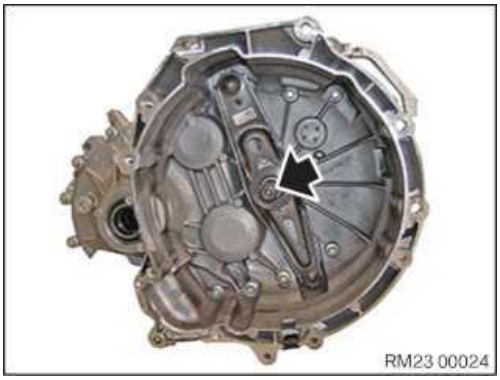
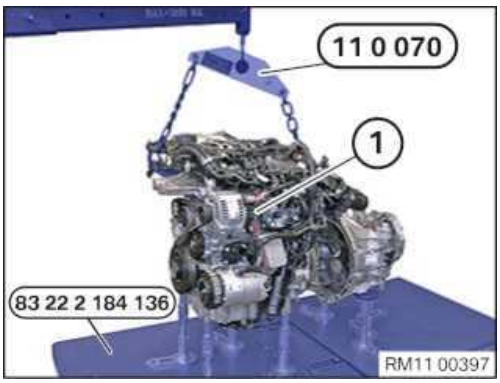
M10		Tightening torque	38 Nm

49 – Mounting engine on manual gearbox

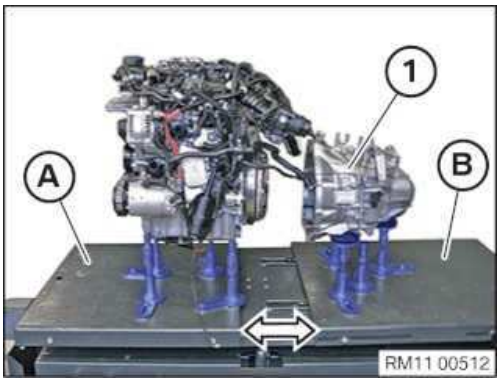


Prerequisite

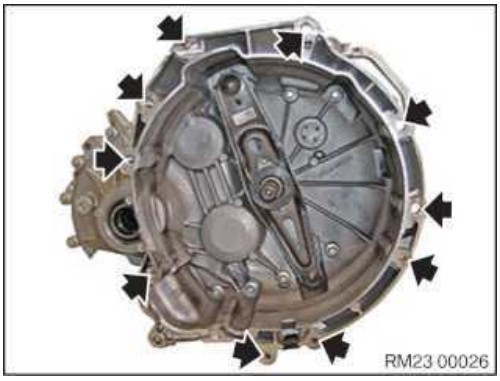
Engine has been removed.



cardiagn.com



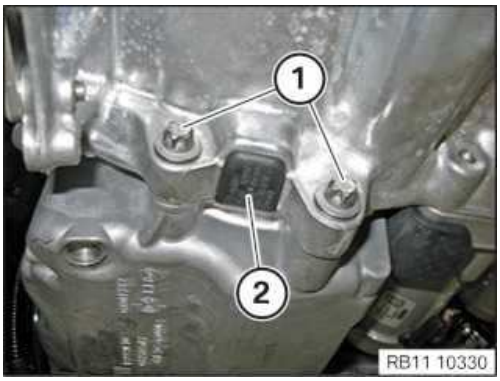
- Check for correct fit of fitting sleeves(1).
- Replace damaged fitting sleeves.



- Remove any grease from the transmission input shaft (arrow) and clean the shaft.
- Do not grease transmission input shaft.
- Check the clutch disc for frictional corrosion in the gearing and renew if necessary.

- Position the engine (1) on the lifting table **2 184 136** using the engine lifter and the special tool .
- Feed out engine lifter from engine (1) with special tool and push aside.

- Push table top (B) in direction of arrow and position manual gearbox (1) on engine.



- Tighten screws (arrows).

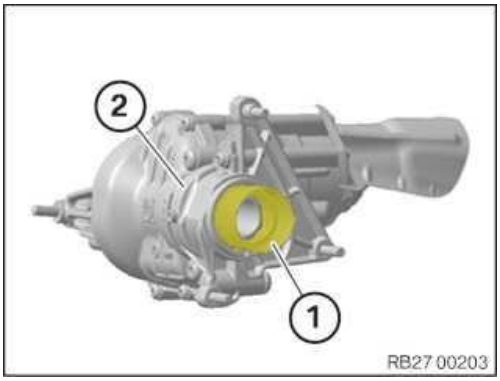
Transmission to engine

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

cardiagn.com

- Tighten the screws (1).

Transmission to oil sump



M8		Tightening torque	19 Nm

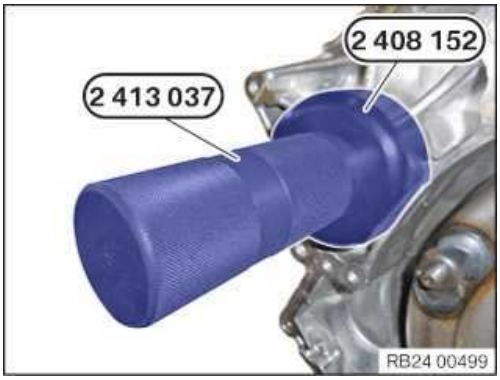
- Install the protective cap (2).

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.

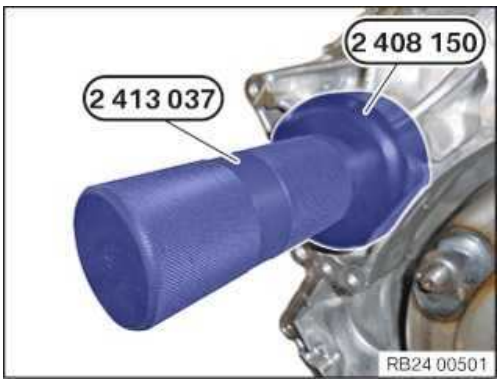
50 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

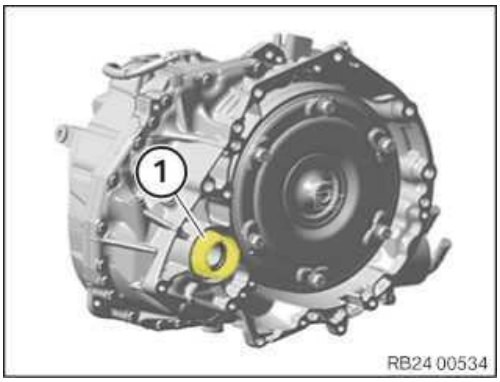
- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.



cardiagn.com

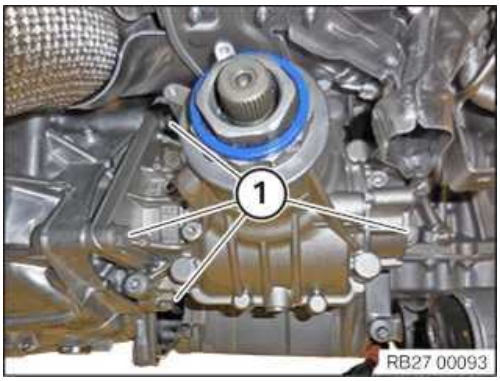


- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.

- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.



- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

cardiagn.com

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

Technically suitable transfer box and electrical transmission oils	

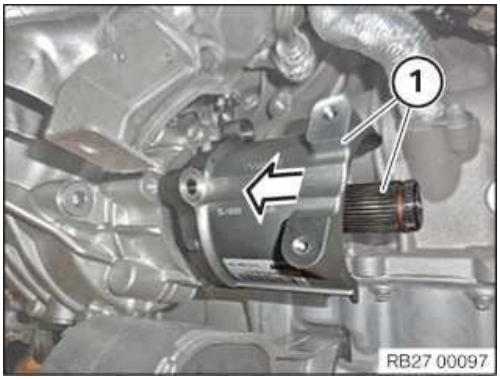
Main group 27

- Tighten the oil filler plug (1).

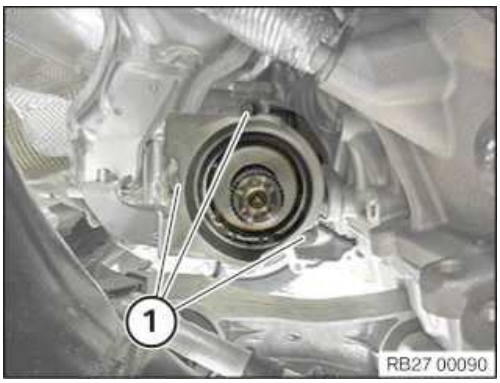
Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm

51 – Install the intermediate shaft with the support tube



cardiagn.com

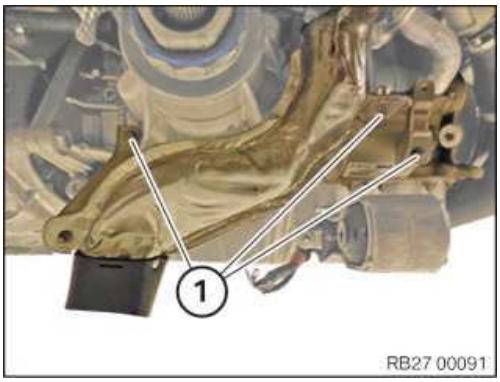


- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.



- Position screws (1).

Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

- If installed: Install air duct.
- Tighten the screws (1).

52 – Installing the high-pressure stage exhaust turbocharger

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

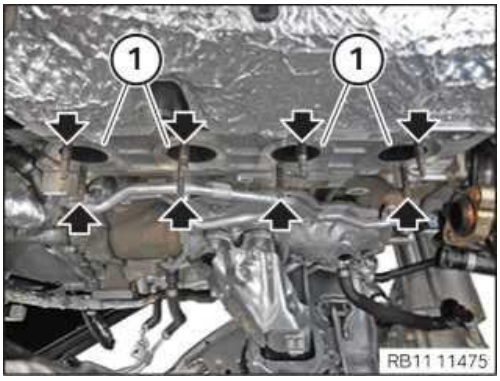
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

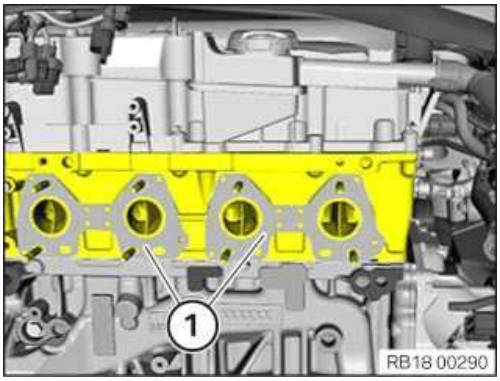


Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

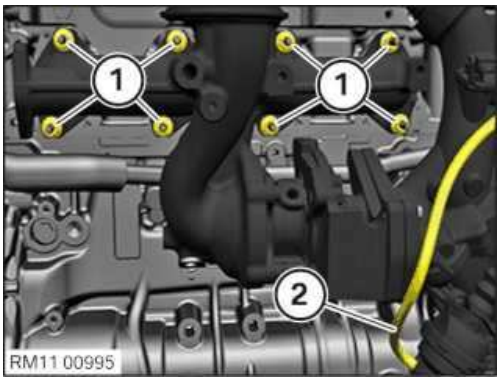
- Do not use any metal-cutting tools.

TECHNICAL INFORMATION



The sealing surfaces must be free from oils, grease and cleaning agents.

- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.



- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.

- Renew gasket (1).

  Parts: Gasket
- Install new gasket (1).

cardiagn.com

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

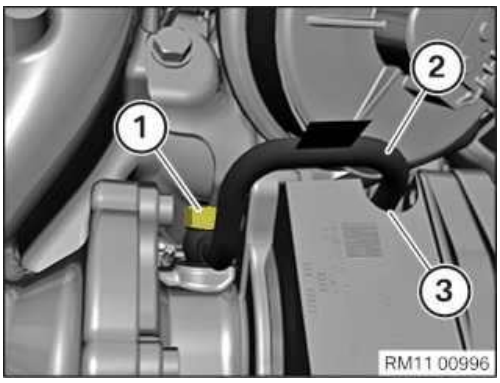
  Parts: Nuts
- Connect vacuum hose(2).

- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

- Tighten the screws (1).

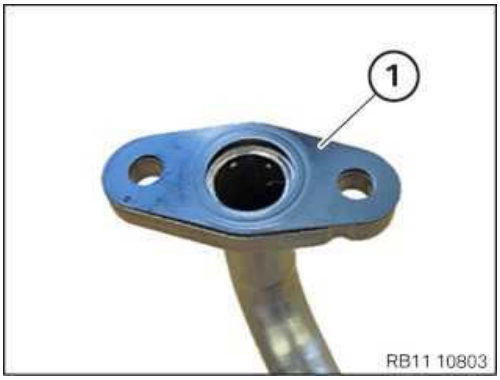


Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

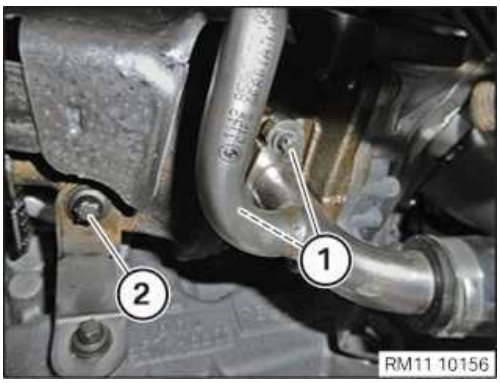
- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring



- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).

cardiagn.com



- Tighten bolt (1) from the right wheel arch.

- Renew seal (1) of oil return line.

  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

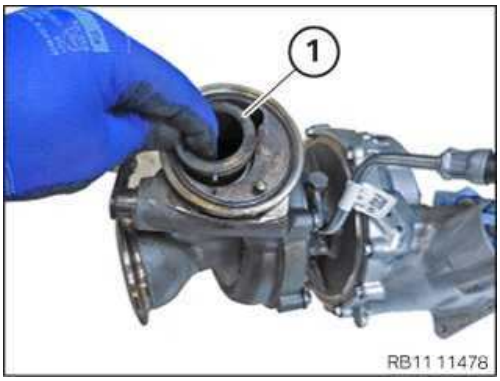
Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

53 – Installing the low-pressure stage turbocharger

RISK OF DAMAGE

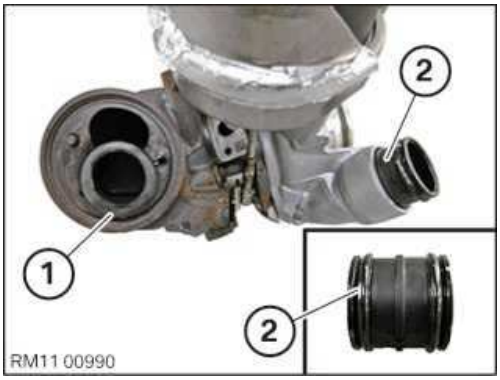
Damage to the surface.



The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

TECHNICAL INFORMATION



The sealing surfaces must be free from oils, grease and cleaning agents.

cardiagn.com

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.

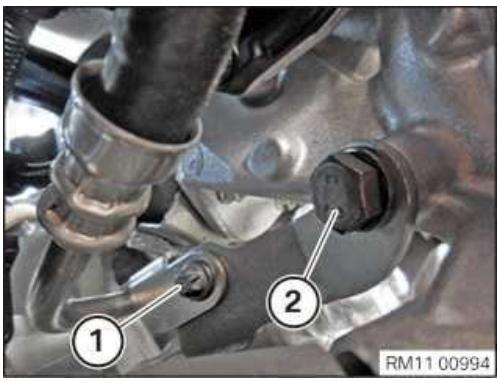
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

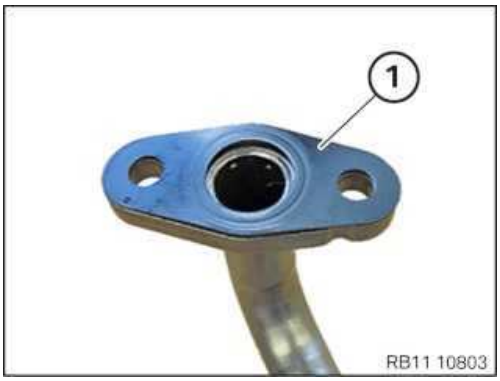
Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

- Tighten down screw (1).

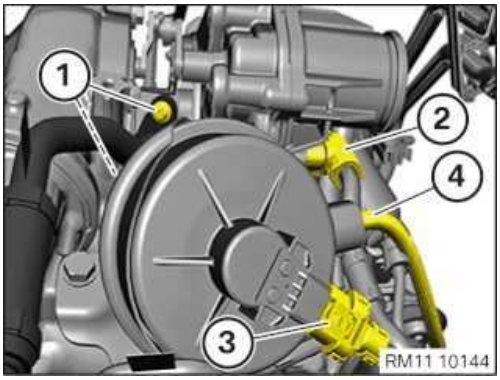
Oil feed line to bracket



Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

Holder to exhaust turbocharger and crankcase

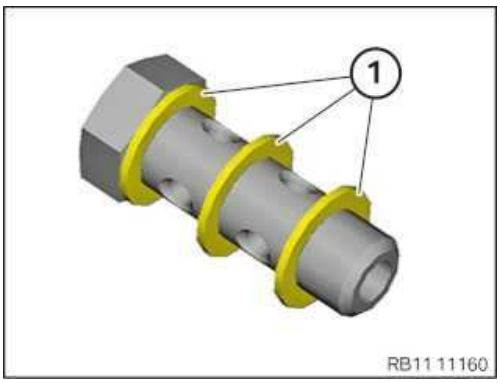


M8x16		Tightening torque	22 Nm

cardiagn.com

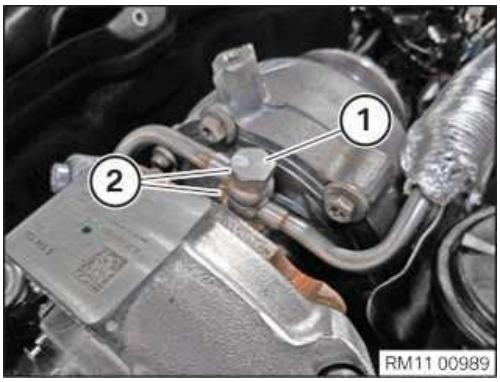
- Renew seal (1) on the oil return line.

  Parts: Gasket



- Position the oil return line with the seal.
- Tighten the screws (1).

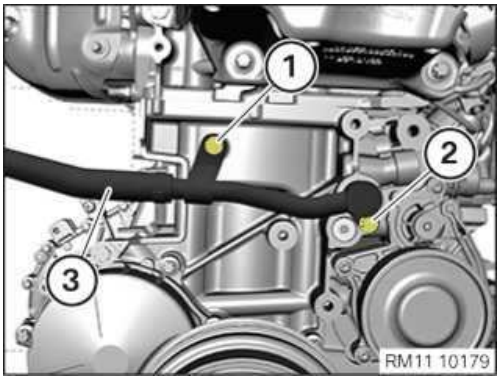
Oil return line to turbocharger



M6x12		Tightening torque	8 Nm

- Connect and lock connectors (2) and (3).

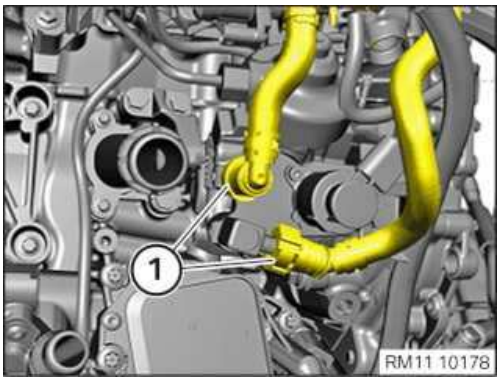
  The locks must engage audibly.
- Connect vacuum hose (4).



- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.

54 – Attaching assemblies (on lifting table)



- Renew sealing ring of the coolant line (3).

  Parts: Sealing ring
- Coat the sealing ring and install the coolant line (3) .
- Tighten down screws (1) and (2).

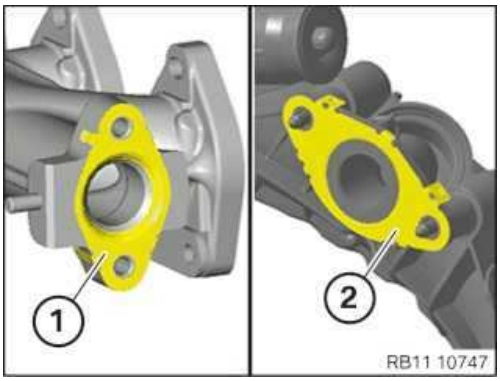
Standard screw connection M6

M6		8 Nm

cardiagn.com

- Connect and lock fuel lines (1).

  The fuel lines (1) must audibly engage.



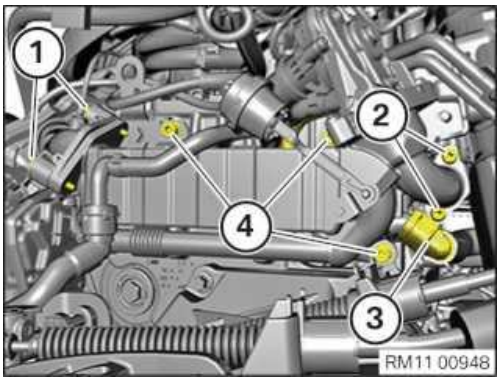
▶ **Installing the exhaust-gas recirculation cooler**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

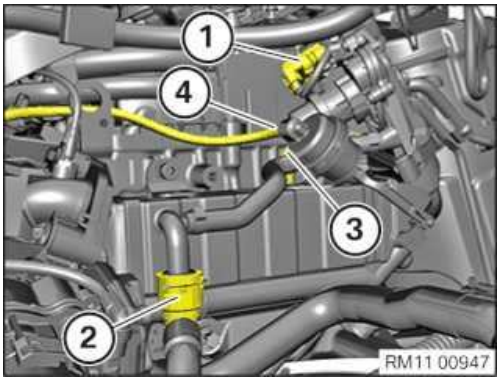
Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold



M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

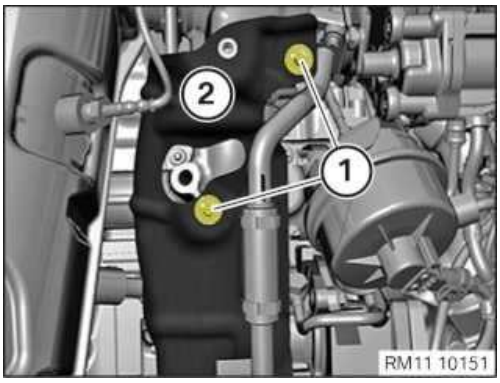
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

▸ **Installing heat shield on exhaust turbocharger at bottom**

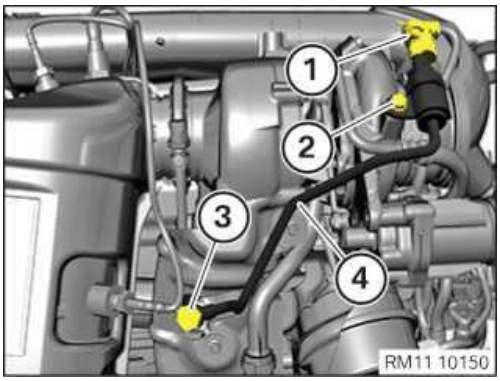


cardiagn.com

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

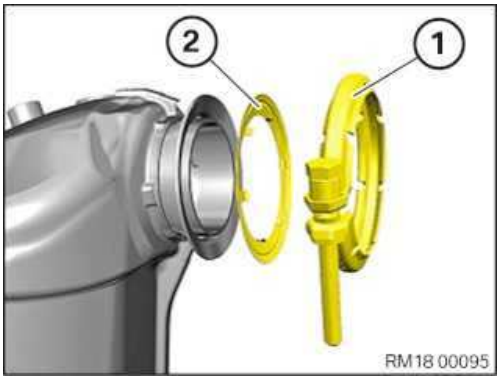
Torx screw BM 6x12		Tightening torque	10 Nm

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm



- Tighten down screw (2).

Standard screw connection M6

M6		8 Nm

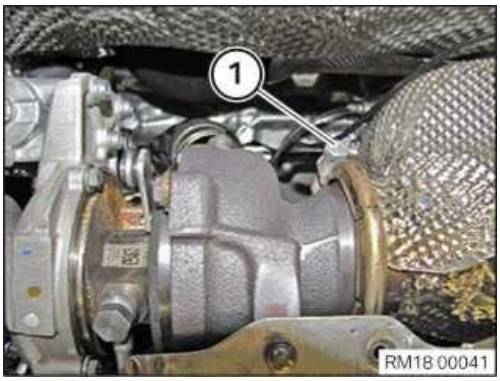
- Connect connectors (1) and lock.

  Lock must audibly engage.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

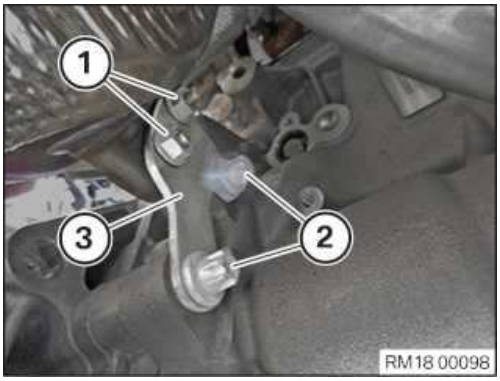


- Remove and install heavy components with the aid of another person/other persons.

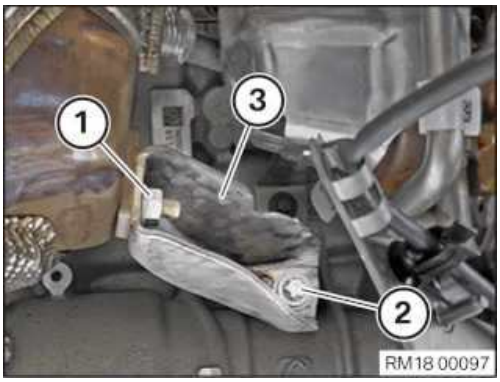
- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket



cardiagn.com



- Carefully insert and install the diesel particulate filter .
- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

- Tighten nuts (1) by hand.

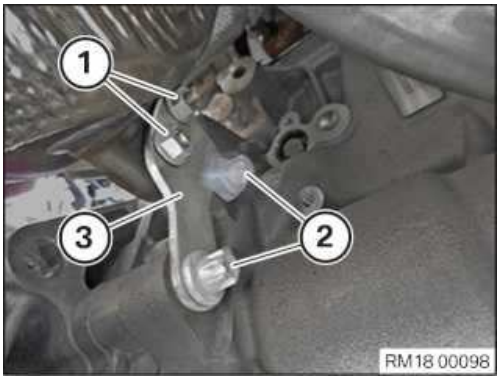
- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.

- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm



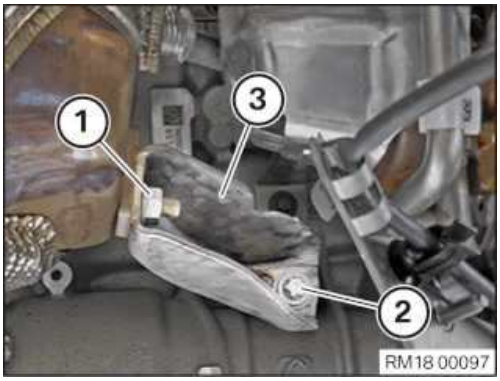
cardiagn.com

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screws (2).



Diesel particulate filter holder to gearbox

M12x75		Tightening torque	66 Nm

- Tighten nuts (1).

Diesel particle filter to holder

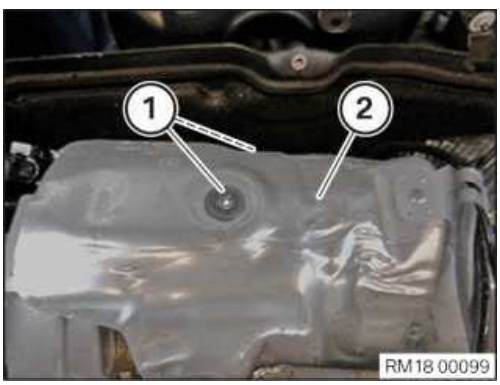
M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screw (2).

Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

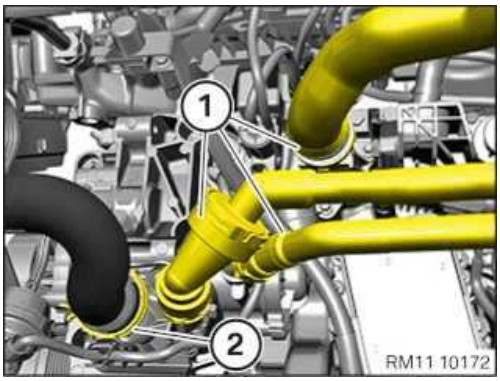


Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Remove fitting aid (1) for the flexible tube.

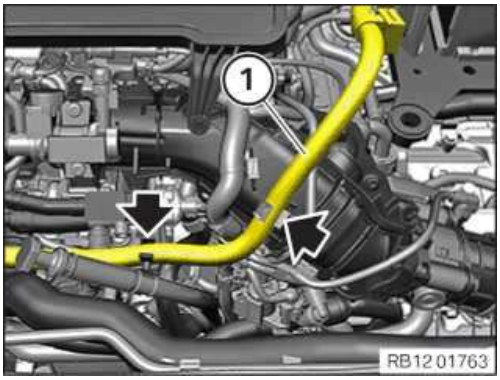
▶ **Install the heat shield on the exhaust turbocharger**



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm



- Fasten the cable at the clips .

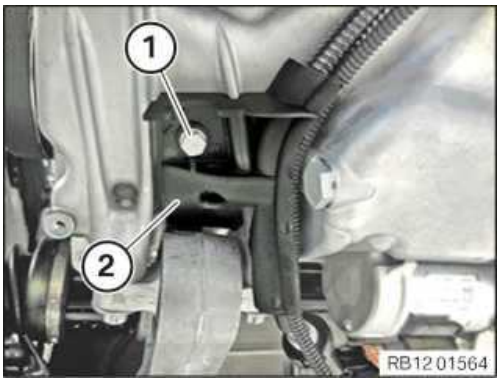
cardiagn.com

- Install the coolant hose and secure with the clamp (2) .
- Connect and lock the coolant lines (1).

  The coolant lines (1) must engage audibly.

CAUTION

Improper routing of the positive battery cable.



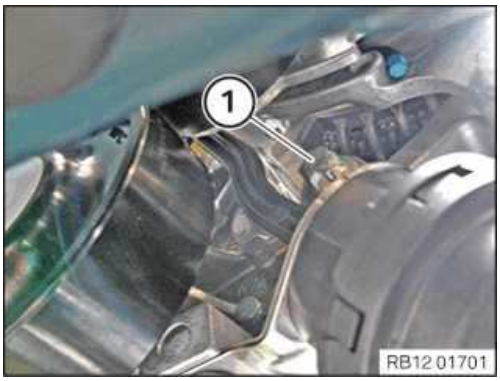
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert the positive battery cable (1) into the clamps (arrows).

- Feed in and install positive battery cable at the clamps (1).

- Insert and install the holder (2).
- Tighten down screw (1).



Bracket to oil sump

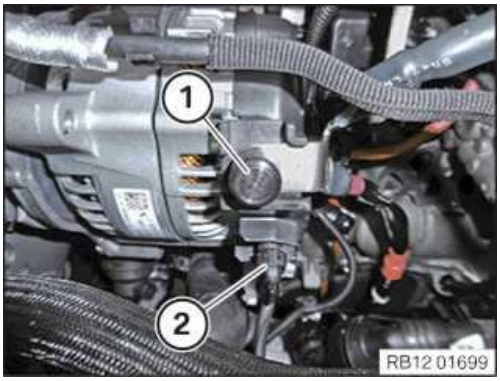
M6		Tightening torque	8 Nm

- Insert and install alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support.

cardiagn.com

- Tighten the screw (1) below on the alternator.

Alternator to component carrier



M10x75 / M10x125		Tightening torque	38 Nm

- Tighten the bolt (1) on top on the alternator.

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm

- Mount positive battery cable to the alternator.
- Tighten nut.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

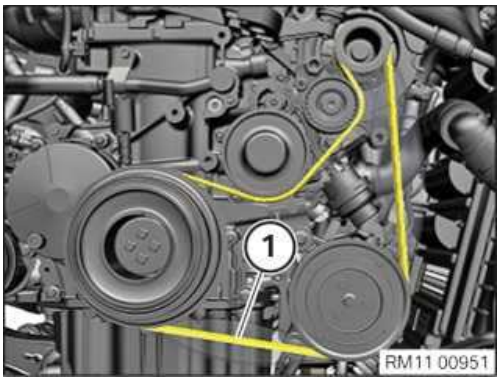
- Mount the cover (1).
- Connect the connector (2) to the alternator and lock audibly.

- Install air conditioning compressor (2) and position it correctly.
- Tighten the screws (1).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

▸ **Installing the drive belt for alternator**



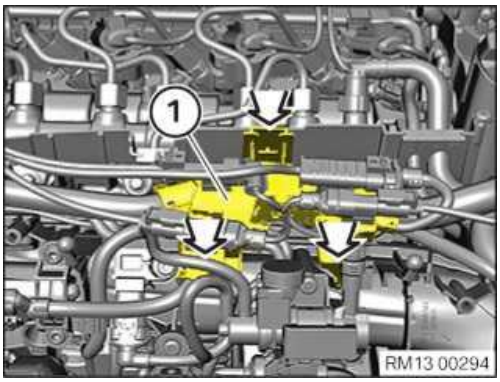
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

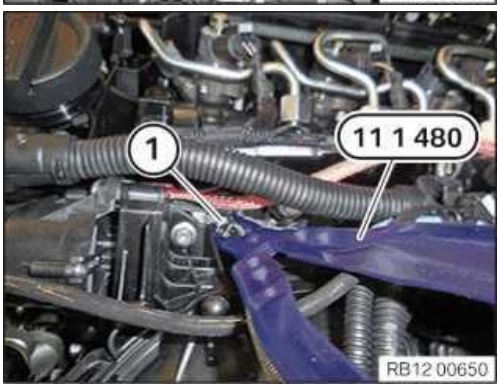
TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

cardiagn.com

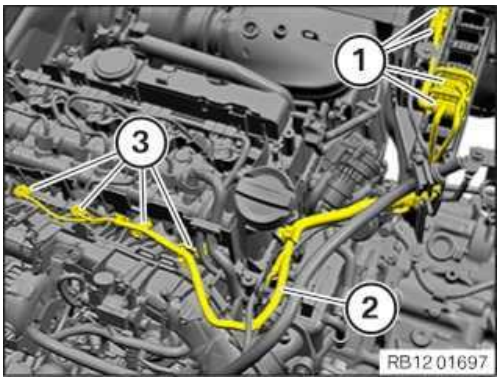


- Feed in the drive belt for the alternator (1) and install it.



- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool **0 496 268 (11 0 390)** out of the belt tensioner and remove it.

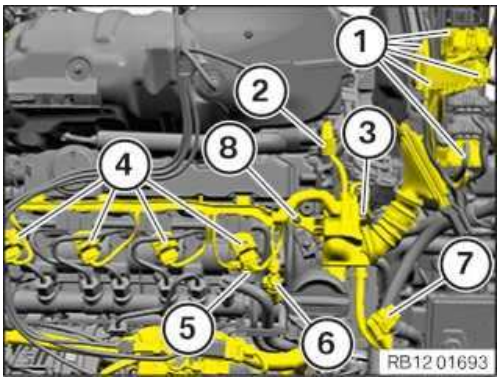
▶ **Installing the cable clip for the intake plenum**



- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.

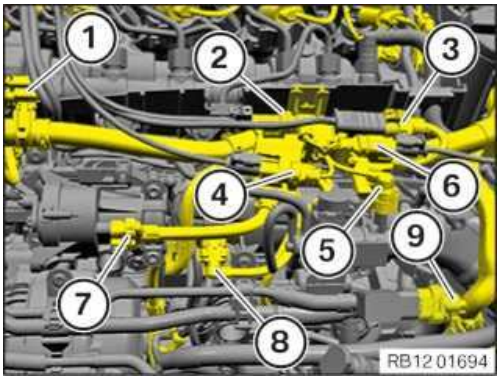
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.



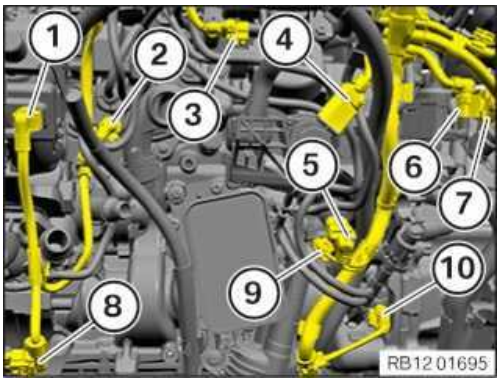
- Lay vehicle wiring harness and fasten with clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Connect all connectors (3) to the glow elements and engage them audibly.
- Mount ground strap and tighten screw (2).

Ground cable to cylinder head

M6x12		Tightening torque	8 Nm

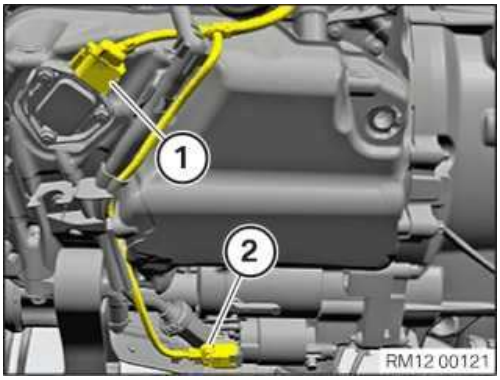


cardiagn.com



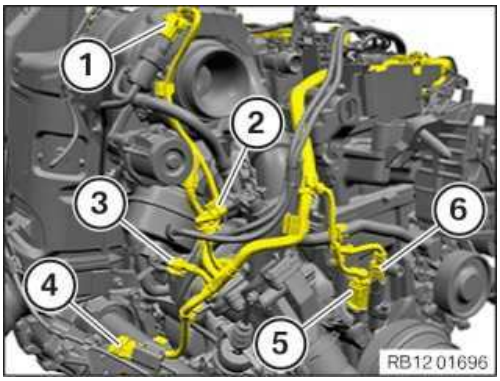
- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

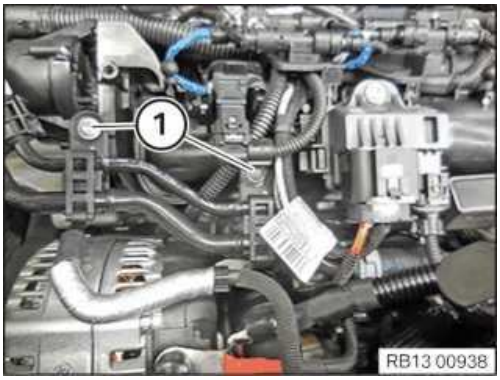


TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.



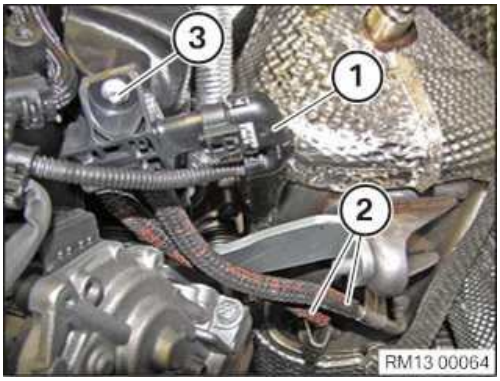
- Connect the connector (1) to the alternator and lock audibly.
- Connect the connector (2) to the electric changeover valve and lock audibly.
- Connect the connector (3) to the electric changeover valve and lock audibly.
- Connect the connector (4) to the high pressure pump and lock audibly.
- Connect the connector (5) to the oil pressure sensor and lock it audibly.
- Attach connector (6) to the throttle bodies and lock it audibly.
- Attach connector (7) to the intake air temperature sensor and lock it audibly.
- Connect the connector (8) to the air conditioning compressor and lock audibly.
- Connect the connector (9) to the solenoid valve and lock audibly.
- Connect the connector (10) to the crankshaft sensor and lock it audibly.



- Connect the connector (1) to the oil-level sensor and lock it audibly.
- Connect connector (2) to the starter motor and lock audibly.

cardiagn.com

- Attach connector (1) to the exhaust turbocharger and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust gas pressure sensor and lock it audibly.
- Connect the connector (4) to the monitoring oxygen sensor and lock audibly.
- Attach connector (5) to the oil pressure switch and lock it audibly.
- Attach connector (6) to the switching valve and lock it audibly.



- Position the fuel line.
- Tighten the screws (1).

Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

55 – Installing differential pressure sensor

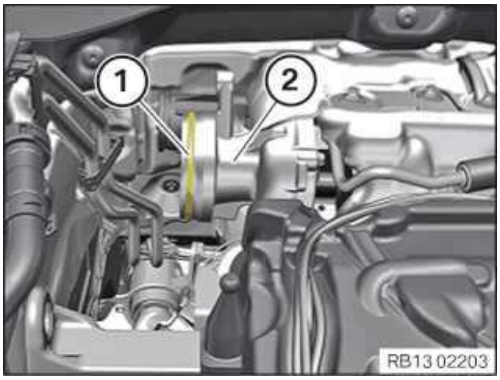
- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.



Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

56 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

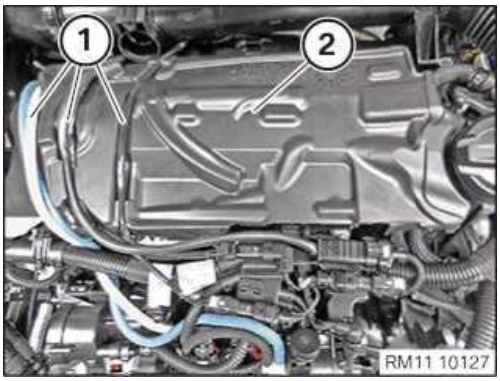
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

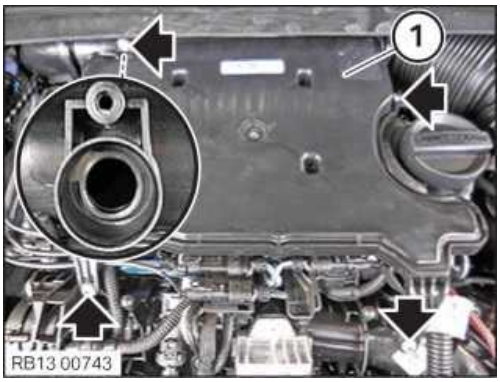
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing



Clamp		Tightening torque	3 Nm

57 – Install the acoustic cover for the injectors

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

58 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

59 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

60 – Install engine

- See additional information.

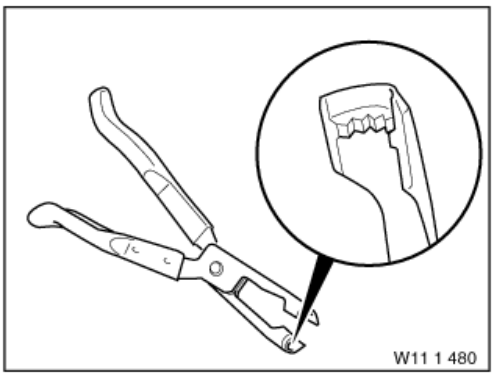
Overview of Special Tools

0 496 268 (11 0 390) Pin



Common — Used in step 7 54

Usage	(roll pin) For securing new tensioning pulley (poly-V belt)
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 15 07 (390)

cardiagn.com

0 490 796 (11 1 480) Pliers

Common Used in step 7 25

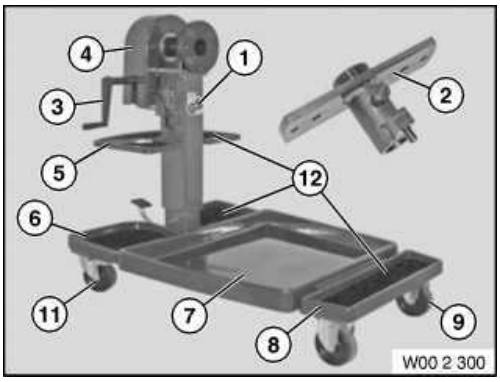
Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

2 459 012 Holder

Common Used in step 12 49

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

2 455 010 Engine support



Common Used in step 13 48

Usage	For accommodating engine on assembly stand. Engine: B3x, B4x, N47.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

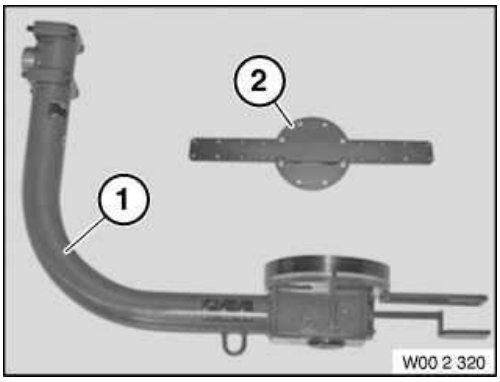
0 495 187 (00 2 300) Assembly stand

Common

Used in step 13



Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.

11 14 110 Removing and installing/sealing or replacing bottom timing case cover

PRELIMINARY WORK

1 – Removing engine

- See additional information.

2 – Removing the acoustic cover

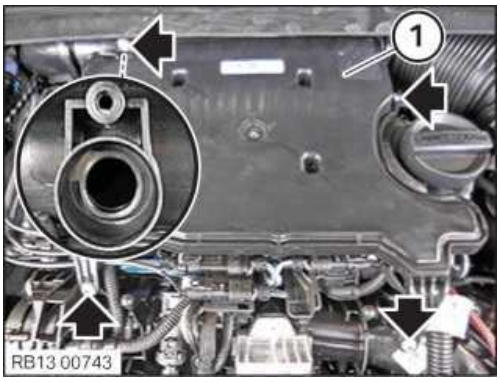
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

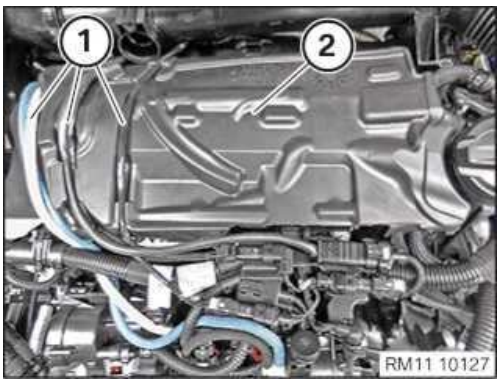


Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

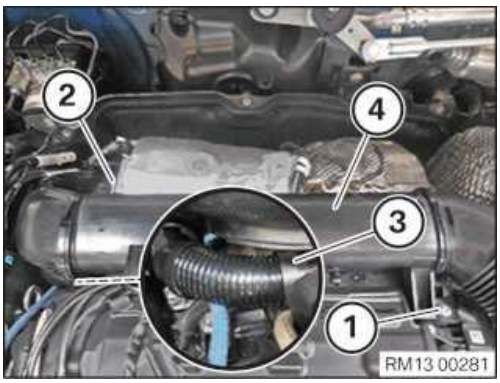


3 – Remove resonator

- Remove screws (arrows).
- Guide out and remove the resonator (1).

cardiagn.com

4 – Remove the acoustic cover for the injectors



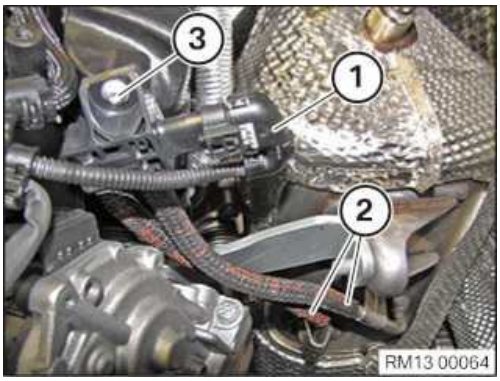
- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

5 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

6 – Remove differential pressure sensor

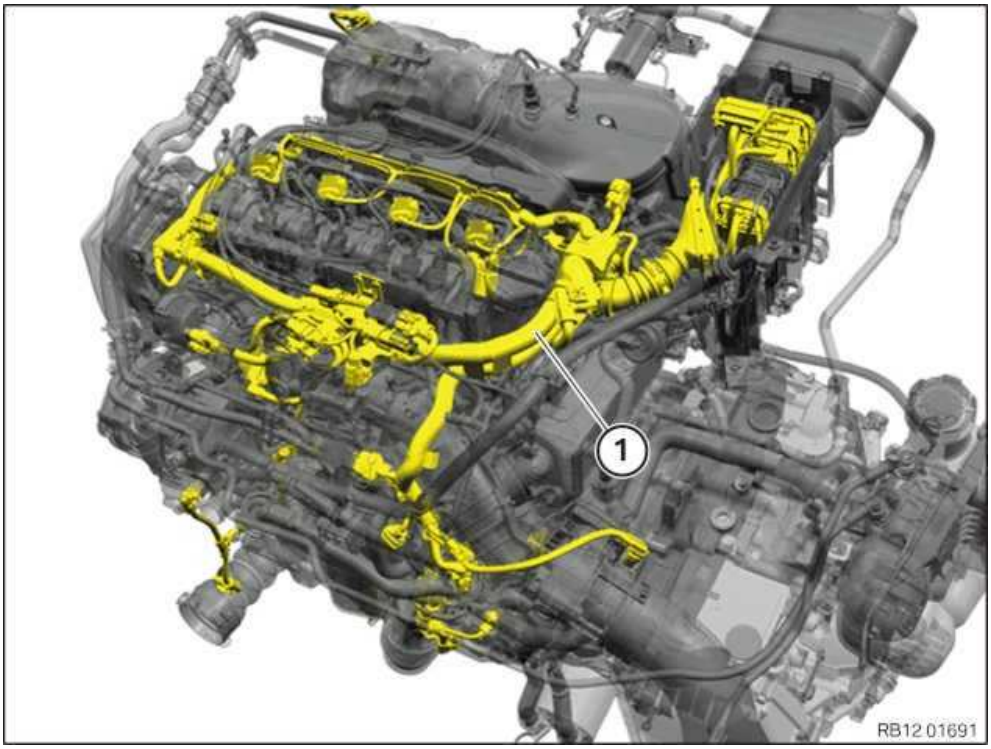


RISK OF DAMAGE

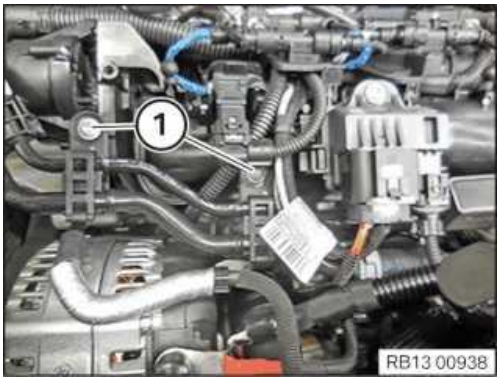
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



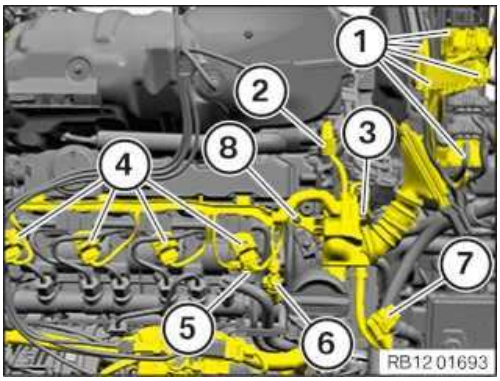
cardiagn.com



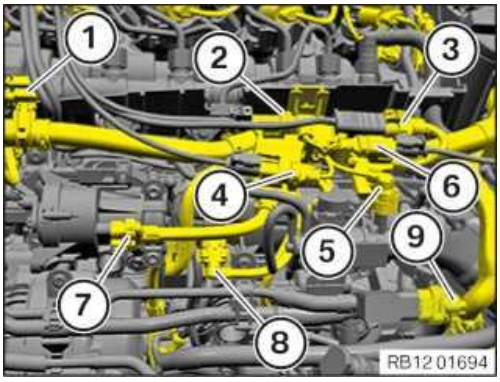
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

7 – Removing assemblies (on lifting table)

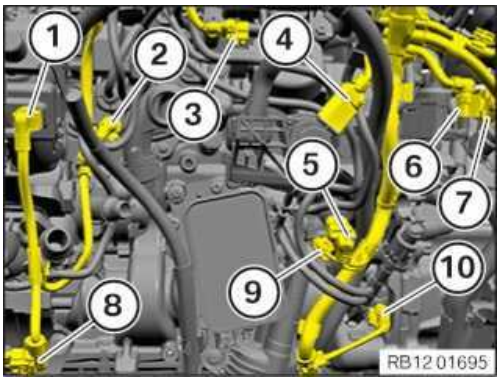
Overview: Wiring harness section for the engine



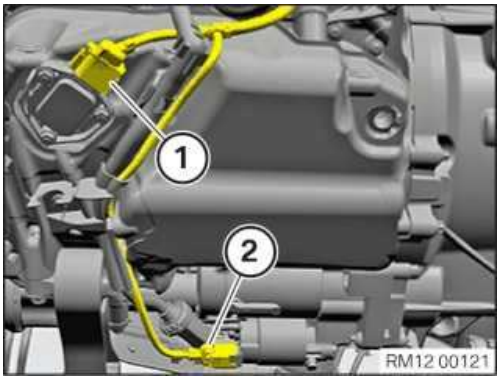
1 Wiring harness section for the engine



- Loosen screws (1).

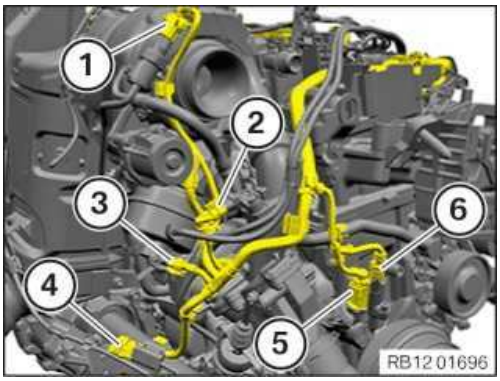


cardiagn.com

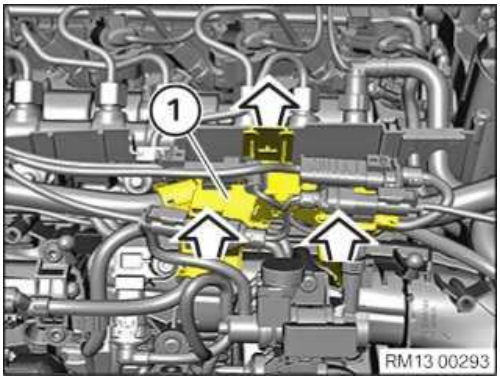


- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).

- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock connector (3) and pull it off from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

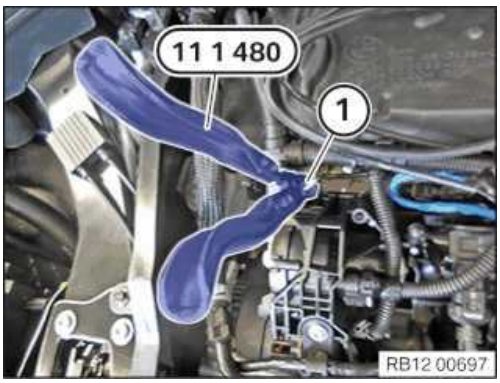


- Unlock and disconnect the connector (1) from the alternator.
- Unlock and disconnect the connector (2) from the electric changeover valve.
- Unlock and disconnect the connector (3) from the electric changeover valve.
- Unlock the connector (4) and pull it off the high pressure pump.
- Unlock the connector (5) and disconnect it from the oil pressure sensor.
- Unlock connector (6) and pull off from throttle body.
- Unlock the connector (7) and disconnect it from the intake air temperature sensor.
- Unlock the connector (8) and disconnect it from the air conditioning compressor.
- Unlock and disconnect the connector (9) from the solenoid valve.
- Unlock the connector (10) and pull it off the crankshaft sensor.

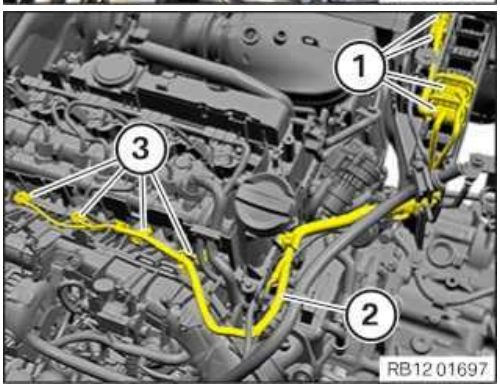


- Unlock the connector (1) and pull off of the oil-level sensor.
- Unlock connector (2) and remove from starter motor.

cardiagn.com



- Unlock the connector (1) and disconnect it from the exhaust gas pressure sensor.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock the connector (3) and pull it off the exhaust turbocharger.
- Unlock the connector (3) and disconnect it from the differential pressure sensor.
- Unlock connector (4) and pull it off from the monitoring oxygen sensor.
- Unlock the connector (5) and pull it off the oil pressure switch .
- Unlock connector (6) and disconnect from switching valve.
- Detach, feed out and remove the wiring harness from the clamps.



▶ **Removing the cable clips from the intake plenum**

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Pull off all connectors (3) from glow element using special tool **0 490 796 (11 1 480)**.
- Loosen screw (2) and remove the ground strap.
- Detach, feed out and remove the wiring harness from the clamps.

▶ **Removing the drive belt for alternator**

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

cardiagn.com

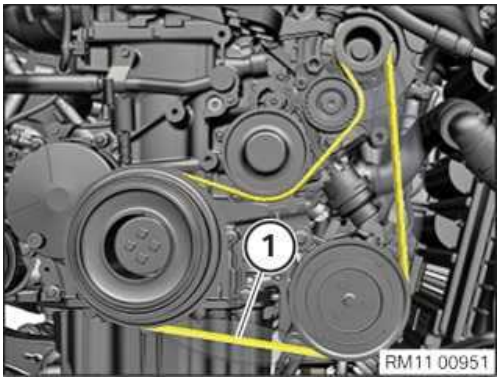
CAUTION

Component with preload.

Danger of injury!

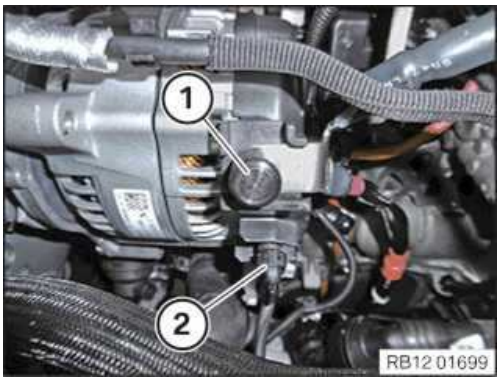
- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION



If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

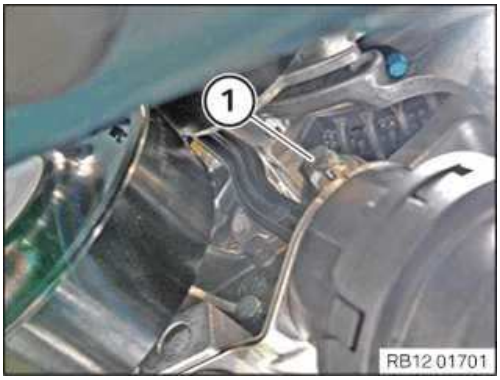
TECHNICAL INFORMATION



The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool **0 496 268 (11 0 390)**.

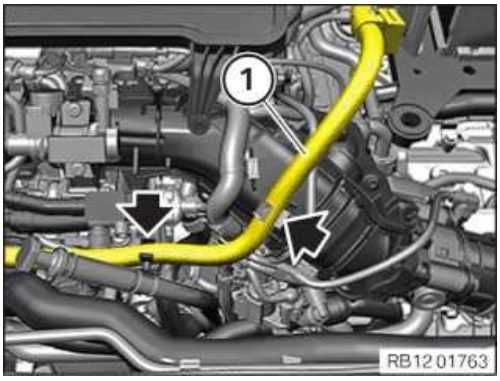
- Guide out the drive belt for the alternator (1) and remove it.



- Remove the cover (1) and loosen the nut below.
- Disconnect positive battery cable from alternator.
- Unlock and disconnect the connector (2) from the alternator.

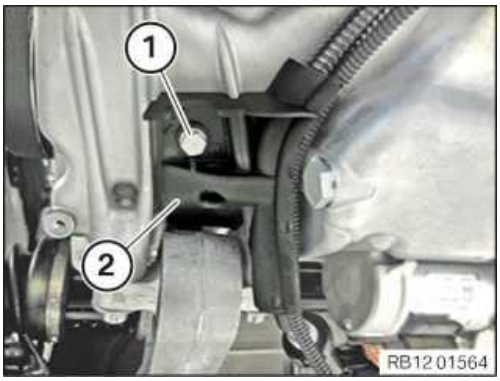
cardiagn.com

- Detach screw (1) on top on the alternator.



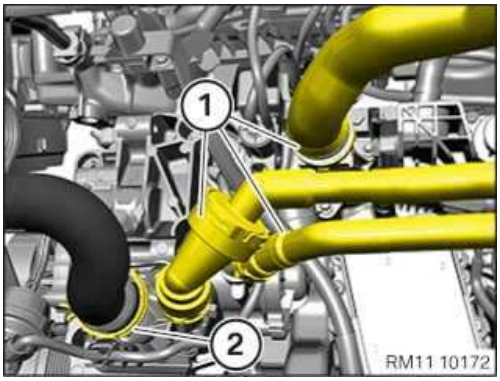
- Detach screw (1) below on the alternator.

- Feed out alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support and remove.



- Loosen screws (1).
- Feed out and remove the air conditioning compressor (2).

- Release the positive battery cable (1) from the clamps (arrows).

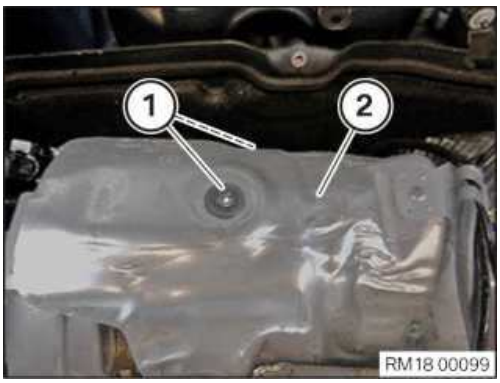


cardiagn.com

- Loosen screw (1).
- Guide out and remove holder (2).

- Feed out positive battery cable from the clamps (1) and remove.

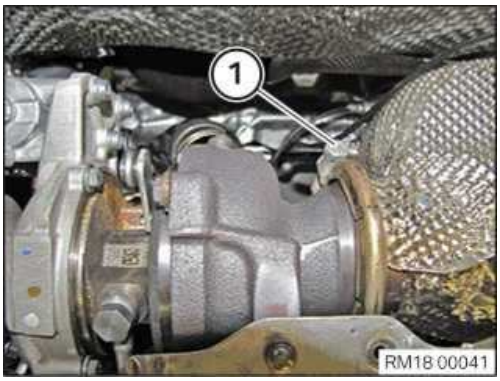
- Unlock and disconnect coolant lines (1).
- Guide out the coolant lines (1) and remove it.
- Detach the clamp (2).
- Guide the coolant hose out and remove.



▶ **Removing heat shield from top exhaust turbocharger**

WARNING

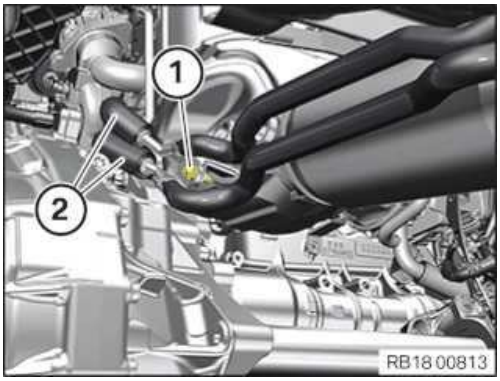
Hot surfaces.



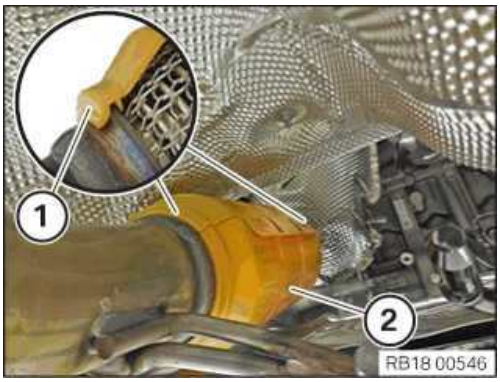
Risk of burning!

- Perform all work only on components that have cooled down.

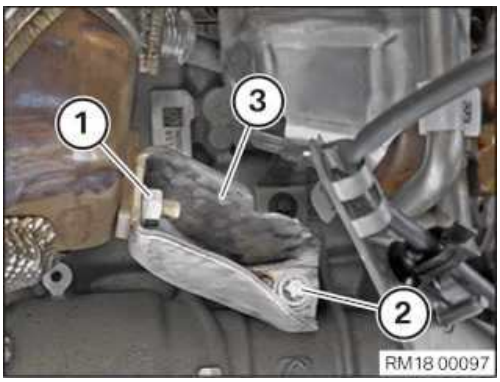
- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).



cardiagn.com

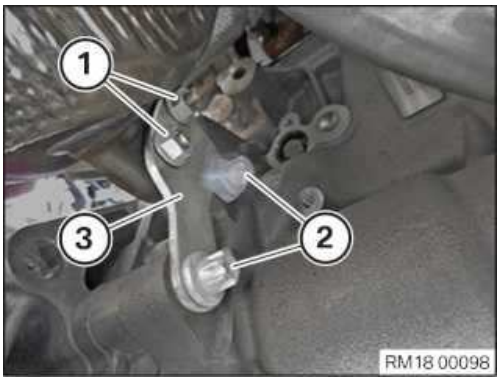


- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



- Loosen nuts (1).

- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

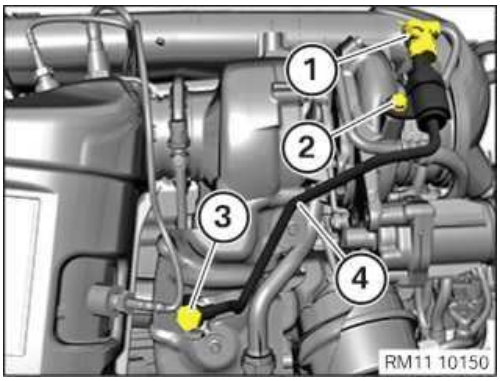


- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.

- Loosen nut (1).
- Loosen screw (2).
- Remove holder (3).

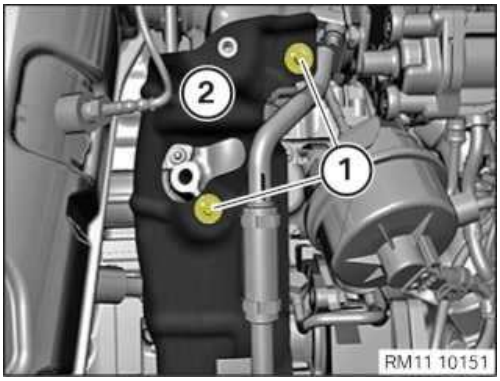
cardiagn.com

- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).
- Guide out and remove diesel particulate filter .



▶ **Remove the heat shield from the exhaust turbocharger at the bottom**

WARNING



Hot surfaces.

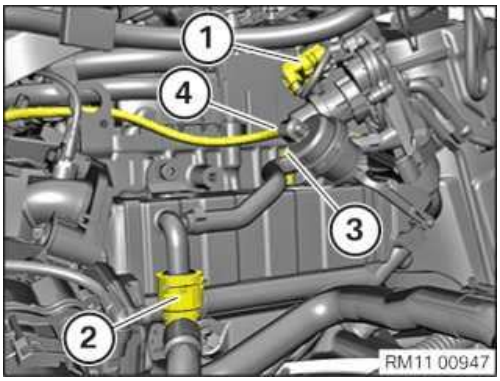
Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).

▶ **Removing the exhaust-gas recirculation cooler**

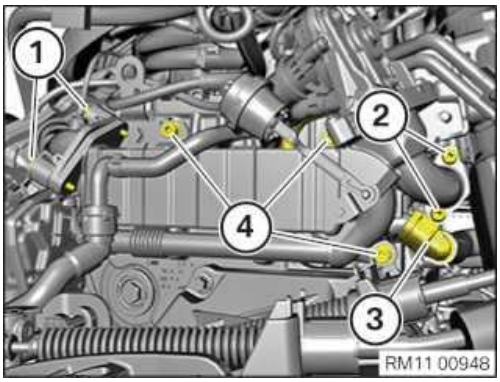


WARNING

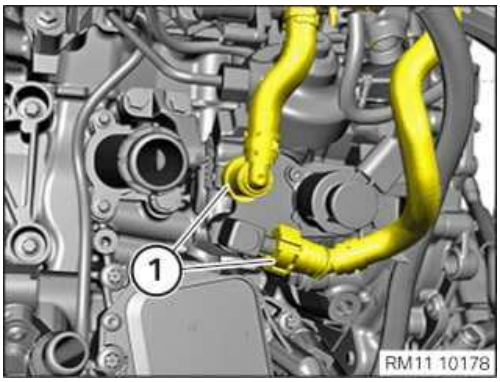
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

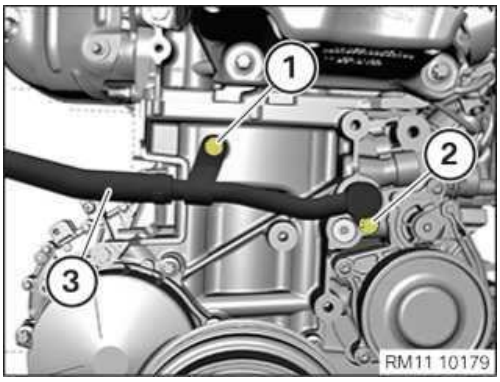


cardiagn.com



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



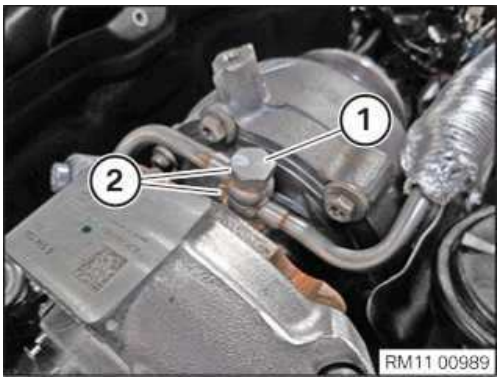
- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

- Unlock the fuel lines (1) and disconnect from the high pressure pump.
- Remove the fuel lines.

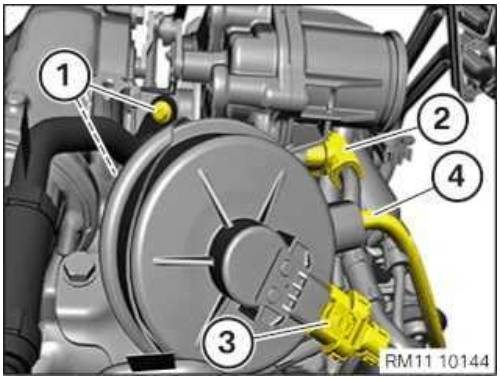
- Loosen screws (1) and (2).
- Remove coolant line (3).

8 – Removing the low-pressure stage turbocharger



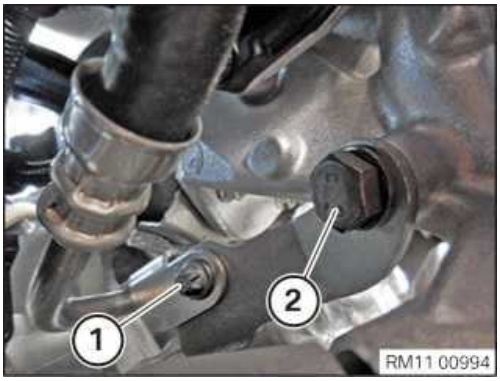
WARNING

Hot surfaces.



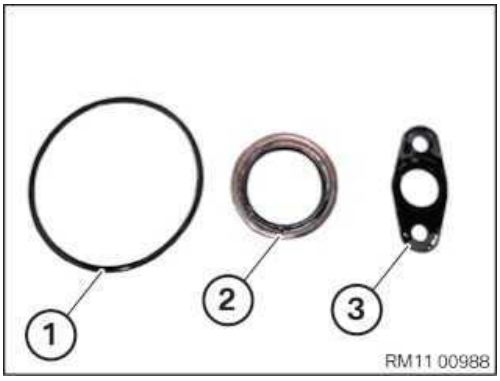
Risk of burning!

- Perform all work only on components that have cooled down.



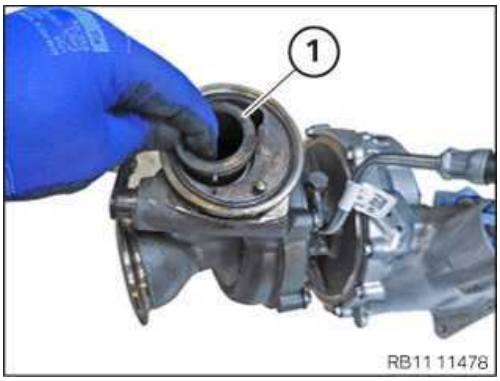
cardiagn.com

- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.



- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.

- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).



- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

cardiagn.com

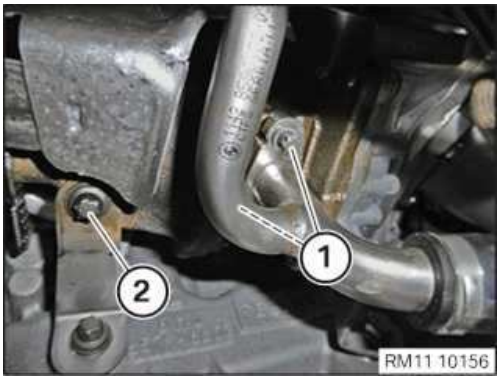
- Remove the spacer ring (1).

9 – Removing the high-pressure stage exhaust turbocharger

WARNING

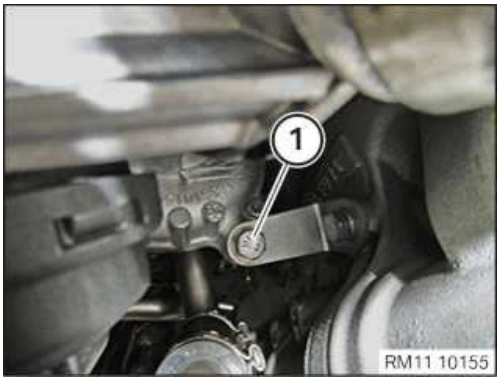
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

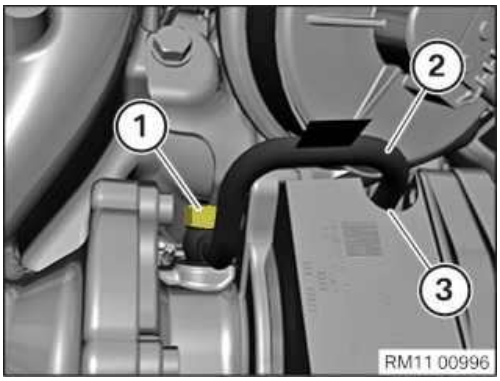
CAUTION



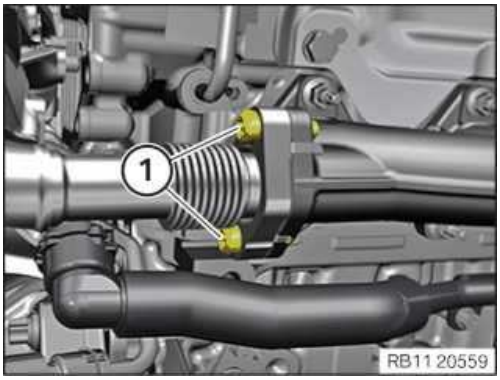
Heavy component.

Heavy components can lead to injury or damage.

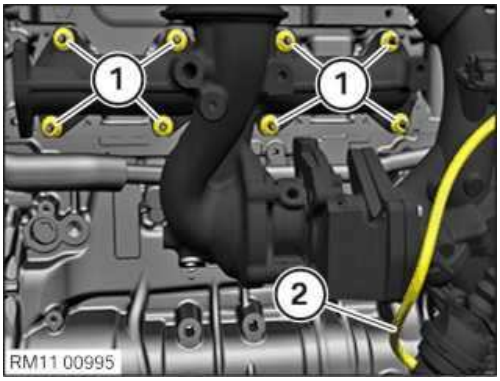
- Remove and install heavy components with the aid of another person/other persons.



- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).

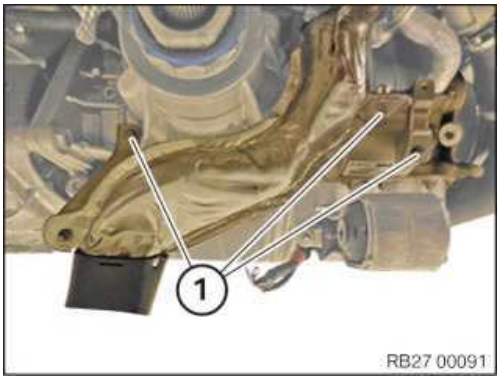


- Release screw (1) from the right wheel arch.

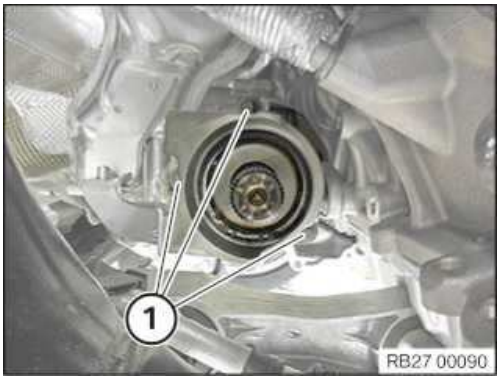


cardiagn.com

- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

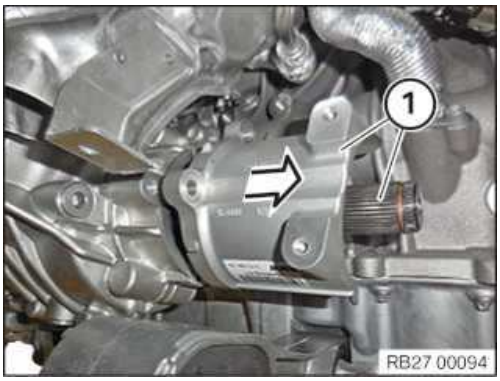


- Loosen screws (1).

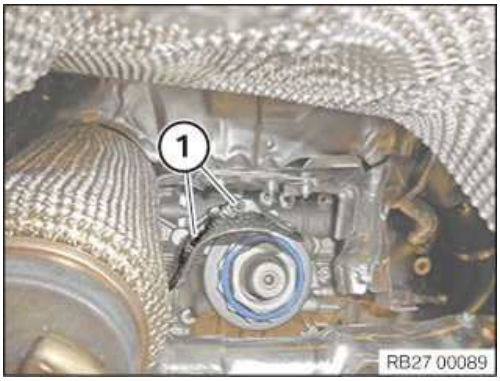


- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

10 – Remove the intermediate shaft with the support tube

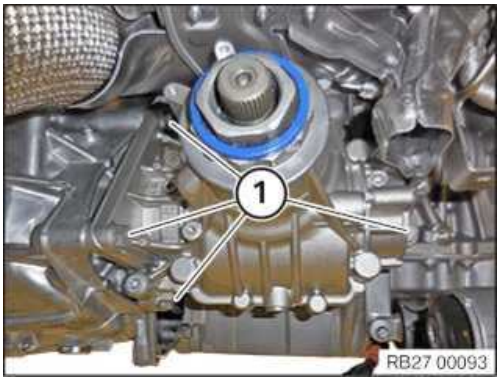


- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).

cardiagn.com



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

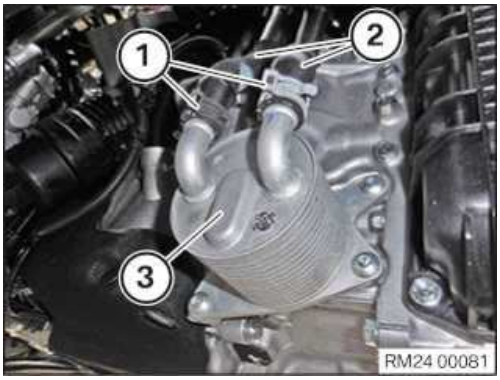
11 – Remove transfer box (VTG)

- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

12 – Detach the engine from the automatic transmission

Prerequisite



Engine has been removed.

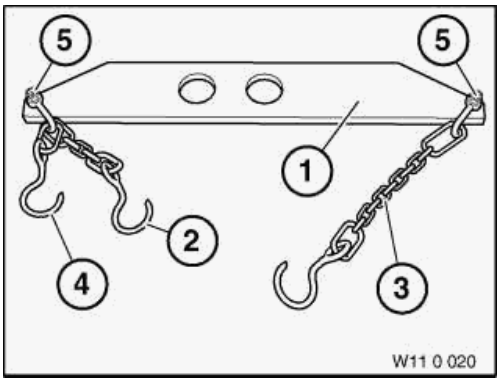
CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Unfasten hose clamps (1).
- Disconnect coolant hoses (2) from transmission oil cooler (3).
- Catch the emerging coolant.



cardiagn.com

- Crank engine with special tool **0 493 380 (11 6 480)** at vibration damper in direction of rotation.
- Unscrew the nut (1) of the torque converter.
- Crank engine further and release remaining 5 nuts.

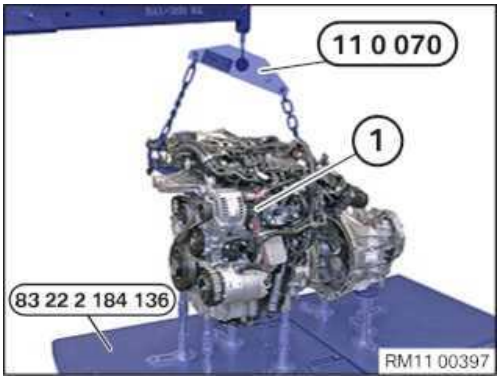
- Stage the workshop crane **2 220 718**.

- Stage the lifting gear .

TECHNICAL INFORMATION

Conduct the following operation with the assistance of a second person.

- Secure the automatic transmission against dropping using a workshop crane **2 220 718** and lifting gear .
- Remove screws (arrows).
- Remove the automatic transmission with help from an auxiliary person and using the workshop crane **2 220 718** including lifting gear and put it to one side.



cardiagn.com

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm

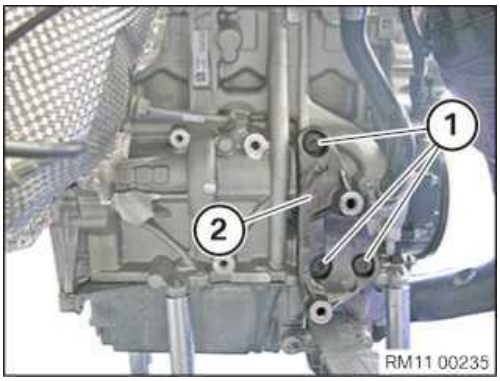
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Attach engine lifter to special tool and lift engine (1) off lifting table.

13 – Mount engine on assembly stand

CAUTION



Heavy component.

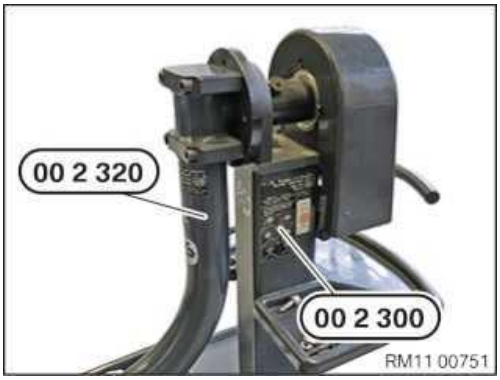
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

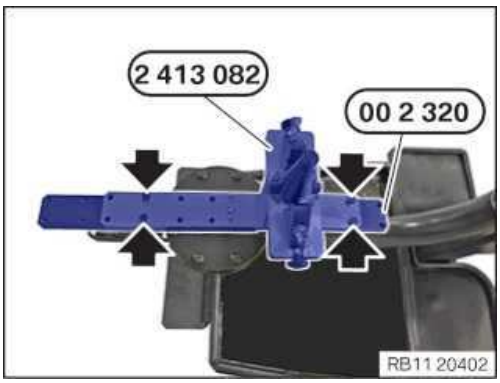
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Loosen screws (1).
- Guide out and remove holder (2).



cardiagn.com

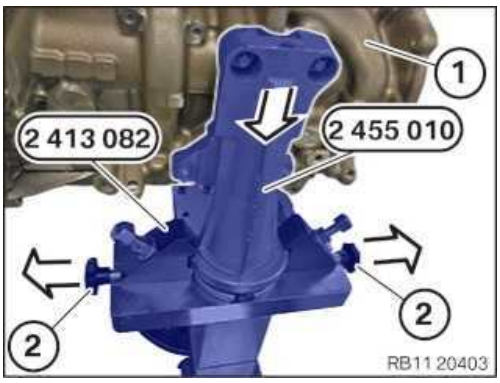


- Position the special tool **2 455 010** on the engine (1).
- Position the standard bolts **M10x30**.
- Tighten the standard bolts (arrows).
-

Special tool 2 455 010 to crankcase

M10x30		Tightening torque	38 Nm

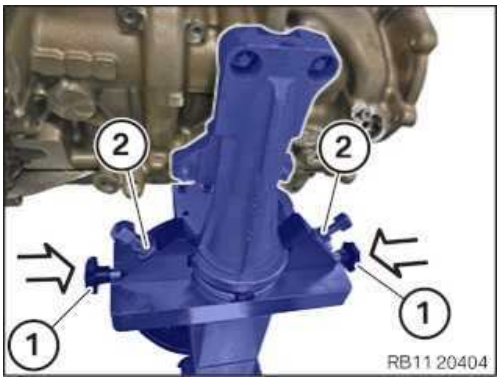
- Prepare the assembly stand **0 495 187 (00 2 300)** with the special tool **0 495 196 (00 2 320)**.



- Screw the special tool to the **0 495 196 (00 2 320)** special tool.
- Tighten screws (arrows).
-

Special tool 11 8 930 to special tool 00 2 320

M14x35		Tightening torque	160 Nm

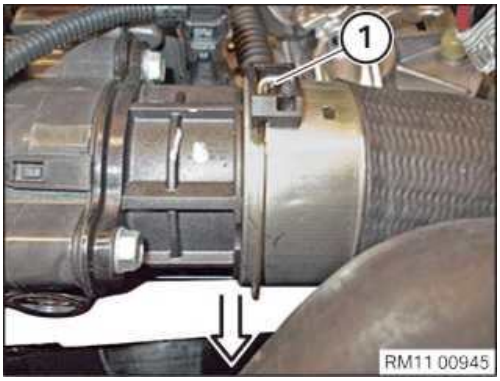


- Position the engine lifter with the special tool and the engine on the special tool **0 495 187 (00 2 300)**.

- Detach the holder (2) in the direction of the arrow.
- Position the engine (1) with the special tool **2 455 010** in the direction of the arrow on the special tool .

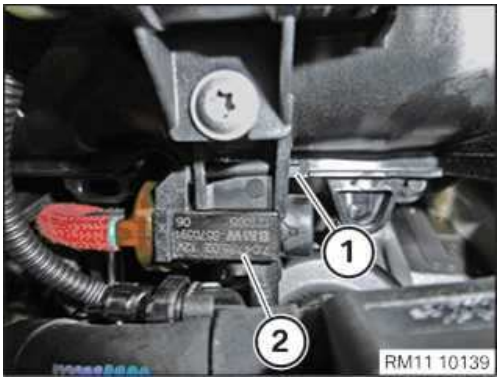
cardiagn.com

- Lock the holder (1) in direction of arrow.
- Tighten nuts (2).



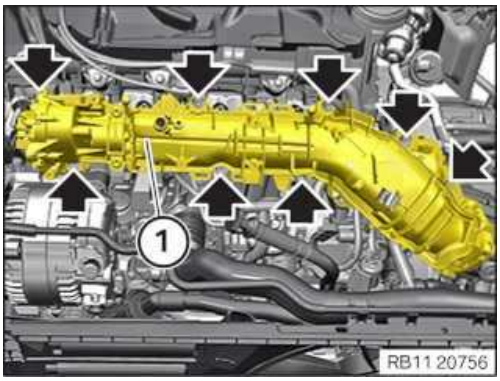
14 – Removing the intake plenum

TECHNICAL INFORMATION

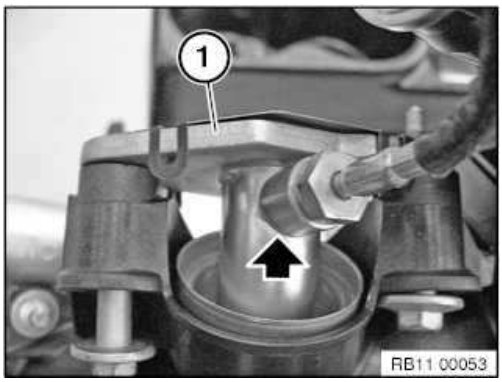


Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.



- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

cardiagn.com

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

15 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

cardiagn.com

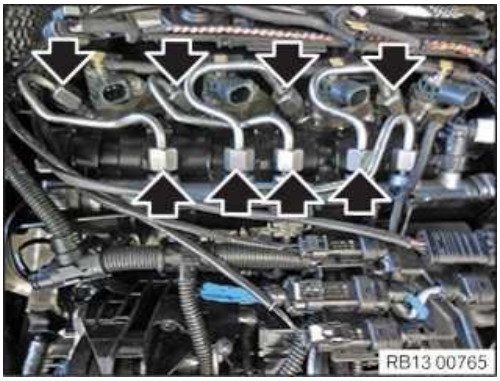
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION



If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

16 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

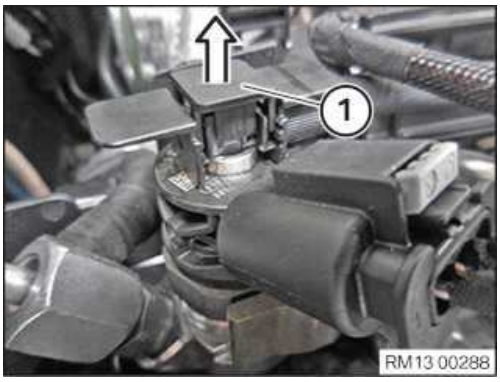
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE



Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

17 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

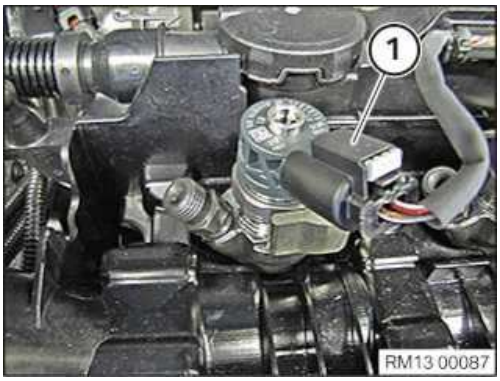
Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

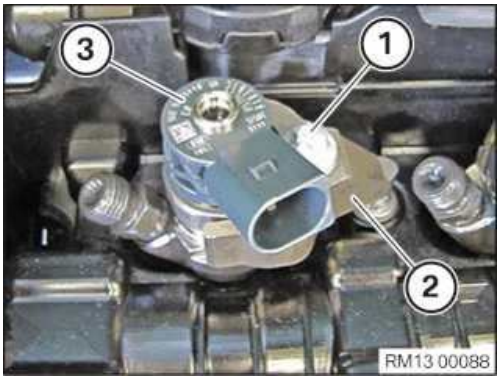
RISK OF DAMAGE

 **Electrostatic discharge.**



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



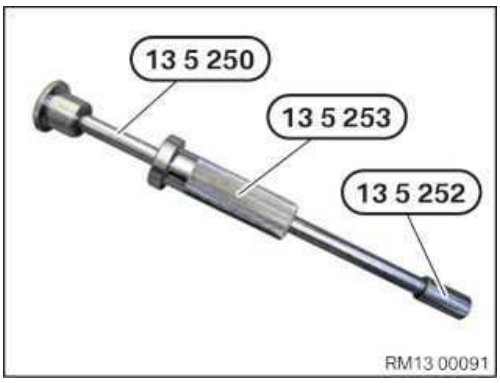
TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

cardiagn.com

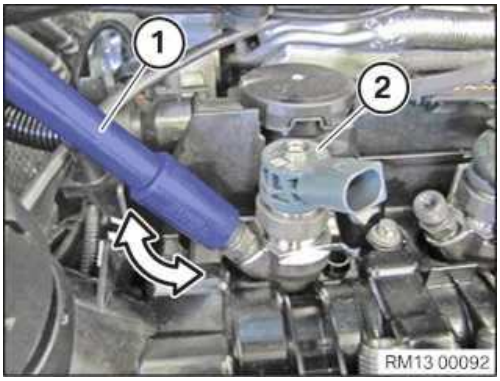
- Unlock and disconnect connector (1).

- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.



▶ **Loosen stuck injectors**

RISK OF DAMAGE



Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)** back onto the special tool **0 493 321 (13 5 250)**.

- Screw the special tool (1) **0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1) **0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

cardiagn.com

WARNING

Working on fuel system.

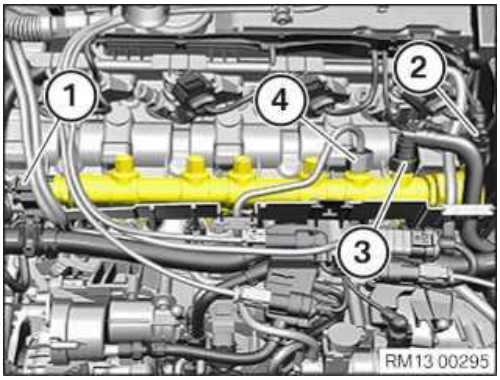
Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

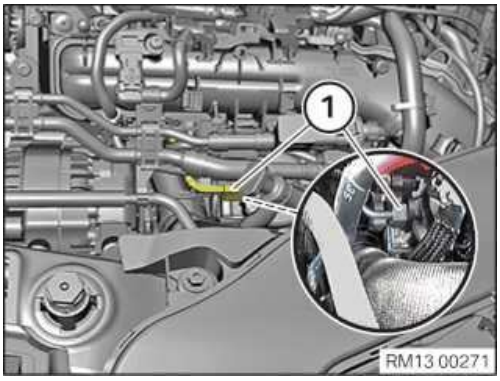
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.



- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

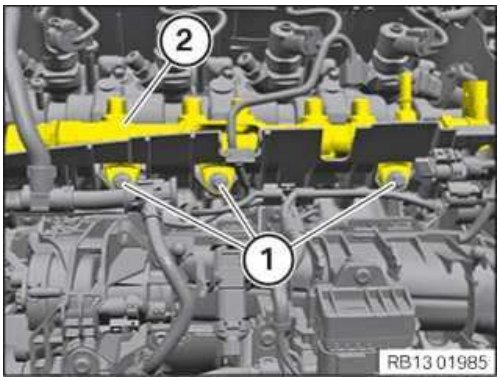
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Unlock and disconnect connector (1).
- Unlock and disconnect connector (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool .
- Reset special tool early on to avoid bending pressure lines.

- Slacken the union nut (1) on the high pressure pump.

cardiagn.com

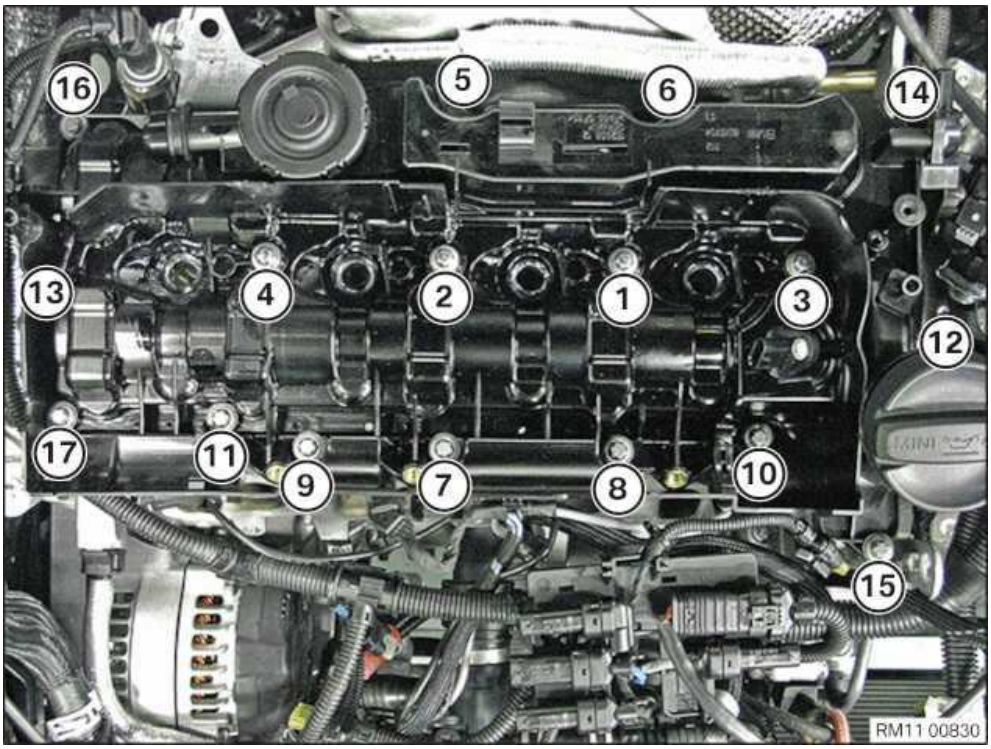
- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

19 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

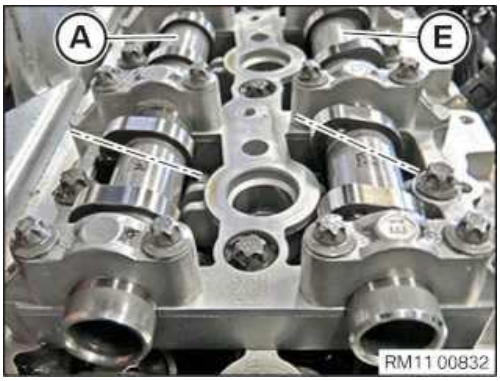
- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

20 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.



The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

21 – Remove chain tensioner piston

cardiagn.com

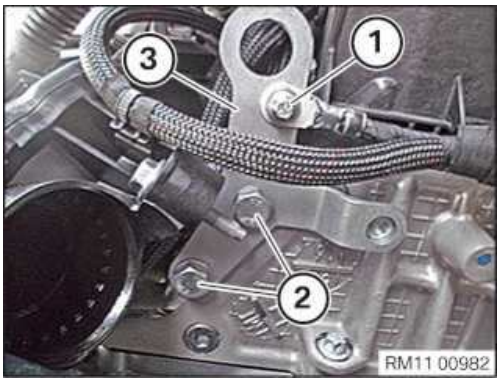
WARNING

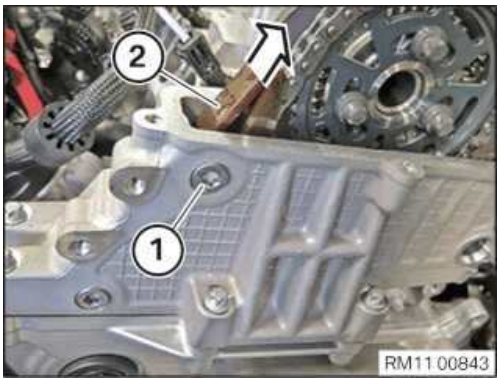
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



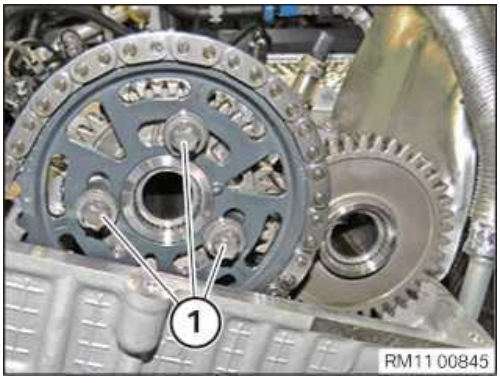
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

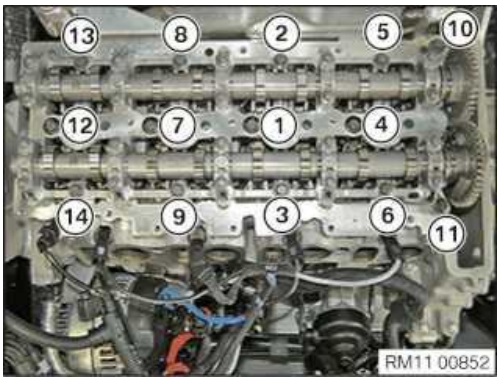
- Remove the chain tensioner piston (1).

22 – Remove the timing chain guide rail



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.



23 – Removing the camshaft sprocket on the intake camshaft

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

24 – Removing the camshaft support

cardiagn.com

- Evenly loosen all screws in a sequence from (14) to (1).
- Loosen and remove all screws in a sequence from (14) to (1).
  Both camshafts can be removed with the camshaft carrier.
- Remove the camshaft support including camshafts towards the top.

25 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

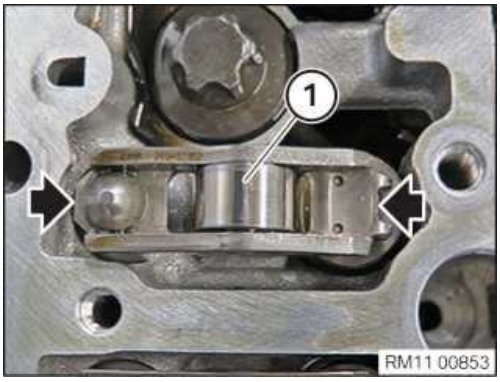
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool or conventional tools.
- Feed out preheating elements and remove.

26 – Remove roller cam followers

- Guide out and remove all roller cam followers (1) (arrows).
- Place all roller cam followers (1) in order in special tool **0 495 105 (11 4 480)**.

  Roller cam followers that have already been used must be installed in same position again.

27 – Removing the hydraulic valve clearance compensating element

cardiagn.com

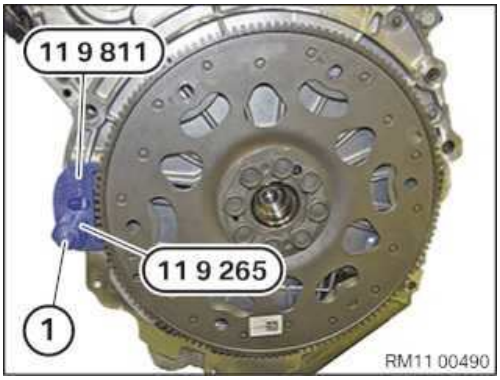
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

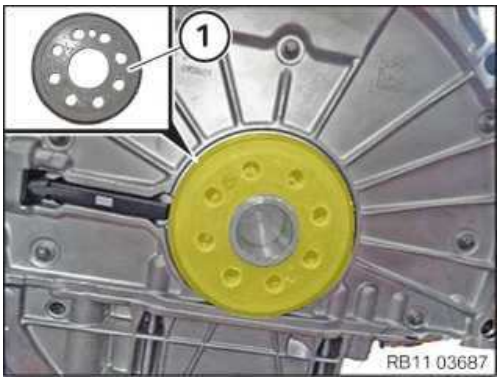
- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.



28 – Removing flywheel

CAUTION

Heavy component.



Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Secure flywheel with a transmission bolt (1) and the special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.
- Unfasten flywheel bolts.
- Remove flywheel.

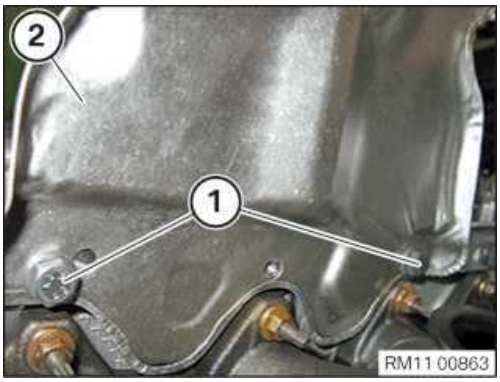
cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

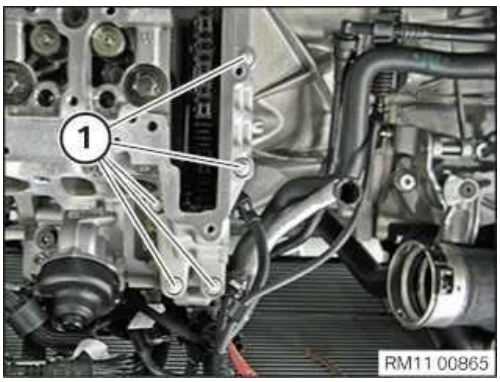
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Remove the increment wheel (1) from the crankshaft and set correctly.

MAIN WORK

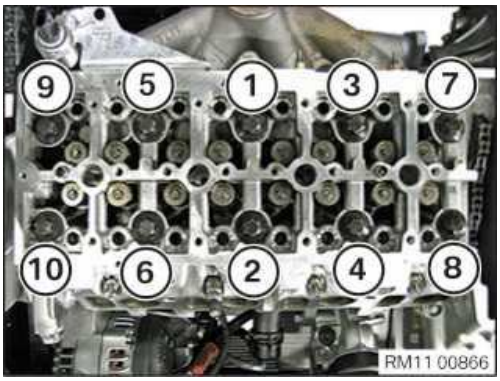


29 – Remove rear timing case cover

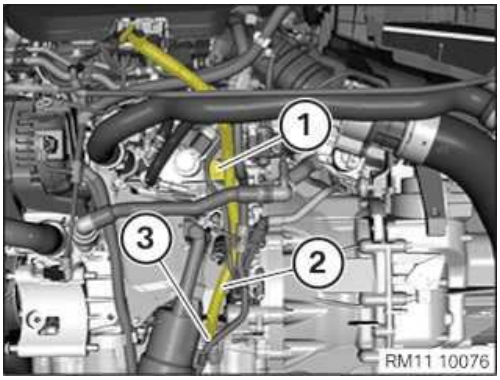
Prerequisite

Transmission is removed.

- Loosen screws (1).
- Feed out the heat shield (2) and place to one side.

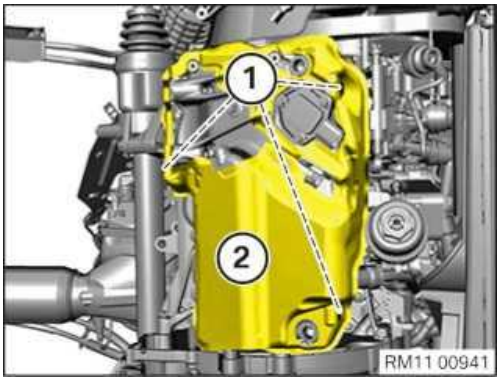


TECHNICAL INFORMATION

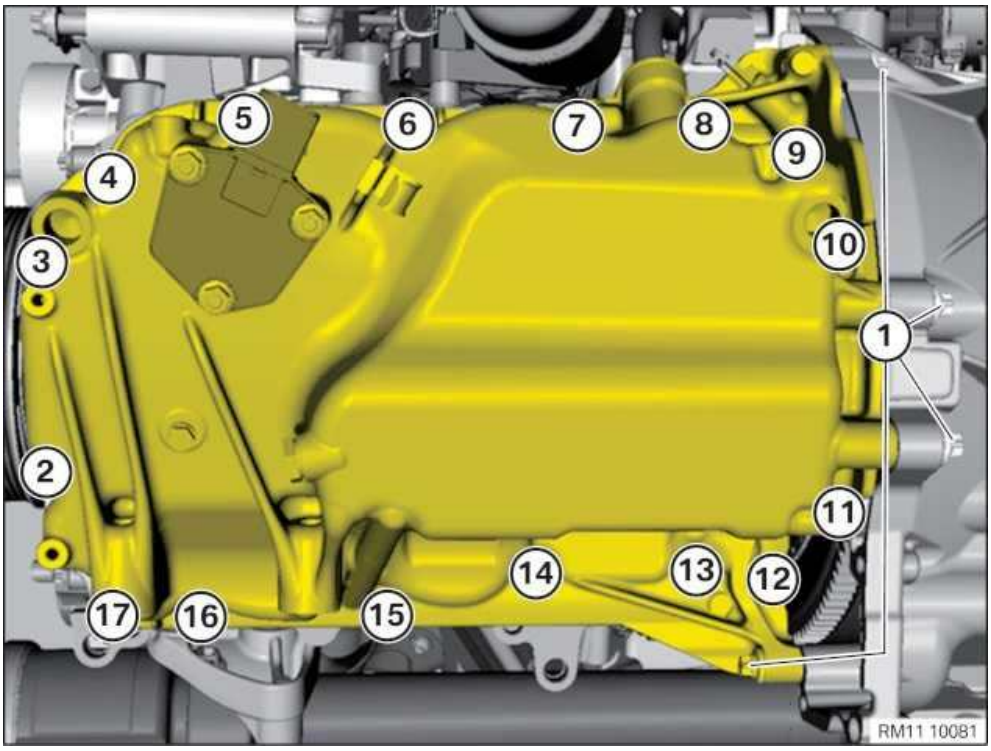


Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).

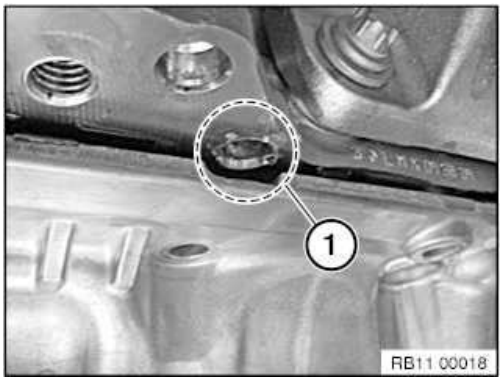


cardiagn.com

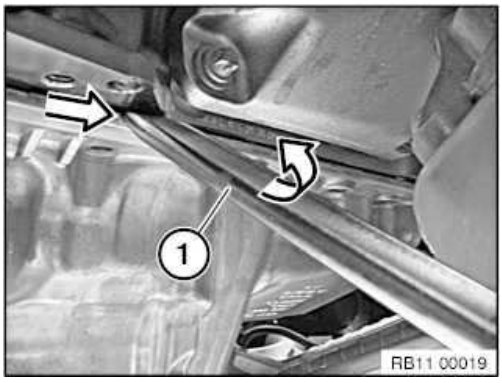


- Loosen the cylinder head bolts in the sequence from (10) to (1).
- Remove cylinder head bolts (1) to (10) with washers.
- Remove cylinder head.

- Loosen screw (1).
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- Remove sealing ring (3) from oil sump if necessary.

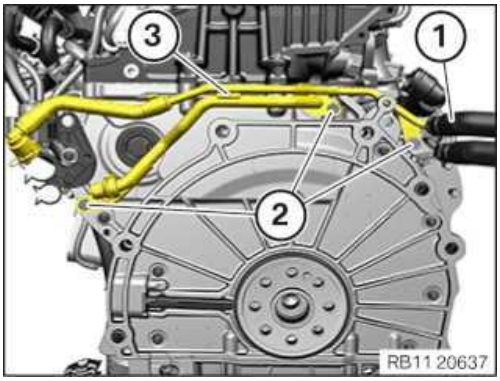


- Expanding rivets (1) on both sides of the acoustic cover (2).
- Feed out and remove the acoustic cover (2).

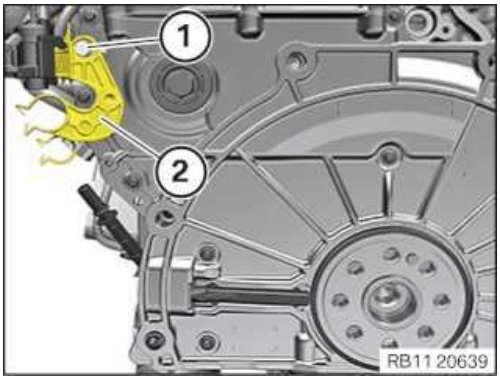


- Loosen the transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).

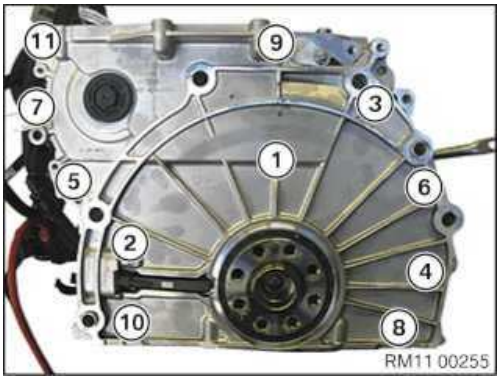
cardiagn.com



- Release oil sump only in area (1).

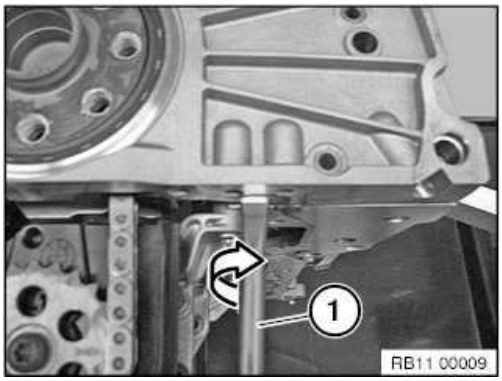


- Detach the oil sump with a suitable mounting lever (1) carefully at the point provided.
- Secure the oil sump against falling.

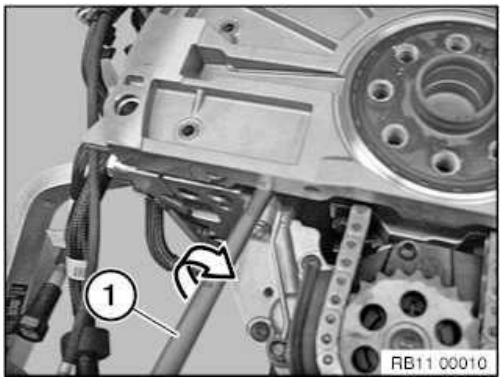


▶ **If installed: Remove coolant line of the SCR metering module**

- Unlock and disconnect the coolant hose (1).
- Loosen screws (2).
- Remove the coolant line (3).



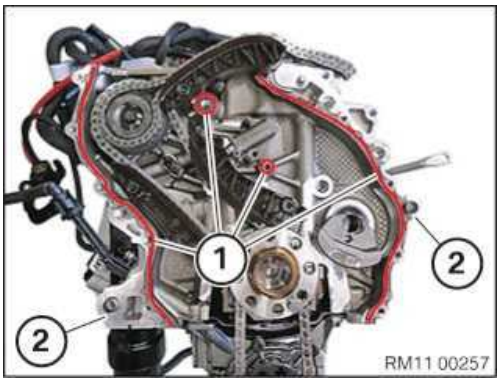
- Loosen screw (1).
- Guide out and remove holder (2).



- Loosen screws in the order (11) to (1).

cardiagn.com

- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.

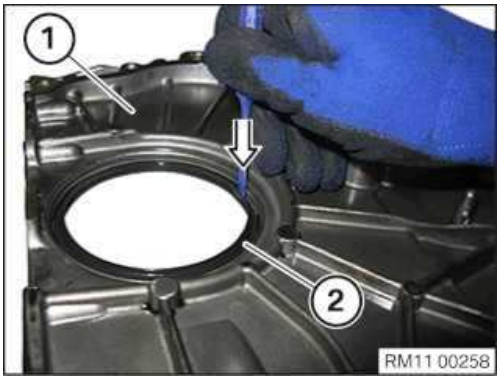


- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.
- Remove the timing case cover.

30 – Install the rear timing case cover

Prerequisite

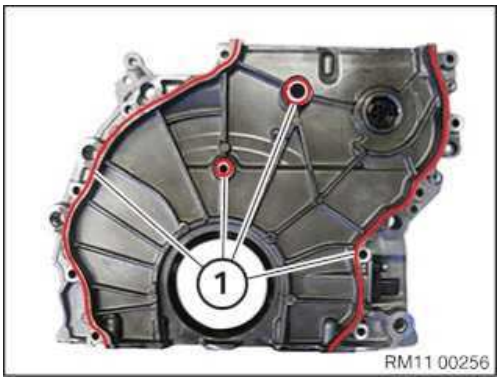
Transmission is removed.



RISK OF DAMAGE

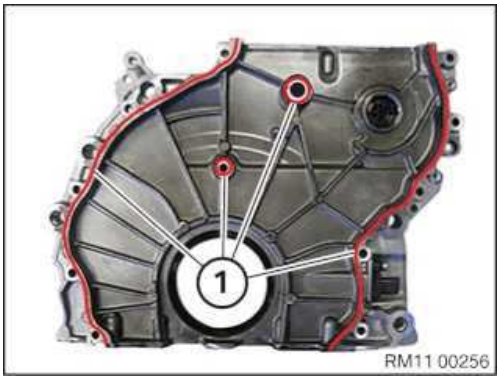
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



- Do not use any metal-cutting tools.

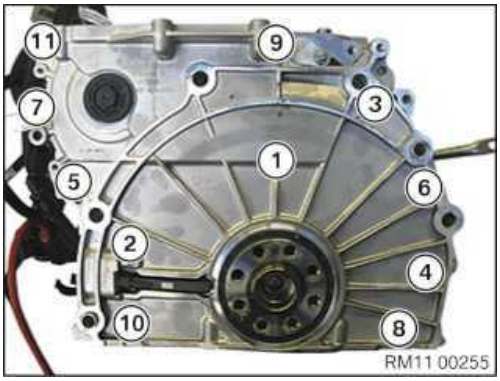
- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.
- Check fitting sleeves (2) for damage and for tight fit; renew if necessary.



- Position the timing case cover (1) underneath.
- Position punch on inner side of crankshaft seal (2).
- Drive out crankshaft seal (2) outwards.

cardiagn.com

- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.



TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Apply sealing bead (1) with a height of approx. 1.5 mm to 2.0 mm on inner side of timing case cover in marked locations. Use liquid sealing compound for this.

  Application time of sealing bead (1) must not exceed 12 minutes.

- Mount the timing case cover without the crankshaft seal.
- Renew screws (1) to (11).

  Parts: Bolts
- Join the bolts in with the sequence (1) to (11).
- Tighten screws in the order (1) to (11).

Rear timing case cover to crankcase

M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

▸ **Installing the rear crankshaft seal**

RISK OF DAMAGE

Radial shaft seal damage.

Touching the sealing lip (inner) on the radial shaft seal with the sharp-edged connector gearing of the output shaft will result in destruction and/or leaks.

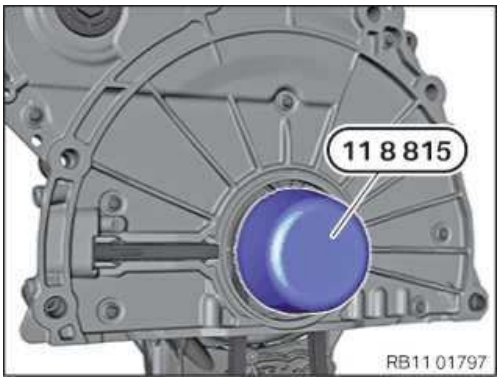
- When inserting the output shaft, make sure that the connector gearing of the output shaft does not touch the sealing lip (inner) of the radial shaft seal.

RISK OF DAMAGE

Radial shaft seal damage.

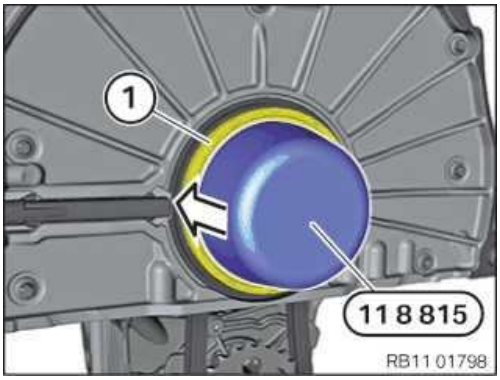
Touching the sealing lip (inner) and applying oil to the radial shaft seal will lead to its destruction.

- Do not touch the sealing lip (inner) of the radial shaft seal.
- Do not apply oil to the radial shaft seal.
- Install the radial shaft seal dry.



cardiagn.com

RISK OF DAMAGE



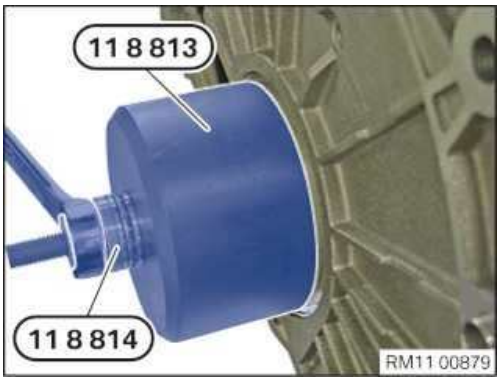
Electrostatic discharge.

Damage to or destruction of electrical components.

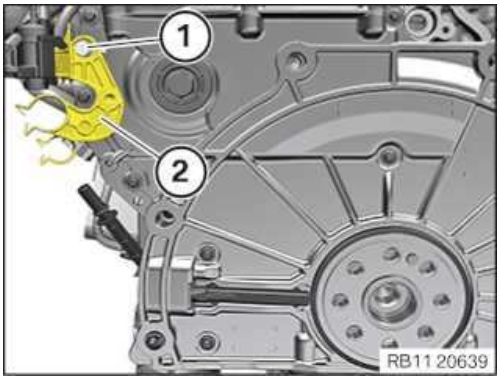
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Position special tool **0 496 137 (11 8 815)** on crankshaft. Make sure that the crankshaft sensor is not damaged.

- Fit the crankshaft seal (1) up to the timing case cover in the direction of the arrow using special tool **0 496 137 (11 8 815)** and position.
- Remove special tool **0 496 137 (11 8 815)**.



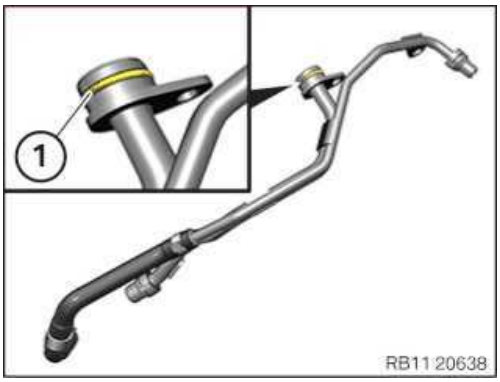
- Secure special tool **0 496 133 (11 8 811)** to the crankshaft using special tool **0 496 134 (11 8 812)**.



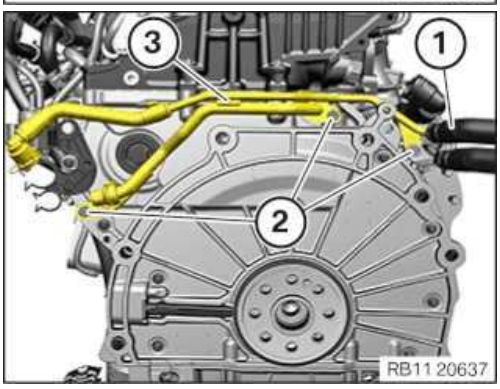
- Check the freedom of movement between the special tool **0 496 135 (11 8 813)** and the crankshaft sensor during installation.

  Otherwise there is a risk that the crankshaft sensor will be damaged.
- Slide on special tool **0 496 135 (11 8 813)**.
- Screw down special tool **0 496 136 (11 8 814)**.

cardiagn.com



- Press in crankshaft seal with special tool **0 496 135 (11 8 813)**.
- Screw in special tool **0 496 135 (11 8 813)** up to timing case cover.



- Insert and install the holder (2).

▶ **If installed: Installing the coolant line of the SCR metering module**

- Renew the O-ring 1.

  Parts: O-ring

- Feed in and install coolant line (3).
- Tighten down screws (2).

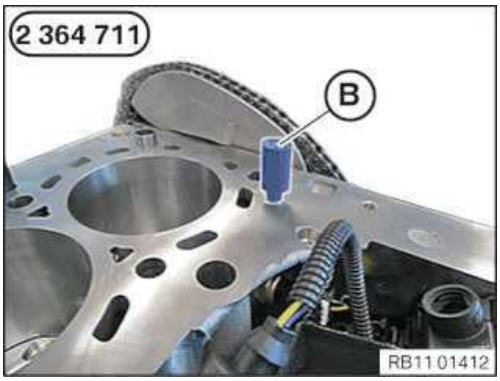
SCR coolant lines to crankcase end cover

Hexagon screw M6x16		Tightening torque	8 Nm

- Connect and lock the coolant line (1).

  Coolant line (1) must audibly engage.

▶ **Cleaning the sealing surface**



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

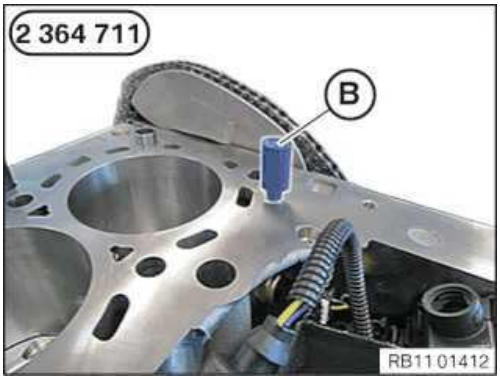
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

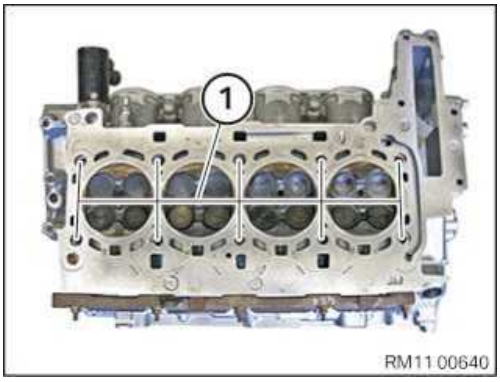
- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.



RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



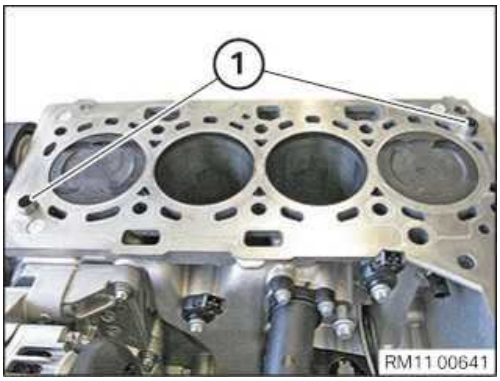
- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.

- Remove special tool (B).

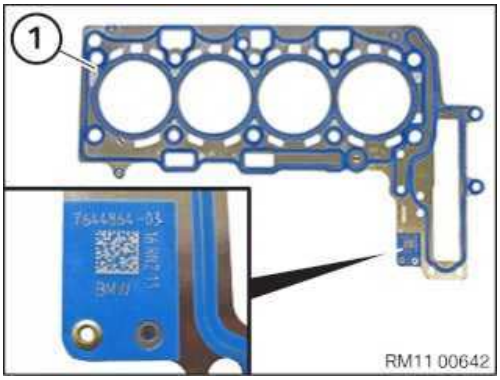
▸ **Renewing the cylinder head gasket**

RISK OF DAMAGE



Damage to the surface.

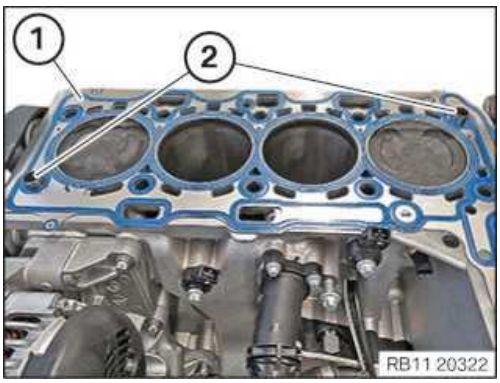
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



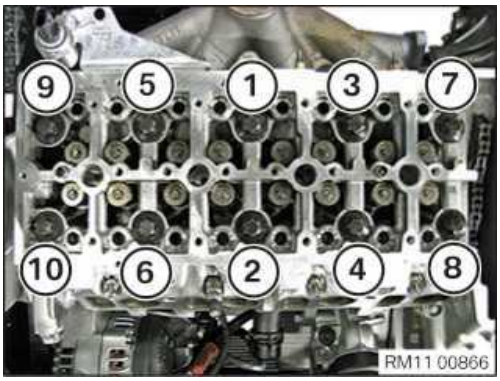
- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).

cardiagn.com



- Check the fitting sleeves (1) for secure fit and damage.



- Identify the cylinder head gasket (1) using the part number.

Note: If the cylinder head is reworked, an additional thicker gasket 0.3 mm is available for service personnel.

- Guide in the cylinder head gasket (1) and install.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Damage to threads.

Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION

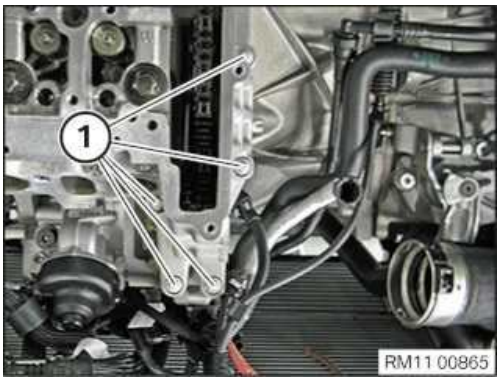
Do not remove bolt coating.

- Renew the cylinder head bolts (1).

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  No coolant, water or engine oil must be present in threaded holes of engine block.

TECHNICAL INFORMATION



When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in cylinder head bolts in sequence (1) to (10).
- Tighten cylinder head bolts using special tools **0 490 504 (00 9 120)** and in sequence (1) to (10).

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

cardiagn.com

- Tighten the cylinder head bolts (1).

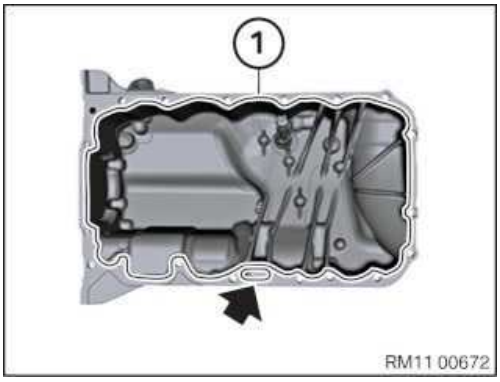
Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

-

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Remove fine sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

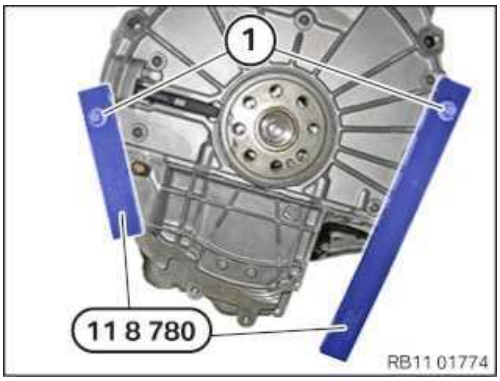
- Remove coarse sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- Apply the sealing compound along the line (1) with a thickness of 2 mm to 2.5 mm.

  Apply the sealing compound along the inner edge.

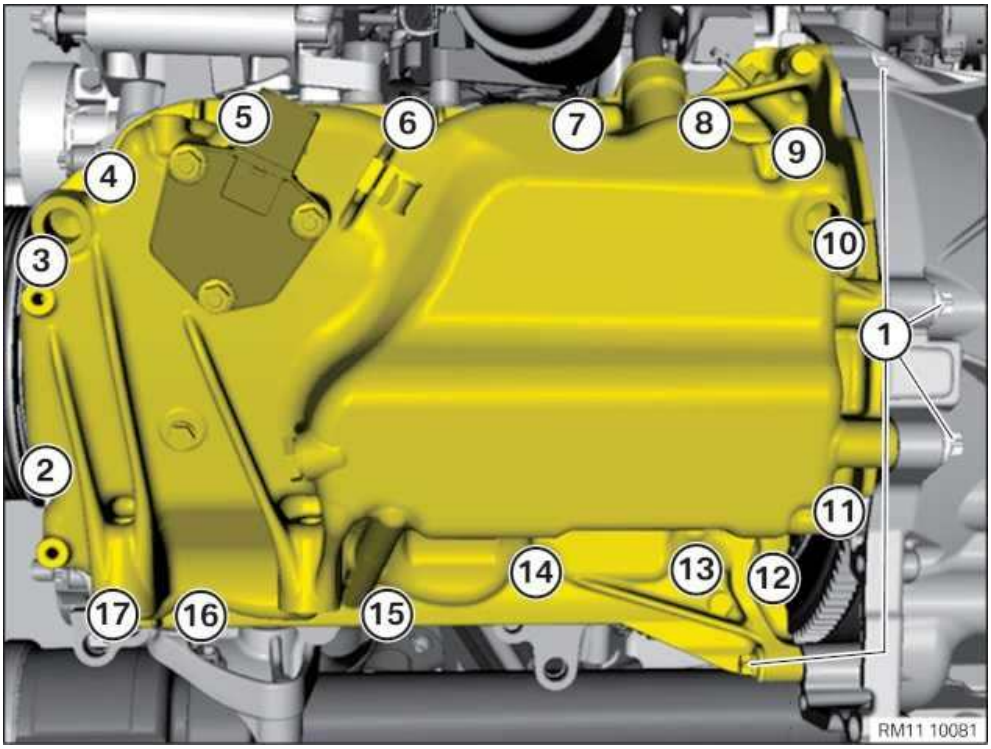


Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

- Completely encircle the oil return orifice (arrow) with the sealing compound.



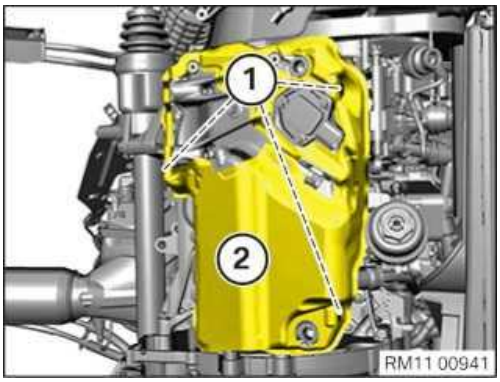
cardiagn.com

TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- If necessary, renew fitting sleeves.

- Position and install oil sump.
- **Hand-tighten** oil sump screws (2) to (17) but do **not** tighten completely.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws(2) to (17) of the oil sump.



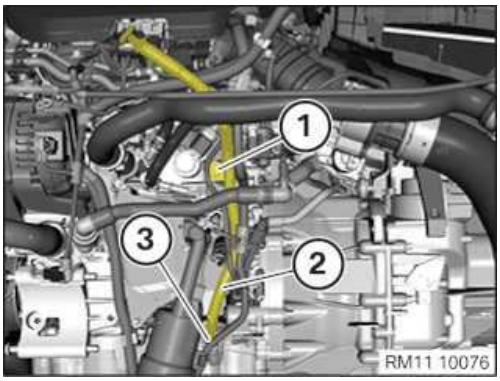
Oil sump to crankcase

M8x30		Tightening torque	2 Nr
M8x110		Tightening torque	2 Nr

- Tighten transmission bolts (1) on oil sump.

Transmission to oil sump

M8		Tightening torque	1 Nr



- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).

- Renew O-ring (1).

  Parts: O-ring

cardiagn.com

- Guide in guide tube (2) for oil dipstick and insert it into oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

Guide tube for oil dipstick on engine

M8x16		Tightening torque	19 Nm

POSTPROCESSES

31 – Installing the flywheel

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

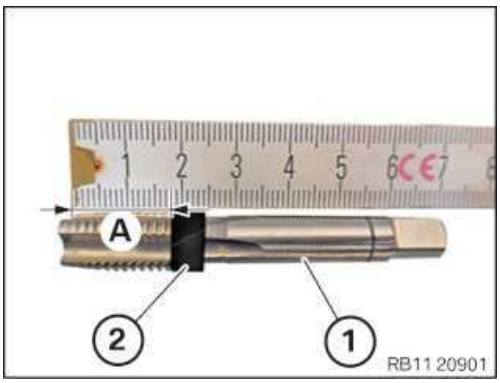
- Check fitting sleeve on the crankshaft for damage and replace if necessary.

TECHNICAL INFORMATION

Clean all threads with a screw tap.

- Clean all the screw threads (1).

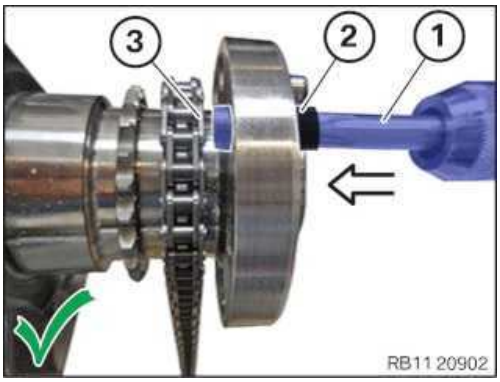
cardiagn.com



- Use the set of special tools **2 285 058**.

Description
Twist drill
Thread cutter M12x1.5
Depth
Insertion tool

- Assemble tool set.



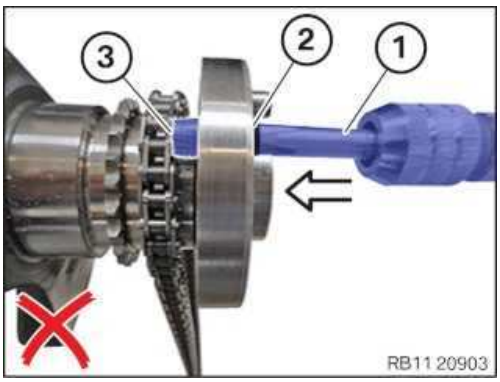
Number	Description
1	Tool holder
2	Thread cutter M12X1,5

- Mark the installation dimension (A) on thread cutter (1) from the set of special tools **2 285 058** using a commonly-available tool (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm

NOTICE



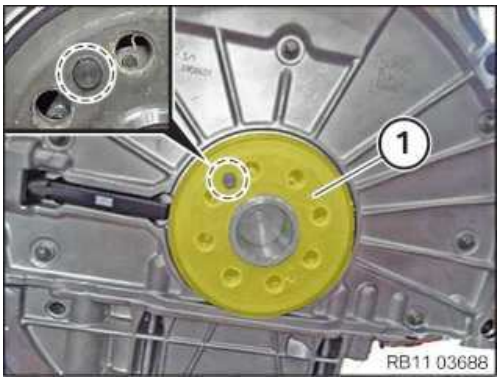
To provide a better overview: Shown with engine removed.

- Screw in the thread cutter (1) from the set of special tools **2 285 058** in direction of arrow up to the installation dimension (2).

Screw-in depth of thread cutter

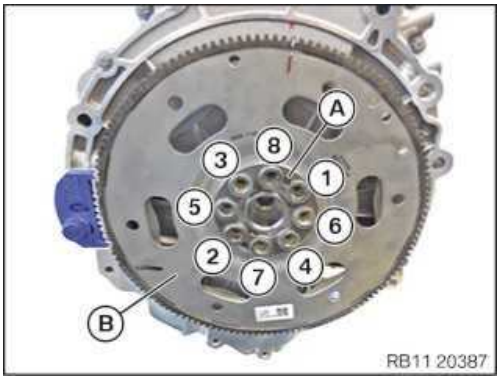
Screw-in depth	18 mm

- Make sure that the thread cutter does (1) **not** rest on the timing chain (3).



TECHNICAL INFORMATION

- **Carefully** handle the timing chain, to protect the timing chain and timing chain drive against damage.

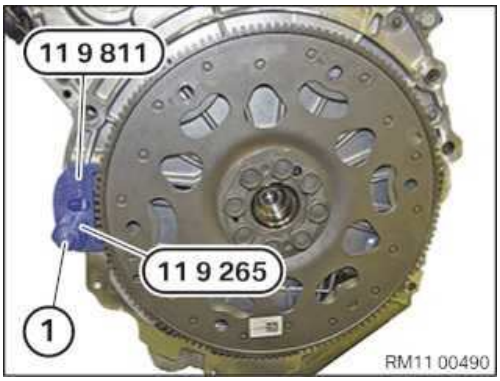


- Make sure the installation dimension (2) of the screw bore (1) is not exceeded.

  The thread cutter (1) may not rest on the timing chain (3).

cardiagn.com

- Important! Observe the marking shown during installation.
- Install special tool (1) on the crankshaft as shown.



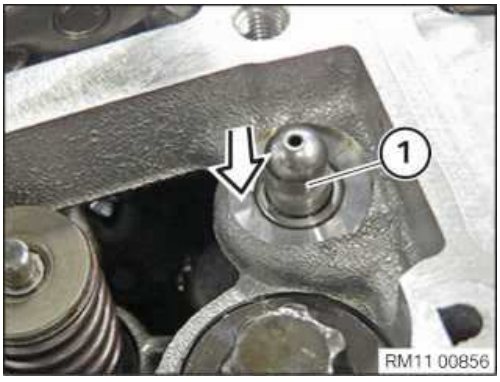
- Position flywheel (B) .
- Renew flywheel bolts (1) to (8).

  Parts: Flywheel bolts
- Screw in flywheel bolt (1) to (8) by hand.
- Observe tightening sequence. Begin at the dowel pin (A).
- Tighten flywheel bolts in sequence (1) to (8).

Flywheel to crankshaft

M12x1.5	Renew screws.	Tightening torque	120 Nm

- Loosen the transmission bolt (1).
- Guide out and remove the special tool **0 494 793 (11 9 265)** and **0 496 171 (11 9 811)** with the **standard** washer (5 mm).



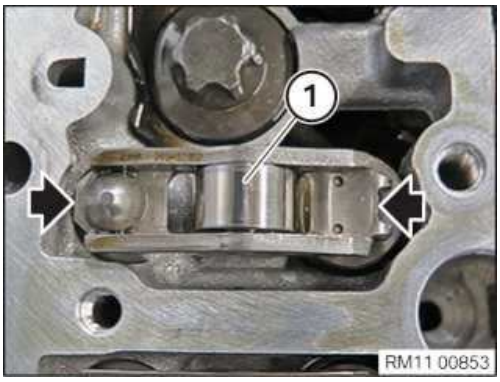
32 – Installing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



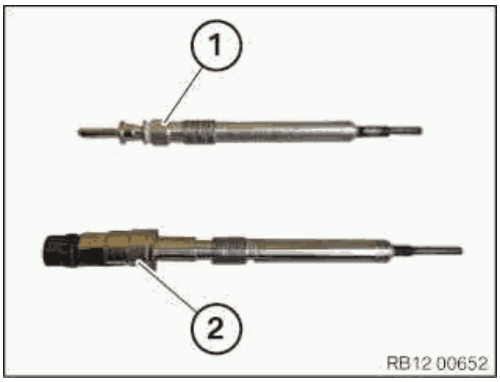
- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

33 – Install the roller cam followers

cardiagn.com

TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.

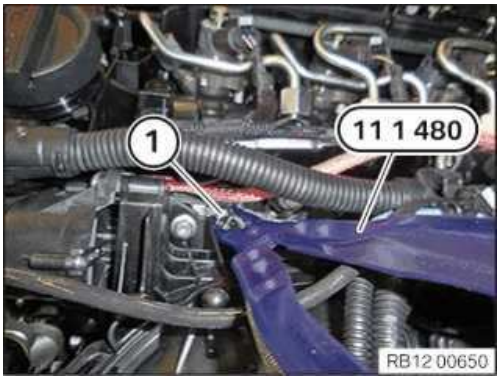


- Check all roller cam followers (1) for damage and replace if necessary.

  Parts: Roller cam followers
- Insert and install all roller cam followers (1).

  Roller cam followers (1) that have already been used must be installed in the same place.
- Note the mounting orientation of the roller cam followers (1).
- Oil all roller cam followers (1).

34 – Install glow elements

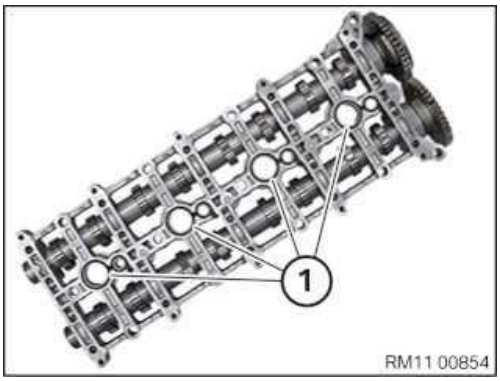


- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

- Tighten the glow element with the special tool or conventional tools.

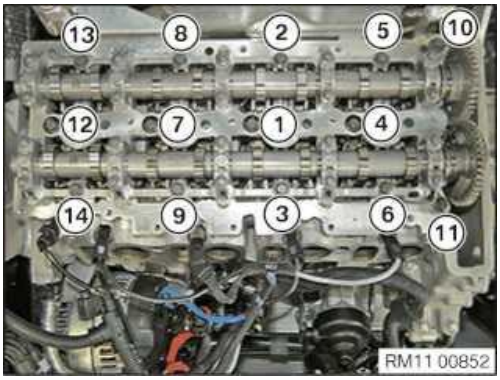
Glow elements to cylinder head

Glow element		Tightening torque	13 Nm



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



35 – Installing the camshaft support

cardiagn.com

- Renew gaskets (1).

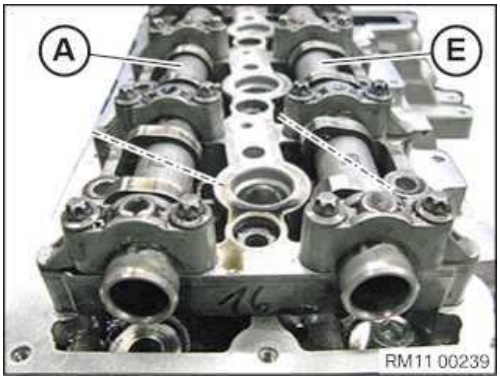
  Parts: gaskets

- Position the camshaft support including the camshafts.
- Tighten the screws in a sequence from (1) to (14) in several steps.

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

36 – Adjusting the timing of the camshafts



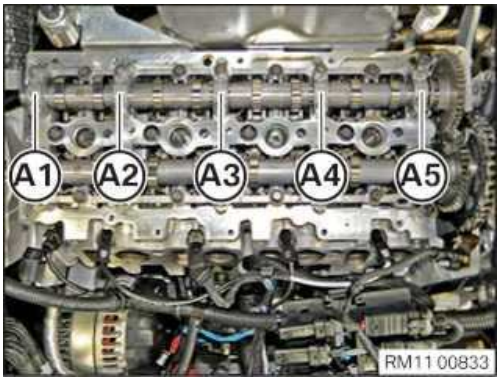
- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

- Slide the special tool **2 288 380** completely into the bore hole of the oil sump.
- Use the special tool to block **2 288 380** the crankshaft in the TDC firing position at the first cylinder.

- The cam of the intake camshaft (E) at the first cylinder points up at an angle.
- The cam of the exhaust camshaft (A) at the first cylinder points outward at an angle.

▸ **Remove exhaust camshaft.**



cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

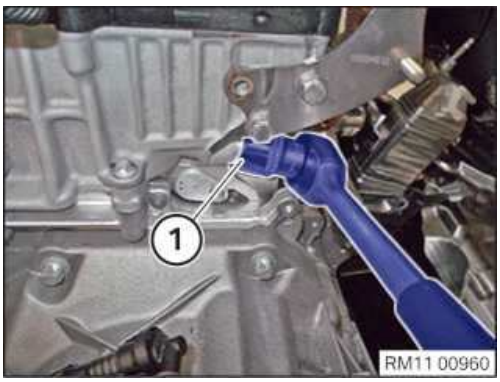
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A5) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components on special tool **0 495 105 (11 4 480)** in a tidy and orderly fashion.



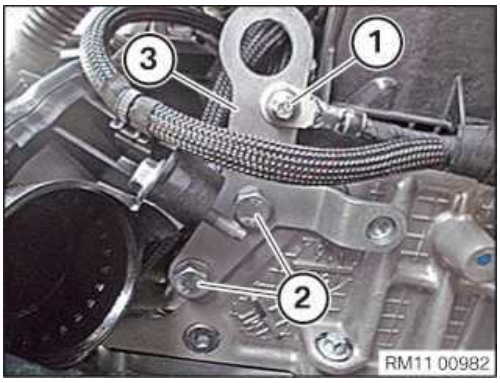
▸ **Remove chain tensioner piston**

WARNING

Hot surfaces.

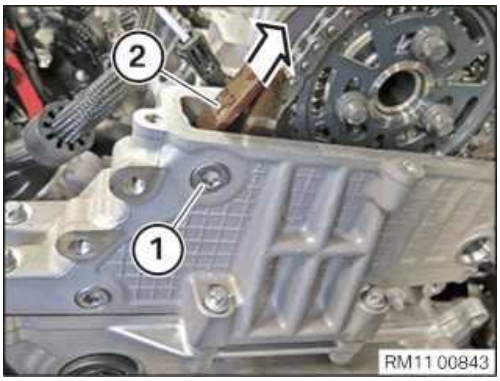
Risk of burning!

- Perform all work only on components that have cooled down.



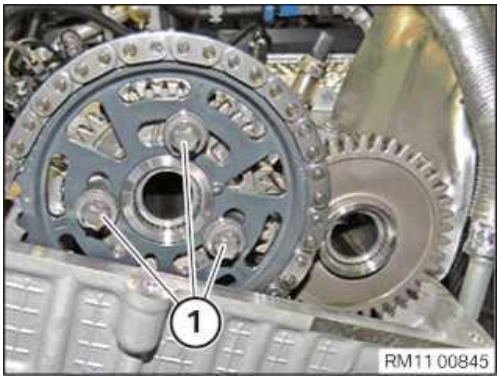
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Remove the chain tensioner piston (1).

▸ **Remove the timing chain guide rail**



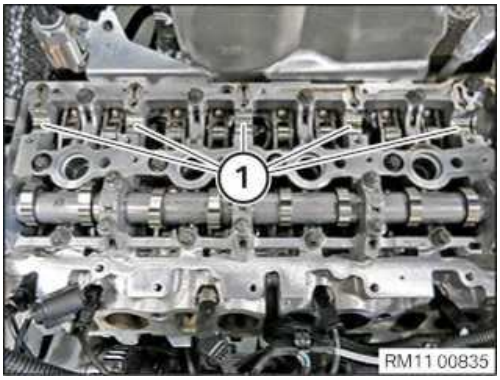
- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

cardiagn.com

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

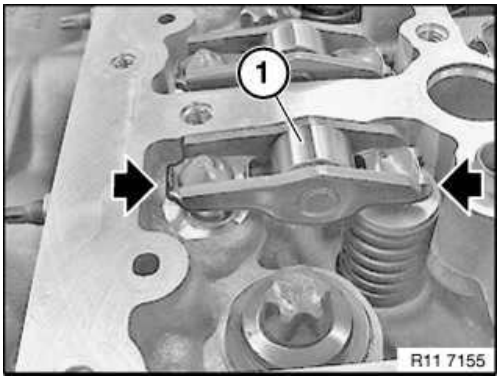
▸ **Removing the camshaft sprocket on the intake camshaft**

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.



▸ **Install exhaust camshaft**

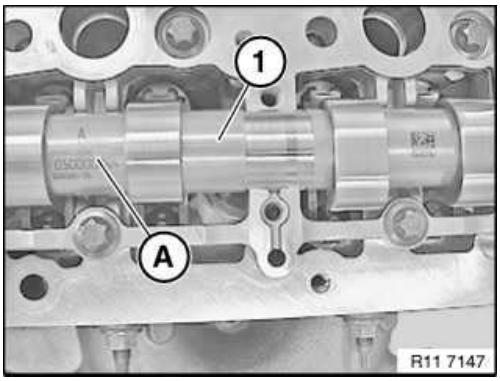
RISK OF DAMAGE



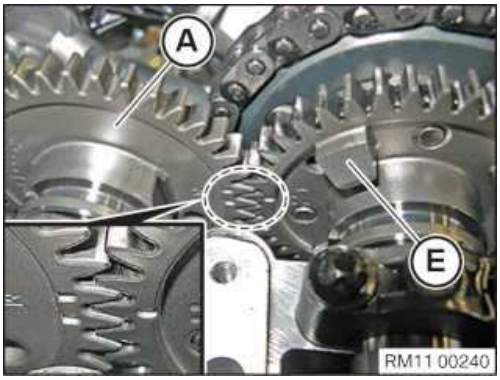
Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

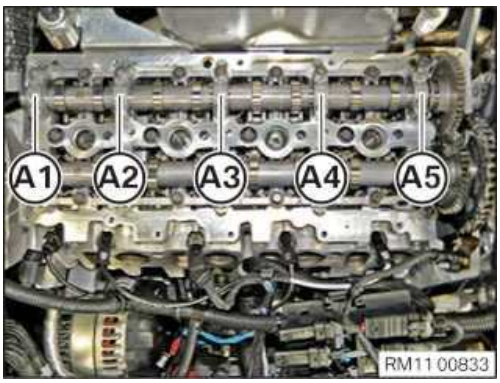
- Comply with the regulations for the installation and disassembly.
- Perform work with care.



- Oil all bearing positions (1).



- Make sure the roller cam followers (1) have the correct mounting orientation.



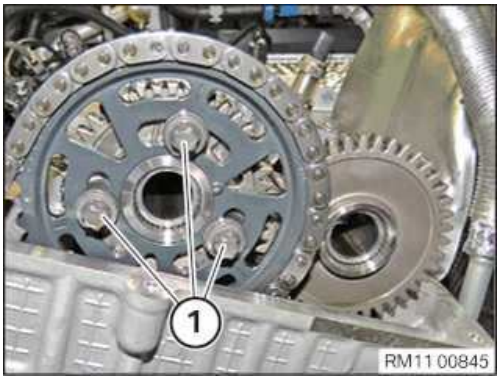
cardiagn.com

- Insert exhaust camshaft (1) so that the identification (A) points upwards.

- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.

- Tighten all exhaust camshaft bearing caps (A1) to (A5) from the inside to the outside by 1/2 a turn at a time.

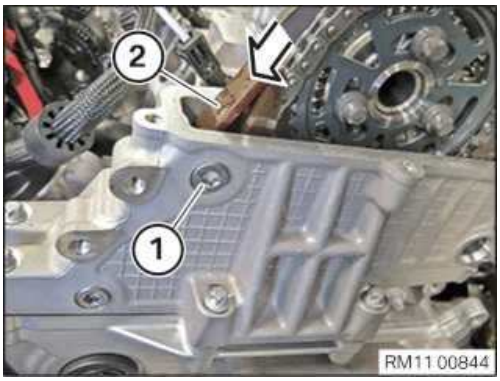
Intake and exhaust camshaft in camshaft support



M6x31		Tightening torque	10 Nm

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

  Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

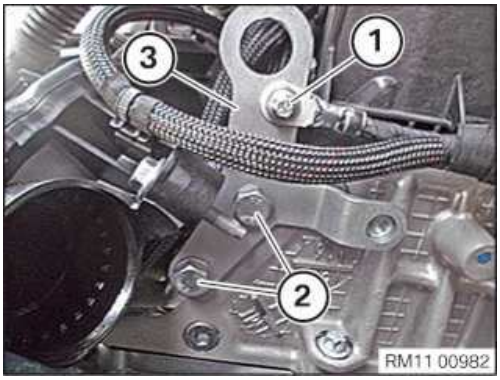


▶ **Installing the camshaft sprocket on the intake camshaft**

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

▶ **Install the timing chain guide rail**

cardiagn.com



- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

▸ Installing the chain tensioner piston

WARNING

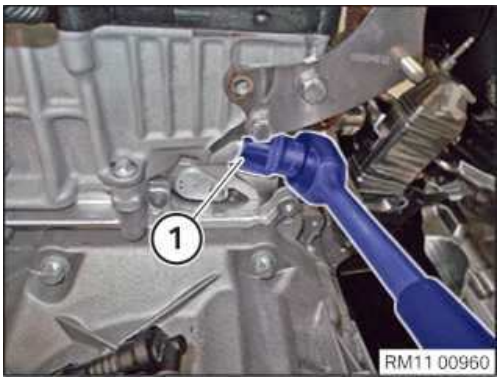
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Renew sealing ring (1).

  Parts: Sealing ring

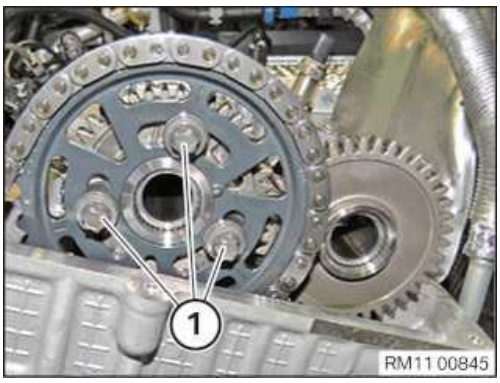


TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

cardiagn.com



- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

▸ **Tightening the camshaft sprocket on the intake camshaft**

- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

37 – Removing the special tool to disconnect the crankshaft

- Remove special tool **2 288 380**.

38 – Removing the special tool to secure the exhaust camshaft

- Remove the special tool **0 496 112 (11 8 760)** to fix the exhaust camshaft.

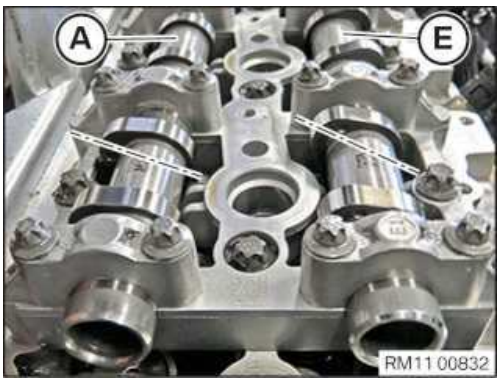
39 – Checking camshaft timing

cardiagn.com

- Remove protective cap (1) from oil sump.

- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE



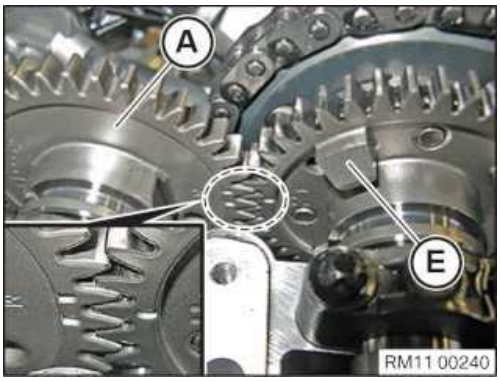
Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

cardiagn.com

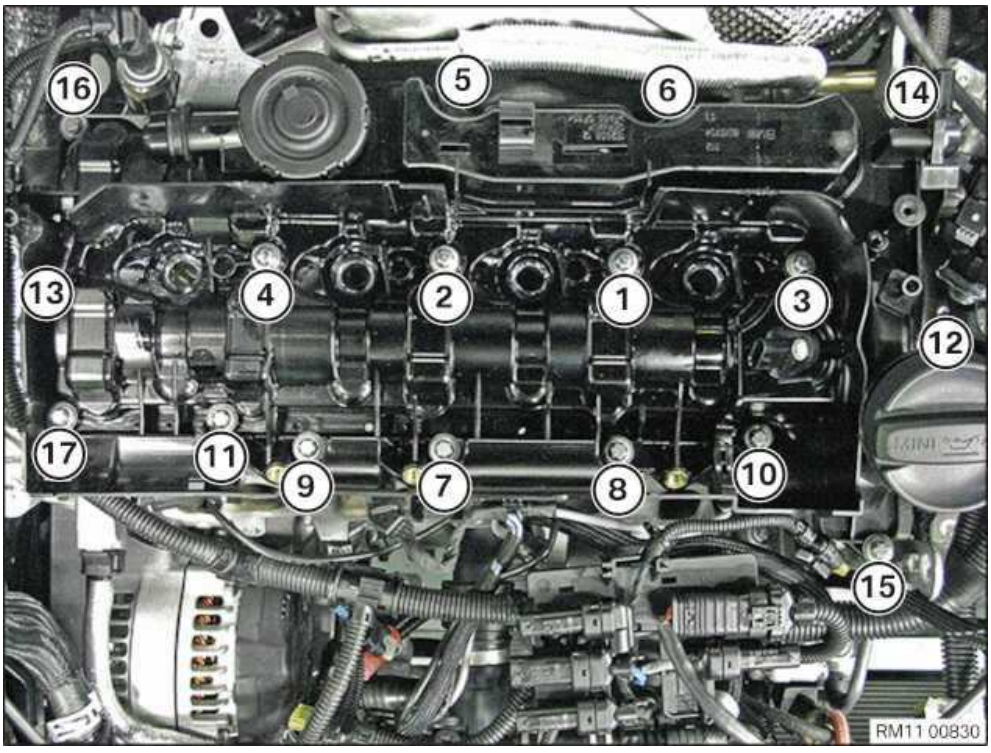
- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

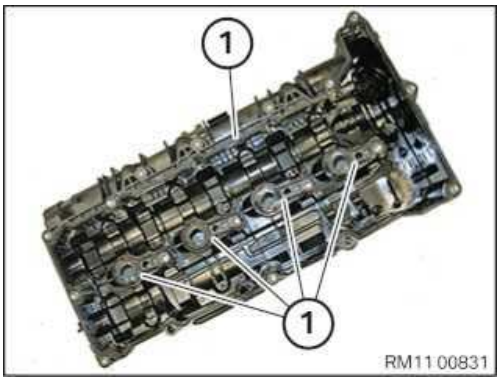
If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.



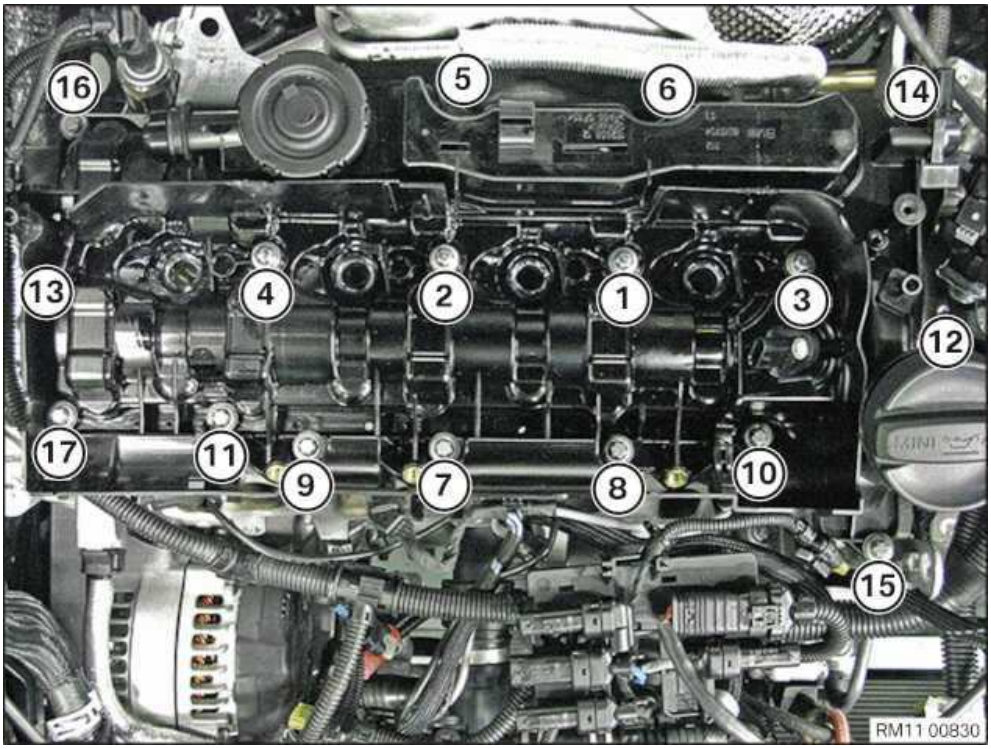
- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).



40 – Installing cylinder head cover

Overview: Screw connection of the cylinder head cover

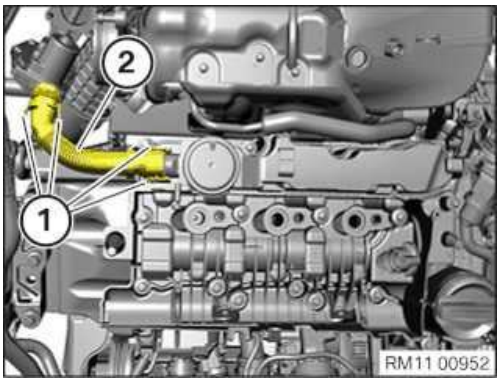


1 to 16 screws of the cylinder head cover.

cardiagn.com

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket



- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

41 – Installing injectors of injection system

▶ **Cleaning the injector shafts**

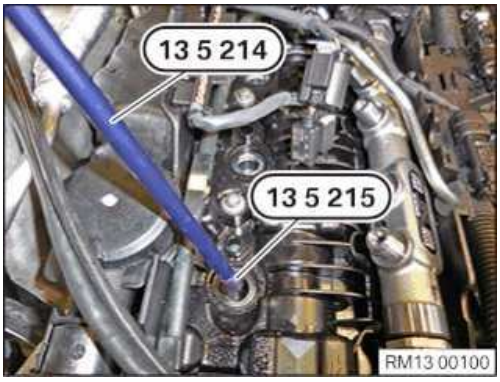
CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

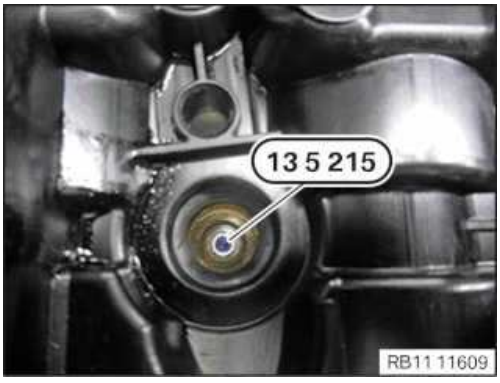
- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.



cardiagn.com

RISK OF DAMAGE



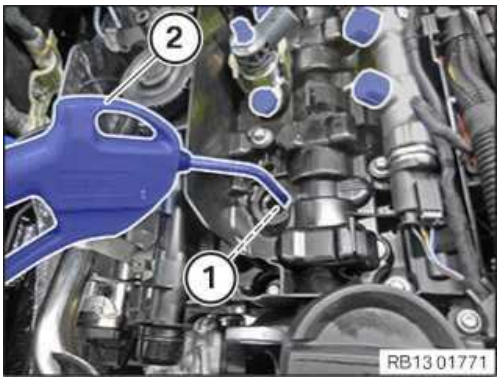
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

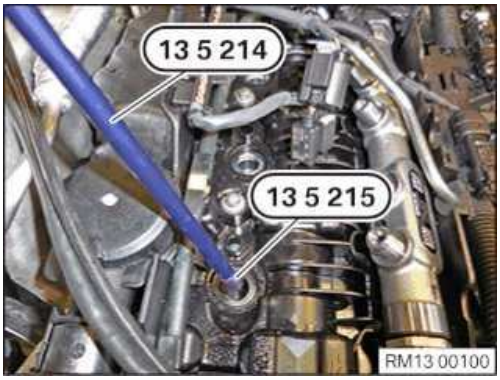
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.



- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

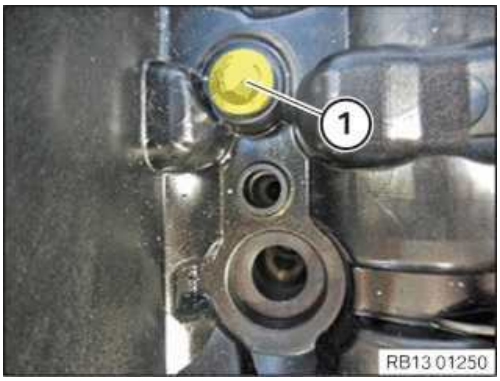


- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

cardiagn.com

- Blow out injector shaft (1) with air gun (2).

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.



▸ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▸ **Prepare the injector for installation**

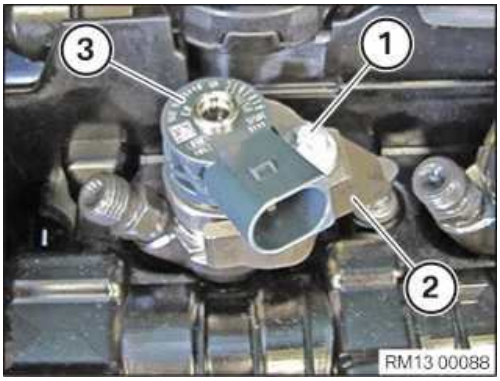
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

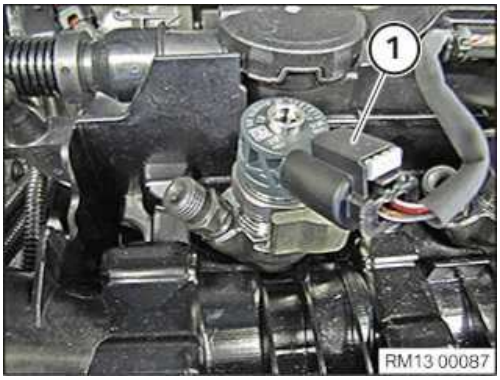
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials



Injector lubricating grease	50 g, Can	83230441070

- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

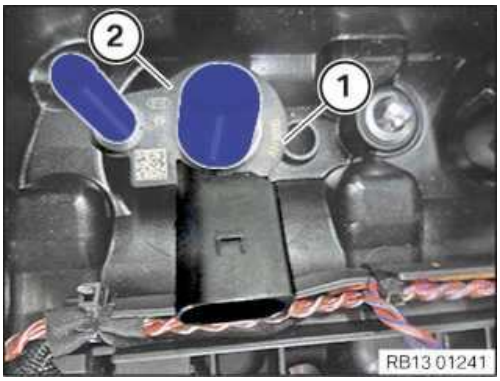
Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

▸ **Replacement: Perform injection quantity compensation**



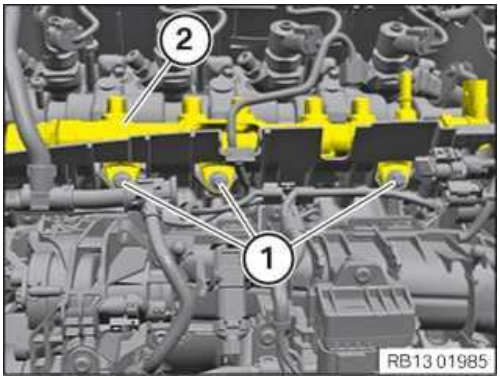
TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

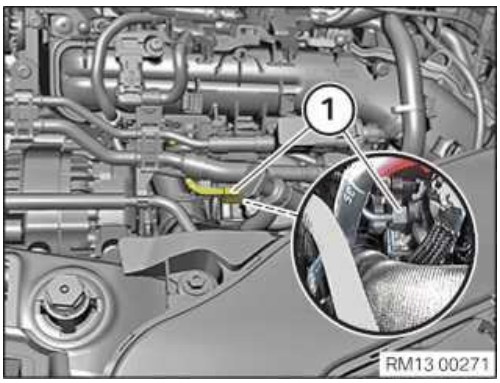
Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.



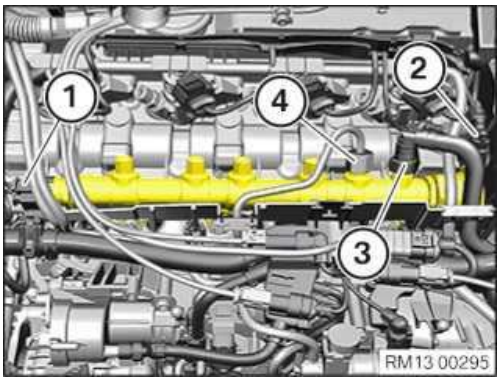
42 – Installing the rail

- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm

TECHNICAL INFORMATION



Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

cardiagn.com

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

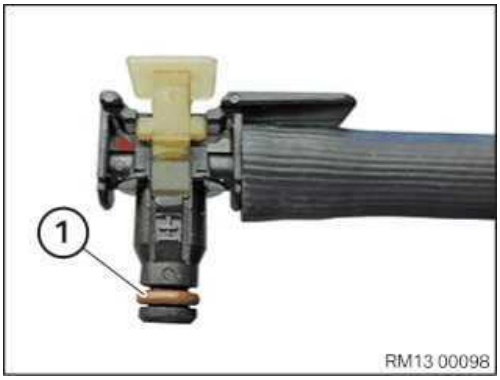
TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool .

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm



- Connect and lock the fuel line (3).

  Fuel line (3) must engage audibly.
- Connect connectors (2) and lock.

  The connector (2) must engage audibly.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

43 – Connect the leakage oil line on the injector

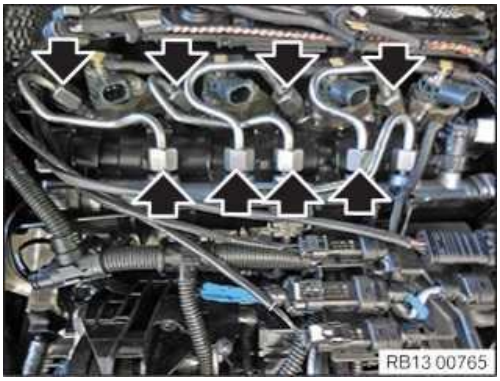
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

44 – Installing high pressure lines between rail and injectors



TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

cardiagn.com

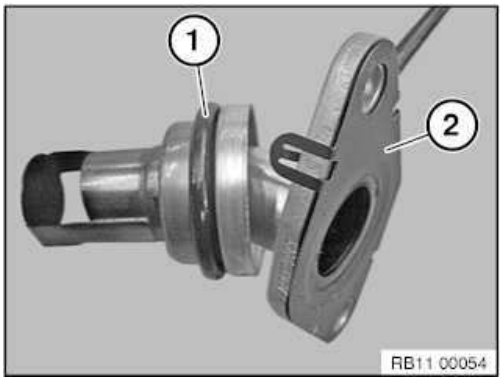
TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

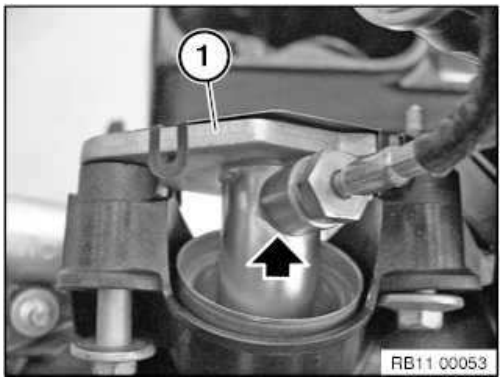


- Tighten the high pressure lines (arrows) with the special tool .

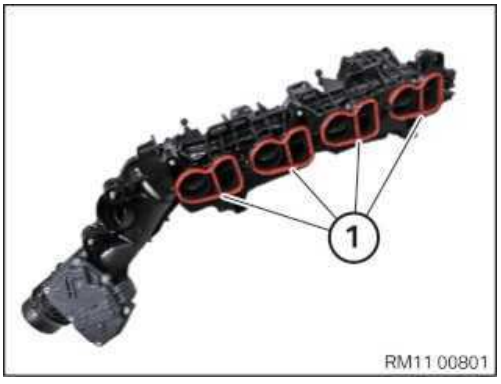
High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).



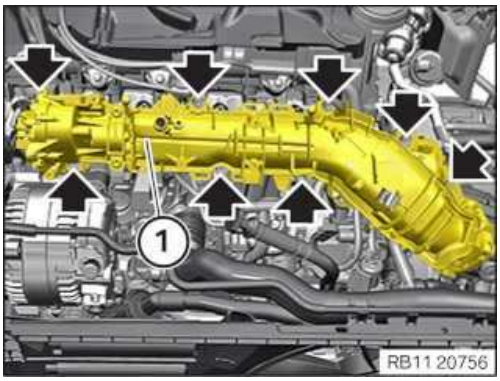
45 – Installing the intake plenum



- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

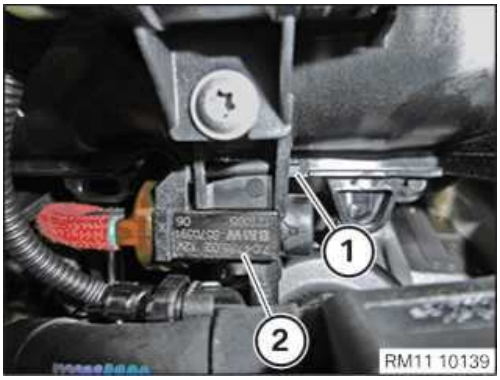
  Parts: Gasket
- Position the seal (2) and clip it in.



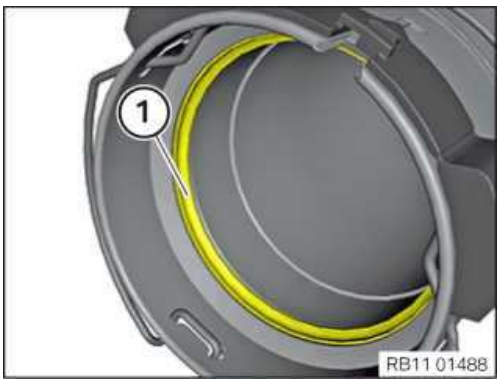
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



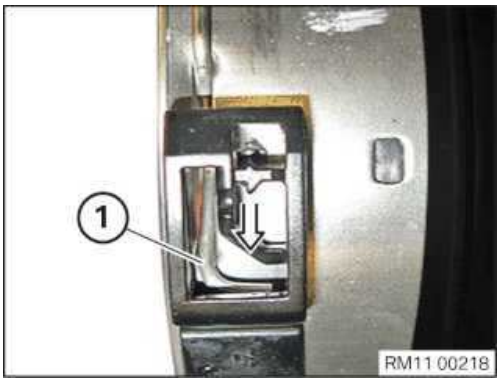
cardiagn.com



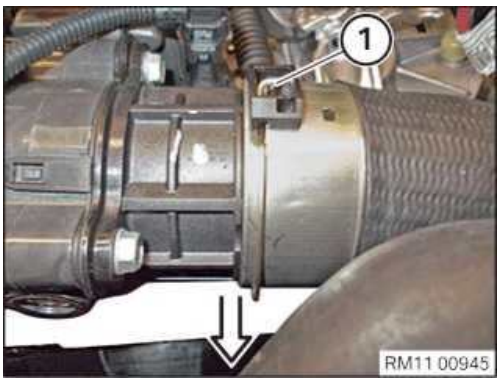
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

- Engage the lock (1) on the bracket (arrow).

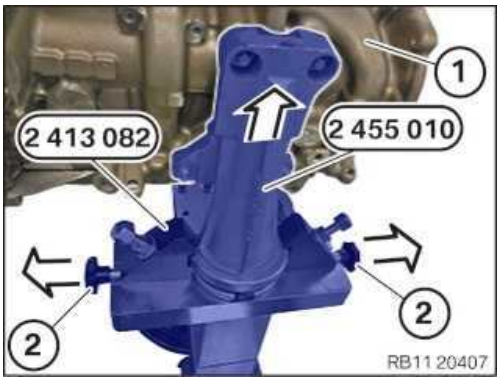
- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

46 – Remove the engine from the assembly stand

cardiagn.com

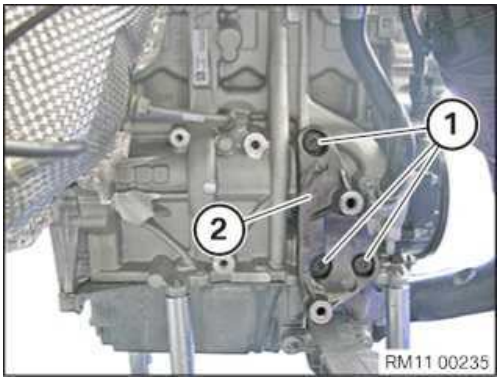
CAUTION



Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



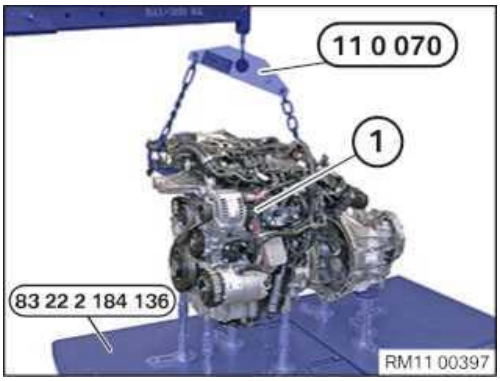
- Insert engine lifter with special tool and position engine (1).

- Unscrew the nuts on special tool .
- Detach the holder (2) in the direction of the arrow.
- Detach the engine (1) with special tool **2 455 010** out of the special tool in the direction of arrow.

- Remove conventional screws (arrows).
- Feed out the special tool **2 455 010** on the engine (1) and remove.

- Insert and install the holder (2).
- Tighten the screws (1).

Holder to crankcase



M10		Tightening torque	38 Nm

47 – Mount engine on the automatic transmission

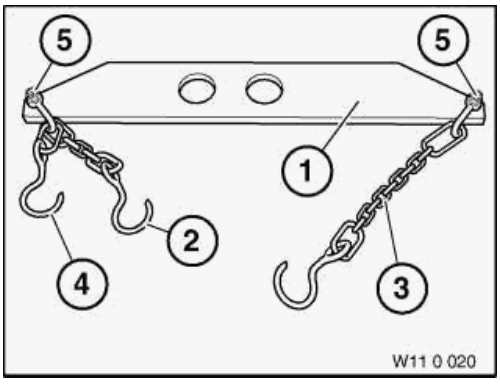
Prerequisite

Engine has been removed.

cardiagn.com

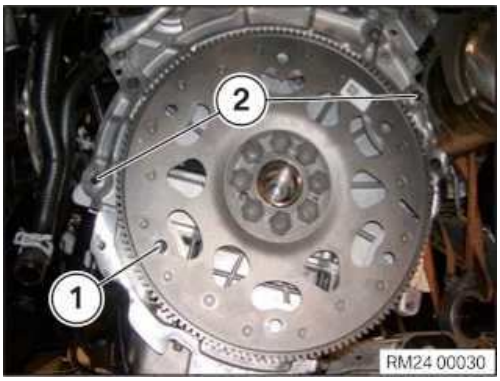
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Position the engine (1) on the lifting table **2 184 136** using the engine lifter and the special tool .
- Feed out engine lifter from engine (1) with special tool and push aside.

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.



- Stage the workshop crane **2 220 718**.

- Stage the lifting gear .

cardiagn.com

- The bore hole (1) of the flywheel must be accessible from the recess on the oil sump.
- Check for correct fit of fitting sleeves(2).

TECHNICAL INFORMATION

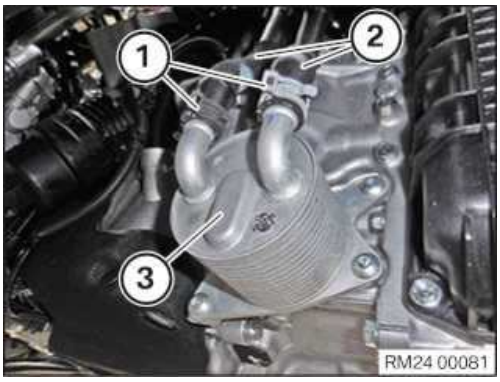
Conduct the following operation with the assistance of a second person.

- Twist torque converter until bore hole in torque converter is flush with bore hole of flywheel.
- Flange-mount and screw automatic transmission on the engine with an auxiliary person and the workshop crane **2 220 718** with the lifting gear .
- Tighten screws (arrows).

Transmission to engine

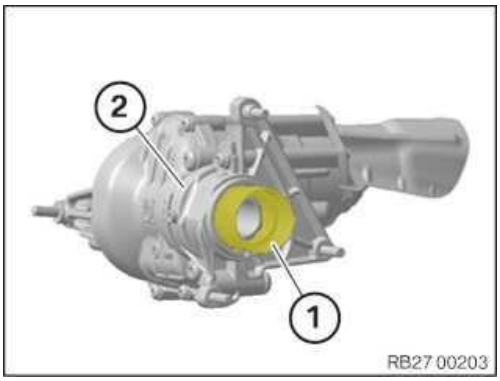
M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

- Feed out workshop crane **2 220 718** with the lifting gear from the automatic transmission and push it aside.



- Crank engine with special tool **0 493 380 (11 6 480)** at vibration damper in direction of rotation.
- Renew nuts (1).

  Parts: Nuts
- Tighten all 6 nuts (1) of the torque converter.



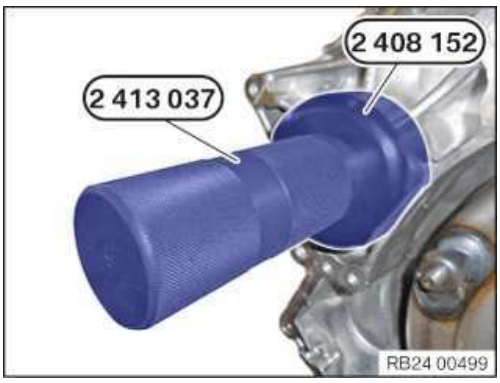
Torque converter to flywheel

M10	Replace nuts. Remove any adhesive residue from the threads.	Tightening torque	56 Nm

- Slide coolant hoses (1) onto transmission oil cooler (3).
- Secure hose clamps (1).

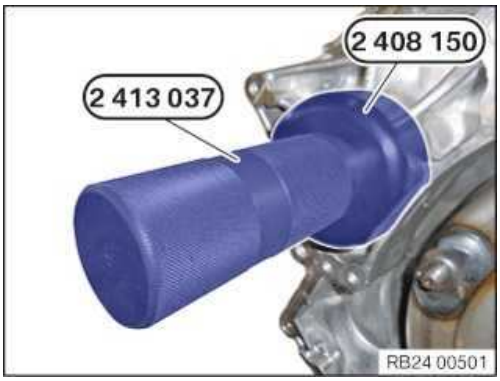
cardiagn.com

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

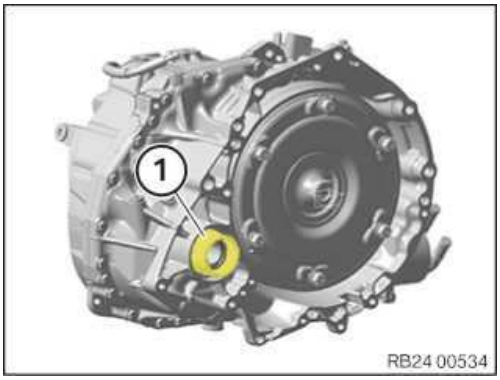


- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.

- Insert special tool **2 411 739** into the inner radial shaft seal.



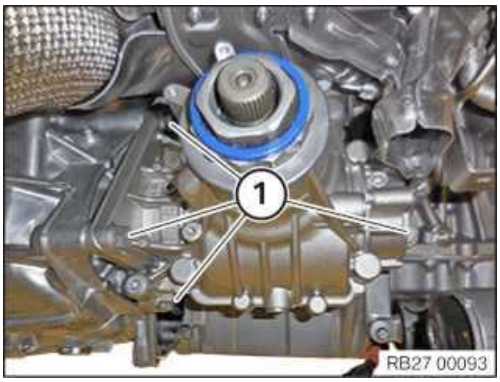
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

cardiagn.com

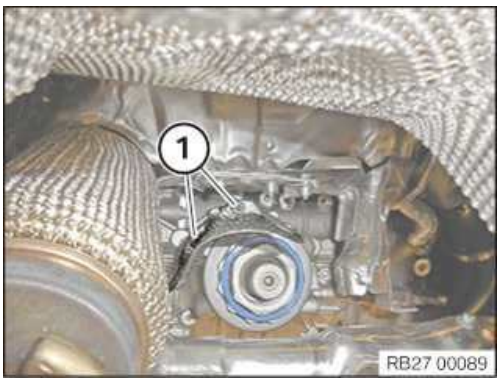
- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.



- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials



Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

cardiagn.com

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

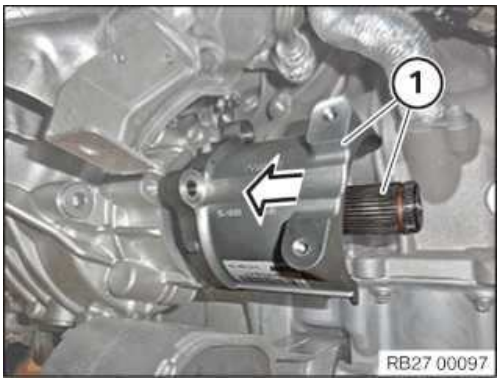
Technically suitable transfer box and electrical transmission oils	

Main group 27

- Tighten the oil filler plug (1).

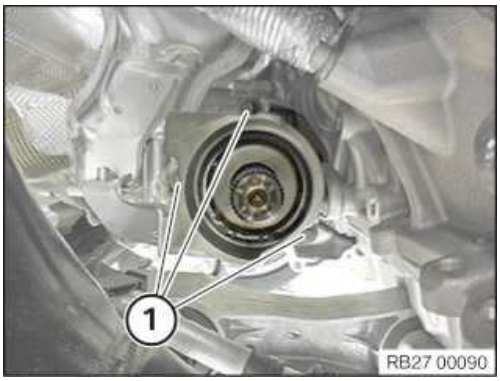
Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm



49 – Install the intermediate shaft with the support tube

- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

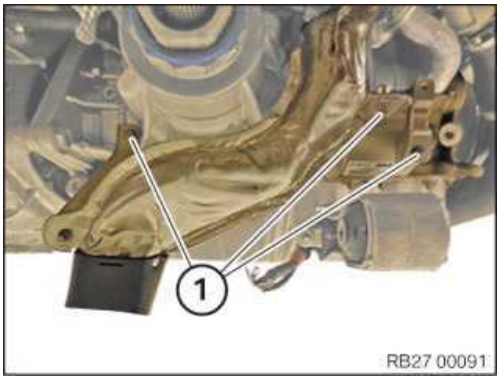


Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

cardiagn.com



- Position screws (1).

Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

- If installed: Install air duct.
- Tighten the screws (1).

50 – Installing the high-pressure stage exhaust turbocharger

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

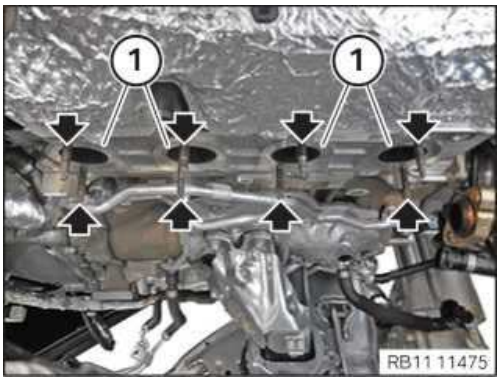
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Damage to the surface.

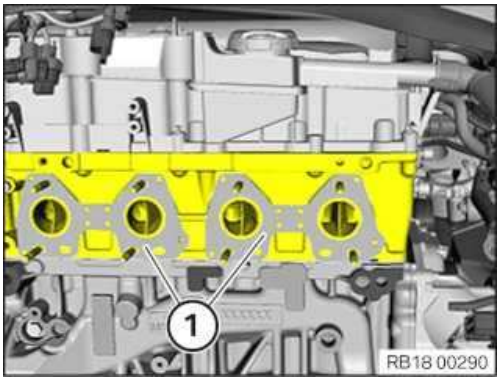


The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

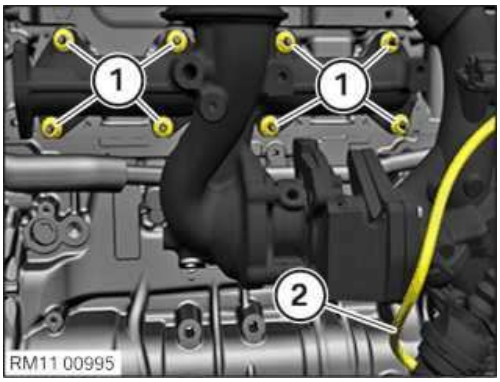
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

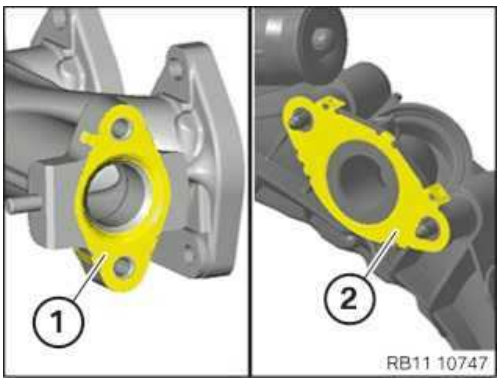


cardiagn.com

- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.



- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.

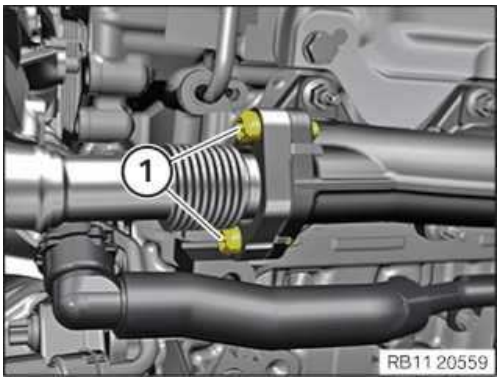


- Renew gasket (1).

  Parts: Gasket
- Install new gasket (1).

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

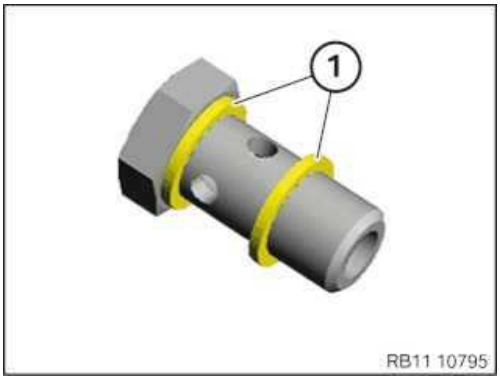
  Parts: Nuts
- Connect vacuum hose(2).



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

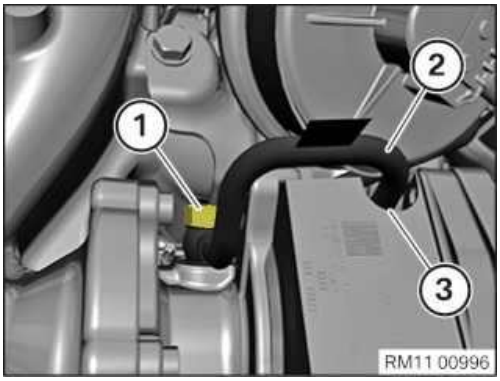
  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket



cardiagn.com

- Tighten the screws (1).



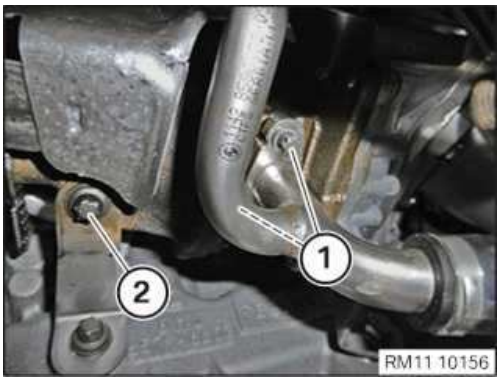
Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring

- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).



- Tighten bolt (1) from the right wheel arch.

- Renew seal (1) of oil return line.

  Parts: Gasket

cardiagn.com

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

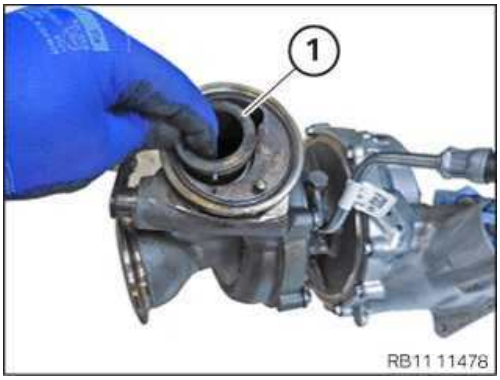
- Tighten down screw (2).

Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

51 – Installing the low-pressure stage turbocharger

RISK OF DAMAGE



Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

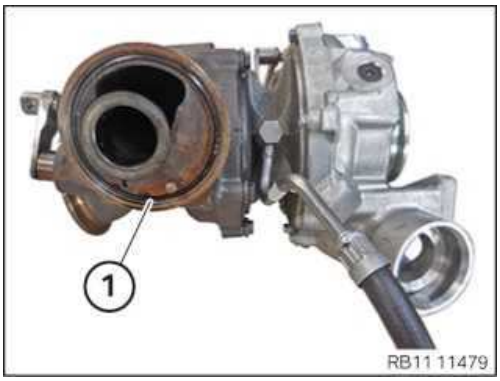
- Do not use any metal-cutting tools.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.



- Renew gasket (1).

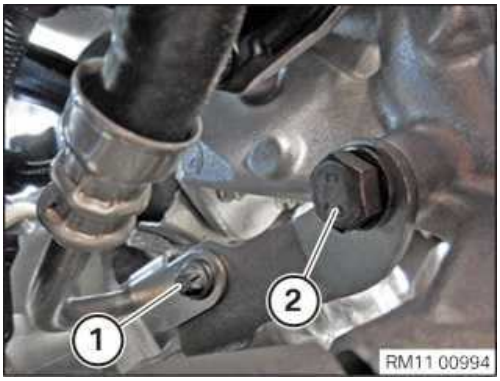
  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

cardiagn.com

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



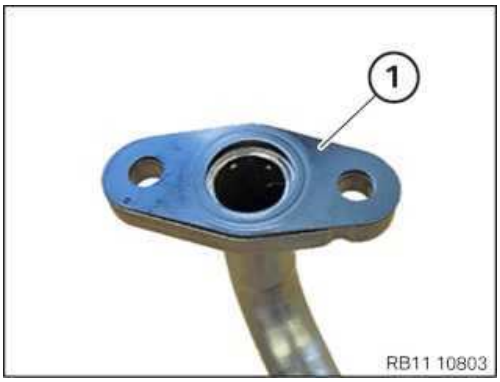
- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

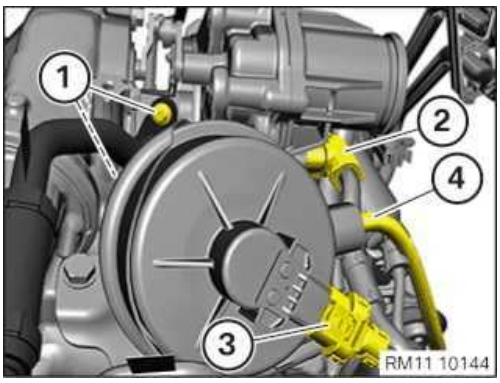
- Tighten down screw (1).



Oil feed line to bracket

Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).



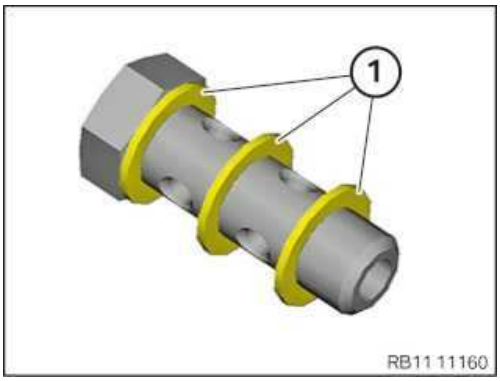
Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

- Renew seal (1) on the oil return line.

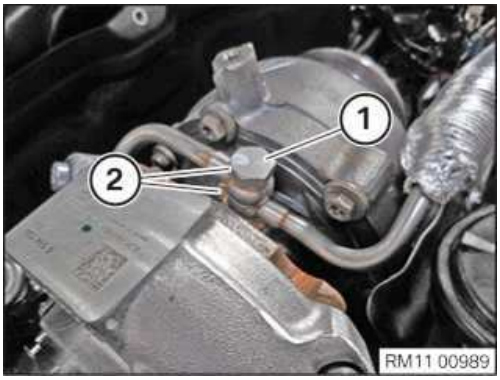
  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).



Oil return line to turbocharger

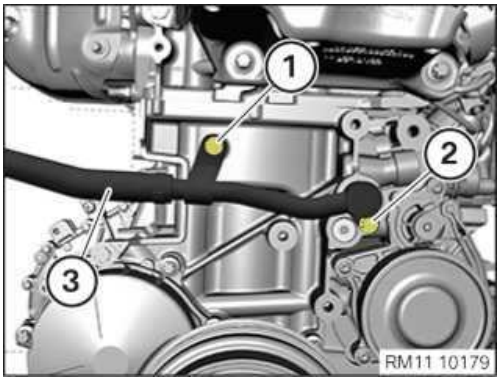
M6x12		Tightening torque	8 Nm



- Connect and lock connectors (2) and (3).

  The locks must engage audibly.
- Connect vacuum hose (4).

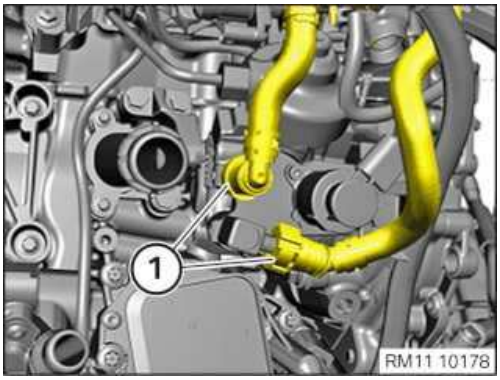
cardiagn.com



- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.

52 – Attaching assemblies (on lifting table)



- Renew sealing ring of the coolant line (3).

  Parts: Sealing ring
- Coat the sealing ring and install the coolant line (3) .
- Tighten down screws (1) and (2).

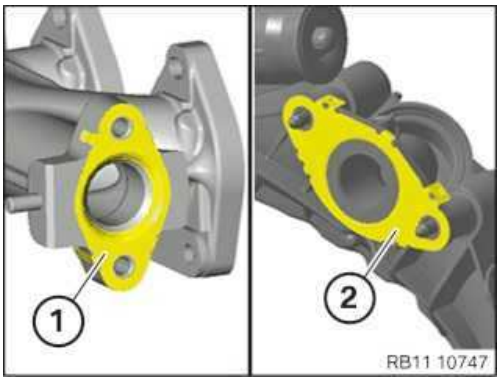
Standard screw connection M6

M6		8 Nm

- Connect and lock fuel lines (1).

  The fuel lines (1) must audibly engage.

▸ **Installing the exhaust-gas recirculation cooler**



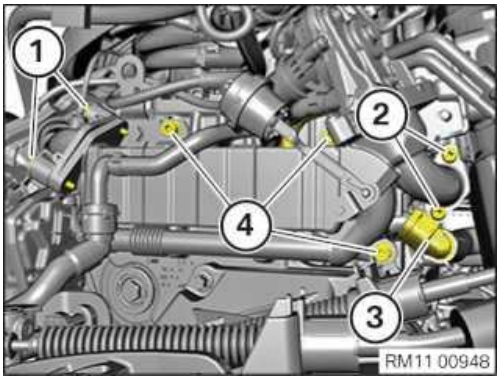
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts

- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.

- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

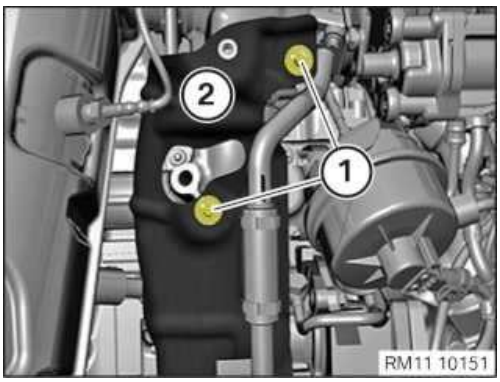
cardiagn.com

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

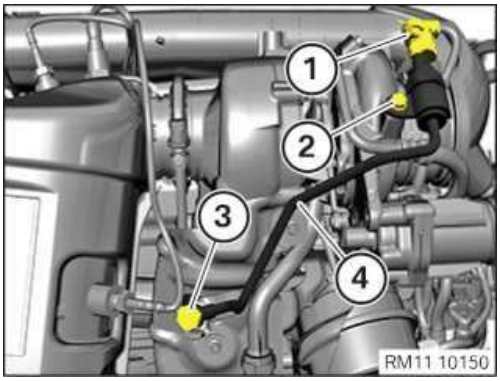


▶ **Installing heat shield on exhaust turbocharger at bottom**

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

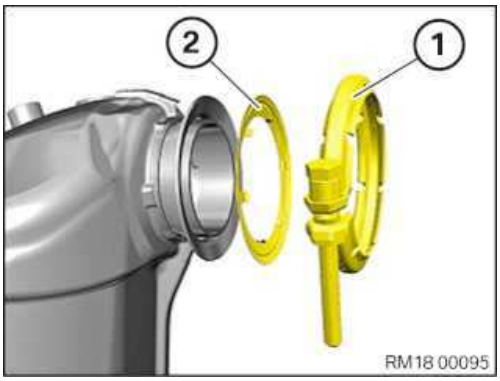
- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

- Tighten down screw (2).



Standard screw connection M6

M6		8 Nm

- Connect connectors (1) and lock.

  Lock must audibly engage.

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

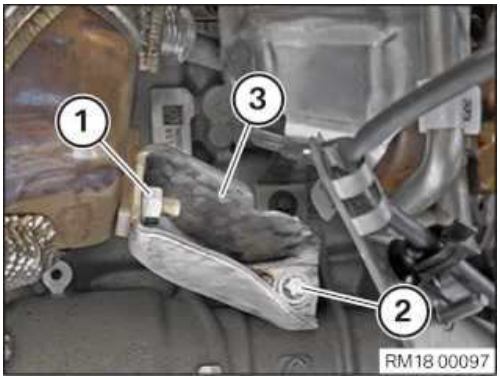
- Remove and install heavy components with the aid of another person/other persons.

- Renew the V-clip (1).

  Parts: V-band clamp

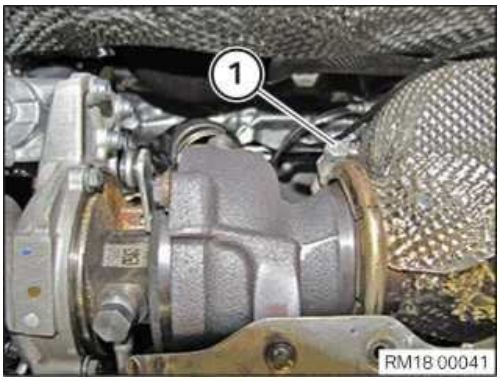
- Renew the gasket (2).

  Parts: Gasket



- Carefully insert and install the diesel particulate filter .
- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

- Tighten nuts (1) by hand.



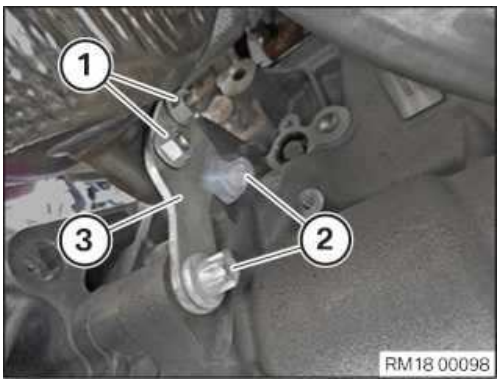
- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.

- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).

cardiagn.com

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger



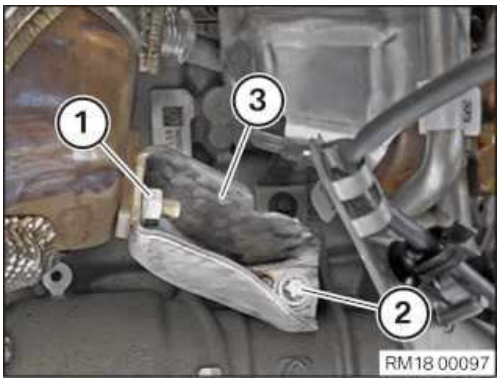
V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screws (2).



Diesel particulate filter holder to gearbox

M12x75		Tightening torque	66 Nm

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screw (2).

Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

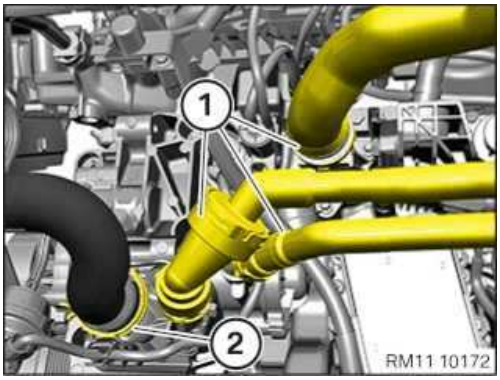
Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Remove fitting aid (1) for the flexible tube.

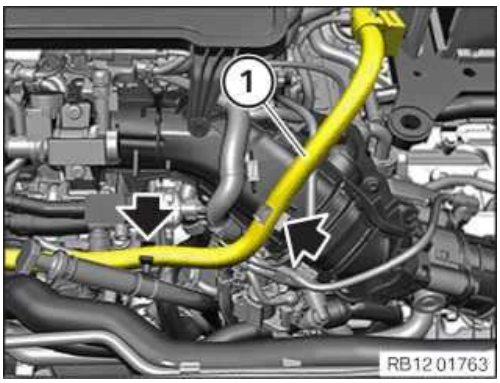
▸ **Install the heat shield on the exhaust turbocharger**

cardiagn.com



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger



Torx screw BM 6x12		Tightening torque	10 Nm

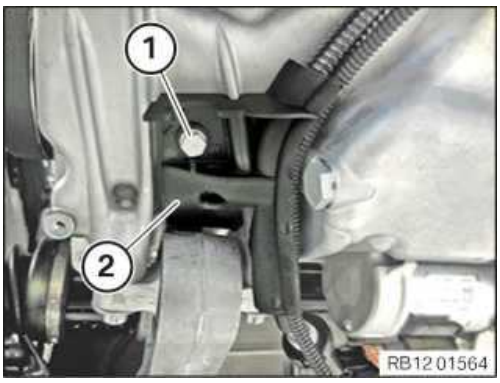
- Fasten the cable at the clips .

- Install the coolant hose and secure with the clamp (2) .
- Connect and lock the coolant lines (1).

  The coolant lines (1) must engage audibly.

CAUTION

Improper routing of the positive battery cable.



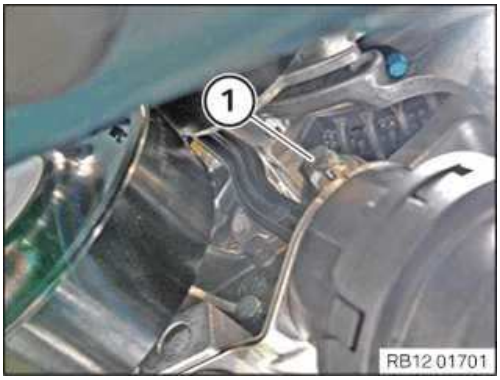
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert the positive battery cable (1) into the clamps (arrows).

- Feed in and install positive battery cable at the clamps (1).

- Insert and install the holder (2).
- Tighten down screw (1).



Bracket to oil sump

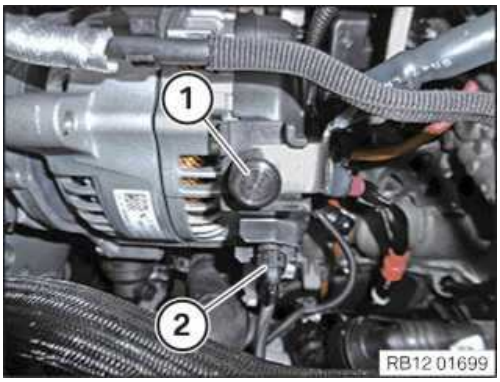
M6		Tightening torque	8 Nm

cardiagn.com

- Insert and install alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support.

- Tighten the screw (1) below on the alternator.

Alternator to component carrier

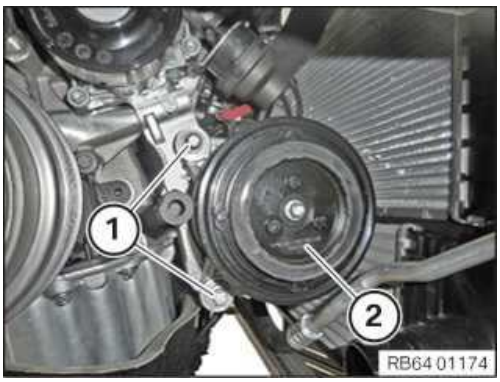


M10x75 / M10x125		Tightening torque	38 Nm

- Tighten the bolt (1) on top on the alternator.

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm



- Mount positive battery cable to the alternator.
- Tighten nut.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

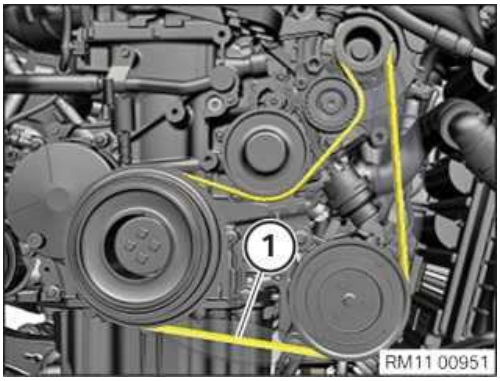
- Mount the cover (1).
- Connect the connector (2) to the alternator and lock audibly.

- Install air conditioning compressor (2) and position it correctly.
- Tighten the screws (1).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

▸ **Installing the drive belt for alternator**



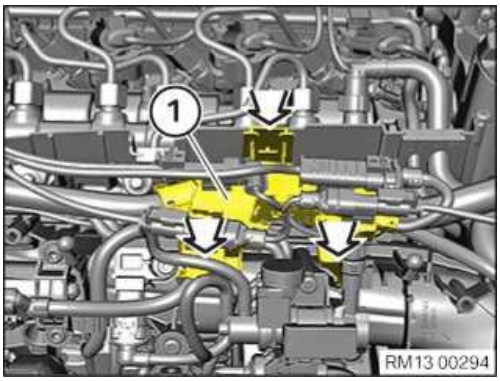
cardiagn.com

TECHNICAL INFORMATION

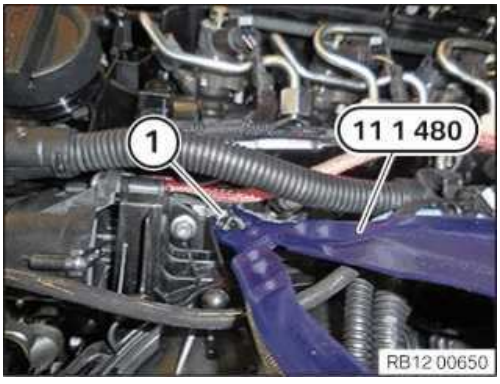
If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

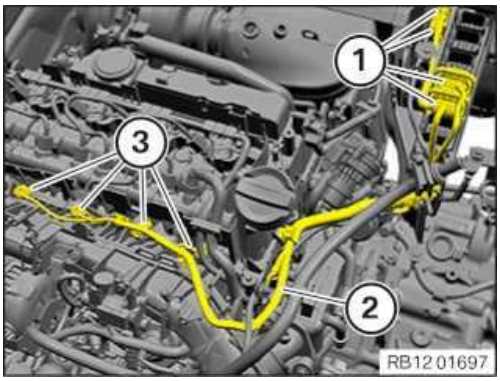


- Feed in the drive belt for the alternator (1) and install it.



- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool **0 496 268 (11 0 390)** out of the belt tensioner and remove it.

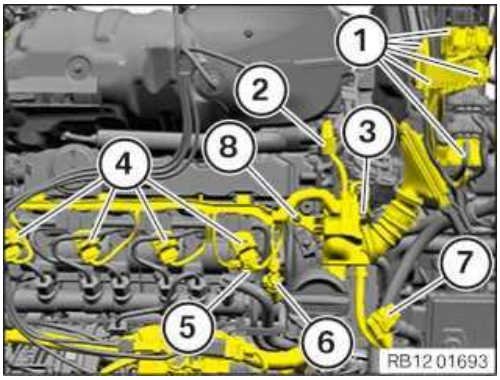
▶ **Installing the cable clip for the intake plenum**



- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.

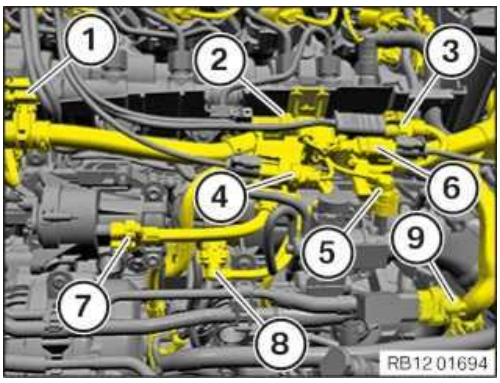
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.



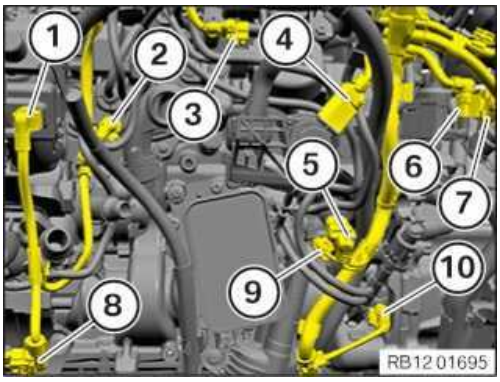
cardiagn.com

- Lay vehicle wiring harness and fasten with clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Connect all connectors (3) to the glow elements and engage them audibly.
- Mount ground strap and tighten screw (2).

Ground cable to cylinder head



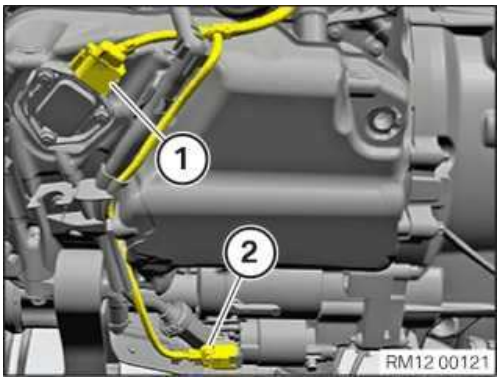
M6x12		Tightening torque	8 Nm



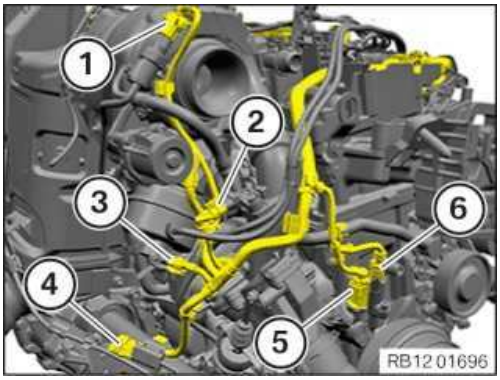
- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

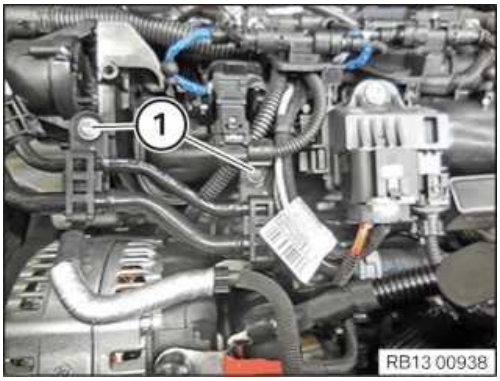
TS5x20		Tightening torque	3,5 Nm



- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.



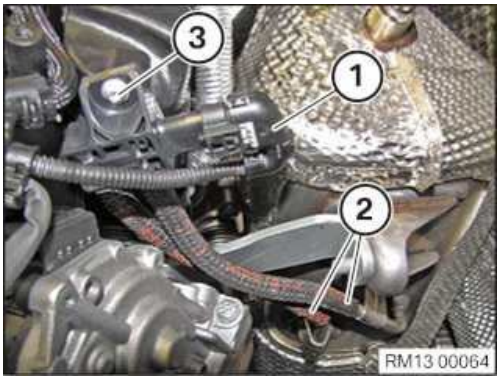
- Connect the connector (1) to the alternator and lock audibly.
- Connect the connector (2) to the electric changeover valve and lock audibly.
- Connect the connector (3) to the electric changeover valve and lock audibly.
- Connect the connector (4) to the high pressure pump and lock audibly.
- Connect the connector (5) to the oil pressure sensor and lock it audibly.
- Attach connector (6) to the throttle bodies and lock it audibly.
- Attach connector (7) to the intake air temperature sensor and lock it audibly.
- Connect the connector (8) to the air conditioning compressor and lock audibly.
- Connect the connector (9) to the solenoid valve and lock audibly.
- Connect the connector (10) to the crankshaft sensor and lock it audibly.



cardiagn.com

- Connect the connector (1) to the oil-level sensor and lock it audibly.
- Connect connector (2) to the starter motor and lock audibly.

- Attach connector (1) to the exhaust turbocharger and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust gas pressure sensor and lock it audibly.
- Connect the connector (4) to the monitoring oxygen sensor and lock audibly.
- Attach connector (5) to the oil pressure switch and lock it audibly.
- Attach connector (6) to the switching valve and lock it audibly.



- Position the fuel line.
- Tighten the screws (1).

Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

53 – Installing differential pressure sensor

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

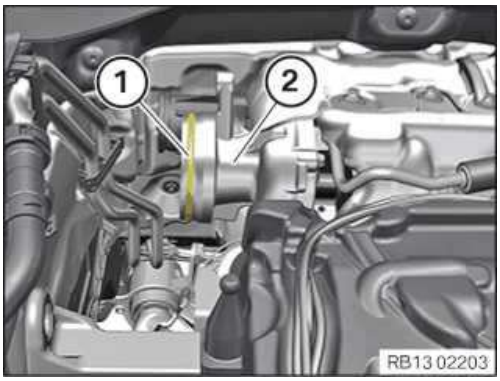
Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor



Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

54 – Installing clean air pipe

cardiagn.com

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

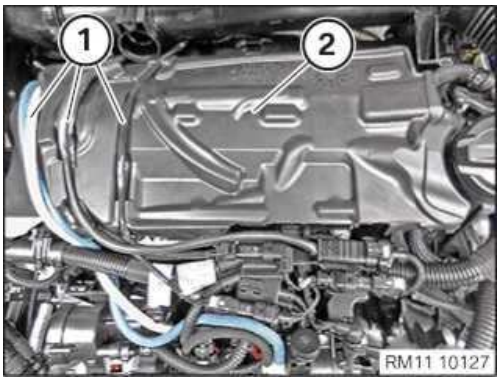
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

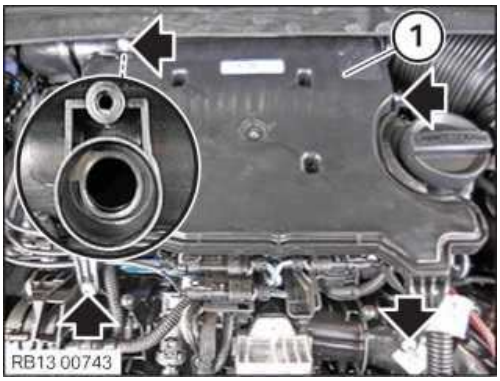
- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm



55 – Install the acoustic cover for the injectors

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

56 – Install resonator

cardiagn.com

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

57 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

58 – Install engine

cardiagn.com

- See additional information.

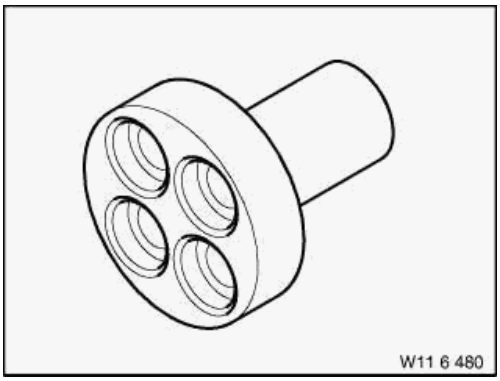
Overview of Special Tools

0 496 268 (11 0 390) Pin



Common	Used in step 7 52
Usage	(roll pin) For securing new tensioning pulley (poly-V belt)
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 15 07 (390)

0 490 796 (11 1 480) Pliers

Common	Used in step 7 25
Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

0 493 380 (11 6 480) Connector

Common	Used in step 12 20 36 39 47
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

cardiagn.com

2 220 718 Workshop crane

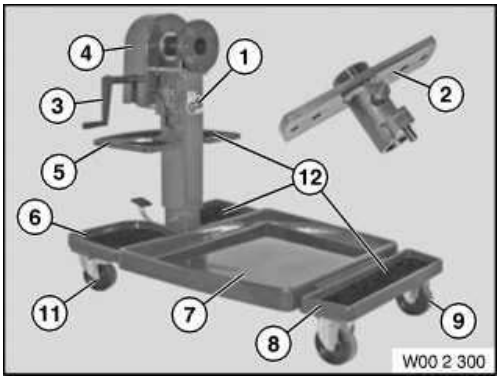
Common	Used in step 12 47
Usage	WSK 1000
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	06 01 11 (701)

cardiagn.com

2 459 012 Holder

Common Used in step 12 47

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)



2 455 010 Engine support

Common Used in step 13 46

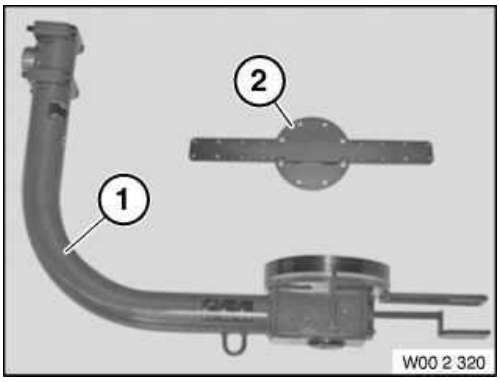
Usage	For accommodating engine on assembly stand. Engine: B3x, B4x, N47.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 495 187 (00 2 300) Assembly stand

Common Used in step 13

Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of



Pos	BMW Order number	Replaced by	Designation	In Connection with

cardiagn.com

1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.

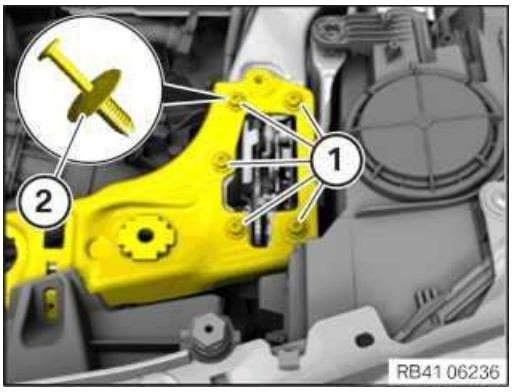
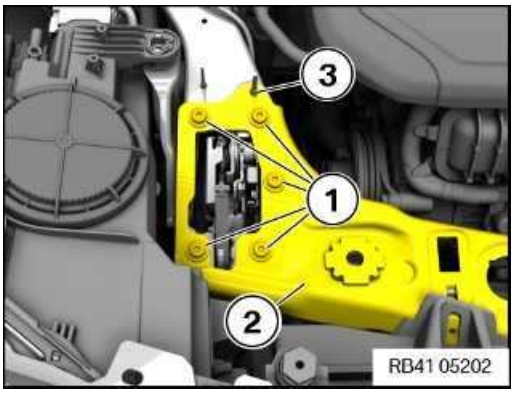
11 14 005 Replacing front crankshaft seal

PRELIMINARY WORK



1 – Remove front cross connection



- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

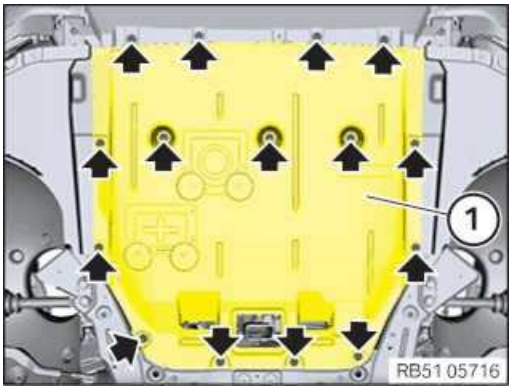
2 – Remove front right wheel

TECHNICAL INFORMATION

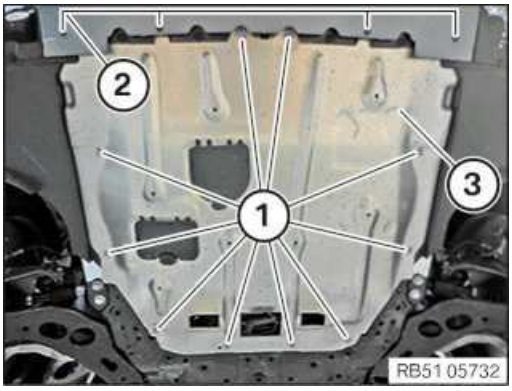
The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

cardiagn.com

TECHNICAL INFORMATION



Strictly observe the specified procedure to prevent clamping errors and imbalance.



- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

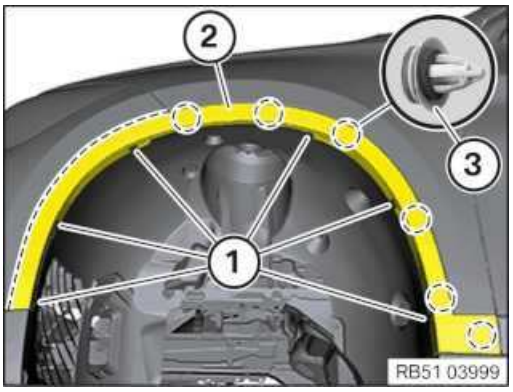
3 – Removing the front underbody protection

- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

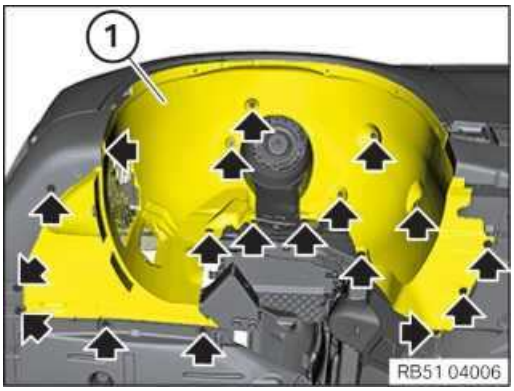
4 – Removing the front right wheel arch cover

▶ **Remove the front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.



NOTICE

Description is for left component only. Procedure on the right side is identical.

cardiagn.com

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

5 – Removing the drive belt for alternator

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

CAUTION

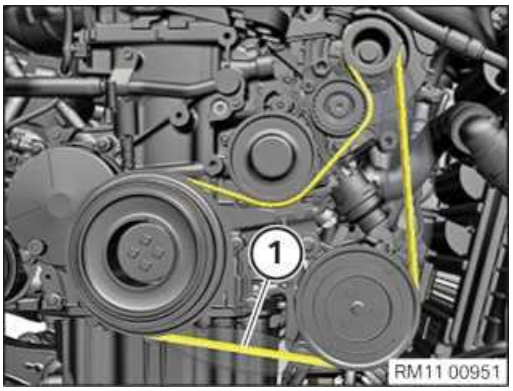
Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION

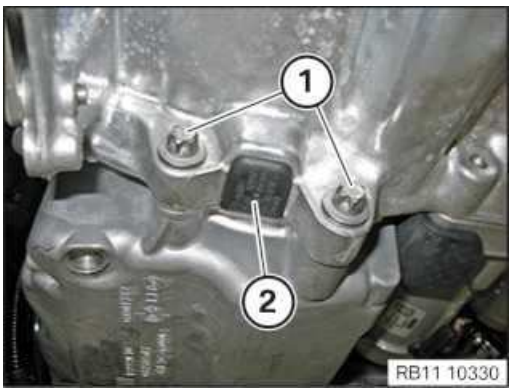
If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.



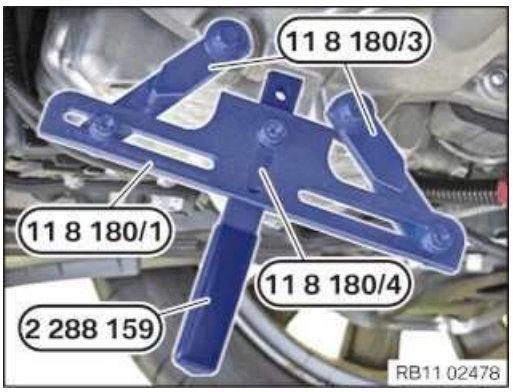
TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

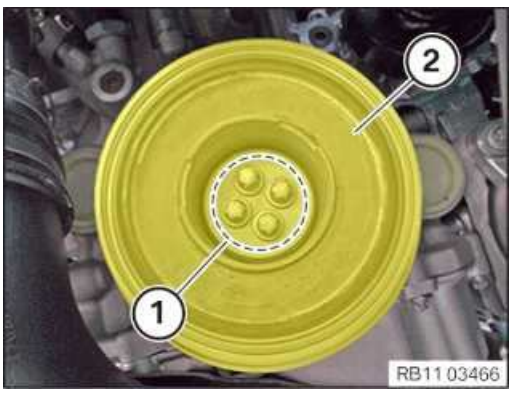
cardiagn.com



- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool **0 496 268 (11 0 390)**.



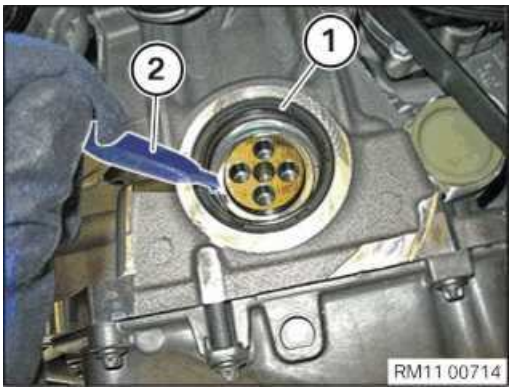
- Guide out the drive belt for the alternator (1) and remove it.



6 – Removing the vibration damper

- Release the transmission bolts (1).
- Remove the protective cap (2).

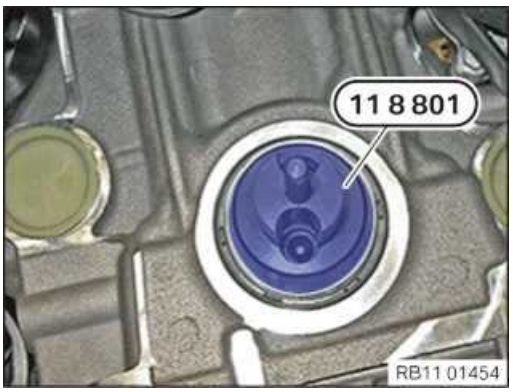
- Position special tool **0 493 587 (11 8 180)** as illustrated.
- Fasten the special tool **0 493 587 (11 8 180)** to the transmission with transmission bolts.



- Loosen screws in the area (1).
- Remove the vibration damper (2).

MAIN WORK

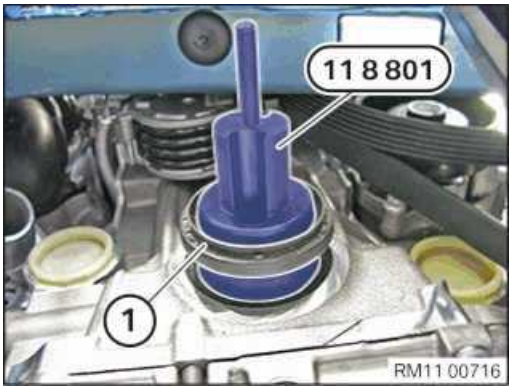
cardiagn.com



7 – Remove the crankshaft seal

- Lift the crankshaft sealing ring (1) with the special tool (2) **2 298 505**.

  Do not scratch the sealing surface on the engine block.



8 – Install the crankshaft seal

TECHNICAL INFORMATION

The radial shaft seal must be installed dry. Do not use engine oil or lubricant.

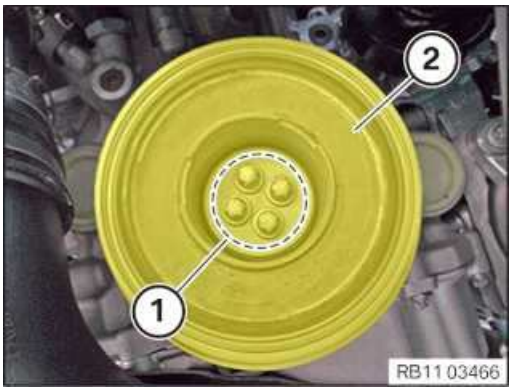
- Secure special tool **0 496 128 (11 8 801)** with special tool **0 496 129 (11 8 802)** to the crankshaft.

- Renew the crankshaft sealing ring (1).

  Parts: Crankshaft seal

- Position the crankshaft seal (1) on the special tool **0 496 128 (11 8 801)**.

- Draw in the crankshaft sealing ring with the special tools **0 496 130 (11 8 803)** and **0 496 131 (11 8 804)**.
- Screw in special tool **0 496 130 (11 8 803)** until it is flush with the crankcase.
- Remove special tools **0 496 130 (11 8 803)** and **0 496 131 (11 8 804)**.

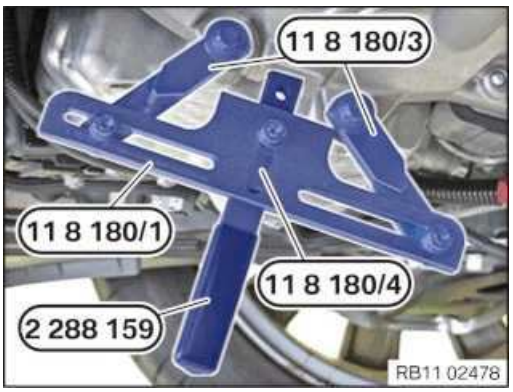


cardiagn.com

- Remove special tool **0 496 128 (11 8 801)**.

POSTPROCESSES

9 – Installing the vibration damper



- Position vibration damper (2).
- Renew screws (1).

  Parts: Bolts
- Fasten the vibration damper (2) with the bolts (1).
- Tighten the screws (1).

Vibration damper with belt pulley to crankshaft

M10x65	Renew screws. Tighten screws crosswise.	1. Jointing torque 2. Angle of rotation	40 Nm 60 °
		3. Angle of rotation	60 °

- Release the transmission bolts and remove the special tool **0 493 587 (11 8 180)**.

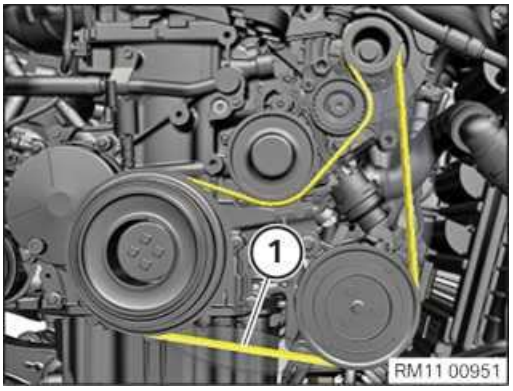
- Tighten transmission screws (1).

Transmission to engine

M8		Tightening torque	19 Nm

- Install protective cap (2).

10 – Installing the drive belt for alternator



TECHNICAL INFORMATION

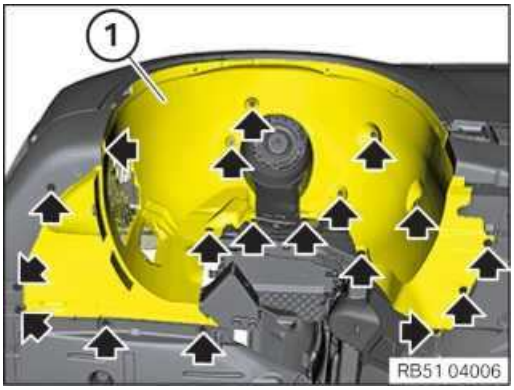
If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

cardiagn.com

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Feed in the drive belt for the alternator (1) and install it.



- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool **0 496 268 (11 0 390)** out of the belt tensioner and remove it.

11 – Installing the front right wheel arch cover

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

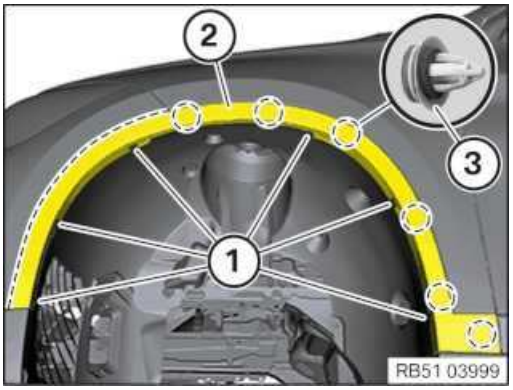
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**

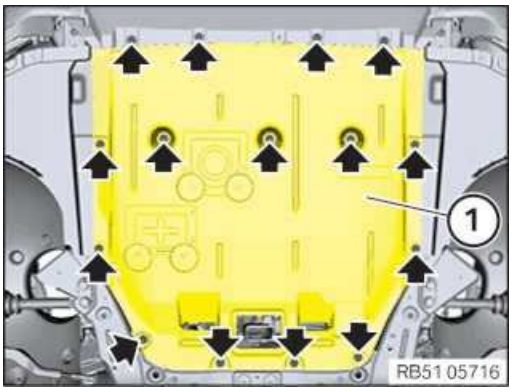


NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

cardiagn.com

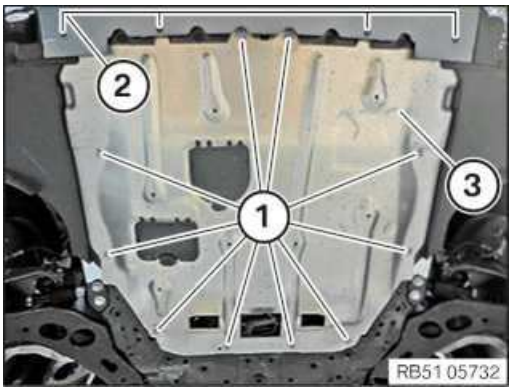
NOTICE



Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.



12 – Installing the front underbody protection

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

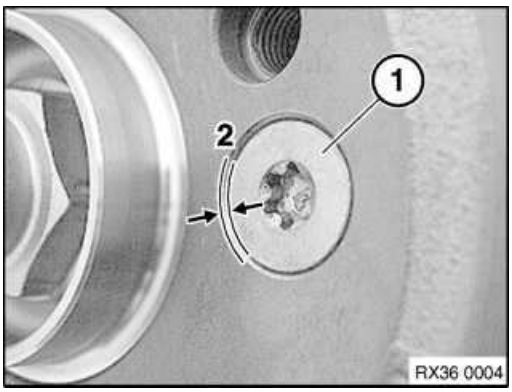
13 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

cardiagn.com

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

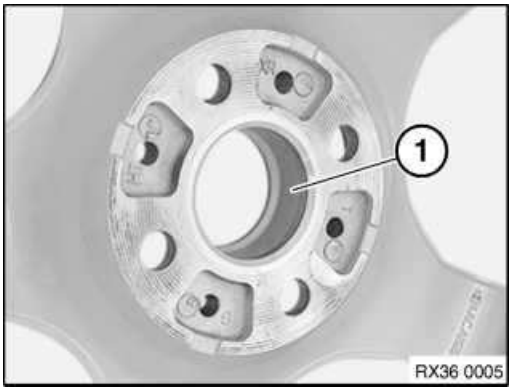


- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

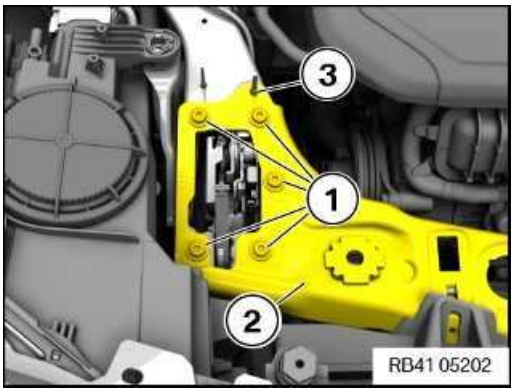
In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

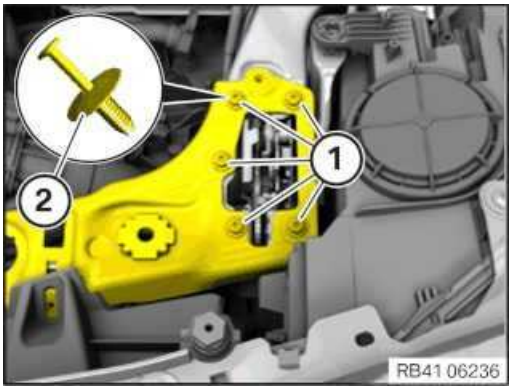
Wheel bolts



M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

cardiagn.com

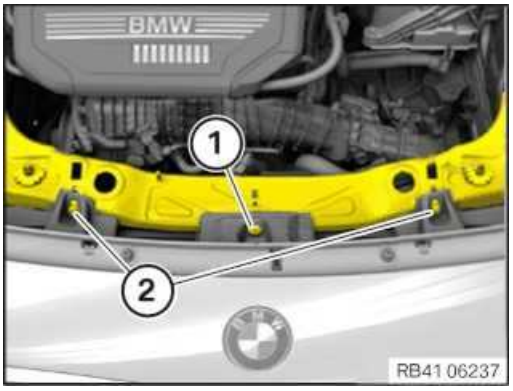
14 – Install front cross connection



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

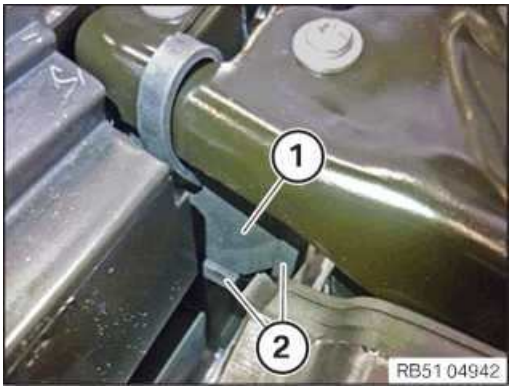
Screws M6x20		Tightening torque	11,8 Nm

- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

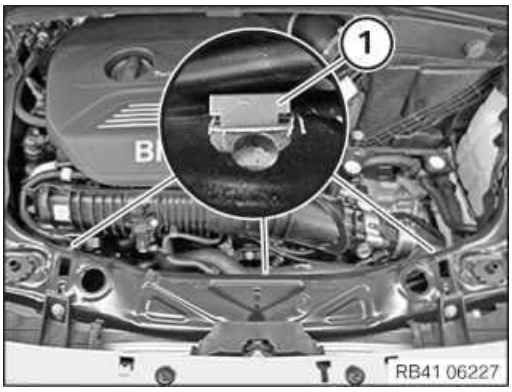
- Tighten down screws (2).



Air duct to upper connection

M6x20 screw		Tightening torque	11,8 Nm

- Tighten down screw (1).



Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm

- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

cardiagn.com

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

Additional Information

Overview of Tightening Torques

Vibration damper with belt pulley to crankshaft — Used in step 9

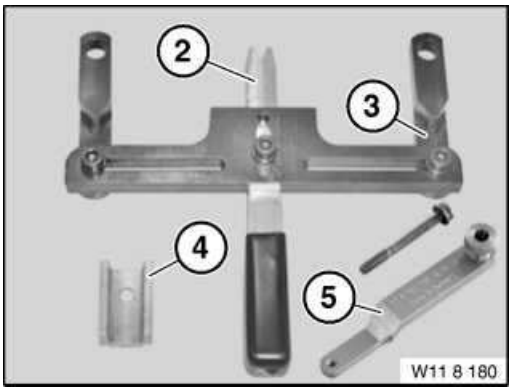
Overview of Special Tools



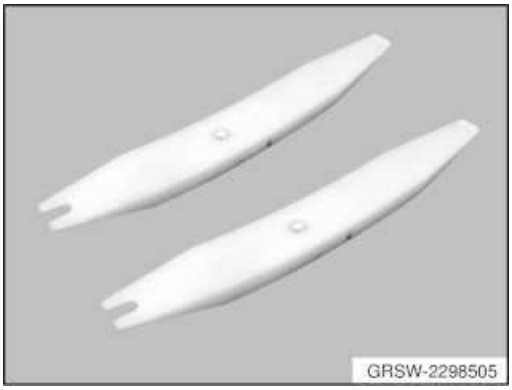
0 496 268 (11 0 390) Pin

Common Used in step 5 10

Usage	(roll pin) For securing new tensioning pulley (poly-V belt)
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 15 07 (390)

0 493 587 (11 8 180) Holder

Common Used in step 6 9



Usage	(Counter support) Blocking flywheel when releasing and tightening down central bolts on vibration absorber
Included in the tool or work	
Storage location	B45
Replaced by	
In connection with	
SI-Number	01 12 99 (452)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
2	0 494 433 (11 8 182)		**Shaped part** (shaped part)	
5	0 494 716 (11 8 185)		**Adapter** (Adapter with adjusting sleeve) E46 M47TU	
1	0 494 432 (11 8 181)	**0 494 434**	**Basic body** (Basic body) E65/M67, E38/M67 Discontinuation Replaced by 11 8 183 (0 494 434)	
3	0 494 434 (11 8 183)		**Basic body**	
4	0 494 435 (11 8 184)		**Adapter** E65 / M67

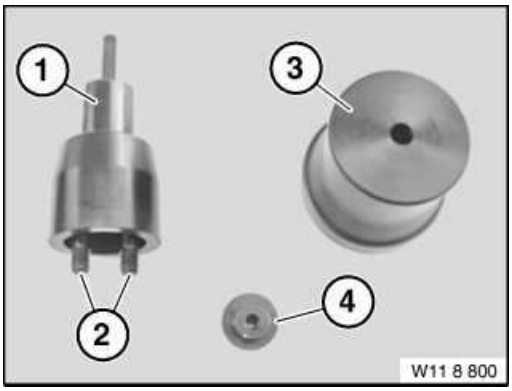
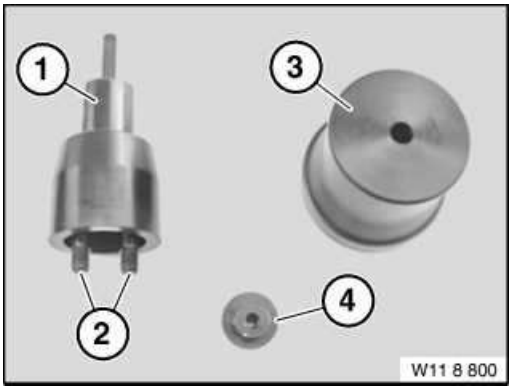
2 298 505 Wedge



Common	Used in step 7
Usage	Set (delivery of 2 pieces)
Included in the tool or work	
Storage location	C34
Replaced by	
In connection with	
SI-Number	01 03 12 (792)

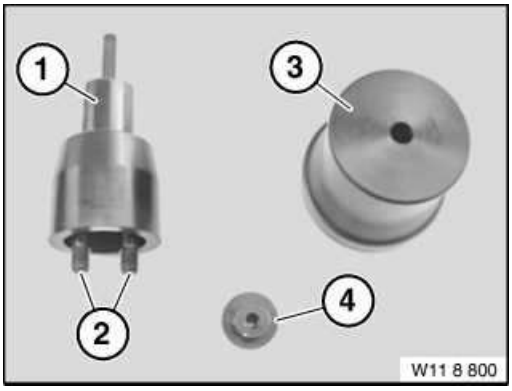
0 496 128 (11 8 801) Basic body



Common	Used in step 8
Usage	Available only as a complete tool set 11 8 800 = 83 30 0 496 127 - as of 30.11.2011
Included in the tool or work	0 496 127
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

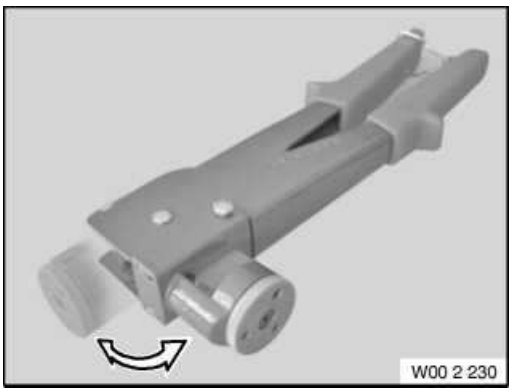
0 496 129 (11 8 802) Screw

Common	Used in step 8
Usage	(Set of screws) Can only be ordered as part of complete tool 11 9 660 = 0495955
Included in the tool or work	0 496 127
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)



0 496 130 (11 8 803) Holding sleeve

Common	Used in step 8
Usage	(Thrust piece) sale of existing inventory and then available as part of complete tool set 11 8 800 = 83 30 0 496 127 only - as of 30.11.2011
Included in the tool or work	0 496 127
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)



cardiagn.com

0 496 131 (11 8 804) Nut

Common	Used in step 8
Usage	(Nut with collar) available as part of set of tools 11 8 800 = 83 30 0 496 127 only - as of 30.11.2011
Included in the tool or work	0 496 127
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

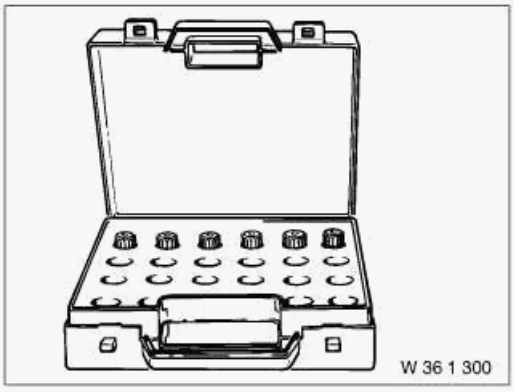
0 496 521 (00 2 230) Pliers

Common	Used in step 11
Usage	(Blind rivet pliers for plastic rivets) For shaft diameters of 3.5 mm, 3.9 mm and 4.5 mm
Included in the tool or work	
Storage location	C25
Replaced by	
In connection with	
SI-Number	01 17 08 (478)

2 344 011 Tool

Common	Used in step 13
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

Replacement tools:



0 495 221 (36 1 323) Wheel stud

Common	Used in step 2
Usage	(Code 30) Code 39 available separately, (see EPC) under 36 13 1 181 259
Included in the tool or work	0 492 518
Storage location	
Replaced by

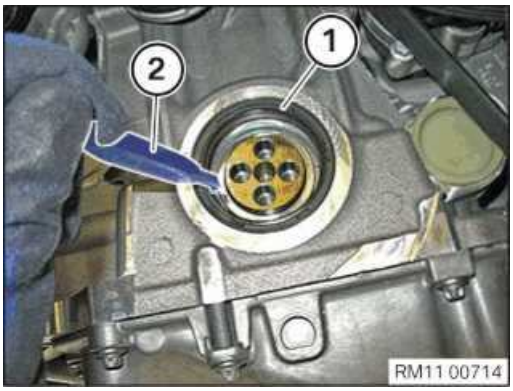
Operating materials	Used in step
2.0 Grease for wheel centring	13

cardiagn.com

11 14 005 Replacing front crankshaft seal (B47)



Special tools required:

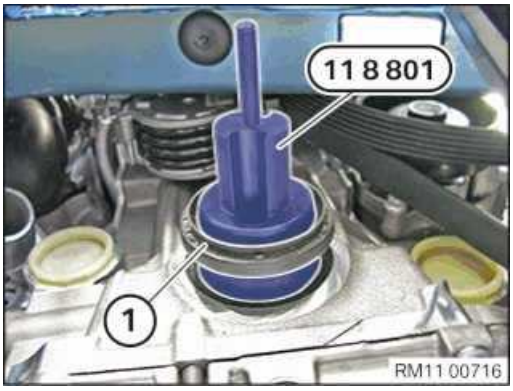
- 11 8 801
- 11 8 802
- 11 8 803
- 11 8 804

Necessary preliminary tasks:

- Remove vibration damper

Removal:

Lift out crankshaft seal (1) using suitable tool.
Do not scratch sealing surface against engine block.



Installation:

Important!
The radial shaft seal must be installed dry.
Do not use engine oil or lubricant.

cardiagn.com

Fasten special tool 11 8 801 with11 8 802 on the crankshaft.

Position the radial shaft seal (1) on special tool 11 8 801 .

Draw in radial shaft seal with special tools 11 8 803 and 11 8 804 .
Screw in special tool 11 8 803 until it is flush with the crankcase.

Required follow-up work:

- Install vibration damper
- Check engine for leak tightness

cardiagn.com

11 14 151 Replacing rear crankshaft seal (B47)

Special tools required:

- 23 0 490
- 11 8 815
- 11 8 811
- 11 8 812
- 11 8 813
- 11 8 814
- 11 8 810

Necessary preliminary tasks:

- Remove transmission.
- Remove flywheel.

Important!

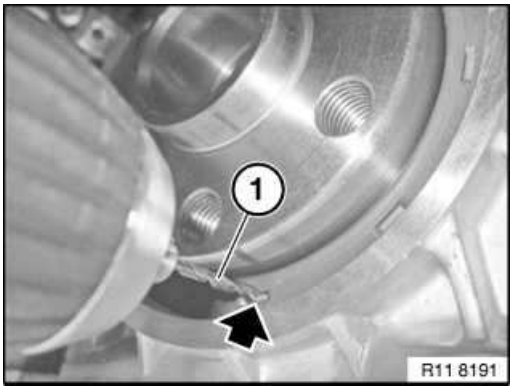
Before the radial shaft seal is removed, the engine must be moved to the installation position using suitable lifting gear.

Engine oil may escape.

The radial shaft seal must be installed dry.

Do not use engine oil or lubricant.

Removal:



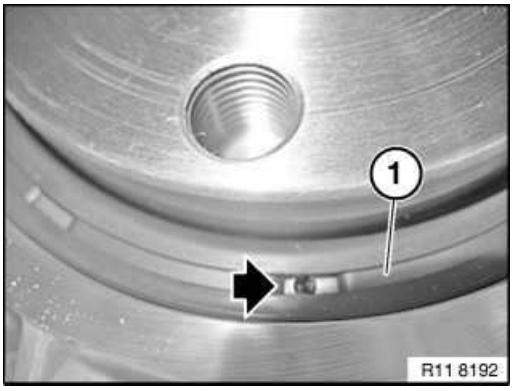
Important!

Magnet wheel (1) is magnetic.

Keep magnet wheel (1) in a plastic bag away from swarf.

Remove magnet wheel (1) from crankshaft.

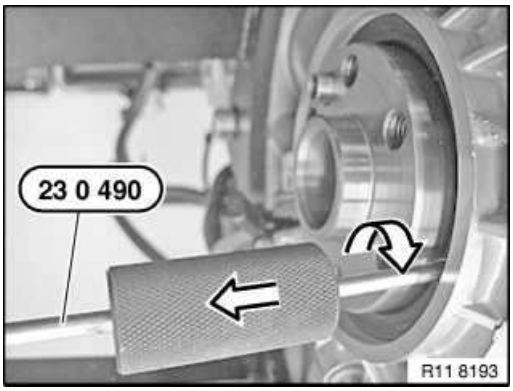
cardiagn.com



Important!

Drill size maximum 2,5 mm.

Remove swarf immediately with vacuum cleaner.



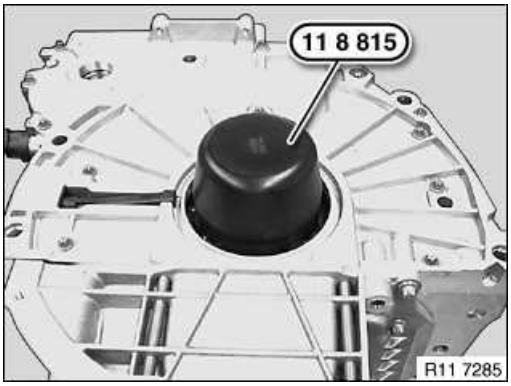
Do not remove swarf with compressed air!

Drill a hole with a drill (1) in the radial shaft seal (see arrow).

Important!

Remove swarf from the radial shaft seal (1).

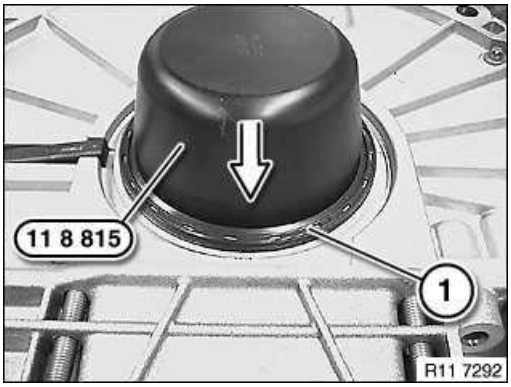
Important!



Risk of damage at the crankcase and on the running surface of the crankshaft.

Immediately carefully remove residual swarf.

Screw in special tool23 0 490 in direction of arrow.



Drive out radial shaft seal with impact weight in direction of arrow.

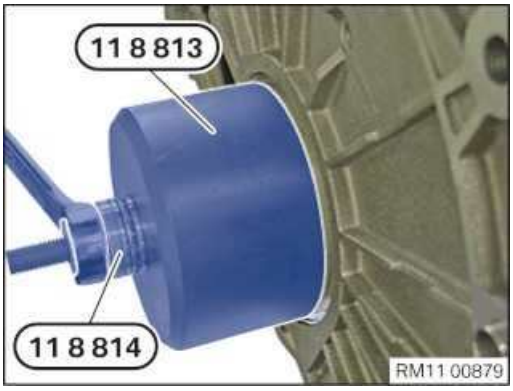
Installation:

Position special tool11 8 815 on crankshaft.*Note:*
Graphic :N47 D20

cardiagn.com

Use special tool 11 8 815 to fit the radial shaft seal (1) in the direction of the arrow up to the timing case cover and position.

Remove special tool 11 8 815 .



Fasten special tool 11 8 811 with special tool 11 8 812 on the crankshaft.

Slide on special tool 11 8 813 .

Screw down special tool 11 8 814 .

Press in radial shaft seal with special tool 11 8 813 .

Screw in special tool 11 8 813 up to gear case cover.

cardiagn.com

Note:
Check the fitting sleeve for damage.

Note the installation position of the magnet wheel.

Position magnet wheel (1) on crankshaft.

Remove all special tools 11 8 810 .

Required follow-up work:

- Install flywheel.
- Install transmission.

cardiagn.com

11 14 151 Replacing the crankshaft seal

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

- Ensure there is a specific weight compensation on the motor vehicle.

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

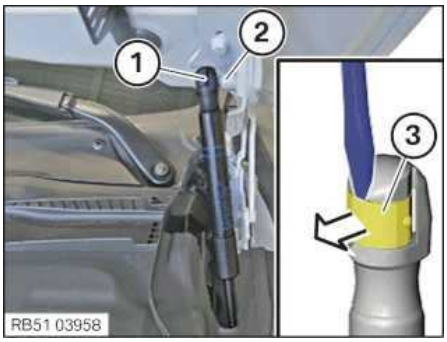
- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

PRELIMINARY WORK

1 – Bring front compartment lid in the service position

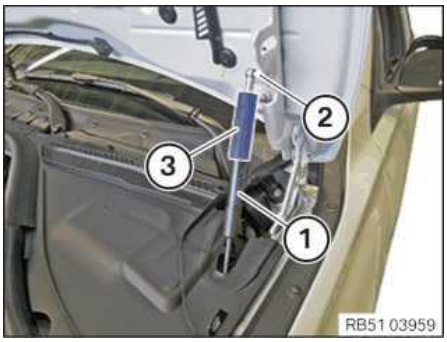
Prerequisite

Engine compartment lid is open.



cardiagn.com

CAUTION



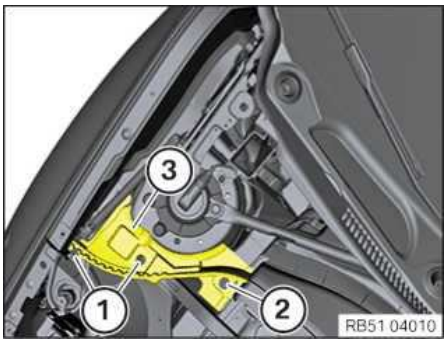
Shutting bonnet or tailgate.

Danger of injury!

- Support bonnet/tailgate in fully open position with the aid of a suitable device.

- Lift clamp (3) slightly using a screwdriver, in the direction of the arrow.
- Lift off ball socket (1) from ball pin (2).
- Repeat the operation on the other side of vehicle.

TECHNICAL INFORMATION

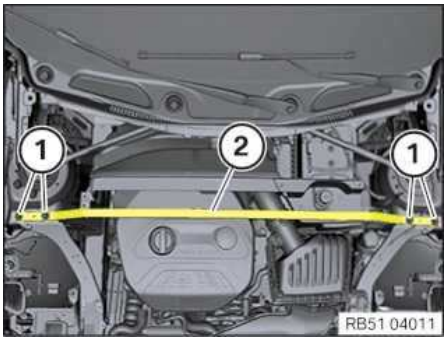


Conduct the following operation with the assistance of a second person.

- Remove the bonnet support and open the bonnet further.
- Push special tool (3) over gas pressure spring (1).
- Place special tool on the ball pin (2) and engage using force.
- Repeat the operation on the other side of vehicle.

2 – Remove suspension cross-brace

TECHNICAL INFORMATION

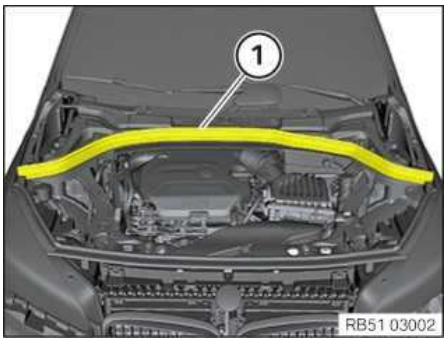


Driving without the strut brace/front end or tension strut is not permitted.

NOTICE

Description is for right component only. The procedure on the left side is identical.

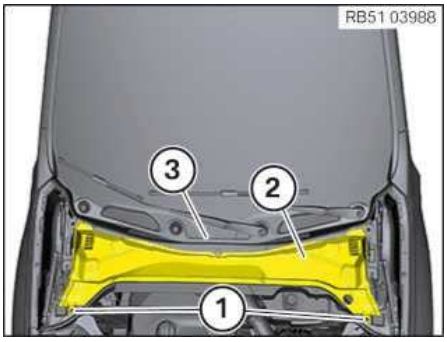
- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).



- Loosen screws (1).
- Remove strut brace (2).

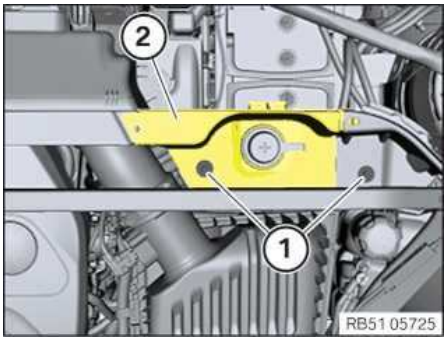
3 – Remove the seal for the rear bonnet

cardiagn.com



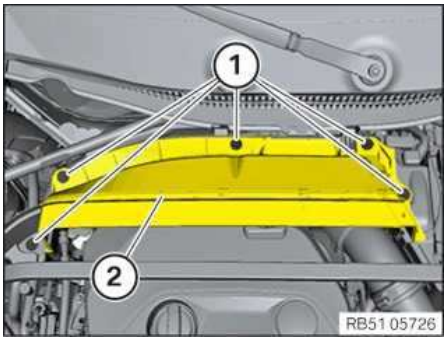
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Pull off rear bonnet seal (1) towards the top and remove.

4 – Removing front cowl panel cover



- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

5 – Removing the upper bulkhead cover

- Loosen screws (1).
- Guide out and remove the cover (2).

- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

6 – Removing the acoustic cover

WARNING

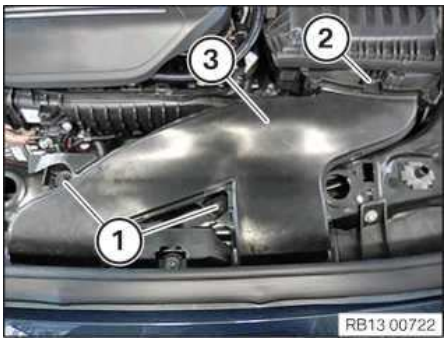
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

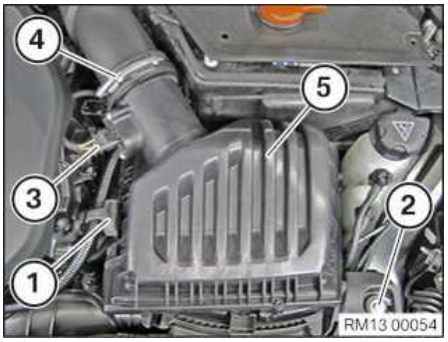
RISK OF DAMAGE



Damage to the acoustic cover.

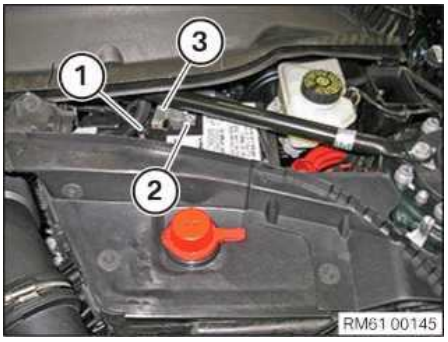
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



- Unclip the acoustic cover from the marked areas towards the top.

7 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

8 – Removing intake silencer housing

- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

9 – Disconnecting the battery earth lead

- Unlock plug connection (1) and disconnect.
- Unfasten nut (2).
- Remove the battery earth lead (3) and secure to one side.

10 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

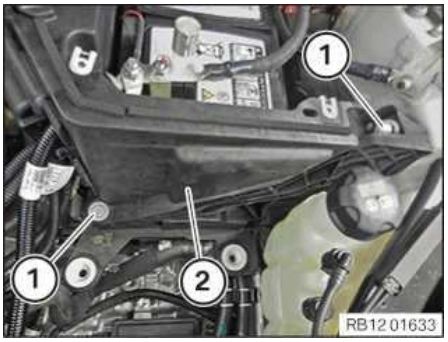
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

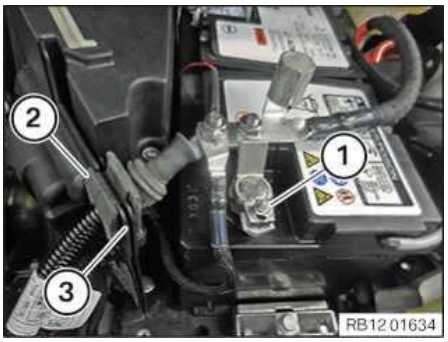
Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.



- Do not pull on the wires when disconnecting connectors and plug connections.

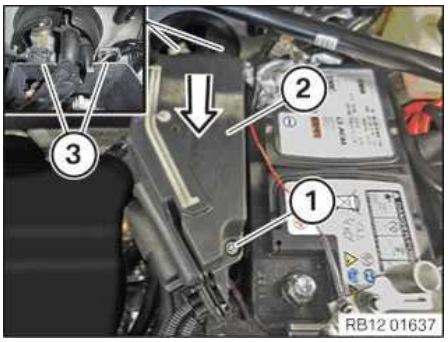
TECHNICAL INFORMATION



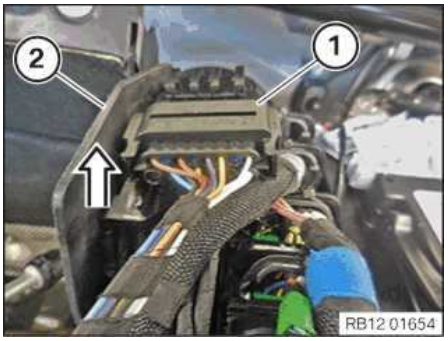
Follow instructions for removing and installing control units.
For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

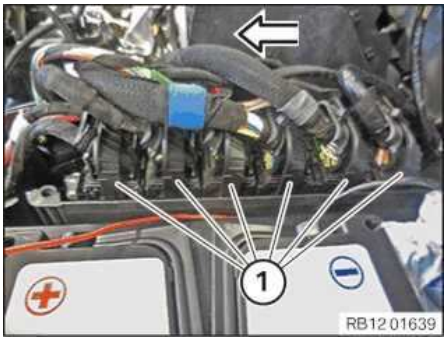
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

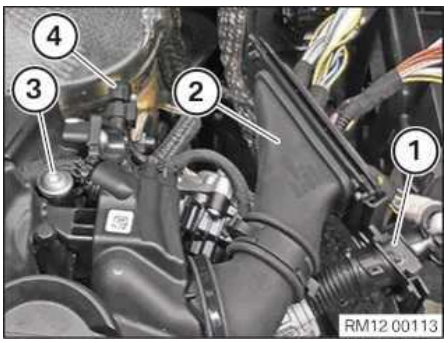


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

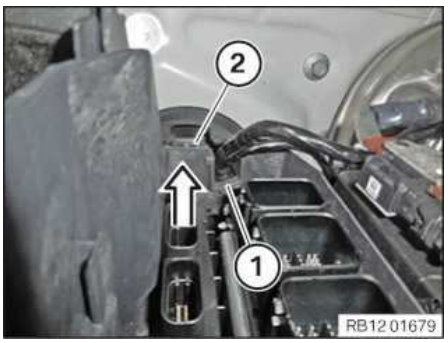


cardiagn.com

- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

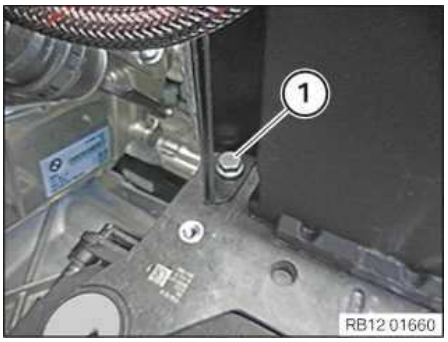


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

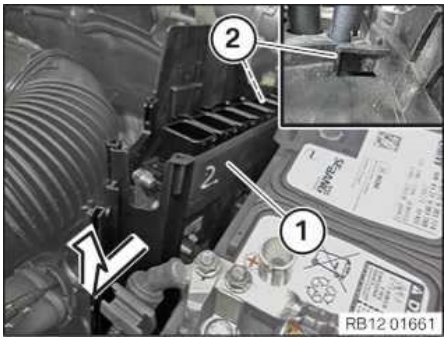


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

- Unlock and loosen connector (1).



- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

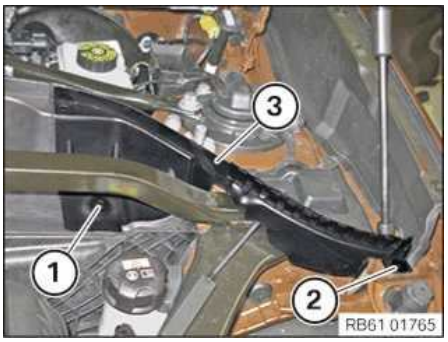


- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

cardiagn.com

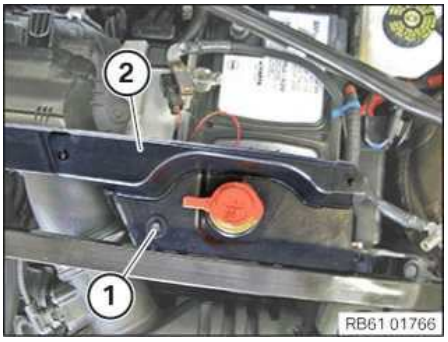
- Loosen screw (1).

- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.



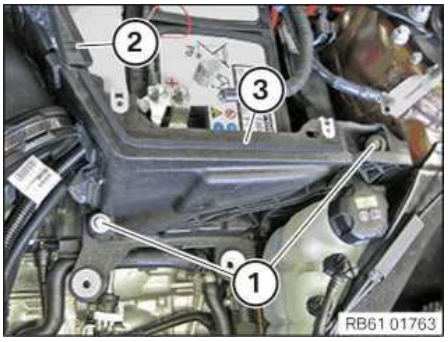
11 – Remove vehicle battery

WARNING



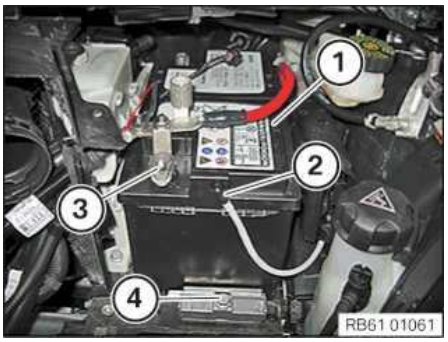
Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!



- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).



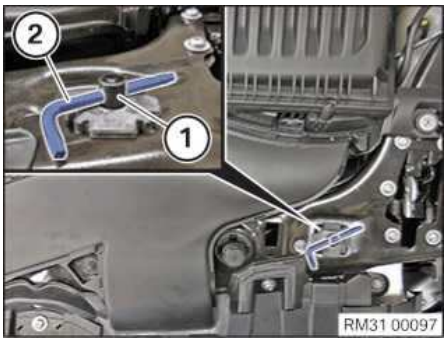
- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

cardiagn.com

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING



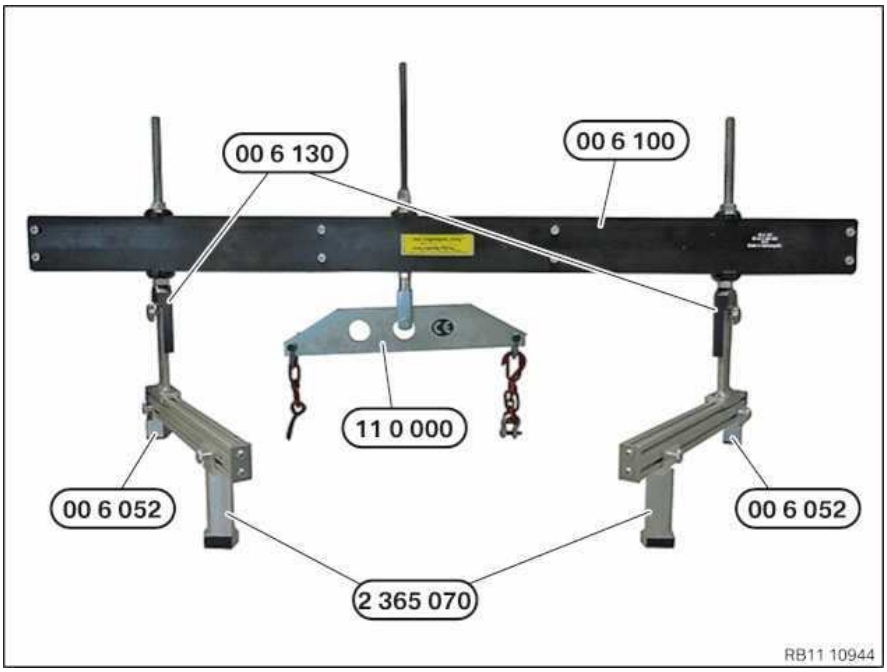
Unprotected battery terminals.

Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

12 – Securing radiator on left and right



NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

13 – Installing the engine bridge

Overview: Prepared engine bridge

Prerequisite

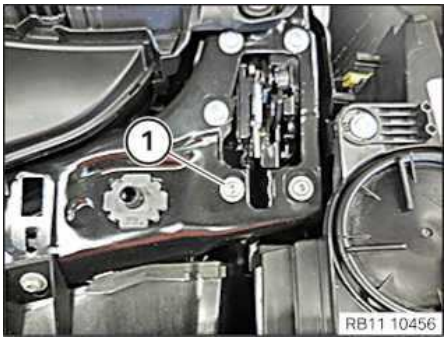
Front compartment lid is in service position.

CAUTION

Components connected to the engine joint or cross member.

Danger of injury!

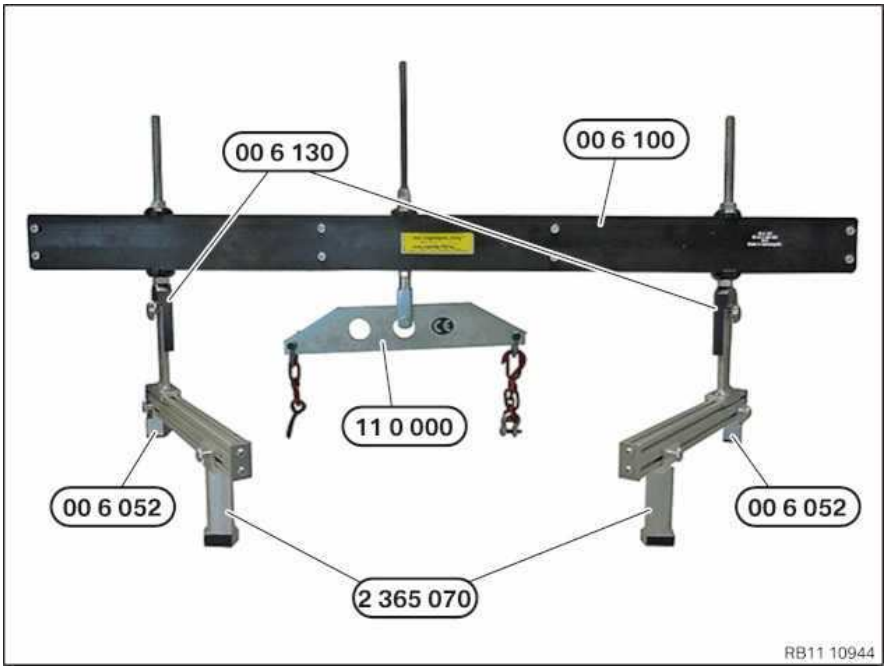
- Check lifting eyes and engine mounting brackets for damage, e.g. cracks.
- Attach the component to correctly mounted engine joints or cross members only.
- Exclusively lift the component, do not move it forwards, backwards or in transverse direction.



cardiagn.com

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

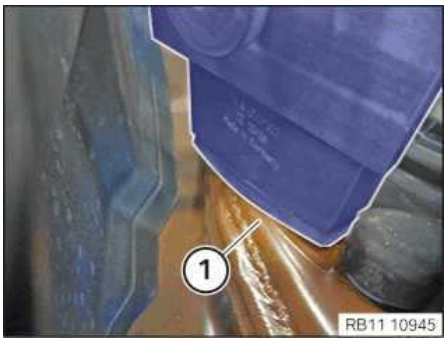
Special tool to cylinder head



M8		Tightening torque	21,5 Nm

- Loosen screw (1) of the left bonnet catch.

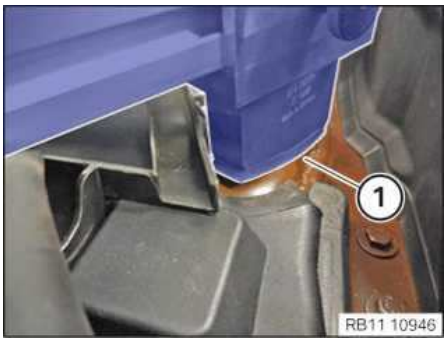
- Loosen screw (1) of the right bonnet catch.



CAUTION

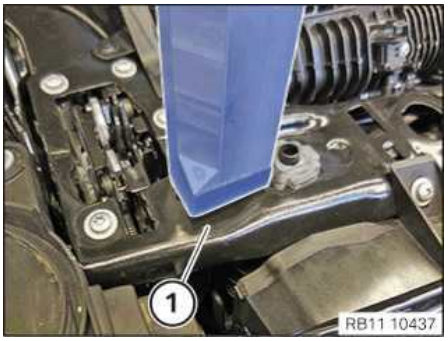
Heavy component.

Heavy components can lead to injury or damage.

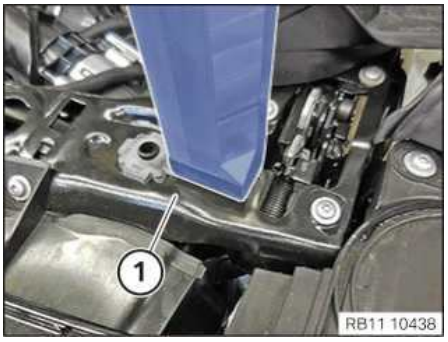


- Remove and install heavy components with the aid of another person/other persons.

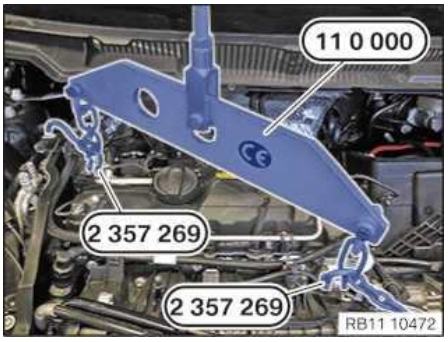
- Set entire cross member **0 496 852 (00 6 100)** on the vehicle and position with the help of an auxiliary person.



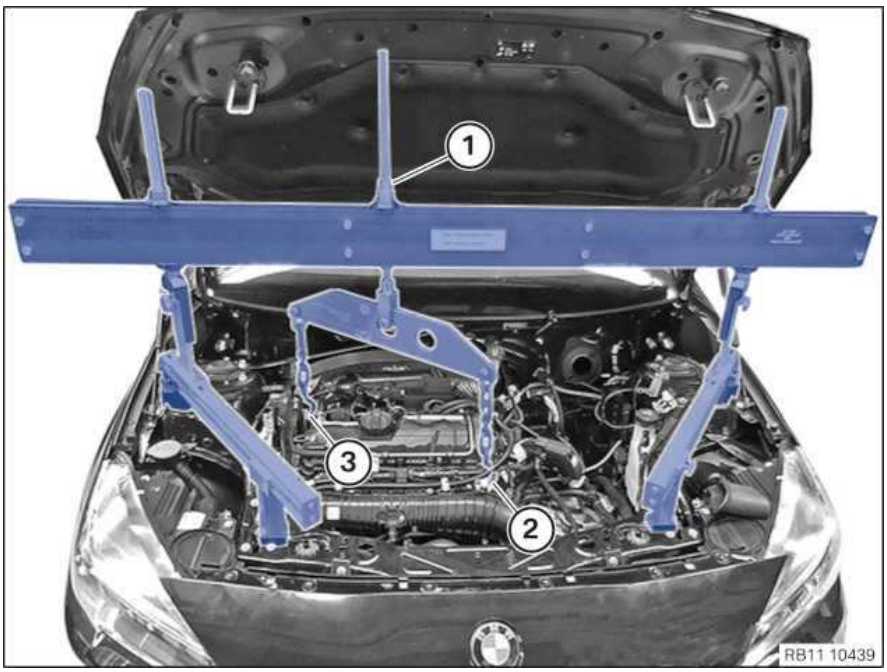
- Position the special tool at the rear mounting point (1) on the **right**.



cardiagn.com

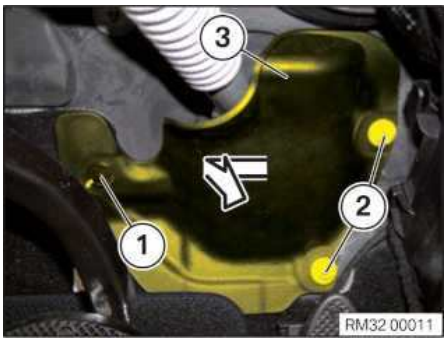


- Position the special tool at the rear mounting point (1) on the **left**.



- Position the special tool at the front mounting point (1) on the **right**.

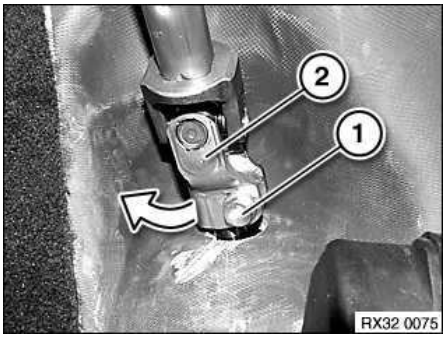
- Position the special tool at the front mounting point (1) on the **left**.



- Position special tool **0 490 561 (11 0 000)** above the engine.
- Attach special tools to the mounting lugs of the engine.

- Tighten side screws (2) and (3).
- Slightly pretension the spindle screw (1) of the engine support beams.
- Tighten down all adjusting screws, knurled screws and nuts on cross member **0 496 852 (00 6 100)** and on special tool .

14 – Releasing lower steering shaft from steering gear



cardiagn.com

- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!

- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

15 – Removing both front wheels

▸ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

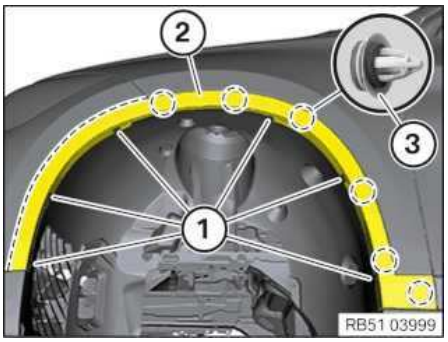
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

16 – Removing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

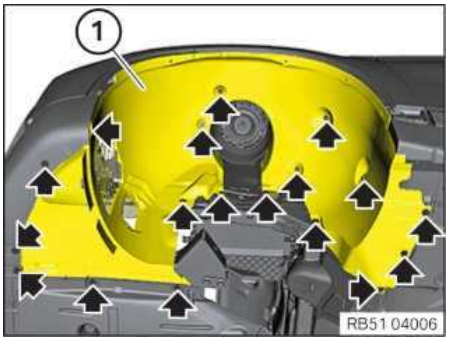
▸ **Remove the front wheel arch trim**



NOTICE

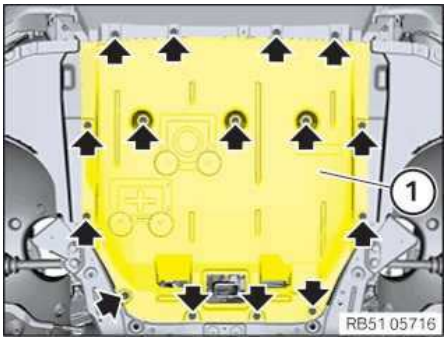
To provide a better overview: Schematic diagram with partially hidden components.

NOTICE



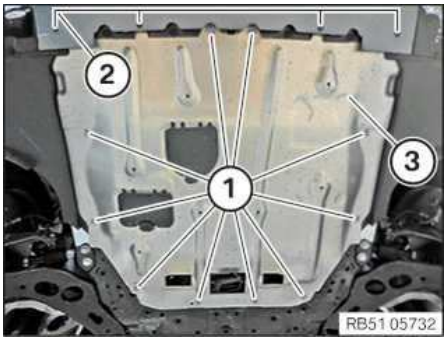
Description is for left component only. Procedure on the right side is identical.

cardiagn.com



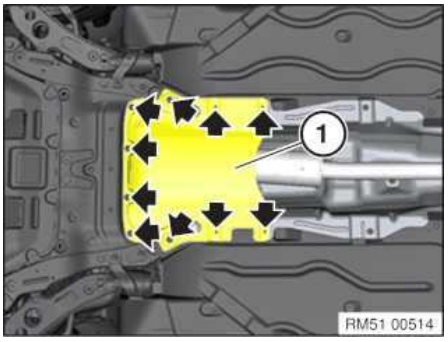
- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

▸ **Remove front wheel arch cover**



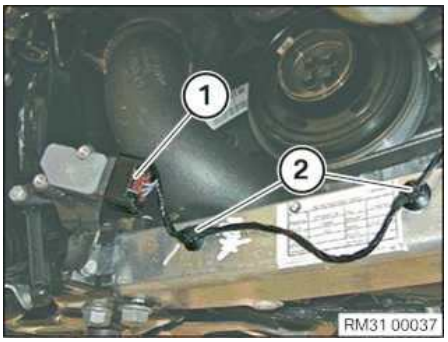
- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

17 – Removing the front underbody protection



- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

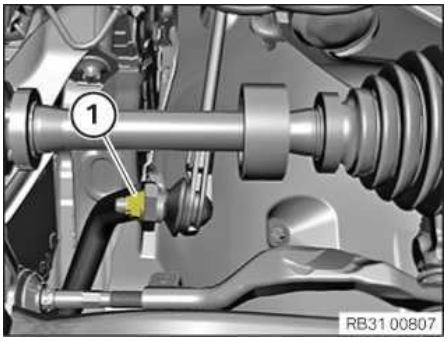


18 – If installed: Removing rear underbody protection

- Remove screws (arrows).
- Remove the rear underbody protection (1).

19 – With right installation: Detaching ride height sensor cable

cardiagn.com



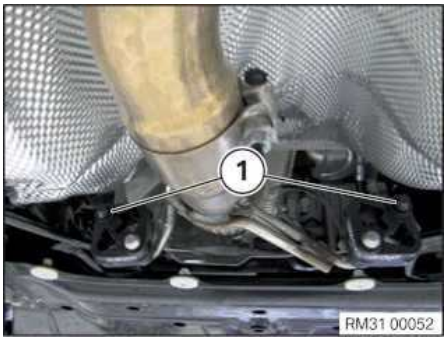
- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

20 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

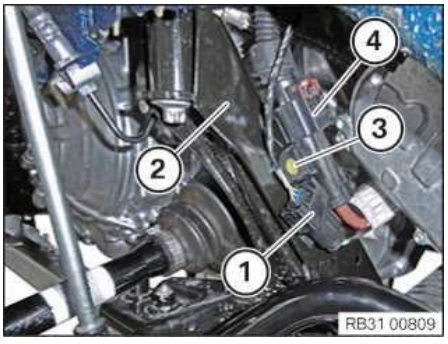
▶ **Detach the anti-roll bar from the anti-roll bar link**



- Unfasten nut (1).

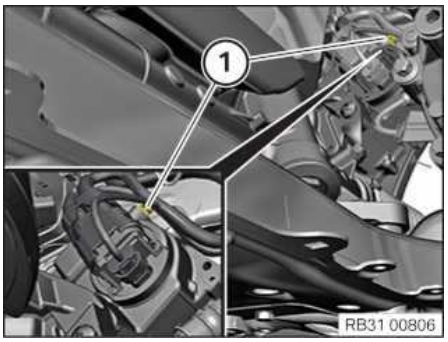
Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .



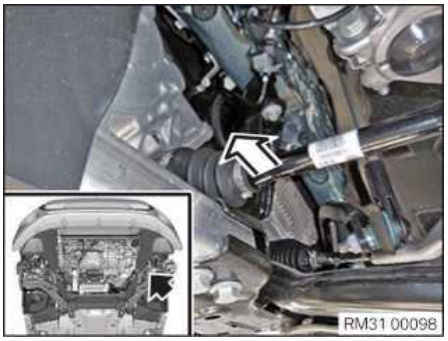
21 – Detaching rubber mount from front axle support

- Spray rubber mount (1) with lubricant and release from holder on front axle support.



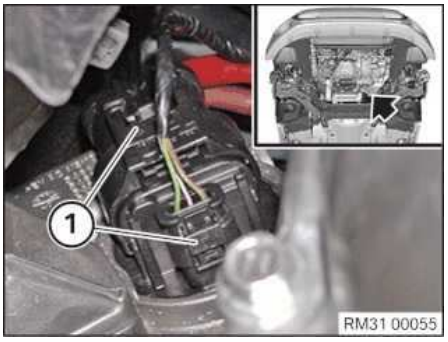
22 – Disconnecting plug connections from steering gear

▶ **If installed: Detach connectors from the front axle carrier**

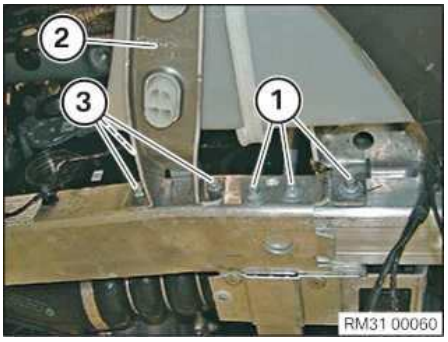


- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).

cardiagn.com



- Disconnect wiring harness (1) from steering gear.

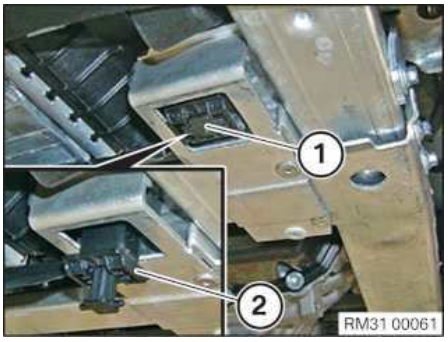


- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.

- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

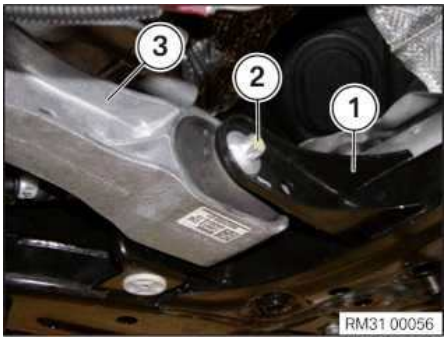
23 – Releasing the mounted part from the front axle support



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.



- Loosen screws (1).

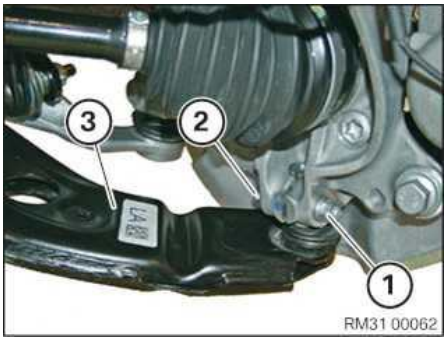
NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).

- Loosen screw (2) of the engine support (3) on the front axle (1).

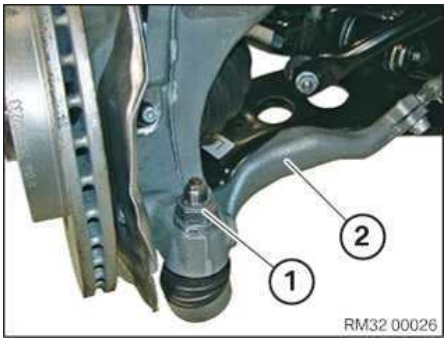
cardiagn.com



NOTICE

Perform the operations on the left and right side.

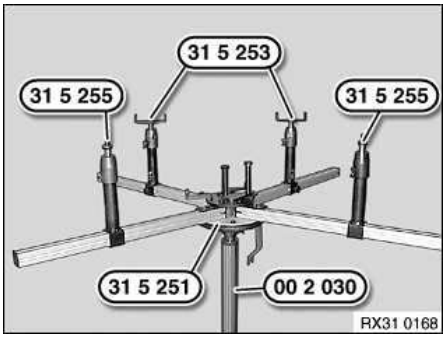
- Loosen screws (1).



24 – Detaching and removing front axle completely

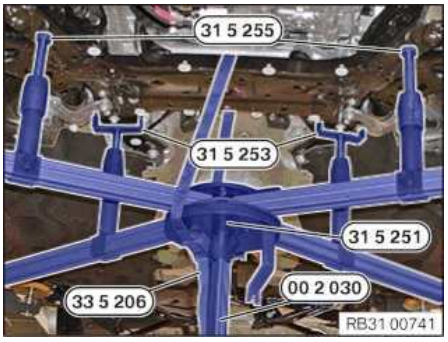
NOTICE

Perform the operations on the left and right side.



- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .

NOTICE

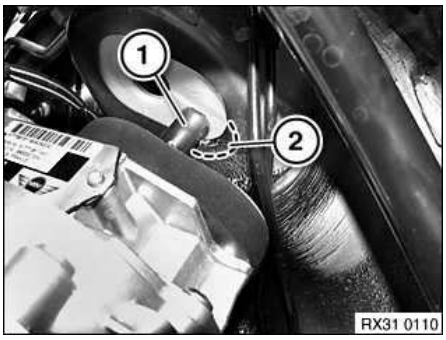


Perform the operations on the left and right side.

- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

Note: In a profile rail pair, two profile rails are connected to one another by gearing.

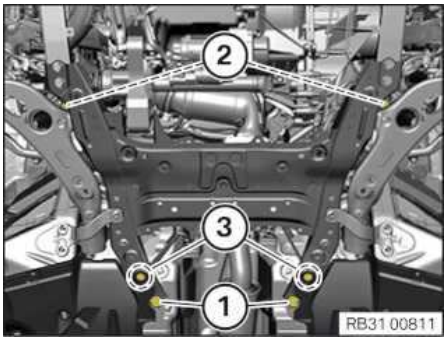


- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .

cardiagn.com



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

25 – Removing starter motor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

cardiagn.com

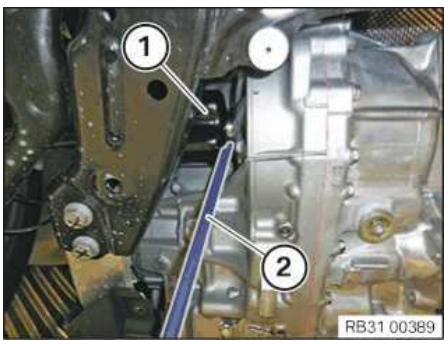
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

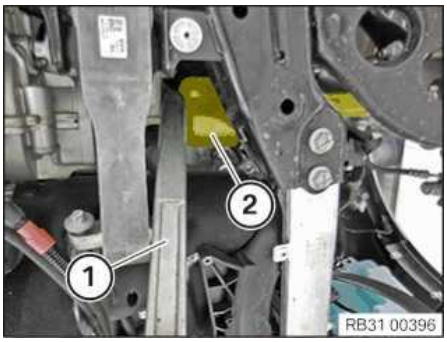
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



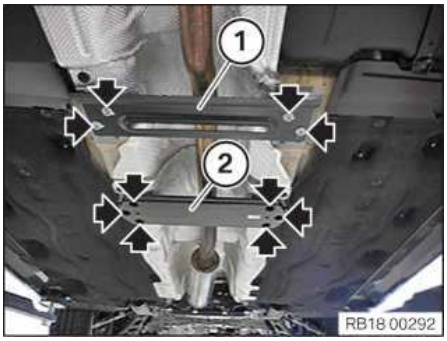
- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Loosen screws (1).
- Feed out starter motor and remove.



26 – Partially removing the left output shaft

- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Tie up output shaft (1).

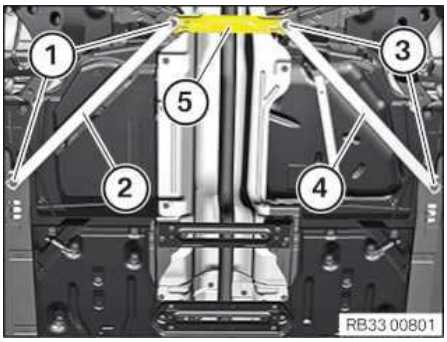


27 – Partially removing right output shaft

cardiagn.com

- Lever out the output shaft (2) with a mounting lever (1).
- Tie up output shaft (1).

28 – Removing the connecting support from the tunnel in front and back



- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

29 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.

- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

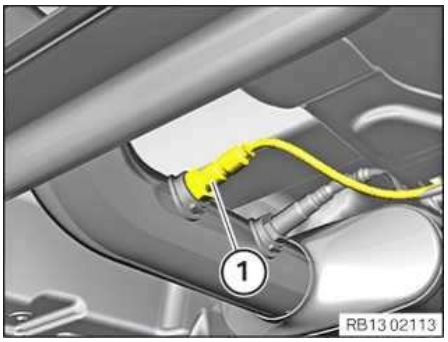
30 – Remove exhaust system

WARNING

Hot surfaces.

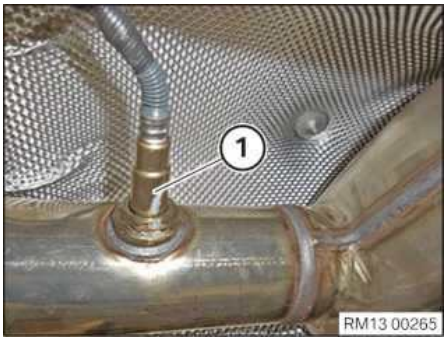
Risk of burning!

- Perform all work only on components that have cooled down.



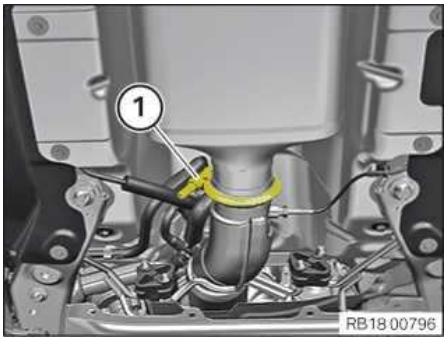
CAUTION

Heavy component.

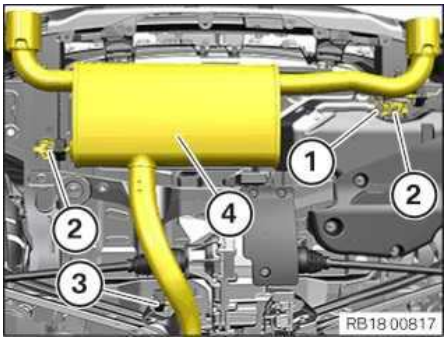


Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

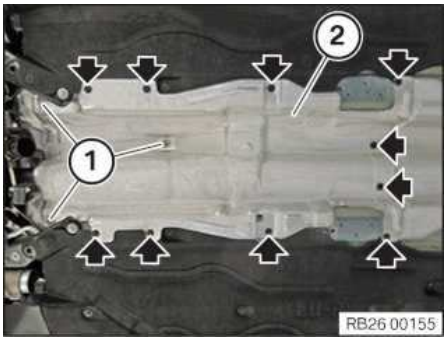


cardiagn.com



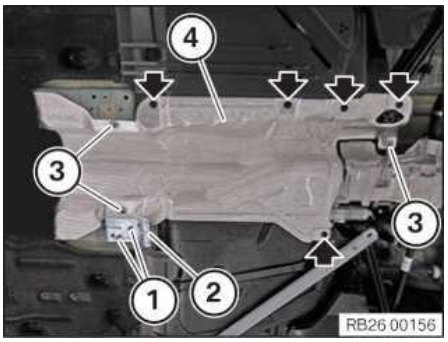
- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.

- Release the diesel particulate sensor (1), guide it out and set it aside.



- Loosen V-band clamp (1).

- Loosen screw (1).
- Loosen nuts (2).
- Release the rubber mount (3) of the exhaust system (4).
- Lower and guide out the exhaust system (4) with assistance of a second person and remove it.



31 – Remove front heat shield

- Remove screws (arrows).
- Loosen nuts (1).
- Guide the heat shield (2) out and remove it.

32 – Remove heat shield at rear.

cardiagn.com

- Loosen screws (1).
- Guide out and remove holder (2).
- Remove screws (arrows).
- Loosen nuts (3).
- Guide the heat shield (4) out and remove it.

33 – Remove propeller shaft

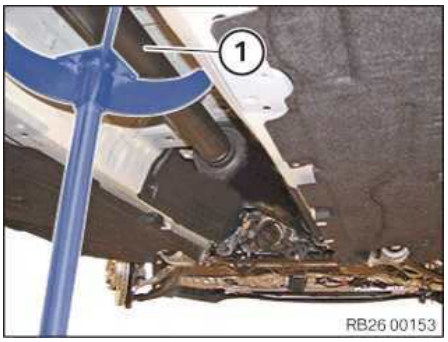
CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

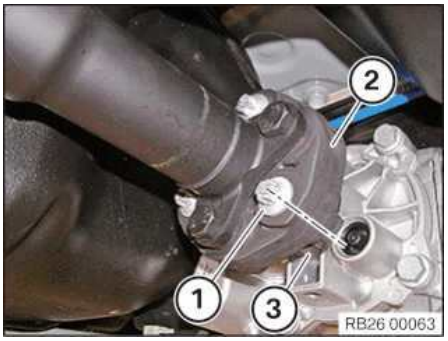


Damage to propeller shaft during removal.

Non-observance of the removal guidelines for the propeller shaft on the rear axle differential may cause severe damage.

- Do not disassemble the three-hole flange, flexible disc and propeller shaft. The three-hole flange to the rear axle differential is balanced with the flexible disc and propeller shaft.
- Loosen the recessed nut against the direction of travel in clockwise direction. The propeller shaft must be loosened on the recessed nut only and exclusively in the direction of rotation otherwise the anti-twist lock of the bi-hexagonal flange nut is damaged.
- In the event of a damaged anti-twist lock on the bi-hexagonal flange nut: Replace the rear axle differential.

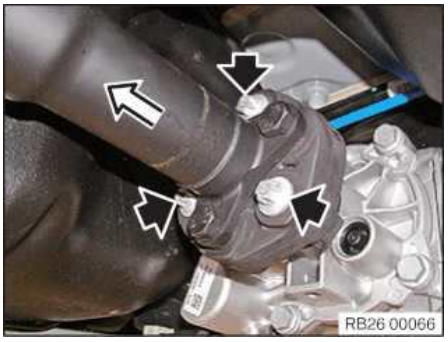
- Install the special too l between the front and rear propeller shaft.
- Make sure that the arrows on the special tool point forward in the direction of travel.



- Always support the propeller shaft (1) with a conventional jack.

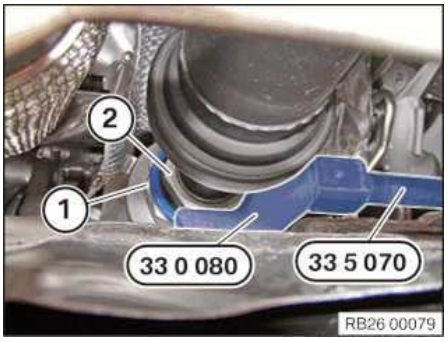
cardiagn.com

- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.



TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.



- Mark the installation position of the screw connection (1), the flexible disc (2) and the three-hole flange (3) on the same level.
- Loosen the screw connection (1).

- Loosen screws (1).

- Remove screws (arrows).
- Guide the propeller shaft out in the direction of the arrow and set it aside.

RISK OF DAMAGE

Damage to the transfer box.

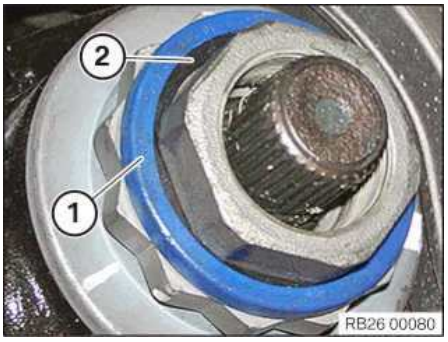
Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

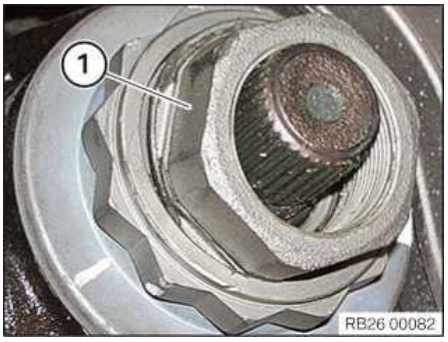
- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to detach the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



cardiagn.com

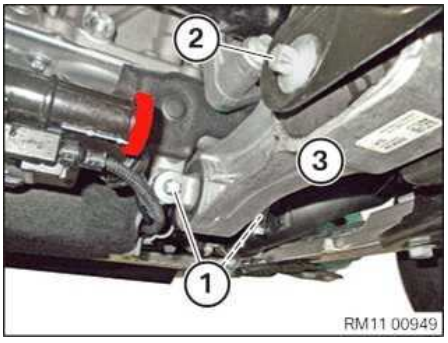


- Release the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

- Thread the propeller shaft (2) out of the recessed nut (1) and remove.

- Thread the retaining clip (1) and the seal (2) out and remove.

- Thread out and remove the recessed nut (1).

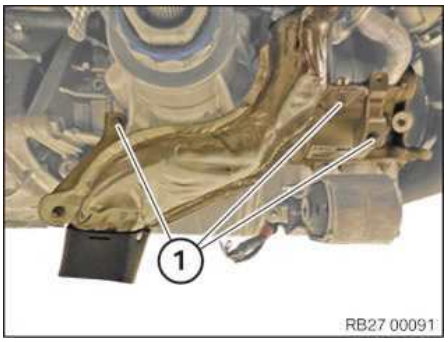


34 – Remove bracket with rubber mount

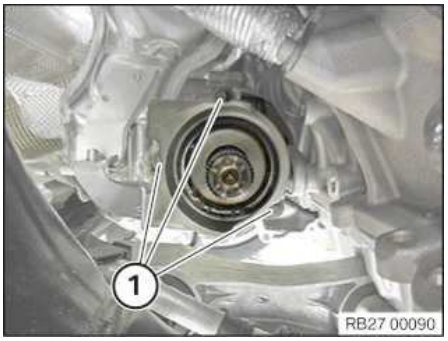
WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

Danger! Life-threatening injuries!

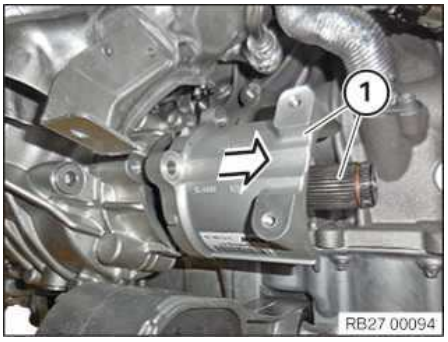


- Secure the vehicle hoist against lowering and lifting.



- Support the engine with the jack at a suitable point.
- Loosen screws (1) and (2).
- Guide out and remove holder (3).

35 – Remove the intermediate shaft with the support tube



cardiagn.com

- With air duct installation: Loosen screws (1).
- Remove air duct

- Loosen screws (1).

- Pull the intermediate shaft with the support tube (1) out of the transfer box.

36 – Drain oil level in the manual gearbox (GS6X60DA)

CAUTION

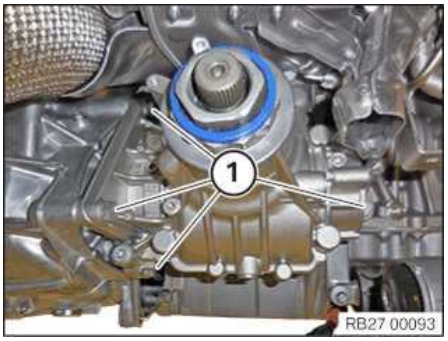
Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

- Draining transmission oil:
  - Unscrew oil drain plug (1) and allow oil to flow out completely.
  - Clean oil drain plug (1) and screw in.

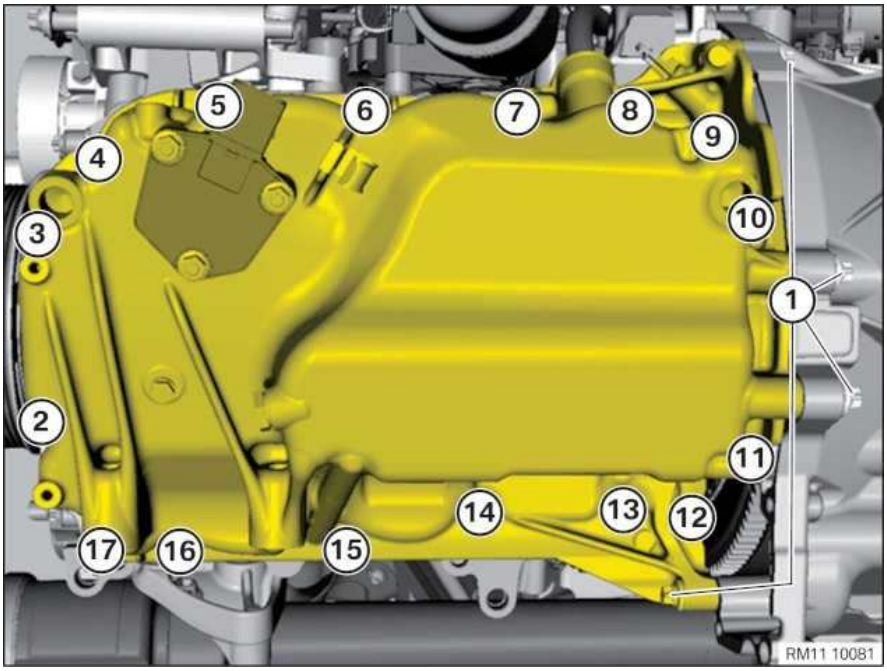
Oil drain plug / oil filler plug



Hexagon socket		Tightening torque	43 Nm

37 – Remove transfer box (VTG)

cardiagn.com



- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

38 – Release transmission-side bolting connection oil sump

- Unscrew the bolts (1) from the transmission.

39 – Removing the manual gearbox (GS6-59DG, GS6X60DA)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

RISK OF DAMAGE

Damage to the engine block.

Damaged and corroded bolts will lead to major damage in the engine block and the transmission.

- It is imperative that protruding threads of the transmission bolts are checked for corrosion and damage prior to removal.
- It is imperative that all rust is removed from corroded threads and that they are cleaned prior to removal.
- Renew rusted and damaged bolts.

▸ **Remove electronics box**

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

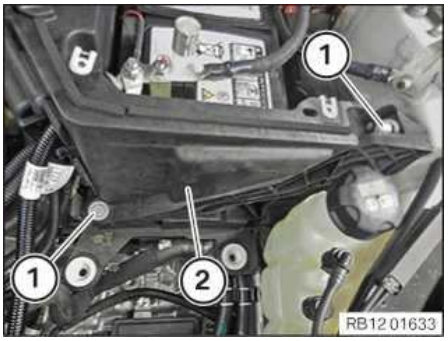
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

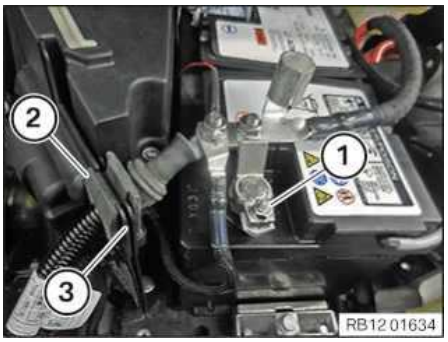
- Do not pull on the wires when disconnecting connectors and plug connections.



TECHNICAL INFORMATION

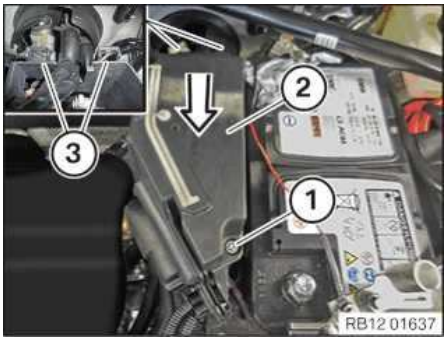
Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units



TECHNICAL INFORMATION

Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

cardiagn.com

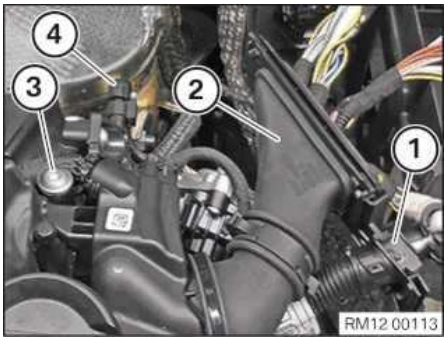
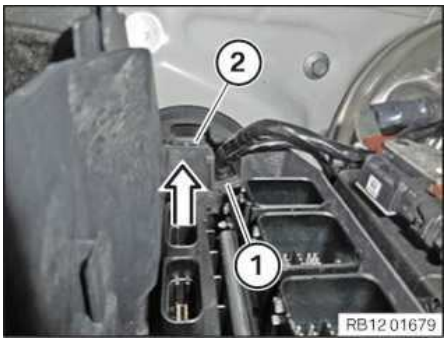
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

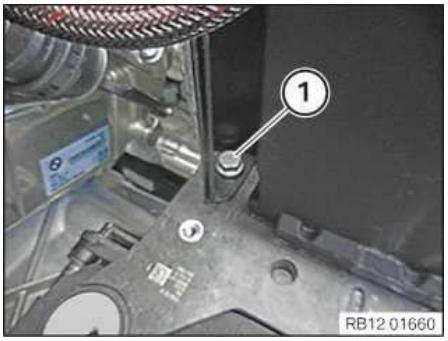


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).



- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

cardiagn.com

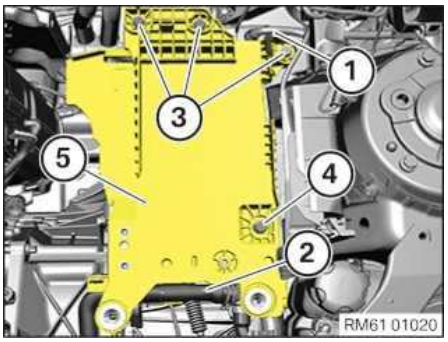
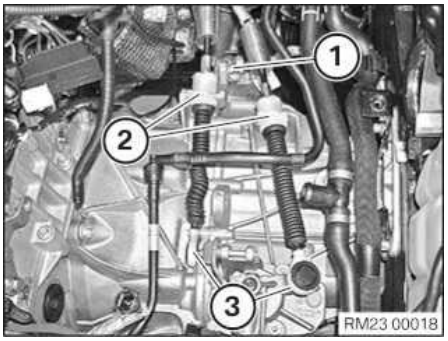
- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

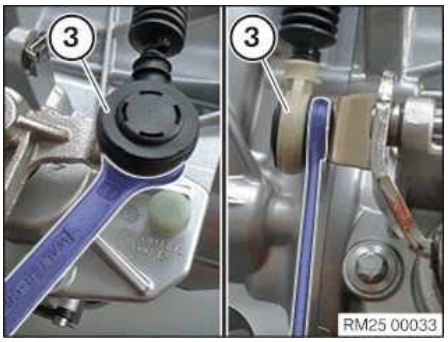


- Loosen screw (1).

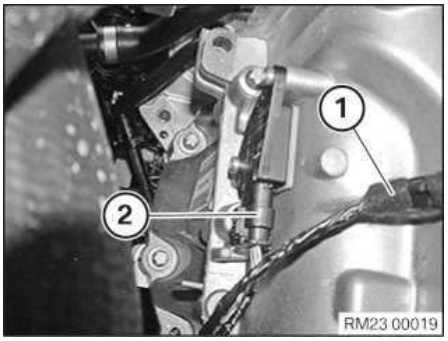


- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

▶ **Remove battery holder**



- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).



- Release the clip on the limit position/bracket (2) and bend the tabs slightly away from the limit position/bracket (2).
- Unscrew the bolt (1) and detach the ground strap from the transmission.

cardiagn.com

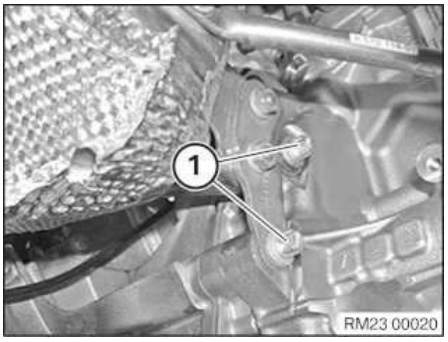
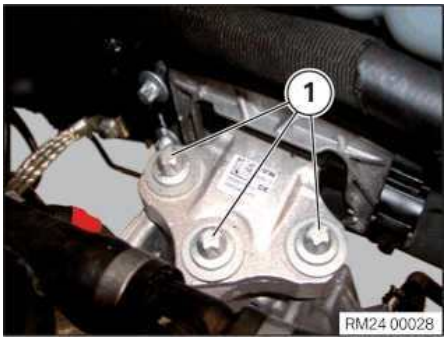
- Lever the fixtures (3) of the selector lever cables away from the ball joints with an open-end spanner SW13.



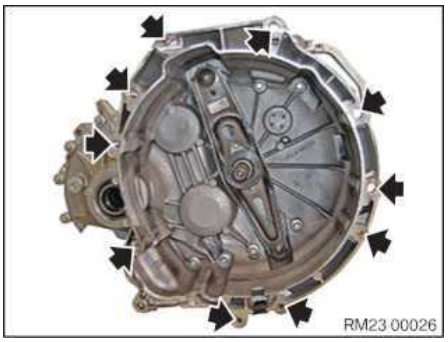
- Disconnect the plug connection (2) of the gear sensor.
- Detach the cable (1) with the holder from the transmission.



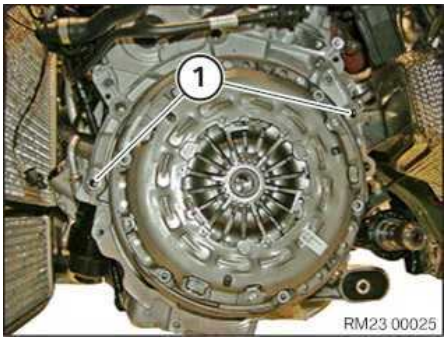
- Relieve tension on clutch slave cylinder slowly; otherwise air will be drawn in through sealing cup.

  Pressure line of clutch slave cylinder remains connected.
- Unscrew the bolts (1) and remove the clutch slave cylinder.

- Loosen screws (1).



- Loosen screws (1).



- Support the transmission with special tool **0 490 133 (00 2 030)**and .
- Secure the transmission with the tensioning strap (3).

cardiagn.com

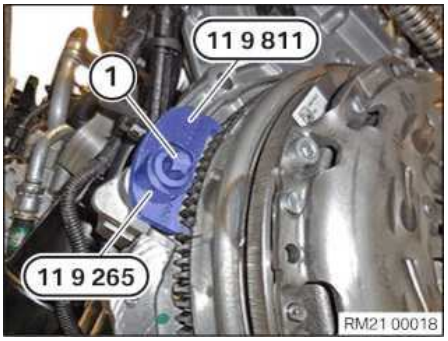
- Remove screws (arrows).
- Pull transmission downwards and remove.

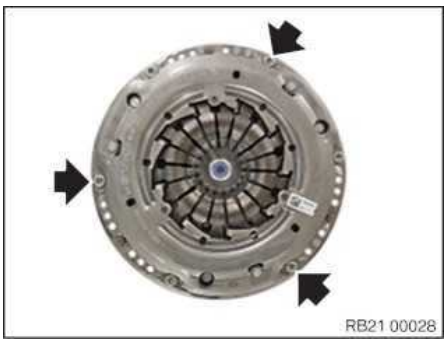
- Check for correct fit of fitting sleeves(1).
- Replace damaged fitting sleeves.

- Remove any grease from the transmission input shaft (arrow) and clean the shaft.
- Do not grease transmission input shaft.
- Check clutch disc for frictional corrosion in gearing and replace if necessary.



40 – Remove clutch

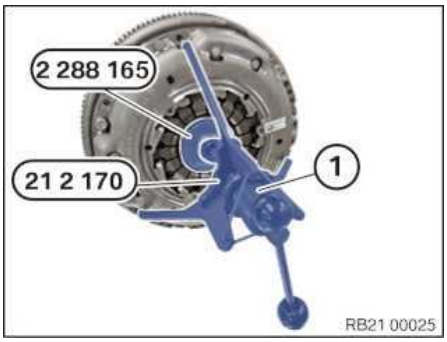
CAUTION



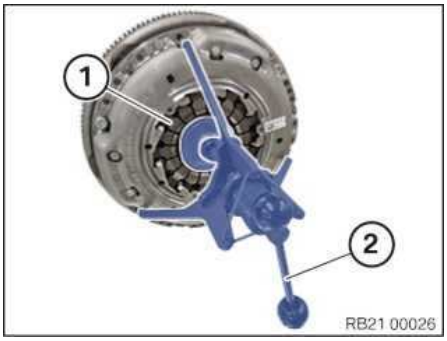
Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.



- Block flywheel with transmission bolt (1) and special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.



- Detach 3 screws to attach special tool and **2 288 165**.

cardiagn.com

- Position special tool and **2 288 165** and tighten on the knurled screw (1).

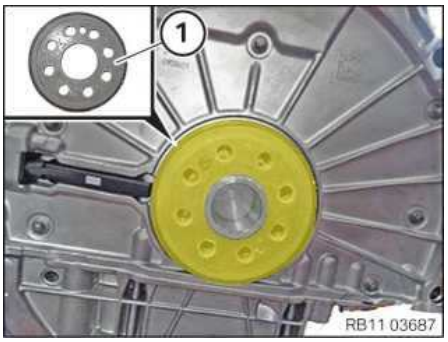
- Screw in the spindle (2) until the diaphragm spring (1) is preloaded and the clutch disc is free of tension.

- Loosen the remaining 3 screws and remove the clutch with clutch disc from the flywheel.

41 – Removing flywheel

CAUTION

Heavy component.



Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Secure the flywheel with a transmission bolt (1) and with special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.
- Unscrew the flywheel bolts with the special tool **0 491 018 (11 4 180)**.
- Remove flywheel.

cardiagn.com

RISK OF DAMAGE

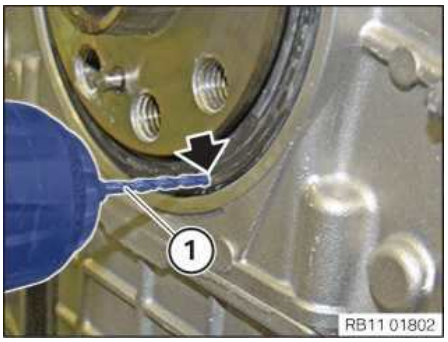
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Remove the increment wheel (1) from the crankshaft and lay it down correctly.

MAIN WORK



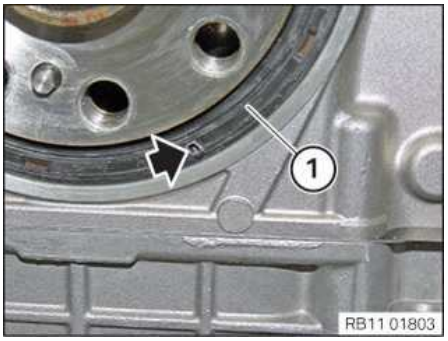
42 – Removing the rear crankshaft seal

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

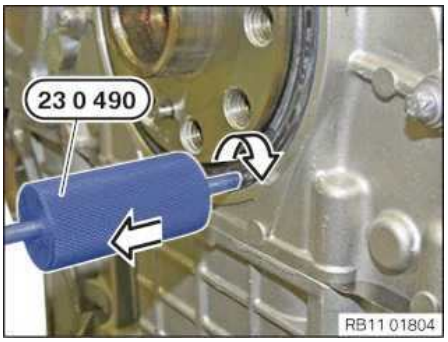
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



RISK OF DAMAGE

Damage due to swarf.

Contamination can lead to malfunctions and damage.



- Cover working area.
- Draw off swarf during drilling using a vacuum cleaner.

- Drill a hole (arrow) into the crankshaft seal with using a 2.5 mm drill (1).
- Do not remove swarf with compressed air!

- Remove swarf in the bore hole (arrow) on the crankshaft sealing ring (1).

cardiagn.com

- Screw in special tool **0 491 454 (23 0 490)** in direction of arrow.
- Drive out crankshaft seal with the impact weight in direction of arrow.

43 – Installing the rear crankshaft seal

RISK OF DAMAGE

Radial shaft seal damage.

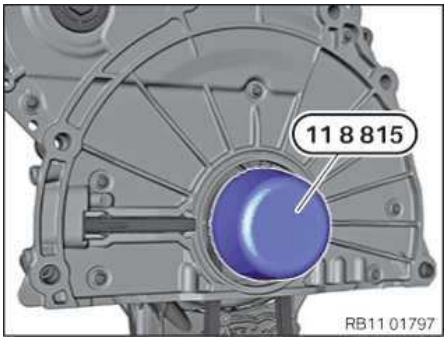
Touching the sealing lip (inner) on the radial shaft seal with the sharp-edged connector gearing of the output shaft will result in destruction and/or leaks.

- When inserting the output shaft, make sure that the connector gearing of the output shaft does not touch the sealing lip (inner) of the radial shaft seal.

RISK OF DAMAGE

Radial shaft seal damage.

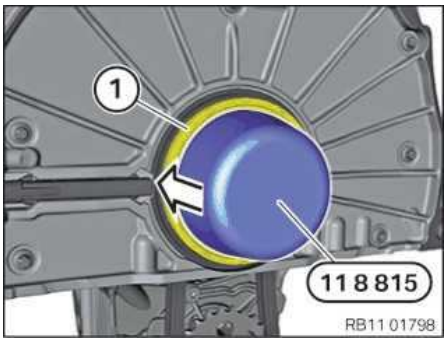
Touching the sealing lip (inner) and applying oil to the radial shaft seal will lead to its destruction.



- Do not touch the sealing lip (inner) of the radial shaft seal.
- Do not apply oil to the radial shaft seal.
- Install the radial shaft seal dry.

RISK OF DAMAGE

Electrostatic discharge.



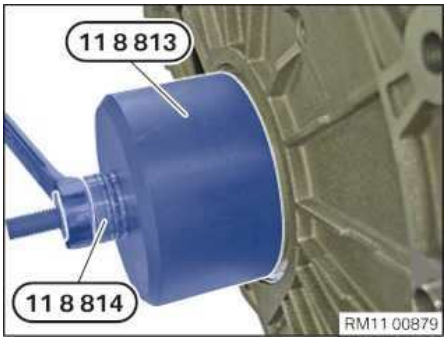
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Position special tool **0 496 137 (11 8 815)** on crankshaft. Make sure that the crankshaft sensor is not damaged.

cardiagn.com

- Fit the crankshaft seal (1) up to the timing case cover in the direction of the arrow using special tool **0 496 137 (11 8 815)** and position.
- Remove special tool **0 496 137 (11 8 815)**.



- Secure special tool **0 496 133 (11 8 811)** to the crankshaft using special tool **0 496 134 (11 8 812)**.

- Check the freedom of movement between the special tool **0 496 135 (11 8 813)** and the crankshaft sensor during installation.

  Otherwise there is a risk that the crankshaft sensor will be damaged.
- Slide on special tool **0 496 135 (11 8 813)**.
- Screw down special tool **0 496 136 (11 8 814)**.

- Press in crankshaft seal with special tool **0 496 135 (11 8 813)**.
- Screw in special tool **0 496 135 (11 8 813)** up to timing case cover.

POSTPROCESSES

44 – Installing the flywheel

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

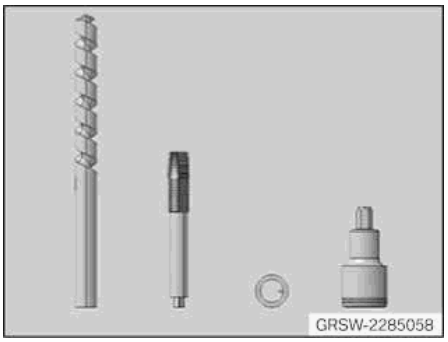
- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

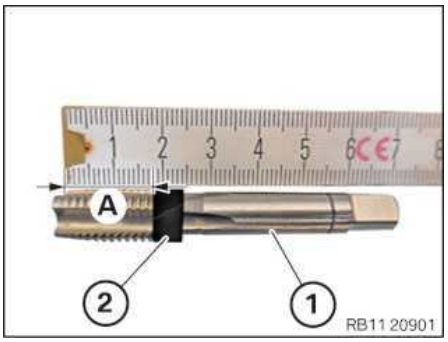


- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

Clean all threads with a screw tap.

- Clean all screw threads (1).

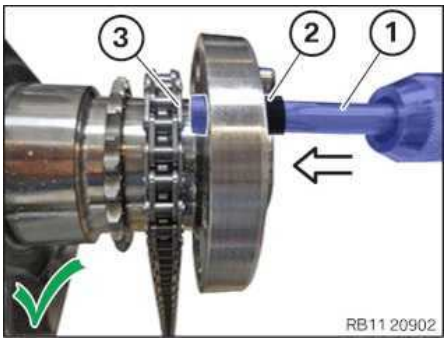


- Use the set of special tools **2 285 058**.

Description
Twist drill
Thread cutter M12x1.5
Depth
Insertion tool

- Assemble tool set.

Number	Description
1	Tool holder
2	Thread cutter M12X1,5



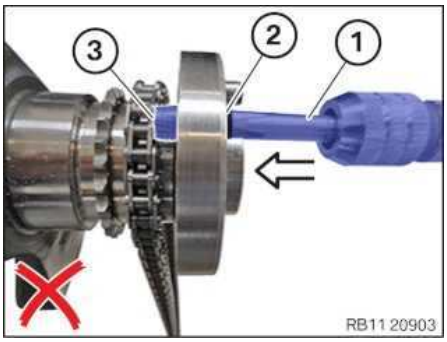
- Mark the screw-in depth (A) on thread cutter (1) from the set of special tools **2 285 058** with a standard tool (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm

cardiagn.com

NOTICE



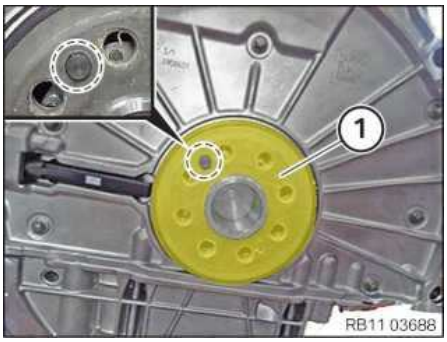
To provide a better overview: Shown with engine removed.

- Screw in the thread cutter (1) from the set of special tools **2 285 058** in direction of arrow up to the screw-in depth (2).

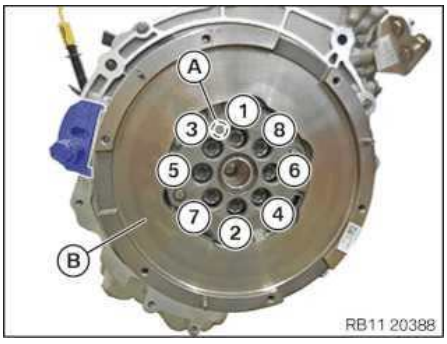
Screw-in depth of thread cutter

Screw-in depth	18 mm

- Make sure that the thread cutter does (1) **not** rest on the timing chain (3).



TECHNICAL INFORMATION

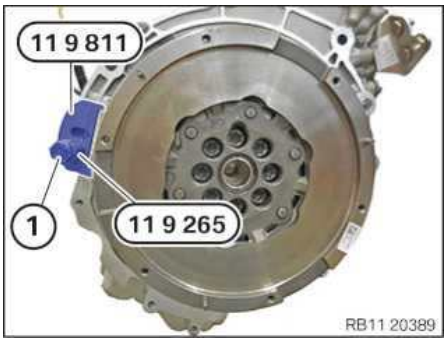


- **Carefully** handle the timing chain, to protect the timing chain and timing chain drive against damage.

- Make sure that the screw-in depth (2) of the screw tap (1) is not exceeded.

  The thread cutter (1) may not rest on the timing chain (3).

- During the installation, note the mark shown without fail.
- Install special tool (1) on the crankshaft as shown.



- Position flywheel (B) .
- Renew flywheel bolts (1) to (8).

  Parts: Flywheel bolts
- Tighten flywheel bolts hand-tight with special tool **0 491 018 (11 4 180)**.
- Observe tightening sequence. While doing so, begin with dowel pin (A).
- Tighten the flywheel bolts using the special tool **0 491 018 (11 4 180)** in sequence (1) to (8).

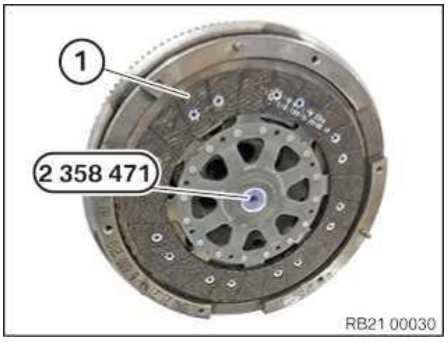
Flywheel to crankshaft

M12x1.5	Renew screws.	Tightening torque	120 Nm

- Loosen the transmission bolt (1).
- Feed out and remove special tools **0 494 793 (11 9 265)** and **0 496 171 (11 9 811)** with the **standard** (5 mm) washer.

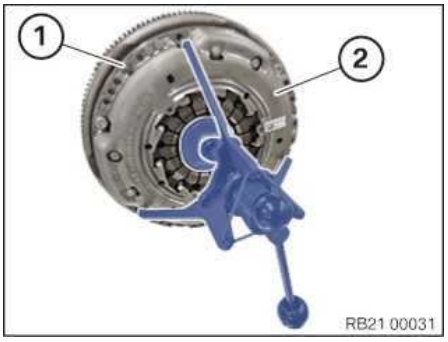
cardiagn.com

CAUTION



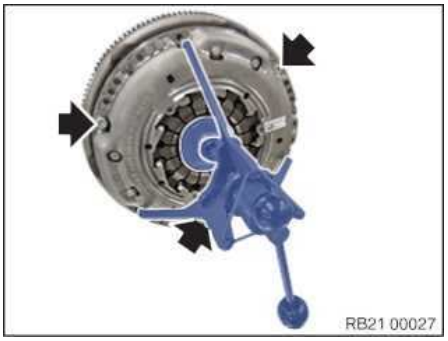
Materials harmful to health.

Contact with fluids harmful to health!



- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

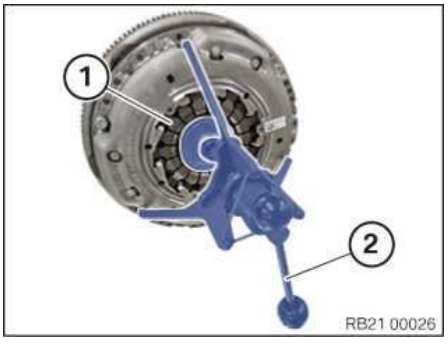
TECHNICAL INFORMATION



Handle the clutch disc carefully. Install the surfaces of the clutch disc in the correct mounting orientation.
Clean friction surfaces of the flywheel and the pressure plate with BMW-approved brake cleaner.
Note designation for "engine side" / "transmission side".

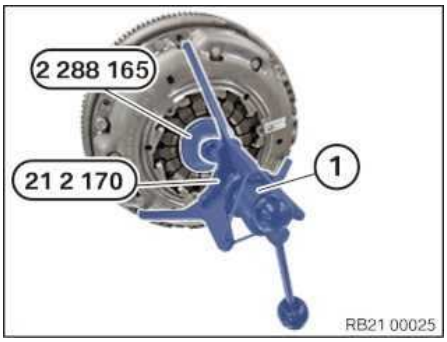
- Centre the clutch disc (1) using special tool .

- Mount the clutch (2) together with the special tool to the flywheel.
- Observe the dowel pins (1).
- The clutch (2) must be secured via the dowel pins (1).



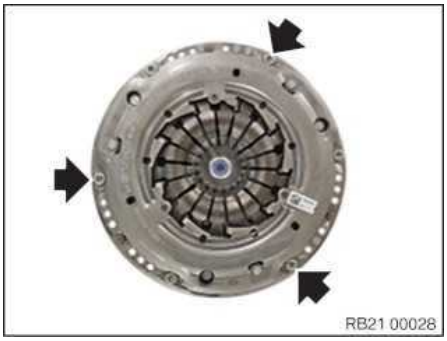
- Renew the bolts (arrows).

  Parts: Bolts
- Install and tighten screws (arrows).



Clutch to flywheel

M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °



- Loosen the spindle (2) until the diaphragm spring (1) is fully relieved.

cardiagn.com

- Unscrew the knurled screw (1) and remove the special tool with **2 288 165** from the clutch.

- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Clutch to flywheel

M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

- Withdraw special tool from clutch disc with aid of accompanying screw.

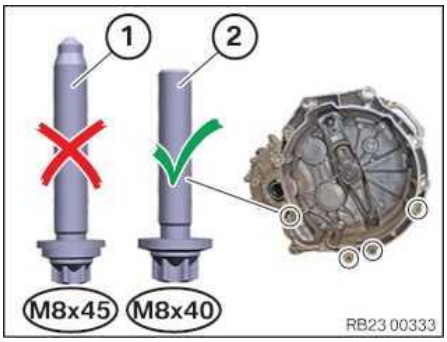
46 – Installing the manual gearbox (GS6-59DG, GS6X60DA)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.



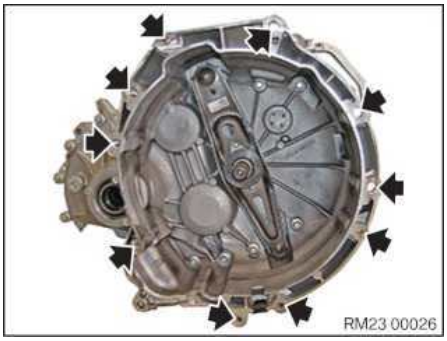
RISK OF DAMAGE

Damage to the engine block.

Damaged and corroded bolts will lead to major damage in the engine block and the transmission.

- It is imperative that protruding threads of the transmission bolts are checked for corrosion and damage prior to removal.
- It is imperative that all rust is removed from corroded threads and that they are cleaned prior to removal.
- Renew rusted and damaged bolts.

cardiagn.com

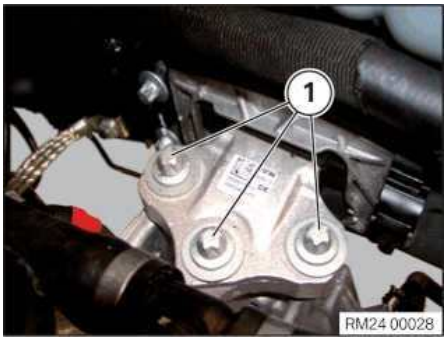


RISK OF DAMAGE

Component damage caused by incorrect screw length.

The use of screws with the incorrect screw length can damage the component.

- Check for correct screw length.
- Re-install screws that correspond to the original screw length.

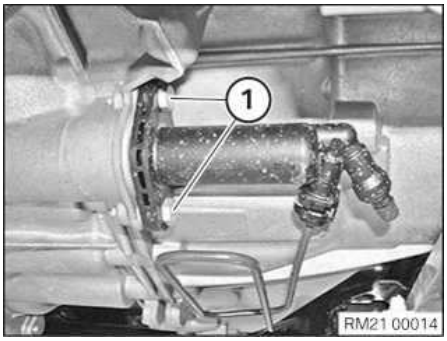


- **Wrong:** The screw (1) (starter motor screw connection) must **not** be used for the bottom screw connection of the transmission.
- **Correct:** It is imperative to use the bolt (2) (M8x40) for the lower screw connection of the transmission and flange-mount the transmission.

- Tighten screws (arrows).

Transmission to engine

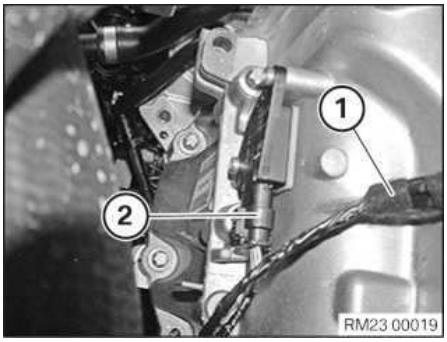
M8x40		Tightening torque	19 Nm
M12x75		Tightening torque	66 Nm



- Renew screws (1).

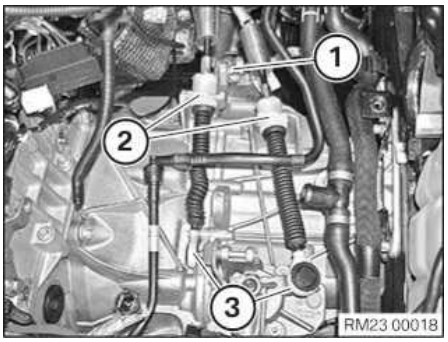
  Parts: Bolts
- Tighten the screws (1).

Transmission mounting



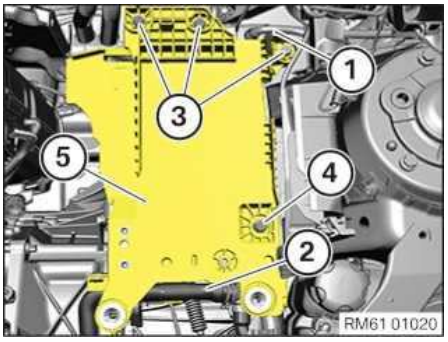
M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

- Install clutch slave cylinder.
- Tighten the screws (1).



Clutch slave cylinder to transmission housing

M8		Tightening torque	19 Nm



- Connect the plug connection (2) of the gear sensor.
- Clamp the cable (1) with the holder to the transmission.

cardiagn.com

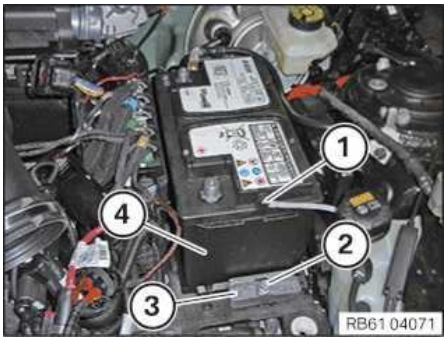
- Tighten the ground strap on the transmission with the screw (1).
- Clip in the clip on the stop/holder (2).
- Attach the selector lever cables (3) on the ball joints.

▶ **Install the battery holder**

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm



- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

▶ **Partially install vehicle battery**

- Install vehicle battery (4).
- Correctly position the holder (3).
- Tighten down screw (2).

Battery terminal rail to battery tray

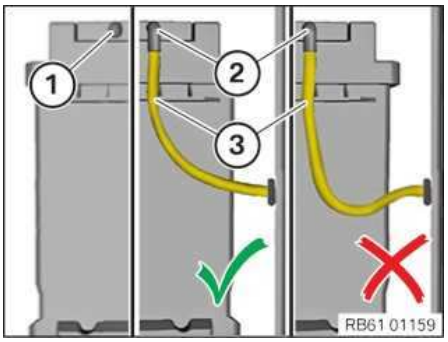
M8		19 Nm

- Fit and clip the vent hose (1) in.

▷ **Check the vent holes of the battery**

WARNING

Gas emission.



Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

cardiagn.com

Check
- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure
- Close the vent hole (1) correctly with a dummy plug.

Check
- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

» The vent hose (3) is not correctly connected.

Measure
- At the vent hole (2), connect the vent hose (3) correctly.

Check
- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).

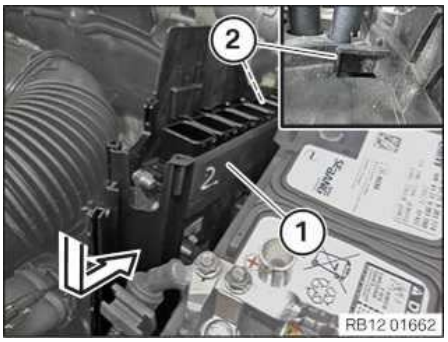
Result

» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure
- Route the vent hose (3) correctly as shown in the centre image.

◁

▸ **Install electronics box**



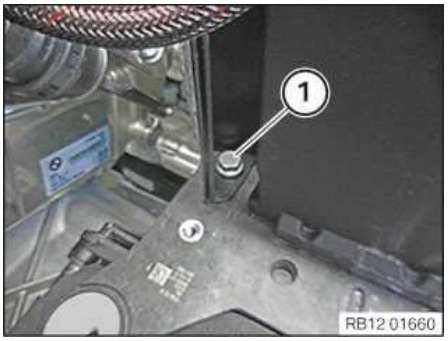
Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

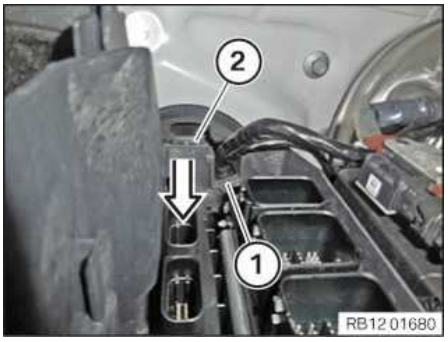
Improper routing of cables and wiring harnesses.

Trapped, crushed or damaged cables may cause short circuits and malfunctions.
- Route all cables without abrasions, do not trap and crush.

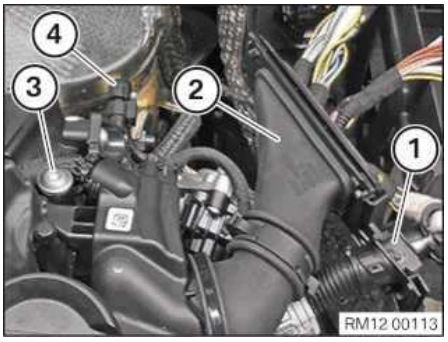


- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

cardiagn.com



- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



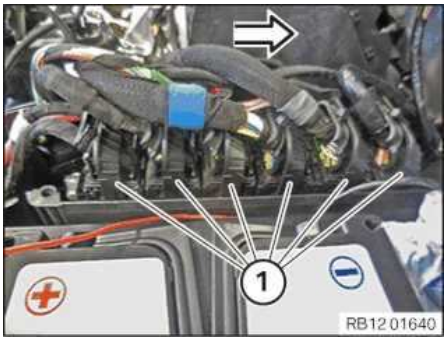
- Tighten down screw (1).

Electronics box to battery tray

M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.

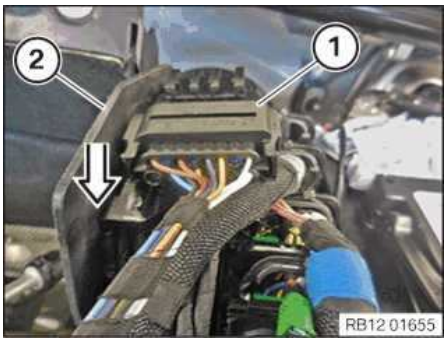
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).



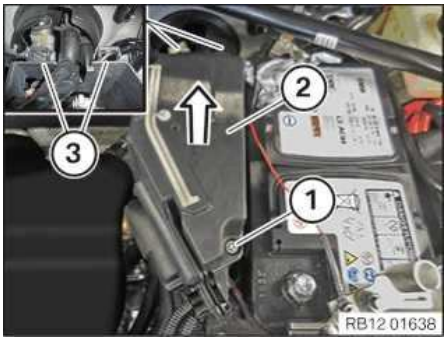
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

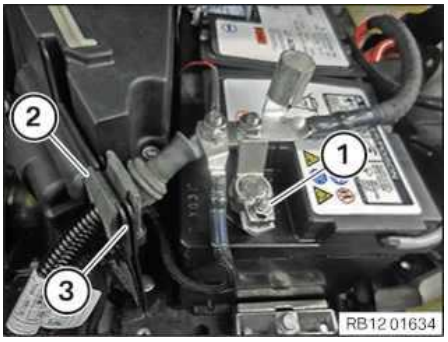


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

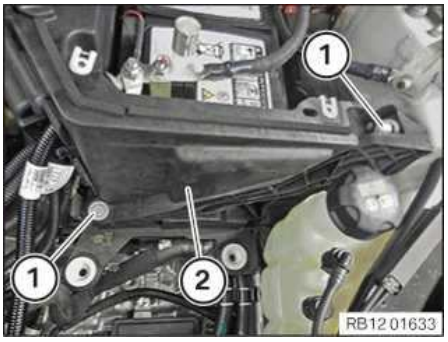
cardiagn.com



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

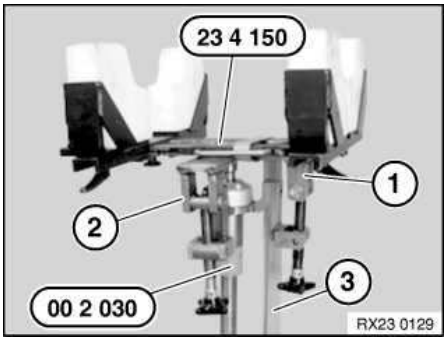
Cover to electronics box



RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

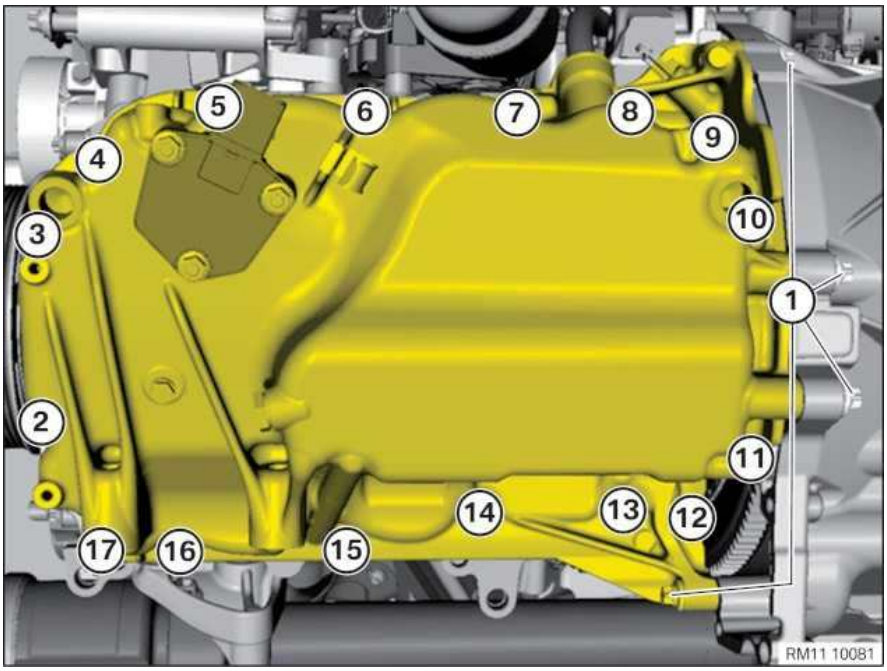
Positive battery terminal to battery



NutM6		Tightening torque	5 Nm

- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray

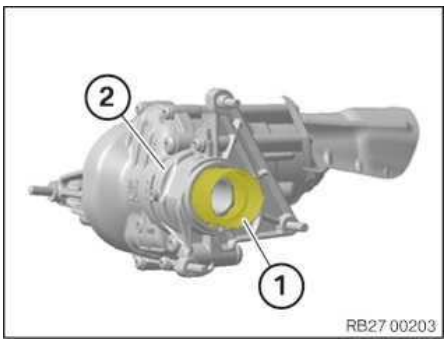


M8		Tightening torque	19 Nm

- Loosening the tensioning strap (3).
- Remove special tools **0 490 133 (00 2 030)** and .

47 – Tighten down transmission-side bolting connection oil sump

cardiagn.com



- Join transmission bolts (1) with 5 Nm.
- Tighten the transmission bolts (1) on the transmission.

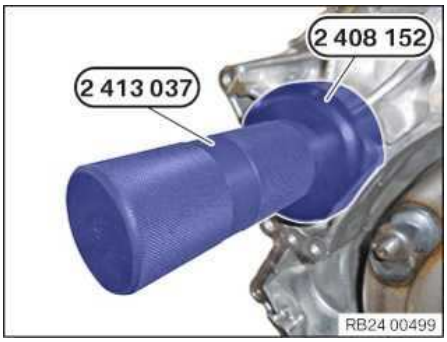
Transmission to oil sump

M8			19 Nm

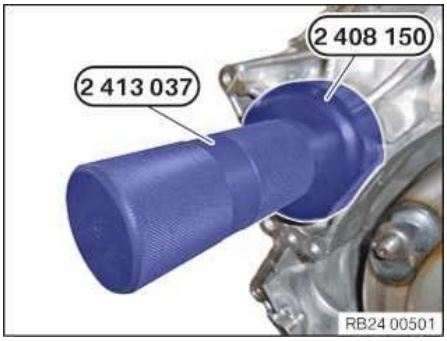
48 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

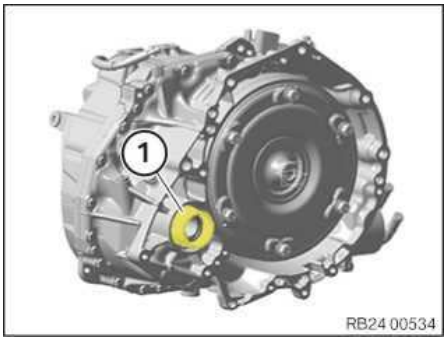
- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.



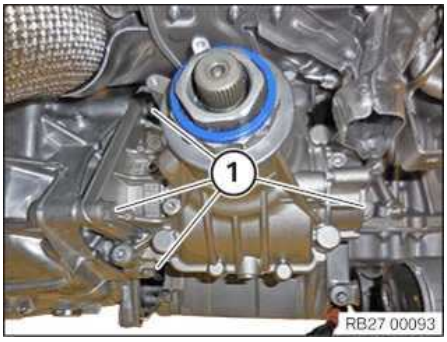
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



cardiagn.com

- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

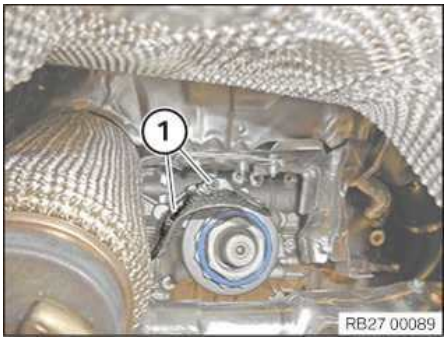
- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.



- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials



Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

cardiagn.com

RISK OF DAMAGE

Damage to the transmission.

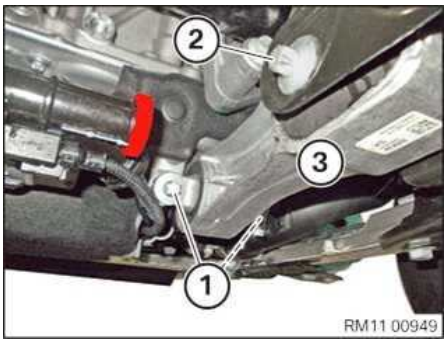
Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

Technically suitable transfer box and electrical transmission oils	



Main group 27

- Tighten the oil filler plug (1).

Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm

49 – Install the holder with the rubber mount

- Insert and install the holder (3).
- Tighten the screws (1) and (2) hand-tight.
- Release jack.
- Tighten down screw (2).

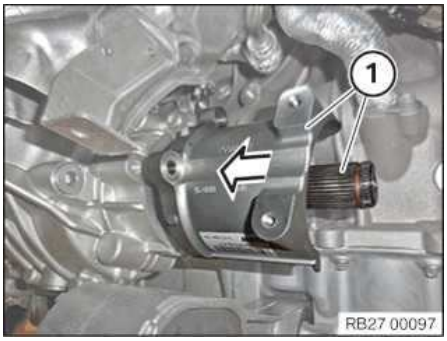
Holder to front axle support

M12		Tightening torque	100 Nm

- Tighten the screws (1).

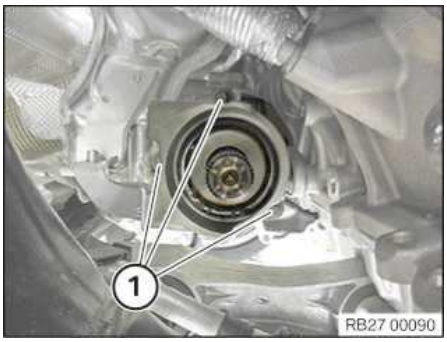
Bracket to oil sump

M12		Tightening torque	100 Nm



50 – Install the intermediate shaft with the support tube

- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

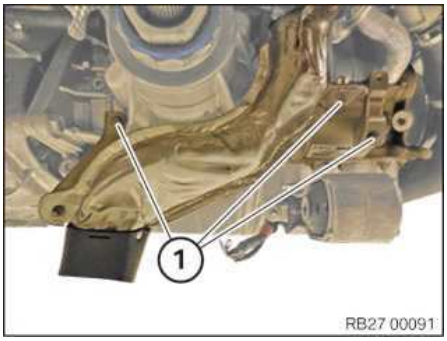


Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

cardiagn.com



- Position screws (1).

Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

- If installed: Install air duct.
- Tighten the screws (1).

51 – Install propeller shaft.

CAUTION

Component with heavy weight.

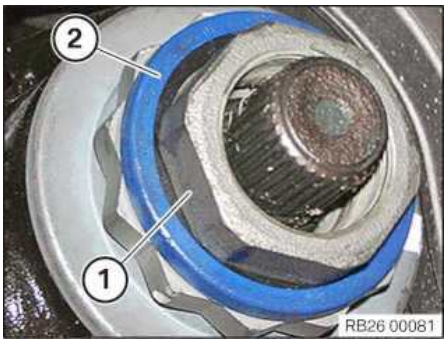
Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

Damage to the propeller shaft during installation.

Non-observance of the installation guidelines for the propeller shaft on the rear axle differential may cause severe damage.



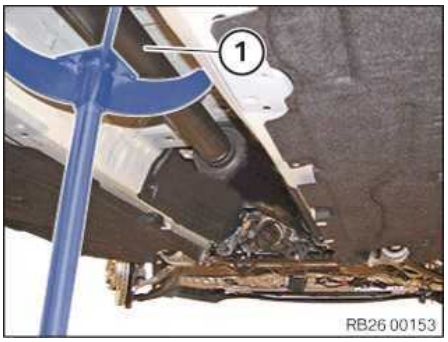
- Always renew the recessed nut on the rear axle differential. Screw locking must be available.
- Strictly observe a minimum hardening time of two hours after having screwed in the recessed nut. The hardening time may be longer at lower temperatures.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

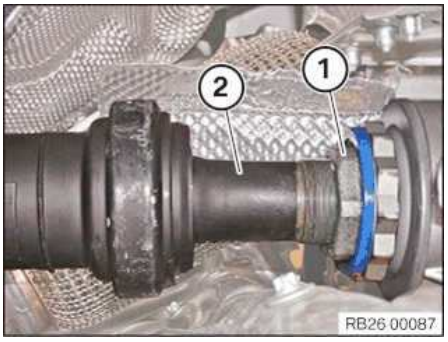


- Renew recessed nut (1).

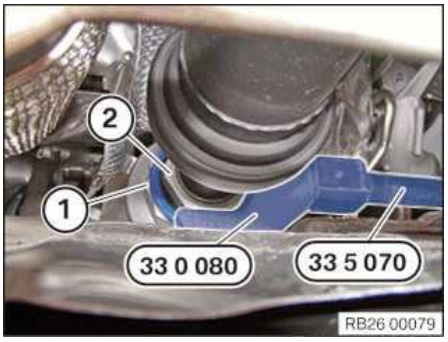
  Parts: Insert nut
- Renew the retaining clip (2) and the seal.

  Parts: Retaining clip, seal
- Insert the seal with the recessed nut (1) and install.
- Insert the retaining clip (2) and install.
- Make sure that recessed nut (1) is screwed in within 5 min.
- Make sure that the hardening time of **minimum** 2 h for the recessed nut is observed.

  The hardening time must be extended at lower temperatures.



cardiagn.com



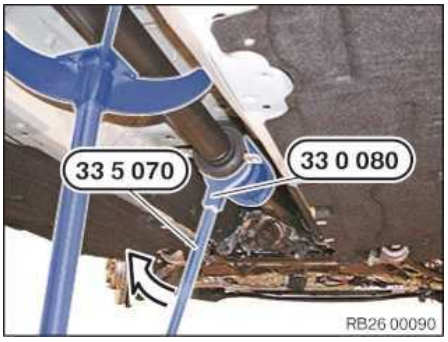
- Insert the propeller shaft (1) and install.
- Always support the propeller shaft (1) with a conventional jack.

- Hand-tighten the bolts (1).

- Push the propeller shaft (2) against the recessed nut (1) up to the limit position.
- Screw the propeller shaft (2) at least 2 thread starts onto the recessed nut (1) by hand.

RISK OF DAMAGE

Damage to the transfer box.



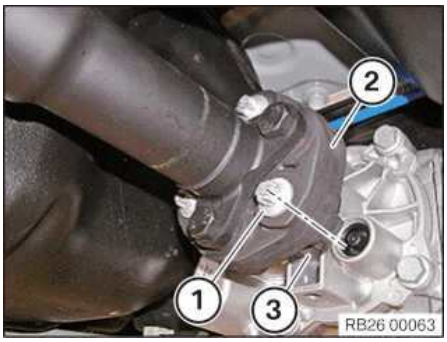
Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to tighten the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



- Tighten the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

Propeller shaft to transfer box

		Tightening torque	80 Nm

cardiagn.com

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Assemble the screw connection (1) of the flexible disc (2) and the three-hole flange (3) according to the mark.
- Renew screws (1).

  Parts: Bolts
- Hand-tighten the bolts (1).

- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

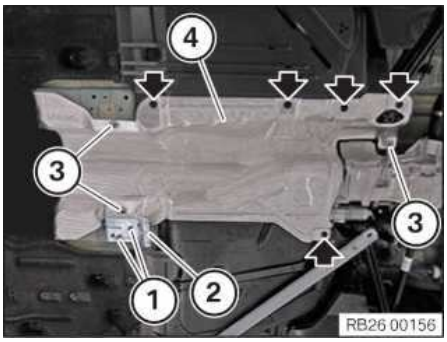
- Tighten the bolts with the special tools **0 490 504 (00 9 120)** and .

Flexible disc to rear axle final drive

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

- Tighten the screws (1).

Centre mount to body



M8		Tightening torque	19 Nm

- Guide the special too l out between the front and rear propeller shaft and remove.

52 – Installing the rear heat shield

cardiagn.com

- Insert and install the heat shield (4).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (3).

Heat shield to body

- Insert and install the heat shield (2).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (1).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

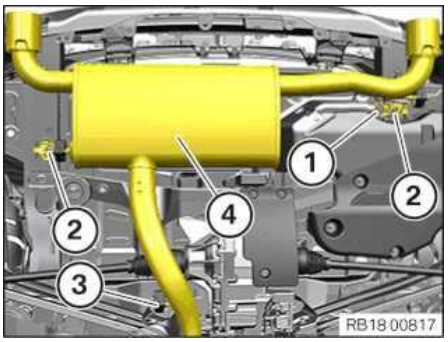
54 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.



CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

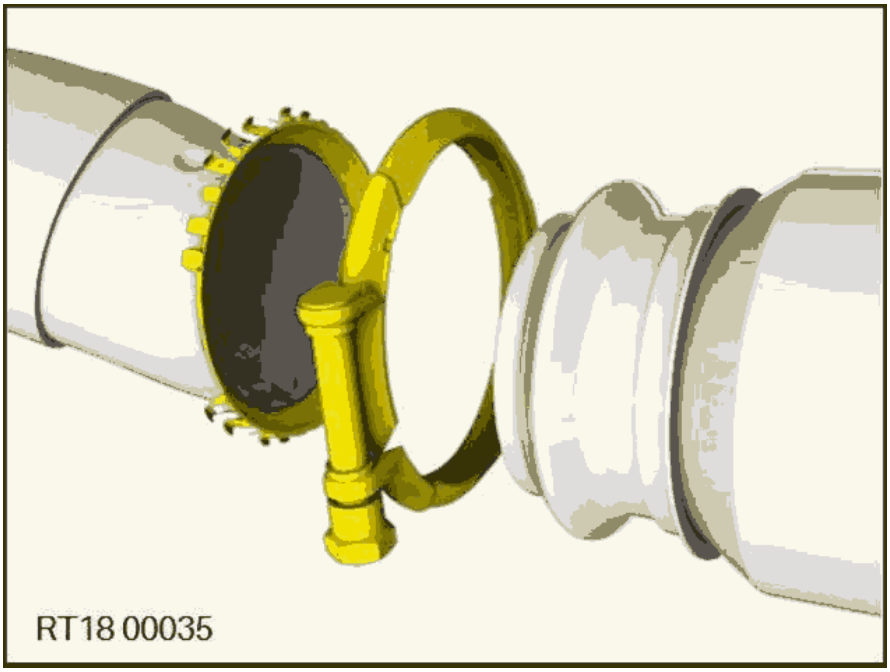
- Feed in and install the exhaust system (4) with a second person.
- Renew nuts (2).

  Parts: Nuts
- Tighten nuts (2).

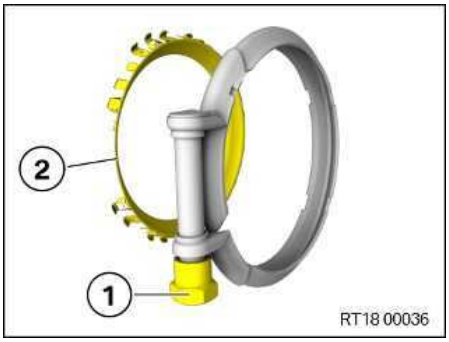
Exhaust system to body

M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).

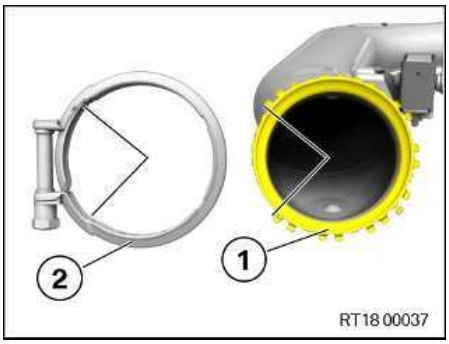


Exhaust bracket on body



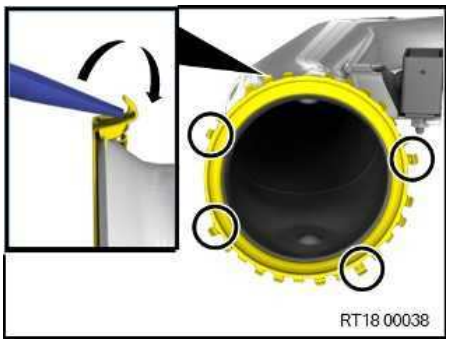
Hexagon screw M8x30		Tightening torque	19 Nm

- Check the rubber mount (3) for damage and renew as needed.
- Mount rubber mount (3) on the exhaust system (4).

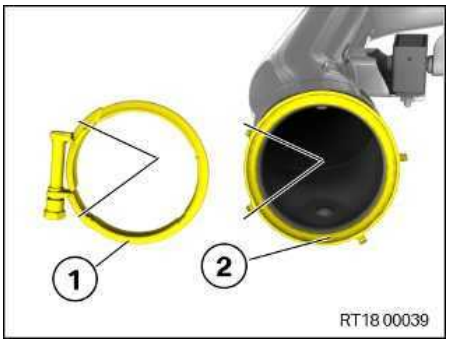


▸ **Install the V-clip**

V-band clamp



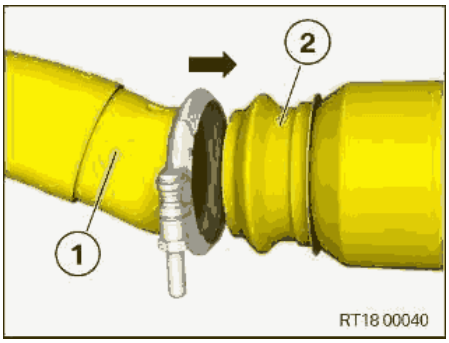
- Unscrew the nut (1) and remove the sealing ring (2).



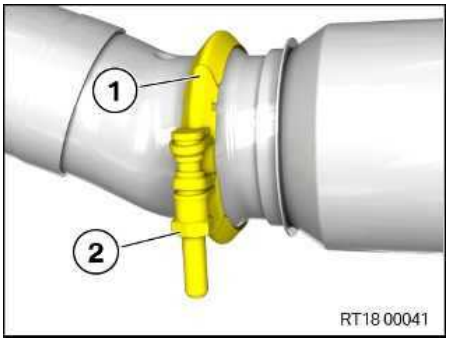
- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.

cardiagn.com

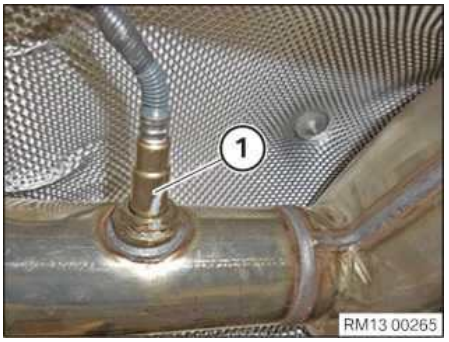


- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.



- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).

- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).

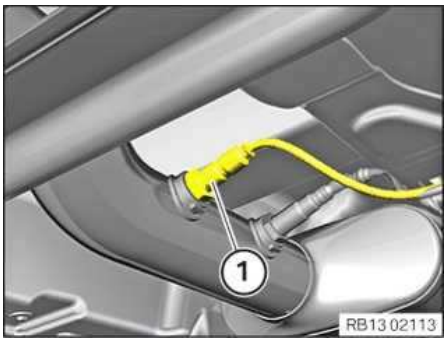


- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.

- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm



- Feed in, install and tighten diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

Sensor		Tightening torque	50 Nm

- Feed in, install and tighten nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

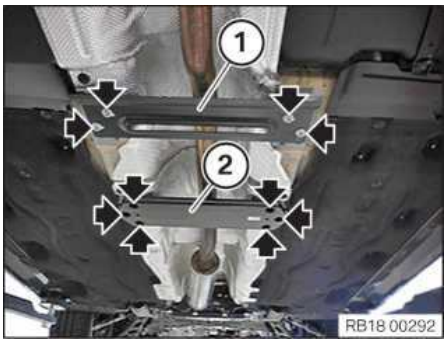
55 – Install the cross-member with torsion struts

- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °



- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

56 – Install the connecting support on the tunnel in front and back

- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

M10x18		Tightening torque	56 Nm

- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

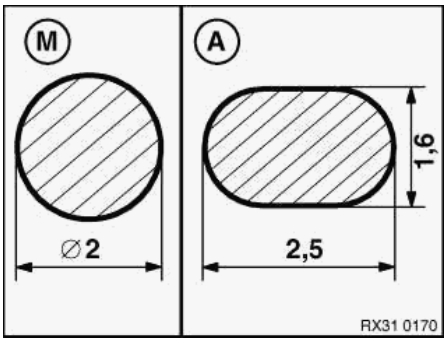
Rear connection carrier to body

M8x18		Tightening torque	28 Nm

57 – Installing right output shaft partially

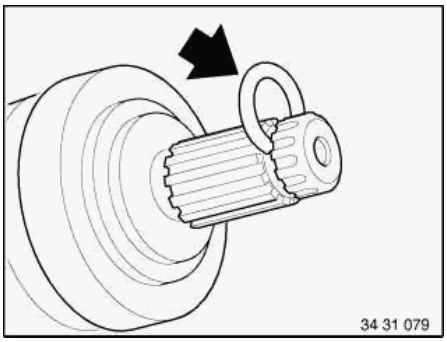
- Renew the circlip (1).

  Parts: Circlip
- Slide output shaft into the transmission as far as the limit position.
- Check for secure seat by levering.



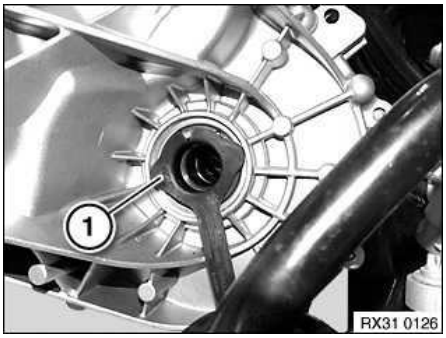
58 – Partially installing the left output shaft

cardiagn.com



- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).



- Do not mix up circlips.

  Different types of output shafts fitted:
  - M: Manual transmission
  - A: Automatic transmission

- Renew circlip (arrow).

- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

- Insert output shaft (1) into transmission.
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

59 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

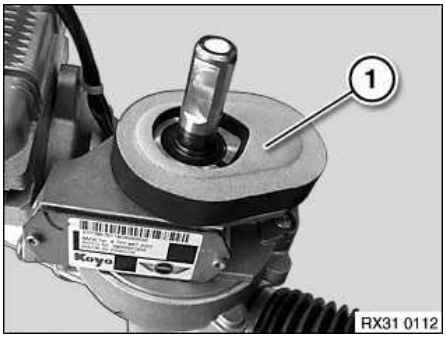
cardiagn.com

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

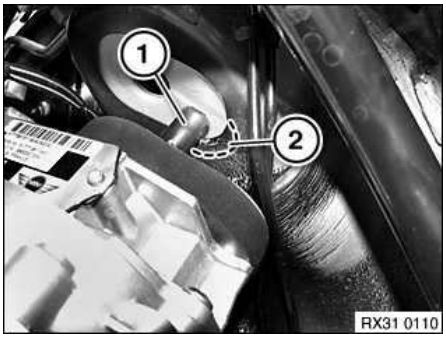
M8x45		Tightening torque	19 Nm

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).



Battery positive lead to starter

M8		Tightening torque	13,5 Nm

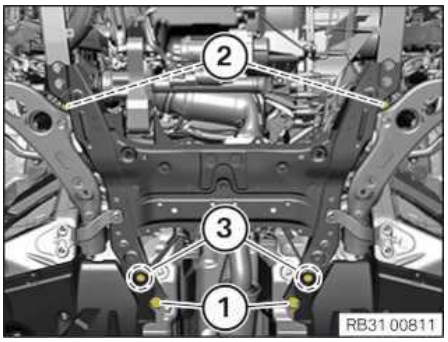


- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

60 – Mount and secure the complete front axle

- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

cardiagn.com

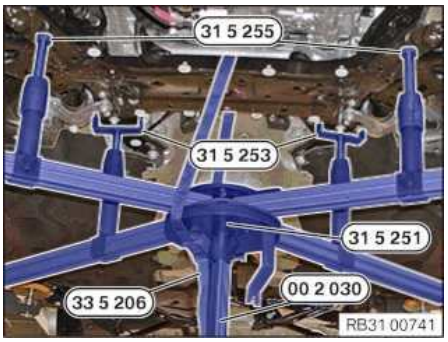
- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

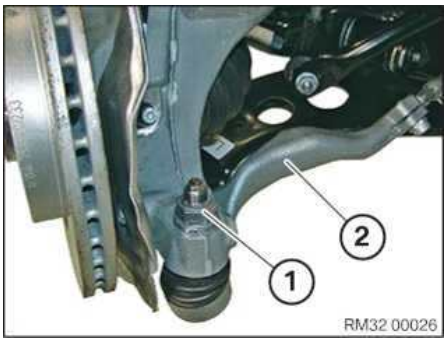
M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).



Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm



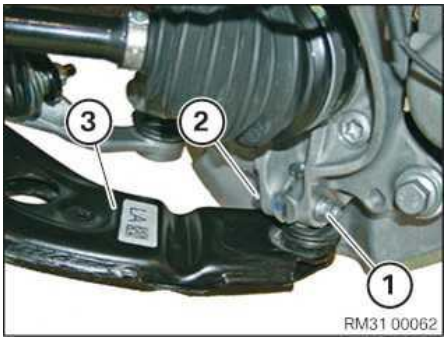
- If necessary, tighten the screws in the areas (3).

Underbody protection to body

Screw		Tightening torque	3 Nm

- Remove special tool from special tool .
- Lower universal jack **0 490 133 (00 2 030)** with the special tool and place it to the side.

NOTICE



Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm

NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

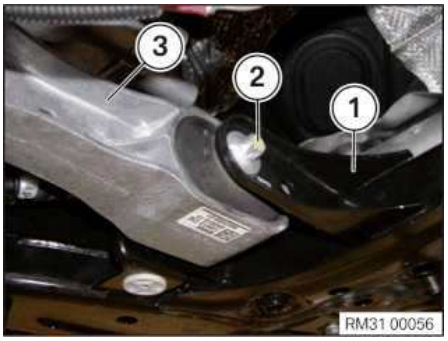
Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

cardiagn.com

61 – Install the mounted parts on the front axle support

NOTICE

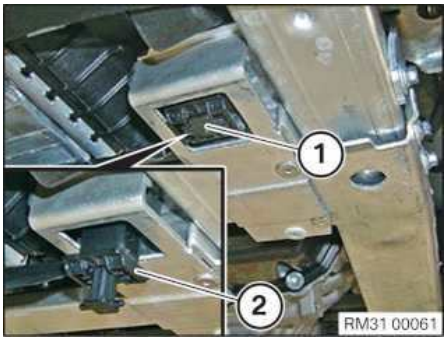


Perform the operations on the left and right side.

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

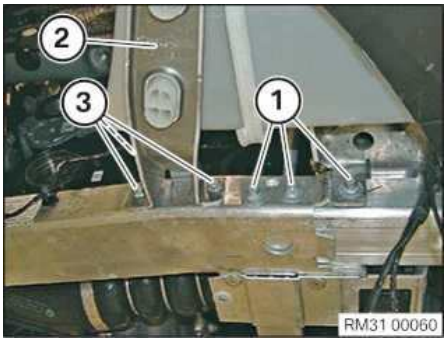
Holder, wishbone rubber mount, to body



M10 screw	Renew screw.	Jointing torque	56 Nm
		Angle of rotation	90 °

- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support



M12 screw		100 Nm

NOTICE

Perform the operations on the left and right side.

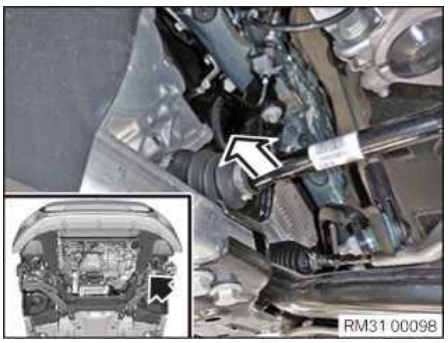
- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.

- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE

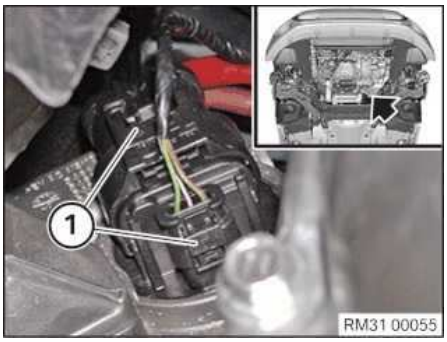


Perform the operations on the left and right side.

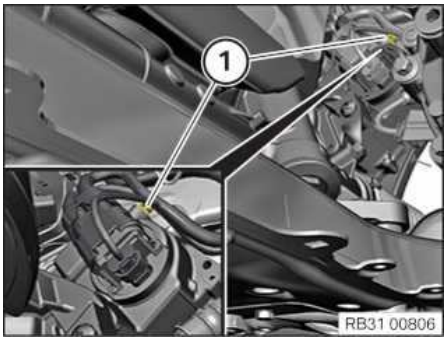
- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

		Tightening torque	11,8 Nm



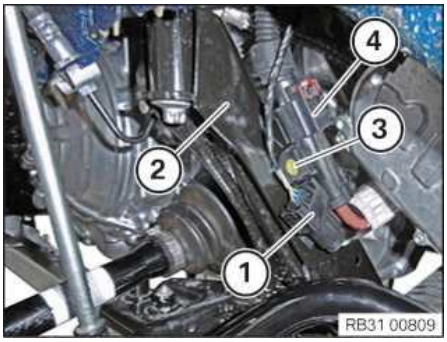
62 – Attaching connector at steering gear



- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.

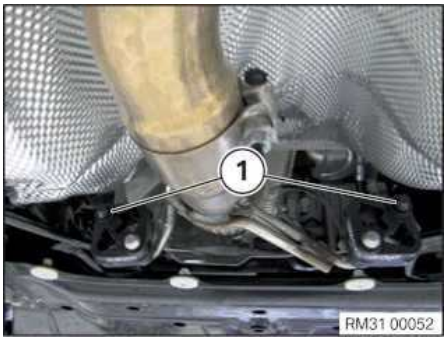
cardiagn.com



- Connect and lock connector (arrow) (1) with the steering gear.

- Fasten the wiring harness (1) on the steering gear.

▸ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

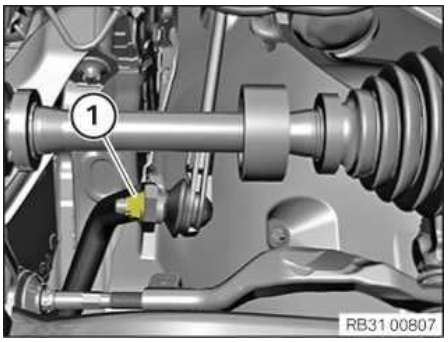
Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

63 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.



64 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▸ **Fastening anti-roll bar on the anti-roll bar link**

cardiagn.com

- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm

65 – With right installation: Securing the cable for the ride height sensor

- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

66 – Topping up oil level in the manual gearbox (GS6X60DA)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

TECHNICAL INFORMATION

Make sure during removal of the filling/level control screw to note the installed filling/level control screw variant.

It is **mandatory** to use variant 1 in transmissions up to production date 08/2015.

It is **mandatory** to use variant 2 in transmissions from production date 08/2015.

Failure to observe will result in a leak on the transmission.

- Variant 1 **until** production date 08/2015.
- Variant 2 **from** production date 08/2015.

- Unscrew filling/level control screw (1) and fill the transmission until the oil overflows.

Transmission oil capacity

Transmission oil GS6-60DA, GS6X60DA/Owner's Handbook	2,2 l

Transmission oil: Technically suitable manual gearbox oil

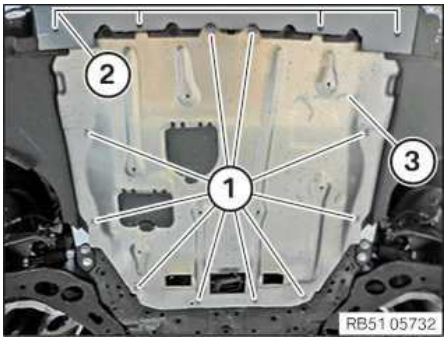
- Allow surplus oil to drain off.
- Renew the filling/level control screw (1).

  Parts: Filling/level control screw
- Tighten filling/level control screw (1).

Oil drain plug / oil filler plug

Hexagon socket		Tightening torque	43 Nm

67 – Installing the front underbody protection

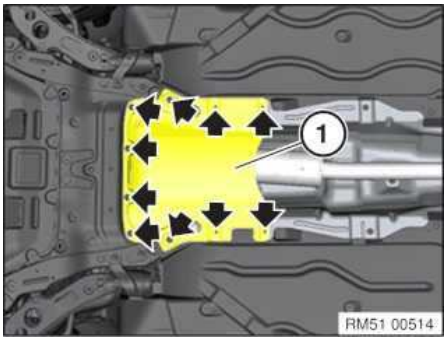


cardiagn.com

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm



- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

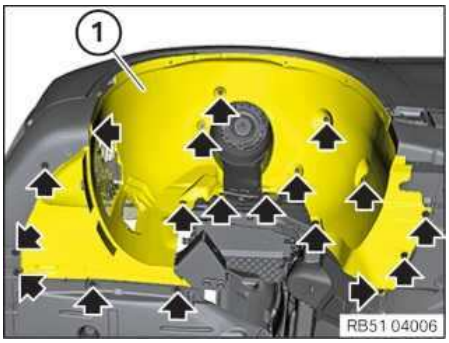
Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

68 – If installed: Installing underbody protection at rear

- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body



Screw		Tightening torque	3 Nm

69 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

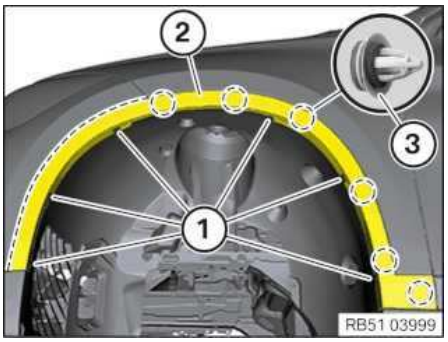
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

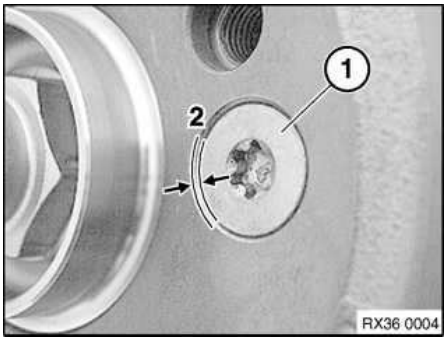
70 – Installing both front wheels

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.



- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

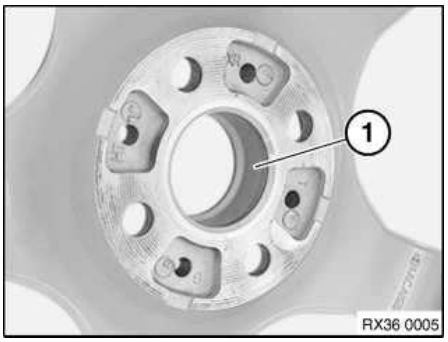
- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

- Renew mounting bolt (1).

  Parts: Mounting bolt
- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.



Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

cardiagn.com

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

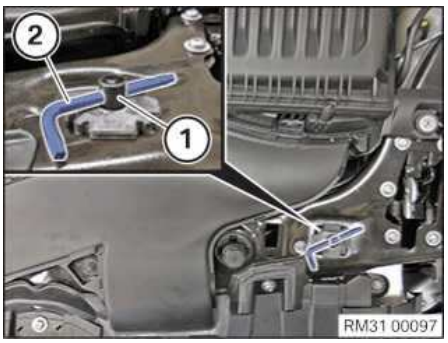
TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.



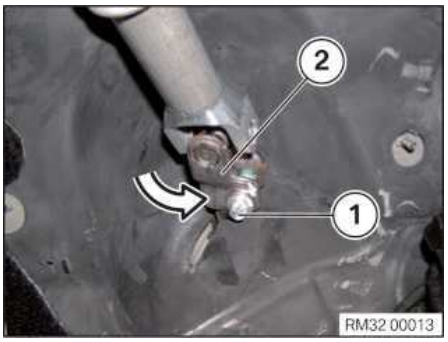
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts.
- Check the wheel bolts and threads for damage, renew the wheel bolts if necessary.
- Join and tighten the wheel bolts (arrows).

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

71 – Removing fastener for left and right radiator



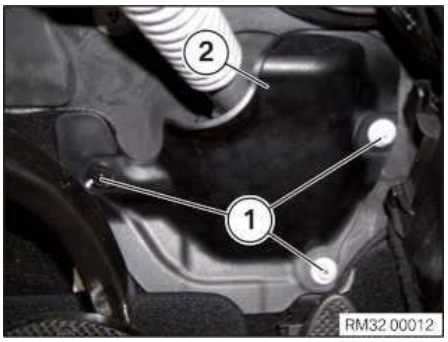
NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

72 – Secure the steering shaft at the bottom on the steering gear

cardiagn.com



- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

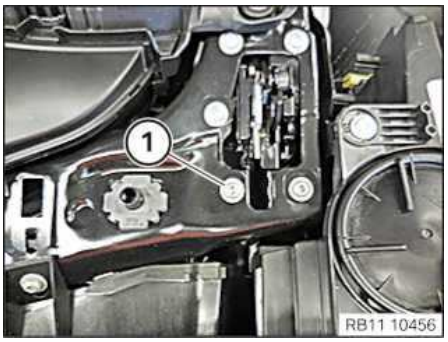
73 – Remove the engine bridge

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Detach the spindle screw (1) from the engine bridge.
- Unscrew the leg screws (2) and (3).
- Guide the engine bridge out of the vehicle with the help of another person and remove.

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.

cardiagn.com

- Tighten the screw (1) of the bonnet catch.

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

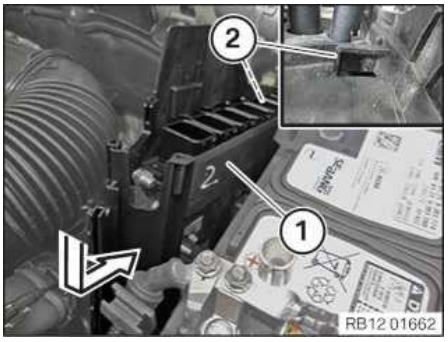
- Tighten the screw (1) of the bonnet catch.

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

74 – Install electronics box

Prerequisite



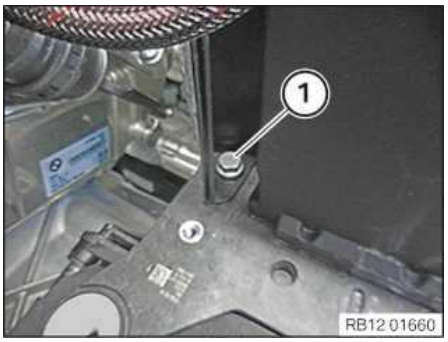
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

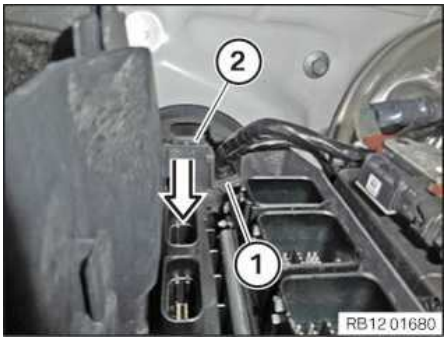
Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

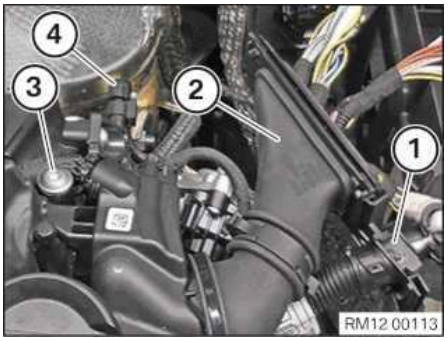


- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



cardiagn.com



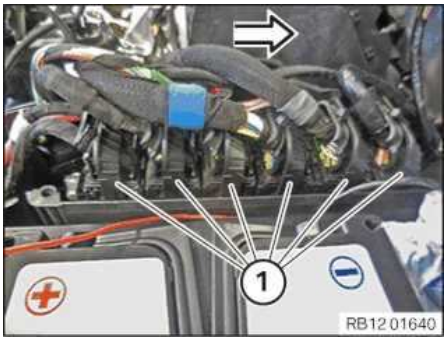
- Tighten down screw (1).

Electronics box to battery tray

M8X16		Tightening torque	15 Nm

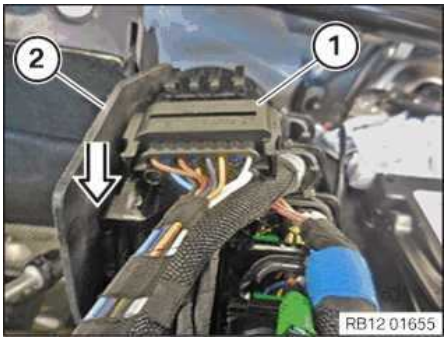
- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.

- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).



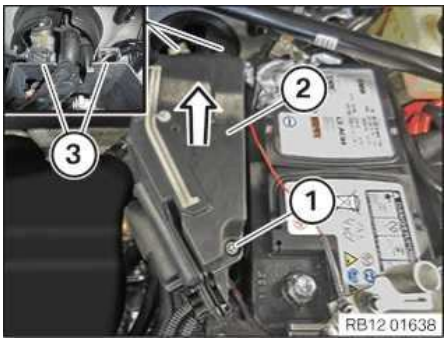
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm



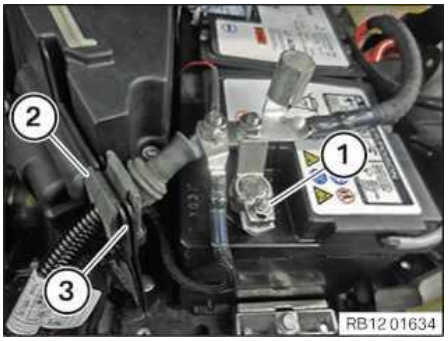
- Attach connector (4) to the differential pressure sensor and lock it audibly.

- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

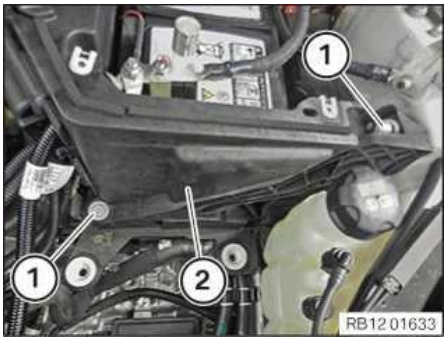
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



cardiagn.com

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

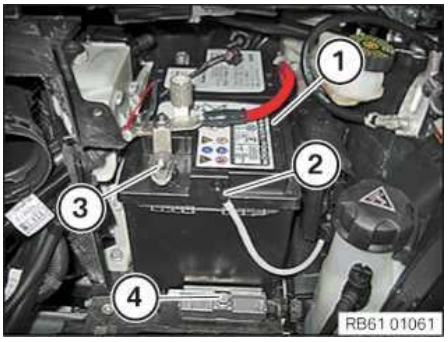


RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

75 – Install vehicle battery

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

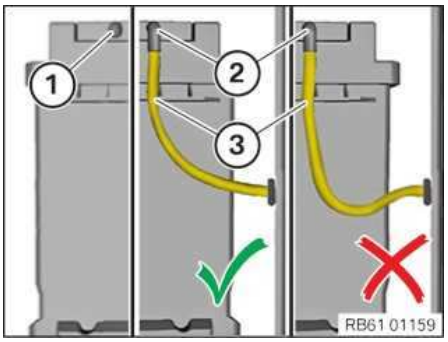
Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

▸ **Check the vent holes of the battery**

WARNING

Gas emission.



Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

cardiagn.com

Check
- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

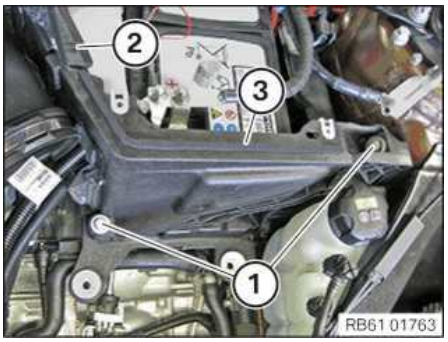
» No dummy plug.

Measure
- Close the vent hole (1) correctly with a dummy plug.

Check
- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

» The vent hose (3) is not correctly connected.



Measure
- At the vent hole (2), connect the vent hose (3) correctly.

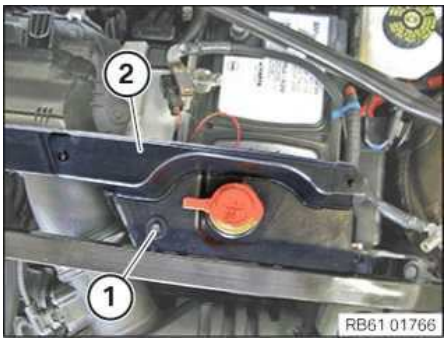
Check
- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).

Result

» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure
- Route the vent hose (3) correctly as shown in the centre image.

- Insert tension strut (3) and tighten with screws (1).

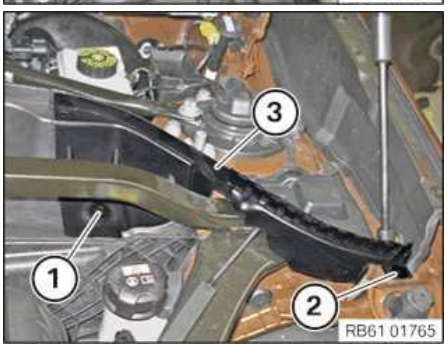


Trailing link

M8		Tightening torque	19 Nm

- Tighten down screw (2).

Battery cover



M8		2,8 Nm

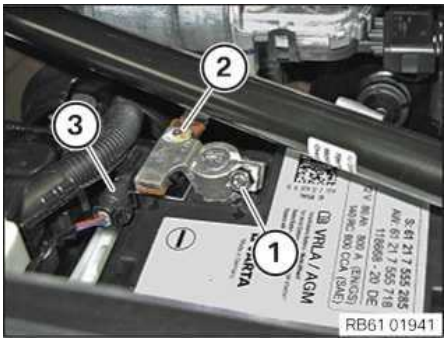
- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover



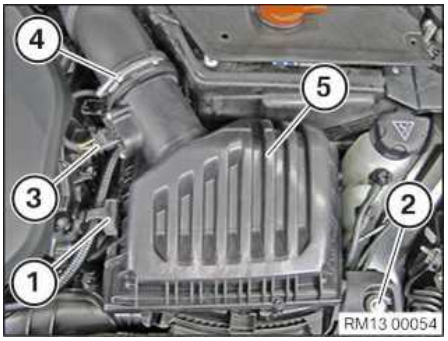
M8		2,8 Nm

cardiagn.com

76 – Connecting the battery earth lead

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)



- Remove the protective cover of the positive battery terminal.
- Position the battery earth lead (2).
- Tighten nut (1).

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6			5 Nm

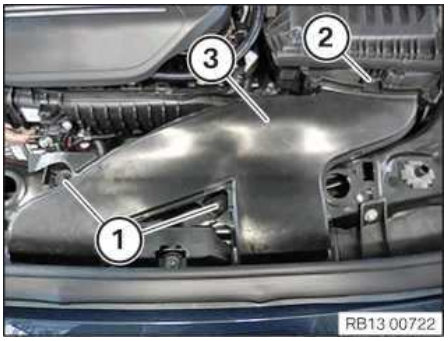
- If required, connect the connector (3).

77 – Installing intake silencer housing

- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm



- Tighten clamp (4).

Clean air pipe to intake silencer housing

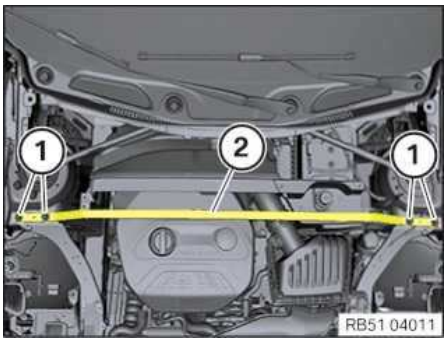
Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

78 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection



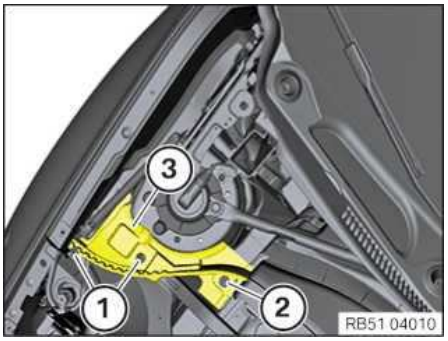
M6		Tightening torque	8 Nm

79 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.

cardiagn.com



- Install the strut brace (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Cross-brace to spring strut dome

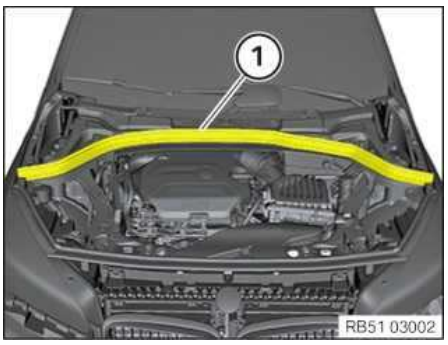
	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

NOTICE

Description is for right component only. The procedure on the left side is identical.

- Install the cover (3).
- Tighten down screw (2).

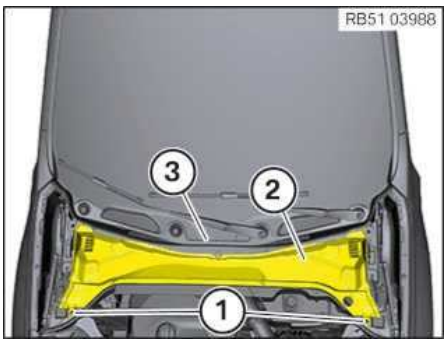
Cover on body



Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

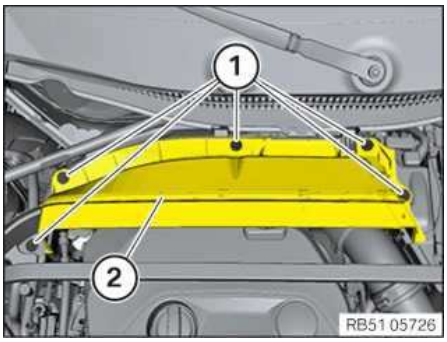
80 – Install the seal for the bonnet



NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

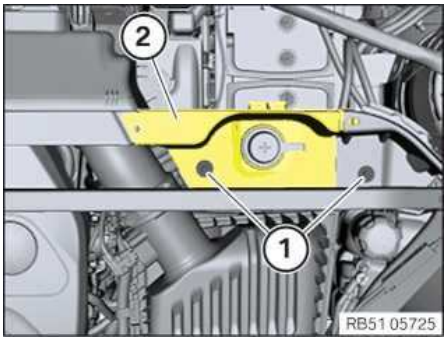
- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.



81 – Installing front cowl panel cover

- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

82 – Installing the upper bulkhead cover



cardiagn.com

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm

- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

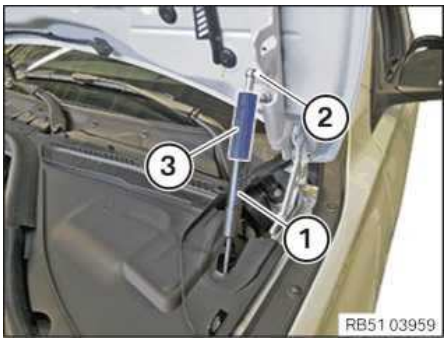
83 – Install acoustic cover

RISK OF DAMAGE

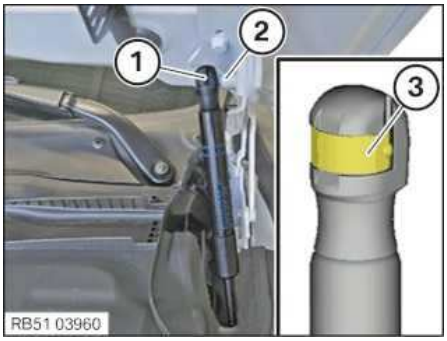
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



- Check for correct installation of all rubber mounts in the acoustic cover (1).



- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

84 – Take bonnet out of the service position

cardiagn.com

- Support the bonnet by hand.
- Remove the special tool (3) from the ball pin (2).
- Pull off the special tool (3) from the gas pressure spring (1).
- Continue to support the bonnet and repeat the operation on the other side of vehicle.

CAUTION

Shutting bonnet or tailgate.

Danger of injury!

- Support bonnet/tailgate in fully open position with the aid of a suitable device.

- Check the clamp (3) is fitted correctly.
- Connect ball socket (1) to ball pin (2).
- Continue to support the bonnet and repeat the operation on the other side of vehicle.

Additional Information

Overview of Tightening Torques

Special tool to cylinder head			Used in step 13
M8		Tightening torque	21,5 Nm

Oil drain plug / oil filler plug			Used in step 36 66
Hexagon socket		Tightening torque	43 Nm

Flywheel to crankshaft			Used in step 44
M12x1.5	Renew screws.	Tightening torque	120 Nm

Clutch to flywheel			Used in step 45
M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

Transmission to engine			Used in step 46
M8x40		Tightening torque	19 Nm
M12x75		Tightening torque	66 Nm

Transmission mounting			Used in step 46
M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

Clutch slave cylinder to transmission housing			Used in step 46
M8		Tightening torque	19 Nm

Battery holder to engine support			Used in step 46
Hexagon screw M8x30		Tightening torque	19 Nm

Battery terminal rail to battery tray			Used in step 46 75
M8			19 Nm

Electronics box to battery tray			Used in step 46 74
M8X16		Tightening torque	15 Nm

cargagn.com

Wiring harness to cylinder head cover			Used in step 46 74
TS5x20		Tightening torque	3,5 Nm

Cover to electronics box			Used in step 46 74
RF5x26.5		Tightening torque	2,5 Nm

Positive battery terminal to battery			Used in step 46 74
NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray			Used in step 46 74
M8		Tightening torque	19 Nm

Transmission to oil sump			Used in step 47
M8			19 Nm

Transfer box to transmission			Used in step 48
M10		Tightening torque	56 Nm

Heat shield to transfer box			Used in step 48
M6	Renew screws.	Tightening torque	6 Nm

Oil filler plug on transfer box (VTG)			Used in step 48
M18x1.5		Tightening torque	35 Nm

Holder to front axle support			Used in step 49
M12		Tightening torque	100 Nm

Bracket to oil sump			Used in step 49
M12		Tightening torque	100 Nm

Intermediate shaft to transfer box			Used in step 50
M8x35		Tightening torque	19 Nm

Propeller shaft to transfer box			Used in step 51
		Tightening torque	80 Nm

Flexible disc to rear axle final drive			Used in step 51
M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

Centre mount to body			Used in step 51
M8		Tightening torque	19 Nm

Heat shield to body			Used in step 52 53
Bolts/nut		Tightening torque	3 Nm

Bracket to body			Used in step 52
M8		Tightening torque	21 Nm

Exhaust system to body			Used in step 54
M8	Replace nuts.	Tightening torque	19 Nm

Exhaust bracket on body			Used in step 54
Hexagon screw M8x30		Tightening torque	19 Nm

V-clip to catalytic converter			Used in step 54
V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

cardiagn.com

Diesel particulate sensor to exhaust system — Used in step 54

Sensor		Tightening torque	50 Nm

Nitrogen oxide sensor downstream of SCR catalytic converter — Used in step 54

Sensor		Tightening torque	50 Nm

Cross-member/torsion strut to axle support and mounting — Used in step 55

M12x48	Renew screws.	Jointing torque Angle of rotation	100 Nm 90 °

Front connection carrier to body — Used in step 56

M10x18		Tightening torque	56 Nm

Rear connection carrier to body — Used in step 56

M8x18		Tightening torque	28 Nm

Starter motor to transmission — Used in step 59

M8x45		Tightening torque	19 Nm

Battery positive lead to starter — Used in step 59

M8		Tightening torque	13,5 Nm

Rear end of front axle support to body — Used in step 60

M14 screw	Renew screw.	Tightening torque	175 Nm

Front axle support, front to body — Used in step 60

M12 screw	Renew screw.	Tightening torque	108 Nm

Underbody protection to body — Used in step 60 68

Screw		Tightening torque	3 Nm

Track rod end to swivel bearing — Used in step 60

M14	Renew nut.	Tightening torque	175 Nm

Wishbone to swivel bearing — Used in step 60

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

Holder, wishbone rubber mount, to body — Used in step 61

M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

Holder with rubber mount to front axle support — Used in step 61

M12 screw			100 Nm

Washer fluid reservoir holder to front axle support adapter plate — Used in step 61

		Tightening torque	10 Nm

Deformation element, bottom, to adapter plate, front axle carrier — Used in step 61

		Tightening torque	11,8 Nm

Holder to front axle support — Used in step 62

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

Anti-roll bar link to anti-roll bar — Used in step 64

M10	Renew nut.	Tightening torque	56 Nm

cardiagn.com

Underbody protection front — Used in step 67

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

Wheel arch cover to body — Used in step 69

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

Wheel arch cover to body — Used in step 69

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body — Used in step 69

Plastic nut		Tightening torque	3 Nm

Brake disc to rear wheel hub — Used in step 70

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub — Used in step 70

M8	Renew screw.	Tightening torque	16 Nm

Wheel bolts — Used in step 70

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Lower steering shaft to steering gear — Used in step 72

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

Steering column cover to bulkhead — Used in step 72

Plastic nut		Tightening torque	3 Nm

Cross connection on support for cross connection — Used in step 73

M6x20		Tightening torque	12 Nm

Battery terminal with IBS positive battery terminal / negative battery terminal — Used in step 75 76

NutM6			5 Nm

Trailing link — Used in step 75

M8		Tightening torque	19 Nm

Battery cover — Used in step 75

M8			2,8 Nm

Intake silencer housing to lock bridge — Used in step 77

M6X30		Tightening torque	8 Nm

Clean air pipe to intake silencer housing — Used in step 77

Clamp		Tightening torque	3 Nm

Intake neck to cross connection — Used in step 78

M6		Tightening torque	8 Nm

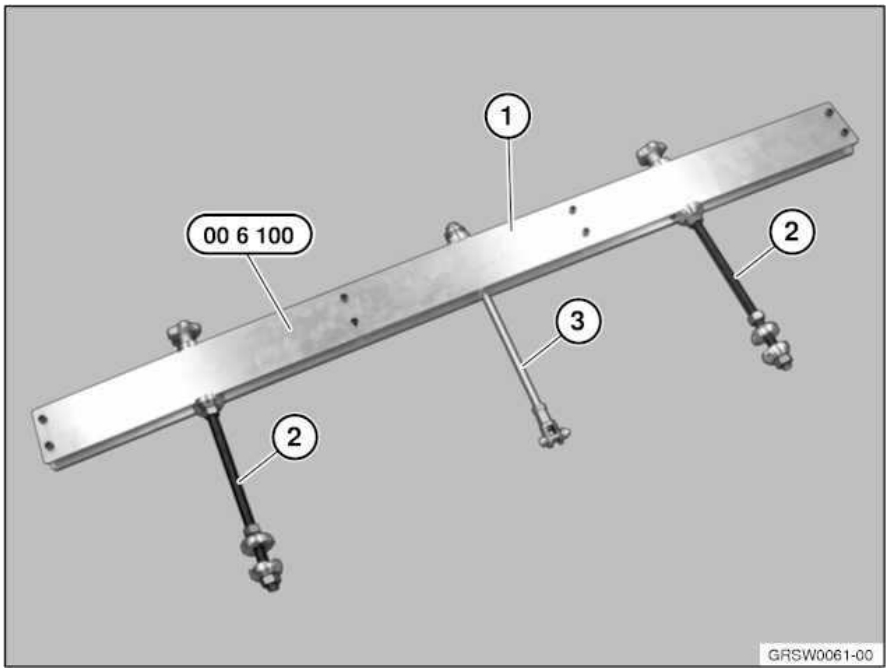
Cover of top bulkhead Used in step 82

Screw		Tightening torque	2,6 Nm

Cover of remote positive terminal Used in step 82

Screw		Tightening torque	2,6 Nm

Overview of Special Tools



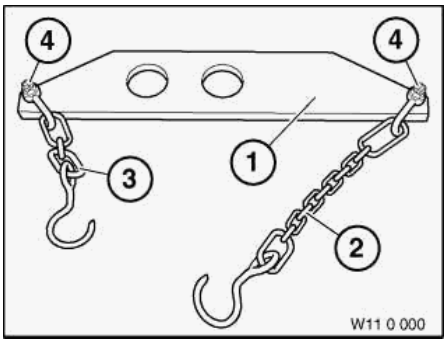
2 459 012 Holder

Common Used in step 13 73

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 496 852 (00 6 100) Device

Common Used in step 13



Usage	Engine bridge (device) 006000
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 10 (659)

Consisting of

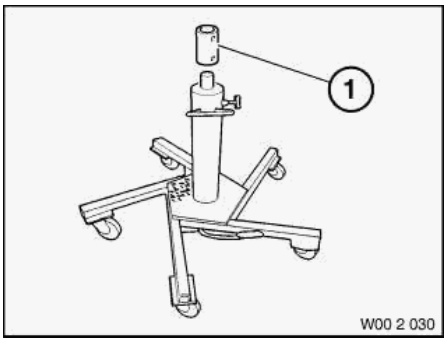
Pos	BMW Order number	Replaced by	Designation	In Connection with
2	2 361 507 (00 6 102)		**Spindle** Set (2 pieces) in connection with 00 6 100.	
3	2 361 506 (00 6 103)		**Spindle** Spindle (central spindle) for Traverse 00 6 100.	

cardiagn.com

0 490 561 (11 0 000) Lifting gear

Common

Used in step 13



Usage	(Hoisting gear) For removing and installing engines. As of 08/2011 only available as a complete set. Delivered with TÜV inspection certificate and operating instructions. No delivery of separate parts.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 13 94 (888)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 490 565 (11 0 009)		**Shackle** (Shackle) 2 pieces. As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 562 (11 0 001)		**Lifting gear** (Cross member) As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 563 (11 0 002)		**Chain** (Chain) Version: long As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 564 (11 0 003)		**Chain** (Chain) Version: short As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.

11 14 151 Replacing the crankshaft seal

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

- Ensure there is a specific weight compensation on the motor vehicle.

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

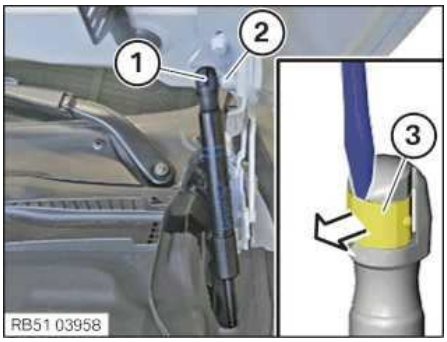
- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

PRELIMINARY WORK

1 – Bring front compartment lid in the service position

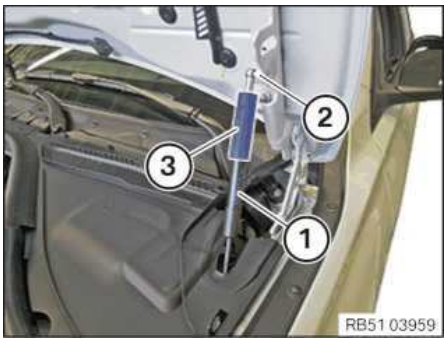
Prerequisite

Engine compartment lid is open.



cardiagn.com

CAUTION



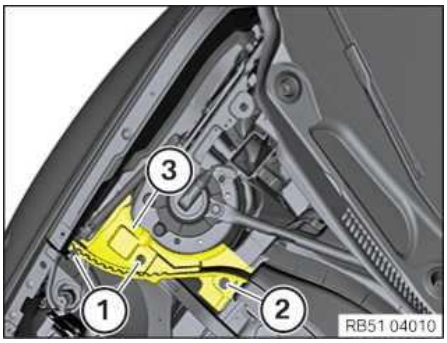
Shutting bonnet or tailgate.

Danger of injury!

- Support bonnet/tailgate in fully open position with the aid of a suitable device.

- Lift clamp (3) slightly using a screwdriver, in the direction of the arrow.
- Lift off ball socket (1) from ball pin (2).
- Repeat the operation on the other side of vehicle.

TECHNICAL INFORMATION

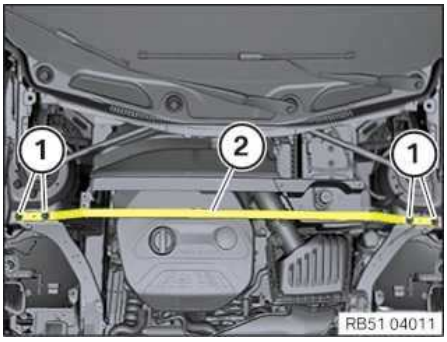


Conduct the following operation with the assistance of a second person.

- Remove the bonnet support and open the bonnet further.
- Push special tool (3) over gas pressure spring (1).
- Place special tool on the ball pin (2) and engage using force.
- Repeat the operation on the other side of vehicle.

2 – Remove suspension cross-brace

TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

NOTICE

Description is for right component only. The procedure on the left side is identical.

- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).

3 – Removing the acoustic cover

cardiagn.com

WARNING

Hot surfaces.

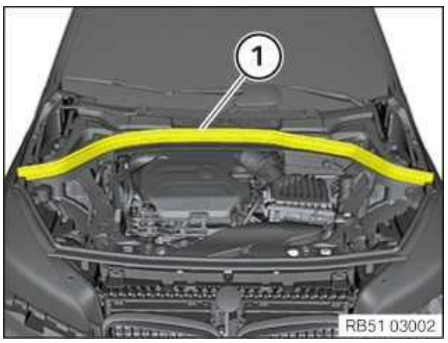
Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the acoustic cover.

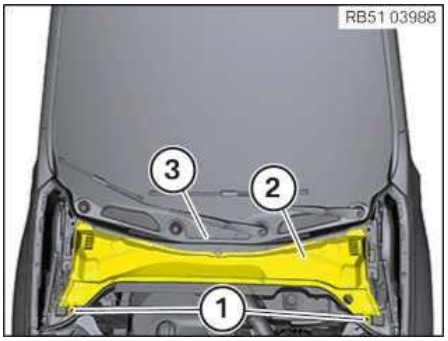
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.



- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

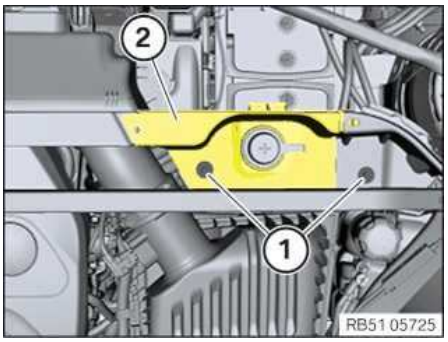
4 – Remove the seal for the rear bonnet



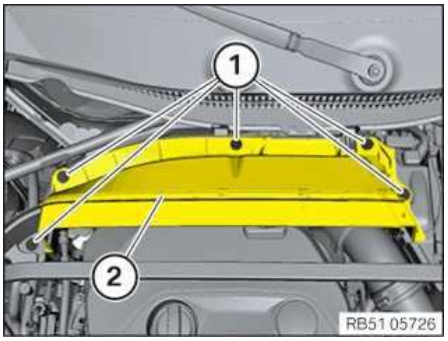
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.



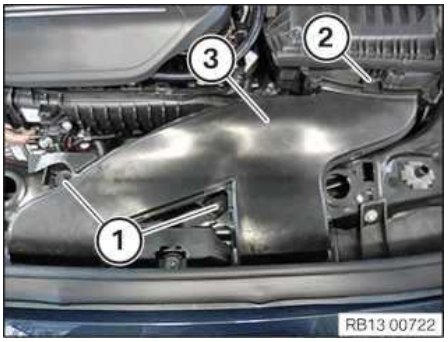
5 – Removing front cowl panel cover



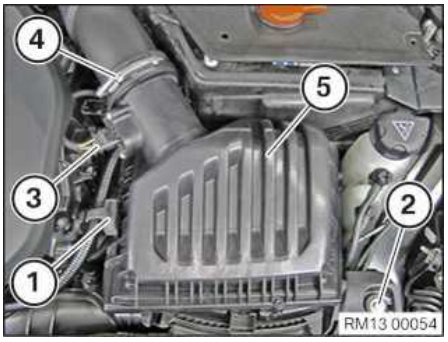
- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

6 – Removing the upper bulkhead cover

cardiagn.com

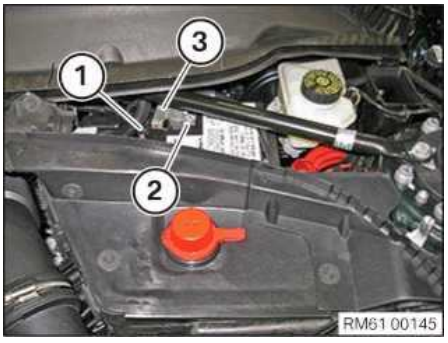


- Loosen screws (1).
- Guide out and remove the cover (2).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

7 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

8 – Removing intake silencer housing

- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

9 – Disconnecting the battery earth lead

- Unlock plug connection (1) and disconnect.
- Unfasten nut (2).
- Remove the battery earth lead (3) and secure to one side.

10 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

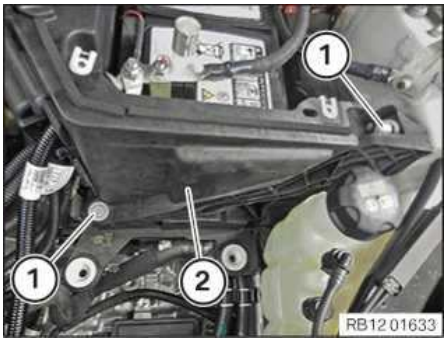
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

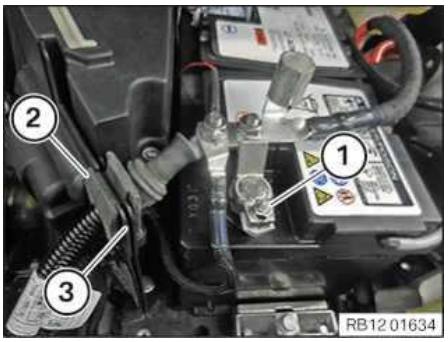
Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.



- Do not pull on the wires when disconnecting connectors and plug connections.

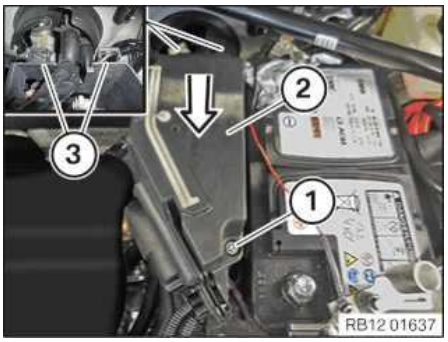
TECHNICAL INFORMATION



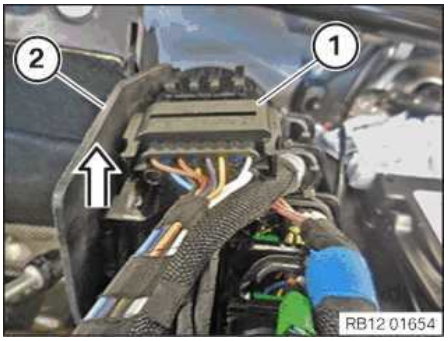
Follow instructions for removing and installing control units.
For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

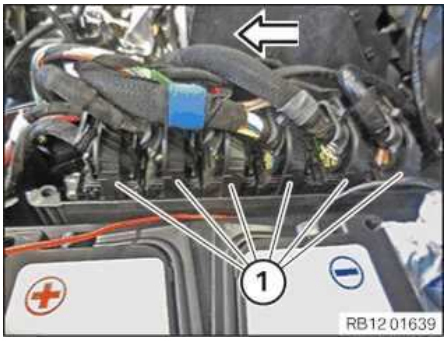
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

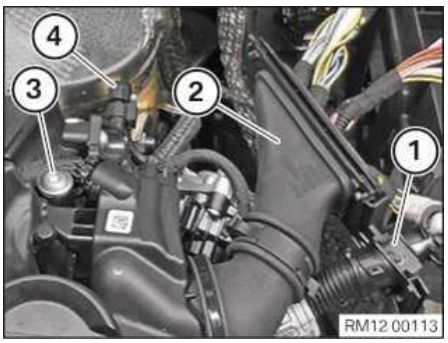


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

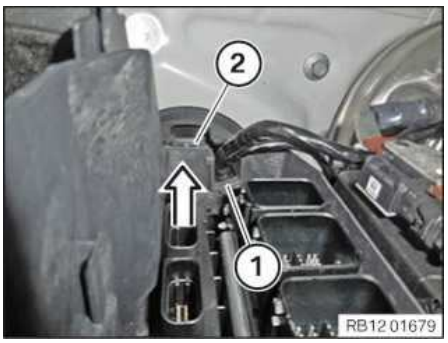


cardiagn.com

- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

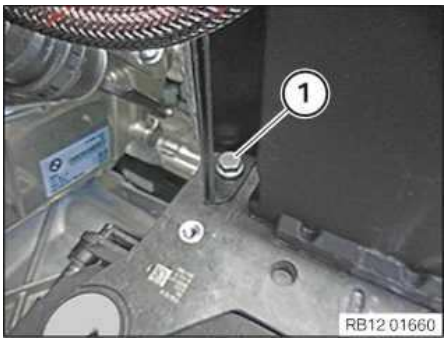


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

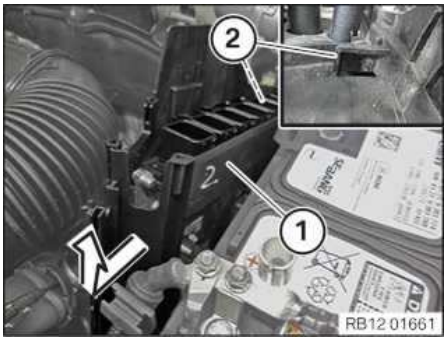


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

- Unlock and loosen connector (1).



- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

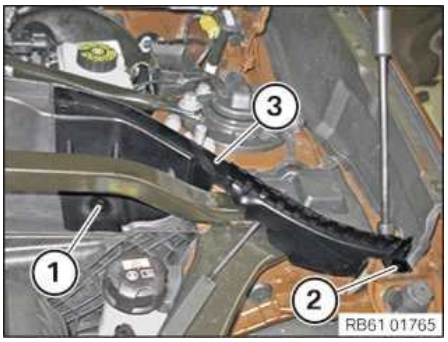


- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

cardiagn.com

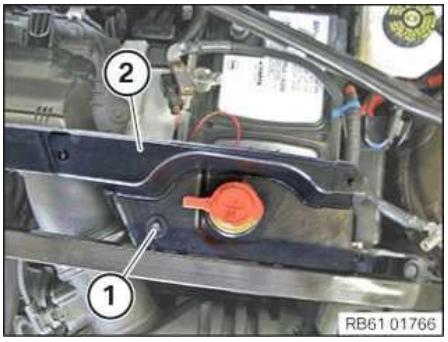
- Loosen screw (1).

- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.



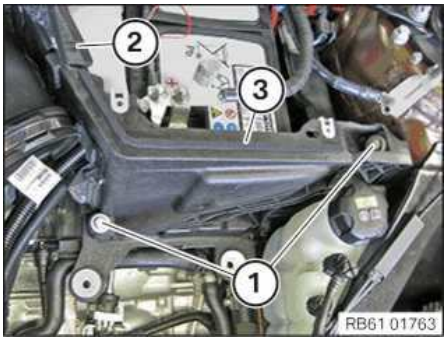
11 – Remove vehicle battery

WARNING



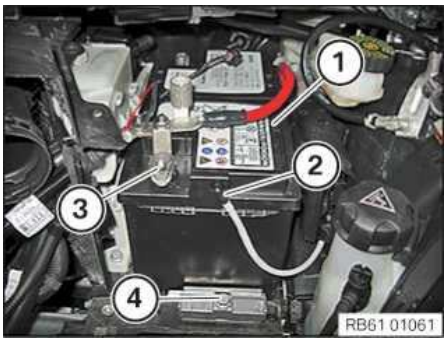
Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!



- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).



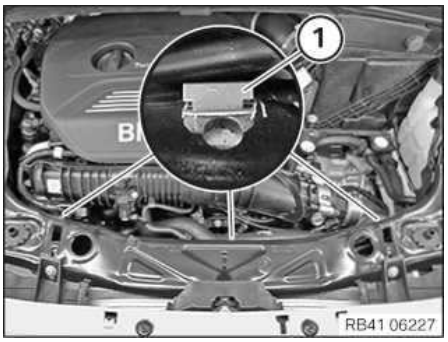
- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

cardiagn.com

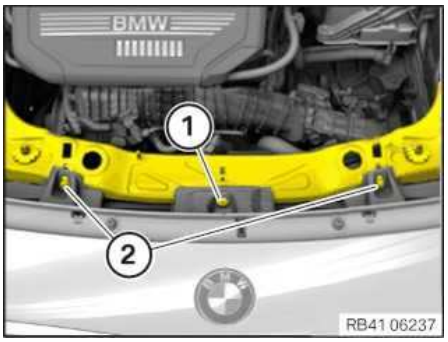
- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING



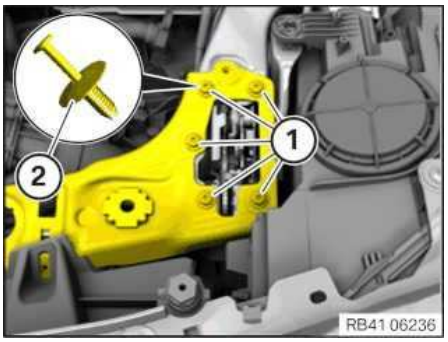
Unprotected battery terminals.

Risk of short circuits! Risk of fire!

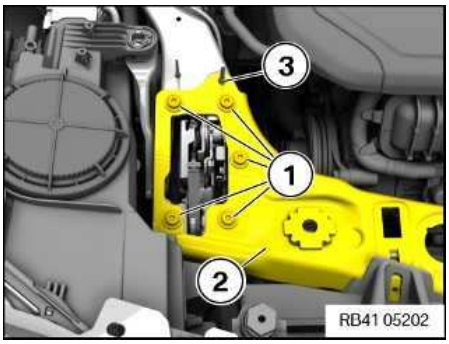


- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

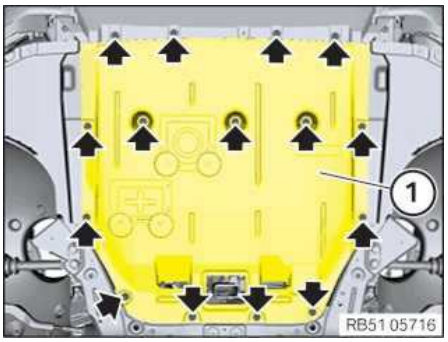


12 – Remove front cross connection

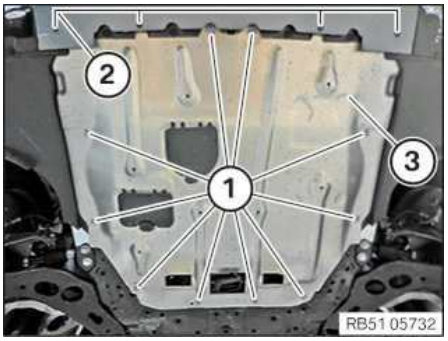


- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

- Loosen screw (1).
- Loosen screws (2).



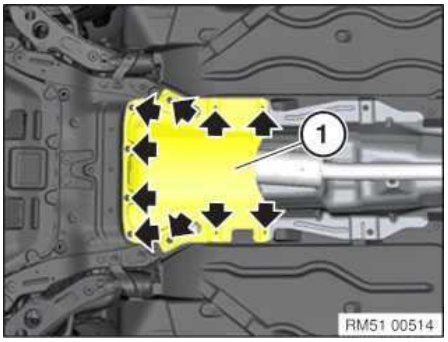
- Loosen screws (1).
- Lever out expanding rivet (2).



- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

13 – Removing the front underbody protection

cardiagn.com



- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

14 – If installed: Removing rear underbody protection

- Remove screws (arrows).
- Remove the rear underbody protection (1).

15 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

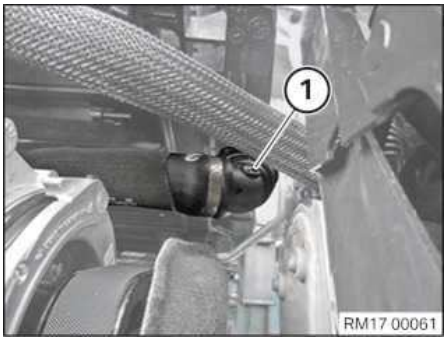
TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

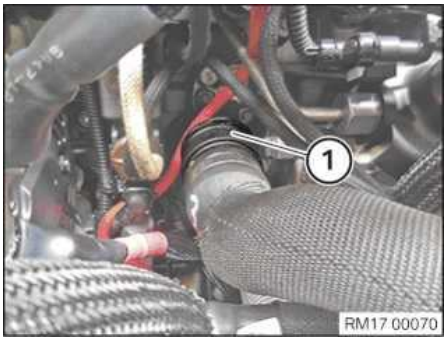
When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.



TECHNICAL INFORMATION

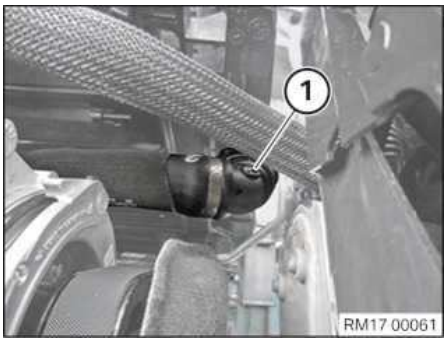
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



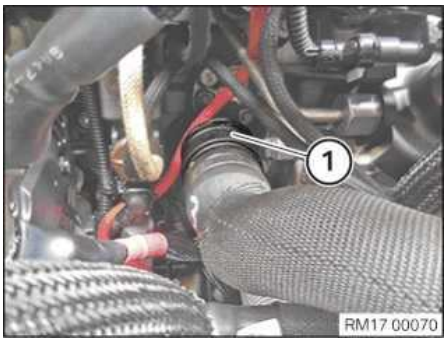
cardiagn.com

- Loosen sealing cap (1).

- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.



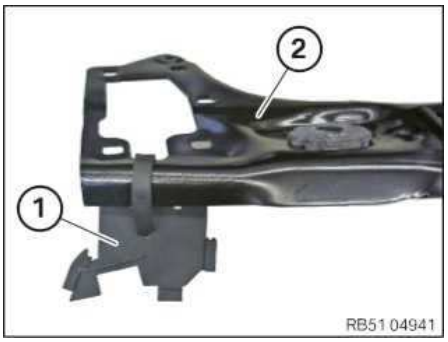
- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.



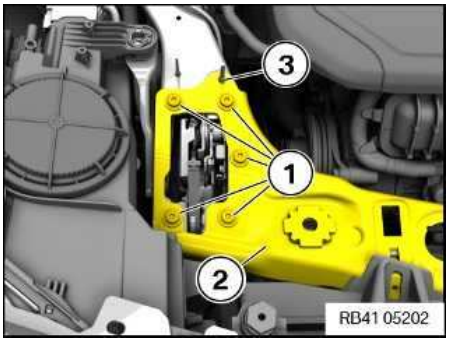
16 – Connect the coolant line

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



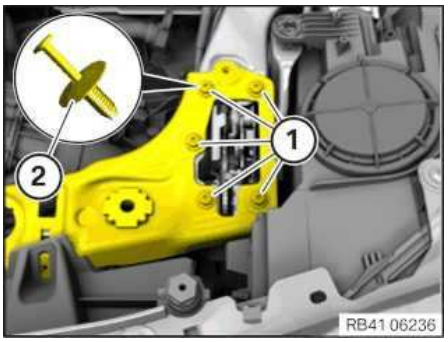
- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the connecting branch and lock audibly.

17 – Install front cross connection

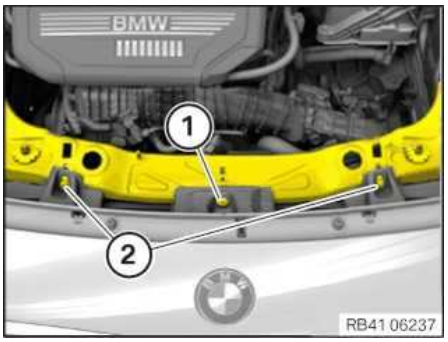
cardiagn.com



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

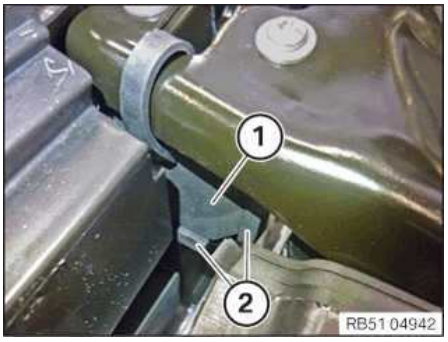
Screws M6x20		Tightening torque	11,8 Nm

- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

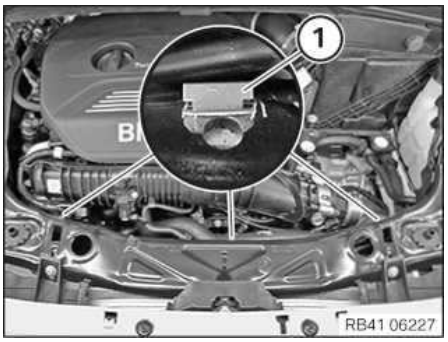
- Tighten down screws (2).



Air duct to upper connection

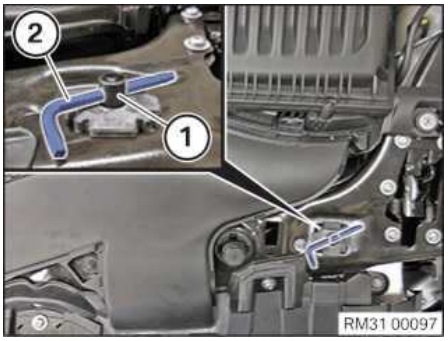
M6x20 screw		Tightening torque	11,8 Nm

- Tighten down screw (1).



Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm

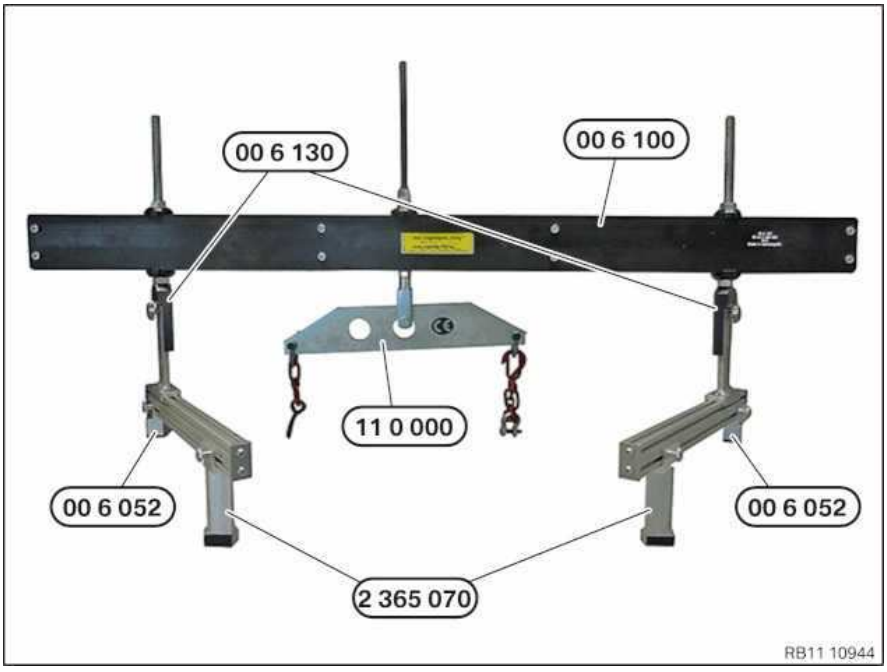


- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

cardiagn.com

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

18 – Securing radiator on left and right



NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

19 – Installing the engine bridge

Overview: Prepared engine bridge

Prerequisite

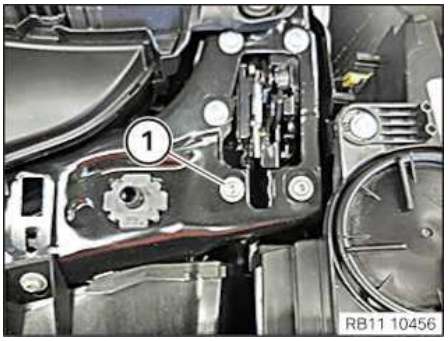
Front compartment lid is in service position.

CAUTION

Components connected to the engine joint or cross member.

Danger of injury!

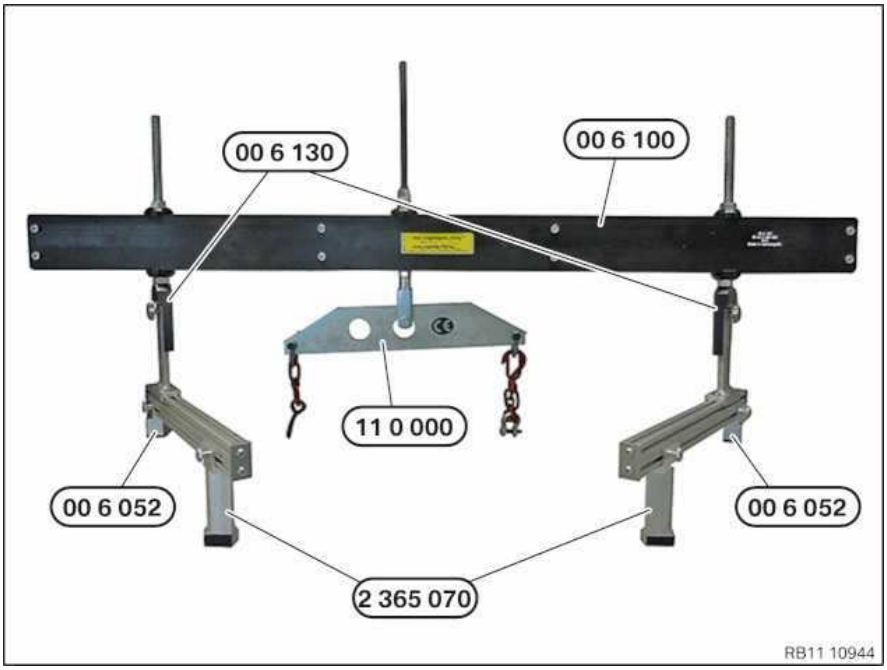
- Check lifting eyes and engine mounting brackets for damage, e.g. cracks.
- Attach the component to correctly mounted engine joints or cross members only.
- Exclusively lift the component, do not move it forwards, backwards or in transverse direction.



cardiagn.com

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

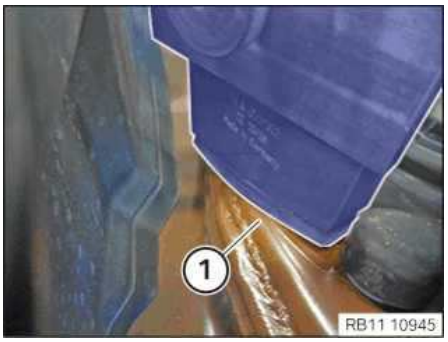
Special tool to cylinder head



M8		Tightening torque	21,5 Nm

- Loosen screw (1) of the left bonnet catch.

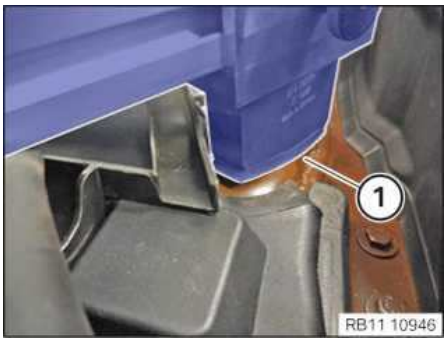
- Loosen screw (1) of the right bonnet catch.



CAUTION

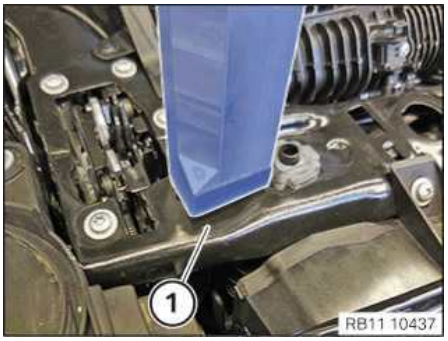
Heavy component.

Heavy components can lead to injury or damage.

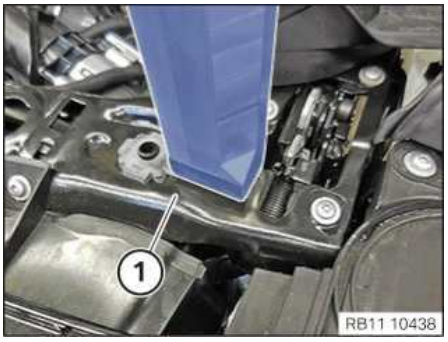


- Remove and install heavy components with the aid of another person/other persons.

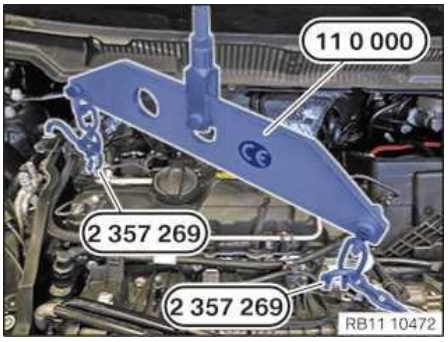
- Set entire cross member **0 496 852 (00 6 100)** on the vehicle and position with the help of an auxiliary person.



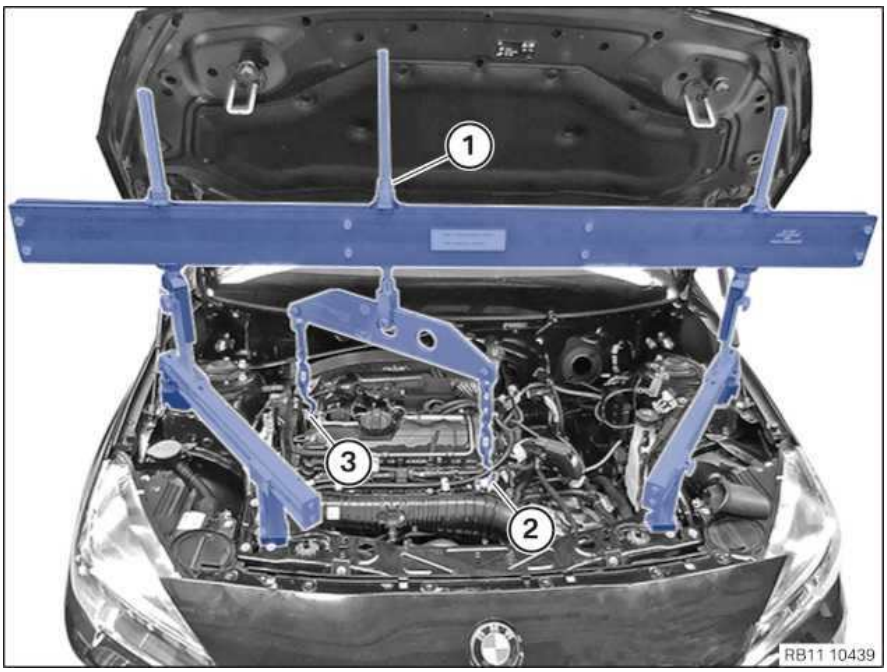
- Position the special tool at the rear mounting point (1) on the **right**.



cardiagn.com

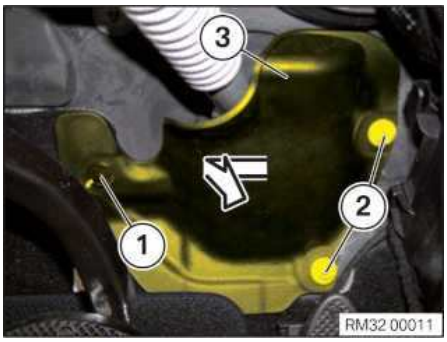


- Position the special tool at the rear mounting point (1) on the **left**.



- Position the special tool at the front mounting point (1) on the **right**.

- Position the special tool at the front mounting point (1) on the **left**.



- Position special tool **0 490 561 (11 0 000)** above the engine.
- Attach special tools to the mounting lugs of the engine.

- Tighten side screws (2) and (3).
- Slightly pretension the spindle screw (1) of the engine support beams.
- Tighten down all adjusting screws, knurled screws and nuts on cross member **0 496 852 (00 6 100)** and on special tool .

20 – Releasing lower steering shaft from steering gear

cardiagn.com

- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!

- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

21 – Removing both front wheels

▸ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

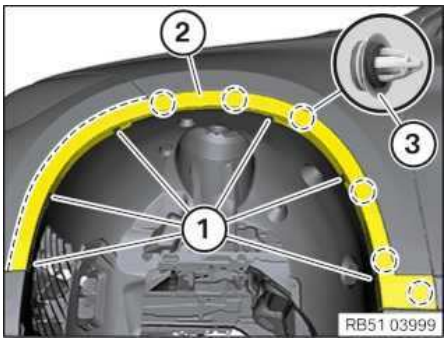
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

22 – Removing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

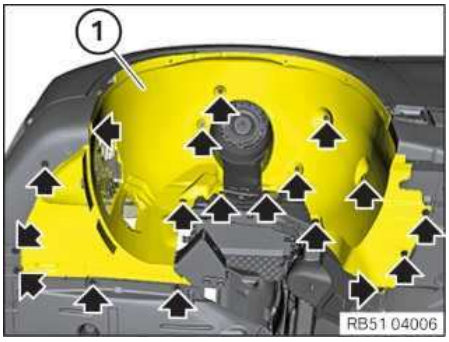
▸ **Remove the front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE



Description is for left component only. Procedure on the right side is identical.

cardiagn.com

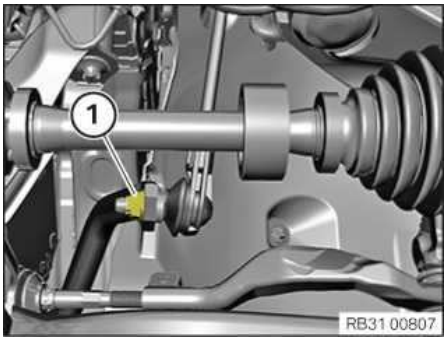
- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

▸ **Remove front wheel arch cover**

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

23 – With right installation: Detaching ride height sensor cable



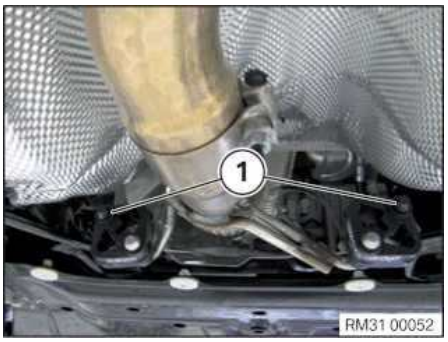
- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

24 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▸ **Detach the anti-roll bar from the anti-roll bar link**



- Unfasten nut (1).

Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .

25 – Detaching rubber mount from front axle support

cardiagn.com

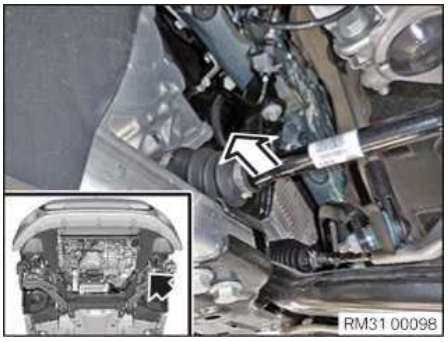
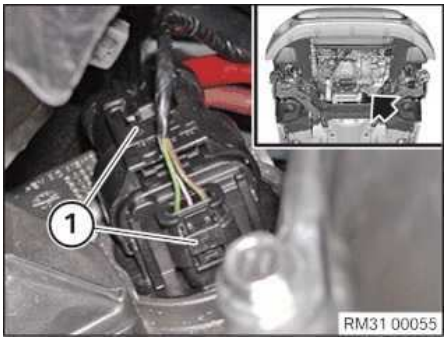
- Spray rubber mount (1) with lubricant and release from holder on front axle support.

26 – Disconnecting plug connections from steering gear



▶ **If installed: Detach connectors from the front axle carrier**

- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).



- Disconnect wiring harness (1) from steering gear.

- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.

- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

27 – Releasing the mounted part from the front axle support

cardiagn.com

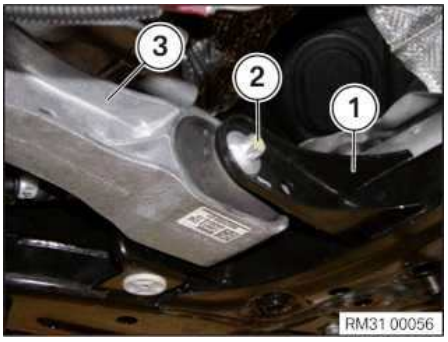
- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.



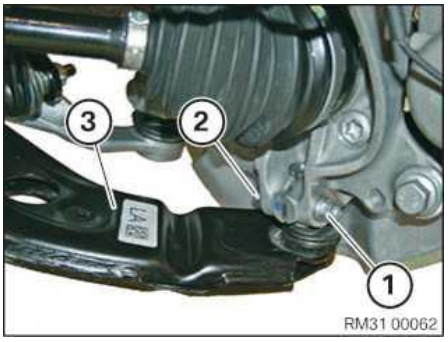
- Loosen screws (1).

NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).

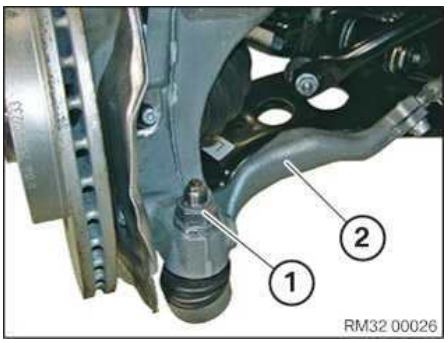
- Loosen screw (2) of the engine support (3) on the front axle (1).



NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

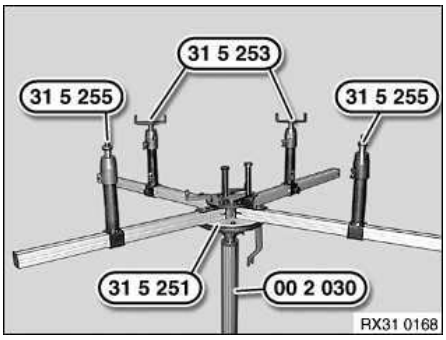


28 – Detaching and removing front axle completely

NOTICE

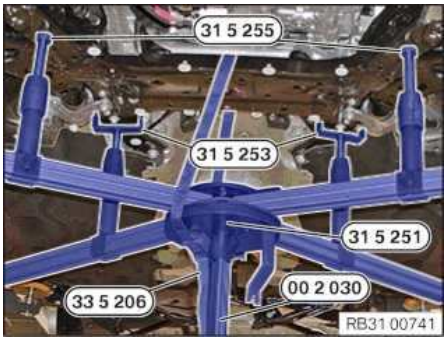
Perform the operations on the left and right side.

- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .



NOTICE

Perform the operations on the left and right side.



- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

cardiagn.com

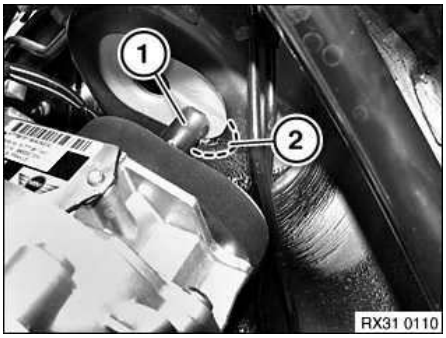
- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

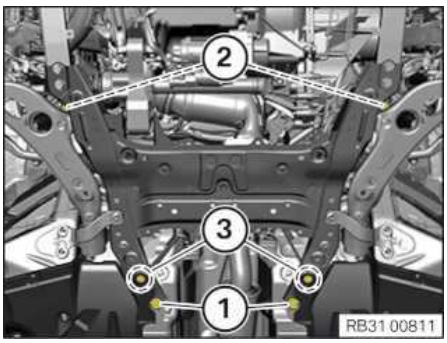


Note: In a profile rail pair, two profile rails are connected to one another by gearing.

- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

29 – Removing starter motor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

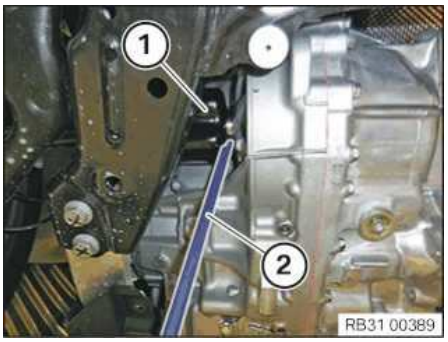
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

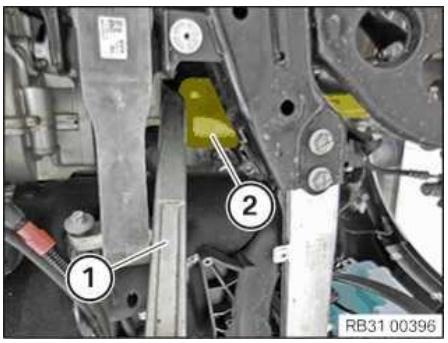
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Loosen screws (1).
- Feed out starter motor and remove.



30 – Partially removing the left output shaft

cardiagn.com

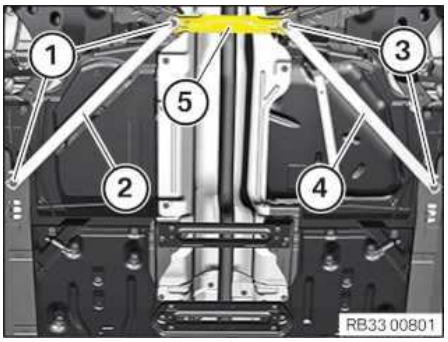
- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Tie up output shaft (1).

31 – Partially removing right output shaft

- Lever out the output shaft (2) with a mounting lever (1).
- Tie up output shaft (1).

32 – Removing the connecting support from the tunnel in front and back



- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

33 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.

- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

34 – Remove exhaust system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

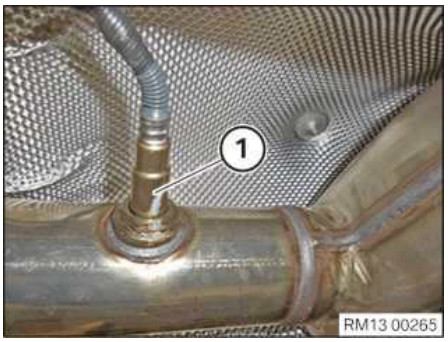
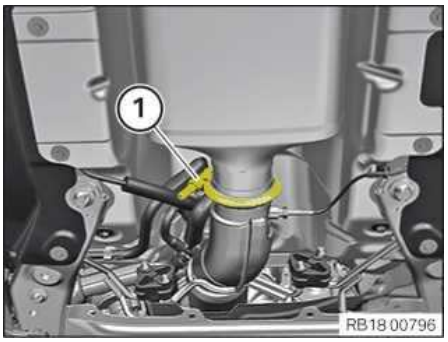
CAUTION

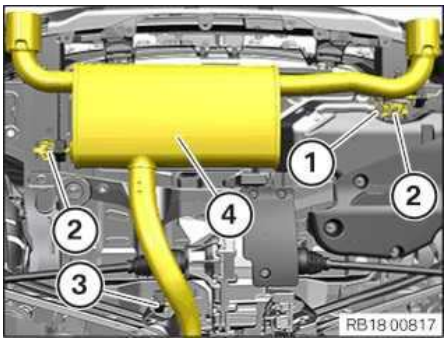


Heavy component.

Heavy components can lead to injury or damage.

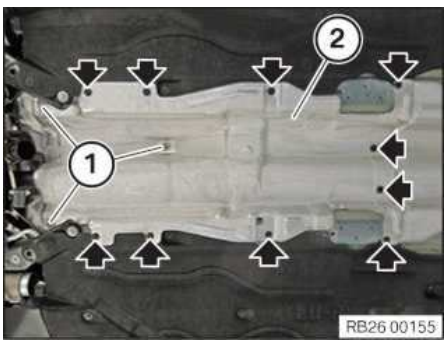


- Remove and install heavy components with the aid of another person/other persons.



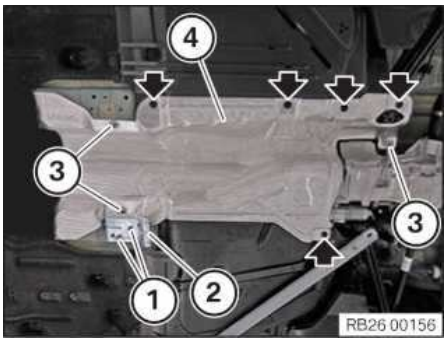
- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.

- Release the diesel particulate sensor (1), guide it out and set it aside.



- Loosen V-band clamp (1).

- Loosen screw (1).
- Loosen nuts (2).
- Release the rubber mount (3) of the exhaust system (4).
- Lower and guide out the exhaust system (4) with assistance of a second person and remove it.



35 – Remove front heat shield

- Remove screws (arrows).
- Loosen nuts (1).
- Guide the heat shield (2) out and remove it.

36 – Remove heat shield at rear.

cardiagn.com

- Loosen screws (1).
- Guide out and remove holder (2).
- Remove screws (arrows).
- Loosen nuts (3).
- Guide the heat shield (4) out and remove it.

37 – Remove propeller shaft

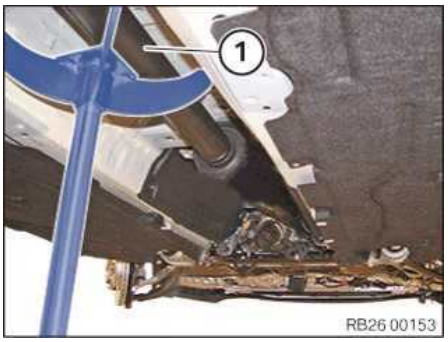
CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

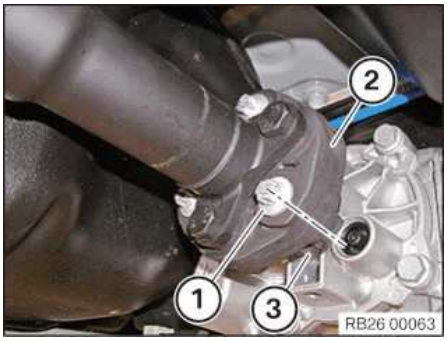


Damage to propeller shaft during removal.

Non-observance of the removal guidelines for the propeller shaft on the rear axle differential may cause severe damage.

- Do not disassemble the three-hole flange, flexible disc and propeller shaft. The three-hole flange to the rear axle differential is balanced with the flexible disc and propeller shaft.
- Loosen the recessed nut against the direction of travel in clockwise direction. The propeller shaft must be loosened on the recessed nut only and exclusively in the direction of rotation otherwise the anti-twist lock of the bi-hexagonal flange nut is damaged.
- In the event of a damaged anti-twist lock on the bi-hexagonal flange nut: Replace the rear axle differential.

- Install the special too l between the front and rear propeller shaft.
- Make sure that the arrows on the special tool point forward in the direction of travel.



- Always support the propeller shaft (1) with a conventional jack.

cardiagn.com

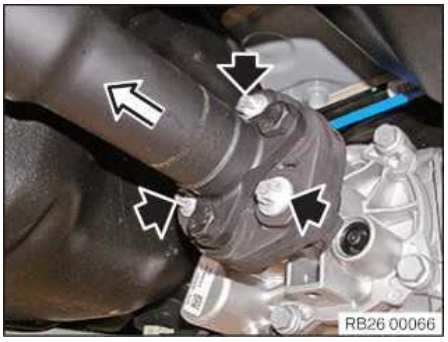
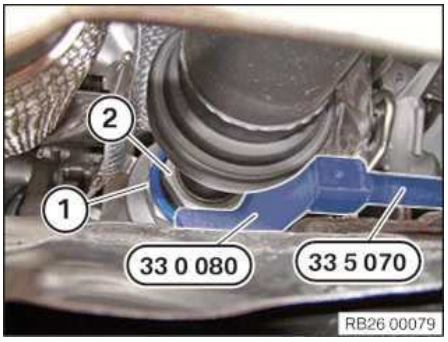
- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.



TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.



- Mark the installation position of the screw connection (1), the flexible disc (2) and the three-hole flange (3) on the same level.
- Loosen the screw connection (1).

- Loosen screws (1).

- Remove screws (arrows).
- Guide the propeller shaft out in the direction of the arrow and set it aside.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to detach the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.

cardiagn.com

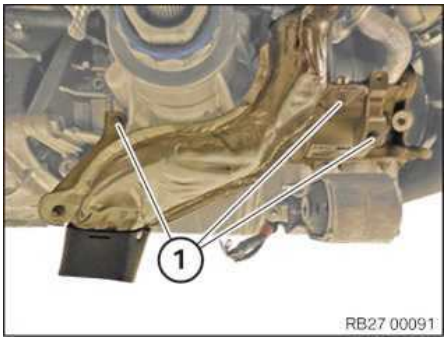
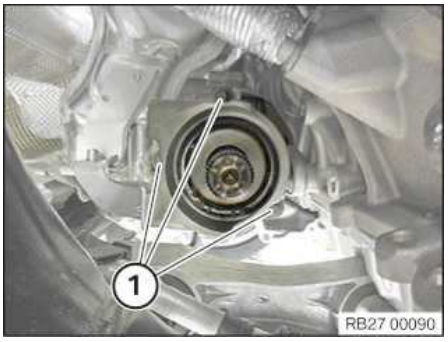
- Release the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

- Thread the propeller shaft (2) out of the recessed nut (1) and remove.

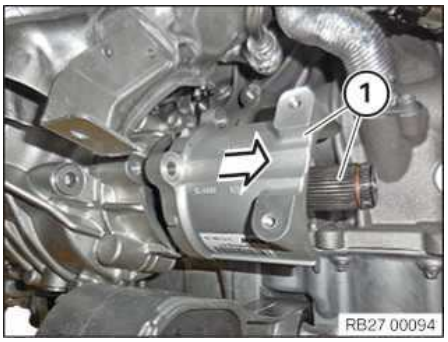


- Thread the retaining clip (1) and the seal (2) out and remove.

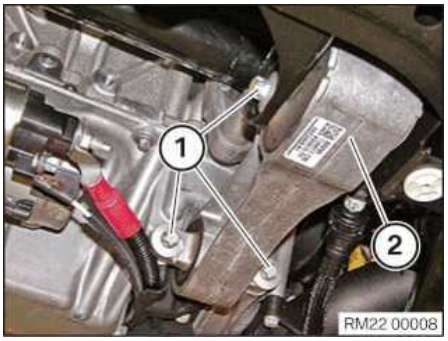


- Thread out and remove the recessed nut (1).

38 – Remove the intermediate shaft with the support tube



- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).

cardiagn.com

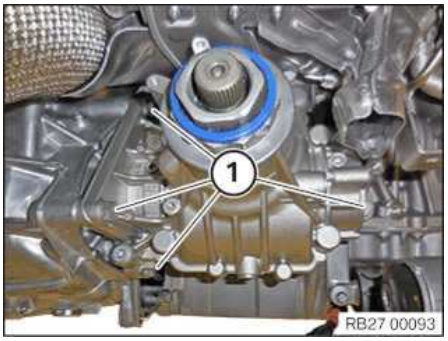
- Pull the intermediate shaft with the support tube (1) out of the transfer box.

39 – Remove bracket with rubber mount



- Release screws (1) and remove holder (2) with rubber mount.

40 – Remove transfer box (VTG)

- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

41 – Remove the automatic transmission (AISIN GA8G45)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

RISK OF DAMAGE

Damage to the engine block.

Damaged and corroded bolts will lead to major damage in the engine block and the transmission.

- It is imperative that protruding threads of the transmission bolts are checked for corrosion and damage prior to removal.
- It is imperative that all rust is removed from corroded threads and that they are cleaned prior to removal.
- Renew rusted and damaged bolts.

▸ **Remove electronics box**

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

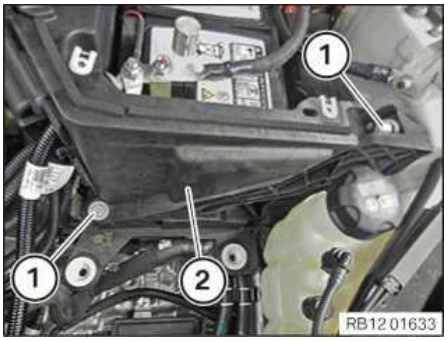
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

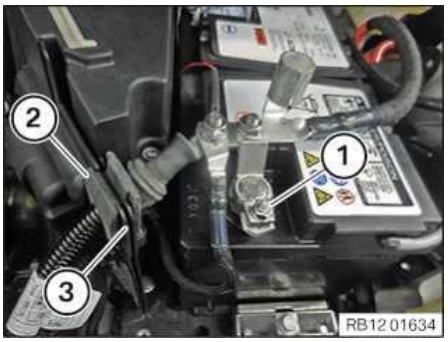
- Do not pull on the wires when disconnecting connectors and plug connections.



TECHNICAL INFORMATION

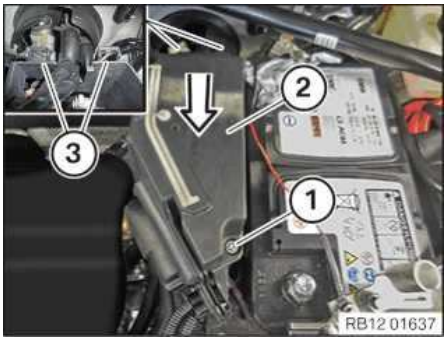
Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units



TECHNICAL INFORMATION

Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

cardiagn.com

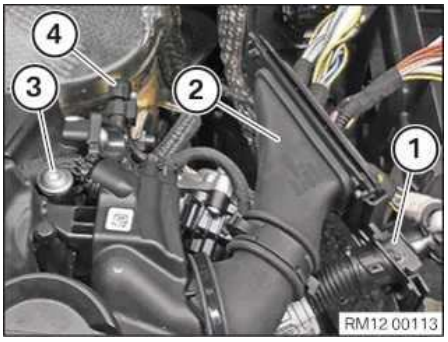
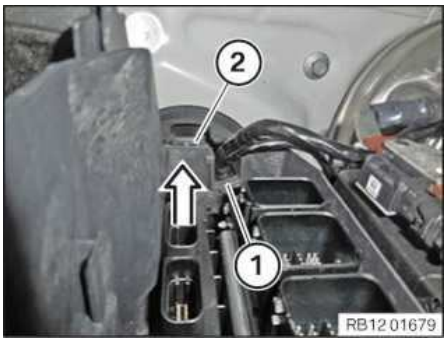
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

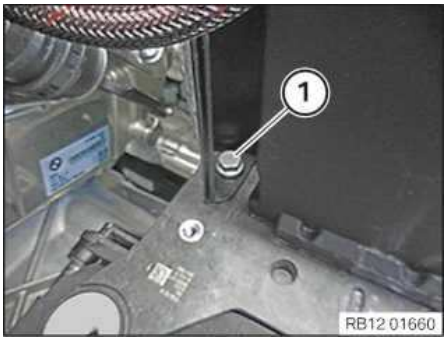


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).



- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

cardiagn.com

- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

- Loosen screw (1).

- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

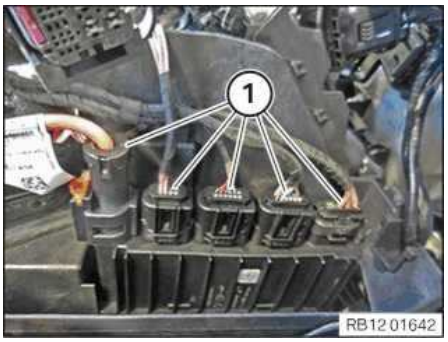
▶ **Removing integrated supply module (PDM)**

RISK OF DAMAGE

Electrostatic discharge.

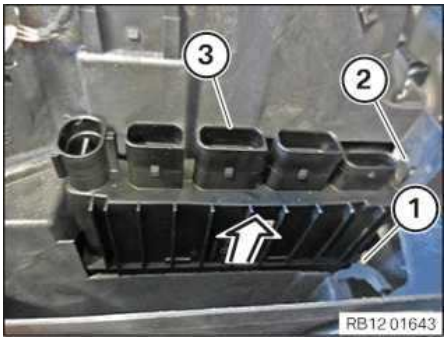
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.



Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

cardiagn.com

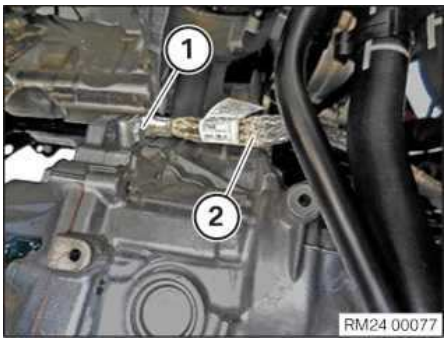
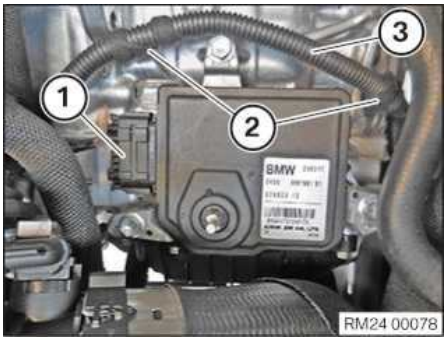
- Unlock and disconnect the plug connection (1).

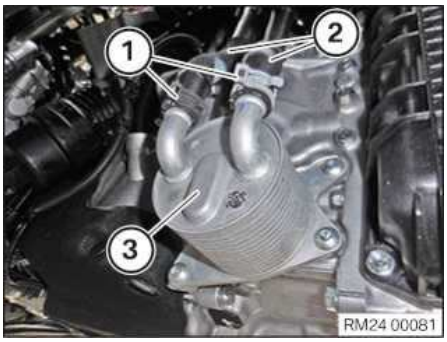


- Disengage locks (1) and (2).
- Guide out and remove the integrated supply module (3) in the direction of the arrow.



▶ **Remove battery holder**

- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).



- Loosen screw (1).
- Detach the ground strap (2) from the transmission and set it aside.

- Unlock plug connection (1) and disconnect.
- Detach the clamps (2) with the wiring harness (3) from the transmission and set it aside.

cardiagn.com

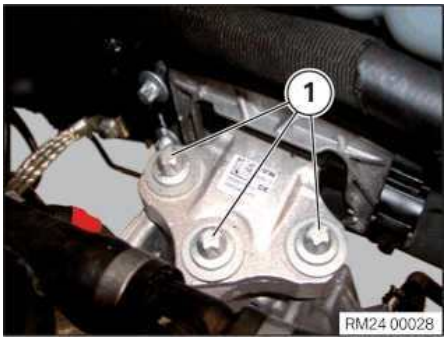
TECHNICAL INFORMATION

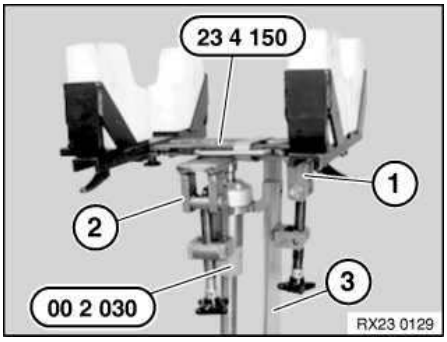
The figure shows transmission oil cooler on vehicles with the B47 engine.



- Unfasten hose clamps (1).
- Disconnect coolant hoses (2) from transmission oil cooler (3).
- Catch and dispose of escaping coolant.

TECHNICAL INFORMATION

The figure shows transmission oil cooler on vehicles with the B48O engine.



- Release locks (1).
- Disconnect coolant hoses from transmission oil cooler.
- Catch and dispose of escaping coolant.

- Loosen screws (1).

- Turn the engine using the special tool **0 493 380 (11 6 480)** on the vibration damper in the direction of rotation.
- Unscrew the nut (1) of the torque converter.
- Crank engine further and release remaining 5 nuts.

- Support the transmission using special tools **0 490 133 (00 2 030)** and .
- Secure the transmission with the tensioning strap (3).

- Unscrew the bolts (arrows) and remove the transmission.

cardiagn.com

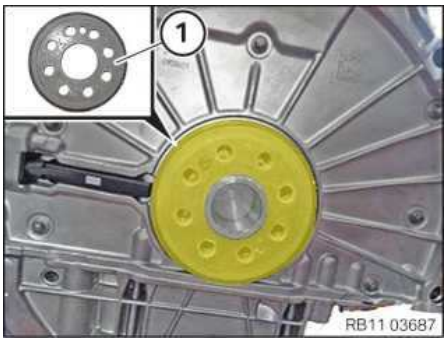
CAUTION



Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Secure flywheel with a transmission bolt (1) and the special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.
- Unfasten flywheel bolts.
- Remove flywheel.

RISK OF DAMAGE

Electrostatic discharge.

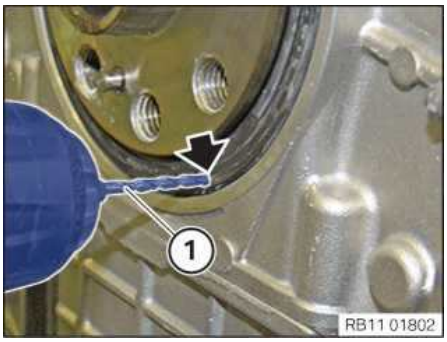
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Remove the increment wheel (1) from the crankshaft and set correctly.

MAIN WORK

43 – Removing the rear crankshaft seal



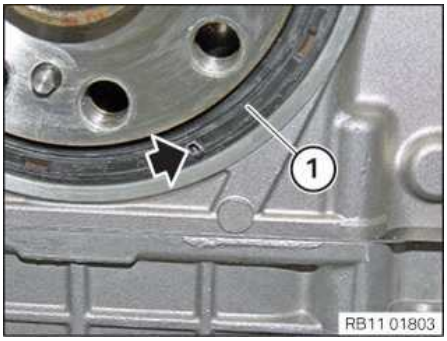
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

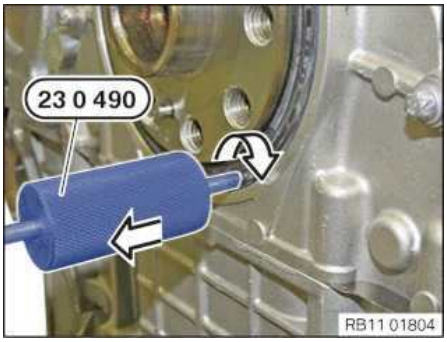
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com



RISK OF DAMAGE

Damage due to swarf.



Contamination can lead to malfunctions and damage.

- Cover working area.
- Draw off swarf during drilling using a vacuum cleaner.

- Drill a hole (arrow) into the crankshaft seal with using a 2.5 mm drill (1).
- Do not remove swarf with compressed air!

- Remove swarf in the bore hole (arrow) on the crankshaft sealing ring (1).

- Screw in special tool **0 491 454 (23 0 490)** in direction of arrow.
- Drive out crankshaft seal with the impact weight in direction of arrow.

44 – Installing the rear crankshaft seal

RISK OF DAMAGE

Radial shaft seal damage.

Touching the sealing lip (inner) on the radial shaft seal with the sharp-edged connector gearing of the output shaft will result in destruction and/or leaks.

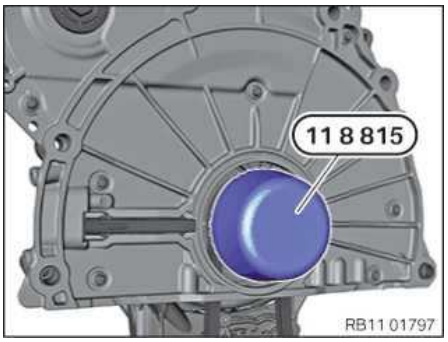
- When inserting the output shaft, make sure that the connector gearing of the output shaft does not touch the sealing lip (inner) of the radial shaft seal.

RISK OF DAMAGE

Radial shaft seal damage.

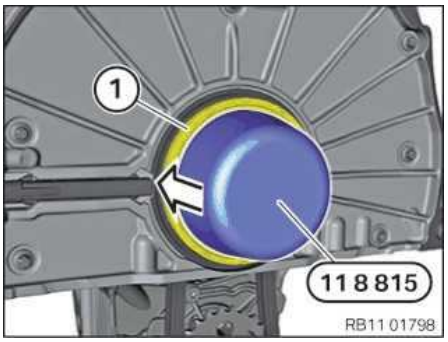
Touching the sealing lip (inner) and applying oil to the radial shaft seal will lead to its destruction.

- Do not touch the sealing lip (inner) of the radial shaft seal.
- Do not apply oil to the radial shaft seal.
- Install the radial shaft seal dry.



cardiagn.com

RISK OF DAMAGE



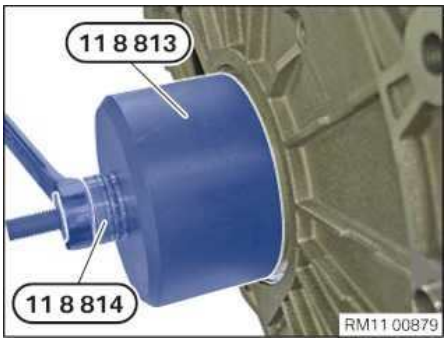
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Position special tool **0 496 137 (11 8 815)** on crankshaft. Make sure that the crankshaft sensor is not damaged.

- Fit the crankshaft seal (1) up to the timing case cover in the direction of the arrow using special tool **0 496 137 (11 8 815)** and position.
- Remove special tool **0 496 137 (11 8 815)**.



- Secure special tool **0 496 133 (11 8 811)** to the crankshaft using special tool **0 496 134 (11 8 812)**.

- Check the freedom of movement between the special tool **0 496 135 (11 8 813)** and the crankshaft sensor during installation.

  Otherwise there is a risk that the crankshaft sensor will be damaged.
- Slide on special tool **0 496 135 (11 8 813)**.
- Screw down special tool **0 496 136 (11 8 814)**.

cardiagn.com

- Press in crankshaft seal with special tool **0 496 135 (11 8 813)**.
- Screw in special tool **0 496 135 (11 8 813)** up to timing case cover.

POSTPROCESSES

45 – Installing the flywheel

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

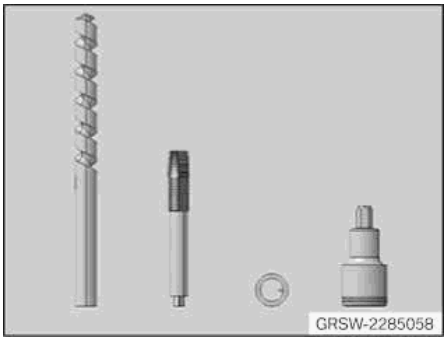
- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



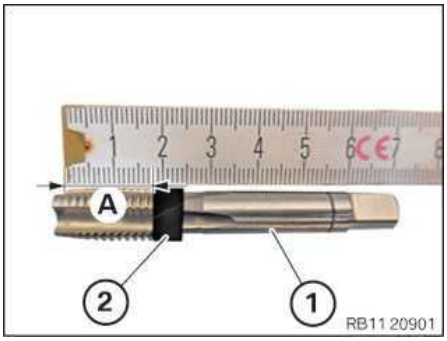
- Check fitting sleeve on the crankshaft for damage and replace if necessary.

TECHNICAL INFORMATION

Clean all threads with a screw tap.

- Clean all the screw threads (1).

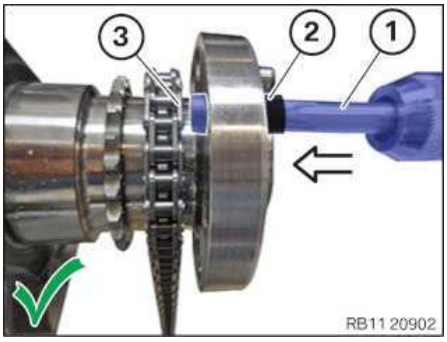
- Use the set of special tools **2 285 058**.



Description
Twist drill
Thread cutter M12x1.5
Depth
Insertion tool

cardiagn.com

- Assemble tool set.



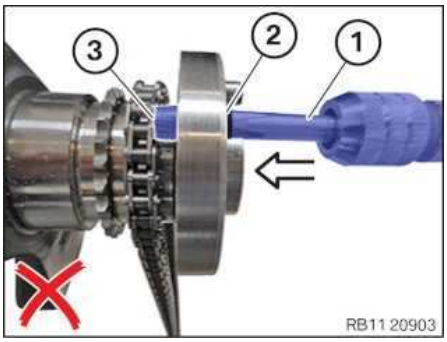
Number	Description
1	Tool holder
2	Thread cutter M12X1,5

- Mark the installation dimension (A) on thread cutter (1) from the set of special tools **2 285 058** using a commonly-available tool (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm

NOTICE



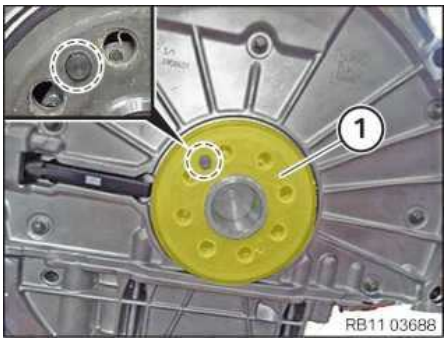
To provide a better overview: Shown with engine removed.

- Screw in the thread cutter (1) from the set of special tools **2 285 058** in direction of arrow up to the installation dimension (2).

Screw-in depth of thread cutter

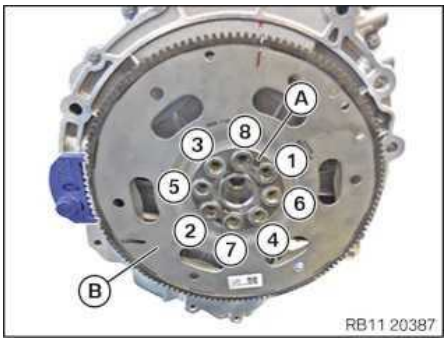
Screw-in depth	18 mm

- Make sure that the thread cutter does (1) **not** rest on the timing chain (3).



TECHNICAL INFORMATION

- **Carefully** handle the timing chain, to protect the timing chain and timing chain drive against damage.

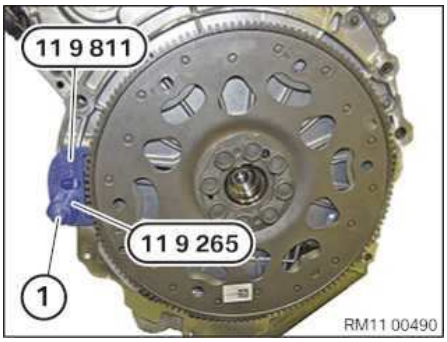


- Make sure the installation dimension (2) of the screw bore (1) is not exceeded.

  The thread cutter (1) may not rest on the timing chain (3).

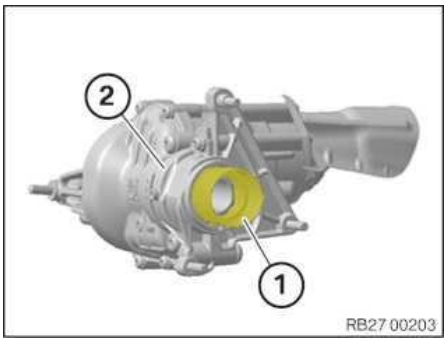
- Important! Observe the marking shown during installation.
- Install special tool (1) on the crankshaft as shown.

cardiagn.com



- Position flywheel (B) .
- Renew flywheel bolts (1) to (8).

  Parts: Flywheel bolts
- Screw in flywheel bolt (1) to (8) by hand.
- Observe tightening sequence. Begin at the dowel pin (A).
- Tighten flywheel bolts in sequence (1) to (8).



Flywheel to crankshaft

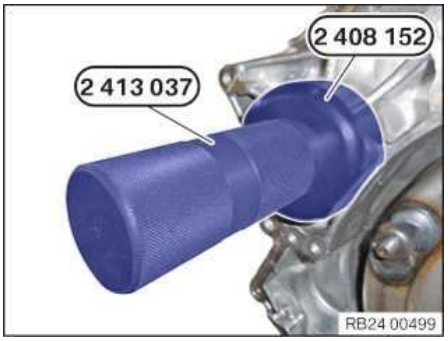
M12x1.5	Renew screws.	Tightening torque	120 Nm

- Loosen the transmission bolt (1).
- Guide out and remove the special tool **0 494 793 (11 9 265)** and **0 496 171 (11 9 811)** with the **standard** washer (5 mm).

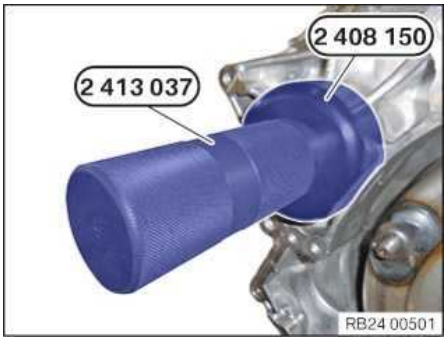
46 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

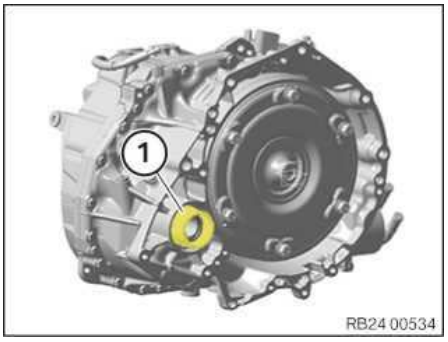
- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.



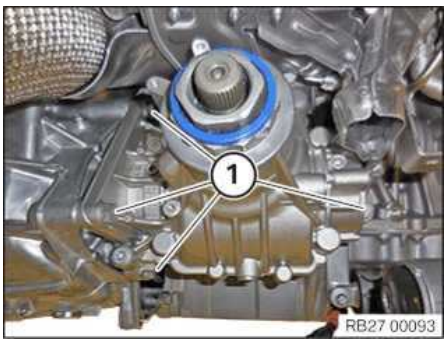
cardiagn.com



- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.

- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.



- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

cardiagn.com

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

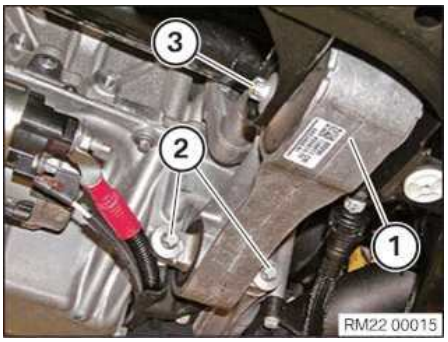
Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

Technically suitable transfer box and electrical transmission oils	



Main group 27

- Tighten the oil filler plug (1).

Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm

47 – Install the holder with rubber mount

- Install holder (1) with rubber mount.
- Tighten down screw (3).

Holder with rubber mount to front axle support

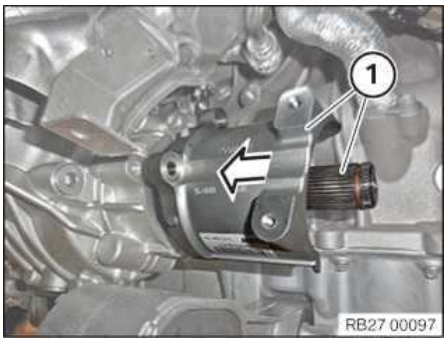
M12		Tightening torque	100 Nm

- Tighten down screws (2).

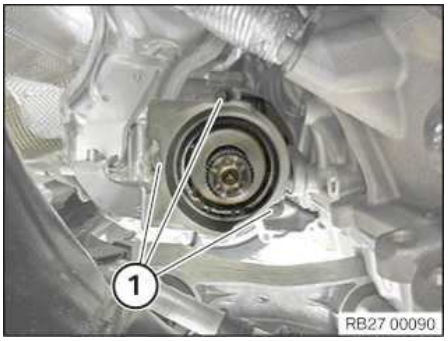
Holder with rubber mount to oil sump

M12		Tightening torque	100 Nm

48 – Install the intermediate shaft with the support tube



- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

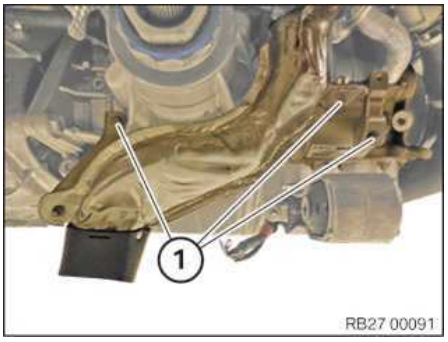


Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

cardiagn.com

- Install the intermediate shaft with support tube (1) in the transfer box.



- Position screws (1).

Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

- If installed: Install air duct.
- Tighten the screws (1).

49 – Install propeller shaft.

CAUTION

Component with heavy weight.

Danger of injury!

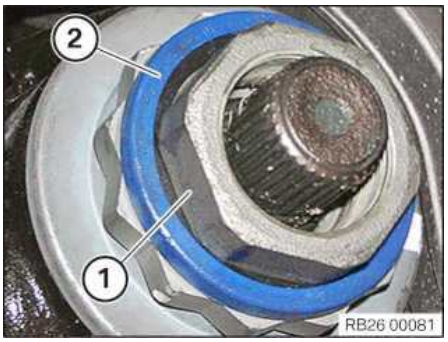
- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

Damage to the propeller shaft during installation.

Non-observance of the installation guidelines for the propeller shaft on the rear axle differential may cause severe damage.

- Always renew the recessed nut on the rear axle differential. Screw locking must be available.
- Strictly observe a minimum hardening time of two hours after having screwed in the recessed nut. The hardening time may be longer at lower temperatures.



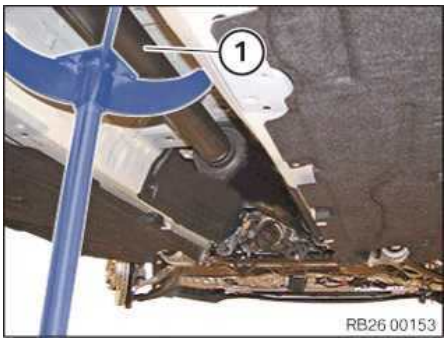
RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

cardiagn.com

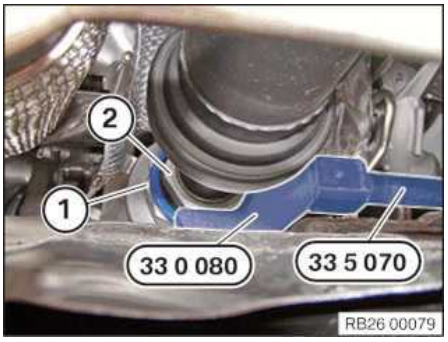


- Renew recessed nut (1).

  Parts: Insert nut
- Renew the retaining clip (2) and the seal.

  Parts: Retaining clip, seal
- Insert the seal with the recessed nut (1) and install.
- Insert the retaining clip (2) and install.
- Make sure that recessed nut (1) is screwed in within 5 min.
- Make sure that the hardening time of **minimum** 2 h for the recessed nut is observed.

  The hardening time must be extended at lower temperatures.



- Insert the propeller shaft (1) and install.
- Always support the propeller shaft (1) with a conventional jack.

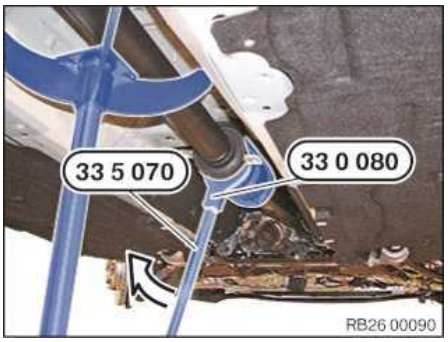
- Hand-tighten the bolts (1).

- Push the propeller shaft (2) against the recessed nut (1) up to the limit position.
- Screw the propeller shaft (2) at least 2 thread starts onto the recessed nut (1) by hand.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

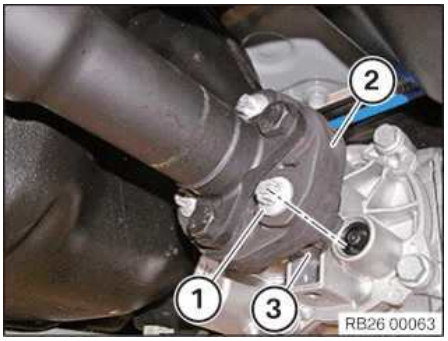


- Do not use the double hexagon head flange nut as counter support.

- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to tighten the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



cardiagn.com

- Tighten the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

Propeller shaft to transfer box

		Tightening torque	80 Nm

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Assemble the screw connection (1) of the flexible disc (2) and the three-hole flange (3) according to the mark.
- Renew screws (1).

  Parts: Bolts
- Hand-tighten the bolts (1).

- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

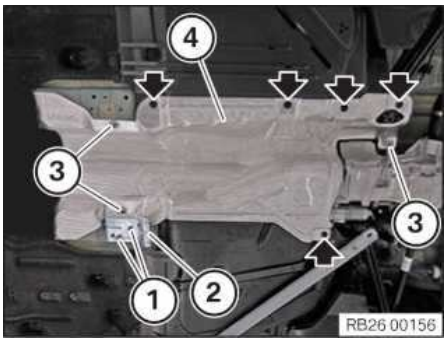
- Tighten the bolts with the special tools **0 490 504 (00 9 120)** and .

Flexible disc to rear axle final drive

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

- Tighten the screws (1).

Centre mount to body



M8		Tightening torque	19 Nm

- Guide the special too l out between the front and rear propeller shaft and remove.

cardiagn.com

50 – Installing the rear heat shield

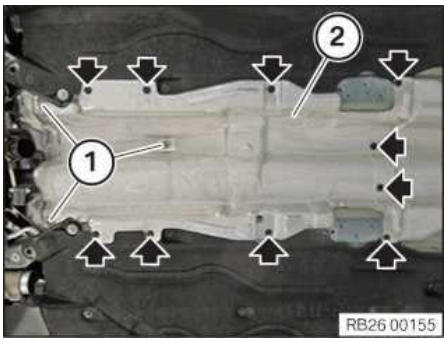
- Insert and install the heat shield (4).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (3).

Heat shield to body



Bolts/nut		Tightening torque	3 Nm

- Insert and install the holder (2).
- Tighten the screws (1).

Bracket to body

M8		Tightening torque	21 Nm

51 – Install the front heat shield

- Insert and install the heat shield (2).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (1).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

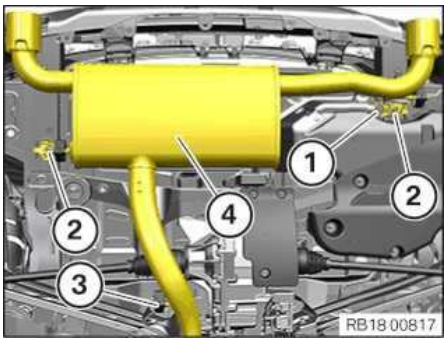
52 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.



CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

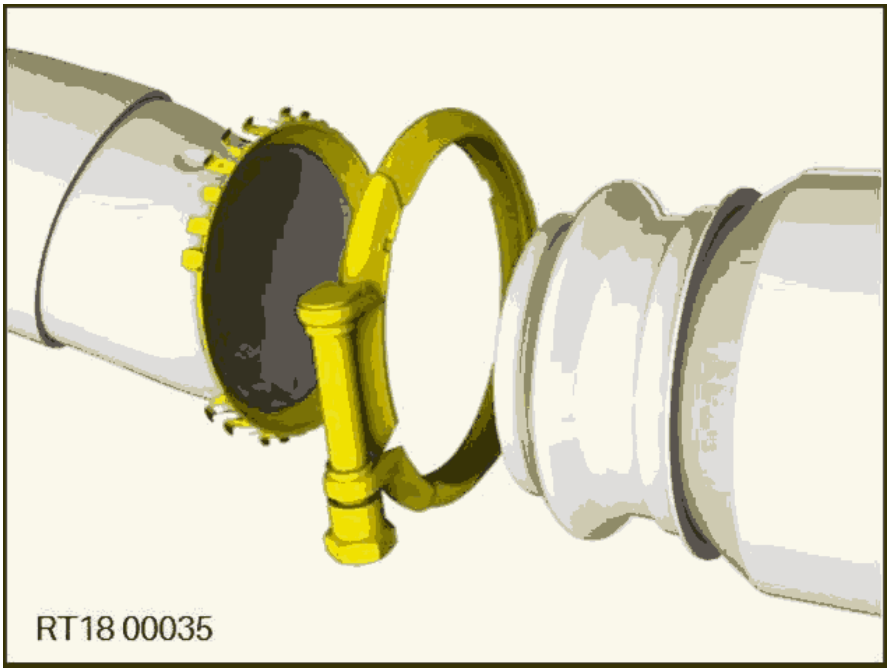
- Feed in and install the exhaust system (4) with a second person.
- Renew nuts (2).

  Parts: Nuts
- Tighten nuts (2).

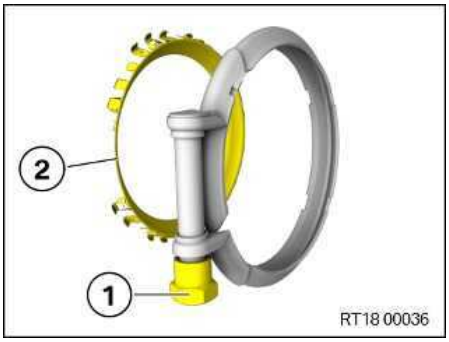
Exhaust system to body

M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).

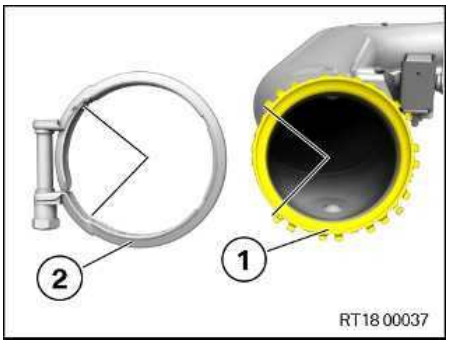


Exhaust bracket on body



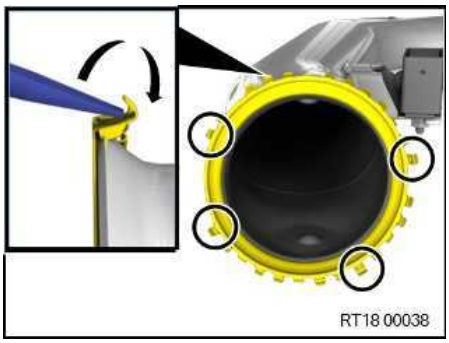
Hexagon screw M8x30		Tightening torque	19 Nm

- Check the rubber mount (3) for damage and renew as needed.
- Mount rubber mount (3) on the exhaust system (4).

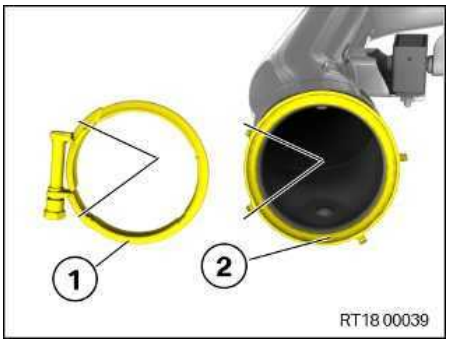


▸ **Install the V-clip**

V-band clamp



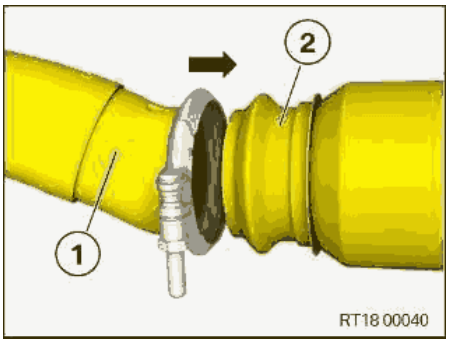
- Unscrew the nut (1) and remove the sealing ring (2).



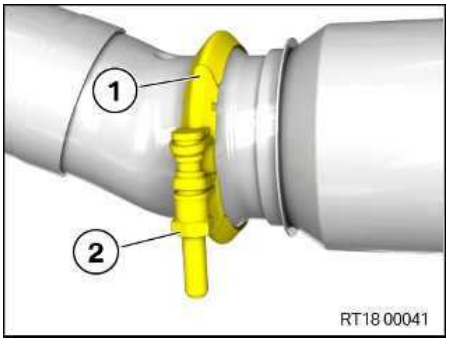
- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.

cardiagn.com

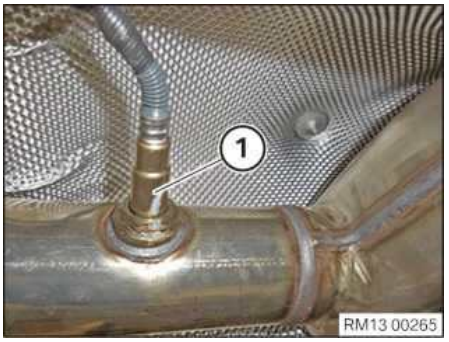


- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.



- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).

- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).

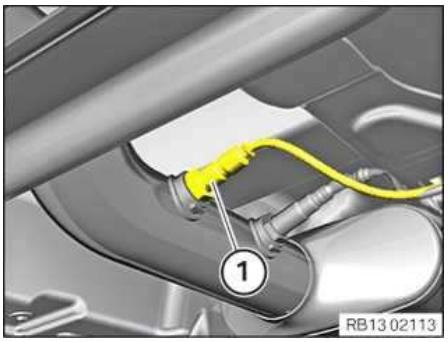


- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.

- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

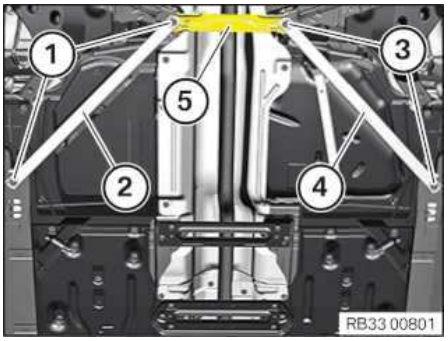


- Feed in, install and tighten diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

Sensor		Tightening torque	50 Nm

cardiagn.com



- Feed in, install and tighten nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

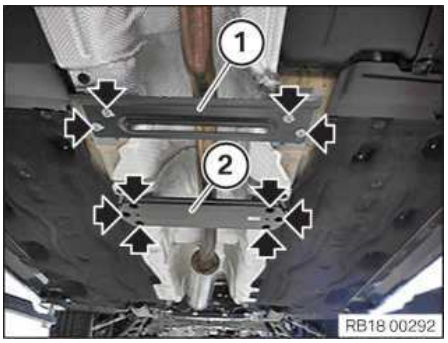
53 – Install the cross-member with torsion struts

- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °



- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

54 – Install the connecting support on the tunnel in front and back

- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

M10x18		Tightening torque	56 Nm

- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

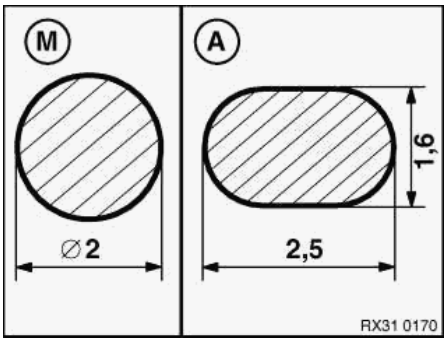
Rear connection carrier to body

M8x18		Tightening torque	28 Nm

55 – Installing right output shaft partially

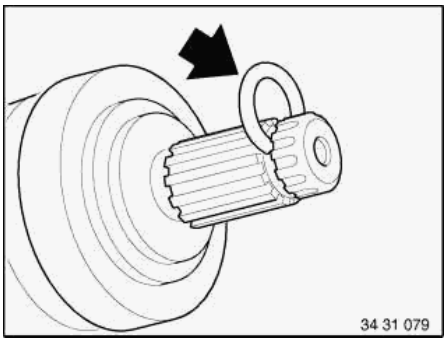
- Renew the circlip (1).

  Parts: Circlip
- Slide output shaft into the transmission as far as the limit position.
- Check for secure seat by levering.



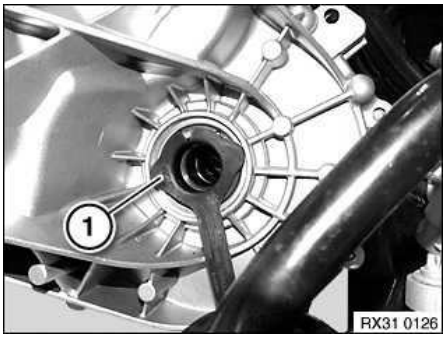
56 – Partially installing the left output shaft

cardiagn.com



- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).



- Do not mix up circlips.

  Different types of output shafts fitted:
  - M: Manual transmission
  - A: Automatic transmission

- Renew circlip (arrow).

- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

- Insert output shaft (1) into transmission.
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

57 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

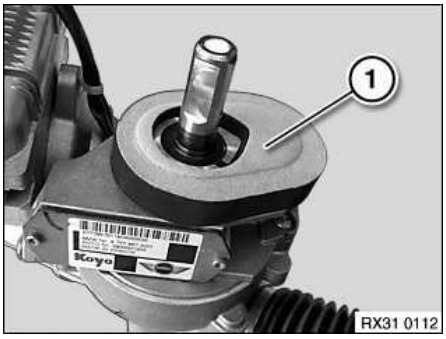
cardiagn.com

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

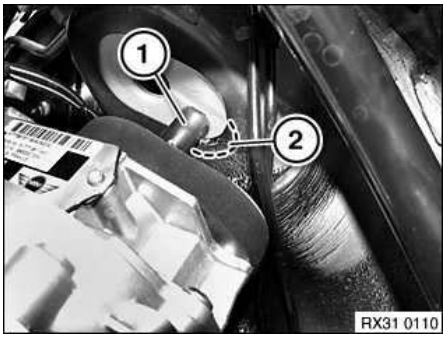
M8x45		Tightening torque	19 Nm

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).



Battery positive lead to starter

M8		Tightening torque	13,5 Nm

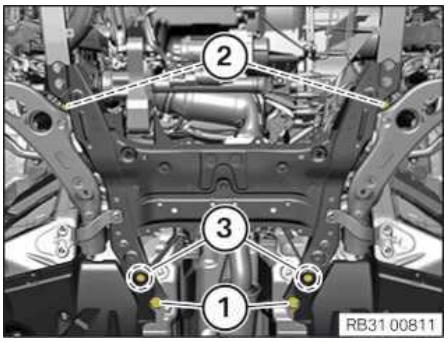


- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

58 – Mount and secure the complete front axle

- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

cardiagn.com

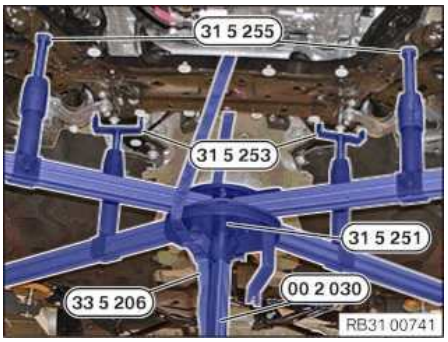
- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

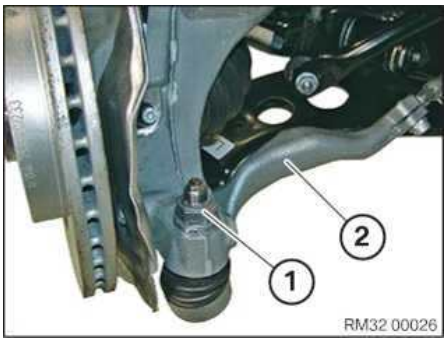
M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).



Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm



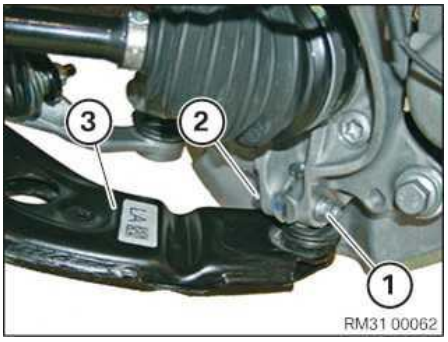
- If necessary, tighten the screws in the areas (3).

Underbody protection to body

Screw		Tightening torque	3 Nm

- Remove special tool from special tool .
- Lower universal jack **0 490 133 (00 2 030)** with the special tool and place it to the side.

NOTICE



Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm

NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

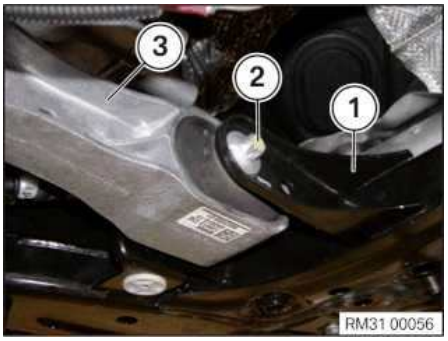
Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

cardiagn.com

59 – Install the mounted parts on the front axle support

NOTICE

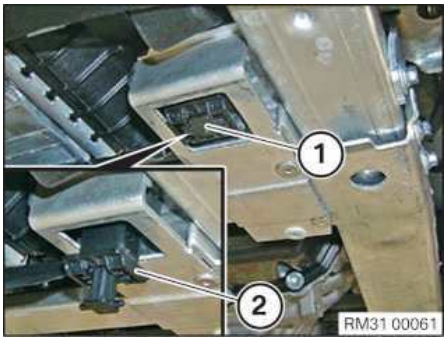


Perform the operations on the left and right side.

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

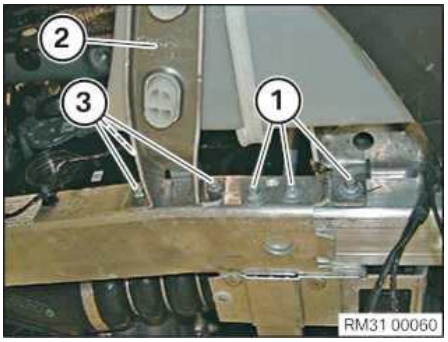
Holder, wishbone rubber mount, to body



M10 screw	Renew screw.	Jointing torque	56 Nm
		Angle of rotation	90 °

- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support



M12 screw		100 Nm

NOTICE

Perform the operations on the left and right side.

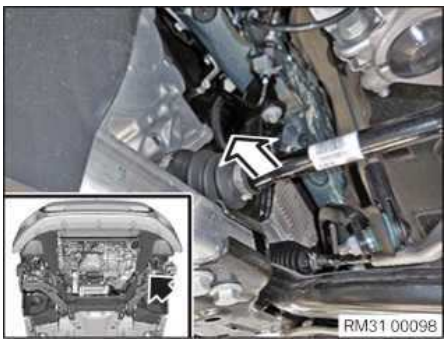
- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.

- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE

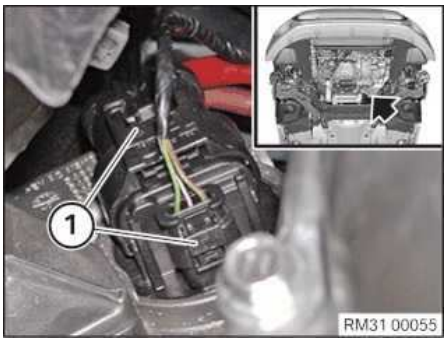


Perform the operations on the left and right side.

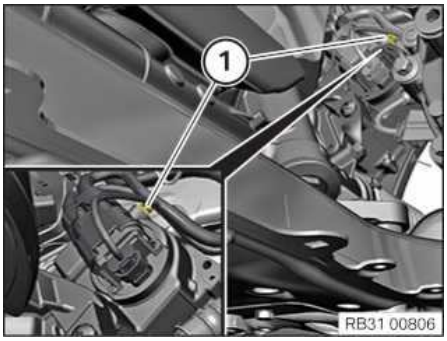
- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

		Tightening torque	11,8 Nm



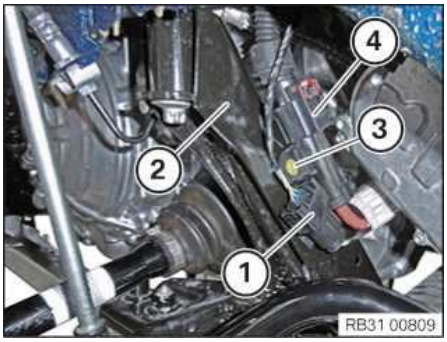
60 – Attaching connector at steering gear



- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.

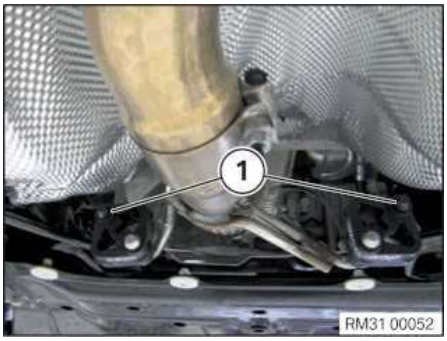
cardiagn.com



- Connect and lock connector (arrow) (1) with the steering gear.

- Fasten the wiring harness (1) on the steering gear.

▸ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

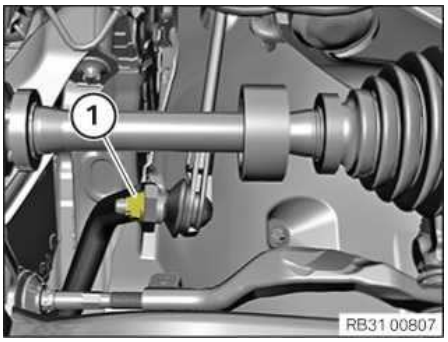
Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

61 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.



62 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▸ **Fastening anti-roll bar on the anti-roll bar link**

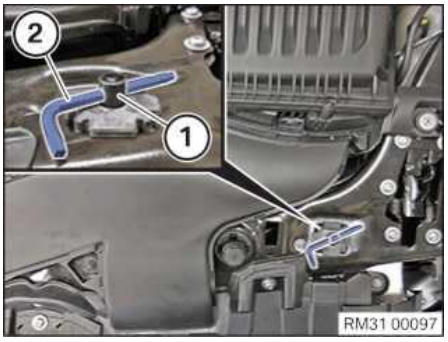
cardiagn.com

- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

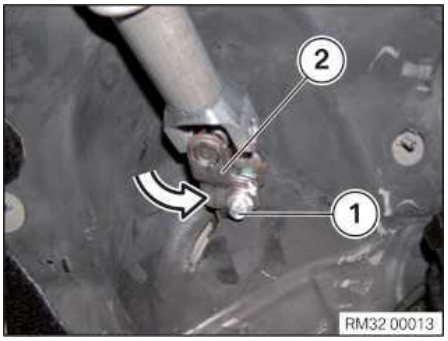


M10	Renew nut.	Tightening torque	56 Nm

63 – With right installation: Securing the cable for the ride height sensor

- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

64 – Removing fastener for left and right radiator



NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

65 – Secure the steering shaft at the bottom on the steering gear

- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

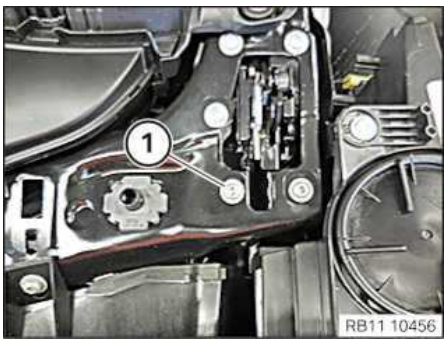
66 – Remove the engine bridge

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.



- Remove and install heavy components with the aid of another person/other persons.

- Detach the spindle screw (1) from the engine bridge.
- Unscrew the leg screws (2) and (3).
- Guide the engine bridge out of the vehicle with the help of another person and remove.

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.

- Tighten the screw (1) of the bonnet catch.

Cross connection on support for cross connection

M6x20		Tighten torque	12 Nm

- Tighten the screw (1) of the bonnet catch.

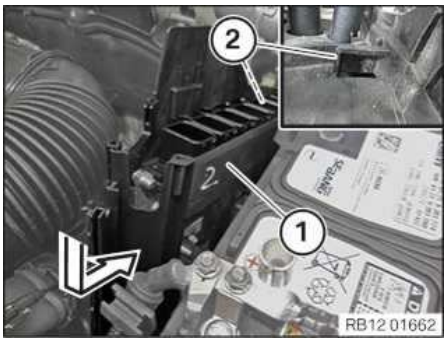
Cross connection on support for cross connection

M6x20		Tighten torque	12 Nm

67 – Install electronics box

Prerequisite

cardiagn.com

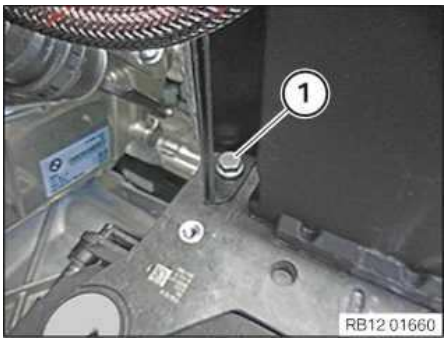


Battery earth lead is disconnected.

RISK OF DAMAGE

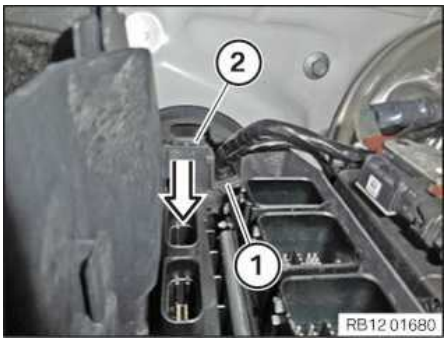
Improper routing of cables and wiring harnesses.

Trapped, crushed or damaged cables may cause short circuits and malfunctions.

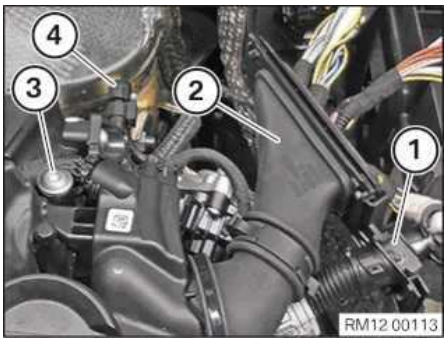


- Route all cables without abrasions, do not trap and crush.

- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.



- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).

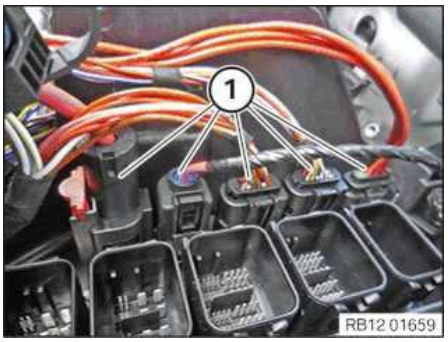


- Tighten down screw (1).

Electronics box to battery tray

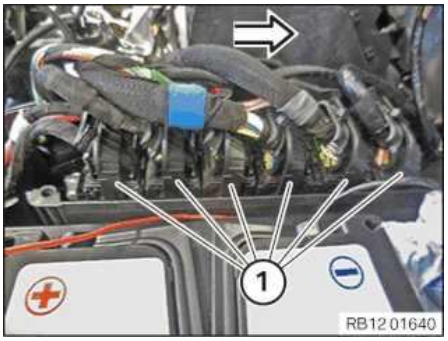
M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



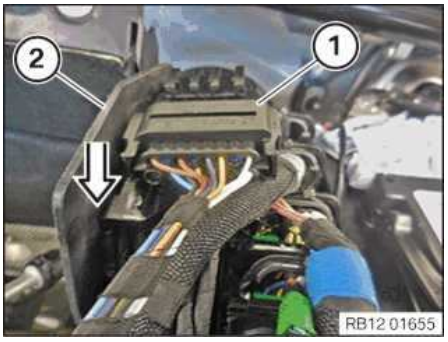
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

Wiring harness to cylinder head cover

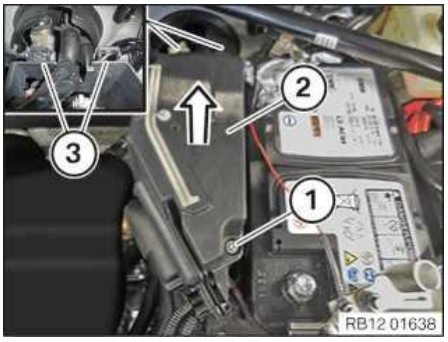


TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

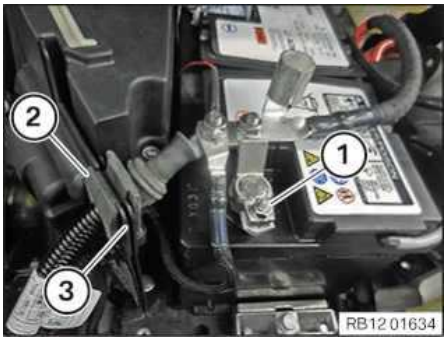


cardiagn.com



- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

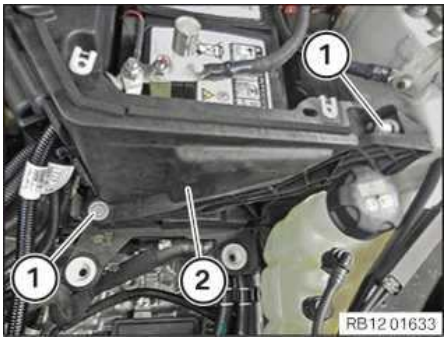
- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

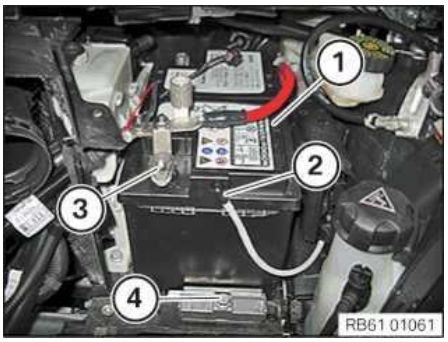


RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

cardiagn.com

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

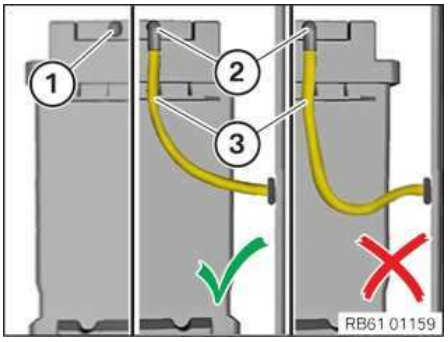
- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

▸ **Check the vent holes of the battery**

WARNING



Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

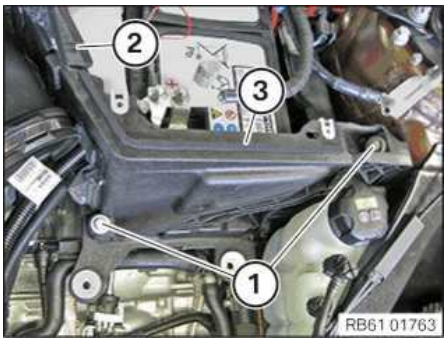
Check
- Check if the vent hole (1) is correctly closed with a dummy plug.

Result
» No dummy plug.

Measure
- Close the vent hole (1) correctly with a dummy plug.

Check
- Check if the vent hole (2) has a correctly connected vent hose (3).

Result
» The vent hose (3) is not correctly connected.



Measure
- At the vent hole (2), connect the vent hose (3) correctly.

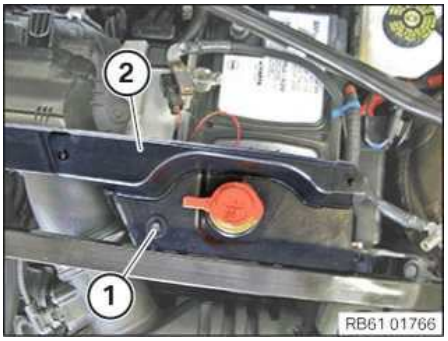
Check
- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).

Result
» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure
- Route the vent hose (3) correctly as shown in the centre image.

cardiagn.com

- Insert tension strut (3) and tighten with screws (1).

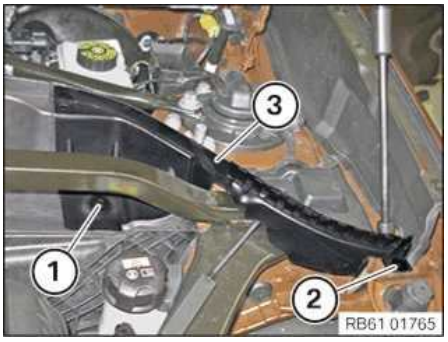


Trailing link

M8		Tightening torque	19 Nm

- Tighten down screw (2).

Battery cover



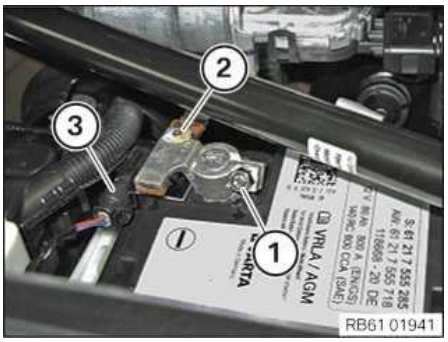
M8		2,8 Nm

- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).



Battery cover

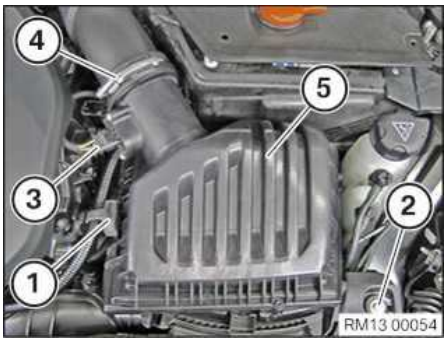
M8		2,8 Nm

69 – Connecting the battery earth lead

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)

- Remove the protective cover of the positive battery terminal.
- Position the battery earth lead (2).
- Tighten nut (1).



Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

- If required, connect the connector (3).

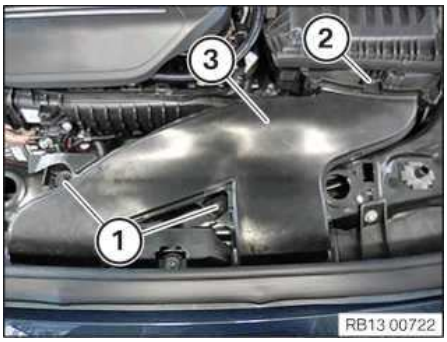
70 – Installing intake silencer housing

cardiagn.com

- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm



- Tighten clamp (4).

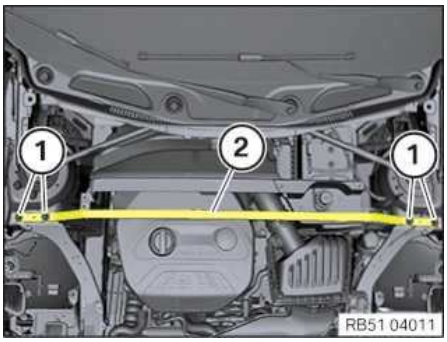
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

71 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

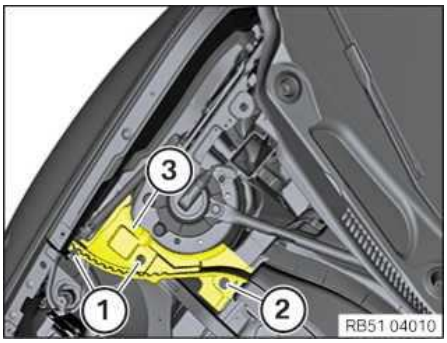


Intake neck to cross connection

M6		Tightening torque	8 Nm

72 – Install strut brace

TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

- Install the strut brace (2).
- Renew screws (1).
  Parts: Bolts
- Tighten the screws (1).

Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

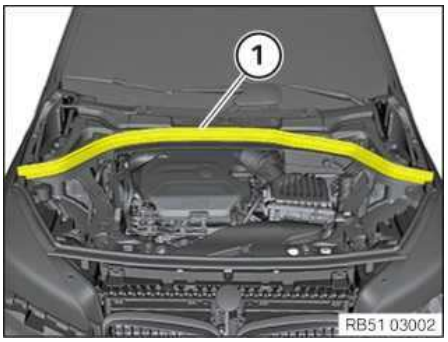
NOTICE

Description is for right component only. The procedure on the left side is identical.

- Install the cover (3).
- Tighten down screw (2).

Cover on body

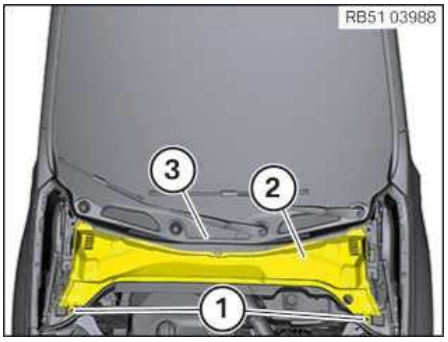
Hexagon screw		Tightening torque	3 Nm



- Install the expanding rivet (1).

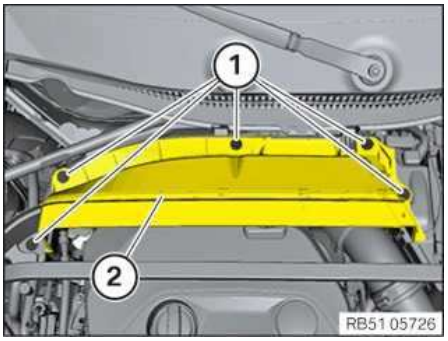
73 – Install the seal for the bonnet

cardiagn.com



NOTICE

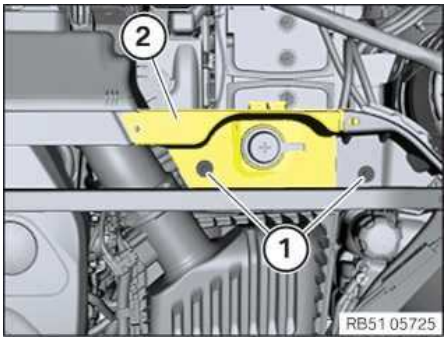
Schematic diagram is for example purposes. Some parts may differ in certain details.



- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

74 – Installing front cowl panel cover

- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).



75 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm

- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

76 – Install acoustic cover

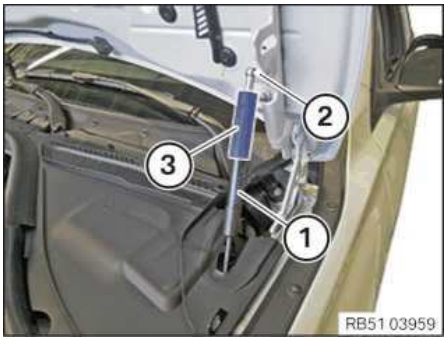
cardiagn.com

RISK OF DAMAGE

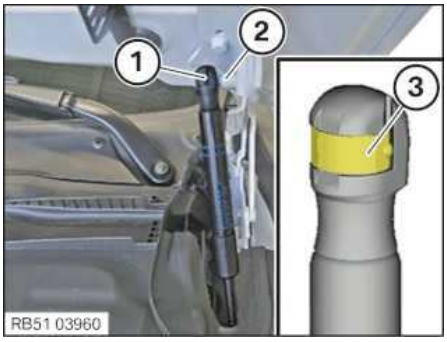
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



- Check for correct installation of all rubber mounts in the acoustic cover (1).



- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

77 – Take bonnet out of the service position

- Support the bonnet by hand.
- Remove the special tool (3) from the ball pin (2).
- Pull off the special tool (3) from the gas pressure spring (1).
- Continue to support the bonnet and repeat the operation on the other side of vehicle.

CAUTION

Shutting bonnet or tailgate.

Danger of injury!

- Support bonnet/tailgate in fully open position with the aid of a suitable device.

- Check the clamp (3) is fitted correctly.
- Connect ball socket (1) to ball pin (2).
- Continue to support the bonnet and repeat the operation on the other side of vehicle.

78 – Fill and bleed the coolant circuit

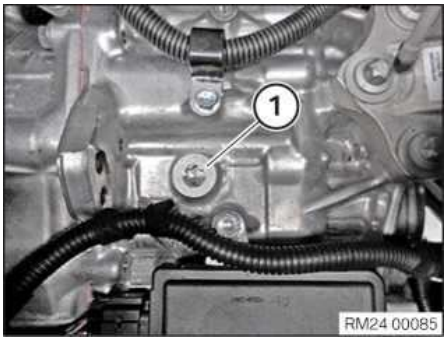
▸ **Filling and bleed the high-temperature coolant circuit**

cardiagn.com

- See additional information.

79 – Checking/topping up oil level in automatic gearbox (AISIN GA8G45)

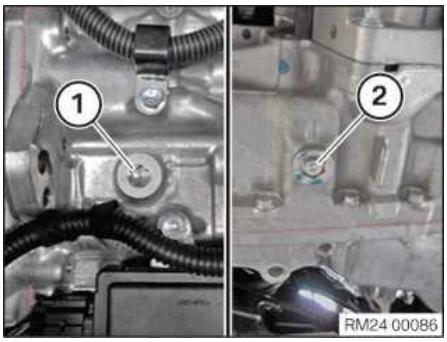
Prerequisite



Vehicle in horizontal position.

CAUTION

Materials harmful to health.



Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

- Move the selector lever to the "P" position.
- Secure vehicle to prevent it rolling.
- Connect diagnosis system.
- Release the oil filler plug (1) using the Torx T55 .

cardiagn.com

- **Topping up the automatic transmission fluid (the automatic transmission fluid was drained):**
- Release oil filler plug (1) from engine compartment.
- Loosen the overflow plug (2) below at the transmission.
- Top up automatic transmission fluid at oil filler plug (1) until oil emerges at overflow plug (2).
- Start engine and run at idle speed.
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check again whether the automatic transmission fluid is leaking at the overflow plug(2) .
- Read the temperature of the automatic transmission fluid with the diagnosis system.
- Increase temperature of automatic transmission fluid to 35 °C to 45 °C.
- Top up automatic transmission fluid until it flows over.
- Renew sealing rings.

  Parts: Sealing ring
- Screw in and fasten oil filler plug (1) and overflow plug (2).

Oil filler plug to transmission housing

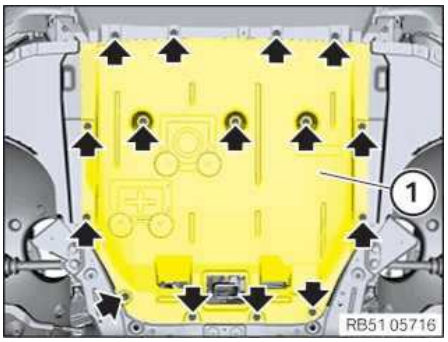
M14	Renew the sealing ring.	Tightening torque	45 Nm

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

- **Check oil level (transmission oil temperature must be between** 35 °C **and** 45 °C **):**
- Open the oil filler plug (1).
- Slacken overflow plug (2).
- Start engine and run at idle speed.
- Unscrew and remove overflow plug (2).
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Top up the automatic transmission fluid until it overflows at the overflow plug (2) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check the oil level again.
- Renew sealing rings.

  Parts: Sealing ring
- If the oil escapes slightly from the overflow plug (2) , tighten the overflow plug (2) and the oil filler plug (1) .

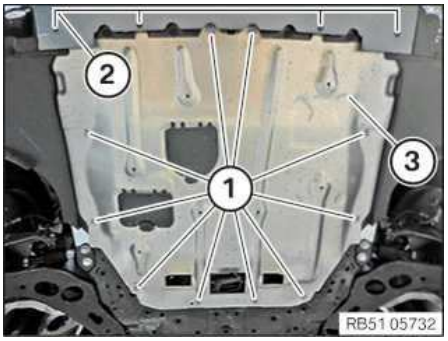


Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

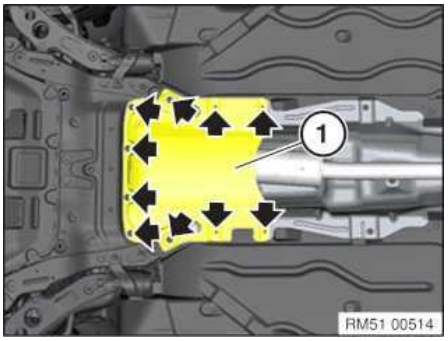


cardiagn.com

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm



- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

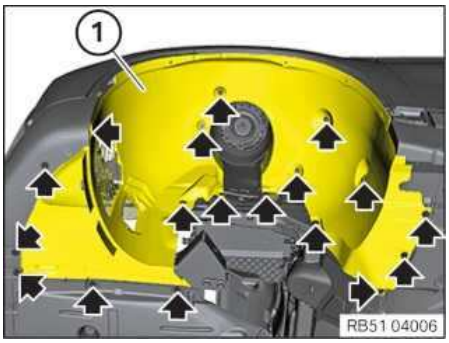
Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

81 – If installed: Installing underbody protection at rear

- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body



Screw		Tightening torque	3 Nm

82 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

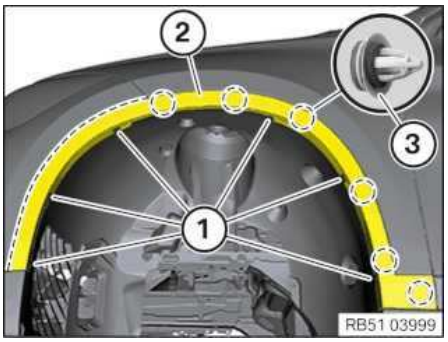
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

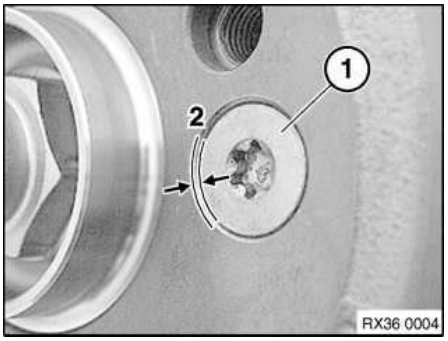
83 – Installing both front wheels

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.



- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

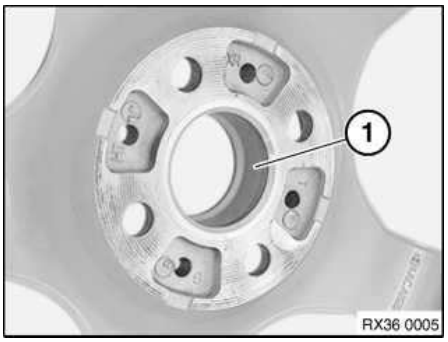
- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

- Renew mounting bolt (1).

  Parts: Mounting bolt
- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.



Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

cardiagn.com

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts.
- Check the wheel bolts and threads for damage, renew the wheel bolts if necessary.
- Join and tighten the wheel bolts (arrows).

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.

11 15 510 Measuring the internal engine pressure (B47C)

Special tools required:

- 11 9 880
- 81 31 2 357 800

Note:

- Follow the diagnosis instruction for pressure testing.
- Check engine oil level.

Note:
Create hose piece (1), Ø = 8 x 13 mm, length = 70 mm.

Create hose piece of low pressure line (2), length = 300 mm.

Connect hose piece (1) with low pressure line (2).

Connect low pressure line (2) with the diagnosis connection of the Integrated Measurement Interface Speaker (IMIB).

Connect tube (1) to special tool 11 9 880 .

Open oil filler cap .

Insert special tool 11 9 880 **hand-tight** into oil filler neck opening.

Start engine and run at idle speed.

Note:
Order number for low-pressure hose: 81 31 2 357 800 (previously: 81 38 2 201 924)

Different fault patterns as example:

0.97 bar	Ambient pressure.
0.95 bar	Engine internal pressure normal.

If the deviation is significantly greater than -0.04 bar, the engine ventilation system is faulty.

0.80 bar	Pressure control valve faulty.

If the deviation is significantly greater than +0.04 bar, the engine ventilation system is clogged.

1.07 bar	Clogged ventilation system, e.g. iced up, contaminated or kinked vent line.

11 16 550 Removing and installing alternator bracket (B47)

Special tools required:

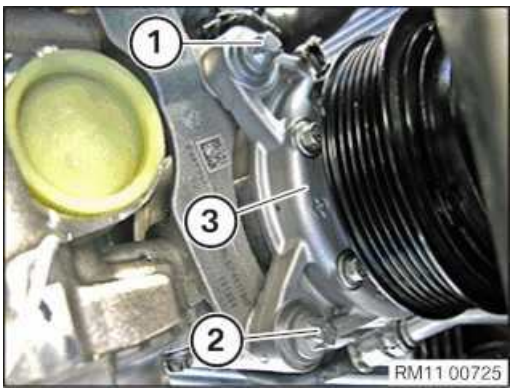
- 11 4 470

Warning!

Risk of scalding!

Only perform these tasks on an engine that has cooled down.

Recycling:



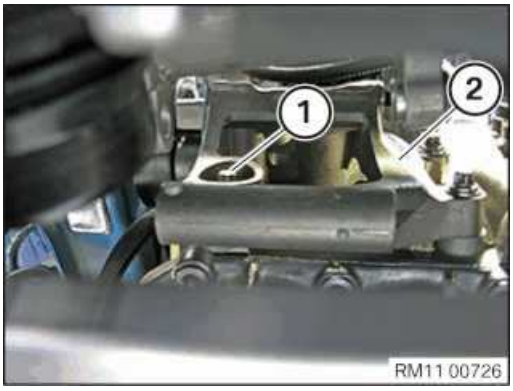
Catch and dispose of drained coolant.

Observe country-specific waste disposal regulations.

Necessary preliminary work:

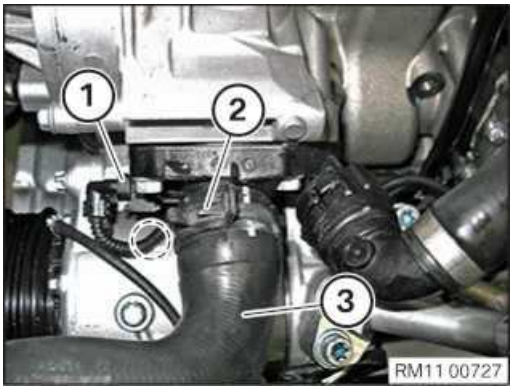
- Remove alternator.
- Remove air conditioning compressor.
- Remove alternator drive belt.
- Drain coolant.
- Remove holder.

Removal:



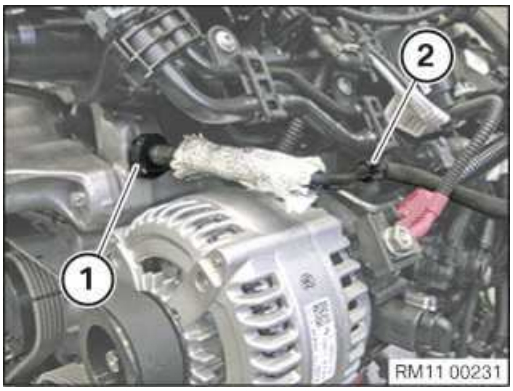
Release and remove screw (1) from air conditioning compressor (3).

Release screw (2) of air conditioning compressor (3).

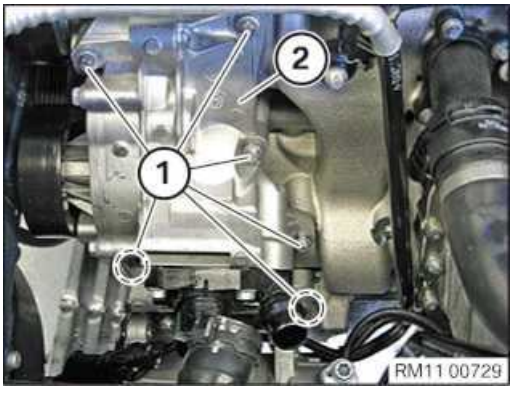


Slightly tip engine backwards and remove screw (2).

Set the air conditioning compressor (3) to the side.

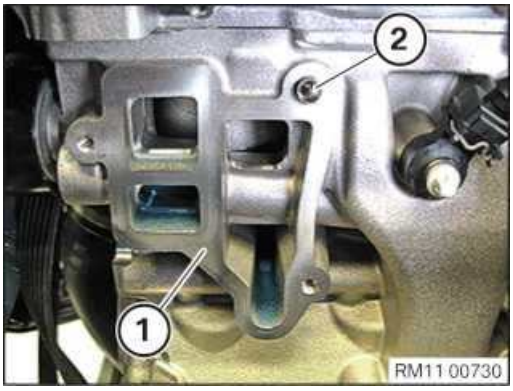


cardiagn.com



Release screw (1) on alternator bracket (2) from bottom.

Unlock connector (1) and pull off.
Release clamp (2) and pull off coolant hose (3).

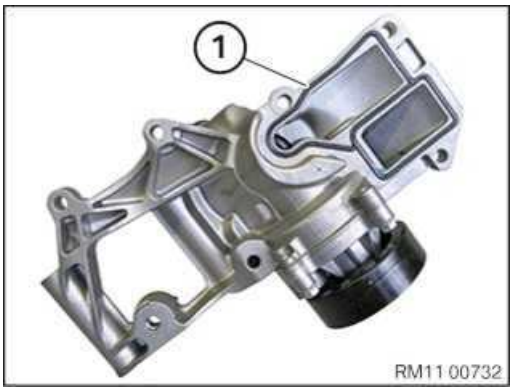


Unlock coolant line (1) and pull off.
Unclip coolant line (1) from holder (2).

Release screws (1).
Remove alternator support (2).

Installation:

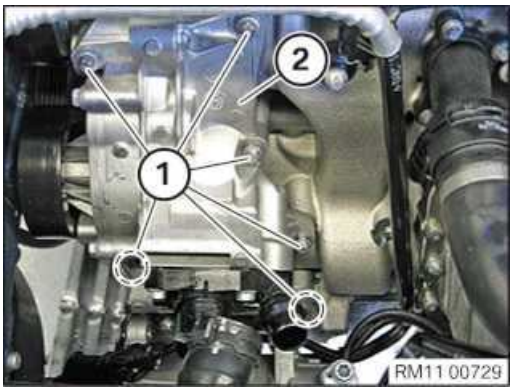
cardiagn.com



Clean sealing surface (1) with special tool 11 4 470 .

Check centering bush (2) for damage and replace if necessary.

Check centering bush (1) for damage and replace if necessary.



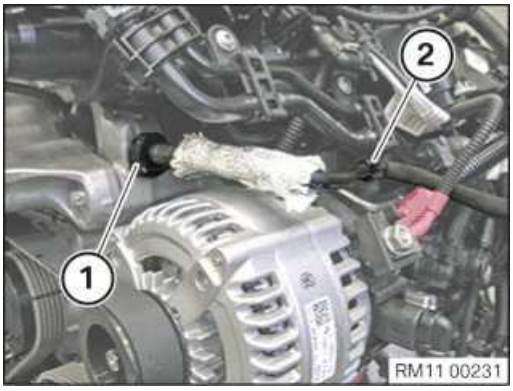
Note:
Sealing bead (1) is bonded to housing of the new alternator support.

Installation note:
If the sealing bead (1) protrudes slightly and if the sealing bead (1) is not damaged, the alternator support can be reinstalled.

If damaged: remove sealing bead (1) using suitable tool.

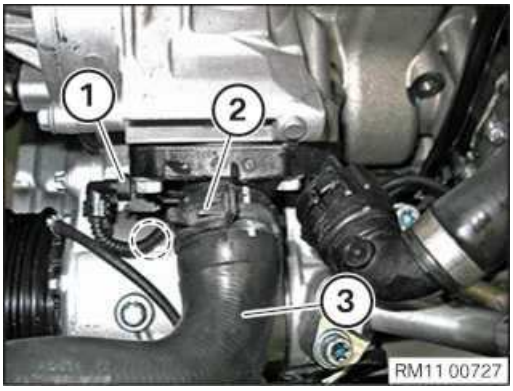
Replacing the sealing bead (1) sealant 2 2 (Loctite 5970).

Sealant height approximately 2 to 2.5 mm.



Mount alternator support (2).

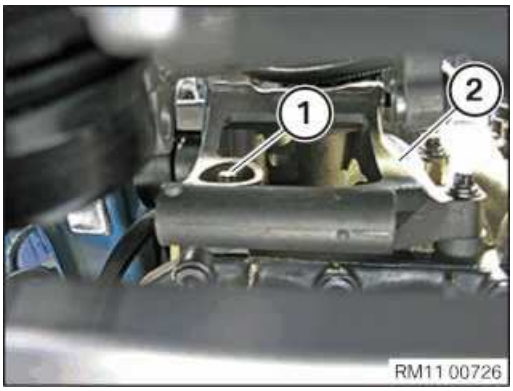
Tighten down screws (1).



Tightening torque 11 51 3AZ.

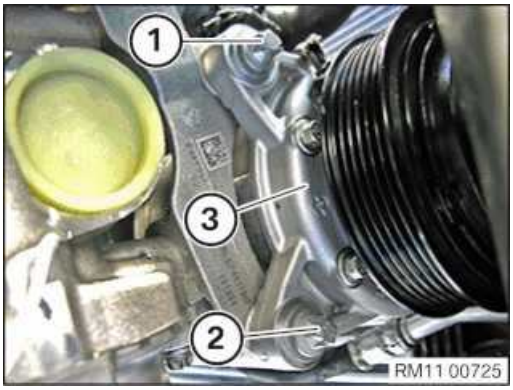
cardiagn.com

Connect and lock coolant line (1).



Clip coolant line (1) into holder (2).

Mount coolant hose (3) and secure with clamp (2).



Connect the connector (1).

Note:
Make sure the cable is laid correctly in the marked area.

Attach screw (1) to alternator bracket (2).

Tightening torque 11 51 3AZ.

Position air conditioning compressor (3) at alternator bracket.

Insert and tighten screw (1).

Tightening torque 64 52 3AZ.

Slightly tip engine backwards and insert screw (2).

Tighten screw (2).

Tightening torque 64 52 3AZ.

cardiagn.com

Required follow-up work:

- Install holder
- Install drive belt for alternator
- Install alternator
- Add coolant

cardiagn.com

11 16 550 Removing and installing/replacing component carrier

TECHNICAL INFORMATION

- When the engine is stopped after the end of the journey, it may be necessary to run the electric fan. In rare cases, operation of the electric fan can last up to 11 min. This protects the components. In this case, replacing the electric fan will not remedy the problem!

PRELIMINARY WORK

1 – Disconnecting all battery earth leads

- See additional information.

2 – Removing the acoustic cover

WARNING

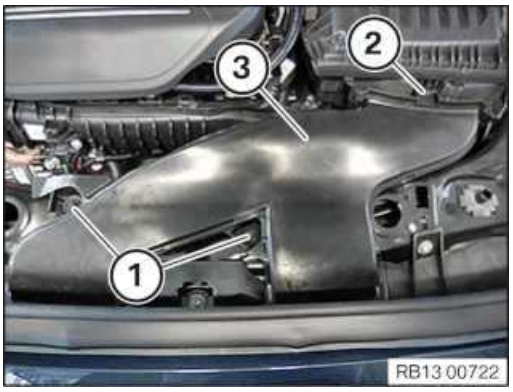
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

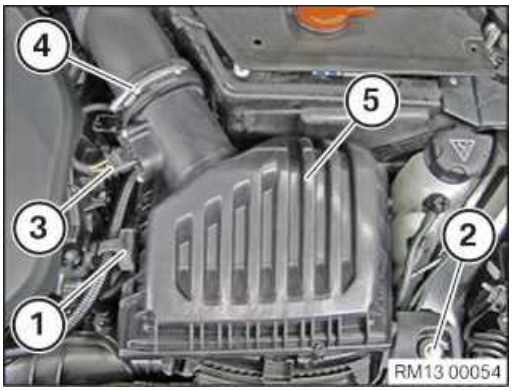
Damage to the acoustic cover.



Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

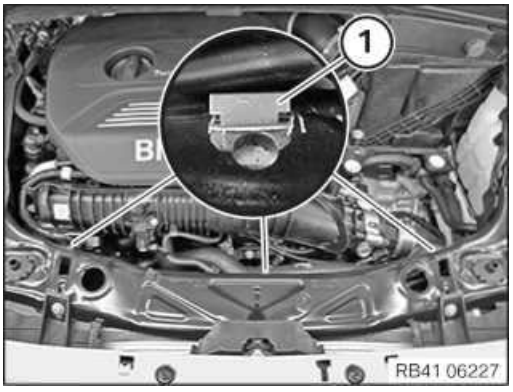
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.



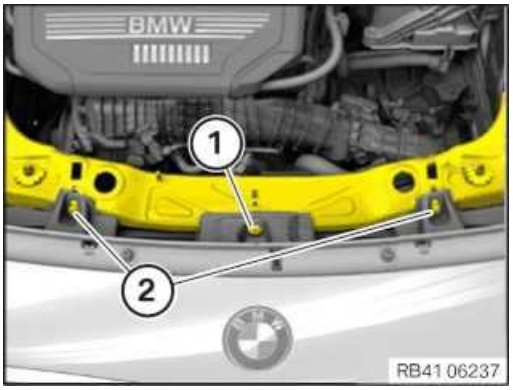
3 – Remove the intake neck for intake silencer housing

cardiagn.com

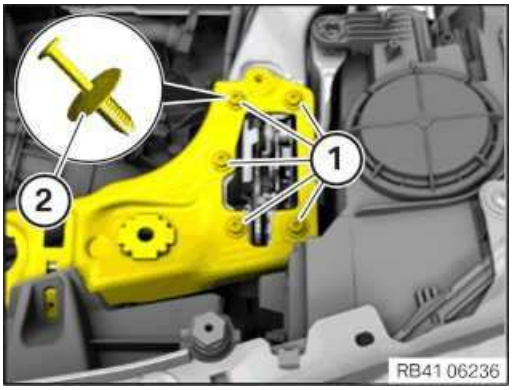


- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

4 – Removing intake silencer housing

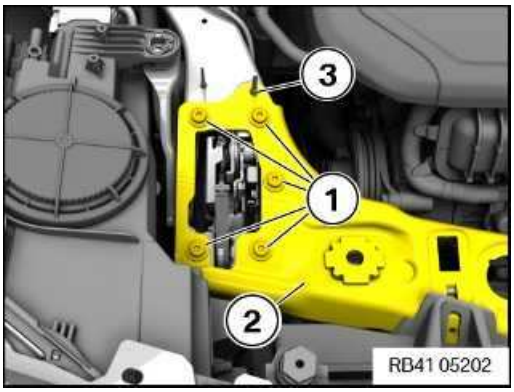


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.



5 – Remove front cross connection

- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

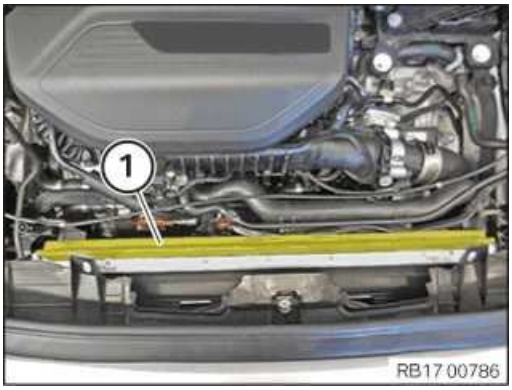


- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

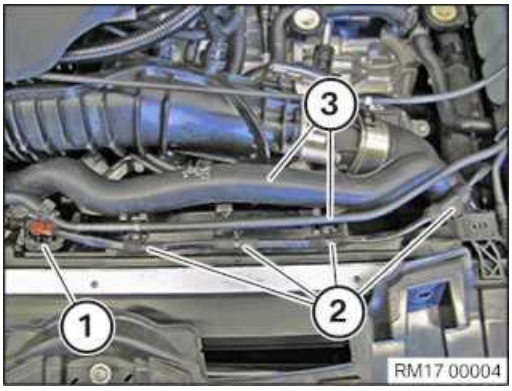
cardiagn.com

- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.



6 – Removing the fan cowl with electric fan

WARNING

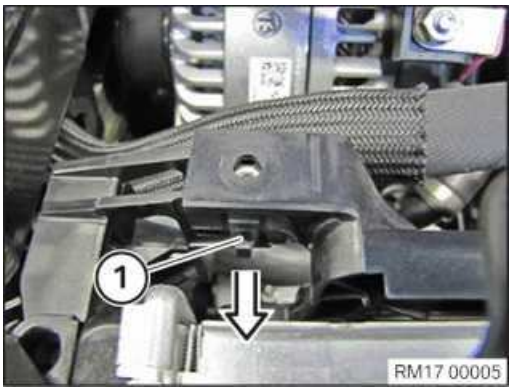


Hot surfaces.

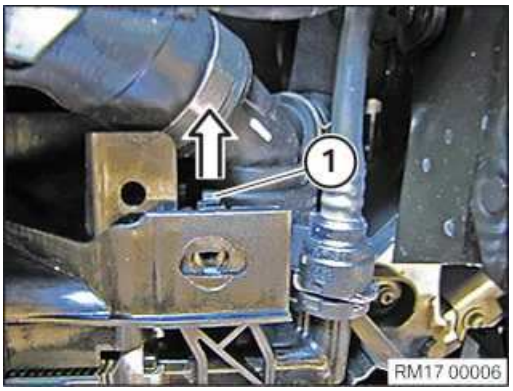
Risk of burning!

- Perform all work only on components that have cooled down.

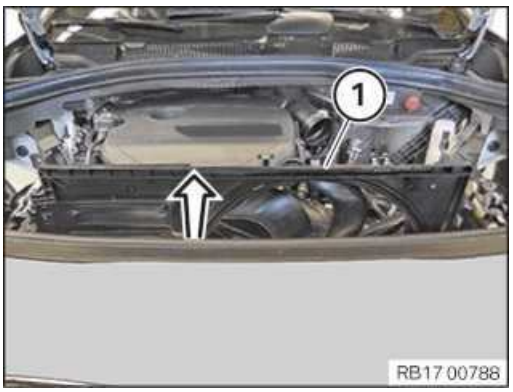
- Feed out and remove the sealing (1) from the radiator.



- Unlock plug connection (1) and disconnect.
- Unlock and loosen the clamps (2).
- Feed out connector (1) and place to one side.
- Thread off coolant line (3) and place to the side.

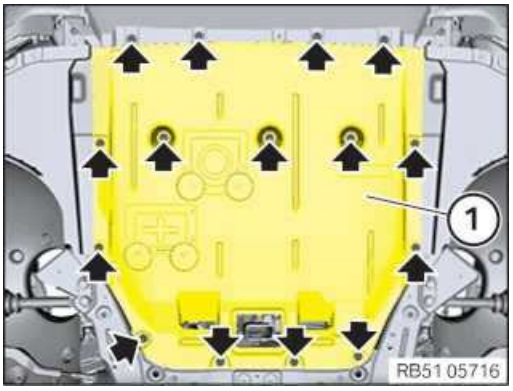


- Loosen screws (1).

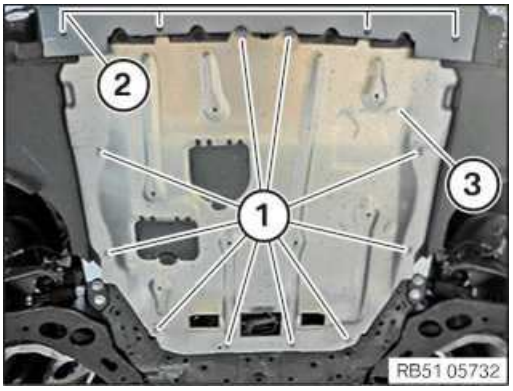


cardiagn.com

- Unlock the right lock (1) on the fan cowl in the direction of the arrow.



- Unlock the left lock (1) on the fan cowl in the direction of the arrow.



- Guide out fan cowl (1) in direction of arrow and remove.

7 – Removing the front underbody protection

- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

8 – Draining coolant

cardiagn.com

WARNING

Hot fluids.

Risk of scalding!

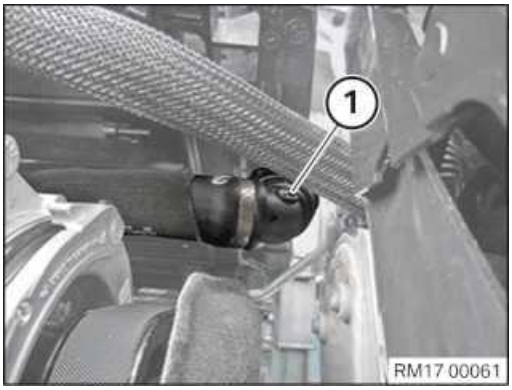
- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

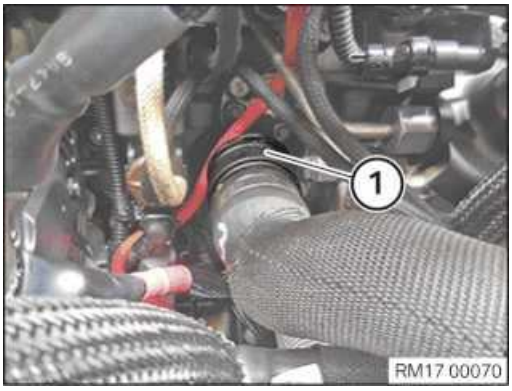
Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.



In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen sealing cap (1).

- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.

- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.

cardiagn.com

9 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

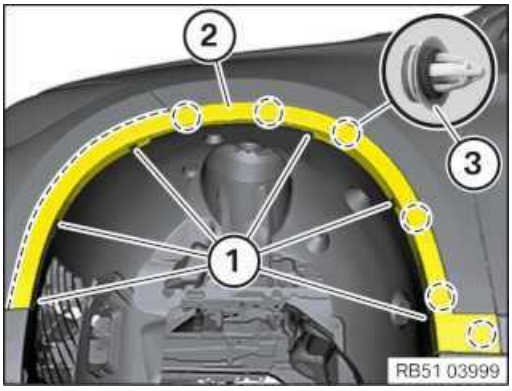
TECHNICAL INFORMATION

Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

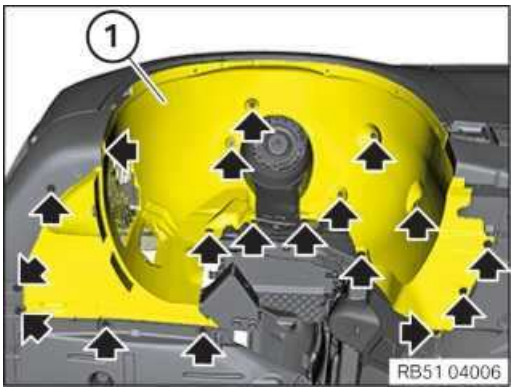
10 – Removing the front right wheel arch cover



▸ **Remove the front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.



NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

11 – Removing the drive belt for alternator

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

CAUTION

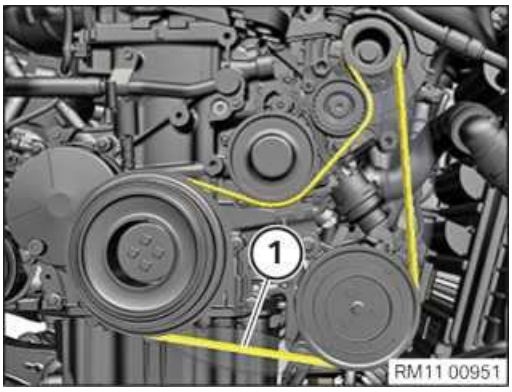
Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

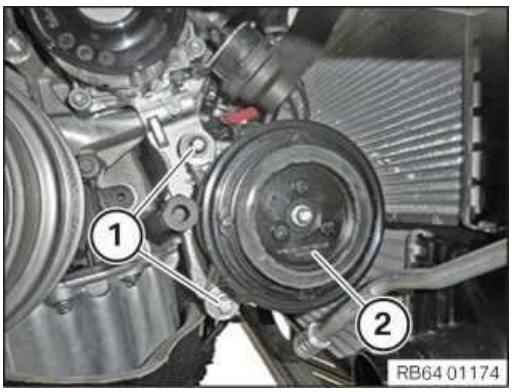


TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool **0 496 268 (11 0 390)**.

cardiagn.com

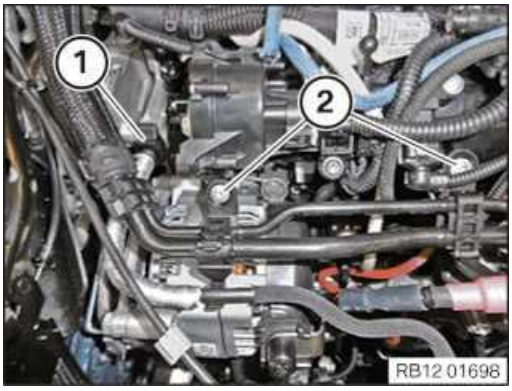


- Guide out the drive belt for the alternator (1) and remove it.

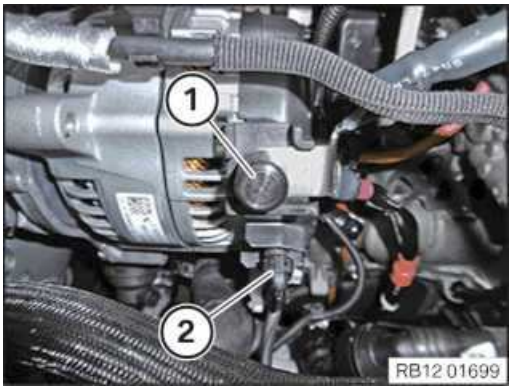
12 – Removing the alternator

Prerequisite

Battery earth lead is disconnected.



TECHNICAL INFORMATION

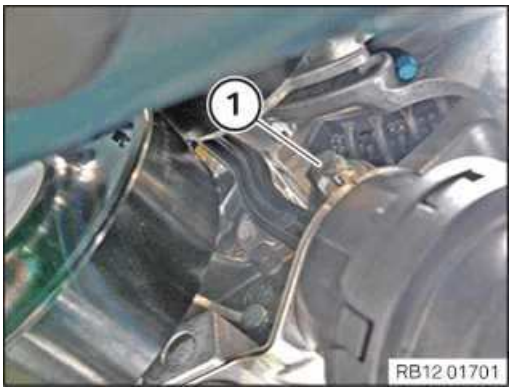


Secure component against falling.

- Loosen screws (1).
- Detach the air conditioning compressor (2) from the component carrier and protect it from falling.

Note: Tie the air conditioning compressor up.

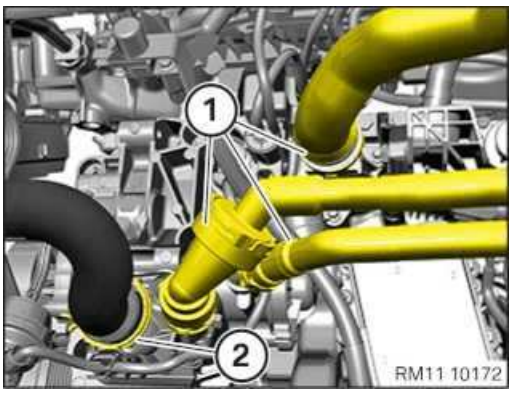
- Unlock the coolant ventilation line (1) and pull it off the cylinder head.
- Catch and dispose of escaping coolant.
- Loosen screws (2).
- Place fuel feed and return line to one side.



- Remove the cover (1) and loosen the nut below.
- Disconnect positive battery cable from alternator.
- Unlock and disconnect the connector (2) from the alternator.

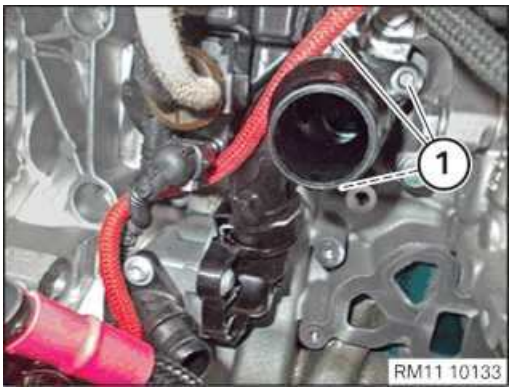
cardiagn.com

- Detach screw (1) on top on the alternator.



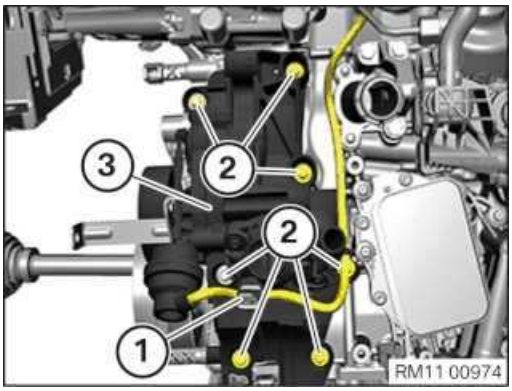
- Detach screw (1) below on the alternator.

- Feed out alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support and remove.



MAIN WORK

13 – Removing the component carrier



- Unlock the lock of the coolant lines.
- Pull off coolant lines (1) and place to one side.
- Loosen hose clamp (2).
- Remove coolant hose.

cardiagn.com

- Loosen screws (1).

- Disconnect the vacuum line (1) from the vacuum unit and detach it from the clamp on the component carrier.
- Loosen screws (2).
- Lift off and remove the component carrier (3) from the crankcase.

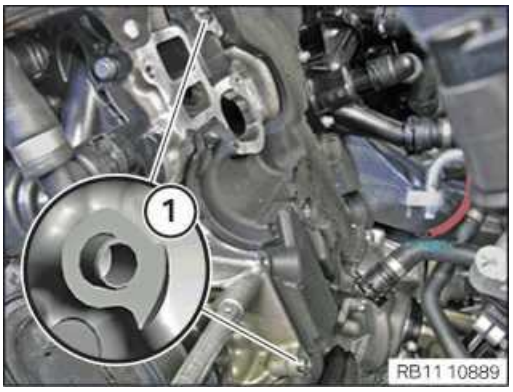
14 – Installing the component carrier

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Clean the sealing surface using special tool **0 495 102 (11 4 470)**.

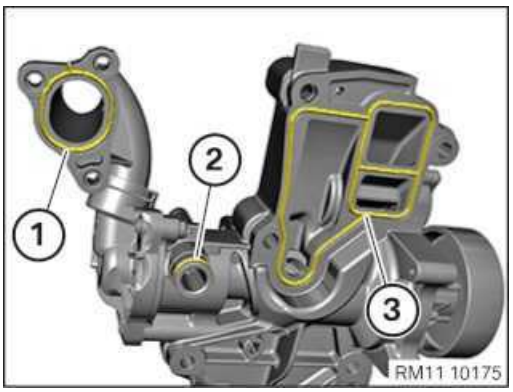
- Clean the sealing surface (1) using special tool **0 495 102 (11 4 470)**.

Check

cardiagn.com

- Check the fitting sleeves (1) for damage.

desired state



- Fitting sleeves must not be scratched or deformed.

Result

» Fitting sleeves are damaged.

Measure

- Renew fitting sleeves.

- Renew gasket (1).

  Parts: Gasket

- Replace O-ring (2).

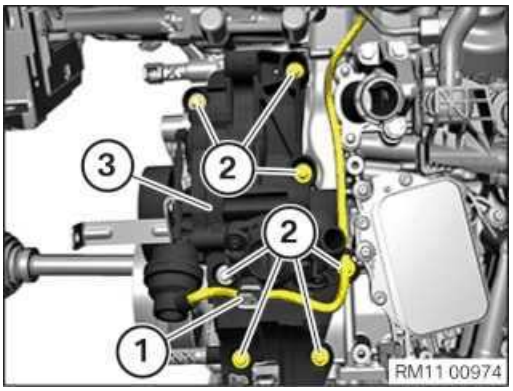
  Parts: O-ring

- Check the sealing bead (3) for damage.
- Check the height of the sealing bead in reference to the surface.

Height of the sealing bead

	2,0 mm ... 2,5 mm

- If necessary, reapply the sealing bead.



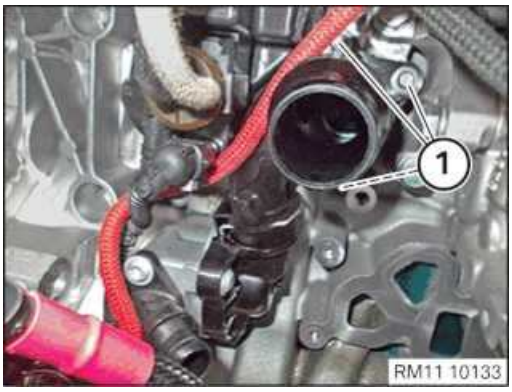
Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

Processing time of liquid sealing compound

	< 12 min

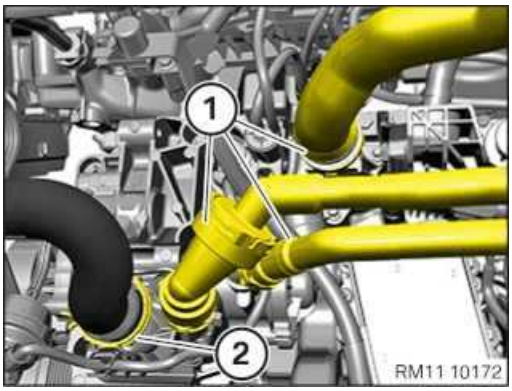


- Position the component carrier (3) on the crankcase.
- Tighten down screws (2).

Component carrier to crankcase

M8x35		Tightening torque	19 Nm

- Connect the vacuum line (1) on the vacuum unit and attach it in the clamp on the component carrier.



cardiagn.com

- Tighten the screws (1).

Connecting branch to engine block

M6x25		Tightening torque	8 Nm

- Connect and lock the coolant lines (1).

  The locks must engage audibly.
- Connect the coolant hose and fasten the hose clamp (2).

POSTPROCESSES

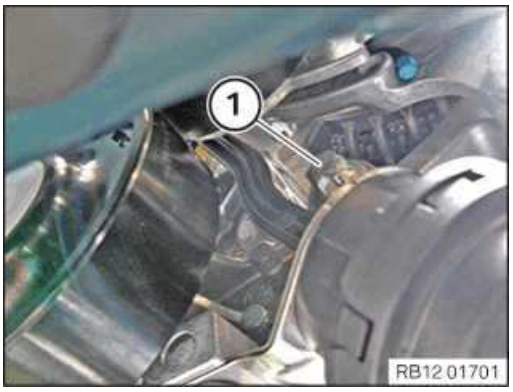
15 – Installing the alternator

Prerequisite

Battery earth lead is disconnected.

CAUTION

Improper routing of the positive battery cable.



Risk of short circuits!

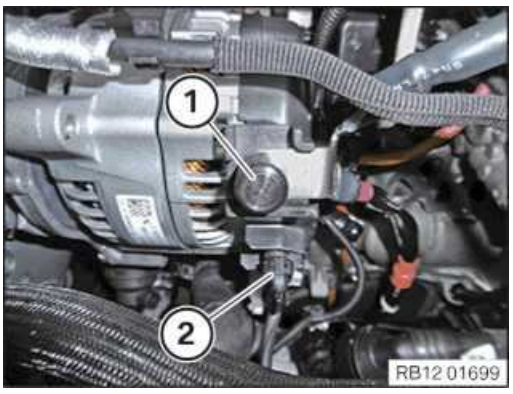
- Route the positive battery cable without abrasions and do not trap.

- Insert and install alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support.

cardiagn.com

- Tighten the screw (1) below on the alternator.

Alternator to component carrier

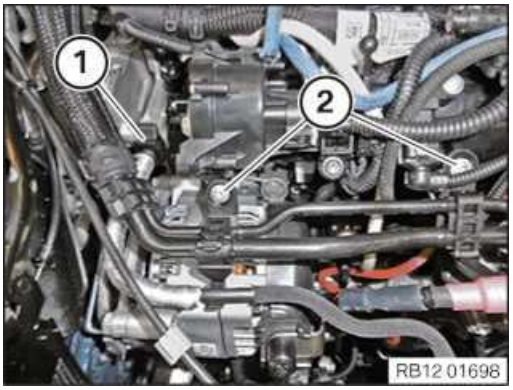


M10x75 / M10x125		Tightening torque	38 Nm

- Tighten the bolt (1) on top on the alternator.

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm

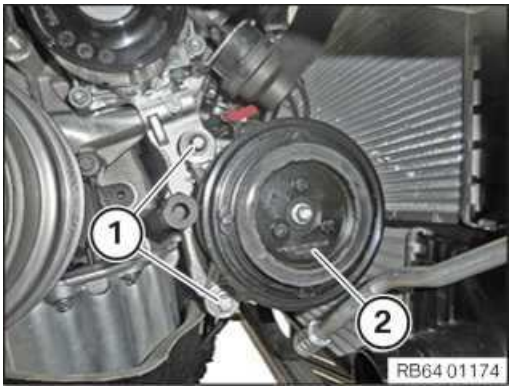


- Mount positive battery cable to the alternator.
- Tighten nut.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

- Mount the cover (1).
- Connect the connector (2) to the alternator and lock audibly.



- Mount fuel supply and return line.
- Tighten down screws (2).

Fuel line to intake plenum

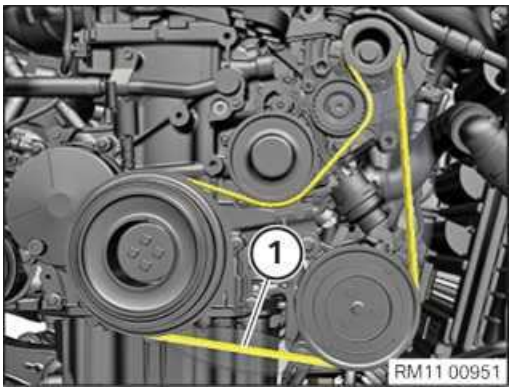
TS6x20		Tightening torque	5 Nm

- Connect the coolant ventilation line (1) to the cylinder head and audibly lock.

- Correctly position the air conditioning compressor (2).
- Tighten the screws (1).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm



cardiagn.com

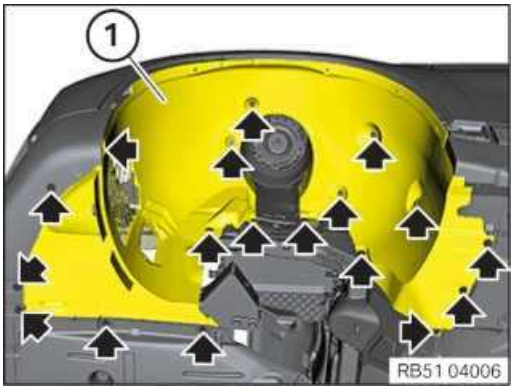
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Feed in the drive belt for the alternator (1) and install it.



- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool **0 496 268 (11 0 390)** out of the belt tensioner and remove it.

17 – Installing the front right wheel arch cover

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

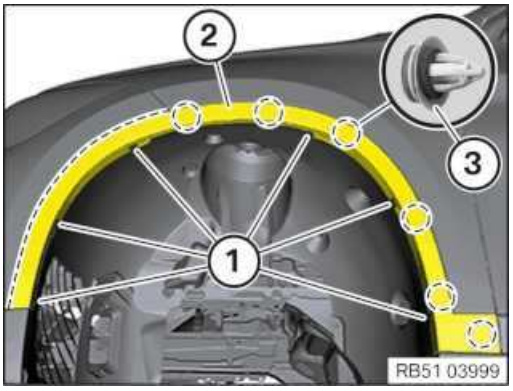
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**



cardiagn.com

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

18 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

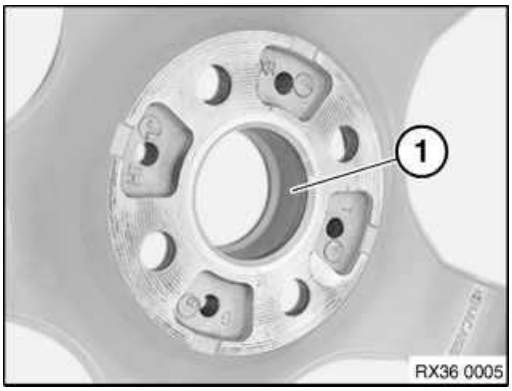
- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

cardiagn.com



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

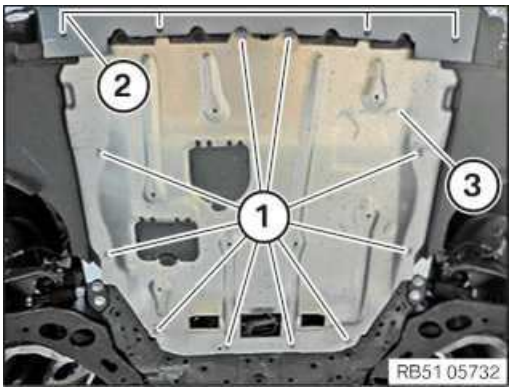
- Renew corroded wheel bolts.

  Parts: Wheel bolts

- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm



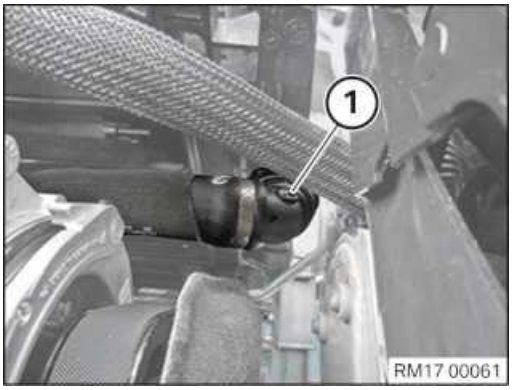
cardiagn.com

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

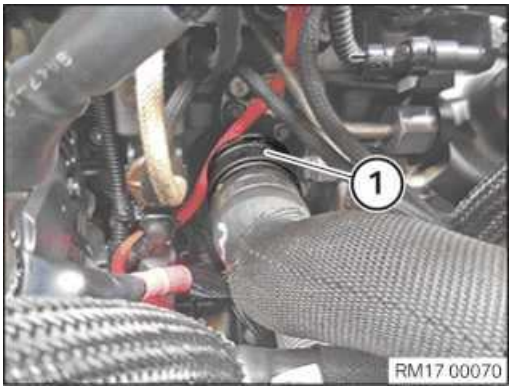
Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).



Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

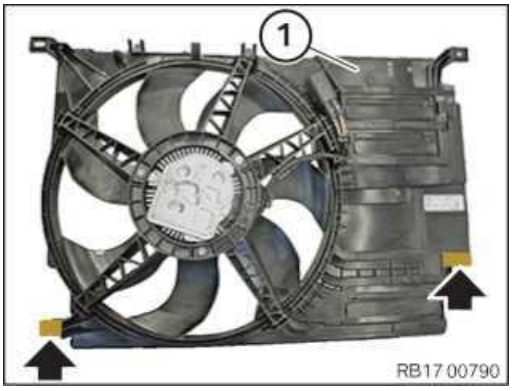


20 – Connect the coolant line

TECHNICAL INFORMATION

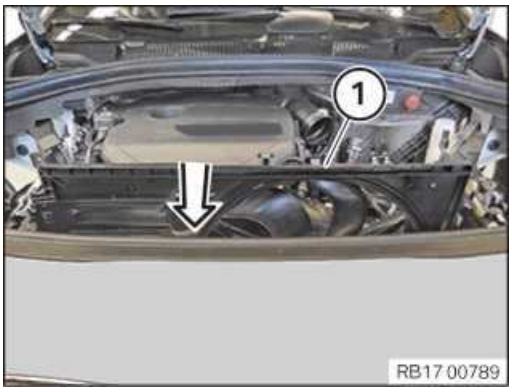
Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the connecting branch and lock audibly.

21 – Installing fan cowl with electric fan



cardiagn.com

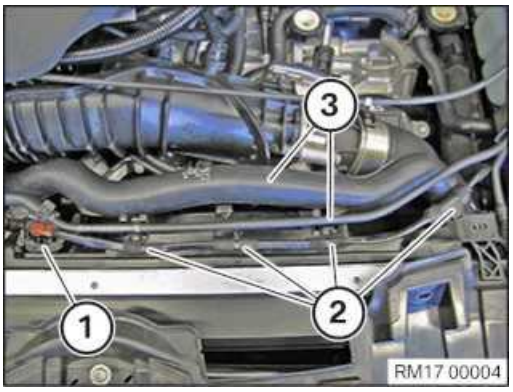
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Feed the guides (arrows) of the fan cowl (1) into the charge air cooler.

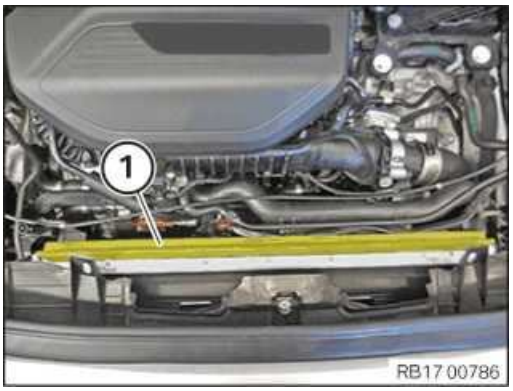
- Feed in and install the fan cowl (1) in the direction of the arrow.

- Lock the left and right locks (arrows).



- Tighten the screws (1).

Fan cowl on radiator

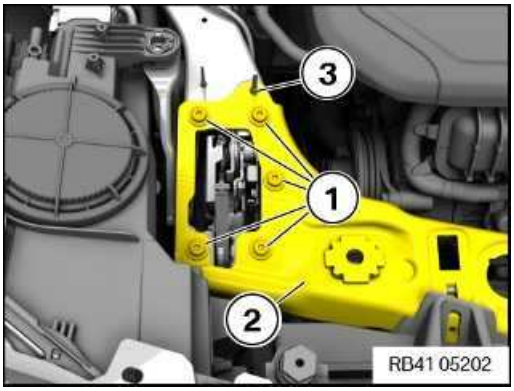


M6X12		Tightening torque	6 Nm

cardiagn.com

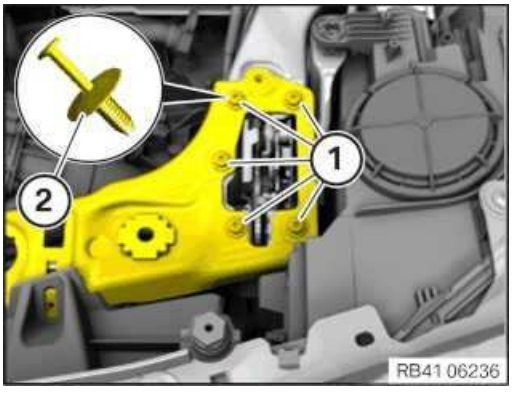
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.
- Secure clamps (2).
- Thread in and install coolant line (3).



- Guide the sealing (1) on the radiator in and install it.

22 – Install front cross connection

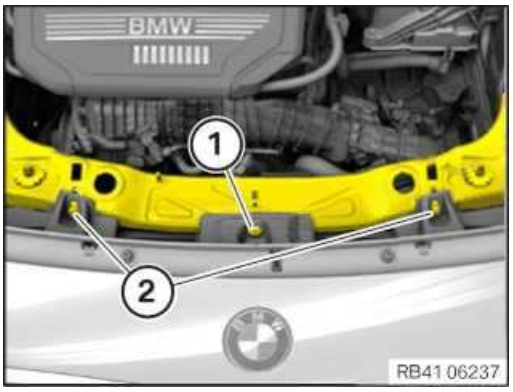


- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm



- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm

cardiagn.com

- Position screws (3) on the rubber mounts for the radiator and tighten.

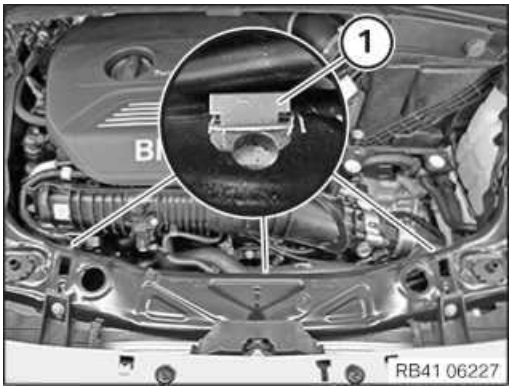
Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

- Tighten down screws (2).

Air duct to upper connection

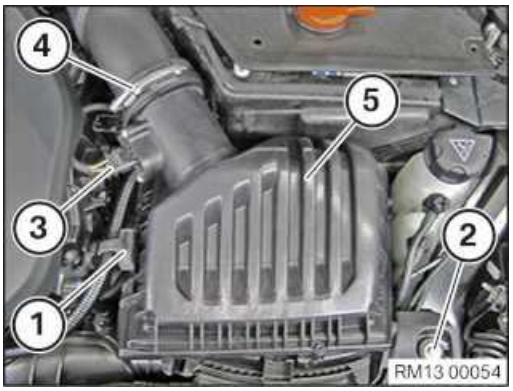
M6x20 screw		Tightening torque	11,8 Nm



- Tighten down screw (1).

Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm



- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

23 – Installing intake silencer housing

- Insert the intake silencer housing (5) into the rubber mounts and install it.

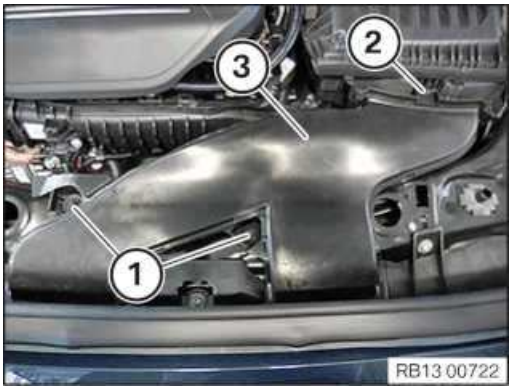
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

Clean air pipe to intake silencer housing



Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

24 – Install the intake neck for the intake filter housing

cardiagn.com

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

25 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

26 – Disconnecting all battery earth leads

cardiagn.com

- See additional information.

27 – Fill and bleed the coolant circuit

▶ **Filling and bleed the high-temperature coolant circuit**

- See additional information.

Additional Information

Overview of Tightening Torques

Component carrier to crankcase			Used in step 14
M8x35		Tightening torque	19 Nm

Connecting branch to engine block			Used in step 14
M6x25		Tightening torque	8 Nm

Alternator to component carrier			Used in step 15
M10x75 / M10x125		Tightening torque	38 Nm

Positive battery cable to alternator			Used in step 15
M8		Tightening torque	19 Nm

Fuel line to intake plenum			Used in step 15
TS6x20		Tightening torque	5 Nm

Air conditioning compressor in component carrier			Used in step 15

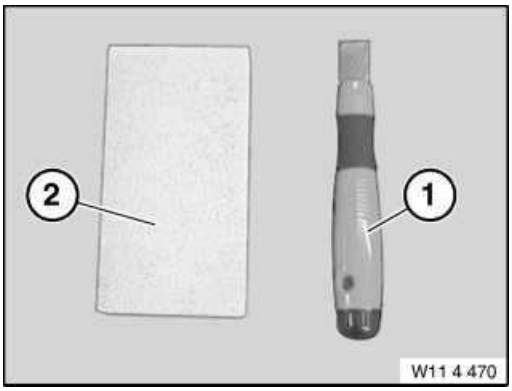
Overview of Special Tools

cardiagn.com



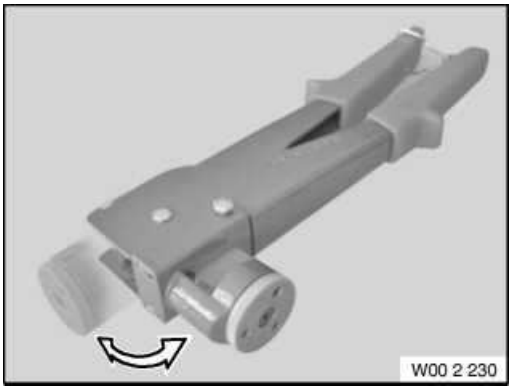
0 496 268 (11 0 390) Pin

Common Used in step 11 16

Usage	(roll pin) For securing new tensioning pulley (poly-V belt)
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 15 07 (390)

0 495 102 (11 4 470) Tool

Common Used in step 14



Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 103 (11 4 471)		**Scraper**	
2	0 495 104 (11 4 472)		**Extractor** (grindstone)	

cardiagn.com

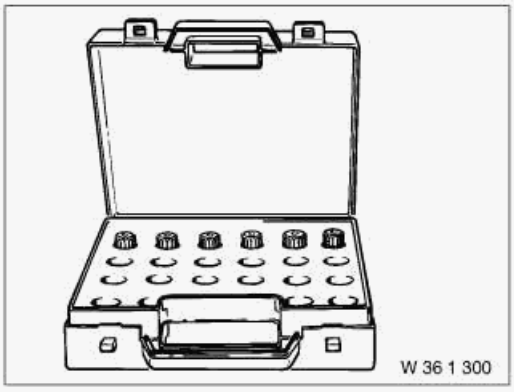
0 496 521 (00 2 230) Pliers

Common	Used in step 17
Usage	(Blind rivet pliers for plastic rivets) For shaft diameters of 3.5 mm, 3.9 mm and 4.5 mm
Included in the tool or work	
Storage location	C25
Replaced by	
In connection with	
SI-Number	01 17 08 (478)

2 344 011 Tool

Common	Used in step 18
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

Replacement tools:

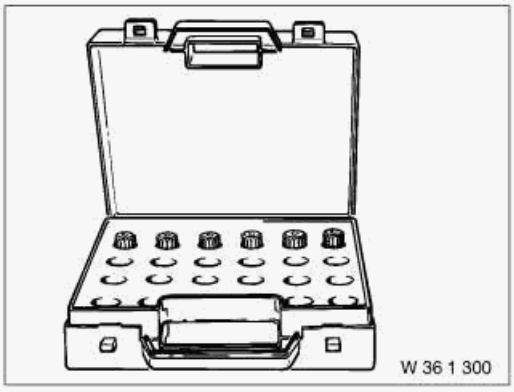


0 495 221 (36 1 323) Wheel stud

Common	Used in step 9
Usage	(Code 30) Code 39 available separately, (see EPC) under 36 13 1 181 259
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 224 (36 1 326) Wheel stud



Common	Used in step 9
Usage	(Code 33) With centring bore available separately, (see EPC) under 36 13 6 765 546
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 225 (36 1 327) Wheel stud

Common	Used in step 9
Usage	(Code 34) With centring bore available separately (see EPC) under 36 13 6 765 547
Included in the tool or work	0 492 518
Storage location

11 21 531 Replacing all crankshaft main bearing shells (B47)

Special tools required:

- 00 2 010

Caution!

Replace main bearing bolts.

There must be no oil in the blind holes **(risk of cracking)**.

Do not wash off bolt coating.

Incorrect assembly of the bearing caps will result in damage to the crankcase.

The code letter **K** on the crankcase stands for "Kupplungsseite" (German = clutch end).

Installation note:

Bearing classification from **1** to **3** (bearing cap) and **A** to **C** (crankcase) possible.

The new main bearing shells and guide bearing shells are indicated in colour or with numbers.

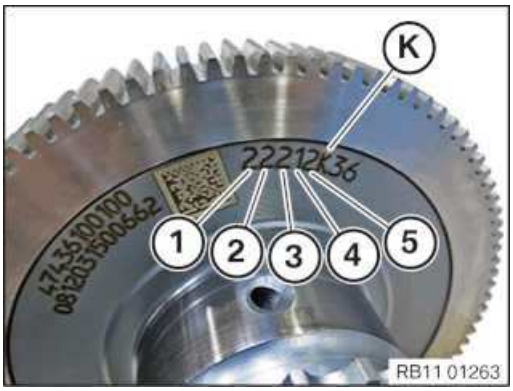
- Bearing colour **blue = 1**
- Bearing colour **green = 2**
- Bearing colour **brown = 3**

Necessary preliminary work:

- Remove crankshaft

Pay attention to the different bearing classification sequences in the crankcase and the bearing caps!

cardiagn.com



Bearing classification in crankcase: A / B / C

The code letter **K** on the crankcase stands for "Kupplungsseite" (German = clutch end).

The following code letters (5 - 1) describe the bearing positions **5** to **1** from left to right.

Example (see graphic):

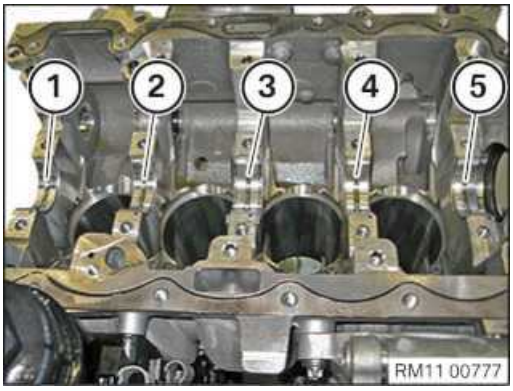
Bearing seat **5**:	Code letter **B**= green bearing shell with lubricating groove.
Bearing seat **4**:	Code letter **B**= green bearing shell with lubricating groove.
Bearing seat **3**:	Code letter **B**= green bearing shell with lubricating groove (thrust bearing).
Bearing seat **2**:	Code letter **B**= green bearing shell with lubricating groove.
Bearing seat **1**:	Code letter **B**= green bearing shell with lubricating groove.

Bearing classification in bearing cap: 1 / 2 / 3

Code letter (K) stands for clutch side.

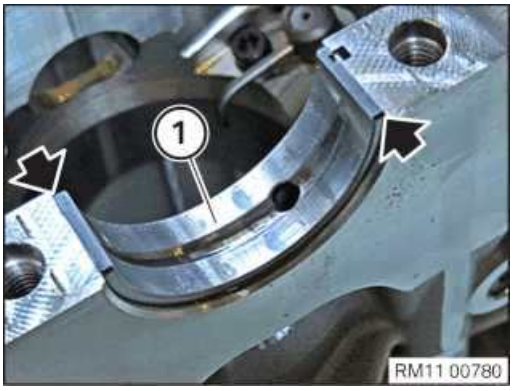
The coefficients (1- 5) describe the bearing positions **1** to **5** from left to right.

Example (see graphic):



Bearing cap **1**:	ID code **2**= bearing shell, blue, without lubricating groove.
Bearing cap **2**:	ID code **2**= green bearing shell without lubricating groove.
Bearing cap **3**:	ID code **2**= green bearing shell without lubricating groove (axial guide bearing).
Bearing cap **4**:	ID code **1**= yellow bearing shell without lubricating groove.
Bearing cap **5**:	ID code **2**= green bearing shell without lubricating groove.

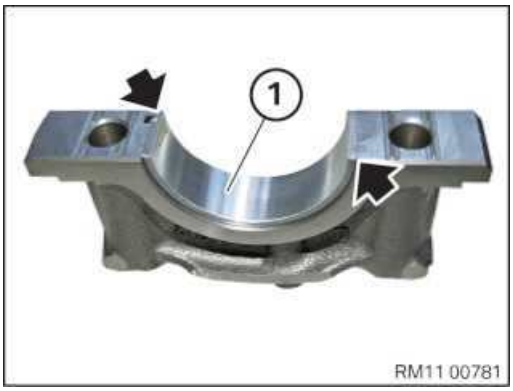
(A/1) Bearing cap / Blue	**(A/2)** Bearing cap / Green	**(A/3)** Bearing cap / Brown
(A/1) Crankcase / Blue	**(A/2)** Crankcase / Blue	**(A/3)** Crankcase / Blue
(B/1) Bearing cap / Blue	**(B/2)** Bearing cap / Green	**(B/3)** Bearing cap / Brown
(B/1) Crankcase / Green	**(B/2)** Crankcase / Green	**(B/3)** Crankcase / Green
(C/1) Bearing cap / Blue	**(C/2)** Bearing cap / Green	**(C/3)** Bearing cap / Brown
(C/1) Crankcase / Brown	**(C/2)** Crankcase / Brown	**(C/3)** Crankcase / Brown



Enter code letters and numbers for crankcase and crankshaft

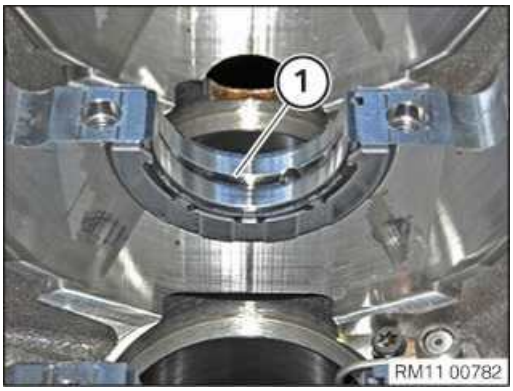
Code letters/numbers	Bearing seat **1**	Bearing seat **2**	Bearing seat **3**	Bearing seat **4**	Bearing seat **5**		
Crankcase at top **code letter**							
Crankshaft at bottom **code number**							

cardiagn.com



Remove bearing shells 1 to 5.

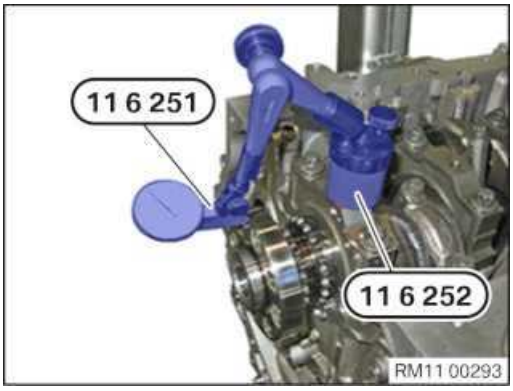
Place main bearing shell (1) with lubricating groove in crankcase (see arrows).



Observe combination of bearing colours according to the table.

Place main bearing shell (1) with no lubricating groove in the bearing cap (see arrows).

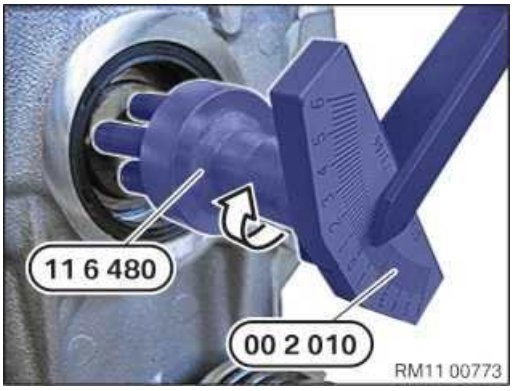
Note:
Pay attention to guide lug on main bearing shell (1).



Observe combination of bearing colours according to the table.

Note:
Thrust bearing (1) on the crankshaft is installed at bearing position 3.

Observe combination of bearing colours according to the table.



cardiagn.com

Install crankshaft.

Check side clearance.

If necessary, check guide bearing shells, crankshaft and engine block.

Rotate crankshaft (1) with special tool 00 2 010 in direction of arrow.

Check crankshaft coefficient of friction.

Required follow-up work:

Assemble engine.

cardiagn.com

11 21 001 Replacing crankshaft

PRELIMINARY WORK

1 – Removing engine

- See additional information.

2 – Removing the acoustic cover

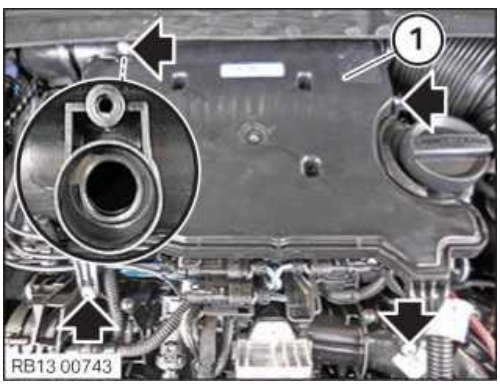
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

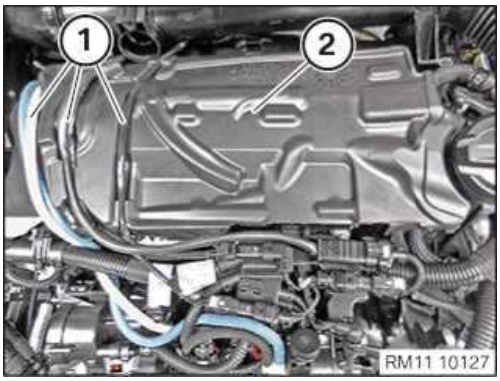


Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

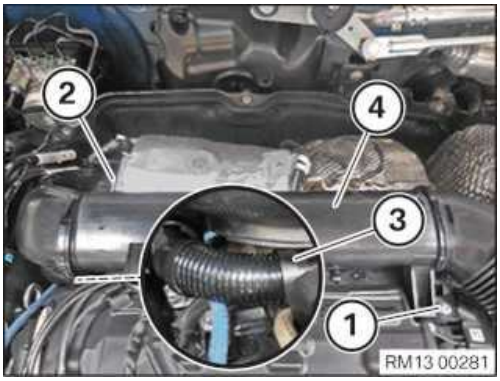


3 – Remove resonator

- Remove screws (arrows).
- Guide out and remove the resonator (1).

4 – Remove the acoustic cover for the injectors

cardiagn.com



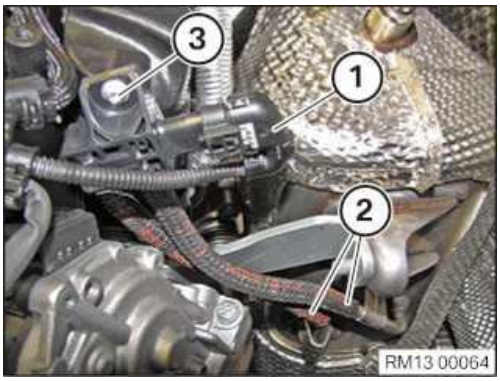
- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

5 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

6 – Remove differential pressure sensor

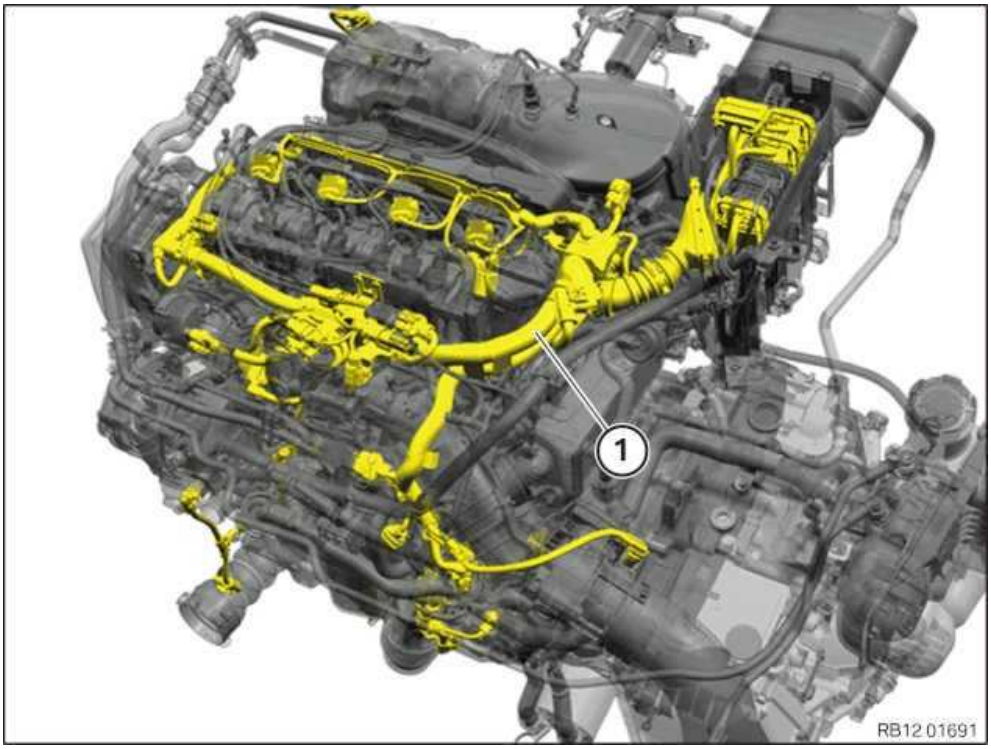


RISK OF DAMAGE

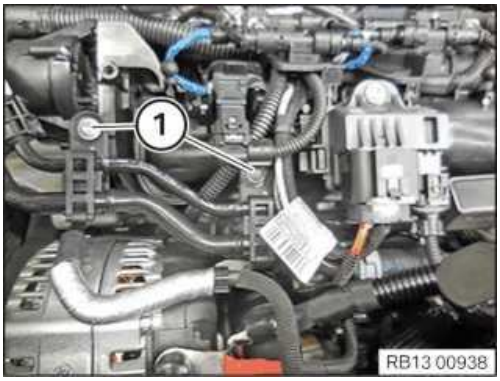
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



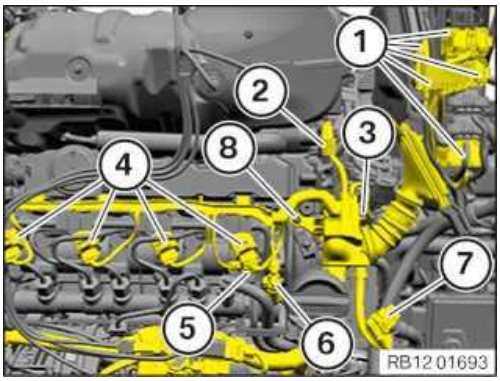
cardiagn.com



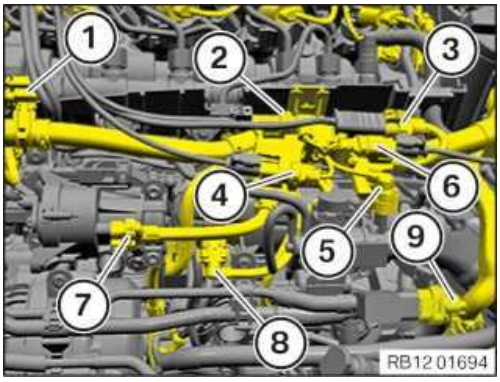
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

7 – Removing assemblies (on lifting table)

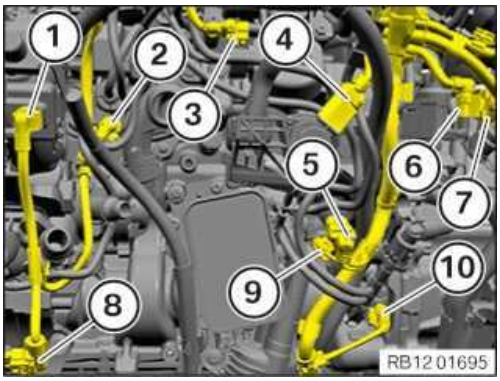
Overview: Wiring harness section for the engine



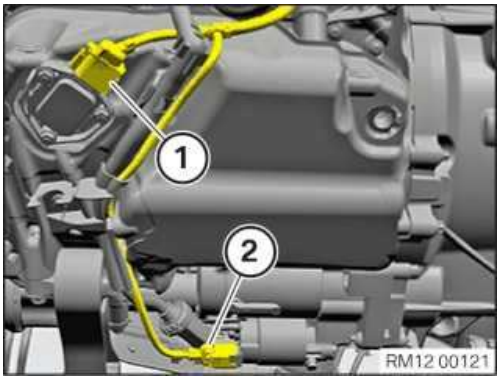
1 Wiring harness section for the engine



- Loosen screws (1).

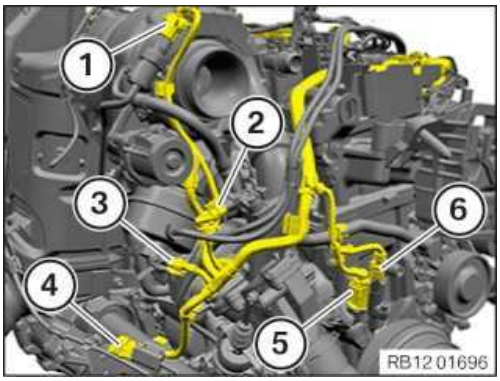


cardiagn.com

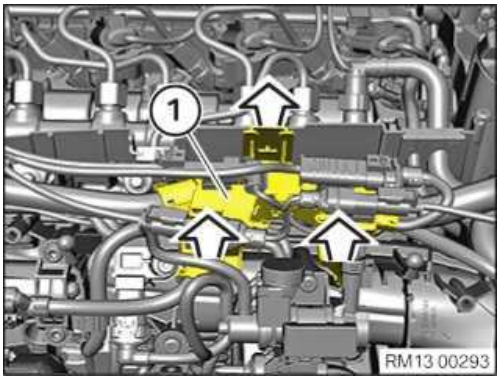


- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).

- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock connector (3) and pull it off from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

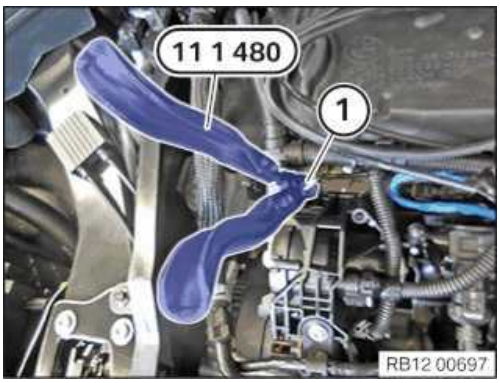


- Unlock and disconnect the connector (1) from the alternator.
- Unlock and disconnect the connector (2) from the electric changeover valve.
- Unlock and disconnect the connector (3) from the electric changeover valve.
- Unlock the connector (4) and pull it off the high pressure pump.
- Unlock the connector (5) and disconnect it from the oil pressure sensor.
- Unlock connector (6) and pull off from throttle body.
- Unlock the connector (7) and disconnect it from the intake air temperature sensor.
- Unlock the connector (8) and disconnect it from the air conditioning compressor.
- Unlock and disconnect the connector (9) from the solenoid valve.
- Unlock the connector (10) and pull it off the crankshaft sensor.

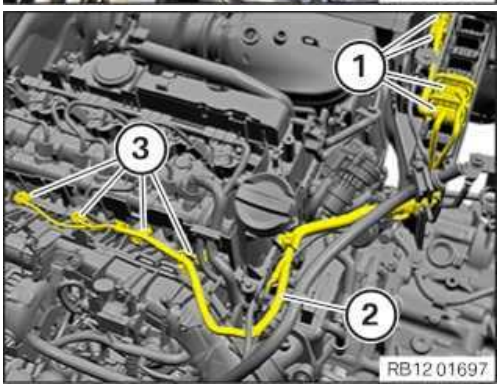


- Unlock the connector (1) and pull off of the oil-level sensor.
- Unlock connector (2) and remove from starter motor.

cardiagn.com



- Unlock the connector (1) and disconnect it from the exhaust gas pressure sensor.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock the connector (3) and pull it off the exhaust turbocharger.
- Unlock the connector (3) and disconnect it from the differential pressure sensor.
- Unlock connector (4) and pull it off from the monitoring oxygen sensor.
- Unlock the connector (5) and pull it off the oil pressure switch .
- Unlock connector (6) and disconnect from switching valve.
- Detach, feed out and remove the wiring harness from the clamps.



▶ **Removing the cable clips from the intake plenum**

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Pull off all connectors (3) from glow element using special tool **0 490 796 (11 1 480)**.
- Loosen screw (2) and remove the ground strap.
- Detach, feed out and remove the wiring harness from the clamps.

▶ **Removing the drive belt for alternator**

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

cardiagn.com

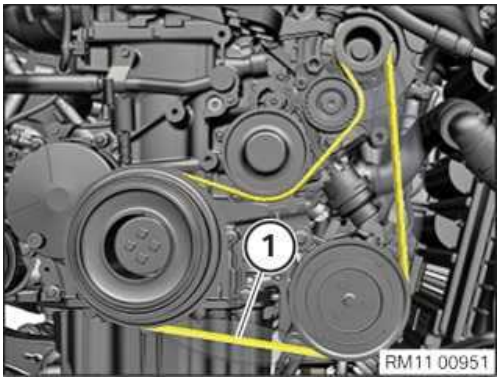
CAUTION

Component with preload.

Danger of injury!

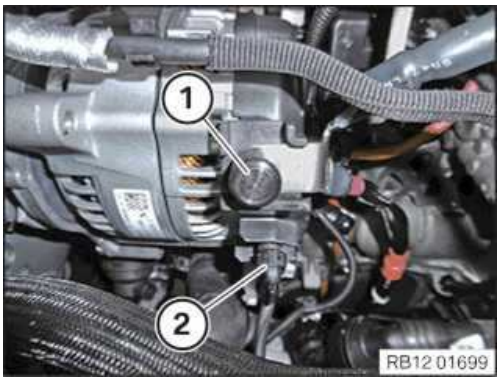
- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION



If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

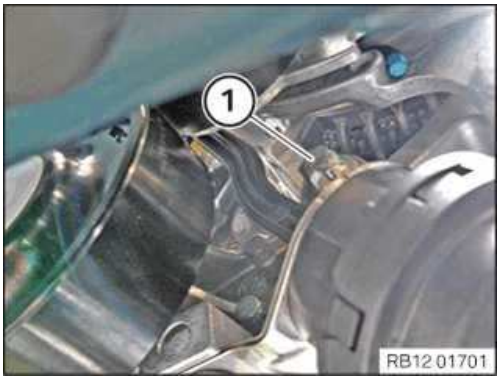
TECHNICAL INFORMATION



The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool **0 496 268 (11 0 390)**.

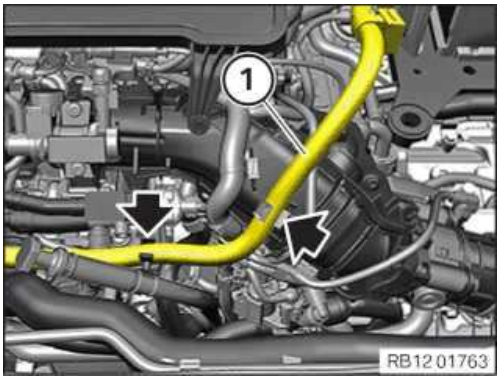
- Guide out the drive belt for the alternator (1) and remove it.



- Remove the cover (1) and loosen the nut below.
- Disconnect positive battery cable from alternator.
- Unlock and disconnect the connector (2) from the alternator.

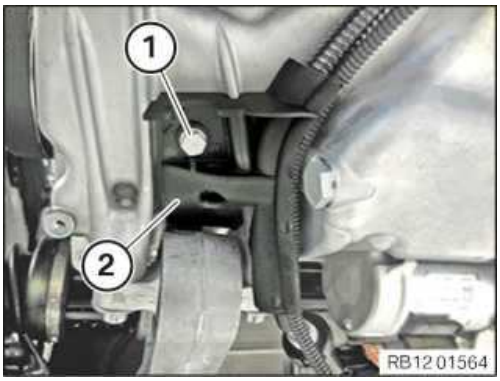
cardiagn.com

- Detach screw (1) on top on the alternator.



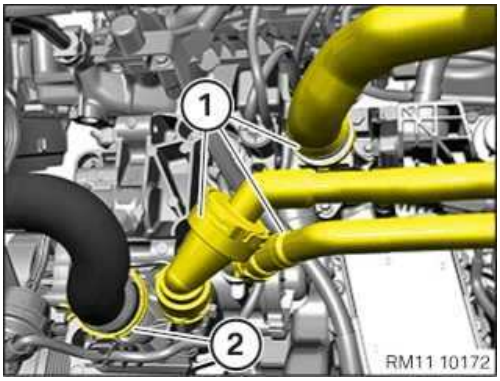
- Detach screw (1) below on the alternator.

- Feed out alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support and remove.



- Loosen screws (1).
- Feed out and remove the air conditioning compressor (2).

- Release the positive battery cable (1) from the clamps (arrows).

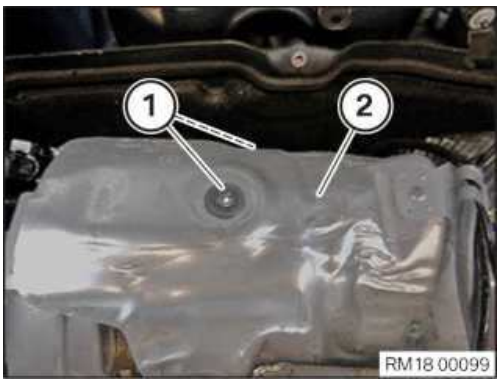


cardiagn.com

- Loosen screw (1).
- Guide out and remove holder (2).

- Feed out positive battery cable from the clamps (1) and remove.

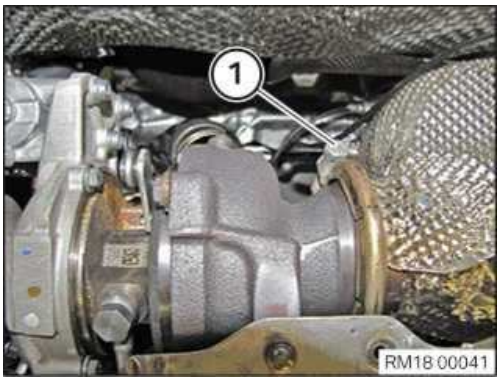
- Unlock and disconnect coolant lines (1).
- Guide out the coolant lines (1) and remove it.
- Detach the clamp (2).
- Guide the coolant hose out and remove.



▶ **Removing heat shield from top exhaust turbocharger**

WARNING

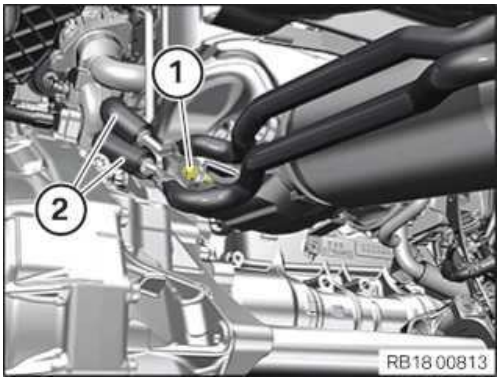
Hot surfaces.



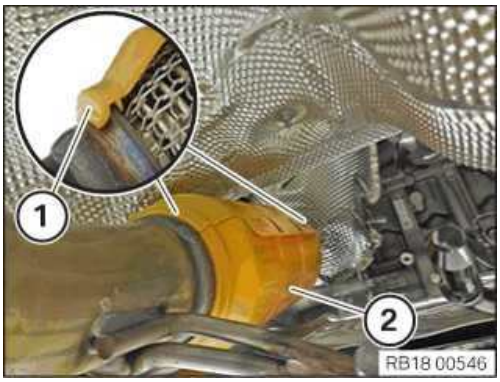
Risk of burning!

- Perform all work only on components that have cooled down.

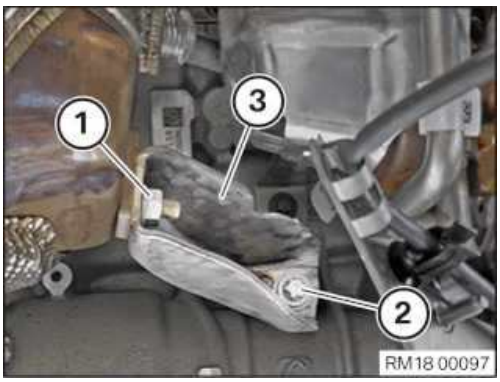
- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).



cardiagn.com

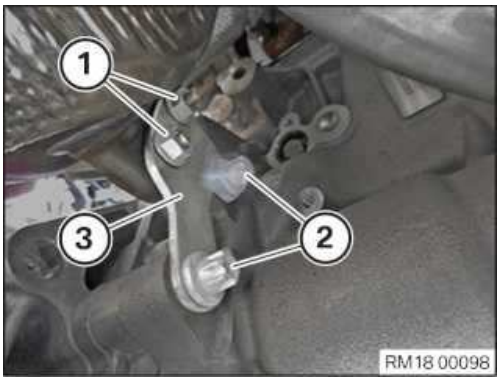


- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



- Loosen nuts (1).

- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

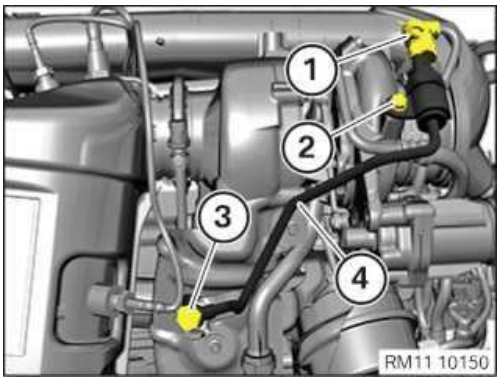


- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.

- Loosen nut (1).
- Loosen screw (2).
- Remove holder (3).

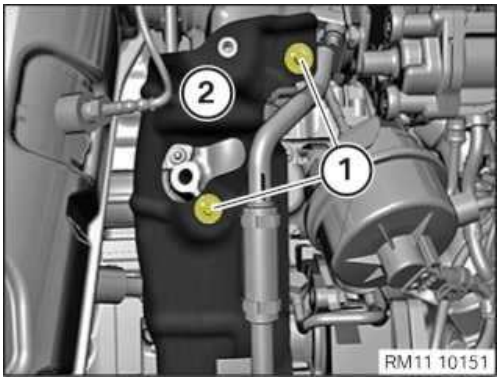
cardiagn.com

- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).
- Guide out and remove diesel particulate filter .



▶ **Remove the heat shield from the exhaust turbocharger at the bottom**

WARNING



Hot surfaces.

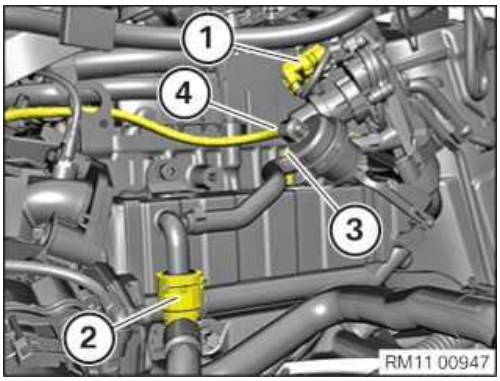
Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).

▶ **Removing the exhaust-gas recirculation cooler**

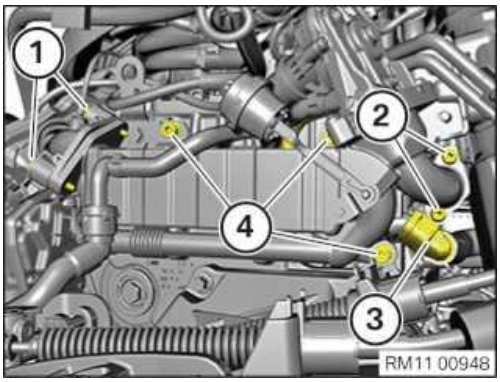


WARNING

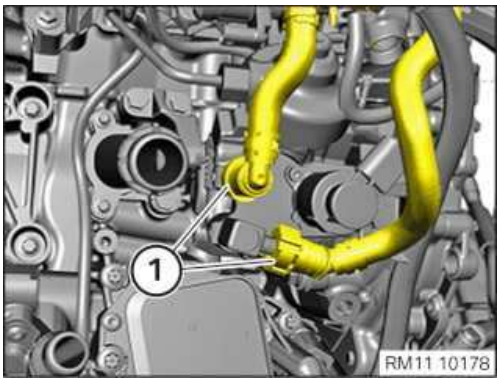
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

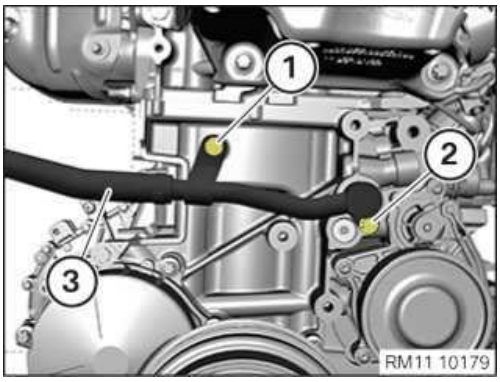


cardiagn.com



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



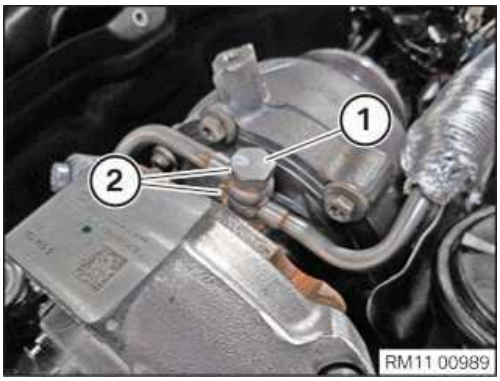
- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

- Unlock the fuel lines (1) and disconnect from the high pressure pump.
- Remove the fuel lines.

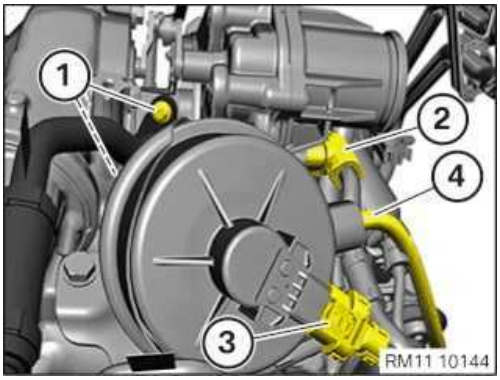
- Loosen screws (1) and (2).
- Remove coolant line (3).

8 – Removing the low-pressure stage turbocharger



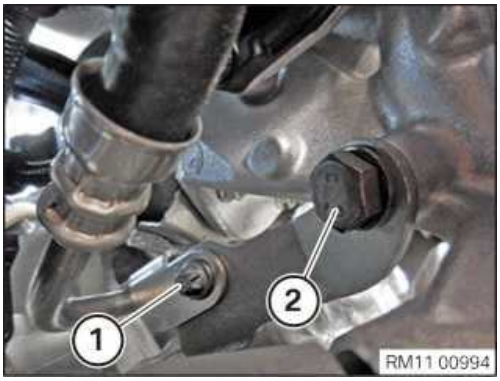
WARNING

Hot surfaces.



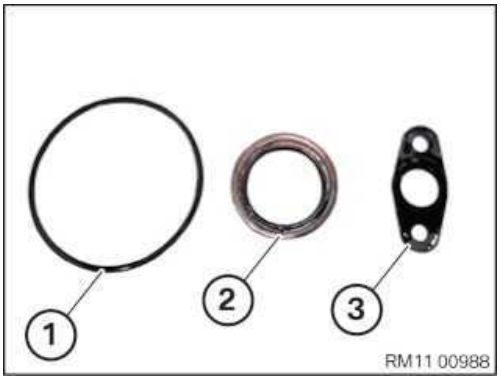
Risk of burning!

- Perform all work only on components that have cooled down.



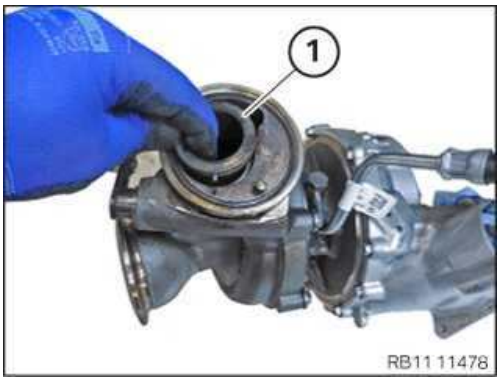
cardiagn.com

- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.



- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.

- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).



- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

cardiagn.com

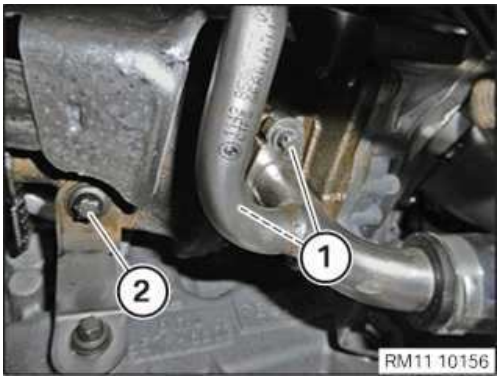
- Remove the spacer ring (1).

9 – Removing the high-pressure stage exhaust turbocharger

WARNING

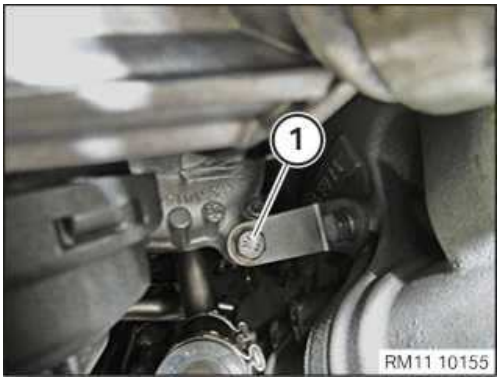
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

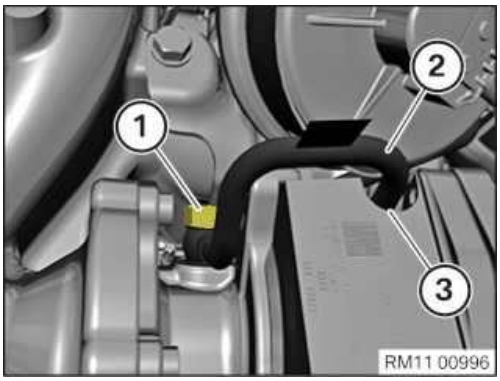
CAUTION



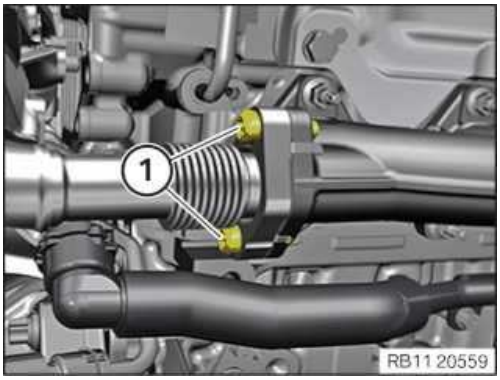
Heavy component.

Heavy components can lead to injury or damage.

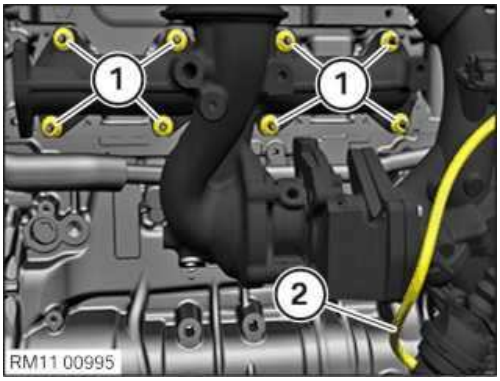
- Remove and install heavy components with the aid of another person/other persons.



- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).

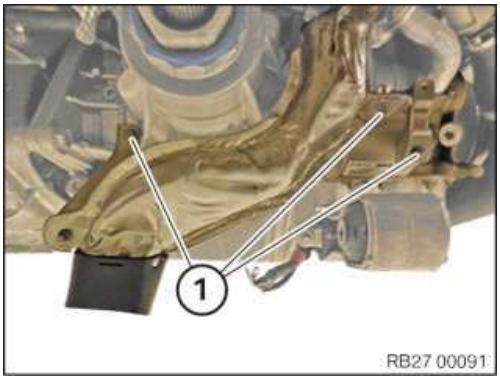


- Release screw (1) from the right wheel arch.

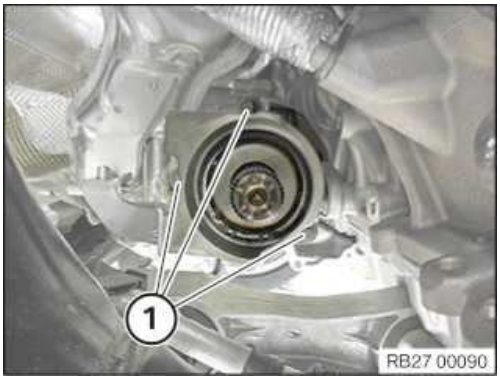


cardiagn.com

- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

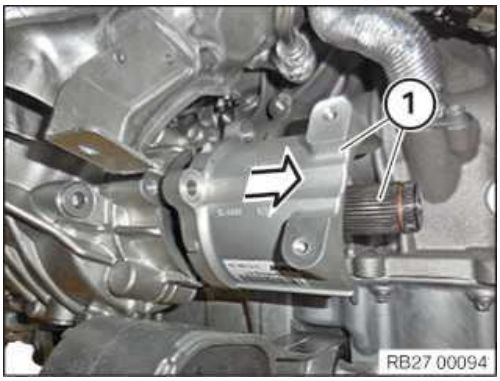


- Loosen screws (1).

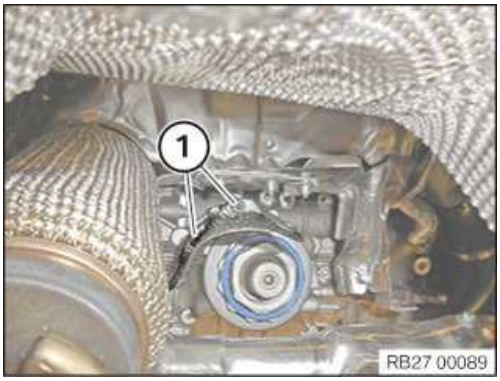


- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

10 – Remove the intermediate shaft with the support tube

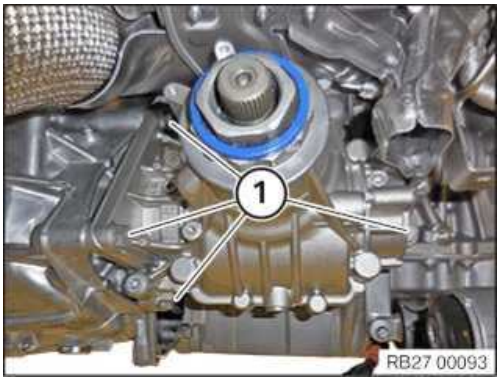


- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).

cardiagn.com



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

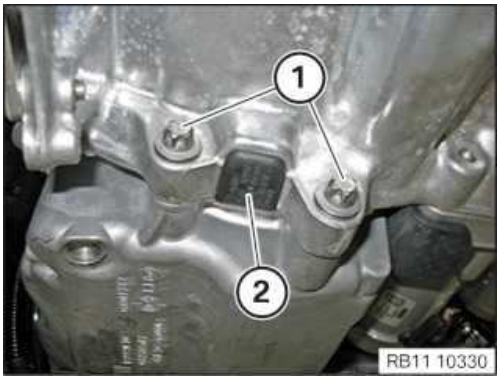
11 – Remove transfer box (VTG)

- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

12 – Detach the engine from the manual gearbox

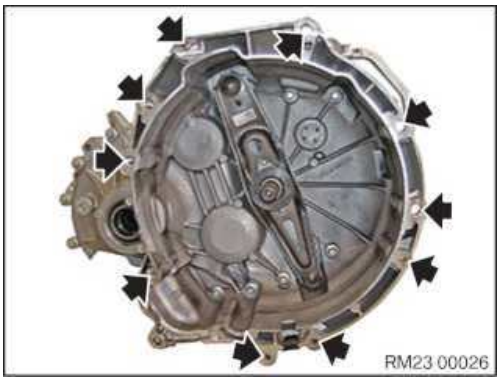
Prerequisite



Engine has been removed.

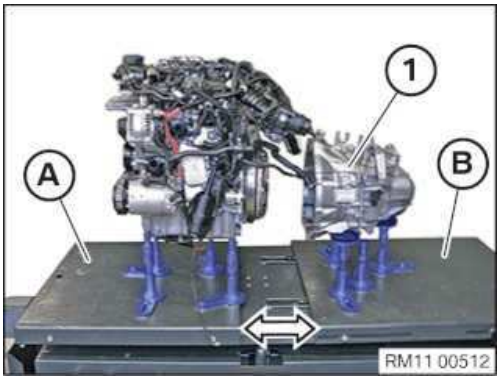
CAUTION

Heavy component.



Heavy components can lead to injury or damage.

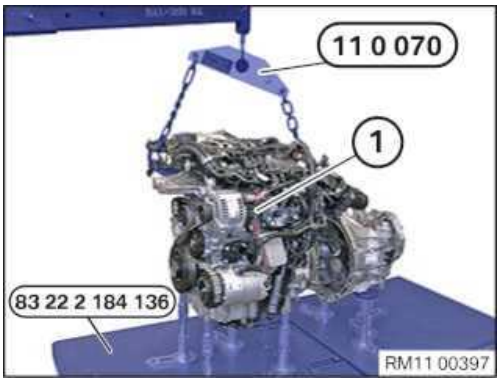
- Remove and install heavy components with the aid of another person/other persons.



- Loosen screws (1).
- Remove protective cap (2).

cardiagn.com

- Remove screws (arrows).



- Slide the table top (B) in the direction of the arrow and slide the manual gearbox (1) to the side.

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

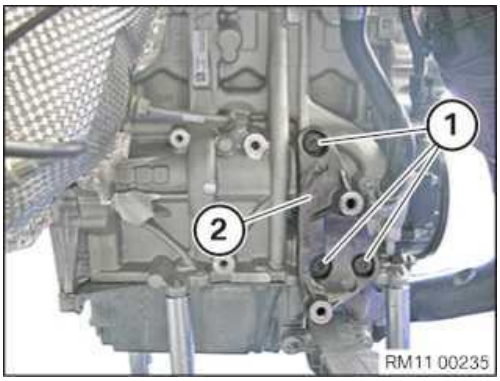
M8		Tightening torque	21,5 Nm

- Attach engine lifter to special tool and lift engine (1) off lifting table.

13 – Mount engine on assembly stand

CAUTION

Heavy component.



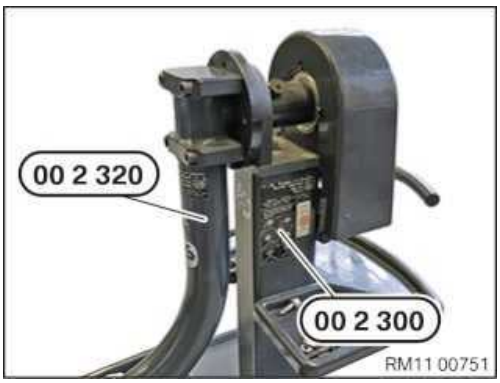
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

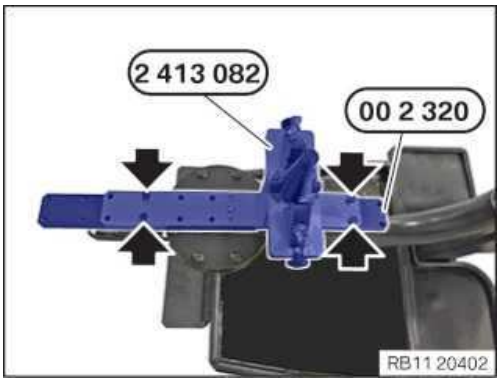
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com



- Loosen screws (1).
- Guide out and remove holder (2).



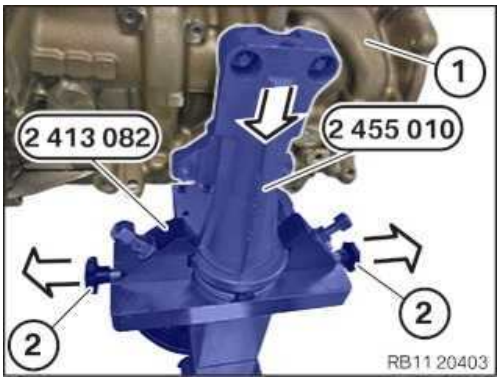
- Position the special tool **2 455 010** on the engine (1).
- Position the standard bolts **M10x30**.
- Tighten the standard bolts (arrows).
-

Special tool 2 455 010 to crankcase

M10x30		Tightening torque	38 Nm

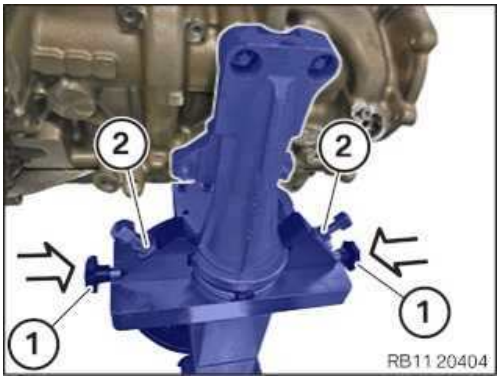
- Prepare the assembly stand **0 495 187 (00 2 300)** with the special tool **0 495 196 (00 2 320)**.

- Screw the special tool to the **0 495 196 (00 2 320)** special tool.
- Tighten screws (arrows).
-



Special tool 11 8 930 to special tool 00 2 320

M14x35		Tightening torque	160 Nm

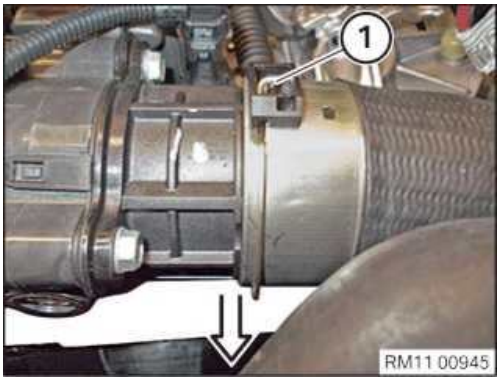


- Position the engine lifter with the special tool and the engine on the special tool **0 495 187 (00 2 300)**.

cardiagn.com

- Detach the holder (2) in the direction of the arrow.
- Position the engine (1) with the special tool **2 455 010** in the direction of the arrow on the special tool .

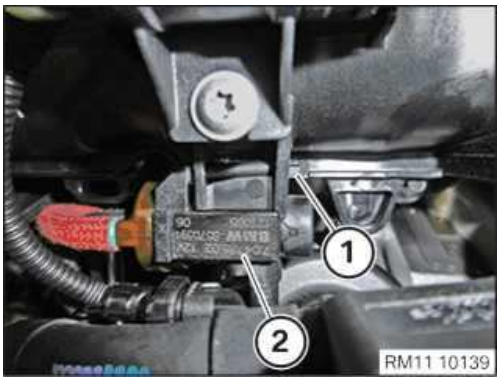
- Lock the holder (1) in direction of arrow.
- Tighten nuts (2).



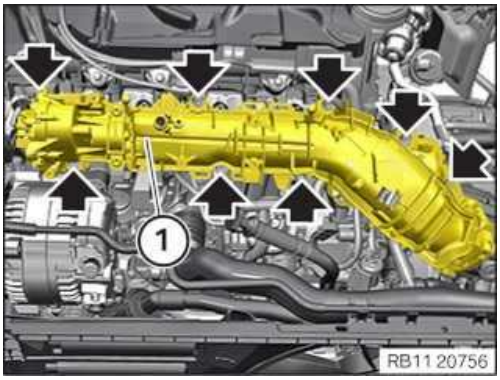
14 – Removing the intake plenum

TECHNICAL INFORMATION

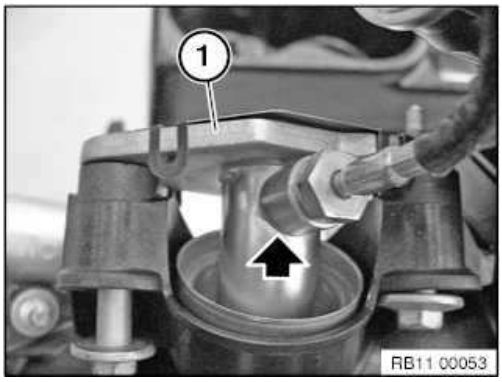
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.



cardiagn.com

- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

15 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

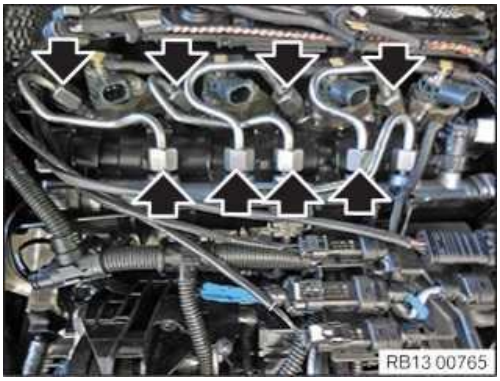
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION



If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

16 – Detaching leakage oil line from injector

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

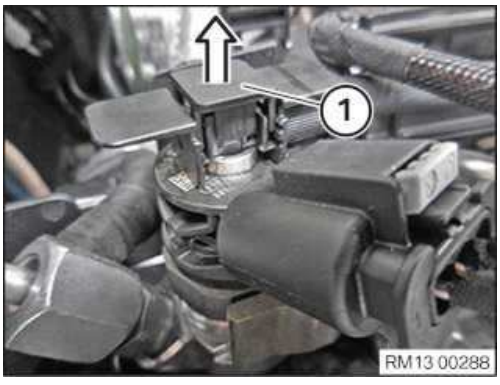
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE



Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

17 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

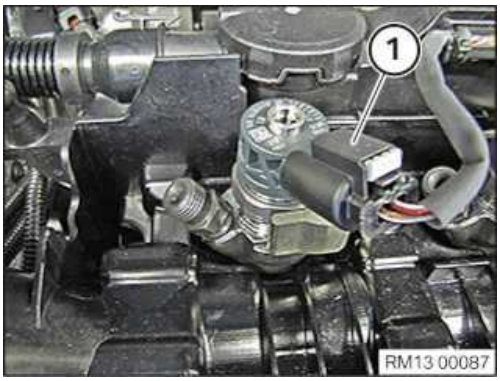
Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

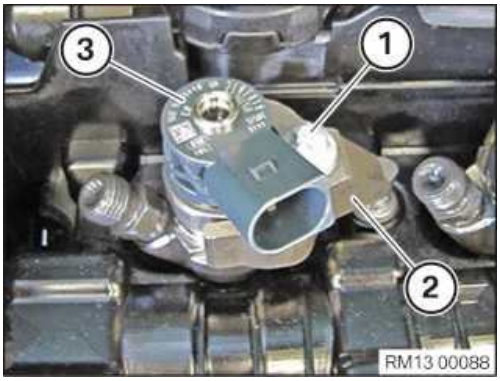
RISK OF DAMAGE

 **Electrostatic discharge.**



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



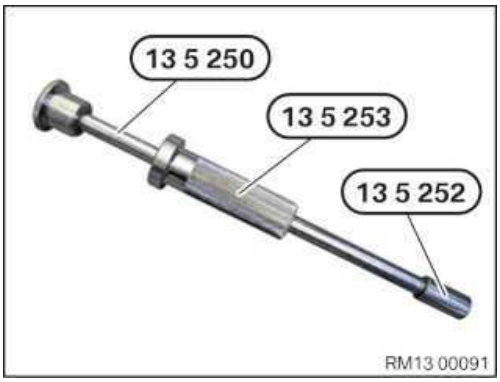
cardiagn.com

TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

- Unlock and disconnect connector (1).

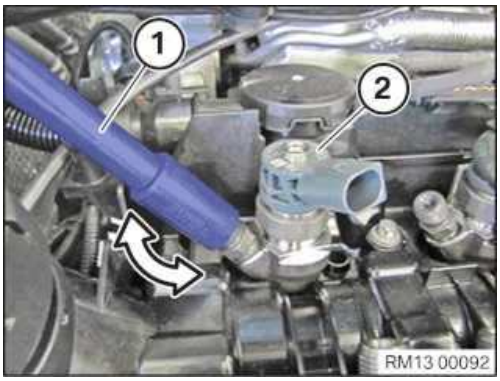
- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.



▶ **Loosen stuck injectors**

RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)** back onto the special tool **0 493 321 (13 5 250)**.

cardiagn.com

- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

18 – Remove high-pressure rail

WARNING

Working on fuel system.

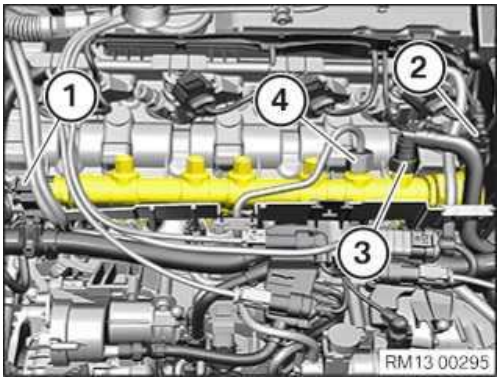
Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

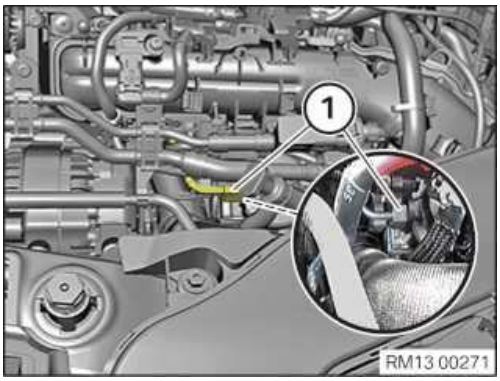
Contamination can result in malfunctions, operating failure or leaks.



- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

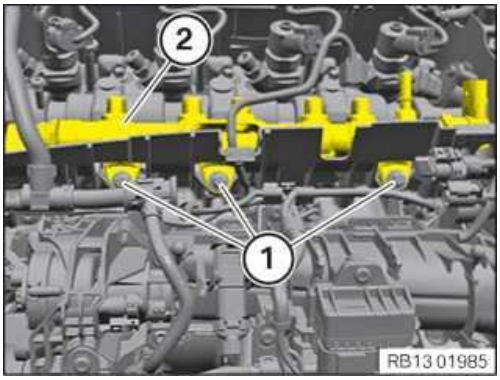
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Unlock and disconnect connector (1).
- Unlock and disconnect connector (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool .
- Reset special tool early on to avoid bending pressure lines.

cardiagn.com

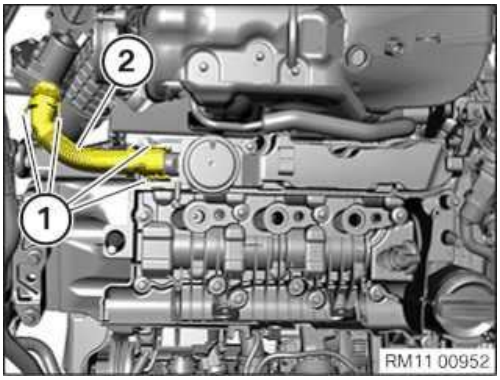
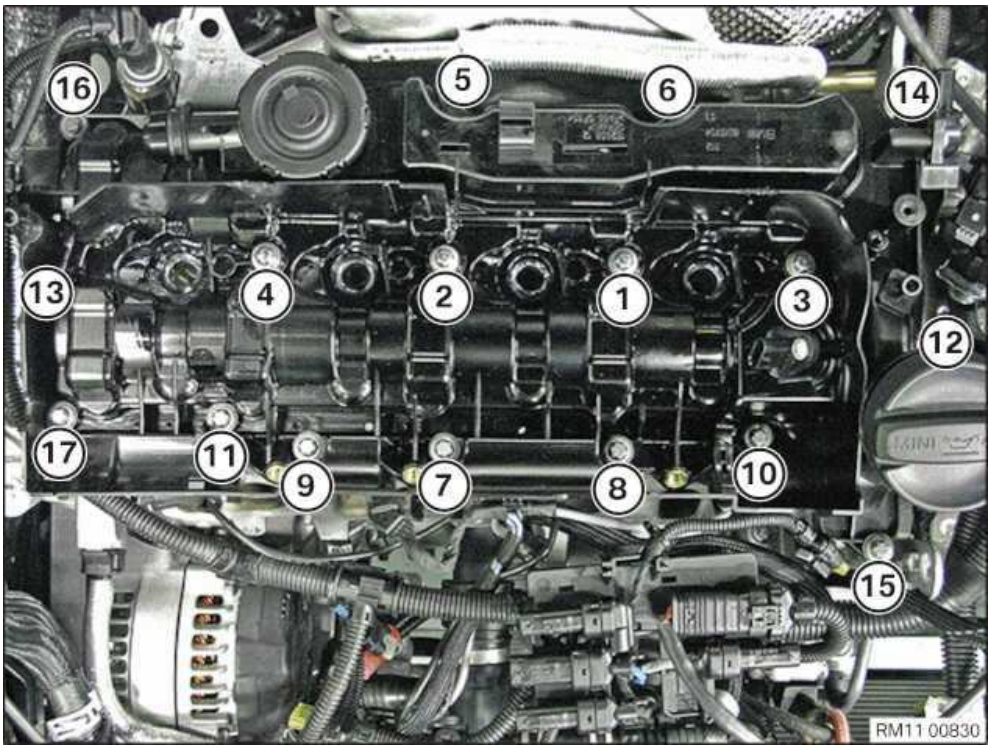
- Slacken the union nut (1) on the high pressure pump.



- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

19 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

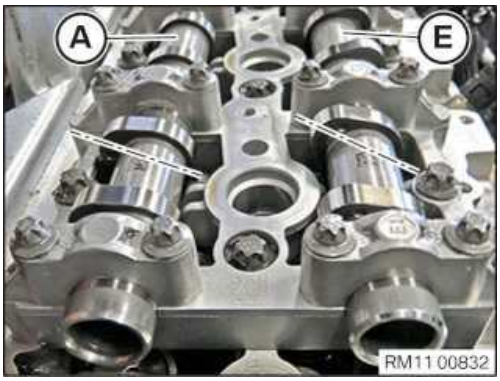
- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

20 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.



The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

21 – Remove chain tensioner piston

cardiagn.com

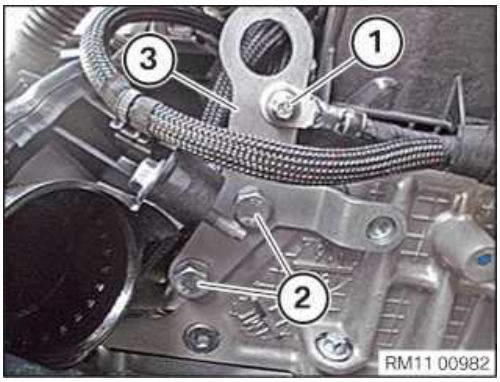
WARNING

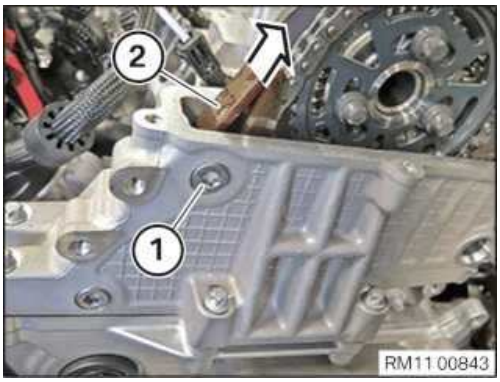
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



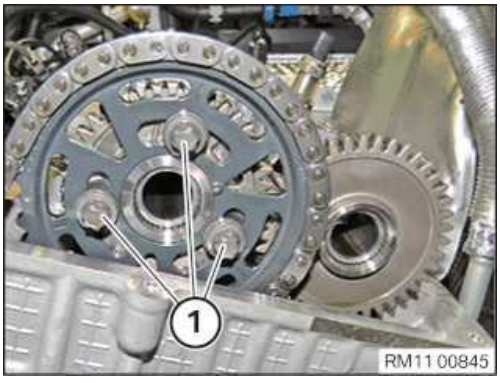
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

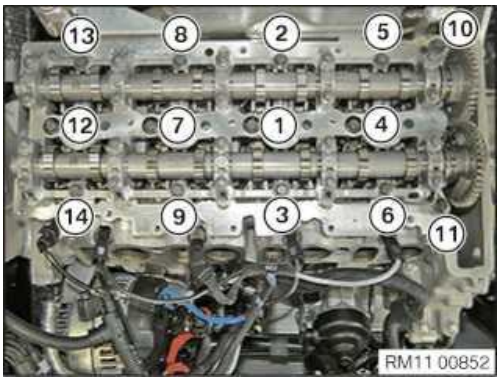
- Remove the chain tensioner piston (1).

22 – Remove the timing chain guide rail



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.



23 – Removing the camshaft sprocket on the intake camshaft

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

24 – Removing the camshaft support

cardiagn.com

- Evenly loosen all screws in a sequence from (14) to (1).
- Loosen and remove all screws in a sequence from (14) to (1).
  Both camshafts can be removed with the camshaft carrier.
- Remove the camshaft support including camshafts towards the top.

25 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

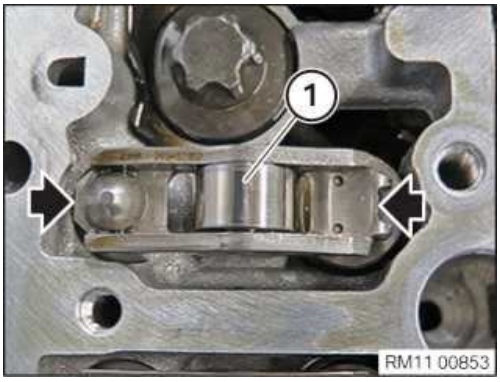
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool or conventional tools.
- Feed out preheating elements and remove.

26 – Remove roller cam followers

- Guide out and remove all roller cam followers (1) (arrows).
- Place all roller cam followers (1) in order in special tool **0 495 105 (11 4 480)**.

  Roller cam followers that have already been used must be installed in same position again.

27 – Removing the hydraulic valve clearance compensating element

cardiagn.com

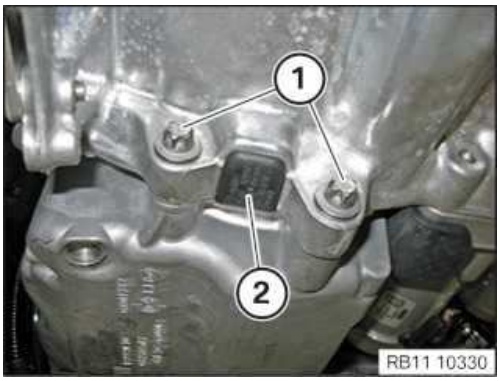
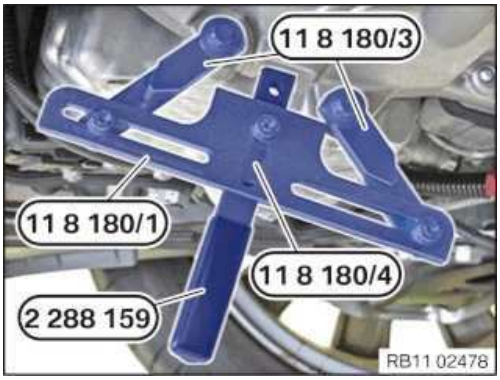
RISK OF DAMAGE

Contaminant or foreign body.

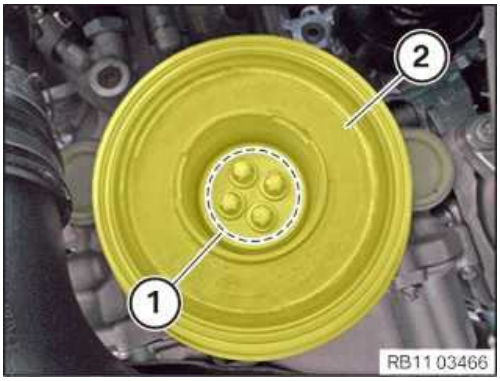


Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.



28 – Removing the vibration damper

- Release the transmission bolts (1).
- Remove the protective cap (2).

- Position special tool **0 493 587 (11 8 180)** as illustrated.
- Fasten the special tool **0 493 587 (11 8 180)** to the transmission with transmission bolts.

- Loosen screws in the area (1).
- Remove the vibration damper (2).

29 – Remove clutch

cardiagn.com

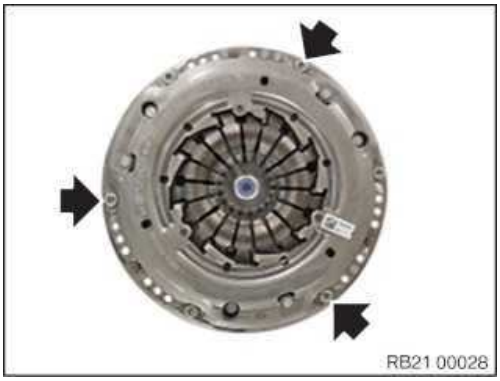
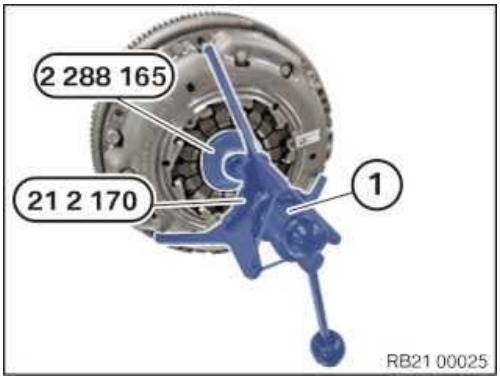
CAUTION

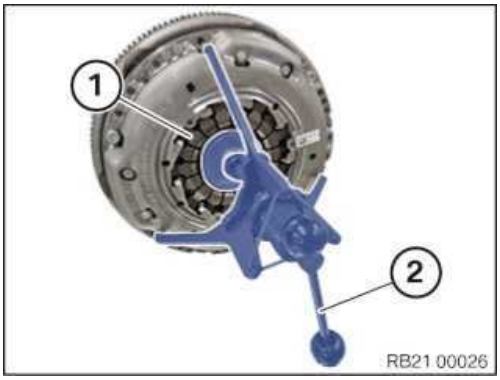


Materials harmful to health.

Contact with fluids harmful to health!

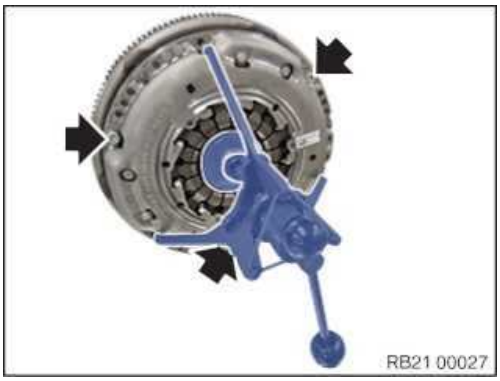


- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.



- Block flywheel with transmission bolt (1) and special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.

- Detach 3 screws to attach special tool and **2 288 165**.



- Position special tool and **2 288 165** and tighten on the knurled screw (1).

- Screw in the spindle (2) until the diaphragm spring (1) is preloaded and the clutch disc is free of tension.

cardiagn.com

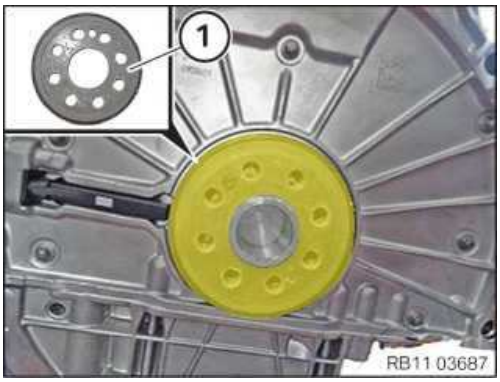
- Loosen the remaining 3 screws and remove the clutch with clutch disc from the flywheel.

30 – Removing flywheel

CAUTION



Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

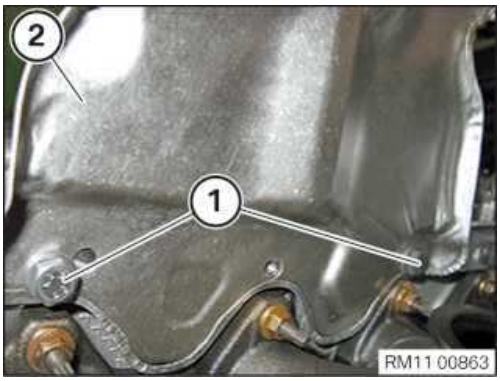
- Secure the flywheel with a transmission bolt (1) and with special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.
- Unscrew the flywheel bolts with the special tool **0 491 018 (11 4 180)**.
- Remove flywheel.

RISK OF DAMAGE

Electrostatic discharge.

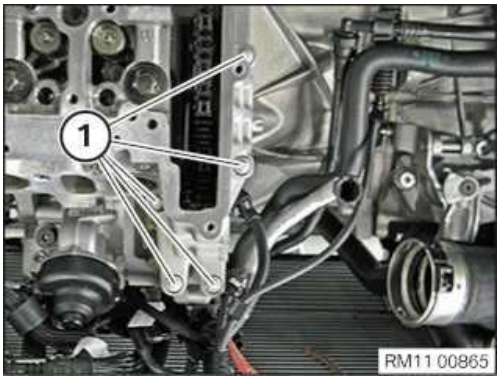
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Remove the increment wheel (1) from the crankshaft and lay it down correctly.

31 – Remove rear timing case cover



Prerequisite

Transmission is removed.

cardiagn.com

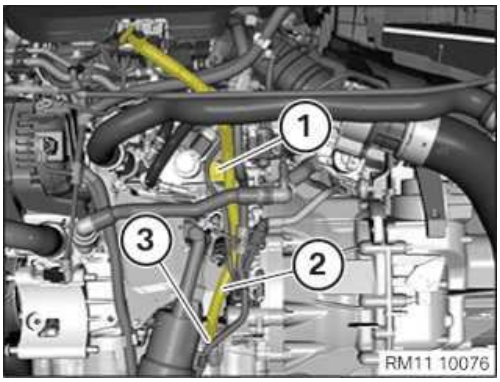
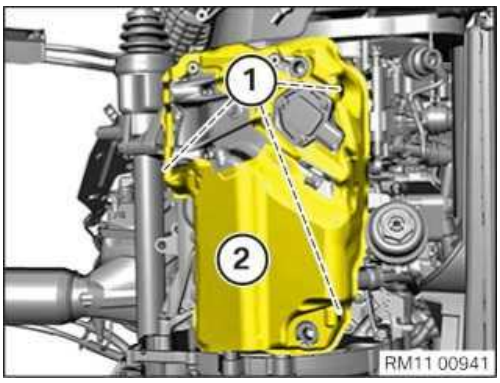
- Loosen screws (1).
- Feed out the heat shield (2) and place to one side.



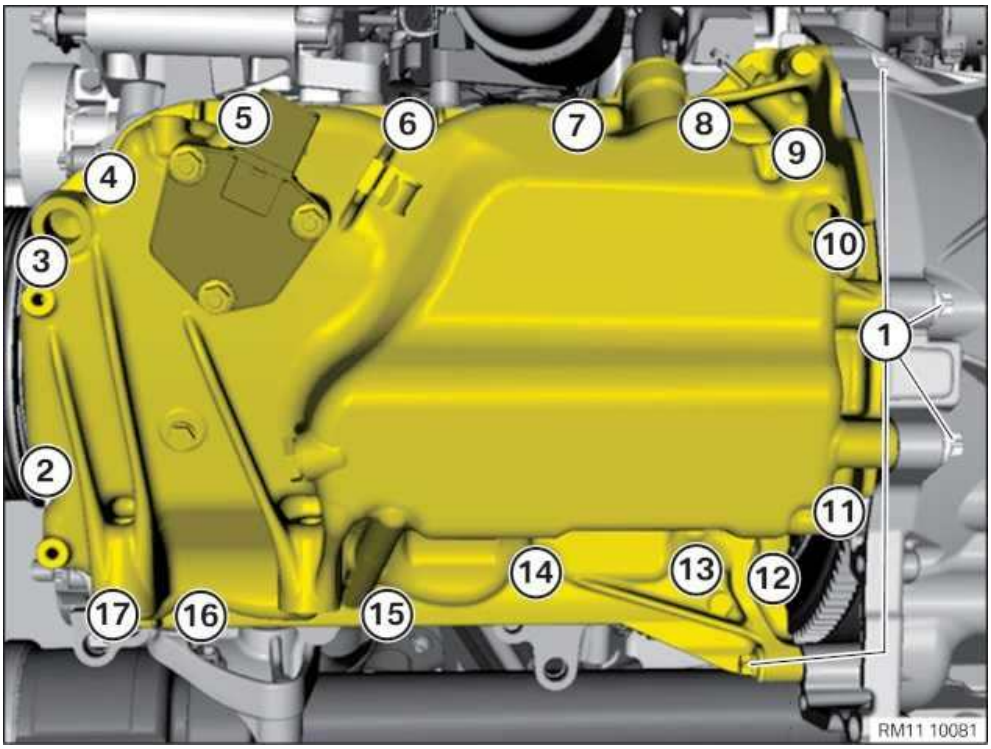
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

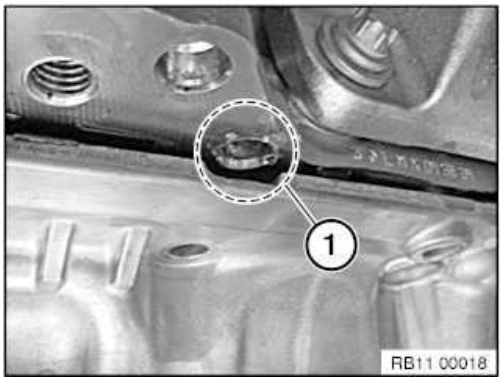


- Loosen screws (1).

- Loosen the cylinder head bolts in the sequence from (10) to (1).
- Remove cylinder head bolts (1) to (10) with washers.
- Remove cylinder head.



- Loosen screw (1).
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- Remove sealing ring (3) from oil sump if necessary.



- Expanding rivets (1) on both sides of the acoustic cover (2).
- Feed out and remove the acoustic cover (2).

cardiagn.com

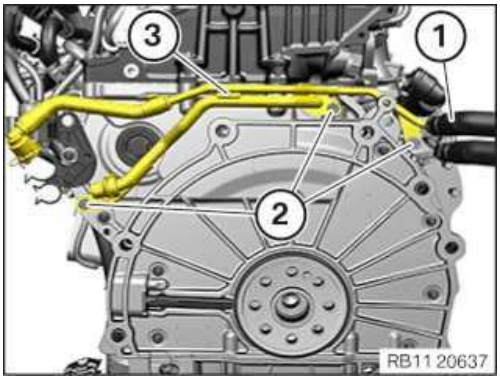
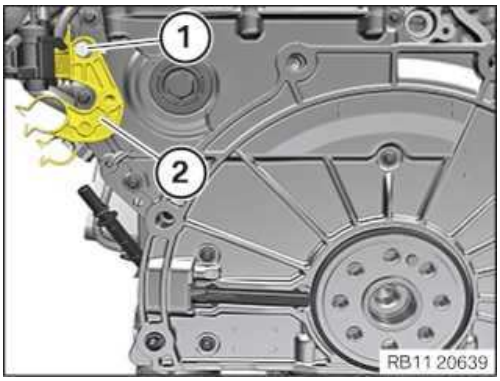
- Loosen the transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).

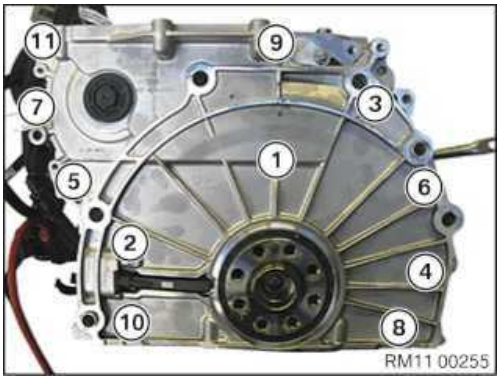


- Release oil sump only in area (1).



- Detach the oil sump with a suitable mounting lever (1) carefully at the point provided.
- Secure the oil sump against falling.

▶ **If installed: Remove coolant line of the SCR metering module**



- Unlock and disconnect the coolant hose (1).
- Loosen screws (2).
- Remove the coolant line (3).

cardiagn.com

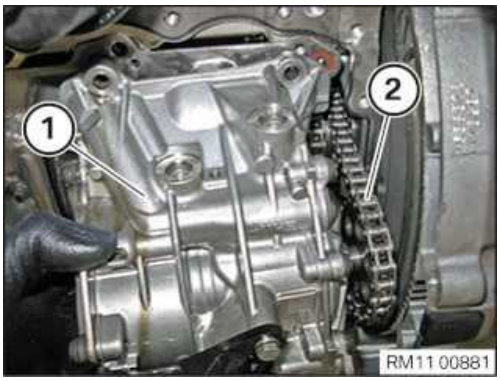
- Loosen screw (1).
- Guide out and remove holder (2).

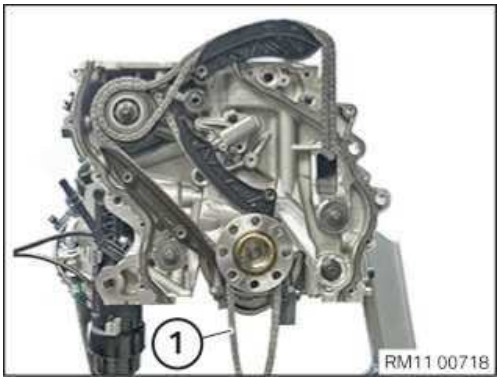
- Loosen screws in the order (11) to (1).

- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.



- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.
- Remove the timing case cover.

32 – Remove the oil vacuum pump



- Loosen screws (1) of the oil vacuum pump (2).

cardiagn.com

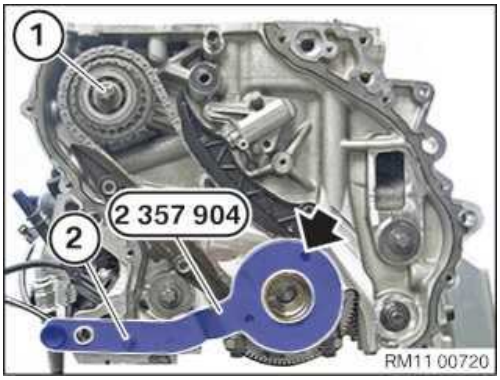
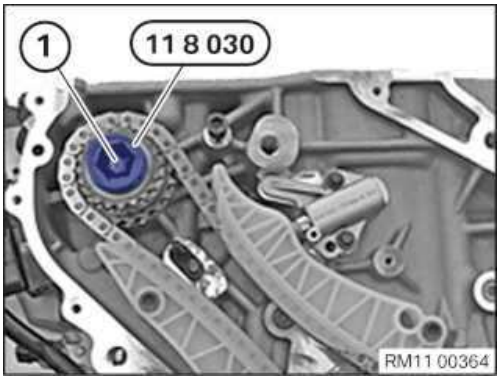
- Remove oil vacuum pump (1) and remove from the drive chain (2).

33 – Remove both timing chains

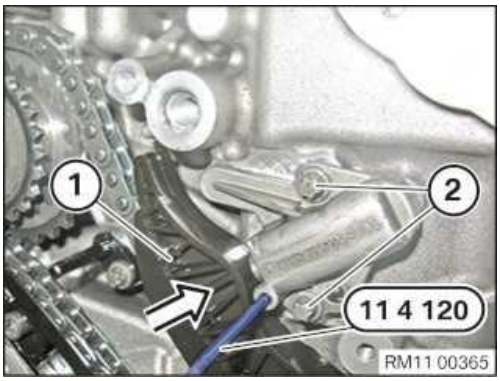


- Remove drive chain (1) for oil pump.

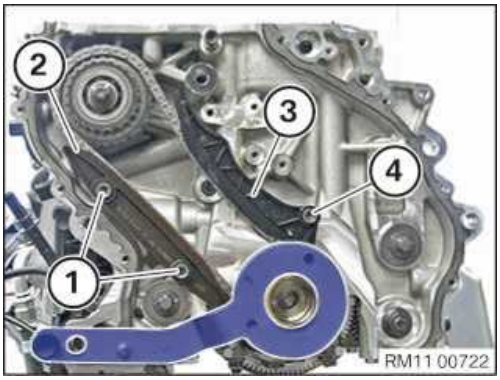


- Remove the timing chain (1) for the camshafts.
- Remove the tensioning rail (2) from the bearing journal (3).

  Bearing journal (3) does not have to be disassembled.

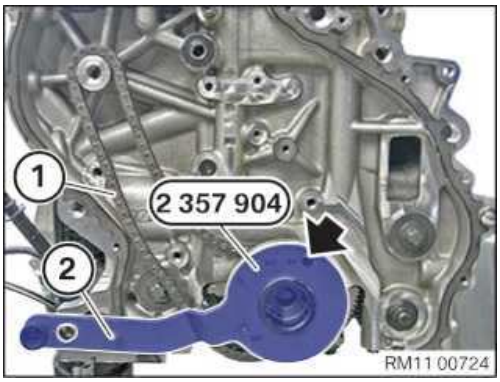


- Secure crankshaft to release central bolt (1) of high pressure pump.
- Position crankshaft with guide pin (arrow).
- Secure special tool **2 357 904** with bolt (2) on crankcase.
- Release central bolt (1) of high pressure pump; do not remove.



- Screw special tool **0 496 725 (11 8 030)** into sprocket of high pressure pump.
- Unscrew central bolt (1) of high pressure pump until central bolt can be supported on special tool **0 496 725 (11 8 030)**.
- Continue turning central bolt (1) until camshaft sprocket is released from high pressure pump shaft.

cardiagn.com



- Press chain tensioner in with tensioning rail (1) by hand in the direction of the arrow until the special tool **0 491 012 (11 4 120)** can be positioned.
- Loosen screws (2).
- Remove chain tensioner.

- Loosen both bearing journals (1).
- Remove the guide rail (2).
- Loosen the bearing journals (4).
- Remove the tensioning rail (3).

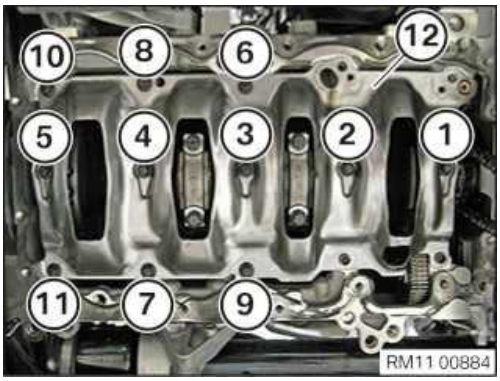
- Remove bolt and camshaft sprocket (1) of high pressure pump.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Unscrew the bolt (2) and remove the special tool **2 357 904**.
- Remove the timing chain (1).

34 – Removing the oil deflector



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

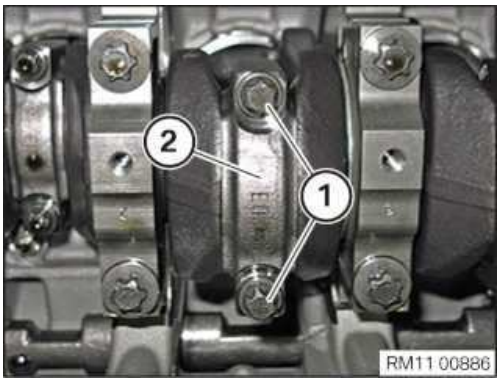
- Loosen screws in the order (11) to (1).
- Guide out and remove the oil deflector (12).

35 – Remove the connecting rod bearing cap

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.



- Always install all bearing shells and bearing supports in the same position from which they were removed.

TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.
A single connecting rod is not permitted to be replaced. Always replace all connecting rods.

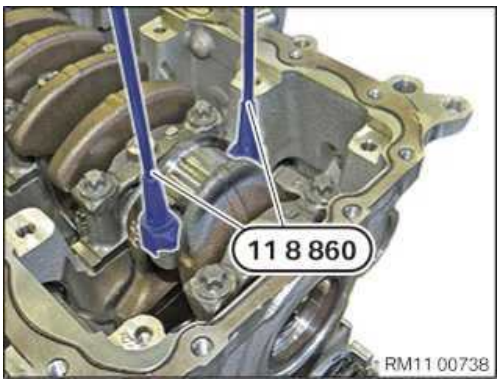
- Turn the crankshaft until the connecting rod bearing journal (1) reaches a vertical position.

- Unscrew the connecting rod bolts (1).

TECHNICAL INFORMATION

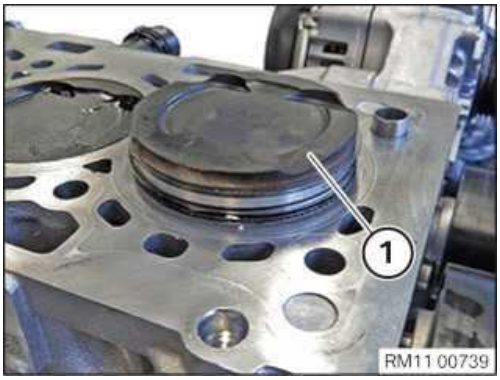
Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.
Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Remove the connecting rod bearing cap (2) and put to one side in the correct order.



36 – Removing the piston with connecting rod

cardiagn.com



TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Screw special tool **0 496 144 (11 8 860)** in at large connecting rod eye.

RISK OF DAMAGE

Damage on the cylinder wall and oil spray nozzles.

Major force can scratch the cylinder wall and bend the oil spray nozzles.

- Carefully move the piston and connecting rod in the engine block.

- Remove the piston (1) and connecting rod.

37 – Remove the connecting rod bearing shells

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.

TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.

A single connecting rod is not permitted to be replaced. Always replace all connecting rods.

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Remove the connecting rod bearing (2) from the connecting rod (1) and store it properly.

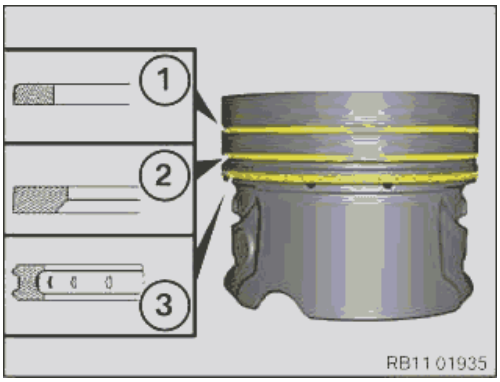
cardiagn.com

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Remove the connecting rod bearing (2) from the connecting rod bearing cap (1) and store it properly.



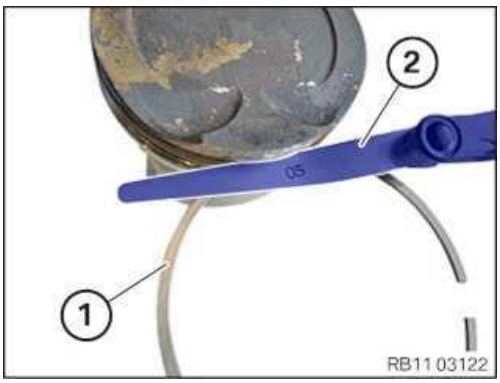
38 – Measure side clearance of piston rings

RISK OF DAMAGE

Damage to the piston rings.

Piston rings can bend or break due to large applications of force.

- Handle piston rings carefully.
- Only bend piston ring up lightly.



TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.

- Mounting orientation of the piston rings

Position number	Description
1	1. Piston ring (plain rectangular compression ring)
2	2. Piston ring (taper faced piston ring)
3	3. Piston ring (oil scraper ring with spiral expander)

Check

- Install all piston rings (1) consecutively as shown in the piston ring groove. Measure the side clearance with a feeler gauge (2).

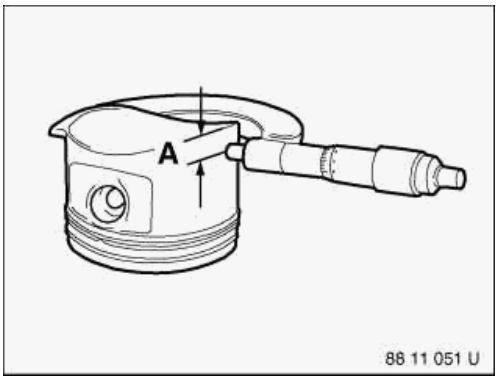
cardiagn.com

desired state

- The side clearance of the piston rings is within the tolerance.

Side clearance of piston rings

Clean all components before measuring the side clearance.	
Side clearance of the plain rectangular compression ring	0,17 mm ... 0,27 mm
Side clearance of the taper faced piston ring	0,30 mm ... 0,50 mm
Side clearance of the oil scraper ring with spiral expander	0,2 mm ... 0,4 mm



Result

» The side clearance of the piston rings is outside of the tolerance.

Measure

- Renew the piston ring.

39 – Measure the piston diameter

Check

- Position the measuring bolt in the area (A) and measure the piston installation clearance 90 ° transversely to the gudgeon pin.

Piston diameter

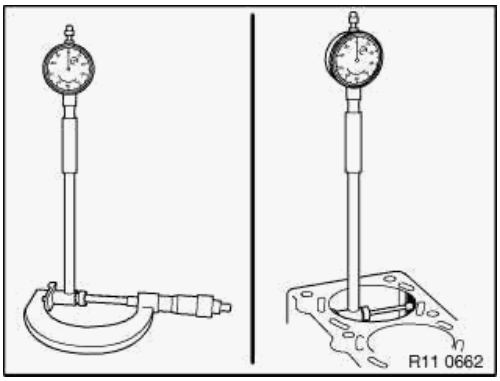
Measure the piston diameter at distance (A) from the lower end of the piston skirt.	
Distance (A) to the lower end of the piston skirt	17 mm
Nominal dimension of piston diameter	83,936 mm ... 83,954 mm

Result

» The piston does not correspond to the specifications.

Measure

- Renew the piston.



40 – Measure the cylinder bores

Prerequisite

Cylinder barrel is cleaned.

Check

cardiagn.com

- Adjusting measuring screw to nominal dimension of cylinder bore.

Cylinder bore

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

- Insert internal measuring device into measuring screw and set to zero.
- With the internal measuring device, measure the cylinder at the following points. Check the deviations from the nominal dimension.
  - Lower third of the cylinder bore in direction of travel,
  - Lower third of the cylinder bore transversely to direction of travel,
  - Middle third of the cylinder bore in direction of travel,
  - Middle third of the cylinder bore transversely to direction of travel,
  - Upper third of the cylinder bore in direction of travel,
  - Upper third of the cylinder bore transversely to direction of travel.

Cylinder bore

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

Result

» Cylinder does not correspond to the specifications.

Measure

- Replace motor.

  Parts: Engine

MAIN WORK

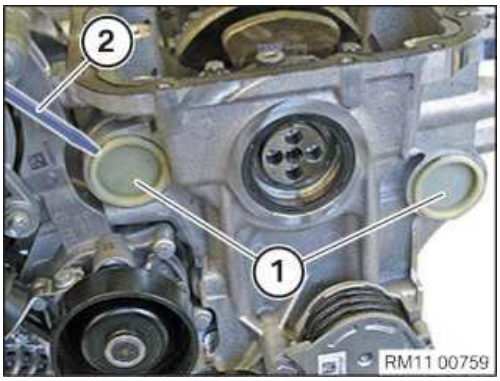
41 – Remove crankshaft

RISK OF DAMAGE

Damage of the engine and mounted parts.

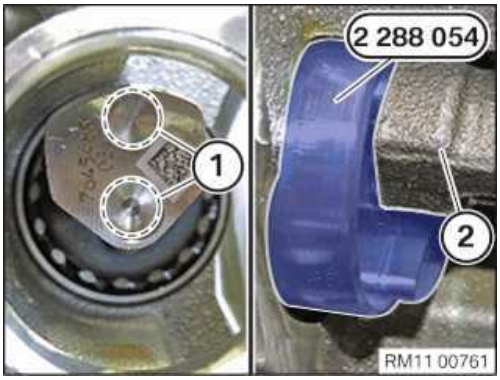
Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

- Comply with the regulations for the installation and disassembly.
- Perform work with care.



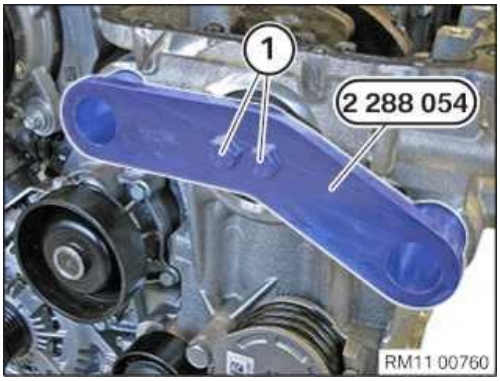
RISK OF DAMAGE

Contaminant or foreign body.

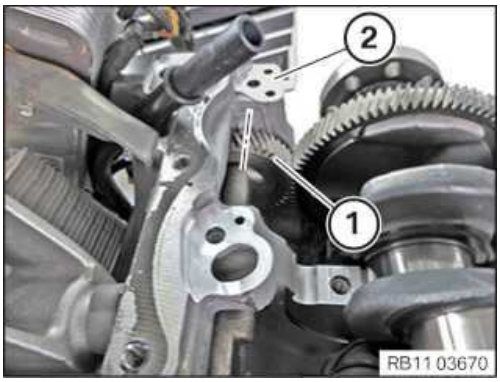


Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



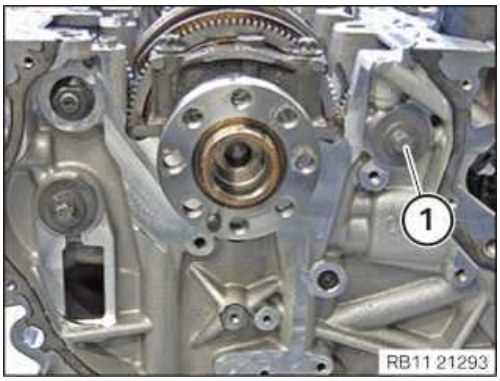
cardiagn.com



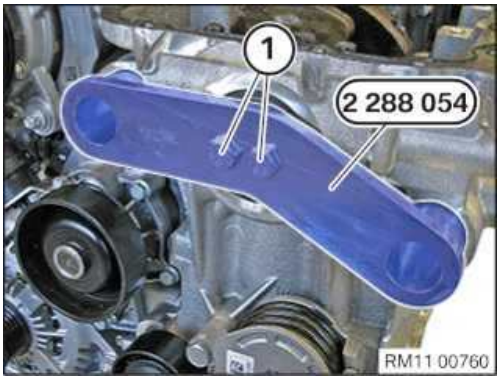
- Remove the sealing cap (1) with a suitable tool (2).

- Rotate the crankshaft to the **TDC of the first cylinder**.
- The special tool **2 288 054** must be positioned in the guides (1) of the counterbalance shafts (2).

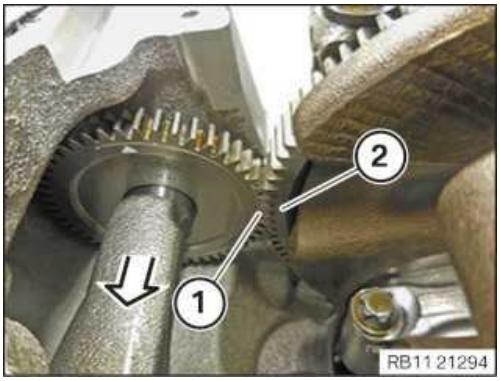
- Secure special tool **2 288 054** with screws (1) to the crankshaft.
- Tighten the screws (1).



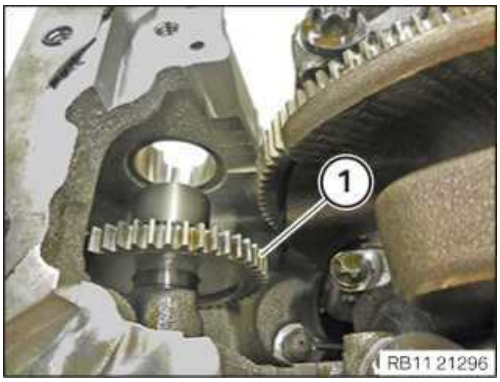
- The counterbalance shaft on the intake side (1) must be re-installed in the same position.
- Mark the position of the gearwheel of the counterbalance shaft on the intake side (1) in relation to the crankcase (2).



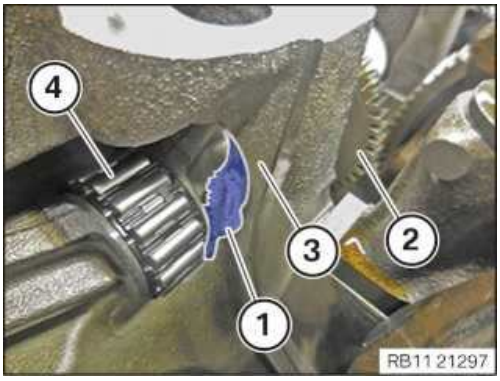
- The intermediate wheel of the exhaust side consists of a fixed wheel and a moving wheel and it must be pretensioned using special tool **0 495 131 (11 5 370)**.
- Pretension the intermediate wheel of the exhaust side using special tool **0 495 131 (11 5 370)** in the illustrated position.
- When reusing the intermediate wheel of the exhaust side, it must remain pretensioned in special tool **0 495 131 (11 5 370)** until its reinstallation.



cardiagn.com

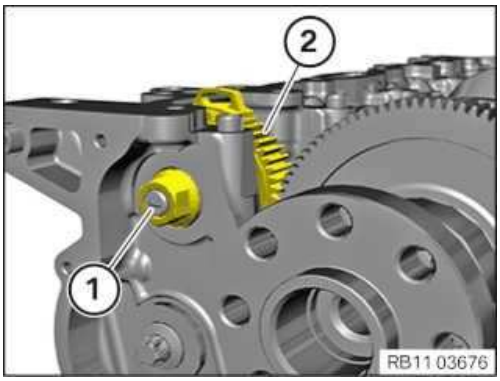


- Loosen screws (1) on the counterbalance shaft on the intake side.

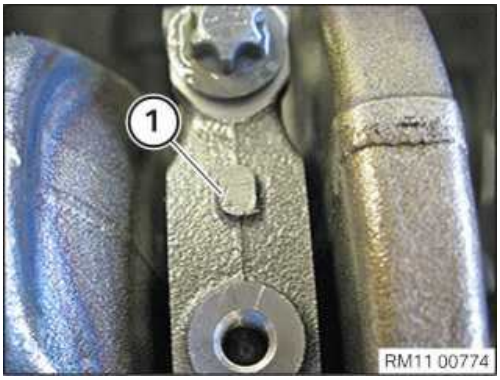


- Loosen screws (1).
- Guide the special tool **2 288 054** out and remove.

- Guide out counterbalance shaft (1) on the intake side from crankshaft (2) in the **direction of the arrow**.



- **Carefully** place aside counterbalance shaft (1) on the intake side.

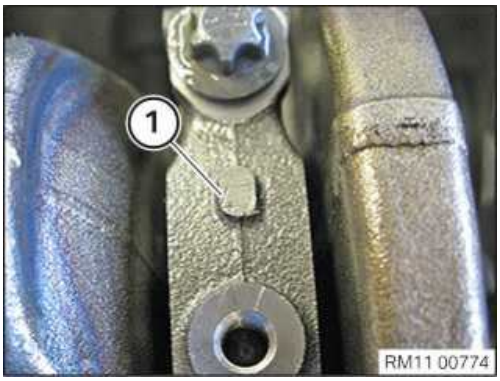


- Position a clean lint-free cleaning rag (1) between counterbalance shaft (2) on the intake side and crankcase (3).
- Ensure that needle bearing (4) is not **damaged**.

cardiagn.com

- Unfasten nut (1).
- Remove the gear (2) using special tool **0 495 131 (11 5 370)**.

RISK OF DAMAGE



Engine damage caused by incorrectly installed bearing shells and bearing supports.

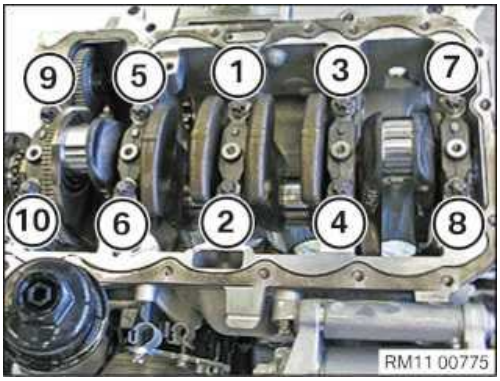
Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.

- Make sure that the mounting orientation is maintained.

  All main bearing caps (1) are marked: **Bearing positions 1 to 5.**

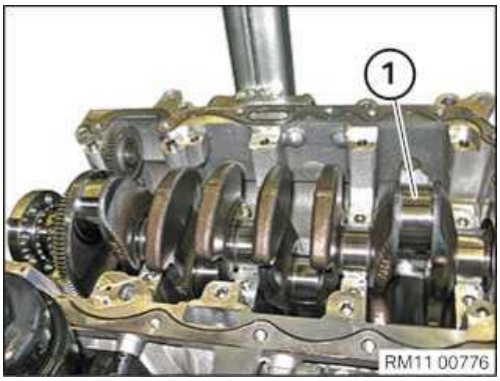
RISK OF DAMAGE



Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.



- Make sure that the mounting orientation is maintained.

  All main bearing caps (1) are marked: **Bearing positions 1 to 5.**

- Gradually detach the crankshaft bearings in the sequence (10) to (1).
- Remove the main bearing caps **1 to 5**.

cardiagn.com

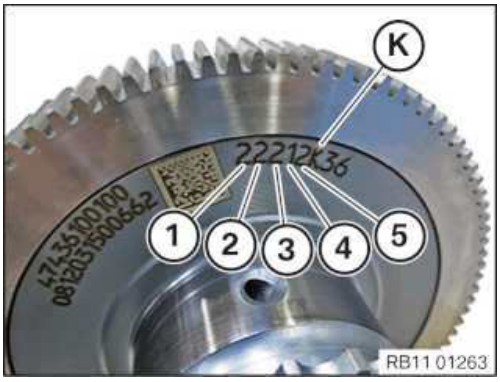
CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

TECHNICAL INFORMATION



Conduct the following operation with the assistance of a second person.

- Remove the crankshaft (1) with a **second person** and carefully set it aside.

42 – Determine the classification of the main bearing shells and the guide bearing shells

- K = Clutch side
- Item numbers (5) to (1) describe the bearing seats 7 to 1 (key performance indicator on each of the crankshaft bearing caps).
- Enter the code letter on the crankcase in the table.

- K = Clutch side
- Item numbers (1) to (5) describe the bearing seats 1 to 5 (key performance indicator on each of the crankshaft bearing caps).
- Enter the identification numbers on the crankshaft in the table.

cardiagn.com

- Enter the code letters and coefficients of the crankcase and the crankshaft.

	Code letter on the crankcase	**Key performance indicator** on the crankshaft
Bearing seat 1		
Bearing seat 2		
Bearing seat 3		
Bearing seat 4		
Bearing seat 5		
Bearing seat 6		
Bearing seat 7		

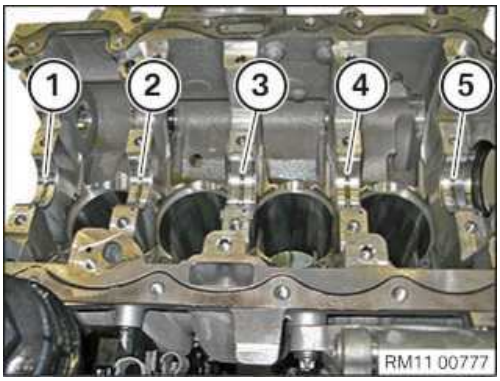
- The main bearing shells and guide bearing shells are indicated in **colour or with numbers**.
- Use the table below to determine the colours of the main bearing shells and the guide bearing shells in the **crankcase**:

	1	2	3
A	Blue = 1	Blue = 1	Blue = 1
B	Green = 2	Green = 2	Green = 2
C	Brown = 3	Brown = 3	Brown = 3

- Use the table below to determine the colours of the main bearing shells and the guide bearing shells in the **crankshaft bearing caps**:

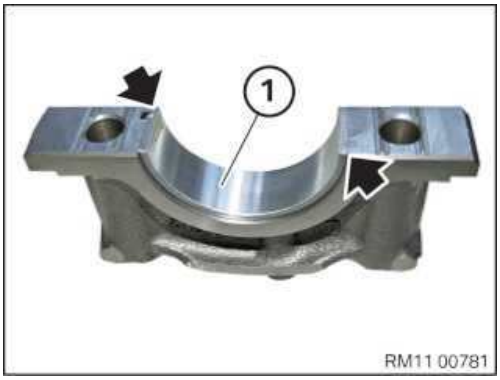
	1	2	3
A	Blue = 1	Green = 2	Brown = 3
B	Blue = 1	Green = 2	Brown = 3
C	Blue = 1	Green = 2	Brown = 3

43 – Renewing main bearing shells and guide bearing shells



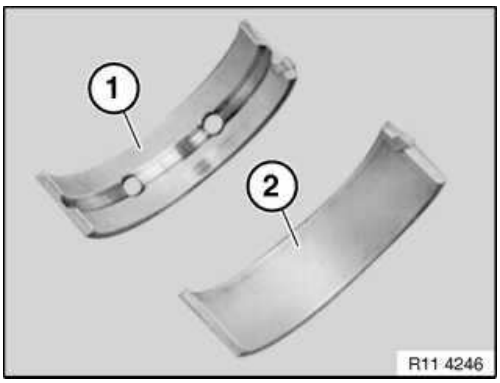
RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.



Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.



cardiagn.com

- Feed out and remove the main bearing shell (1) and (2)- and (4) and (5) (with lubricating groove) from the crankcase.
- Feed out and remove the guide bearing shell (3) (with lubricating groove) from the crankcase.

- Feed out and remove the main bearing shells (1) from the crankshaft bearing caps (1) - and (2) and (4) and (5).
- Feed out and remove the guide bearing shell (1) from the crankshaft bearing cap (3).

- Replace main bearing shells with lubricating groove (1) and the main bearing shells (2).

  Parts: Main bearing shells

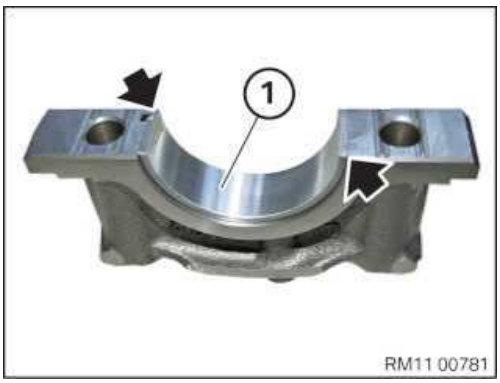
- Replace guide bearing shells with lubricating groove (1) and guide bearing shells (2).

  Parts: Guide bearing shells

- Make sure the guide bearing shells and main bearing shells with lubricating groove (1) are correctly positioned in the crankcase.

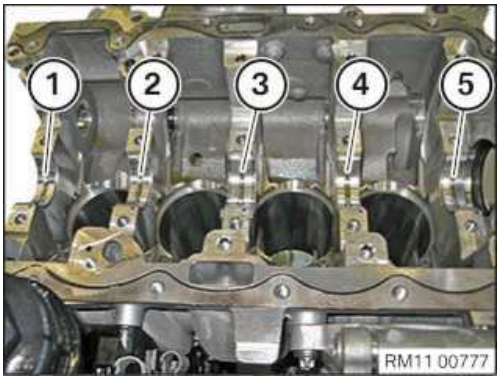
  All guide bearing shells and main bearing shell with lubricating groove (1) in the crankcase are protected against incorrect assembly (mark).

cardiagn.com

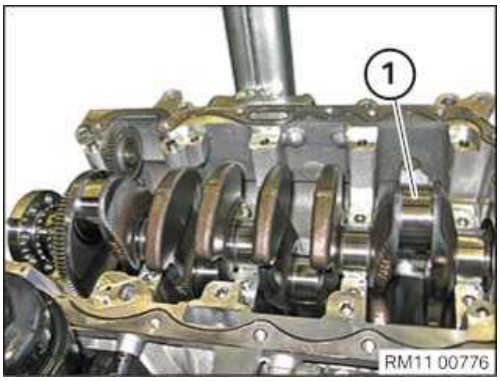


- Make sure the guide bearing shells and main bearing shells (1) are correctly positioned in the crankshaft bearing cap.

  All guide bearing shells and the main bearing shells (1) in the crankshaft bearing caps have protection against incorrect assembly (mark).



- Insert and install the main bearing shell with lubricating groove (1) and (2) and (4) and (5) in the crankcase.
- Oil main bearing shell with lubricating groove (1) and (2) and (4) and (5).
- Insert and install the guide bearing shell (3) (with lubricating groove) in the crankcase.
- Oil guide bearing shell with lubricating groove (3).



- Insert and install the main bearing shells (1) from the crankshaft bearing caps (1) - and (2) and (4) and (5).
- Oil main bearing shell (1) and (2) and (4) and (5).
- Insert and install the guide bearing shell (3) in the crankshaft bearing cap.
- Oil the guide bearing shell (3).

44 – Installing the crankshaft

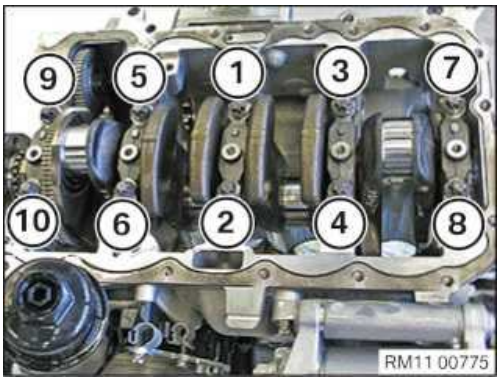
- Ensure correct installation of the main bearing shells (1) to (5) with the guide lug.

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.



- Remove and install heavy components with the aid of another person/other persons.

TECHNICAL INFORMATION

Conduct the following operation with the assistance of a second person.

- Install the crankshaft (1).

  Parts: Crankshaft

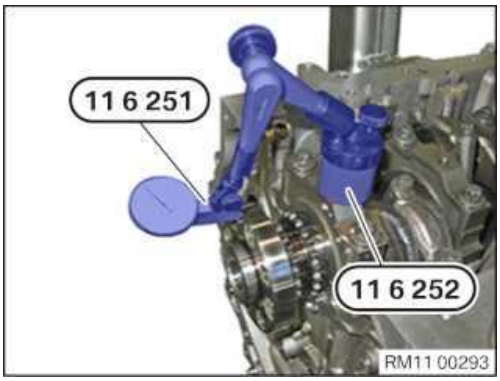
- Observe the allocation and numbering 1 to 5 of the main bearing caps.

  Assign the main bearing caps according to the order of the cylinders.
- Do not install the main bearing cap in an incorrect position.
- Ensure that the main bearing cap is positioned mounted.

  The main bearing cap must not be mounted rotated by 180°!

  The main bearing caps are coded to prevent incorrect assembly.
- Align main bearing caps exactly.
- Replace main bearing bolts.

  Parts: Bolts
- Tighten the main bearing bolts in the sequence (1) to (10).



Main bearing cap to crankcase

M10x85	Replace screws.	1. tightening torque	25 Nm
		2. tightening torque	50 Nm
		3. Angle of rotation	60 °
		4. Angle of rotation	60 °

▸ **Check the crankshaft side clearance**

Check

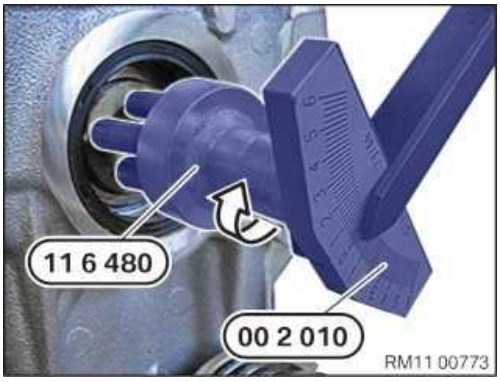
- Set up the dial gauge **0 493 144 (11 6 251)** with the tripod **0 493 145 (11 6 252)** from the special tool **0 493 143 (11 6 250)** at the crankshaft.

Axial play of crankshaft

Equipment installation status	0,090 mm ... 0,273 mm
Operating condition	0,11 mm ... 0,314 mm

Result

» The side clearance has been exceeded.



cardiagn.com

Measure

- Renew worn components.

▸ **Check the coefficient of friction for the crankshaft**

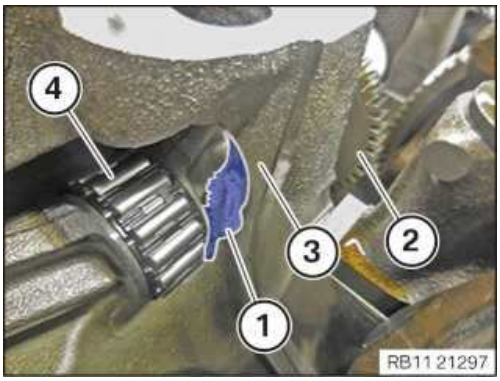
Check

- Turn the crankshaft clockwise with the special tool **0 490 130 (00 2 010)** and compare the reading on the scale to the maximum permitted torque.

Maximum permitted torque of the crankshaft

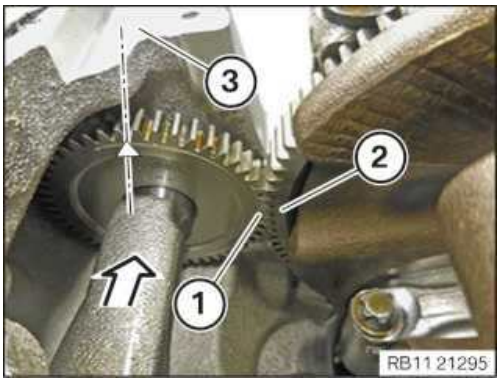
	max. 2 Nm

Result



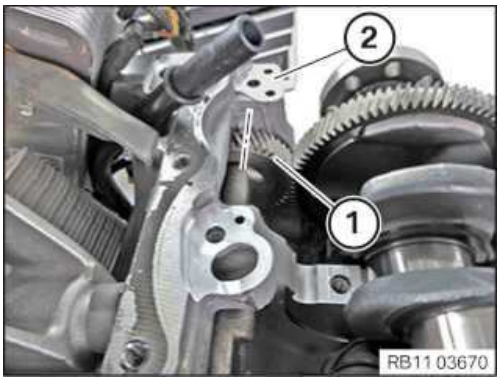
» The maximum permitted torque is exceeded.

Measure



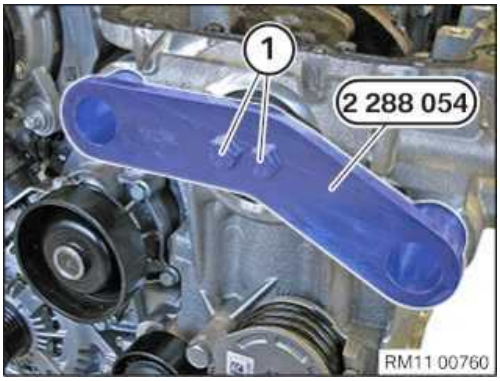
- Correct the radial clearance.

- Bring or adjust crankshaft (2) to the **TDC position** .
- The special tool **2 420 824** in the area (1) is labelled with the different engine versions.
- Install the special too **2 420 824** with the correct bore or on the crankshaft.
- Using the special tool **2 420 824** secure the crankshaft to the fitting sleeve (2) in the TDC position.

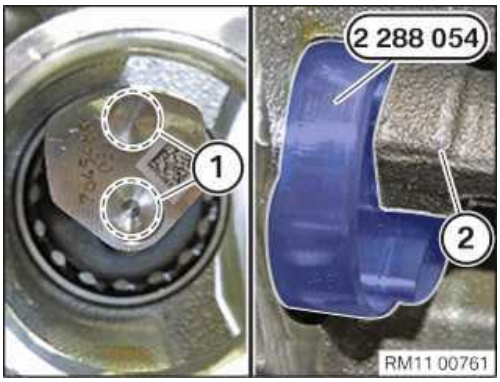


- Guide out lint-free cleaning rag (1) between counterbalance shaft (2) on the intake side and crankcase (3) and remove it.
- Ensure that needle bearing is (4) **not** damaged.

- Position counterbalance shaft (1) on the intake side in the **direction of the arrow** on crankshaft (2).
- Make sure that the mark on the gear (1) for the right counterbalance shaft points **up vertically** to the oil sump (3).

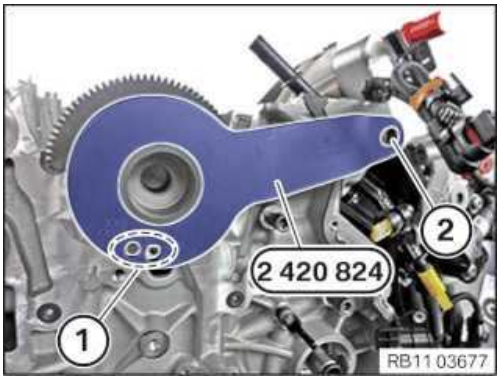


cardiagn.com



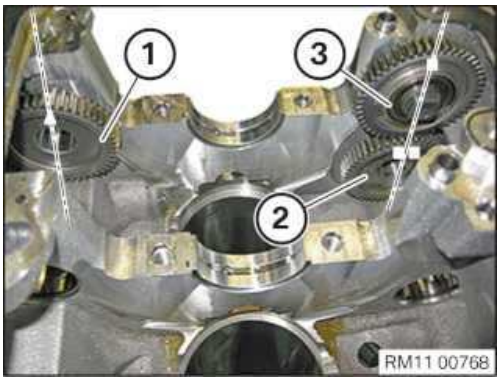
- Check the position of the gear of the counterbalance shaft on the intake side (1) to the crankcase (2) using the marking.

- Position the counterbalance shaft on the exhaust side so that the marking points perpendicular to the oil sump.



- Make sure that the balance weights on the counterbalance shafts face the oil sump.
- Mount the special tool **2 288 054** and abut the bolts (1).

- Make sure the special tool **2 288 054** is correctly fitted in the guides (1) of the counterbalance shaft (2).
- If necessary, slightly turn the counterbalance shafts.
- Tighten special tool **2 288 054**.



Special tool 2 288 054 to crankshaft

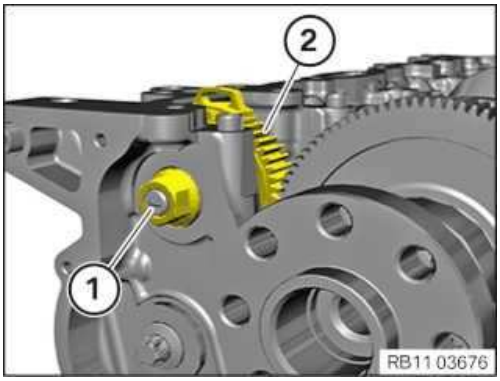
M10		Tightening torque	20 Nm

- Remove special tool **2 420 824**.

cardiagn.com

NOTICE

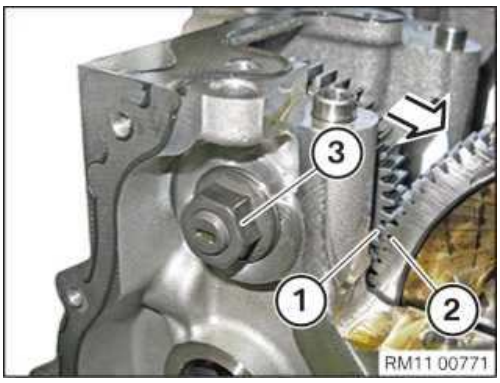
To provide a better overview: Illustration of surrounding parts in removed state.



- Ensure that the identifications on the gears (1), (2) and (3) point up vertically to the oil sump sealing surface.

NOTICE

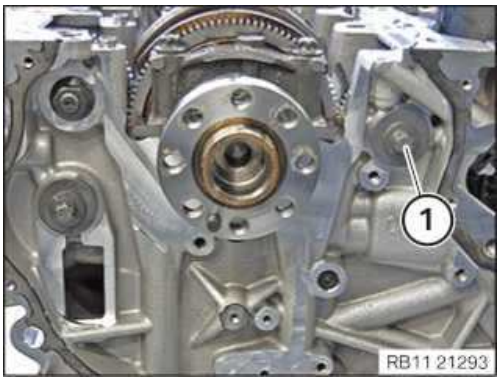
Schematic diagram is for example purposes. Some parts may differ in certain details.



- When installing a new gear: Ensure the ring gear remains blocked until installation using the factory-mounted fixation (1).

- Insert the intermediate wheel (2)with the special tool **0 495 131 (11 5 370)** and install.
- Tighten the nut (1) hand-tight.

- Make sure that the teeth of the intermediate wheel engage with the teeth of the crankshaft and counterbalance shaft.
- Relieve tension on special tool **0 495 131 (11 5 370)** and remove.

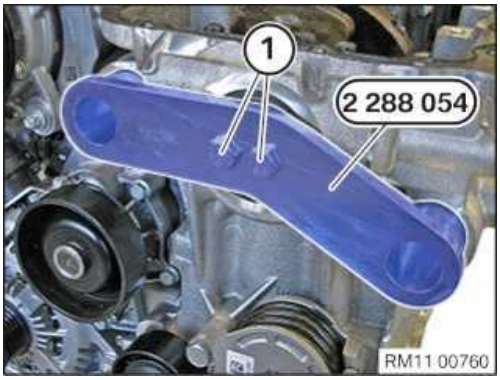


- Move the intermediate wheel (1)in the direction of the arrow into position on the crankshaft (2).
- Tighten nut (3).

Idler gear to crankcase

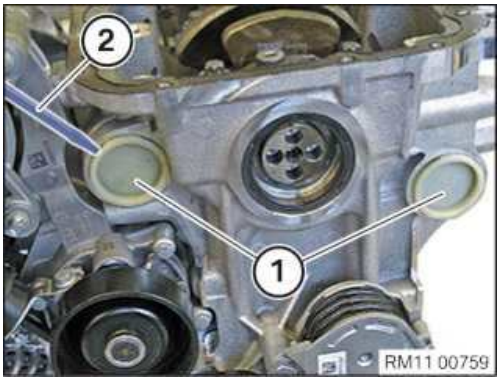
M12x1.5		Tightening torque	10 Nm
		Angle of rotation	45 °

cardiagn.com



- Renew the screw (1).

  Parts: Screw



- Tighten screws (1)of the counterbalance shaft on the intake side.

Gear to counterbalance shaft

M10	Renew screws.	1. Jointing torque	20 Nm
		2. Angle of rotation	180 °

- Unscrew the bolts (1) and remove the special tool **2 288 054**.

- Renew the sealing cap (1).

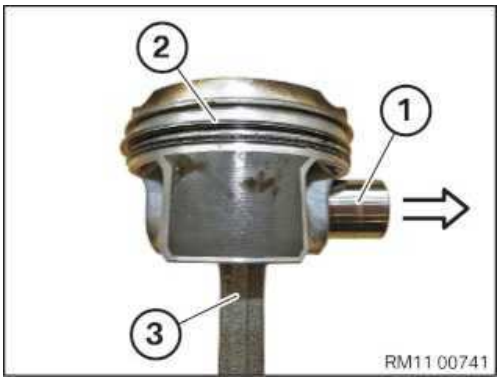
  Parts: Sealing cap

- Make sure the O-rings of the sealing cap (1) are fitted correctly.
- Mount both sealing caps (1).

POSTPROCESSES

45 – If necessary: Renew the piston

CAUTION

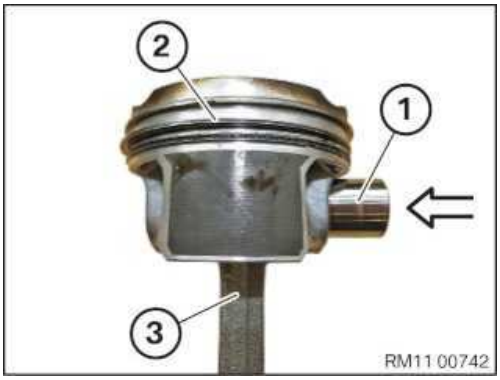


Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

- Use special tool to remove the gudgeon pin circlip.
- Insert the flat side (3) of special tool into the groove (4).
- Grab and remove the gudgeon pin circlip (1) with the arched side (2).



cardiagn.com

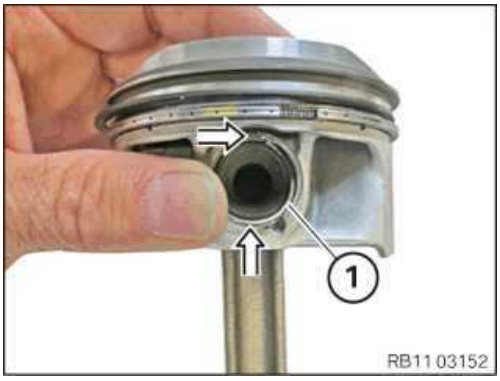
TECHNICAL INFORMATION

Piston and gudgeon pin are matched to each other.
Always install piston and gudgeon pin together and do not switch by mistake.

- Remove the gudgeon pin (1) in the direction of arrow.
- Remove piston (2) from connecting rod (3).

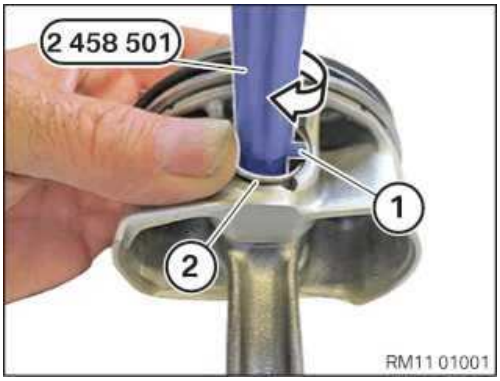
- Renew piston with gudgeon pin.

  Parts: Pistons



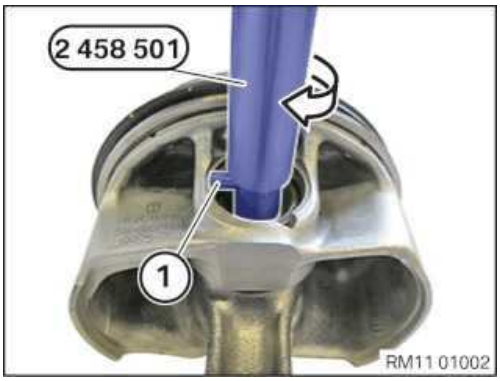
TECHNICAL INFORMATION

Piston and gudgeon pin are matched to each other.
Always install piston and gudgeon pin together and do not switch by mistake.

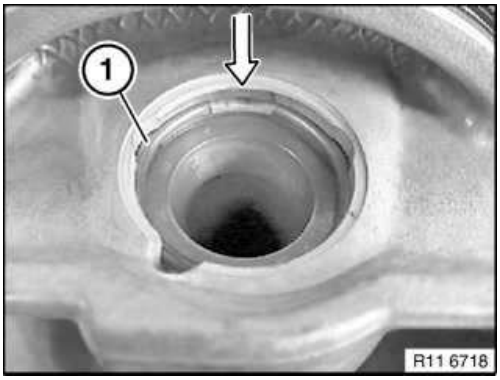


- Position piston (2) on the connecting rod (3).
- Install the gudgeon pin (1) in the direction of arrow.
- You must be able to install the gudgeon pin (1) without major effort.
- Gudgeon pin (1) must be free of play in piston and connecting rod.

- Prepare special tool on the fitting aid .



- Insert the gudgeon pin circlip (1) into the groove on the piston (see arrows).



- Screw in the positioned gudgeon pin circlip (2)with and with the guide pin (1) in the direction of the arrow.

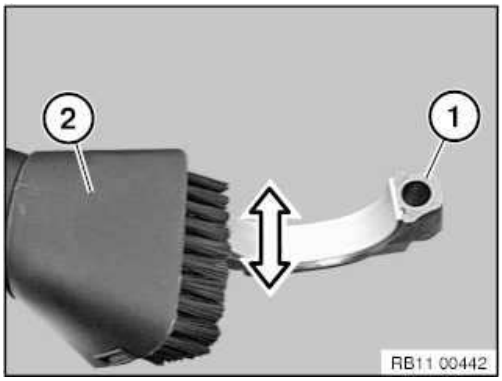
cardiagn.com

- Screw the gudgeon pin circlip with guide pin (1) into the groove of the piston in the direction of the arrow.

- Gudgeon pin circlip (1) must be fitted correctly in the groove (arrow).

46 – Install the connecting rod bearing shell

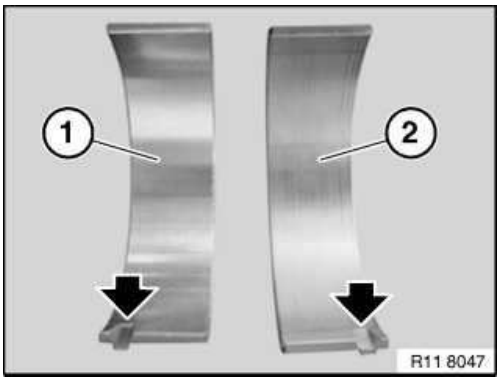
RISK OF DAMAGE



Engine damage caused by incorrectly installed bearing shells and bearing supports.

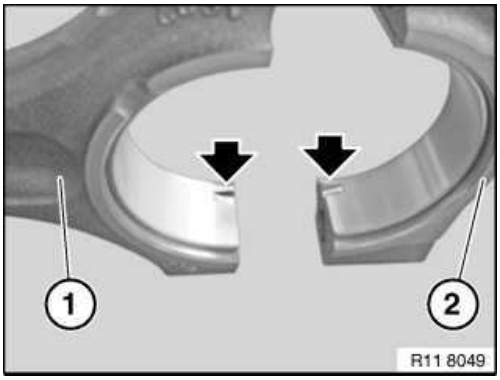
Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.



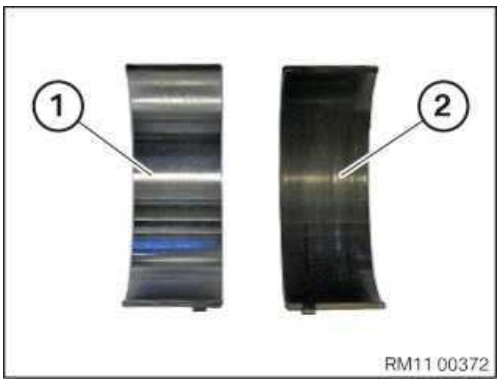
TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.
A single connecting rod is not permitted to be replaced. Always replace all connecting rods.



- Vacuum the crack surfaces (1) with a conventional vacuum cleaner (2).

cardiagn.com



- To avoid incorrect assembly: Pay attention to marks (arrows).

  The connecting rod bearing (1) for the connecting rod bearing cap and the connecting rod bearing (2) for the connecting rod are each equipped with protection against incorrect assembly as shown in the marked area.

- To avoid incorrect assembly: Pay attention to marks (arrows).

  The connecting rod bearing cap (2) and the connecting rod (1) are each equipped with protection against incorrect assembly.

- Makes sure that a light connecting rod bearing shell (1) and a dark connecting rod bearing shell (2) are installed for each connecting rod.

TECHNICAL INFORMATION

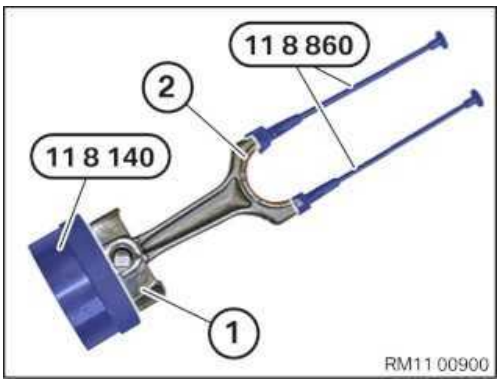
Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Insert the dark connecting rod bearing shell (2) into the connecting rod (1).
- Oil the connecting rod bearing shell (2).

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.



Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Insert the light connecting rod bearing shell (2) into the connecting rod bearing cap (1).
- Oil the connecting rod bearing shell (2).

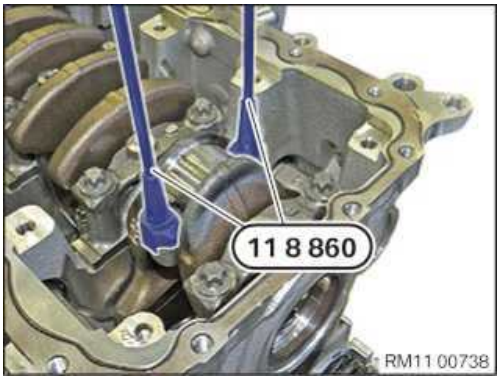
cardiagn.com

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.
Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Coat the pistons (1) and piston rings lightly with oil.
- Mount the special tool **0 493 582 (11 8 140)** on the piston (1).
- Screw the special tool **0 496 144 (11 8 860)** in on the large connecting rod eye (2).

- Insert the piston with the special tool **0 493 582 (11 8 140)** with the arrow pointing to cylinder 1.



RISK OF DAMAGE

Damage on the cylinder wall and oil spray nozzles.

Major force can scratch the cylinder wall and bend the oil spray nozzles.

- Carefully move the piston and connecting rod in the engine block.

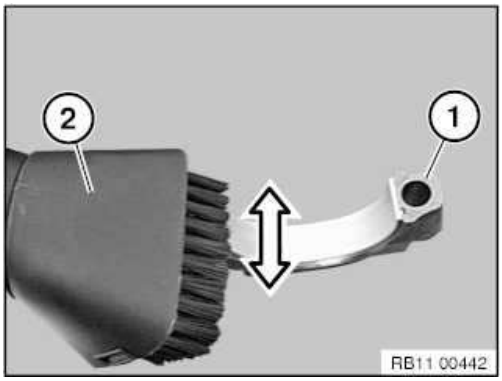
- Install the piston in the crankcase.

- Remove special tool **0 496 144 (11 8 860)** from large connecting rod eye.

48 – Install the connecting rod bearing cap

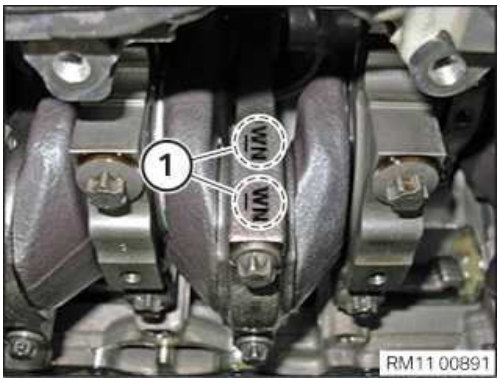
RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.



Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.

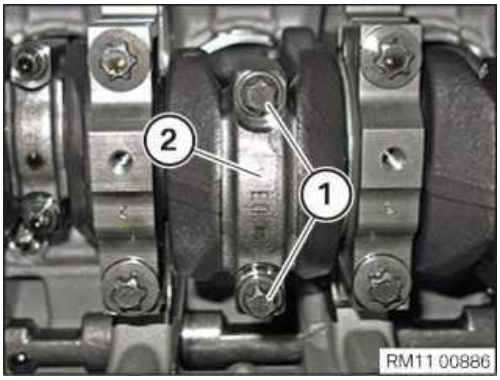


TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.
A single connecting rod is not permitted to be replaced. Always replace all connecting rods.

cardiagn.com

- Vacuum the crack surfaces (1) with a conventional vacuum cleaner (2).



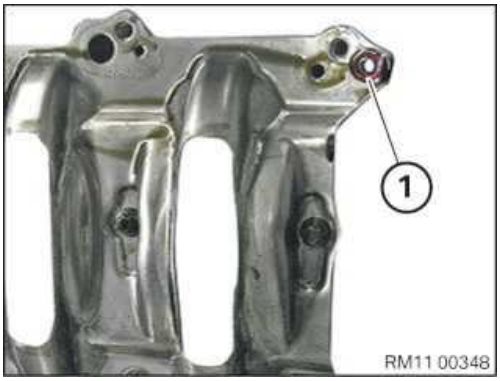
- Attach the connecting rod bearing caps to the connecting rod until the designations (1) match.

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

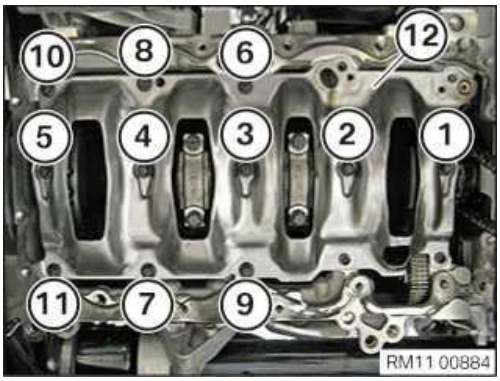
- Make sure that the connecting rod bearing is attached to the same connecting rod that it was detached from.



- Position the connecting rod bearing cap (2).
- Tighten the bolts (1) with the special tool **0 490 504 (00 9 120)**.

Connecting rod bearing cap to connecting rod

M9x47		Tightening torque	20 Nm
		Angle of rotation 1	70 °
		Angle of rotation 2	70 °



49 – Installing the oil deflector

- Check sealing ring (1) for damage and replace oil deflector if necessary.

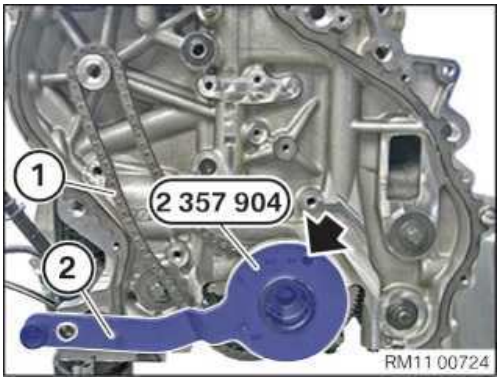
  Parts: Oil deflector

cardiagn.com

- Insert and install the oil deflector (12).
- Renew screws (1) to (11).

  Parts: Bolts
- Hand-tighten the bolts (1) to (5).
- Hand-tighten the bolts (6) to (11).
- Tighten the screws (1) to (5).

Oil deflector to crankshaft bearing cap

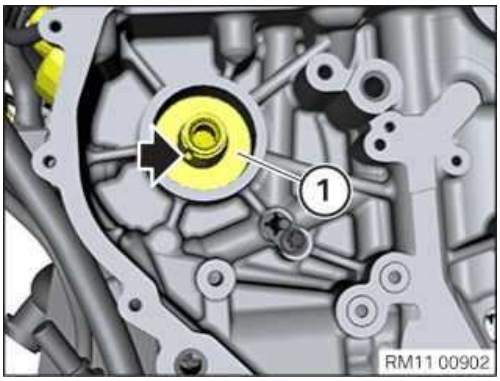


M8x14	Replace screws.	Tightening torque	35 Nm
		Release	180 °
		Tightening torque	15 Nm
		Angle of rotation	45 °

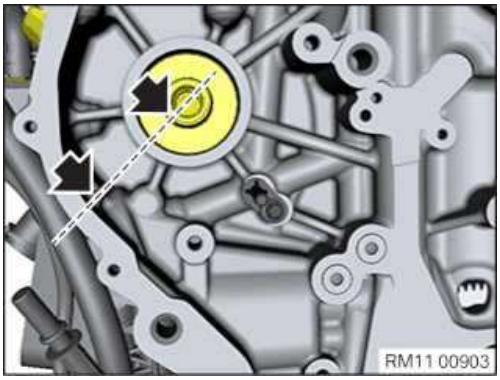
- Tighten the screws (6) to (11).

Oil deflector to crankcase

M8x14		Tightening torque	19 Nm



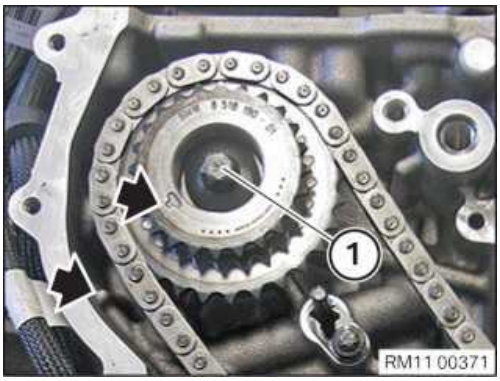
50 – Install both timing chains



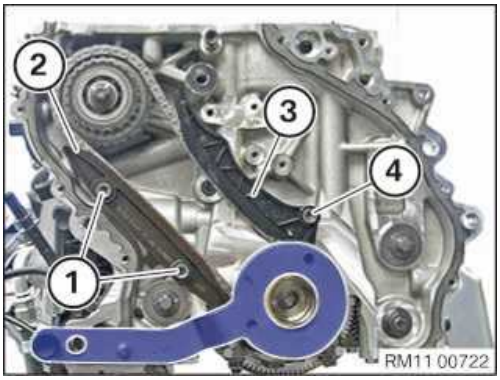
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Position the timing chain (1).
- Secure crankshaft with special tool **2 357 904**.
- Secure special tool **2 357 904** with bolt (2) on crankcase.



- Note spline groove on high pressure pump (1).



- Mark and groove (arrows) on high pressure pump and crankcase must align.

cardiagn.com

- Position the impeller with timing chain on the high pressure pump.
- Screw in and fasten central bolt (1) of high pressure pump.
- Mark and cast lug (arrows) must align.

- Position tensioning rail (3).
- Replace bearing journal.

  Parts: Bearing journal
- Tighten the bearing journals (4).

Bearing journal of tensioning and guide rail

M8	*Replace bearing journal.*	Tightening torque	20 Nm

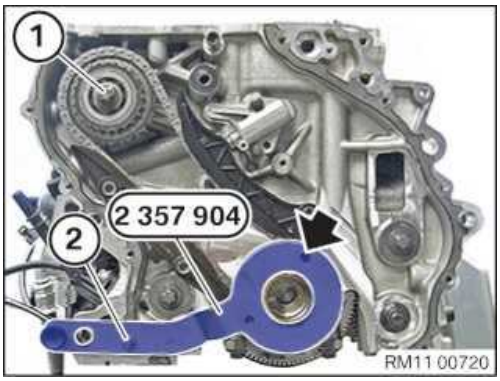
- Position the guide rail (2).
- Replace bearing journal.

  Parts: Bearing journal
- Tighten both bearing journals (1).

Bearing journal of tensioning and guide rail

M8	*Replace bearing journal.*	Tightening torque	20 Nm

- Clean sealing surfaces (1) with compressed air.



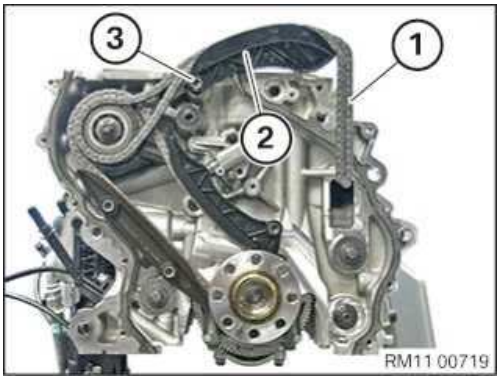
- Position hydraulic chain tensioner.
- Tighten down screws (2).

Chain tensioner to crankcase

M6x22		Tightening torque	10 Nm

- Press chain tensioner in by hand with tensioning rail (1) in direction of arrow until special tool **0 491 012 (11 4 120)** can be removed.

cardiagn.com



- To fasten central bolt (1) of high pressure pump, crankshaft must remain secured with special tool **2 357 904** and bolt (2).
- Renew central bolt (1).

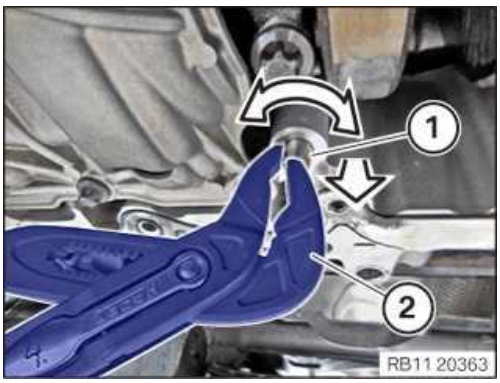
  Parts: Central bolt
- Tighten central bolt (1).

Camshaft sprocket on high pressure pump

M12		Tightening torque	65 Nm

- Position tensioning rail (2) on bearing journal (3).
- Position camshaft timing chain (1).

- Mount drive chain (1) for oil pump on crankshaft.

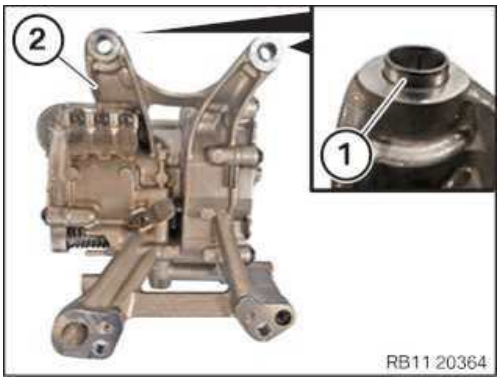


51 – Install the oil vacuum pump

RISK OF DAMAGE

Contaminant or foreign body.

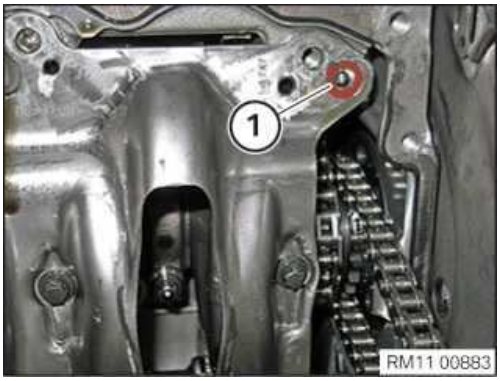
Contamination can result in malfunctions, operating failure or leaks.



- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

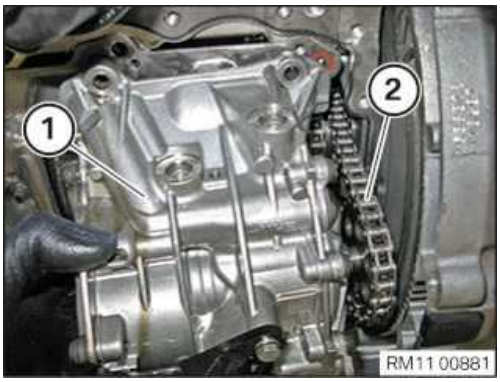
- Remove centering sleeves from the crankcase (1) using a standard tool (2).
- Renew the centring sleeves (1).

  Parts: Centring sleeves



cardiagn.com

- Install centering sleeves (1) in the oil vacuum pump (2).



- Check the sealing ring (1) for damage and renew where required.
- Make sure the sealing ring (1) is installed correctly.

- Check sealing ring (1) for damage and replace oil deflector if necessary.

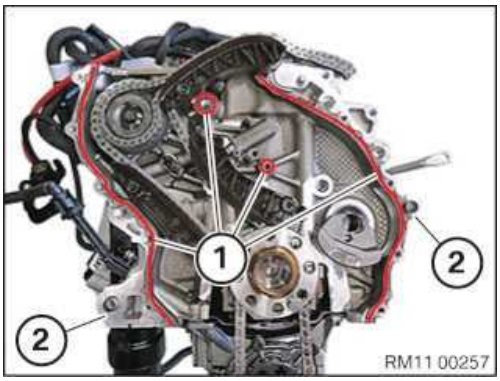
  Parts: Oil deflector

- Insert oil vacuum pump (1) into the drive chain (2).

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1) of the oil vacuum pump (2).

Oil vacuum pump to crankcaseB47



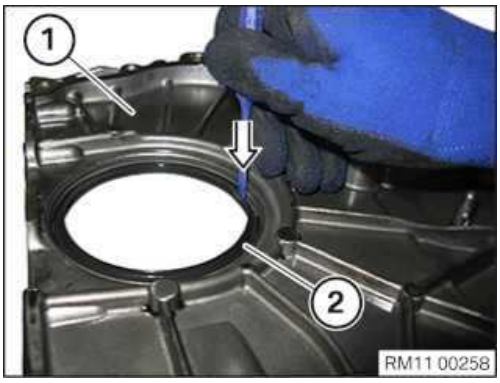
M8x35		Tightening torque	19 Nm

52 – Install the rear timing case cover

Prerequisite

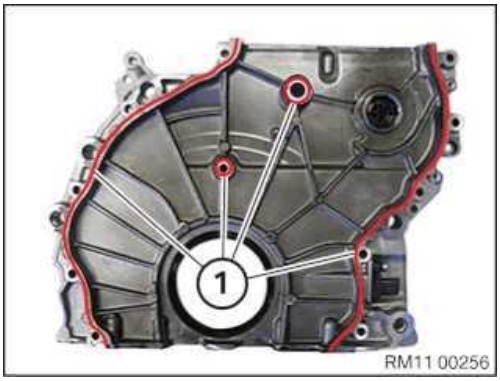
Transmission is removed.

cardiagn.com



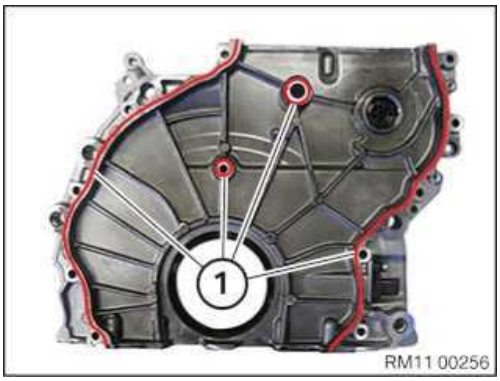
RISK OF DAMAGE

Damage to the surface.



The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

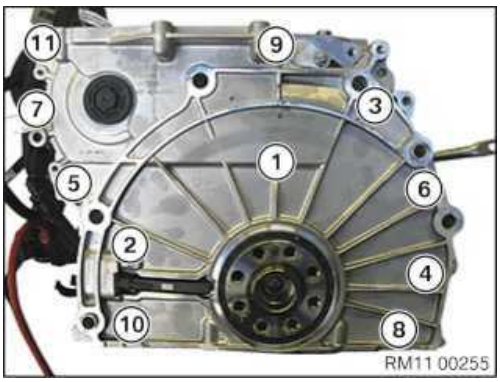
- Do not use any metal-cutting tools.



- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.
- Check fitting sleeves (2) for damage and for tight fit; renew if necessary.

- Position the timing case cover (1) underneath.
- Position punch on inner side of crankshaft seal (2).
- Drive out crankshaft seal (2) outwards.

- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.



TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Apply sealing bead (1) with a height of approx. 1.5 mm to 2.0 mm on inner side of timing case cover in marked locations. Use liquid sealing compound for this.

  Application time of sealing bead (1) must not exceed 12 minutes.

- Mount the timing case cover without the crankshaft seal.
- Renew screws (1) to (11).

  Parts: Bolts
- Join the bolts in with the sequence (1) to (11).
- Tighten screws in the order (1) to (11).

Rear timing case cover to crankcase

M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

▸ **Installing the rear crankshaft seal**

cardiagn.com

RISK OF DAMAGE

Radial shaft seal damage.

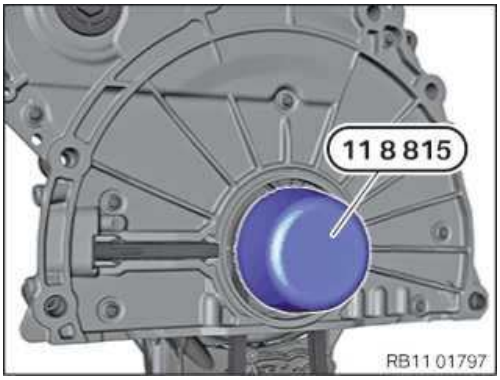
Touching the sealing lip (inner) on the radial shaft seal with the sharp-edged connector gearing of the output shaft will result in destruction and/or leaks.

- When inserting the output shaft, make sure that the connector gearing of the output shaft does not touch the sealing lip (inner) of the radial shaft seal.

RISK OF DAMAGE

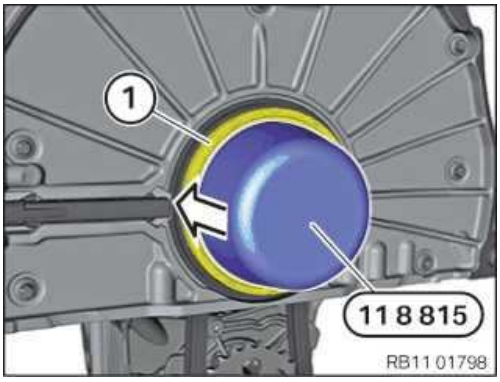
Radial shaft seal damage.

Touching the sealing lip (inner) and applying oil to the radial shaft seal will lead to its destruction.



- Do not touch the sealing lip (inner) of the radial shaft seal.
- Do not apply oil to the radial shaft seal.
- Install the radial shaft seal dry.

RISK OF DAMAGE



Electrostatic discharge.

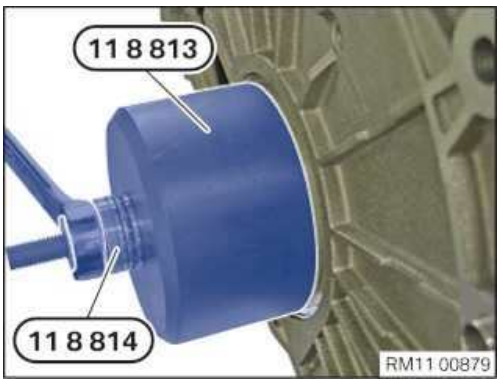
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

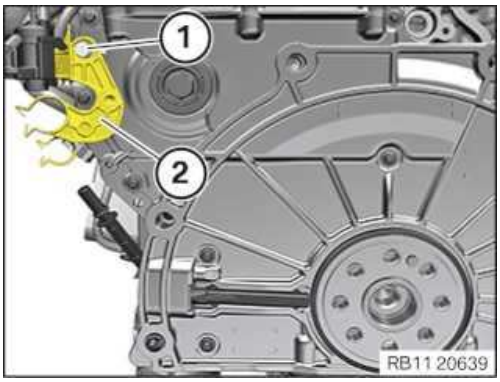
- Position special tool **0 496 137 (11 8 815)** on crankshaft. Make sure that the crankshaft sensor is not damaged.

- Fit the crankshaft seal (1) up to the timing case cover in the direction of the arrow using special tool **0 496 137 (11 8 815)** and position.
- Remove special tool **0 496 137 (11 8 815)**.

cardiagn.com

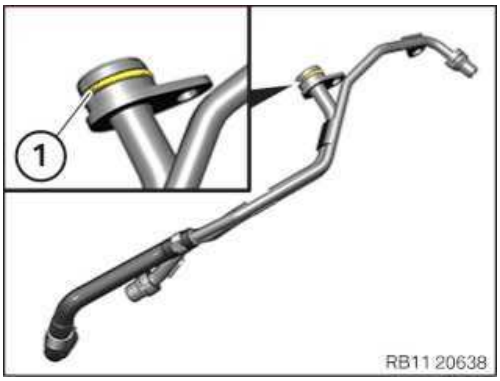


- Secure special tool **0 496 133 (11 8 811)** to the crankshaft using special tool **0 496 134 (11 8 812)**.



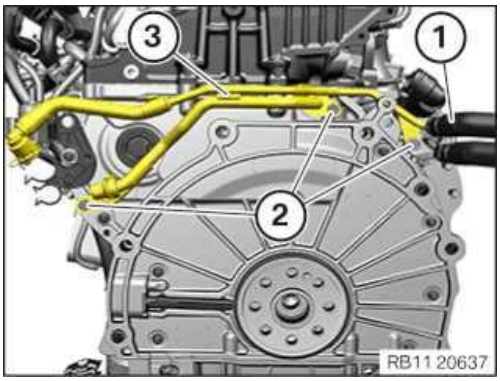
- Check the freedom of movement between the special tool **0 496 135 (11 8 813)** and the crankshaft sensor during installation.

  Otherwise there is a risk that the crankshaft sensor will be damaged.
- Slide on special tool **0 496 135 (11 8 813)**.
- Screw down special tool**0 496 136 (11 8 814)**.



- Press in crankshaft seal with special tool **0 496 135 (11 8 813)**.
- Screw in special tool **0 496 135 (11 8 813)** up to timing case cover.

- Insert and install the holder (2).



▶ **If installed: Installing the coolant line of the SCR metering module**

- Renew the O-ring 1.

  Parts: O-ring

cardiagn.com

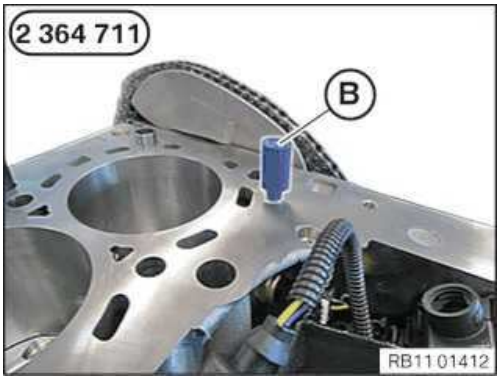
- Feed in and install coolant line (3).
- Tighten down screws (2).

SCR coolant lines to crankcase end cover

Hexagon screw M6x16		Tightening torque	8 Nm

- Connect and lock the coolant line (1).

  Coolant line (1) must audibly engage.



▸ **Cleaning the sealing surface**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

RISK OF DAMAGE

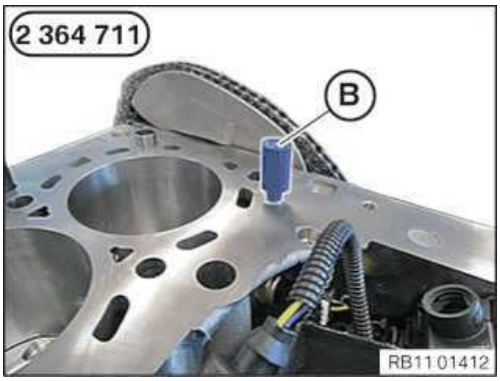
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.

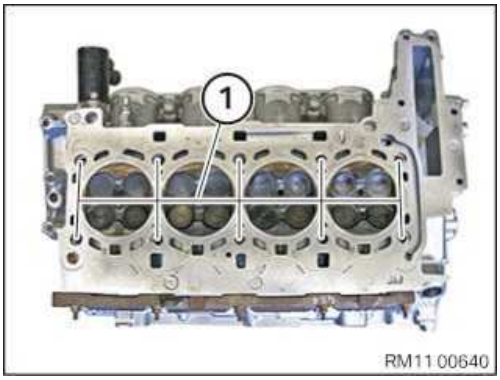
RISK OF DAMAGE



Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

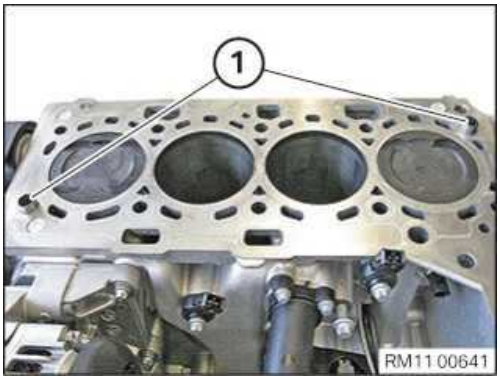


- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.

cardiagn.com

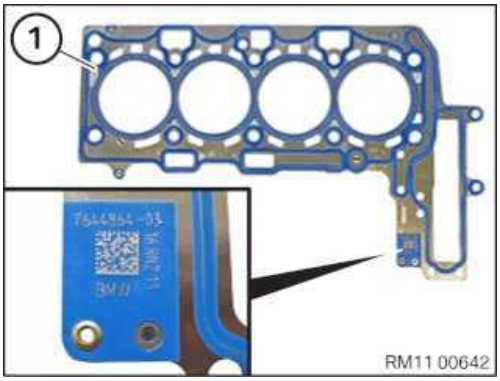
- Remove special tool (B).

▶ **Renewing the cylinder head gasket**



RISK OF DAMAGE

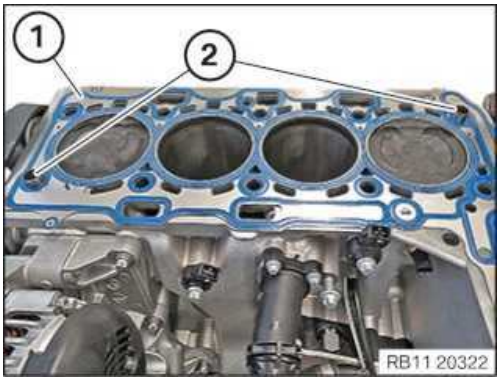
Damage to the surface.



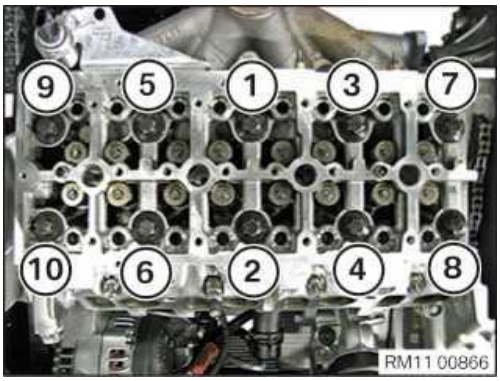
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).



- Check the fitting sleeves (1) for secure fit and damage.



- Identify the cylinder head gasket (1) using the part number.

Note: If the cylinder head is reworked, an additional thicker gasket 0.3 mm is available for service personnel.

- Guide in the cylinder head gasket (1) and install.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Damage to threads.

Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION

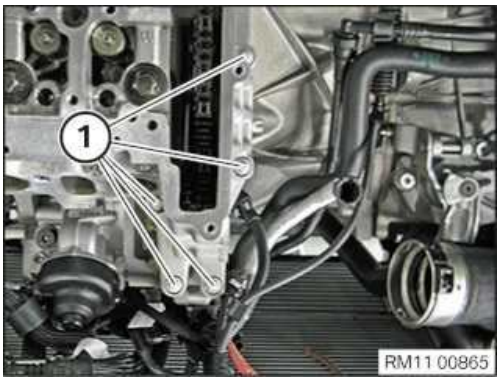
Do not remove bolt coating.

- Renew the cylinder head bolts (1).

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  No coolant, water or engine oil must be present in threaded holes of engine block.

TECHNICAL INFORMATION



When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in cylinder head bolts in sequence (1) to (10).
- Tighten cylinder head bolts using special tools **0 490 504 (00 9 120)** and in sequence (1) to (10).

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

cardiagn.com

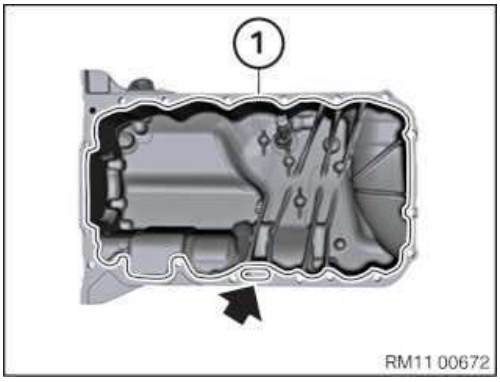
- Tighten the cylinder head bolts (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Remove fine sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

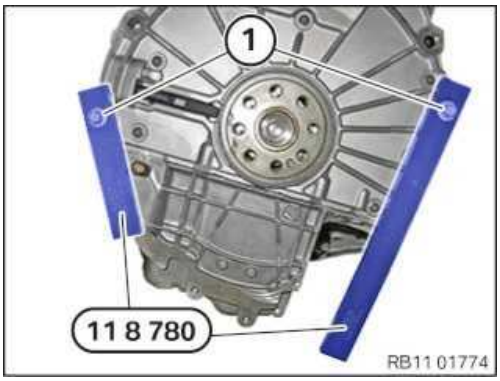
- Remove coarse sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- Apply the sealing compound along the line (1) with a thickness of 2 mm to 2.5 mm.

  Apply the sealing compound along the inner edge.

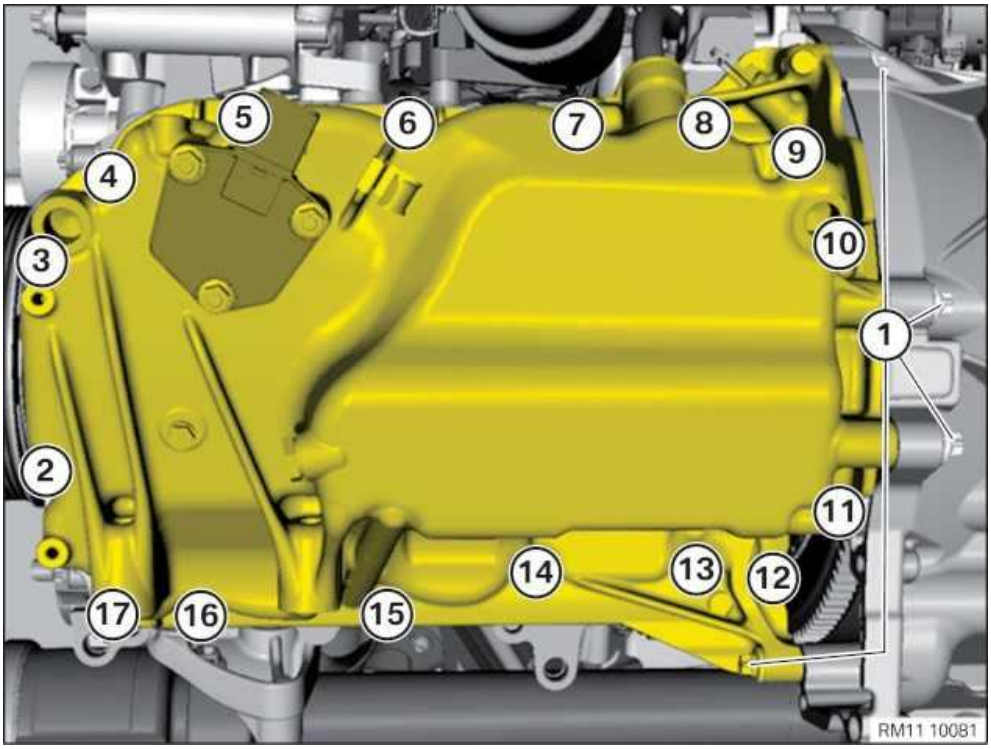


Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

- Completely encircle the oil return orifice (arrow) with the sealing compound.



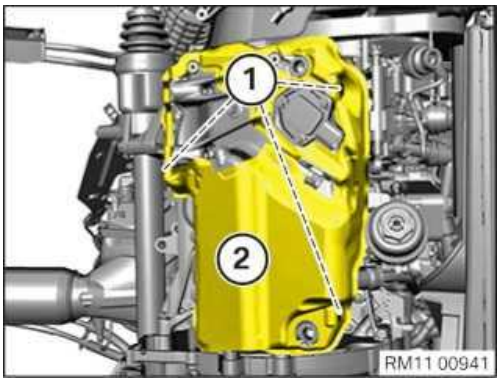
cardiagn.com

TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- If necessary, renew fitting sleeves.

- Position and install oil sump.
- **Hand-tighten** oil sump screws (2) to (17) but do **not** tighten completely.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws(2) to (17) of the oil sump.



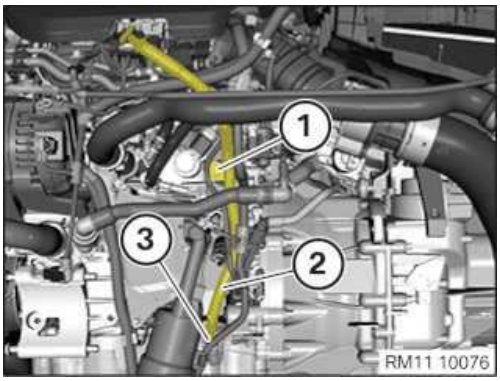
Oil sump to crankcase

M8x30		Tightening torque	2 Nr
M8x110		Tightening torque	2 Nr

- Tighten transmission bolts (1) on oil sump.

Transmission to oil sump

M8		Tightening torque	1 Nr



- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).

- Renew O-ring (1).

  Parts: O-ring

cardiagn.com

- Guide in guide tube (2) for oil dipstick and insert it into oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

Guide tube for oil dipstick on engine

M8x16		Tightening torque	19 Nm

53 – Installing the flywheel

CAUTION

Heavy component.

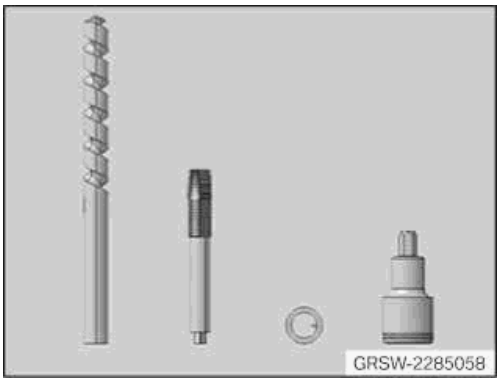
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.



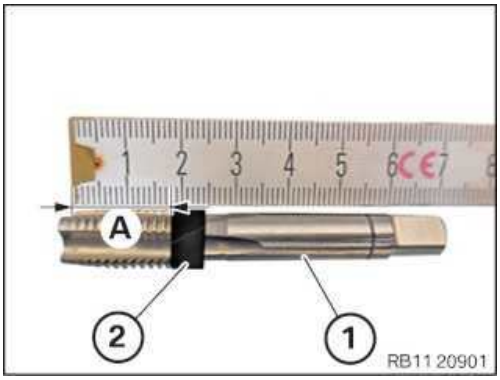
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

Clean all threads with a screw tap.

- Clean all screw threads (1).

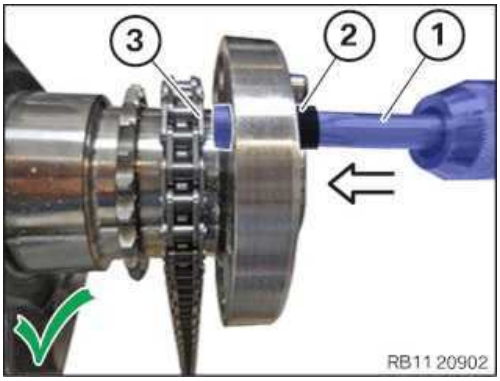
- Use the set of special tools **2 285 058**.



Description
Twist drill
Thread cutter M12x1.5
Depth
Insertion tool

cardiagn.com

- Assemble tool set.



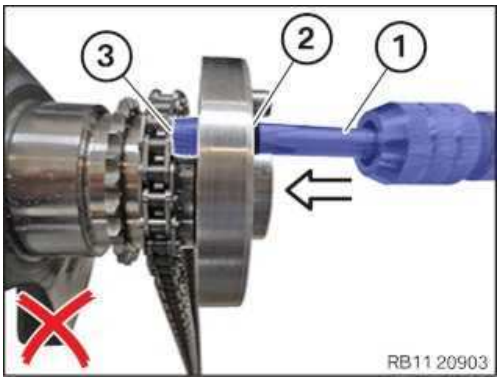
Number	Description
1	Tool holder
2	Thread cutter M12X1,5

- Mark the screw-in depth (A) on thread cutter (1) from the set of special tools **2 285 058** with a standard tool (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm

NOTICE



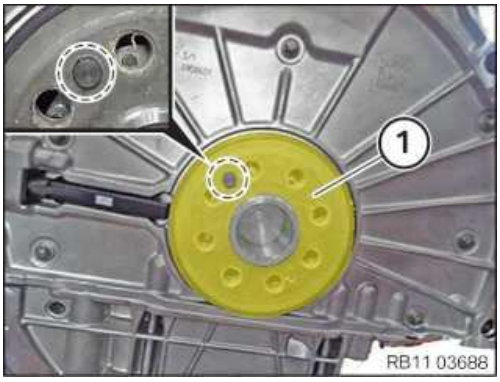
To provide a better overview: Shown with engine removed.

- Screw in the thread cutter (1) from the set of special tools **2 285 058** in direction of arrow up to the screw-in depth (2).

Screw-in depth of thread cutter

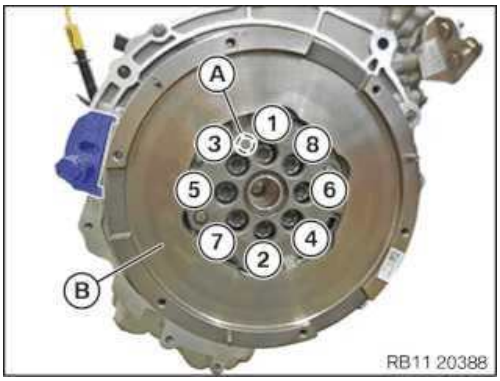
Screw-in depth	18 mm

- Make sure that the thread cutter does (1) **not** rest on the timing chain (3).



TECHNICAL INFORMATION

- **Carefully** handle the timing chain, to protect the timing chain and timing chain drive against damage.

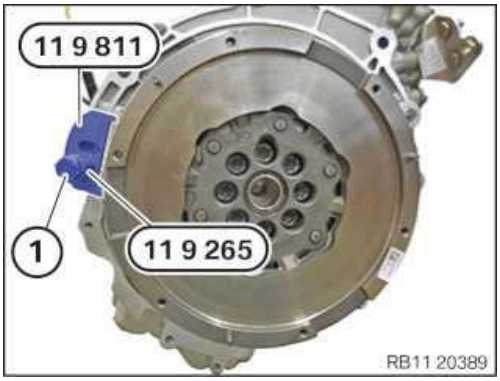


- Make sure that the screw-in depth (2) of the screw tap (1) is not exceeded.

  The thread cutter (1) may not rest on the timing chain (3).

- During the installation, note the mark shown without fail.
- Install special tool (1) on the crankshaft as shown.

cardiagn.com



- Position flywheel (B) .
- Renew flywheel bolts (1) to (8).

  Parts: Flywheel bolts
- Tighten flywheel bolts hand-tight with special tool **0 491 018 (11 4 180)**.
- Observe tightening sequence. While doing so, begin with dowel pin (A).
- Tighten the flywheel bolts using the special tool **0 491 018 (11 4 180)** in sequence (1) to (8).

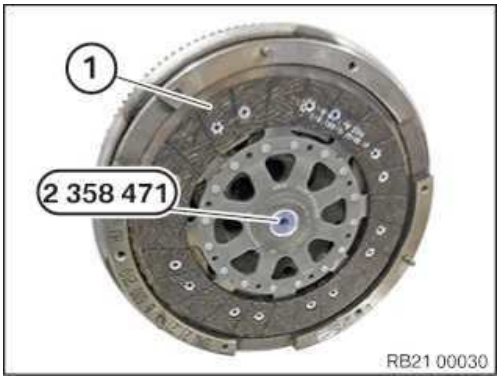
Flywheel to crankshaft

M12x1.5	Renew screws.	Tightening torque	120 Nm

- Loosen the transmission bolt (1).
- Feed out and remove special tools **0 494 793 (11 9 265)** and **0 496 171 (11 9 811)** with the **standard** (5 mm) washer.

54 – Install clutch

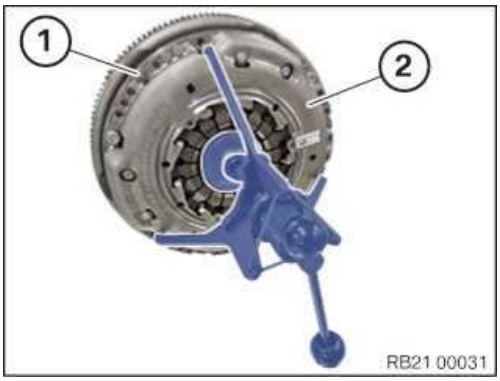
CAUTION



Materials harmful to health.

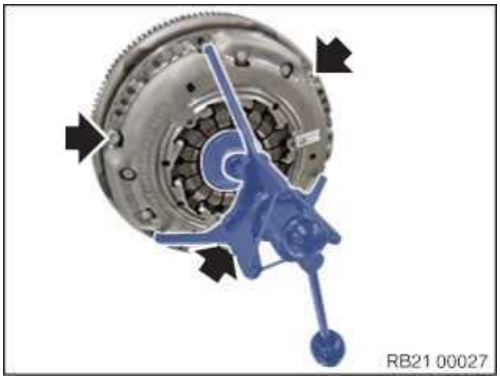
Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.



TECHNICAL INFORMATION

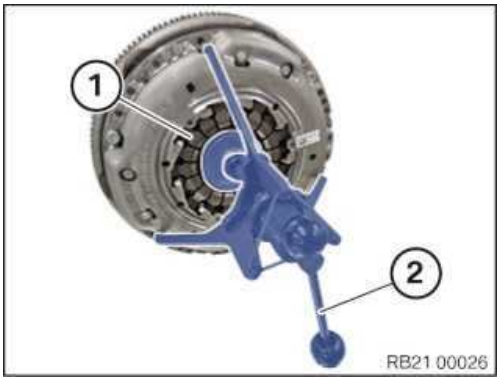
Handle the clutch disc carefully. Install the surfaces of the clutch disc in the correct mounting orientation.
Clean friction surfaces of the flywheel and the pressure plate with BMW-approved brake cleaner.
Note designation for ”engine side” / ”transmission side”.



- Centre the clutch disc (1) using special tool .

cardiagn.com

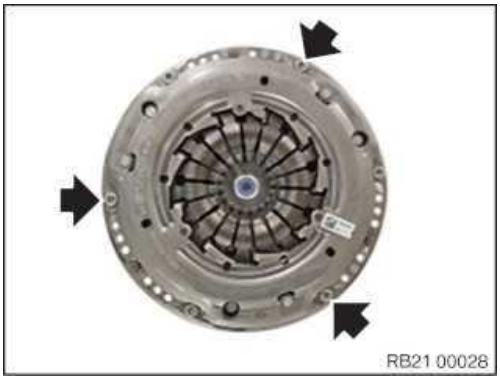
- Mount the clutch (2) together with the special tool to the flywheel.
- Observe the dowel pins (1).
- The clutch (2) must be secured via the dowel pins (1).



- Renew the bolts (arrows).

  Parts: Bolts
- Install and tighten screws (arrows).

Clutch to flywheel



M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

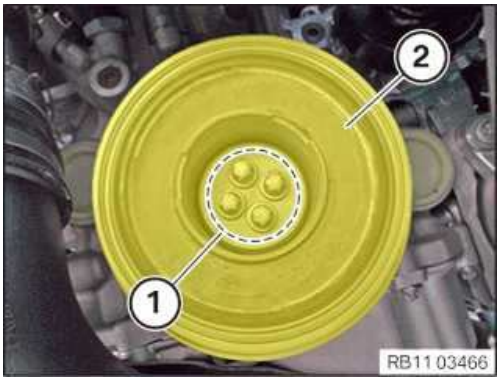
- Loosen the spindle (2) until the diaphragm spring (1) is fully relieved.

- Unscrew the knurled screw (1) and remove the special tool with **2 288 165** from the clutch.

- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Clutch to flywheel

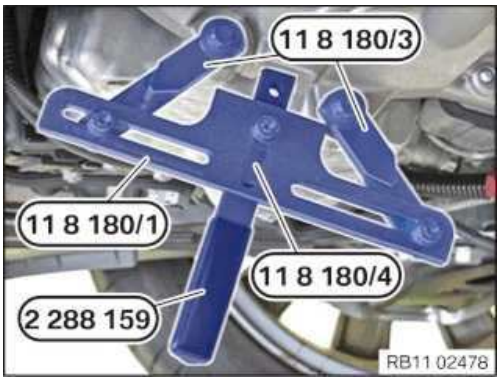


M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

cardiagn.com

- Withdraw special tool from clutch disc with aid of accompanying screw.

55 – Installing the vibration damper



- Position vibration damper (2).
- Renew screws (1).

  Parts: Bolts
- Fasten the vibration damper (2) with the bolts (1).
- Tighten the screws (1).

Vibration damper with belt pulley to crankshaft

M10x65	Renew screws. Tighten screws crosswise.	1. Jointing torque	40 Nm
		2. Angle of rotation	60 °
		3. Angle of rotation	60 °

- Release the transmission bolts and remove the special tool **0 493 587 (11 8 180)**.

- Tighten transmission screws (1).

Transmission to engine

M8		Tightening torque	19 Nm

- Install protective cap (2).

56 – Installing the hydraulic valve clearance compensating element

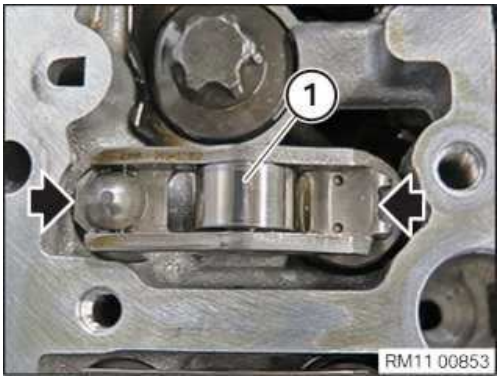
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

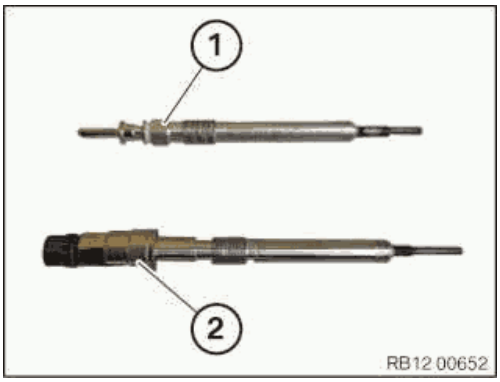


- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

57 – Install the roller cam followers

TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.



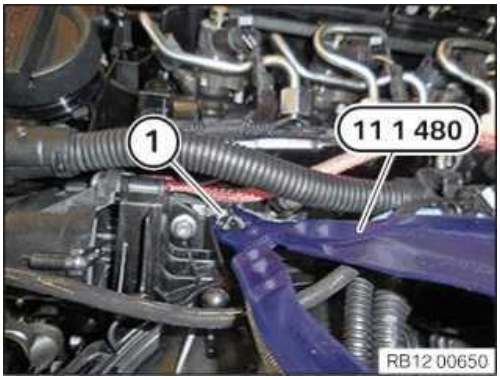
- Check all roller cam followers (1) for damage and replace if necessary.

  Parts: Roller cam followers
- Insert and install all roller cam followers (1).

  Roller cam followers (1) that have already been used must be installed in the same place.
- Note the mounting orientation of the roller cam followers (1).
- Oil all roller cam followers (1).

58 – Install glow elements

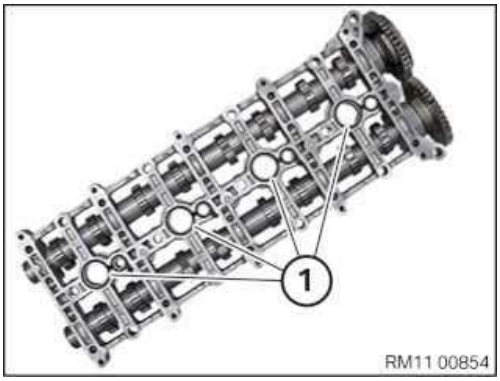
- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.



cardiagn.com

- Tighten the glow element with the special tool or conventional tools.

Glow elements to cylinder head



Glow element		Tightening torque	13 Nm

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

59 – Installing the camshaft support

- Renew gaskets (1).

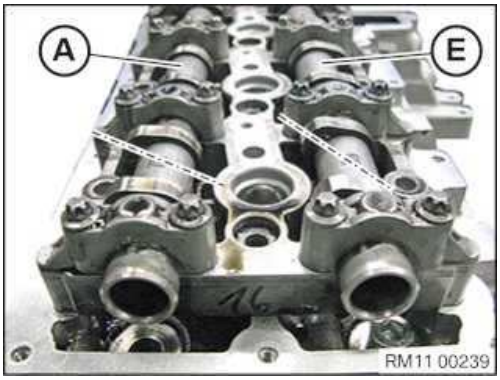
  Parts: gaskets

- Position the camshaft support including the camshafts.
- Tighten the screws in a sequence from (1) to (14) in several steps.

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

60 – Adjusting the timing of the camshafts



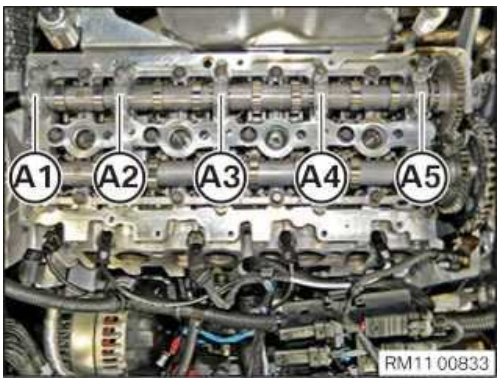
- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

- Slide the special tool **2 288 380** completely into the bore hole of the oil sump.
- Use the special tool to block **2 288 380** the crankshaft in the TDC firing position at the first cylinder.

- The cam of the intake camshaft (E) at the first cylinder points up at an angle.
- The cam of the exhaust camshaft (A) at the first cylinder points outward at an angle.



▸ **Remove exhaust camshaft.**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

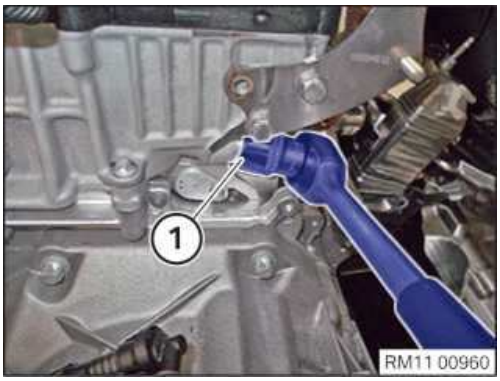
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A5) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components on special tool **0 495 105 (11 4 480)** in a tidy and orderly fashion.

▸ **Remove chain tensioner piston**



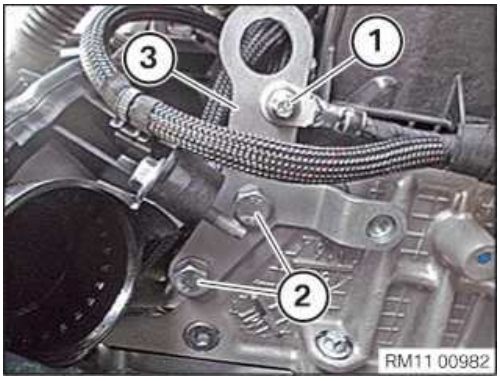
WARNING

Hot surfaces.

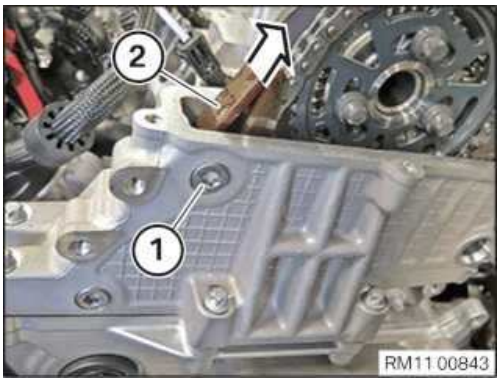
Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



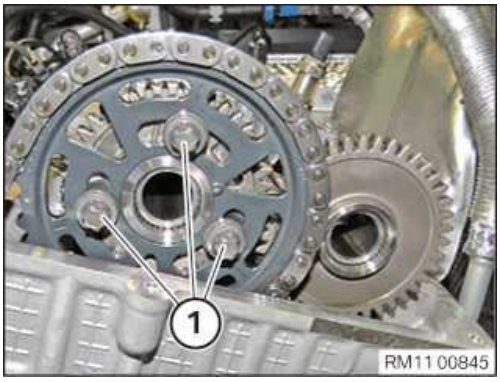
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

▸ **Remove the timing chain guide rail**



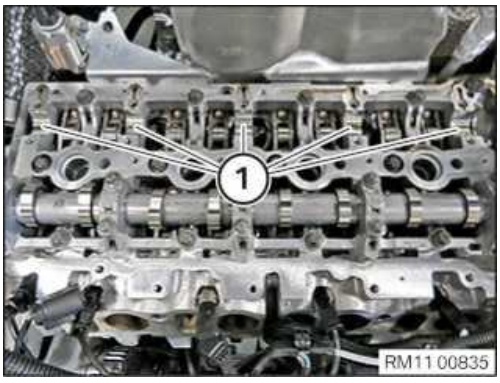
- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

▸ **Removing the camshaft sprocket on the intake camshaft**

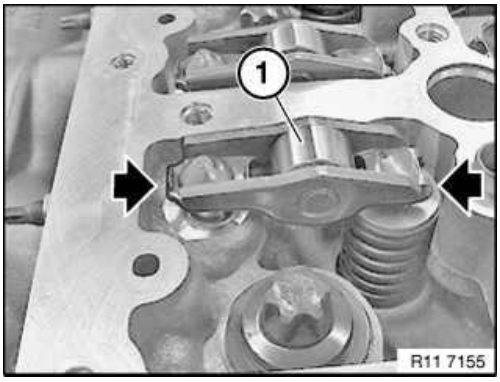
- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

▸ **Install exhaust camshaft**



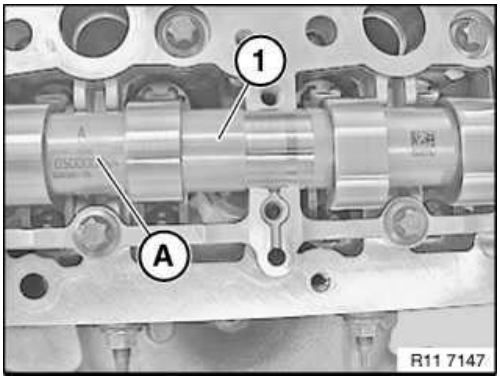
cardiagn.com

RISK OF DAMAGE

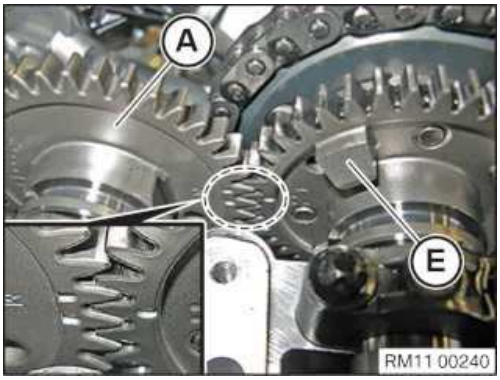


Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

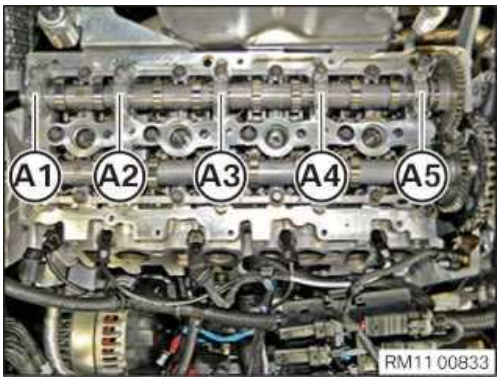


- Comply with the regulations for the installation and disassembly.
- Perform work with care.



- Oil all bearing positions (1).

- Make sure the roller cam followers (1) have the correct mounting orientation.



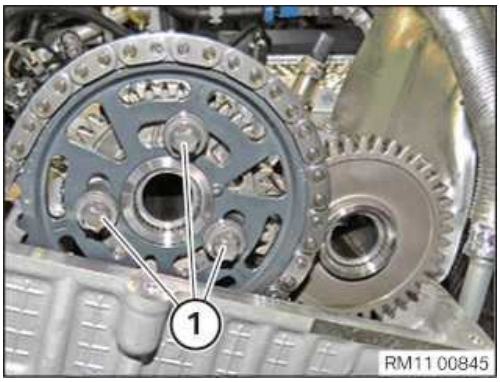
- Insert exhaust camshaft (1) so that the identification (A) points upwards.

- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.

cardiagn.com

- Tighten all exhaust camshaft bearing caps (A1) to (A5) from the inside to the outside by 1/2 a turn at a time.

Intake and exhaust camshaft in camshaft support



M6x31		Tightening torque	10 Nm

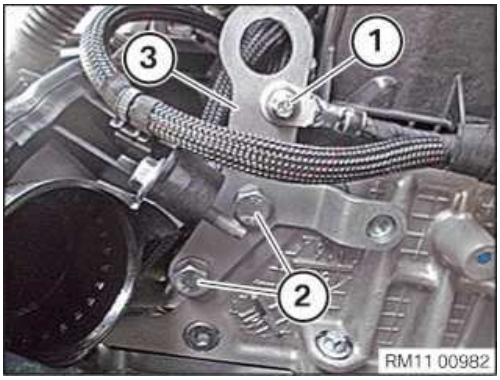
- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

  Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

▶ **Installing the camshaft sprocket on the intake camshaft**

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

▶ **Install the timing chain guide rail**



- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6			8 Nm

cardiagn.com

▶ **Installing the chain tensioner piston**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

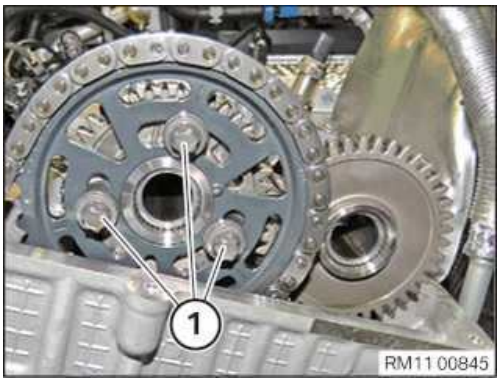
- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

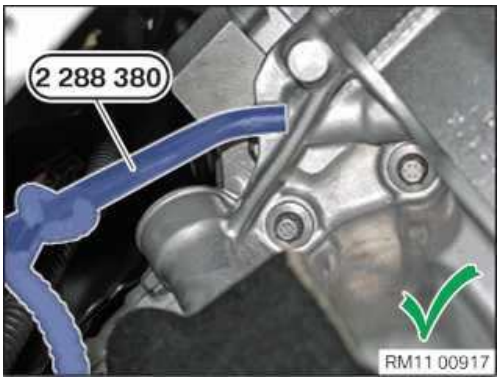


- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

▶ **Tightening the camshaft sprocket on the intake camshaft**



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

61 – Removing the special tool to disconnect the crankshaft

cardiagn.com

- Remove special tool **2 288 380**.

62 – Removing the special tool to secure the exhaust camshaft

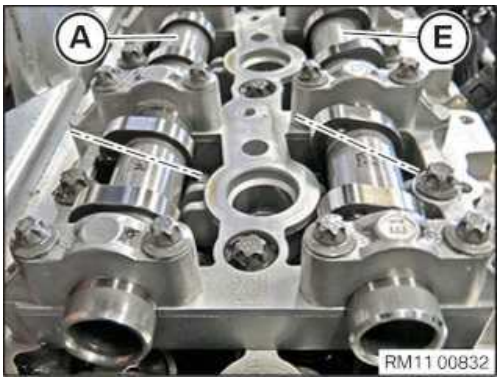
- Remove the special tool **0 496 112 (11 8 760)** to fix the exhaust camshaft.

63 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

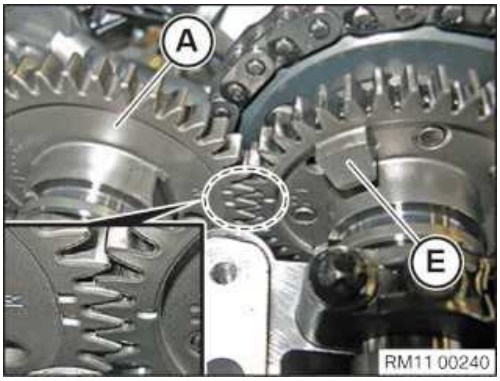


The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

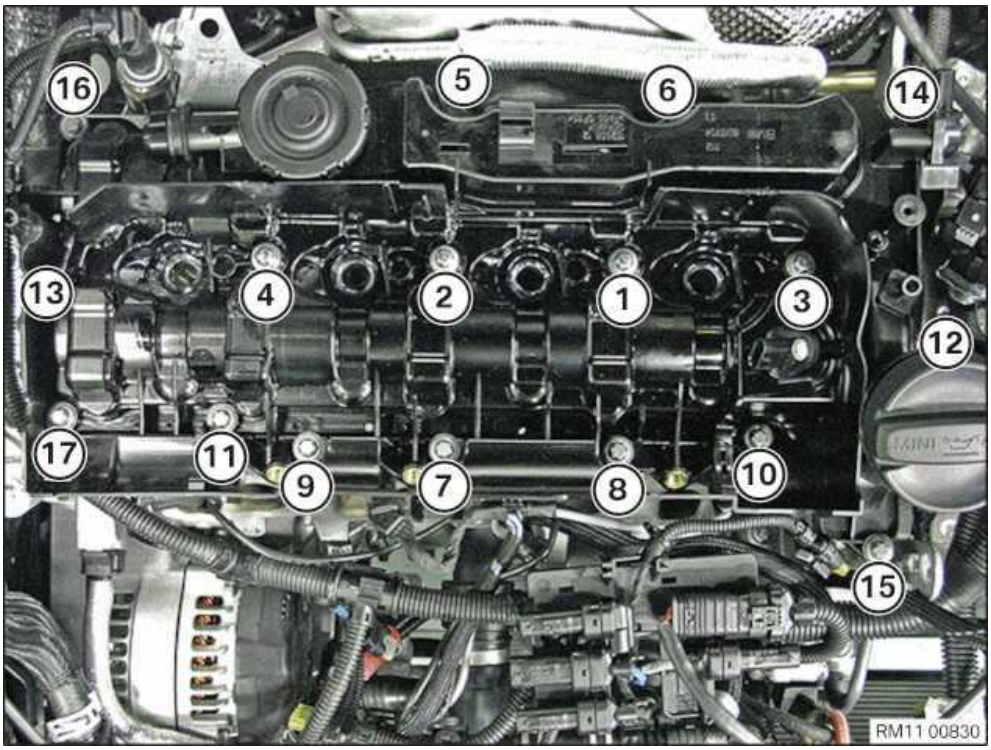
- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

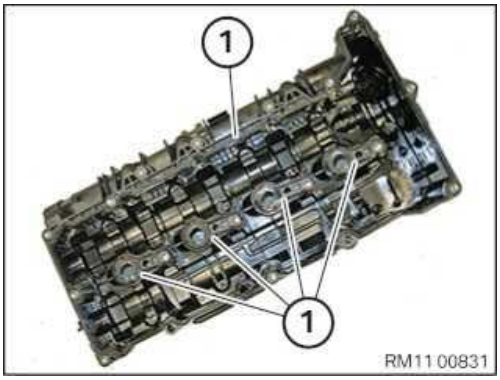
If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.



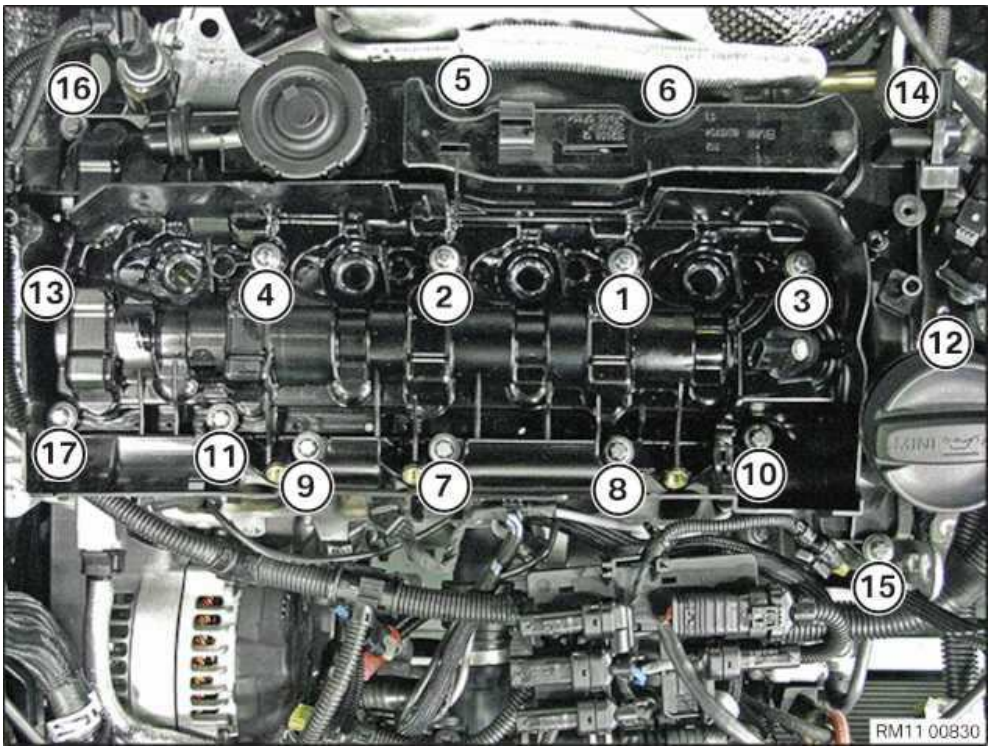
- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).



64 – Installing cylinder head cover

cardiagn.com

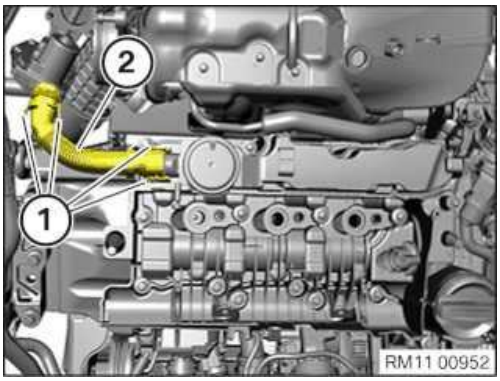
Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket



- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-

cardiagn.com

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

65 – Installing injectors of injection system

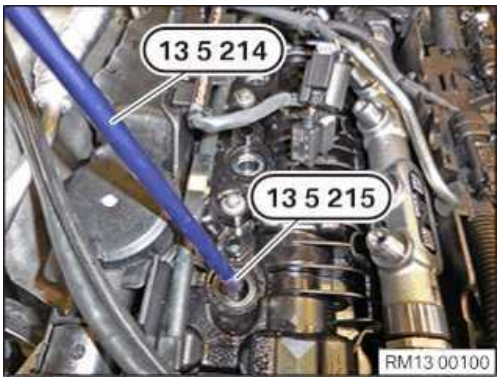
▸ **Cleaning the injector shafts**

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

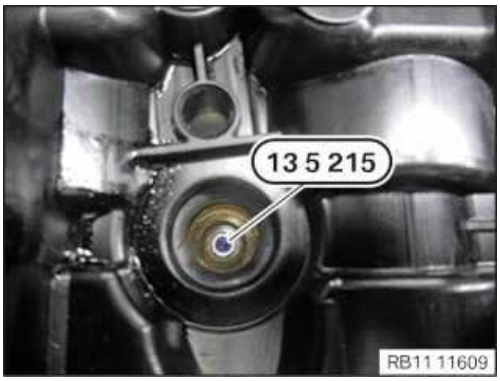
- Collect dirt particles, e.g. when blowing out, use cloth to do so.



- Wear safety goggles.

RISK OF DAMAGE

Contaminant or foreign body.

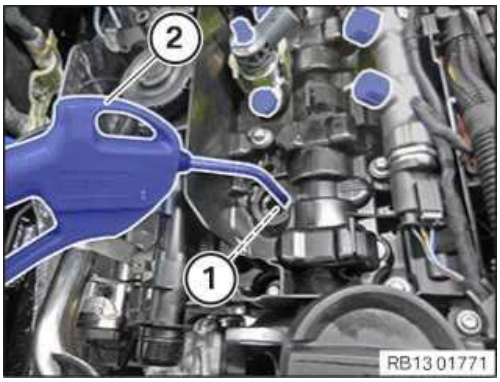


Contamination can result in malfunctions, operating failure or leaks.

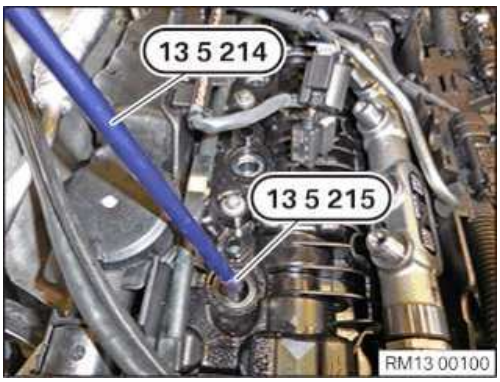
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

cardiagn.com



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.



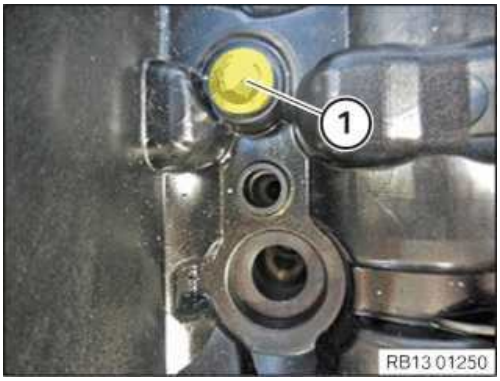
- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

- Blow out injector shaft (1) with air gun (2).

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

► **Check the placement of the clamping claw**



cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

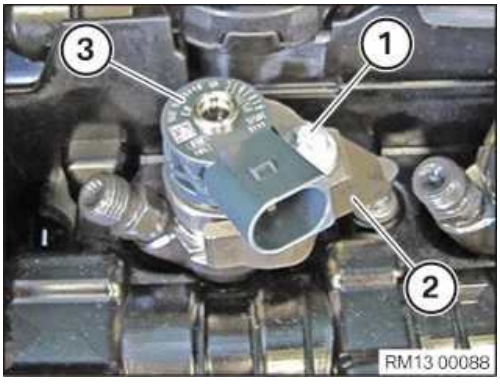
▸ **Prepare the injector for installation**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

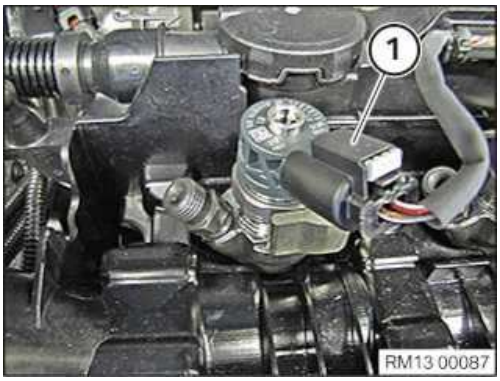


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

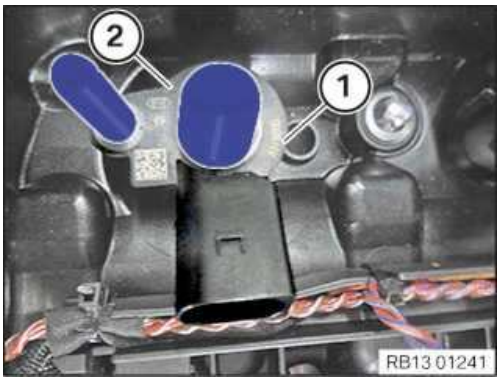
Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

cardiagn.com

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



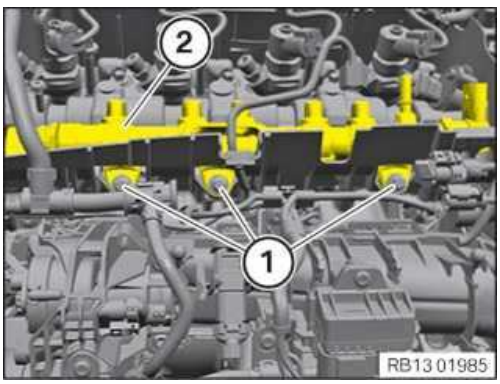
▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

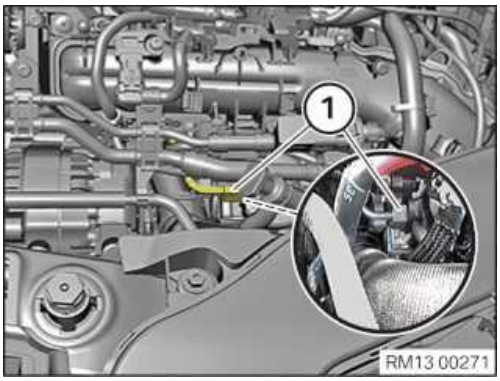
Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

66 – Installing the rail

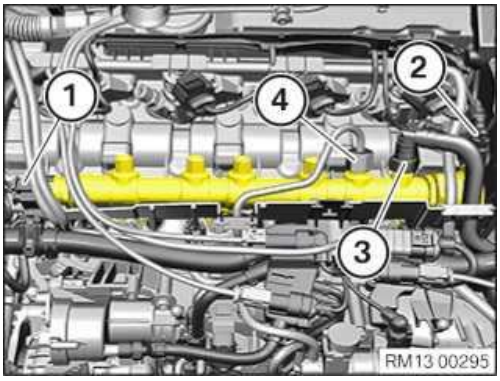


- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm

cardiagn.com



TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

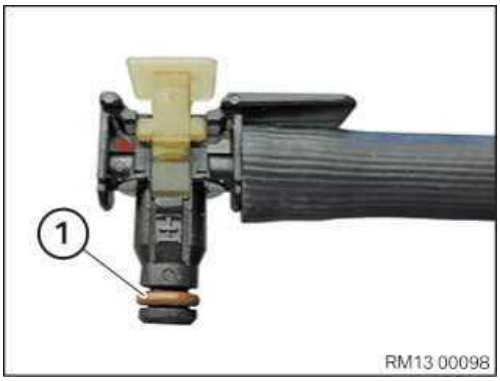
TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool .

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm



- Connect and lock the fuel line (3).

  Fuel line (3) must engage audibly.
- Connect connectors (2) and lock.

  The connector (2) must engage audibly.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

67 – Connect the leakage oil line on the injector

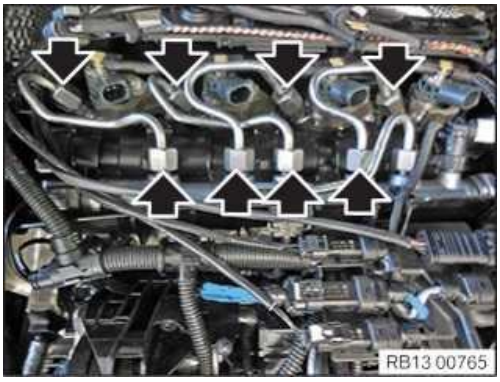
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

cardiagn.com

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.



68 – Installing high pressure lines between rail and injectors

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

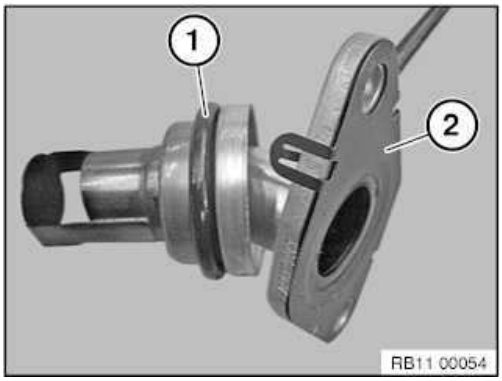
TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.



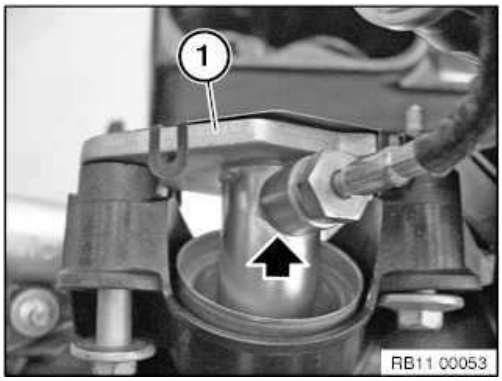
- Tighten the high pressure lines (arrows) with the special tool .

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

69 – Installing the intake plenum

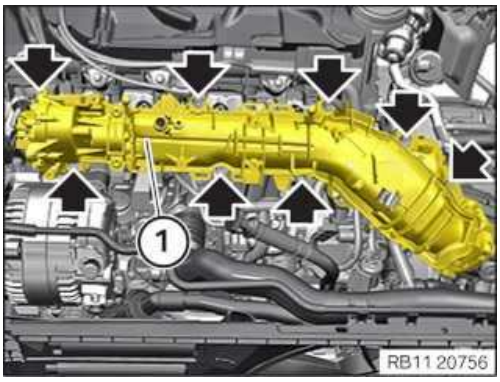


- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position the seal (2) and clip it in.

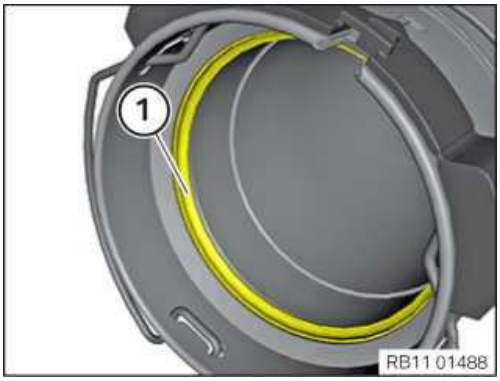
cardiagn.com



- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

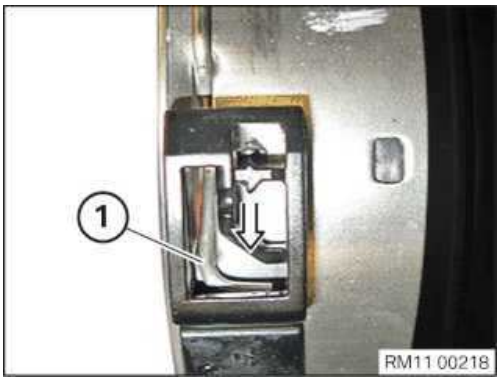
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



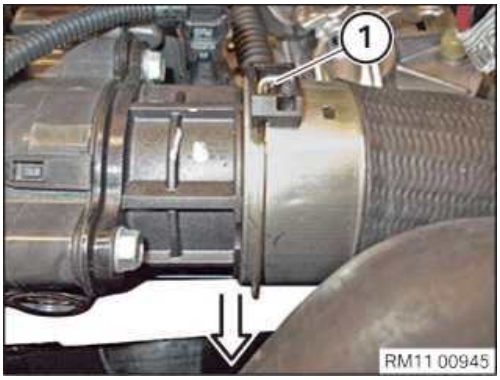
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

cardiagn.com

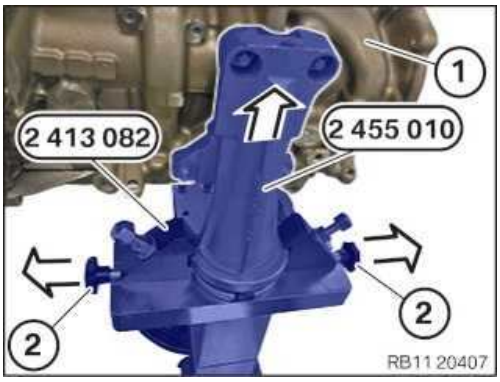
- Engage the lock (1) on the bracket (arrow).

- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

70 – Remove the engine from the assembly stand

CAUTION

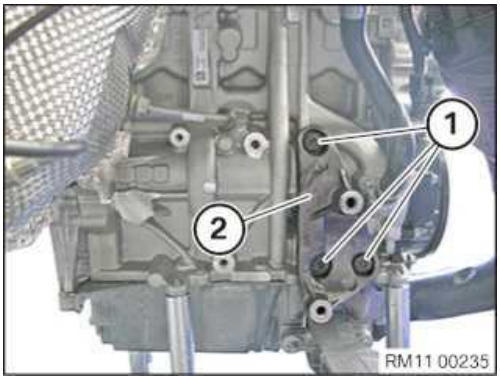


Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Insert engine lifter with special tool and position engine (1).

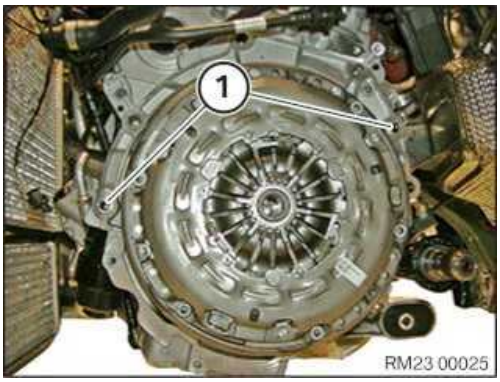


- Unscrew the nuts on special tool .
- Detach the holder (2) in the direction of the arrow.
- Detach the engine (1) with special tool **2 455 010** out of the special tool in the direction of arrow.

cardiagn.com

- Remove conventional screws (arrows).
- Feed out the special tool **2 455 010** on the engine (1) and remove.

- Insert and install the holder (2).
- Tighten the screws (1).

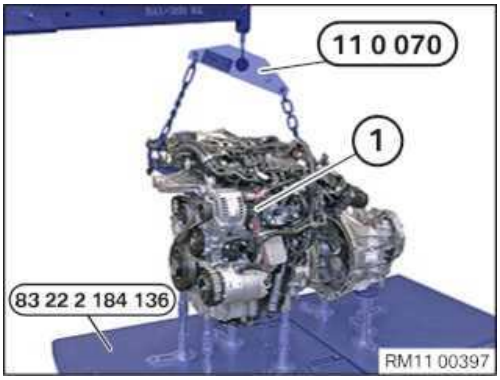


Holder to crankcase

M10		Tightening torque	38 Nm

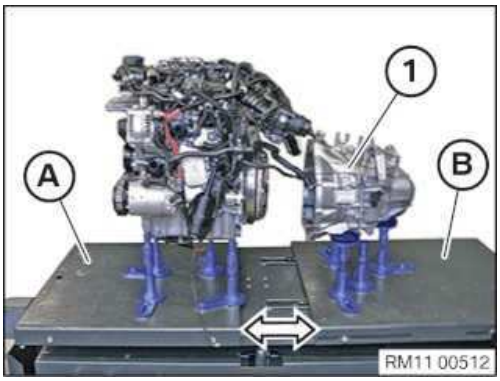
71 – Mounting engine on manual gearbox

Prerequisite

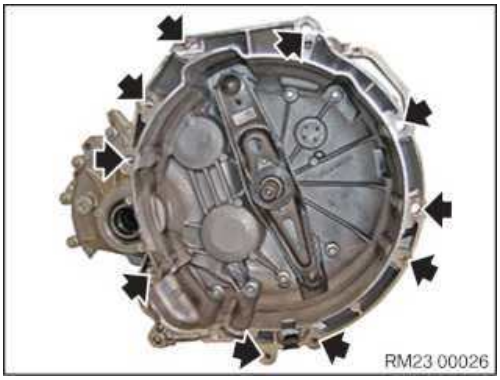


Engine has been removed.

- Check for correct fit of fitting sleeves(1).
- Replace damaged fitting sleeves.

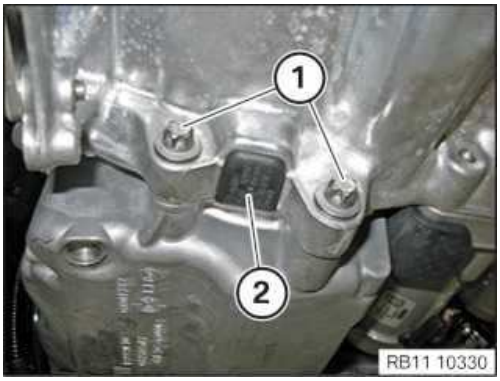


- Remove any grease from the transmission input shaft (arrow) and clean the shaft.
- Do not grease transmission input shaft.
- Check the clutch disc for frictional corrosion in the gearing and renew if necessary.



- Position the engine (1) on the lifting table **2 184 136** using the engine lifter and the special tool .
- Feed out engine lifter from engine (1) with special tool and push aside.

cardiagn.com



- Push table top (B) in direction of arrow and position manual gearbox (1) on engine.

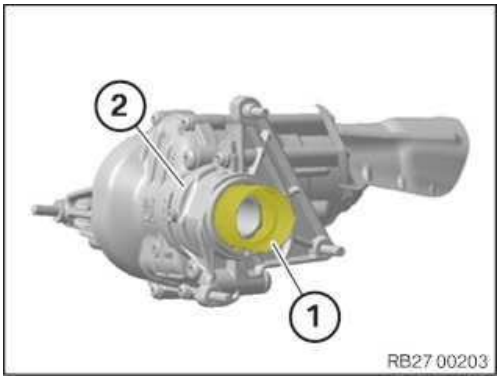
- Tighten screws (arrows).

Transmission to engine

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

- Tighten the screws (1).

Transmission to oil sump



M8		Tightening torque	19 Nm

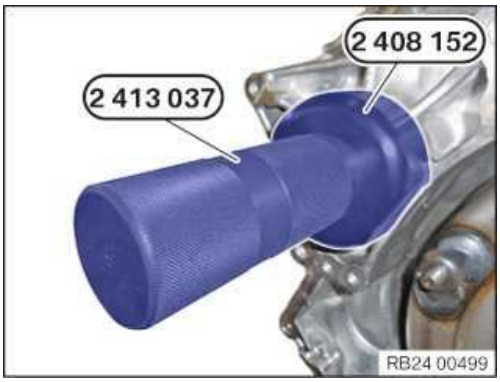
- Install the protective cap (2).

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.

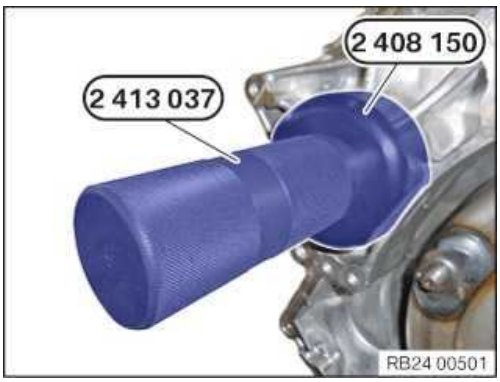
72 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

cardiagn.com

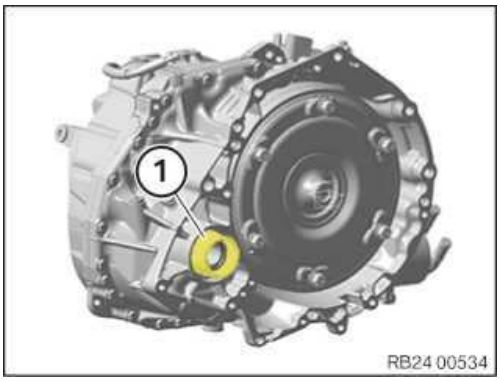


- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.

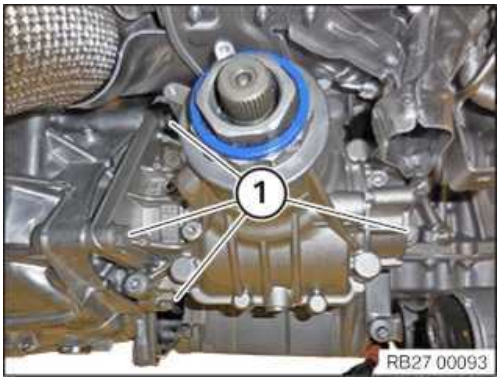
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

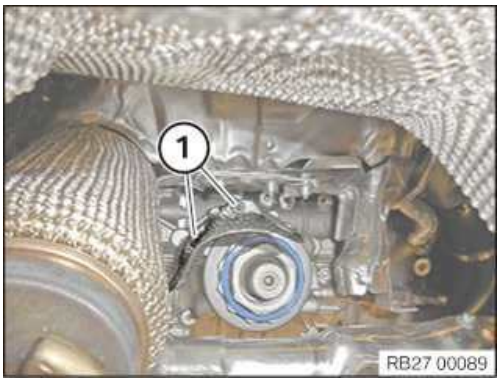
cardiagn.com



- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials



Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

cardiagn.com

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

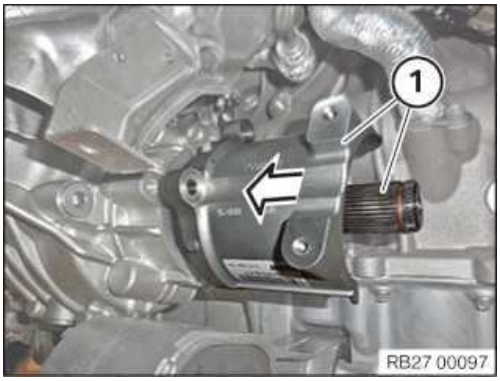
Technically suitable transfer box and electrical transmission oils	

Main group 27

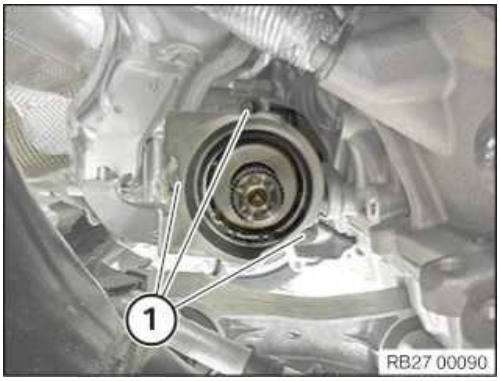
- Tighten the oil filler plug (1).

Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm



73 – Install the intermediate shaft with the support tube



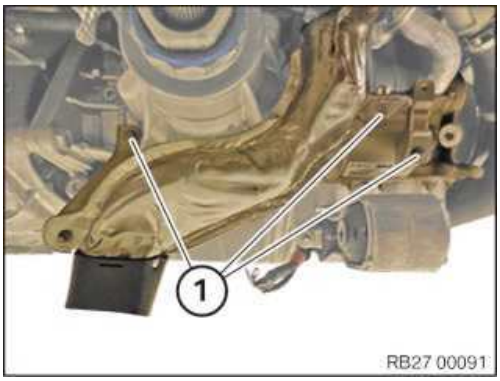
- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

- Position screws (1).



Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

cardiagn.com

- If installed: Install air duct.
- Tighten the screws (1).

74 – Installing the high-pressure stage exhaust turbocharger

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

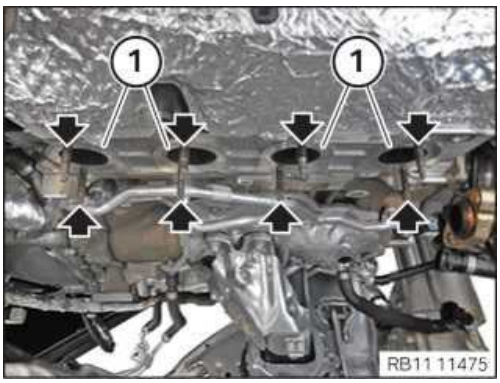
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE



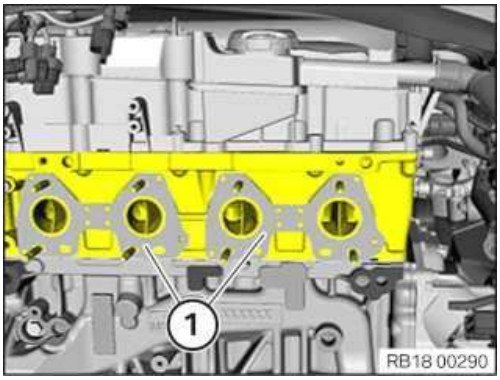
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

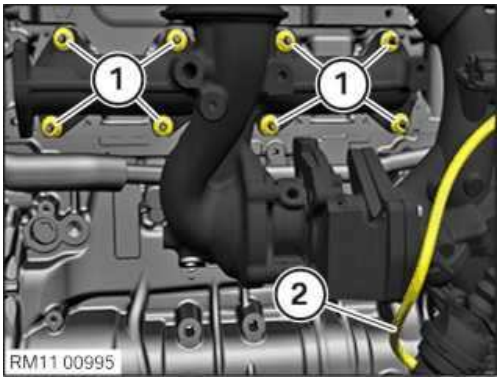
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.

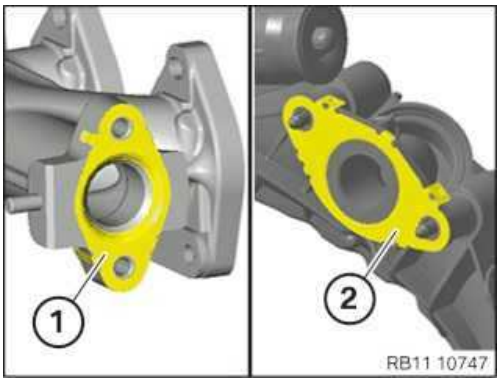
cardiagn.com



- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.

- Renew gasket (1).

  Parts: Gasket

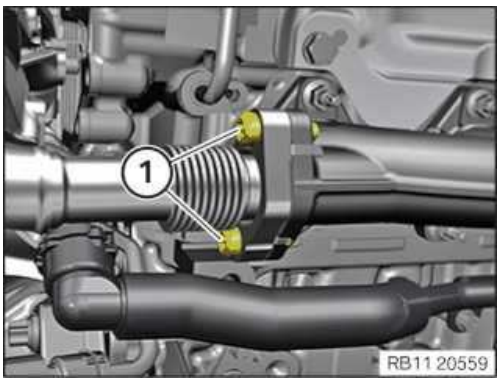


- Install new gasket (1).

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

  Parts: Nuts

- Connect vacuum hose(2).

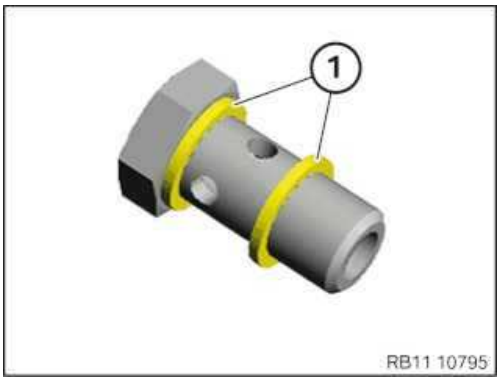


- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

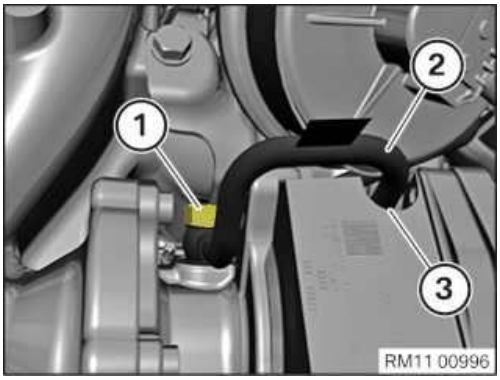
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket



- Tighten the screws (1).

Exhaust-gas recirculation cooler to exhaust manifold



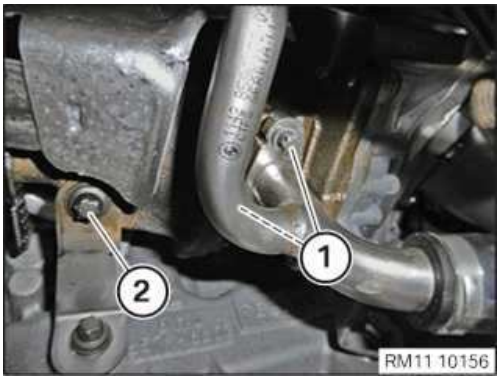
M8x28	Replace screws	Tightening torque	32 Nm

cardiagn.com

- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring

- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).



- Tighten bolt (1) from the right wheel arch.

- Renew seal (1) of oil return line.

  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

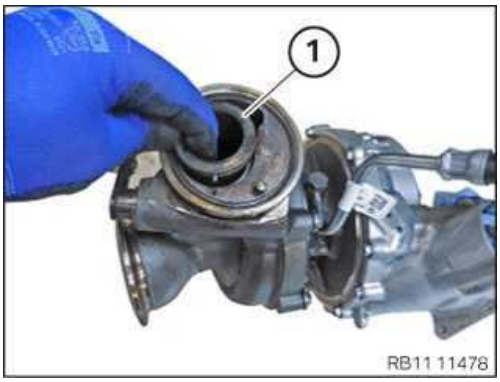
Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

75 – Installing the low-pressure stage turbocharger

cardiagn.com

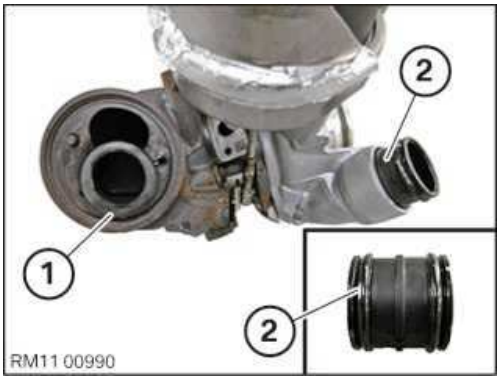
RISK OF DAMAGE



Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.



TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.

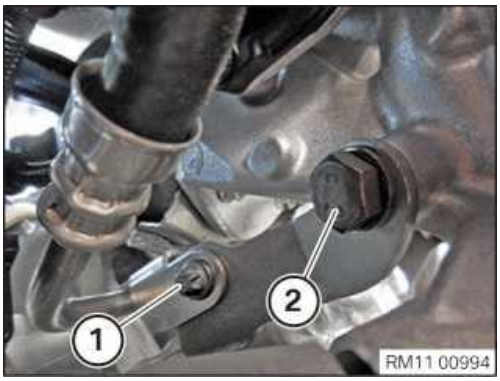
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

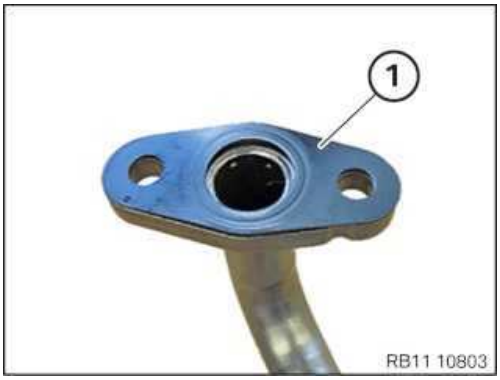
Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

cardiagn.com

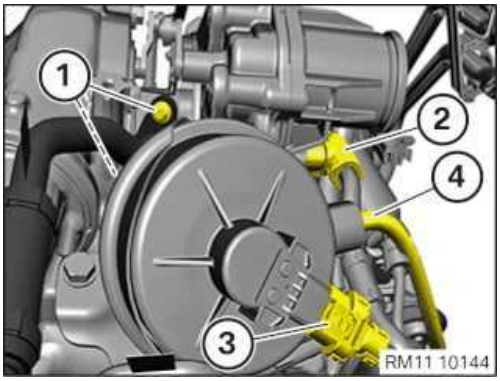
- Tighten down screw (1).



Oil feed line to bracket

Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

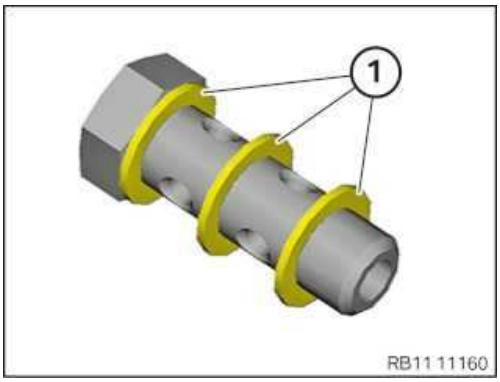


Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

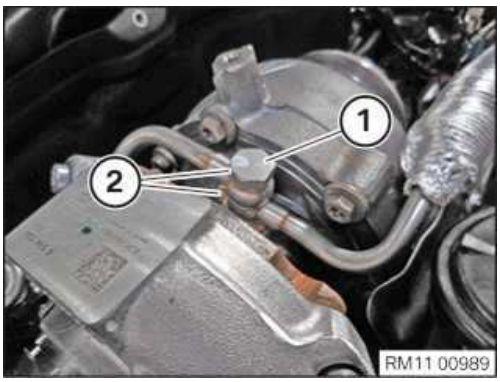
- Renew seal (1) on the oil return line.

  Parts: Gasket



- Position the oil return line with the seal.
- Tighten the screws (1).

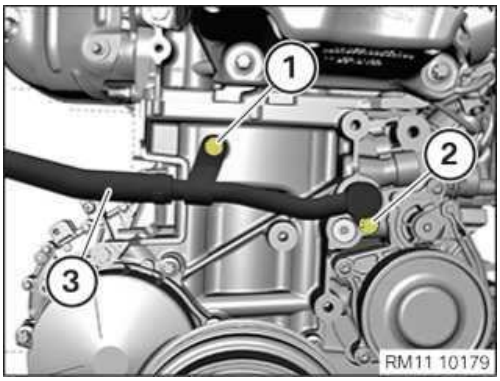
Oil return line to turbocharger



M6x12		Tightening torque	8 Nm

- Connect and lock connectors (2) and (3).

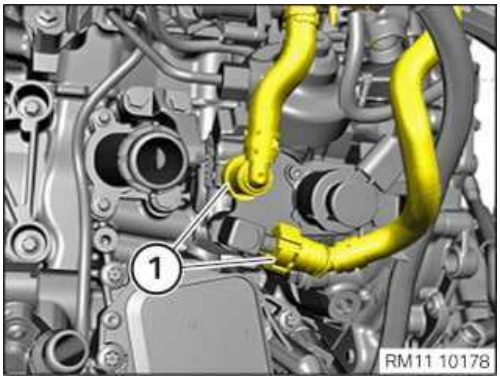
  The locks must engage audibly.
- Connect vacuum hose (4).



- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.

cardiagn.com



- Renew sealing ring of the coolant line (3).

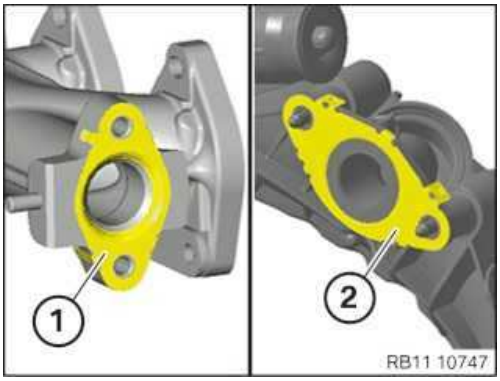
  Parts: Sealing ring
- Coat the sealing ring and install the coolant line (3) .
- Tighten down screws (1) and (2).

Standard screw connection M6

M6		8 Nm

- Connect and lock fuel lines (1).

  The fuel lines (1) must audibly engage.



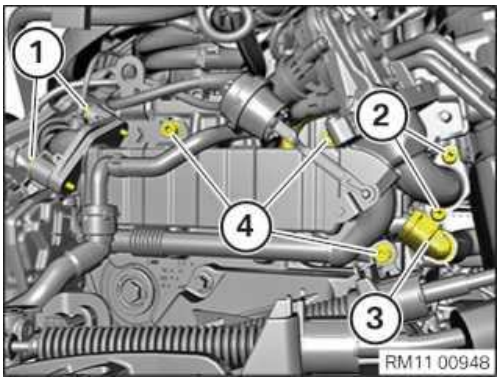
▶ **Installing the exhaust-gas recirculation cooler**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

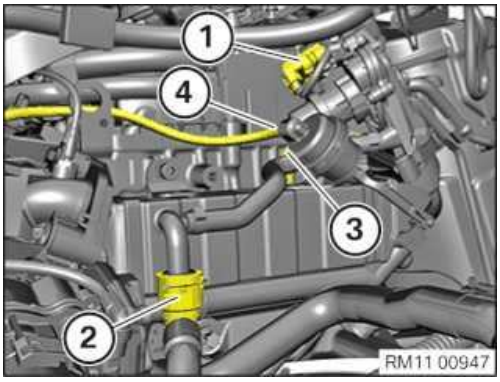
Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold



M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

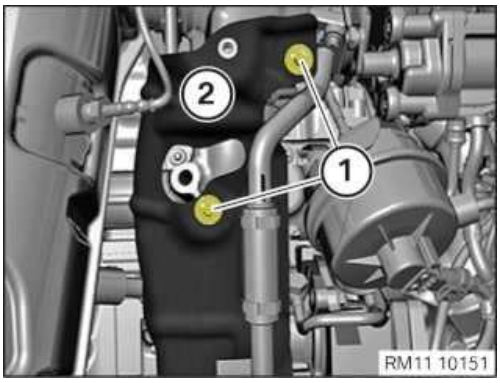
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

▸ **Installing heat shield on exhaust turbocharger at bottom**

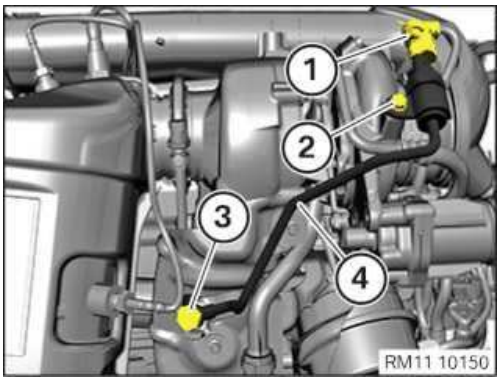


cardiagn.com

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

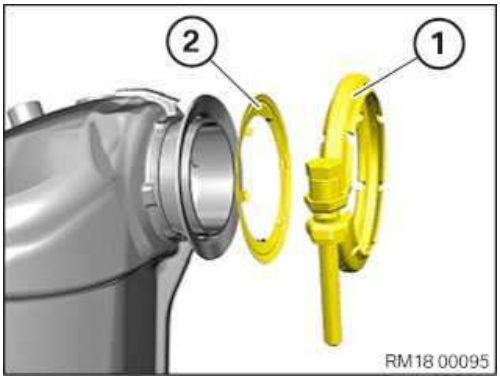
Torx screw BM 6x12		Tightening torque	10 Nm

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm



- Tighten down screw (2).

Standard screw connection M6

M6		8 Nm

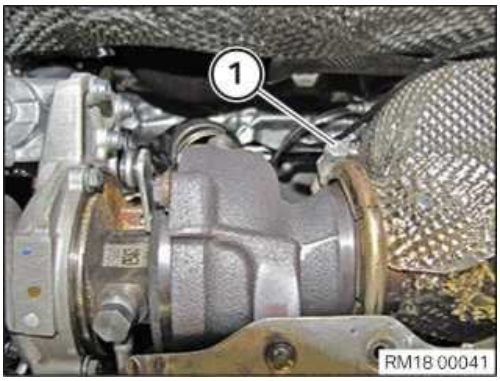
- Connect connectors (1) and lock.

  Lock must audibly engage.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

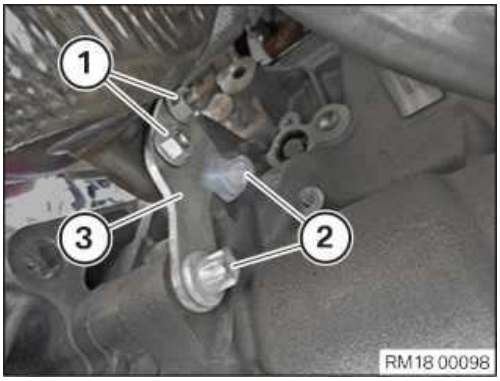


- Remove and install heavy components with the aid of another person/other persons.

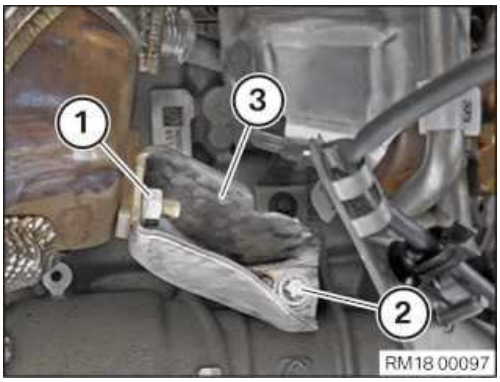
- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket



cardiagn.com



- Carefully insert and install the diesel particulate filter .
- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

- Tighten nuts (1) by hand.

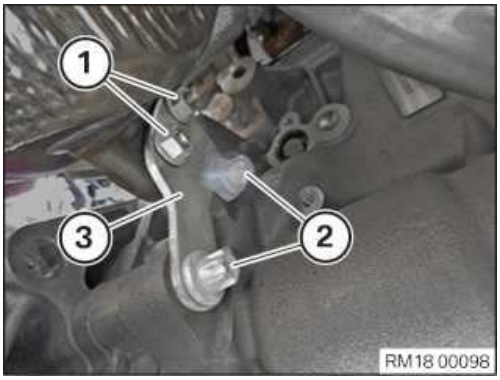
- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.

- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm



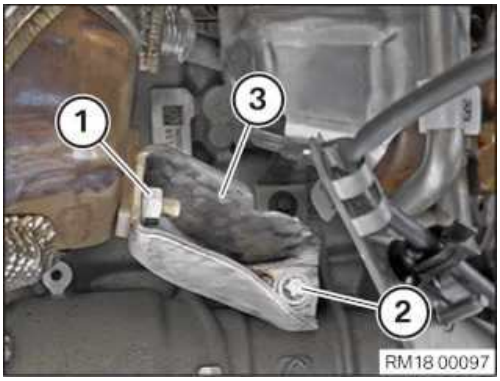
cardiagn.com

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screws (2).



Diesel particulate filter holder to gearbox

M12x75		Tightening torque	66 Nm

- Tighten nuts (1).

Diesel particle filter to holder

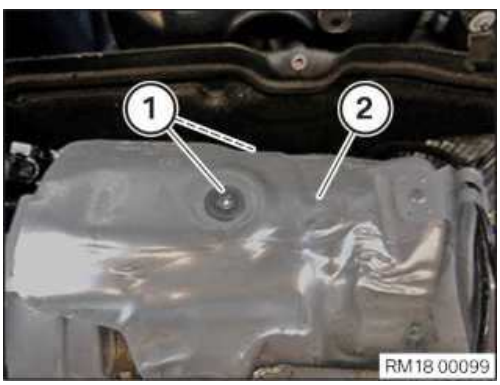
M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screw (2).

Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

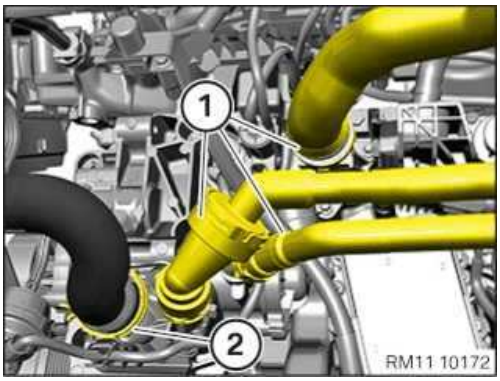


Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Remove fitting aid (1) for the flexible tube.

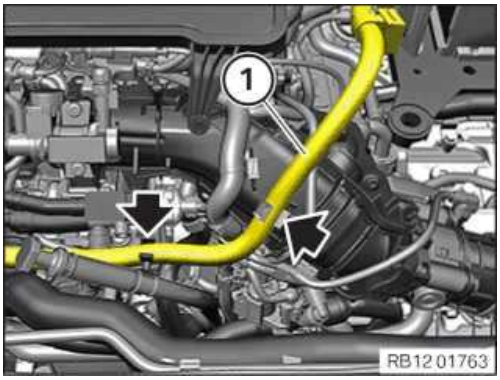
▶ **Install the heat shield on the exhaust turbocharger**



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm



- Fasten the cable at the clips .

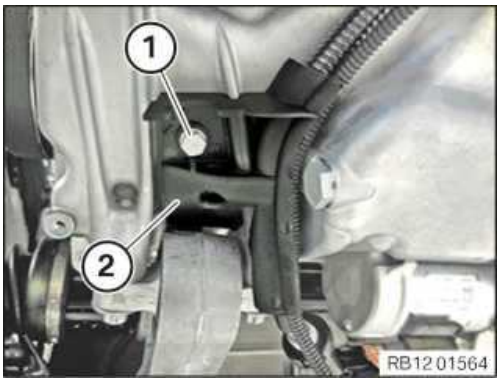
cardiagn.com

- Install the coolant hose and secure with the clamp (2) .
- Connect and lock the coolant lines (1).

  The coolant lines (1) must engage audibly.

CAUTION

Improper routing of the positive battery cable.



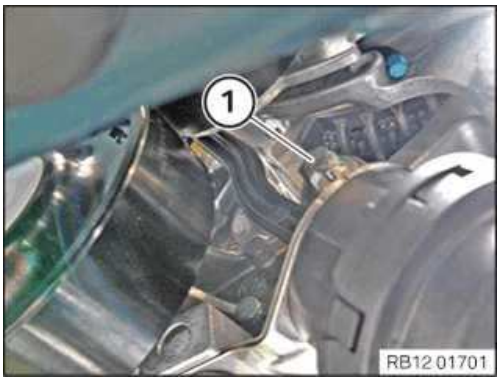
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert the positive battery cable (1) into the clamps (arrows).

- Feed in and install positive battery cable at the clamps (1).

- Insert and install the holder (2).
- Tighten down screw (1).



Bracket to oil sump

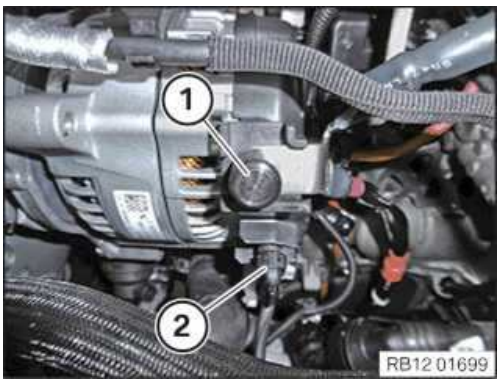
M6		Tightening torque	8 Nm

- Insert and install alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support.

cardiagn.com

- Tighten the screw (1) below on the alternator.

Alternator to component carrier



M10x75 / M10x125		Tightening torque	38 Nm

- Tighten the bolt (1) on top on the alternator.

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm

- Mount positive battery cable to the alternator.
- Tighten nut.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

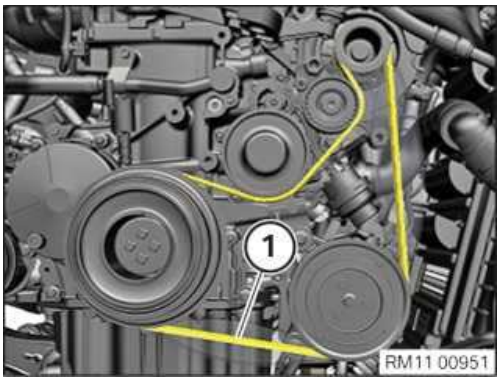
- Mount the cover (1).
- Connect the connector (2) to the alternator and lock audibly.

- Install air conditioning compressor (2) and position it correctly.
- Tighten the screws (1).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

▸ **Installing the drive belt for alternator**



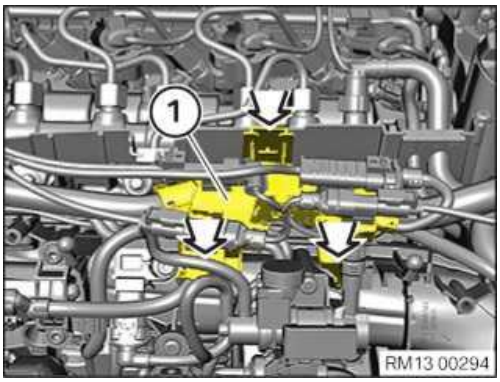
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

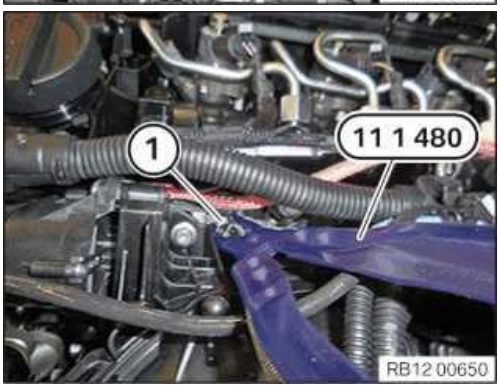
TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

cardiagn.com

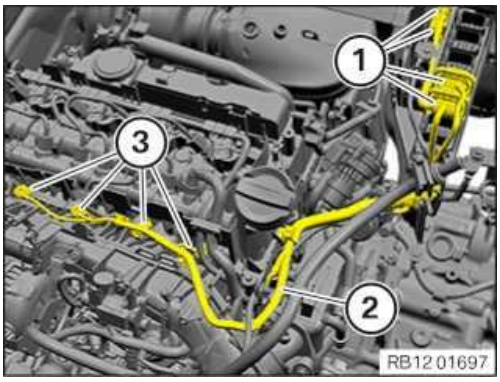


- Feed in the drive belt for the alternator (1) and install it.



- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool **0 496 268 (11 0 390)** out of the belt tensioner and remove it.

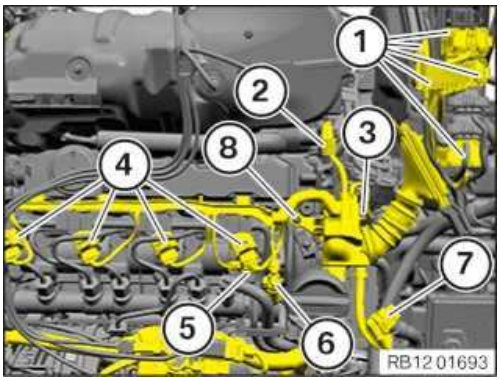
▶ **Installing the cable clip for the intake plenum**



- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.

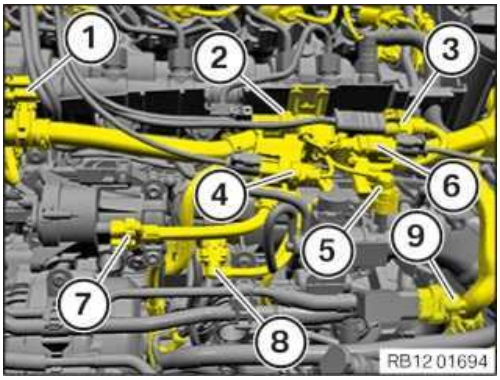
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.



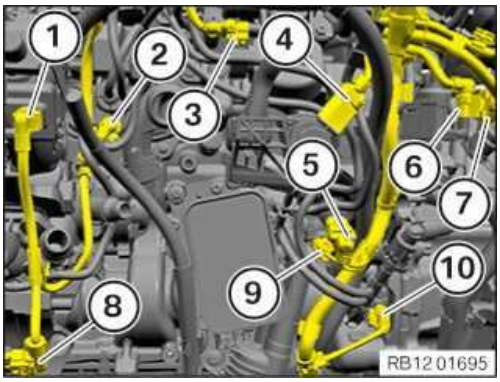
- Lay vehicle wiring harness and fasten with clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Connect all connectors (3) to the glow elements and engage them audibly.
- Mount ground strap and tighten screw (2).

Ground cable to cylinder head

M6x12		Tightening torque	8 Nm

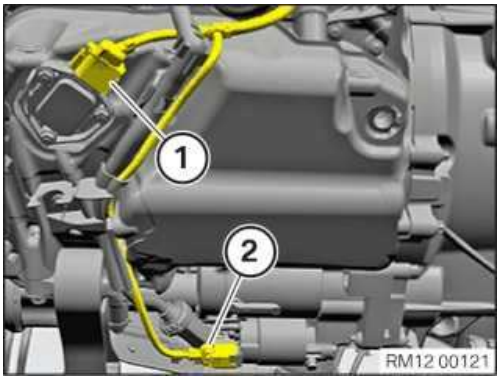


cardiagn.com



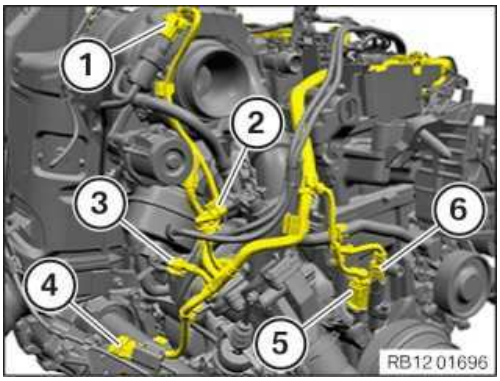
- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

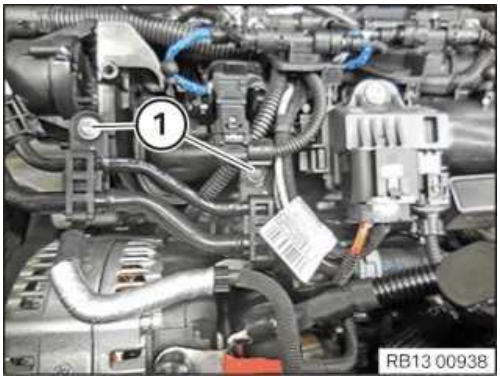


TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.



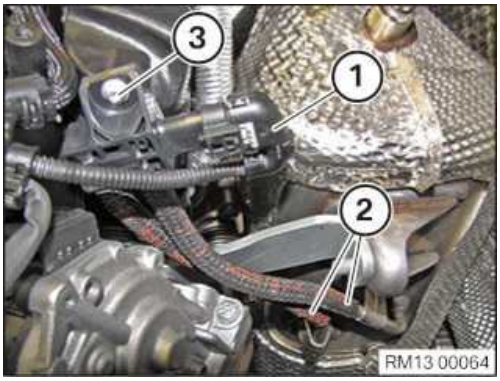
- Connect the connector (1) to the alternator and lock audibly.
- Connect the connector (2) to the electric changeover valve and lock audibly.
- Connect the connector (3) to the electric changeover valve and lock audibly.
- Connect the connector (4) to the high pressure pump and lock audibly.
- Connect the connector (5) to the oil pressure sensor and lock it audibly.
- Attach connector (6) to the throttle bodies and lock it audibly.
- Attach connector (7) to the intake air temperature sensor and lock it audibly.
- Connect the connector (8) to the air conditioning compressor and lock audibly.
- Connect the connector (9) to the solenoid valve and lock audibly.
- Connect the connector (10) to the crankshaft sensor and lock it audibly.



- Connect the connector (1) to the oil-level sensor and lock it audibly.
- Connect connector (2) to the starter motor and lock audibly.

cardiagn.com

- Attach connector (1) to the exhaust turbocharger and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust gas pressure sensor and lock it audibly.
- Connect the connector (4) to the monitoring oxygen sensor and lock audibly.
- Attach connector (5) to the oil pressure switch and lock it audibly.
- Attach connector (6) to the switching valve and lock it audibly.



- Position the fuel line.
- Tighten the screws (1).

Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

77 – Installing differential pressure sensor

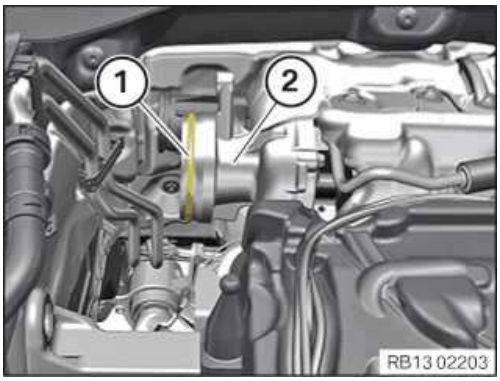
- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.



Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

78 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

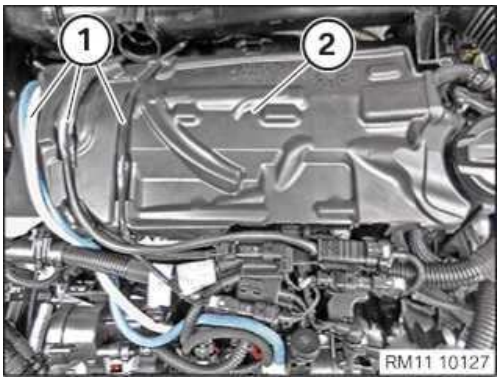
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

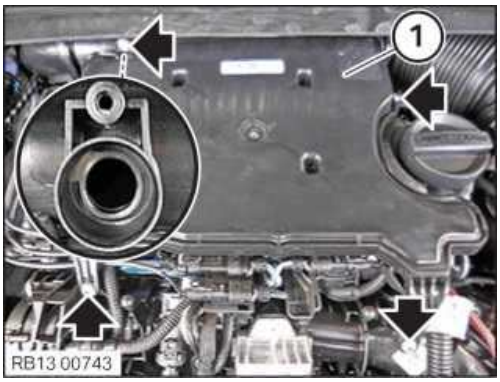
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing



Clamp		Tightening torque	3 Nm

79 – Install the acoustic cover for the injectors

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

80 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

81 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

82 – Install engine

- See additional information.

Additional Information

Overview of Tightening Torques

Special tool to cylinder head Used in step 12

M8		Tightening torque	21,5 Nm

Special tool 2 455 010 to crankcase Used in step 13

M10x30		Tightening torque	38 Nm

cardiagn.com

Special tool 11 8 930 to special tool 00 2 320

Used in step 13

M14x35		Tightening torque	160 Nm

Main bearing cap to crankcase

Used in step 44

M10x85	Replace screws.	1. tightening torque	25 Nm
		2. tightening torque	50 Nm
		3. Angle of rotation	60 °
		4. Angle of rotation	60 °

Special tool 2 288 054 to crankshaft

Used in step 44

M10		Tightening torque	20 Nm

Idler gear to crankcase

Used in step 44

M12x1.5		Tightening torque	10 Nm
		Angle of rotation	45 °

Gear to counterbalance shaft

Used in step 44

M10	Renew screws.	1. Jointing torque	20 Nm
		2. Angle of rotation	180 °

Connecting rod bearing cap to connecting rod

Used in step 48

M9x47		Tightening torque	20 Nm
		Angle of rotation 1	70 °
		Angle of rotation 2	70 °

Oil deflector to crankshaft bearing cap

Used in step 49

M8x14	Replace screws.	Tightening torque	35 Nm
		Release	180 °
		Tightening torque	15 Nm
		Angle of rotation	45 °

Oil deflector to crankcase

Used in step 49

M8x14		Tightening torque	19 Nm

Bearing journal of tensioning and guide rail

Used in step 50

M8	*Replace bearing journal.*	Tightening torque	20 Nm

Chain tensioner to crankcase

Used in step 50

M6x22		Tightening torque	10 Nm

Camshaft sprocket on high pressure pump

Used in step 50

M12		Tightening torque	65 Nm

Oil vacuum pump to crankcaseB47

Used in step 51

M8x35		Tightening torque	19 Nm

Rear timing case cover to crankcase

Used in step 52

M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

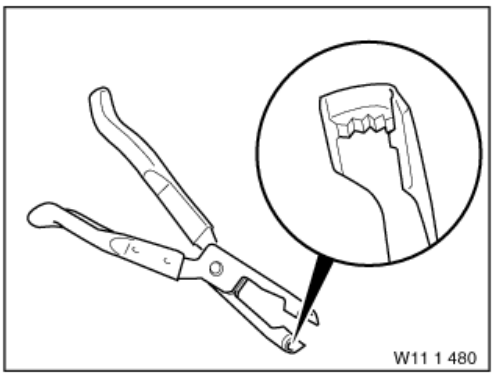
Screw TS6	Renew screw.	Tightening torque	5 Nm

Overview of Special Tools

0 496 268 (11 0 390) Pin



Common — Used in step 7 76

Usage	(roll pin) For securing new tensioning pulley (poly-V belt)
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 15 07 (390)

cardiagn.com

0 490 796 (11 1 480) Pliers

Common Used in step 7 25

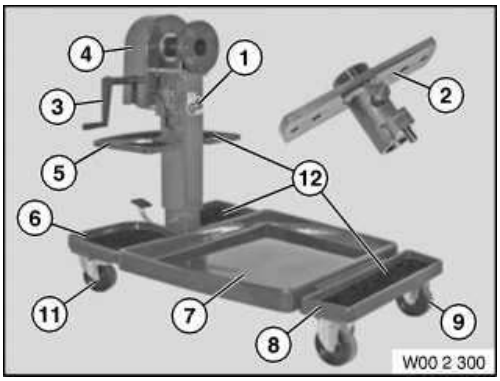
Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

2 459 012 Holder

Common Used in step 12 71

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

2 455 010 Engine support



Common Used in step 13 70

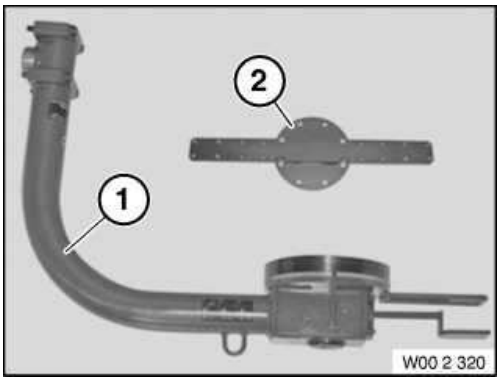
Usage	For accommodating engine on assembly stand. Engine: B3x, B4x, N47.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 495 187 (00 2 300) Assembly stand

Used in step 13

cardiagn.com

Common



Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of

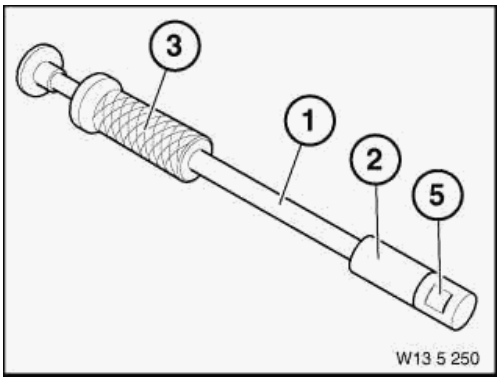
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.	

cardiagn.com

0 495 196 (00 2 320) Support arm

Common

Used in step 13



Usage	(Support arm with fixture) For mounting engines using the engine mounting bracket.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 197 (00 2 321)		**Support arm**	
2	0 495 198 (00 2 322)		**Panel** (take-up plate)	
3	0 495 380 (00 2 323)		**Panel** (fixture) Engine N73	
6	0 496 287 (00 2 326)		**Panel** (fixture) Engine: M73	
5	0 496 288 (00 2 327)	**0 496 373**	**Panel** (fixture) Engine: S62 Replaced by 11 5 420 (0 496 373)	
8	0 496 533 (00 2 328)		**Support** (Engine mount) Engine: N57, N57Top	
9	0 496 579 (00 2 329)	**0 496 680**	**Support** (Engine mount) Engine: N74 Replaced by 116160 (0 496 680)	
4	0 495 379 (00 2 324)		**Panel** (fixture) Engine M67TU	
5	0 495 381 (00 2 325)		**Panel** (fixture) Engine N62, N62TU	

cardiagn.com

0 493 321 (13 5 250) Puller

Common

Used in step 17

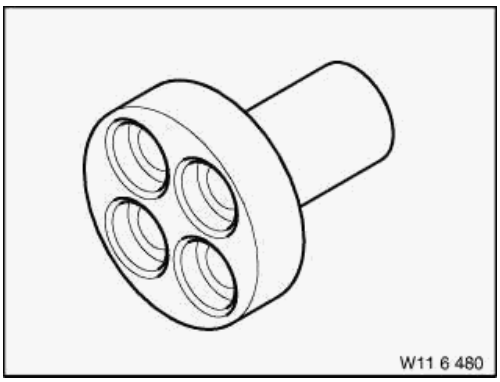
Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

cardiagn.com

0 493 339 (13 5 252) Bush



Common	Used in step 17
Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

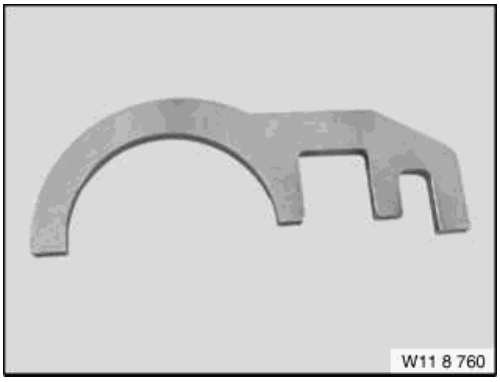
0 493 340 (13 5 253) Weight

Common	Used in step 17
Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 380 (11 6 480) Connector

Common	Used in step 20 60 63
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

cardiagn.com



2 288 380 Locating stud

Common Used in step 20 60 61 63

Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 112 (11 8 760) Gauge

Common Used in step 20 60 62 63

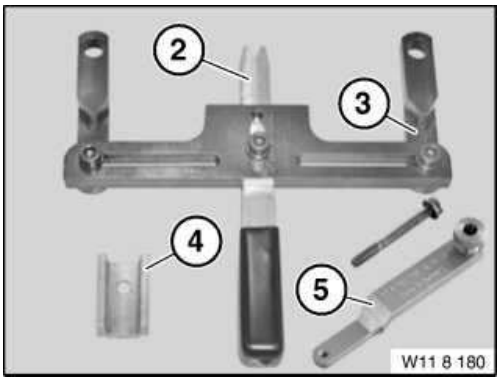
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

cardiagn.com

0 495 105 (11 4 480) oddments tray

Common

Used in step 26 27 60



Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

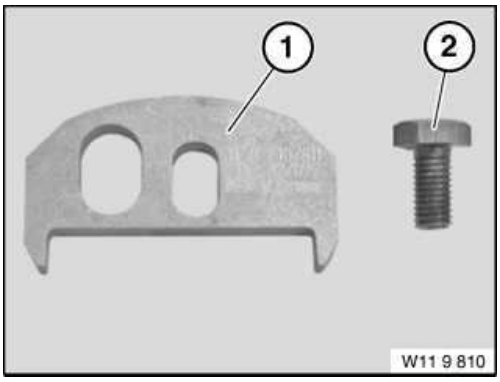
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

cardiagn.com

0 493 587 (11 8 180) Holder

Common

Used in step 28 55



Usage	(Counter support) Blocking flywheel when releasing and tightening down central bolts on vibration absorber
Included in the tool or work	
Storage location	B45
Replaced by	
In connection with	
SI-Number	01 12 99 (452)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
2	0 494 433 (11 8 182)		**Shaped part** (shaped part)	
5	0 494 716 (11 8 185)		**Adapter** (Adapter with adjusting sleeve) E46 M47TU	
1	0 494 432 (11 8 181)	**0 494 434**	**Basic body** (Basic body) E65/M67, E38/M67 Discontinuation Replaced by 11 8 183 (0 494 434)	
3	0 494 434 (11 8 183)		**Basic body**	
4	0 494 435 (11 8 184)		**Adapter** E65 / M67	

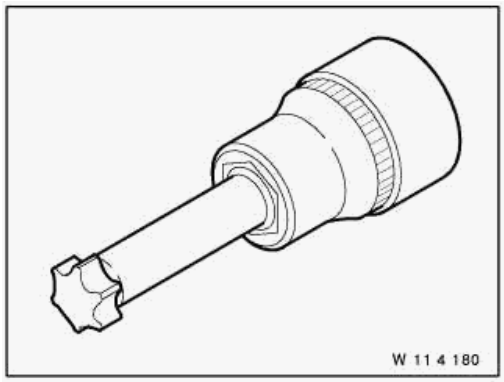
cardiagn.com

0 496 171 (11 9 811) Holder

Common	Used in step 29 30 53
Usage	Available only as a complete tool set 11 9 810 (83 30 0 496 170) - as of 13.01.12
Included in the tool or work	0 496 170
Storage location	C86
Replaced by	
In connection with	
SI-Number	01 07 07 (355)

0 494 793 (11 9 265) Bush

Common	Used in step 29 30 53
Usage	
Included in the tool or work	0 493 938
Storage location	A44
Replaced by	
In connection with	
SI-Number	



2 288 165 Synchronising key

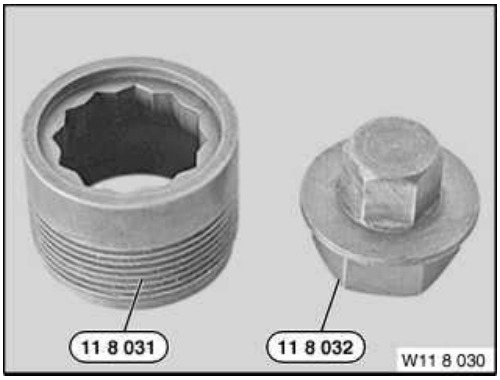
Common	Used in step 29 54
Usage	Conversion kit for 21 2 170, for orders till 02.2014. Orders as of March 2014 do not require the conversion, as the new thrust piece has been accounted for.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 09 14 (088)

cardiagn.com

0 491 018 (11 4 180) Socket WAF 46

Common Used in step 30 53

Usage	(screwdriver bit Torx T60) For releasing and tightening down dual-mass flywheel - model year: from Jan 94
Included in the tool or work	
Storage location	C9
Replaced by	
In connection with	
SI-Number	01 02 94 (777)



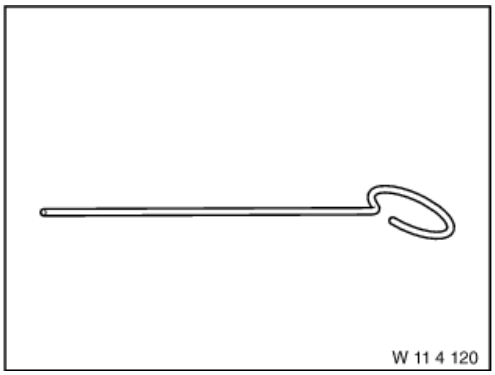
2 357 904 Gauge

Common Used in step 33 50

Usage	For positioning the high pressure pump to the crankshaft . Replaced by gauge 2420824
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 725 (11 8 030) Extractor

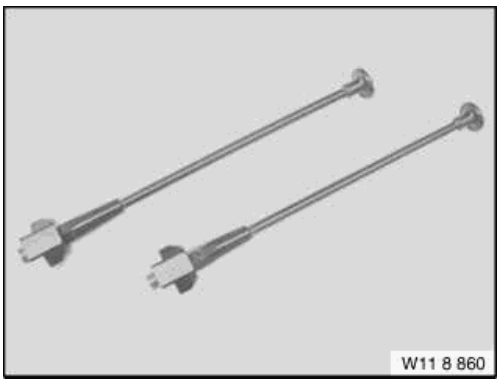
Common Used in step 33



Usage	for the disassembly of the high pressure pump (replaces SWZ 11 8 740 as of 08/2009) 11 8 740 will be replaced by 83 30 2 448 914.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 496 757 (11 8 031)	**2 448 914**	**Holding sleeve** Replaces SWZ11 8 741 from 08/2009, 09/2011 no longer available individually. From 10/2016, can only be ordered as a new set of special tools 2 448 914.	
2	0 496 758 (11 8 032)	**2 448 914**	**Adapter** Replaces special tool 11 8 742 from 08/2009, 09/2011 remaining inventories will be sold off - no longer available individually. From 10/2016, can only be ordered as a new set of special tools 2 448 914.	

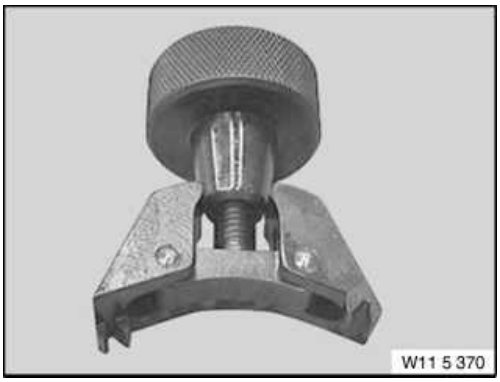


cardiagn.com

0 491 012 (11 4 120) Pin

Common	Used in step 33 50
Usage	(lock pin) For chain tensioners, for locking the chain tensioner piston (e.g. during cylinder head removal and fitting)
Included in the tool or work	
Storage location	B1
Replaced by	
In connection with	
SI-Number	01 12 93 (701)

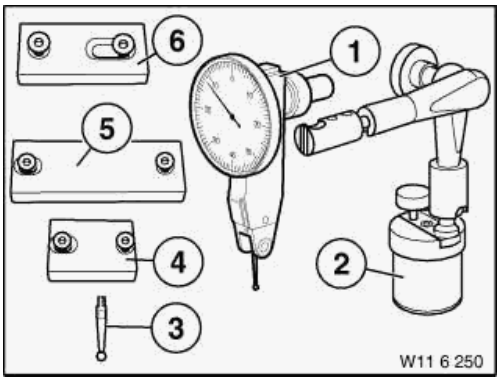
0 496 144 (11 8 860) Assembly tool



Common	Used in step 36 47
Usage	For installing piston with connecting rod in crankcase.
Included in the tool or work	
Storage location	A23
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

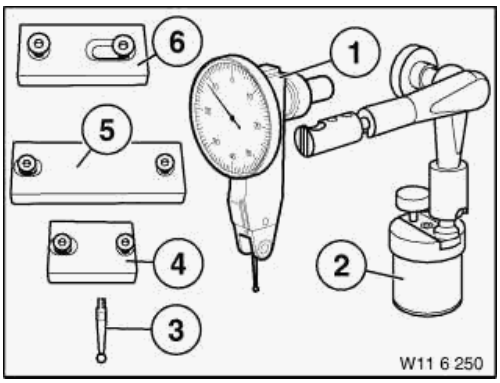
2 288 054 Gauge

Common	Used in step 41 44
Usage	For positioning the counterbalance shafts during installation.
Included in the tool or work	
Storage location	C56
Replaced by	
In connection with	
SI-Number	01 06 14 (076)



0 495 131 (11 5 370) Tool

Common	Used in step 41 44
Usage	(Locating tool) For VANOS exhaust camshaft gear setting.
Included in the tool or work	
Storage location	A71
Replaced by	
In connection with	
SI-Number	01 02 05 (173)

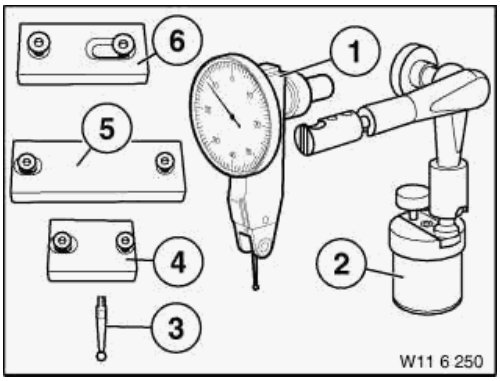


cardiagn.com

0 493 144 (11 6 251) Dial gauge

Common	Used in step 44
Usage	(Dial gauge) With 0.8 mm measuring range in each direction
Included in the tool or work	0 493 143
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 145 (11 6 252) Tripod

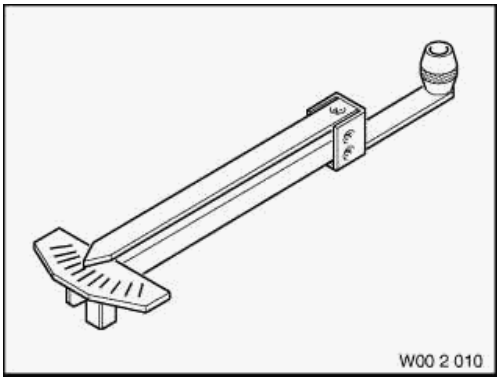


Common	Used in step 44
Usage	(Small hydraulic tripod with magnetic base)
Included in the tool or work	0 493 143
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 143 (11 6 250) Measuring device

Used in step 44

cardiagn.com



Common

Usage	(Measuring device) Sensing arm measuring device With small tripod for measuring tooth flank and side clearance on counterbalance shafts, camshafts and crankshafts.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 04 98 (304)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 495 214 (11 6 254)		**Panel** (Fixture) Engine: M47T2; M57T2; S85	
5	0 495 468 (11 6 255)		**Panel** (Fixture M7) Engine camshaft: M67TU	
3	0 493 146 (11 6 253)		**Sensor** (sensor) Sensor arm 11.5 mm	
1	0 493 144 (11 6 251)		**Dial gauge** (Dial gauge) With 0.8 mm measuring range in each direction	
2	0 493 145 (11 6 252)		**Tripod** (Small hydraulic tripod with magnetic base)	
6	0 495 470 (11 6 256)		**Panel** (Fixture M8) Engine crankshaft: M67TU	

0 490 130 (00 2 010) Measurement aid

Common Used in step 44

Usage	(Coefficient of friction meter) For adjusting the steering box (measurement possible in both directions) and for checking and adjusting the bevel pinion and crown wheel bearing in all final drives
Included in the tool or work	
Storage location	X9
Replaced by	
In connection with	
SI-Number	

cardiagn.com

2 420 824 Gauge

Common

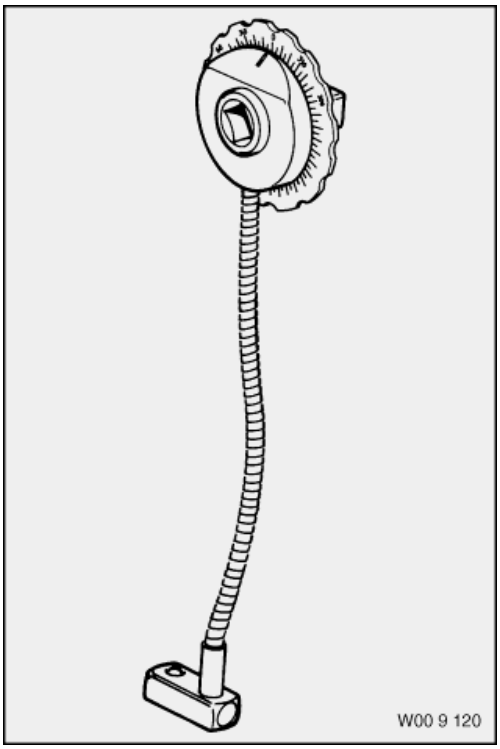
Used in step 44

Usage	For positioning the high pressure pump to the crankshaft . Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B56
Replaced by	
In connection with	
SI-Number	

0 493 582 (11 8 140) Bush

Common

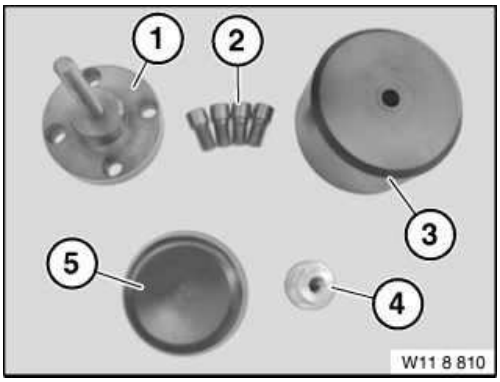
Used in step 47



Usage	(Assembly bushes) For installing the pistons
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 12 99 (452)

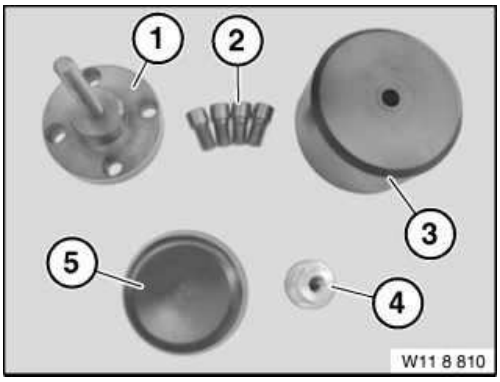
Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 494 394 (11 8 141)		**Bush** Bush for piston installation 84.00 mm	
2	0 494 395 (11 8 142)		**Bush** Liquidation of existing inventory and then available only as a complete tool set 11 8140 (83 30 0 493 582) - as of 12.03.12.	
3	0 494 396 (11 8 143)		**Bush** Liquidation of existing inventory and then available only as a complete tool set 11 8140 (83 30 0 493 582) - as of 12.03.12.	



cardiagn.com

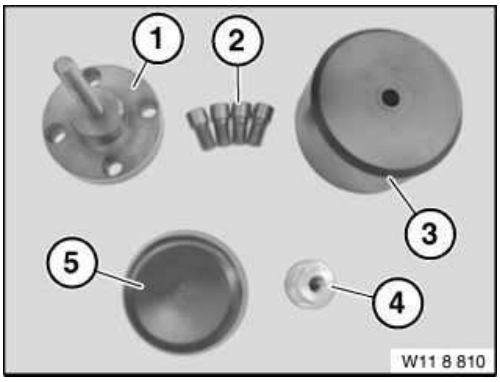
0 490 504 (00 9 120) Torque angle measuring dial



Common	Used in step 48 52
Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

0 496 137 (11 8 815) Holding sleeve

Common	Used in step 52
Usage	(Slip sleeve) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)



0 496 133 (11 8 811) Basic body

Common	Used in step 52
Usage	Liquidation of existing inventory and then available only as a complete tool set 11 8 810 = 83 30 0 496 132 - as of 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by

cardiagn.com

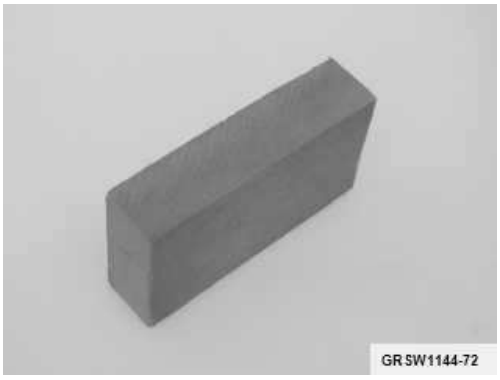
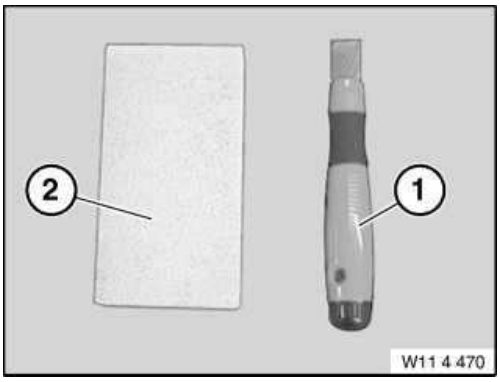
2 364 711 Plug



Common	Used in step 52
Usage	For closing the pressure oil holes for cleaning the cylinder head sealing surfaces.
Included in the tool or work	
Storage location	C20
Replaced by	
In connection with	
SI-Number	01 50 14 (203)

0 495 103 (11 4 471) Scraper

Common	Used in step 52
Usage	
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	



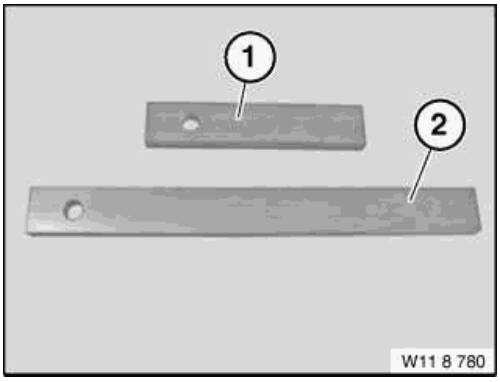
0 495 104 (11 4 472) Extractor

Common	Used in step 52
Usage	(grindstone)
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 102 (11 4 470) Tool

Common



Used in step 52 74

Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

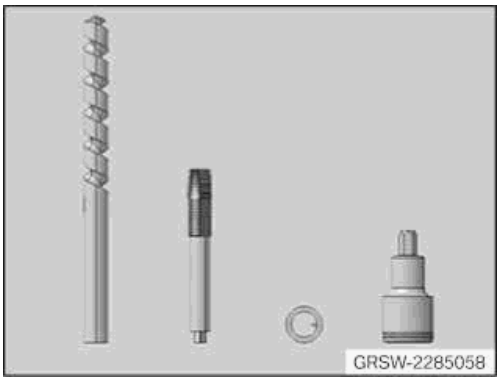
Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 103 (11 4 471)		**Scraper**	
2	0 495 104 (11 4 472)		**Extractor** (grindstone)	

0 496 120 (11 8 780) Plate

Common

Used in step 52



Usage	(Mounting plates) For securing transmission oil sump when gearbox is removed.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 496 121 (11 8 781)		**Plate** (Mounting plate, short)Discontinued; only available via set 11 8 780 = 0496120.	
2	0 496 122 (11 8 782)		**Plate** (Mounting plate, long) Discontinued; only available via set 11 8 780 = 0496120.

Overview Technical Data

Side clearance of piston rings	Used in step 38
Clean all components before measuring the side clearance.	
Side clearance of the plain rectangular compression ring	0,17 mm ... 0,27 mm
Side clearance of the taper faced piston ring	0,30 mm ... 0,50 mm
Side clearance of the oil scraper ring with spiral expander	0,2 mm ... 0,4 mm

Piston diameter	Used in step 39
Measure the piston diameter at distance (A) from the lower end of the piston skirt.	
Distance (A) to the lower end of the piston skirt	17 mm
Nominal dimension of piston diameter	83,936 mm ... 83,954 mm

Cylinder bore	Used in step 40

cardiagn.com

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

Axial play of crankshaft Used in step 44

Equipment installation status	0,090 mm ... 0,273 mm
Operating condition	0,11 mm ... 0,314 mm

Maximum permitted torque of the crankshaft Used in step 44

max. 2 Nm

Screw-in depth of thread cutter Used in step 53

Screw-in depth	18 mm

11 21 001 Replacing crankshaft

PRELIMINARY WORK

1 – Removing engine

- See additional information.

2 – Removing the acoustic cover

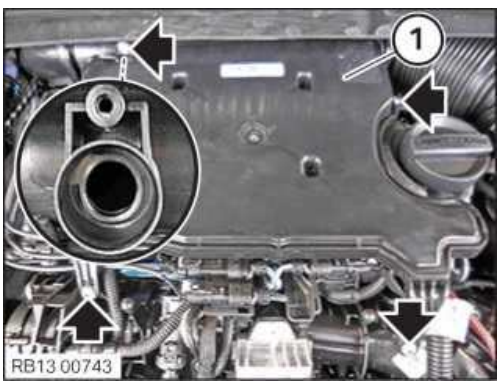
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

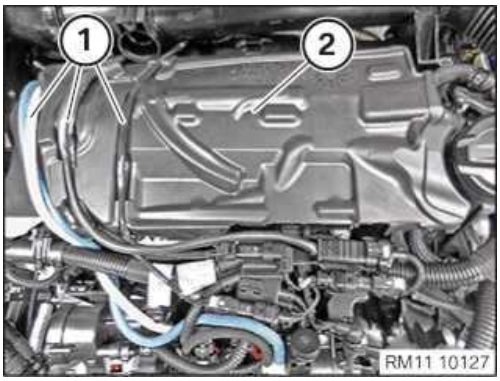


Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

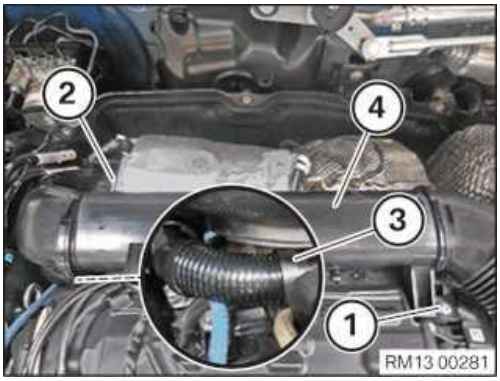


3 – Remove resonator

- Remove screws (arrows).
- Guide out and remove the resonator (1).

4 – Remove the acoustic cover for the injectors

cardiagn.com



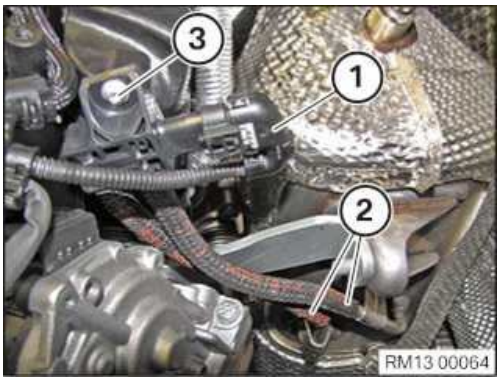
- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

5 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

6 – Remove differential pressure sensor

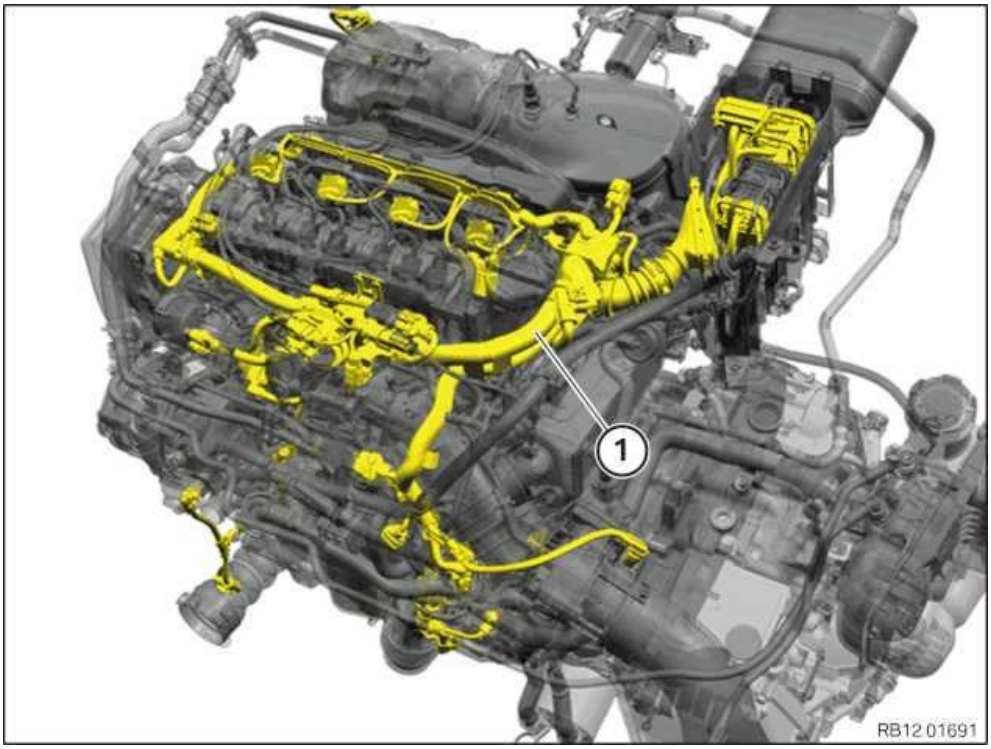


RISK OF DAMAGE

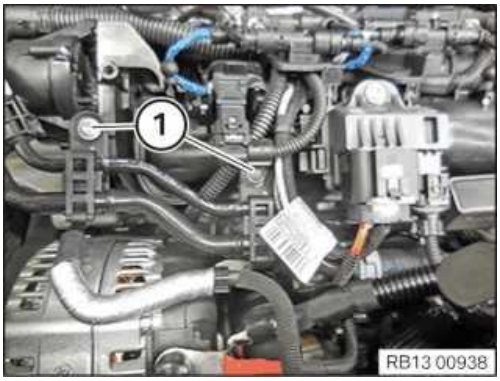
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



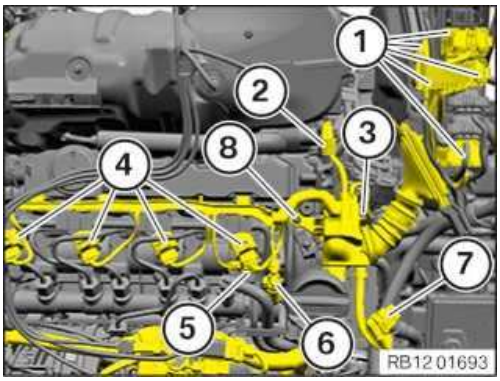
cardiagn.com



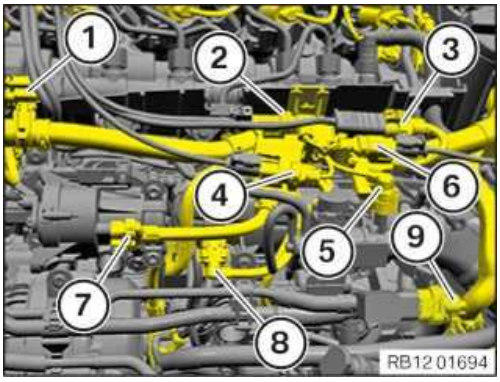
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

7 – Removing assemblies (on lifting table)

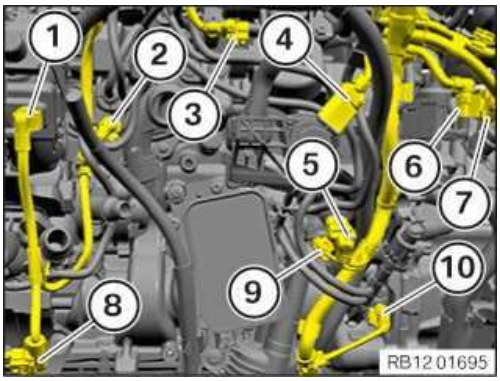
Overview: Wiring harness section for the engine



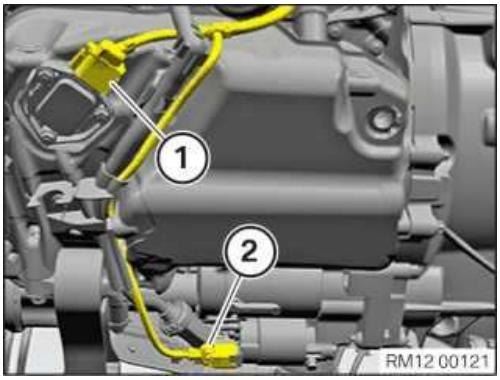
1 Wiring harness section for the engine



- Loosen screws (1).

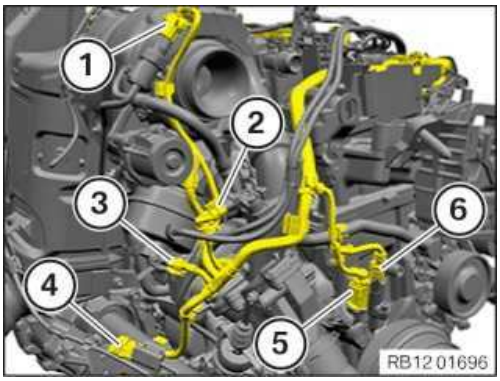


cardiagn.com

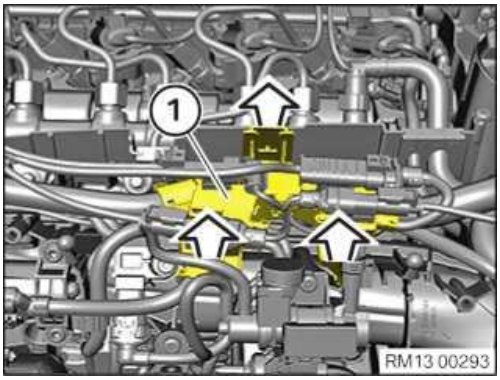


- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).

- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock connector (3) and pull it off from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

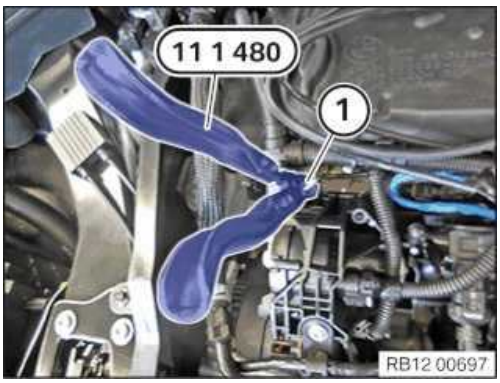


- Unlock and disconnect the connector (1) from the alternator.
- Unlock and disconnect the connector (2) from the electric changeover valve.
- Unlock and disconnect the connector (3) from the electric changeover valve.
- Unlock the connector (4) and pull it off the high pressure pump.
- Unlock the connector (5) and disconnect it from the oil pressure sensor.
- Unlock connector (6) and pull off from throttle body.
- Unlock the connector (7) and disconnect it from the intake air temperature sensor.
- Unlock the connector (8) and disconnect it from the air conditioning compressor.
- Unlock and disconnect the connector (9) from the solenoid valve.
- Unlock the connector (10) and pull it off the crankshaft sensor.

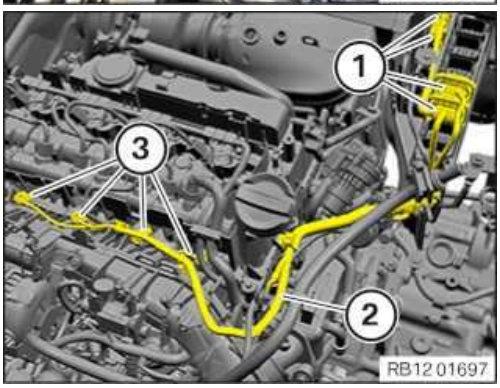


- Unlock the connector (1) and pull off of the oil-level sensor.
- Unlock connector (2) and remove from starter motor.

cardiagn.com



- Unlock the connector (1) and disconnect it from the exhaust gas pressure sensor.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock the connector (3) and pull it off the exhaust turbocharger.
- Unlock the connector (3) and disconnect it from the differential pressure sensor.
- Unlock connector (4) and pull it off from the monitoring oxygen sensor.
- Unlock the connector (5) and pull it off the oil pressure switch .
- Unlock connector (6) and disconnect from switching valve.
- Detach, feed out and remove the wiring harness from the clamps.



▶ **Removing the cable clips from the intake plenum**

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Pull off all connectors (3) from glow element using special tool **0 490 796 (11 1 480)**.
- Loosen screw (2) and remove the ground strap.
- Detach, feed out and remove the wiring harness from the clamps.

▶ **Removing the drive belt for alternator**

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

cardiagn.com

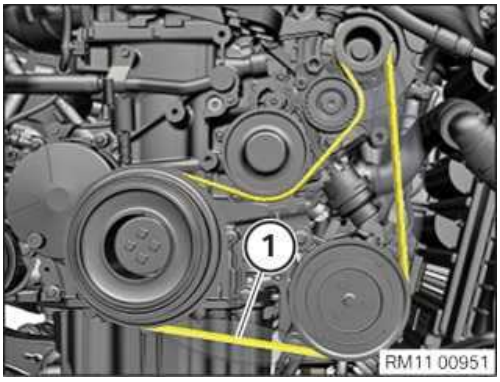
CAUTION

Component with preload.

Danger of injury!

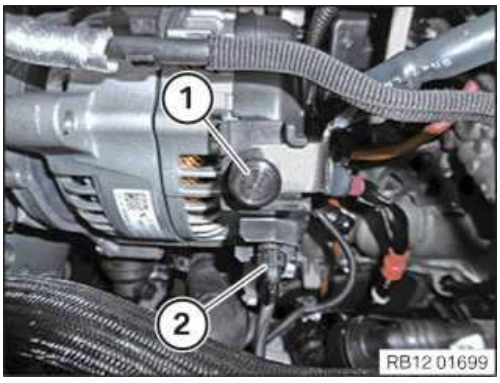
- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION



If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

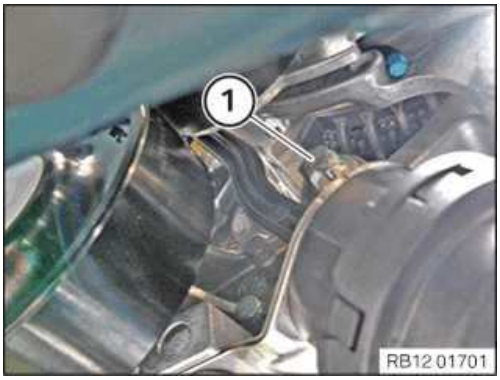
TECHNICAL INFORMATION



The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool **0 496 268 (11 0 390)**.

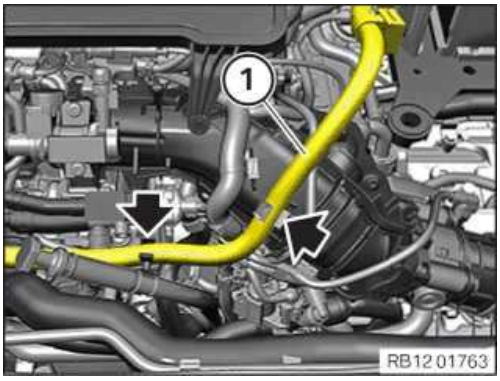
- Guide out the drive belt for the alternator (1) and remove it.



- Remove the cover (1) and loosen the nut below.
- Disconnect positive battery cable from alternator.
- Unlock and disconnect the connector (2) from the alternator.

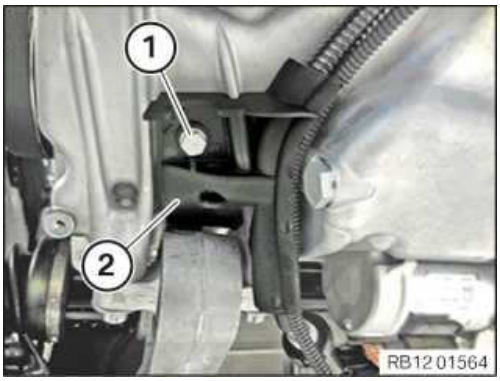
cardiagn.com

- Detach screw (1) on top on the alternator.



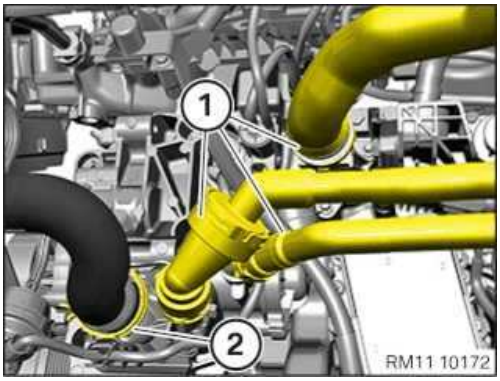
- Detach screw (1) below on the alternator.

- Feed out alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support and remove.



- Loosen screws (1).
- Feed out and remove the air conditioning compressor (2).

- Release the positive battery cable (1) from the clamps (arrows).

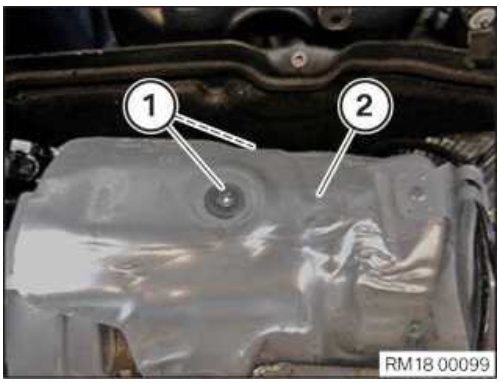


cardiagn.com

- Loosen screw (1).
- Guide out and remove holder (2).

- Feed out positive battery cable from the clamps (1) and remove.

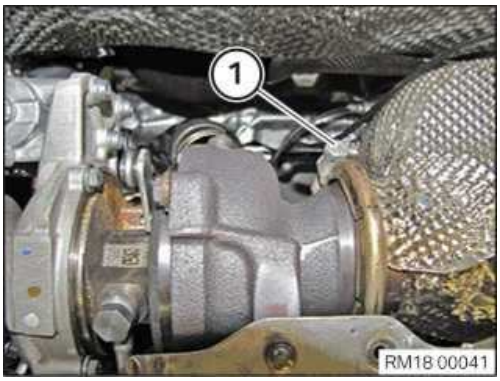
- Unlock and disconnect coolant lines (1).
- Guide out the coolant lines (1) and remove it.
- Detach the clamp (2).
- Guide the coolant hose out and remove.



▶ **Removing heat shield from top exhaust turbocharger**

WARNING

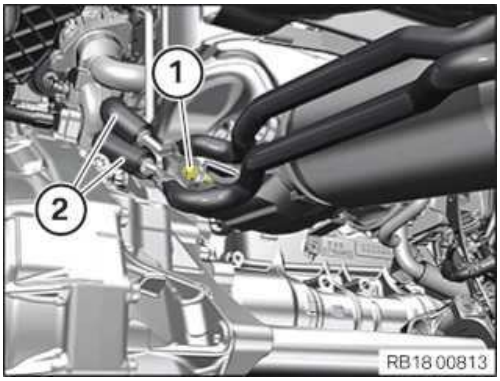
Hot surfaces.



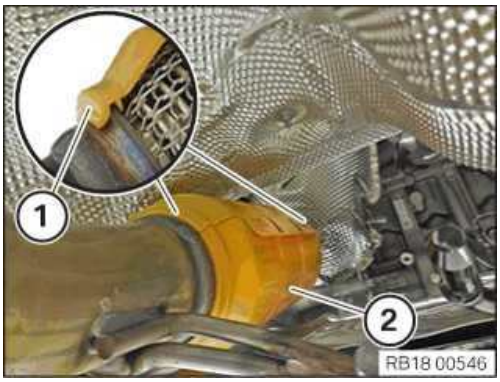
Risk of burning!

- Perform all work only on components that have cooled down.

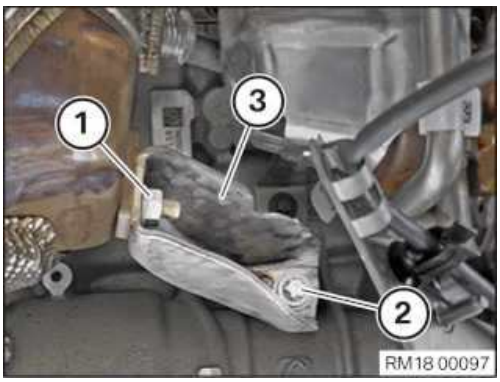
- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).



cardiagn.com

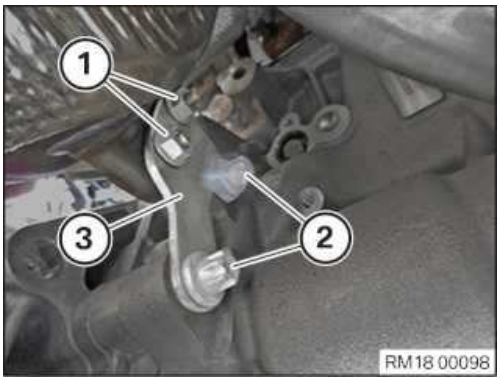


- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



- Loosen nuts (1).

- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

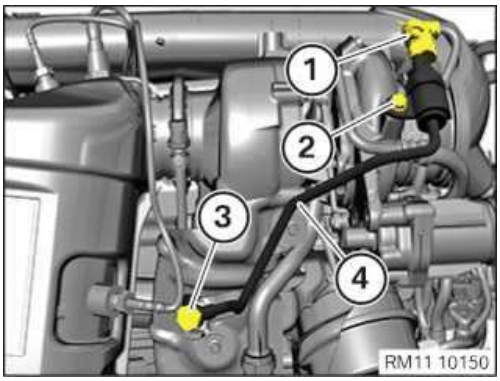


- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.

- Loosen nut (1).
- Loosen screw (2).
- Remove holder (3).

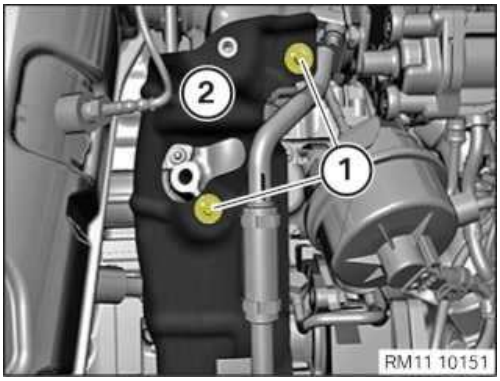
cardiagn.com

- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).
- Guide out and remove diesel particulate filter .



▶ **Remove the heat shield from the exhaust turbocharger at the bottom**

WARNING



Hot surfaces.

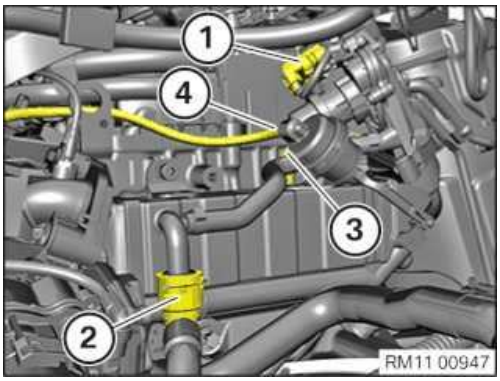
Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).

▶ **Removing the exhaust-gas recirculation cooler**

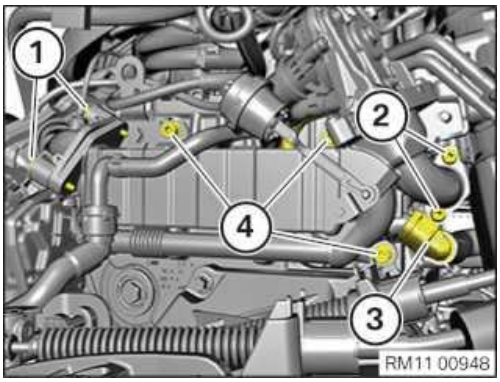


WARNING

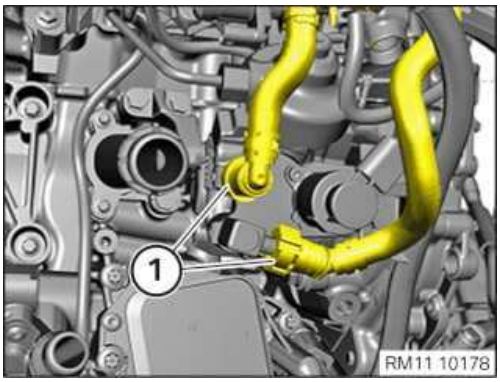
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

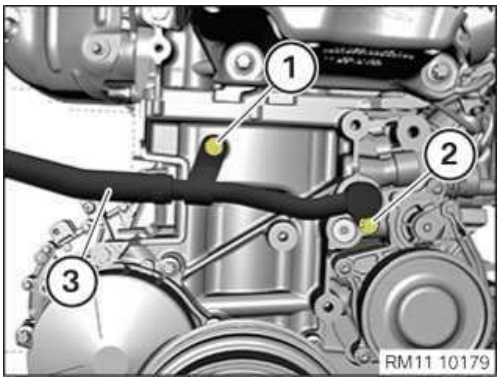


cardiagn.com



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



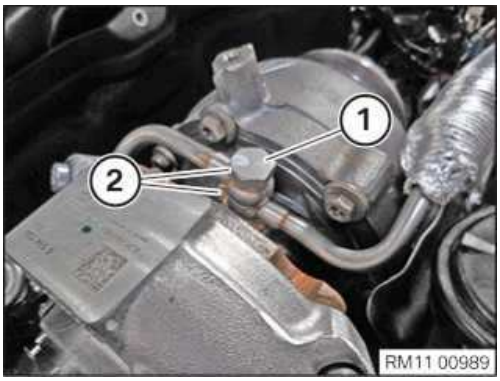
- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

- Unlock the fuel lines (1) and disconnect from the high pressure pump.
- Remove the fuel lines.

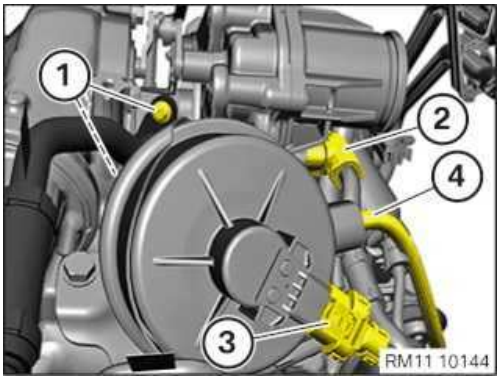
- Loosen screws (1) and (2).
- Remove coolant line (3).

8 – Removing the low-pressure stage turbocharger



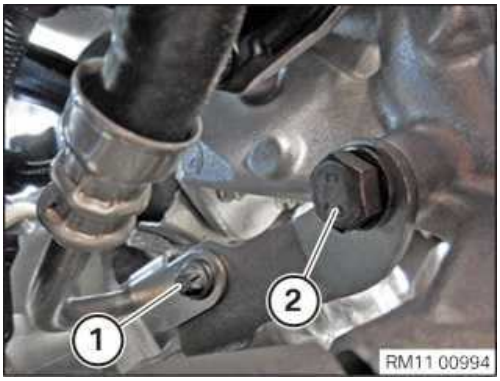
WARNING

Hot surfaces.



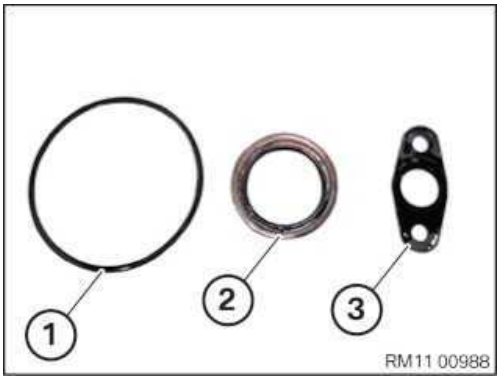
Risk of burning!

- Perform all work only on components that have cooled down.



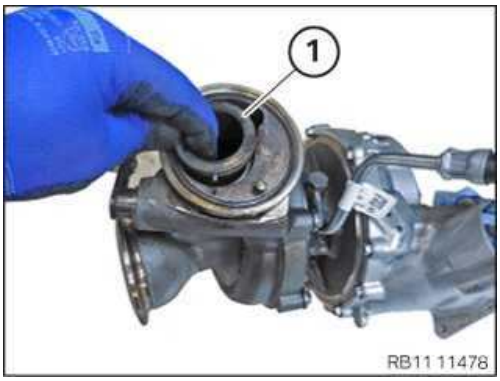
cardiagn.com

- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.



- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.

- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).



- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

cardiagn.com

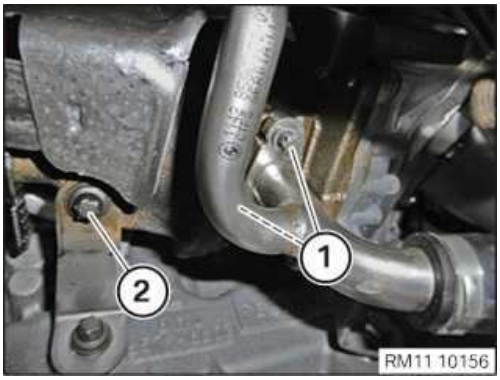
- Remove the spacer ring (1).

9 – Removing the high-pressure stage exhaust turbocharger

WARNING

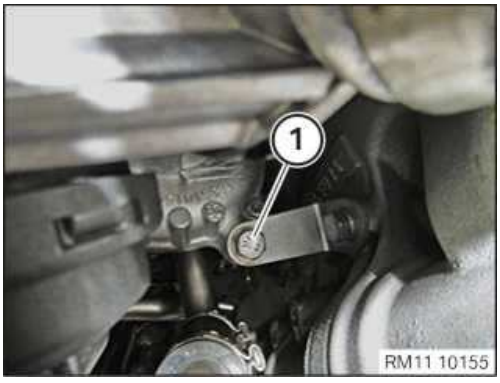
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

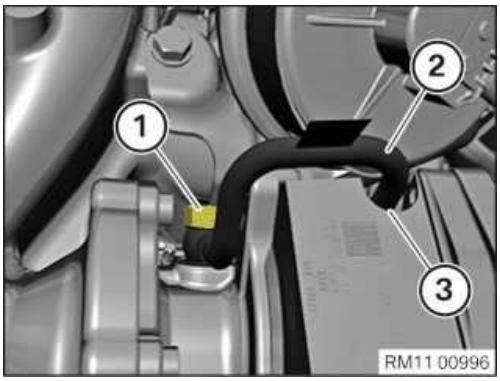
CAUTION



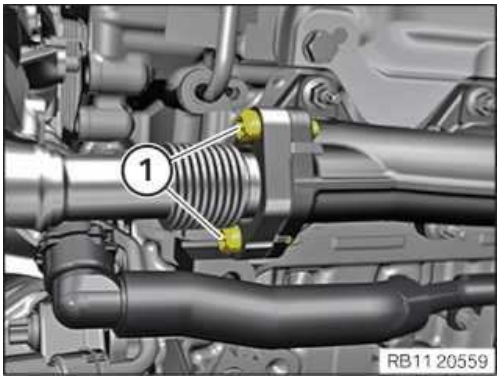
Heavy component.

Heavy components can lead to injury or damage.

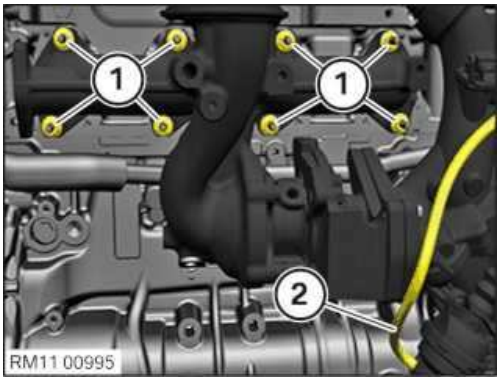
- Remove and install heavy components with the aid of another person/other persons.



- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).

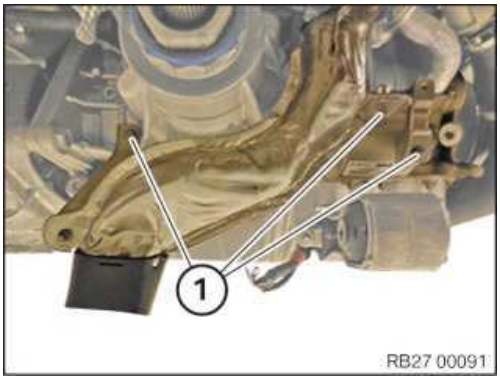


- Release screw (1) from the right wheel arch.

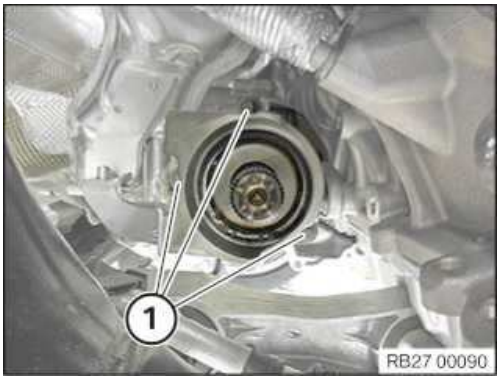


cardiagn.com

- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

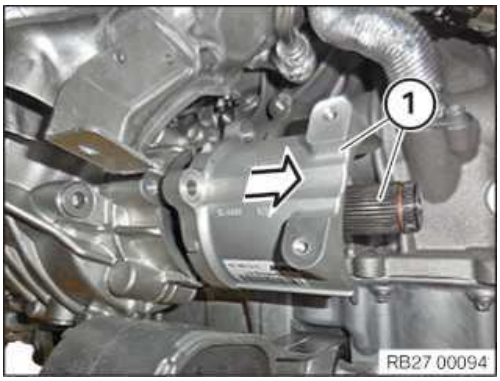


- Loosen screws (1).

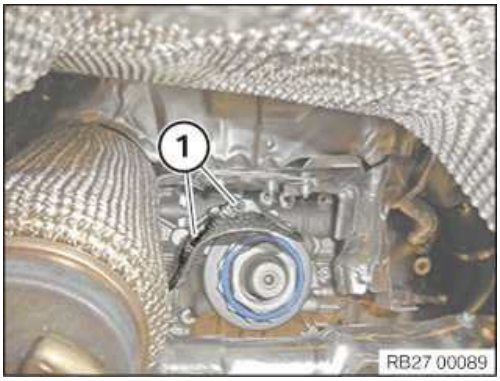


- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

10 – Remove the intermediate shaft with the support tube

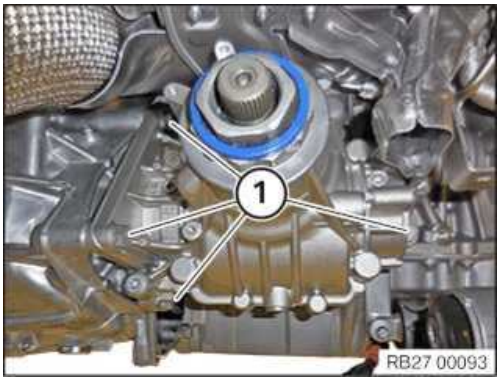


- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).

cardiagn.com



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

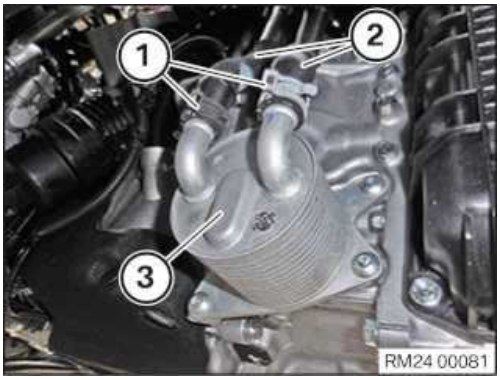
11 – Remove transfer box (VTG)

- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

12 – Detach the engine from the automatic transmission

Prerequisite



Engine has been removed.

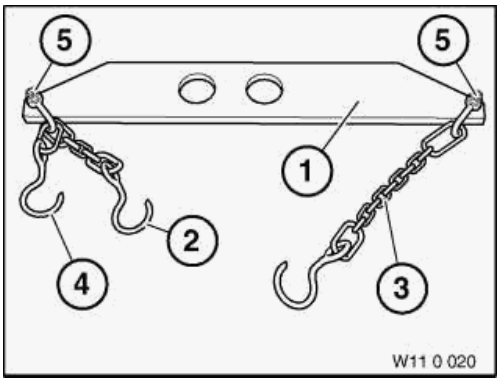
CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Unfasten hose clamps (1).
- Disconnect coolant hoses (2) from transmission oil cooler (3).
- Catch the emerging coolant.



cardiagn.com

- Crank engine with special tool **0 493 380 (11 6 480)** at vibration damper in direction of rotation.
- Unscrew the nut (1) of the torque converter.
- Crank engine further and release remaining 5 nuts.

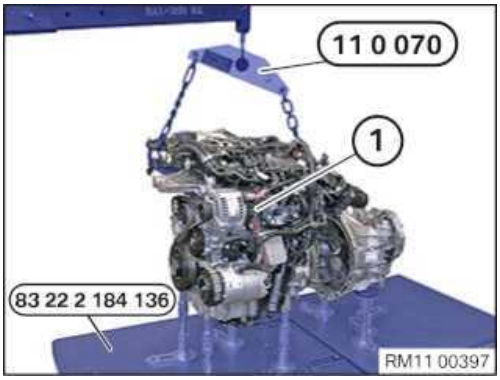
- Stage the workshop crane **2 220 718**.

- Stage the lifting gear .

TECHNICAL INFORMATION

Conduct the following operation with the assistance of a second person.

- Secure the automatic transmission against dropping using a workshop crane **2 220 718** and lifting gear .
- Remove screws (arrows).
- Remove the automatic transmission with help from an auxiliary person and using the workshop crane **2 220 718** including lifting gear and put it to one side.



cardiagn.com

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm

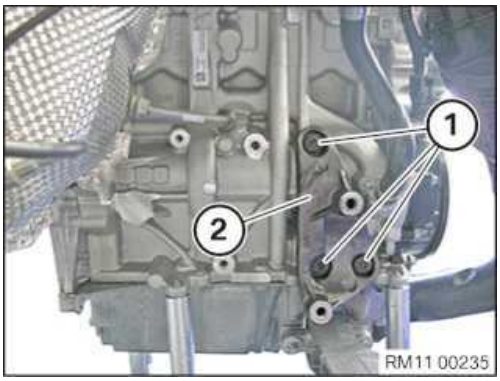
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Attach engine lifter to special tool and lift engine (1) off lifting table.

13 – Mount engine on assembly stand

CAUTION



Heavy component.

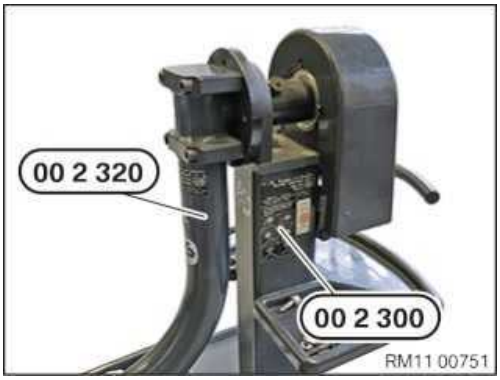
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

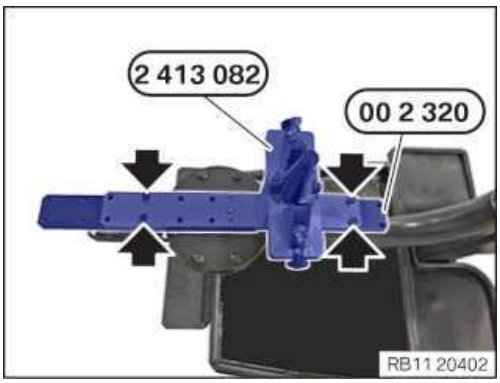
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Loosen screws (1).
- Guide out and remove holder (2).



cardiagn.com

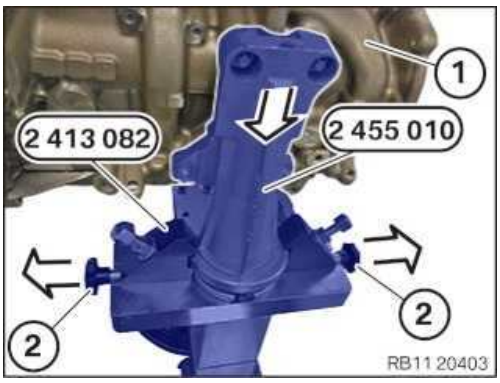


- Position the special tool **2 455 010** on the engine (1).
- Position the standard bolts **M10x30**.
- Tighten the standard bolts (arrows).
-

Special tool 2 455 010 to crankcase

M10x30		Tightening torque	38 Nm

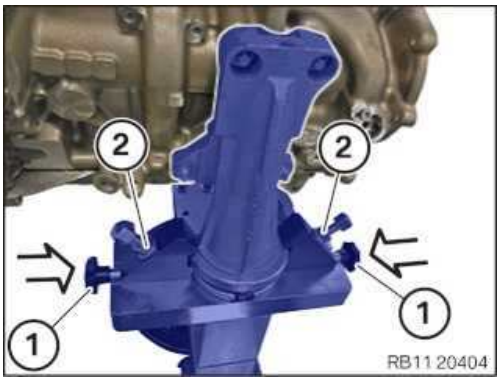
- Prepare the assembly stand **0 495 187 (00 2 300)** with the special tool **0 495 196 (00 2 320)**.



- Screw the special tool to the **0 495 196 (00 2 320)** special tool.
- Tighten screws (arrows).
-

Special tool 11 8 930 to special tool 00 2 320

M14x35		Tightening torque	160 Nm

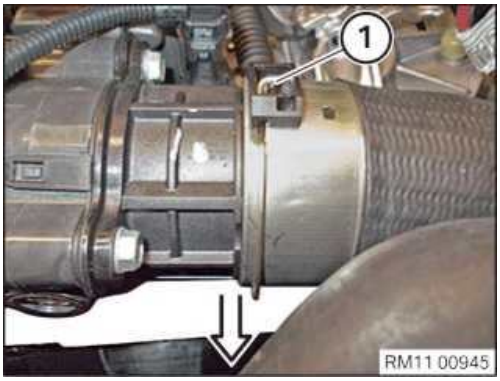


- Position the engine lifter with the special tool and the engine on the special tool **0 495 187 (00 2 300)**.

- Detach the holder (2) in the direction of the arrow.
- Position the engine (1) with the special tool **2 455 010** in the direction of the arrow on the special tool .

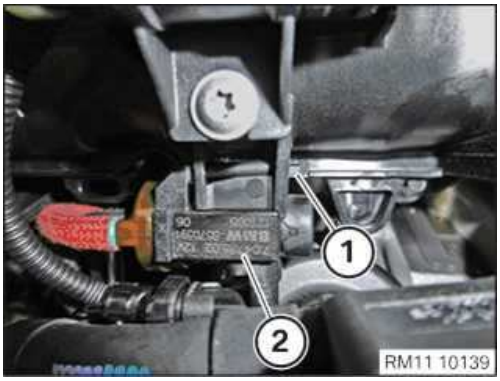
cardiagn.com

- Lock the holder (1) in direction of arrow.
- Tighten nuts (2).



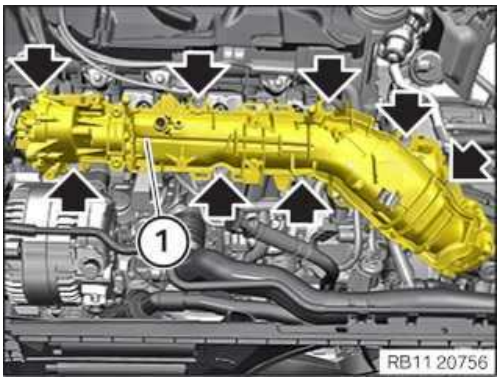
14 – Removing the intake plenum

TECHNICAL INFORMATION

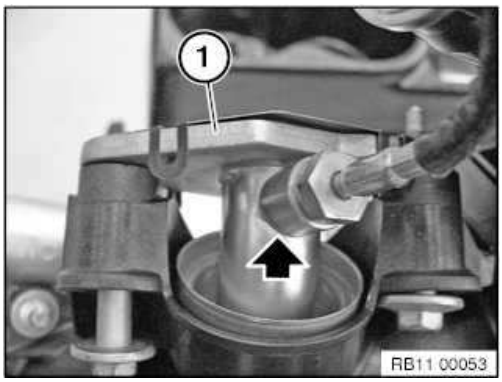


Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.



- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

cardiagn.com

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

15 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

cardiagn.com

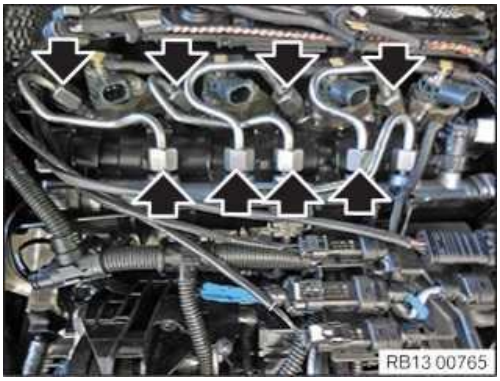
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION



If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

16 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

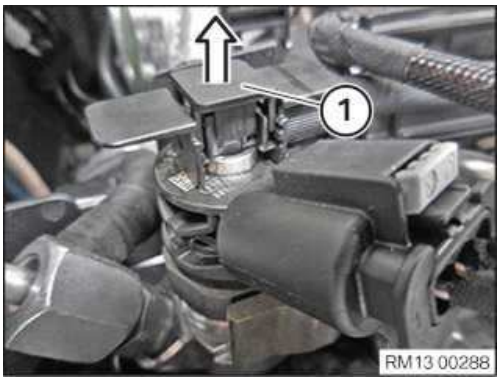
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE



Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

17 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

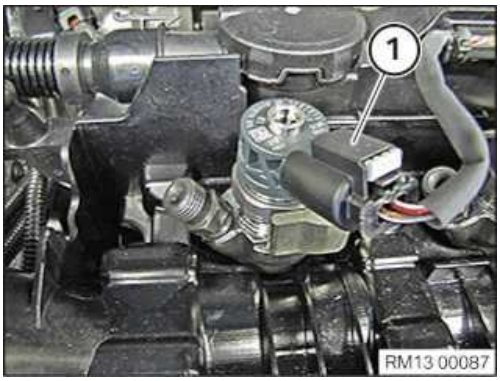
Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

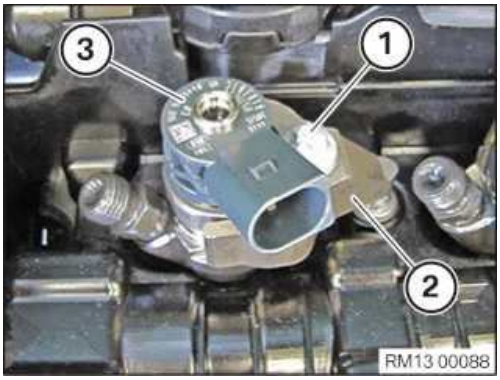
RISK OF DAMAGE

 **Electrostatic discharge.**



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

cardiagn.com

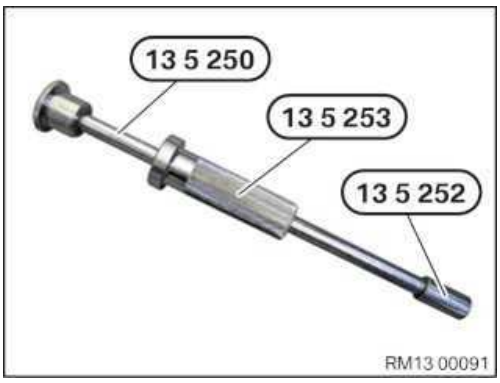
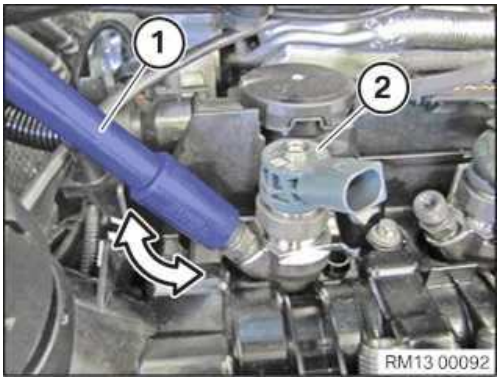
- Unlock and disconnect connector (1).

- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.



▶ **Loosen stuck injectors**

RISK OF DAMAGE



Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)** back onto the special tool **0 493 321 (13 5 250)**.

- Screw the special tool (1) **0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1) **0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

cardiagn.com

WARNING

Working on fuel system.

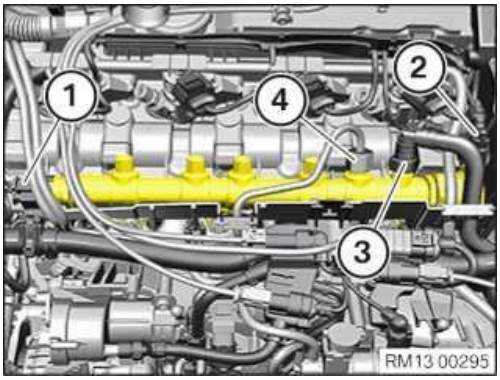
Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

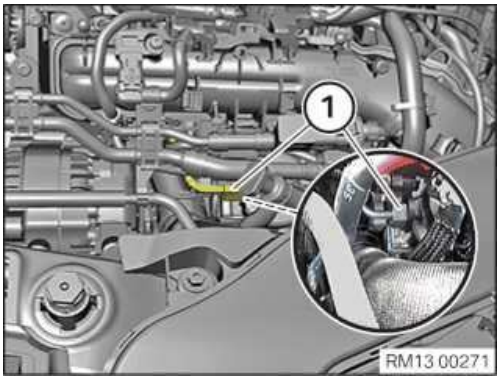
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.



- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

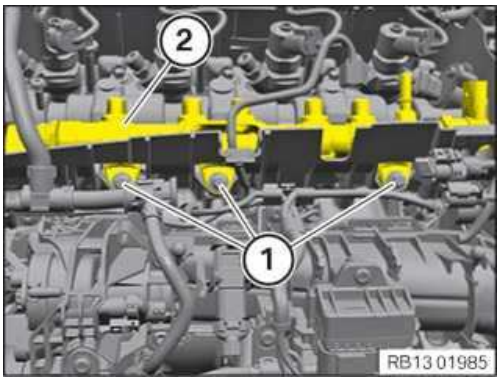
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Unlock and disconnect connector (1).
- Unlock and disconnect connector (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool .
- Reset special tool early on to avoid bending pressure lines.

- Slacken the union nut (1) on the high pressure pump.

cardiagn.com

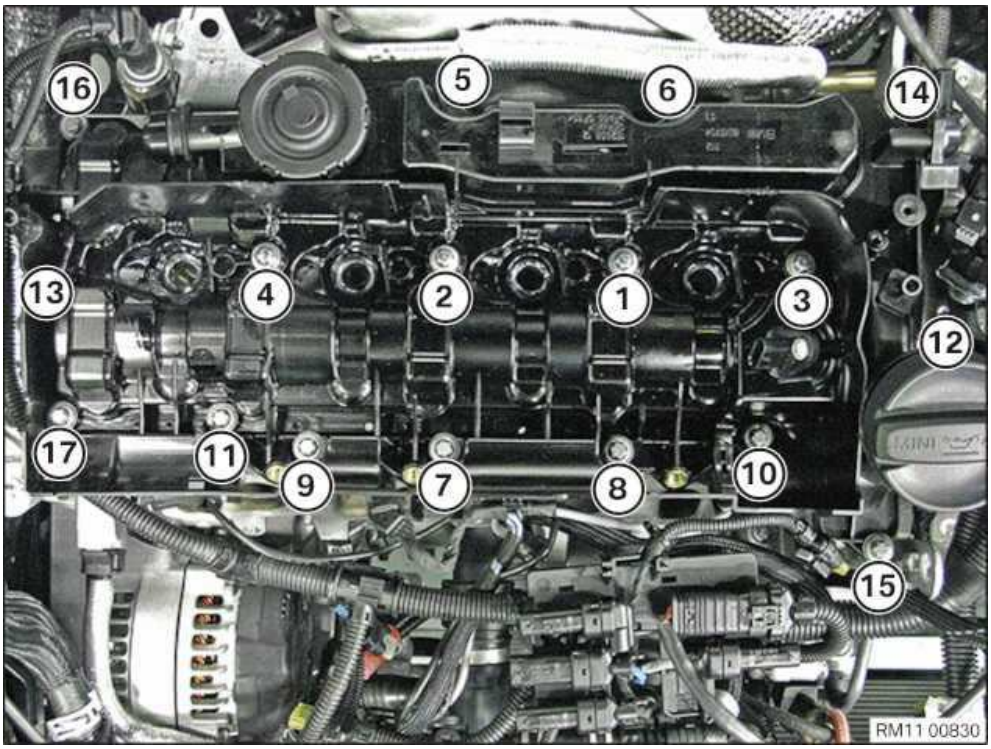
- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

19 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

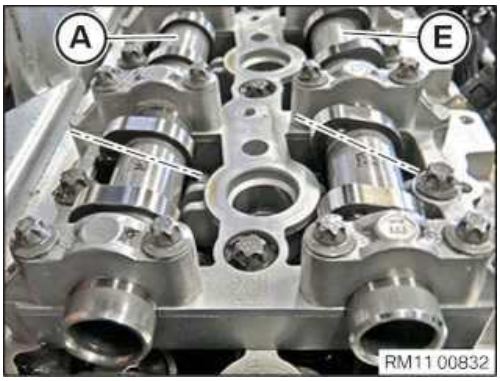
- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

20 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.



The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

21 – Remove chain tensioner piston

cardiagn.com

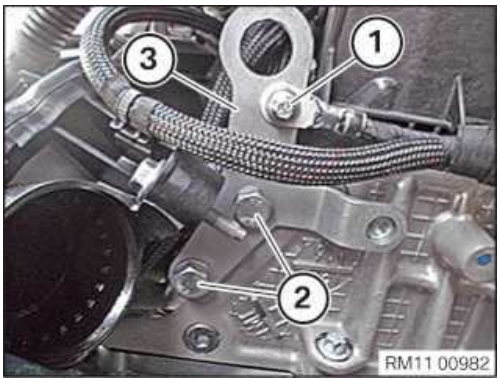
WARNING

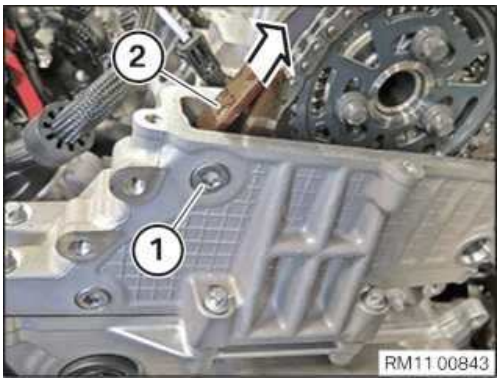
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



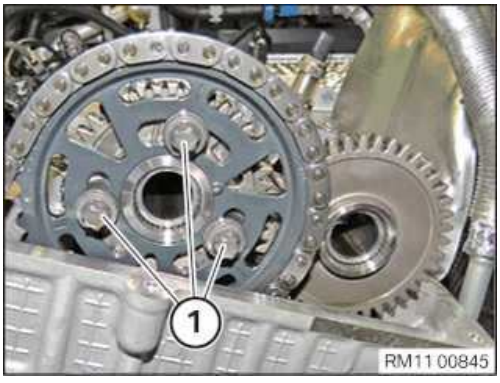
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

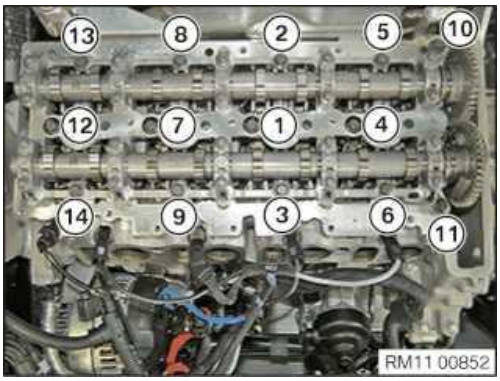
- Remove the chain tensioner piston (1).

22 – Remove the timing chain guide rail



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.



23 – Removing the camshaft sprocket on the intake camshaft

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

24 – Removing the camshaft support

cardiagn.com

- Evenly loosen all screws in a sequence from (14) to (1).
- Loosen and remove all screws in a sequence from (14) to (1).
  Both camshafts can be removed with the camshaft carrier.
- Remove the camshaft support including camshafts towards the top.

25 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

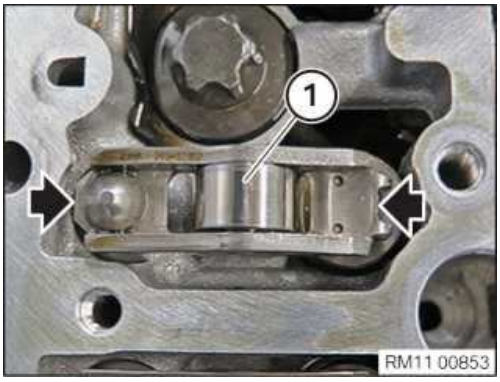
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool or conventional tools.
- Feed out preheating elements and remove.

26 – Remove roller cam followers

- Guide out and remove all roller cam followers (1) (arrows).
- Place all roller cam followers (1) in order in special tool **0 495 105 (11 4 480)**.

  Roller cam followers that have already been used must be installed in same position again.

27 – Removing the hydraulic valve clearance compensating element

cardiagn.com

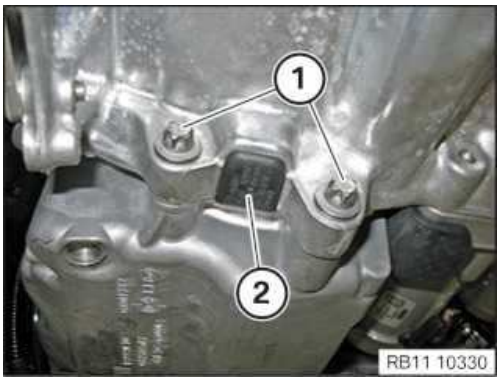
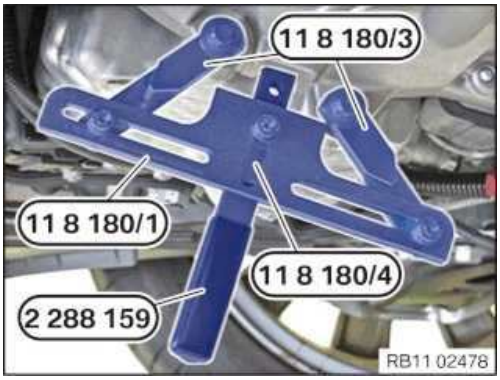
RISK OF DAMAGE

Contaminant or foreign body.

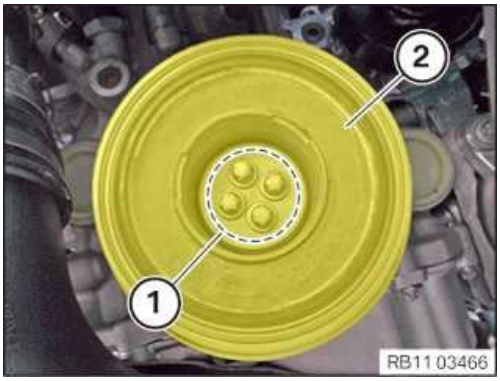


Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.



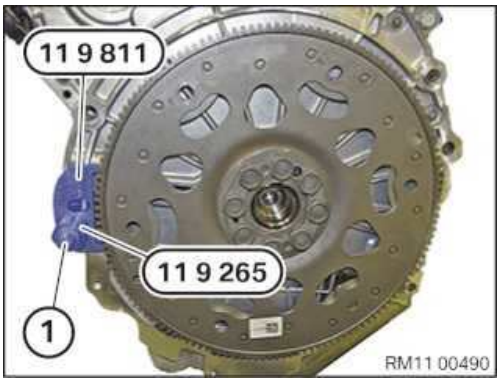
28 – Removing the vibration damper

- Release the transmission bolts (1).
- Remove the protective cap (2).

- Position special tool **0 493 587 (11 8 180)** as illustrated.
- Fasten the special tool **0 493 587 (11 8 180)** to the transmission with transmission bolts.

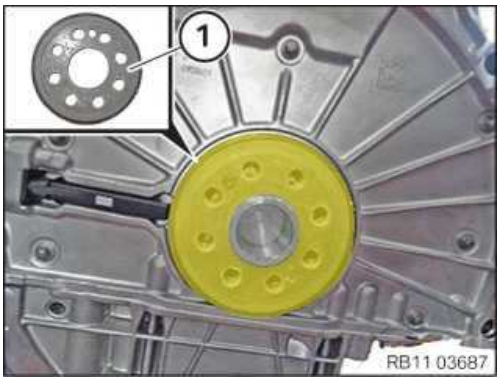
- Loosen screws in the area (1).
- Remove the vibration damper (2).

29 – Removing flywheel



cardiagn.com

CAUTION



Heavy component.

Heavy components can lead to injury or damage.

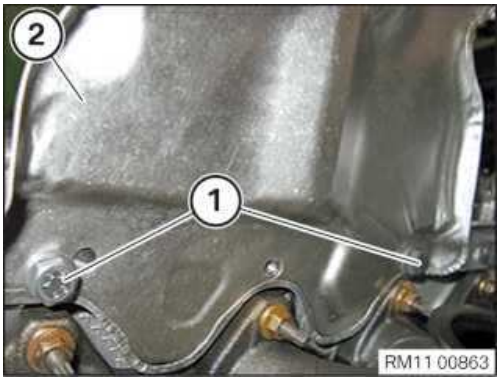
- Remove and install heavy components with the aid of another person/other persons.

- Secure flywheel with a transmission bolt (1) and the special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.
- Unfasten flywheel bolts.
- Remove flywheel.

RISK OF DAMAGE

Electrostatic discharge.

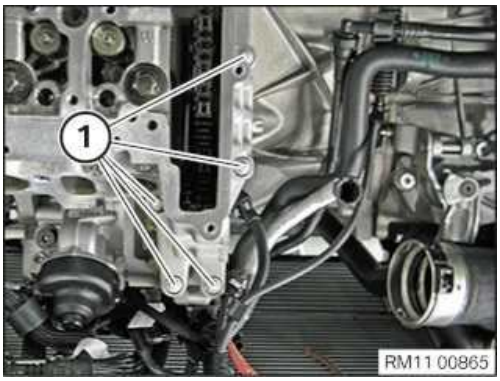
Damage to or destruction of electrical components.



- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Remove the increment wheel (1) from the crankshaft and set correctly.

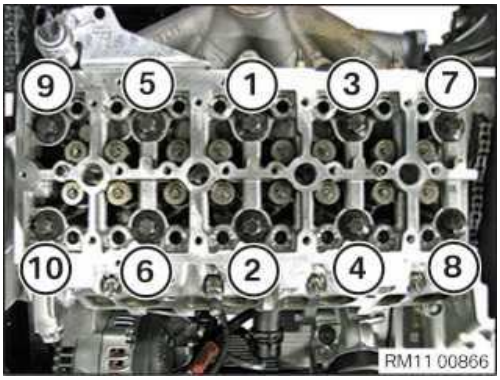
30 – Remove rear timing case cover



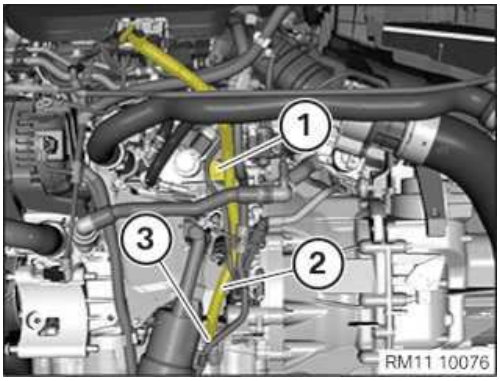
Prerequisite

Transmission is removed.

- Loosen screws (1).
- Feed out the heat shield (2) and place to one side.

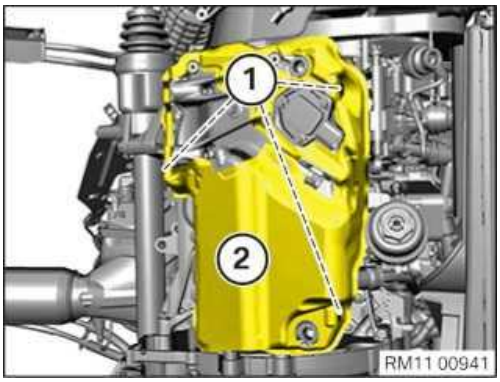


cardiagn.com



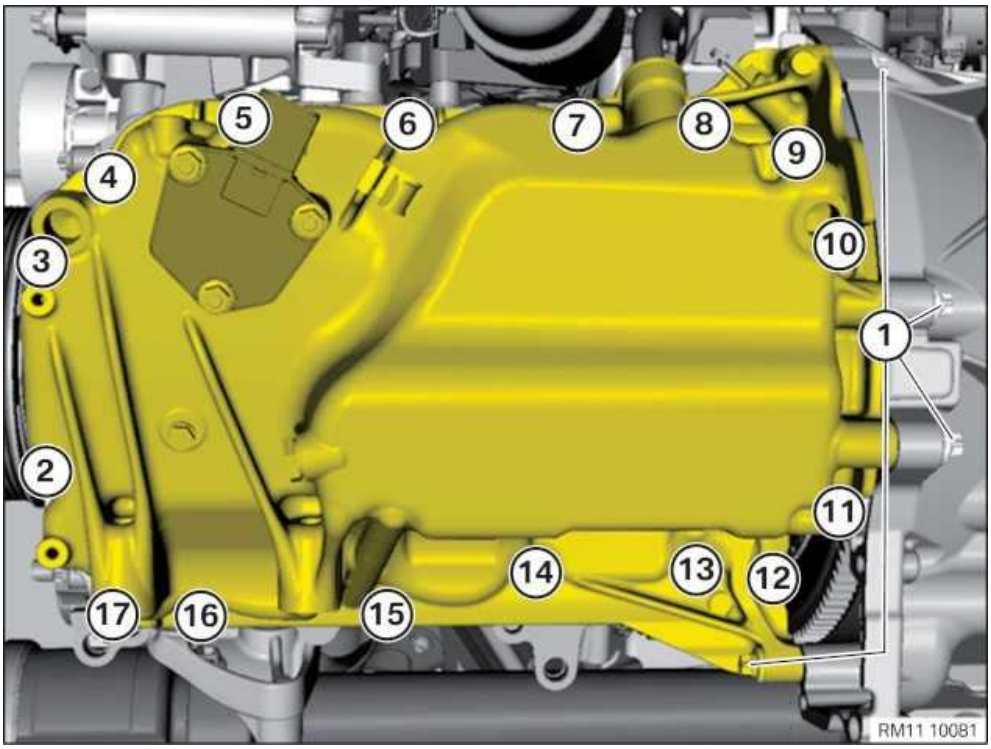
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

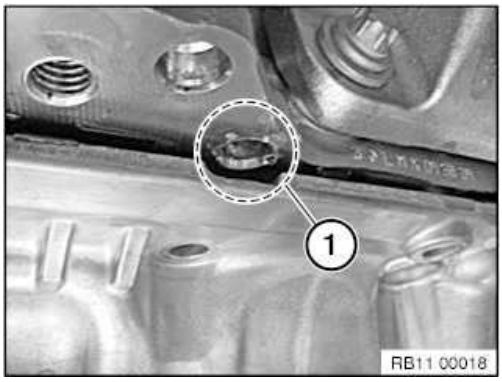


- Loosen screws (1).

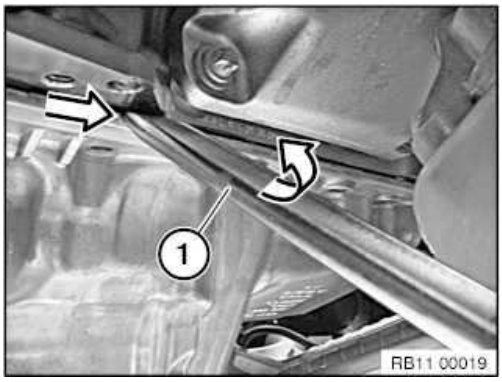
- Loosen the cylinder head bolts in the sequence from (10) to (1).
- Remove cylinder head bolts (1) to (10) with washers.
- Remove cylinder head.



- Loosen screw (1).
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- Remove sealing ring (3) from oil sump if necessary.

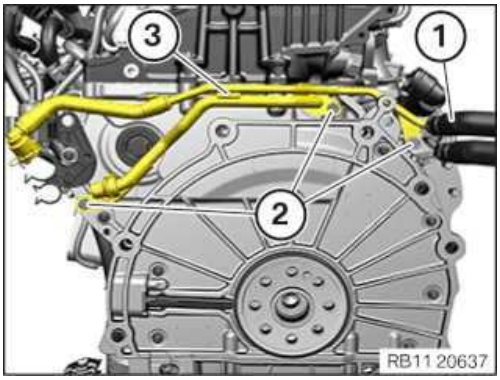


- Expanding rivets (1) on both sides of the acoustic cover (2).
- Feed out and remove the acoustic cover (2).

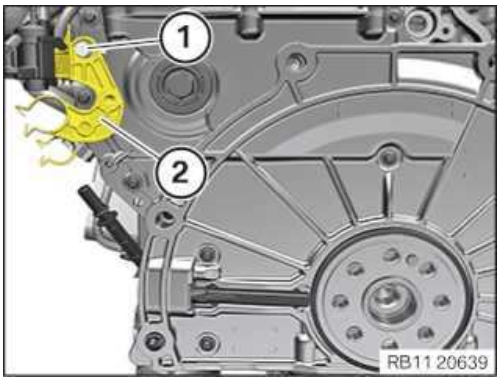


cardiagn.com

- Loosen the transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).

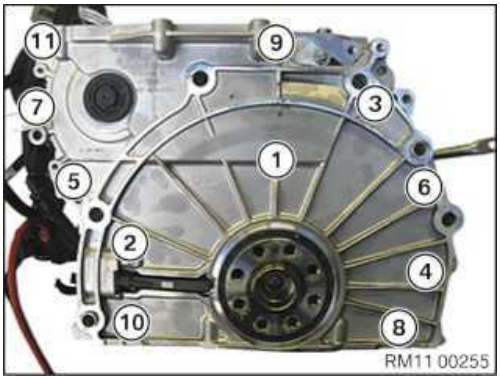


- Release oil sump only in area (1).

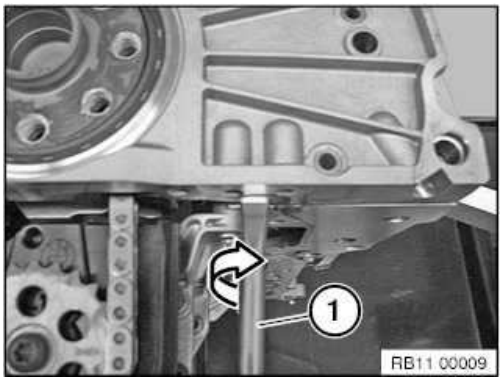


- Detach the oil sump with a suitable mounting lever (1) carefully at the point provided.
- Secure the oil sump against falling.

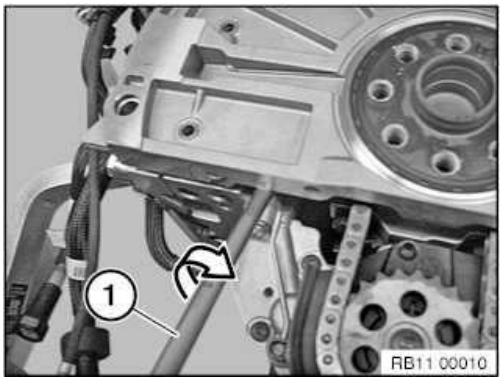
▶ **If installed: Remove coolant line of the SCR metering module**



- Unlock and disconnect the coolant hose (1).
- Loosen screws (2).
- Remove the coolant line (3).



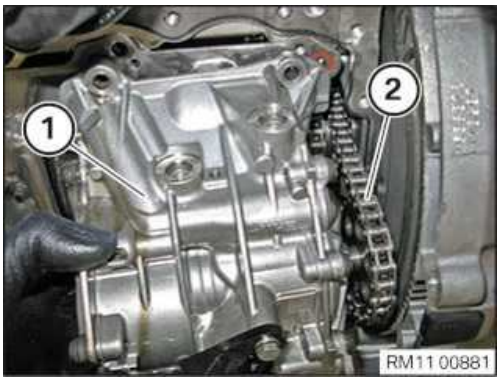
cardiagn.com



- Loosen screw (1).
- Guide out and remove holder (2).

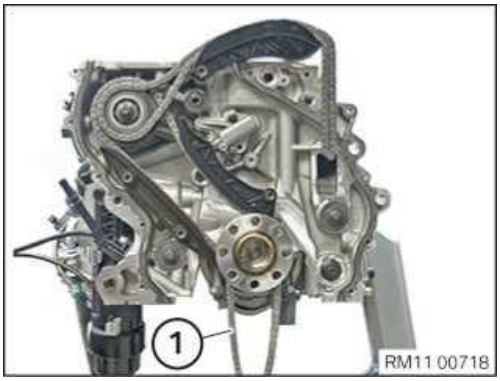
- Loosen screws in the order (11) to (1).

- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.



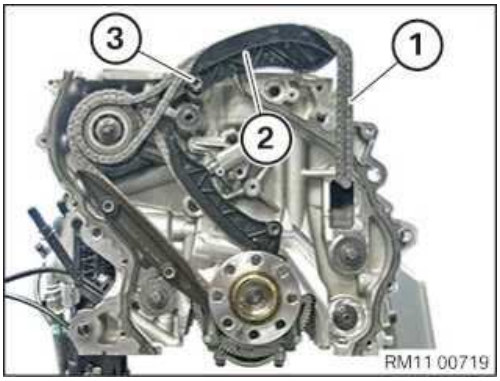
- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.
- Remove the timing case cover.

31 – Remove the oil vacuum pump



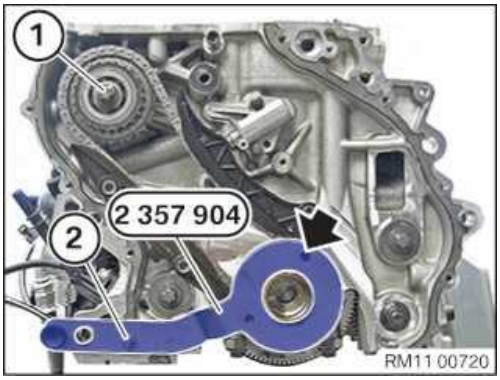
- Loosen screws (1) of the oil vacuum pump (2).

cardiagn.com

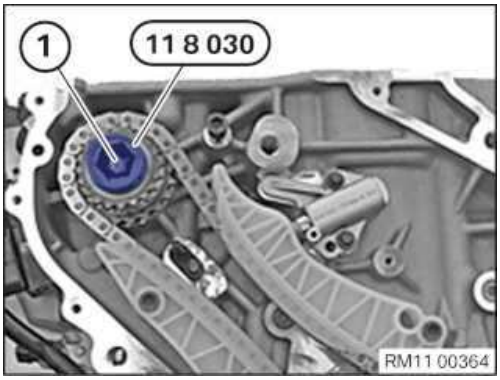


- Remove oil vacuum pump (1) and remove from the drive chain (2).

32 – Remove both timing chains

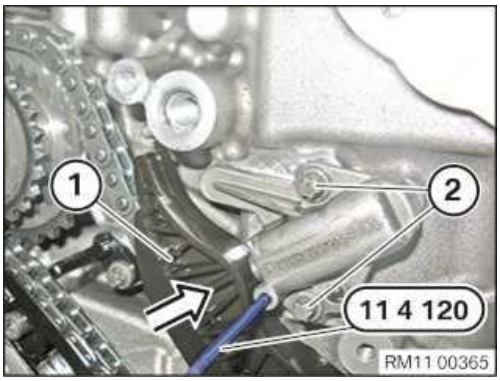


- Remove drive chain (1) for oil pump.

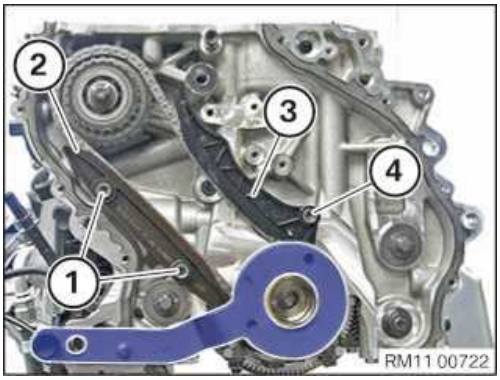


- Remove the timing chain (1) for the camshafts.
- Remove the tensioning rail (2) from the bearing journal (3).

  Bearing journal (3) does not have to be disassembled.

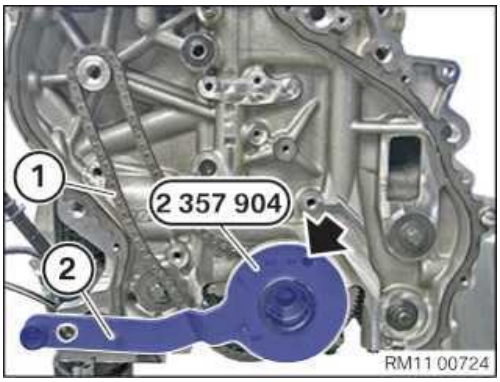


- Secure crankshaft to release central bolt (1) of high pressure pump.
- Position crankshaft with guide pin (arrow).
- Secure special tool **2 357 904** with bolt (2) on crankcase.
- Release central bolt (1) of high pressure pump; do not remove.



- Screw special tool **0 496 725 (11 8 030)** into sprocket of high pressure pump.
- Unscrew central bolt (1) of high pressure pump until central bolt can be supported on special tool **0 496 725 (11 8 030)**.
- Continue turning central bolt (1) until camshaft sprocket is released from high pressure pump shaft.

cardiagn.com



- Press chain tensioner in with tensioning rail (1) by hand in the direction of the arrow until the special tool **0 491 012 (11 4 120)** can be positioned.
- Loosen screws (2).
- Remove chain tensioner.

- Loosen both bearing journals (1).
- Remove the guide rail (2).
- Loosen the bearing journals (4).
- Remove the tensioning rail (3).

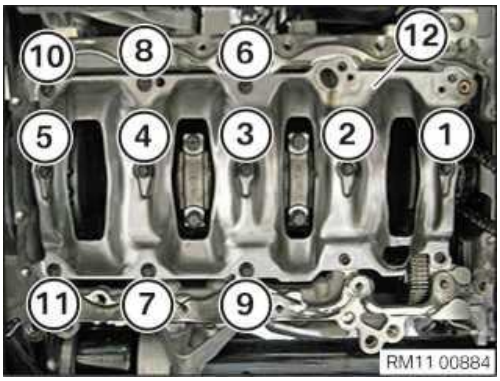
- Remove bolt and camshaft sprocket (1) of high pressure pump.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Unscrew the bolt (2) and remove the special tool **2 357 904**.
- Remove the timing chain (1).

33 – Removing the oil deflector



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

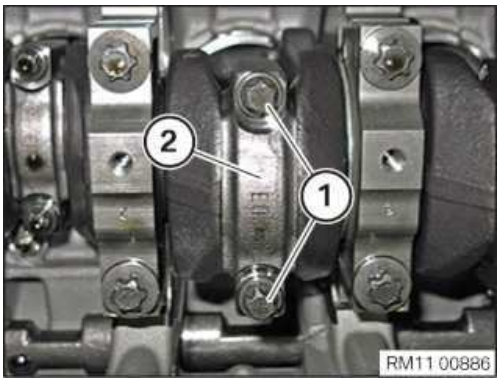
- Loosen screws in the order (11) to (1).
- Guide out and remove the oil deflector (12).

34 – Remove the connecting rod bearing cap

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.



- Always install all bearing shells and bearing supports in the same position from which they were removed.

TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.
A single connecting rod is not permitted to be replaced. Always replace all connecting rods.

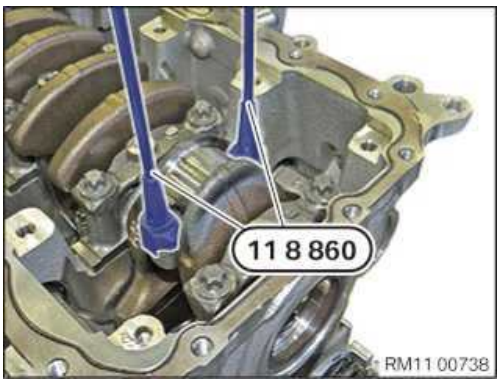
- Turn the crankshaft until the connecting rod bearing journal (1) reaches a vertical position.

- Unscrew the connecting rod bolts (1).

TECHNICAL INFORMATION

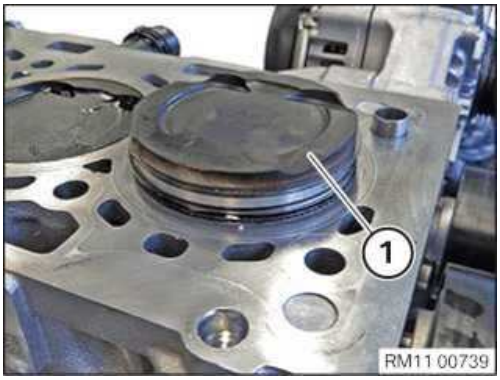
Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.
Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Remove the connecting rod bearing cap (2) and put to one side in the correct order.



35 – Removing the piston with connecting rod

cardiagn.com



TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Screw special tool **0 496 144 (11 8 860)** in at large connecting rod eye.

RISK OF DAMAGE

Damage on the cylinder wall and oil spray nozzles.

Major force can scratch the cylinder wall and bend the oil spray nozzles.

- Carefully move the piston and connecting rod in the engine block.

- Remove the piston (1) and connecting rod.

36 – Remove the connecting rod bearing shells

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.

TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.

A single connecting rod is not permitted to be replaced. Always replace all connecting rods.

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Remove the connecting rod bearing (2) from the connecting rod (1) and store it properly.

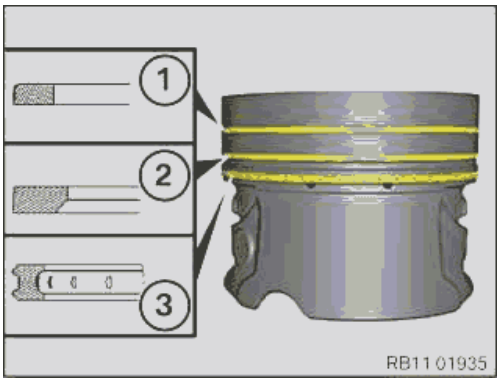
cardiagn.com

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Remove the connecting rod bearing (2) from the connecting rod bearing cap (1) and store it properly.



37 – Measure side clearance of piston rings

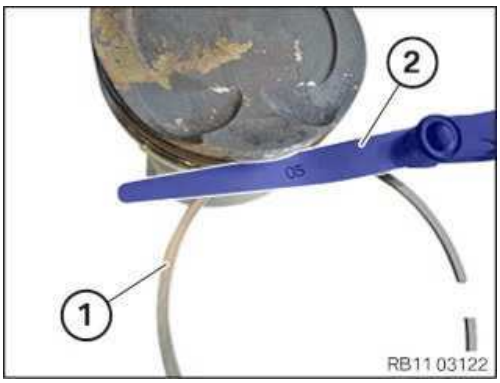
RISK OF DAMAGE

Damage to the piston rings.

Piston rings can bend or break due to large applications of force.

- Handle piston rings carefully.
- Only bend piston ring up lightly.

TECHNICAL INFORMATION



- Note the installation position of the component. The component may be installed in various installation positions.

- Mounting orientation of the piston rings

Position number	Description
1	1. Piston ring (plain rectangular compression ring)
2	2. Piston ring (taper faced piston ring)
3	3. Piston ring (oil scraper ring with spiral expander)

Check

- Install all piston rings (1) consecutively as shown in the piston ring groove. Measure the side clearance with a feeler gauge (2).

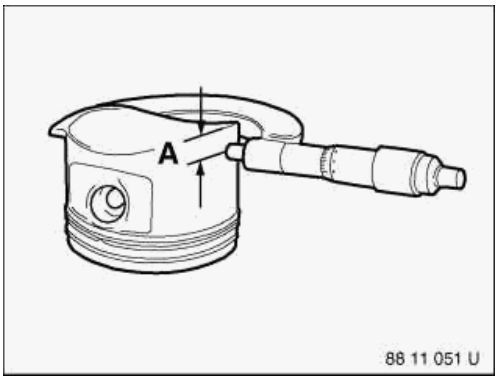
cardiagn.com

desired state

- The side clearance of the piston rings is within the tolerance.

Side clearance of piston rings

Clean all components before measuring the side clearance.	
Side clearance of the plain rectangular compression ring	0,17 mm ... 0,27 mm
Side clearance of the taper faced piston ring	0,30 mm ... 0,50 mm
Side clearance of the oil scraper ring with spiral expander	0,2 mm ... 0,4 mm



Result

» The side clearance of the piston rings is outside of the tolerance.

Measure

- Renew the piston ring.

38 – Measure the piston diameter

Check

- Position the measuring bolt in the area (A) and measure the piston installation clearance 90 ° transversely to the gudgeon pin.

Piston diameter

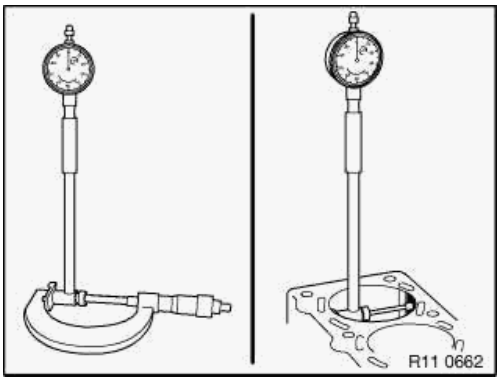
Measure the piston diameter at distance (A) from the lower end of the piston skirt.	
Distance (A) to the lower end of the piston skirt	17 mm
Nominal dimension of piston diameter	83,936 mm ... 83,954 mm

Result

» The piston does not correspond to the specifications.

Measure

- Renew the piston.



39 – Measure the cylinder bores

Prerequisite

Cylinder barrel is cleaned.

Check

cardiagn.com

- Adjusting measuring screw to nominal dimension of cylinder bore.

Cylinder bore

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

- Insert internal measuring device into measuring screw and set to zero.
- With the internal measuring device, measure the cylinder at the following points. Check the deviations from the nominal dimension.
  - Lower third of the cylinder bore in direction of travel,
  - Lower third of the cylinder bore transversely to direction of travel,
  - Middle third of the cylinder bore in direction of travel,
  - Middle third of the cylinder bore transversely to direction of travel,
  - Upper third of the cylinder bore in direction of travel,
  - Upper third of the cylinder bore transversely to direction of travel.

Cylinder bore

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

Result

» Cylinder does not correspond to the specifications.

Measure

- Replace motor.

  Parts: Engine

MAIN WORK

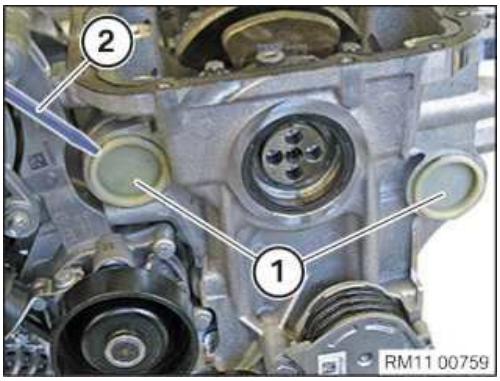
40 – Remove crankshaft

RISK OF DAMAGE

Damage of the engine and mounted parts.

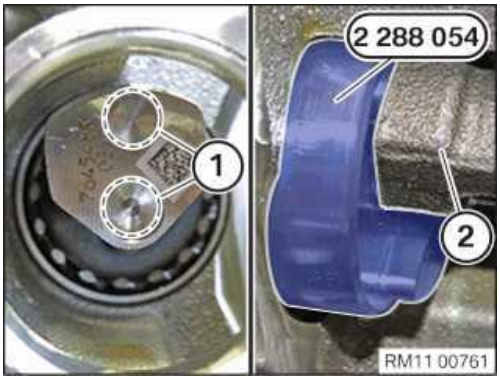
Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

- Comply with the regulations for the installation and disassembly.
- Perform work with care.



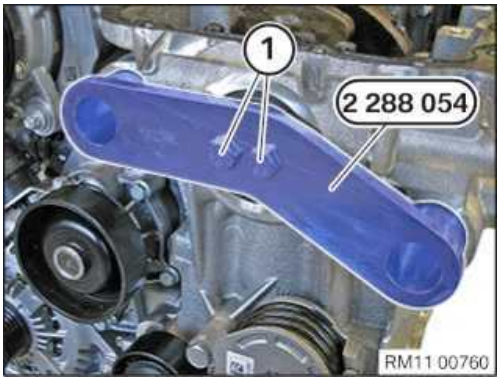
RISK OF DAMAGE

Contaminant or foreign body.

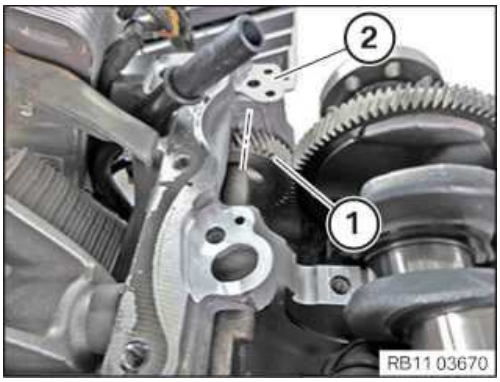


Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



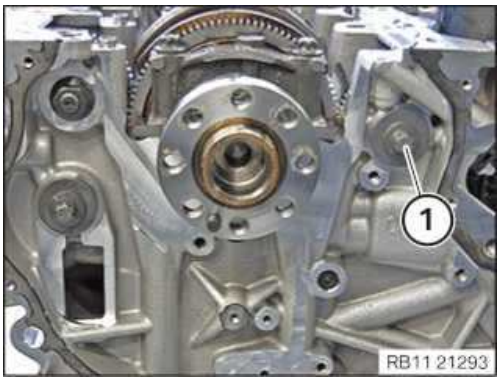
cardiagn.com



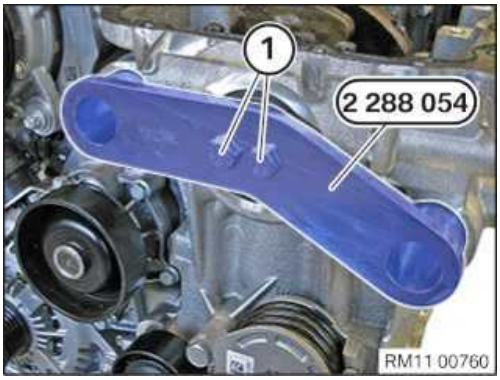
- Remove the sealing cap (1) with a suitable tool (2).

- Rotate the crankshaft to the **TDC of the first cylinder**.
- The special tool **2 288 054** must be positioned in the guides (1) of the counterbalance shafts (2).

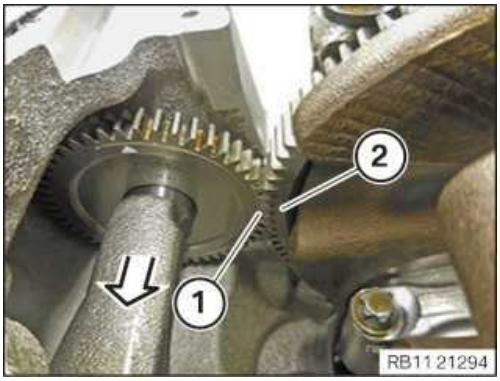
- Secure special tool **2 288 054** with screws (1) to the crankshaft.
- Tighten the screws (1).



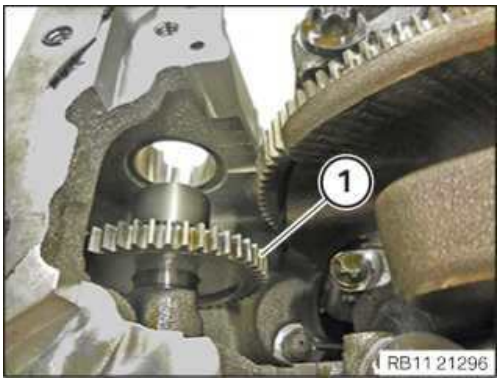
- The counterbalance shaft on the intake side (1) must be re-installed in the same position.
- Mark the position of the gearwheel of the counterbalance shaft on the intake side (1) in relation to the crankcase (2).



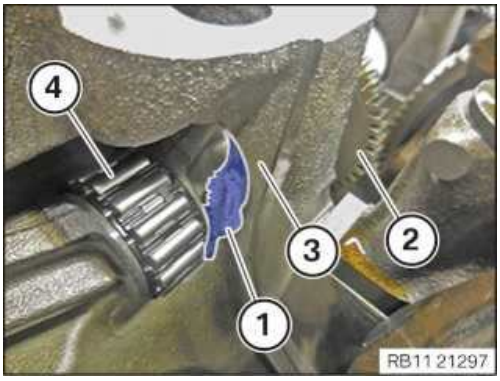
- The intermediate wheel of the exhaust side consists of a fixed wheel and a moving wheel and it must be pretensioned using special tool **0 495 131 (11 5 370)**.
- Pretension the intermediate wheel of the exhaust side using special tool **0 495 131 (11 5 370)** in the illustrated position.
- When reusing the intermediate wheel of the exhaust side, it must remain pretensioned in special tool **0 495 131 (11 5 370)** until its reinstallation.



cardiagn.com

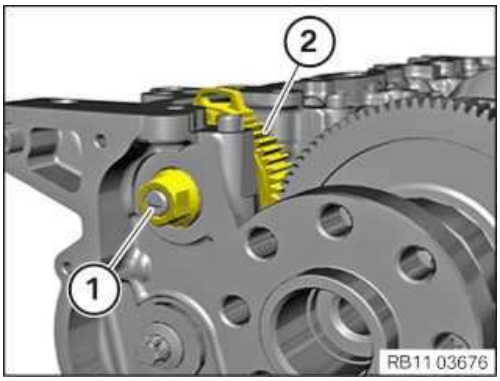


- Loosen screws (1) on the counterbalance shaft on the intake side.

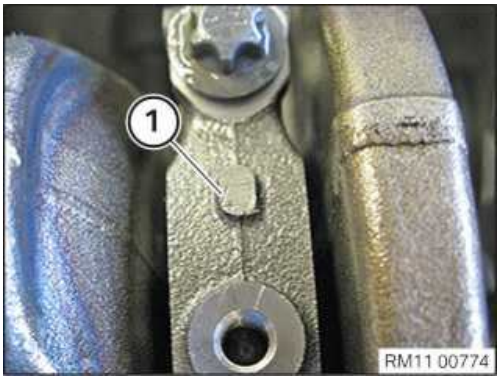


- Loosen screws (1).
- Guide the special tool **2 288 054** out and remove.

- Guide out counterbalance shaft (1) on the intake side from crankshaft (2) in the **direction of the arrow**.



- **Carefully** place aside counterbalance shaft (1) on the intake side.

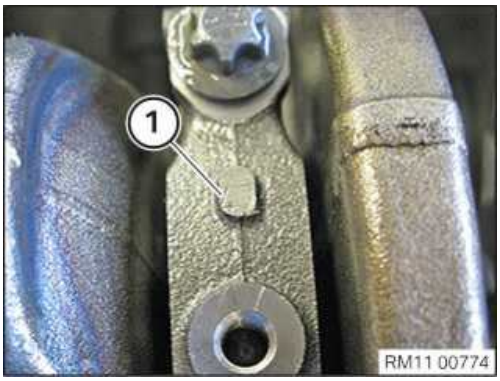


- Position a clean lint-free cleaning rag (1) between counterbalance shaft (2) on the intake side and crankcase (3).
- Ensure that needle bearing (4) is not **damaged**.

cardiagn.com

- Unfasten nut (1).
- Remove the gear (2) using special tool **0 495 131 (11 5 370)**.

RISK OF DAMAGE



Engine damage caused by incorrectly installed bearing shells and bearing supports.

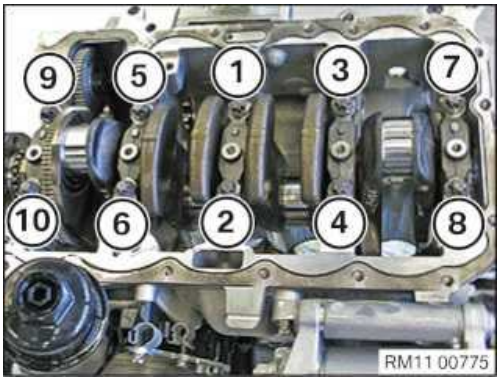
Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.

- Make sure that the mounting orientation is maintained.

  All main bearing caps (1) are marked: **Bearing positions 1 to 5.**

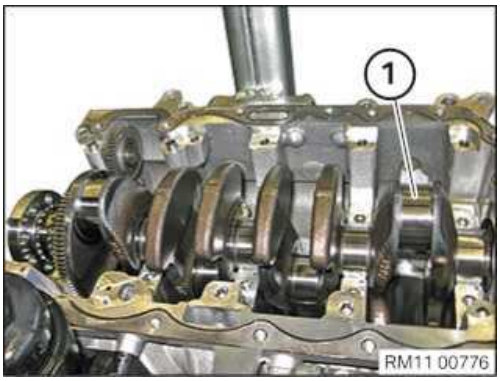
RISK OF DAMAGE



Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.



- Make sure that the mounting orientation is maintained.

  All main bearing caps (1) are marked: **Bearing positions 1 to 5.**

- Gradually detach the crankshaft bearings in the sequence (10) to (1).
- Remove the main bearing caps **1 to 5**.

cardiagn.com

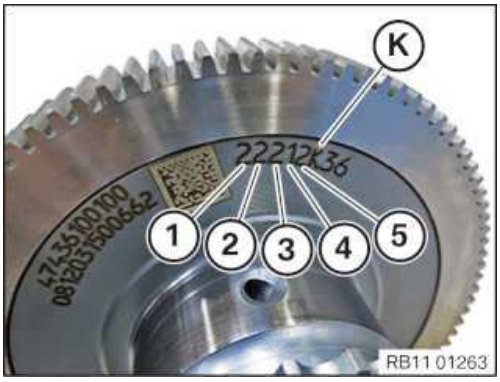
CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

TECHNICAL INFORMATION



Conduct the following operation with the assistance of a second person.

- Remove the crankshaft (1) with a **second person** and carefully set it aside.

41 – Determine the classification of the main bearing shells and the guide bearing shells

- K = Clutch side
- Item numbers (5) to (1) describe the bearing seats 7 to 1 (key performance indicator on each of the crankshaft bearing caps).
- Enter the code letter on the crankcase in the table.

- K = Clutch side
- Item numbers (1) to (5) describe the bearing seats 1 to 5 (key performance indicator on each of the crankshaft bearing caps).
- Enter the identification numbers on the crankshaft in the table.

cardiagn.com

- Enter the code letters and coefficients of the crankcase and the crankshaft.

	Code letter on the crankcase	**Key performance indicator** on the crankshaft
Bearing seat 1		
Bearing seat 2		
Bearing seat 3		
Bearing seat 4		
Bearing seat 5		
Bearing seat 6		
Bearing seat 7		

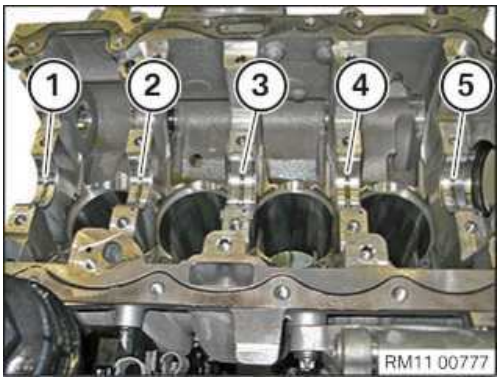
- The main bearing shells and guide bearing shells are indicated in **colour or with numbers**.
- Use the table below to determine the colours of the main bearing shells and the guide bearing shells in the **crankcase**:

	1	2	3
A	Blue = 1	Blue = 1	Blue = 1
B	Green = 2	Green = 2	Green = 2
C	Brown = 3	Brown = 3	Brown = 3

- Use the table below to determine the colours of the main bearing shells and the guide bearing shells in the **crankshaft bearing caps**:

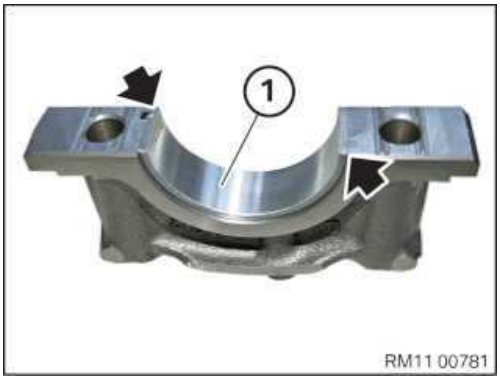
	1	2	3
A	Blue = 1	Green = 2	Brown = 3
B	Blue = 1	Green = 2	Brown = 3
C	Blue = 1	Green = 2	Brown = 3

42 – Renewing main bearing shells and guide bearing shells



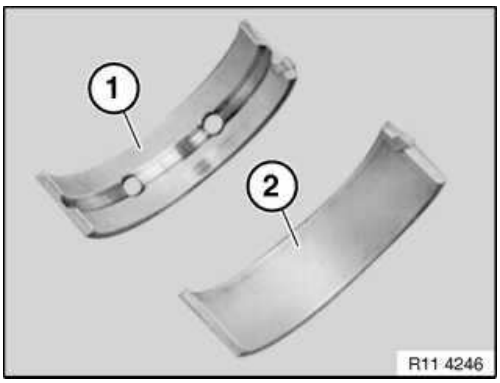
RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.



Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.



cardiagn.com

- Feed out and remove the main bearing shell (1) and (2)- and (4) and (5) (with lubricating groove) from the crankcase.
- Feed out and remove the guide bearing shell (3) (with lubricating groove) from the crankcase.

- Feed out and remove the main bearing shells (1) from the crankshaft bearing caps (1) - and (2) and (4) and (5).
- Feed out and remove the guide bearing shell (1) from the crankshaft bearing cap (3).

- Replace main bearing shells with lubricating groove (1) and the main bearing shells (2).

  Parts: Main bearing shells

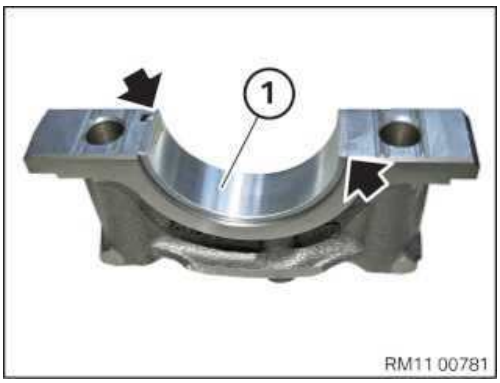
- Replace guide bearing shells with lubricating groove (1) and guide bearing shells (2).

  Parts: Guide bearing shells

- Make sure the guide bearing shells and main bearing shells with lubricating groove (1) are correctly positioned in the crankcase.

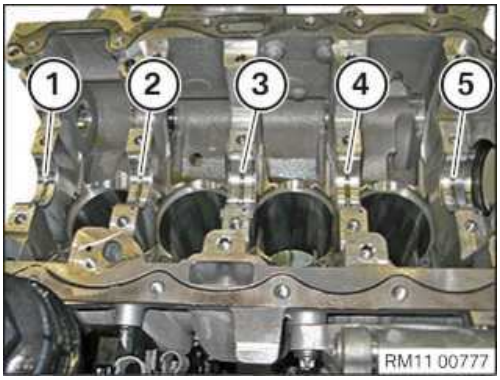
  All guide bearing shells and main bearing shell with lubricating groove (1) in the crankcase are protected against incorrect assembly (mark).

cardiagn.com

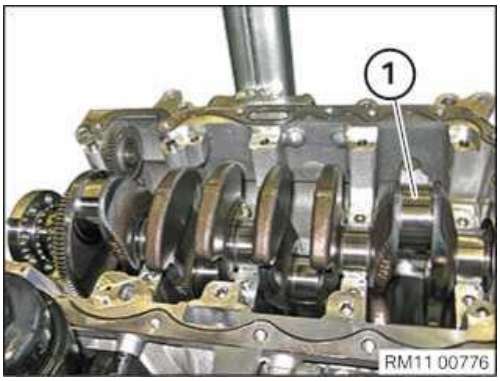


- Make sure the guide bearing shells and main bearing shells (1) are correctly positioned in the crankshaft bearing cap.

  All guide bearing shells and the main bearing shells (1) in the crankshaft bearing caps have protection against incorrect assembly (mark).



- Insert and install the main bearing shell with lubricating groove (1) and (2) and (4) and (5) in the crankcase.
- Oil main bearing shell with lubricating groove (1) and (2) and (4) and (5).
- Insert and install the guide bearing shell (3) (with lubricating groove) in the crankcase.
- Oil guide bearing shell with lubricating groove (3).



- Insert and install the main bearing shells (1) from the crankshaft bearing caps (1) - and (2) and (4) and (5).
- Oil main bearing shell (1) and (2) and (4) and (5).
- Insert and install the guide bearing shell (3) in the crankshaft bearing cap.
- Oil the guide bearing shell (3).

43 – Installing the crankshaft

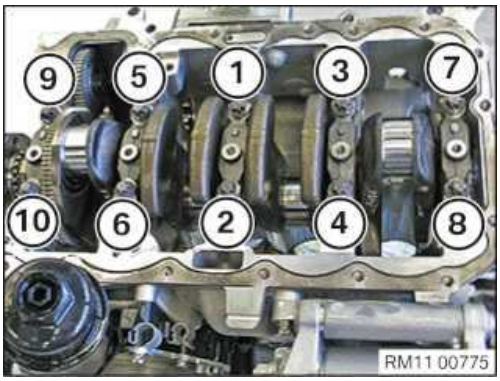
- Ensure correct installation of the main bearing shells (1) to (5) with the guide lug.

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.



- Remove and install heavy components with the aid of another person/other persons.

TECHNICAL INFORMATION

Conduct the following operation with the assistance of a second person.

- Install the crankshaft (1).

  Parts: Crankshaft

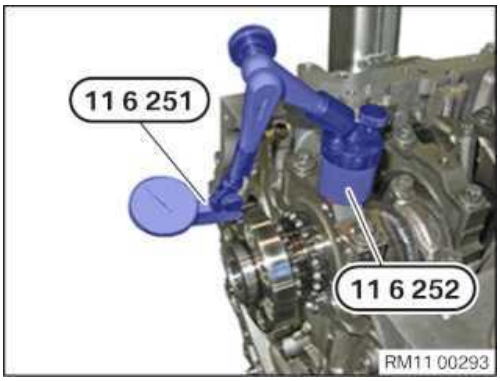
- Observe the allocation and numbering 1 to 5 of the main bearing caps.

  Assign the main bearing caps according to the order of the cylinders.
- Do not install the main bearing cap in an incorrect position.
- Ensure that the main bearing cap is positioned mounted.

  The main bearing cap must not be mounted rotated by 180°!

  The main bearing caps are coded to prevent incorrect assembly.
- Align main bearing caps exactly.
- Replace main bearing bolts.

  Parts: Bolts
- Tighten the main bearing bolts in the sequence (1) to (10).



Main bearing cap to crankcase

M10x85	Replace screws.	1. tightening torque	25 Nm
		2. tightening torque	50 Nm
		3. Angle of rotation	60 °
		4. Angle of rotation	60 °

▸ **Check the crankshaft side clearance**

Check

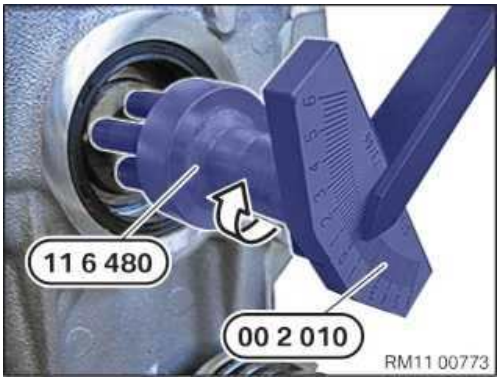
- Set up the dial gauge **0 493 144 (11 6 251)** with the tripod **0 493 145 (11 6 252)** from the special tool **0 493 143 (11 6 250)** at the crankshaft.

Axial play of crankshaft

Equipment installation status	0,090 mm ... 0,273 mm
Operating condition	0,11 mm ... 0,314 mm

Result

» The side clearance has been exceeded.



cardiagn.com

Measure

- Renew worn components.

▸ **Check the coefficient of friction for the crankshaft**

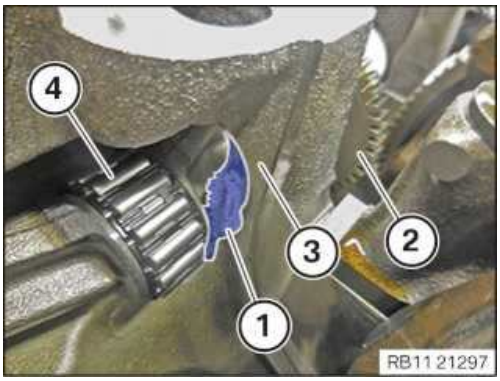
Check

- Turn the crankshaft clockwise with the special tool **0 490 130 (00 2 010)** and compare the reading on the scale to the maximum permitted torque.

Maximum permitted torque of the crankshaft

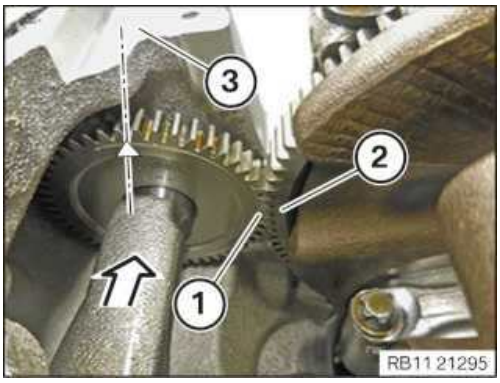
	max. 2 Nm

Result



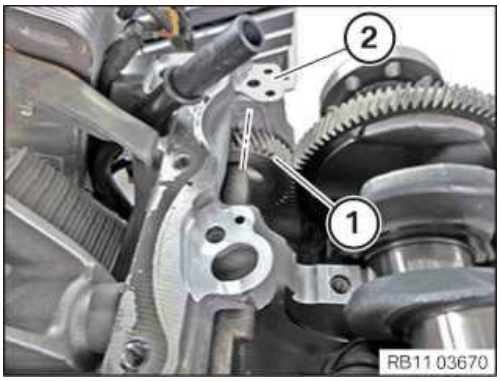
» The maximum permitted torque is exceeded.

Measure



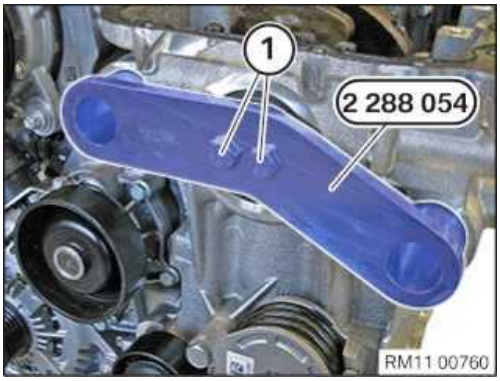
- Correct the radial clearance.

- Bring or adjust crankshaft (2) to the **TDC position** .
- The special tool **2 420 824** in the area (1) is labelled with the different engine versions.
- Install the special too **2 420 824** with the correct bore or on the crankshaft.
- Using the special tool **2 420 824** secure the crankshaft to the fitting sleeve (2) in the TDC position.

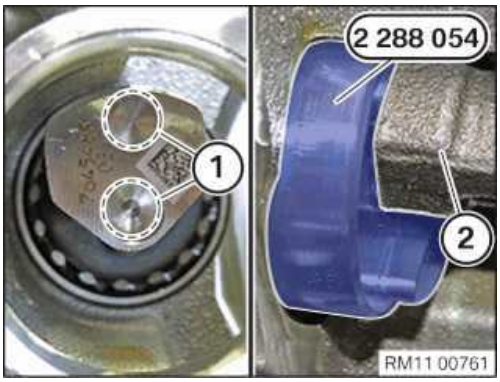


- Guide out lint-free cleaning rag (1) between counterbalance shaft (2) on the intake side and crankcase (3) and remove it.
- Ensure that needle bearing is (4) **not** damaged.

- Position counterbalance shaft (1) on the intake side in the **direction of the arrow** on crankshaft (2).
- Make sure that the mark on the gear (1) for the right counterbalance shaft points **up vertically** to the oil sump (3).

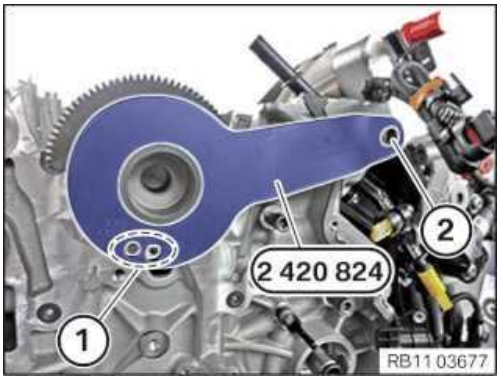


cardiagn.com



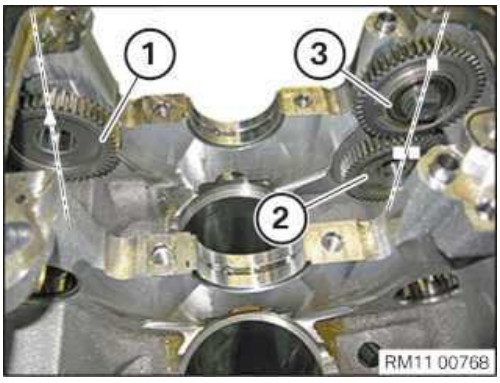
- Check the position of the gear of the counterbalance shaft on the intake side (1) to the crankcase (2) using the marking.

- Position the counterbalance shaft on the exhaust side so that the marking points perpendicular to the oil sump.



- Make sure that the balance weights on the counterbalance shafts face the oil sump.
- Mount the special tool **2 288 054** and abut the bolts (1).

- Make sure the special tool **2 288 054** is correctly fitted in the guides (1) of the counterbalance shaft (2).
- If necessary, slightly turn the counterbalance shafts.
- Tighten special tool **2 288 054**.



Special tool 2 288 054 to crankshaft

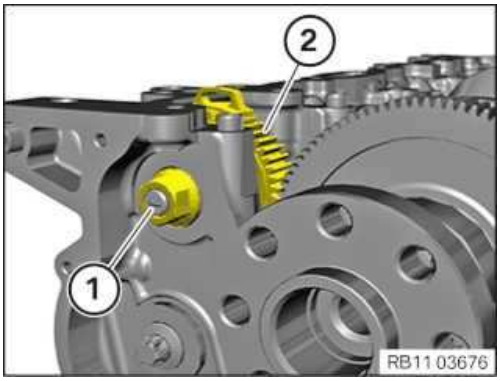
M10		Tightening torque	20 Nm

- Remove special tool **2 420 824**.

cardiagn.com

NOTICE

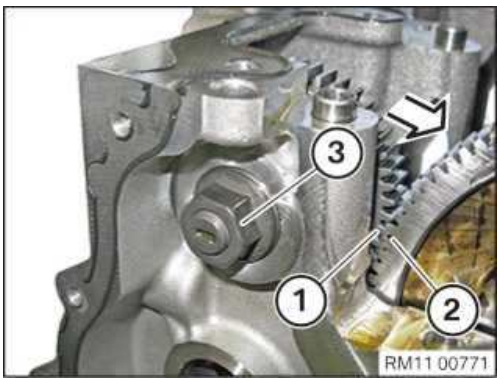
To provide a better overview: Illustration of surrounding parts in removed state.



- Ensure that the identifications on the gears (1), (2) and (3) point up vertically to the oil sump sealing surface.

NOTICE

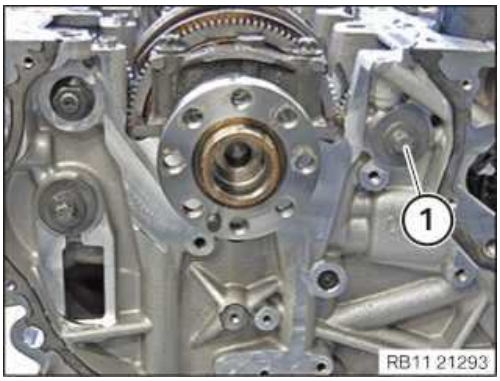
Schematic diagram is for example purposes. Some parts may differ in certain details.



- When installing a new gear: Ensure the ring gear remains blocked until installation using the factory-mounted fixation (1).

- Insert the intermediate wheel (2)with the special tool **0 495 131 (11 5 370)** and install.
- Tighten the nut (1) hand-tight.

- Make sure that the teeth of the intermediate wheel engage with the teeth of the crankshaft and counterbalance shaft.
- Relieve tension on special tool **0 495 131 (11 5 370)** and remove.

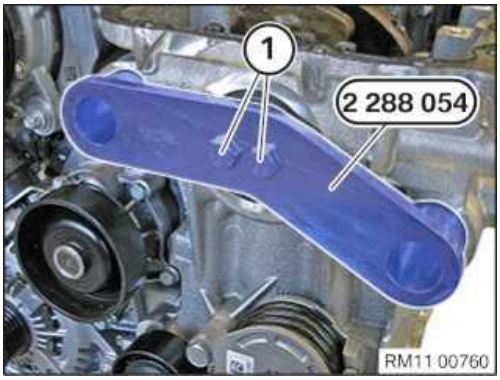


- Move the intermediate wheel (1)in the direction of the arrow into position on the crankshaft (2).
- Tighten nut (3).

Idler gear to crankcase

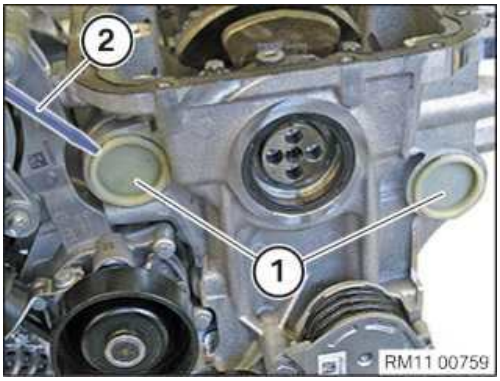
M12x1.5		Tightening torque	10 Nm
		Angle of rotation	45 °

cardiagn.com



- Renew the screw (1).

  Parts: Screw



- Tighten screws (1)of the counterbalance shaft on the intake side.

Gear to counterbalance shaft

M10	Renew screws.	1. Jointing torque	20 Nm
		2. Angle of rotation	180 °

- Unscrew the bolts (1) and remove the special tool **2 288 054**.

- Renew the sealing cap (1).

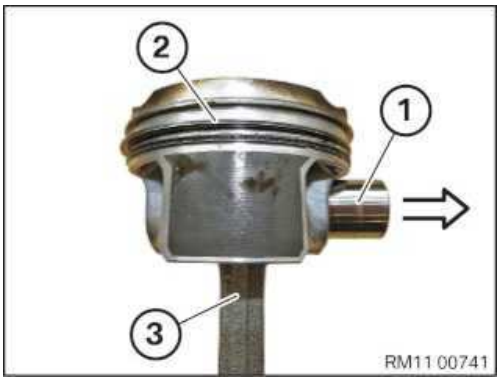
  Parts: Sealing cap

- Make sure the O-rings of the sealing cap (1) are fitted correctly.
- Mount both sealing caps (1).

POSTPROCESSES

44 – If necessary: Renew the piston

CAUTION

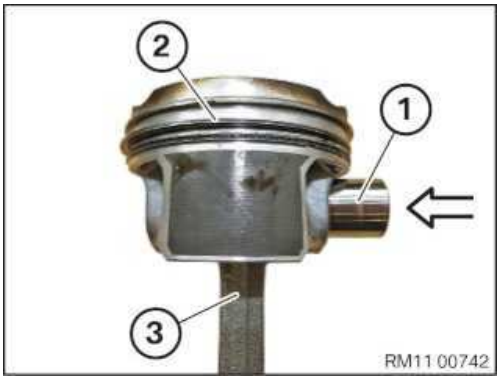


Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

- Use special tool to remove the gudgeon pin circlip.
- Insert the flat side (3) of special tool into the groove (4).
- Grab and remove the gudgeon pin circlip (1) with the arched side (2).



cardiagn.com

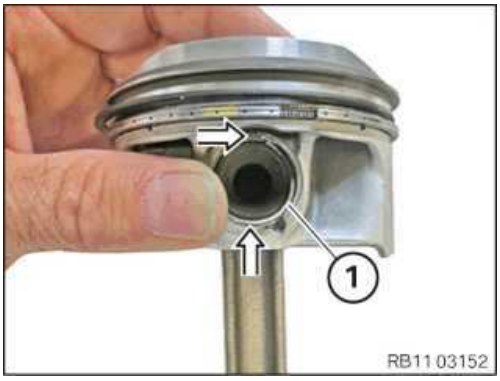
TECHNICAL INFORMATION

Piston and gudgeon pin are matched to each other.
Always install piston and gudgeon pin together and do not switch by mistake.

- Remove the gudgeon pin (1) in the direction of arrow.
- Remove piston (2) from connecting rod (3).

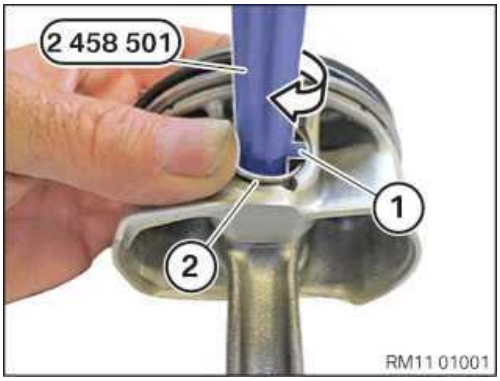
- Renew piston with gudgeon pin.

  Parts: Pistons



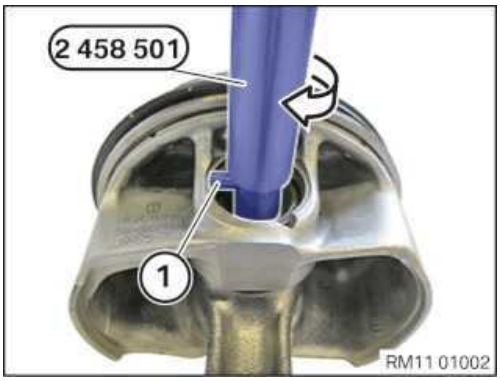
TECHNICAL INFORMATION

Piston and gudgeon pin are matched to each other.
Always install piston and gudgeon pin together and do not switch by mistake.

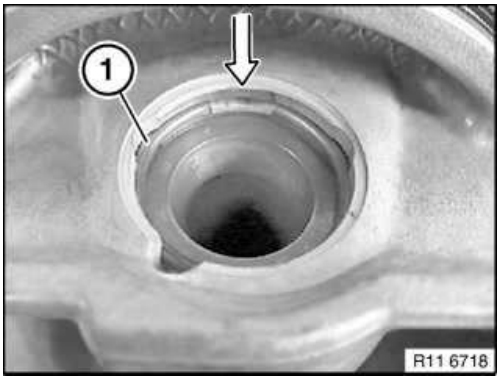


- Position piston (2) on the connecting rod (3).
- Install the gudgeon pin (1) in the direction of arrow.
- You must be able to install the gudgeon pin (1) without major effort.
- Gudgeon pin (1) must be free of play in piston and connecting rod.

- Prepare special tool on the fitting aid .



- Insert the gudgeon pin circlip (1) into the groove on the piston (see arrows).



- Screw in the positioned gudgeon pin circlip (2)with and with the guide pin (1) in the direction of the arrow.

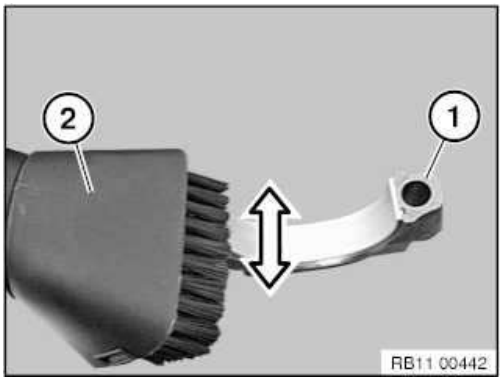
cardiagn.com

- Screw the gudgeon pin circlip with guide pin (1) into the groove of the piston in the direction of the arrow.

- Gudgeon pin circlip (1) must be fitted correctly in the groove (arrow).

45 – Install the connecting rod bearing shell

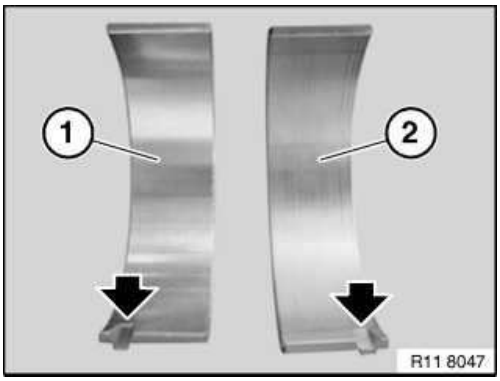
RISK OF DAMAGE



Engine damage caused by incorrectly installed bearing shells and bearing supports.

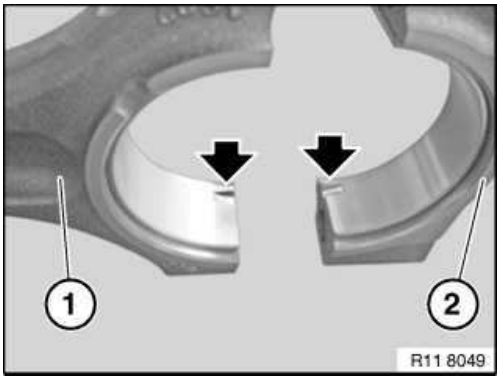
Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.



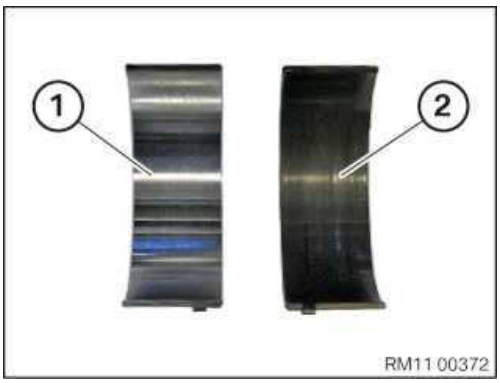
TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.
A single connecting rod is not permitted to be replaced. Always replace all connecting rods.



- Vacuum the crack surfaces (1) with a conventional vacuum cleaner (2).

cardiagn.com



- To avoid incorrect assembly: Pay attention to marks (arrows).

  The connecting rod bearing (1) for the connecting rod bearing cap and the connecting rod bearing (2) for the connecting rod are each equipped with protection against incorrect assembly as shown in the marked area.

- To avoid incorrect assembly: Pay attention to marks (arrows).

  The connecting rod bearing cap (2) and the connecting rod (1) are each equipped with protection against incorrect assembly.

- Makes sure that a light connecting rod bearing shell (1) and a dark connecting rod bearing shell (2) are installed for each connecting rod.

TECHNICAL INFORMATION

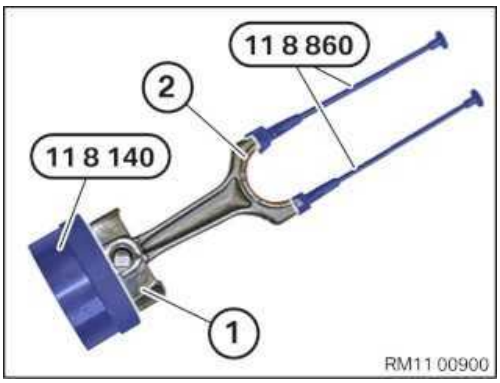
Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Insert the dark connecting rod bearing shell (2) into the connecting rod (1).
- Oil the connecting rod bearing shell (2).

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.



Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Insert the light connecting rod bearing shell (2) into the connecting rod bearing cap (1).
- Oil the connecting rod bearing shell (2).

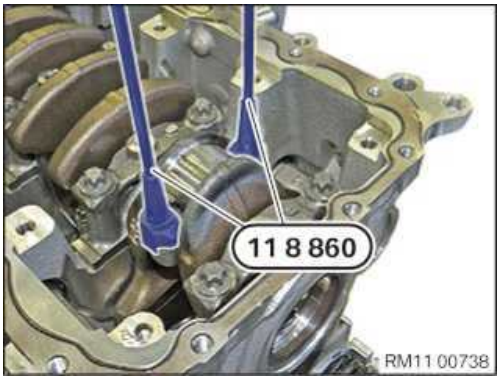
cardiagn.com

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.
Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Coat the pistons (1) and piston rings lightly with oil.
- Mount the special tool **0 493 582 (11 8 140)** on the piston (1).
- Screw the special tool **0 496 144 (11 8 860)** in on the large connecting rod eye (2).

- Insert the piston with the special tool **0 493 582 (11 8 140)** with the arrow pointing to cylinder 1.



RISK OF DAMAGE

Damage on the cylinder wall and oil spray nozzles.

Major force can scratch the cylinder wall and bend the oil spray nozzles.

- Carefully move the piston and connecting rod in the engine block.

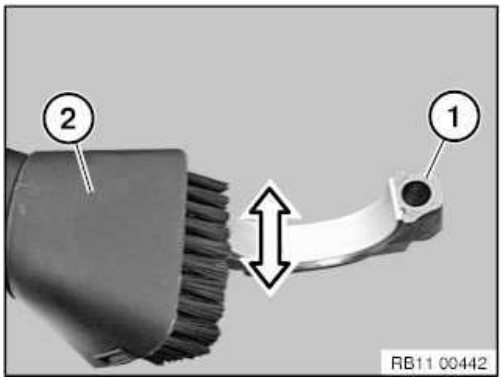
- Install the piston in the crankcase.

- Remove special tool **0 496 144 (11 8 860)** from large connecting rod eye.

47 – Install the connecting rod bearing cap

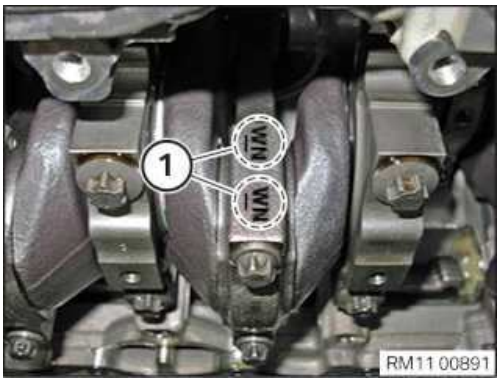
RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.



Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.

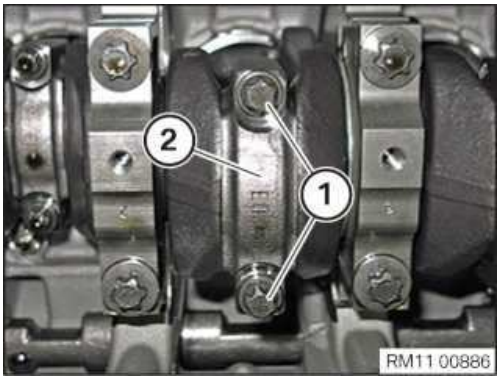


TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.
A single connecting rod is not permitted to be replaced. Always replace all connecting rods.

cardiagn.com

- Vacuum the crack surfaces (1) with a conventional vacuum cleaner (2).



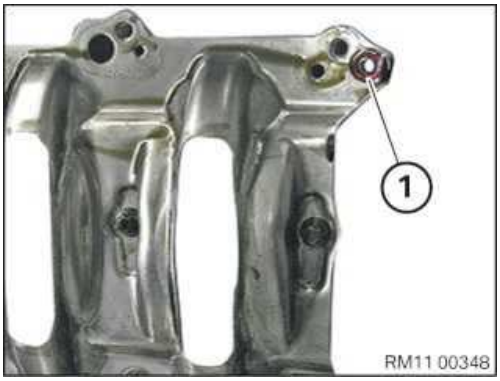
- Attach the connecting rod bearing caps to the connecting rod until the designations (1) match.

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

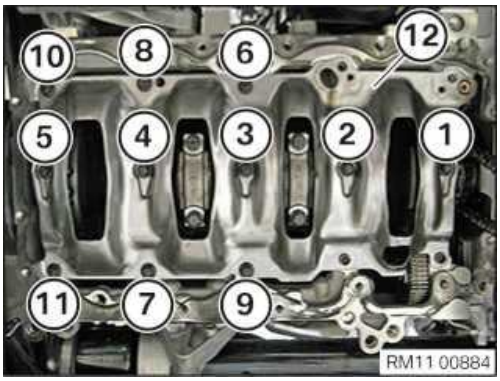
- Make sure that the connecting rod bearing is attached to the same connecting rod that it was detached from.



- Position the connecting rod bearing cap (2).
- Tighten the bolts (1) with the special tool **0 490 504 (00 9 120)**.

Connecting rod bearing cap to connecting rod

M9x47		Tightening torque	20 Nm
		Angle of rotation 1	70 °
		Angle of rotation 2	70 °



48 – Installing the oil deflector

- Check sealing ring (1) for damage and replace oil deflector if necessary.

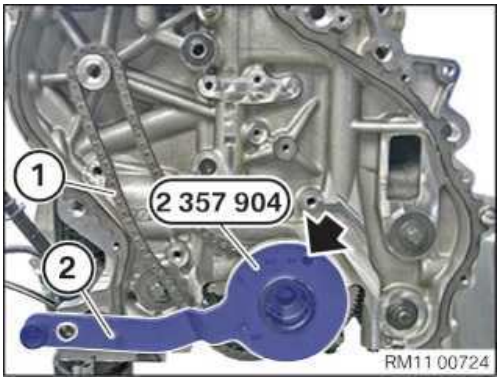
  Parts: Oil deflector

cardiagn.com

- Insert and install the oil deflector (12).
- Renew screws (1) to (11).

  Parts: Bolts
- Hand-tighten the bolts (1) to (5).
- Hand-tighten the bolts (6) to (11).
- Tighten the screws (1) to (5).

Oil deflector to crankshaft bearing cap

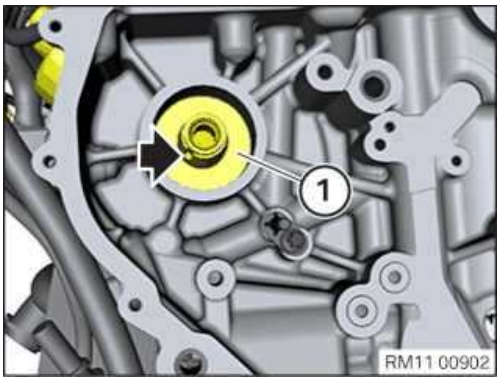


M8x14	Replace screws.	Tightening torque	35 Nm
		Release	180 °
		Tightening torque	15 Nm
		Angle of rotation	45 °

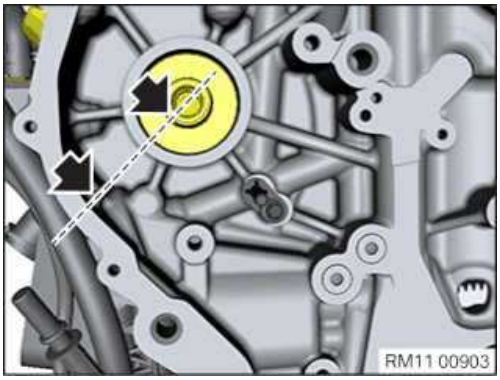
- Tighten the screws (6) to (11).

Oil deflector to crankcase

M8x14		Tightening torque	19 Nm



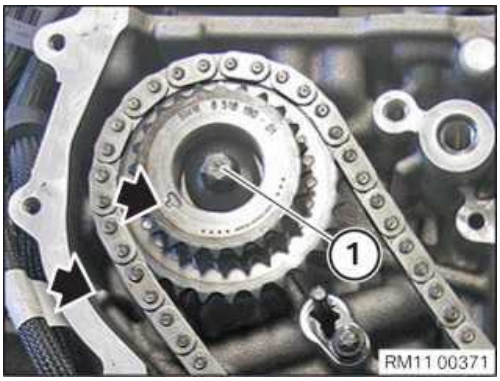
49 – Install both timing chains



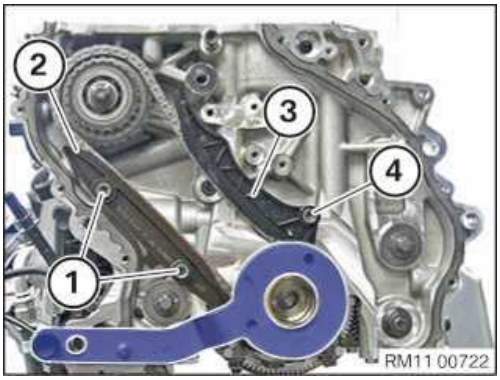
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Position the timing chain (1).
- Secure crankshaft with special tool **2 357 904**.
- Secure special tool **2 357 904** with bolt (2) on crankcase.



- Note spline groove on high pressure pump (1).



- Mark and groove (arrows) on high pressure pump and crankcase must align.

cardiagn.com

- Position the impeller with timing chain on the high pressure pump.
- Screw in and fasten central bolt (1) of high pressure pump.
- Mark and cast lug (arrows) must align.

- Position tensioning rail (3).
- Replace bearing journal.

  Parts: Bearing journal
- Tighten the bearing journals (4).

Bearing journal of tensioning and guide rail

M8	*Replace bearing journal.*	Tightening torque	20 Nm

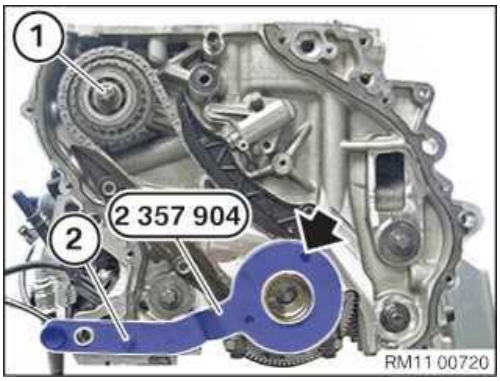
- Position the guide rail (2).
- Replace bearing journal.

  Parts: Bearing journal
- Tighten both bearing journals (1).

Bearing journal of tensioning and guide rail

M8	*Replace bearing journal.*	Tightening torque	20 Nm

- Clean sealing surfaces (1) with compressed air.



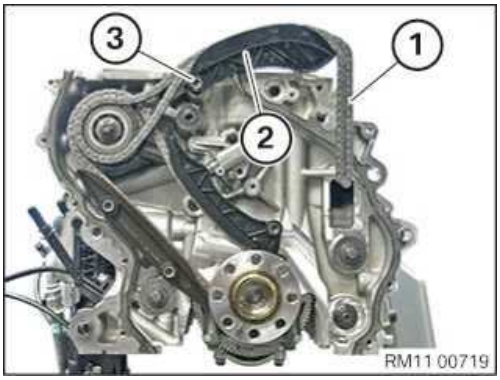
- Position hydraulic chain tensioner.
- Tighten down screws (2).

Chain tensioner to crankcase

M6x22		Tightening torque	10 Nm

- Press chain tensioner in by hand with tensioning rail (1) in direction of arrow until special tool **0 491 012 (11 4 120)** can be removed.

cardiagn.com



- To fasten central bolt (1) of high pressure pump, crankshaft must remain secured with special tool **2 357 904** and bolt (2).
- Renew central bolt (1).

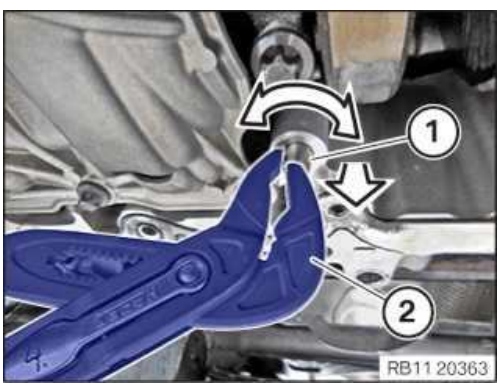
  Parts: Central bolt
- Tighten central bolt (1).

Camshaft sprocket on high pressure pump

M12		Tightening torque	65 Nm

- Position tensioning rail (2) on bearing journal (3).
- Position camshaft timing chain (1).

- Mount drive chain (1) for oil pump on crankshaft.

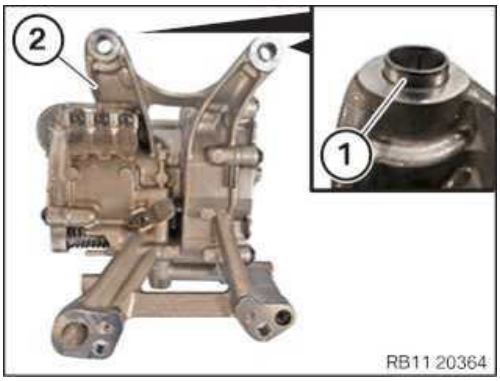


50 – Install the oil vacuum pump

RISK OF DAMAGE

Contaminant or foreign body.

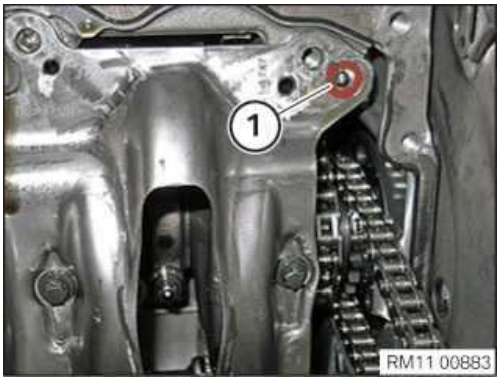
Contamination can result in malfunctions, operating failure or leaks.



- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

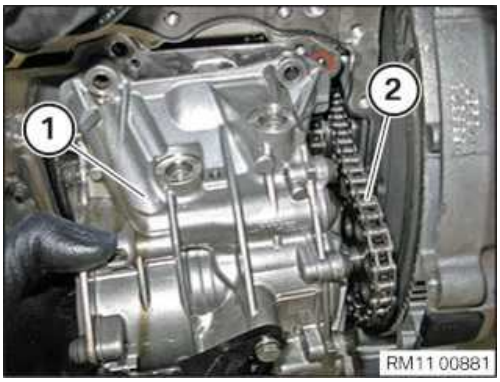
- Remove centering sleeves from the crankcase (1) using a standard tool (2).
- Renew the centring sleeves (1).

  Parts: Centring sleeves



cardiagn.com

- Install centering sleeves (1) in the oil vacuum pump (2).



- Check the sealing ring (1) for damage and renew where required.
- Make sure the sealing ring (1) is installed correctly.

- Check sealing ring (1) for damage and replace oil deflector if necessary.

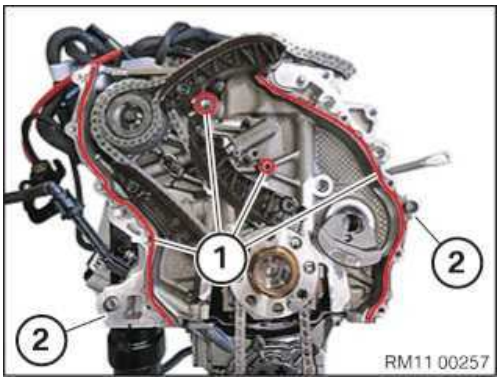
  Parts: Oil deflector

- Insert oil vacuum pump (1) into the drive chain (2).

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1) of the oil vacuum pump (2).

Oil vacuum pump to crankcaseB47



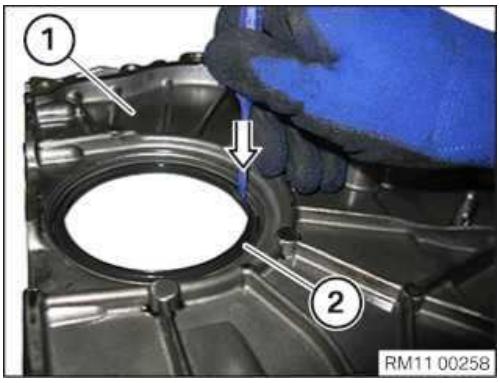
M8x35		Tightening torque	19 Nm

51 – Install the rear timing case cover

Prerequisite

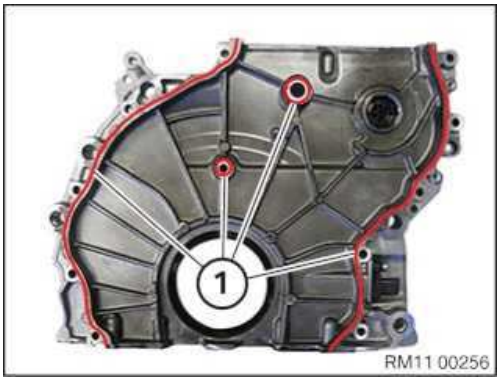
Transmission is removed.

cardiagn.com



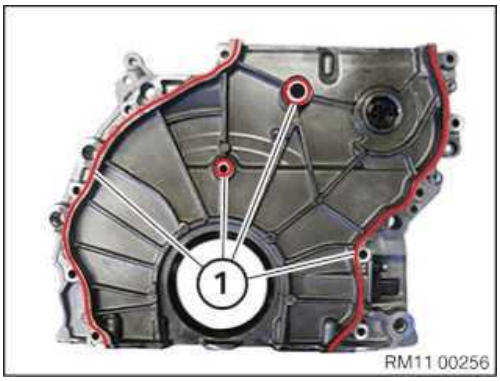
RISK OF DAMAGE

Damage to the surface.



The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

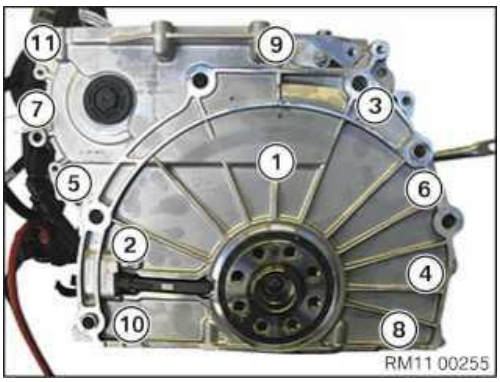
- Do not use any metal-cutting tools.



- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.
- Check fitting sleeves (2) for damage and for tight fit; renew if necessary.

- Position the timing case cover (1) underneath.
- Position punch on inner side of crankshaft seal (2).
- Drive out crankshaft seal (2) outwards.

- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.



TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Apply sealing bead (1) with a height of approx. 1.5 mm to 2.0 mm on inner side of timing case cover in marked locations. Use liquid sealing compound for this.

  Application time of sealing bead (1) must not exceed 12 minutes.

- Mount the timing case cover without the crankshaft seal.
- Renew screws (1) to (11).

  Parts: Bolts
- Join the bolts in with the sequence (1) to (11).
- Tighten screws in the order (1) to (11).

Rear timing case cover to crankcase

M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

▸ **Installing the rear crankshaft seal**

cardiagn.com

RISK OF DAMAGE

Radial shaft seal damage.

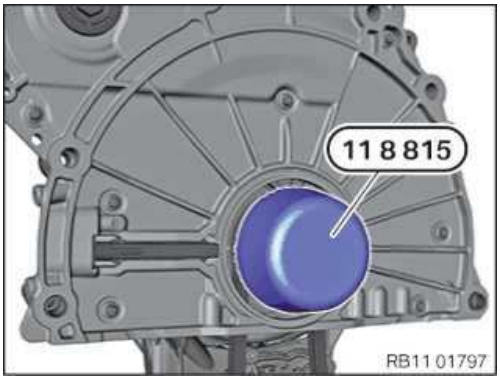
Touching the sealing lip (inner) on the radial shaft seal with the sharp-edged connector gearing of the output shaft will result in destruction and/or leaks.

- When inserting the output shaft, make sure that the connector gearing of the output shaft does not touch the sealing lip (inner) of the radial shaft seal.

RISK OF DAMAGE

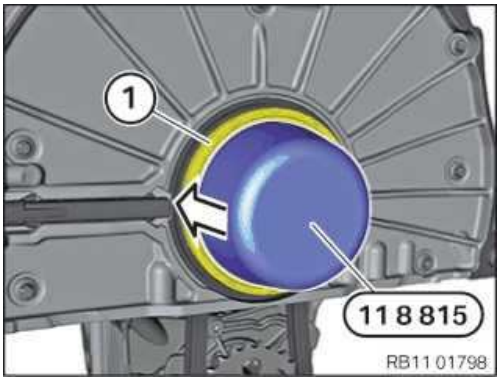
Radial shaft seal damage.

Touching the sealing lip (inner) and applying oil to the radial shaft seal will lead to its destruction.



- Do not touch the sealing lip (inner) of the radial shaft seal.
- Do not apply oil to the radial shaft seal.
- Install the radial shaft seal dry.

RISK OF DAMAGE



Electrostatic discharge.

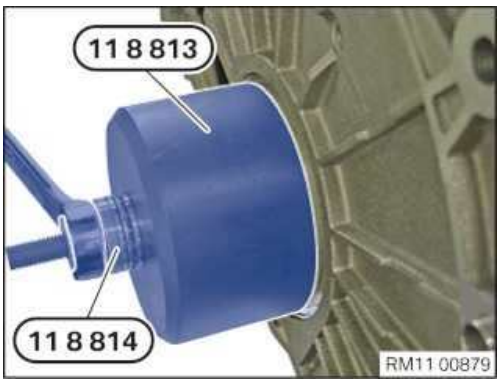
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

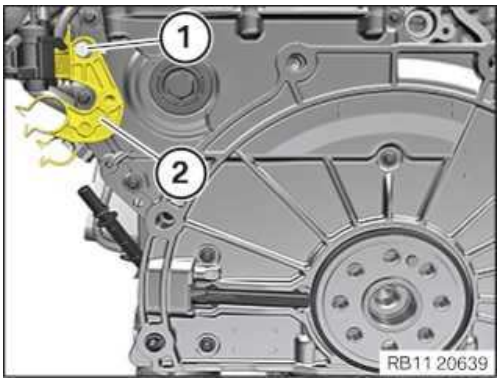
- Position special tool **0 496 137 (11 8 815)** on crankshaft. Make sure that the crankshaft sensor is not damaged.

- Fit the crankshaft seal (1) up to the timing case cover in the direction of the arrow using special tool **0 496 137 (11 8 815)** and position.
- Remove special tool **0 496 137 (11 8 815)**.

cardiagn.com

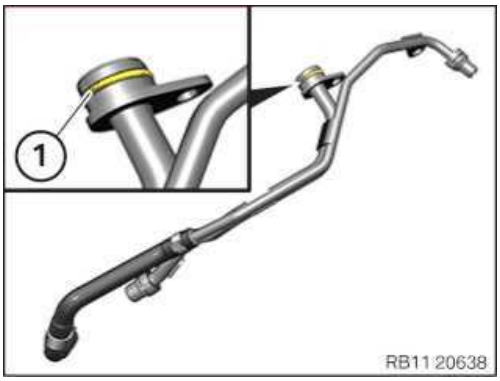


- Secure special tool **0 496 133 (11 8 811)** to the crankshaft using special tool **0 496 134 (11 8 812)**.



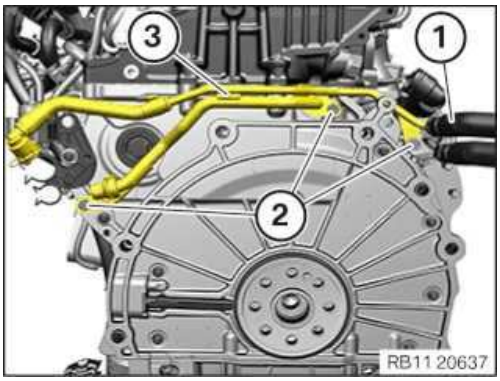
- Check the freedom of movement between the special tool **0 496 135 (11 8 813)** and the crankshaft sensor during installation.

  Otherwise there is a risk that the crankshaft sensor will be damaged.
- Slide on special tool **0 496 135 (11 8 813)**.
- Screw down special tool**0 496 136 (11 8 814)**.



- Press in crankshaft seal with special tool **0 496 135 (11 8 813)**.
- Screw in special tool **0 496 135 (11 8 813)** up to timing case cover.

- Insert and install the holder (2).



▶ **If installed: Installing the coolant line of the SCR metering module**

- Renew the O-ring 1.

  Parts: O-ring

cardiagn.com

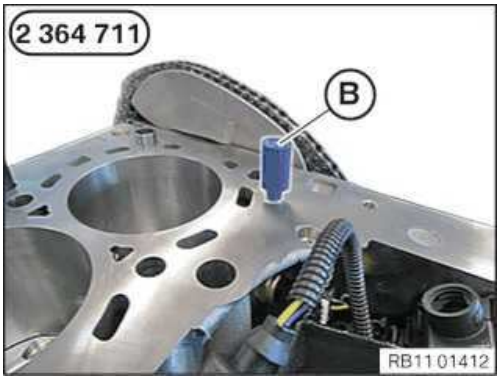
- Feed in and install coolant line (3).
- Tighten down screws (2).

SCR coolant lines to crankcase end cover

Hexagon screw M6x16		Tightening torque	8 Nm

- Connect and lock the coolant line (1).

  Coolant line (1) must audibly engage.



▸ **Cleaning the sealing surface**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

RISK OF DAMAGE

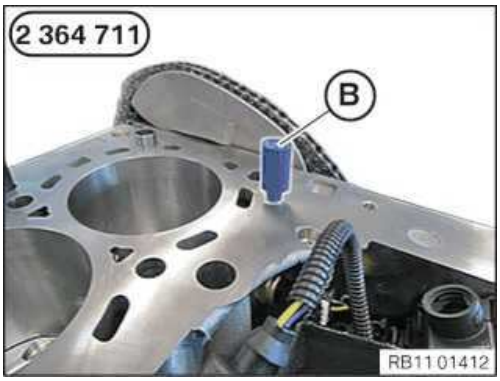
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.

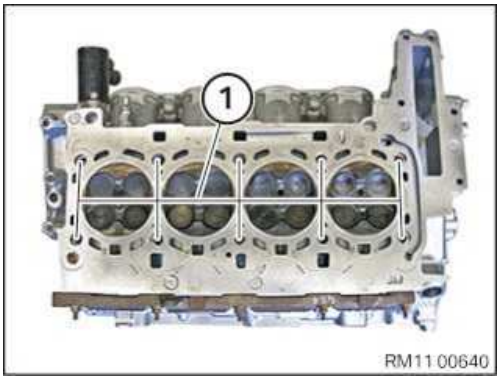
RISK OF DAMAGE



Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

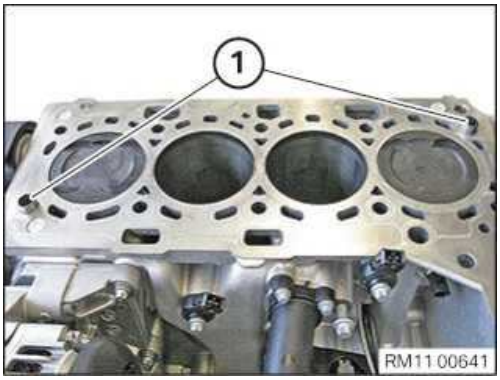


- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.

cardiagn.com

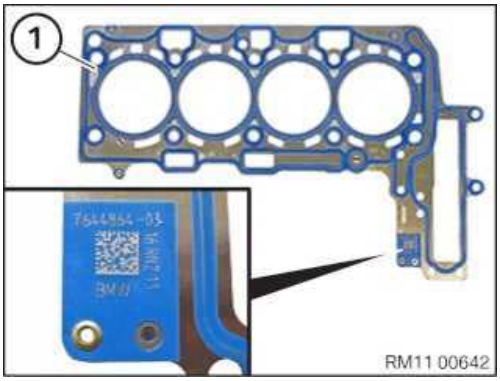
- Remove special tool (B).

▶ **Renewing the cylinder head gasket**



RISK OF DAMAGE

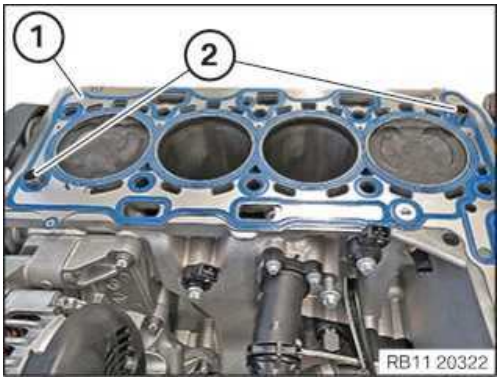
Damage to the surface.



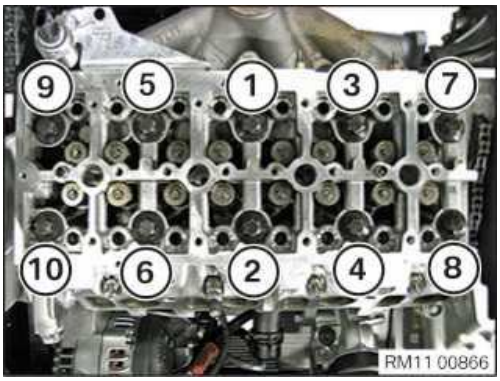
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).



- Check the fitting sleeves (1) for secure fit and damage.



- Identify the cylinder head gasket (1) using the part number.

Note: If the cylinder head is reworked, an additional thicker gasket 0.3 mm is available for service personnel.

- Guide in the cylinder head gasket (1) and install.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Damage to threads.

Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION

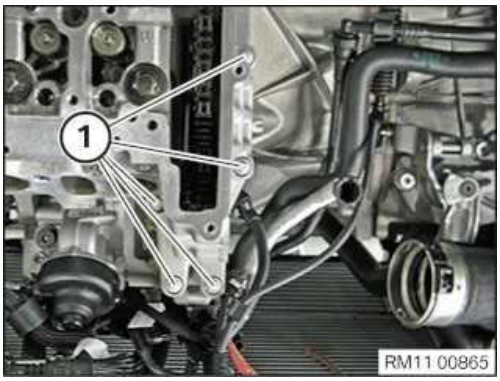
Do not remove bolt coating.

- Renew the cylinder head bolts (1).

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  No coolant, water or engine oil must be present in threaded holes of engine block.

TECHNICAL INFORMATION



When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in cylinder head bolts in sequence (1) to (10).
- Tighten cylinder head bolts using special tools **0 490 504 (00 9 120)** and in sequence (1) to (10).

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

cardiagn.com

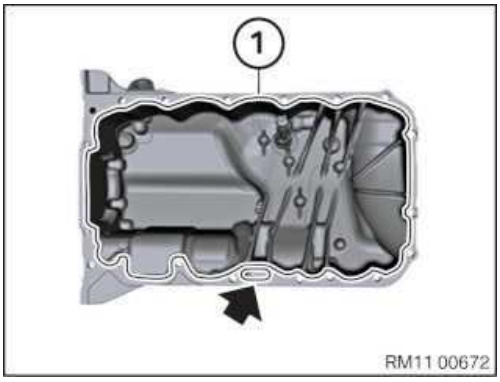
- Tighten the cylinder head bolts (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Remove fine sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

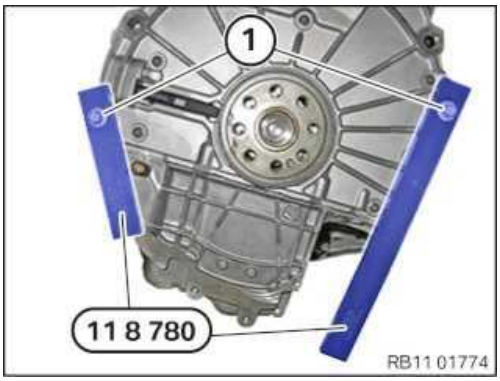
- Remove coarse sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- Apply the sealing compound along the line (1) with a thickness of 2 mm to 2.5 mm.

  Apply the sealing compound along the inner edge.

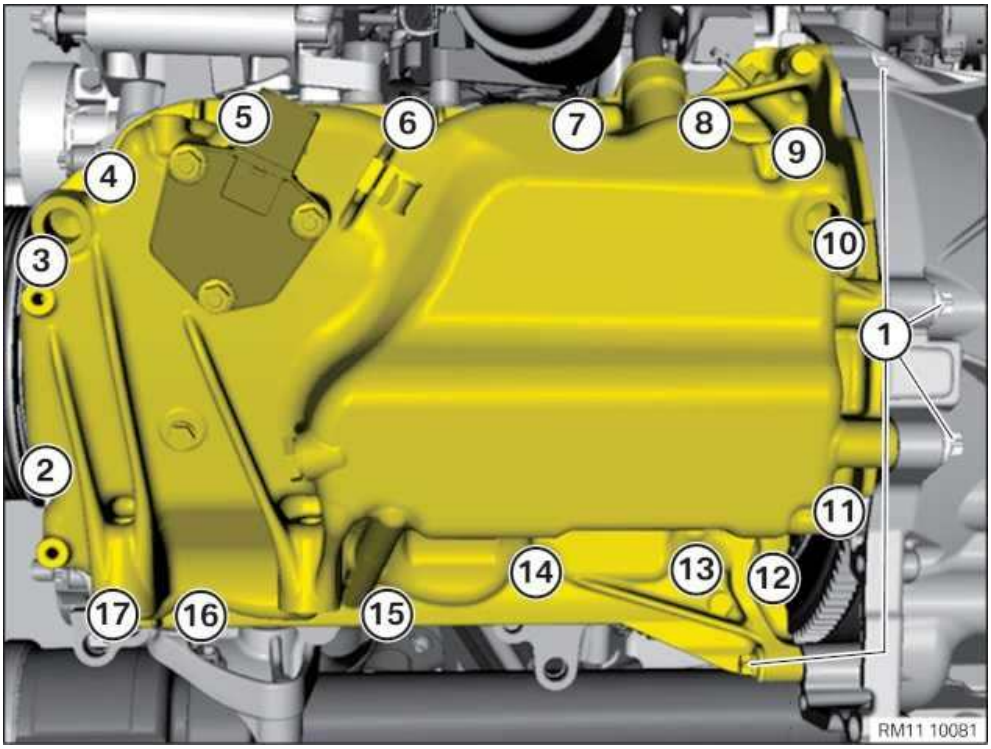


Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

- Completely encircle the oil return orifice (arrow) with the sealing compound.



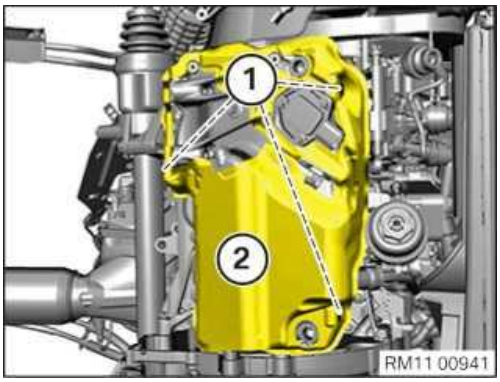
cardiagn.com

TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- If necessary, renew fitting sleeves.

- Position and install oil sump.
- **Hand-tighten** oil sump screws (2) to (17) but do **not** tighten completely.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws(2) to (17) of the oil sump.



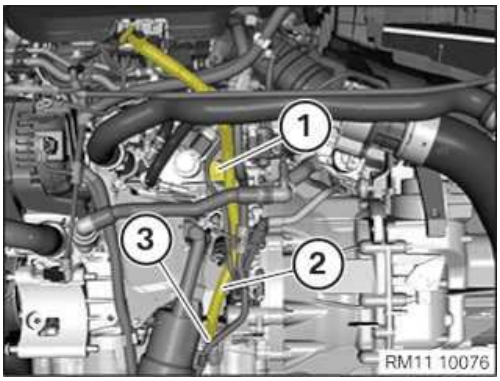
Oil sump to crankcase

M8x30		Tightening torque	2 Nr
M8x110		Tightening torque	2 Nr

- Tighten transmission bolts (1) on oil sump.

Transmission to oil sump

M8		Tightening torque	1 Nr



- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).

- Renew O-ring (1).

  Parts: O-ring

cardiagn.com

- Guide in guide tube (2) for oil dipstick and insert it into oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

Guide tube for oil dipstick on engine

M8x16		Tightening torque	19 Nm

52 – Installing the flywheel

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

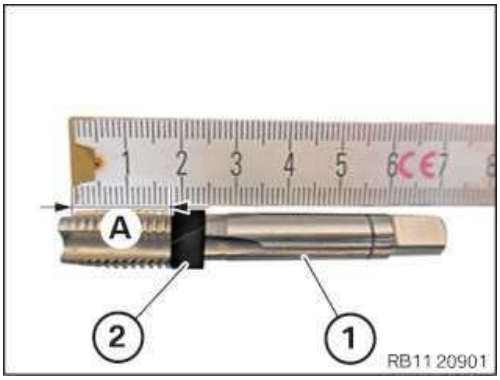
- Check fitting sleeve on the crankshaft for damage and replace if necessary.

TECHNICAL INFORMATION

Clean all threads with a screw tap.

- Clean all the screw threads (1).

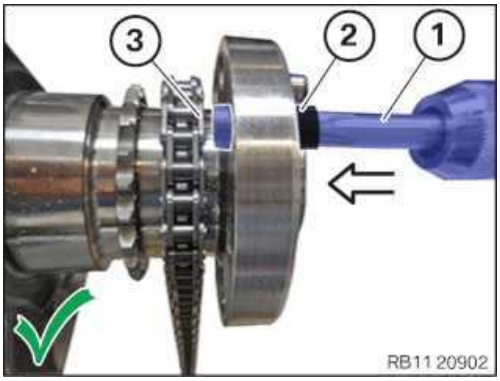
- Use the set of special tools **2 285 058**.



Description
Twist drill
Thread cutter M12x1.5
Depth
Insertion tool

cardiagn.com

- Assemble tool set.



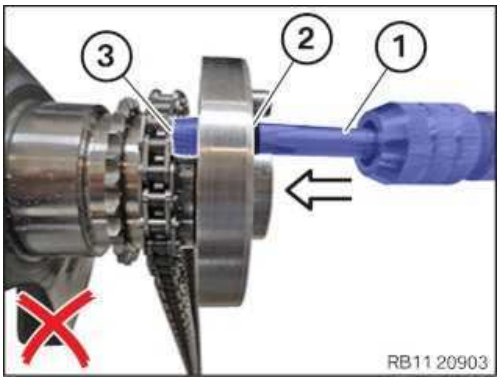
Number	Description
1	Tool holder
2	Thread cutter M12X1,5

- Mark the installation dimension (A) on thread cutter (1) from the set of special tools **2 285 058** using a commonly-available tool (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm

NOTICE



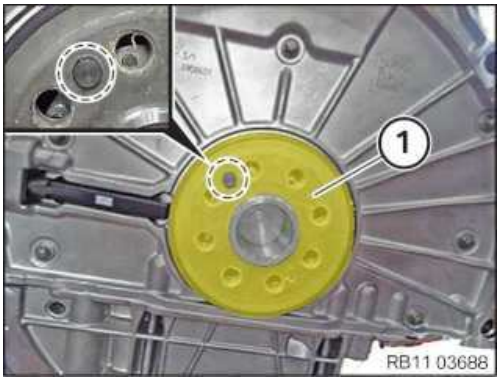
To provide a better overview: Shown with engine removed.

- Screw in the thread cutter (1) from the set of special tools **2 285 058** in direction of arrow up to the installation dimension (2).

Screw-in depth of thread cutter

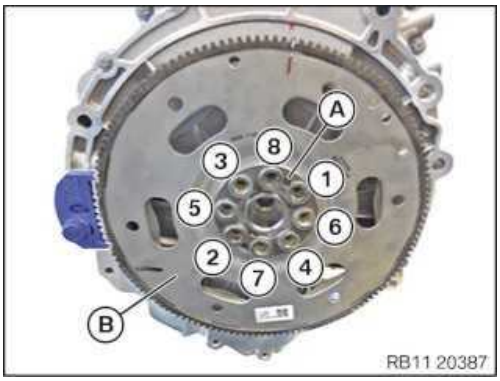
Screw-in depth	18 mm

- Make sure that the thread cutter does (1) **not** rest on the timing chain (3).



TECHNICAL INFORMATION

- **Carefully** handle the timing chain, to protect the timing chain and timing chain drive against damage.

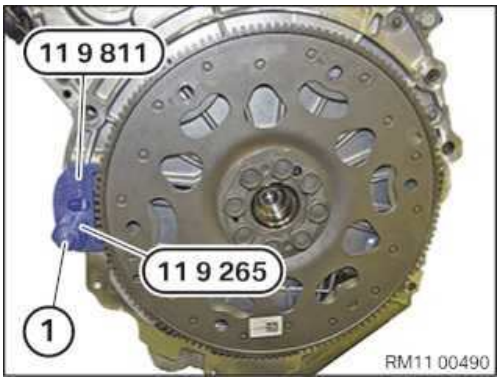


- Make sure the installation dimension (2) of the screw bore (1) is not exceeded.

  The thread cutter (1) may not rest on the timing chain (3).

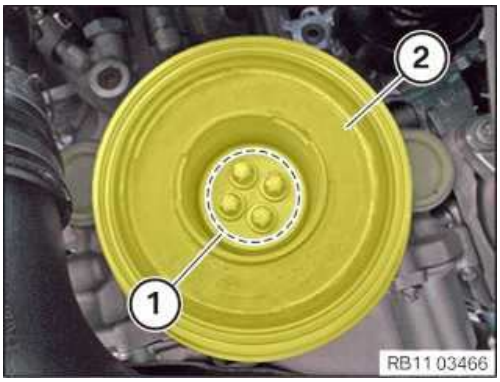
- Important! Observe the marking shown during installation.
- Install special tool (1) on the crankshaft as shown.

cardiagn.com



- Position flywheel (B) .
- Renew flywheel bolts (1) to (8).

  Parts: Flywheel bolts
- Screw in flywheel bolt (1) to (8) by hand.
- Observe tightening sequence. Begin at the dowel pin (A).
- Tighten flywheel bolts in sequence (1) to (8).

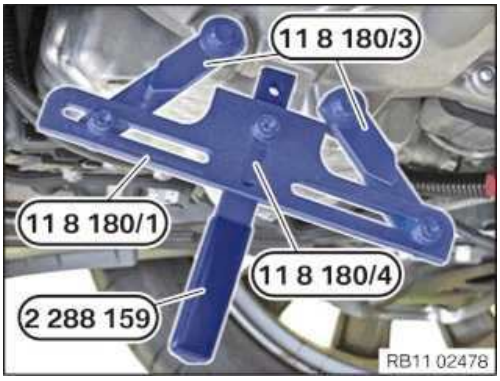


Flywheel to crankshaft

M12x1.5	Renew screws.	Tightening torque	120 Nm

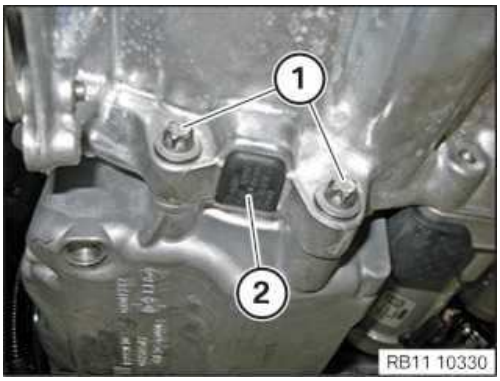
- Loosen the transmission bolt (1).
- Guide out and remove the special tool **0 494 793 (11 9 265)** and **0 496 171 (11 9 811)** with the **standard** washer (5 mm).

53 – Installing the vibration damper



- Position vibration damper (2).
- Renew screws (1).

  Parts: Bolts
- Fasten the vibration damper (2) with the bolts (1).
- Tighten the screws (1).



Vibration damper with belt pulley to crankshaft

M10x65	Renew screws. Tighten screws crosswise.	1. Jointing torque	40 Nm
		2. Angle of rotation	60 °
		3. Angle of rotation	60 °

- Release the transmission bolts and remove the special tool **0 493 587 (11 8 180)**.

cardiagn.com

- Tighten transmission screws (1).

Transmission to engine

M8		Tightening torque	19 Nm

- Install protective cap (2).

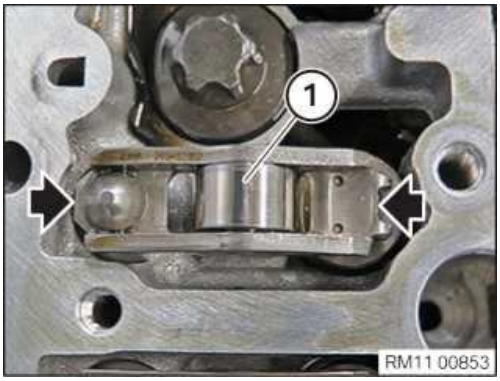
54 – Installing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

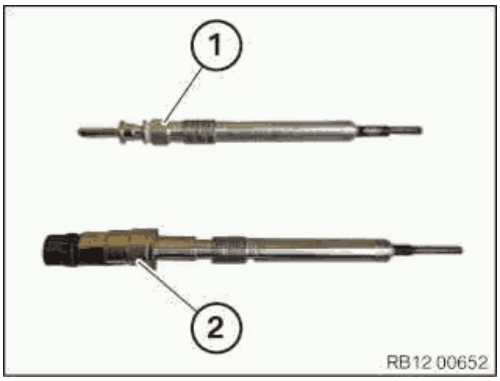


- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

55 – Install the roller cam followers

TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.



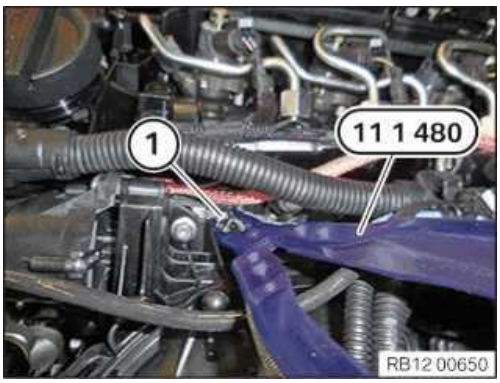
- Check all roller cam followers (1) for damage and replace if necessary.

  Parts: Roller cam followers
- Insert and install all roller cam followers (1).

  Roller cam followers (1) that have already been used must be installed in the same place.
- Note the mounting orientation of the roller cam followers (1).
- Oil all roller cam followers (1).

56 – Install glow elements

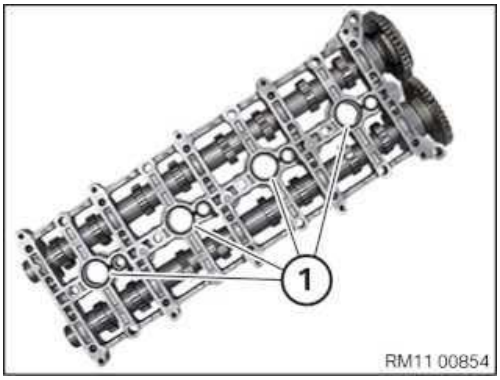
cardiagn.com



- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

- Tighten the glow element with the special tool or conventional tools.

Glow elements to cylinder head



Glow element		Tightening torque	13 Nm

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

57 – Installing the camshaft support

- Renew gaskets (1).

  Parts: gaskets

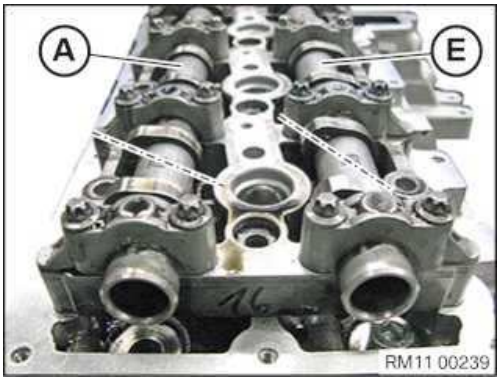
- Position the camshaft support including the camshafts.
- Tighten the screws in a sequence from (1) to (14) in several steps.

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

58 – Adjusting the timing of the camshafts

cardiagn.com

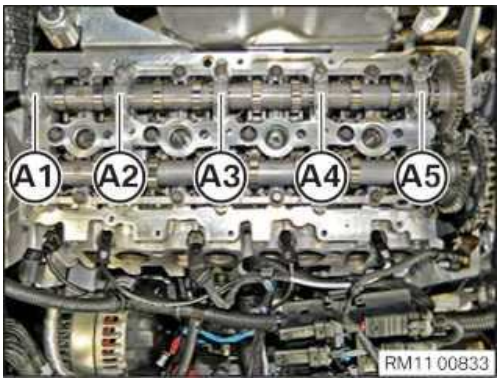


- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

- Slide the special tool **2 288 380** completely into the bore hole of the oil sump.
- Use the special tool to block **2 288 380** the crankshaft in the TDC firing position at the first cylinder.

- The cam of the intake camshaft (E) at the first cylinder points up at an angle.
- The cam of the exhaust camshaft (A) at the first cylinder points outward at an angle.



▸ **Remove exhaust camshaft.**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

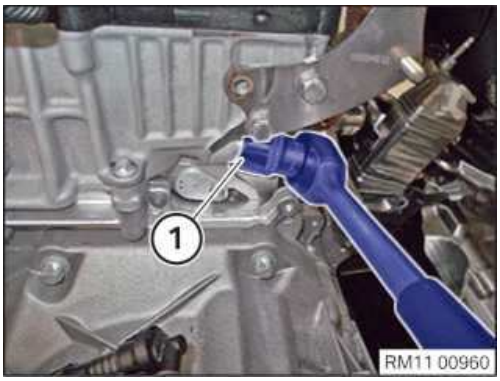
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A5) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components on special tool **0 495 105 (11 4 480)** in a tidy and orderly fashion.

cardiagn.com



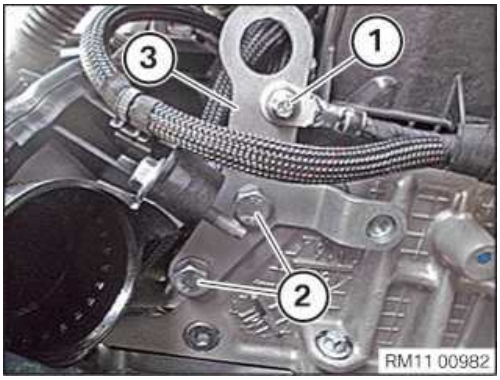
▶ **Remove chain tensioner piston**

WARNING

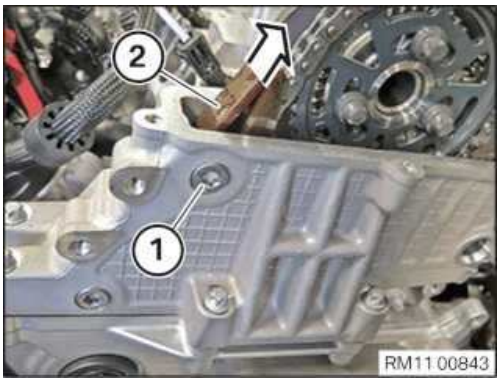
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



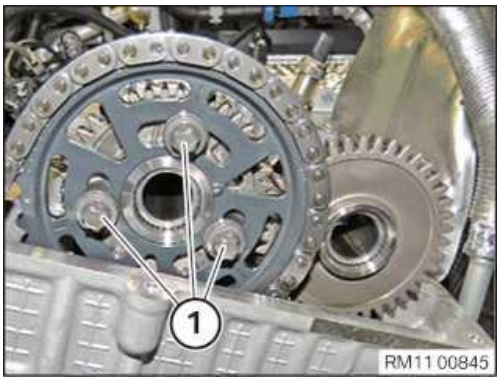
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

▶ **Remove the timing chain guide rail**



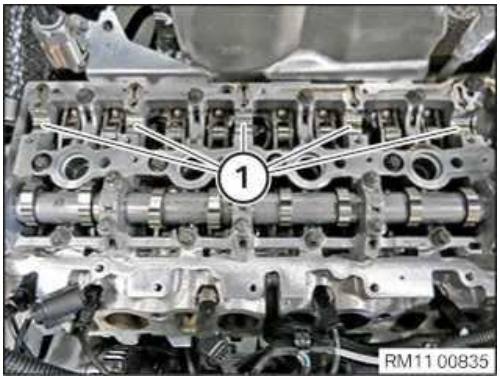
- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

▶ **Removing the camshaft sprocket on the intake camshaft**

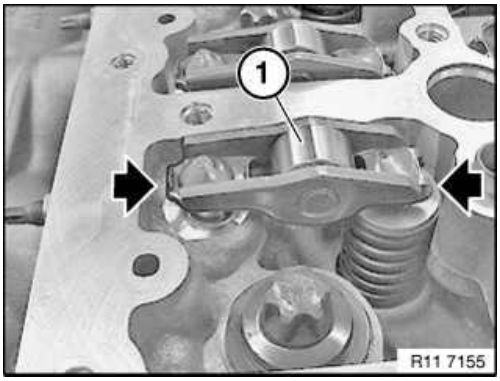
- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

cardiagn.com



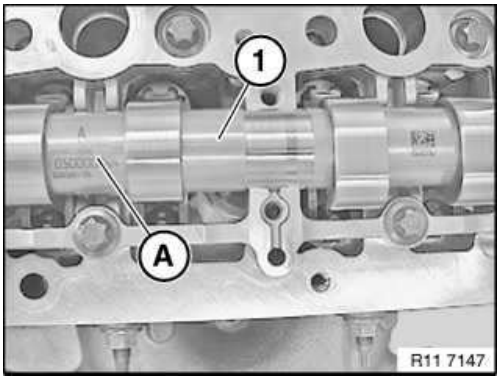
▶ **Install exhaust camshaft**

RISK OF DAMAGE

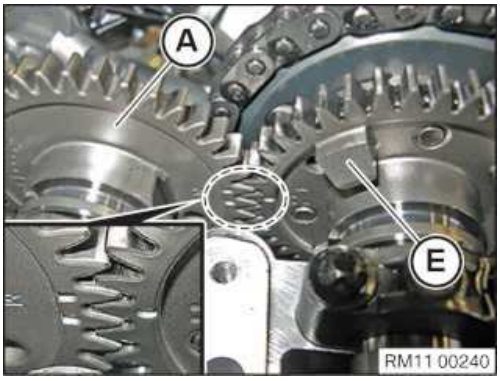


Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

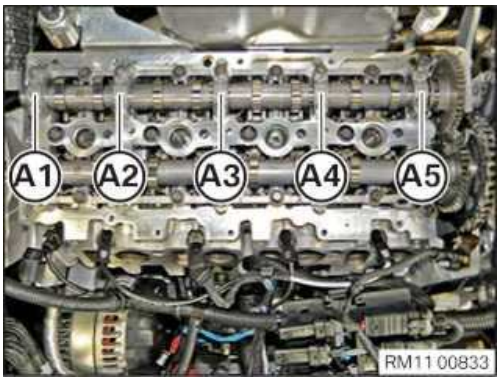


- Comply with the regulations for the installation and disassembly.
- Perform work with care.



- Oil all bearing positions (1).

- Make sure the roller cam followers (1) have the correct mounting orientation.



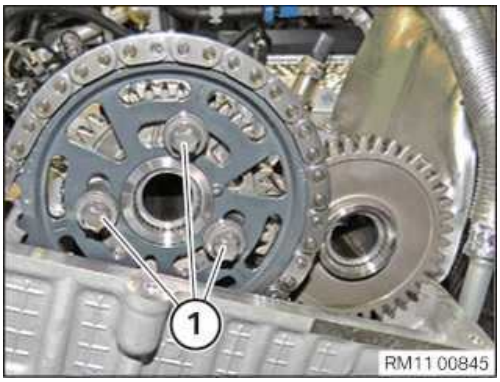
- Insert exhaust camshaft (1) so that the identification (A) points upwards.

- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.

cardiagn.com

- Tighten all exhaust camshaft bearing caps (A1) to (A5) from the inside to the outside by 1/2 a turn at a time.

Intake and exhaust camshaft in camshaft support



M6x31		Tightening torque	10 Nm

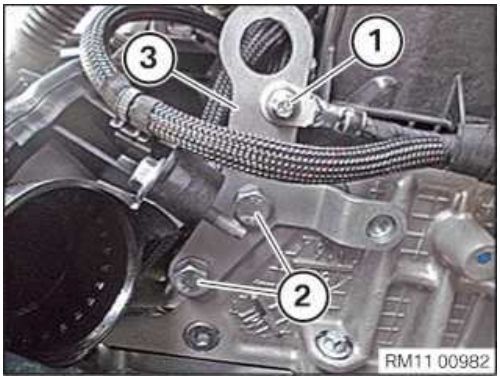
- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

  Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

▶ **Installing the camshaft sprocket on the intake camshaft**

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

▶ **Install the timing chain guide rail**



- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6			8 Nm

cardiagn.com

▶ **Installing the chain tensioner piston**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

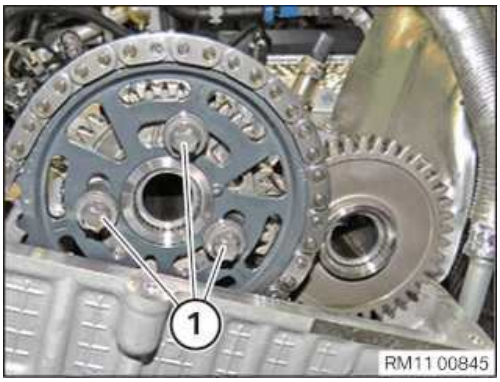
- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

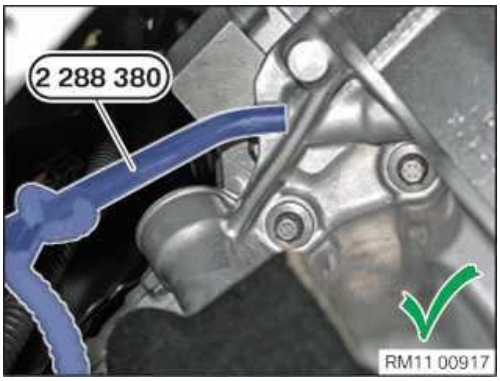


- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

▶ **Tightening the camshaft sprocket on the intake camshaft**



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

59 – Removing the special tool to disconnect the crankshaft

cardiagn.com

- Remove special tool **2 288 380**.

60 – Removing the special tool to secure the exhaust camshaft

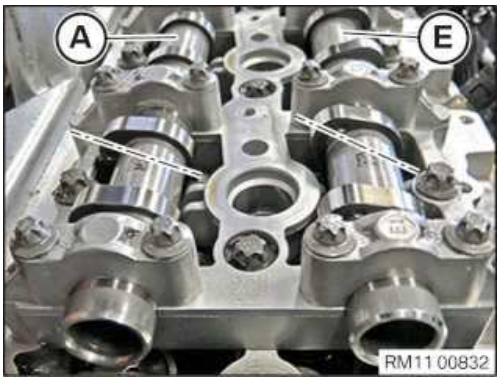
- Remove the special tool **0 496 112 (11 8 760)** to fix the exhaust camshaft.

61 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

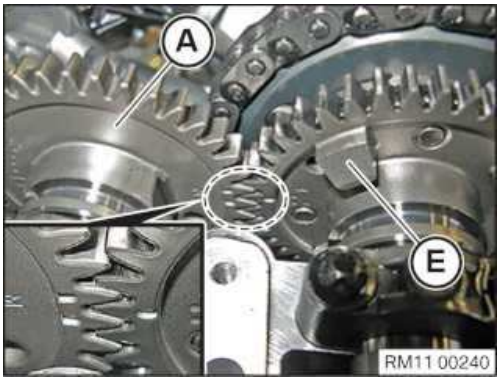


The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

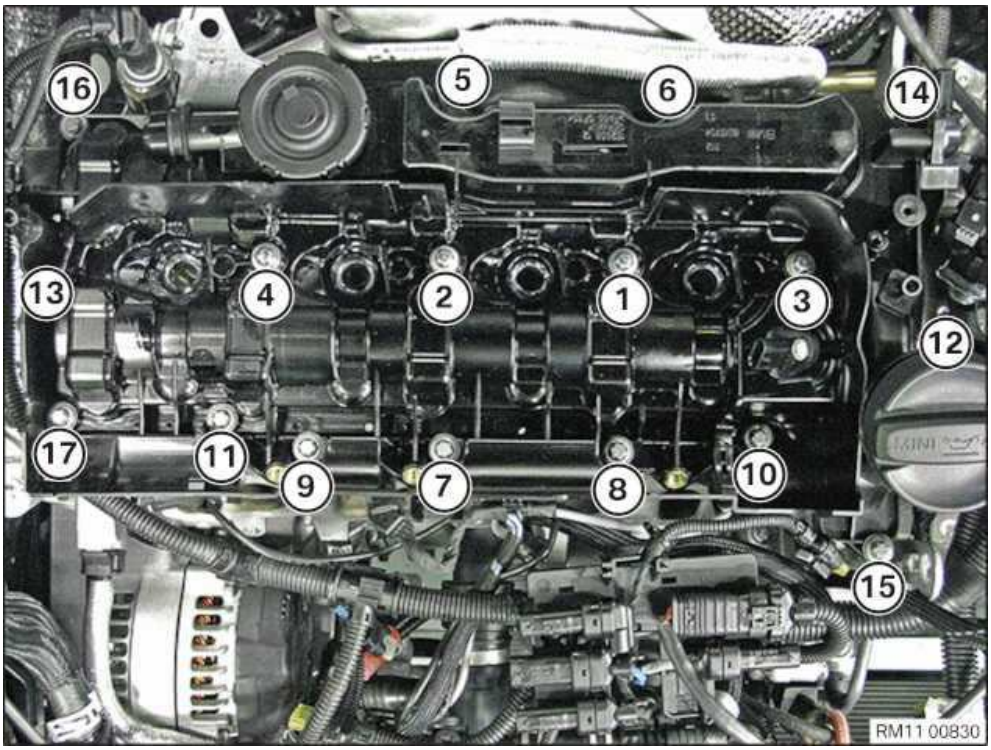
- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

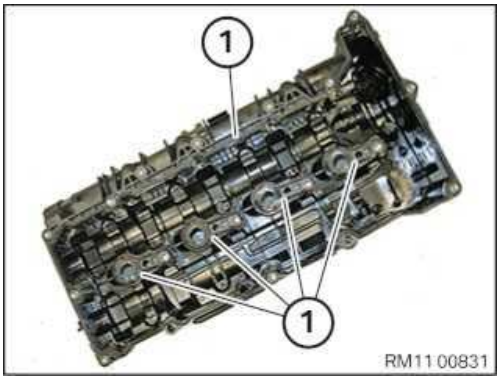
TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.



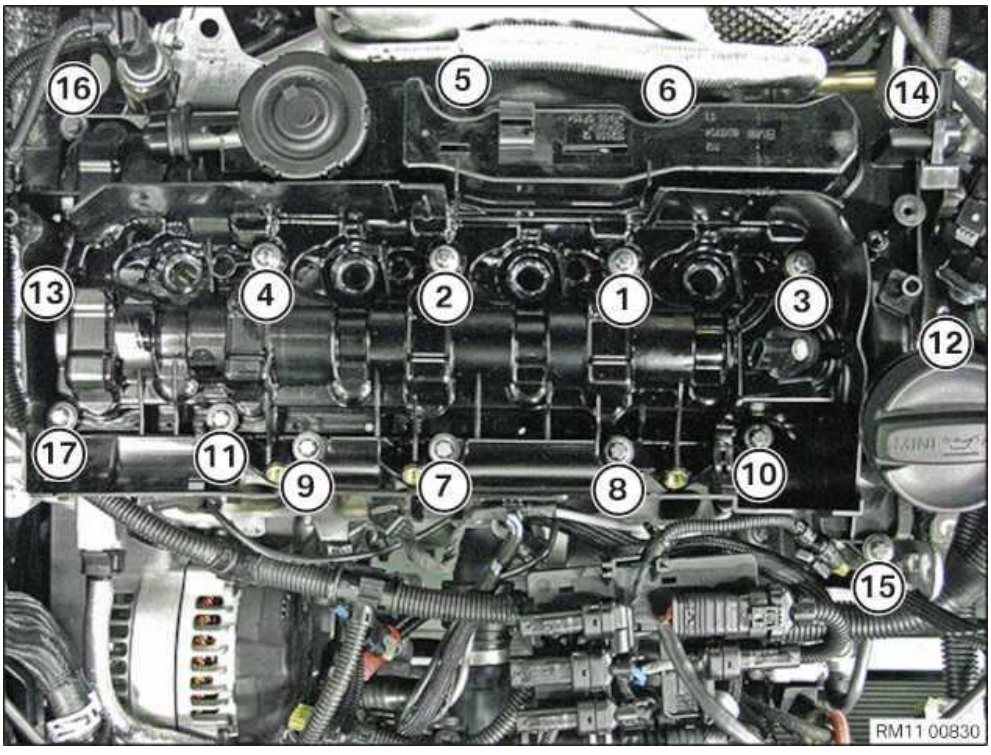
- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.



- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

cardiagn.com

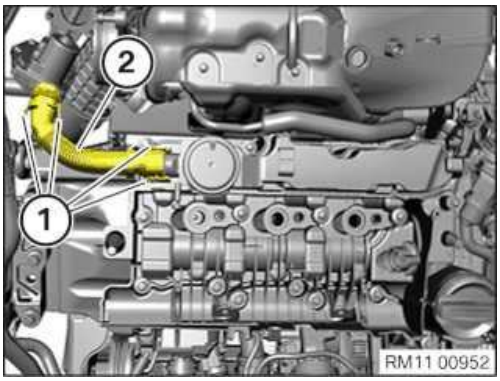
Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket



- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-

cardiagn.com

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

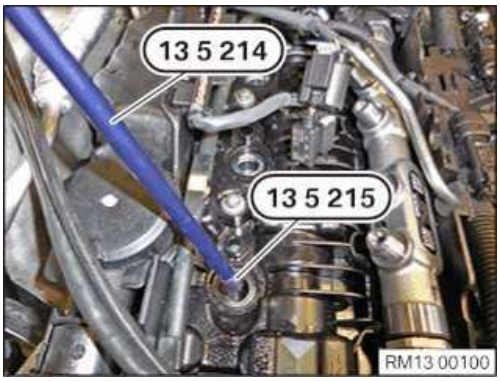
63 – Installing injectors of injection system

▶ **Cleaning the injector shafts**

CAUTION

Swirling dirt particles caused by compressed air.

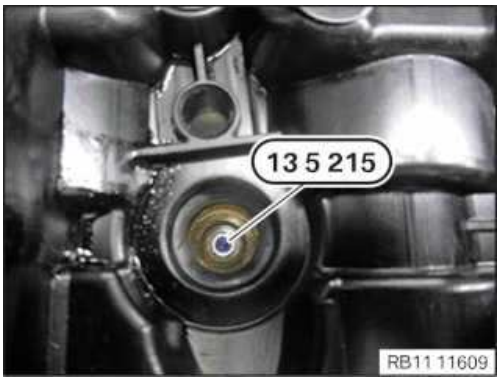
Danger of injury!



- Collect dirt particles, e.g. when blowing out, use cloth to do so.
- Wear safety goggles.

RISK OF DAMAGE

Contaminant or foreign body.

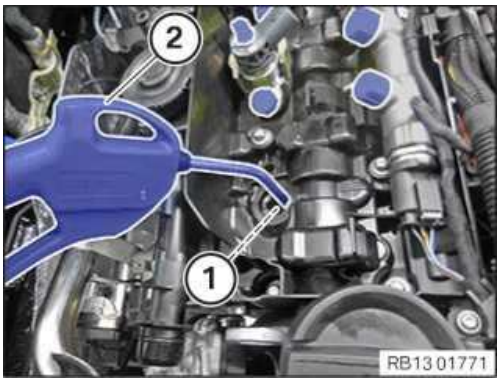


Contamination can result in malfunctions, operating failure or leaks.

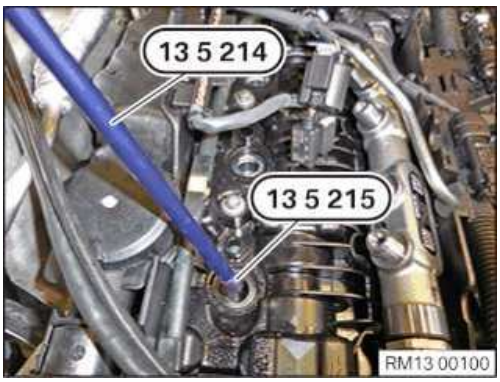
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

cardiagn.com



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.



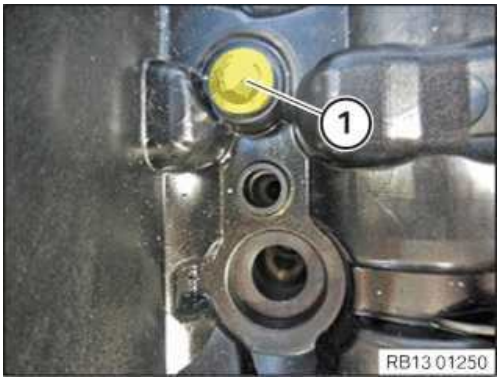
- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

- Blow out injector shaft (1) with air gun (2).

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

► **Check the placement of the clamping claw**



cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

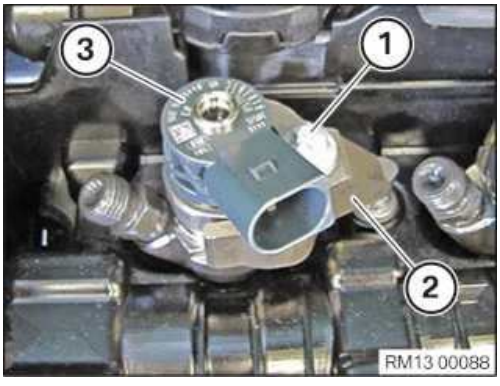
▸ **Prepare the injector for installation**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

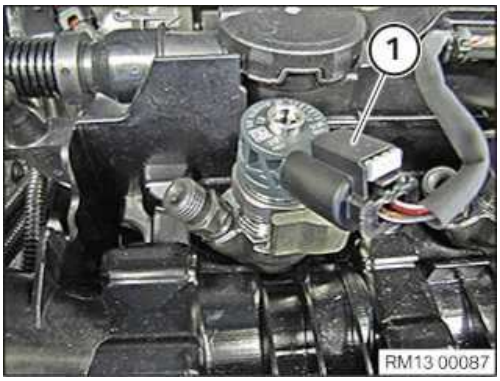


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

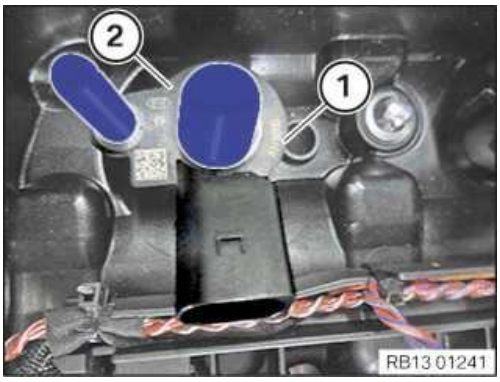
Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

cardiagn.com

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



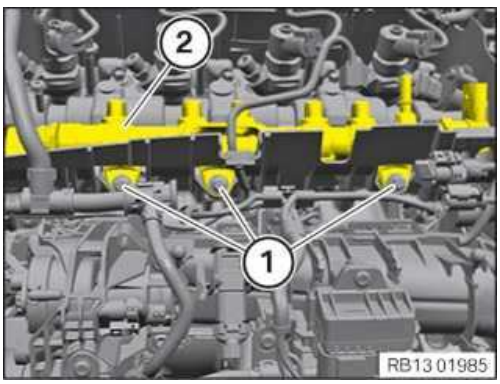
▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

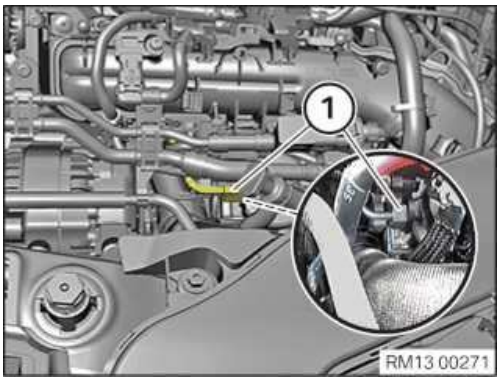
Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

64 – Installing the rail

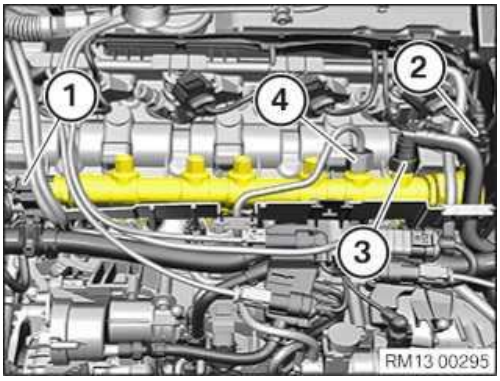


- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm

cardiagn.com



TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

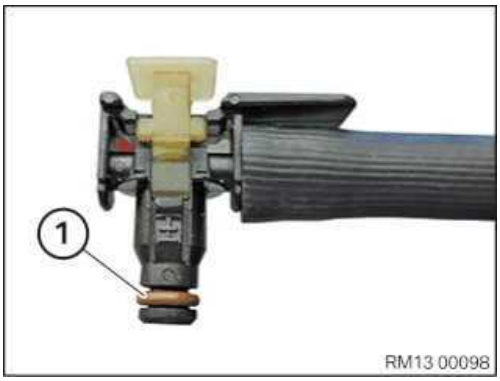
TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool .

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm



- Connect and lock the fuel line (3).

  Fuel line (3) must engage audibly.
- Connect connectors (2) and lock.

  The connector (2) must engage audibly.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

65 – Connect the leakage oil line on the injector

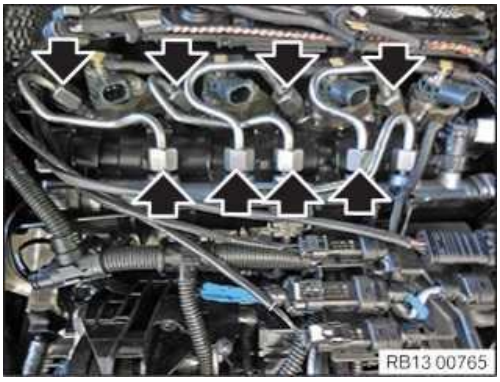
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

cardiagn.com

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.



66 – Installing high pressure lines between rail and injectors

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

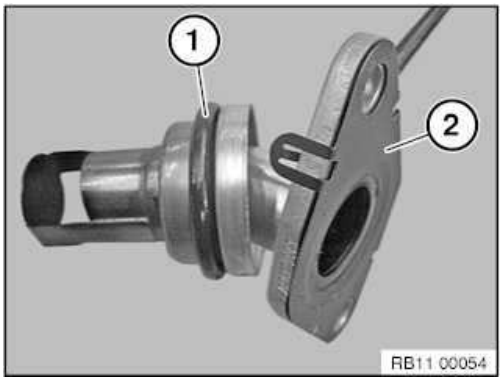
TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.



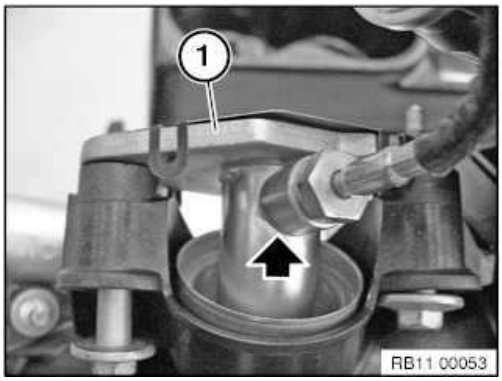
- Tighten the high pressure lines (arrows) with the special tool .

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

67 – Installing the intake plenum

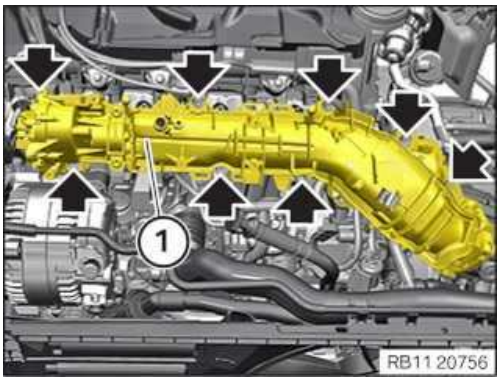


- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position the seal (2) and clip it in.

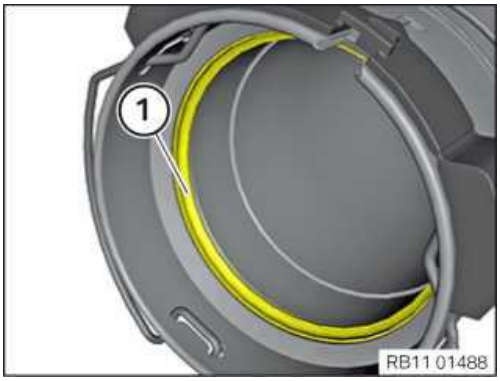
cardiagn.com



- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

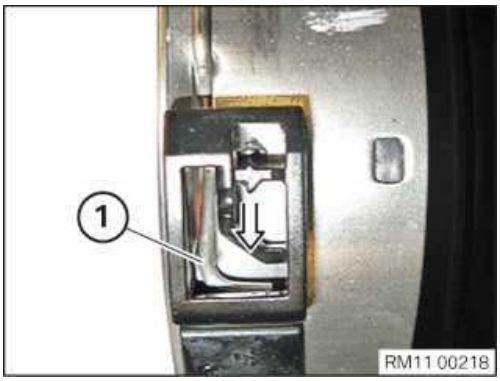
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



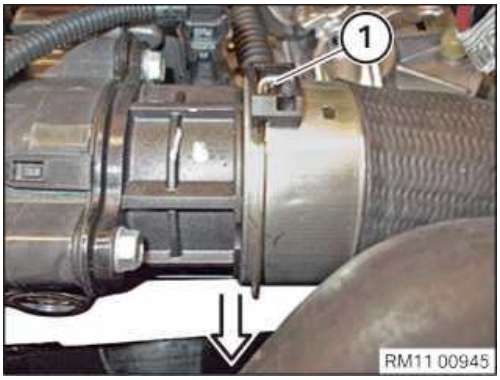
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

cardiagn.com

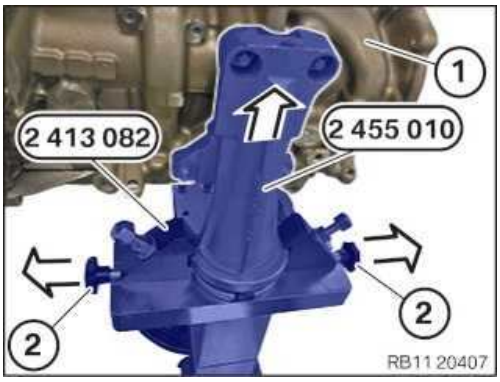
- Engage the lock (1) on the bracket (arrow).

- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

68 – Remove the engine from the assembly stand

CAUTION

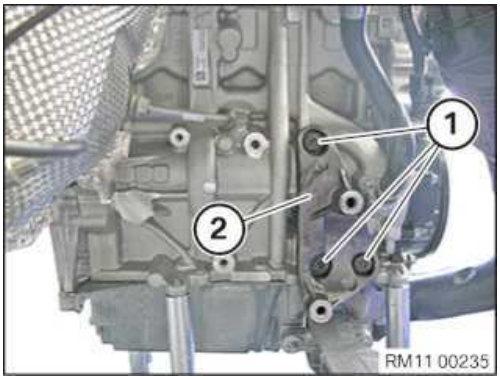


Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Insert engine lifter with special tool and position engine (1).

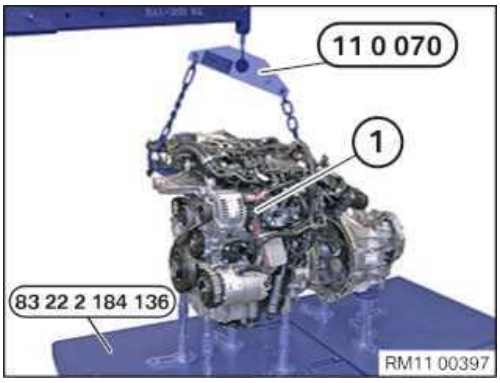


- Unscrew the nuts on special tool .
- Detach the holder (2) in the direction of the arrow.
- Detach the engine (1) with special tool **2 455 010** out of the special tool in the direction of arrow.

cardiagn.com

- Remove conventional screws (arrows).
- Feed out the special tool **2 455 010** on the engine (1) and remove.

- Insert and install the holder (2).
- Tighten the screws (1).



Holder to crankcase

M10		Tightening torque	38 Nm

69 – Mount engine on the automatic transmission

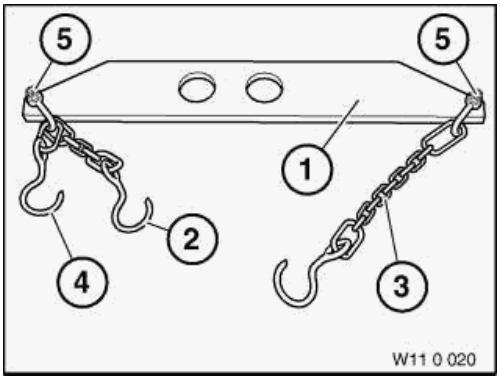
Prerequisite

Engine has been removed.

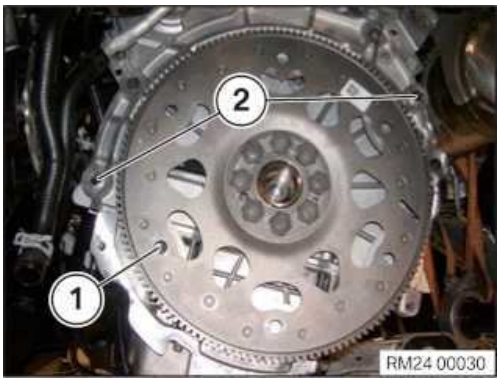
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Position the engine (1) on the lifting table **2 184 136** using the engine lifter and the special tool .
- Feed out engine lifter from engine (1) with special tool and push aside.



- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.



cardiagn.com

- Stage the workshop crane **2 220 718**.

- Stage the lifting gear .

- The bore hole (1) of the flywheel must be accessible from the recess on the oil sump.
- Check for correct fit of fitting sleeves(2).

cardiagn.com

TECHNICAL INFORMATION

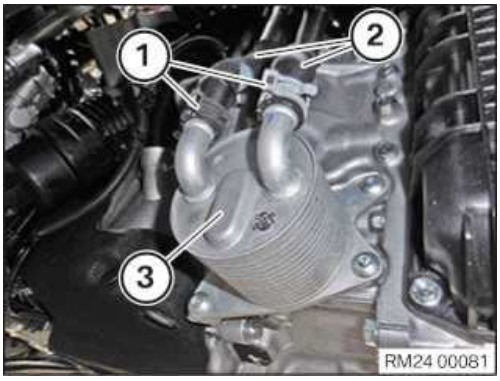
Conduct the following operation with the assistance of a second person.

- Twist torque converter until bore hole in torque converter is flush with bore hole of flywheel.
- Flange-mount and screw automatic transmission on the engine with an auxiliary person and the workshop crane **2 220 718** with the lifting gear .
- Tighten screws (arrows).

Transmission to engine

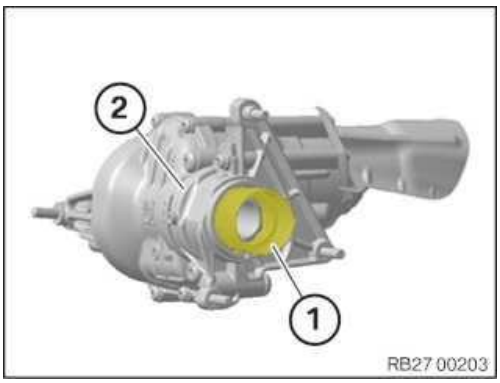
M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

- Feed out workshop crane **2 220 718** with the lifting gear from the automatic transmission and push it aside.



- Crank engine with special tool **0 493 380 (11 6 480)** at vibration damper in direction of rotation.
- Renew nuts (1).

  Parts: Nuts
- Tighten all 6 nuts (1) of the torque converter.



Torque converter to flywheel

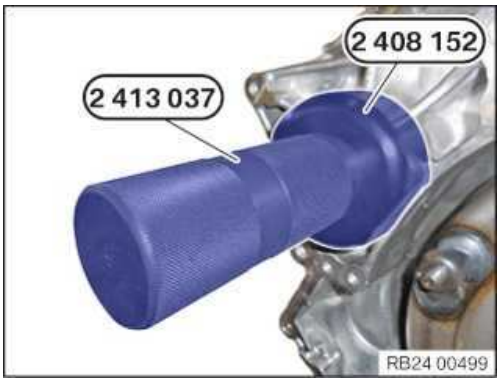
M10	Replace nuts. Remove any adhesive residue from the threads.	Tightening torque	56 Nm

- Slide coolant hoses (1) onto transmission oil cooler (3).
- Secure hose clamps (1).

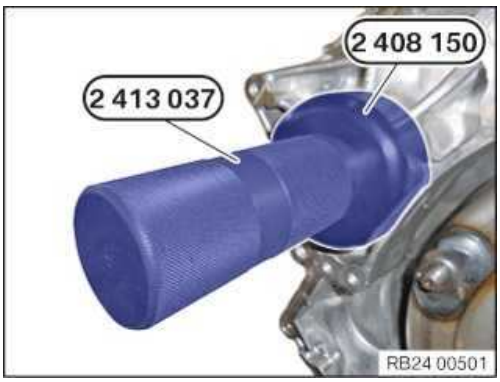
70 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

cardiagn.com

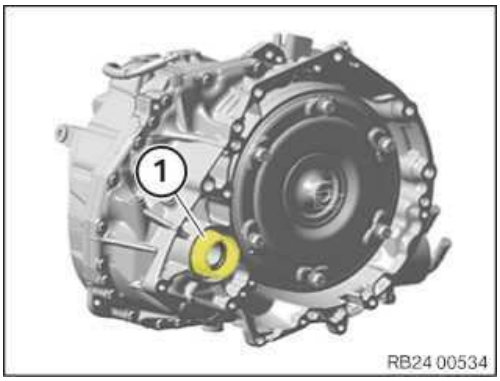


- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.

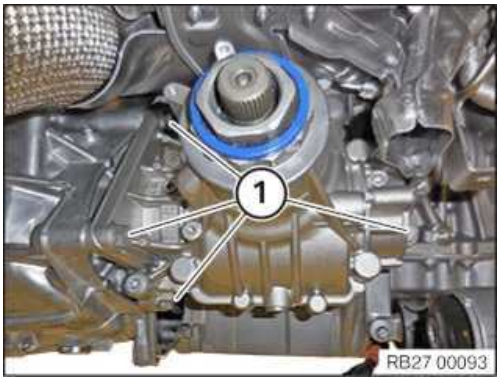
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

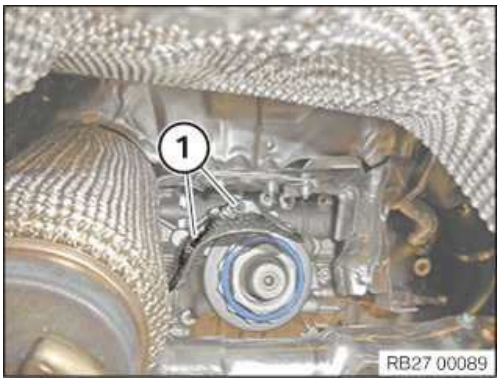
cardiagn.com



- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials



Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

cardiagn.com

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

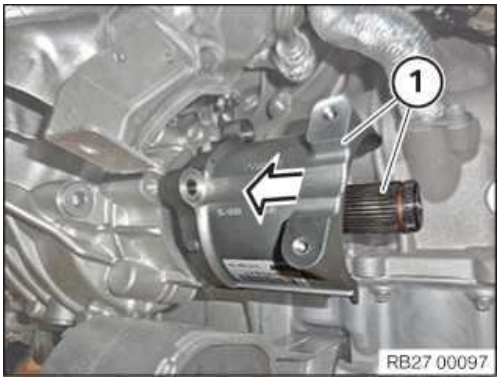
Technically suitable transfer box and electrical transmission oils	

Main group 27

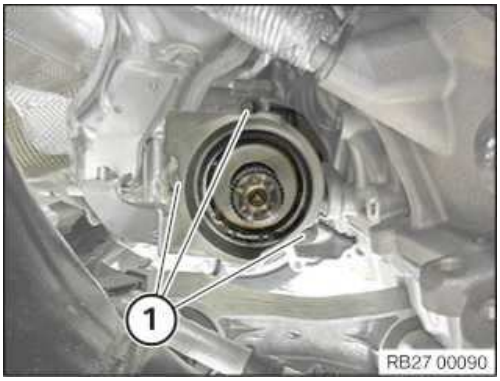
- Tighten the oil filler plug (1).

Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm



71 – Install the intermediate shaft with the support tube



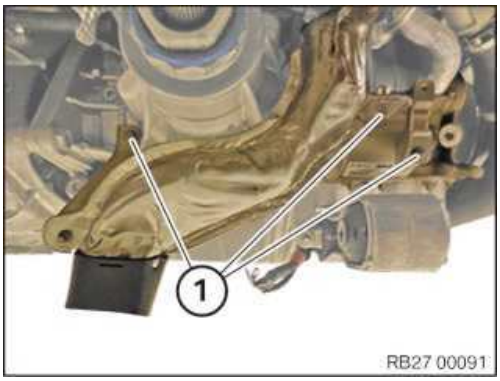
- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

- Position screws (1).



Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

cardiagn.com

- If installed: Install air duct.
- Tighten the screws (1).

72 – Installing the high-pressure stage exhaust turbocharger

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

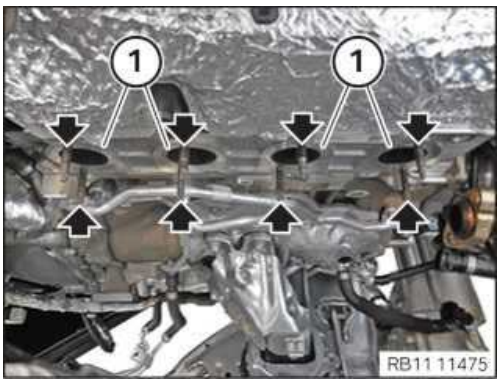
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE



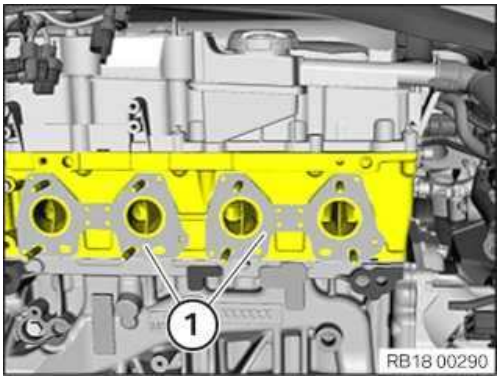
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

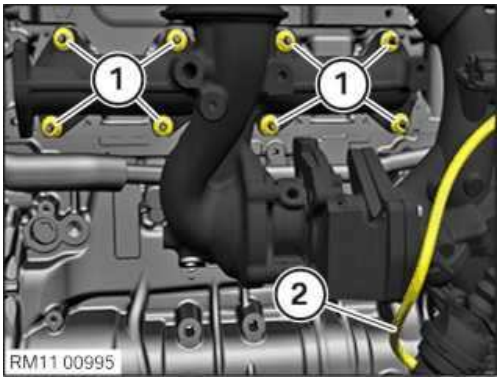
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.

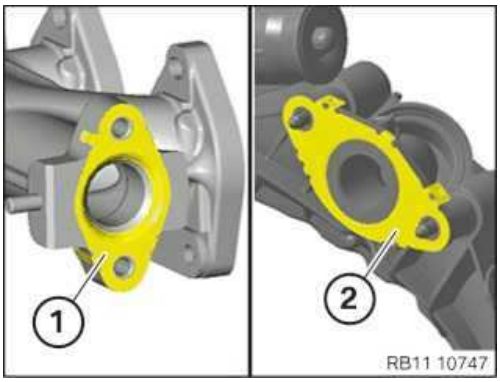
cardiagn.com



- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.

- Renew gasket (1).

  Parts: Gasket

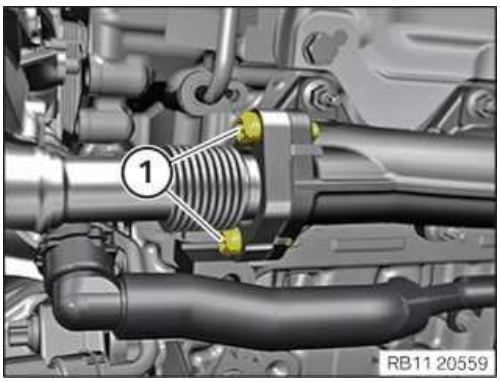


- Install new gasket (1).

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

  Parts: Nuts

- Connect vacuum hose(2).

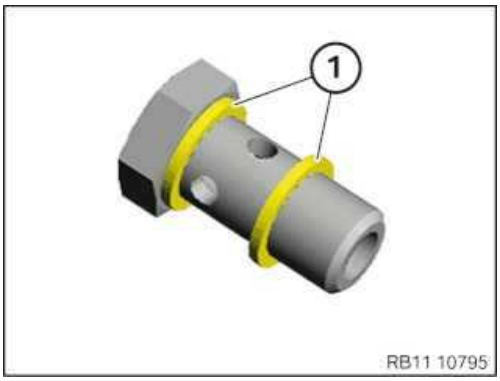


- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

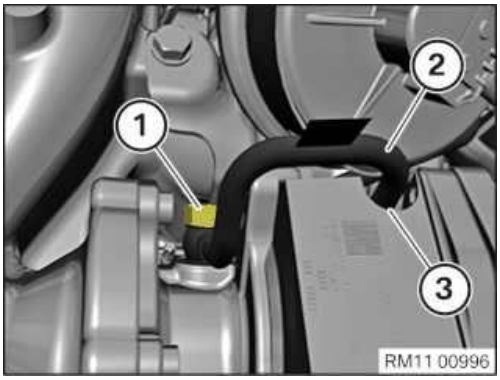
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket



- Tighten the screws (1).

Exhaust-gas recirculation cooler to exhaust manifold



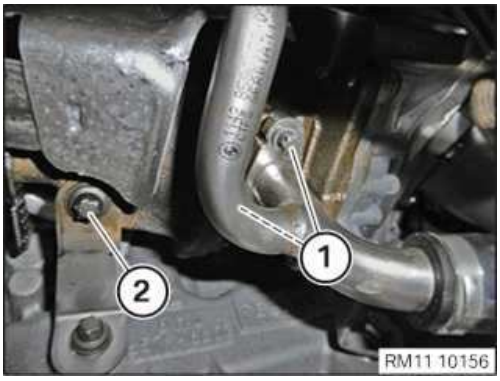
M8x28	Replace screws	Tightening torque	32 Nm

cardiagn.com

- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring

- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).



- Tighten bolt (1) from the right wheel arch.

- Renew seal (1) of oil return line.

  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

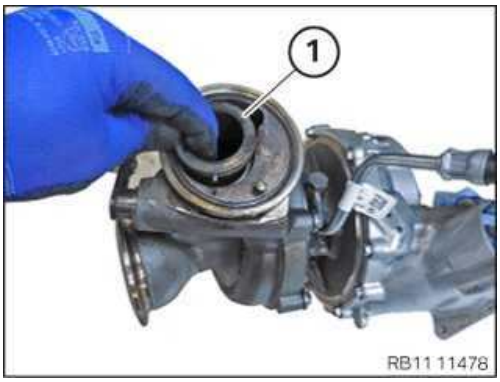
Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

73 – Installing the low-pressure stage turbocharger

cardiagn.com

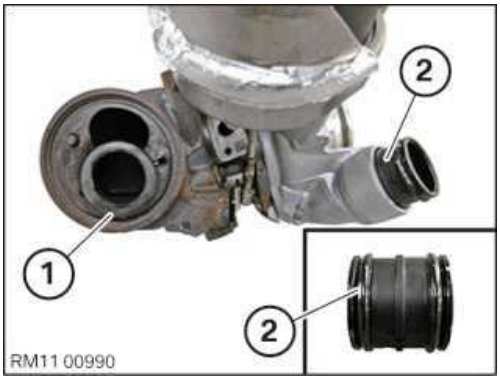
RISK OF DAMAGE



Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.



TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.

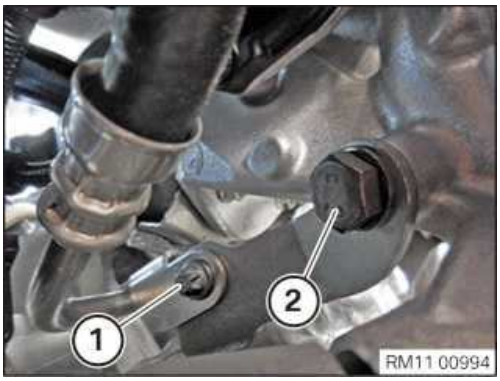
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

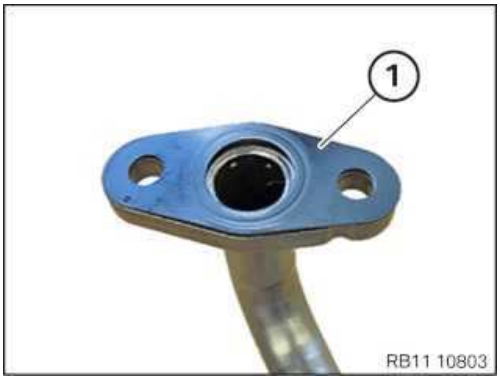
Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

cardiagn.com

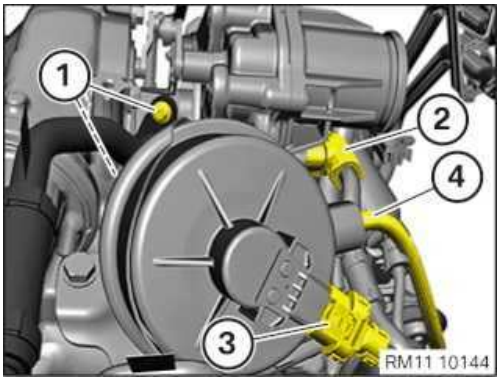
- Tighten down screw (1).



Oil feed line to bracket

Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

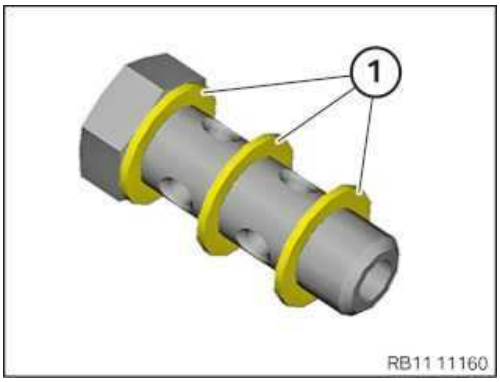


Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

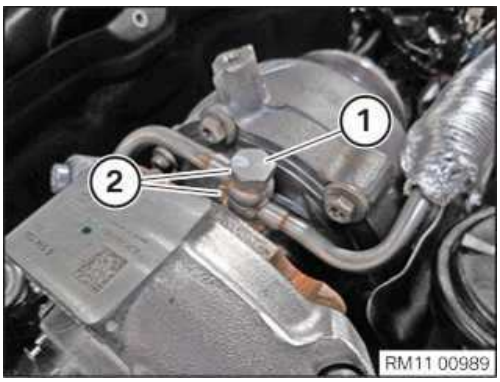
- Renew seal (1) on the oil return line.

  Parts: Gasket



- Position the oil return line with the seal.
- Tighten the screws (1).

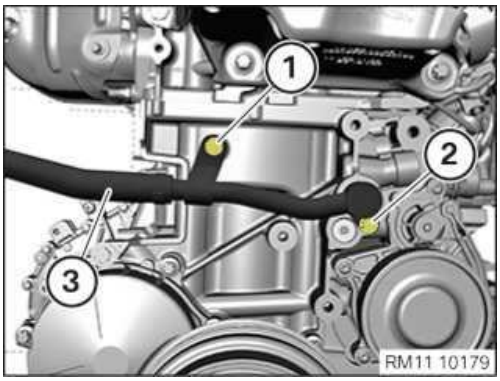
Oil return line to turbocharger



M6x12		Tightening torque	8 Nm

- Connect and lock connectors (2) and (3).

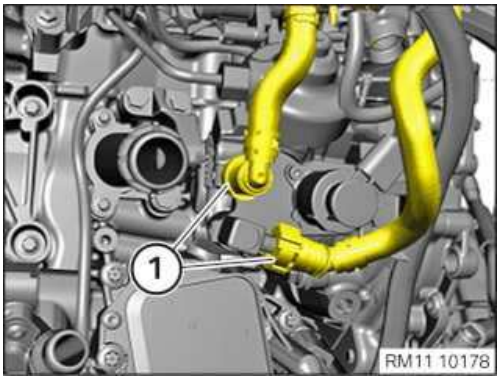
  The locks must engage audibly.
- Connect vacuum hose (4).



- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.

cardiagn.com



- Renew sealing ring of the coolant line (3).

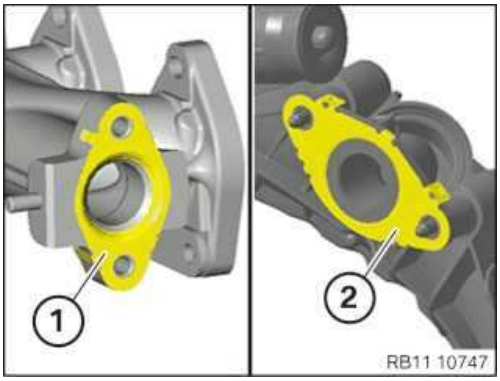
  Parts: Sealing ring
- Coat the sealing ring and install the coolant line (3) .
- Tighten down screws (1) and (2).

Standard screw connection M6

M6		8 Nm

- Connect and lock fuel lines (1).

  The fuel lines (1) must audibly engage.



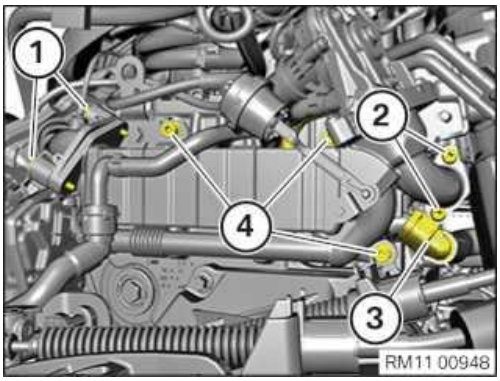
▶ **Installing the exhaust-gas recirculation cooler**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

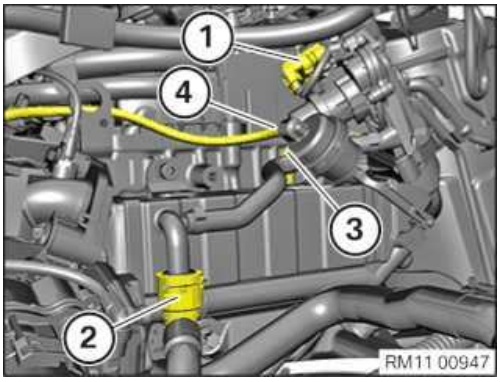
Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold



M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

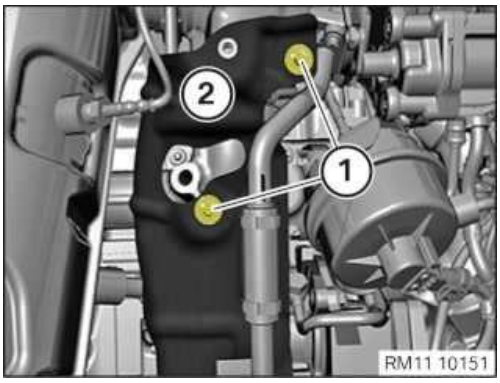
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

▸ **Installing heat shield on exhaust turbocharger at bottom**

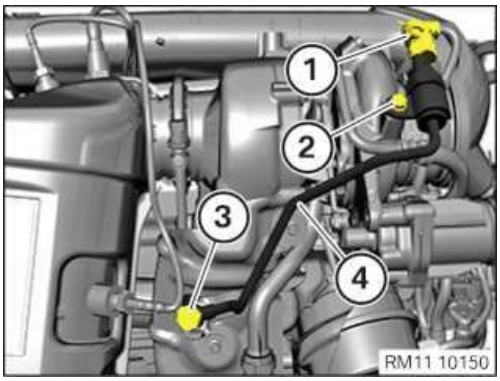


cardiagn.com

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

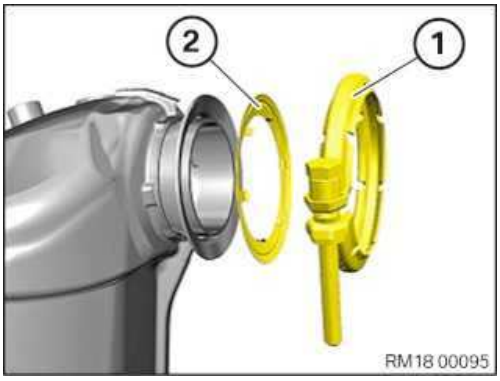
Torx screw BM 6x12		Tightening torque	10 Nm

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm



- Tighten down screw (2).

Standard screw connection M6

M6		8 Nm

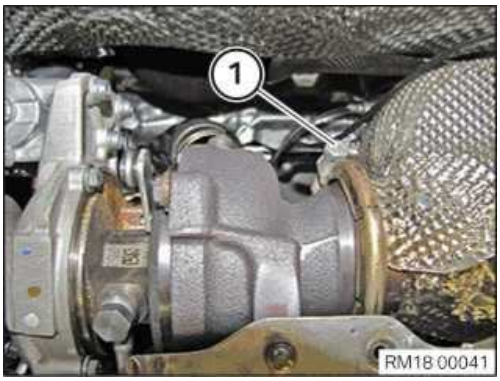
- Connect connectors (1) and lock.

  Lock must audibly engage.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

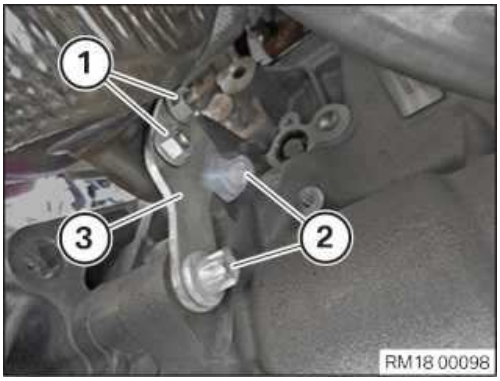


- Remove and install heavy components with the aid of another person/other persons.

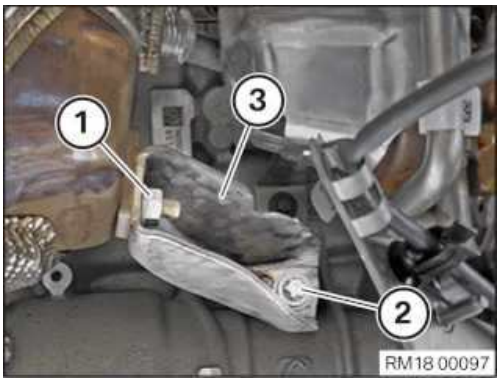
- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket



cardiagn.com



- Carefully insert and install the diesel particulate filter .
- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

- Tighten nuts (1) by hand.

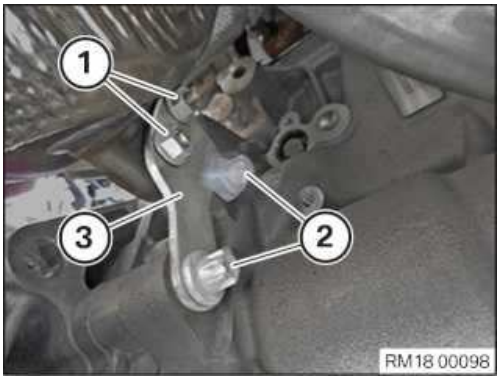
- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.

- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm



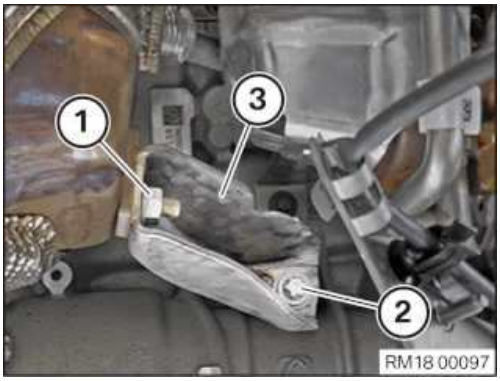
cardiagn.com

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screws (2).



Diesel particulate filter holder to gearbox

M12x75		Tightening torque	66 Nm

- Tighten nuts (1).

Diesel particle filter to holder

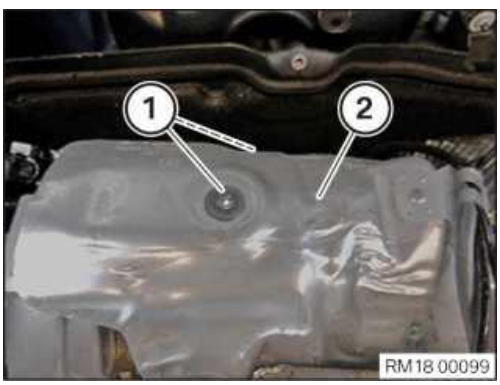
- Tighten down screw (2).

Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

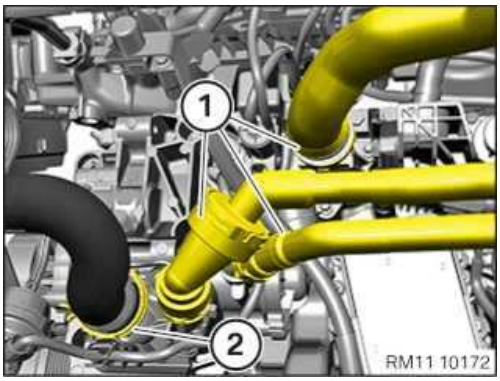


Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Remove fitting aid (1) for the flexible tube.

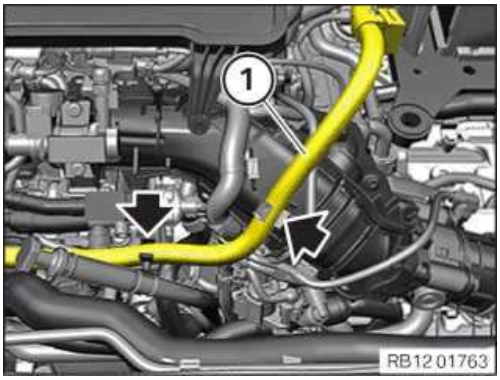
▶ **Install the heat shield on the exhaust turbocharger**



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm



- Fasten the cable at the clips .

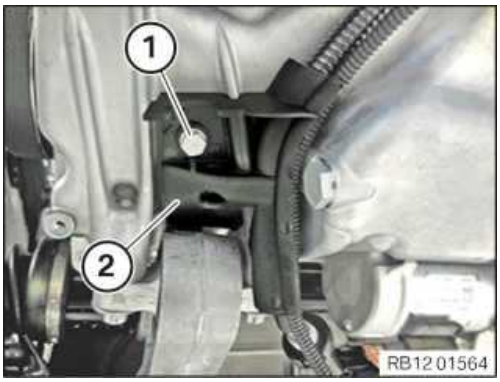
cardiagn.com

- Install the coolant hose and secure with the clamp (2) .
- Connect and lock the coolant lines (1).

  The coolant lines (1) must engage audibly.

CAUTION

Improper routing of the positive battery cable.



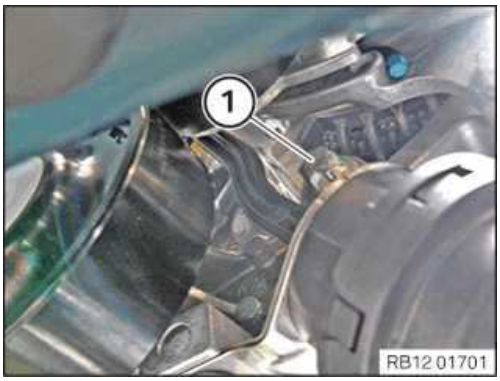
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert the positive battery cable (1) into the clamps (arrows).

- Feed in and install positive battery cable at the clamps (1).

- Insert and install the holder (2).
- Tighten down screw (1).



Bracket to oil sump

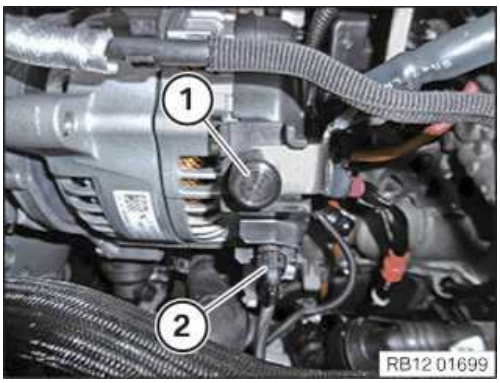
M6		Tightening torque	8 Nm

- Insert and install alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support.

cardiagn.com

- Tighten the screw (1) below on the alternator.

Alternator to component carrier



M10x75 / M10x125		Tightening torque	38 Nm

- Tighten the bolt (1) on top on the alternator.

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm

- Mount positive battery cable to the alternator.
- Tighten nut.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

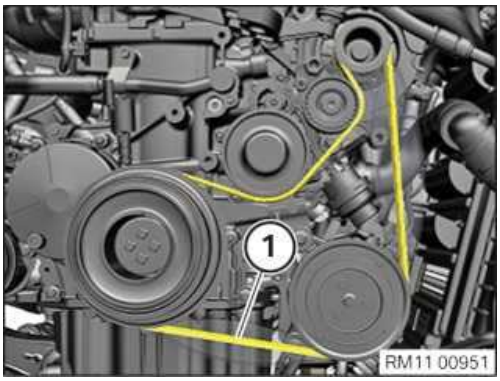
- Mount the cover (1).
- Connect the connector (2) to the alternator and lock audibly.

- Install air conditioning compressor (2) and position it correctly.
- Tighten the screws (1).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

▸ **Installing the drive belt for alternator**



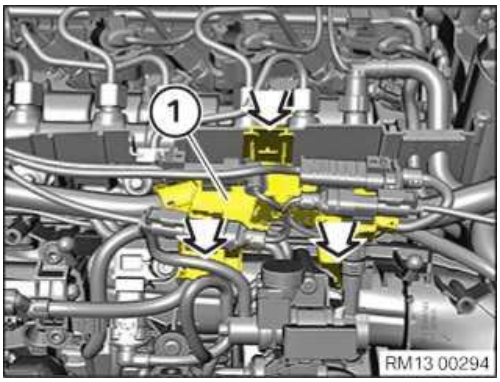
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

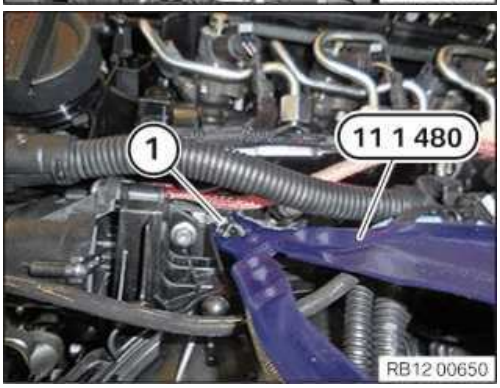
TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

cardiagn.com

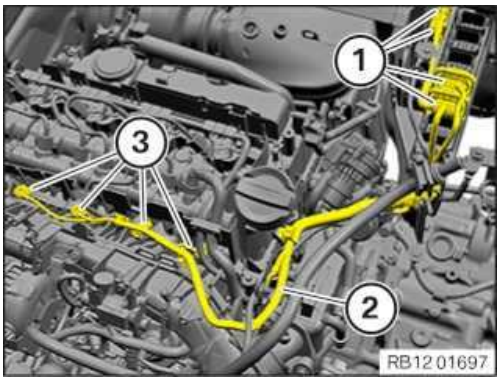


- Feed in the drive belt for the alternator (1) and install it.



- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool **0 496 268 (11 0 390)** out of the belt tensioner and remove it.

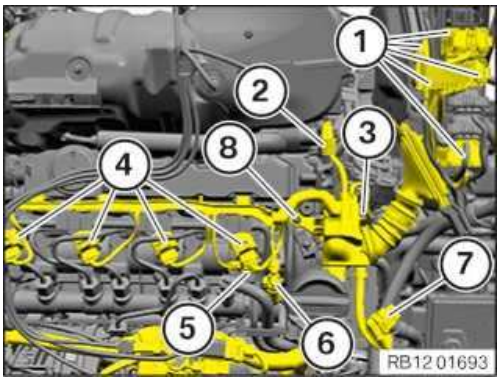
▶ **Installing the cable clip for the intake plenum**



- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.

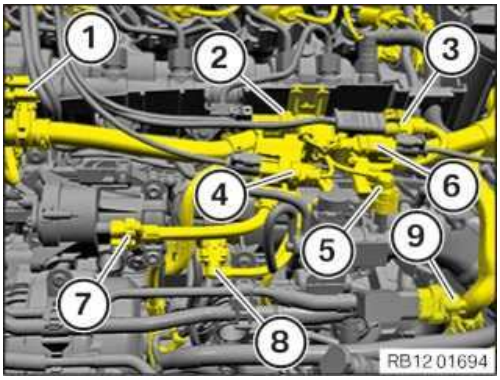
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.



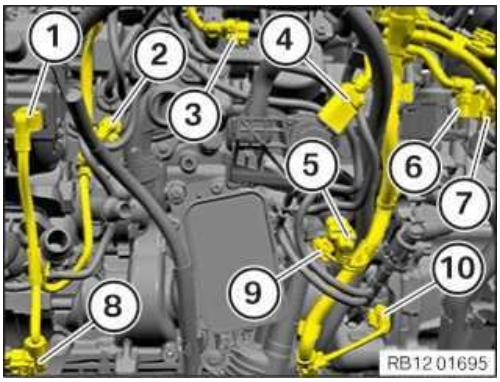
- Lay vehicle wiring harness and fasten with clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Connect all connectors (3) to the glow elements and engage them audibly.
- Mount ground strap and tighten screw (2).

Ground cable to cylinder head

M6x12		Tightening torque	8 Nm

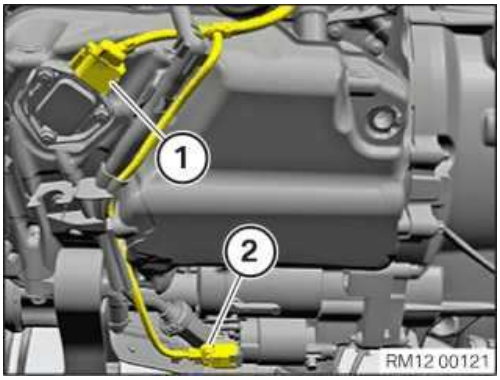


cardiagn.com



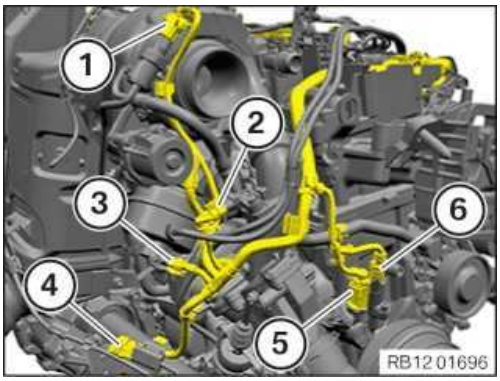
- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

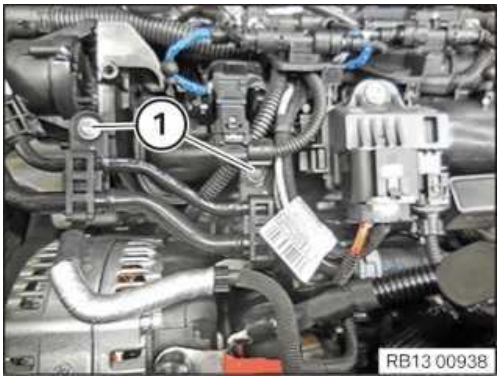


TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.



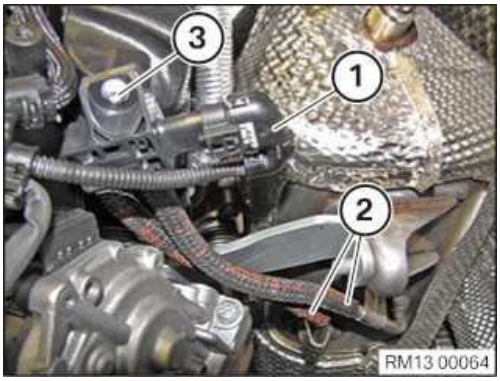
- Connect the connector (1) to the alternator and lock audibly.
- Connect the connector (2) to the electric changeover valve and lock audibly.
- Connect the connector (3) to the electric changeover valve and lock audibly.
- Connect the connector (4) to the high pressure pump and lock audibly.
- Connect the connector (5) to the oil pressure sensor and lock it audibly.
- Attach connector (6) to the throttle bodies and lock it audibly.
- Attach connector (7) to the intake air temperature sensor and lock it audibly.
- Connect the connector (8) to the air conditioning compressor and lock audibly.
- Connect the connector (9) to the solenoid valve and lock audibly.
- Connect the connector (10) to the crankshaft sensor and lock it audibly.



- Connect the connector (1) to the oil-level sensor and lock it audibly.
- Connect connector (2) to the starter motor and lock audibly.

cardiagn.com

- Attach connector (1) to the exhaust turbocharger and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust gas pressure sensor and lock it audibly.
- Connect the connector (4) to the monitoring oxygen sensor and lock audibly.
- Attach connector (5) to the oil pressure switch and lock it audibly.
- Attach connector (6) to the switching valve and lock it audibly.



- Position the fuel line.
- Tighten the screws (1).

Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

75 – Installing differential pressure sensor

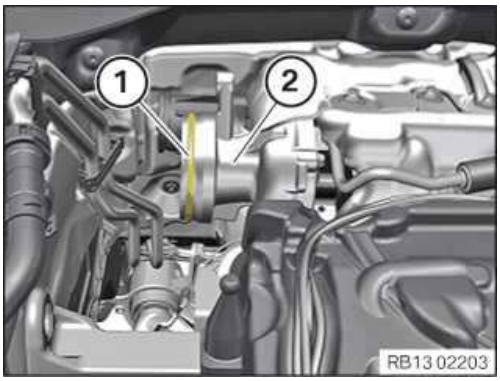
- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.



Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

76 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

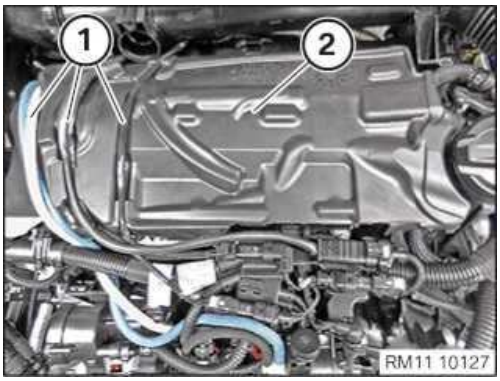
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

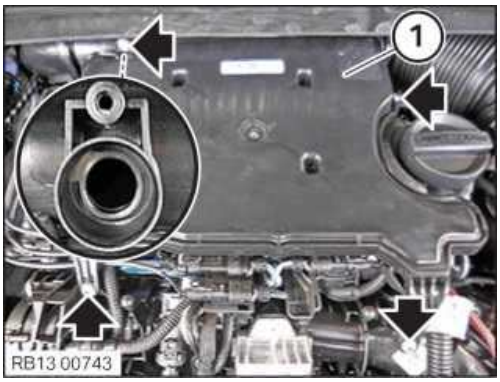
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing



Clamp		Tightening torque	3 Nm

77 – Install the acoustic cover for the injectors

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

78 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

79 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

80 – Install engine

- See additional information.

High pressure line between high pressure pump and rail

Used in step 64

High-pressure pipe		Tightening torque	28 Nm

High pressure lines between injector and rail

Used in step 66

High pressure lines		Tightening torque	28 Nm

Intake plenum to cylinder head

Used in step 67

M6		Tightening torque	11 Nm

Holder to crankcase

Used in step 68

M10		Tightening torque	38 Nm

Transmission to engine

Used in step 69

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

Torque converter to flywheel

Used in step 69

M10	Replace nuts. Remove any adhesive residue from the threads.	Tightening torque	56 Nm

Transfer box to transmission

Used in step 70

M10		Tightening torque	56 Nm

Heat shield to transfer box

Used in step 70

M6	Renew screws.	Tightening torque	6 Nm

Oil filler plug on transfer box (VTG)

Used in step 70

M18x1.5		Tightening torque	35 Nm

Intermediate shaft to transfer box

Used in step 71

M8x35		Tightening torque	19 Nm

cardiagn.com

Exhaust-gas recirculation cooler to exhaust manifold

Used in step 72 74

M8x28	Replace screws	Tightening torque	32 Nm

Oil return line to turbocharger

Used in step 72 73

M6x12		Tightening torque	8 Nm

Holder to exhaust turbocharger and crankcase

Used in step 72

M8x16		Tightening torque	22 Nm

Exhaust turbocharger to exhaust manifold

Used in step 73

V-band clamp		Tightening torque	19 Nm

Oil feed line to bracket

Used in step 73

Torx screw M6x12		Tightening torque	8 Nm

Holder to exhaust turbocharger and crankcase

Used in step 73

M8x16		Tightening torque	22 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 74

M8x20		Tightening torque	5 Nm
		Release angle	90 °

Intake plenum to exhaust-gas recirculation cooler

Used in step 74

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 74

M8x20		Tightening torque	19 Nm

Heat shield for exhaust turbocharger

Used in step 74

Torx screw BM 6x12		Tightening torque	10 Nm

Banjo bolt for exhaust pressure pipe to exhaust manifold

Used in step 74

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

Diesel particulate filter V-clip to exhaust turbocharger

Used in step 74

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

Diesel particle filter to holder

Used in step 74

M8 hexagon nut		Tightening torque	19 Nm

Diesel particulate filter holder to gearbox

Used in step 74

M12x75		Tightening torque	66 Nm

Diesel particulate filter bracket to crankcase

Used in step 74

M10x35		Tightening torque	38 Nm

Heat shield for exhaust turbocharger

Used in step 74

Torx screw BM 6x12		Tightening torque	10 Nm

Bracket to oil sump

Used in step 74

M6		Tightening torque	8 Nm

cardiagn.com

Alternator to component carrier — Used in step 74

M10x75 / M10x125		Tightening torque	38 Nm

Positive battery cable to alternator — Used in step 74

M8		Tightening torque	19 Nm

Air conditioning compressor in component carrier — Used in step 74

M10		Tightening torque	38 Nm

Ground cable to cylinder head — Used in step 74

M6x12		Tightening torque	8 Nm

Wiring harness to cylinder head cover — Used in step 74

TS5x20		Tightening torque	3,5 Nm

Fuel line to intake plenum — Used in step 74

TS6x20		Tightening torque	5 Nm

Differential pressure sensor to holder — Used in step 75

Screw		Tightening torque	4 Nm

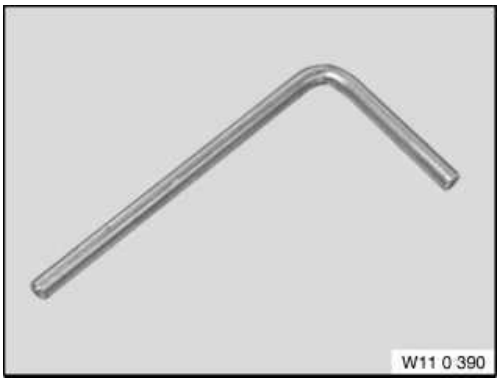
Clamp for the pressure hose on the differential pressure sensor — Used in step 75

Clamp 15–19mm		Tightening torque	3 Nm

Clean air pipe to cylinder head cover — Used in step 76

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing — Used in step 76



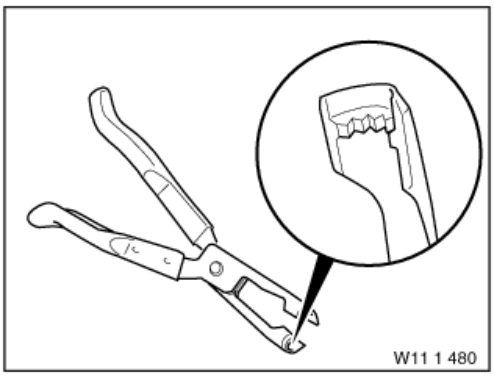
Clamp		Tightening torque	3 Nm

Resonator to manifold and clean air pipe — Used in step 78

Screw TS6	Renew screw.	Tightening torque	5 Nm

Overview of Special Tools

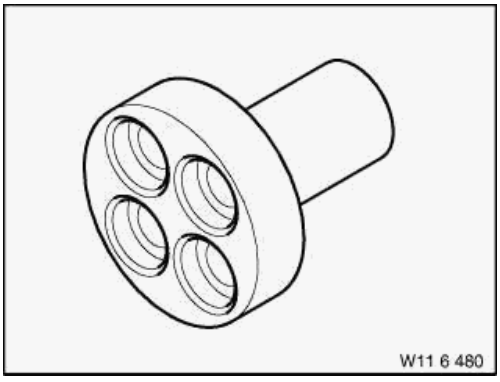
0 496 268 (11 0 390) Pin



Common — Used in step 7 74

Usage	(roll pin) For securing new tensioning pulley (poly-V belt)
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 15 07 (390)

cardiagn.com



0 490 796 (11 1 480) Pliers

Common Used in step 7 25

Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

0 493 380 (11 6 480) Connector

Common Used in step 12 20 58 61 69

Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

2 220 718 Workshop crane

Used in step 12 69

cardiagn.com

Common	
Usage	WSK 1000
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	06 01 11 (701)

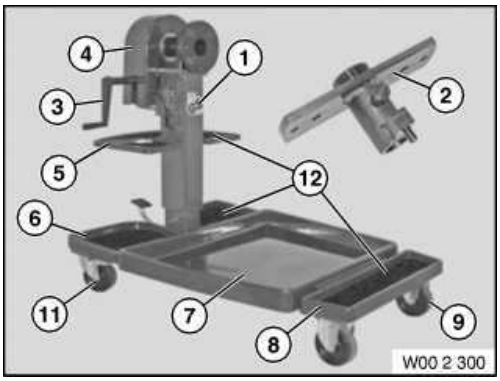
cardiagn.com

2 459 012 Holder

Common	Used in step 12 69
Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

2 455 010 Engine support

Common



Used in step 13 68

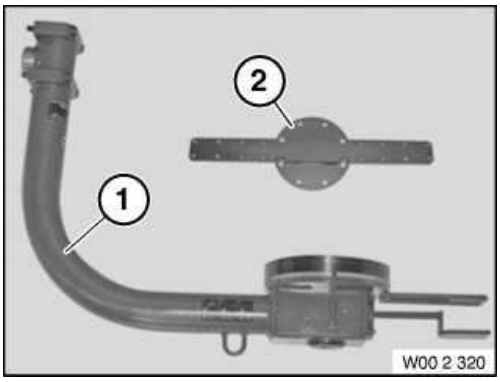
Usage	For accommodating engine on assembly stand. Engine: B3x, B4x, N47.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 495 187 (00 2 300) Assembly stand

Used in step 13

cardiagn.com

Common



Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of

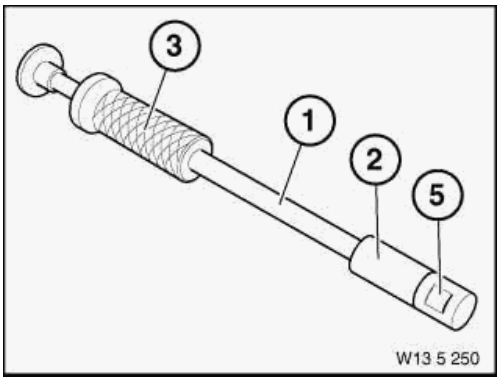
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.	

cardiagn.com

0 495 196 (00 2 320) Support arm

Common

Used in step 13



Usage	(Support arm with fixture) For mounting engines using the engine mounting bracket.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 197 (00 2 321)		**Support arm**	
2	0 495 198 (00 2 322)		**Panel** (take-up plate)	
3	0 495 380 (00 2 323)		**Panel** (fixture) Engine N73	
6	0 496 287 (00 2 326)		**Panel** (fixture) Engine: M73	
5	0 496 288 (00 2 327)	**0 496 373**	**Panel** (fixture) Engine: S62 Replaced by 11 5 420 (0 496 373)	
8	0 496 533 (00 2 328)		**Support** (Engine mount) Engine: N57, N57Top	
9	0 496 579 (00 2 329)	**0 496 680**	**Support** (Engine mount) Engine: N74 Replaced by 116160 (0 496 680)	
4	0 495 379 (00 2 324)		**Panel** (fixture) Engine M67TU	
5	0 495 381 (00 2 325)		**Panel** (fixture) Engine N62, N62TU	

cardiagn.com

0 493 321 (13 5 250) Puller

Common

Used in step 17

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

0 493 339 (13 5 252) Bush

Common

Used in step 17

Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

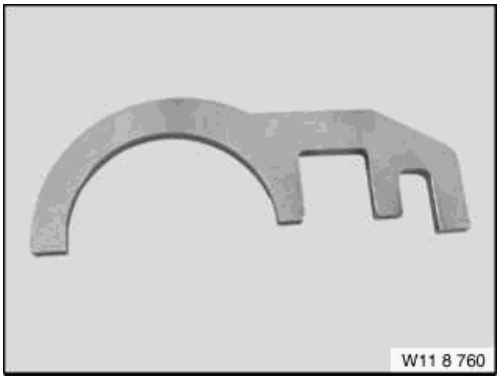
0 493 340 (13 5 253) Weight

Common

Used in step 17

Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com



2 288 380 Locating stud

Common Used in step 20 58 59 61

Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

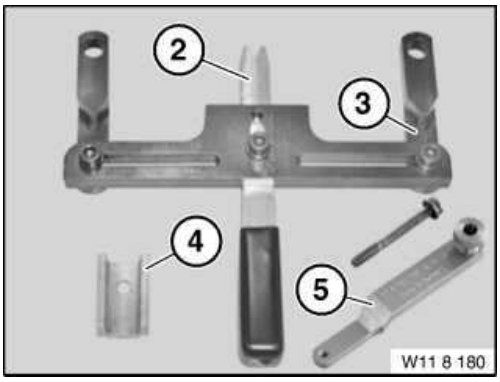
0 496 112 (11 8 760) Gauge

Common Used in step 20 58 60 61

Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 495 105 (11 4 480) oddments tray

Common Used in step 26 27 58



Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

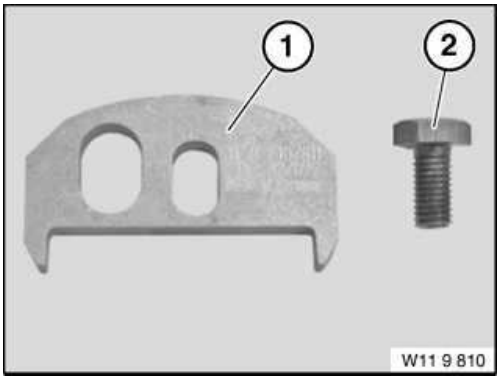
Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

cardiagn.com

0 493 587 (11 8 180) Holder

Common



Used in step 28 53

Usage	(Counter support) Blocking flywheel when releasing and tightening down central bolts on vibration absorber
Included in the tool or work	
Storage location	B45
Replaced by	
In connection with	
SI-Number	01 12 99 (452)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
2	0 494 433 (11 8 182)		**Shaped part** (shaped part)	
5	0 494 716 (11 8 185)		**Adapter** (Adapter with adjusting sleeve) E46 M47TU	
1	0 494 432 (11 8 181)	**0 494 434**	**Basic body** (Basic body) E65/M67, E38/M67 Discontinuation Replaced by 11 8 183 (0 494 434)	
3	0 494 434 (11 8 183)		**Basic body**	
4	0 494 435 (11 8 184)		**Adapter** E65 / M67	

0 496 171 (11 9 811) Holder

Common

Used in step 29 52

Usage	Available only as a complete tool set 11 9 810 (83 30 0 496 170) - as of 13.01.12
Included in the tool or work	0 496 170
Storage location	C86
Replaced by	
In connection with	
SI-Number	01 07 07 (355)

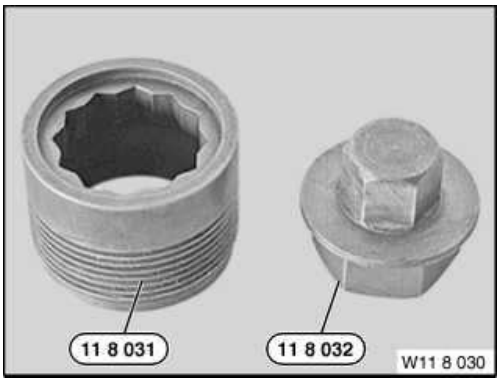
0 494 793 (11 9 265) Bush

Common

Used in step 29 52

Usage	
Included in the tool or work	0 493 938
Storage location	A44
Replaced by	
In connection with	
SI-Number	

cardiagn.com



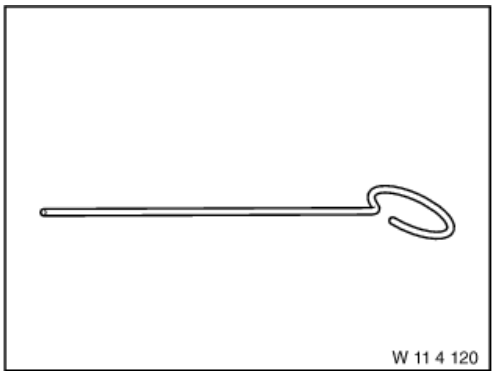
2 357 904 Gauge

Common Used in step 32 49

Usage	For positioning the high pressure pump to the crankshaft . Replaced by gauge 2420824
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 725 (11 8 030) Extractor

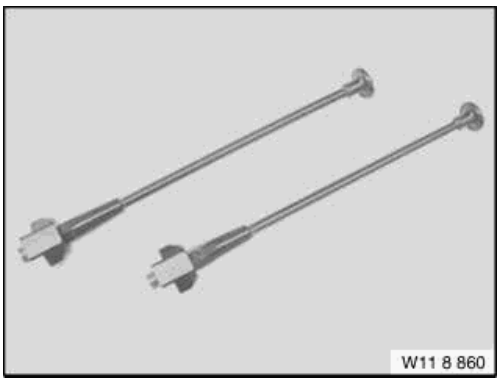
Common Used in step 32



Usage	for the disassembly of the high pressure pump (replaces SWZ 11 8 740 as of 08/2009) 11 8 740 will be replaced by 83 30 2 448 914.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 496 757 (11 8 031)	2 448 914	**Holding sleeve** Replaces SWZ11 8 741 from 08/2009, 09/2011 no longer available individually. From 10/2016, can only be ordered as a new set of special tools 2 448 914.	
2	0 496 758 (11 8 032)	2 448 914	**Adapter** Replaces special tool 11 8 742 from 08/2009, 09/2011 remaining inventories will be sold off - no longer available individually. From 10/2016, can only be ordered as a new set of special tools 2 448 914.	



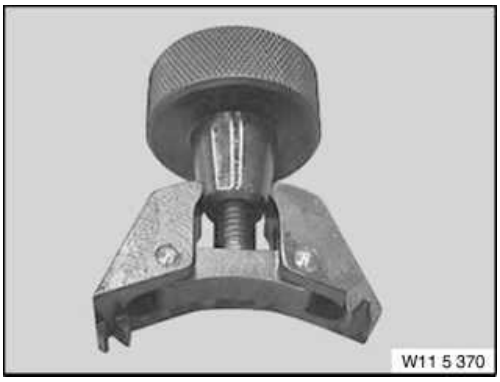
cardiagn.com

0 491 012 (11 4 120) Pin

Common	Used in step 32 49
Usage	(lock pin) For chain tensioners, for locking the chain tensioner piston (e.g. during cylinder head removal and fitting)
Included in the tool or work	
Storage location	B1
Replaced by	
In connection with	
SI-Number	01 12 93 (701)

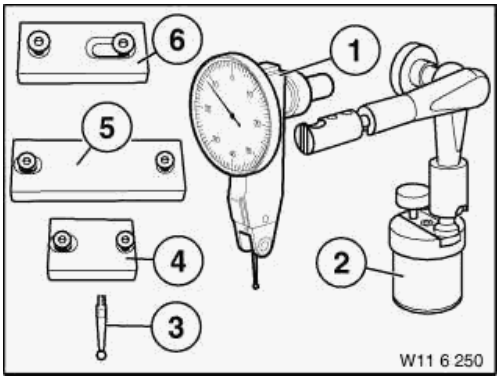
0 496 144 (11 8 860) Assembly tool

Common	Used in step 35 46
Usage	For installing piston with connecting rod in crankcase.
Included in the tool or work	
Storage location	A23
Replaced by	
In connection with	
SI-Number	01 05 07 (353)



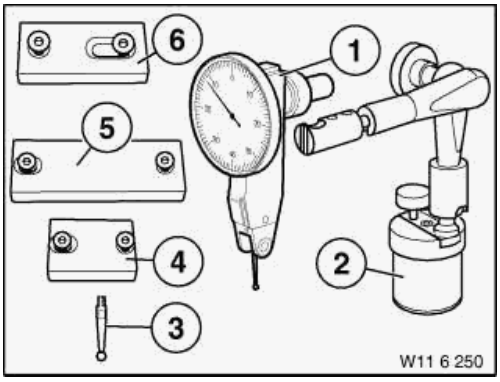
2 288 054 Gauge

Common	Used in step 40 43
Usage	For positioning the counterbalance shafts during installation.
Included in the tool or work	
Storage location	C56
Replaced by	
In connection with	
SI-Number	01 06 14 (076)



cardiagn.com

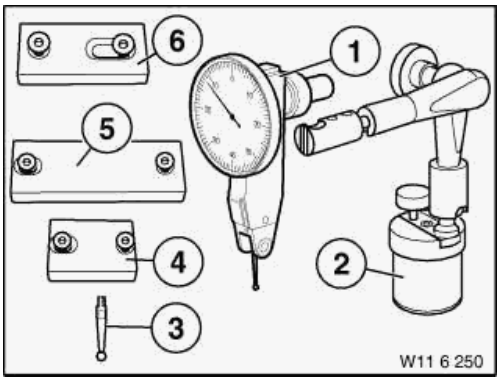
0 495 131 (11 5 370) Tool



Common	Used in step 40 43
Usage	(Locating tool) For VANOS exhaust camshaft gear setting.
Included in the tool or work	
Storage location	A71
Replaced by	
In connection with	
SI-Number	01 02 05 (173)

0 493 144 (11 6 251) Dial gauge

Common	Used in step 43
Usage	(Dial gauge) With 0.8 mm measuring range in each direction
Included in the tool or work	0 493 143
Storage location	
Replaced by	
In connection with	
SI-Number	



0 493 145 (11 6 252) Tripod

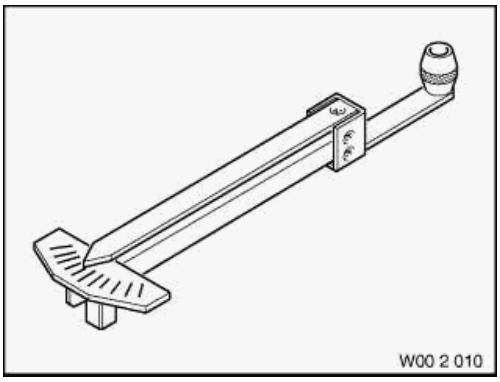
Common	Used in step 43
Usage	(Small hydraulic tripod with magnetic base)
Included in the tool or work	0 493 143
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 143 (11 6 250) Measuring device

Common

Used in step 43



Usage	(Measuring device) Sensing arm measuring device With small tripod for measuring tooth flank and side clearance on counterbalance shafts, camshafts and crankshafts.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 04 98 (304)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 495 214 (11 6 254)		**Panel** (Fixture) Engine: M47T2; M57T2; S85	
5	0 495 468 (11 6 255)		**Panel** (Fixture M7) Engine camshaft: M67TU	
3	0 493 146 (11 6 253)		**Sensor** (sensor) Sensor arm 11.5 mm	
1	0 493 144 (11 6 251)		**Dial gauge** (Dial gauge) With 0.8 mm measuring range in each direction	
2	0 493 145 (11 6 252)		**Tripod** (Small hydraulic tripod with magnetic base)	
6	0 495 470 (11 6 256)		**Panel** (Fixture M8) Engine crankshaft: M67TU	

cardiagn.com

0 490 130 (00 2 010) Measurement aid

Common	Used in step 43
Usage	(Coefficient of friction meter) For adjusting the steering box (measurement possible in both directions) and for checking and adjusting the bevel pinion and crown wheel bearing in all final drives
Included in the tool or work	
Storage location	X9
Replaced by	
In connection with	
SI-Number	

2 420 824 Gauge

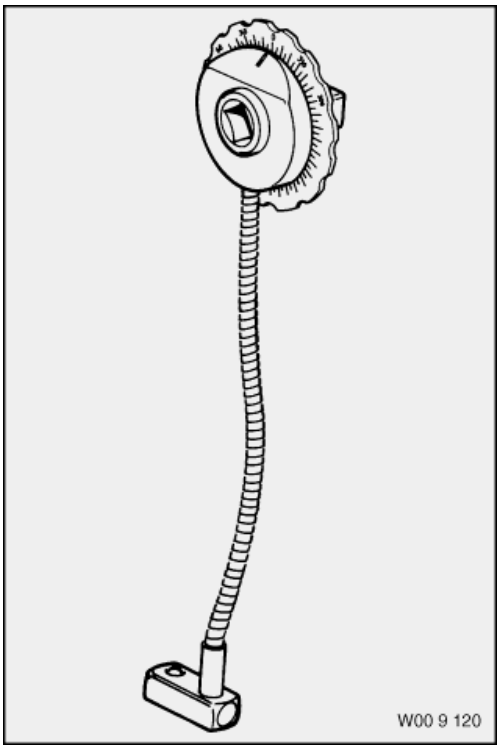
Common	Used in step 43
Usage	For positioning the high pressure pump to the crankshaft . Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B56
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 582 (11 8 140) Bush

Common

Used in step 46

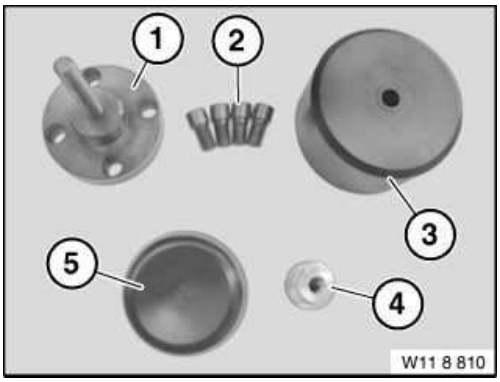


Usage	(Assembly bushes) For installing the pistons
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 12 99 (452)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 494 394 (11 8 141)		**Bush** Bush for piston installation 84.00 mm	
2	0 494 395 (11 8 142)		**Bush** Liquidation of existing inventory and then available only as a complete tool set 11 8140 (83 30 0 493 582) - as of 12.03.12.	
3	0 494 396 (11 8 143)		**Bush** Liquidation of existing inventory and then available only as a complete tool set 11 8140 (83 30 0 493 582) - as of 12.03.12.	

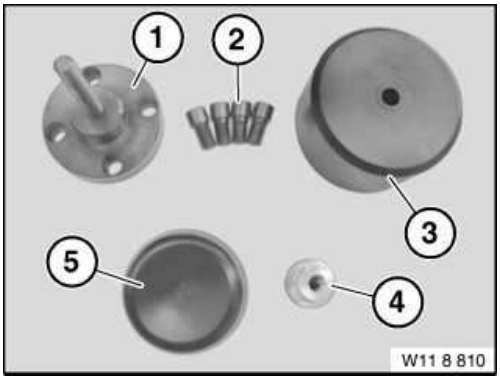
cardiagn.com



0 490 504 (00 9 120) Torque angle measuring dial

Common Used in step 47 51

Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

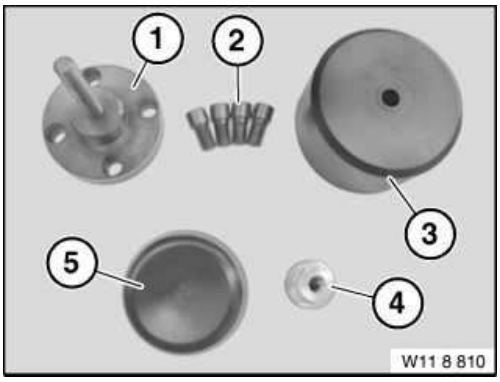


0 496 137 (11 8 815) Holding sleeve

Common Used in step 51

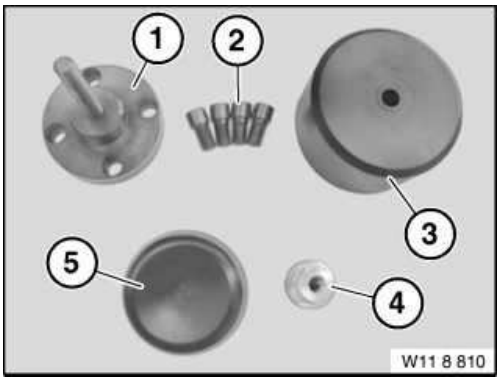
Usage	(Slip sleeve) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 496 133 (11 8 811) Basic body



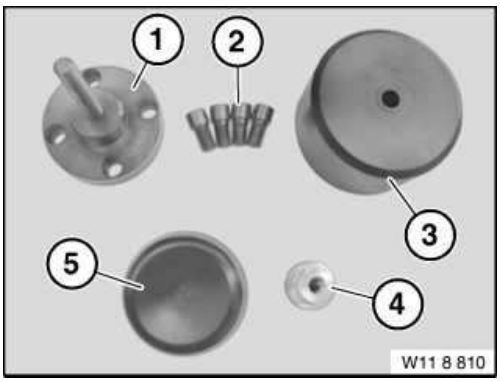
Common Used in step 51

Usage	Liquidation of existing inventory and then available only as a complete tool set 11 8 810 = 83 30 0 496 132 - as of 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)



cardiagn.com

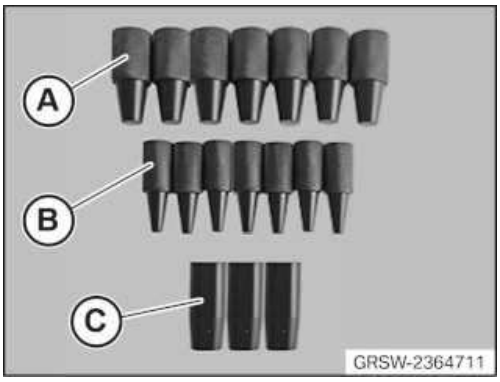
0 496 134 (11 8 812) Screw



Common	Used in step 51
Usage	(Screw set) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 496 135 (11 8 813) Holding sleeve

Common	Used in step 51
Usage	(Thrust sleeve) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

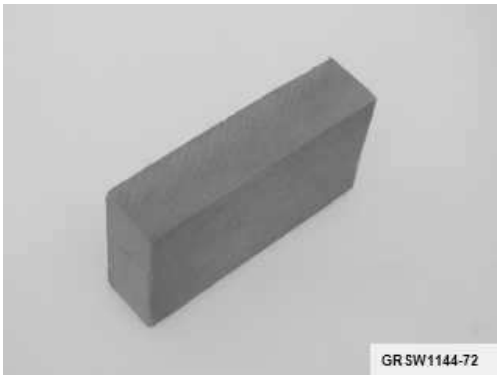


0 496 136 (11 8 814) Nut

Common	Used in step 51
Usage	(Nut with bearing) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

cardiagn.com

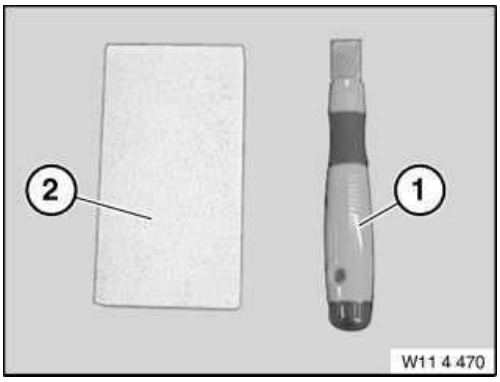
2 364 711 Plug



Common	Used in step 51
Usage	For closing the pressure oil holes for cleaning the cylinder head sealing surfaces.
Included in the tool or work	
Storage location	C20
Replaced by	
In connection with	
SI-Number	01 50 14 (203)

0 495 103 (11 4 471) Scraper

Common	Used in step 51
Usage	
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	



0 495 104 (11 4 472) Extractor

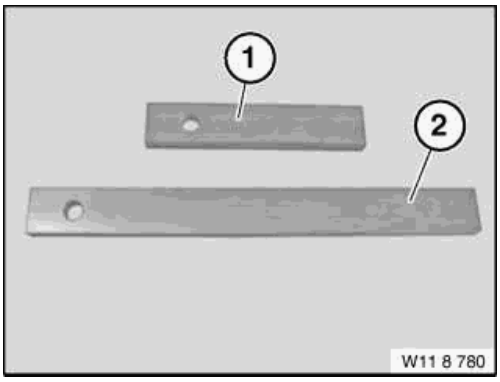
Common	Used in step 51
Usage	(grindstone)
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 102 (11 4 470) Tool

Common

Used in step 51 72



Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

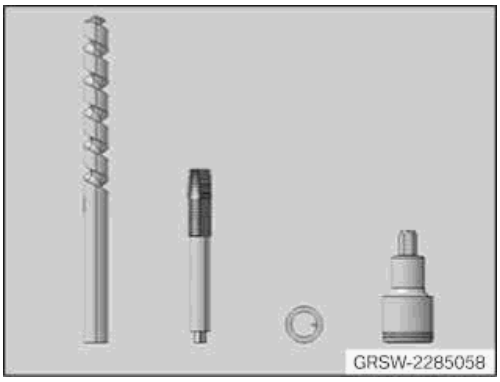
Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 103 (11 4 471)		**Scraper**	
2	0 495 104 (11 4 472)		**Extractor** (grindstone)	

cardiagn.com

0 496 120 (11 8 780) Plate

Common



Used in step 51

Usage	(Mounting plates) For securing transmission oil sump when gearbox is removed.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 496 121 (11 8 781)		**Plate** (Mounting plate, short)Discontinued; only available via set 11 8 780 = 0496120.

Overview Technical Data

Side clearance of piston rings Used in step 37

cardiagn.com

Clean all components before measuring the side clearance.

Side clearance of the plain rectangular compression ring	0,17 mm ... 0,27 mm
Side clearance of the taper faced piston ring	0,30 mm ... 0,50 mm
Side clearance of the oil scraper ring with spiral expander	0,2 mm ... 0,4 mm

Piston diameter Used in step 38

Measure the piston diameter at distance (A) from the lower end of the piston skirt.

Distance (A) to the lower end of the piston skirt	17 mm
Nominal dimension of piston diameter	83,936 mm ... 83,954 mm

Cylinder bore Used in step 39

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

Axial play of crankshaft Used in step 43

Equipment installation status	0,090 mm ... 0,273 mm
Operating condition	0,11 mm ... 0,314 mm

Maximum permitted torque of the crankshaft Used in step 43

max. 2 Nm

Screw-in depth of thread cutter Used in step 52

Screw-in depth	18 mm

cardiagn.com

11 21 500 Replacing crankshaft (B47AO0)

Special tools required:

- 2 288 054
- 00 2 010
- 11 6 480
- 2 420 824

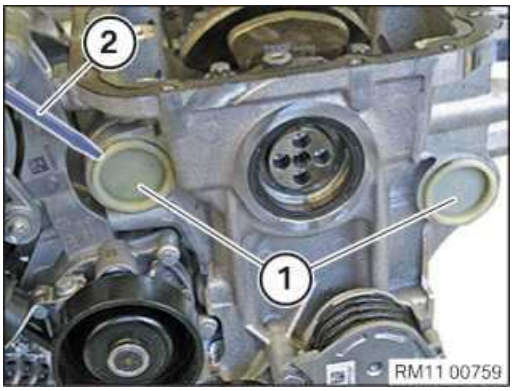
Attention!

Replace main and connecting rod bolts.

There must be no oil in the blind holes **(risk of cracking)**.

Do not wash off bolt coating.

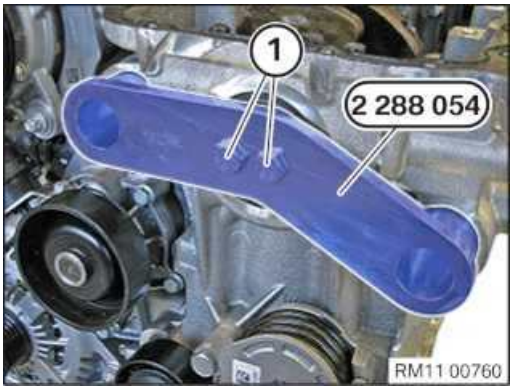
Incorrect assembly of the crankshaft bearing caps will result in damage to the crankcase.



It is necessary to remove the counterbalance shafts in order to remove the crankshaft.

To properly adjust the counterbalance shafts, a new, coated intermediate gear must always be fitted.

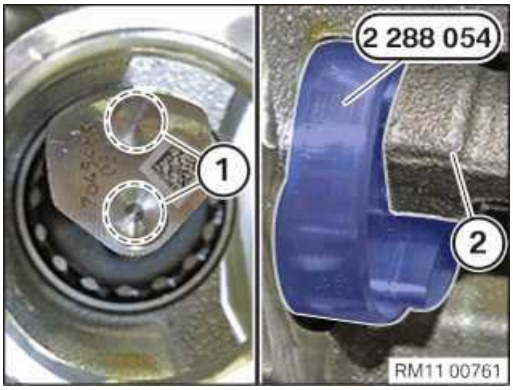
Necessary preliminary work:



- Remove engine with gearbox
- Mount engine on assembly stand
- Remove rear timing case cover.
- Remove both timing chains
- Removing all pistons

Removal:

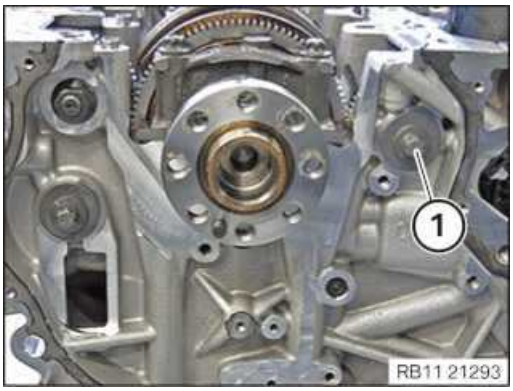
Remove sealing caps (1) with a suitable tool (2).



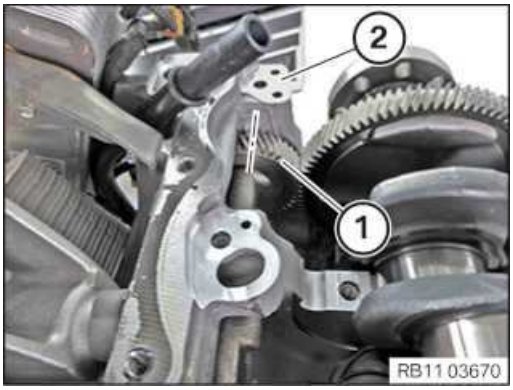
cardiagn.com

Twist crankshaft to **top dead centre on first cylinder**.

Mount special tool 2 288 054 and abut screws (1).



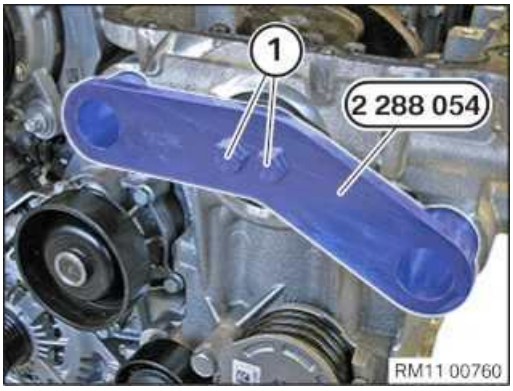
Observe installation note in next operation!



Note:
Make sure special tool 2 288 054 is properly seated in the guides (1) of the counterbalance shaft (2).

Slightly twist crankshaft if necessary.

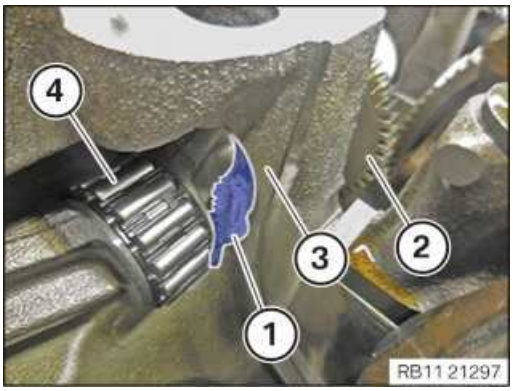
Tighten special tool 2 288 054 to **20 Nm**.



Release screw (1).

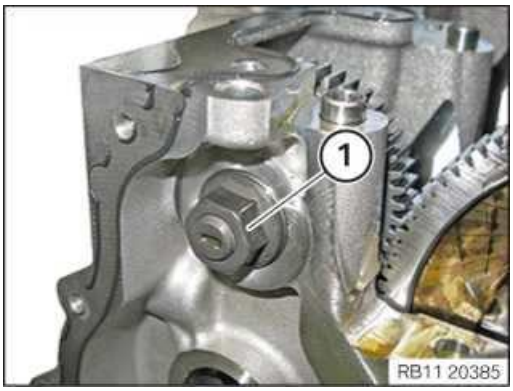
Counterbalance shaft (1) must be replaced in the same position.

Mark position of the counterbalance shaft (1) gear in relation to the crankcase (2).



cardiagn.com

Release screws (1) and remove special tool 2 288 054 .

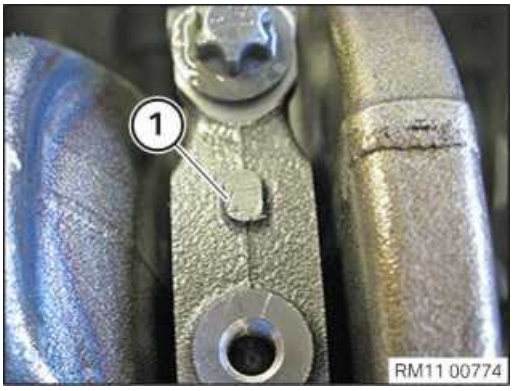


Detach the counterbalance shaft on the inlet side from the crankshaft by turning slightly in the direction of the arrow and push backwards.

Protect counterbalance shaft against damage on the intake side (2) by means of a suitable tool (1).

Lay counterbalance shaft, intake side, (2) in the crankcase (3).

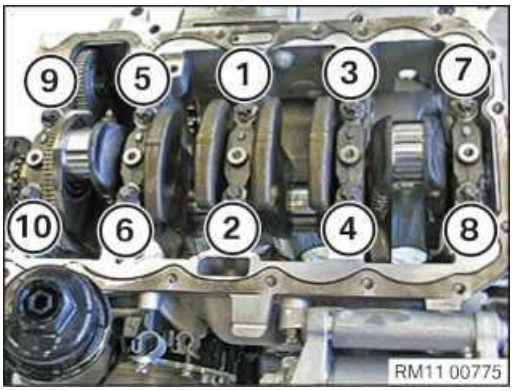
Do not damage the needle bearing (4).



Slacken nut (1).

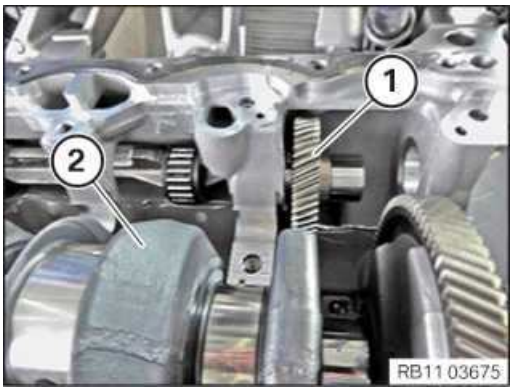
cardiagn.com

Slide intermediate wheel out in the direction of the arrow and remove.



Note:

All crankshaft bearing caps (1) are labelled **(bearing position 1 to 5)**.



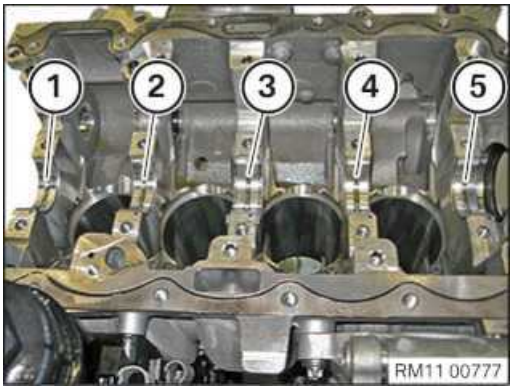
Installation position must be maintained.

Graphic at bearing seat number 4.

Release main bearing screw connection of main bearing cap in the sequence **10 - 1**.

Remove main bearing caps 1 - 5.

Attention!

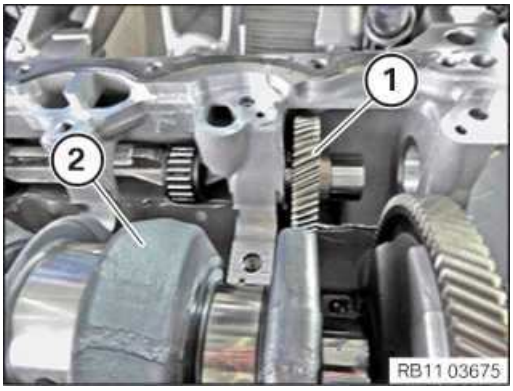


When removing the crankshaft (2), do not damage the counterbalance shaft (1).

With the assistance of a second person, remove crankshaft (2) and carefully place to one side.

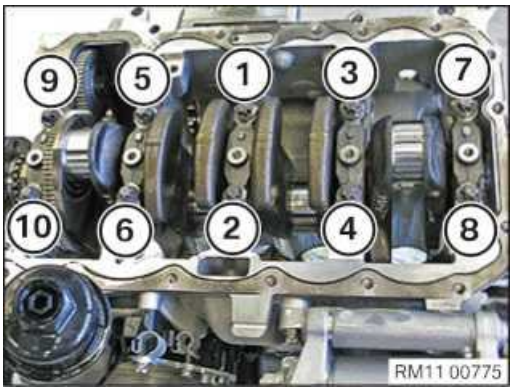
Pay attention to the oil hole in the crankshaft bearing shells.

Installation:



cardiagn.com

For new crankshaft replace crankshaft main bearing shells.



Oil the crankshaft bearing shells (1-5).

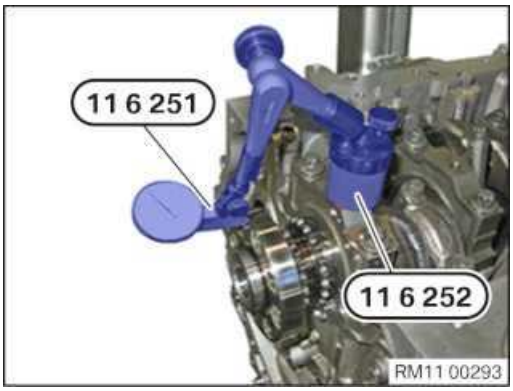
Both locating grooves of the crankshaft bearing shells in the crankcase and on the crankshaft bearing cap must be mounted on one side.

When installing the crankshaft (2), ensure that the counterbalance shaft (1) is not damaged.

With the help of a second person, insert the crankshaft (2).

Attention!

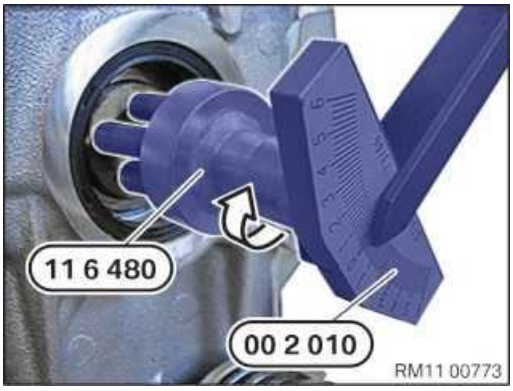
Do not fit crankshaft bearing cap in incorrect position.



Risk of damage to crankcase moulding.

Align crankshaft bearing cap exactly.

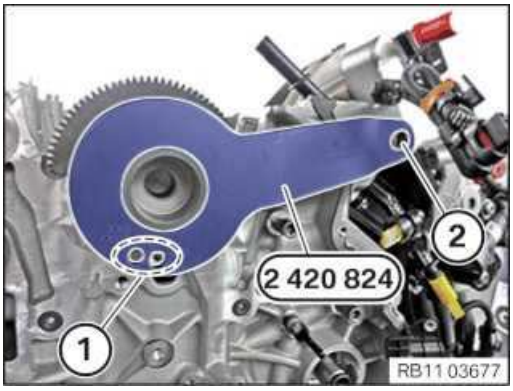
Fit main bearing bolts.



Tighten main bearing bolts in sequence **1 - 10** (comply with tightening specifications).

Tightening torque: 11 11 1AZ.

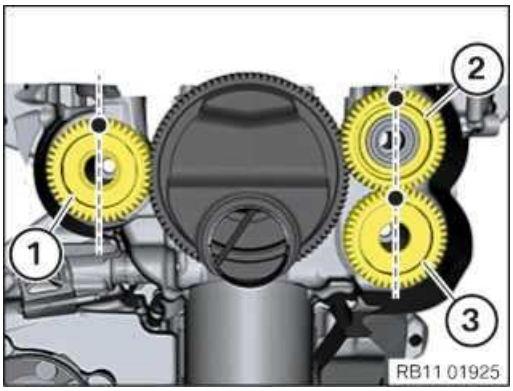
Check side clearance.



cardiagn.com

Friction coefficient of crankshaft.

Screw in all screws of vibration damper by hand.

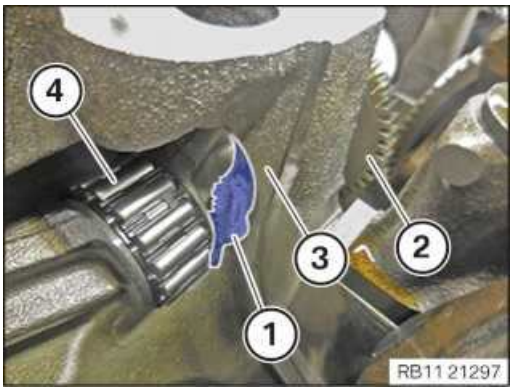


Turn crankshaft evenly with special tool 00 2 010 and special tool 11 6 480 .

Special tool 2 420 824 is labelled in area (1).

Install special tool 2 420 824 with the labelled bore hole **(B47)** on the crankshaft.

Fix crankshaft with special tool 2 420 824 on the fitting sleeve (2).



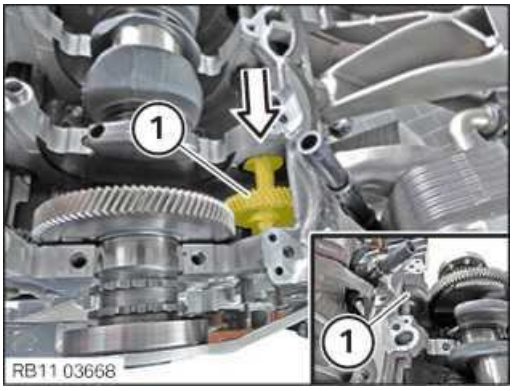
Schematic representation of drive and intermediate wheels.

Attention!

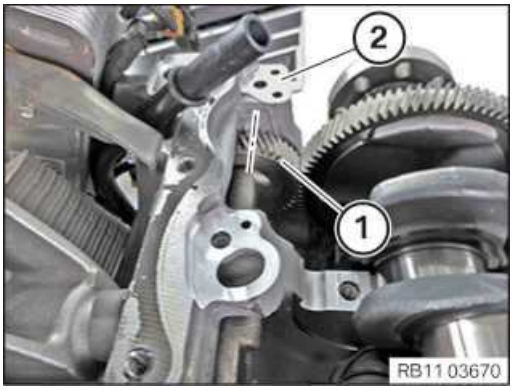
Install a new, coated intermediate wheel (2) to adjust the counterbalance shafts.

Parts: Intermediate wheel

All marks on the drive gears (1 and 3) and intermediate wheel (2) must point vertically to the oil sump sealing surface (upwards).



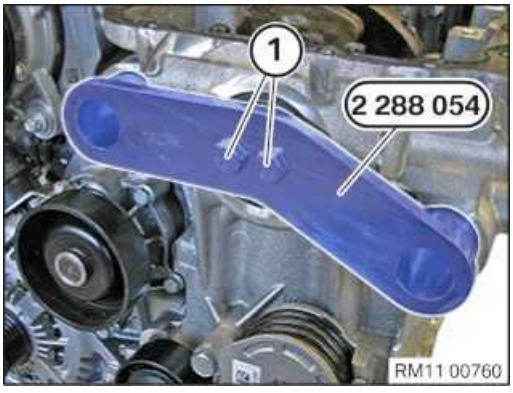
Raise counterbalance shaft (2) on the intake side.



Remove (3) tools.

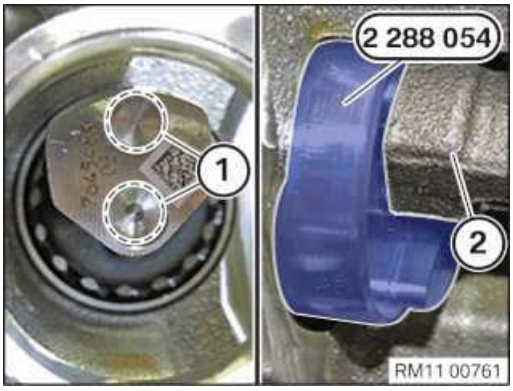
Carefully install the needle bearing (4) in the crankcase.

cardiagn.com



Insert counterbalance shaft (1) into the crankshaft gear by turning slightly and install.

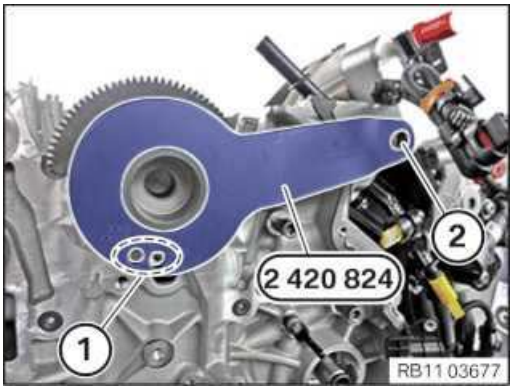
Check position of the counterbalance shaft (1) gear in relation to the crankcase (2).



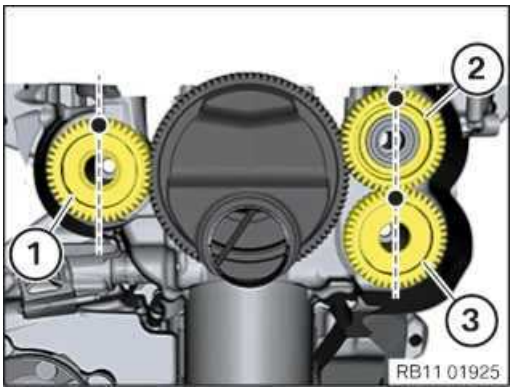
Position the counterbalance shaft on the exhaust side so that the marking points perpendicular to the oil sump.

Mount special tool 2 288 054 and abut screws (1).

Observe installation note in next operation!



cardiagn.com



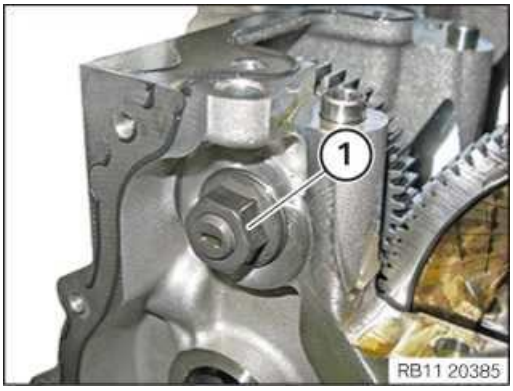
Note:
Make sure special tool 2 288 054 is properly seated in the guides (1) of the counterbalance shaft (2).

Slightly twist crankshaft and/or counterbalance shafts if necessary.

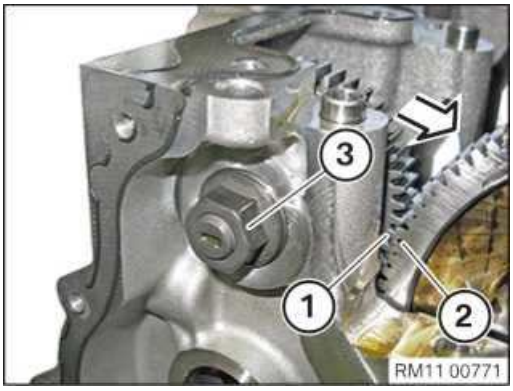
Tighten special tool 2 288 054 to 20 Nm.

Detach and remove special tool 2 420 824 .

Schematic representation of drive and intermediate gears.



All marks on the drive gears (1 and 3) and intermediate wheel (2) must point vertically to the oil sump sealing surface (upwards).

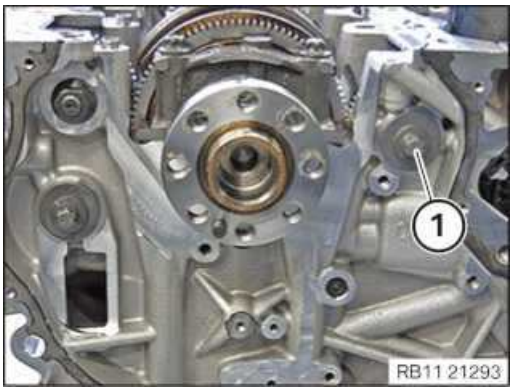


Install intermediate wheel on the crankshaft by turning slightly in the direction of the arrow.

Marking must point vertically upwards.

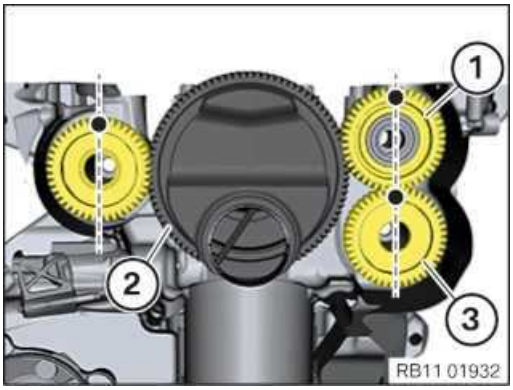
cardiagn.com

Tighten nut (1) handtight.



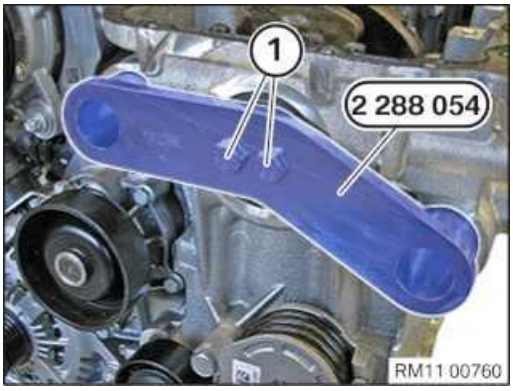
Press intermediate gear (1) hand-tight onto gear (2) of the crankshaft and the drive gear of counterbalance shaft, exhaust side;.

There must be zero play in both gearings.



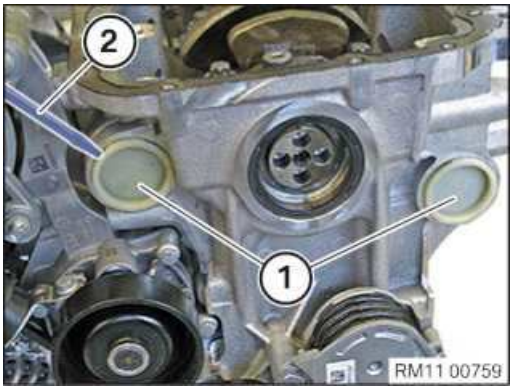
Tighten nut (3).

Tightening torque: 11 27 2AZ.



Tighten screw (1).

Tightening torque: 11 27 1AZ.



Check setting of gear wheels (1), (2) and (3).

cardiagn.com

Release screws (1) and remove special tool 2 288 054 .

Parts: Replacing sealing cap (1).

Ensure proper fit of O-ring.

Install both sealing caps (1).

Required reworking:

- Install all pistons
- Install both timing chains
- Install the rear timing case cover
- Remove engine from assembly stand
- Install engine with gearbox

cardiagn.com

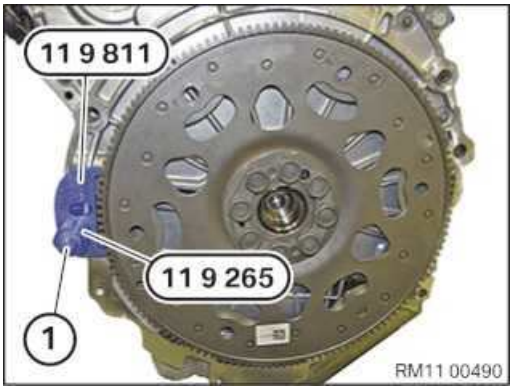
11 22 000 Removing and installing/replacing flywheel (B47)

Special tools required:

- 11 9 811
- 11 9 265
- 11 4 180

Necessary preliminary work:

- Remove transmission.
- For manual gearbox:
  Remove clutch.



REMOVAL:

Manual gearbox.

Secure flywheel with Torx screw (1) and special tools 11 9 811 and 11 9 265 .

Release flywheel studs with special tool 11 4 180 /

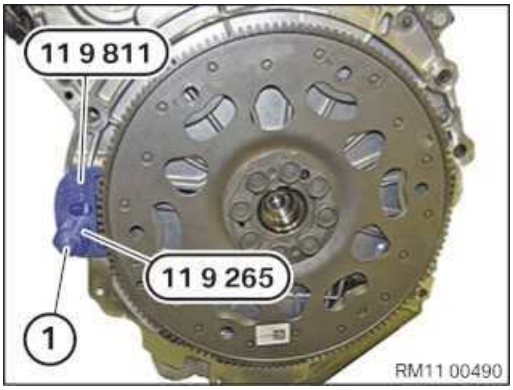
Automatic transmission.

Secure flywheel with transmission bolt (1) and special tool 11 9 811 / 11 9 265 .

Unfasten flywheel bolts.

INSTALLATION:

cardiagn.com



Manual gearbox.

Parts: Replace screws.

Secure flywheel with Torx screw (1) and special tools 11 9 811 and 11 9 265 .

Tighten flywheel bolts with special tool 11 4 180 .

Tightening torque: 11 22 1AZ.

Automatic transmission.

Parts: Replace screws.

Secure flywheel with transmission bolt (1) and special tool 11 9 811 / 11 9 265 .

Unfasten flywheel bolts.

Tightening torque: 11 22 1AZ.

Concluding tasks:

- Install clutch.
- Install transmission.

cardiagn.com

11 22 000 Removing and installing/replacing the flywheel

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

- Ensure there is a specific weight compensation on the motor vehicle.

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

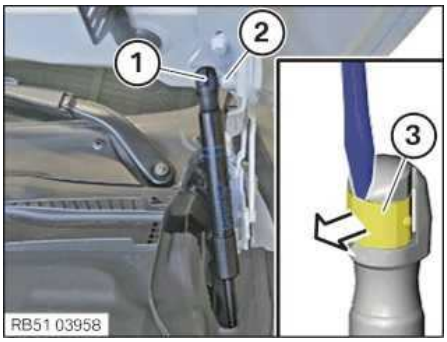
- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

PRELIMINARY WORK

1 – Bring front compartment lid in the service position

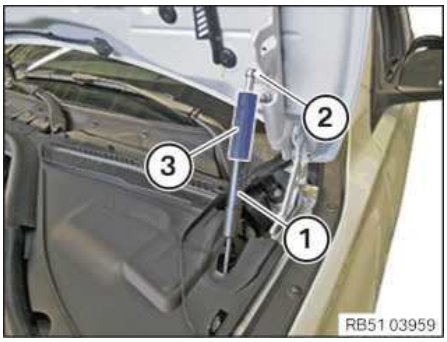
Prerequisite

Engine compartment lid is open.



cardiagn.com

CAUTION



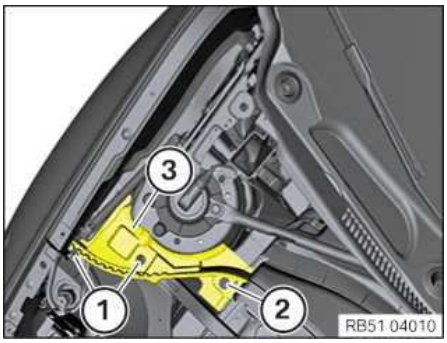
Shutting bonnet or tailgate.

Danger of injury!

- Support bonnet/tailgate in fully open position with the aid of a suitable device.

- Lift clamp (3) slightly using a screwdriver, in the direction of the arrow.
- Lift off ball socket (1) from ball pin (2).
- Repeat the operation on the other side of vehicle.

TECHNICAL INFORMATION

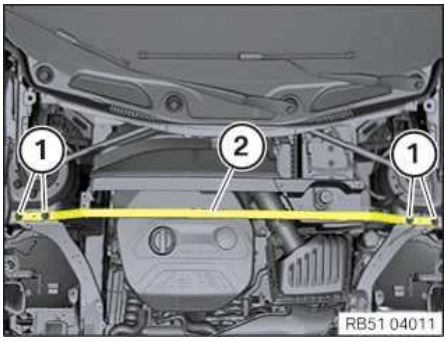


Conduct the following operation with the assistance of a second person.

- Remove the bonnet support and open the bonnet further.
- Push special tool (3) over gas pressure spring (1).
- Place special tool on the ball pin (2) and engage using force.
- Repeat the operation on the other side of vehicle.

2 – Remove suspension cross-brace

TECHNICAL INFORMATION

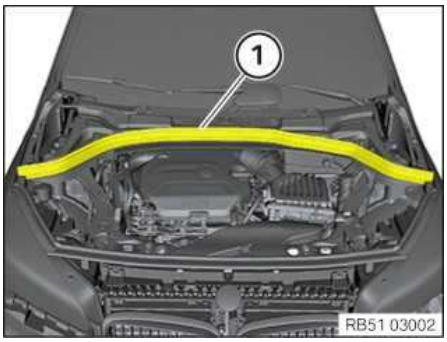


Driving without the strut brace/front end or tension strut is not permitted.

NOTICE

Description is for right component only. The procedure on the left side is identical.

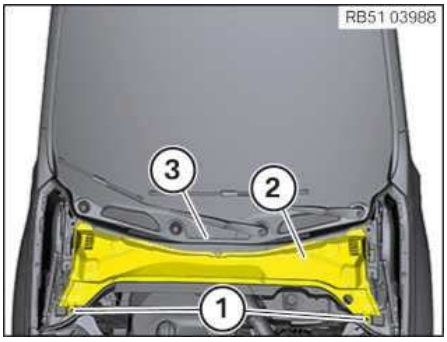
- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).



- Loosen screws (1).
- Remove strut brace (2).

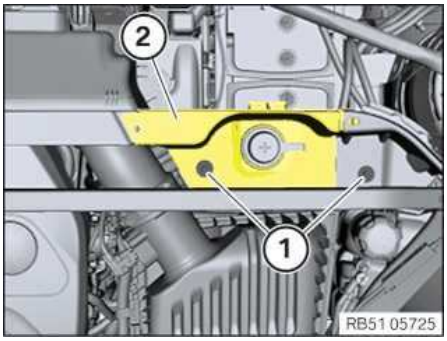
3 – Remove the seal for the rear bonnet

cardiagn.com



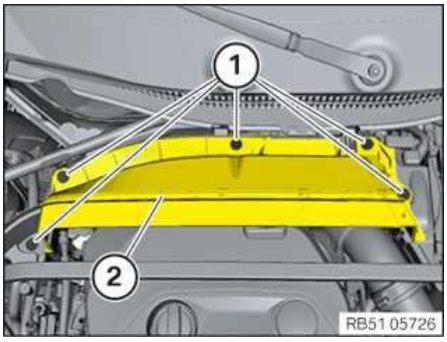
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Pull off rear bonnet seal (1) towards the top and remove.

4 – Removing front cowl panel cover



- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

5 – Removing the upper bulkhead cover

- Loosen screws (1).
- Guide out and remove the cover (2).

- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

6 – Removing the acoustic cover

WARNING

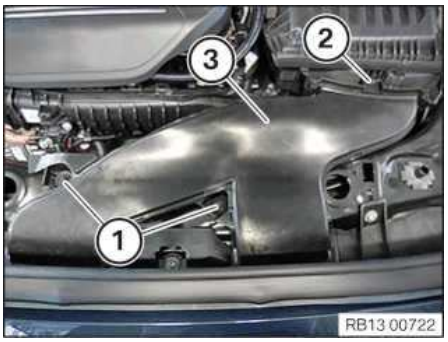
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

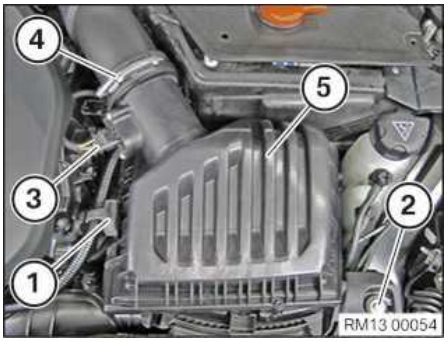
RISK OF DAMAGE



Damage to the acoustic cover.

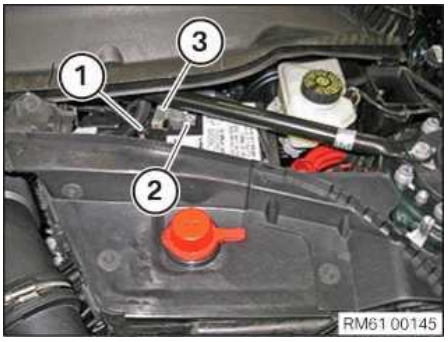
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



- Unclip the acoustic cover from the marked areas towards the top.

7 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

8 – Removing intake silencer housing

- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

9 – Disconnecting the battery earth lead

- Unlock plug connection (1) and disconnect.
- Unfasten nut (2).
- Remove the battery earth lead (3) and secure to one side.

10 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

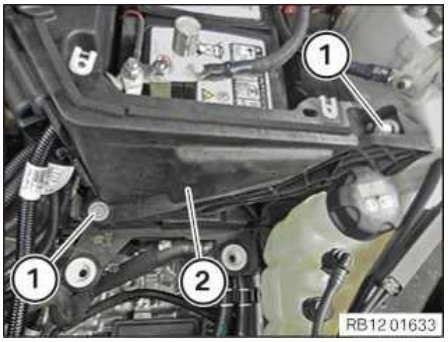
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

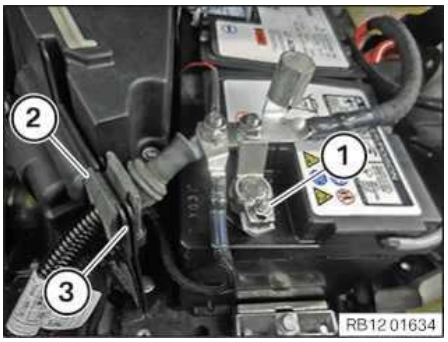
Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.



- Do not pull on the wires when disconnecting connectors and plug connections.

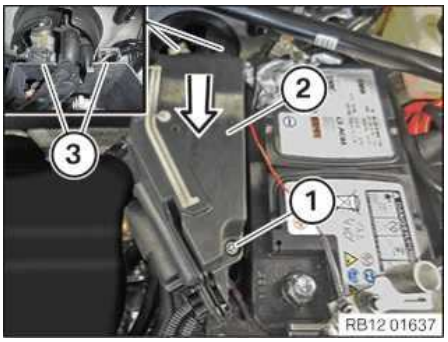
TECHNICAL INFORMATION



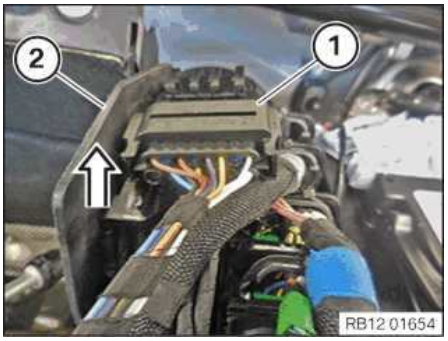
Follow instructions for removing and installing control units.
For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

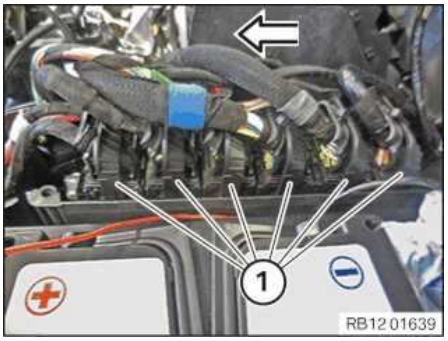
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

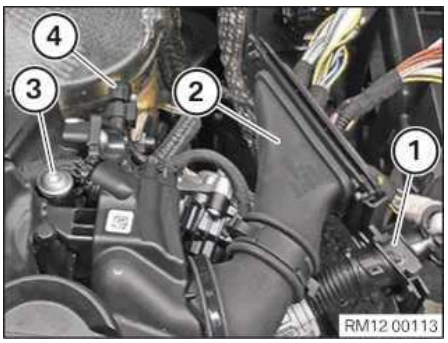


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

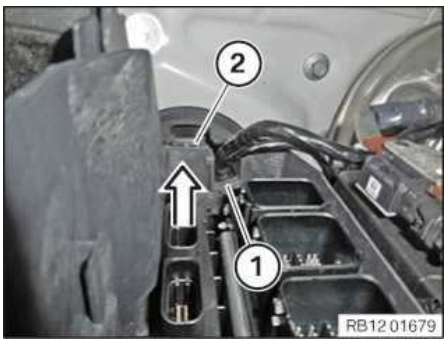


cardiagn.com

- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

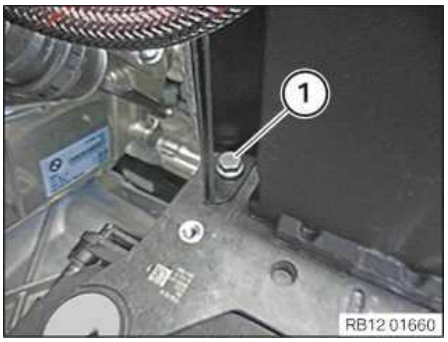


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

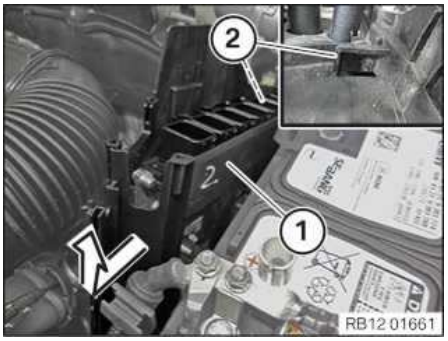


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

- Unlock and loosen connector (1).



- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

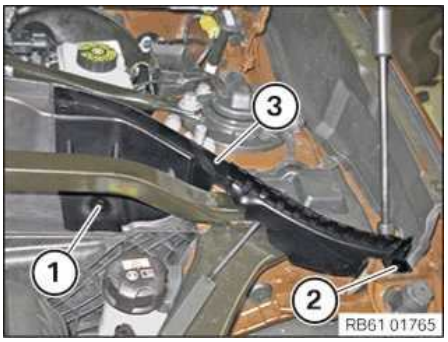


- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

cardiagn.com

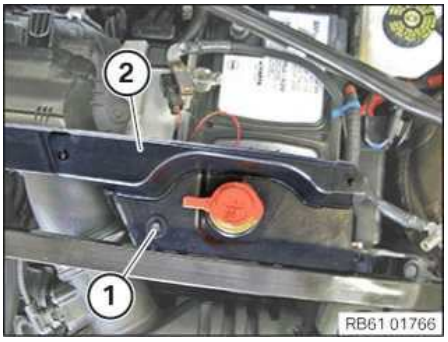
- Loosen screw (1).

- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.



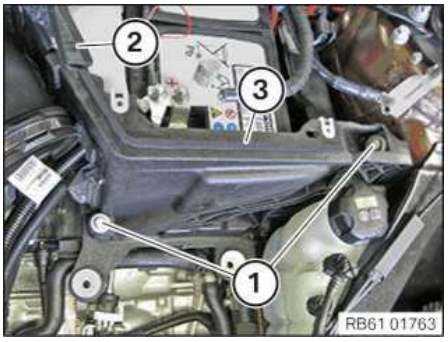
11 – Remove vehicle battery

WARNING



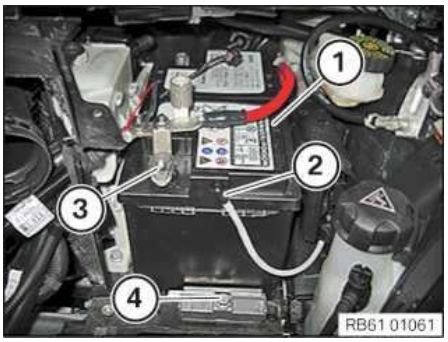
Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!



- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).



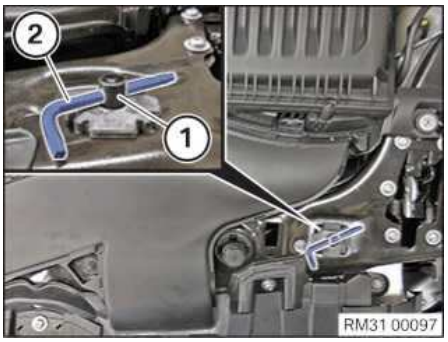
- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

cardiagn.com

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING



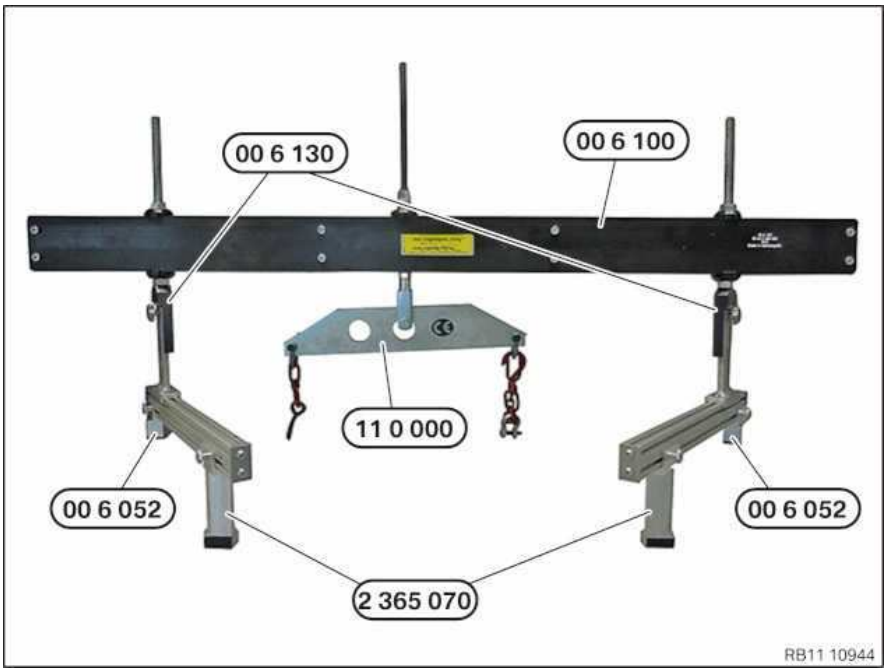
Unprotected battery terminals.

Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

12 – Securing radiator on left and right



NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

13 – Installing the engine bridge

Overview: Prepared engine bridge

Prerequisite

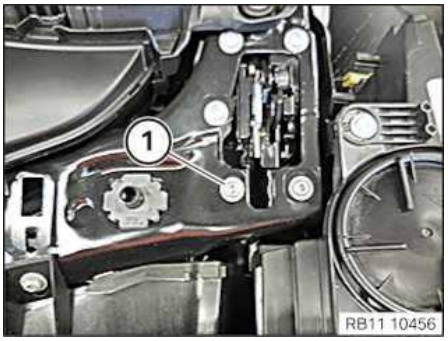
Front compartment lid is in service position.

CAUTION

Components connected to the engine joint or cross member.

Danger of injury!

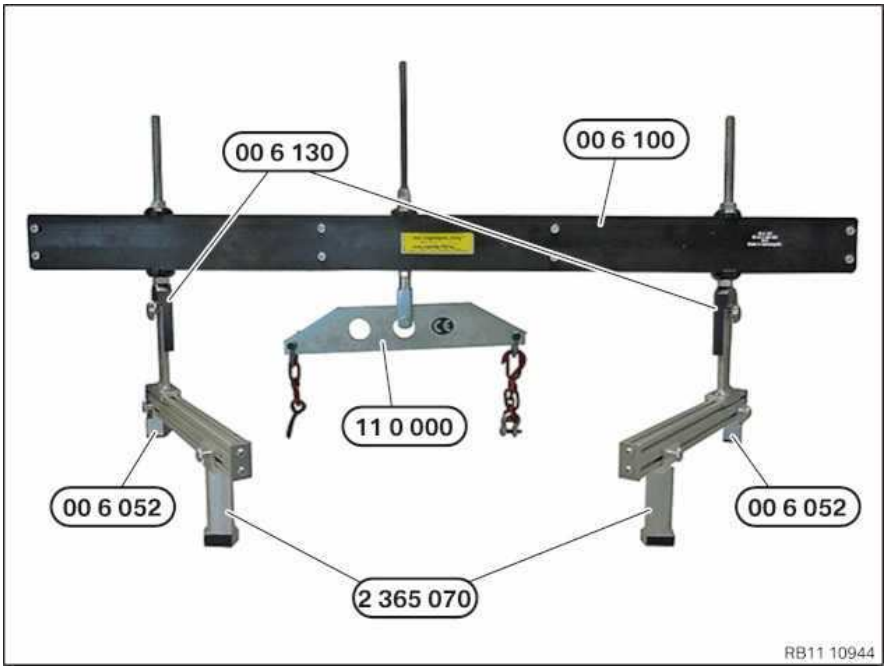
- Check lifting eyes and engine mounting brackets for damage, e.g. cracks.
- Attach the component to correctly mounted engine joints or cross members only.
- Exclusively lift the component, do not move it forwards, backwards or in transverse direction.



cardiagn.com

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

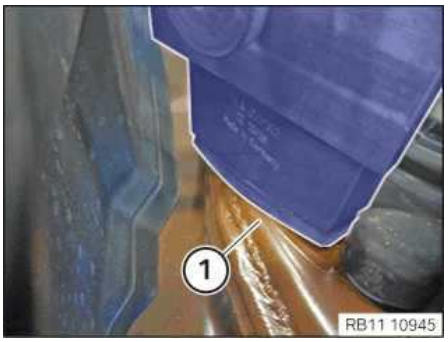
Special tool to cylinder head



M8		Tightening torque	21,5 Nm

- Loosen screw (1) of the left bonnet catch.

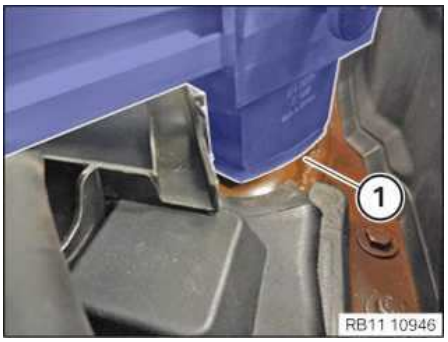
- Loosen screw (1) of the right bonnet catch.



CAUTION

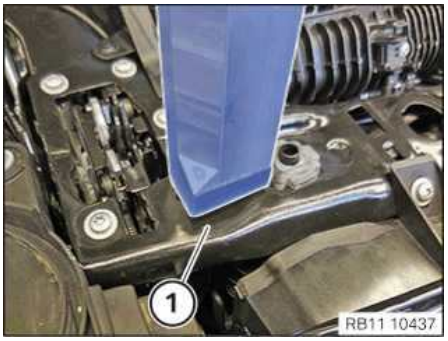
Heavy component.

Heavy components can lead to injury or damage.

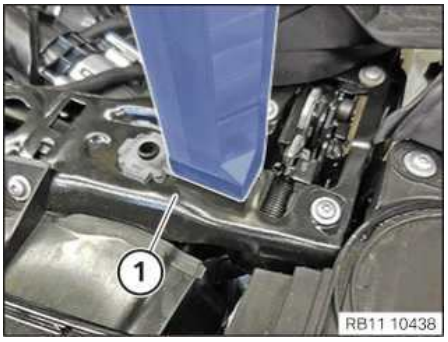


- Remove and install heavy components with the aid of another person/other persons.

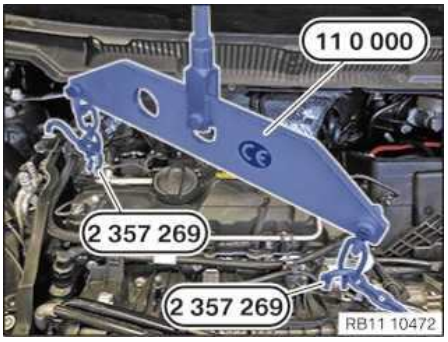
- Set entire cross member **0 496 852 (00 6 100)** on the vehicle and position with the help of an auxiliary person.



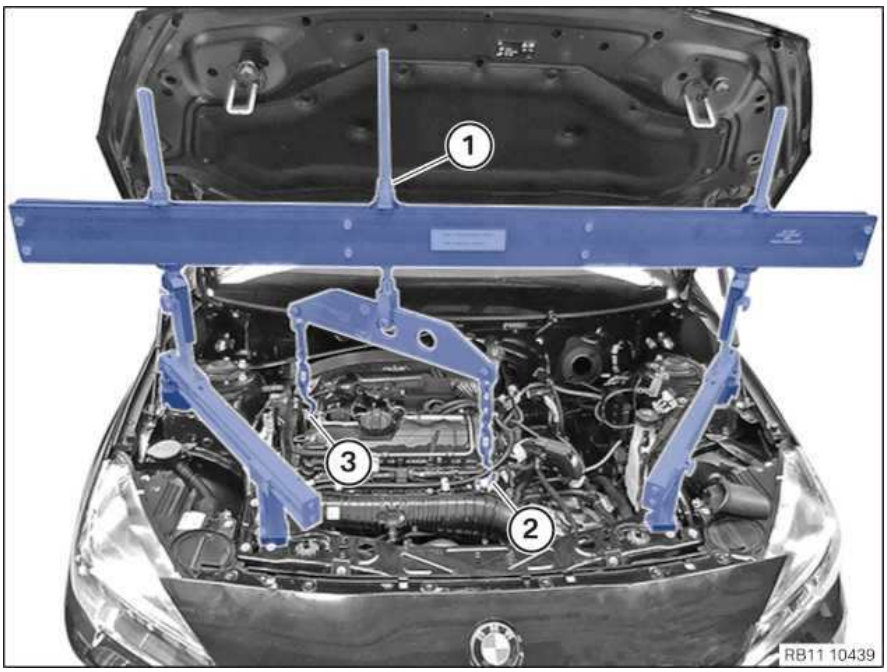
- Position the special tool at the rear mounting point (1) on the **right**.



cardiagn.com

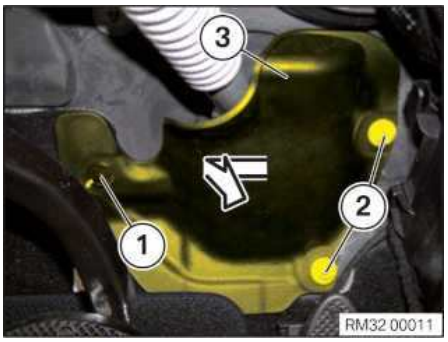


- Position the special tool at the rear mounting point (1) on the **left**.



- Position the special tool at the front mounting point (1) on the **right**.

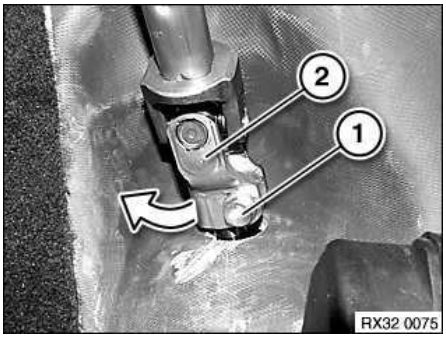
- Position the special tool at the front mounting point (1) on the **left**.



- Position special tool **0 490 561 (11 0 000)** above the engine.
- Attach special tools to the mounting lugs of the engine.

- Tighten side screws (2) and (3).
- Slightly pretension the spindle screw (1) of the engine support beams.
- Tighten down all adjusting screws, knurled screws and nuts on cross member **0 496 852 (00 6 100)** and on special tool .

14 – Releasing lower steering shaft from steering gear



cardiagn.com

- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!

- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

15 – Removing both front wheels

▸ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

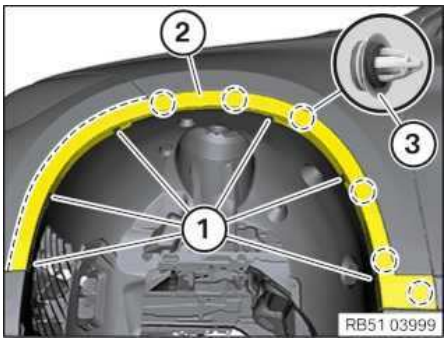
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

16 – Removing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

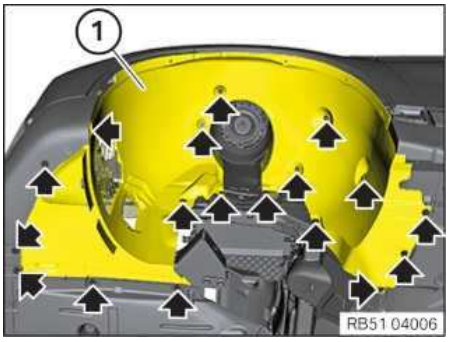
▸ **Remove the front wheel arch trim**



NOTICE

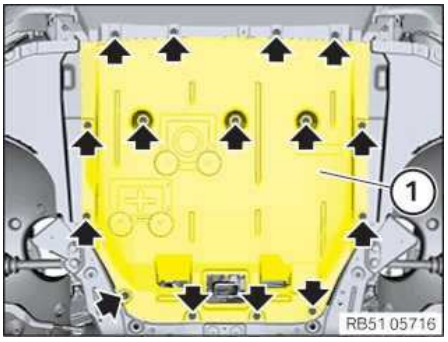
To provide a better overview: Schematic diagram with partially hidden components.

NOTICE



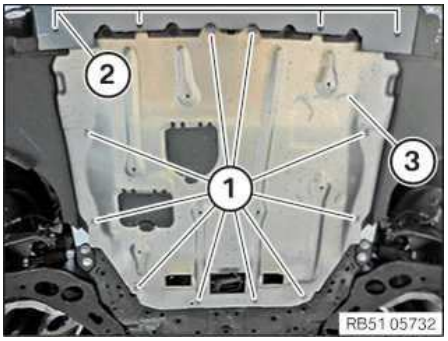
Description is for left component only. Procedure on the right side is identical.

cardiagn.com



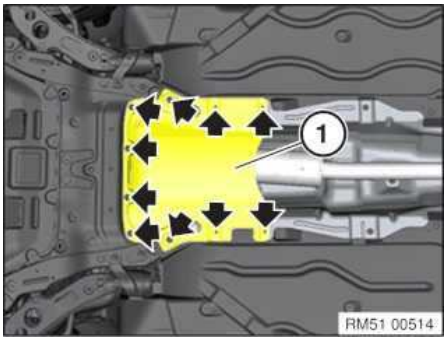
- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

▸ **Remove front wheel arch cover**



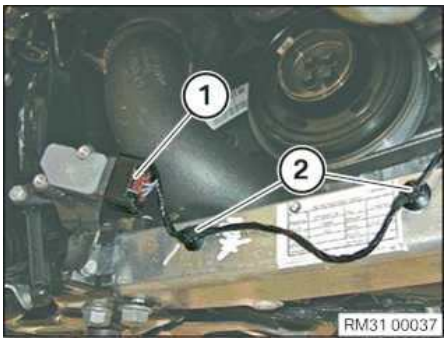
- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

17 – Removing the front underbody protection



- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

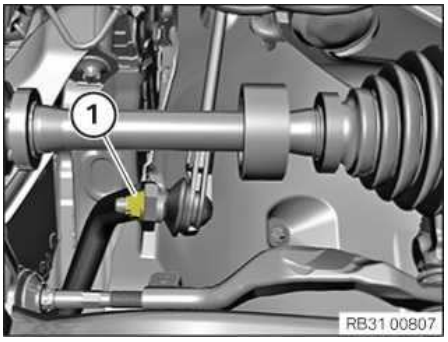


18 – If installed: Removing rear underbody protection

- Remove screws (arrows).
- Remove the rear underbody protection (1).

19 – With right installation: Detaching ride height sensor cable

cardiagn.com



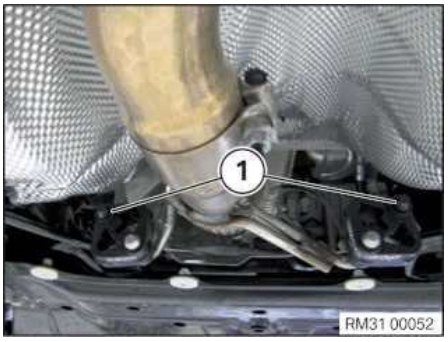
- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

20 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

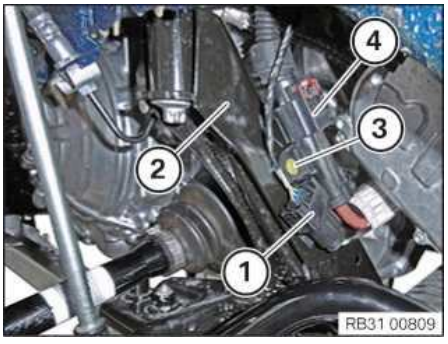
▶ **Detach the anti-roll bar from the anti-roll bar link**



- Unfasten nut (1).

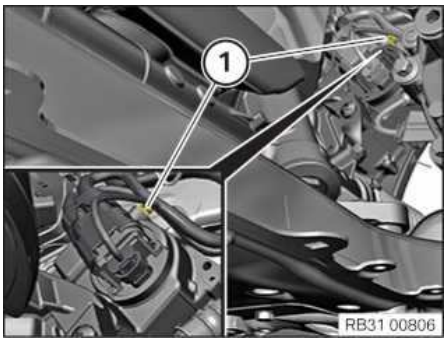
Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .



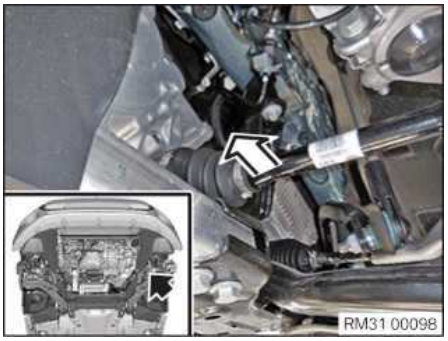
21 – Detaching rubber mount from front axle support

- Spray rubber mount (1) with lubricant and release from holder on front axle support.



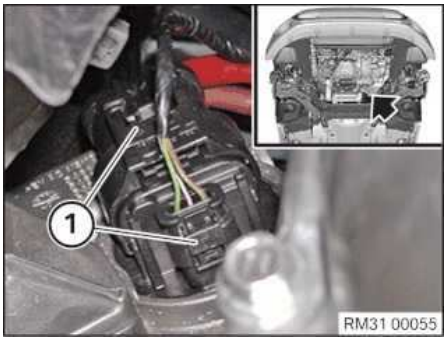
22 – Disconnecting plug connections from steering gear

▶ **If installed: Detach connectors from the front axle carrier**

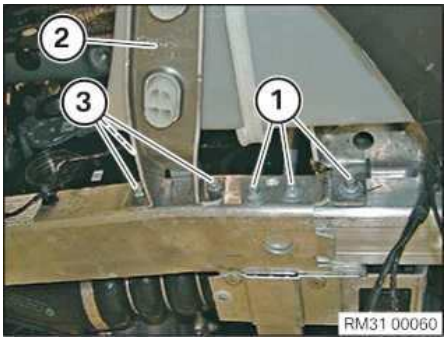


- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).

cardiagn.com



- Disconnect wiring harness (1) from steering gear.

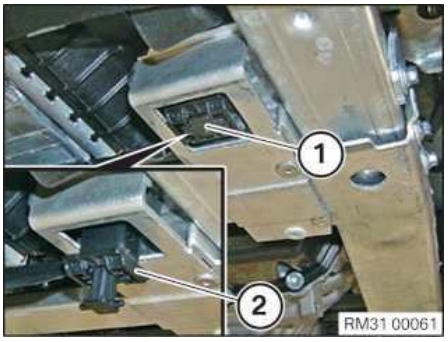


- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.

- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

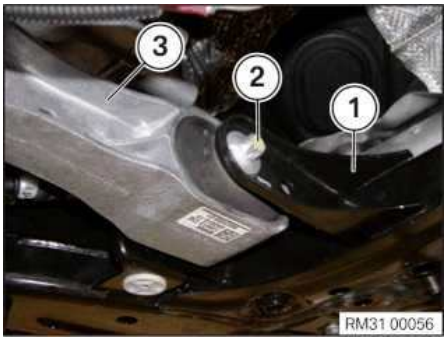
23 – Releasing the mounted part from the front axle support



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.



- Loosen screws (1).

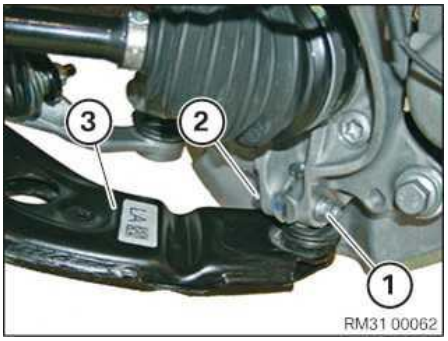
NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).

- Loosen screw (2) of the engine support (3) on the front axle (1).

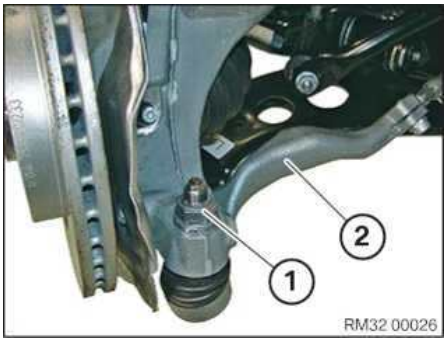
cardiagn.com



NOTICE

Perform the operations on the left and right side.

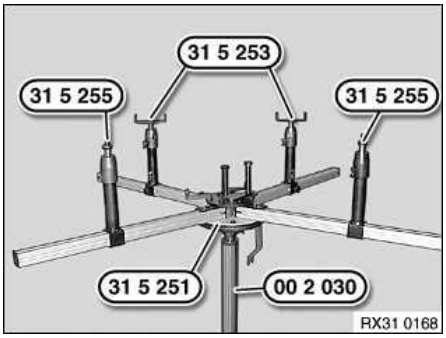
- Loosen screws (1).



24 – Detaching and removing front axle completely

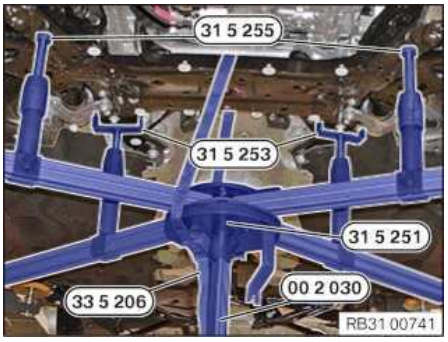
NOTICE

Perform the operations on the left and right side.



- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .

NOTICE

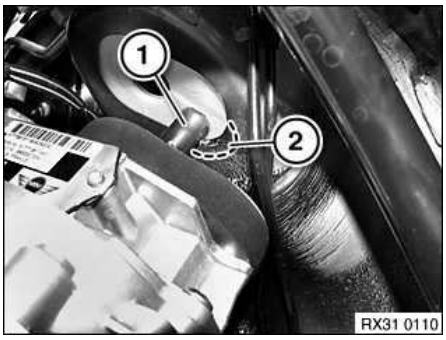


Perform the operations on the left and right side.

- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

Note: In a profile rail pair, two profile rails are connected to one another by gearing.

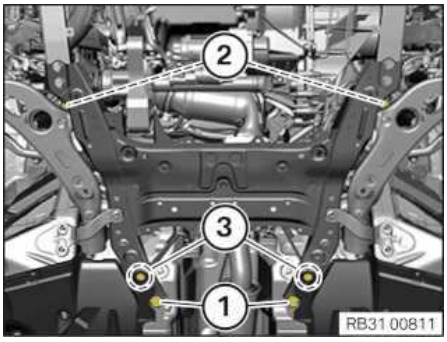


- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .

cardiagn.com



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

25 – Removing starter motor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

cardiagn.com

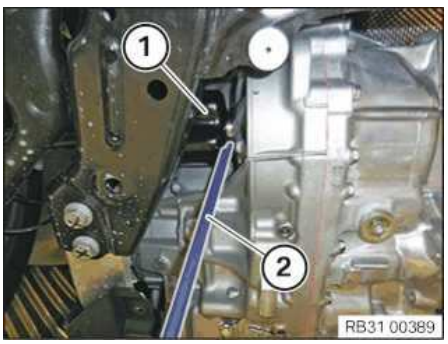
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

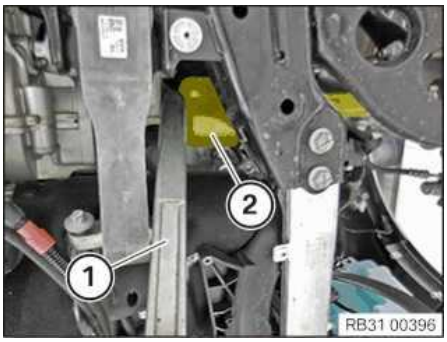
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



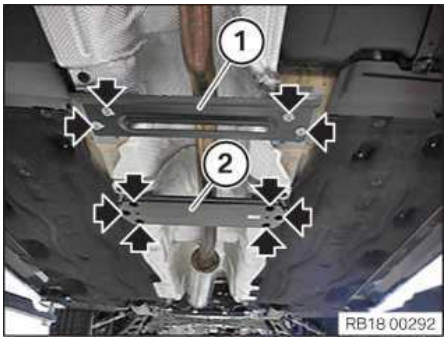
- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Loosen screws (1).
- Feed out starter motor and remove.



26 – Partially removing the left output shaft

- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Tie up output shaft (1).

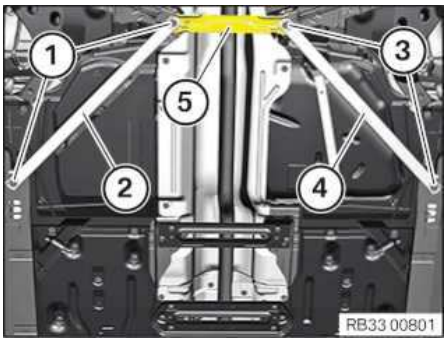


27 – Partially removing right output shaft

cardiagn.com

- Lever out the output shaft (2) with a mounting lever (1).
- Tie up output shaft (1).

28 – Removing the connecting support from the tunnel in front and back



- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

29 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.

- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

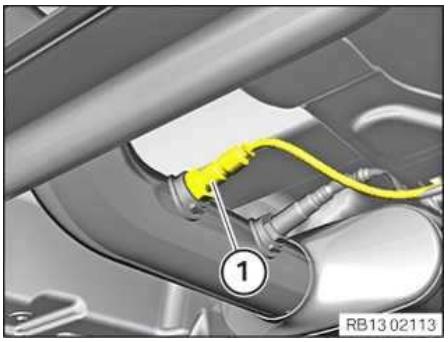
30 – Remove exhaust system

WARNING

Hot surfaces.

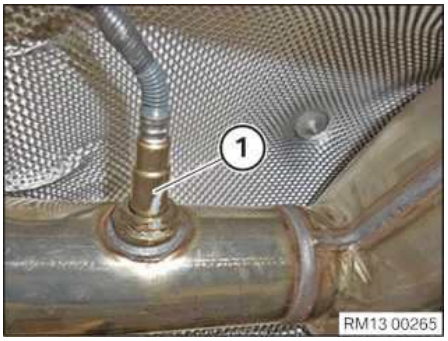
Risk of burning!

- Perform all work only on components that have cooled down.



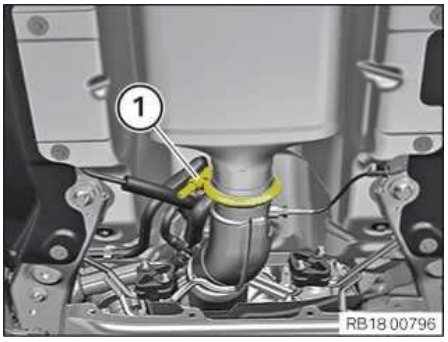
CAUTION

Heavy component.

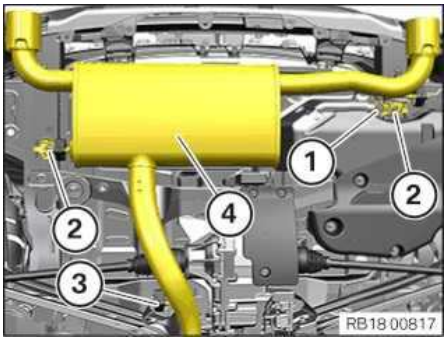


Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

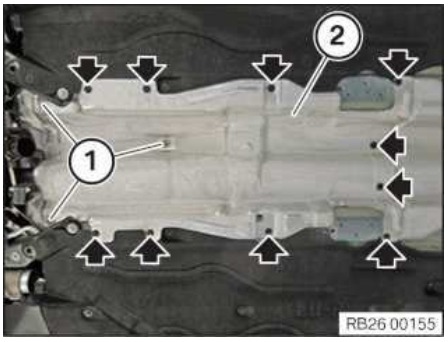


cardiagn.com



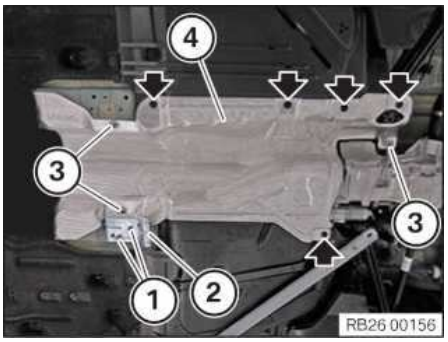
- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.

- Release the diesel particulate sensor (1), guide it out and set it aside.



- Loosen V-band clamp (1).

- Loosen screw (1).
- Loosen nuts (2).
- Release the rubber mount (3) of the exhaust system (4).
- Lower and guide out the exhaust system (4) with assistance of a second person and remove it.



31 – Remove front heat shield

- Remove screws (arrows).
- Loosen nuts (1).
- Guide the heat shield (2) out and remove it.

32 – Remove heat shield at rear.

cardiagn.com

- Loosen screws (1).
- Guide out and remove holder (2).
- Remove screws (arrows).
- Loosen nuts (3).
- Guide the heat shield (4) out and remove it.

33 – Remove propeller shaft

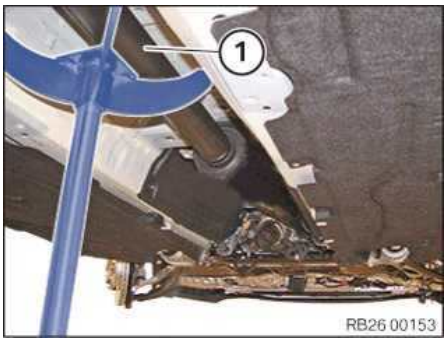
CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

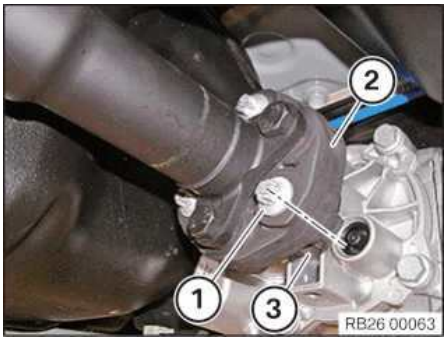


Damage to propeller shaft during removal.

Non-observance of the removal guidelines for the propeller shaft on the rear axle differential may cause severe damage.

- Do not disassemble the three-hole flange, flexible disc and propeller shaft. The three-hole flange to the rear axle differential is balanced with the flexible disc and propeller shaft.
- Loosen the recessed nut against the direction of travel in clockwise direction. The propeller shaft must be loosened on the recessed nut only and exclusively in the direction of rotation otherwise the anti-twist lock of the bi-hexagonal flange nut is damaged.
- In the event of a damaged anti-twist lock on the bi-hexagonal flange nut: Replace the rear axle differential.

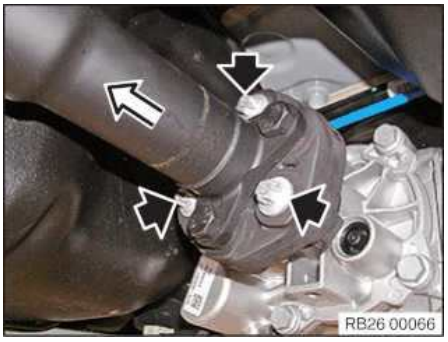
- Install the special too l between the front and rear propeller shaft.
- Make sure that the arrows on the special tool point forward in the direction of travel.



- Always support the propeller shaft (1) with a conventional jack.

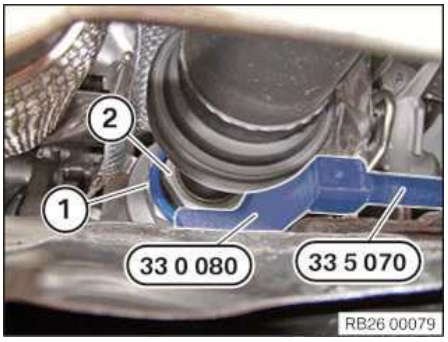
cardiagn.com

- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.



TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.



- Mark the installation position of the screw connection (1), the flexible disc (2) and the three-hole flange (3) on the same level.
- Loosen the screw connection (1).

- Loosen screws (1).

- Remove screws (arrows).
- Guide the propeller shaft out in the direction of the arrow and set it aside.

RISK OF DAMAGE

Damage to the transfer box.

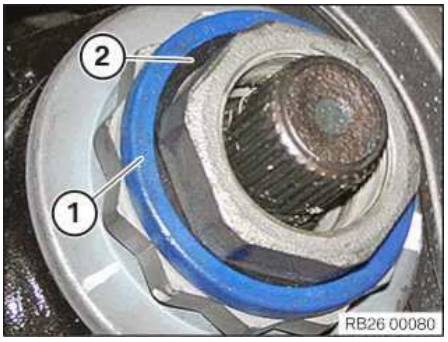
Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

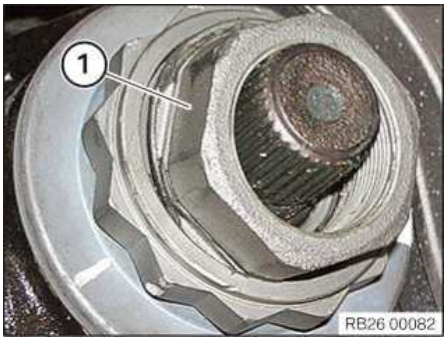
- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to detach the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



cardiagn.com

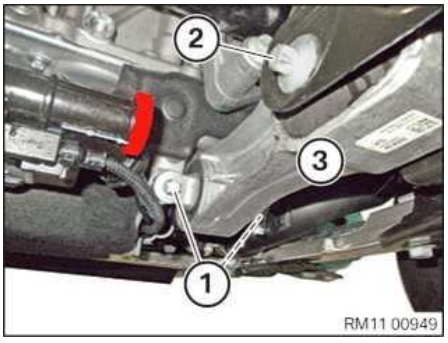


- Release the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

- Thread the propeller shaft (2) out of the recessed nut (1) and remove.

- Thread the retaining clip (1) and the seal (2) out and remove.

- Thread out and remove the recessed nut (1).

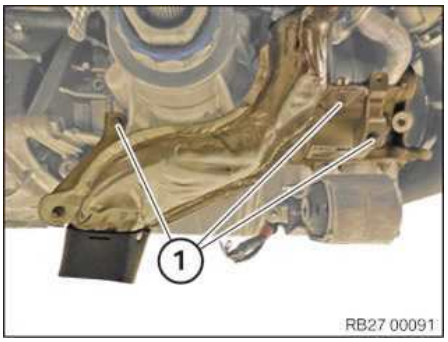


34 – Remove bracket with rubber mount

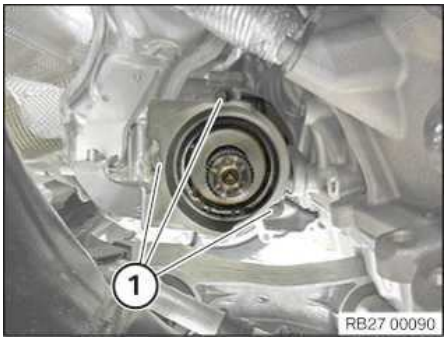
WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

Danger! Life-threatening injuries!

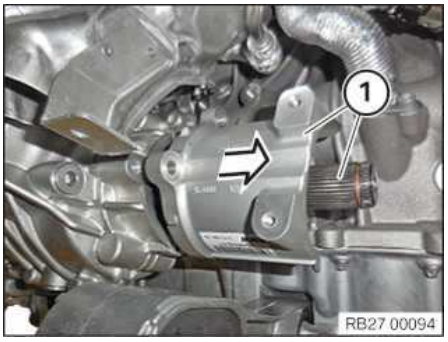


- Secure the vehicle hoist against lowering and lifting.



- Support the engine with the jack at a suitable point.
- Loosen screws (1) and (2).
- Guide out and remove holder (3).

35 – Remove the intermediate shaft with the support tube



cardiagn.com

- With air duct installation: Loosen screws (1).
- Remove air duct

- Loosen screws (1).

- Pull the intermediate shaft with the support tube (1) out of the transfer box.

36 – Drain oil level in the manual gearbox (GS6X60DA)

CAUTION

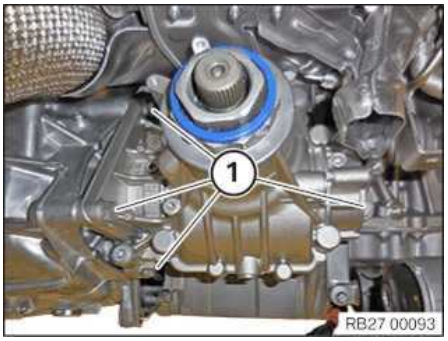
Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

- Draining transmission oil:
  - Unscrew oil drain plug (1) and allow oil to flow out completely.
  - Clean oil drain plug (1) and screw in.

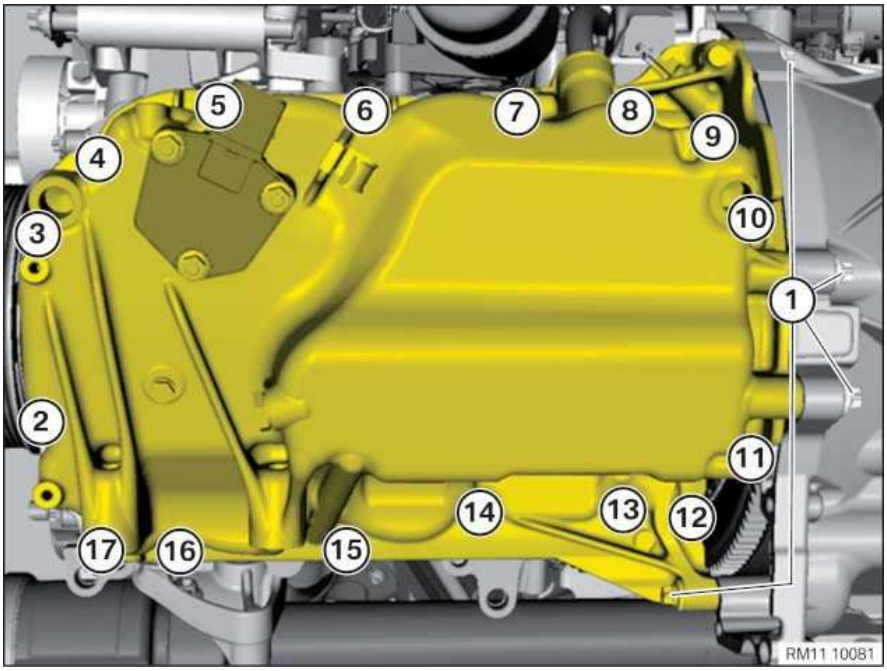
Oil drain plug / oil filler plug



Hexagon socket		Tightening torque	43 Nm

37 – Remove transfer box (VTG)

cardiagn.com



- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

38 – Release transmission-side bolting connection oil sump

- Unscrew the bolts (1) from the transmission.

39 – Removing the manual gearbox (GS6-59DG, GS6X60DA)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

RISK OF DAMAGE

Damage to the engine block.

Damaged and corroded bolts will lead to major damage in the engine block and the transmission.

- It is imperative that protruding threads of the transmission bolts are checked for corrosion and damage prior to removal.
- It is imperative that all rust is removed from corroded threads and that they are cleaned prior to removal.
- Renew rusted and damaged bolts.

▸ **Remove electronics box**

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

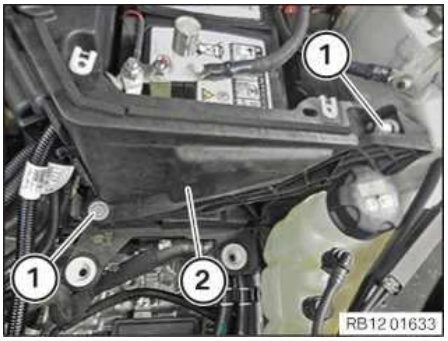
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

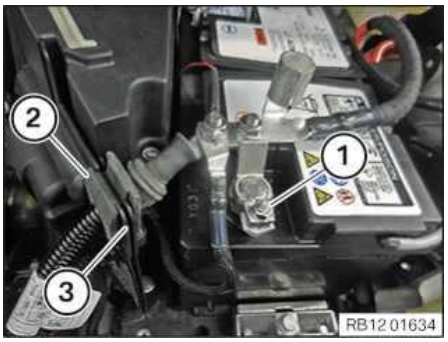
- Do not pull on the wires when disconnecting connectors and plug connections.



TECHNICAL INFORMATION

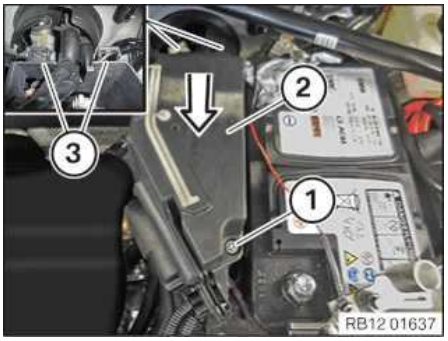
Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units



TECHNICAL INFORMATION

Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

cardiagn.com

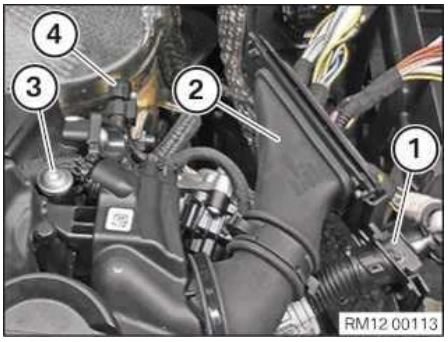
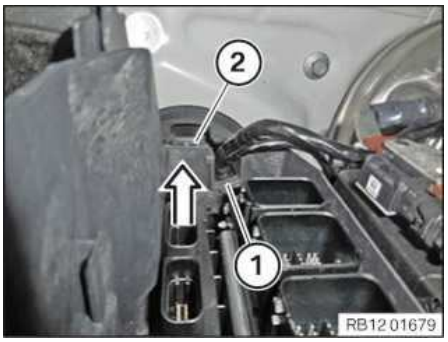
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

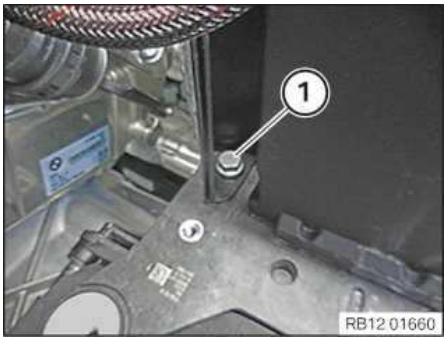


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).



- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

cardiagn.com

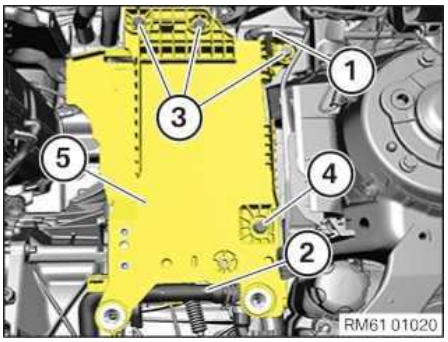
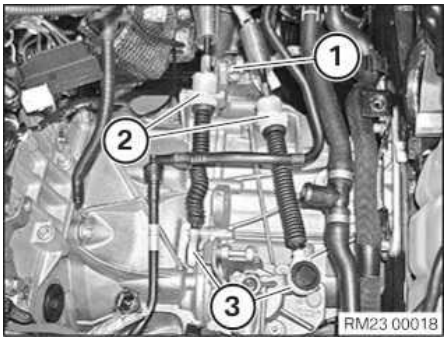
- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

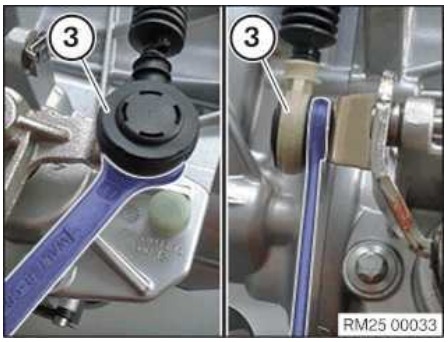


- Loosen screw (1).

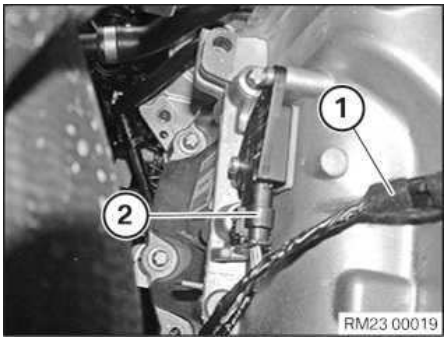


- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

▶ **Remove battery holder**



- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).



- Release the clip on the limit position/bracket (2) and bend the tabs slightly away from the limit position/bracket (2).
- Unscrew the bolt (1) and detach the ground strap from the transmission.

cardiagn.com

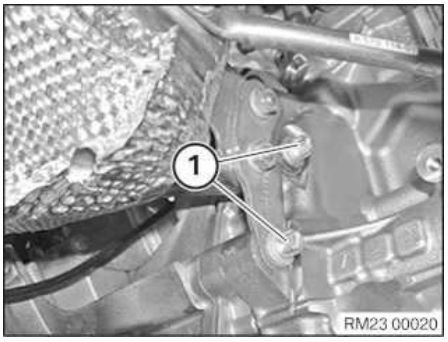
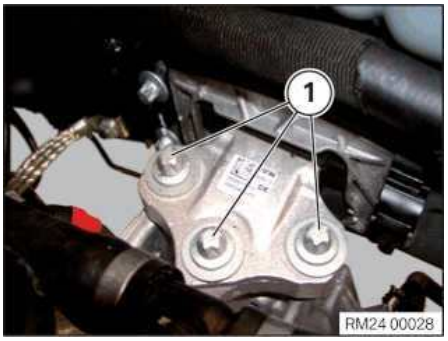
- Lever the fixtures (3) of the selector lever cables away from the ball joints with an open-end spanner SW13.



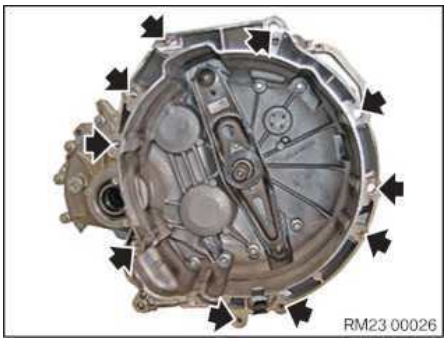
- Disconnect the plug connection (2) of the gear sensor.
- Detach the cable (1) with the holder from the transmission.



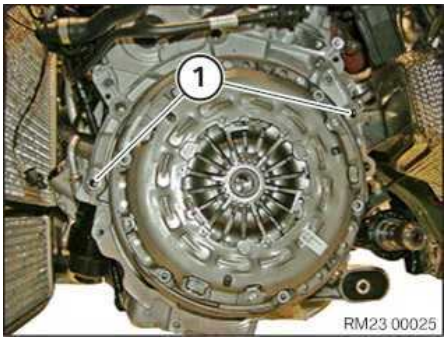
- Relieve tension on clutch slave cylinder slowly; otherwise air will be drawn in through sealing cup.

  Pressure line of clutch slave cylinder remains connected.
- Unscrew the bolts (1) and remove the clutch slave cylinder.

- Loosen screws (1).



- Loosen screws (1).



- Support the transmission with special tool **0 490 133 (00 2 030)**and .
- Secure the transmission with the tensioning strap (3).

cardiagn.com

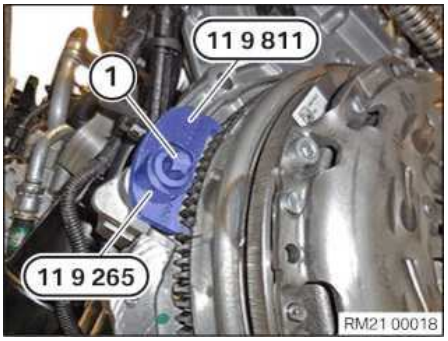
- Remove screws (arrows).
- Pull transmission downwards and remove.

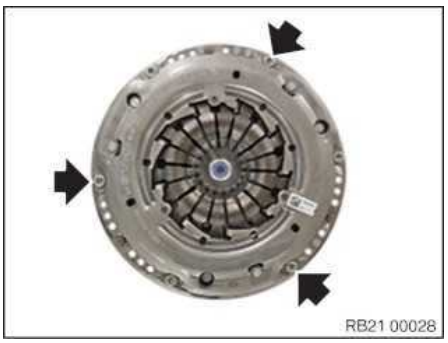
- Check for correct fit of fitting sleeves(1).
- Replace damaged fitting sleeves.

- Remove any grease from the transmission input shaft (arrow) and clean the shaft.
- Do not grease transmission input shaft.
- Check clutch disc for frictional corrosion in gearing and replace if necessary.



40 – Remove clutch

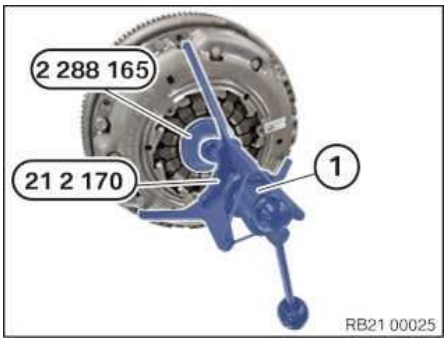
CAUTION



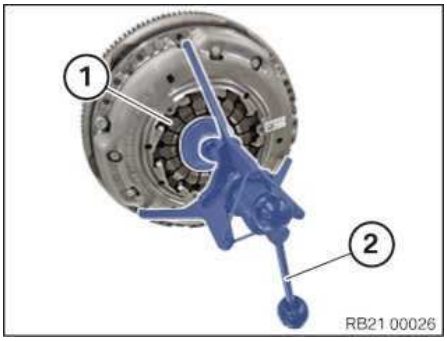
Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.



- Block flywheel with transmission bolt (1) and special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.



- Detach 3 screws to attach special tool and **2 288 165**.

cardiagn.com

- Position special tool and **2 288 165** and tighten on the knurled screw (1).

- Screw in the spindle (2) until the diaphragm spring (1) is preloaded and the clutch disc is free of tension.

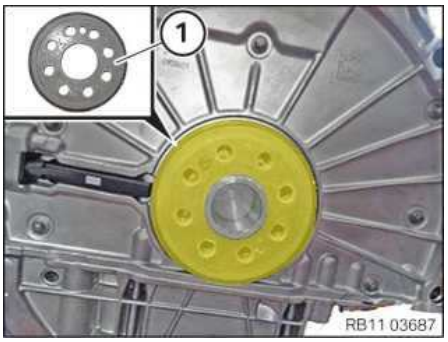
- Loosen the remaining 3 screws and remove the clutch with clutch disc from the flywheel.

MAIN WORK

41 – Removing flywheel

CAUTION

Heavy component.



Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Secure the flywheel with a transmission bolt (1) and with special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.
- Unscrew the flywheel bolts with the special tool **0 491 018 (11 4 180)**.
- Remove flywheel.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Remove the increment wheel (1) from the crankshaft and lay it down correctly.

42 – Installing the flywheel

CAUTION

Heavy component.

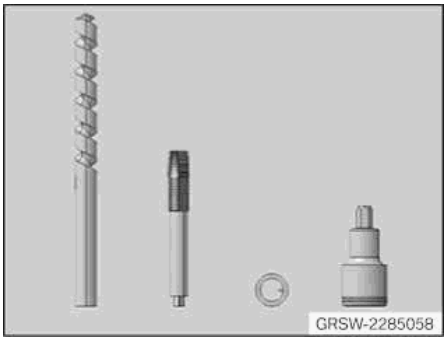
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.



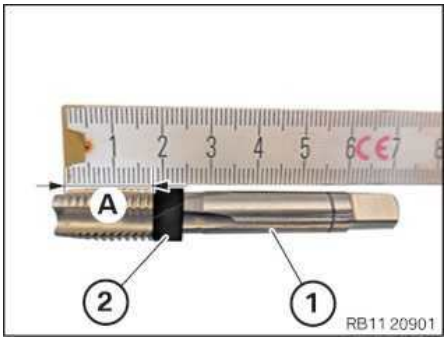
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

Clean all threads with a screw tap.

- Clean all screw threads (1).

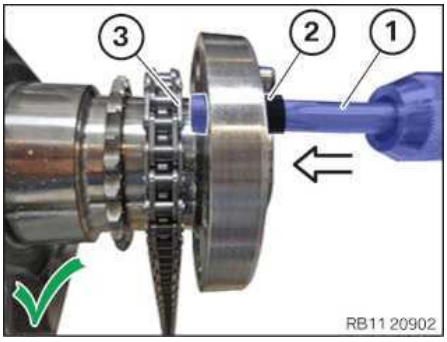
- Use the set of special tools **2 285 058**.



Description
Twist drill
Thread cutter M12x1.5
Depth
Insertion tool

cardiagn.com

- Assemble tool set.



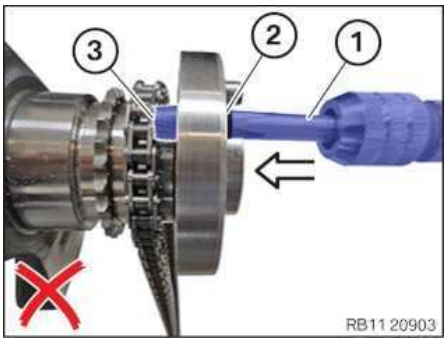
Number	Description
1	Tool holder
2	Thread cutter M12X1,5

- Mark the screw-in depth (A) on thread cutter (1) from the set of special tools **2 285 058** with a standard tool (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm

NOTICE



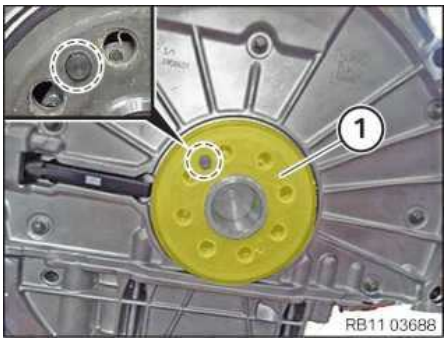
To provide a better overview: Shown with engine removed.

- Screw in the thread cutter (1) from the set of special tools **2 285 058** in direction of arrow up to the screw-in depth (2).

Screw-in depth of thread cutter

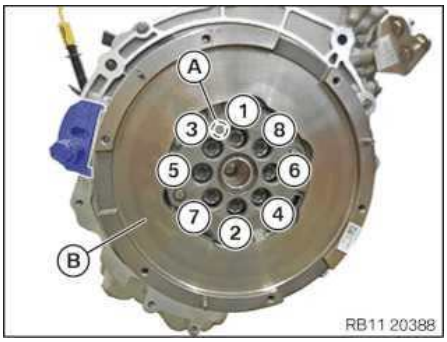
Screw-in depth	18 mm

- Make sure that the thread cutter does (1) **not** rest on the timing chain (3).



TECHNICAL INFORMATION

- **Carefully** handle the timing chain, to protect the timing chain and timing chain drive against damage.

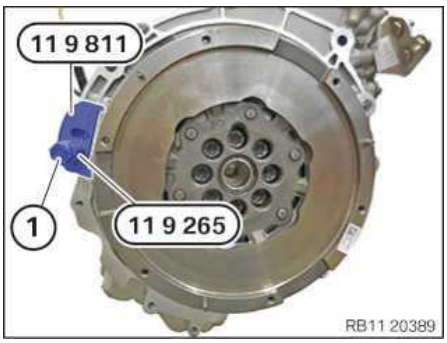


- Make sure that the screw-in depth (2) of the screw tap (1) is not exceeded.

  The thread cutter (1) may not rest on the timing chain (3).

- During the installation, note the mark shown without fail.
- Install special tool (1) on the crankshaft as shown.

cardiagn.com



- Position flywheel (B) .
- Renew flywheel bolts (1) to (8).

  Parts: Flywheel bolts
- Tighten flywheel bolts hand-tight with special tool **0 491 018 (11 4 180)**.
- Observe tightening sequence. While doing so, begin with dowel pin (A).
- Tighten the flywheel bolts using the special tool **0 491 018 (11 4 180)** in sequence (1) to (8).

Flywheel to crankshaft

M12x1.5	Renew screws.	Tightening torque	120 Nm

- Loosen the transmission bolt (1).
- Feed out and remove special tools **0 494 793 (11 9 265)** and **0 496 171 (11 9 811)** with the **standard** (5 mm) washer.

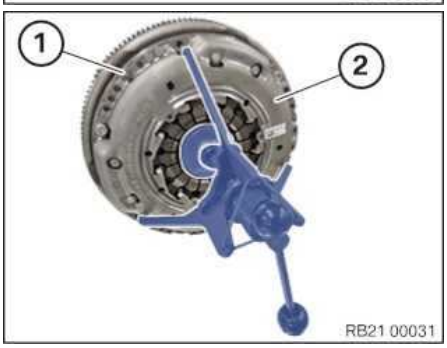
POSTPROCESSES

43 – Install clutch

CAUTION

Materials harmful to health.

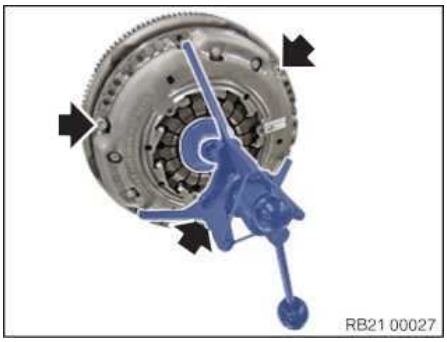
Contact with fluids harmful to health!



- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

TECHNICAL INFORMATION

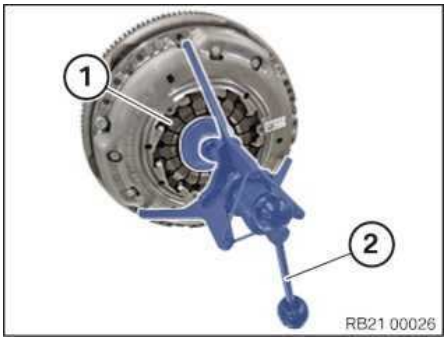
Handle the clutch disc carefully. Install the surfaces of the clutch disc in the correct mounting orientation.
Clean friction surfaces of the flywheel and the pressure plate with BMW-approved brake cleaner.
Note designation for "engine side" / "transmission side".



- Centre the clutch disc (1) using special tool .

- Mount the clutch (2) together with the special tool to the flywheel.
- Observe the dowel pins (1).
- The clutch (2) must be secured via the dowel pins (1).

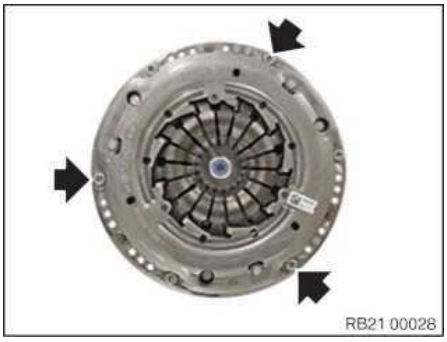
cardiagn.com



- Renew the bolts (arrows).

  Parts: Bolts
- Install and tighten screws (arrows).

Clutch to flywheel



M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

- Loosen the spindle (2) until the diaphragm spring (1) is fully relieved.

- Unscrew the knurled screw (1) and remove the special tool with **2 288 165** from the clutch.

- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Clutch to flywheel

M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

- Withdraw special tool from clutch disc with aid of accompanying screw.

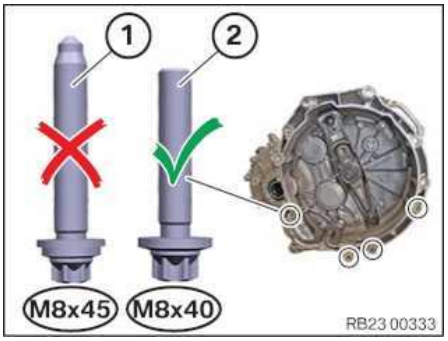
44 – Installing the manual gearbox (GS6-59DG, GS6X60DA)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.



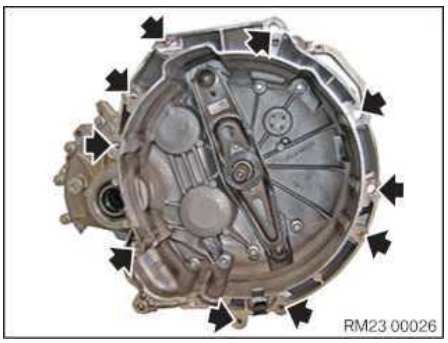
cardiagn.com

RISK OF DAMAGE

Damage to the engine block.

Damaged and corroded bolts will lead to major damage in the engine block and the transmission.

- It is imperative that protruding threads of the transmission bolts are checked for corrosion and damage prior to removal.
- It is imperative that all rust is removed from corroded threads and that they are cleaned prior to removal.
- Renew rusted and damaged bolts.

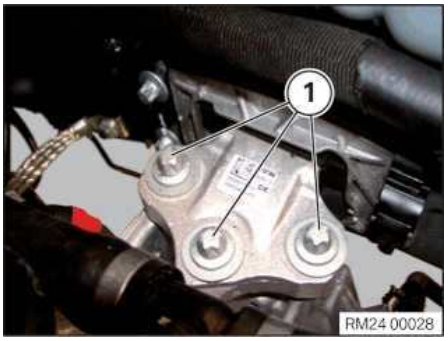


RISK OF DAMAGE

Component damage caused by incorrect screw length.

The use of screws with the incorrect screw length can damage the component.

- Check for correct screw length.
- Re-install screws that correspond to the original screw length.

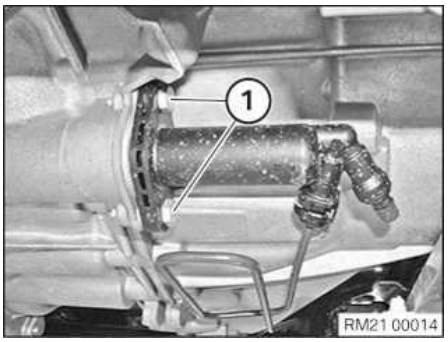


- **Wrong:** The screw (1) (starter motor screw connection) must **not** be used for the bottom screw connection of the transmission.
- **Correct:** It is imperative to use the bolt (2) (M8x40) for the lower screw connection of the transmission and flange-mount the transmission.

- Tighten screws (arrows).

Transmission to engine

M8x40		Tightening torque	19 Nm
M12x75		Tightening torque	66 Nm

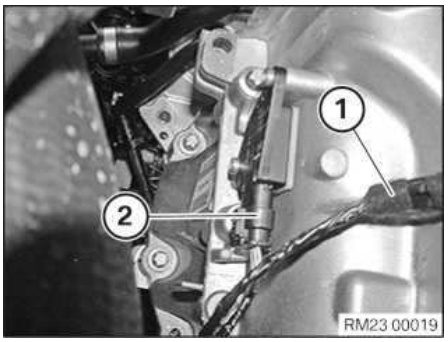


- Renew screws (1).

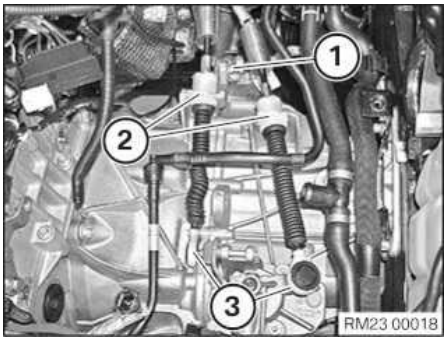
  Parts: Bolts
- Tighten the screws (1).

Transmission mounting

M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °



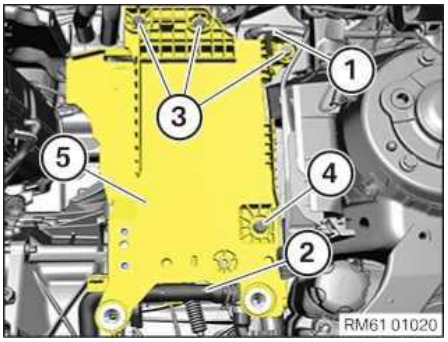
- Install clutch slave cylinder.
- Tighten the screws (1).



Clutch slave cylinder to transmission housing

M8		Tightening torque	19 Nm

cardiagn.com



- Connect the plug connection (2) of the gear sensor.
- Clamp the cable (1) with the holder to the transmission.

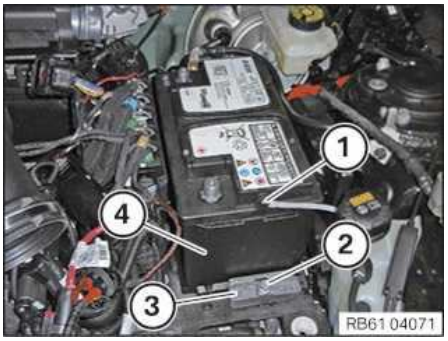
- Tighten the ground strap on the transmission with the screw (1).
- Clip in the clip on the stop/holder (2).
- Attach the selector lever cables (3) on the ball joints.

▸ **Install the battery holder**

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm



- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

▸ **Partially install vehicle battery**

- Install vehicle battery (4).
- Correctly position the holder (3).
- Tighten down screw (2).

Battery terminal rail to battery tray

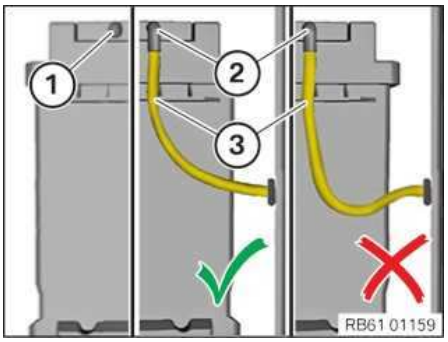
M8		19 Nm

- Fit and clip the vent hose (1) in.

▹ **Check the vent holes of the battery**

WARNING

Gas emission.



Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

cardiagn.com

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

Check
- Check if the vent hole (1) is correctly closed with a dummy plug.

Result
» No dummy plug.

Measure
- Close the vent hole (1) correctly with a dummy plug.

Check
- Check if the vent hole (2) has a correctly connected vent hose (3).

Result
» The vent hose (3) is not correctly connected.

Measure
- At the vent hole (2), connect the vent hose (3) correctly.

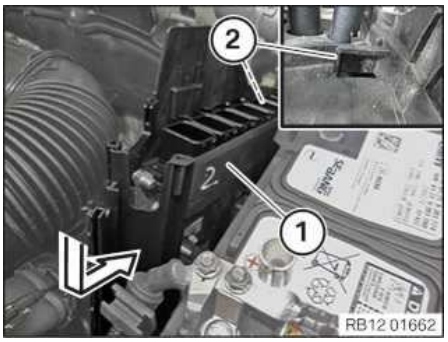
Check
- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).

Result
» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure
- Route the vent hose (3) correctly as shown in the centre image.

◁

▶ **Install electronics box**

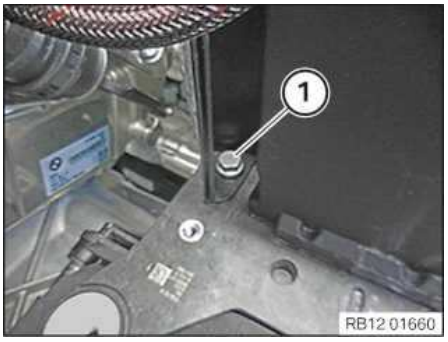


Prerequisite
Battery earth lead is disconnected.

RISK OF DAMAGE

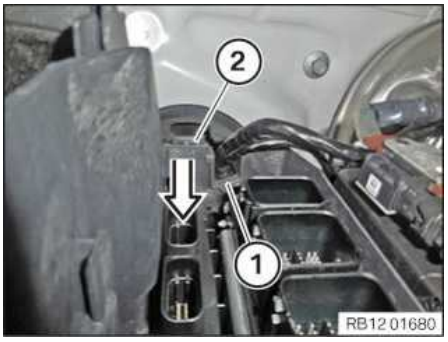
Improper routing of cables and wiring harnesses.

Trapped, crushed or damaged cables may cause short circuits and malfunctions.
- Route all cables without abrasions, do not trap and crush.

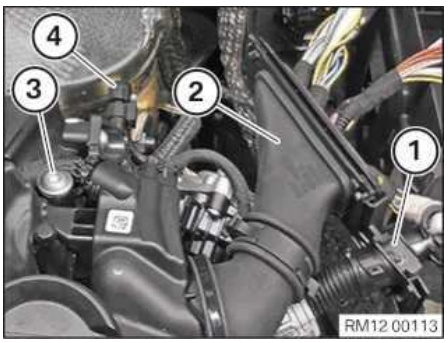


cardiagn.com

- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.



- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).

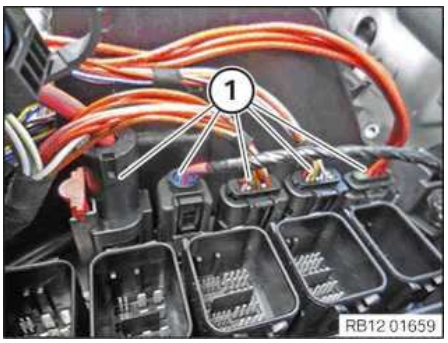


- Tighten down screw (1).

Electronics box to battery tray

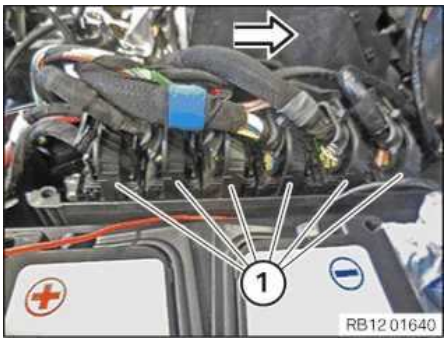
M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



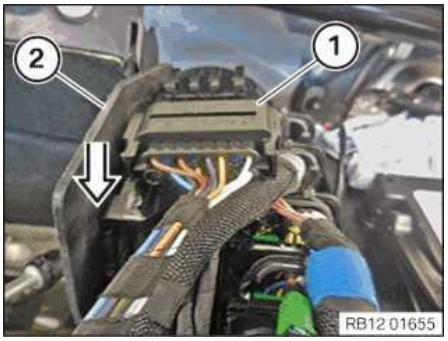
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

Wiring harness to cylinder head cover

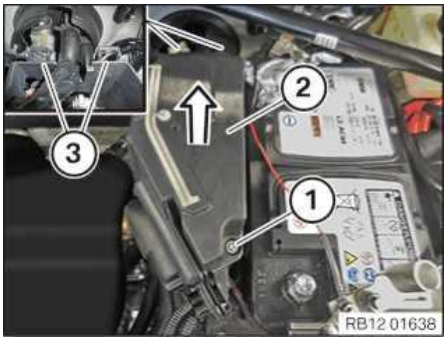


TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

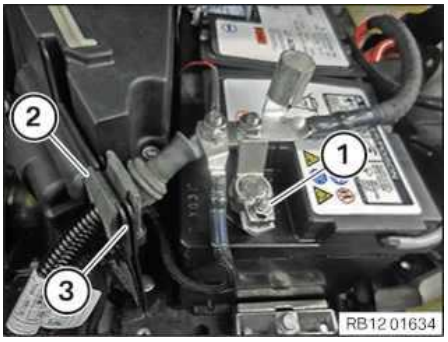


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



cardiagn.com

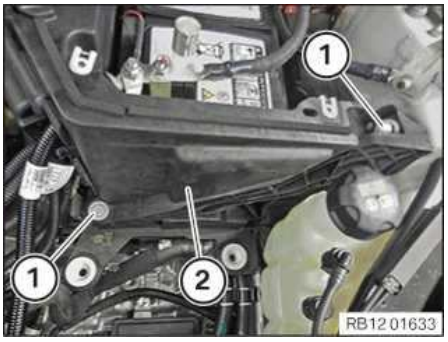
- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

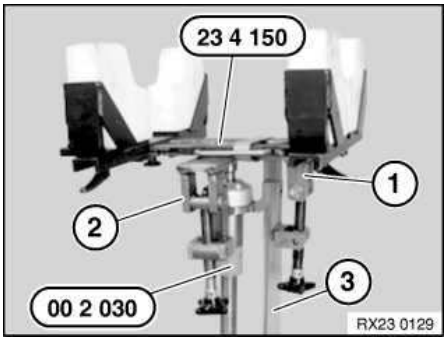
Cover to electronics box



RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

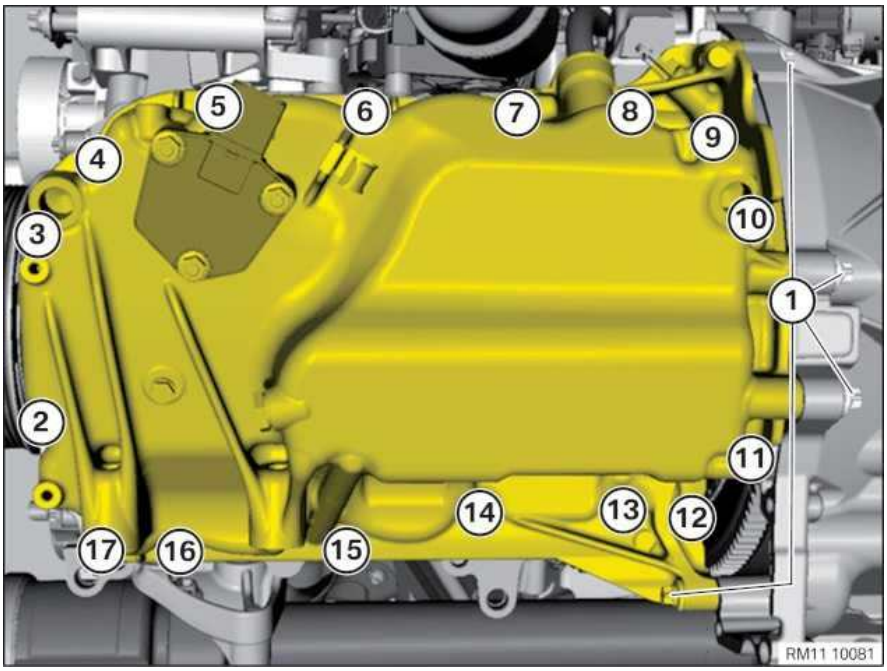
Positive battery terminal to battery



NutM6		Tightening torque	5 Nm

- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray

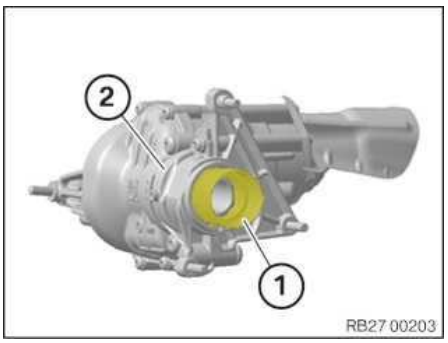


M8		Tightening torque	19 Nm

- Loosening the tensioning strap (3).
- Remove special tools **0 490 133 (00 2 030)** and .

45 – Tighten down transmission-side bolting connection oil sump

cardiagn.com



- Join transmission bolts (1) with 5 Nm.
- Tighten the transmission bolts (1) on the transmission.

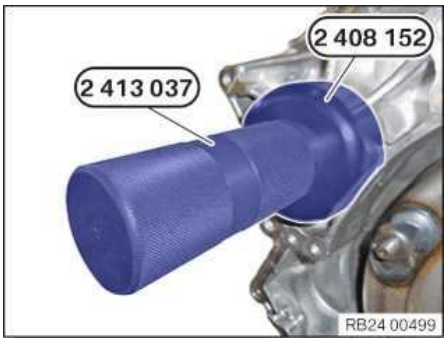
Transmission to oil sump

M8			19 Nm

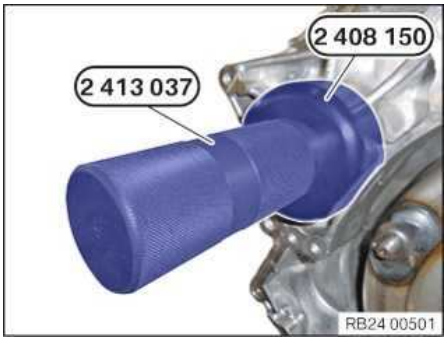
46 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

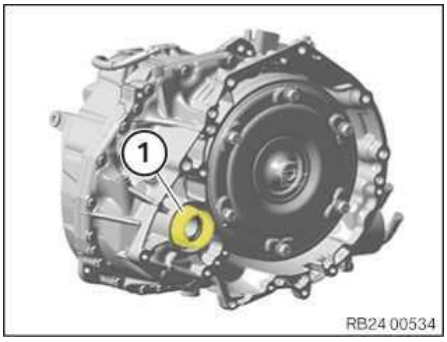
- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.



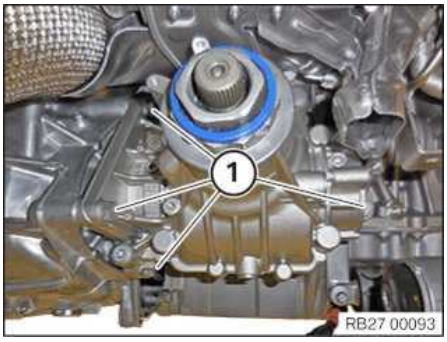
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



cardiagn.com

- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

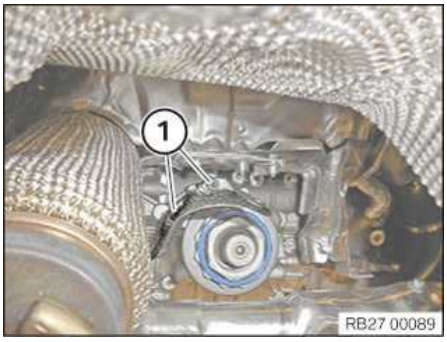
- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.



- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials



Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

cardiagn.com

RISK OF DAMAGE

Damage to the transmission.

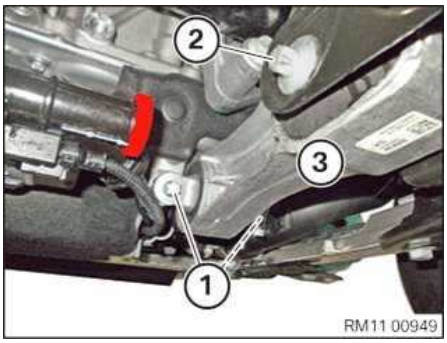
Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

Technically suitable transfer box and electrical transmission oils	



Main group 27

- Tighten the oil filler plug (1).

Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm

47 – Install the holder with the rubber mount

- Insert and install the holder (3).
- Tighten the screws (1) and (2) hand-tight.
- Release jack.
- Tighten down screw (2).

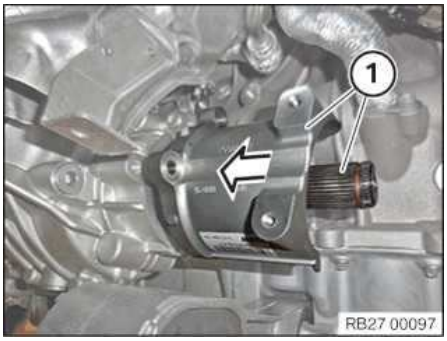
Holder to front axle support

M12		Tightening torque	100 Nm

- Tighten the screws (1).

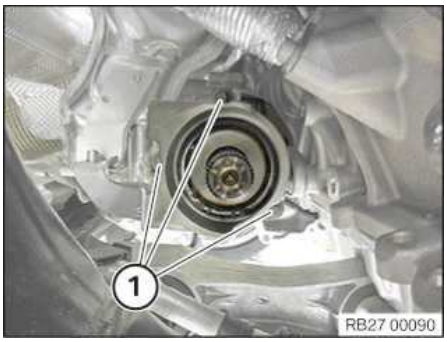
Bracket to oil sump

M12		Tightening torque	100 Nm



48 – Install the intermediate shaft with the support tube

- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

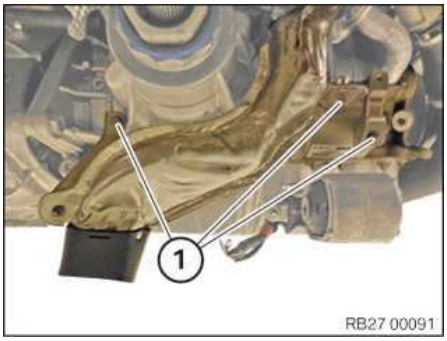


Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

cardiagn.com



- Position screws (1).

Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

- If installed: Install air duct.
- Tighten the screws (1).

49 – Install propeller shaft.

CAUTION

Component with heavy weight.

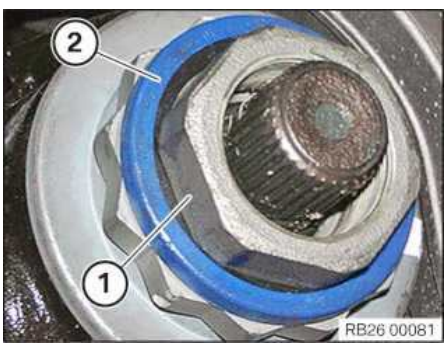
Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

Damage to the propeller shaft during installation.

Non-observance of the installation guidelines for the propeller shaft on the rear axle differential may cause severe damage.



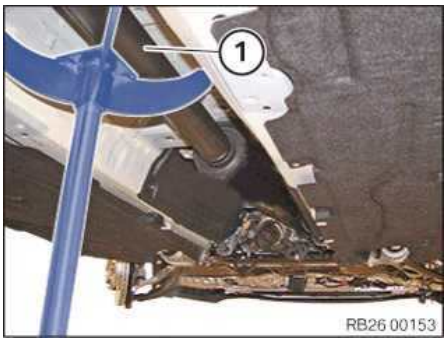
- Always renew the recessed nut on the rear axle differential. Screw locking must be available.
- Strictly observe a minimum hardening time of two hours after having screwed in the recessed nut. The hardening time may be longer at lower temperatures.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

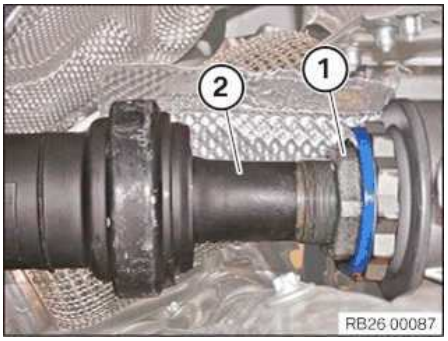


- Renew recessed nut (1).

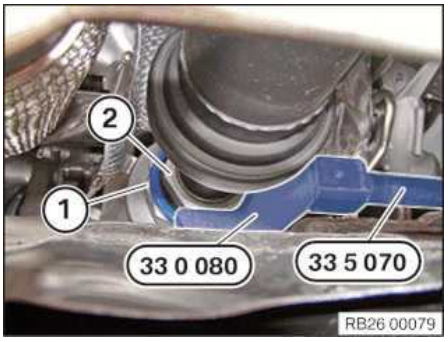
  Parts: Insert nut
- Renew the retaining clip (2) and the seal.

  Parts: Retaining clip, seal
- Insert the seal with the recessed nut (1) and install.
- Insert the retaining clip (2) and install.
- Make sure that recessed nut (1) is screwed in within 5 min.
- Make sure that the hardening time of **minimum** 2 h for the recessed nut is observed.

  The hardening time must be extended at lower temperatures.



cardiagn.com



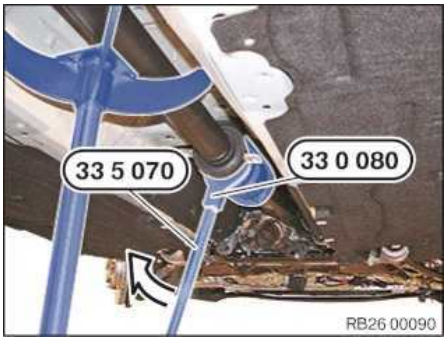
- Insert the propeller shaft (1) and install.
- Always support the propeller shaft (1) with a conventional jack.

- Hand-tighten the bolts (1).

- Push the propeller shaft (2) against the recessed nut (1) up to the limit position.
- Screw the propeller shaft (2) at least 2 thread starts onto the recessed nut (1) by hand.

RISK OF DAMAGE

Damage to the transfer box.



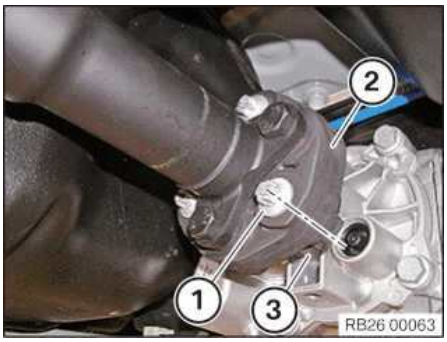
Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to tighten the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



- Tighten the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

Propeller shaft to transfer box

		Tightening torque	80 Nm

cardiagn.com

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Assemble the screw connection (1) of the flexible disc (2) and the three-hole flange (3) according to the mark.
- Renew screws (1).

  Parts: Bolts
- Hand-tighten the bolts (1).

- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

- Tighten the bolts with the special tools **0 490 504 (00 9 120)** and .

Flexible disc to rear axle final drive

Bolts/nut		Tightening torque	3 Nm

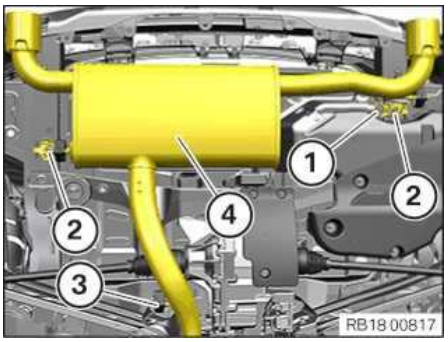
52 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.



CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

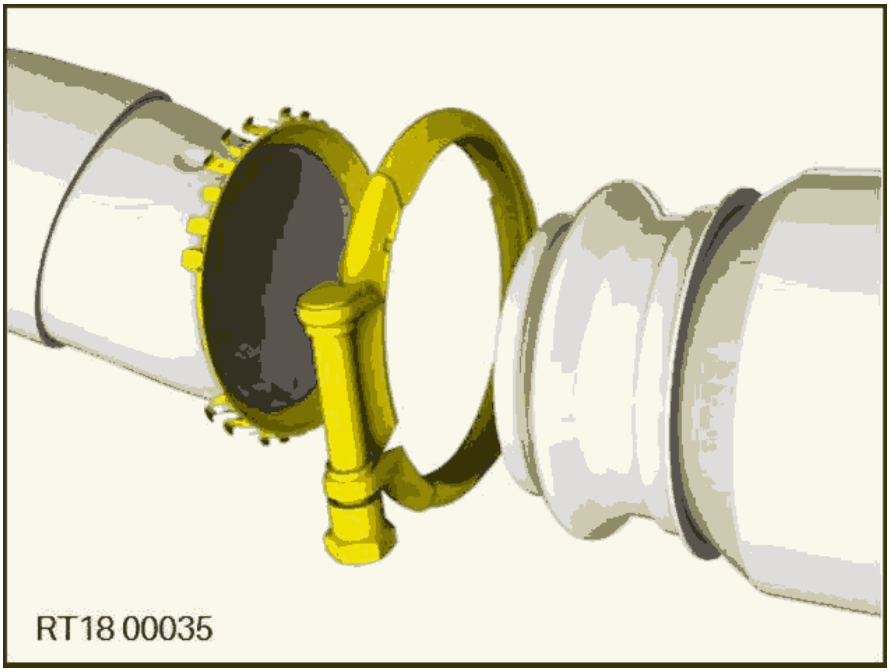
- Feed in and install the exhaust system (4) with a second person.
- Renew nuts (2).

  Parts: Nuts
- Tighten nuts (2).

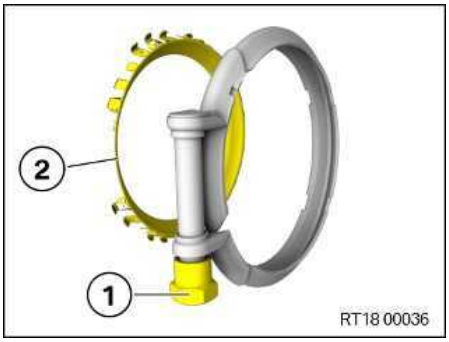
Exhaust system to body

M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).

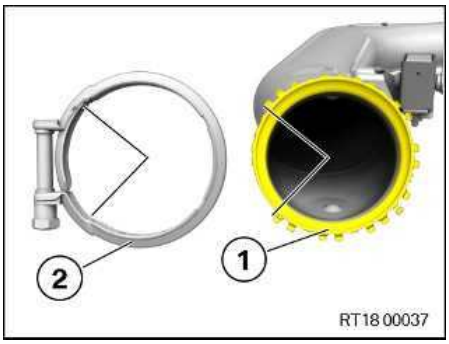


Exhaust bracket on body



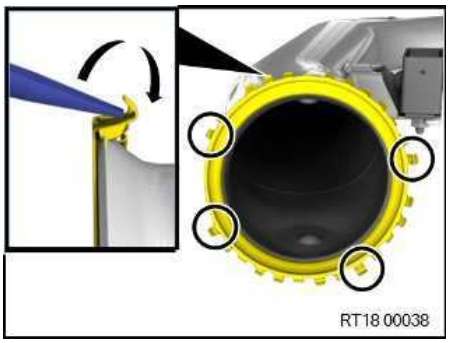
Hexagon screw M8x30		Tightening torque	19 Nm

- Check the rubber mount (3) for damage and renew as needed.
- Mount rubber mount (3) on the exhaust system (4).

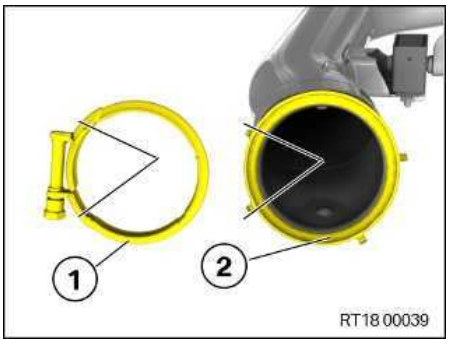


▸ **Install the V-clip**

V-band clamp



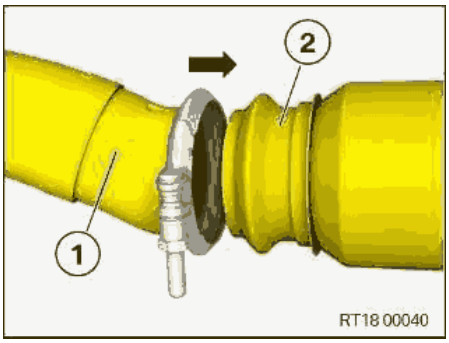
- Unscrew the nut (1) and remove the sealing ring (2).



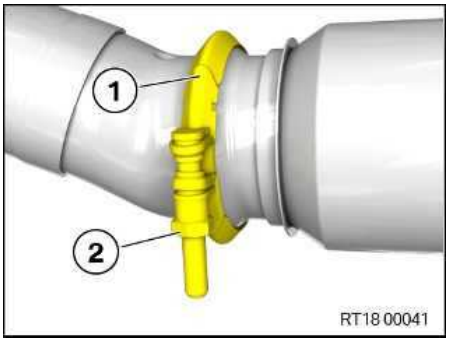
- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.

cardiagn.com

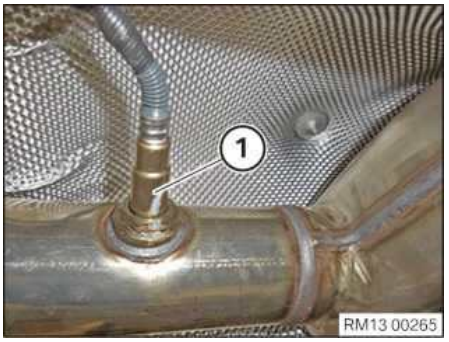


- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.



- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).

- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).



- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.

- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

- Feed in, install and tighten nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

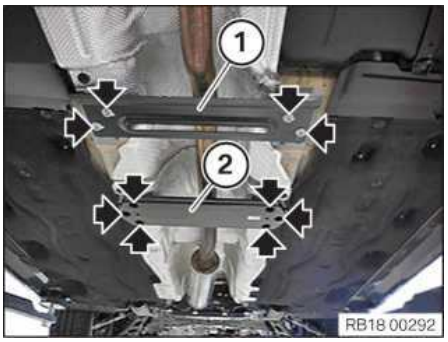
53 – Install the cross-member with torsion struts

- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °



- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

54 – Install the connecting support on the tunnel in front and back

- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

M10x18		Tightening torque	56 Nm

- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

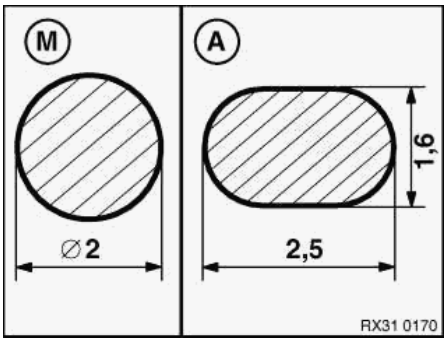
Rear connection carrier to body

M8x18		Tightening torque	28 Nm

55 – Installing right output shaft partially

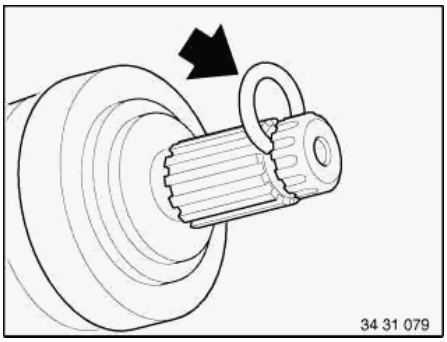
- Renew the circlip (1).

  Parts: Circlip
- Slide output shaft into the transmission as far as the limit position.
- Check for secure seat by levering.



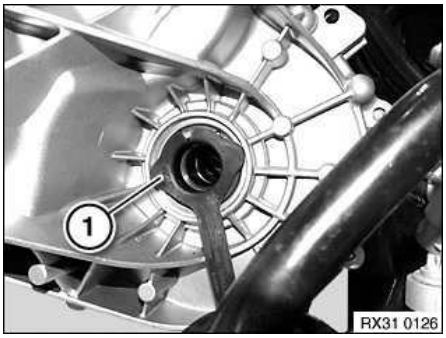
56 – Partially installing the left output shaft

cardiagn.com



- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).



- Do not mix up circlips.

  Different types of output shafts fitted:
  - M: Manual transmission
  - A: Automatic transmission

- Renew circlip (arrow).

- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

- Insert output shaft (1) into transmission.
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

57 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

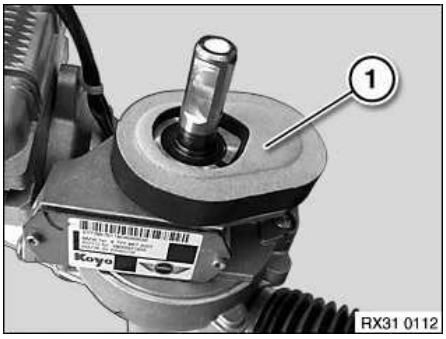
cardiagn.com

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

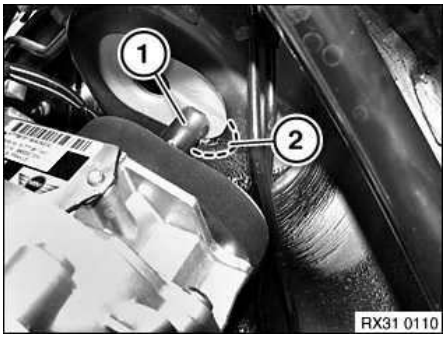
M8x45		Tightening torque	19 Nm

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).



Battery positive lead to starter

M8		Tightening torque	13,5 Nm

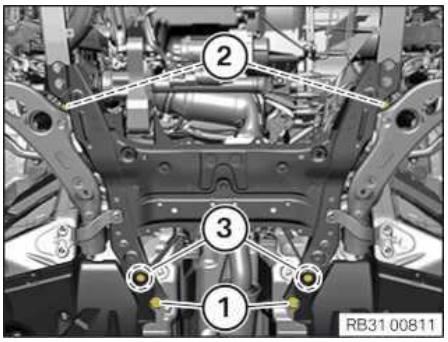


- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

58 – Mount and secure the complete front axle

- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

cardiagn.com

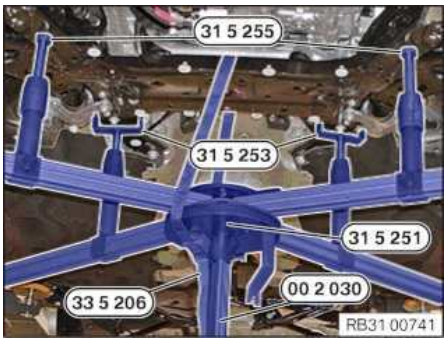
- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

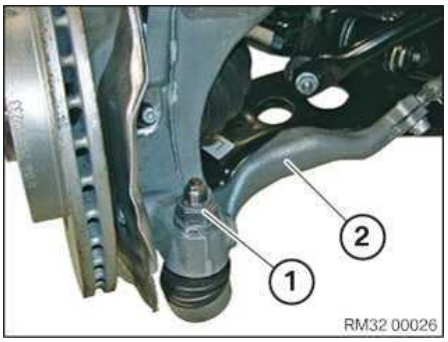
M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).



Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm



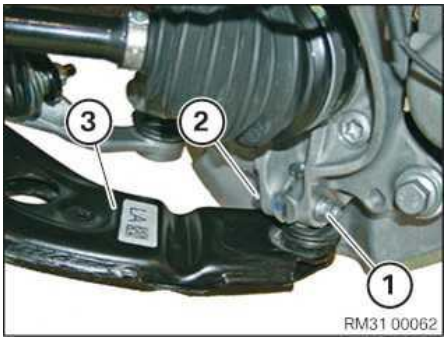
- If necessary, tighten the screws in the areas (3).

Underbody protection to body

Screw		Tightening torque	3 Nm

- Remove special tool from special tool .
- Lower universal jack **0 490 133 (00 2 030)** with the special tool and place it to the side.

NOTICE



Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm

NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

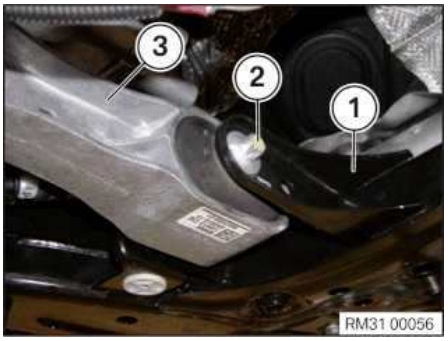
Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

cardiagn.com

59 – Install the mounted parts on the front axle support

NOTICE

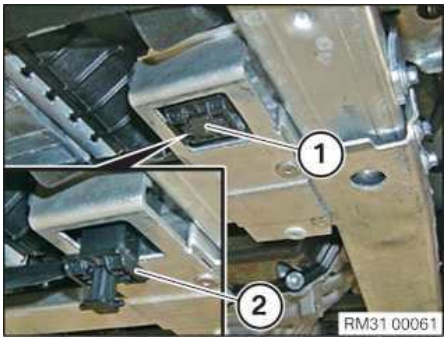


Perform the operations on the left and right side.

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

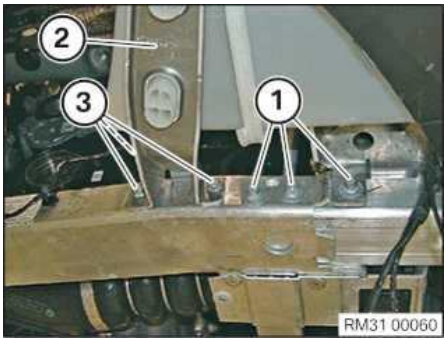
Holder, wishbone rubber mount, to body



M10 screw	Renew screw.	Jointing torque	56 Nm
		Angle of rotation	90 °

- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support



M12 screw		100 Nm

NOTICE

Perform the operations on the left and right side.

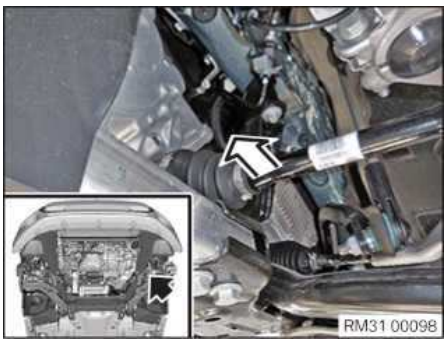
- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.

- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE

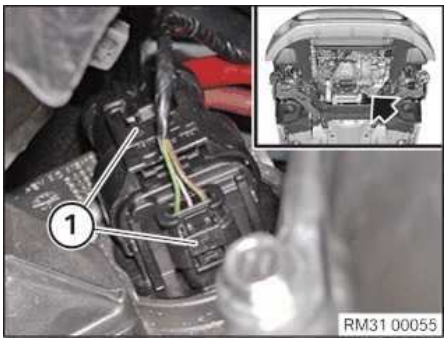


Perform the operations on the left and right side.

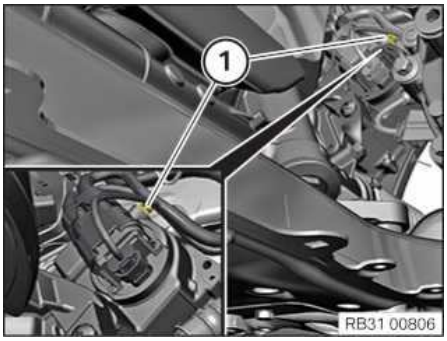
- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

		Tightening torque	11,8 Nm



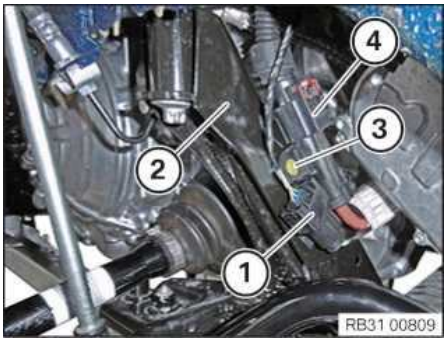
60 – Attaching connector at steering gear



- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.

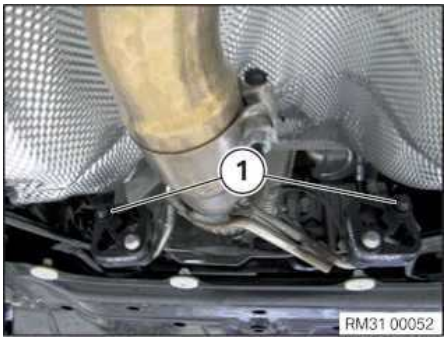
cardiagn.com



- Connect and lock connector (arrow) (1) with the steering gear.

- Fasten the wiring harness (1) on the steering gear.

▸ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

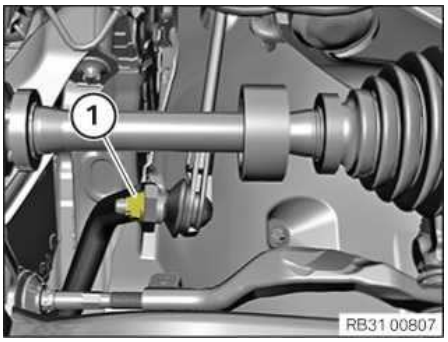
Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

61 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.



62 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▸ **Fastening anti-roll bar on the anti-roll bar link**

cardiagn.com

- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm

63 – With right installation: Securing the cable for the ride height sensor

- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

64 – Topping up oil level in the manual gearbox (GS6X60DA)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

TECHNICAL INFORMATION

Make sure during removal of the filling/level control screw to note the installed filling/level control screw variant.

It is **mandatory** to use variant 1 in transmissions up to production date 08/2015.

It is **mandatory** to use variant 2 in transmissions from production date 08/2015.

Failure to observe will result in a leak on the transmission.

- Variant 1 **until** production date 08/2015.
- Variant 2 **from** production date 08/2015.

- Unscrew filling/level control screw (1) and fill the transmission until the oil overflows.

Transmission oil capacity

Transmission oil GS6-60DA, GS6X60DA/Owner's Handbook	2,2 l

Transmission oil: Technically suitable manual gearbox oil

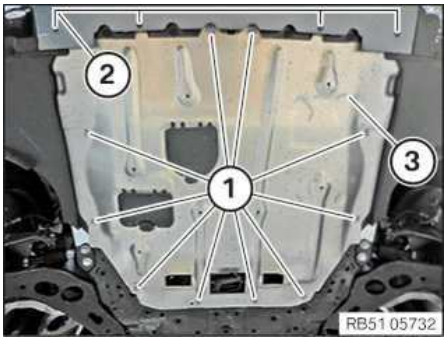
- Allow surplus oil to drain off.
- Renew the filling/level control screw (1).

  Parts: Filling/level control screw
- Tighten filling/level control screw (1).

Oil drain plug / oil filler plug

Hexagon socket		Tightening torque	43 Nm

65 – Installing the front underbody protection

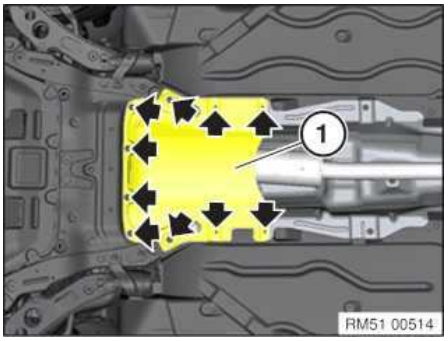


cardiagn.com

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm



- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

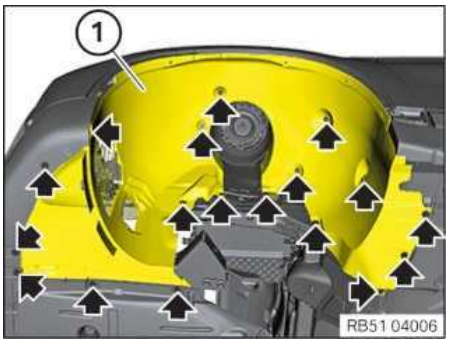
Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

66 – If installed: Installing underbody protection at rear

- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body



Screw		Tightening torque	3 Nm

67 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

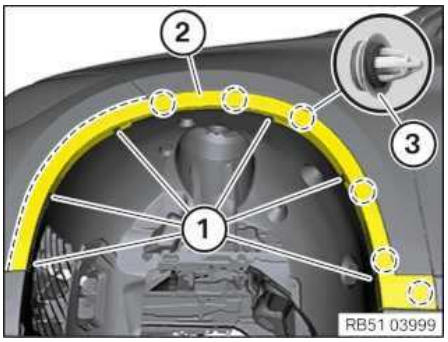
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

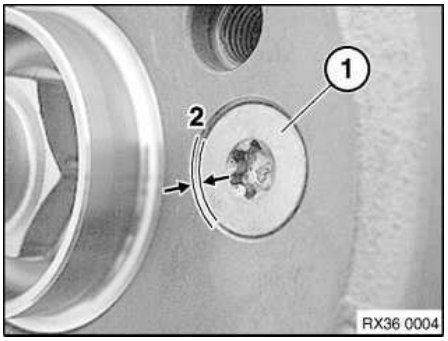
68 – Installing both front wheels

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.



- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

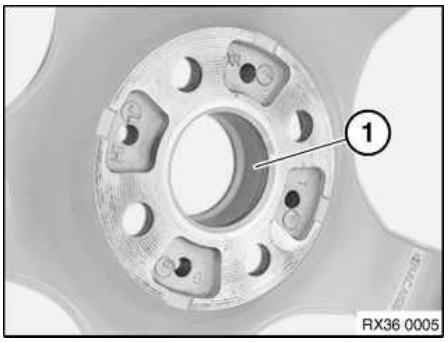
- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

- Renew mounting bolt (1).

  Parts: Mounting bolt
- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.



Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

cardiagn.com

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

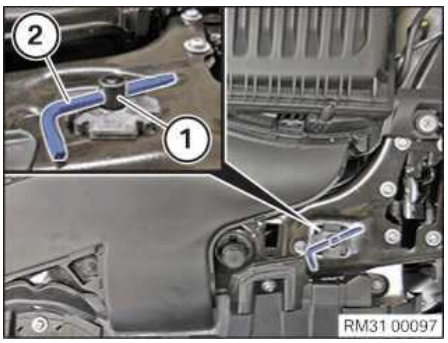
TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.



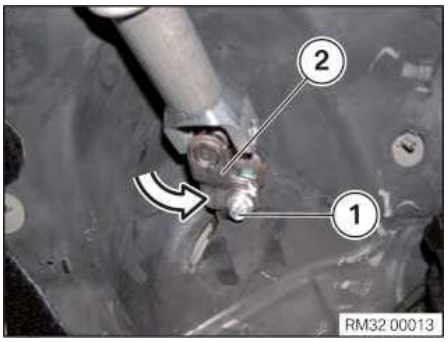
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts.
- Check the wheel bolts and threads for damage, renew the wheel bolts if necessary.
- Join and tighten the wheel bolts (arrows).

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

69 – Removing fastener for left and right radiator



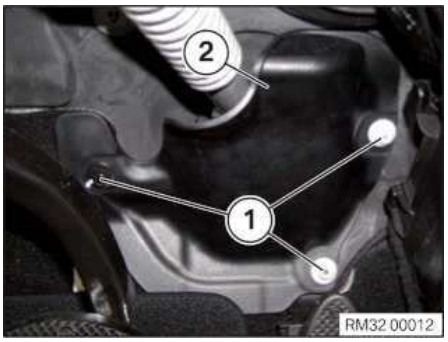
NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

70 – Secure the steering shaft at the bottom on the steering gear

cardiagn.com



- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

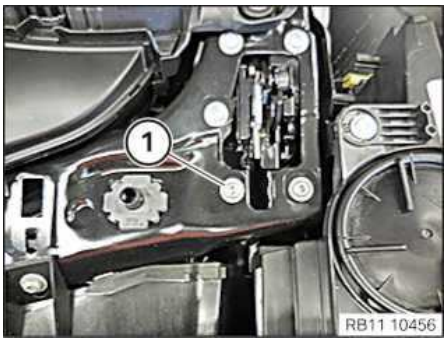
71 – Remove the engine bridge

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Detach the spindle screw (1) from the engine bridge.
- Unscrew the leg screws (2) and (3).
- Guide the engine bridge out of the vehicle with the help of another person and remove.

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.

cardiagn.com

- Tighten the screw (1) of the bonnet catch.

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

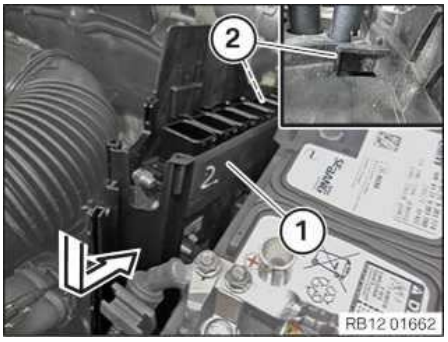
- Tighten the screw (1) of the bonnet catch.

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

72 – Install electronics box

Prerequisite



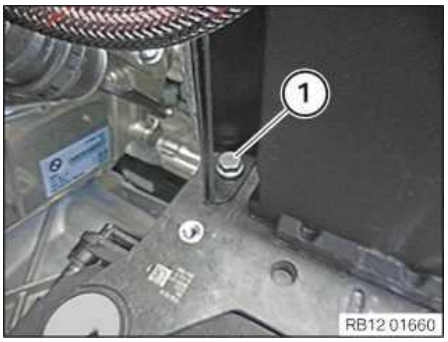
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

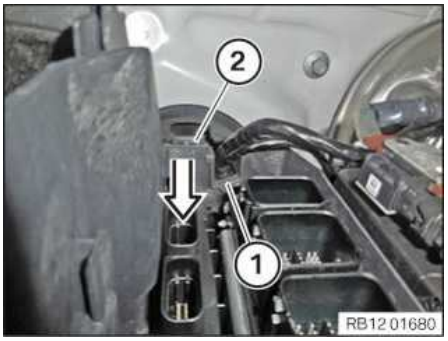
Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

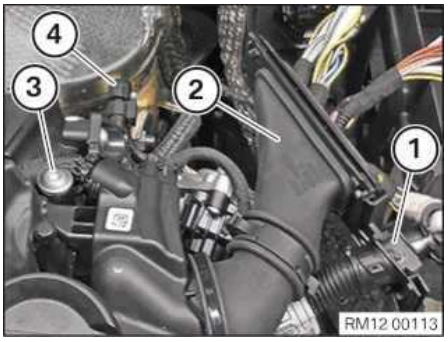


- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



cardiagn.com



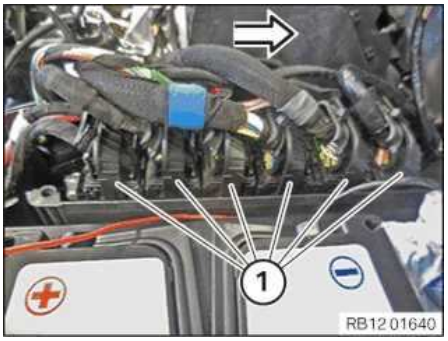
- Tighten down screw (1).

Electronics box to battery tray

M8X16		Tightening torque	15 Nm

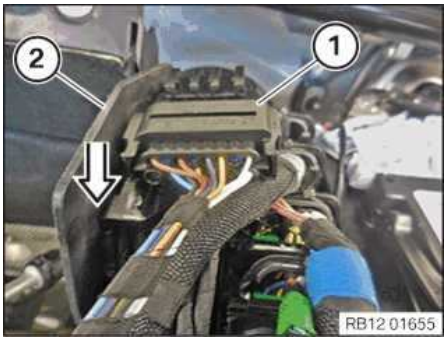
- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.

- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).



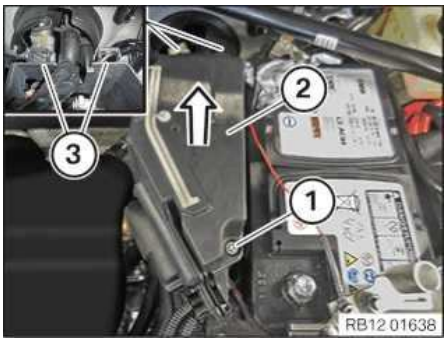
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm



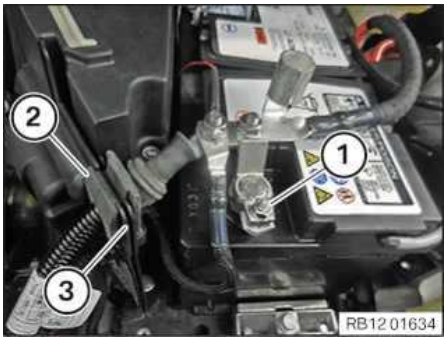
- Attach connector (4) to the differential pressure sensor and lock it audibly.

- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

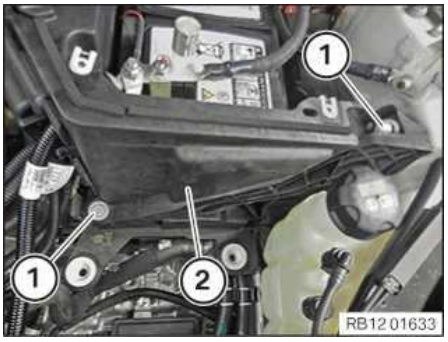
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



cardiagn.com

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

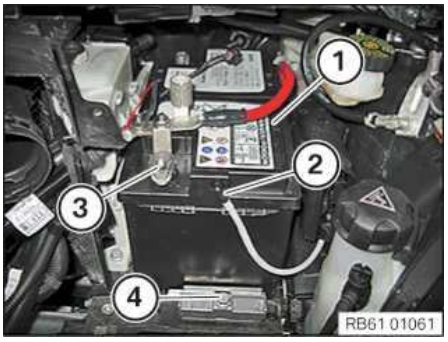


RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

73 – Install vehicle battery

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

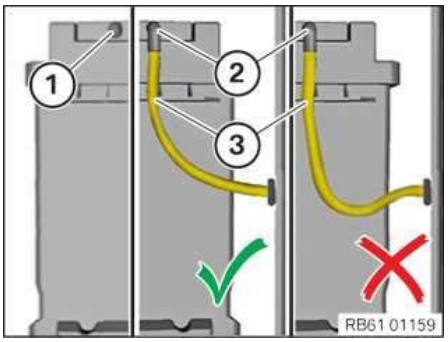
Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

▸ **Check the vent holes of the battery**

WARNING

Gas emission.



Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

cardiagn.com

Check
- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

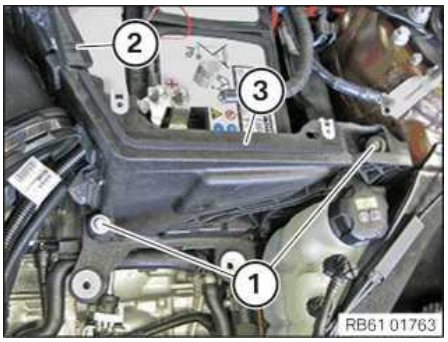
» No dummy plug.

Measure
- Close the vent hole (1) correctly with a dummy plug.

Check
- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

» The vent hose (3) is not correctly connected.



Measure
- At the vent hole (2), connect the vent hose (3) correctly.

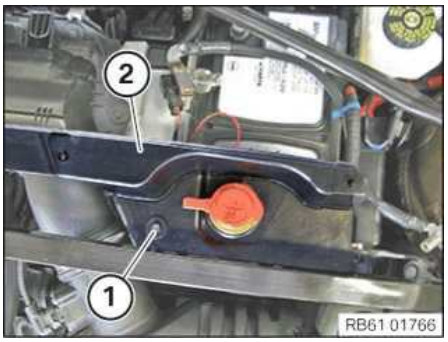
Check
- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).

Result

» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure
- Route the vent hose (3) correctly as shown in the centre image.

- Insert tension strut (3) and tighten with screws (1).



Trailing link

NutM6		5 Nm

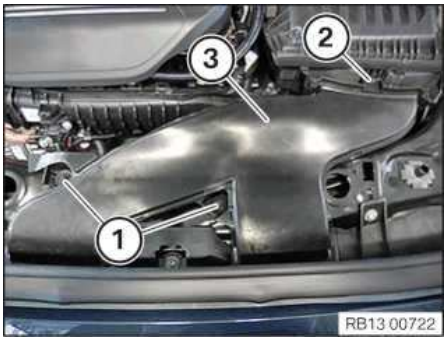
- If required, connect the connector (3).

75 – Installing intake silencer housing

- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm



- Tighten clamp (4).

Clean air pipe to intake silencer housing

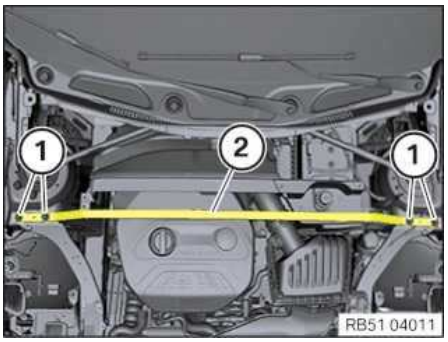
Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

76 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection



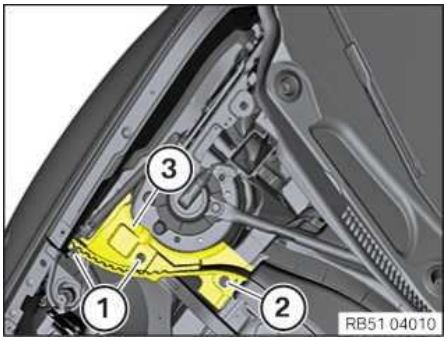
M6		Tightening torque	8 Nm

77 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.

cardiagn.com



- Install the strut brace (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Cross-brace to spring strut dome

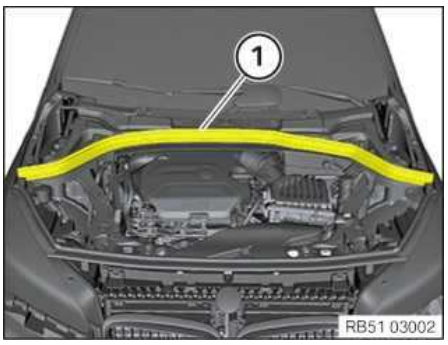
	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

NOTICE

Description is for right component only. The procedure on the left side is identical.

- Install the cover (3).
- Tighten down screw (2).

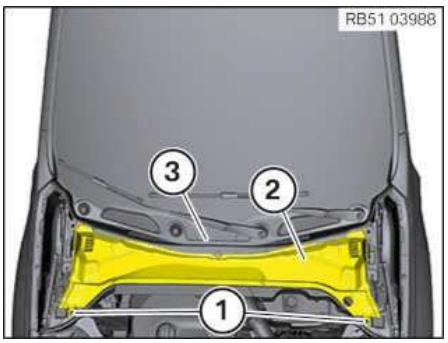
Cover on body



Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

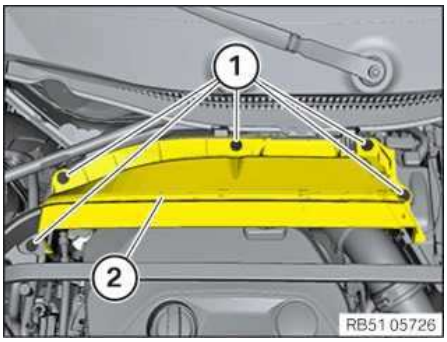
78 – Install the seal for the bonnet



NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

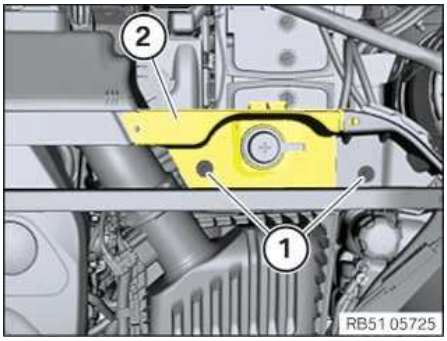
- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.



79 – Installing front cowl panel cover

- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

80 – Installing the upper bulkhead cover



cardiagn.com

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm

- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

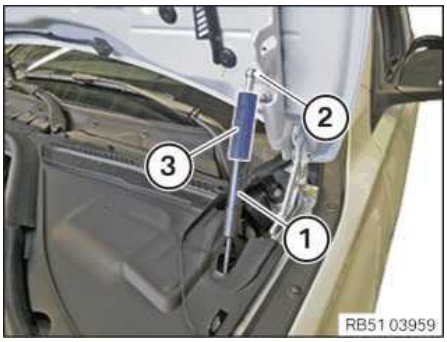
81 – Install acoustic cover

RISK OF DAMAGE

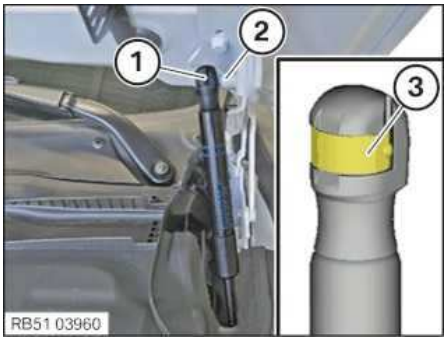
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



- Check for correct installation of all rubber mounts in the acoustic cover (1).



- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

82 – Take bonnet out of the service position

cardiagn.com

- Support the bonnet by hand.
- Remove the special tool (3) from the ball pin (2).
- Pull off the special tool (3) from the gas pressure spring (1).
- Continue to support the bonnet and repeat the operation on the other side of vehicle.

CAUTION

Shutting bonnet or tailgate.

Danger of injury!

- Support bonnet/tailgate in fully open position with the aid of a suitable device.

- Check the clamp (3) is fitted correctly.
- Connect ball socket (1) to ball pin (2).
- Continue to support the bonnet and repeat the operation on the other side of vehicle.

Additional Information

Overview of Tightening Torques

Special tool to cylinder head			Used in step 13
M8		Tightening torque	21,5 Nm

Oil drain plug / oil filler plug			Used in step 36 64
Hexagon socket		Tightening torque	43 Nm

Flywheel to crankshaft			Used in step 42
M12x1.5	Renew screws.	Tightening torque	120 Nm

Clutch to flywheel			Used in step 43
M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

Transmission to engine			Used in step 44
M8x40		Tightening torque	19 Nm
M12x75		Tightening torque	66 Nm

Transmission mounting			Used in step 44
M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

Clutch slave cylinder to transmission housing			Used in step 44
M8		Tightening torque	19 Nm

Battery holder to engine support			Used in step 44
Hexagon screw M8x30		Tightening torque	19 Nm

Battery terminal rail to battery tray			Used in step 44 73
M8			19 Nm

Electronics box to battery tray			Used in step 44 72
M8X16		Tightening torque	15 Nm

cardiagn.com

Wiring harness to cylinder head cover — Used in step 44 72

TS5x20		Tightening torque	3,5 Nm

Cover to electronics box — Used in step 44 72

RF5x26.5		Tightening torque	2,5 Nm

Positive battery terminal to battery — Used in step 44 72

NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray — Used in step 44 72

M8		Tightening torque	19 Nm

Transmission to oil sump — Used in step 45

M8			19 Nm

Transfer box to transmission — Used in step 46

M10		Tightening torque	56 Nm

Heat shield to transfer box — Used in step 46

M6	Renew screws.	Tightening torque	6 Nm

Oil filler plug on transfer box (VTG) — Used in step 46

M18x1.5		Tightening torque	35 Nm

Holder to front axle support — Used in step 47

M12		Tightening torque	100 Nm

Bracket to oil sump — Used in step 47

M12		Tightening torque	100 Nm

Intermediate shaft to transfer box — Used in step 48

M8x35		Tightening torque	19 Nm

Propeller shaft to transfer box — Used in step 49

		Tightening torque	80 Nm

Flexible disc to rear axle final drive — Used in step 49

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

Centre mount to body — Used in step 49

M8		Tightening torque	19 Nm

Heat shield to body — Used in step 50 51

Bolts/nut		Tightening torque	3 Nm

Bracket to body — Used in step 50

M8		Tightening torque	21 Nm

Exhaust system to body — Used in step 52

M8	Replace nuts.	Tightening torque	19 Nm

Exhaust bracket on body — Used in step 52

Hexagon screw M8x30		Tightening torque	19 Nm

V-clip to catalytic converter — Used in step 52

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

cardiagn.com

Diesel particulate sensor to exhaust system — Used in step 52

Sensor		Tightening torque	50 Nm

Nitrogen oxide sensor downstream of SCR catalytic converter — Used in step 52

Sensor		Tightening torque	50 Nm

Cross-member/torsion strut to axle support and mounting — Used in step 53

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

Front connection carrier to body — Used in step 54

M10x18		Tightening torque	56 Nm

Rear connection carrier to body — Used in step 54

M8x18		Tightening torque	28 Nm

Starter motor to transmission — Used in step 57

M8x45		Tightening torque	19 Nm

Battery positive lead to starter — Used in step 57

M8		Tightening torque	13,5 Nm

Rear end of front axle support to body — Used in step 58

M14 screw	Renew screw.	Tightening torque	175 Nm

Front axle support, front to body — Used in step 58

M12 screw	Renew screw.	Tightening torque	108 Nm

Underbody protection to body — Used in step 58 66

Screw		Tightening torque	3 Nm

Track rod end to swivel bearing — Used in step 58

M14	Renew nut.	Tightening torque	175 Nm

Wishbone to swivel bearing — Used in step 58

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

Holder, wishbone rubber mount, to body — Used in step 59

M10 screw	Renew screw.	Jointing torque	56 Nm
		Angle of rotation	90 °

Holder with rubber mount to front axle support — Used in step 59

M12 screw			100 Nm

Washer fluid reservoir holder to front axle support adapter plate — Used in step 59

		Tightening torque	10 Nm

Deformation element, bottom, to adapter plate, front axle carrier — Used in step 59

		Tightening torque	11,8 Nm

Holder to front axle support — Used in step 60

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

Anti-roll bar link to anti-roll bar — Used in step 62

M10	Renew nut.	Tightening torque	56 Nm

cardiagn.com

Underbody protection front

Used in step 65

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

Wheel arch cover to body

Used in step 67

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

Wheel arch cover to body

Used in step 67

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Used in step 67

Plastic nut		Tightening torque	3 Nm

Brake disc to rear wheel hub

Used in step 68

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

Used in step 68

M8	Renew screw.	Tightening torque	16 Nm

Wheel bolts

Used in step 68

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Lower steering shaft to steering gear

Used in step 70

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

Steering column cover to bulkhead

Used in step 70

Plastic nut		Tightening torque	3 Nm

Cross connection on support for cross connection

Used in step 71

M6x20		Tightening torque	12 Nm

Battery terminal with IBS positive battery terminal / negative battery terminal

Used in step 73 74

NutM6			5 Nm

Trailing link

Used in step 73

M8		Tightening torque	19 Nm

Battery cover

Used in step 73

M8			2,8 Nm

Intake silencer housing to lock bridge

Used in step 75

M6X30		Tightening torque	8 Nm

Clean air pipe to intake silencer housing

Used in step 75

Clamp		Tightening torque	3 Nm

Intake neck to cross connection

Used in step 76

M6		Tightening torque	8 Nm

cardiagn.com

Cross-brace to spring strut dome Used in step 77

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

Cover on body Used in step 77

Hexagon screw		Tightening torque	3 Nm

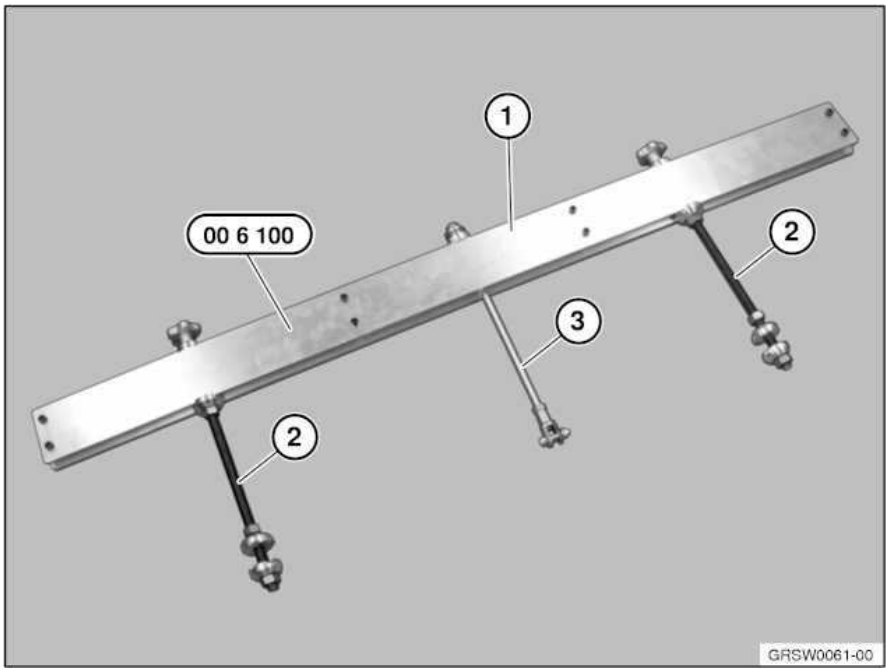
Cover of top bulkhead Used in step 80

Screw		Tightening torque	2,6 Nm

Cover of remote positive terminal Used in step 80

Screw		Tightening torque	2,6 Nm

Overview of Special Tools



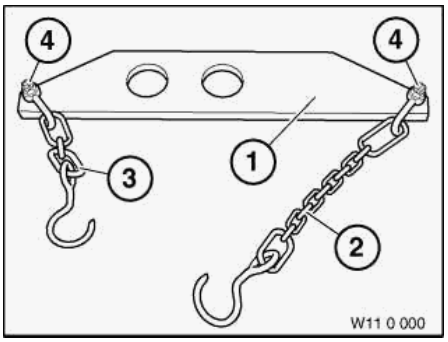
2 459 012 Holder

Common Used in step 13 71

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 496 852 (00 6 100) Device

Common Used in step 13



Usage	Engine bridge (device) 006000
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 10 (659)

Consisting of

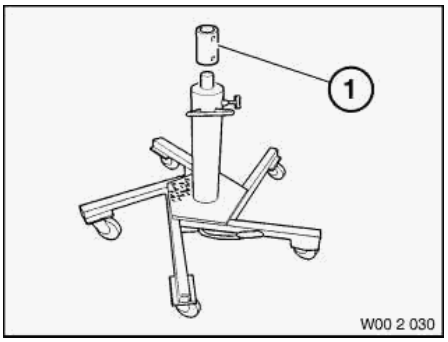
Pos	BMW Order number	Replaced by	Designation	In Connection with
2	2 361 507 (00 6 102)		**Spindle** Set (2 pieces) in connection with 00 6 100.	
3	2 361 506 (00 6 103)		**Spindle** Spindle (central spindle) for Traverse 00 6 100.	

cardiagn.com

0 490 561 (11 0 000) Lifting gear

Common

Used in step 13



Usage	(Hoisting gear) For removing and installing engines. As of 08/2011 only available as a complete set. Delivered with TÜV inspection certificate and operating instructions. No delivery of separate parts.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 13 94 (888)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 490 565 (11 0 009)		**Shackle** (Shackle) 2 pieces. As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 562 (11 0 001)		**Lifting gear** (Cross member) As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 563 (11 0 002)		**Chain** (Chain) Version: long As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 564 (11 0 003)		**Chain** (Chain) Version: short As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	

cardiagn.com

0 490 133 (00 2 030) Device

Common

Used in step 24 39 44 58

Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

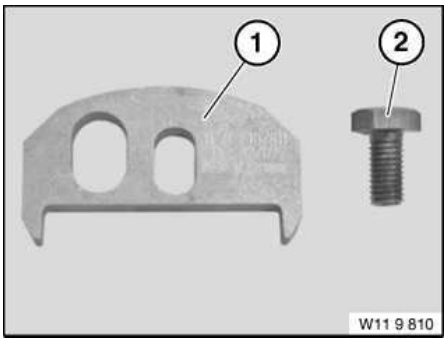
Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

0 495 554 (33 5 070) Extension

Common

Used in step 33 49



Usage	Pull-out extension for 33 5 040, 33 5 050, 33 5 060.
Included in the tool or work	
Storage location	A18
Replaced by	
In connection with	
SI-Number	01 21 06 (300)

Consisting of

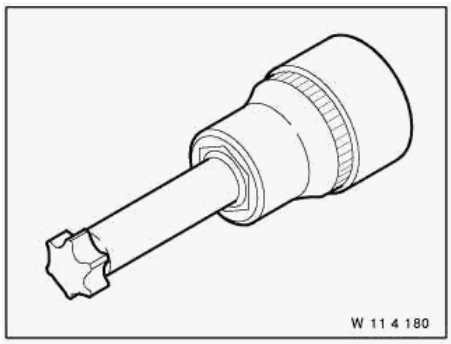
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 592 (33 5 071)		**Extension** (Extension (1 item)) discontinued, can only be ordered using complete tool	

cardiagn.com

0 496 171 (11 9 811) Holder

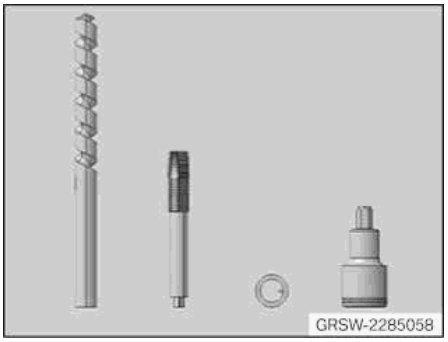
Common	Used in step 40 41 42
Usage	Available only as a complete tool set 11 9 810 (83 30 0 496 170) - as of 13.01.12
Included in the tool or work	0 496 170
Storage location	C86
Replaced by	
In connection with	
SI-Number	01 07 07 (355)

0 494 793 (11 9 265) Bush



Common	Used in step 40 41 42
Usage	
Included in the tool or work	0 493 938
Storage location	A44
Replaced by	
In connection with	
SI-Number	

2 288 165 Synchronising key



Common	Used in step 40 43
Usage	Conversion kit for 21 2 170, for orders till 02.2014. Orders as of March 2014 do not require the conversion, as the new thrust piece has been accounted for.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 09 14 (088)

0 491 018 (11 4 180) Socket WAF 46

Common	Used in step 41 42
Usage	(screwdriver bit Torx T60) For releasing and tightening down dual-mass flywheel - model year: from Jan 94
Included in the tool or work	
Storage location	C9
Replaced by	
In connection with	
SI-Number	01 02 94 (777)

2 285 058 Tool set

2 409 025 Puller

Common	Used in step 46
Usage	For disassembly of the outer radial shaft seal of the transmission output shaft, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A76
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

2 411 739 Puller

Common	Used in step 46
Usage	For disassembly of the inner radial shaft seal of the output, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C78
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

2 408 152 Striking element

Common	Used in step 46
Usage	For installation of the right radial shaft seal transmission output shaft (inner). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)

2 413 037 Handle

Common	Used in step 46
Usage	Universal drift handle. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C77
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

11 22 000 Removing and installing/replacing the flywheel

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

- Ensure there is a specific weight compensation on the motor vehicle.

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

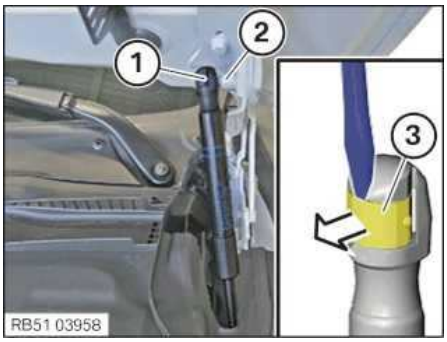
- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

PRELIMINARY WORK

1 – Bring front compartment lid in the service position

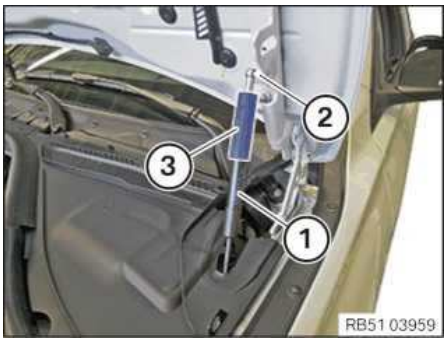
Prerequisite

Engine compartment lid is open.



cardiagn.com

CAUTION



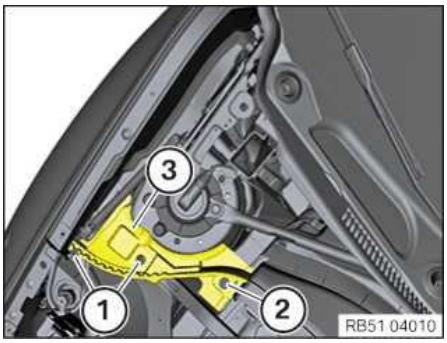
Shutting bonnet or tailgate.

Danger of injury!

- Support bonnet/tailgate in fully open position with the aid of a suitable device.

- Lift clamp (3) slightly using a screwdriver, in the direction of the arrow.
- Lift off ball socket (1) from ball pin (2).
- Repeat the operation on the other side of vehicle.

TECHNICAL INFORMATION

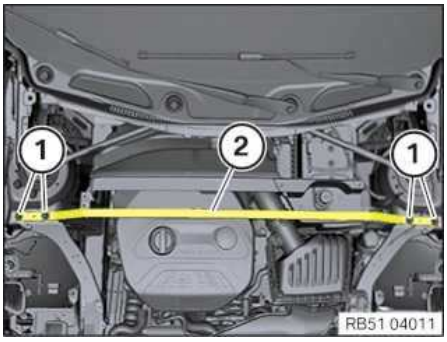


Conduct the following operation with the assistance of a second person.

- Remove the bonnet support and open the bonnet further.
- Push special tool (3) over gas pressure spring (1).
- Place special tool on the ball pin (2) and engage using force.
- Repeat the operation on the other side of vehicle.

2 – Remove suspension cross-brace

TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

NOTICE

Description is for right component only. The procedure on the left side is identical.

- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).

3 – Removing the acoustic cover

cardiagn.com

WARNING

Hot surfaces.

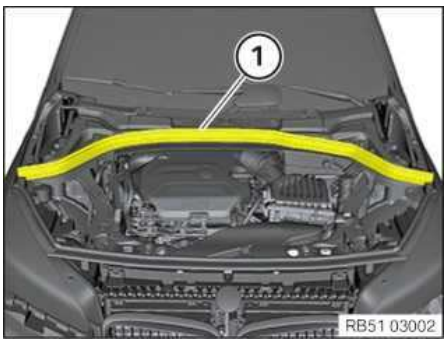
Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the acoustic cover.

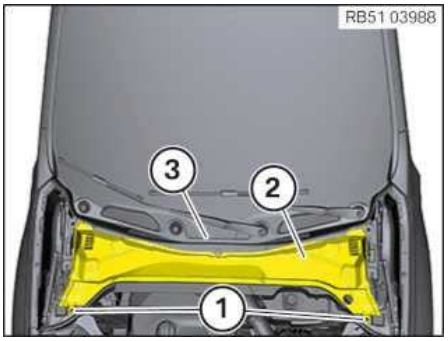
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.



- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

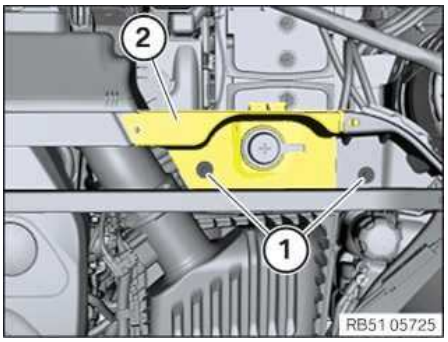
4 – Remove the seal for the rear bonnet



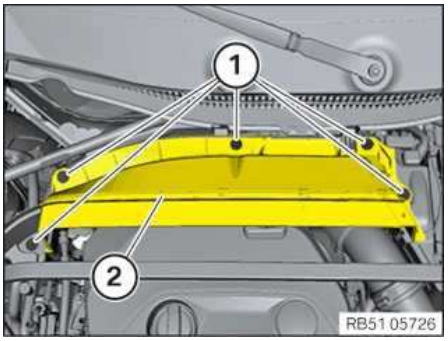
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.



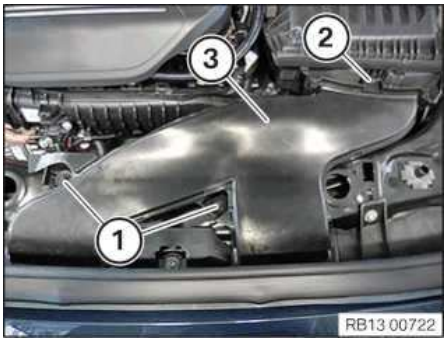
5 – Removing front cowl panel cover



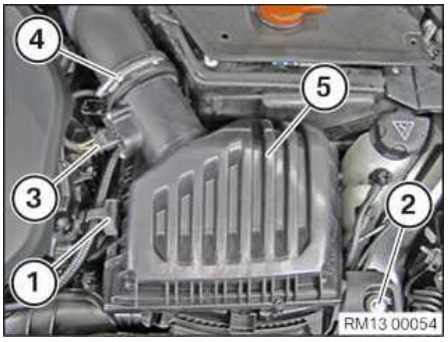
- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

6 – Removing the upper bulkhead cover

cardiagn.com

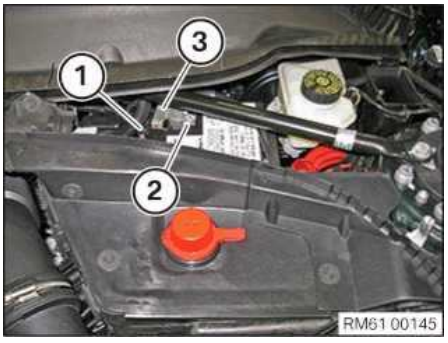


- Loosen screws (1).
- Guide out and remove the cover (2).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

7 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

8 – Removing intake silencer housing

- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

9 – Disconnecting the battery earth lead

- Unlock plug connection (1) and disconnect.
- Unfasten nut (2).
- Remove the battery earth lead (3) and secure to one side.

10 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

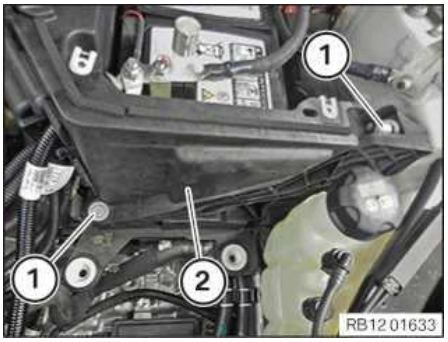
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

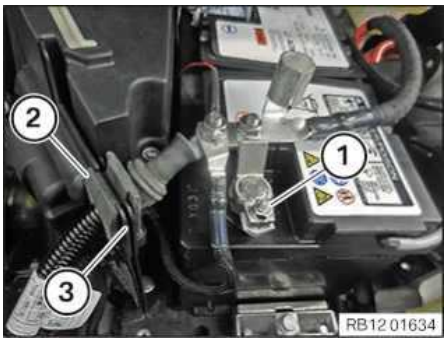
Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.



- Do not pull on the wires when disconnecting connectors and plug connections.

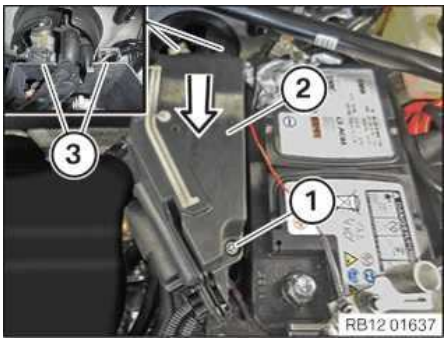
TECHNICAL INFORMATION



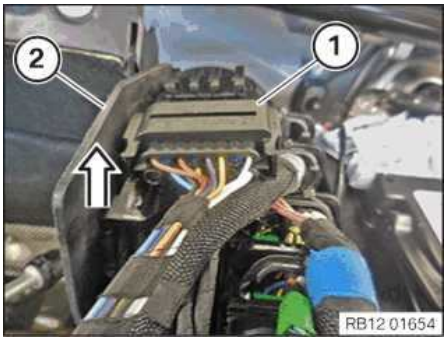
Follow instructions for removing and installing control units.
For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

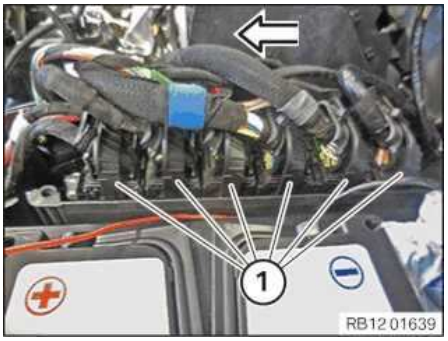
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

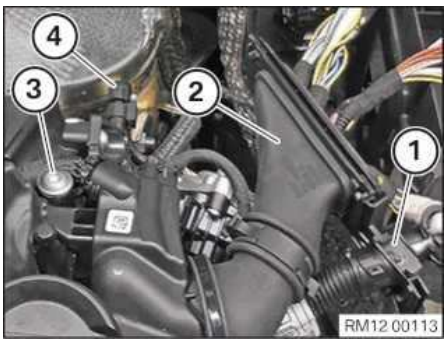


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

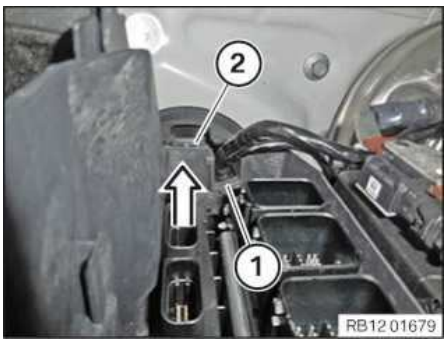


cardiagn.com

- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

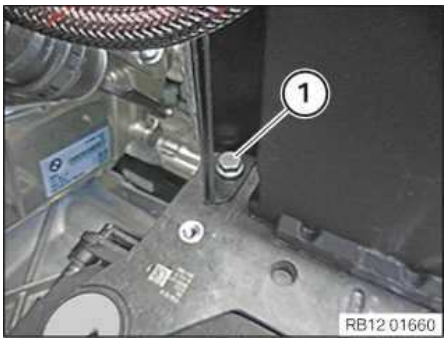


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

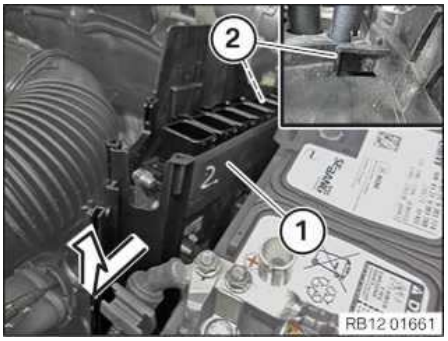


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

- Unlock and loosen connector (1).



- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

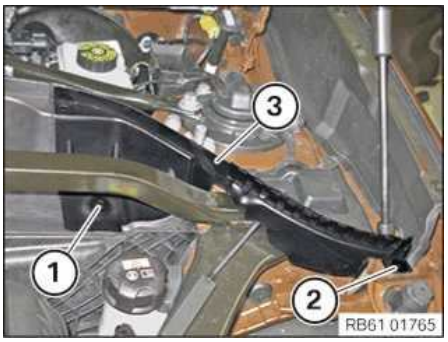


- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

cardiagn.com

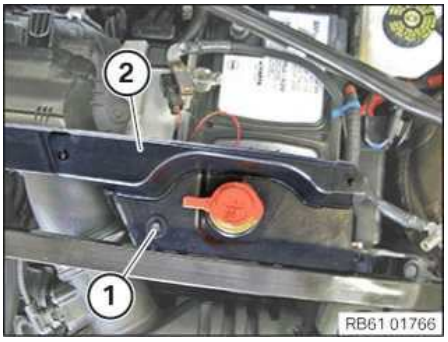
- Loosen screw (1).

- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.



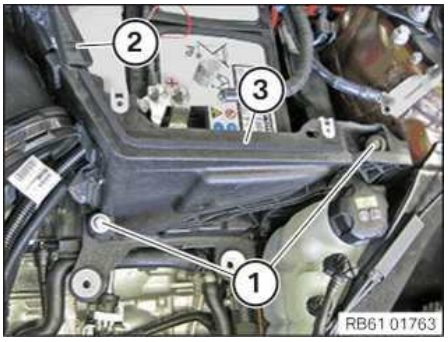
11 – Remove vehicle battery

WARNING



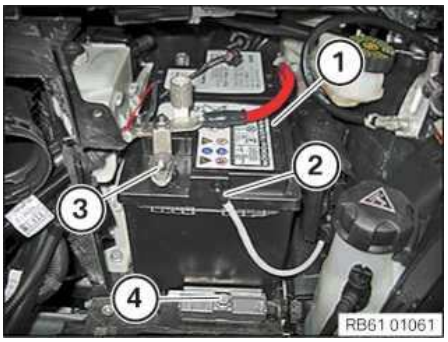
Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!



- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).



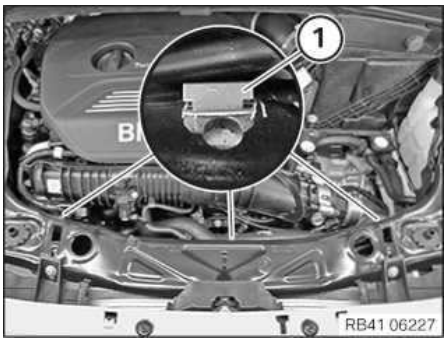
- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

cardiagn.com

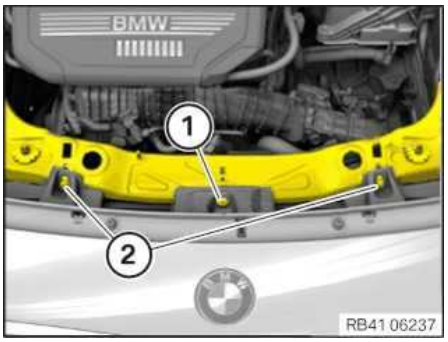
- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING



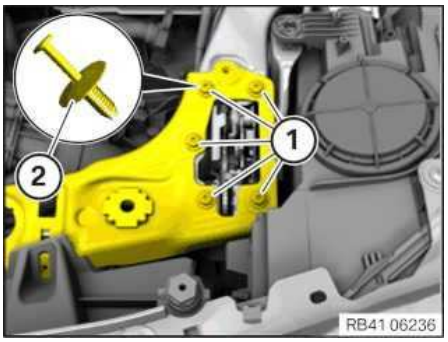
Unprotected battery terminals.

Risk of short circuits! Risk of fire!

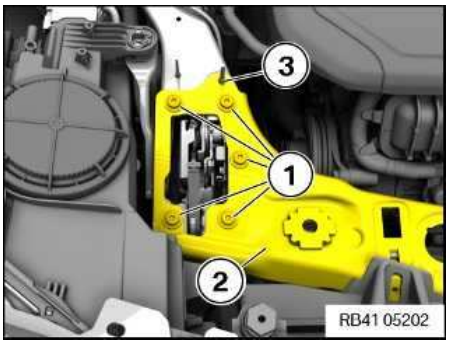


- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

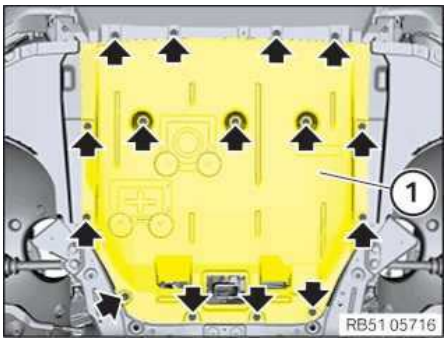


12 – Remove front cross connection

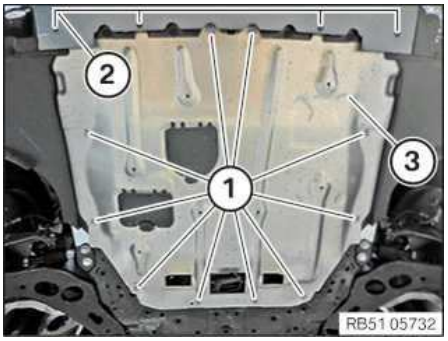


- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

- Loosen screw (1).
- Loosen screws (2).



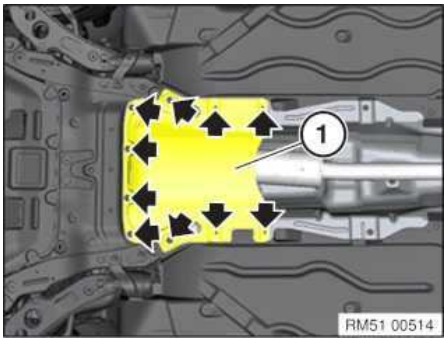
- Loosen screws (1).
- Lever out expanding rivet (2).



- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

13 – Removing the front underbody protection

cardiagn.com



- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

14 – If installed: Removing rear underbody protection

- Remove screws (arrows).
- Remove the rear underbody protection (1).

15 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

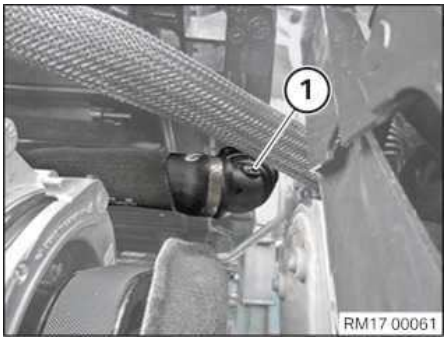
TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

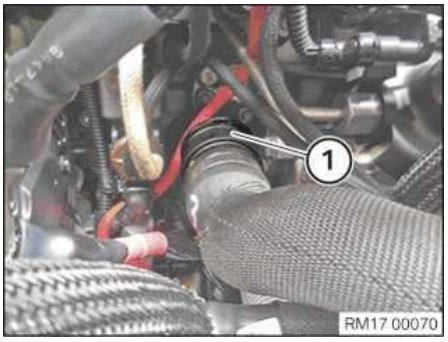
When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.



TECHNICAL INFORMATION

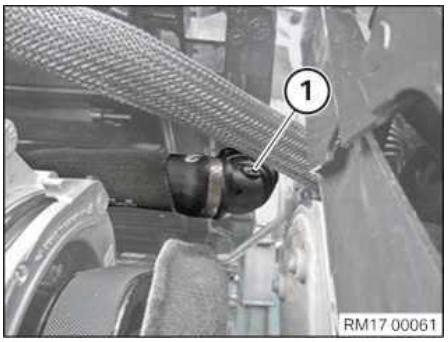
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



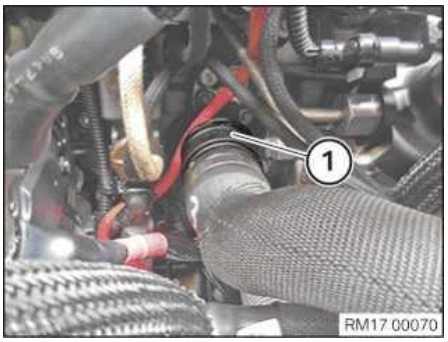
cardiagn.com

- Loosen sealing cap (1).

- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.



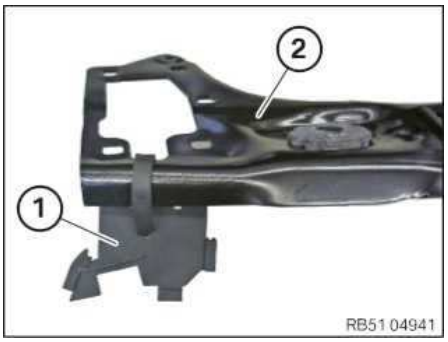
- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.



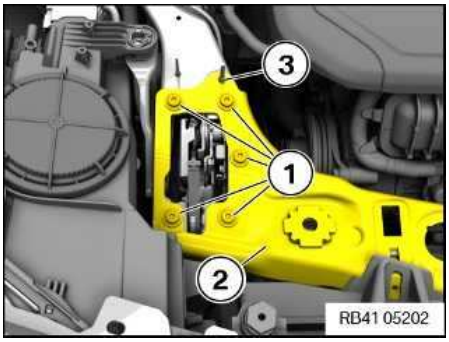
16 – Connect the coolant line

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



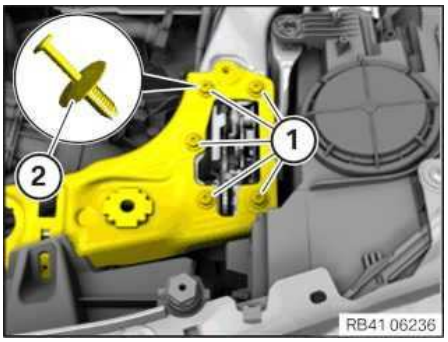
- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the connecting branch and lock audibly.

17 – Install front cross connection

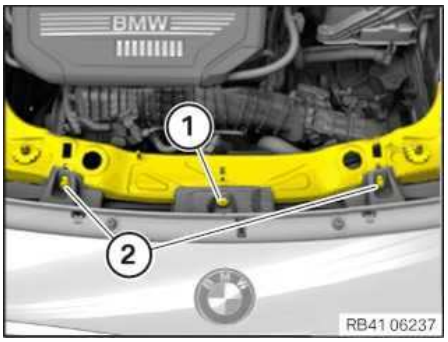
cardiagn.com



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

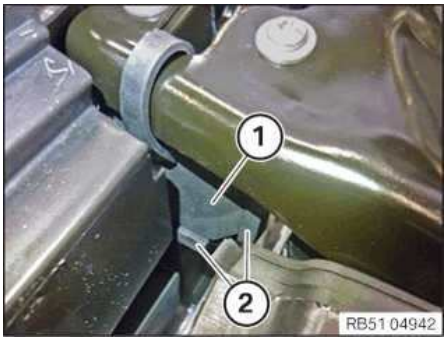
Screws M6x20		Tightening torque	11,8 Nm

- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

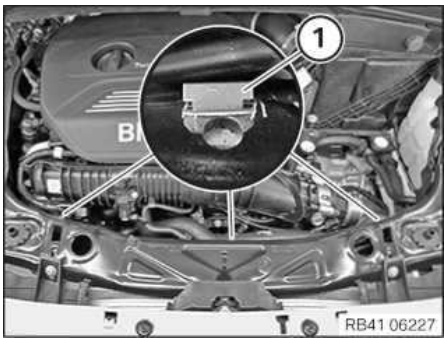
- Tighten down screws (2).



Air duct to upper connection

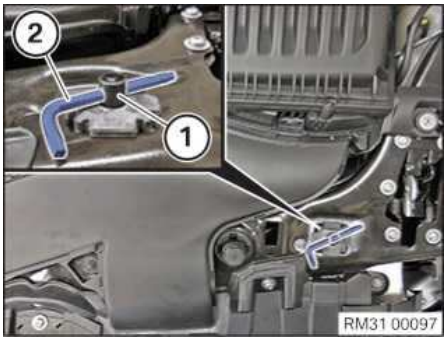
M6x20 screw		Tightening torque	11,8 Nm

- Tighten down screw (1).



Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm

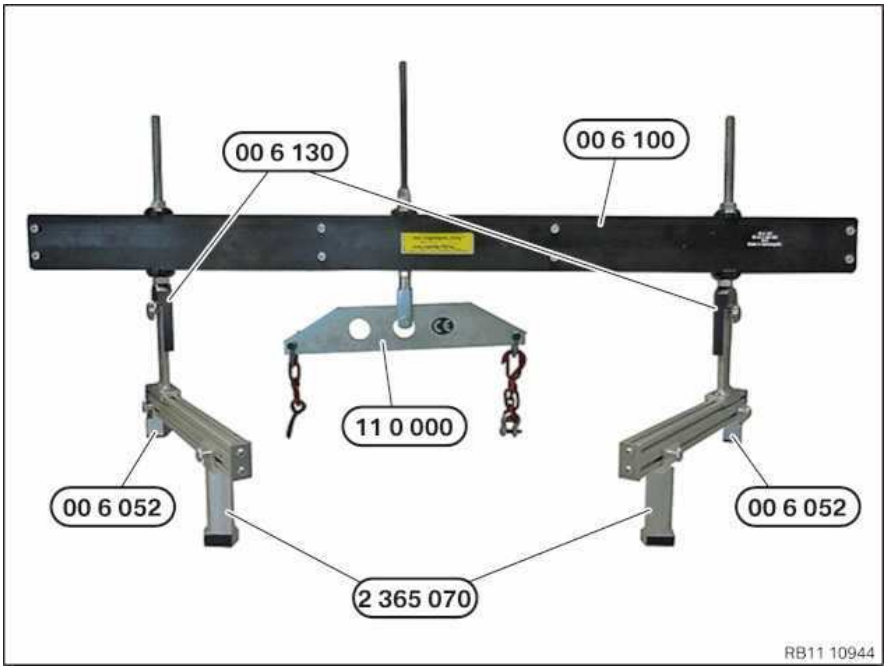


- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

cardiagn.com

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

18 – Securing radiator on left and right



NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

19 – Installing the engine bridge

Overview: Prepared engine bridge

Prerequisite

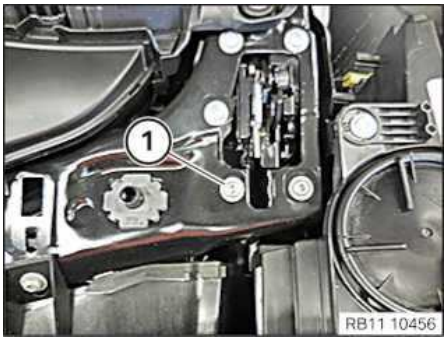
Front compartment lid is in service position.

CAUTION

Components connected to the engine joint or cross member.

Danger of injury!

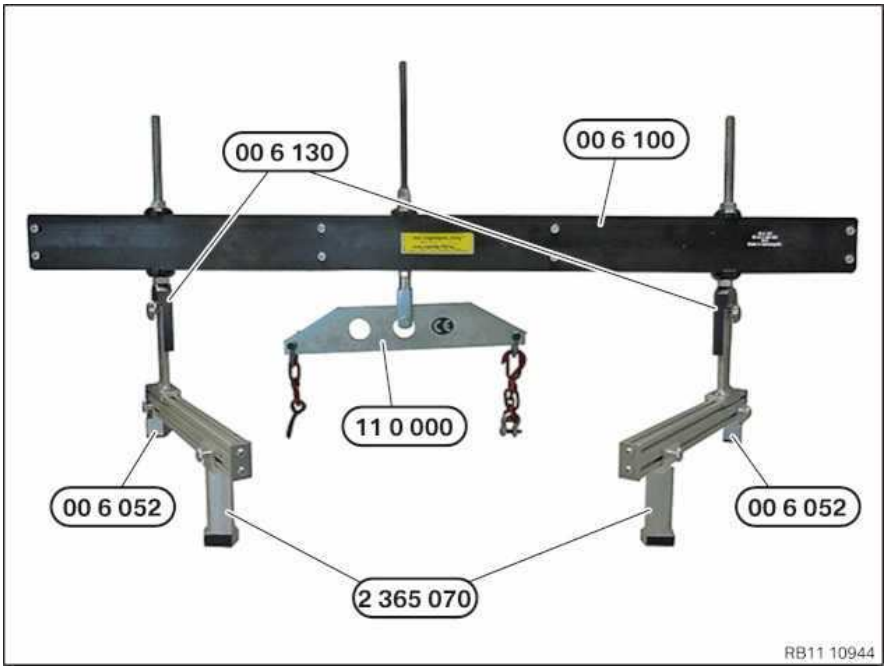
- Check lifting eyes and engine mounting brackets for damage, e.g. cracks.
- Attach the component to correctly mounted engine joints or cross members only.
- Exclusively lift the component, do not move it forwards, backwards or in transverse direction.



cardiagn.com

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

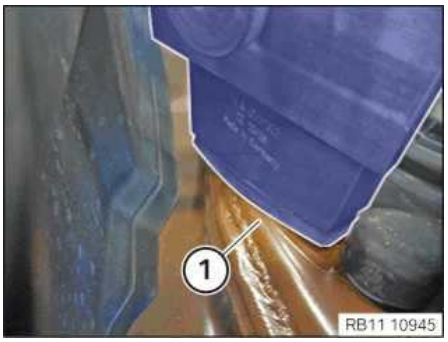
Special tool to cylinder head



M8		Tightening torque	21,5 Nm

- Loosen screw (1) of the left bonnet catch.

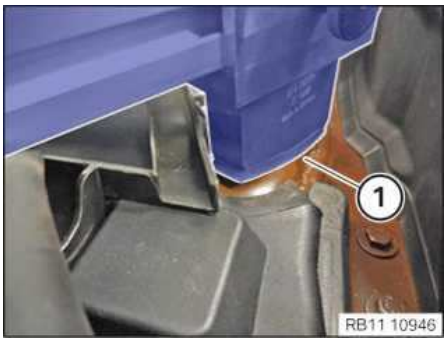
- Loosen screw (1) of the right bonnet catch.



CAUTION

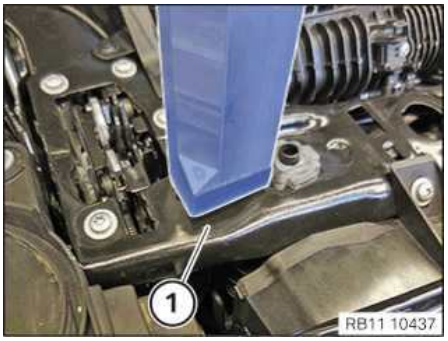
Heavy component.

Heavy components can lead to injury or damage.

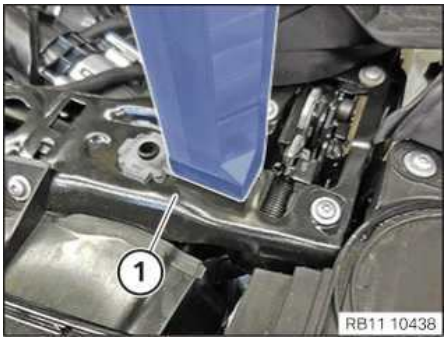


- Remove and install heavy components with the aid of another person/other persons.

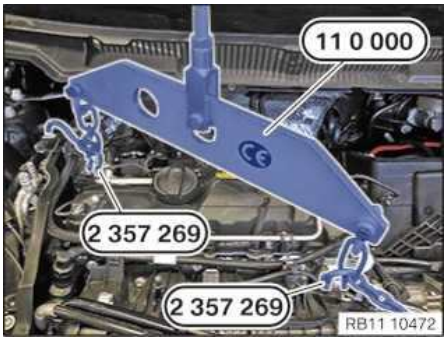
- Set entire cross member **0 496 852 (00 6 100)** on the vehicle and position with the help of an auxiliary person.



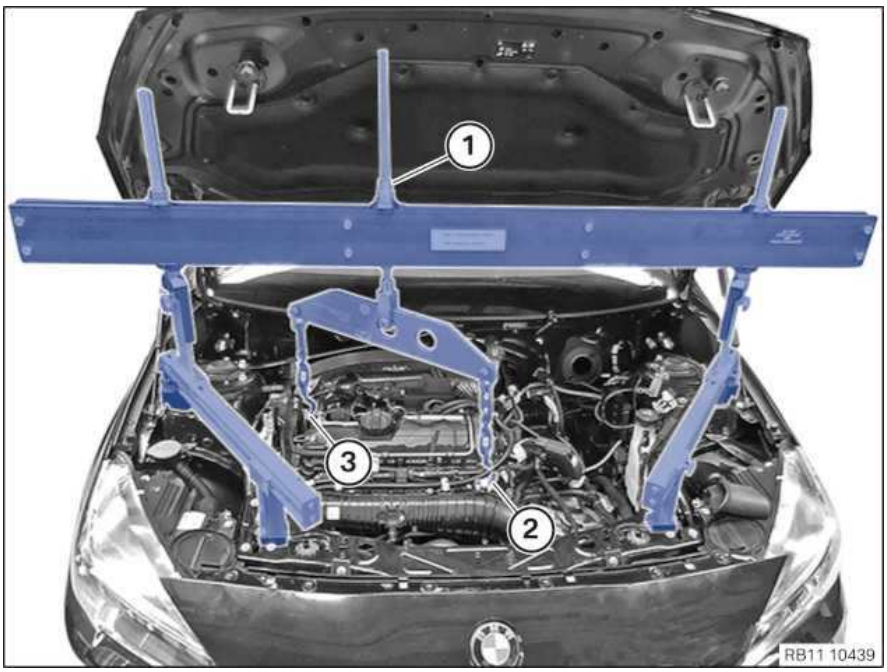
- Position the special tool at the rear mounting point (1) on the **right**.



cardiagn.com

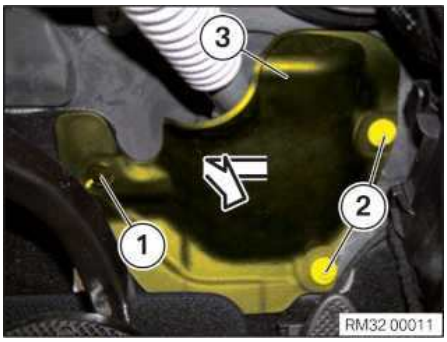


- Position the special tool at the rear mounting point (1) on the **left**.



- Position the special tool at the front mounting point (1) on the **right**.

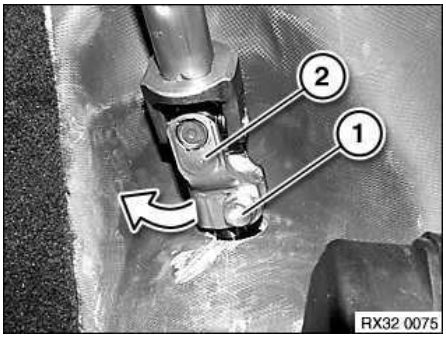
- Position the special tool at the front mounting point (1) on the **left**.



- Position special tool **0 490 561 (11 0 000)** above the engine.
- Attach special tools to the mounting lugs of the engine.

- Tighten side screws (2) and (3).
- Slightly pretension the spindle screw (1) of the engine support beams.
- Tighten down all adjusting screws, knurled screws and nuts on cross member **0 496 852 (00 6 100)** and on special tool .

20 – Releasing lower steering shaft from steering gear



cardiagn.com

- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!

- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

21 – Removing both front wheels

▸ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

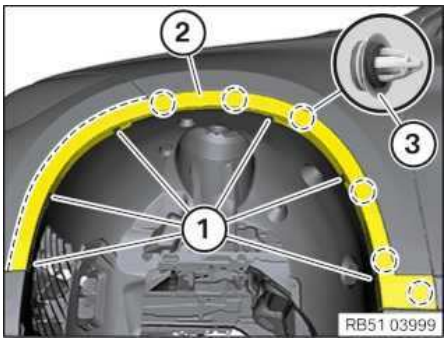
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

22 – Removing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

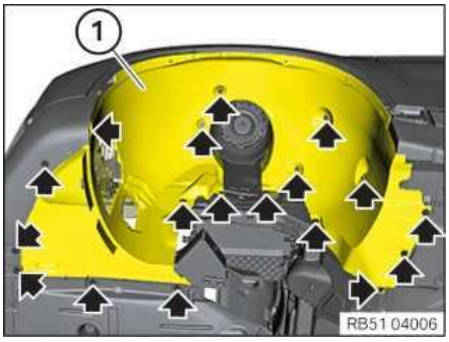
▸ **Remove the front wheel arch trim**



NOTICE

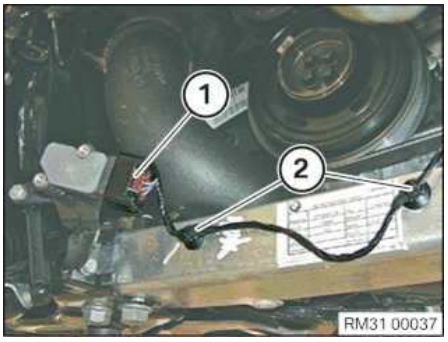
To provide a better overview: Schematic diagram with partially hidden components.

NOTICE



Description is for left component only. Procedure on the right side is identical.

cardiagn.com

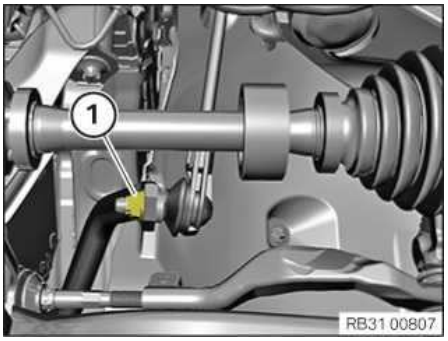


- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

▸ **Remove front wheel arch cover**

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

23 – With right installation: Detaching ride height sensor cable



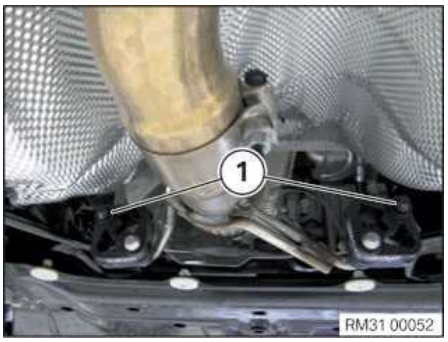
- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

24 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▸ **Detach the anti-roll bar from the anti-roll bar link**

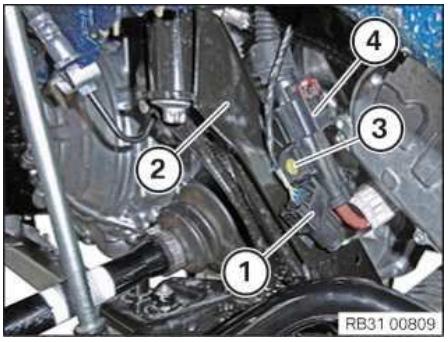


- Unfasten nut (1).

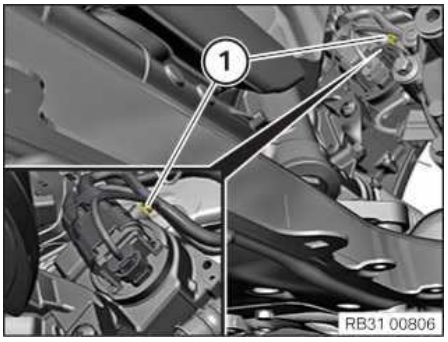
Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .

25 – Detaching rubber mount from front axle support

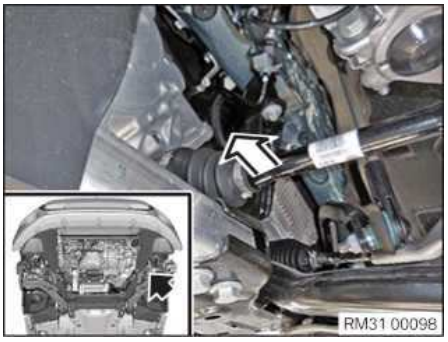


cardiagn.com



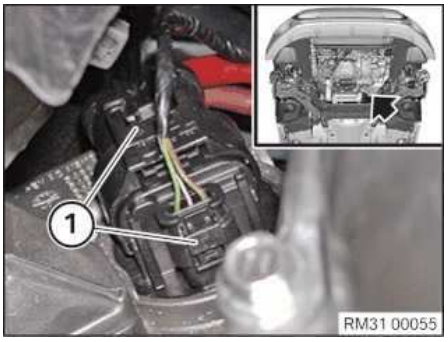
- Spray rubber mount (1) with lubricant and release from holder on front axle support.

26 – Disconnecting plug connections from steering gear



▶ **If installed: Detach connectors from the front axle carrier**

- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).



- Disconnect wiring harness (1) from steering gear.

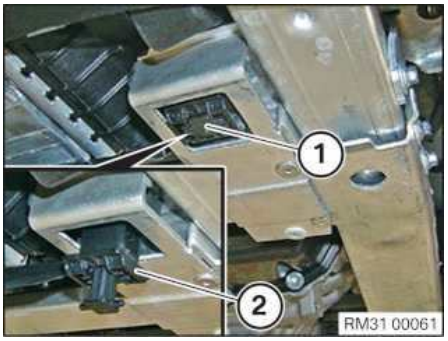
- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.

- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

27 – Releasing the mounted part from the front axle support

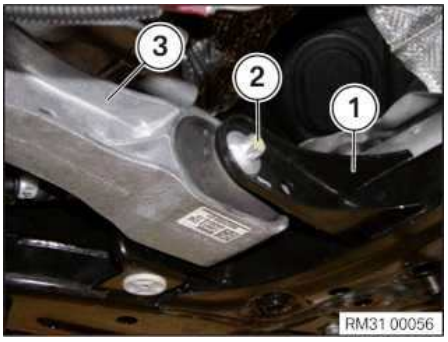
cardiagn.com



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.



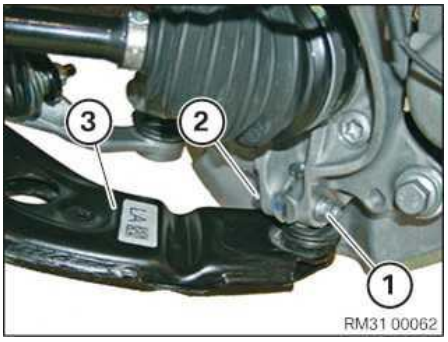
- Loosen screws (1).

NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).

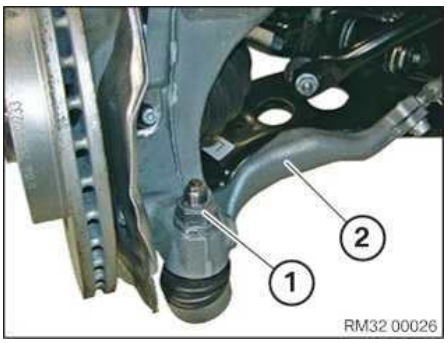
- Loosen screw (2) of the engine support (3) on the front axle (1).



NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

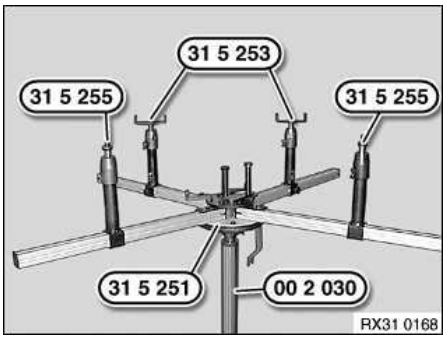


28 – Detaching and removing front axle completely

NOTICE

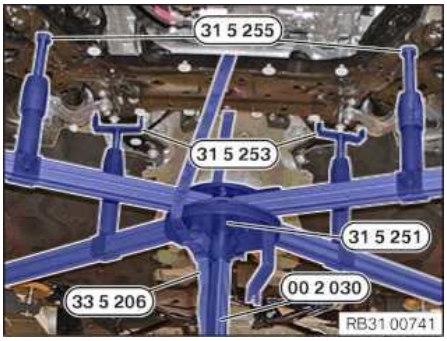
Perform the operations on the left and right side.

- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .



NOTICE

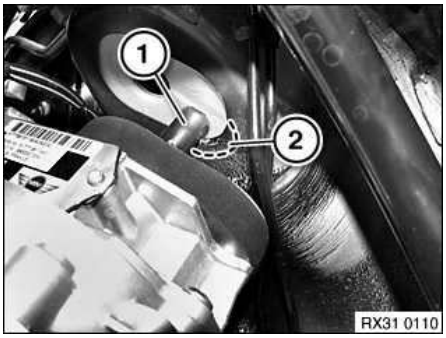
Perform the operations on the left and right side.



- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

cardiagn.com

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

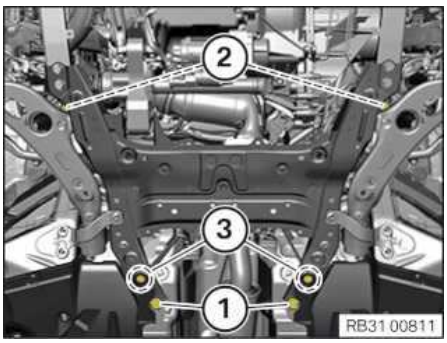


Note: In a profile rail pair, two profile rails are connected to one another by gearing.

- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

29 – Removing starter motor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

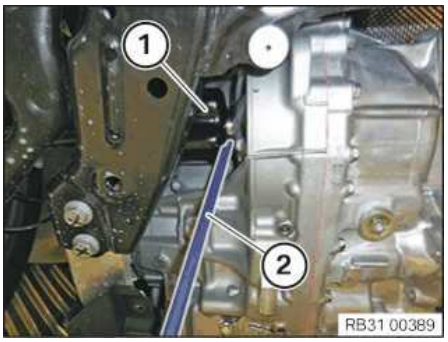
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

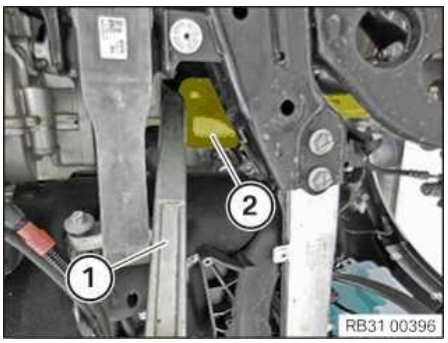
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Loosen screws (1).
- Feed out starter motor and remove.



30 – Partially removing the left output shaft

cardiagn.com

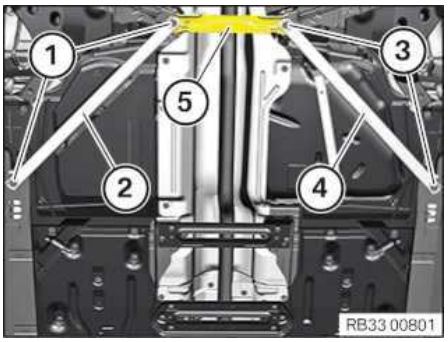
- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Tie up output shaft (1).

31 – Partially removing right output shaft

- Lever out the output shaft (2) with a mounting lever (1).
- Tie up output shaft (1).

32 – Removing the connecting support from the tunnel in front and back



- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

33 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.

- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

34 – Remove exhaust system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

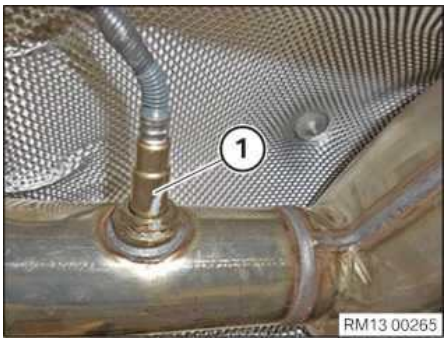
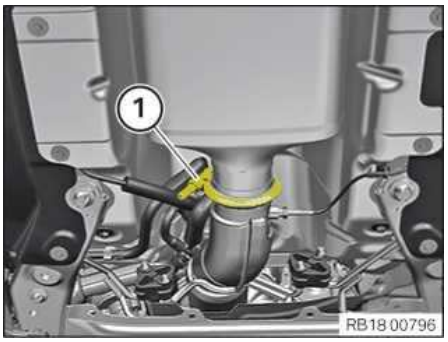
CAUTION

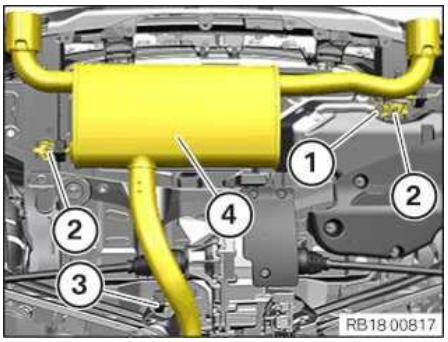


Heavy component.

Heavy components can lead to injury or damage.

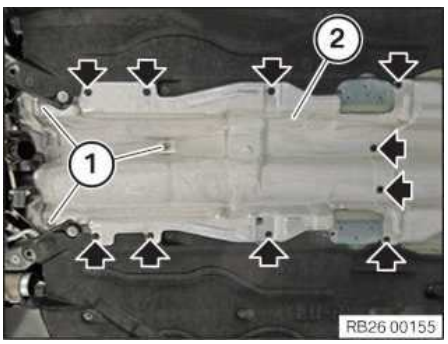


- Remove and install heavy components with the aid of another person/other persons.



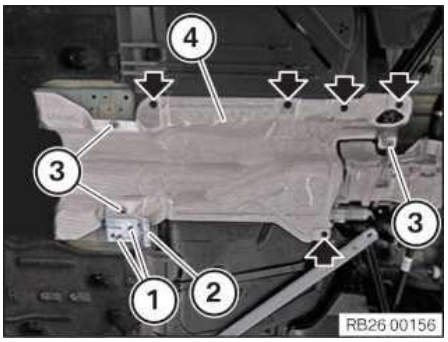
- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.

- Release the diesel particulate sensor (1), guide it out and set it aside.



- Loosen V-band clamp (1).

- Loosen screw (1).
- Loosen nuts (2).
- Release the rubber mount (3) of the exhaust system (4).
- Lower and guide out the exhaust system (4) with assistance of a second person and remove it.



35 – Remove front heat shield

- Remove screws (arrows).
- Loosen nuts (1).
- Guide the heat shield (2) out and remove it.

36 – Remove heat shield at rear.

cardiagn.com

- Loosen screws (1).
- Guide out and remove holder (2).
- Remove screws (arrows).
- Loosen nuts (3).
- Guide the heat shield (4) out and remove it.

37 – Remove propeller shaft

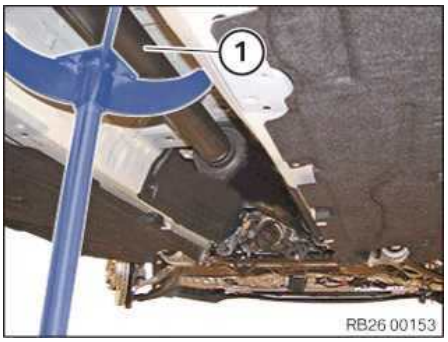
CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

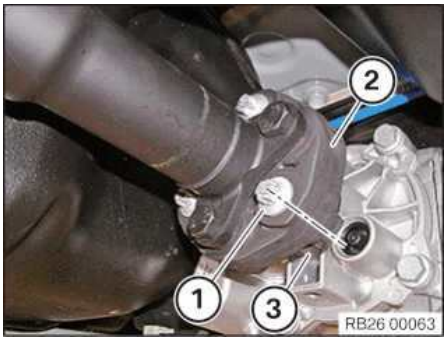


Damage to propeller shaft during removal.

Non-observance of the removal guidelines for the propeller shaft on the rear axle differential may cause severe damage.

- Do not disassemble the three-hole flange, flexible disc and propeller shaft. The three-hole flange to the rear axle differential is balanced with the flexible disc and propeller shaft.
- Loosen the recessed nut against the direction of travel in clockwise direction. The propeller shaft must be loosened on the recessed nut only and exclusively in the direction of rotation otherwise the anti-twist lock of the bi-hexagonal flange nut is damaged.
- In the event of a damaged anti-twist lock on the bi-hexagonal flange nut: Replace the rear axle differential.

- Install the special too l between the front and rear propeller shaft.
- Make sure that the arrows on the special tool point forward in the direction of travel.



- Always support the propeller shaft (1) with a conventional jack.

cardiagn.com

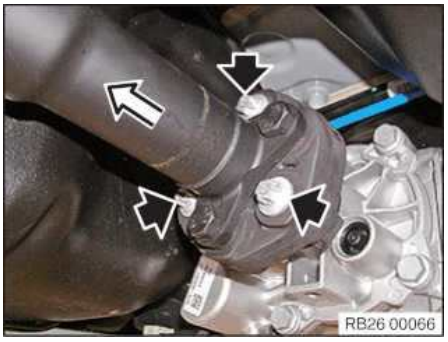
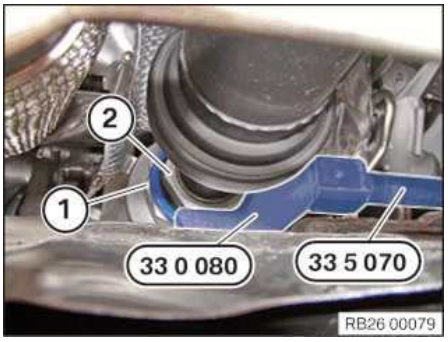
- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.



TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.



- Mark the installation position of the screw connection (1), the flexible disc (2) and the three-hole flange (3) on the same level.
- Loosen the screw connection (1).

- Loosen screws (1).

- Remove screws (arrows).
- Guide the propeller shaft out in the direction of the arrow and set it aside.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to detach the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.

cardiagn.com

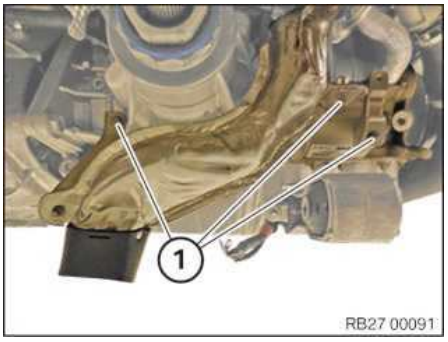
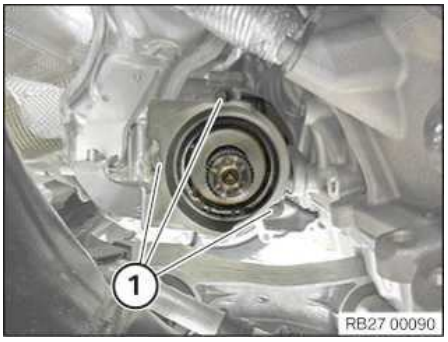
- Release the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

- Thread the propeller shaft (2) out of the recessed nut (1) and remove.

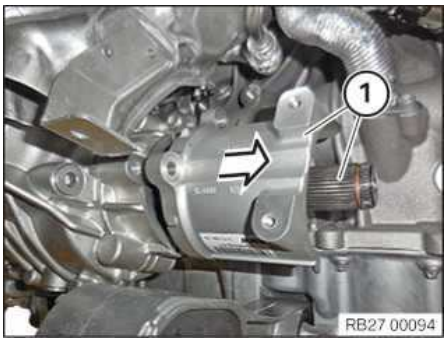


- Thread the retaining clip (1) and the seal (2) out and remove.

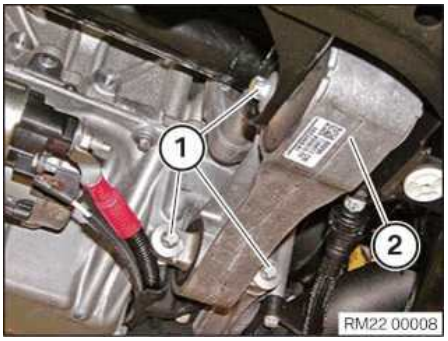


- Thread out and remove the recessed nut (1).

38 – Remove the intermediate shaft with the support tube



- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).

cardiagn.com

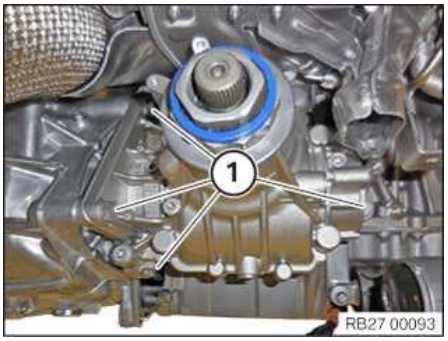
- Pull the intermediate shaft with the support tube (1) out of the transfer box.

39 – Remove bracket with rubber mount



- Release screws (1) and remove holder (2) with rubber mount.

40 – Remove transfer box (VTG)

- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

41 – Remove the automatic transmission (AISIN GA8G45)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

RISK OF DAMAGE

Damage to the engine block.

Damaged and corroded bolts will lead to major damage in the engine block and the transmission.

- It is imperative that protruding threads of the transmission bolts are checked for corrosion and damage prior to removal.
- It is imperative that all rust is removed from corroded threads and that they are cleaned prior to removal.
- Renew rusted and damaged bolts.

▸ **Remove electronics box**

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

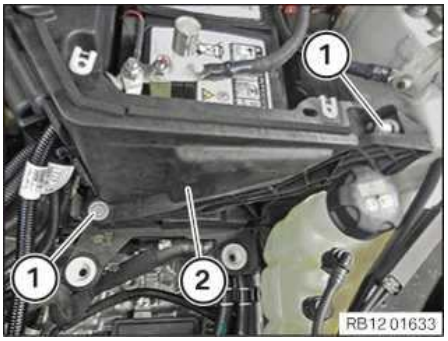
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

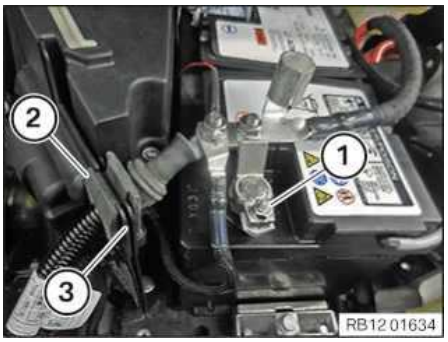
- Do not pull on the wires when disconnecting connectors and plug connections.



TECHNICAL INFORMATION

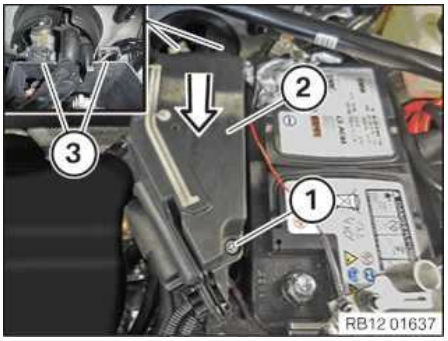
Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units



TECHNICAL INFORMATION

Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

cardiagn.com

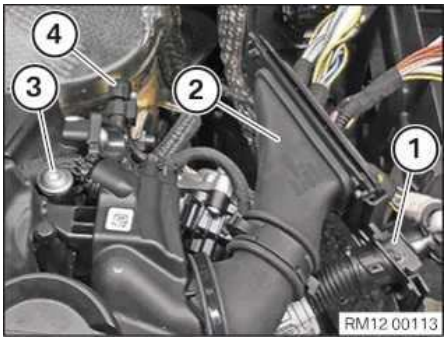
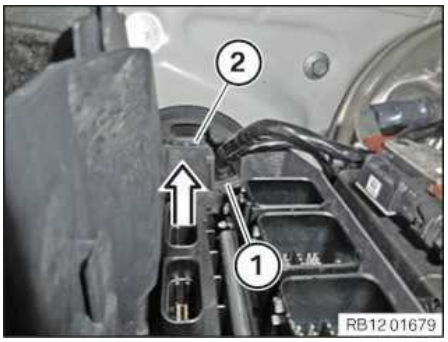
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

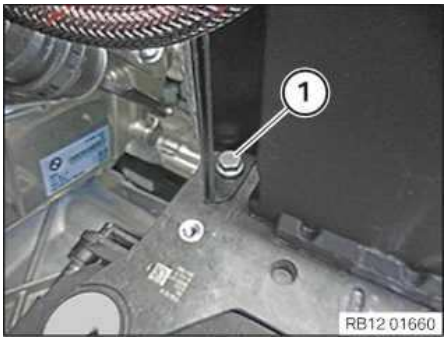


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).



- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

cardiagn.com

- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

- Loosen screw (1).

- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

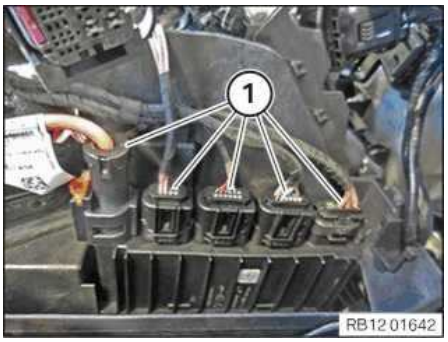
▶ **Removing integrated supply module (PDM)**

RISK OF DAMAGE

Electrostatic discharge.

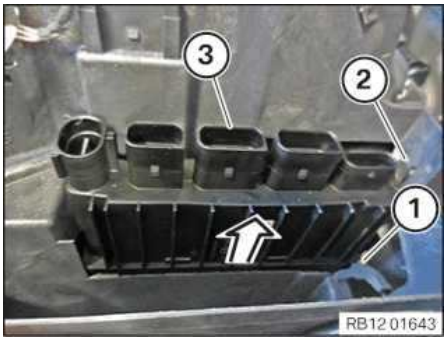
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.



Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

cardiagn.com

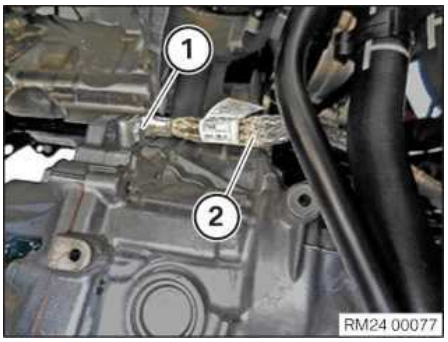
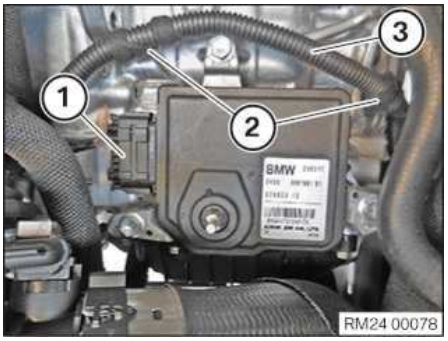
- Unlock and disconnect the plug connection (1).

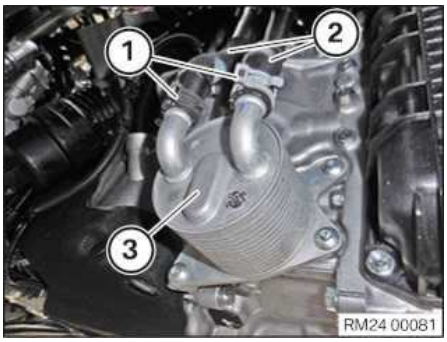


- Disengage locks (1) and (2).
- Guide out and remove the integrated supply module (3) in the direction of the arrow.



▶ **Remove battery holder**

- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).



- Loosen screw (1).
- Detach the ground strap (2) from the transmission and set it aside.

- Unlock plug connection (1) and disconnect.
- Detach the clamps (2) with the wiring harness (3) from the transmission and set it aside.

cardiagn.com

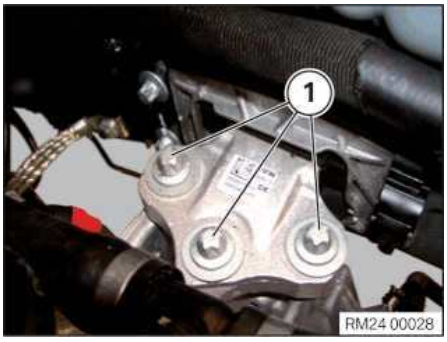
TECHNICAL INFORMATION

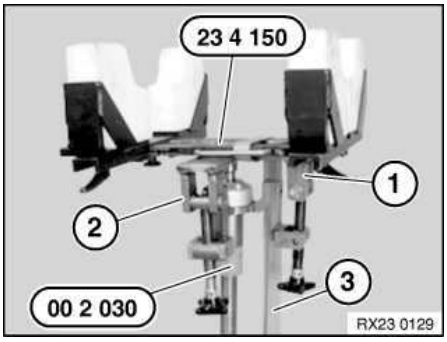
The figure shows transmission oil cooler on vehicles with the B47 engine.



- Unfasten hose clamps (1).
- Disconnect coolant hoses (2) from transmission oil cooler (3).
- Catch and dispose of escaping coolant.

TECHNICAL INFORMATION

The figure shows transmission oil cooler on vehicles with the B48O engine.



- Release locks (1).
- Disconnect coolant hoses from transmission oil cooler.
- Catch and dispose of escaping coolant.

- Loosen screws (1).

- Turn the engine using the special tool **0 493 380 (11 6 480)** on the vibration damper in the direction of rotation.
- Unscrew the nut (1) of the torque converter.
- Crank engine further and release remaining 5 nuts.

- Support the transmission using special tools **0 490 133 (00 2 030)** and .
- Secure the transmission with the tensioning strap (3).

- Unscrew the bolts (arrows) and remove the transmission.

cardiagn.com

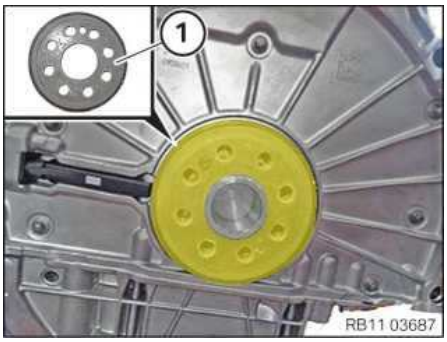
42 – Removing flywheel

CAUTION



Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Secure flywheel with a transmission bolt (1) and the special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.
- Unfasten flywheel bolts.
- Remove flywheel.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Remove the increment wheel (1) from the crankshaft and set correctly.

43 – Installing the flywheel

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

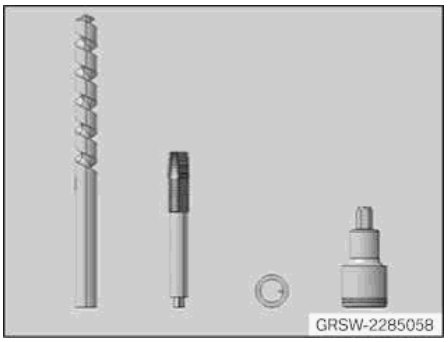
cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

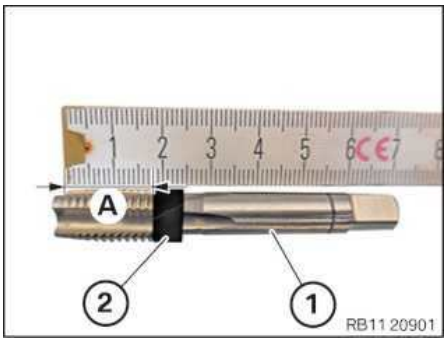


- Check fitting sleeve on the crankshaft for damage and replace if necessary.

TECHNICAL INFORMATION

Clean all threads with a screw tap.

- Clean all the screw threads (1).

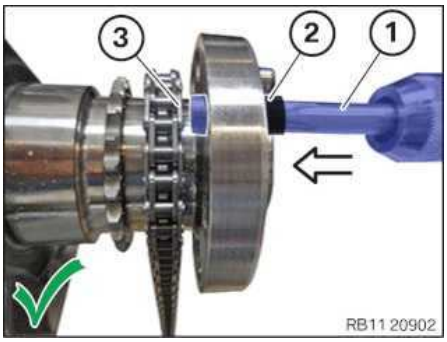


- Use the set of special tools **2 285 058**.

Description
Twist drill
Thread cutter M12x1.5
Depth
Insertion tool

- Assemble tool set.

Number	Description
1	Tool holder
2	Thread cutter M12X1,5



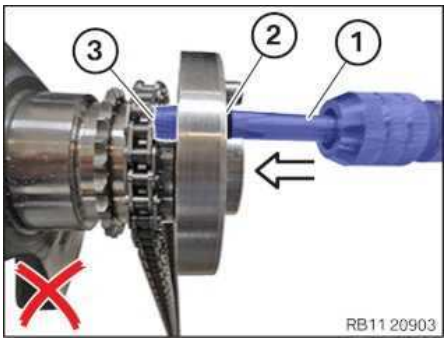
- Mark the installation dimension (A) on thread cutter (1) from the set of special tools **2 285 058** using a commonly-available tool (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm

cardiagn.com

NOTICE



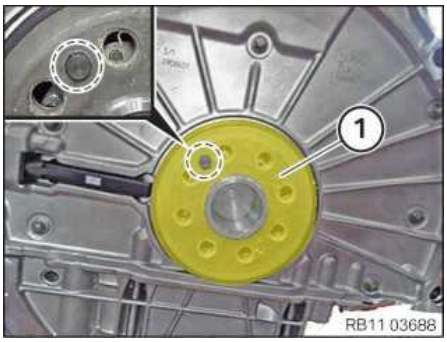
To provide a better overview: Shown with engine removed.

- Screw in the thread cutter (1) from the set of special tools **2 285 058** in direction of arrow up to the installation dimension (2).

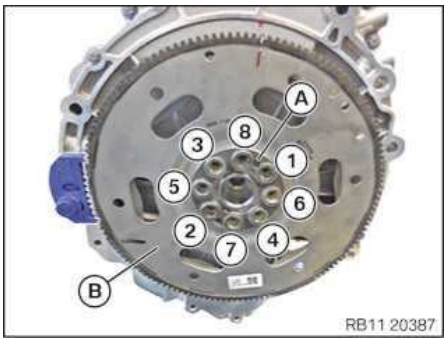
Screw-in depth of thread cutter

Screw-in depth	18 mm

- Make sure that the thread cutter does (1) **not** rest on the timing chain (3).



TECHNICAL INFORMATION

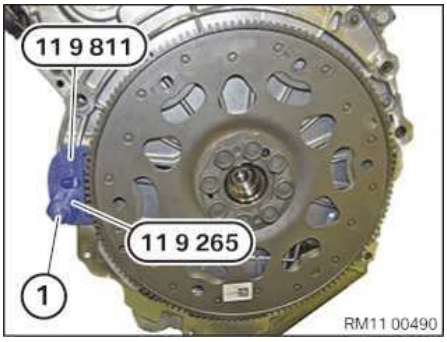


- **Carefully** handle the timing chain, to protect the timing chain and timing chain drive against damage.

- Make sure the installation dimension (2) of the screw bore (1) is not exceeded.

  The thread cutter (1) may not rest on the timing chain (3).

- Important! Observe the marking shown during installation.
- Install special tool (1) on the crankshaft as shown.

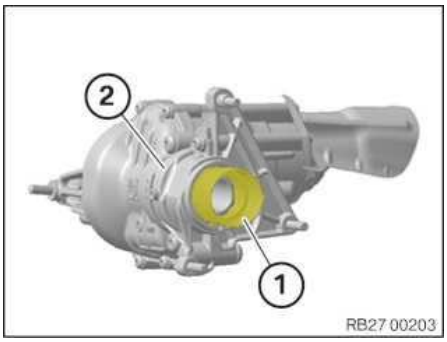


- Position flywheel (B) .
- Renew flywheel bolts (1) to (8).

  Parts: Flywheel bolts
- Screw in flywheel bolt (1) to (8) by hand.
- Observe tightening sequence. Begin at the dowel pin (A).
- Tighten flywheel bolts in sequence (1) to (8).

Flywheel to crankshaft

M12x1.5	Renew screws.	Tightening torque	120 Nm



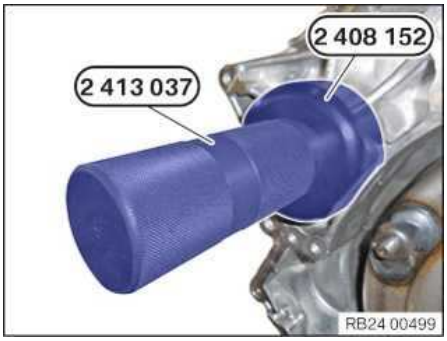
- Loosen the transmission bolt (1).
- Guide out and remove the special tool **0 494 793 (11 9 265)** and **0 496 171 (11 9 811)** with the **standard** washer (5 mm).

POSTPROCESSES

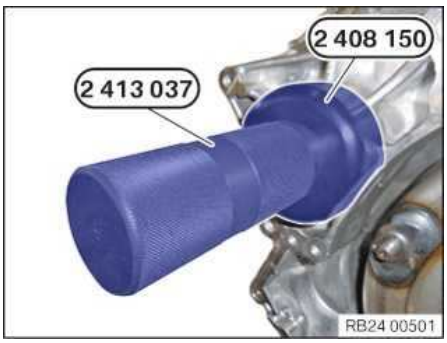
44 – Install the transfer box (VTG)

cardiagn.com

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

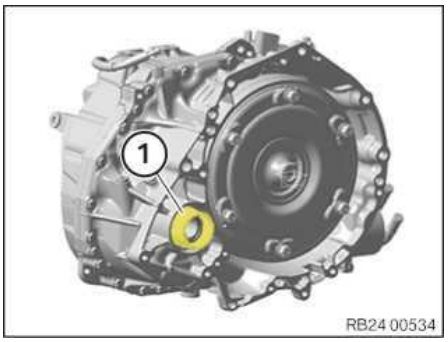


- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.

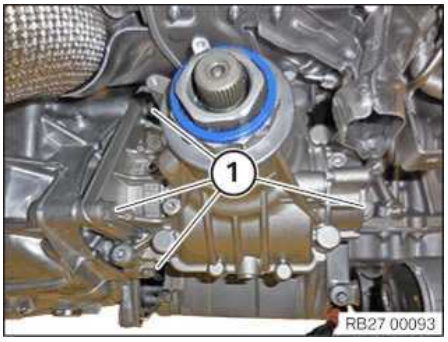
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

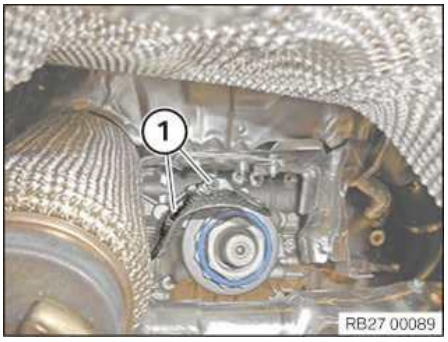
cardiagn.com



- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials



Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

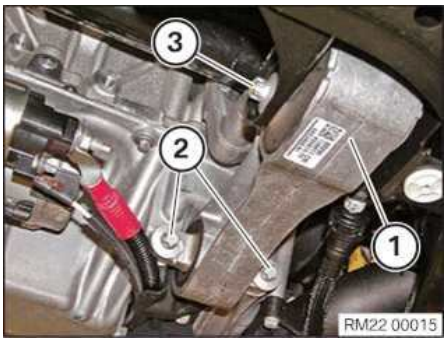
- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

cardiagn.com

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

Technically suitable transfer box and electrical transmission oils	



Main group 27

- Tighten the oil filler plug (1).

Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm

45 – Install the holder with rubber mount

- Install holder (1) with rubber mount.
- Tighten down screw (3).

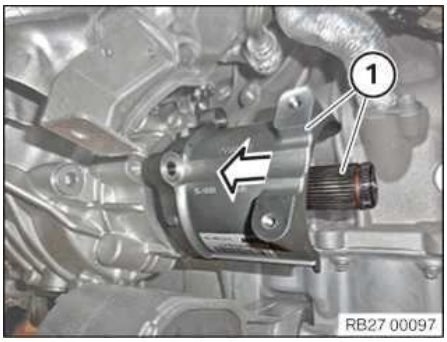
Holder with rubber mount to front axle support

M12		Tightening torque	100 Nm

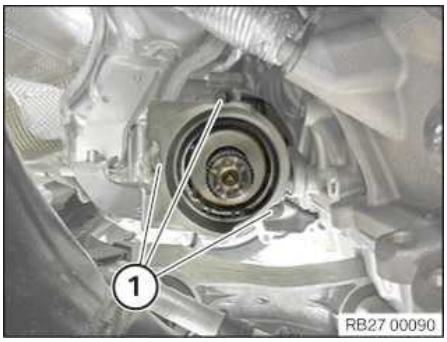
- Tighten down screws (2).

Holder with rubber mount to oil sump

M12		Tightening torque	100 Nm



46 – Install the intermediate shaft with the support tube



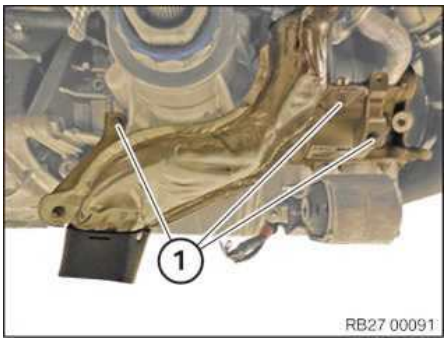
- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

- Position screws (1).



Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

cardiagn.com

- If installed: Install air duct.
- Tighten the screws (1).

47 – Install propeller shaft.

CAUTION

Component with heavy weight.

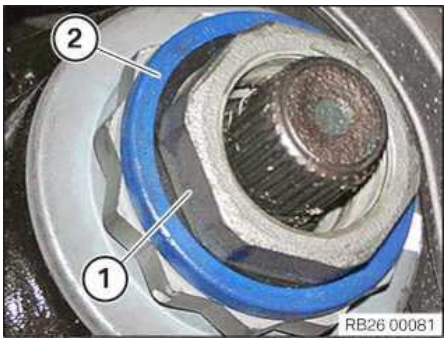
Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

Damage to the propeller shaft during installation.

Non-observance of the installation guidelines for the propeller shaft on the rear axle differential may cause severe damage.



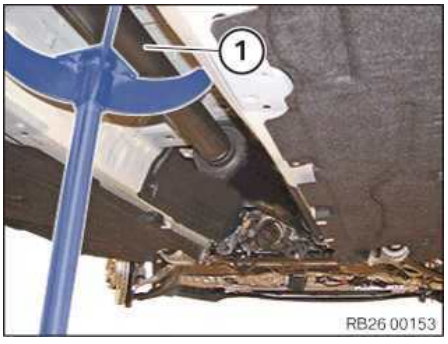
- Always renew the recessed nut on the rear axle differential. Screw locking must be available.
- Strictly observe a minimum hardening time of two hours after having screwed in the recessed nut. The hardening time may be longer at lower temperatures.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

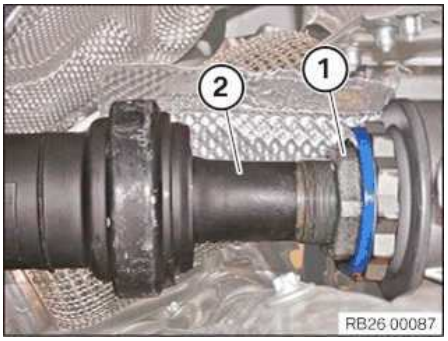


- Renew recessed nut (1).

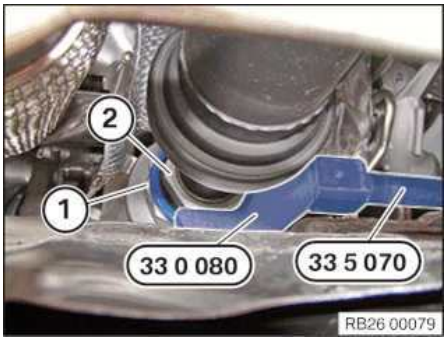
  Parts: Insert nut
- Renew the retaining clip (2) and the seal.

  Parts: Retaining clip, seal
- Insert the seal with the recessed nut (1) and install.
- Insert the retaining clip (2) and install.
- Make sure that recessed nut (1) is screwed in within 5 min.
- Make sure that the hardening time of **minimum** 2 h for the recessed nut is observed.

  The hardening time must be extended at lower temperatures.



- Insert the propeller shaft (1) and install.
- Always support the propeller shaft (1) with a conventional jack.



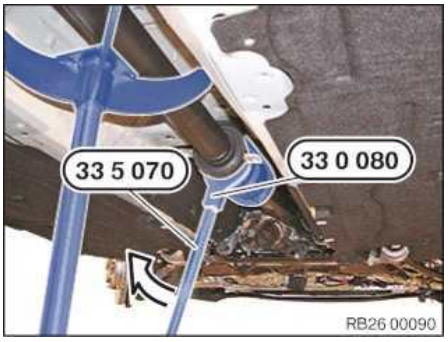
cardiagn.com

- Hand-tighten the bolts (1).

- Push the propeller shaft (2) against the recessed nut (1) up to the limit position.
- Screw the propeller shaft (2) at least 2 thread starts onto the recessed nut (1) by hand.

RISK OF DAMAGE

Damage to the transfer box.



Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to tighten the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.

- Tighten the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

Propeller shaft to transfer box

		Tightening torque	80 Nm

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Assemble the screw connection (1) of the flexible disc (2) and the three-hole flange (3) according to the mark.
- Renew screws (1).

  Parts: Bolts

- Hand-tighten the bolts (1).

cardiagn.com

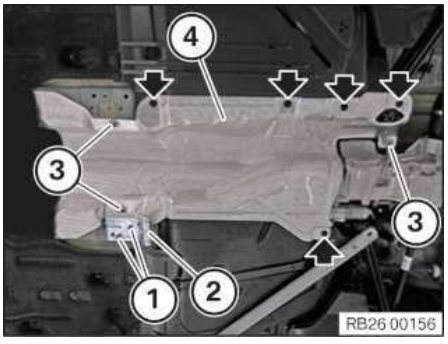
- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

- Tighten the bolts with the special tools **0 490 504 (00 9 120)** and .

Flexible disc to rear axle final drive

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

- Tighten the screws (1).



Centre mount to body

M8		Tightening torque	19 Nm

- Guide the special too l out between the front and rear propeller shaft and remove.

48 – Installing the rear heat shield

- Insert and install the heat shield (4).
- Tighten screws (arrows).

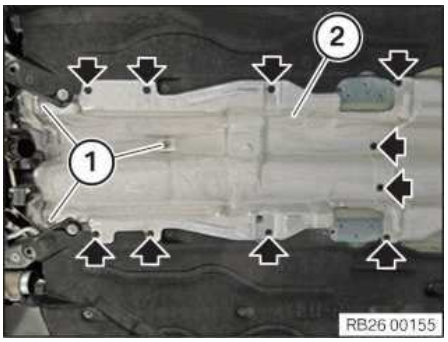
Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (3).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm



- Insert and install the holder (2).
- Tighten the screws (1).

Bracket to body

M8		Tightening torque	21 Nm

49 – Install the front heat shield

cardiagn.com

- Insert and install the heat shield (2).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (1).

Heat shield to body

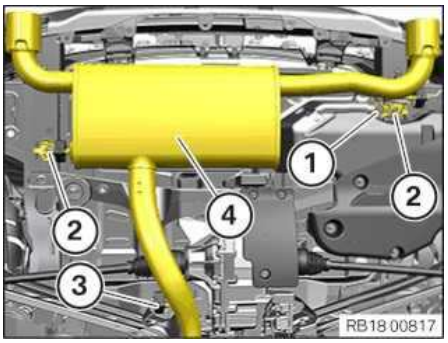
Bolts/nut		Tightening torque	3 Nm

50 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!



- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Feed in and install the exhaust system (4) with a second person.
- Renew nuts (2).

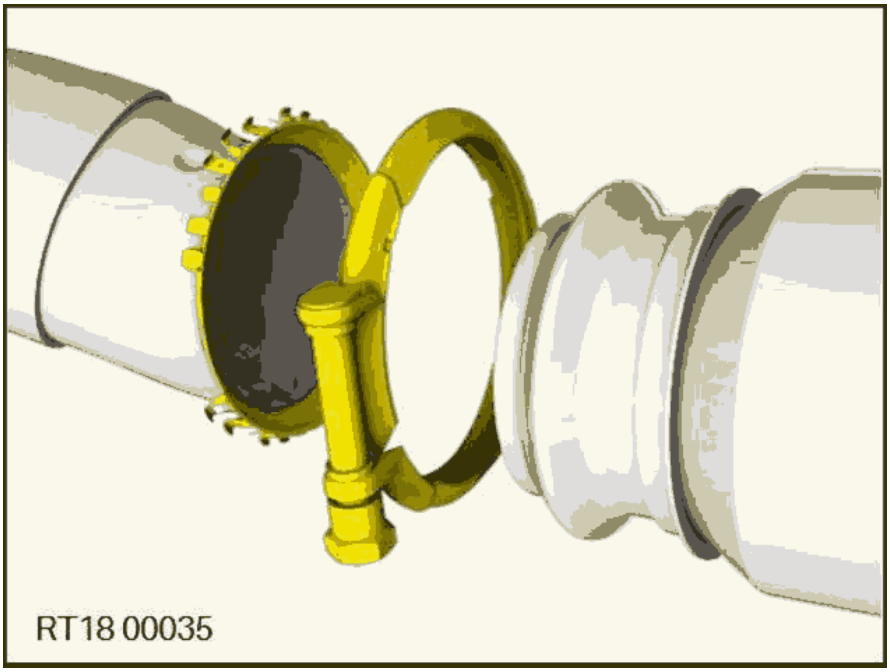
  Parts: Nuts
- Tighten nuts (2).

Exhaust system to body

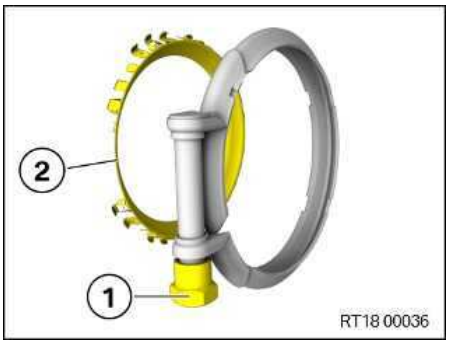
M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).

Exhaust bracket on body

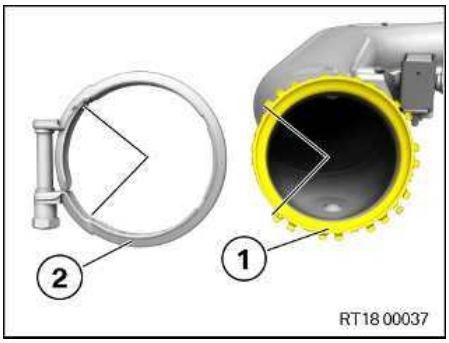


Hexagon screw M8x30		Tightening torque	19 Nm



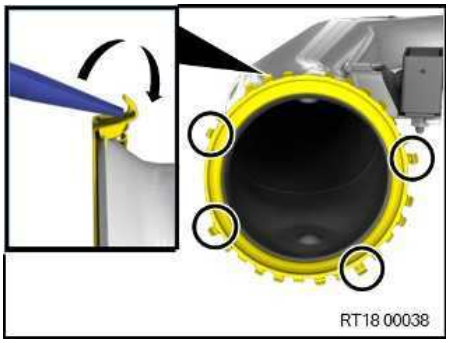
- Check the rubber mount (3) for damage and renew as needed.
- Mount rubber mount (3) on the exhaust system (4).

▸ **Install the V-clip**

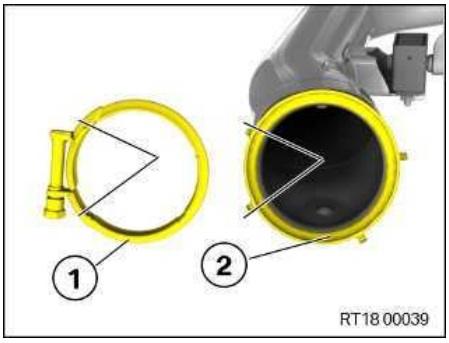


cardiagn.com

V-band clamp



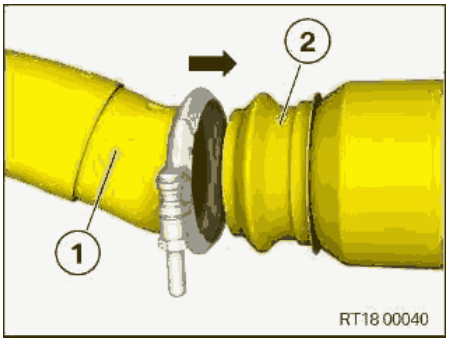
- Unscrew the nut (1) and remove the sealing ring (2).



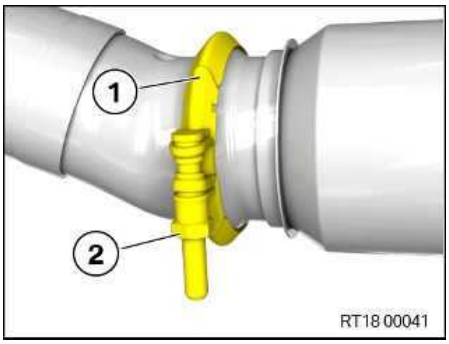
- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.

- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.

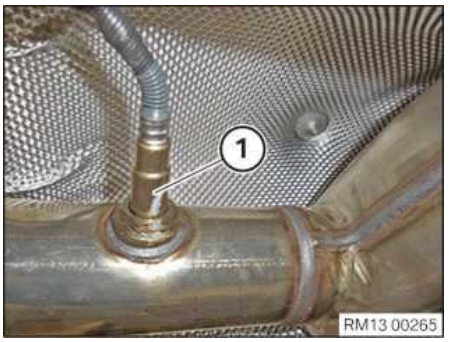


- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).



cardiagn.com

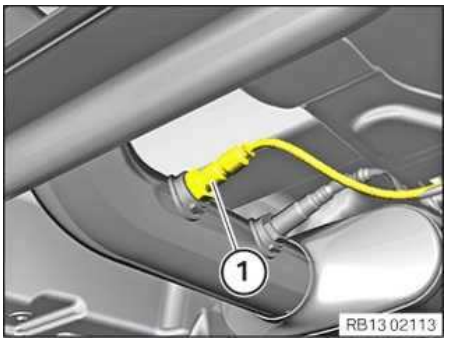
- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).



- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.

- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

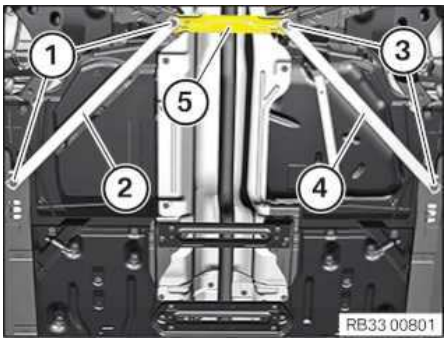


V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

- Feed in, install and tighten diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

Sensor		Tightening torque	50 Nm



- Feed in, install and tighten nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

51 – Install the cross-member with torsion struts

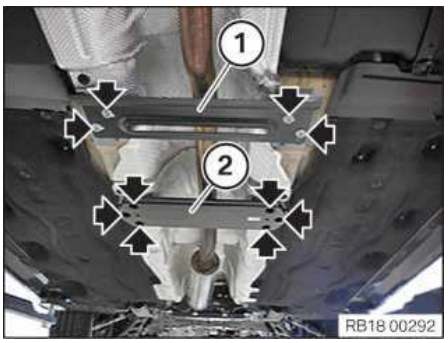
cardiagn.com

- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °



- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

52 – Install the connecting support on the tunnel in front and back

- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

M10x18		Tightening torque	56 Nm

- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

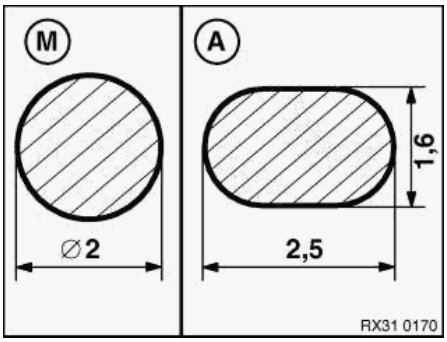
Rear connection carrier to body

M8x18		Tightening torque	28 Nm

53 – Installing right output shaft partially

- Renew the circlip (1).

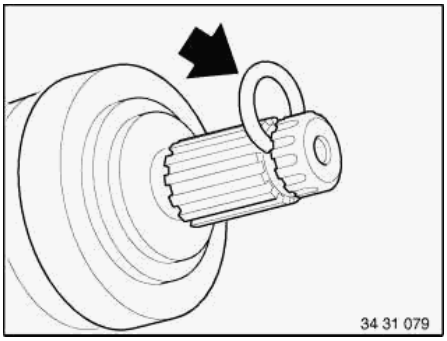
  Parts: Circlip
- Slide output shaft into the transmission as far as the limit position.
- Check for secure seat by levering.



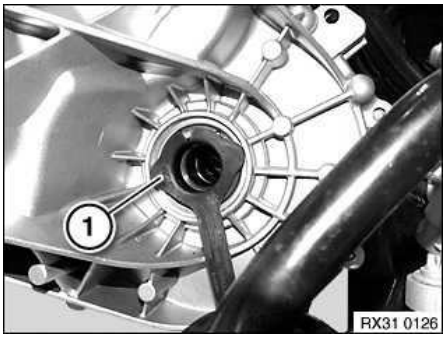
54 – Partially installing the left output shaft

- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).



cardiagn.com



- Do not mix up circlips.

  Different types of output shafts fitted:

  - M: Manual transmission
  - A: Automatic transmission

- Renew circlip (arrow).

- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

- Insert output shaft (1) into transmission.
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

55 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

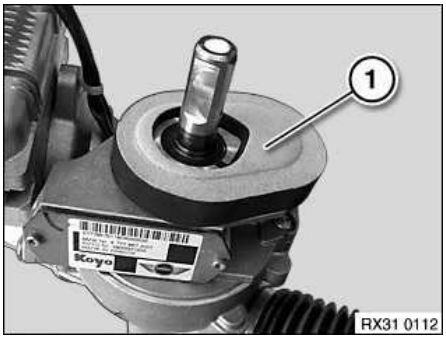
- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

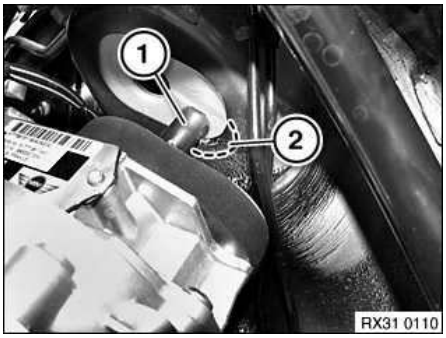
cardiagn.com

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).



Battery positive lead to starter

M8		Tightening torque	13,5 Nm

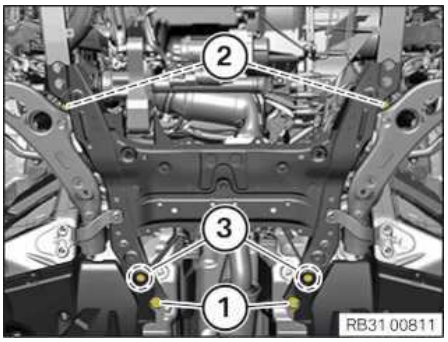


- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

56 – Mount and secure the complete front axle

- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

cardiagn.com

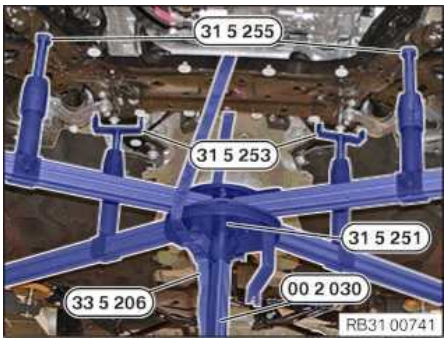
- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

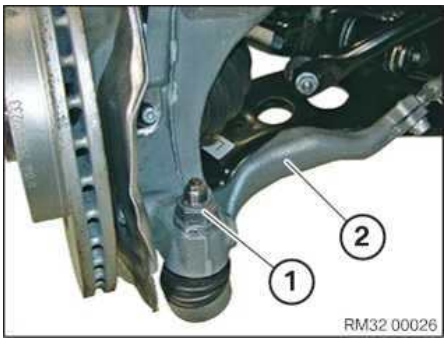
M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).



Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm



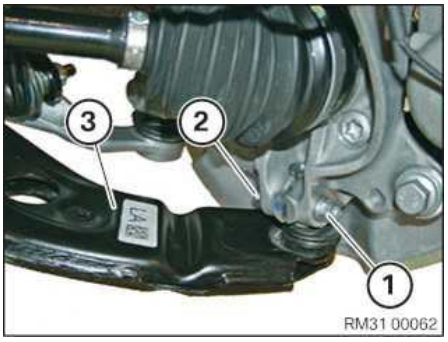
- If necessary, tighten the screws in the areas (3).

Underbody protection to body

Screw		Tightening torque	3 Nm

- Remove special tool from special tool .
- Lower universal jack **0 490 133 (00 2 030)** with the special tool and place it to the side.

NOTICE



Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm

NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

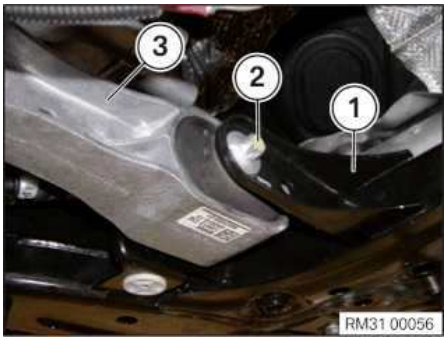
Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

cardiagn.com

57 – Install the mounted parts on the front axle support

NOTICE

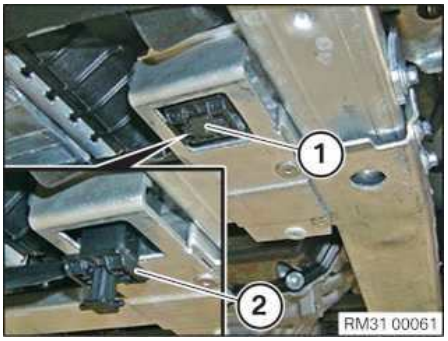


Perform the operations on the left and right side.

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

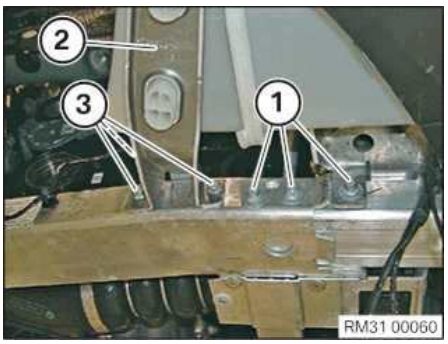
Holder, wishbone rubber mount, to body



M10 screw	Renew screw.	Jointing torque	56 Nm
		Angle of rotation	90 °

- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support



M12 screw		100 Nm

NOTICE

Perform the operations on the left and right side.

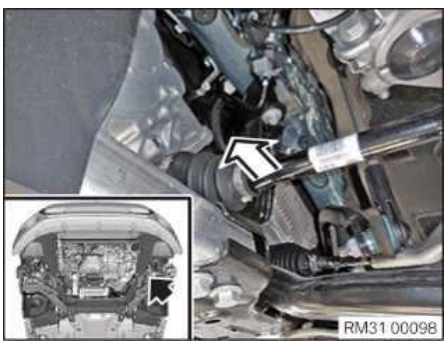
- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.

- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE

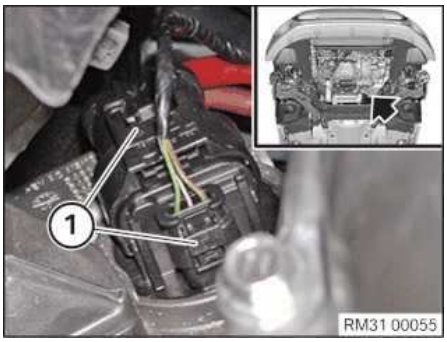


Perform the operations on the left and right side.

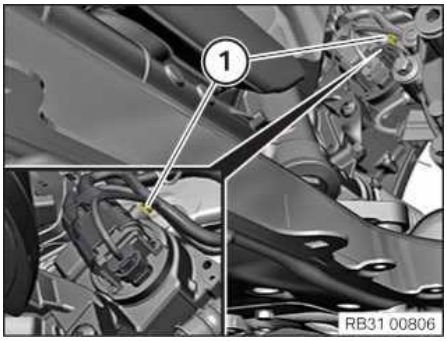
- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

		Tightening torque	11,8 Nm



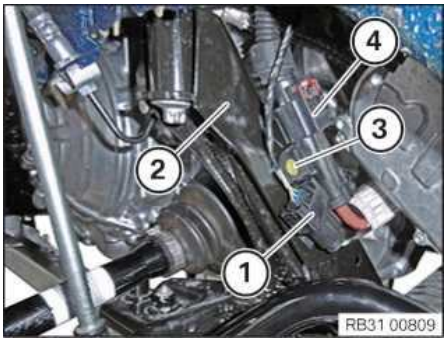
58 – Attaching connector at steering gear



- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.

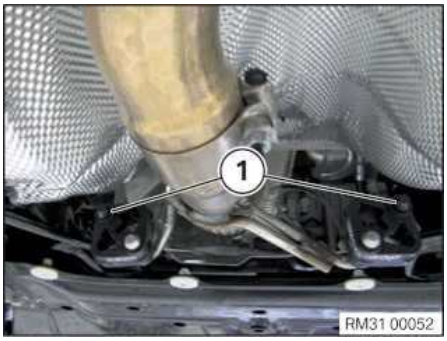
cardiagn.com



- Connect and lock connector (arrow) (1) with the steering gear.

- Fasten the wiring harness (1) on the steering gear.

▸ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

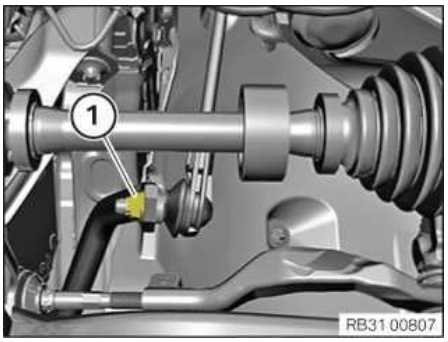
Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

59 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.



60 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▸ **Fastening anti-roll bar on the anti-roll bar link**

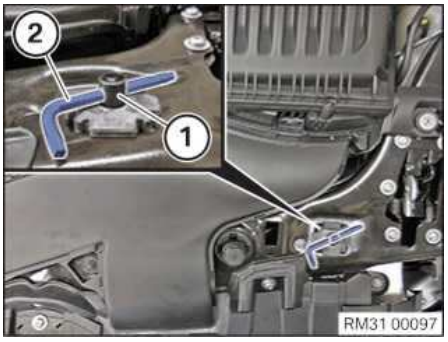
cardiagn.com

- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

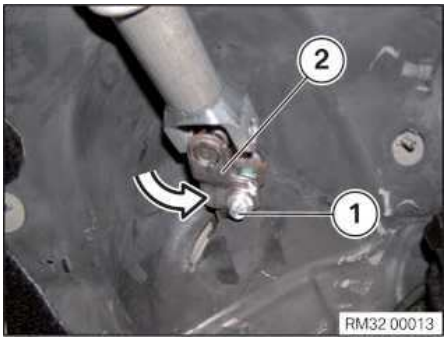


M10	Renew nut.	Tightening torque	56 Nm

61 – With right installation: Securing the cable for the ride height sensor

- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

62 – Removing fastener for left and right radiator

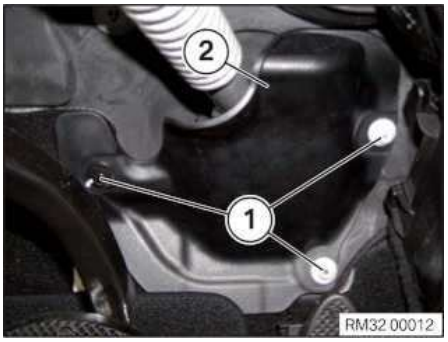


NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

63 – Secure the steering shaft at the bottom on the steering gear



- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

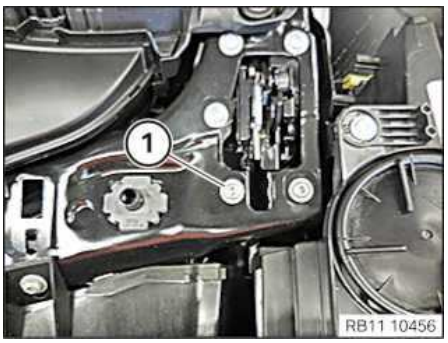
64 – Remove the engine bridge

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.



- Remove and install heavy components with the aid of another person/other persons.

- Detach the spindle screw (1) from the engine bridge.
- Unscrew the leg screws (2) and (3).
- Guide the engine bridge out of the vehicle with the help of another person and remove.

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.

- Tighten the screw (1) of the bonnet catch.

Cross connection on support for cross connection

M6x20		Tighten torque	12 Nm

- Tighten the screw (1) of the bonnet catch.

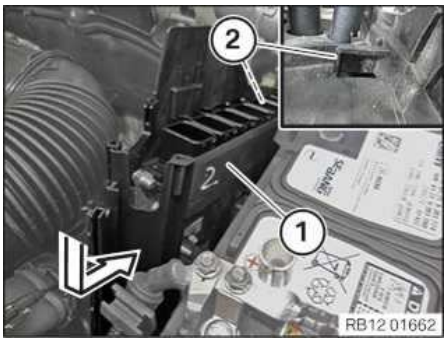
Cross connection on support for cross connection

M6x20		Tighten torque	12 Nm

65 – Install electronics box

Prerequisite

cardiagn.com

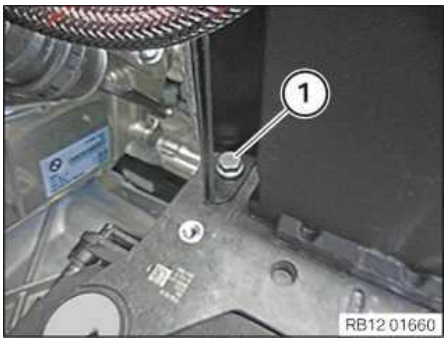


Battery earth lead is disconnected.

RISK OF DAMAGE

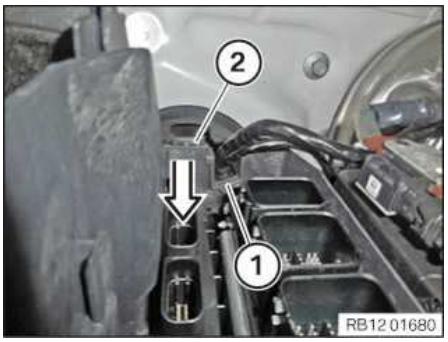
Improper routing of cables and wiring harnesses.

Trapped, crushed or damaged cables may cause short circuits and malfunctions.

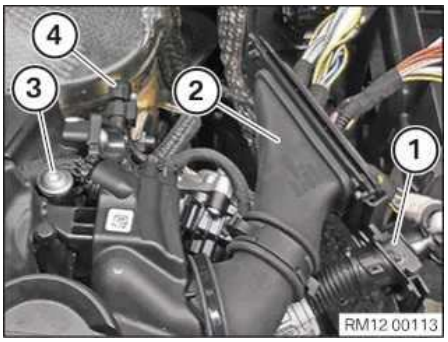


- Route all cables without abrasions, do not trap and crush.

- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.



- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).

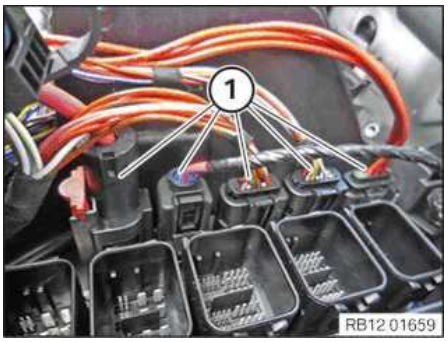


- Tighten down screw (1).

Electronics box to battery tray

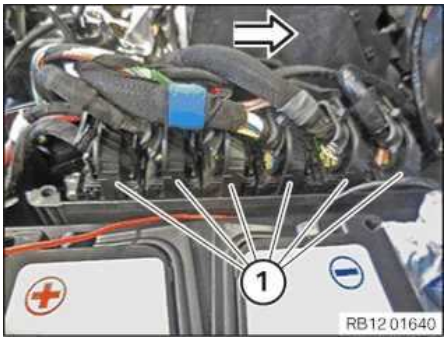
M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



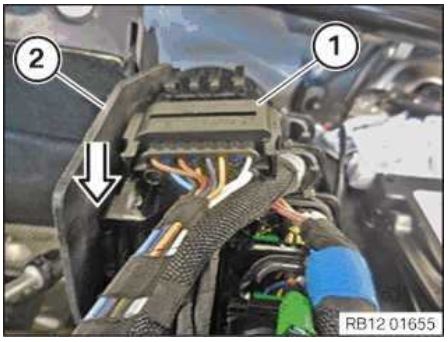
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

Wiring harness to cylinder head cover

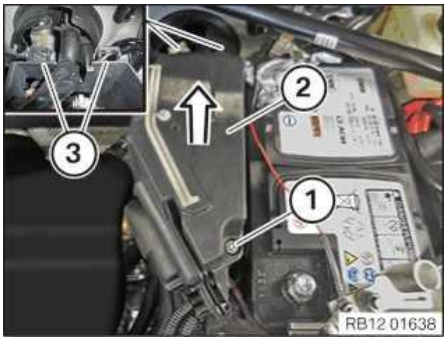


TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

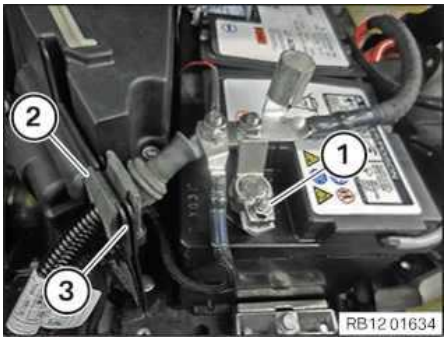


cardiagn.com



- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

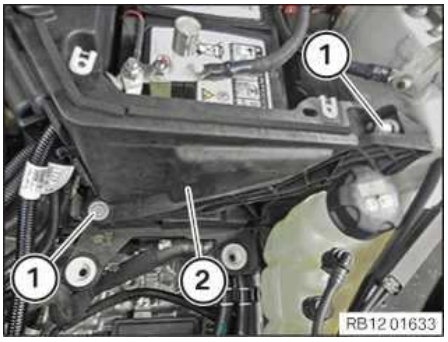
- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

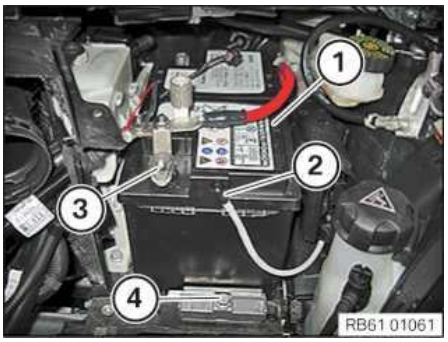


RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

cardiagn.com

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

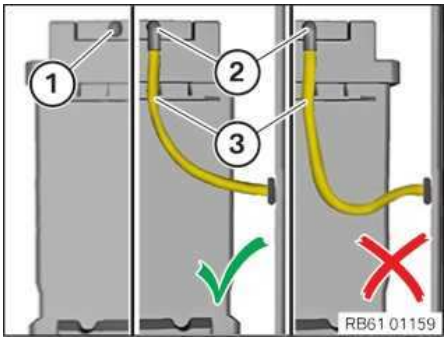
- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

▸ **Check the vent holes of the battery**

WARNING



Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

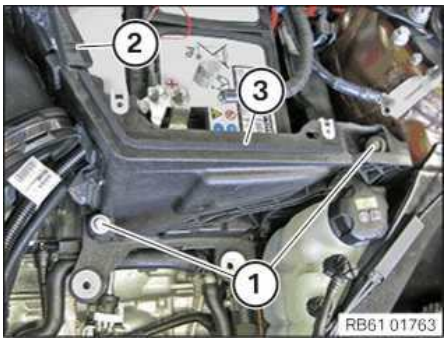
» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

Check

- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).



Result

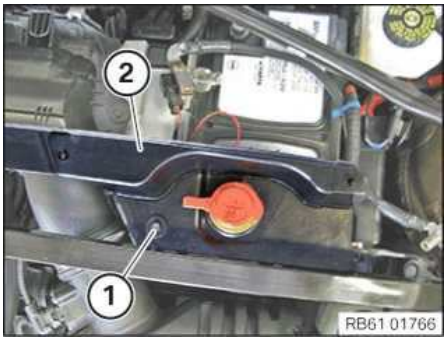
» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

cardiagn.com

- Insert tension strut (3) and tighten with screws (1).

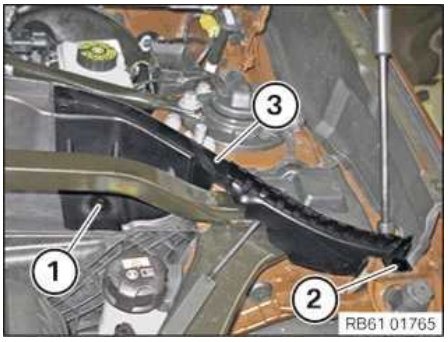


Trailing link

M8		Tightening torque	19 Nm

- Tighten down screw (2).

Battery cover



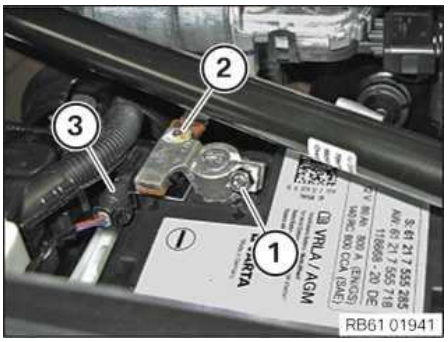
M8		2,8 Nm

- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).



Battery cover

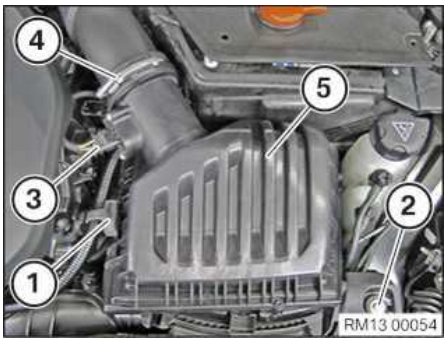
M8		2,8 Nm

67 – Connecting the battery earth lead

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)

- Remove the protective cover of the positive battery terminal.
- Position the battery earth lead (2).
- Tighten nut (1).



Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

- If required, connect the connector (3).

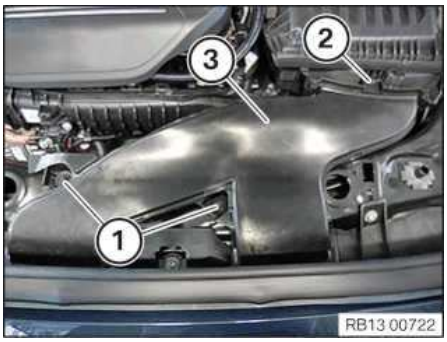
68 – Installing intake silencer housing

cardiagn.com

- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm



- Tighten clamp (4).

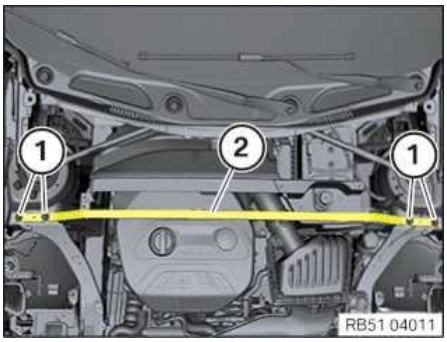
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

69 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

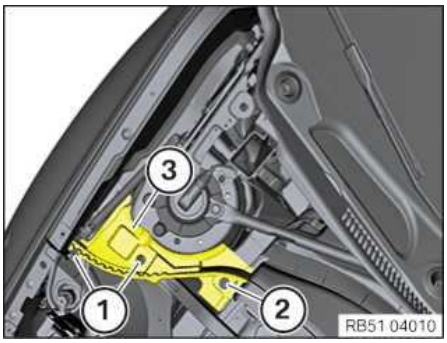


Intake neck to cross connection

M6		Tightening torque	8 Nm

70 – Install strut brace

TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

- Install the strut brace (2).
- Renew screws (1).
  Parts: Bolts
- Tighten the screws (1).

Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

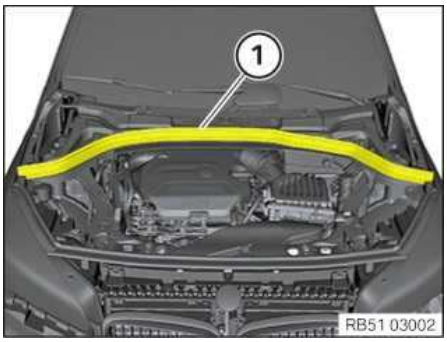
NOTICE

Description is for right component only. The procedure on the left side is identical.

- Install the cover (3).
- Tighten down screw (2).

Cover on body

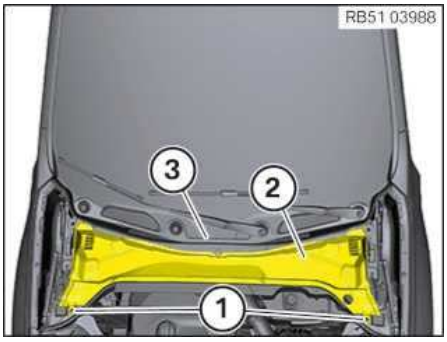
Hexagon screw		Tightening torque	3 Nm



- Install the expanding rivet (1).

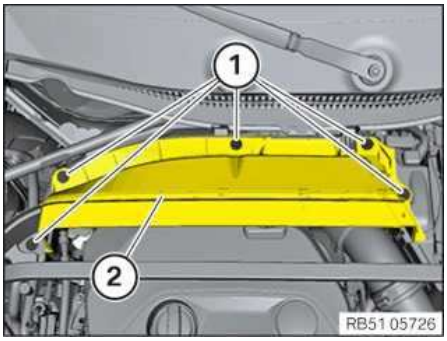
71 – Install the seal for the bonnet

cardiagn.com



NOTICE

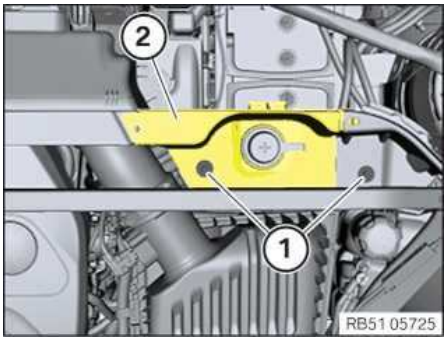
Schematic diagram is for example purposes. Some parts may differ in certain details.



- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

72 – Installing front cowl panel cover

- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).



73 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm

- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

74 – Install acoustic cover

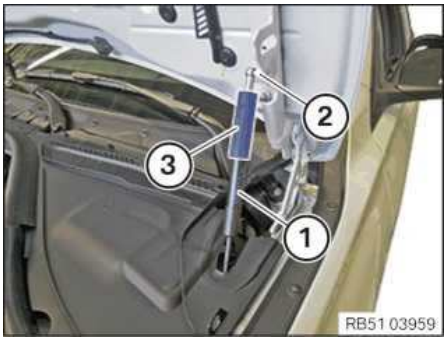
cardiagn.com

RISK OF DAMAGE

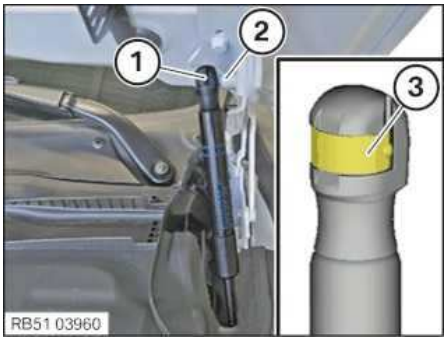
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



- Check for correct installation of all rubber mounts in the acoustic cover (1).



- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

75 – Take bonnet out of the service position

- Support the bonnet by hand.
- Remove the special tool (3) from the ball pin (2).
- Pull off the special tool (3) from the gas pressure spring (1).
- Continue to support the bonnet and repeat the operation on the other side of vehicle.

CAUTION

Shutting bonnet or tailgate.

Danger of injury!

- Support bonnet/tailgate in fully open position with the aid of a suitable device.

- Check the clamp (3) is fitted correctly.
- Connect ball socket (1) to ball pin (2).
- Continue to support the bonnet and repeat the operation on the other side of vehicle.

76 – Fill and bleed the coolant circuit

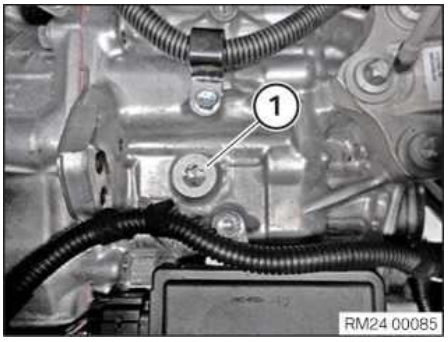
▸ **Filling and bleed the high-temperature coolant circuit**

cardiagn.com

- See additional information.

77 – Checking/topping up oil level in automatic gearbox (AISIN GA8G45)

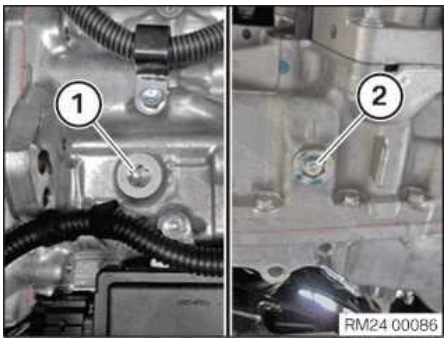
Prerequisite



Vehicle in horizontal position.

CAUTION

Materials harmful to health.



Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

- Move the selector lever to the "P" position.
- Secure vehicle to prevent it rolling.
- Connect diagnosis system.
- Release the oil filler plug (1) using the Torx T55 .

cardiagn.com

- **Topping up the automatic transmission fluid (the automatic transmission fluid was drained):**
- Release oil filler plug (1) from engine compartment.
- Loosen the overflow plug (2) below at the transmission.
- Top up automatic transmission fluid at oil filler plug (1) until oil emerges at overflow plug (2).
- Start engine and run at idle speed.
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check again whether the automatic transmission fluid is leaking at the overflow plug(2) .
- Read the temperature of the automatic transmission fluid with the diagnosis system.
- Increase temperature of automatic transmission fluid to 35 °C to 45 °C.
- Top up automatic transmission fluid until it flows over.
- Renew sealing rings.

  Parts: Sealing ring
- Screw in and fasten oil filler plug (1) and overflow plug (2).

Oil filler plug to transmission housing

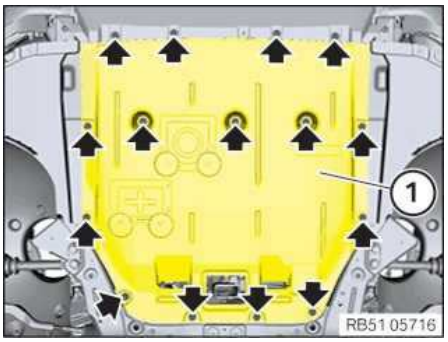
M14	Renew the sealing ring.	Tightening torque	45 Nm

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

- **Check oil level (transmission oil temperature must be between** 35 °C **and** 45 °C **):**
- Open the oil filler plug (1).
- Slacken overflow plug (2).
- Start engine and run at idle speed.
- Unscrew and remove overflow plug (2).
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Top up the automatic transmission fluid until it overflows at the overflow plug (2) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check the oil level again.
- Renew sealing rings.

  Parts: Sealing ring
- If the oil escapes slightly from the overflow plug (2) , tighten the overflow plug (2) and the oil filler plug (1) .

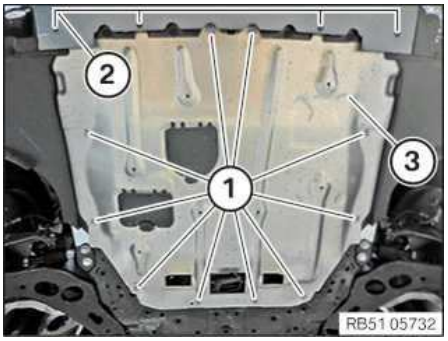


Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

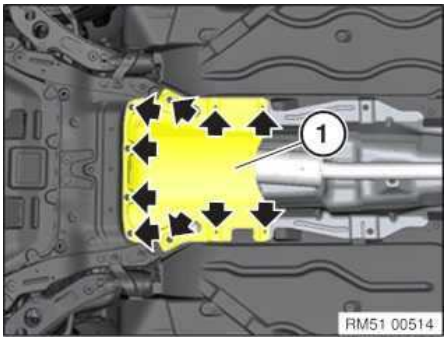


cardiagn.com

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm



- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

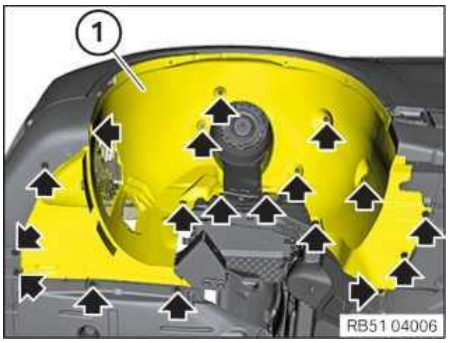
Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

79 – If installed: Installing underbody protection at rear

- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body



Screw		Tightening torque	3 Nm

80 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

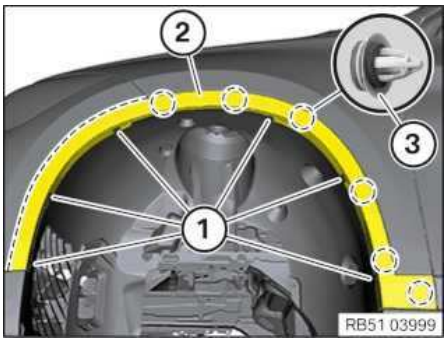
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

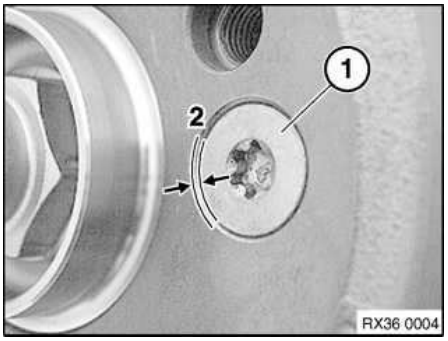
81 – Installing both front wheels

▶ Mounting the wheel

▷ Clean the contact surfaces between the brake disc and the wheel rim

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.



- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

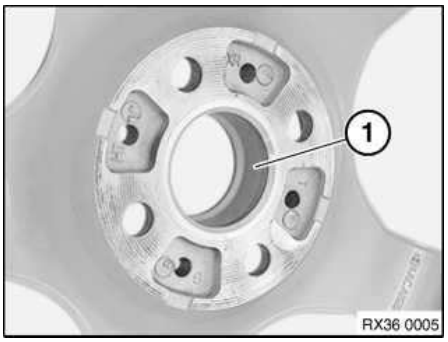
- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

- Renew mounting bolt (1).

  Parts: Mounting bolt
- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.



Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

cardiagn.com

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts.
- Check the wheel bolts and threads for damage, renew the wheel bolts if necessary.
- Join and tighten the wheel bolts (arrows).

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

Additional Information

Overview of Tightening Torques

Cross connection to carrier support — Used in step 17

Screws M6x20		Tightening torque	11,8 Nm

Screw connection for rubber mount of coolant radiator to coolant radiator — Used in step 17

Bolt to rubber mount		Tightening torque	8 Nm

Air duct to upper connection — Used in step 17

M6x20 screw		Tightening torque	11,8 Nm

Bracing strut to upper connection — Used in step 17

M8x20 screw		Tightening torque	28 Nm

Special tool to cylinder head — Used in step 19

M8		Tightening torque	21,5 Nm

cardiagn.com

Flywheel to crankshaft — Used in step 43

M12x1.5	Renew screws.	Tightening torque	120 Nm

Transfer box to transmission — Used in step 44

M10		Tightening torque	56 Nm

Heat shield to transfer box — Used in step 44

M6	Renew screws.	Tightening torque	6 Nm

Oil filler plug on transfer box (VTG) — Used in step 44

M18x1.5		Tightening torque	35 Nm

Holder with rubber mount to front axle support — Used in step 45

M12		Tightening torque	100 Nm

Holder with rubber mount to oil sump — Used in step 45

M12		Tightening torque	100 Nm

Intermediate shaft to transfer box — Used in step 46

M8x35		Tightening torque	19 Nm

Propeller shaft to transfer box — Used in step 47

		Tightening torque	80 Nm

Flexible disc to rear axle final drive — Used in step 47

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

Centre mount to body — Used in step 47

M8		Tightening torque	19 Nm

Heat shield to body — Used in step 48 49

Bolts/nut		Tightening torque	3 Nm

Bracket to body — Used in step 48

M8		Tightening torque	21 Nm

Exhaust system to body — Used in step 50

M8	Replace nuts.	Tightening torque	19 Nm

Exhaust bracket on body — Used in step 50

Hexagon screw M8x30		Tightening torque	19 Nm

V-clip to catalytic converter — Used in step 50

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

Diesel particulate sensor to exhaust system — Used in step 50

Sensor		Tightening torque	50 Nm

Nitrogen oxide sensor downstream of SCR catalytic converter — Used in step 50

Sensor		Tightening torque	50 Nm

Cross-member/torsion strut to axle support and mounting — Used in step 51

M12x48	Renew screws.	Jointing torque Angle of rotation	100 Nm 90 °

Front connection carrier to body — Used in step 52

M10x18		Tightening torque	56 Nm

cardiagn.com

Rear connection carrier to body — Used in step 52

M8x18		Tightening torque	28 Nm

Starter motor to transmission — Used in step 55

M8x45		Tightening torque	19 Nm

Battery positive lead to starter — Used in step 55

M8		Tightening torque	13,5 Nm

Rear end of front axle support to body — Used in step 56

M14 screw	Renew screw.	Tightening torque	175 Nm

Front axle support, front to body — Used in step 56

M12 screw	Renew screw.	Tightening torque	108 Nm

Underbody protection to body — Used in step 56 79

Screw		Tightening torque	3 Nm

Track rod end to swivel bearing — Used in step 56

M14	Renew nut.	Tightening torque	175 Nm

Wishbone to swivel bearing — Used in step 56

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

Holder, wishbone rubber mount, to body — Used in step 57

M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

Holder with rubber mount to front axle support — Used in step 57

M12 screw			100 Nm

Washer fluid reservoir holder to front axle support adapter plate — Used in step 57

		Tightening torque	10 Nm

Deformation element, bottom, to adapter plate, front axle carrier — Used in step 57

		Tightening torque	11,8 Nm

Holder to front axle support — Used in step 58

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

Anti-roll bar link to anti-roll bar — Used in step 60

M10	Renew nut.	Tightening torque	56 Nm

Lower steering shaft to steering gear — Used in step 63

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

Steering column cover to bulkhead — Used in step 63

Plastic nut		Tightening torque	3 Nm

Cross connection on support for cross connection — Used in step 64

M6x20		Tightening torque	12 Nm

Electronics box to battery tray — Used in step 65

M8X16		Tightening torque	15 Nm

cardiagn.com

Wiring harness to cylinder head cover — Used in step 65

TS5x20		Tightening torque	3,5 Nm

Cover to electronics box — Used in step 65

RF5x26.5		Tightening torque	2,5 Nm

Positive battery terminal to battery — Used in step 65

NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray — Used in step 65

M8		Tightening torque	19 Nm

Battery terminal rail to battery tray — Used in step 66

M8			19 Nm

Battery terminal with IBS positive battery terminal / negative battery terminal — Used in step 66 67

NutM6			5 Nm

Trailing link — Used in step 66

M8		Tightening torque	19 Nm

Battery cover — Used in step 66

M8			2,8 Nm

Intake silencer housing to lock bridge — Used in step 68

M6X30		Tightening torque	8 Nm

Clean air pipe to intake silencer housing — Used in step 68

Clamp		Tightening torque	3 Nm

Intake neck to cross connection — Used in step 69

M6		Tightening torque	8 Nm

Cross-brace to spring strut dome — Used in step 70

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

Cover on body — Used in step 70

Hexagon screw		Tightening torque	3 Nm

Cover of top bulkhead — Used in step 73

Screw		Tightening torque	2,6 Nm

Cover of remote positive terminal — Used in step 73

Screw		Tightening torque	2,6 Nm

Oil filler plug to transmission housing — Used in step 77

M14	Renew the sealing ring.	Tightening torque	45 Nm

Overflow screw in oil drain plug — Used in step 77

M6	Renew the sealing ring.		8 Nm

Underbody protection front — Used in step 78

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

cardiagn.com

Wheel arch cover to body — Used in step 80

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

Wheel arch cover to body — Used in step 80

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body — Used in step 80

Plastic nut		Tightening torque	3 Nm

Brake disc to rear wheel hub — Used in step 81

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub — Used in step 81

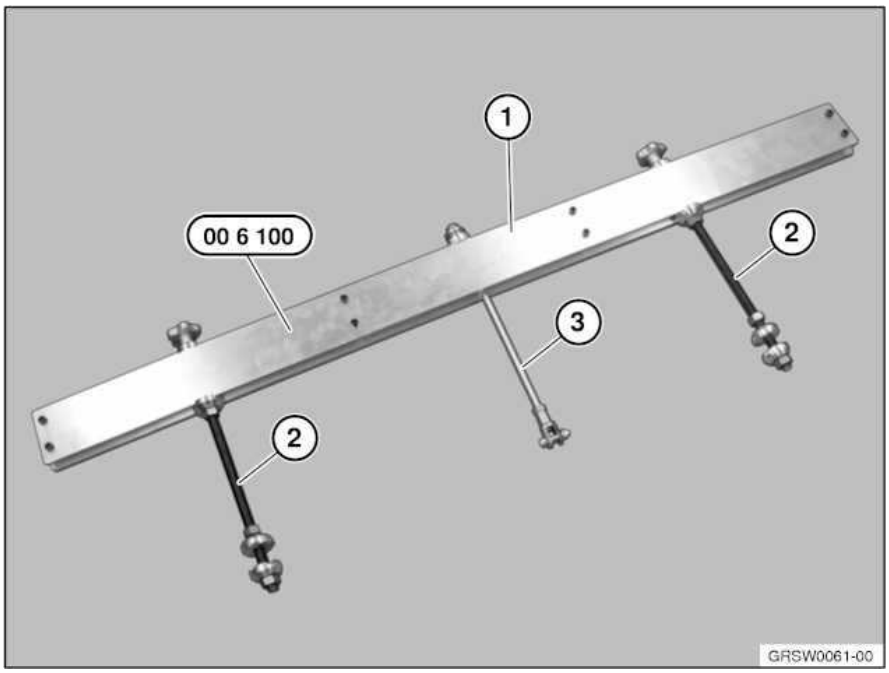
M8	Renew screw.	Tightening torque	16 Nm

Wheel bolts — Used in step 81

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Overview of Special Tools

2 459 012 Holder



Common — Used in step 19 64

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with

cardiagn.com

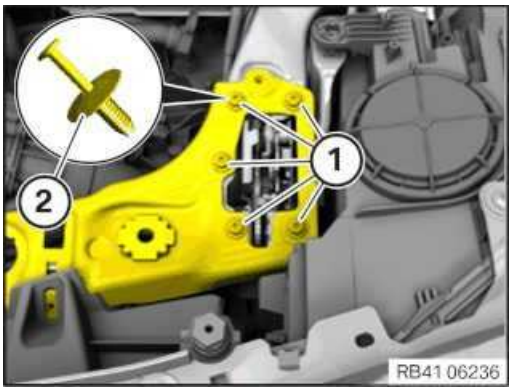
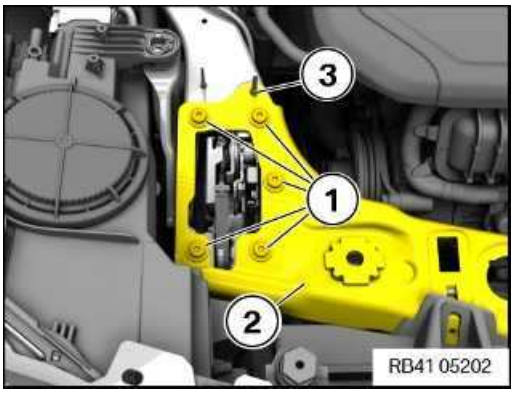
11 23 010 Removing and installing/replacing vibration damper

PRELIMINARY WORK



1 – Remove front cross connection



- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

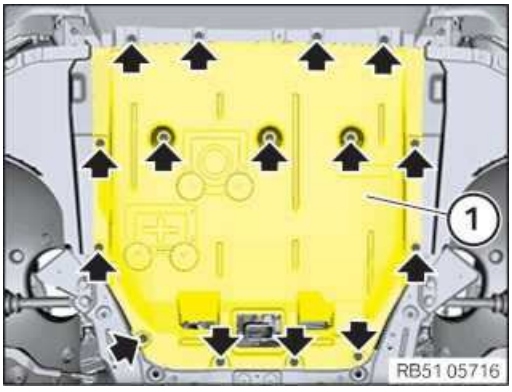
2 – Remove front right wheel

TECHNICAL INFORMATION

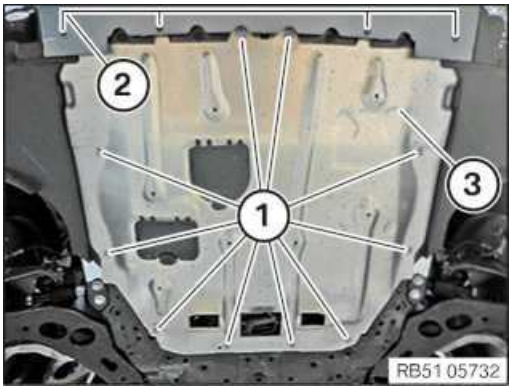
The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

cardiagn.com

TECHNICAL INFORMATION



Strictly observe the specified procedure to prevent clamping errors and imbalance.



- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

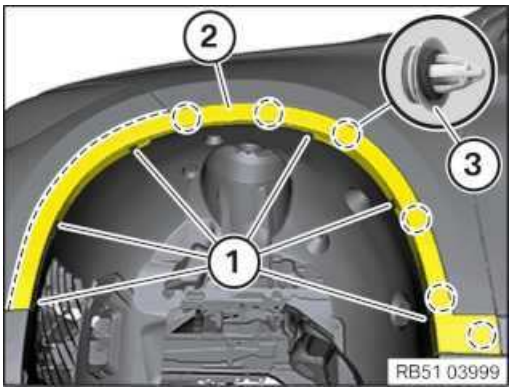
3 – Removing the front underbody protection

- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

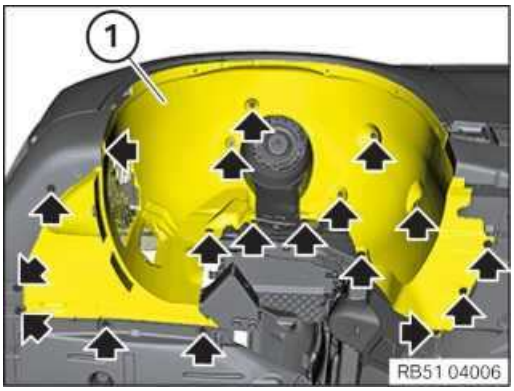
4 – Removing the front right wheel arch cover

▶ **Remove the front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.



NOTICE

Description is for left component only. Procedure on the right side is identical.

cardiagn.com

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

5 – Removing the drive belt for alternator

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

CAUTION

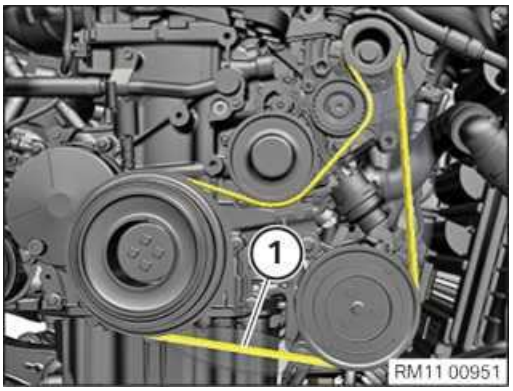
Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION

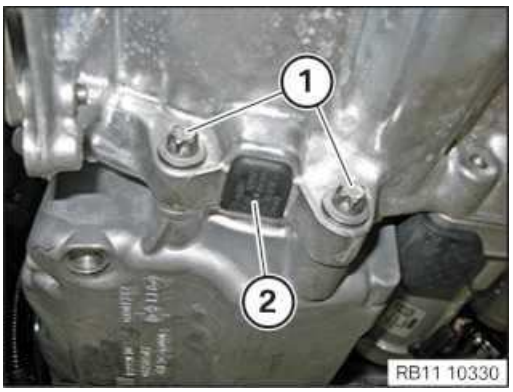
If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.



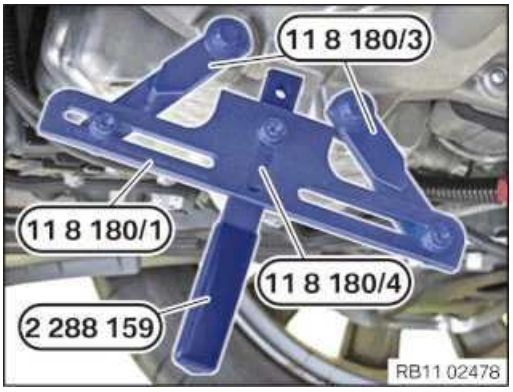
TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

cardiagn.com



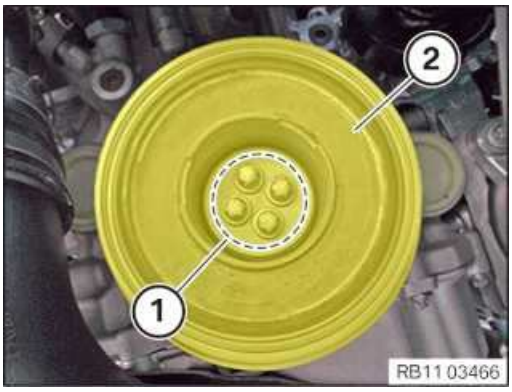
- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool **0 496 268 (11 0 390)**.



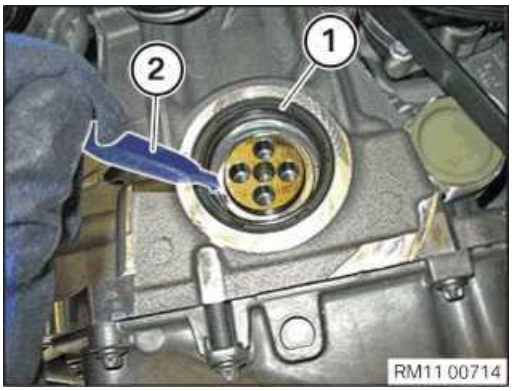
- Guide out the drive belt for the alternator (1) and remove it.

MAIN WORK

6 – Removing the vibration damper



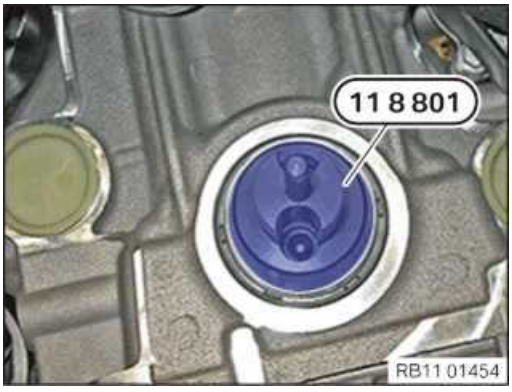
- Release the transmission bolts (1).
- Remove the protective cap (2).



- Position special tool **0 493 587 (11 8 180)** as illustrated.
- Fasten the special tool **0 493 587 (11 8 180)** to the transmission with transmission bolts.

cardiagn.com

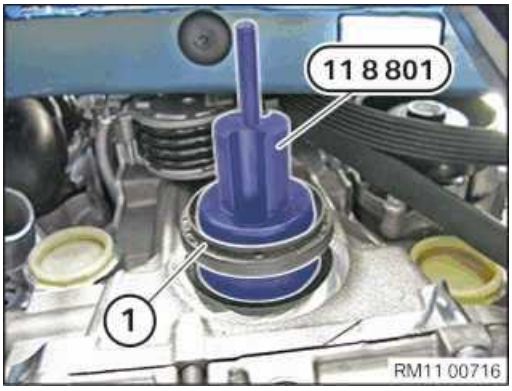
- Loosen screws in the area (1).
- Remove the vibration damper (2).



7 – Remove the crankshaft seal

- Lift the crankshaft sealing ring (1) with the special tool (2) **2 298 505**.

  Do not scratch the sealing surface on the engine block.



8 – Install the crankshaft seal

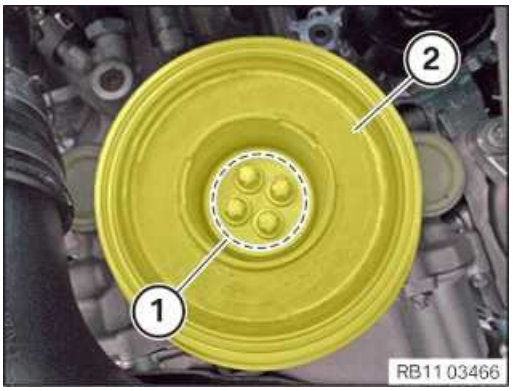
TECHNICAL INFORMATION

The radial shaft seal must be installed dry. Do not use engine oil or lubricant.

- Secure special tool **0 496 128 (11 8 801)** with special tool **0 496 129 (11 8 802)** to the crankshaft.

- Renew the crankshaft sealing ring (1).

  Parts: Crankshaft seal
- Position the crankshaft seal (1) on the special tool **0 496 128 (11 8 801)**.

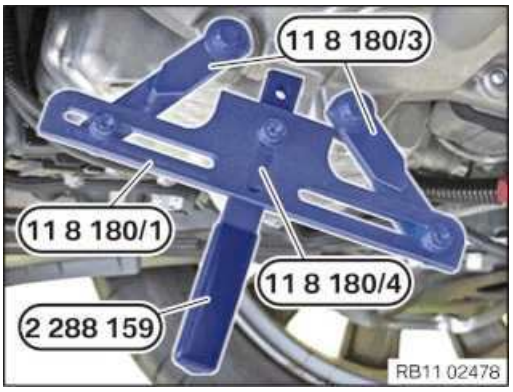


- Draw in the crankshaft sealing ring with the special tools **0 496 130 (11 8 803)** and **0 496 131 (11 8 804)**.
- Screw in special tool **0 496 130 (11 8 803)** until it is flush with the crankcase.
- Remove special tools **0 496 130 (11 8 803)** and **0 496 131 (11 8 804)**.

cardiagn.com

- Remove special tool **0 496 128 (11 8 801)**.

9 – Installing the vibration damper



- Position vibration damper (2).
- Renew screws (1).

  Parts: Bolts
- Fasten the vibration damper (2) with the bolts (1).
- Tighten the screws (1).

Vibration damper with belt pulley to crankshaft

M10x65	Renew screws. Tighten screws crosswise.	1. Jointing torque 2. Angle of rotation	40 Nm 60 °
		3. Angle of rotation	60 °

- Release the transmission bolts and remove the special tool **0 493 587 (11 8 180)**.

- Tighten transmission screws (1).

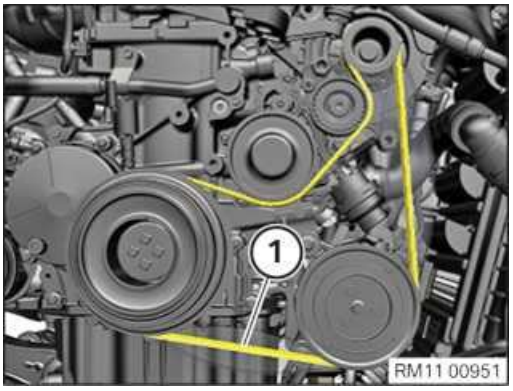
Transmission to engine

M8		Tightening torque	19 Nm

- Install protective cap (2).

POSTPROCESSES

10 – Installing the drive belt for alternator



TECHNICAL INFORMATION

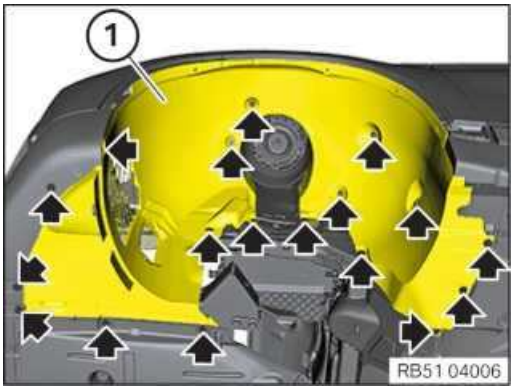
If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

cardiagn.com

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Feed in the drive belt for the alternator (1) and install it.



- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool **0 496 268 (11 0 390)** out of the belt tensioner and remove it.

11 – Installing the front right wheel arch cover

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

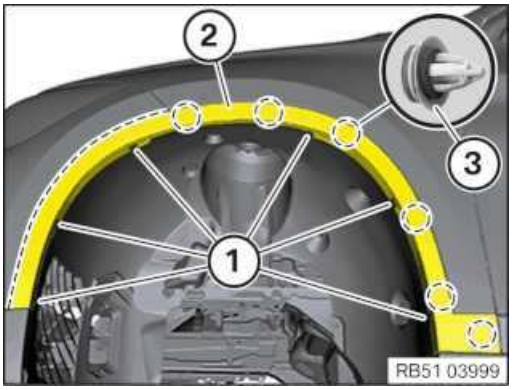
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**

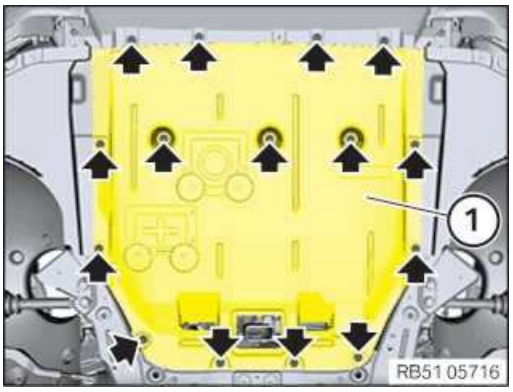


NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

cardiagn.com

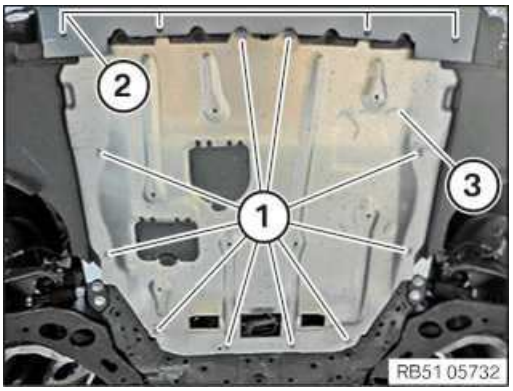
NOTICE



Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.



12 – Installing the front underbody protection

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

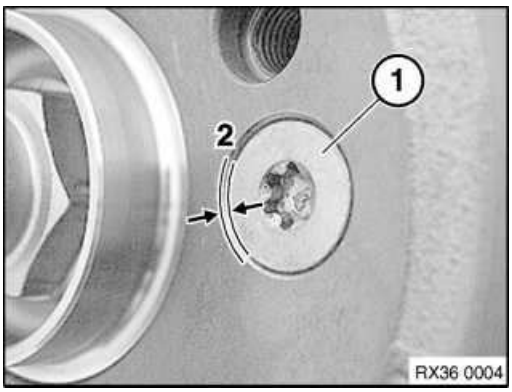
13 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

cardiagn.com

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

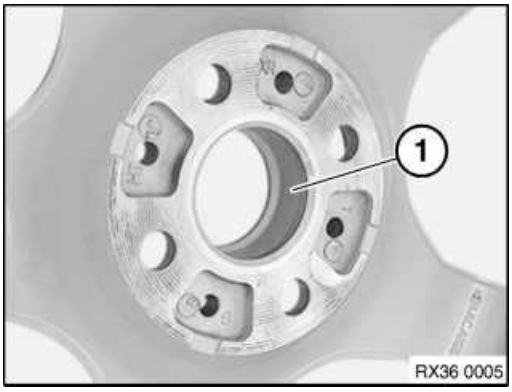


- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

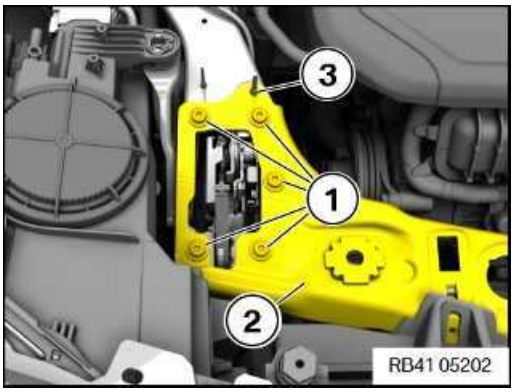
In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

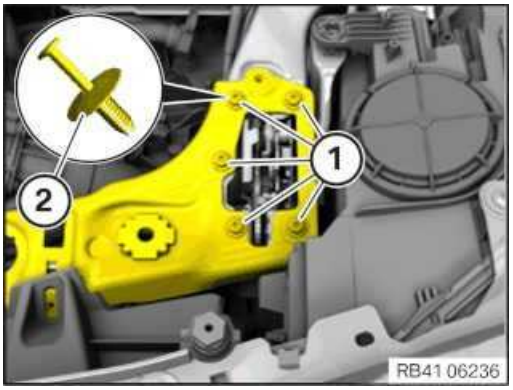
Wheel bolts



M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

cardiagn.com

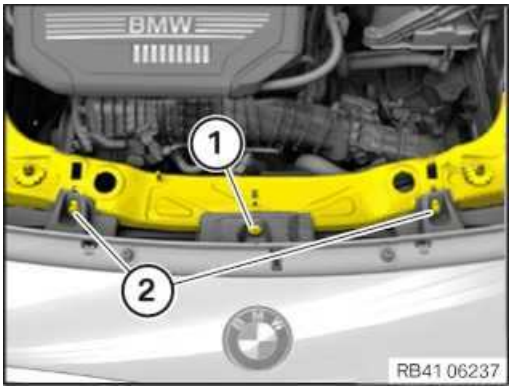
14 – Install front cross connection



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

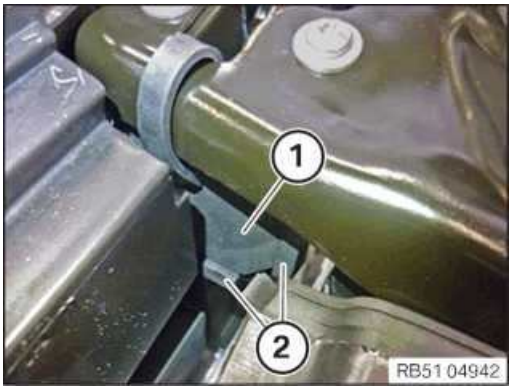
Screws M6x20		Tightening torque	11,8 Nm

- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

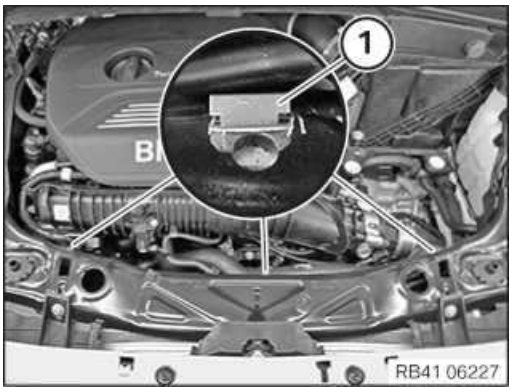
- Tighten down screws (2).



Air duct to upper connection

M6x20 screw		Tightening torque	11,8 Nm

- Tighten down screw (1).



Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm

- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

cardiagn.com

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

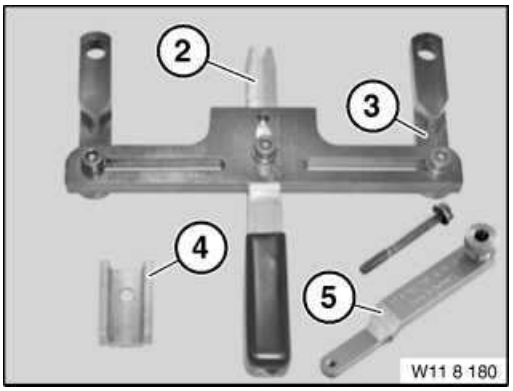
Overview of Special Tools



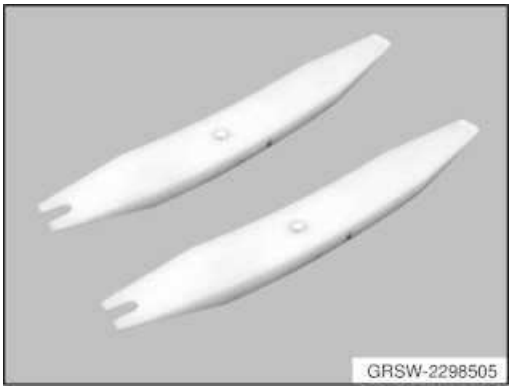
0 496 268 (11 0 390) Pin

Common Used in step 5 10

Usage	(roll pin) For securing new tensioning pulley (poly-V belt)
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 15 07 (390)

0 493 587 (11 8 180) Holder

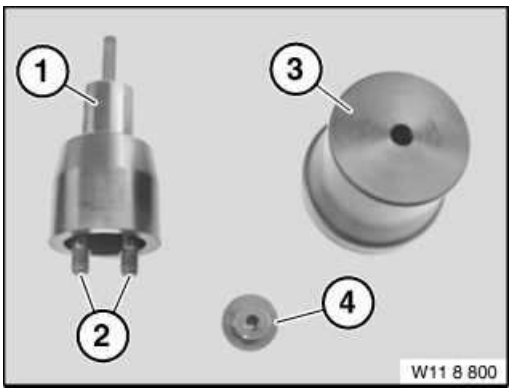
Common Used in step 6 9



Usage	(Counter support) Blocking flywheel when releasing and tightening down central bolts on vibration absorber
Included in the tool or work	
Storage location	B45
Replaced by	
In connection with	
SI-Number	01 12 99 (452)

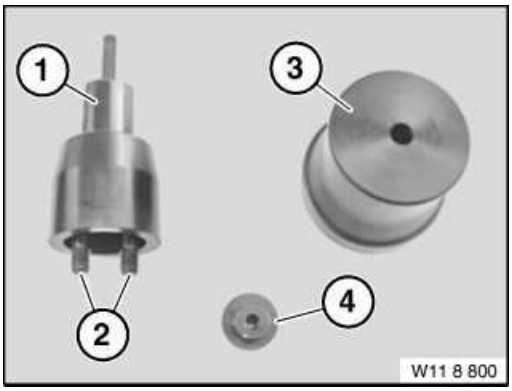
Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
2	0 494 433 (11 8 182)		**Shaped part** (shaped part)	
5	0 494 716 (11 8 185)		**Adapter** (Adapter with adjusting sleeve) E46 M47TU	
1	0 494 432 (11 8 181)	**0 494 434**	**Basic body** (Basic body) E65/M67, E38/M67 Discontinuation Replaced by 11 8 183 (0 494 434)	
3	0 494 434 (11 8 183)		**Basic body**	
4	0 494 435 (11 8 184)		**Adapter** E65 / M67	



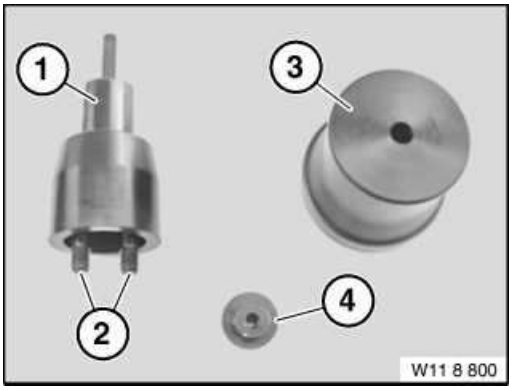
cardiagn.com

2 298 505 Wedge



Common	Used in step 7
Usage	Set (delivery of 2 pieces)
Included in the tool or work	
Storage location	C34
Replaced by	
In connection with	
SI-Number	01 03 12 (792)

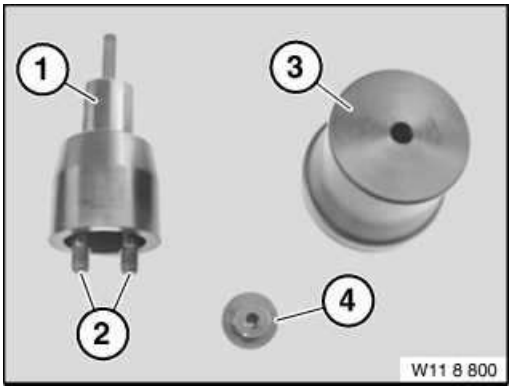
0 496 128 (11 8 801) Basic body



Common	Used in step 8
Usage	Available only as a complete tool set 11 8 800 = 83 30 0 496 127 - as of 30.11.2011
Included in the tool or work	0 496 127
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

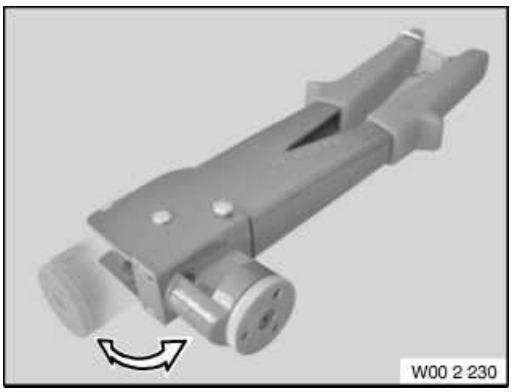
0 496 129 (11 8 802) Screw

Common	Used in step 8
Usage	(Set of screws) Can only be ordered as part of complete tool 11 9 660 = 0495955
Included in the tool or work	0 496 127
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)



0 496 130 (11 8 803) Holding sleeve

Common	Used in step 8
Usage	(Thrust piece) sale of existing inventory and then available as part of complete tool set 11 8 800 = 83 30 0 496 127 only - as of 30.11.2011
Included in the tool or work	0 496 127
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)



cardiagn.com

0 496 131 (11 8 804) Nut

Common	Used in step 8
Usage	(Nut with collar) available as part of set of tools 11 8 800 = 83 30 0 496 127 only - as of 30.11.2011
Included in the tool or work	0 496 127
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

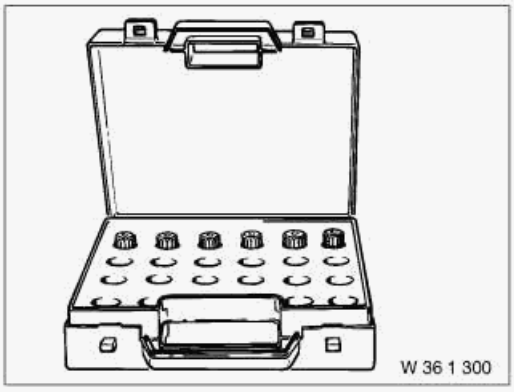
0 496 521 (00 2 230) Pliers

Common	Used in step 11
Usage	(Blind rivet pliers for plastic rivets) For shaft diameters of 3.5 mm, 3.9 mm and 4.5 mm
Included in the tool or work	
Storage location	C25
Replaced by	
In connection with	
SI-Number	01 17 08 (478)

2 344 011 Tool

Common	Used in step 13
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

Replacement tools:



0 495 221 (36 1 323) Wheel stud

Common	Used in step 2
Usage	(Code 30) Code 39 available separately, (see EPC) under 36 13 1 181 259
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number

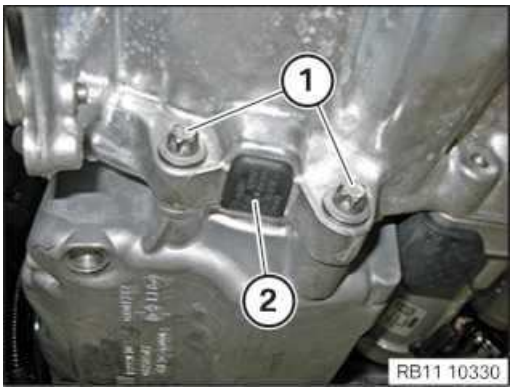
Operating materials	Used in step
2.0 Grease for wheel centring	13

cardiagn.com

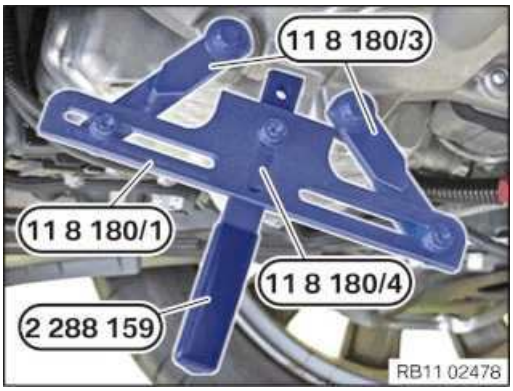
11 23 010 Removing and installing/replacing vibration damper (B48AO0)



Special tools required:

- 11 8 180
- 2 288 159

Necessary preliminary tasks:

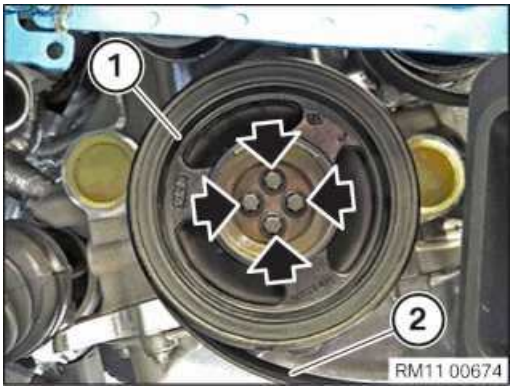


- Release drive belt for alternator

Removal:

Undo the transmission bolts (1).

Remove protective cap (2).



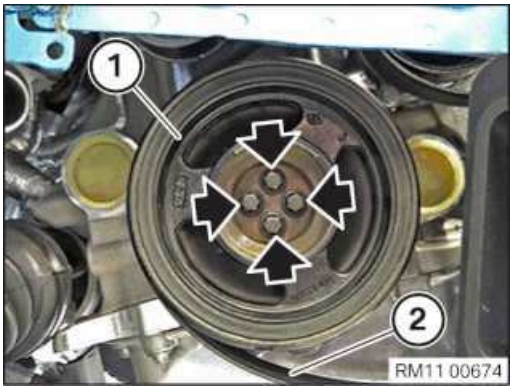
Prepare special tool 11 8 180 /1 with special tool 11 8 180 /3, 11 8 180 /4 and 2 288 159 .

Fix the special tool 11 8 180 with the housing screws.

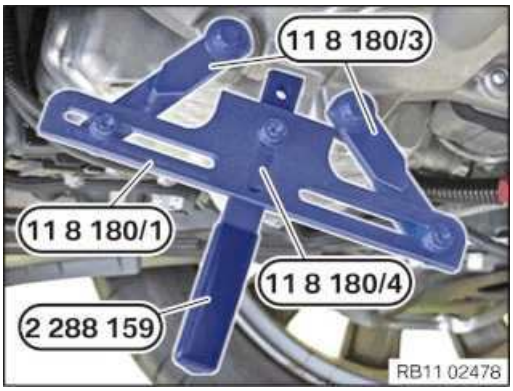
Slide the special tool 2 288 159 in the gearbox housing and fix the flywheel.

Tighten down all screws.

cardiagn.com



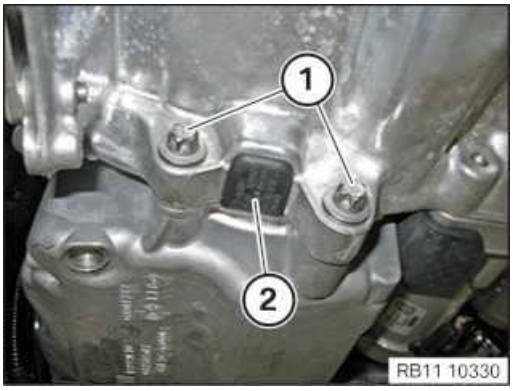
Slacken all screws on the vibration damper (1).
Feed out and remove vibration damper (1) from drive belt.



Replacement:

- Replacing front crankshaft seal

Installation:



Position vibration damper (1).
Route drive belt (2) properly over the vibration damper.
Tighten down all screws.
Tightening torque 11 23 1AZ.

Undo the Torx screws.
Remove special tool 11 8 180 with 2 288 159 .

cardiagn.com

Tighten down Torx screws (1).

Tightening torque 23 00 1AZ.

Mount protective cap (2).

Required reworking:

- Tension drive belt for alternator

cardiagn.com

11 24 571 Replace all connecting rod bearings (B47)

Necessary preliminary tasks:

- Removing all pistons

Important!

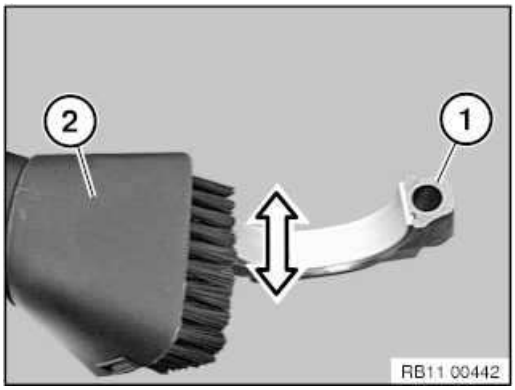
The connecting rod bearing shells for the connecting rod and the connecting rod bearing cap are **different**.

Dark connecting rod bearing shell must be mounted in connecting rod.

Light connecting rod bearing shell must be mounted in connecting rod bearing cap.

Replace connecting rod bolts.

Removal:

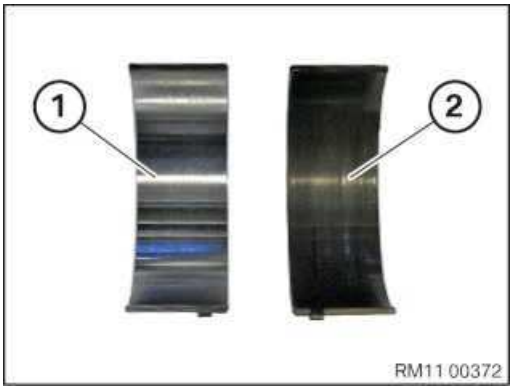


Remove connecting rod bearing (2) from connecting rod (1).

Remove connecting rod bearing (2) from connecting rod bearing cap (1).

Installation:

cardiagn.com



Important!

New connecting rods must be vacuum cleaned prior to installation.

Do not use compressed air to blow off cracked areas.

Use a commercially available vacuum cleaner (2) to vacuum clean cracked areas (1).

One light connecting rod bearing shell (1) and one dark connecting rod bearing shell (2) must be installed per connecting rod.

Clean connecting rod eye (1).

Insert dark connecting rod bearing shell (2) into connecting rod (1).

Oil connecting rod bearing shell (2).

Clean connecting rod bearing cap (1).

Insert light connecting rod bearing shell (2) into connecting rod bearing cap (1).

Oil connecting rod bearing shell (2).

Required follow-up work:

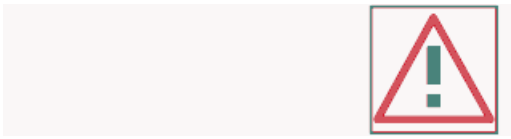
- Install all pistons

cardiagn.com

11 25 000 Removing and installing or replacing all pistons (B47)

Special tools required:

- 11 8 860
- 2 318 460
- 11 4 492
- 11 8 140
- 00 2 530



Warning!

Protective goggles must be worn when working on the piston pin circlip.

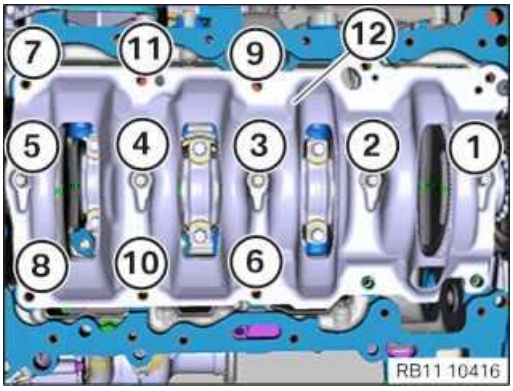
Necessary preliminary tasks:

- Remove engine with transmission.
- Remove transmission.
- Mount engine on assembly stand.
- Remove cylinder head.
- Remove oil pump with vacuum pump.

Important!

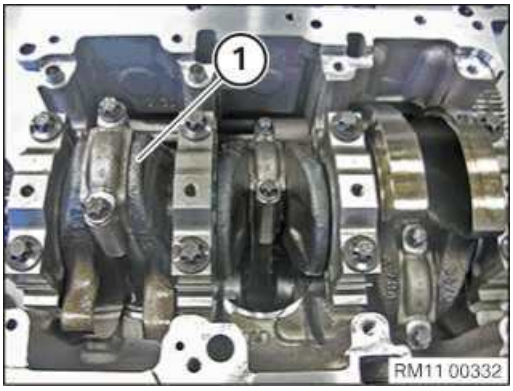
If pistons, connecting rods and connecting rod bearing shells are reused, they must be reinstalled in the same places.

Individual connecting rod replacement is not permitted; they are classified by weight class.



Connecting rods and connecting rod bearing caps are denoted with the same pairing letters. Mixing up the components will result in engine damage.

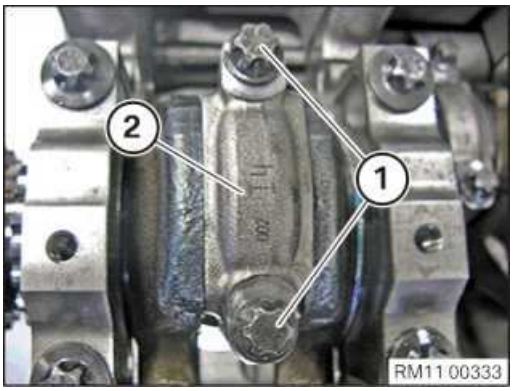
Piston and gudgeon pins are paired and must not be fitted individually or confused.



Removal:

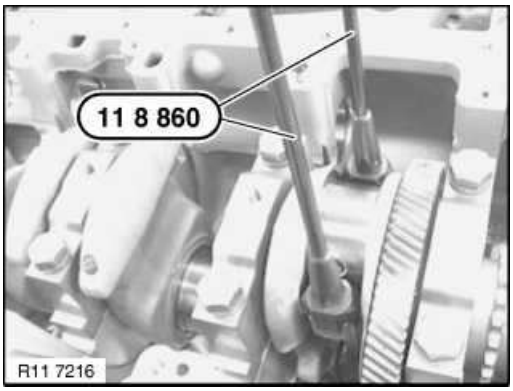
cardiagn.com

Remove screws in the sequence **11 - 1**.



Remove reinforcement (12).

Important!



Position crankshaft (1) vertically.

Proceed with care at the cylinder wall and oil spray nozzles **Risk of damage**!

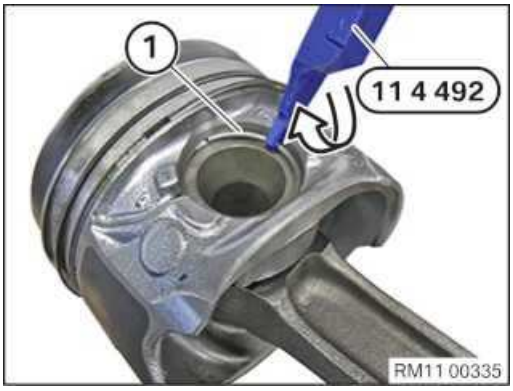
Undo the connecting rod bolt (1).

Remove connecting rod bearing caps (2) and set down in neat order.

Screw special tool 11 8 860 in at large connecting rod eye.

Remove piston and connecting rod.

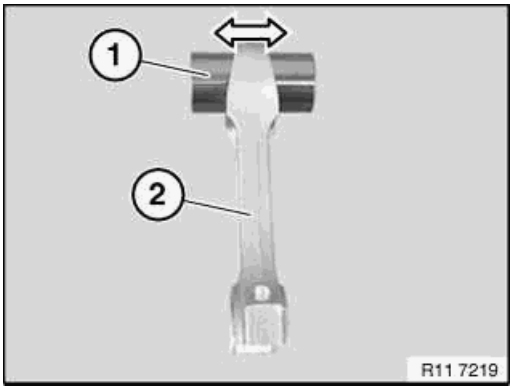
cardiagn.com



Position piston (1) with connecting rod on special tool 2 318 460 .

Warning!

Safety goggles must be worn for the next operation.



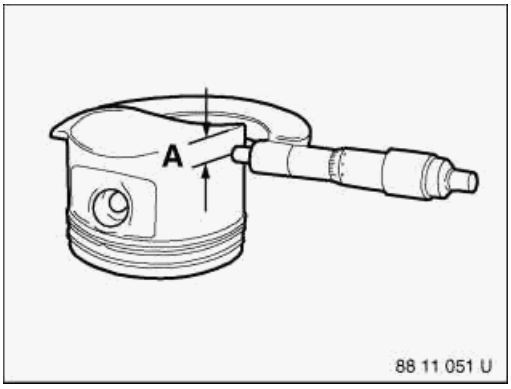
Warning!

Safety goggles must be worn.

Lever out piston circlip (1) with special tool 11 4 492 in direction of arrow.**Important!**

Piston and gudgeon pin are matched to each other.

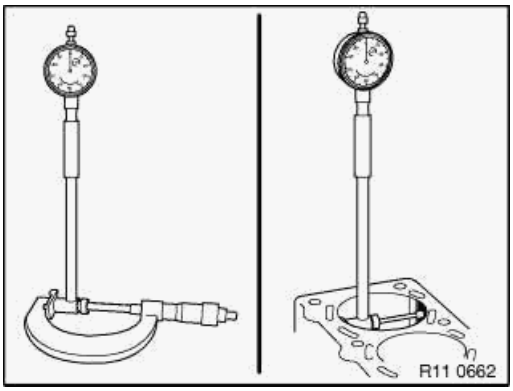
They must not be mixed up.



Note:
It must be possible to press gudgeon pin (1) through the bush (small connecting rod eye) with little force; it must not reveal any noticeable play.

Remove gudgeon pin (1) from piston (2) and connecting rod (3).*Note:*
Graphic B48

Installation:



cardiagn.com

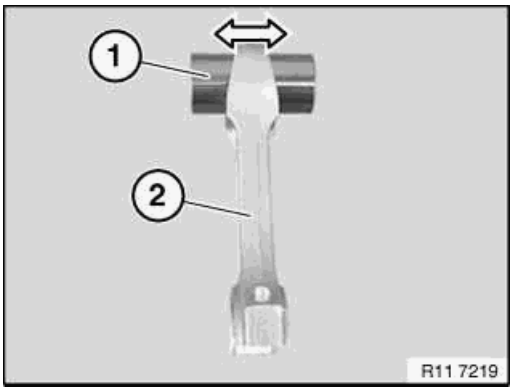
Before installation, measure piston installation clearance. Measure piston diameter with micrometre screw at measuring point A from lower edge of piston and offset at 90° to the axis of the gudgeon pin.

Distance A,

Refer to Technical Data.

Adjust micrometre screw to cylinder bore of engine block. Set internal measuring device at micrometer screw to zero. Measure bottom, centre and top of cylinder bore in direction of travel and direction of rotation.

Diameter of the cylinder bore,



Technical Data.

Piston installation clearance,

Technical Data.

Permitted total wear clearance,

Technical Data.

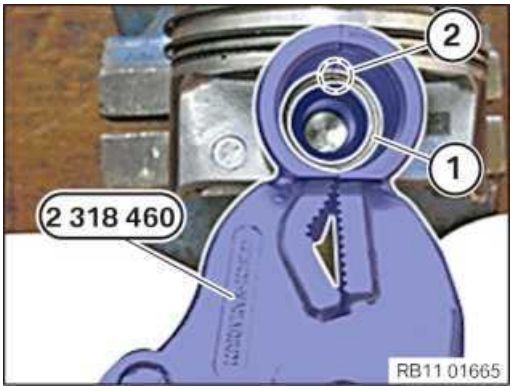
Clean and oil connecting rod bearing.

If necessary, replace connecting rod bearing.

Note:
It must be possible to press gudgeon pin (1) through the bush (small connecting rod eye) and must not display any significant play.

Install gudgeon pin (1) in piston (2) and connecting rod (3).

Note:
Graphic B48

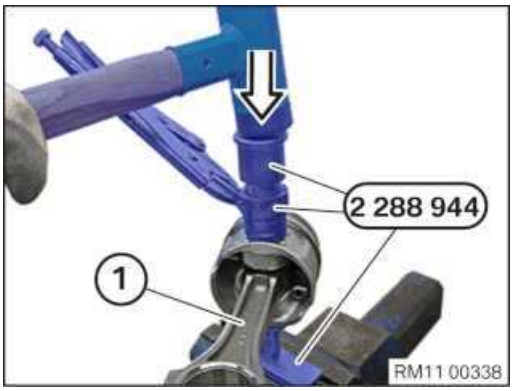


Warning!

Safety goggles must be worn for the next operation.

Pre-tension gudgeon pin circlip (1) in special tool 2 318 460 .

cardiagn.com

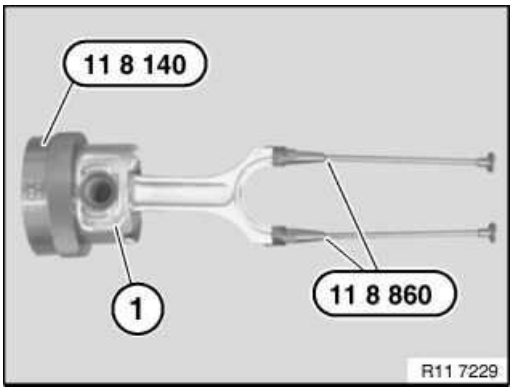


Important!

Insert the circlip (1) in a way that the opening (2) points towards the piston crown.

Note:
Make sure the tool is positioned correctly.

Important!



Piston and gudgeon pin are matched to each other.

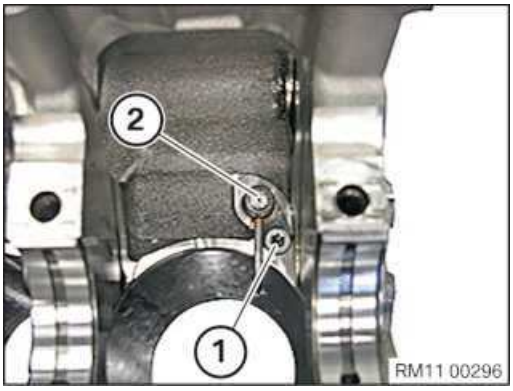
They must not be mixed up.

Install circlip so that opening is opposite recess.

Insert connecting rod with gudgeon pin into piston.

Drive in gudgeon pin circlip in direction of arrow.

Align contact points of piston rings (offset at approx. 120°, but do not arrange over gudgeon pin boss).



Lightly coat pistons and piston rings with oil.

Prepare piston with piston rings on special tool 11 8 140 .

Screw special tool 11 8 860 on at large connecting rod eye.

Pay attention to the protective edge for the cylinder wall.

cardiagn.com

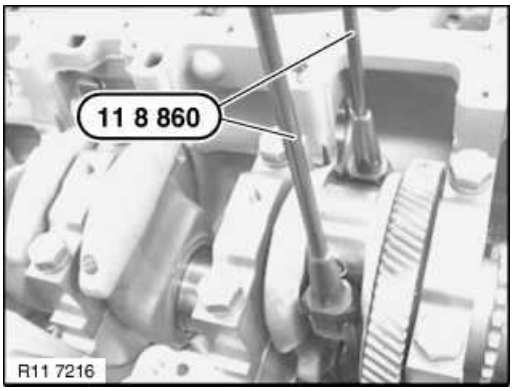
Important!

Oil spray nozzles (2) must not be maladjusted or bent.

A bent oil spray nozzle cannot be adjusted and must be replaced.

Release screw (1) and remove oil spray nozzle (2).

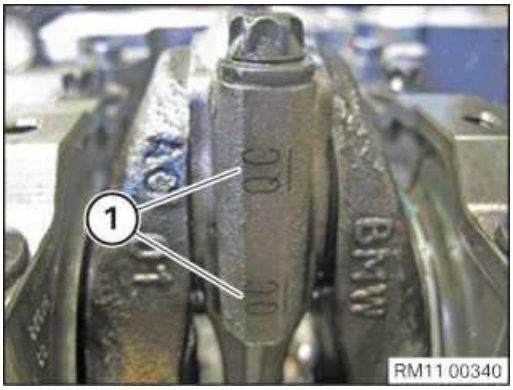
Insert piston (1) with connecting rod in cylinder.



Important!

Risk of piston ring breakage.

Risk of damage to oil spray nozzle.

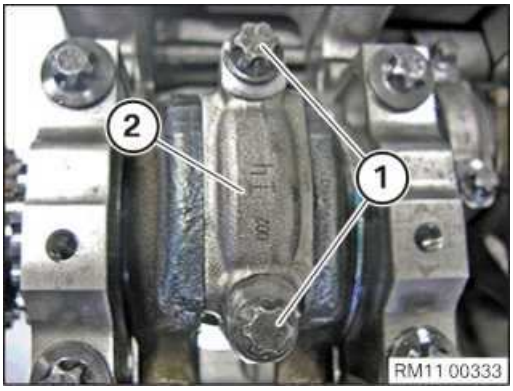


Only press pistons in with finger force - do **not** knock in!

Insert piston so that the arrow points in direction of cylinder 1.

Slide connecting rod eye onto crankshaft.

Remove special tool 11 8 860 from large connecting rod eye.

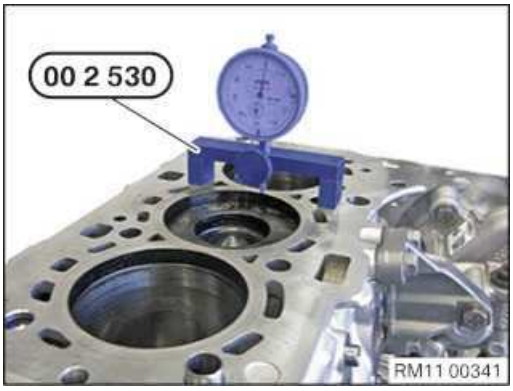


Clean and oil connecting rod bearing.

If necessary, replace connecting rod bearing.

Mount connecting rod bearing caps so that pairing letters (1) match.

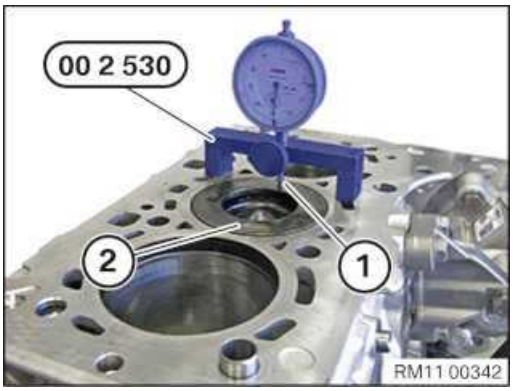
Bolt piston (1) with connecting rod to crankshaft.



cardiagn.com

Parts: Replace connecting rod bolt (1).

Tighten connecting rod bolts (1).

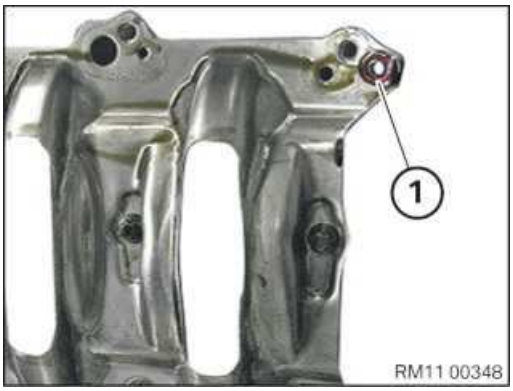


Tightening torque: 11 24 1AZ.

The gasket thickness must be recalculated when repair work is carried out on the crankshaft drive or pistons.

Measuring the **piston protrusion:**

Position dial gauge with measuring fixture special tool 00 2 530 on cleaned engine block sealing surface. Set dial gauge to zero under preload.



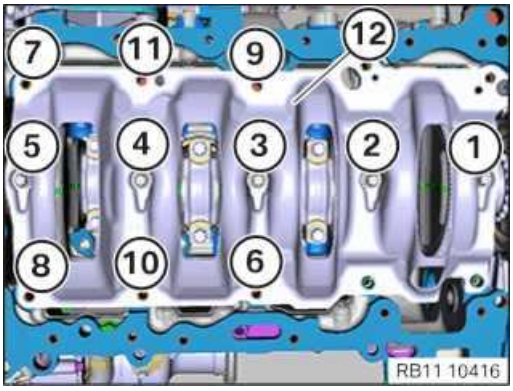
Position piston at TDC.

Clean piston at measuring points (1 and 2).

Position dial gauge at measuring point (1) on piston. Determine highest point by turning crankshaft.

Measure and note down piston protrusion at measuring points (1 and 2) on all pistons.

Determine thickness of cylinder head gasket.



Important!

Sealing ring (1) must not be damaged or missing.

Check centring bushes for damage, replace if necessary.

cardiagn.com

Parts:

- Replace reinforcement (12).
- Renew screws (1 - 5).

Install reinforcement (12).

Tighten screws in the sequence **1 - 5**.

Tightening torque: 11 41 3AZ.

Tighten screws in the sequence **6 - 11**.

Tightening torque: 11 41 4AZ.

Required follow-up work:

- Install oil pump with vacuum pump.
- Install cylinder head.
- Remove engine from assembly stand.
- Attach transmission.
- Install engine with transmission.
- Check engine function and leak tightness.

cardiagn.com

This documentation refers to special tools that were not yet available when going to press.

11 25 000 Removing and installing/replacing all pistons

PRELIMINARY WORK

1 – Removing engine

- See additional information.

2 – Removing the acoustic cover

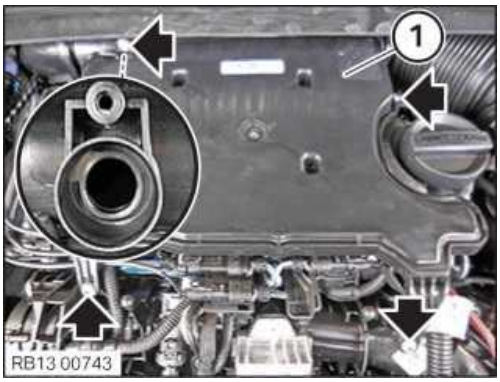
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

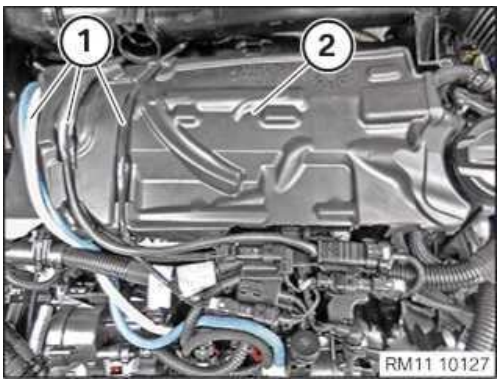


Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

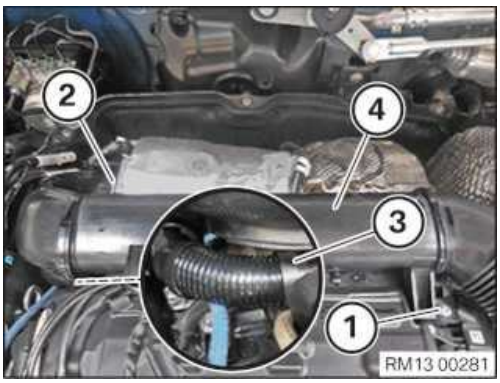


3 – Remove resonator

- Remove screws (arrows).
- Guide out and remove the resonator (1).

cardiagn.com

4 – Remove the acoustic cover for the injectors



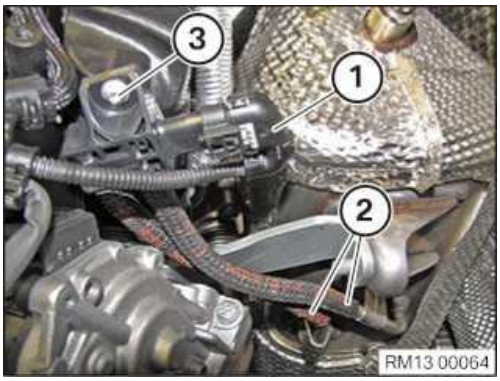
- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

5 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

6 – Remove differential pressure sensor

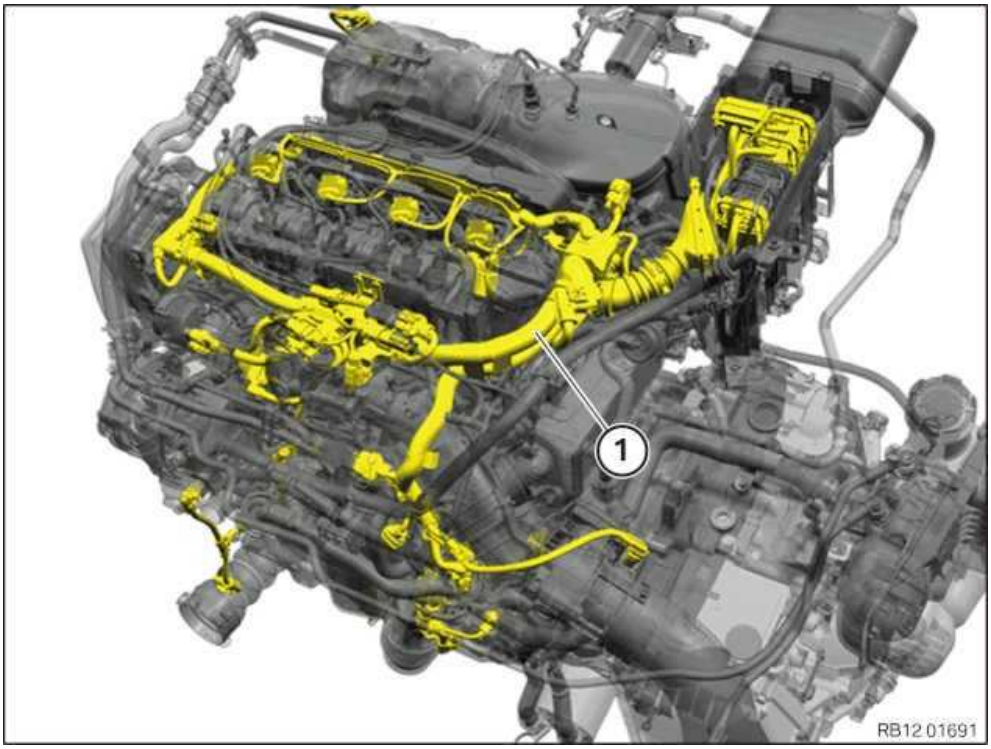


RISK OF DAMAGE

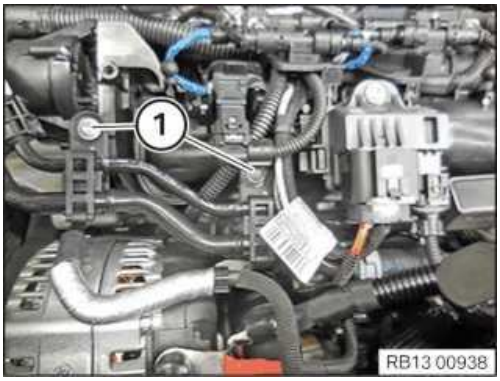
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



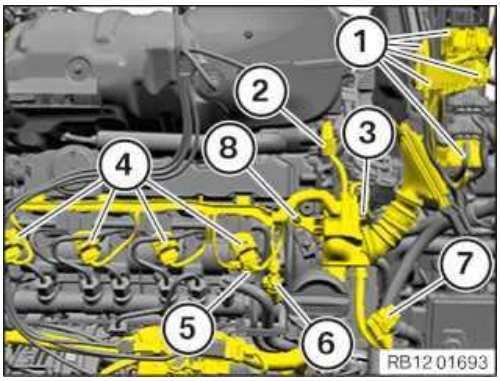
cardiagn.com



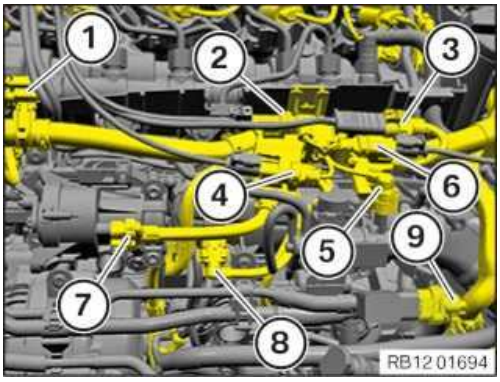
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

7 – Removing assemblies (on lifting table)

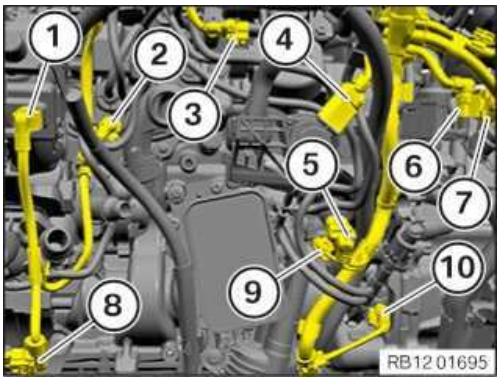
Overview: Wiring harness section for the engine



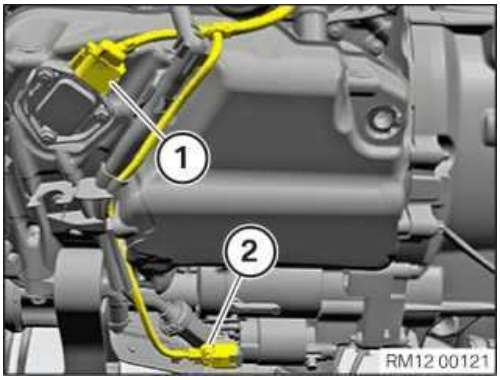
1 Wiring harness section for the engine



- Loosen screws (1).

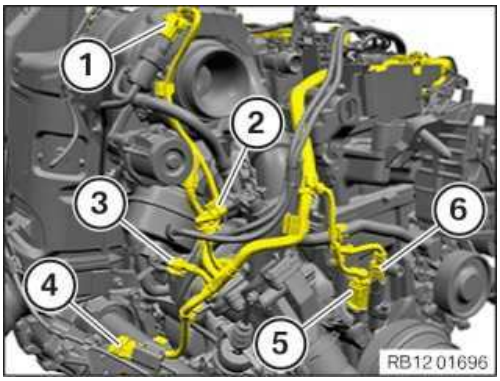


cardiagn.com

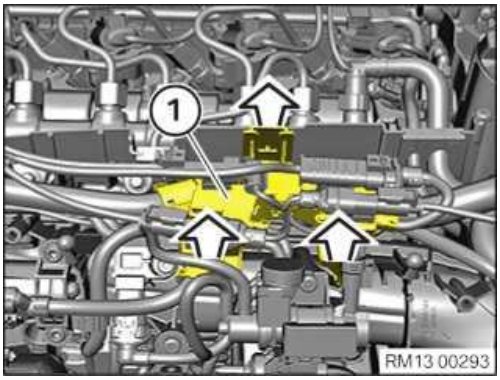


- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).

- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock connector (3) and pull it off from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

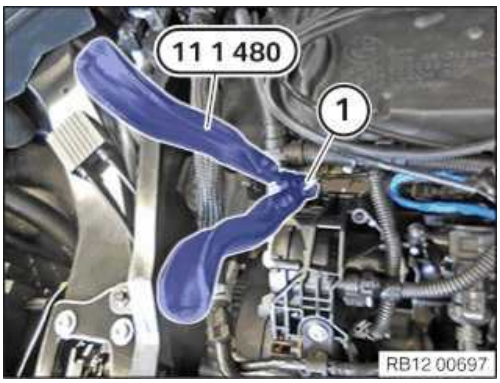


- Unlock and disconnect the connector (1) from the alternator.
- Unlock and disconnect the connector (2) from the electric changeover valve.
- Unlock and disconnect the connector (3) from the electric changeover valve.
- Unlock the connector (4) and pull it off the high pressure pump.
- Unlock the connector (5) and disconnect it from the oil pressure sensor.
- Unlock connector (6) and pull off from throttle body.
- Unlock the connector (7) and disconnect it from the intake air temperature sensor.
- Unlock the connector (8) and disconnect it from the air conditioning compressor.
- Unlock and disconnect the connector (9) from the solenoid valve.
- Unlock the connector (10) and pull it off the crankshaft sensor.

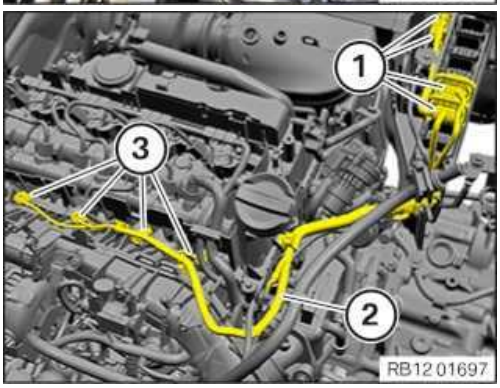


- Unlock the connector (1) and pull off of the oil-level sensor.
- Unlock connector (2) and remove from starter motor.

cardiagn.com



- Unlock the connector (1) and disconnect it from the exhaust gas pressure sensor.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock the connector (3) and pull it off the exhaust turbocharger.
- Unlock the connector (3) and disconnect it from the differential pressure sensor.
- Unlock connector (4) and pull it off from the monitoring oxygen sensor.
- Unlock the connector (5) and pull it off the oil pressure switch .
- Unlock connector (6) and disconnect from switching valve.
- Detach, feed out and remove the wiring harness from the clamps.



▶ **Removing the cable clips from the intake plenum**

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Pull off all connectors (3) from glow element using special tool **0 490 796 (11 1 480)**.
- Loosen screw (2) and remove the ground strap.
- Detach, feed out and remove the wiring harness from the clamps.

▶ **Removing the drive belt for alternator**

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

cardiagn.com

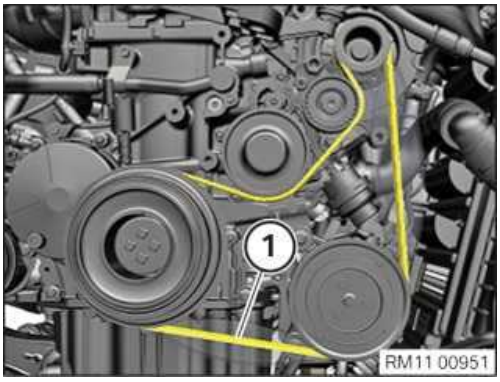
CAUTION

Component with preload.

Danger of injury!

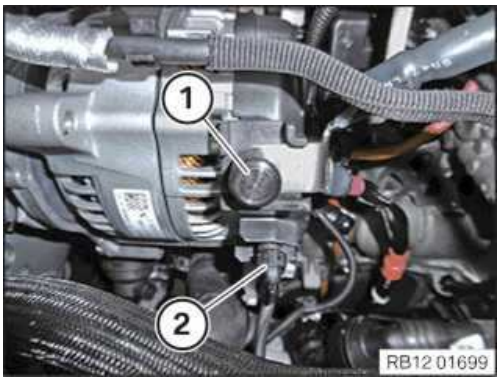
- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION



If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

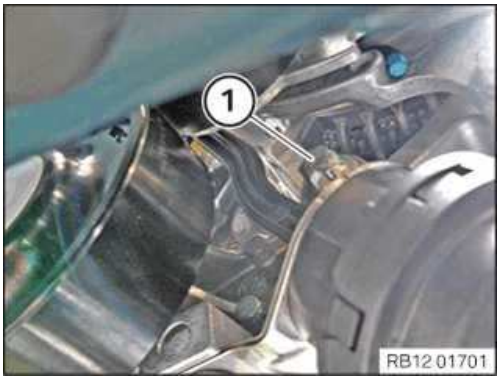
TECHNICAL INFORMATION



The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool **0 496 268 (11 0 390)**.

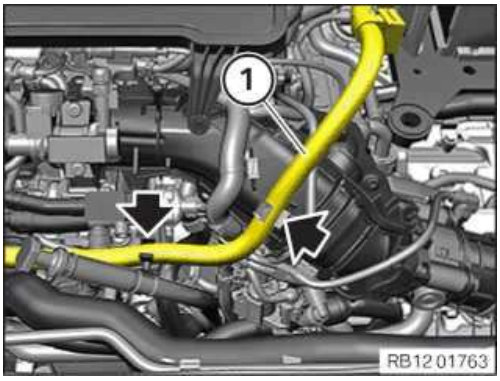
- Guide out the drive belt for the alternator (1) and remove it.



- Remove the cover (1) and loosen the nut below.
- Disconnect positive battery cable from alternator.
- Unlock and disconnect the connector (2) from the alternator.

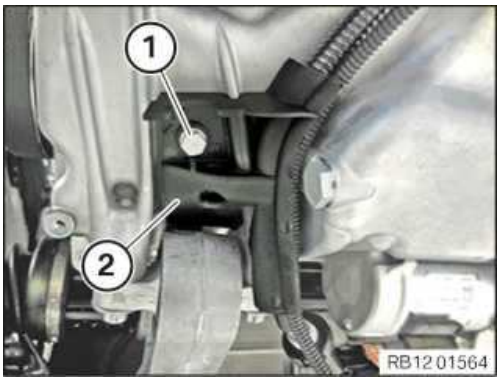
cardiagn.com

- Detach screw (1) on top on the alternator.



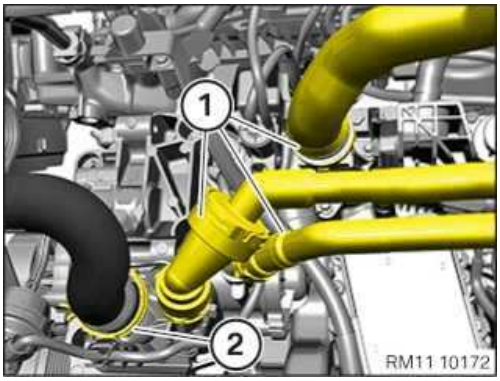
- Detach screw (1) below on the alternator.

- Feed out alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support and remove.



- Loosen screws (1).
- Feed out and remove the air conditioning compressor (2).

- Release the positive battery cable (1) from the clamps (arrows).

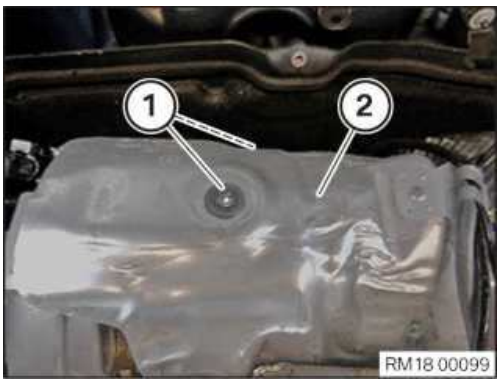


cardiagn.com

- Loosen screw (1).
- Guide out and remove holder (2).

- Feed out positive battery cable from the clamps (1) and remove.

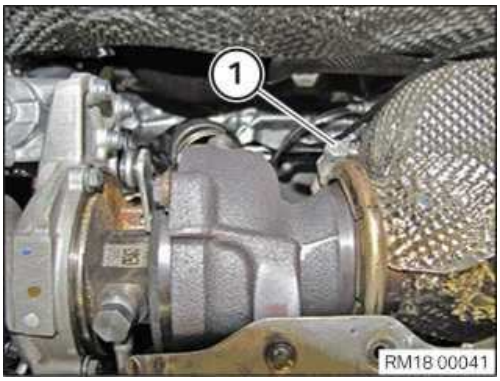
- Unlock and disconnect coolant lines (1).
- Guide out the coolant lines (1) and remove it.
- Detach the clamp (2).
- Guide the coolant hose out and remove.



▶ **Removing heat shield from top exhaust turbocharger**

WARNING

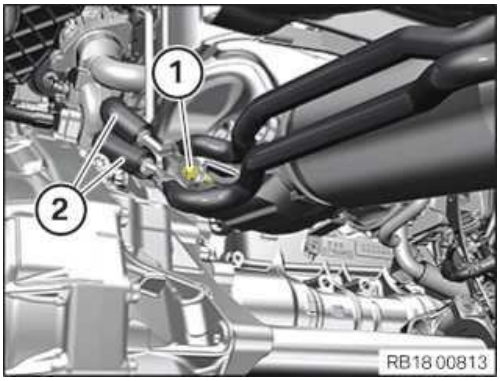
Hot surfaces.



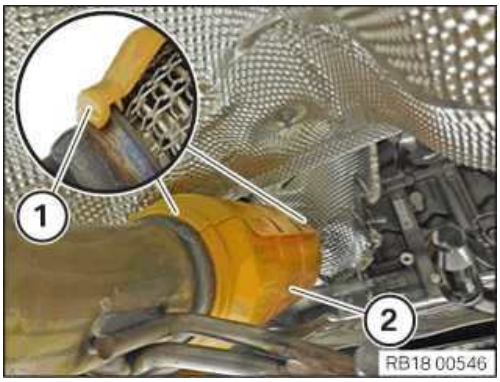
Risk of burning!

- Perform all work only on components that have cooled down.

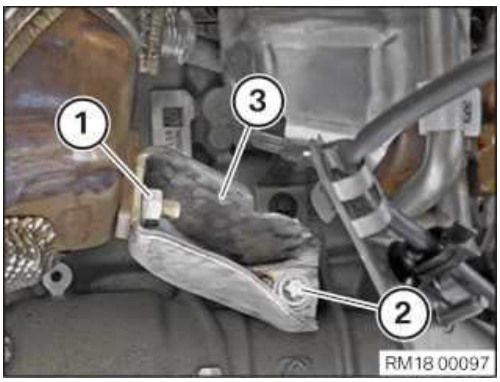
- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).



cardiagn.com

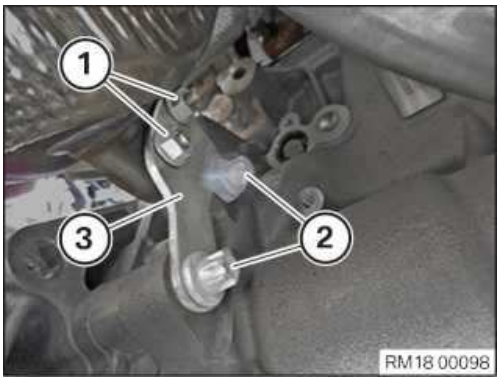


- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



- Loosen nuts (1).

- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

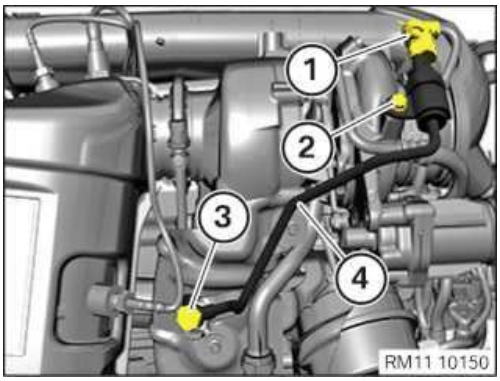


- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.

- Loosen nut (1).
- Loosen screw (2).
- Remove holder (3).

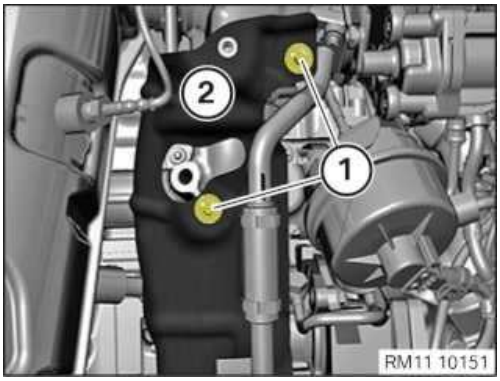
cardiagn.com

- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).
- Guide out and remove diesel particulate filter .



▶ **Remove the heat shield from the exhaust turbocharger at the bottom**

WARNING



Hot surfaces.

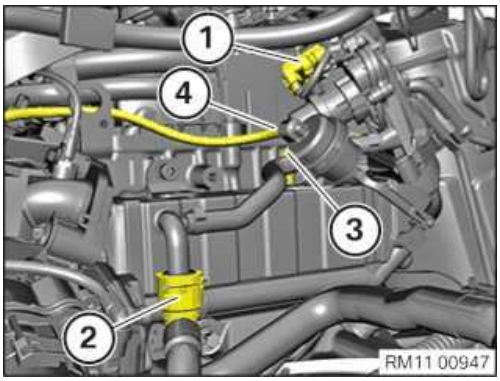
Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).

▶ **Removing the exhaust-gas recirculation cooler**

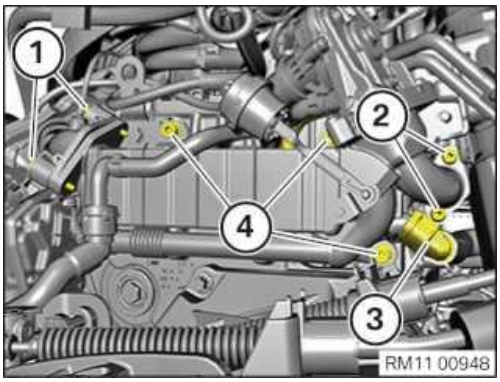


WARNING

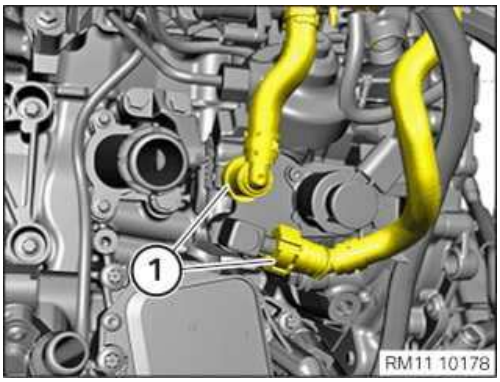
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

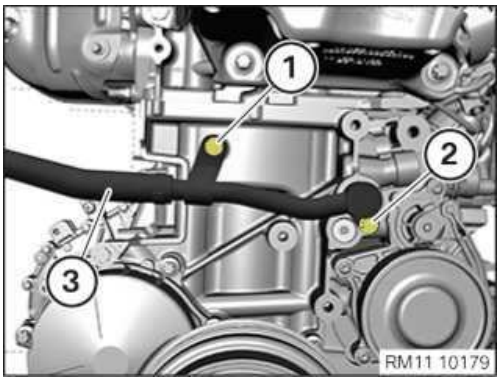


cardiagn.com



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



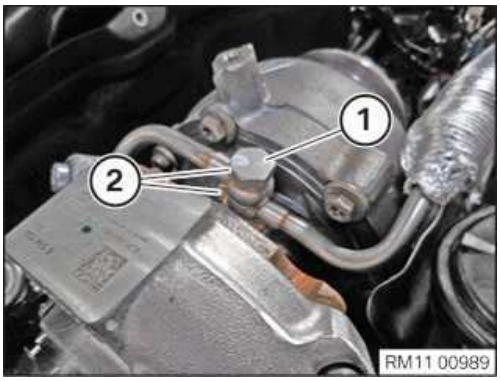
- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

- Unlock the fuel lines (1) and disconnect from the high pressure pump.
- Remove the fuel lines.

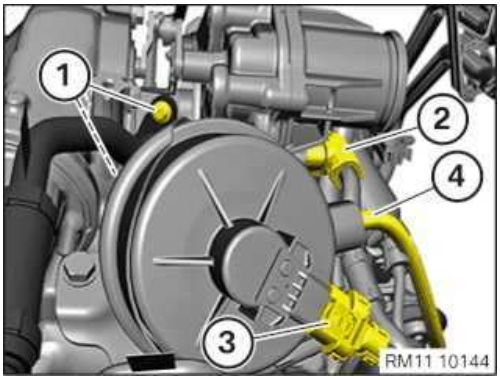
- Loosen screws (1) and (2).
- Remove coolant line (3).

8 – Removing the low-pressure stage turbocharger



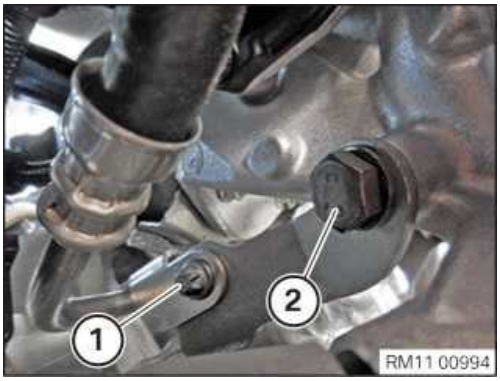
WARNING

Hot surfaces.



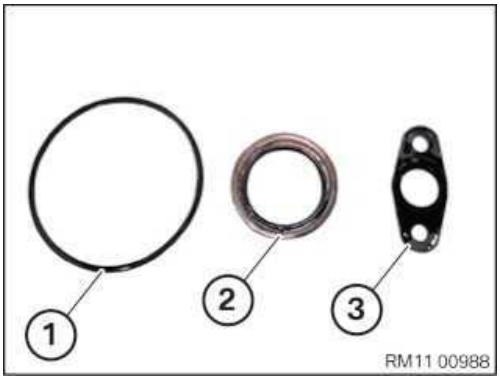
Risk of burning!

- Perform all work only on components that have cooled down.



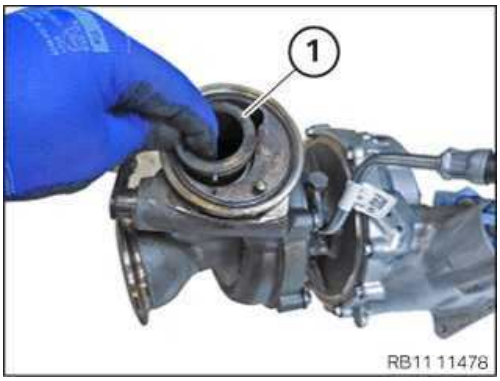
cardiagn.com

- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.



- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.

- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).



- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

cardiagn.com

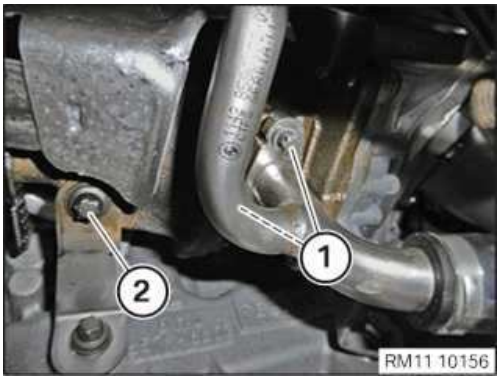
- Remove the spacer ring (1).

9 – Removing the high-pressure stage exhaust turbocharger

WARNING

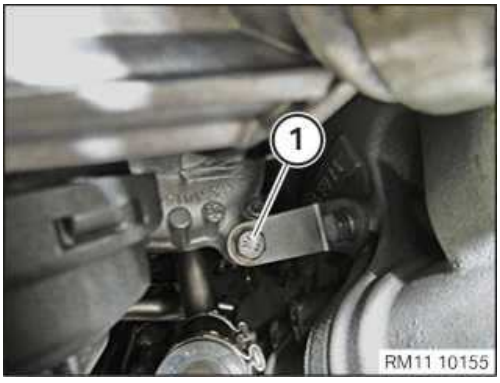
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

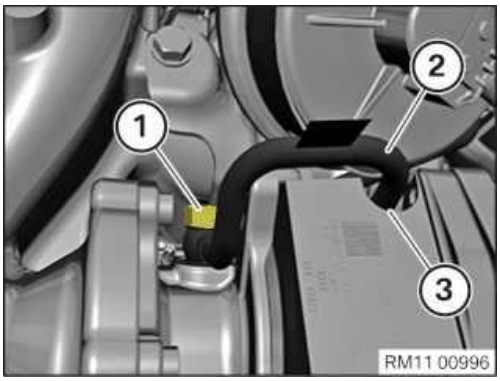
CAUTION



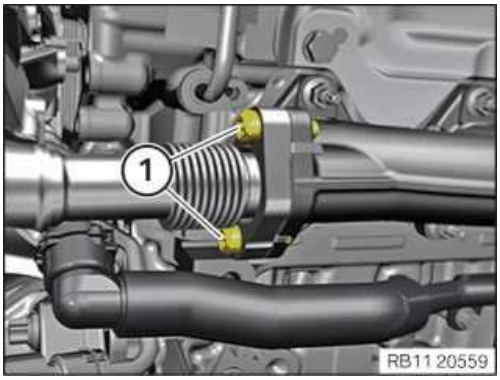
Heavy component.

Heavy components can lead to injury or damage.

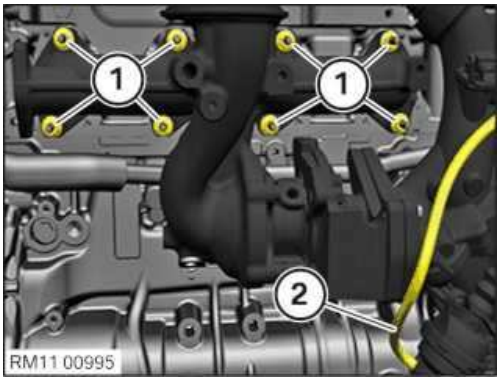
- Remove and install heavy components with the aid of another person/other persons.



- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).

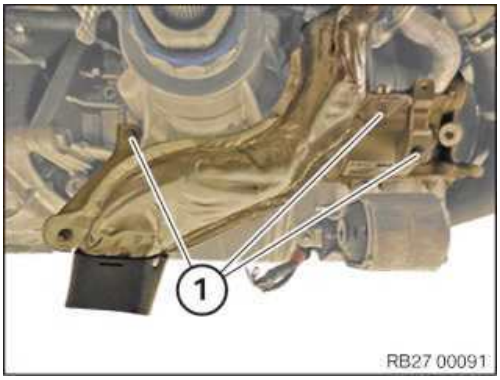


- Release screw (1) from the right wheel arch.

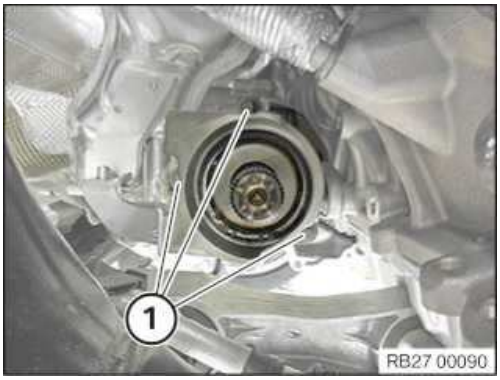


cardiagn.com

- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

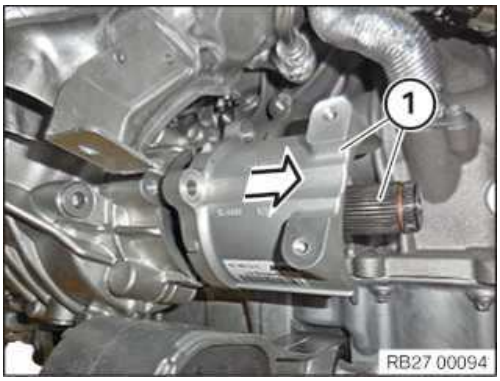


- Loosen screws (1).

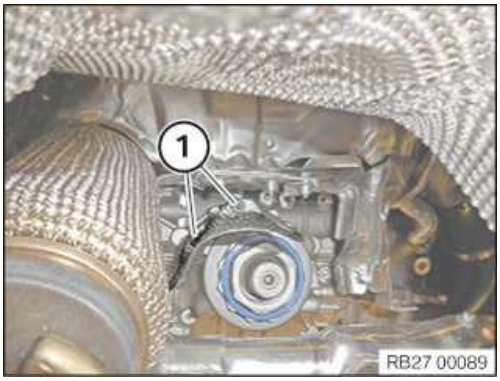


- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

10 – Remove the intermediate shaft with the support tube

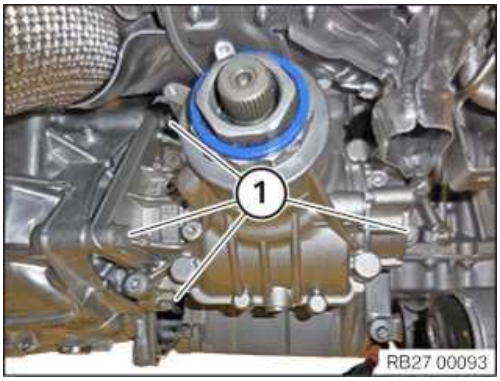


- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).

cardiagn.com



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

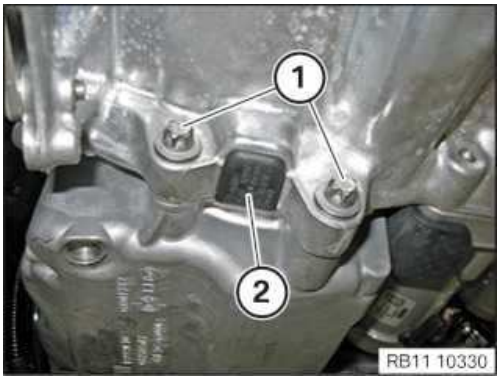
11 – Remove transfer box (VTG)

- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

12 – Detach the engine from the manual gearbox

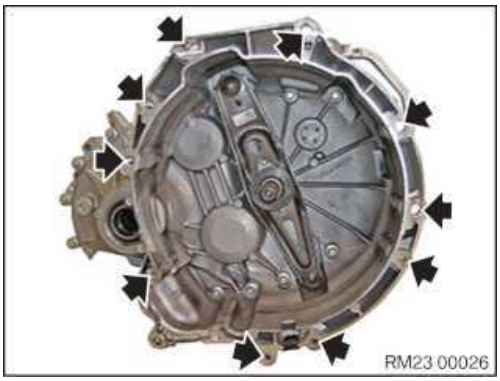
Prerequisite



Engine has been removed.

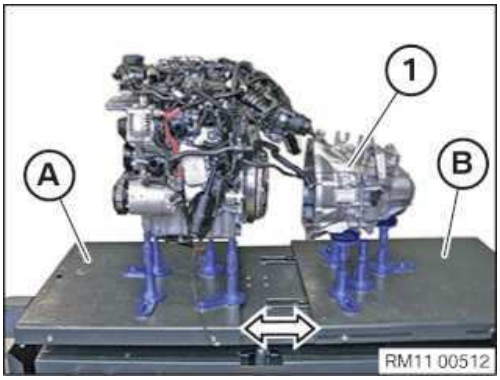
CAUTION

Heavy component.



Heavy components can lead to injury or damage.

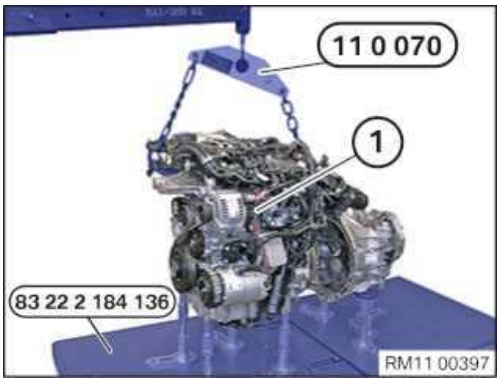
- Remove and install heavy components with the aid of another person/other persons.



- Loosen screws (1).
- Remove protective cap (2).

cardiagn.com

- Remove screws (arrows).



- Slide the table top (B) in the direction of the arrow and slide the manual gearbox (1) to the side.

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

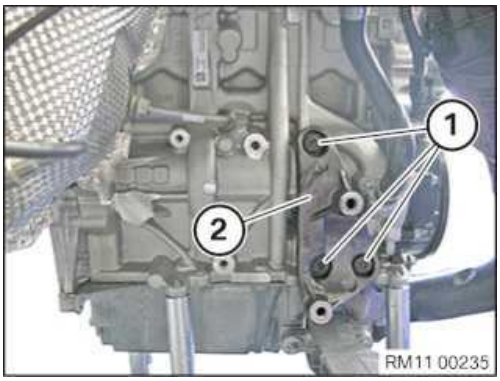
M8		Tightening torque	21,5 Nm

- Attach engine lifter to special tool and lift engine (1) off lifting table.

13 – Mount engine on assembly stand

CAUTION

Heavy component.



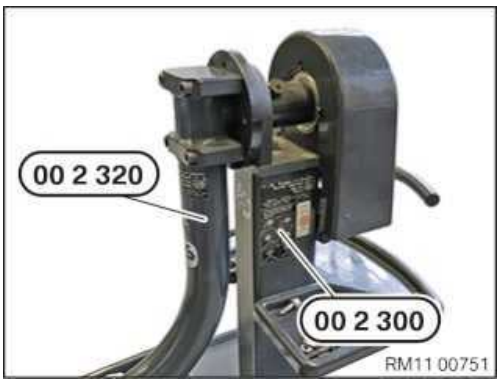
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

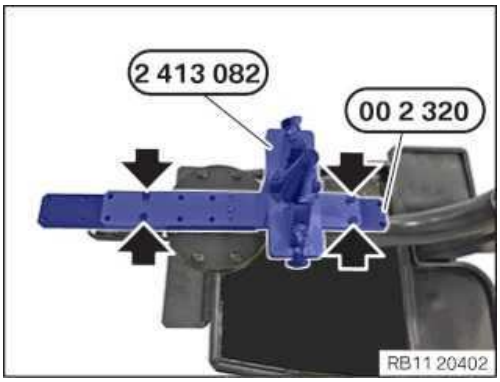
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com



- Loosen screws (1).
- Guide out and remove holder (2).



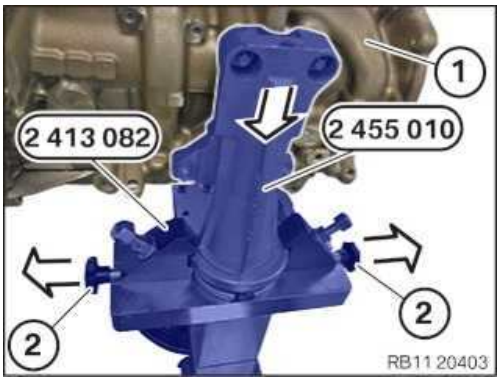
- Position the special tool **2 455 010** on the engine (1).
- Position the standard bolts **M10x30**.
- Tighten the standard bolts (arrows).
-

Special tool 2 455 010 to crankcase

M10x30		Tightening torque	38 Nm

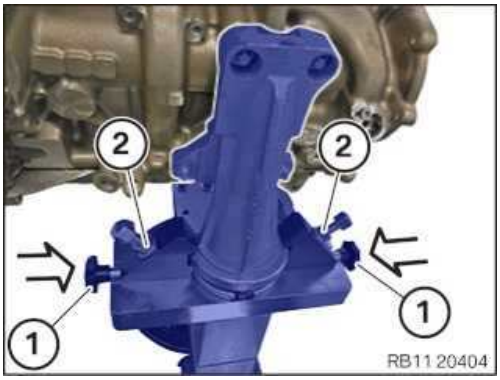
- Prepare the assembly stand **0 495 187 (00 2 300)** with the special tool **0 495 196 (00 2 320)**.

- Screw the special tool to the **0 495 196 (00 2 320)** special tool.
- Tighten screws (arrows).
-



Special tool 11 8 930 to special tool 00 2 320

M14x35		Tightening torque	160 Nm

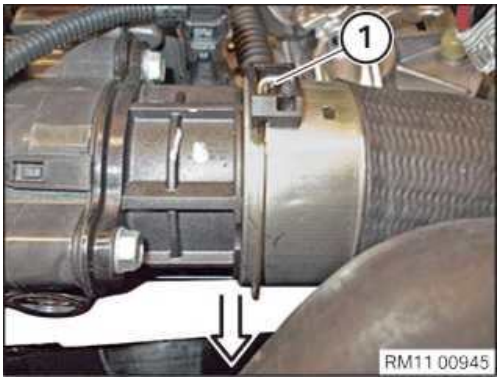


- Position the engine lifter with the special tool and the engine on the special tool **0 495 187 (00 2 300)**.

cardiagn.com

- Detach the holder (2) in the direction of the arrow.
- Position the engine (1) with the special tool **2 455 010** in the direction of the arrow on the special tool .

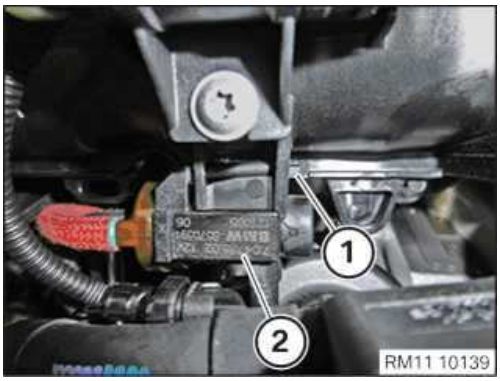
- Lock the holder (1) in direction of arrow.
- Tighten nuts (2).



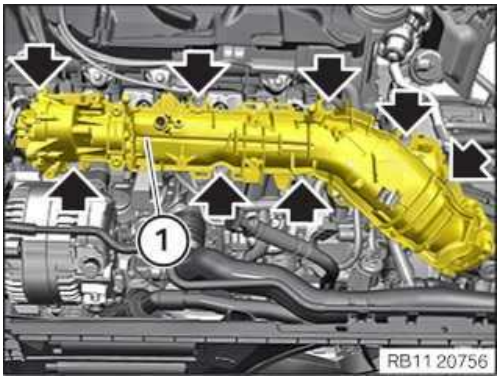
14 – Removing the intake plenum

TECHNICAL INFORMATION

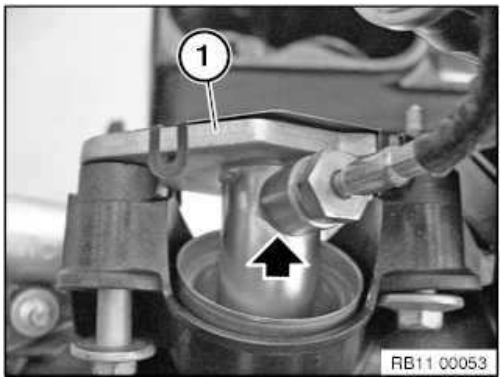
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.



cardiagn.com

- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

15 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

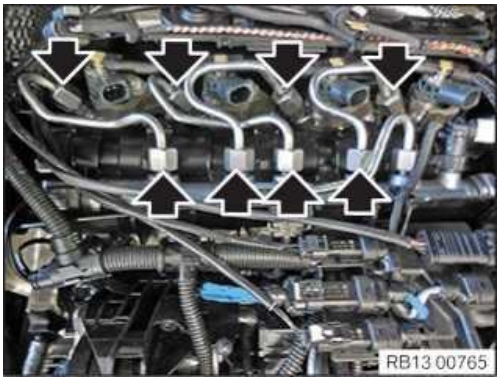
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION



If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

16 – Detaching leakage oil line from injector

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

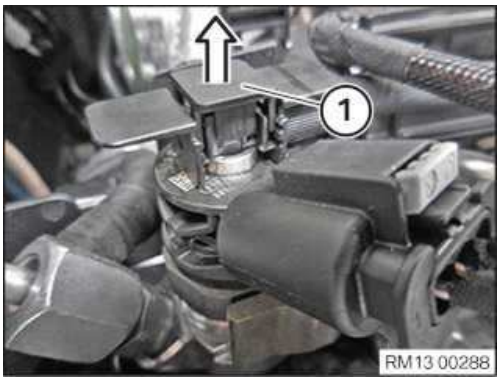
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE



Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

17 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

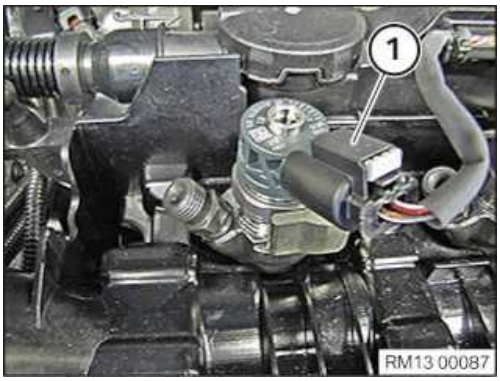
Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

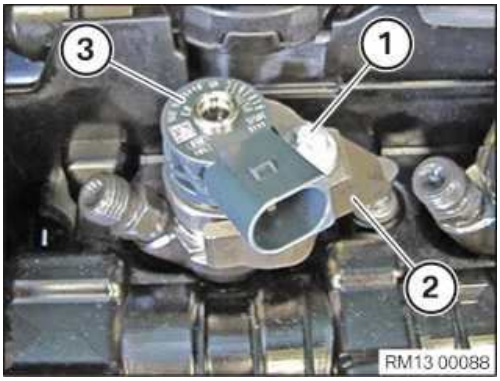
RISK OF DAMAGE

 **Electrostatic discharge.**



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



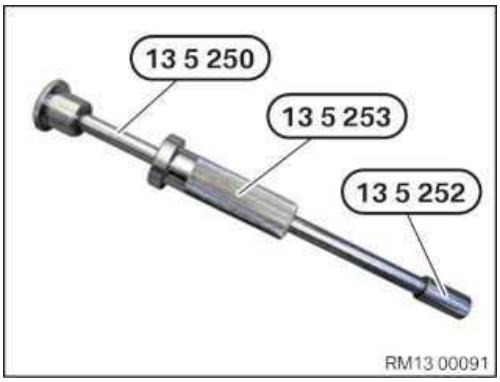
cardiagn.com

TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

- Unlock and disconnect connector (1).

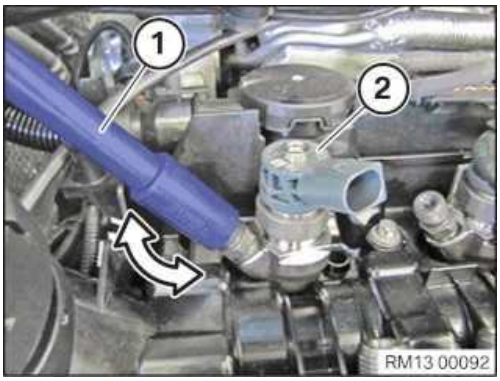
- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.



▶ **Loosen stuck injectors**

RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)** back onto the special tool **0 493 321 (13 5 250)**.

cardiagn.com

- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

18 – Remove high-pressure rail

WARNING

Working on fuel system.

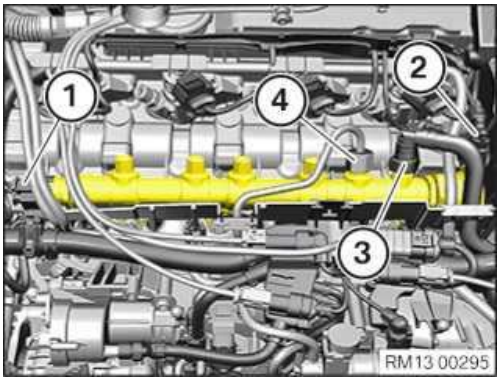
Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

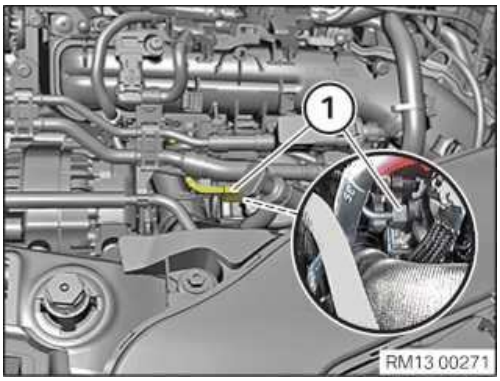
Contamination can result in malfunctions, operating failure or leaks.



- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

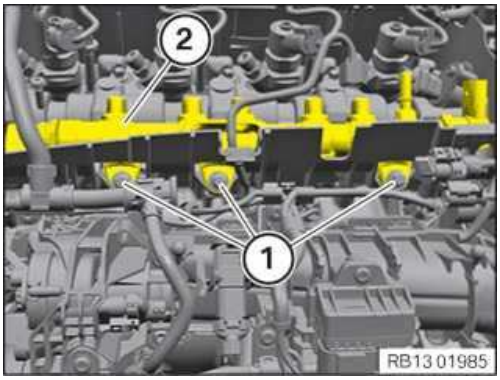
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Unlock and disconnect connector (1).
- Unlock and disconnect connector (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool .
- Reset special tool early on to avoid bending pressure lines.

cardiagn.com

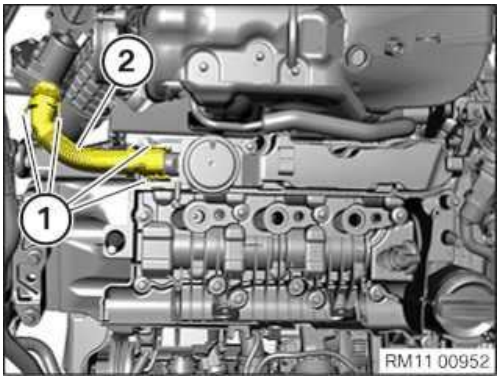
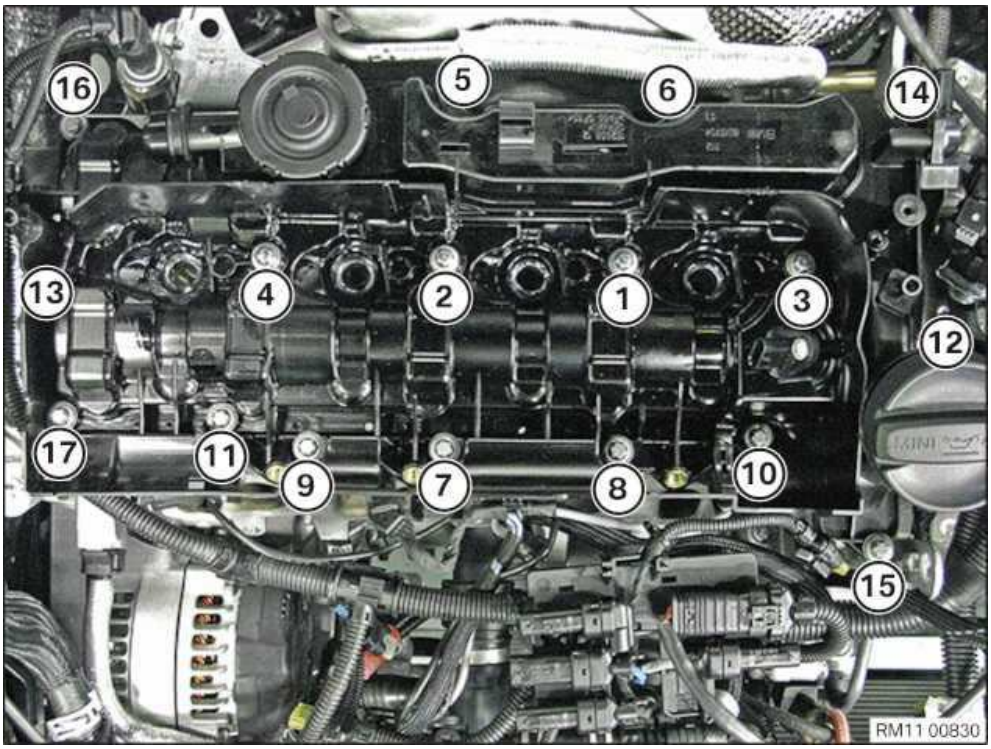
- Slacken the union nut (1) on the high pressure pump.



- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

19 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

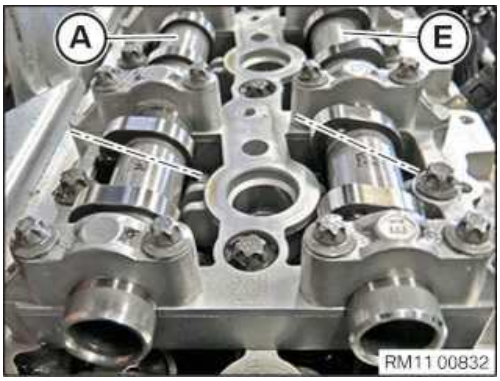
- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

20 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.



The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

21 – Remove chain tensioner piston

cardiagn.com

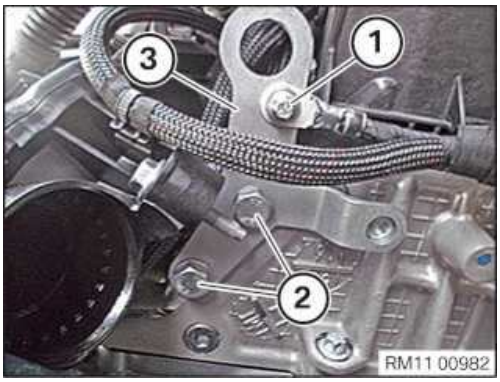
WARNING

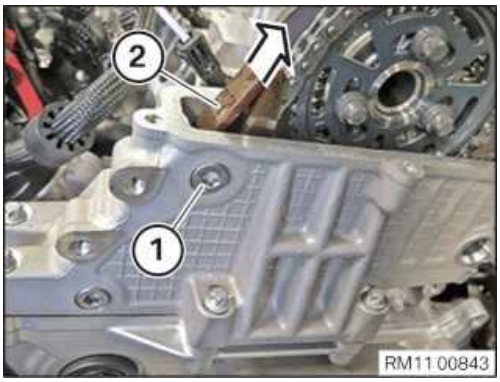
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



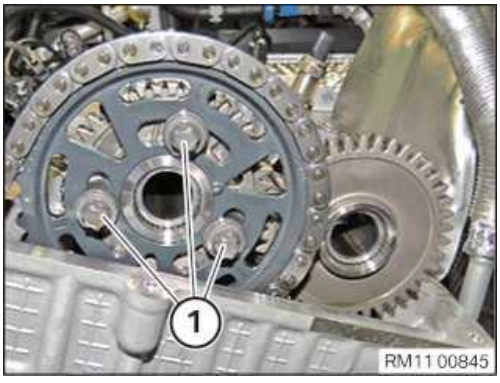
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

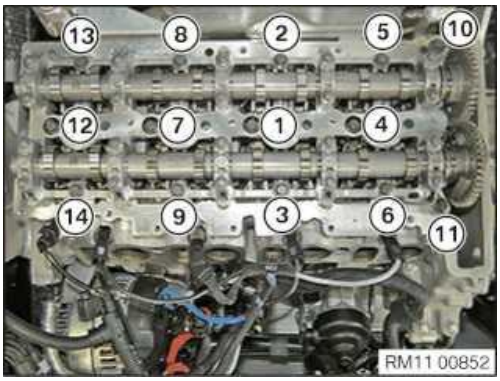
- Remove the chain tensioner piston (1).

22 – Remove the timing chain guide rail



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.



23 – Removing the camshaft sprocket on the intake camshaft

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

24 – Removing the camshaft support

cardiagn.com

- Evenly loosen all screws in a sequence from (14) to (1).
- Loosen and remove all screws in a sequence from (14) to (1).
  Both camshafts can be removed with the camshaft carrier.
- Remove the camshaft support including camshafts towards the top.

25 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

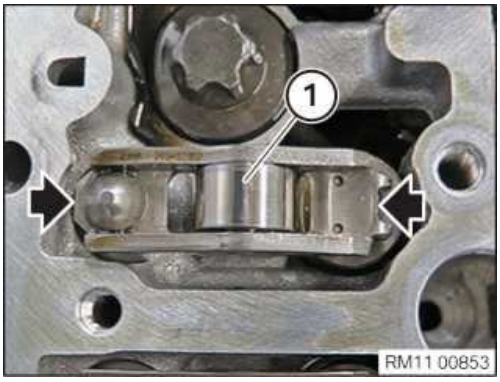
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool or conventional tools.
- Feed out preheating elements and remove.

26 – Remove roller cam followers

- Guide out and remove all roller cam followers (1) (arrows).
- Place all roller cam followers (1) in order in special tool **0 495 105 (11 4 480)**.

  Roller cam followers that have already been used must be installed in same position again.

27 – Removing the hydraulic valve clearance compensating element

cardiagn.com

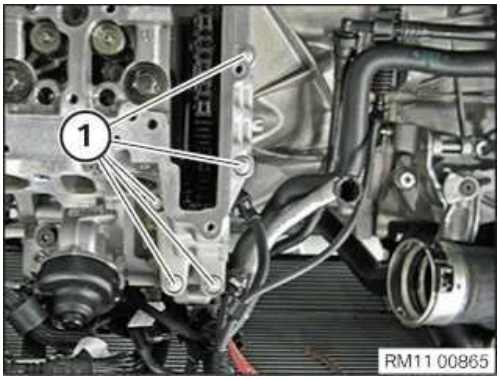
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.

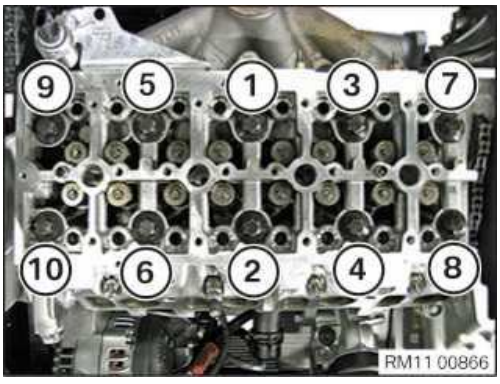


28 – Removing cylinder head

CAUTION

Heavy component.

Heavy components can lead to injury or damage.



- Remove and install heavy components with the aid of another person/other persons.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).

- Loosen the cylinder head bolts in the sequence from (10) to (1).
- Remove cylinder head.

29 – Removing the acoustic cover of the oil sump

cardiagn.com

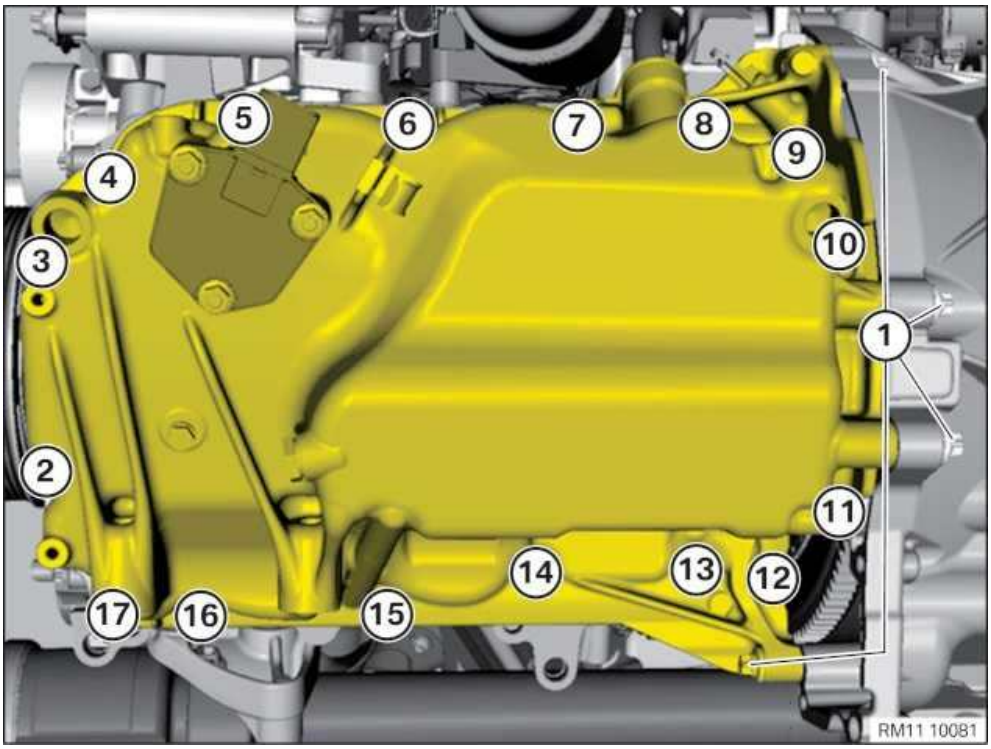
- Unlock connector (1) and pull off.
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).

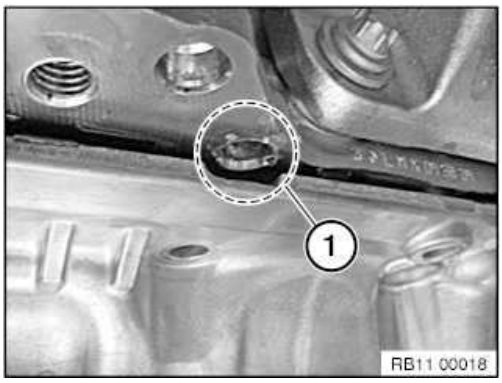
- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Unscrew the screw (1) on the wiring harness to the oil sump.
- Unlock and pull off connector (2) on the oil-level sensor.
- Place wiring harness (3) to one side.



- Remove the expanding rivets (1) on both sides of the acoustic cover.
- Feed out and remove the acoustic cover (2).

30 – Remove oil sump



- Loosen screws (1).
- Feed out starter motor and remove.

cardiagn.com

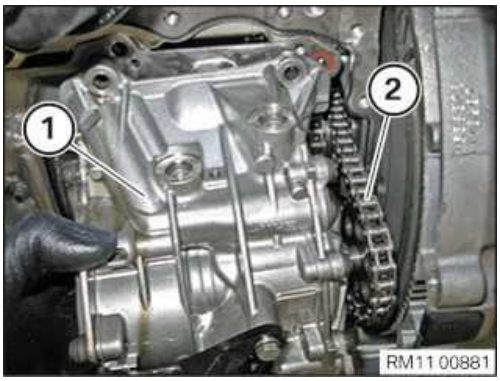
- Release transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).

- Release the oil sump only in area (1).



- Release the oil sump carefully using a suitable mounting lever (1) at the appropriate position in the direction of the arrow.
- Secure the oil sump to prevent it from falling.

31 – Remove the oil vacuum pump

- Loosen screws (1) of the oil vacuum pump (2).

cardiagn.com

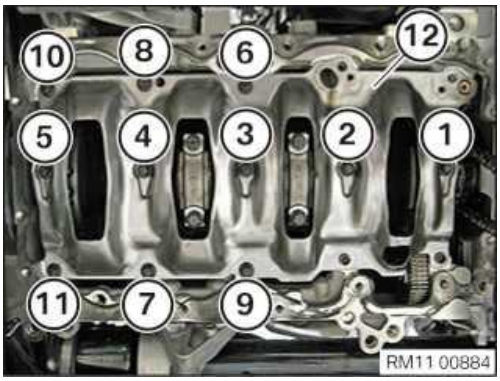
- Remove oil vacuum pump (1) and remove from the drive chain (2).



32 – Removing the oil deflector

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Loosen screws in the order (11) to (1).
- Guide out and remove the oil deflector (12).

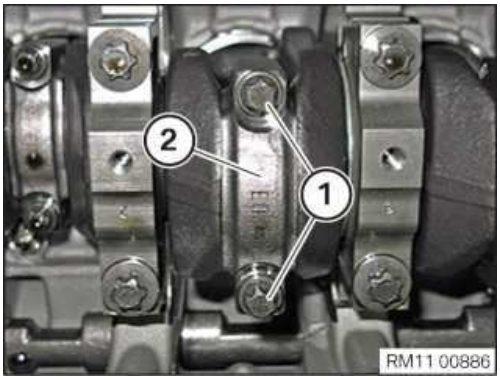
33 – Remove the connecting rod bearing cap

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.



TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.
A single connecting rod is not permitted to be replaced. Always replace all connecting rods.

cardiagn.com

- Turn the crankshaft until the connecting rod bearing journal (1) reaches a vertical position.

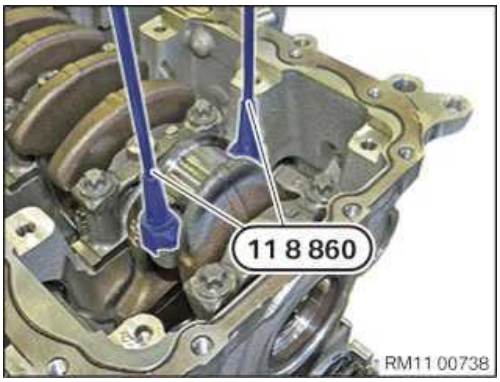
- Unscrew the connecting rod bolts (1).

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

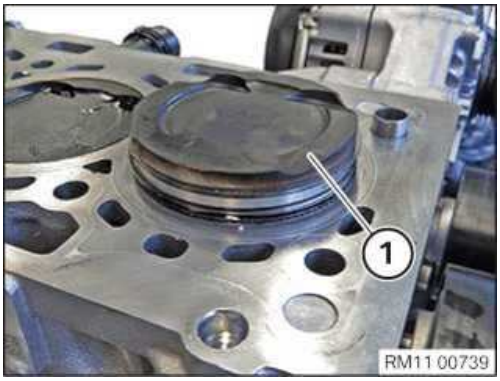
Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Remove the connecting rod bearing cap (2) and put to one side in the correct order.



MAIN WORK

34 – Removing the piston with connecting rod



TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Screw special tool **0 496 144 (11 8 860)** in at large connecting rod eye.

RISK OF DAMAGE

Damage on the cylinder wall and oil spray nozzles.

Major force can scratch the cylinder wall and bend the oil spray nozzles.

- Carefully move the piston and connecting rod in the engine block.
- Remove the piston (1) and connecting rod.

35 – Remove the connecting rod bearing shells

cardiagn.com

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.

TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.

A single connecting rod is not permitted to be replaced. Always replace all connecting rods.

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Remove the connecting rod bearing (2) from the connecting rod (1) and store it properly.

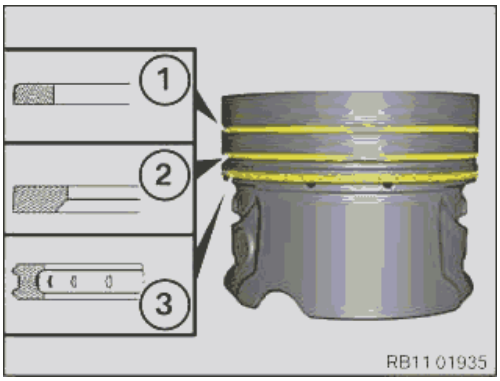
TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Remove the connecting rod bearing (2) from the connecting rod bearing cap (1) and store it properly.

36 – Measure side clearance of piston rings



RISK OF DAMAGE

Damage to the piston rings.

Piston rings can bend or break due to large applications of force.

- Handle piston rings carefully.
- Only bend piston ring up lightly.

cardiagn.com

TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.

- Mounting orientation of the piston rings

Position number	Description
1	1. Piston ring (plain rectangular compression ring)
2	2. Piston ring (taper faced piston ring)
3	3. Piston ring (oil scraper ring with spiral expander)

Check

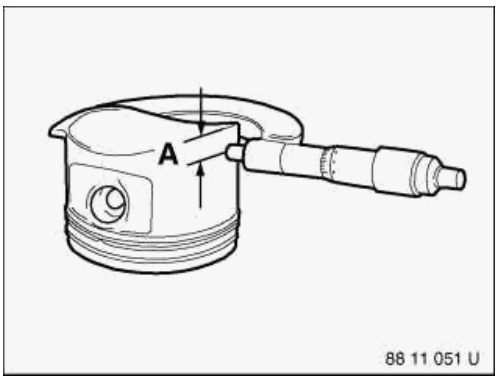
- Install all piston rings (1) consecutively as shown in the piston ring groove. Measure the side clearance with a feeler gauge (2).

desired state

- The side clearance of the piston rings is within the tolerance.

Side clearance of piston rings

Clean all components before measuring the side clearance.	
Side clearance of the plain rectangular compression ring	0,17 mm ... 0,27 mm
Side clearance of the taper faced piston ring	0,30 mm ... 0,50 mm
Side clearance of the oil scraper ring with spiral expander	0,2 mm ... 0,4 mm



Result

» The side clearance of the piston rings is outside of the tolerance.

Measure

- Renew the piston ring.

37 – Measure the piston diameter

Check

- Position the measuring bolt in the area (A) and measure the piston installation clearance 90 ° transversely to the gudgeon pin.

Piston diameter

Measure the piston diameter at distance (A) from the lower end of the piston skirt.	
Distance (A) to the lower end of the piston skirt	17 mm
Nominal dimension of piston diameter	83,936 mm ... 83,954 mm

cardiagn.com

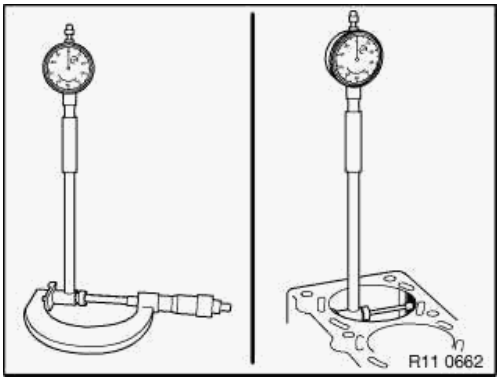
Result

» The piston does not correspond to the specifications.



Measure

- Renew the piston.

38 – Measure the cylinder bores

Prerequisite

Cylinder barrel is cleaned.

Check

- Adjusting measuring screw to nominal dimension of cylinder bore.

Cylinder bore

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

- Insert internal measuring device into measuring screw and set to zero.
- With the internal measuring device, measure the cylinder at the following points. Check the deviations from the nominal dimension.
  - Lower third of the cylinder bore in direction of travel,
  - Lower third of the cylinder bore transversely to direction of travel,
  - Middle third of the cylinder bore in direction of travel,
  - Middle third of the cylinder bore transversely to direction of travel,
  - Upper third of the cylinder bore in direction of travel,
  - Upper third of the cylinder bore transversely to direction of travel.

Cylinder bore

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

Result

» Cylinder does not correspond to the specifications.

Measure

- Replace motor.

  Parts: Engine

39 – If necessary: Renew the piston

cardiagn.com

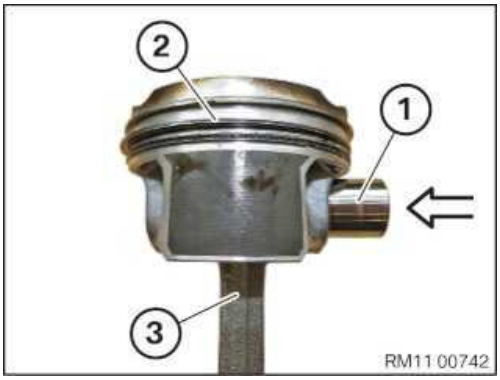
CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.



- Use special tool to remove the gudgeon pin circlip.
- Insert the flat side (3) of special tool into the groove (4).
- Grab and remove the gudgeon pin circlip (1) with the arched side (2).

TECHNICAL INFORMATION

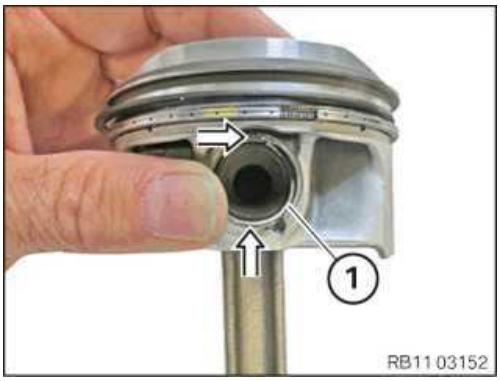
Piston and gudgeon pin are matched to each other.
Always install piston and gudgeon pin together and do not switch by mistake.

- Remove the gudgeon pin (1) in the direction of arrow.
- Remove piston (2) from connecting rod (3).

- Renew piston with gudgeon pin.

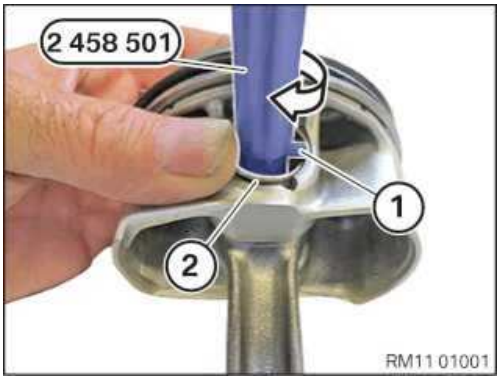
  Parts: Pistons

TECHNICAL INFORMATION



Piston and gudgeon pin are matched to each other.
Always install piston and gudgeon pin together and do not switch by mistake.

- Position piston (2) on the connecting rod (3).
- Install the gudgeon pin (1) in the direction of arrow.
- You must be able to install the gudgeon pin (1) without major effort.
- Gudgeon pin (1) must be free of play in piston and connecting rod.



- Prepare special tool on the fitting aid .

cardiagn.com

- Insert the gudgeon pin circlip (1) into the groove on the piston (see arrows).

- Screw in the positioned gudgeon pin circlip (2)with and with the guide pin (1) in the direction of the arrow.

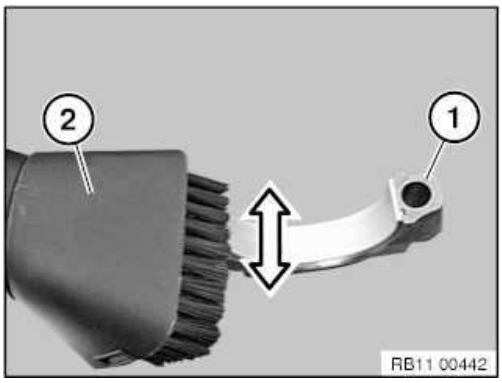
- Screw the gudgeon pin circlip with guide pin (1) into the groove of the piston in the direction of the arrow.

- Gudgeon pin circlip (1) must be fitted correctly in the groove (arrow).

40 – Install the connecting rod bearing shell

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.



Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.

cardiagn.com

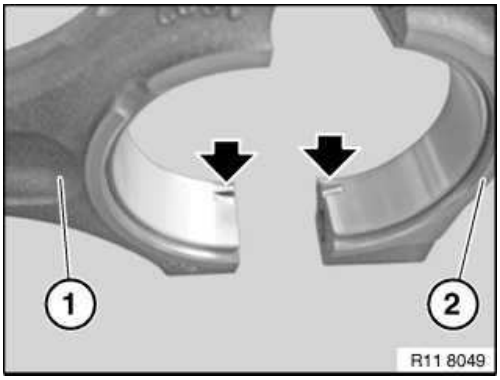
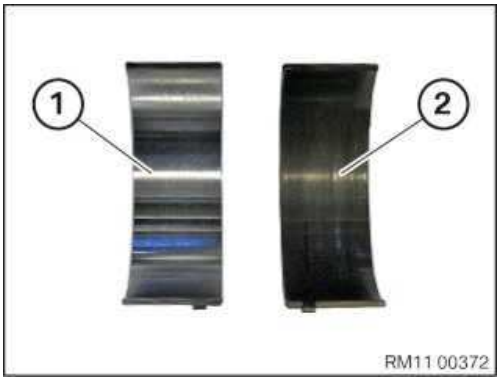
TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.
A single connecting rod is not permitted to be replaced. Always replace all connecting rods.



- Vacuum the crack surfaces (1) with a conventional vacuum cleaner (2).



- To avoid incorrect assembly: Pay attention to marks (arrows).

  The connecting rod bearing (1) for the connecting rod bearing cap and the connecting rod bearing (2) for the connecting rod are each equipped with protection against incorrect assembly as shown in the marked area.

- To avoid incorrect assembly: Pay attention to marks (arrows).

  The connecting rod bearing cap (2) and the connecting rod (1) are each equipped with protection against incorrect assembly.

- Makes sure that a light connecting rod bearing shell (1) and a dark connecting rod bearing shell (2) are installed for each connecting rod.

cardiagn.com

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Insert the dark connecting rod bearing shell (2) into the connecting rod (1).
- Oil the connecting rod bearing shell (2).

TECHNICAL INFORMATION

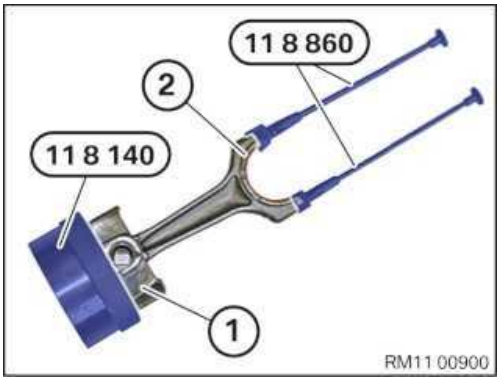
Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.



- Insert the light connecting rod bearing shell (2) into the connecting rod bearing cap (1).
- Oil the connecting rod bearing shell (2).

41 – Installing piston with connecting rod

TECHNICAL INFORMATION

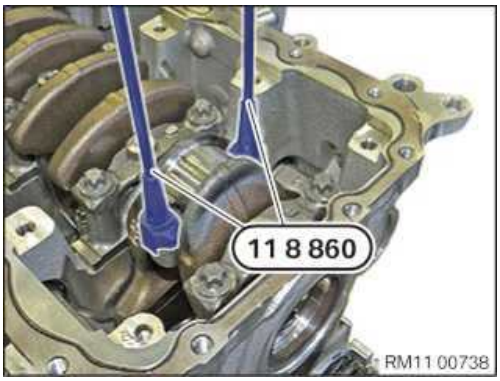
Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Coat the pistons (1) and piston rings lightly with oil.
- Mount the special tool **0 493 582 (11 8 140)** on the piston (1).
- Screw the special tool **0 496 144 (11 8 860)** in on the large connecting rod eye (2).

- Insert the piston with the special tool **0 493 582 (11 8 140)** with the arrow pointing to cylinder 1.

RISK OF DAMAGE



Damage on the cylinder wall and oil spray nozzles.

Major force can scratch the cylinder wall and bend the oil spray nozzles.

- Carefully move the piston and connecting rod in the engine block.

- Install the piston in the crankcase.

cardiagn.com

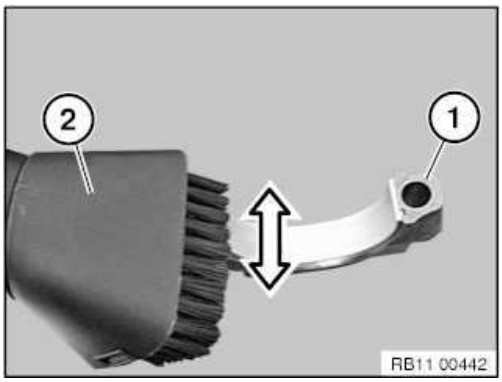
- Remove special tool **0 496 144 (11 8 860)** from large connecting rod eye.

POSTPROCESSES

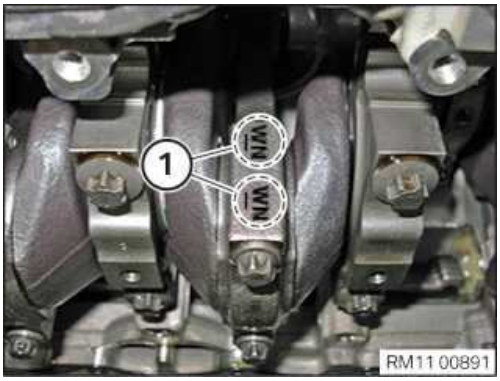
42 – Install the connecting rod bearing cap

RISK OF DAMAGE



Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.



- Always install all bearing shells and bearing supports in the same position from which they were removed.

TECHNICAL INFORMATION

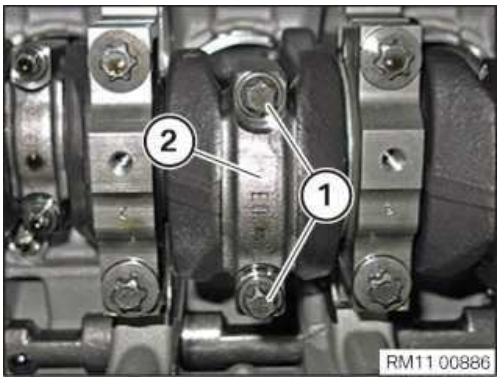
The connecting rods of the engine are balanced and are matched to each other.
A single connecting rod is not permitted to be replaced. Always replace all connecting rods.

- Vacuum the crack surfaces (1) with a conventional vacuum cleaner (2).



- Attach the connecting rod bearing caps to the connecting rod until the designations (1) match.

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.
Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Make sure that the connecting rod bearing is attached to the same connecting rod that it was detached from.

cardiagn.com

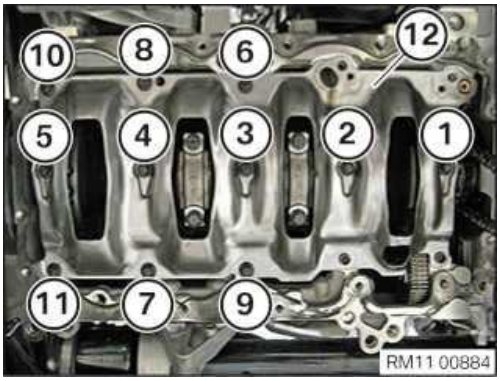
- Position the connecting rod bearing cap (2).
- Tighten the bolts (1) with the special tool **0 490 504 (00 9 120)**.

Connecting rod bearing cap to connecting rod



M9x47		Tightening torque	20 Nm
		Angle of rotation 1	70 °
		Angle of rotation 2	70 °

43 – Installing the oil deflector

- Check sealing ring (1) for damage and replace oil deflector if necessary.

  Parts: Oil deflector

- Insert and install the oil deflector (12).
- Renew screws (1) to (11).

  Parts: Bolts
- Hand-tighten the bolts (1) to (5).
- Hand-tighten the bolts (6) to (11).
- Tighten the screws (1) to (5).

Oil deflector to crankshaft bearing cap

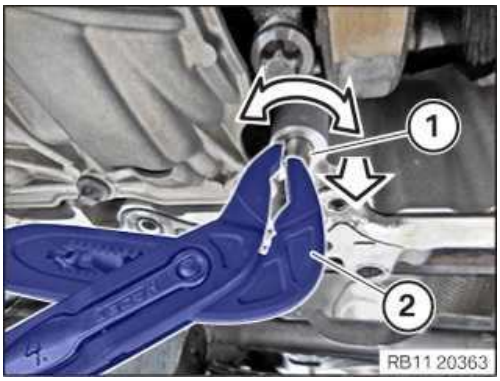
M8x14	Replace screws.	Tightening torque	35 Nm
		Release	180 °
		Tightening torque	15 Nm
		Angle of rotation	45 °

- Tighten the screws (6) to (11).

Oil deflector to crankcase

M8x14		Tightening torque	19 Nm

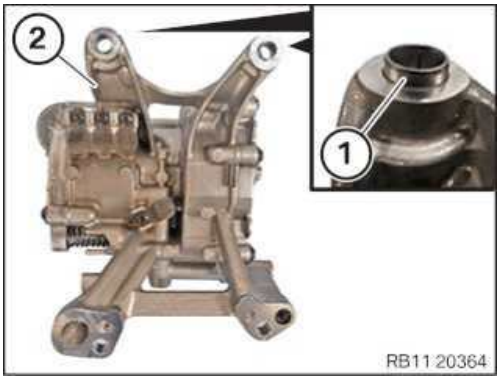
44 – Install the oil vacuum pump



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.



- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

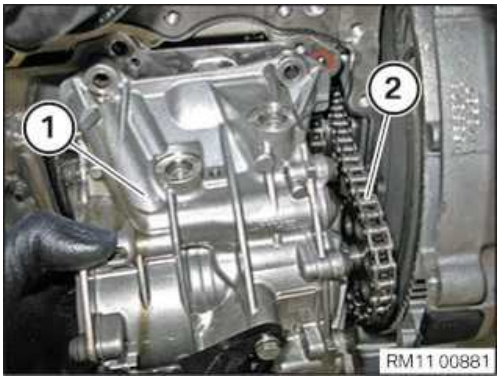
- Remove centering sleeves from the crankcase (1) using a standard tool (2).
- Renew the centring sleeves (1).

  Parts: Centring sleeves

- Install centering sleeves (1) in the oil vacuum pump (2).



- Check the sealing ring (1) for damage and renew where required.
- Make sure the sealing ring (1) is installed correctly.

- Check sealing ring (1) for damage and replace oil deflector if necessary.

  Parts: Oil deflector

- Insert oil vacuum pump (1) into the drive chain (2).

cardiagn.com

- Renew screws (1).

  Parts: Bolts

- Tighten the screws (1) of the oil vacuum pump (2).

Oil vacuum pump to crankcaseB47

M8x35		Tightening torque	19 Nm

45 – Refitting sump

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove fine sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.
- Clean sealing surface (1) with brake cleaner.

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove coarse sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.
- Clean sealing surface (1) with brake cleaner.

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

- Have the special tool ready.

cardiagn.com

TECHNICAL INFORMATION

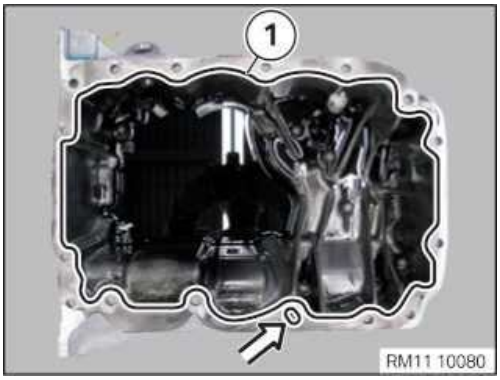
For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue



- Position the sealing compound (1) on special tool as shown.

  Parts: Sealing compound

Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Completely surround the oil return orifice (arrow) with the sealing compound.

  No sealing compound may enter the oil return orifice.
- Fix oil sump within the prescribed application time of the sealing compound.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- Apply the sealing compound along the line (1) with a thickness of 2 mm to 2.5 mm.

  The sealing compound must be applied along the inner edge.
- Completely encircle the oil return orifice (arrow) with the sealing compound.

TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- Renew the fitting sleeves if required.

cardiagn.com

RISK OF DAMAGE

Component damage caused by incorrect screw length.

The use of screws with the incorrect screw length can damage the component.

- Check for correct screw length.
- Re-install screws that correspond to the original screw length.

- Ensure that the **correct** screw (2) (M8x40) is used for mounting the oil sump on the transmission.

  The screw (1) (mounting bolt of the starter motor) may **never** be used for mounting the oil sump.

- Position and install the oil sump.
- Tighten screws (2) to (17) **hand-tight**, do **not** tighten fully.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws (2) to (17) on the oil sump.

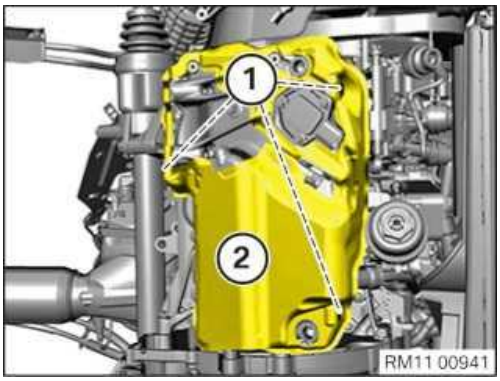
Oil sump to crankcase

M8x30		Tightening torque	2 Nr
M8x110		Tightening torque	2 Nr

- Tighten the transmission bolts (1) on the oil sump.

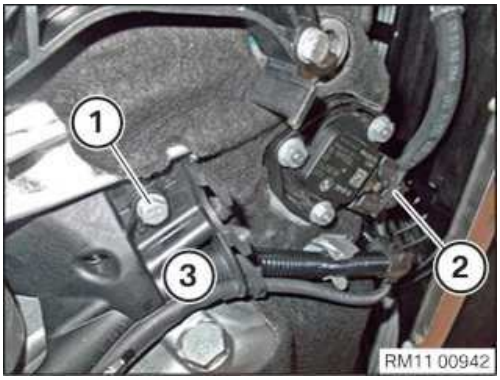
Transmission to oil sump

M8		Tightening torque	1 Nr



- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission



M8x45		Tightening torque	19 Nm

46 – Installing the acoustic cover for the oil sump

cardiagn.com

- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).

- Position wiring harness (3).
- Tighten down screw (1).

Bracket to oil sump

M6		Tightening torque	8 Nm

- Connect and lock the connector (2) on the oil-level sensor.

  The connector must lock audibly.

CAUTION

Improper routing of the positive battery cable.

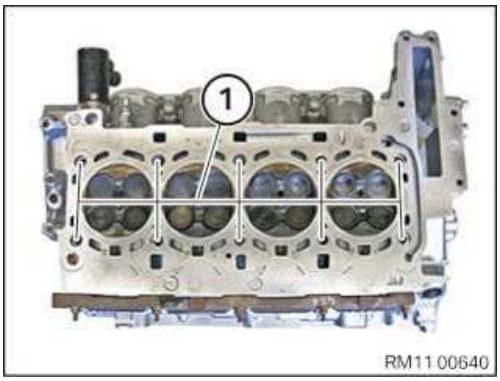
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm



- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).

  The connector must engage audibly.

47 – Renewing the cylinder head gasket

cardiagn.com

RISK OF DAMAGE

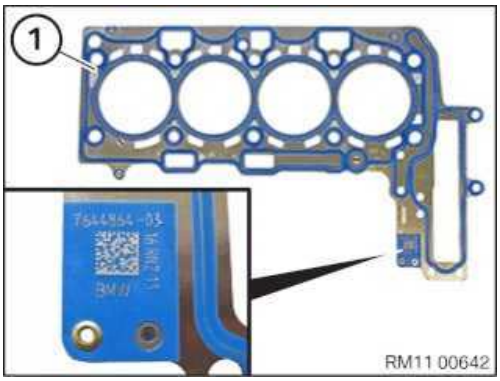
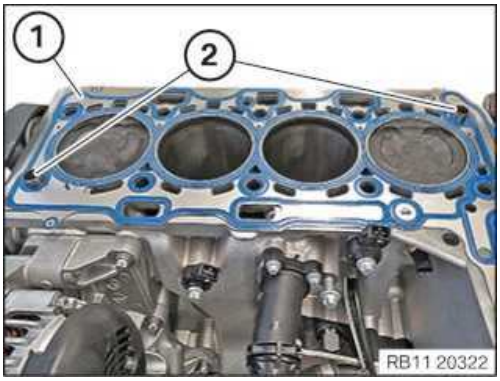
Damage to the surface.



The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).



- Check the fitting sleeves (1) for secure fit and damage.

- Identify the cylinder head gasket (1) using the part number.

Note: If the cylinder head is reworked, an additional thicker gasket 0.3 mm is available for service personnel.

- Guide in the cylinder head gasket (1) and install.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

48 – Mounting the cylinder head

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

RISK OF DAMAGE

Damage to threads.

Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION

Do not remove bolt coating.

- Position the cylinder head on the crankcase.
- Renew the cylinder head bolts (1).

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  No coolant, water or engine oil must be present in threaded holes of engine block.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in cylinder head bolts in sequence (1) to (10).
- Tighten cylinder head bolts using special tools **0 490 504 (00 9 120)** and in sequence (1) to (10).

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

- Tighten the cylinder head bolts (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

49 – Installing the hydraulic valve clearance compensating element

cardiagn.com

RISK OF DAMAGE

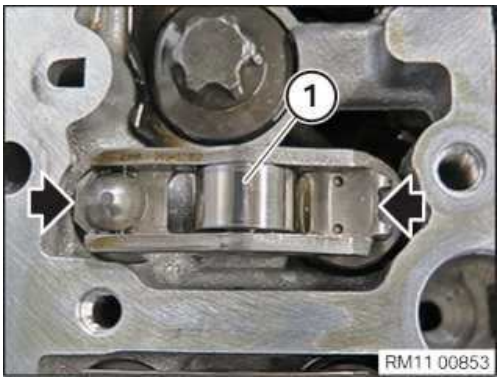
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

50 – Install the roller cam followers

TECHNICAL INFORMATION

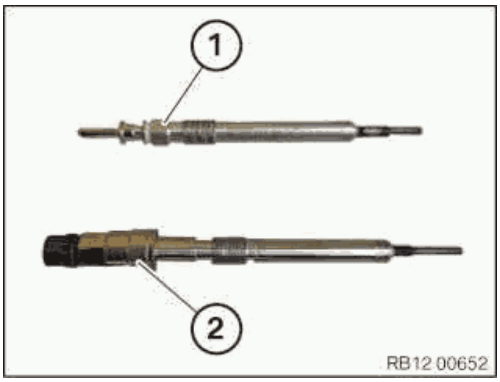
- Note the installation position of the component. The component may be installed in various installation positions.



- Check all roller cam followers (1) for damage and replace if necessary.

  Parts: Roller cam followers
- Insert and install all roller cam followers (1).

  Roller cam followers (1) that have already been used must be installed in the same place.
- Note the mounting orientation of the roller cam followers (1).
- Oil all roller cam followers (1).

51 – Install glow elements

- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

cardiagn.com

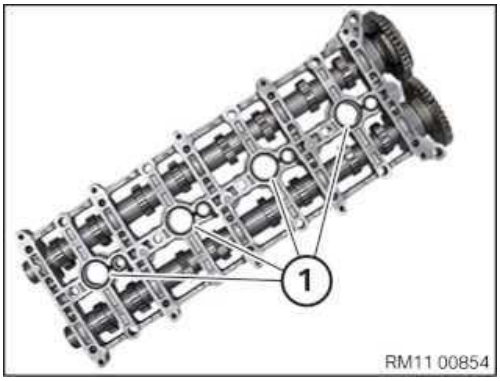
- Tighten the glow element with the special tool or conventional tools.

Glow elements to cylinder head



Glow element		Tightening torque	13 Nm

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

52 – Installing the camshaft support

- Renew gaskets (1).

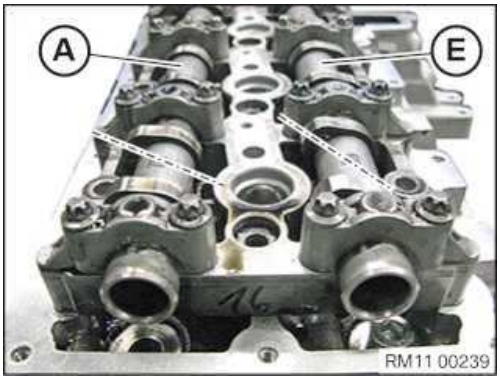
  Parts: gaskets

- Position the camshaft support including the camshafts.
- Tighten the screws in a sequence from (1) to (14) in several steps.

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

53 – Adjusting the timing of the camshafts



- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

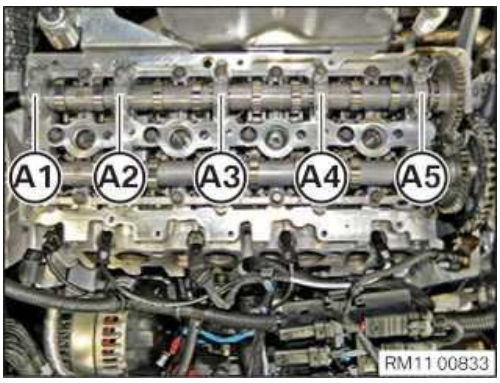
- Slide the special tool **2 288 380** completely into the bore hole of the oil sump.
- Use the special tool to block **2 288 380** the crankshaft in the TDC firing position at the first cylinder.

- The cam of the intake camshaft (E) at the first cylinder points up at an angle.
- The cam of the exhaust camshaft (A) at the first cylinder points outward at an angle.



▸ **Remove exhaust camshaft.**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

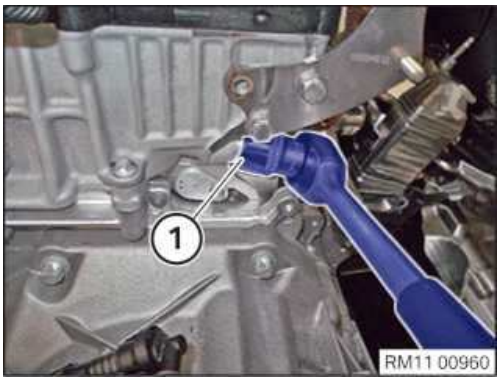
The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A5) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components on special tool **0 495 105 (11 4 480)** in a tidy and orderly fashion.

▸ **Remove chain tensioner piston**



WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

TECHNICAL INFORMATION

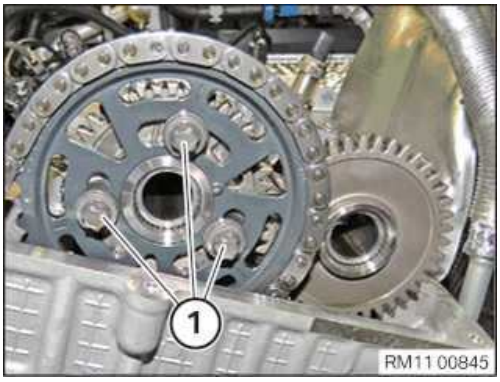
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

▸ **Remove the timing chain guide rail**



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

▸ **Removing the camshaft sprocket on the intake camshaft**

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

▸ **Install exhaust camshaft**

cardiagn.com

RISK OF DAMAGE

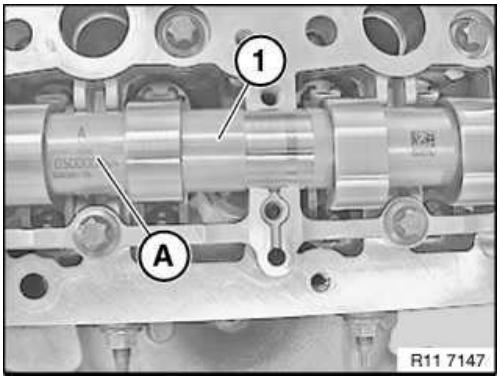
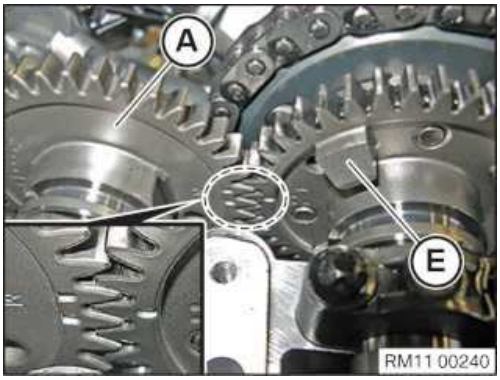
Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

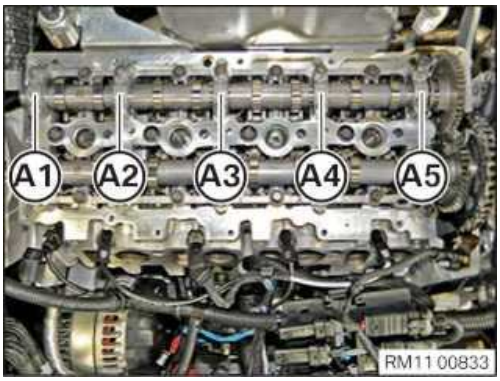


- Comply with the regulations for the installation and disassembly.
- Perform work with care.



- Oil all bearing positions (1).

- Make sure the roller cam followers (1) have the correct mounting orientation.



- Insert exhaust camshaft (1) so that the identification (A) points upwards.

- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.

cardiagn.com

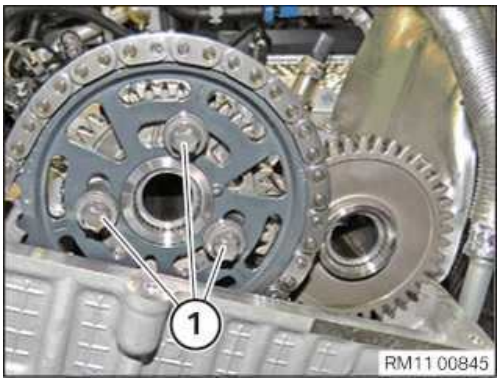
- Tighten all exhaust camshaft bearing caps (A1) to (A5) from the inside to the outside by 1/2 a turn at a time.

Intake and exhaust camshaft in camshaft support



M6x31		Tightening torque	10 Nm

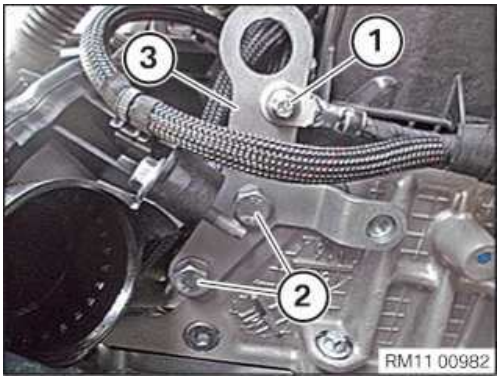
- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

  Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

▶ **Installing the camshaft sprocket on the intake camshaft**

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

▶ **Install the timing chain guide rail**



- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6			8 Nm

cardiagn.com

▶ **Installing the chain tensioner piston**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

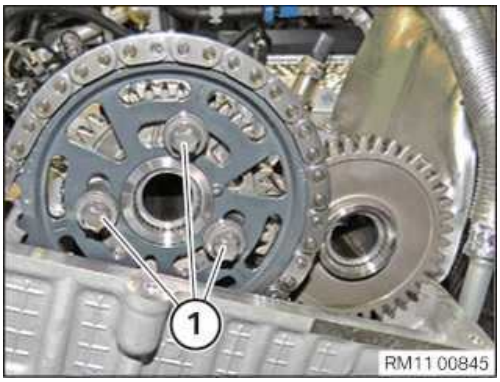
The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

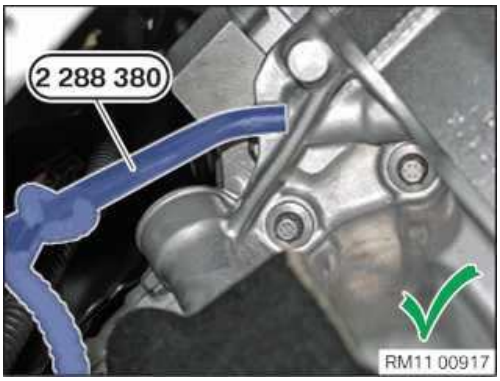


- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

▶ **Tightening the camshaft sprocket on the intake camshaft**



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

cardiagn.com

- Remove special tool **2 288 380**.

55 – Removing the special tool to secure the exhaust camshaft

- Remove the special tool **0 496 112 (11 8 760)** to fix the exhaust camshaft.

56 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

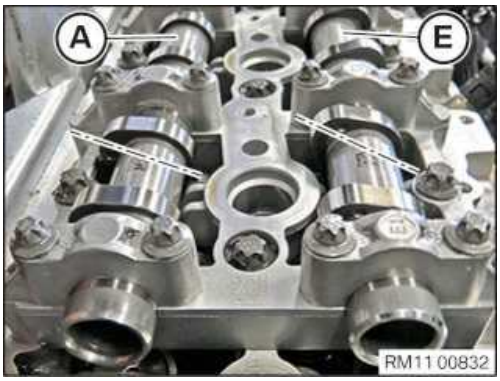
Damage to the engine.



The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

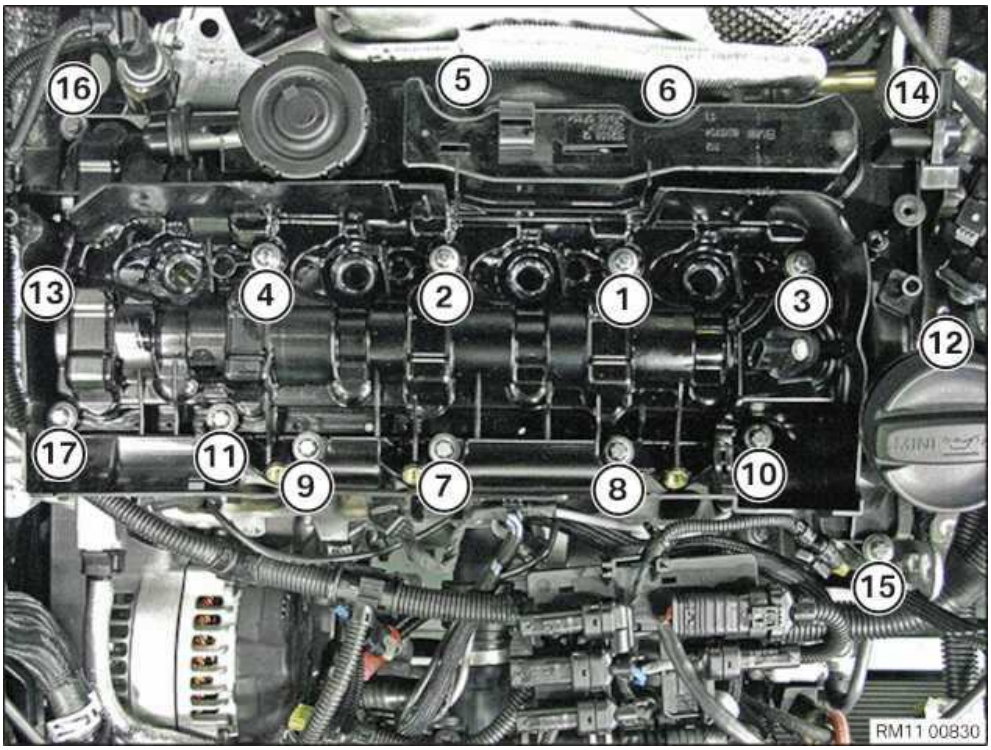
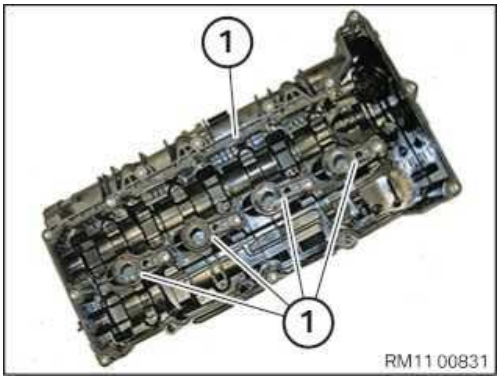
If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.



- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).



57 – Installing cylinder head cover

cardiagn.com

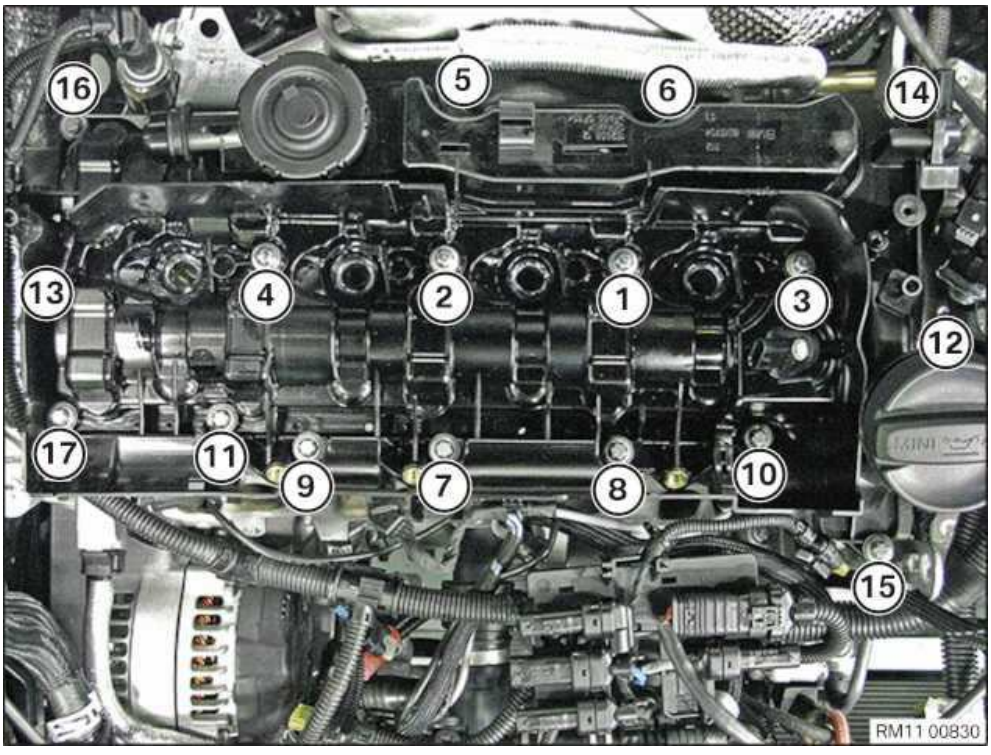
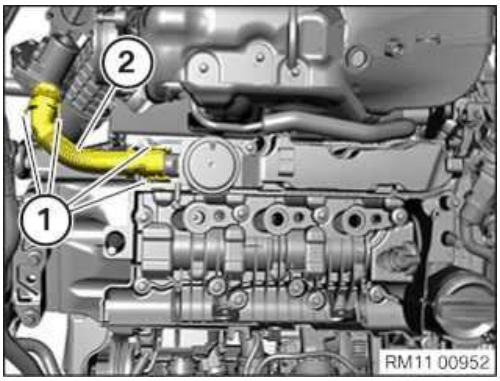
Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket



- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-

cardiagn.com

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

58 – Installing injectors of injection system

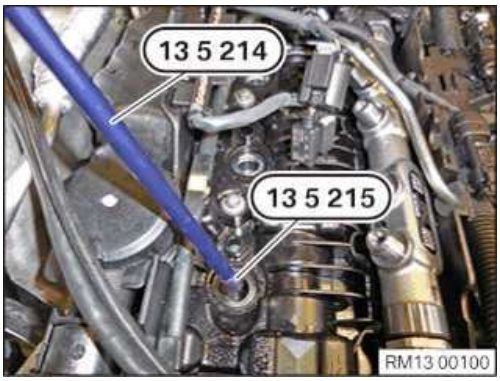
▶ **Cleaning the injector shafts**

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

- Collect dirt particles, e.g. when blowing out, use cloth to do so.



- Wear safety goggles.

RISK OF DAMAGE

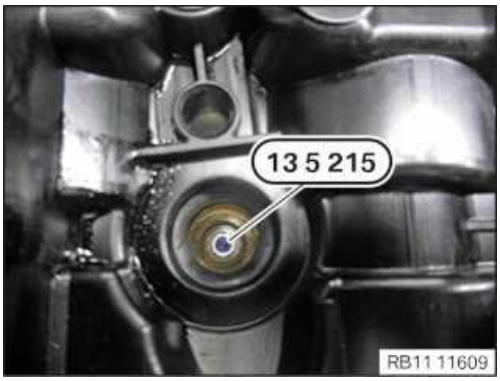
Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

cardiagn.com

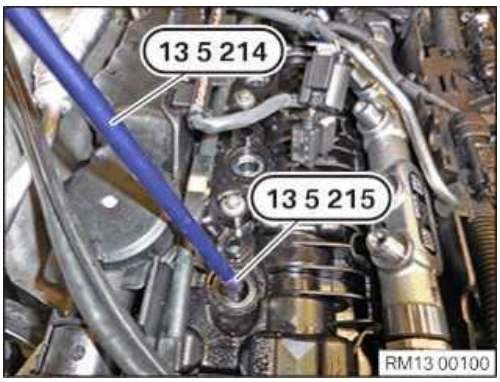
- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.



- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

- Blow out injector shaft (1) with air gun (2).

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

► **Check the placement of the clamping claw**

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▸ **Prepare the injector for installation**

RISK OF DAMAGE

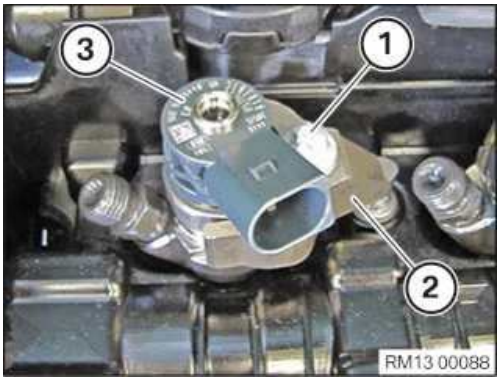
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

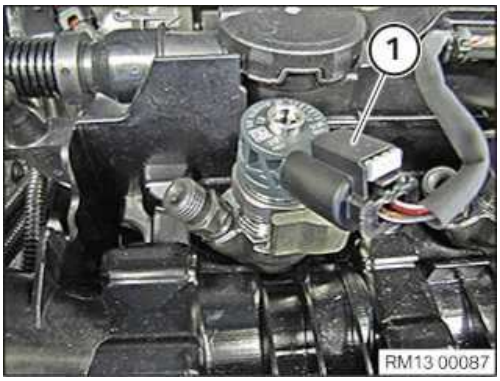


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

cardiagn.com

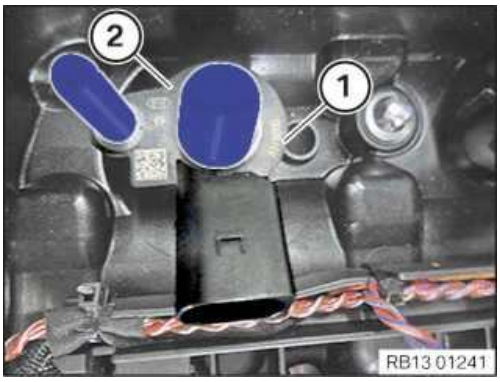
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

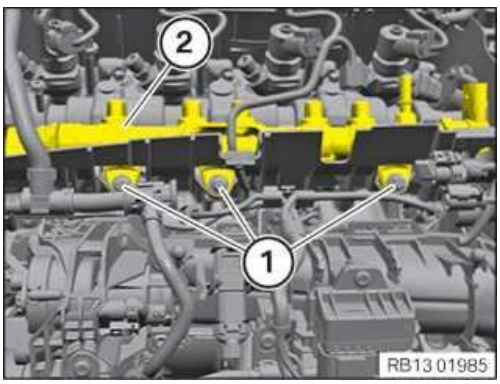
If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

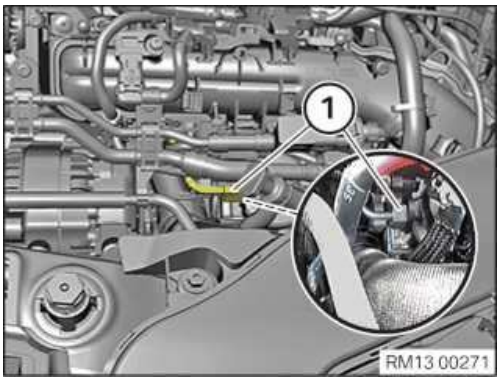
Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

59 – Installing the rail



- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm

cardiagn.com

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

TECHNICAL INFORMATION

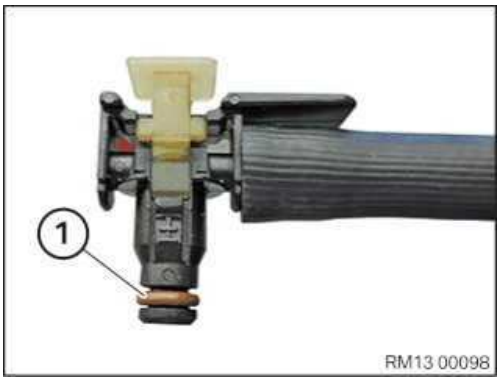
Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool .

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm



- Connect and lock the fuel line (3).

  Fuel line (3) must engage audibly.
- Connect connectors (2) and lock.

  The connector (2) must engage audibly.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

60 – Connect the leakage oil line on the injector

- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

cardiagn.com

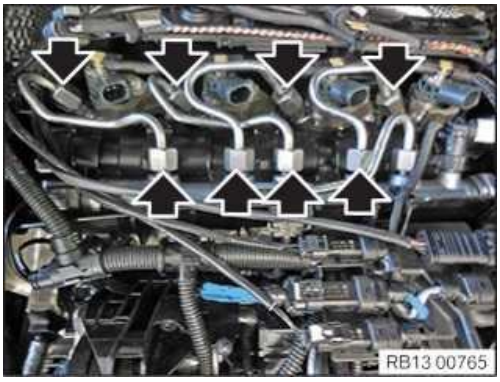
- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.



61 – Installing high pressure lines between rail and injectors

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

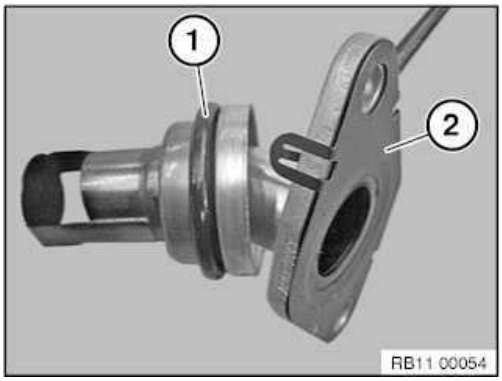
Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.



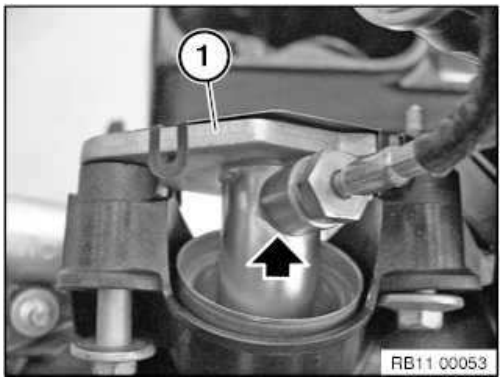
- Tighten the high pressure lines (arrows) with the special tool .

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

62 – Installing the intake plenum



- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position the seal (2) and clip it in.

cardiagn.com

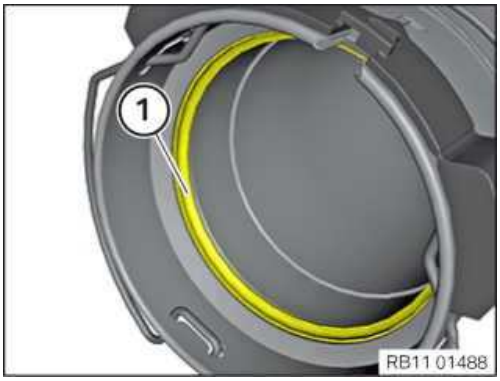
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

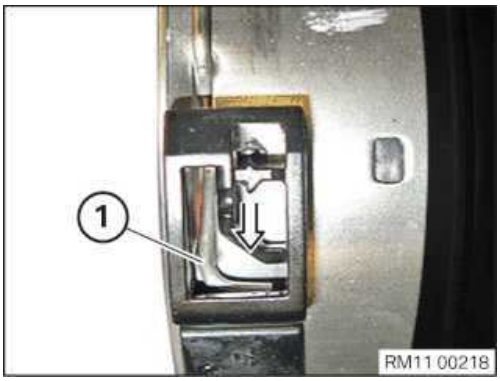
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



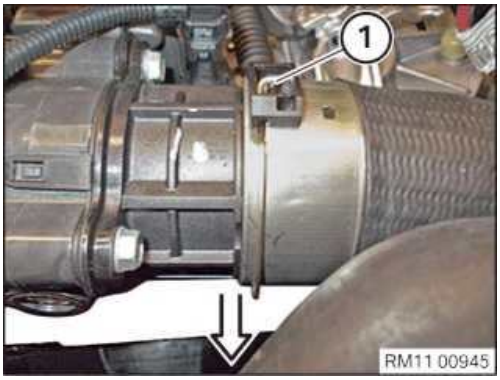
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

cardiagn.com

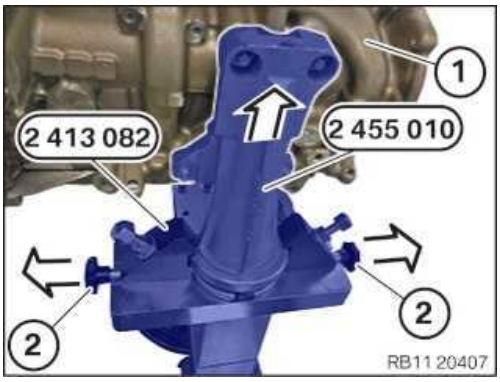
- Engage the lock (1) on the bracket (arrow).

- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

63 – Remove the engine from the assembly stand

CAUTION

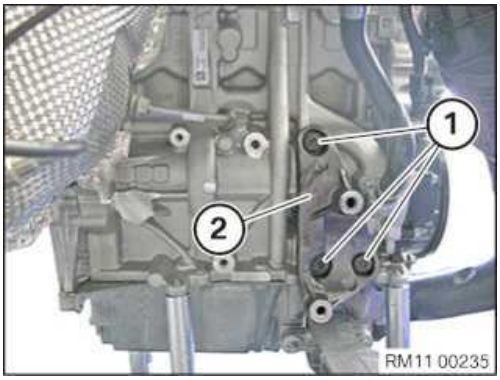


Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Insert engine lifter with special tool and position engine (1).



- Unscrew the nuts on special tool .
- Detach the holder (2) in the direction of the arrow.
- Detach the engine (1) with special tool **2 455 010** out of the special tool in the direction of arrow.

cardiagn.com

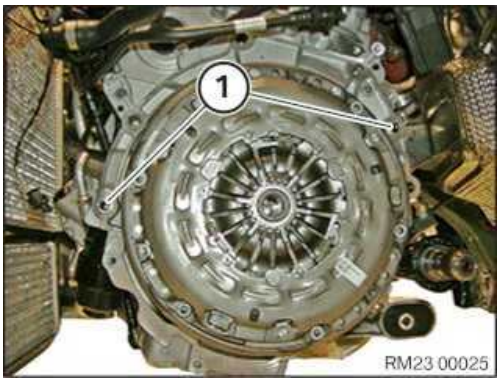
- Remove conventional screws (arrows).
- Feed out the special tool **2 455 010** on the engine (1) and remove.

- Insert and install the holder (2).
- Tighten the screws (1).

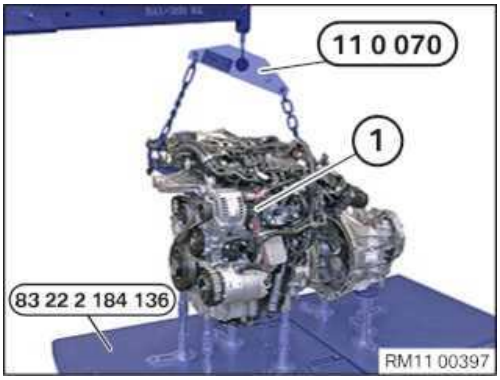


Holder to crankcase

M10		Tightening torque	38 Nm

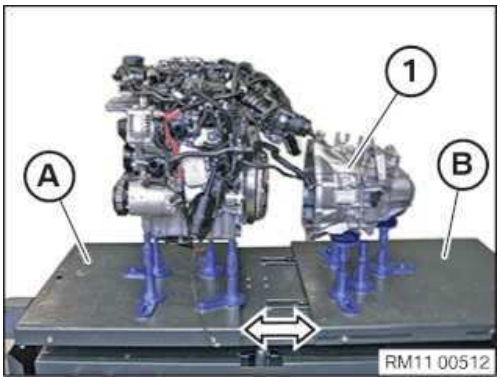
64 – Mounting engine on manual gearbox

Prerequisite

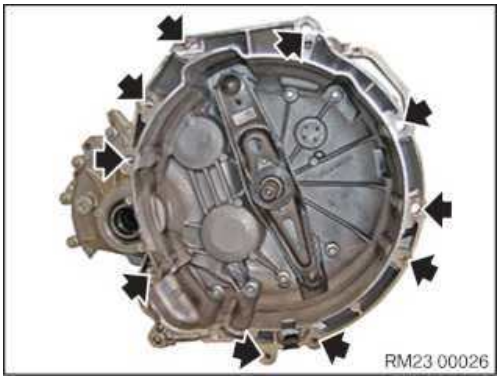


Engine has been removed.

- Check for correct fit of fitting sleeves(1).
- Replace damaged fitting sleeves.

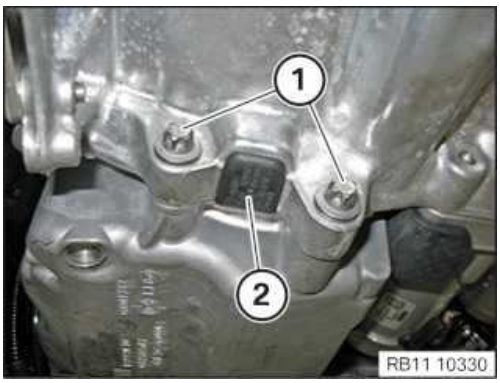


- Remove any grease from the transmission input shaft (arrow) and clean the shaft.
- Do not grease transmission input shaft.
- Check the clutch disc for frictional corrosion in the gearing and renew if necessary.



- Position the engine (1) on the lifting table **2 184 136** using the engine lifter and the special tool .
- Feed out engine lifter from engine (1) with special tool and push aside.

cardiagn.com



- Push table top (B) in direction of arrow and position manual gearbox (1) on engine.

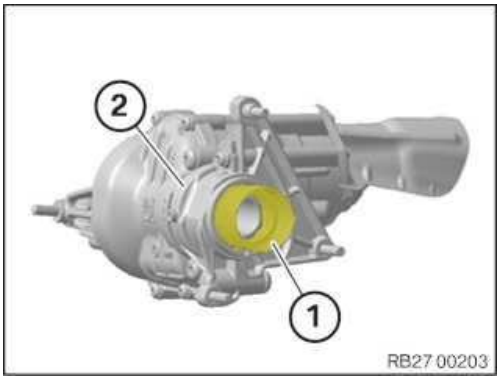
- Tighten screws (arrows).

Transmission to engine

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

- Tighten the screws (1).

Transmission to oil sump



M8		Tightening torque	19 Nm

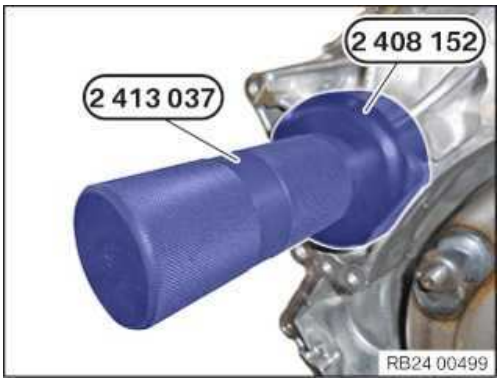
- Install the protective cap (2).

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.

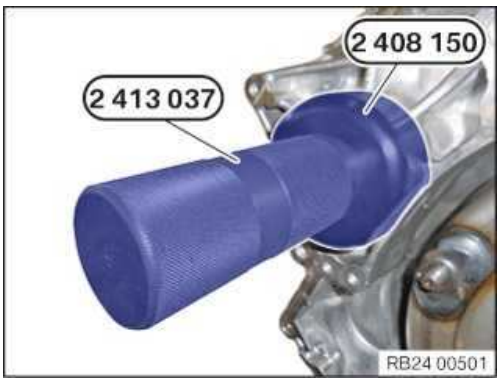
65 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

cardiagn.com

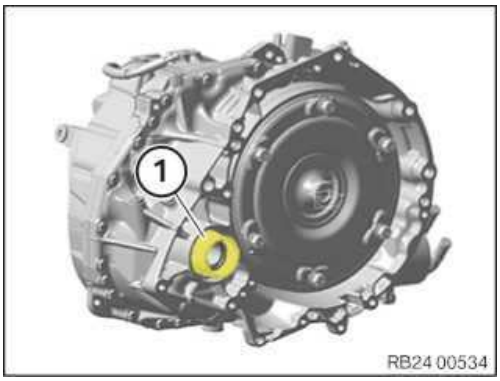


- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.

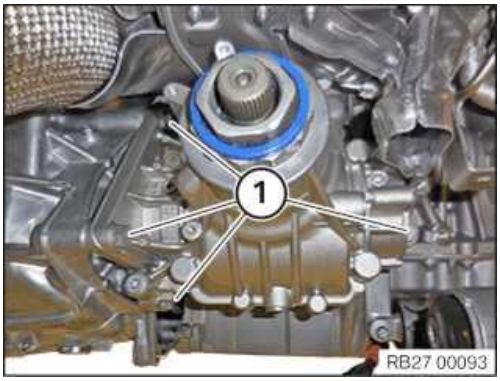
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

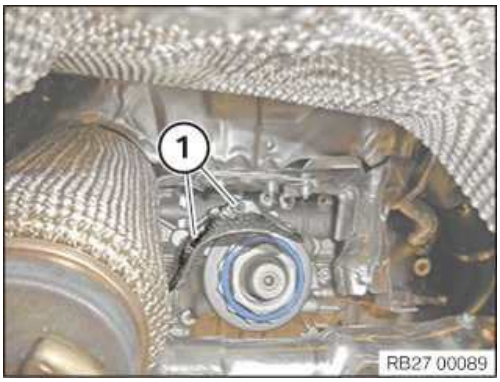
cardiagn.com



- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials



Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

cardiagn.com

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

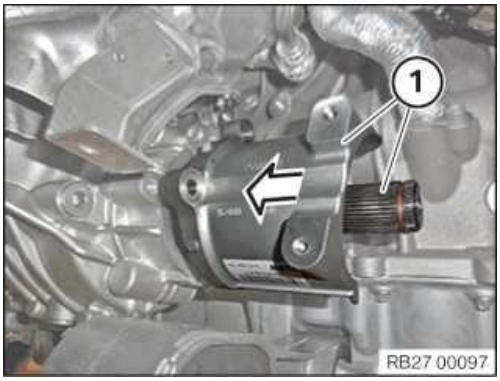
Technically suitable transfer box and electrical transmission oils	

Main group 27

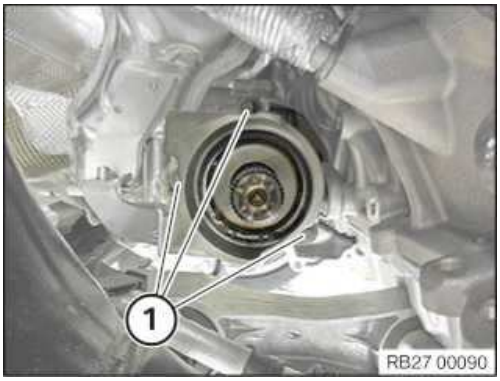
- Tighten the oil filler plug (1).

Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm



66 – Install the intermediate shaft with the support tube



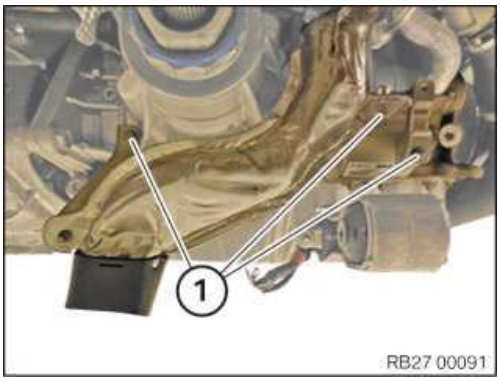
- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

- Position screws (1).



Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

cardiagn.com

- If installed: Install air duct.
- Tighten the screws (1).

67 – Installing the high-pressure stage exhaust turbocharger

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

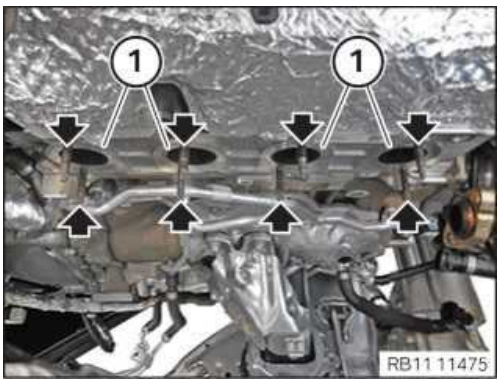
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE



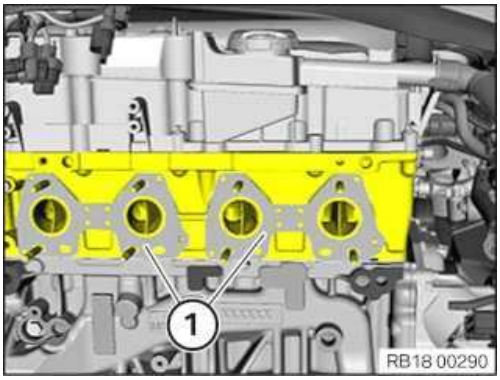
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

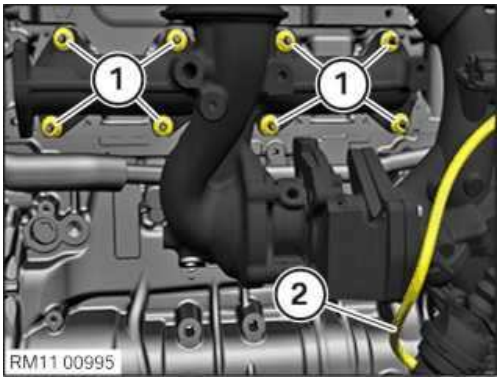
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.

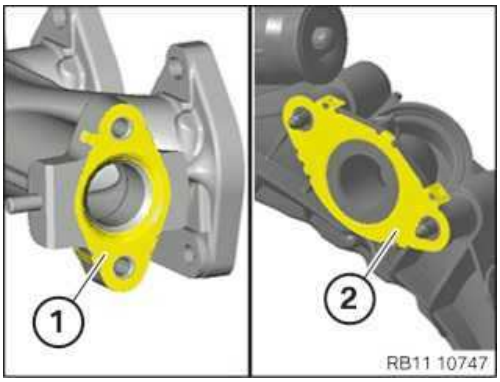
cardiagn.com



- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.

- Renew gasket (1).

  Parts: Gasket

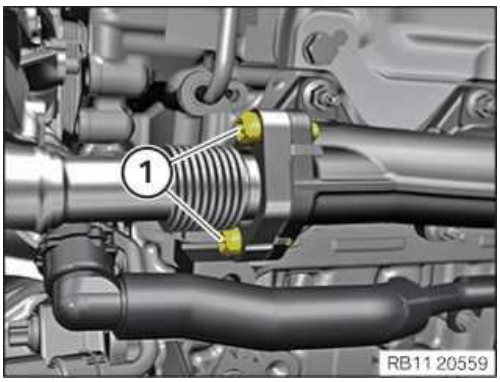


- Install new gasket (1).

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

  Parts: Nuts

- Connect vacuum hose(2).

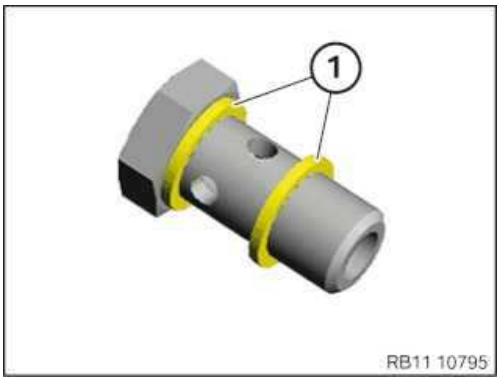


- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

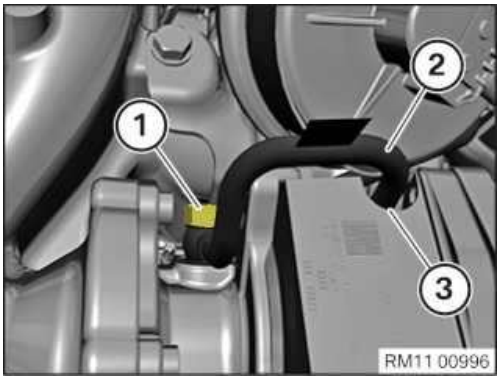
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket



- Tighten the screws (1).

Exhaust-gas recirculation cooler to exhaust manifold



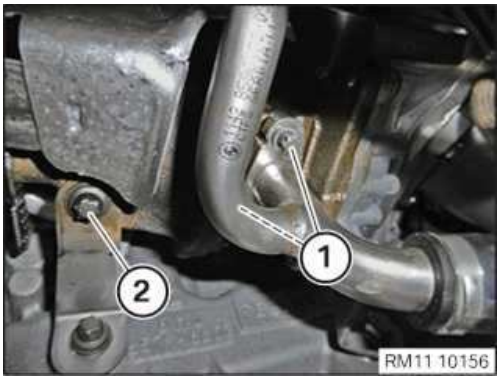
M8x28	Replace screws	Tightening torque	32 Nm

cardiagn.com

- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring

- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).



- Tighten bolt (1) from the right wheel arch.

- Renew seal (1) of oil return line.

  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

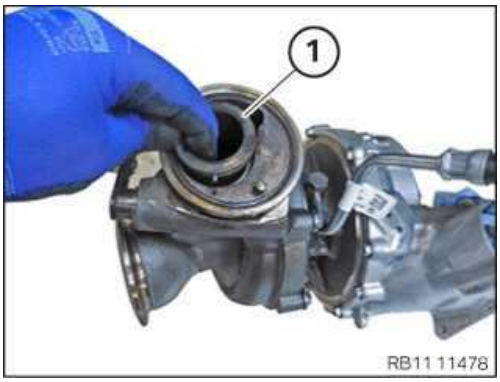
Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

68 – Installing the low-pressure stage turbocharger

cardiagn.com

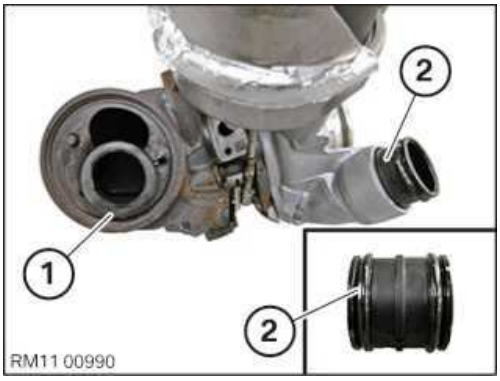
RISK OF DAMAGE



Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.



TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.

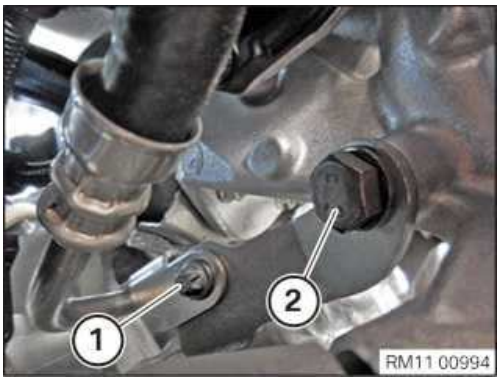
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

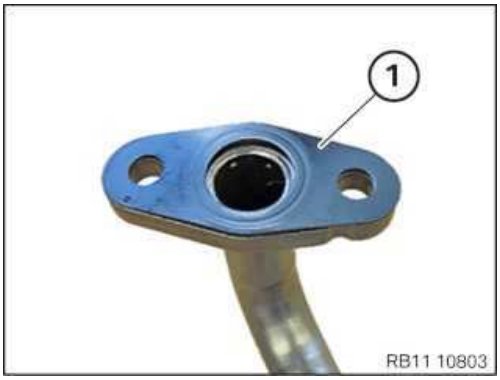
Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

cardiagn.com

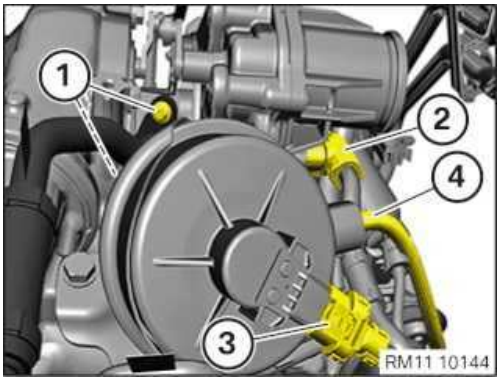
- Tighten down screw (1).



Oil feed line to bracket

Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

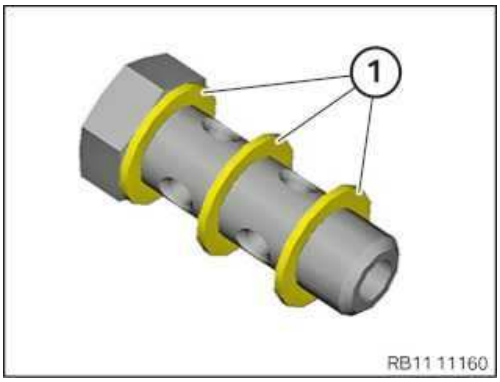


Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

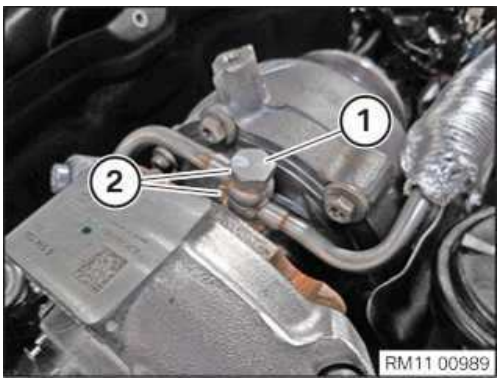
- Renew seal (1) on the oil return line.

  Parts: Gasket



- Position the oil return line with the seal.
- Tighten the screws (1).

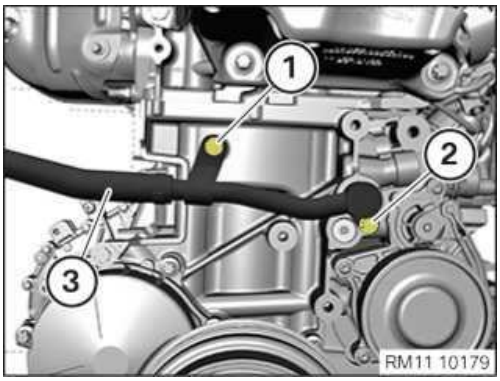
Oil return line to turbocharger



M6x12		Tightening torque	8 Nm

- Connect and lock connectors (2) and (3).

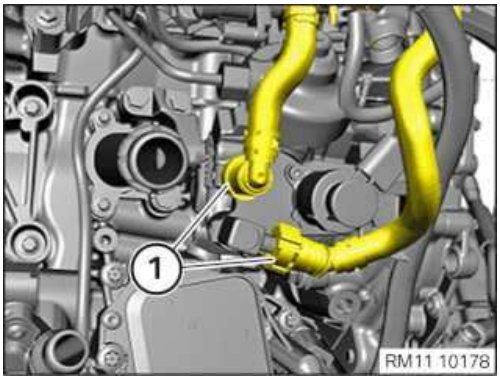
  The locks must engage audibly.
- Connect vacuum hose (4).



- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.

cardiagn.com



- Renew sealing ring of the coolant line (3).

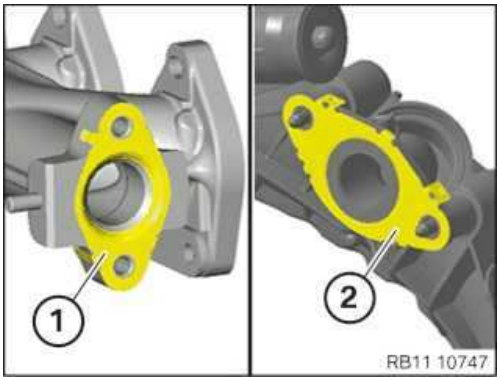
  Parts: Sealing ring
- Coat the sealing ring and install the coolant line (3) .
- Tighten down screws (1) and (2).

Standard screw connection M6

M6		8 Nm

- Connect and lock fuel lines (1).

  The fuel lines (1) must audibly engage.



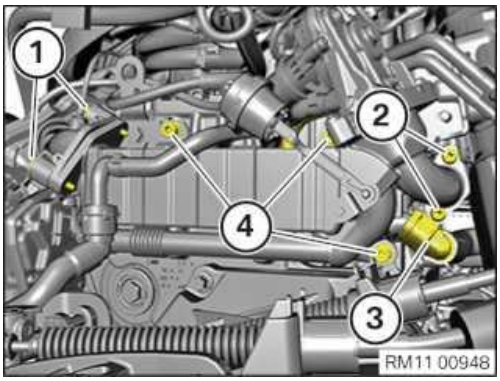
▶ **Installing the exhaust-gas recirculation cooler**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

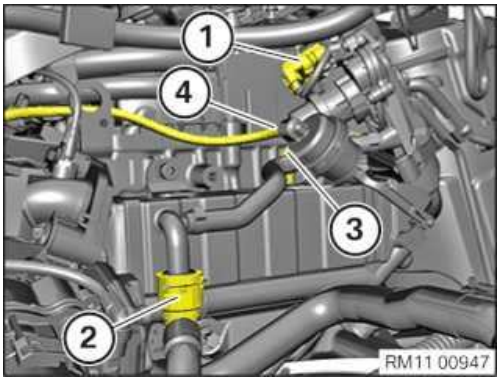
Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold



M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

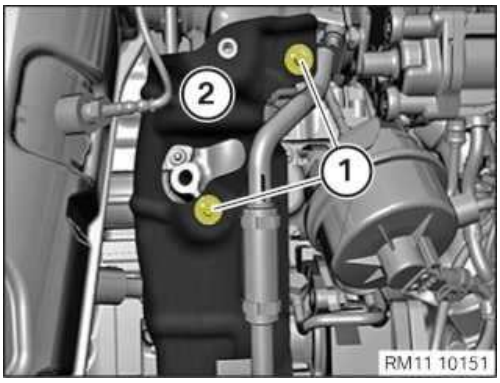
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

▸ **Installing heat shield on exhaust turbocharger at bottom**

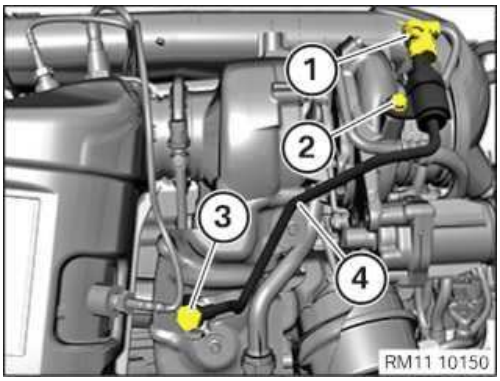


cardiagn.com

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

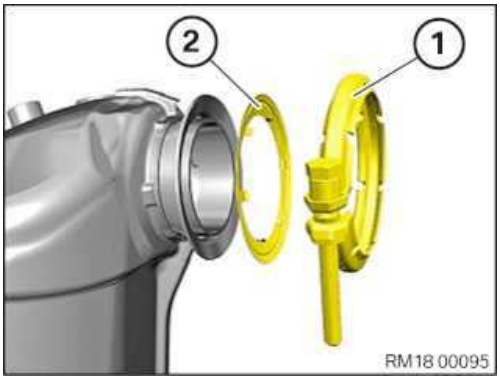
Torx screw BM 6x12		Tightening torque	10 Nm

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm



- Tighten down screw (2).

Standard screw connection M6

M6		8 Nm

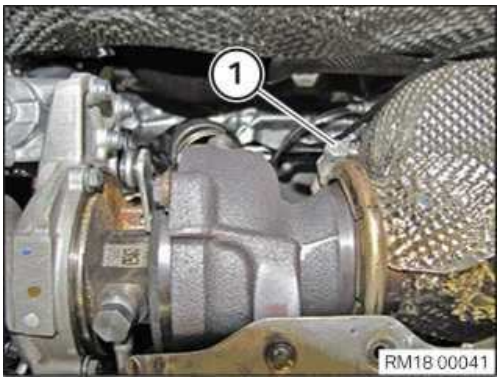
- Connect connectors (1) and lock.

  Lock must audibly engage.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

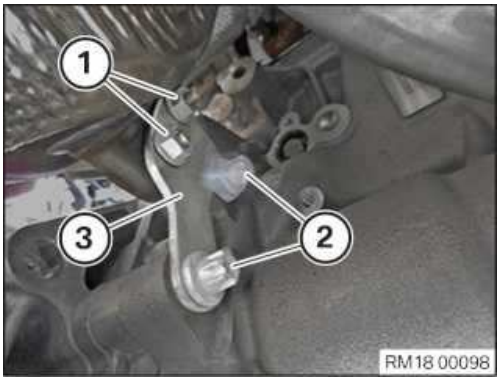


- Remove and install heavy components with the aid of another person/other persons.

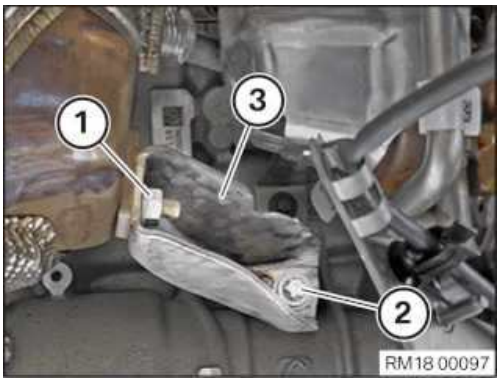
- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket



cardiagn.com



- Carefully insert and install the diesel particulate filter .
- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

- Tighten nuts (1) by hand.

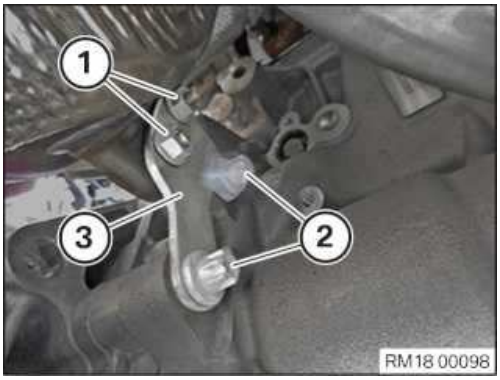
- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.

- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm



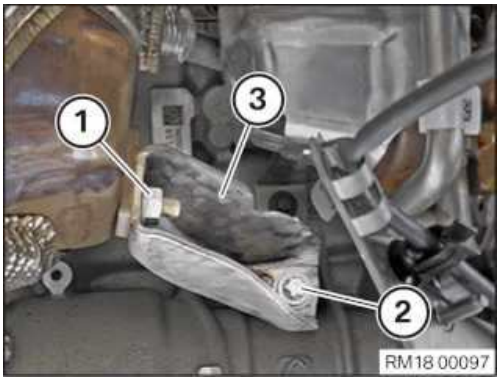
cardiagn.com

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screws (2).



Diesel particulate filter holder to gearbox

M12x75		Tightening torque	66 Nm

- Tighten nuts (1).

Diesel particle filter to holder

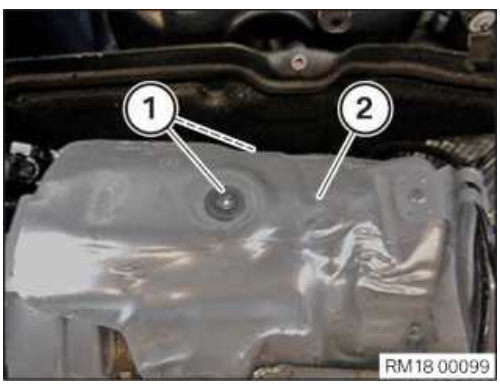
M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screw (2).

Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

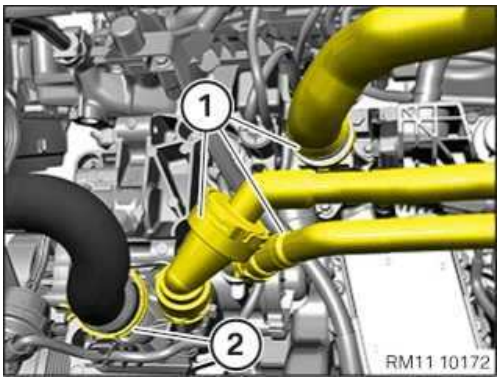


Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Remove fitting aid (1) for the flexible tube.

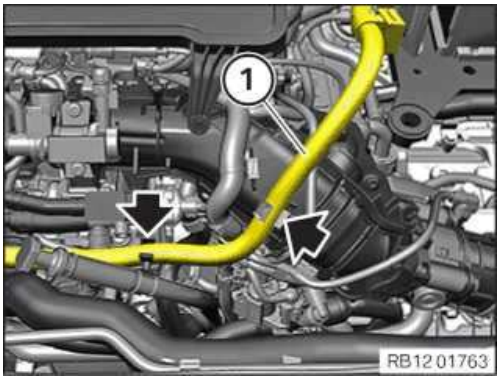
▶ **Install the heat shield on the exhaust turbocharger**



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm



- Fasten the cable at the clips .

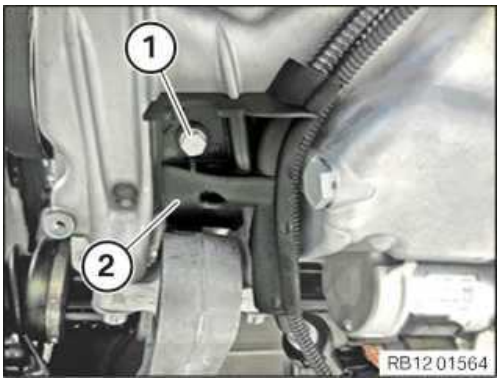
cardiagn.com

- Install the coolant hose and secure with the clamp (2) .
- Connect and lock the coolant lines (1).

  The coolant lines (1) must engage audibly.

CAUTION

Improper routing of the positive battery cable.



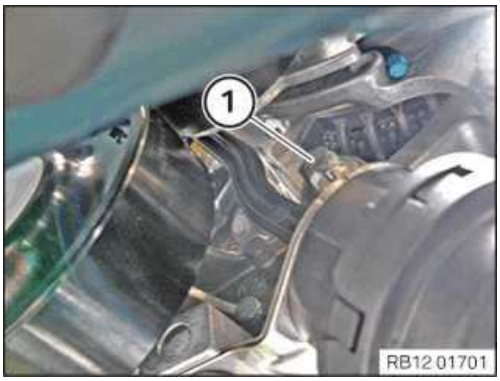
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert the positive battery cable (1) into the clamps (arrows).

- Feed in and install positive battery cable at the clamps (1).

- Insert and install the holder (2).
- Tighten down screw (1).



Bracket to oil sump

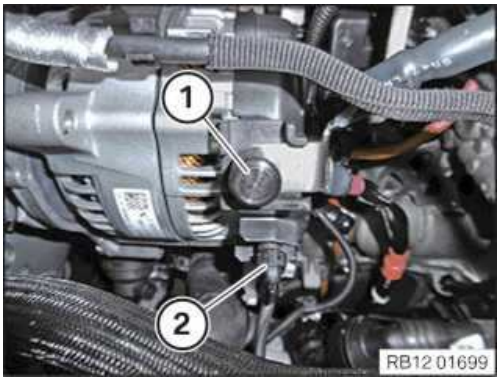
M6		Tightening torque	8 Nm

- Insert and install alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support.

cardiagn.com

- Tighten the screw (1) below on the alternator.

Alternator to component carrier



M10x75 / M10x125		Tightening torque	38 Nm

- Tighten the bolt (1) on top on the alternator.

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm

- Mount positive battery cable to the alternator.
- Tighten nut.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

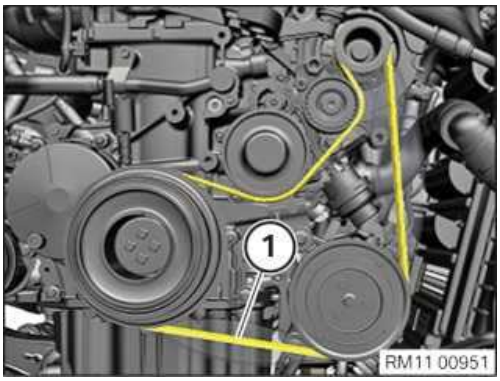
- Mount the cover (1).
- Connect the connector (2) to the alternator and lock audibly.

- Install air conditioning compressor (2) and position it correctly.
- Tighten the screws (1).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

▸ **Installing the drive belt for alternator**



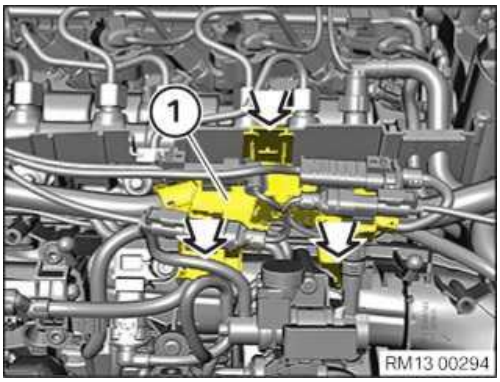
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

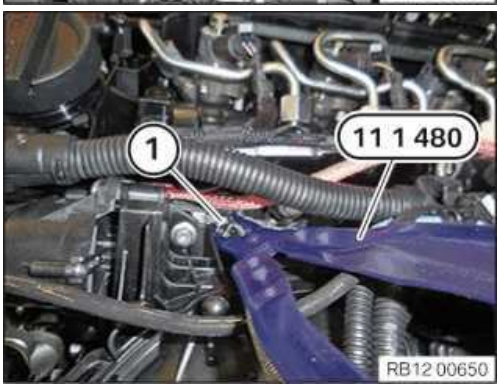
TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

cardiagn.com

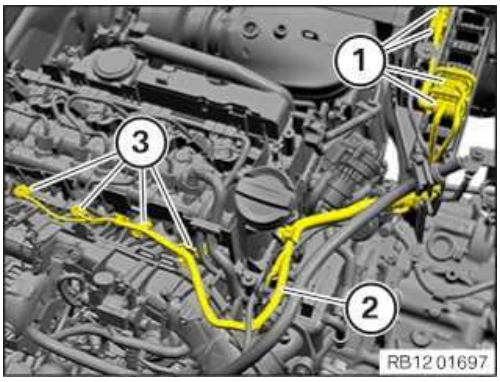


- Feed in the drive belt for the alternator (1) and install it.



- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool **0 496 268 (11 0 390)** out of the belt tensioner and remove it.

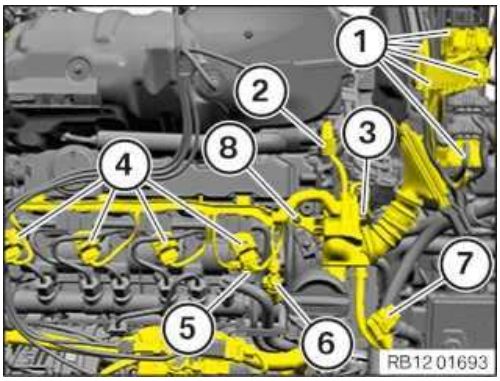
▶ **Installing the cable clip for the intake plenum**



- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.

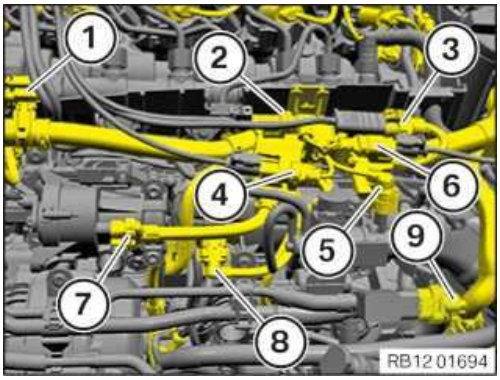
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.



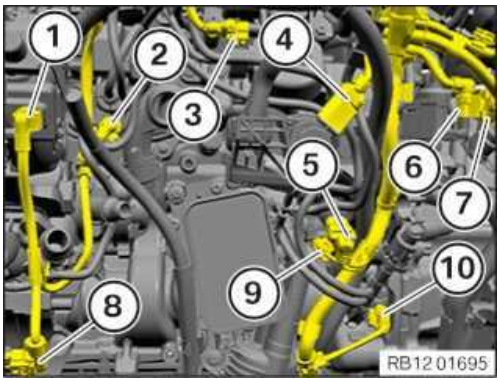
- Lay vehicle wiring harness and fasten with clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Connect all connectors (3) to the glow elements and engage them audibly.
- Mount ground strap and tighten screw (2).

Ground cable to cylinder head

M6x12		Tightening torque	8 Nm

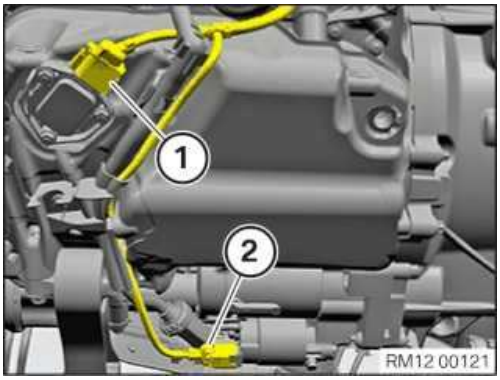


cardiagn.com



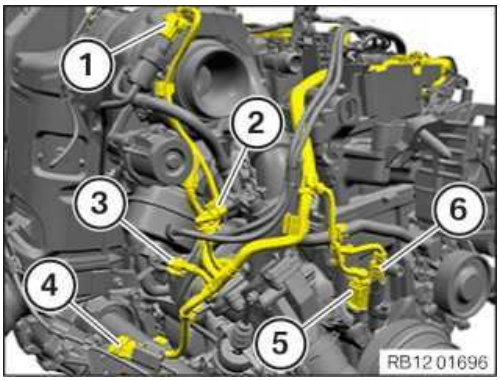
- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

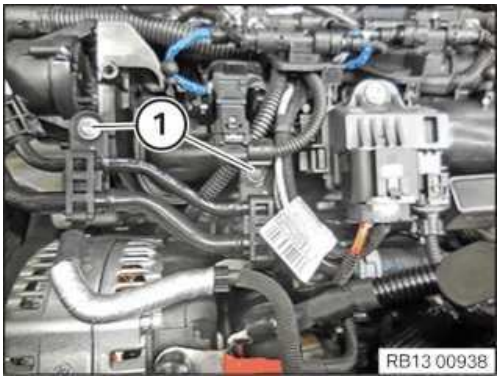


TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.



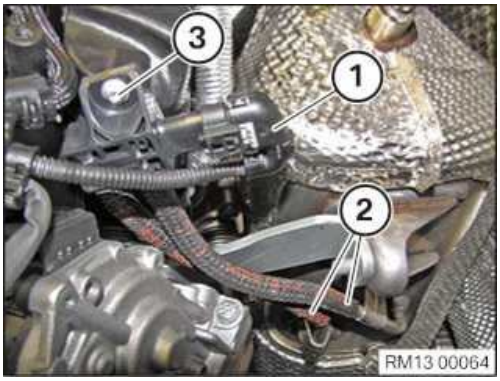
- Connect the connector (1) to the alternator and lock audibly.
- Connect the connector (2) to the electric changeover valve and lock audibly.
- Connect the connector (3) to the electric changeover valve and lock audibly.
- Connect the connector (4) to the high pressure pump and lock audibly.
- Connect the connector (5) to the oil pressure sensor and lock it audibly.
- Attach connector (6) to the throttle bodies and lock it audibly.
- Attach connector (7) to the intake air temperature sensor and lock it audibly.
- Connect the connector (8) to the air conditioning compressor and lock audibly.
- Connect the connector (9) to the solenoid valve and lock audibly.
- Connect the connector (10) to the crankshaft sensor and lock it audibly.



- Connect the connector (1) to the oil-level sensor and lock it audibly.
- Connect connector (2) to the starter motor and lock audibly.

cardiagn.com

- Attach connector (1) to the exhaust turbocharger and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust gas pressure sensor and lock it audibly.
- Connect the connector (4) to the monitoring oxygen sensor and lock audibly.
- Attach connector (5) to the oil pressure switch and lock it audibly.
- Attach connector (6) to the switching valve and lock it audibly.



- Position the fuel line.
- Tighten the screws (1).

Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

70 – Installing differential pressure sensor

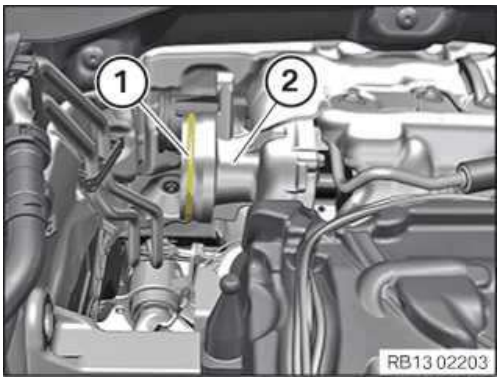
- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.



Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

71 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

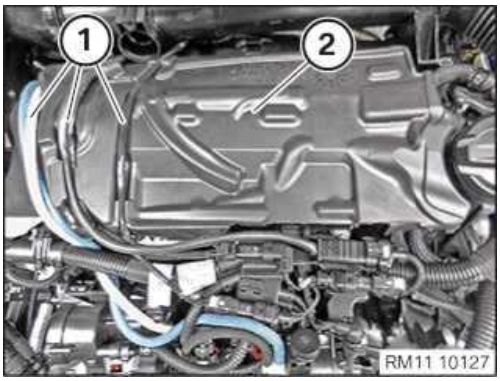
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

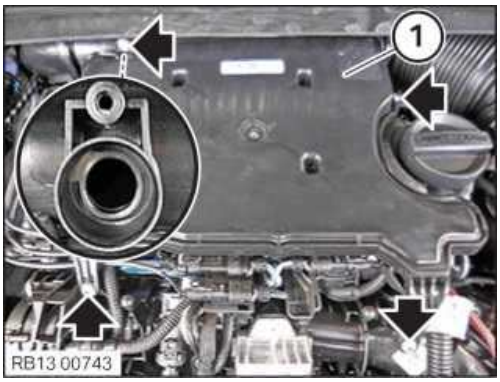
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing



Clamp		Tightening torque	3 Nm

72 – Install the acoustic cover for the injectors

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

73 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

74 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

75 – Install engine

- See additional information.

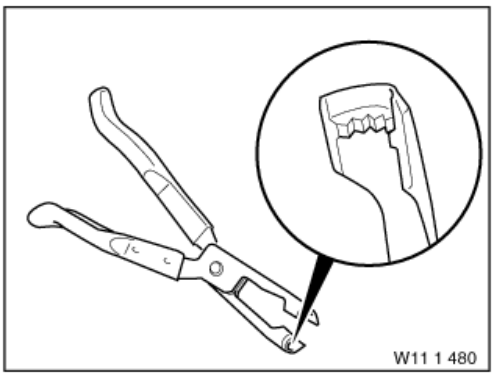
Overview of Special Tools

0 496 268 (11 0 390) Pin



Common — Used in step 7 69

Usage	(roll pin) For securing new tensioning pulley (poly-V belt)
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 15 07 (390)

cardiagn.com

0 490 796 (11 1 480) Pliers

Common Used in step 7 25

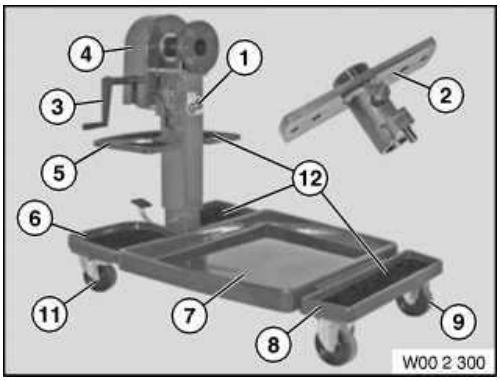
Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

2 459 012 Holder

Common Used in step 12 64

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

2 455 010 Engine support



Common Used in step 13 63

Usage	For accommodating engine on assembly stand. Engine: B3x, B4x, N47.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 495 187 (00 2 300) Assembly stand

Used in step 13

cardiagn.com

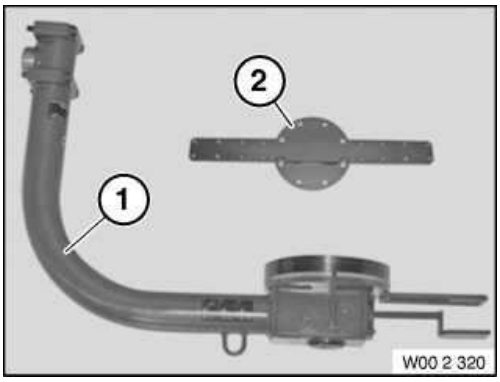
Common



Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.	

cardiagn.com

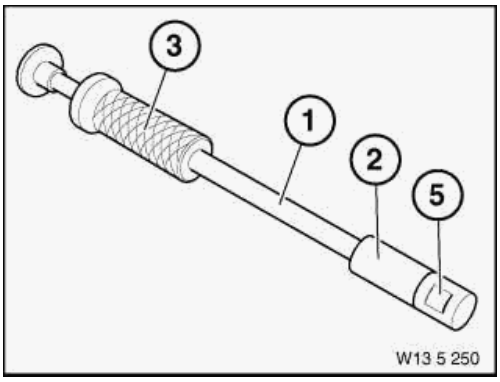
0 495 196 (00 2 320) Support arm

Common

Used in step 13



Usage	(Support arm with fixture) For mounting engines using the engine mounting bracket.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 197 (00 2 321)		**Support arm**	
2	0 495 198 (00 2 322)		**Panel** (take-up plate)	
3	0 495 380 (00 2 323)		**Panel** (fixture) Engine N73	
6	0 496 287 (00 2 326)		**Panel** (fixture) Engine: M73	
5	0 496 288 (00 2 327)	**0 496 373**	**Panel** (fixture) Engine: S62 Replaced by 11 5 420 (0 496 373)	
8	0 496 533 (00 2 328)		**Support** (Engine mount) Engine: N57, N57Top	
9	0 496 579 (00 2 329)	**0 496 680**	**Support** (Engine mount) Engine: N74 Replaced by 116160 (0 496 680)	
4	0 495 379 (00 2 324)		**Panel** (fixture) Engine M67TU	
5	0 495 381 (00 2 325)		**Panel** (fixture) Engine N62, N62TU	

cardiagn.com

0 493 321 (13 5 250) Puller

Common Used in step 17

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

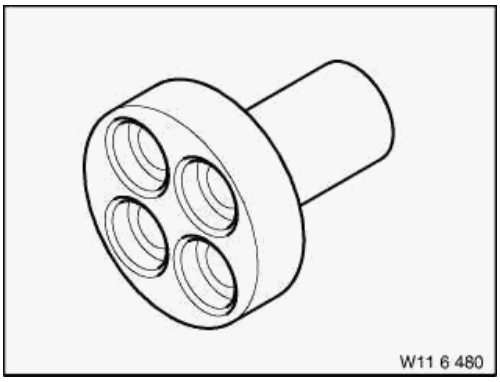
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

0 493 339 (13 5 252) Bush

Common Used in step 17

Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 340 (13 5 253) Weight



Common Used in step 17

Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

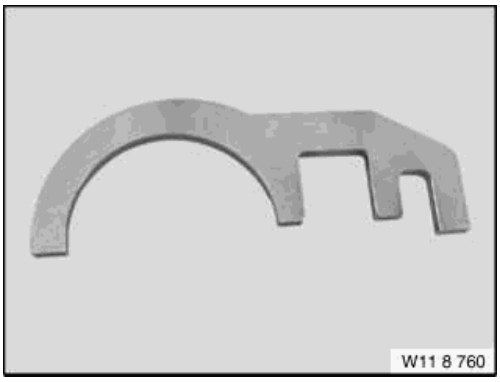
0 493 380 (11 6 480) Connector



Common	Used in step 20 53 56
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

2 288 380 Locating stud

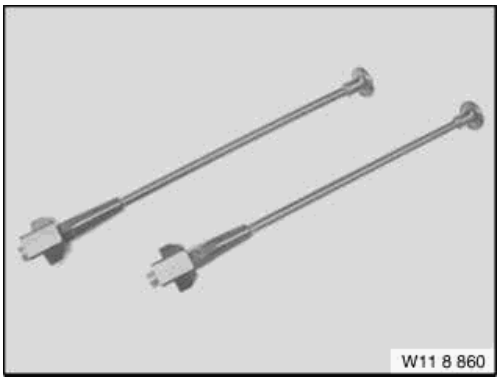
Common	Used in step 20 53 54 56
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 112 (11 8 760) Gauge

Common	Used in step 20 53 55 56
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

cardiagn.com

0 495 105 (11 4 480) oddments tray



Common Used in step 26 27 53

Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

0 496 144 (11 8 860) Assembly tool

Common Used in step 34 41

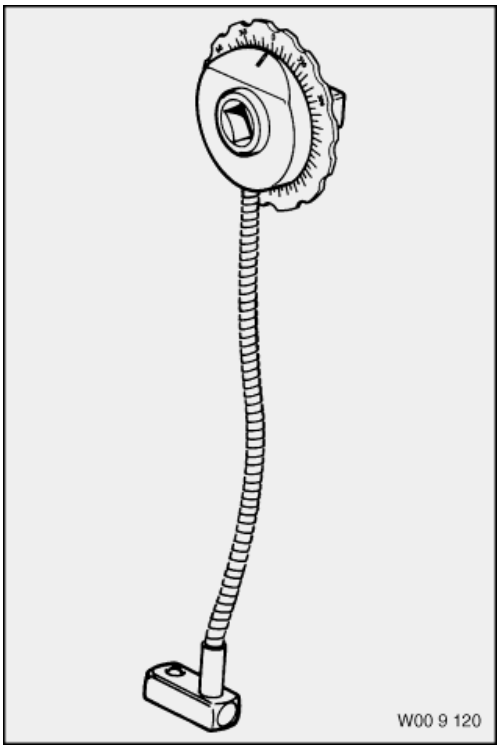
Usage	For installing piston with connecting rod in crankcase.
Included in the tool or work	
Storage location	A23
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

cardiagn.com

0 493 582 (11 8 140) Bush

Common

Used in step 41



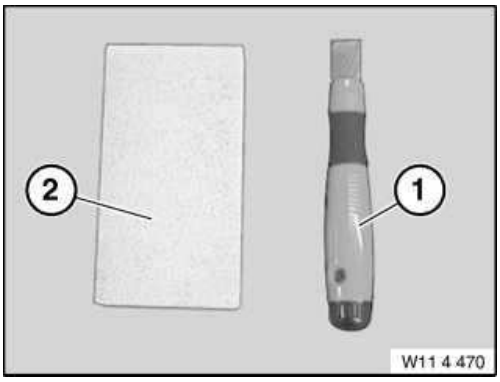
Usage	(Assembly bushes) For installing the pistons
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 12 99 (452)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 494 394 (11 8 141)		**Bush** Bush for piston installation 84.00 mm	
2	0 494 395 (11 8 142)		**Bush** Liquidation of existing inventory and then available only as a complete tool set 11 8140 (83 30 0 493 582) - as of 12.03.12.	
3	0 494 396 (11 8 143)		**Bush** Liquidation of existing inventory and then available only as a complete tool set 11 8140 (83 30 0 493 582) - as of 12.03.12.	

cardiagn.com

0 490 504 (00 9 120) Torque angle measuring dial



Common

Used in step 42 48

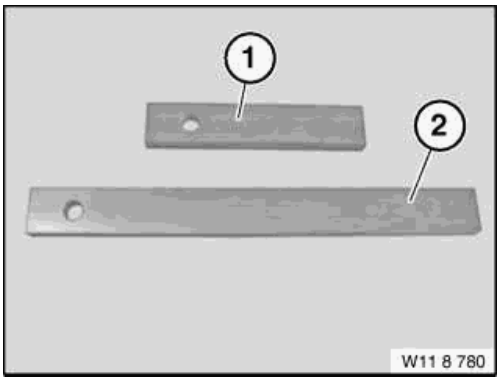
Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 102 (11 4 470) Tool

Common

Used in step 45 67



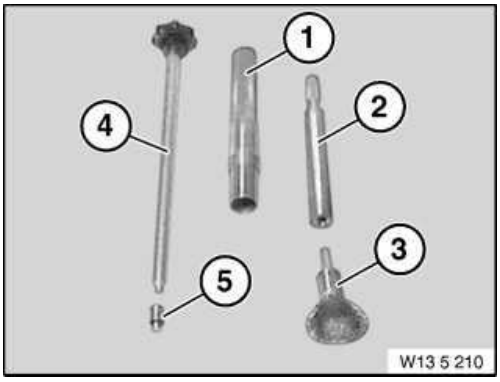
Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 103 (11 4 471)		**Scraper**	
2	0 495 104 (11 4 472)		**Extractor** (grindstone)	

cardiagn.com

0 496 120 (11 8 780) Plate

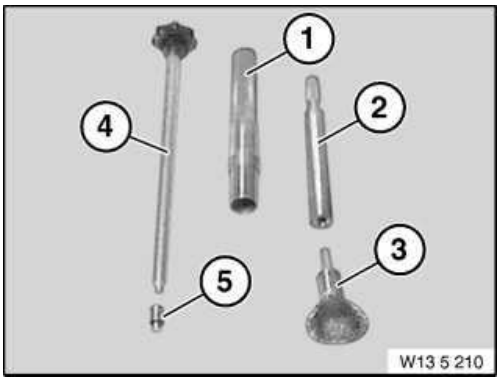


Common Used in step 45

Usage	(Mounting plates) For securing transmission oil sump when gearbox is removed.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 496 121 (11 8 781)		**Plate** (Mounting plate, short)Discontinued; only available via set 11 8 780 = 0496120.	
2	0 496 122 (11 8 782)		**Plate** (Mounting plate, long) Discontinued; only available via set 11 8 780 = 0496120.	

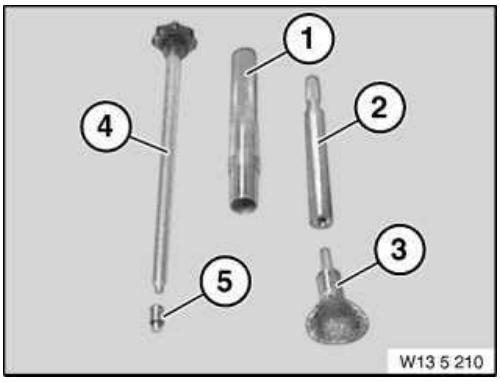


0 493 763 (13 5 215) Plug

Common Used in step 58

Usage	(Seal plug)
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 762 (13 5 214) Rod

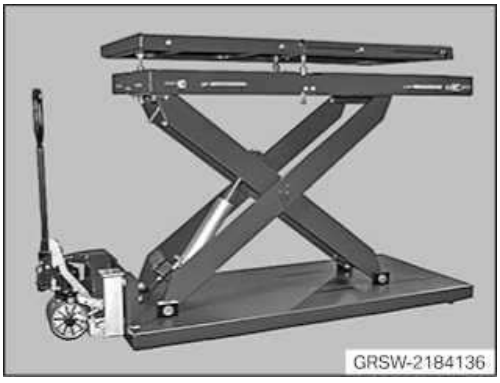


Common Used in step 58

Usage	(Mounting rod) For the seal plug
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 758 (13 5 210) Tool



Common Used in step 58

Usage	(Cleaning set) For injector channels
Included in the tool or work	
Storage location	B4
Replaced by	
In connection with	
SI-Number	01 05 00 (574)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 759 (13 5 211)		**Holding sleeve** (Guide sleeve)	
2	0 493 760 (13 5 212)		**Holder** (Brush holder)	
3	0 493 761 (13 5 213)		**Brush head**	
4	0 493 762 (13 5 214)		**Rod** (Mounting rod) For the seal plug	
5	0 493 763 (13 5 215)		**Plug** (Seal plug)	

2 184 136 Mobile equipment table lift

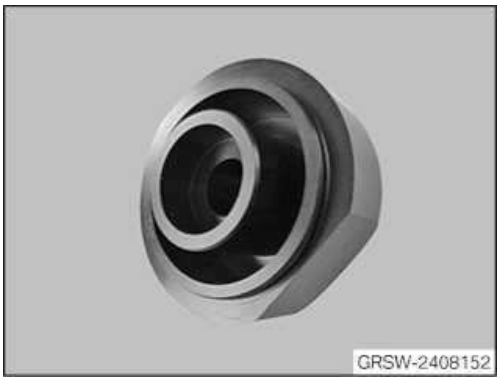
Common Used in step 64

Usage	Table lift MHT 1200
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	06 01 10 (649)

cardiagn.com

2 409 025 Puller

Common	Used in step 65
Usage	For disassembly of the outer radial shaft seal of the transmission output shaft, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A76
Replaced by	
In connection with	
SI-Number	01 53 14 (211)



2 411 739 Puller

Common	Used in step 65
Usage	For disassembly of the inner radial shaft seal of the output, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C78
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

cardiagn.com

2 408 152 Striking element

Common Used in step 65

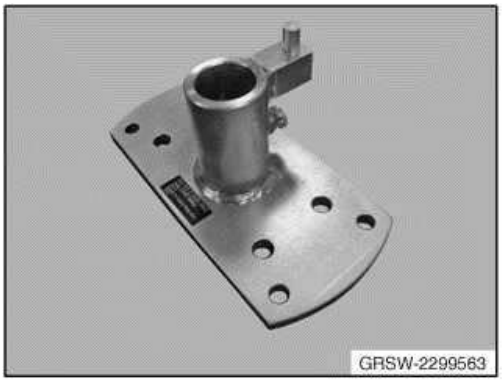
Usage	For installation of the right radial shaft seal transmission output shaft (inner). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)

2 413 037 Handle

Common Used in step 65

Usage	Universal drift handle. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C77
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

2 408 150 Striking element



Common Used in step 65

Usage	For installing the right radial shaft seal transmission output shaft (outer). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037

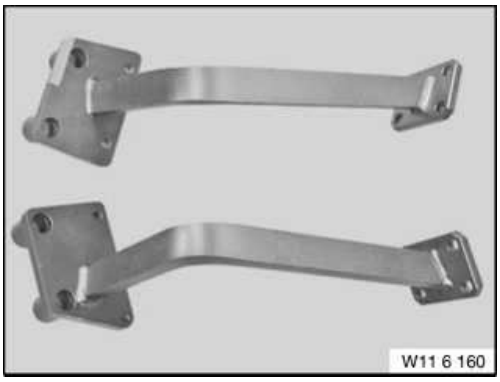
Replacement tools:

2 299 563 Adapter



Common	Used in step 13
Usage	New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.
Included in the tool or work	0 495 187
Storage location	
Replaced by	
In connection with	
SI-Number	

0 496 373 (11 5 420) Plate

Common	Used in step 13
Usage	(Fixture) Engine S62
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	

0 496 680 (11 6 160) Support

Common	Used in step 13
Usage	For mounting N74 engine on the assembly stand. In combination with 00 2 300, 00 2 320
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	00 2 300; 00 2 320 = 0495196
SI-Number	01 31 09 (604)

Overview Technical Data

Side clearance of piston rings

Used in step 36

Clean all components before measuring the side clearance.

Side clearance of the plain rectangular compression ring	0,17 mm ... 0,27 mm
Side clearance of the taper faced piston ring	0,30 mm ... 0,50 mm
Side clearance of the oil scraper ring with spiral expander	0,2 mm ... 0,4 mm

Piston diameter

Used in step 37

Measure the piston diameter at distance (A) from the lower end of the piston skirt.

Distance (A) to the lower end of the piston skirt	17 mm
Nominal dimension of piston diameter	83,936 mm ... 83,954 mm

Cylinder bore

Used in step 38

cardiagn.com

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

11 25 000 Removing and installing/replacing all pistons

PRELIMINARY WORK

1 – Removing engine

- See additional information.

2 – Removing the acoustic cover

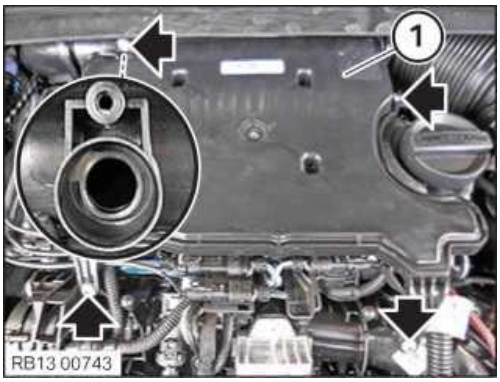
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

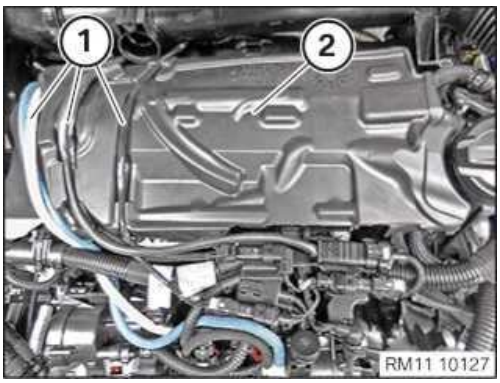


Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

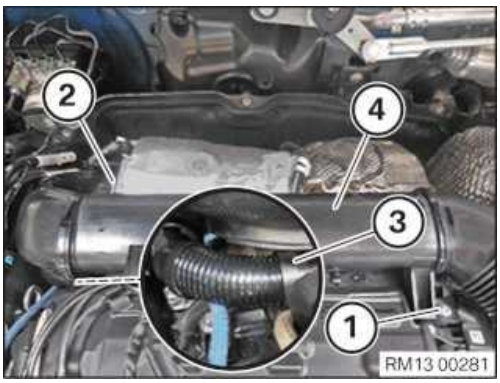


3 – Remove resonator

- Remove screws (arrows).
- Guide out and remove the resonator (1).

cardiagn.com

4 – Remove the acoustic cover for the injectors



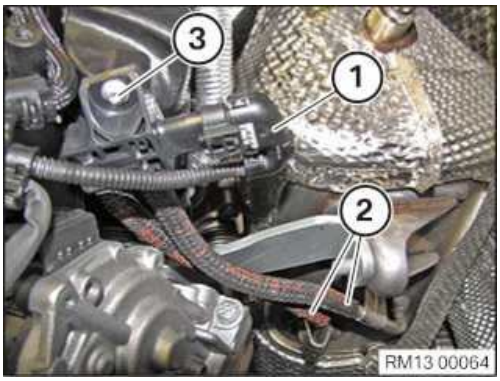
- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

5 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

6 – Remove differential pressure sensor

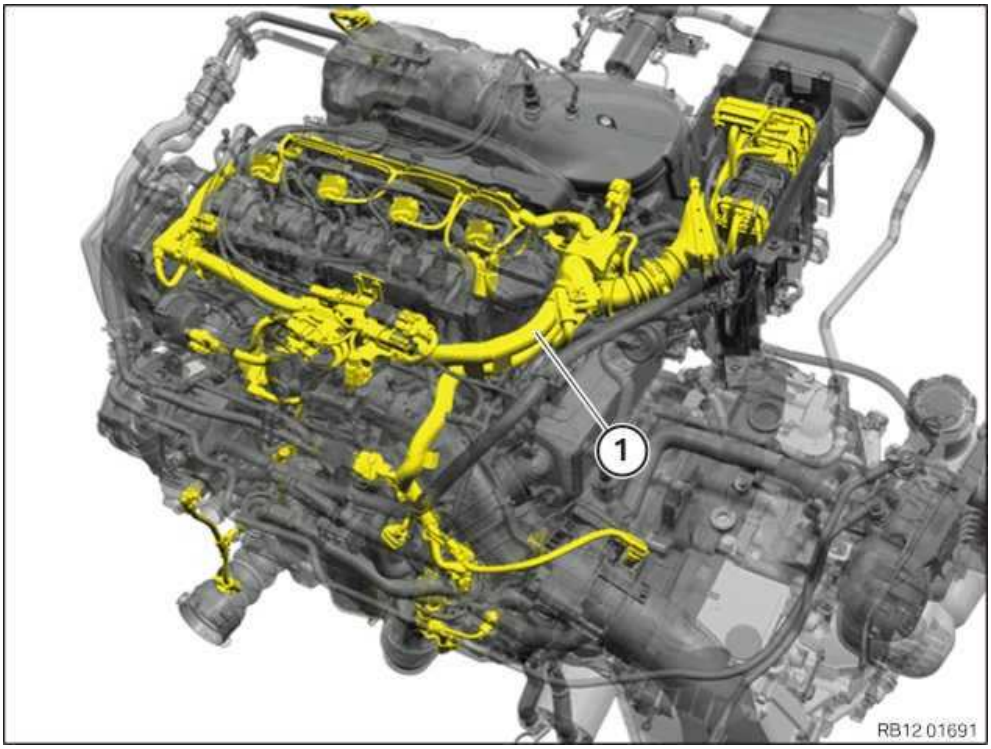


RISK OF DAMAGE

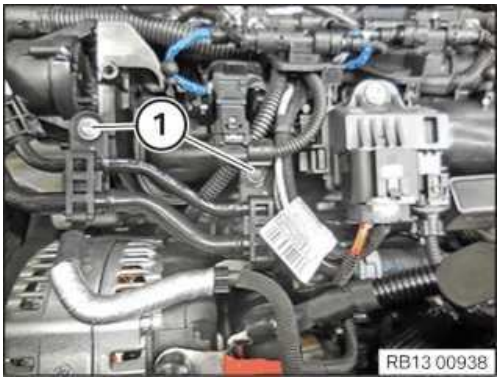
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



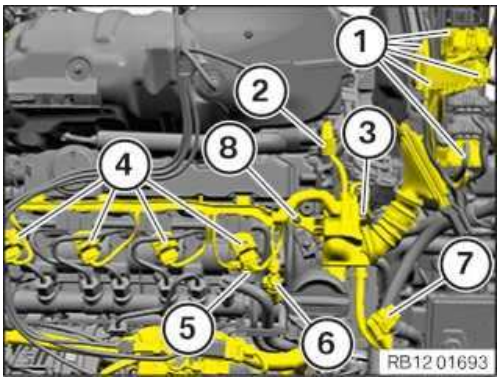
cardiagn.com



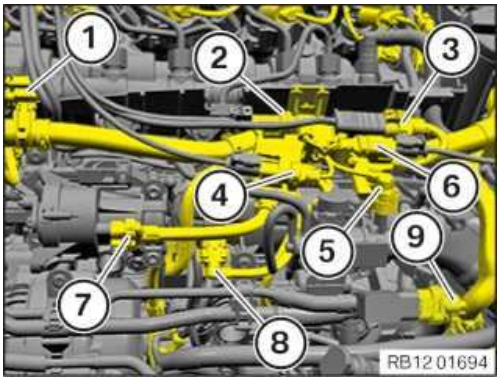
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

7 – Removing assemblies (on lifting table)

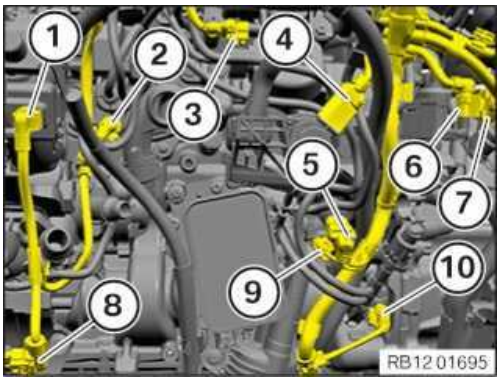
Overview: Wiring harness section for the engine



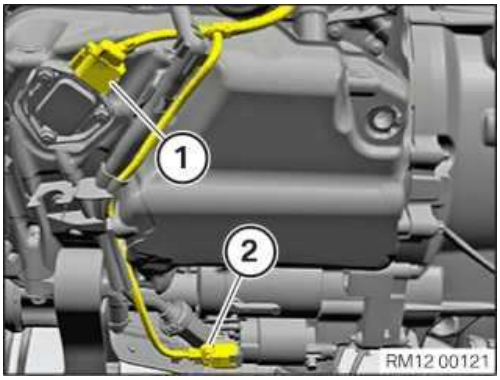
1 Wiring harness section for the engine



- Loosen screws (1).

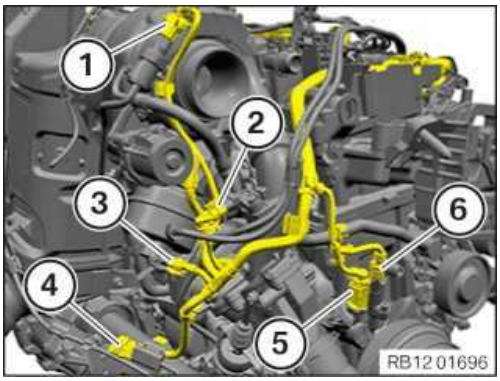


cardiagn.com

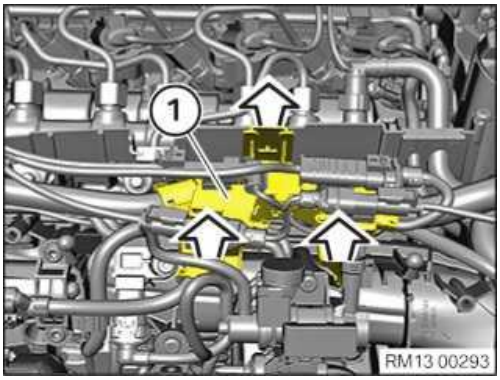


- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).

- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock connector (3) and pull it off from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

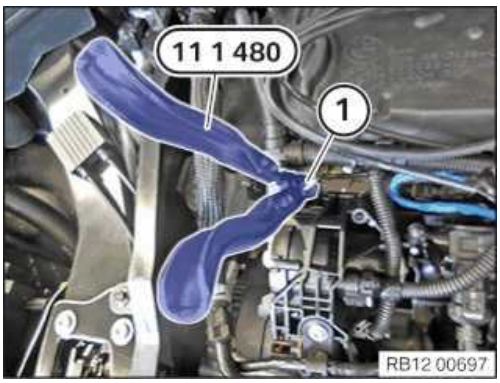


- Unlock and disconnect the connector (1) from the alternator.
- Unlock and disconnect the connector (2) from the electric changeover valve.
- Unlock and disconnect the connector (3) from the electric changeover valve.
- Unlock the connector (4) and pull it off the high pressure pump.
- Unlock the connector (5) and disconnect it from the oil pressure sensor.
- Unlock connector (6) and pull off from throttle body.
- Unlock the connector (7) and disconnect it from the intake air temperature sensor.
- Unlock the connector (8) and disconnect it from the air conditioning compressor.
- Unlock and disconnect the connector (9) from the solenoid valve.
- Unlock the connector (10) and pull it off the crankshaft sensor.

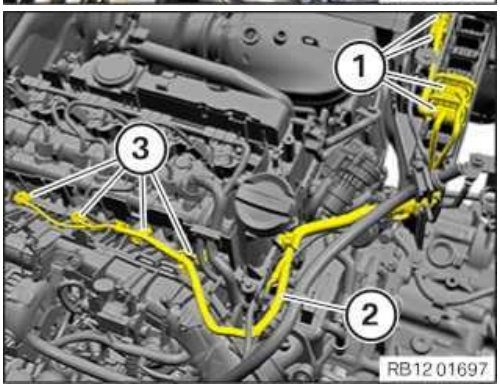


- Unlock the connector (1) and pull off of the oil-level sensor.
- Unlock connector (2) and remove from starter motor.

cardiagn.com



- Unlock the connector (1) and disconnect it from the exhaust gas pressure sensor.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock the connector (3) and pull it off the exhaust turbocharger.
- Unlock the connector (3) and disconnect it from the differential pressure sensor.
- Unlock connector (4) and pull it off from the monitoring oxygen sensor.
- Unlock the connector (5) and pull it off the oil pressure switch .
- Unlock connector (6) and disconnect from switching valve.
- Detach, feed out and remove the wiring harness from the clamps.



▶ **Removing the cable clips from the intake plenum**

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Pull off all connectors (3) from glow element using special tool **0 490 796 (11 1 480)**.
- Loosen screw (2) and remove the ground strap.
- Detach, feed out and remove the wiring harness from the clamps.

▶ **Removing the drive belt for alternator**

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

cardiagn.com

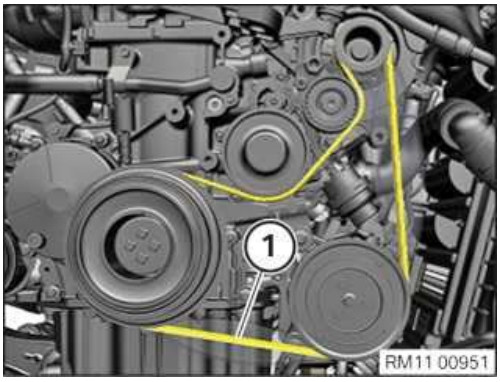
CAUTION

Component with preload.

Danger of injury!

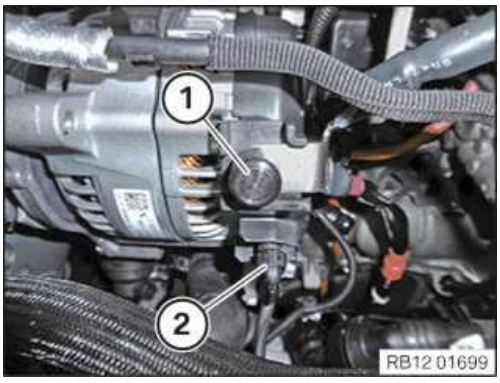
- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION



If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

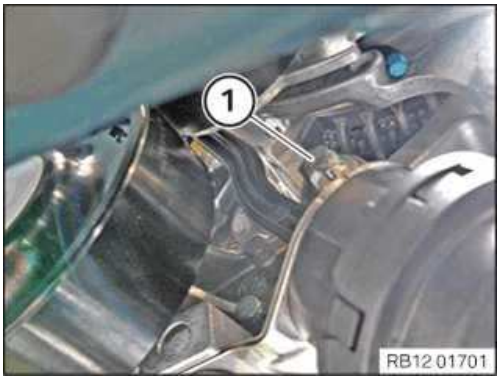
TECHNICAL INFORMATION



The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool **0 496 268 (11 0 390)**.

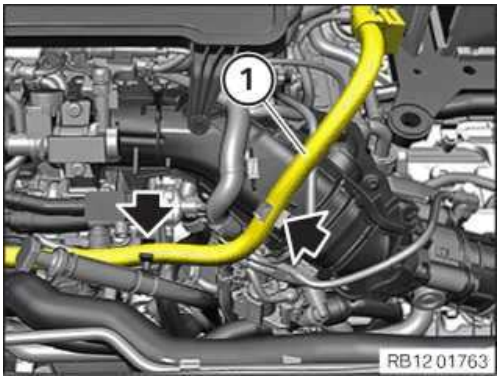
- Guide out the drive belt for the alternator (1) and remove it.



- Remove the cover (1) and loosen the nut below.
- Disconnect positive battery cable from alternator.
- Unlock and disconnect the connector (2) from the alternator.

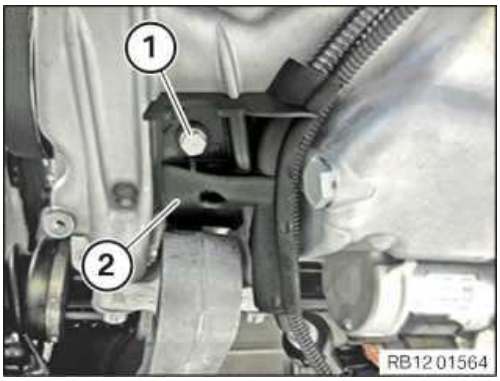
cardiagn.com

- Detach screw (1) on top on the alternator.



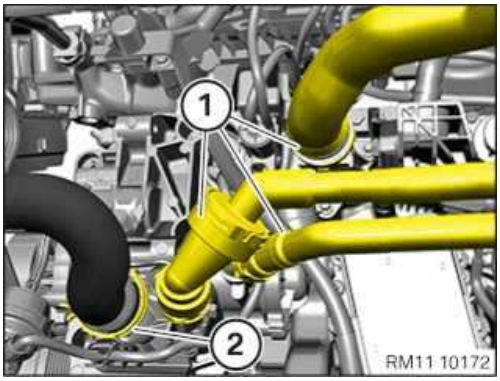
- Detach screw (1) below on the alternator.

- Feed out alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support and remove.



- Loosen screws (1).
- Feed out and remove the air conditioning compressor (2).

- Release the positive battery cable (1) from the clamps (arrows).

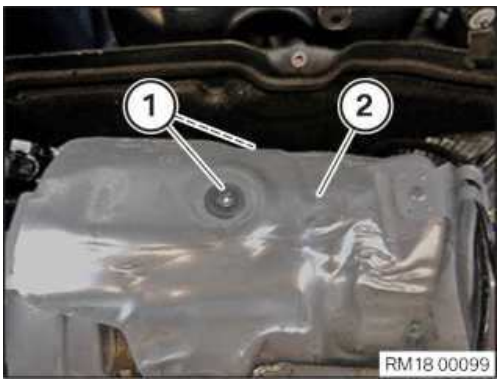


cardiagn.com

- Loosen screw (1).
- Guide out and remove holder (2).

- Feed out positive battery cable from the clamps (1) and remove.

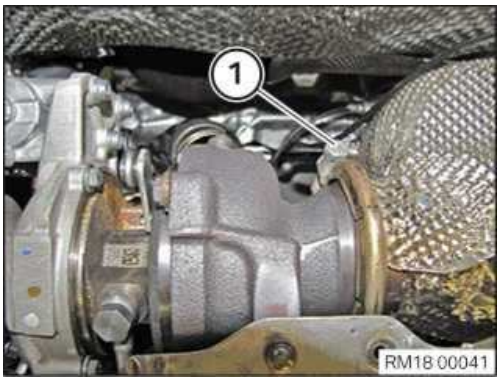
- Unlock and disconnect coolant lines (1).
- Guide out the coolant lines (1) and remove it.
- Detach the clamp (2).
- Guide the coolant hose out and remove.



▶ **Removing heat shield from top exhaust turbocharger**

WARNING

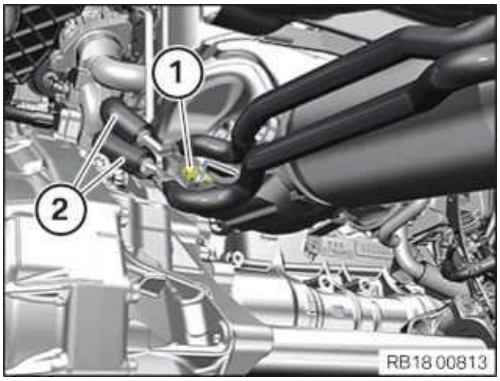
Hot surfaces.



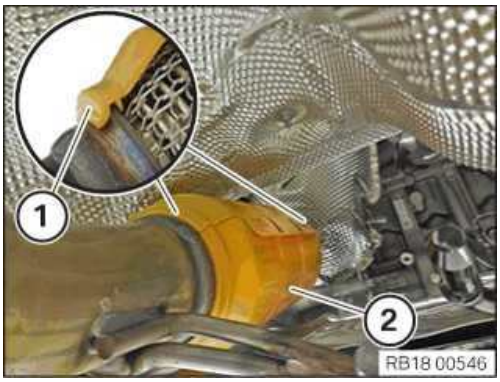
Risk of burning!

- Perform all work only on components that have cooled down.

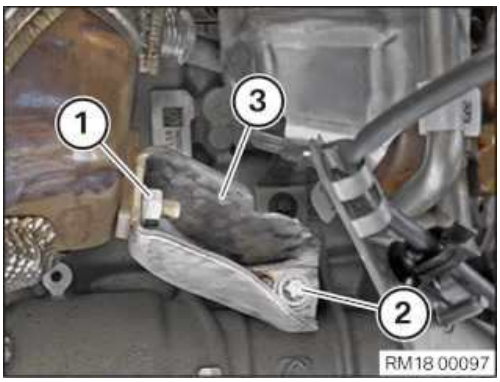
- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).



cardiagn.com

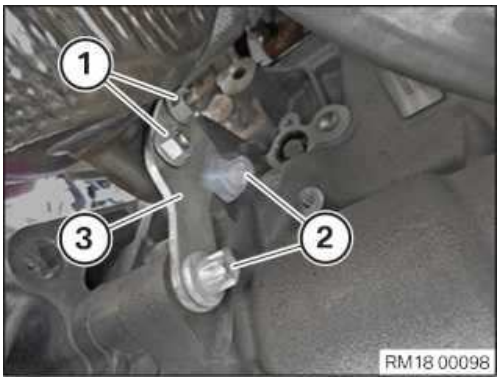


- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



- Loosen nuts (1).

- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

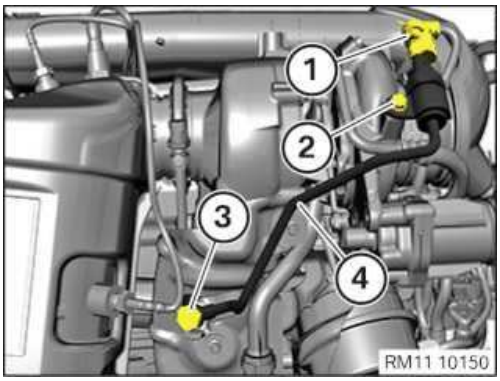


- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.

- Loosen nut (1).
- Loosen screw (2).
- Remove holder (3).

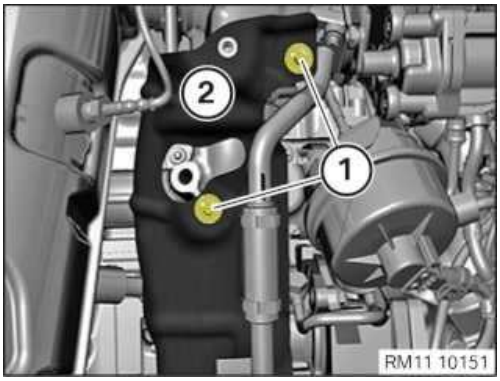
cardiagn.com

- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).
- Guide out and remove diesel particulate filter .



▶ **Remove the heat shield from the exhaust turbocharger at the bottom**

WARNING



Hot surfaces.

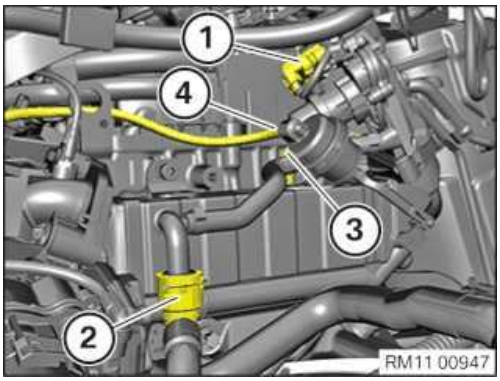
Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).

▶ **Removing the exhaust-gas recirculation cooler**

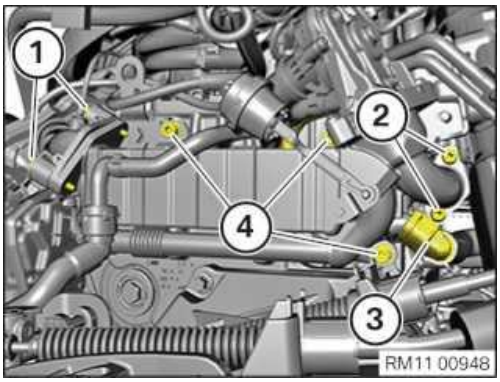


WARNING

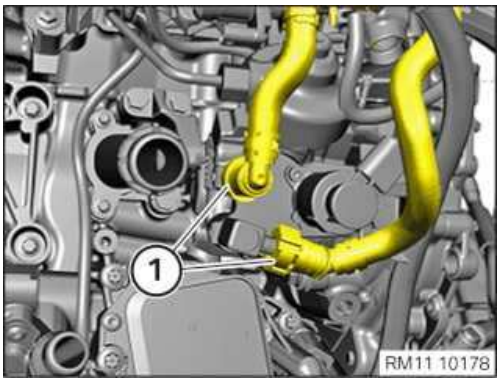
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

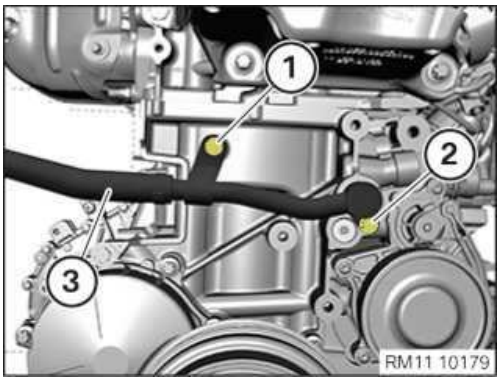


cardiagn.com



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



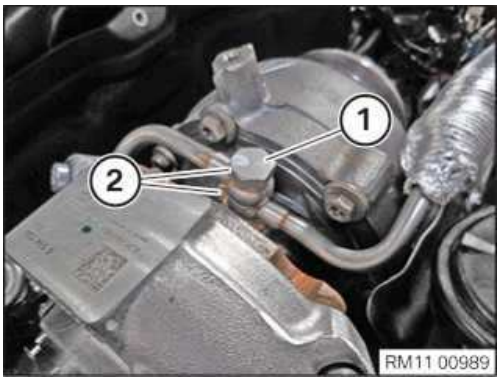
- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

- Unlock the fuel lines (1) and disconnect from the high pressure pump.
- Remove the fuel lines.

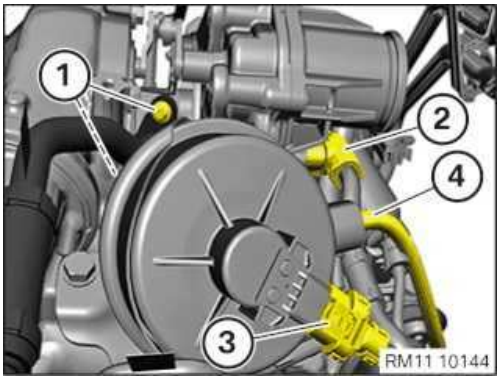
- Loosen screws (1) and (2).
- Remove coolant line (3).

8 – Removing the low-pressure stage turbocharger



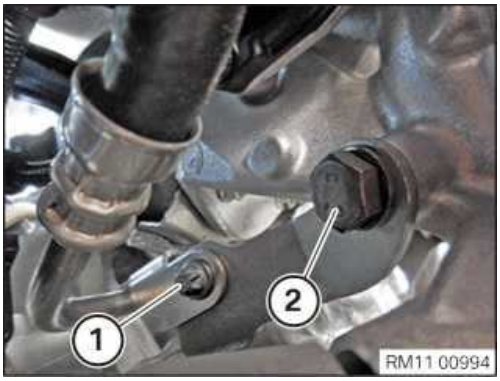
WARNING

Hot surfaces.



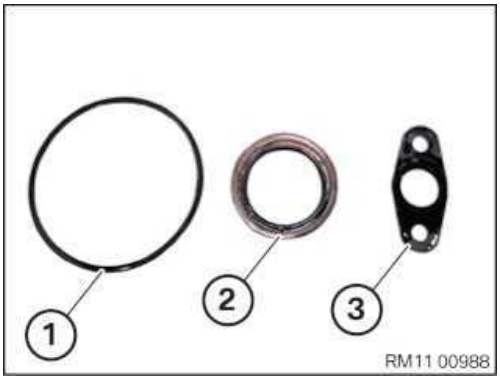
Risk of burning!

- Perform all work only on components that have cooled down.



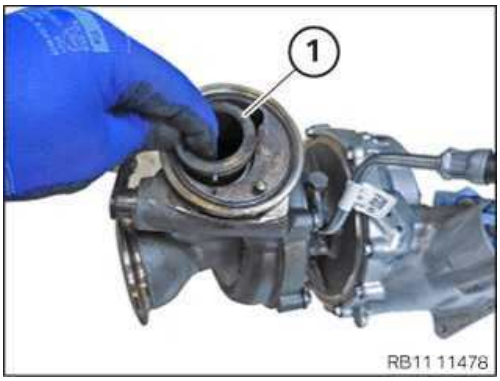
cardiagn.com

- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.



- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.

- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).



- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

cardiagn.com

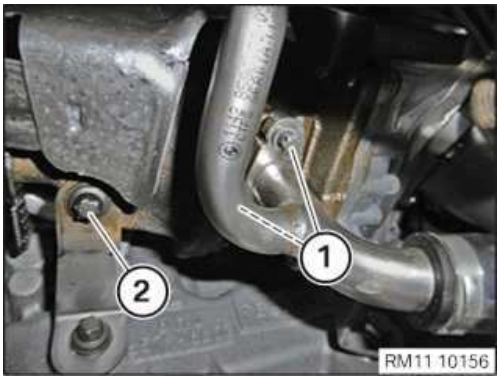
- Remove the spacer ring (1).

9 – Removing the high-pressure stage exhaust turbocharger

WARNING

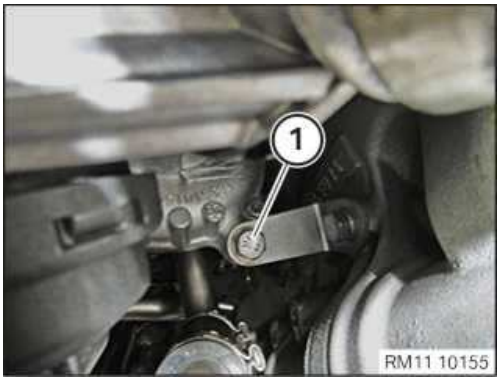
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

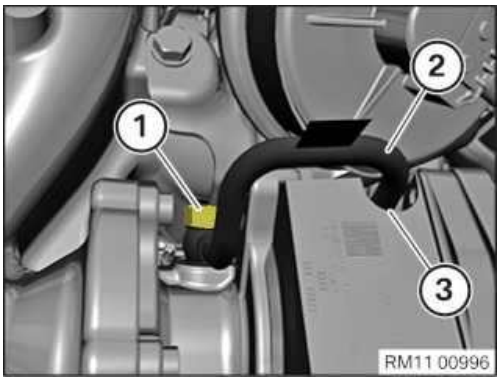
CAUTION



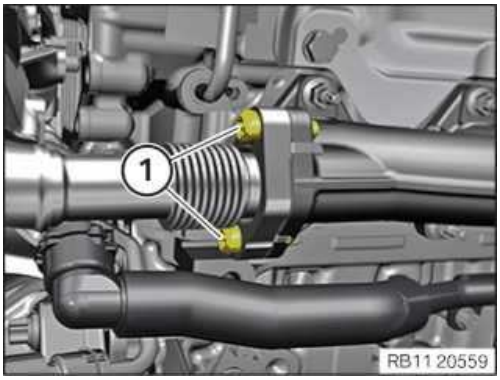
Heavy component.

Heavy components can lead to injury or damage.

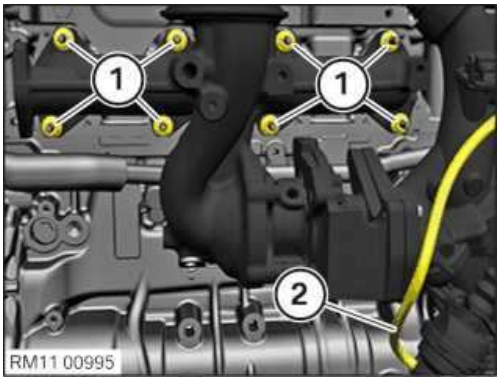
- Remove and install heavy components with the aid of another person/other persons.



- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).

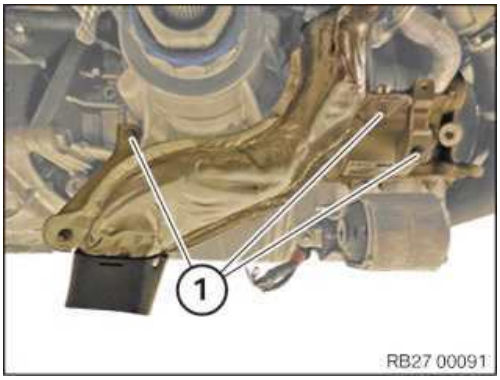


- Release screw (1) from the right wheel arch.

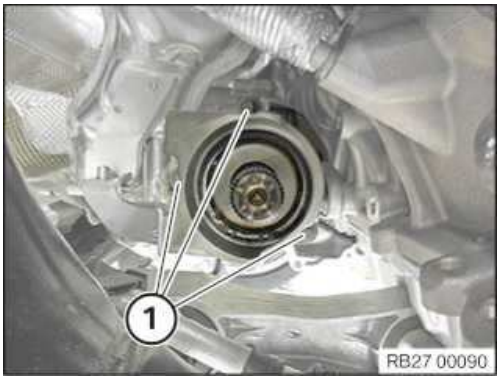


cardiagn.com

- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

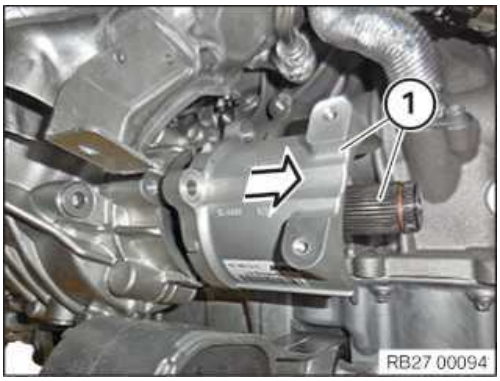


- Loosen screws (1).

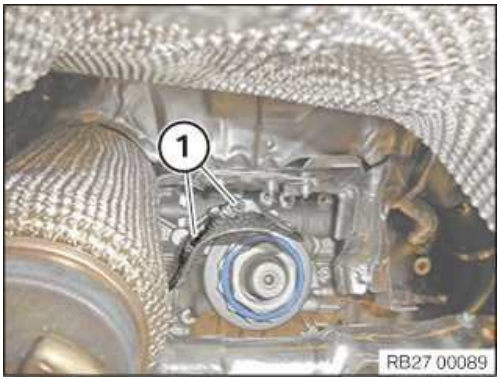


- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

10 – Remove the intermediate shaft with the support tube

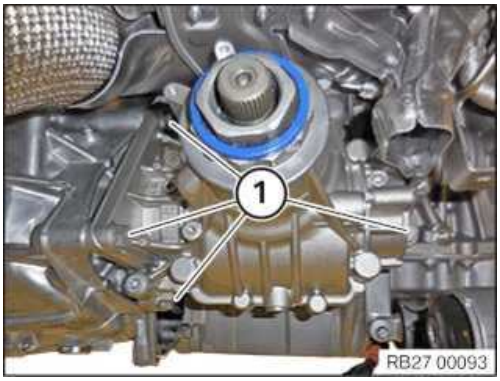


- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).

cardiagn.com



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

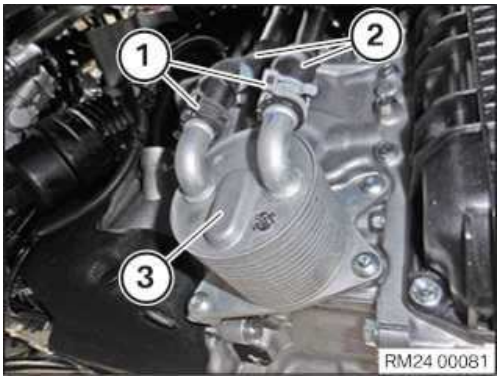
11 – Remove transfer box (VTG)

- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

12 – Detach the engine from the automatic transmission

Prerequisite



Engine has been removed.

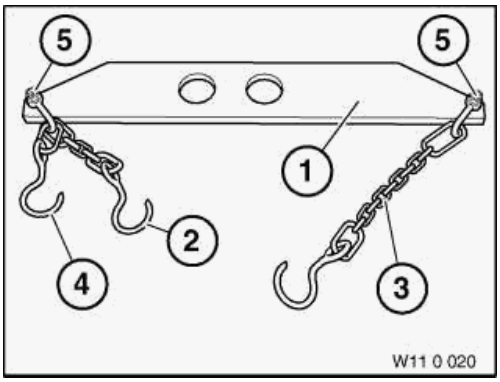
CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Unfasten hose clamps (1).
- Disconnect coolant hoses (2) from transmission oil cooler (3).
- Catch the emerging coolant.



cardiagn.com

- Crank engine with special tool **0 493 380 (11 6 480)** at vibration damper in direction of rotation.
- Unscrew the nut (1) of the torque converter.
- Crank engine further and release remaining 5 nuts.

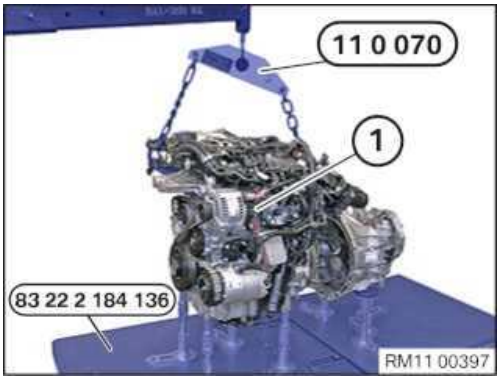
- Stage the workshop crane **2 220 718**.

- Stage the lifting gear .

TECHNICAL INFORMATION

Conduct the following operation with the assistance of a second person.

- Secure the automatic transmission against dropping using a workshop crane **2 220 718** and lifting gear .
- Remove screws (arrows).
- Remove the automatic transmission with help from an auxiliary person and using the workshop crane **2 220 718** including lifting gear and put it to one side.



cardiagn.com

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm

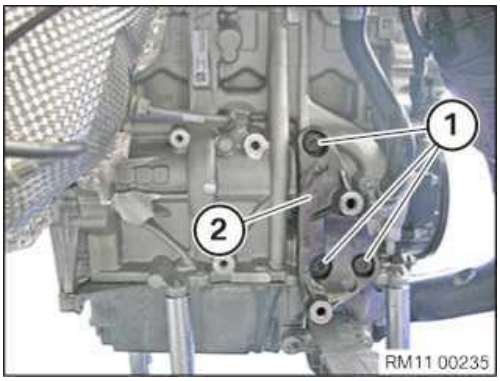
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Attach engine lifter to special tool and lift engine (1) off lifting table.

13 – Mount engine on assembly stand

CAUTION



Heavy component.

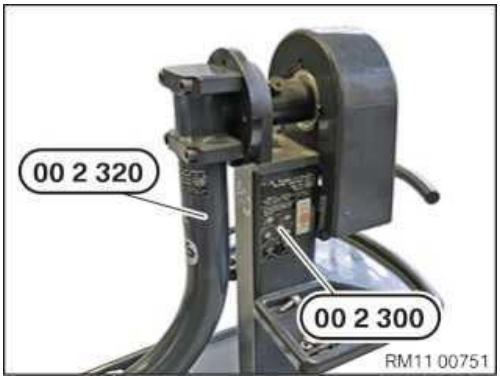
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

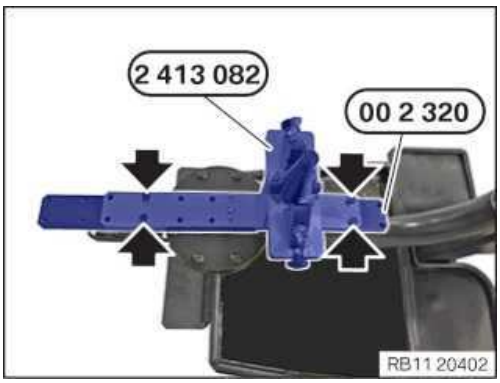
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Loosen screws (1).
- Guide out and remove holder (2).



cardiagn.com

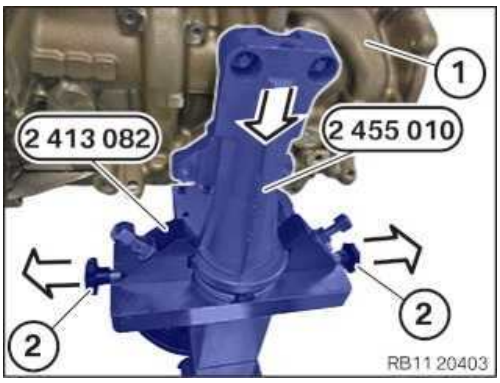


- Position the special tool **2 455 010** on the engine (1).
- Position the standard bolts **M10x30**.
- Tighten the standard bolts (arrows).
-

Special tool 2 455 010 to crankcase

M10x30		Tightening torque	38 Nm

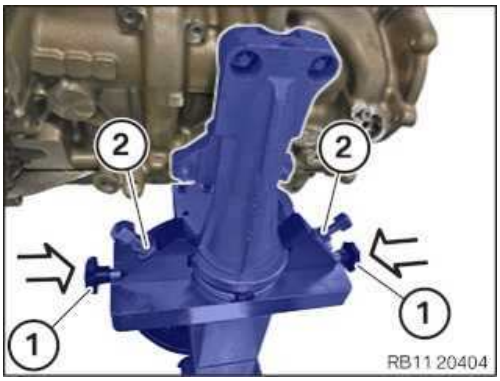
- Prepare the assembly stand **0 495 187 (00 2 300)** with the special tool **0 495 196 (00 2 320)**.



- Screw the special tool to the **0 495 196 (00 2 320)** special tool.
- Tighten screws (arrows).
-

Special tool 11 8 930 to special tool 00 2 320

M14x35		Tightening torque	160 Nm

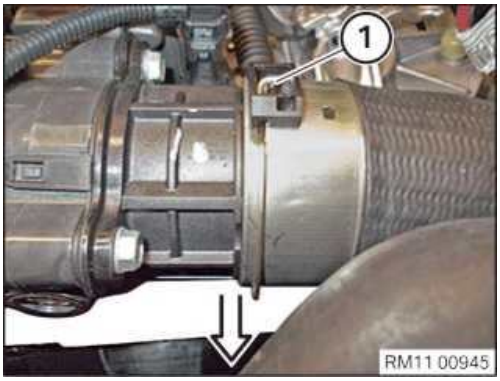


- Position the engine lifter with the special tool and the engine on the special tool **0 495 187 (00 2 300)**.

- Detach the holder (2) in the direction of the arrow.
- Position the engine (1) with the special tool **2 455 010** in the direction of the arrow on the special tool .

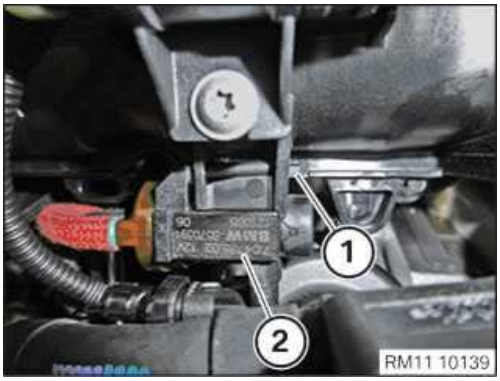
cardiagn.com

- Lock the holder (1) in direction of arrow.
- Tighten nuts (2).



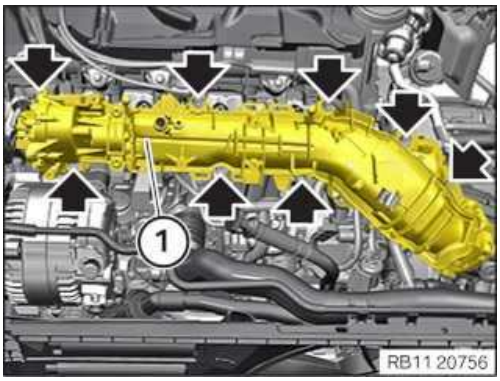
14 – Removing the intake plenum

TECHNICAL INFORMATION

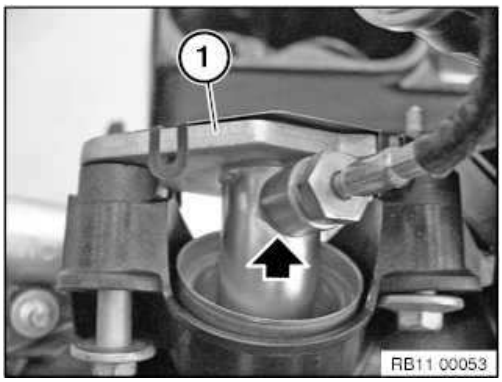


Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.



- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

cardiagn.com

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

15 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

cardiagn.com

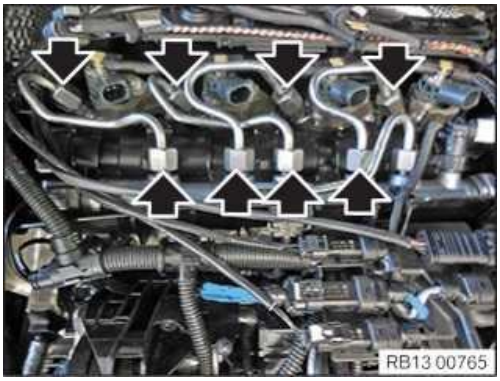
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION



If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

16 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

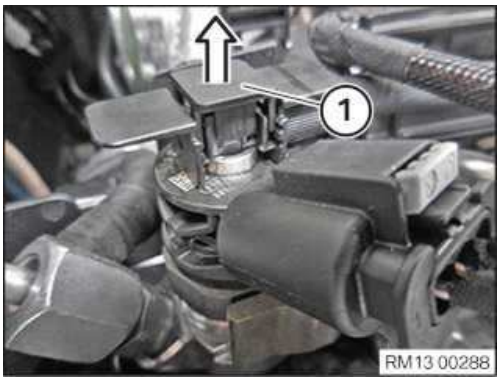
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE



Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

17 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

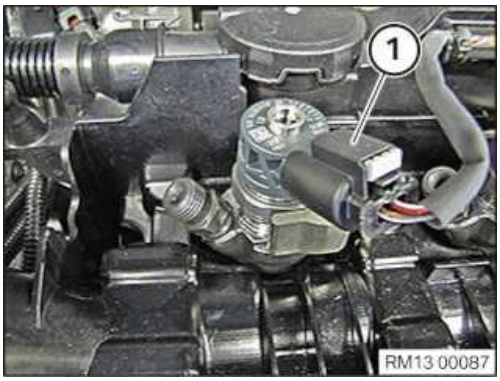
Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

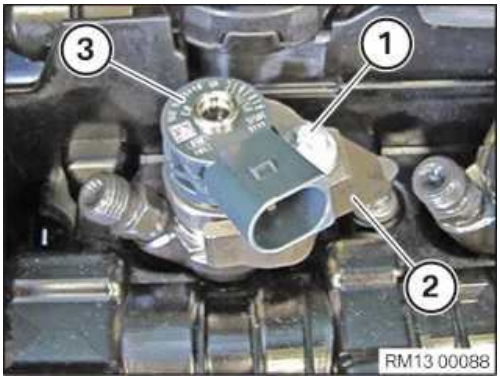
RISK OF DAMAGE

 **Electrostatic discharge.**



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

cardiagn.com

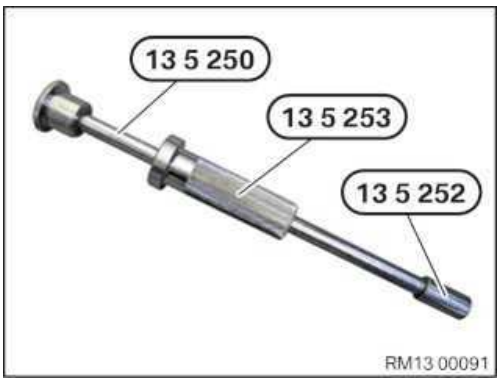
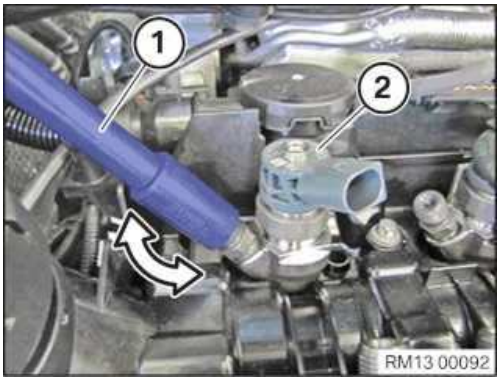
- Unlock and disconnect connector (1).

- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.



▶ **Loosen stuck injectors**

RISK OF DAMAGE



Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)** back onto the special tool **0 493 321 (13 5 250)**.

- Screw the special tool (1) **0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1) **0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

cardiagn.com

WARNING

Working on fuel system.

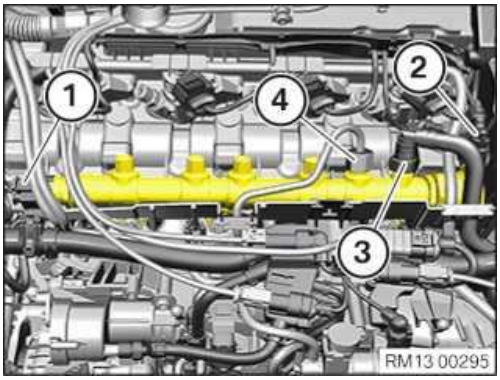
Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

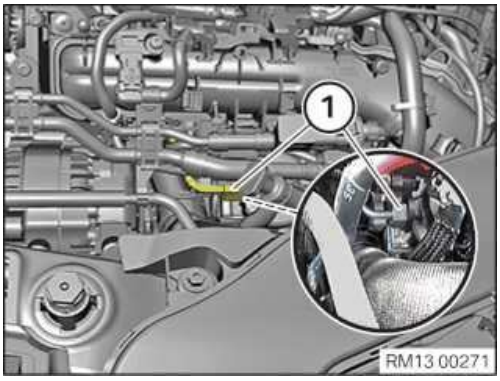
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.



- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

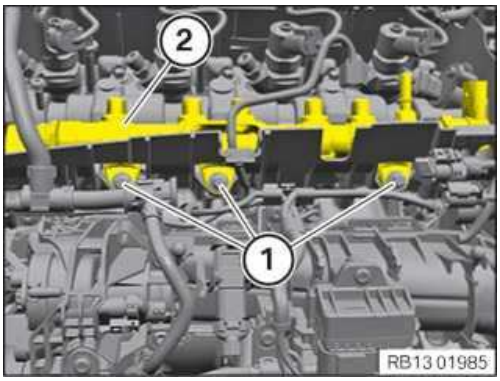
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Unlock and disconnect connector (1).
- Unlock and disconnect connector (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool .
- Reset special tool early on to avoid bending pressure lines.

- Slacken the union nut (1) on the high pressure pump.

cardiagn.com

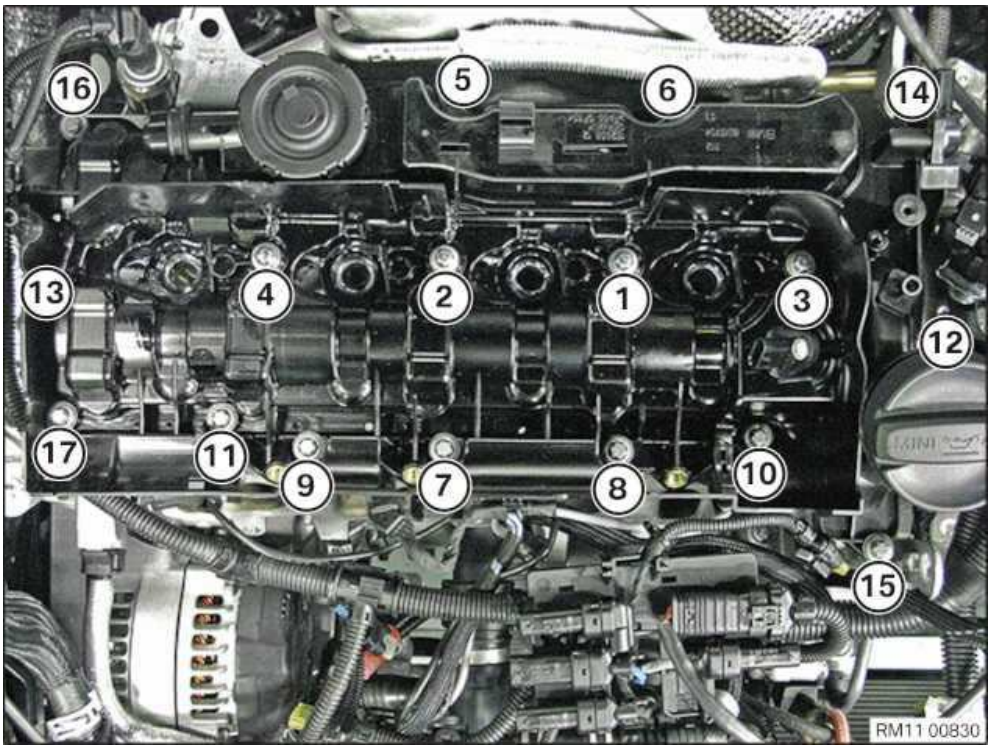
- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

19 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

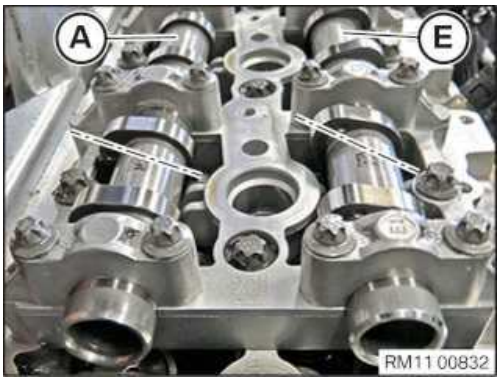
- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

20 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.



The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

21 – Remove chain tensioner piston

cardiagn.com

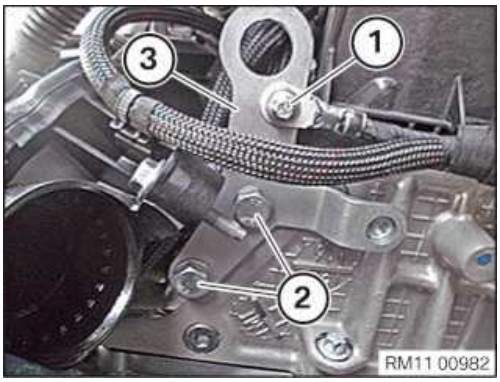
WARNING

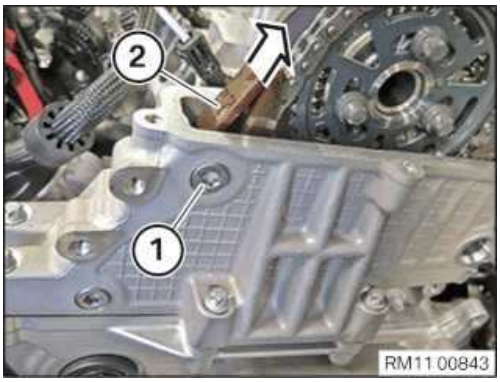
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



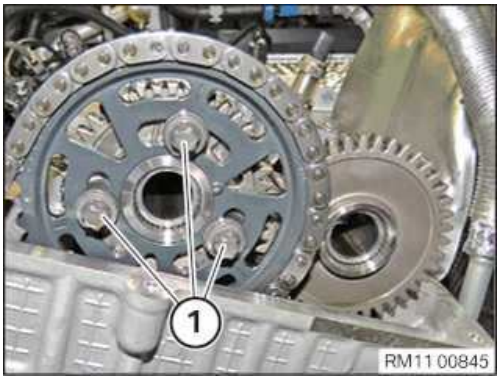
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

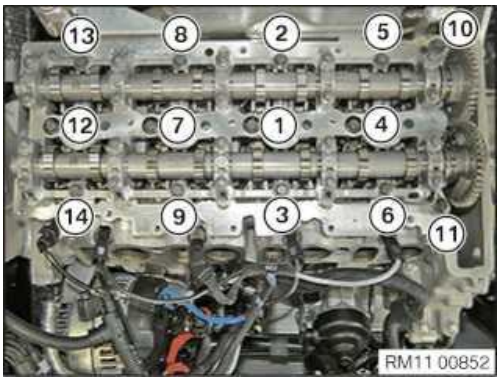
- Remove the chain tensioner piston (1).

22 – Remove the timing chain guide rail



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.



23 – Removing the camshaft sprocket on the intake camshaft

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

24 – Removing the camshaft support

cardiagn.com

- Evenly loosen all screws in a sequence from (14) to (1).
- Loosen and remove all screws in a sequence from (14) to (1).
  Both camshafts can be removed with the camshaft carrier.
- Remove the camshaft support including camshafts towards the top.

25 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

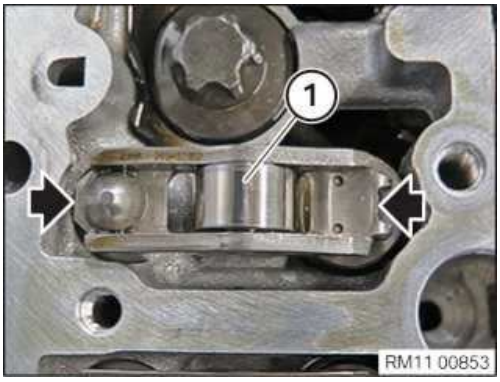
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool or conventional tools.
- Feed out preheating elements and remove.

26 – Remove roller cam followers

- Guide out and remove all roller cam followers (1) (arrows).
- Place all roller cam followers (1) in order in special tool **0 495 105 (11 4 480)**.

  Roller cam followers that have already been used must be installed in same position again.

27 – Removing the hydraulic valve clearance compensating element

cardiagn.com

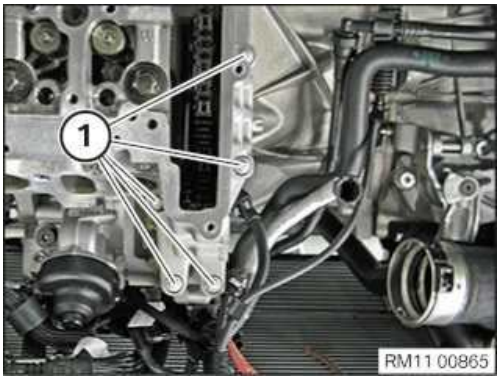
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.

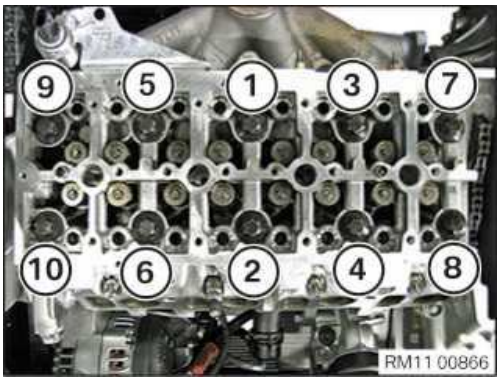


28 – Removing cylinder head

CAUTION

Heavy component.

Heavy components can lead to injury or damage.



- Remove and install heavy components with the aid of another person/other persons.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).

- Loosen the cylinder head bolts in the sequence from (10) to (1).
- Remove cylinder head.

29 – Removing the acoustic cover of the oil sump

cardiagn.com

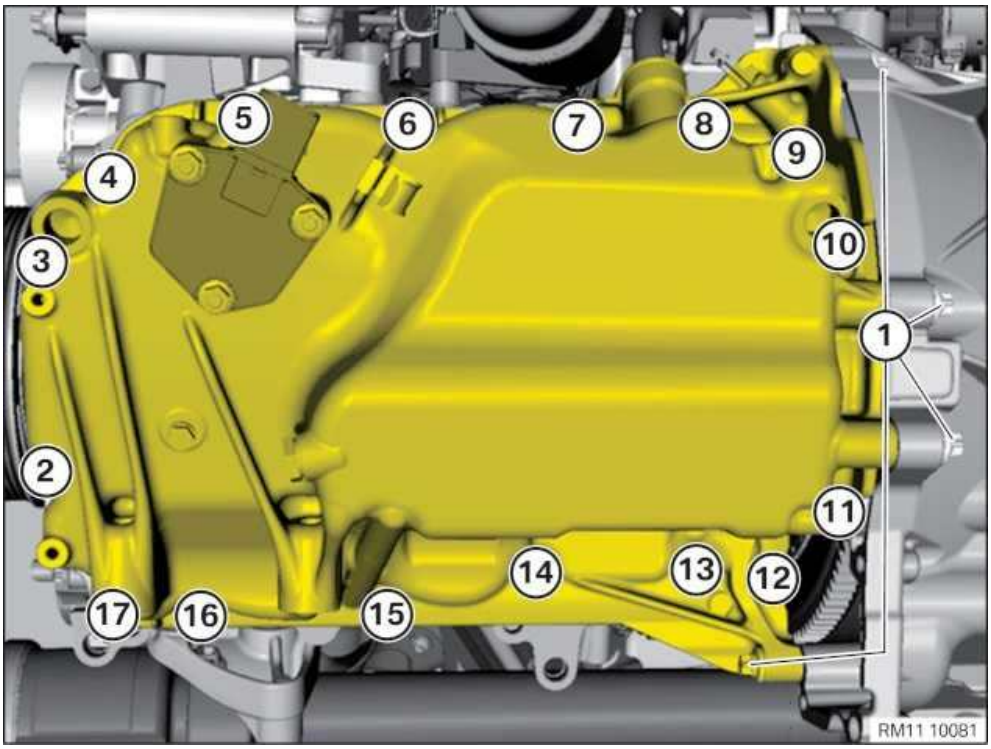
- Unlock connector (1) and pull off.
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).

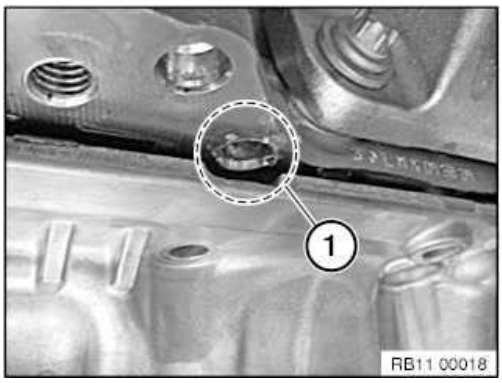
- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Unscrew the screw (1) on the wiring harness to the oil sump.
- Unlock and pull off connector (2) on the oil-level sensor.
- Place wiring harness (3) to one side.



- Remove the expanding rivets (1) on both sides of the acoustic cover.
- Feed out and remove the acoustic cover (2).

30 – Remove oil sump



- Loosen screws (1).
- Feed out starter motor and remove.

cardiagn.com

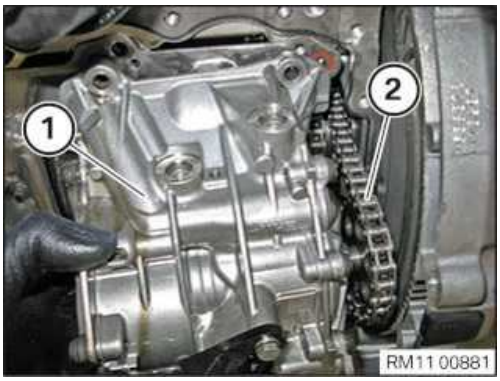
- Release transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).

- Release the oil sump only in area (1).



- Release the oil sump carefully using a suitable mounting lever (1) at the appropriate position in the direction of the arrow.
- Secure the oil sump to prevent it from falling.

31 – Remove the oil vacuum pump

- Loosen screws (1) of the oil vacuum pump (2).

cardiagn.com

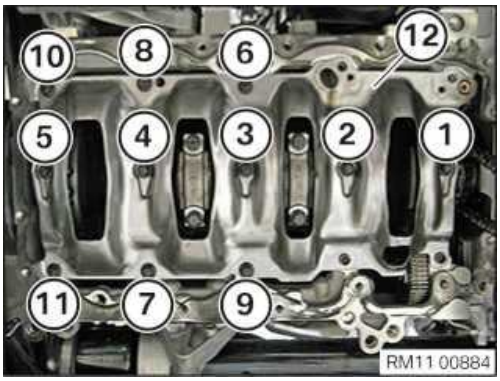
- Remove oil vacuum pump (1) and remove from the drive chain (2).



32 – Removing the oil deflector

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Loosen screws in the order (11) to (1).
- Guide out and remove the oil deflector (12).

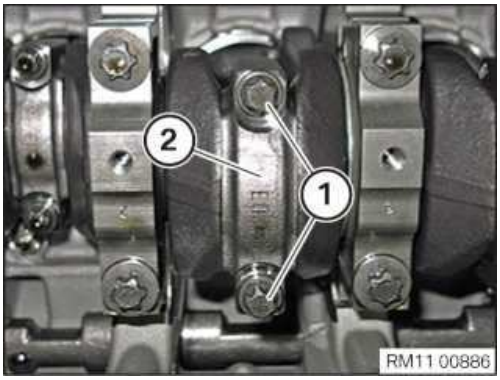
33 – Remove the connecting rod bearing cap

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.



TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.
A single connecting rod is not permitted to be replaced. Always replace all connecting rods.

cardiagn.com

- Turn the crankshaft until the connecting rod bearing journal (1) reaches a vertical position.

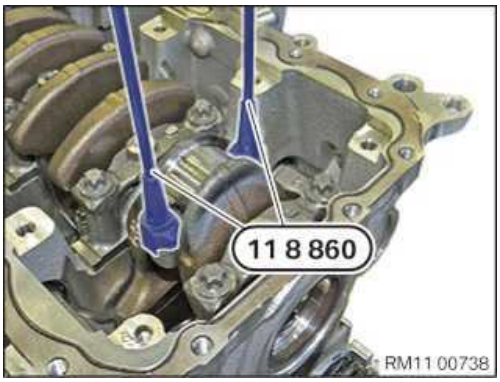
- Unscrew the connecting rod bolts (1).

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

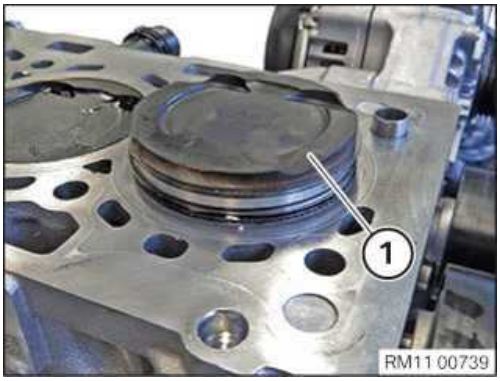
Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Remove the connecting rod bearing cap (2) and put to one side in the correct order.



MAIN WORK

34 – Removing the piston with connecting rod



TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Screw special tool **0 496 144 (11 8 860)** in at large connecting rod eye.

RISK OF DAMAGE

Damage on the cylinder wall and oil spray nozzles.

Major force can scratch the cylinder wall and bend the oil spray nozzles.

- Carefully move the piston and connecting rod in the engine block.
- Remove the piston (1) and connecting rod.

35 – Remove the connecting rod bearing shells

cardiagn.com

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.

TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.

A single connecting rod is not permitted to be replaced. Always replace all connecting rods.

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Remove the connecting rod bearing (2) from the connecting rod (1) and store it properly.

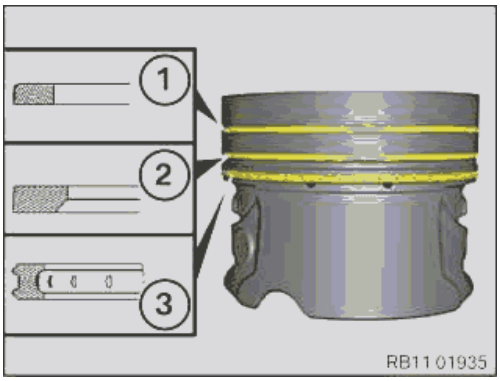
TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Remove the connecting rod bearing (2) from the connecting rod bearing cap (1) and store it properly.

36 – Measure side clearance of piston rings



RISK OF DAMAGE

Damage to the piston rings.

Piston rings can bend or break due to large applications of force.

- Handle piston rings carefully.
- Only bend piston ring up lightly.

cardiagn.com

TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.

- Mounting orientation of the piston rings

Position number	Description
1	1. Piston ring (plain rectangular compression ring)
2	2. Piston ring (taper faced piston ring)
3	3. Piston ring (oil scraper ring with spiral expander)

Check

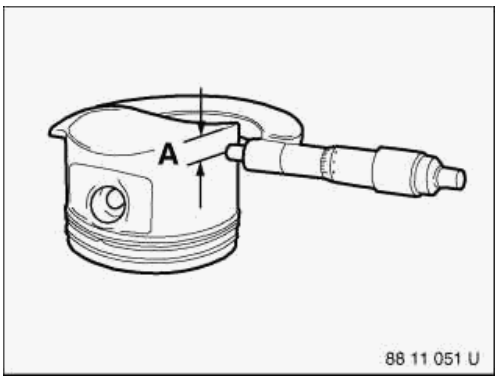
- Install all piston rings (1) consecutively as shown in the piston ring groove. Measure the side clearance with a feeler gauge (2).

desired state

- The side clearance of the piston rings is within the tolerance.

Side clearance of piston rings

Clean all components before measuring the side clearance.	
Side clearance of the plain rectangular compression ring	0,17 mm ... 0,27 mm
Side clearance of the taper faced piston ring	0,30 mm ... 0,50 mm
Side clearance of the oil scraper ring with spiral expander	0,2 mm ... 0,4 mm



Result

» The side clearance of the piston rings is outside of the tolerance.

Measure

- Renew the piston ring.

37 – Measure the piston diameter

Check

- Position the measuring bolt in the area (A) and measure the piston installation clearance 90 ° transversely to the gudgeon pin.

Piston diameter

Measure the piston diameter at distance (A) from the lower end of the piston skirt.	
Distance (A) to the lower end of the piston skirt	17 mm
Nominal dimension of piston diameter	83,936 mm ... 83,954 mm

cardiagn.com

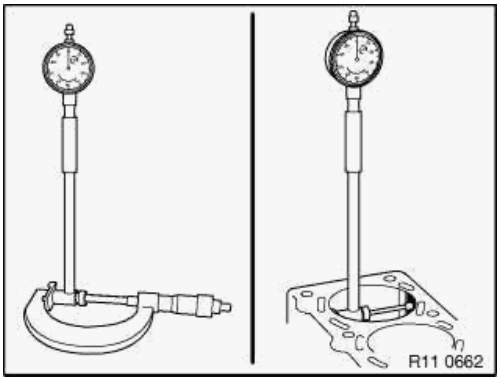
Result

» The piston does not correspond to the specifications.



Measure

- Renew the piston.

38 – Measure the cylinder bores

Prerequisite

Cylinder barrel is cleaned.

Check

- Adjusting measuring screw to nominal dimension of cylinder bore.

Cylinder bore

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

- Insert internal measuring device into measuring screw and set to zero.
- With the internal measuring device, measure the cylinder at the following points. Check the deviations from the nominal dimension.
  - Lower third of the cylinder bore in direction of travel,
  - Lower third of the cylinder bore transversely to direction of travel,
  - Middle third of the cylinder bore in direction of travel,
  - Middle third of the cylinder bore transversely to direction of travel,
  - Upper third of the cylinder bore in direction of travel,
  - Upper third of the cylinder bore transversely to direction of travel.

Cylinder bore

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

Result

» Cylinder does not correspond to the specifications.

Measure

- Replace motor.

  Parts: Engine

39 – If necessary: Renew the piston

cardiagn.com

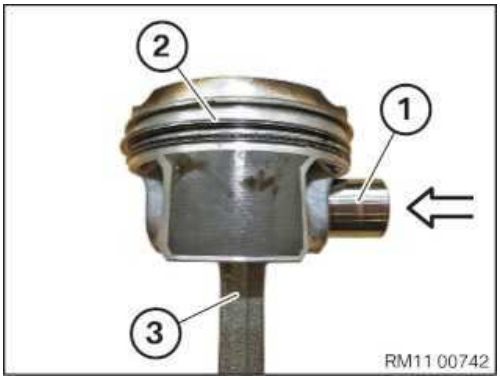
CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.



- Use special tool to remove the gudgeon pin circlip.
- Insert the flat side (3) of special tool into the groove (4).
- Grab and remove the gudgeon pin circlip (1) with the arched side (2).

TECHNICAL INFORMATION

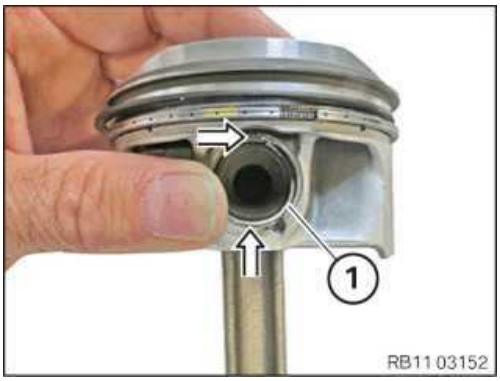
Piston and gudgeon pin are matched to each other.
Always install piston and gudgeon pin together and do not switch by mistake.

- Remove the gudgeon pin (1) in the direction of arrow.
- Remove piston (2) from connecting rod (3).

- Renew piston with gudgeon pin.

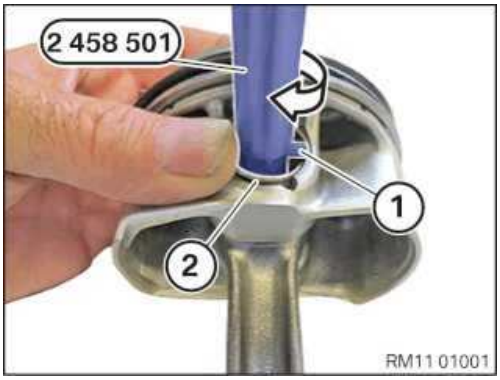
  Parts: Pistons

TECHNICAL INFORMATION



Piston and gudgeon pin are matched to each other.
Always install piston and gudgeon pin together and do not switch by mistake.

- Position piston (2) on the connecting rod (3).
- Install the gudgeon pin (1) in the direction of arrow.
- You must be able to install the gudgeon pin (1) without major effort.
- Gudgeon pin (1) must be free of play in piston and connecting rod.



- Prepare special tool on the fitting aid .

cardiagn.com

- Insert the gudgeon pin circlip (1) into the groove on the piston (see arrows).

- Screw in the positioned gudgeon pin circlip (2)with and with the guide pin (1) in the direction of the arrow.

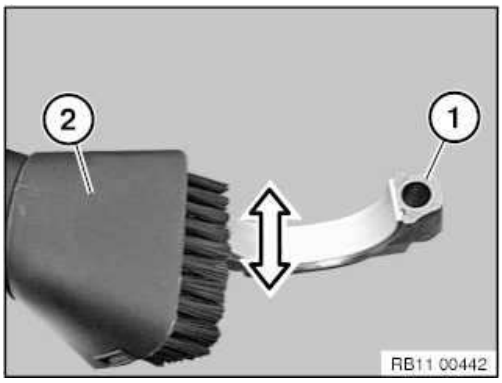
- Screw the gudgeon pin circlip with guide pin (1) into the groove of the piston in the direction of the arrow.

- Gudgeon pin circlip (1) must be fitted correctly in the groove (arrow).

40 – Install the connecting rod bearing shell

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.



Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.

cardiagn.com

TECHNICAL INFORMATION

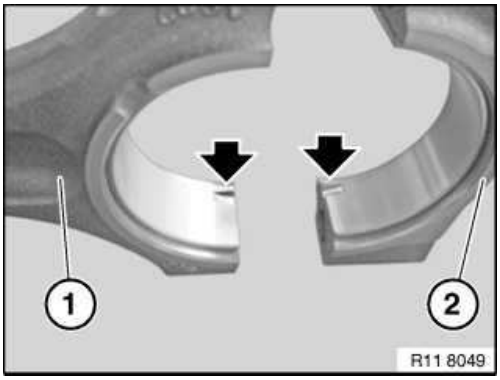
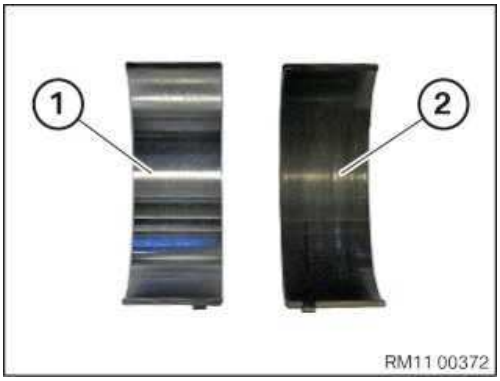
The connecting rods of the engine are balanced and are matched to each other.
A single connecting rod is not permitted to be replaced. Always replace all connecting rods.



- Vacuum the crack surfaces (1) with a conventional vacuum cleaner (2).



- To avoid incorrect assembly: Pay attention to marks (arrows).

  The connecting rod bearing (1) for the connecting rod bearing cap and the connecting rod bearing (2) for the connecting rod are each equipped with protection against incorrect assembly as shown in the marked area.

- To avoid incorrect assembly: Pay attention to marks (arrows).

  The connecting rod bearing cap (2) and the connecting rod (1) are each equipped with protection against incorrect assembly.

- Makes sure that a light connecting rod bearing shell (1) and a dark connecting rod bearing shell (2) are installed for each connecting rod.

cardiagn.com

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Insert the dark connecting rod bearing shell (2) into the connecting rod (1).
- Oil the connecting rod bearing shell (2).

TECHNICAL INFORMATION

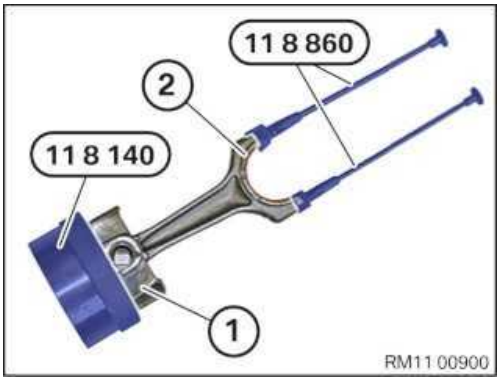
Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.



- Insert the light connecting rod bearing shell (2) into the connecting rod bearing cap (1).
- Oil the connecting rod bearing shell (2).

41 – Installing piston with connecting rod

TECHNICAL INFORMATION

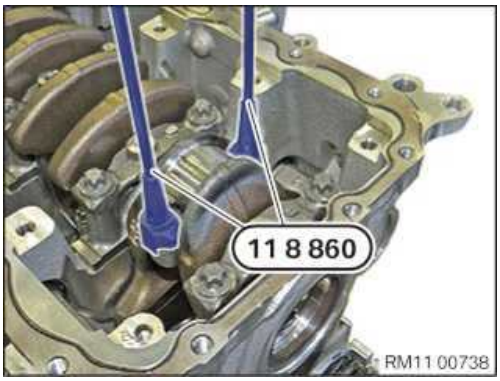
Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Coat the pistons (1) and piston rings lightly with oil.
- Mount the special tool **0 493 582 (11 8 140)** on the piston (1).
- Screw the special tool **0 496 144 (11 8 860)** in on the large connecting rod eye (2).

- Insert the piston with the special tool **0 493 582 (11 8 140)** with the arrow pointing to cylinder 1.

RISK OF DAMAGE



Damage on the cylinder wall and oil spray nozzles.

Major force can scratch the cylinder wall and bend the oil spray nozzles.

- Carefully move the piston and connecting rod in the engine block.

- Install the piston in the crankcase.

cardiagn.com

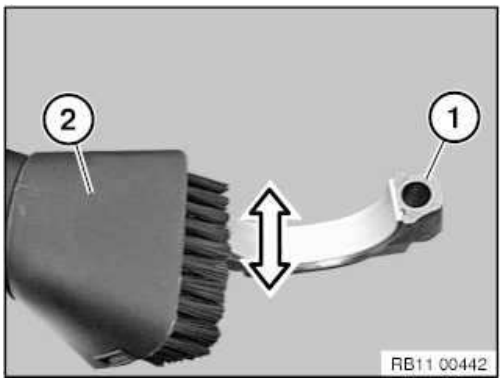
- Remove special tool **0 496 144 (11 8 860)** from large connecting rod eye.

POSTPROCESSES

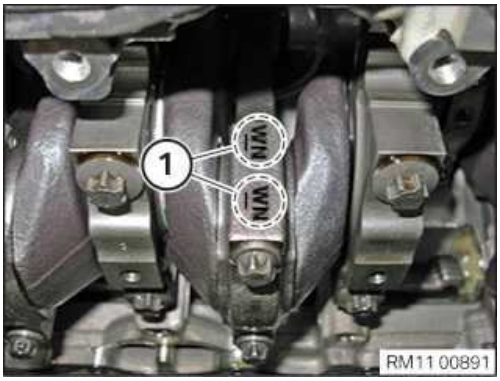
42 – Install the connecting rod bearing cap

RISK OF DAMAGE



Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.



- Always install all bearing shells and bearing supports in the same position from which they were removed.

TECHNICAL INFORMATION

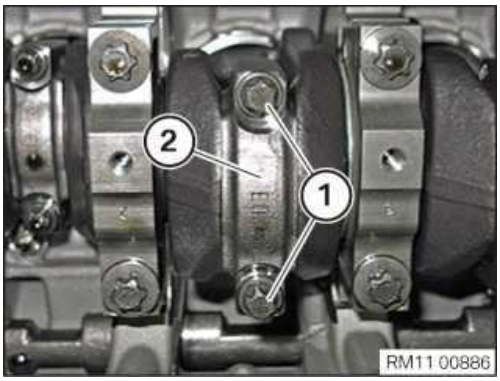
The connecting rods of the engine are balanced and are matched to each other.
A single connecting rod is not permitted to be replaced. Always replace all connecting rods.

- Vacuum the crack surfaces (1) with a conventional vacuum cleaner (2).



- Attach the connecting rod bearing caps to the connecting rod until the designations (1) match.

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.
Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Make sure that the connecting rod bearing is attached to the same connecting rod that it was detached from.

cardiagn.com

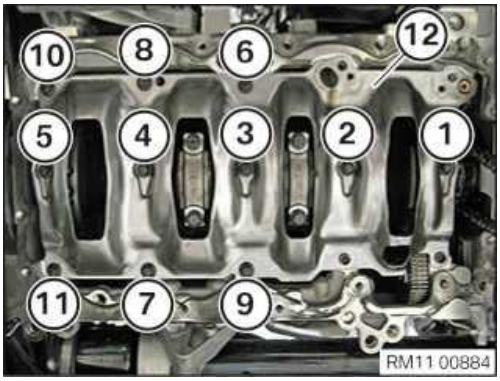
- Position the connecting rod bearing cap (2).
- Tighten the bolts (1) with the special tool **0 490 504 (00 9 120)**.

Connecting rod bearing cap to connecting rod



M9x47		Tightening torque	20 Nm
		Angle of rotation 1	70 °
		Angle of rotation 2	70 °

43 – Installing the oil deflector

- Check sealing ring (1) for damage and replace oil deflector if necessary.

  Parts: Oil deflector

- Insert and install the oil deflector (12).
- Renew screws (1) to (11).

  Parts: Bolts
- Hand-tighten the bolts (1) to (5).
- Hand-tighten the bolts (6) to (11).
- Tighten the screws (1) to (5).

Oil deflector to crankshaft bearing cap

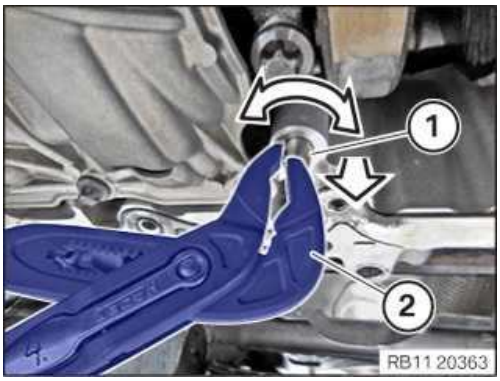
M8x14	Replace screws.	Tightening torque	35 Nm
		Release	180 °
		Tightening torque	15 Nm
		Angle of rotation	45 °

- Tighten the screws (6) to (11).

Oil deflector to crankcase

M8x14		Tightening torque	19 Nm

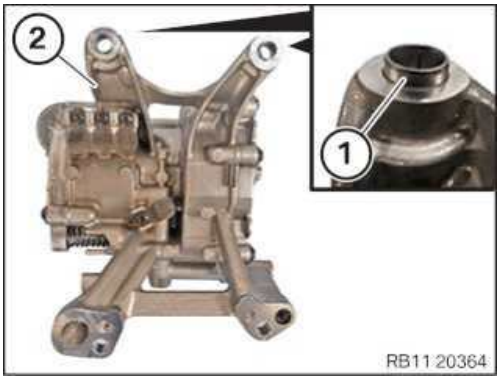
44 – Install the oil vacuum pump



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.



- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

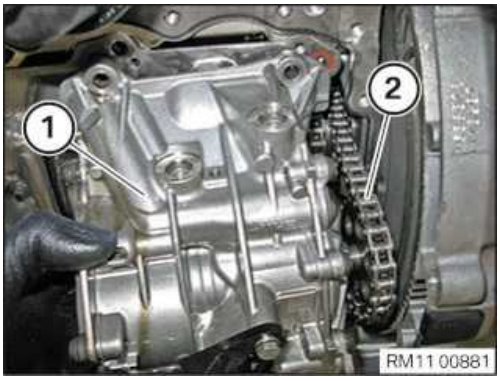
- Remove centering sleeves from the crankcase (1) using a standard tool (2).
- Renew the centring sleeves (1).

  Parts: Centring sleeves

- Install centering sleeves (1) in the oil vacuum pump (2).



- Check the sealing ring (1) for damage and renew where required.
- Make sure the sealing ring (1) is installed correctly.

- Check sealing ring (1) for damage and replace oil deflector if necessary.

  Parts: Oil deflector

- Insert oil vacuum pump (1) into the drive chain (2).

cardiagn.com

- Renew screws (1).

  Parts: Bolts

- Tighten the screws (1) of the oil vacuum pump (2).

Oil vacuum pump to crankcaseB47

M8x35		Tightening torque	19 Nm

45 – Refitting sump

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove fine sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.
- Clean sealing surface (1) with brake cleaner.

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove coarse sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.
- Clean sealing surface (1) with brake cleaner.

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

- Have the special tool ready.

cardiagn.com

TECHNICAL INFORMATION

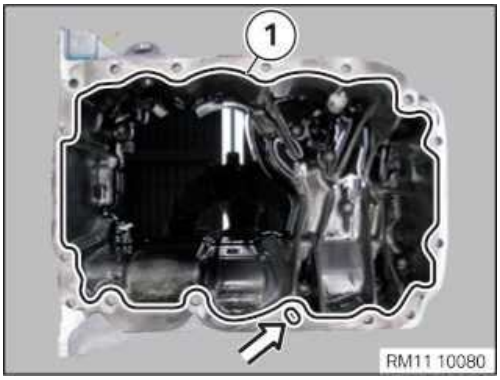
For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue



- Position the sealing compound (1) on special tool as shown.

  Parts: Sealing compound

Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Completely surround the oil return orifice (arrow) with the sealing compound.

  No sealing compound may enter the oil return orifice.
- Fix oil sump within the prescribed application time of the sealing compound.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- Apply the sealing compound along the line (1) with a thickness of 2 mm to 2.5 mm.

  The sealing compound must be applied along the inner edge.
- Completely encircle the oil return orifice (arrow) with the sealing compound.

TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- Renew the fitting sleeves if required.

cardiagn.com

RISK OF DAMAGE

Component damage caused by incorrect screw length.

The use of screws with the incorrect screw length can damage the component.

- Check for correct screw length.
- Re-install screws that correspond to the original screw length.

- Ensure that the **correct** screw (2) (M8x40) is used for mounting the oil sump on the transmission.

  The screw (1) (mounting bolt of the starter motor) may **never** be used for mounting the oil sump.

- Position and install the oil sump.
- Tighten screws (2) to (17) **hand-tight**, do **not** tighten fully.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws (2) to (17) on the oil sump.

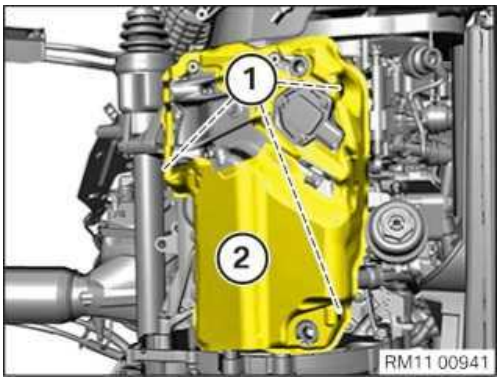
Oil sump to crankcase

M8x30		Tightening torque	2 Nr
M8x110		Tightening torque	2 Nr

- Tighten the transmission bolts (1) on the oil sump.

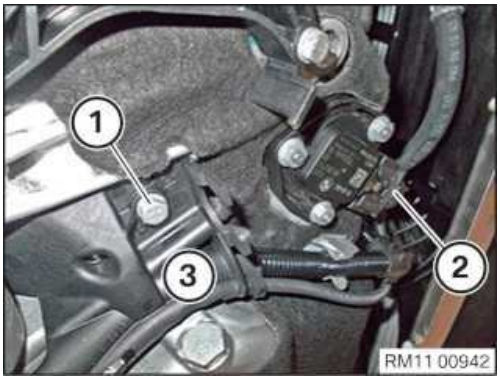
Transmission to oil sump

M8		Tightening torque	1 Nr



- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission



M8x45		Tightening torque	19 Nm

46 – Installing the acoustic cover for the oil sump

cardiagn.com

- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).

- Position wiring harness (3).
- Tighten down screw (1).

Bracket to oil sump

M6		Tightening torque	8 Nm

- Connect and lock the connector (2) on the oil-level sensor.

  The connector must lock audibly.

CAUTION

Improper routing of the positive battery cable.

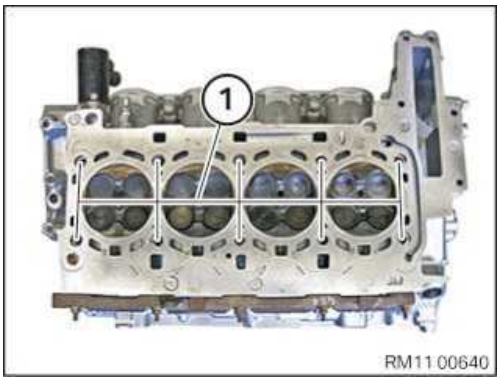
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm



- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).

  The connector must engage audibly.

47 – Renewing the cylinder head gasket

cardiagn.com

RISK OF DAMAGE

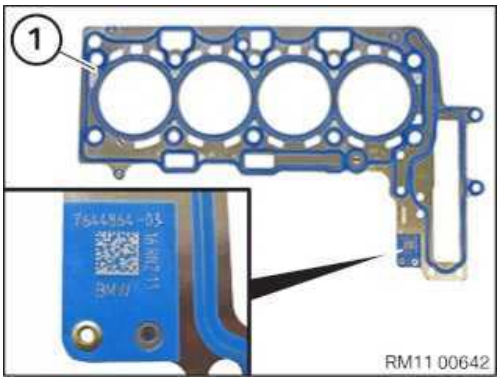
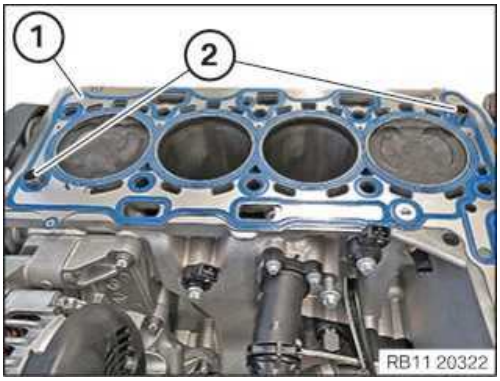
Damage to the surface.



The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).



- Check the fitting sleeves (1) for secure fit and damage.

- Identify the cylinder head gasket (1) using the part number.

Note: If the cylinder head is reworked, an additional thicker gasket 0.3 mm is available for service personnel.

- Guide in the cylinder head gasket (1) and install.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

48 – Mounting the cylinder head

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

RISK OF DAMAGE

Damage to threads.

Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION

Do not remove bolt coating.

- Position the cylinder head on the crankcase.
- Renew the cylinder head bolts (1).

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  No coolant, water or engine oil must be present in threaded holes of engine block.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in cylinder head bolts in sequence (1) to (10).
- Tighten cylinder head bolts using special tools **0 490 504 (00 9 120)** and in sequence (1) to (10).

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

- Tighten the cylinder head bolts (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

49 – Installing the hydraulic valve clearance compensating element

cardiagn.com

RISK OF DAMAGE

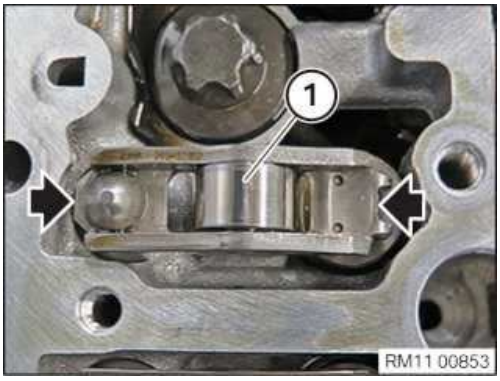
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

50 – Install the roller cam followers

TECHNICAL INFORMATION

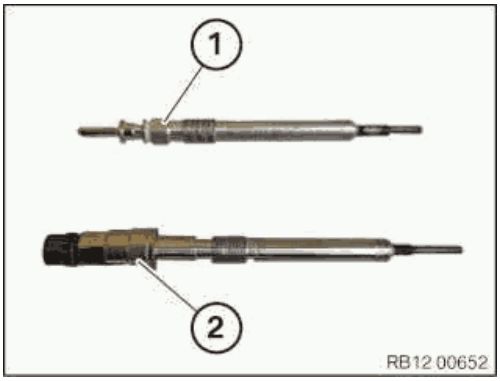
- Note the installation position of the component. The component may be installed in various installation positions.



- Check all roller cam followers (1) for damage and replace if necessary.

  Parts: Roller cam followers
- Insert and install all roller cam followers (1).

  Roller cam followers (1) that have already been used must be installed in the same place.
- Note the mounting orientation of the roller cam followers (1).
- Oil all roller cam followers (1).

51 – Install glow elements

- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

cardiagn.com

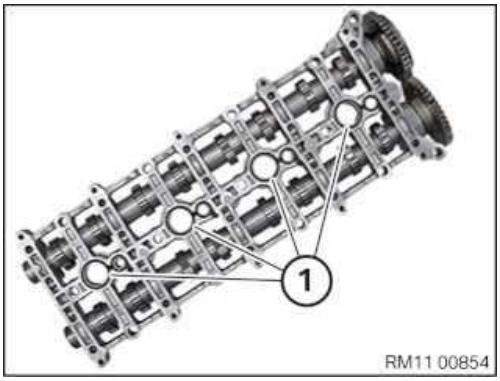
- Tighten the glow element with the special tool or conventional tools.

Glow elements to cylinder head



Glow element		Tightening torque	13 Nm

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

52 – Installing the camshaft support

- Renew gaskets (1).

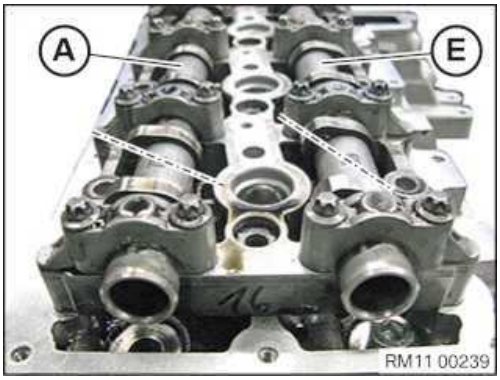
  Parts: gaskets

- Position the camshaft support including the camshafts.
- Tighten the screws in a sequence from (1) to (14) in several steps.

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

53 – Adjusting the timing of the camshafts



- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

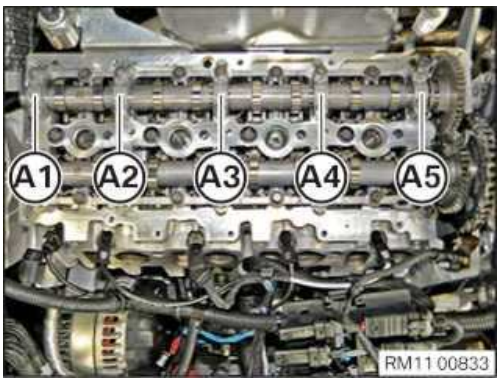
- Slide the special tool **2 288 380** completely into the bore hole of the oil sump.
- Use the special tool to block **2 288 380** the crankshaft in the TDC firing position at the first cylinder.

- The cam of the intake camshaft (E) at the first cylinder points up at an angle.
- The cam of the exhaust camshaft (A) at the first cylinder points outward at an angle.



▸ **Remove exhaust camshaft.**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

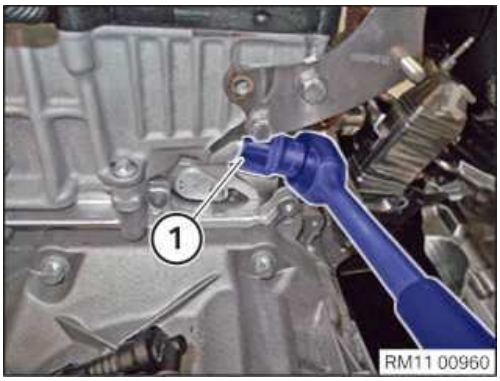
The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A5) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components on special tool **0 495 105 (11 4 480)** in a tidy and orderly fashion.

▸ **Remove chain tensioner piston**



WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

TECHNICAL INFORMATION

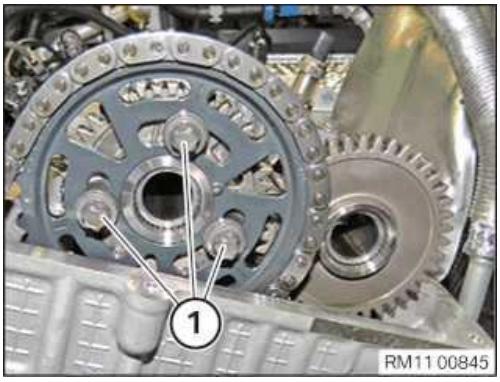
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

▶ **Remove the timing chain guide rail**



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

▶ **Removing the camshaft sprocket on the intake camshaft**

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

▶ **Install exhaust camshaft**

cardiagn.com

RISK OF DAMAGE

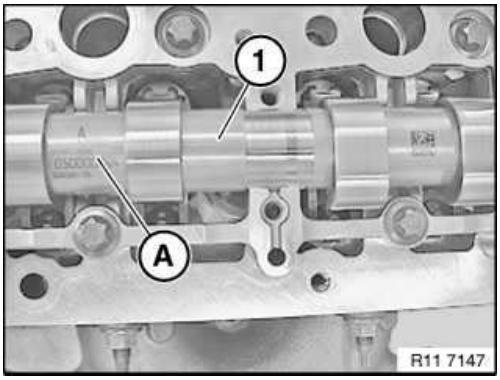
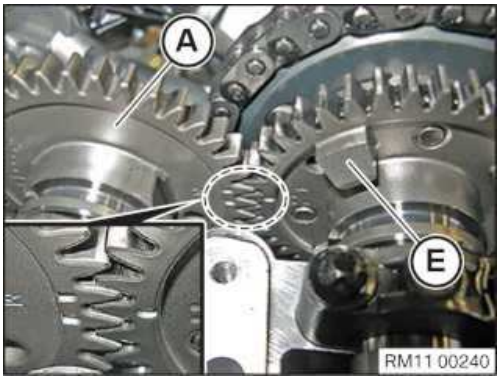
Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

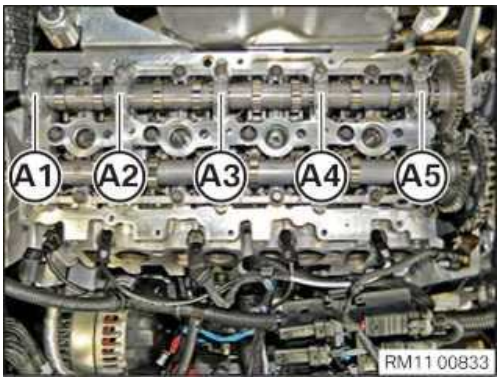


- Comply with the regulations for the installation and disassembly.
- Perform work with care.



- Oil all bearing positions (1).

- Make sure the roller cam followers (1) have the correct mounting orientation.



- Insert exhaust camshaft (1) so that the identification (A) points upwards.

- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.

cardiagn.com

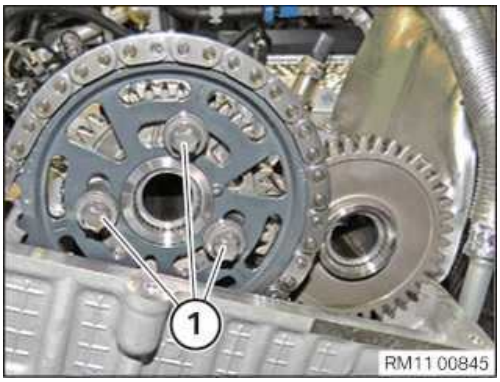
- Tighten all exhaust camshaft bearing caps (A1) to (A5) from the inside to the outside by 1/2 a turn at a time.

Intake and exhaust camshaft in camshaft support



M6x31		Tightening torque	10 Nm

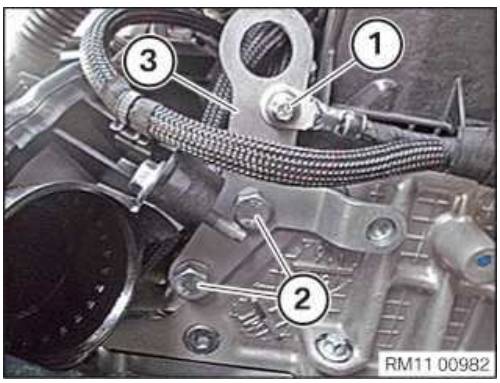
- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

  Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

▶ **Installing the camshaft sprocket on the intake camshaft**

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

▶ **Install the timing chain guide rail**



- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6			8 Nm

cardiagn.com

▶ **Installing the chain tensioner piston**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

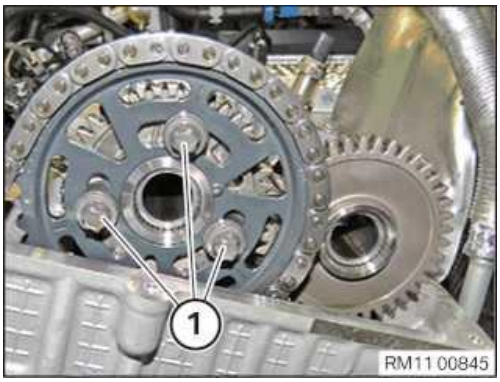
The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

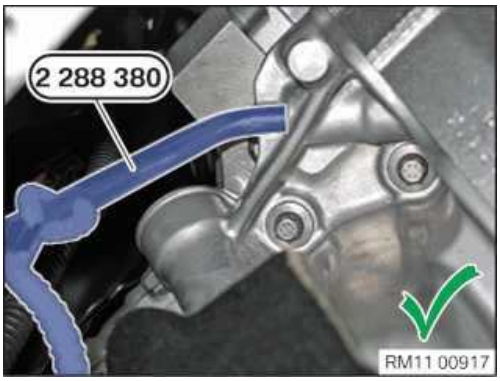


- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

▶ **Tightening the camshaft sprocket on the intake camshaft**



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

cardiagn.com

- Remove special tool **2 288 380**.

55 – Removing the special tool to secure the exhaust camshaft

- Remove the special tool **0 496 112 (11 8 760)** to fix the exhaust camshaft.

56 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

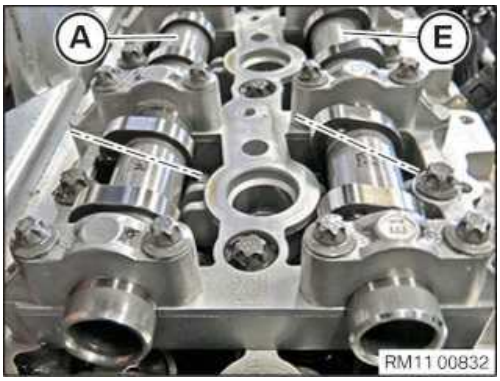
Damage to the engine.



The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

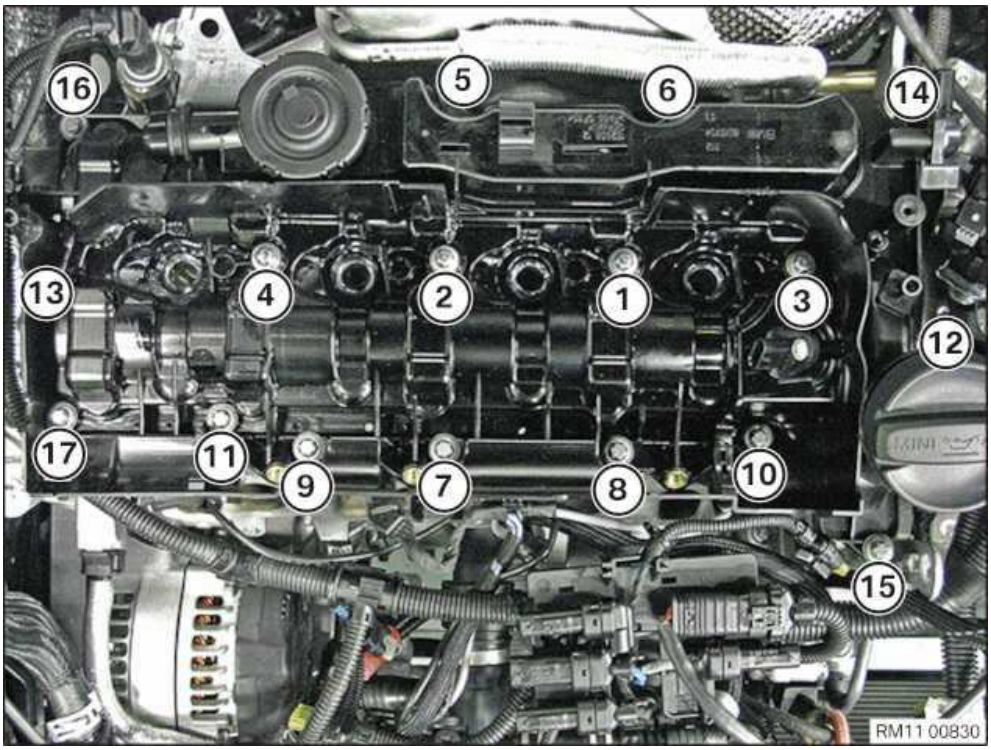
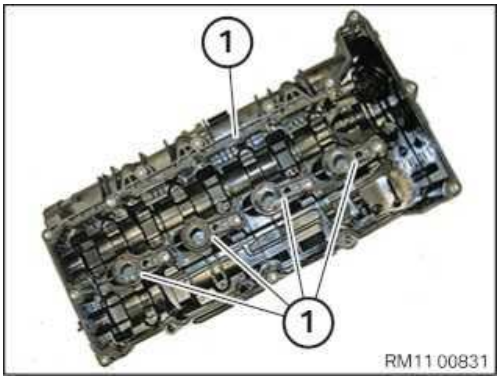
If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.



- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).



57 – Installing cylinder head cover

cardiagn.com

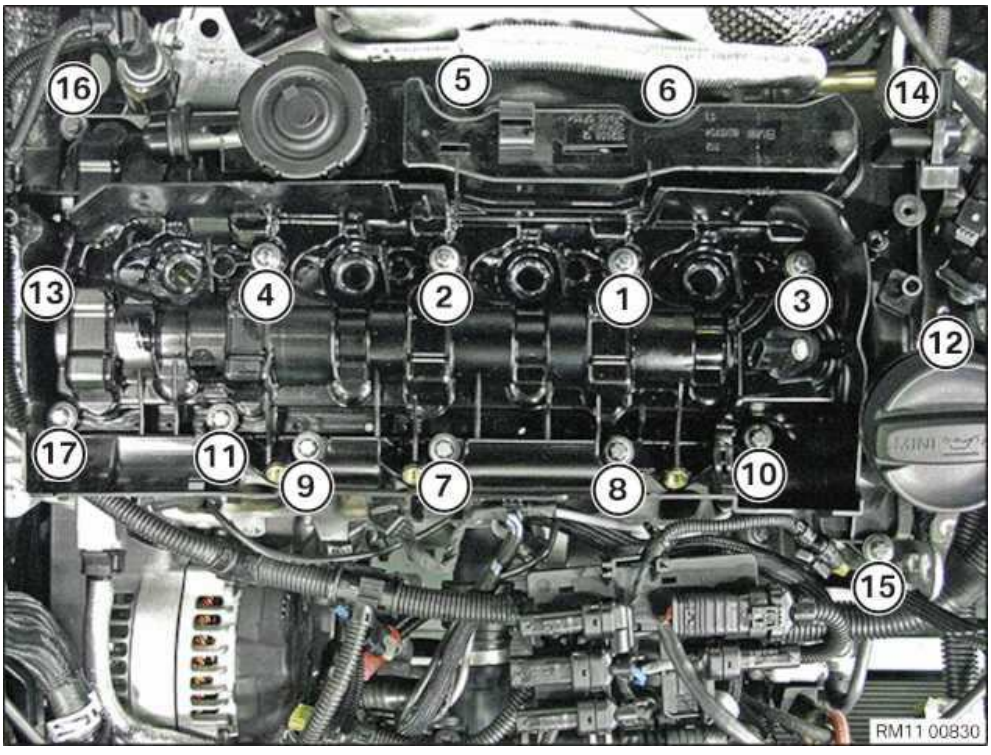
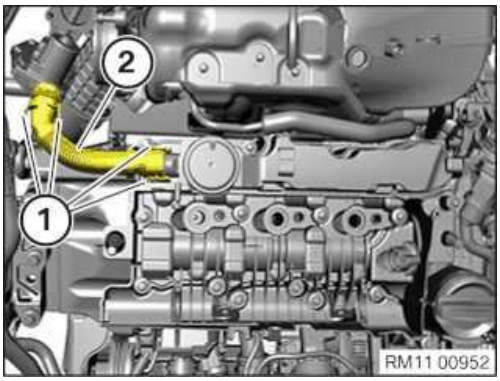
Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket



- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-

cardiagn.com

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

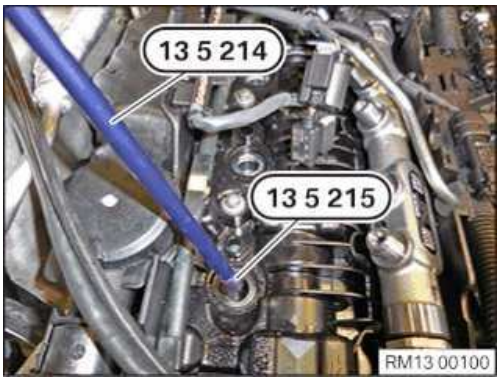
58 – Installing injectors of injection system

▶ **Cleaning the injector shafts**

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!



- Collect dirt particles, e.g. when blowing out, use cloth to do so.
- Wear safety goggles.

RISK OF DAMAGE

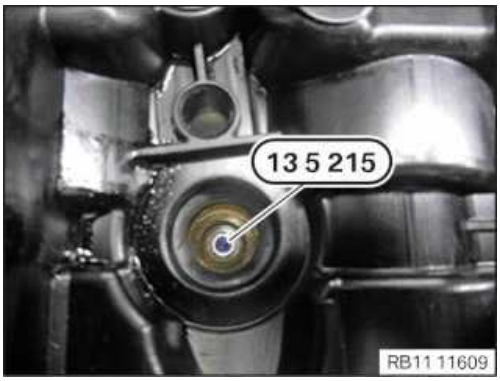
Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

cardiagn.com

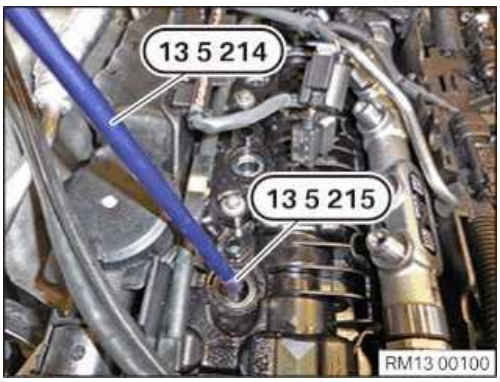
- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.



- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

- Blow out injector shaft (1) with air gun (2).

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

► **Check the placement of the clamping claw**

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▸ **Prepare the injector for installation**

RISK OF DAMAGE

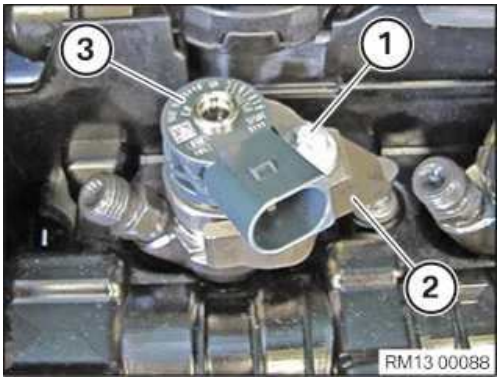
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

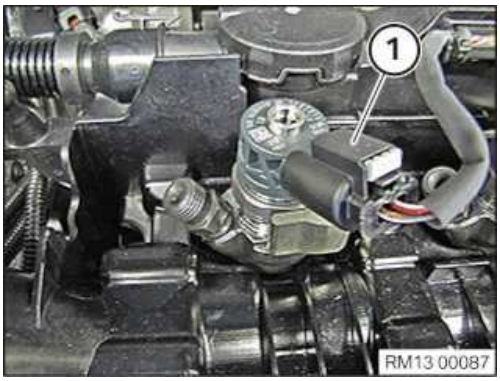


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

cardiagn.com

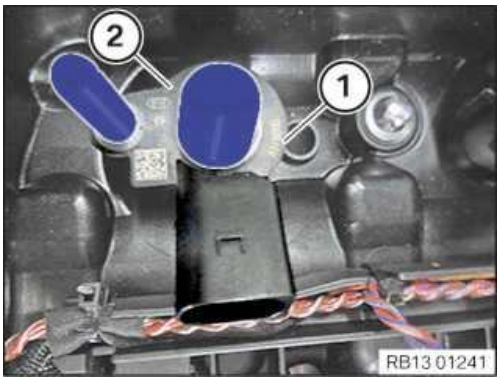
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

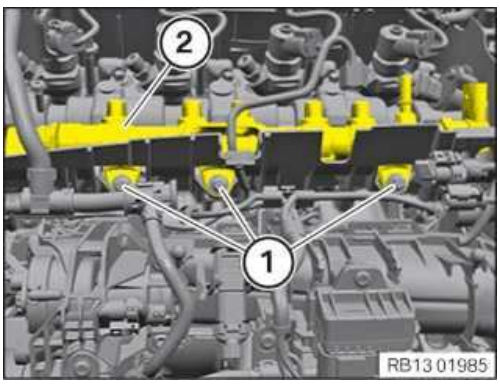
If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

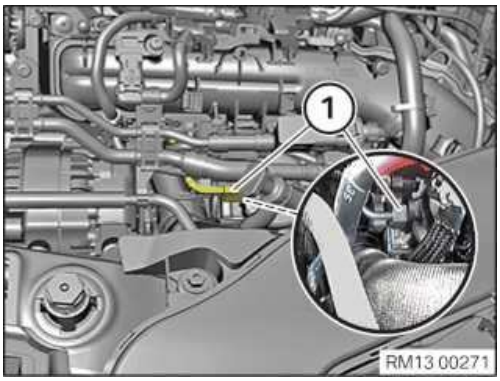


Schematic diagram is for example purposes. Some parts may differ in certain details.

- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

59 – Installing the rail



- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm

cardiagn.com

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

TECHNICAL INFORMATION

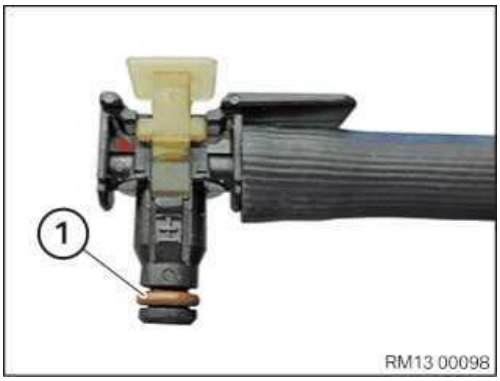
Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool .

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm



- Connect and lock the fuel line (3).

  Fuel line (3) must engage audibly.
- Connect connectors (2) and lock.

  The connector (2) must engage audibly.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

60 – Connect the leakage oil line on the injector

- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

cardiagn.com

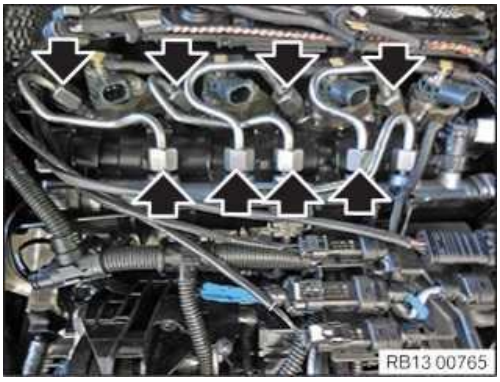
- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.



61 – Installing high pressure lines between rail and injectors

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

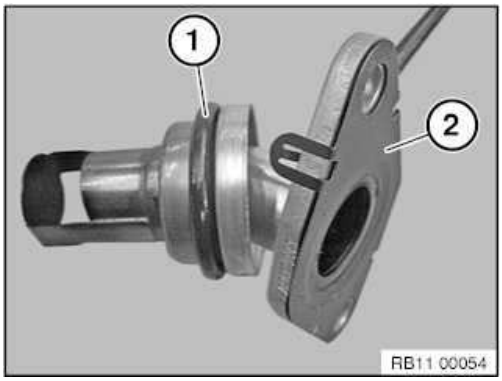
Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.



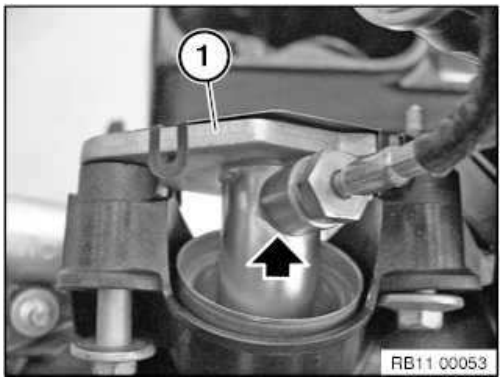
- Tighten the high pressure lines (arrows) with the special tool .

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

62 – Installing the intake plenum



- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position the seal (2) and clip it in.

cardiagn.com

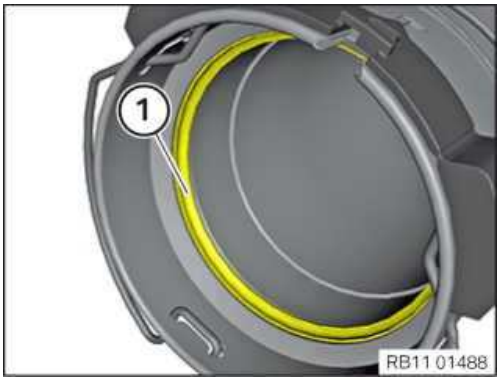
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

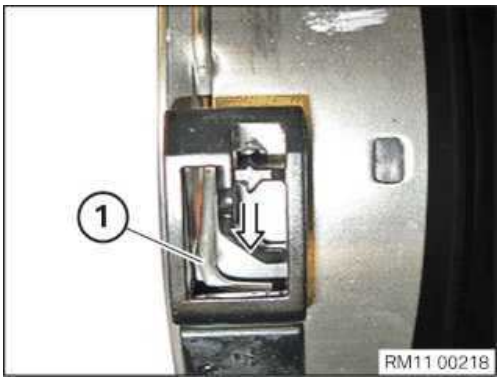
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



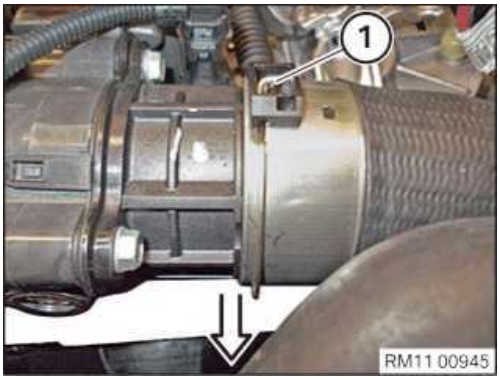
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

cardiagn.com

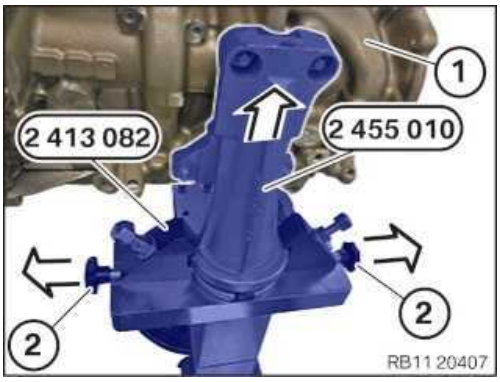
- Engage the lock (1) on the bracket (arrow).

- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

63 – Remove the engine from the assembly stand

CAUTION

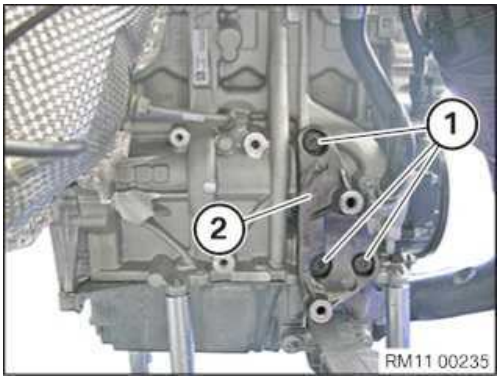


Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Insert engine lifter with special tool and position engine (1).



- Unscrew the nuts on special tool .
- Detach the holder (2) in the direction of the arrow.
- Detach the engine (1) with special tool **2 455 010** out of the special tool in the direction of arrow.

cardiagn.com

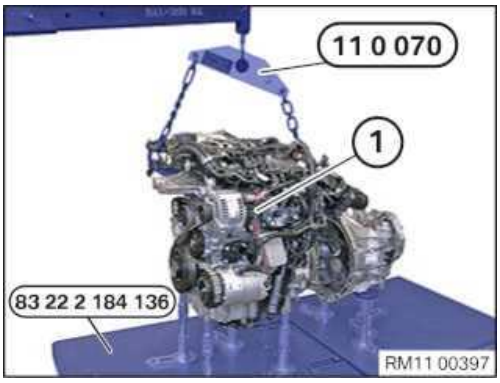
- Remove conventional screws (arrows).
- Feed out the special tool **2 455 010** on the engine (1) and remove.

- Insert and install the holder (2).
- Tighten the screws (1).



Holder to crankcase

M10		Tightening torque	38 Nm

64 – Mount engine on the automatic transmission

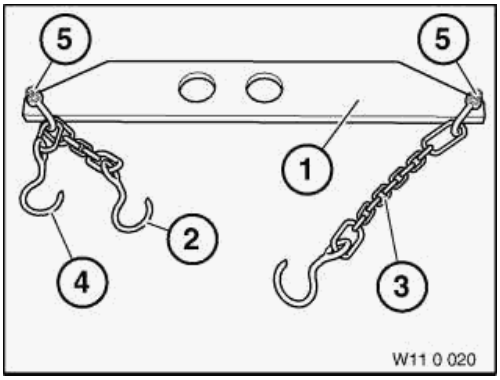
Prerequisite

Engine has been removed.

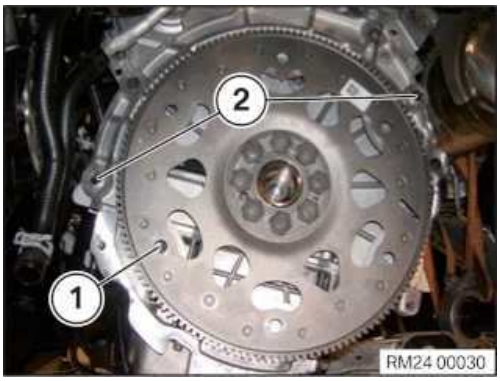
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Position the engine (1) on the lifting table **2 184 136** using the engine lifter and the special tool .
- Feed out engine lifter from engine (1) with special tool and push aside.



- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.



cardiagn.com

- Stage the workshop crane **2 220 718**.

- Stage the lifting gear .

- The bore hole (1) of the flywheel must be accessible from the recess on the oil sump.
- Check for correct fit of fitting sleeves(2).

cardiagn.com

TECHNICAL INFORMATION

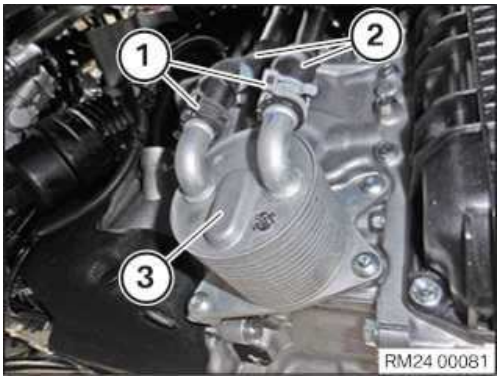
Conduct the following operation with the assistance of a second person.

- Twist torque converter until bore hole in torque converter is flush with bore hole of flywheel.
- Flange-mount and screw automatic transmission on the engine with an auxiliary person and the workshop crane **2 220 718** with the lifting gear .
- Tighten screws (arrows).

Transmission to engine

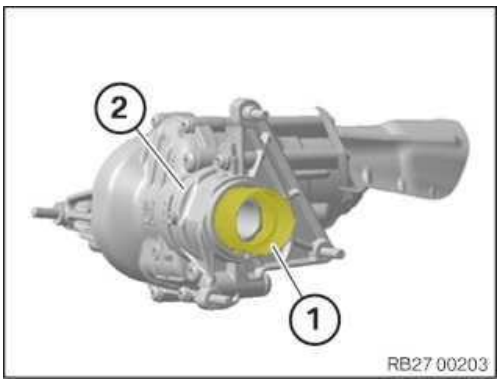
M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

- Feed out workshop crane **2 220 718** with the lifting gear from the automatic transmission and push it aside.



- Crank engine with special tool **0 493 380 (11 6 480)** at vibration damper in direction of rotation.
- Renew nuts (1).

  Parts: Nuts
- Tighten all 6 nuts (1) of the torque converter.



Torque converter to flywheel

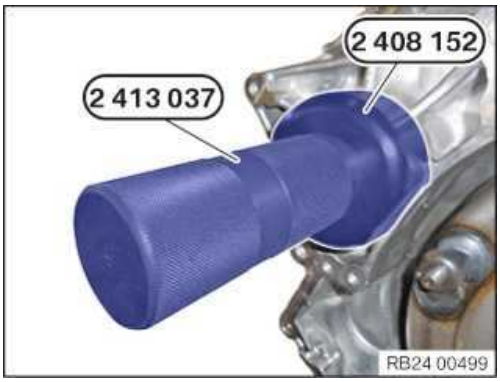
M10	Replace nuts. Remove any adhesive residue from the threads.	Tightening torque	56 Nm

- Slide coolant hoses (1) onto transmission oil cooler (3).
- Secure hose clamps (1).

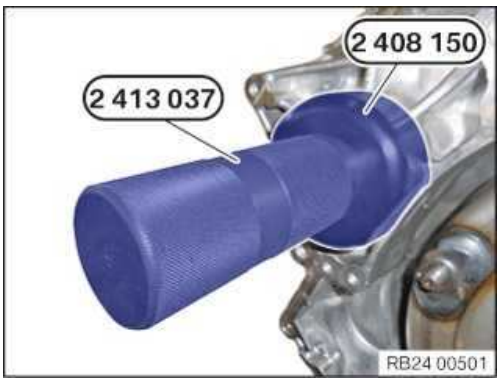
65 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

cardiagn.com

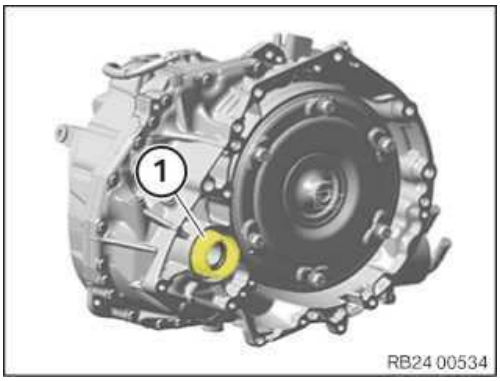


- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.

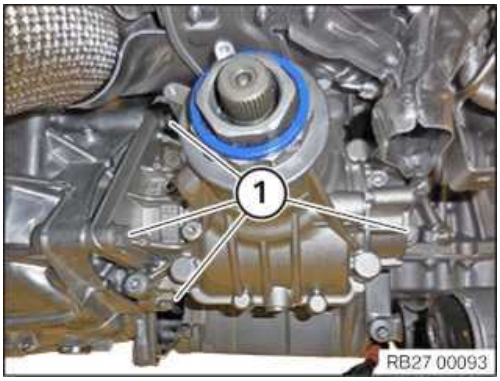
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

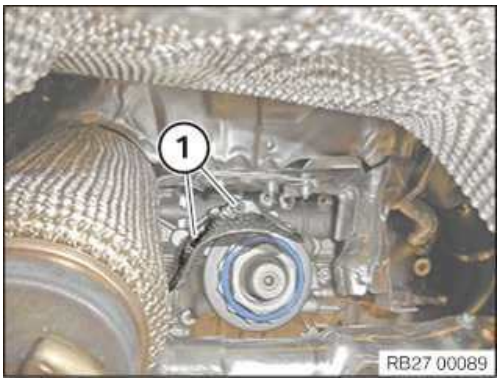
cardiagn.com



- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials



Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

cardiagn.com

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

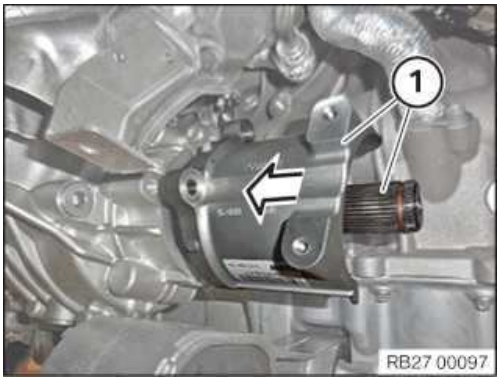
Technically suitable transfer box and electrical transmission oils	

Main group 27

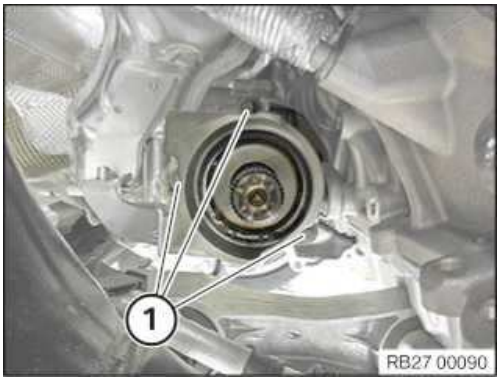
- Tighten the oil filler plug (1).

Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm



66 – Install the intermediate shaft with the support tube



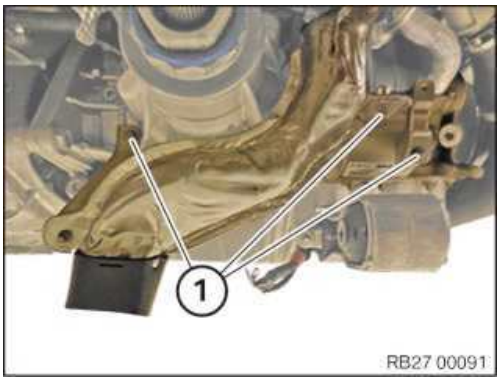
- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

- Position screws (1).



Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

cardiagn.com

- If installed: Install air duct.
- Tighten the screws (1).

67 – Installing the high-pressure stage exhaust turbocharger

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

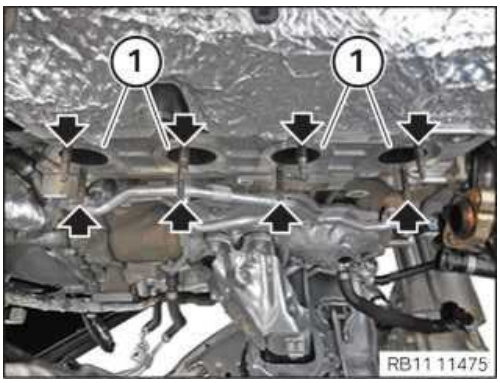
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE



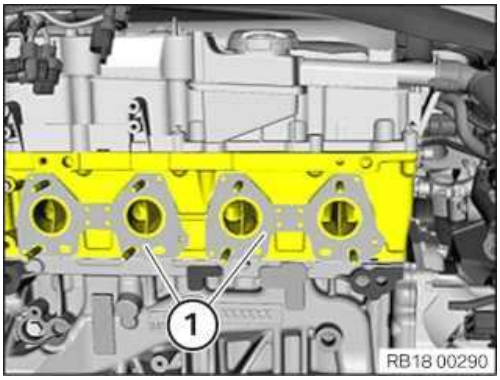
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

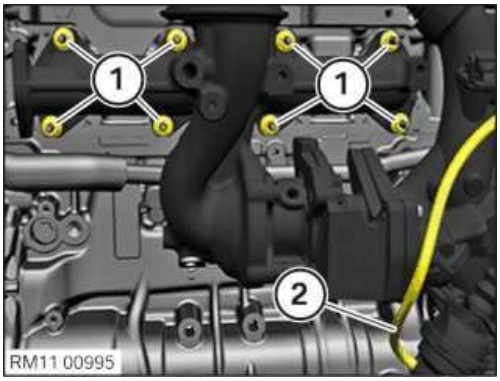
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.

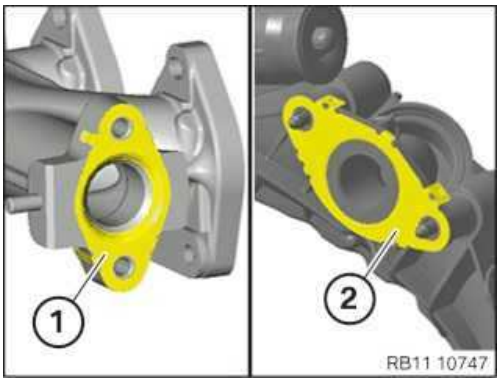
cardiagn.com



- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.

- Renew gasket (1).

  Parts: Gasket

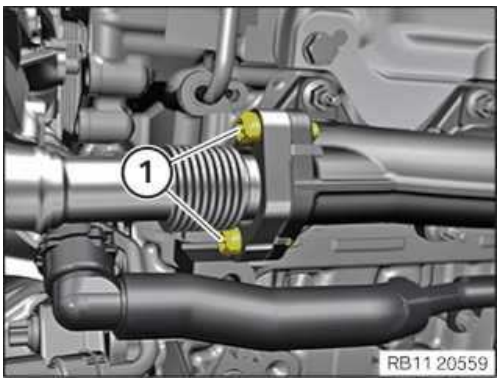


- Install new gasket (1).

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

  Parts: Nuts

- Connect vacuum hose(2).

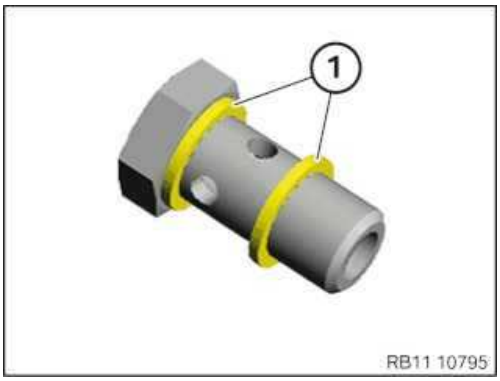


- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

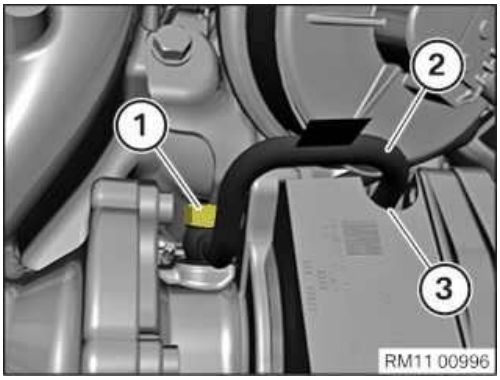
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket



- Tighten the screws (1).

Exhaust-gas recirculation cooler to exhaust manifold



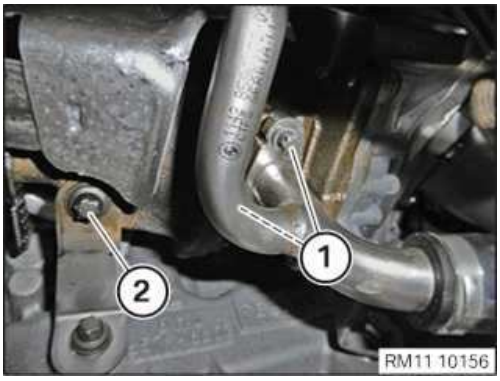
M8x28	Replace screws	Tightening torque	32 Nm

cardiagn.com

- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring

- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).



- Tighten bolt (1) from the right wheel arch.

- Renew seal (1) of oil return line.

  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

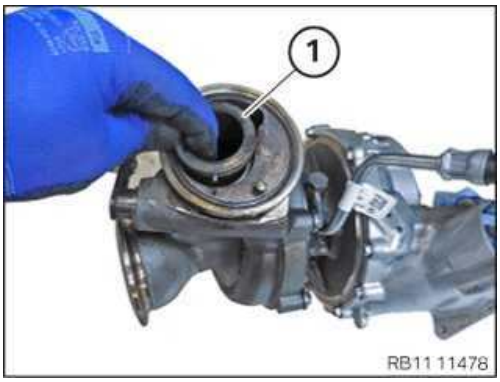
Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

68 – Installing the low-pressure stage turbocharger

cardiagn.com

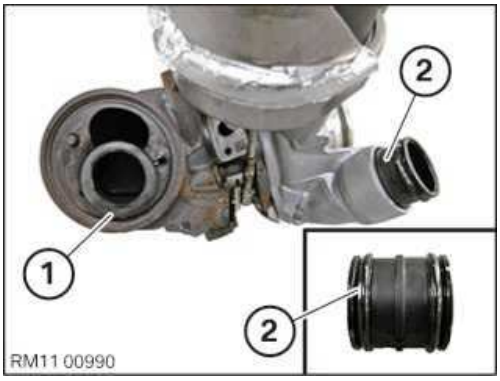
RISK OF DAMAGE



Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.



TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.

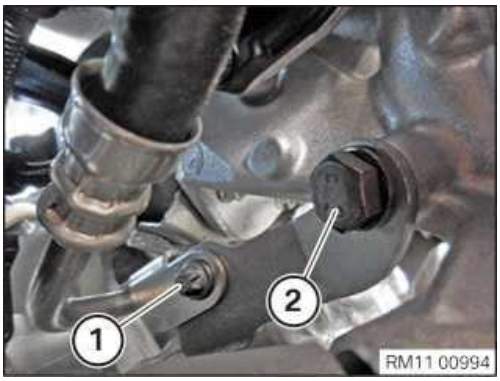
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

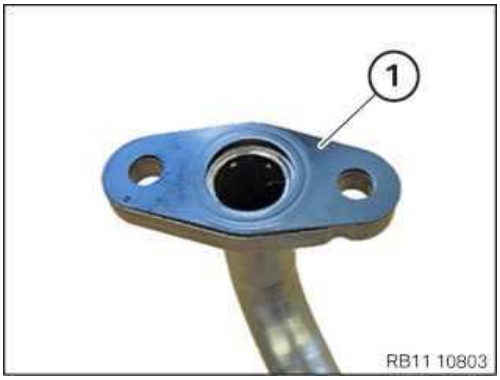
Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

cardiagn.com

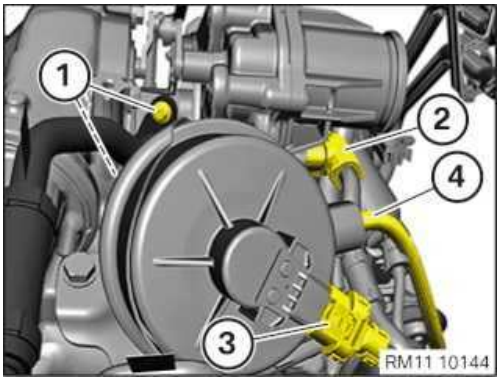
- Tighten down screw (1).



Oil feed line to bracket

Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

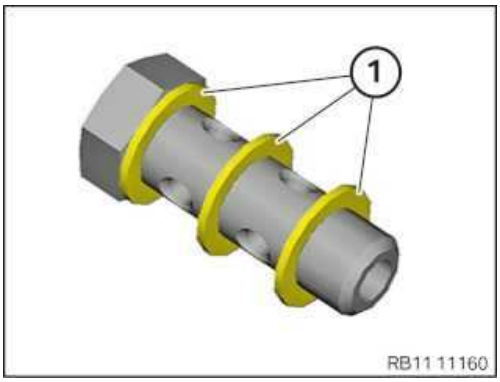


Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

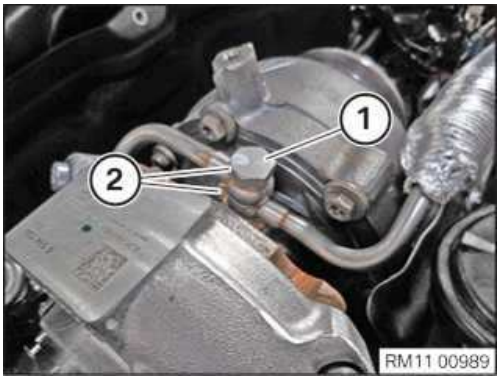
- Renew seal (1) on the oil return line.

  Parts: Gasket



- Position the oil return line with the seal.
- Tighten the screws (1).

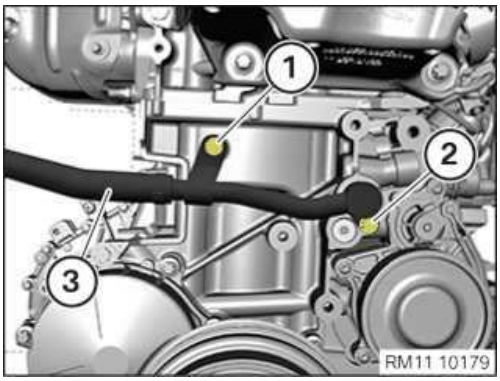
Oil return line to turbocharger



M6x12		Tightening torque	8 Nm

- Connect and lock connectors (2) and (3).

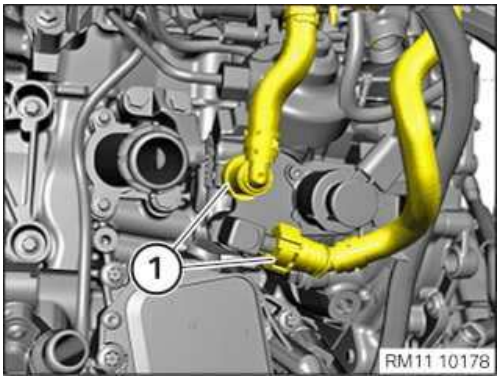
  The locks must engage audibly.
- Connect vacuum hose (4).



- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.

cardiagn.com



- Renew sealing ring of the coolant line (3).

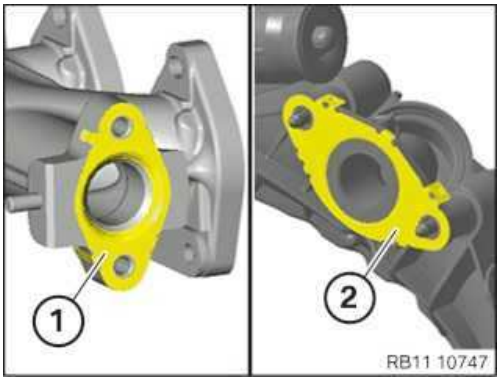
  Parts: Sealing ring
- Coat the sealing ring and install the coolant line (3) .
- Tighten down screws (1) and (2).

Standard screw connection M6

M6		8 Nm

- Connect and lock fuel lines (1).

  The fuel lines (1) must audibly engage.



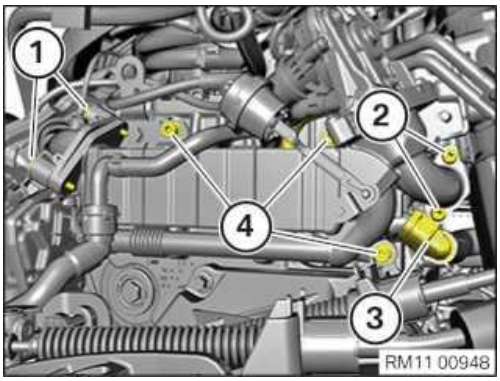
▶ **Installing the exhaust-gas recirculation cooler**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

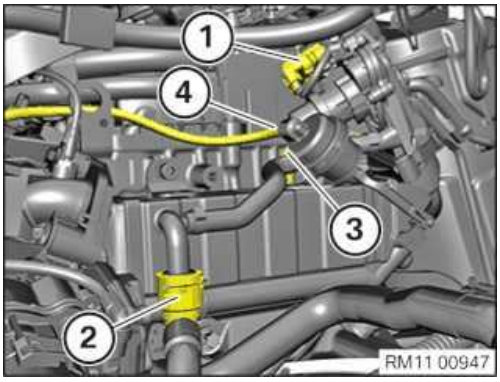
Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold



M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

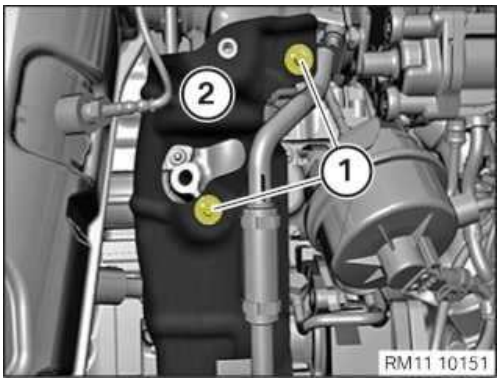
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

▸ **Installing heat shield on exhaust turbocharger at bottom**

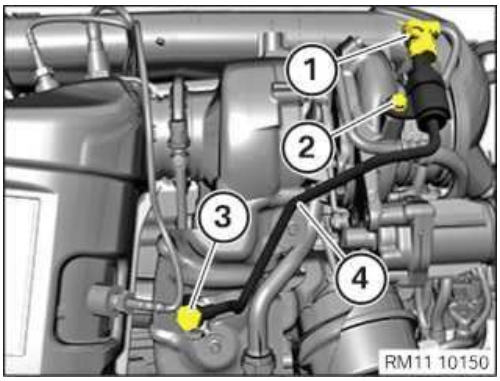


cardiagn.com

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

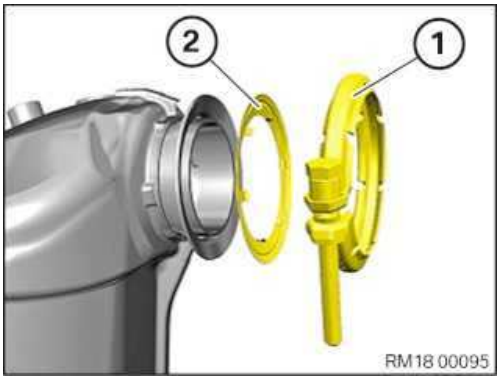
Torx screw BM 6x12		Tightening torque	10 Nm

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm



- Tighten down screw (2).

Standard screw connection M6

M6		8 Nm

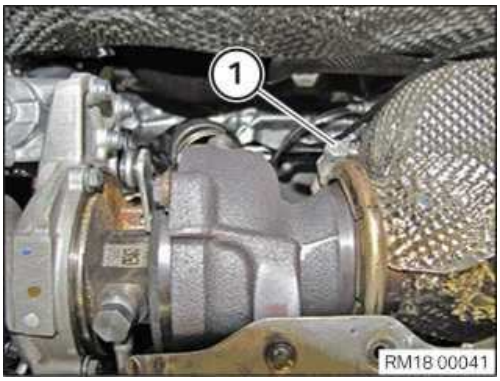
- Connect connectors (1) and lock.

  Lock must audibly engage.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

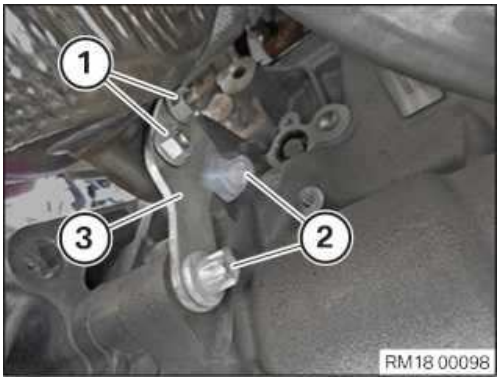


- Remove and install heavy components with the aid of another person/other persons.

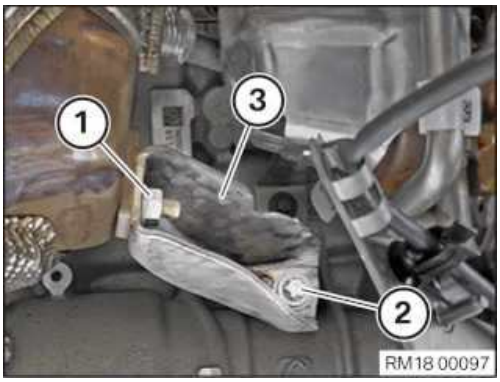
- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket



cardiagn.com



- Carefully insert and install the diesel particulate filter .
- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

- Tighten nuts (1) by hand.

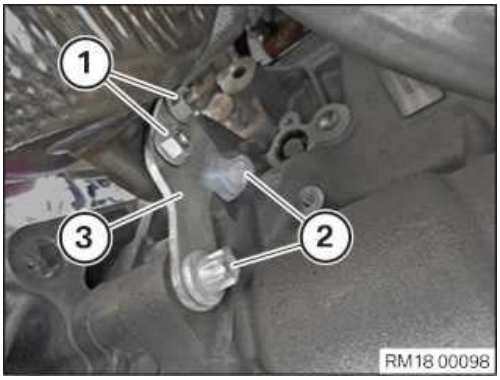
- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.

- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm



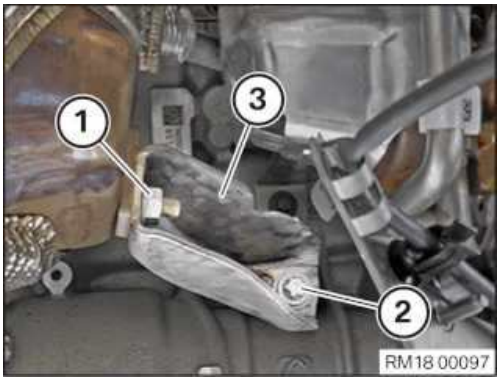
cardiagn.com

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screws (2).



Diesel particulate filter holder to gearbox

M12x75		Tightening torque	66 Nm

- Tighten nuts (1).

Diesel particle filter to holder

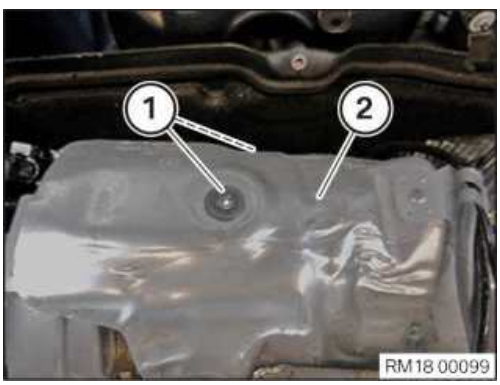
M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screw (2).

Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

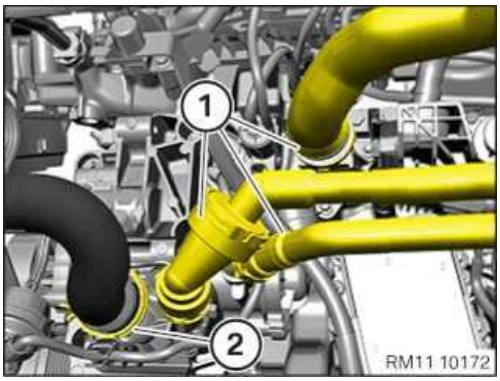


Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Remove fitting aid (1) for the flexible tube.

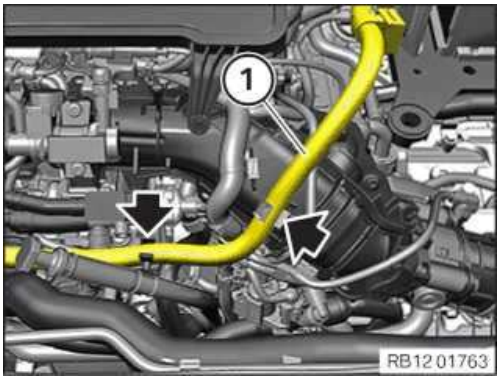
▶ **Install the heat shield on the exhaust turbocharger**



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm



- Fasten the cable at the clips .

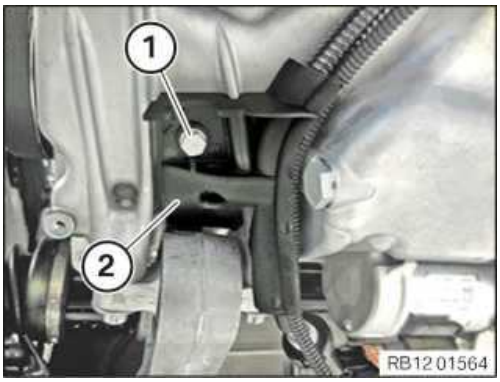
cardiagn.com

- Install the coolant hose and secure with the clamp (2) .
- Connect and lock the coolant lines (1).

  The coolant lines (1) must engage audibly.

CAUTION

Improper routing of the positive battery cable.



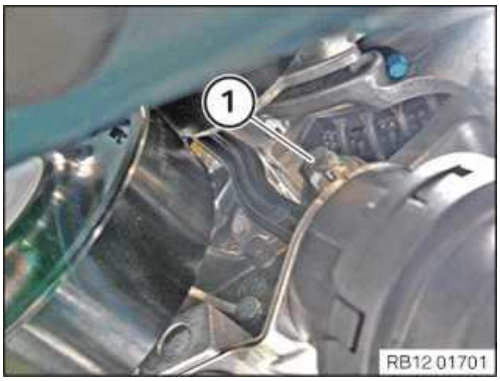
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert the positive battery cable (1) into the clamps (arrows).

- Feed in and install positive battery cable at the clamps (1).

- Insert and install the holder (2).
- Tighten down screw (1).



Bracket to oil sump

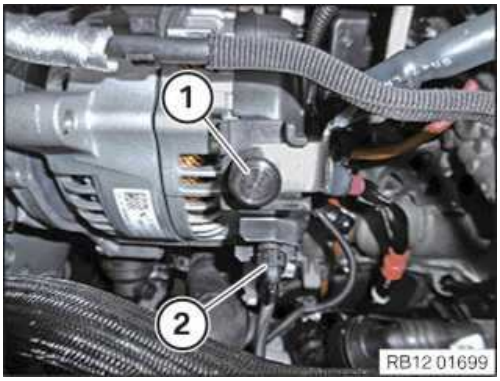
M6		Tightening torque	8 Nm

- Insert and install alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support.

cardiagn.com

- Tighten the screw (1) below on the alternator.

Alternator to component carrier



M10x75 / M10x125		Tightening torque	38 Nm

- Tighten the bolt (1) on top on the alternator.

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm

- Mount positive battery cable to the alternator.
- Tighten nut.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

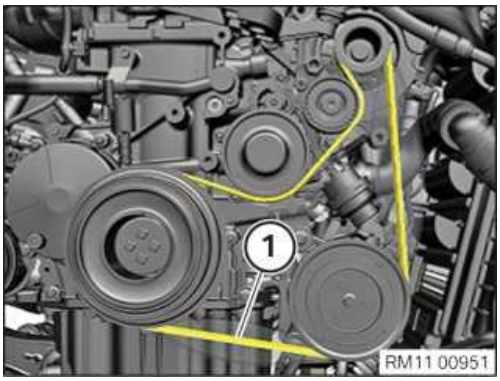
- Mount the cover (1).
- Connect the connector (2) to the alternator and lock audibly.

- Install air conditioning compressor (2) and position it correctly.
- Tighten the screws (1).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

▸ **Installing the drive belt for alternator**



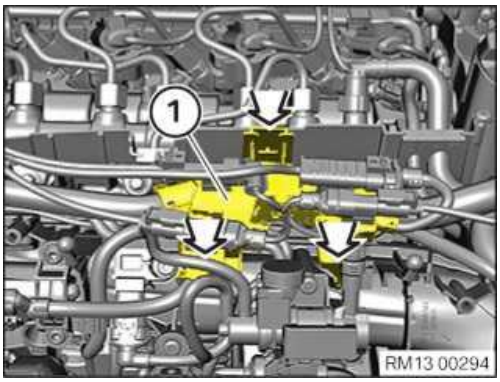
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

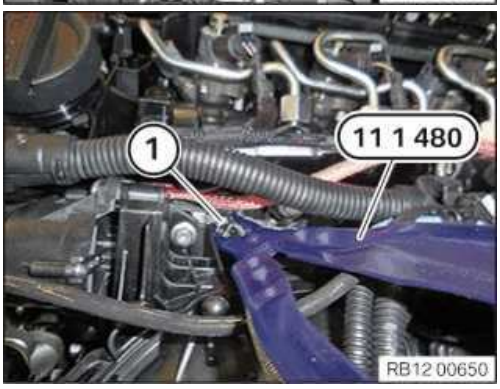
TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

cardiagn.com

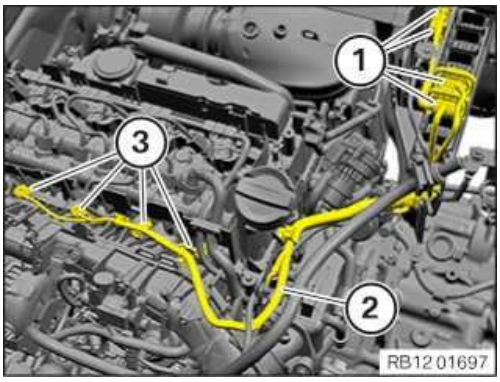


- Feed in the drive belt for the alternator (1) and install it.



- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool **0 496 268 (11 0 390)** out of the belt tensioner and remove it.

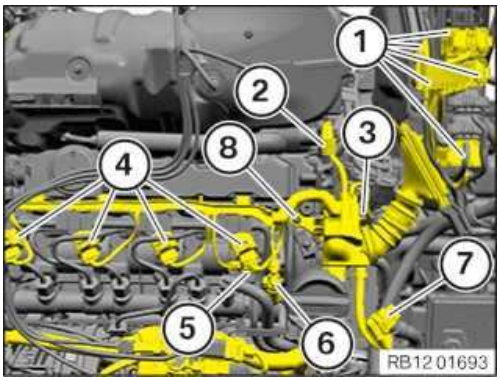
▶ **Installing the cable clip for the intake plenum**



- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.

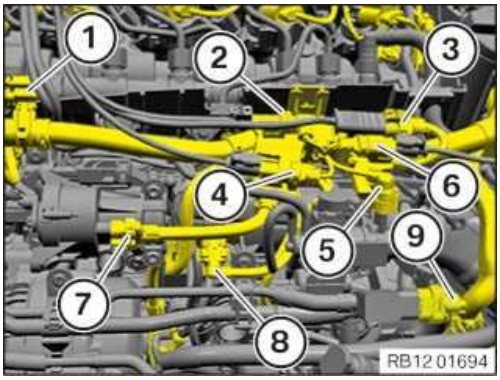
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.



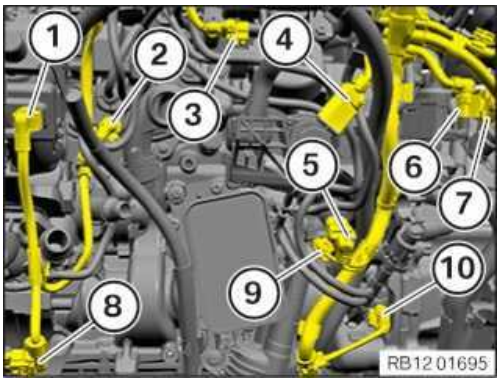
- Lay vehicle wiring harness and fasten with clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Connect all connectors (3) to the glow elements and engage them audibly.
- Mount ground strap and tighten screw (2).

Ground cable to cylinder head

M6x12		Tightening torque	8 Nm

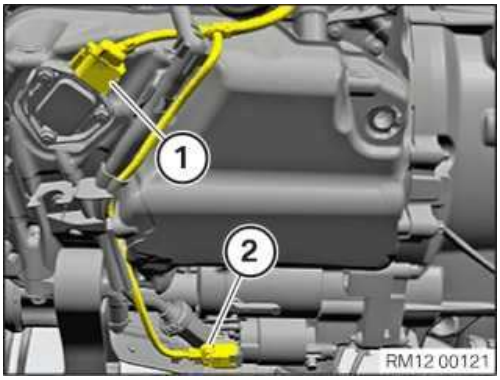


cardiagn.com



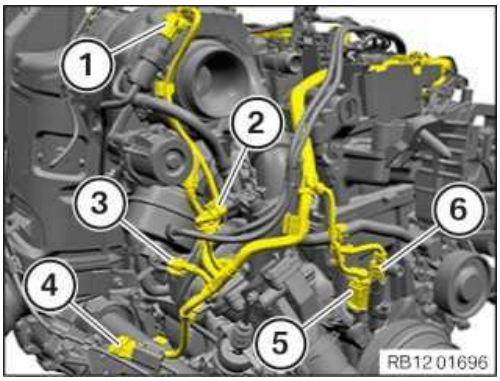
- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

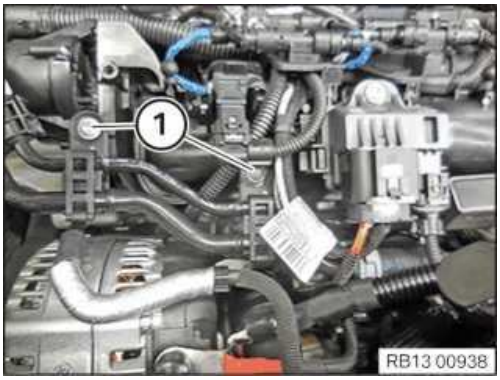


TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.



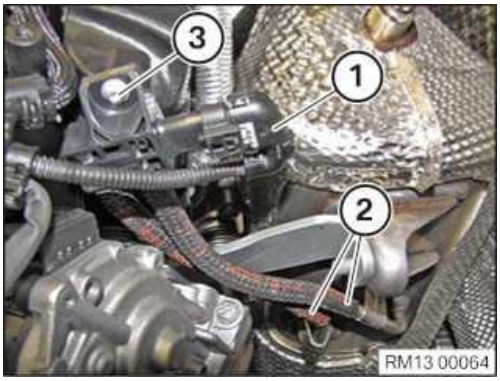
- Connect the connector (1) to the alternator and lock audibly.
- Connect the connector (2) to the electric changeover valve and lock audibly.
- Connect the connector (3) to the electric changeover valve and lock audibly.
- Connect the connector (4) to the high pressure pump and lock audibly.
- Connect the connector (5) to the oil pressure sensor and lock it audibly.
- Attach connector (6) to the throttle bodies and lock it audibly.
- Attach connector (7) to the intake air temperature sensor and lock it audibly.
- Connect the connector (8) to the air conditioning compressor and lock audibly.
- Connect the connector (9) to the solenoid valve and lock audibly.
- Connect the connector (10) to the crankshaft sensor and lock it audibly.



- Connect the connector (1) to the oil-level sensor and lock it audibly.
- Connect connector (2) to the starter motor and lock audibly.

cardiagn.com

- Attach connector (1) to the exhaust turbocharger and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust gas pressure sensor and lock it audibly.
- Connect the connector (4) to the monitoring oxygen sensor and lock audibly.
- Attach connector (5) to the oil pressure switch and lock it audibly.
- Attach connector (6) to the switching valve and lock it audibly.



- Position the fuel line.
- Tighten the screws (1).

Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

70 – Installing differential pressure sensor

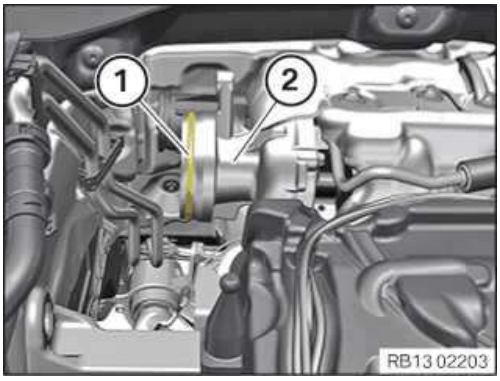
- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.



Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

71 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

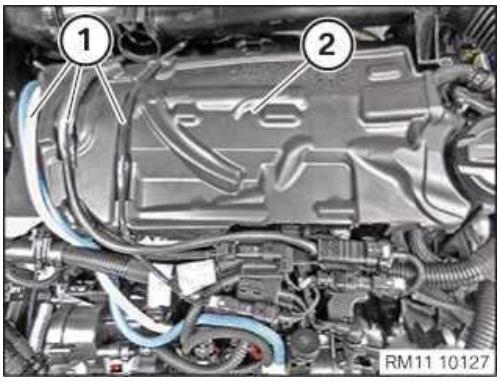
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

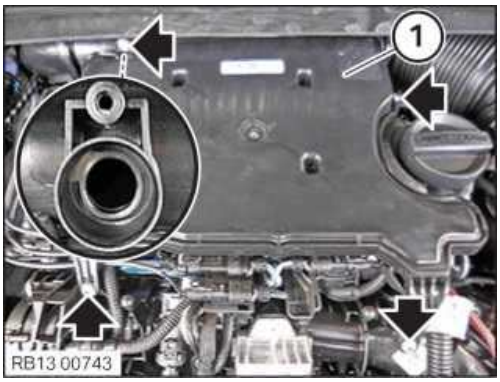
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing



Clamp		Tightening torque	3 Nm

72 – Install the acoustic cover for the injectors

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

73 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

74 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

75 – Install engine

- See additional information.

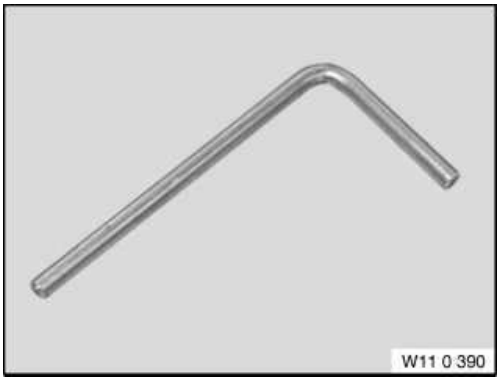
Clamp 15–19mm		Tightening torque	3 Nm

Clean air pipe to cylinder head cover — Used in step 71

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing — Used in step 71



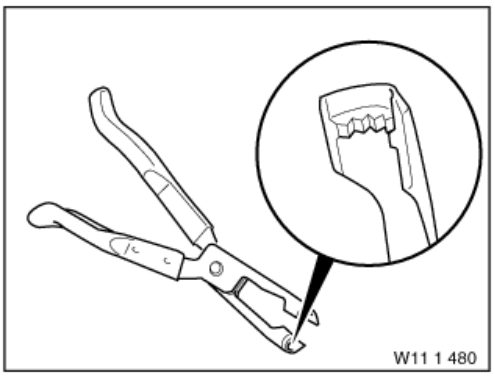
Clamp		Tightening torque	3 Nm

Resonator to manifold and clean air pipe — Used in step 73

Screw TS6	Renew screw.	Tightening torque	5 Nm

Overview of Special Tools

0 496 268 (11 0 390) Pin



Common — Used in step 7 69

Usage	(roll pin) For securing new tensioning pulley (poly-V belt)
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 15 07 (390)

cardiagn.com

0 490 796 (11 1 480) Pliers

Common	Used in step 7 25
Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

0 493 380 (11 6 480) Connector

Common	Used in step 12 20 53 56 64
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

2 220 718 Workshop crane

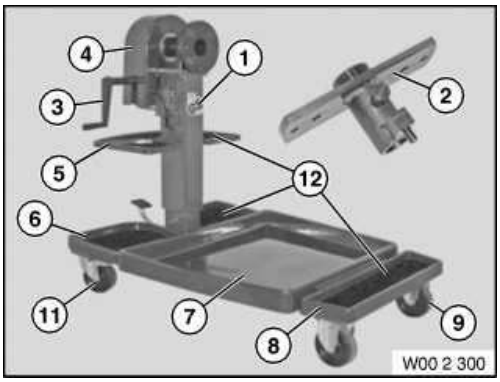
Common	Used in step 12 64
Usage	WSK 1000
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	06 01 11 (701)

cardiagn.com

2 459 012 Holder

Common Used in step 12 64

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)



2 455 010 Engine support

Common Used in step 13 63

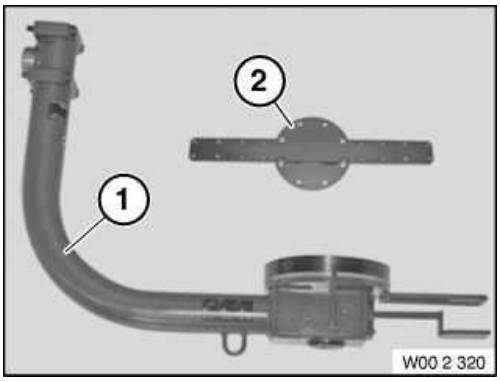
Usage	For accommodating engine on assembly stand. Engine: B3x, B4x, N47.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 495 187 (00 2 300) Assembly stand

Common Used in step 13

Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of



Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	

cardiagn.com

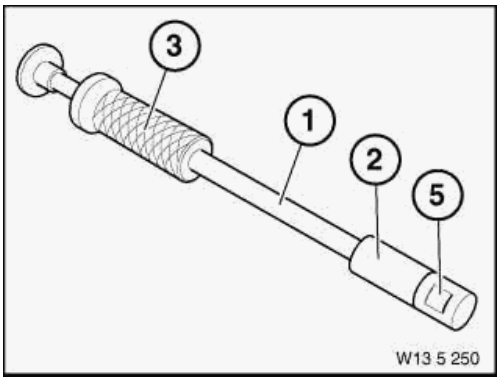
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.	

cardiagn.com

0 495 196 (00 2 320) Support arm

Common

Used in step 13



Usage	(Support arm with fixture) For mounting engines using the engine mounting bracket.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 197 (00 2 321)		**Support arm**	
2	0 495 198 (00 2 322)		**Panel** (take-up plate)	
3	0 495 380 (00 2 323)		**Panel** (fixture) Engine N73	
6	0 496 287 (00 2 326)		**Panel** (fixture) Engine: M73	
5	0 496 288 (00 2 327)	**0 496 373**	**Panel** (fixture) Engine: S62 Replaced by 11 5 420 (0 496 373)	
8	0 496 533 (00 2 328)		**Support** (Engine mount) Engine: N57, N57Top	
9	0 496 579 (00 2 329)	**0 496 680**	**Support** (Engine mount) Engine: N74 Replaced by 116160 (0 496 680)	
4	0 495 379 (00 2 324)		**Panel** (fixture) Engine M67TU	
5	0 495 381 (00 2 325)		**Panel** (fixture) Engine N62, N62TU	

cardiagn.com

0 493 321 (13 5 250) Puller

Common

Used in step 17

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

0 493 339 (13 5 252) Bush

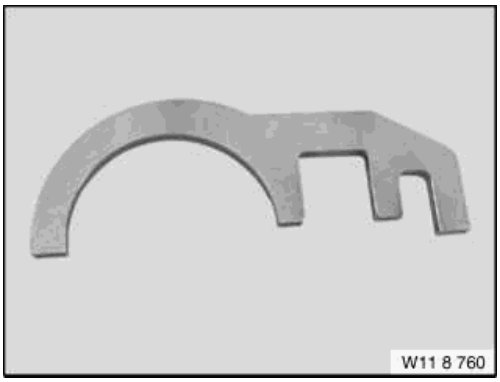
Common

Used in step 17

Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 340 (13 5 253) Weight



Common	Used in step 17
Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

2 288 380 Locating stud

Common	Used in step 20 53 54 56
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 112 (11 8 760) Gauge

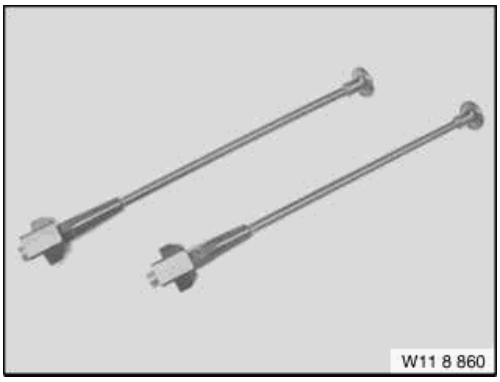
Common	Used in step 20 53 55 56
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

cardiagn.com

0 495 105 (11 4 480) oddments tray

Common

Used in step 26 27 53



Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

cardiagn.com

0 496 144 (11 8 860) Assembly tool

Common

Used in step 34 41

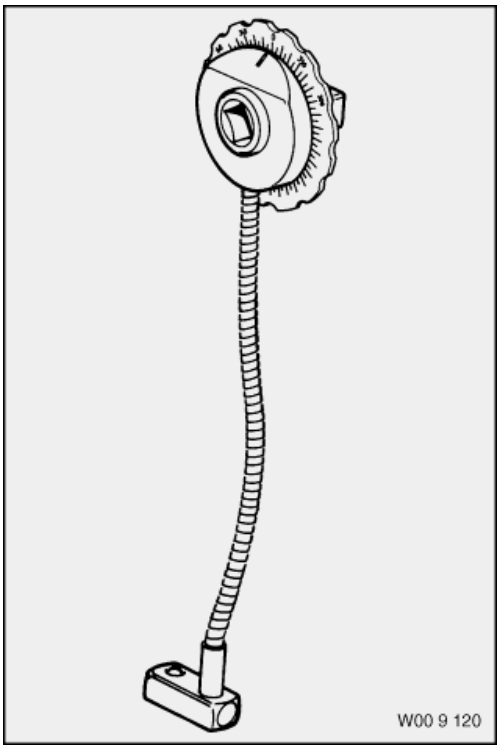
Usage	For installing piston with connecting rod in crankcase.
Included in the tool or work	
Storage location	A23
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

cardiagn.com

0 493 582 (11 8 140) Bush

Common

Used in step 41



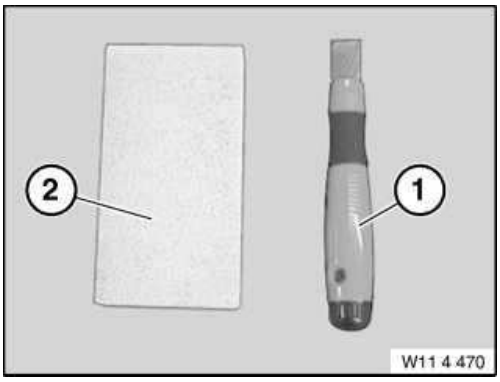
Usage	(Assembly bushes) For installing the pistons
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 12 99 (452)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 494 394 (11 8 141)		**Bush** Bush for piston installation 84.00 mm	
2	0 494 395 (11 8 142)		**Bush** Liquidation of existing inventory and then available only as a complete tool set 11 8140 (83 30 0 493 582) - as of 12.03.12.	
3	0 494 396 (11 8 143)		**Bush** Liquidation of existing inventory and then available only as a complete tool set 11 8140 (83 30 0 493 582) - as of 12.03.12.	

cardiagn.com

0 490 504 (00 9 120) Torque angle measuring dial



Common

Used in step 42 48

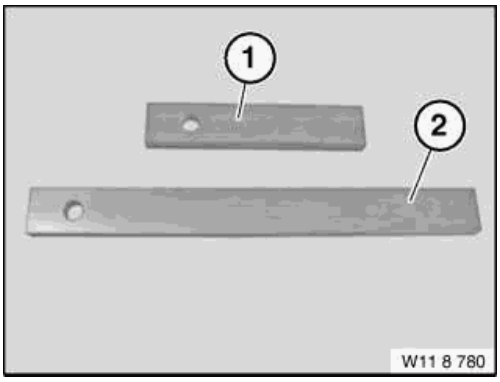
Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 102 (11 4 470) Tool

Common

Used in step 45 67



Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

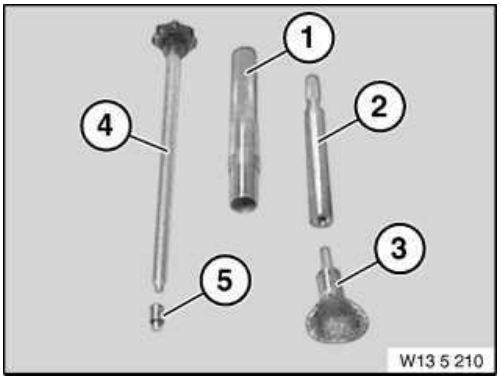
Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 103 (11 4 471)		**Scraper**	
2	0 495 104 (11 4 472)		**Extractor** (grindstone)	

cardiagn.com

0 496 120 (11 8 780) Plate

Common



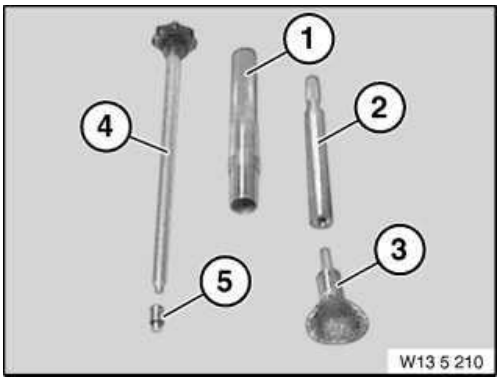
Used in step 45

Usage	(Mounting plates) For securing transmission oil sump when gearbox is removed.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 496 121 (11 8 781)		**Plate** (Mounting plate, short)Discontinued; only available via set 11 8 780 = 0496120.	
2	0 496 122 (11 8 782)		**Plate** (Mounting plate, long) Discontinued; only available via set 11 8 780 = 0496120.	

0 493 763 (13 5 215) Plug



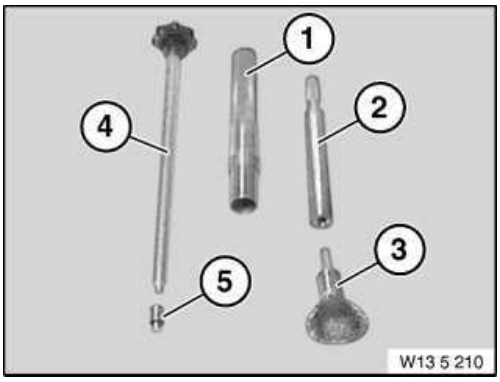
Common

Used in step 58

Usage	(Seal plug)
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 762 (13 5 214) Rod



Common

Used in step 58

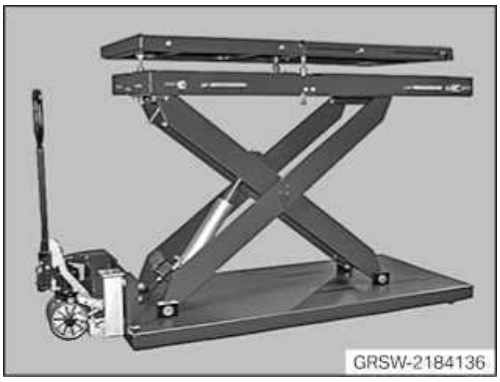
Usage	(Mounting rod) For the seal plug
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 758 (13 5 210) Tool

Common

Used in step 58



Usage	(Cleaning set) For injector channels
Included in the tool or work	
Storage location	B4
Replaced by	
In connection with	
SI-Number	01 05 00 (574)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 759 (13 5 211)		**Holding sleeve** (Guide sleeve)	
2	0 493 760 (13 5 212)		**Holder** (Brush holder)	
3	0 493 761 (13 5 213)		**Brush head**	
4	0 493 762 (13 5 214)		**Rod** (Mounting rod) For the seal plug	
5	0 493 763 (13 5 215)		**Plug** (Seal plug)	

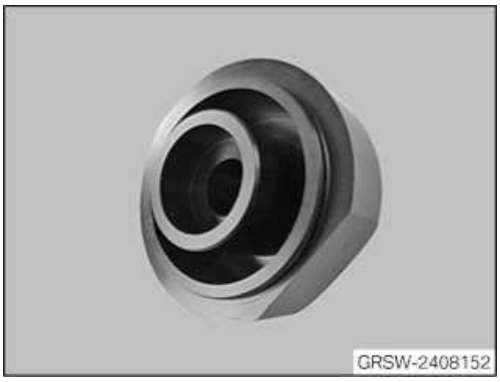
cardiagn.com

2 184 136 Mobile equipment table lift

Common	Used in step 64
Usage	Table lift MHT 1200
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	06 01 10 (649)

2 409 025 Puller

Common	Used in step 65
Usage	For disassembly of the outer radial shaft seal of the transmission output shaft, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A76
Replaced by	
In connection with	
SI-Number	01 53 14 (211)



2 411 739 Puller

Common	Used in step 65
Usage	For disassembly of the inner radial shaft seal of the output, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C78
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

cardiagn.com

2 408 152 Striking element

Common Used in step 65

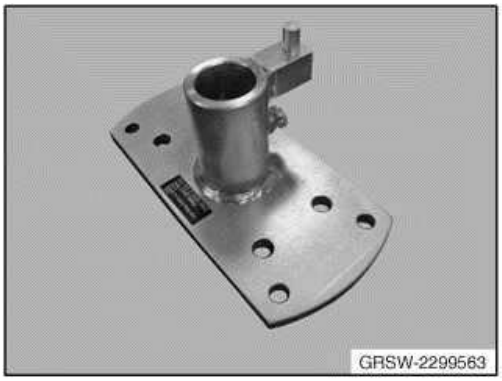
Usage	For installation of the right radial shaft seal transmission output shaft (inner). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)

2 413 037 Handle

Common Used in step 65

Usage	Universal drift handle. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C77
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

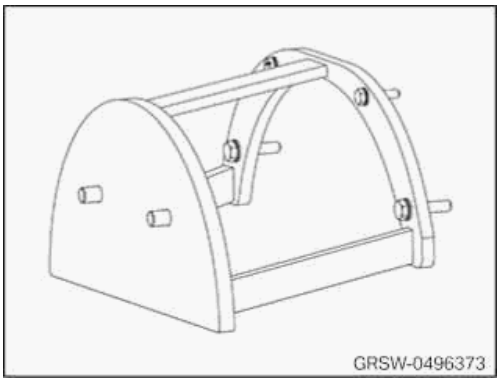
2 408 150 Striking element



Common Used in step 65

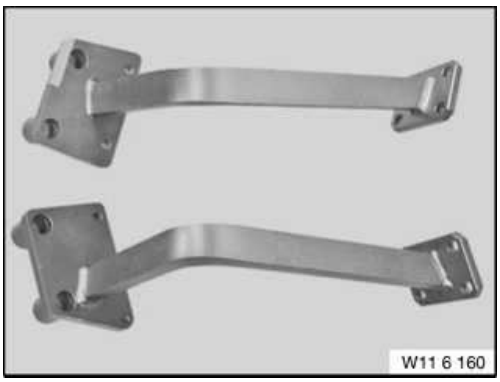
Usage	For installing the right radial shaft seal transmission output shaft (outer). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)

Replacement tools:



cardiagn.com

2 299 563 Adapter



Common	Used in step 13
Usage	New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.
Included in the tool or work	0 495 187
Storage location	
Replaced by	
In connection with	
SI-Number	

0 496 373 (11 5 420) Plate

Common	Used in step 13
Usage	(Fixture) Engine S62
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	

0 496 680 (11 6 160) Support

Common	Used in step 13
Usage	For mounting N74 engine on the assembly stand. In combination with 00 2 300, 00 2 320
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	00 2 300; 00 2 320 = 0495196
SI-Number	01 31 09 (604)

Overview Technical Data

Side clearance of piston rings

Used in step 36

Clean all components before measuring the side clearance.

Side clearance of the plain rectangular compression ring	0,17 mm ... 0,27 mm
Side clearance of the taper faced piston ring	0,30 mm ... 0,50 mm
Side clearance of the oil scraper ring with spiral expander	0,2 mm ... 0,4 mm

Piston diameter

Used in step 37

Measure the piston diameter at distance (A) from the lower end of the piston skirt.

Distance (A) to the lower end of the piston skirt	17 mm
Nominal dimension of piston diameter	83,936 mm ... 83,954 mm

Cylinder bore

Used in step 38

cardiagn.com

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

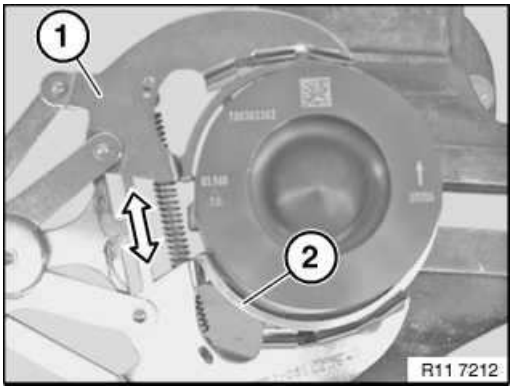
11 25 671 Replacing piston rings on all pistons (B47)

Necessary preliminary tasks:

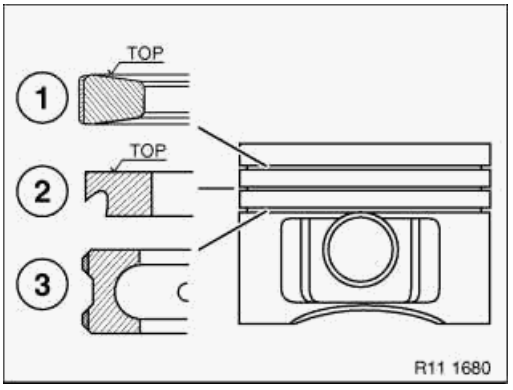


- Removing piston

Removal:

If necessary, measure side clearance.

Refer to Technical Data.



Note:

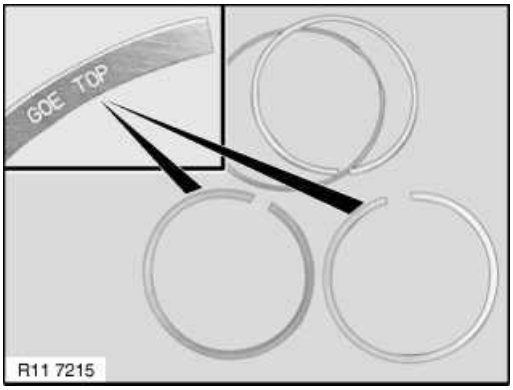
It might not be possible to find the identification on used piston rings.

Put aside piston rings in correct sequence and installation position.

Remove all piston rings (2) with piston ring pliers (1).

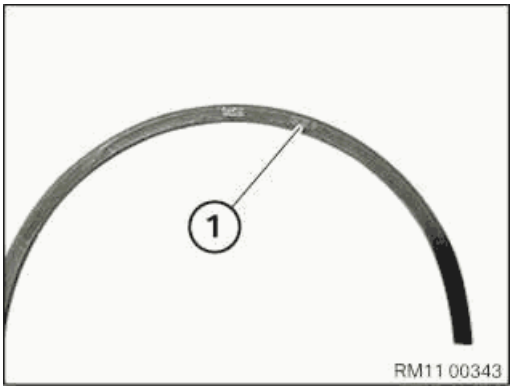
Note:

1. Plain rectangular compression ring
2. Piston ring
3. Oil scraper ring with spiral expander.



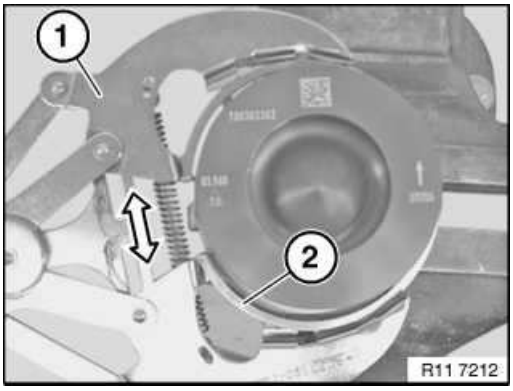
cardiagn.com

If necessary, measure end clearance.



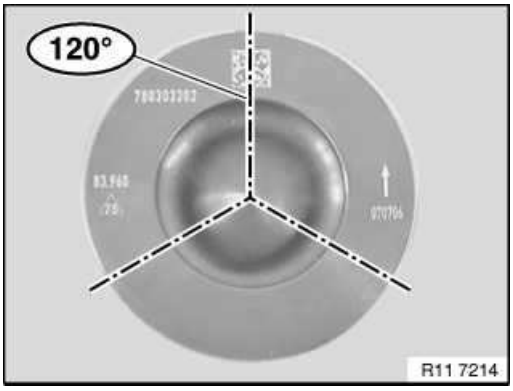
Refer to Technical Data.

Installation:



Installation note:
Marking “TOP” must point towards piston crown.

The oil scraper ring has no identification marking and can be installed in any position.



Installation note:
If there is no “TOP” marking, the “GOE” marking (1) must point to the piston crown.

The oil scraper ring has no identification marking and can be installed in any position.

Using piston ring pliers (1), install all piston rings (2) in the correct installation position.

cardiagn.com

Note:
Piston rings must be arranged with a 120° offset.

Align contact points on piston rings (offset at approx. 120°, but do not arrange over gudgeon pin boss).

Lightly coat pistons and piston rings with oil.

Required follow-up work:

- Install piston

cardiagn.com

11 27 030 Remove and install/replace counterbalance shafts

PRELIMINARY WORK

1 – Removing engine

- See additional information.

2 – Removing the acoustic cover

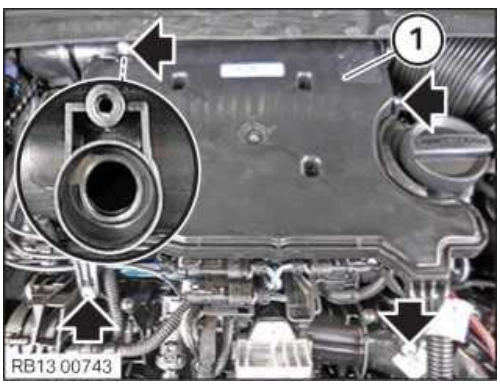
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

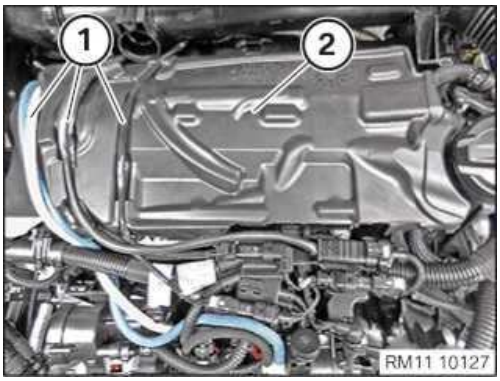


Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

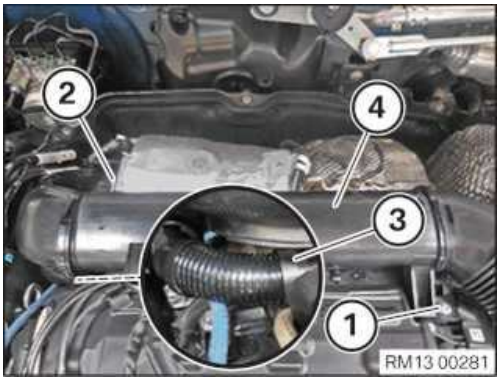


3 – Remove resonator

- Remove screws (arrows).
- Guide out and remove the resonator (1).

4 – Remove the acoustic cover for the injectors

cardiagn.com



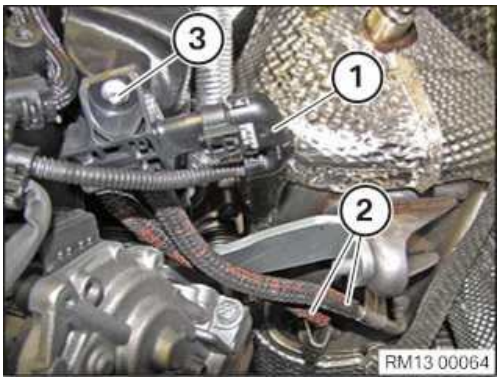
- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

5 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

6 – Remove differential pressure sensor

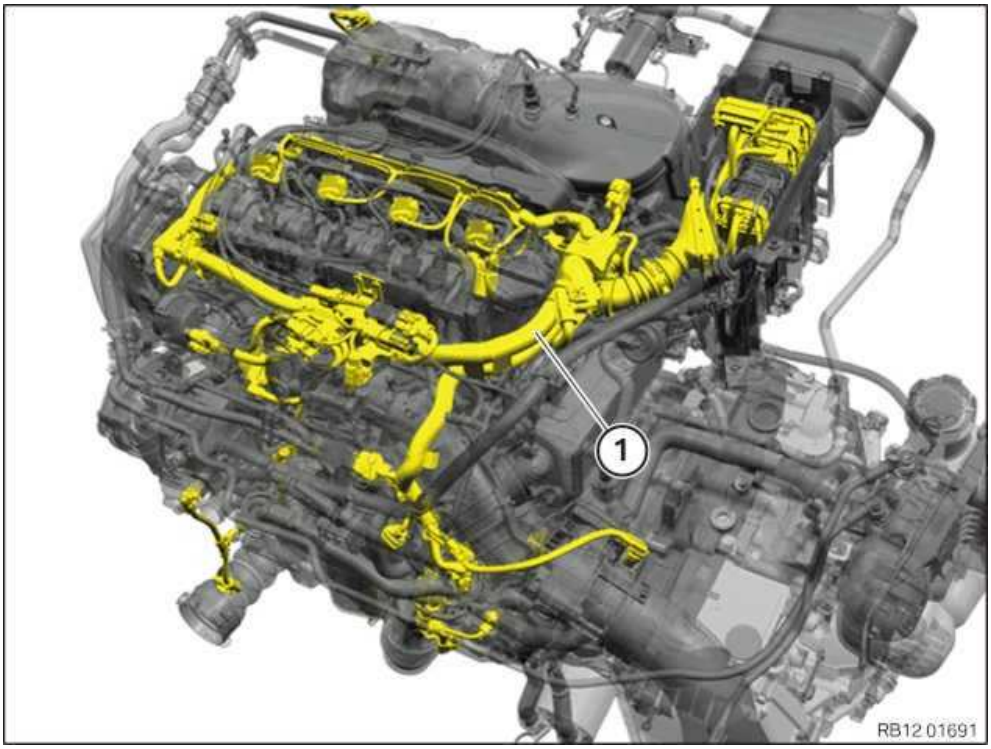


RISK OF DAMAGE

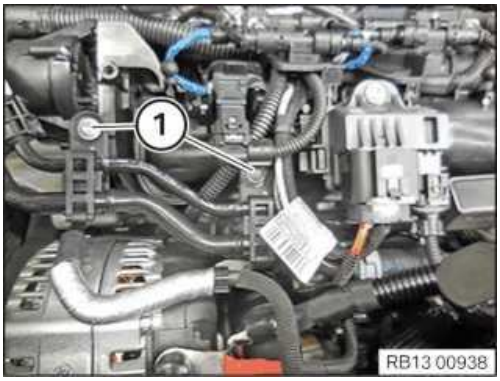
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



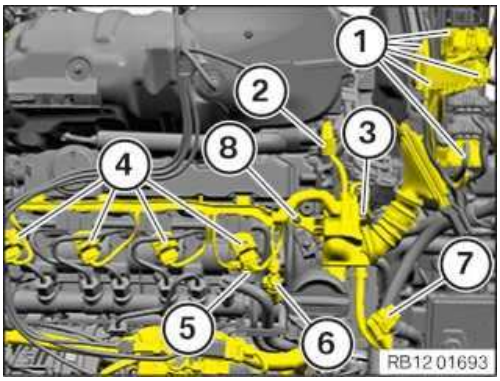
cardiagn.com



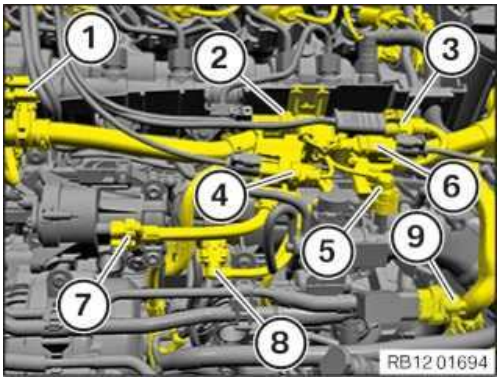
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

7 – Removing assemblies (on lifting table)

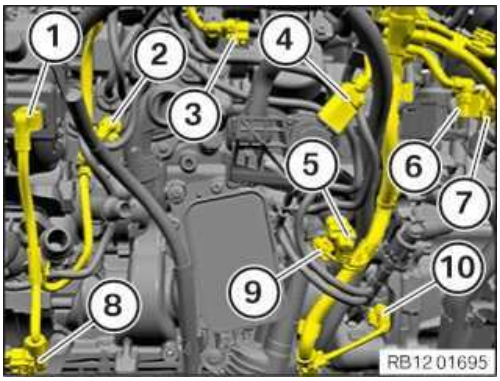
Overview: Wiring harness section for the engine



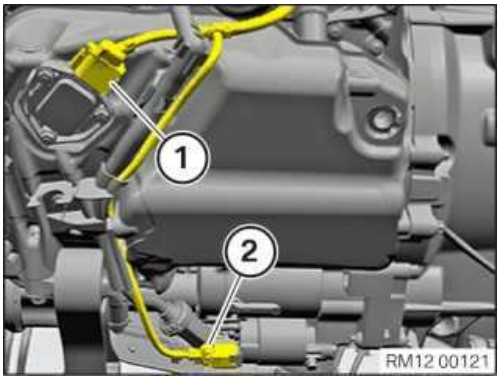
1 Wiring harness section for the engine



- Loosen screws (1).

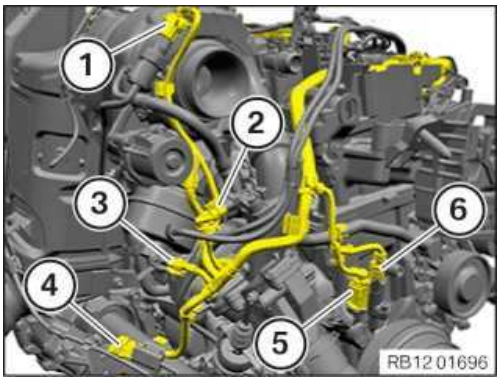


cardiagn.com

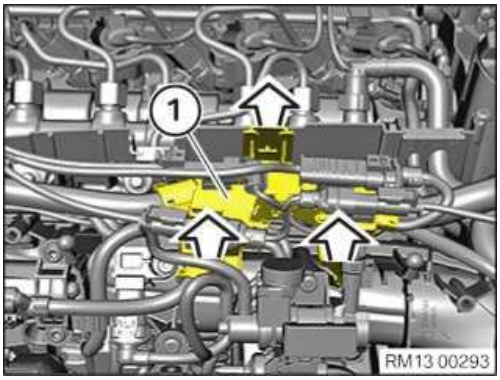


- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).

- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock connector (3) and pull it off from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

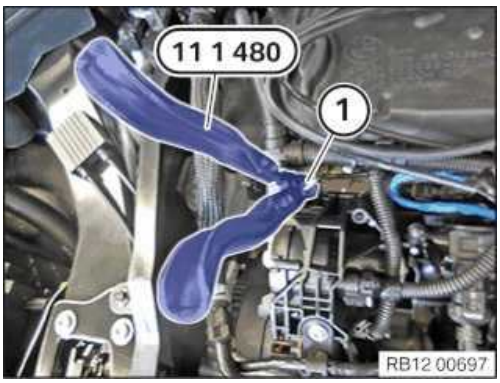


- Unlock and disconnect the connector (1) from the alternator.
- Unlock and disconnect the connector (2) from the electric changeover valve.
- Unlock and disconnect the connector (3) from the electric changeover valve.
- Unlock the connector (4) and pull it off the high pressure pump.
- Unlock the connector (5) and disconnect it from the oil pressure sensor.
- Unlock connector (6) and pull off from throttle body.
- Unlock the connector (7) and disconnect it from the intake air temperature sensor.
- Unlock the connector (8) and disconnect it from the air conditioning compressor.
- Unlock and disconnect the connector (9) from the solenoid valve.
- Unlock the connector (10) and pull it off the crankshaft sensor.

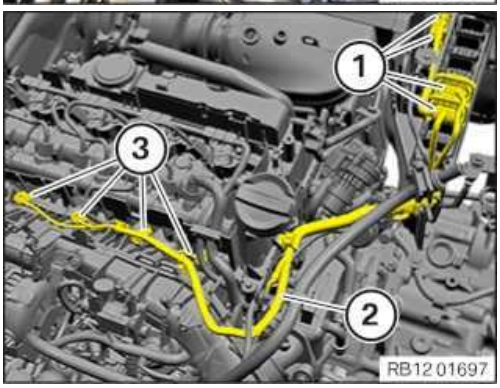


- Unlock the connector (1) and pull off of the oil-level sensor.
- Unlock connector (2) and remove from starter motor.

cardiagn.com



- Unlock the connector (1) and disconnect it from the exhaust gas pressure sensor.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock the connector (3) and pull it off the exhaust turbocharger.
- Unlock the connector (3) and disconnect it from the differential pressure sensor.
- Unlock connector (4) and pull it off from the monitoring oxygen sensor.
- Unlock the connector (5) and pull it off the oil pressure switch .
- Unlock connector (6) and disconnect from switching valve.
- Detach, feed out and remove the wiring harness from the clamps.



▶ **Removing the cable clips from the intake plenum**

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Pull off all connectors (3) from glow element using special tool **0 490 796 (11 1 480)**.
- Loosen screw (2) and remove the ground strap.
- Detach, feed out and remove the wiring harness from the clamps.

▶ **Removing the drive belt for alternator**

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

cardiagn.com

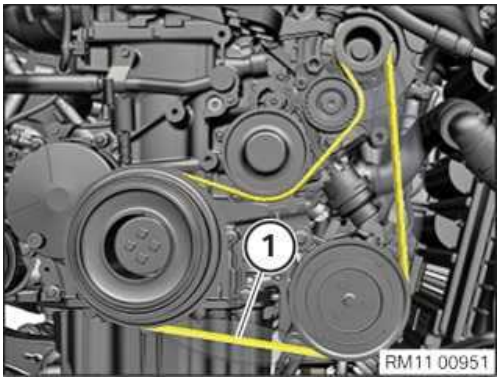
CAUTION

Component with preload.

Danger of injury!

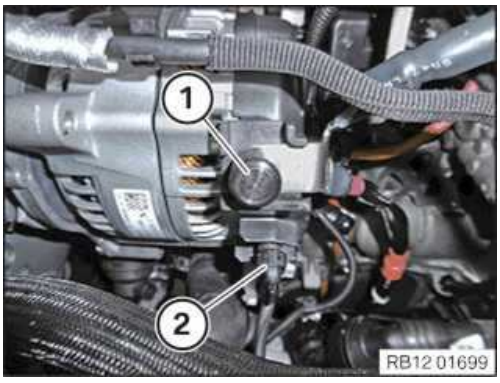
- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION



If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

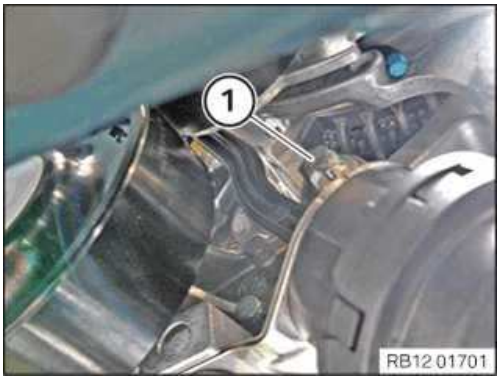
TECHNICAL INFORMATION



The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool **0 496 268 (11 0 390)**.

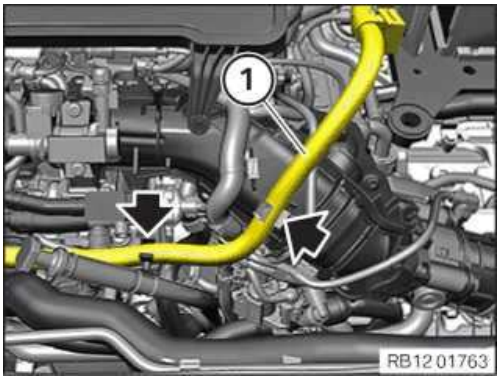
- Guide out the drive belt for the alternator (1) and remove it.



- Remove the cover (1) and loosen the nut below.
- Disconnect positive battery cable from alternator.
- Unlock and disconnect the connector (2) from the alternator.

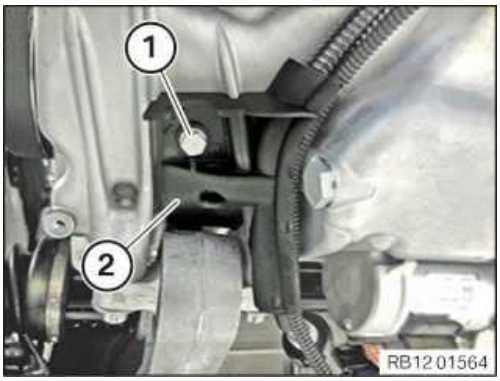
cardiagn.com

- Detach screw (1) on top on the alternator.



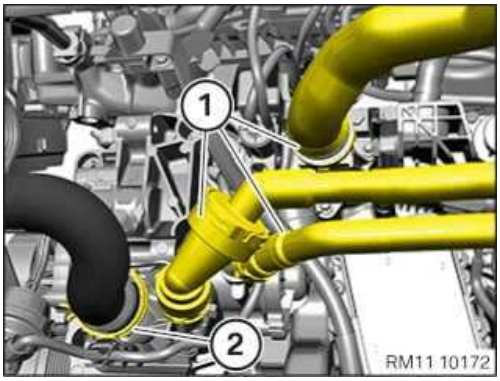
- Detach screw (1) below on the alternator.

- Feed out alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support and remove.



- Loosen screws (1).
- Feed out and remove the air conditioning compressor (2).

- Release the positive battery cable (1) from the clamps (arrows).

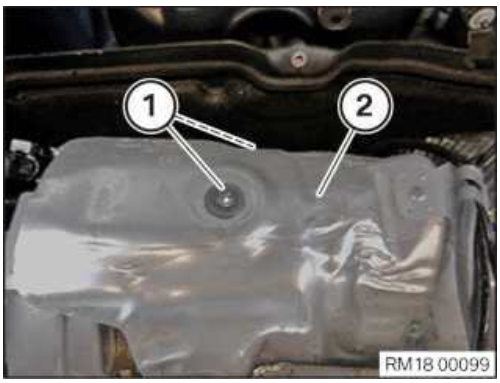


cardiagn.com

- Loosen screw (1).
- Guide out and remove holder (2).

- Feed out positive battery cable from the clamps (1) and remove.

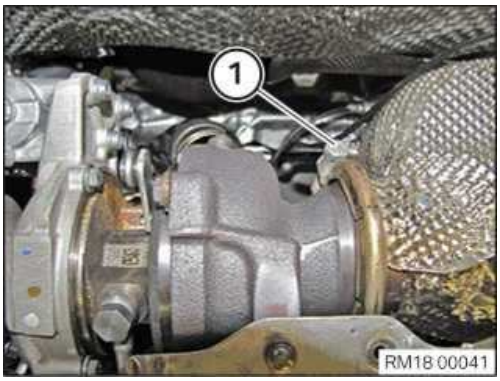
- Unlock and disconnect coolant lines (1).
- Guide out the coolant lines (1) and remove it.
- Detach the clamp (2).
- Guide the coolant hose out and remove.



▶ **Removing heat shield from top exhaust turbocharger**

WARNING

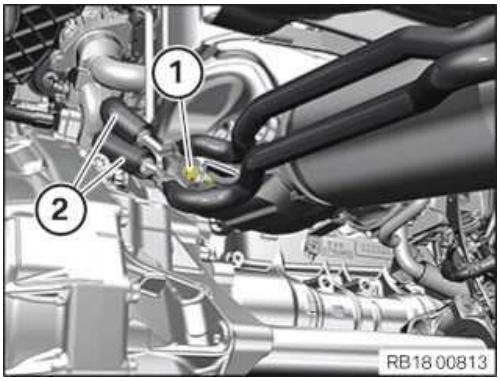
Hot surfaces.



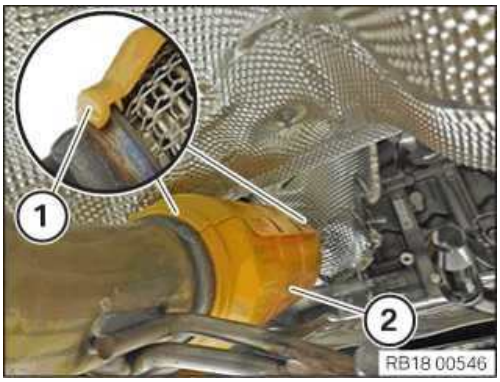
Risk of burning!

- Perform all work only on components that have cooled down.

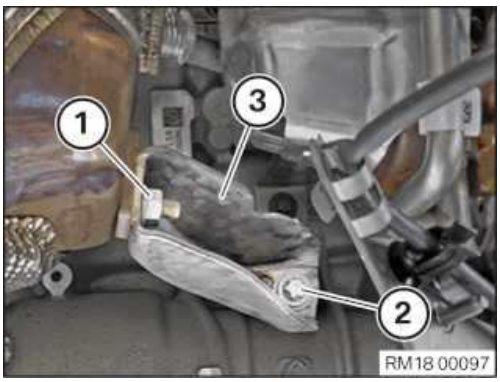
- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).



cardiagn.com

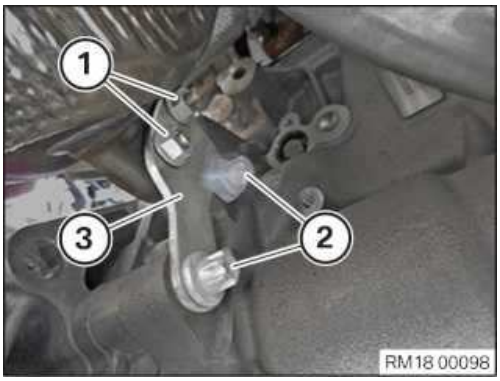


- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



- Loosen nuts (1).

- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

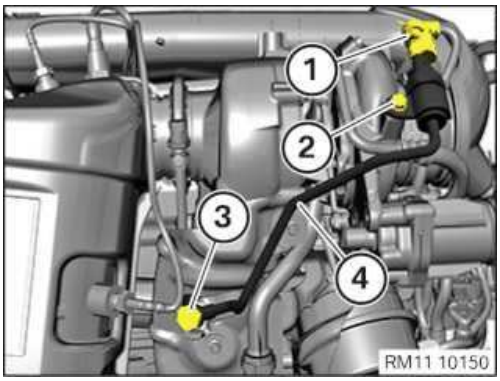


- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.

- Loosen nut (1).
- Loosen screw (2).
- Remove holder (3).

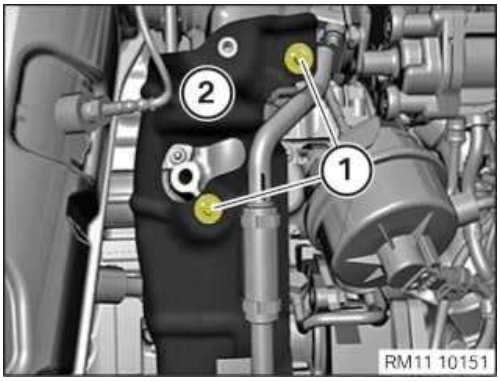
cardiagn.com

- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).
- Guide out and remove diesel particulate filter .



▶ **Remove the heat shield from the exhaust turbocharger at the bottom**

WARNING



Hot surfaces.

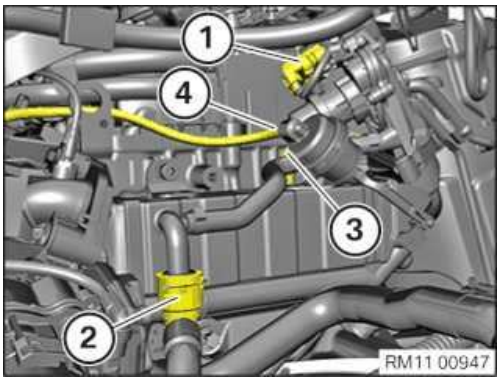
Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).

▶ **Removing the exhaust-gas recirculation cooler**

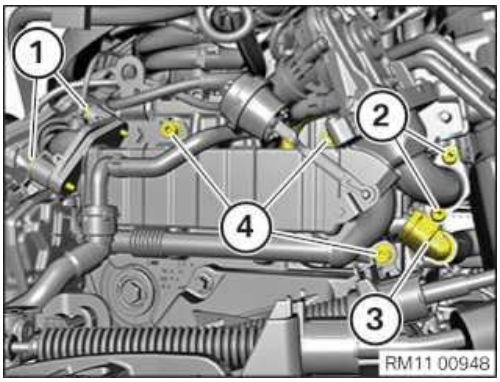


WARNING

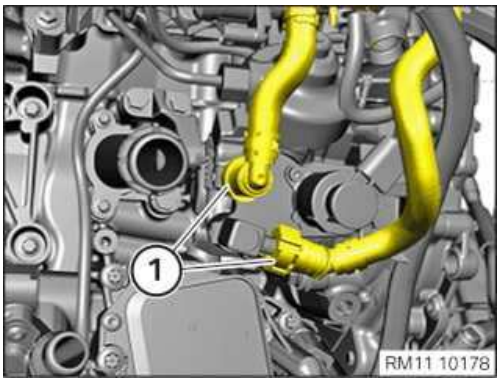
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

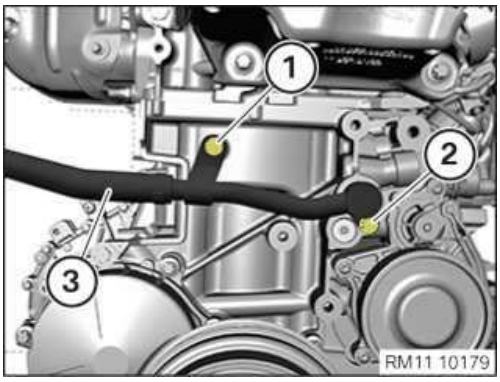


cardiagn.com



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



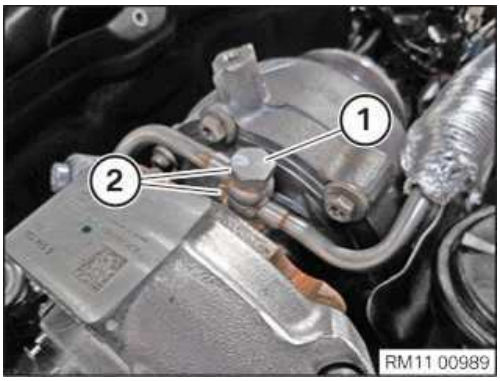
- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

- Unlock the fuel lines (1) and disconnect from the high pressure pump.
- Remove the fuel lines.

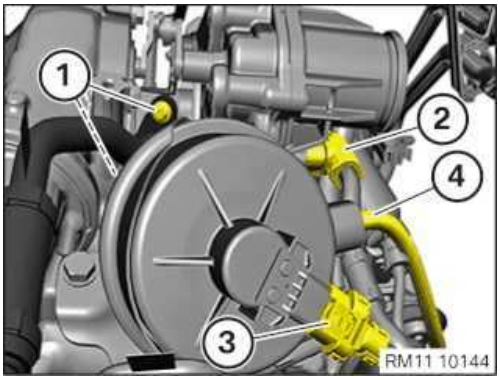
- Loosen screws (1) and (2).
- Remove coolant line (3).

8 – Removing the low-pressure stage turbocharger



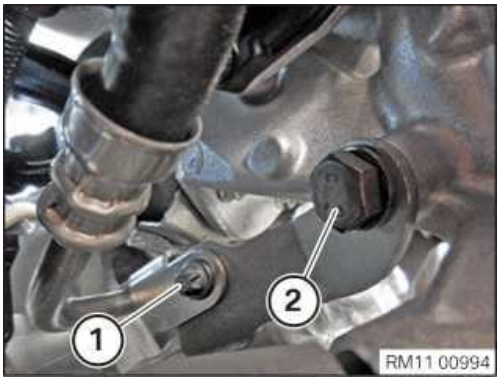
WARNING

Hot surfaces.



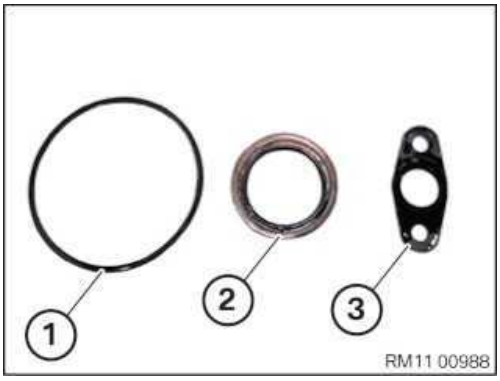
Risk of burning!

- Perform all work only on components that have cooled down.



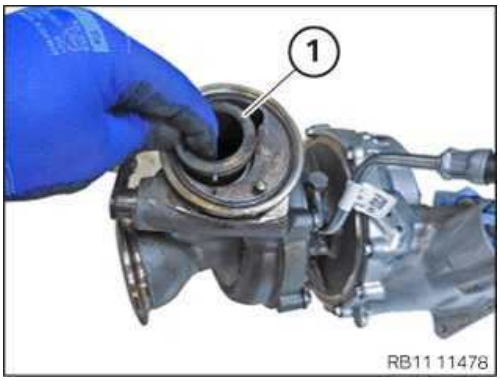
cardiagn.com

- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.



- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.

- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).



- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

cardiagn.com

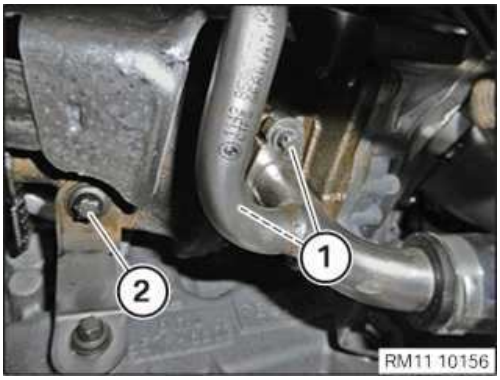
- Remove the spacer ring (1).

9 – Removing the high-pressure stage exhaust turbocharger

WARNING

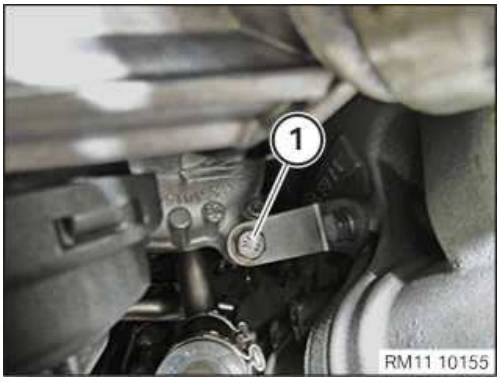
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

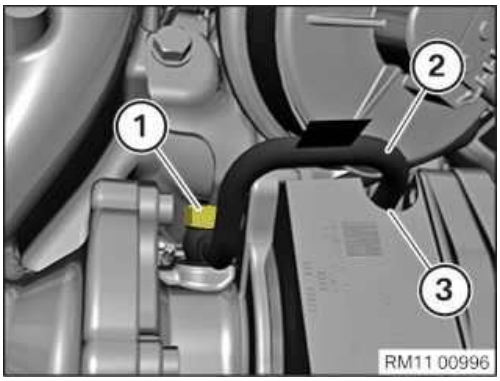
CAUTION



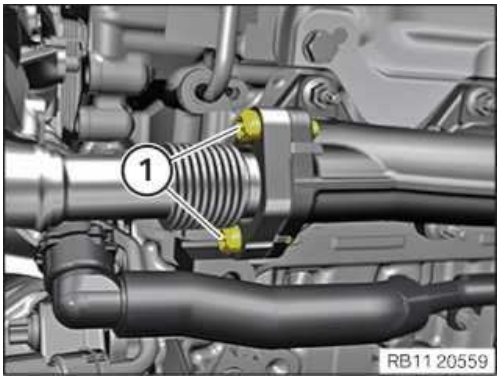
Heavy component.

Heavy components can lead to injury or damage.

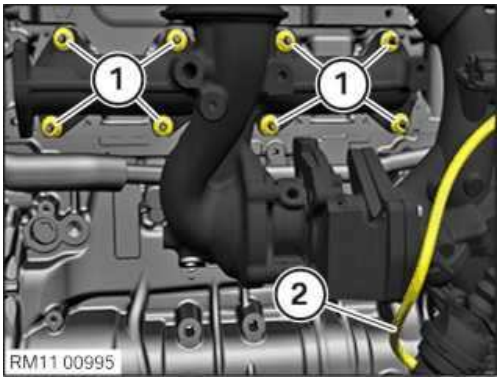
- Remove and install heavy components with the aid of another person/other persons.



- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).

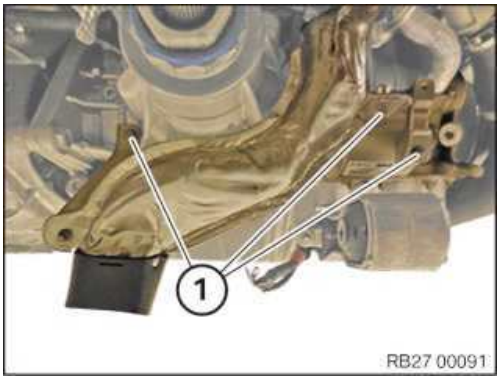


- Release screw (1) from the right wheel arch.

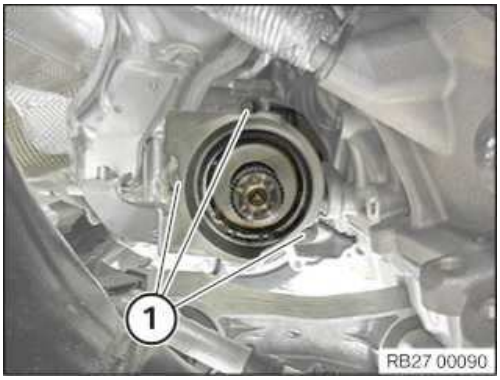


cardiagn.com

- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

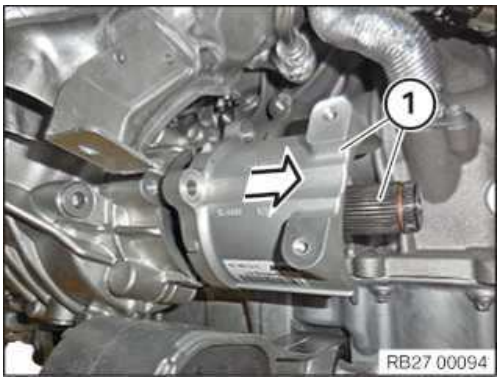


- Loosen screws (1).

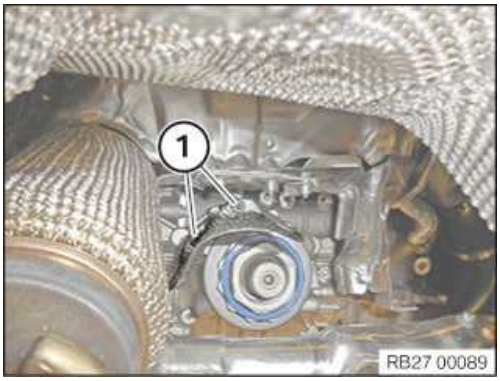


- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

10 – Remove the intermediate shaft with the support tube

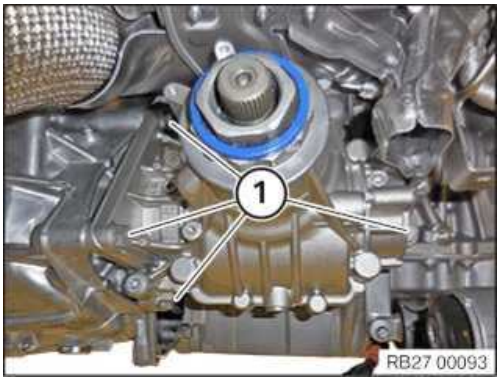


- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).

cardiagn.com



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

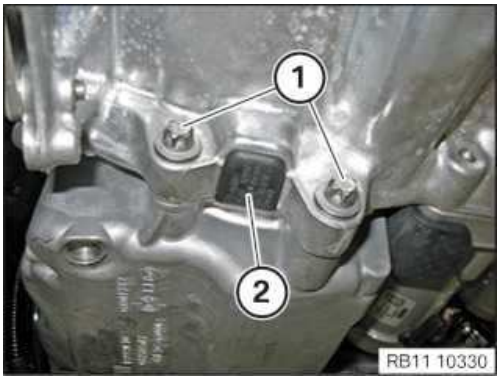
11 – Remove transfer box (VTG)

- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

12 – Detach the engine from the manual gearbox

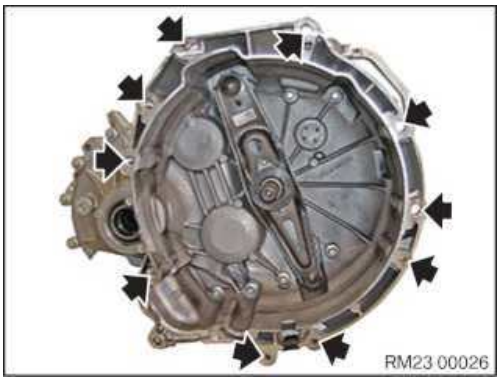
Prerequisite



Engine has been removed.

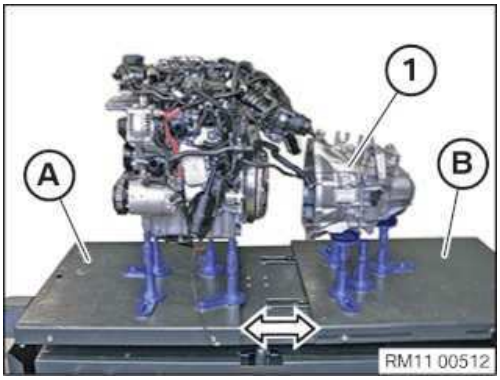
CAUTION

Heavy component.



Heavy components can lead to injury or damage.

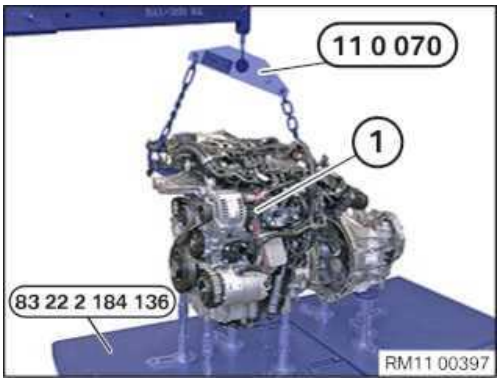
- Remove and install heavy components with the aid of another person/other persons.



- Loosen screws (1).
- Remove protective cap (2).

cardiagn.com

- Remove screws (arrows).



- Slide the table top (B) in the direction of the arrow and slide the manual gearbox (1) to the side.

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

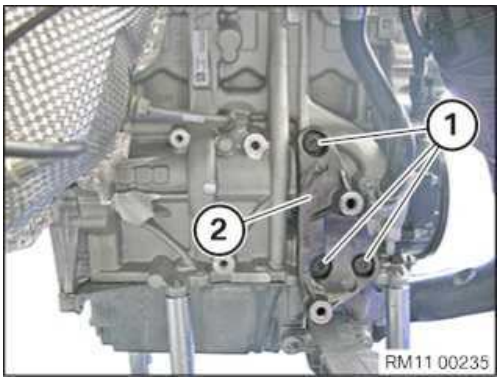
M8		Tightening torque	21,5 Nm

- Attach engine lifter to special tool and lift engine (1) off lifting table.

13 – Mount engine on assembly stand

CAUTION

Heavy component.



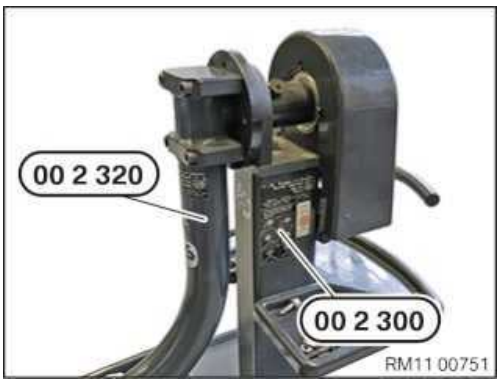
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

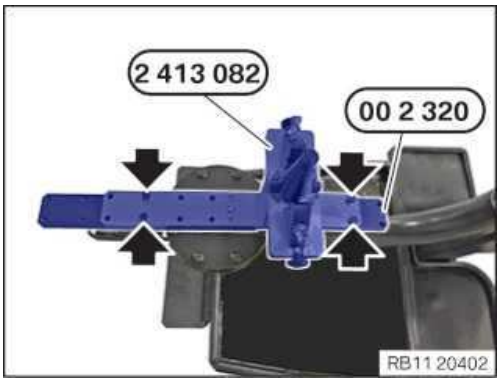
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com



- Loosen screws (1).
- Guide out and remove holder (2).



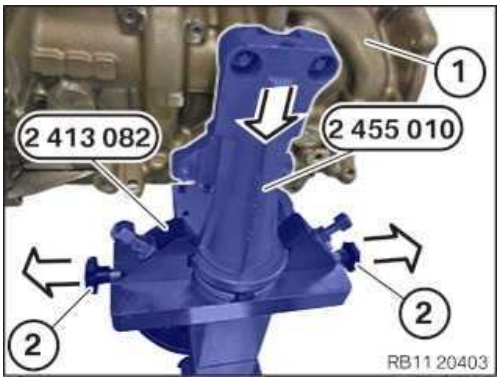
- Position the special tool **2 455 010** on the engine (1).
- Position the standard bolts **M10x30**.
- Tighten the standard bolts (arrows).
-

Special tool 2 455 010 to crankcase

M10x30		Tightening torque	38 Nm

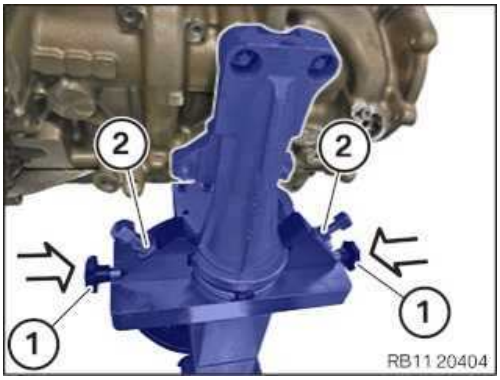
- Prepare the assembly stand **0 495 187 (00 2 300)** with the special tool **0 495 196 (00 2 320)**.

- Screw the special tool to the **0 495 196 (00 2 320)** special tool.
- Tighten screws (arrows).
-



Special tool 11 8 930 to special tool 00 2 320

M14x35		Tightening torque	160 Nm

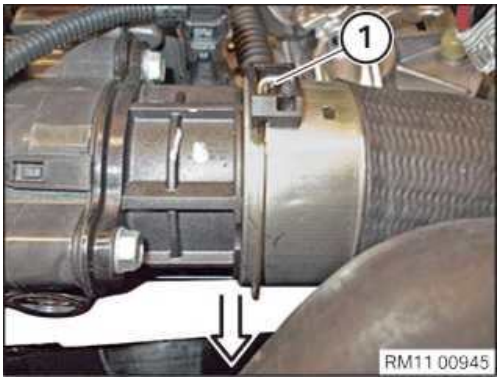


- Position the engine lifter with the special tool and the engine on the special tool **0 495 187 (00 2 300)**.

cardiagn.com

- Detach the holder (2) in the direction of the arrow.
- Position the engine (1) with the special tool **2 455 010** in the direction of the arrow on the special tool .

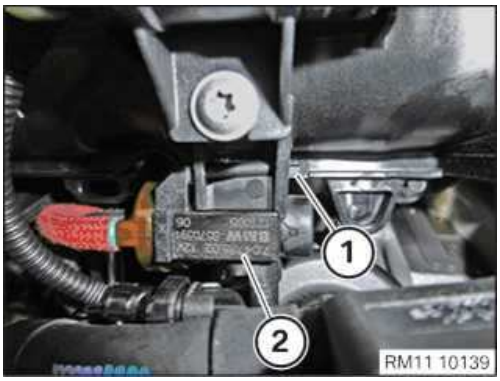
- Lock the holder (1) in direction of arrow.
- Tighten nuts (2).



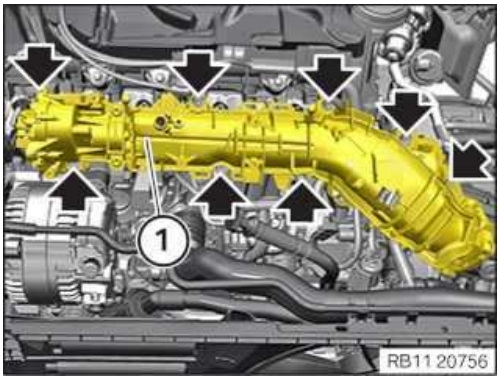
14 – Removing the intake plenum

TECHNICAL INFORMATION

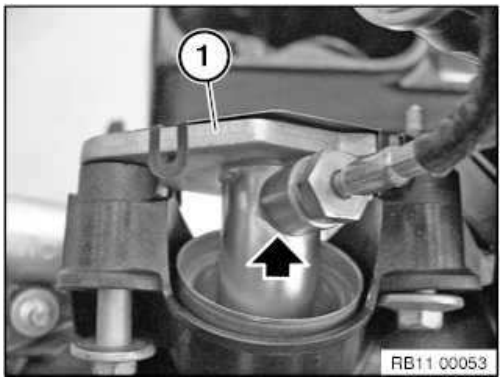
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.



cardiagn.com

- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

15 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

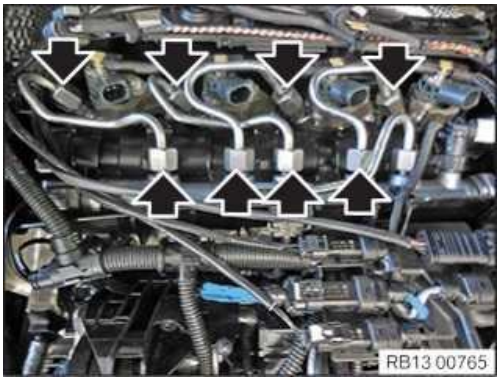
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION



If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

16 – Detaching leakage oil line from injector

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

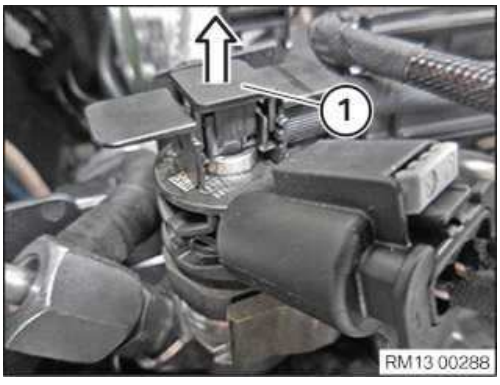
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE



Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

17 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

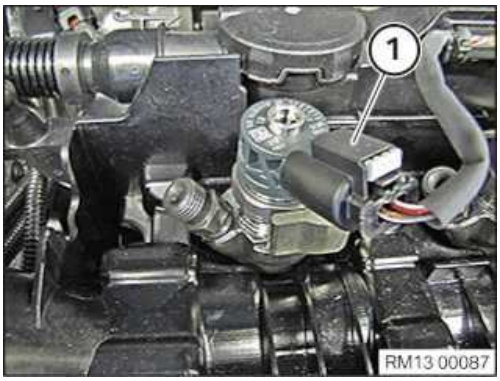
Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

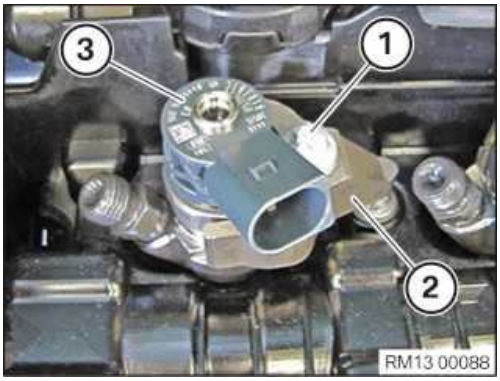
RISK OF DAMAGE

 **Electrostatic discharge.**



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



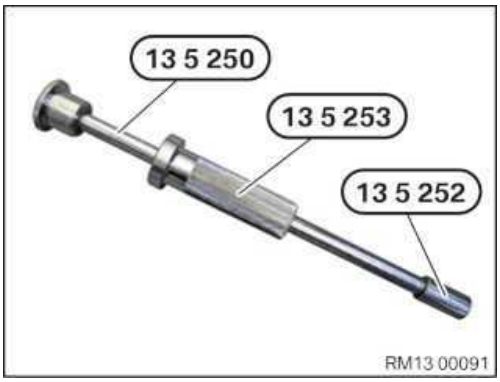
cardiagn.com

TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

- Unlock and disconnect connector (1).

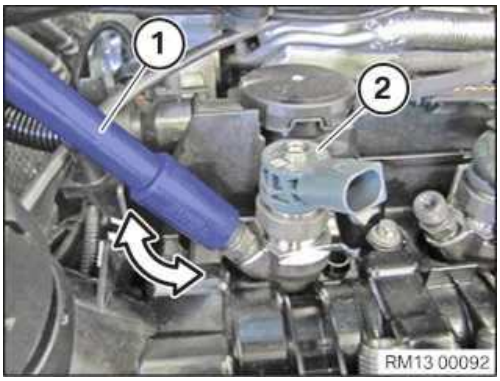
- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.



▶ **Loosen stuck injectors**

RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)** back onto the special tool **0 493 321 (13 5 250)**.

cardiagn.com

- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

18 – Remove high-pressure rail

WARNING

Working on fuel system.

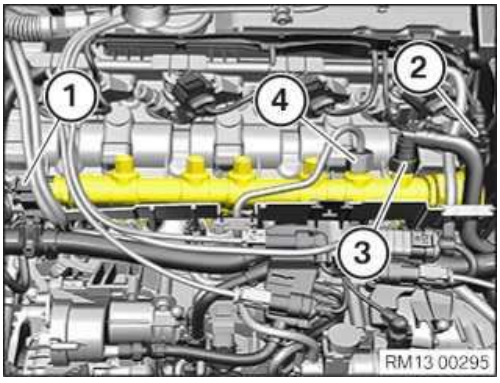
Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

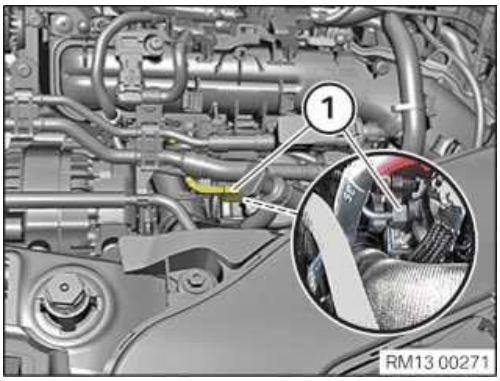
Contamination can result in malfunctions, operating failure or leaks.



- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

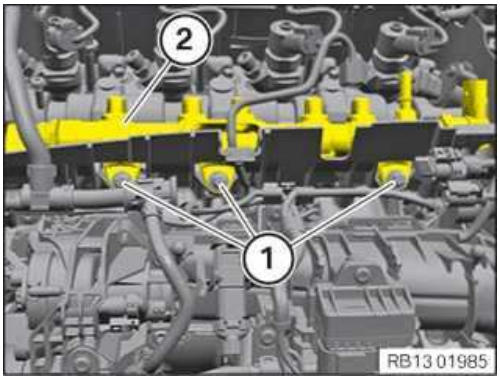
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



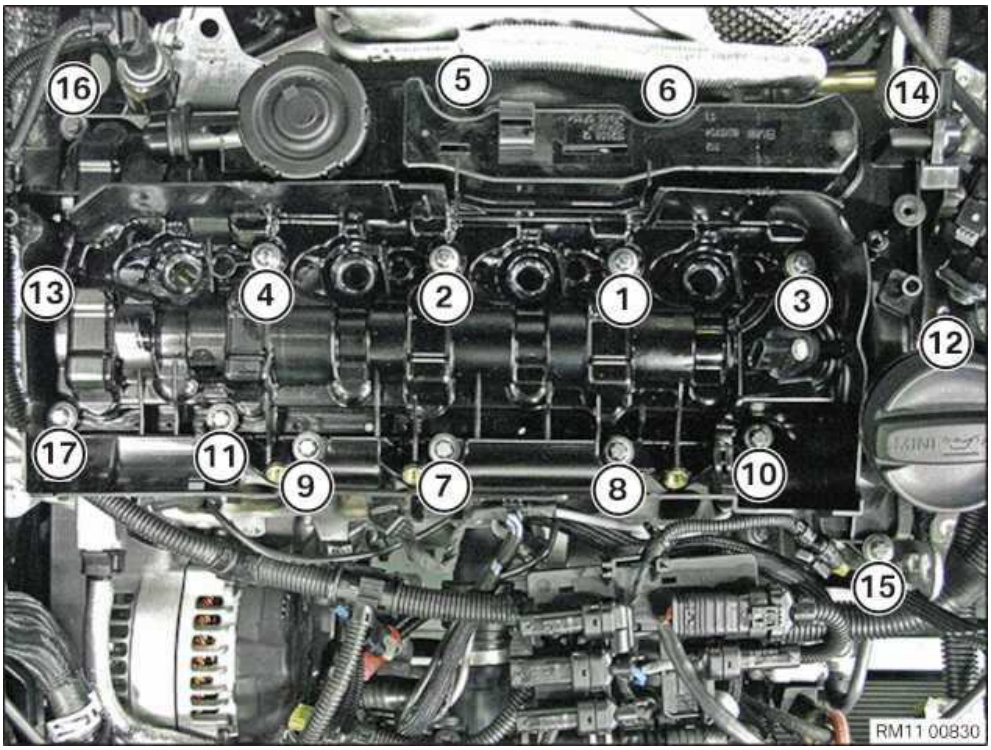
TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

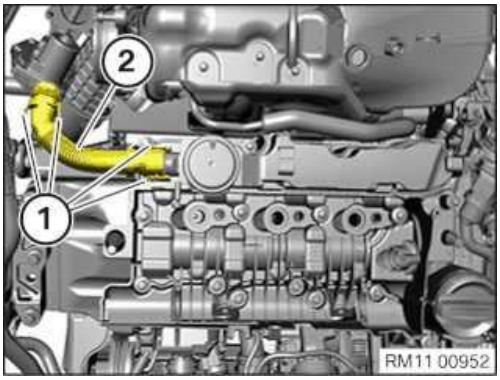


- Unlock and disconnect connector (1).
- Unlock and disconnect connector (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool .
- Reset special tool early on to avoid bending pressure lines.

cardiagn.com



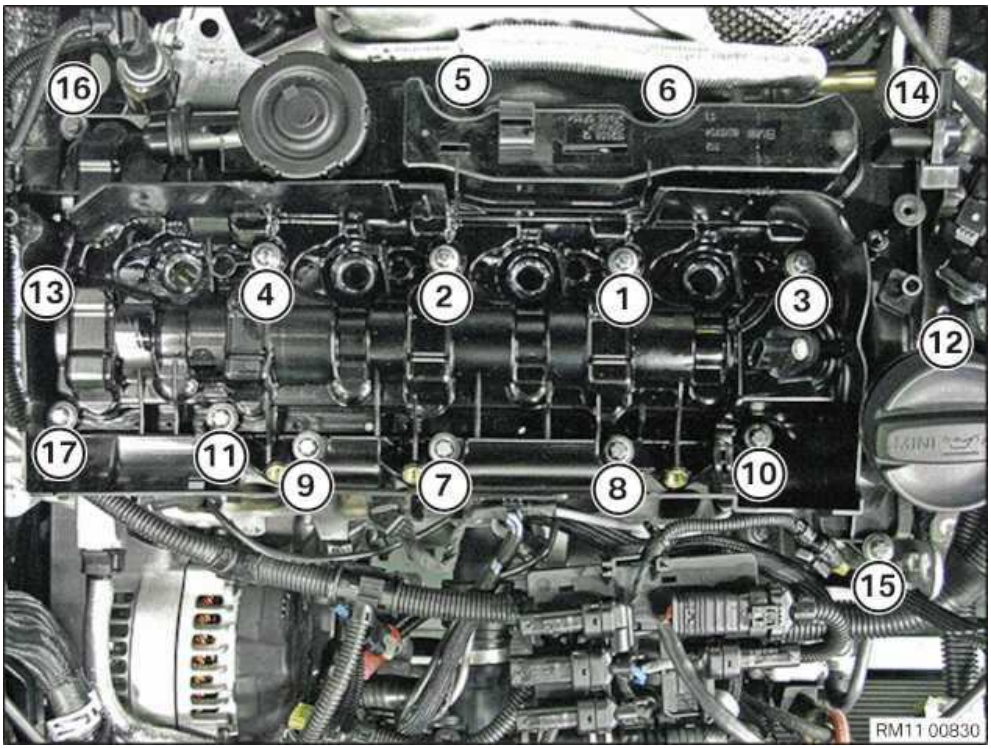
- Slacken the union nut (1) on the high pressure pump.



- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

19 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

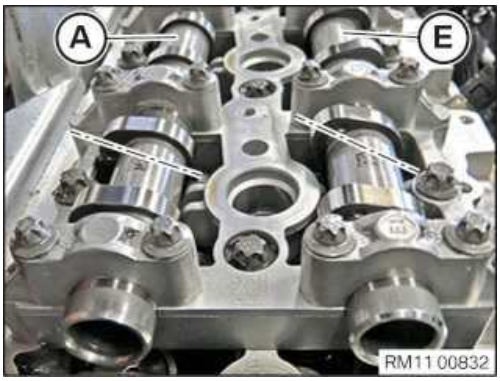
- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

20 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.



The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

21 – Remove chain tensioner piston

cardiagn.com

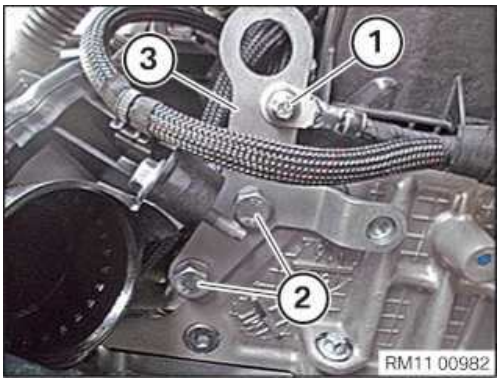
WARNING

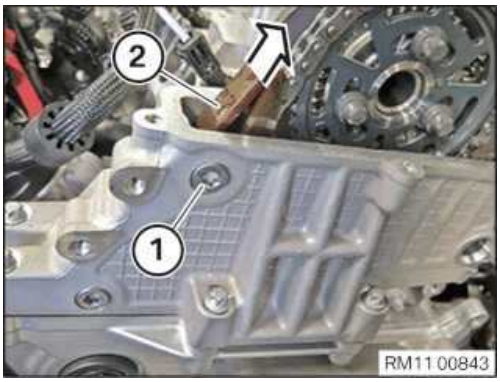
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



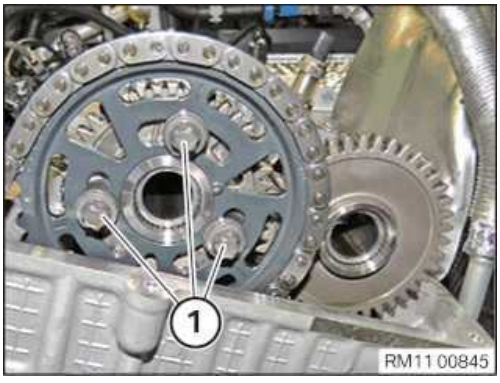
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

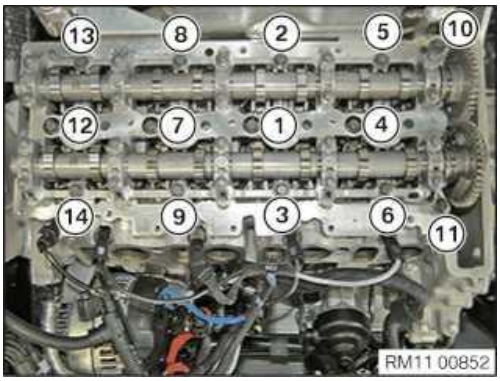
- Remove the chain tensioner piston (1).

22 – Remove the timing chain guide rail



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.



23 – Removing the camshaft sprocket on the intake camshaft

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

24 – Removing the camshaft support

cardiagn.com

- Evenly loosen all screws in a sequence from (14) to (1).
- Loosen and remove all screws in a sequence from (14) to (1).
  Both camshafts can be removed with the camshaft carrier.
- Remove the camshaft support including camshafts towards the top.

25 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

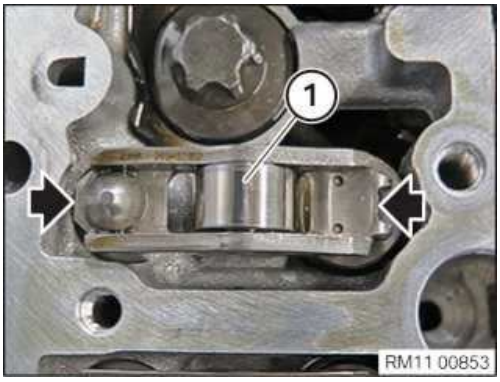
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool or conventional tools.
- Feed out preheating elements and remove.

26 – Remove roller cam followers

- Guide out and remove all roller cam followers (1) (arrows).
- Place all roller cam followers (1) in order in special tool **0 495 105 (11 4 480)**.

  Roller cam followers that have already been used must be installed in same position again.

27 – Removing the hydraulic valve clearance compensating element

cardiagn.com

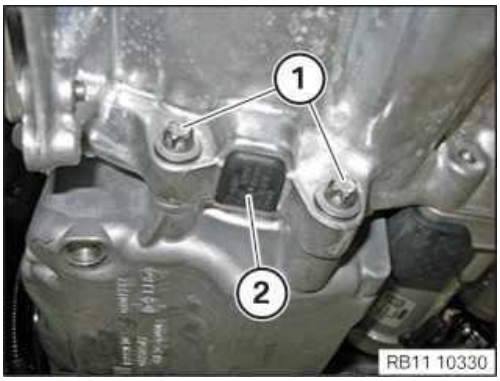
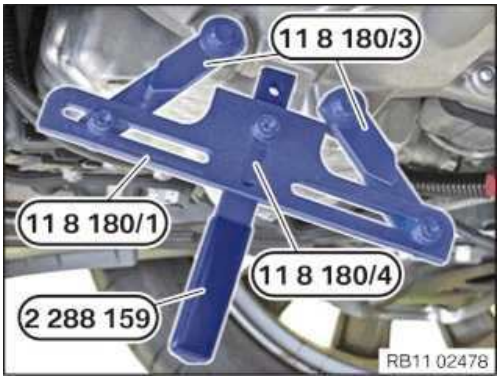
RISK OF DAMAGE

Contaminant or foreign body.

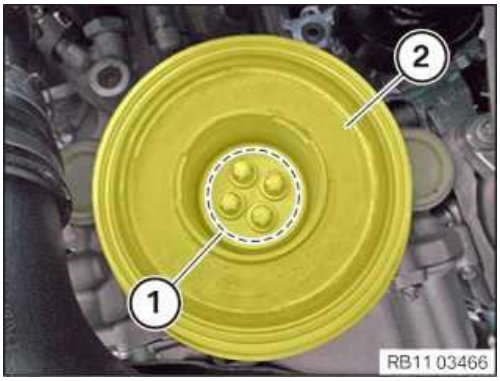


Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.



28 – Removing the vibration damper

- Release the transmission bolts (1).
- Remove the protective cap (2).

- Position special tool **0 493 587 (11 8 180)** as illustrated.
- Fasten the special tool **0 493 587 (11 8 180)** to the transmission with transmission bolts.

- Loosen screws in the area (1).
- Remove the vibration damper (2).

29 – Remove clutch

cardiagn.com

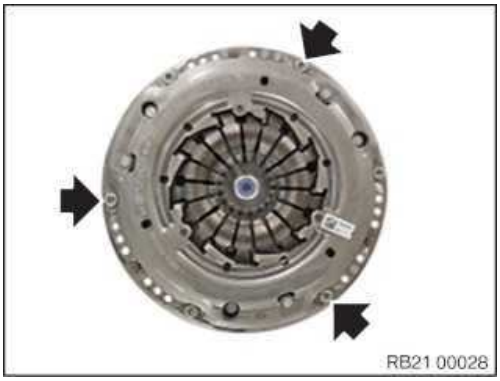
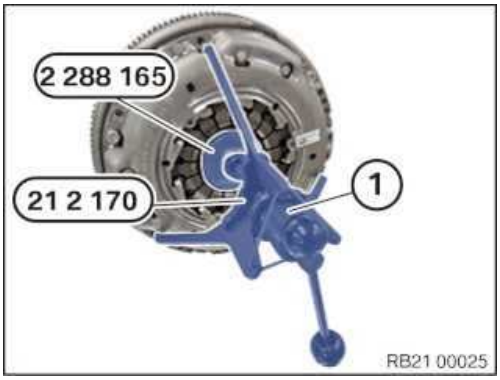
CAUTION

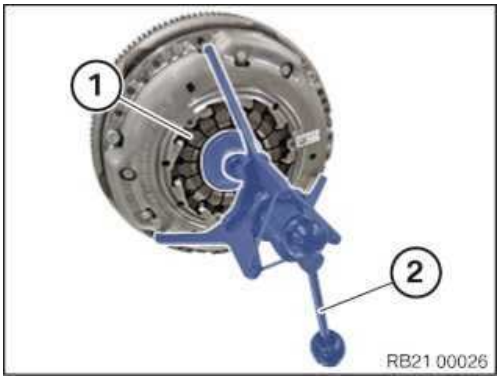


Materials harmful to health.

Contact with fluids harmful to health!

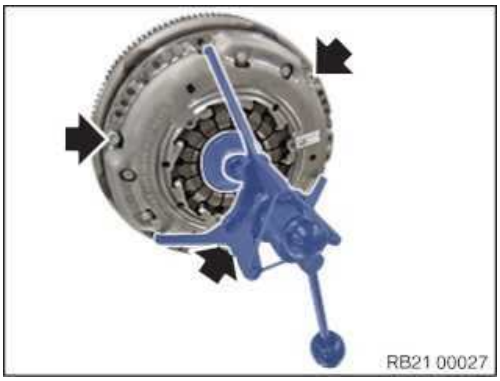


- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.



- Block flywheel with transmission bolt (1) and special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.

- Detach 3 screws to attach special tool and **2 288 165**.



- Position special tool and **2 288 165** and tighten on the knurled screw (1).

- Screw in the spindle (2) until the diaphragm spring (1) is preloaded and the clutch disc is free of tension.

cardiagn.com

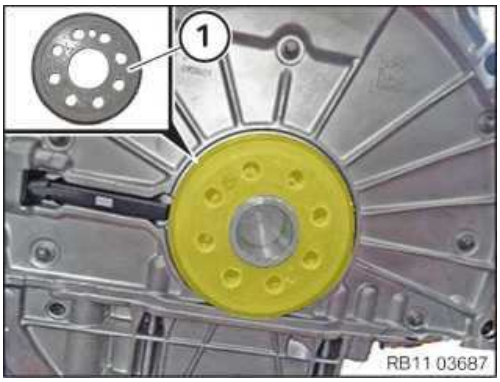
- Loosen the remaining 3 screws and remove the clutch with clutch disc from the flywheel.

30 – Removing flywheel

CAUTION



Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

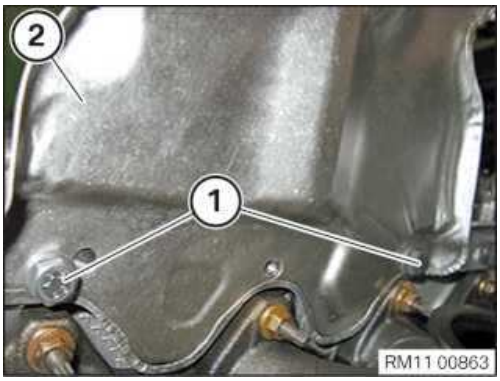
- Secure the flywheel with a transmission bolt (1) and with special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.
- Unscrew the flywheel bolts with the special tool **0 491 018 (11 4 180)**.
- Remove flywheel.

RISK OF DAMAGE

Electrostatic discharge.

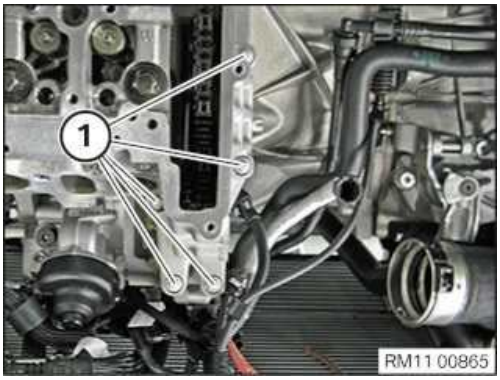
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Remove the increment wheel (1) from the crankshaft and lay it down correctly.

31 – Remove rear timing case cover



Prerequisite

Transmission is removed.

cardiagn.com

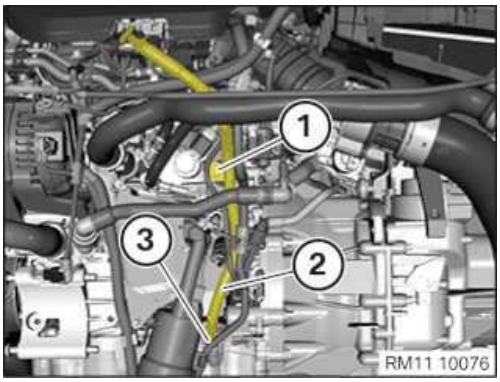
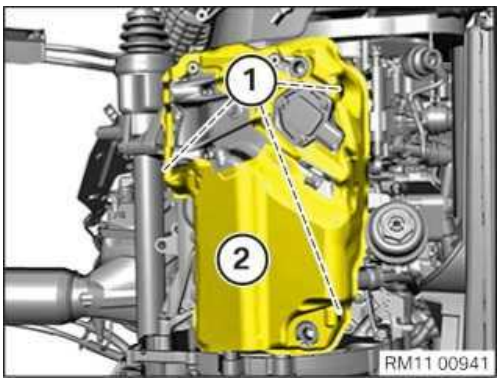
- Loosen screws (1).
- Feed out the heat shield (2) and place to one side.



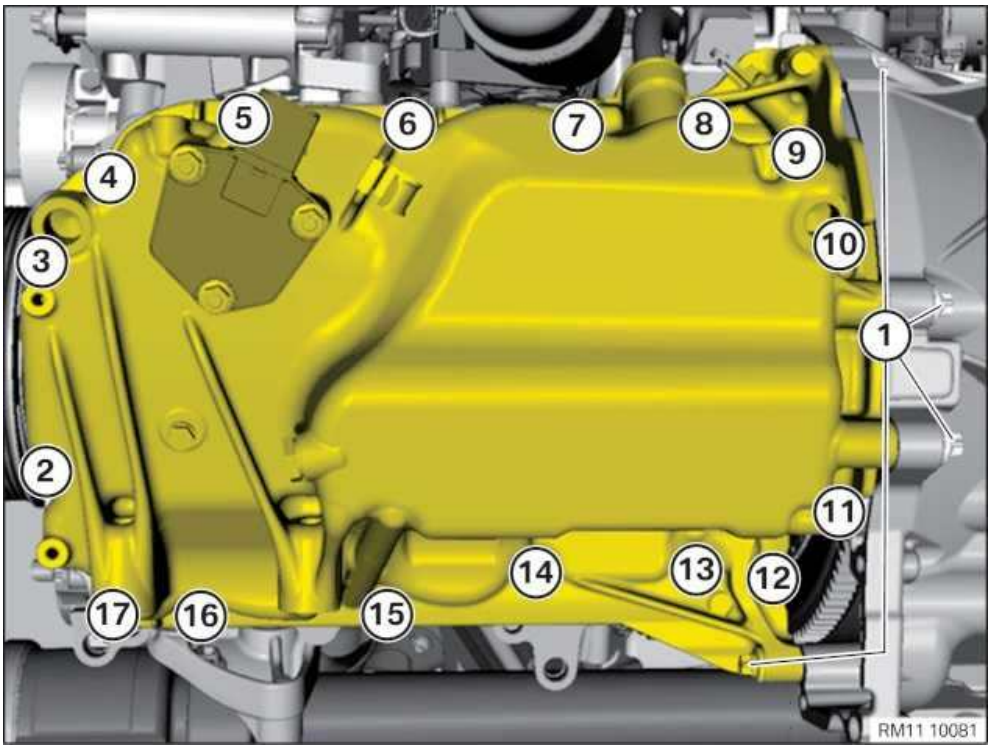
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

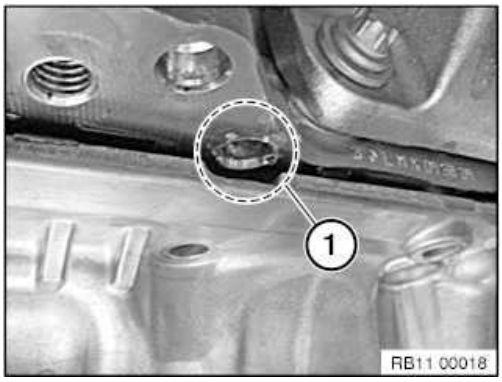


- Loosen screws (1).

- Loosen the cylinder head bolts in the sequence from (10) to (1).
- Remove cylinder head bolts (1) to (10) with washers.
- Remove cylinder head.



- Loosen screw (1).
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- Remove sealing ring (3) from oil sump if necessary.



- Expanding rivets (1) on both sides of the acoustic cover (2).
- Feed out and remove the acoustic cover (2).

cardiagn.com

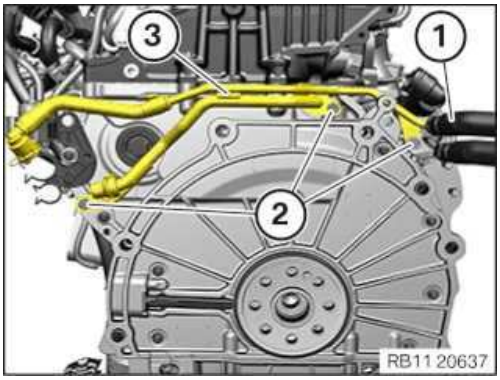
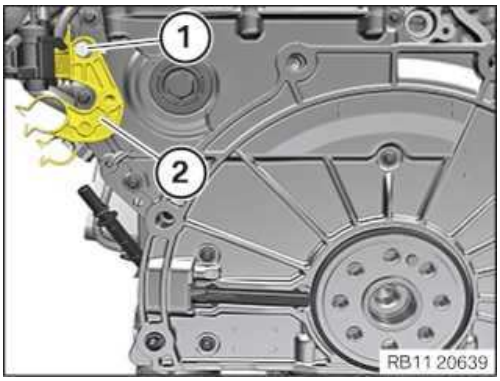
- Loosen the transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).

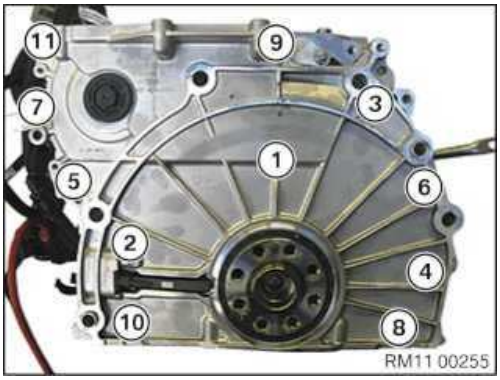


- Release oil sump only in area (1).



- Detach the oil sump with a suitable mounting lever (1) carefully at the point provided.
- Secure the oil sump against falling.

▶ **If installed: Remove coolant line of the SCR metering module**



- Unlock and disconnect the coolant hose (1).
- Loosen screws (2).
- Remove the coolant line (3).

cardiagn.com

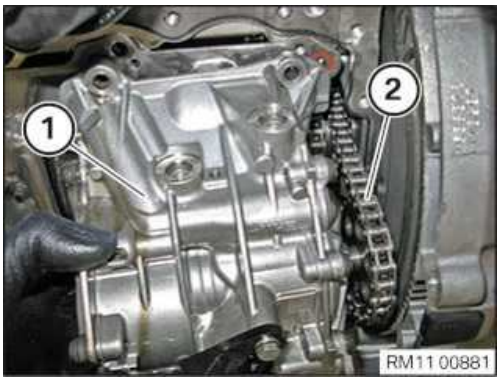
- Loosen screw (1).
- Guide out and remove holder (2).

- Loosen screws in the order (11) to (1).

- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.



- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.
- Remove the timing case cover.

32 – Remove the oil vacuum pump

- Loosen screws (1) of the oil vacuum pump (2).

cardiagn.com

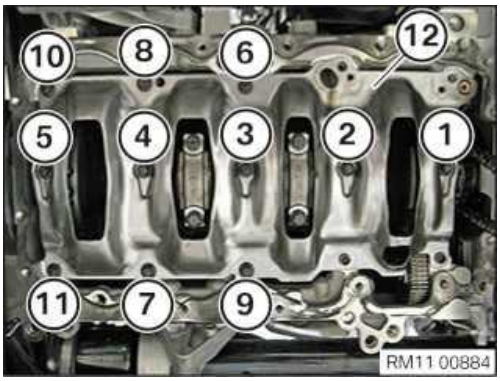
- Remove oil vacuum pump (1) and remove from the drive chain (2).



33 – Removing the oil deflector

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Loosen screws in the order (11) to (1).
- Guide out and remove the oil deflector (12).

MAIN WORK

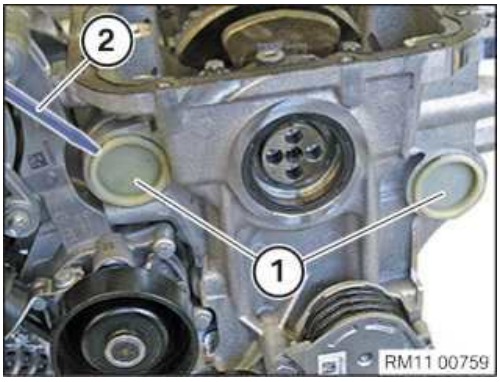
34 – Remove counterbalance shafts

RISK OF DAMAGE

Damage of the engine and mounted parts.

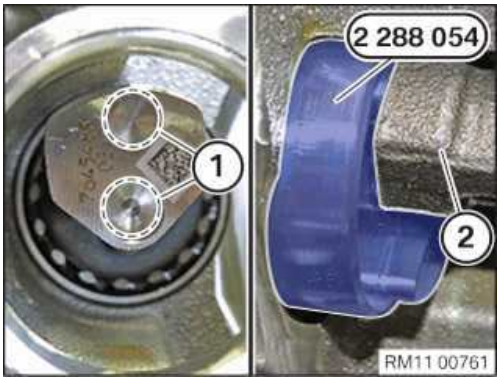
Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

- Comply with the regulations for the installation and disassembly.
- Perform work with care.



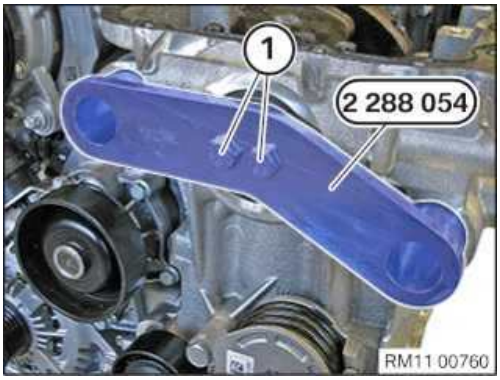
cardiagn.com

RISK OF DAMAGE



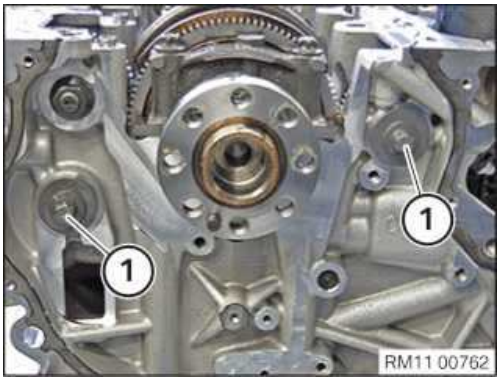
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.



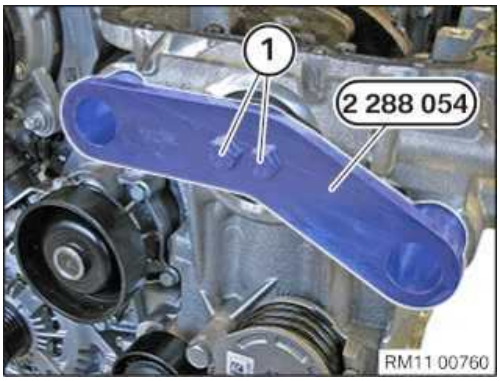
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Remove the sealing cap (1) with a suitable tool (2).



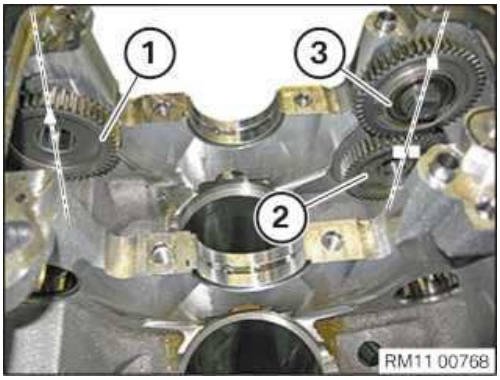
- Rotate the crankshaft to the **TDC of the first cylinder**.
- The special tool **2 288 054** must be positioned in the guides (1) of the counterbalance shafts (2).

- Secure special tool **2 288 054** with screws (1) to the crankshaft.
- Tighten the screws (1).



Special tool 2 288 054 to crankshaft

M10		Tightening torque	20 Nm



- Loosen screws (1).

cardiagn.com

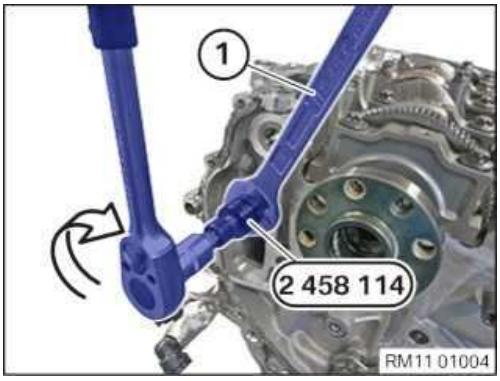
- Loosen screws (1).
- Guide the special tool **2 288 054** out and remove.

NOTICE

To provide a better overview: Illustration of surrounding parts in removed state.

- The identifications on the gears (1) , (2) and (3) must point vertically to the top towards the oil sump sealing surface.

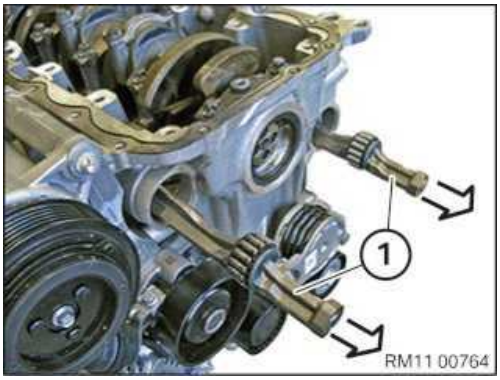
Gear	Identification
1 intake side	Triangle and E
2 exhaust side	Two squares and A
3 exhaust side of intermediate wheel	One square



- The intermediate wheel of the exhaust side consists of a fixed wheel and a moving wheel and it must be pretensioned using special tool **0 495 131 (11 5 370)**.
- Pretension the intermediate wheel of the exhaust side using special tool **0 495 131 (11 5 370)** in the illustrated position.
- When reusing the intermediate wheel of the exhaust side, it must remain pretensioned in special tool **0 495 131 (11 5 370)** until its reinstallation.

- Screw in special tool **2 458 114** into the gear of the counterbalance shaft.

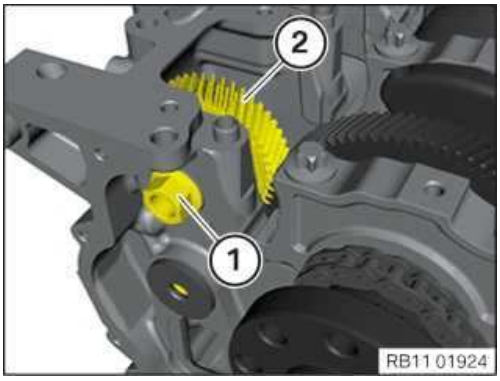
Note: The gears have been pressed onto the counterbalance shaft with a taper and they can exclusively be released using the special tool.



- Counter support special tool **2 458 114** with an open-end spanner (1).
- Screw the bolt of the special tool **2 458 114** in to detach the counterbalance shaft from the gear.

cardiagn.com

- Release the counterbalance shaft of the intake side from the gear using special tool **2 458 114**.



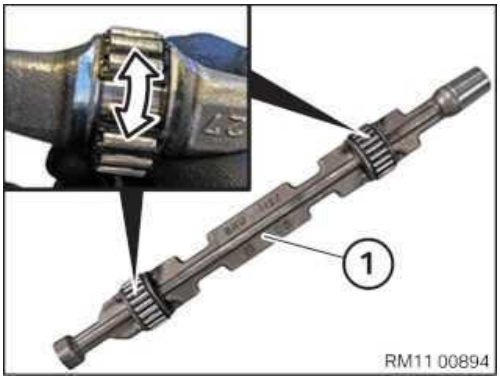
- Feed out the counterbalance shaft (1) in the direction of arrow out of the crankcase and remove.

- Remove the gear (1) of the intake side.

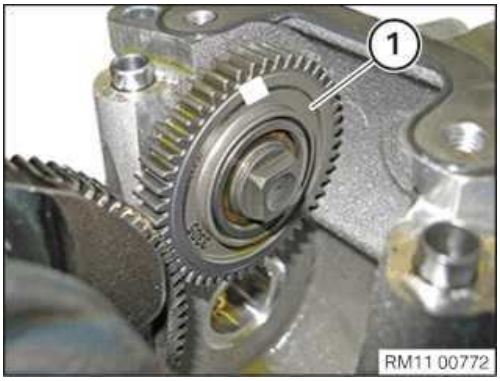
- Remove the gear (1) of the exhaust side.

- Unfasten nut (1).
- Remove the gear (2) using special tool **0 495 131 (11 5 370)**.

35 – Install counterbalance shafts

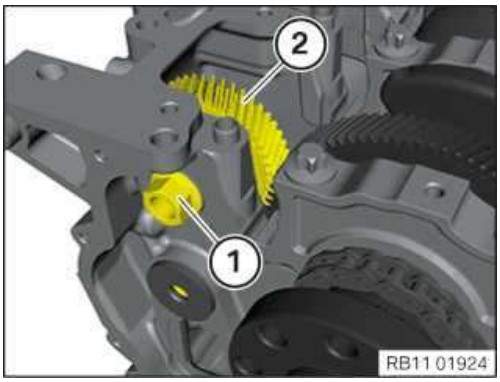


cardiagn.com



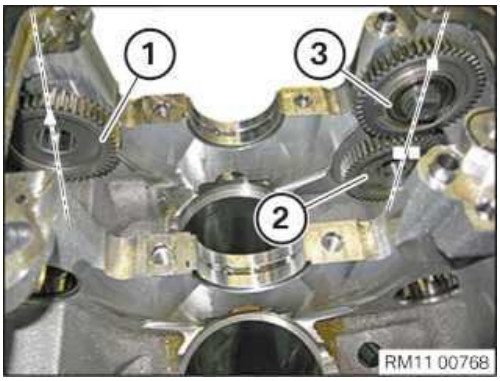
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- If a new gear is installed, the ring gear must remain blocked until installation using the factory-mounted fixation (1) .

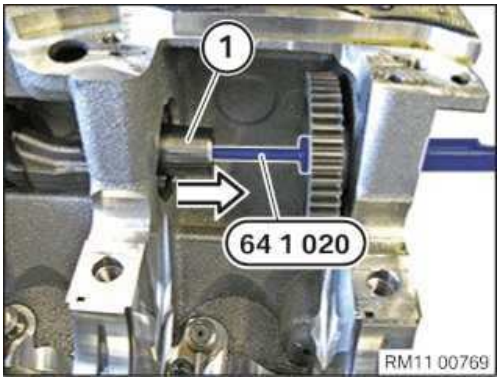
- Check both needle bearings (1) of counterbalance shaft for damage.
- Pull off damaged needle bearing (1) from the counterbalance shaft and renew it.



- Rotate the crankshaft to the **TDC of the first cylinder**.
- Replace the gear (1).
- **Parts:** Gear
- Position the intermediate wheel (1) such that the mark points vertically to the top.

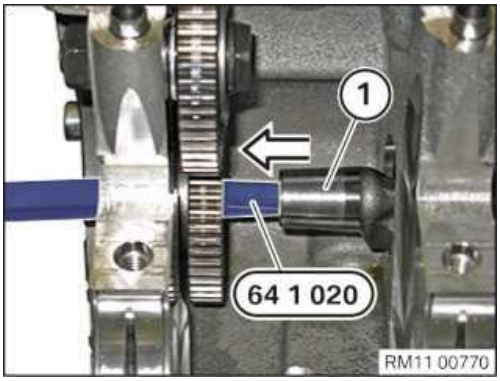
- Tighten the nut (1) on the intermediate wheel (2) hand-tight.

cardiagn.com



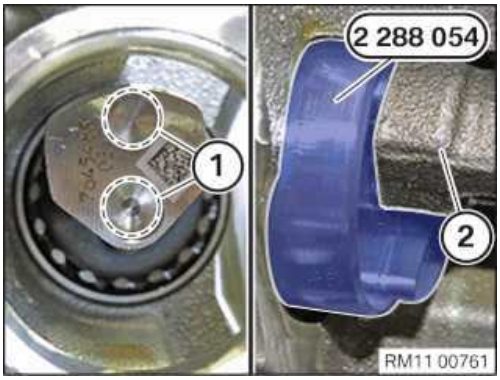
NOTICE

To provide a better overview: Illustration of surrounding parts in removed state.



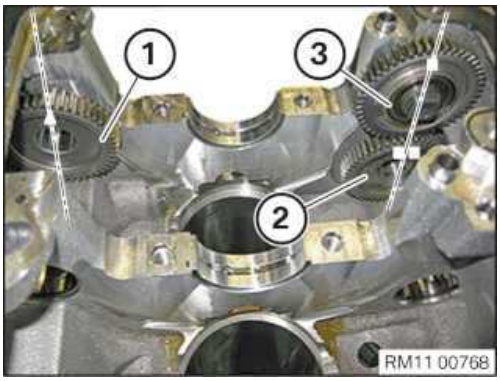
- The identifications on the gears (1) , (2) and (3) must point vertically to the top towards the oil sump sealing surface.

Gear	Marking	Identification
1 intake side	Triangle	E
2 exhaust side	Two rectangles	A
3 exhaust side of intermediate wheel	One square	



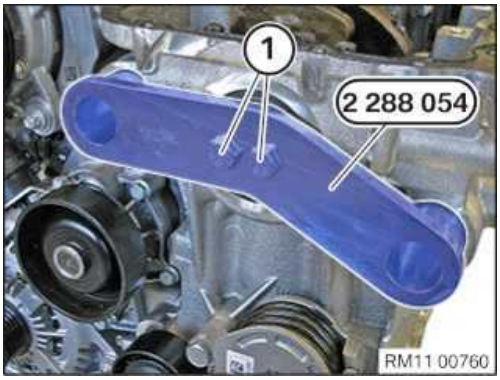
- Install the gear (1) identification **E** such that the marks point vertically to the top.
- Install the gear (2) identification **A** such that the marks point vertically to the top.

- Slide the special tool **0 493 681 (64 1 020)** or another suitable tool through the gear into the counterbalance shaft.
- Carefully insert the counterbalance shaft (1) into the gear on the intake side.



- Slide the special tool **0 493 681 (64 1 020)** or another suitable tool through the gear into the counterbalance shaft.
- Carefully insert the counterbalance shaft (1) into the gear on the exhaust side.

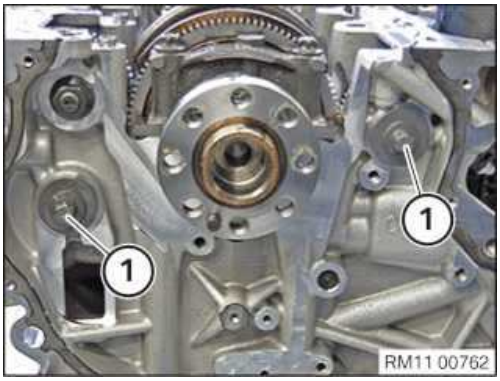
- The crankshaft must be at the **top dead centre of the first cylinder**.
- The special tool **2 288 054** must be positioned in the guides (1) of the counterbalance shafts (2).



cardiagn.com

NOTICE

To provide a better overview: Illustration of surrounding parts in removed state.



- The identifications on the gears (1) , (2) and (3) must point vertically to the top towards the oil sump sealing surface.

- Secure special tool **2 288 054** with screws (1) to the crankshaft.
- Tighten the screws (1).

Special tool 2 288 054 to crankshaft

M10		Tightening torque	20 Nm

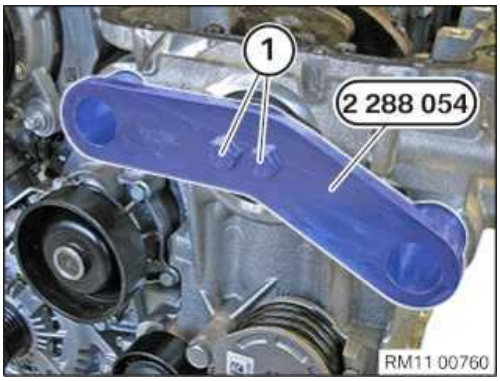
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Gear to counterbalance shaft

M10	Renew screws.	1. Jointing torque	20 Nm
		2. Angle of rotation	180 °

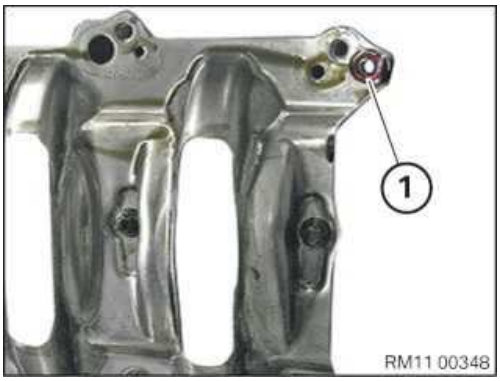
- The gearing of the intermediate wheel engages in the gearing of the crankshaft and the counterbalance shaft.
- Relieve tension on special tool **0 495 131 (11 5 370)** and remove.



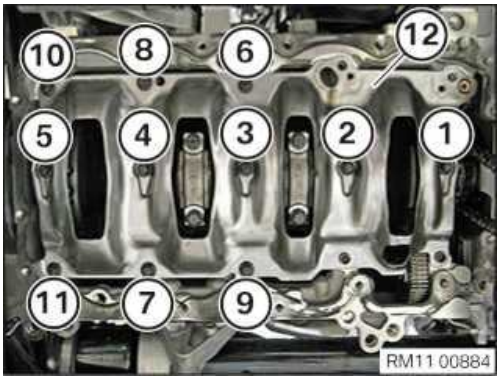
- Move the intermediate wheel (1) in the direction of arrow on the crankshaft (2) to the equipment.
- Tighten nut (3).

Idler gear to crankcase

M12x1.5		Tightening torque	10 Nm
		Angle of rotation	45 °



cardiagn.com



- Unscrew the bolts (1) and remove the special tool **2 288 054**.
-

POSTPROCESSES

36 – Installing the oil deflector

- Check sealing ring (1) for damage and replace oil deflector if necessary.
  Parts: Oil deflector

- Insert and install the oil deflector (12).
- Renew screws (1) to (11).
  Parts: Bolts
- Hand-tighten the bolts (1) to (5).
- Hand-tighten the bolts (6) to (11).
- Tighten the screws (1) to (5).

Oil deflector to crankshaft bearing cap

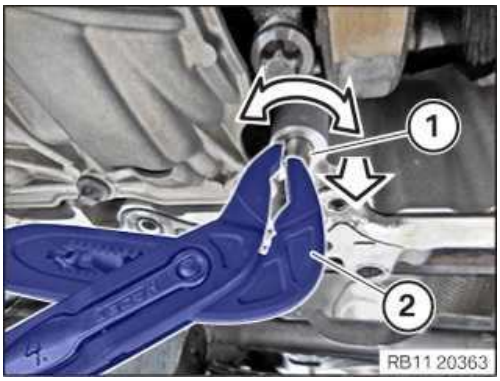
M8x14	Replace screws.	Tightening torque	35 Nm
		Release	180 °
		Tightening torque	15 Nm
		Angle of rotation	45 °

- Tighten the screws (6) to (11).

Oil deflector to crankcase

M8x14		Tightening torque	19 Nm

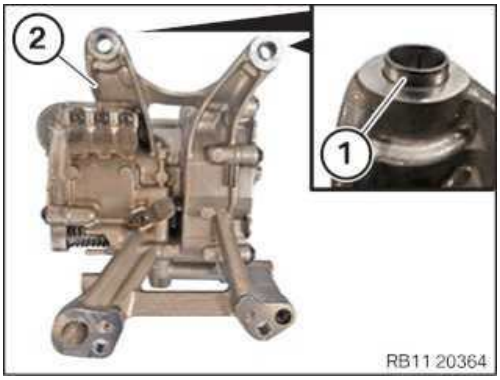
37 – Install the oil vacuum pump



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.



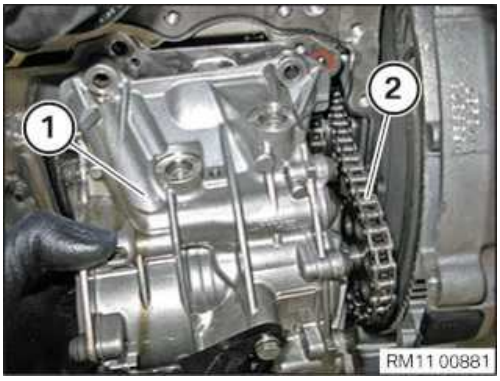
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

- Remove centering sleeves from the crankcase (1) using a standard tool (2).
- Renew the centring sleeves (1).

  Parts: Centring sleeves

- Install centering sleeves (1) in the oil vacuum pump (2).



- Check the sealing ring (1) for damage and renew where required.
- Make sure the sealing ring (1) is installed correctly.

- Check sealing ring (1) for damage and replace oil deflector if necessary.

  Parts: Oil deflector

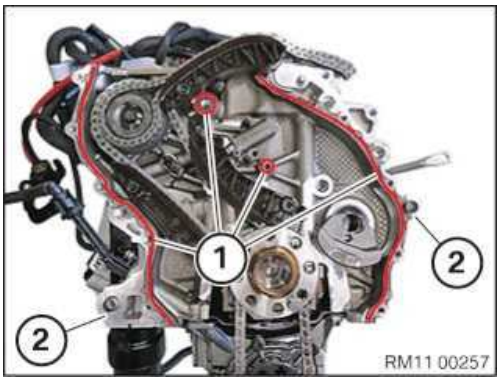
- Insert oil vacuum pump (1) into the drive chain (2).

cardiagn.com

- Renew screws (1).

  Parts: Bolts

- Tighten the screws (1) of the oil vacuum pump (2).



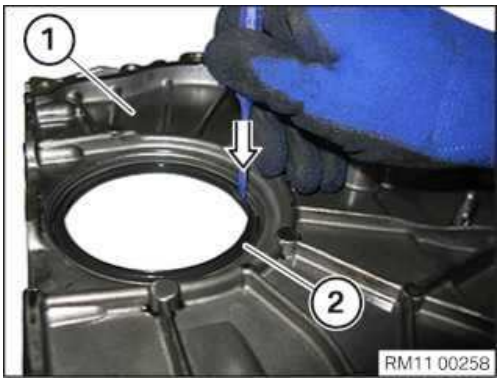
Oil vacuum pump to crankcaseB47

M8x35		Tightening torque	19 Nm

38 – Install the rear timing case cover

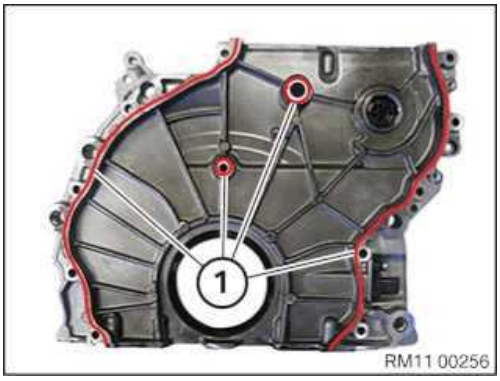
Prerequisite

Transmission is removed.



RISK OF DAMAGE

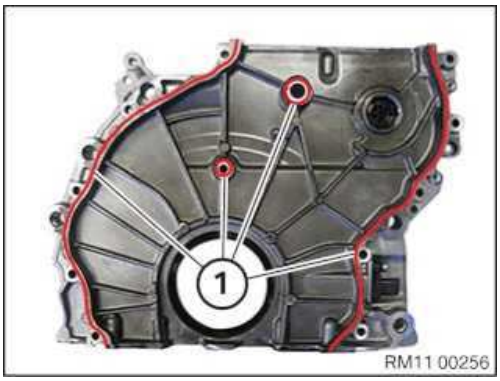
Damage to the surface.

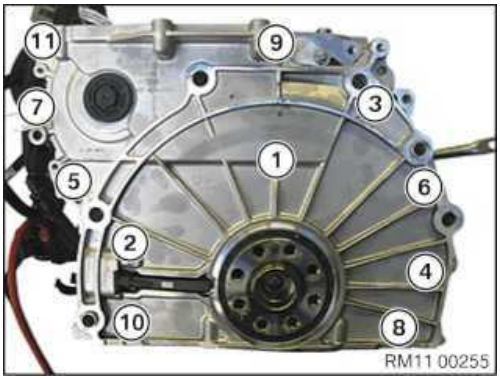


The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.
- Check fitting sleeves (2) for damage and for tight fit; renew if necessary.





- Position the timing case cover (1) underneath.
- Position punch on inner side of crankshaft seal (2).
- Drive out crankshaft seal (2) outwards.

- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.

cardiagn.com

TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Apply sealing bead (1) with a height of approx. 1.5 mm to 2.0 mm on inner side of timing case cover in marked locations. Use liquid sealing compound for this.

  Application time of sealing bead (1) must not exceed 12 minutes.

- Mount the timing case cover without the crankshaft seal.
- Renew screws (1) to (11).

  Parts: Bolts
- Join the bolts in with the sequence (1) to (11).
- Tighten screws in the order (1) to (11).

Rear timing case cover to crankcase

M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

▸ **Installing the rear crankshaft seal**

RISK OF DAMAGE

Radial shaft seal damage.

Touching the sealing lip (inner) on the radial shaft seal with the sharp-edged connector gearing of the output shaft will result in destruction and/or leaks.

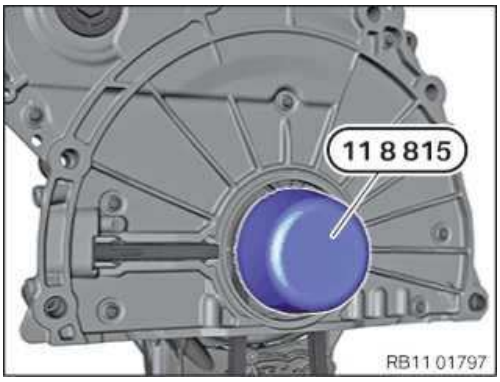
- When inserting the output shaft, make sure that the connector gearing of the output shaft does not touch the sealing lip (inner) of the radial shaft seal.

RISK OF DAMAGE

Radial shaft seal damage.

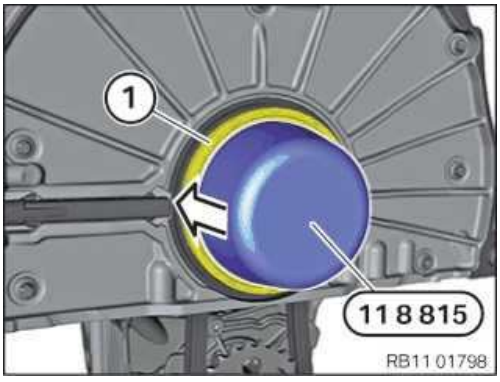
Touching the sealing lip (inner) and applying oil to the radial shaft seal will lead to its destruction.

- Do not touch the sealing lip (inner) of the radial shaft seal.
- Do not apply oil to the radial shaft seal.
- Install the radial shaft seal dry.



cardiagn.com

RISK OF DAMAGE



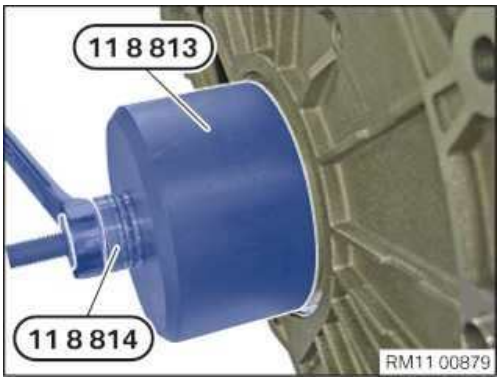
Electrostatic discharge.

Damage to or destruction of electrical components.

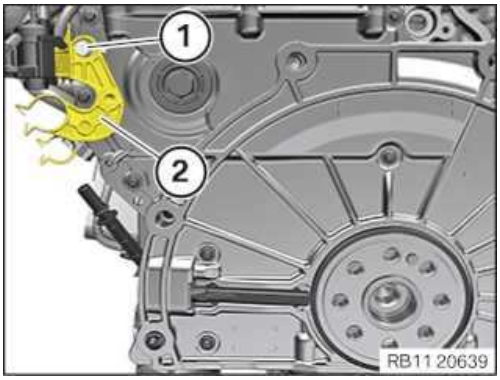
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Position special tool **0 496 137 (11 8 815)** on crankshaft. Make sure that the crankshaft sensor is not damaged.

- Fit the crankshaft seal (1) up to the timing case cover in the direction of the arrow using special tool **0 496 137 (11 8 815)** and position.
- Remove special tool **0 496 137 (11 8 815)**.



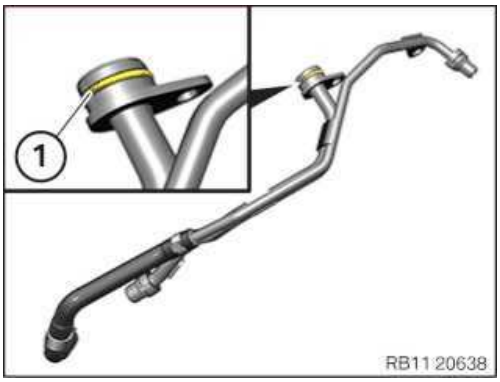
- Secure special tool **0 496 133 (11 8 811)** to the crankshaft using special tool **0 496 134 (11 8 812)**.



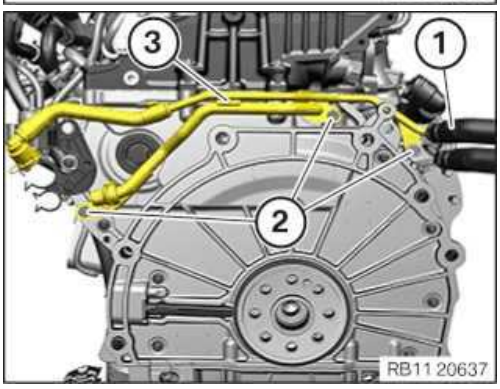
- Check the freedom of movement between the special tool **0 496 135 (11 8 813)** and the crankshaft sensor during installation.

  Otherwise there is a risk that the crankshaft sensor will be damaged.
- Slide on special tool **0 496 135 (11 8 813)**.
- Screw down special tool **0 496 136 (11 8 814)**.

cardiagn.com



- Press in crankshaft seal with special tool **0 496 135 (11 8 813)**.
- Screw in special tool **0 496 135 (11 8 813)** up to timing case cover.



- Insert and install the holder (2).

▶ **If installed: Installing the coolant line of the SCR metering module**

- Renew the O-ring 1.

  Parts: O-ring

- Feed in and install coolant line (3).
- Tighten down screws (2).

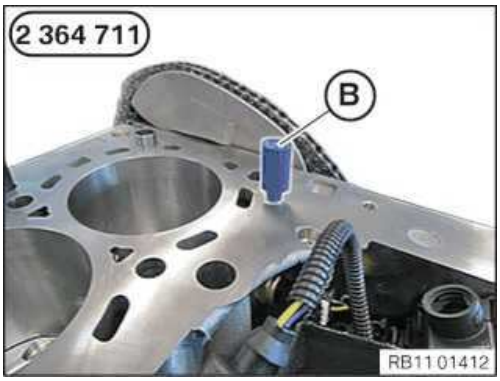
SCR coolant lines to crankcase end cover

Hexagon screw M6x16		Tightening torque	8 Nm

- Connect and lock the coolant line (1).

  Coolant line (1) must audibly engage.

▶ **Cleaning the sealing surface**



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

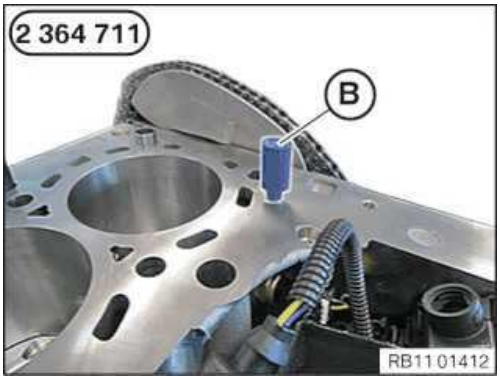
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

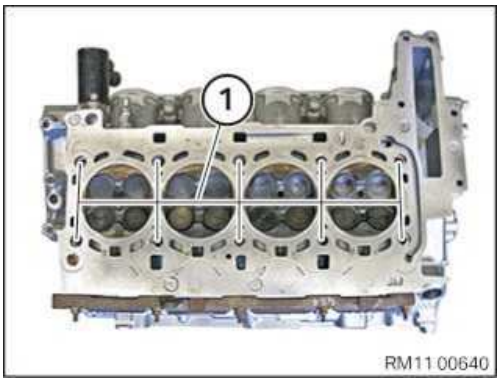
- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.



RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



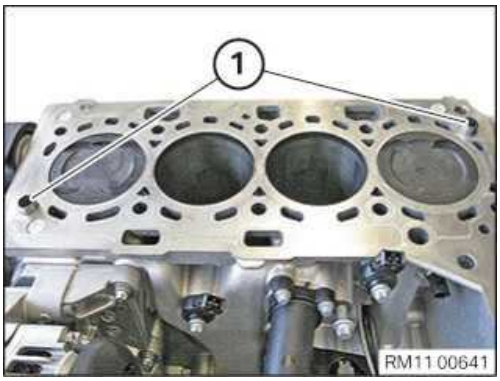
- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.

- Remove special tool (B).

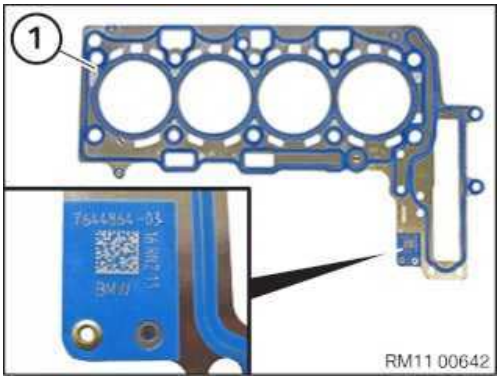
▸ **Renewing the cylinder head gasket**

RISK OF DAMAGE



Damage to the surface.

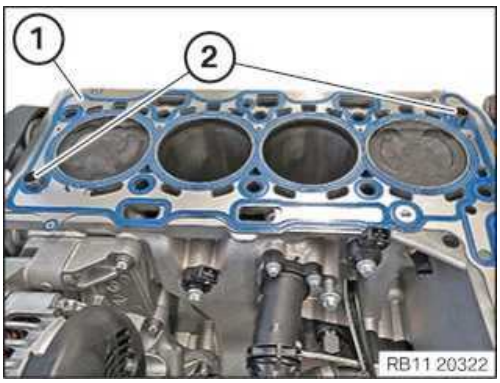
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



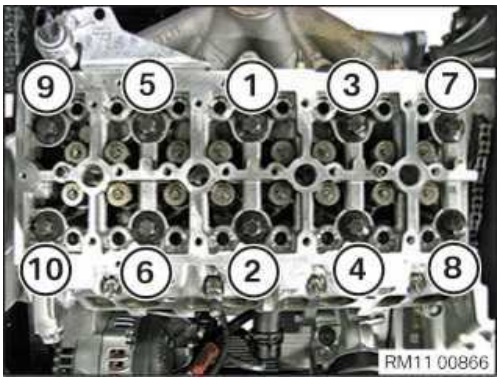
- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).

cardiagn.com



- Check the fitting sleeves (1) for secure fit and damage.



- Identify the cylinder head gasket (1) using the part number.

Note: If the cylinder head is reworked, an additional thicker gasket 0.3 mm is available for service personnel.

- Guide in the cylinder head gasket (1) and install.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Damage to threads.

Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION

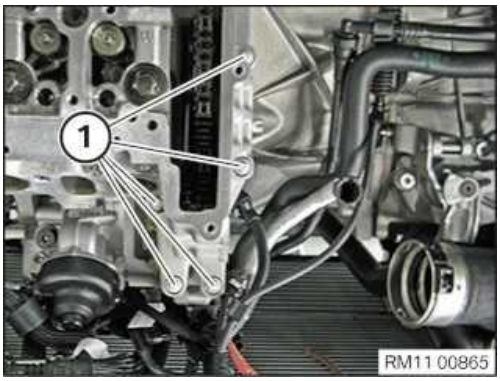
Do not remove bolt coating.

- Renew the cylinder head bolts (1).

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  No coolant, water or engine oil must be present in threaded holes of engine block.

TECHNICAL INFORMATION



When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in cylinder head bolts in sequence (1) to (10).
- Tighten cylinder head bolts using special tools **0 490 504 (00 9 120)** and in sequence (1) to (10).

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

cardiagn.com

- Tighten the cylinder head bolts (1).

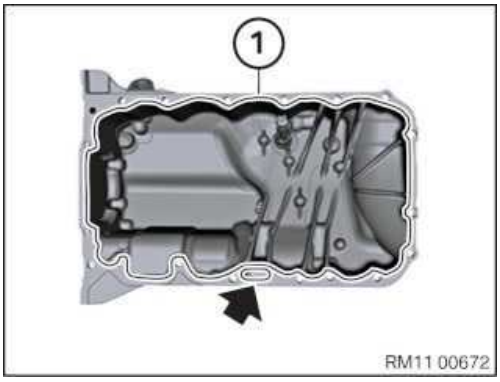
Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

-

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Remove fine sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

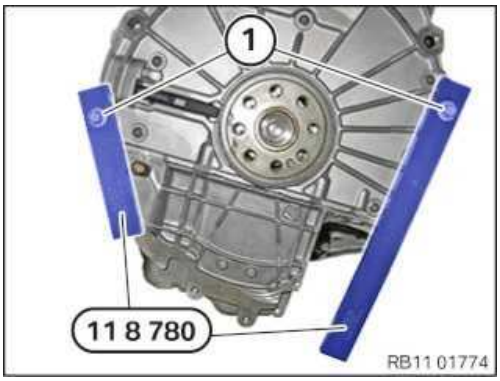
- Remove coarse sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- Apply the sealing compound along the line (1) with a thickness of 2 mm to 2.5 mm.

  Apply the sealing compound along the inner edge.

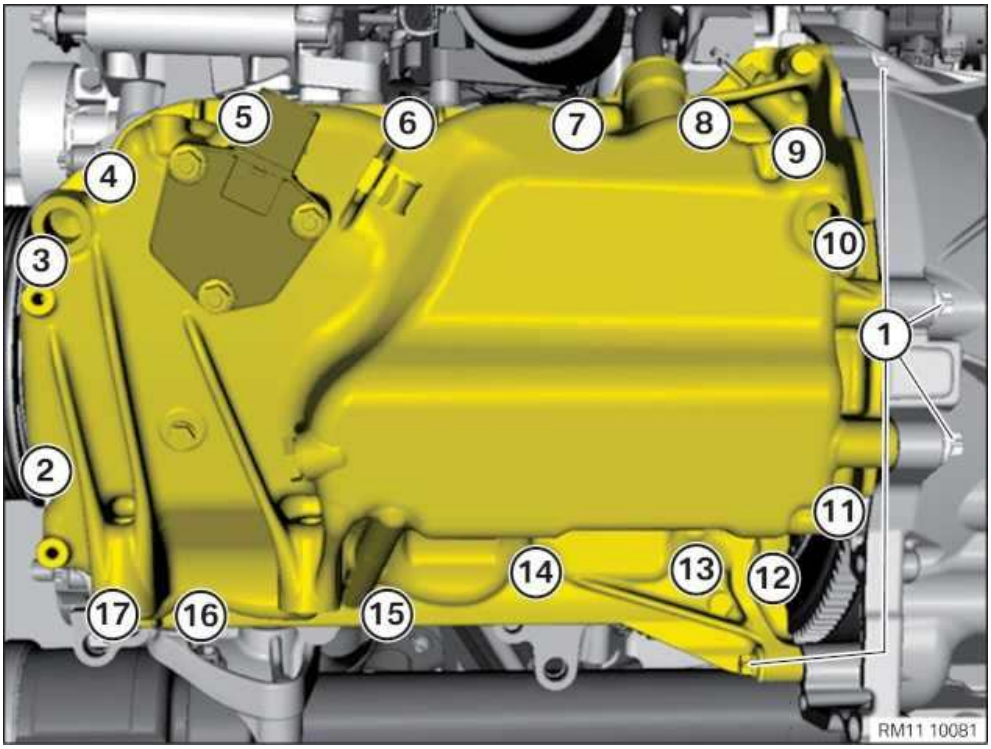


Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

- Completely encircle the oil return orifice (arrow) with the sealing compound.



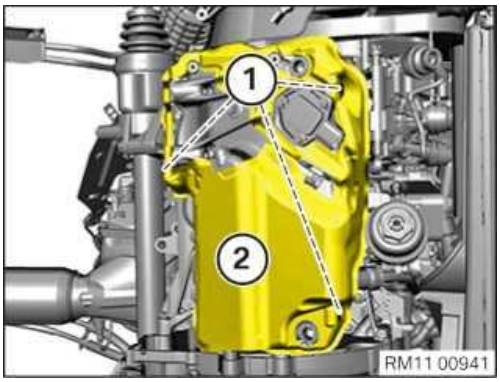
cardiagn.com

TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- If necessary, renew fitting sleeves.

- Position and install oil sump.
- **Hand-tighten** oil sump screws (2) to (17) but do **not** tighten completely.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws(2) to (17) of the oil sump.



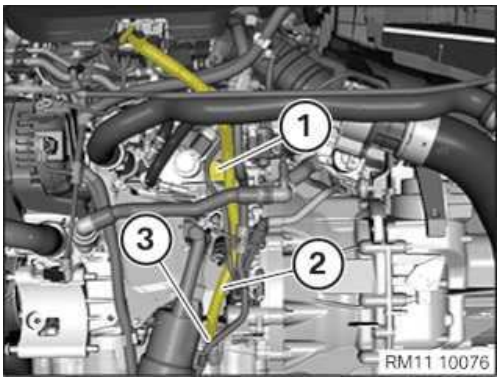
Oil sump to crankcase

M8x30		Tightening torque	2 Nr
M8x110		Tightening torque	2 Nr

- Tighten transmission bolts (1) on oil sump.

Transmission to oil sump

M8		Tightening torque	1 Nr



- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).

- Renew O-ring (1).

  Parts: O-ring

cardiagn.com

- Guide in guide tube (2) for oil dipstick and insert it into oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

Guide tube for oil dipstick on engine

M8x16		Tightening torque	19 Nm

39 – Installing the flywheel

CAUTION

Heavy component.

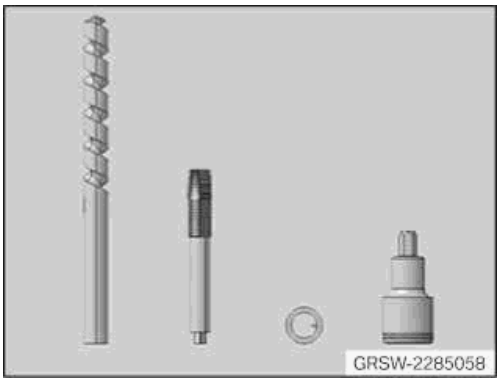
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.



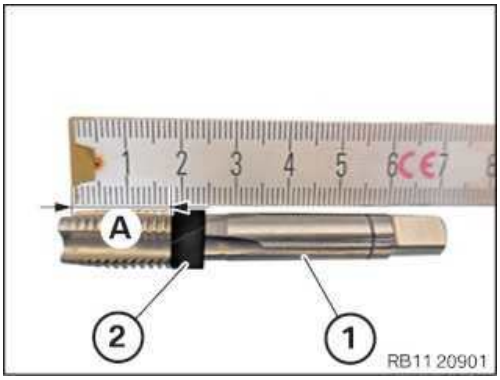
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

Clean all threads with a screw tap.

- Clean all screw threads (1).

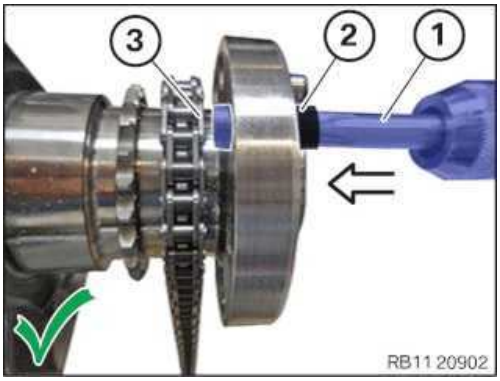
- Use the set of special tools **2 285 058**.



Description
Twist drill
Thread cutter M12x1.5
Depth
Insertion tool

cardiagn.com

- Assemble tool set.



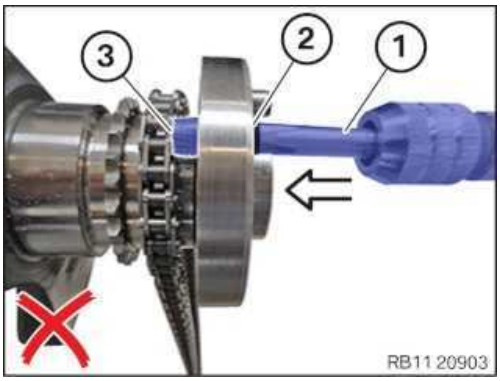
Number	Description
1	Tool holder
2	Thread cutter M12X1,5

- Mark the screw-in depth (A) on thread cutter (1) from the set of special tools **2 285 058** with a standard tool (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm

NOTICE



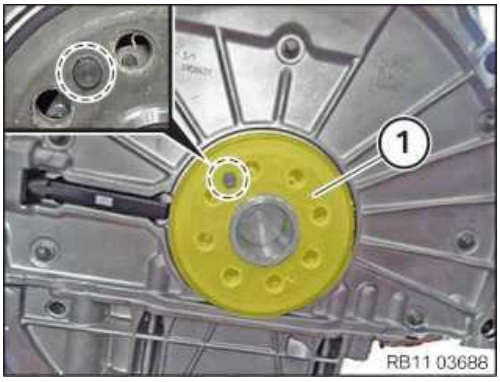
To provide a better overview: Shown with engine removed.

- Screw in the thread cutter (1) from the set of special tools **2 285 058** in direction of arrow up to the screw-in depth (2).

Screw-in depth of thread cutter

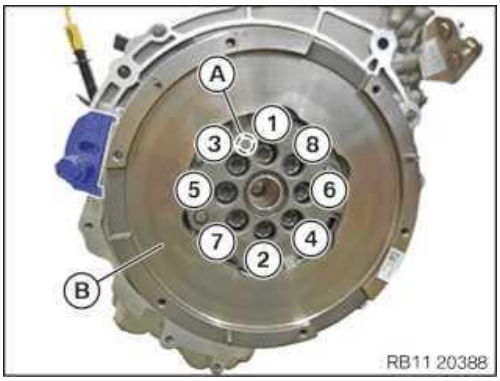
Screw-in depth	18 mm

- Make sure that the thread cutter does (1) **not** rest on the timing chain (3).



TECHNICAL INFORMATION

- **Carefully** handle the timing chain, to protect the timing chain and timing chain drive against damage.

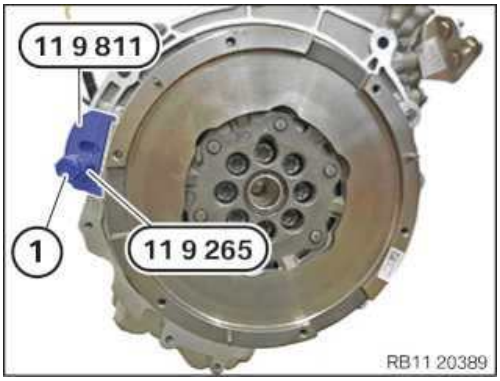


- Make sure that the screw-in depth (2) of the screw tap (1) is not exceeded.

  The thread cutter (1) may not rest on the timing chain (3).

- During the installation, note the mark shown without fail.
- Install special tool (1) on the crankshaft as shown.

cardiagn.com



- Position flywheel (B) .
- Renew flywheel bolts (1) to (8).

  Parts: Flywheel bolts
- Tighten flywheel bolts hand-tight with special tool **0 491 018 (11 4 180)**.
- Observe tightening sequence. While doing so, begin with dowel pin (A).
- Tighten the flywheel bolts using the special tool **0 491 018 (11 4 180)** in sequence (1) to (8).

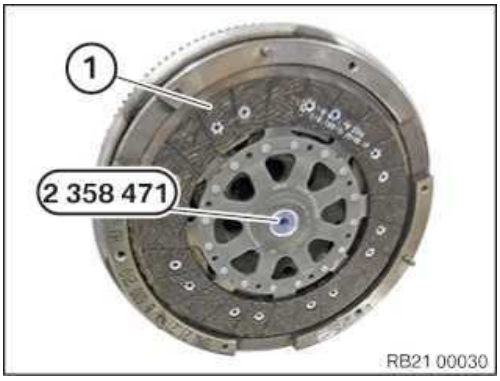
Flywheel to crankshaft

M12x1.5	Renew screws.	Tightening torque	120 Nm

- Loosen the transmission bolt (1).
- Feed out and remove special tools **0 494 793 (11 9 265)** and **0 496 171 (11 9 811)** with the **standard** (5 mm) washer.

40 – Install clutch

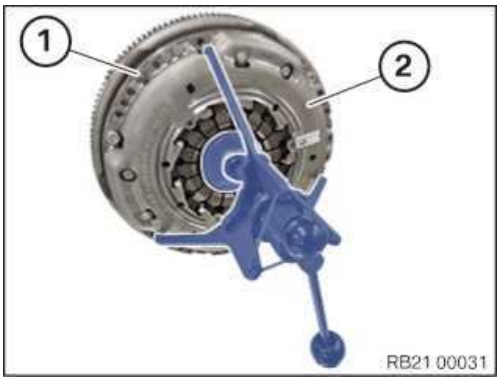
CAUTION



Materials harmful to health.

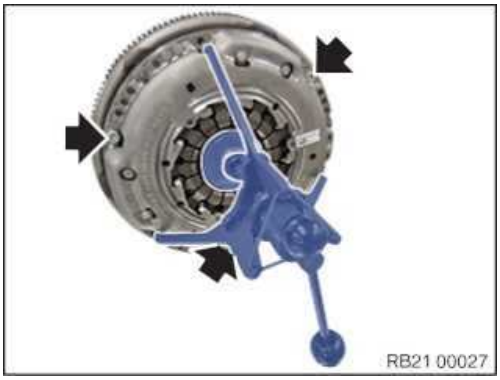
Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.



TECHNICAL INFORMATION

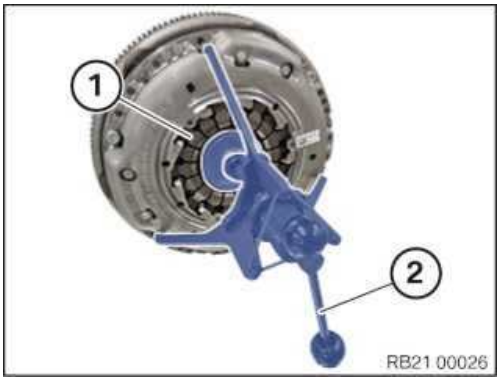
Handle the clutch disc carefully. Install the surfaces of the clutch disc in the correct mounting orientation.
Clean friction surfaces of the flywheel and the pressure plate with BMW-approved brake cleaner.
Note designation for ”engine side” / ”transmission side”.



- Centre the clutch disc (1) using special tool .

cardiagn.com

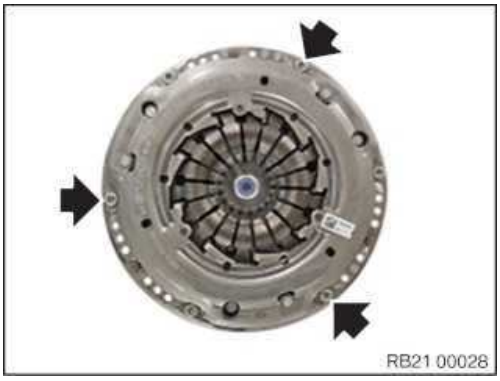
- Mount the clutch (2) together with the special tool to the flywheel.
- Observe the dowel pins (1).
- The clutch (2) must be secured via the dowel pins (1).



- Renew the bolts (arrows).

  Parts: Bolts
- Install and tighten screws (arrows).

Clutch to flywheel



M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

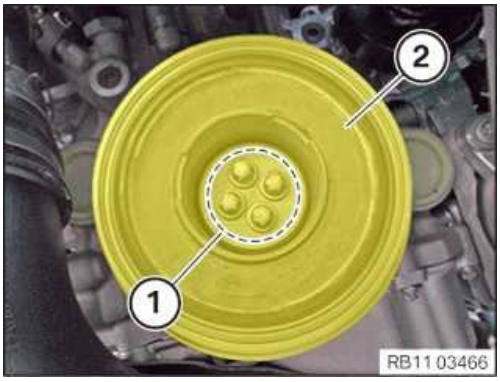
- Loosen the spindle (2) until the diaphragm spring (1) is fully relieved.

- Unscrew the knurled screw (1) and remove the special tool with **2 288 165** from the clutch.

- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Clutch to flywheel

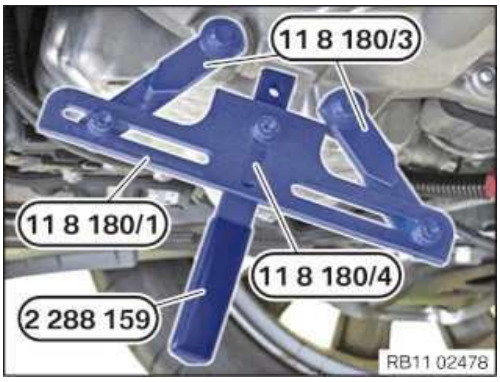


M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

cardiagn.com

- Withdraw special tool from clutch disc with aid of accompanying screw.

41 – Installing the vibration damper



- Position vibration damper (2).
- Renew screws (1).

  Parts: Bolts
- Fasten the vibration damper (2) with the bolts (1).
- Tighten the screws (1).

Vibration damper with belt pulley to crankshaft

M10x65	Renew screws. Tighten screws crosswise.	1. Jointing torque	40 Nm
		2. Angle of rotation	60 °
		3. Angle of rotation	60 °

- Release the transmission bolts and remove the special tool **0 493 587 (11 8 180)**.

- Tighten transmission screws (1).

Transmission to engine

M8		Tightening torque	19 Nm

- Install protective cap (2).

42 – Installing the hydraulic valve clearance compensating element

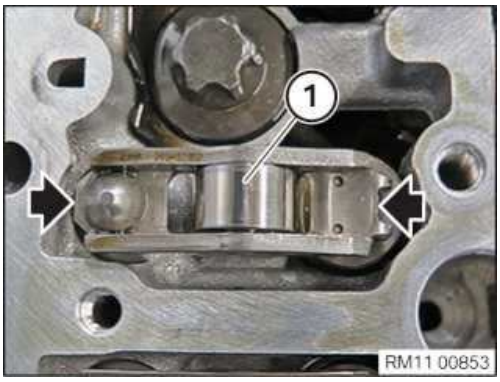
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

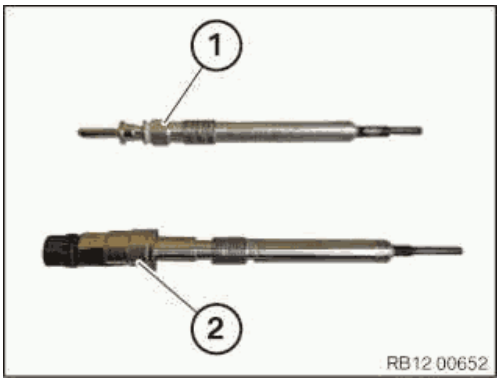


- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

43 – Install the roller cam followers

TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.



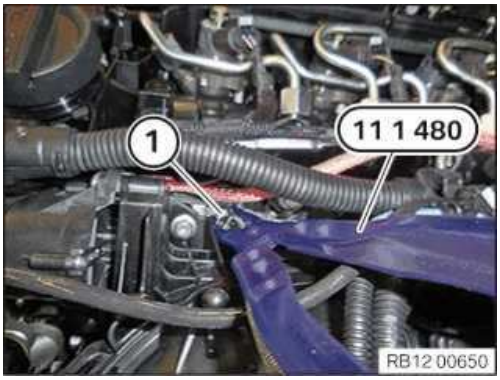
- Check all roller cam followers (1) for damage and replace if necessary.

  Parts: Roller cam followers
- Insert and install all roller cam followers (1).

  Roller cam followers (1) that have already been used must be installed in the same place.
- Note the mounting orientation of the roller cam followers (1).
- Oil all roller cam followers (1).

44 – Install glow elements

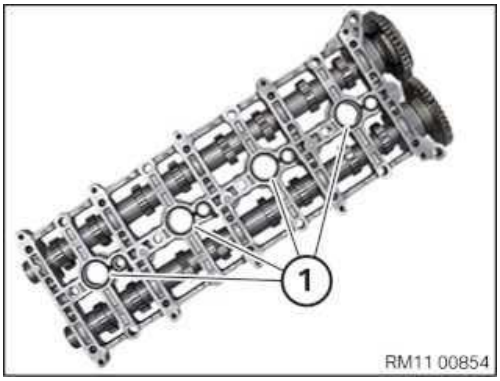
- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.



cardiagn.com

- Tighten the glow element with the special tool or conventional tools.

Glow elements to cylinder head



Glow element		Tightening torque	13 Nm

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

45 – Installing the camshaft support

- Renew gaskets (1).

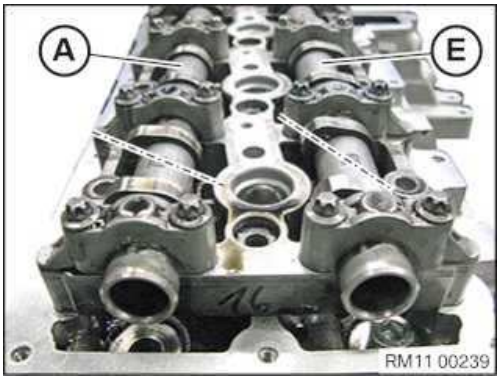
  Parts: gaskets

- Position the camshaft support including the camshafts.
- Tighten the screws in a sequence from (1) to (14) in several steps.

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

46 – Adjusting the timing of the camshafts



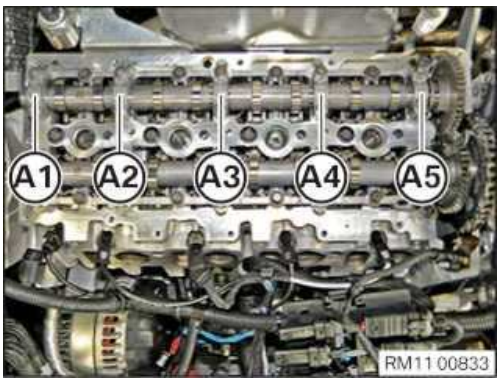
- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

- Slide the special tool **2 288 380** completely into the bore hole of the oil sump.
- Use the special tool to block **2 288 380** the crankshaft in the TDC firing position at the first cylinder.

- The cam of the intake camshaft (E) at the first cylinder points up at an angle.
- The cam of the exhaust camshaft (A) at the first cylinder points outward at an angle.



▸ **Remove exhaust camshaft.**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

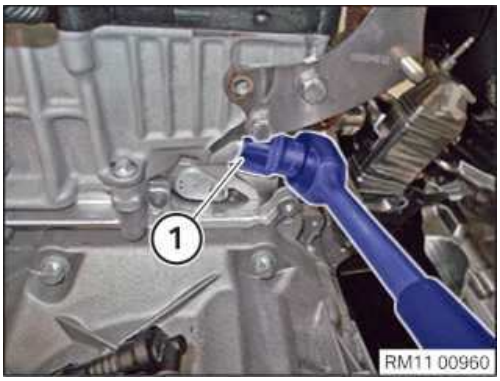
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A5) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components on special tool **0 495 105 (11 4 480)** in a tidy and orderly fashion.

▸ **Remove chain tensioner piston**



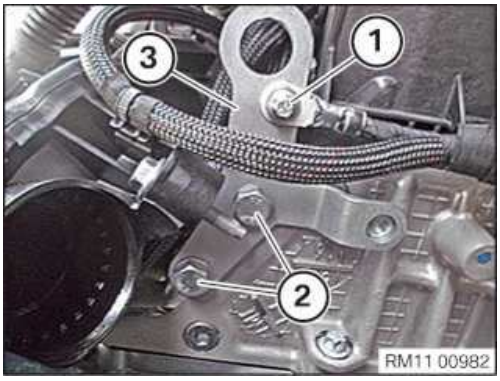
WARNING

Hot surfaces.

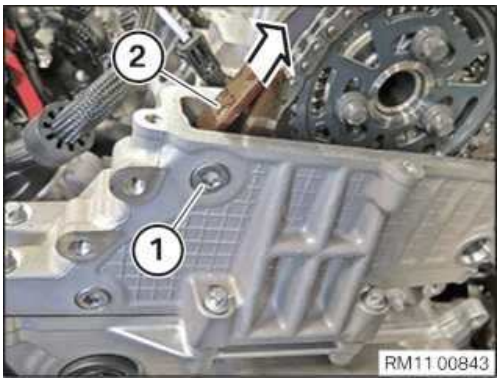
Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



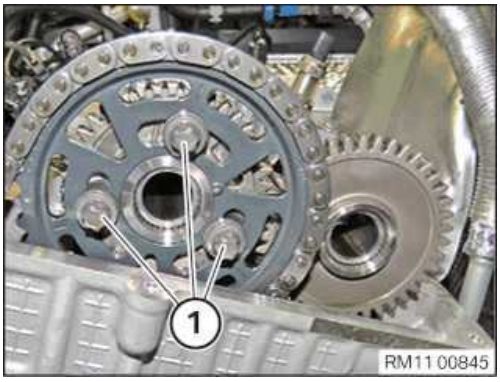
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

▶ **Remove the timing chain guide rail**



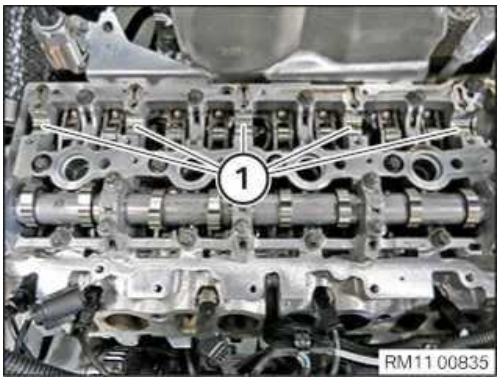
- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

▶ **Removing the camshaft sprocket on the intake camshaft**

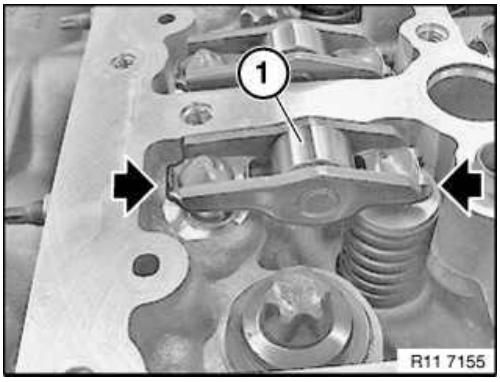
- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

▶ **Install exhaust camshaft**



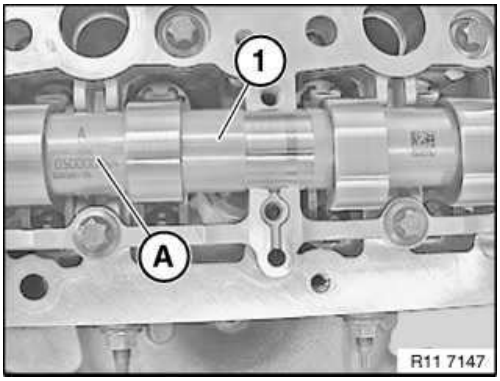
cardiagn.com

RISK OF DAMAGE

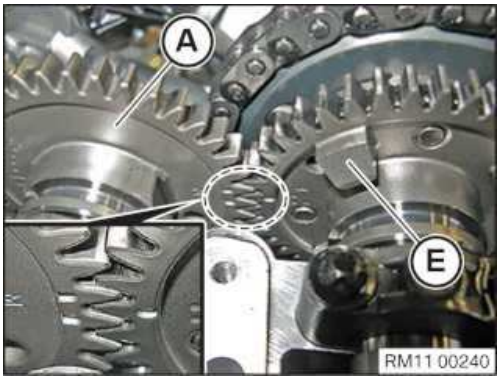


Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

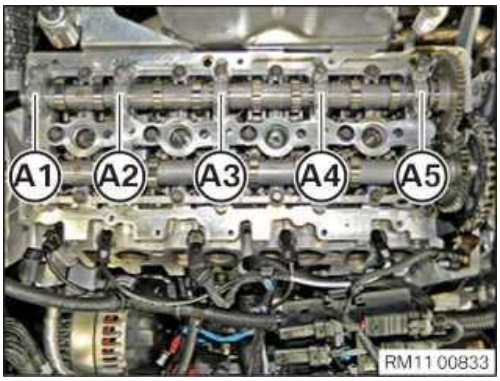


- Comply with the regulations for the installation and disassembly.
- Perform work with care.



- Oil all bearing positions (1).

- Make sure the roller cam followers (1) have the correct mounting orientation.



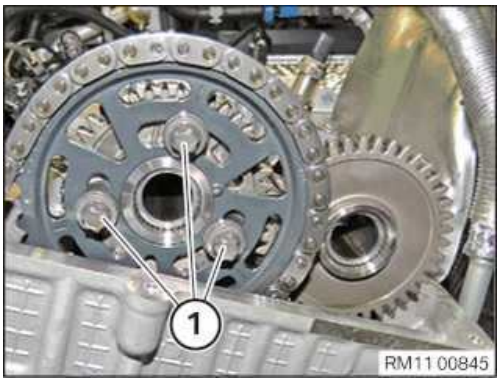
- Insert exhaust camshaft (1) so that the identification (A) points upwards.

- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.

cardiagn.com

- Tighten all exhaust camshaft bearing caps (A1) to (A5) from the inside to the outside by 1/2 a turn at a time.

Intake and exhaust camshaft in camshaft support



M6x31		Tightening torque	10 Nm

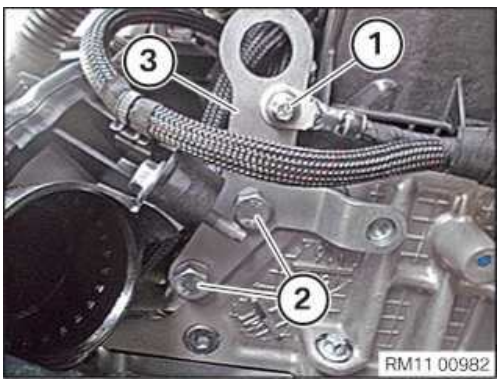
- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

  Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

▶ **Installing the camshaft sprocket on the intake camshaft**

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

▶ **Install the timing chain guide rail**



- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6			8 Nm

cardiagn.com

▶ **Installing the chain tensioner piston**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

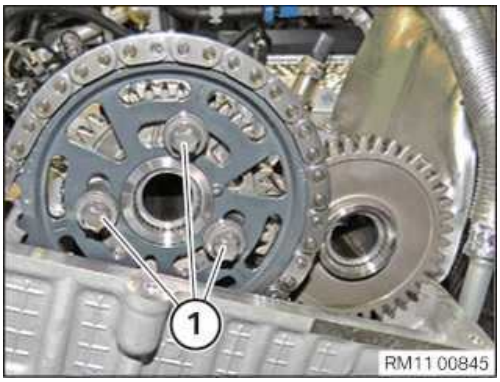
- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

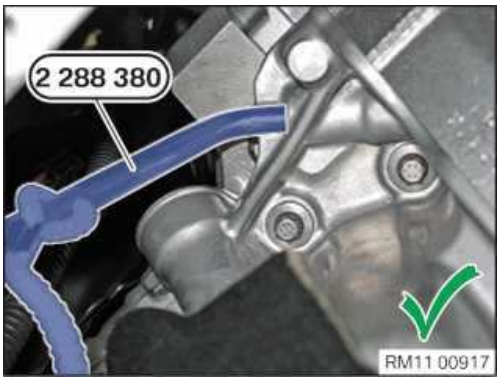


- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

▶ **Tightening the camshaft sprocket on the intake camshaft**



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

47 – Removing the special tool to disconnect the crankshaft

cardiagn.com

- Remove special tool **2 288 380**.

48 – Removing the special tool to secure the exhaust camshaft

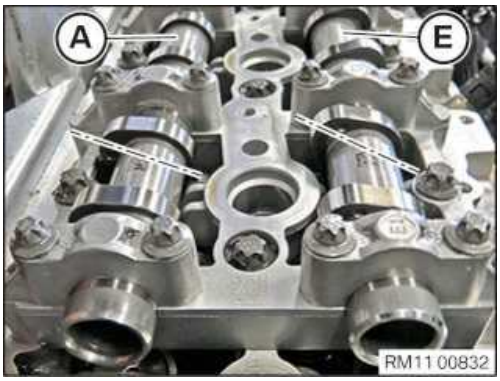
- Remove the special tool **0 496 112 (11 8 760)** to fix the exhaust camshaft.

49 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

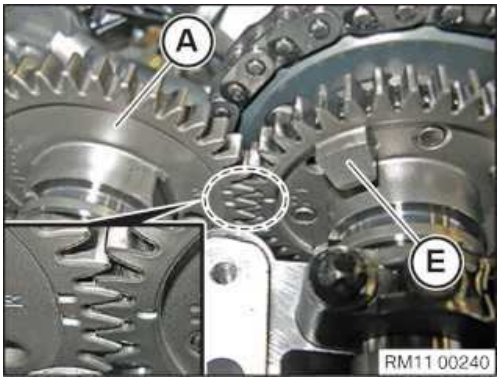


The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

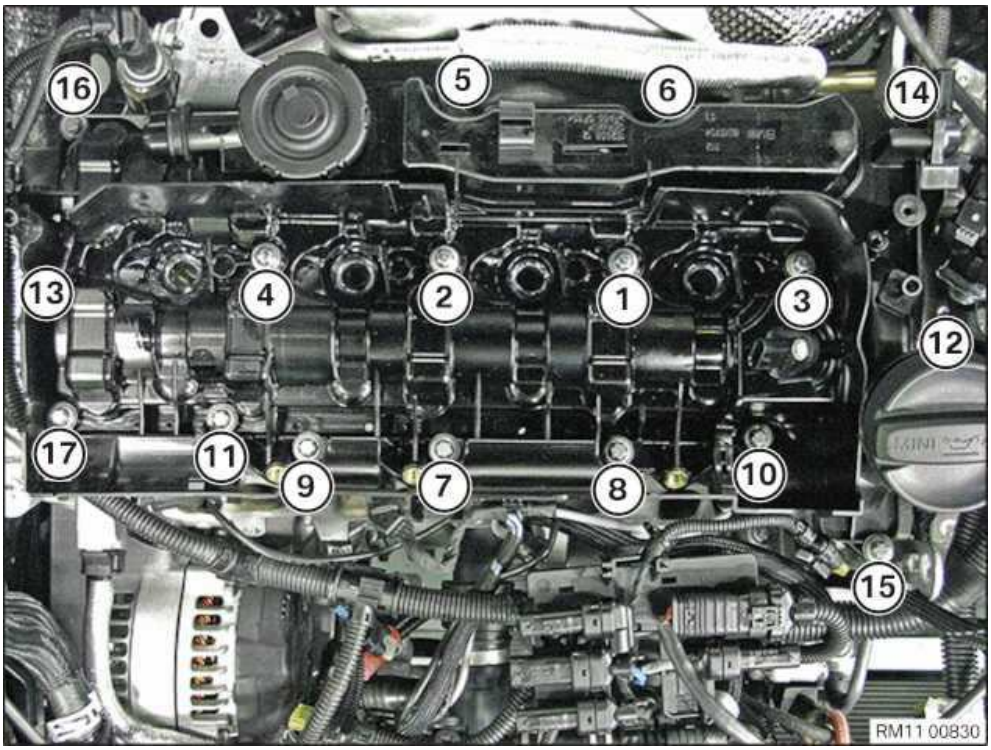
- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

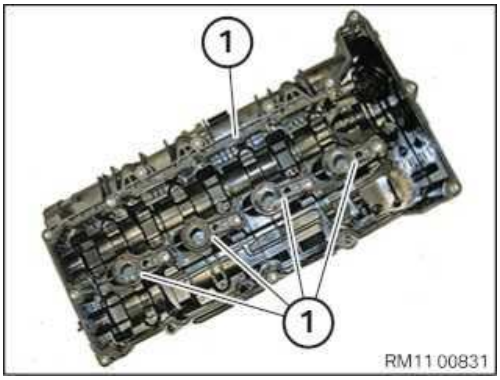
TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.



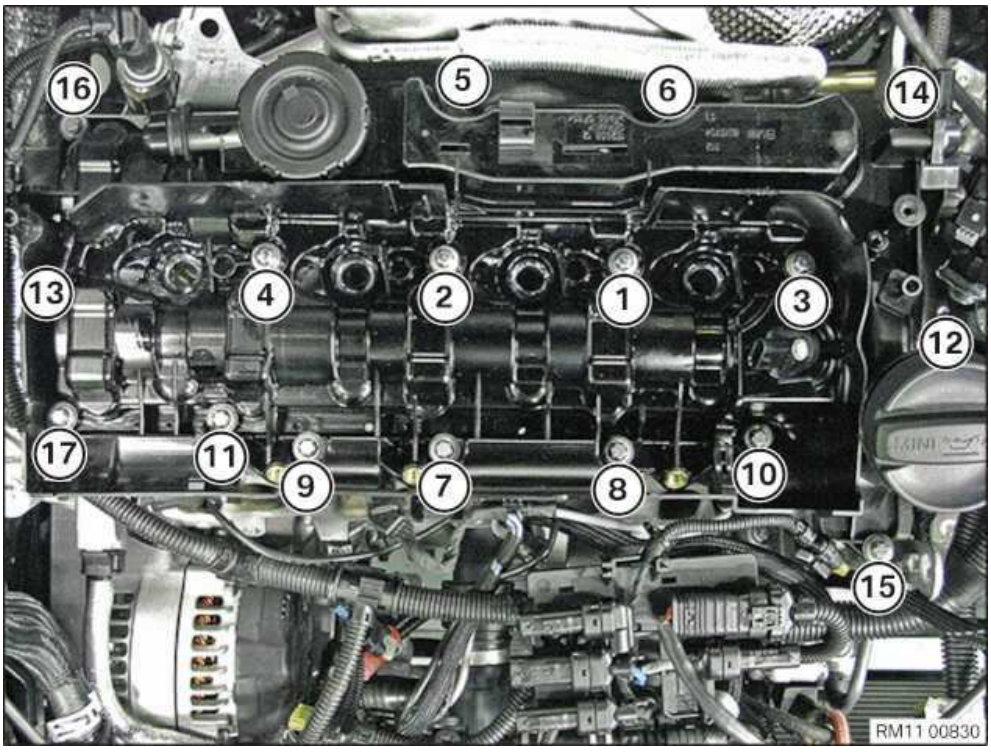
- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.



- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

cardiagn.com

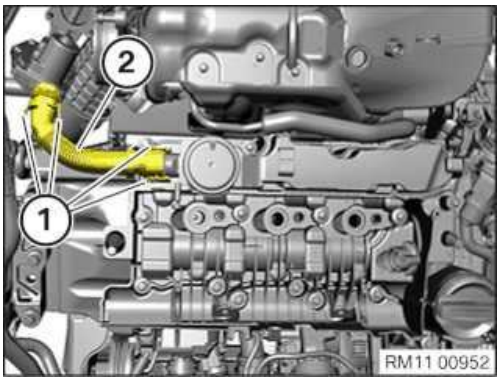
Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket



- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-

cardiagn.com

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

51 – Installing injectors of injection system

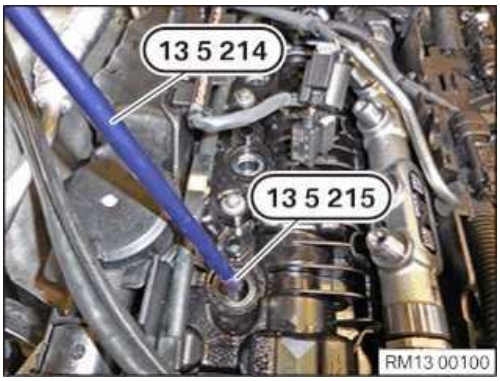
▸ **Cleaning the injector shafts**

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

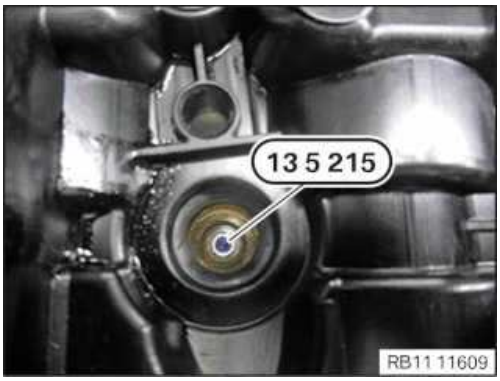
- Collect dirt particles, e.g. when blowing out, use cloth to do so.



- Wear safety goggles.

RISK OF DAMAGE

Contaminant or foreign body.

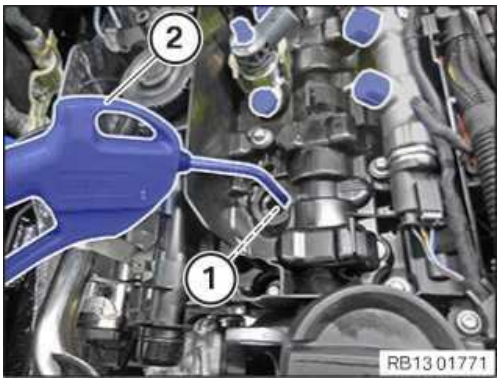


Contamination can result in malfunctions, operating failure or leaks.

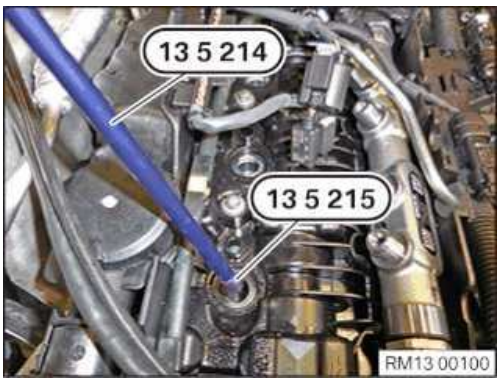
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

cardiagn.com



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.



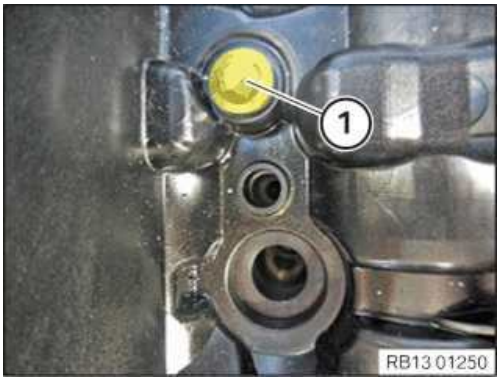
- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

- Blow out injector shaft (1) with air gun (2).

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

► **Check the placement of the clamping claw**



cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

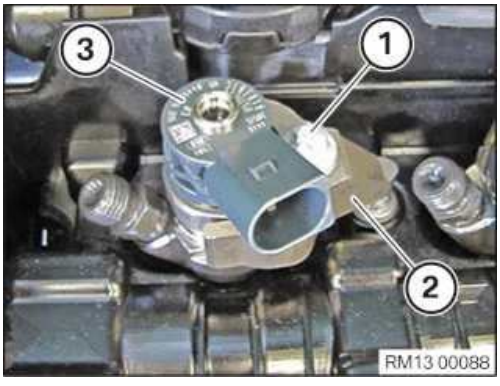
▸ **Prepare the injector for installation**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

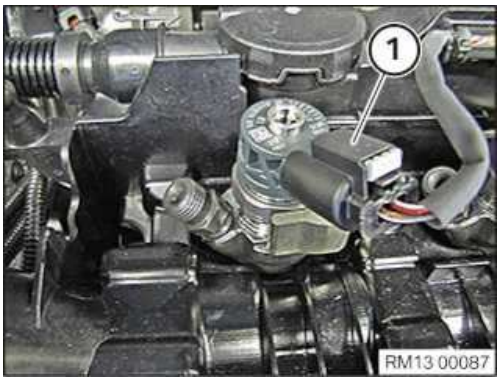


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

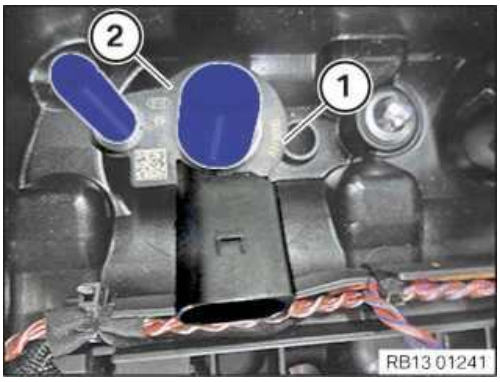
Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

cardiagn.com

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



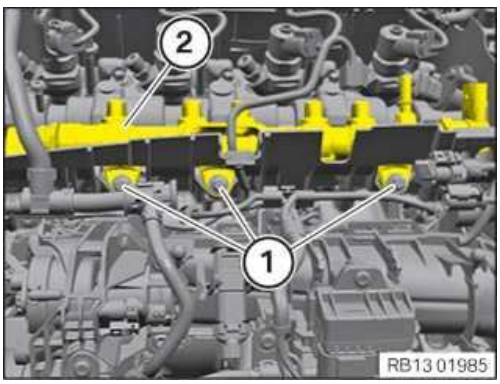
▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

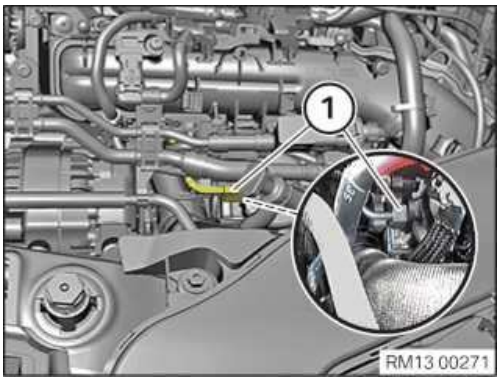
Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

52 – Installing the rail

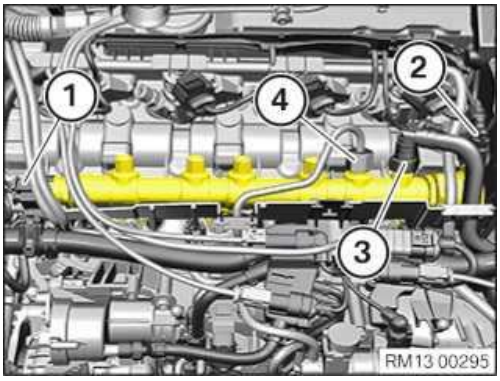


- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm

cardiagn.com



TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

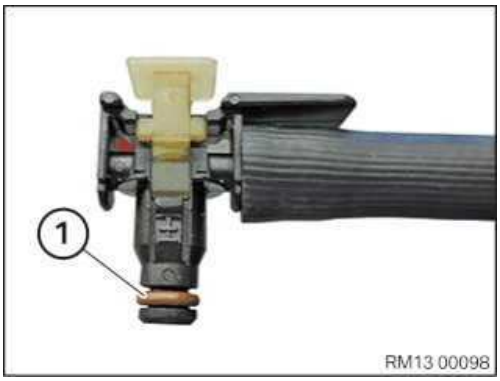
TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool .

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm



- Connect and lock the fuel line (3).

  Fuel line (3) must engage audibly.
- Connect connectors (2) and lock.

  The connector (2) must engage audibly.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

53 – Connect the leakage oil line on the injector

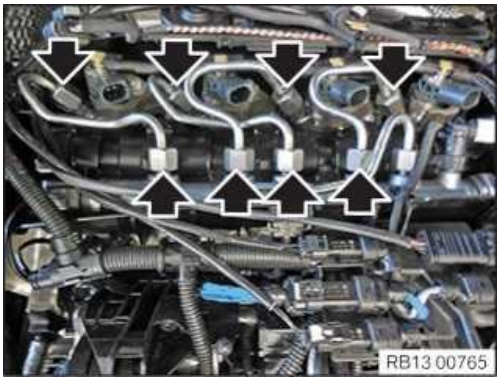
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

cardiagn.com

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.



54 – Installing high pressure lines between rail and injectors

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

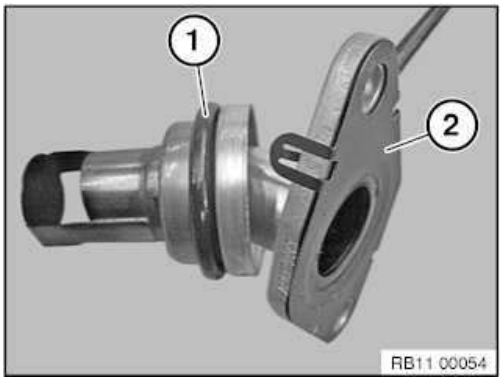
TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.



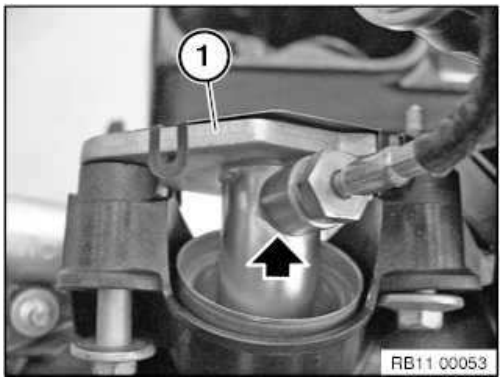
- Tighten the high pressure lines (arrows) with the special tool .

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

55 – Installing the intake plenum

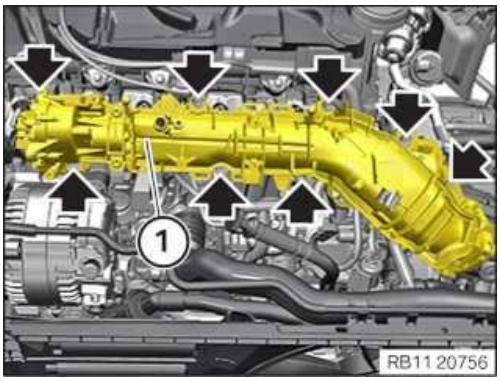


- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position the seal (2) and clip it in.

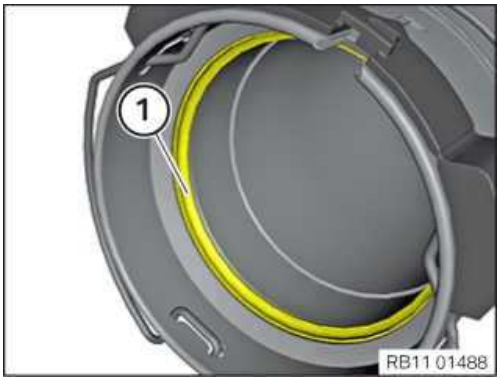
cardiagn.com



- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

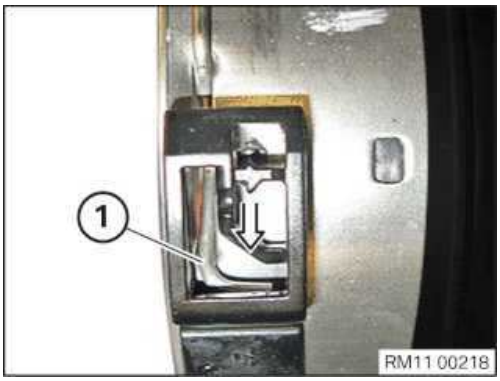
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



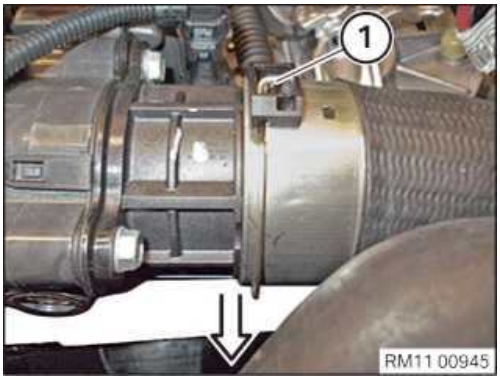
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

cardiagn.com

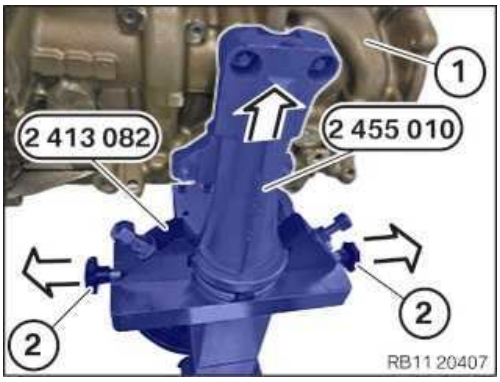
- Engage the lock (1) on the bracket (arrow).

- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

56 – Remove the engine from the assembly stand

CAUTION

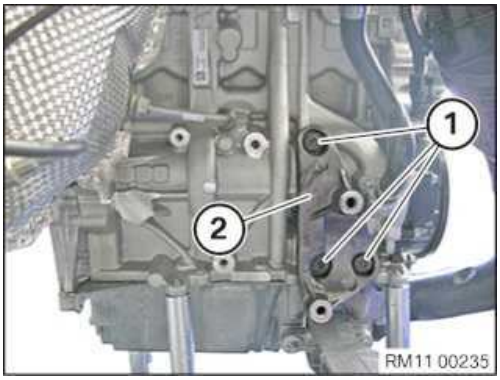


Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Insert engine lifter with special tool and position engine (1).

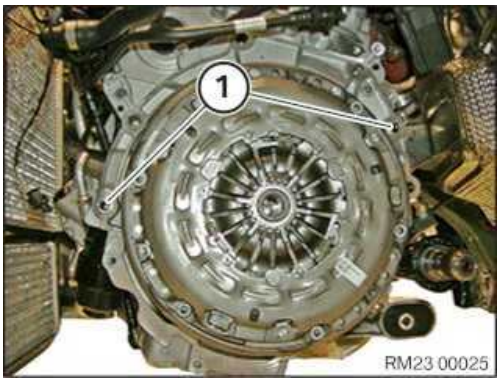


- Unscrew the nuts on special tool .
- Detach the holder (2) in the direction of the arrow.
- Detach the engine (1) with special tool **2 455 010** out of the special tool in the direction of arrow.

cardiagn.com

- Remove conventional screws (arrows).
- Feed out the special tool **2 455 010** on the engine (1) and remove.

- Insert and install the holder (2).
- Tighten the screws (1).

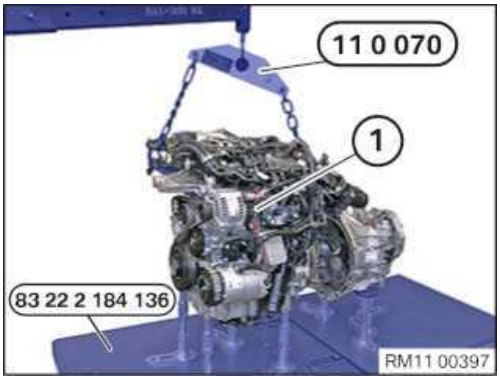


Holder to crankcase

M10		Tightening torque	38 Nm

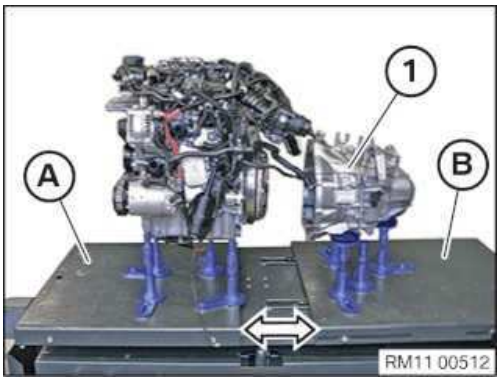
57 – Mounting engine on manual gearbox

Prerequisite

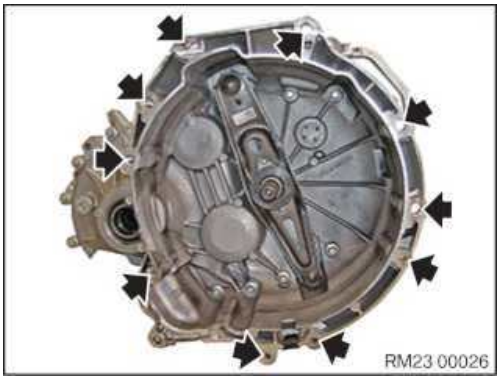


Engine has been removed.

- Check for correct fit of fitting sleeves(1).
- Replace damaged fitting sleeves.

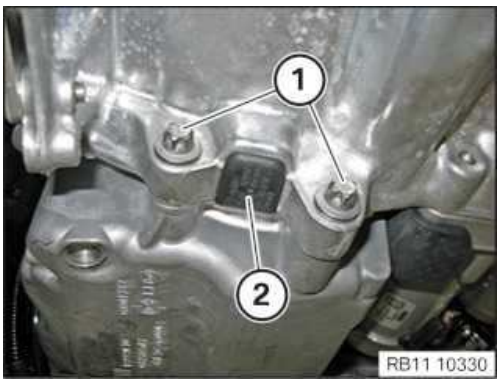


- Remove any grease from the transmission input shaft (arrow) and clean the shaft.
- Do not grease transmission input shaft.
- Check the clutch disc for frictional corrosion in the gearing and renew if necessary.



- Position the engine (1) on the lifting table **2 184 136** using the engine lifter and the special tool .
- Feed out engine lifter from engine (1) with special tool and push aside.

cardiagn.com



- Push table top (B) in direction of arrow and position manual gearbox (1) on engine.

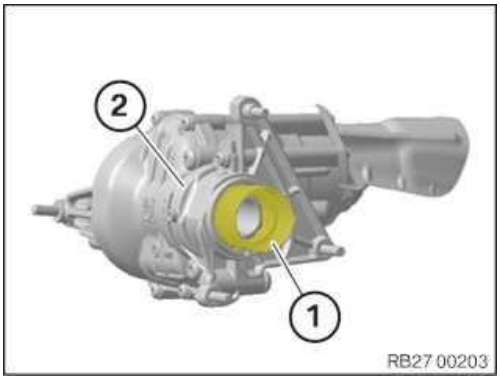
- Tighten screws (arrows).

Transmission to engine

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

- Tighten the screws (1).

Transmission to oil sump



M8		Tightening torque	19 Nm

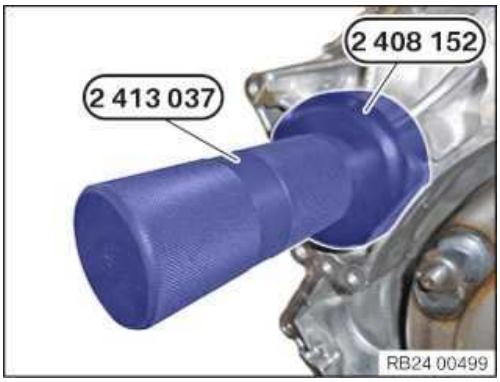
- Install the protective cap (2).

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.

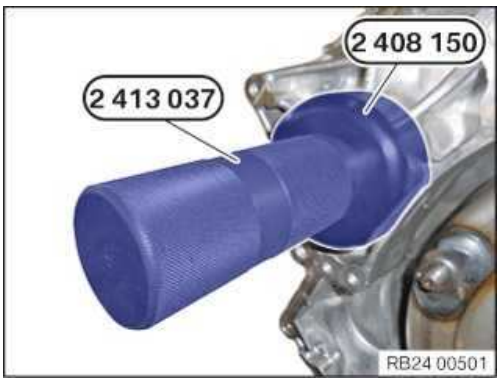
58 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

cardiagn.com

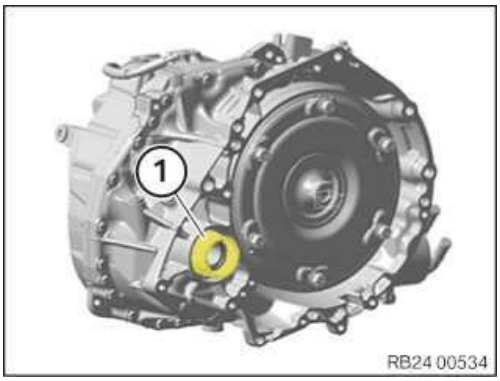


- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.

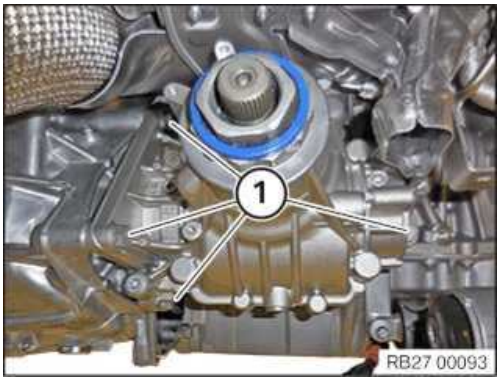
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

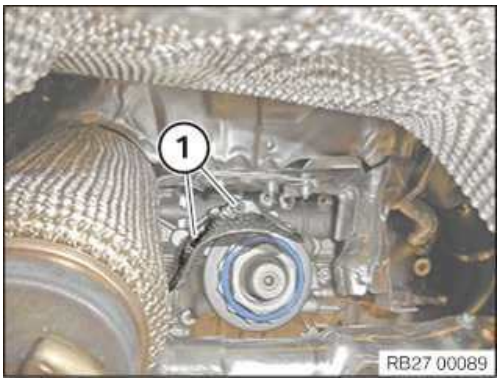
cardiagn.com



- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials



Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

cardiagn.com

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

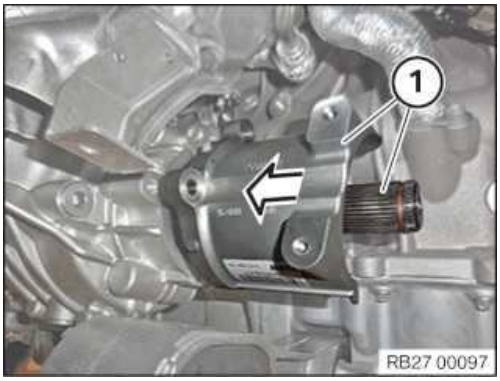
Technically suitable transfer box and electrical transmission oils	

Main group 27

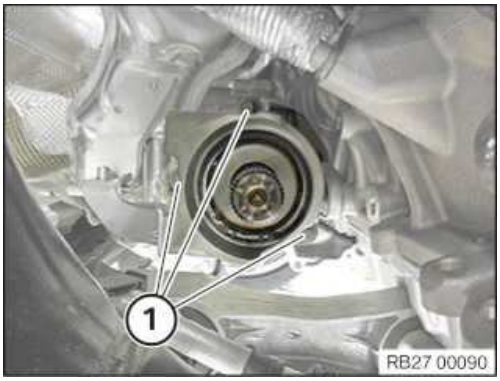
- Tighten the oil filler plug (1).

Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm



59 – Install the intermediate shaft with the support tube



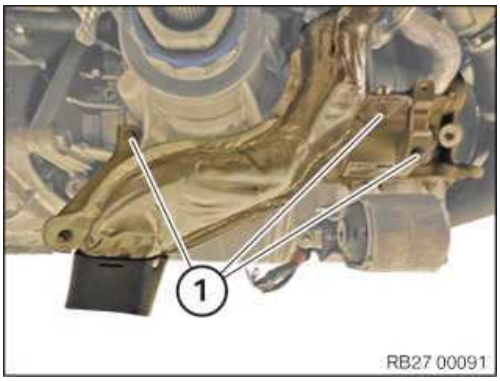
- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

- Position screws (1).



Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

cardiagn.com

- If installed: Install air duct.
- Tighten the screws (1).

60 – Installing the high-pressure stage exhaust turbocharger

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

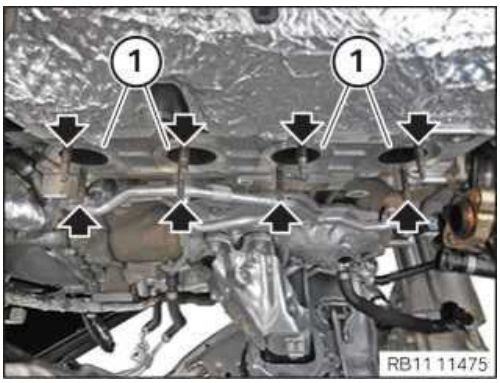
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE



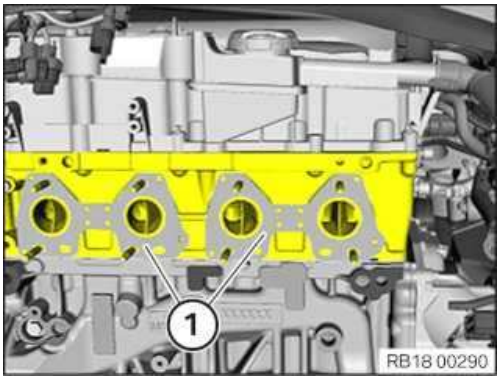
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

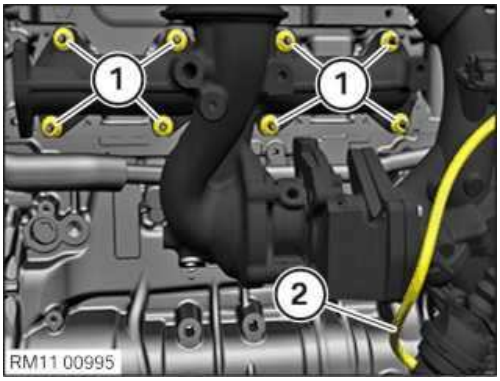
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.

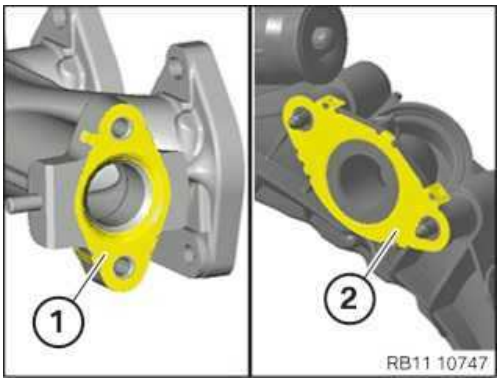
cardiagn.com



- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.

- Renew gasket (1).

  Parts: Gasket

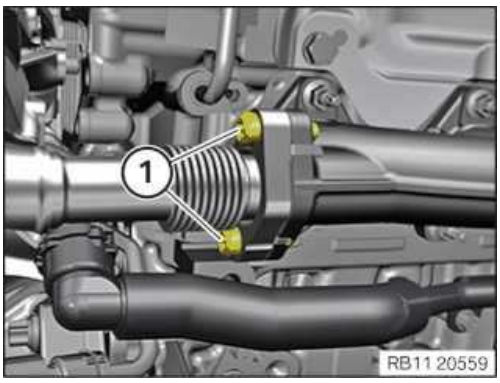


- Install new gasket (1).

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

  Parts: Nuts

- Connect vacuum hose(2).

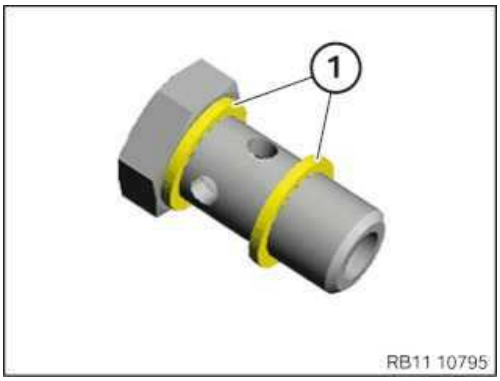


- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

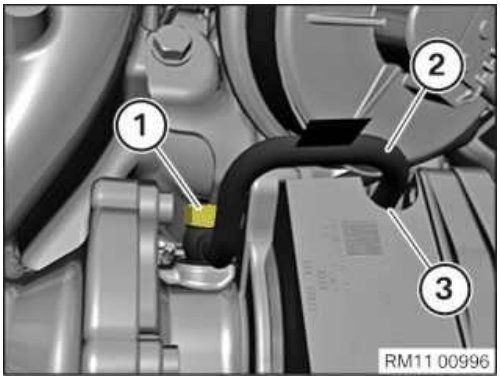
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket



- Tighten the screws (1).

Exhaust-gas recirculation cooler to exhaust manifold



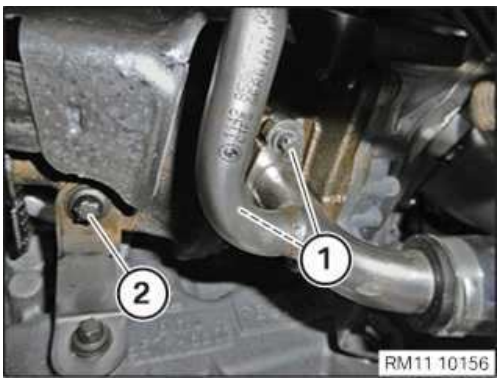
M8x28	Replace screws	Tightening torque	32 Nm

cardiagn.com

- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring

- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).



- Tighten bolt (1) from the right wheel arch.

- Renew seal (1) of oil return line.

  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

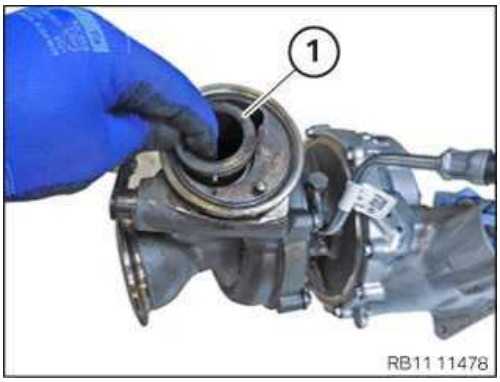
Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

61 – Installing the low-pressure stage turbocharger

cardiagn.com

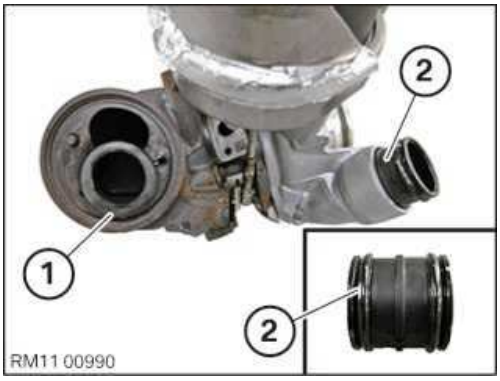
RISK OF DAMAGE



Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.



TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.

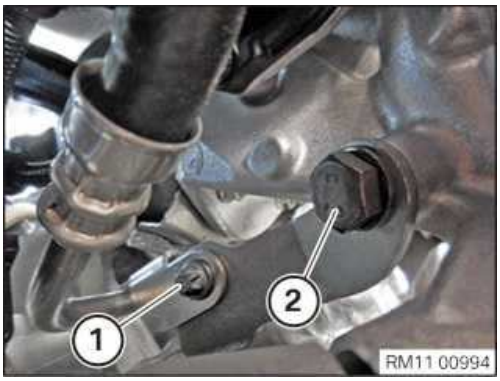
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

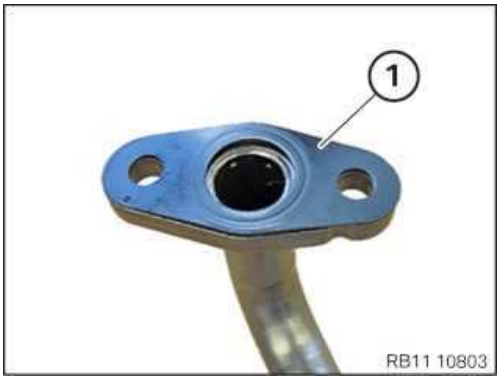
Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

cardiagn.com

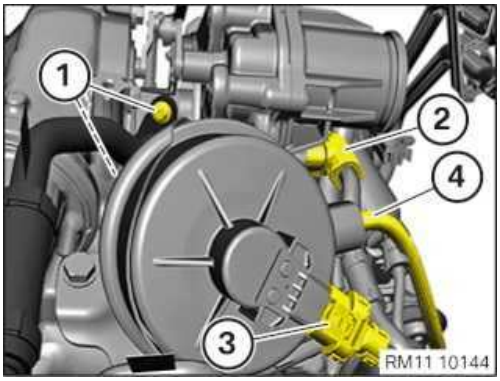
- Tighten down screw (1).



Oil feed line to bracket

Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

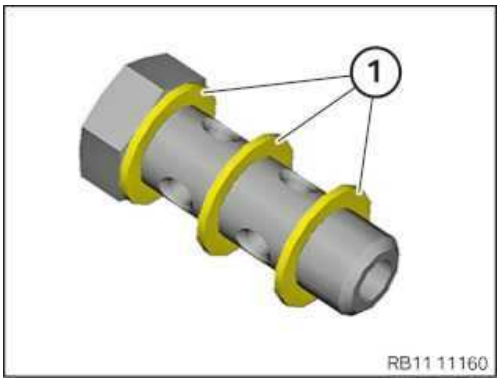


Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

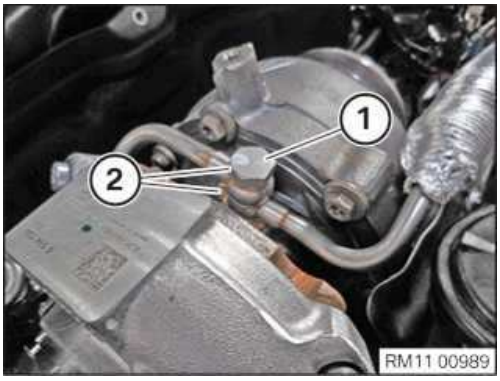
- Renew seal (1) on the oil return line.

  Parts: Gasket



- Position the oil return line with the seal.
- Tighten the screws (1).

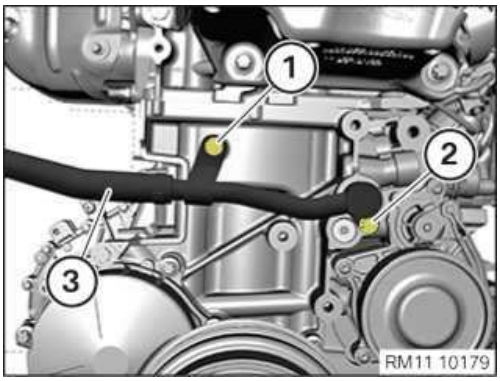
Oil return line to turbocharger



M6x12		Tightening torque	8 Nm

- Connect and lock connectors (2) and (3).

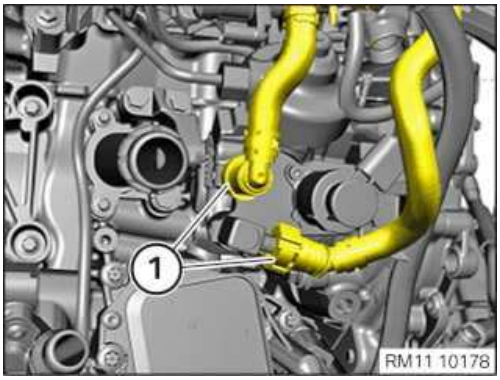
  The locks must engage audibly.
- Connect vacuum hose (4).



- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.

cardiagn.com



- Renew sealing ring of the coolant line (3).

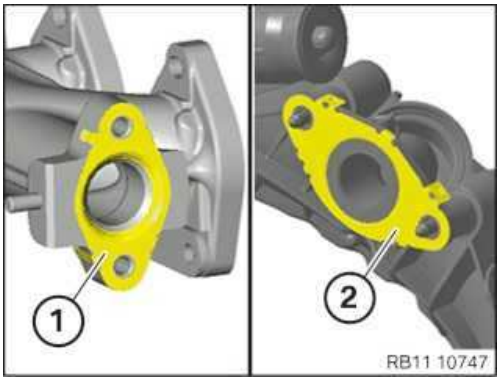
  Parts: Sealing ring
- Coat the sealing ring and install the coolant line (3) .
- Tighten down screws (1) and (2).

Standard screw connection M6

M6		8 Nm

- Connect and lock fuel lines (1).

  The fuel lines (1) must audibly engage.



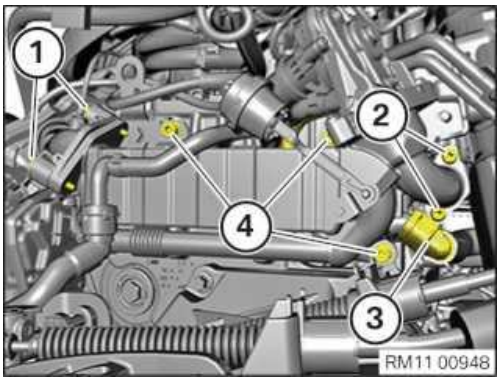
▶ **Installing the exhaust-gas recirculation cooler**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

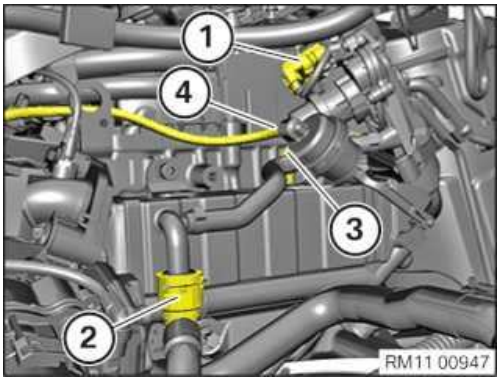
Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold



M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

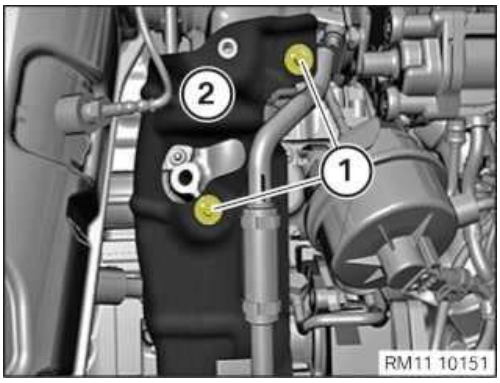
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

▸ **Installing heat shield on exhaust turbocharger at bottom**

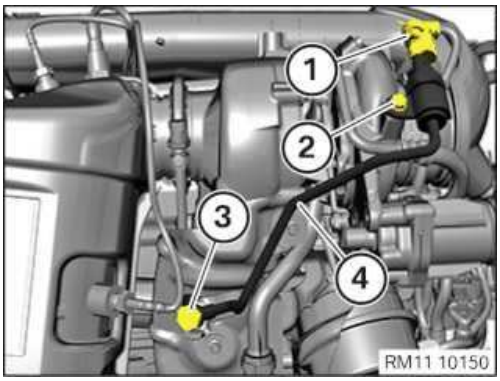


cardiagn.com

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

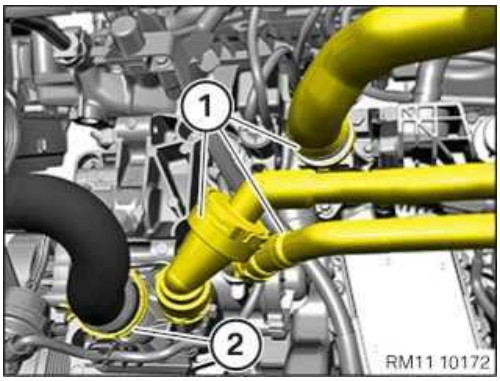
- Remove fitting aid (1) for the flexible tube.

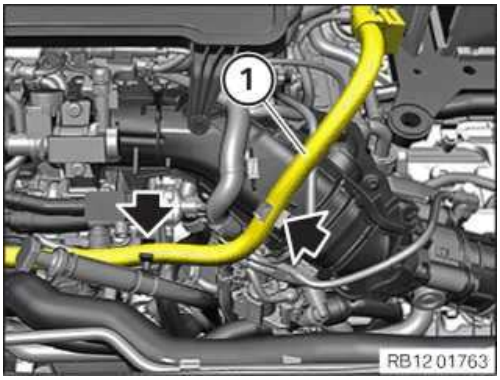
▶ **Install the heat shield on the exhaust turbocharger**



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm



- Fasten the cable at the clips .

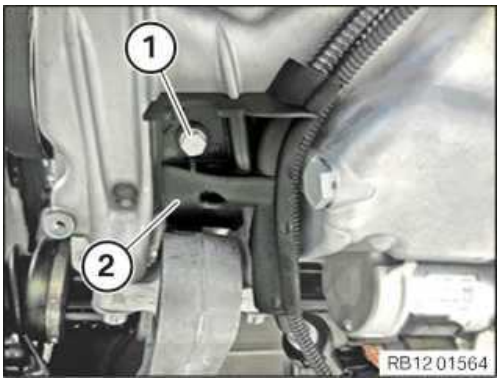
cardiagn.com

- Install the coolant hose and secure with the clamp (2) .
- Connect and lock the coolant lines (1).

  The coolant lines (1) must engage audibly.

CAUTION

Improper routing of the positive battery cable.



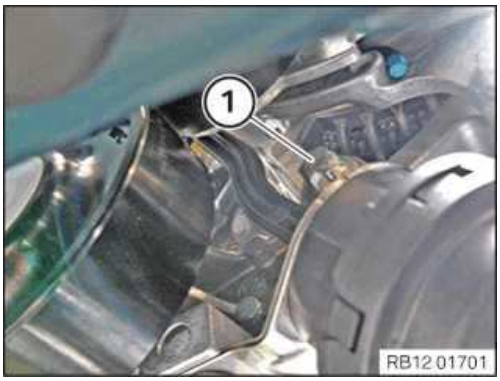
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert the positive battery cable (1) into the clamps (arrows).

- Feed in and install positive battery cable at the clamps (1).

- Insert and install the holder (2).
- Tighten down screw (1).



Bracket to oil sump

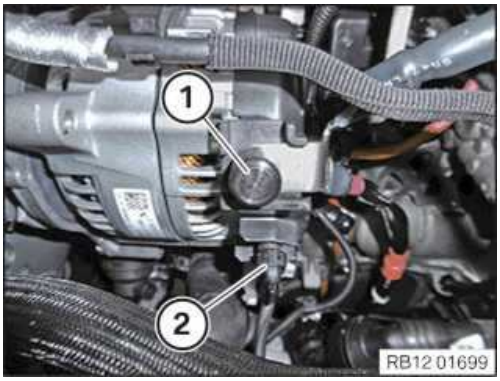
M6		Tightening torque	8 Nm

- Insert and install alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support.

cardiagn.com

- Tighten the screw (1) below on the alternator.

Alternator to component carrier



M10x75 / M10x125		Tightening torque	38 Nm

- Tighten the bolt (1) on top on the alternator.

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm

- Mount positive battery cable to the alternator.
- Tighten nut.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

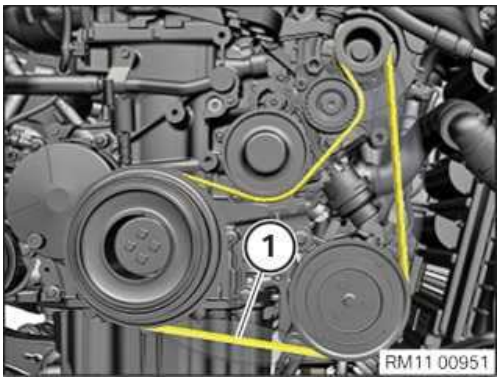
- Mount the cover (1).
- Connect the connector (2) to the alternator and lock audibly.

- Install air conditioning compressor (2) and position it correctly.
- Tighten the screws (1).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

▸ **Installing the drive belt for alternator**



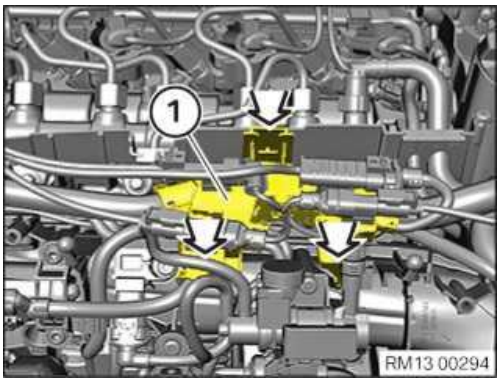
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

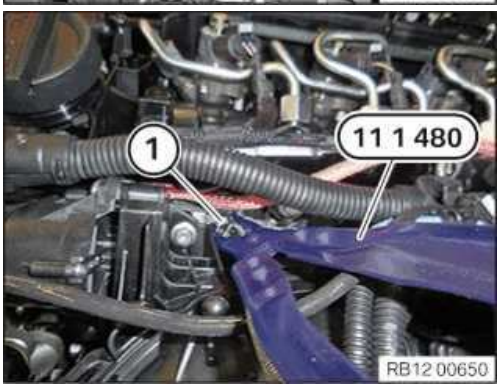
TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

cardiagn.com

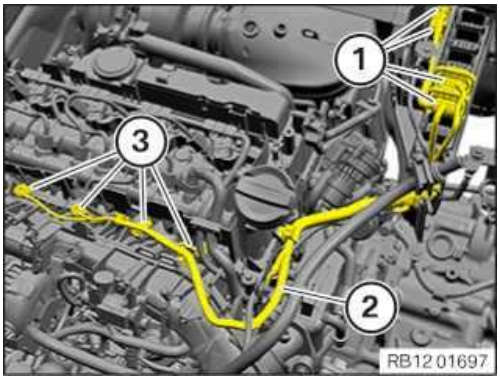


- Feed in the drive belt for the alternator (1) and install it.



- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool **0 496 268 (11 0 390)** out of the belt tensioner and remove it.

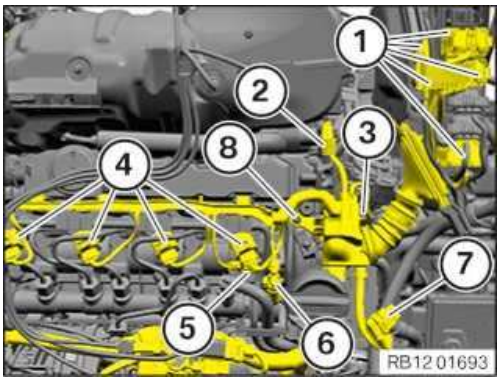
▶ **Installing the cable clip for the intake plenum**



- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.

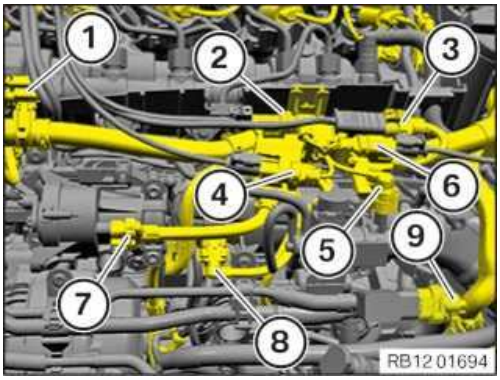
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.



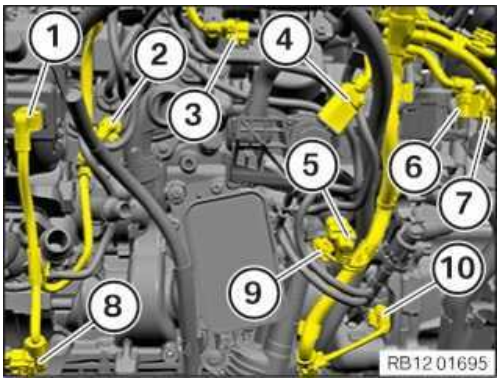
- Lay vehicle wiring harness and fasten with clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Connect all connectors (3) to the glow elements and engage them audibly.
- Mount ground strap and tighten screw (2).

Ground cable to cylinder head

M6x12		Tightening torque	8 Nm

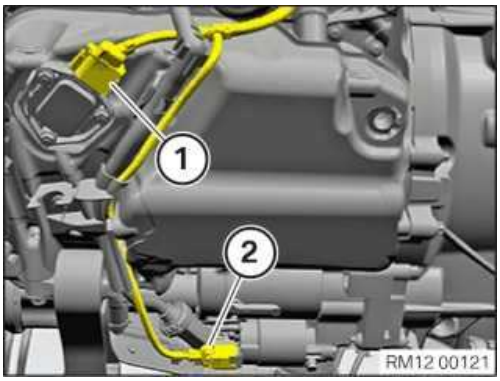


cardiagn.com



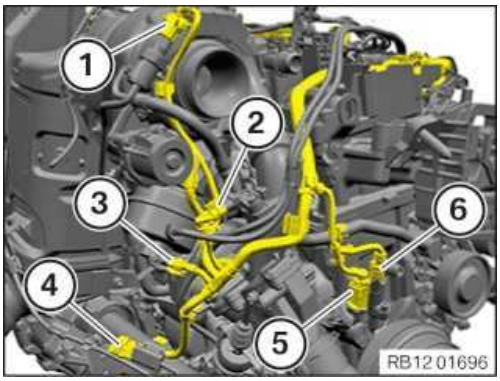
- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the integrated supply module (PDM) and to the DME control unit.
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

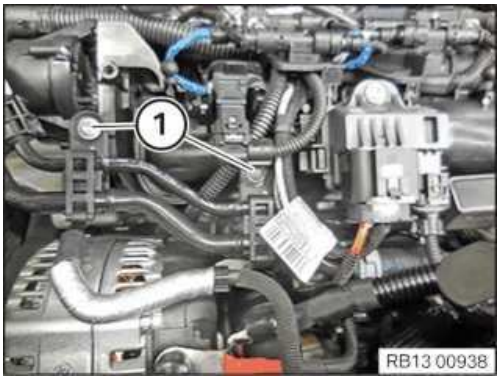


TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.



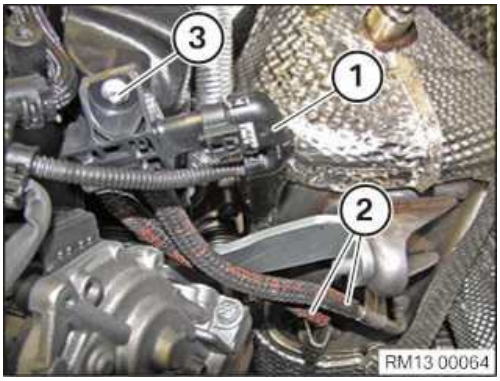
- Connect the connector (1) to the alternator and lock audibly.
- Connect the connector (2) to the electric changeover valve and lock audibly.
- Connect the connector (3) to the electric changeover valve and lock audibly.
- Connect the connector (4) to the high pressure pump and lock audibly.
- Connect the connector (5) to the oil pressure sensor and lock it audibly.
- Attach connector (6) to the throttle bodies and lock it audibly.
- Attach connector (7) to the intake air temperature sensor and lock it audibly.
- Connect the connector (8) to the air conditioning compressor and lock audibly.
- Connect the connector (9) to the solenoid valve and lock audibly.
- Connect the connector (10) to the crankshaft sensor and lock it audibly.



- Connect the connector (1) to the oil-level sensor and lock it audibly.
- Connect connector (2) to the starter motor and lock audibly.

cardiagn.com

- Attach connector (1) to the exhaust turbocharger and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust gas pressure sensor and lock it audibly.
- Connect the connector (4) to the monitoring oxygen sensor and lock audibly.
- Attach connector (5) to the oil pressure switch and lock it audibly.
- Attach connector (6) to the switching valve and lock it audibly.



- Position the fuel line.
- Tighten the screws (1).

Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

63 – Installing differential pressure sensor

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.
