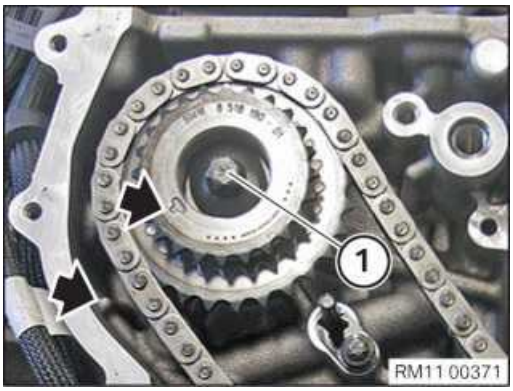


Fix special tool 2 357 904 with screw (2) in position at the crankcase.

Note:
Graphic B48.

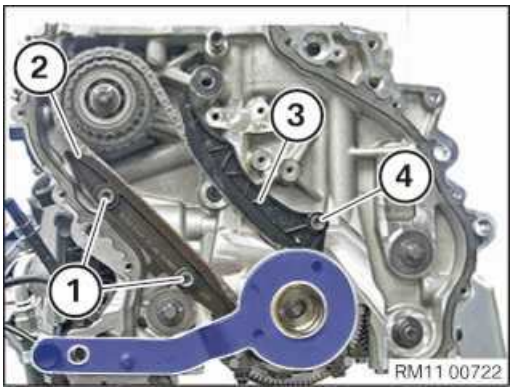


Note:
Pay attention to spline groove on high pressure pump (1).



cardiagn.com

Note:
Mark on crankcase and groove on high pressure pump must be in line.



Note:
Spline and mark on pinion are on a single plane.

Position impeller with timing chain on the high-pressure pump.

Insert central bolt (1) of high pressure pump.

Mark and cast lug must be in line.

Important!

Clean all the threads of the bearing journals (if necessary with screw tap).

Parts: Replace bearing journals.

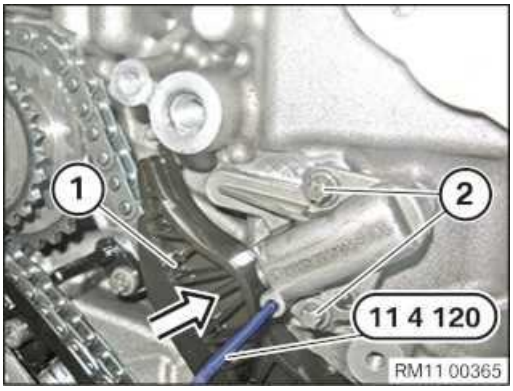
Position guide rail (2).

Screw in both bearing journals (1).

Tightening torque: 11 11 6AZ.

Position tensioning rail (3).

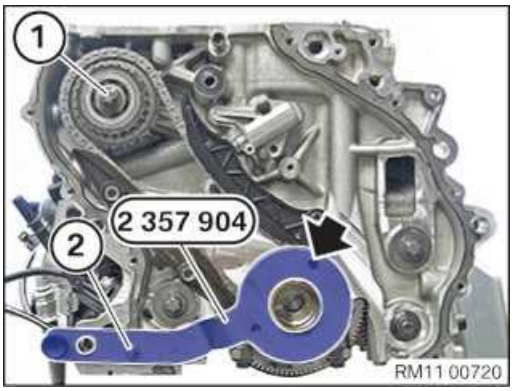
Screw in bearing journals (4).



Tightening torque: 11 11 6AZ.

cardiagn.com

Important!

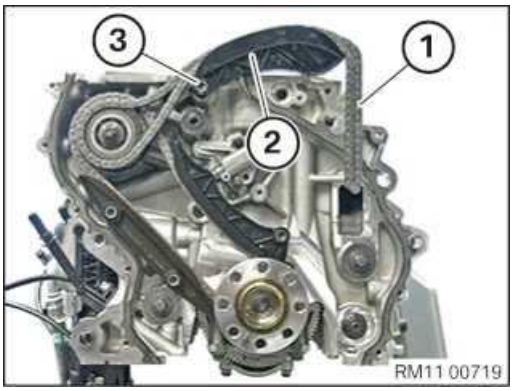


Clean sealing surfaces (1) with compressed air.

Install hydraulic chain tensioner. Tighten down screws (2).

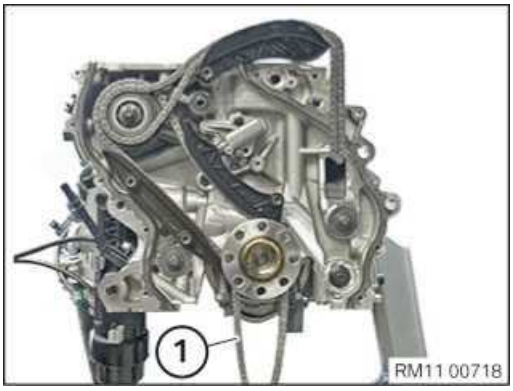
Tightening torque: 13 52 1AZ.

Remove special tool 11 4 120 .



Note:
Crankshaft must remain blocked to fasten central bolt (1) of high pressure pump.

Parts: Replace central bolt (1).



Tighten central bolt (1) of high pressure pump.

Tightening torque: 13 52 2AZ.

Install tensioning rail (2) with timing chain (1) for camshafts.

cardiagn.com

Mount drive chain (1) for oil pump on crankshaft.

Required follow-up work:

- Install rear timing case cover
- Install oil pump
- Mounting the flywheel
- Mounting the cylinder head
- Remove engine from assembly stand
- Install gearbox
- Install engine with transmission

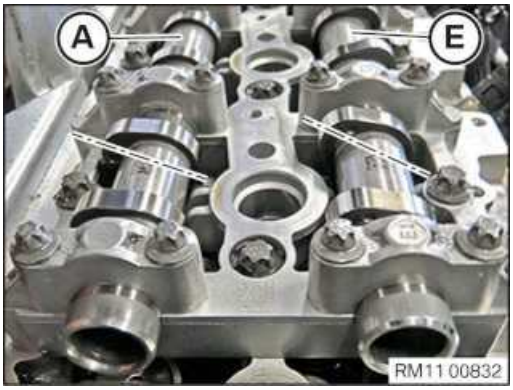
cardiagn.com

11 31 028 Replacing exhaust camshaft (B47)

Special tools required:

- 11 6 480

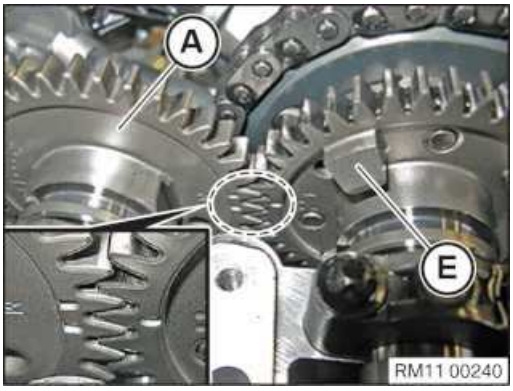
Necessary preliminary tasks:



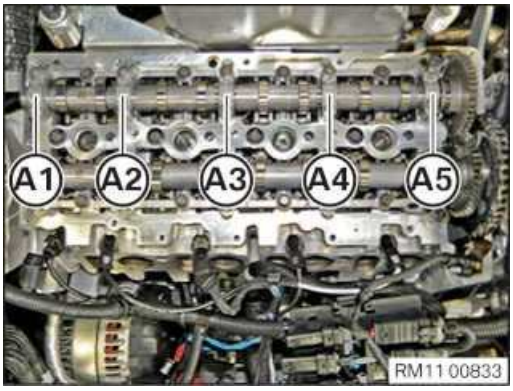
- Remove front right wheel arch panel
- Remove cylinder head cover

REMOVAL:

Crank engine with special tool11 6 480 to firing TDC position of cylinder no. 1.**Important!**

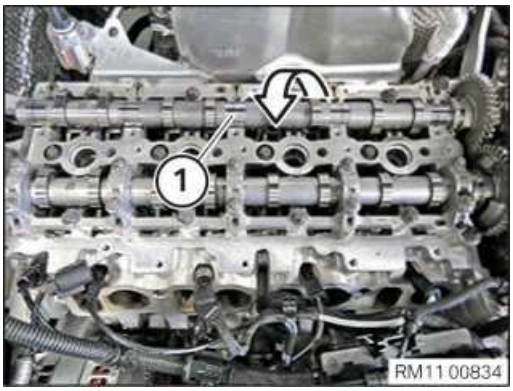


Do not crank engine in reverse direction!



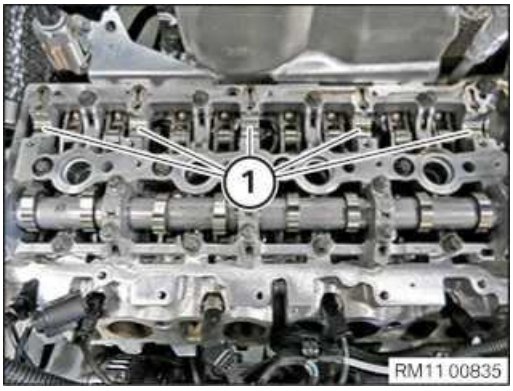
The cam on the intake camshaft (E) points obliquely upwards at cylinder No. 1.

The cam on the exhaust camshaft (A) points obliquely outward to the left at cylinder No. 1.

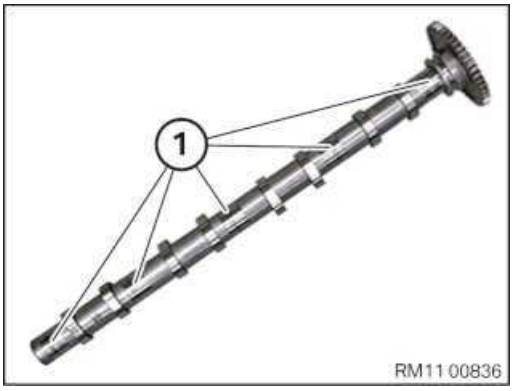


cardiagn.com

Check position of exhaust and intake camshafts (see graphic).

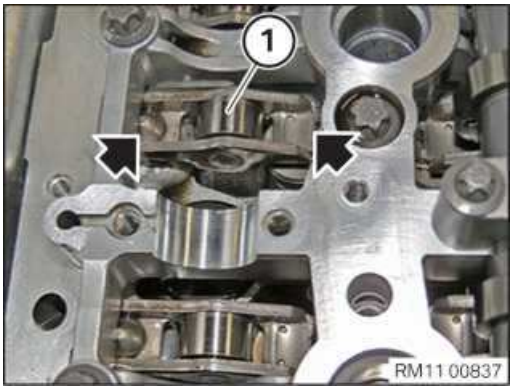


Release camshaft bearing caps **A1** to **A5** by 1/2 a turn at a time, working from the outside inwards, and remove.

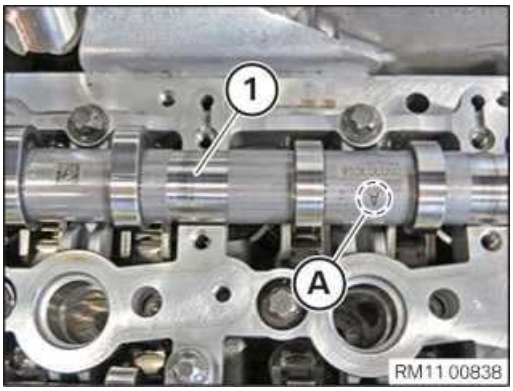


Feed exhaust camshaft upwards to remove.

INSTALLATION:

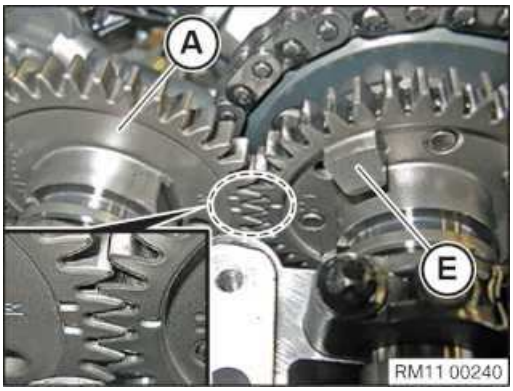


Oil all bearing positions (1).

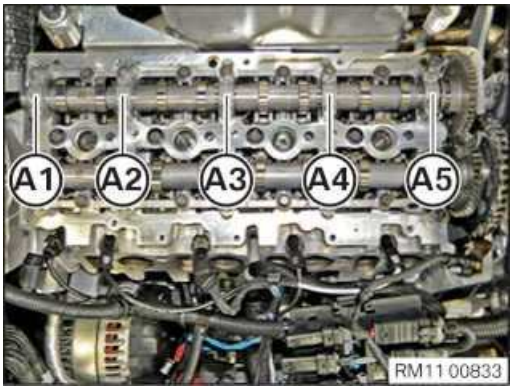


cardiagn.com

Oil all bearing positions (1) of exhaust camshaft.



Check installation position of the roller cam followers **(risk of damage!)**.



Note:
Identification (A) on exhaust camshaft (1) must point upwards.

Install exhaust camshaft (1).

When inserting the exhaust camshaft (A), the marks of both camshafts (A and E) must be aligned (see graphic).

cardiagn.com

Tighten down camshaft bearing caps **A1** to **A5** on the camshaft carrier by 1/2 a turn at a time, working from the inside outwards.

Tightening torque: 11 31 2AZ.

Using special tool 11 6 480 , crank engine twice in direction of engine rotation until cylinder no.1 is back in firing TDC position.

Check camshaft adjustment .

Required follow-up work:

- Install cylinder head cover
- Install front right wheel arch panel

cardiagn.com

11 31 025 Replacing intake camshaft (B47)

Special tools required:

- 11 6 480
- 2 288 380
- 11 8 760

Necessary preliminary tasks:

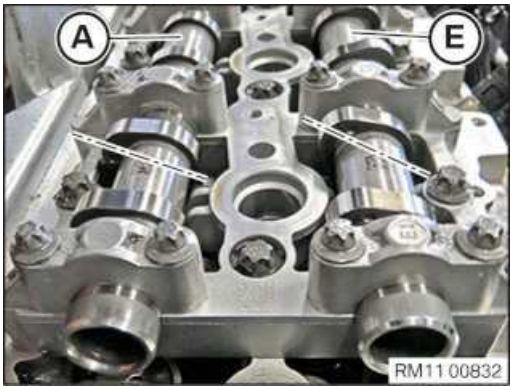
- Remove wheel arch panel
- Remove cylinder head cover
- Remove exhaust-gas recirculation cooler

REMOVAL:

Crank engine with special tool 11 6 480 to TDC firing position of cylinder no. 1.**Important!**
Do not crank engine in reverse direction!

Remove cover (1).

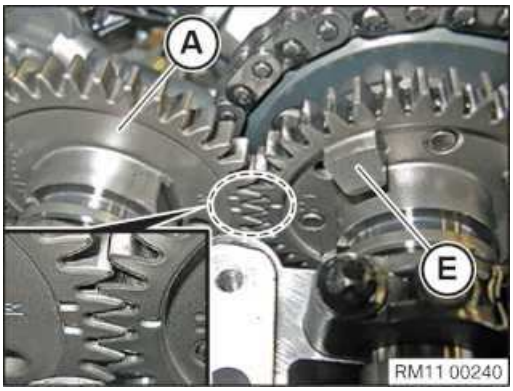
cardiagn.com



Turn engine with special tool 11 6 480 on vibration absorber.

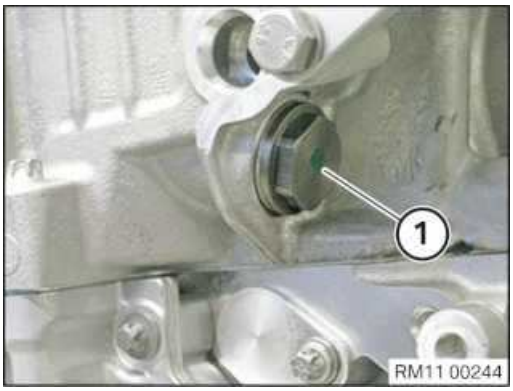
Important!

Vehicles with manual gearboxes have an additional bore hole in front of the dowel hole that can be mistaken for the dowel hole.



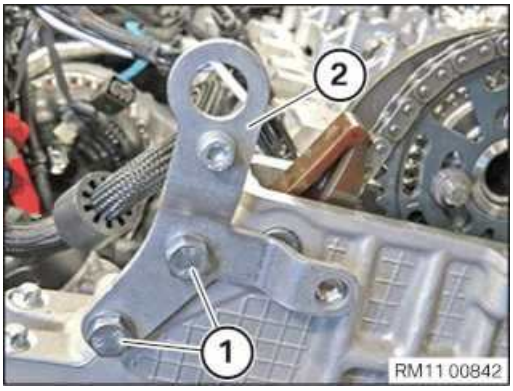
It must be possible to slide the special tool 2 288 380 into the oil sump to the offset.

Block crankshaft with cylinder no. 1 in TDC firing position with special tool2 288 380 .

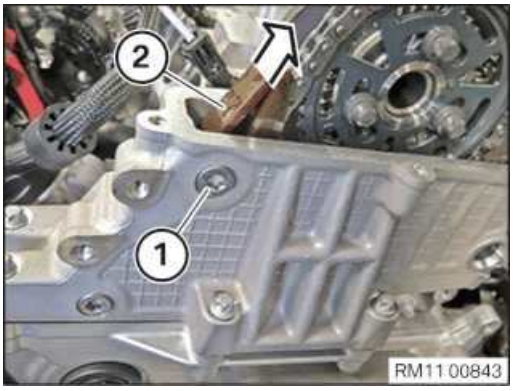


The cam on the intake camshaft (E) points obliquely upwards at cylinder No. 1.

The cam on the exhaust camshaft (A) points obliquely outward to the left at cylinder No. 1.

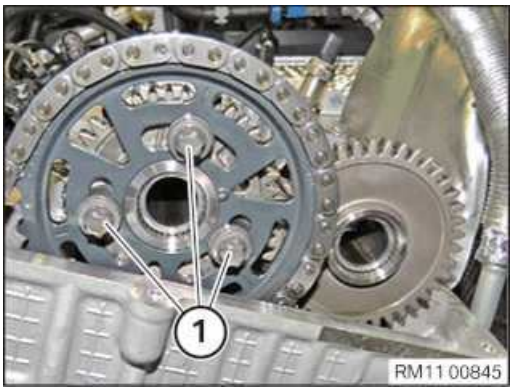


Marks on both camshafts (A and E) must match up (see graphic).



Release chain tensioner (1).

cardiagn.com



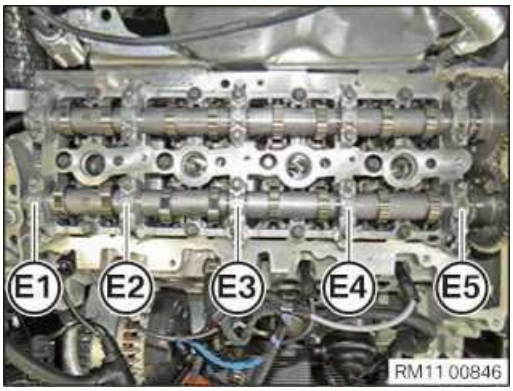
Release screws (1).

Remove suspension element (2).

Remove bearing journal (1).

Remove guide rail (2) in direction of arrow.

Important!

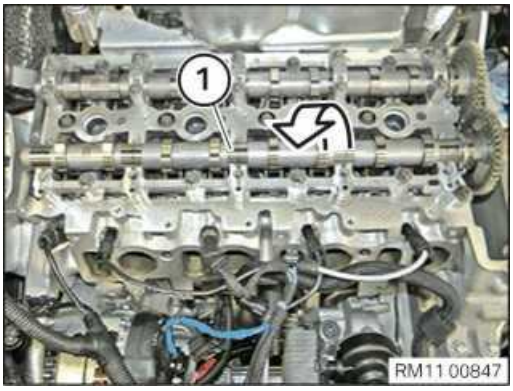


Secure timing chain against falling out.

Risk of damage to oil spray nozzle.

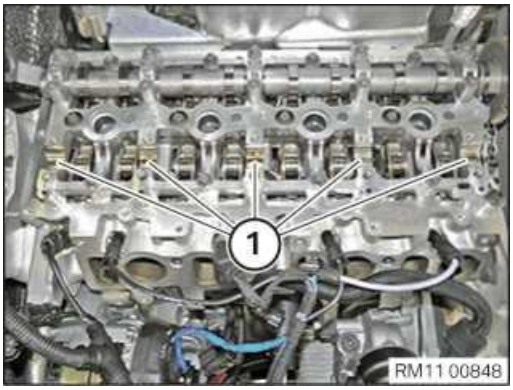
Release screws (1).

Remove camshaft sprocket from the intake camshaft and feed out of timing chain.



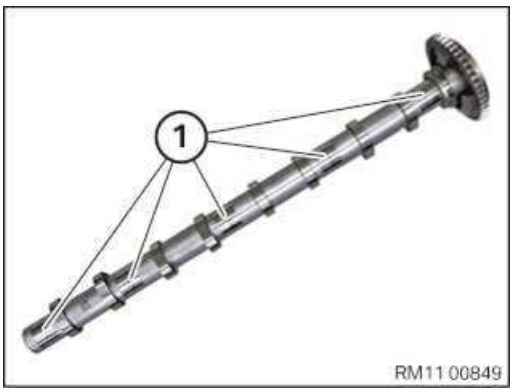
Place timing chain in cylinder head.

Note:
It is necessary to adjust the engine timing when removing the intake camshaft.

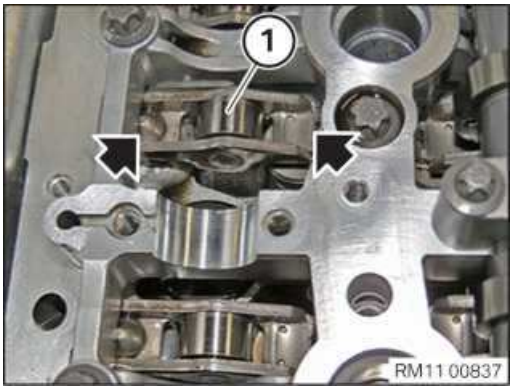


Release camshaft bearing caps **E1** to **E5** by 1/2 a turn at a time, working from the outside inwards.

cardiagn.com

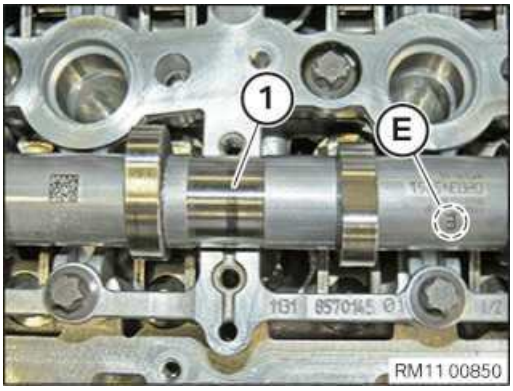


Feed out intake camshaft towards the top and put to one side.

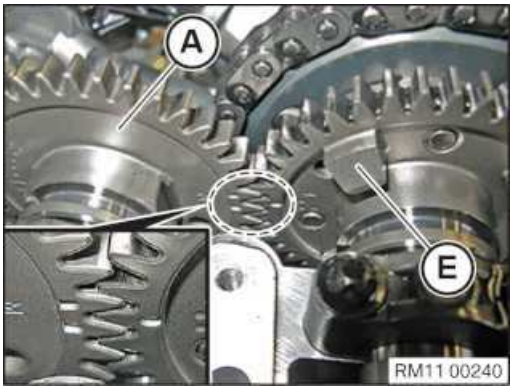


INSTALLATION:

Oil all bearing positions (1).

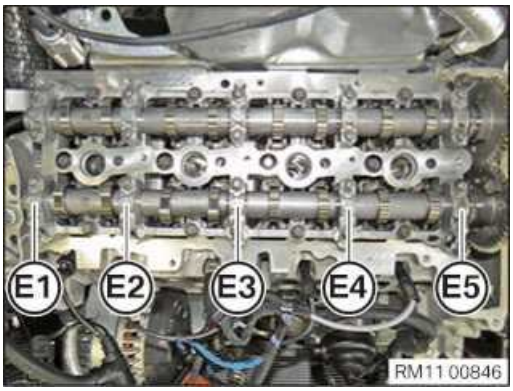


Grease all bearing positions (1) of the intake camshaft.



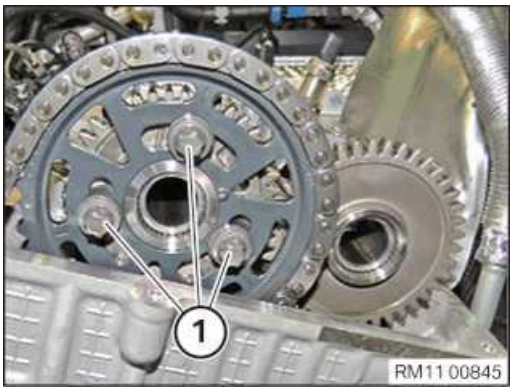
Check installation position of the roller cam followers **(risk of damage!)**.

cardiagn.com



Note:
Identification (E) must point upwards.

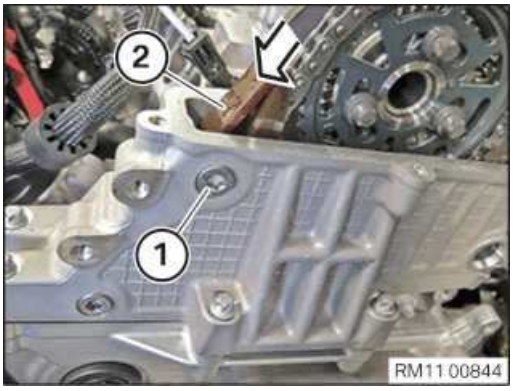
Insert intake camshaft (1).



When inserting the intake camshaft (E), the marks of both camshafts (A and E) must be aligned (see graphic).

Tighten down camshaft bearing caps **E1** to **E5** on the camshaft carrier by 1/2 a turn at a time, working from the inside outwards.

Tightening torque: 11 31 2AZ.



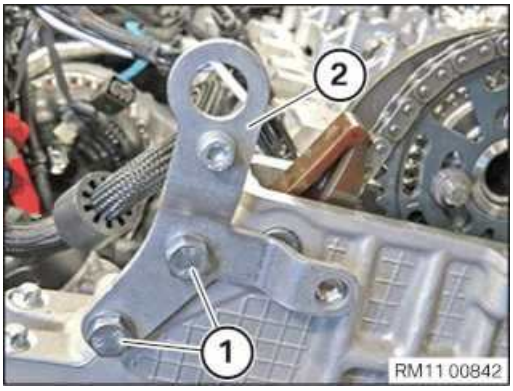
Place the camshaft sprocket with timing chain on the intake camshaft such that bolts (1) are located in the centre of the elongated holes.

Insert bolts (1).

Tighten bolts (1) to 10 Nm.

Release bolts (1) again by a 90° turn.

cardiagn.com

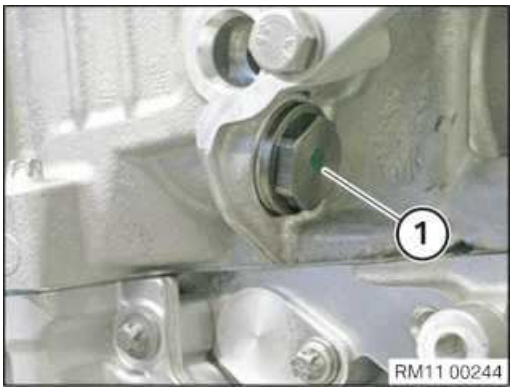


Parts: Replace bearing journals (1).

Install guide rail (2) in the direction of the arrow.

Note:
Make sure guide rail is correctly installed in the lower bearing journal.

Screw in bearing journals (1).



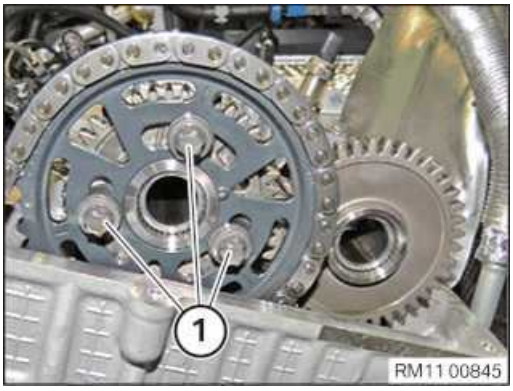
Tightening torque: 11 12 6AZ.

Install suspension element (2).

Tighten down screws (1).

Tightening torque: 11 00 4AZ.

Parts: Replace sealing ring.



Install chain tensioner (1) and tighten down.

Tightening torque: 11 12 5AZ.

Place special tool 11 8 760 on exhaust camshaft.**Note:**
Special tool 11 8 760 must lie flush on cylinder head.

cardiagn.com

Tighten camshaft bolts (1).

Tightening torque: 11 31 1AZ.

Crank engine twice in direction of engine rotation with special tool 11 6 480 up to TDC firing position of cylinder no. 1.

Check camshaft adjustment.

Important!

Do not crank engine in reverse direction!

Important!

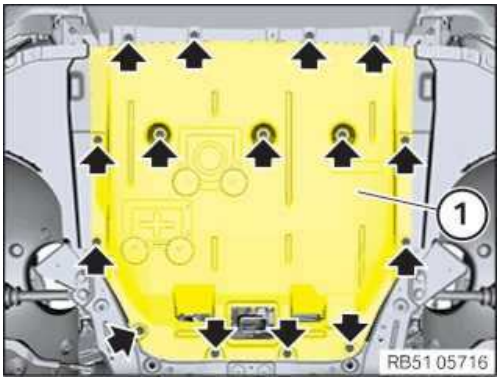
2 288 380 Remove special tool before starting engine.

Required follow-up work:

- Install exhaust-gas recirculation cooler
- Install cylinder head cover
- Install wheel arch panel

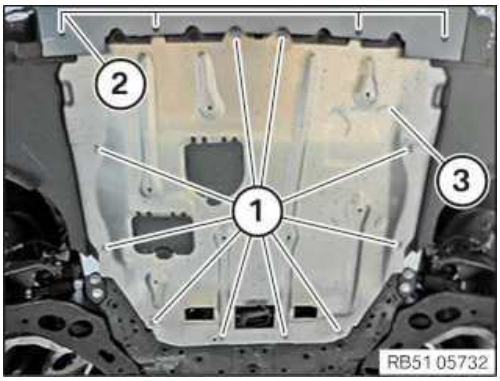
cardiagn.com

11 33 050 Removing and installing/replacing all rocker arms



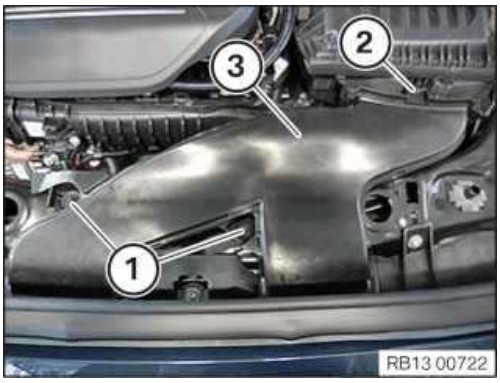
PRELIMINARY WORK

1 – Disconnecting all battery earth leads



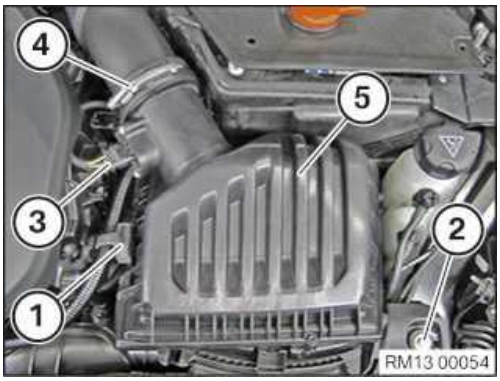
- See additional information.

2 – Removing the front underbody protection



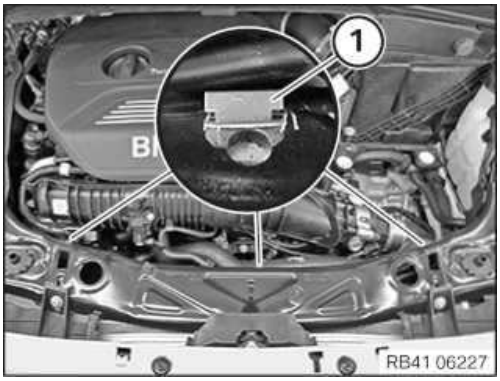
- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).



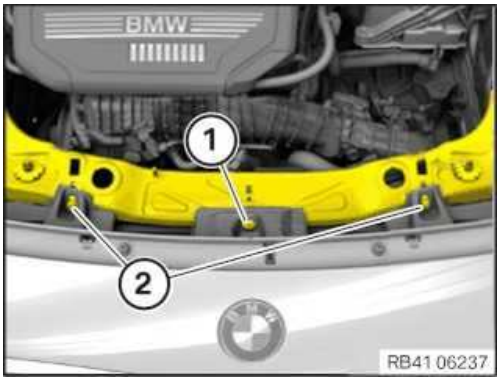
3 – Remove the intake neck for intake silencer housing

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

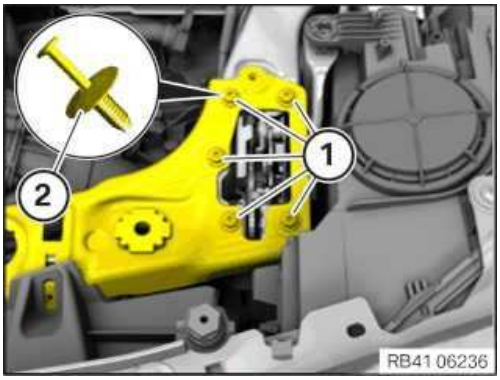


4 – Removing intake silencer housing

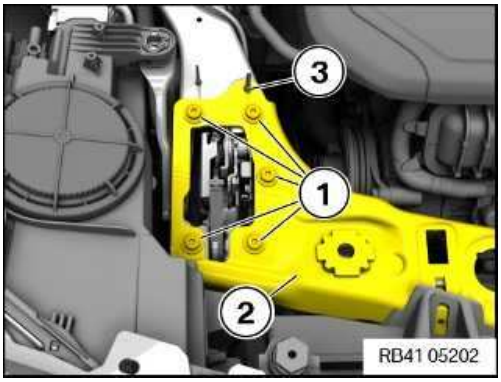
cardiagn.com



- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.



5 – Remove front cross connection



- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

6 – Draining coolant

cardiagn.com

WARNING

Hot fluids.

Risk of scalding!

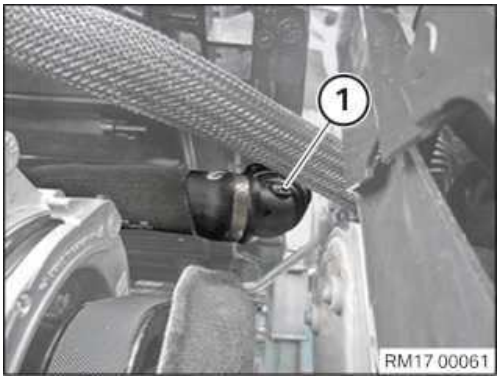
- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

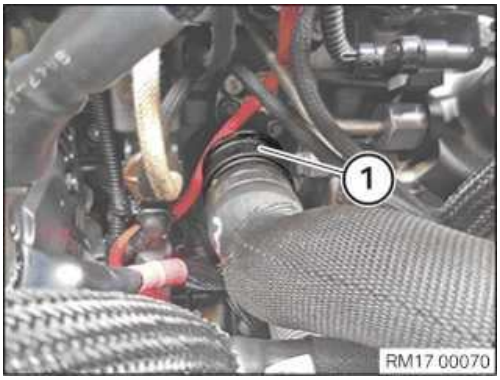
Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.



In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

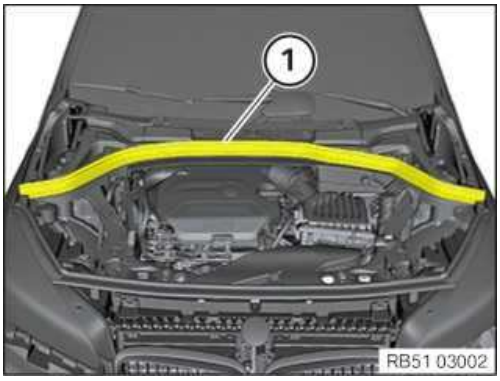
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen sealing cap (1).

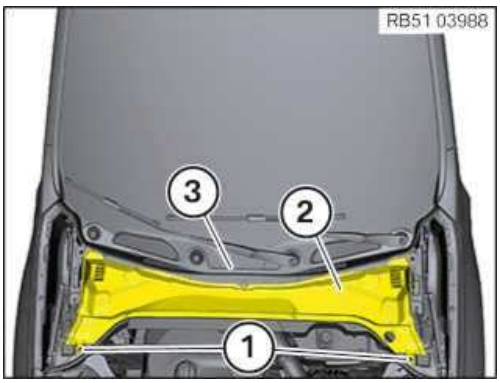
- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.



- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.

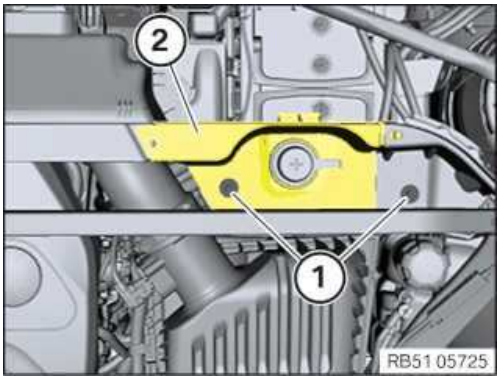
7 – Remove the seal for the rear bonnet

cardiagn.com



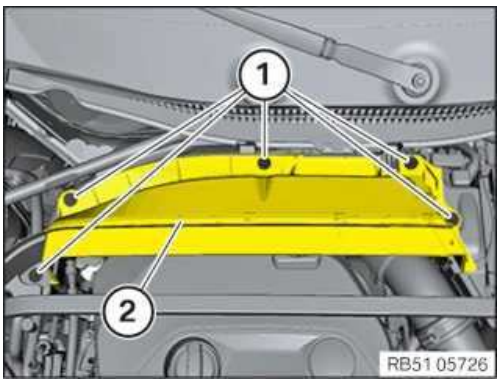
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Pull off rear bonnet seal (1) towards the top and remove.

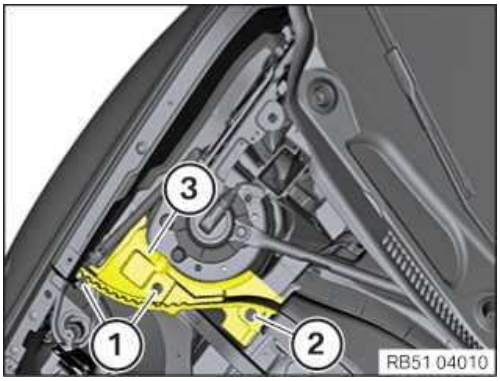
8 – Removing front cowl panel cover



- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

9 – Removing the upper bulkhead cover

- Loosen screws (1).
- Guide out and remove the cover (2).

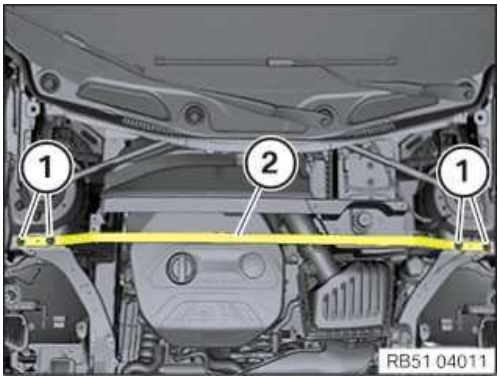


- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

10 – Remove suspension cross-brace

cardiagn.com

TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

NOTICE

Description is for right component only. The procedure on the left side is identical.

- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).

11 – Removing the acoustic cover

WARNING

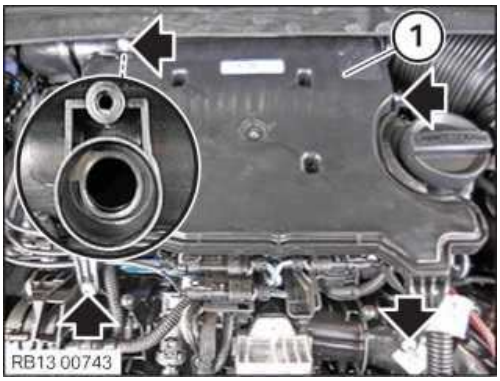
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

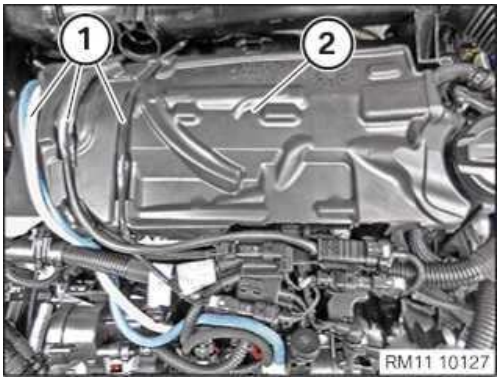
Damage to the acoustic cover.



Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

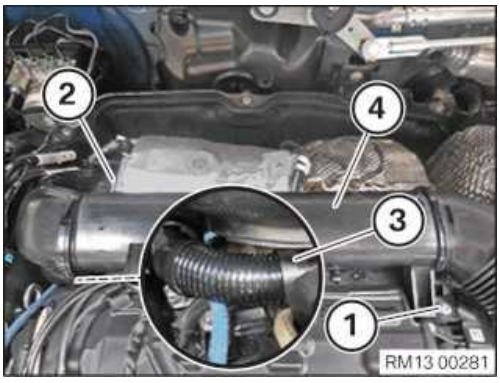


12 – Remove resonator

cardiagn.com

- Remove screws (arrows).
- Guide out and remove the resonator (1).

13 – Remove the acoustic cover for the injectors



- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

14 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

15 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

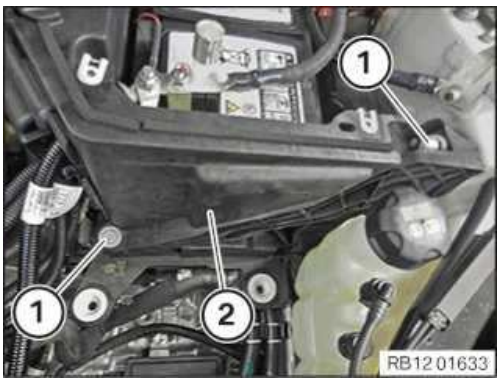
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

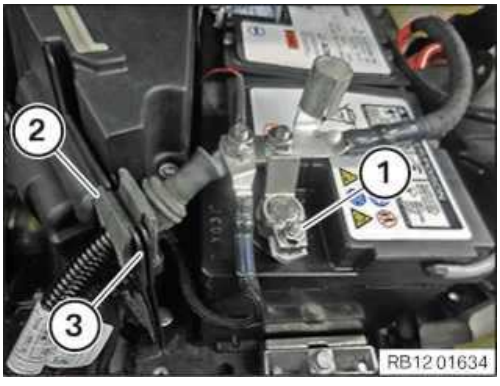
Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.



TECHNICAL INFORMATION

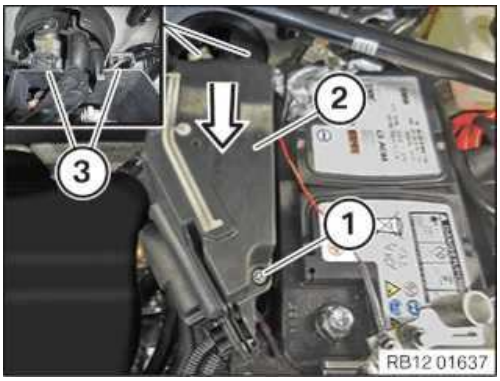
Follow instructions for removing and installing control units.



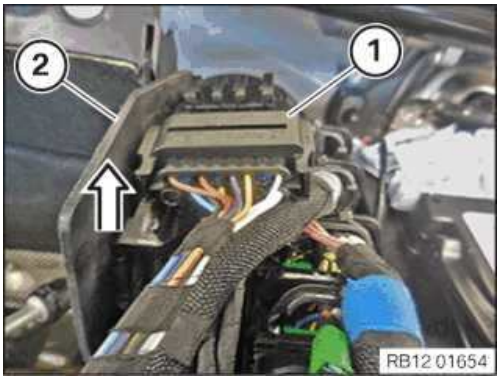
For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

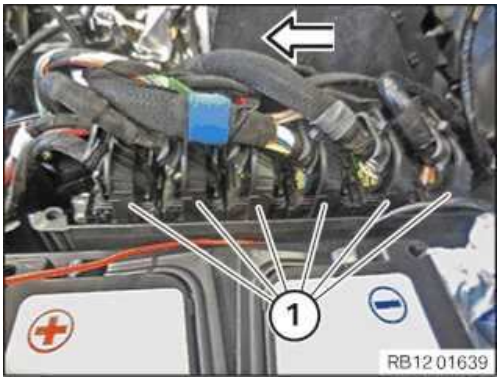
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



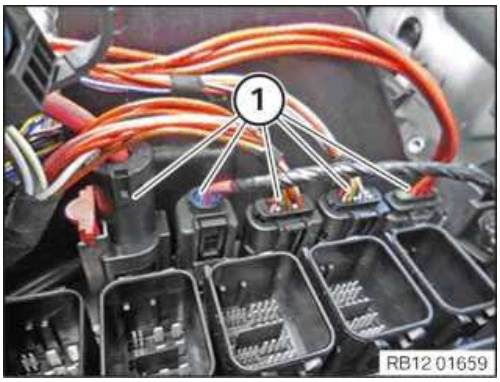
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



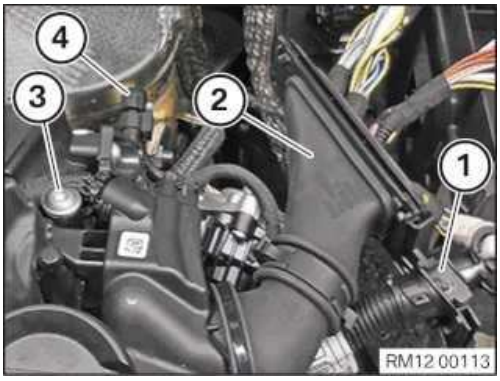
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



cardiagn.com

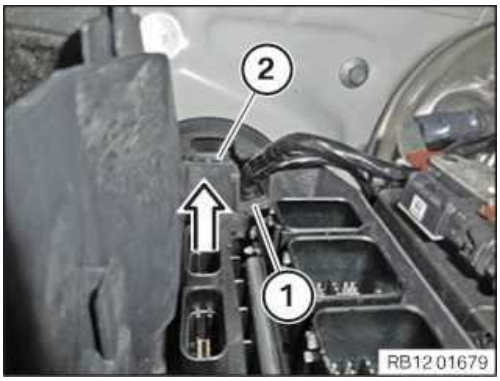


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

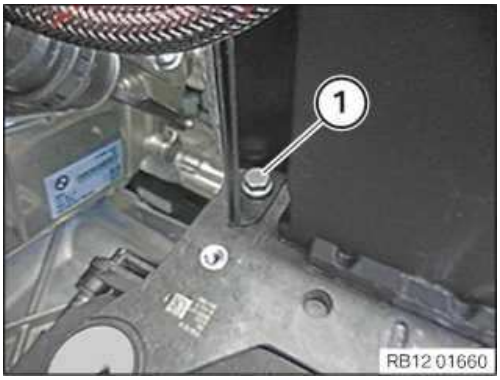


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

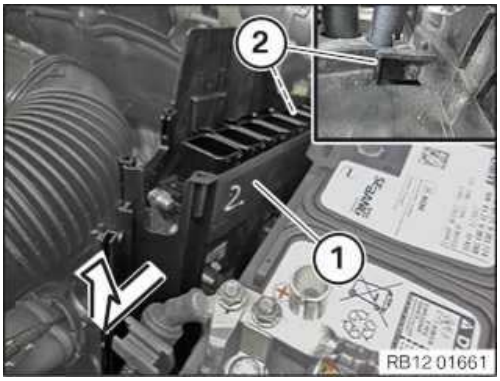
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).



- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

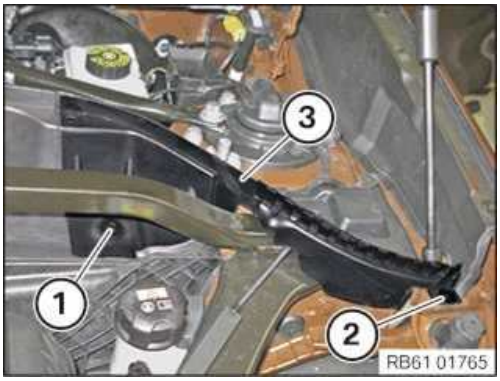


cardiagn.com

- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

- Loosen screw (1).

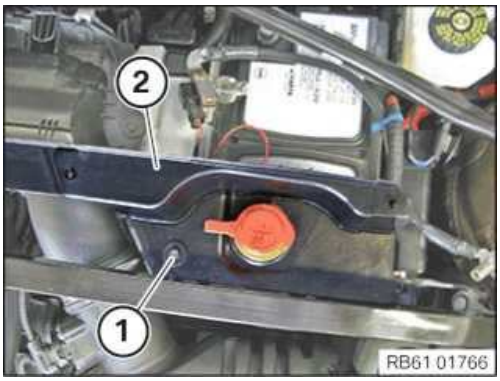
- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.



16 – Remove vehicle battery

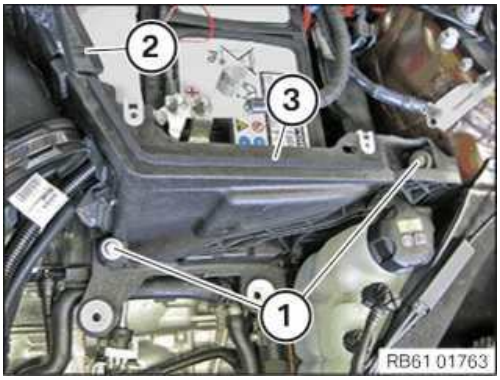
WARNING

Working on 12 V vehicle electrical system.

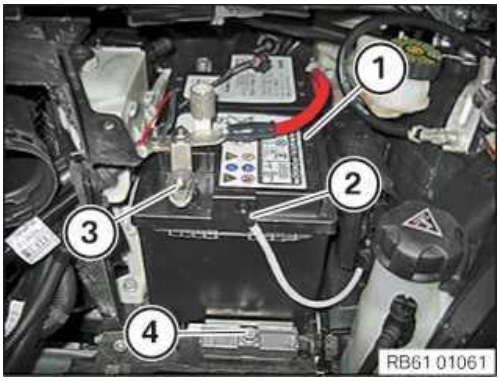


Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.



- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).



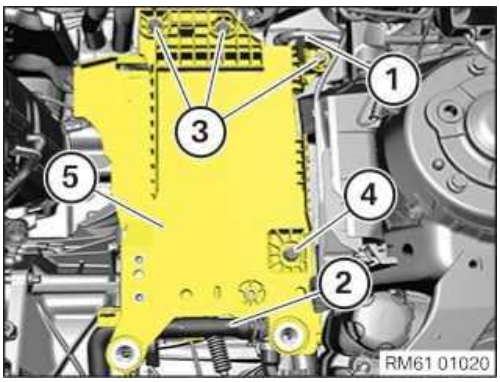
cardiagn.com

- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING



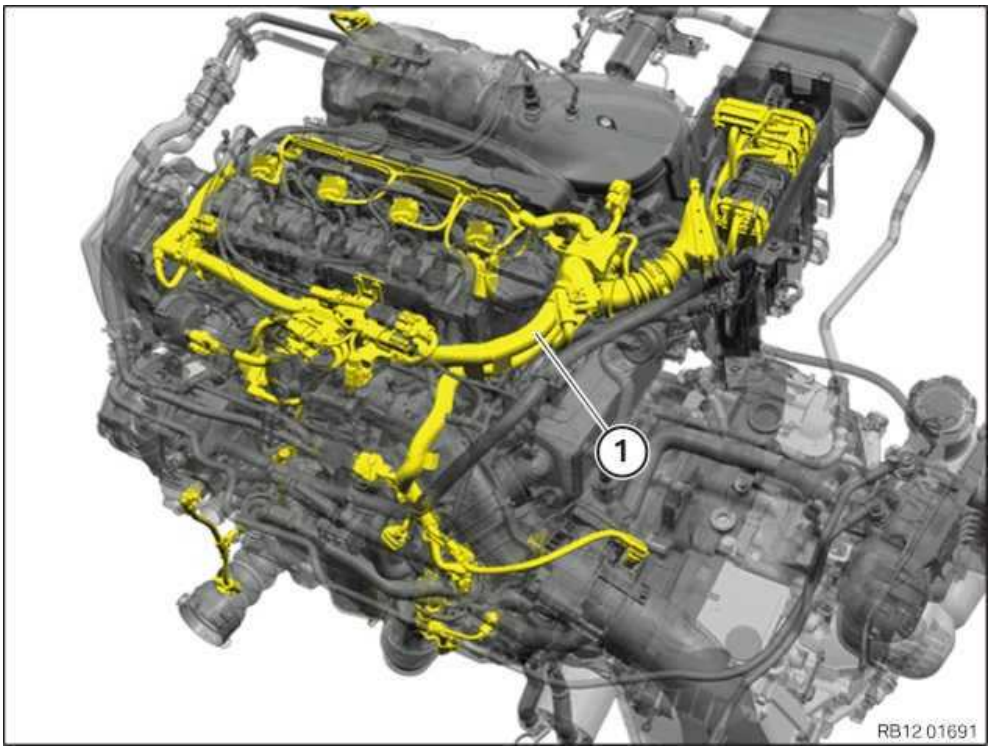
Unprotected battery terminals.

Risk of short circuits! Risk of fire!

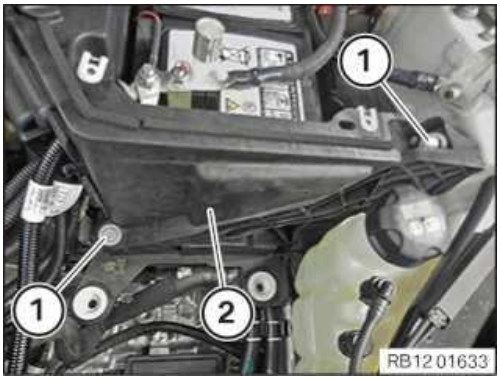
- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

17 – Remove battery holder

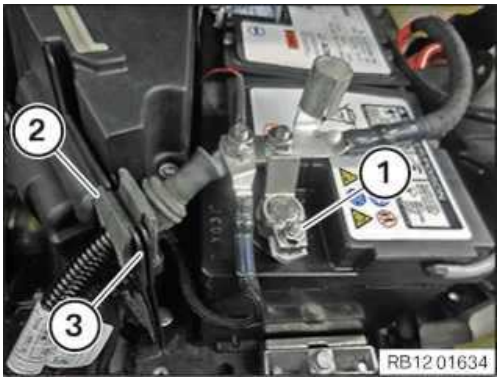


- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

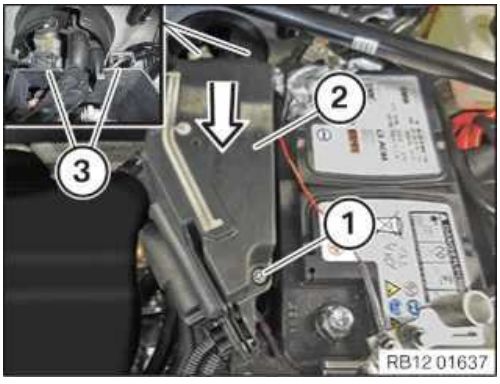


18 – Releasing the wiring harness section for the intake plenum

cardiagn.com

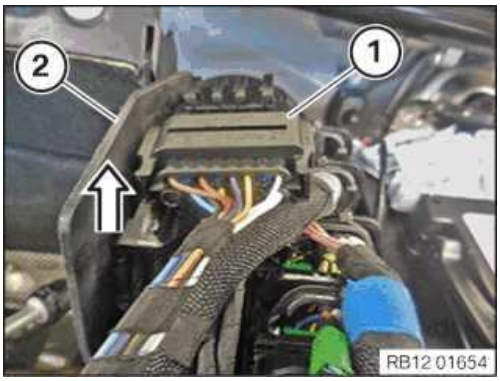


Overview: Wiring harness section for the engine

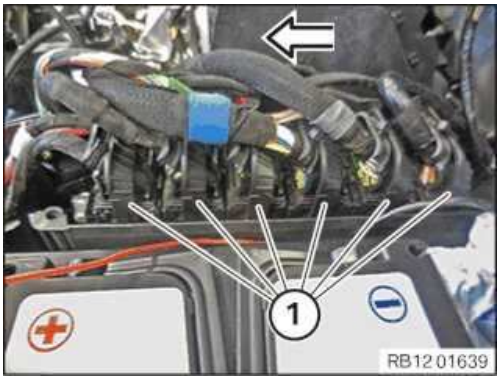


1 Wiring harness section for the engine

- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

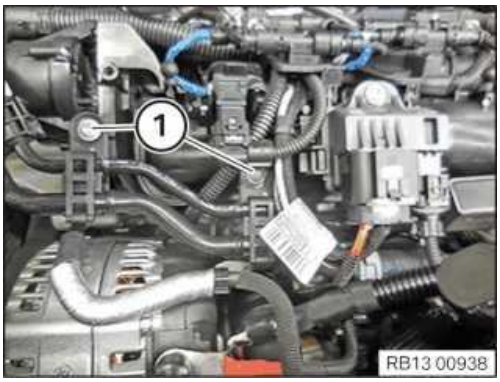


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

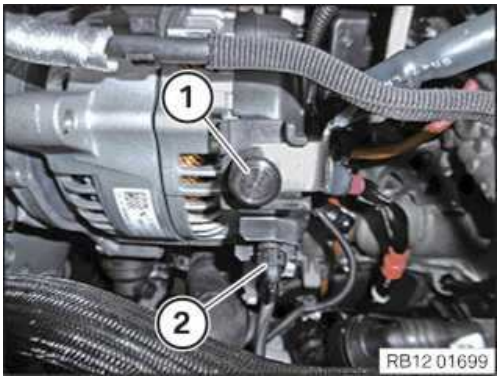


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

cardiagn.com

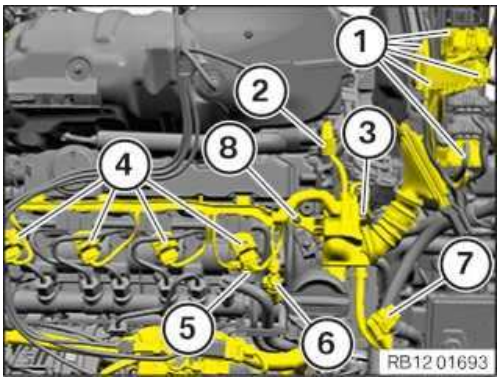


- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).

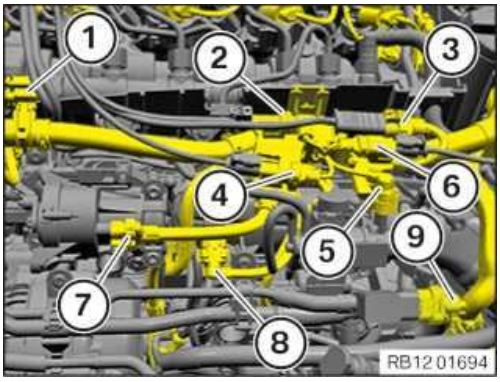


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

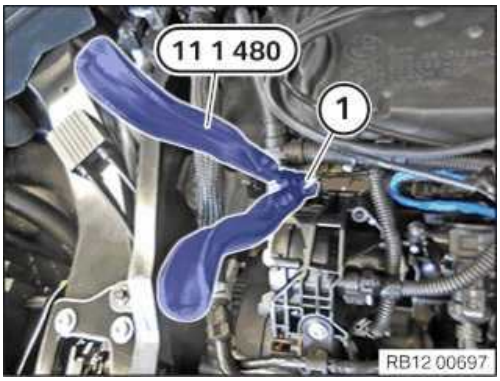
- Unlock and loosen connector (1).



- Loosen screws (1).

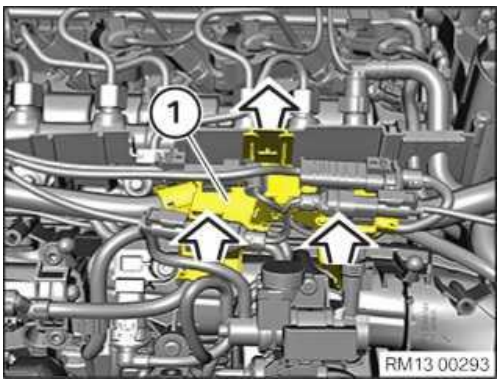


- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.



cardiagn.com

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).



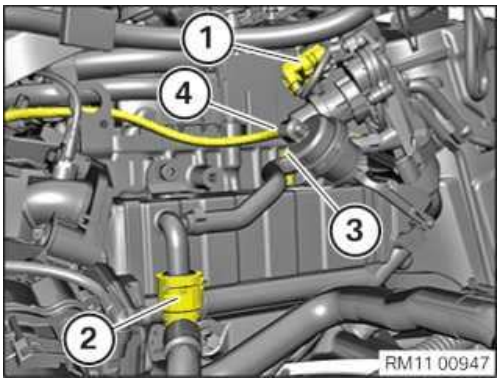
- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock and disconnect the connector (3) from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

▶ **Removing the cable clips from the intake plenum**

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

19 – Removing the exhaust-gas recirculation cooler

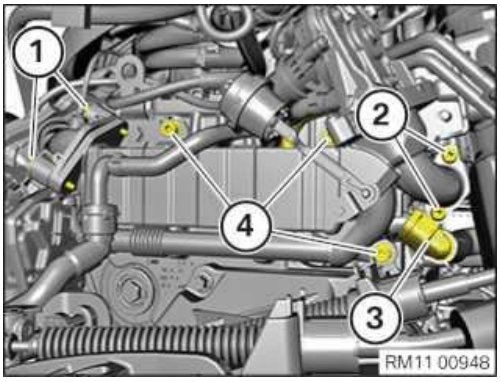


cardiagn.com

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

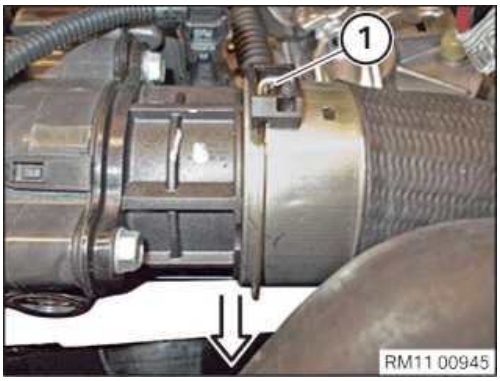
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

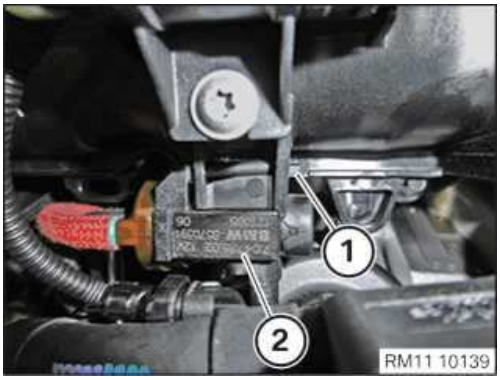
- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

20 – Removing the intake plenum

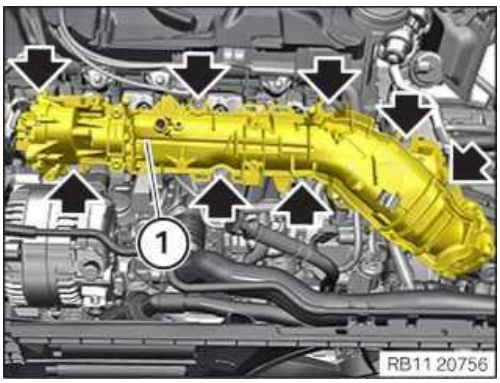


TECHNICAL INFORMATION

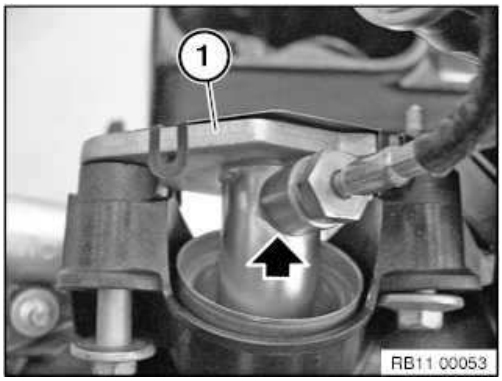
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the lock (1).



cardiagn.com



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

21 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

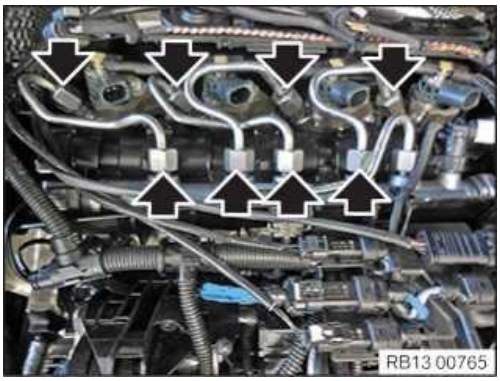
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.



TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

22 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

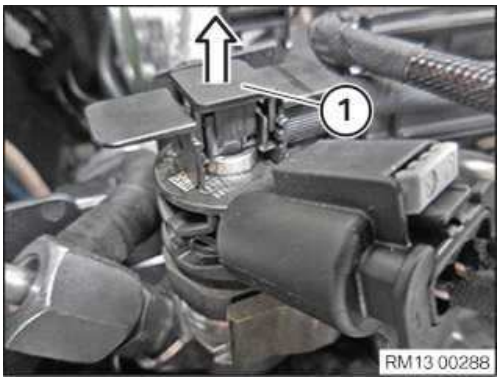
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

23 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

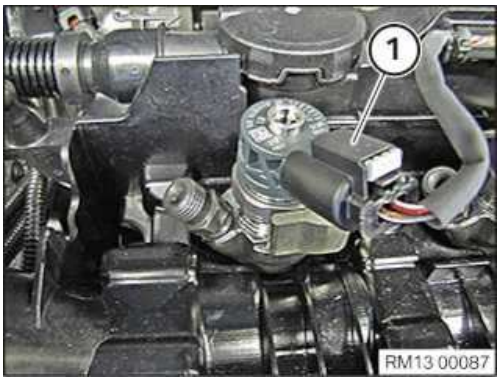
RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

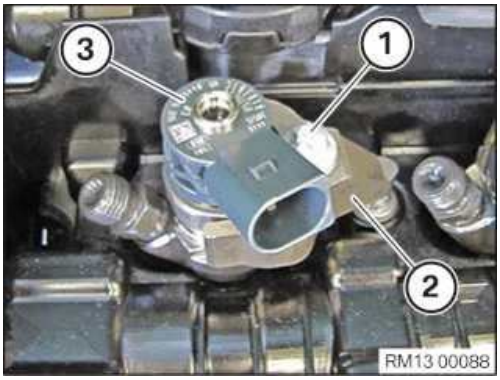
- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.



- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

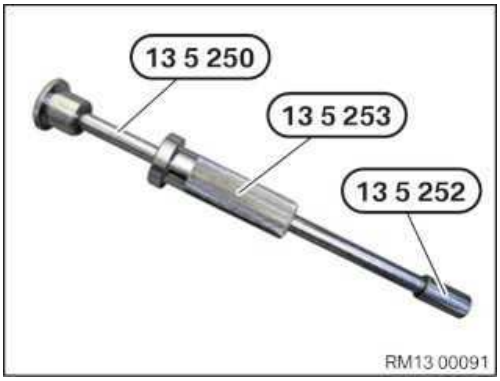
TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

- Unlock and disconnect connector (1).

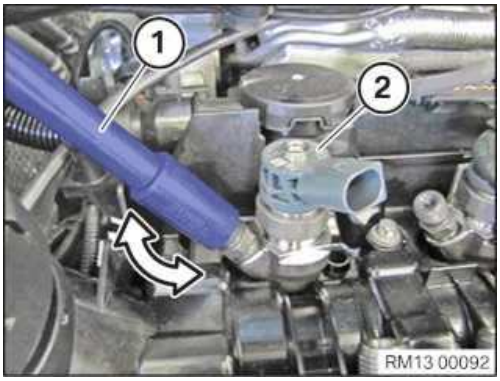
- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

▶ **Loosen stuck injectors**



cardiagn.com

RISK OF DAMAGE



Contaminant or foreign body.

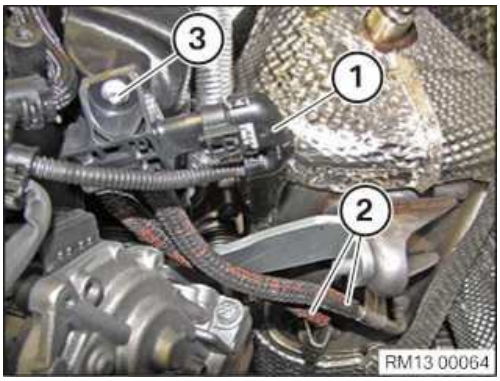
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)**back onto the special tool **0 493 321 (13 5 250)**.

- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

24 – Remove differential pressure sensor

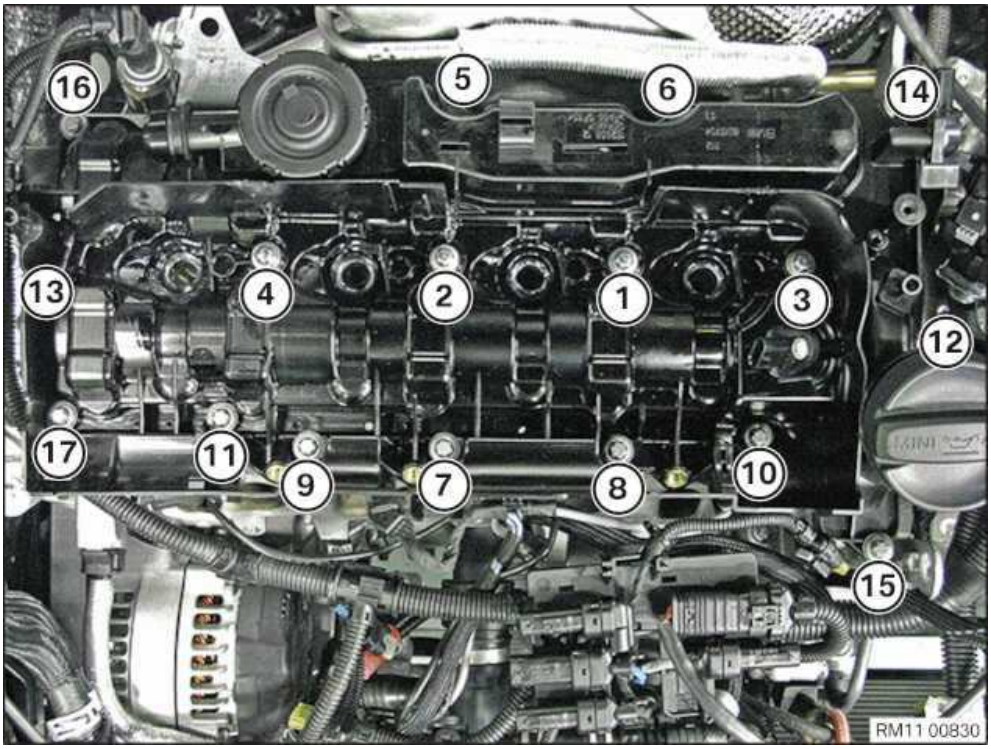


RISK OF DAMAGE

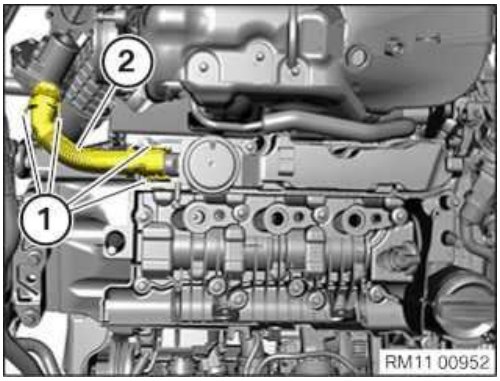
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



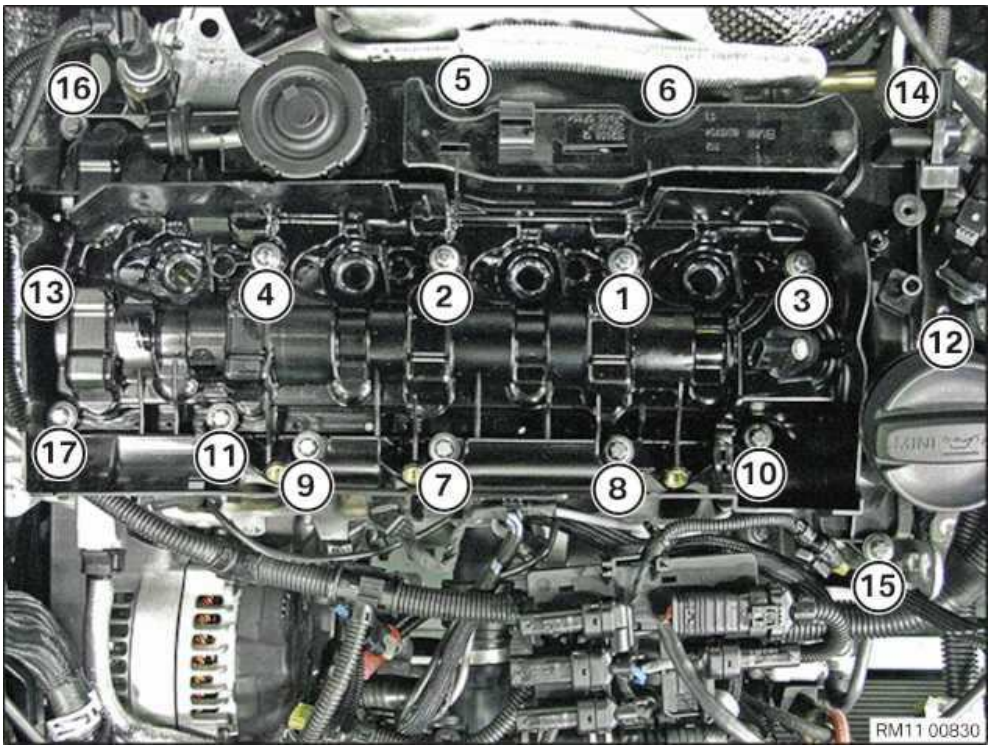
cardiagn.com



- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

25 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

26 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

TECHNICAL INFORMATION

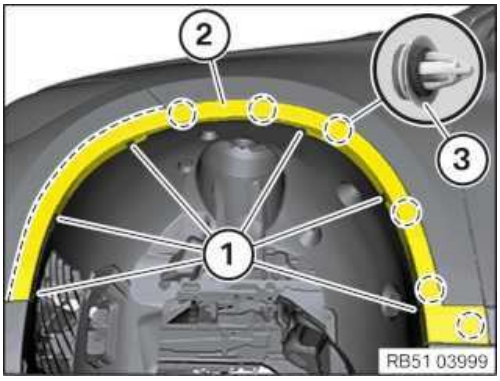
Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

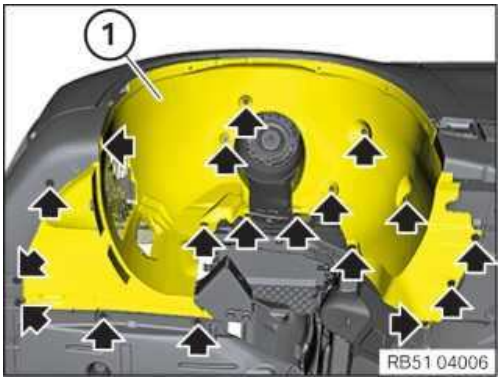
27 – Removing the front right wheel arch cover

▸ **Remove the front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.



cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

NOTICE

Description is for left component only. Procedure on the right side is identical.

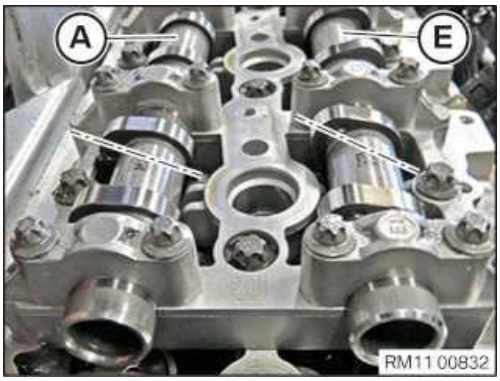
- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

28 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

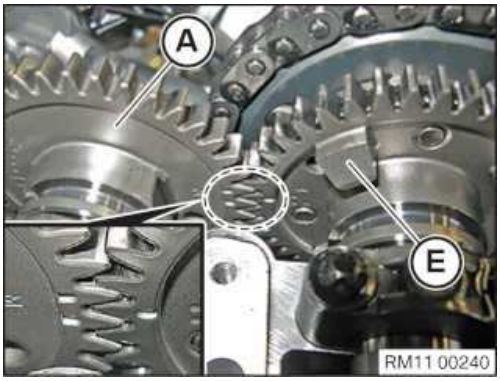


The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

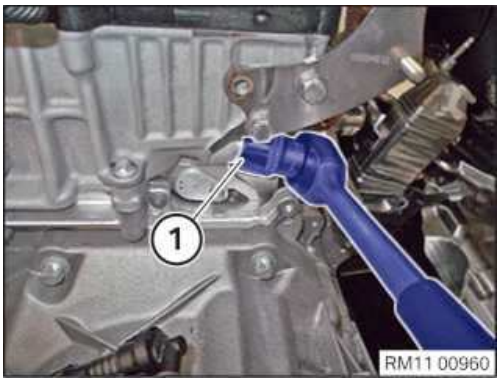
If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

29 – Remove chain tensioner piston



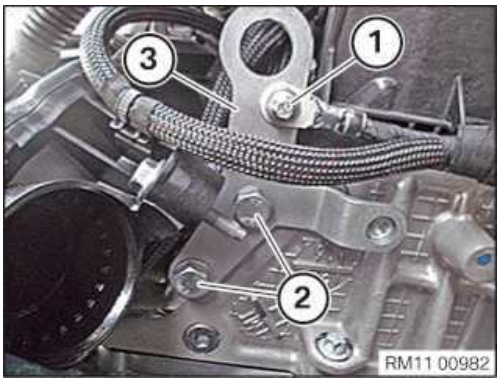
cardiagn.com

WARNING

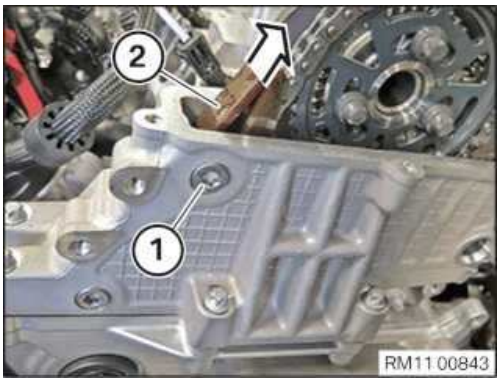
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



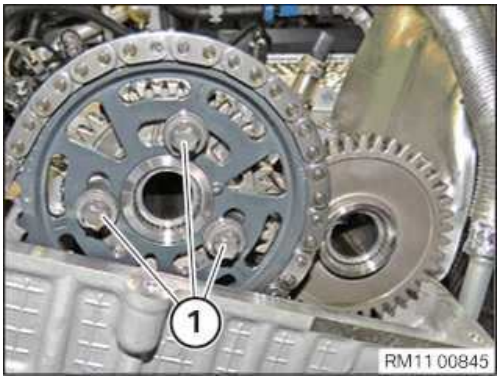
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

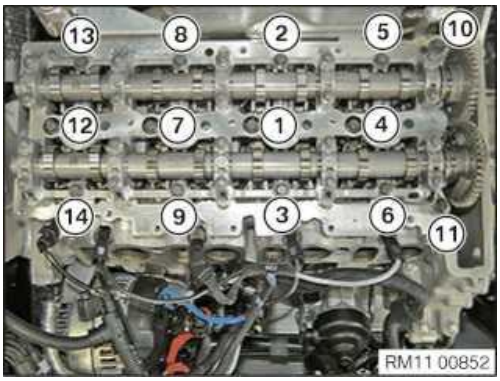
- Remove the chain tensioner piston (1).

30 – Remove the timing chain guide rail



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.



31 – Removing the camshaft sprocket on the intake camshaft

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

32 – Removing the camshaft support

cardiagn.com

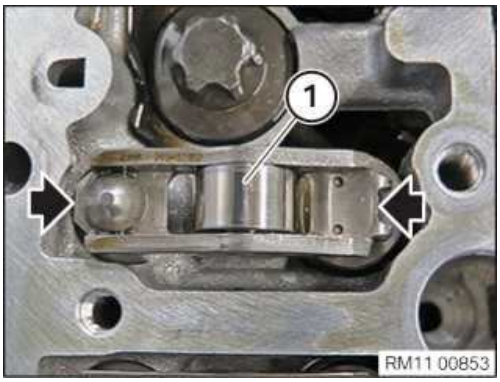
- Evenly loosen all screws in a sequence from (14) to (1).
- Loosen and remove all screws in a sequence from (14) to (1).

  Both camshafts can be removed with the camshaft carrier.
- Remove the camshaft support including camshafts towards the top.

MAIN WORK



33 – Remove roller cam followers

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

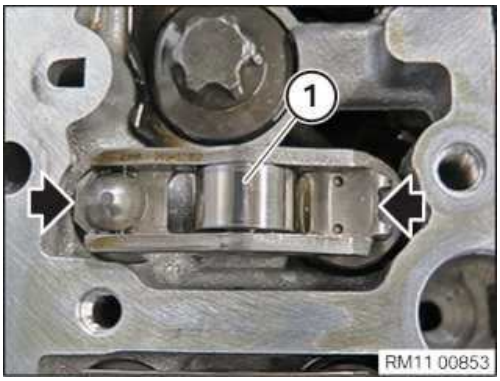
Damage to the engine.

If the classification of the roller cam followers is ignored, this can lead to engine damage.

- Observe the classification of the roller cam followers.
- Always reuse used roller cam followers at the same position.

- Remove the roller cam follower (1) and place it onto the special tool **0 495 105 (11 4 480)**.
- Repeat the process for all roller cam followers.

34 – Install the roller cam followers



RISK OF DAMAGE

Contaminant or foreign body.

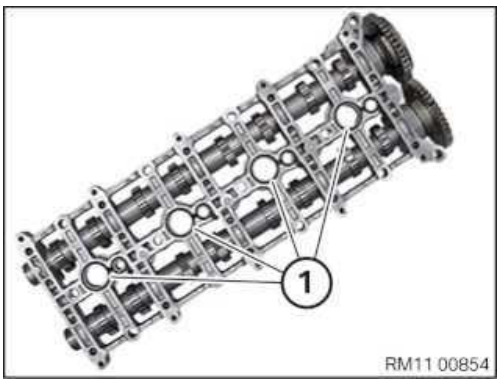
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

RISK OF DAMAGE

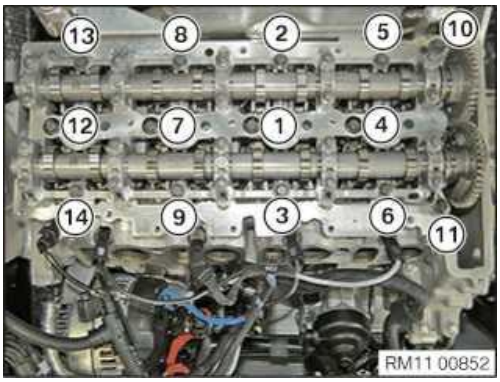
Damage to the engine.



If the classification of the roller cam followers is ignored, this can lead to engine damage.

- Observe the classification of the roller cam followers.
- Always reuse used roller cam followers at the same position.

- Install the roller cam follower (1).
- Repeat the process for all roller cam followers.

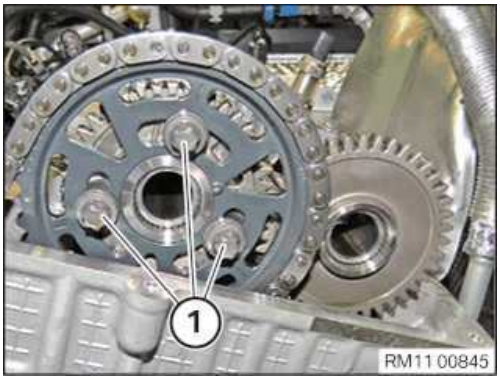


POSTPROCESSES

35 – Installing the camshaft support

- Renew gaskets (1).

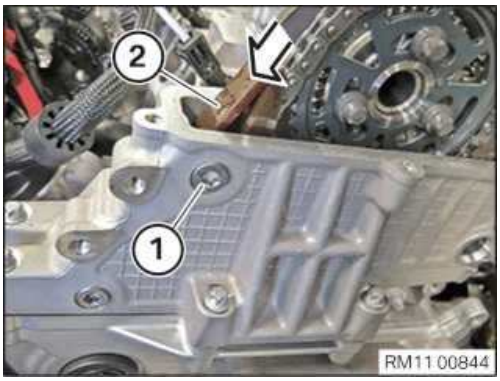
  Parts: gaskets



- Position the camshaft support including the camshafts.
- Tighten the screws in a sequence from (1) to (14) in several steps.

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

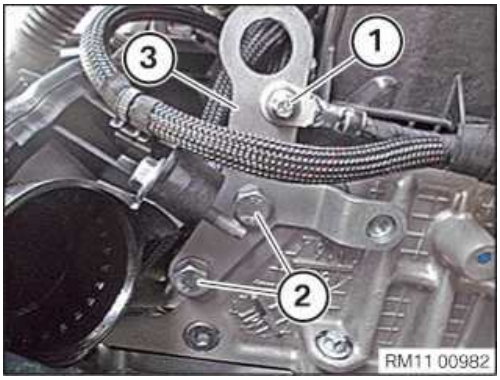


36 – Installing the camshaft sprocket on the intake camshaft

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

37 – Install the timing chain guide rail

cardiagn.com



- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

38 – Installing the chain tensioner piston

WARNING

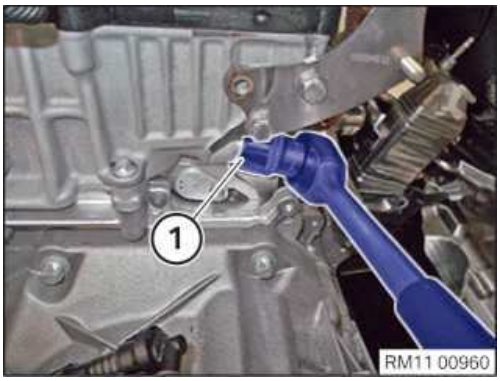
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Renew sealing ring (1).

  Parts: Sealing ring

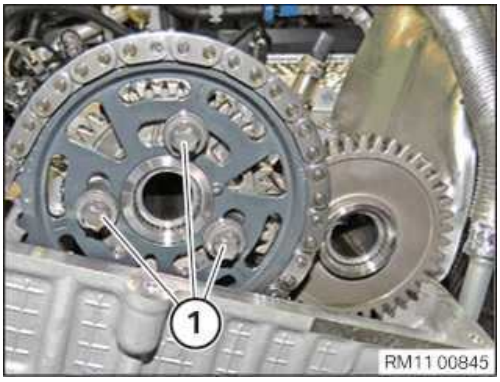


TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

cardiagn.com



- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

39 – Tightening the camshaft sprocket on the intake camshaft

- Tighten the screws (1).

Camshaft sprocket to camshaft

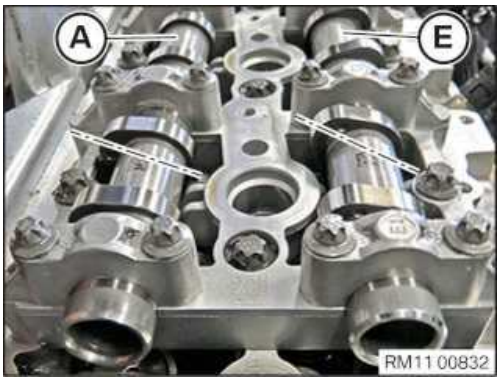
M7x17.			17 Nm

40 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

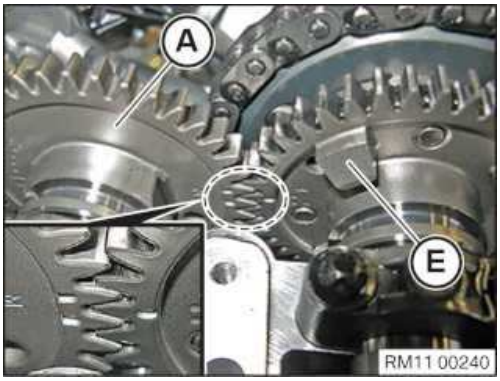


The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

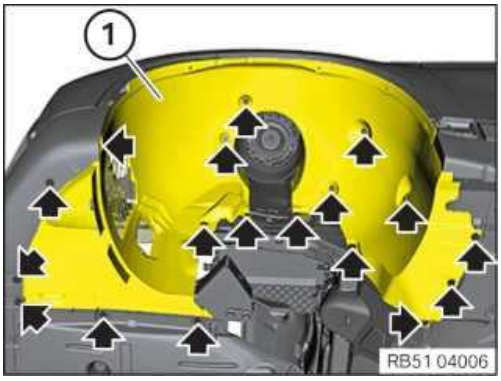
- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.



- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

41 – Installing the front right wheel arch cover

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

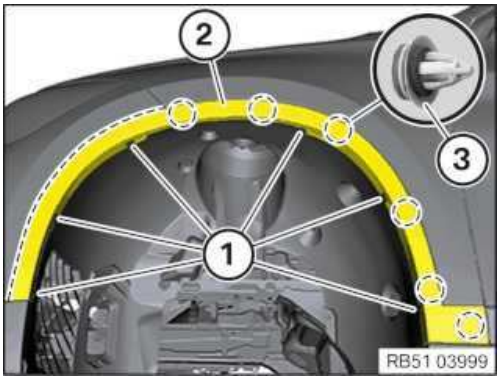
- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm



▸ **Installing front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.
  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

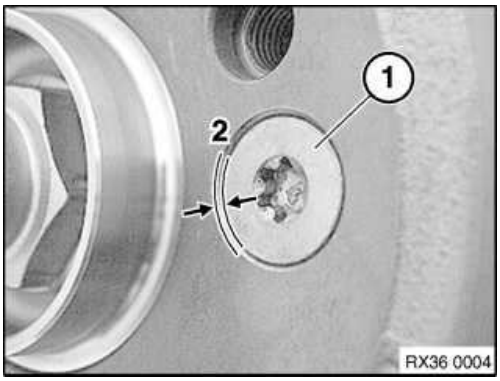
42 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

cardiagn.com

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

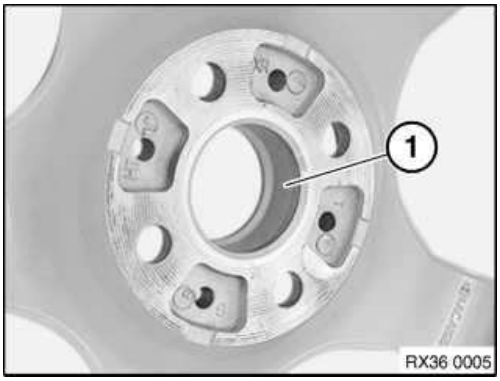


- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

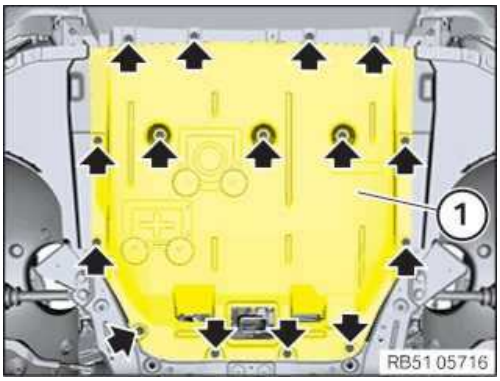
TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

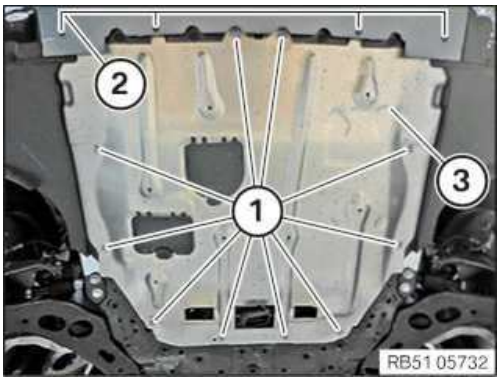


- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		



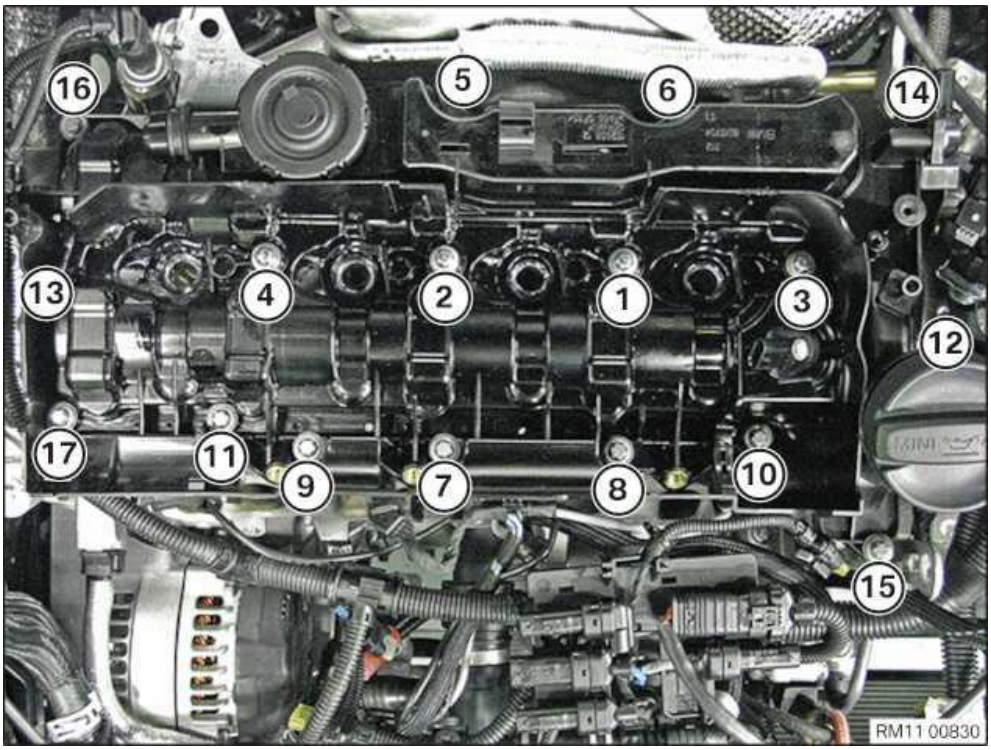
43 – Installing the front underbody protection

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

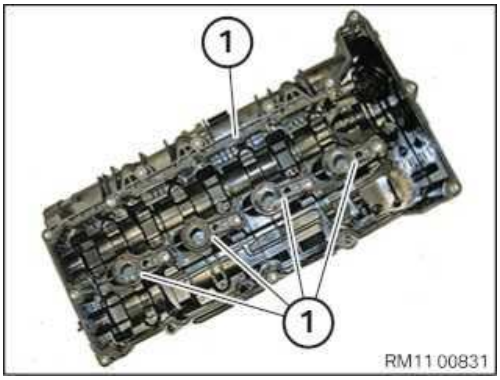
Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).



Underbody protection front

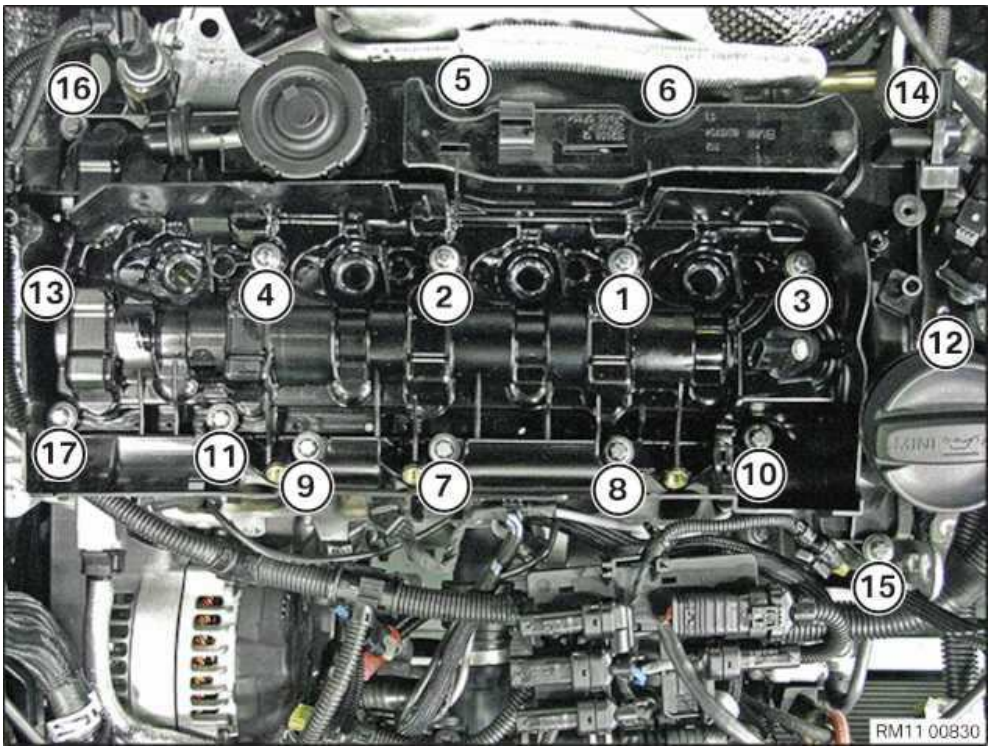
Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm



44 – Installing cylinder head cover

cardiagn.com

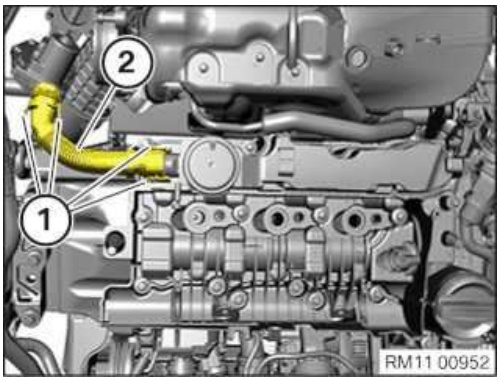
Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket

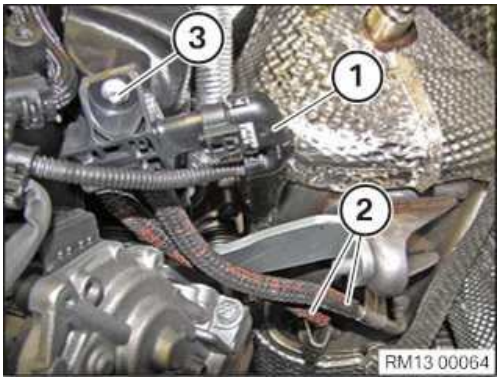


- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-



cardiagn.com

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

45 – Installing differential pressure sensor

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

46 – Installing injectors of injection system

▶ **Cleaning the injector shafts**

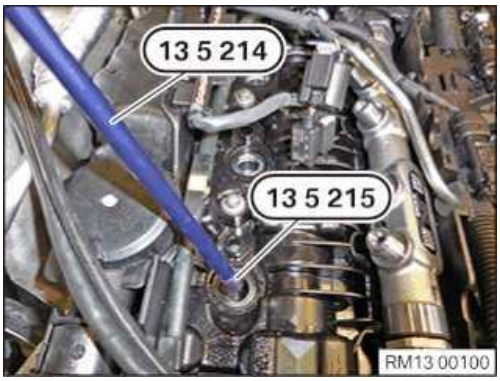
CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

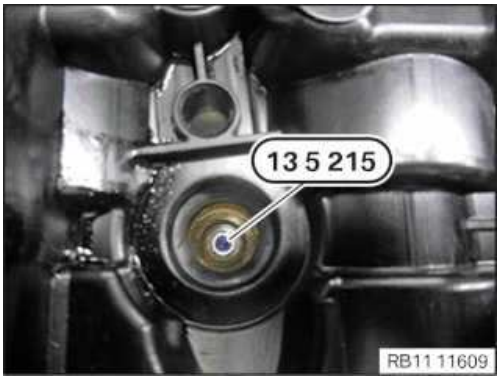
- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.



RISK OF DAMAGE

Contaminant or foreign body.

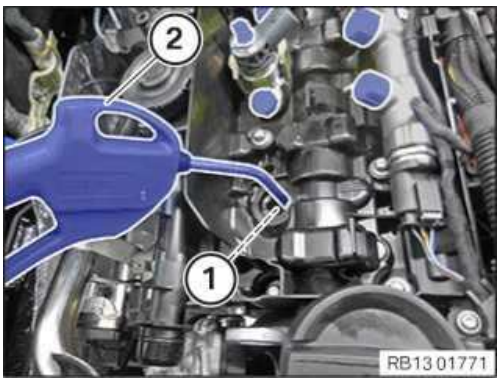


Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

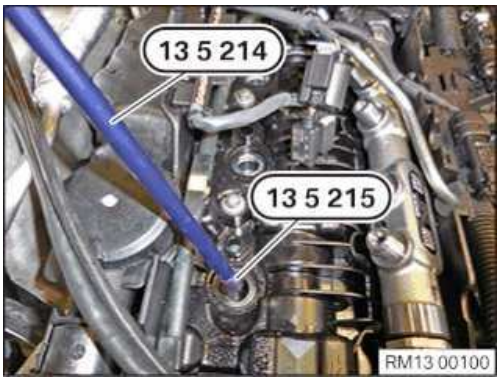
cardiagn.com

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

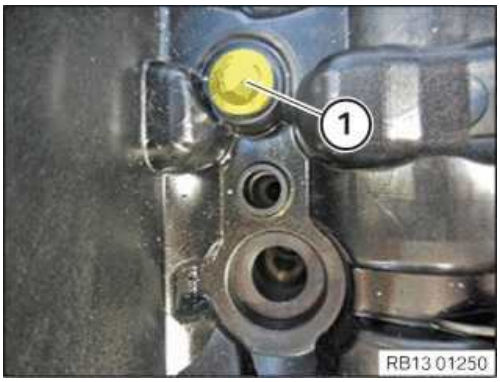


- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

- Blow out injector shaft (1) with air gun (2).

cardiagn.com

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.



▸ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▸ **Prepare the injector for installation**

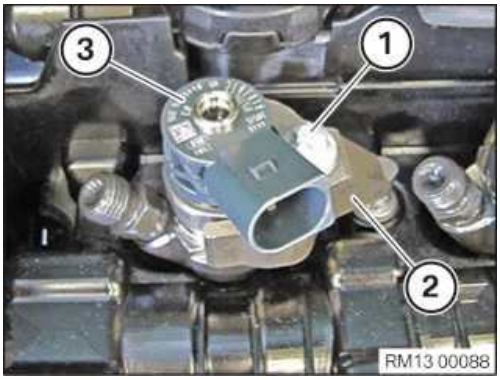
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

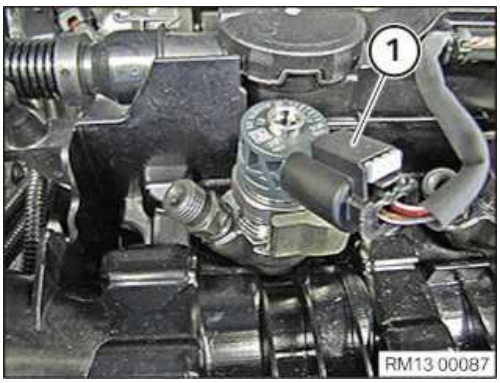


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring

- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials



Injector lubricating grease	50 g, Can	83230441070

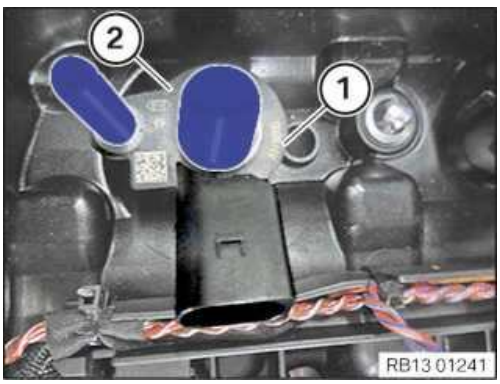
- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



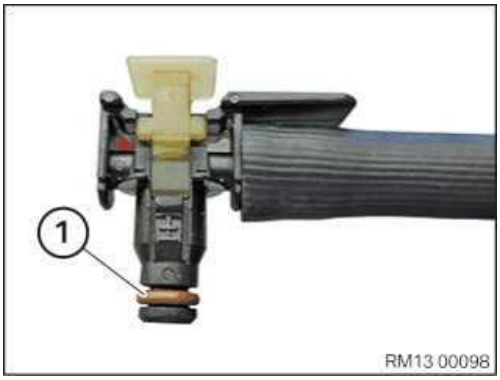
▸ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

cardiagn.com

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

47 – Connect the leakage oil line on the injector

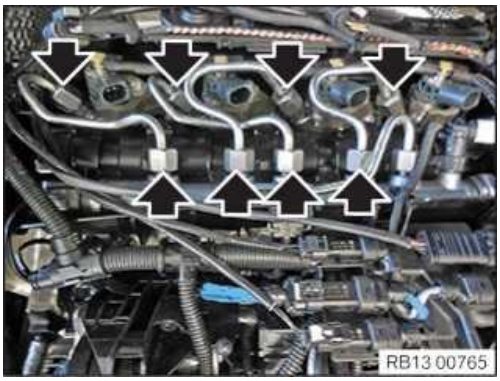
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

48 – Installing high pressure lines between rail and injectors



TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

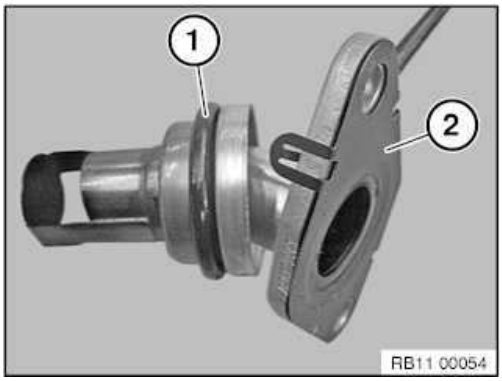
Reset special tool in early to avoid bending pressure lines.

cardiagn.com

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

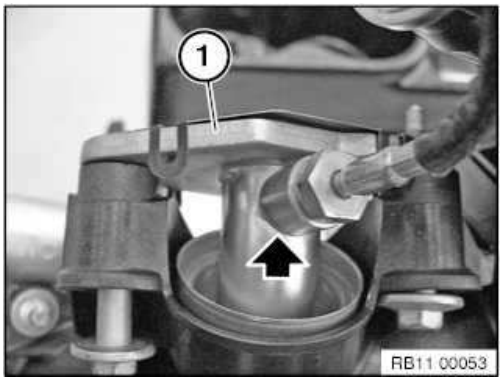


- Tighten the high pressure lines (arrows) with the special tool .

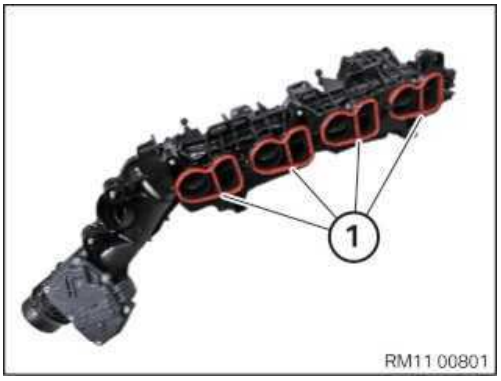
High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).



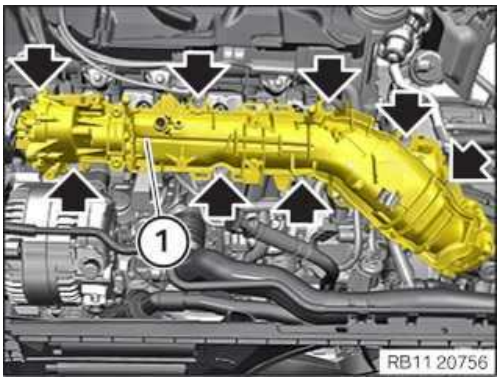
49 – Installing the intake plenum



- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

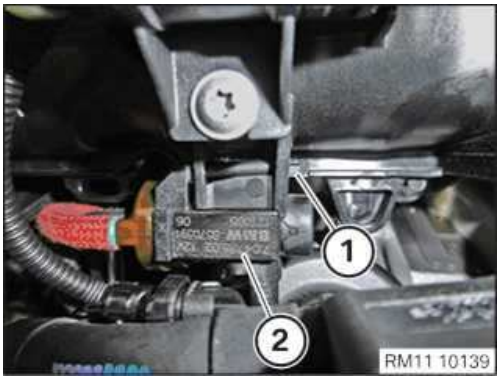
  Parts: Gasket
- Position the seal (2) and clip it in.



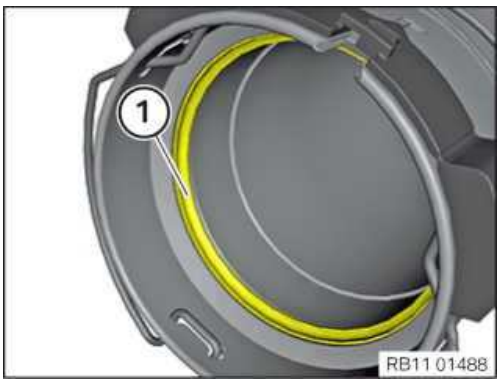
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



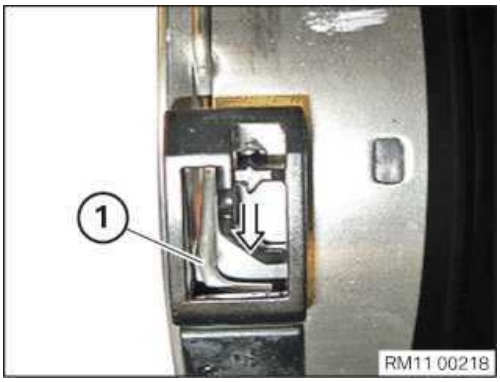
cardiagn.com



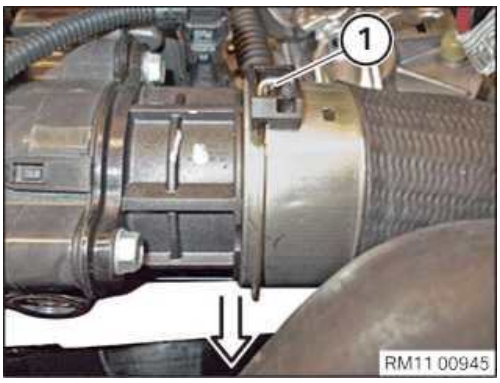
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

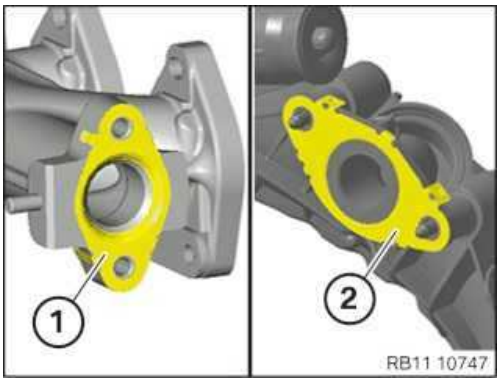
  Parts: Sealing ring

- Engage the lock (1) on the bracket (arrow).

- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

50 – Installing the exhaust-gas recirculation cooler



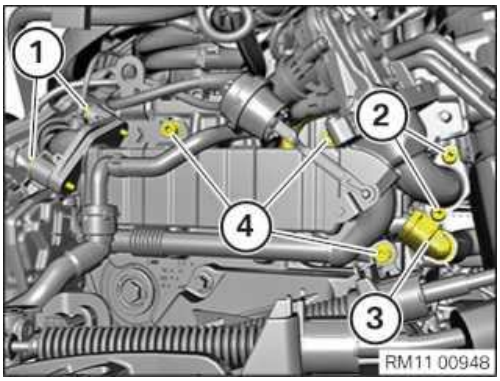
cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts

- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.

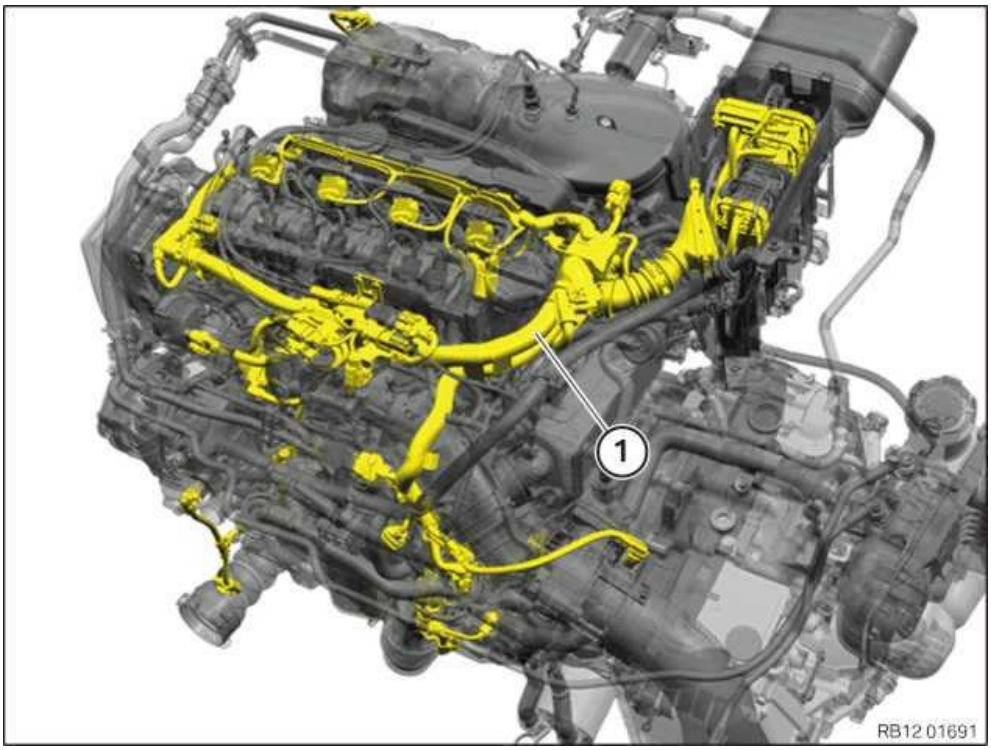
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

cardiagn.com

TECHNICAL INFORMATION



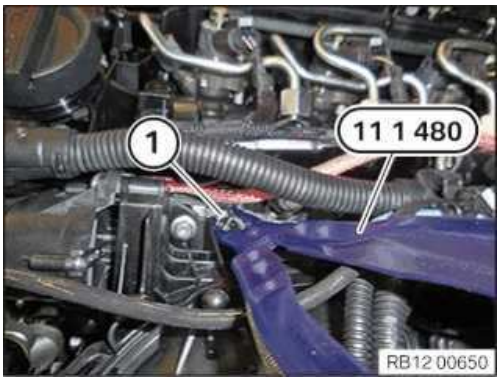
Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

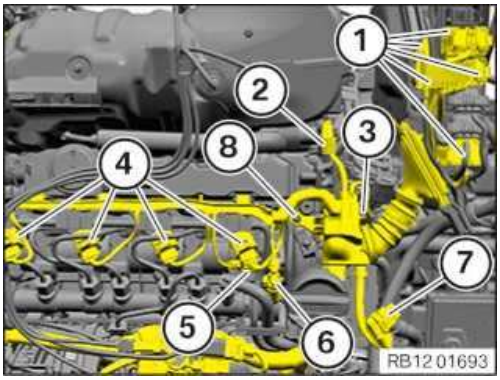
51 – Fastening the wiring harness section for the intake plenum

Overview: Wiring harness section for the engine



1 Wiring harness section for the engine

▸ **Installing the cable clip for the intake plenum**

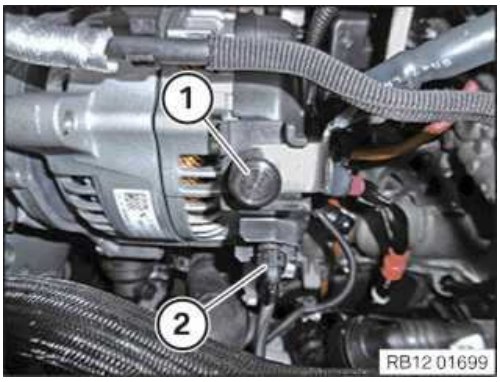


- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

cardiagn.com

- Connect and lock the connector (1) on the glow elements.

  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.

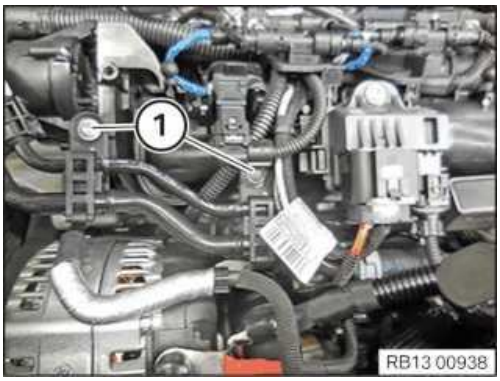


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.

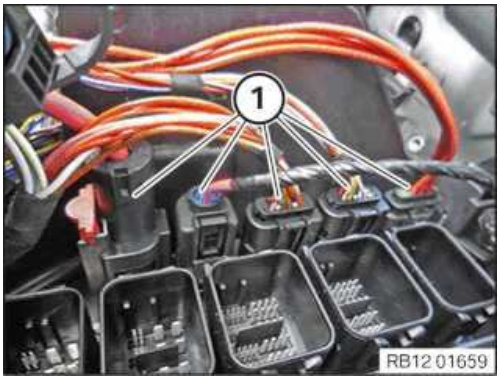


- Connect and lock the connector (2).

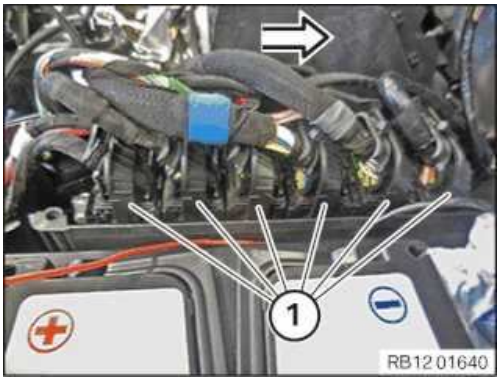
  Lock must snap audibly into place.
- Connect the positive battery cable (1) and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

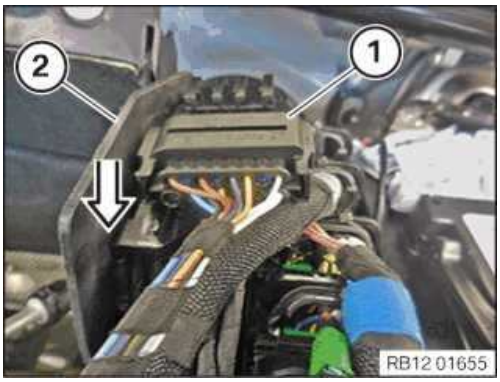


cardiagn.com

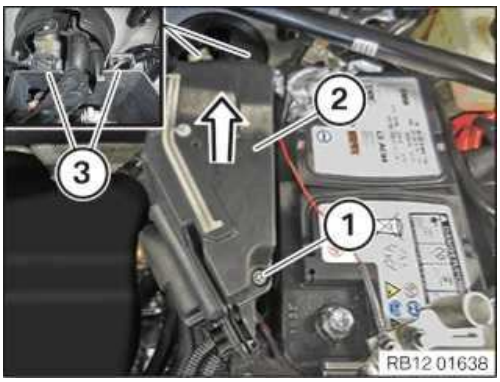


- Position the fuel line.
- Tighten the screws (1).

Fuel line to intake plenum



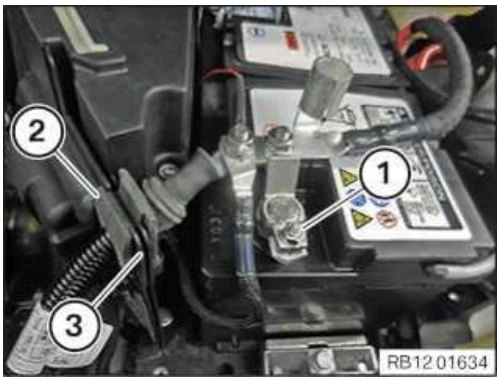
TS6x20		Tightening torque	5 Nm



- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

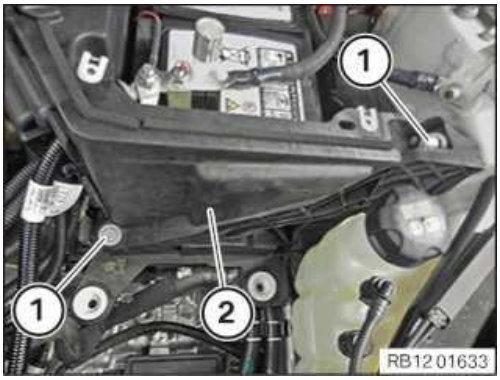
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm



cardiagn.com

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray

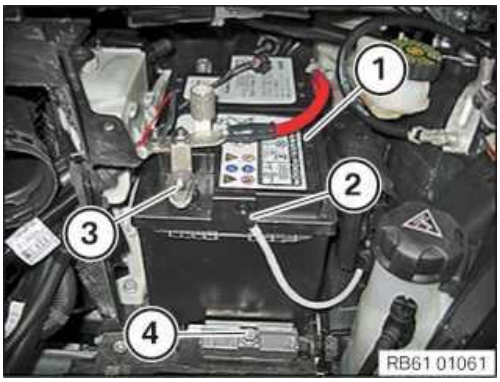
M8		Tightening torque	19 Nm

52 – Install the battery holder

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm



- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

53 – Install vehicle battery

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

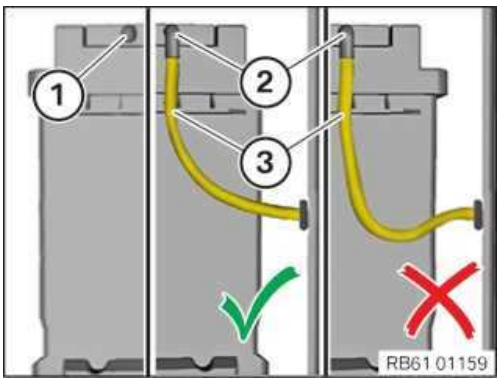
Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

▸ **Check the vent holes of the battery**

cardiagn.com

WARNING



Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

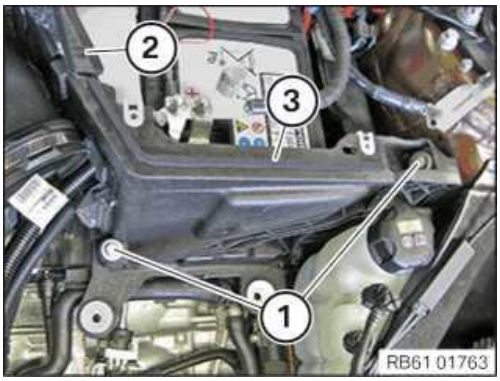
» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

Check

- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).



Result

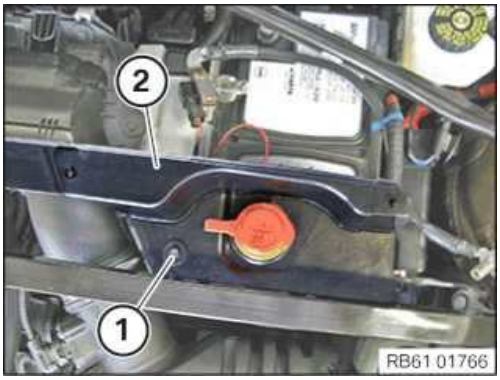
» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

cardiagn.com

- Insert tension strut (3) and tighten with screws (1).

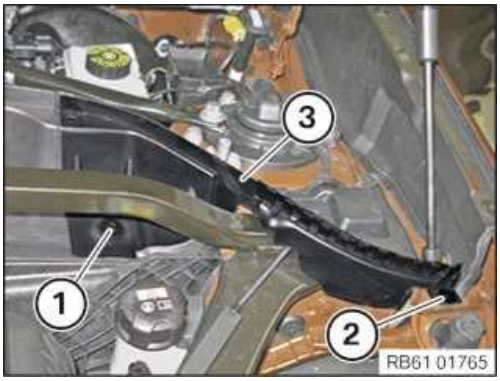


Trailing link

M8		Tightening torque	19 Nm

- Tighten down screw (2).

Battery cover



M8		2,8 Nm

- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

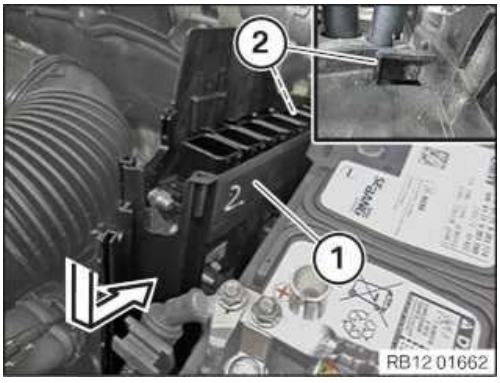
- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

54 – Install electronics box

Prerequisite



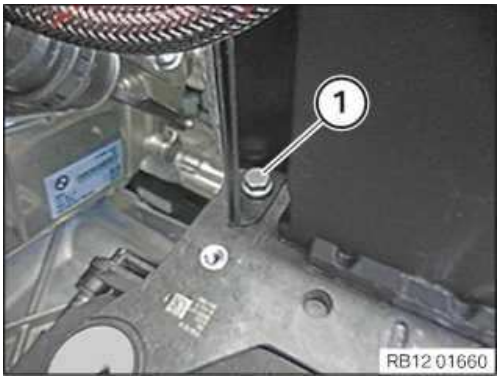
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

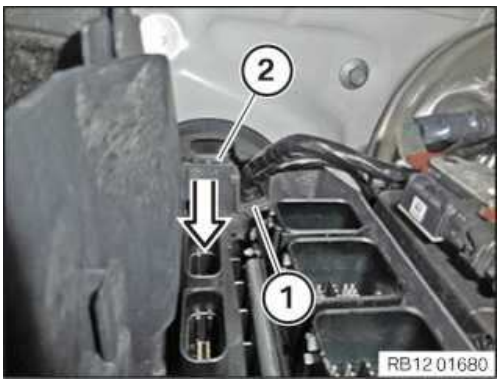
Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

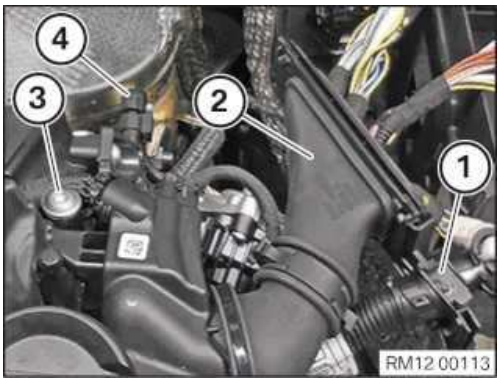


- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

cardiagn.com



- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).

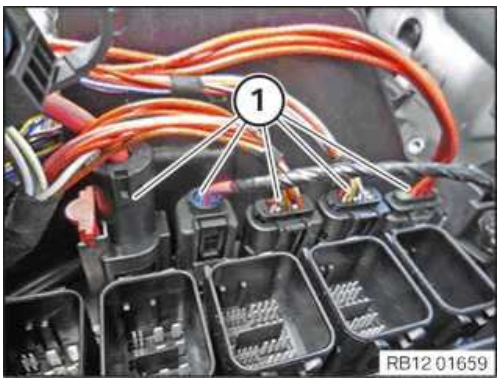


- Tighten down screw (1).

Electronics box to battery tray

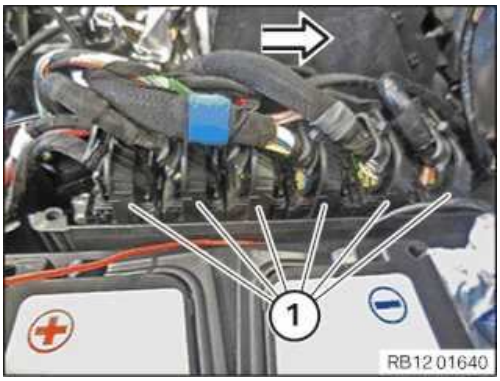
M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



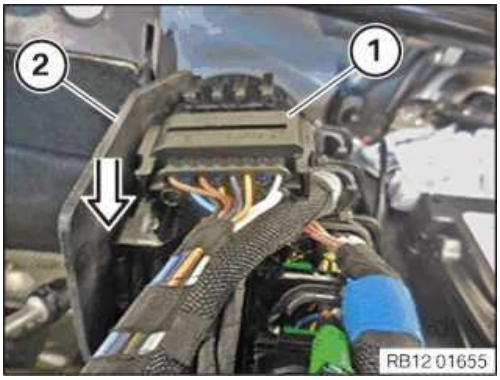
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

Wiring harness to cylinder head cover

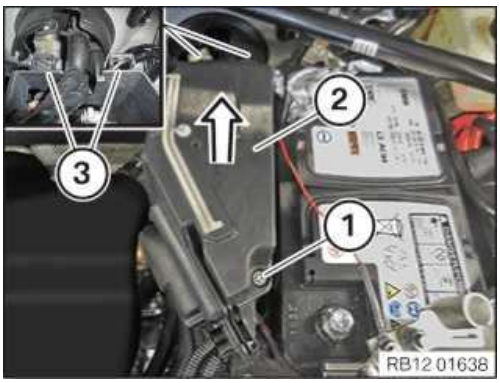


TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

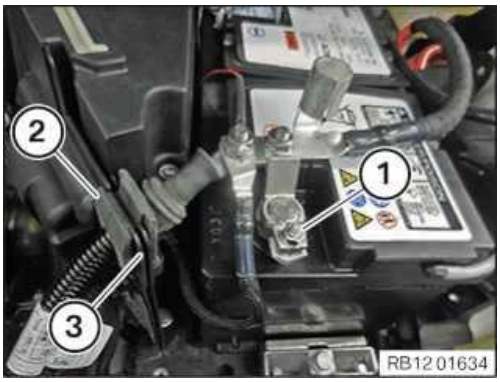


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



cardiagn.com

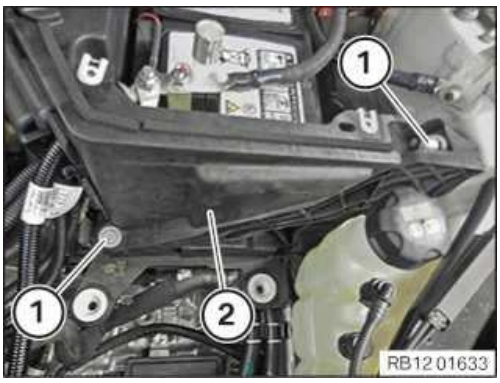
- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box



RF5x26.5		Tightening torque	2,5 Nm

Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

cardiagn.com

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

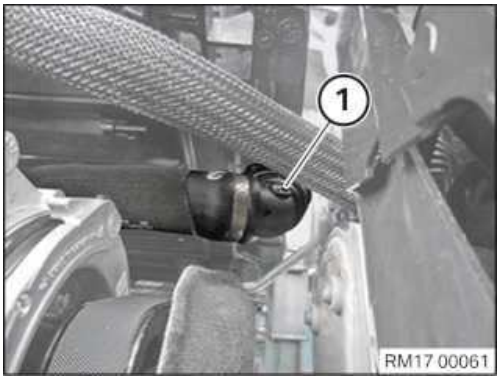
  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.

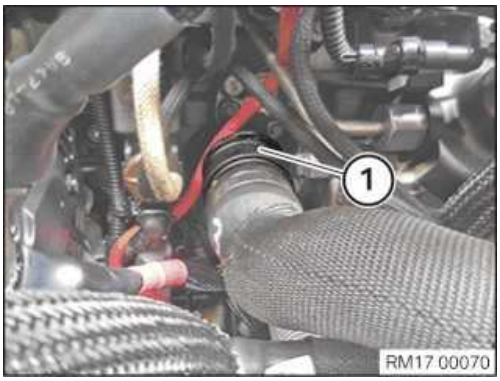
- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

56 – Connect the coolant line



TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect the right coolant line (1) to the radiator and lock audibly.

cardiagn.com

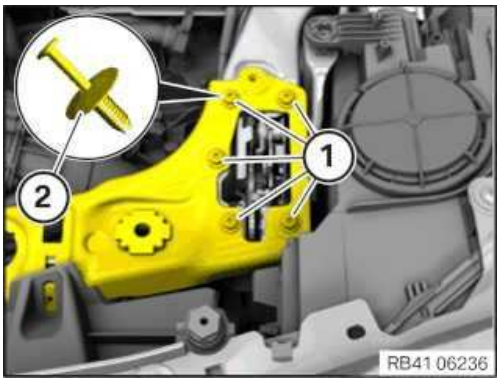
- Connect the coolant line (1) to the connecting branch and lock audibly.

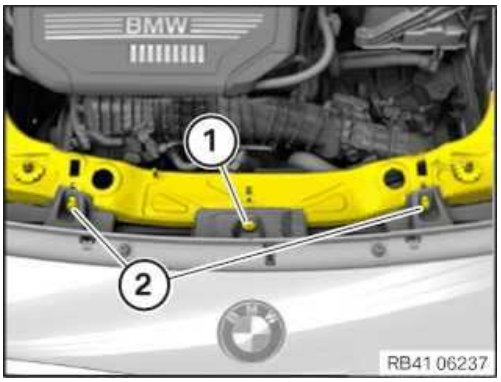
57 – Install front cross connection



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm

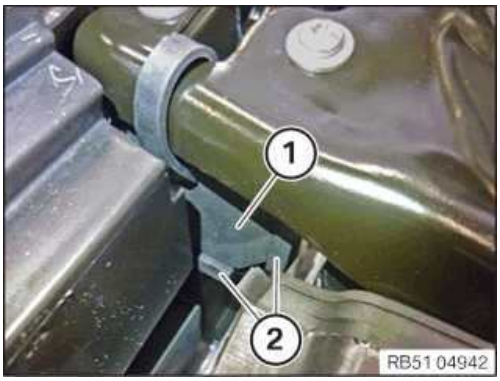
- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

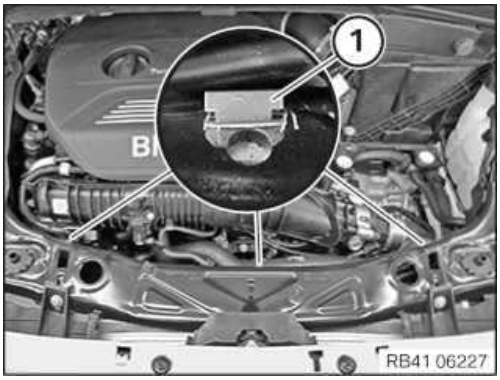
- Tighten down screws (2).

Air duct to upper connection



M6x20 screw		Tightening torque	11,8 Nm

- Tighten down screw (1).



Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm

cardiagn.com

- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

58 – Installing intake silencer housing

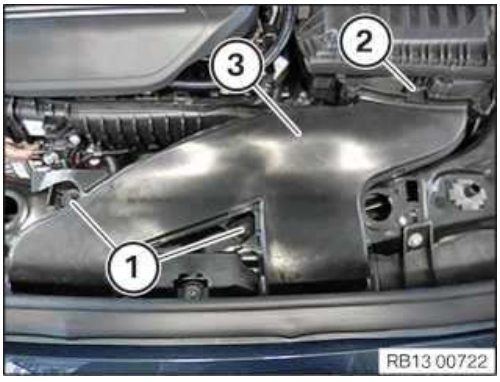
- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

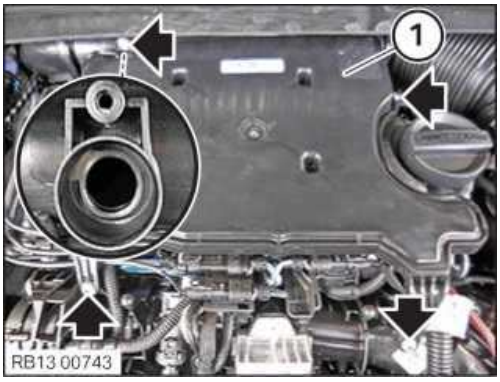
59 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm



60 – Install the acoustic cover for the injectors

cardiagn.com

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

61 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

62 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

cardiagn.com

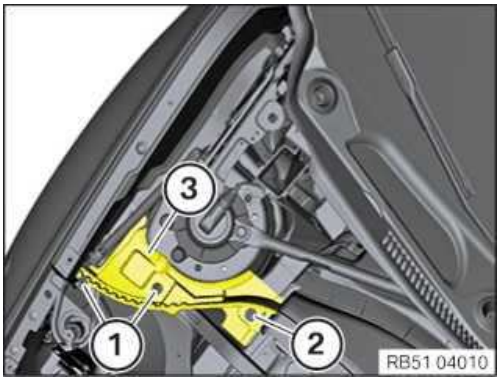
- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

63 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).

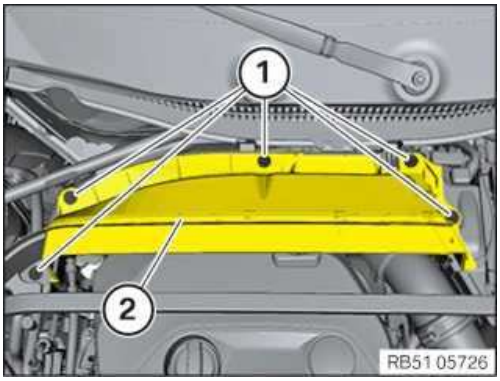
  Parts: Bolts
- Tighten the screws (1).

Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

NOTICE

Description is for right component only. The procedure on the left side is identical.



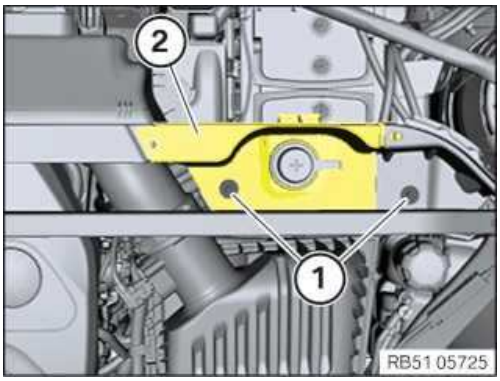
- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

64 – Installing the upper bulkhead cover



- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm

cardiagn.com

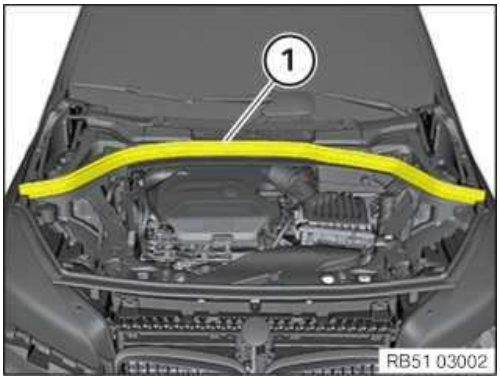
- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

65 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

66 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

67 – Disconnecting all battery earth leads

- See additional information.

68 – Fill and bleed the coolant circuit

▸ **Filling and bleed the high-temperature coolant circuit**

cardiagn.com

- See additional information.

Additional Information

Overview of Tightening Torques

Camshaft carrier to cylinder head — Used in step 35

M7x35		Tightening torque	13 Nm

Bearing journal to cylinder head — Used in step 37

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

Standard screw connection M8 — Used in step 37

M8		Tightening torque	19 Nm

Standard screw connection M6 — Used in step 37

M6			8 Nm

Chain tensioner piston to cylinder head — Used in step 38

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

Camshaft sprocket to camshaft — Used in step 39

M7x17.			17 Nm

Wheel arch cover to body — Used in step 41

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body — Used in step 41

Plastic nut		Tightening torque	3 Nm

Brake disc to front wheel hub — Used in step 42

M8	Renew screw.		16 Nm

Wheel bolts — Used in step 42

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

cardiagn.com

Underbody protection front

Used in step 43

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

Cylinder head cover to cylinder head

Used in step 44

M6		Tightening torque.	8,5 Nm

Differential pressure sensor to holder

Used in step 45

Screw		Tightening torque	4 Nm

Clamp for the pressure hose on the differential pressure sensor

Used in step 45

Clamp 15–19mm		Tightening torque	3 Nm

Clamping claw facing to cylinder head cover

Used in step 46

Screw M6		Tightening torque	8 Nm

Injector to cylinder head cover

Used in step 46

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

High pressure lines between injector and rail

Used in step 48

High pressure lines		Tightening torque	28 Nm

Intake plenum to cylinder head

Used in step 49

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 50

M8x20		Tightening torque	5 Nm
		Release angle	90 °

Intake plenum to exhaust-gas recirculation cooler

Used in step 50

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to exhaust manifold

Used in step 50

M8x28	Replace screws	Tightening torque	32 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 50

M8x20		Tightening torque	19 Nm

Wiring harness to cylinder head cover

Used in step 51 54

TS5x20		Tightening torque	3,5 Nm

Positive battery cable to alternator

Used in step 51

M8		Tightening torque	19 Nm

Fuel line to intake plenum

Used in step 51

TS6x20		Tightening torque	5 Nm

Cover to electronics box

Used in step 51 54

RF5x26.5		Tightening torque	2,5 Nm

cardiagn.com

Positive battery terminal to battery

Used in step 51 54

NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray

Used in step 51 54

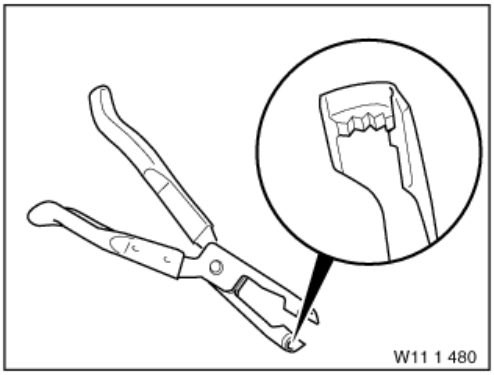
Cover of top bulkhead

Used in step 64

Screw		Tightening torque	2,6 Nm



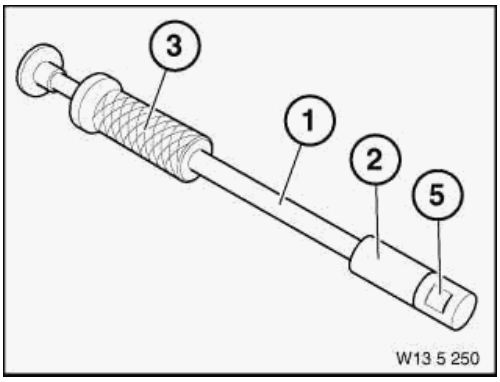
Cover of remote positive terminal

Used in step 64

Screw		Tightening torque	2,6 Nm

Overview of Special Tools

0 490 796 (11 1 480) Pliers



Common

Used in step 18

Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

cardiagn.com

0 493 321 (13 5 250) Puller

Common

Used in step 23

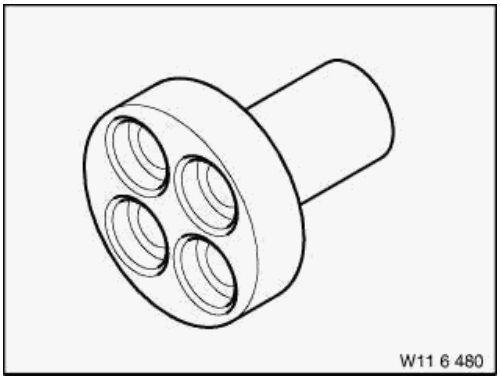
Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

cardiagn.com

0 493 339 (13 5 252) Bush



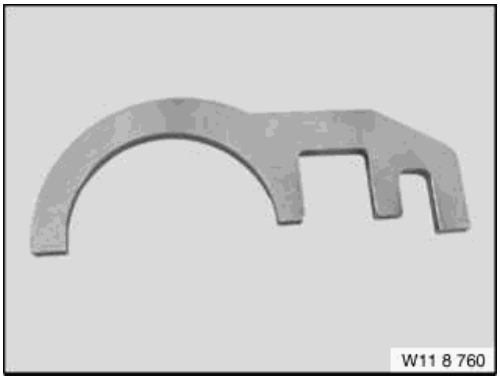
Common	Used in step 23
Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 340 (13 5 253) Weight

Common	Used in step 23
Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 380 (11 6 480) Connector

Common	Used in step 28 40
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)



cardiagn.com

2 288 380 Locating stud

Common	Used in step 28 40
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

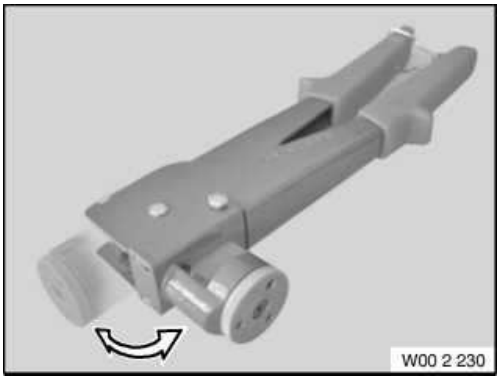
0 496 112 (11 8 760) Gauge

Common	Used in step 28 40
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

cardiagn.com

0 495 105 (11 4 480) oddments tray

Common



Used in step 33

Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

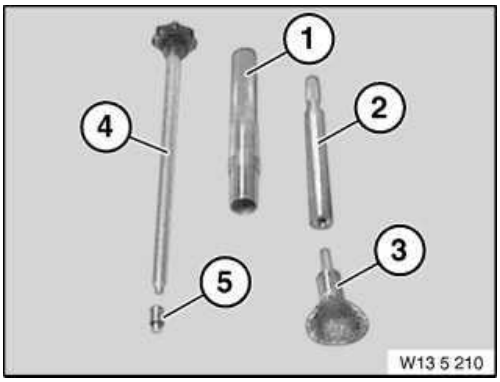
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

0 496 521 (00 2 230) Pliers

Common

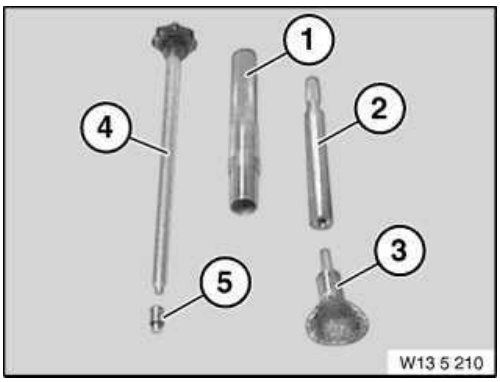
Used in step 41

Usage	(Blind rivet pliers for plastic rivets) For shaft diameters of 3.5 mm, 3.9 mm and 4.5 mm
Included in the tool or work	
Storage location	C25
Replaced by	
In connection with	
SI-Number	01 17 08 (478)



cardiagn.com

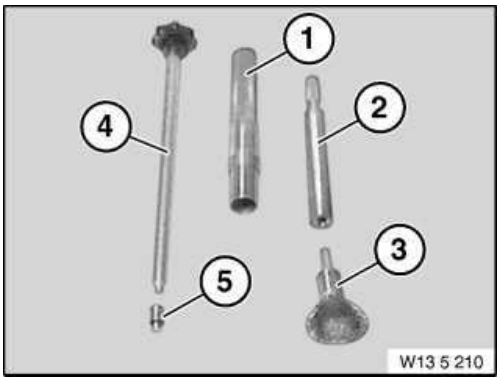
2 344 011 Tool



Common	Used in step 42
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

0 493 763 (13 5 215) Plug

Common	Used in step 46
Usage	(Seal plug)
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	



0 493 762 (13 5 214) Rod

Common	Used in step 46
Usage	(Mounting rod) For the seal plug
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 758 (13 5 210) Tool

Common

Used in step 46

Usage	(Cleaning set) For injector channels
Included in the tool or work	
Storage location	B4
Replaced by	
In connection with	
SI-Number	01 05 00 (574)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 759 (13 5 211)		**Holding sleeve** (Guide sleeve)	
2	0 493 760 (13 5 212)		**Holder** (Brush holder)	
3	0 493 761 (13 5 213)		**Brush head**	
4	0 493 762 (13 5 214)		**Rod** (Mounting rod) For the seal plug	
5	0 493 763 (13 5 215)		**Plug** (Seal plug)

11 33 050 Removing and installing/replacing all rocker arms (B47)

Special tools required:

- 11 6 480
- 2 288 380
- 11 4 480

Important!

Risk of damage to engine.

Adherence to notes on checking and adjusting timing is mandatory!

Necessary preliminary tasks:

- Remove front right wheel arch cover
- Remove cylinder head cover
- Remove exhaust-gas recirculation cooler

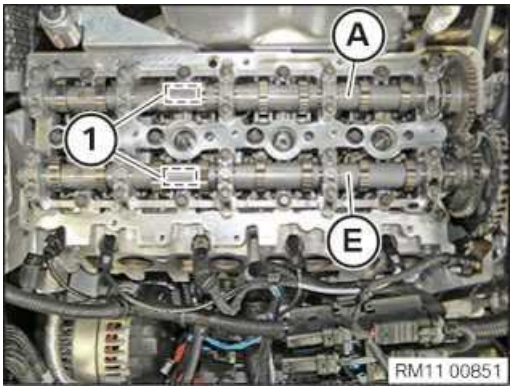
Removal:

Use special tool11 6 480 to turn engine to TDC firing position of cylinder 1.**Important!**

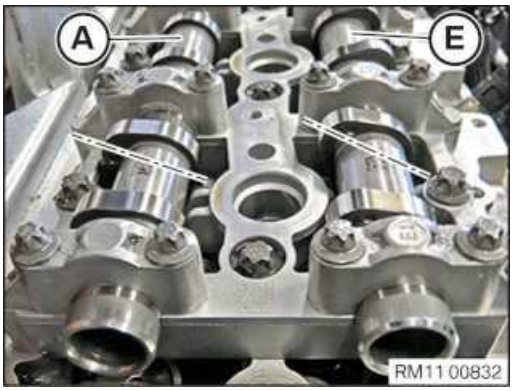
Do not crank engine in reverse direction!

Remove protective cap on oil sump.

cardiagn.com



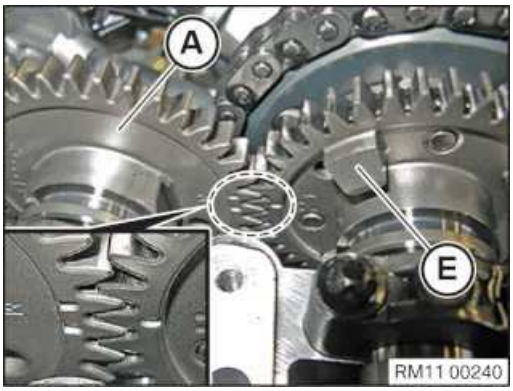
Important!



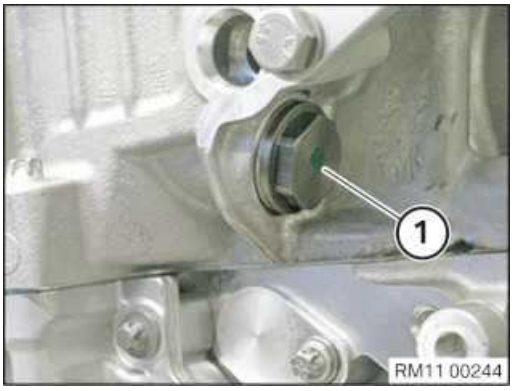
On vehicles with manual gearbox, an additional bore hole that can be confused with dowel hole is located in front of dowel hole.

It must be possible to push special tool 2 288 380 into oil sump up to throw.

Block crankshaft with cylinder no. 1 in TDC firing position with special tool2 288 380 .

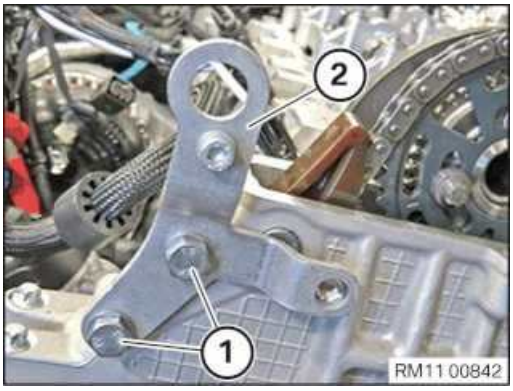


It must be possible to read the part number (1) on the exhaust and intake camshafts (A and E) from above.



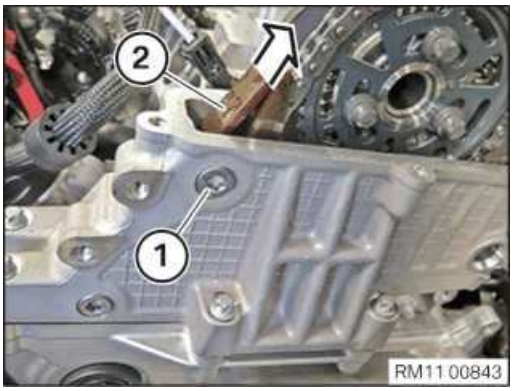
The cam on the intake camshaft (E) points obliquely upwards at cylinder No. 1.

The cam on the exhaust camshaft (A) at the first cylinder points obliquely outwards to the left.

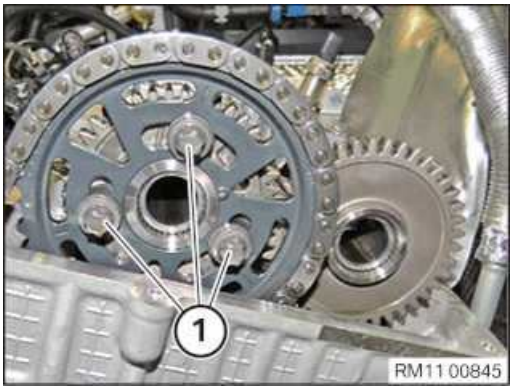


The marks on both camshafts (A and E) must match up (see graphic).

cardiagn.com



Release chain tensioner (1).



Release screws (1).

Remove suspension element (2).

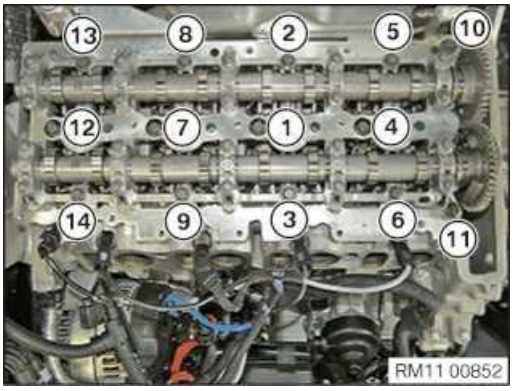
Remove bearing journal (1).

Remove guide rail (2) in direction of arrow.

Important!

Protect timing chain to prevent it from falling.

Risk of damage to oil spray nozzle.

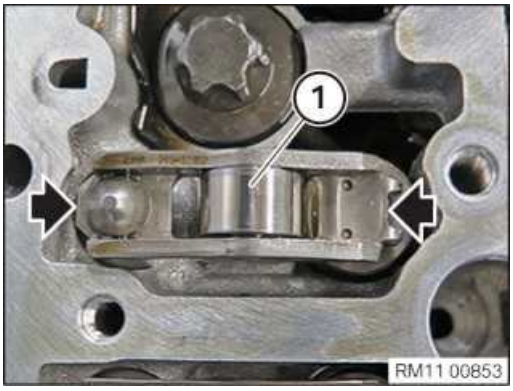


Release screws (1) on camshaft sprocket.

Remove camshaft sprocket from intake camshaft.

Pull camshaft sprocket out of timing chain and place it neatly on the special tool 11 4 480 .

Place timing chain at the cylinder head.

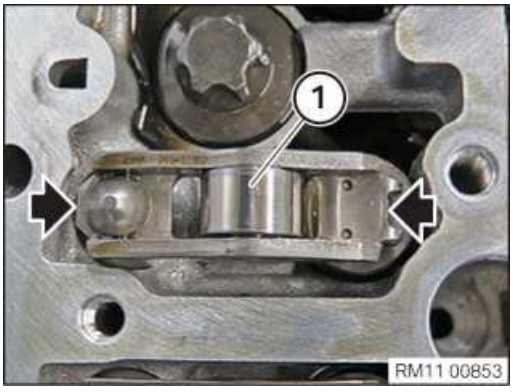


cardiagn.com

Note:
Both camshafts can be removed with the camshaft carrier.

Release all screws (see graphic) in the sequence **14 - 1** in multiple steps.

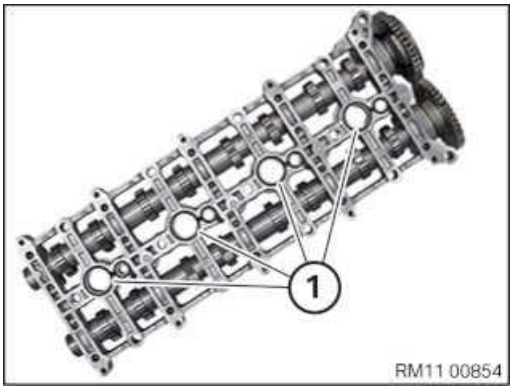
Remove camshaft carrier with camshafts towards top.



Note:
Already used rocker arms may be refitted only in the same position.

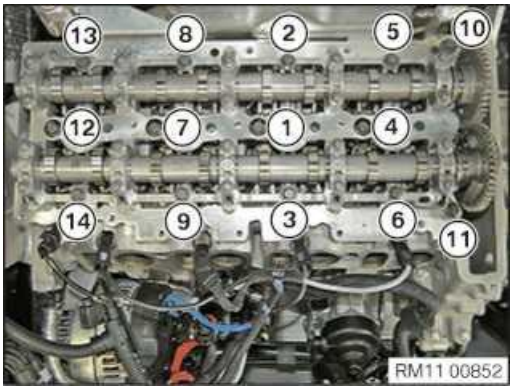
Set down all rocker arms (1) on special tool 11 4 480 in neat order.

Lift off rocker arm (1).



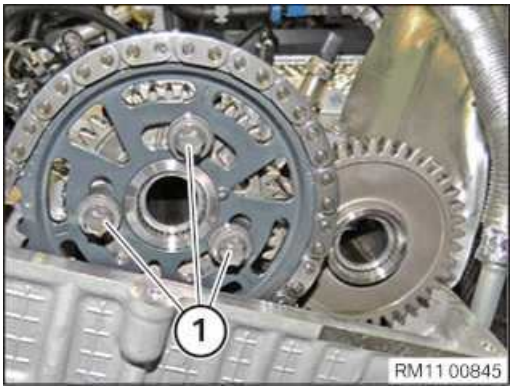
Installation:

Note:
Already used rocker arms may be refitted only in the same position.



Make sure roller cam followers are in correct installation positions.

Install rocker arm (1).

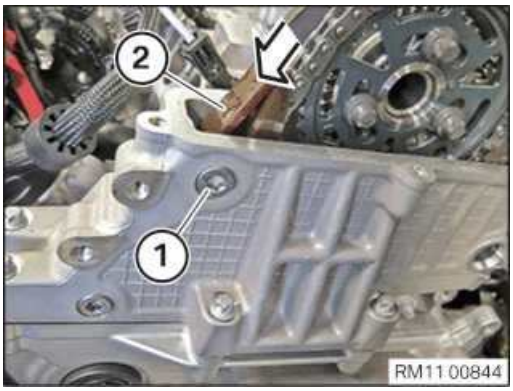


Parts: Replace gaskets (1).

cardiagn.com

Tighten screws in the sequence **1** to **14** in multiple steps.

Tightening torque: 11 31 3AZ.

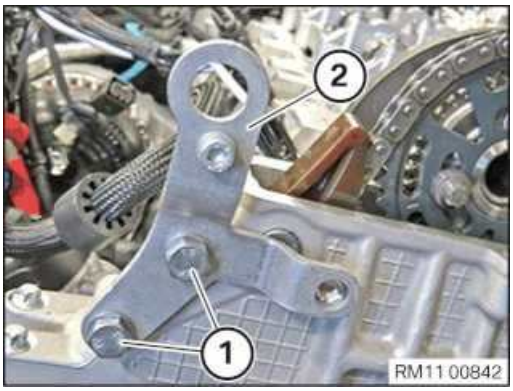


Place the camshaft sprocket with timing chain on the intake camshaft such that bolts (1) are located in the centre of the elongated holes.

Insert bolts (1).

Tighten bolts (1) to 10 Nm.

Release bolts (1) again by a 90° turn.



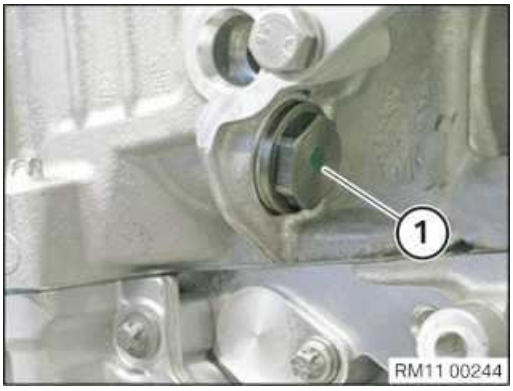
Parts: Replace bearing journals (1).

Install guide rail (2) in the direction of the arrow.

Note:
Ensure correct installation of guide rail (1) at bottom bearing journal.

Screw in bearing journals (1).

Tightening torque: 11 12 6AZ.

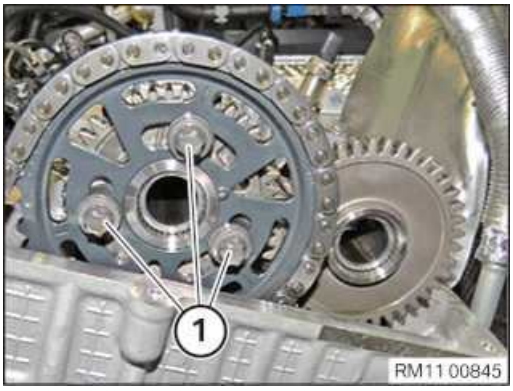


Install suspension element (2).

Tighten down screws (1).

Tightening torque: 11 00 4AZ.

cardiagn.com



Install chain tensioner (1) and tighten down.

Parts:

Replace the sealing ring.

Tightening torque: 11 12 5AZ.

Tighten down screws (1).

Tightening torque: 11 31 1AZ.

Remove special tool 2 288 380 .

Crank engine with special tool 11 6 480 twice in direction of rotation.

Check timing.

Important!

Do not crank engine in reverse direction.

Important!

2 288 380 Remove special tool before starting engine.

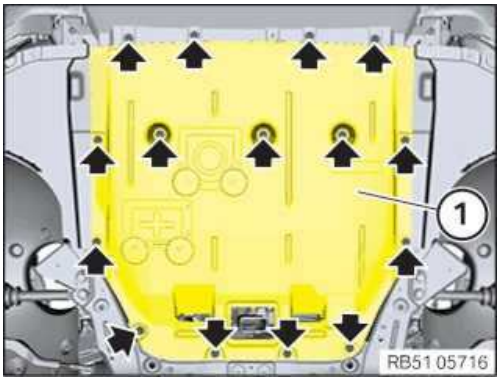
cardiagn.com

Required follow-up work:

- Install exhaust-gas recirculation cooler.
- Install cylinder head cover.
- Install front right wheel arch cover.

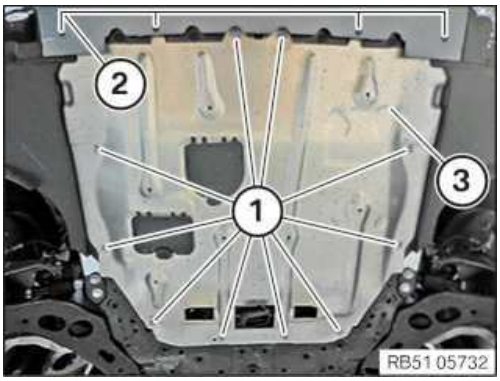
cardiagn.com

11 33 062 Replacing all hydraulic valve clearance compensating elements



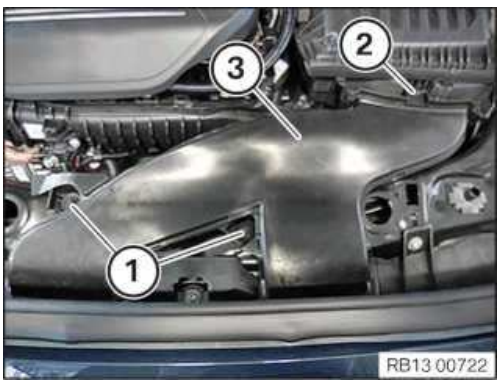
PRELIMINARY WORK

1 – Disconnecting all battery earth leads



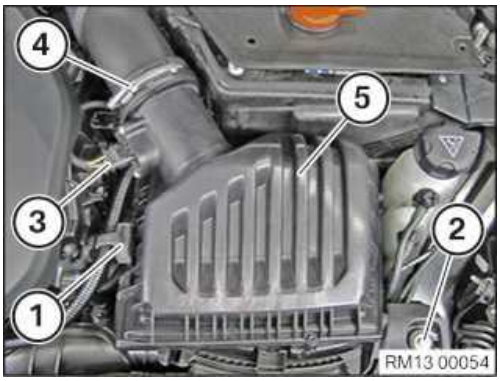
- See additional information.

2 – Removing the front underbody protection



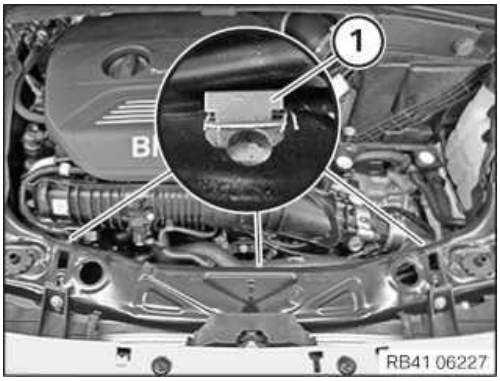
- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).



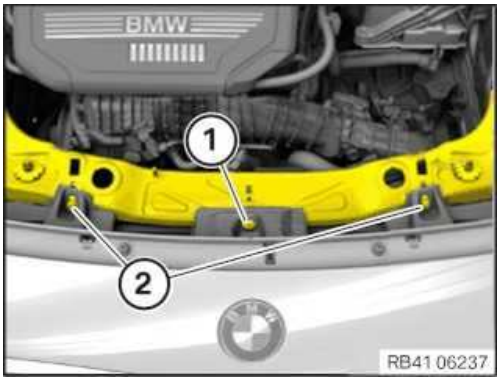
3 – Remove the intake neck for intake silencer housing

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

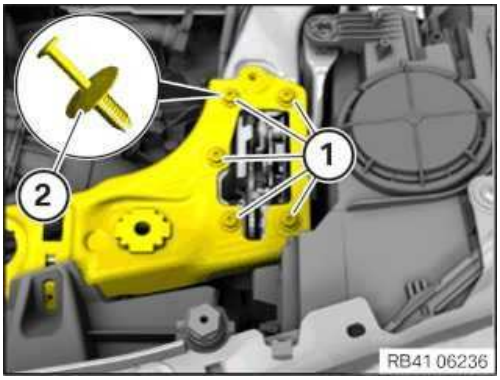


4 – Removing intake silencer housing

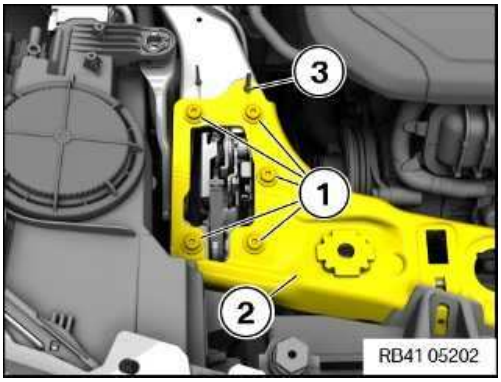
cardiagn.com



- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.



5 – Remove front cross connection



- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

6 – Draining coolant

cardiagn.com

WARNING

Hot fluids.

Risk of scalding!

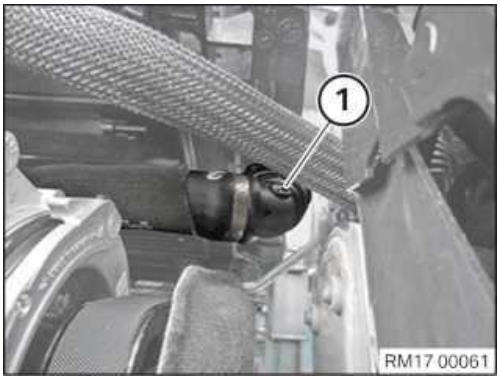
- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

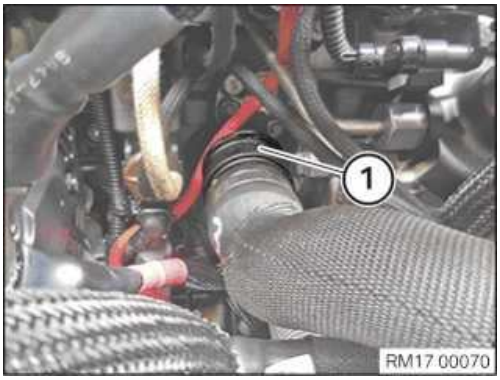
Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.



In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

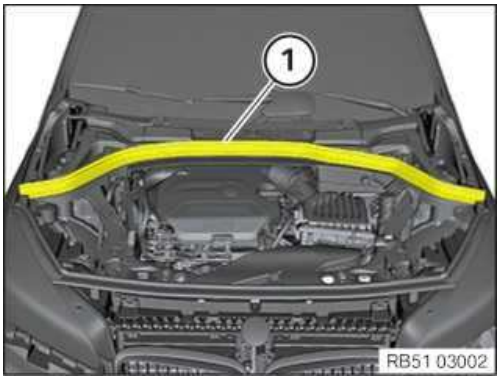
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen sealing cap (1).

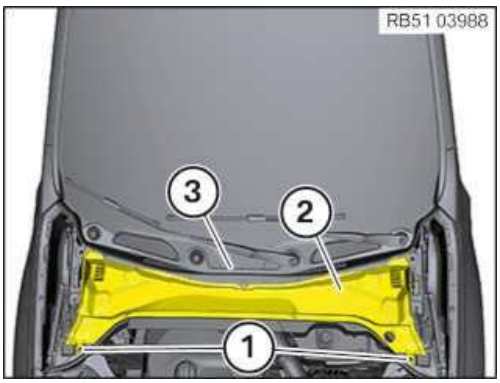
- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.



- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.

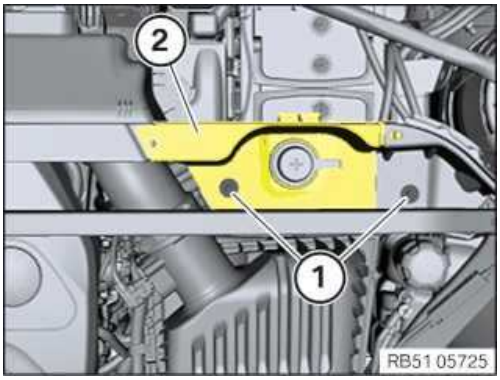
7 – Remove the seal for the rear bonnet

cardiagn.com



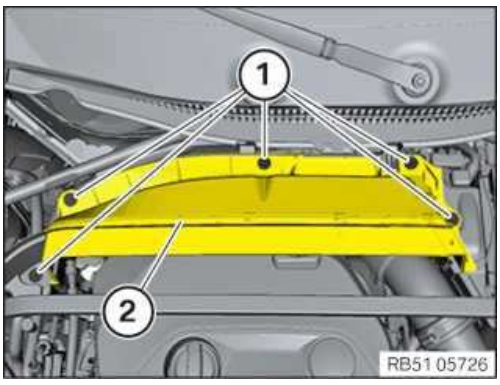
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Pull off rear bonnet seal (1) towards the top and remove.

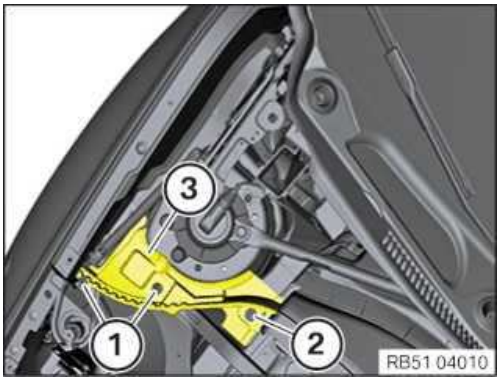
8 – Removing front cowl panel cover



- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

9 – Removing the upper bulkhead cover

- Loosen screws (1).
- Guide out and remove the cover (2).

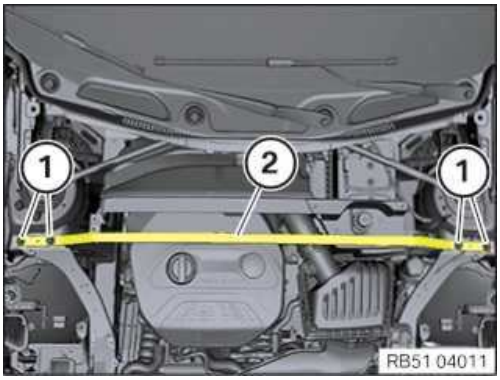


- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

10 – Remove suspension cross-brace

cardiagn.com

TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

NOTICE

Description is for right component only. The procedure on the left side is identical.

- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).

11 – Removing the acoustic cover

WARNING

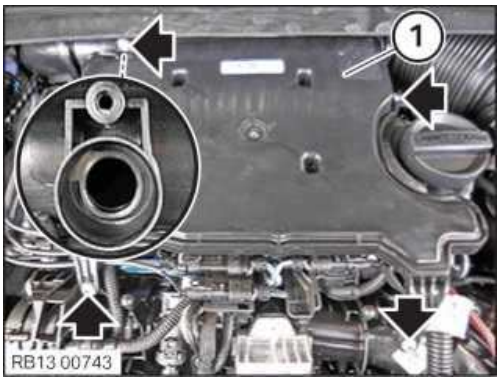
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

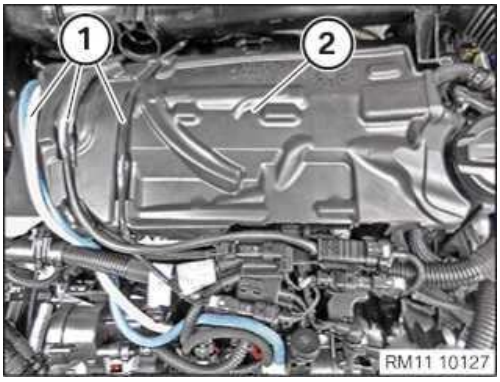
Damage to the acoustic cover.



Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

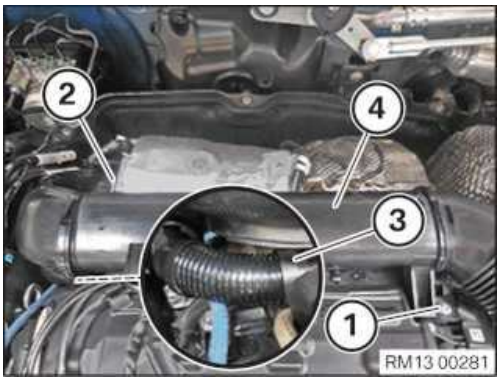


12 – Remove resonator

cardiagn.com

- Remove screws (arrows).
- Guide out and remove the resonator (1).

13 – Remove the acoustic cover for the injectors



- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

14 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

15 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

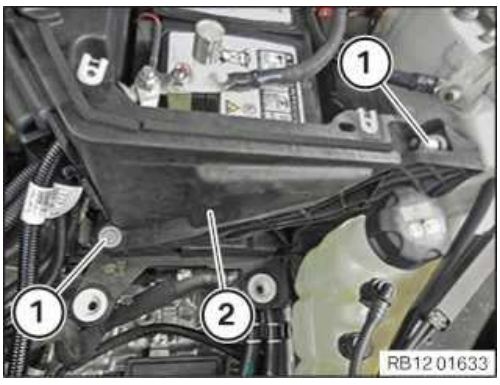
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

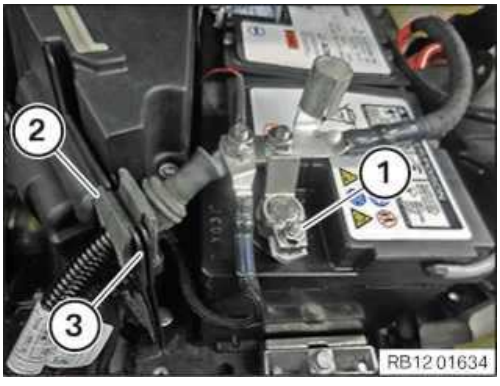
Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.



TECHNICAL INFORMATION

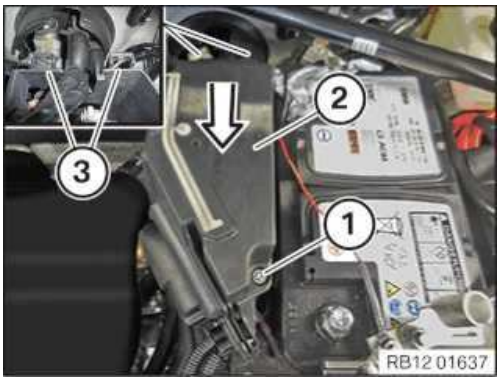
Follow instructions for removing and installing control units.



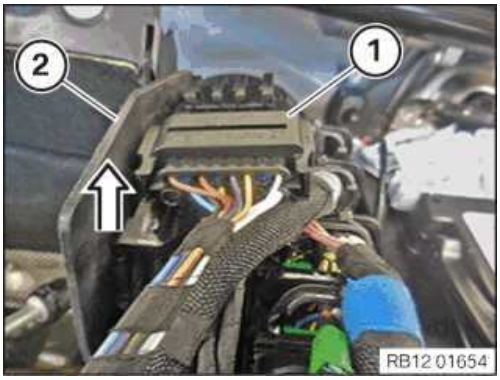
For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

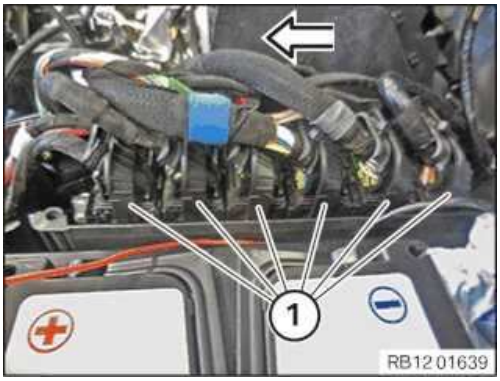
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



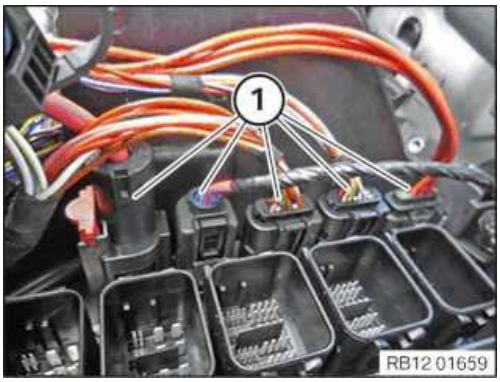
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



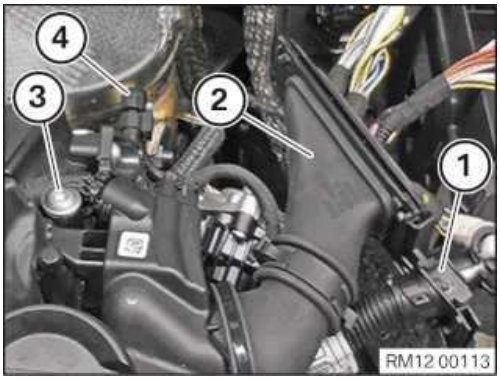
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



cardiagn.com

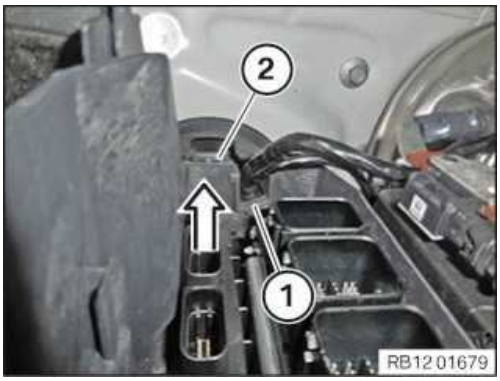


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

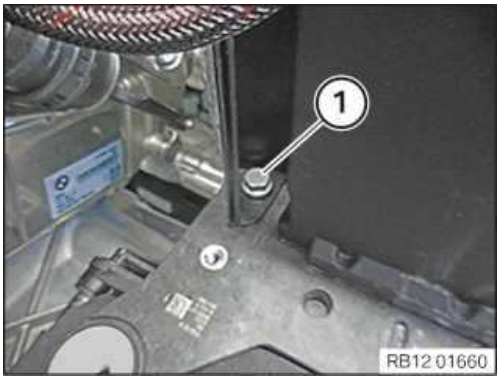


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

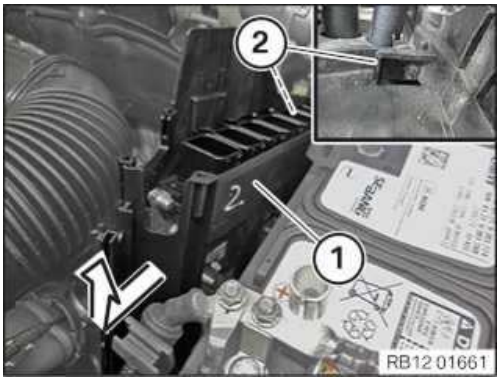
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).



- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

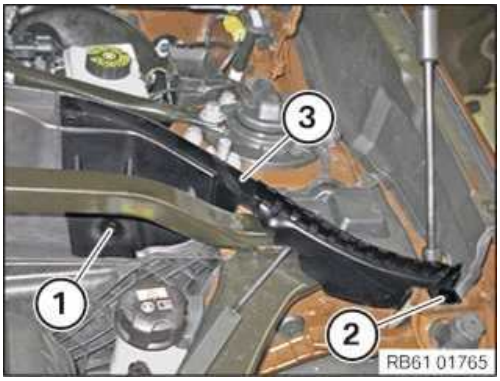


cardiagn.com

- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

- Loosen screw (1).

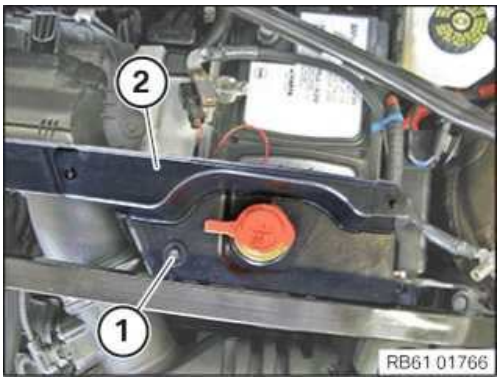
- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.



16 – Remove vehicle battery

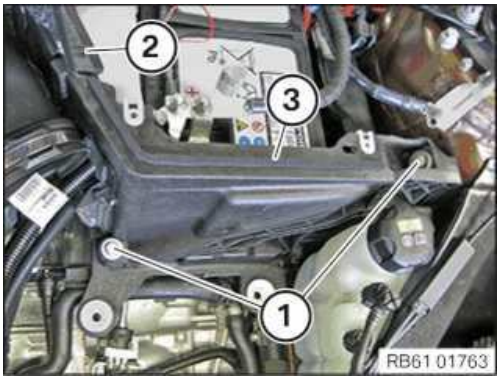
WARNING

Working on 12 V vehicle electrical system.

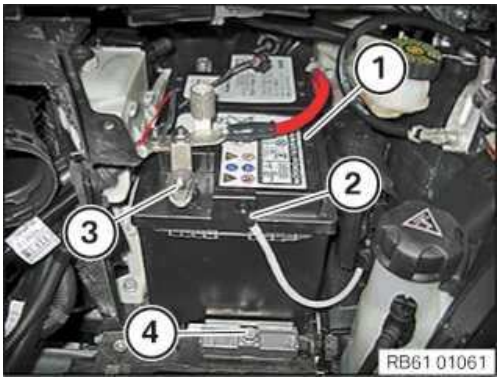


Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.



- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).



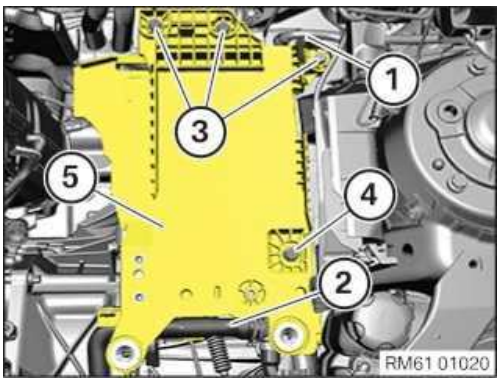
cardiagn.com

- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING



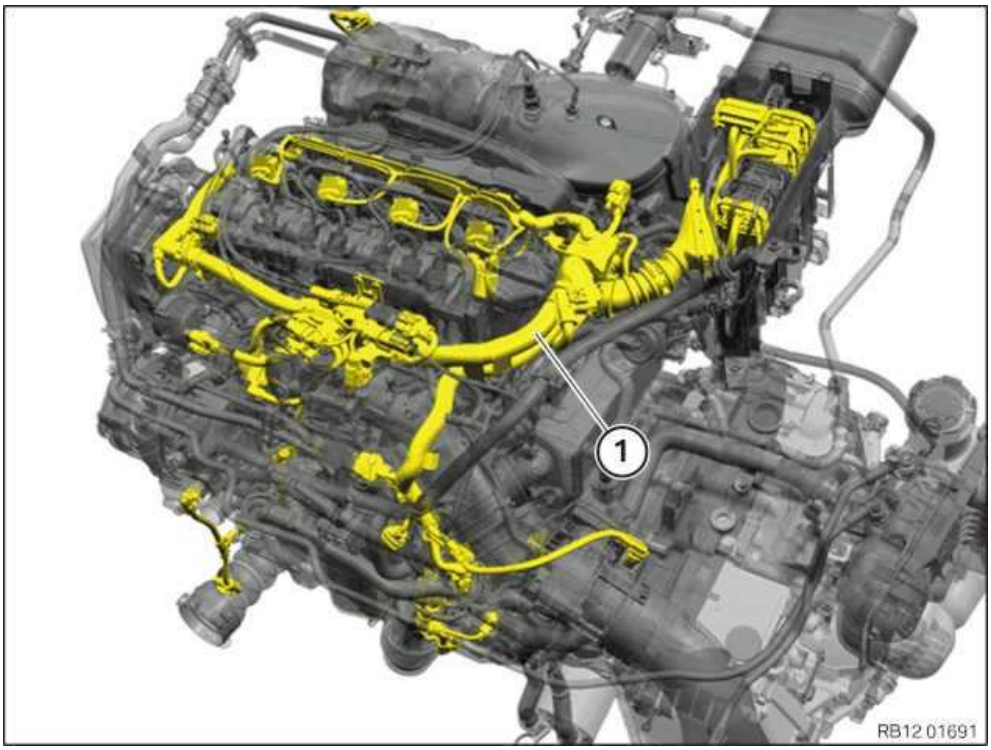
Unprotected battery terminals.

Risk of short circuits! Risk of fire!

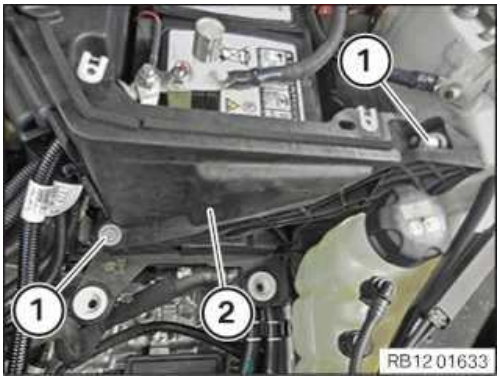
- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

17 – Remove battery holder

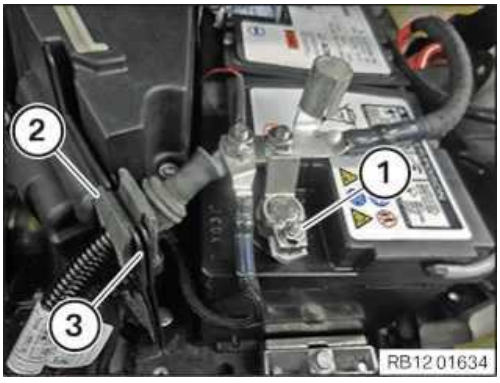


- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

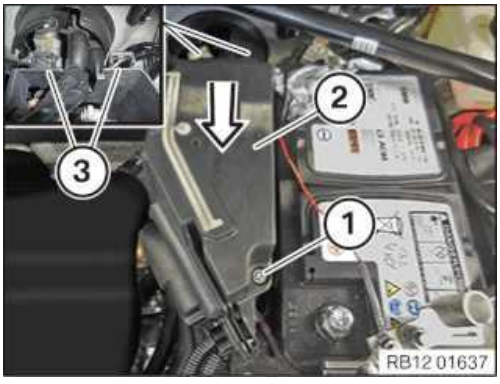


18 – Releasing the wiring harness section for the intake plenum

cardiagn.com

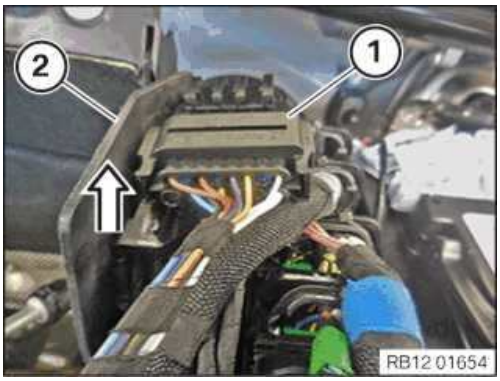


Overview: Wiring harness section for the engine

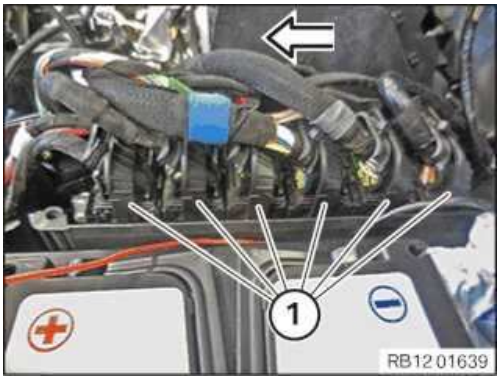


1 Wiring harness section for the engine

- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

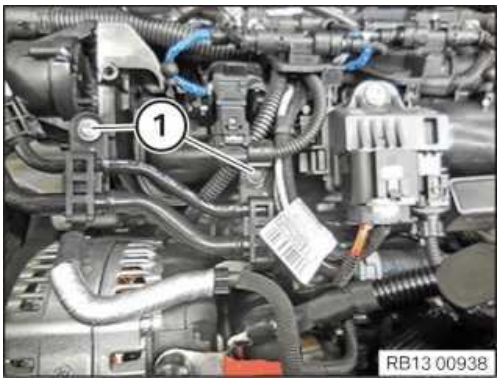


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

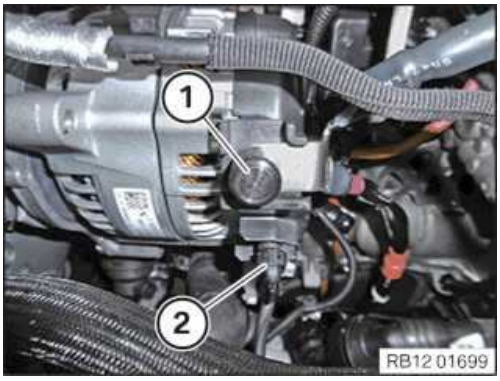


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

cardiagn.com

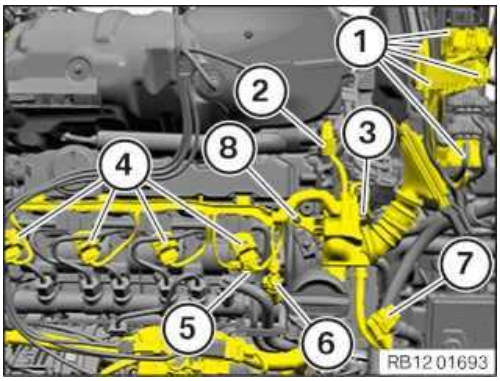


- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).

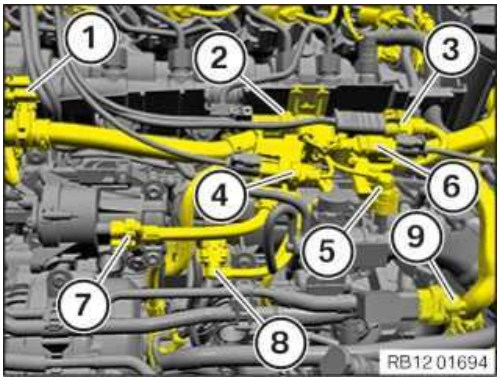


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

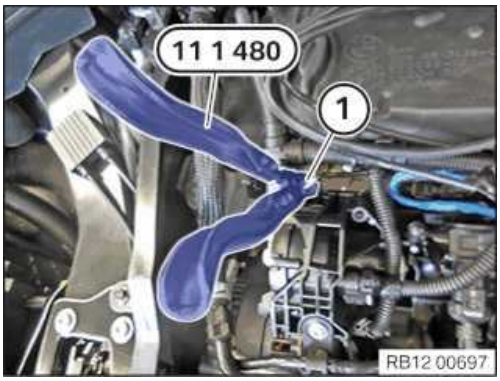
- Unlock and loosen connector (1).



- Loosen screws (1).

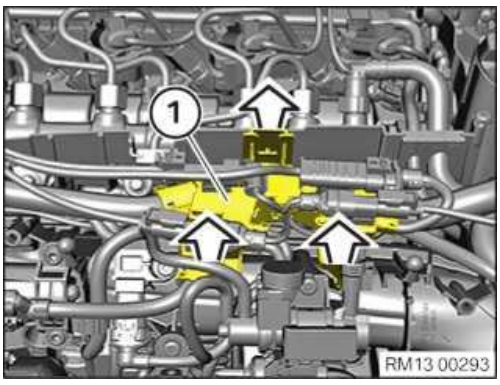


- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.



cardiagn.com

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).



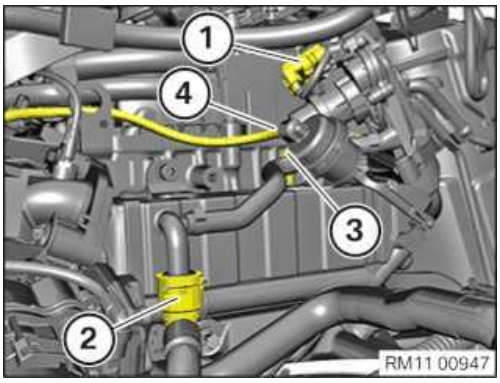
- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock and disconnect the connector (3) from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

▶ **Removing the cable clips from the intake plenum**

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

19 – Removing the exhaust-gas recirculation cooler

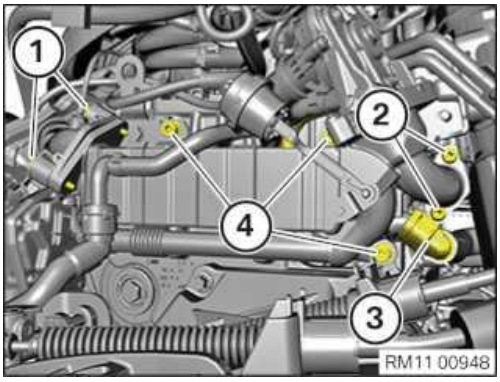


cardiagn.com

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

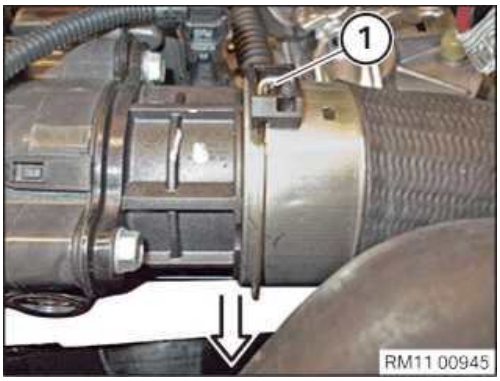
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

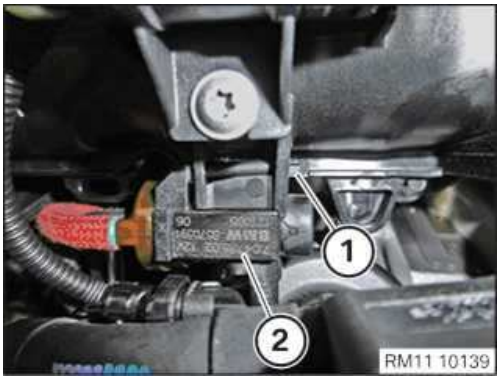
- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

20 – Removing the intake plenum

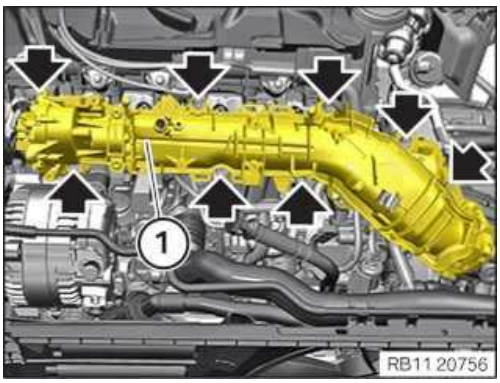


TECHNICAL INFORMATION

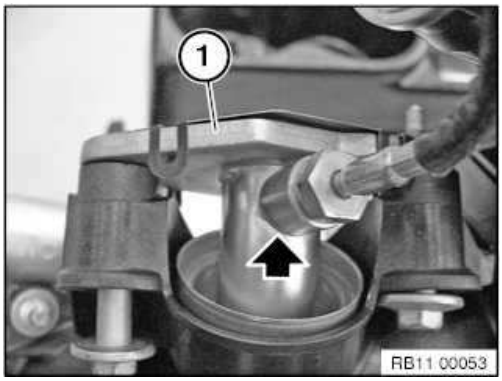
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the lock (1).



cardiagn.com



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

21 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

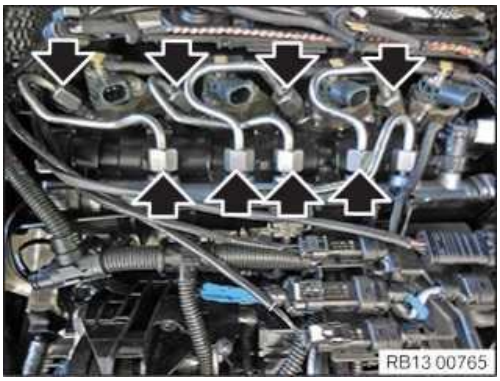
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.



TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

22 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

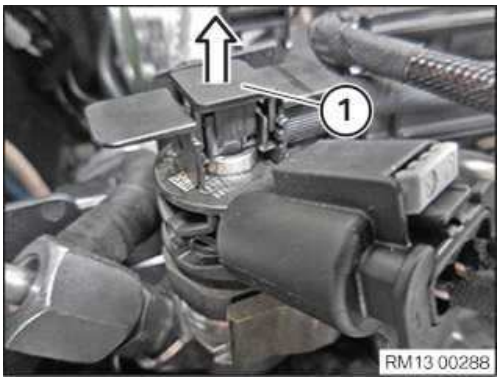
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

23 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

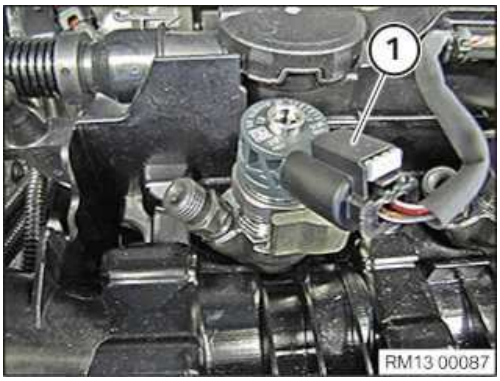
RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

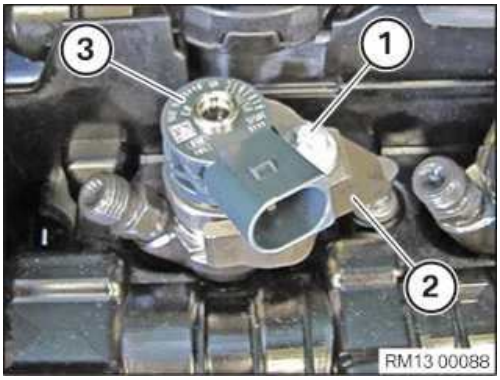
- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.



- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

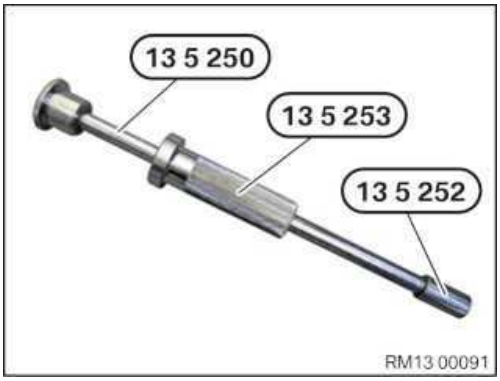
TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

- Unlock and disconnect connector (1).

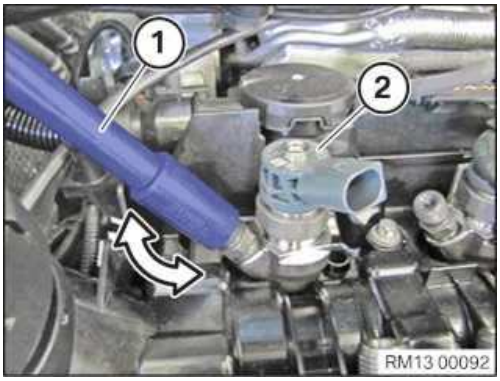
- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

▶ **Loosen stuck injectors**



cardiagn.com

RISK OF DAMAGE



Contaminant or foreign body.

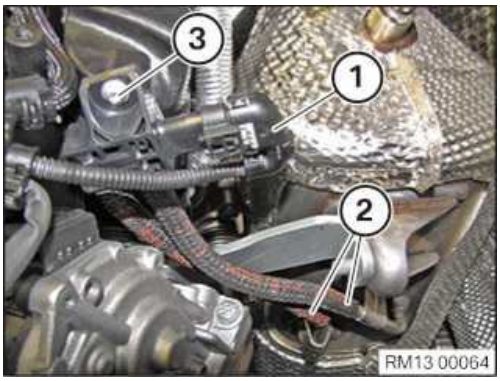
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)**back onto the special tool **0 493 321 (13 5 250)**.

- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

24 – Remove differential pressure sensor

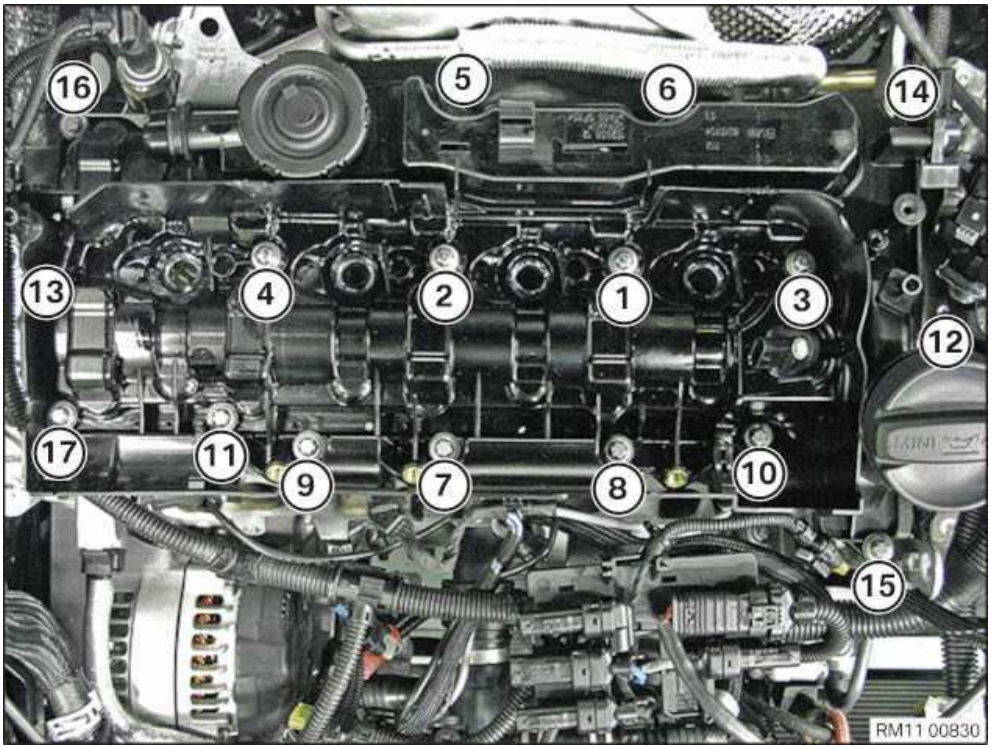


RISK OF DAMAGE

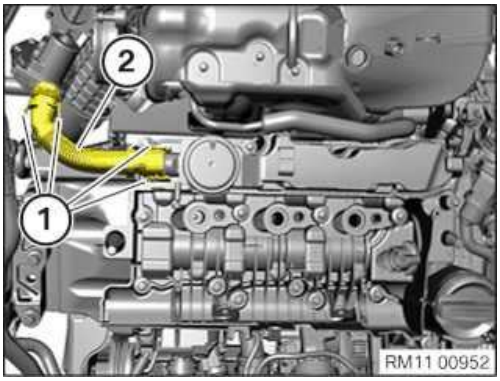
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



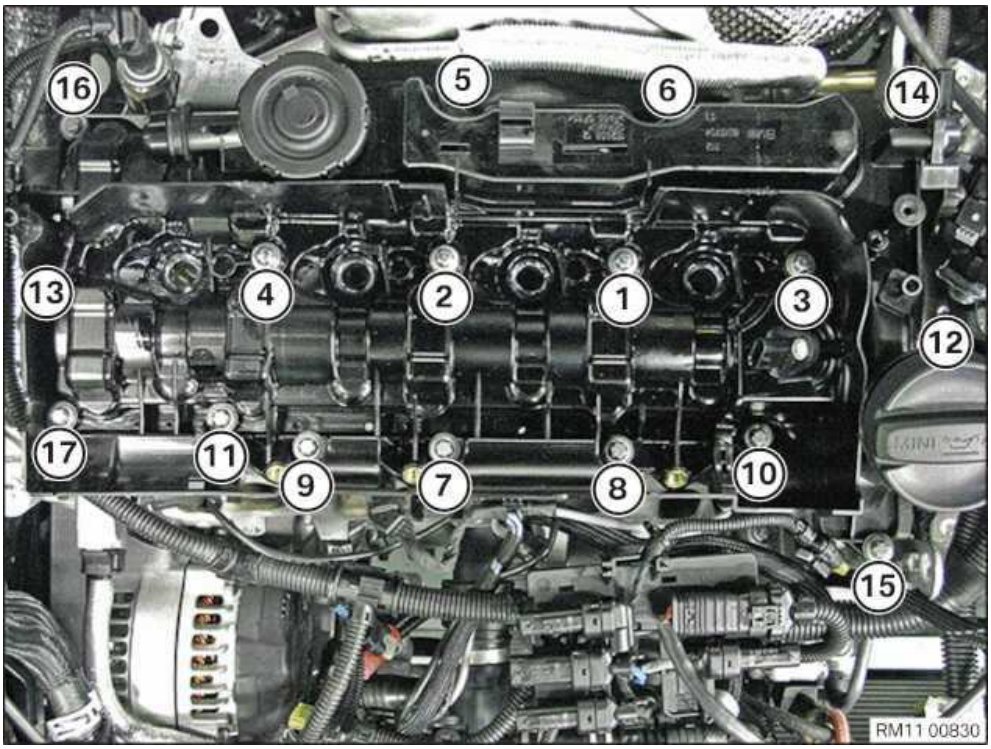
cardiagn.com



- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

25 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

26 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

TECHNICAL INFORMATION

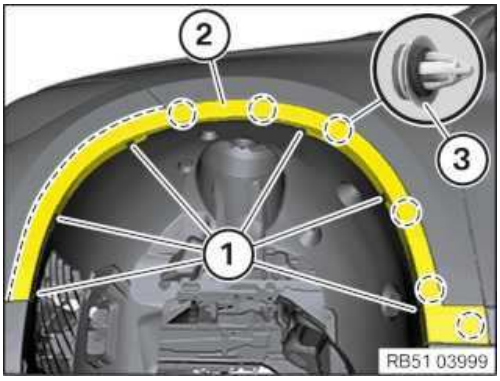
Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

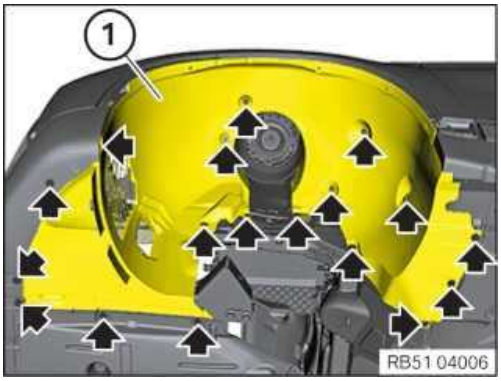
27 – Removing the front right wheel arch cover

▸ **Remove the front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.



cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

NOTICE

Description is for left component only. Procedure on the right side is identical.

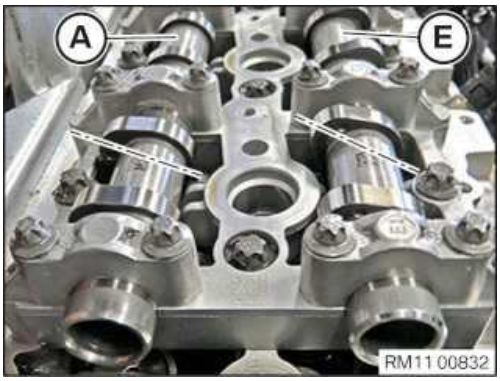
- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

28 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

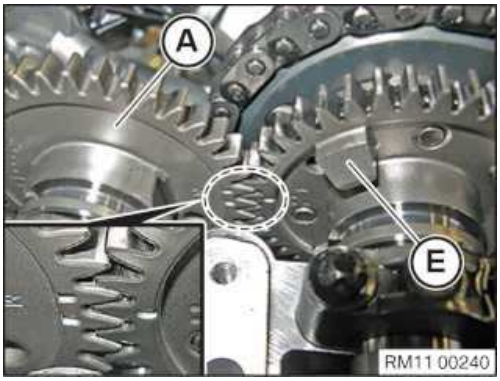


The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

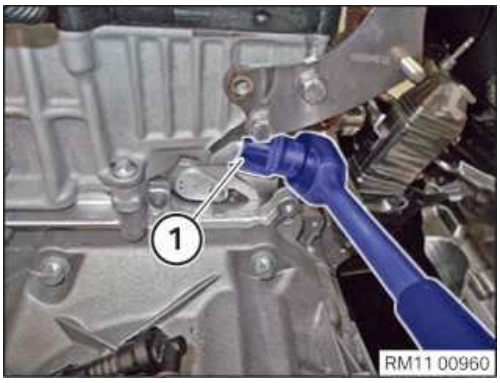
If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

29 – Remove chain tensioner piston



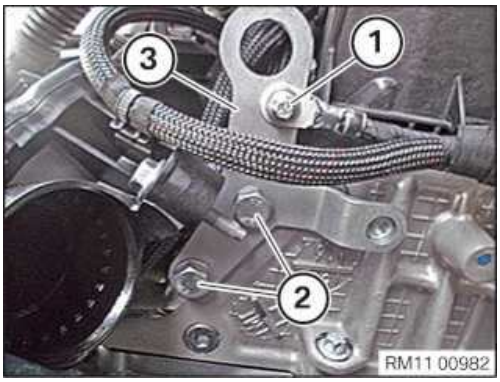
cardiagn.com

WARNING

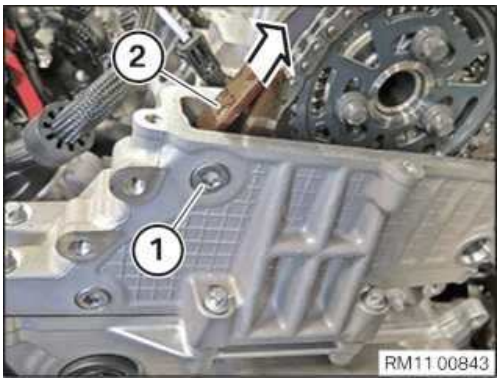
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



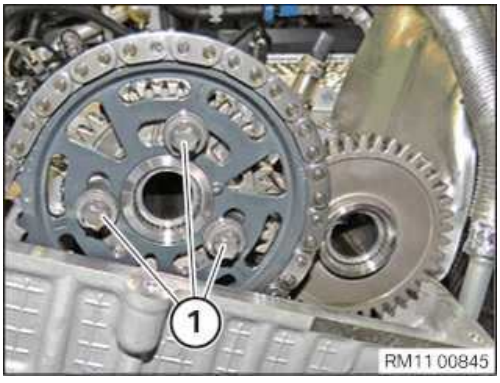
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

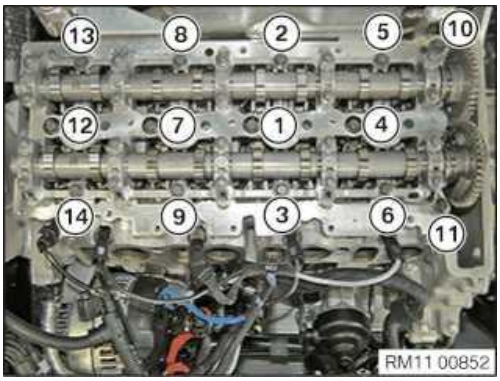
- Remove the chain tensioner piston (1).

30 – Remove the timing chain guide rail



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.



31 – Removing the camshaft sprocket on the intake camshaft

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

32 – Removing the camshaft support

cardiagn.com

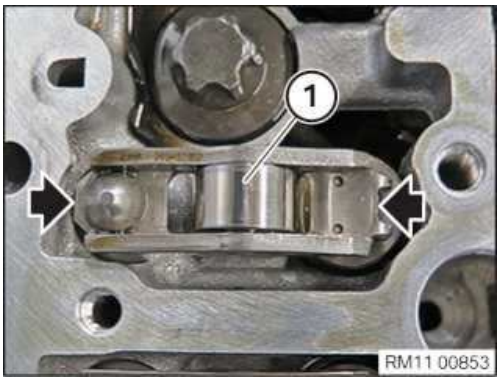
- Evenly loosen all screws in a sequence from (14) to (1).
- Loosen and remove all screws in a sequence from (14) to (1).

  Both camshafts can be removed with the camshaft carrier.
- Remove the camshaft support including camshafts towards the top.



33 – Remove roller cam followers

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Damage to the engine.

If the classification of the roller cam followers is ignored, this can lead to engine damage.

- Observe the classification of the roller cam followers.
- Always reuse used roller cam followers at the same position.

- Remove the roller cam follower (1) and place it onto the special tool **0 495 105 (11 4 480)**.
- Repeat the process for all roller cam followers.

cardiagn.com

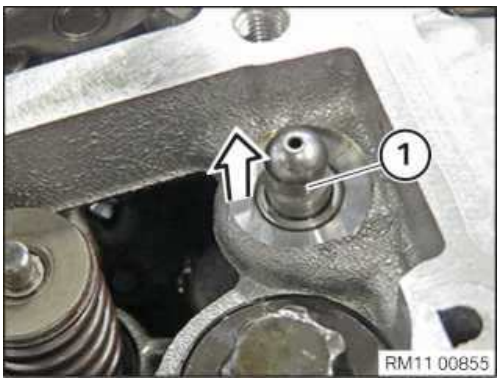
MAIN WORK



34 – Removing the hydraulic valve clearance compensating element

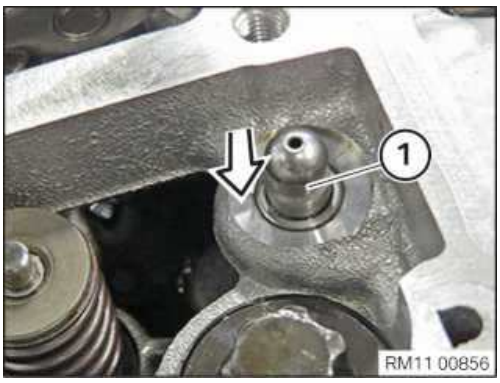
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.



35 – Installing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

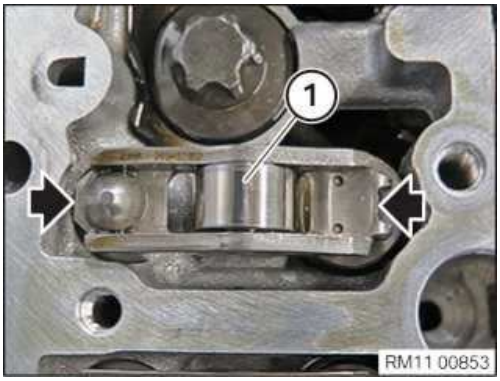
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

POSTPROCESSES

36 – Install the roller cam followers



cardiagn.com

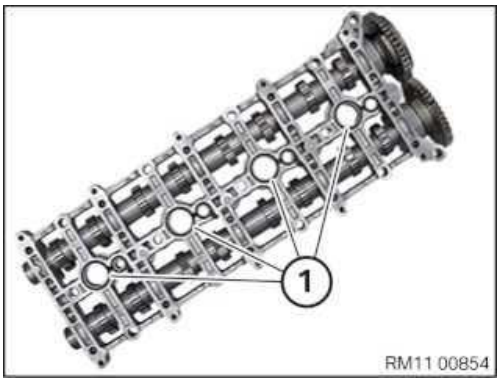
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

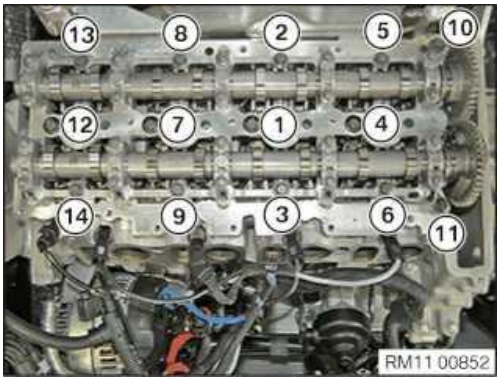
RISK OF DAMAGE



Damage to the engine.

If the classification of the roller cam followers is ignored, this can lead to engine damage.

- Observe the classification of the roller cam followers.
- Always reuse used roller cam followers at the same position.

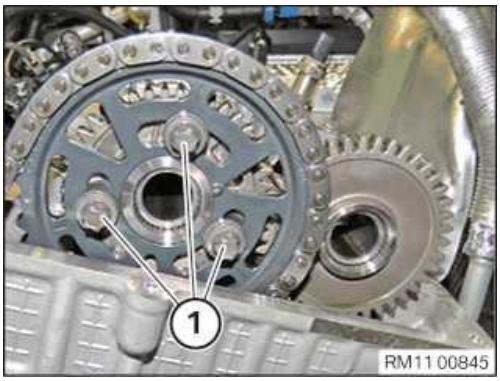


- Install the roller cam follower (1).
- Repeat the process for all roller cam followers.

37 – Installing the camshaft support

- Renew gaskets (1).

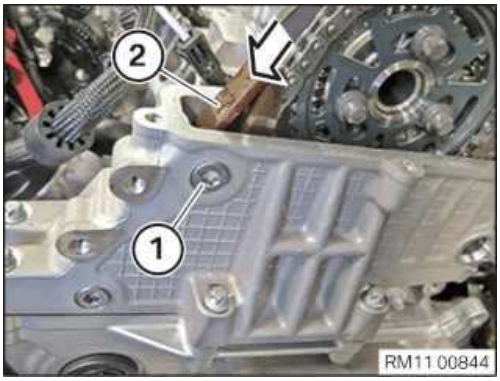
  Parts: gaskets



- Position the camshaft support including the camshafts.
- Tighten the screws in a sequence from (1) to (14) in several steps.

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

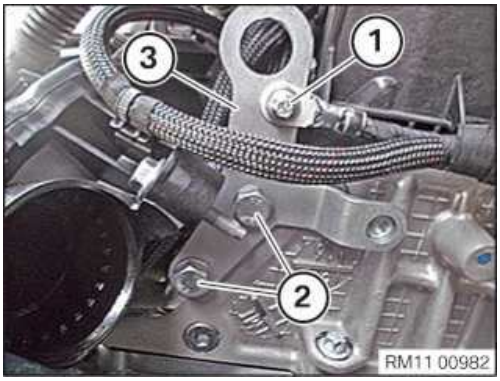


38 – Installing the camshaft sprocket on the intake camshaft

cardiagn.com

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

39 – Install the timing chain guide rail



- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

40 – Installing the chain tensioner piston

WARNING

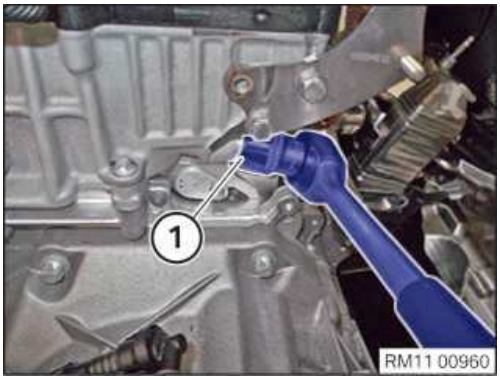
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Renew sealing ring (1).

  Parts: Sealing ring

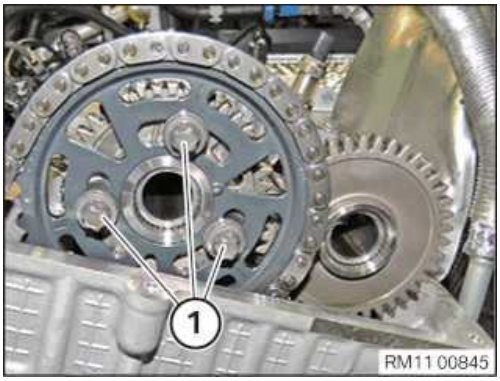


cardiagn.com

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.



- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

41 – Tightening the camshaft sprocket on the intake camshaft

- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

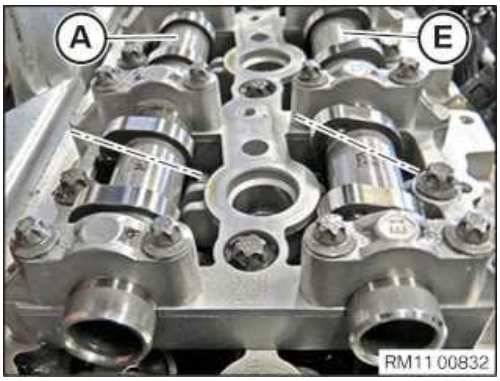
42 – Checking camshaft timing

- Remove protective cap (1) from oil sump.

- **Spin the engine twice in the direction of rotation.**

cardiagn.com

RISK OF DAMAGE



Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

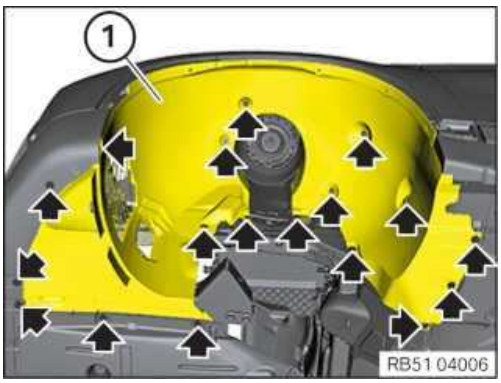
TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

cardiagn.com



- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

43 – Installing the front right wheel arch cover

NOTICE

Description is for left component only. Procedure on the right side is identical.

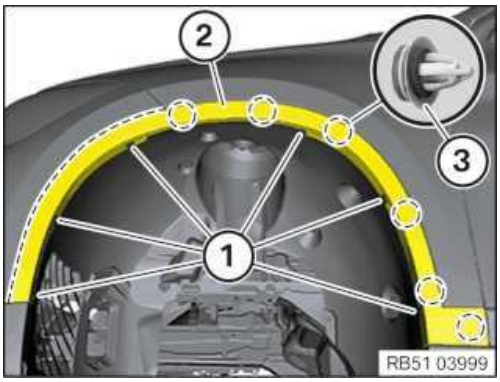
- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm



▸ **Installing front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

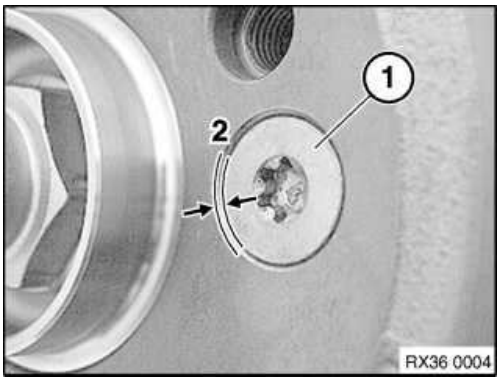
44 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

cardiagn.com

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

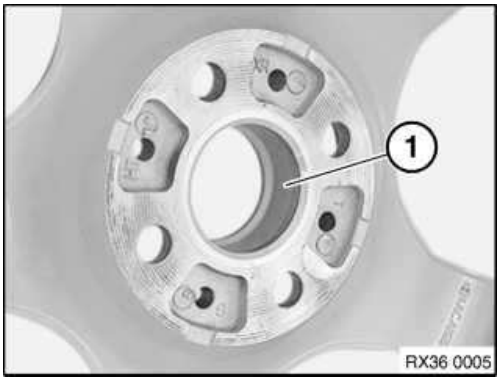


- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

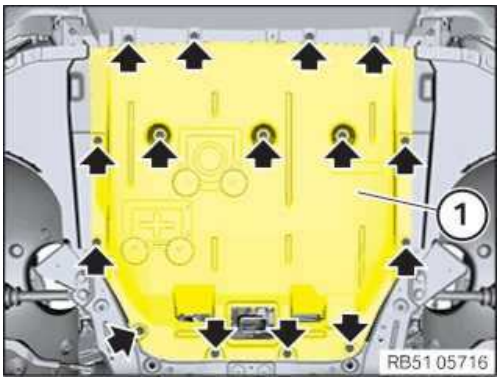
TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

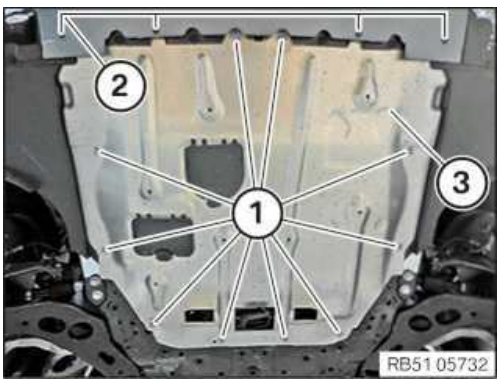


- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		



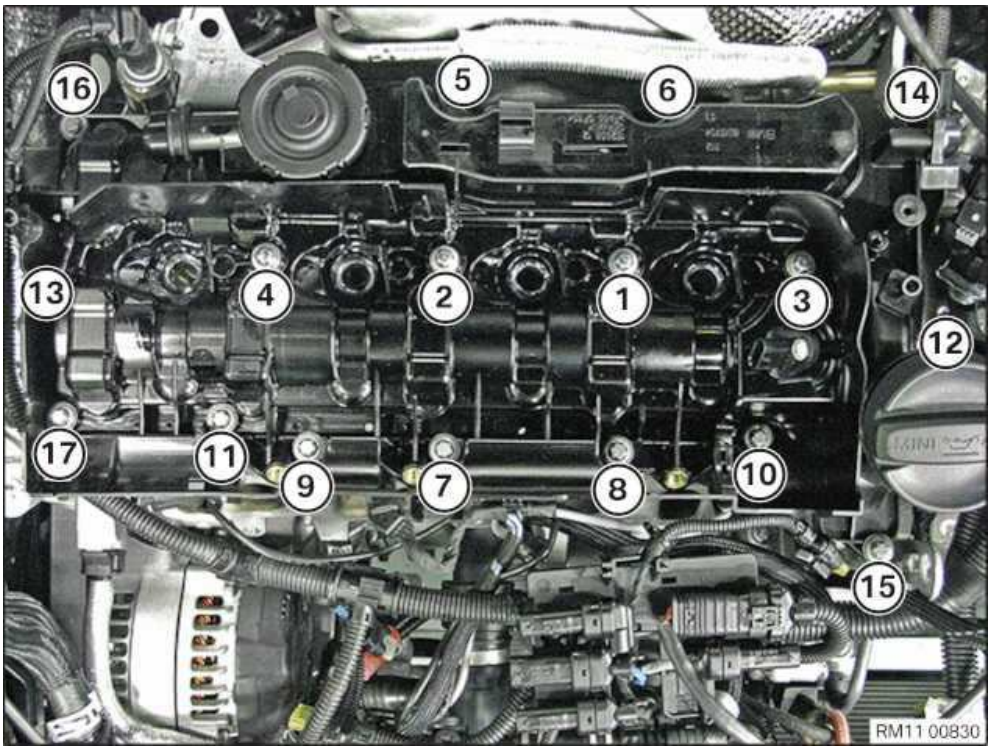
45 – Installing the front underbody protection

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

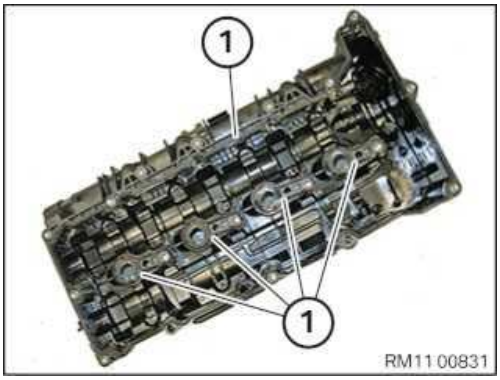
Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).



Underbody protection front

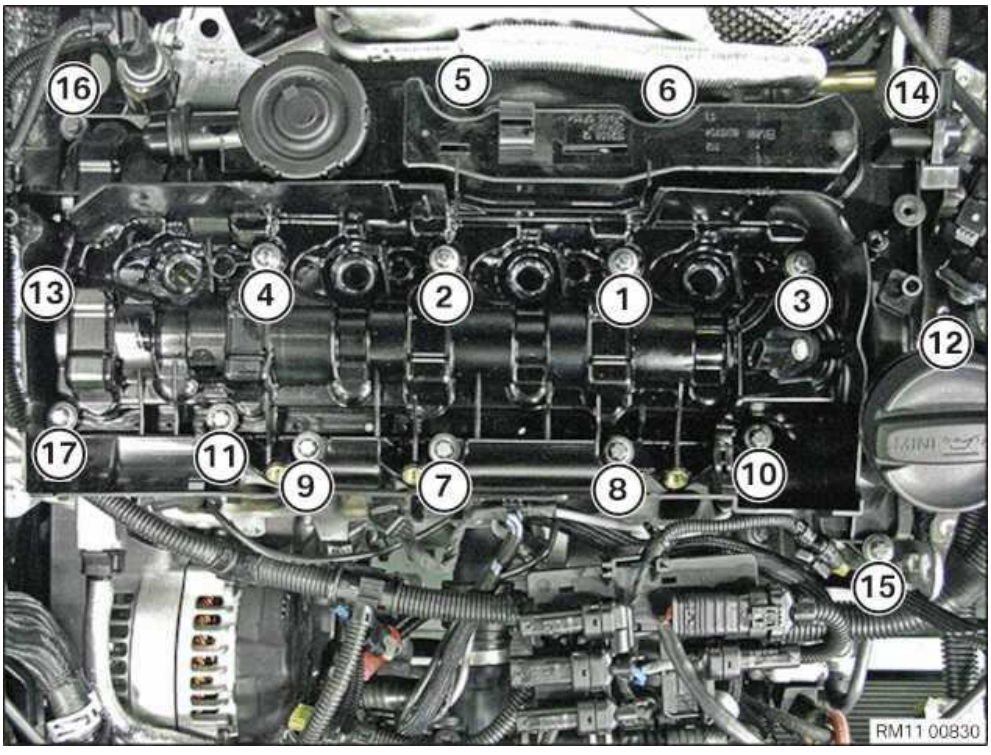
Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm



46 – Installing cylinder head cover

cardiagn.com

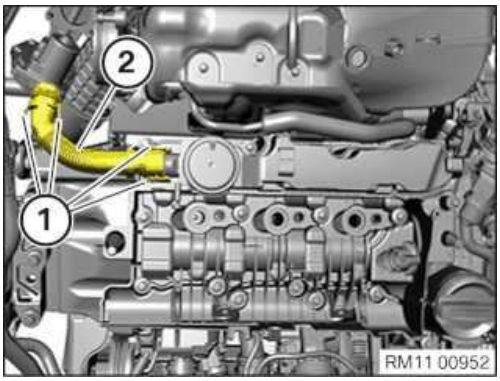
Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket

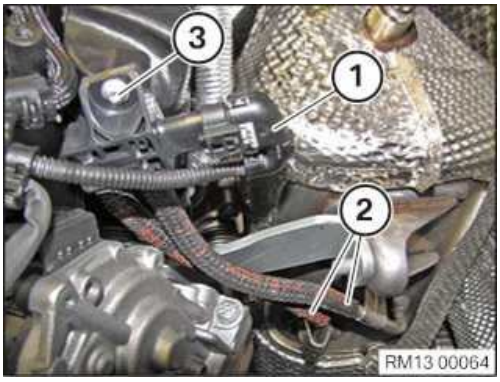


- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-



cardiagn.com

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

47 – Installing differential pressure sensor

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

48 – Installing injectors of injection system

▶ **Cleaning the injector shafts**

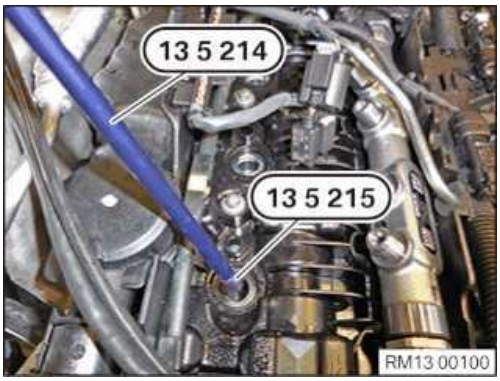
CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

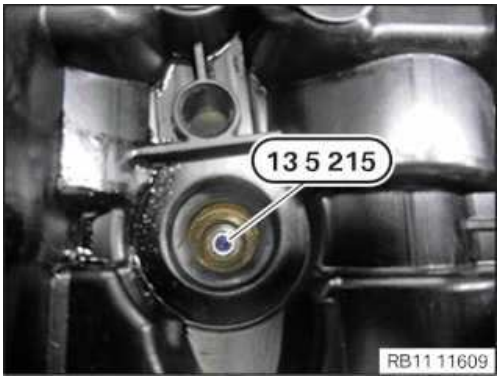
- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.



RISK OF DAMAGE

Contaminant or foreign body.

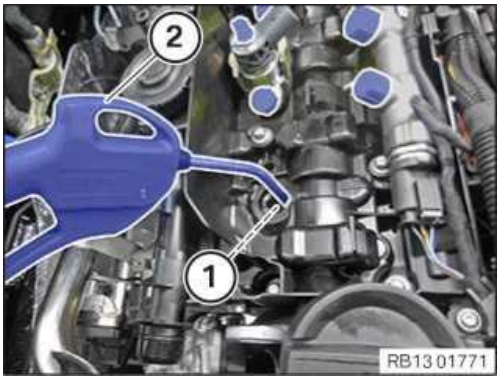


Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

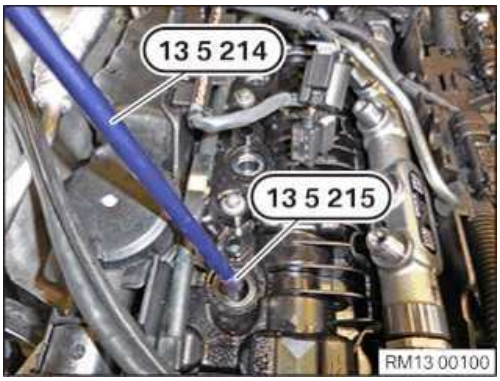
cardiagn.com

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

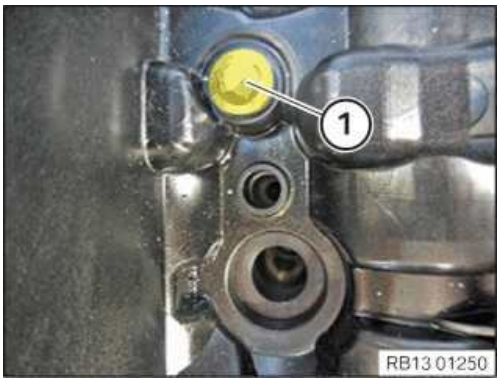


- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

- Blow out injector shaft (1) with air gun (2).

cardiagn.com

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.



▶ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▶ **Prepare the injector for installation**

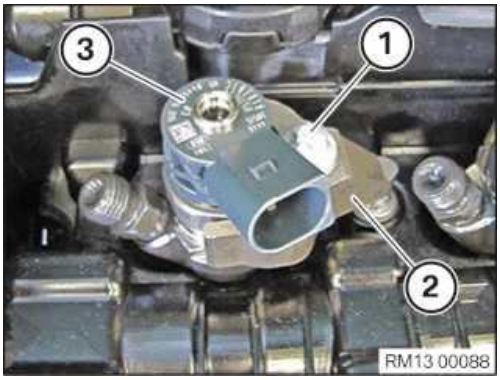
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

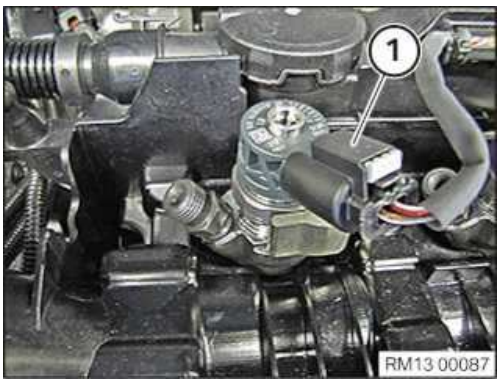


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring

- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials



Injector lubricating grease	50 g, Can	83230441070

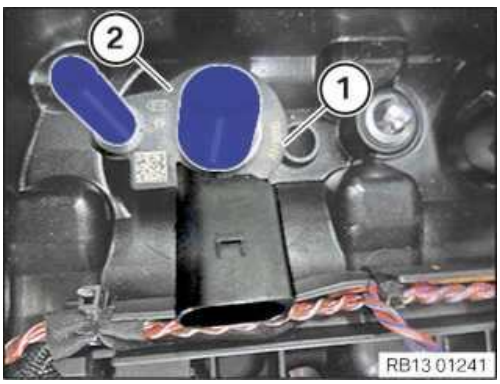
- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



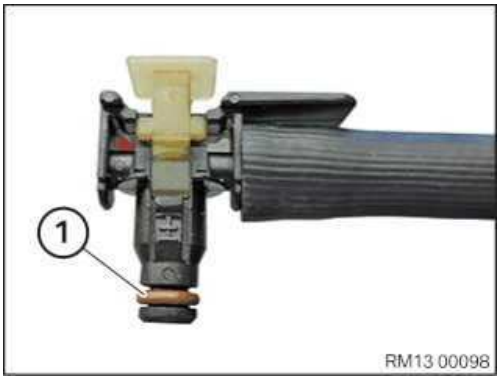
▸ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

cardiagn.com

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

49 – Connect the leakage oil line on the injector

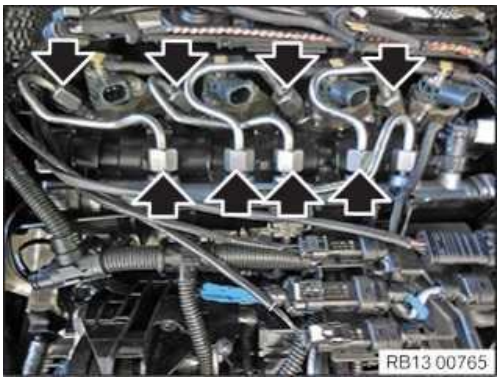
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

50 – Installing high pressure lines between rail and injectors



TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

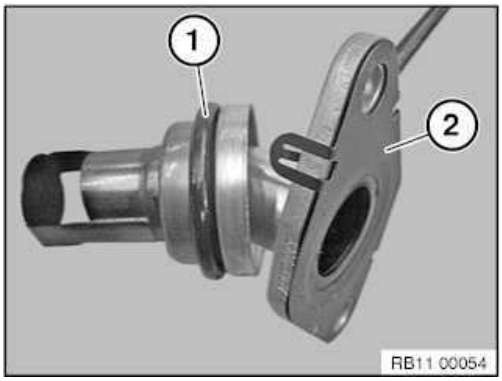
Reset special tool in early to avoid bending pressure lines.

cardiagn.com

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

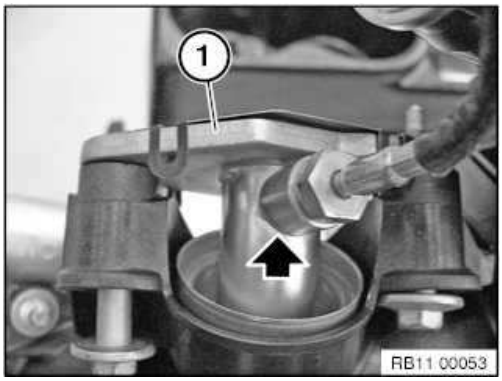


- Tighten the high pressure lines (arrows) with the special tool .

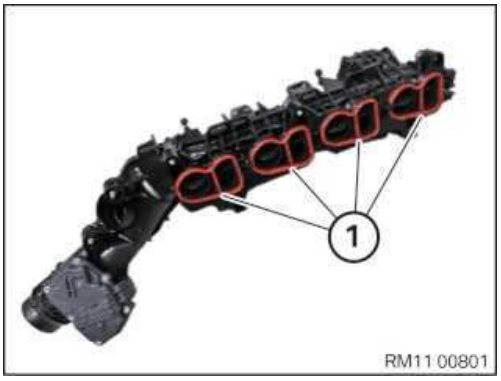
High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).



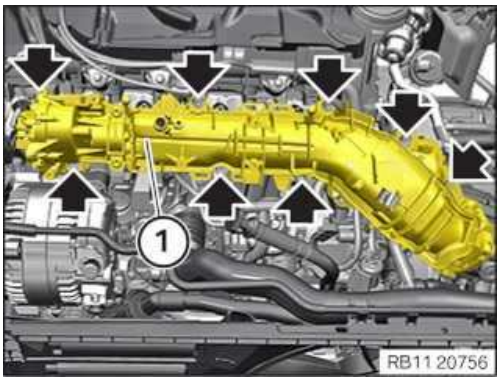
51 – Installing the intake plenum



- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

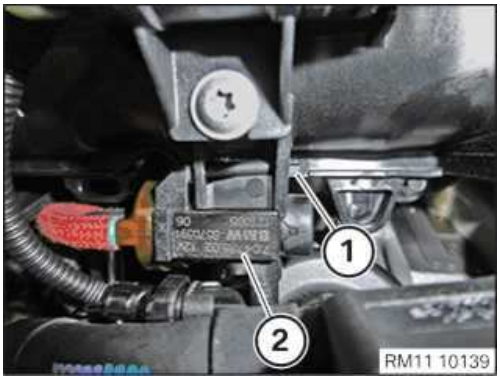
  Parts: Gasket
- Position the seal (2) and clip it in.



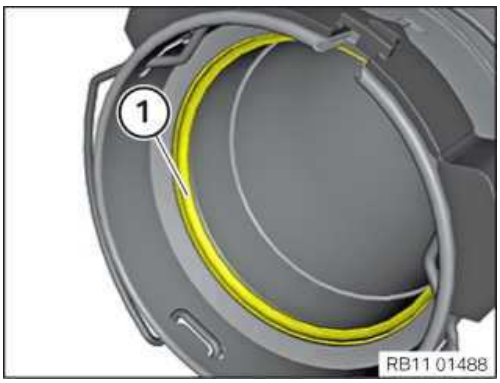
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



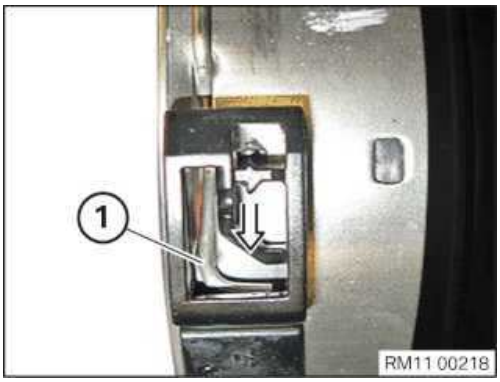
cardiagn.com



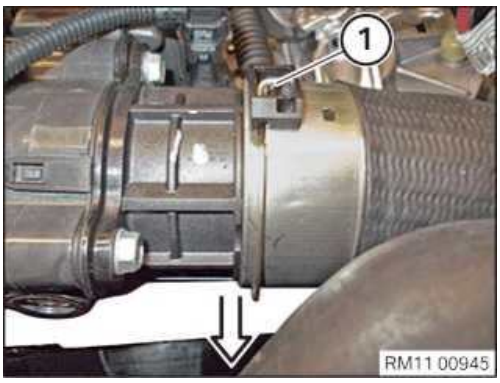
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

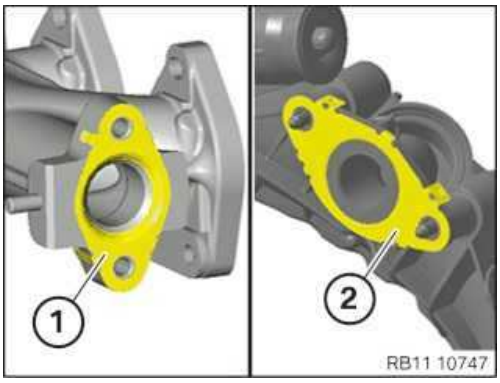
  Parts: Sealing ring

- Engage the lock (1) on the bracket (arrow).

- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

52 – Installing the exhaust-gas recirculation cooler



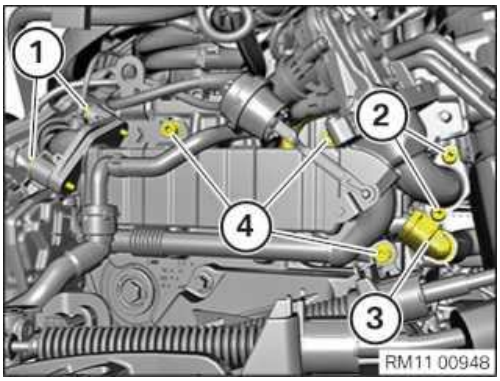
cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts

- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.

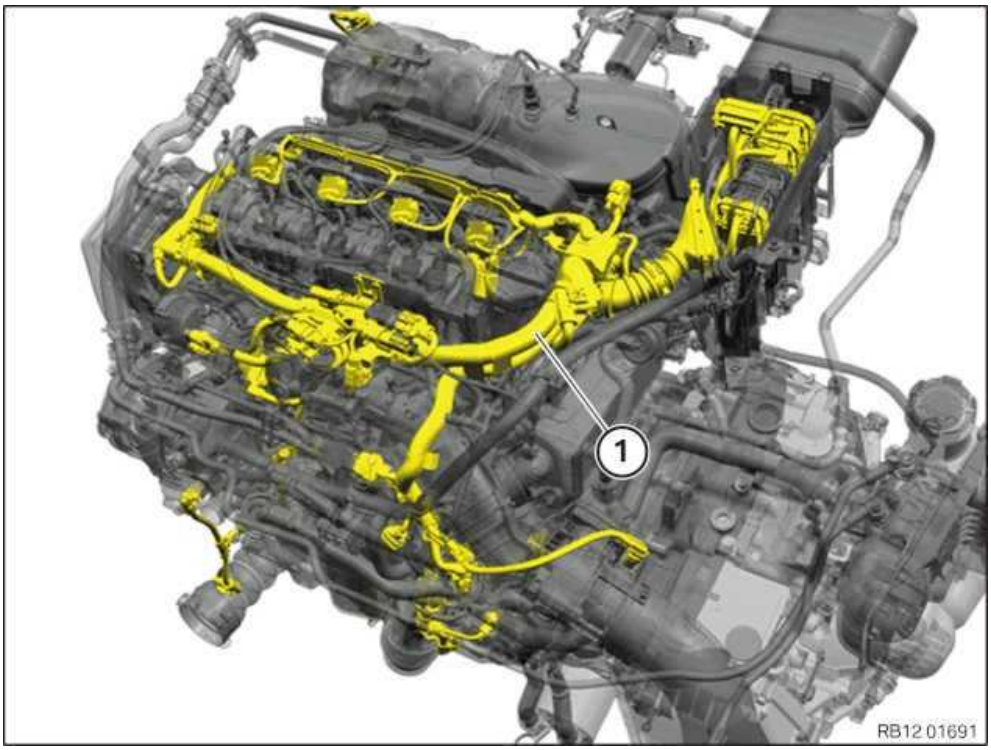
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

cardiagn.com

TECHNICAL INFORMATION



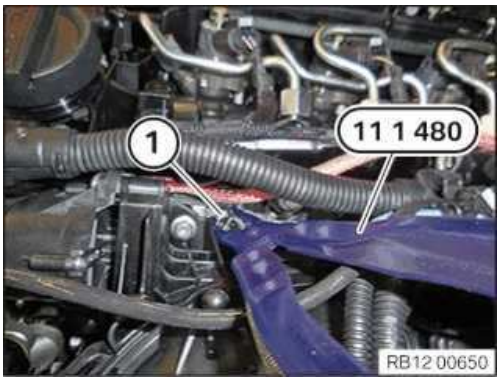
Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

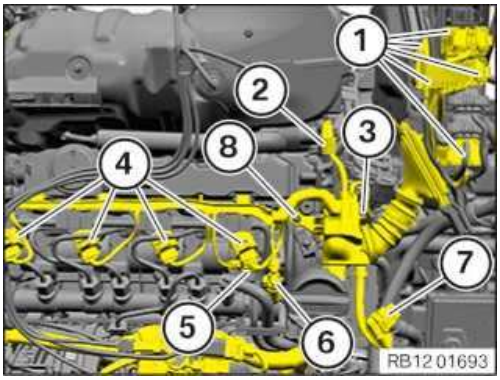
53 – Fastening the wiring harness section for the intake plenum

Overview: Wiring harness section for the engine



1 Wiring harness section for the engine

▸ **Installing the cable clip for the intake plenum**

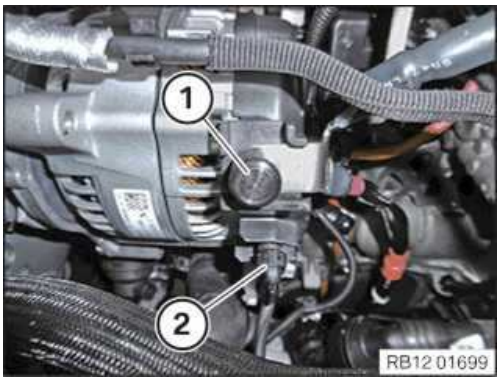


- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

cardiagn.com

- Connect and lock the connector (1) on the glow elements.

  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.

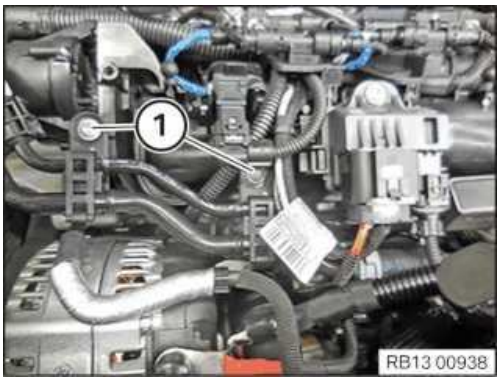


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.

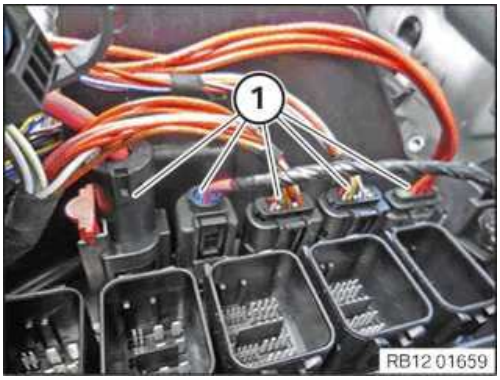


- Connect and lock the connector (2).

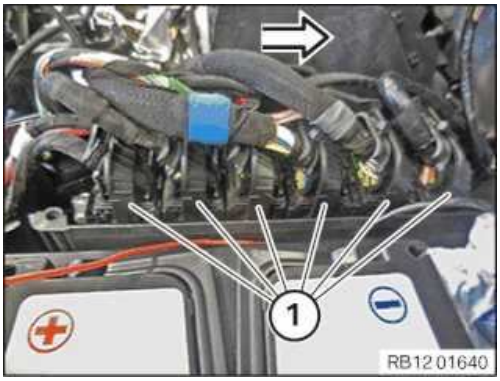
  Lock must snap audibly into place.
- Connect the positive battery cable (1) and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

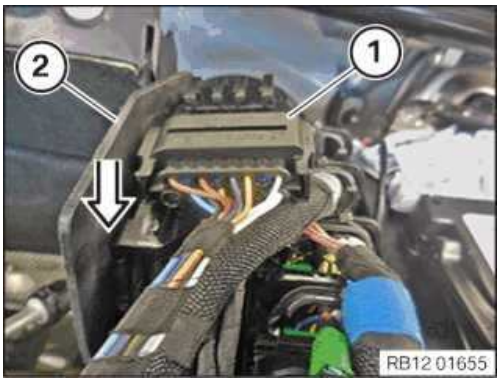


cardiagn.com

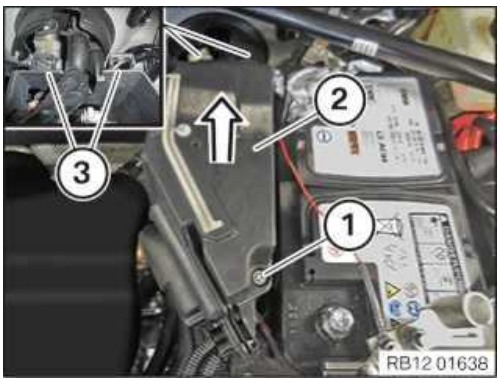


- Position the fuel line.
- Tighten the screws (1).

Fuel line to intake plenum



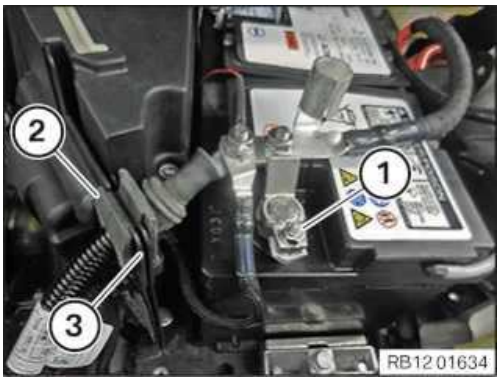
TS6x20		Tightening torque	5 Nm



- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

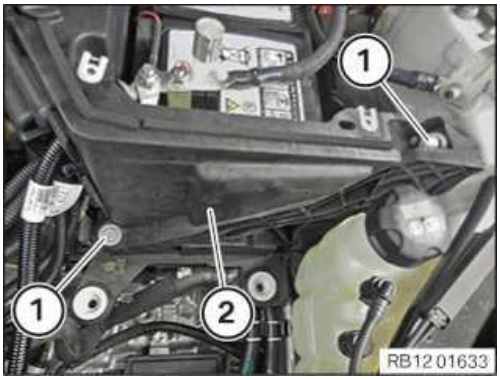
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm

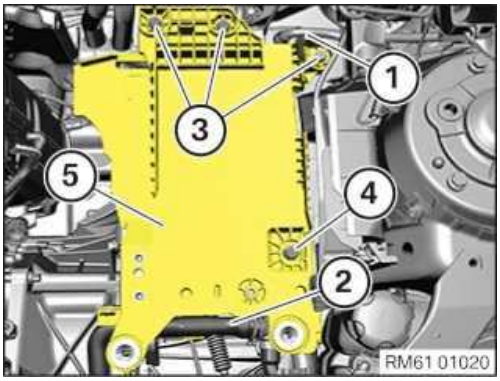


cardiagn.com

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray

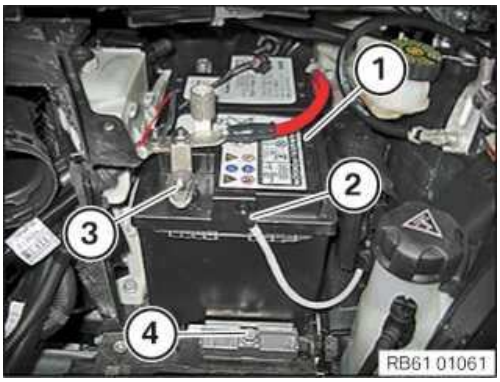
M8		Tightening torque	19 Nm

54 – Install the battery holder

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm



- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

55 – Install vehicle battery

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

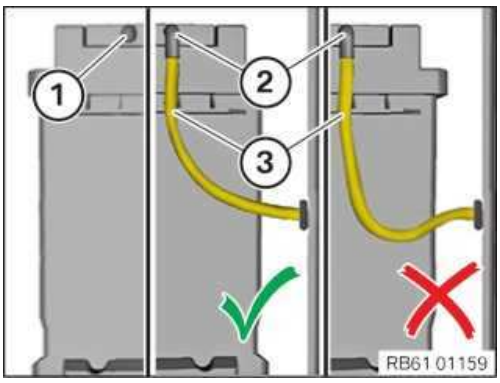
Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

▸ **Check the vent holes of the battery**

cardiagn.com

WARNING



Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

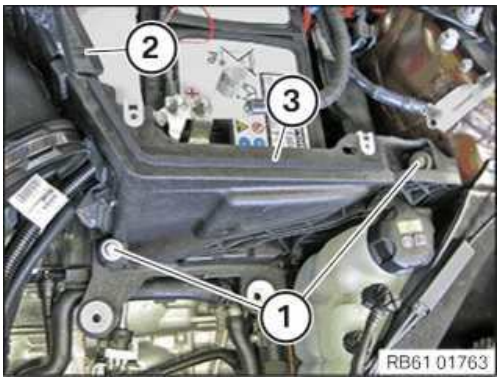
» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

Check

- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).



Result

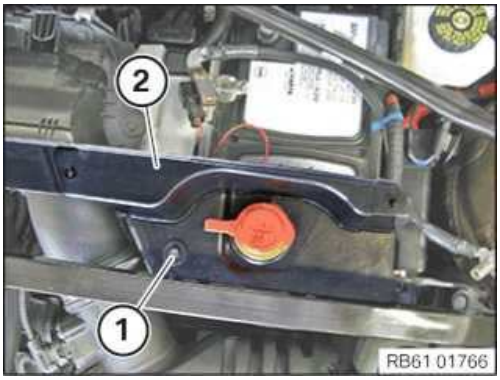
» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

cardiagn.com

- Insert tension strut (3) and tighten with screws (1).



Trailing link

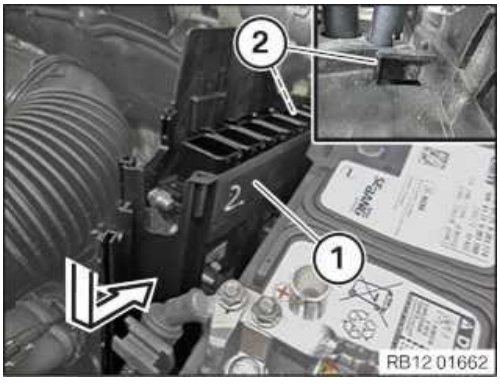
- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

56 – Install electronics box

Prerequisite



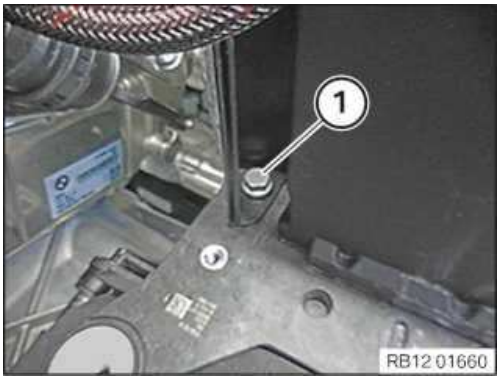
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

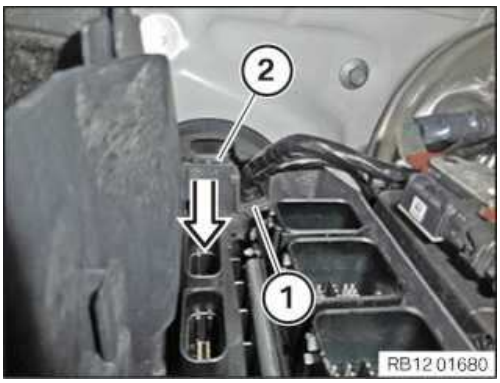
Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

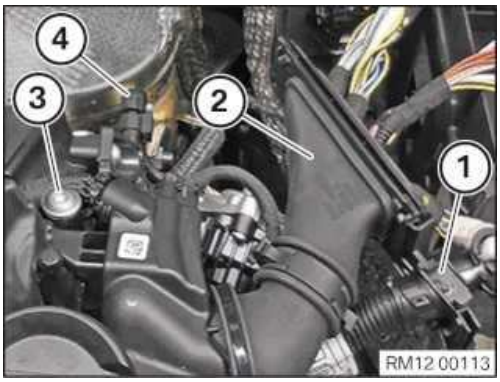


- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

cardiagn.com



- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).

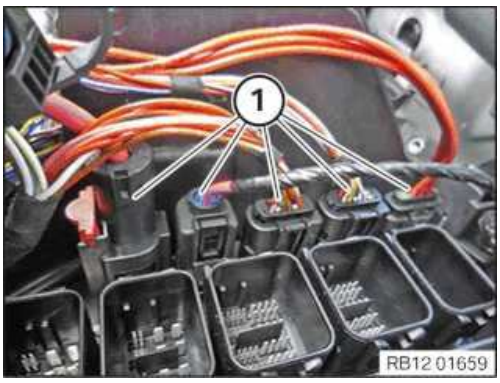


- Tighten down screw (1).

Electronics box to battery tray

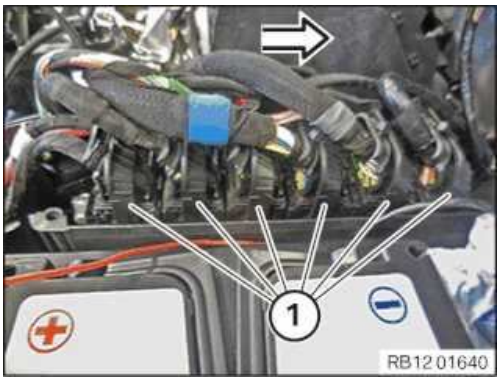
M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



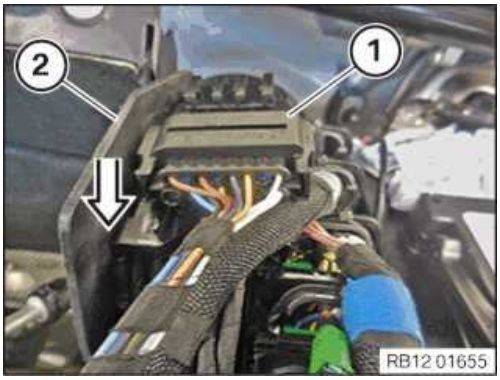
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

Wiring harness to cylinder head cover

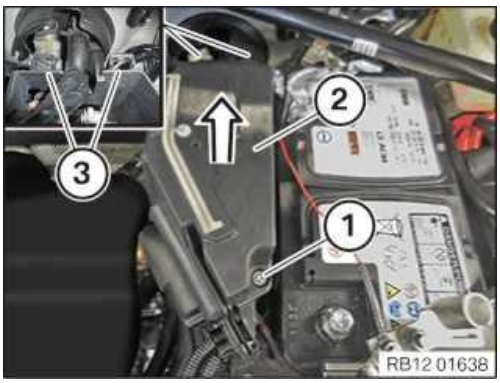


TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

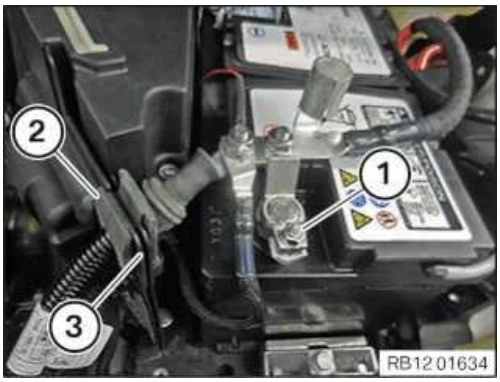


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



cardiagn.com

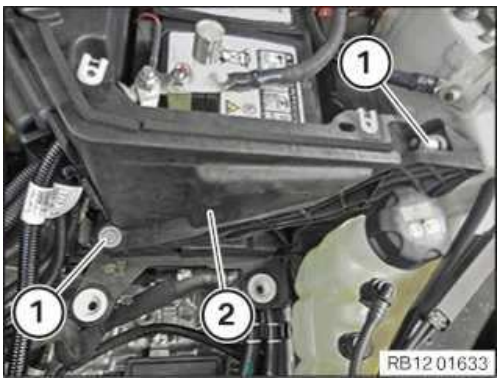
- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box



RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

M8		Tightening torque	19 Nm

cardiagn.com

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

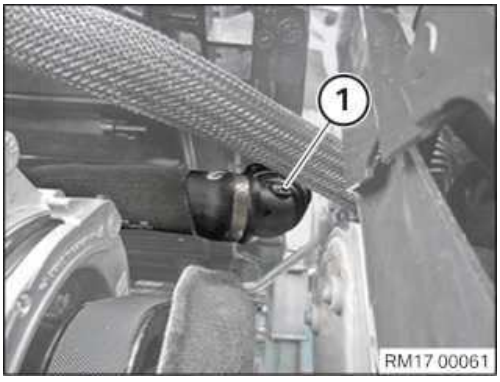
  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.

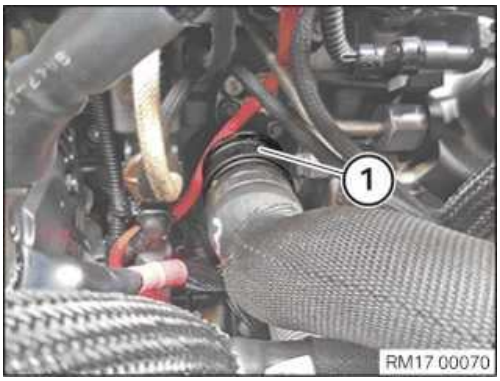
- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

58 – Connect the coolant line

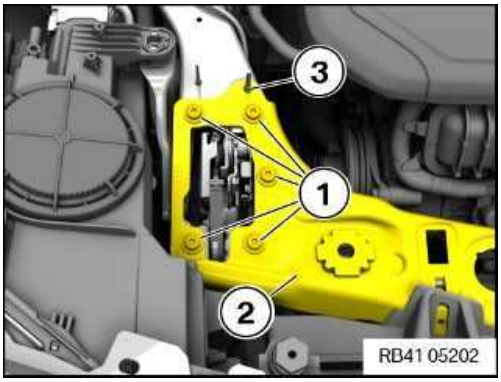


TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

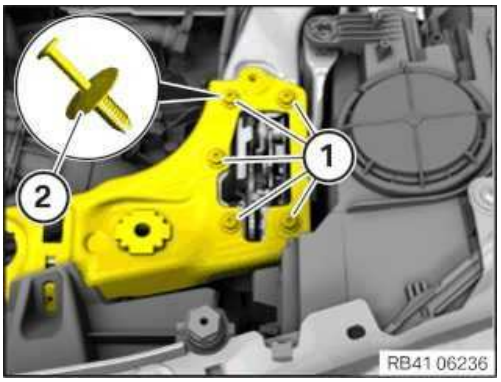
- Connect the right coolant line (1) to the radiator and lock audibly.

cardiagn.com



- Connect the coolant line (1) to the connecting branch and lock audibly.

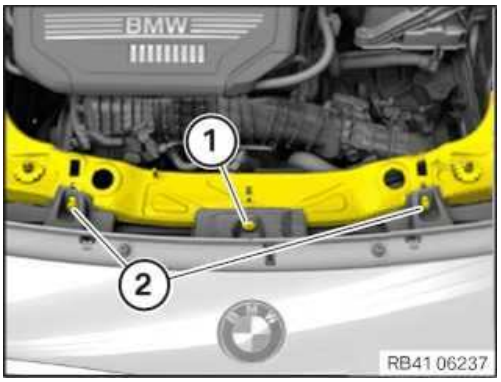
59 – Install front cross connection



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm

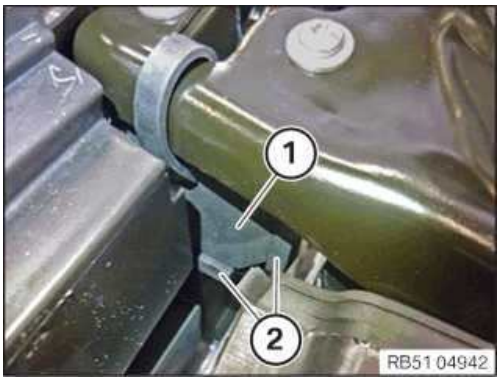
- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

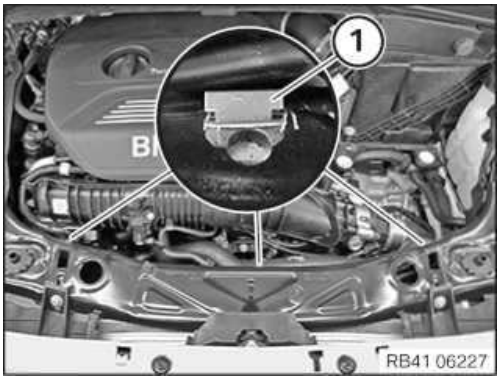
- Tighten down screws (2).

Air duct to upper connection



M6x20 screw		Tightening torque	11,8 Nm

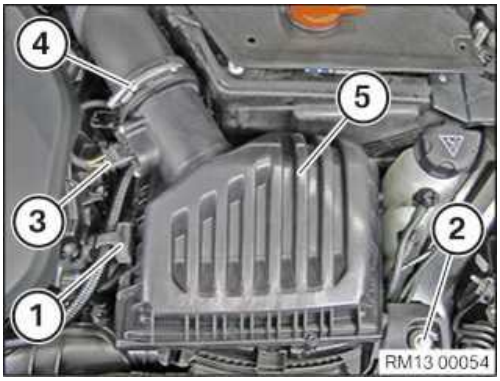
- Tighten down screw (1).



Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm

cardiagn.com



- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

60 – Installing intake silencer housing

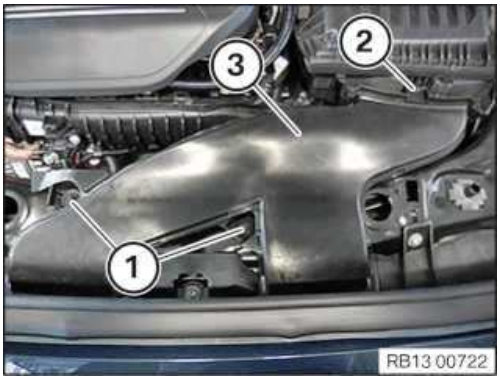
- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

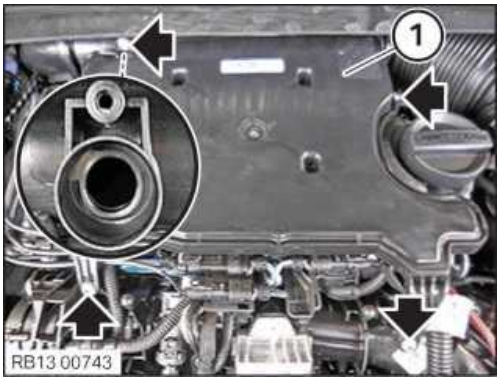
61 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm



62 – Install the acoustic cover for the injectors

cardiagn.com

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

63 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

64 – Install acoustic cover

RISK OF DAMAGE

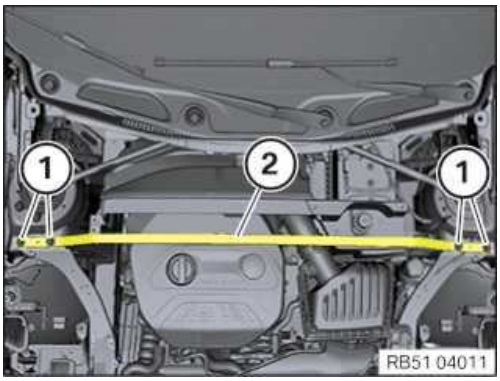
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

cardiagn.com

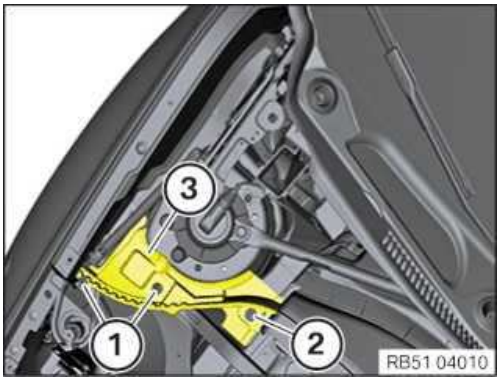


- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

65 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).

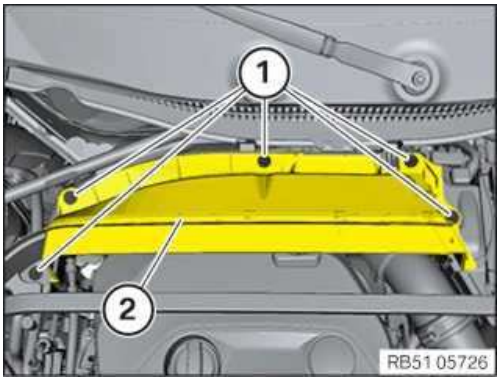
  Parts: Bolts
- Tighten the screws (1).

Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

NOTICE

Description is for right component only. The procedure on the left side is identical.



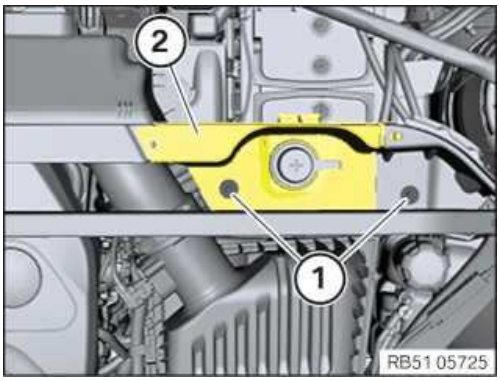
- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

66 – Installing the upper bulkhead cover

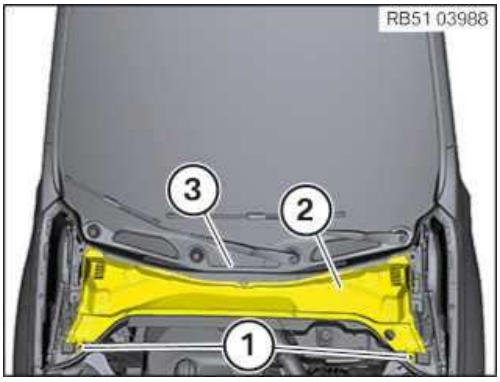


- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm

cardiagn.com

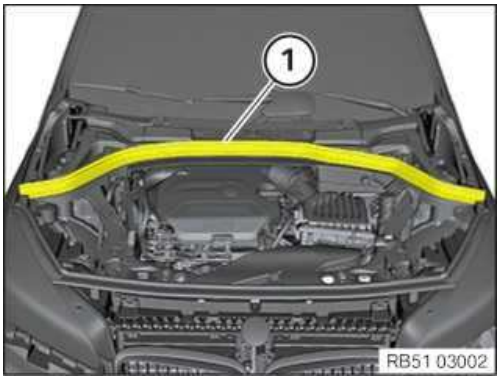


- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

67 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

68 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

69 – Disconnecting all battery earth leads

- See additional information.

70 – Fill and bleed the coolant circuit

▸ **Filling and bleed the high-temperature coolant circuit**

cardiagn.com

- See additional information.

cardiagn.com

Underbody protection front

Used in step 45

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

Cylinder head cover to cylinder head

Used in step 46

M6		Tightening torque.	8,5 Nm

Differential pressure sensor to holder

Used in step 47

Screw		Tightening torque	4 Nm

Clamp for the pressure hose on the differential pressure sensor

Used in step 47

Clamp 15–19mm		Tightening torque	3 Nm

Clamping claw facing to cylinder head cover

Used in step 48

Screw M6		Tightening torque	8 Nm

Injector to cylinder head

Used in step 48

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

High pressure lines between injector and rail

Used in step 50

High pressure lines		Tightening torque	28 Nm

Intake plenum to cylinder head

Used in step 51

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 52

M8x20		Tightening torque	5 Nm
		Release angle	90 °

Intake plenum to exhaust-gas recirculation cooler

Used in step 52

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to exhaust manifold

Used in step 52

M8x28	Replace screws	Tightening torque	32 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 52

M8x20		Tightening torque	19 Nm

Wiring harness to cylinder head cover

Used in step 53 56

TS5x20		Tightening torque	3,5 Nm

Positive battery cable to alternator

Used in step 53

M8		Tightening torque	19 Nm

Fuel line to intake plenum

Used in step 53

TS6x20		Tightening torque	5 Nm

Cover to electronics box

Used in step 53 56

RF5x26.5		Tightening torque	2,5 Nm

cardiagn.com

Positive battery terminal to battery

Used in step 53 56

NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray

Used in step 53 56

M8		Tightening torque	19 Nm

Battery holder to engine support

Used in step 54

Hexagon screw M8x30		Tightening torque	19 Nm

Battery terminal rail to battery tray

Used in step 55

M8			19 Nm

Battery terminal with IBS positive battery terminal / negative battery terminal

Used in step 55

NutM6			5 Nm

Trailing link

Used in step 55

M8		Tightening torque	19 Nm

Battery cover

Used in step 55

M8			2,8 Nm

Electronics box to battery tray

Used in step 56

M8X16		Tightening torque	15 Nm

Clean air pipe to cylinder head cover

Used in step 57

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing

Used in step 57 60

Clamp		Tightening torque	3 Nm

Cross connection to carrier support

Used in step 59

Screws M6x20		Tightening torque	11,8 Nm

Screw connection for rubber mount of coolant radiator to coolant radiator

Used in step 59

Bolt to rubber mount		Tightening torque	8 Nm

Air duct to upper connection

Used in step 59

M6x20 screw		Tightening torque	11,8 Nm

Bracing strut to upper connection

Used in step 59

M8x20 screw		Tightening torque	28 Nm

Intake silencer housing to lock bridge

Used in step 60

M6X30		Tightening torque	8 Nm

Intake neck to cross connection

Used in step 61

M6		Tightening torque	8 Nm

Resonator to manifold and clean air pipe

Used in step 63

Screw TS6	Renew screw.	Tightening torque	5 Nm

cardiagn.com

Cross-brace to spring strut dome

Used in step 65

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

Cover on body

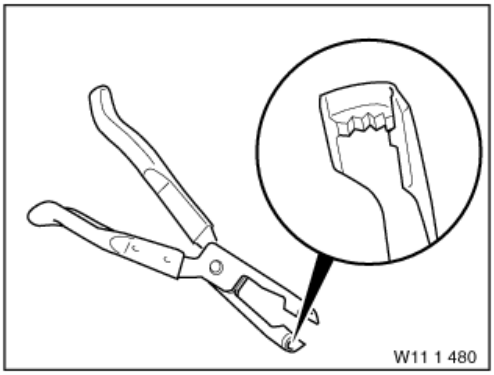
Used in step 65

Hexagon screw		Tightening torque	3 Nm

Cover of top bulkhead

Used in step 66

Screw		Tightening torque	2,6 Nm



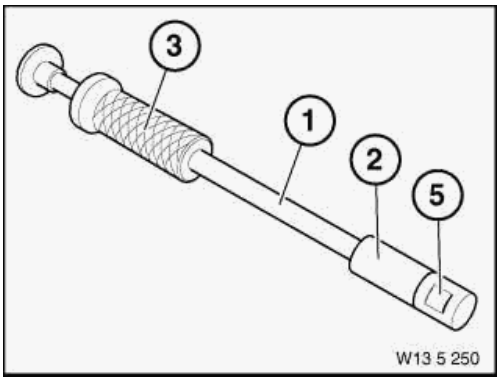
Cover of remote positive terminal

Used in step 66

Screw		Tightening torque	2,6 Nm

Overview of Special Tools

0 490 796 (11 1 480) Pliers



Common

Used in step 18

Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

cardiagn.com

0 493 321 (13 5 250) Puller

Common

Used in step 23

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

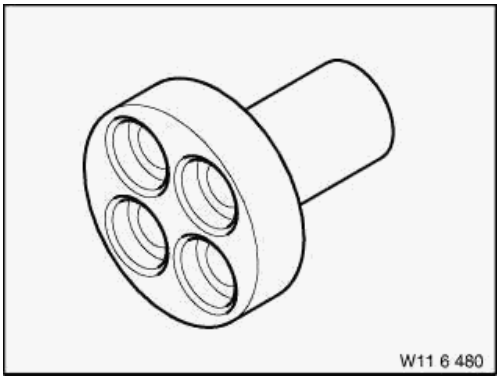
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

cardiagn.com

0 493 339 (13 5 252) Bush

Common Used in step 23

Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	



0 493 340 (13 5 253) Weight

Common Used in step 23

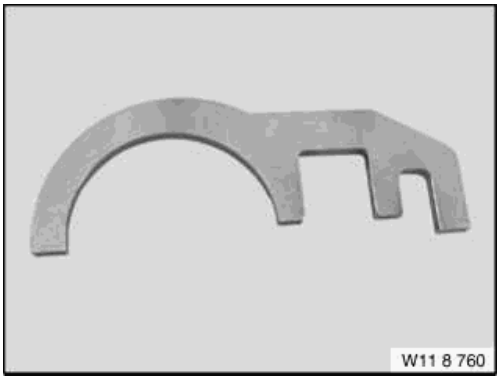
Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 380 (11 6 480) Connector

Common Used in step 28 42

Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

cardiagn.com



2 288 380 Locating stud

Common Used in step 28 42

Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 112 (11 8 760) Gauge

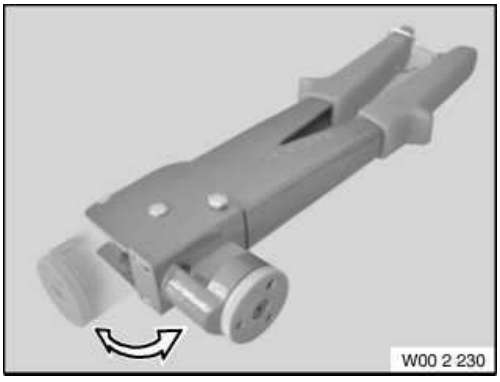
Common Used in step 28 42

Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

cardiagn.com

0 495 105 (11 4 480) oddments tray

Common



Used in step 33 34

Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

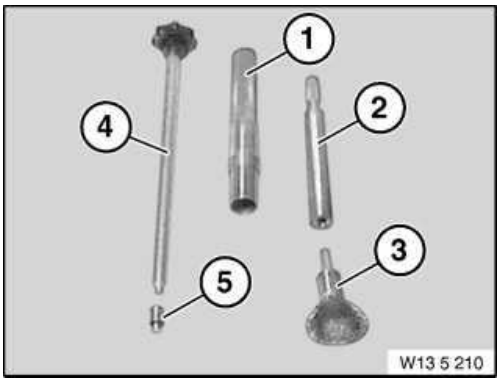
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

0 496 521 (00 2 230) Pliers

Common

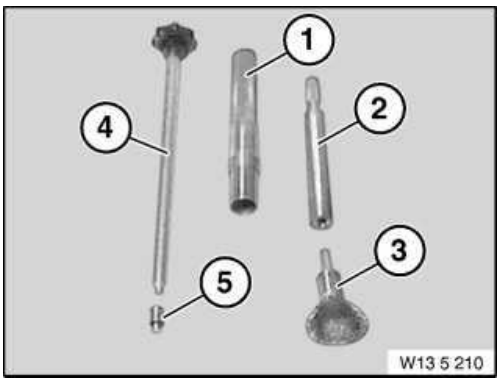
Used in step 43

Usage	(Blind rivet pliers for plastic rivets) For shaft diameters of 3.5 mm, 3.9 mm and 4.5 mm
Included in the tool or work	
Storage location	C25
Replaced by	
In connection with	
SI-Number	01 17 08 (478)



cardiagn.com

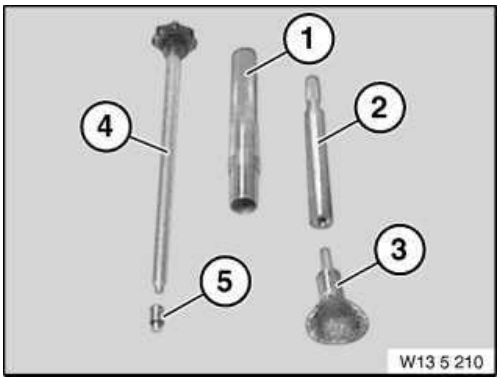
2 344 011 Tool



Common	Used in step 44
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

0 493 763 (13 5 215) Plug

Common	Used in step 48
Usage	(Seal plug)
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	



0 493 762 (13 5 214) Rod

Common	Used in step 48
Usage	(Mounting rod) For the seal plug
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 758 (13 5 210) Tool

Common

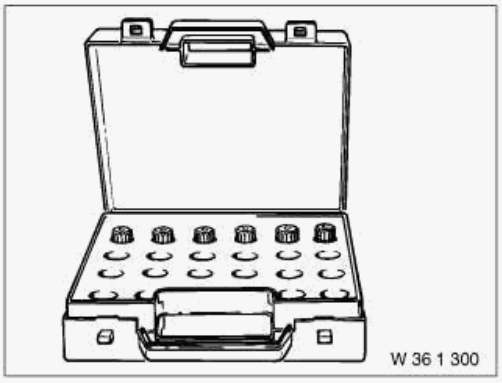
Used in step 48

Usage	(Cleaning set) For injector channels
Included in the tool or work	
Storage location	B4
Replaced by	
In connection with	
SI-Number	01 05 00 (574)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 759 (13 5 211)		**Holding sleeve** (Guide sleeve)	
2	0 493 760 (13 5 212)		**Holder** (Brush holder)	
3	0 493 761 (13 5 213)		**Brush head**	
4	0 493 762 (13 5 214)		**Rod** (Mounting rod) For the seal plug	
5	0 493 763 (13 5 215)		**Plug** (Seal plug)	

Replacement tools:



cardiagn.com

0 495 221 (36 1 323) Wheel stud

Common	Used in step 26
Usage	(Code 30) Code 39 available separately, (see EPC) under 36 13 1 181 259
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 224 (36 1 326) Wheel stud

Common	Used in step 26
Usage	(Code 33) With centring bore available separately, (see EPC) under 36 13 6 765 546
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 225 (36 1 327) Wheel stud

Common	Used in step 26
Usage	(Code 34) With centring bore available separately (see EPC) under 36 13 6 765 547
Included in the tool or work	0 492 518

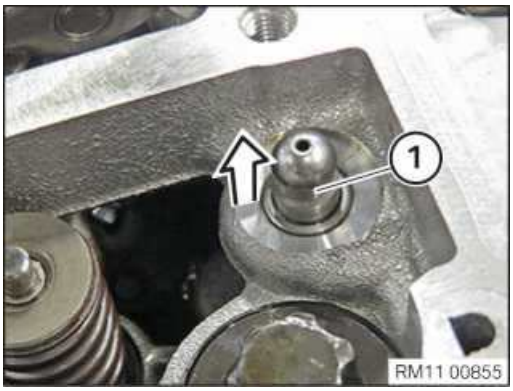
Chain tensioner piston seal on cylinder head	40
Exhaust-gas recirculation cooler seal on exhaust manifold	52
Exhaust-gas recirculation cooler seal on intake plenum	52

cardiagn.com

11 33 062 Replacing all hydraulic valve clearance compensating elements (B47)



Special tools required:

- 11 4 480

When reused, the hydraulic valve clearance compensating elements must be fitted at the same position.

Necessary preliminary tasks:

- Remove all rocker arms

Remove all hydraulic valve clearance compensating elements (1) in direction of arrow.*Note:*
If hydraulic valve clearance compensating elements (1) are reused, they must be placed together with rocker arms in neat order in special tool 11 4 480 .

Installation:

Install all hydraulic valve clearance compensating elements (1).

cardiagn.com

Required follow-up work:

- Install all rocker arms

Check function of DME.

cardiagn.com

11 34 552 Removing and installing or replacing all valves - cylinder head removed (B47)

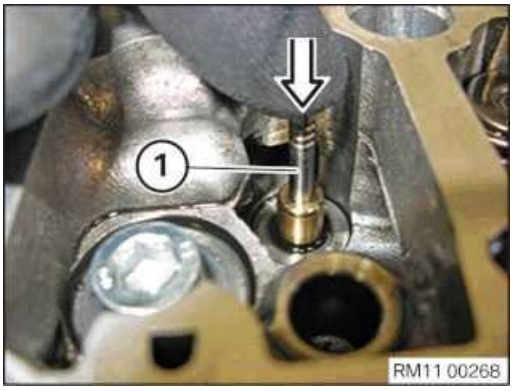
Special tools required:

- 11 9 000
- 11 9 005
- 11 9 006
- 11 9 008
- 11 4 480
- 11 9 007

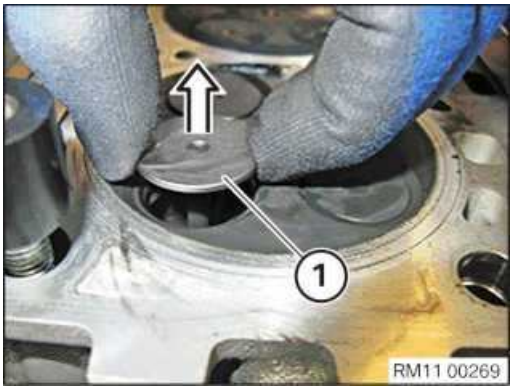
Necessary preliminary tasks:

- Remove valve stem seals

Removal:

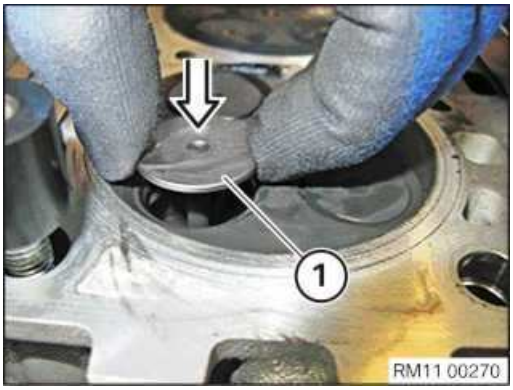


Turing the cylinder head with the special tool 11 9 000 .
Unlocking the special tool 11 9 005 .
Remove special tool 11 9 006 .

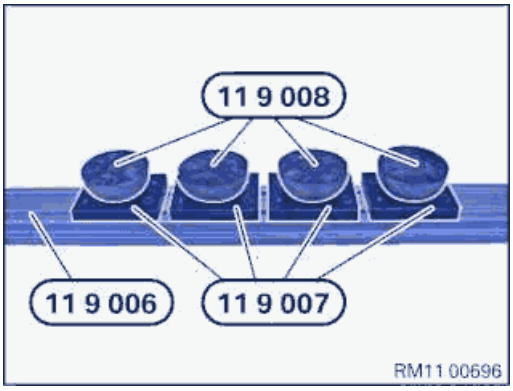


Remove special tool 11 9 008 if necessary.

cardiagn.com



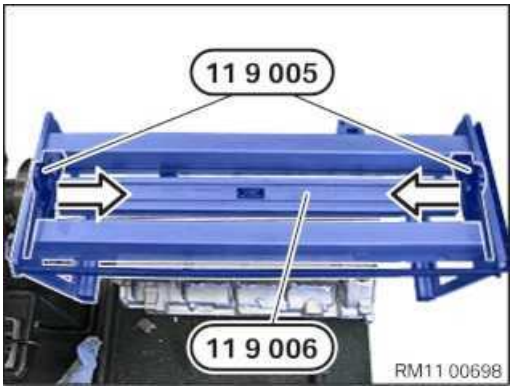
Push valve stem (1) into the cylinder head.



Removing the valve (1) and placing on the special tool 11 4 480 in an orderly fashion.

Installation:

Installing the valve (1).



Prepare the special tools 11 9 006 , 11 9 007 and 11 9 008 as shown.

cardiagn.com

Note:
The special tools 11 9 008 must be set up accordingly in the next operation.

Turn round special tool 11 9 006 and insert as shown.

Lock special tool 11 9 005 in direction of arrow.

Lock special tool 11 9 005 in direction of arrow.

Rotate cylinder head, using special tool 11 9 000 , 180° into installation position.

Required follow-up work:

- Installing and, if necessary, replacing the valve stem seals
- Assemble engine

cardiagn.com

11 34 550 Removing and installing/replacing all valves

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

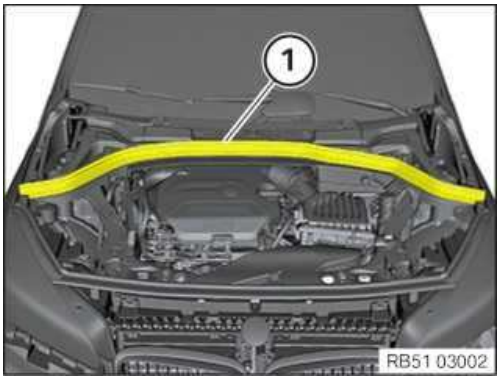
Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

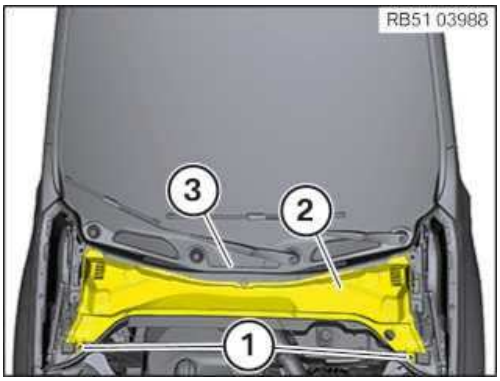


- Ensure there is a specific weight compensation on the motor vehicle.

PRELIMINARY WORK

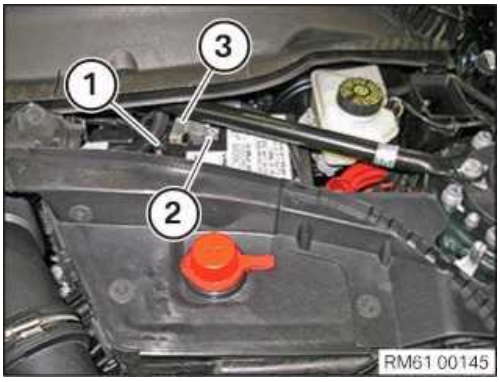
1 – Remove the seal for the rear bonnet

NOTICE



Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.

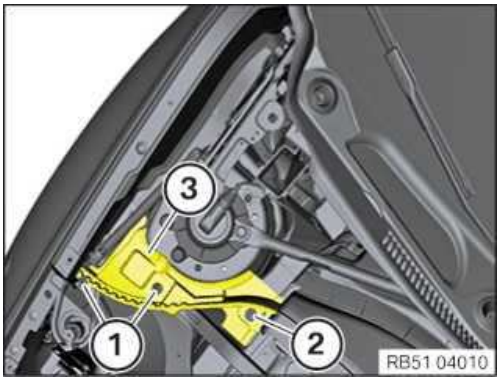


2 – Removing front cowl panel cover

cardiagn.com

- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

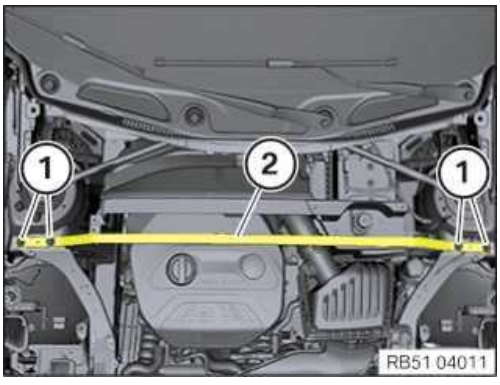
3 – Disconnecting the battery earth lead



- Unlock plug connection (1) and disconnect.
- Unfasten nut (2).
- Remove the battery earth lead (3) and secure to one side.

4 – Remove suspension cross-brace

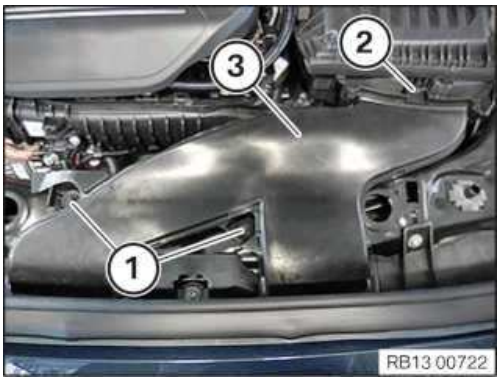
TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

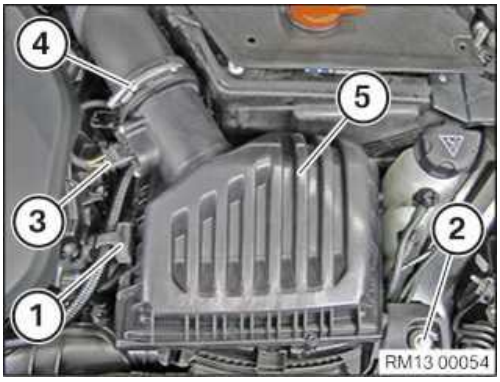
NOTICE

Description is for right component only. The procedure on the left side is identical.



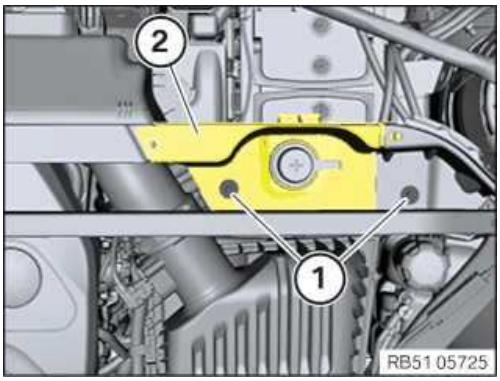
- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).



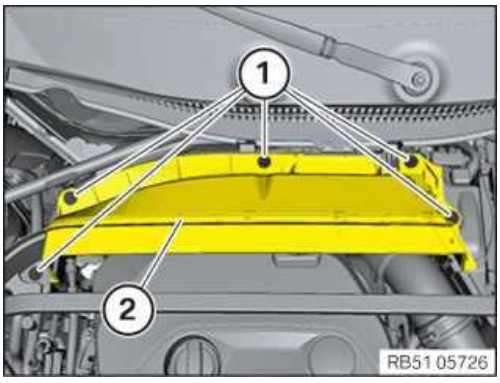
5 – Remove the intake neck for intake silencer housing

cardiagn.com



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

6 – Removing intake silencer housing



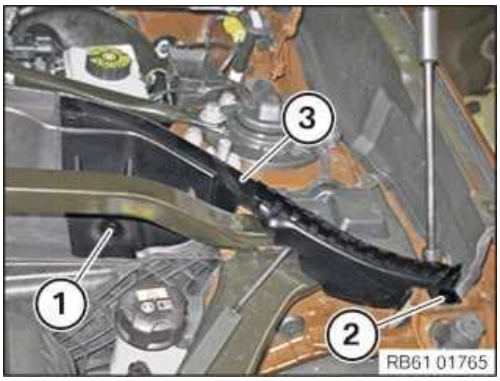
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

7 – Removing the upper bulkhead cover

- Loosen screws (1).
- Guide out and remove the cover (2).

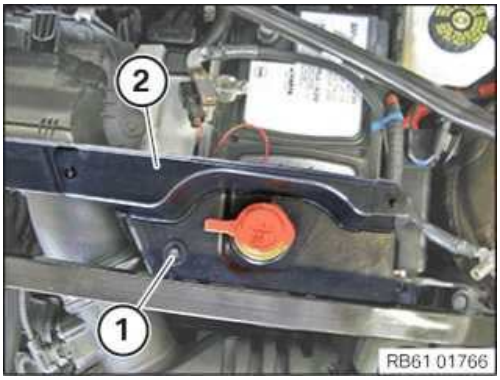
- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

8 – Remove vehicle battery



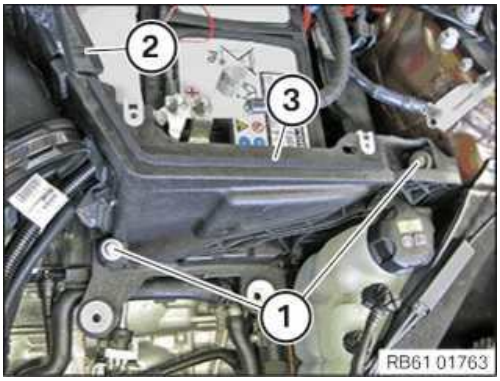
WARNING

Working on 12 V vehicle electrical system.

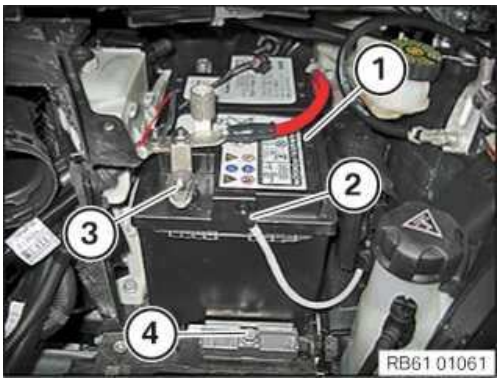


Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.



cardiagn.com



- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING

Unprotected battery terminals.

Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

9 – Removing the acoustic cover

WARNING

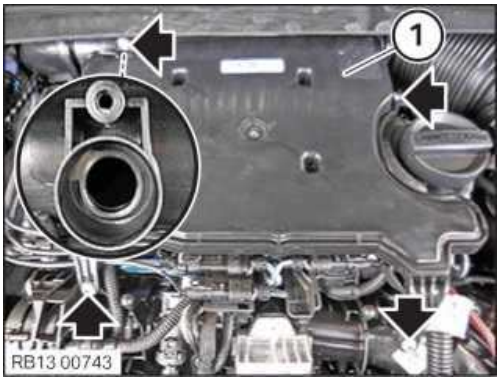
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE



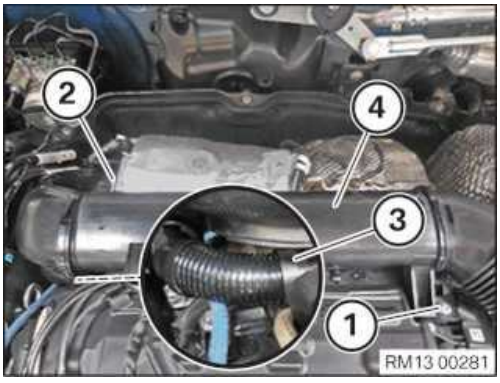
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

10 – Remove resonator



- Remove screws (arrows).
- Guide out and remove the resonator (1).

11 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

12 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

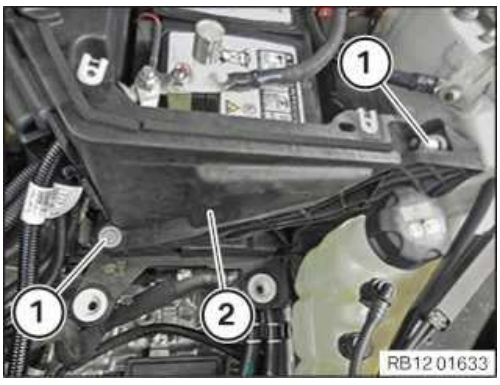
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

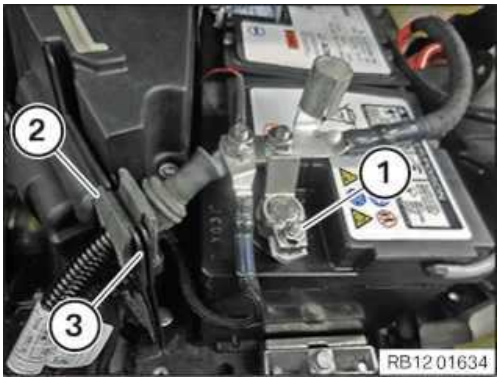
Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.



TECHNICAL INFORMATION

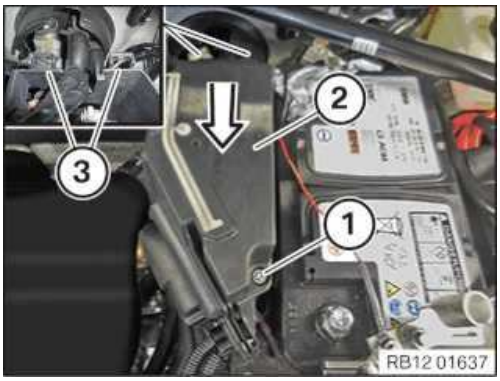
Follow instructions for removing and installing control units.



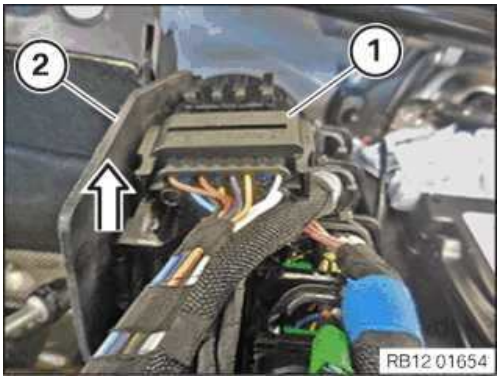
For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

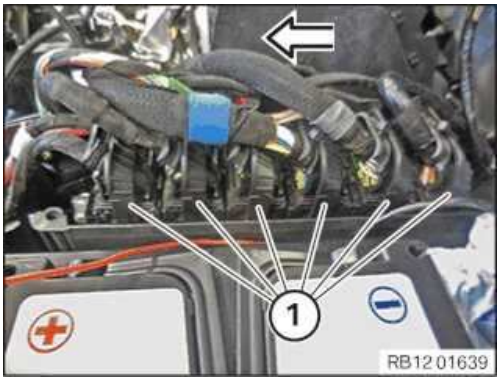
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



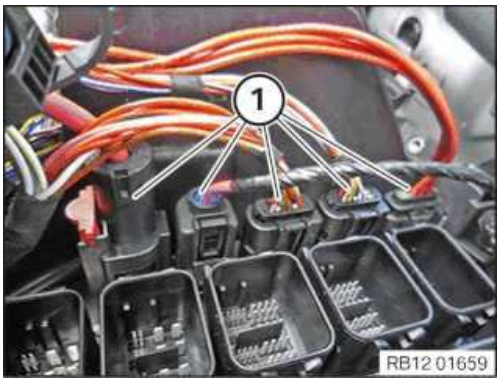
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



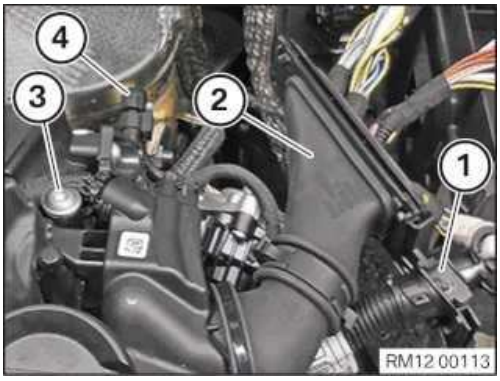
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



cardiagn.com

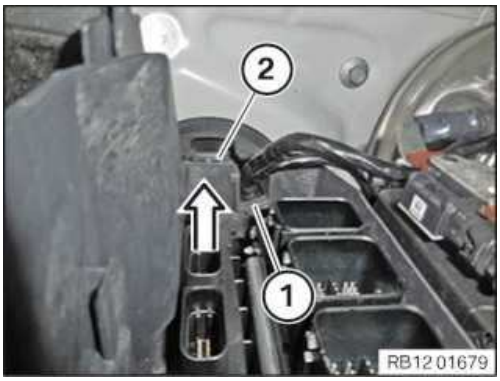


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

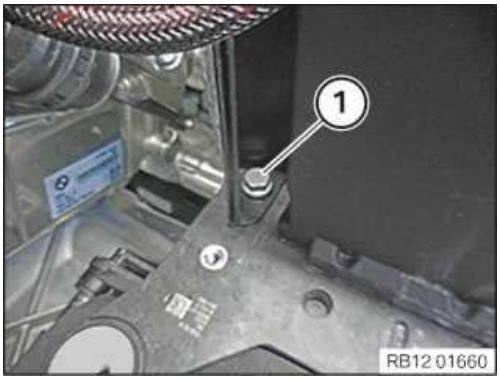


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

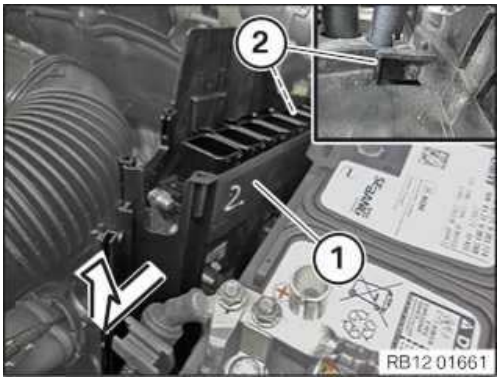
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).

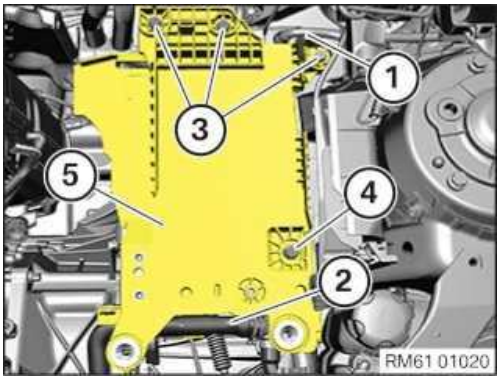


- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

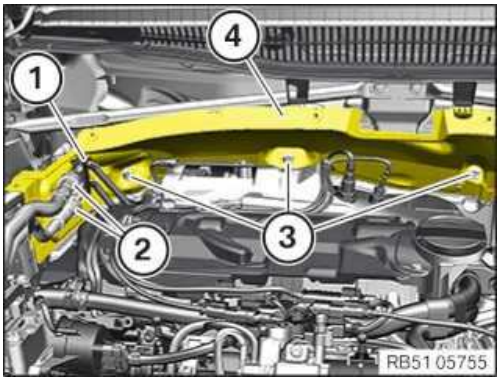


cardiagn.com

- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.



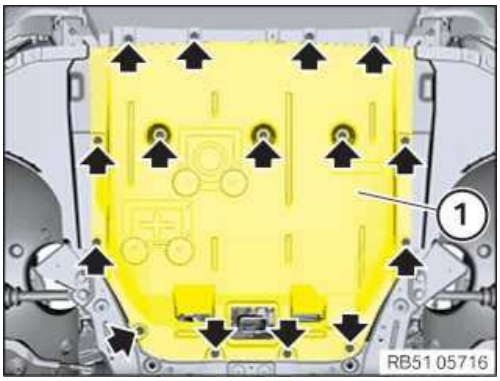
- Loosen screw (1).



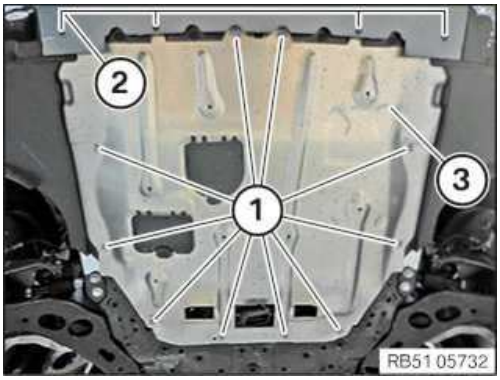
- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

13 – Remove battery holder

- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).



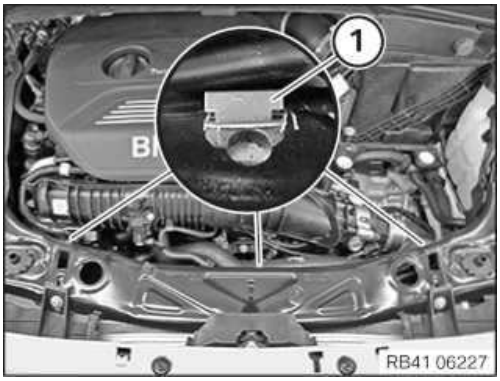
14 – Remove the rear bulkhead upper part



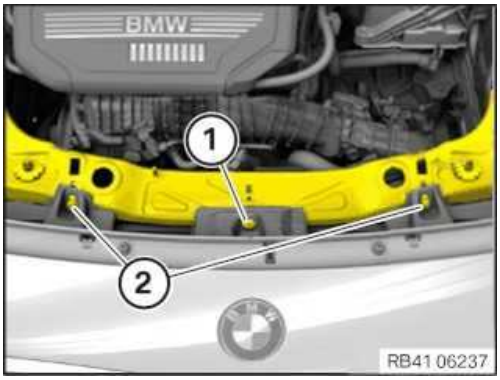
- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.

15 – Removing the front underbody protection

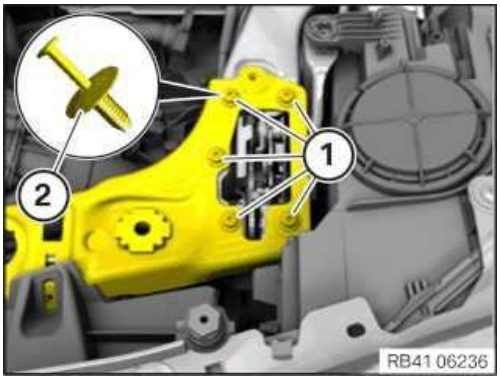
cardiagn.com



- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

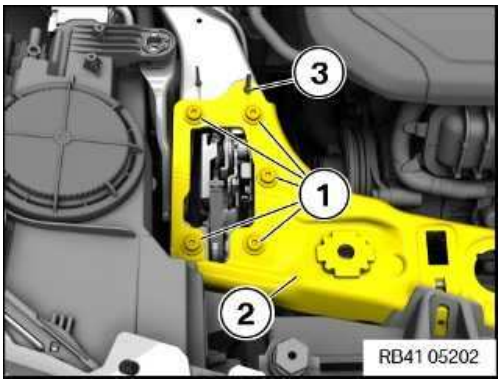


- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).



16 – Remove front cross connection

- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.



- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

cardiagn.com

- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

17 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

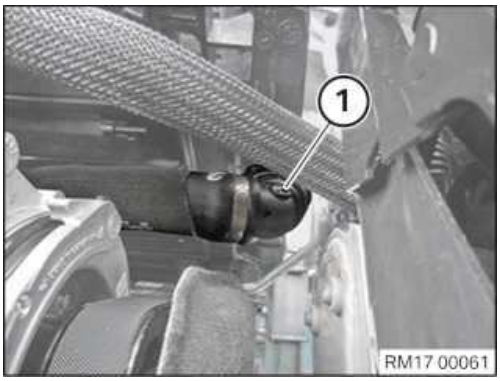
TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

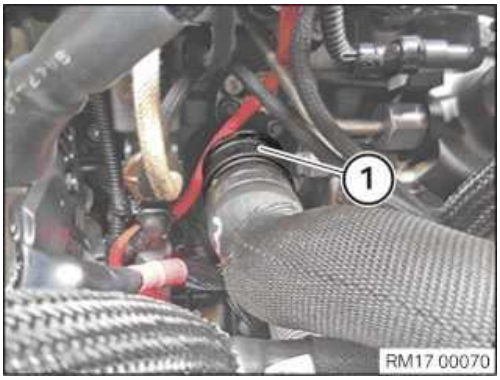
When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.



TECHNICAL INFORMATION

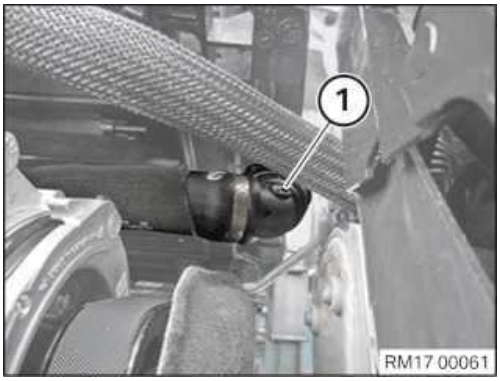
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



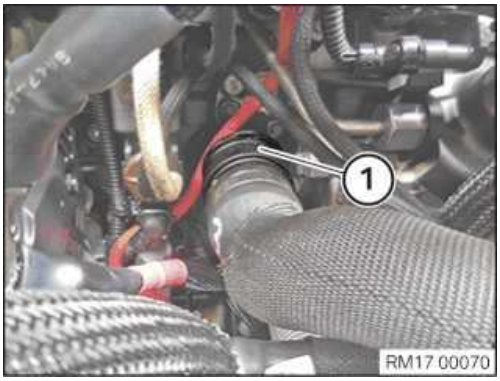
- Loosen sealing cap (1).

cardiagn.com

- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.



- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.

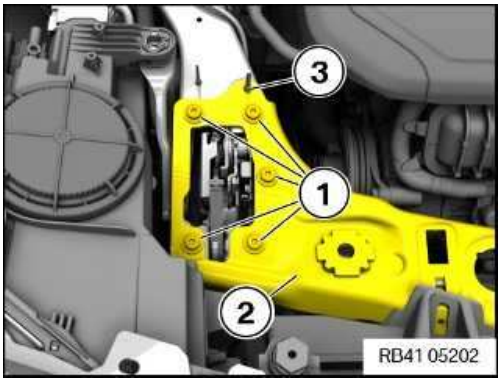


18 – Connect the coolant line

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

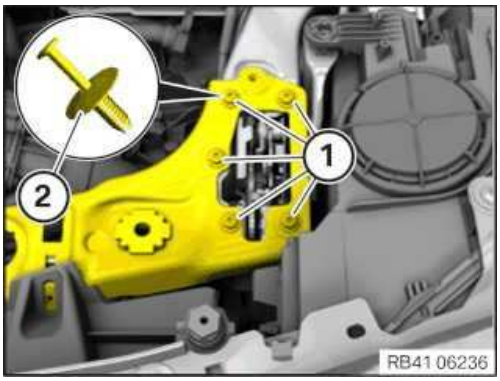
- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the connecting branch and lock audibly.

19 – Install front cross connection

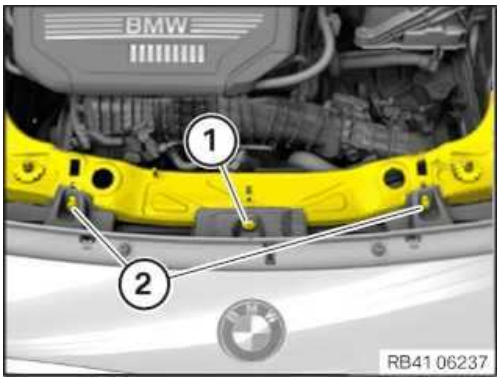
cardiagn.com



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

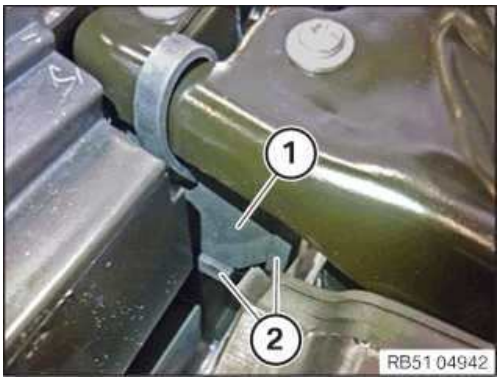
Screws M6x20		Tightening torque	11,8 Nm

- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

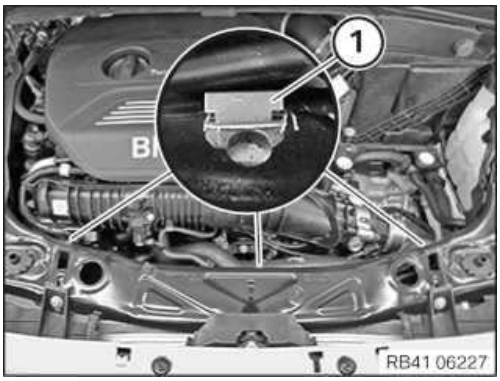
- Tighten down screws (2).



Air duct to upper connection

M6x20 screw		Tightening torque	11,8 Nm

- Tighten down screw (1).



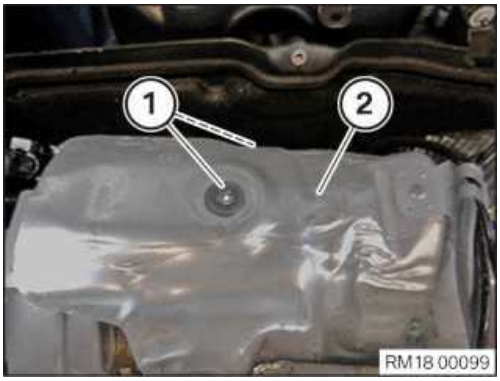
Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm

- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

cardiagn.com

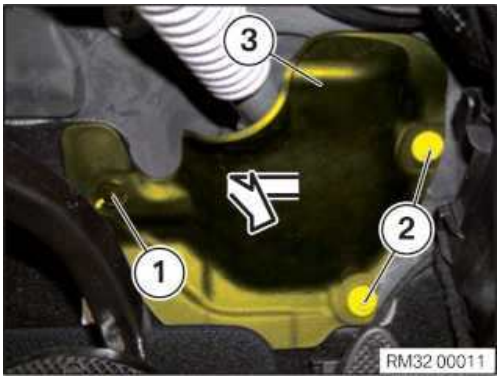
- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.



20 – Removing heat shield from top exhaust turbocharger

WARNING

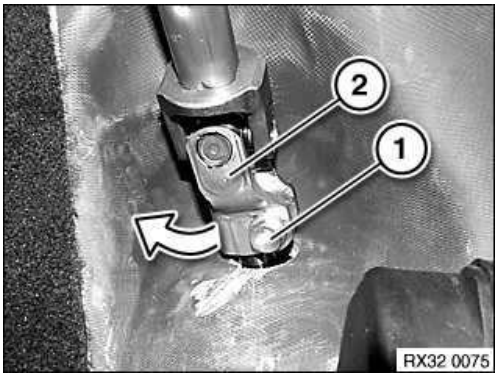
Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.

- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).



21 – Releasing lower steering shaft from steering gear

- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!

- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

22 – Securing radiator on left and right

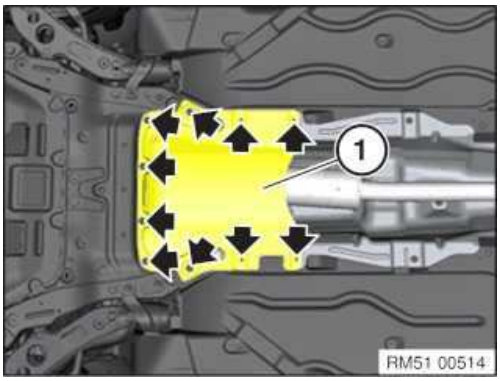
cardiagn.com

NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

23 – Removing both front wheels



▶ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

24 – If installed: Removing rear underbody protection

- Remove screws (arrows).
- Remove the rear underbody protection (1).

25 – Removing right underbody panelling

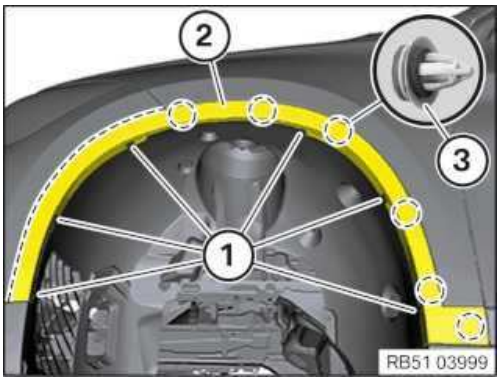
- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).

26 – Removing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

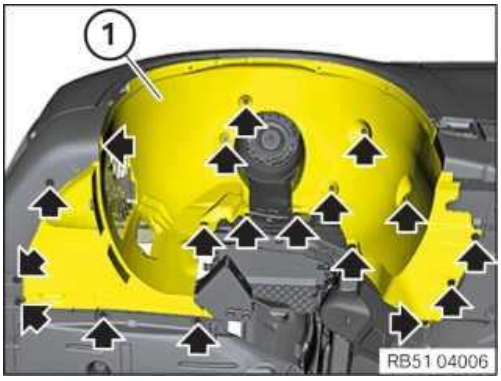
cardiagn.com



▶ **Remove the front wheel arch trim**

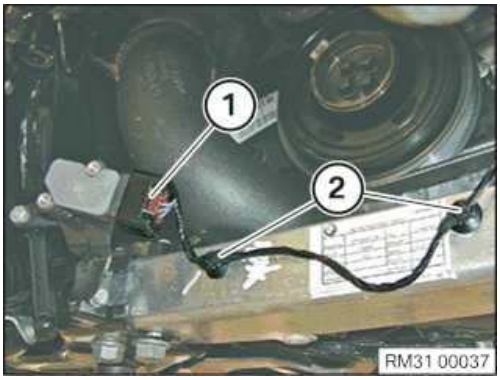
NOTICE

To provide a better overview: Schematic diagram with partially hidden components.



NOTICE

Description is for left component only. Procedure on the right side is identical.



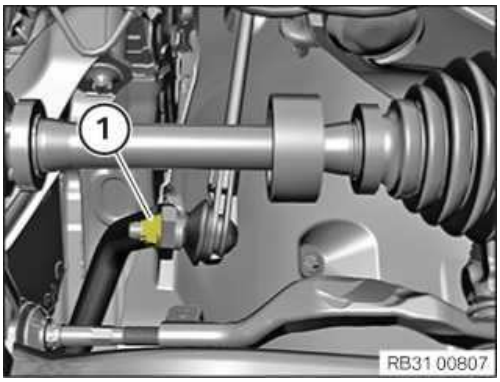
- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

▶ **Remove front wheel arch cover**

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

27 – With right installation: Detaching ride height sensor cable

- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.



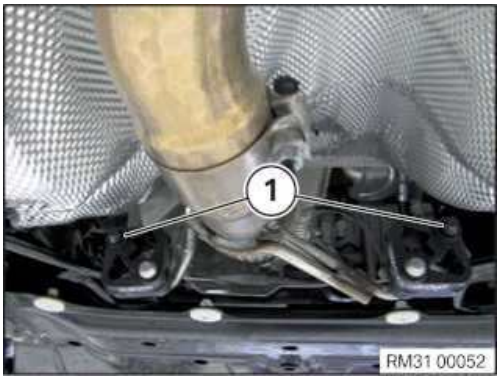
28 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Detach the anti-roll bar from the anti-roll bar link**

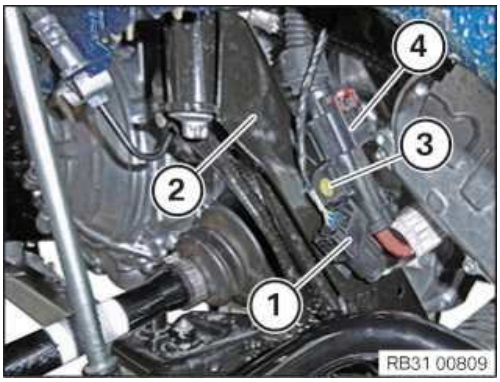
cardiagn.com



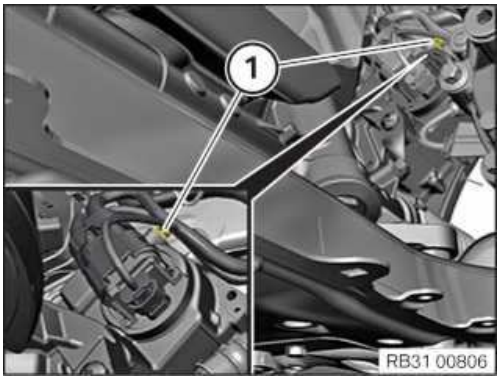
- Unfasten nut (1).

Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .



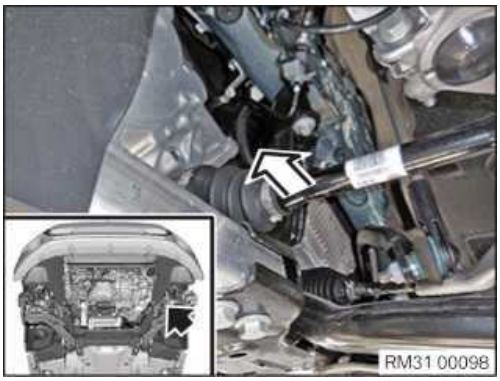
29 – Detaching rubber mount from front axle support



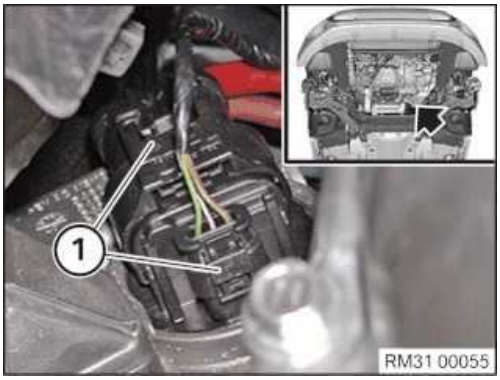
- Spray rubber mount (1) with lubricant and release from holder on front axle support.

30 – Disconnecting plug connections from steering gear

▶ **If installed: Detach connectors from the front axle carrier**

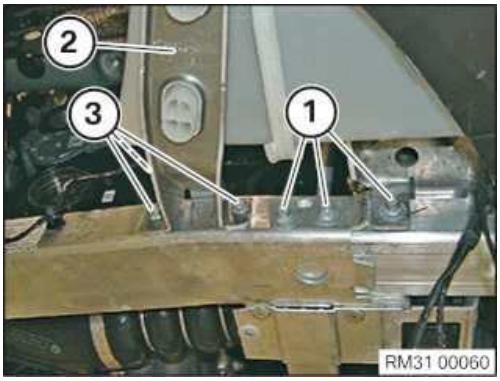


- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).



- Disconnect wiring harness (1) from steering gear.

cardiagn.com

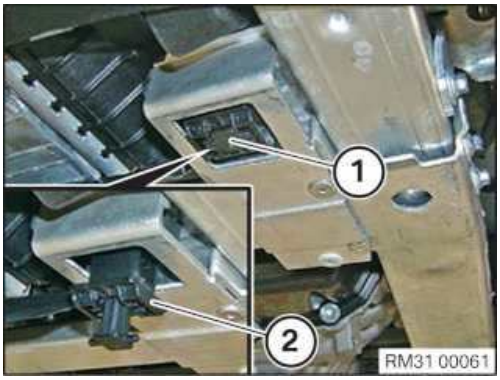


- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.

- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

31 – Releasing the mounted part from the front axle support



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

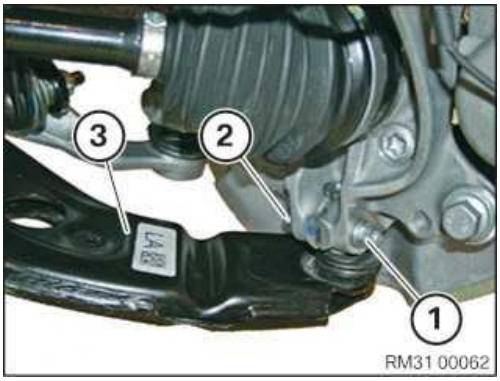
NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).

- Loosen screw (2) of the engine support (3) on the front axle (1).

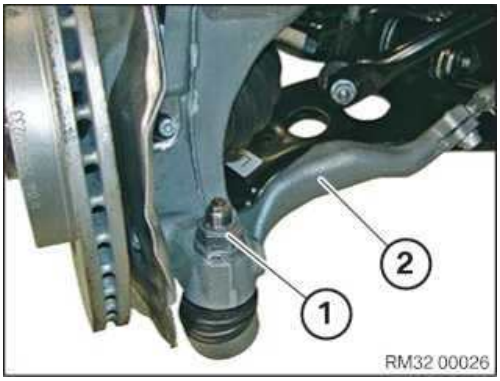
cardiagn.com



NOTICE

Perform the operations on the left and right side.

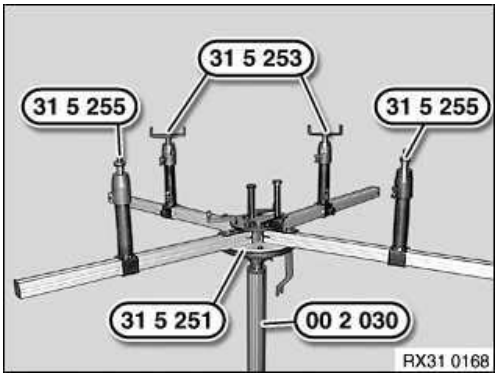
- Loosen screws (1).



32 – Detaching and removing front axle completely

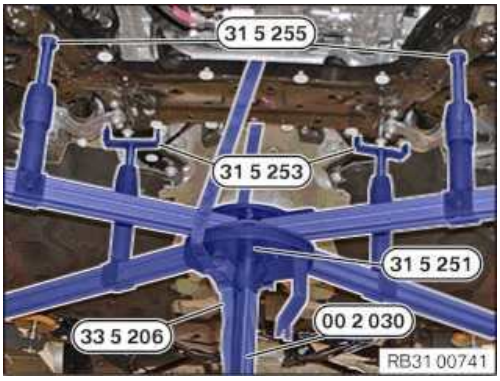
NOTICE

Perform the operations on the left and right side.



- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .

NOTICE

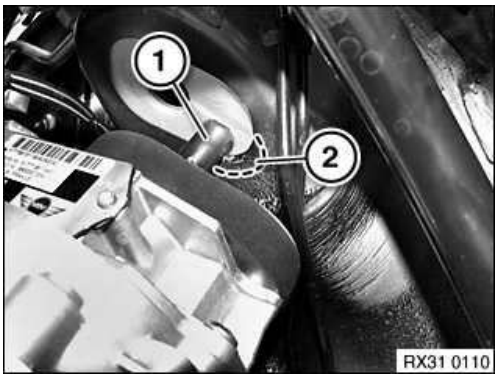


Perform the operations on the left and right side.

- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

Note: In a profile rail pair, two profile rails are connected to one another by gearing.

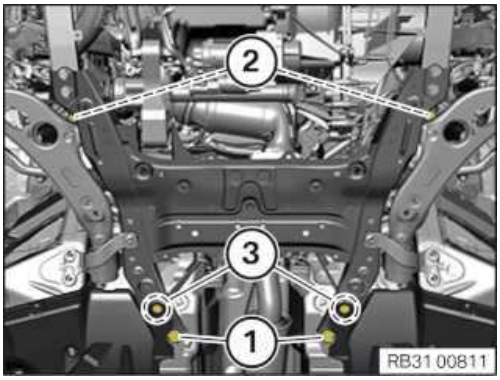


- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .

cardiagn.com

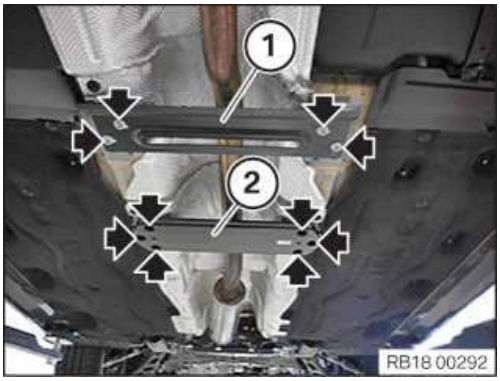


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



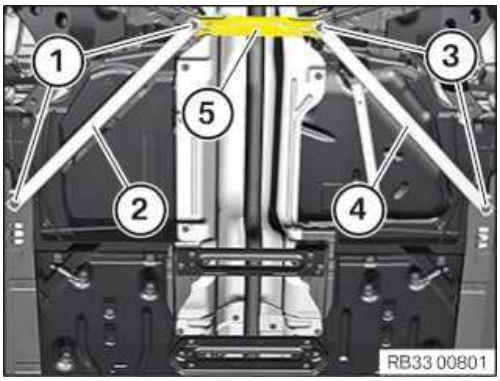
- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

33 – Removing the connecting support from the tunnel in front and back



- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

34 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.

cardiagn.com

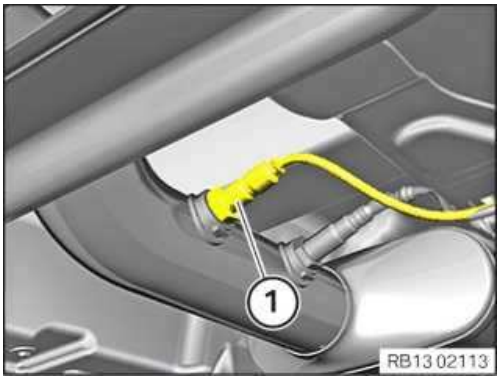
- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

35 – Remove exhaust system

WARNING

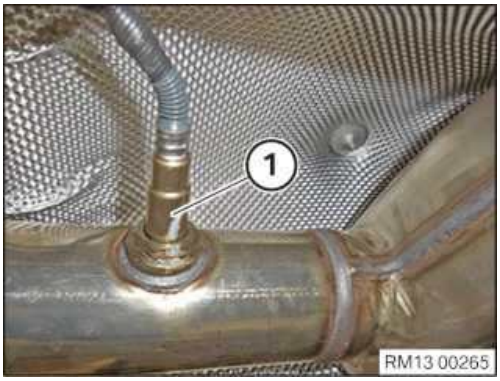
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

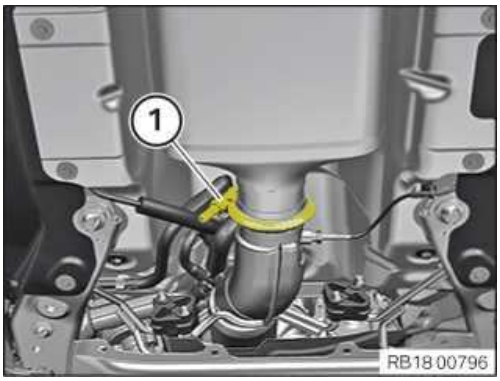
CAUTION



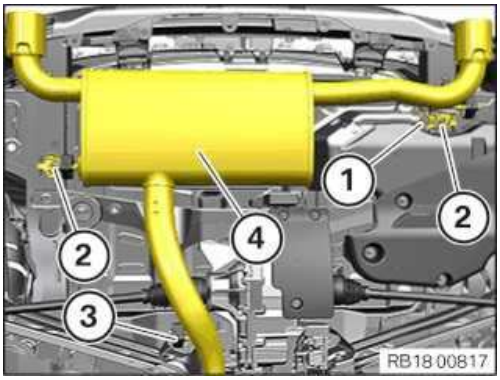
Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

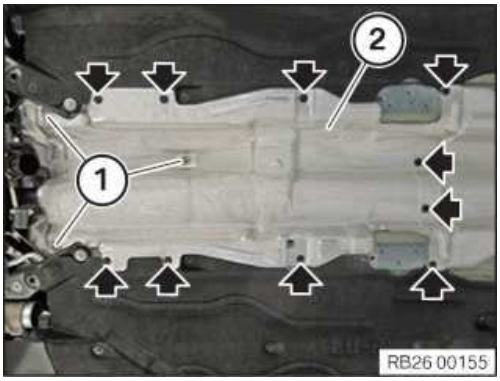


- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.

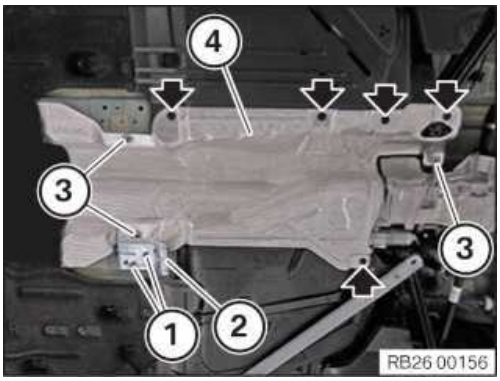


- Release the diesel particulate sensor (1), guide it out and set it aside.

cardiagn.com



- Loosen V-band clamp (1).



- Loosen screw (1).
- Loosen nuts (2).
- Release the rubber mount (3) of the exhaust system (4).
- Lower and guide out the exhaust system (4) with assistance of a second person and remove it.

36 – Remove front heat shield

- Remove screws (arrows).
- Loosen nuts (1).
- Guide the heat shield (2) out and remove it.

37 – Remove heat shield at rear.

- Loosen screws (1).
- Guide out and remove holder (2).
- Remove screws (arrows).
- Loosen nuts (3).
- Guide the heat shield (4) out and remove it.

38 – Remove propeller shaft

cardiagn.com

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

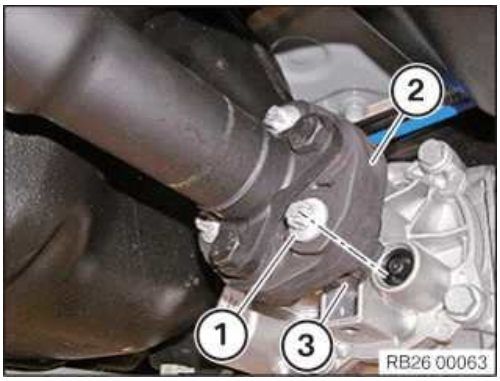
RISK OF DAMAGE

Damage to propeller shaft during removal.

Non-observance of the removal guidelines for the propeller shaft on the rear axle differential may cause severe damage.

- Do not disassemble the three-hole flange, flexible disc and propeller shaft. The three-hole flange to the rear axle differential is balanced with the flexible disc and propeller shaft.
- Loosen the recessed nut against the direction of travel in clockwise direction. The propeller shaft must be loosened on the recessed nut only and exclusively in the direction of rotation otherwise the anti-twist lock of the bi-hexagonal flange nut is damaged.
- In the event of a damaged anti-twist lock on the bi-hexagonal flange nut: Replace the rear axle differential.

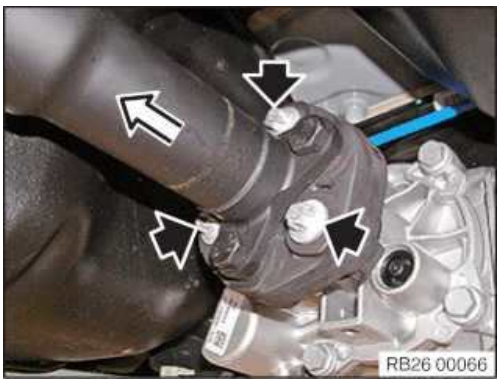
- Install the special too l between the front and rear propeller shaft.
- Make sure that the arrows on the special tool point forward in the direction of travel.



- Always support the propeller shaft (1) with a conventional jack.

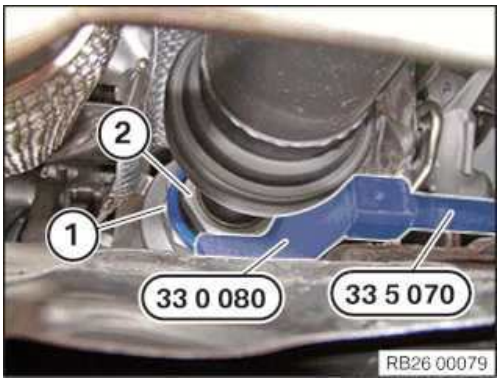
- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

cardiagn.com



TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.



- Mark the installation position of the screw connection (1), the flexible disc (2) and the three-hole flange (3) on the same level.
- Loosen the screw connection (1).

- Loosen screws (1).

- Remove screws (arrows).
- Guide the propeller shaft out in the direction of the arrow and set it aside.

RISK OF DAMAGE

Damage to the transfer box.

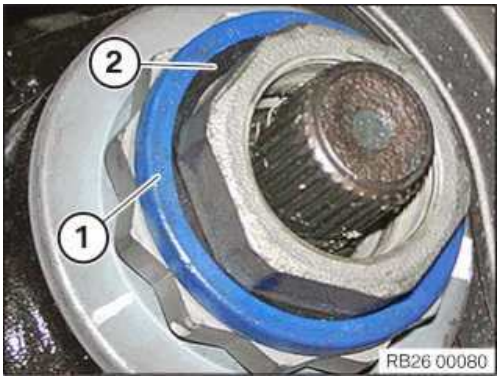
Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

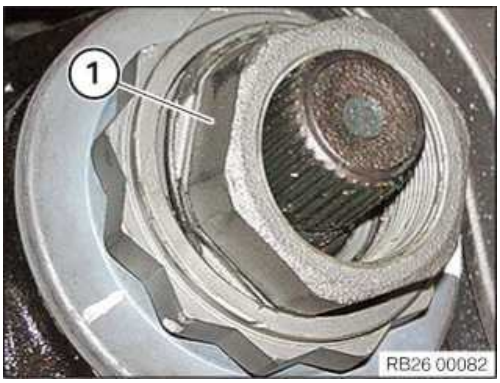
- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to detach the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



- Release the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.



cardiagn.com

- Thread the propeller shaft (2) out of the recessed nut (1) and remove.

- Thread the retaining clip (1) and the seal (2) out and remove.

- Thread out and remove the recessed nut (1).

39 – Removing starter motor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

cardiagn.com

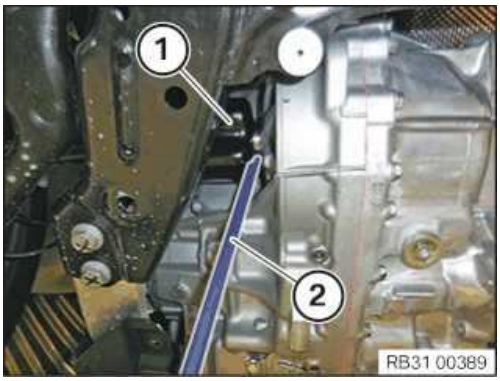
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

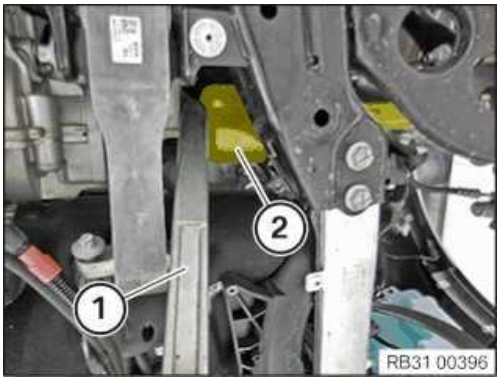
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



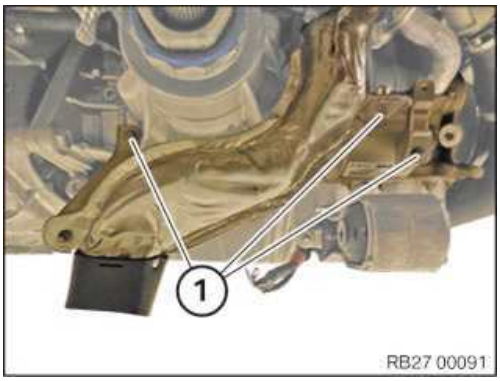
- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Loosen screws (1).
- Feed out starter motor and remove.



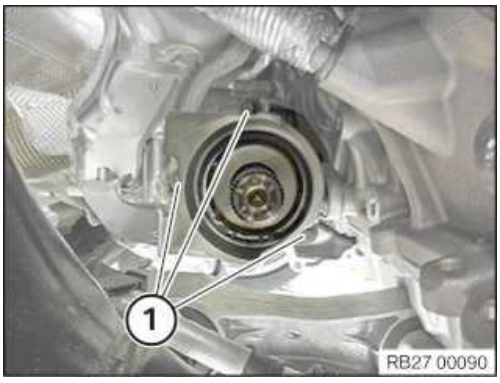
40 – Partially removing the left output shaft

cardiagn.com

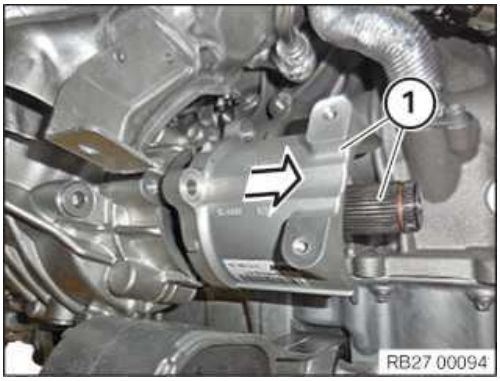


- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Tie up output shaft (1).

41 – Partially removing right output shaft

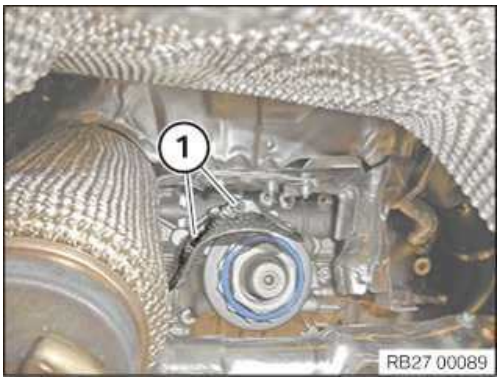


- Lever out the output shaft (2) with a mounting lever (1).
- Tie up output shaft (1).

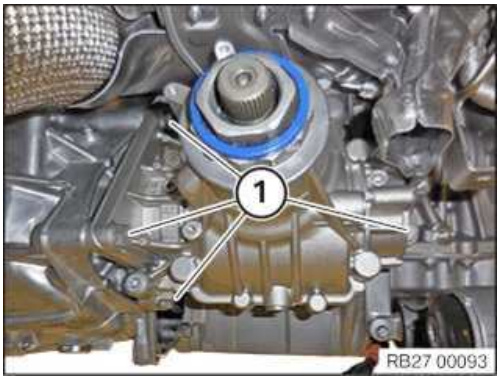


42 – Remove the intermediate shaft with the support tube

- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

43 – Remove transfer box (VTG)

cardiagn.com

- Loosen screws (1).
- Remove heat shield.

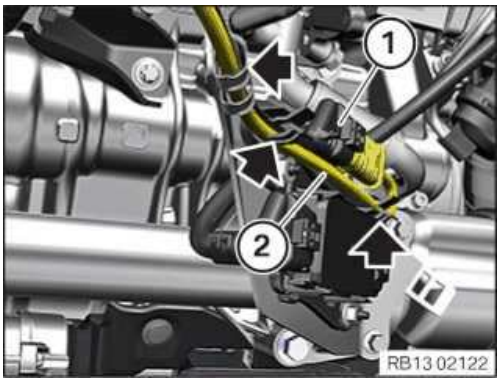
- Loosen screws (1).
- Remove the transfer box (VTG).

44 – Remove the monitoring oxygen sensor

WARNING

Hot surfaces.

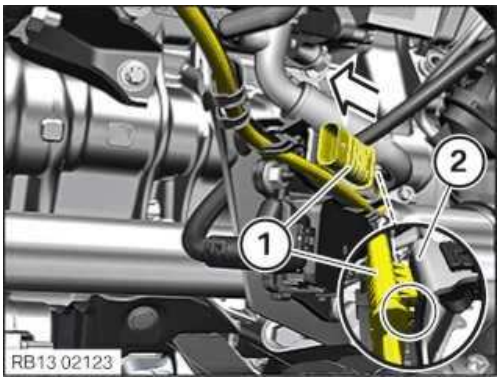
Risk of burning!



- Perform all work only on components that have cooled down.

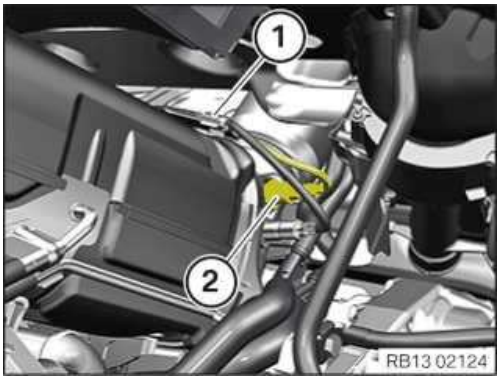
RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Feed oxygen monitor sensor cable (1) out of the clamps (arrows).

cardiagn.com

- Unlock the connector (1) in the marked area and disconnect it from the holder (2) in the direction of arrow.

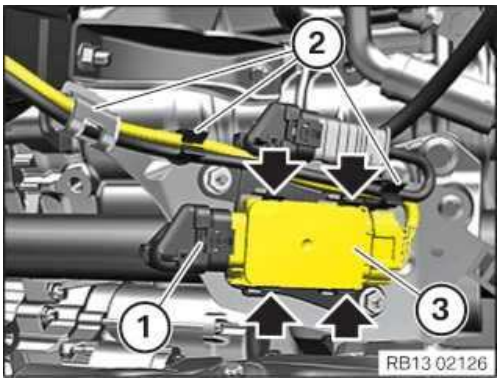
- Guide the cable of the monitoring oxygen sensor (2) out of the clamp (1).
- Release the monitoring oxygen sensor (2) using special tool **0 491 074 (11 7 020)**.
- Remove the monitoring oxygen sensor (2).

45 – Removing the nitrogen oxide sensor before SCR catalytic converter

WARNING

Hot surfaces.

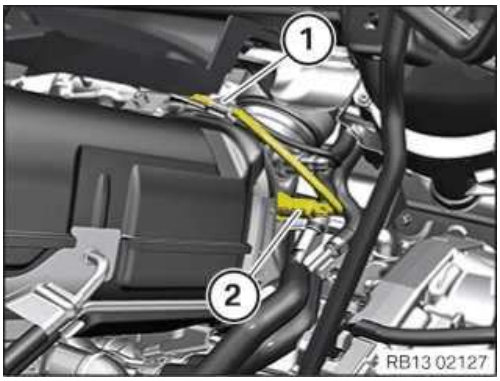
Risk of burning!



- Perform all work only on components that have cooled down.

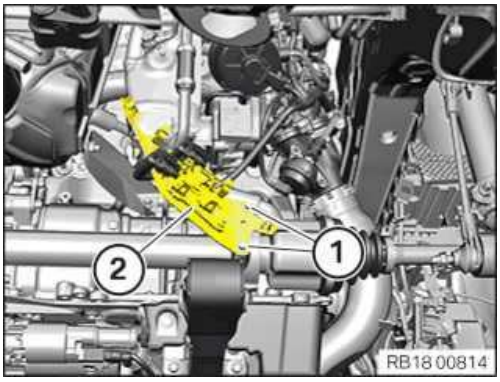
RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Slide the cable of the nitrogen oxide sensor evaluation electronics (3) out of the clamps (2) and remove.
- Unlock (arrows) and remove the evaluation electronics for the nitrogen oxide sensor (3).

cardiagn.com

- Slide the cable of the nitrogen oxide sensor before the SCR catalytic converter (2) out of the clamps (1) and remove.
- Detach the nitrogen oxide sensor before the SCR catalytic converter (2) using the special tool **0 491 074 (11 7 020)**.
- Guide out and remove the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

46 – Remove holder for oxygen sensor

- Loosen screws (1).
- Thread out the holder (2) for the oxygen sensor and remove.

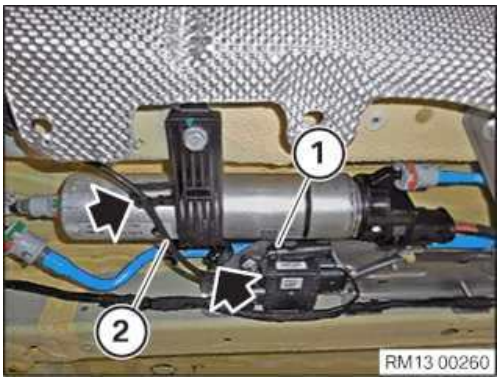
47 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

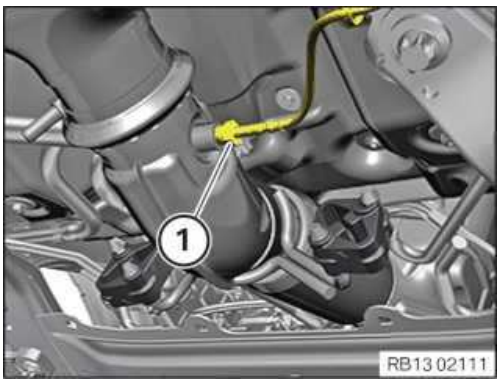


RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



cardiagn.com

- Unlock and loosen connector (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

- Loosen the cable clip (1).

- Loosen exhaust temperature sensor (1).
- Feed out and remove exhaust temperature sensor (1).

48 – Removing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

WARNING

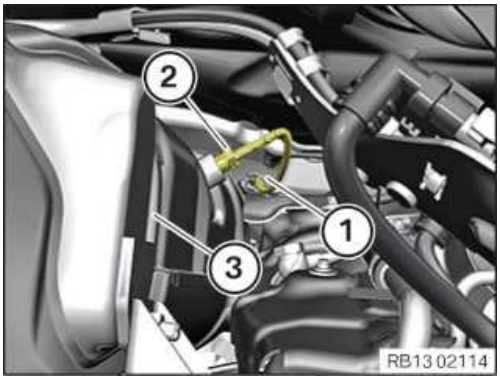
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

- Unlock and loosen connector (1).
- Uncover the exhaust temperature sensor cable.

- Guide the exhaust temperature sensor cable (2) out of the clamp (1) and place it to one side.
- Release the exhaust temperature sensor (2) with conventional tools .
- Feed out and remove the exhaust temperature sensor (2) from the diesel particulate filter (3).

49 – Remove the exhaust temperature sensor on the diesel particulate filter

WARNING

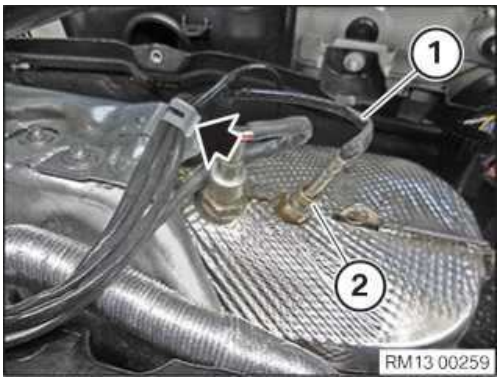
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect connector (1).
- Put the cable of the exhaust temperature sensor to one side.

cardiagn.com

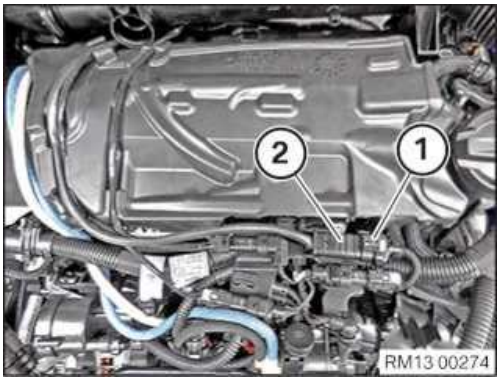
- Guide cable (1) of the exhaust temperature sensor out of the clamp (arrow) and remove it.
- Loosen exhaust temperature sensor (2).
- Feed out and remove exhaust temperature sensor (2).

50 – Remove the control sensor

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

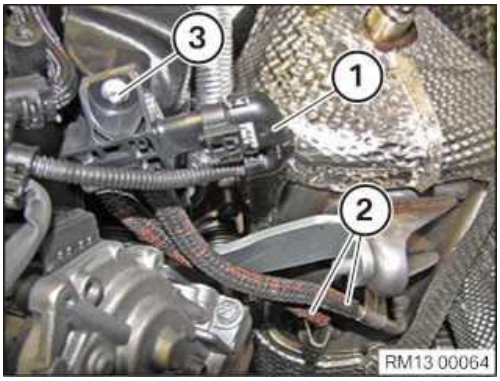
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock plug connection (1) and disconnect.
- Detach the connector (2) from the holder .
- Release the front oxygen sensor cable.

- Detach the control sensor (1) with the special tool .
- Feed out and remove the control sensor (1).

cardiagn.com



51 – Remove differential pressure sensor

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

52 – Removing the diesel particulate filter

WARNING

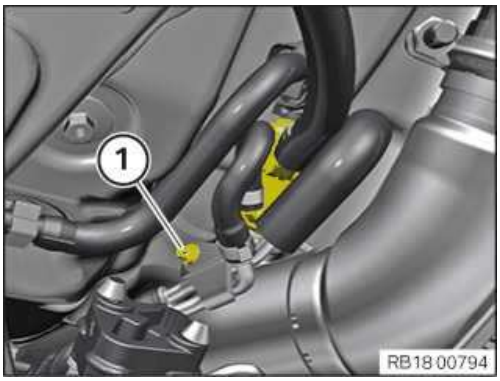
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

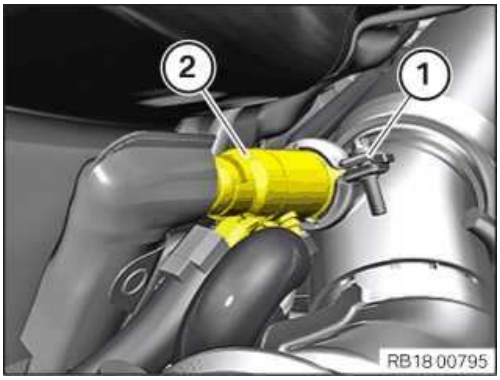
CAUTION

Heavy component.

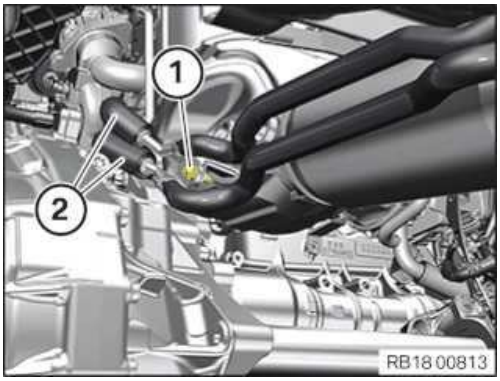


Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



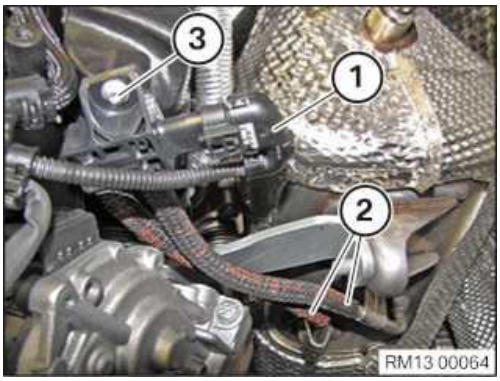
cardiagn.com

- Loosen screw (1).

- Loosen V-band clamp (1).
- Remove the SCR metering module (2) and set it aside.

- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

▶ **Remove differential pressure sensor**

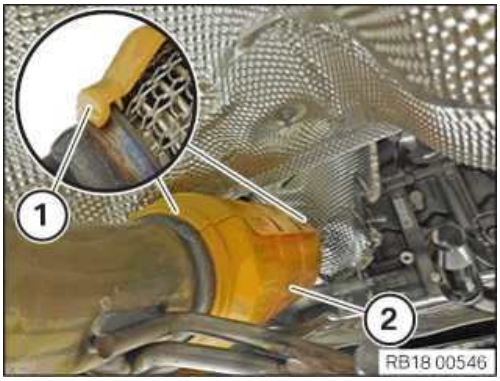


RISK OF DAMAGE

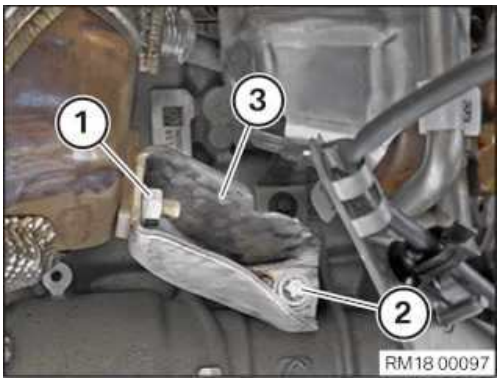
Electrostatic discharge.

Damage to or destruction of electrical components.

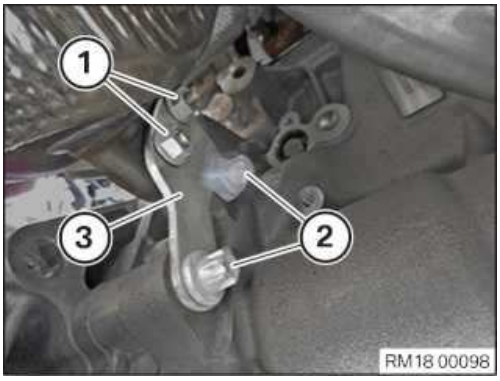
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



cardiagn.com

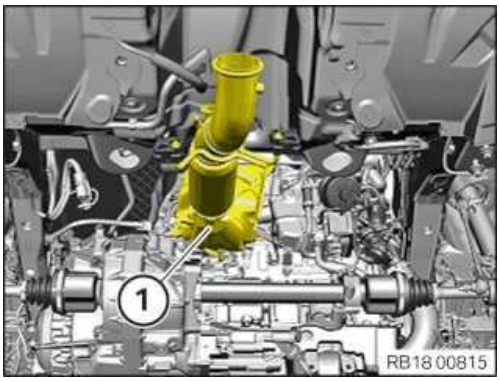


- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.



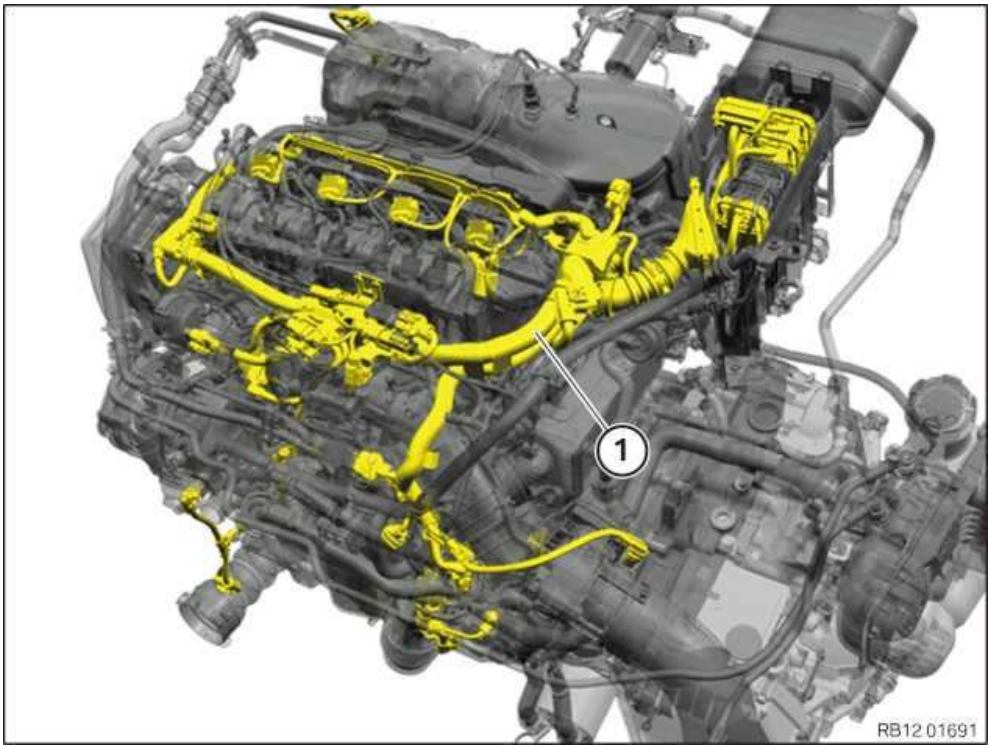
- Loosen nuts (1).

- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.

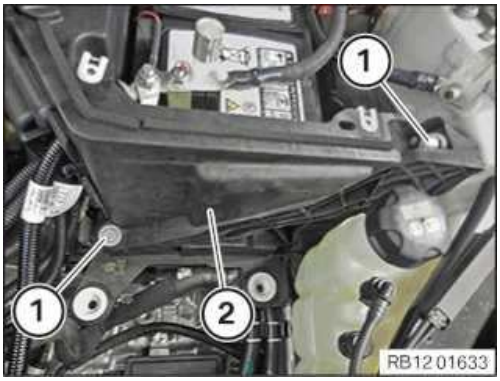


- Unfasten nut (1).
- Loosen screw (2).
- Remove holder (3).

- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).

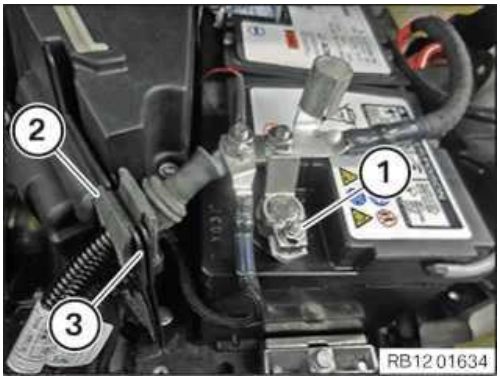


cardiagn.com



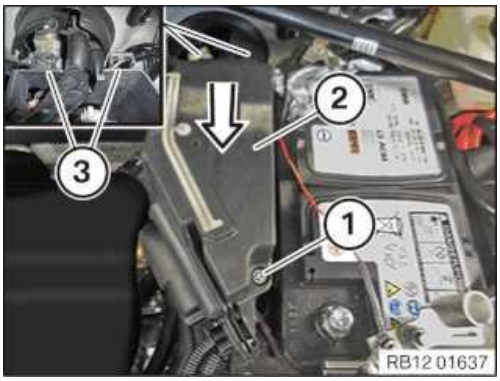
- Feed out diesel particulate filter (1) toward the bottom and remove.

53 – Releasing the wiring harness section for the intake plenum

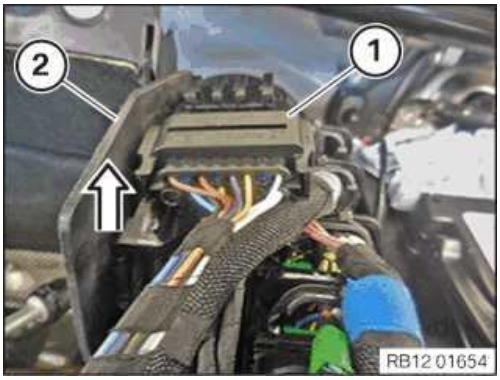


Overview: Wiring harness section for the engine

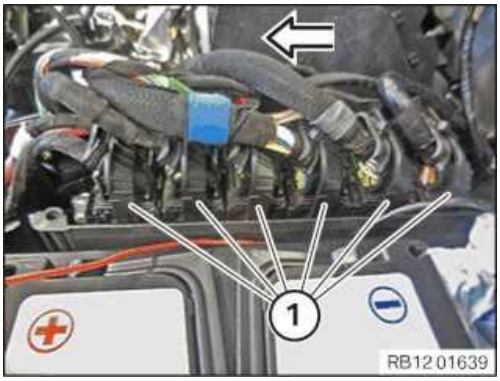
1 Wiring harness section for the engine



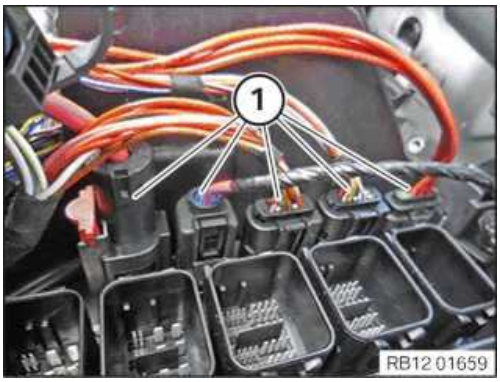
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



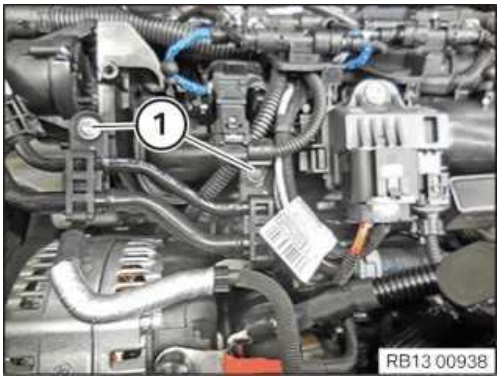
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



cardiagn.com

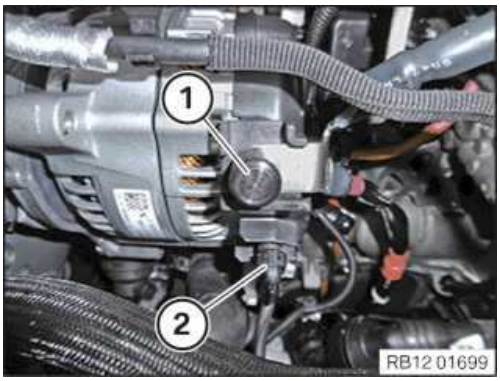


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

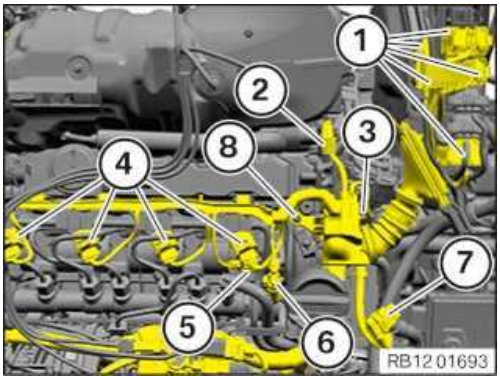


- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).

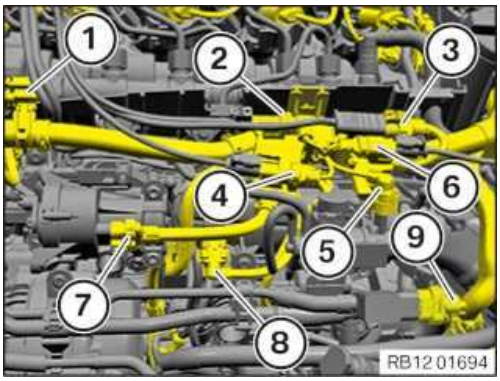
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).



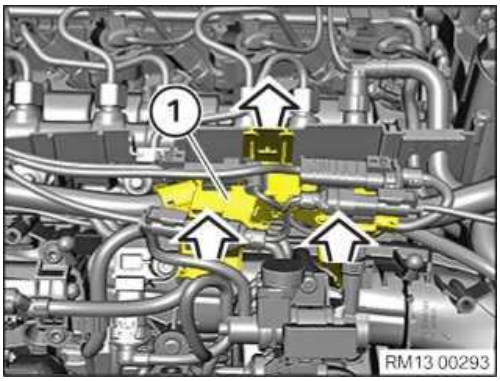
- Loosen screws (1).



cardiagn.com

- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).



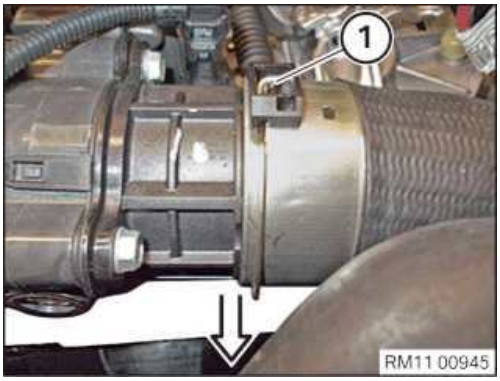
- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock and disconnect the connector (3) from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

▶ **Removing the cable clips from the intake plenum**

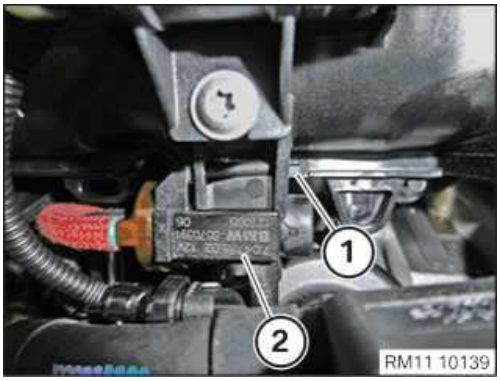
cardiagn.com

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.



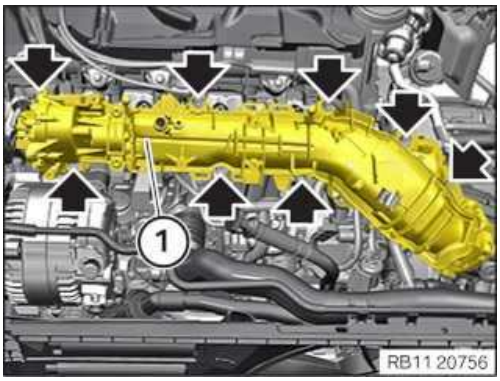
54 – Removing the intake plenum

TECHNICAL INFORMATION

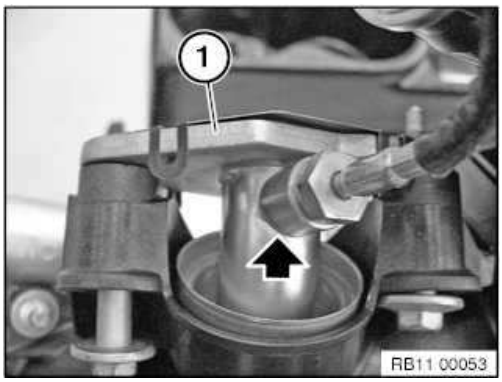


Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

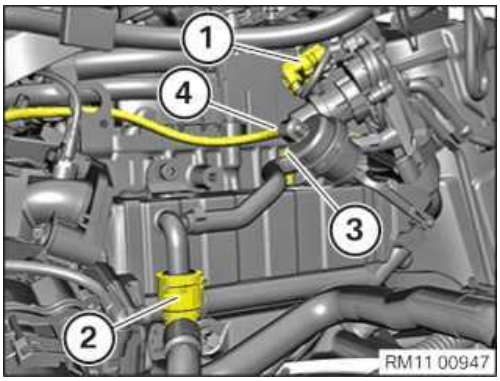


- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

cardiagn.com

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

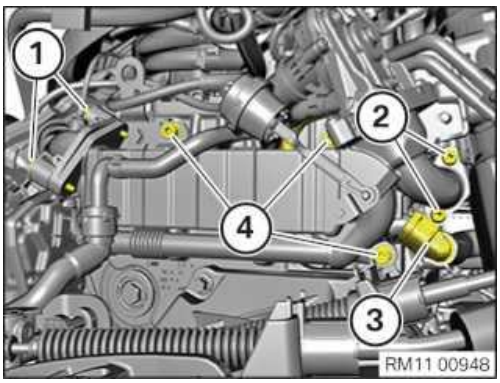


55 – Removing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

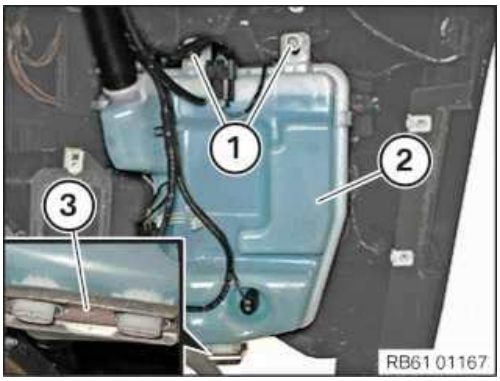
Risk of burning!



- Perform all work only on components that have cooled down.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



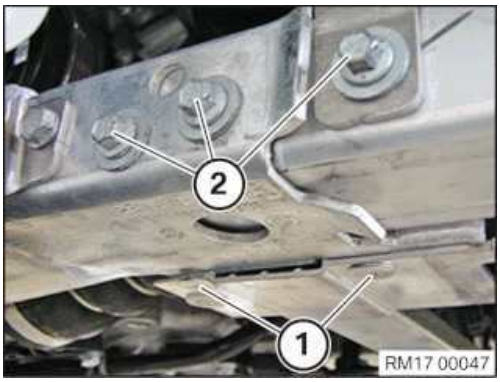
- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

56 – Remove the washer fluid reservoir from the fixture

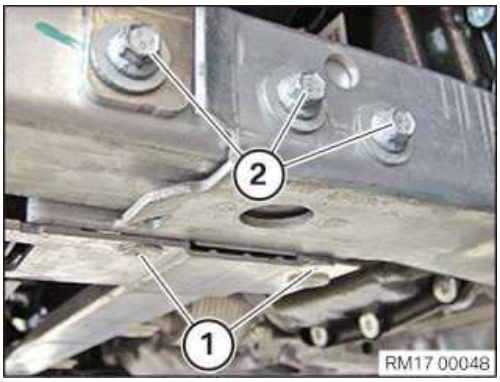
cardiagn.com

- Loosen screws (1).
- Guide the washer fluid reservoir (2) up and out of the fixture (3) and set it aside.



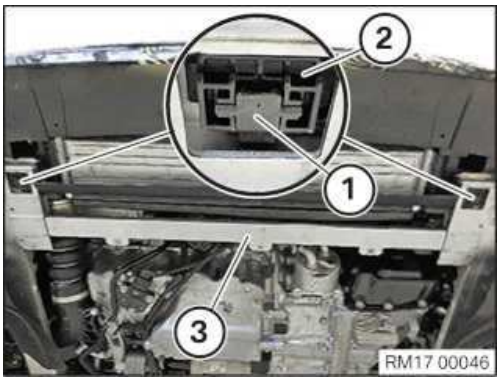
57 – Removing the right charge air duct between the exhaust turbocharger and the charge air cooler

WARNING



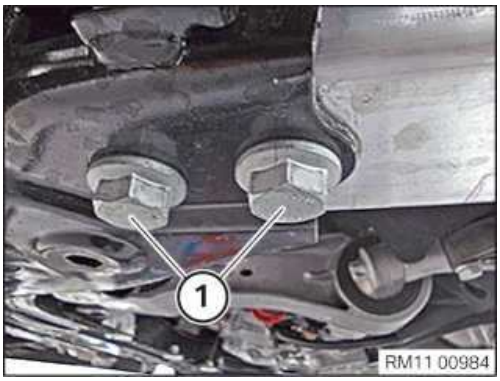
Hot surfaces.

Risk of burning!

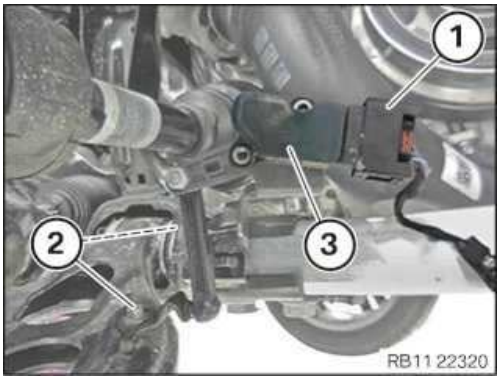


- Perform all work only on components that have cooled down.

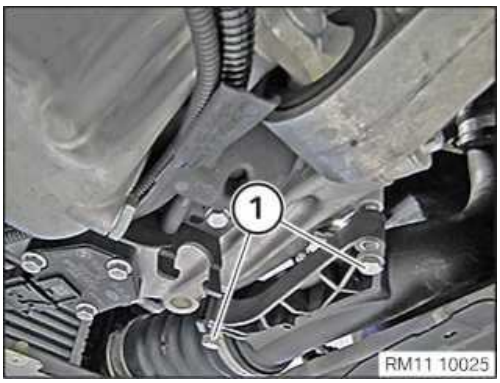
- Undo screws (2) at front left.
- Drill out blind rivets (1) at front left.



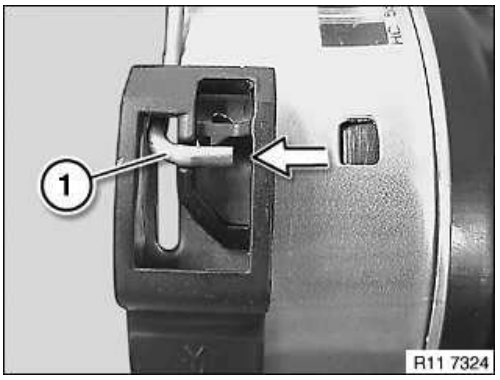
- Undo screws (2) at front right.
- Drill out blind rivets (1) at front right.



- Unlock locking pins (1).
- Thread out and remove locks (2).
- Thread out and remove cross connection (3).

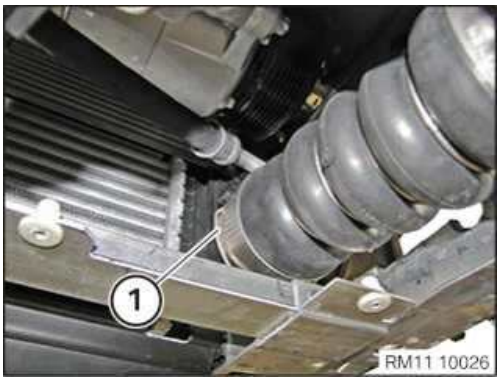


cardiagn.com

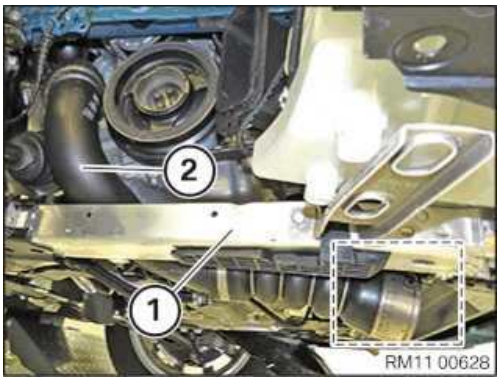


- Release the screws (1) on the right front axle support.

- **If installed:**
- Unlock and release plug connection (1).
- Loosen screws (2).
- Feed out the ride height sensor (3) and remove.

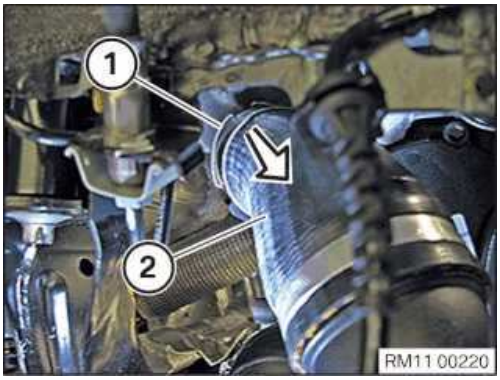


- Release screws (1) of charge air duct on right oil sump.

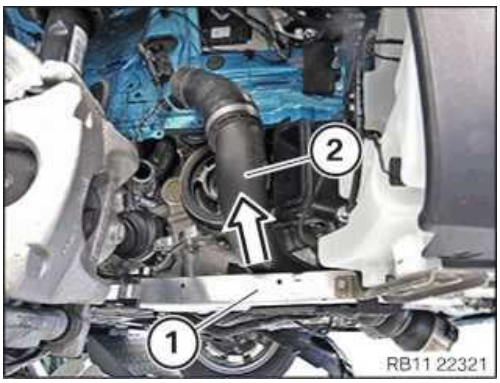


- Unlock lock (1).

  The lock (1) must engage in the bracket during unlocking (arrow).



- Unlock and release the charge air duct (1) on the charge air cooler.

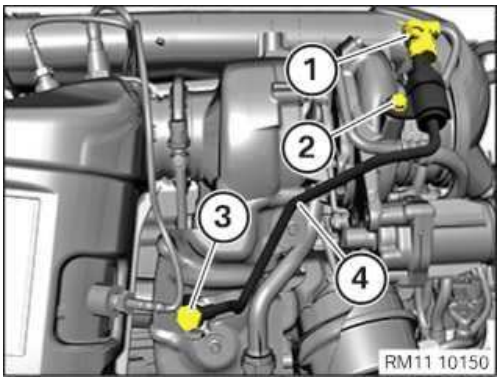


cardiagn.com

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (2) in the **marked** area towards the bottom and set it aside.

- Unlock and detach the locks (1) on both sides.
- Feed out the charge air duct (2) on the exhaust turbocharger in the direction of the arrow and set it aside.

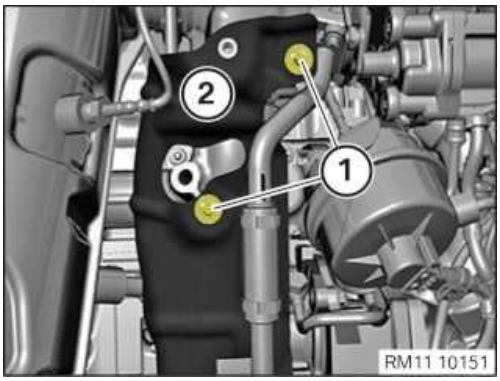
- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (1) in the direction of arrow between the side member and the deformation element and remove.



58 – Remove the heat shield from the exhaust turbocharger at the bottom

WARNING

Hot surfaces.



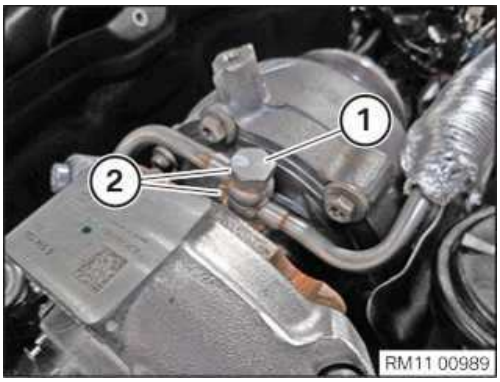
Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

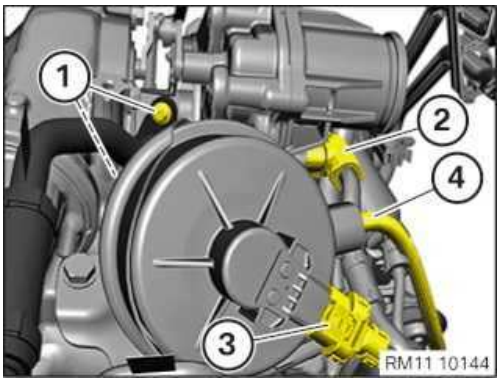
cardiagn.com

- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).



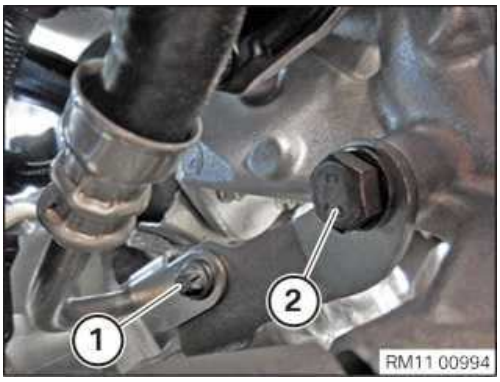
59 – Removing the low-pressure stage turbocharger

WARNING



Hot surfaces.

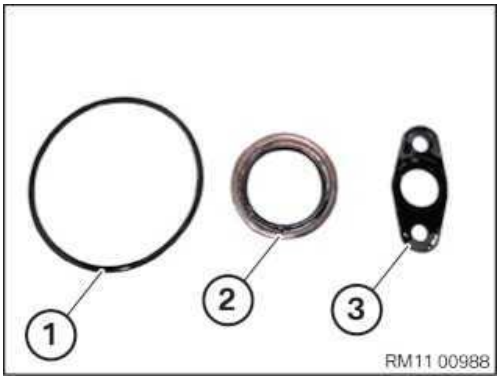
Risk of burning!



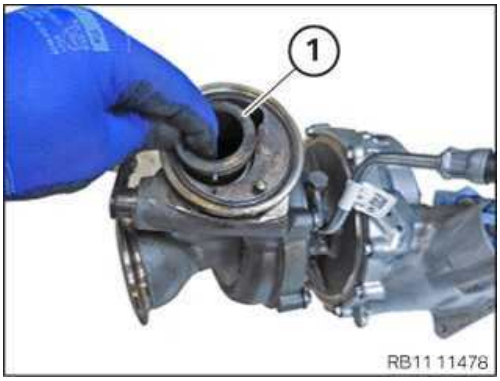
- Perform all work only on components that have cooled down.

- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.

- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.



- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).



cardiagn.com

- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

- Remove the spacer ring (1).

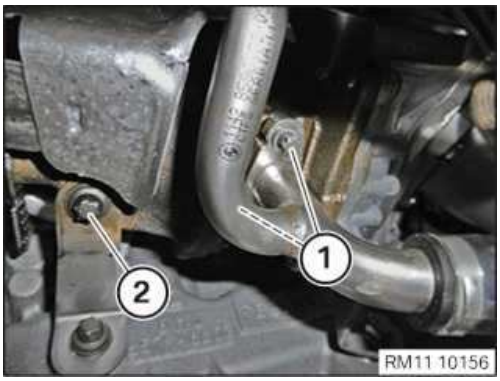
60 – Removing the high-pressure stage exhaust turbocharger

WARNING

Hot surfaces.

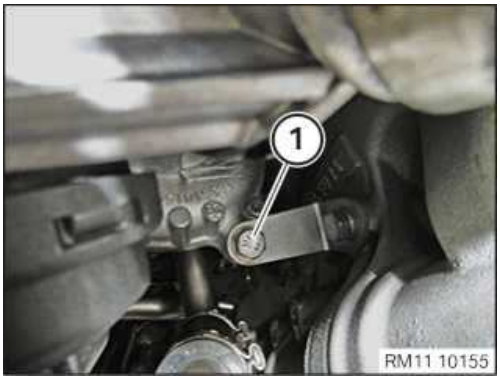
Risk of burning!

- Perform all work only on components that have cooled down.



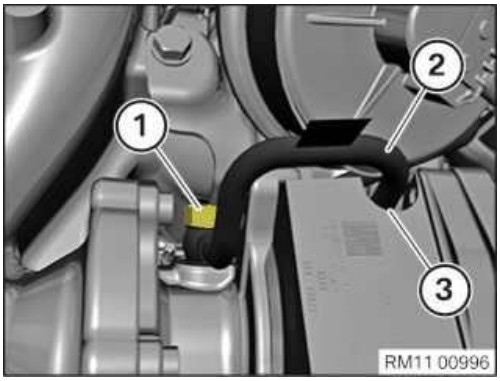
CAUTION

Heavy component.

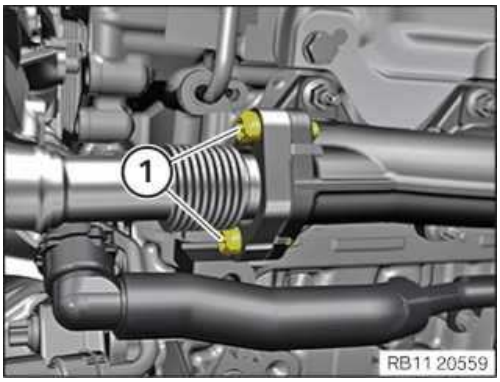


Heavy components can lead to injury or damage.

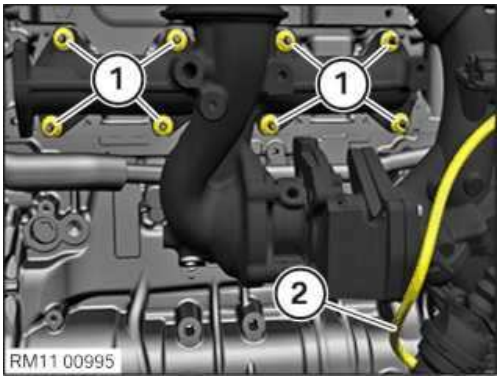
- Remove and install heavy components with the aid of another person/other persons.



cardiagn.com



- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).



- Release screw (1) from the right wheel arch.

- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

- Loosen screws (1).

- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

61 – Removing high pressure lines between rail and injectors

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

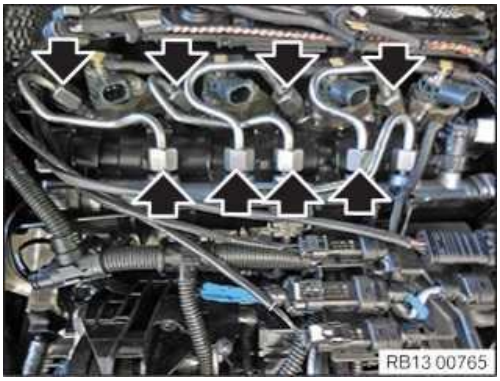
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.



TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

62 – Remove leakage oil lines

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

Hot surfaces.

Risk of burning!

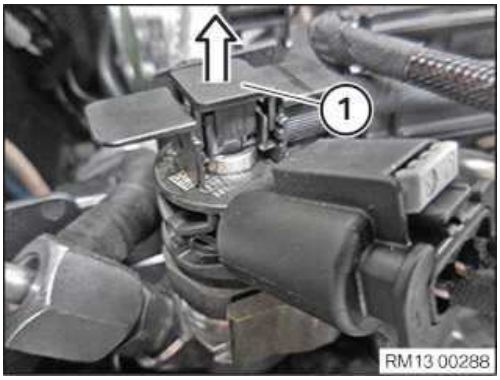
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Contaminant or foreign body.

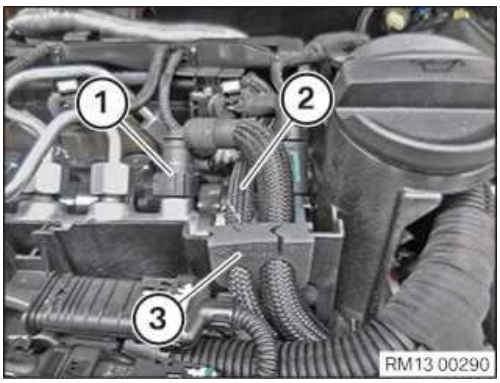
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

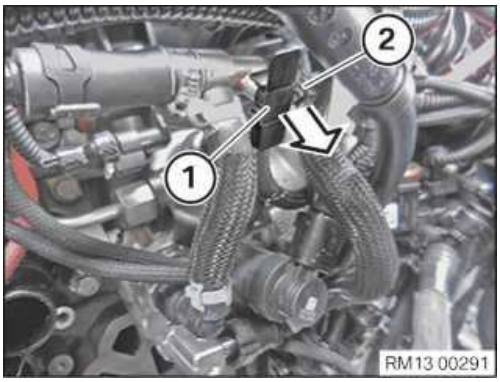


TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



cardiagn.com



- Unlock the connectors (arrows) and disconnect.

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

- Unlock and loosen fuel line (1) and set it aside.
- Guide the leakage oil line (2) out of the rubber grommet (3) and set it aside.

- Release lock (1) in direction of arrow.
- Feed out leakage oil line (2) and remove.

63 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

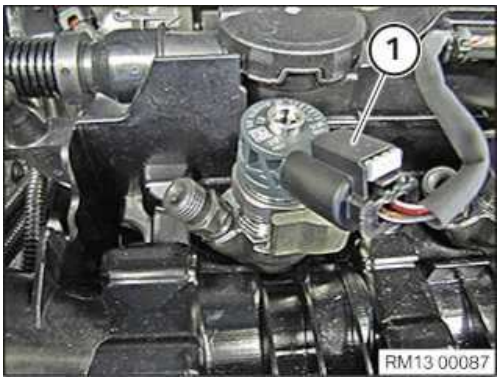
Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

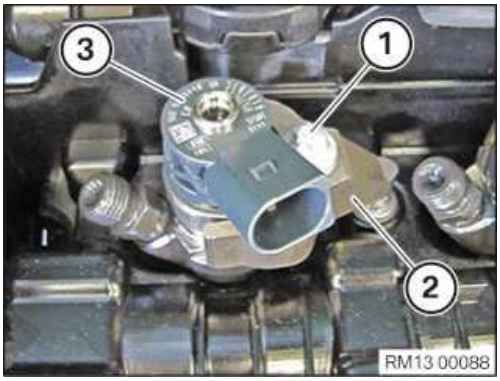
RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



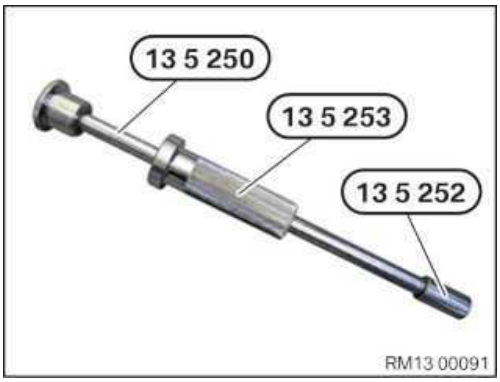
cardiagn.com

TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

- Unlock and disconnect connector (1).

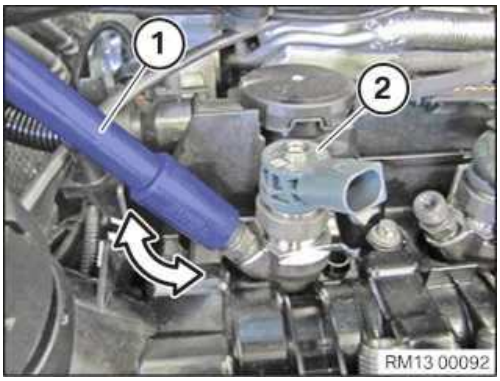
- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.



▶ **Loosen stuck injectors**

RISK OF DAMAGE

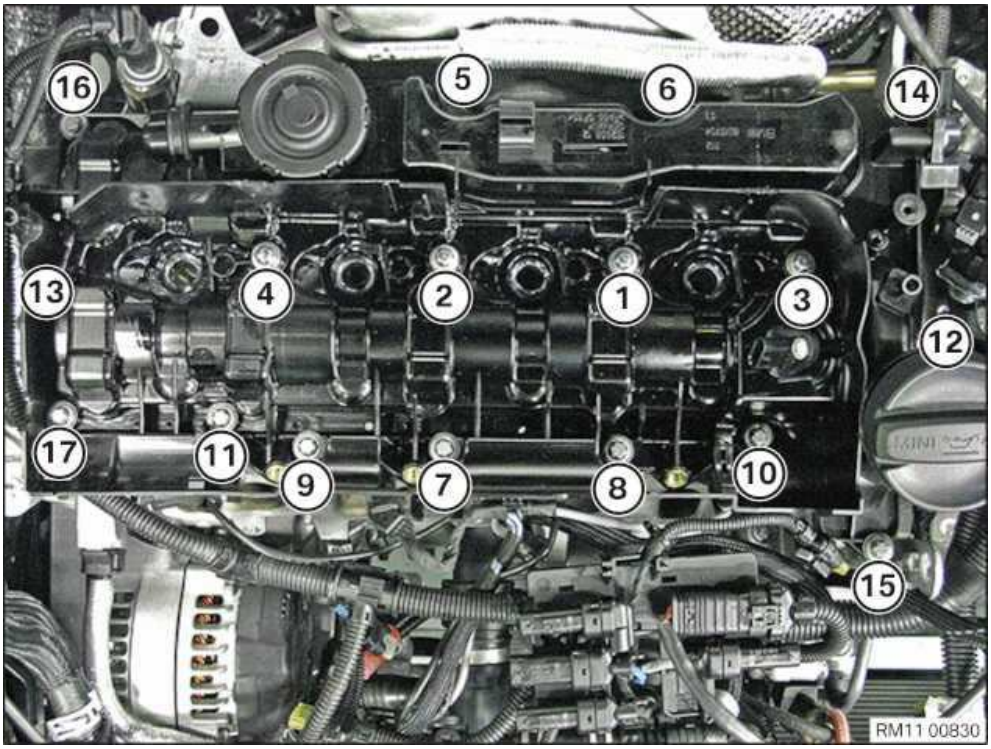
Contaminant or foreign body.



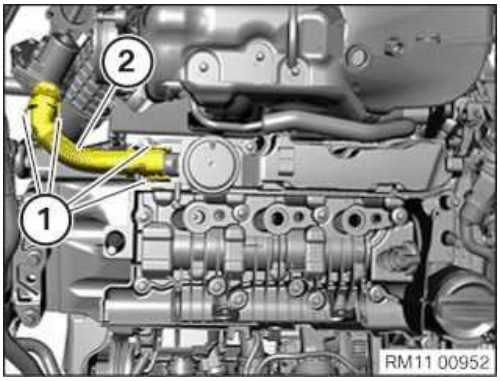
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)** back onto the special tool **0 493 321 (13 5 250)**.



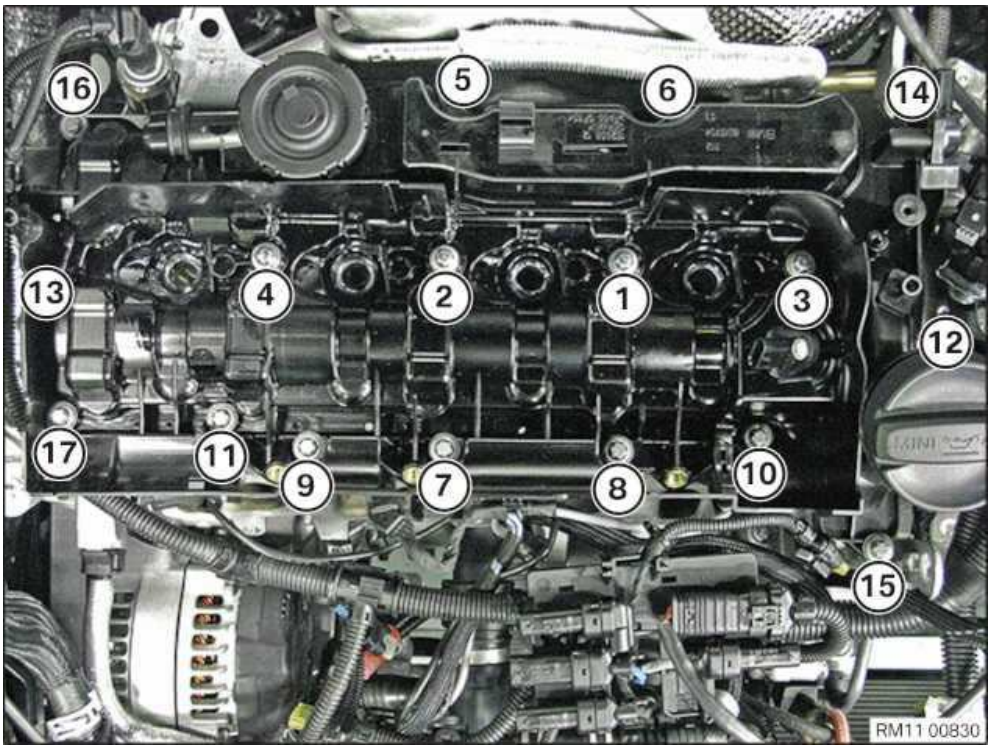
cardiagn.com



- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

64 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

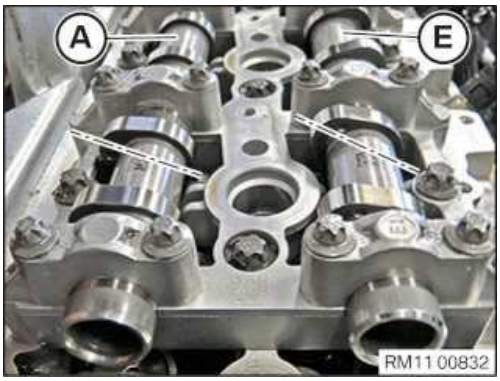
- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

65 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

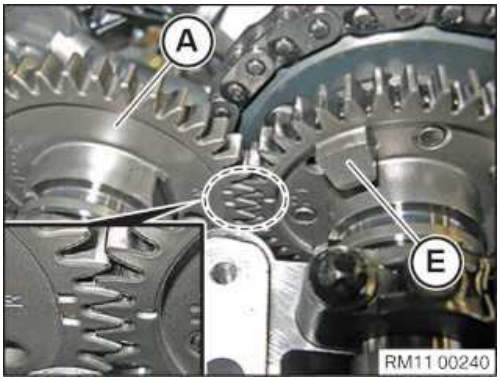


The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

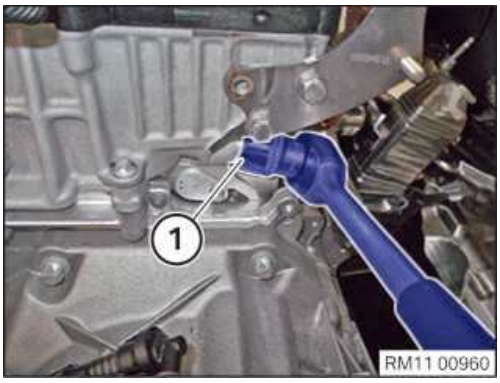
If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

66 – Remove chain tensioner piston



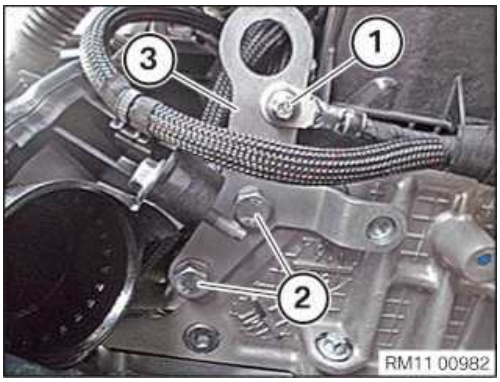
cardiagn.com

WARNING

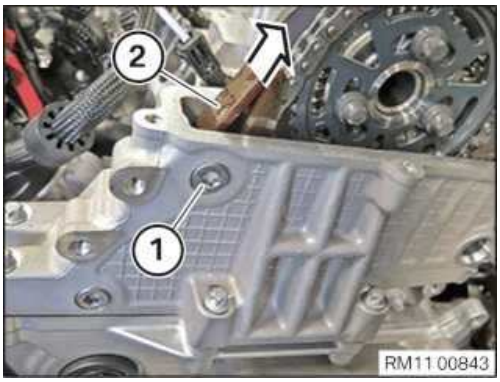
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



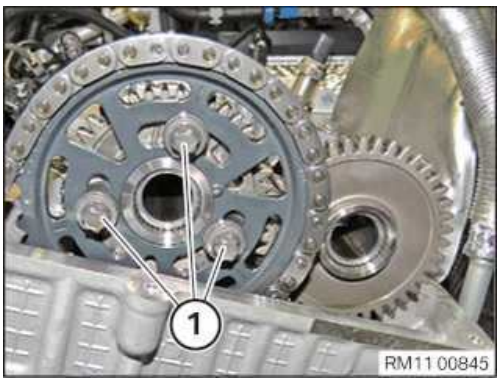
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

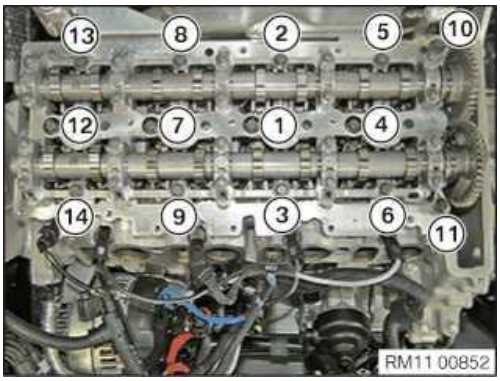
- Remove the chain tensioner piston (1).

67 – Remove the timing chain guide rail



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.



68 – Removing the camshaft sprocket on the intake camshaft

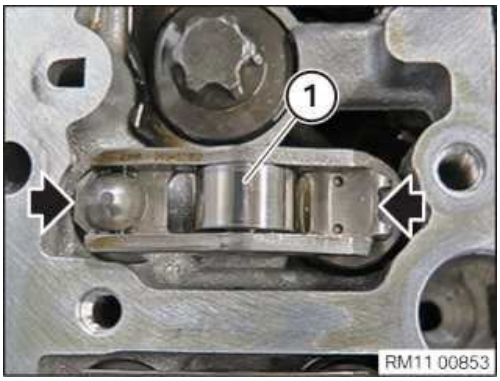
- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

69 – Removing the camshaft support

cardiagn.com

- Evenly loosen all screws in a sequence from (14) to (1).
- Loosen and remove all screws in a sequence from (14) to (1).

  Both camshafts can be removed with the camshaft carrier.
- Remove the camshaft support including camshafts towards the top.



70 – Remove roller cam followers

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

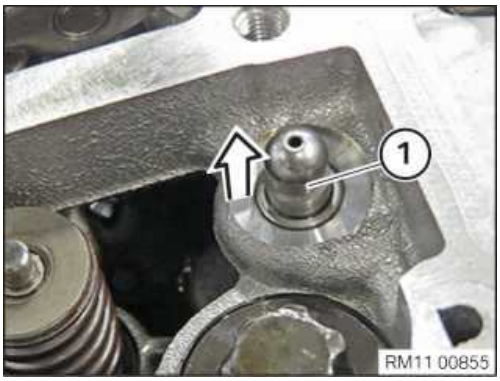
Damage to the engine.

If the classification of the roller cam followers is ignored, this can lead to engine damage.

- Observe the classification of the roller cam followers.
- Always reuse used roller cam followers at the same position.

- Remove the roller cam follower (1) and place it onto the special tool **0 495 105 (11 4 480)**.
- Repeat the process for all roller cam followers.

71 – Removing the hydraulic valve clearance compensating element



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.

72 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

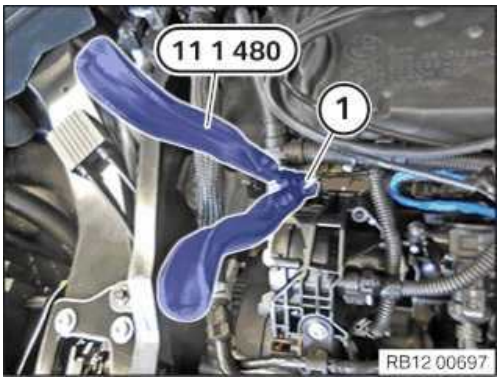
- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

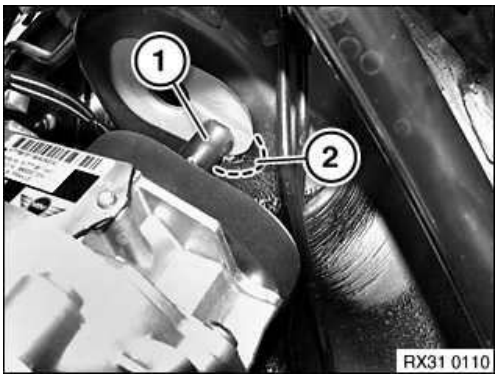
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool or conventional tools.
- Feed out preheating elements and remove.

73 – Remove cylinder head.



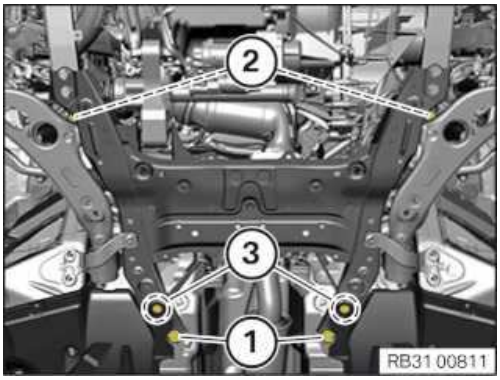
CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

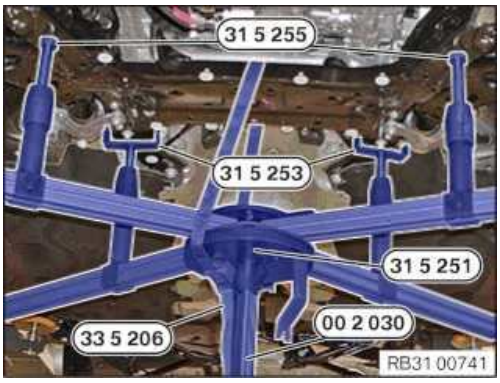
- Position front axle support.
- Bend the underbody panelling to the side in area (3).
- Raise front axle support.
- When raising, insert the charge air cooler into its rubber mount on the transmission cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

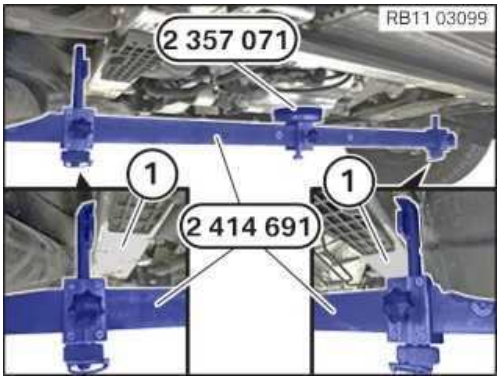
M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).



Front axle support, front to body

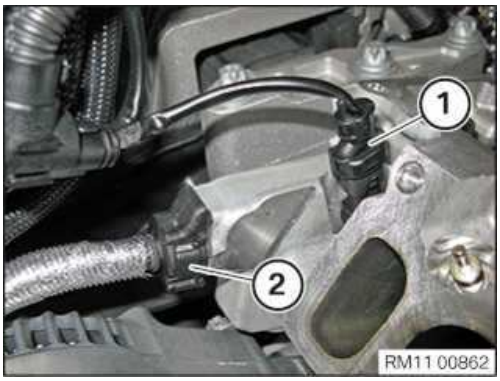
M12 screw	Renew screw.	Tightening torque	108 Nm



- If applicable, tighten the screws in area (3).

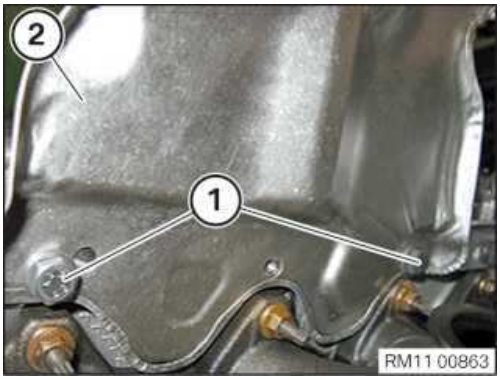
Underbody protection to body

Screw		Tightening torque	3 Nm

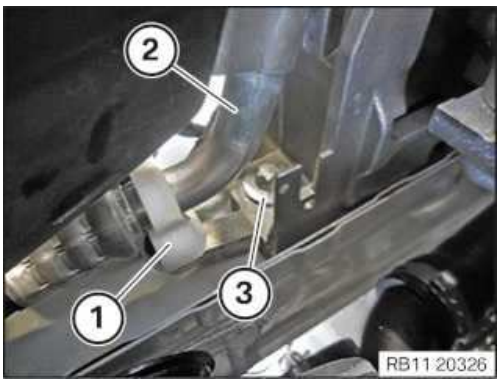


- Remove special tool from special tool .
- Lower the universal jack **0 490 133 (00 2 030)** with the special tool and set it aside.

- Prepare special tool together with the special tool **2 357 071**.
- Attach special tool to front axle support and align special tool **2 357 071** correctly under the oil sump and then tighten.
- Turn special tool at adjusting screw uniformly upwards, until the special tool **2 357 071** makes contact with the oil sump.
- Tighten all adjusting screws of special tools and **2 357 071**.



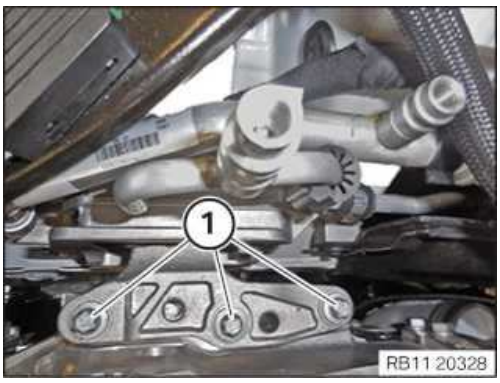
cardiagn.com



TECHNICAL INFORMATION

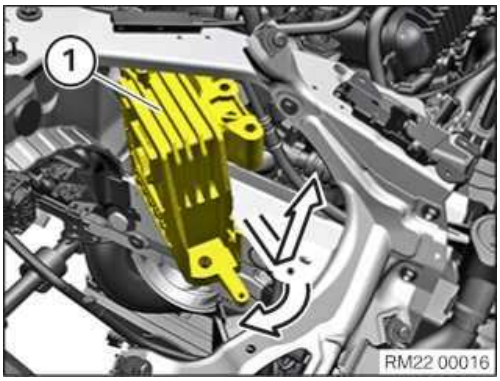
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the connector (1) from the coolant temperature sensor.
- Unlock and loosen coolant line (2).

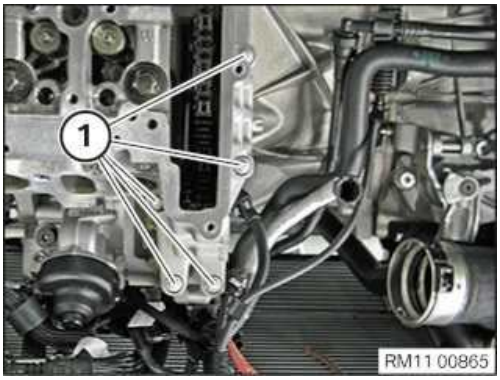


- Loosen screws (1).
- Feed out the heat shield (2) and set it aside.

- Unlock and loosen holder (1).
- Feed out the refrigerant line (2) and put to one side.
- Loosen screw (3).

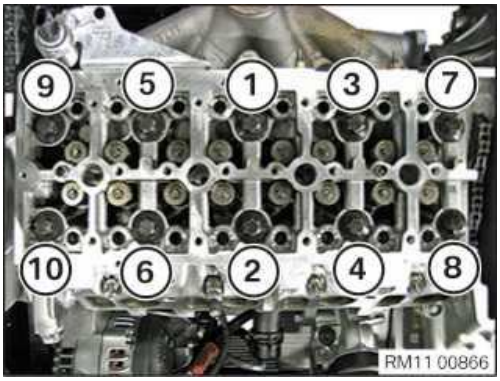


- Loosen screw (1).



- Loosen screws (1).

cardiagn.com

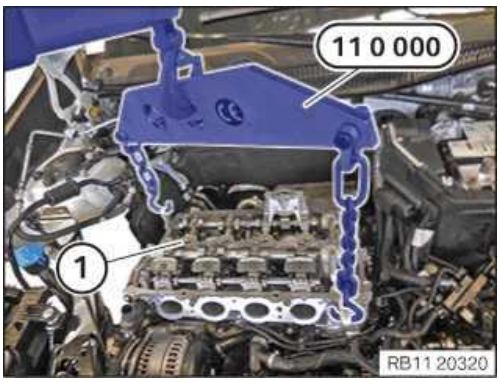


- Turn engine mount (1) in direction of arrow and remove upwards.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).



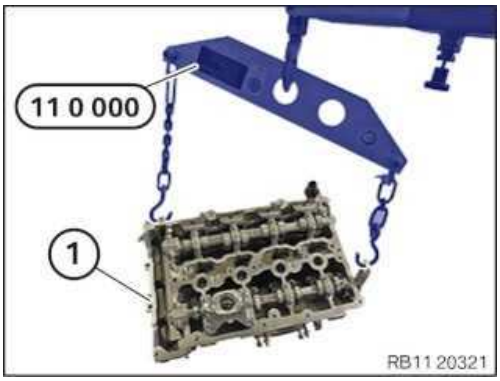
- Loosen the cylinder head bolts in the sequence from (10) to (1).
- Remove cylinder head bolts (1) to (10) with washers.

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm

RISK OF DAMAGE



Damage to the guide rails.

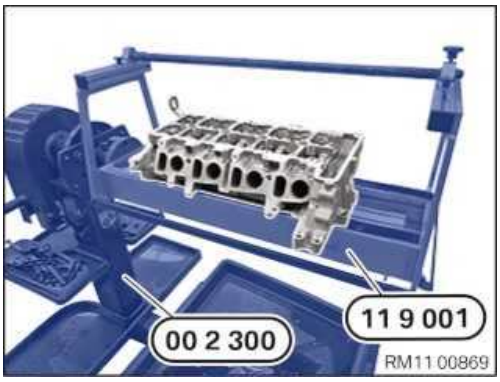
Large amounts of force may damage the guide rails of the timing chain.

- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- **Carefully** guide out the cylinder head (1) with the engine lifter and the special tool **0 490 561 (11 0 000)** and remove.

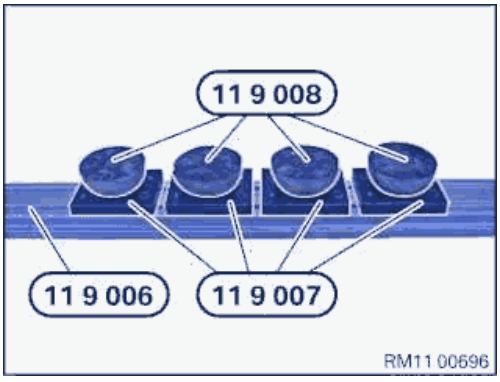
cardiagn.com

- Mount the cylinder head (1) on the special tool **0 494 362 (11 9 000)**.



74 – Remove all valve springs

RISK OF DAMAGE

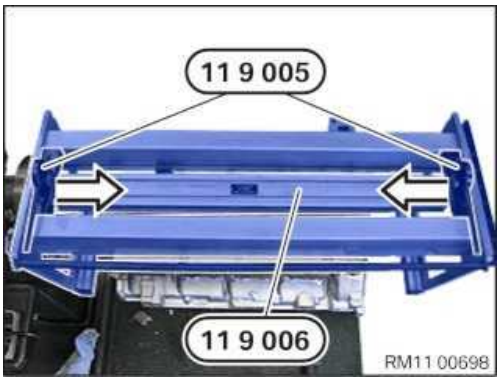


Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

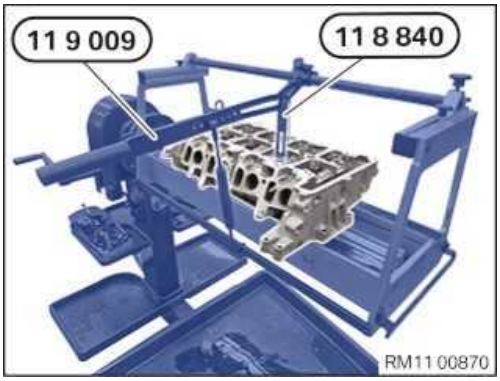
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Mount and screw the cylinder head onto the special tools **0 494 366 (11 9 001)** and **0 495 187 (00 2 300)**.

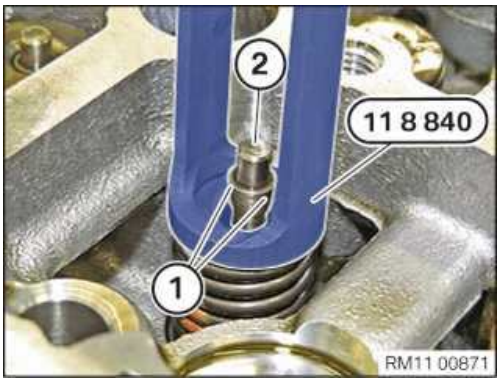


- Prepare the special tools **0 494 371 (11 9 006)**, **0 494 372 (11 9 007)** and **0 494 373 (11 9 008)** as shown.

- Position special tool **0 494 373 (11 9 008)** as illustrated.



cardiagn.com



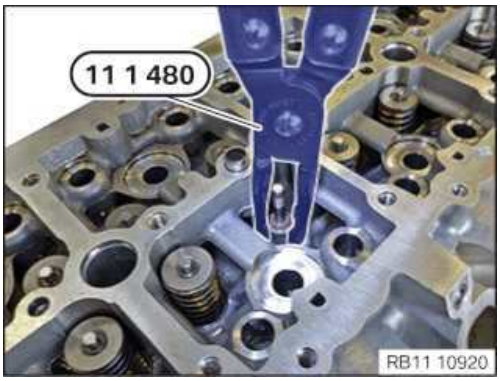
- Turn round special tool **0 494 371 (11 9 006)** and insert as shown.
- Lock special tool **0 494 370 (11 9 005)** in direction of arrow.

- Lock special tool **0 494 370 (11 9 005)** in direction of arrow.
- Use the special tool **0 494 362 (11 9 000)** to bring the cylinder head into the installation position by 180°.

- Align special tool **0 494 374 (11 9 009)** in direction of valve axis.
- Position the special tool **0 496 143 (11 8 840)** according to the nut.
- Press down the valve spring on the upper spring cup with the special tools **0 494 374 (11 9 009)** and **0 496 143 (11 8 840)**.
- The **hooks** from the set of special tools **0 494 362 (11 9 000)** can be used to **hold** the valve spring down.

- Keep the valve spring pressed down with the special tool **0 496 143 (11 8 840)**.
- Remove the valve shims (1) from the valve (2) using a magnet.
- Guide the valve spring and spring cup out and remove.
- Set down valve spring, spring cup and valve shims (2) in the special tool **0 495 105 (11 4 480)** in an orderly manner.

75 – Remove valve stem seals



RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

cardiagn.com

- Disassemble the valve stem seal (1) using the special tool **0 490 796 (11 1 480)**.

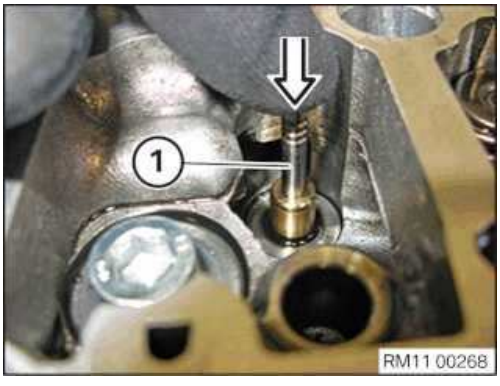
MAIN WORK

76 – Remove all valves

RISK OF DAMAGE

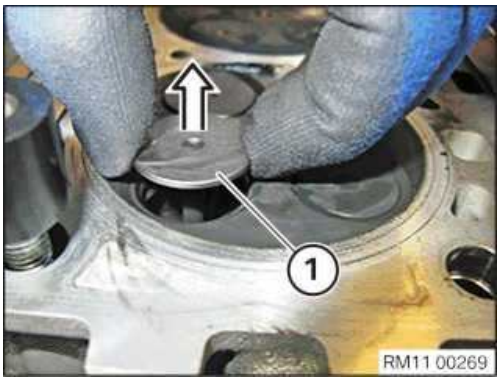
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.



- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Turn the cylinder head with the special tool **0 494 362 (11 9 000)**.
- Unlock the special tool **0 494 370 (11 9 005)** in the direction of the arrow.
- Remove special tool **0 494 371 (11 9 006)**.

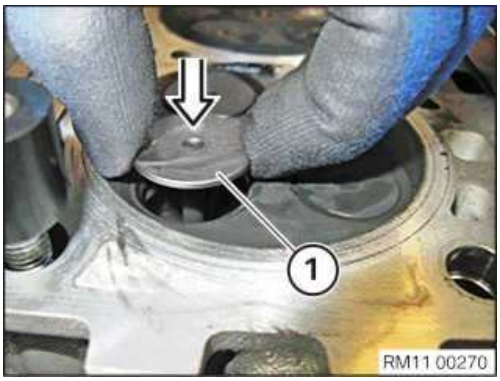


- Remove special tool **0 494 373 (11 9 008)** if necessary.

- Push the valve stem (1) into the cylinder head in the direction of the arrow.

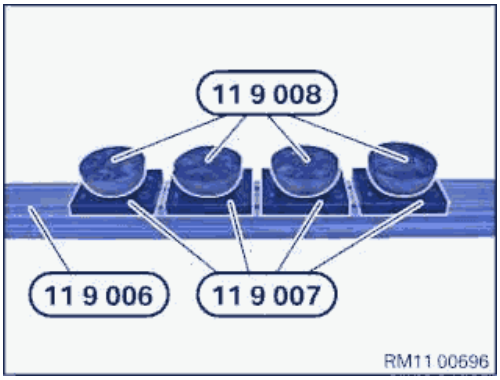
cardiagn.com

- Remove the valve (1) in the direction of arrow and store it properly in the special tool **0 495 105 (11 4 480)**.



77 – Install all valves

RISK OF DAMAGE

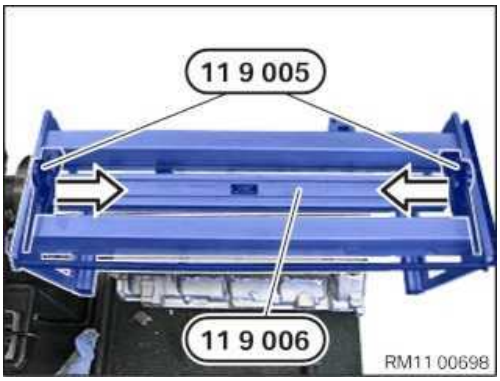


Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Insert and install the valve (1) in the direction of the arrow.



- Prepare the special tools **0 494 371 (11 9 006)**, **0 494 372 (11 9 007)** and **0 494 373 (11 9 008)** as shown.

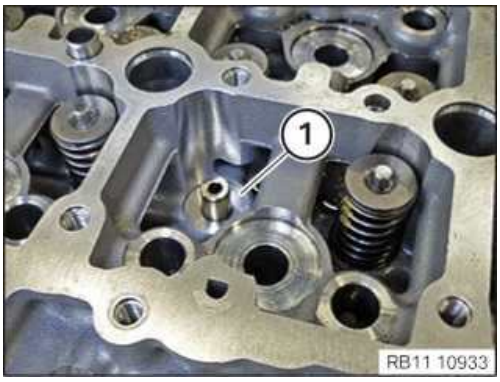
- The special tools **0 494 373 (11 9 008)** must be set up accordingly in the next operation.

cardiagn.com

- Turn round special tool **0 494 371 (11 9 006)** and insert as shown.
- Lock special tool **0 494 370 (11 9 005)** in direction of arrow.

- Lock special tool **0 494 370 (11 9 005)** in direction of arrow.
- Use the special tool **0 494 362 (11 9 000)** to bring the cylinder head into the installation position by 180°.

POSTPROCESSES



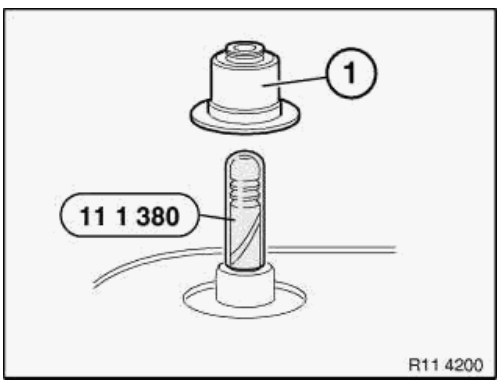
78 – Installing valve stem seals

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

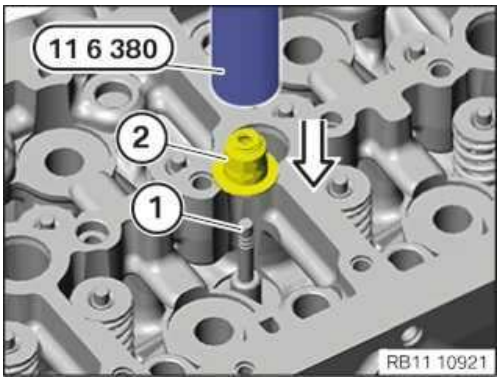


RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.



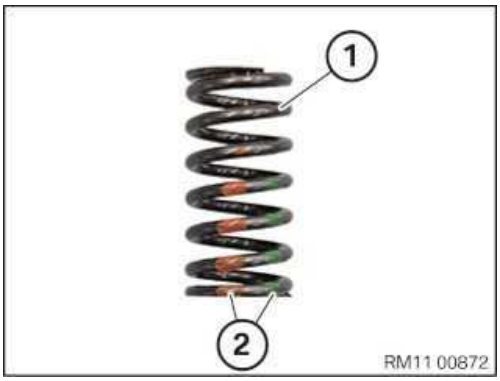
- Clean the contact surfaces (1).

- Fit special tool **0 490 746 (11 1 380)**.
- Oil the valve stem seal (1) and install it.

  Parts: Valve stem seal

cardiagn.com

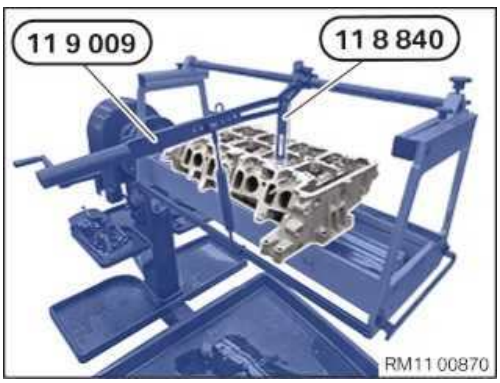
- Position the valve stem seals (2) on the valve (1).
- Use special tool **0 493 249 (11 6 380)** to press down the valve stem seal (2) until they are in contact with the cylinder head.



79 – Install all valve springs

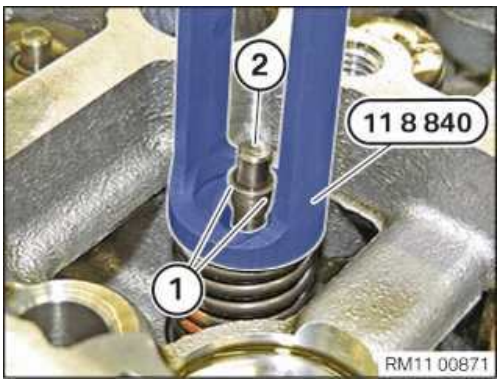
RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

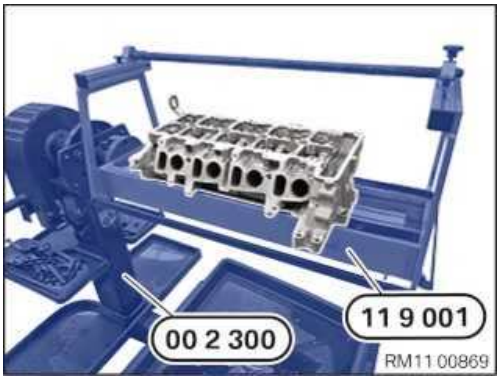
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- The valve spring (1) is marked with a colour code (2).

  The mounting orientation of the valve spring (1) can be freely chosen.

- Align special tool **0 494 374 (11 9 009)** in direction of valve axis.
- Position the special tool **0 496 143 (11 8 840)** according to the nut.
- Press down the valve spring on the upper spring cup with the special tools **0 494 374 (11 9 009)** and **0 496 143 (11 8 840)**.
- The **hooks** from the set of special tools **0 494 362 (11 9 000)** can be used to **hold** the valve spring down.

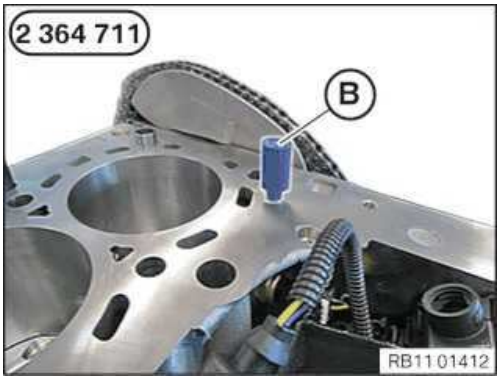


- Keep the valve spring pressed down with the special tool **0 496 143 (11 8 840)**.
- Insert the valve shims (1) at the valve (2) with the magnet and install.
- Relieve load on valve spring.
- Make sure that the valve shims (1) are installed correctly.

cardiagn.com

- Unlock the special tool **0 494 370 (11 9 005)** in the direction of the arrow.
- Guide the special tool **0 494 371 (11 9 006)** out and remove.

- Unscrew and remove the cylinder head from the special tools **0 494 366 (11 9 001)** and **0 495 187 (00 2 300)**.



80 – Cleaning the sealing surface

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

RISK OF DAMAGE

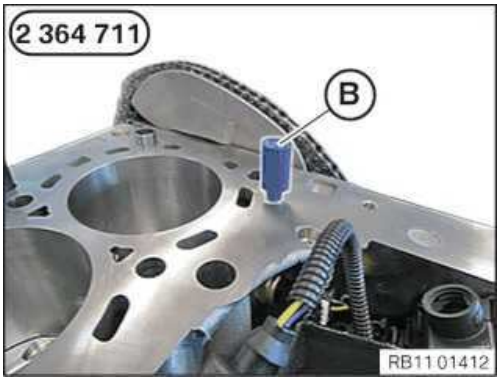
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.

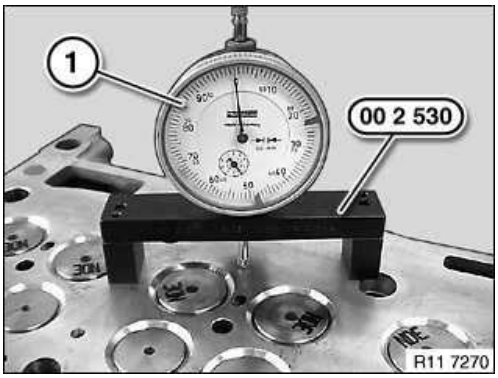
cardiagn.com



RISK OF DAMAGE

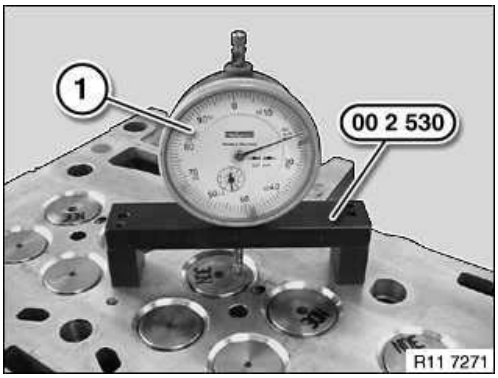
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.



- Remove special tool (B).

81 – Checking the valve underprotrusion

- Set the dial gauge (1) onto the cleaned cylinder sealing surface with slight preload in special tool **0 490 185 (00 2 530)**.
- Set dial gauge in mildly preloaded state to "zero".

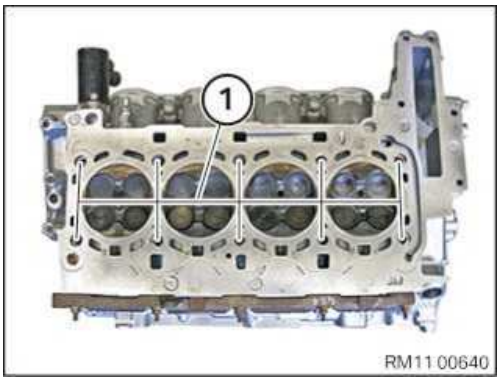
Check

- Position the dial gauge (1) on the valve with special tool **0 490 185 (00 2 530)**.
- Measure valve underprotrusion and compare with the setpoint value.

Valve underprotrusion

	0,8 (0,7 - 0,9) mm

Result



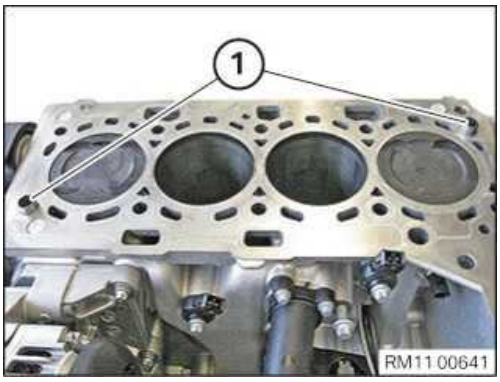
» Valve underprotrusion is outside tolerance.

Measure

- Replace cylinder head.

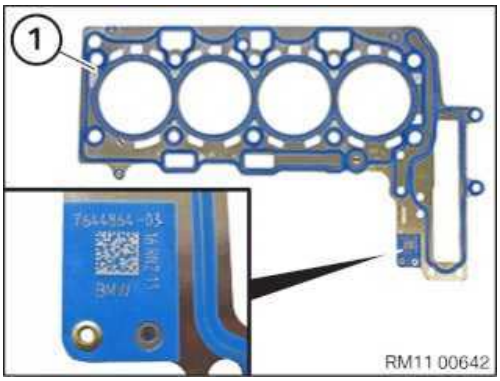
82 – Renewing the cylinder head gasket

cardiagn.com



RISK OF DAMAGE

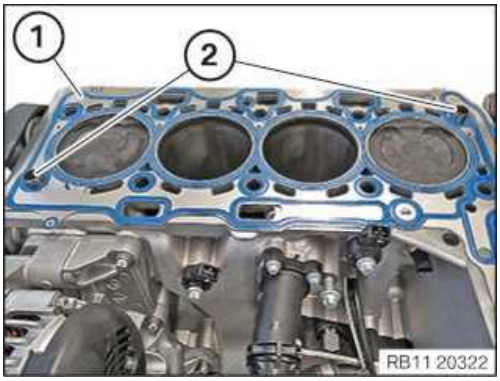
Damage to the surface.



The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).



- Check the fitting sleeves (1) for secure fit and damage.

- Identify the cylinder head gasket (1) using the part number.

Note: If the cylinder head is reworked, an additional thicker gasket 0.3 mm is available for service personnel.

- Guide in the cylinder head gasket (1) and install.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

83 – Installing the cylinder head

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

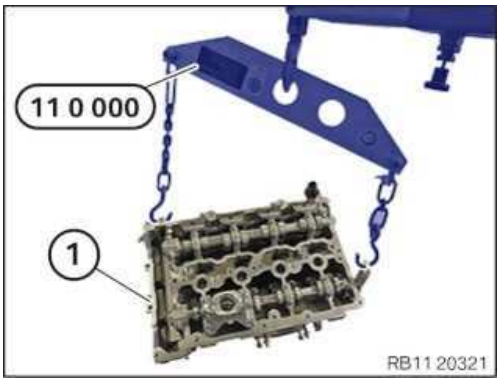
- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

RISK OF DAMAGE

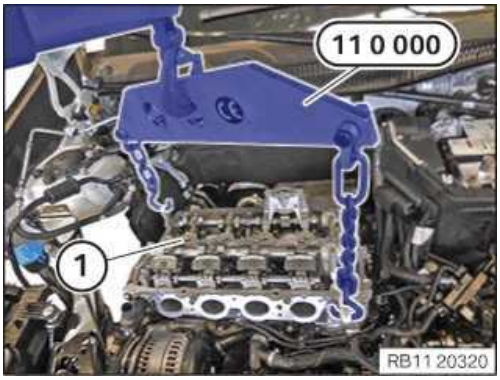
Damage to threads.

Fluid in the threaded hole may damage the thread when screws are tightened in the threads.



- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION



Do not remove bolt coating.

TECHNICAL INFORMATION

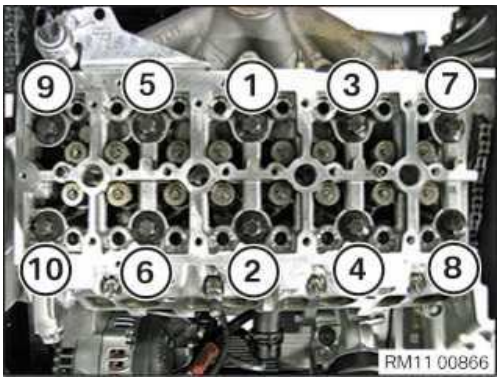
When replacing the cylinder head: The complete valve control and the Valvetronic servomotor are already pre-assembled for new cylinder heads.

- Position cylinder head (1) on special tool **0 490 561 (11 0 000)** and engine lifter.

RISK OF DAMAGE

Damage to the guide rails.

Large amounts of force may damage the guide rails of the timing chain.



- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- Feed in the cylinder head (1) **carefully** with the engine lifter and the special tool **0 490 561 (11 0 000)** and install.

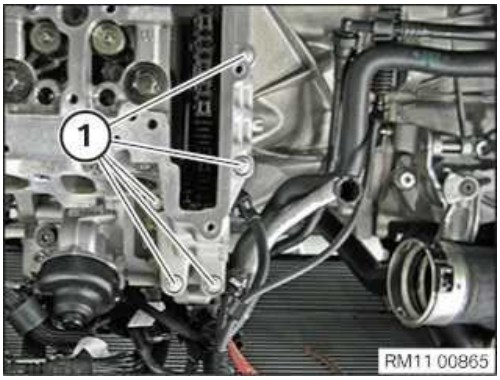
- Unscrew the bolts (1) of the special tool **2 459 012**.
- Guide the special tool **2 459 012** out and remove.

cardiagn.com

- Renew the cylinder head bolts (1).

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  No coolant, water or engine oil must be present in threaded holes of engine block.

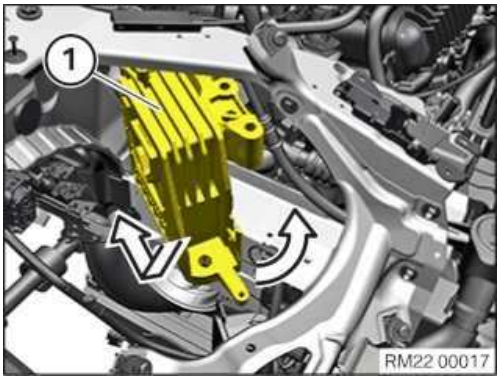


TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in cylinder head bolts in sequence (1) to (10).
- Tighten cylinder head bolts using special tools **0 490 504 (00 9 120)** and in sequence (1) to (10).

Cylinder head to crankcase



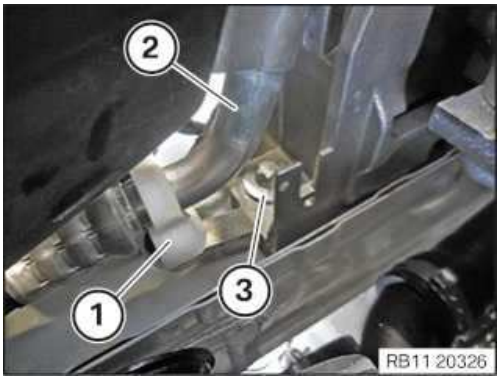
M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

- Tighten the cylinder head bolts (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

- Thread in engine mount (1) in direction of arrow then install.

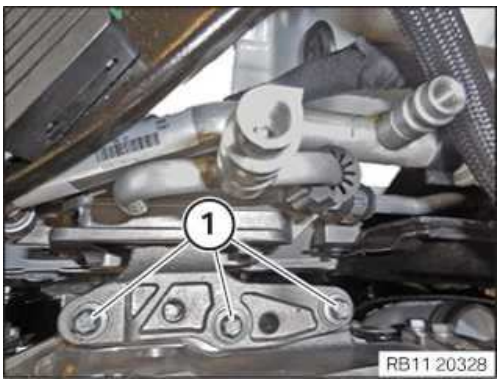


cardiagn.com

- Tighten down screw (1).

Right engine mount to side member

M12		Tightening torque	100 Nm

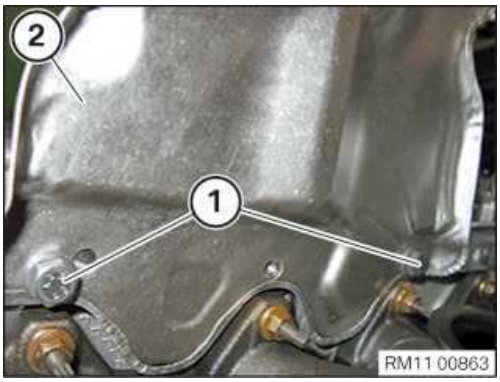


- Tighten down screw (3).

Right engine mount to side member

M12		Tightening torque	100 Nm

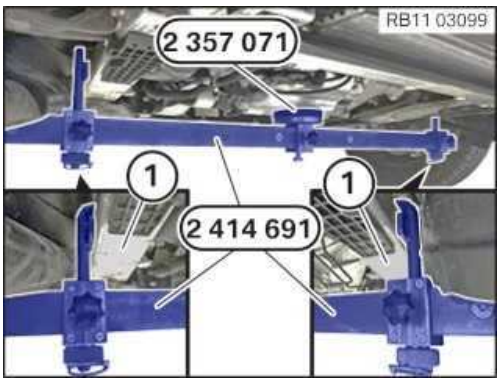
- Feed in and install the refrigerant line (2).
- Lock holder (1).
- Make sure the bracket (1) engages audibly.



- Renew screws (1).

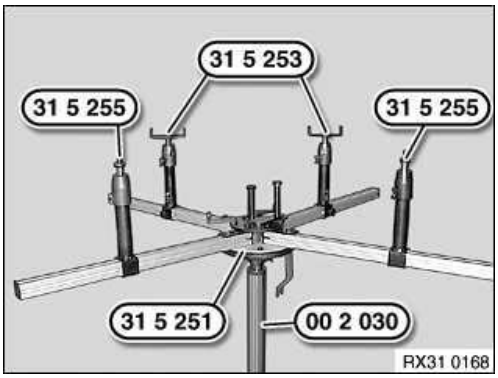
  Parts: Bolts
- Tighten the screws (1).

Right engine mount to cylinder head



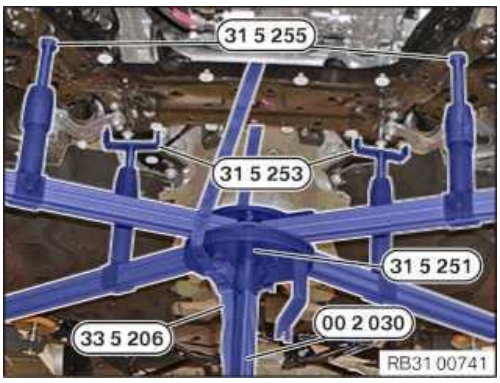
M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

- Feed in and install the heat shield (2).
- Tighten the screws (1).



Heat shield to cylinder head

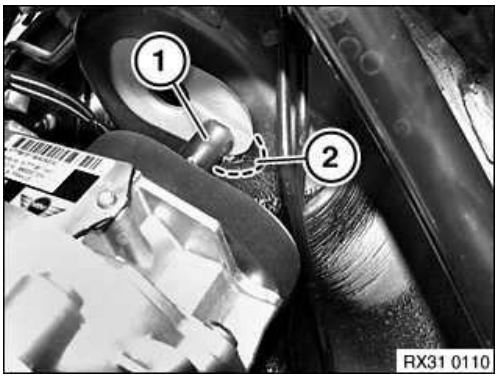
M8X16		Tightening torque	10 Nm



- Disassemble special tool using special tool **2 357 071**.

cardiagn.com

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

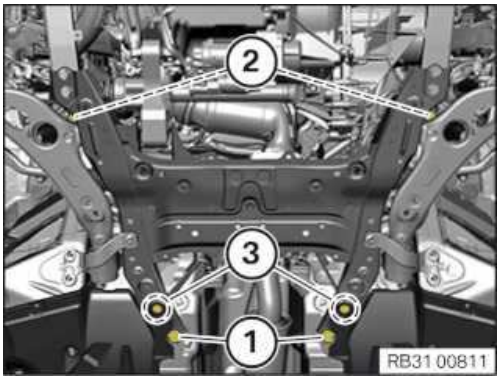


Note: In a profile rail pair, two profile rails are connected to one another by gearing.

- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

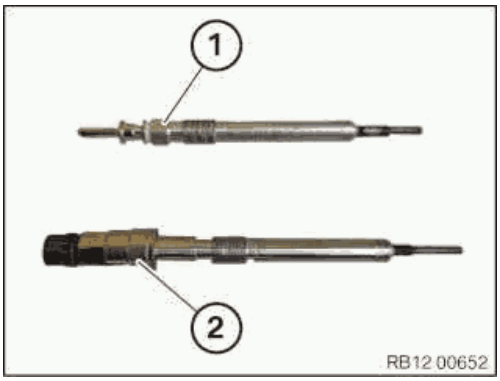
Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.



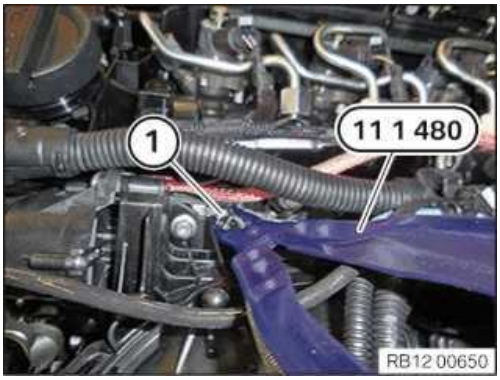
- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and the front axle remove.

84 – Install glow elements

- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.



cardiagn.com

- Tighten the glow element with the special tool or conventional tools.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

85 – Installing the hydraulic valve clearance compensating element

RISK OF DAMAGE

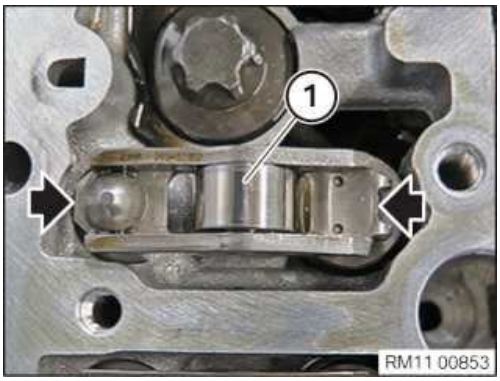
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

86 – Install the roller cam followers



RISK OF DAMAGE

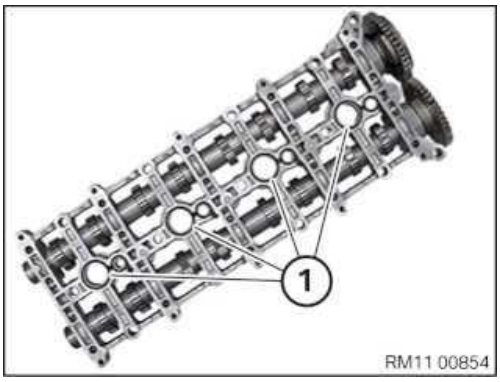
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

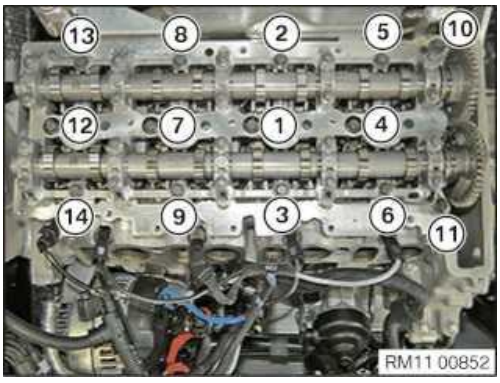
RISK OF DAMAGE



Damage to the engine.

If the classification of the roller cam followers is ignored, this can lead to engine damage.

- Observe the classification of the roller cam followers.
- Always reuse used roller cam followers at the same position.

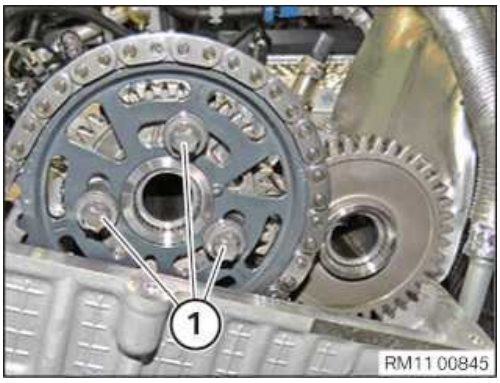


- Install the roller cam follower (1).
- Repeat the process for all roller cam followers.

87 – Installing the camshaft support

- Renew gaskets (1).

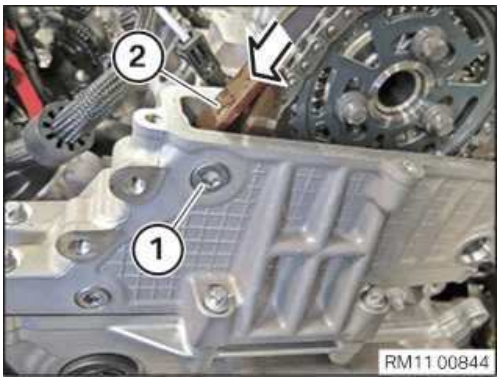
  Parts: gaskets



- Position the camshaft support including the camshafts.
- Tighten the screws in a sequence from (1) to (14) in several steps.

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

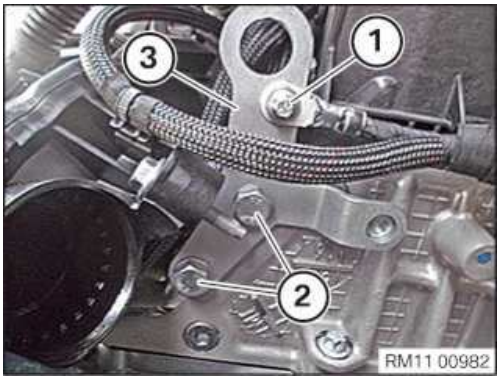


88 – Installing the camshaft sprocket on the intake camshaft

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

89 – Install the timing chain guide rail

cardiagn.com



- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

90 – Installing the chain tensioner piston

WARNING

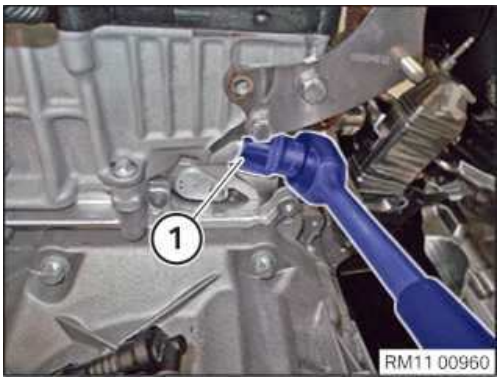
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Renew sealing ring (1).

  Parts: Sealing ring

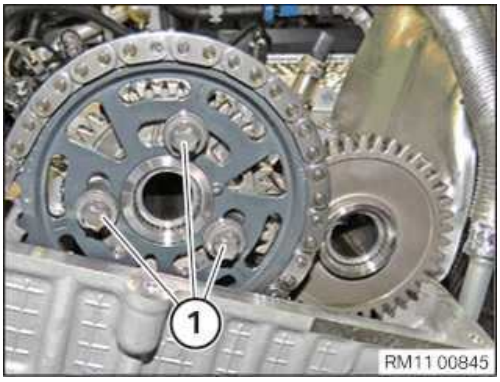


TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

cardiagn.com



- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

91 – Tightening the camshaft sprocket on the intake camshaft

- Tighten the screws (1).

Camshaft sprocket to camshaft

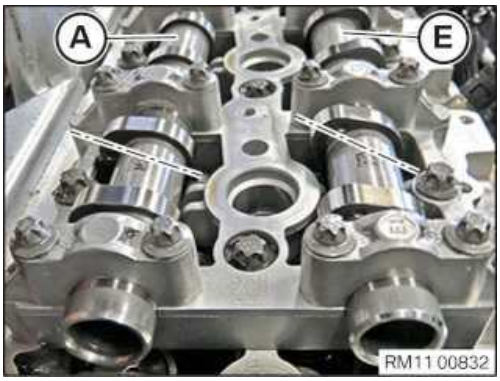
M7x17.			17 Nm

92 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

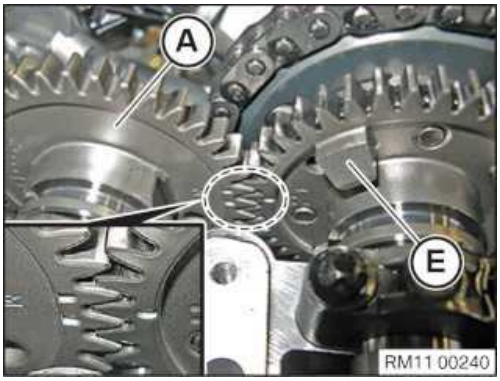


The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

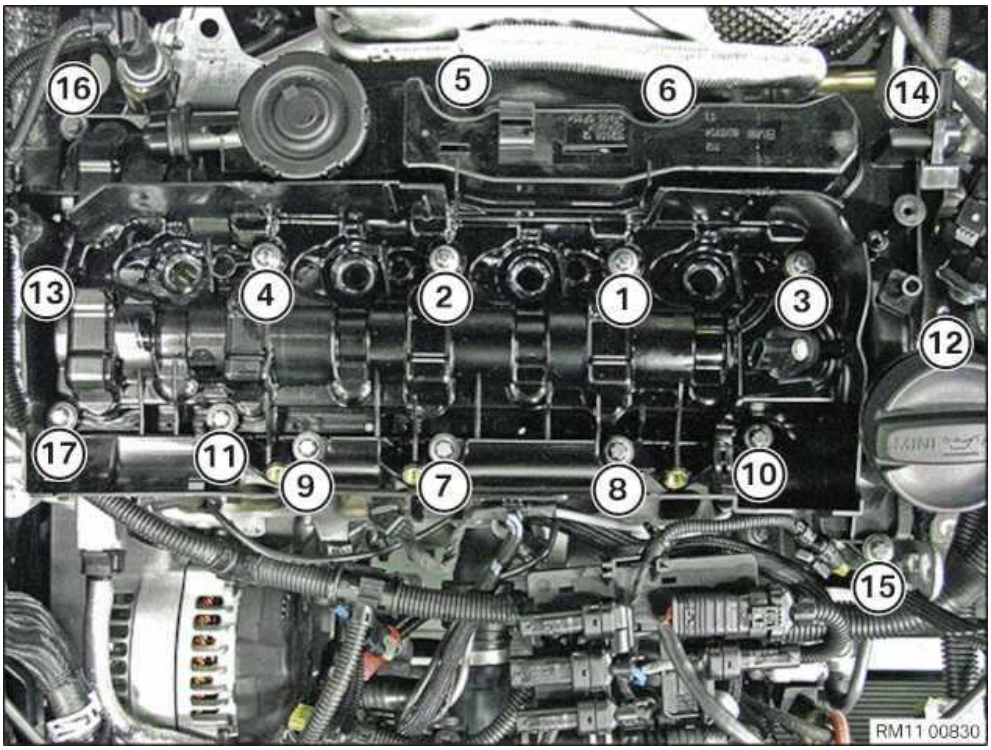
- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

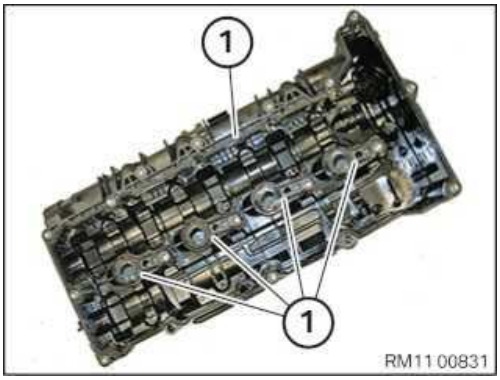
If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.



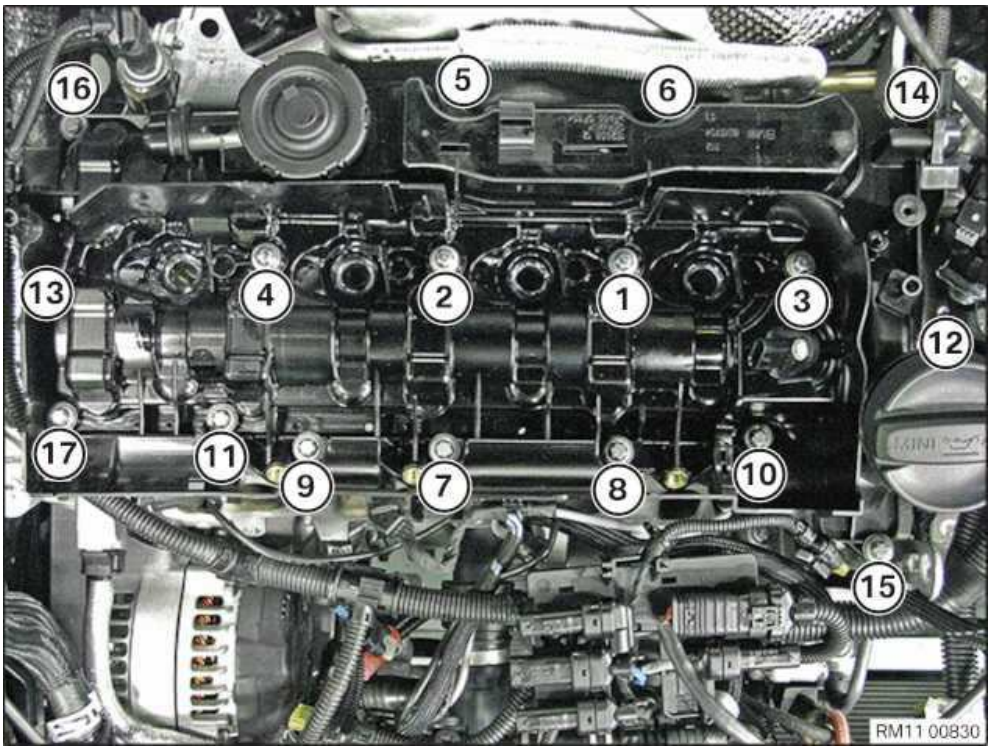
- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).



93 – Installing cylinder head cover

cardiagn.com

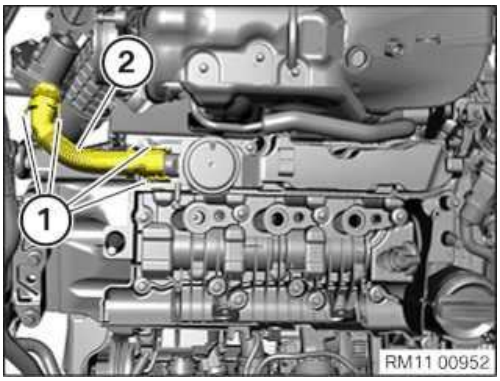
Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket



- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-

cardiagn.com

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

94 – Installing injectors of injection system

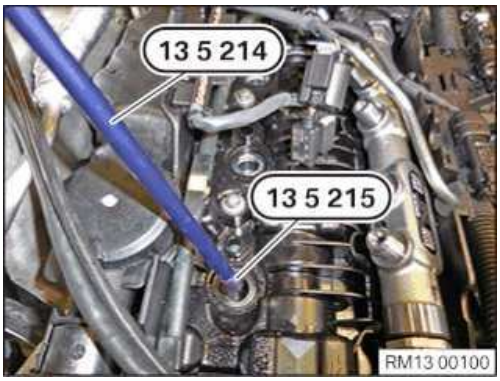
▸ **Cleaning the injector shafts**

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

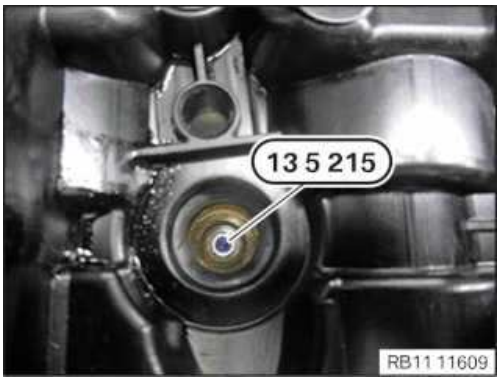
- Collect dirt particles, e.g. when blowing out, use cloth to do so.



- Wear safety goggles.

RISK OF DAMAGE

Contaminant or foreign body.

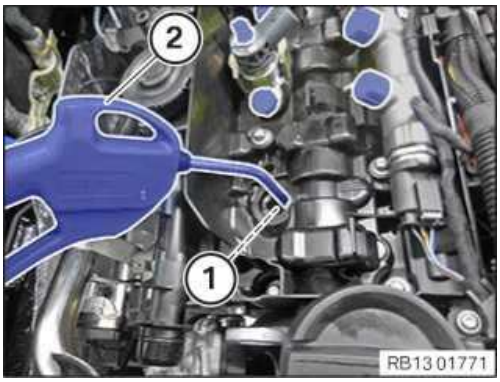


Contamination can result in malfunctions, operating failure or leaks.

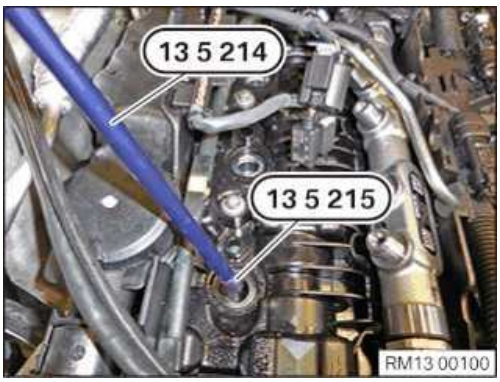
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

cardiagn.com



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.



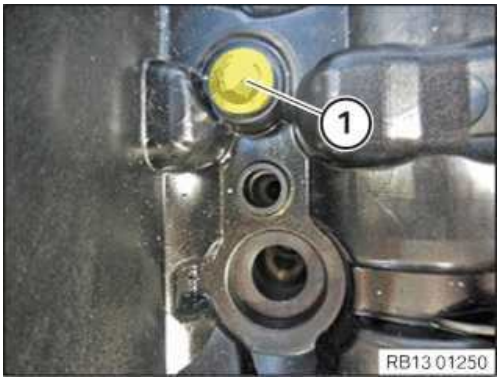
- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

- Blow out injector shaft (1) with air gun (2).

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

► **Check the placement of the clamping claw**



cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

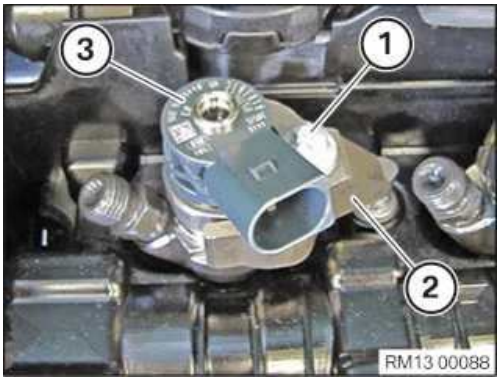
▸ **Prepare the injector for installation**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

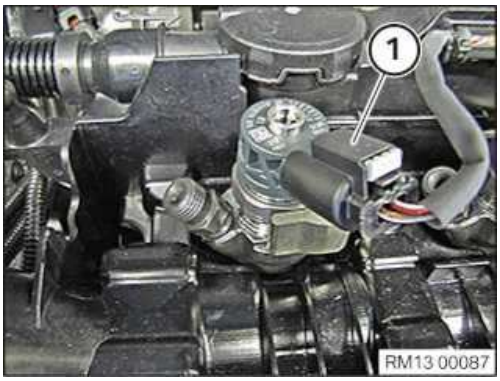


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

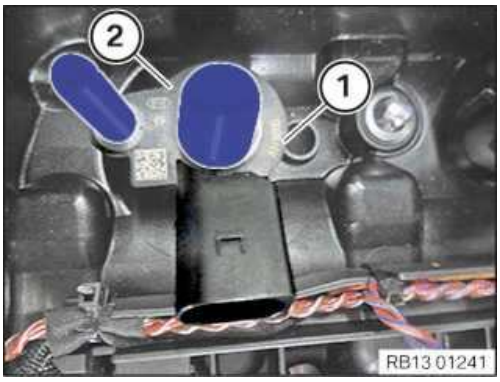
Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

cardiagn.com

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



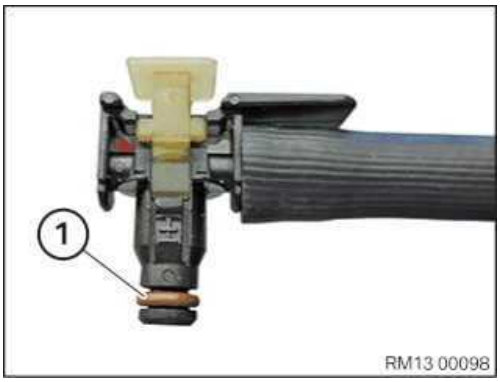
▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

95 – Connect the leakage oil line on the injector

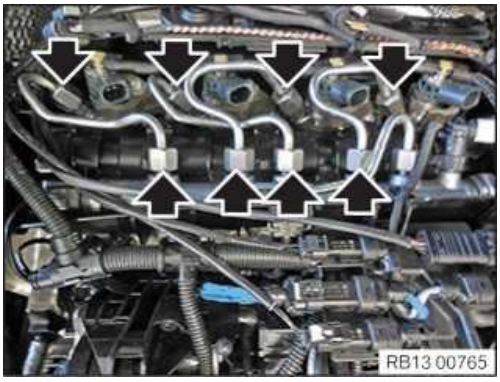
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

cardiagn.com

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.



96 – Installing high pressure lines between rail and injectors

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the high pressure lines (arrows) with the special tool .

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

97 – Prepare for the installation of the exhaust turbocharger

- Check the oil feed lines and the oil return lines for contamination or obstruction, clean or renew if necessary.
- If the oil feed lines and/or oil return lines are heavily contaminated, we recommend changing the engine oil and the oil filter.
- If installed: Check the coolant feed lines and the coolant return lines for the exhaust turbocharger for contamination or obstruction, clean or renew if necessary.
- Check that the screw connections and the plug connections of all the lines are correct.
- Check air cleaner for contamination and clean or renew as needed.
- Check correct functioning of crankcase ventilation.
- Replace all gaskets.

  Parts: Seals

cardiagn.com

98 – Installing the high-pressure stage exhaust turbocharger

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

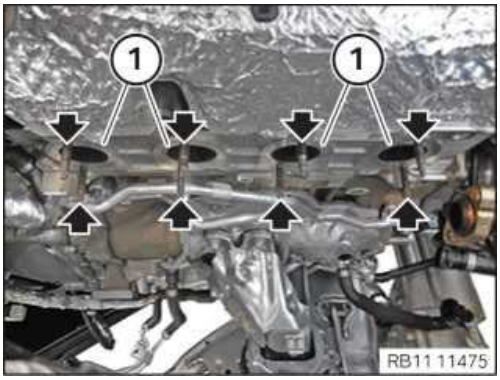
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE



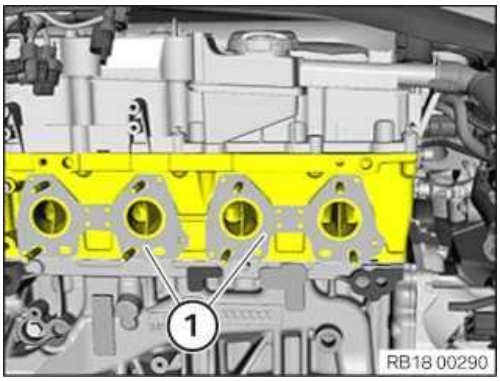
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

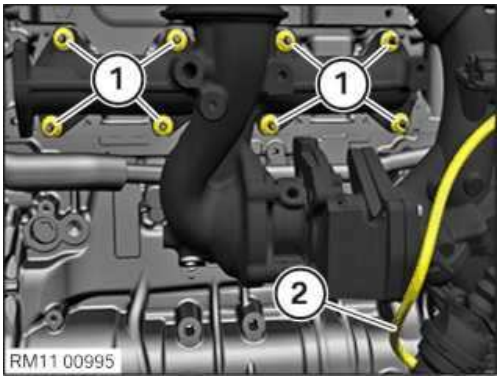
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.

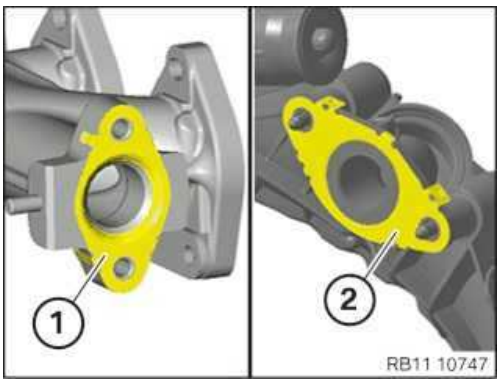
- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.



cardiagn.com

- Renew gasket (1).

  Parts: Gasket

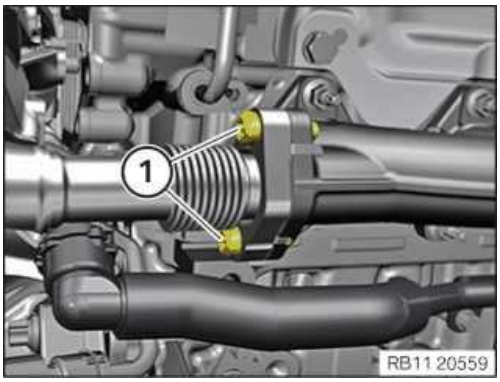


- Install new gasket (1).

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

  Parts: Nuts

- Connect vacuum hose(2).



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

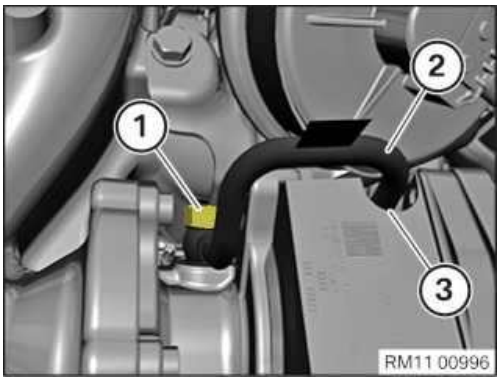
  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

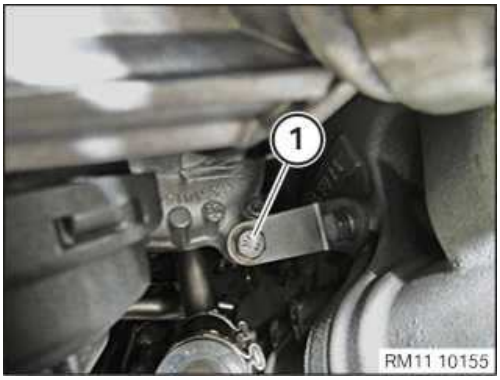
  Parts: Gasket

- Tighten the screws (1).

Exhaust-gas recirculation cooler to exhaust manifold



M8x28	Replace screws	Tightening torque	32 Nm

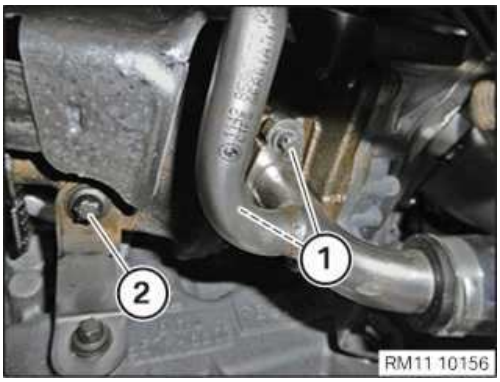


- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring

cardiagn.com

- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).



- Tighten bolt (1) from the right wheel arch.

- Renew seal (1) of oil return line.

  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

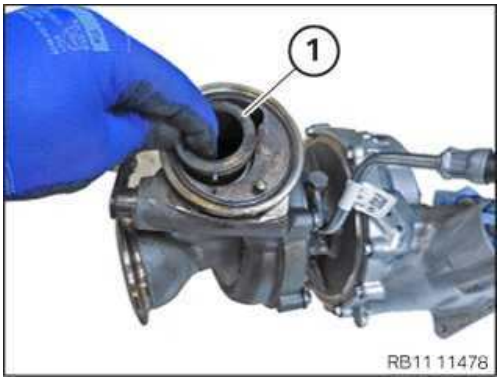
Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

99 – Installing the low-pressure stage turbocharger

RISK OF DAMAGE

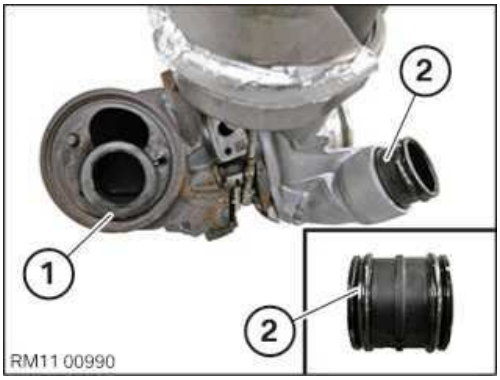
Damage to the surface.



The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

cardiagn.com



TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.

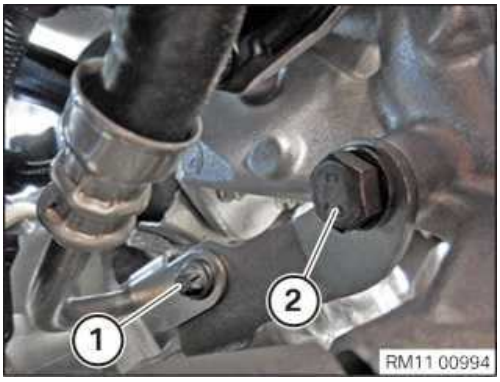
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

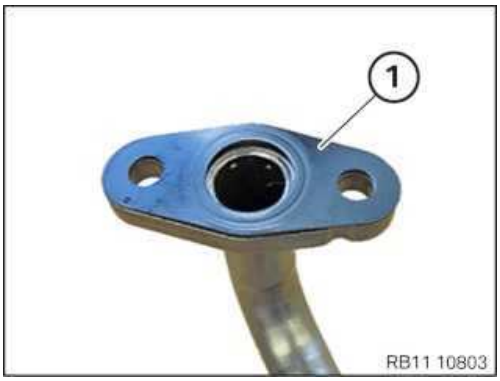
Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

- Tighten down screw (1).

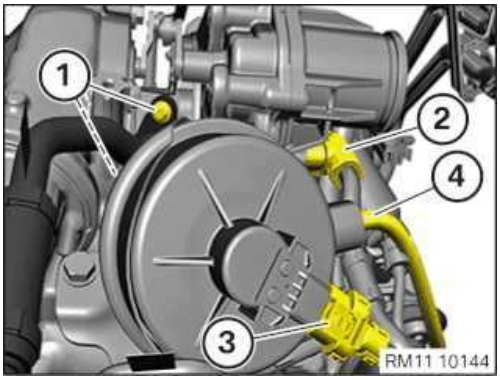
Oil feed line to bracket



Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

Holder to exhaust turbocharger and crankcase

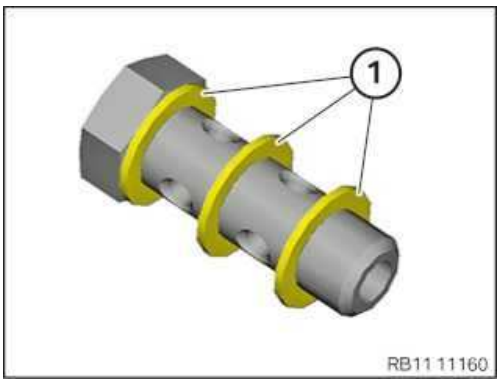


M8x16		Tightening torque	22 Nm

cardiagn.com

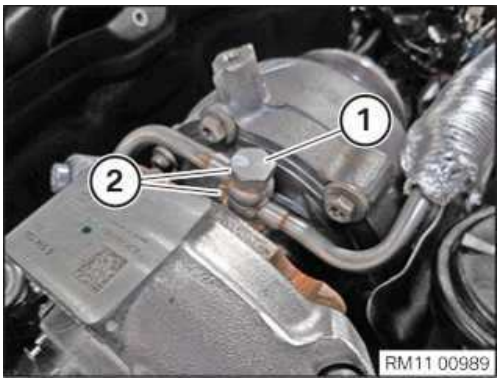
- Renew seal (1) on the oil return line.

  Parts: Gasket



- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger



M6x12		Tightening torque	8 Nm

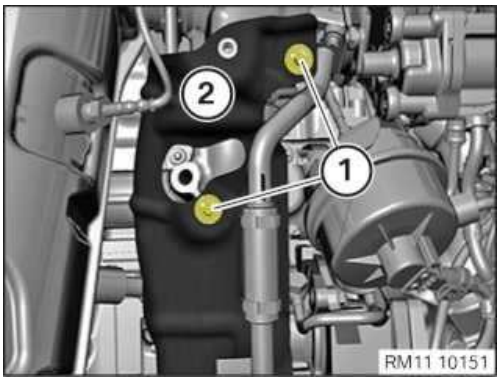
- Connect and lock connectors (2) and (3).

  The locks must engage audibly.
- Connect vacuum hose (4).

- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.

100 – Installing heat shield on exhaust turbocharger at bottom

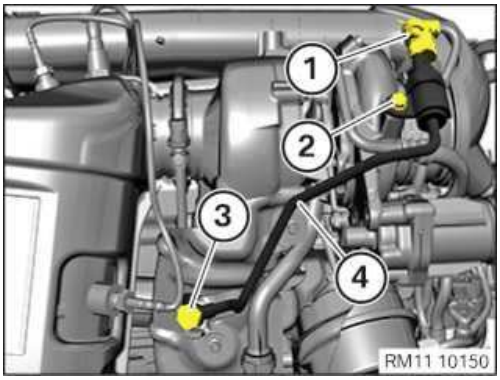


WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



cardiagn.com

- Feed in and install the heat shield (2).
