11 00 039 Check compression of all cylinders

PRELIMINARY WORK

1 – Removing the acoustic cover

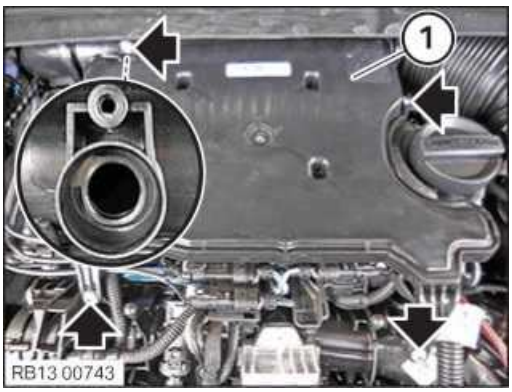
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

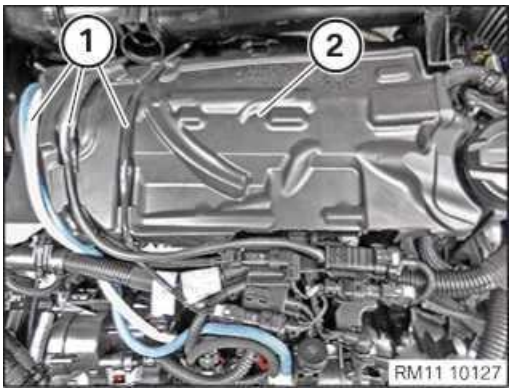
RISK OF DAMAGE



Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

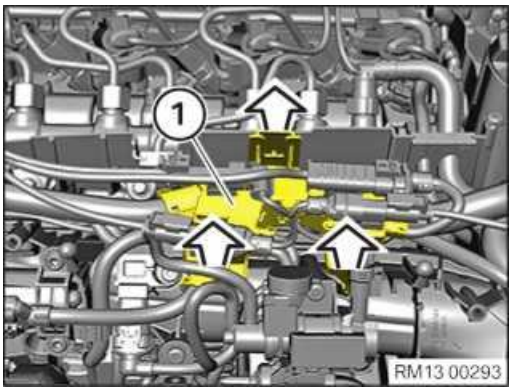
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



- Unclip the acoustic cover from the marked areas towards the top.

2 – Remove resonator

- Remove screws (arrows).
- Guide out and remove the resonator (1).



3 – Remove the acoustic cover for the injectors

- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

cardiagn.com

4 – Removing the cable clips from the intake plenum

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

5 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

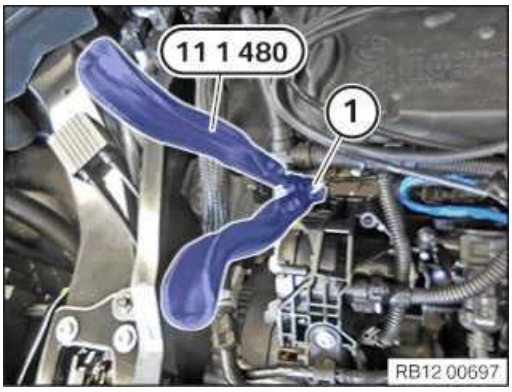
- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



cardiagn.com

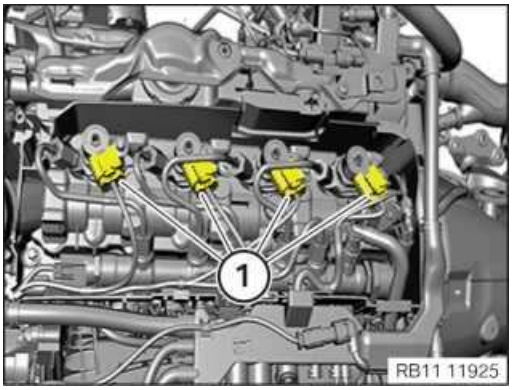
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.



- Release the glow elements with the special tool or conventional tools.
- Feed out preheating elements and remove.

cardiagn.com

MAIN WORK

6 – Check compression

- Unlock all connectors (1) and disconnect them from the injectors.

  This prevents injection.

- Screw special tools **0 496 146 (11 8 880)** and **0 493 129 (11 0 235)** into the bore holes of the individual cylinders.
- Connect an approved battery charger.

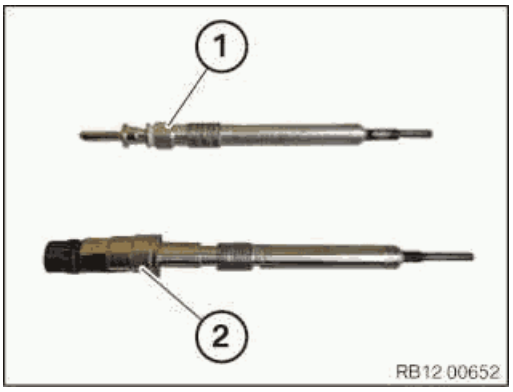
  The charger ensures constant battery voltage.
- With vehicles with manual gearbox: Ensure that no gear is engaged.
- Start engine.
- Check compression pressure and compare with the setpoint value.

  The number of engine revolutions for the compression check must be identical at each cylinder.

Compression pressure setpoint value

	min. 16 bar

- Remove special tools **0 496 146 (11 8 880)** and **0 493 129 (11 0 235)**.



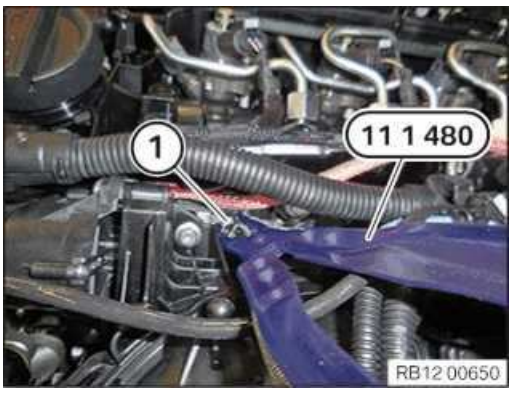
- Attach all connectors to the injectors.

  The connectors must lock audibly.

POSTPROCESSES

7 – Install glow elements

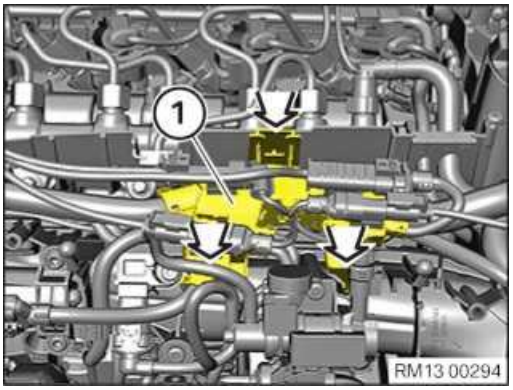
cardiagn.com



- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

- Tighten the glow element with the special tool or conventional tools.

Glow elements to cylinder head



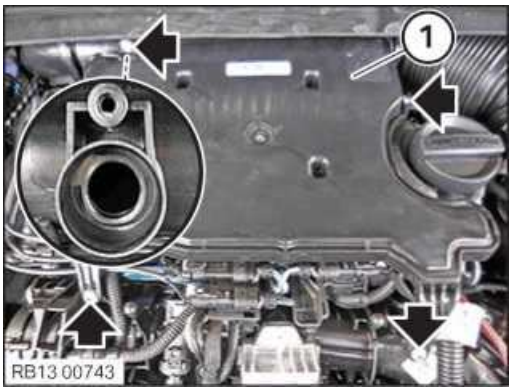
Glow element		Tightening torque	13 Nm

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

8 – Installing the cable clip for the intake plenum

- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.



9 – Install the acoustic cover for the injectors

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

cardiagn.com

10 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

11 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

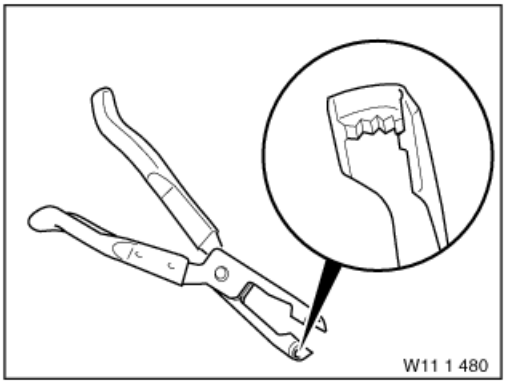
- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

Additional Information

Overview of Tightening Torques

Glow elements to cylinder head Used in step 7



Glow element		Tightening torque	13 Nm

cardiagn.com

Resonator to manifold and clean air pipe			Used in step 10
Screw TS6	Renew screw.	Tightening torque	5 Nm

Overview of Special Tools

0 490 796 (11 1 480) Pliers

Common	Used in step 5
Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

0 496 146 (11 8 880) Adapter

Common	Used in step 6
Usage	For compression testing.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 493 129 (11 0 235) Sensor

Common	Used in step 6
Usage	(Test probe, screw-in) For measuring "absolute compression" at all cylinders, engine: S14, S38, S50B30, S50B32, S50US, S52US, S54, S85
Included in the tool or work	0 490 613
Storage location	
Replaced by	
In connection with

11 00 039 Checking compression of all cylinders (B47)

Special tools required:

- 11 8 880
- 11 0 235

Necessary preliminary tasks:

- Remove all glow elements.

Warning!

On vehicles with manual gearbox:

There must be no drive position engaged during the starting operation.

Important!

To prevent the injectors from injecting, it is necessary to disconnect the injector plug connections.

Screw in special tools 11 8 880 and 11 0 235 .*Note:*
The compression check on all cylinders must have a constant battery voltage. If necessary, connect an auxiliary battery or charger.

The number of engine revolutions for the compression check must be identical for each cylinder. (The measuring result could be falsified.)

Technical data.

Required follow-up work:

- Install glow elements
- Check function of DDE, erase fault memory if necessary

cardiagn.com

00 Danger of injury if oil comes into contact with eyes and skin

Danger of injury!

Contact with eyes or skin may result in injury!

Possible symptoms are:

- Impaired sight
- Irritation of the eyes
- Reddening of the skin
- Rough and cracked skin

Protective measures/rules of conduct:

- Wear safety goggles.
- Wear oil-resistant protective gloves.
- Observe country-specific safety regulations.

First aid measures:

- Eye contact: Immediately flush eyes with lots of water for at least 15 minutes. In the case that it is available, use an eye wash bottle. If eye irritation persists, consult a doctor.
- Skin contact: Wash off with soap and water immediately. If irritation persists, consult a doctor.

  Note: Do not use solvents/thinners.

cardiagn.com

00 Danger of poisoning if oil is ingested/absorbed through the skin

Danger of poisoning!

Ingesting oil or absorbing through the skin may cause poisoning!

Possible symptoms are:

- Headaches
- Dizziness
- Stomach aches
- Vomiting
- Diarrhoea
- Cramps/fits
- Unconsciousness

Protective measures/rules of conduct:

- Fill oil in appropriately marked containers only.
- Do not fill oil in containers meant for drinking out of. (bottles for beverages, glasses or cups)
- Observe country-specific safety regulations.

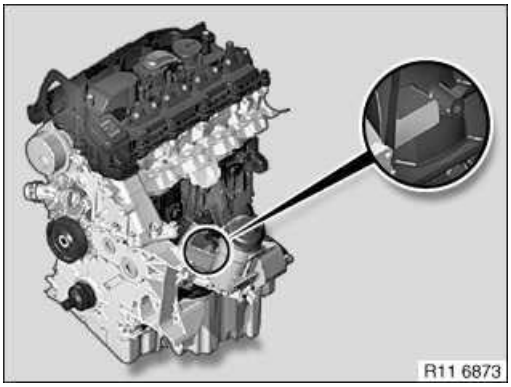
First aid measures:

- Do not induce vomiting.

  If the person affected is still conscious, he/she must rinse out their mouth with water, drink plenty of water and consult a doctor immediately.

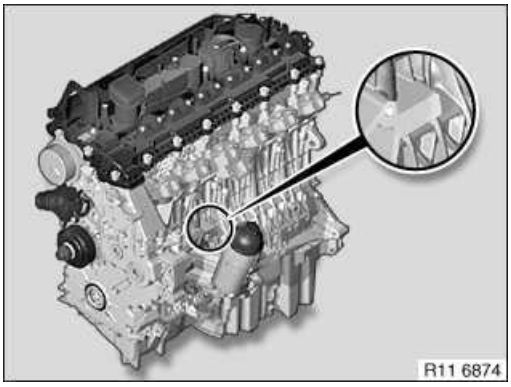
  Do not administer anything to an unconscious person via their mouth; place them in a stable position on their side. Call the emergency doctor immediately.

cardiagn.com



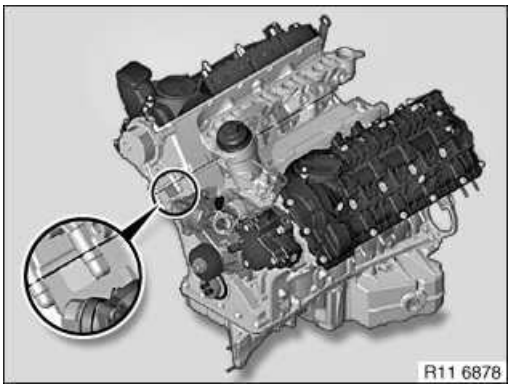
Engine identification

Engine number at the marked surface.



Replacement drives are already assigned a number containing the identification and engine number at the factory.

The old drive number must be imprinted for replacement crankcases.



Magnesium crank cases feature a label, the engine number does not need to be embossed.

11 00 ... Engine oil change (B47)

Warning!

Risk of scalding!

Carry out work on the vehicle only when wearing oil- and heat-resistant protective gloves incl. forearm protection, face guard and protective apron.

Attention!

Carry out engine oil service only when the engine is at operating temperature.

Observe the exact engine oil filling capacity.

Overfilling the engine with engine oil will result in **engine damage**.

Attention!

Risk of damage!

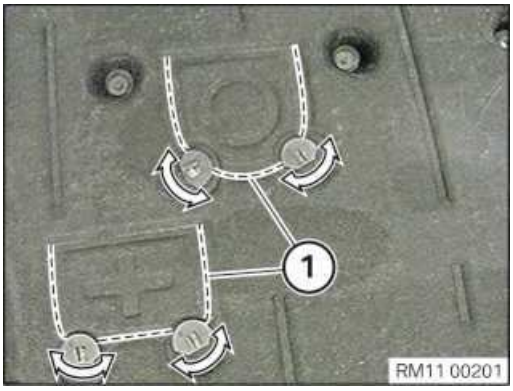
When working on the engine oil, coolant or fuel circuit, it is essential always to protect the alternator against dirt contamination.

Cover alternator with suitable materials.

Recycling:

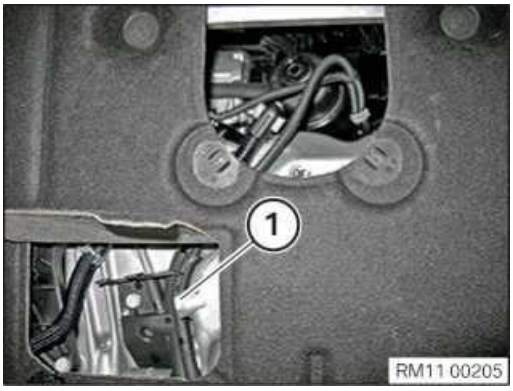
Catch and dispose of drained engine oil in a suitable collecting vessel.

Observe country-specific waste disposal regulations.

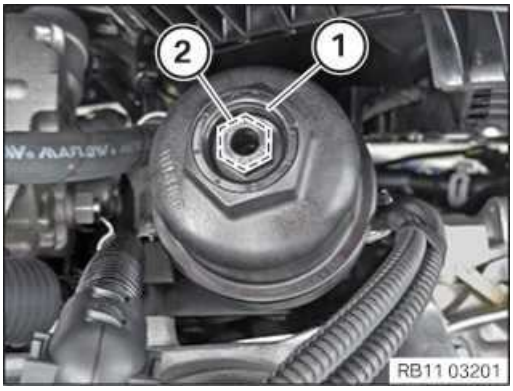


Necessary preliminary tasks:

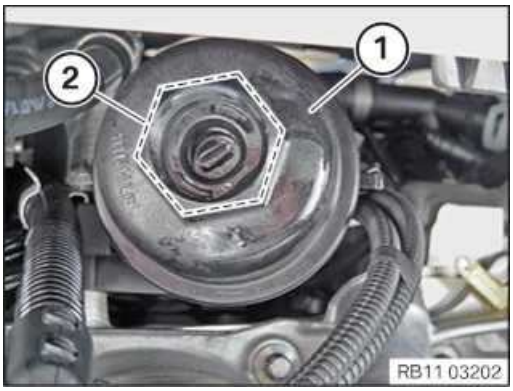
- Opening the oil filler cap



Removal:

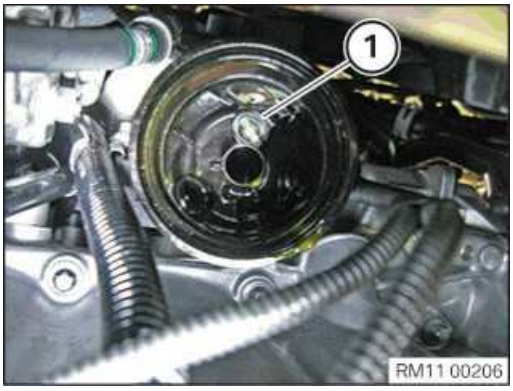


Open service flaps (1) in front underbody protection.

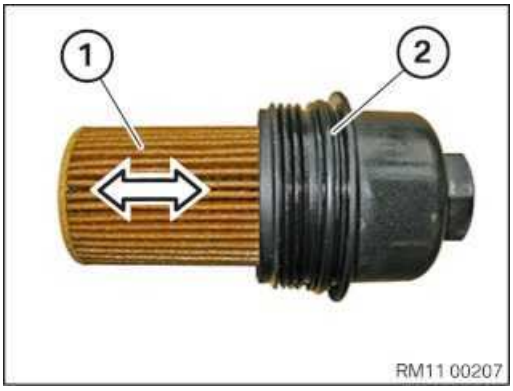


cardiagn.com

Remove oil drain plug (1).
Drain the engine oil.



Undo oil drain plug (1) at hexagon head (2).
Drain the engine oil.



Undo oil filter cover (1) at hexagon head (2).

Installation:

Check the freedom of movement of the non-return valve (1).

cardiagn.com

Renew oil filter (1).

Parts: Oil filter (1).

Ensure that the oil filter (1) engages audibly.

Renew O-ring (2) and coat with engine oil.

Parts: O-ring (2).

Replace screw with O-ring (1)

Parts: Screw with O-ring (1).

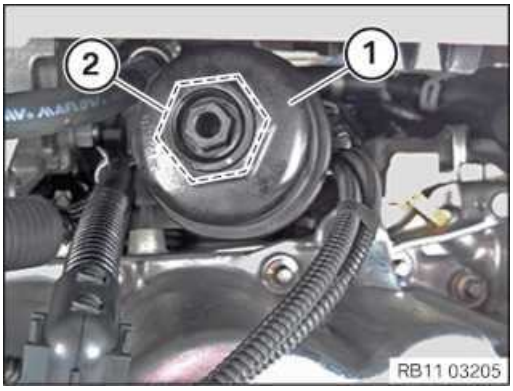
Wet the O-ring (1) with engine oil.

The thread (1) must be cleaned before installation without fail with original BMW brake cleaner (part number: 83 19 2 365 214).

The thread must be completely free of engine oil!

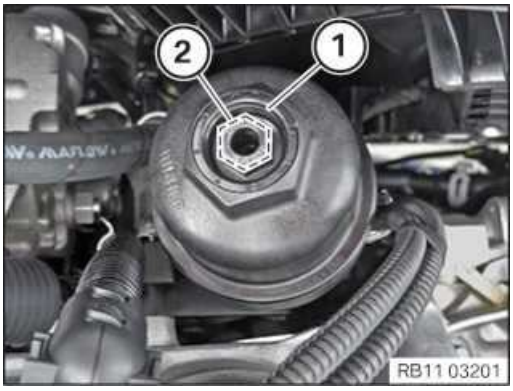
Attention!

Risk of damage!

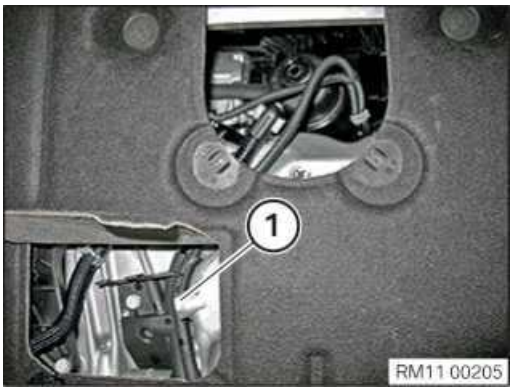


Elastomers (O-rings) may not touch brake cleaner!

Let the brake cleaner dry completely, if necessary blow dry with compressed air.



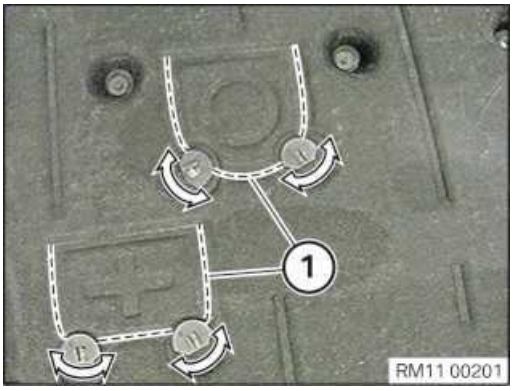
Oil drain plug (1).



cardiagn.com

Install oil filter cover (1) and tighten at hexagon head (2).
Tightening torque: 11 42 1AZ.

Tighten oil drain plug (1) at hexagon head (2).
Tightening torque 11 42 6AZ.



Renew the sealing ring.
Parts: Sealing ring.
Tighten oil drain plug (1).
Tightening torque: 11 13 1AZ.

Pour in engine oil.
Close oil filler cap .
Checking oil level:

- Vehicle horizontal
- Start engine and run at idle until oil pressure indicator light goes out
- Switch off the engine
- Check engine oil level using the oil dipstick

Check oil filter cover and oil drain plug of the oil sump for tightness.

cardiagn.com

Close service flaps (1) in front underbody protection.

cardiagn.com

11 00 300 Engine oil consumption measurement

Attention!

This procedure for measuring oil consumption may not be used for the S 85 due to the oil pan design.

Many complaints about oil consumption are caused by the oil level being measured using the wrong method.

The oil consumption should be measured after a distance of 7,500 km at the earliest, as the process of running in the engine will not have been essentially completed and the engine oil consumption stabilised until this distance has been covered.

Engine oil consumption that may occur in an engine can only be determined by the customer on the basis of the refilled engine oil quantity. As soon as the engine oil level falls below the MAX mark on the dipstick, many customers top up the engine oil without paying attention to a number of basic rules, such as the vehicle must be standing on level ground, a certain period of time must be left to allow the oil to flow back to the sump. In such cases, the available container sizes (e. g. 1-litre can) make it easy to top up above the MAX mark. Too much added engine oil is damaging to the engine and is consumed more quickly due to the splash effect.

It is therefore recommended to allow the engine oil level to the MIN mark and only then to add the required engine oil quantity. The distance between the marks is equivalent to approx. 1.0 to 1.5 litres.

The procedure for checking the oil level is given in the Owner's Handbook for the vehicle concerned.

The service delegates will only deal with claims made under warranty if exact measurements by weighing are available (see below).

Measuring oil consumption by weighing:

To assess a warranty or goodwill claim, only the following oil consumption measurement method by weighing can be accepted (this must have been carried out by a BMW contractual partner):

Note:

The engine must not leak any oil.

Engine oil may only be drained off when the engine is at its normal operating temperature. The engine oil temperature must be at least 90 °C and read off on the diagnosis system.

Preparation:

1. Eliminate any leaks and traces of oil before measuring the engine oil consumption.
2. Allow the engine to run at idling speed for 5 minutes, during which the engine oil temperature must not drop below 90 °C.
3. Unscrew the main flow oil filter cover (the engine oil will flow back into the oil sump from the oil filter housing).
4. Unscrew the oil drain plug.
5. Allow the engine oil to drain off for 15 minutes.
   If necessary, remove the fan/fan cowl.
6. Turn the engine once through 360 degrees by the vibration damper.
7. Allow the engine oil to drain off for 15 minutes.
8. Retighten the primary flow oil filter.
9. Pour in the specified engine oil quantity for the engine type in question (with filter change).
10. Drive the vehicle for a distance of at least 1,000 km/500 miles. Increasing the mileage will produce significantly better measuring results.
    Measurement procedure:
11. Check the engine for leaks; if the engine is not tight, the examination will not be meaningful.
12. Prepare the measuring container to be able to capture the oil quantity.
13. Allow the engine to run at idling speed for 5 minutes, during which the engine oil temperature must not drop below 90 °C.
14. Unscrew the main flow oil filter cover (the engine oil will flow back into the oil sump from the oil filter housing).

cardiagn.com

15. Unscrew the oil drain plug.
16. Allow the engine oil to drain off for 15 minutes.
    If necessary, remove the fan/fan cowl.
17. Turn the engine once through 360 degrees by the vibration damper.
18. Allow the engine oil to drain off for 15 minutes.
19. Weight the **amount of drained engine oil**. (Engine oil has a density of about 0.86 g/cm³ at room temperature.)

$$\text{Engine oil consumption} = \frac{\text{Amount of oil added (cm³) - amount of oil drained off (g): 0.86 g/cm³}}{\text{mileage reading when draining - mileage reading when adding engine oil}}$$

Example:

Volume of oil added at mileage reading 44,800: 4.000 cm³

Weight of oil added at mileage reading 45,900: 2.700 g

$$\text{Engine oil consumption} = \frac{\text{4.000 cm3 - 2.700 g : 0.86 g/cm³}}{\text{45,900 km - 44,800 km}} = 0.78 \text{ cm³/km}$$

0.78 cm³/km = 0.78 l/1,000 km

Test certificate for engine oil consumption:

Vehicle data: _____

BMW (type): _____

Chassis number: _____

Added oil quantity (in ccm):	_____ ccm	at kilometre reading:_____
less drained off oil quantity (in g) : 0.86 (g/ccm)	_____ ccm	at kilometre reading:_____
=> oil consumption:	_____ ccm	=> mileage: _____ km

Oil consumption [l/1000 km] =

_____ *[ccm] oil consumption* _____ [km] mileage

Oil consumption after balancing out: _____ l/1000 km

Oil grade: _____

Oil grade: _____

Viscosity: _____

Cause of damage: _____

_____ _____

11 00 ... Handling components after flood damage

Flood damage can occur if the permissible fording depth of a vehicle is exceeded. Ingress of water can cause damage to the engine (water shock) or components.

Because dirt particles generally enter into the component with the water (e.g. starter motor, wiring harness), the components need to be thoroughly inspected.

Residual moisture in the components leads to corrosion (increased contact resistance in the component), which can lead to a component failure at a later time.

If water ingress into the electrical components cannot be ruled out, it is recommended to replace the component to ensure correct functioning through the vehicle lifetime.

cardiagn.com

11 00 590 Installing the exchange engine (B47)

Special tools required:

- 11 8 030
- 2 288 380

Attention!

Do not remove transportation retainer (adapter) of high pressure pump without special tool.

Risk of damage to timing chain drive.

Necessary preliminary work:

- Remove engine with gearbox.
- Remove transmission.
- Remove high pressure pump.
- Remount flywheel.

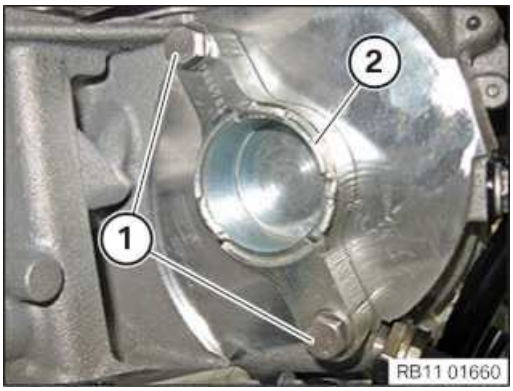
Attention!

Do not remove transportation retainer (1) without special tool 11 8 030 .

Remove protective cap (1) on oil sump.

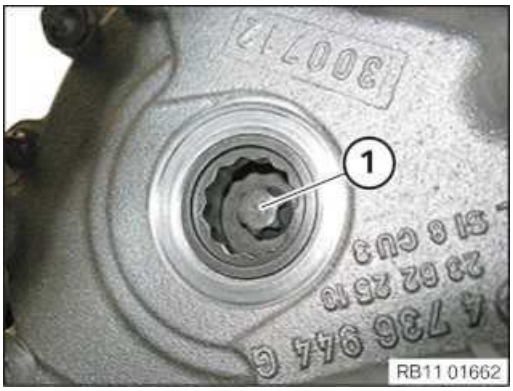
cardiagn.com

Attention!



On vehicles with manual gearbox, an additional bore hole that can be confused with dowel hole is located in front of dowel hole.

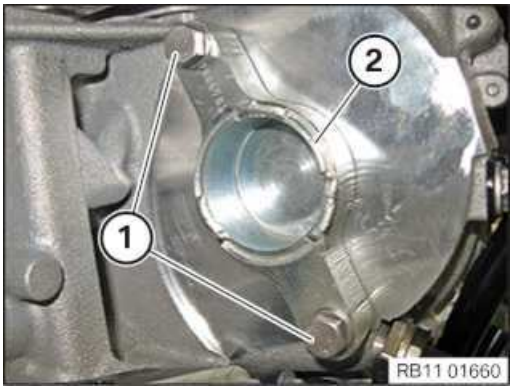
The special tool 2 288 380 must be able to be pushed into the oil sump up to the offset.



Disconnect crankshaft with special tool 2 288 380 .

Screw in special tool 11 8 030 .

Release screws (1) from the transportation retainer (2).

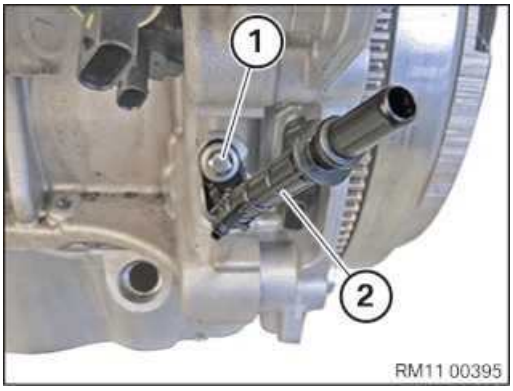


Attention!

The special tool 11 8 030 remains in the timing case.

Central bolt (1) remains in camshaft sprocket.

Remove central bolt (1).*Note:*
The central bolt (1) is supported on special tool 11 8 030 until the transportation retainer is pressed out.



cardiagn.com

Remove transportation retainer (2).

Install high pressure pump.

Remount transportation retainer (1).

Attention!

Risk of damage!

Non-compliance may cause the brake servo to fail!

Do not dismantle non-return valve (2) into separate components!

Before installing non-return valve (2), check if the installation opening in the crankcase is clear and clean.

Release screw (1).

Remount non-return valve (2).

Parts: Replace O-ring.

Tighten screw (1).

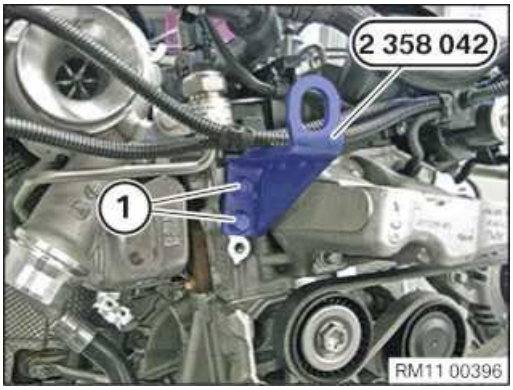
Tightening torque: 11 00 2AZ.

Required follow-up work:

- Remount all assemblies and sensors
- Position exchange engine on table lift with workshop crane
- Fit transmission.
- Install engine with transmission.

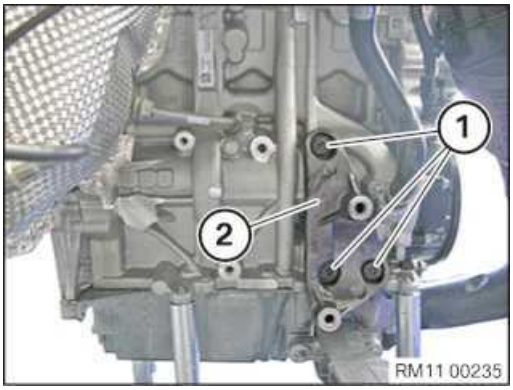
cardiagn.com

Mounting engine on assembly stand (B47)



Special tools required:

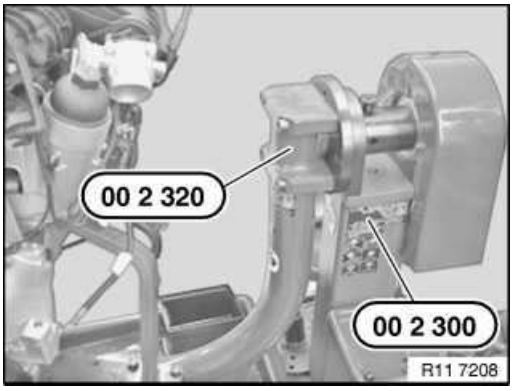
- 2 358 042
- 00 2 300
- 00 2 320
- 2 288 357
- 11 9 030
- 11 0 070



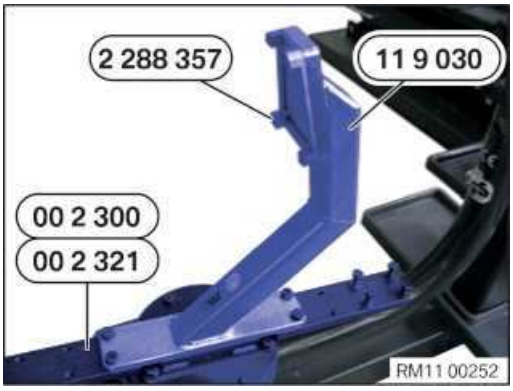
Important!
Follow manufacturer's instructions.

Necessary preliminary tasks:

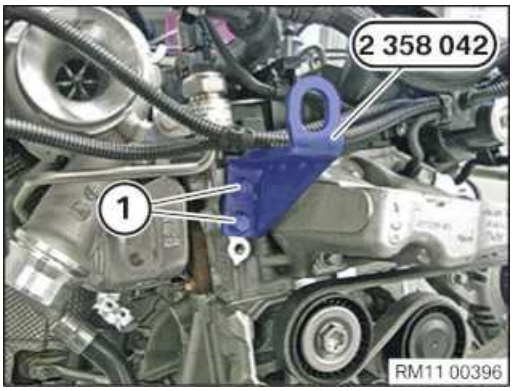
- Remove engine with transmission.
- Remove transmission.



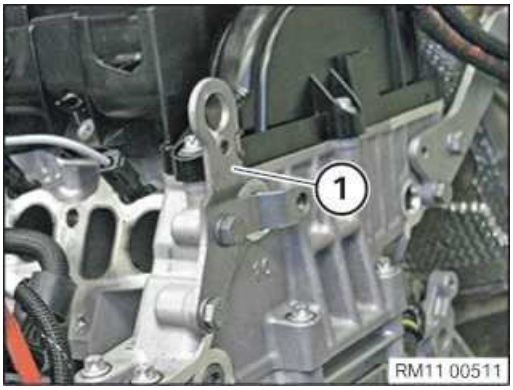
The securing eye 2 358 042 is to be fastened with the screws (1).
Tightening torque: 11 11 4AZ.



Release screws (1).
Remove adapter plate (2).
Installation note:
Tightening torque: 11 00 4AZ.

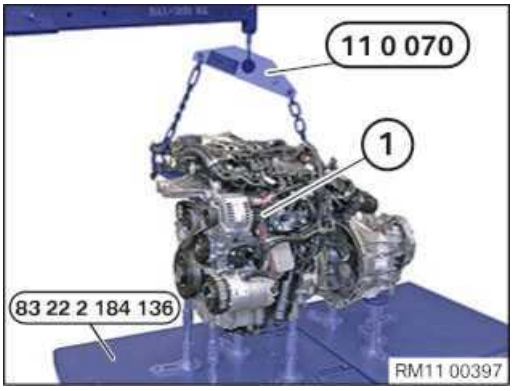


cardiagn.com



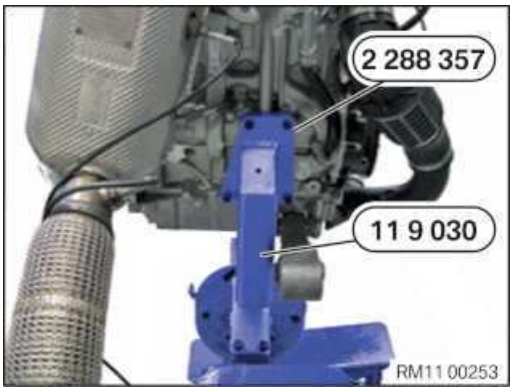
Prepare special tool 00 2 300 together with special tool 00 2 320 (00 2 321).

Prepare special tool 2 288 357 together with special tool 11 9 030 .



Note:
Attach engine lifter to securing eye 2 358 042 .

Note:
Attach engine lifter to the available securing eye (1).



cardiagn.com

Lift engine (1) with workshop crane and special tool 11 0 070 from table lift (83 22 2 184 136).

Lift engine with workshop crane onto assembly stand.

Bolt special tools 11 9 030 and 2 288 357 to engine.
Tightening torque: 11 11 4AZ.
Fix special tool 11 9 030 to assembly stand 00 2 300 .
Tightening torque: 11 11 5AZ.

Required follow-up work:

- Suspend engine from workshop crane
- Remove engine from assembly stand
- Use workshop crane to place engine on table lift
- Attach transmission.
- Install engine with transmission.

cardiagn.com

3.3	All	Brake cleaner	83 19 2 365 214	Clean.

4.0 Lubricant for **application**.

	Designation in repair instructions	Designation, Electronic Parts Catalogue	Part number, Electronic Parts Catalogue	Application examples
4.1	N12, N13, N18, N20, N26, N42, N46, N46TU, N51, N52, N52KP, N52TU, N55, N62, N62TU, N63O0, N63O1, N63O2, N73 S55, S63T0 B38, B48, B58	Lubricating grease Longtime PD1	83 19 2 160 340	For greasing the splined shaft on actuator drive/gearing of intermediate shaft.
4.2	M47, M47TU, M47T2, M57, M57TU, M57T2,	High-temperature assembly paste	83 23 0 309 003	For greasing the thread on the exhaust turbocharger.
4.3	N12, N13, N14, N16, N18 N20, N26, N40, N42, N45, N45TU N46, N46TU, N43. N51, N52, N52Kp, N52TU, N53, N54, N55. N62, N62TU, N63O0, N63O1, N63O2 N73, N73H, N74. S63T1, S65, S85. B38, B48, B58	High temperature paste	83 19 2 158 851 83 19 2 158 852	For greasing the threads on the oxygen sensors.

cardiagn.com

4.4	N47, N47O1 N47C1, N47T N47D1 N57 N57D1 N63O0, N63O1, N63O2 S63, S63T0	Copper paste	81 22 9 400 794	For greasing the double hex head bolt on the exhaust turbocharger. For greasing the central bolt on the VANOS gear.
4.5	M47, M47TU, M47T2 M57, M57TU, M57T2 N47, N47O1 N47C1, N47T N47D1 N57 N57D1	High-temperature grease (UrethynE2).	83 23 0 441 070	For greasing the injectors or injector shafts. Solenoid valve and piezo injector.
4.6	N47T0, N47T1 N57T0, N57T1, N57S1 B47T0,	Assembly paste	83 29 9 407 778	For lubricating the O-rings of the pressure pipes. Multistage turbocharging assembly.
4.7	W20	Assembly paste, grease	No longer greased.	For greasing the torsion splined shaft.
4.8	N63O1, N63O2	Assembly paste, grease	83 23 9 407 778	For greasing the central bolt on the crankshaft.
4.9	W20	Assembly paste, grease	83 23 9 407 778	Grease O-ring on alternator.

5.0 lubricant for **filling**

	Designation in repair instructions	**Designation, Electronic Parts Catalogue**	**Part number, Electronic Parts Catalogue**	**Application examples**
5.1	M47, M57	Exhaust turbocharger additive	83 19 2 362 168	For filling the exhaust turbocharger after the renewal.
5.2	B32, B36, B37, B38, B42, B46, B47, B48, B58	Exhaust turbocharger additive, petrol MSP	83 19 2 457 276	For filling the exhaust turbocharger after the renewal.

6.0 Lubricants to loosen locked **screw connections.**

	Designation in repair instructions	**Designation, Electronic Parts Catalogue**	**Part number, Electronic Parts Catalogue**	**Application examples**
6.1	M47, M47TU, M47TU2, M57, M57TU, M57TU2. N47, N47C, N47D1, N57, N57D1, N57S1 W16, W17, B37, B47, B57	Brunox lubricating grease	83 23 0 418 567	For releasing the glow elements.
6.2	E89 F10, F11.	Brunox lubricating grease	83 23 0 418 567	For releasing and tightening the screw connection of the rubber mounts.

7.0 **Leak detection spray and contact spray**

cardiagn.com

	Designation in repair instructions	Designation, Electronic Parts Catalogue	Part number, Electronic Parts Catalogue	Application examples
7.1	Petrol: N13, N20, N26, N54, N55 B38, B48, B58 Diesel fuel: M47, M47TU, M47TU2, M57, M57TU, M57TU2. N47, N47C, N47D1, N57, N57D1, B37, B47	Leak detection spray	83 19 9 407 861	Check charge air path for tightness. Example: leakage on charge air hose or charge air cooler.
7.2	S55	Contact spray	81 22 9 400 208	For cleaning and protecting of electrical plug connections.

cardiagn.com

11 00 050 Removing and installing engine

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

- Ensure there is a specific weight compensation on the motor vehicle.

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.

cardiagn.com

for any return shipments. Always package removed components straight away.

- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

Follow notes for repair work on the cooling system.

For additional information see:

Main group 17

17 00 ... Notes for working on the cooling system

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION

Filling **without** the vacuum filler device (watering can filling) is **not permitted**.

Non-compliance will result in danger of component damage and/or engine damage.

Filling specification **absolutely must** be adhered to.

The operation of the vehicle is not permitted unless the filling procedure has been completed. Otherwise, functional limitations (degradation) and/or overheating may occur.

A bleeding procedure is required after a part has been exchanged in the cooling system and/or after refilling the cooling system.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.

PRELIMINARY WORK

1 – Drawing off the air conditioning

- See additional information.

2 – Removing the acoustic cover

cardiagn.com

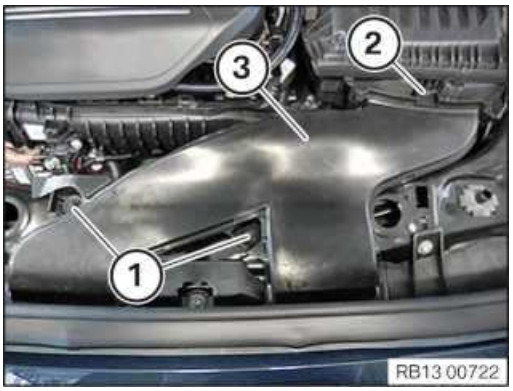
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

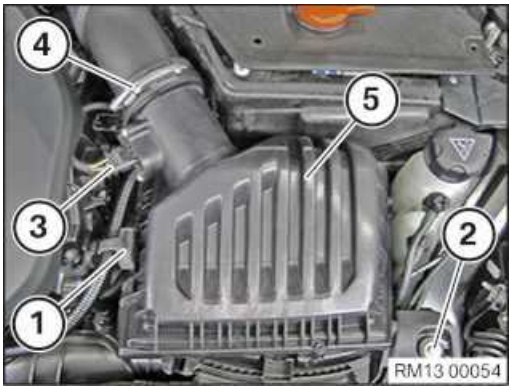
RISK OF DAMAGE



Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

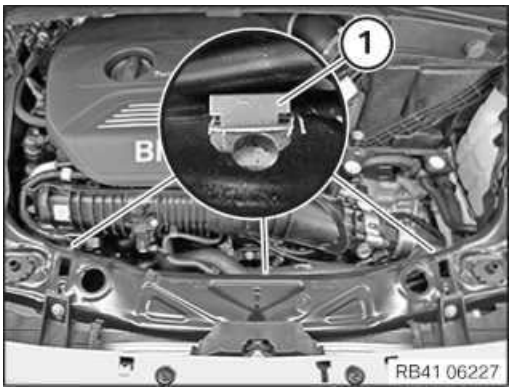
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



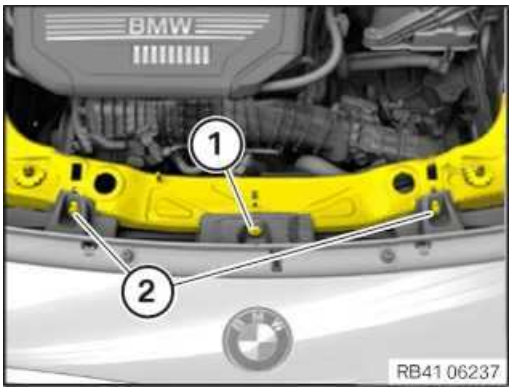
- Unclip the acoustic cover from the marked areas towards the top.

3 – Remove the intake neck for intake silencer housing

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

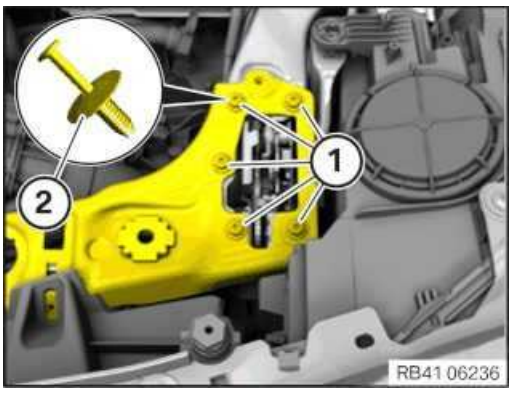


4 – Removing intake silencer housing

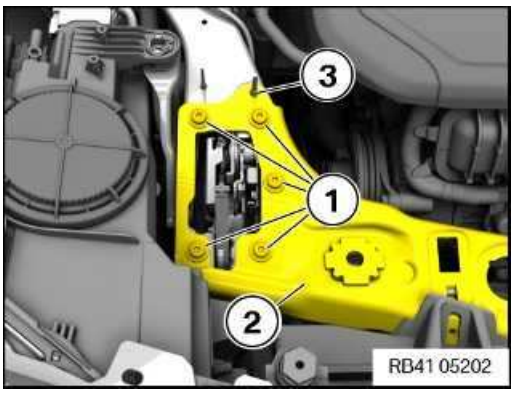


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

5 – Remove front cross connection



cardiagn.com



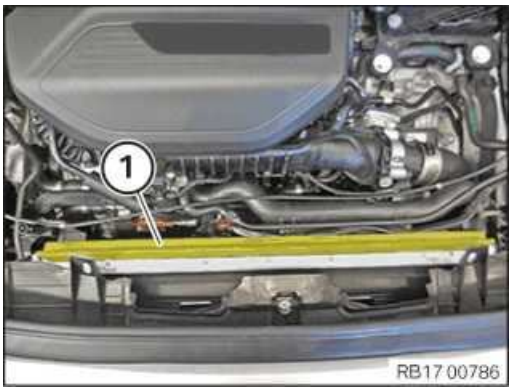
- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

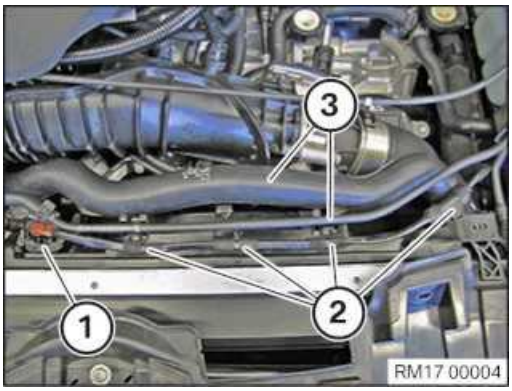
- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

6 – Removing the fan cowl with electric fan



WARNING

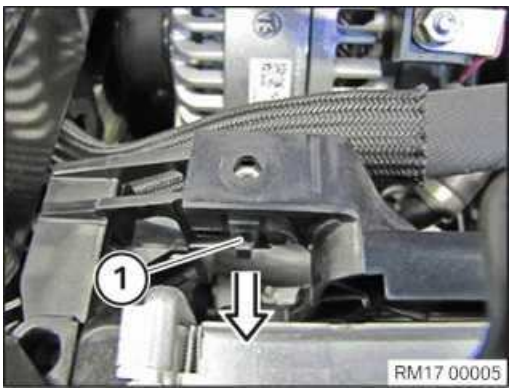
Hot surfaces.



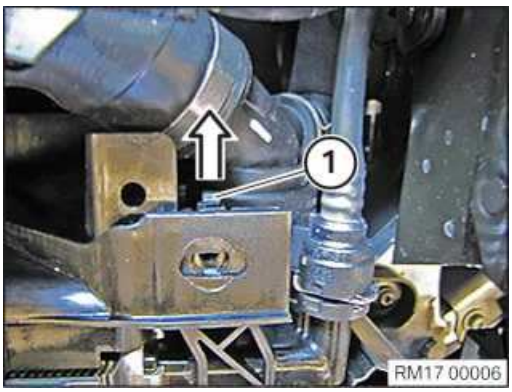
Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

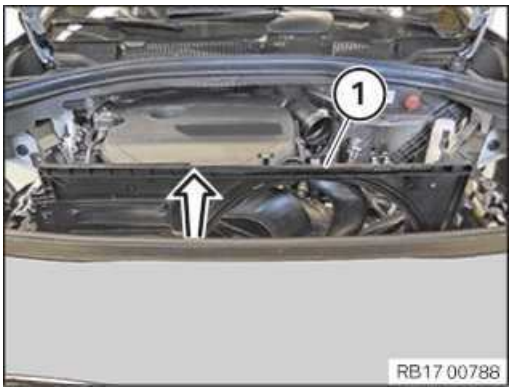


- Feed out and remove the sealing (1) from the radiator.

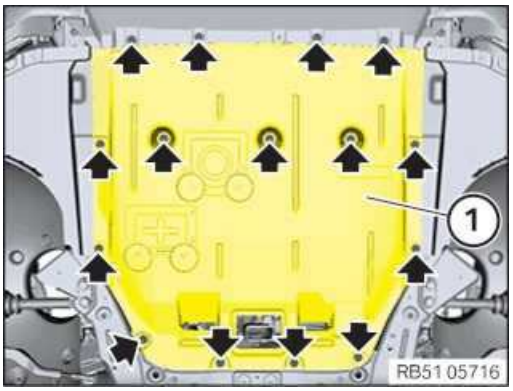


- Unlock plug connection (1) and disconnect.
- Unlock and loosen the clamps (2).
- Feed out connector (1) and place to one side.
- Thread off coolant line (3) and place to the side.

- Loosen screws (1).

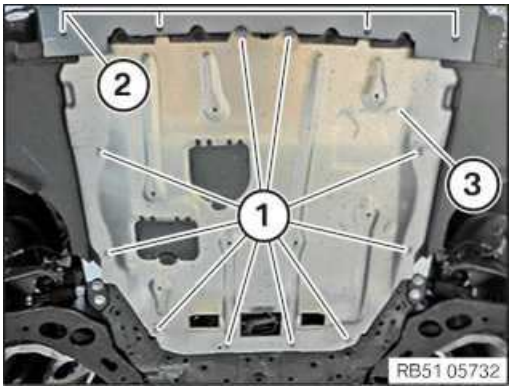


- Unlock the right lock (1) on the fan cowl in the direction of the arrow.



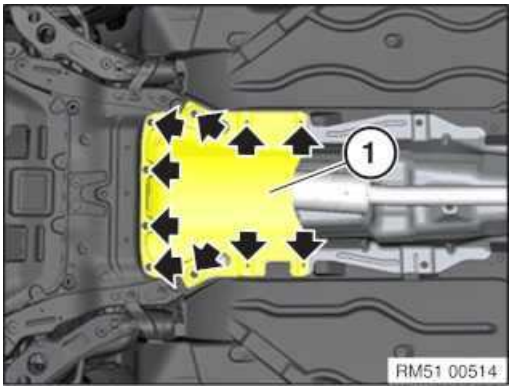
- Unlock the left lock (1) on the fan cowl in the direction of the arrow.

cardiagn.com



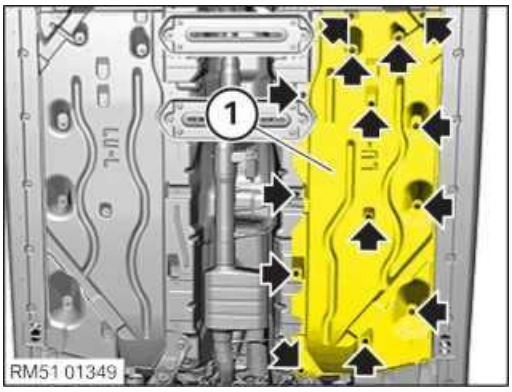
- Guide out fan cowl (1) in direction of arrow and remove.

7 – Removing the front underbody protection



- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).



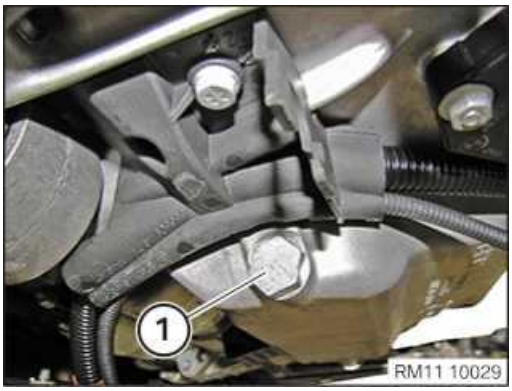
8 – If installed: Removing rear underbody protection

- Remove screws (arrows).
- Remove the rear underbody protection (1).

9 – Removing right underbody panelling

cardiagn.com

- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).



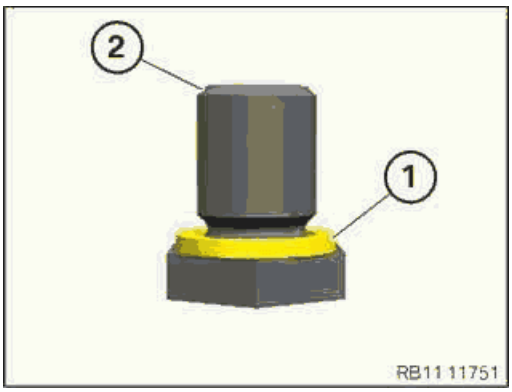
10 – Releasing the oil drain plug

WARNING

Hot fluids.

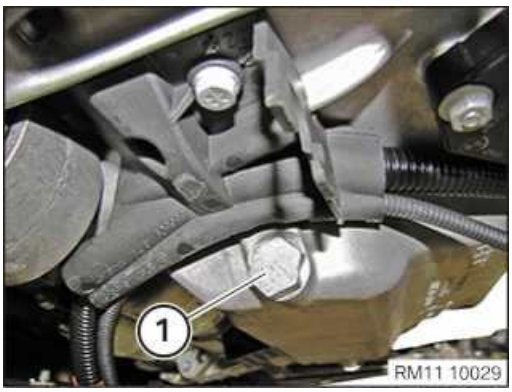
Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.



TECHNICAL INFORMATION

Catch and dispose of drained engine oil in a suitable collecting vessel. Observe country-specific waste disposal regulations.



- Release oil drain plug (1).
- Drain engine oil.

11 – Tightening the oil drain plug

- Renew sealing ring (1) on the oil drain plug (2).

  Parts: Sealing ring
- Guide in the sealing ring (1) on the oil drain plug (2) and install.

- Renew the sealing ring.

  Parts: Sealing ring
- Position oil drain plug (1) on the oil sump and tighten.

Oil drain plug on oil sump

M12x1.5	Renew the sealing ring.	Tightening torque	25 Nm

12 – Draining coolant

cardiagn.com

WARNING

Hot fluids.

Risk of scalding!

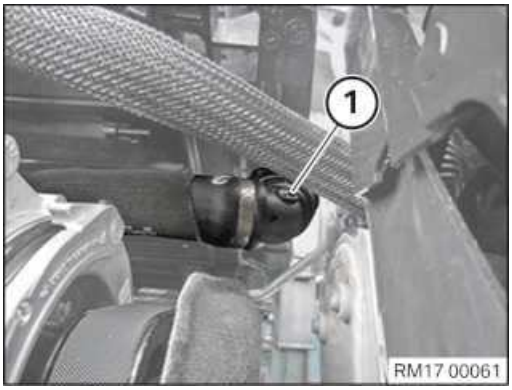
- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

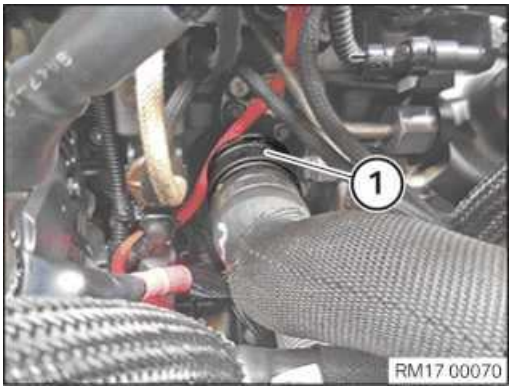
Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.



In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

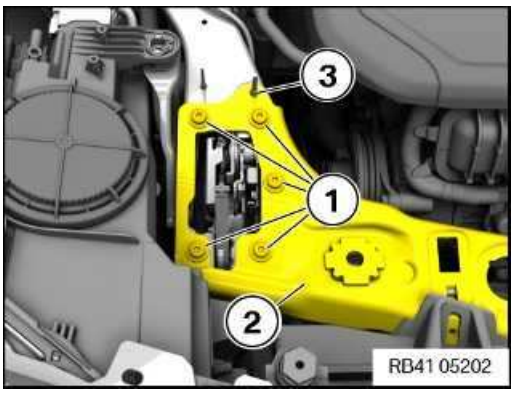
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen sealing cap (1).

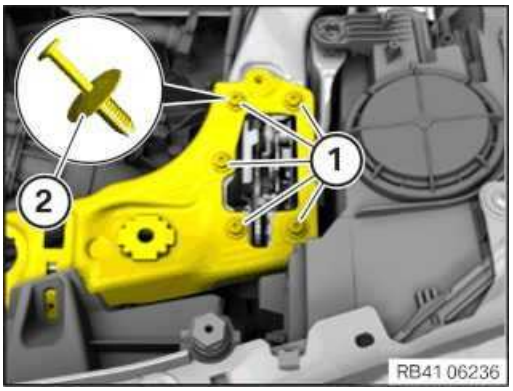
- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.



- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.

cardiagn.com

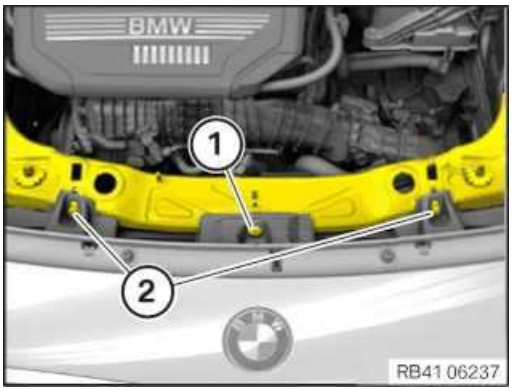
13 – Install front cross connection



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm

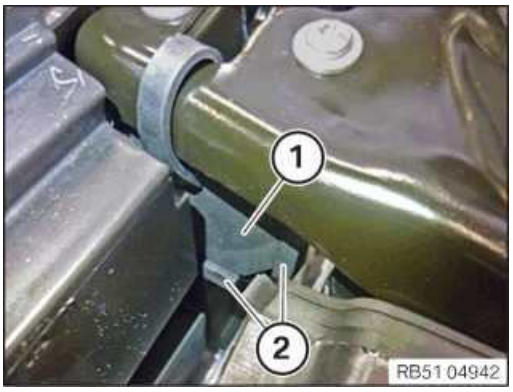
- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

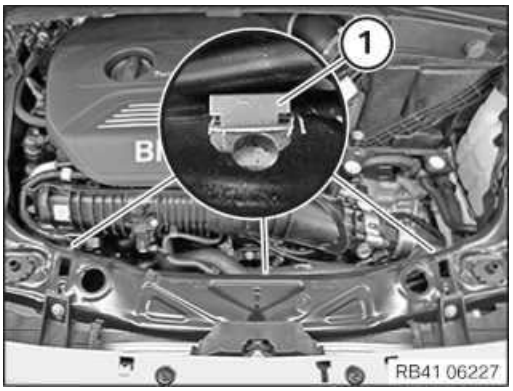
- Tighten down screws (2).

Air duct to upper connection



M6x20 screw		Tightening torque	11,8 Nm

- Tighten down screw (1).

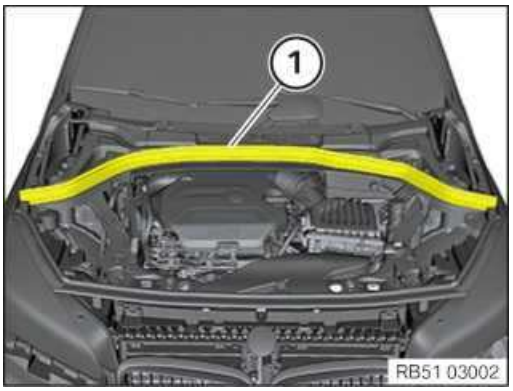


Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm

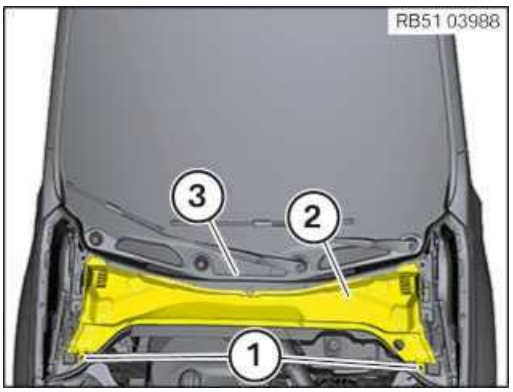
cardiagn.com

- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).



- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

14 – Remove the seal for the rear bonnet

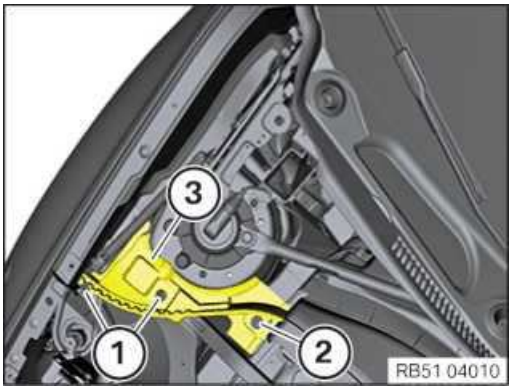


NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.

15 – Removing front cowl panel cover

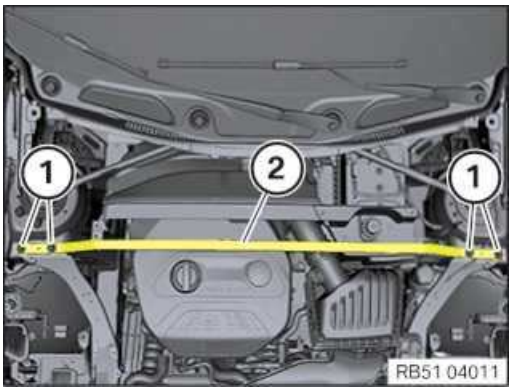


- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

16 – Remove suspension cross-brace

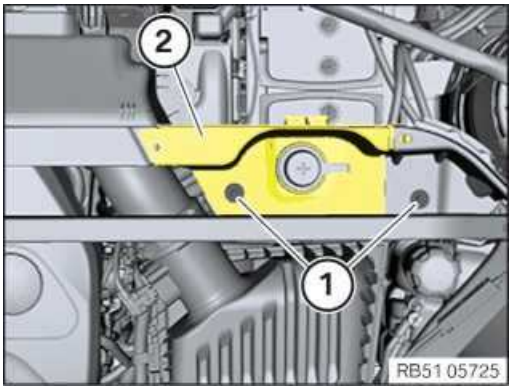
cardiagn.com

TECHNICAL INFORMATION



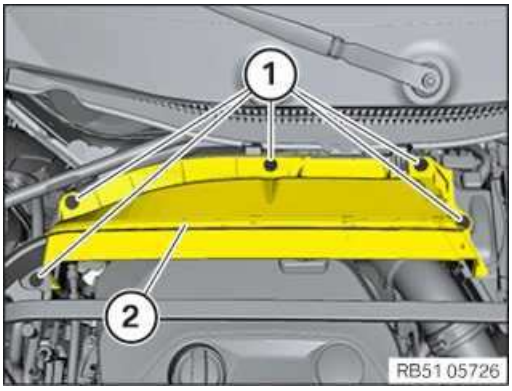
Driving without the strut brace/front end or tension strut is not permitted.

NOTICE



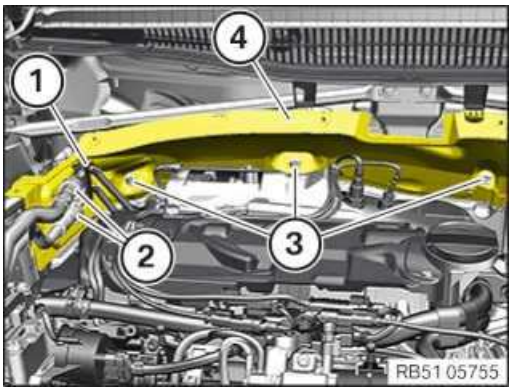
Description is for right component only. The procedure on the left side is identical.

- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).



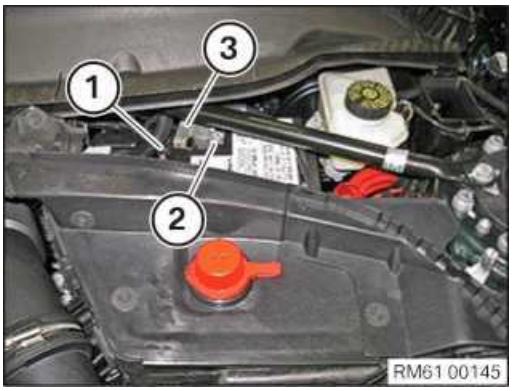
- Loosen screws (1).
- Remove strut brace (2).

17 – Removing the upper bulkhead cover



- Loosen screws (1).
- Guide out and remove the cover (2).

- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).



18 – Remove the rear bulkhead upper part

cardiagn.com

- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.

19 – Disconnecting the battery earth lead

- Unlock plug connection (1) and disconnect.
- Unfasten nut (2).
- Remove the battery earth lead (3) and secure to one side.

20 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

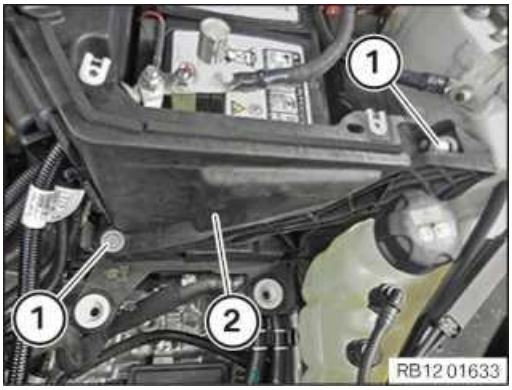
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

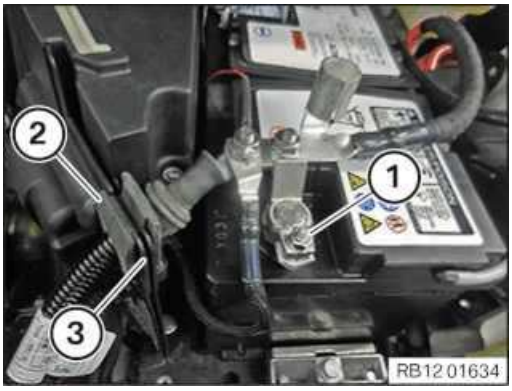
Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.



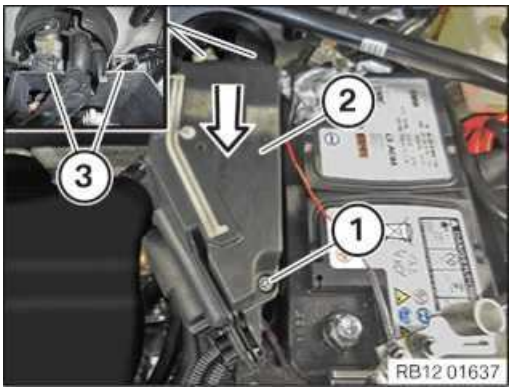
TECHNICAL INFORMATION

Follow instructions for removing and installing control units.
For additional information see: 12 00 ... Notes on removal and installation of control units

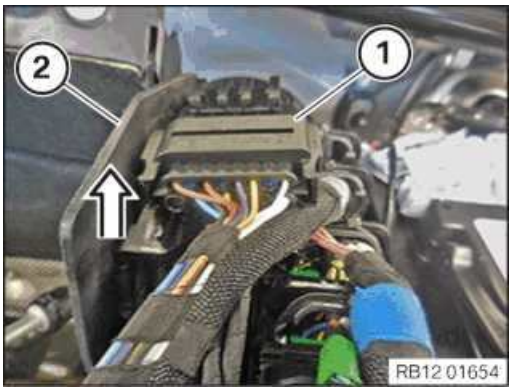


cardiagn.com

TECHNICAL INFORMATION

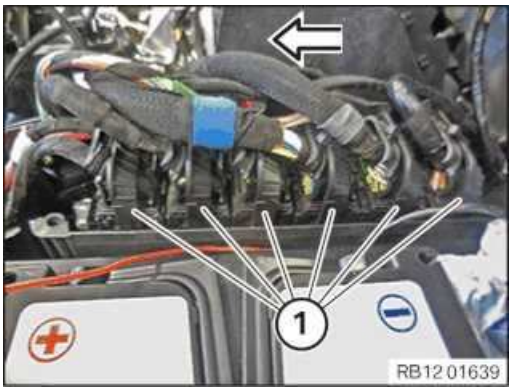


Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.

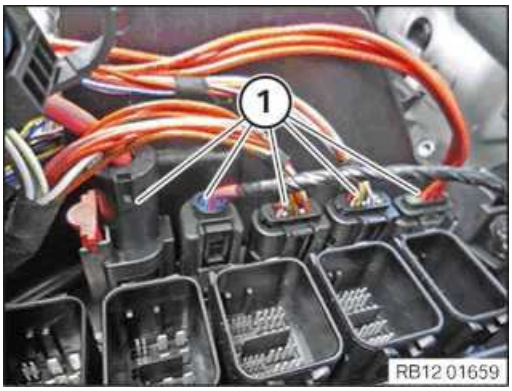


- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

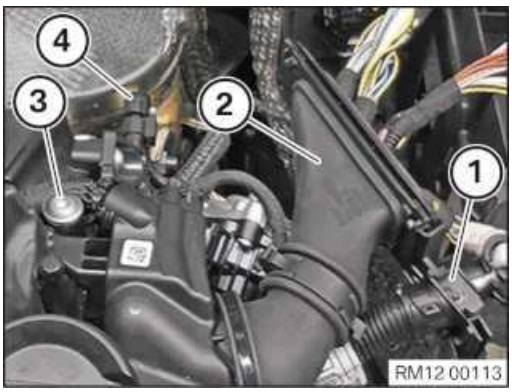
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



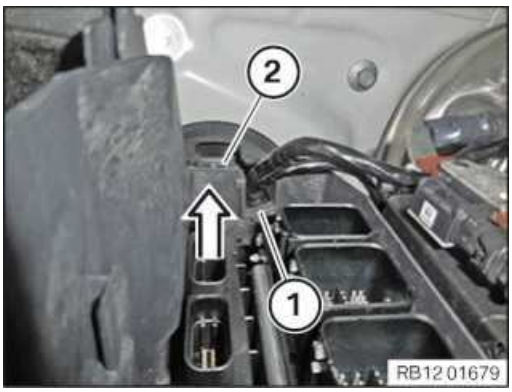
- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.



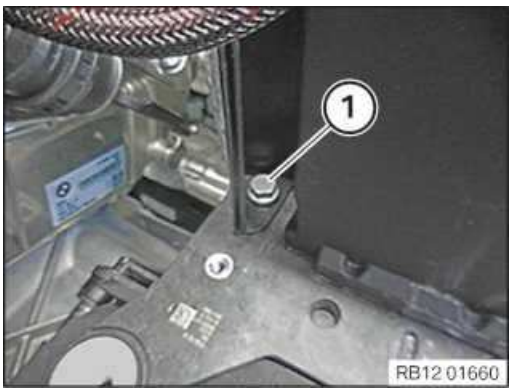
- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).



cardiagn.com

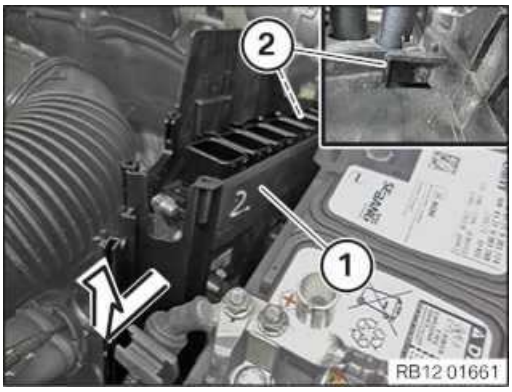


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).

- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

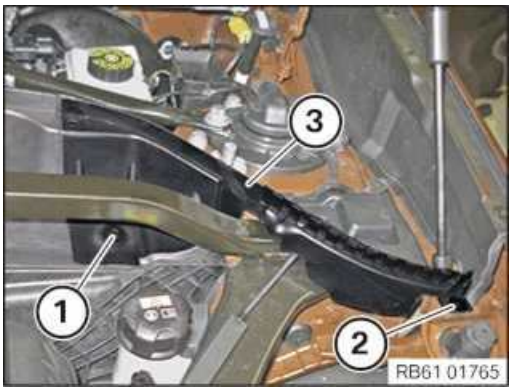


- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

- Loosen screw (1).

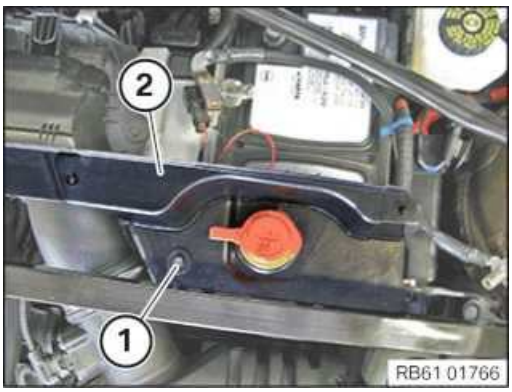
cardiagn.com

- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.



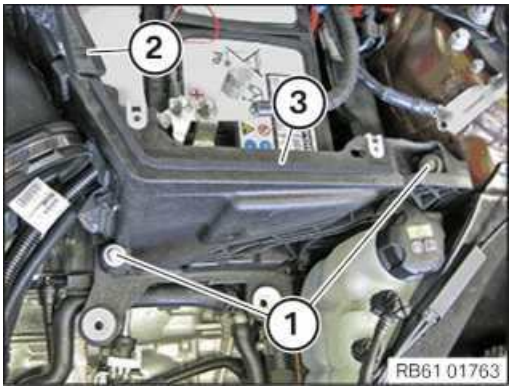
21 – Remove vehicle battery

WARNING



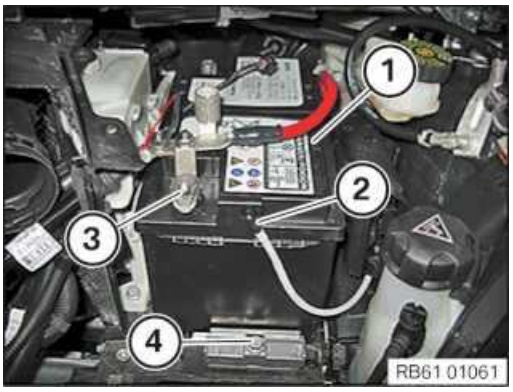
Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!



- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).



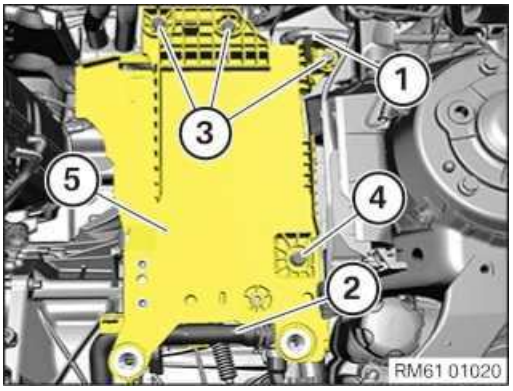
- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

cardiagn.com

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING



Unprotected battery terminals.

Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

22 – Remove battery holder

- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

23 – Removing both front wheels

▸ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

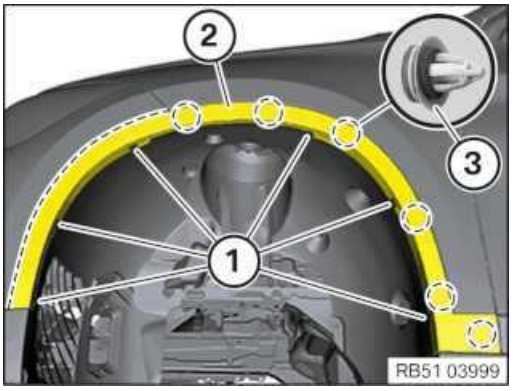
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

24 – Removing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

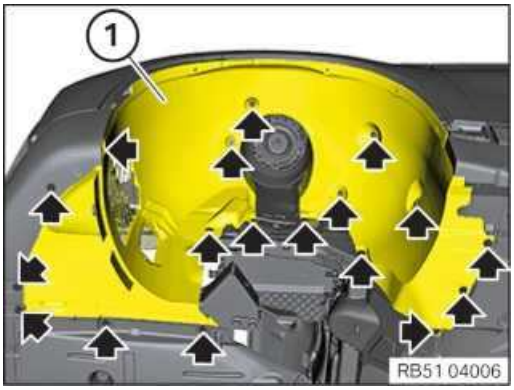
▸ **Remove the front wheel arch trim**



cardiagn.com

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.



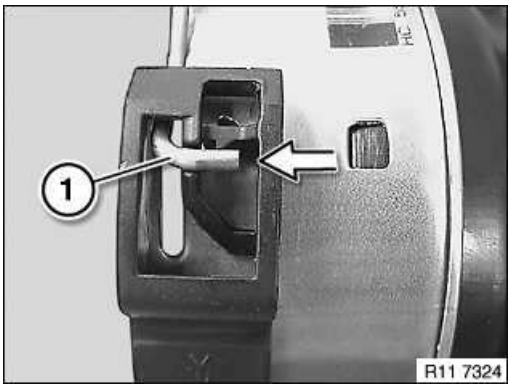
NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

▶ **Remove front wheel arch cover**

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

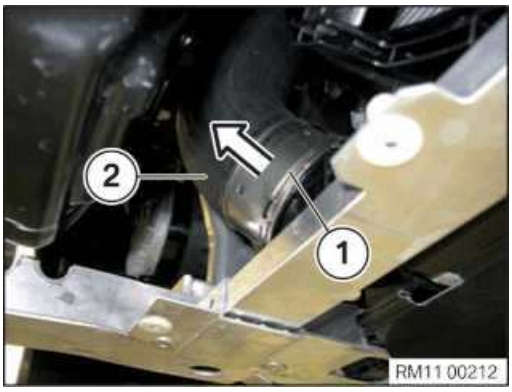


25 – Remove the pressure pipe between the throttle body and the charge air cooler

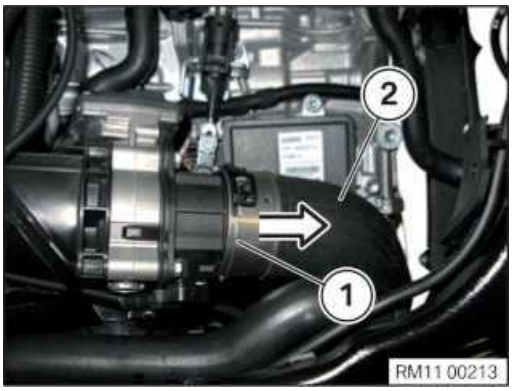
WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.



- Unlock the lock (1).

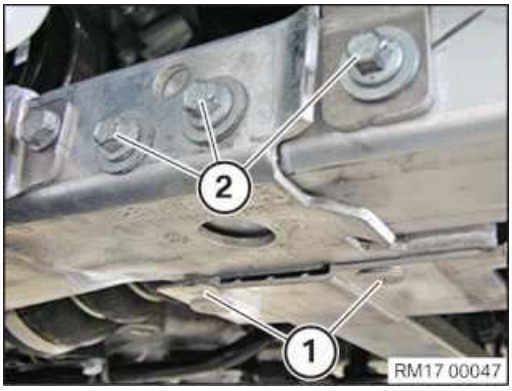
  The lock (1) must engage in the bracket (arrow).

cardiagn.com

- Unlock and detach the locks (1) on both sides.
- Guide out the pressure pipe (2) in the direction of the arrow and set it aside.

- Unlock and detach the locks (1) on both sides.
- Guide out the pressure pipe (2) in the direction of the arrow and set it aside.

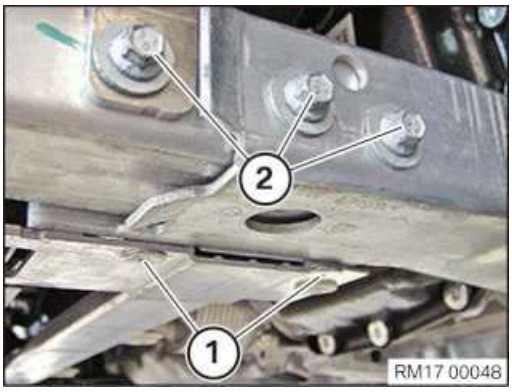
- Remove the pressure pipe (1) in the direction of the arrow.



26 – Removing the right charge air duct between the exhaust turbocharger and the charge air cooler

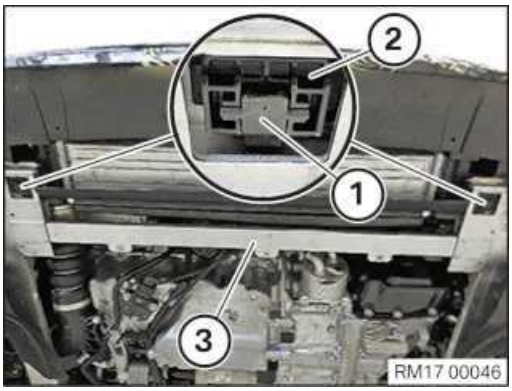
WARNING

Hot surfaces.

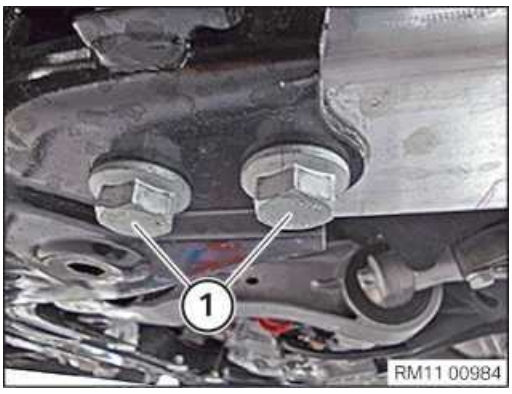


Risk of burning!

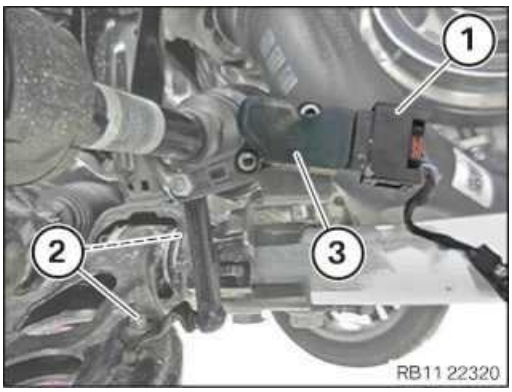
- Perform all work only on components that have cooled down.



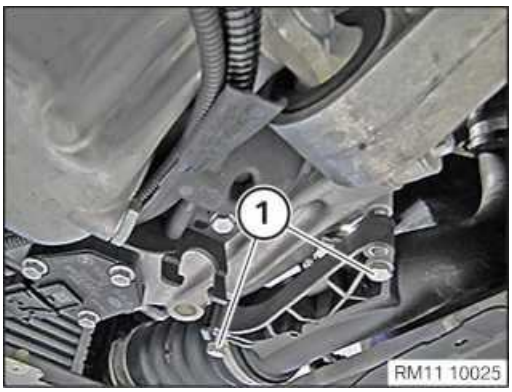
- Undo screws (2) at front left.
- Drill out blind rivets (1) at front left.



cardiagn.com

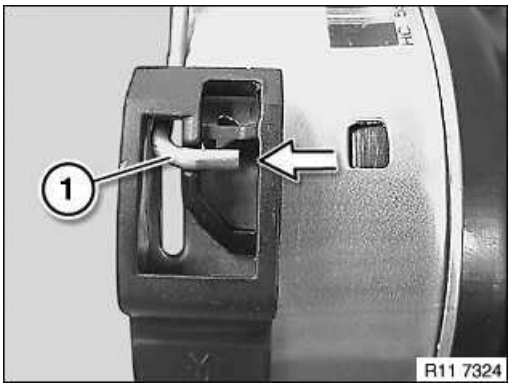


- Undo screws (2) at front right.
- Drill out blind rivets (1) at front right.

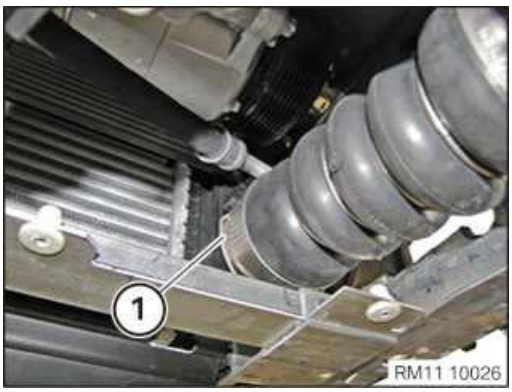


- Unlock locking pins (1).
- Thread out and remove locks (2).
- Thread out and remove cross connection (3).

- Release the screws (1) on the right front axle support.

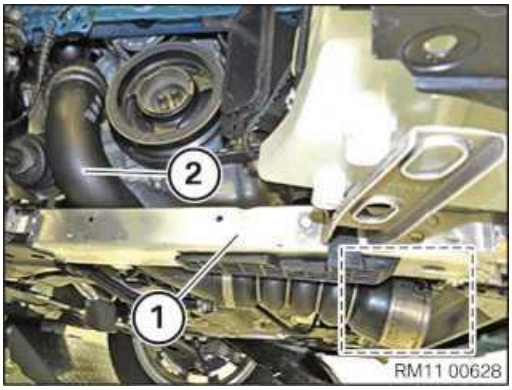


- **If installed:**
- Unlock and release plug connection (1).
- Loosen screws (2).
- Feed out the ride height sensor (3) and remove.



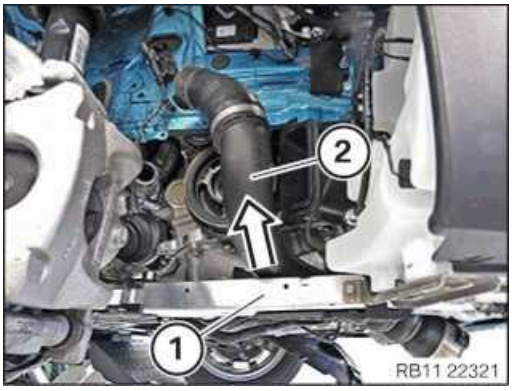
- Release screws (1) of charge air duct on right oil sump.

cardiagn.com



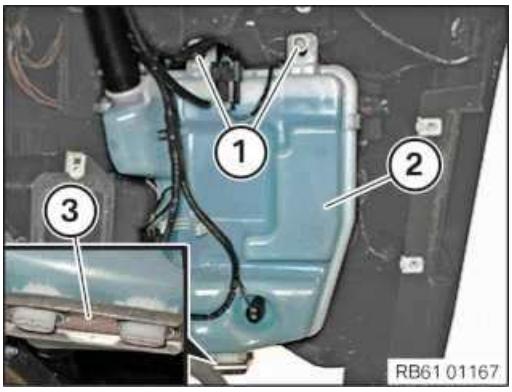
- Unlock lock (1).

  The lock (1) must engage in the bracket during unlocking (arrow).



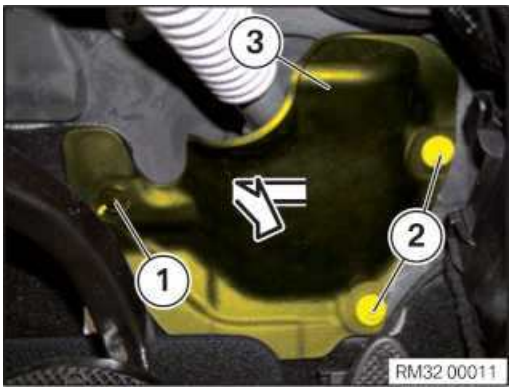
- Unlock and release the charge air duct (1) on the charge air cooler.

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (2) in the **marked** area towards the bottom and set it aside.



- Unlock and detach the locks (1) on both sides.
- Feed out the charge air duct (2) on the exhaust turbocharger in the direction of the arrow and set it aside.

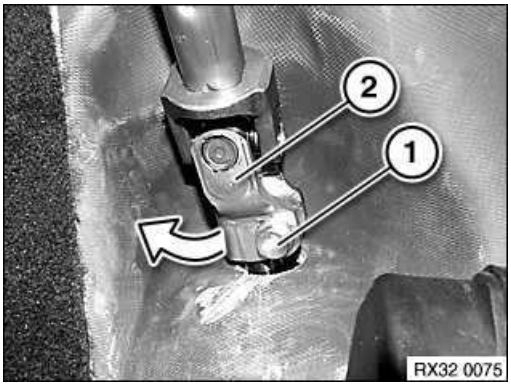
- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (1) in the direction of arrow between the side member and the deformation element and remove.



27 – Remove the washer fluid reservoir from the fixture

cardiagn.com

- Loosen screws (1).
- Guide the washer fluid reservoir (2) up and out of the fixture (3) and set it aside.



28 – Releasing lower steering shaft from steering gear

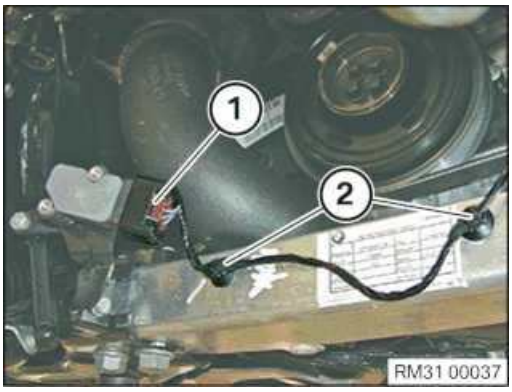
- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!

- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

29 – Securing radiator on left and right



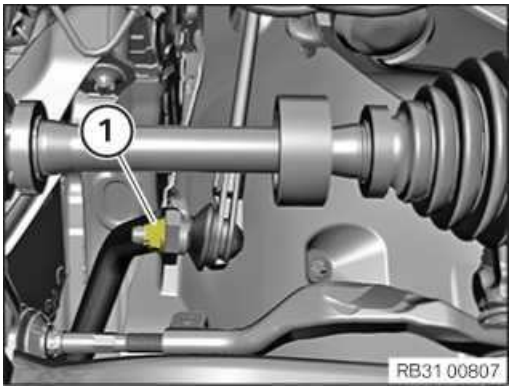
NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

30 – With right installation: Detaching ride height sensor cable

cardiagn.com



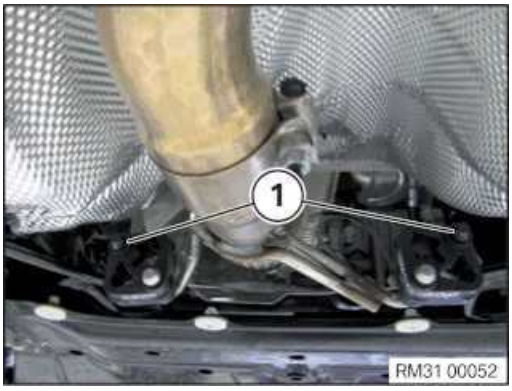
- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

31 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▸ **Detach the anti-roll bar from the anti-roll bar link**

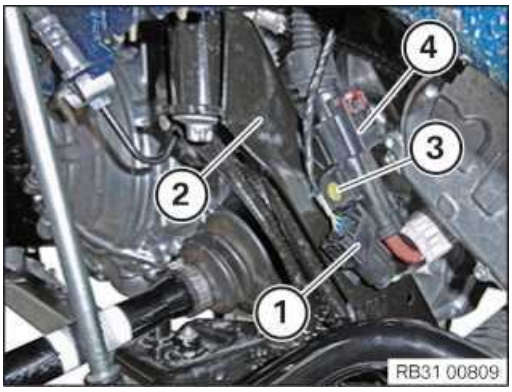


- Unfasten nut (1).

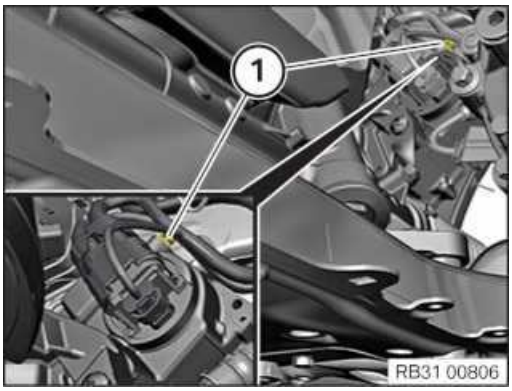
Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .

32 – Detaching rubber mount from front axle support

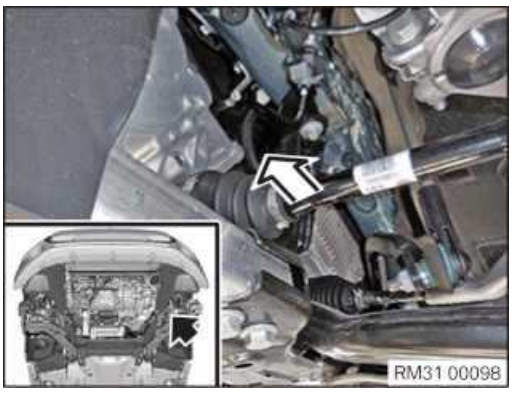


- Spray rubber mount (1) with lubricant and release from holder on front axle support.



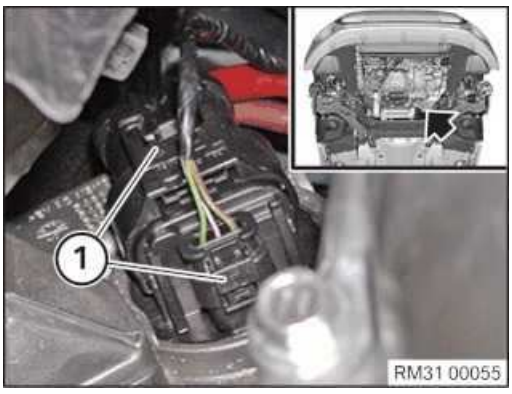
33 – Disconnecting plug connections from steering gear

▸ **If installed: Detach connectors from the front axle carrier**

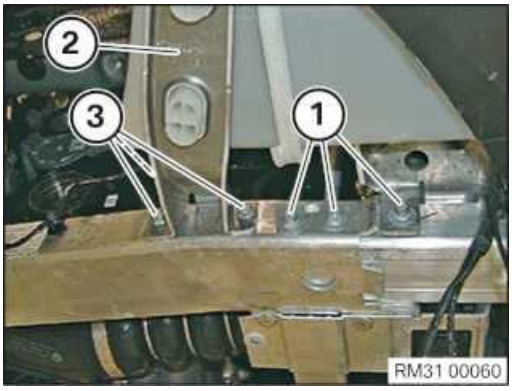


cardiagn.com

- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).



- Disconnect wiring harness (1) from steering gear.

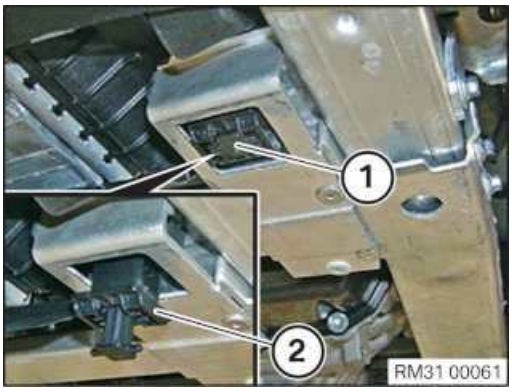


- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.

- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

34 – Releasing the mounted part from the front axle support



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

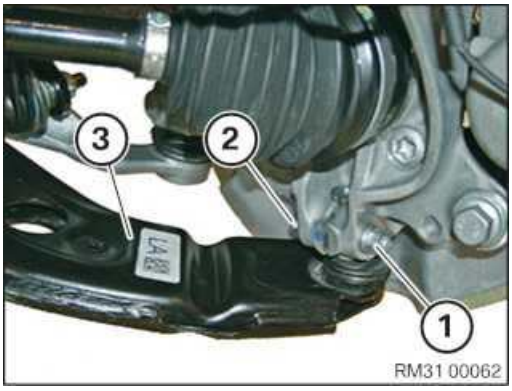
cardiagn.com

NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).

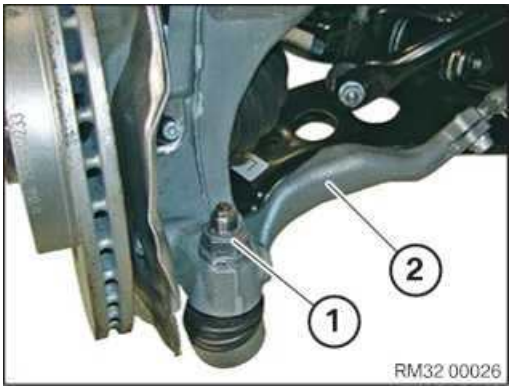
- Loosen screw (2) of the engine support (3) on the front axle (1).



NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

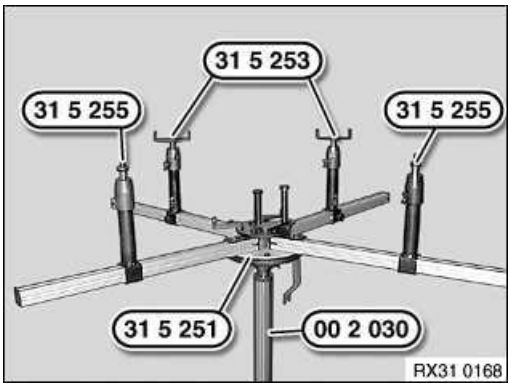


35 – Detaching and removing front axle completely

NOTICE

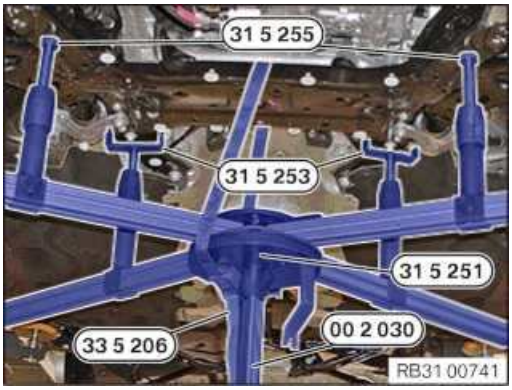
Perform the operations on the left and right side.

- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .



NOTICE

Perform the operations on the left and right side.



- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

cardiagn.com

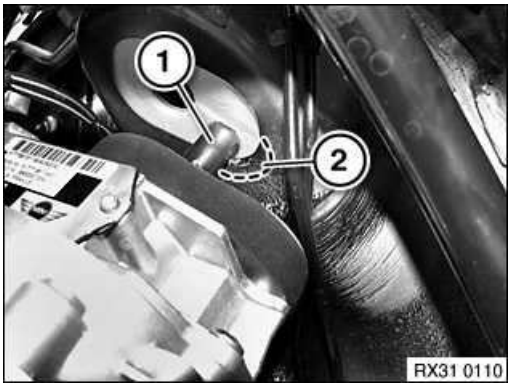
- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

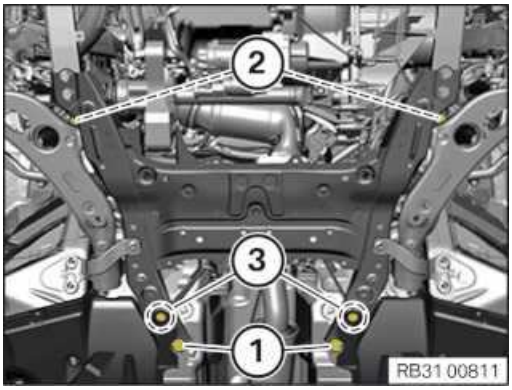


Note: In a profile rail pair, two profile rails are connected to one another by gearing.

- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

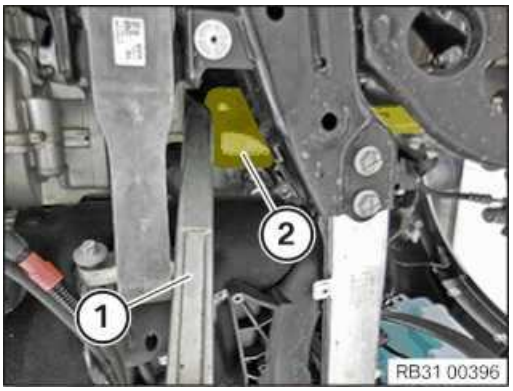
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

cardiagn.com

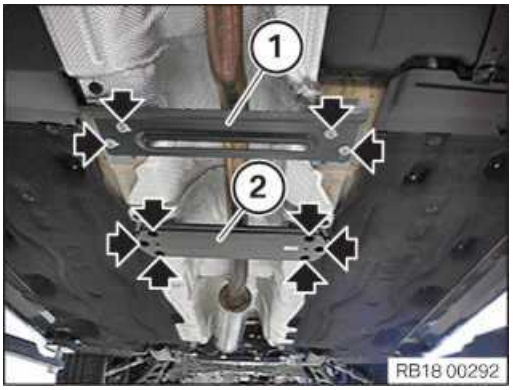
- Loosen screws (1).
- Feed out starter motor and remove.

37 – Partially removing right output shaft

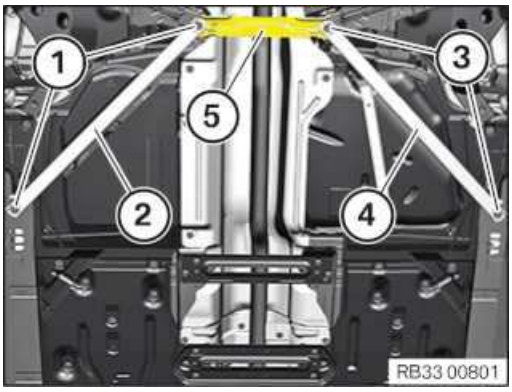


- Lever out the output shaft (2) with a mounting lever (1).
- Tie up output shaft (1).

38 – Partially removing the left output shaft

- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Tie up output shaft (1).

39 – Removing the connecting support from the tunnel in front and back



- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

40 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.

cardiagn.com

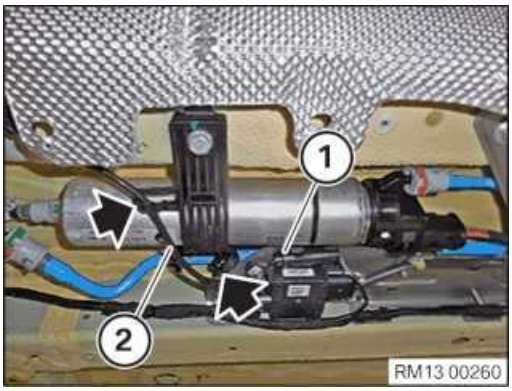
- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

41 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!



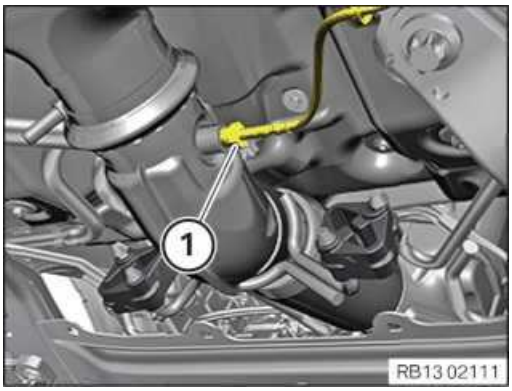
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and loosen connector (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

cardiagn.com

- Loosen the cable clip (1).

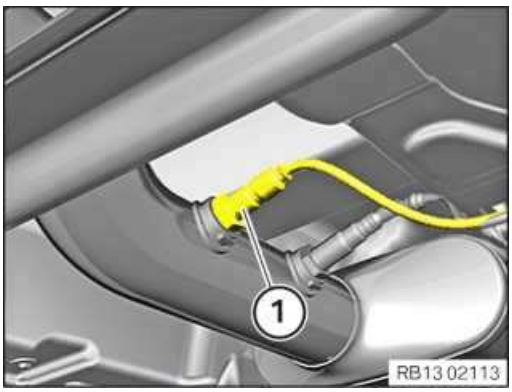
- Loosen exhaust temperature sensor (1).
- Feed out and remove exhaust temperature sensor (1).

42 – Remove exhaust system

WARNING

Hot surfaces.

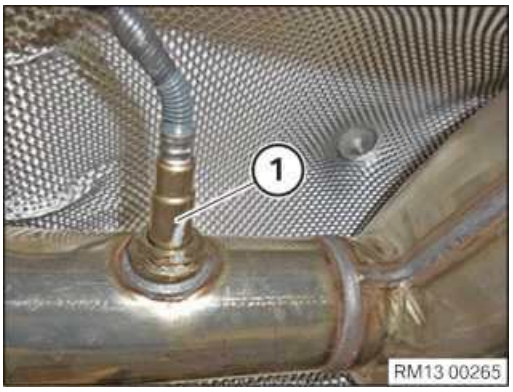
Risk of burning!



- Perform all work only on components that have cooled down.

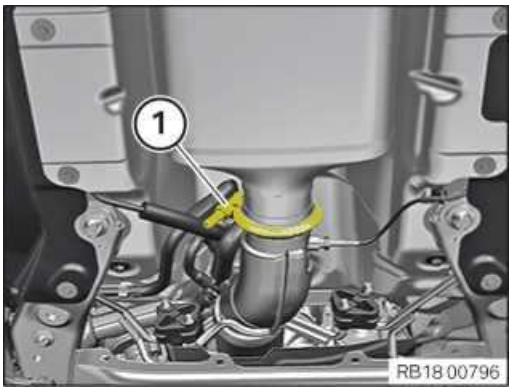
CAUTION

Heavy component.



Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.

cardiagn.com

- Release the diesel particulate sensor (1), guide it out and set it aside.

- Loosen V-band clamp (1).

- Loosen screw (1).
- Loosen nuts (2).
- Release the rubber mount (3) of the exhaust system (4).
- Lower and guide out the exhaust system (4) with assistance of a second person and remove it.

43 – Remove the SCR metering module

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

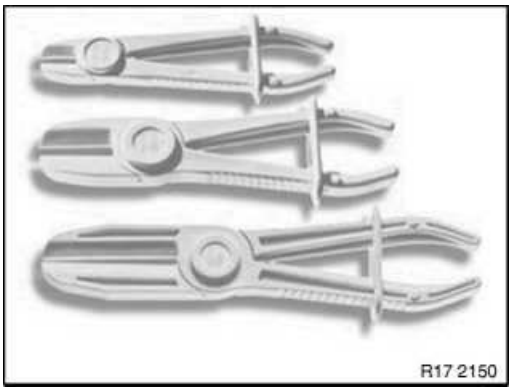
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

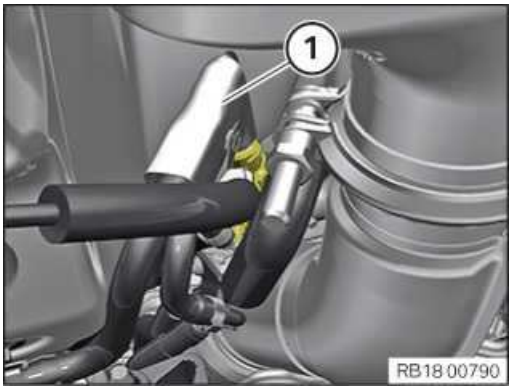
After repair work, clean the working area thoroughly with water.
Clean special tools with water after every use.

TECHNICAL INFORMATION



Use only lint-free cloths for cleaning the SCR system: WAYPALL cleaning cloths L20 - see BMW Group Parts.

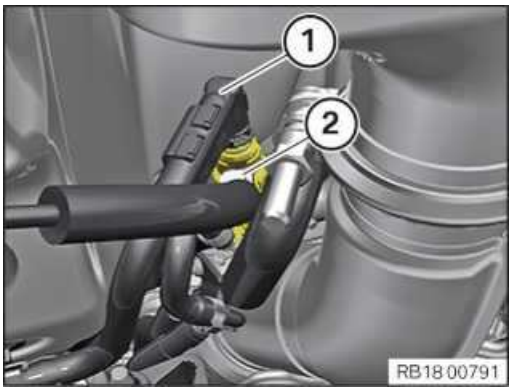
TECHNICAL INFORMATION



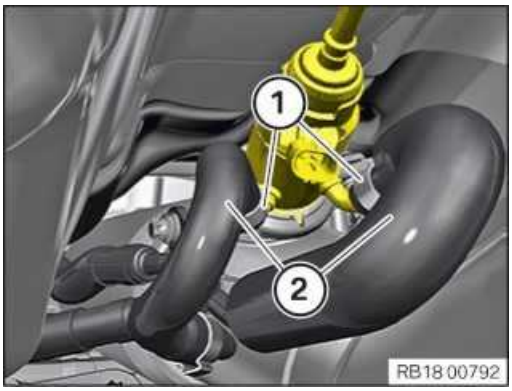
Notes on work at the cooling system form the basis of these repair instructions and must be complied with at all times.
For additional information see: 17 00 ... Instructions for repair work on cooling system

TECHNICAL INFORMATION

Do not unintentionally swap the coolant hoses and coolant lines. If necessary, mark before removal.



- Use commercially available pinch-off tools to pinch off the coolant hoses.



- Guide the heat protection cap (1) out and remove.

cardiagn.com

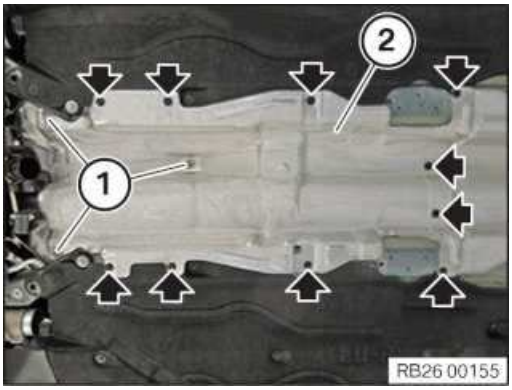
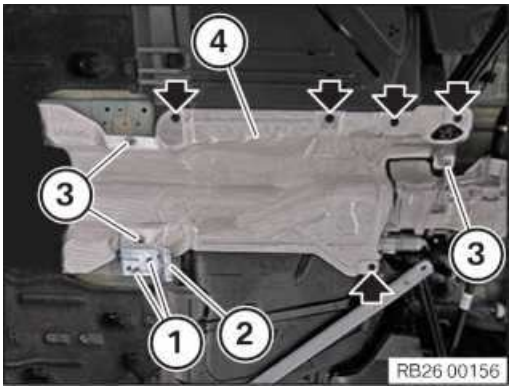
- When releasing the metering line, make sure that **no lateral forces** act on the metering line and the connection.

  The SCR metering module connection can be damaged by lateral forces.
- Unlock and disconnect the metering line (1).
- Unlock and disconnect connector (2).



- Loosen clamps (1).
- Disconnect coolant lines (2).



- Loosen V-band clamp (1).
- Guide out and remove the SCR metering module (2).

44 – Remove front heat shield

- Remove screws (arrows).
- Loosen nuts (1).
- Guide the heat shield (2) out and remove it.

45 – Remove heat shield at rear.

- Loosen screws (1).
- Guide out and remove holder (2).
- Remove screws (arrows).
- Loosen nuts (3).
- Guide the heat shield (4) out and remove it.

cardiagn.com

46 – Remove propeller shaft

CAUTION

Component with heavy weight.

Danger of injury!

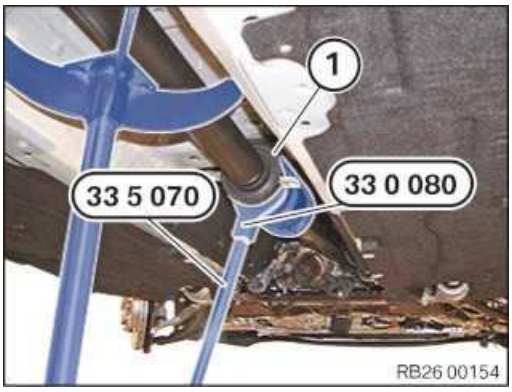
- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

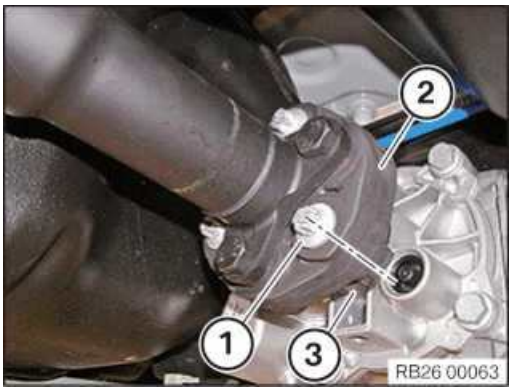
Damage to propeller shaft during removal.

Non-observance of the removal guidelines for the propeller shaft on the rear axle differential may cause severe damage.

- Do not disassemble the three-hole flange, flexible disc and propeller shaft. The three-hole flange to the rear axle differential is balanced with the flexible disc and propeller shaft.
- Loosen the recessed nut against the direction of travel in clockwise direction. The propeller shaft must be loosened on the recessed nut only and exclusively in the direction of rotation otherwise the anti-twist lock of the bi-hexagonal flange nut is damaged.
- In the event of a damaged anti-twist lock on the bi-hexagonal flange nut: Replace the rear axle differential.



- Install the special too l between the front and rear propeller shaft.
- Make sure that the arrows on the special tool point forward in the direction of travel.



- Always support the propeller shaft (1) with a conventional jack.

cardiagn.com

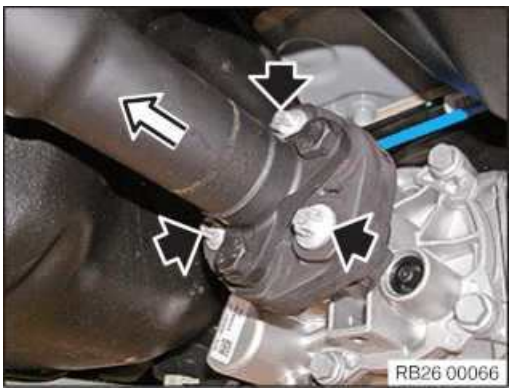
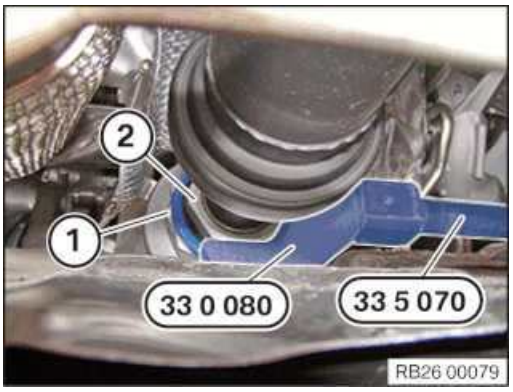
- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.



TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Mark the installation position of the screw connection (1), the flexible disc (2) and the three-hole flange (3) on the same level.
- Loosen the screw connection (1).



- Loosen screws (1).

- Remove screws (arrows).
- Guide the propeller shaft out in the direction of the arrow and set it aside.

cardiagn.com

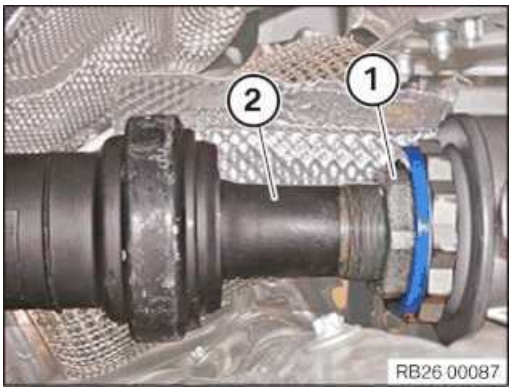
RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

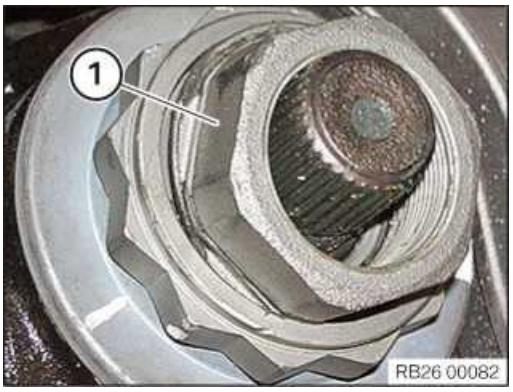


- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to detach the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.

- Release the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.



- Thread the propeller shaft (2) out of the recessed nut (1) and remove.

- Thread the retaining clip (1) and the seal (2) out and remove.

cardiagn.com

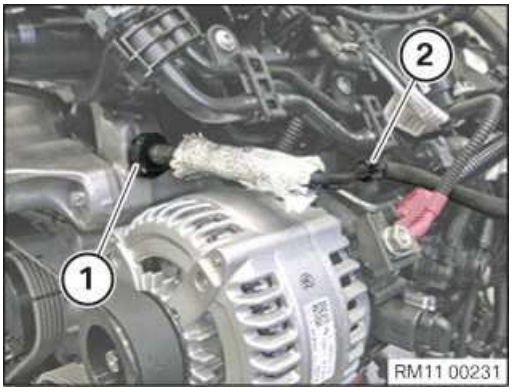
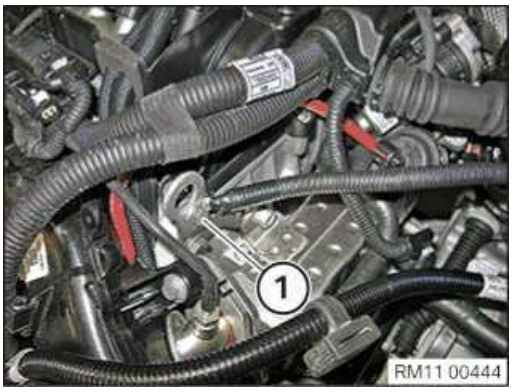
- Thread out and remove the recessed nut (1).

MAIN WORK

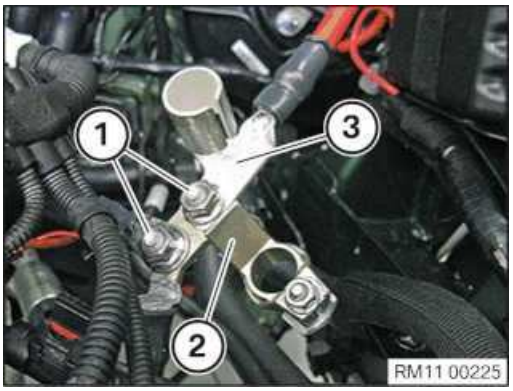


47 – Remove the engine (Automatic)

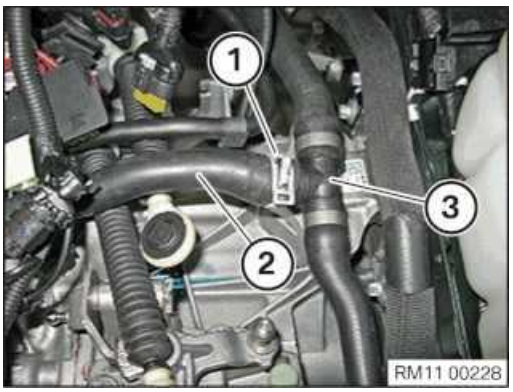
- Unlock and pull off the fuel lines (1).



- Seal fuel lines with special tools and .

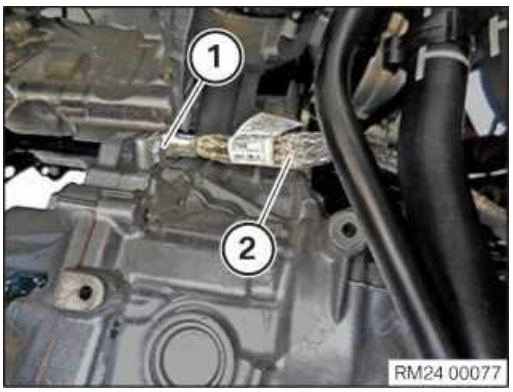


- Unlock the clamp (1).
- Pull off the coolant line (2) from the cylinder head.



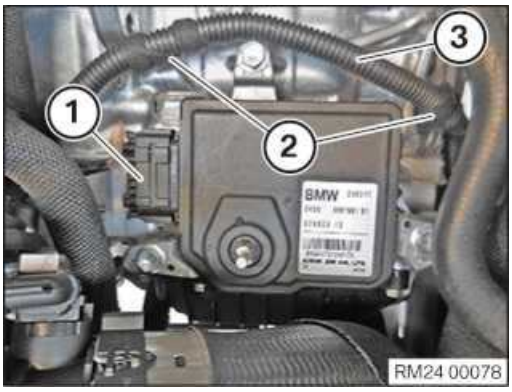
cardiagn.com

- Unscrew the bolt (1) and set the ground strap aside.

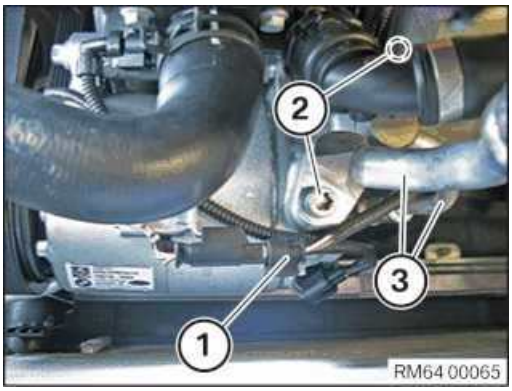


- Loosen nuts (1).
- Feed out the positive battery terminal (2) and the remote positive terminal (3) and set aside.

- Detach the clamping collar (1).
- Detach the coolant hose (2) from the coolant line (3).
- Catch and dispose of escaping coolant.



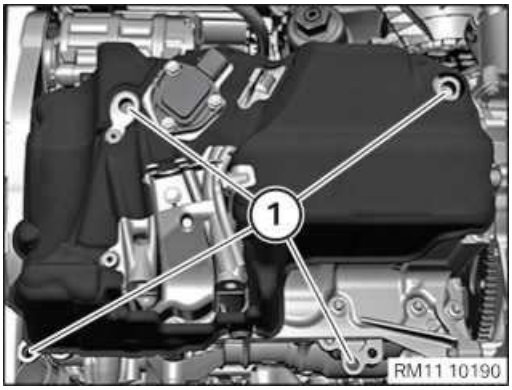
- Unlock and disconnect the vacuum line (1).



- Loosen screw (1).
- Feed out ground cable (2) and set it aside.

cardiagn.com

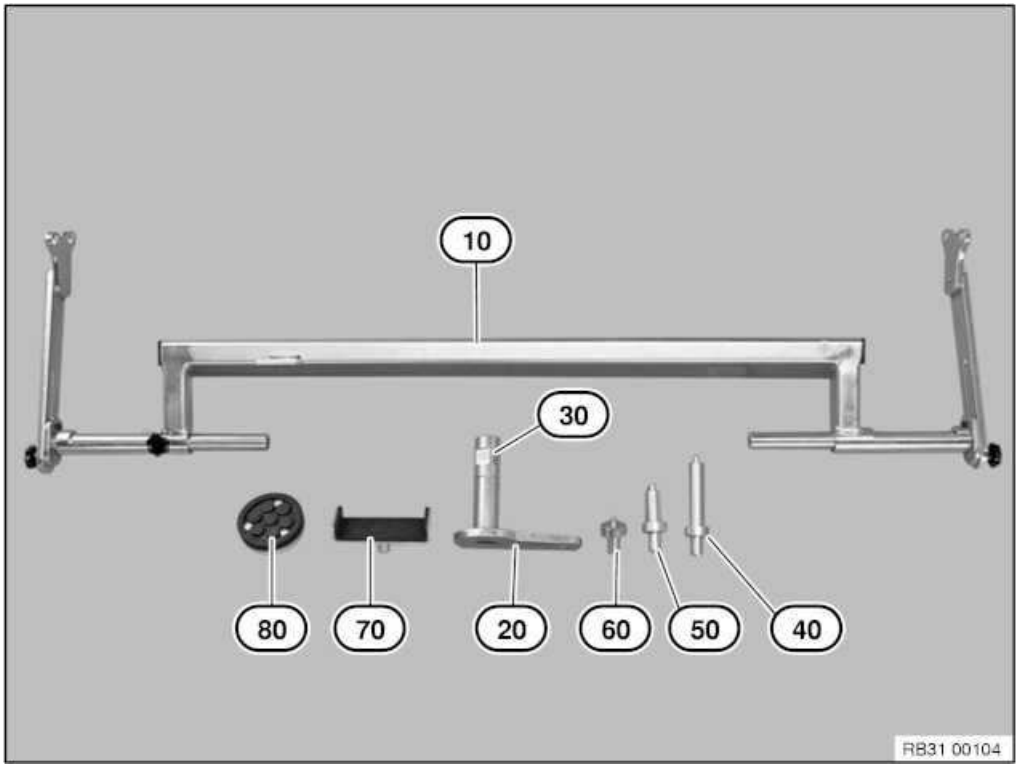
- Unlock plug connection (1) and disconnect.
- Detach the clamps (2) with the wiring harness (3) from the transmission and set it aside.



CAUTION

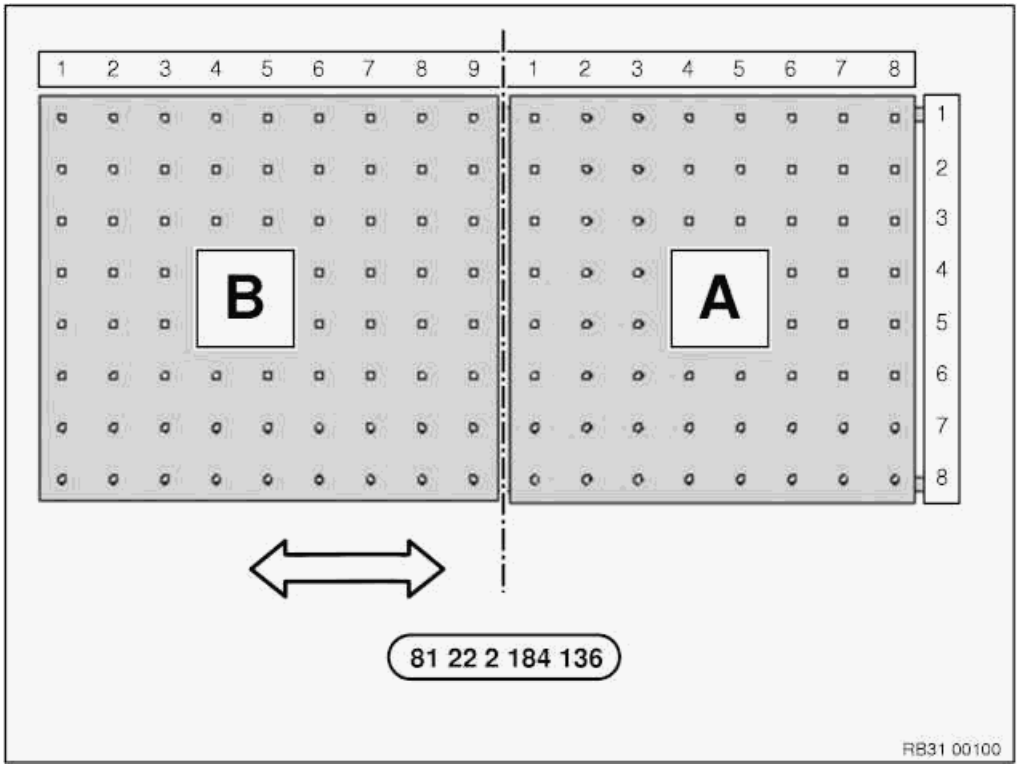
Residual pressure in the air conditioning.

Danger of injury!



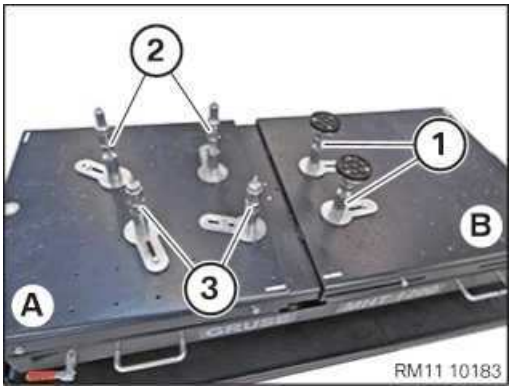
- Wear safety goggles and protective gloves when disconnecting the refrigerant line.
- Seal refrigerant lines with seal plugs.

- Unlock plug connection (1) and disconnect.
- Loosen screws (2).
- Feed out the refrigerant lines (3) and set them aside.
- Close the openings on the refrigerant lines (3) and the air conditioning compressor with standard tools.



- Make sure that the spacer pins **40/50** of the table top **A** of the mobile lifting table are installed in the mounting point (1) of the oil sump.

cardiagn.com



- Overview of the set of special tools **2 305 379**:

Number	Description
10	For mounting the swivel bearing including brake disc
20	Retaining element for adjustable fixture
30	Adjustable fixture
40	Distance pin 40 x 160 mm
50	Distance pin 40 x 110 mm
60	Distance pin 40 x 60 mm
70	Fixture with U-profile
80	Plate mounting 100 mm

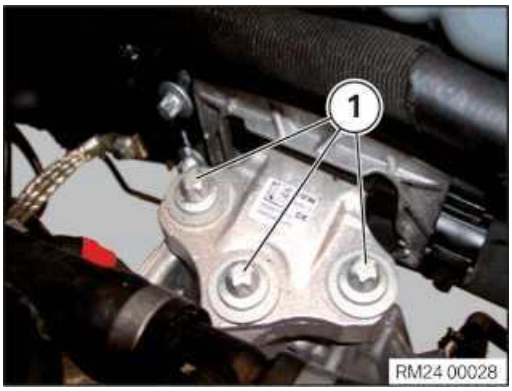
- Overview of special tools **2 184 136**:

Letter	Description
A	Table top for engine with coordinates
B	Table top for transmission with coordinates

- Position adjustable fixture (30) with distance pin (50) for the engine block on table top (A) at coordinates **6/6** and **2/6** (2).
- Position adjustable fixture (30) with the spacer pin (50) for the engine oil sump on the table top (A) at coordinates **4/2** and **2/3**.
- Position adjustable fixture (30) with distance pin (80) for the transmission housing on table top (B) at coordinates **7/3** and **7/5** (1).

cardiagn.com

- Position the lifting table below the engine.
- Abut all fixtures and screw them to the lifting table.



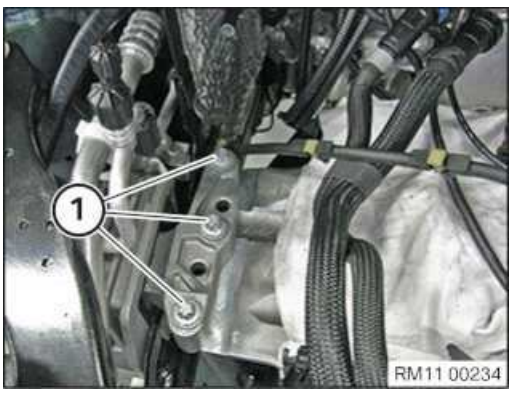
WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

- Ensure there is a specific weight compensation on the motor vehicle.

- Position the weight compensation (1) on the vehicle.



WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

- Ensure there is a specific weight compensation on the motor vehicle.

- Loosen screws (1).

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

- Loosen screws (1).
- Raise the vehicle **carefully**.

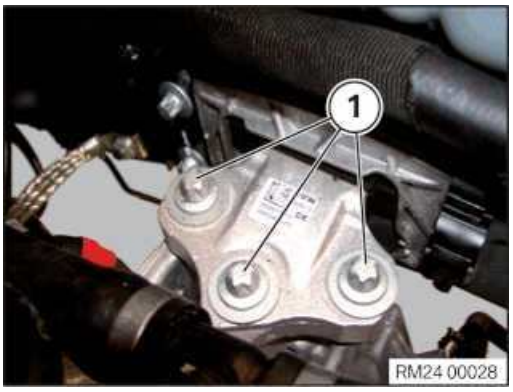
cardiagn.com

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

- Ensure there is a specific weight compensation on the motor vehicle.



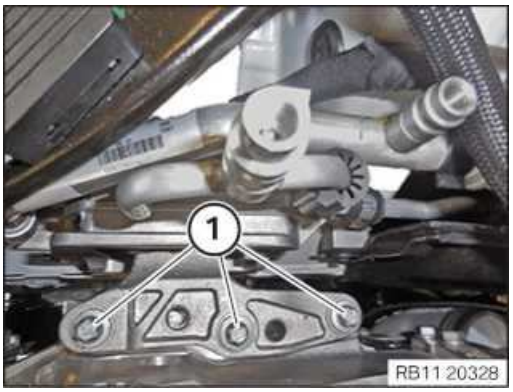
WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

- Position the lifting table and the engine under the vehicle.
- **Carefully** lower the vehicle and, if necessary, position the lifting table **correctly** for the vehicle.



- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Transmission mounting

M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

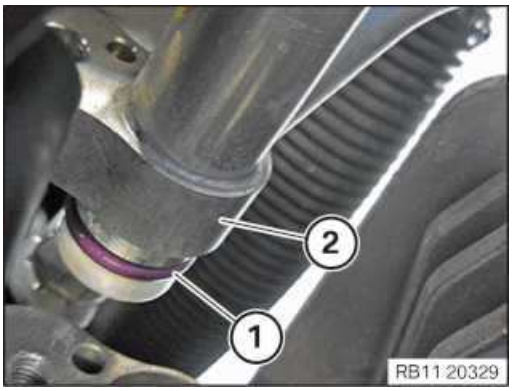
- Renew screws (1).

  Parts: screws.
- Tighten the screws (1).

Right engine mount to cylinder head

M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

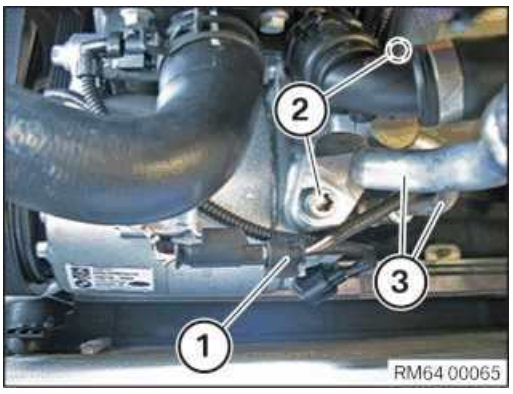
cardiagn.com



WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

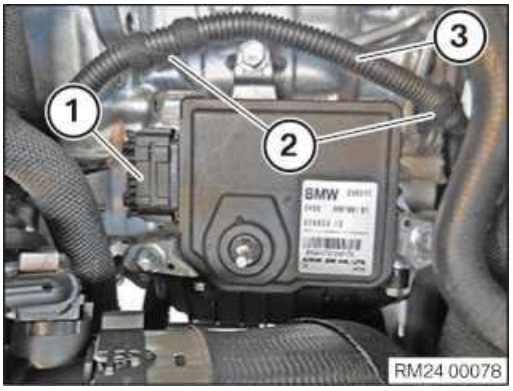


- Ensure there is a specific weight compensation on the motor vehicle.

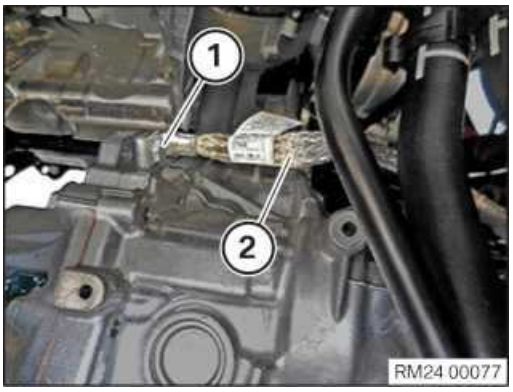
- Remove weight compensation (1) from the vehicle.
- Lower lifting table(2) and put to one side.

- Renew sealing ring (1) of the refrigerant lines (2).

  Parts: Sealing ring



- Feed in and install the refrigerant lines (3).
- Tighten down screws (2).



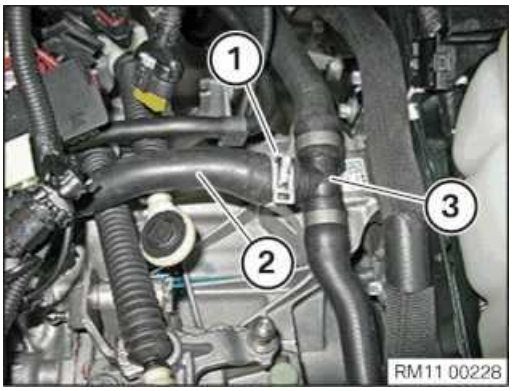
Refrigerant line on air conditioning compressor

M8		Tightening torque	19 Nm

- Connect connectors (1) and lock.
- Make sure the connector (1) engages audibly.

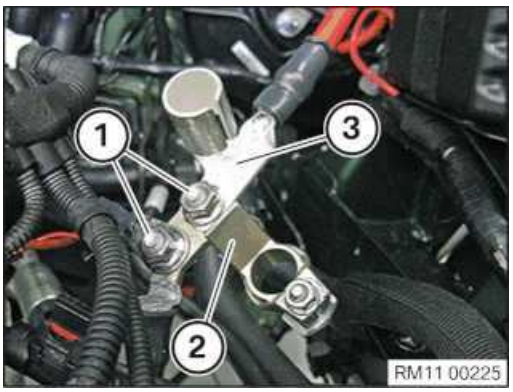
- Position wiring harness (3) and secure to the gearbox using clamps (2) .
- Connect the connector (1) and audibly lock it.

- Insert ground strap (2) and tighten screw (1) .



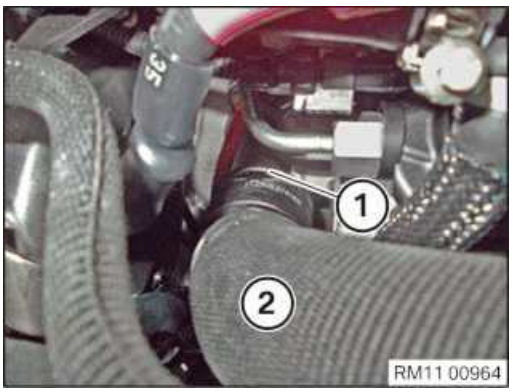
Standard screw connection M8

M8		Tightening torque	19 Nm

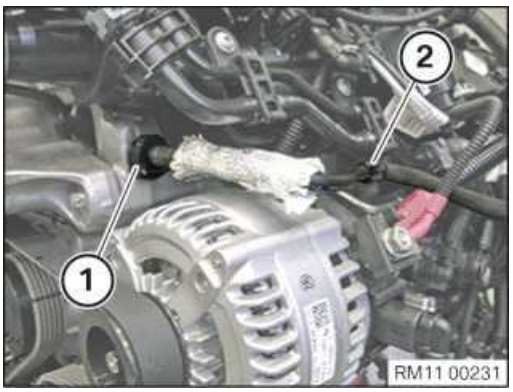


cardiagn.com

- Connect the vacuum line (1) and lock.
- Make sure you can hear the vacuum line (1) engage.



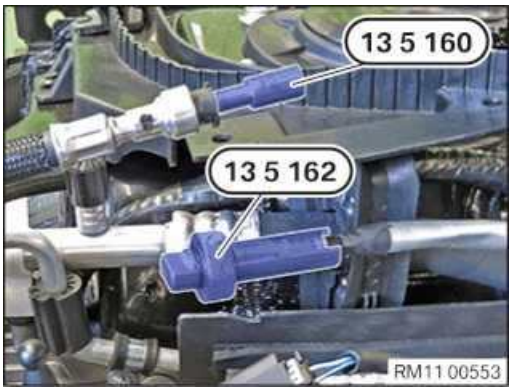
- Insert and install the coolant hose (2) on the coolant line (3).
- Fasten the clamping collar (1).



- Insert and install the positive battery terminal (2) and the remote positive terminal (3).
- Tighten nuts (1).

Positive battery cable to positive battery terminal

M8		Tightening torque	15 Nm



- Connect and lock the coolant lines (2).
- Ensure that the lock (1)engages audibly.

- Connect the coolant line (2).
- Lock clamp (1).

cardiagn.com

- Thread out special tools and and remove.

- Route and connect fuel lines (1).
- Ensure that the locks engage audibly.

POSTPROCESSES

49 – Install propeller shaft.

CAUTION

Component with heavy weight.

Danger of injury!

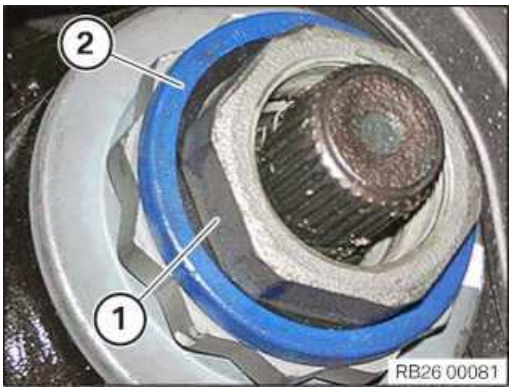
- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

Damage to the propeller shaft during installation.

Non-observance of the installation guidelines for the propeller shaft on the rear axle differential may cause severe damage.

- Always renew the recessed nut on the rear axle differential. Screw locking must be available.
- Strictly observe a minimum hardening time of two hours after having screwed in the recessed nut. The hardening time may be longer at lower temperatures.



RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

cardiagn.com

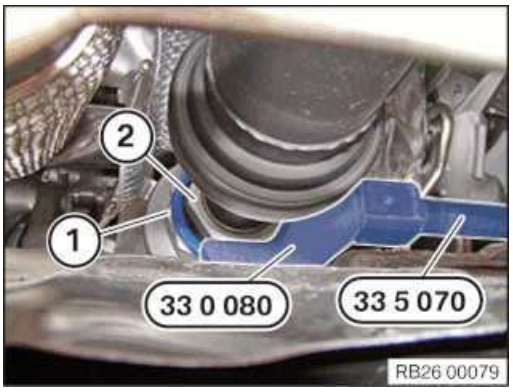
- Renew recessed nut (1).

  Parts: Insert nut
- Renew the retaining clip (2) and the seal.

  Parts: Retaining clip, seal
- Insert the seal with the recessed nut (1) and install.
- Insert the retaining clip (2) and install.
- Make sure that recessed nut (1) is screwed in within 5 min.
- Make sure that the hardening time of **minimum** 2 h for the recessed nut is observed.

  The hardening time must be extended at lower temperatures.

- Insert the propeller shaft (1) and install.
- Always support the propeller shaft (1) with a conventional jack.



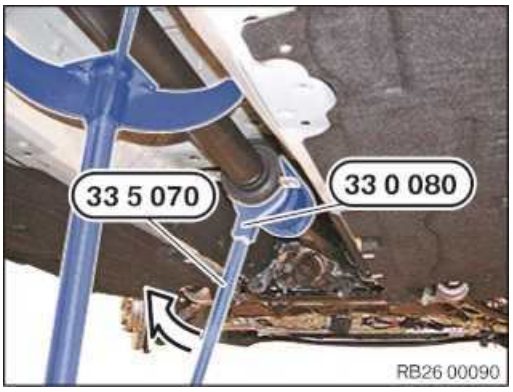
- Hand-tighten the bolts (1).

- Push the propeller shaft (2) against the recessed nut (1) up to the limit position.
- Screw the propeller shaft (2) at least 2 thread starts onto the recessed nut (1) by hand.

cardiagn.com

RISK OF DAMAGE

Damage to the transfer box.



Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

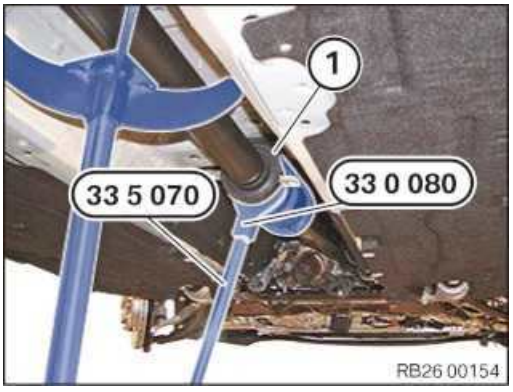
  The recessed nut (2) on the transfer box must **not** be used to tighten the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.

- Tighten the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

Propeller shaft to transfer box

		Tightening torque	80 Nm



TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Assemble the screw connection (1) of the flexible disc (2) and the three-hole flange (3) according to the mark.
- Renew screws (1).

  Parts: Bolts
- Hand-tighten the bolts (1).

- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

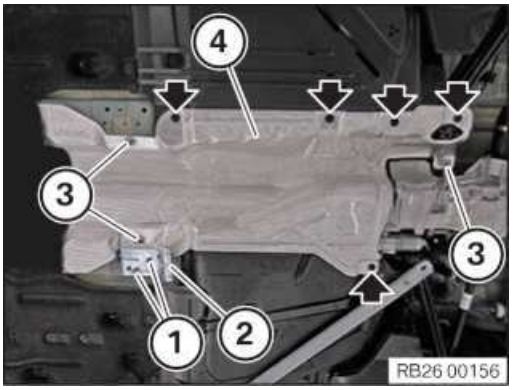
cardiagn.com

- Tighten the bolts with the special tools **0 490 504 (00 9 120)** and .

Flexible disc to rear axle final drive

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

- Tighten the screws (1).



Centre mount to body

M8		Tightening torque	19 Nm

- Guide the special too l out between the front and rear propeller shaft and remove.

50 – Installing the rear heat shield

- Insert and install the heat shield (4).
- Tighten screws (arrows).

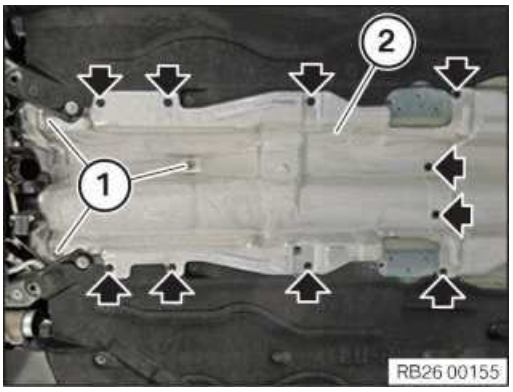
Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (3).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm



- Insert and install the holder (2).
- Tighten the screws (1).

Bracket to body

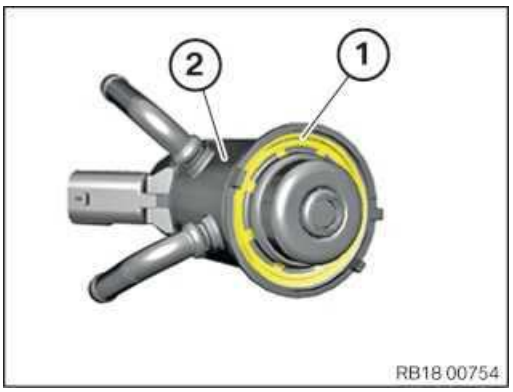
M8		Tightening torque	21 Nm

51 – Install the front heat shield

cardiagn.com

- Insert and install the heat shield (2).
- Tighten screws (arrows).

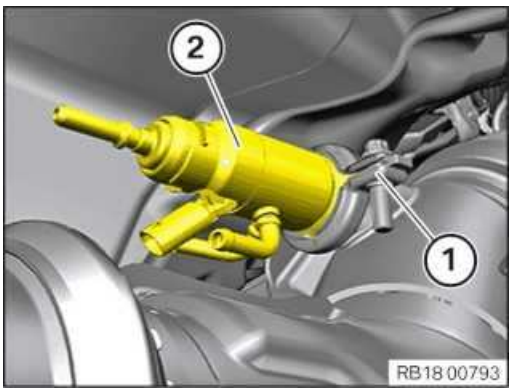
Heat shield to body



Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (1).

Heat shield to body

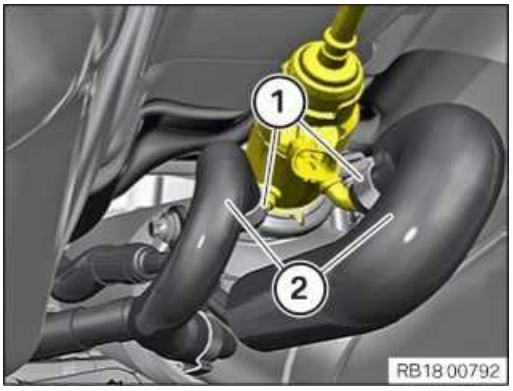


Bolts/nut		Tightening torque	3 Nm

52 – Install the SCR metering module

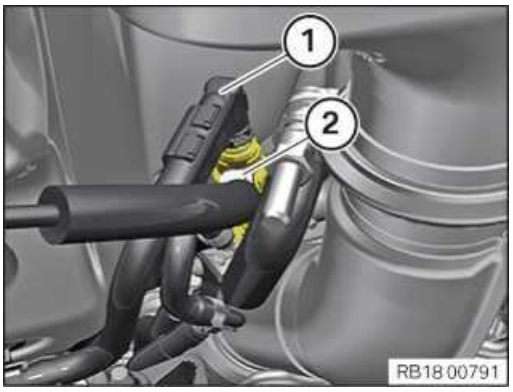
- Renew the seal (1) of the SCR metering module (2).

  Parts: Sealing ring



- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

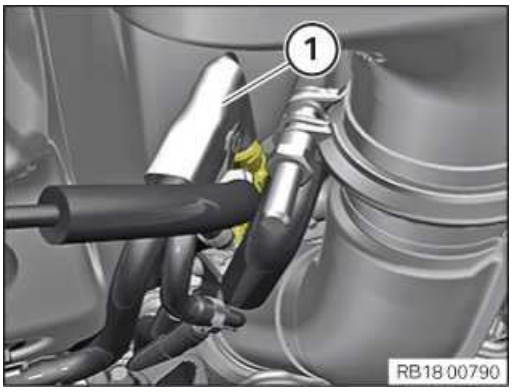


SCR metering module V-clip to exhaust system

V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

- Connect the coolant lines (2).
- Renew the clamps (1).

  Parts: Clamps
- Fasten the clamps (1).



- Connect connectors (2) and lock.

  The connector (2) must engage audibly.
- Connect and lock the metering line (1).

  Metering line (1) must engage audibly.

cardiagn.com

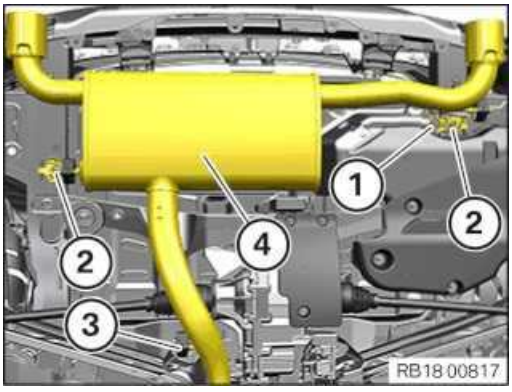
- Insert and install the heat protection cap (1).

53 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!



- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Feed in and install the exhaust system (4) with a second person.
- Renew nuts (2).

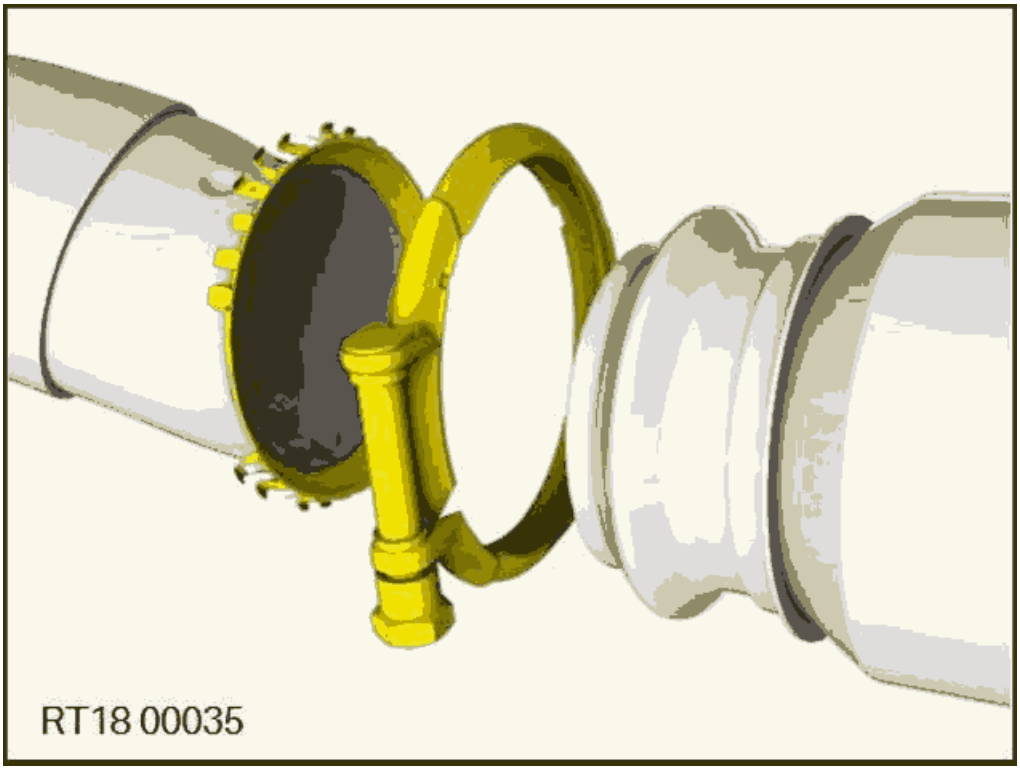
  Parts: Nuts
- Tighten nuts (2).

Exhaust system to body

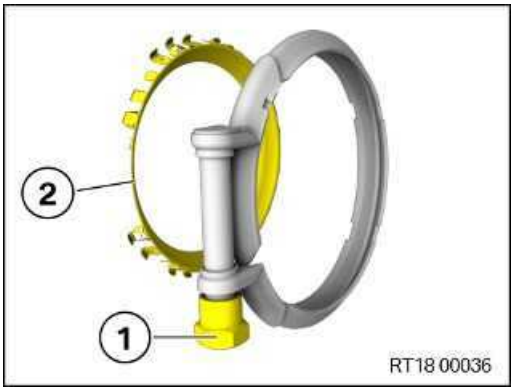
M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).

Exhaust bracket on body

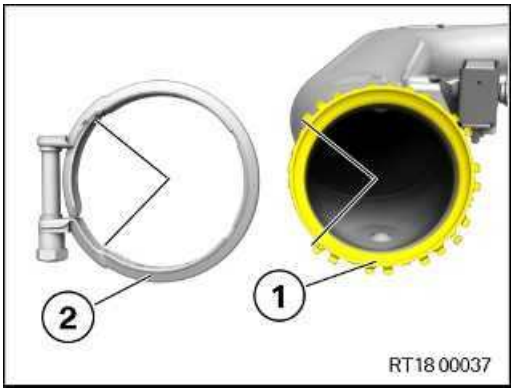


Hexagon screw M8x30		Tightening torque	19 Nm



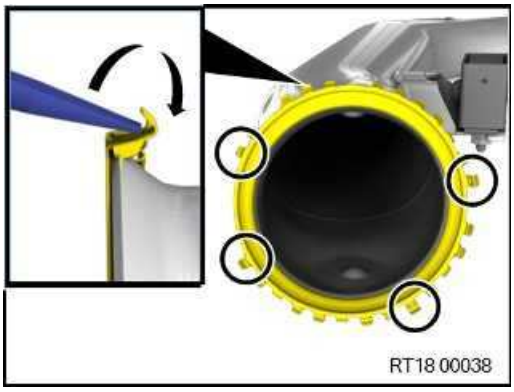
- Check the rubber mount (3) for damage and renew as needed.
- Mount rubber mount (3) on the exhaust system (4).

▸ **Install the V-clip**

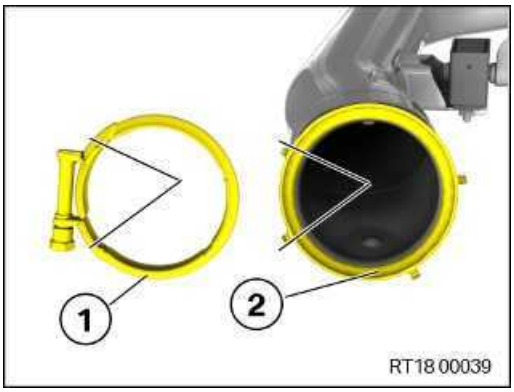


cardiagn.com

V-band clamp



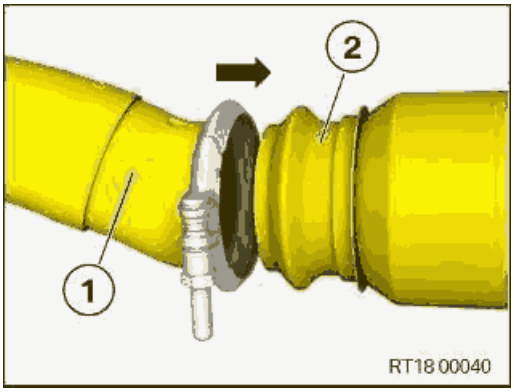
- Unscrew the nut (1) and remove the sealing ring (2).



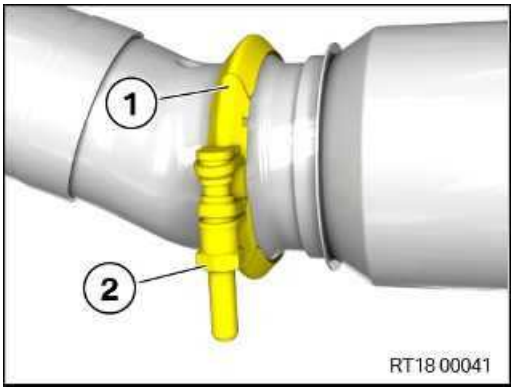
- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.

- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.

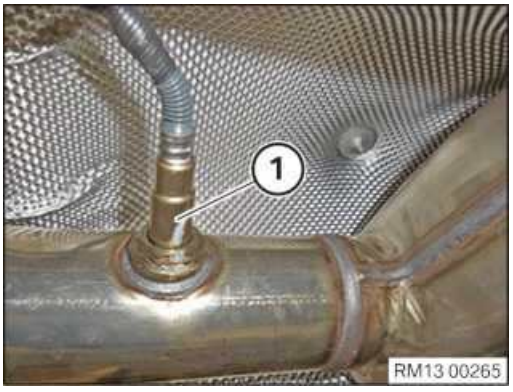


cardiagn.com



- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).

- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).

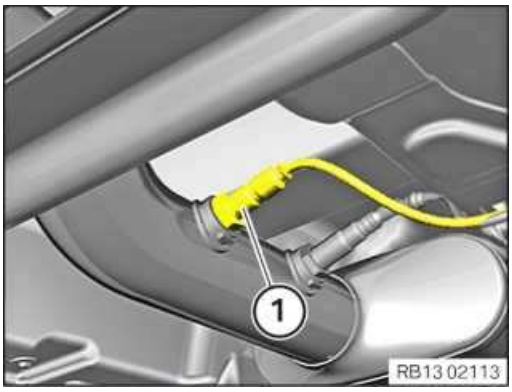


- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.

- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

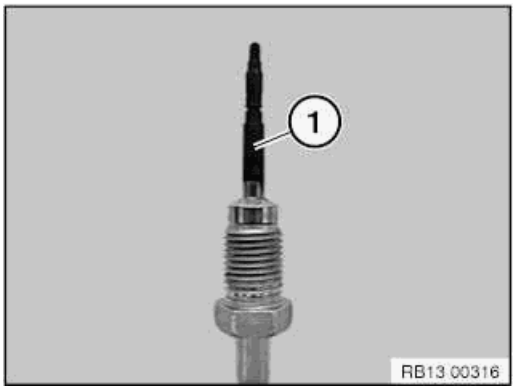


- Feed in, install and tighten diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

Sensor		Tightening torque	50 Nm

cardiagn.com

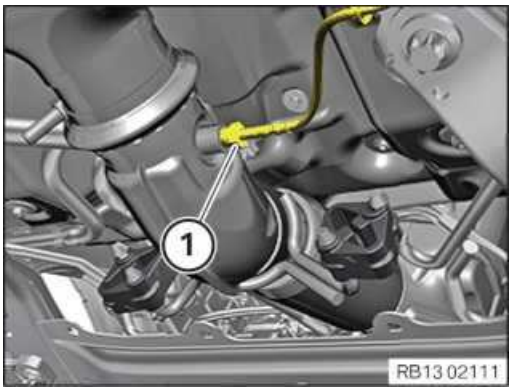


- Feed in, install and tighten nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

54 – Installing exhaust temperature sensor on catalytic converter

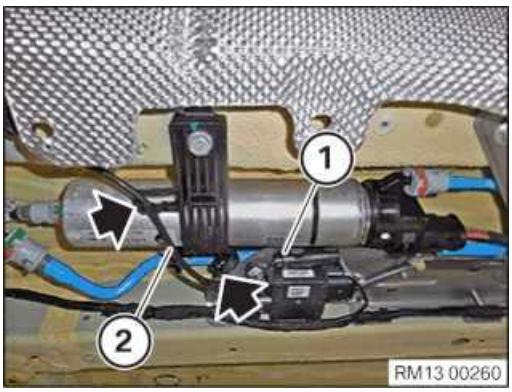


RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.
- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.

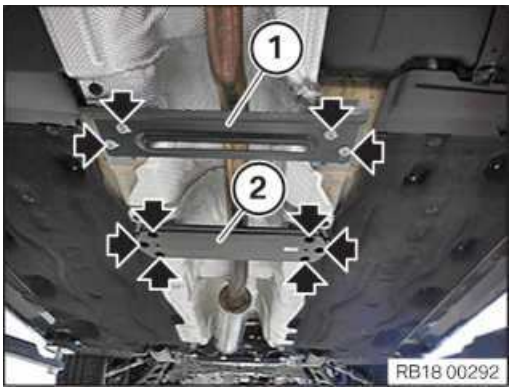


- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).

Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Secure the cable clips (1).



- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

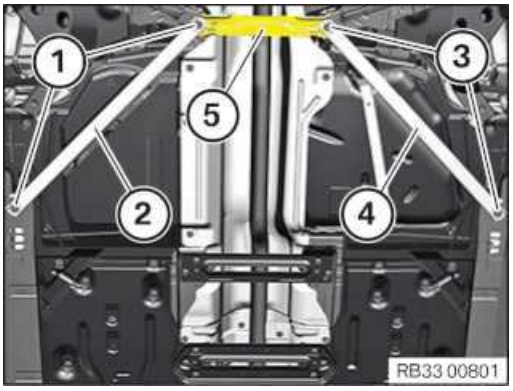
  The connector (1) must engage audibly.

55 – Install the connecting support on the tunnel in front and back

cardiagn.com

- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body



M10x18		Tightening torque	56 Nm

- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

M8x18		Tightening torque	28 Nm

56 – Install the cross-member with torsion struts

- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

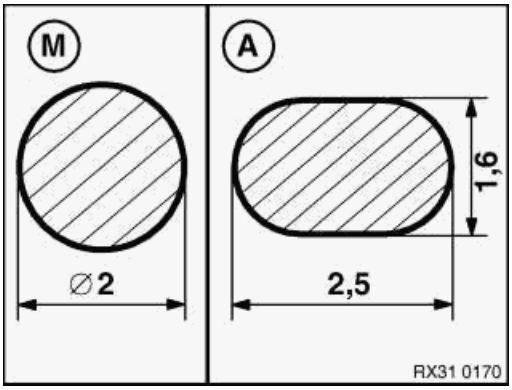
Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

57 – Installing right output shaft partially

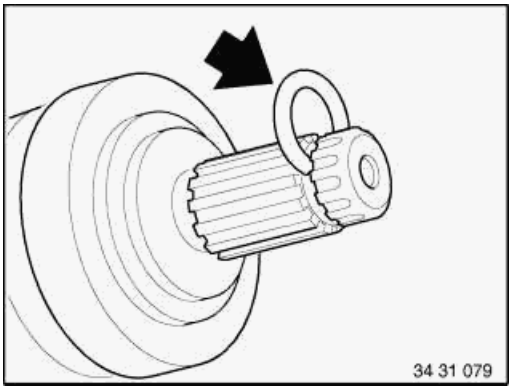
- Renew the circlip (1).

  Parts: Circlip
- Slide output shaft into the transmission as far as the limit position.
- Check for secure seat by levering.



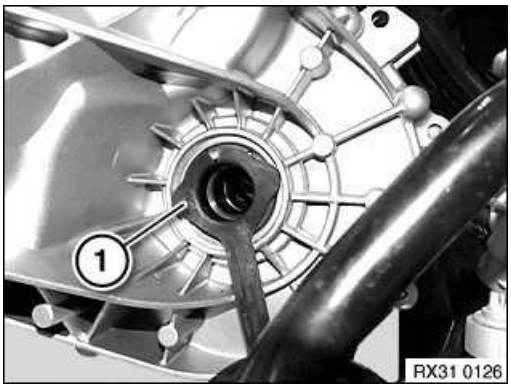
58 – Partially installing the left output shaft

cardiagn.com



- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).



- Do not mix up circlips.

  Different types of output shafts fitted:
  - M: Manual transmission
  - A: Automatic transmission

- Renew circlip (arrow).

- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

- Insert output shaft (1) into transmission.
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

cardiagn.com

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

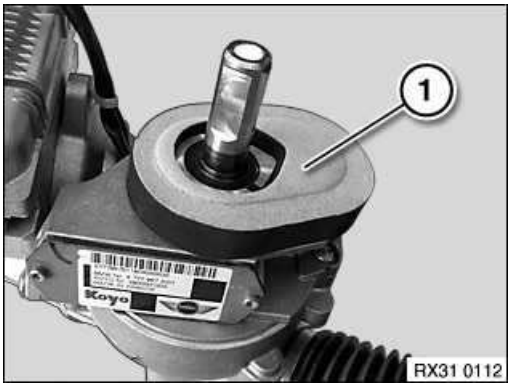
- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

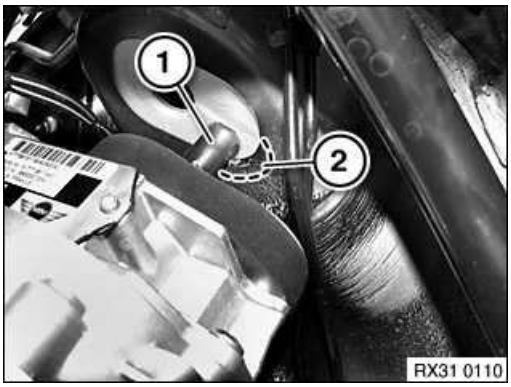
- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).



Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

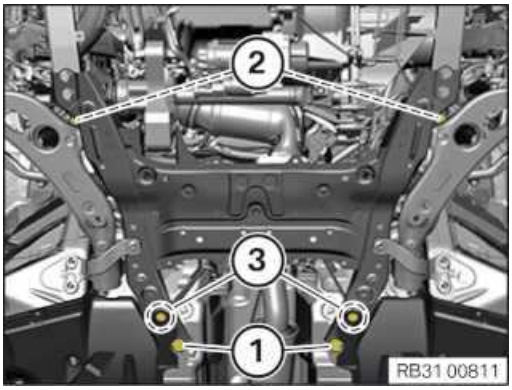


60 – Mount and secure the complete front axle

- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.

cardiagn.com



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

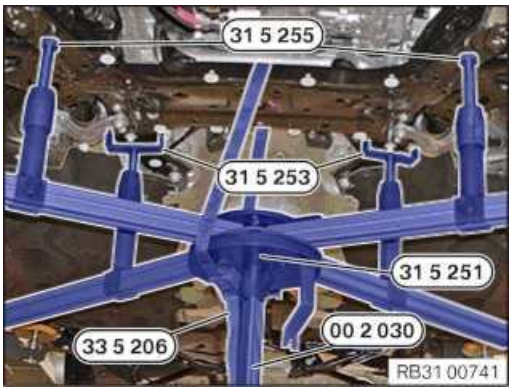
- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

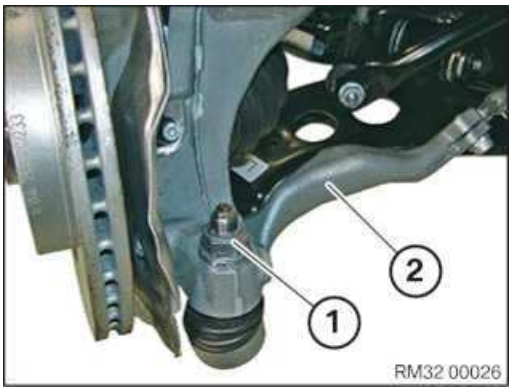
- Tighten down screws (2).



Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

- If necessary, tighten the screws in the areas (3).



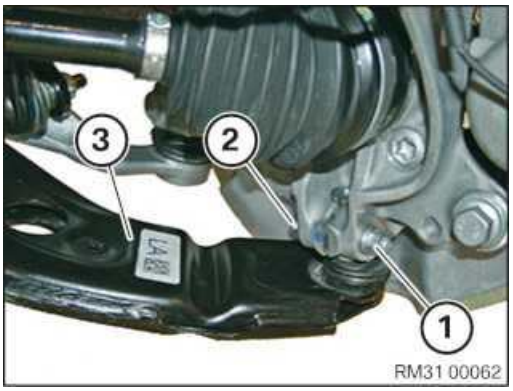
Underbody protection to body

Screw		Tightening torque	3 Nm

- Remove special tool from special tool .
- Lower universal jack **0 490 133 (00 2 030)** with the special tool and place it to the side.

cardiagn.com

NOTICE



Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm

NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

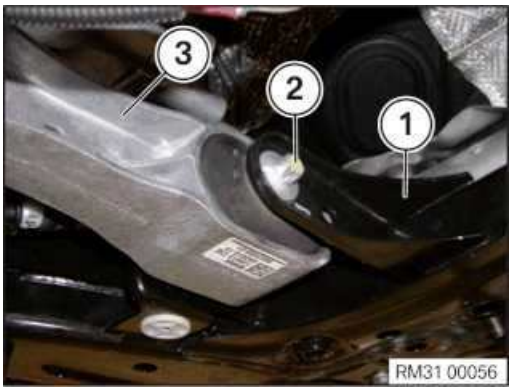
Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

61 – Install the mounted parts on the front axle support

NOTICE

Perform the operations on the left and right side.

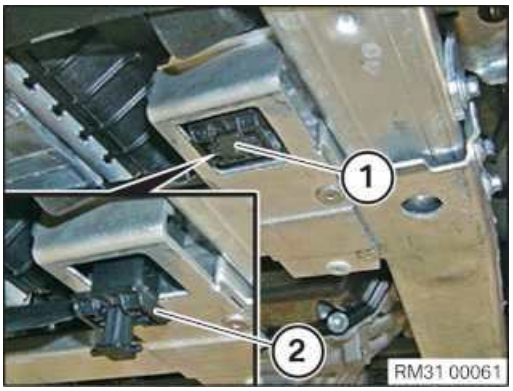


- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

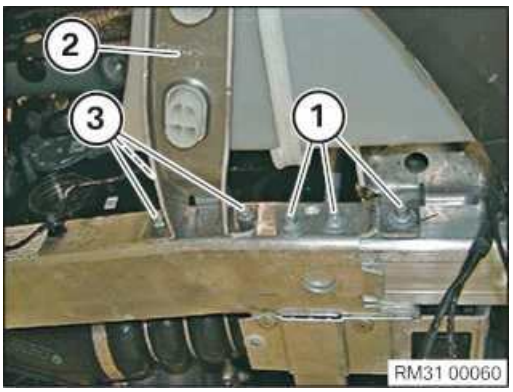
M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °



cardiagn.com

- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support



M12 screw		100 Nm

NOTICE

Perform the operations on the left and right side.

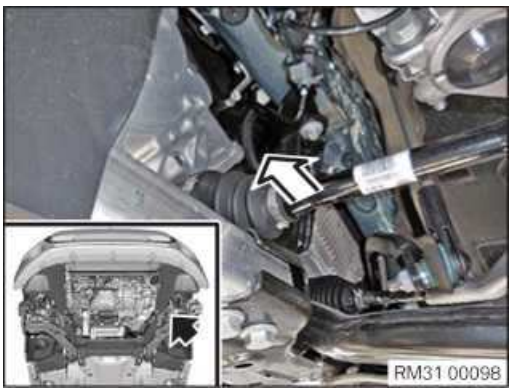
- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.

- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE

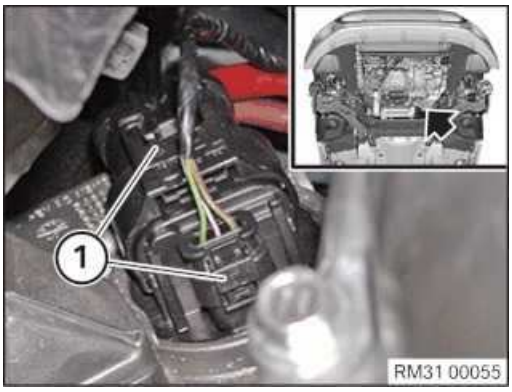


Perform the operations on the left and right side.

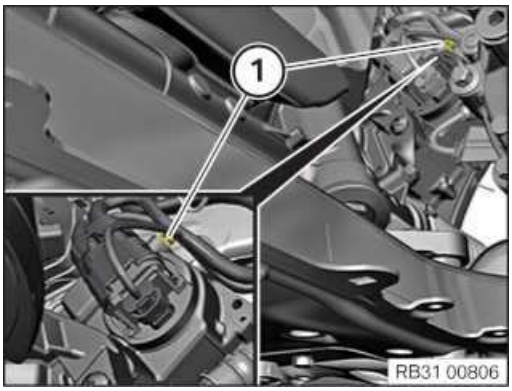
- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

		Tightening torque	11,8 Nm



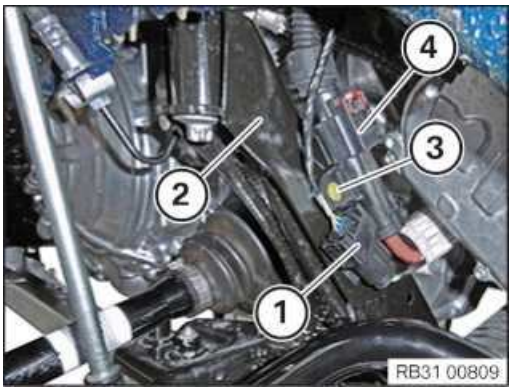
62 – Attaching connector at steering gear



- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.

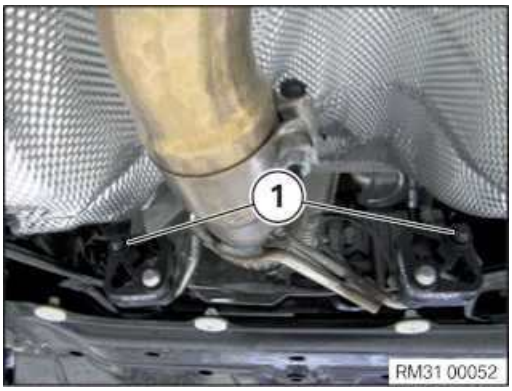
cardiagn.com



- Connect and lock connector (arrow) (1) with the steering gear.

- Fasten the wiring harness (1) on the steering gear.

▸ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

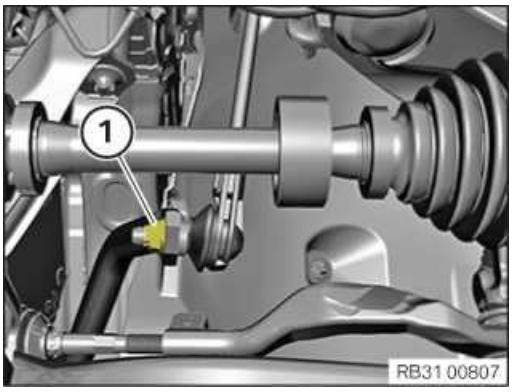
- Fasten the plug connection (1) at the front axle support (2).

63 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount

- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.



64 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▸ **Fastening anti-roll bar on the anti-roll bar link**

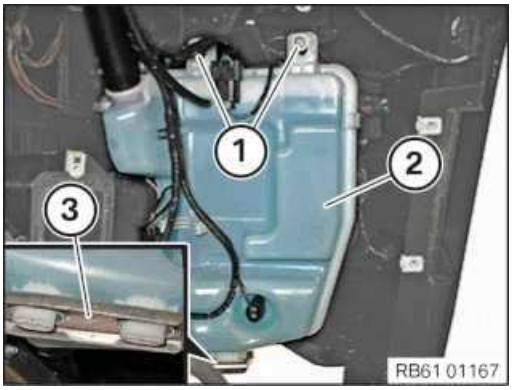
cardiagn.com

- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar



M10	Renew nut.	Tightening torque	56 Nm

65 – With right installation: Securing the cable for the ride height sensor

- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

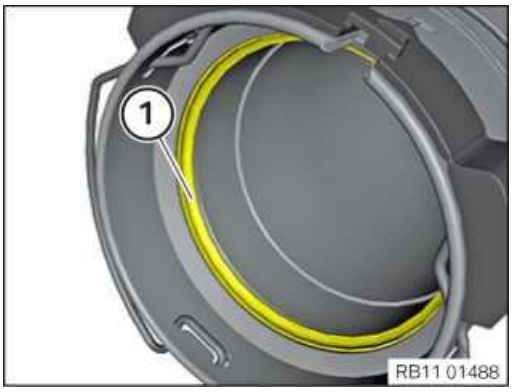
66 – Install the washer fluid reservoir in the fixture

- Feed washer fluid reservoir (2) into the mounting (3) and install.
- Tighten the screws (1).

Washer fluid reservoir to body

M6x20		Tightening torque	8 Nm

67 – Installing pressure pipe between throttle body and charge air cooler



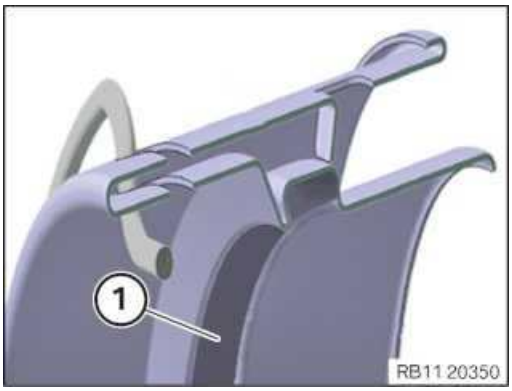
RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.

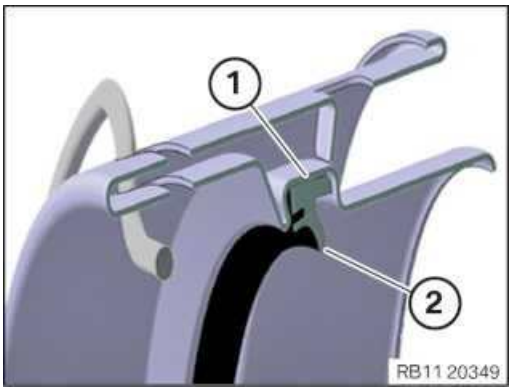
cardiagn.com



- Check seal (1) for damage and renew seal (1) as needed.

  Parts: Gasket

▶ **Replace damaged gasket**

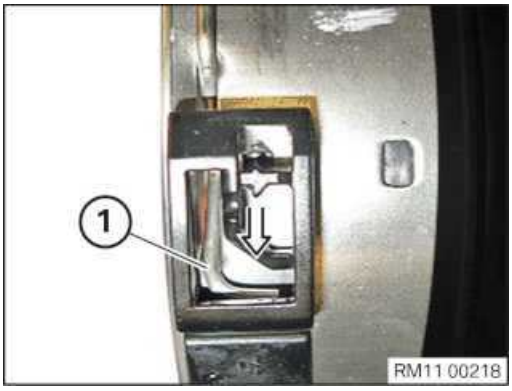


TECHNICAL INFORMATION

Do not use pointed or sharp-edged tools for the installation and/or removal.

- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

  The gasket groove (1) must be clean.



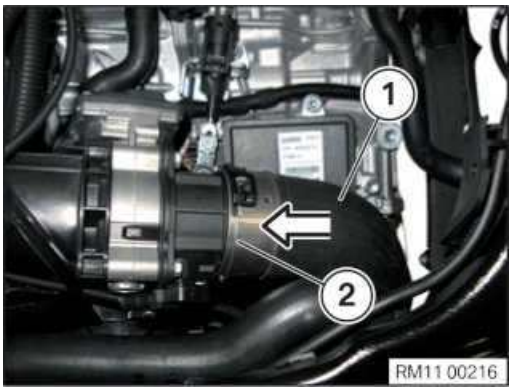
- Renew gasket.

  Parts: Gasket
- Install seal dry without lubricant or mounting agent.

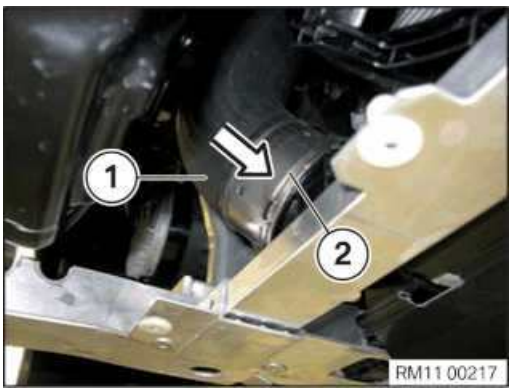
TECHNICAL INFORMATION

Incorrect assembly is possible. Ensure correct installation position.

- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).



- Detach the locks (1) in the direction of the arrow from the brackets.

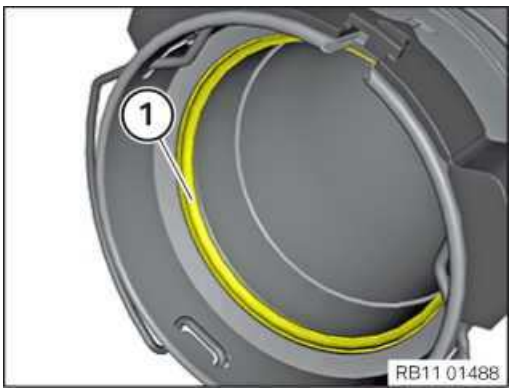


cardiagn.com

- Insert and install the pressure pipe (1) in the direction of the arrow.

- Insert and install the pressure pipe (1) in the direction of the arrow.
- Ensure that the locks (1) engage audibly.

- Insert and install the pressure pipe (1) in the direction of the arrow.
- Ensure that the locks (2)engage audibly.



68 – Installing the right charge air duct between the exhaust turbocharger and the charge air cooler

RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

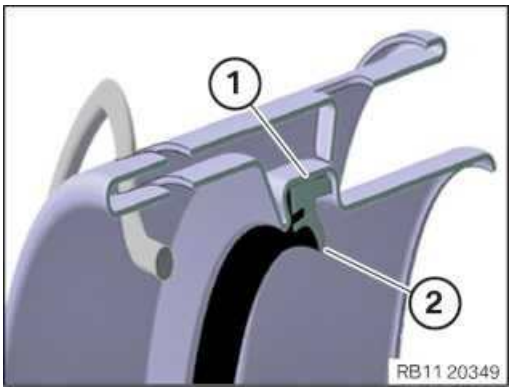
- Replace the gaskets and pressure pipe if necessary.

- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

▸ **Replace damaged gasket**

cardiagn.com

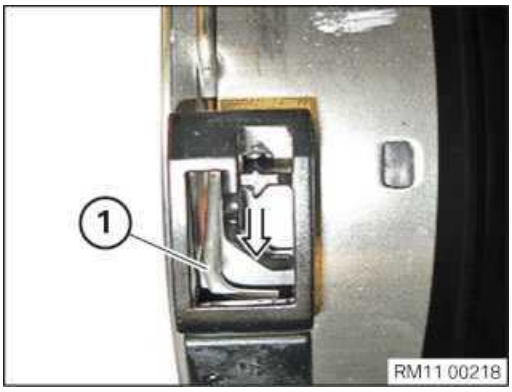


TECHNICAL INFORMATION

Do not use pointed or sharp-edged tools for the installation and/or removal.

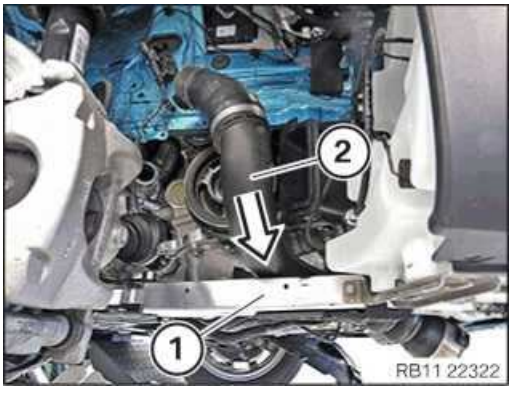
- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

  The gasket groove (1) must be clean.



- Renew gasket.

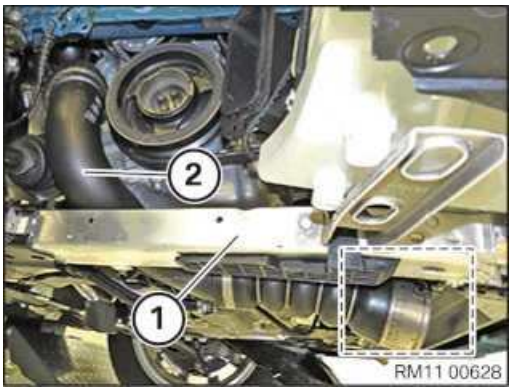
  Parts: Gasket
- Install seal dry without lubricant or mounting agent.



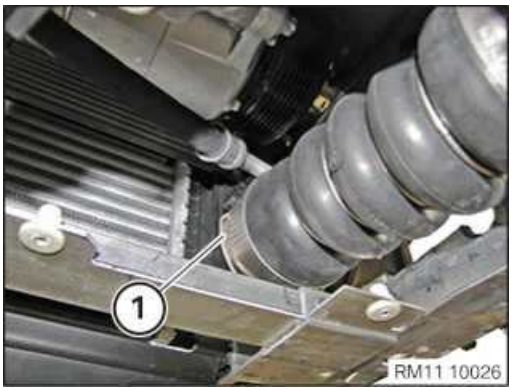
TECHNICAL INFORMATION

Incorrect assembly is possible. Ensure correct installation position.

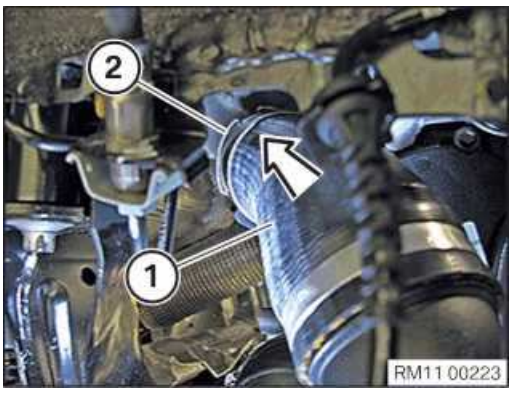
- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).



- Detach the locks (1) in the direction of the arrow from the brackets.
- Ensure that the locks (1) engage audibly.

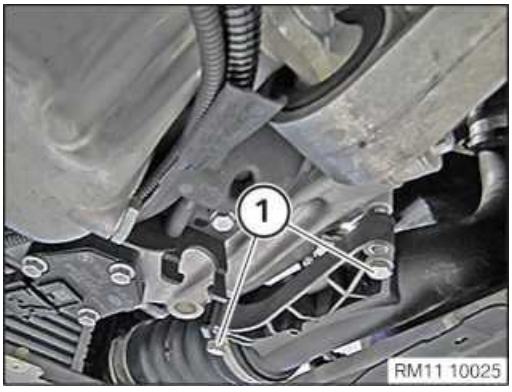


- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed in the charge air duct (1) in the **direction** of arrow between the side member and the deformation element and position.



cardiagn.com

- Pull the adapter of the front axle support (1) downwards to the front right.
- Position the charge air duct (2) in **marked** area on the charge air cooler.



- Feed in and install the charge air duct (1) on the charge air cooler .
- Make sure the charge air duct (1) engages audibly on the charge air cooler.

- Feed in and install charge air duct (1) in the **direction** of the arrow on exhaust turbocharger.

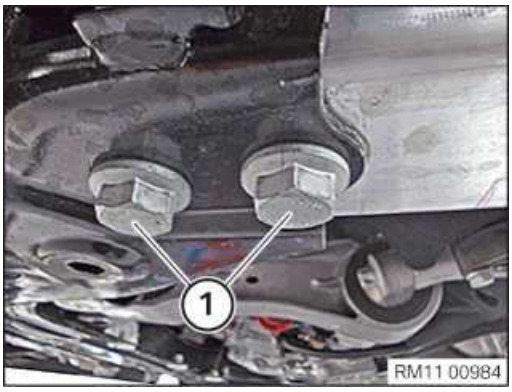
  The locks (2) must engage audibly.

- Tighten the screws (1).

Charge air duct to oil sump

M6		Tightening torque	8 Nm

- **If installed:**
- Feed in and install the ride height sensor (3).
- Tighten the screws (2).

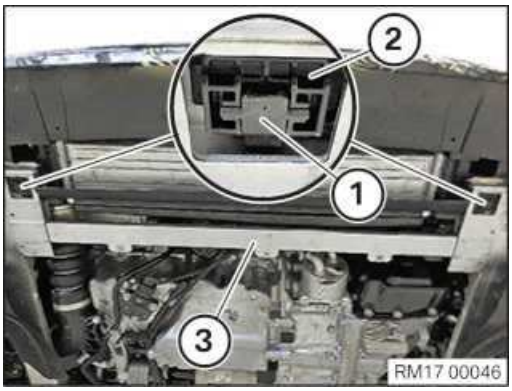


Ride height sensor holder to front axle support

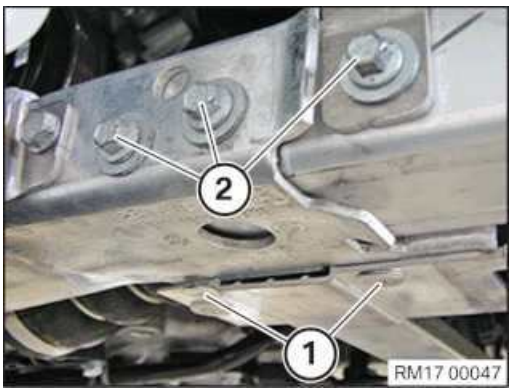
M6		Tightening torque	8 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.



cardiagn.com

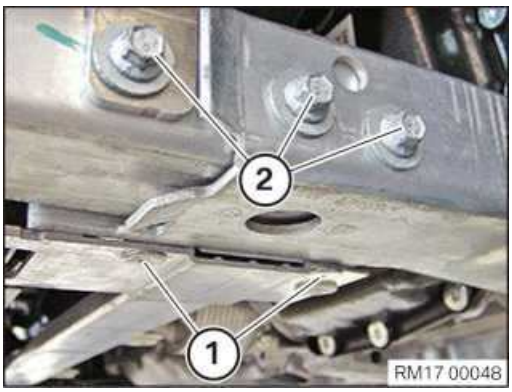


- Tighten the screws (1) on the adapter of the front axle support.

Adapter, front axle support to front axle support

		Tightening torque	100 Nm

- Guide in cross connection (3) and install.
- Guide in locks (2) and install.
- Lock the locking pins (1).
- Ensure that the locking pins (1) audibly engage.



- Tighten the bolts (2) at the front left.

Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front left.

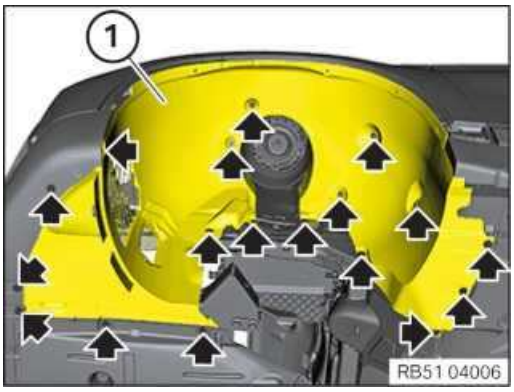
- Tighten the bolts (2) at the front right.

Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front right.



69 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**

cardiagn.com

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

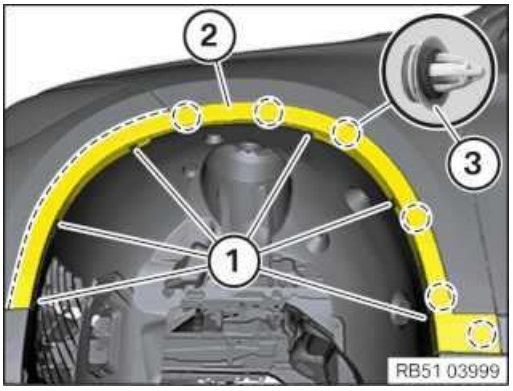
Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

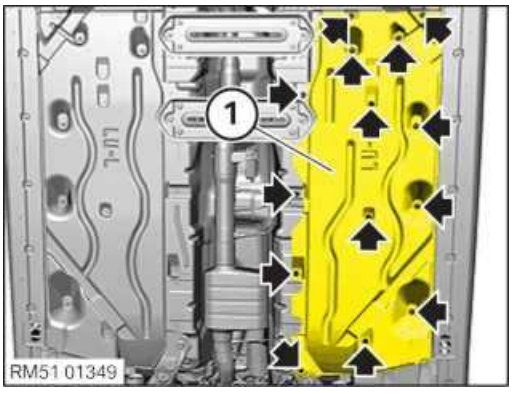


▸ **Installing front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE



Description is for left component only. Procedure on the right side is identical.

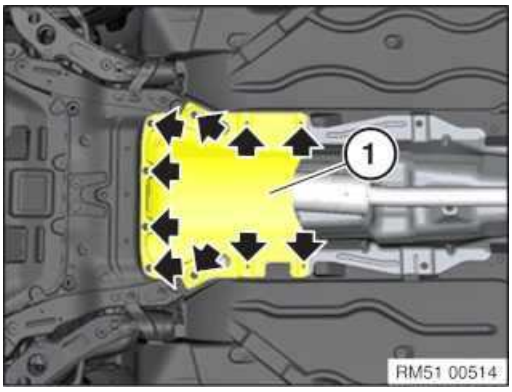
- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

70 – Installing underbody panelling , right

- Correctly position the underbody panelling (1).
- Tighten all bolts and nuts (arrows).

Underbody panelling, side



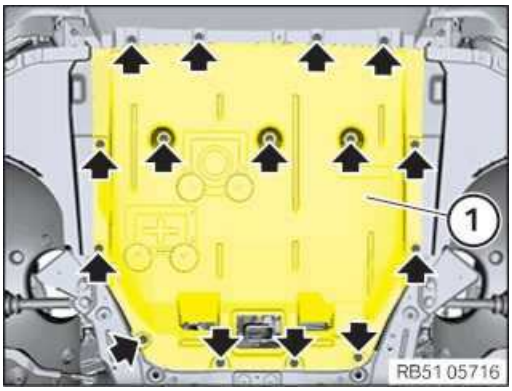
Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side

Plastic nut		Tightening torque	2,6 Nm

71 – If installed: Installing underbody protection at rear

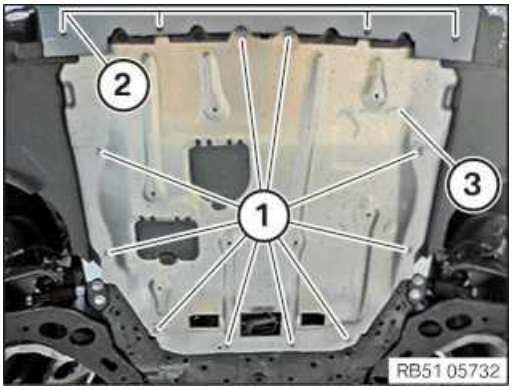
cardiagn.com



- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body

Screw		Tightening torque	3 Nm



72 – Installing the front underbody protection

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

73 – Installing both front wheels

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

cardiagn.com

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

- Renew mounting bolt (1).

  Parts: Mounting bolt
- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

cardiagn.com

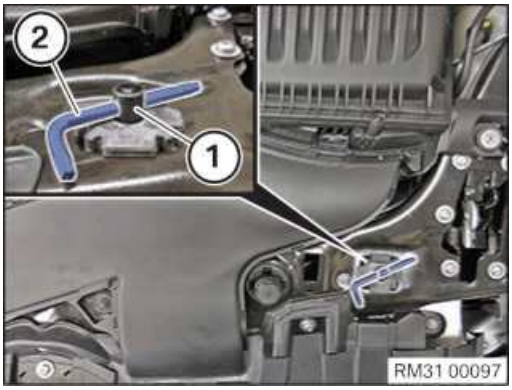
TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.



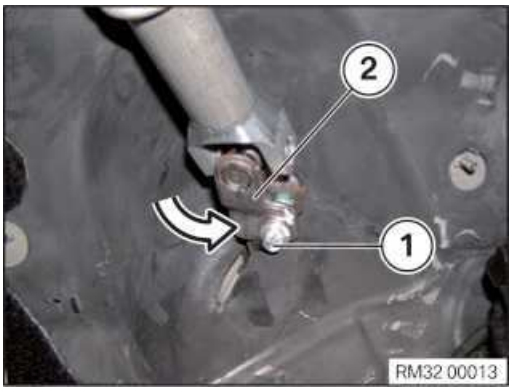
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts.
- Check the wheel bolts and threads for damage, renew the wheel bolts if necessary.
- Join and tighten the wheel bolts (arrows).

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

74 – Removing fastener for left and right radiator



NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

75 – Secure the steering shaft at the bottom on the steering gear

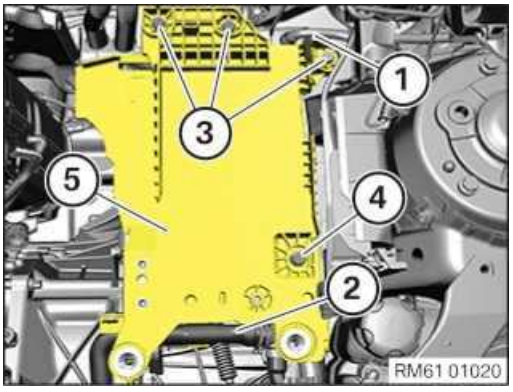
cardiagn.com

- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm



- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

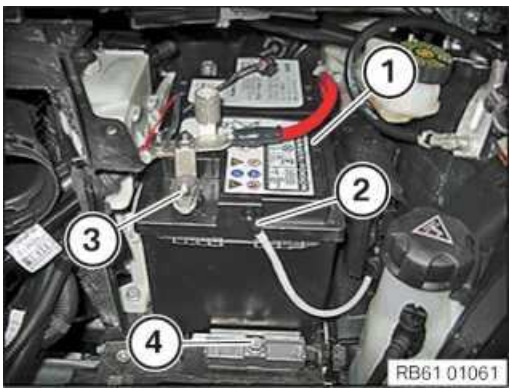
Plastic nut		Tightening torque	3 Nm

76 – Install the battery holder

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm



- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

77 – Install vehicle battery

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

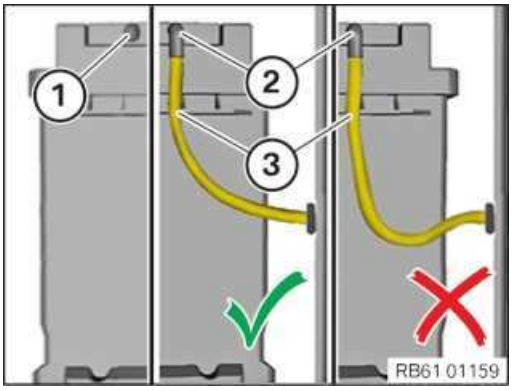
Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

cardiagn.com

▸ **Check the vent holes of the battery**

WARNING



Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

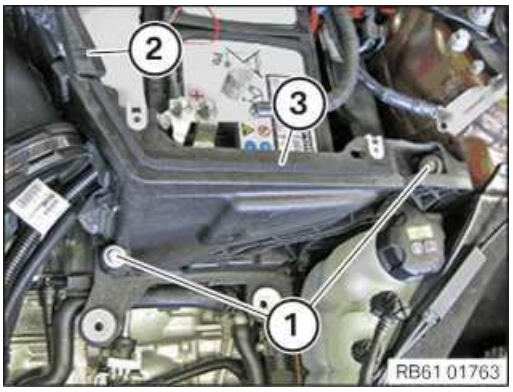
» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

Check

- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).



Result

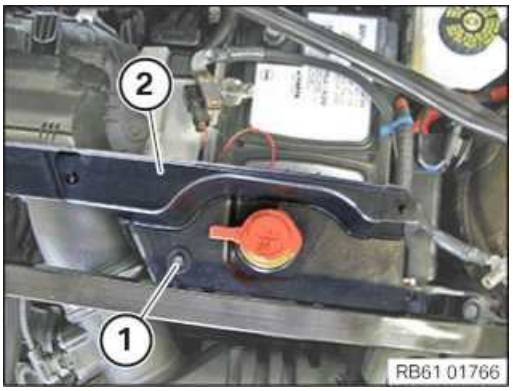
» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

cardiagn.com

- Insert tension strut (3) and tighten with screws (1).

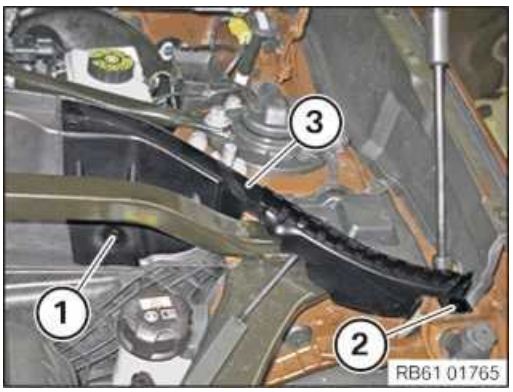


Trailing link

M8		Tightening torque	19 Nm

- Tighten down screw (2).

Battery cover



M8		2,8 Nm

- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

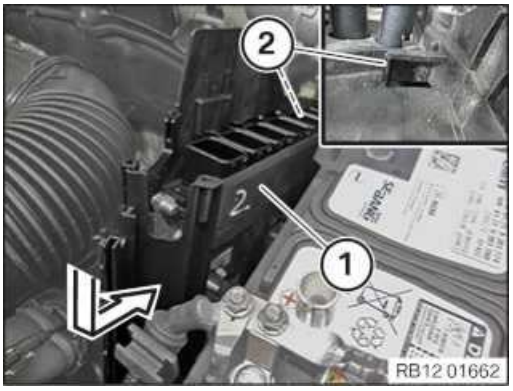
- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

78 – Install electronics box

Prerequisite



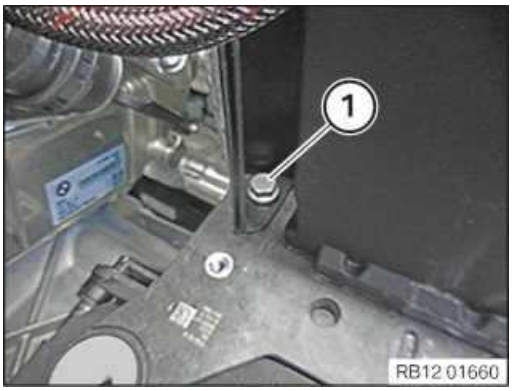
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

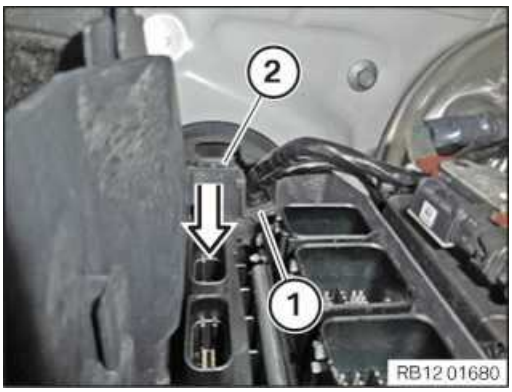
Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

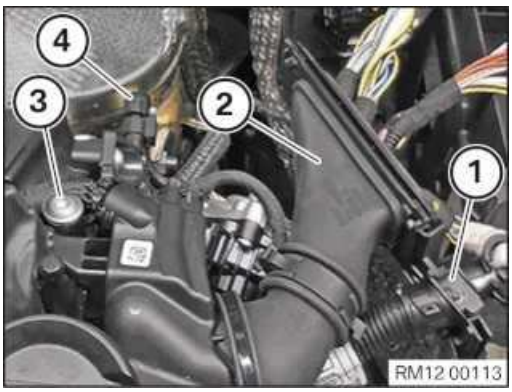


- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

cardiagn.com



- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).

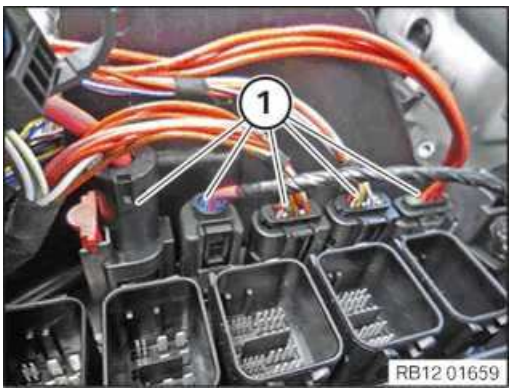


- Tighten down screw (1).

Electronics box to battery tray

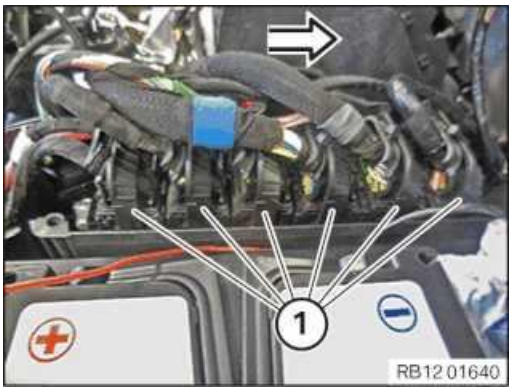
M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



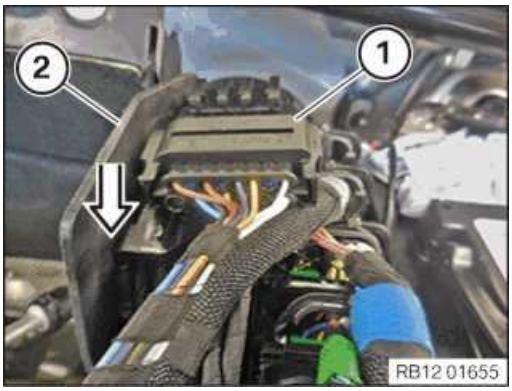
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

Wiring harness to cylinder head cover

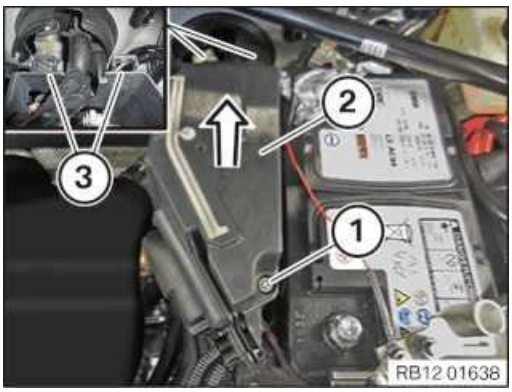


TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

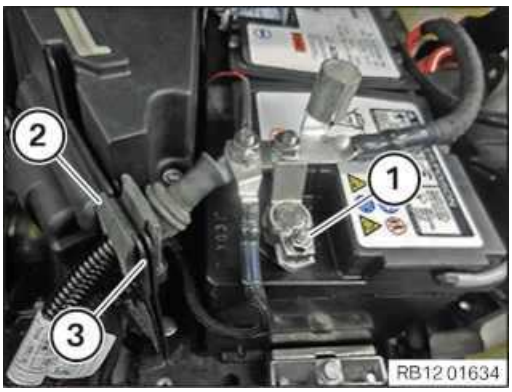


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



cardiagn.com

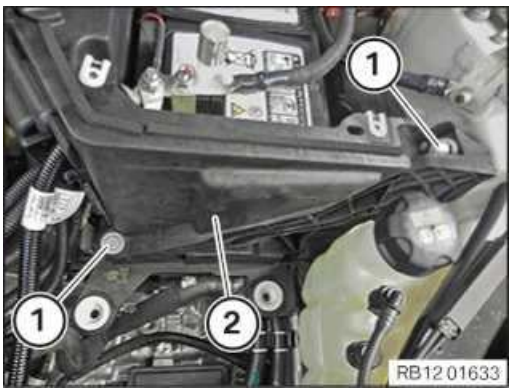
- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box



RF5x26.5		Tightening torque	2,5 Nm

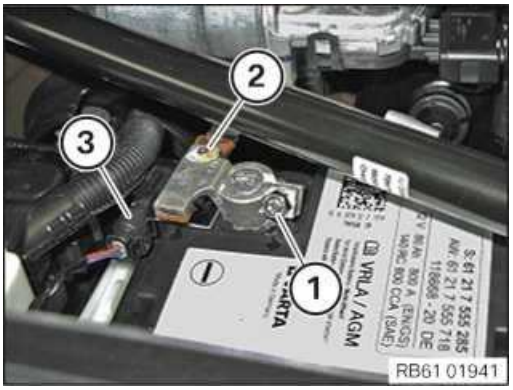
- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray



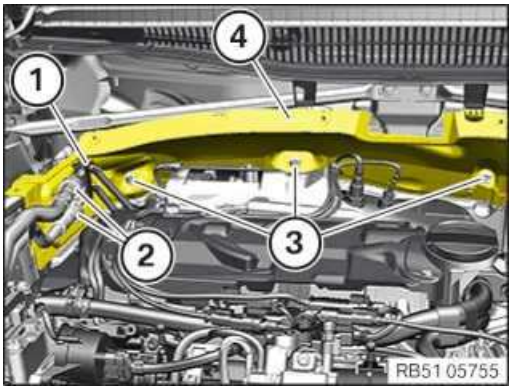
M8		Tightening torque	19 Nm

79 – Connecting the battery earth lead

cardiagn.com

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)



- Remove the protective cover of the positive battery terminal.
- Position the battery earth lead (2).
- Tighten nut (1).

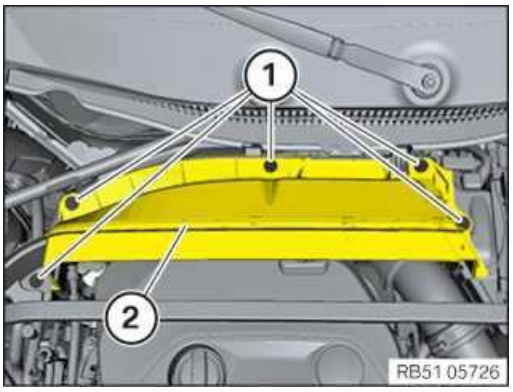
Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

- If required, connect the connector (3).

80 – Installing rear bulkhead upper part

- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

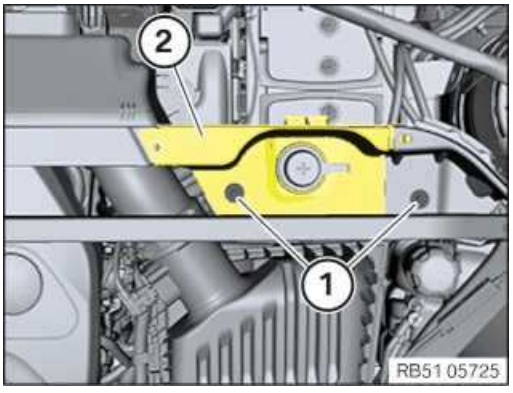


Rear bulkhead upper part to lower section of bulkhead

Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.



81 – Installing the upper bulkhead cover

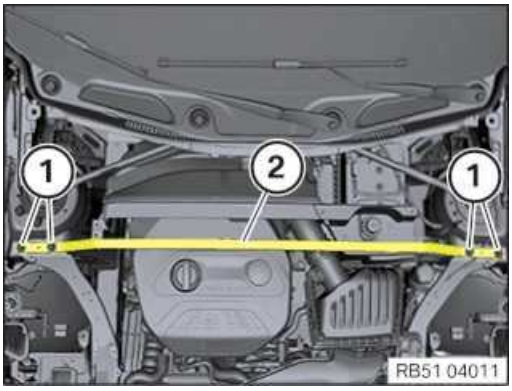
- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm

- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal



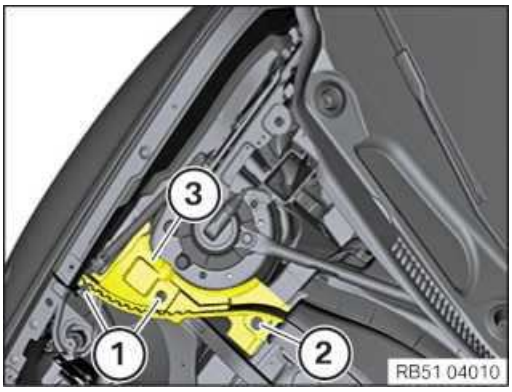
Screw		Tightening torque	2,6 Nm

82 – Install strut brace

cardiagn.com

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).

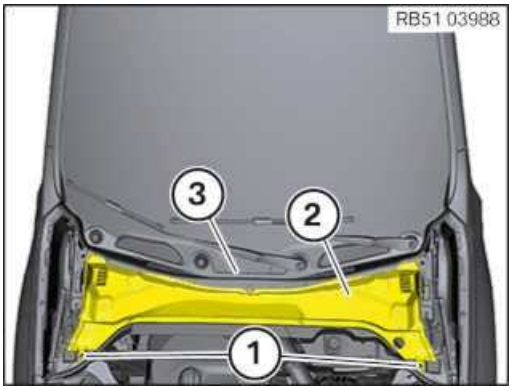
  Parts: Bolts
- Tighten the screws (1).

Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

NOTICE

Description is for right component only. The procedure on the left side is identical.



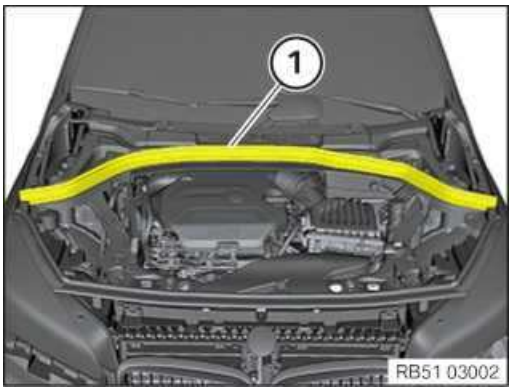
- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

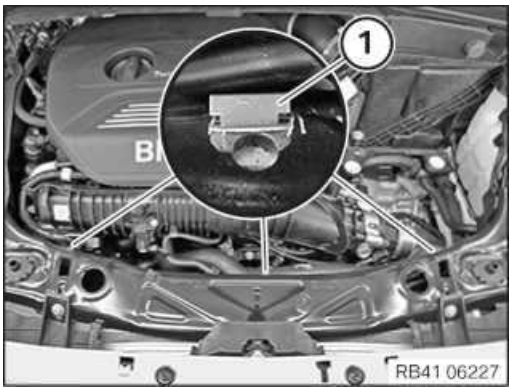
83 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

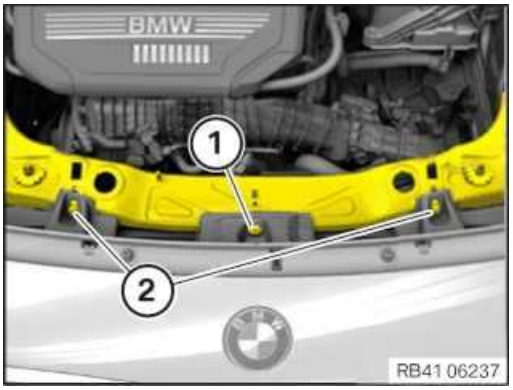
84 – Install the seal for the bonnet

NOTICE

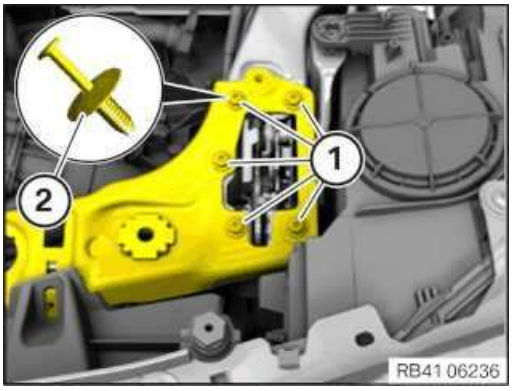


Schematic diagram is for example purposes. Some parts may differ in certain details.

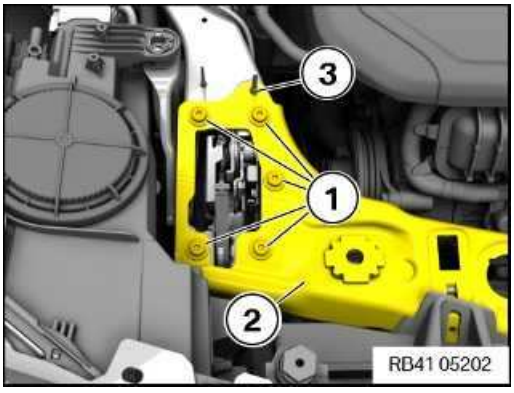
cardiagn.com



- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.



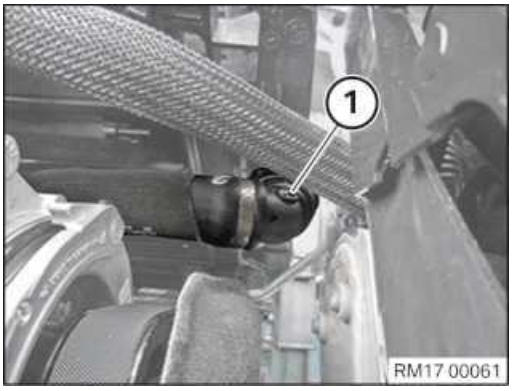
85 – Remove front cross connection



- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

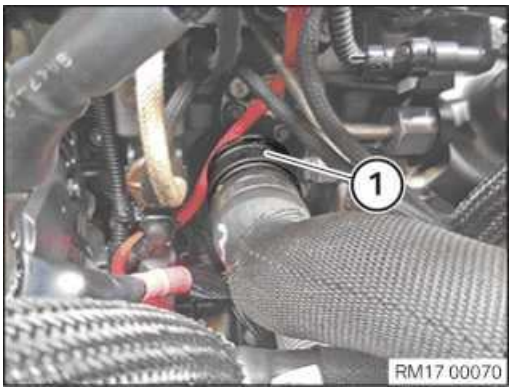
- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).



- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

86 – Connect the coolant line

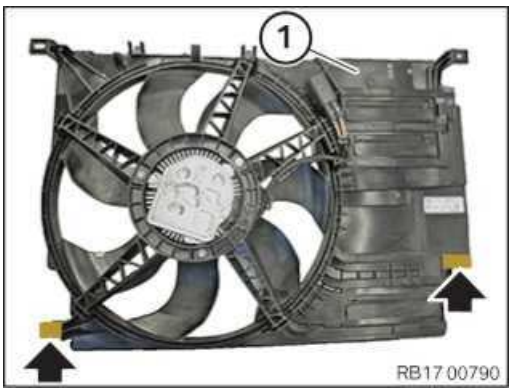


cardiagn.com

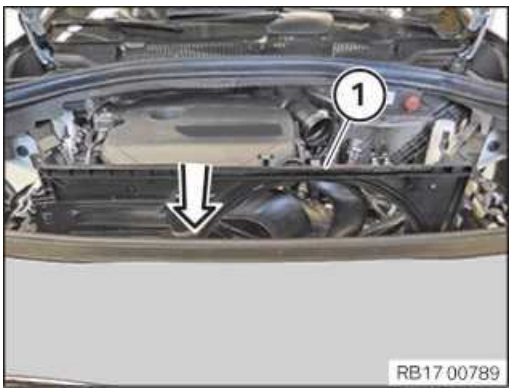
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the connecting branch and lock audibly.

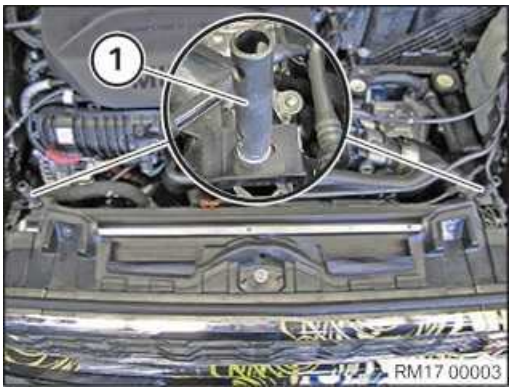


87 – Installing fan cowl with electric fan

TECHNICAL INFORMATION

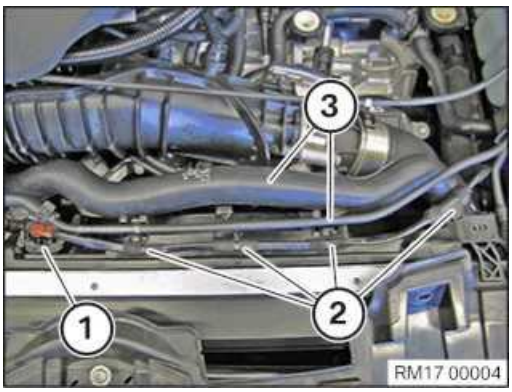
Make sure that the connections are locked correctly. The locks must engage audibly.

- Feed the guides (arrows) of the fan cowl (1) into the charge air cooler.



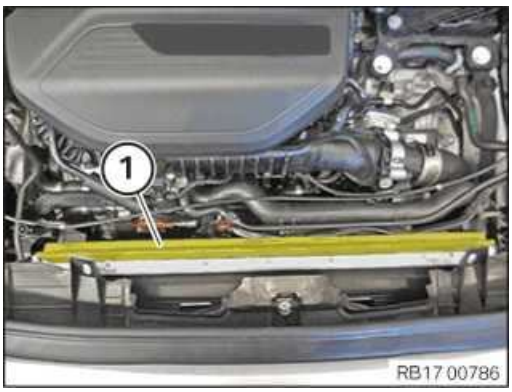
- Feed in and install the fan cowl (1) in the direction of the arrow.

cardiagn.com



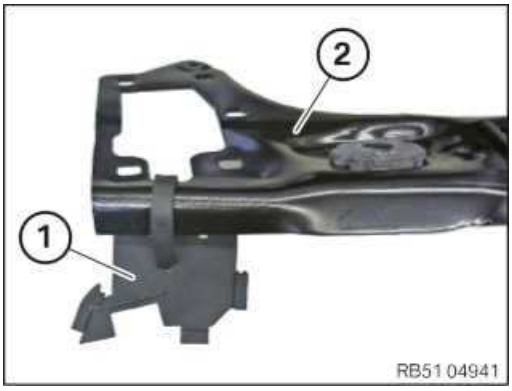
- Lock the left and right locks (arrows).

- Tighten the screws (1).



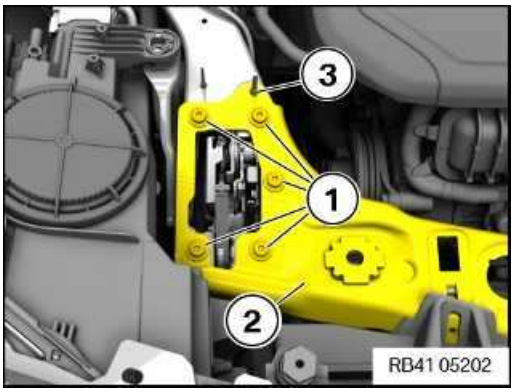
Fan cowl on radiator

M6X12		Tightening torque	6 Nm



- Connect connectors (1) and lock.

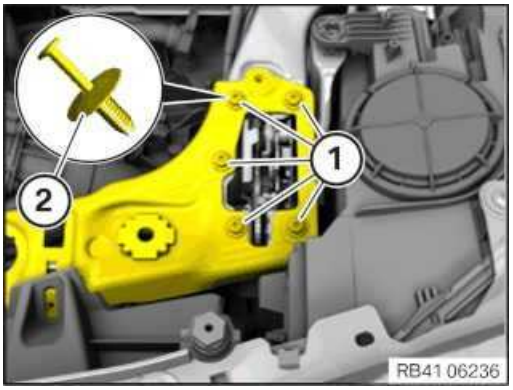
  The connector (1) must engage audibly.
- Secure clamps (2).
- Thread in and install coolant line (3).



- Guide the sealing (1) on the radiator in and install it.

88 – Install front cross connection

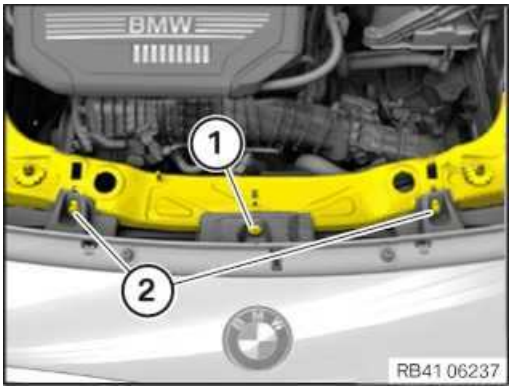
- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.



cardiagn.com

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

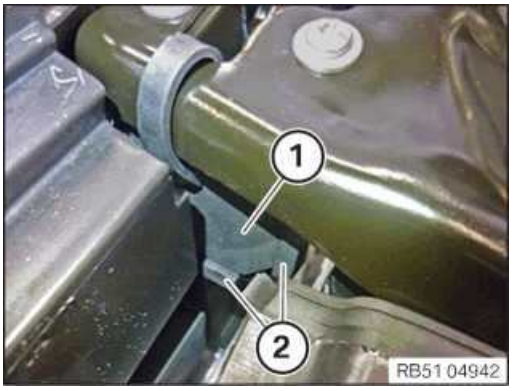
Screws M6x20		Tightening torque	11,8 Nm

- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

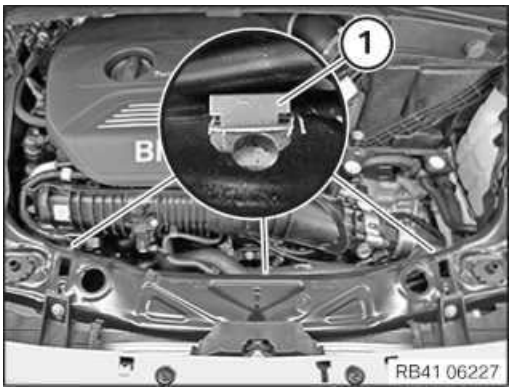
- Tighten down screws (2).



Air duct to upper connection

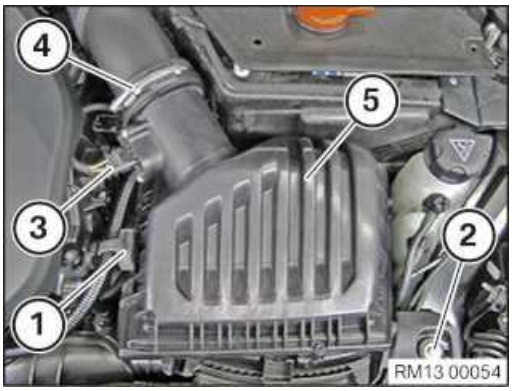
M6x20 screw		Tightening torque	11,8 Nm

- Tighten down screw (1).



Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm



- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

cardiagn.com

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

89 – Installing intake silencer housing

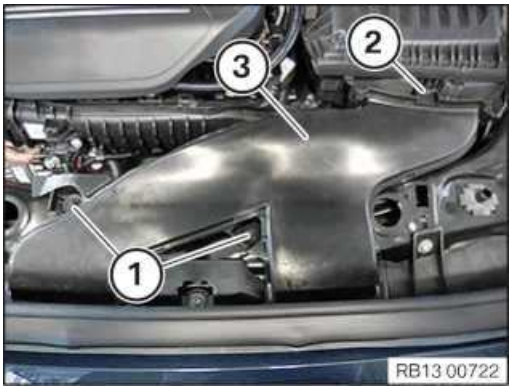
- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

90 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

91 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

cardiagn.com

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

92 – Removing the oil filler cap

- Open oil filler cap (1).

93 – Topping up the engine oil

RISK OF DAMAGE

Damage to the petrol particulate filter.

Vehicles equipped with a petrol particulate filter must be operated with low-ash engine oil only.

- Use BMW Longlife-04 , BMW Longlife-12 FE or BMW Longlife-17 FE+ engine oils or engine oils approved by BMW matching the same specifications only.
- For additional information see: Overview of approved engine oils for BMW Group engines.

RISK OF DAMAGE

Engine damage caused by excessively filling the engine with engine oil.

Filling an excessive quantity of engine oil may cause engine damage.

- Observe the exact engine oil filling capacity.
- Drain the engine oil.

cardiagn.com

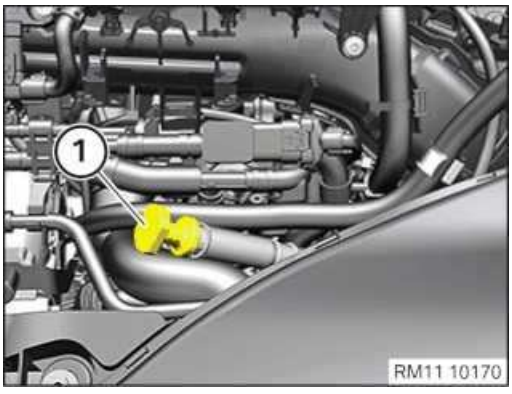
- Pour in engine oil.

Engine oilB47TÜ1

Capacity of engine oil	5,5 l
Engine oil: Technically suitable engine oils for BMW Group engines	

94 – Installing the oil filler cap

- Close oil filler cap (1).



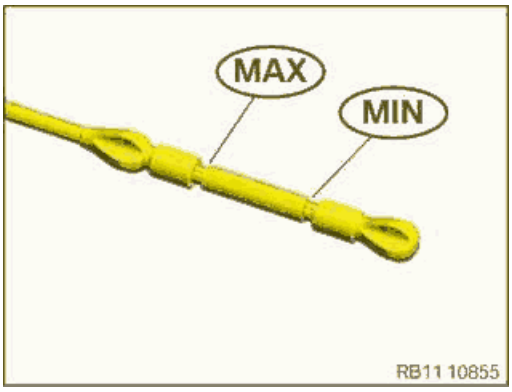
95 – Check engine oil level

- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▸ **Check engine oil level**

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).



- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.

cardiagn.com

96 – Fill and bleed the coolant circuit

TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

▶ **Filling and bleed the high-temperature coolant circuit**

97 – Evacuate and fill air conditioning

- See additional information.

- See additional information.

cardiagn.com

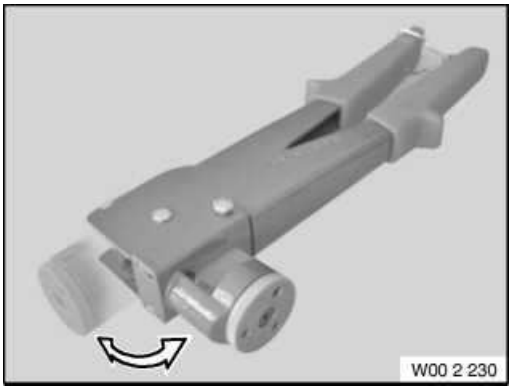
2 184 136 Mobile equipment table lift

Common	Used in step 47
Usage	Table lift MHT 1200
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	06 01 10 (649)



0 490 504 (00 9 120) Torque angle measuring dial

Common	Used in step 49
Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

cardiagn.com

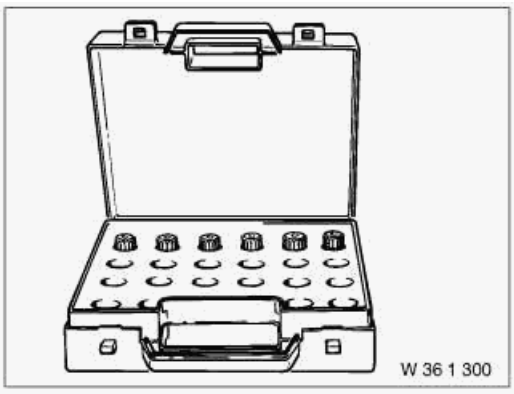
0 496 521 (00 2 230) Pliers

Common	Used in step 69
Usage	(Blind rivet pliers for plastic rivets) For shaft diameters of 3.5 mm, 3.9 mm and 4.5 mm
Included in the tool or work	
Storage location	C25
Replaced by	
In connection with	
SI-Number	01 17 08 (478)

2 344 011 Tool

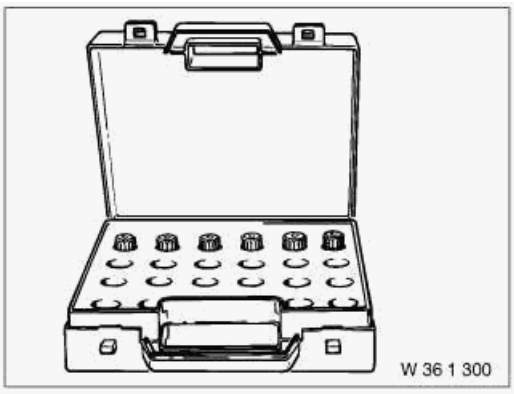
Common	Used in step 73
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

Replacement tools:



0 495 221 (36 1 323) Wheel stud

Common	Used in step 23
Usage	(Code 30) Code 39 available separately, (see EPC) under 36 13 1 181 259
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	



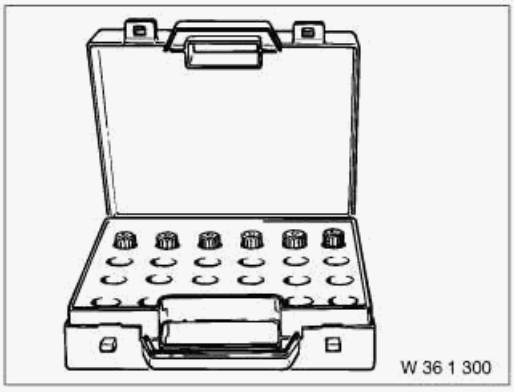
cardiagn.com

0 495 224 (36 1 326) Wheel stud

Common	Used in step 23
Usage	(Code 33) With centring bore available separately, (see EPC) under 36 13 6 765 546
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 225 (36 1 327) Wheel stud

Common	Used in step 23
Usage	(Code 34) With centring bore available separately (see EPC) under 36 13 6 765 547
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	



0 495 226 (36 1 328) Wheel stud

Common	Used in step 23
Usage	(Code 35) With centring bore available separately, (see EPC) under 36 13 6 762 340
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

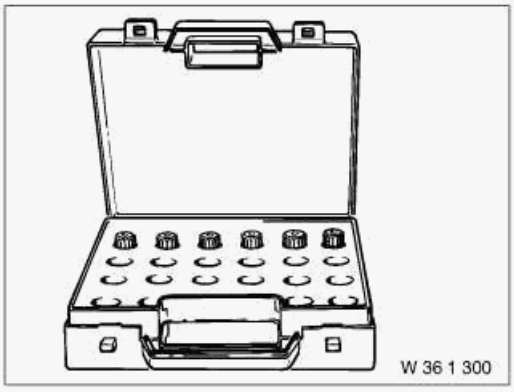
cardiagn.com

0 495 227 (36 1 329) Wheel stud

Common	Used in step 23
Usage	(Code 36) With centring bore available separately (see EPC) under 36 13 6 762 341
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 228 (36 1 331) Wheel stud

Common	Used in step 23
Usage	(Code 37) With centring bore available separately (see EPC) under 36 13 6 762 342
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	



0 495 229 (36 1 332) Wheel stud

Common	Used in step 23
Usage	(Code 38) With centring bore available separately (see EPC) under 36 13 6 762 343

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

- Ensure there is a specific weight compensation on the motor vehicle.

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.

cardiagn.com

for any return shipments. Always package removed components straight away.

- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

Follow notes for repair work on the cooling system.

For additional information see:

Main group 17

17 00 ... Notes for working on the cooling system

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION

Filling **without** the vacuum filler device (watering can filling) is **not permitted**.

Non-compliance will result in danger of component damage and/or engine damage.

Filling specification **absolutely must** be adhered to.

The operation of the vehicle is not permitted unless the filling procedure has been completed. Otherwise, functional limitations (degradation) and/or overheating may occur.

A bleeding procedure is required after a part has been exchanged in the cooling system and/or after refilling the cooling system.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.

PRELIMINARY WORK

1 – Drawing off the air conditioning

- See additional information.

2 – Removing the acoustic cover

cardiagn.com

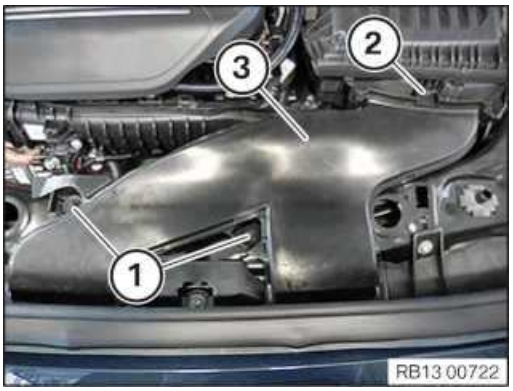
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

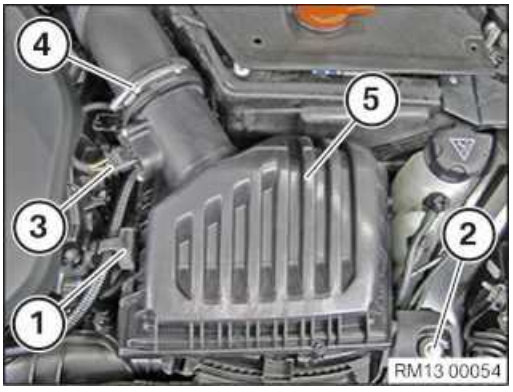
RISK OF DAMAGE



Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

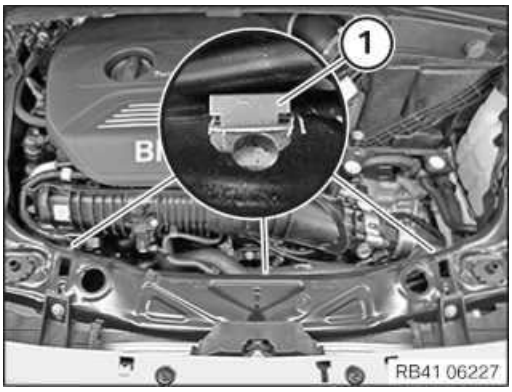
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



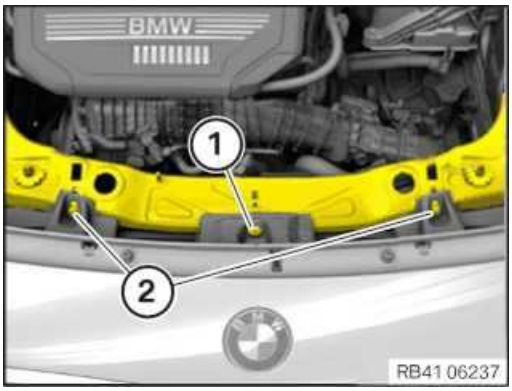
- Unclip the acoustic cover from the marked areas towards the top.

3 – Remove the intake neck for intake silencer housing

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

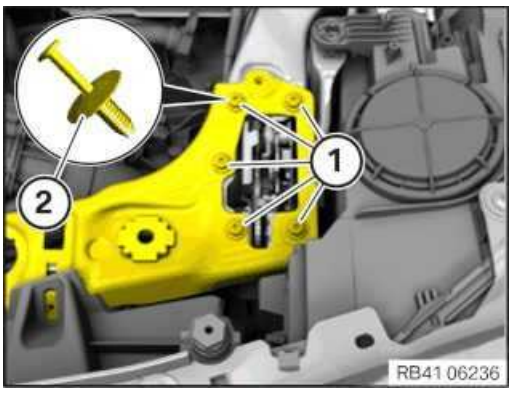


4 – Removing intake silencer housing

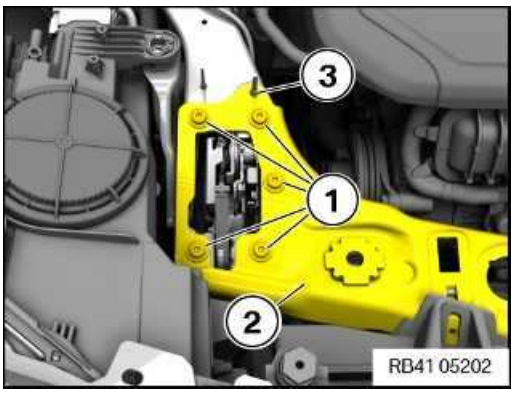


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

5 – Remove front cross connection



cardiagn.com



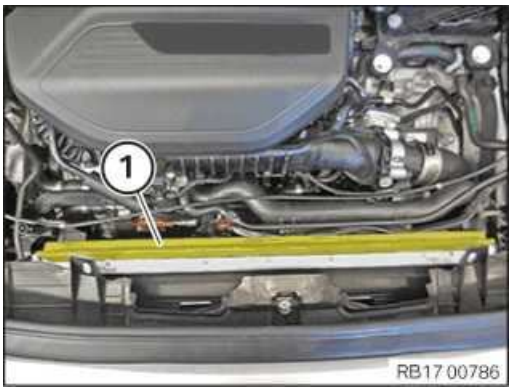
- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

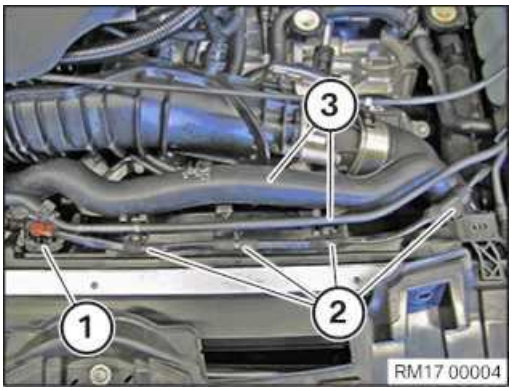
- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

6 – Removing the fan cowl with electric fan



WARNING

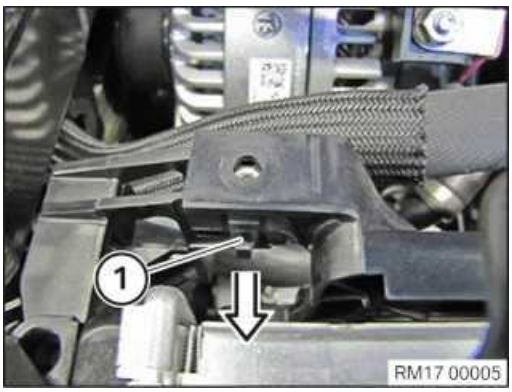
Hot surfaces.



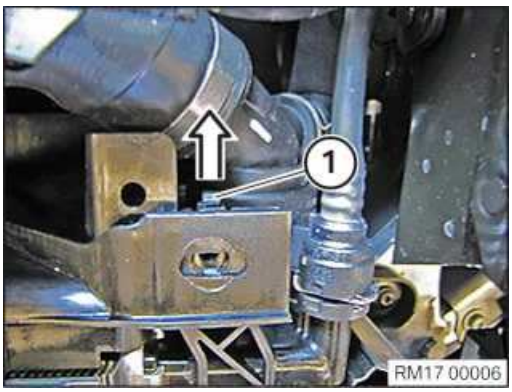
Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

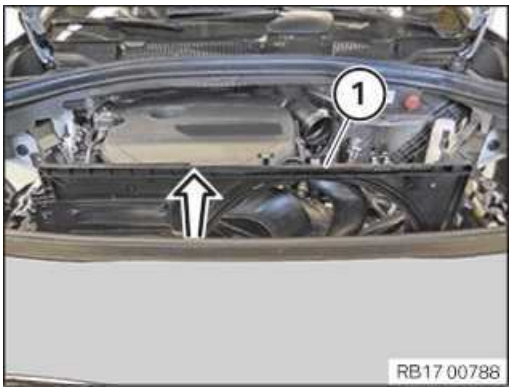


- Feed out and remove the sealing (1) from the radiator.

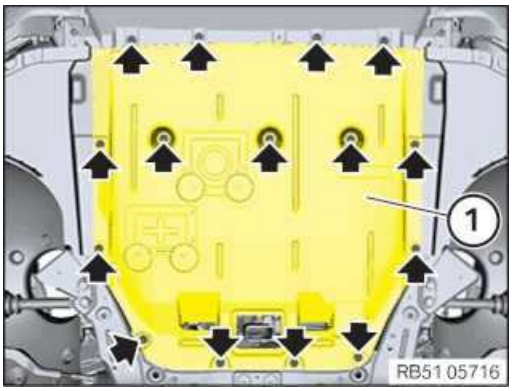


- Unlock plug connection (1) and disconnect.
- Unlock and loosen the clamps (2).
- Feed out connector (1) and place to one side.
- Thread off coolant line (3) and place to the side.

- Loosen screws (1).

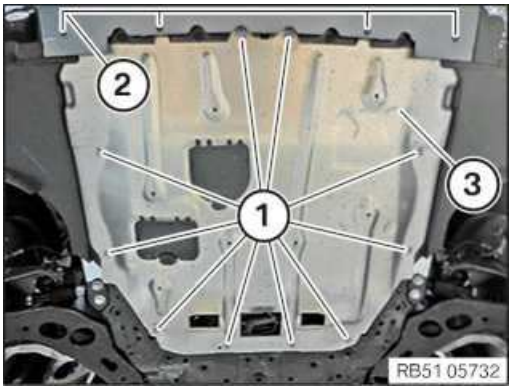


- Unlock the right lock (1) on the fan cowl in the direction of the arrow.



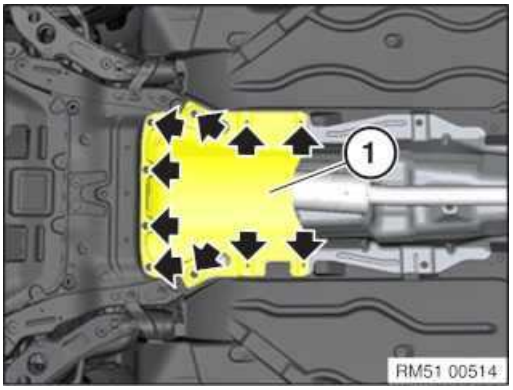
- Unlock the left lock (1) on the fan cowl in the direction of the arrow.

cardiagn.com



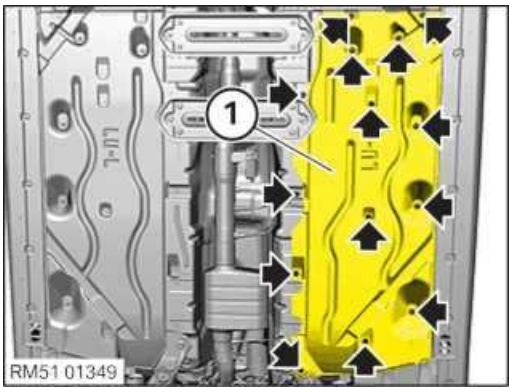
- Guide out fan cowl (1) in direction of arrow and remove.

7 – Removing the front underbody protection



- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).



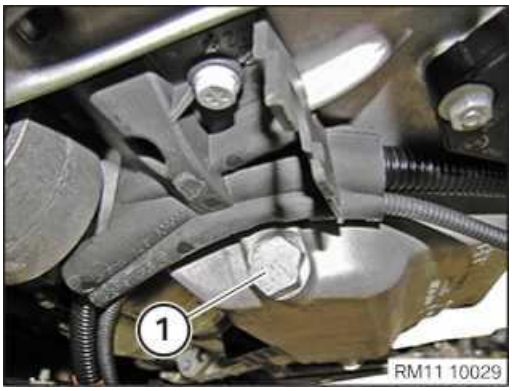
8 – If installed: Removing rear underbody protection

- Remove screws (arrows).
- Remove the rear underbody protection (1).

9 – Removing right underbody panelling

cardiagn.com

- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).



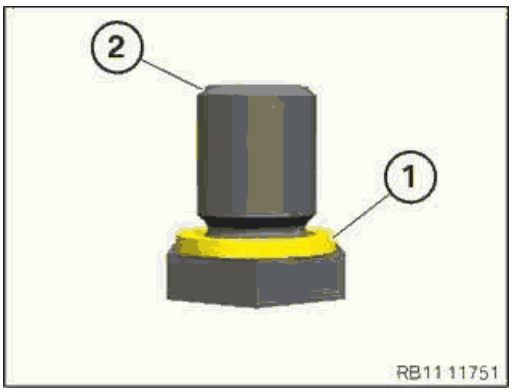
10 – Releasing the oil drain plug

WARNING

Hot fluids.

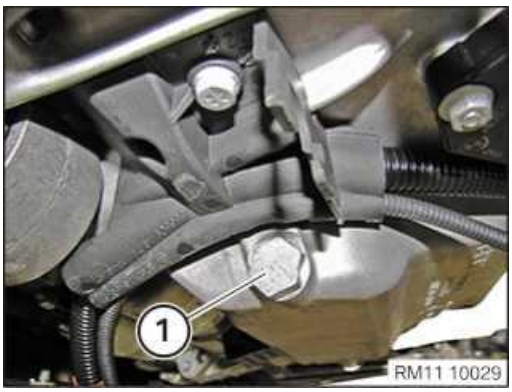
Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.



TECHNICAL INFORMATION

Catch and dispose of drained engine oil in a suitable collecting vessel. Observe country-specific waste disposal regulations.



- Release oil drain plug (1).
- Drain engine oil.

11 – Tightening the oil drain plug

- Renew sealing ring (1) on the oil drain plug (2).

  Parts: Sealing ring
- Guide in the sealing ring (1) on the oil drain plug (2) and install.

- Renew the sealing ring.

  Parts: Sealing ring
- Position oil drain plug (1) on the oil sump and tighten.

Oil drain plug on oil sump

M12x1.5	Renew the sealing ring.	Tightening torque	25 Nm

12 – Draining coolant

cardiagn.com

WARNING

Hot fluids.

Risk of scalding!

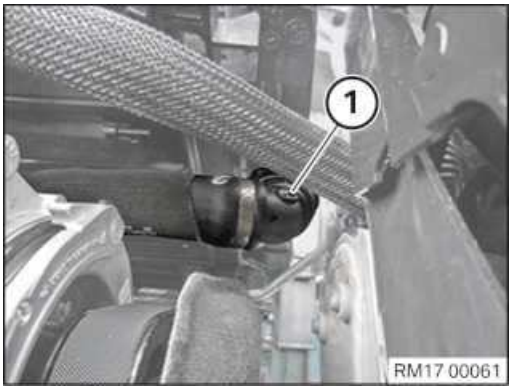
- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

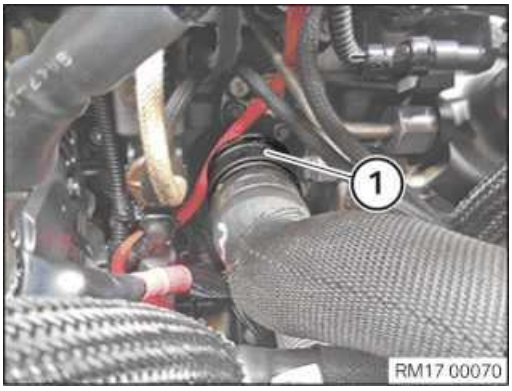
Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.



In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

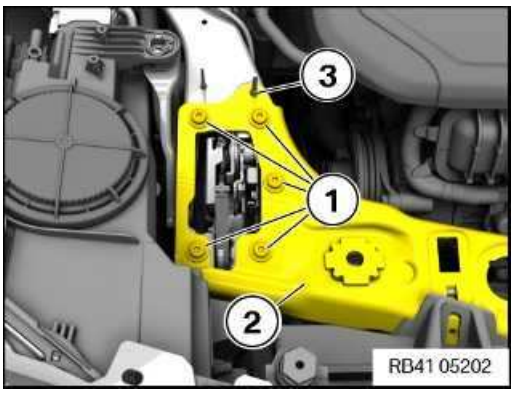
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen sealing cap (1).

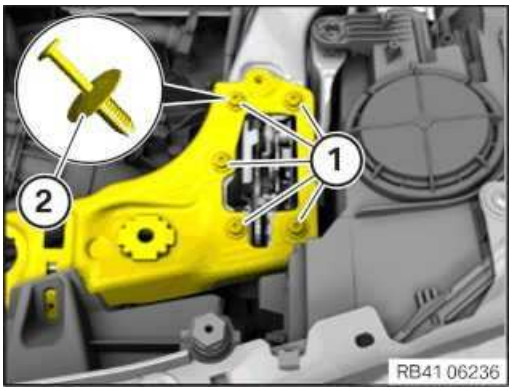
- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.



- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.

cardiagn.com

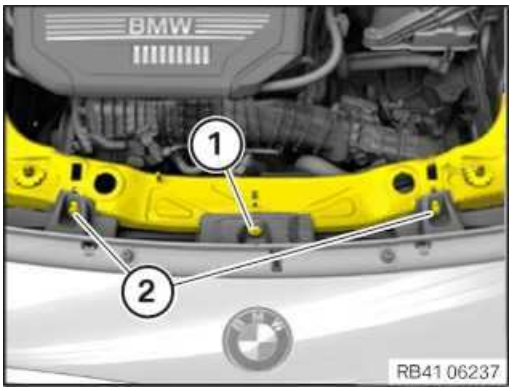
13 – Install front cross connection



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm

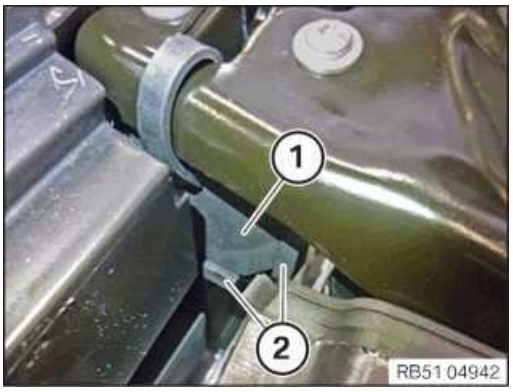
- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

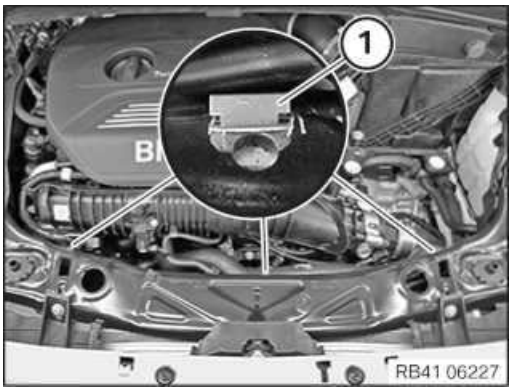
- Tighten down screws (2).

Air duct to upper connection



M6x20 screw		Tightening torque	11,8 Nm

- Tighten down screw (1).

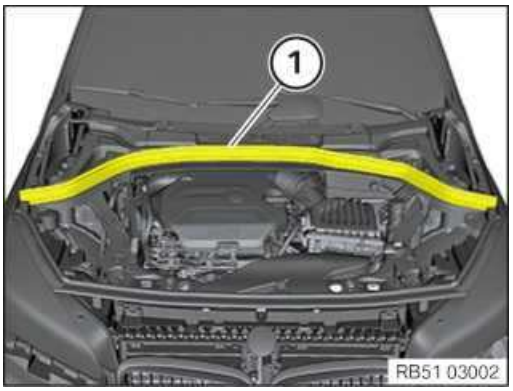


Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm

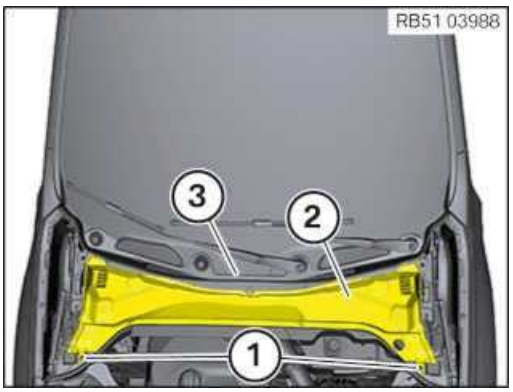
cardiagn.com

- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).



- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

14 – Remove the seal for the rear bonnet

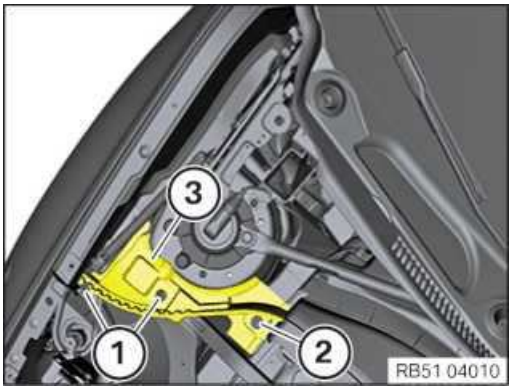


NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.

15 – Removing front cowl panel cover

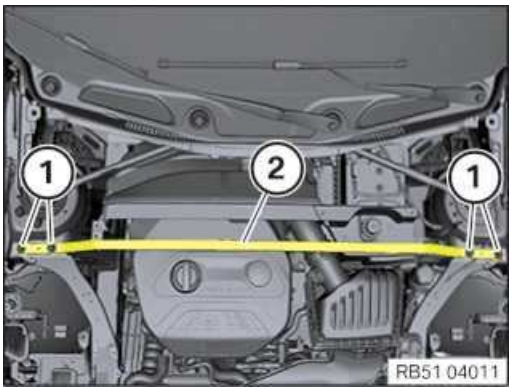


- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

16 – Remove suspension cross-brace

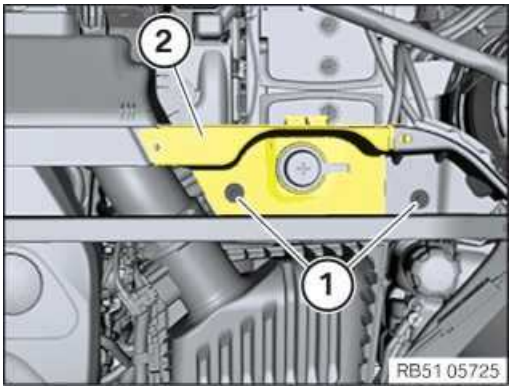
cardiagn.com

TECHNICAL INFORMATION



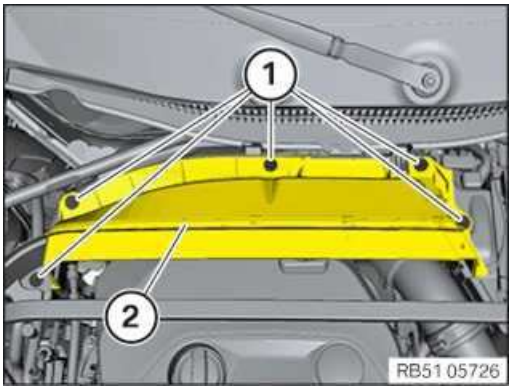
Driving without the strut brace/front end or tension strut is not permitted.

NOTICE



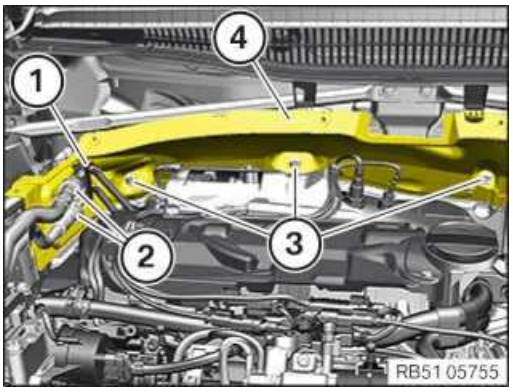
Description is for right component only. The procedure on the left side is identical.

- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).



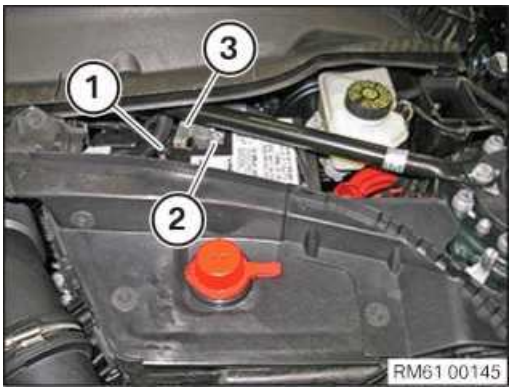
- Loosen screws (1).
- Remove strut brace (2).

17 – Removing the upper bulkhead cover



- Loosen screws (1).
- Guide out and remove the cover (2).

- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).



18 – Remove the rear bulkhead upper part

cardiagn.com

- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.

19 – Disconnecting the battery earth lead

- Unlock plug connection (1) and disconnect.
- Unfasten nut (2).
- Remove the battery earth lead (3) and secure to one side.

20 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

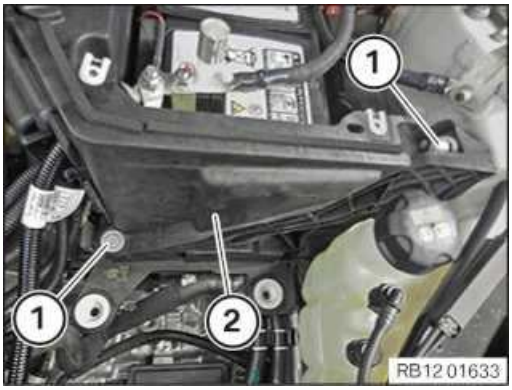
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

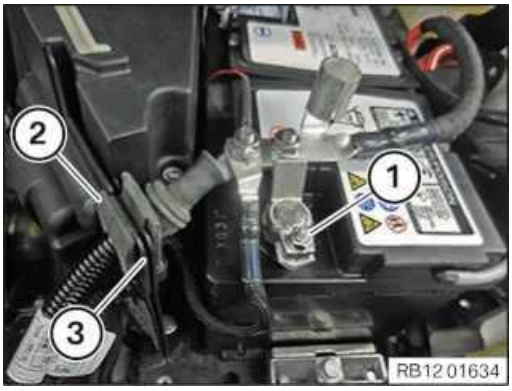
Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.



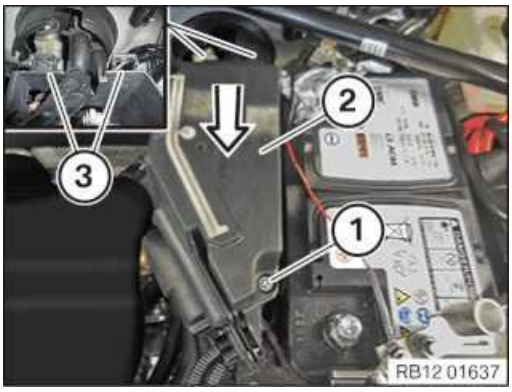
TECHNICAL INFORMATION

Follow instructions for removing and installing control units.
For additional information see: 12 00 ... Notes on removal and installation of control units

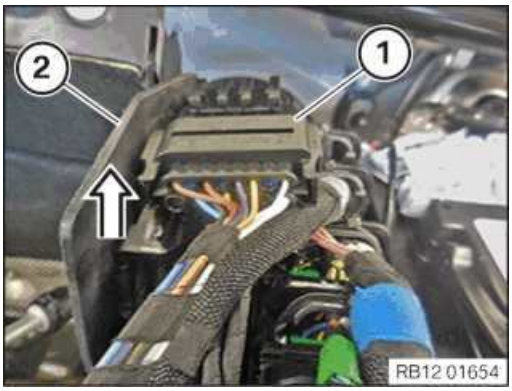


cardiagn.com

TECHNICAL INFORMATION

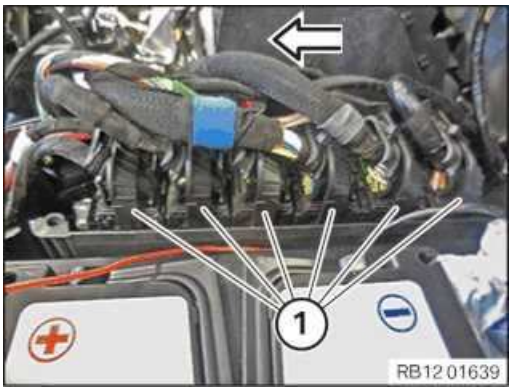


Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.

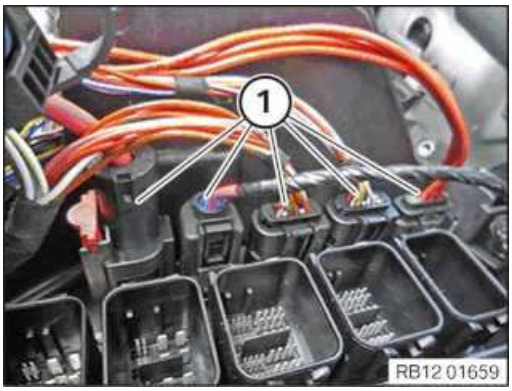


- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

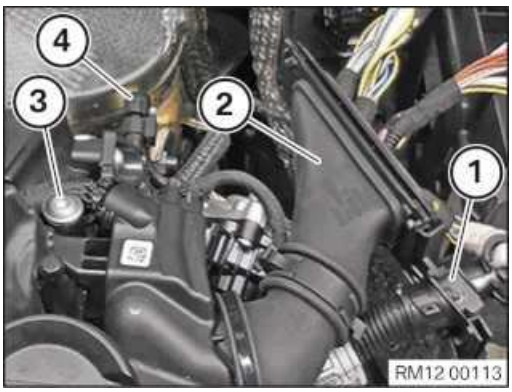
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



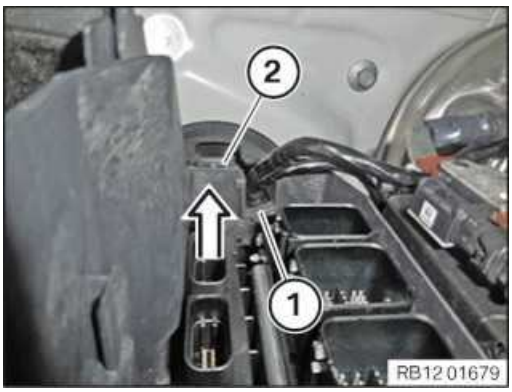
- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.



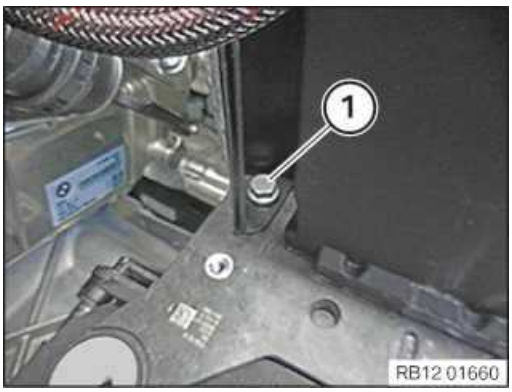
- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).



cardiagn.com

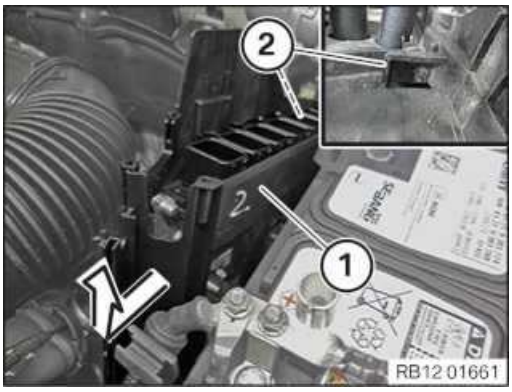


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).

- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

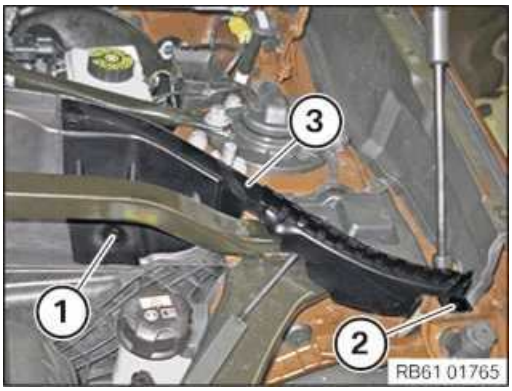


- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

- Loosen screw (1).

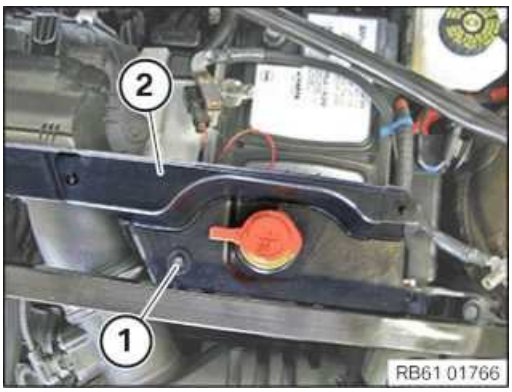
cardiagn.com

- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.



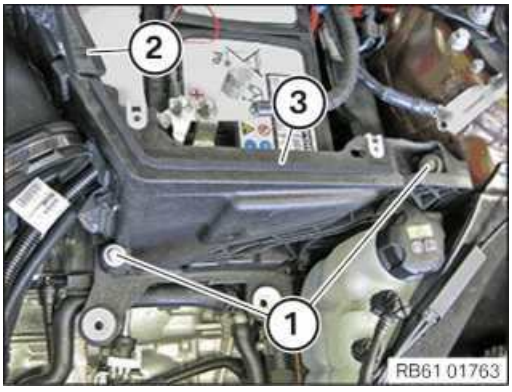
21 – Remove vehicle battery

WARNING



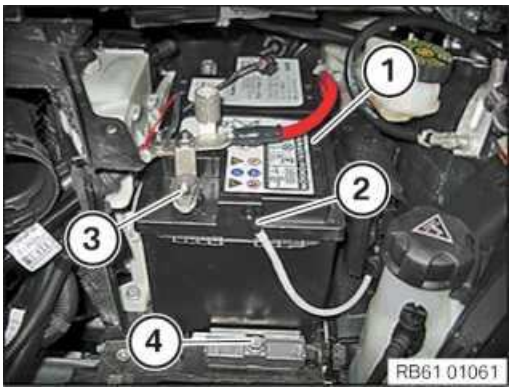
Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!



- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).



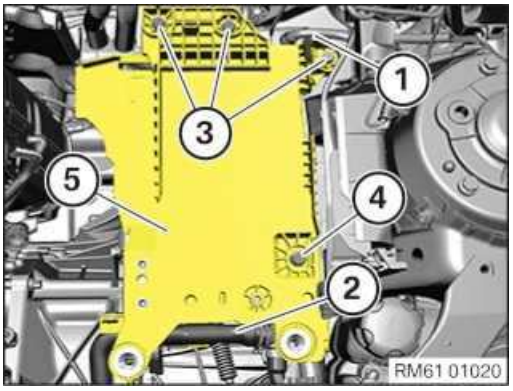
- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

cardiagn.com

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING



Unprotected battery terminals.

Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

22 – Remove battery holder

- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

23 – Removing both front wheels

▸ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

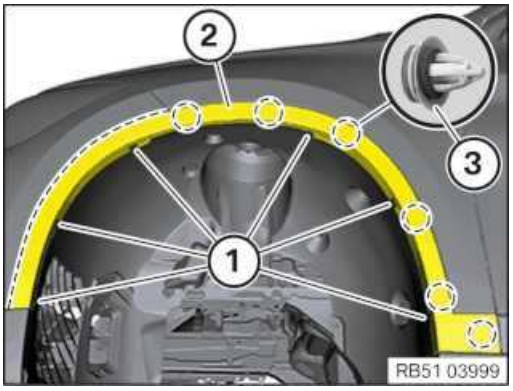
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

24 – Removing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

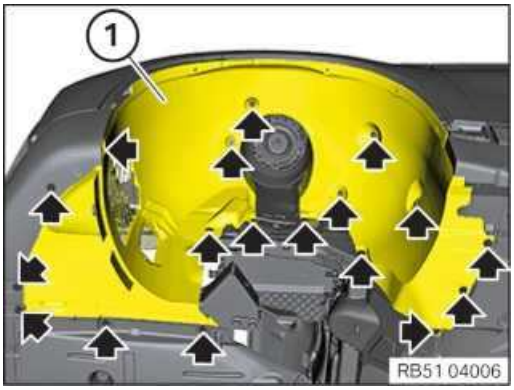
▸ **Remove the front wheel arch trim**



cardiagn.com

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.



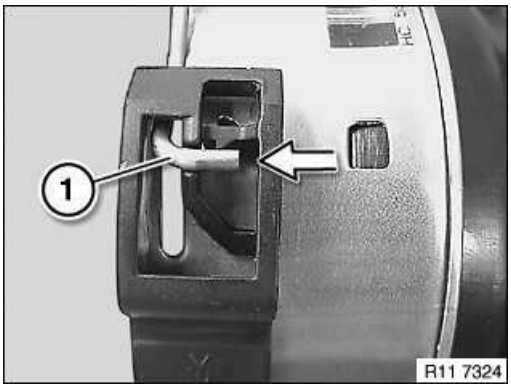
NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

▶ **Remove front wheel arch cover**

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

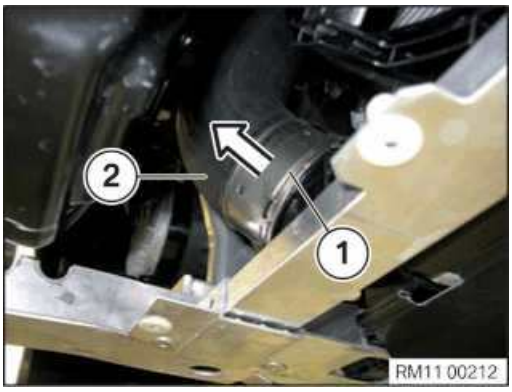


25 – Remove the pressure pipe between the throttle body and the charge air cooler

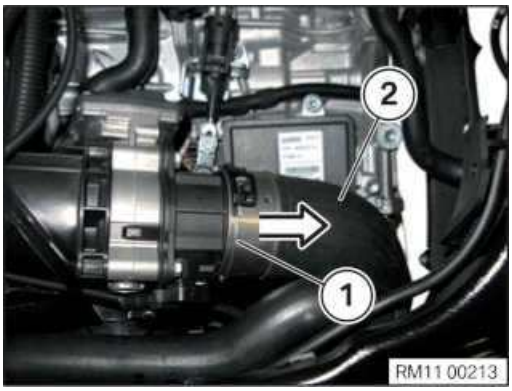
WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.



- Unlock the lock (1).

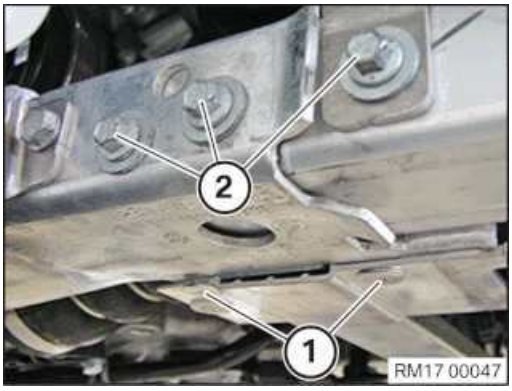
  The lock (1) must engage in the bracket (arrow).

cardiagn.com

- Unlock and detach the locks (1) on both sides.
- Guide out the pressure pipe (2) in the direction of the arrow and set it aside.

- Unlock and detach the locks (1) on both sides.
- Guide out the pressure pipe (2) in the direction of the arrow and set it aside.

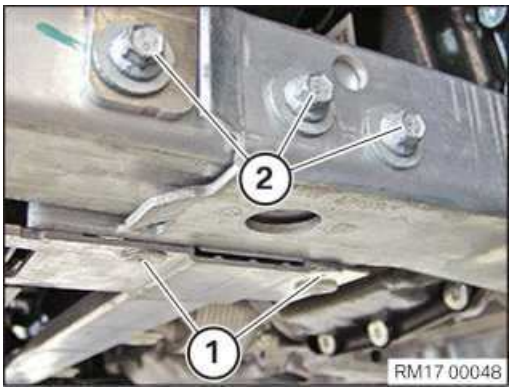
- Remove the pressure pipe (1) in the direction of the arrow.



26 – Removing the right charge air duct between the exhaust turbocharger and the charge air cooler

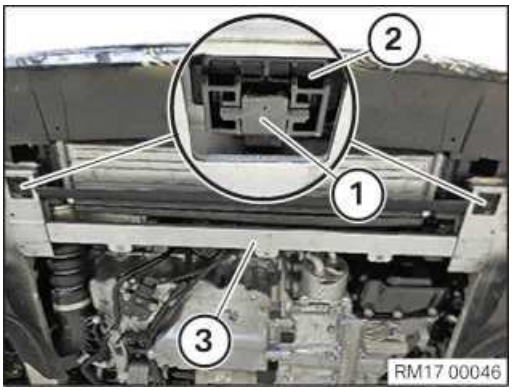
WARNING

Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.



- Undo screws (2) at front left.
- Drill out blind rivets (1) at front left.

cardiagn.com

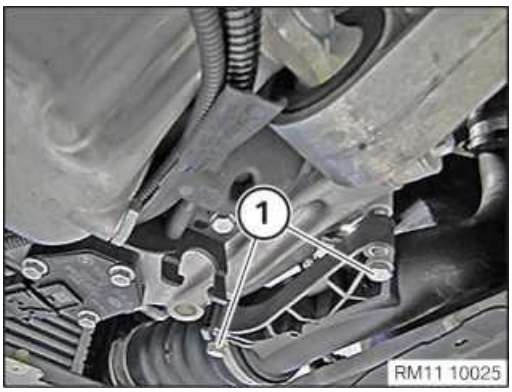
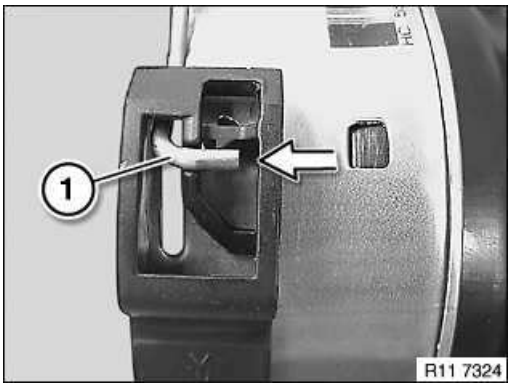
- Undo screws (2) at front right.
- Drill out blind rivets (1) at front right.

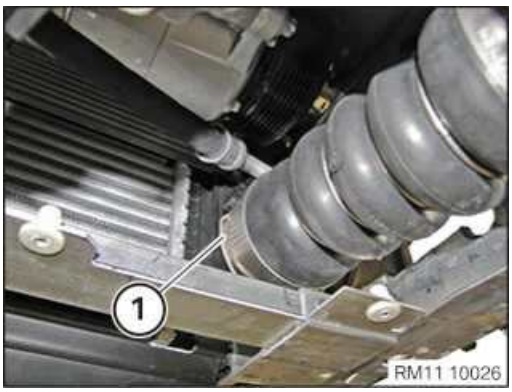


- Unlock locking pins (1).
- Thread out and remove locks (2).
- Thread out and remove cross connection (3).

- Release the screws (1) on the right front axle support.



- **If installed:**
- Unlock and release plug connection (1).
- Loosen screws (2).
- Feed out the ride height sensor (3) and remove.



- Release screws (1) of charge air duct on right oil sump.

cardiagn.com

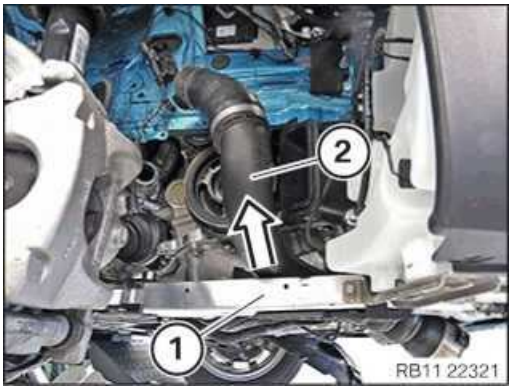
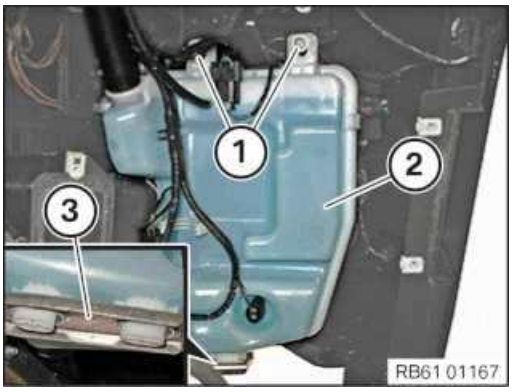
- Unlock lock (1).

  The lock (1) must engage in the bracket during unlocking (arrow).



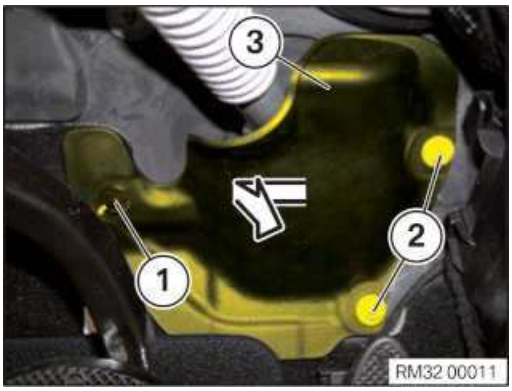
- Unlock and release the charge air duct (1) on the charge air cooler.

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (2) in the **marked** area towards the bottom and set it aside.



- Unlock and detach the locks (1) on both sides.
- Feed out the charge air duct (2) on the exhaust turbocharger in the direction of the arrow and set it aside.

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (1) in the direction of arrow between the side member and the deformation element and remove.



27 – Remove the washer fluid reservoir from the fixture

cardiagn.com

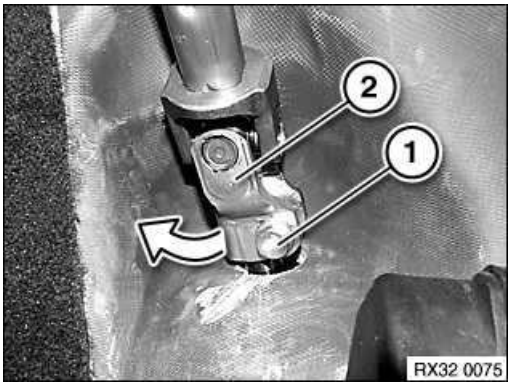
- Loosen screws (1).
- Guide the washer fluid reservoir (2) up and out of the fixture (3) and set it aside.



28 – Releasing lower steering shaft from steering gear

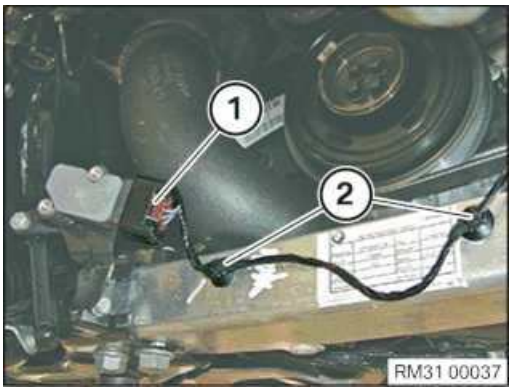
- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!

- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

29 – Securing radiator on left and right



NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

30 – With right installation: Detaching ride height sensor cable

cardiagn.com

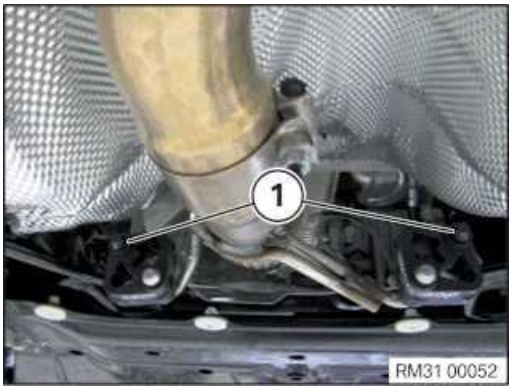
- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

31 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▸ **Detach the anti-roll bar from the anti-roll bar link**

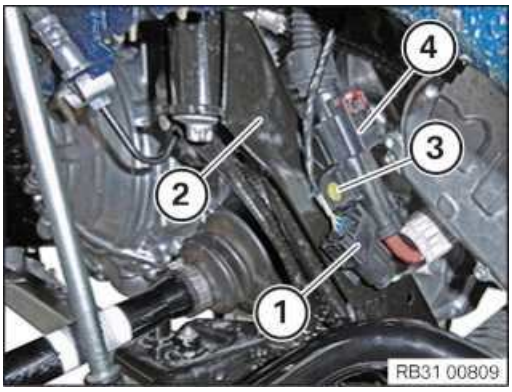


- Unfasten nut (1).

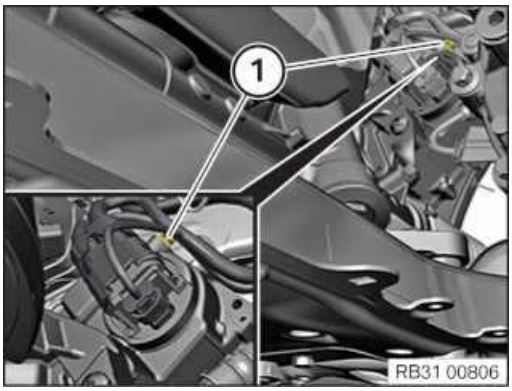
Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .

32 – Detaching rubber mount from front axle support



- Spray rubber mount (1) with lubricant and release from holder on front axle support.



33 – Disconnecting plug connections from steering gear

▸ **If installed: Detach connectors from the front axle carrier**

cardiagn.com

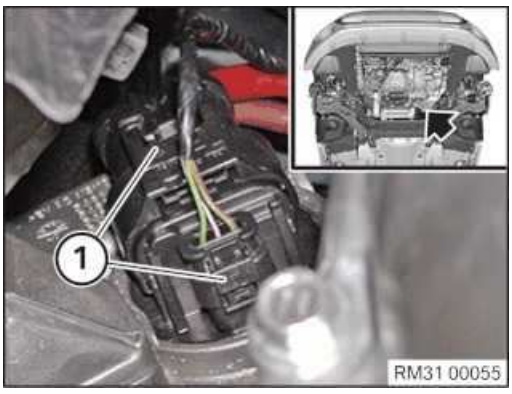
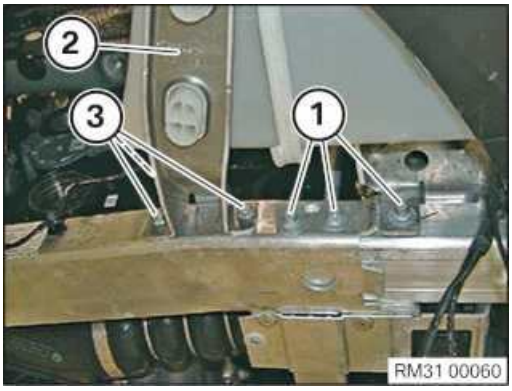
- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).



- Disconnect wiring harness (1) from steering gear.

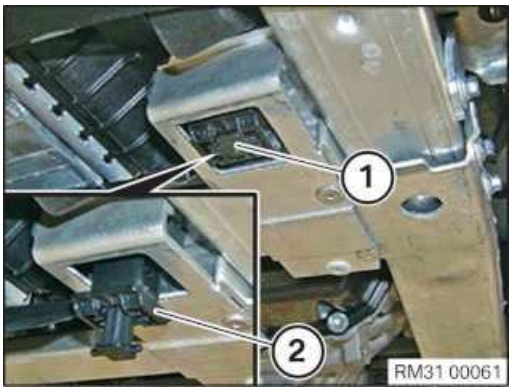


- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.

- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

34 – Releasing the mounted part from the front axle support



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

cardiagn.com

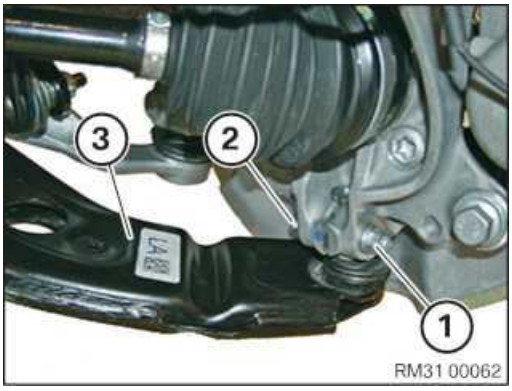
NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).

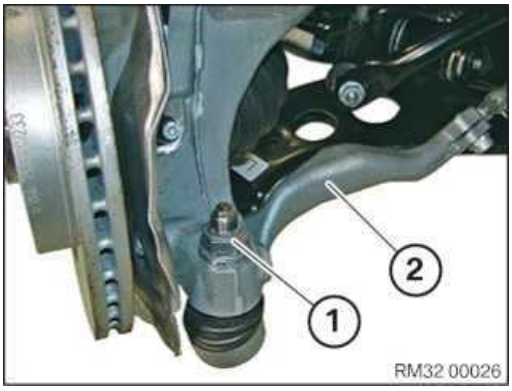
- Loosen screw (2) of the engine support (3) on the front axle (1).



NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

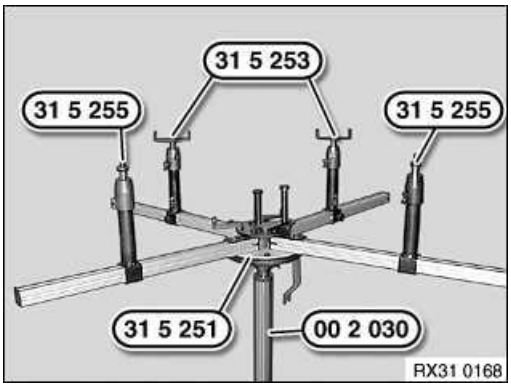


35 – Detaching and removing front axle completely

NOTICE

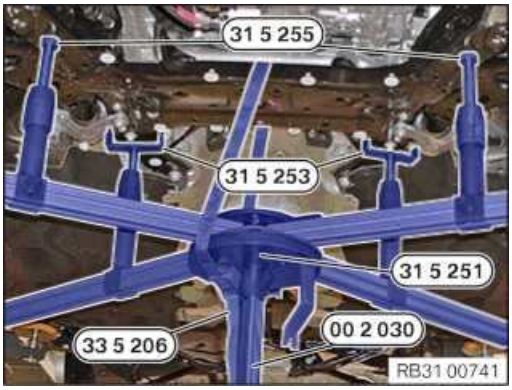
Perform the operations on the left and right side.

- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .



NOTICE

Perform the operations on the left and right side.



- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

cardiagn.com

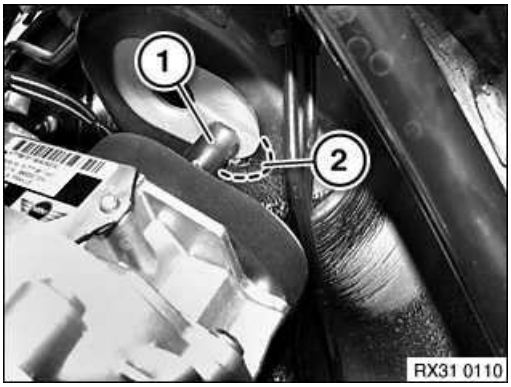
- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

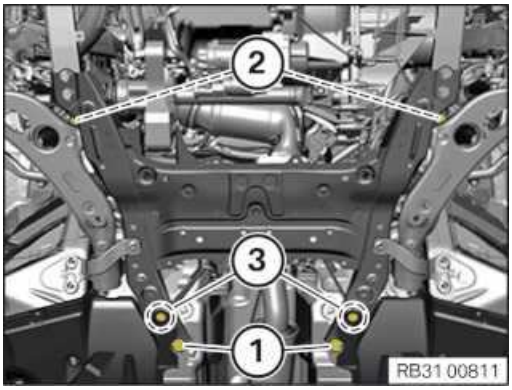


Note: In a profile rail pair, two profile rails are connected to one another by gearing.

- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

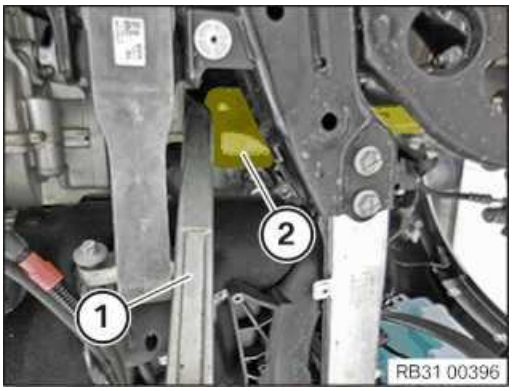
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

cardiagn.com

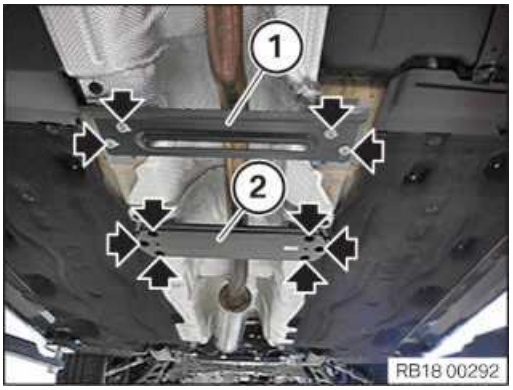
- Loosen screws (1).
- Feed out starter motor and remove.

37 – Partially removing right output shaft

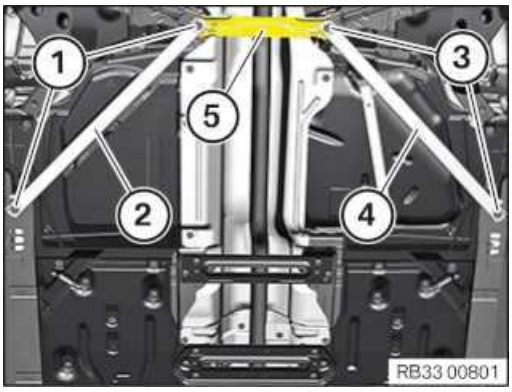


- Lever out the output shaft (2) with a mounting lever (1).
- Tie up output shaft (1).

38 – Partially removing the left output shaft

- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Tie up output shaft (1).

39 – Removing the connecting support from the tunnel in front and back



- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

40 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.

cardiagn.com

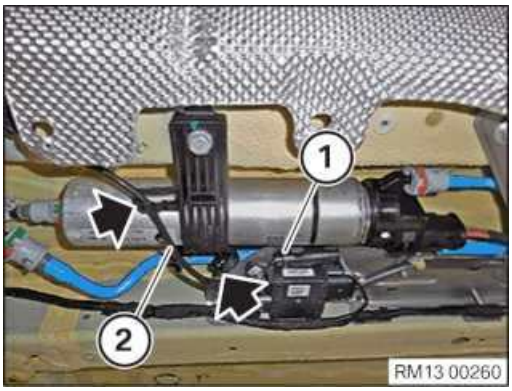
- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

41 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!



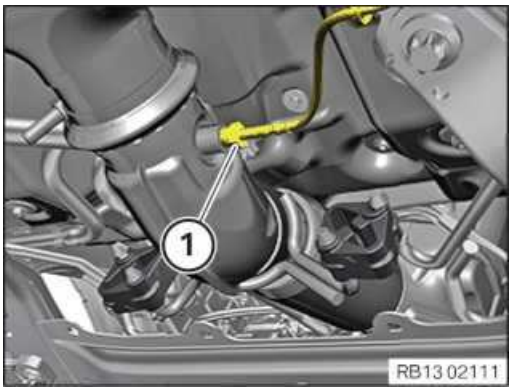
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and loosen connector (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

cardiagn.com

- Loosen the cable clip (1).

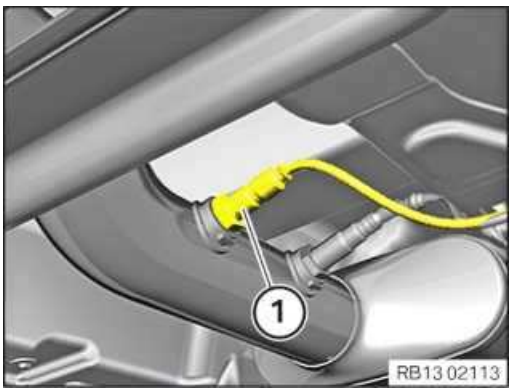
- Loosen exhaust temperature sensor (1).
- Feed out and remove exhaust temperature sensor (1).

42 – Remove exhaust system

WARNING

Hot surfaces.

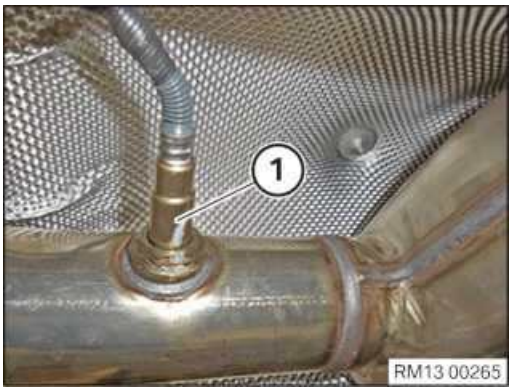
Risk of burning!



- Perform all work only on components that have cooled down.

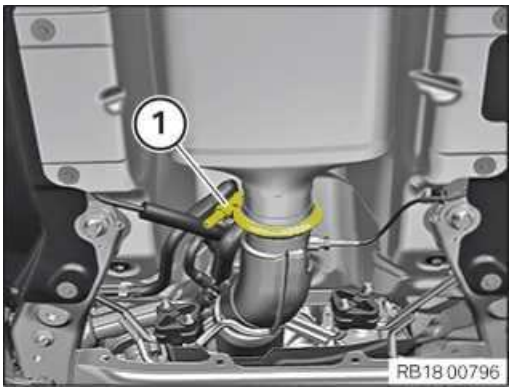
CAUTION

Heavy component.



Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.

cardiagn.com

- Release the diesel particulate sensor (1), guide it out and set it aside.

- Loosen V-band clamp (1).

- Loosen screw (1).
- Loosen nuts (2).
- Release the rubber mount (3) of the exhaust system (4).
- Lower and guide out the exhaust system (4) with assistance of a second person and remove it.

43 – Remove the SCR metering module

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

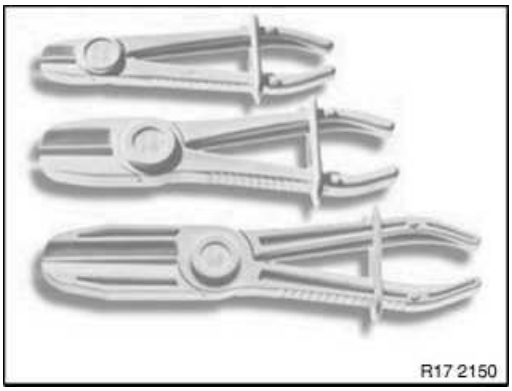
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

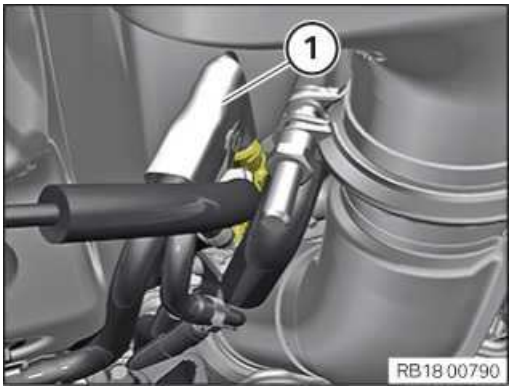
After repair work, clean the working area thoroughly with water.
Clean special tools with water after every use.

TECHNICAL INFORMATION



Use only lint-free cloths for cleaning the SCR system: WAYPALL cleaning cloths L20 - see BMW Group Parts.

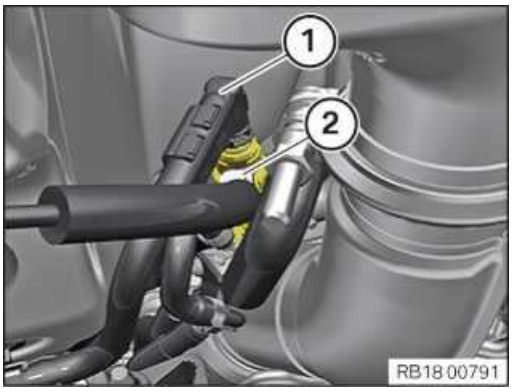
TECHNICAL INFORMATION



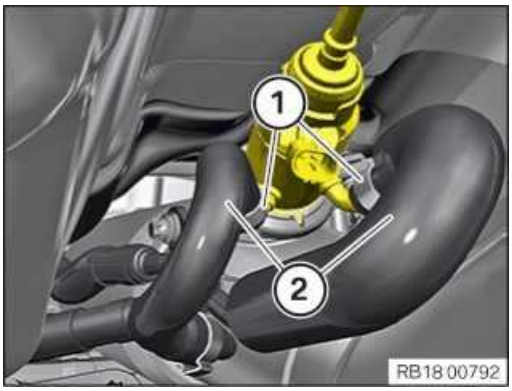
Notes on work at the cooling system form the basis of these repair instructions and must be complied with at all times.
For additional information see: 17 00 ... Instructions for repair work on cooling system

TECHNICAL INFORMATION

Do not unintentionally swap the coolant hoses and coolant lines. If necessary, mark before removal.



- Use commercially available pinch-off tools to pinch off the coolant hoses.



- Guide the heat protection cap (1) out and remove.

cardiagn.com

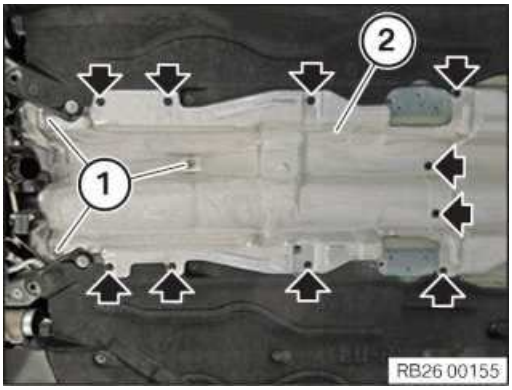
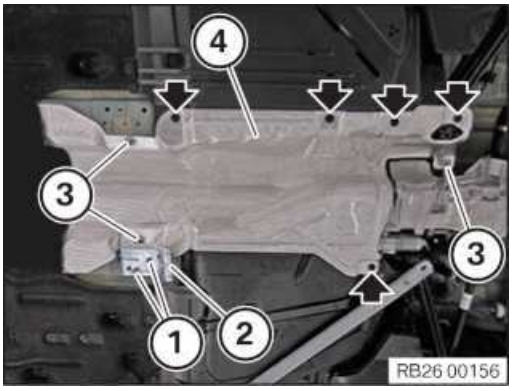
- When releasing the metering line, make sure that **no lateral forces** act on the metering line and the connection.

  The SCR metering module connection can be damaged by lateral forces.
- Unlock and disconnect the metering line (1).
- Unlock and disconnect connector (2).



- Loosen clamps (1).
- Disconnect coolant lines (2).



- Loosen V-band clamp (1).
- Guide out and remove the SCR metering module (2).

44 – Remove front heat shield

- Remove screws (arrows).
- Loosen nuts (1).
- Guide the heat shield (2) out and remove it.

45 – Remove heat shield at rear.

- Loosen screws (1).
- Guide out and remove holder (2).
- Remove screws (arrows).
- Loosen nuts (3).
- Guide the heat shield (4) out and remove it.

cardiagn.com

46 – Remove propeller shaft

CAUTION

Component with heavy weight.

Danger of injury!

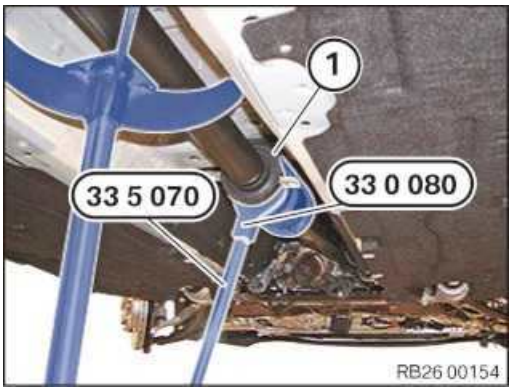
- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

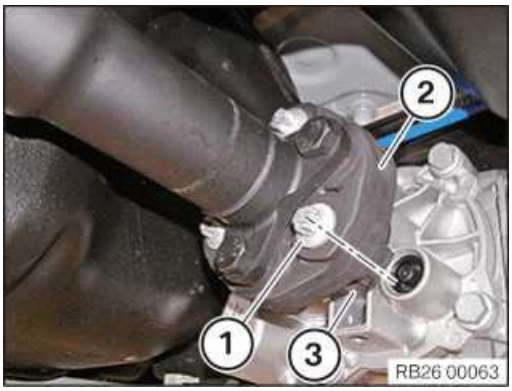
Damage to propeller shaft during removal.

Non-observance of the removal guidelines for the propeller shaft on the rear axle differential may cause severe damage.

- Do not disassemble the three-hole flange, flexible disc and propeller shaft. The three-hole flange to the rear axle differential is balanced with the flexible disc and propeller shaft.
- Loosen the recessed nut against the direction of travel in clockwise direction. The propeller shaft must be loosened on the recessed nut only and exclusively in the direction of rotation otherwise the anti-twist lock of the bi-hexagonal flange nut is damaged.
- In the event of a damaged anti-twist lock on the bi-hexagonal flange nut: Replace the rear axle differential.



- Install the special too l between the front and rear propeller shaft.
- Make sure that the arrows on the special tool point forward in the direction of travel.



- Always support the propeller shaft (1) with a conventional jack.

cardiagn.com

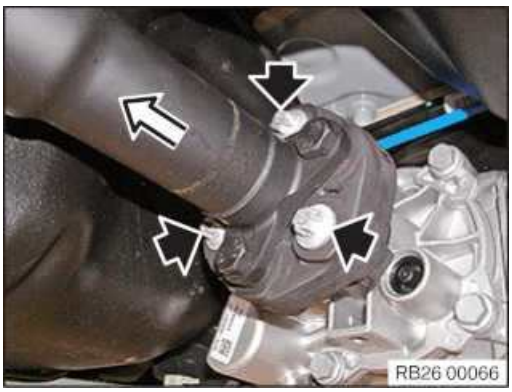
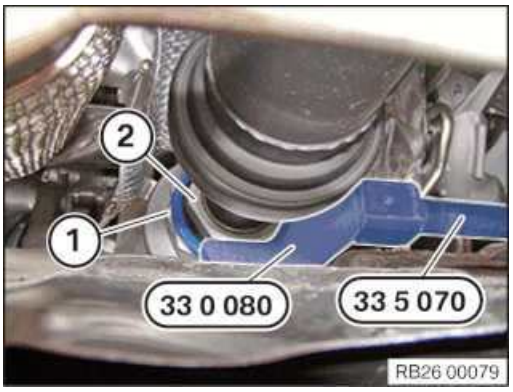
- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.



TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Mark the installation position of the screw connection (1), the flexible disc (2) and the three-hole flange (3) on the same level.
- Loosen the screw connection (1).



- Loosen screws (1).

- Remove screws (arrows).
- Guide the propeller shaft out in the direction of the arrow and set it aside.

cardiagn.com

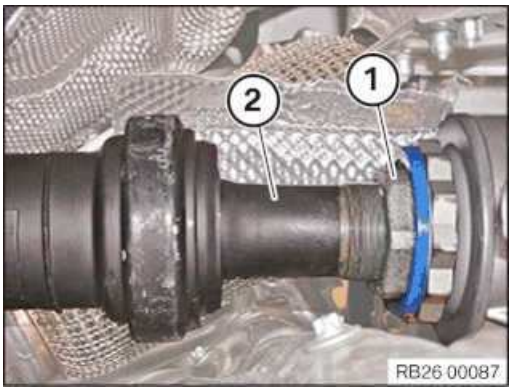
RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

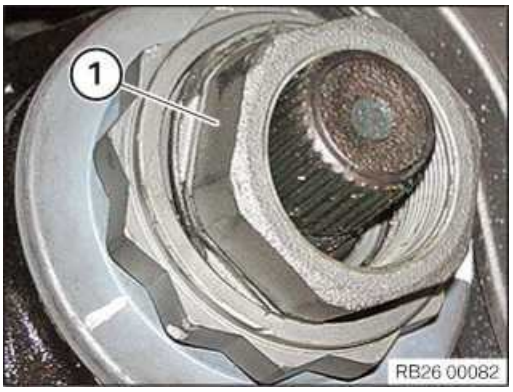


- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to detach the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.

- Release the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.



- Thread the propeller shaft (2) out of the recessed nut (1) and remove.

- Thread the retaining clip (1) and the seal (2) out and remove.

cardiagn.com

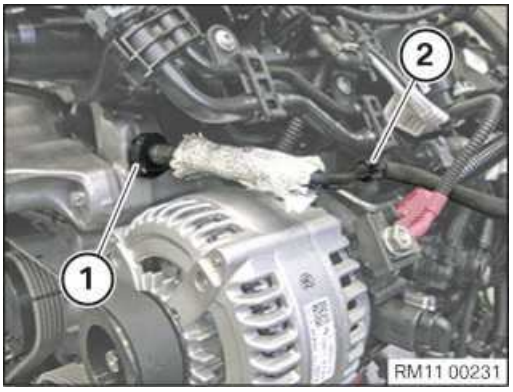
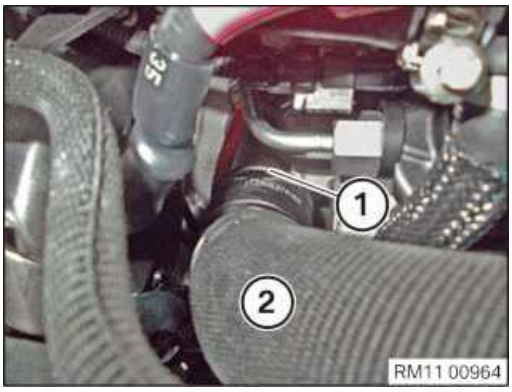
- Thread out and remove the recessed nut (1).

MAIN WORK

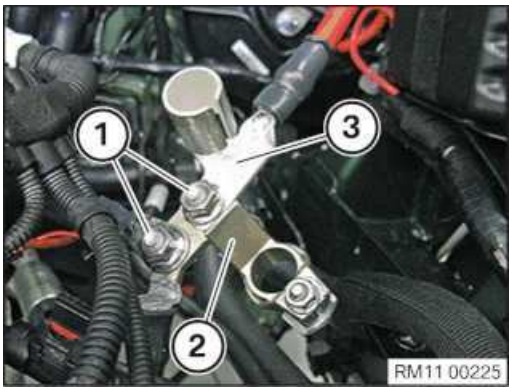


47 – Removing engine

- Unlock and pull off the fuel lines (1).

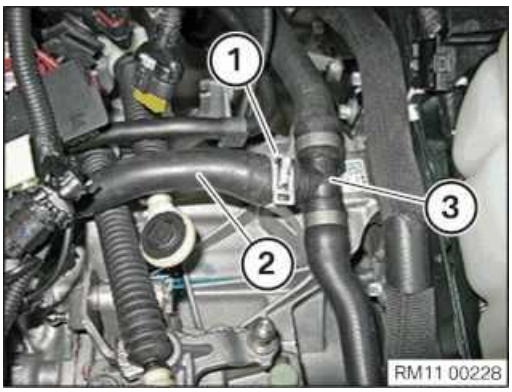


- Seal fuel lines with special tools and .



- Unlock the clamp (1).
- Pull off the coolant line (2) from the cylinder head.

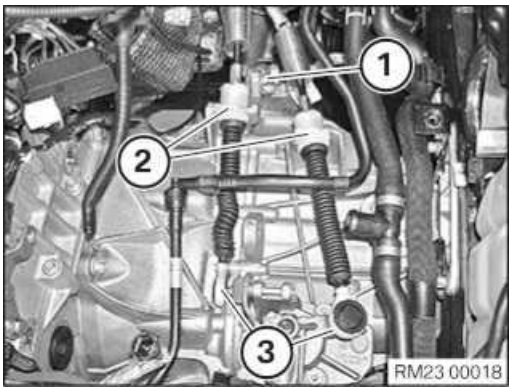
cardiagn.com



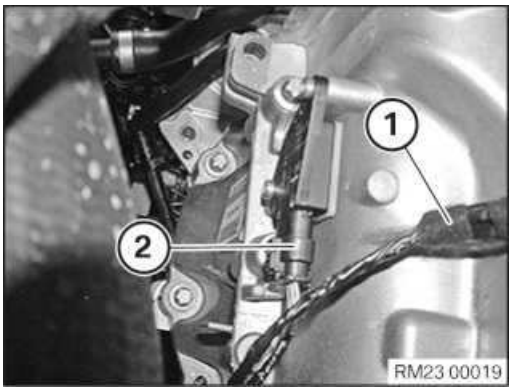
- Unlock lock (1) upwards and pull off coolant hose (2).
- Catch and dispose of escaping coolant.

- Loosen nuts (1).
- Feed out the positive battery terminal (2) and the remote positive terminal (3) and set aside.

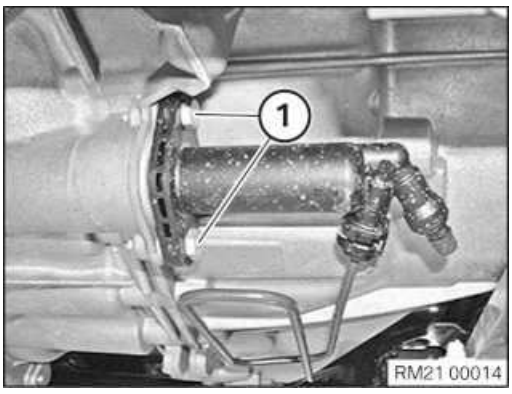
- Unscrew the bolt (1) and set the ground strap aside.



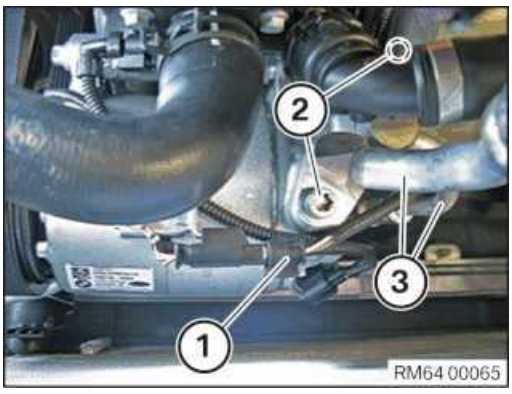
- Detach the clamping collar (1).
- Detach the coolant hose (2) from the coolant line (3).
- Catch and dispose of escaping coolant.



- Unlock and disconnect the vacuum line (1).



cardiagn.com

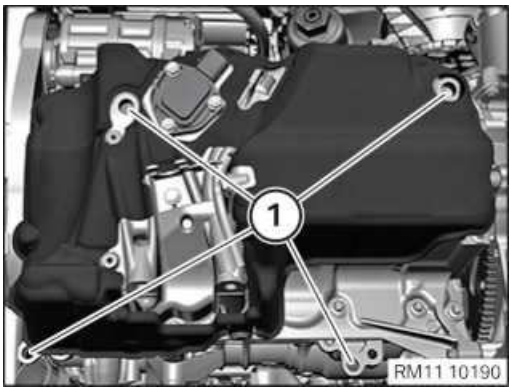


- Release screw (1) and guide out the ground strap and set it aside.
- Unlock safeguards (2) on the holders of the gear selector cables and remove.
- Lever fixtures (3) of the gear selector cables with an AF 13 open-end spanner off the ball joints.

- Unlock plug connection (2) and disconnect.
- Release cable (1) with the holder from the transmission.

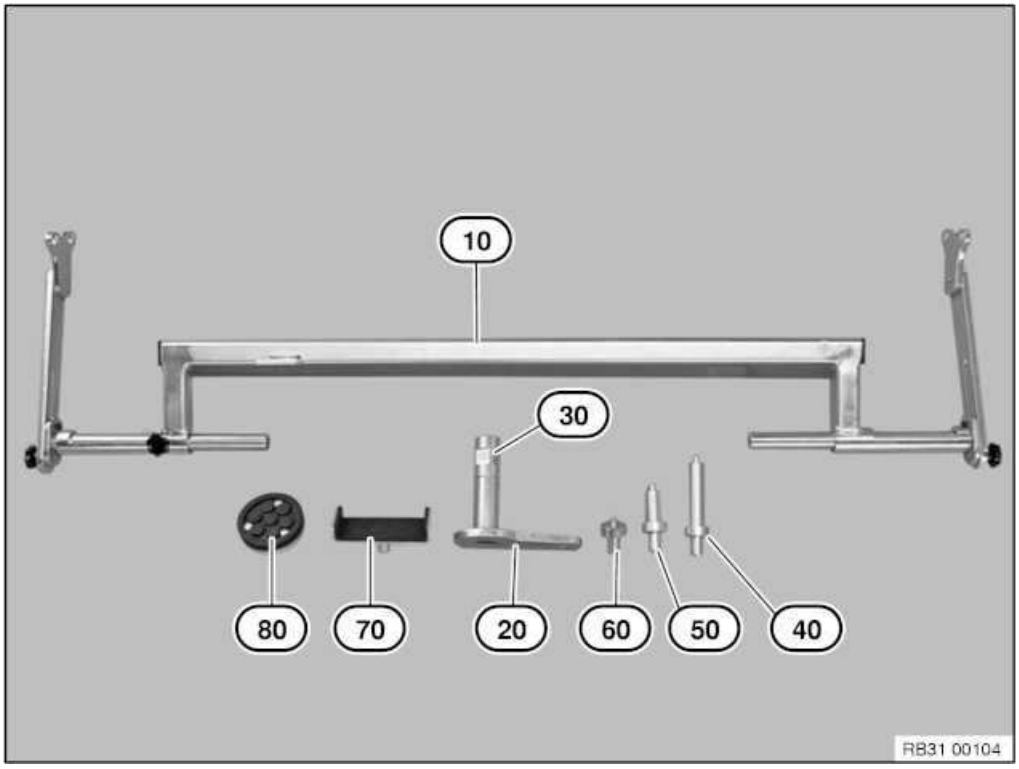
- **Ensure that the clutch slave cylinder remains connected to the pressure line.**
- Loosen screws (1).
- **Slowly** release clutch slave cylinder and remove.

CAUTION



Residual pressure in the air conditioning.

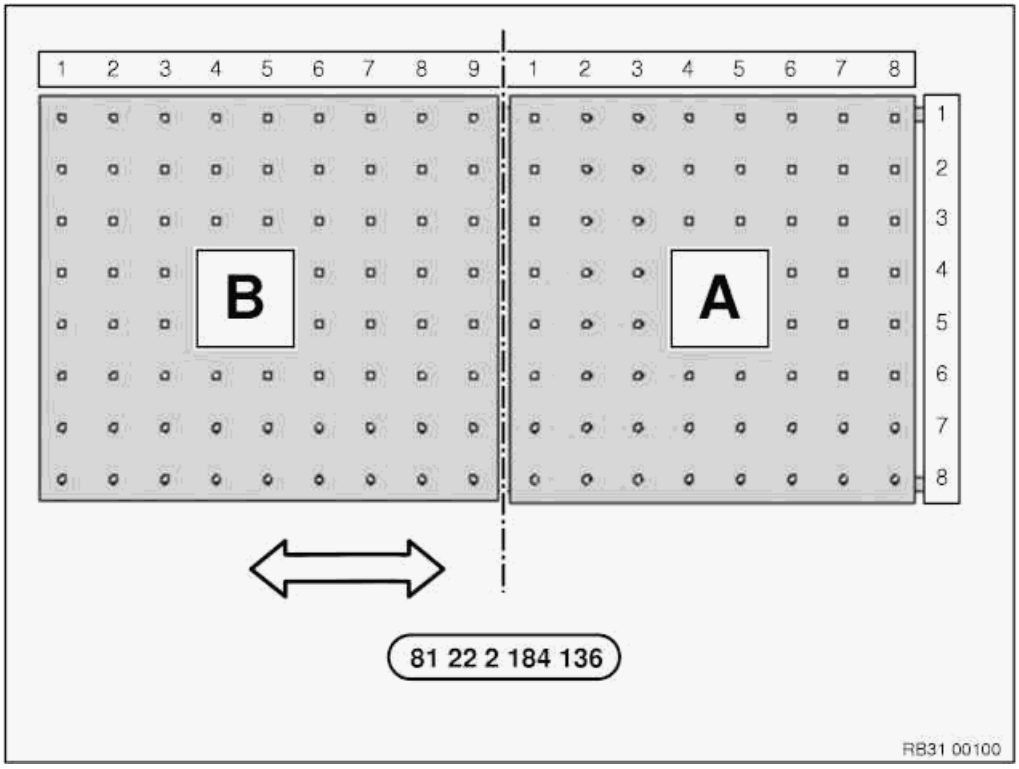
Danger of injury!



- Wear safety goggles and protective gloves when disconnecting the refrigerant line.
- Seal refrigerant lines with seal plugs.

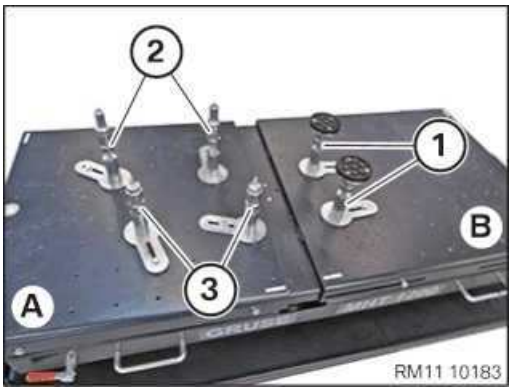
- Unlock plug connection (1) and disconnect.
- Loosen screws (2).
- Feed out the refrigerant lines (3) and set them aside.
- Close the openings on the refrigerant lines (3) and the air conditioning compressor with standard tools.

cardiagn.com



- Ensure that the **40/50** distance pins of table top **A** of the mobile lifting table are installed in mounting points (1) of the oil sump.

- Overview of the set of special tools **2 305 379**:



Number	Description
10	For mounting the swivel bearing including brake disc
20	Retaining element for adjustable fixture
30	Adjustable fixture
40	Distance pin 40 x 160 mm
50	Distance pin 40 x 110 mm
60	Distance pin 40 x 60 mm
70	Fixture with U-profile
80	Plate mounting 100 mm

- Overview of special tools **2 184 136**:

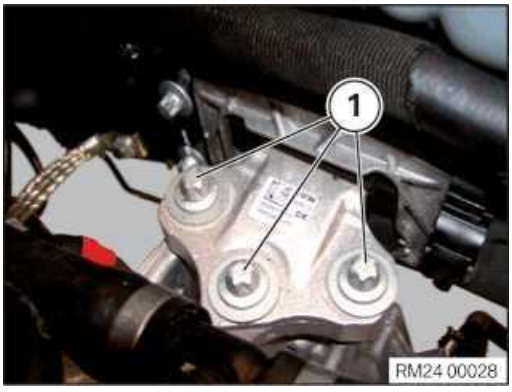
Letter	Description
A	Table top for engine with coordinates
B	Table top for transmission with coordinates

cardiagn.com

- Position adjustable fixture (30) with distance pin (50) for the engine block on table top (A) at coordinates **6/6** and **2/6** (2).
- Position adjustable fixture (30) with distance pin (50) for the engine oil sump on table top (A) at coordinates **4/2** and **2/3** (3).
- Position adjustable fixture (30) with distance pin (80) for the transmission housing on table top (B) at coordinates **7/3** and **7/5** (1).

- Position the lifting table below the engine.
- Abut all fixtures and screw them to the lifting table.

- Attach the adjustable fixture to the housing of the clutch slave cylinder with screw (1).



WARNING

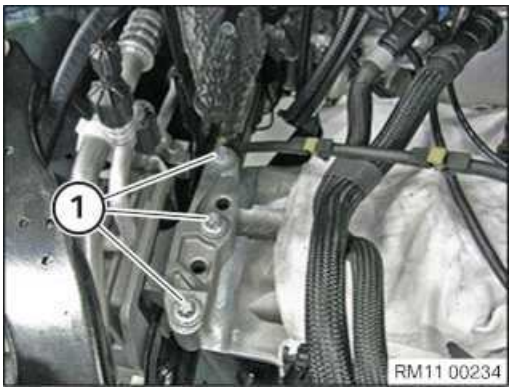
Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

- Ensure there is a specific weight compensation on the motor vehicle.

- Position the weight compensation (1) on the vehicle.

WARNING



Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

- Ensure there is a specific weight compensation on the motor vehicle.

- Loosen screws (1).

cardiagn.com

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

- Loosen screws (1).
- Raise the vehicle **carefully**.

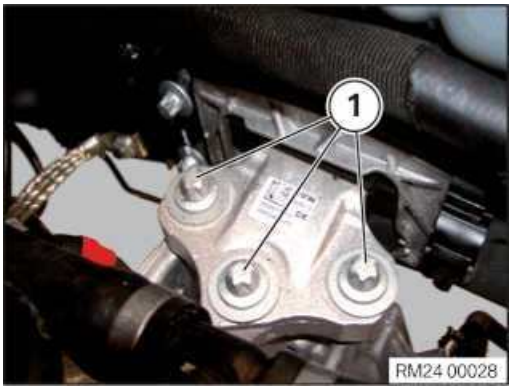
48 – Install engine

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

- Ensure there is a specific weight compensation on the motor vehicle.



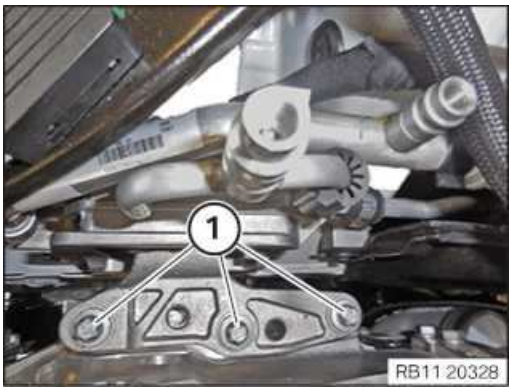
WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

- Position the lifting table and the engine under the vehicle.
- **Carefully** lower the vehicle and, if necessary, position the lifting table **correctly** for the vehicle.



- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Transmission mounting

M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

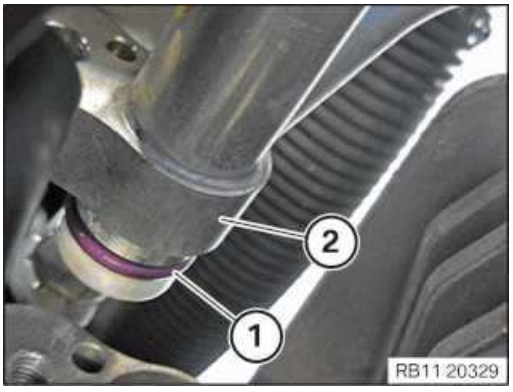
cardiagn.com

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Right engine mount to cylinder head

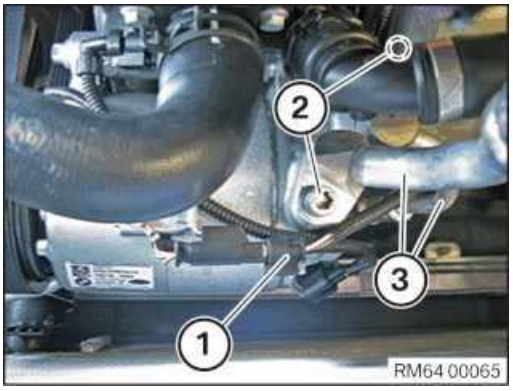
M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °



WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

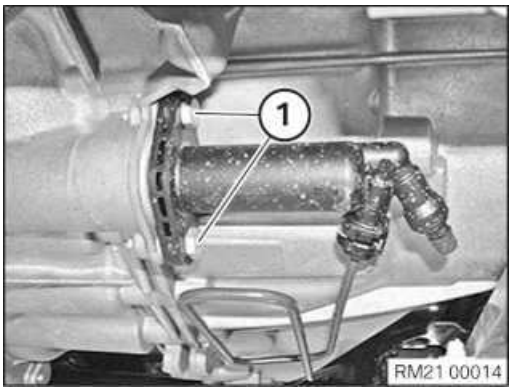


- Ensure there is a specific weight compensation on the motor vehicle.

- Remove weight compensation (1) from the vehicle.
- Lower lifting table(2) and put to one side.

- Renew sealing ring (1) of the refrigerant lines (2).

  Parts: Sealing ring

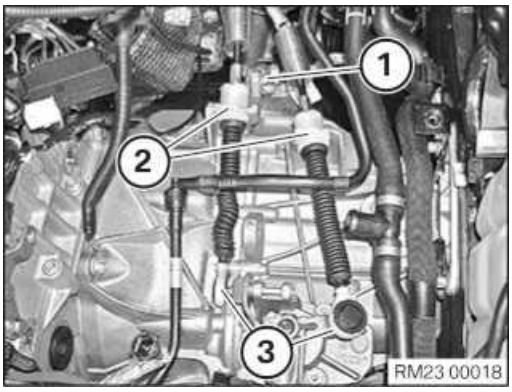


- Feed in and install the refrigerant lines (3).
- Tighten down screws (2).

Refrigerant line on air conditioning compressor

M8		Tightening torque	19 Nm

- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.



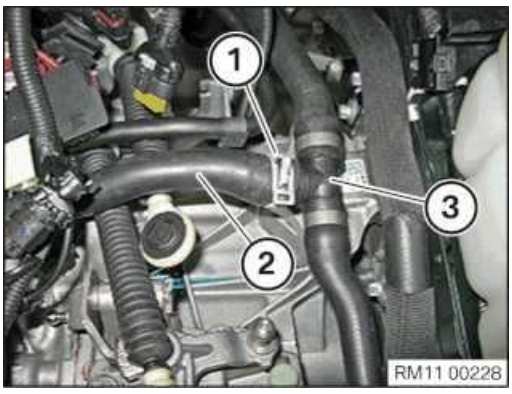
- Feed in and install the clutch slave cylinder .
- Tighten the screws (1).

Clutch slave cylinder to transmission housing

M8		Tightening torque	19 Nm

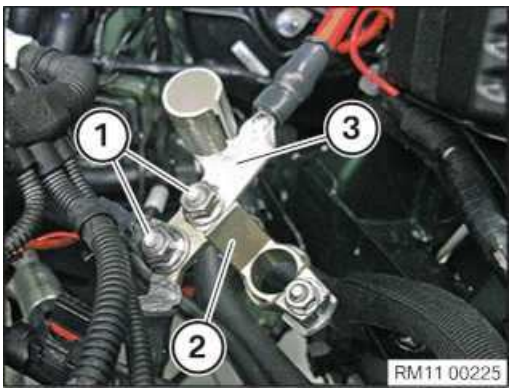
cardiagn.com

- Insert earth strap and tighten the screw (1).



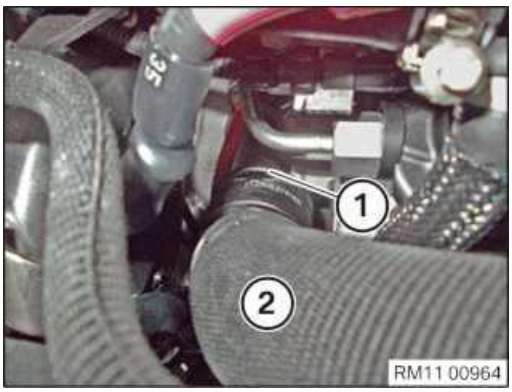
Standard screw connection M8

M8		Tightening torque	19 Nm



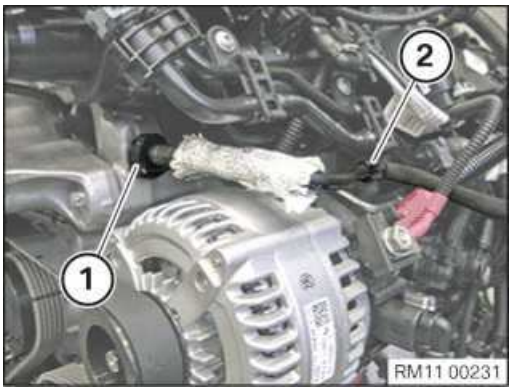
- Attach fixtures (3) of gear selector cables to the ball joints and engage.
- Insert gear selector cables into the holders and secure in the holders with safeguards (2).

- Connect the vacuum line (1) and lock.
- Make sure you can hear the vacuum line (1) engage.



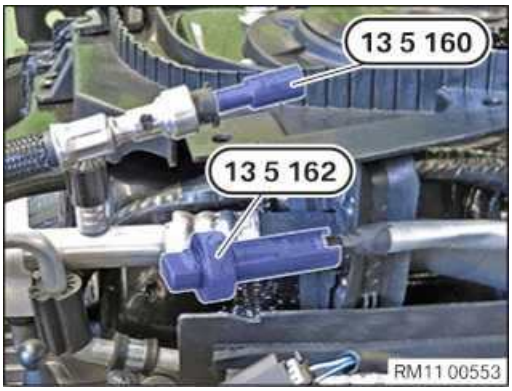
- Insert and install the coolant hose (2) on the coolant line (3).
- Fasten the clamping collar (1).

- Insert and install the positive battery terminal (2) and the remote positive terminal (3).
- Tighten nuts (1).



Positive battery cable to positive battery terminal

M8		Tightening torque	15 Nm



- Connect and lock coolant line (2).
- Ensure that the lock (1)engages audibly.

cardiagn.com

- Connect the coolant line (2).
- Lock clamp (1).

- Thread out special tools and and remove.

- Route and connect fuel lines (1).
- Ensure that the locks engage audibly.

POSTPROCESSES

49 – Install propeller shaft.

CAUTION

Component with heavy weight.

Danger of injury!

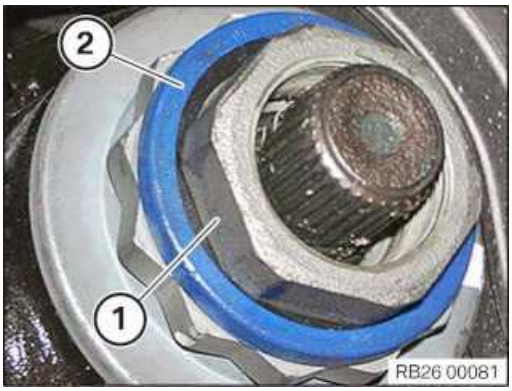
- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

cardiagn.com

RISK OF DAMAGE

Damage to the propeller shaft during installation.

Non-observance of the installation guidelines for the propeller shaft on the rear axle differential may cause severe damage.



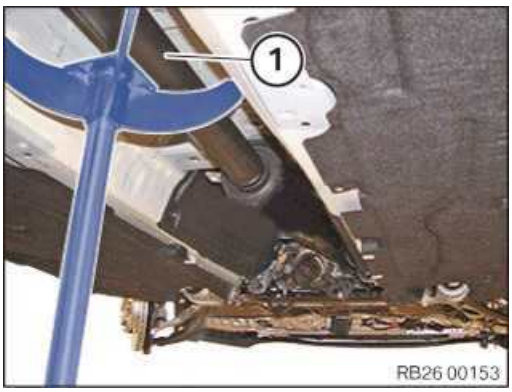
- Always renew the recessed nut on the rear axle differential. Screw locking must be available.
- Strictly observe a minimum hardening time of two hours after having screwed in the recessed nut. The hardening time may be longer at lower temperatures.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

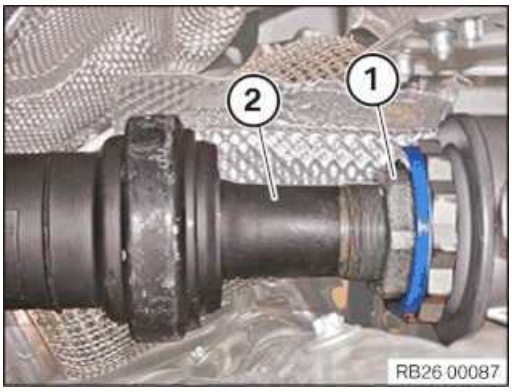


- Renew recessed nut (1).

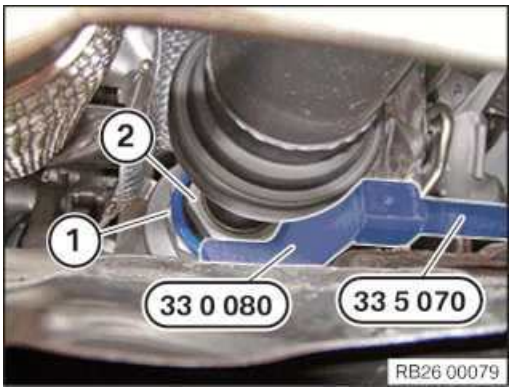
  Parts: Insert nut
- Renew the retaining clip (2) and the seal.

  Parts: Retaining clip, seal
- Insert the seal with the recessed nut (1) and install.
- Insert the retaining clip (2) and install.
- Make sure that recessed nut (1) is screwed in within 5 min.
- Make sure that the hardening time of **minimum** 2 h for the recessed nut is observed.

  The hardening time must be extended at lower temperatures.



- Insert the propeller shaft (1) and install.
- Always support the propeller shaft (1) with a conventional jack.



- Hand-tighten the bolts (1).

cardiagn.com

- Push the propeller shaft (2) against the recessed nut (1) up to the limit position.
- Screw the propeller shaft (2) at least 2 thread starts onto the recessed nut (1) by hand.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to tighten the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.

- Tighten the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

Propeller shaft to transfer box

		Tightening torque	80 Nm

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Assemble the screw connection (1) of the flexible disc (2) and the three-hole flange (3) according to the mark.
- Renew screws (1).

  Parts: Bolts

- Hand-tighten the bolts (1).

cardiagn.com

- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

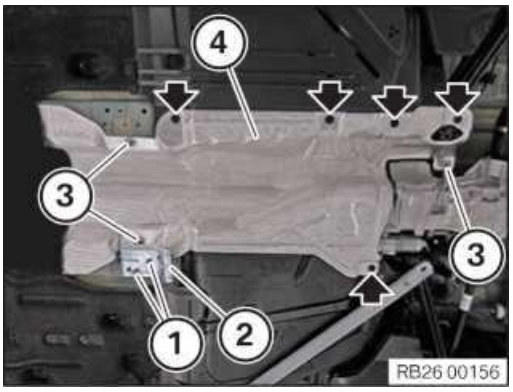
- Tighten the bolts with the special tools **0 490 504 (00 9 120)** and .

Flexible disc to rear axle final drive

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

- Tighten the screws (1).

Centre mount to body



M8		Tightening torque	19 Nm

- Guide the special too l out between the front and rear propeller shaft and remove.

50 – Installing the rear heat shield

cardiagn.com

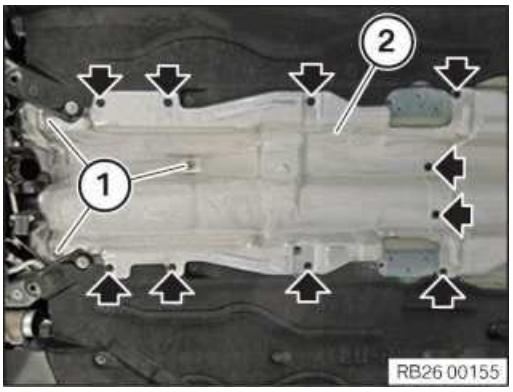
- Insert and install the heat shield (4).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (3).

Heat shield to body



Bolts/nut		Tightening torque	3 Nm

- Insert and install the holder (2).
- Tighten the screws (1).

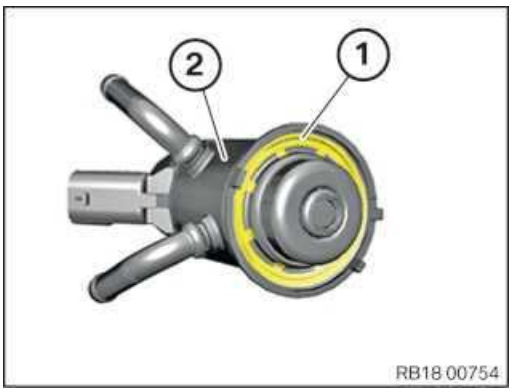
Bracket to body

M8		Tightening torque	21 Nm

51 – Install the front heat shield

- Insert and install the heat shield (2).
- Tighten screws (arrows).

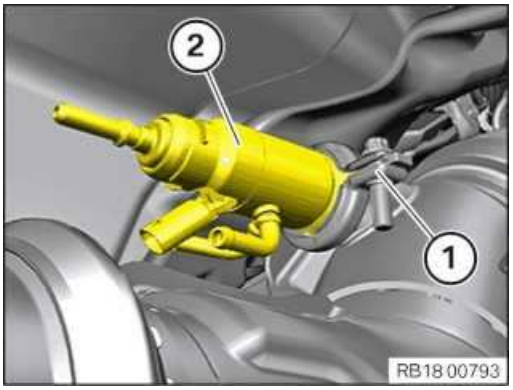
Heat shield to body



Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (1).

Heat shield to body

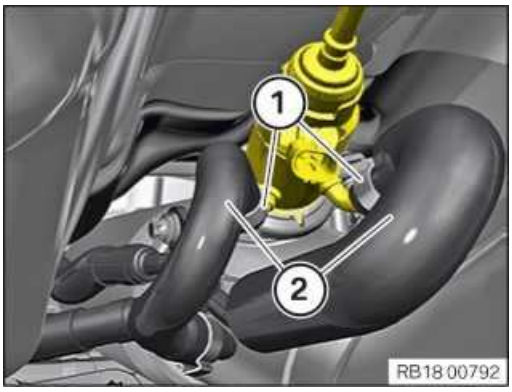


Bolts/nut		Tightening torque	3 Nm

52 – Install the SCR metering module

- Renew the seal (1) of the SCR metering module (2).

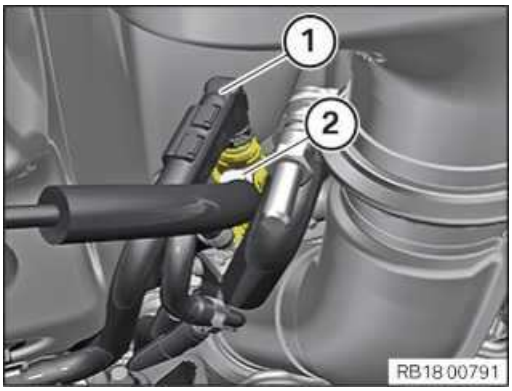
  Parts: Sealing ring



- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

SCR metering module V-clip to exhaust system



V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

cardiagn.com

- Connect the coolant lines (2).
- Renew the clamps (1).

  Parts: Clamps
- Fasten the clamps (1).

- Connect connectors (2) and lock.

  The connector (2) must engage audibly.
- Connect and lock the metering line (1).

  Metering line (1) must engage audibly.

- Insert and install the heat protection cap (1).

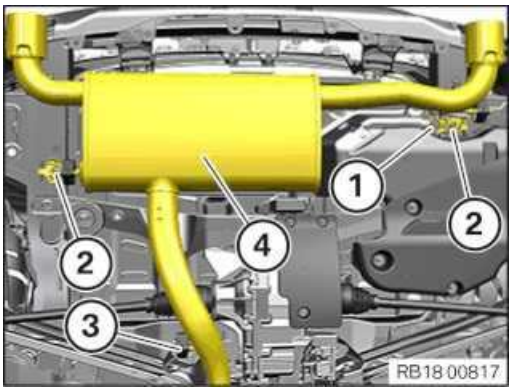
53 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.



CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

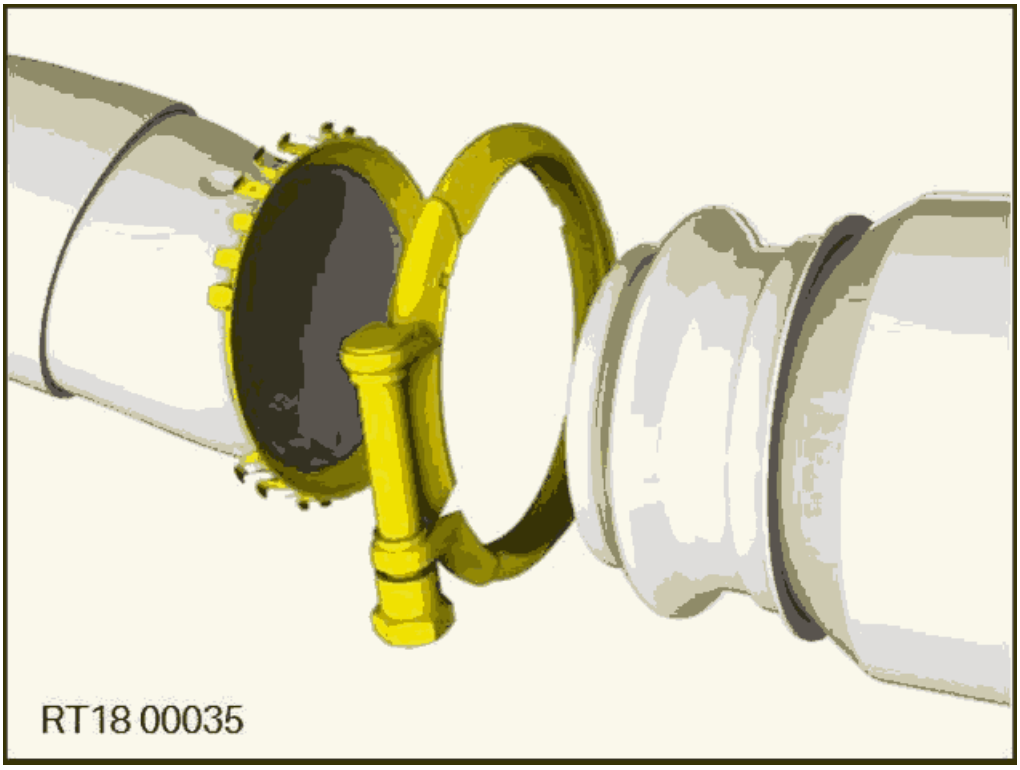
- Feed in and install the exhaust system (4) with a second person.
- Renew nuts (2).

  Parts: Nuts
- Tighten nuts (2).

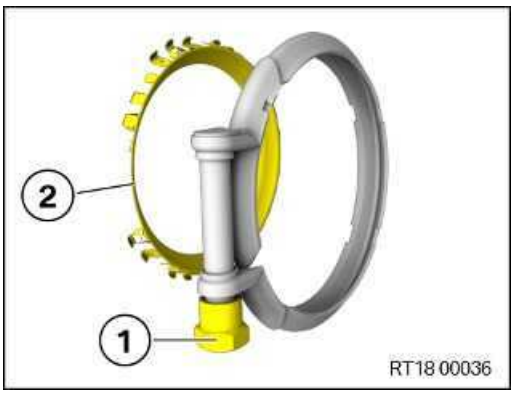
Exhaust system to body

M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).



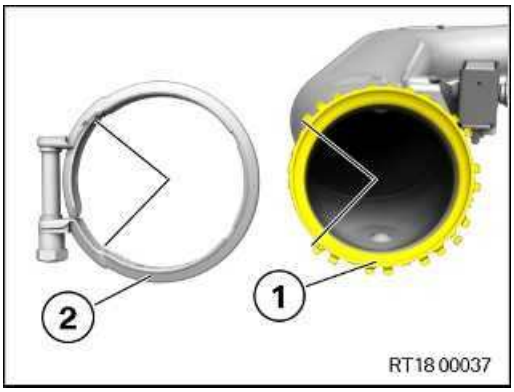
Exhaust bracket on body



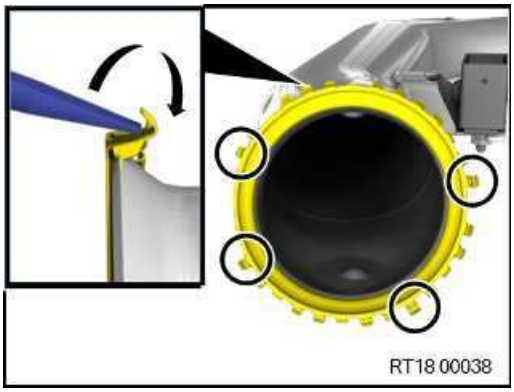
Hexagon screw M8x30		Tightening torque	19 Nm

- Check the rubber mount (3) for damage and renew as needed.
- Mount rubber mount (3) on the exhaust system (4).

▸ **Install the V-clip**

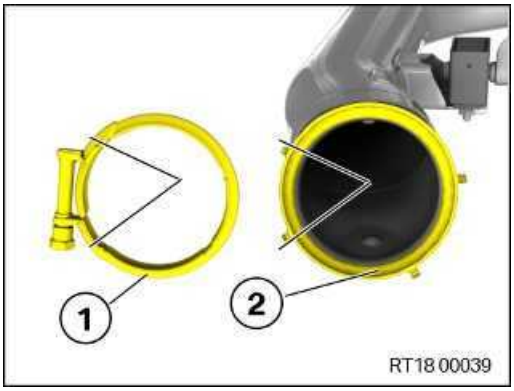


V-band clamp



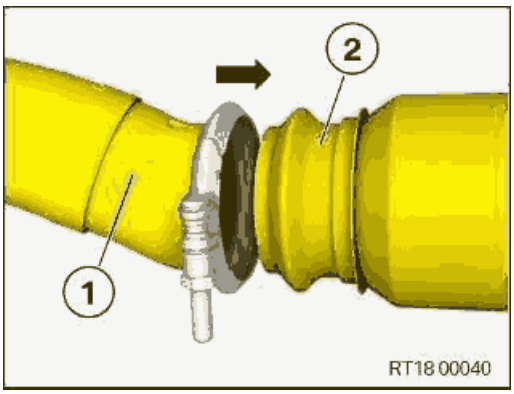
- Unscrew the nut (1) and remove the sealing ring (2).

cardiagn.com



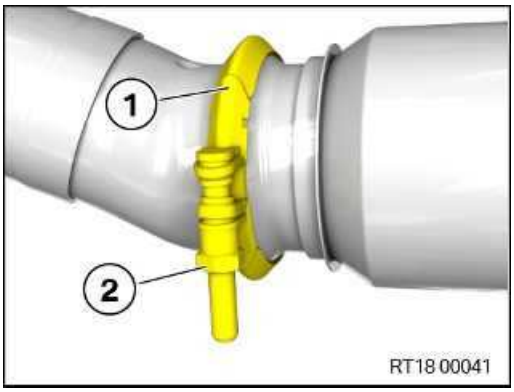
- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.



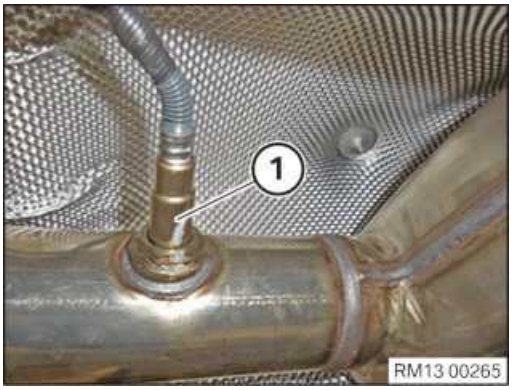
- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.

- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).



- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).

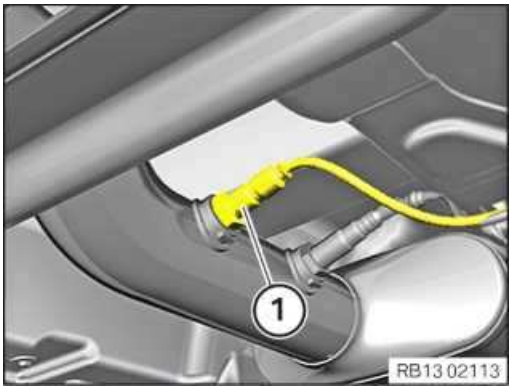
- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.



cardiagn.com

- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

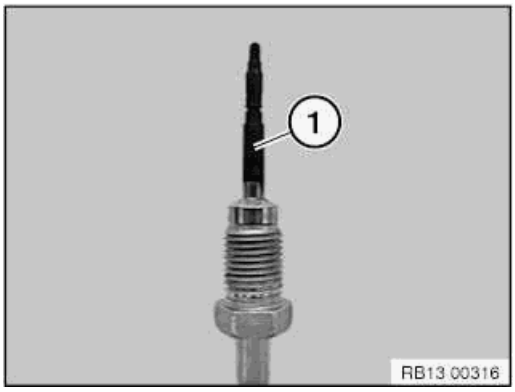


V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

- Feed in, install and tighten diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

Sensor		Tightening torque	50 Nm

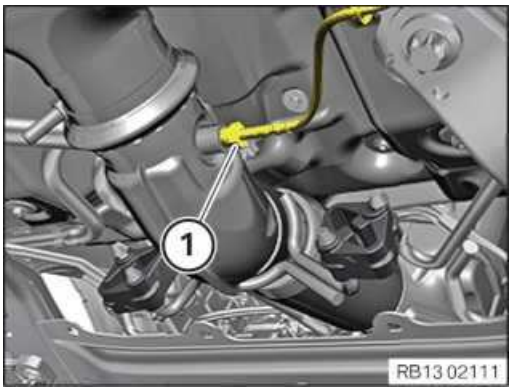


- Feed in, install and tighten nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

54 – Installing exhaust temperature sensor on catalytic converter



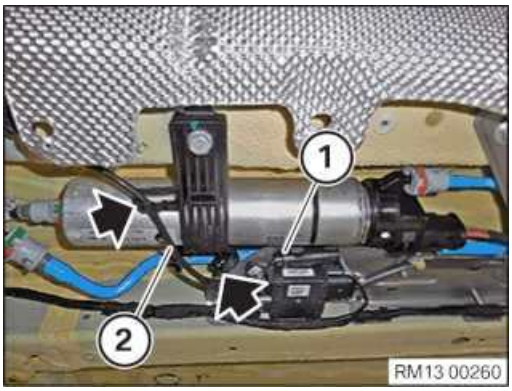
RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.
- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.

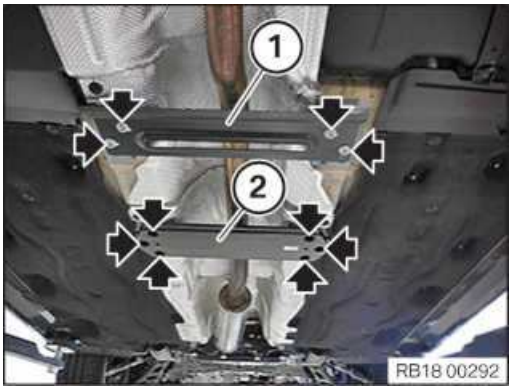
- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).



Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

cardiagn.com



- Secure the cable clips (1).

- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

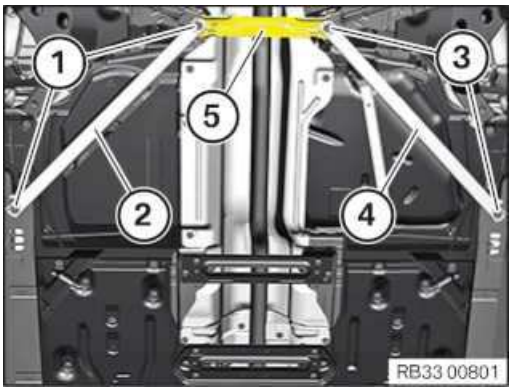
  The connector (1) must engage audibly.

55 – Install the connecting support on the tunnel in front and back

- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

M10x18		Tightening torque	56 Nm



- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

M8x18		Tightening torque	28 Nm

56 – Install the cross-member with torsion struts

cardiagn.com

- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

57 – Installing right output shaft partially

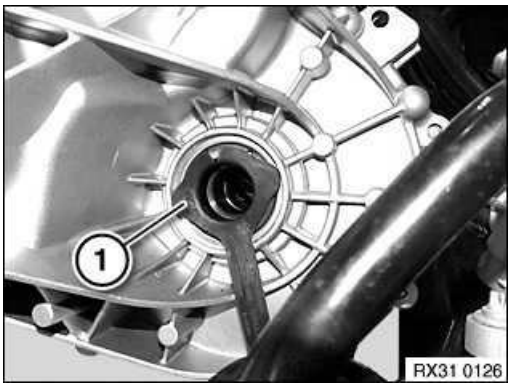
- Renew the circlip (1).

  Parts: Circlip
- Slide output shaft into the transmission as far as the limit position.
- Check for secure seat by levering.

58 – Partially installing the left output shaft

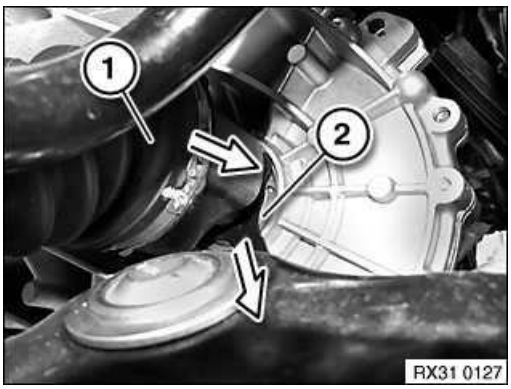
- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).



- Do not mix up circlips.

  Different types of output shafts fitted:
  - M: Manual transmission
  - A: Automatic transmission



cardiagn.com

- Renew circlip (arrow).

- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

- Insert output shaft (1) into transmission.
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

59 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

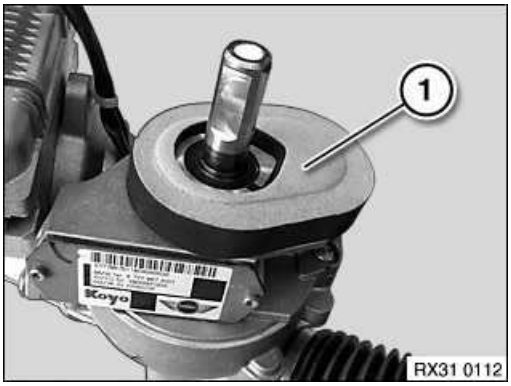
- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

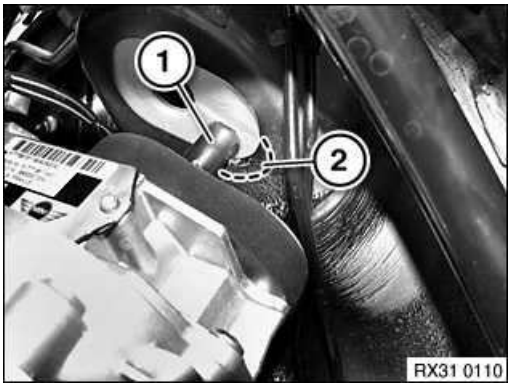
cardiagn.com

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).



Battery positive lead to starter

M8		Tightening torque	13,5 Nm

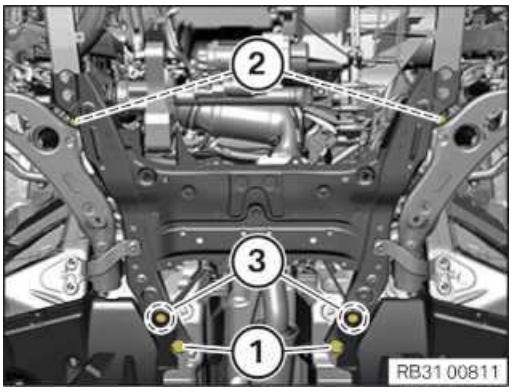


- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

60 – Mount and secure the complete front axle

- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

cardiagn.com

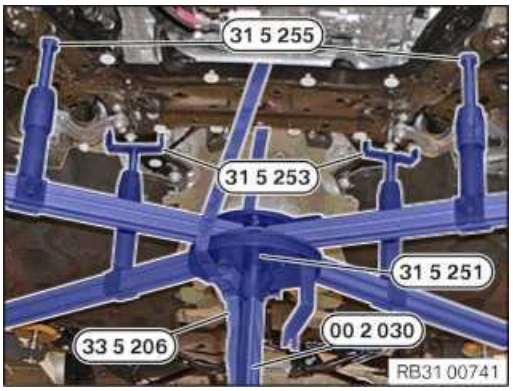
- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

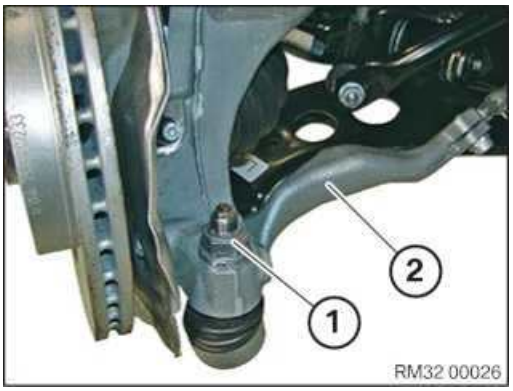
M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).



Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm



- If necessary, tighten the screws in the areas (3).

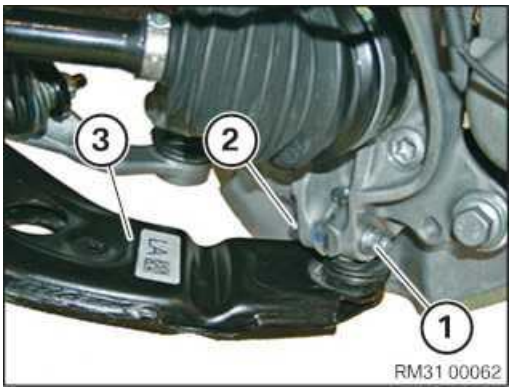
Underbody protection to body

Screw		Tightening torque	3 Nm

- Remove special tool from special tool .
- Lower universal jack **0 490 133 (00 2 030)** with the special tool and place it to the side.

NOTICE

Perform the operations on the left and right side.



- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm

cardiagn.com

NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

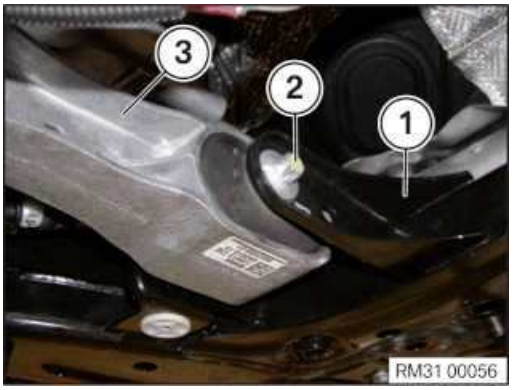
  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

61 – Install the mounted parts on the front axle support

NOTICE

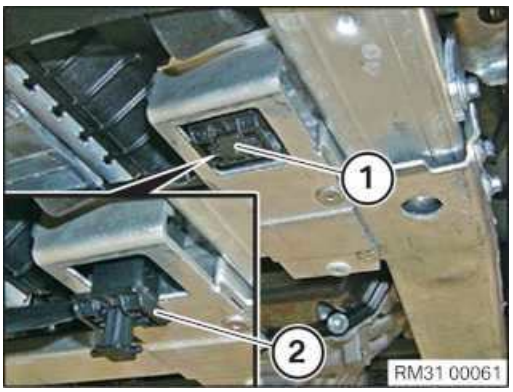


Perform the operations on the left and right side.

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

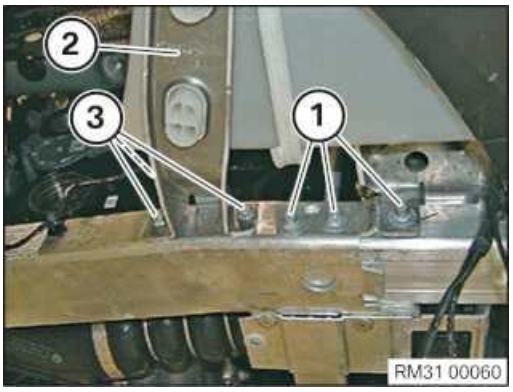


M10 screw	Renew screw.	Jointing torque	56 Nm
		Angle of rotation	90 °

- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support

M12 screw		100 Nm



NOTICE

Perform the operations on the left and right side.

- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.

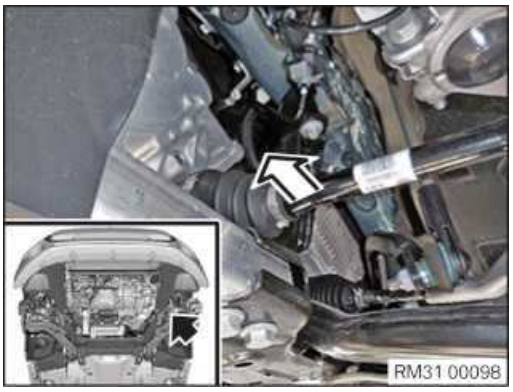
cardiagn.com

- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE



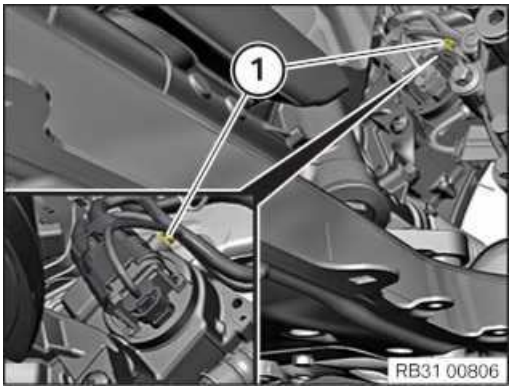
Perform the operations on the left and right side.

- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

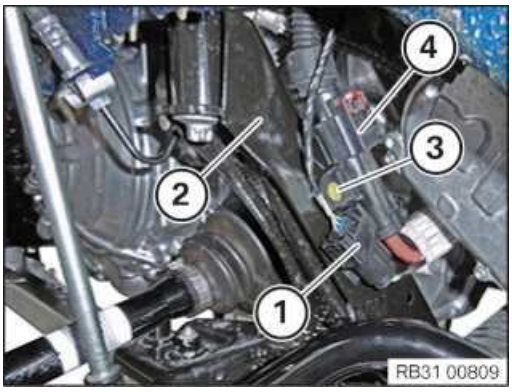
		Tightening torque	11,8 Nm

62 – Attaching connector at steering gear



- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.

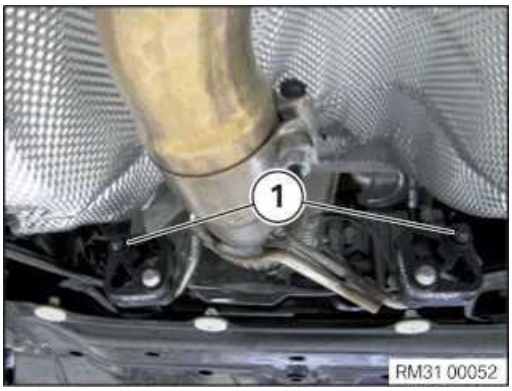


- Connect and lock connector (arrow) (1) with the steering gear.

- Fasten the wiring harness (1) on the steering gear.

▸ **If installed: Fasten the plug connections at the front axle support**

cardiagn.com



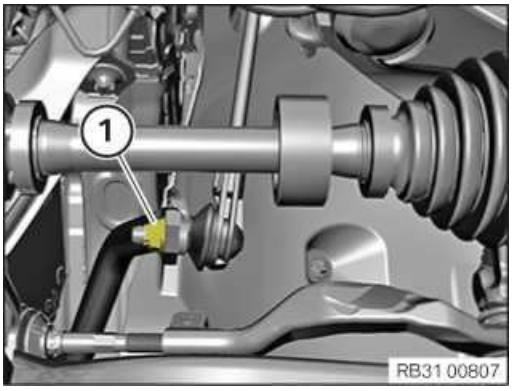
- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

63 – Securing rubber mount on front axle support



- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.

64 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▸ **Fastening anti-roll bar on the anti-roll bar link**

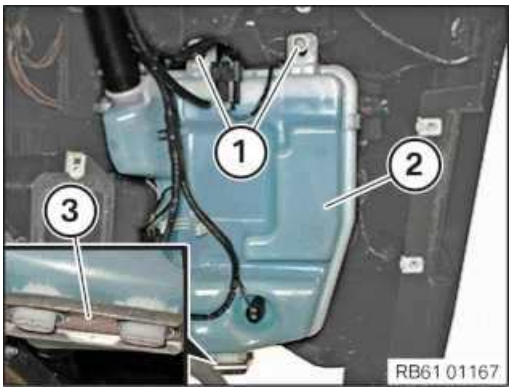
- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm



65 – With right installation: Securing the cable for the ride height sensor

- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

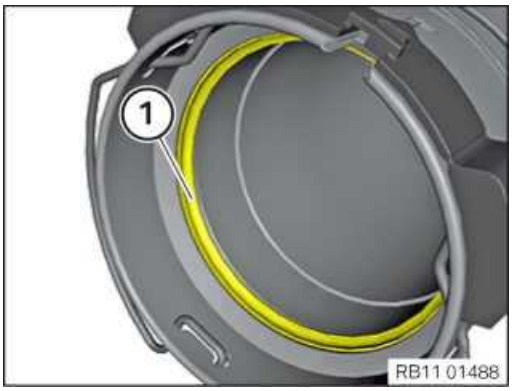
cardiagn.com

66 – Install the washer fluid reservoir in the fixture

- Feed washer fluid reservoir (2) into the mounting (3) and install.
- Tighten the screws (1).

Washer fluid reservoir to body

M6x20		Tightening torque	8 Nm



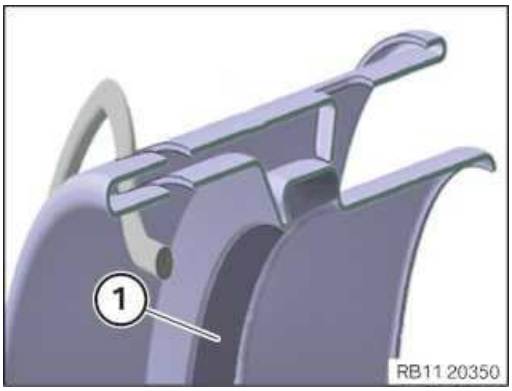
67 – Installing pressure pipe between throttle body and charge air cooler

RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.

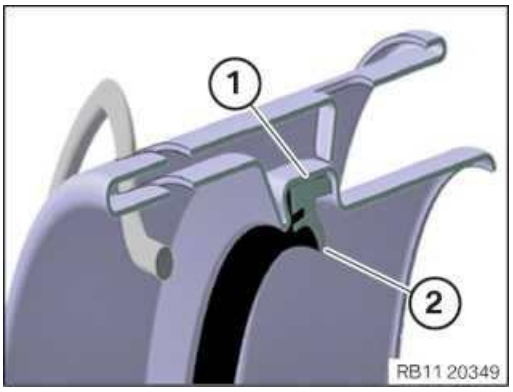


- Check seal (1) for damage and renew seal (1) as needed.

  Parts: Gasket

▸ **Replace damaged gasket**

TECHNICAL INFORMATION

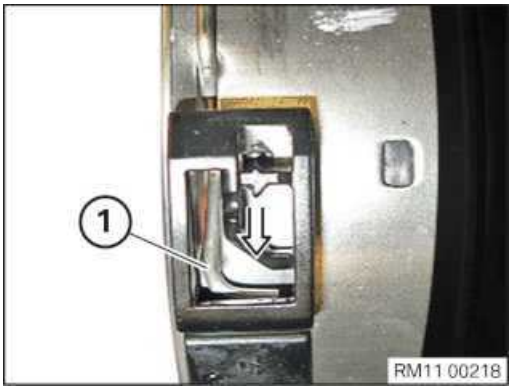


Do not use pointed or sharp-edged tools for the installation and/or removal.

- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

  The gasket groove (1) must be clean.

cardiagn.com

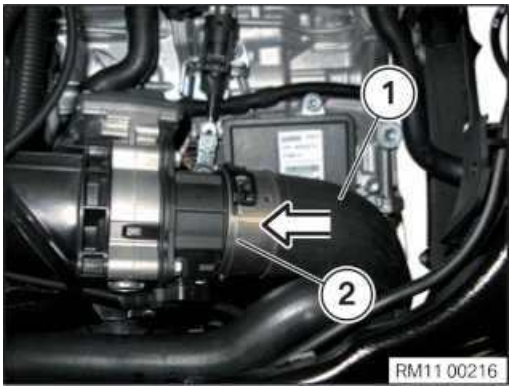


- Renew gasket.

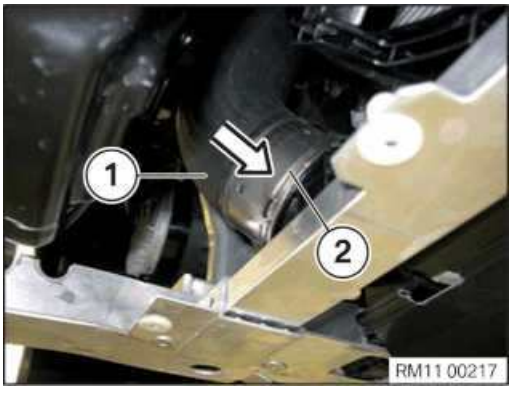
  Parts: Gasket
- Install seal dry without lubricant or mounting agent.

TECHNICAL INFORMATION

Incorrect assembly is possible. Ensure correct installation position.



- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).

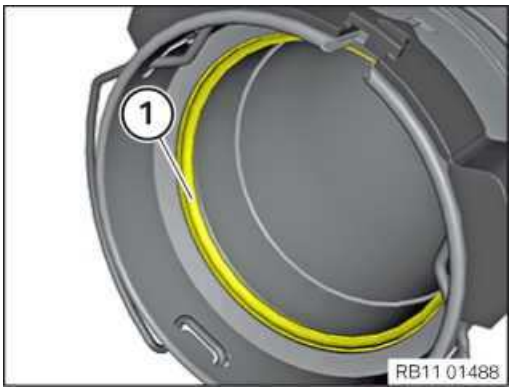


- Detach the locks (1) in the direction of the arrow from the brackets.

- Insert and install the pressure pipe (1) in the direction of the arrow.

- Insert and install the pressure pipe (1) in the direction of the arrow.
- Ensure that the locks (1) engage audibly.

- Insert and install the pressure pipe (1) in the direction of the arrow.
- Ensure that the locks (2)engage audibly.



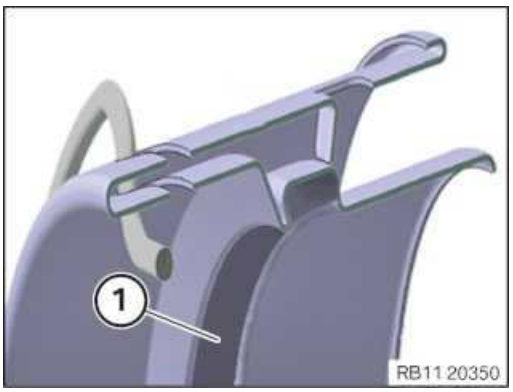
cardiagn.com

RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

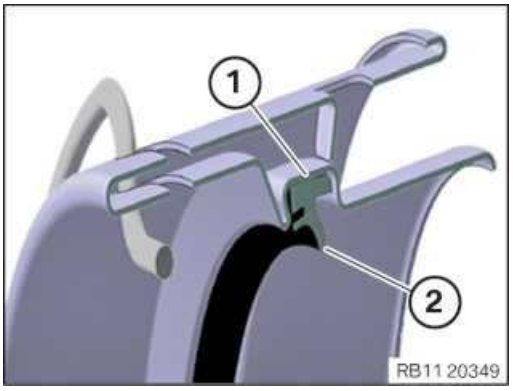
- Replace the gaskets and pressure pipe if necessary.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

▶ **Replace damaged gasket**



TECHNICAL INFORMATION

Do not use pointed or sharp-edged tools for the installation and/or removal.

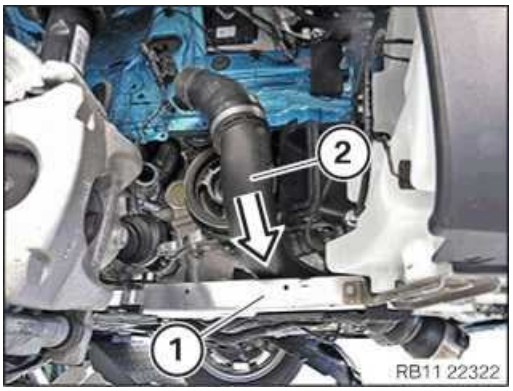
- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

  The gasket groove (1) must be clean.

- Renew gasket.

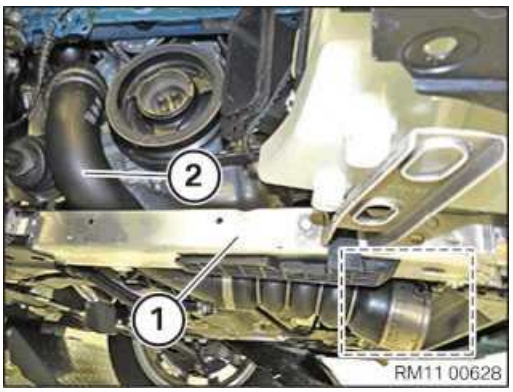
  Parts: Gasket
- Install seal dry without lubricant or mounting agent.

TECHNICAL INFORMATION

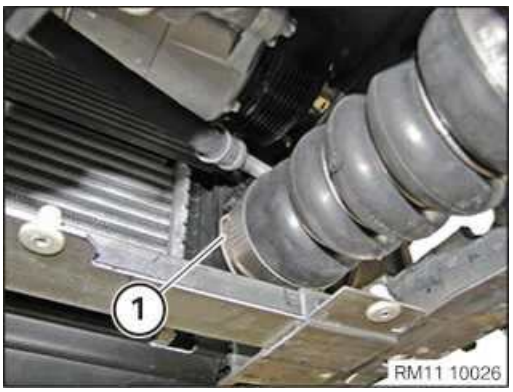


Incorrect assembly is possible. Ensure correct installation position.

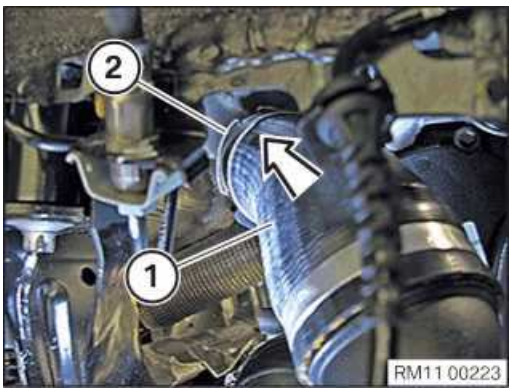
- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).



cardiagn.com

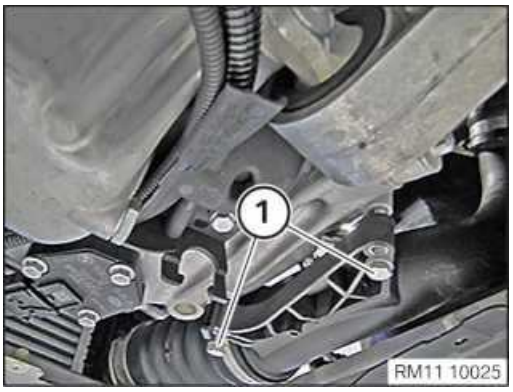


- Detach the locks (1) in the direction of the arrow from the brackets.
- Ensure that the locks (1) engage audibly.



- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed in the charge air duct (1) in the **direction** of arrow between the side member and the deformation element and position.

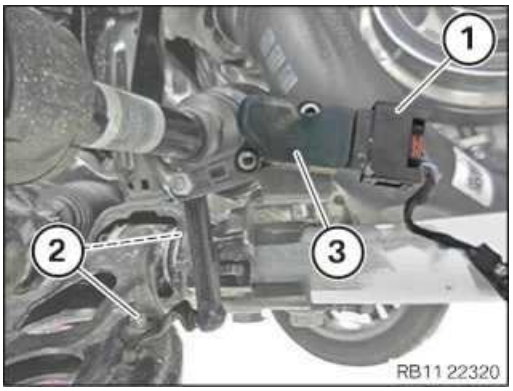
- Pull the adapter of the front axle support (1) downwards to the front right.
- Position the charge air duct (2) in **marked** area on the charge air cooler.



- Feed in and install the charge air duct (1) on the charge air cooler .
- Make sure the charge air duct (1) engages audibly on the charge air cooler.

- Feed in and install charge air duct (1) in the **direction** of the arrow on exhaust turbocharger.

  The locks (2) must engage audibly.

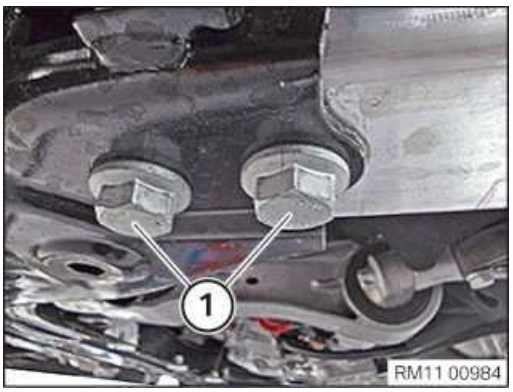


cardiagn.com

- Tighten the screws (1).

Charge air duct to oil sump

M6		Tightening torque	8 Nm



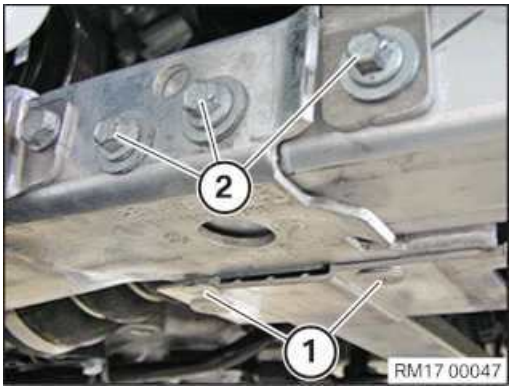
- **If installed:**
- Feed in and install the ride height sensor (3).
- Tighten the screws (2).

Ride height sensor holder to front axle support

M6		Tightening torque	8 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.



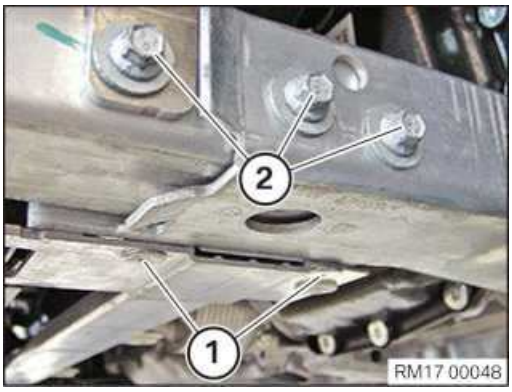
- Tighten the screws (1) on the adapter of the front axle support.

Adapter, front axle support to front axle support

		Tightening torque	100 Nm

- Guide in cross connection (3) and install.
- Guide in locks (2) and install.
- Lock the locking pins (1).
- Ensure that the locking pins (1) audibly engage.

- Tighten the bolts (2) at the front left.



Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front left.

cardiagn.com

- Tighten the bolts (2) at the front right.

Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet

- Mount the blind rivets (1) at the front right.

69 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

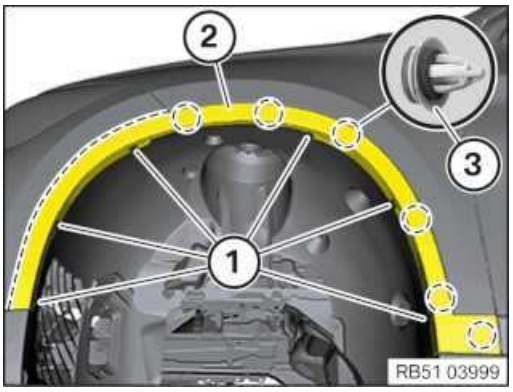
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**

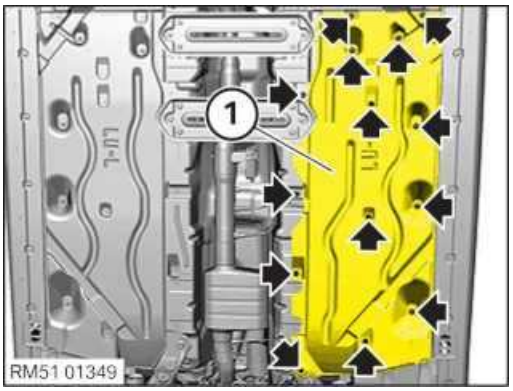


NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.



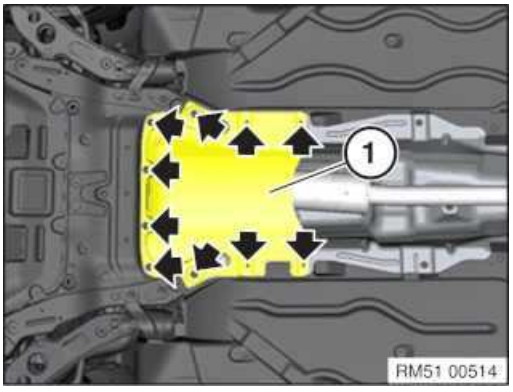
cardiagn.com

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

70 – Installing underbody panelling , right

- Correctly position the underbody panelling (1).
- Tighten all bolts and nuts (arrows).



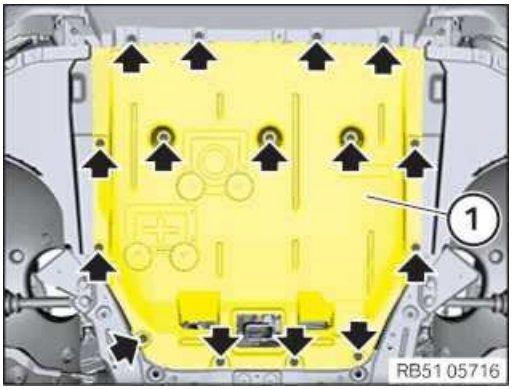
Underbody panelling, side

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side

Plastic nut		Tightening torque	2,6 Nm

71 – If installed: Installing underbody protection at rear

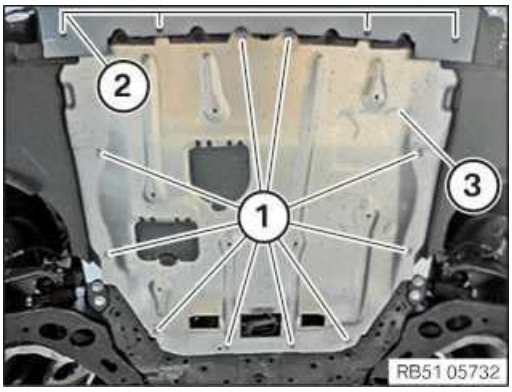


- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body

Screw		Tightening torque	3 Nm

72 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

cardiagn.com

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

73 – Installing both front wheels

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

cardiagn.com

- Renew mounting bolt (1).

  Parts: Mounting bolt

- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

cardiagn.com

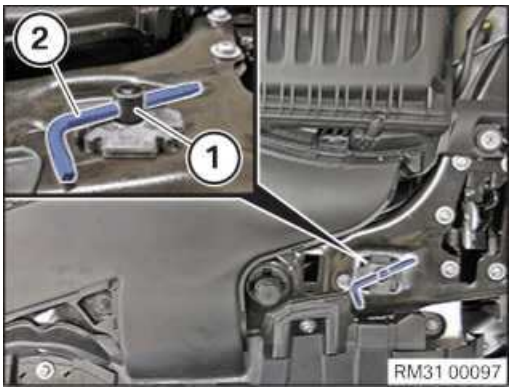
TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.



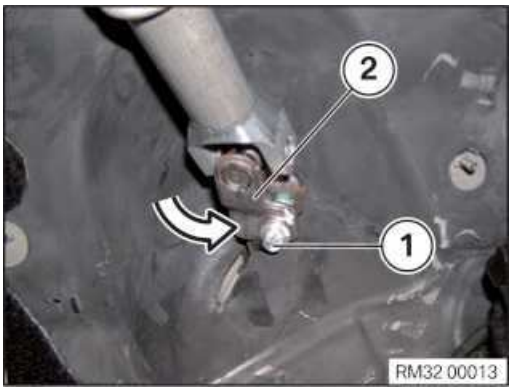
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts.
- Check the wheel bolts and threads for damage, renew the wheel bolts if necessary.
- Join and tighten the wheel bolts (arrows).

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

74 – Removing fastener for left and right radiator



NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

75 – Secure the steering shaft at the bottom on the steering gear

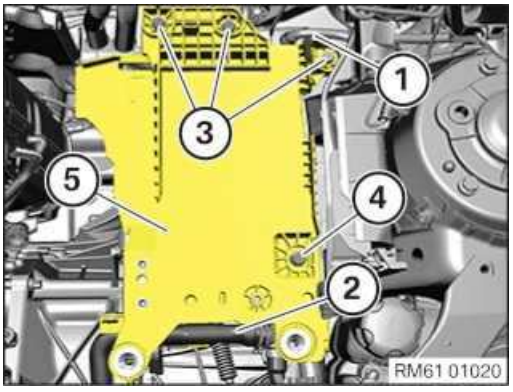
cardiagn.com

- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm



- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

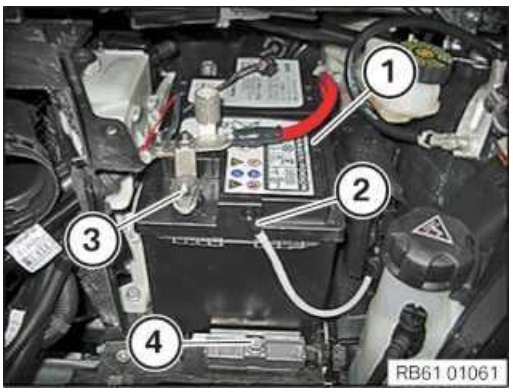
Plastic nut		Tightening torque	3 Nm

76 – Install the battery holder

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm



- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

77 – Install vehicle battery

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

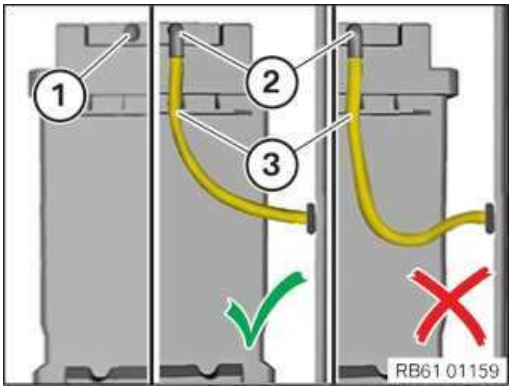
Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

cardiagn.com

▸ **Check the vent holes of the battery**

WARNING



Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

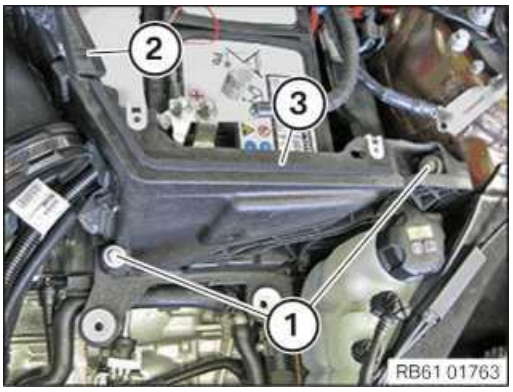
» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

Check

- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).



Result

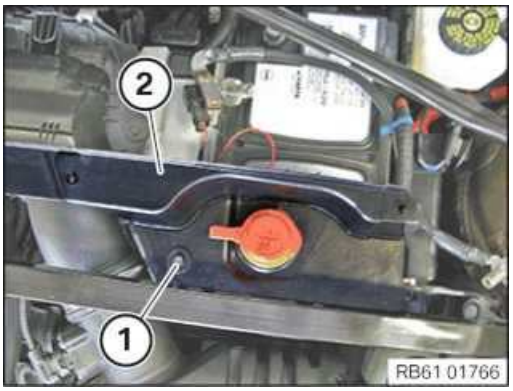
» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

cardiagn.com

- Insert tension strut (3) and tighten with screws (1).

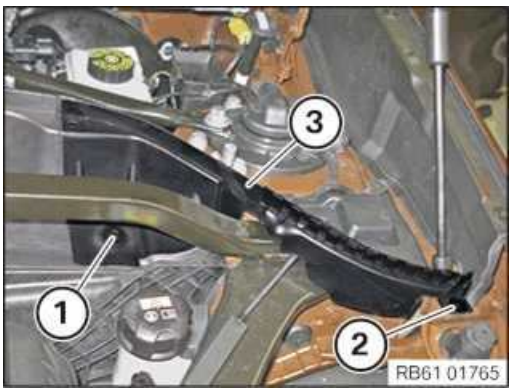


Trailing link

M8		Tightening torque	19 Nm

- Tighten down screw (2).

Battery cover



M8		2,8 Nm

- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

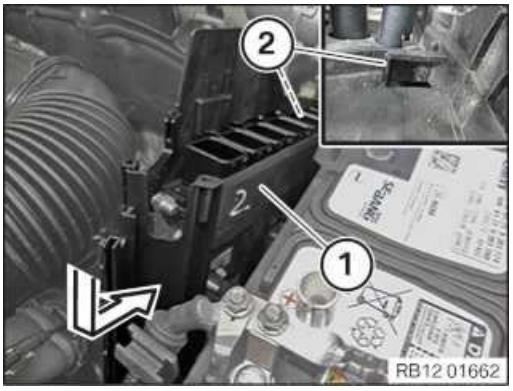
- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

78 – Install electronics box

Prerequisite



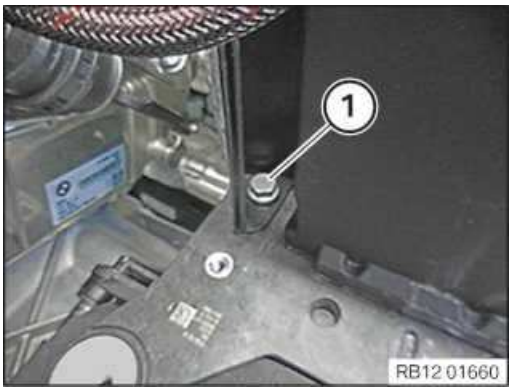
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

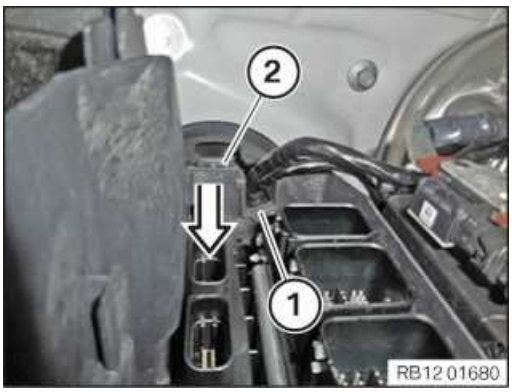
Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

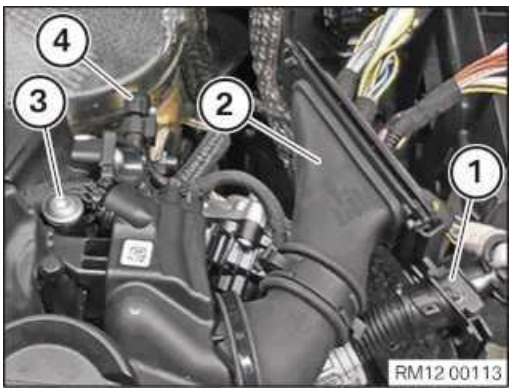


- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

cardiagn.com



- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).

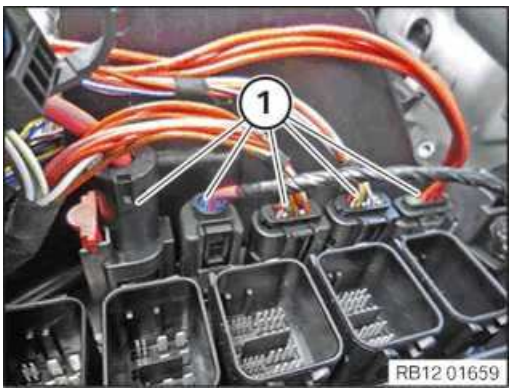


- Tighten down screw (1).

Electronics box to battery tray

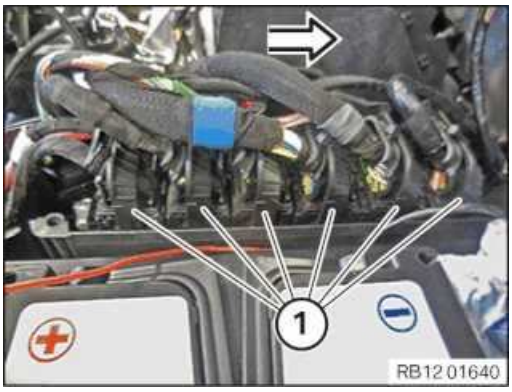
M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



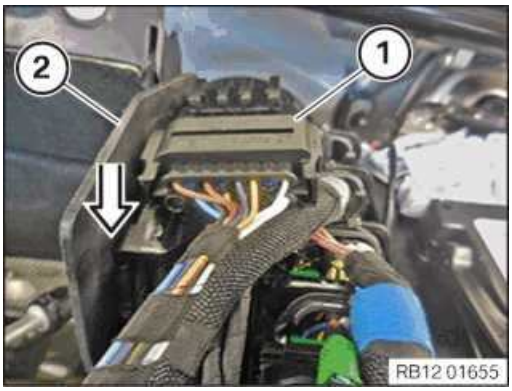
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

Wiring harness to cylinder head cover

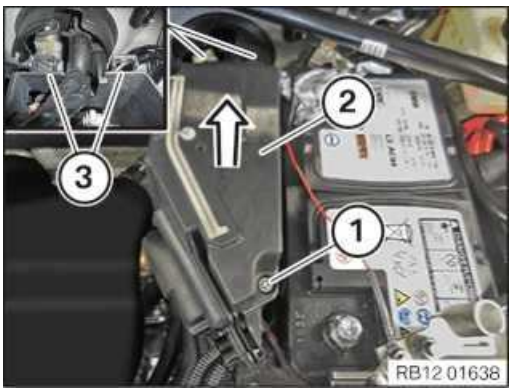


TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

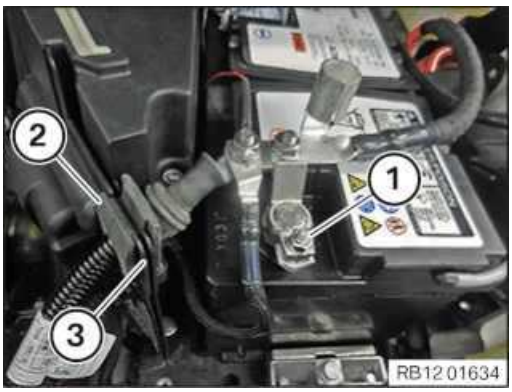


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



cardiagn.com

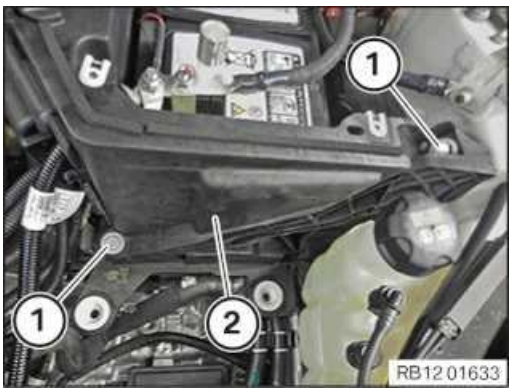
- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box



RF5x26.5		Tightening torque	2,5 Nm

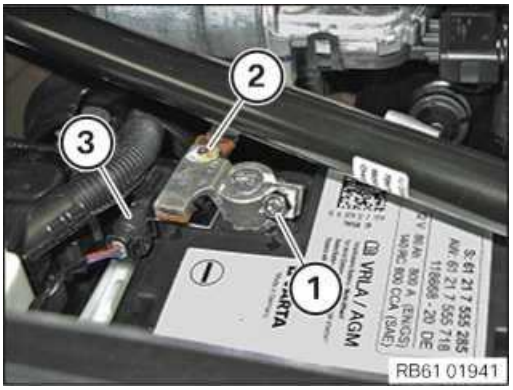
- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray



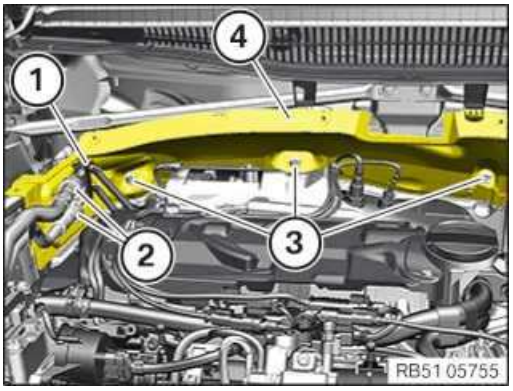
M8		Tightening torque	19 Nm

79 – Connecting the battery earth lead

cardiagn.com

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)



- Remove the protective cover of the positive battery terminal.
- Position the battery earth lead (2).
- Tighten nut (1).

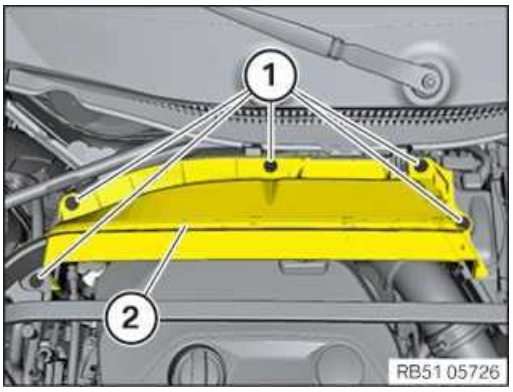
Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

- If required, connect the connector (3).

80 – Installing rear bulkhead upper part

- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

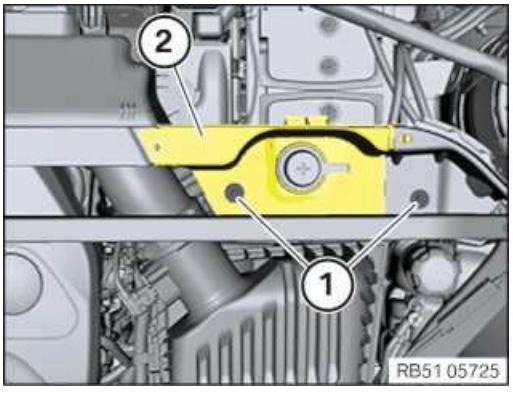


Rear bulkhead upper part to lower section of bulkhead

Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.



81 – Installing the upper bulkhead cover

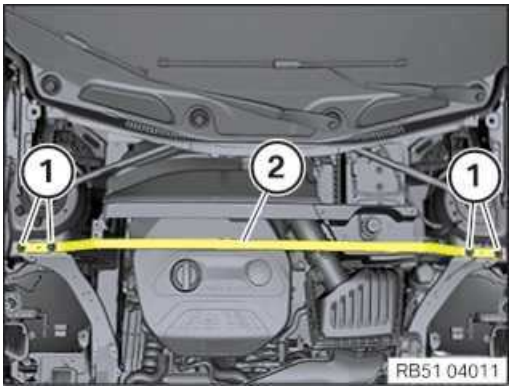
- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm

- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal



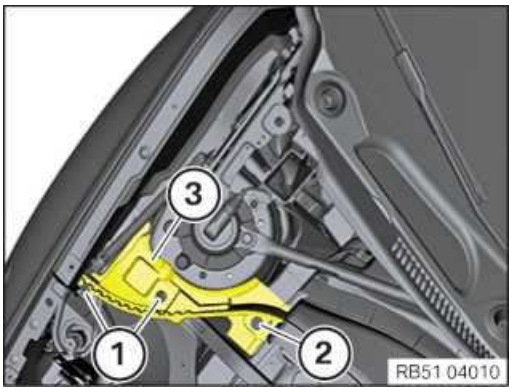
Screw		Tightening torque	2,6 Nm

82 – Install strut brace

cardiagn.com

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).

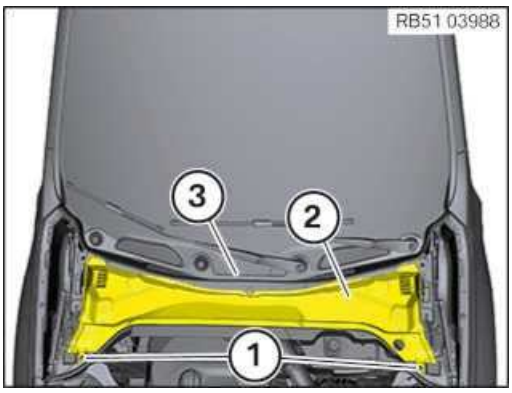
  Parts: Bolts
- Tighten the screws (1).

Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

NOTICE

Description is for right component only. The procedure on the left side is identical.



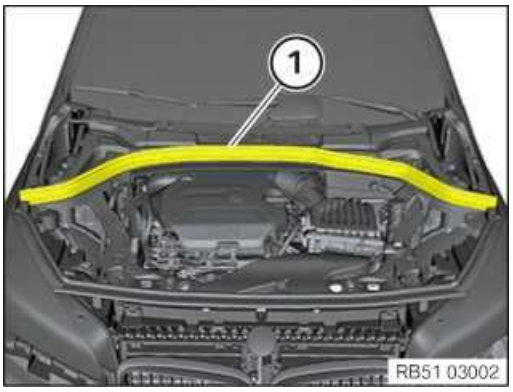
- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

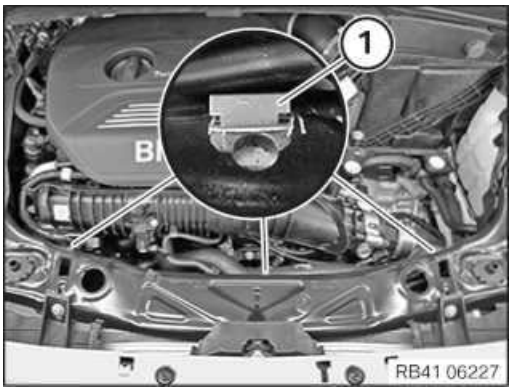
83 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

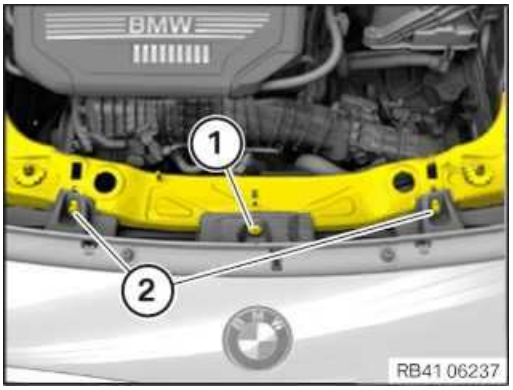
84 – Install the seal for the bonnet

NOTICE

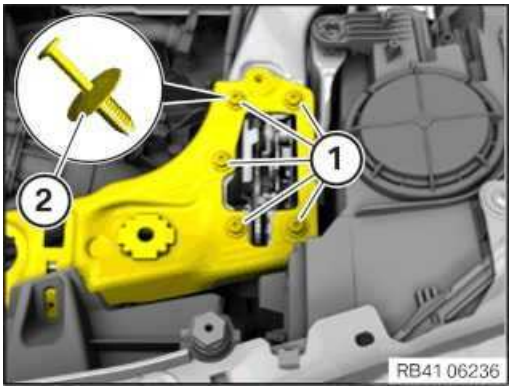


Schematic diagram is for example purposes. Some parts may differ in certain details.

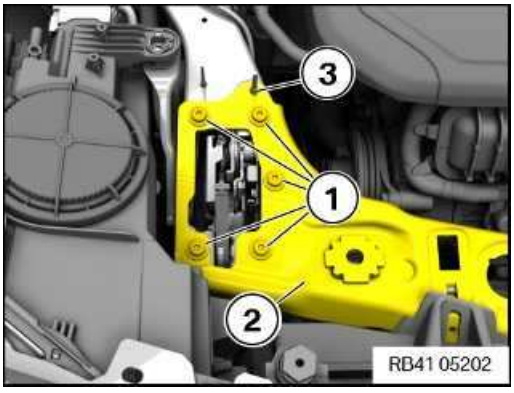
cardiagn.com



- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.



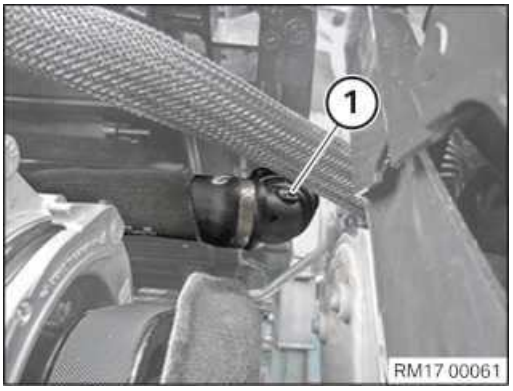
85 – Remove front cross connection



- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

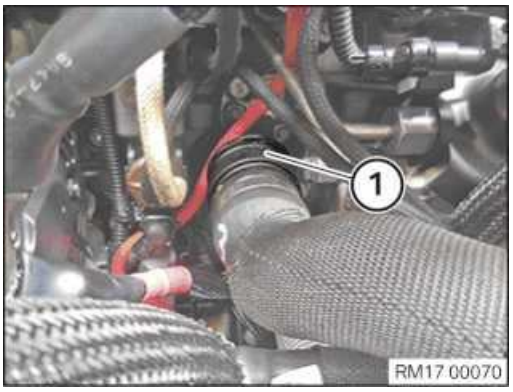
- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).



- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

86 – Connect the coolant line

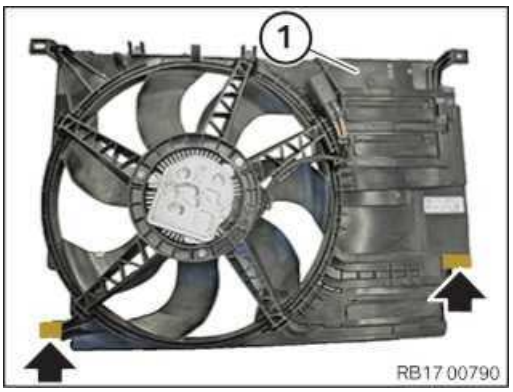


cardiagn.com

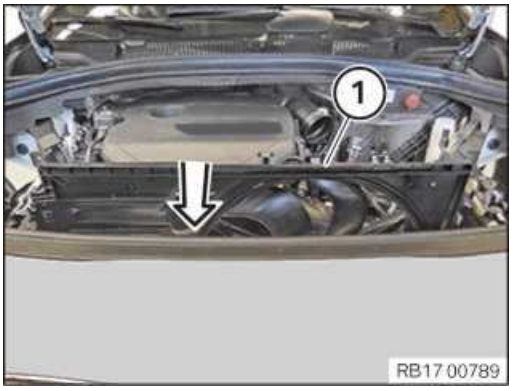
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the connecting branch and lock audibly.

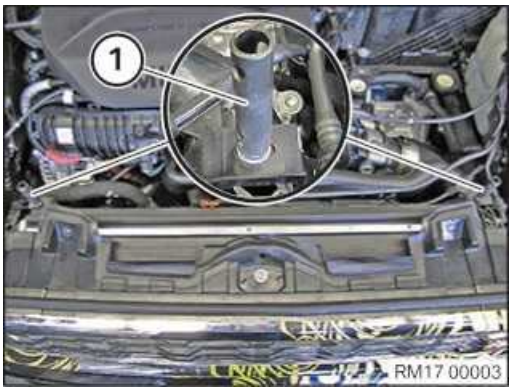


87 – Installing fan cowl with electric fan

TECHNICAL INFORMATION

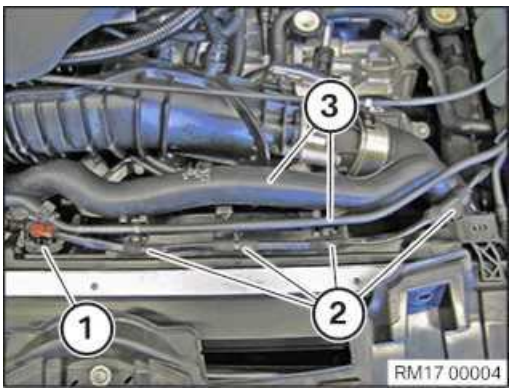
Make sure that the connections are locked correctly. The locks must engage audibly.

- Feed the guides (arrows) of the fan cowl (1) into the charge air cooler.



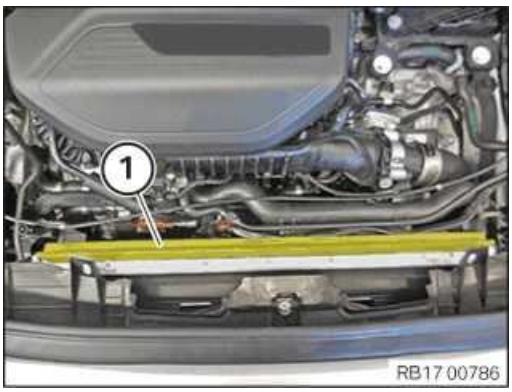
- Feed in and install the fan cowl (1) in the direction of the arrow.

cardiagn.com



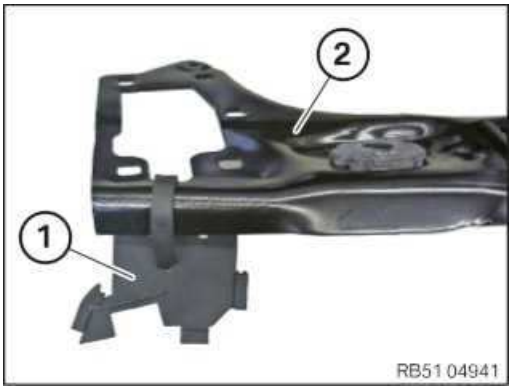
- Lock the left and right locks (arrows).

- Tighten the screws (1).



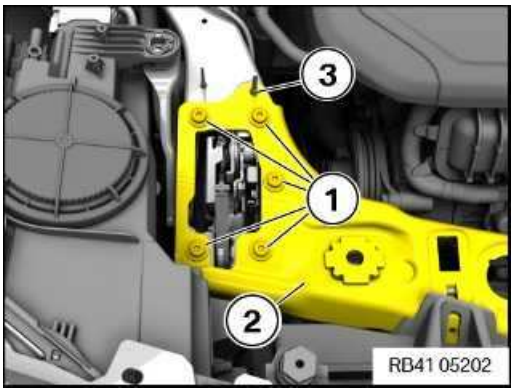
Fan cowl on radiator

M6X12		Tightening torque	6 Nm



- Connect connectors (1) and lock.

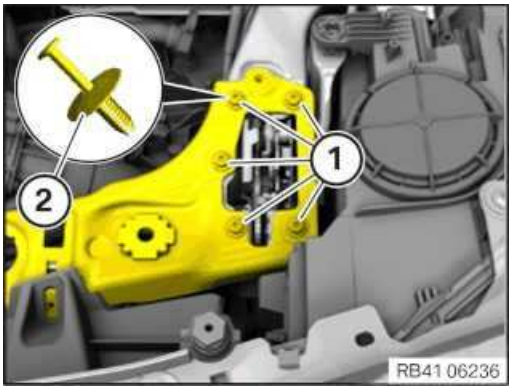
  The connector (1) must engage audibly.
- Secure clamps (2).
- Thread in and install coolant line (3).



- Guide the sealing (1) on the radiator in and install it.

88 – Install front cross connection

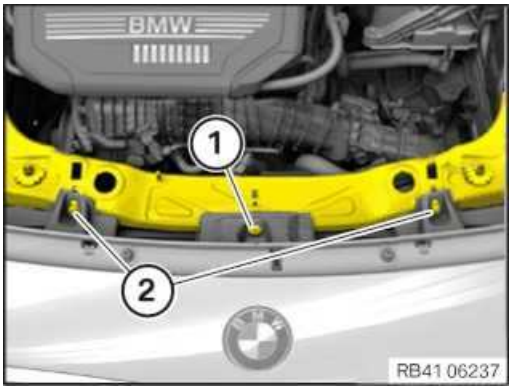
- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.



cardiagn.com

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

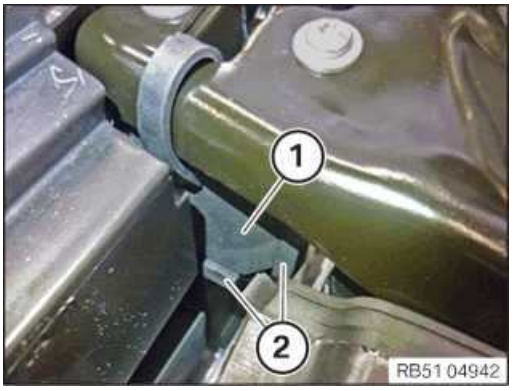
Screws M6x20		Tightening torque	11,8 Nm

- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

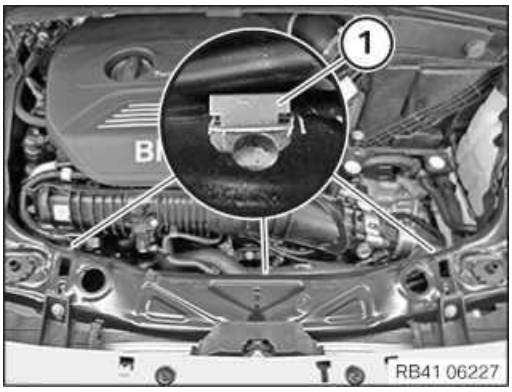
- Tighten down screws (2).



Air duct to upper connection

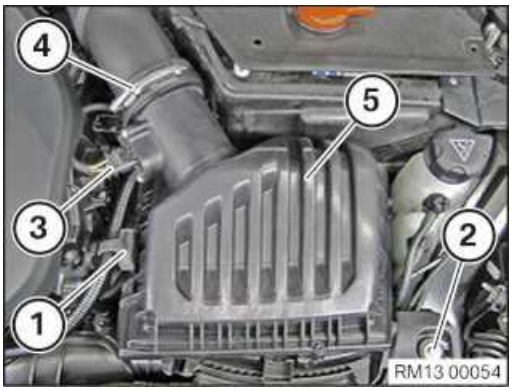
M6x20 screw		Tightening torque	11,8 Nm

- Tighten down screw (1).



Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm



- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

cardiagn.com

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

89 – Installing intake silencer housing

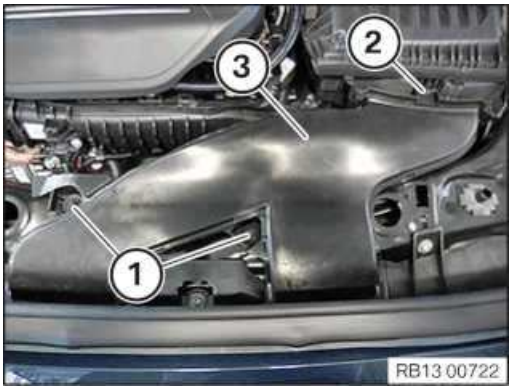
- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

90 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

91 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

cardiagn.com

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

92 – Removing the oil filler cap

- Open oil filler cap (1).

93 – Topping up the engine oil

RISK OF DAMAGE

Damage to the petrol particulate filter.

Vehicles equipped with a petrol particulate filter must be operated with low-ash engine oil only.

- Use BMW Longlife-04 , BMW Longlife-12 FE or BMW Longlife-17 FE+ engine oils or engine oils approved by BMW matching the same specifications only.
- For additional information see: Overview of approved engine oils for BMW Group engines.

RISK OF DAMAGE

Engine damage caused by excessively filling the engine with engine oil.

Filling an excessive quantity of engine oil may cause engine damage.

- Observe the exact engine oil filling capacity.
- Drain the engine oil.

cardiagn.com

- Pour in engine oil.

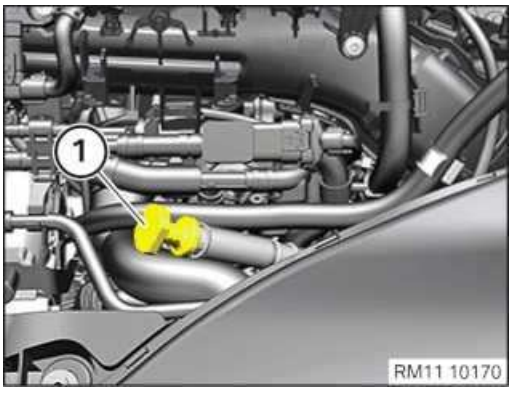
Engine oilB47TÜ1

Capacity of engine oil	5,5 l

Engine oil: Technically suitable engine oils for BMW Group engines

94 – Installing the oil filler cap

- Close oil filler cap (1).



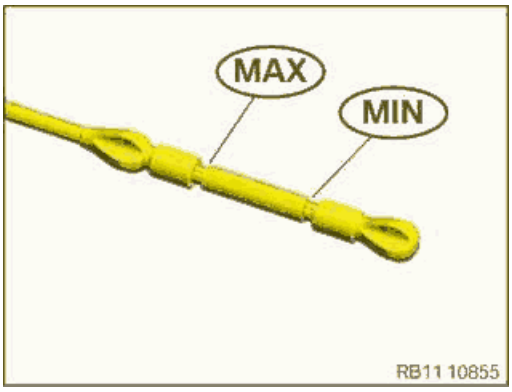
95 – Check engine oil level

- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▶ **Check engine oil level**

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).



- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.

cardiagn.com

96 – Fill and bleed the coolant circuit

TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

▶ **Filling and bleed the high-temperature coolant circuit**

97 – Evacuate and fill air conditioning

- See additional information.

- See additional information.

Used in step 61

M12 screw			100 Nm

Washer fluid reservoir holder to front axle support adapter plate

Used in step 61

		Tightening torque	10 Nm

Deformation element, bottom, to adapter plate, front axle carrier

Used in step 61

		Tightening torque	11,8 Nm

cardiagn.com

Holder to front axle support

Used in step 62

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

Anti-roll bar link to anti-roll bar

Used in step 64

M10	Renew nut.	Tightening torque	56 Nm

Washer fluid reservoir to body

Used in step 66

M6x20		Tightening torque	8 Nm

Charge air duct to oil sump

Used in step 68

M6		Tightening torque	8 Nm

Ride height sensor holder to front axle support

Used in step 68

M6		Tightening torque	8 Nm

Adapter, front axle support to front axle support

Used in step 68

		Tightening torque	100 Nm

Cross connection to front axle support

Used in step 68

M6		Tightening torque	12 Nm

Wheel arch cover to body

Used in step 69

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

Wheel arch cover to body

Used in step 69

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Used in step 69

Plastic nut		Tightening torque	3 Nm

Underbody panelling, side

Used in step 70

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side

Used in step 70

Plastic nut		Tightening torque	2,6 Nm

Underbody protection front

Used in step 72

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

Brake disc to rear wheel hub

Used in step 73

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

Used in step 73

M8	Renew screw.	Tightening torque	16 Nm

cardiagn.com

Wheel bolts

Used in step 73

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Lower steering shaft to steering gear

Used in step 75

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

Steering column cover to bulkhead

Used in step 75

Plastic nut		Tightening torque	3 Nm

Battery holder to engine support

Used in step 76

Hexagon screw M8x30		Tightening torque	19 Nm

Battery terminal rail to battery tray

Used in step 77

M8			19 Nm

Battery terminal with IBS positive battery terminal / negative battery terminal

Used in step 77 79

NutM6			5 Nm

Trailing link

Used in step 77

M8		Tightening torque	19 Nm

Battery cover

Used in step 77

M8			2,8 Nm

Electronics box to battery tray

Used in step 78

M8X16		Tightening torque	15 Nm

Wiring harness to cylinder head cover

Used in step 78

TS5x20		Tightening torque	3,5 Nm

Cover to electronics box

Used in step 78

RF5x26.5		Tightening torque	2,5 Nm

Positive battery terminal to battery

Used in step 78

NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray

Used in step 78

M8		Tightening torque	19 Nm

Rear bulkhead upper part to lower section of bulkhead

Used in step 80

Oval-head screw		Tightening torque	5 Nm

cardiagn.com

Cover of top bulkhead Used in step 81

Screw		Tightening torque	2,6 Nm

Cover of remote positive terminal Used in step 81

Screw		Tightening torque	2,6 Nm

Cross-brace to spring strut dome Used in step 82

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

Cover on body Used in step 82

Hexagon screw		Tightening torque	3 Nm

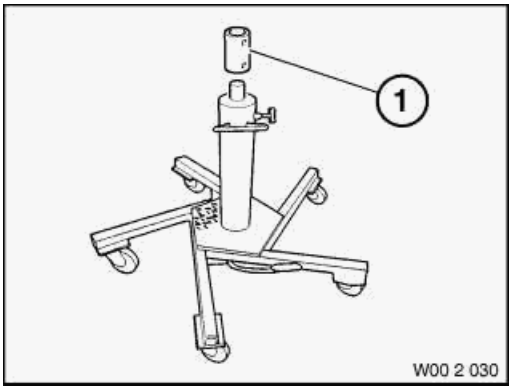
Fan cowl on radiator Used in step 87

M6X12		Tightening torque	6 Nm

Intake silencer housing to lock bridge Used in step 89

M6X30		Tightening torque	8 Nm

Clean air pipe to intake silencer housing Used in step 89



Clamp		Tightening torque	3 Nm

Intake neck to cross connection Used in step 90

M6		Tightening torque	8 Nm

Overview of Special Tools

0 490 133 (00 2 030) Device

Common Used in step 35 60

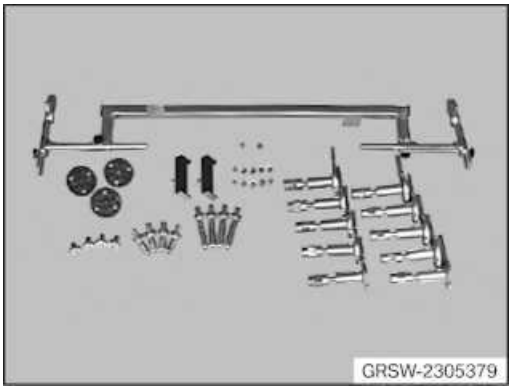
Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

cardiagn.com

0 495 554 (33 5 070) Extension

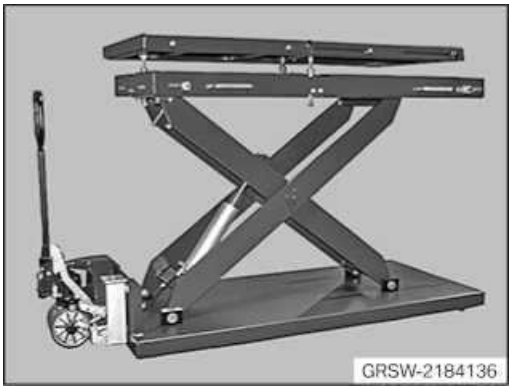


Common Used in step 46 49

Usage	Pull-out extension for 33 5 040, 33 5 050, 33 5 060.
Included in the tool or work	
Storage location	A18
Replaced by	
In connection with	
SI-Number	01 21 06 (300)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 592 (33 5 071)		**Extension** (Extension (1 item)) discontinued, can only be ordered using complete tool	

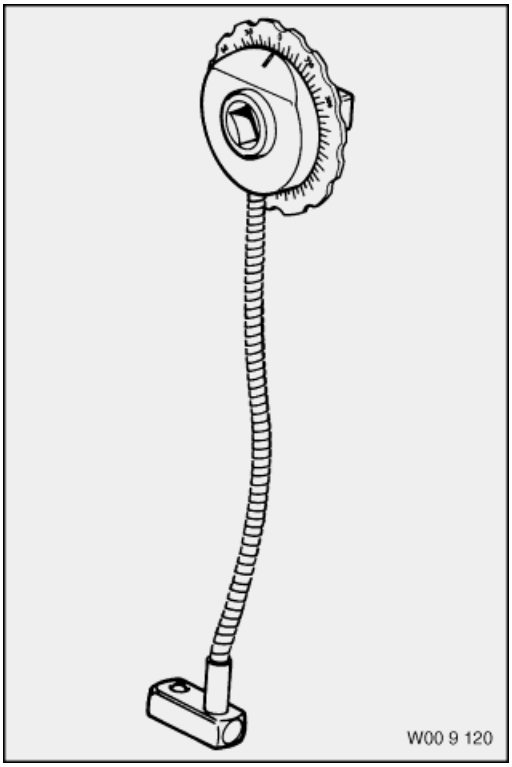


2 305 379 Accessories

Common Used in step 47

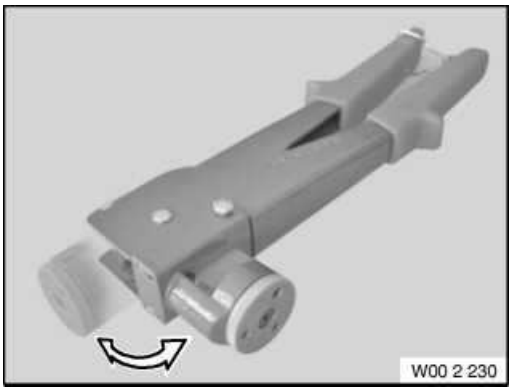
Usage	Attachment set for unit table lift MHT 1200.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	Mobile major assembly table lift MHT 1200 81222184136
SI-Number	06 01 10 (649)

2 184 136 Mobile equipment table lift



Common Used in step 47

Usage	Table lift MHT 1200
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	06 01 10 (649)



cardiagn.com

0 490 504 (00 9 120) Torque angle measuring dial

Common	Used in step 49
Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

0 496 521 (00 2 230) Pliers

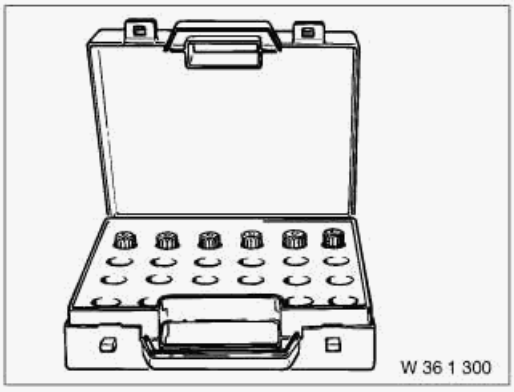
Common	Used in step 69
Usage	(Blind rivet pliers for plastic rivets) For shaft diameters of 3.5 mm, 3.9 mm and 4.5 mm
Included in the tool or work	
Storage location	C25
Replaced by	
In connection with	
SI-Number	01 17 08 (478)

cardiagn.com

2 344 011 Tool

Common	Used in step 73
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

Replacement tools:



0 495 221 (36 1 323) Wheel stud

Common	Used in step 23
Usage	(Code 30) Code 39 available separately, (see EPC) under 36 13 1 181 259
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

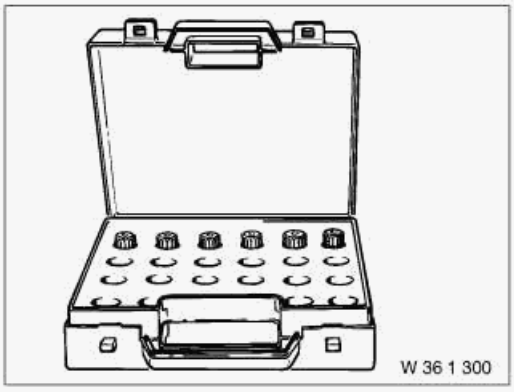
cardiagn.com

0 495 224 (36 1 326) Wheel stud

Common	Used in step 23
Usage	(Code 33) With centring bore available separately, (see EPC) under 36 13 6 765 546
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 225 (36 1 327) Wheel stud

Common	Used in step 23
Usage	(Code 34) With centring bore available separately (see EPC) under 36 13 6 765 547
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	



0 495 226 (36 1 328) Wheel stud

Common	Used in step 23
Usage	(Code 35) With centring bore available separately, (see EPC) under 36 13 6 762 340
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 227 (36 1 329) Wheel stud

Common	Used in step 23
Usage	(Code 36) With centring bore available separately (see EPC) under 36 13 6 762 341
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 228 (36 1 331) Wheel stud

Common	Used in step 23
Usage	(Code 37) With centring bore available separately (see EPC) under 36 13 6 762 342
Included in the tool or work	0 492 518
Storage location	
Replaced by

cardiagn.com

11 00 050 Removing and installing engine with transmission (B47AO0)

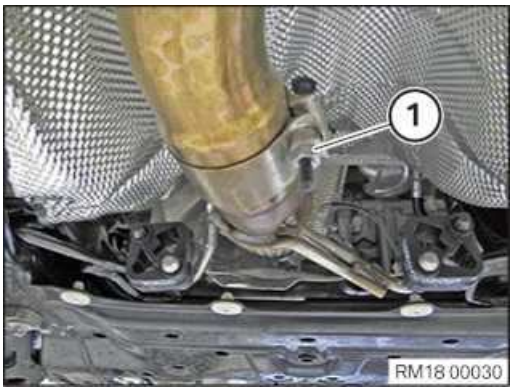
Special tools required:

- 32 1 270
- 13 5 160
- 13 5 162
- 00 9 030

Recycling:

Catch and dispose of escaping fuel with auxiliary materials.

Observe country-specific waste disposal regulations.

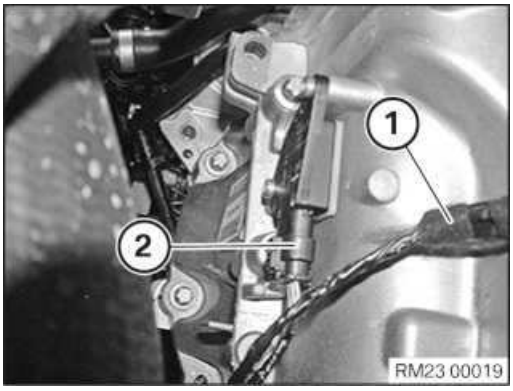


Important!

Seal openings or lines on air conditioning with special tool 32 1 270 to prevent escape of media and contamination.

Necessary preliminary tasks:

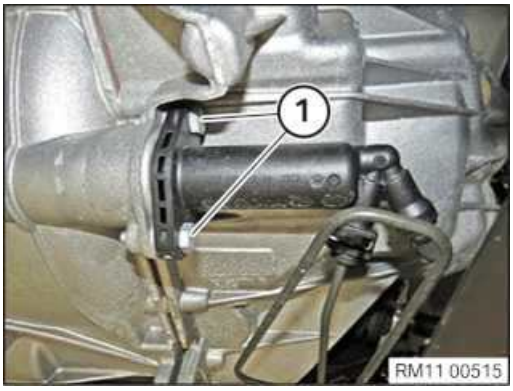
- Remove acoustic cover
- Remove battery.
- Remove DDE control unit.
- Remove front axle complete.
- Remove both output shafts.
- Remove starter motor.
- Drain engine oil.
- Remove charge air cooler.
- Remove radiator.



REMOVAL:

Release clamp (1).

Slide exhaust system from diesel particulate filter.



cardiagn.com

Vehicles with manual gearbox:

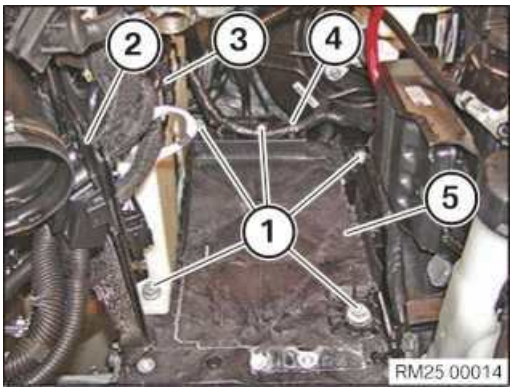
Disconnect plug connection (2) on gear sensor.

Detach cable (1) with holder from transmission.

Vehicles with manual gearbox:

Note:
Pressure line of clutch slave cylinder remains connected.

Important!



Slowly relieve tension on clutch slave cylinder otherwise air may be drawn in through sealing sleeve.

If possible, do not deflect push rod of clutch slave cylinder.

A deflection of the push rod caused by removal will cause easy escape of fluid. This escape of fluid does not mean that the clutch slave cylinder is damaged.

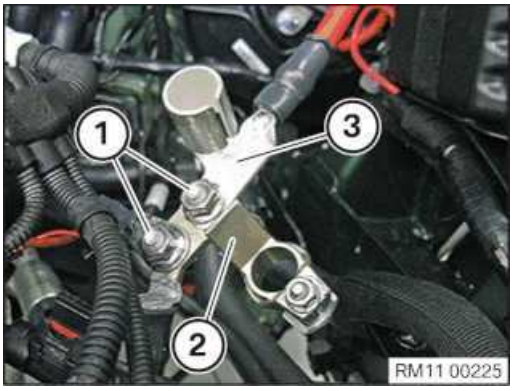
Exchange is therefore not necessary.

Release nuts (1) and remove clutch slave cylinder.

Release screws (1).

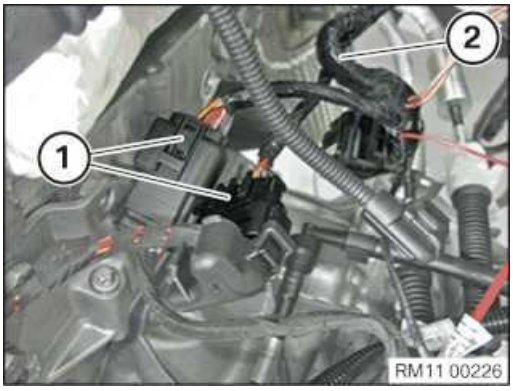
Release battery housing (2) from bracket and remove.

Release control unit holder (3).



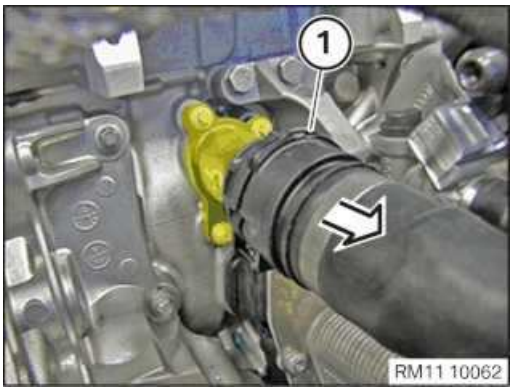
Detach wiring harness (4) from battery tray (5).

Remove battery tray (5).



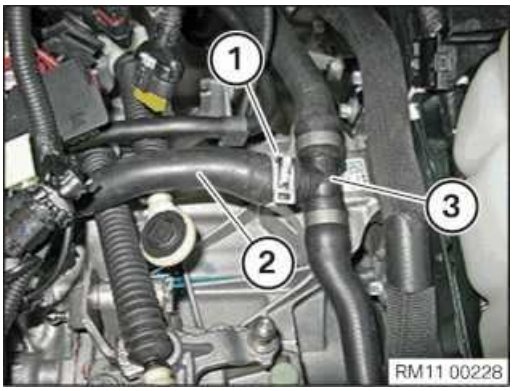
Loosen screw connection (1) of the ground strap.

cardiagn.com



Unscrew nuts (1).

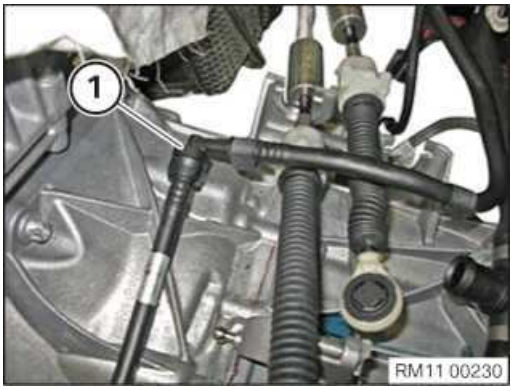
Disconnect positive battery terminal (2) and positive battery connection point (3).



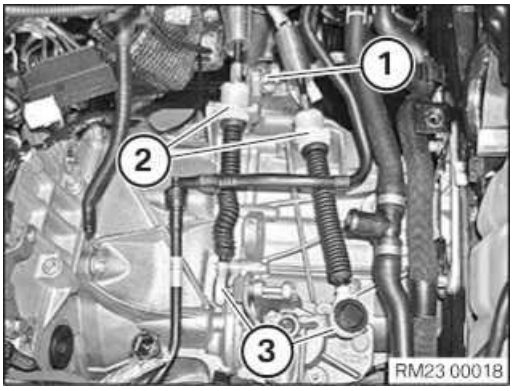
Unlock plug connections (1) and disconnect.

Disconnect wiring harness (2) from engine wiring harness.

Release coolant hose (1) and pull off connecting branch.



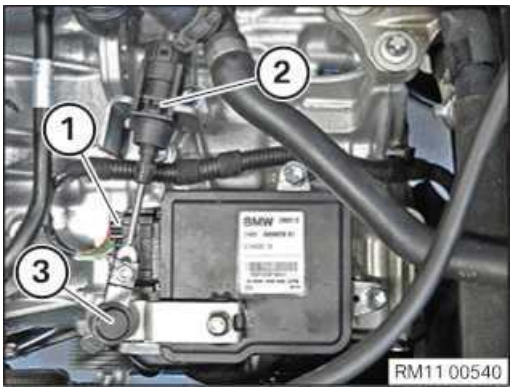
Shown with intake plenum removed for purposes of clarity.



Release clamp (1).

Pull hose (2) off connecting pipe (3).

cardiagn.com

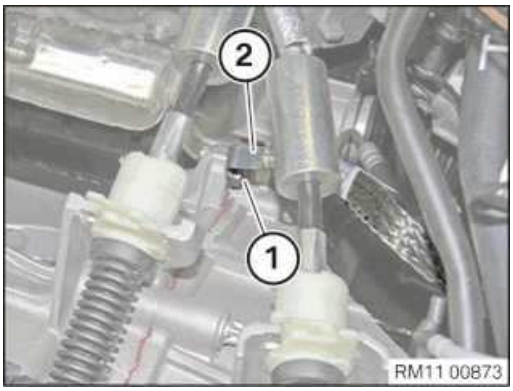


Release vacuum line (1) connection and disconnect.

Vehicles with manual gearbox:

Release clips on limit position/holder (2).

Detach selector lever cables (3) at ball joints.

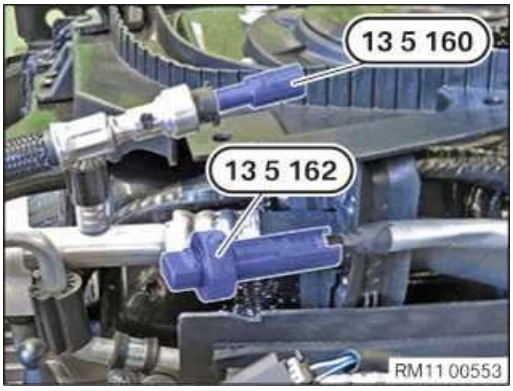


Vehicles with automatic transmission:

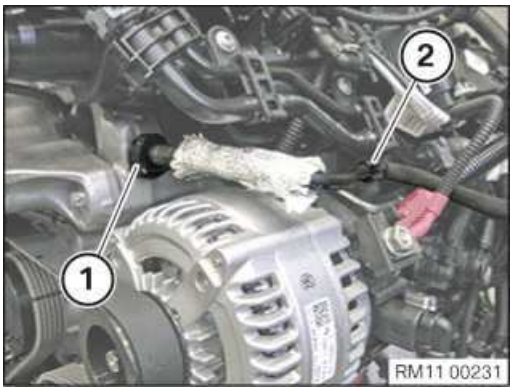
Unlock and disconnect the connector (1).

Release clips on limit position/holder (2).

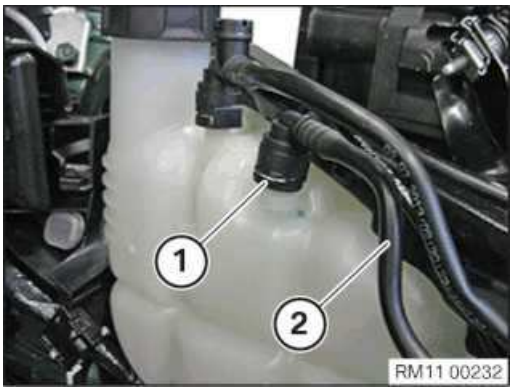
Detach selector lever cable (3) at ball joint.



Slacken screw (1) and remove ground strap (2).

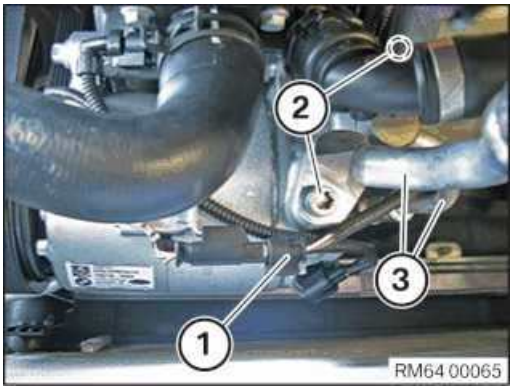


cardiagn.com

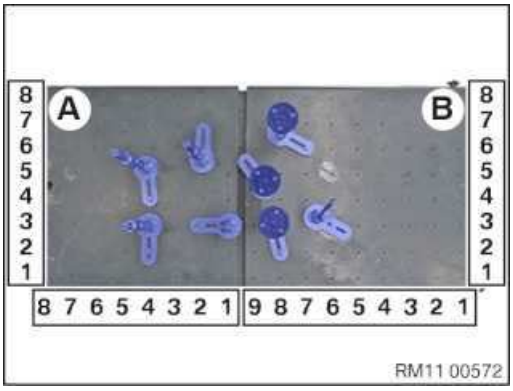


Disconnect fuel lines (1).
Catch and dispose of escaping fuel.

Seal fuel lines with special tools 13 5 160 and 13 5 162 .

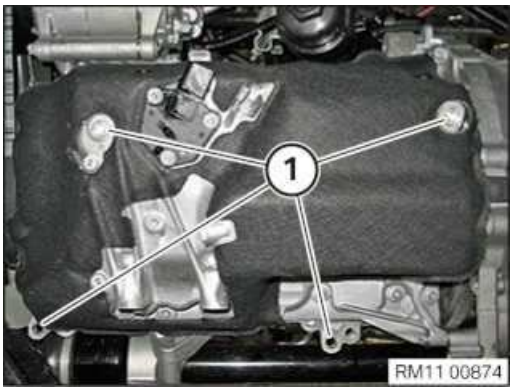


Unlock coolant line (1) and pull off.
Unclip coolant line (1) from holder (2).

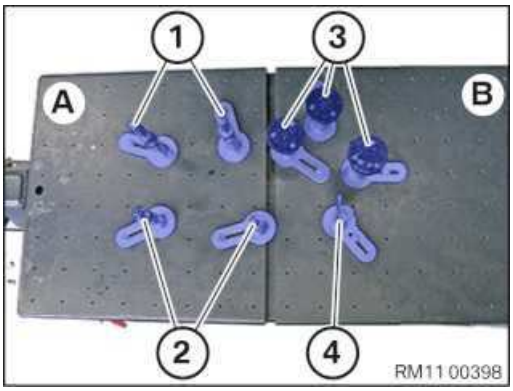


Unlock coolant line (1) and pull off.
Detach coolant line (1) from front end.

cardiagn.com



Unfasten screws (2).



Remove refrigerant lines (3).

Note:
Overview of coordinates for mobile table lift.

Note:
The fixtures (40/50) of table top **A** of the mobile table lift must be seated in the mounting points (1).

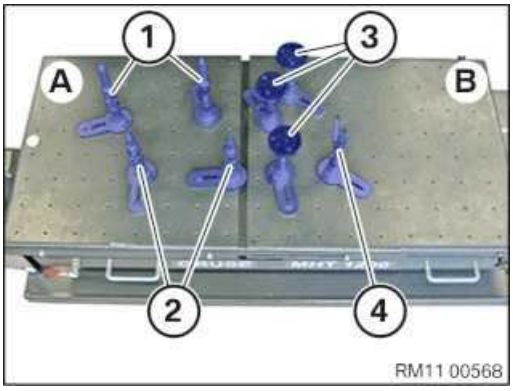
Vehicle with manual gearbox:

Prepare mobile table lift:

Note:
Position engine assembly on table top **A**.

Position transmission on table top **B** .

Structure of table lift.



Position fixture (30) with fixture (40) for engine block on table top **A** at coordinates **6/6** and **1/7** (1).

Position fixture (30) with fixture (50) for oil sump on table top **A** at co-ordinates **5/3** and **2/3** (2).

Position fixture (30) with fixture (80) for transmission housing on table top **B** at co-ordinates **6/5**, **2/5** and **2/7** (3).

Position fixture (83 30 2 357 221) for transmission housing on table top **B** at co-ordinates **7/3** (4).

cardiagn.com

Vehicle with automatic transmission:

Prepare mobile table lift:

Note:
Position engine assembly on table top **A**.

Position transmission on table top **B** .

Structure of table lift.

Position fixture (30) with fixture (40) for engine block on table top **A** at coordinates **6/5** and **2/6** (1).

Position fixture (30) with fixture (50) for oil sump on table top **A** at co-ordinates **4/2** and **2/3** (2).

Position fixture (30) with fixture (80) for transmission housing on table top **B** at co-ordinates **9/6**, **7/6** and **8/2** (3).

Position fixture (83 30 2 357 221) for transmission housing on table top **B** at co-ordinates **6/3** (4).

Important!

Removal weight approx. 150 kg to 300 kg.

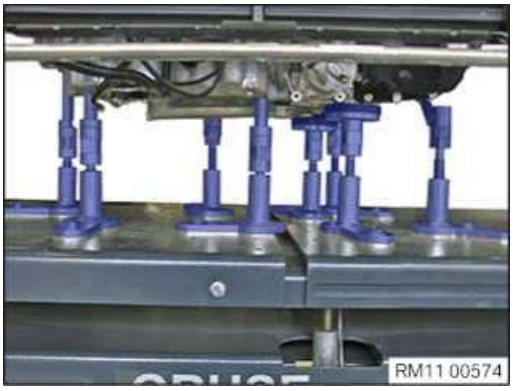
Check payload of vehicle, empty if necessary.

Load front footwell with sandbags if necessary, approx. 100 kg.

Note safety instructions of table lift.

Vehicles with manual gearbox:

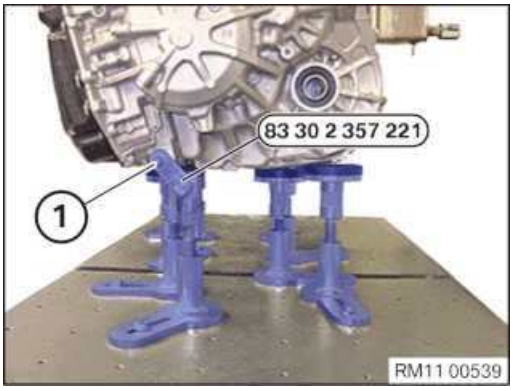
Position table lift under the engine.



Abut all fixtures and screw to the table lift.

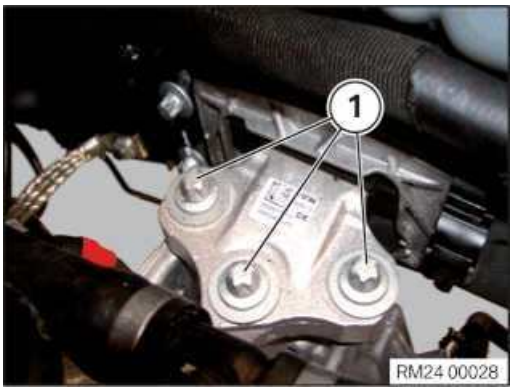
Vehicles with manual gearbox:

Screw fixture (83 30 2 357 221) to the housing for the clutch slave cylinder.



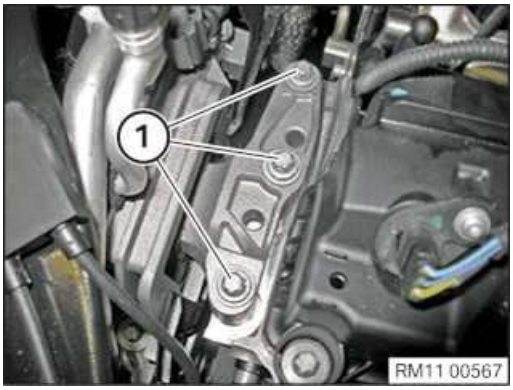
cardiagn.com

Vehicles with automatic transmission:



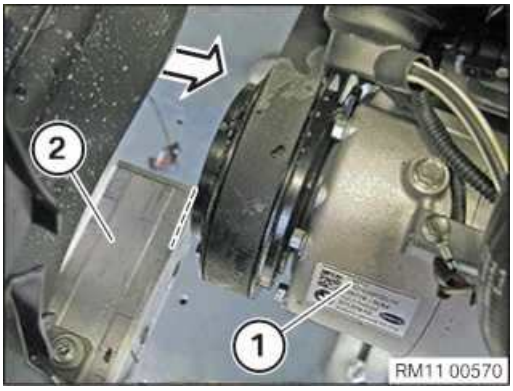
Position table lift under the engine.

Abut all fixtures and screw to the table lift.



Vehicles with automatic transmission:

Screw fixture (83 30 2 357 221) to the transmission housing with screw (1).

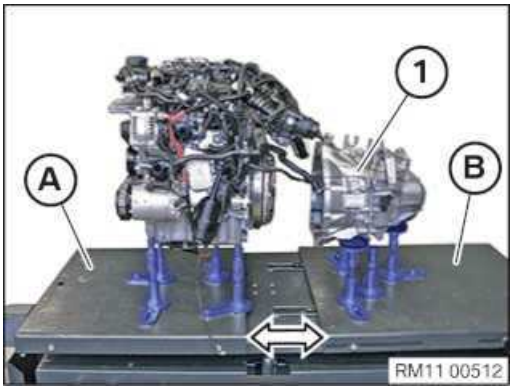


Release screws (1).

Release screw connection (1) of right engine support.

Carefully raise the vehicle.

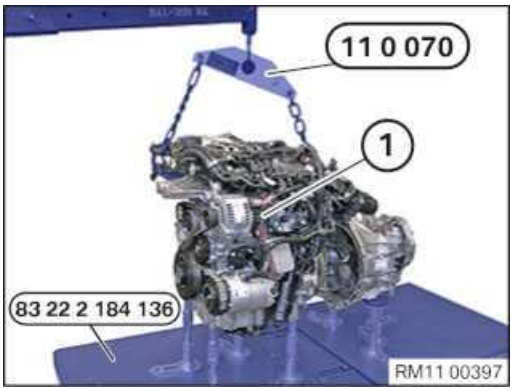
cardiagn.com



Important!

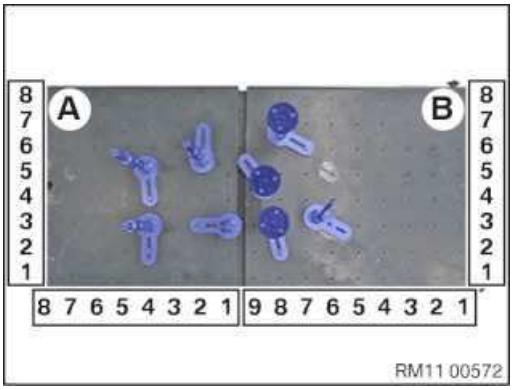
Take care when removing the engine!

Risk of damage of the compressor (1) at the deformation element (2).



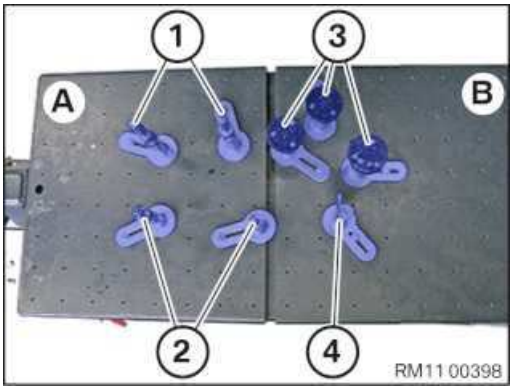
Slightly slide the table lift with the engine in direction of arrow.

Remove engine with transmission.



Loosen transmission.

Slide table top **B** in direction of arrow and remove transmission.



Attach engine lifter and lift engine from table lift.

INSTALLATION:

Note:
Overview of coordinates for mobile table lift.

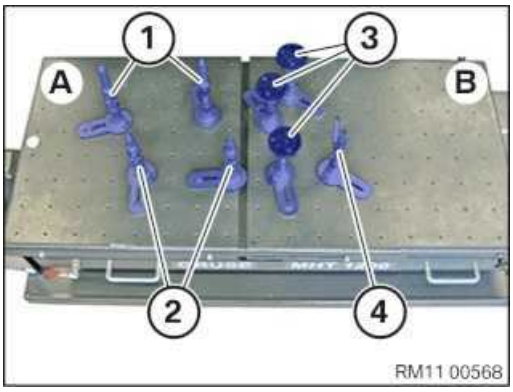
cardiagn.com

Vehicles with manual gearbox:

Prepare mobile table lift:

Note:
Position engine assembly on table top **A**.

Position transmission on table top **B** .



Structure of table lift.

Position fixture (30) with fixture (40) for engine block on table top **A** at coordinates **6/6** and **1/7** (1).

Position fixture (30) with fixture (5) for oil sump on table top **A** at co-ordinates **5/3** and **2/3** (2).

Position fixture (30) with fixture (80) for transmission housing on table top **B** at co-ordinates **6/5**, **2/5** and **2/7** (3).

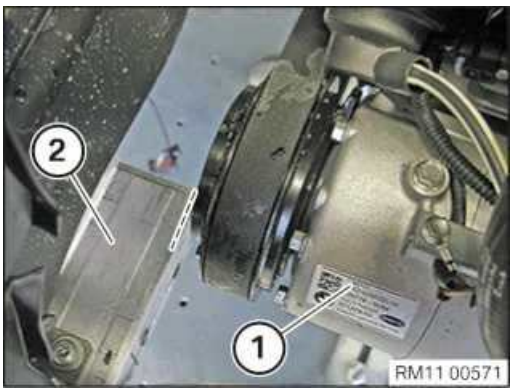
Position fixture (83 30 2 357 221) for transmission housing on table top **B** at co-ordinates **7/3** (4).

Vehicle with automatic transmission:

Prepare mobile table lift:

Note:
Position engine assembly on table top **A**.

Position transmission on table top **B** .



Structure of table lift.

Position fixture (30) with fixture (40) for engine block on table top **A** at coordinates **6/5** and **2/6** (1).

Position fixture (30) with fixture (50) for oil sump on table top **A** at co-ordinates **4/2** and **2/3** (2).

Position fixture (30) with fixture (80) for transmission housing on table top **B** at co-ordinates **9/6**, **7/6** and **8/2** (3).

Position fixture (83 30 2 357 221) for transmission housing on table top **B** at co-ordinates **6/3** (4).

Important!

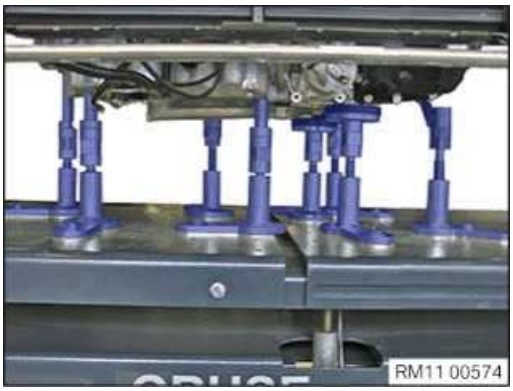
Take care when installing the engine!

Risk of damage of the compressor (1) at the deformation element (2).

cardiagn.com

Vehicles with manual gearbox:

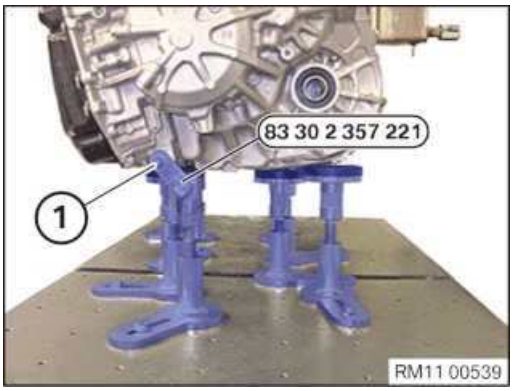
Place engine and transmission on table lift.



Mount transmission on engine.

Vehicles with manual gearbox:

Screw fixture (83 30 2 357 221) to the housing for the clutch slave cylinder.

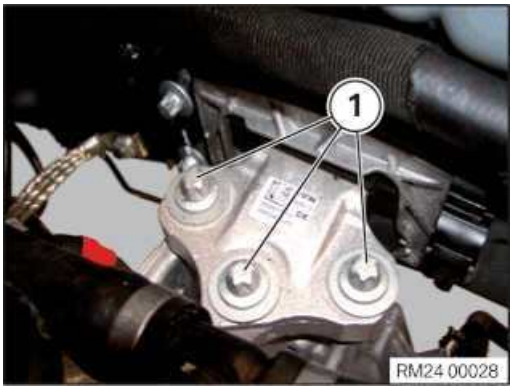


Lower vehicle.

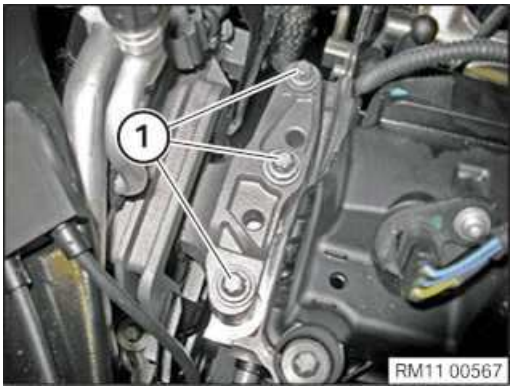
Vehicles with automatic transmission:

Place engine on table lift.

Mount transmission on engine.

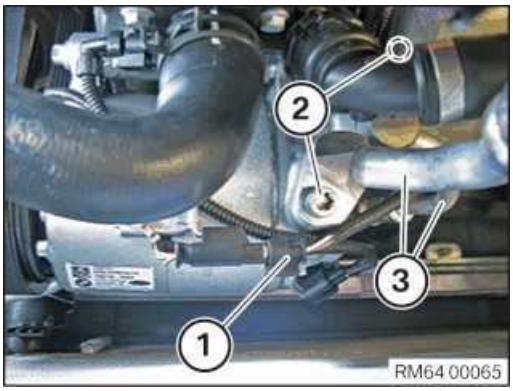


Vehicles with automatic transmission:



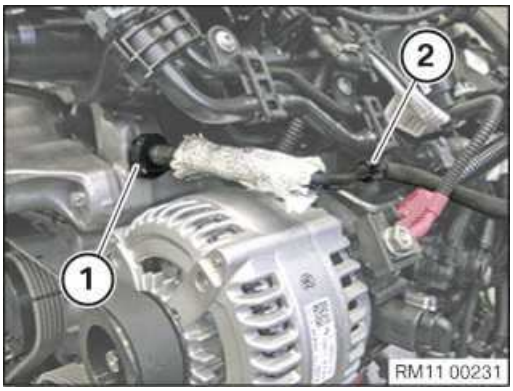
Screw fixture (83 30 2 357 221) to the transmission housing with screw (1).

Lower vehicle.



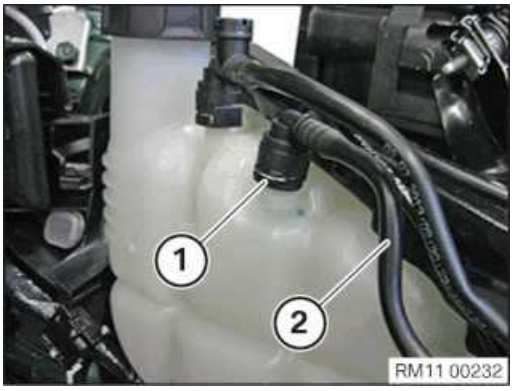
cardiagn.com

Position table lift with engine and transmission under the vehicle.
Carefully lower the vehicle.
Tighten screws (1) on transmission carrier.
Tightening torque 22 32 1AZ.



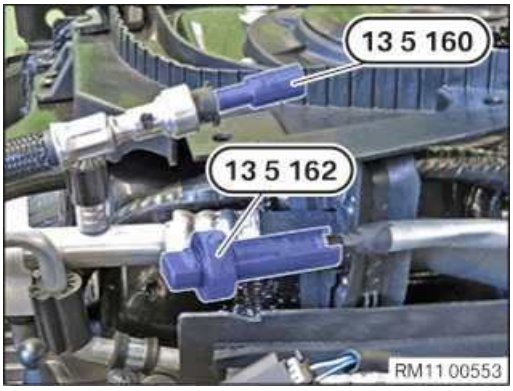
Tighten screws (1) on right engine support.
Tightening torque 22 11 1AZ.

Parts: Replace sealing rings.



Note:
Use special tool 00 9 030 to mount sealing rings without damaging them.

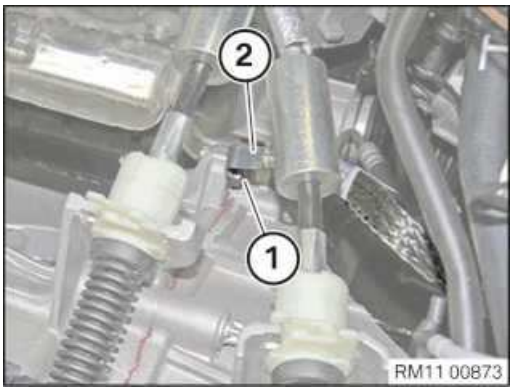
Join refrigerant lines (3) to compressor.
Tighten down screws (2).
Tightening torque 64 53 4AZ.



Install coolant line (1) in vehicle
Connect and lock coolant line (1).
Clip coolant line (1) into holder (2).

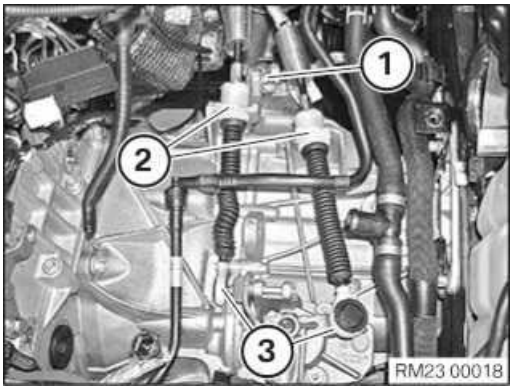
cardiagn.com

Connect and lock coolant line (1).



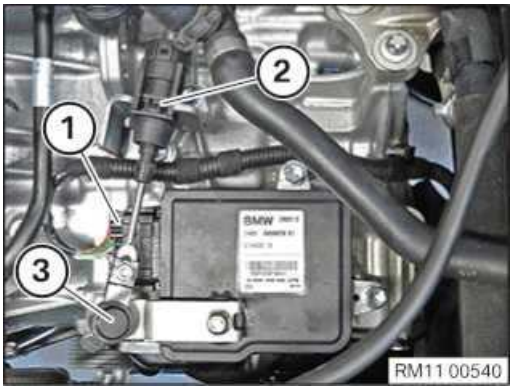
Route coolant line (1) correctly in the front end.

Remove special tools13 5 160 and 13 5 162 .



Connect fuel lines (1).

Position ground strap (2) and tighten screw (1).



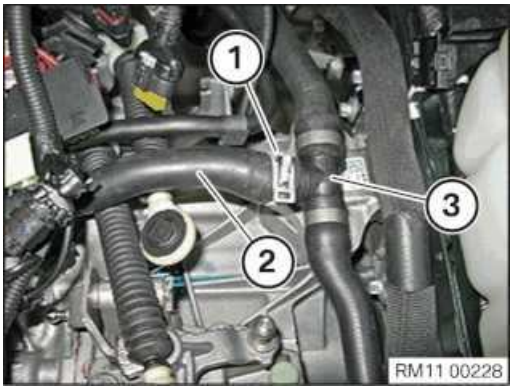
cardiagn.com

Vehicles with manual gearbox:

Attach selector lever cables (3) at ball joints.

Fasten limit position/holder (2) with clips.

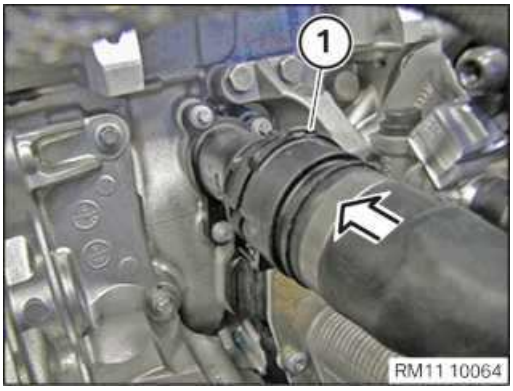
Vehicles with automatic transmission:



Connect the connector (1).

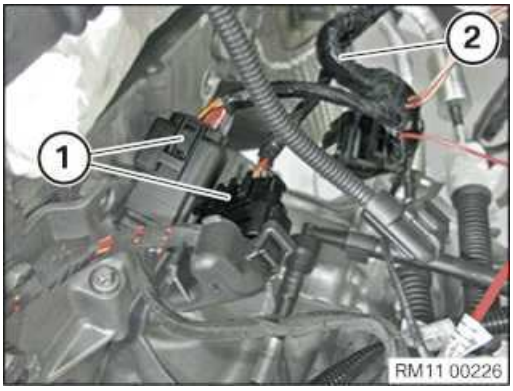
Attach clip at limit position/holder (2).

Attach selector lever cable (3) to ball joint.



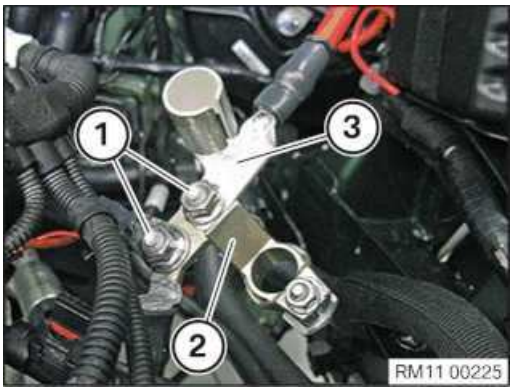
Connect vacuum line (1).

Connect hose (2) to connecting pipe (3).



Fasten clamp (1).

cardiagn.com

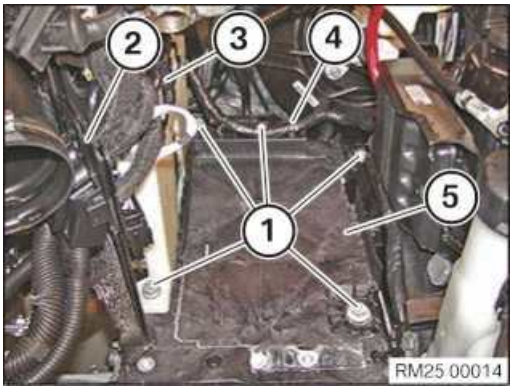


Place coolant hose (1) on connecting branch and lock.

Shown with intake plenum removed for purposes of clarity.

Join wiring harness (2) and engine wiring harness.

Connect the connector (1).

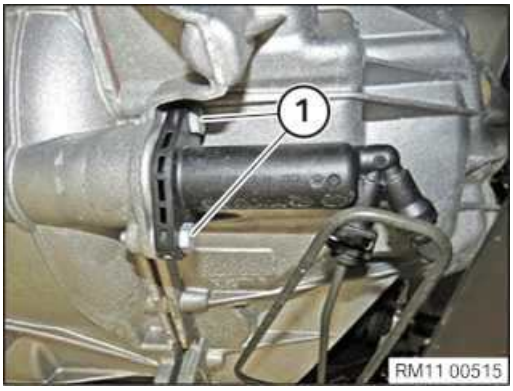


Connect positive battery terminal (2) and positive battery connection point (3).

Tighten down nuts (1).

Attach ground cable with screw (1).*Note:*
Position ground cable correctly in holder.

cardiagn.com



Install battery tray (5).

Attach wiring harness (4) to battery tray (5).

Install control unit holder (3).

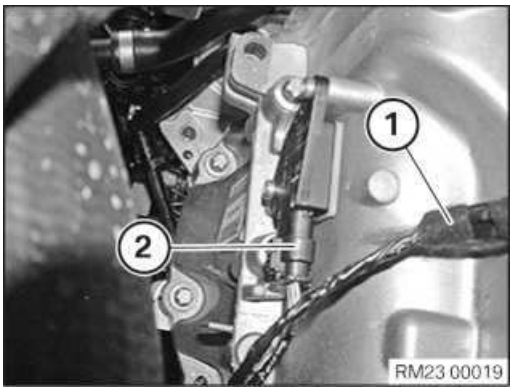
Install battery housing (2).

Tighten down screws (1).

Vehicles with manual gearbox:

Important!

Slowly relieve tension on clutch slave cylinder otherwise air may be drawn in through sealing sleeve.

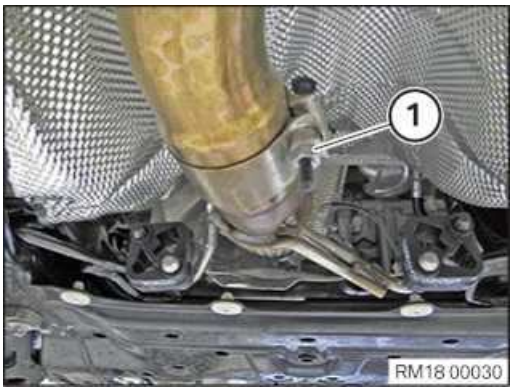


If possible, do not deflect push rod of clutch slave cylinder.

A deflection of the push rod caused by removal will cause easy escape of fluid. This escape of fluid does not mean that the clutch slave cylinder is damaged.

Exchange is therefore not necessary.

Carefully insert clutch slave cylinder and tighten nuts (2).



Tightening torque 21 52 1AZ.

Vehicles with manual gearbox:

Connect connector (2) of neutral gear sensor.

Fasten cable (1) with holder on transmission.

Parts: Replace clamp (1).

Slide exhaust system onto diesel particulate filter.

Tighten clamp (1).

Tightening torque 18 20 1AZ.

cardiagn.com

Required follow-up work:

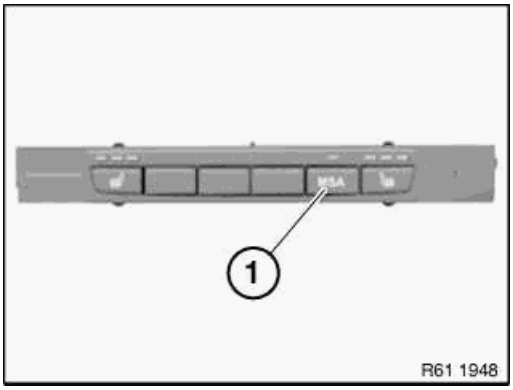
- Install radiator.
- Install charge air cooler.
- Install both output shafts.
- Install starter.
- Install complete front axle.
- Top up engine oil.
- Install DDE control unit.
- Install battery.
- Install acoustic cover.

Check cooling system for tightness.

cardiagn.com

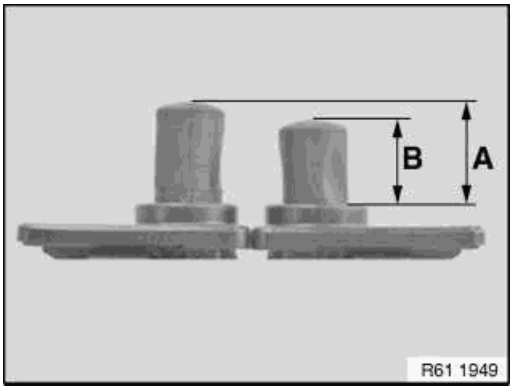
00 Safety information for working on vehicles with automatic engine start-stop function (MSA)

Warning!



If the engine hood/bonnet contact is pulled upwards (workshop mode), the information "switch closed" is output. The automatic engine start-stop function is active.

An automatic engine start is possible.



Observe safety precautions when working on MSA vehicles.

Before carrying out practical work on the engine, always ensure that the MSA functionality is deactivated so as to prevent automatic engine starting while work is being carried out in the engine compartment.

MSA function is deactivated by:

- Deactivate MSA by means of button (1) in passenger compartment
- Open seat belt buckle and driver's door

- Open engine bonnet/hood and ensure that engine hood/bonnet contact is not in workshop mode
  - Workshop mode

    A = 10 mm
  - Basic setting (engine hood/bonnet open)

    B = 7 mm

  To make sure that the engine hood/bonnet contact is at the basic setting, if necessary press the hood/bonnet contact up to the limit position before starting work and slowly release.

When working with diagnosis tools:

- Observe instructions in diagnosis tool

cardiagn.com

Note:
For further information on automatic engine start-stop function (MSA):

- Refer to the Service Information (bulletin) (for manual transmissions) Service Information (bulletin) 61 01 07 335
- Refer to the Service Information (bulletin) (for automatic transmissions or twin-clutch gearboxes) Service Information (bulletin) 61 01 10 629

00 Safety instructions for handling oil

Warning!

Danger of poisoning if oil is ingested/absorbed through the skin!

Risk of injury if oil comes into contact with eyes and skin!

Recycling:

Observe country-specific waste disposal regulations.

Measures if oil is unintentionally released:

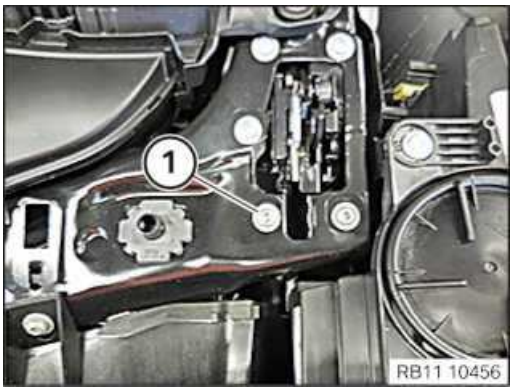
- Personal precautionary measures: Danger of slipping! Keep non-involved persons away from the work area. Wear personal protective clothing/equipment.
- Environmental protection measures: Prevent oil from draining into drain channels, sewerage systems, pits, cellars, water and the ground.
- Limiting spread: Use oil blocks to prevent the surface spread of oil.
- Cleaning procedure: Bind and dispose of escaped oil with nonflammable absorbents.

  Note: Do not flush oil away with water or aqueous cleaning agents.

cardiagn.com

11 00 670 Secure engine in installation position

Special tools required:



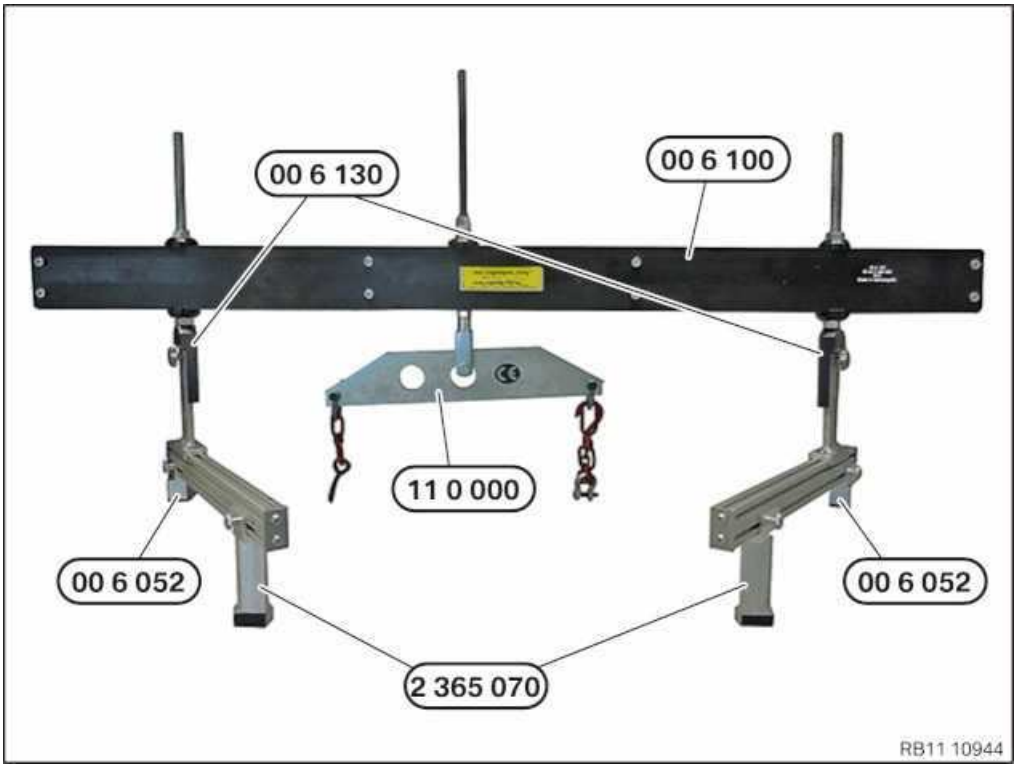
- 00 6 100
- 00 6 130
- 2 365 070
- 00 6 052
- 11 0 000
- 00 0 490

Warning!

Danger of injury!

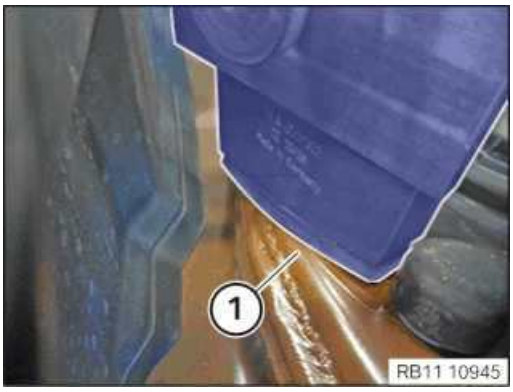
Observe following instructions relating to special tool:

1. Prior to each use, check the special tools for defects, modifications and operational reliability.
2. Damaged/modified special tools must not be used!
3. No changes or modifications may be made to the special tools!
4. Keep special tools dry, clean and free of grease.

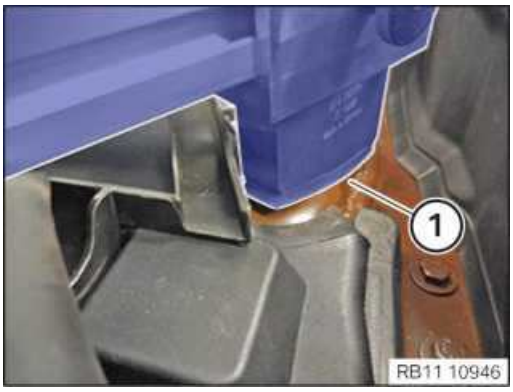


Release screw (1) from left engine compartment lock.

Release screw (1) from right engine compartment lock.



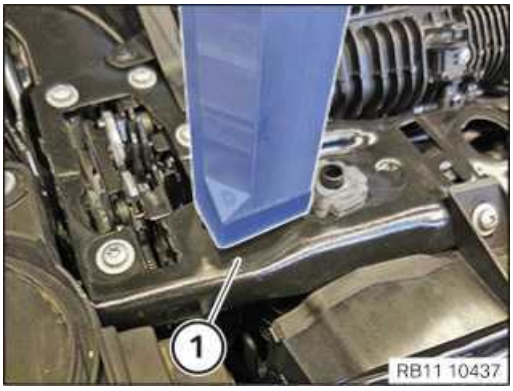
cardiagn.com



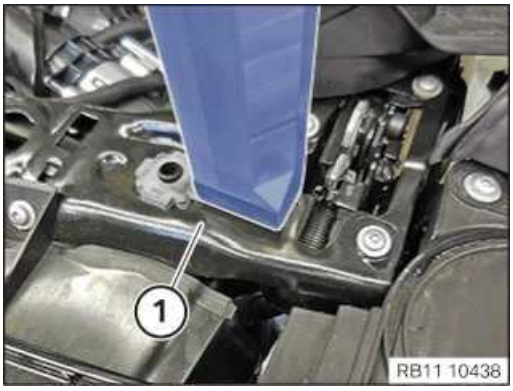
Modify the engine bridge 00 6 100 using special tools 00 6 130 , 2 365 070 , 00 6 052 and 11 0 000 to match the motor vehicle.

With the help of an assistant, fit the entire cross-member 00 6 100 onto the vehicle.

.



(1) = rear right support point.



(1) = rear left support point.

cardiagn.com

(1) = front right support point.

(1) = front left support point.

Attach the chains to the engine.

Slightly pretension the spindle (1) of the engine support beam.

Warning!
Danger of injury!

Tighten down all adjusting screws, knurled screws and nuts on cross-member 00 6 100 and on special tool 00 0 490 .

cardiagn.com

Important!

Avoid a change of engine position in the transverse or longitudinal direction!

Always make sure there is sufficient clearance between the engine (or its add-on parts) and the body.

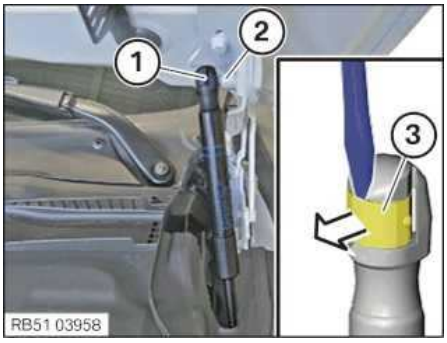
cardiagn.com

11 00 670 Securing engine in installation position

PRELIMINARY WORK

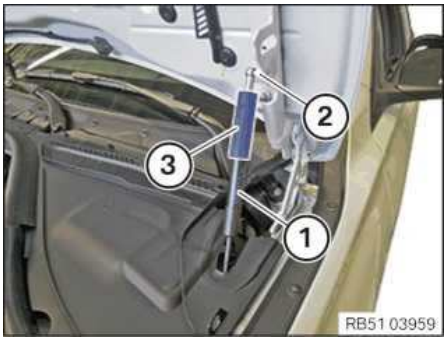
1 – Bring front compartment lid in the service position

Prerequisite



Engine compartment lid is open.

CAUTION



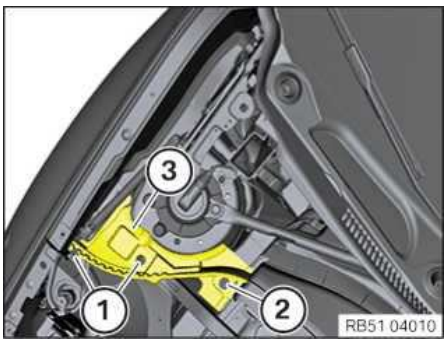
Shutting bonnet or tailgate.

Danger of injury!

- Support bonnet/tailgate in fully open position with the aid of a suitable device.

- Lift clamp (3) slightly using a screwdriver, in the direction of the arrow.
- Lift off ball socket (1) from ball pin (2).
- Repeat the operation on the other side of vehicle.

TECHNICAL INFORMATION



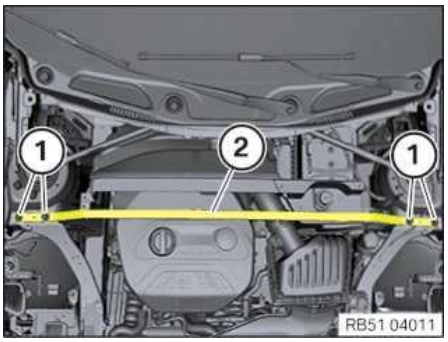
Conduct the following operation with the assistance of a second person.

- Remove the bonnet support and open the bonnet further.
- Push special tool (3) over gas pressure spring (1).
- Place special tool on the ball pin (2) and engage using force.
- Repeat the operation on the other side of vehicle.

2 – Remove suspension cross-brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.

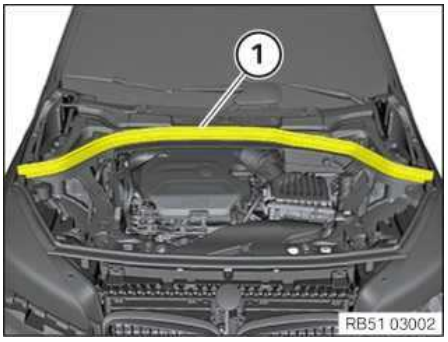


NOTICE

Description is for right component only. The procedure on the left side is identical.

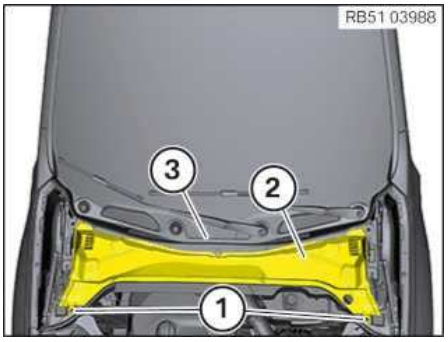
- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

cardiagn.com



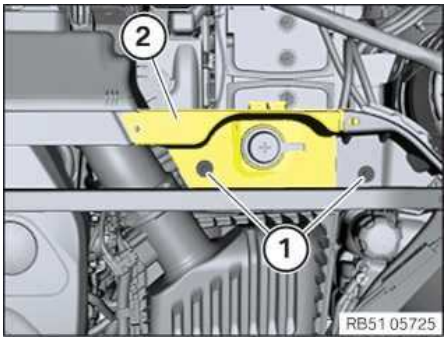
- Loosen screws (1).
- Remove strut brace (2).

3 – Remove the seal for the rear bonnet



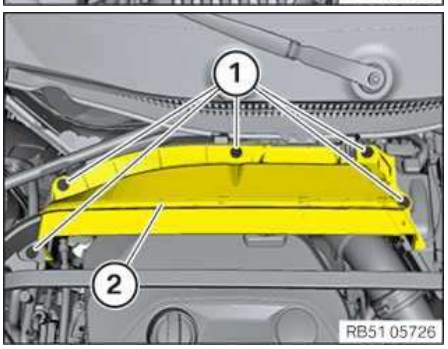
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Pull off rear bonnet seal (1) towards the top and remove.

4 – Removing front cowl panel cover



- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

5 – Removing the upper bulkhead cover

- Loosen screws (1).
- Guide out and remove the cover (2).

- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

cardiagn.com

6 – Removing the acoustic cover

WARNING

Hot surfaces.

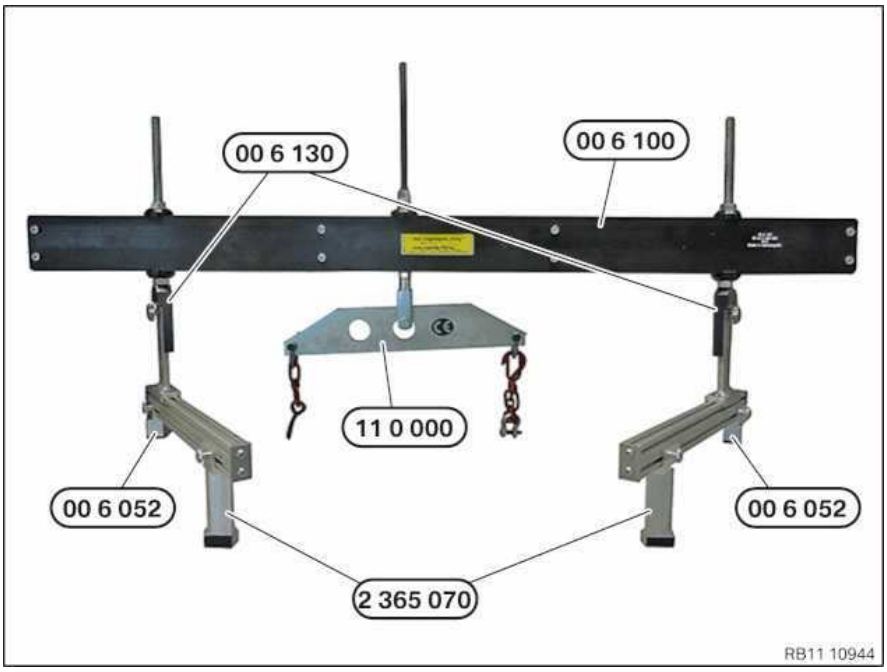
Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.



- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

MAIN WORK

7 – Installing the engine bridge

Overview: Prepared engine bridge

Prerequisite

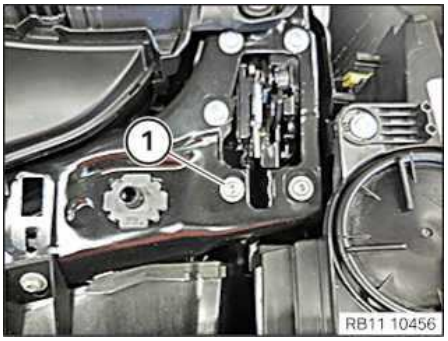
Front compartment lid is in service position.

CAUTION

Components connected to the engine joint or cross member.

Danger of injury!

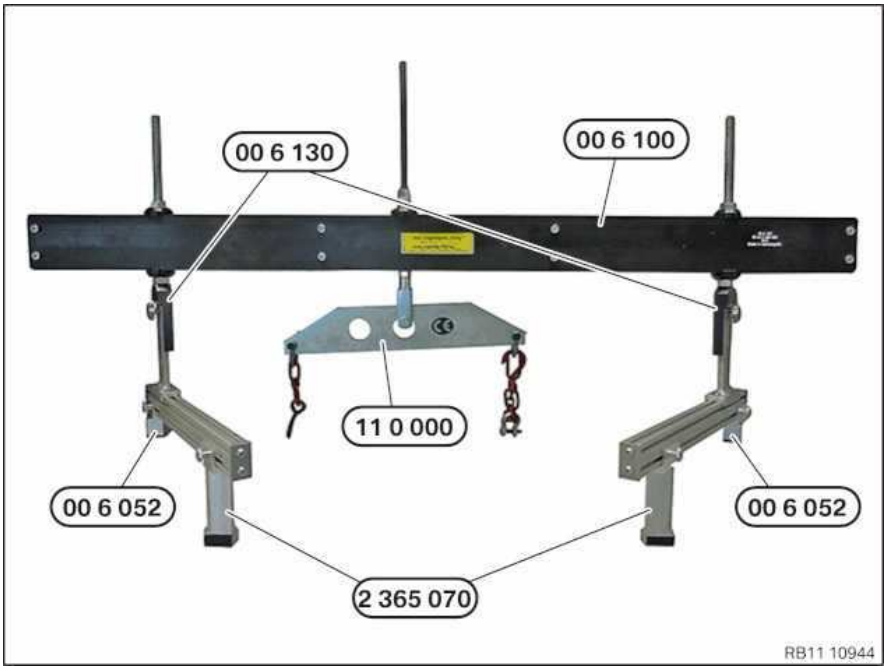
- Check lifting eyes and engine mounting brackets for damage, e.g. cracks.
- Attach the component to correctly mounted engine joints or cross members only.
- Exclusively lift the component, do not move it forwards, backwards or in transverse direction.



cardiagn.com

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

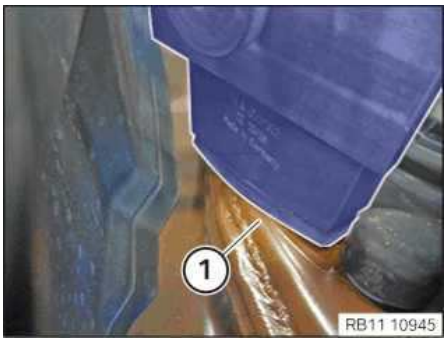
Special tool to cylinder head



M8		Tightening torque	21,5 Nm

- Loosen screw (1) of the left bonnet catch.

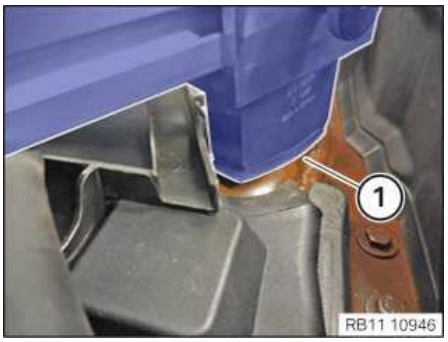
- Loosen screw (1) of the right bonnet catch.



CAUTION

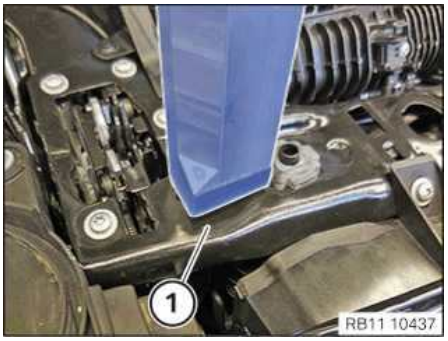
Heavy component.

Heavy components can lead to injury or damage.

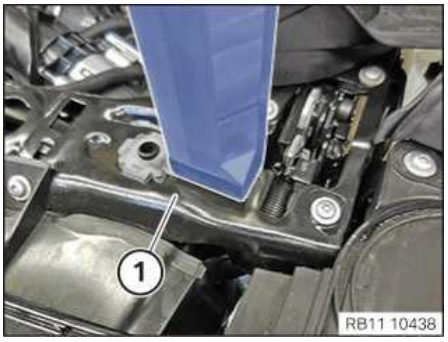


- Remove and install heavy components with the aid of another person/other persons.

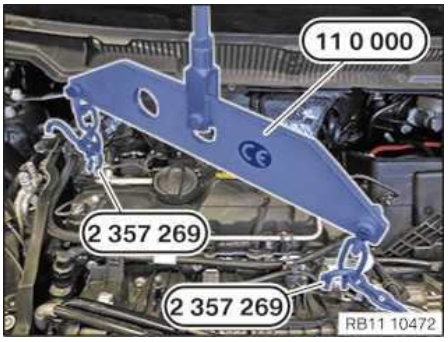
- Set entire cross member **0 496 852 (00 6 100)** on the vehicle and position with the help of an auxiliary person.



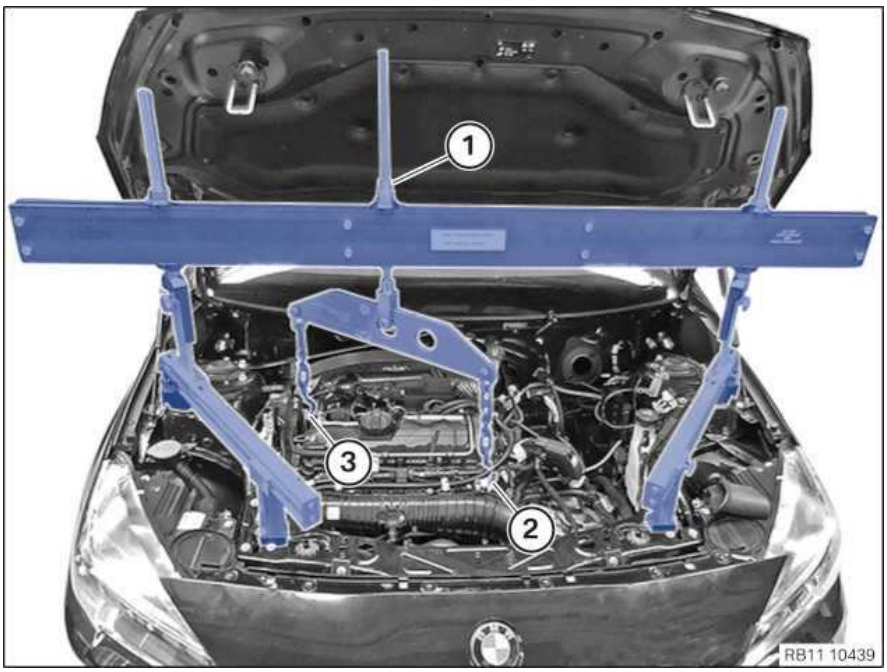
- Position the special tool at the rear mounting point (1) on the **right**.



cardiagn.com



- Position the special tool at the rear mounting point (1) on the **left**.



- Position the special tool at the front mounting point (1) on the **right**.

- Position the special tool at the front mounting point (1) on the **left**.

- Position special tool **0 490 561 (11 0 000)** above the engine.
- Attach special tools to the mounting lugs of the engine.

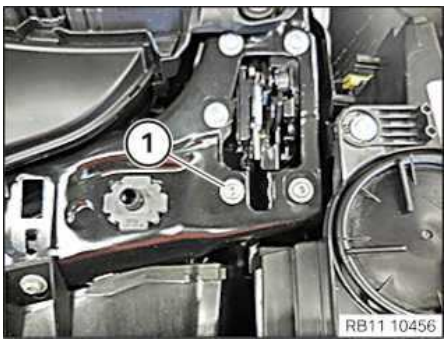
- Tighten side screws (2) and (3).
- Slightly pretension the spindle screw (1) of the engine support beams.
- Tighten down all adjusting screws, knurled screws and nuts on cross member **0 496 852 (00 6 100)** and on special tool .

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.



- Remove and install heavy components with the aid of another person/other persons.

- Detach the spindle screw (1) from the engine bridge.
- Unscrew the leg screws (2) and (3).
- Guide the engine bridge out of the vehicle with the help of another person and remove.

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.

- Tighten the screw (1) of the bonnet catch.

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Tighten the screw (1) of the bonnet catch.

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

POSTPROCESSES

cardiagn.com

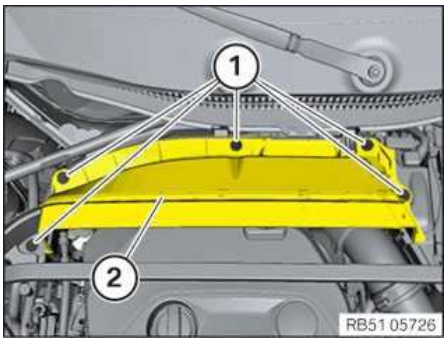
9 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

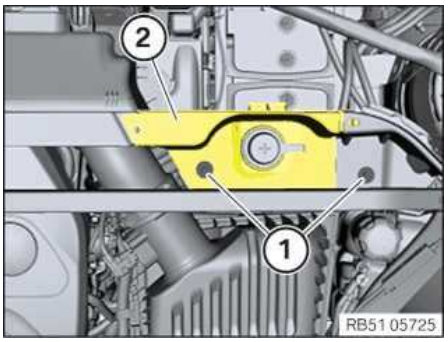
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

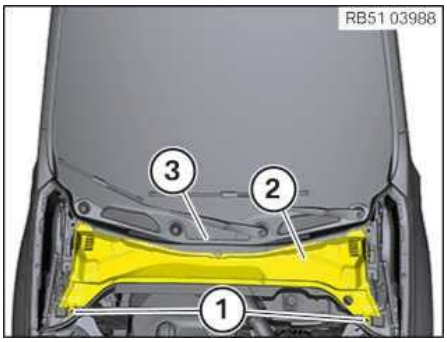


10 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm



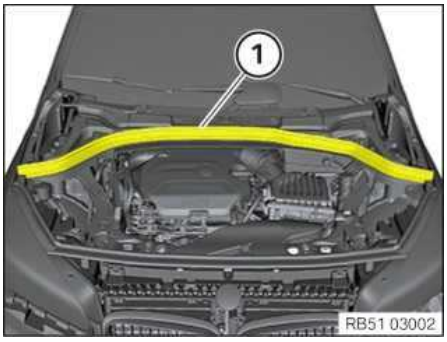
- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

11 – Installing front cowl panel cover

cardiagn.com

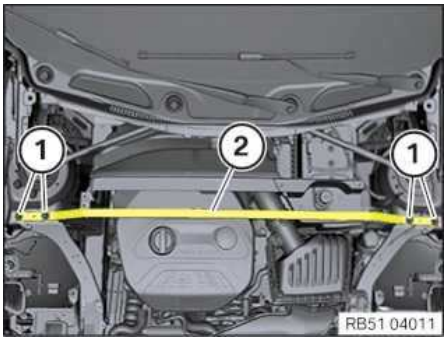


- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

12 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

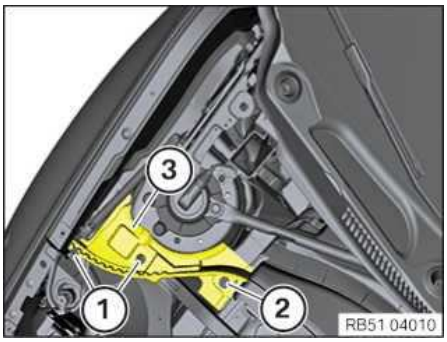


- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

13 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

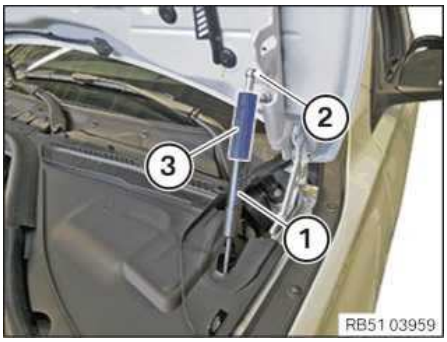
Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

NOTICE

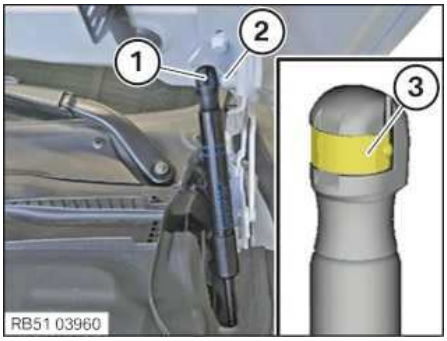
Description is for right component only. The procedure on the left side is identical.

- Install the cover (3).
- Tighten down screw (2).



Cover on body

Hexagon screw		Tightening torque	3 Nm



- Install the expanding rivet (1).

14 – Take bonnet out of the service position

cardiagn.com

- Support the bonnet by hand.
- Remove the special tool (3) from the ball pin (2).
- Pull off the special tool (3) from the gas pressure spring (1).
- Continue to support the bonnet and repeat the operation on the other side of vehicle.

CAUTION

Shutting bonnet or tailgate.

Danger of injury!

- Support bonnet/tailgate in fully open position with the aid of a suitable device.

- Check the clamp (3) is fitted correctly.
- Connect ball socket (1) to ball pin (2).
- Continue to support the bonnet and repeat the operation on the other side of vehicle.

Additional Information

Overview of Tightening Torques

Special tool to cylinder head			Used in step 7
M8		Tightening torque	21,5 Nm

Cross connection on support for cross connection			Used in step 8
M6x20		Tightening torque	12 Nm

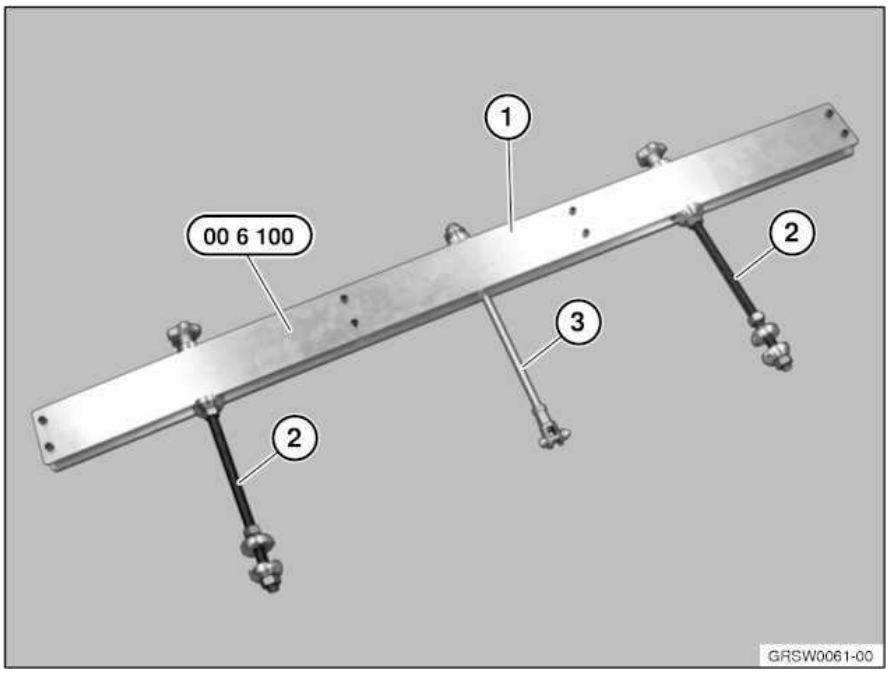
Cover of top bulkhead			Used in step 10
Screw		Tightening torque	2,6 Nm

Cover of remote positive terminal			Used in step 10
Screw		Tightening torque	2,6 Nm

Cross-brace to spring strut dome			Used in step 13
	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

Cover on body			Used in step 13
Hexagon screw		Tightening torque	3 Nm

Overview of Special Tools

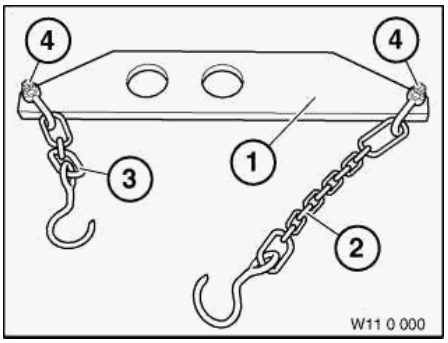


cardiagn.com

2 459 012 Holder

Common	Used in step 7 8
Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 496 852 (00 6 100) Device



Common	Used in step 7
Usage	Engine bridge (device) 006000
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 10 (659)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
2	2 361 507 (00 6 102)		**Spindle** Set (2 pieces) in connection with 00 6 100.	
3	2 361 506 (00 6 103)		**Spindle** Spindle (central spindle) for Traverse 00 6 100.	

cardiagn.com

0 490 561 (11 0 000) Lifting gear

Common

Used in step 7

Usage	(Hoisting gear) For removing and installing engines. As of 08/2011 only available as a complete set. Delivered with TÜV inspection certificate and operating instructions. No delivery of separate parts.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 13 94 (888)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 490 565 (11 0 009)		**Shackle** (Shackle) 2 pieces. As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 562 (11 0 001)		**Lifting gear** (Cross member) As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 563 (11 0 002)		**Chain** (Chain) Version: long As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 564 (11 0 003)		**Chain** (Chain) Version: short As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	

cardiagn.com

11 12 729 Checking cylinder head for watertightness

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

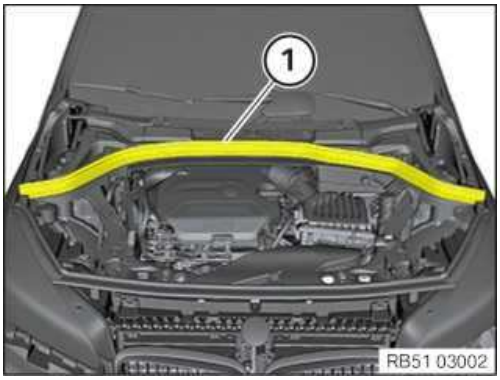
Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

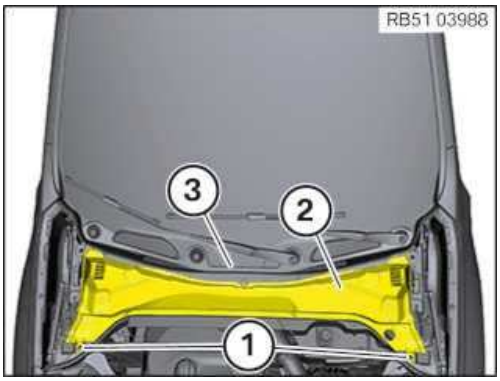


- Ensure there is a specific weight compensation on the motor vehicle.

PRELIMINARY WORK

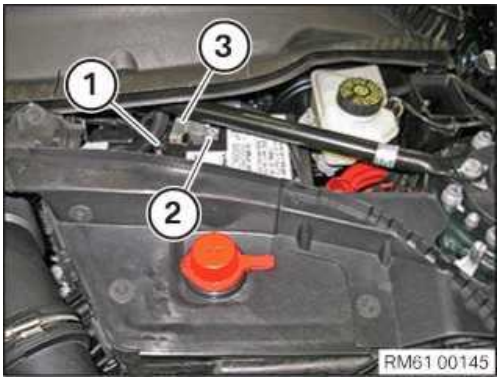
1 – Remove the seal for the rear bonnet

NOTICE



Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.

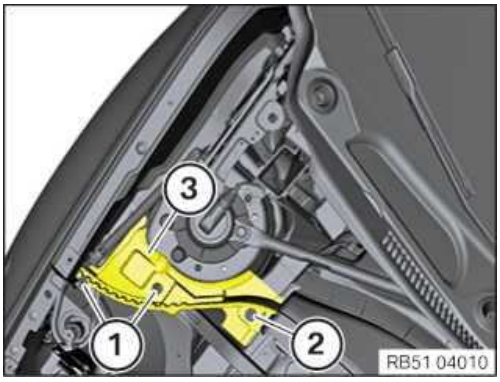


2 – Removing front cowl panel cover

cardiagn.com

- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

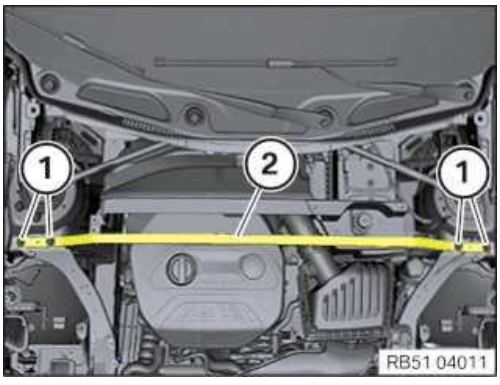
3 – Disconnecting the battery earth lead



- Unlock plug connection (1) and disconnect.
- Unfasten nut (2).
- Remove the battery earth lead (3) and secure to one side.

4 – Remove suspension cross-brace

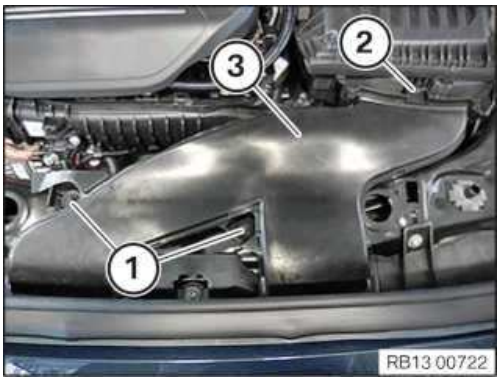
TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

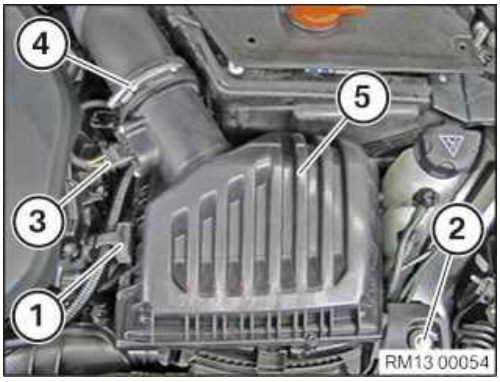
NOTICE

Description is for right component only. The procedure on the left side is identical.



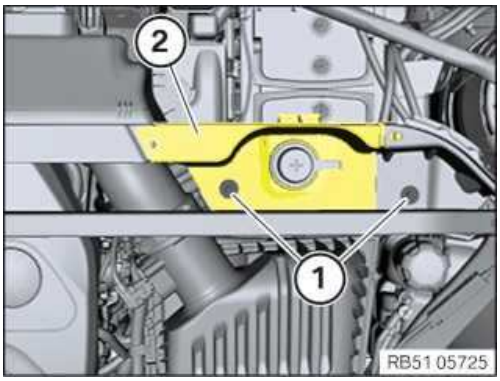
- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).



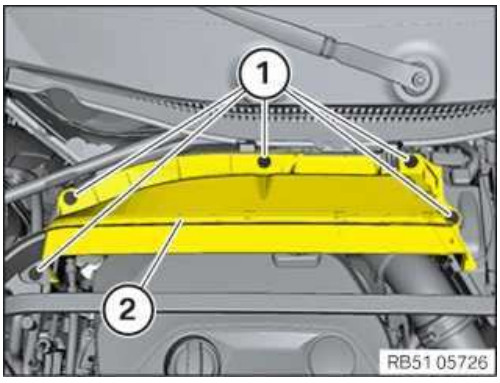
5 – Remove the intake neck for intake silencer housing

cardiagn.com



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

6 – Removing intake silencer housing



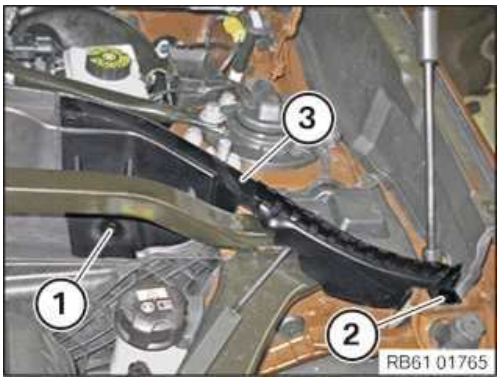
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

7 – Removing the upper bulkhead cover

- Loosen screws (1).
- Guide out and remove the cover (2).

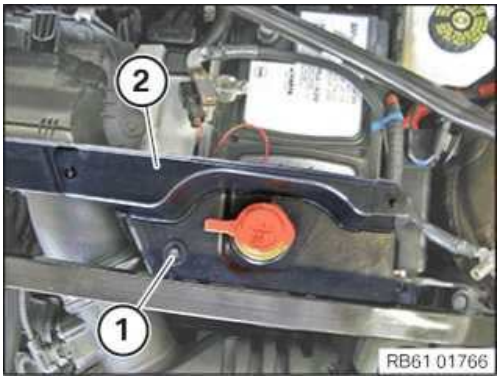
- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

8 – Remove vehicle battery



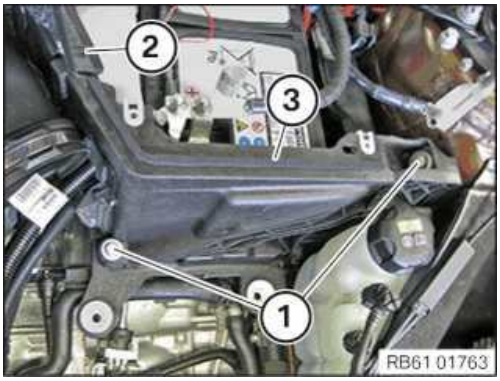
WARNING

Working on 12 V vehicle electrical system.

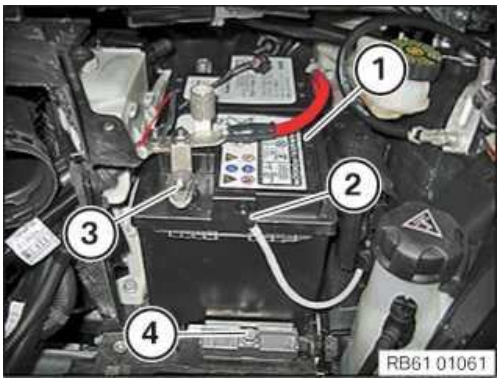


Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.



cardiagn.com



- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING

Unprotected battery terminals.

Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

9 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

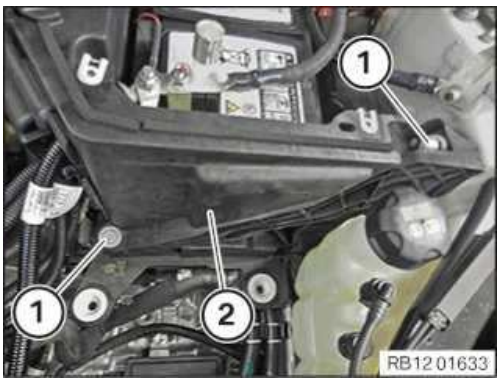
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

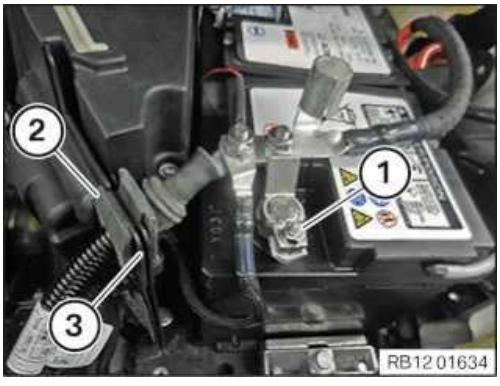
Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.



TECHNICAL INFORMATION

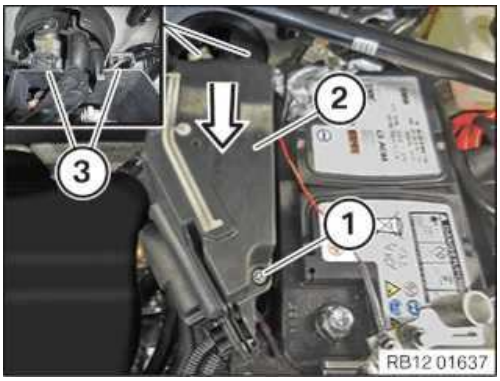
Follow instructions for removing and installing control units.



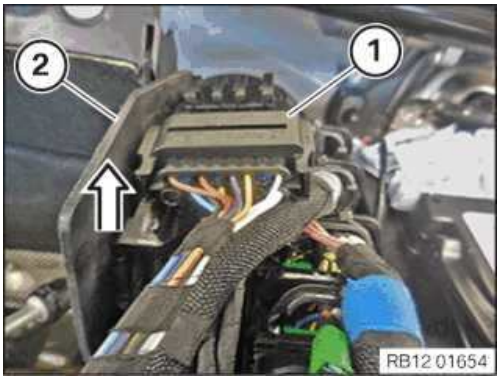
For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

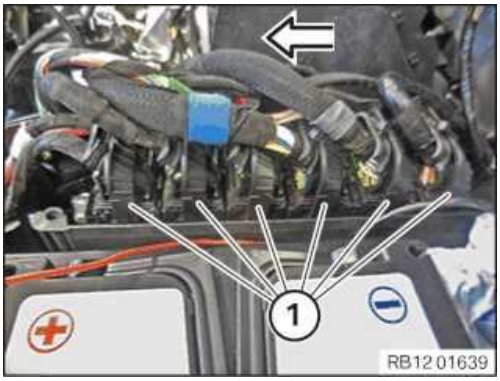
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



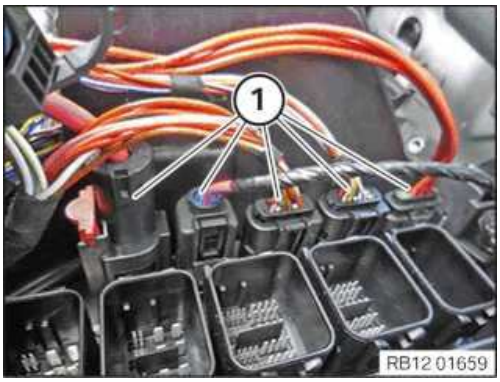
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



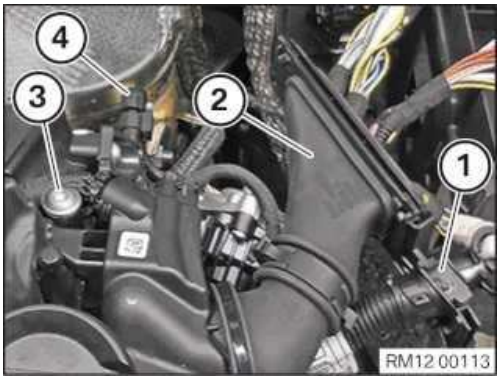
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



cardiagn.com

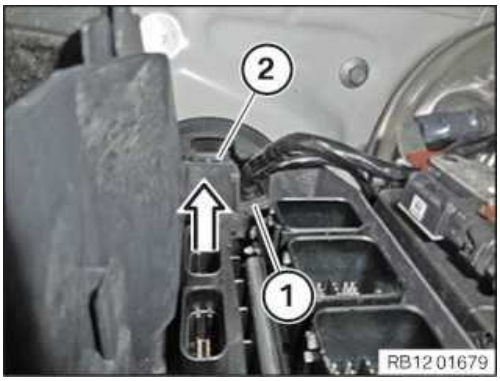


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

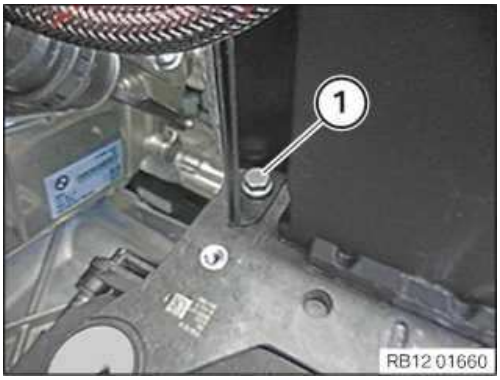


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

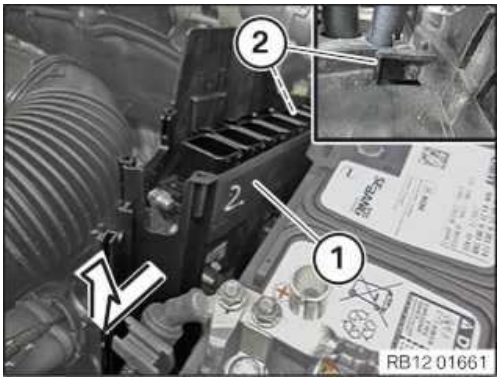
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).

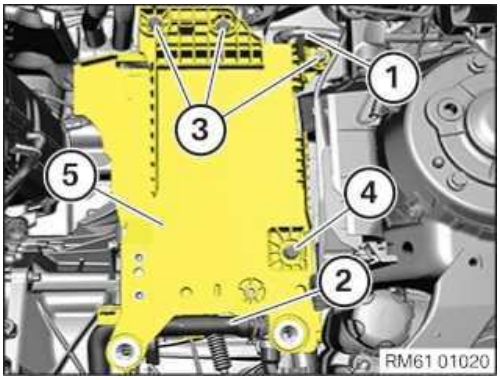


- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.



cardiagn.com

- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.



- Loosen screw (1).

- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

10 – Remove battery holder

- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

11 – Removing the acoustic cover

WARNING

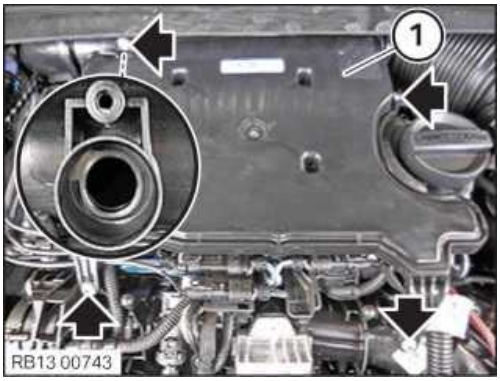
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE



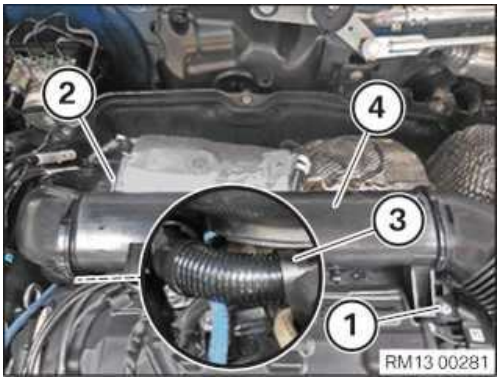
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

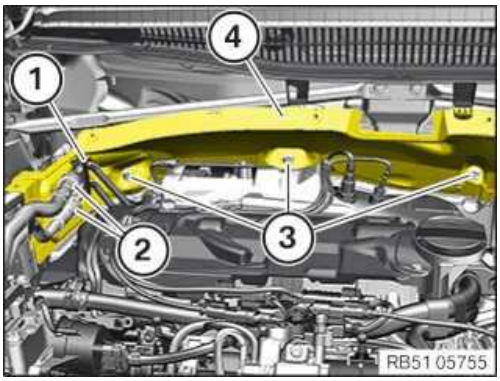
- Unclip the acoustic cover from the marked areas towards the top.

12 – Remove resonator



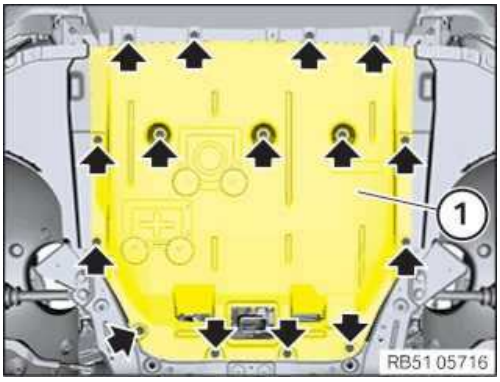
- Remove screws (arrows).
- Guide out and remove the resonator (1).

13 – Removing clean air pipe



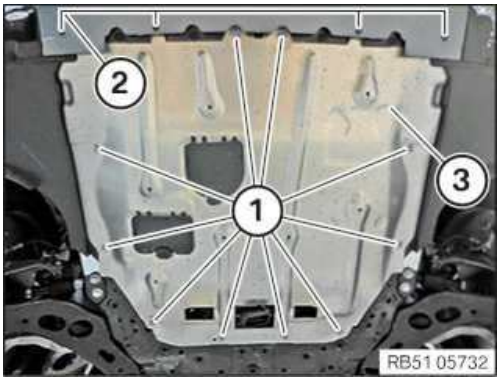
- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.



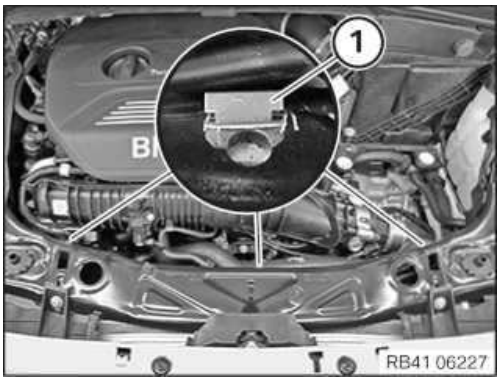
14 – Remove the rear bulkhead upper part

cardiagn.com

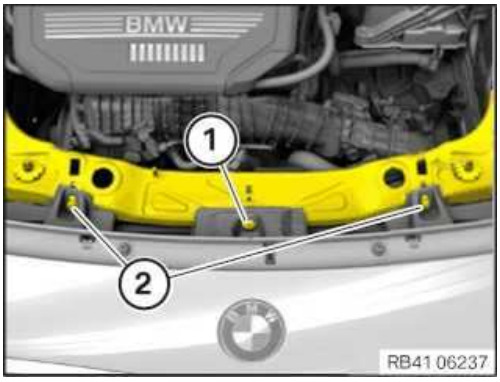


- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.

15 – Removing the front underbody protection

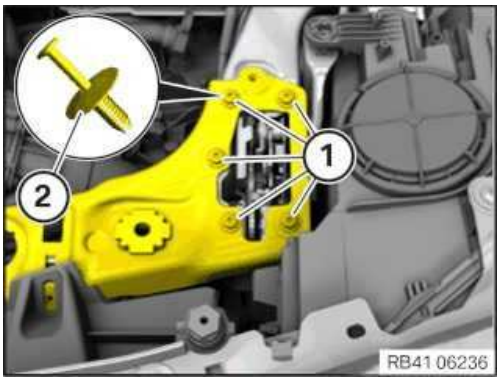


- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

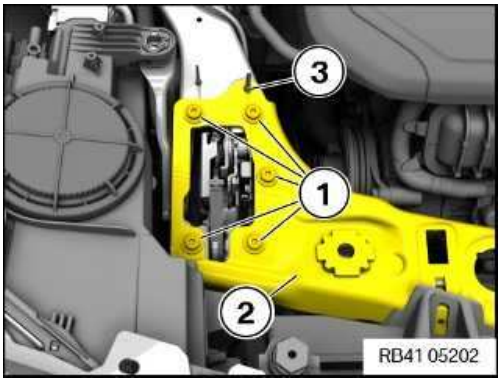


- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

16 – Remove front cross connection



- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.



- Loosen screw (1).
- Loosen screws (2).

cardiagn.com

- Loosen screws (1).
- Lever out expanding rivet (2).

- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

17 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

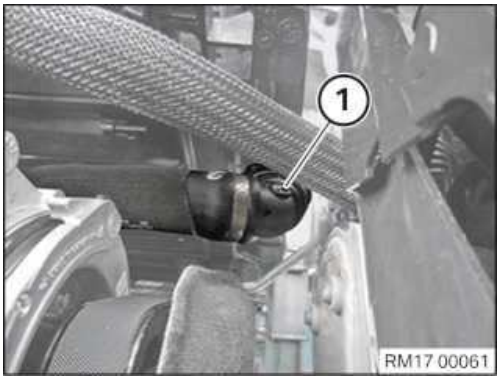
TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

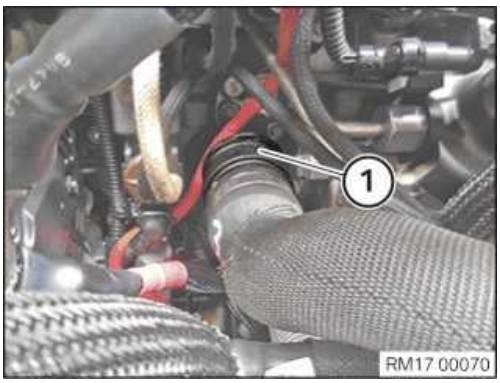
When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.



TECHNICAL INFORMATION

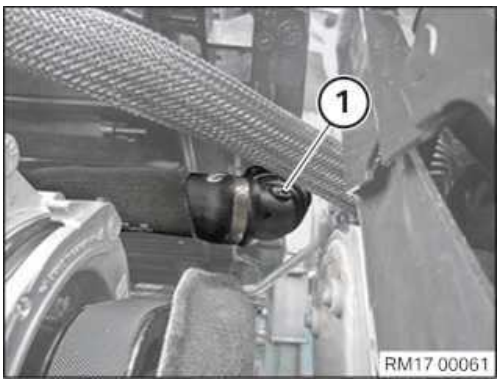
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



cardiagn.com

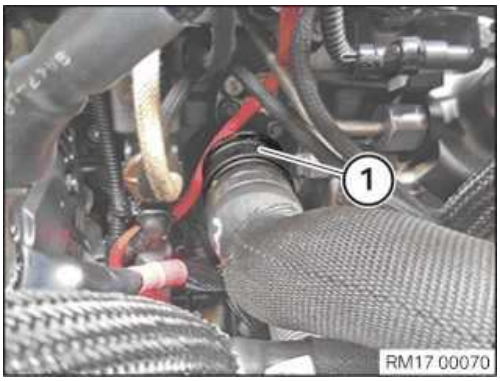
- Loosen sealing cap (1).

- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.



- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.

18 – Connect the coolant line

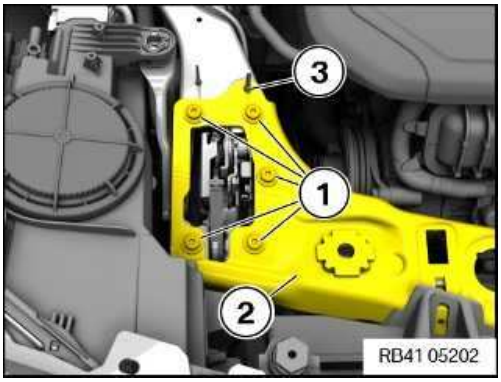


TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

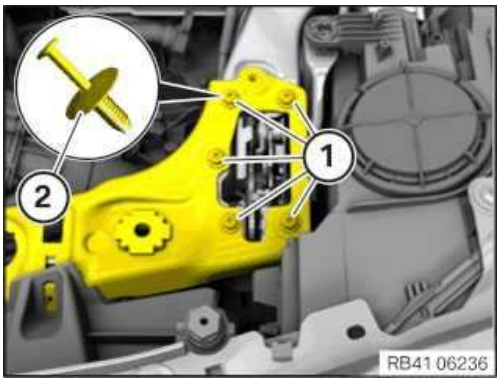
- Connect the right coolant line (1) to the radiator and lock audibly.

cardiagn.com



- Connect the coolant line (1) to the connecting branch and lock audibly.

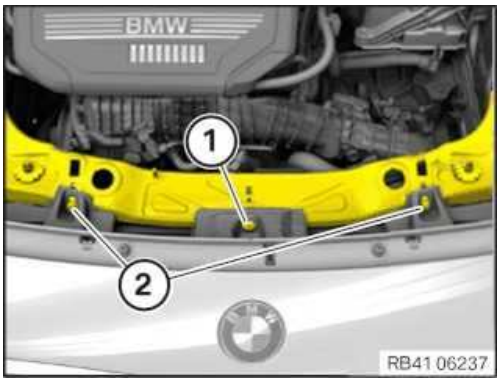
19 – Install front cross connection



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm

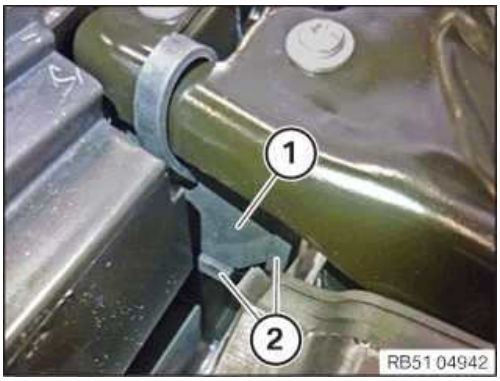
- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

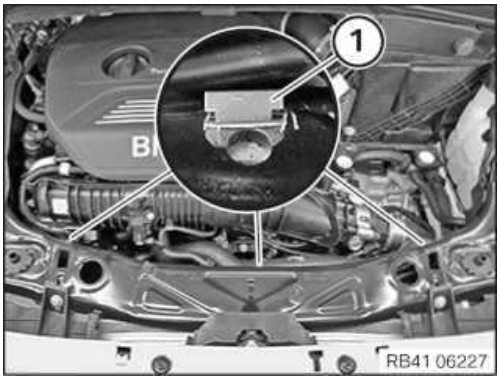
- Tighten down screws (2).

Air duct to upper connection



M6x20 screw		Tightening torque	11,8 Nm

- Tighten down screw (1).



Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm

cardiagn.com

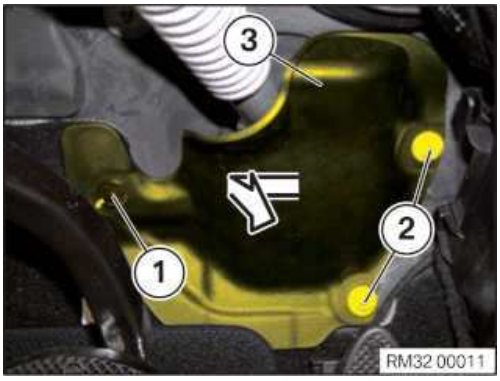
- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

20 – Removing heat shield from top exhaust turbocharger

WARNING

Hot surfaces.

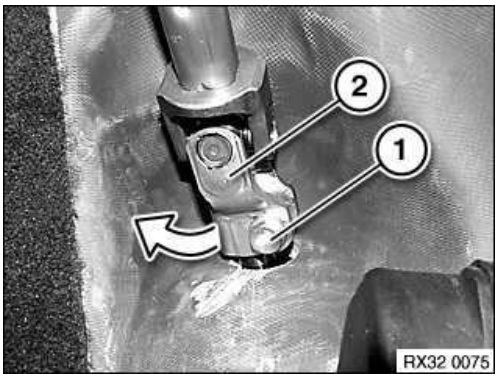


Risk of burning!

- Perform all work only on components that have cooled down.

- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).

21 – Releasing lower steering shaft from steering gear



- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!

cardiagn.com

- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

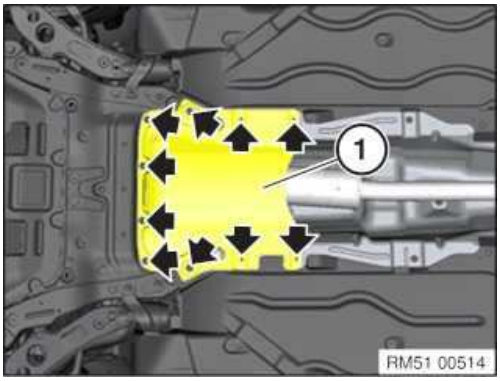
22 – Securing radiator on left and right

NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

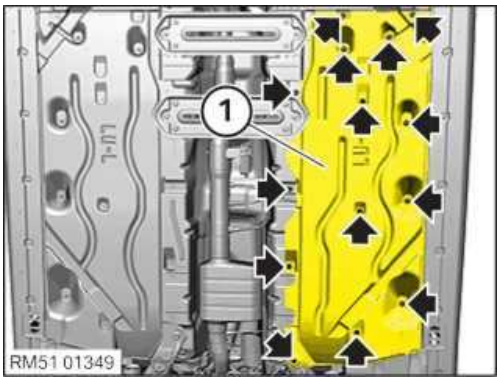
23 – Removing both front wheels



▶ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.



24 – If installed: Removing rear underbody protection

- Remove screws (arrows).
- Remove the rear underbody protection (1).

25 – Removing right underbody panelling

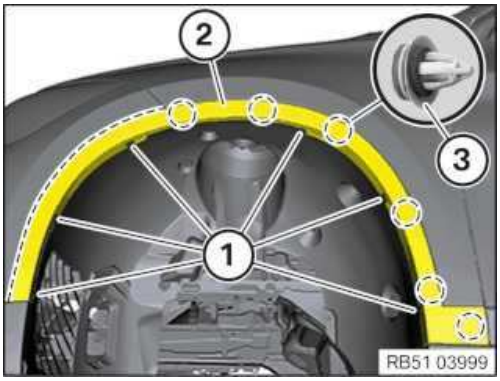
cardiagn.com

- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).

26 – Removing front left and right wheel arch cover

NOTICE

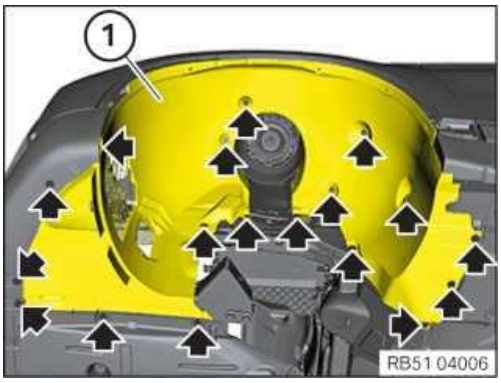
Perform the operations on the left and right side.



▶ **Remove the front wheel arch trim**

NOTICE

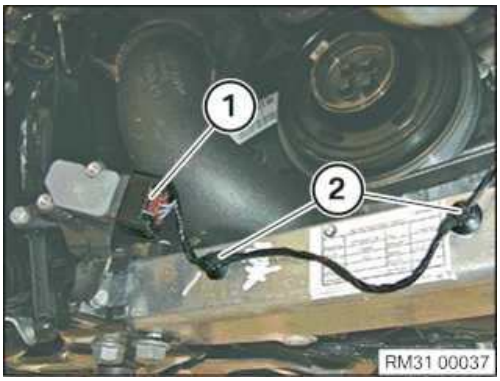
To provide a better overview: Schematic diagram with partially hidden components.



NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

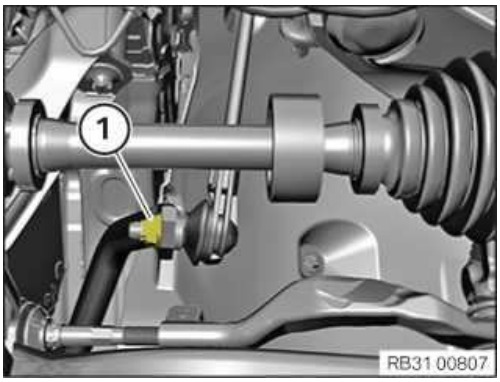


▶ **Remove front wheel arch cover**

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

27 – With right installation: Detaching ride height sensor cable

cardiagn.com



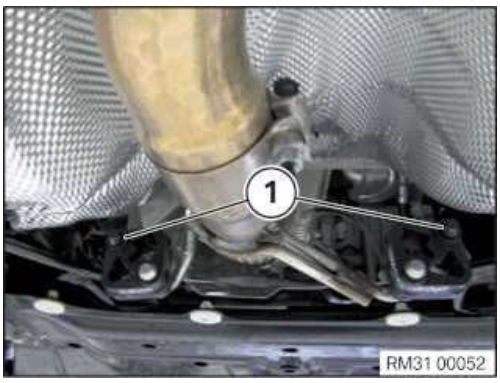
- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

28 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

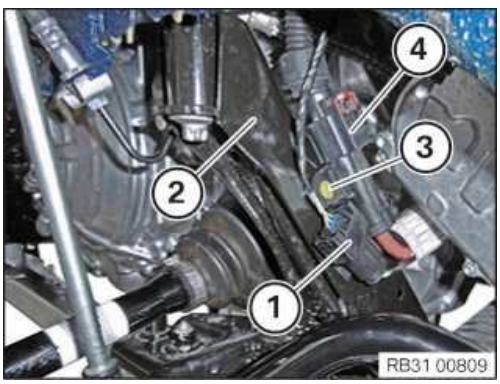
▶ Detach the anti-roll bar from the anti-roll bar link



- Unfasten nut (1).

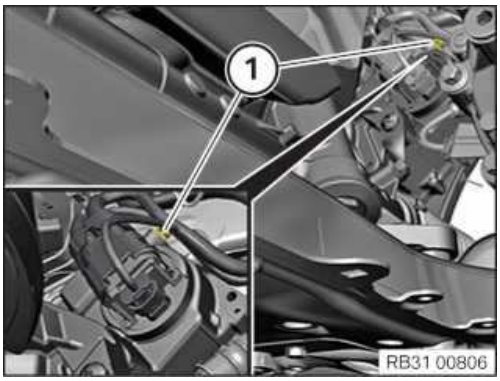
Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .



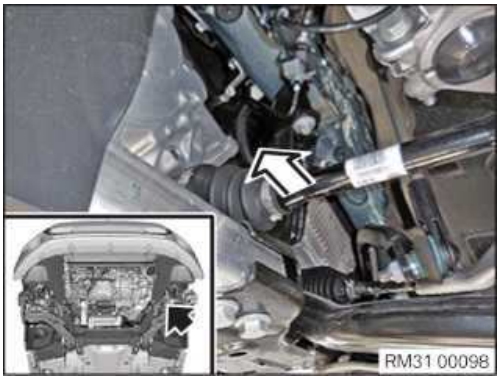
29 – Detaching rubber mount from front axle support

- Spray rubber mount (1) with lubricant and release from holder on front axle support.



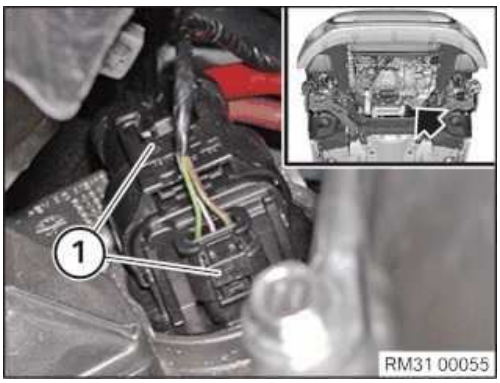
30 – Disconnecting plug connections from steering gear

▶ If installed: Detach connectors from the front axle carrier

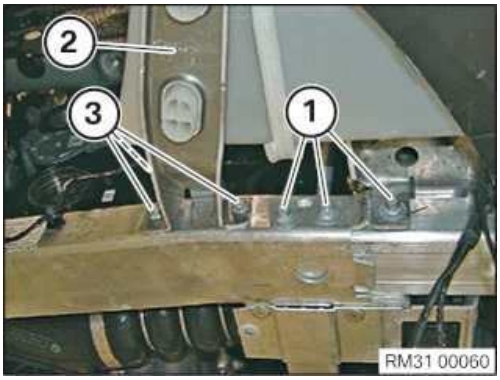


- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).

cardiagn.com



- Disconnect wiring harness (1) from steering gear.

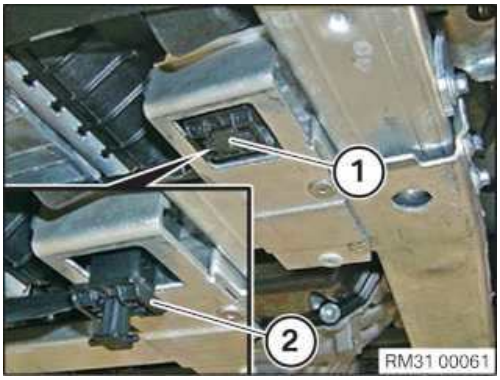


- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.

- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

31 – Releasing the mounted part from the front axle support



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

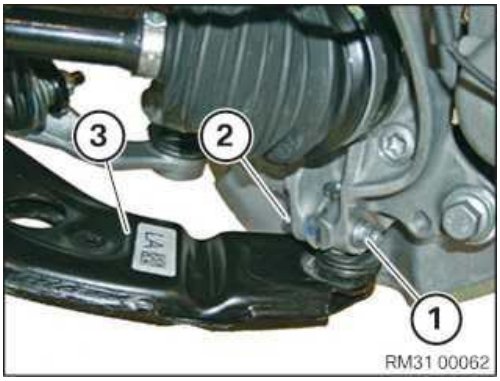
NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).

cardiagn.com

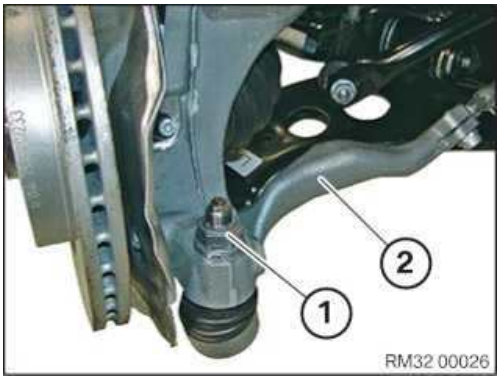
- Loosen screw (2) of the engine support (3) on the front axle (1).



NOTICE

Perform the operations on the left and right side.

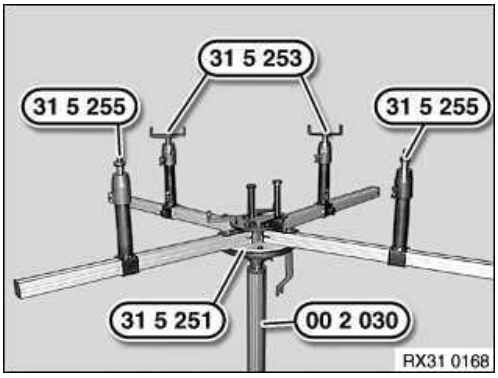
- Loosen screws (1).



32 – Detaching and removing front axle completely

NOTICE

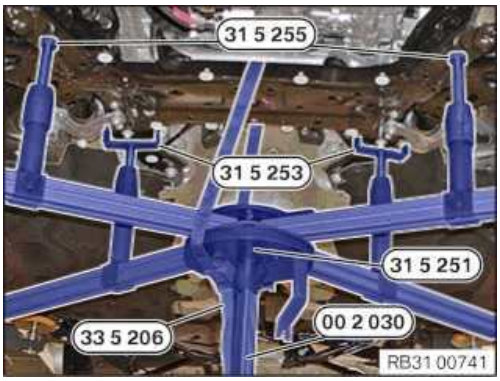
Perform the operations on the left and right side.



- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .

NOTICE

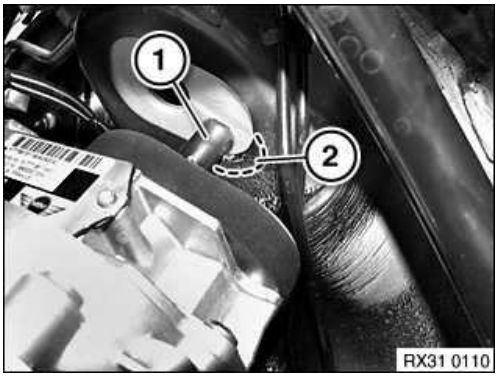
Perform the operations on the left and right side.



- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

Note: In a profile rail pair, two profile rails are connected to one another by gearing.

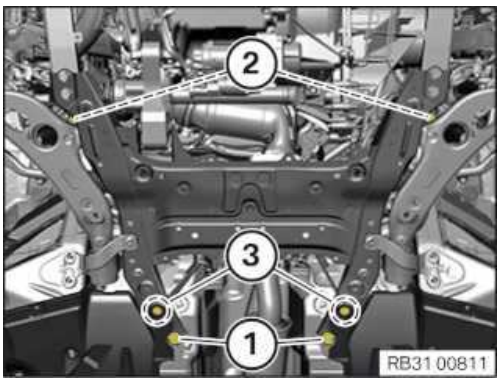


cardiagn.com

- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .

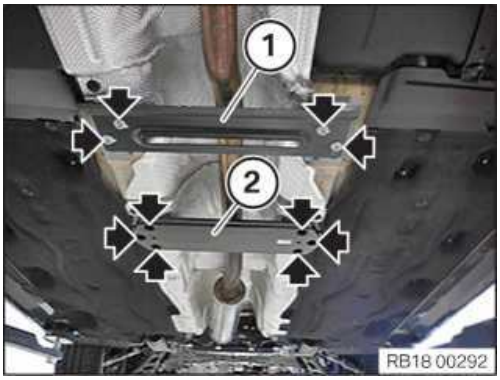


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



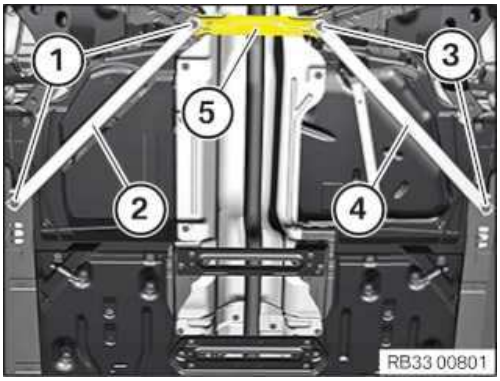
- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

33 – Removing the connecting support from the tunnel in front and back



- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

34 – Remove the cross strut with the torsion strut

cardiagn.com

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.

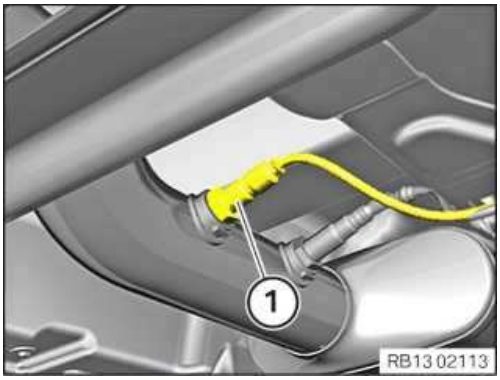
- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

35 – Remove exhaust system

WARNING

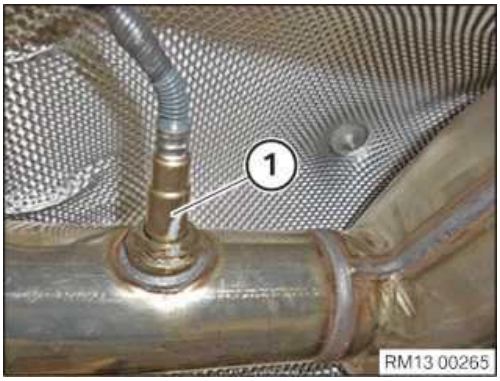
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

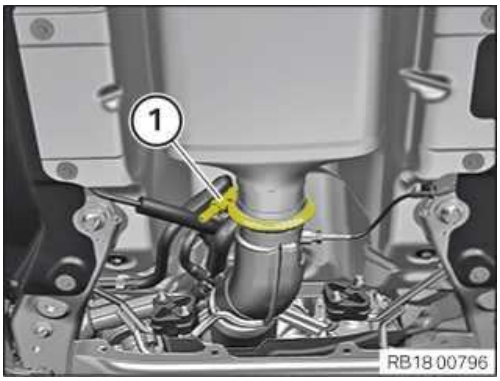
CAUTION



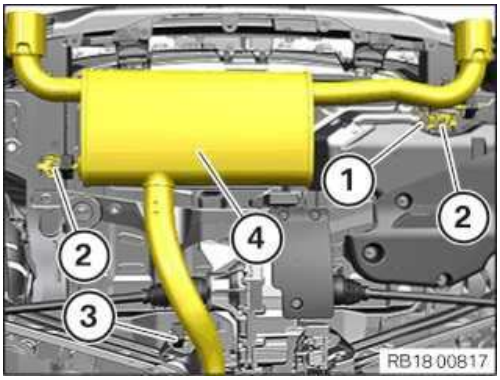
Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

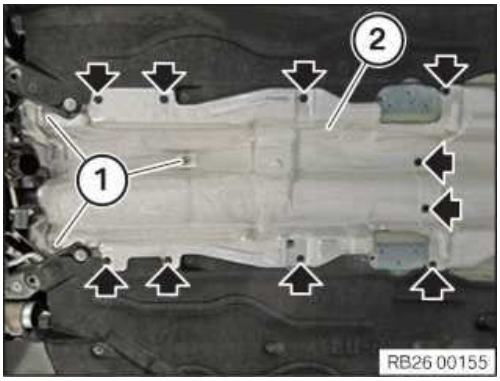


- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.

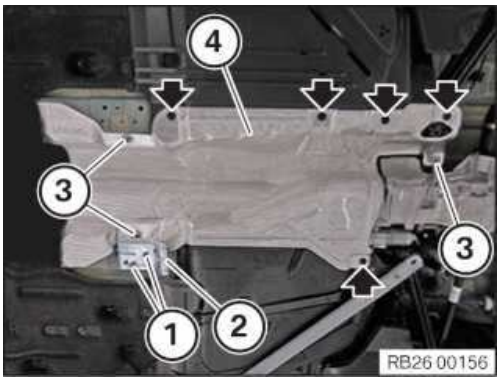


- Release the diesel particulate sensor (1), guide it out and set it aside.

cardiagn.com



- Loosen V-band clamp (1).



- Loosen screw (1).
- Loosen nuts (2).
- Release the rubber mount (3) of the exhaust system (4).
- Lower and guide out the exhaust system (4) with assistance of a second person and remove it.

36 – Remove front heat shield

- Remove screws (arrows).
- Loosen nuts (1).
- Guide the heat shield (2) out and remove it.

37 – Remove heat shield at rear.

- Loosen screws (1).
- Guide out and remove holder (2).
- Remove screws (arrows).
- Loosen nuts (3).
- Guide the heat shield (4) out and remove it.

38 – Remove propeller shaft

cardiagn.com

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

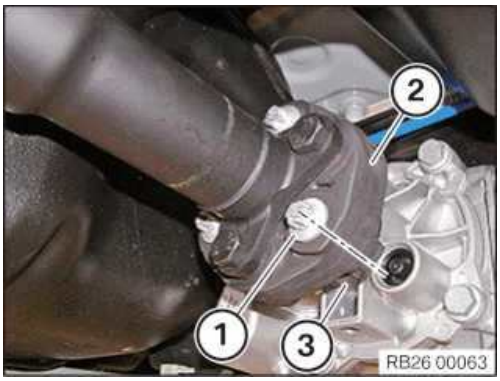
RISK OF DAMAGE

Damage to propeller shaft during removal.

Non-observance of the removal guidelines for the propeller shaft on the rear axle differential may cause severe damage.

- Do not disassemble the three-hole flange, flexible disc and propeller shaft. The three-hole flange to the rear axle differential is balanced with the flexible disc and propeller shaft.
- Loosen the recessed nut against the direction of travel in clockwise direction. The propeller shaft must be loosened on the recessed nut only and exclusively in the direction of rotation otherwise the anti-twist lock of the bi-hexagonal flange nut is damaged.
- In the event of a damaged anti-twist lock on the bi-hexagonal flange nut: Replace the rear axle differential.

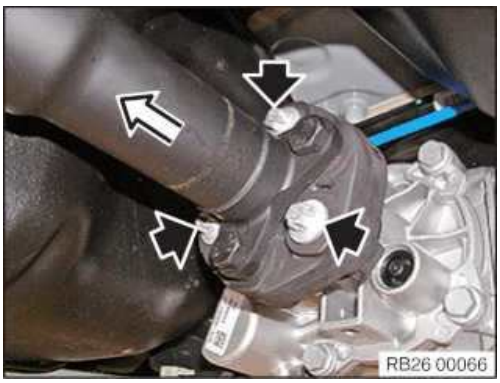
- Install the special too l between the front and rear propeller shaft.
- Make sure that the arrows on the special tool point forward in the direction of travel.



- Always support the propeller shaft (1) with a conventional jack.

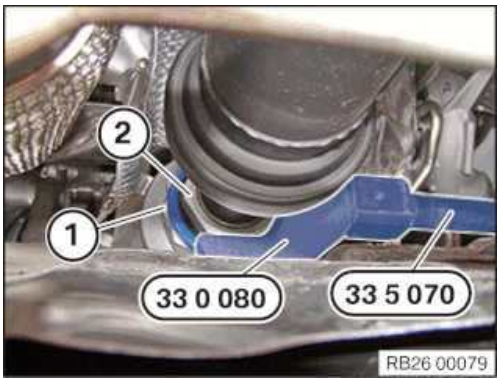
- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

cardiagn.com



TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.



- Mark the installation position of the screw connection (1), the flexible disc (2) and the three-hole flange (3) on the same level.
- Loosen the screw connection (1).

- Loosen screws (1).

- Remove screws (arrows).
- Guide the propeller shaft out in the direction of the arrow and set it aside.

RISK OF DAMAGE

Damage to the transfer box.

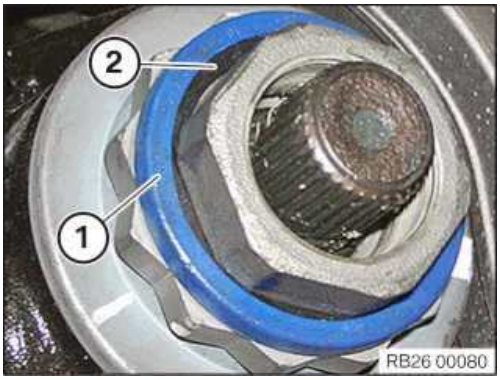
Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

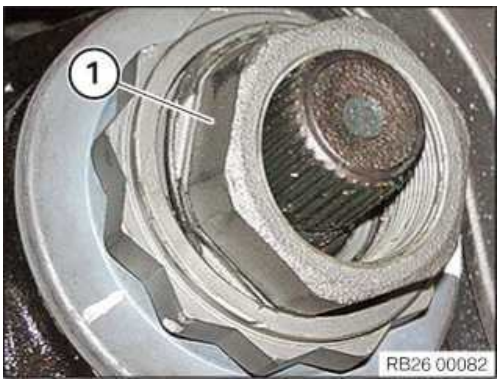
- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to detach the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



- Release the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.



cardiagn.com

- Thread the propeller shaft (2) out of the recessed nut (1) and remove.

- Thread the retaining clip (1) and the seal (2) out and remove.

- Thread out and remove the recessed nut (1).

39 – Removing starter motor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

cardiagn.com

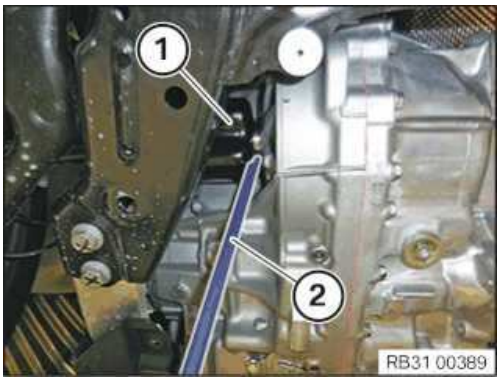
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

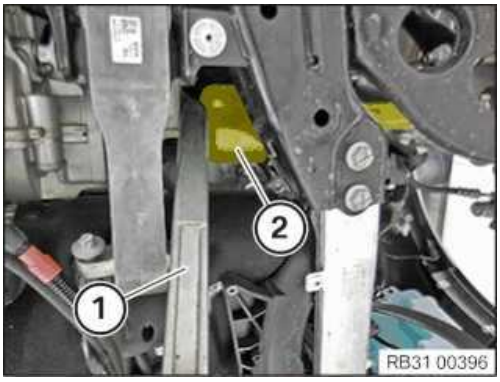
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



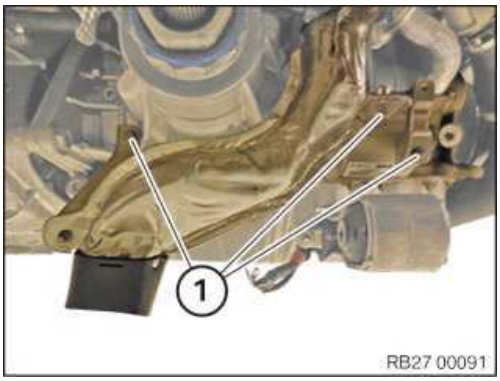
- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Loosen screws (1).
- Feed out starter motor and remove.



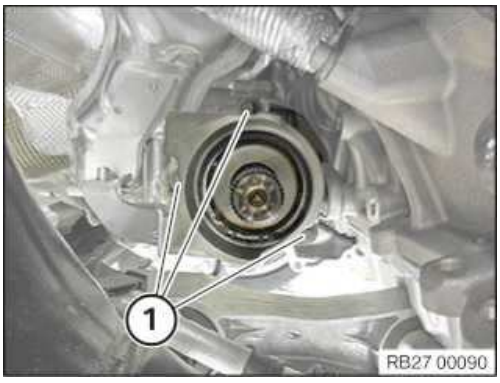
40 – Partially removing the left output shaft

cardiagn.com

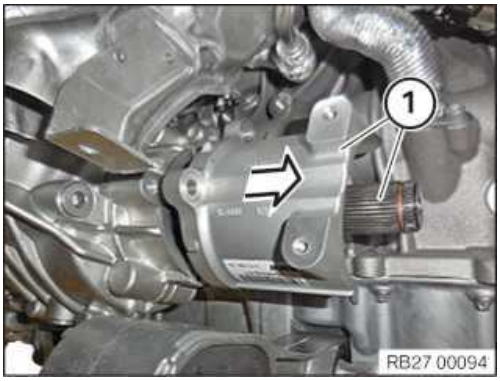


- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Tie up output shaft (1).

41 – Partially removing right output shaft

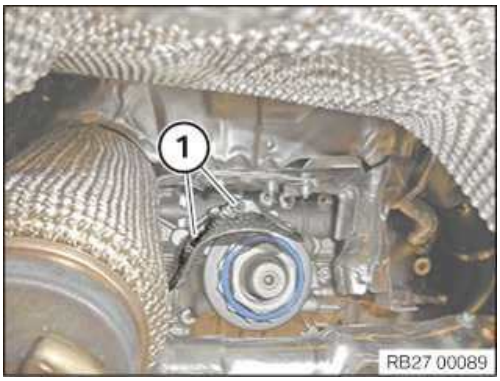


- Lever out the output shaft (2) with a mounting lever (1).
- Tie up output shaft (1).

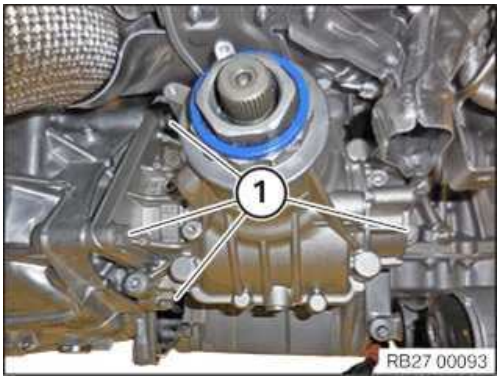


42 – Remove the intermediate shaft with the support tube

- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

43 – Remove transfer box (VTG)

cardiagn.com

- Loosen screws (1).
- Remove heat shield.

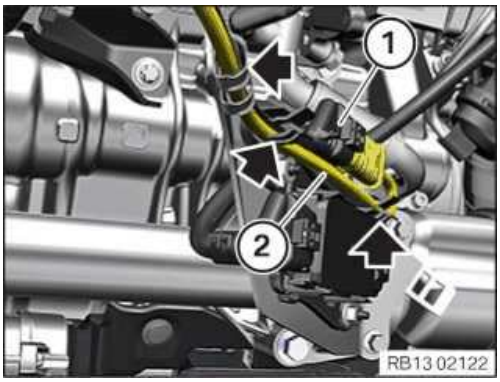
- Loosen screws (1).
- Remove the transfer box (VTG).

44 – Remove the monitoring oxygen sensor

WARNING

Hot surfaces.

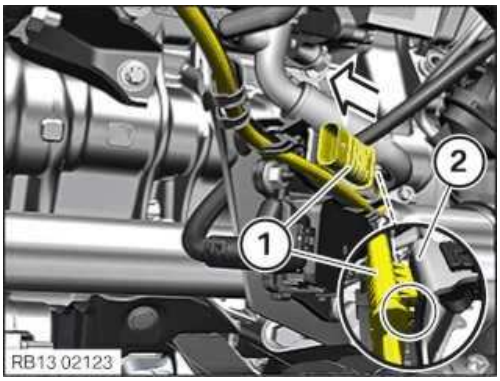
Risk of burning!



- Perform all work only on components that have cooled down.

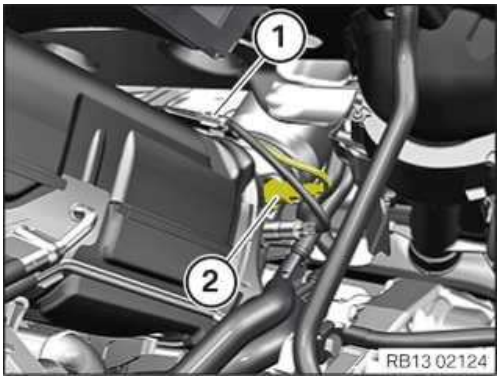
RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Feed oxygen monitor sensor cable (1) out of the clamps (arrows).

cardiagn.com

- Unlock the connector (1) in the marked area and disconnect it from the holder (2) in the direction of arrow.

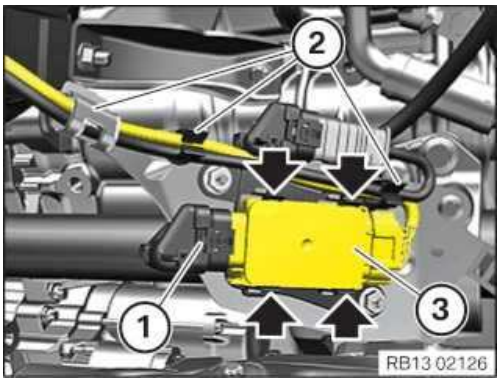
- Guide the cable of the monitoring oxygen sensor (2) out of the clamp (1).
- Release the monitoring oxygen sensor (2) using special tool **0 491 074 (11 7 020)**.
- Remove the monitoring oxygen sensor (2).

45 – Removing the nitrogen oxide sensor before SCR catalytic converter

WARNING

Hot surfaces.

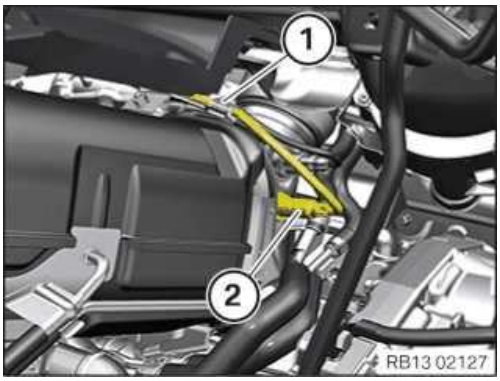
Risk of burning!



- Perform all work only on components that have cooled down.

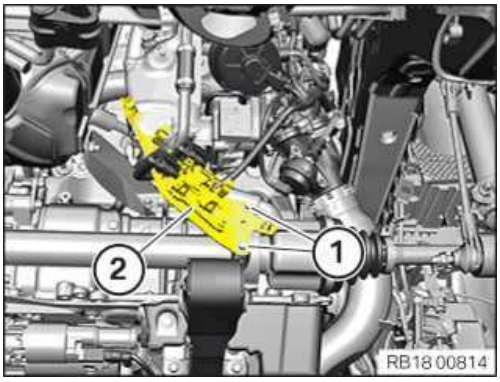
RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Slide the cable of the nitrogen oxide sensor evaluation electronics (3) out of the clamps (2) and remove.
- Unlock (arrows) and remove the evaluation electronics for the nitrogen oxide sensor (3).

cardiagn.com

- Slide the cable of the nitrogen oxide sensor before the SCR catalytic converter (2) out of the clamps (1) and remove.
- Detach the nitrogen oxide sensor before the SCR catalytic converter (2) using the special tool **0 491 074 (11 7 020)**.
- Guide out and remove the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

46 – Remove holder for oxygen sensor

- Loosen screws (1).
- Thread out the holder (2) for the oxygen sensor and remove.

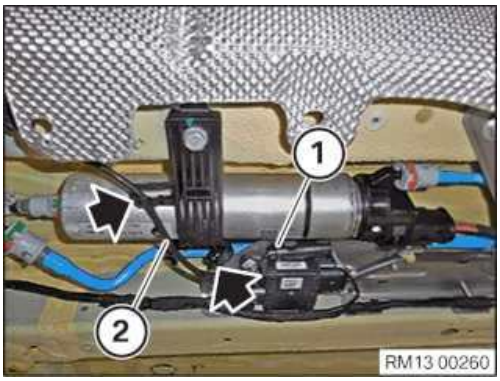
47 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

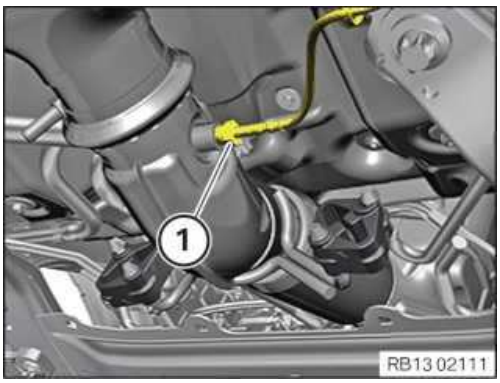


RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



cardiagn.com

- Unlock and loosen connector (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

- Loosen the cable clip (1).

- Loosen exhaust temperature sensor (1).
- Feed out and remove exhaust temperature sensor (1).

48 – Removing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

WARNING

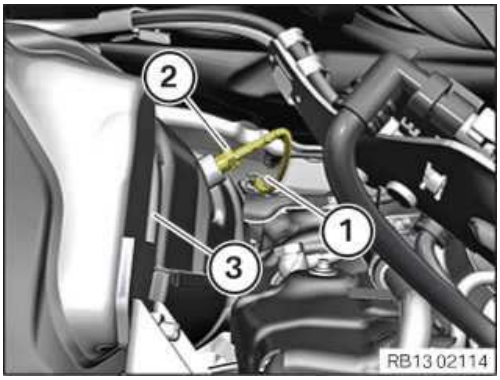
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

- Unlock and loosen connector (1).
- Uncover the exhaust temperature sensor cable.

- Guide the exhaust temperature sensor cable (2) out of the clamp (1) and place it to one side.
- Release the exhaust temperature sensor (2) with conventional tools .
- Feed out and remove the exhaust temperature sensor (2) from the diesel particulate filter (3).

49 – Remove the exhaust temperature sensor on the diesel particulate filter

WARNING

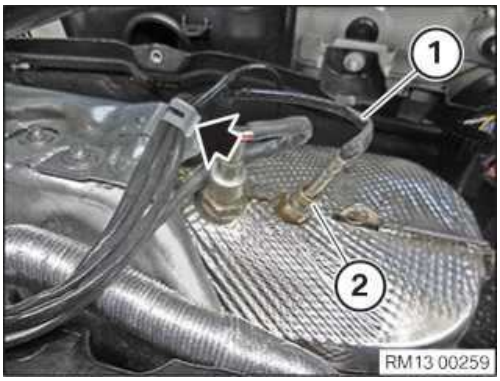
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect connector (1).
- Put the cable of the exhaust temperature sensor to one side.

cardiagn.com

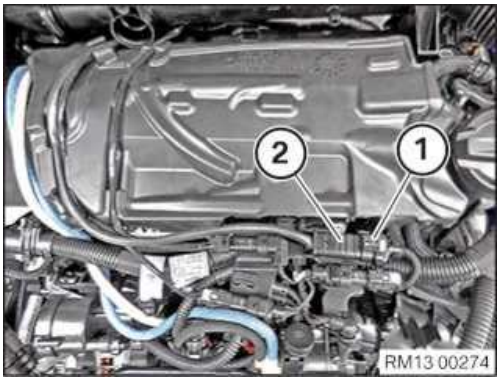
- Guide cable (1) of the exhaust temperature sensor out of the clamp (arrow) and remove it.
- Loosen exhaust temperature sensor (2).
- Feed out and remove exhaust temperature sensor (2).

50 – Remove the control sensor

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock plug connection (1) and disconnect.
- Detach the connector (2) from the holder .
- Release the front oxygen sensor cable.

- Detach the control sensor (1) with the special tool .
- Feed out and remove the control sensor (1).

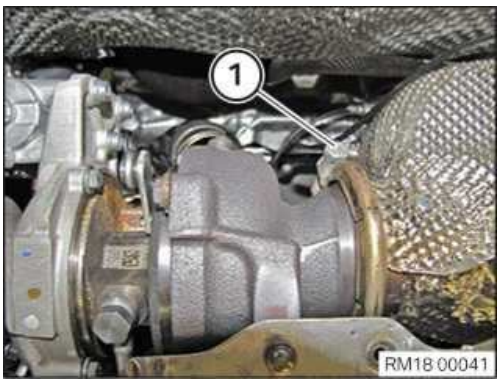
cardiagn.com

51 – Removing the diesel particulate filter

WARNING

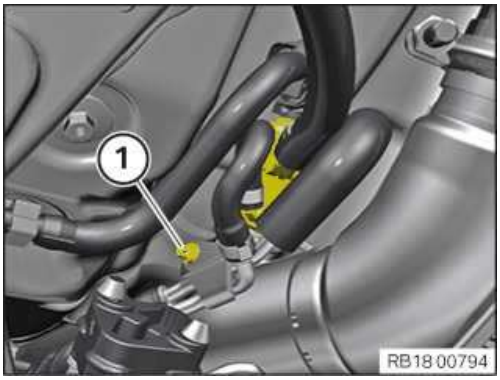
Hot surfaces.

Risk of burning!



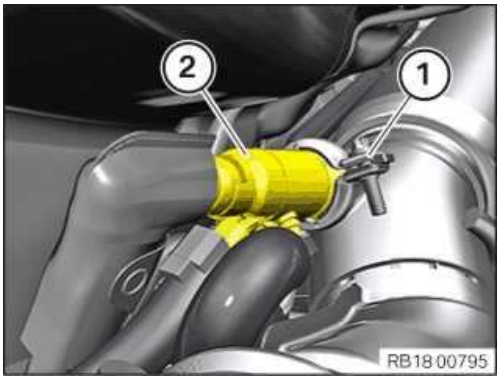
- Perform all work only on components that have cooled down.

CAUTION



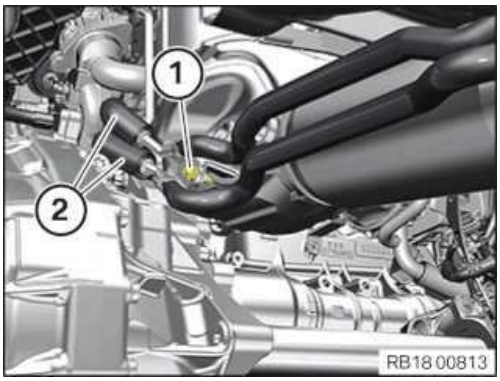
Heavy component.

Heavy components can lead to injury or damage.



- Remove and install heavy components with the aid of another person/other persons.

- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.

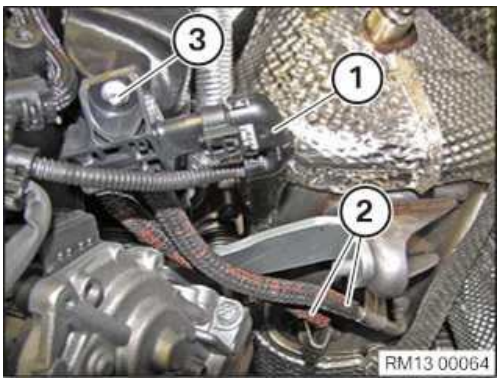


- Loosen screw (1).

- Loosen V-band clamp (1).
- Remove the SCR metering module (2) and set it aside.

cardiagn.com

- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.



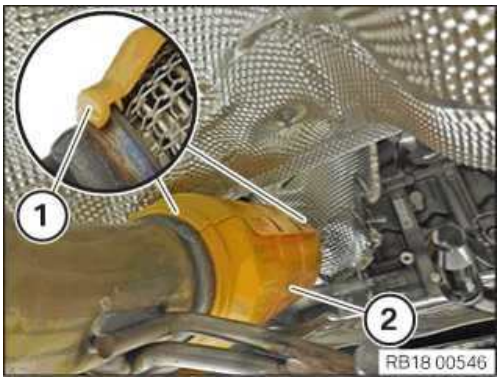
▶ **Remove differential pressure sensor**

RISK OF DAMAGE

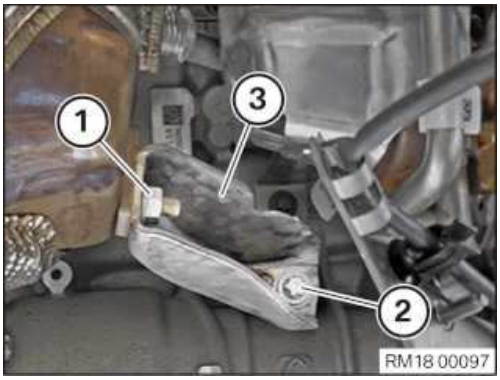
Electrostatic discharge.

Damage to or destruction of electrical components.

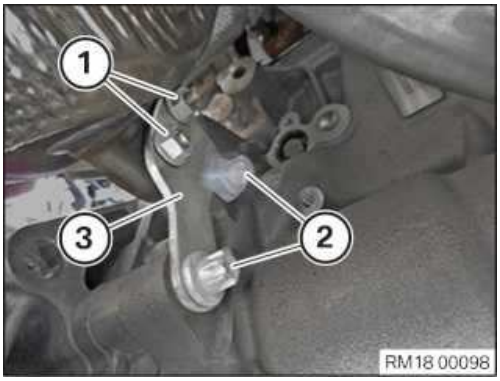
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



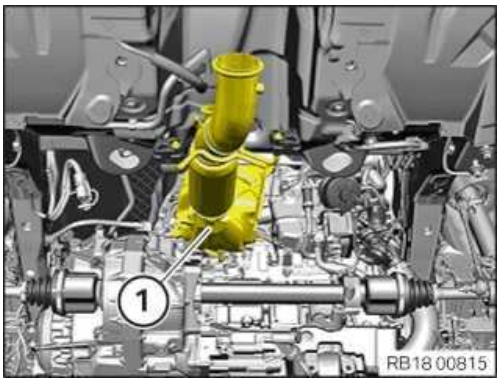
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.



- Loosen nuts (1).



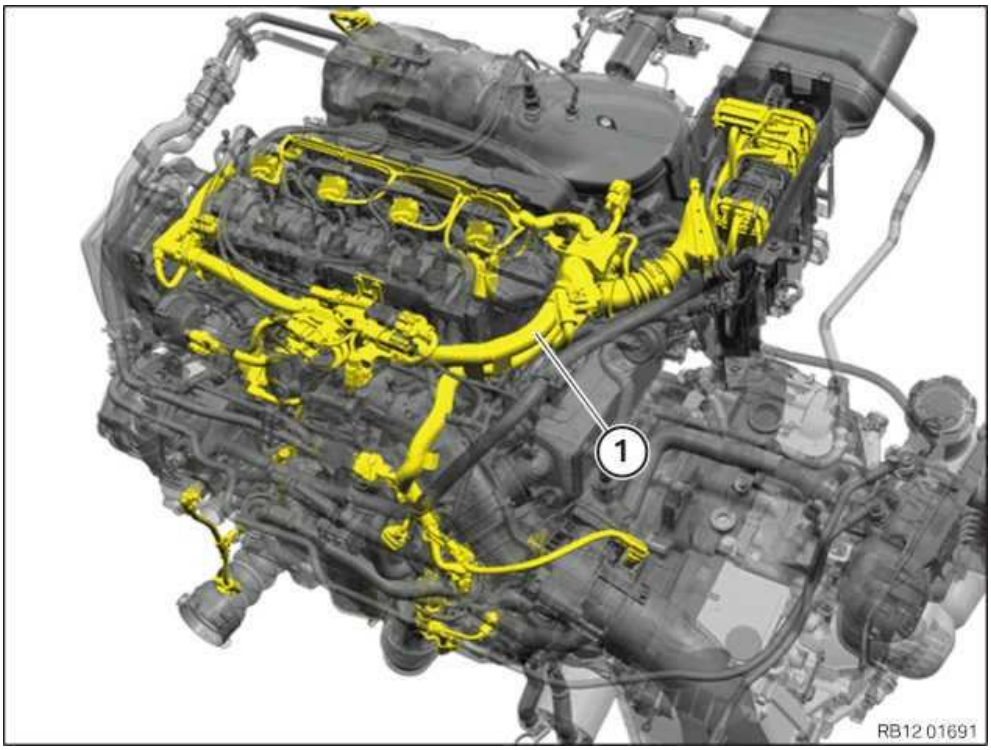
cardiagn.com



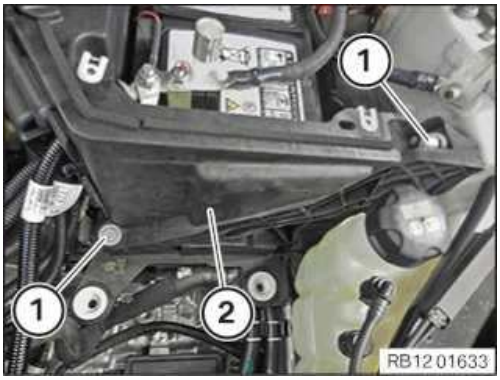
- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.

- Unfasten nut (1).
- Loosen screw (2).
- Remove holder (3).

- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).

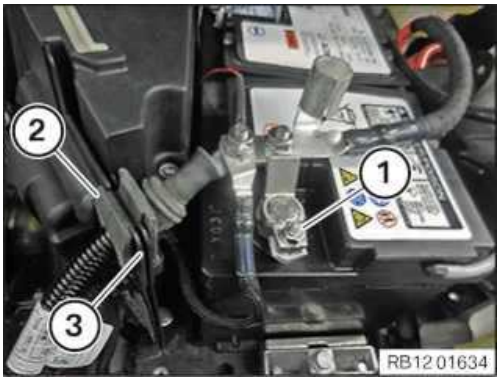


- Feed out diesel particulate filter (1) toward the bottom and remove.

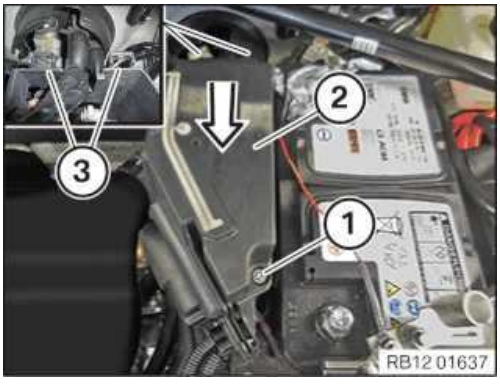


52 – Releasing the wiring harness section for the intake plenum

cardiagn.com

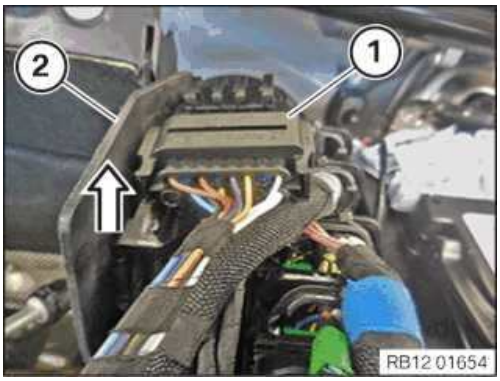


Overview: Wiring harness section for the engine

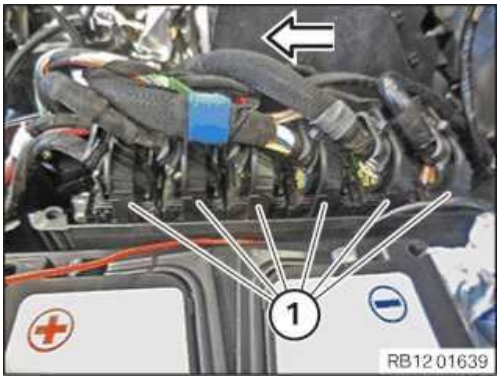


1 Wiring harness section for the engine

- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

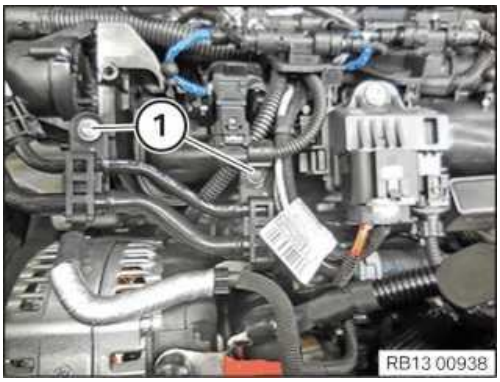


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

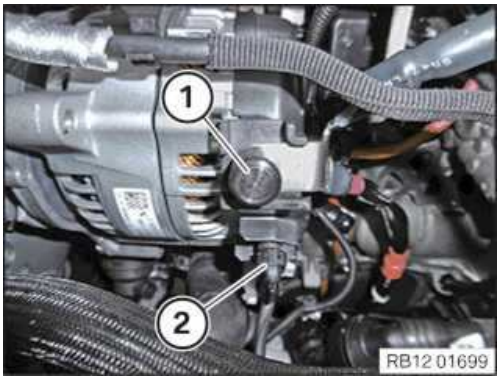


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

cardiagn.com

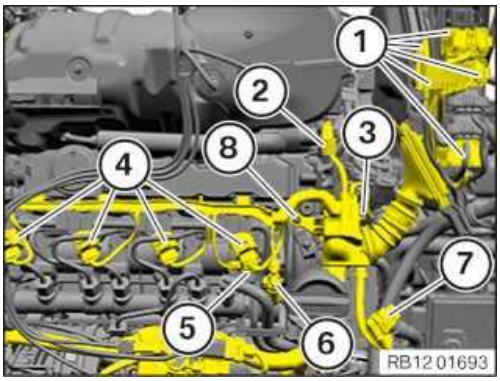


- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).

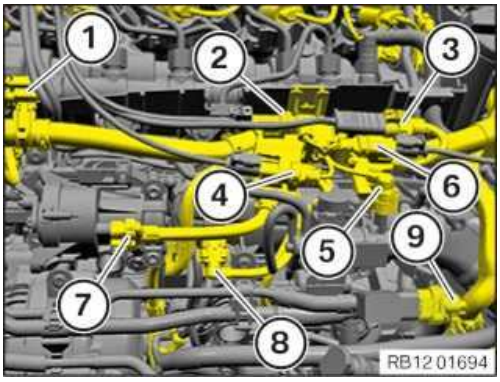


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

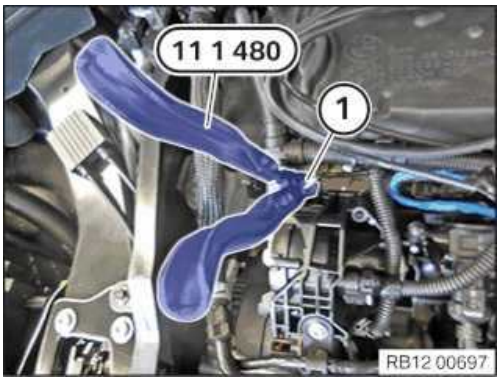
- Unlock and loosen connector (1).



- Loosen screws (1).

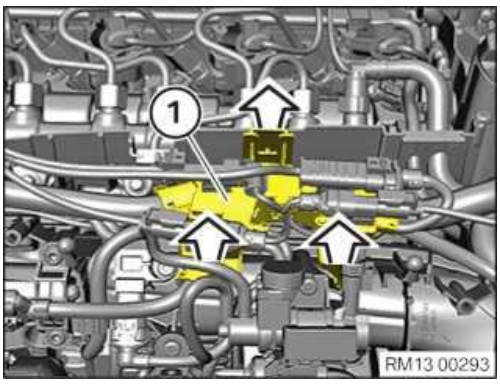


- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.



cardiagn.com

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).



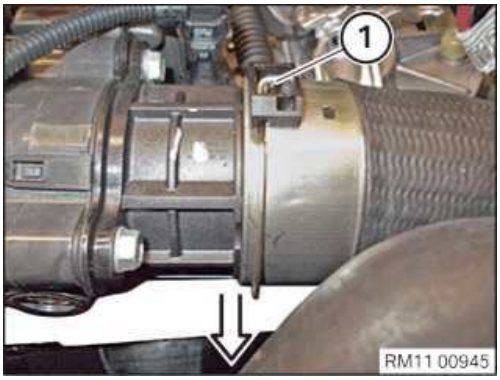
- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock and disconnect the connector (3) from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

▶ **Removing the cable clips from the intake plenum**

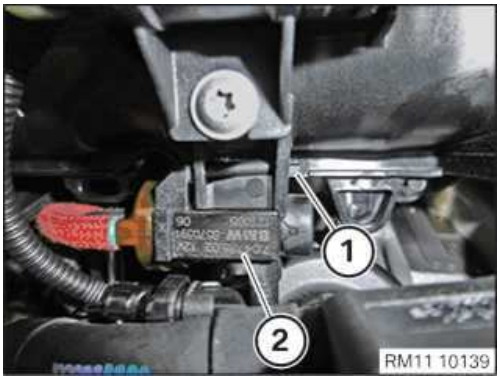
- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

53 – Removing the intake plenum

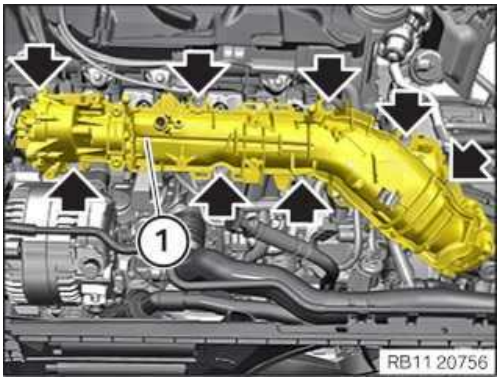


cardiagn.com

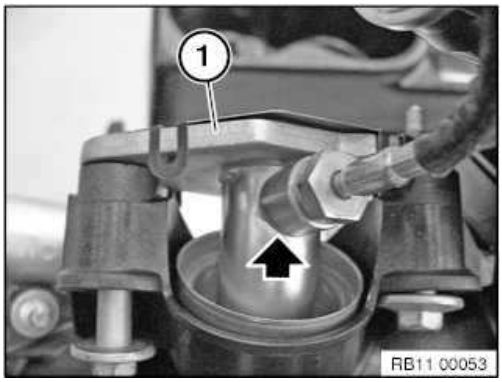
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the lock (1).



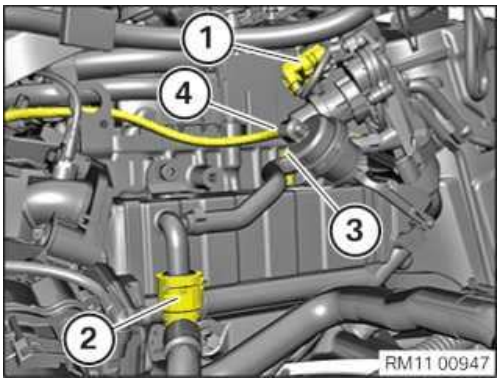
- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

cardiagn.com

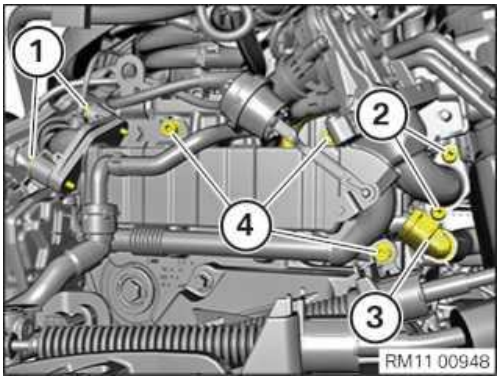


54 – Removing the exhaust-gas recirculation cooler

WARNING

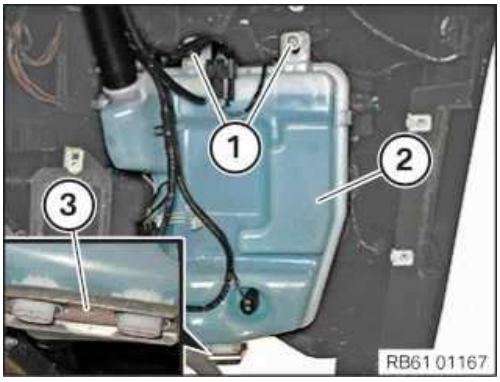
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

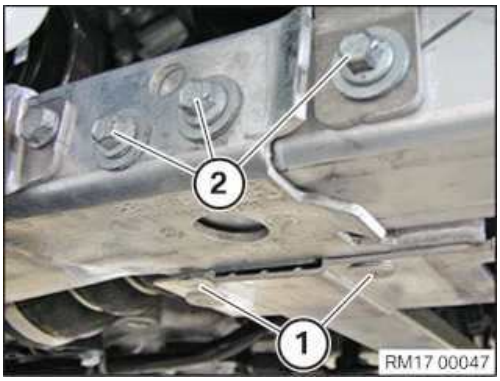
- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

55 – Remove the washer fluid reservoir from the fixture

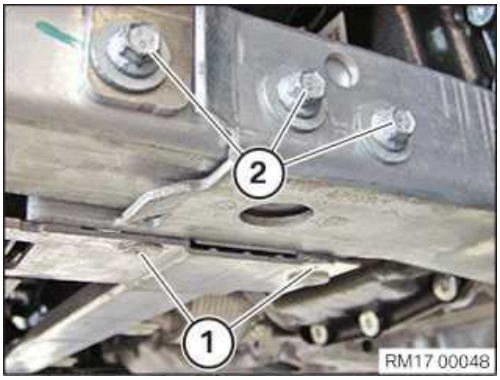
- Loosen screws (1).
- Guide the washer fluid reservoir (2) up and out of the fixture (3) and set it aside.

56 – Removing the right charge air duct between the exhaust turbocharger and the charge air cooler



WARNING

Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

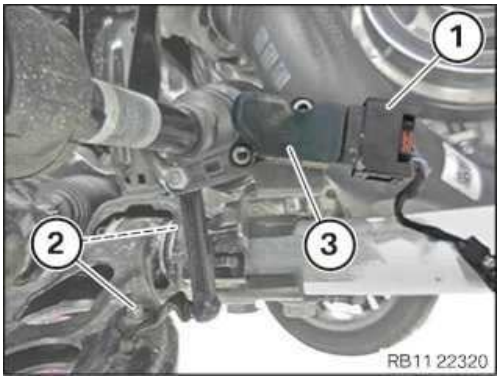
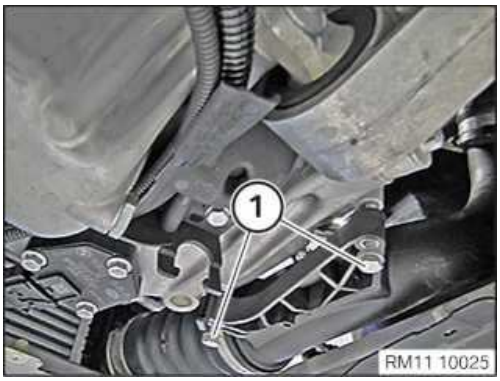
- Undo screws (2) at front left.
- Drill out blind rivets (1) at front left.

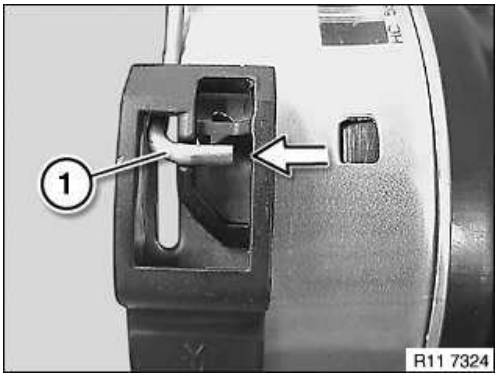


- Undo screws (2) at front right.
- Drill out blind rivets (1) at front right.

- Unlock locking pins (1).
- Thread out and remove locks (2).
- Thread out and remove cross connection (3).



- Release the screws (1) on the right front axle support.



- **If installed:**
- Unlock and release plug connection (1).
- Loosen screws (2).
- Feed out the ride height sensor (3) and remove.

cardiagn.com

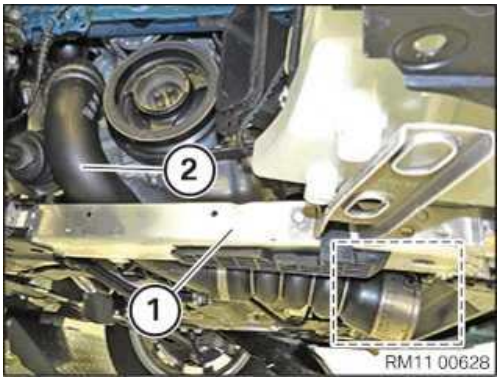
- Release screws (1) of charge air duct on right oil sump.



- Unlock lock (1).

  The lock (1) must engage in the bracket during unlocking (arrow).

- Unlock and release the charge air duct (1) on the charge air cooler.

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (2) in the **marked** area towards the bottom and set it aside.

- Unlock and detach the locks (1) on both sides.
- Feed out the charge air duct (2) on the exhaust turbocharger in the direction of the arrow and set it aside.

cardiagn.com

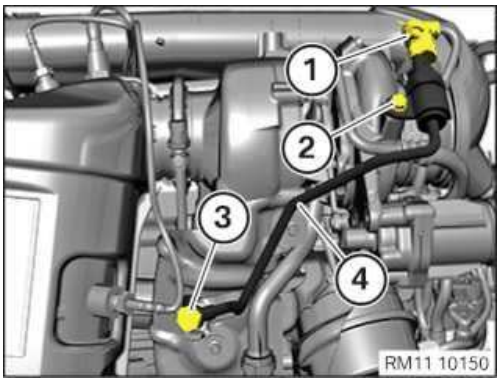
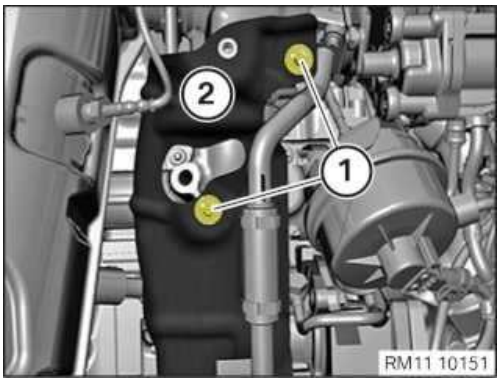
- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (1) in the direction of arrow between the side member and the deformation element and remove.



57 – Remove the heat shield from the exhaust turbocharger at the bottom

WARNING



Hot surfaces.

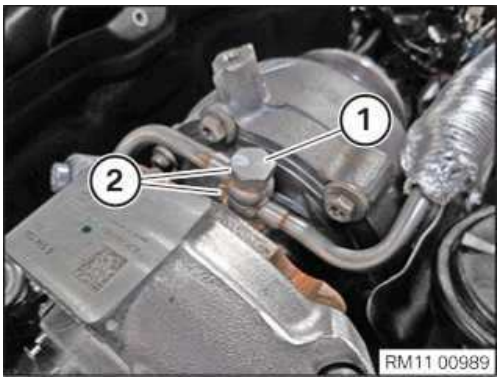
Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

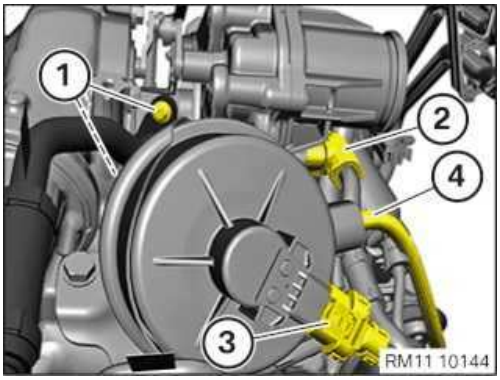
- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).

58 – Removing the low-pressure stage turbocharger



WARNING

Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

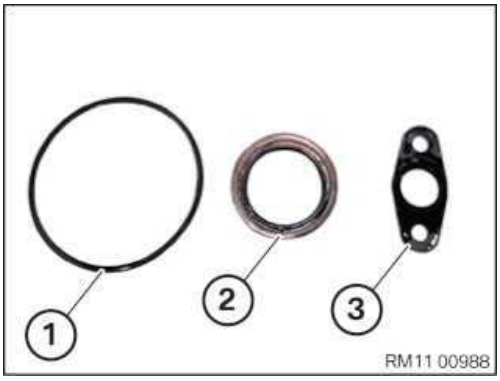
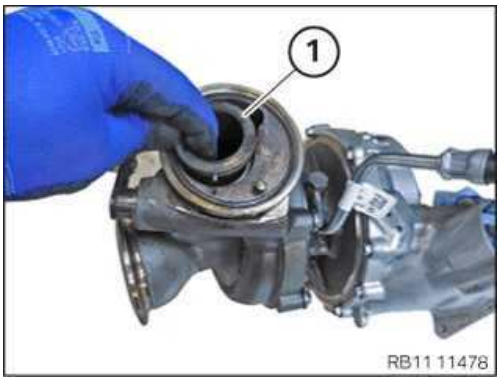
- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.



- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.

- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).



- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

cardiagn.com

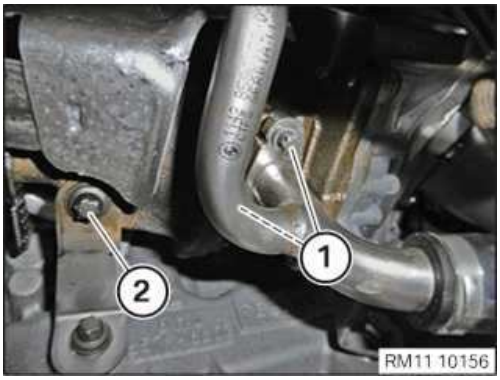
- Remove the spacer ring (1).

59 – Removing the high-pressure stage exhaust turbocharger

WARNING

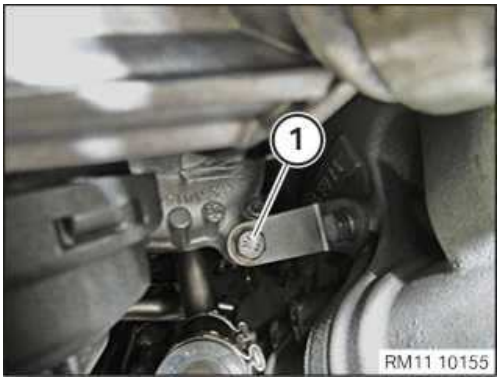
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

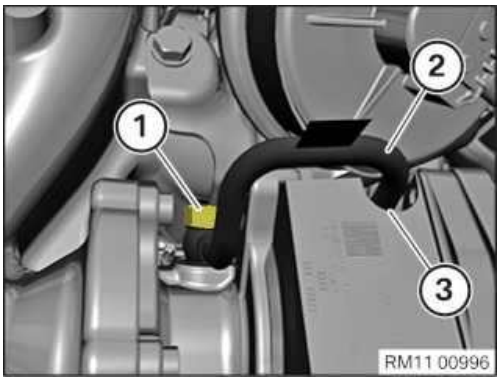
CAUTION



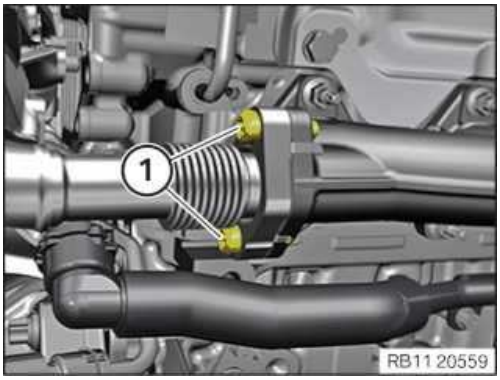
Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).



- Release screw (1) from the right wheel arch.

cardiagn.com

- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

- Loosen screws (1).

- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

60 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

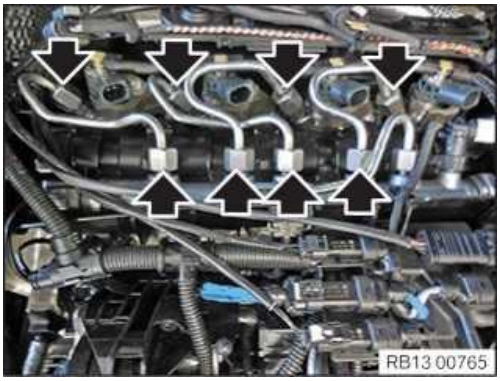
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION



If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

61 – Remove leakage oil lines

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

Hot surfaces.

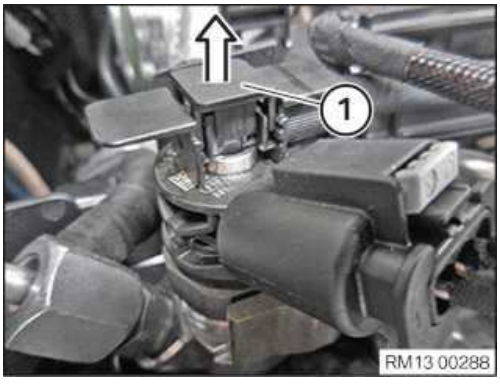
Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Contaminant or foreign body.

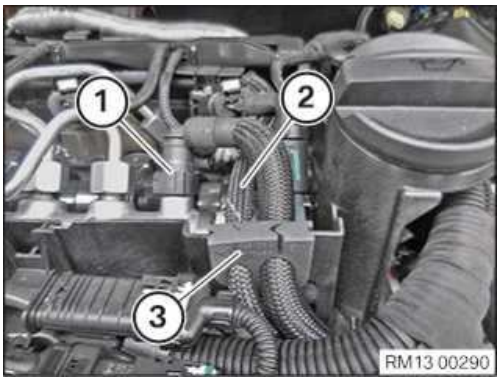
Contamination can result in malfunctions, operating failure or leaks.



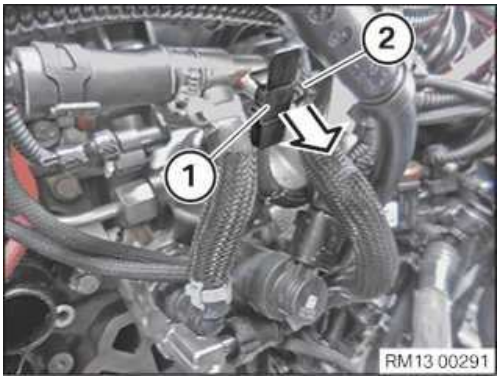
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the connectors (arrows) and disconnect.



- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

cardiagn.com

- Unlock and loosen fuel line (1) and set it aside.
- Guide the leakage oil line (2) out of the rubber grommet (3) and set it aside.

- Release lock (1) in direction of arrow.
- Feed out leakage oil line (2) and remove.

62 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

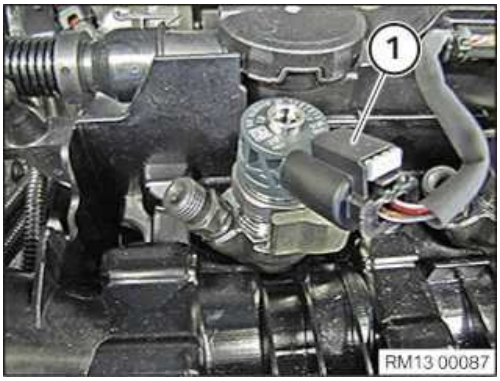
RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

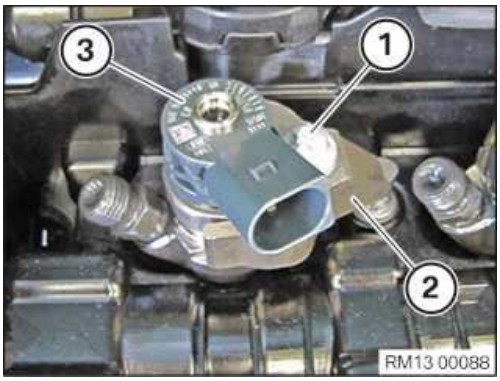
RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

- Unlock and disconnect connector (1).

cardiagn.com

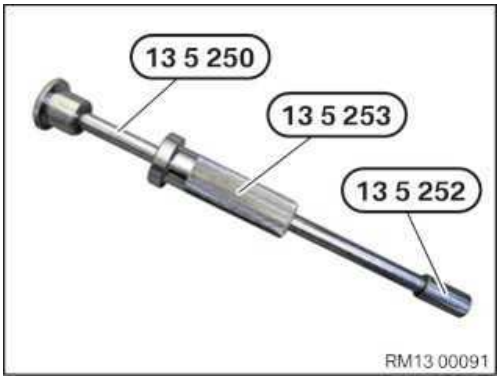
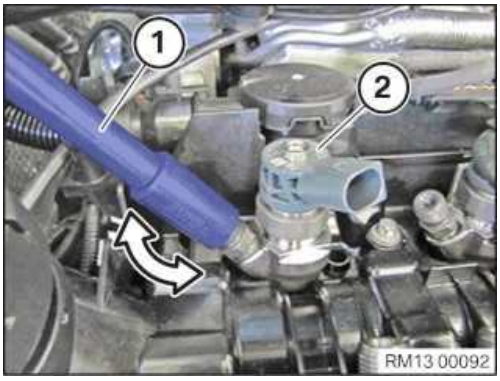
- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.



▶ **Loosen stuck injectors**

RISK OF DAMAGE



Contaminant or foreign body.

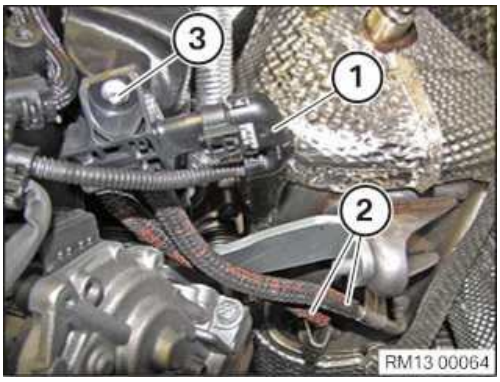
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)** back onto the special tool **0 493 321 (13 5 250)**.

- Screw the special tool (1) **0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1) **0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

63 – Remove differential pressure sensor

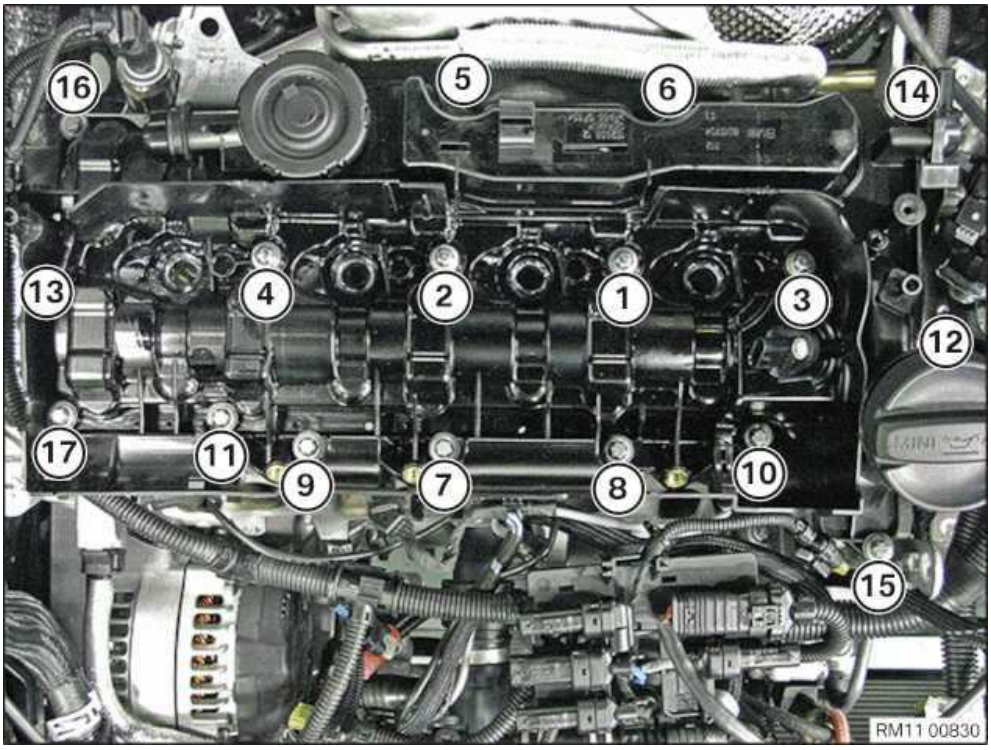


cardiagn.com

RISK OF DAMAGE

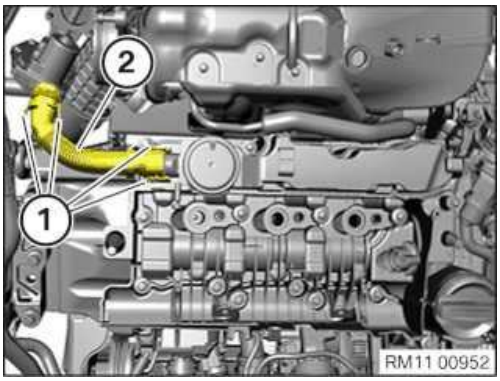
Electrostatic discharge.

Damage to or destruction of electrical components.



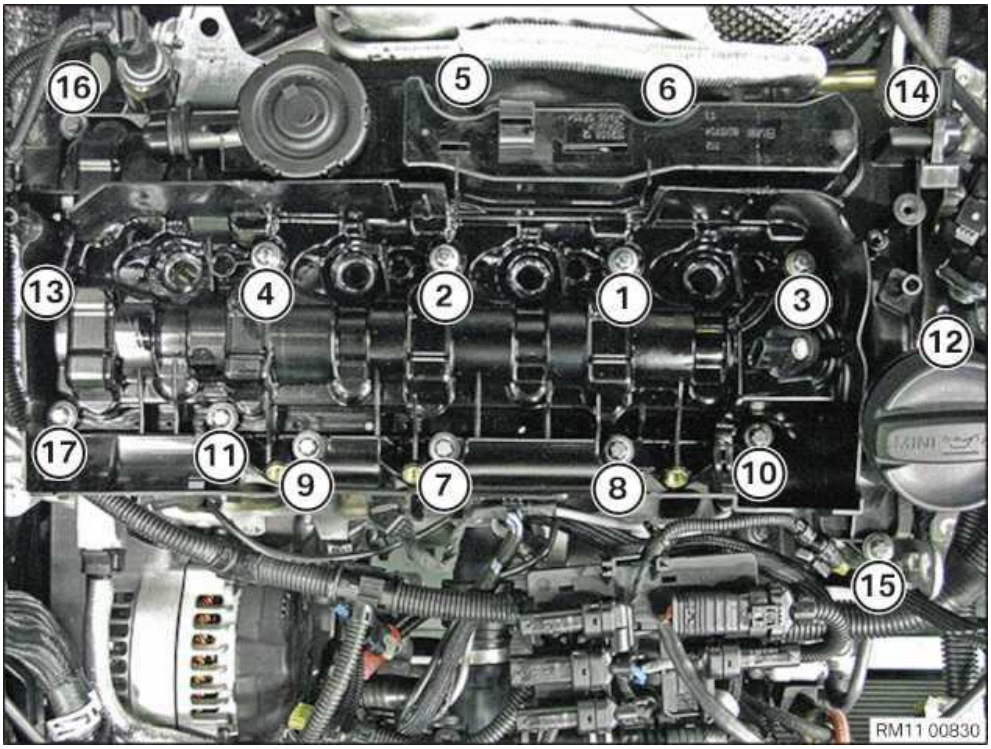
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.



64 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

cardiagn.com

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

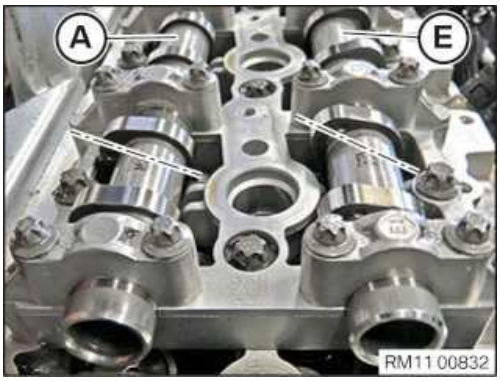
- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

65 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

cardiagn.com

RISK OF DAMAGE



Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

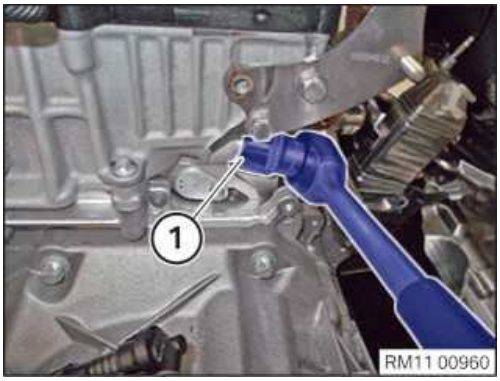
If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

cardiagn.com

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).



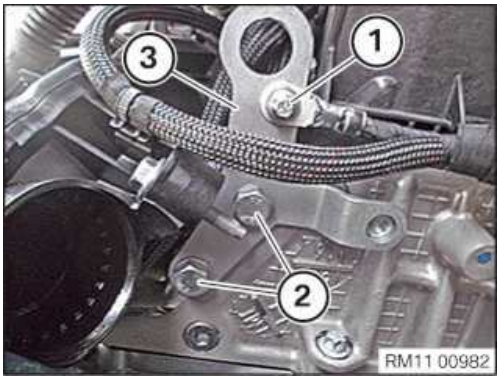
66 – Remove chain tensioner piston

WARNING

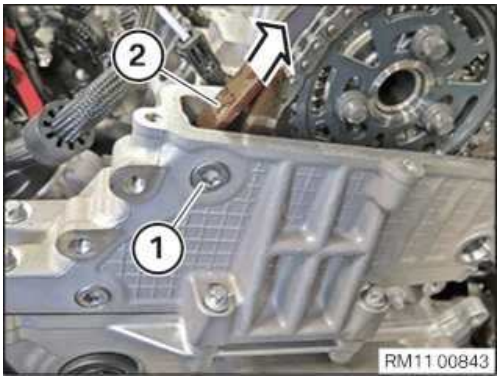
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



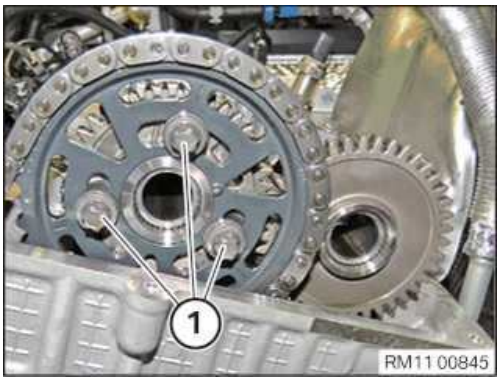
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

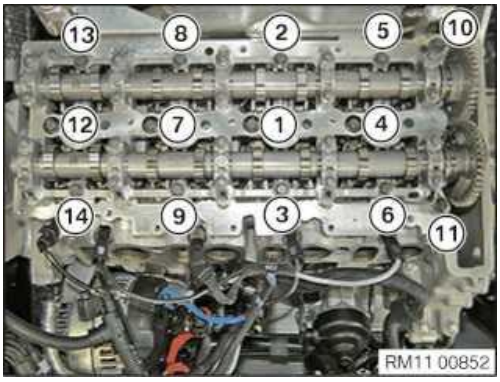
- Remove the chain tensioner piston (1).

67 – Remove the timing chain guide rail



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.



68 – Removing the camshaft sprocket on the intake camshaft

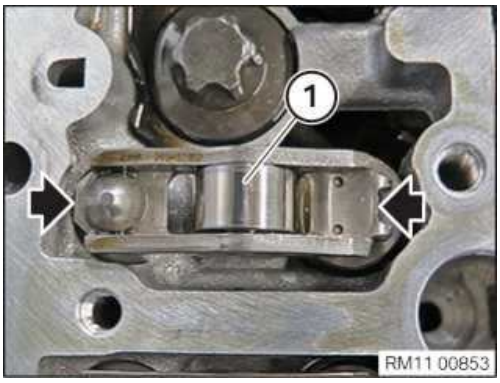
cardiagn.com

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

69 – Removing the camshaft support

- Evenly loosen all screws in a sequence from (14) to (1).
- Loosen and remove all screws in a sequence from (14) to (1).

  Both camshafts can be removed with the camshaft carrier.
- Remove the camshaft support including camshafts towards the top.



70 – Remove roller cam followers

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

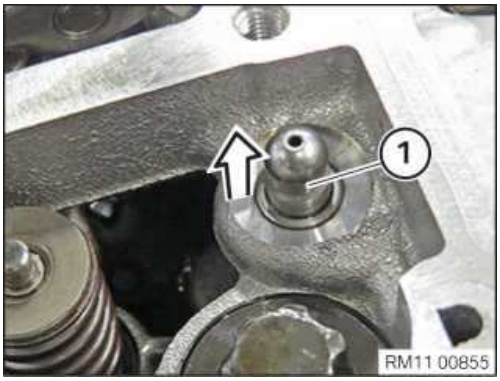
Damage to the engine.

If the classification of the roller cam followers is ignored, this can lead to engine damage.

- Observe the classification of the roller cam followers.
- Always reuse used roller cam followers at the same position.

- Remove the roller cam follower (1) and place it onto the special tool **0 495 105 (11 4 480)**.
- Repeat the process for all roller cam followers.

71 – Removing the hydraulic valve clearance compensating element



cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.

72 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

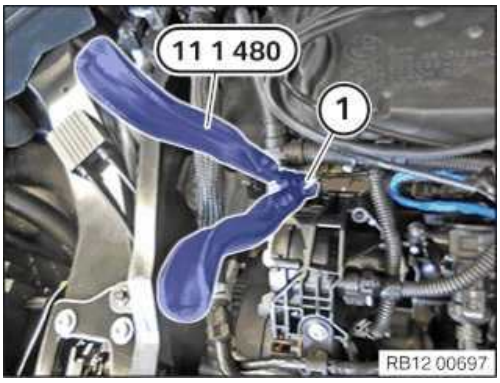
- Do not pull on the wires when disconnecting connectors and plug connections.

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.



- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Electrostatic discharge.

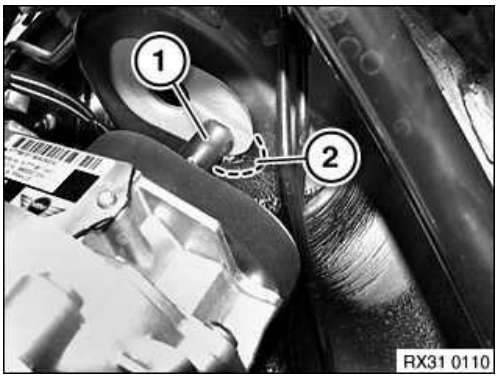
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool or conventional tools.
- Feed out preheating elements and remove.

73 – Remove cylinder head.



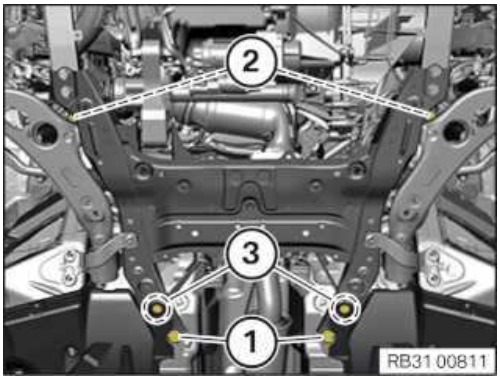
CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

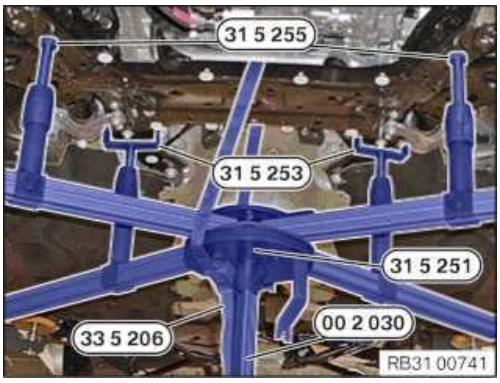
- Position front axle support.
- Bend the underbody panelling to the side in area (3).
- Raise front axle support.
- When raising, insert the charge air cooler into its rubber mount on the transmission cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

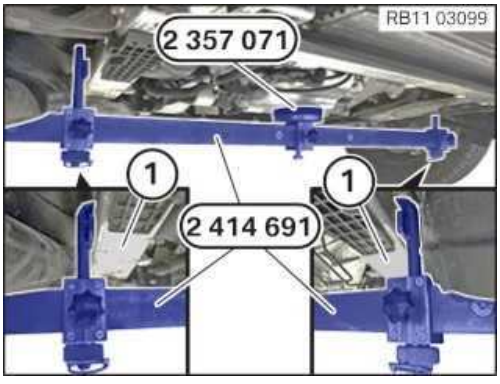
M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).



Front axle support, front to body

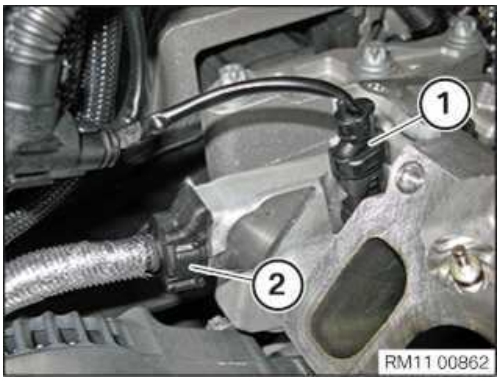
M12 screw	Renew screw.	Tightening torque	108 Nm



- If applicable, tighten the screws in area (3).

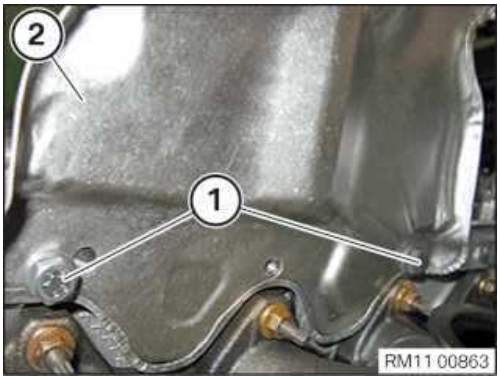
Underbody protection to body

Screw		Tightening torque	3 Nm

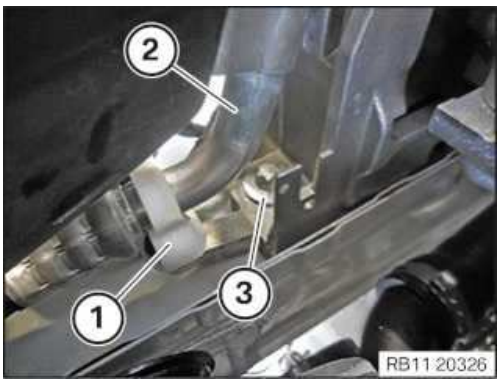


- Remove special tool from special tool .
- Lower the universal jack **0 490 133 (00 2 030)** with the special tool and set it aside.

- Prepare special tool together with the special tool **2 357 071**.
- Attach special tool to front axle support and align special tool **2 357 071** correctly under the oil sump and then tighten.
- Turn special tool at adjusting screw uniformly upwards, until the special tool **2 357 071** makes contact with the oil sump.
- Tighten all adjusting screws of special tools and **2 357 071**.



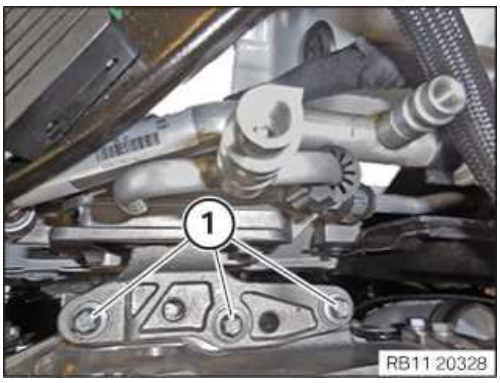
cardiagn.com



TECHNICAL INFORMATION

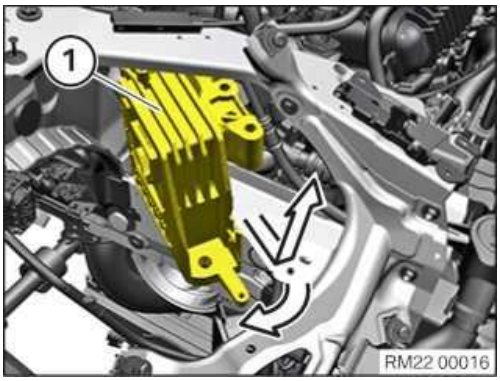
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the connector (1) from the coolant temperature sensor.
- Unlock and loosen coolant line (2).

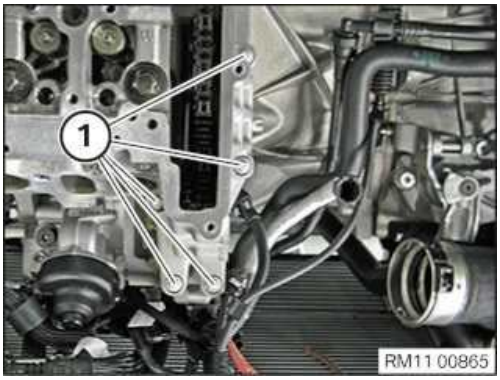


- Loosen screws (1).
- Feed out the heat shield (2) and set it aside.

- Unlock and loosen holder (1).
- Feed out the refrigerant line (2) and put to one side.
- Loosen screw (3).

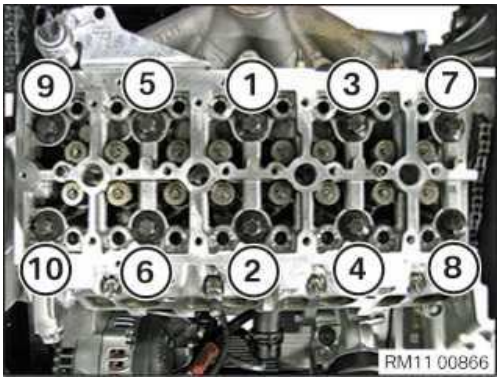


- Loosen screw (1).



- Loosen screws (1).

cardiagn.com

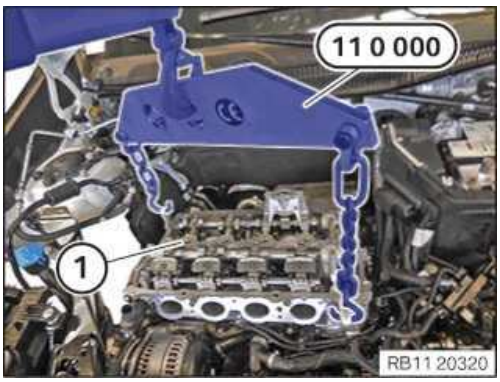


- Turn engine mount (1) in direction of arrow and remove upwards.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).



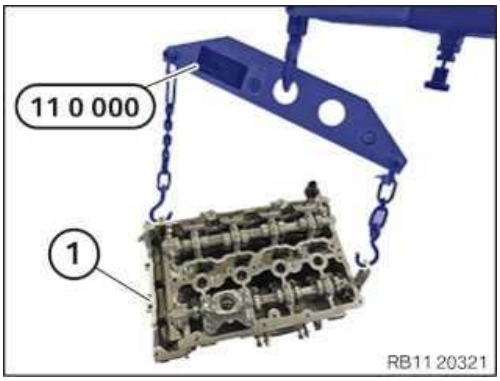
- Loosen the cylinder head bolts in the sequence from (10) to (1).
- Remove cylinder head bolts (1) to (10) with washers.

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm

RISK OF DAMAGE



Damage to the guide rails.

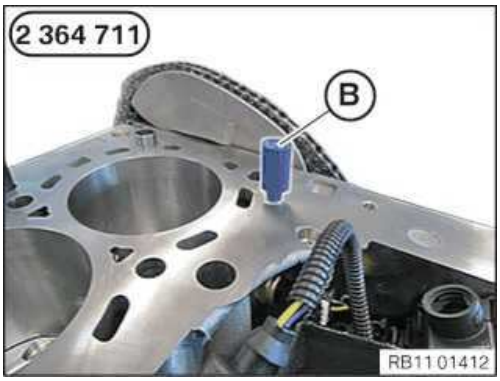
Large amounts of force may damage the guide rails of the timing chain.

- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- **Carefully** guide out the cylinder head (1) with the engine lifter and the special tool **0 490 561 (11 0 000)** and remove.

cardiagn.com

- Mount the cylinder head (1) on the special tool **0 494 362 (11 9 000)**.



74 – Cleaning the sealing surface

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

RISK OF DAMAGE

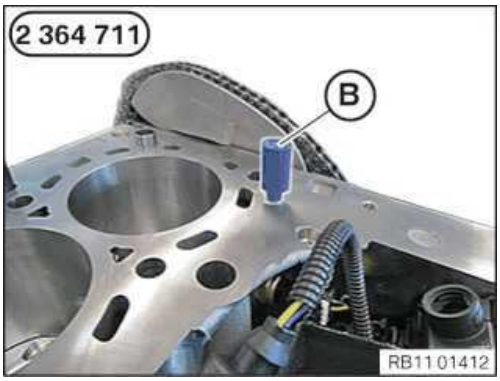
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.

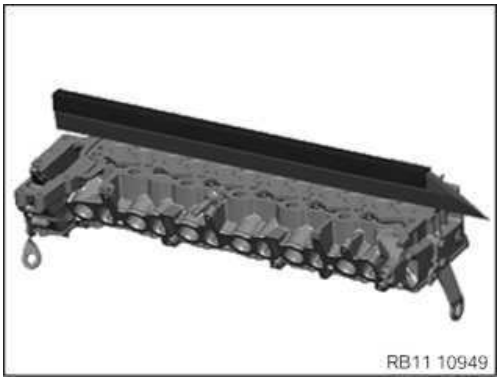
RISK OF DAMAGE



Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

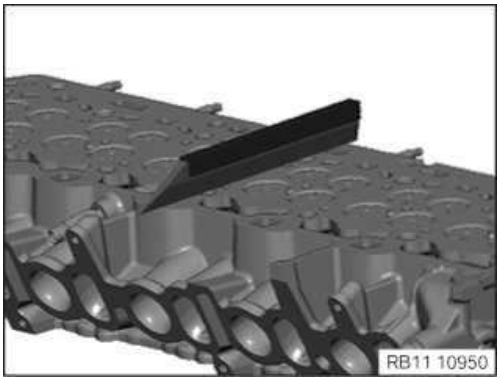
- Do not use any metal-cutting tools.



- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.

cardiagn.com

- Remove special tool (B).

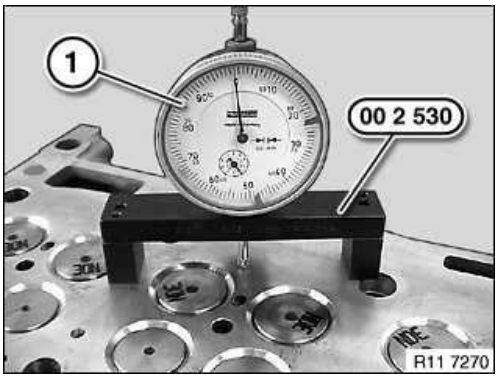


75 – Check the flatness of the cylinder head

- Check the flatness of the cylinder head lengthwise using a straightedge.

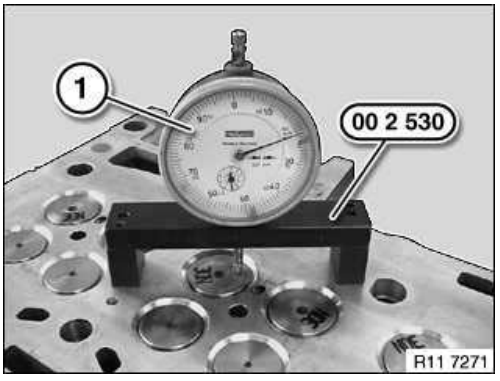
Cylinder head flatness

Maximum lengthwise deviation from flatness	0,10 mm
Maximum transverse deviation from flatness	0,05 mm



- Check the flatness of the cylinder head crosswise using a straightedge.

Cylinder head flatness



Maximum lengthwise deviation from flatness	0,10 mm
Maximum transverse deviation from flatness	0,05 mm

76 – Checking the valve underprotrusion

- Set the dial gauge (1) onto the cleaned cylinder sealing surface with slight preload in special tool **0 490 185 (00 2 530)**.
- Set dial gauge in mildly preloaded state to "zero".

Check

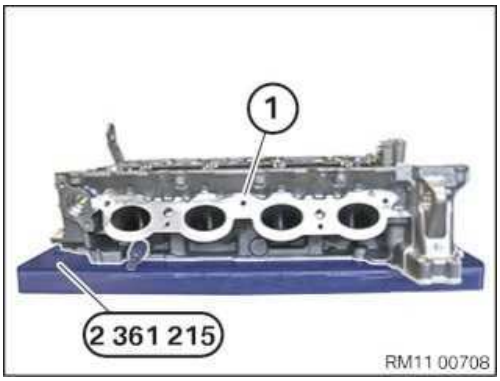
- Position the dial gauge (1) on the valve with special tool **0 490 185 (00 2 530)**.
- Measure valve underprotrusion and compare with the setpoint value.

Valve underprotrusion

	0,8 (0,7 - 0,9) mm

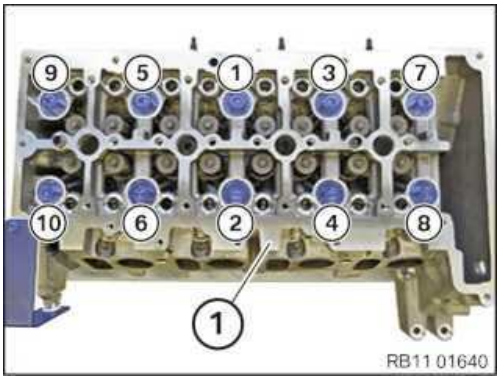
cardiagn.com

Result



» Valve underprotrusion is outside tolerance.

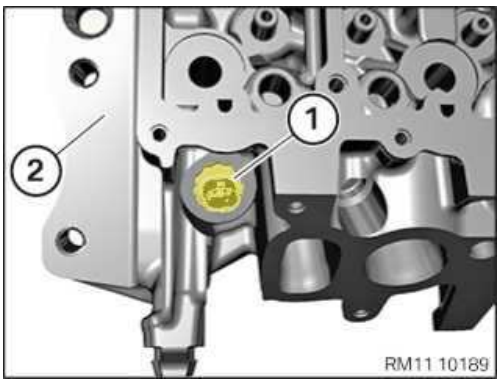
Measure



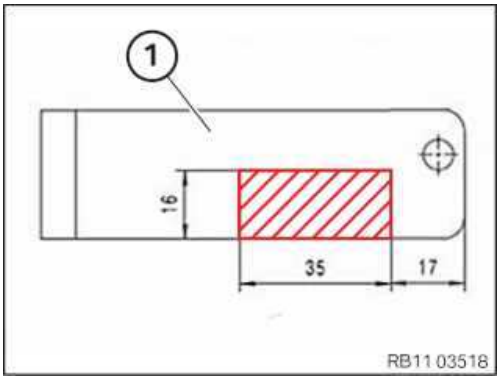
- Replace cylinder head.

MAIN WORK

77 – Checking cylinder head for watertightness



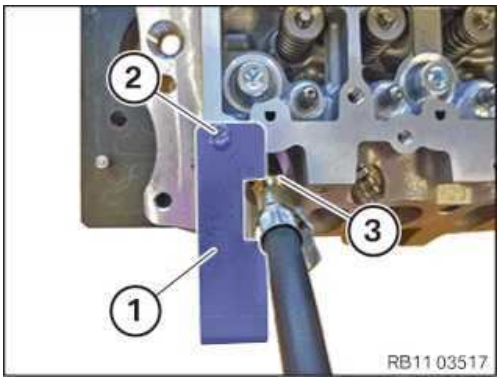
- Position the cylinder head (1) on the special tool so that the rubber layer faces the cylinder head (1) and all water ducts at the cylinder head (1) are closed.



- Tighten special tool **0 496 184 (11 8 891)** using the screws **0 496 186 (11 8 893)** in the sequence (1) to (10) on the cylinder head (1).

Special tool to cylinder head

Special tool		Tightening torque	20 Nm



- Remove coolant temperature sensor (1) from the cylinder head (2) using special tool .

- Dimension special tool **2 405 214** as shown.
- Drill through top corners of the marked area on the special tool **2 405 214** using drill M6.
- Cut off marked area from the special tool **2 405 214**.

cardiagn.com

- Lock coolant duct on the cylinder head using special tool (1) and secure with screw (2).
- Tighten down screw (2).

Standard screw connection M6

M6		8 Nm

- Install valve (3) into the cylinder head from the special tool .

Special tool to cylinder head

Special tool		Tightening torque	20 Nm

Check

- Heat up the cylinder head.

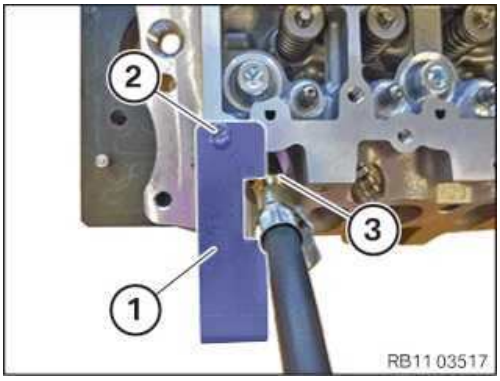
Check for cylinder head watertightness

Temperature of the cylinder head	60 °C

- Connect compressed air to the valve (3).

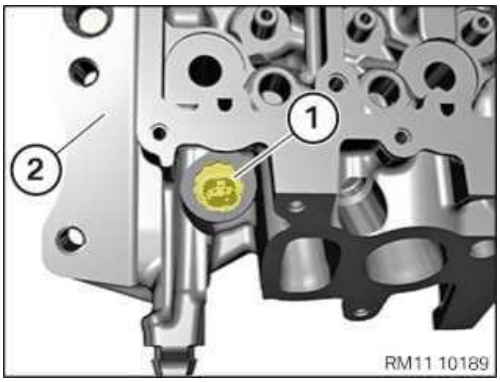
Check for cylinder head watertightness

Testing pressure	max. 3,0 bar



- Check the cylinder head in for tightness in a water bath.

Result

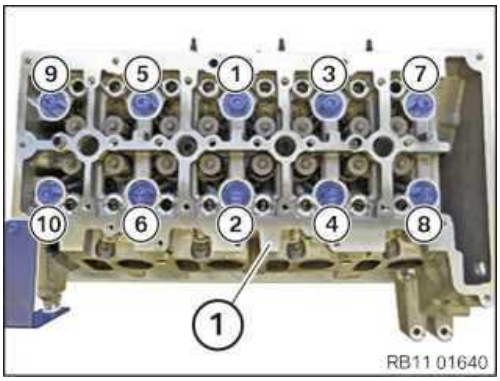


» Air bubbles develop.

Measure

- Check cylinder head at the point of exit of the air bubbles for damage, repair or renew if required.

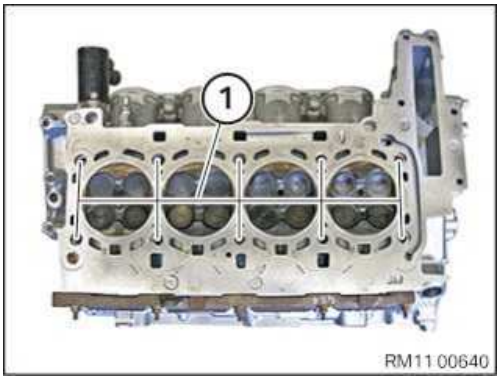
- Loosen screw (2).
- Remove position (1) of special tool **2 405 214**.
- Remove valve (3).



- Install coolant temperature sensor (1) and tighten using special tool .

Coolant temperature sensor at cylinder head

Temperature sensor		Tightening torque	3,5 Nm

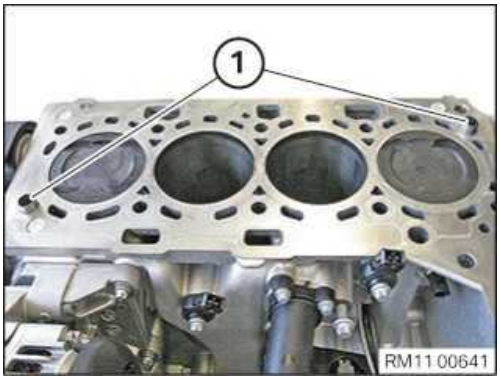


cardiagn.com

- Loosen screws in the order (10) to (1).
- Remove cylinder head (1) from the special tool .

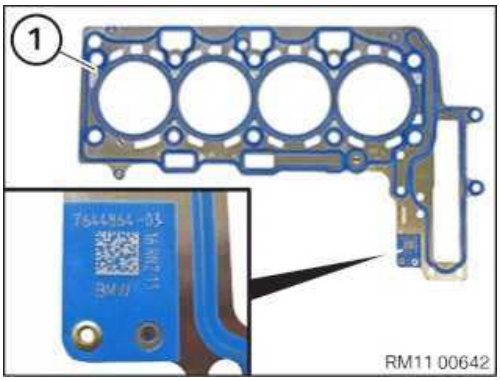
POSTPROCESSES

78 – Renewing the cylinder head gasket



RISK OF DAMAGE

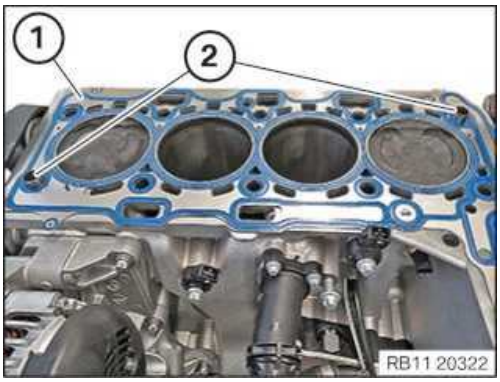
Damage to the surface.



The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).



- Check the fitting sleeves (1) for secure fit and damage.

- Identify the cylinder head gasket (1) using the part number.

Note: If the cylinder head is reworked, an additional thicker gasket 0.3 mm is available for service personnel.

- Guide in the cylinder head gasket (1) and install.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

cardiagn.com

79 – Installing the cylinder head

CAUTION

Heavy component.

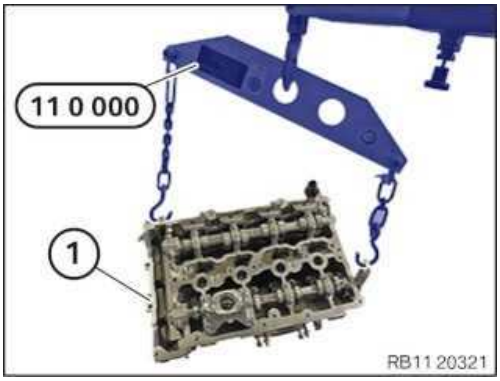
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

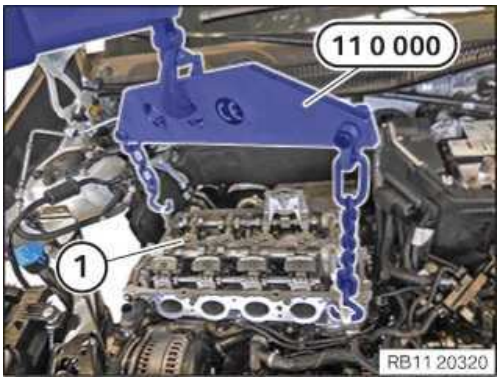
Damage to threads.

Fluid in the threaded hole may damage the thread when screws are tightened in the threads.



- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION



Do not remove bolt coating.

TECHNICAL INFORMATION

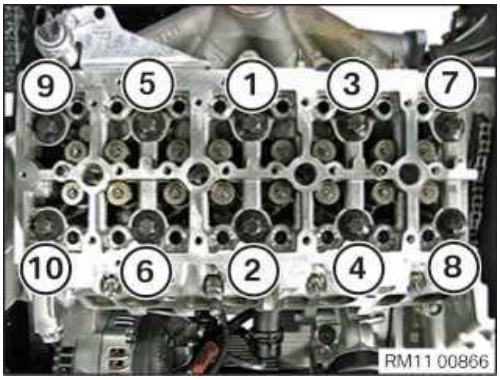
When replacing the cylinder head: The complete valve control and the Valvetronic servomotor are already pre-assembled for new cylinder heads.

- Position cylinder head (1) on special tool **0 490 561 (11 0 000)** and engine lifter.

RISK OF DAMAGE

Damage to the guide rails.

Large amounts of force may damage the guide rails of the timing chain.



- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- Feed in the cylinder head (1) **carefully** with the engine lifter and the special tool **0 490 561 (11 0 000)** and install.

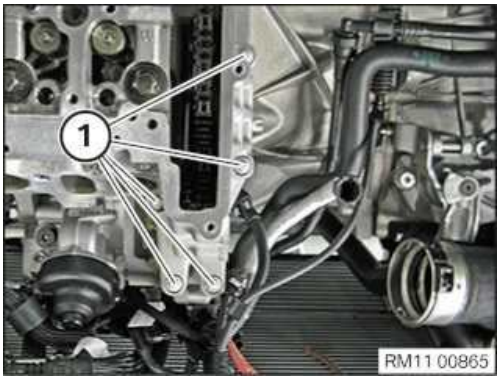
cardiagn.com

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Guide the special tool **2 459 012** out and remove.

- Renew the cylinder head bolts (1).

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  No coolant, water or engine oil must be present in threaded holes of engine block.



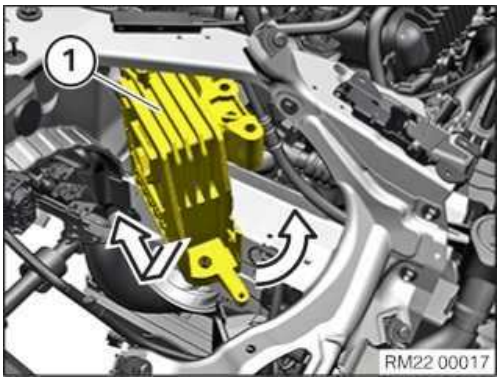
TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in cylinder head bolts in sequence (1) to (10).
- Tighten cylinder head bolts using special tools **0 490 504 (00 9 120)** and in sequence (1) to (10).

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

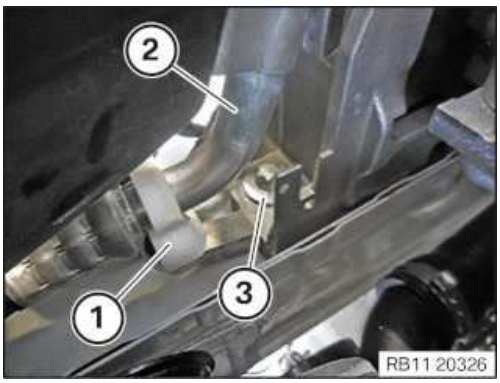


- Tighten the cylinder head bolts (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

cardiagn.com

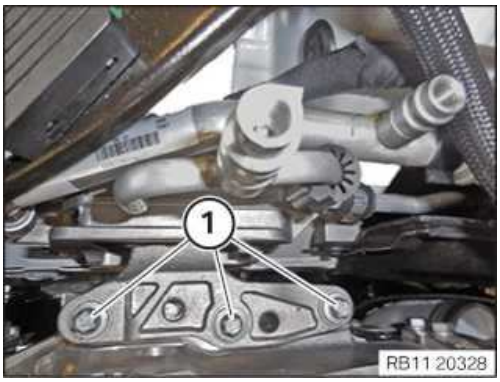


- Thread in engine mount (1) in direction of arrow then install.

- Tighten down screw (1).

Right engine mount to side member

M12		Tightening torque	100 Nm

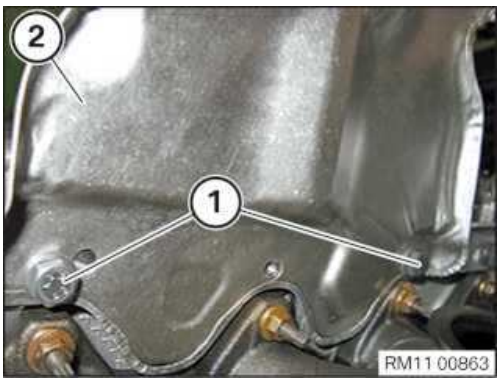


- Tighten down screw (3).

Right engine mount to side member

M12		Tightening torque	100 Nm

- Feed in and install the refrigerant line (2).
- Lock holder (1).
- Make sure the bracket (1) engages audibly.

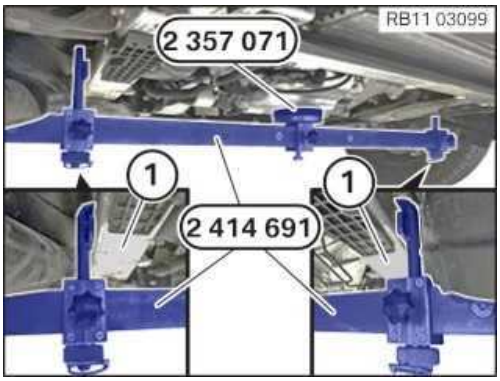


- Renew screws (1).

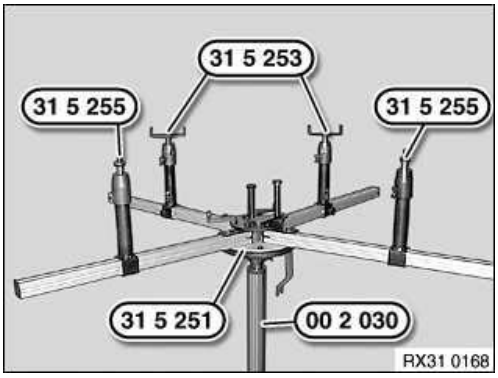
  Parts: Bolts
- Tighten the screws (1).

Right engine mount to cylinder head

M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °



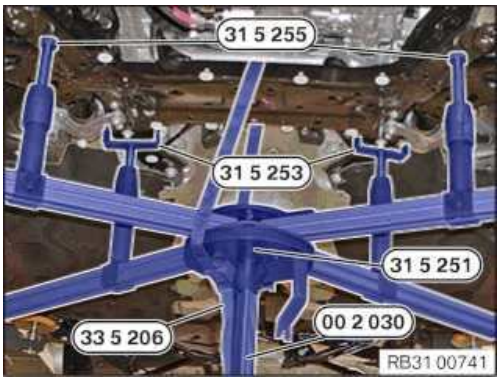
- Feed in and install the heat shield (2).
- Tighten the screws (1).



Heat shield to cylinder head

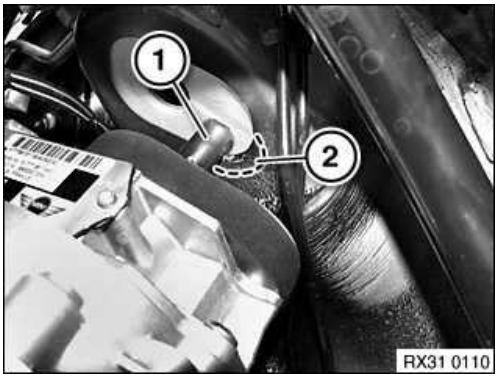
M8X16		Tightening torque	10 Nm

cardiagn.com



- Disassemble special tool using special tool **2 357 071**.

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

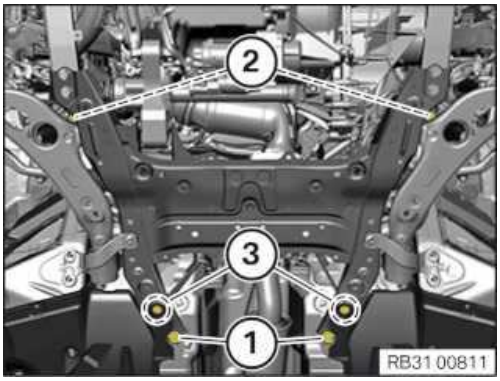


Note: In a profile rail pair, two profile rails are connected to one another by gearing.

- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

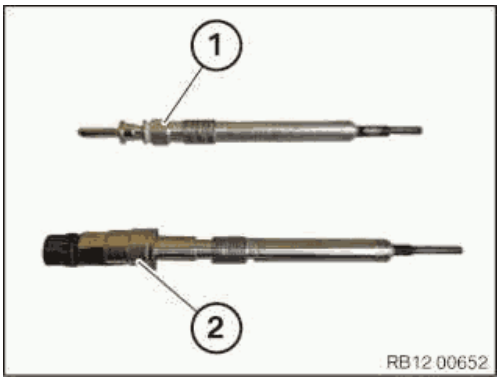
Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

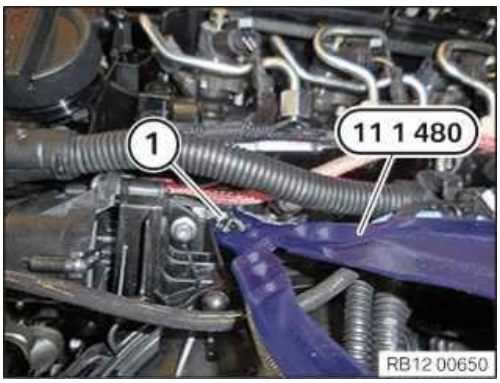


- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and the front axle remove.

cardiagn.com



- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

- Tighten the glow element with the special tool or conventional tools.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

81 – Installing the hydraulic valve clearance compensating element

RISK OF DAMAGE

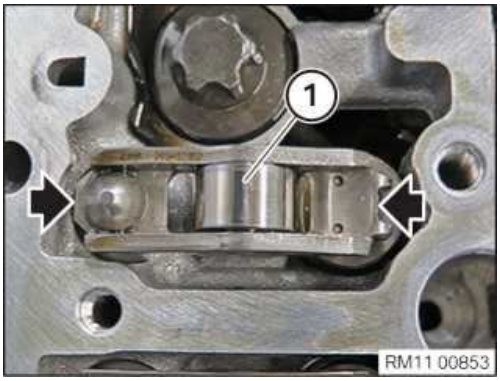
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

82 – Install the roller cam followers



cardiagn.com

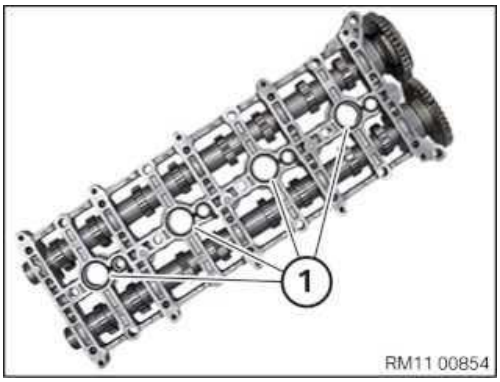
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

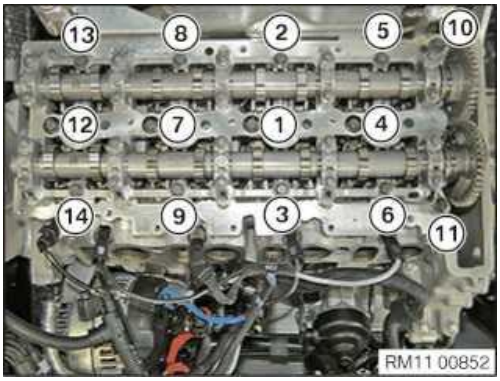
RISK OF DAMAGE



Damage to the engine.

If the classification of the roller cam followers is ignored, this can lead to engine damage.

- Observe the classification of the roller cam followers.
- Always reuse used roller cam followers at the same position.

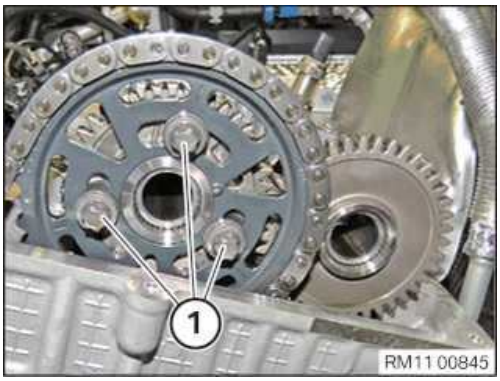


- Install the roller cam follower (1).
- Repeat the process for all roller cam followers.

83 – Installing the camshaft support

- Renew gaskets (1).

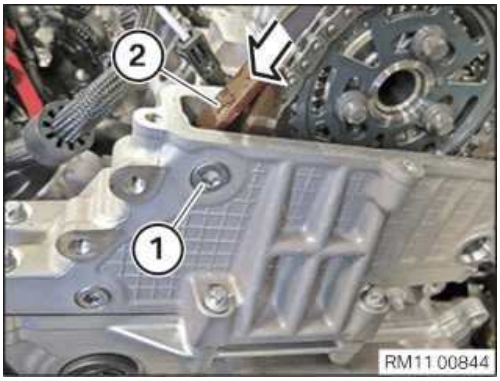
  Parts: gaskets



- Position the camshaft support including the camshafts.
- Tighten the screws in a sequence from (1) to (14) in several steps.

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

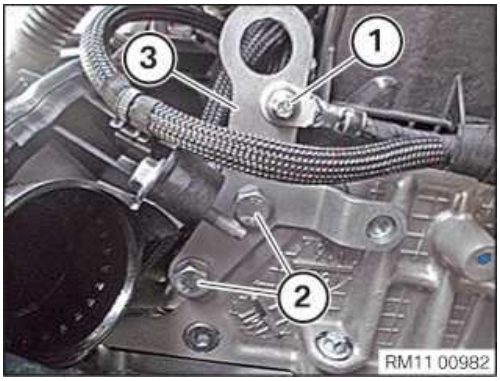


84 – Installing the camshaft sprocket on the intake camshaft

cardiagn.com

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

85 – Install the timing chain guide rail



- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

86 – Installing the chain tensioner piston

WARNING

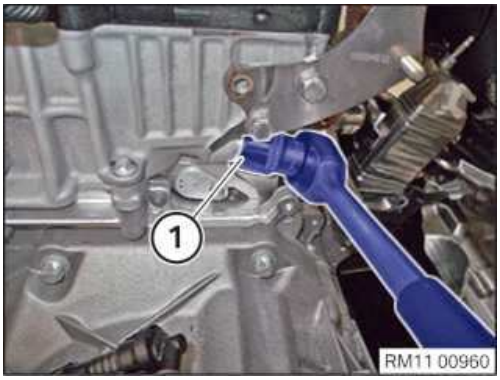
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Renew sealing ring (1).

  Parts: Sealing ring

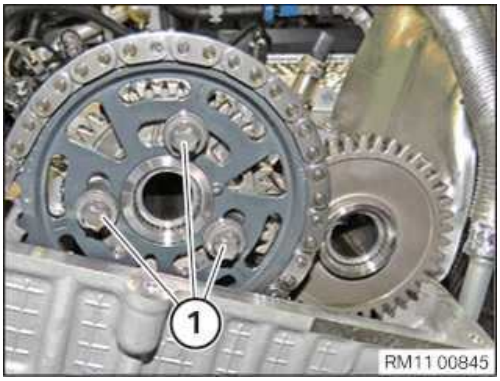


cardiagn.com

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.



- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

87 – Tightening the camshaft sprocket on the intake camshaft

- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

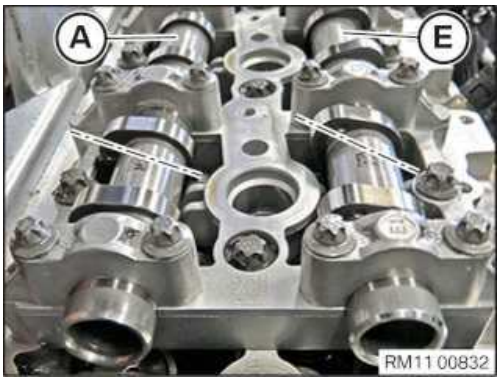
88 – Checking camshaft timing

- Remove protective cap (1) from oil sump.

- **Spin the engine twice in the direction of rotation.**

cardiagn.com

RISK OF DAMAGE



Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

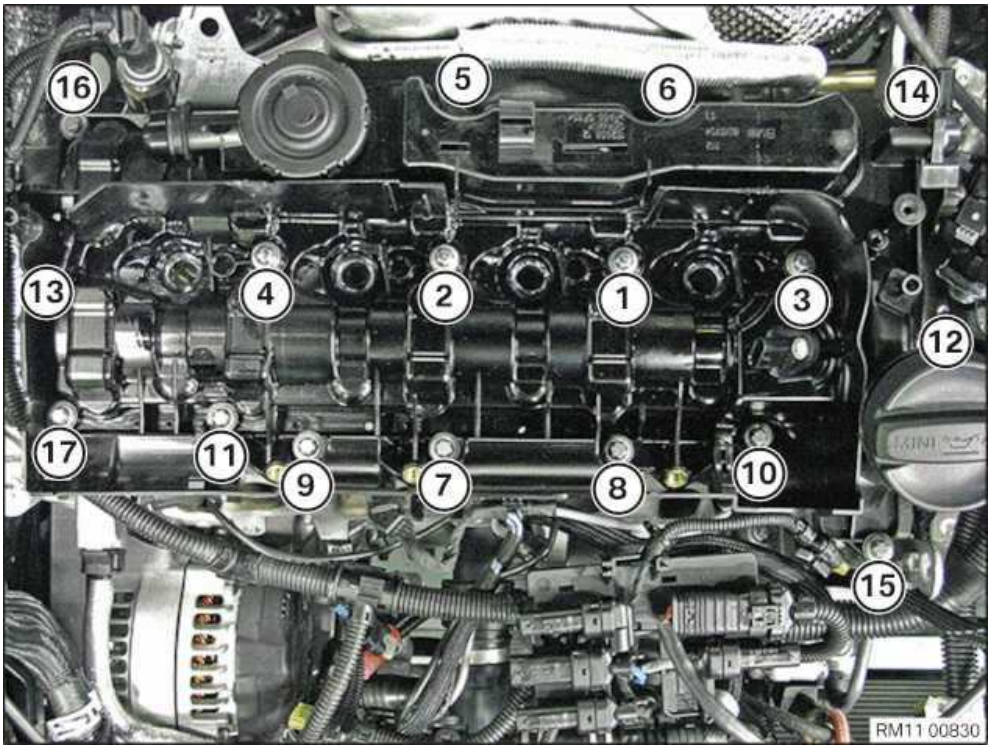
- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

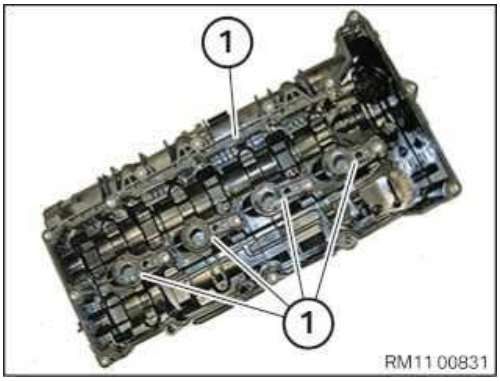
If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.



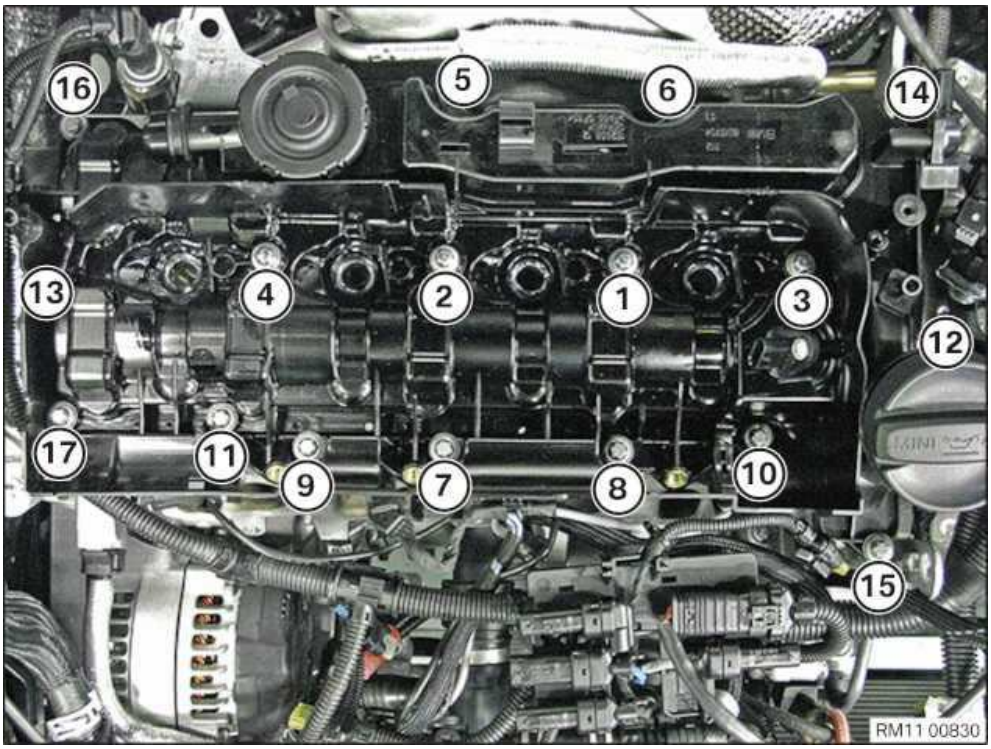
cardiagn.com



- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

89 – Installing cylinder head cover

Overview: Screw connection of the cylinder head cover

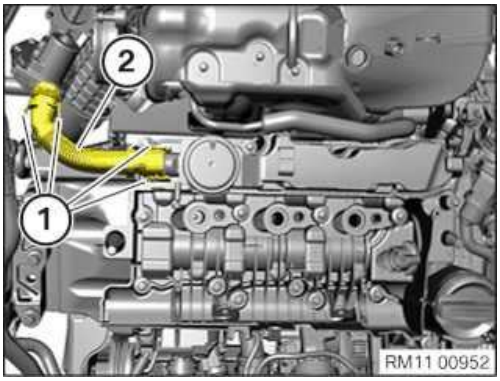


1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket

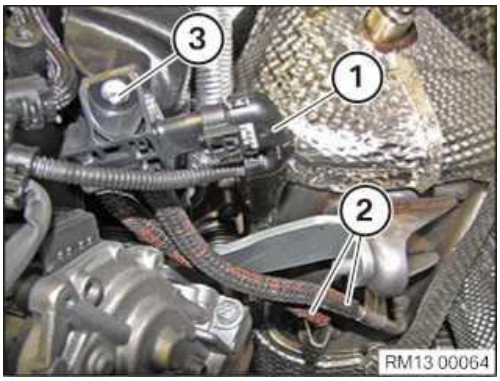
cardiagn.com



- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr



-

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

90 – Installing differential pressure sensor

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

91 – Installing injectors of injection system

▸ **Cleaning the injector shafts**

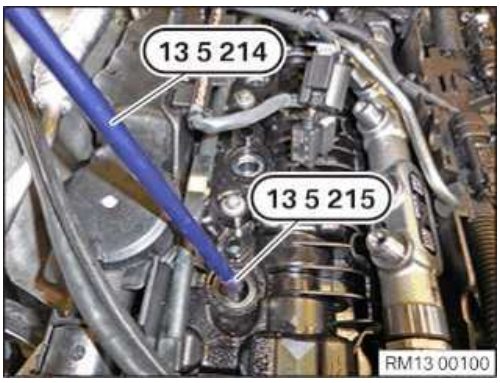
cardiagn.com

CAUTION

Swirling dirt particles caused by compressed air.

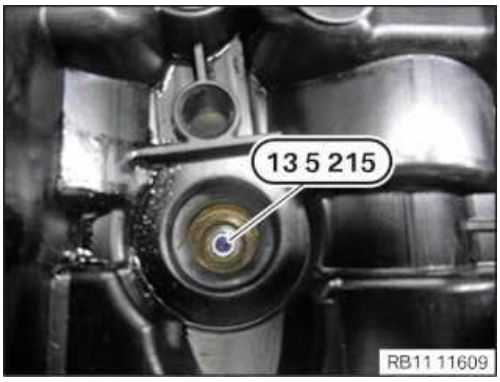
Danger of injury!

- Collect dirt particles, e.g. when blowing out, use cloth to do so.



- Wear safety goggles.

RISK OF DAMAGE



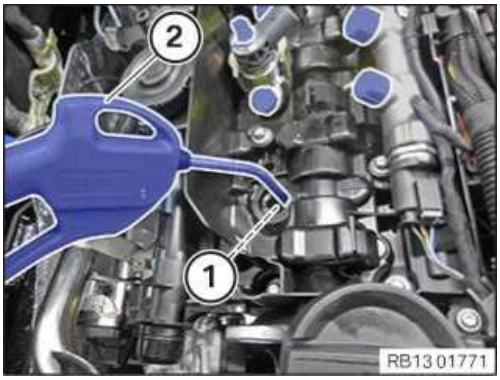
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

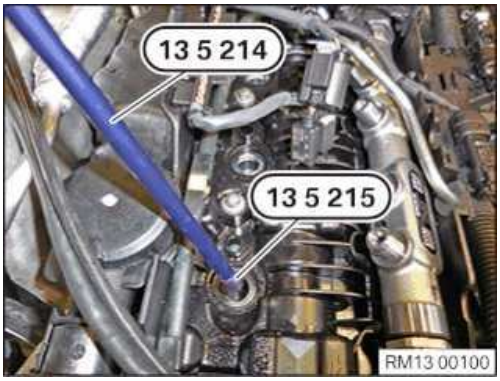
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.



- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

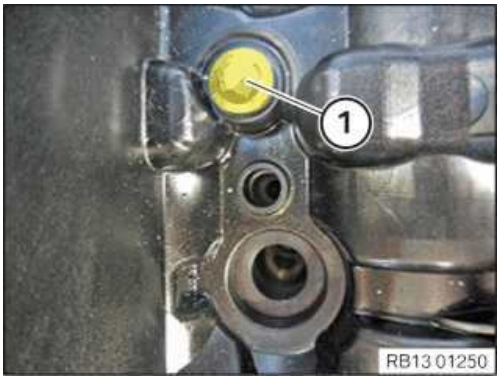


cardiagn.com

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

- Blow out injector shaft (1) with air gun (2).

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.



▸ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▸ **Prepare the injector for installation**

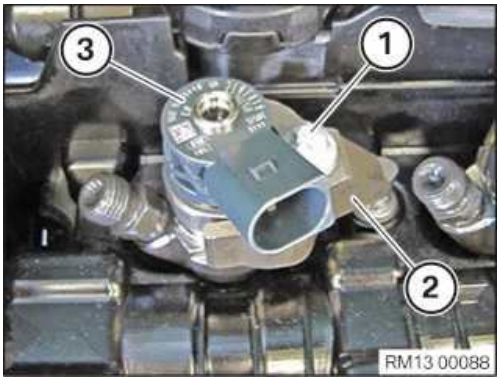
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

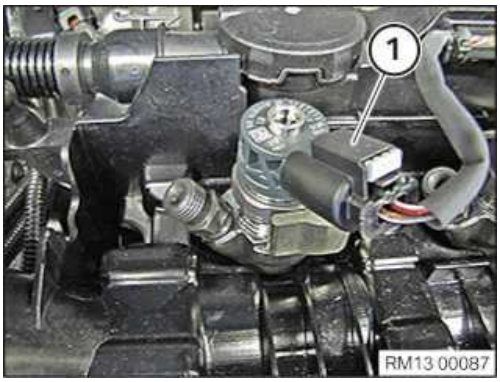


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring

- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials



Injector lubricating grease	50 g, Can	83230441070

- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

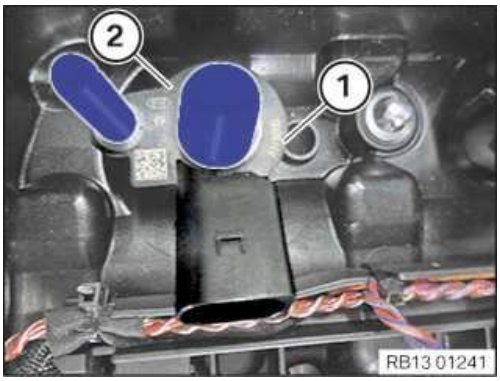
Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

▸ **Replacement: Perform injection quantity compensation**



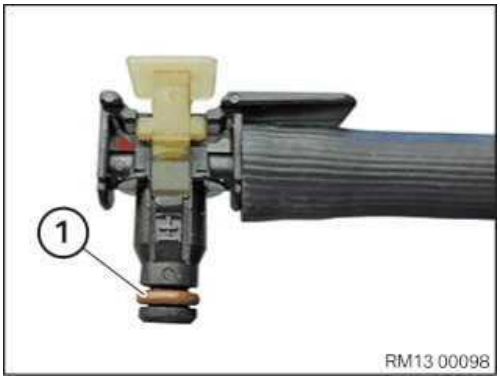
TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

92 – Connect the leakage oil line on the injector

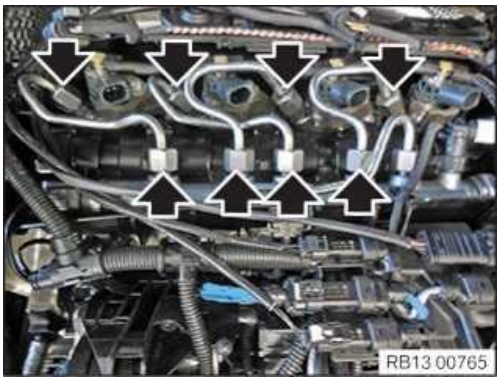
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

93 – Installing high pressure lines between rail and injectors



TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the high pressure lines (arrows) with the special tool .

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

94 – Prepare for the installation of the exhaust turbocharger

- Check the oil feed lines and the oil return lines for contamination or obstruction, clean or renew if necessary.
- If the oil feed lines and/or oil return lines are heavily contaminated, we recommend changing the engine oil and the oil filter.
- If installed: Check the coolant feed lines and the coolant return lines for the exhaust turbocharger for contamination or obstruction, clean or renew if necessary.
- Check that the screw connections and the plug connections of all the lines are correct.
- Check air cleaner for contamination and clean or renew as needed.
- Check correct functioning of crankcase ventilation.
- Replace all gaskets.

  Parts: Seals

95 – Installing the high-pressure stage exhaust turbocharger

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

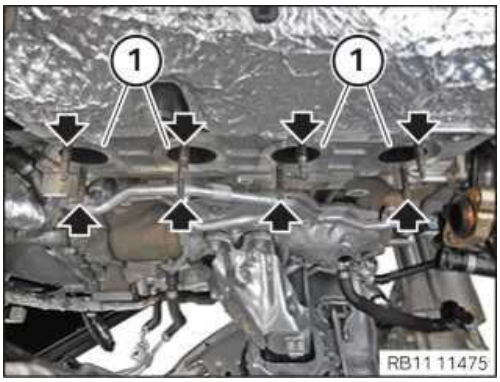
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

RISK OF DAMAGE

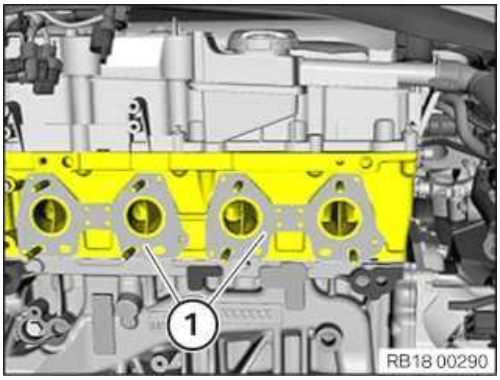


Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

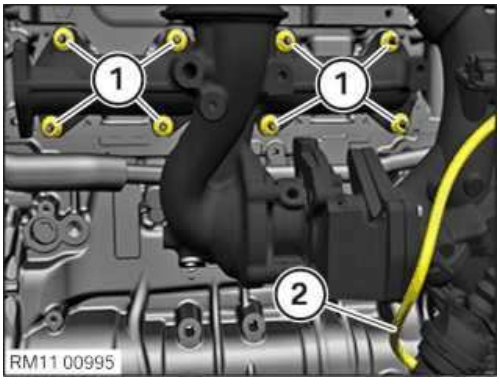
- Do not use any metal-cutting tools.

TECHNICAL INFORMATION



The sealing surfaces must be free from oils, grease and cleaning agents.

- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.



- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.

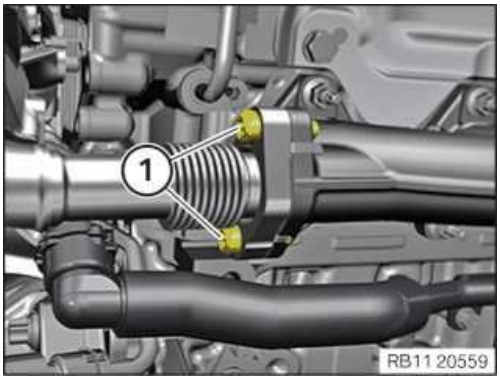
- Renew gasket (1).

  Parts: Gasket
- Install new gasket (1).

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

  Parts: Nuts
- Connect vacuum hose(2).

cardiagn.com



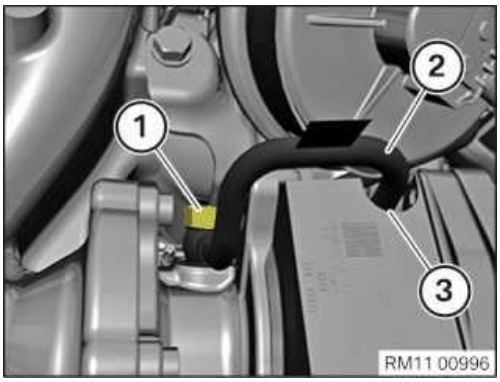
- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

- Tighten the screws (1).

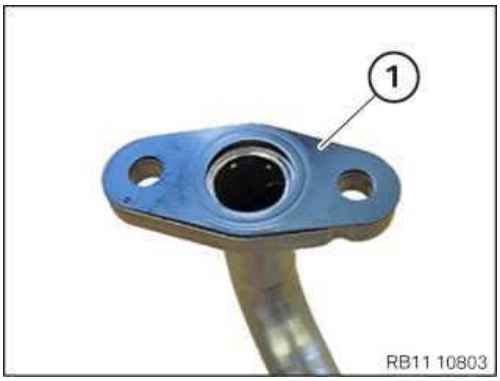


Exhaust-gas recirculation cooler to exhaust manifold

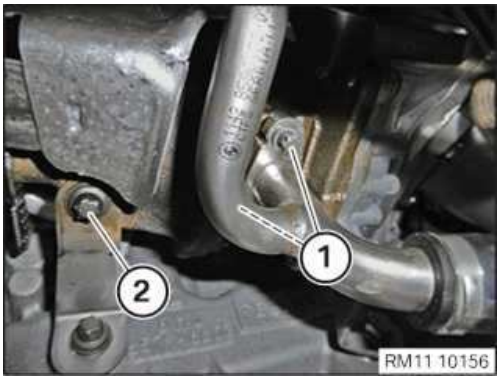
M8x28	Replace screws	Tightening torque	32 Nm

- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring



- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).



- Tighten bolt (1) from the right wheel arch.

cardiagn.com

- Renew seal (1) of oil return line.

  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

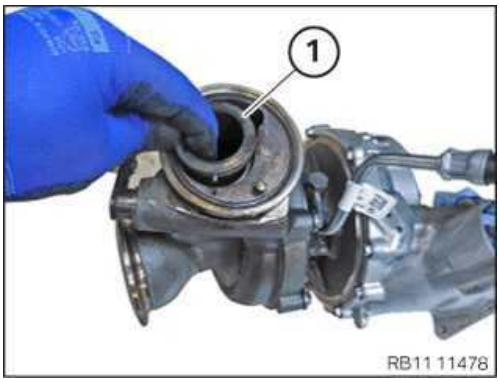
- Tighten down screw (2).

Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

96 – Installing the low-pressure stage turbocharger

RISK OF DAMAGE



Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

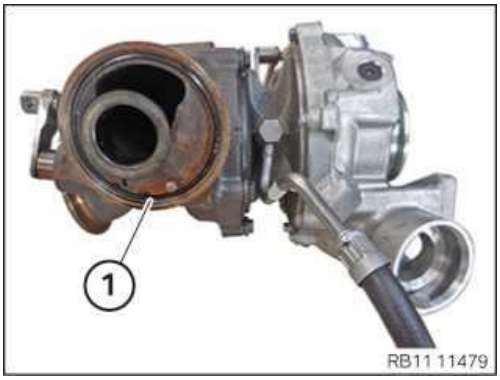
- Do not use any metal-cutting tools.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.



cardiagn.com

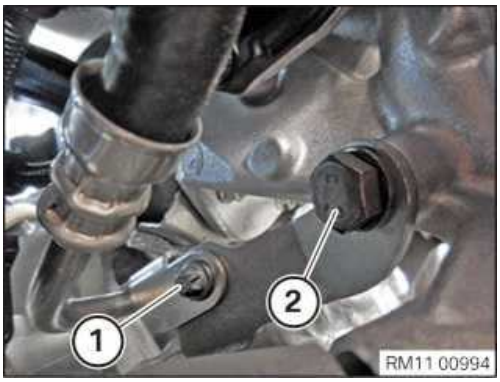
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



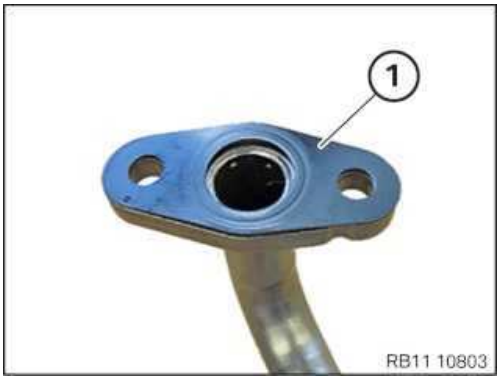
- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

- Tighten down screw (1).

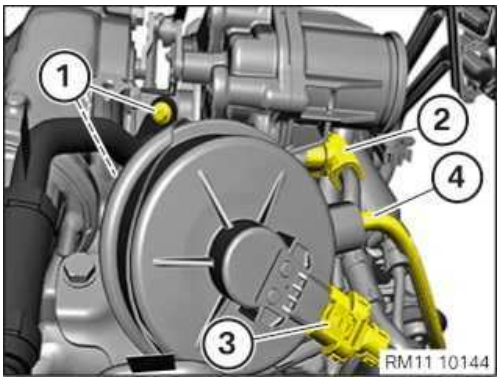


Oil feed line to bracket

Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

Holder to exhaust turbocharger and crankcase

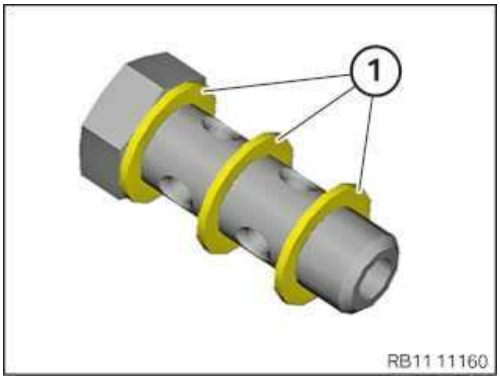


M8x16		Tightening torque	22 Nm

- Renew seal (1) on the oil return line.

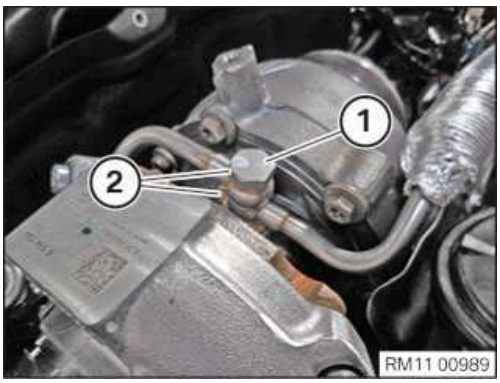
  Parts: Gasket

cardiagn.com



- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger



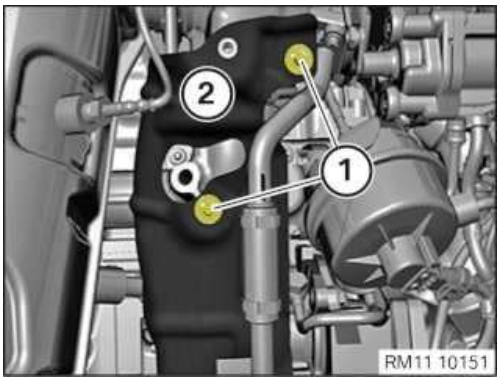
M6x12		Tightening torque	8 Nm

- Connect and lock connectors (2) and (3).

  The locks must engage audibly.
- Connect vacuum hose (4).

- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.



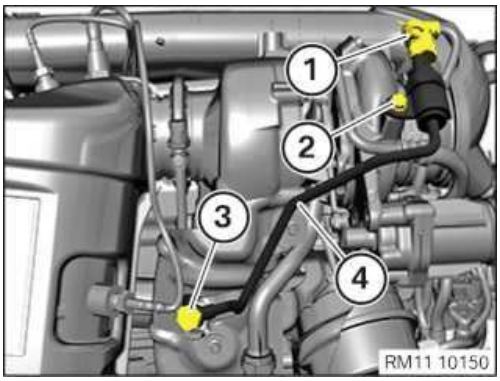
97 – Installing heat shield on exhaust turbocharger at bottom

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

cardiagn.com

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

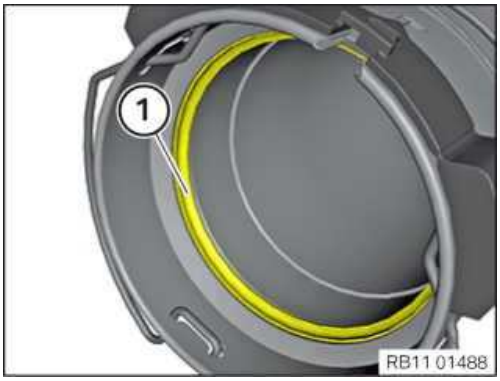
- Tighten down screw (2).

Standard screw connection M6

M6		8 Nm

- Connect connectors (1) and lock.

  Lock must audibly engage.



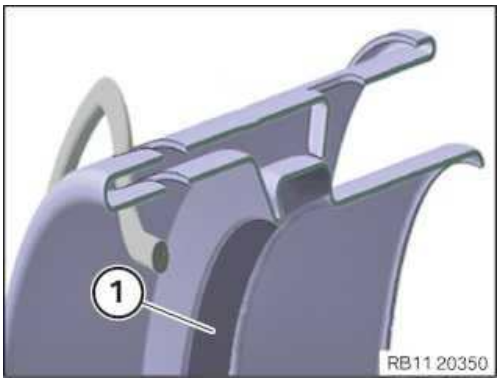
98 – Installing the right charge air duct between the exhaust turbocharger and the charge air cooler

RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.

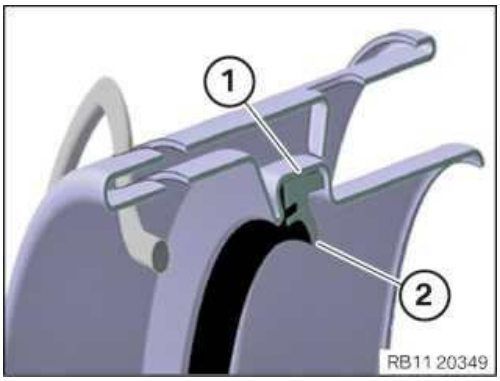


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

▶ **Replace damaged gasket**

TECHNICAL INFORMATION

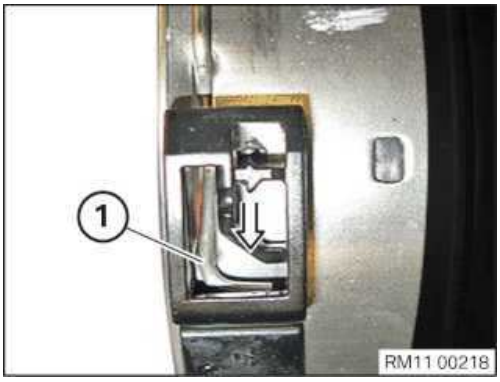


Do not use pointed or sharp-edged tools for the installation and/or removal.

- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

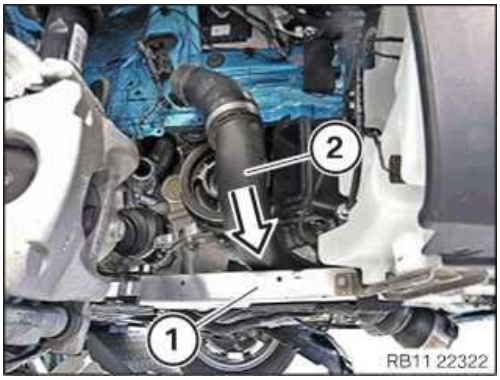
  The gasket groove (1) must be clean.

cardiagn.com



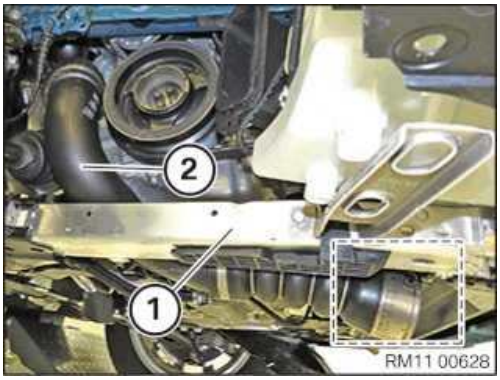
- Renew gasket.

  Parts: Gasket
- Install seal dry without lubricant or mounting agent.

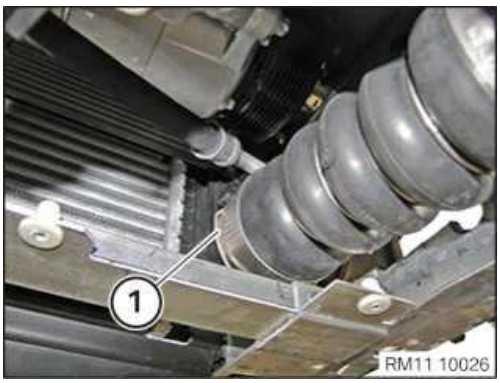


TECHNICAL INFORMATION

Incorrect assembly is possible. Ensure correct installation position.

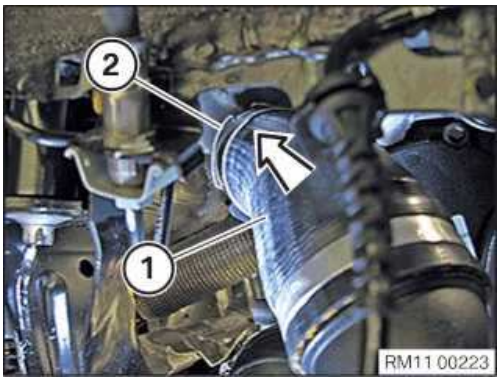


- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).

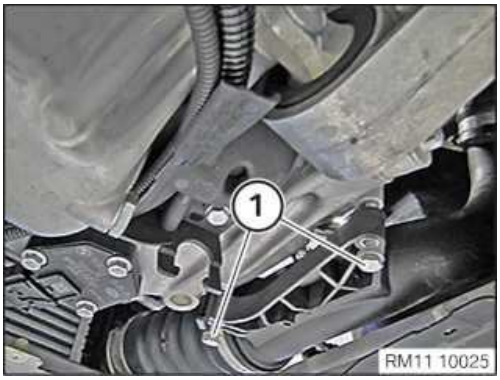


- Detach the locks (1) in the direction of the arrow from the brackets.
- Ensure that the locks (1) engage audibly.

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed in the charge air duct (1) in the **direction** of arrow between the side member and the deformation element and position.



- Pull the adapter of the front axle support (1) downwards to the front right.
- Position the charge air duct (2) in **marked** area on the charge air cooler.



- Feed in and install the charge air duct (1) on the charge air cooler .
- Make sure the charge air duct (1) engages audibly on the charge air cooler.

cardiagn.com

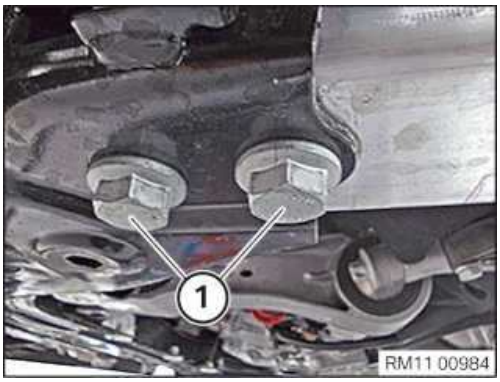
- Feed in and install charge air duct (1) in the **direction** of the arrow on exhaust turbocharger.

  The locks (2) must engage audibly.

- Tighten the screws (1).

Charge air duct to oil sump

M6		Tightening torque	8 Nm



- **If installed:**
- Feed in and install the ride height sensor (3).
- Tighten the screws (2).

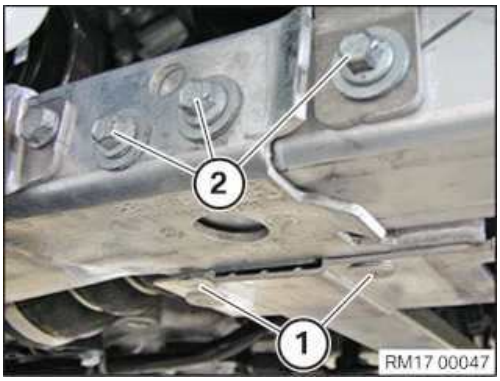
Ride height sensor holder to front axle support

M6		Tightening torque	8 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

- Tighten the screws (1) on the adapter of the front axle support.

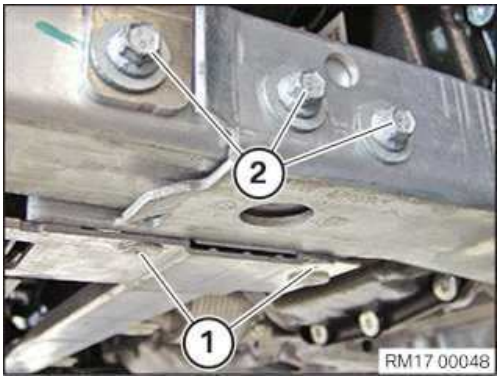


Adapter, front axle support to front axle support

		Tightening torque	100 Nm

- Guide in cross connection (3) and install.
- Guide in locks (2) and install.
- Lock the locking pins (1).
- Ensure that the locking pins (1) audibly engage.

cardiagn.com



- Tighten the bolts (2) at the front left.

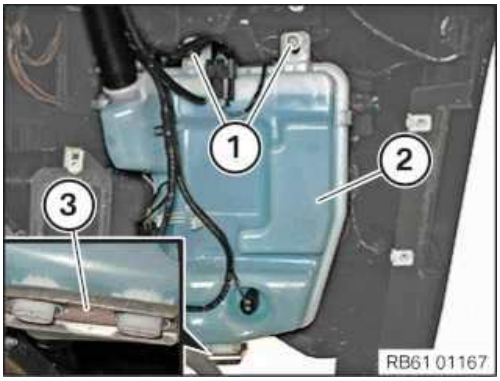
Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front left.

- Tighten the bolts (2) at the front right.



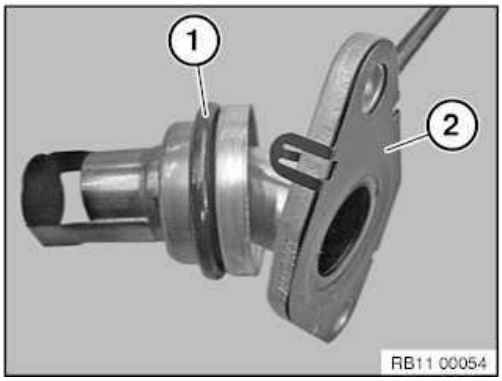
Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front right.

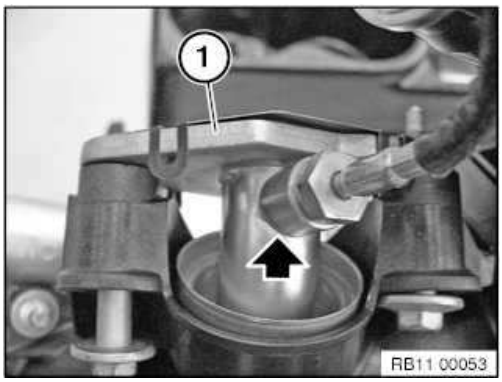
99 – Install the washer fluid reservoir in the fixture



- Feed washer fluid reservoir (2) into the mounting (3) and install.
- Tighten the screws (1).

Washer fluid reservoir to body

M6x20		Tightening torque	8 Nm

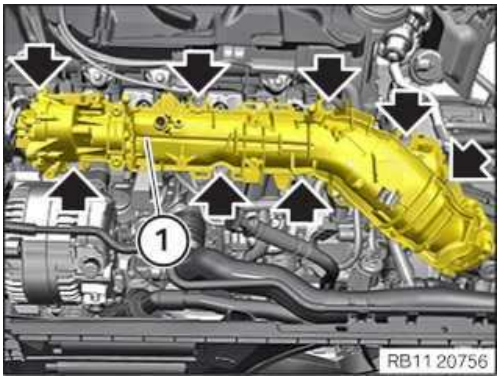


100 – Installing the intake plenum

- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position the seal (2) and clip it in.

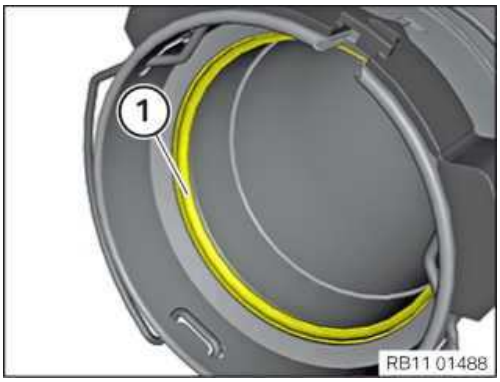


- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

cardiagn.com

- Renew gaskets (1).

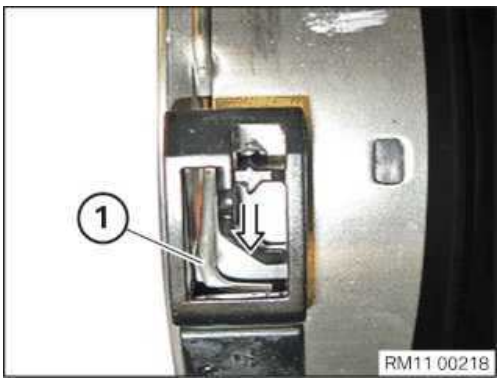
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



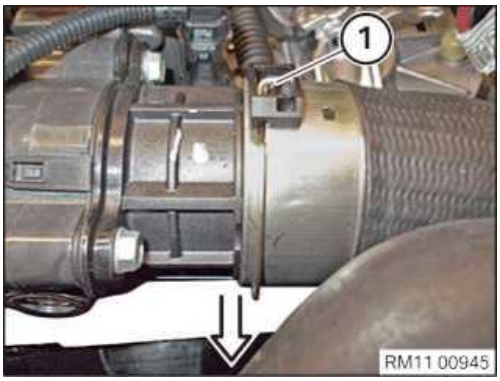
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

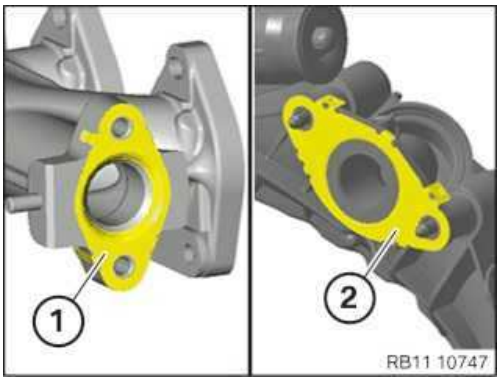
  Parts: Sealing ring

- Engage the lock (1) on the bracket (arrow).

cardiagn.com

- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.



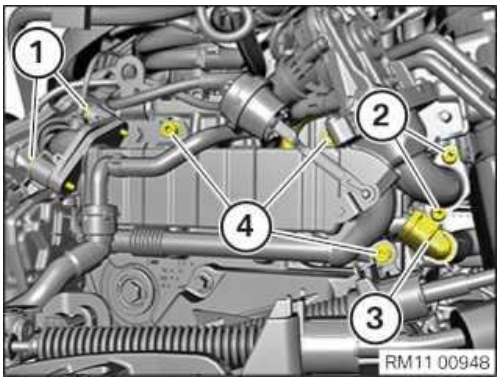
101 – Installing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

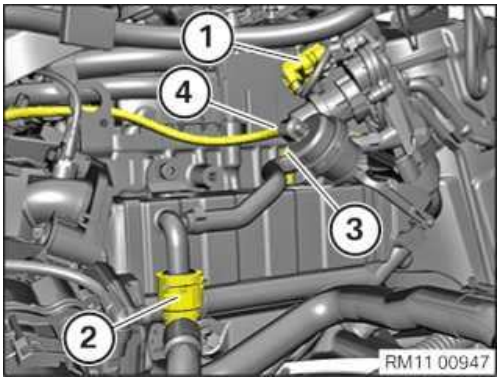
Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold



M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

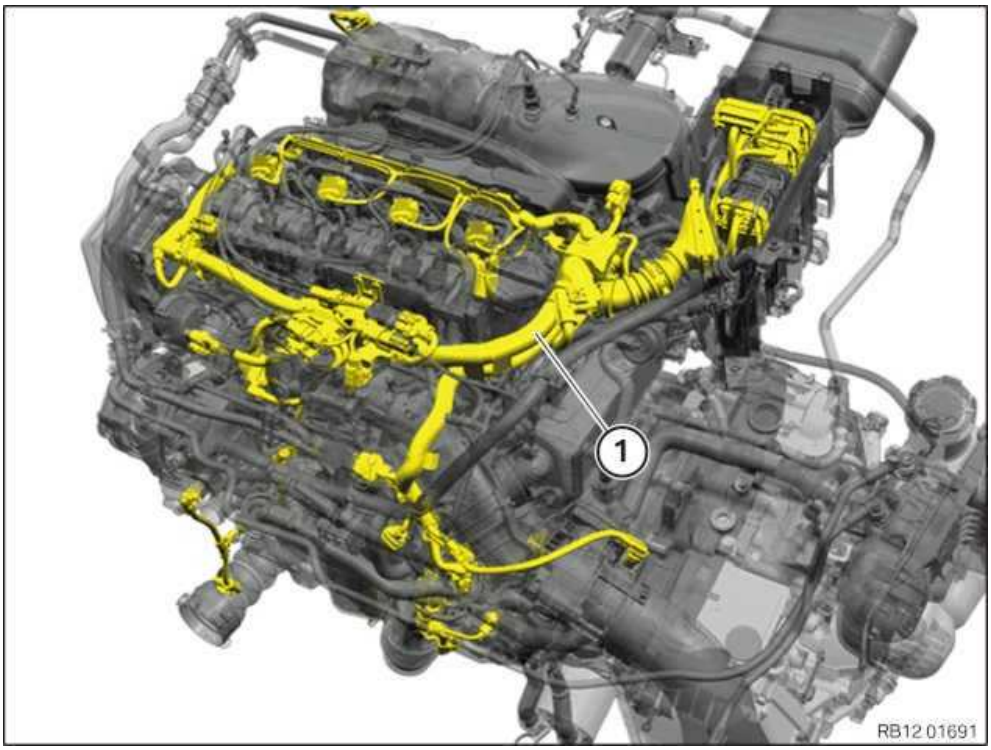
  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

TECHNICAL INFORMATION

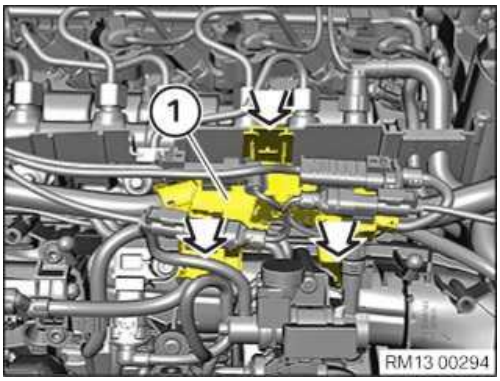
Make sure that the connections are locked correctly. The locks must engage audibly.



- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

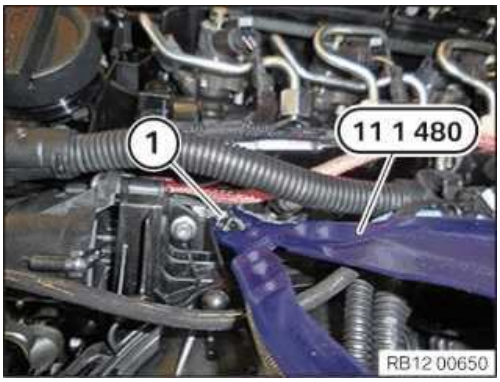
  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

102 – Fastening the wiring harness section for the intake plenum



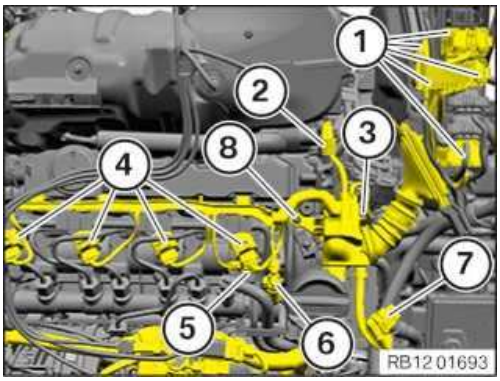
cardiagn.com

Overview: Wiring harness section for the engine



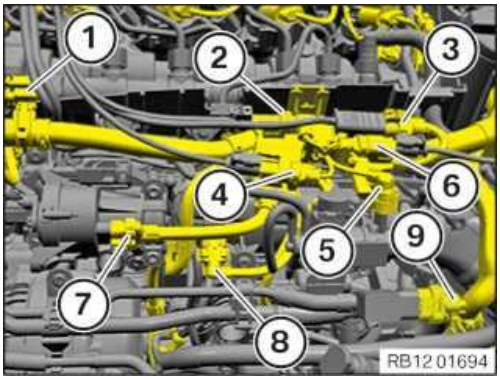
1 Wiring harness section for the engine

▶ **Installing the cable clip for the intake plenum**

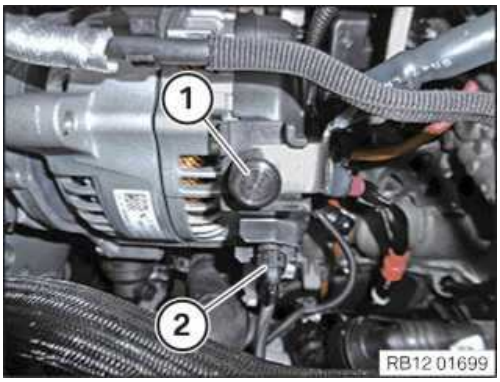


- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.



cardiagn.com

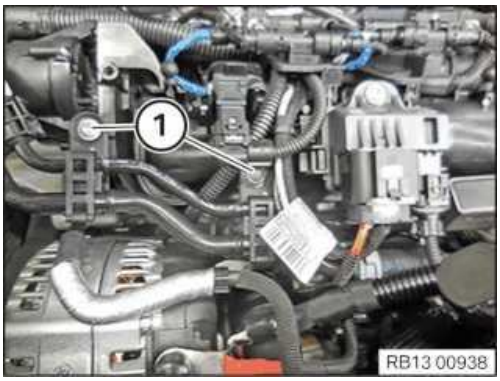


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.

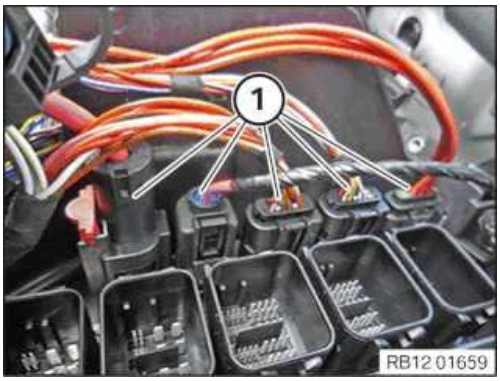


- Connect and lock the connector (2).

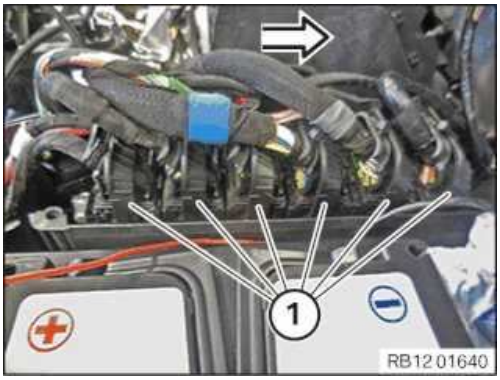
  Lock must snap audibly into place.
- Connect the positive battery cable (1) and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

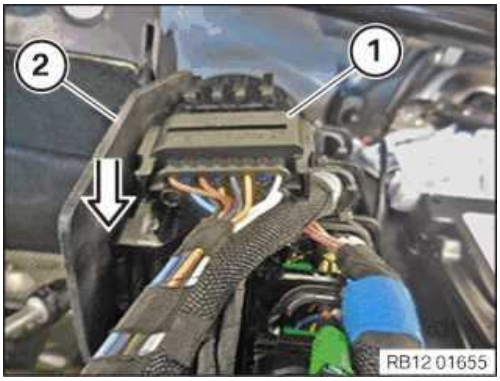


- Position the fuel line.
- Tighten the screws (1).

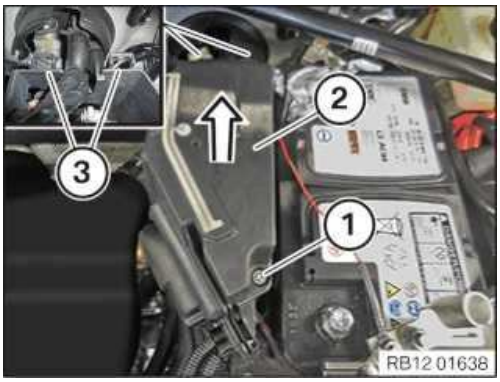


Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

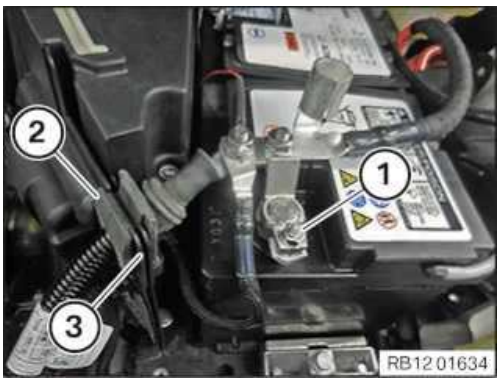


cardiagn.com



- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

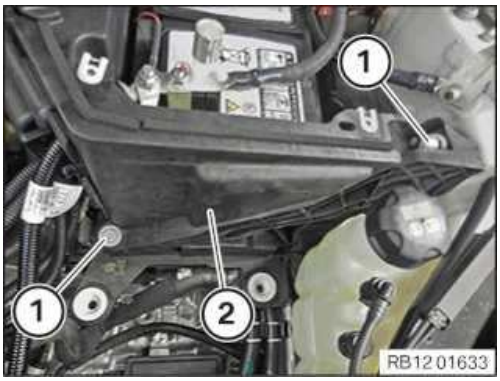


- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm



- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

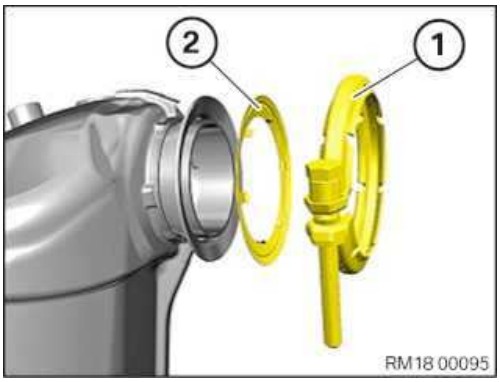
NutM6		Tightening torque	5 Nm

cardiagn.com

- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm



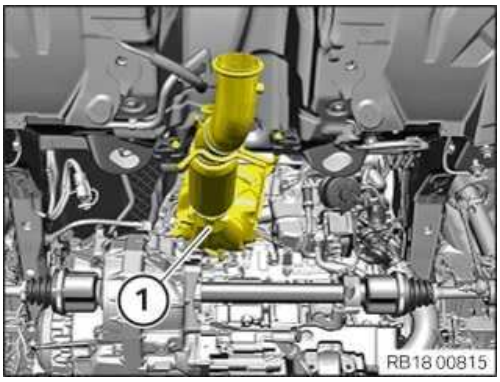
103 – Installing the diesel particulate filter

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

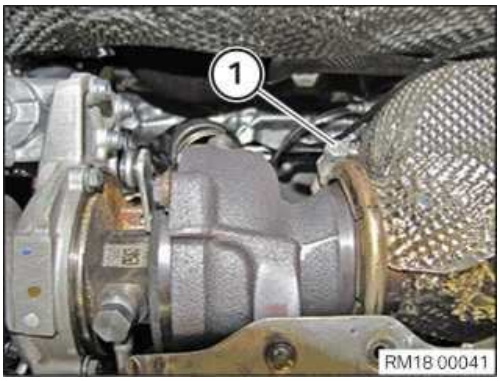
- Remove and install heavy components with the aid of another person/other persons.



- Renew the V-clip (1).

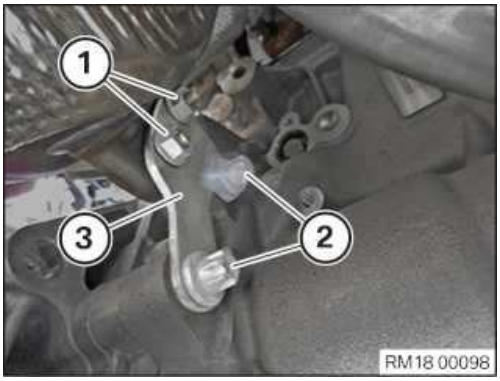
  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket

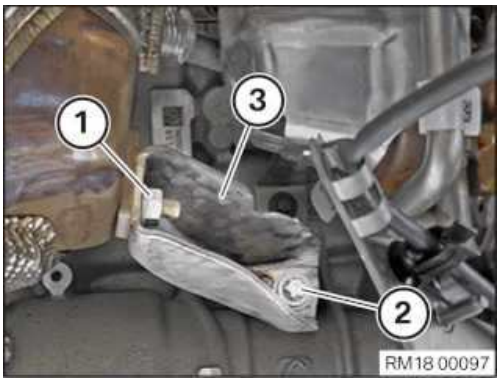


- Before installing the diesel particulate filter: Mount fitting aid (1) for the flexible tube.

- Carefully insert and install the diesel particulate filter (1).



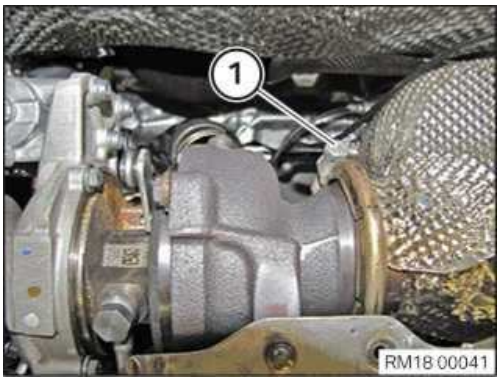
cardiagn.com



- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

- Tighten nuts (1) by hand.

- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.



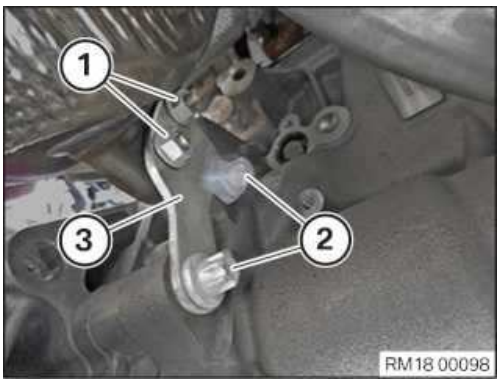
- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).

- Remove fitting aid (1) for the flexible tube.

cardiagn.com

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger



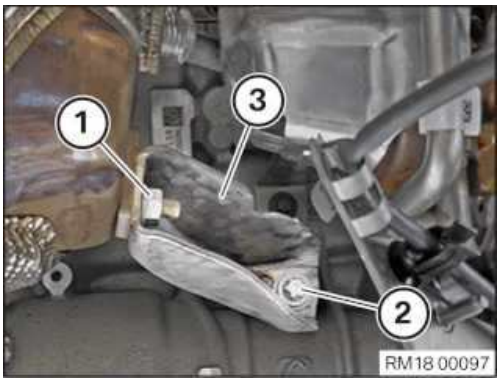
V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screws (2).



Diesel particulate filter holder to gearbox

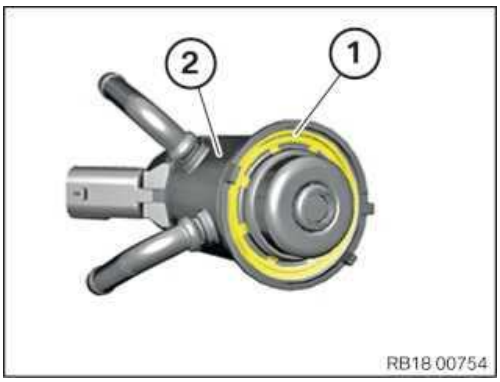
M12x75		Tightening torque	66 Nm

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screw (2).

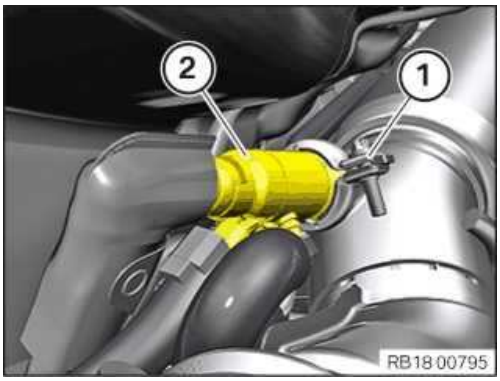


Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

Diesel particle filter to holder

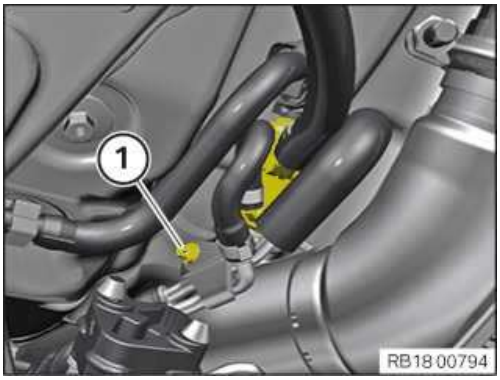


M8 hexagon nut		Tightening torque	19 Nm

- Renew sealing ring (1) of the SCR metering module (2).

  Parts: Sealing ring

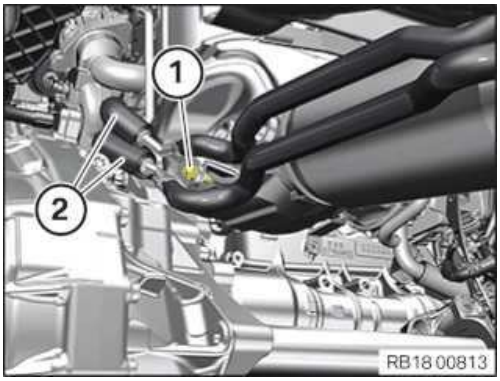
cardiagn.com



- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

SCR metering module V-clip to exhaust system

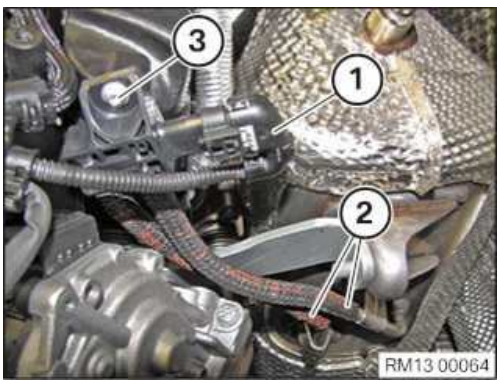


V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

▶ **Installing differential pressure sensor**

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

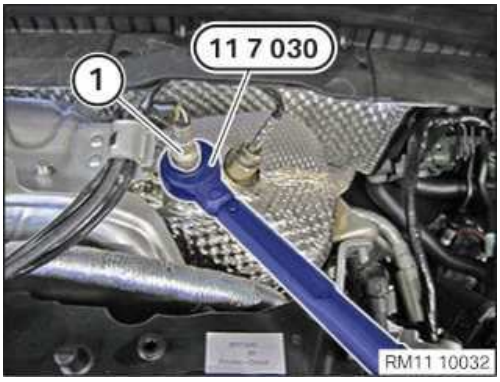
Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

104 – Install the control sensor

cardiagn.com



TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

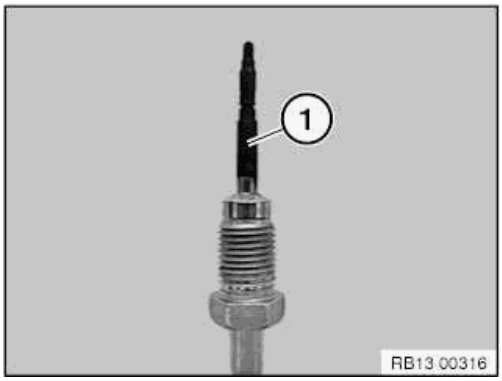
For oxygen sensors that are reused, the following should be observed:

Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Feed in front oxygen sensor (1) and install.
- Tighten front oxygen sensor (1) using special tool .

Control sensor

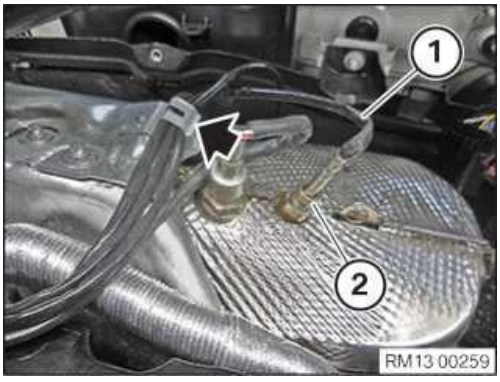


Control sensor		Tightening torque	50 Nm

- Lay and secure cable of oxygen control sensor.
- Secure the connector (2) to the holder.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

105 – Install the exhaust-gas temperature sensor on the diesel particulate filter



RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and renew the exhaust temperature sensor as needed.

- Feed in and install the exhaust temperature sensor (2).
- Tighten the exhaust temperature sensor (2).

Exhaust temperature sensor to diesel particulate filter

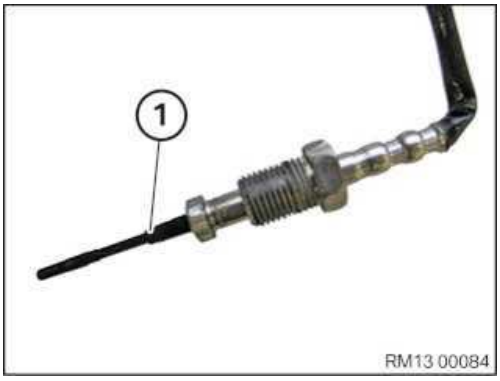
Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install cable (1) of the exhaust temperature sensor in the clamp (arrow).

cardiagn.com

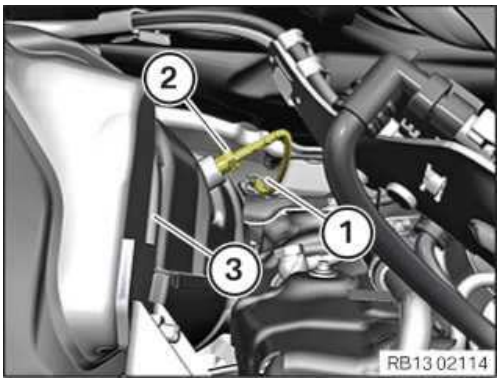
- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



106 – Installing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

RISK OF DAMAGE

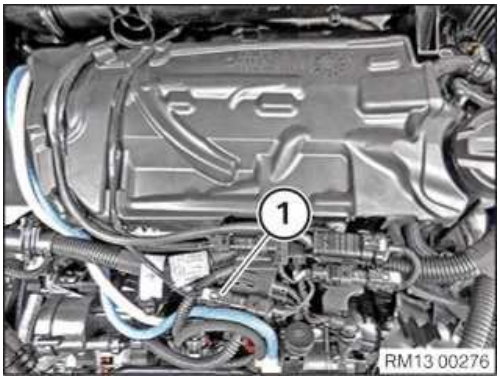


Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Make sure the gauge tip (1) is not damaged during installation.

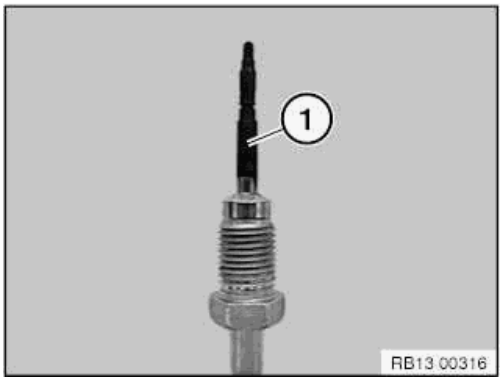


- Guide the exhaust temperature sensor (2) into diesel particulate filter (3) and install.
- Tighten the exhaust temperature sensor (2) with conventional tools .

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install the cable of the exhaust temperature sensor (2) in the clamps (1).

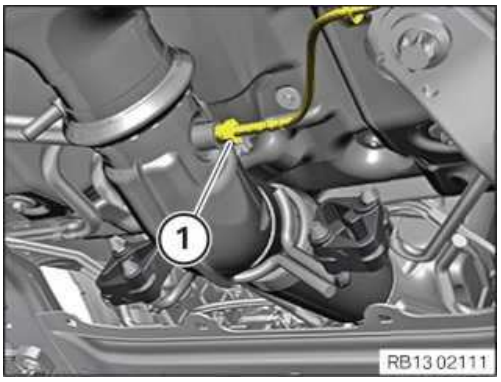


- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

107 – Installing exhaust temperature sensor on catalytic converter

cardiagn.com



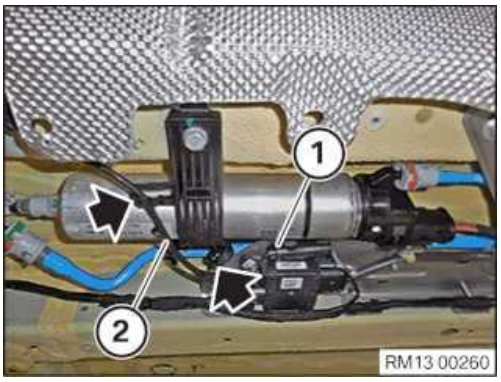
RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

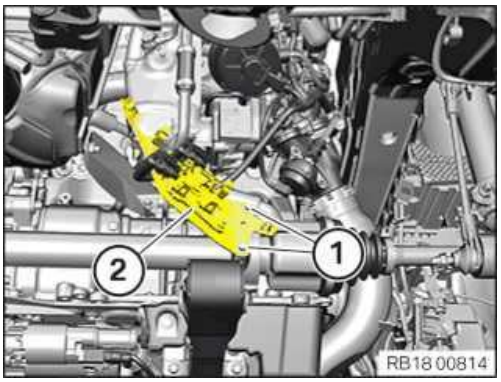
- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.



- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).

Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

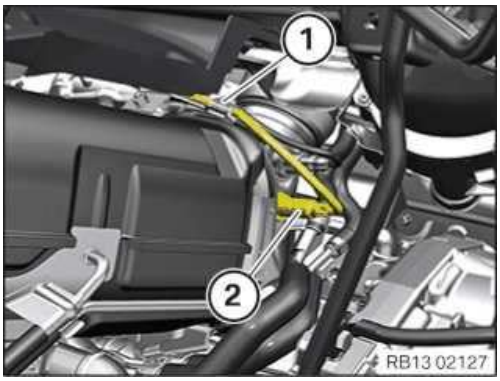


- Secure the cable clips (1).

- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

108 – Install holder for oxygen sensor

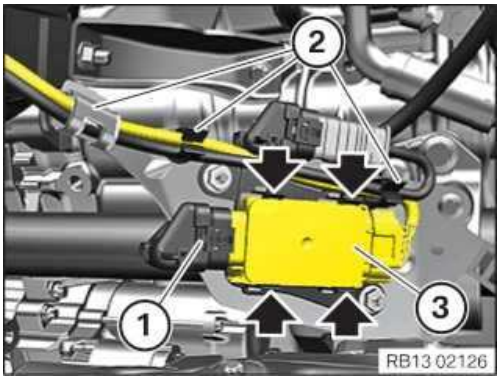


- Insert and install the holder (2).
- Tighten the screws (1).

Oxygen sensor holder to intermediate shaft

Hexagon screw M6x16		Tightening torque	8 Nm

109 – Installing the nitrogen oxide sensor before SCR catalytic converter



cardiagn.com

- Insert nitrogen oxide sensor before the SCR catalytic converter (2) and install.
- Tighten the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

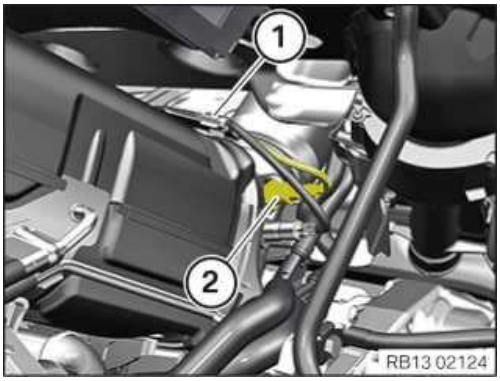
Nitrogen oxide sensor before SCR catalytic converter

Sensor		Tightening torque	50 Nm

- Install and lock the evaluation electronics for the nitrogen oxide sensor (3) (arrows).
- Insert the evaluation electronics cable for the nitrogen oxide sensor (3) into the clamps (2) and install.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

110 – Install the monitoring sensor



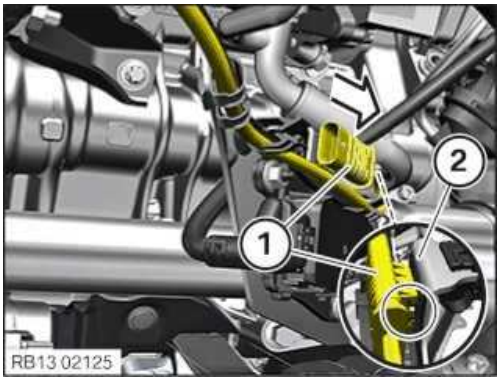
TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

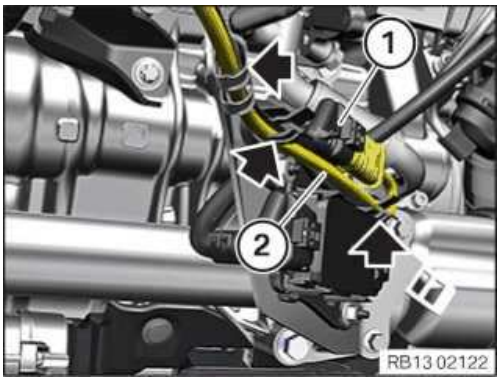
For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue



- Feed in the monitoring oxygen sensor (2) and install.
- Tighten the monitoring oxygen sensor (2) with special tool **0 491 074 (11 7 020)** .

Monitoring sensor

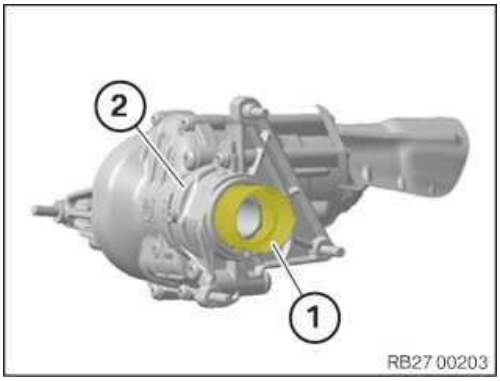
Sensor		Tightening torque	50 Nm



- Insert the cable of the monitoring oxygen sensor (2) into the clamp (1) and secure it.

- Connect the connector (1) with the bracket (2) in the direction of arrow.
- Make sure that the connector (1) is locked correctly in the marked area.

  The connector (1) must engage audibly.



cardiagn.com

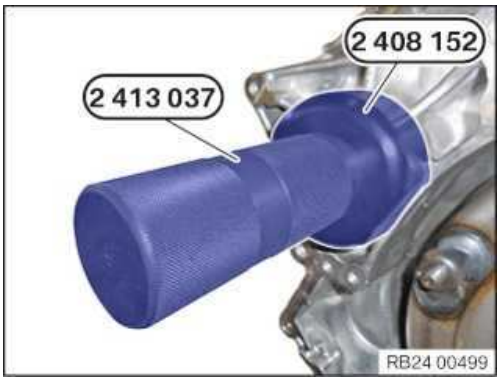
- Insert and attach the cable of the monitoring oxygen sensor (2) to the clamps (arrows).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

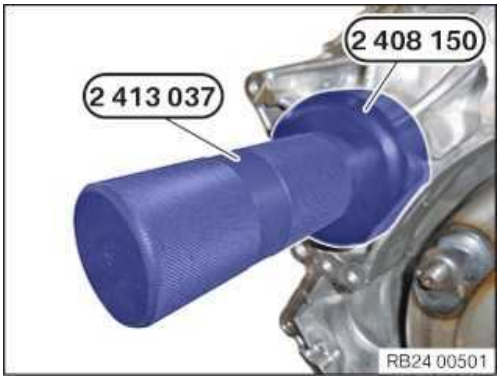
111 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

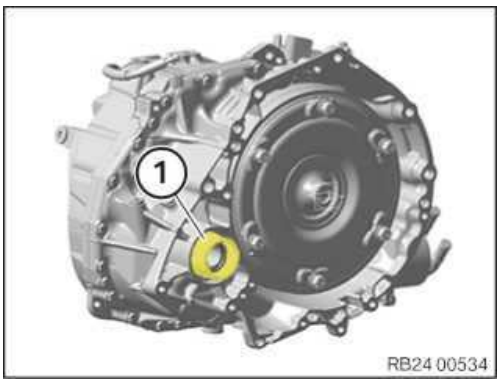
- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.



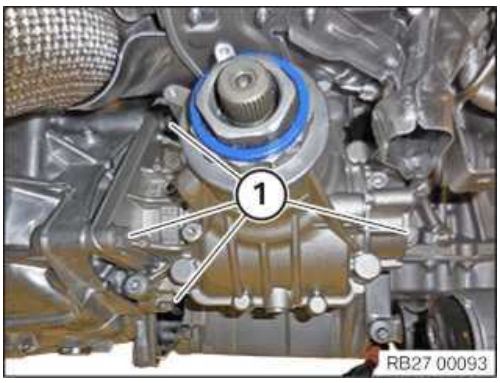
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



cardiagn.com

- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

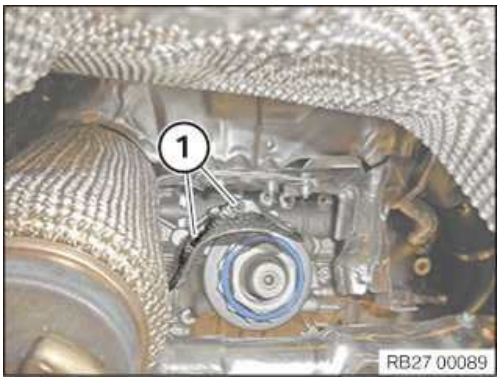


- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754



- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

cardiagn.com

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

Technically suitable transfer box and electrical transmission oils	

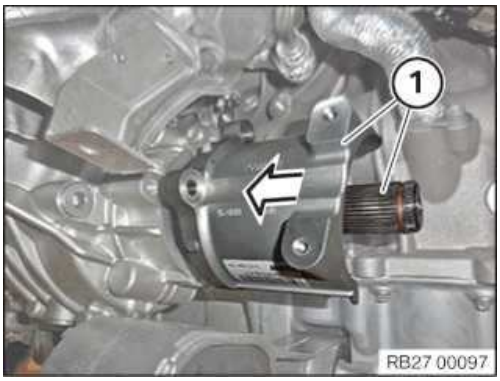
Main group 27

- Tighten the oil filler plug (1).

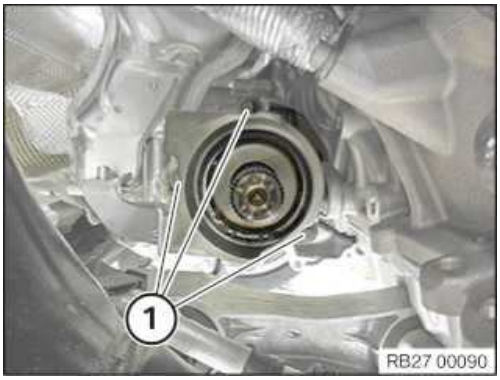
Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm

112 – Install the intermediate shaft with the support tube



- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

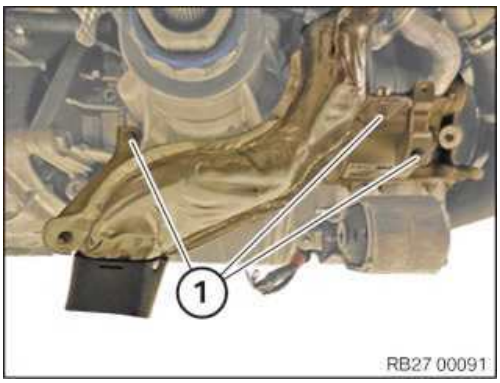


Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

cardiagn.com

- Install the intermediate shaft with support tube (1) in the transfer box.



- Position screws (1).

Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

- If installed: Install air duct.
- Tighten the screws (1).

113 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

cardiagn.com

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

114 – Installing right output shaft partially

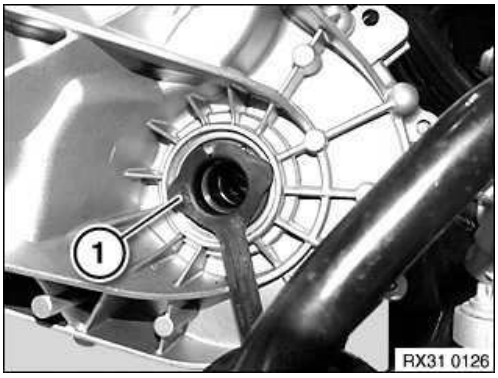
- Renew the circlip (1).

  Parts: Circlip
- Slide output shaft into the transmission as far as the limit position.
- Check for secure seat by levering.

115 – Partially installing the left output shaft

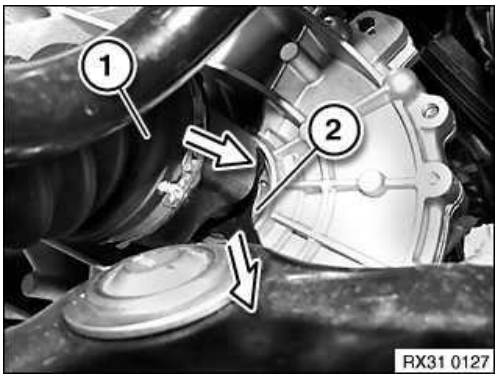
- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).



- Do not mix up circlips.

  Different types of output shafts fitted:
  - M: Manual transmission
  - A: Automatic transmission



cardiagn.com

- Renew circlip (arrow).

- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

- Insert output shaft (1) into transmission.
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

116 – Install propeller shaft.

CAUTION

Component with heavy weight.

Danger of injury!

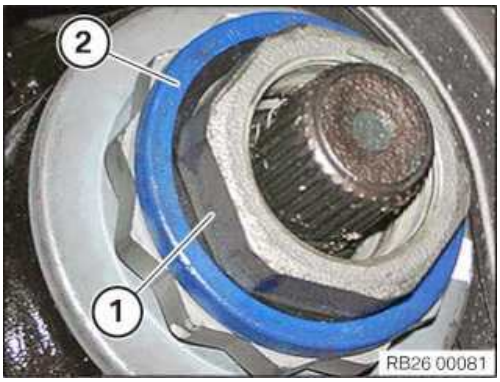
- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

Damage to the propeller shaft during installation.

Non-observance of the installation guidelines for the propeller shaft on the rear axle differential may cause severe damage.

- Always renew the recessed nut on the rear axle differential. Screw locking must be available.
- Strictly observe a minimum hardening time of two hours after having screwed in the recessed nut. The hardening time may be longer at lower temperatures.



cardiagn.com

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

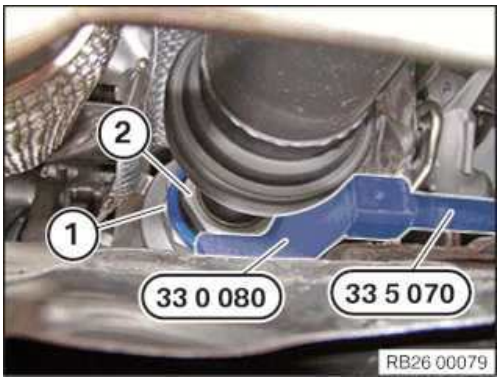
- Renew recessed nut (1).

  Parts: Insert nut
- Renew the retaining clip (2) and the seal.

  Parts: Retaining clip, seal
- Insert the seal with the recessed nut (1) and install.
- Insert the retaining clip (2) and install.
- Make sure that recessed nut (1) is screwed in within 5 min.
- Make sure that the hardening time of **minimum** 2 h for the recessed nut is observed.

  The hardening time must be extended at lower temperatures.

- Insert the propeller shaft (1) and install.
- Always support the propeller shaft (1) with a conventional jack.



- Hand-tighten the bolts (1).

- Push the propeller shaft (2) against the recessed nut (1) up to the limit position.
- Screw the propeller shaft (2) at least 2 thread starts onto the recessed nut (1) by hand.

cardiagn.com

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to tighten the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.

- Tighten the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

Propeller shaft to transfer box

		Tightening torque	80 Nm

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Assemble the screw connection (1) of the flexible disc (2) and the three-hole flange (3) according to the mark.
- Renew screws (1).

  Parts: Bolts

- Hand-tighten the bolts (1).

- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

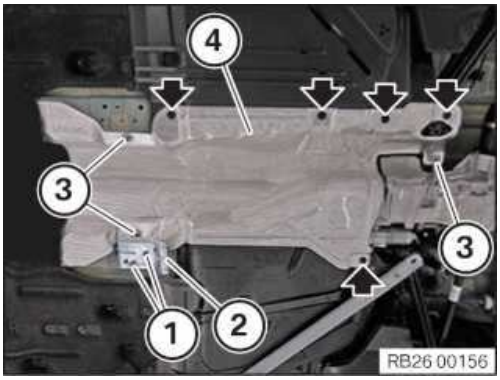
cardiagn.com

- Tighten the bolts with the special tools **0 490 504 (00 9 120)** and .

Flexible disc to rear axle final drive

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

- Tighten the screws (1).



Centre mount to body

M8		Tightening torque	19 Nm

- Guide the special too l out between the front and rear propeller shaft and remove.

117 – Installing the rear heat shield

- Insert and install the heat shield (4).
- Tighten screws (arrows).

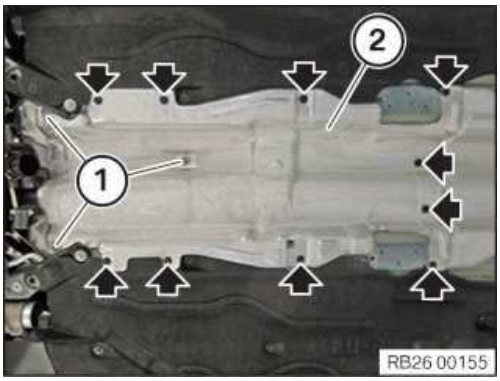
Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (3).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm



- Insert and install the holder (2).
- Tighten the screws (1).

Bracket to body

M8		Tightening torque	21 Nm

118 – Install the front heat shield

cardiagn.com

- Insert and install the heat shield (2).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (1).

Heat shield to body

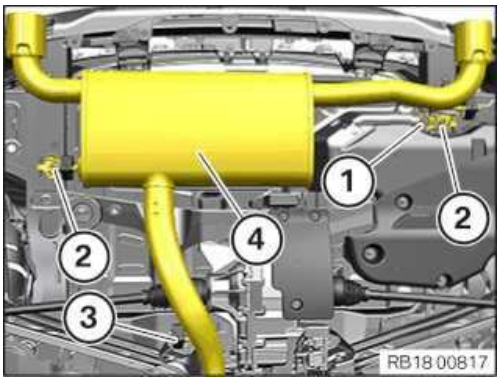
Bolts/nut		Tightening torque	3 Nm

119 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!



- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Feed in and install the exhaust system (4) with a second person.
- Renew nuts (2).

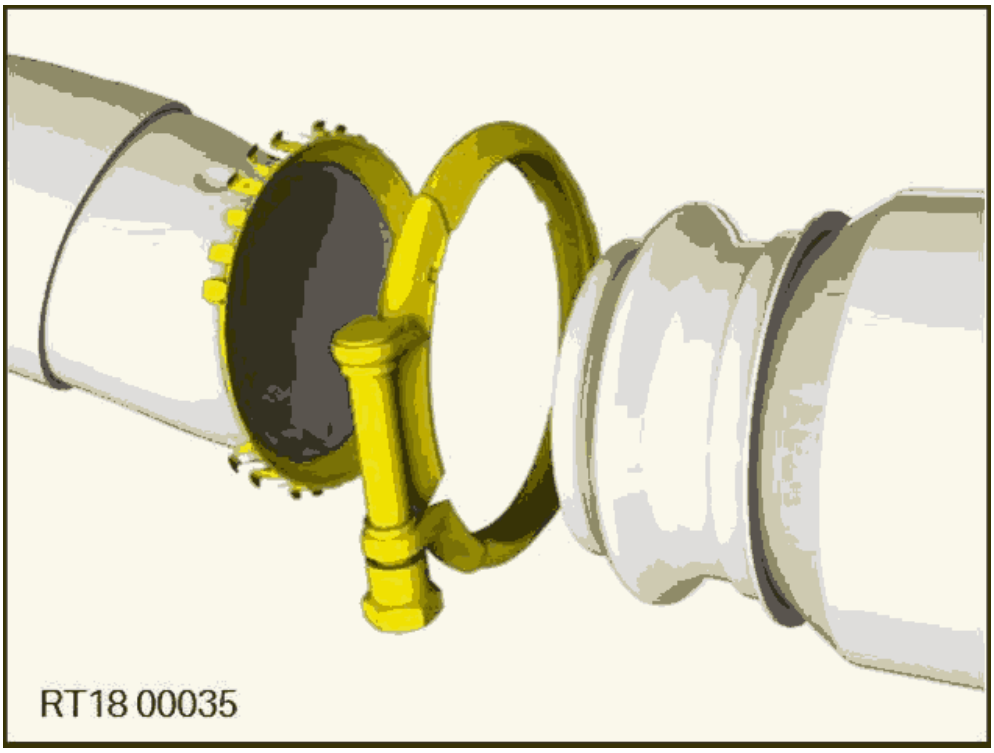
  Parts: Nuts
- Tighten nuts (2).

Exhaust system to body

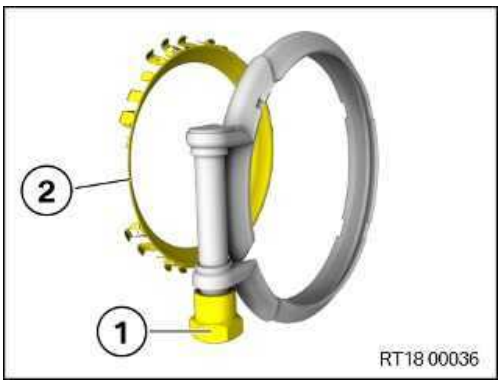
M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).

Exhaust bracket on body

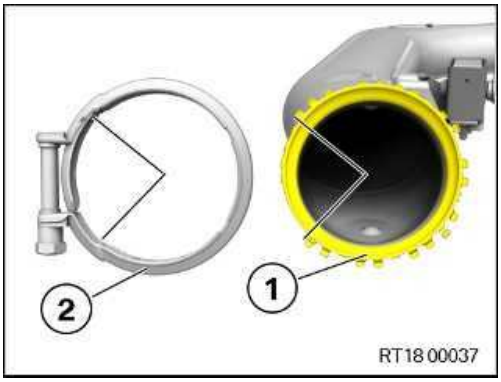


Hexagon screw M8x30		Tightening torque	19 Nm



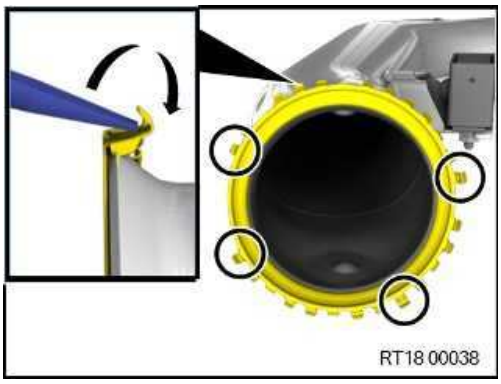
- Check the rubber mount (3) for damage and renew as needed.
- Mount rubber mount (3) on the exhaust system (4).

▸ **Install the V-clip**

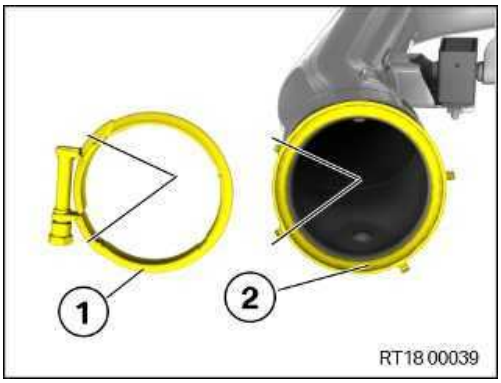


cardiagn.com

V-band clamp



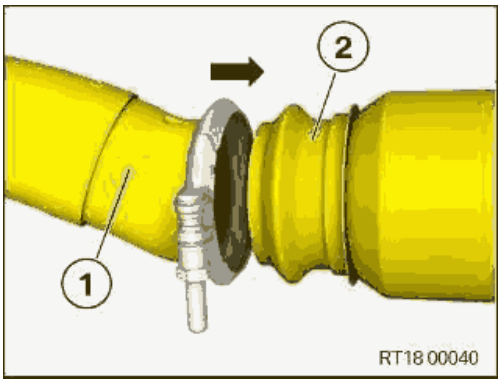
- Unscrew the nut (1) and remove the sealing ring (2).



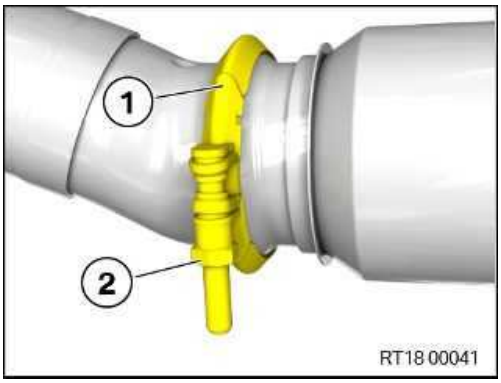
- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.

- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.

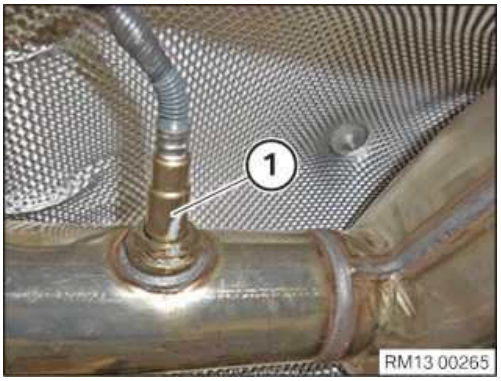


cardiagn.com



- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).

- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).

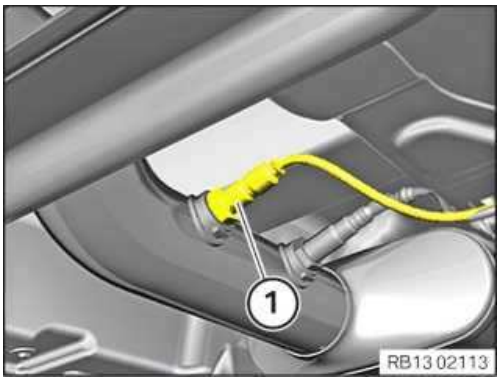


- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.

- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

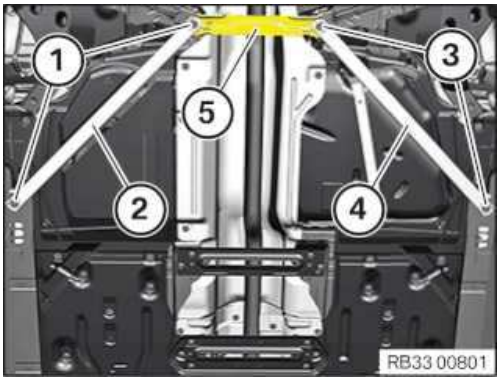


- Feed in, install and tighten diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

Sensor		Tightening torque	50 Nm

cardiagn.com



- Feed in, install and tighten nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

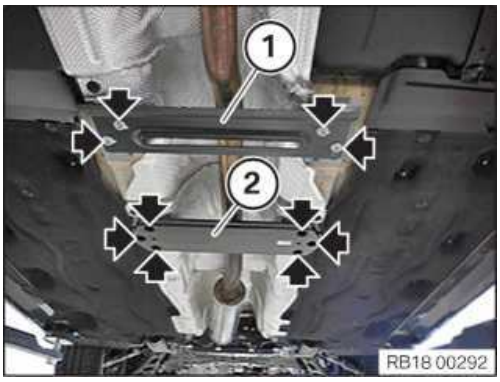
120 – Install the cross-member with torsion struts

- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °



- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Cross-member/torsion strut to axle support and mounting

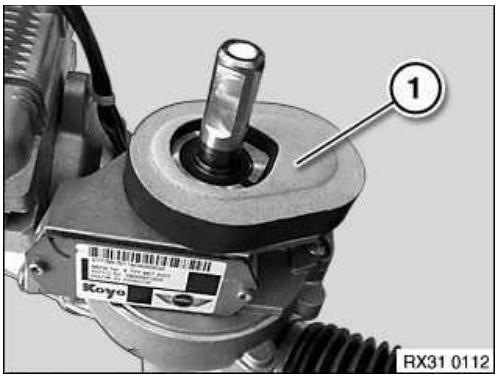
M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

121 – Install the connecting support on the tunnel in front and back

- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

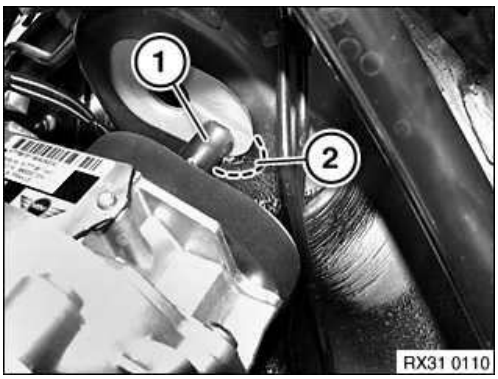
M10x18		Tightening torque	56 Nm



- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

M8x18		Tightening torque	28 Nm

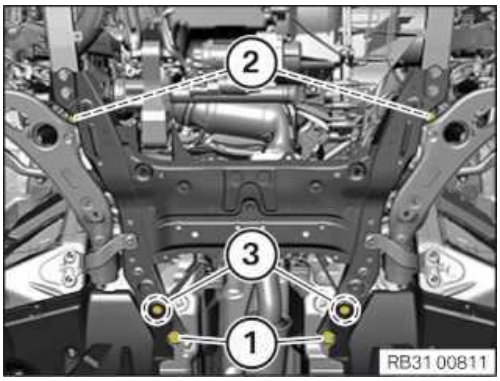


122 – Mount and secure the complete front axle

cardiagn.com

- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

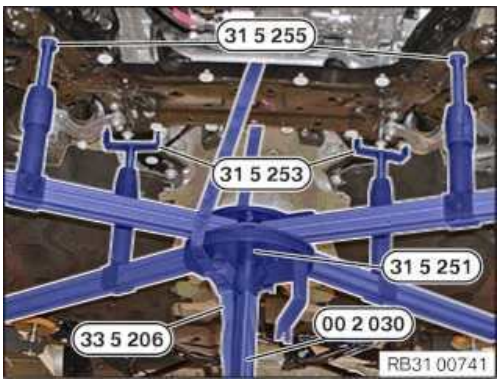
- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

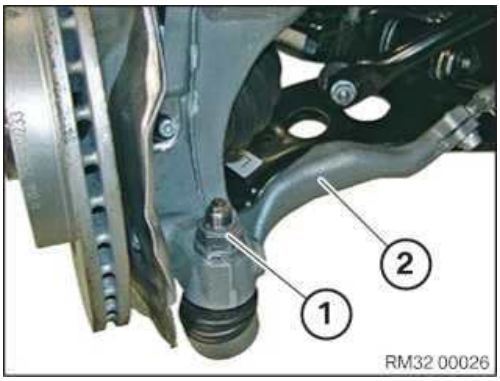
- Tighten down screws (2).



Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

- If necessary, tighten the screws in the areas (3).



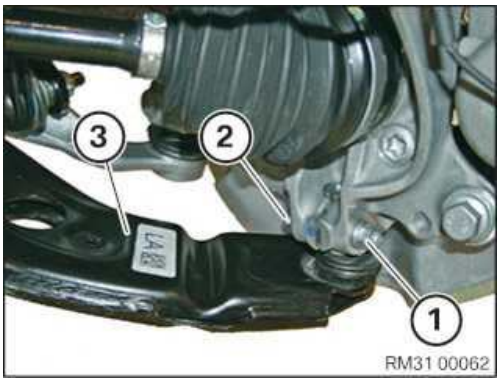
Underbody protection to body

Screw		Tightening torque	3 Nm

- Remove special tool from special tool .
- Lower universal jack **0 490 133 (00 2 030)** with the special tool and place it to the side.

cardiagn.com

NOTICE



Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm

NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

123 – Install the mounted parts on the front axle support

NOTICE

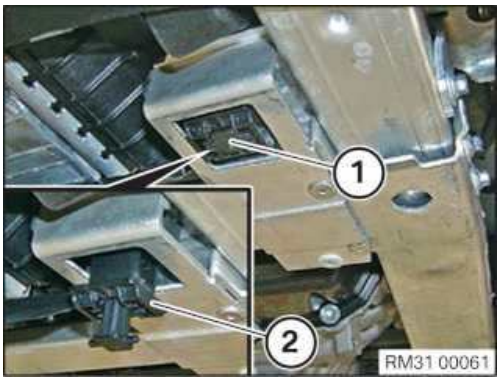
Perform the operations on the left and right side.

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

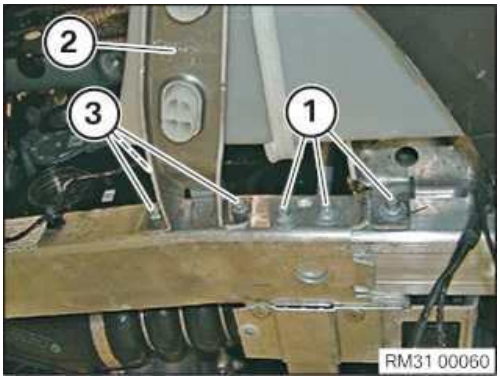
M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °



- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support

M12 screw		100 Nm



cardiagn.com

NOTICE

Perform the operations on the left and right side.

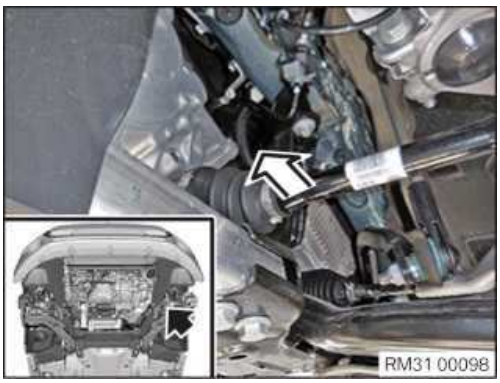
- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.

- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE



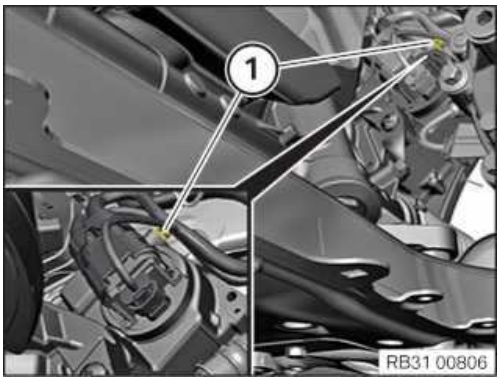
Perform the operations on the left and right side.

- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

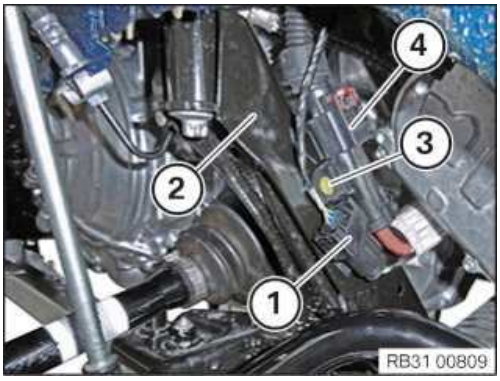
		Tightening torque	11,8 Nm

124 – Attaching connector at steering gear



- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.

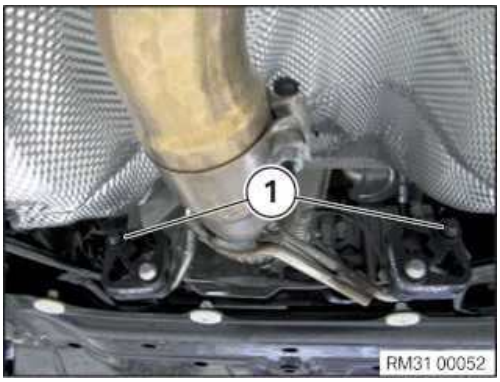


- Connect and lock connector (arrow) (1) with the steering gear.

cardiagn.com

- Fasten the wiring harness (1) on the steering gear.

▶ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

125 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.

126 – Securing anti-roll bar on left and right on the anti-roll bar link

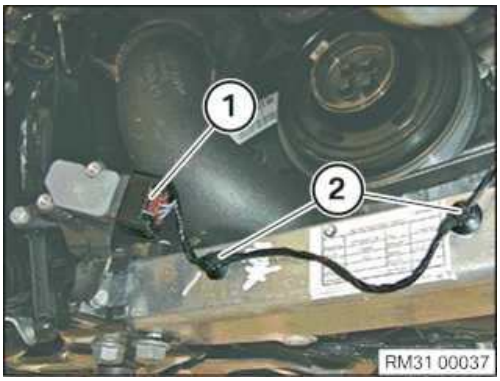
NOTICE

Perform the operations on the left and right side.

▶ **Fastening anti-roll bar on the anti-roll bar link**

- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

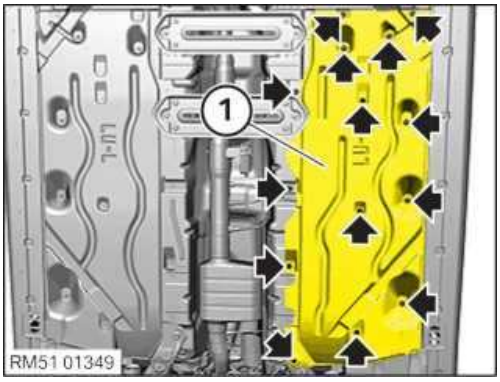
  Parts: Nut
- Tighten nut (1).



Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm



127 – With right installation: Securing the cable for the ride height sensor

cardiagn.com

- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

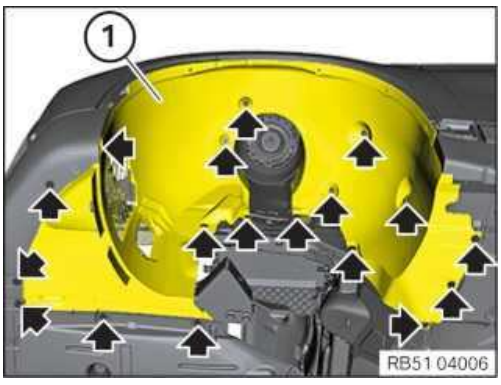
128 – Installing underbody panelling , right

- Correctly position the underbody panelling (1).
- Tighten all bolts and nuts (arrows).

Underbody panelling, side

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side



Plastic nut		Tightening torque	2,6 Nm

129 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

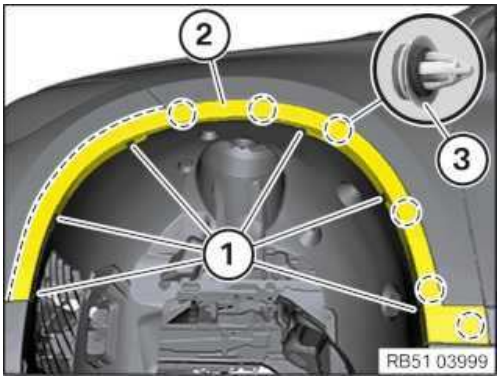
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

130 – Installing both front wheels

▶ Mounting the wheel

▷ Clean the contact surfaces between the brake disc and the wheel rim

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

cardiagn.com

- Renew mounting bolt (1).

  Parts: Mounting bolt

- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

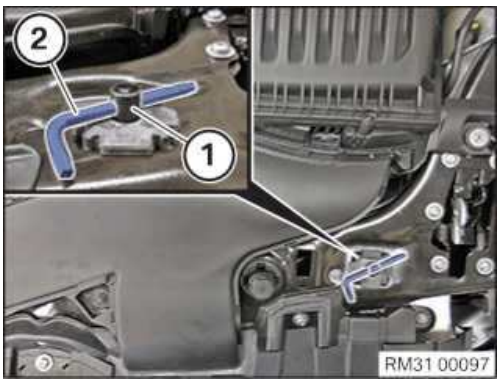
The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts



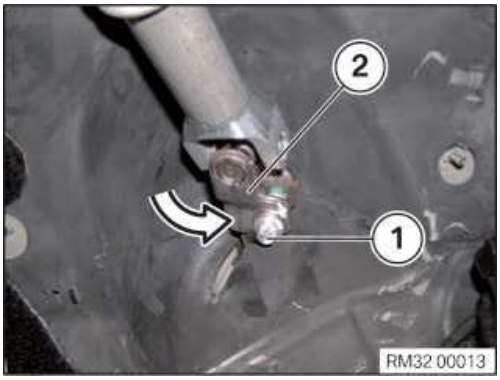
- Clean the wheel bolts.
- Check the wheel bolts and threads for damage, renew the wheel bolts if necessary.
- Join and tighten the wheel bolts (arrows).

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

cardiagn.com

131 – Removing fastener for left and right radiator



NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

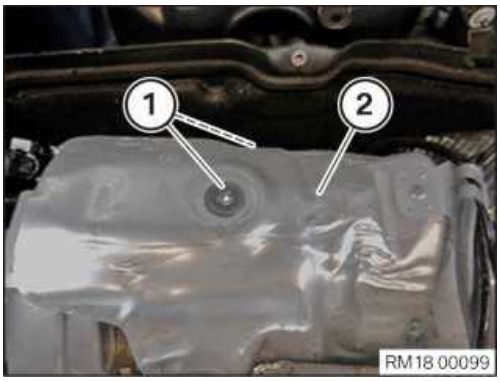
132 – Secure the steering shaft at the bottom on the steering gear

- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm



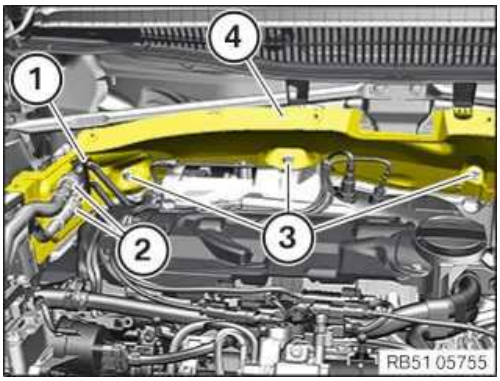
- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

133 – Install the heat shield on the exhaust turbocharger

- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.



Heat shield for exhaust turbocharger

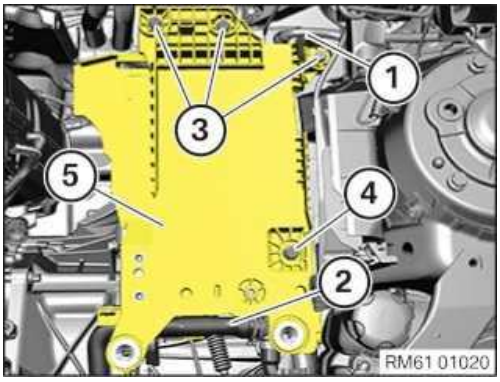
Torx screw BM 6x12		Tightening torque	10 Nm

- Fasten the cable at the clips .

134 – Installing rear bulkhead upper part

cardiagn.com

- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).



Rear bulkhead upper part to lower section of bulkhead

Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

135 – Install the battery holder

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

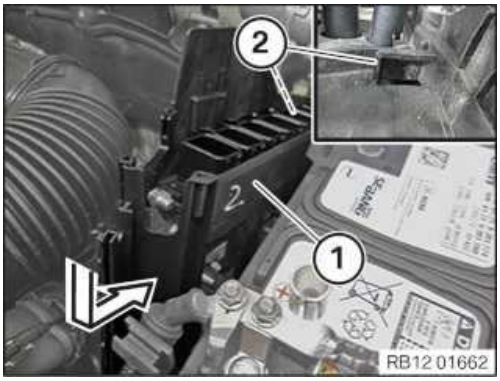
Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

136 – Install electronics box

Prerequisite



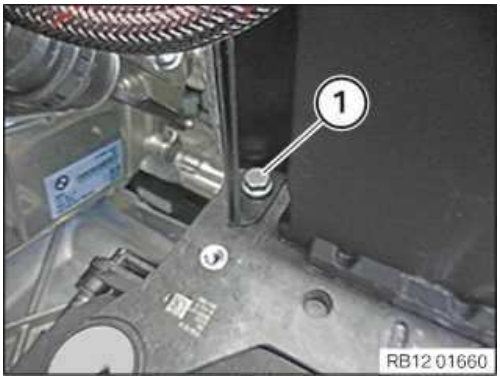
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

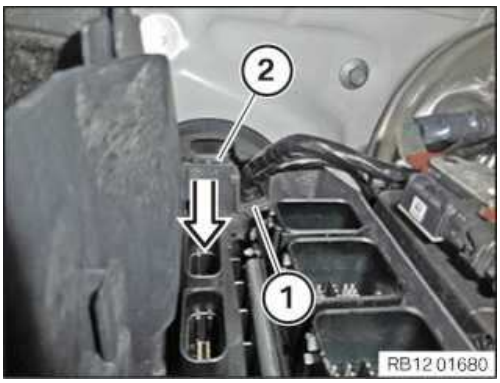
Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

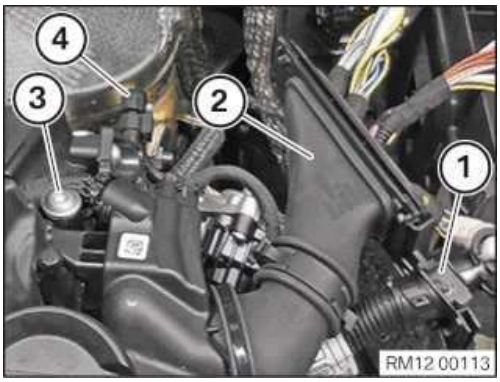


- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

cardiagn.com



- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).

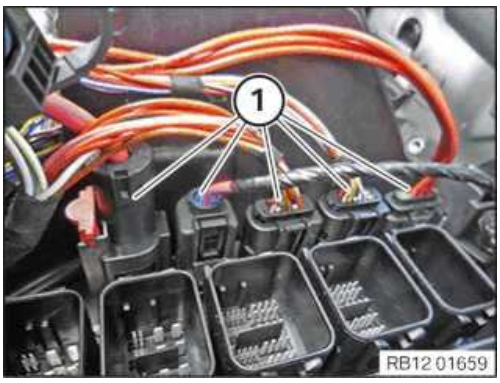


- Tighten down screw (1).

Electronics box to battery tray

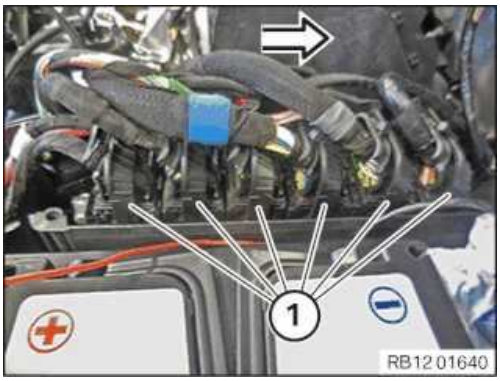
M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



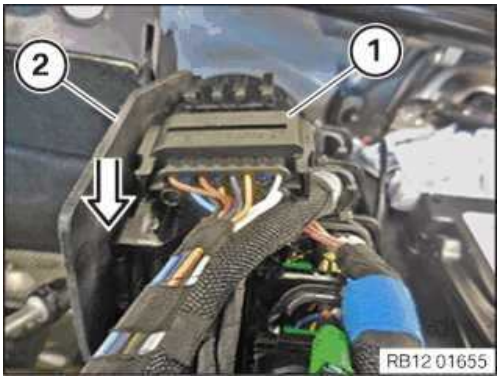
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

Wiring harness to cylinder head cover

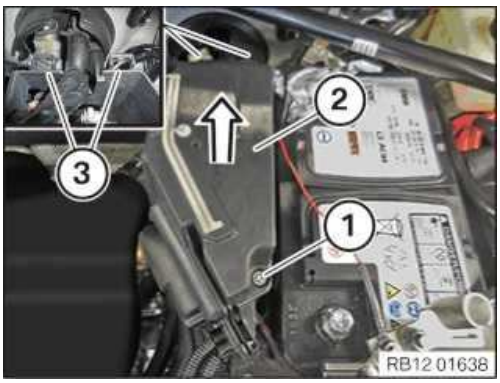


TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

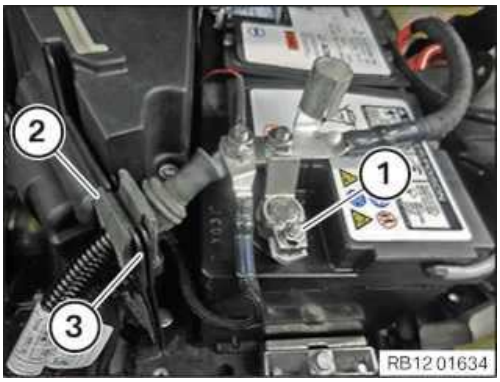


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



cardiagn.com

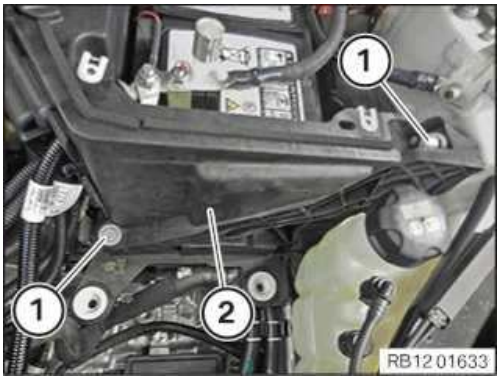
- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

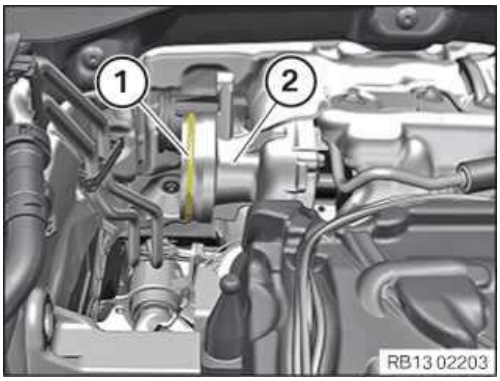


RF5x26.5		Tightening torque	2,5 Nm

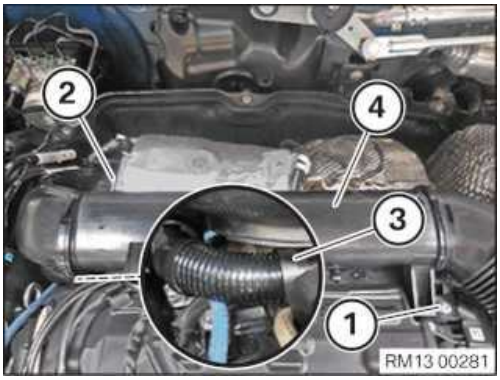
- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).



Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

cardiagn.com

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

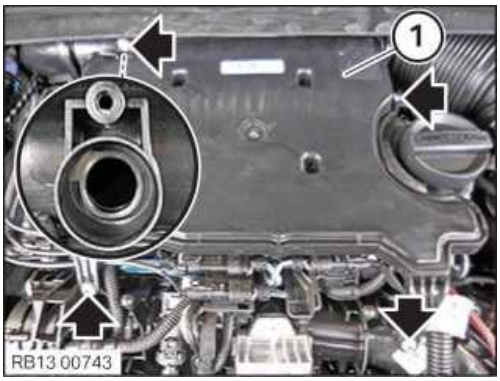
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

138 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

139 – Install acoustic cover

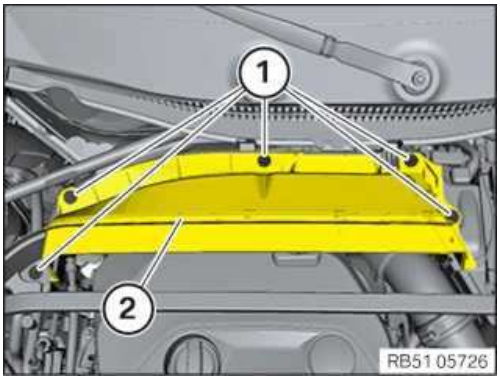
cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

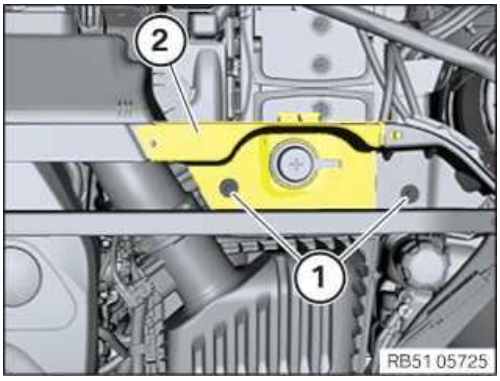
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

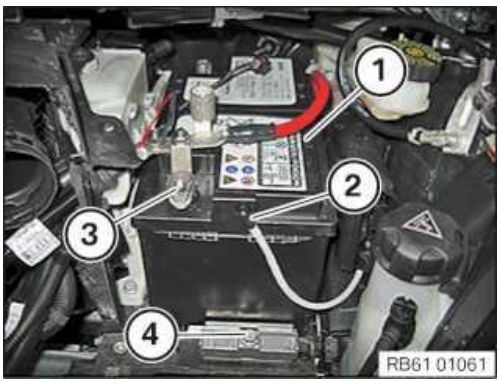


140 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm



- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

cardiagn.com

141 – Install vehicle battery

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

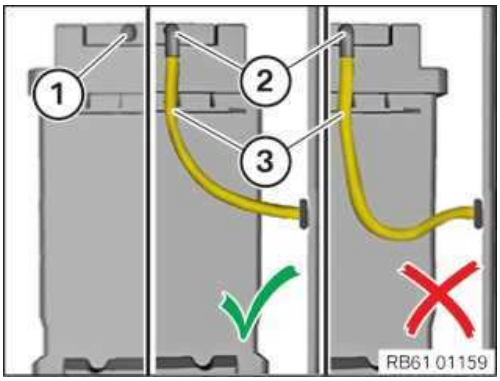
- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

▸ **Check the vent holes of the battery**

WARNING



Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

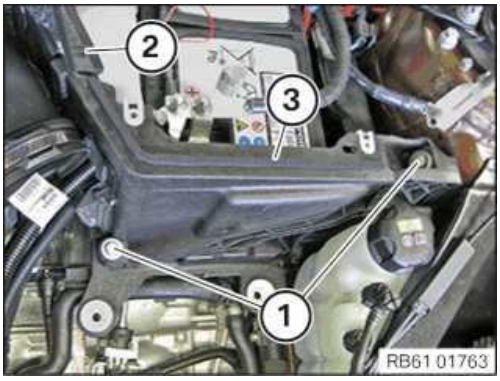
» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

cardiagn.com

Check



- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).

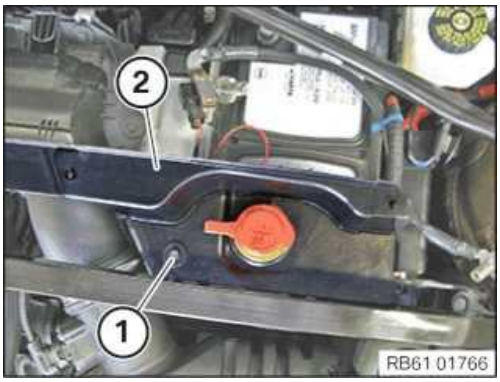
Result

» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

- Insert tension strut (3) and tighten with screws (1).

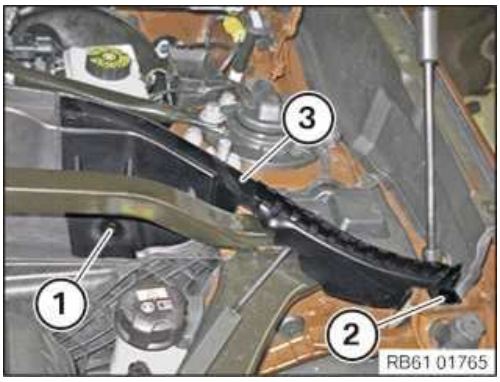


Trailing link

M8		Tightening torque	19 Nm

- Tighten down screw (2).

Battery cover



M8		2,8 Nm

- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

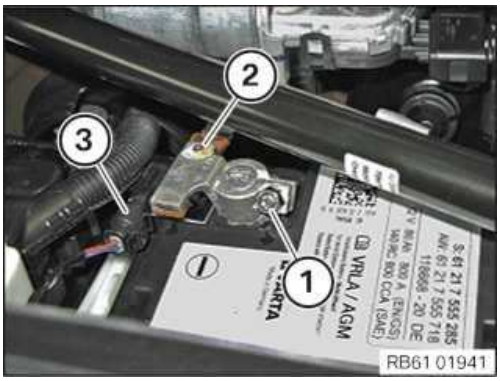
- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

142 – Connecting the battery earth lead

TECHNICAL INFORMATION



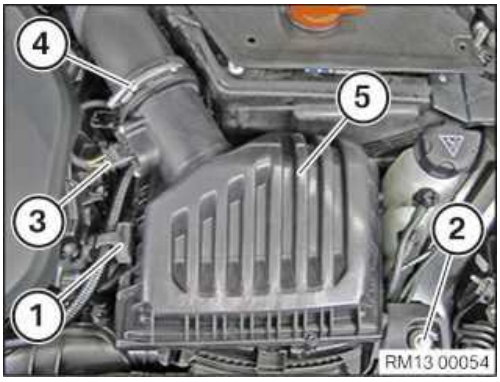
For additional information see:

61 00 ... Safety information on handling the vehicle battery

61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery

61 12 ... Notes on the intelligent battery sensor (IBS)

cardiagn.com



- Remove the protective cover of the positive battery terminal.
- Position the battery earth lead (2).
- Tighten nut (1).

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

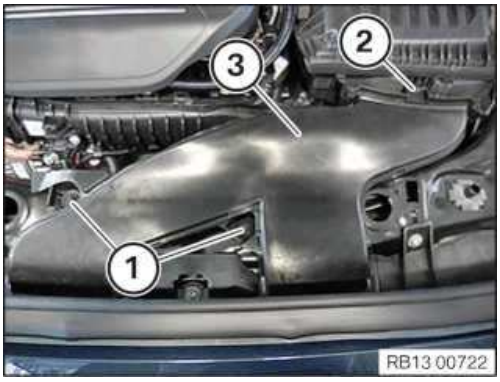
- If required, connect the connector (3).

143 – Installing intake silencer housing

- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm



- Tighten clamp (4).

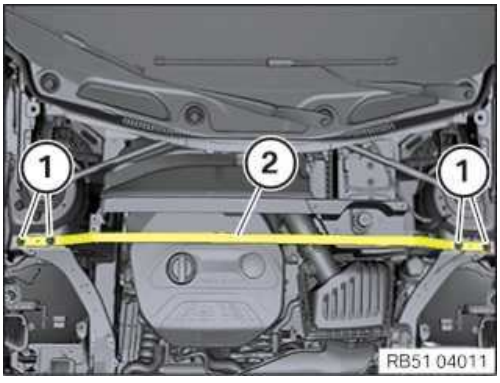
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

144 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).



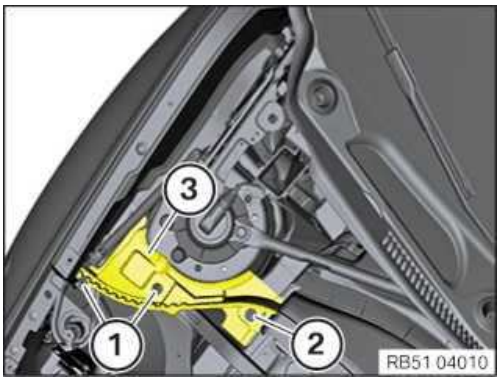
Intake neck to cross connection

M6		Tightening torque	8 Nm

145 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).
  Parts: Bolts
- Tighten the screws (1).

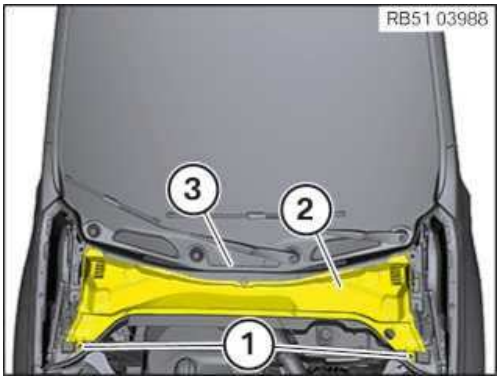
Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

cardiagn.com

NOTICE

Description is for right component only. The procedure on the left side is identical.



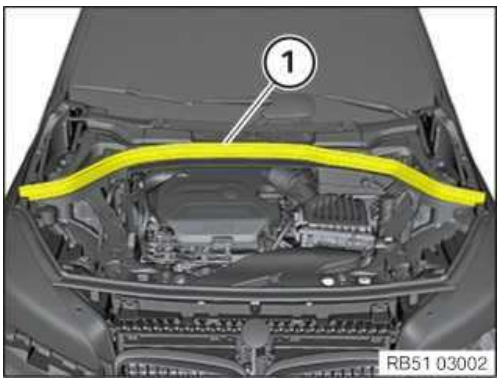
- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

146 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

147 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

148 – Fill and bleed the coolant circuit

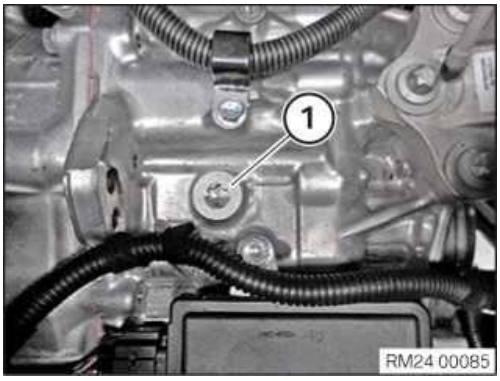
▸ **Filling and bleed the high-temperature coolant circuit**

cardiagn.com

- See additional information.

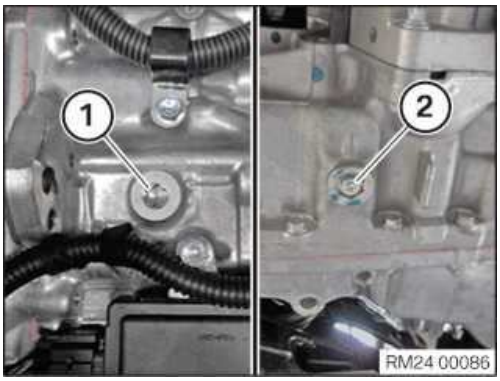
149 – Checking/topping up oil level in automatic gearbox (AISIN GA8G45)

Prerequisite



Vehicle in horizontal position.

CAUTION



Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

- Move the selector lever to the "P" position.
- Secure vehicle to prevent it rolling.
- Connect diagnosis system.
- Release the oil filler plug (1) using the Torx T55 .

- **Topping up the automatic transmission fluid (the automatic transmission fluid was drained):**
- Release oil filler plug (1) from engine compartment.
- Loosen the overflow plug (2) below at the transmission.
- Top up automatic transmission fluid at oil filler plug (1) until oil emerges at overflow plug (2).
- Start engine and run at idle speed.
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check again whether the automatic transmission fluid is leaking at the overflow plug(2) .
- Read the temperature of the automatic transmission fluid with the diagnosis system.
- Increase temperature of automatic transmission fluid to 35 °C to 45 °C.
- Top up automatic transmission fluid until it flows over.

cardiagn.com

- Renew sealing rings.

  Parts: Sealing ring

- Screw in and fasten oil filler plug (1) and overflow plug (2).

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

- **Check oil level (transmission oil temperature must be between** 35 °C **and** 45 °C **):**
- Open the oil filler plug (1).
- Slacken overflow plug (2).
- Start engine and run at idle speed.
- Unscrew and remove overflow plug (2).
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Top up the automatic transmission fluid until it overflows at the overflow plug (2) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check the oil level again.
- Renew sealing rings.

  Parts: Sealing ring

- If the oil escapes slightly from the overflow plug (2) , tighten the overflow plug (2) and the oil filler plug (1) .

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

150 – Topping up oil level in the manual gearbox (GS6X60DA)

CAUTION

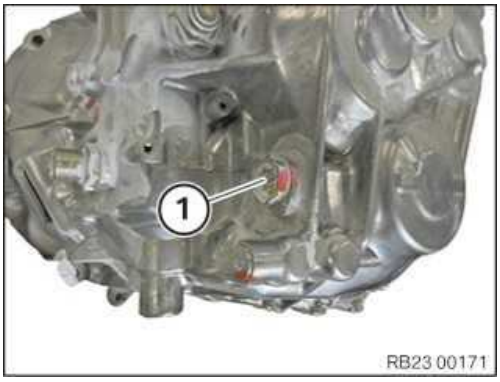
Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

TECHNICAL INFORMATION



Make sure during removal of the filling/level control screw to note the installed filling/level control screw variant.

It is **mandatory** to use variant 1 in transmissions up to production date 08/2015.

It is **mandatory** to use variant 2 in transmissions from production date 08/2015.

Failure to observe will result in a leak on the transmission.

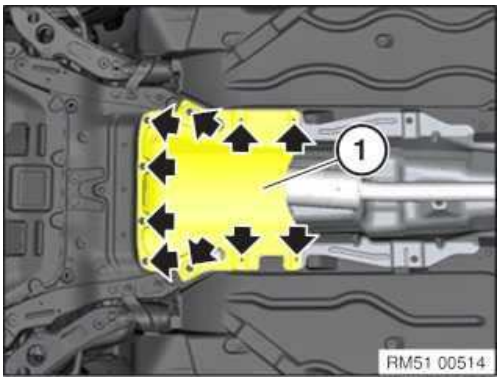
- Variant 1 **until** production date 08/2015.
- Variant 2 **from** production date 08/2015.

- Unscrew filling/level control screw (1) and fill the transmission until the oil overflows.

Transmission oil capacity

Transmission oil GS6-60DA, GS6X60DA/Owner's Handbook	2,2 l

Transmission oil: Technically suitable manual gearbox oil



- Allow surplus oil to drain off.
- Renew the filling/level control screw (1).

Special tool to cylinder head — Used in step 77

Special tool		Tightening torque	20 Nm

Standard screw connection M6 — Used in step 77 85 97

M6			8 Nm

Coolant temperature sensor at cylinder head — Used in step 77

Temperature sensor		Tightening torque	3,5 Nm

Cylinder head to crankcase — Used in step 79

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

cardiagn.com

Cylinder head bolt to timing case cover

Used in step 79

M8x40		Tightening torque	19 Nm

Right engine mount to side member

Used in step 79

M12		Tightening torque	100 Nm

Right engine mount to cylinder head

Used in step 79

M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

Heat shield to cylinder head

Used in step 79

M8X16		Tightening torque	10 Nm

Glow elements to cylinder head

Used in step 80

Glow element		Tightening torque	13 Nm

Camshaft carrier to cylinder head

Used in step 83

M7x35		Tightening torque	13 Nm

Bearing journal to cylinder head

Used in step 85

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

Standard screw connection M8

Used in step 85

M8		Tightening torque	19 Nm

Chain tensioner piston to cylinder head

Used in step 86

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

Camshaft sprocket to camshaft

Used in step 87

M7x17.			17 Nm

Cylinder head cover to cylinder head

Used in step 89

M6		Tightening torque.	8,5 Nm

Differential pressure sensor to holder

Used in step 90 103

Screw		Tightening torque	4 Nm

Clamp for the pressure hose on the differential pressure sensor

Used in step 90 103

Clamp 15–19mm		Tightening torque	3 Nm

Clamping claw facing to cylinder head cover

Used in step 91

Screw M6		Tightening torque	8 Nm

Injector to cylinder head cover

Used in step 91

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

High pressure lines between injector and rail

Used in step 93

High pressure lines		Tightening torque	28 Nm

cardiagn.com

Exhaust-gas recirculation cooler to exhaust manifold

Used in step 95 101

M8x28	Replace screws	Tightening torque	32 Nm

Oil return line to turbocharger

Used in step 95 96

M6x12		Tightening torque	8 Nm

Holder to exhaust turbocharger and crankcase

Used in step 95

M8x16		Tightening torque	22 Nm

Exhaust turbocharger to exhaust manifold

Used in step 96

V-band clamp		Tightening torque	19 Nm

Oil feed line to bracket

Used in step 96

Torx screw M6x12		Tightening torque	8 Nm

Holder to exhaust turbocharger and crankcase

Used in step 96

M8x16		Tightening torque	22 Nm

Heat shield for exhaust turbocharger

Used in step 97

Torx screw BM 6x12		Tightening torque	10 Nm

Banjo bolt for exhaust pressure pipe to exhaust manifold

Used in step 97

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

Charge air duct to oil sump

Used in step 98

M6		Tightening torque	8 Nm

Ride height sensor holder to front axle support

Used in step 98

M6		Tightening torque	8 Nm

Adapter, front axle support to front axle support

Used in step 98

		Tightening torque	100 Nm

Cross connection to front axle support

Used in step 98

M6		Tightening torque	12 Nm

Washer fluid reservoir to body

Used in step 99

M6x20		Tightening torque	8 Nm

Intake plenum to cylinder head

Used in step 100

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 101

M8x20		Tightening torque	5 Nm
		Release angle	90 °

Intake plenum to exhaust-gas recirculation cooler

Used in step 101

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 101

M8x20		Tightening torque	19 Nm

cardiagn.com

Wiring harness to cylinder head cover

Used in step 102 136

TS5x20		Tightening torque	3,5 Nm

Positive battery cable to alternator

Used in step 102

M8		Tightening torque	19 Nm

Fuel line to intake plenum

Used in step 102

TS6x20		Tightening torque	5 Nm

Cover to electronics box

Used in step 102 136

RF5x26.5		Tightening torque	2,5 Nm

Positive battery terminal to battery

Used in step 102 136

NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray

Used in step 102 136

M8		Tightening torque	19 Nm

Diesel particulate filter V-clip to exhaust turbocharger

Used in step 103

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

Diesel particle filter to holder

Used in step 103

M8 hexagon nut		Tightening torque	19 Nm

Diesel particulate filter holder to gearbox

Used in step 103

M12x75		Tightening torque	66 Nm

Diesel particulate filter bracket to crankcase

Used in step 103

M10x35		Tightening torque	38 Nm

SCR metering module V-clip to exhaust system

Used in step 103

V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

Holder for coolant lines to diesel particulate filter

Used in step 103

Torx bolt BM6x16		Tightening torque	8 Nm

Control sensor

Used in step 104

Control sensor		Tightening torque	50 Nm

Exhaust temperature sensor to diesel particulate filter

Used in step 105 106

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Exhaust-gas temperature sensor to exhaust system

Used in step 107

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Oxygen sensor holder to intermediate shaft

Used in step 108

Hexagon screw M6x16		Tightening torque	8 Nm

Nitrogen oxide sensor before SCR catalytic converter

Used in step 109

Sensor		Tightening torque	50 Nm

cardiagn.com

Monitoring sensor — Used in step 110

Sensor		Tightening torque	50 Nm

Transfer box to transmission — Used in step 111

M10		Tightening torque	56 Nm

Heat shield to transfer box — Used in step 111

M6	Renew screws.	Tightening torque	6 Nm

Oil filler plug on transfer box (VTG) — Used in step 111

M18x1.5		Tightening torque	35 Nm

Intermediate shaft to transfer box — Used in step 112

M8x35		Tightening torque	19 Nm

Starter motor to transmission — Used in step 113

M8x45		Tightening torque	19 Nm

Battery positive lead to starter — Used in step 113

M8		Tightening torque	13,5 Nm

Propeller shaft to transfer box — Used in step 116

		Tightening torque	80 Nm

Flexible disc to rear axle final drive — Used in step 116

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

Centre mount to body — Used in step 116

M8		Tightening torque	19 Nm

Heat shield to body — Used in step 117 118

Bolts/nut		Tightening torque	3 Nm

Bracket to body — Used in step 117

M8		Tightening torque	21 Nm

Exhaust system to body — Used in step 119

M8	Replace nuts.	Tightening torque	19 Nm

Exhaust bracket on body — Used in step 119

Hexagon screw M8x30		Tightening torque	19 Nm

V-clip to catalytic converter — Used in step 119

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

Diesel particulate sensor to exhaust system — Used in step 119

Sensor		Tightening torque	50 Nm

Nitrogen oxide sensor downstream of SCR catalytic converter — Used in step 119

Sensor		Tightening torque	50 Nm

cardiagn.com

Cross-member/torsion strut to axle support and mounting

Used in step 120

M12x48	Renew screws.	Jointing torque Angle of rotation	100 Nm 90 °

Front connection carrier to body

Used in step 121

M10x18		Tightening torque	56 Nm

Rear connection carrier to body

Used in step 121

M8x18		Tightening torque	28 Nm

Track rod end to swivel bearing

Used in step 122

M14	Renew nut.	Tightening torque	175 Nm

Wishbone to swivel bearing

Used in step 122

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

Holder, wishbone rubber mount, to body

Used in step 123

M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

Holder with rubber mount to front axle support

Used in step 123

M12 screw			100 Nm

Washer fluid reservoir holder to front axle support adapter plate

Used in step 123

		Tightening torque	10 Nm

Deformation element, bottom, to adapter plate, front axle carrier

Used in step 123

		Tightening torque	11,8 Nm

Holder to front axle support

Used in step 124

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

Anti-roll bar link to anti-roll bar

Used in step 126

M10	Renew nut.	Tightening torque	56 Nm

Underbody panelling, side

Used in step 128

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side

Used in step 128

Plastic nut		Tightening torque	2,6 Nm

Wheel arch cover to body

Used in step 129

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

Wheel arch cover to body

Used in step 129

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Used in step 129

Plastic nut		Tightening torque	3 Nm

cardiagn.com

Brake disc to rear wheel hub

Used in step 130

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

Used in step 130

M8	Renew screw.	Tightening torque	16 Nm

Wheel bolts

Used in step 130

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Lower steering shaft to steering gear

Used in step 132

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

Steering column cover to bulkhead

Used in step 132

Plastic nut		Tightening torque	3 Nm

Heat shield for exhaust turbocharger

Used in step 133

Torx screw BM 6x12		Tightening torque	10 Nm

Rear bulkhead upper part to lower section of bulkhead

Used in step 134

Oval-head screw		Tightening torque	5 Nm

Battery holder to engine support

Used in step 135

Hexagon screw M8x30		Tightening torque	19 Nm

Electronics box to battery tray

Used in step 136

M8X16		Tightening torque	15 Nm

Clean air pipe to cylinder head cover

Used in step 137

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing

Used in step 137 143

Clamp		Tightening torque	3 Nm

Resonator to manifold and clean air pipe

Used in step 138

Screw TS6	Renew screw.	Tightening torque	5 Nm

Cover of top bulkhead

Used in step 140

Screw		Tightening torque	2,6 Nm

Cover of remote positive terminal

Used in step 140

Screw		Tightening torque	2,6 Nm

Battery terminal rail to battery tray

Used in step 141

M8			19 Nm

cardiagn.com

Battery terminal with IBS positive battery terminal / negative battery terminal Used in step 141 142

NutM6			5 Nm

Trailing link Used in step 141

M8		Tightening torque	19 Nm

Battery cover Used in step 141

M8			2,8 Nm

Intake silencer housing to lock bridge Used in step 143

M6X30		Tightening torque	8 Nm

Intake neck to cross connection Used in step 144

M6		Tightening torque	8 Nm

Cross-brace to spring strut dome Used in step 145

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

Cover on body Used in step 145

Hexagon screw		Tightening torque	3 Nm

Oil filler plug to transmission housing Used in step 149

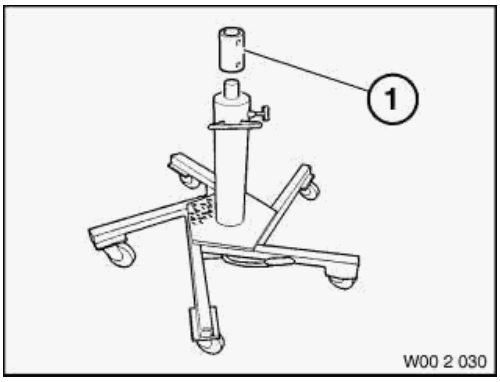
M14	Renew the sealing ring.	Tightening torque	45 Nm

Overflow screw in oil drain plug Used in step 149

M6	Renew the sealing ring.		8 Nm

Oil drain plug / oil filler plug Used in step 150

Hexagon socket		Tightening torque	43 Nm



Underbody protection front Used in step 152

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

Overview of Special Tools

cardiagn.com

0 490 133 (00 2 030) Device

Common

Used in step 32 73 79 122

Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

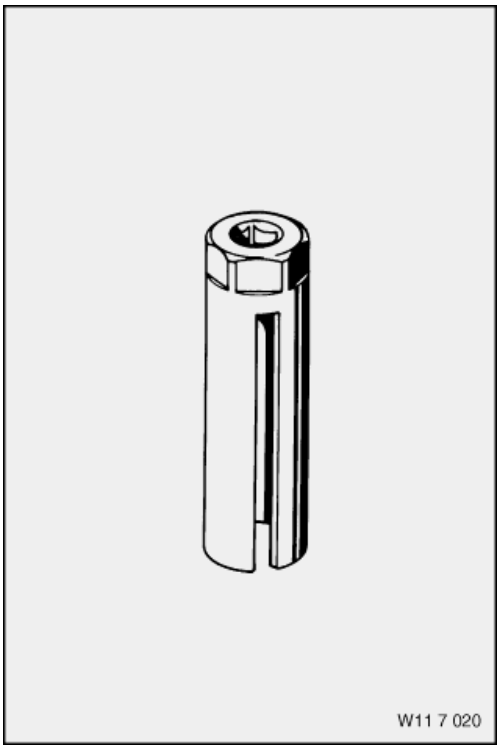
Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

0 495 554 (33 5 070) Extension

Common

Used in step 38 116

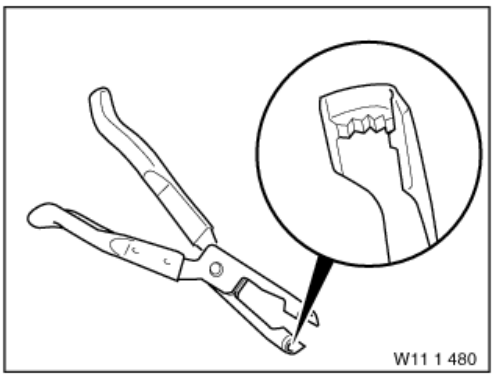


Usage	Pull-out extension for 33 5 040, 33 5 050, 33 5 060.
Included in the tool or work	
Storage location	A18
Replaced by	
In connection with	
SI-Number	01 21 06 (300)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 592 (33 5 071)		**Extension** (Extension (1 item)) discontinued, can only be ordered using complete tool	

cardiagn.com

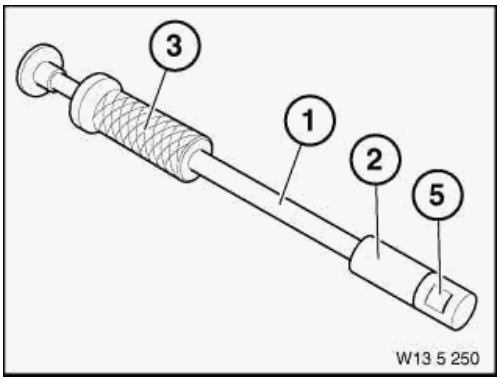


0 491 074 (11 7 020) Socket wrench insert

Common Used in step 44 45 110

Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	

0 490 796 (11 1 480) Pliers



Common Used in step 52 72

Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

cardiagn.com

0 493 321 (13 5 250) Puller

Common

Used in step 62

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

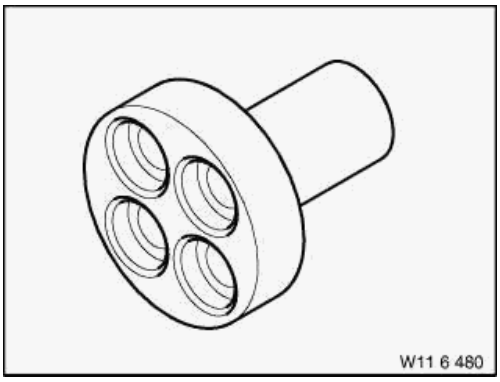
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

0 493 339 (13 5 252) Bush

Common

Used in step 62

Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

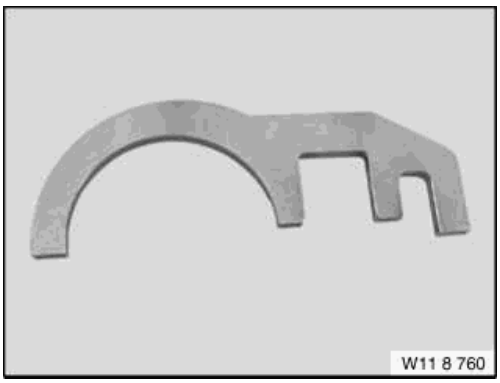


cardiagn.com

0 493 340 (13 5 253) Weight

Common	Used in step 62
Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 380 (11 6 480) Connector



Common	Used in step 65 88
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

2 288 380 Locating stud

Common	Used in step 65 88
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 112 (11 8 760) Gauge

Common	Used in step 65 88
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

cardiagn.com

0 495 105 (11 4 480) oddments tray

Common

Used in step 70 71

Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

2 357 071 Panel

Common

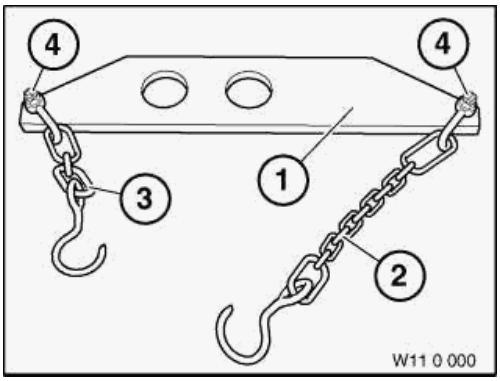
Used in step 73 79

Usage	Additional mounting plate for lifting table MHT 1200. Delivery quantity: 1 piece. During the course of the changeover from BMWi to iPerformance, a tool changeover also takes place from campaign to warehouse.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	Table lift MHT 1200 81222184136
SI-Number	01 21 13 (987)

cardiagn.com

2 459 012 Holder

Common



Used in step 73 79

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

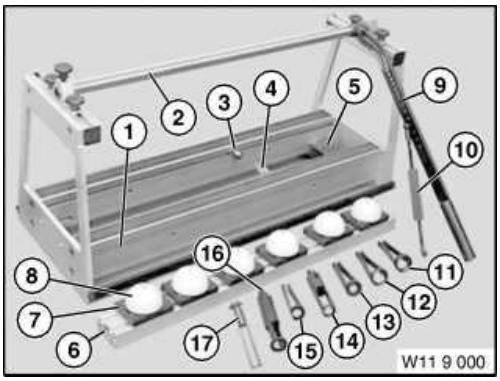
0 490 561 (11 0 000) Lifting gear

Used in step 73 79

cardiagn.com

Common

Usage	(Hoisting gear) For removing and installing engines. As of 08/2011 only available as a complete set. Delivered with TÜV inspection certificate and operating instructions. No delivery of separate parts.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 13 94 (888)



Consisting of

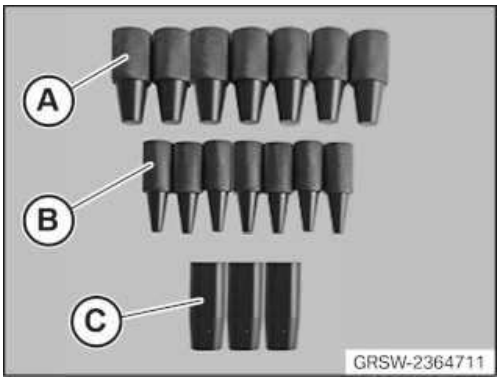
Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 490 565 (11 0 009)		**Shackle** (Shackle) 2 pieces. As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 562 (11 0 001)		**Lifting gear** (Cross member) As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 563 (11 0 002)		**Chain** (Chain) Version: long As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 564 (11 0 003)		**Chain** (Chain) Version: short As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	

0 494 362 (11 9 000) Device

Used in step 73

cardiagn.com

Common



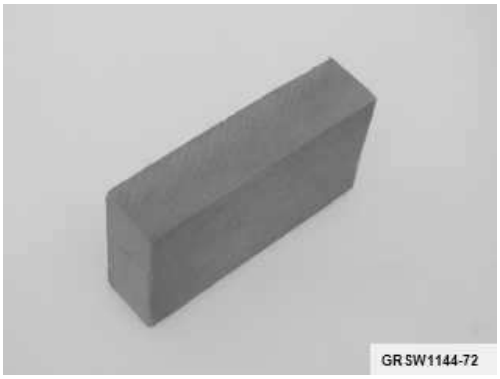
Usage	(Cylinder head expander tool)
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 03 02 (833)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 494 366 (11 9 001)		**Device**	
6	0 494 371 (11 9 006)		**Insert** (Aluminium strip)	
11	0 494 376 (11 9 012)		**Basket** (Valve spring cage) Engine M41, M51, S50	
17	0 495 028 (11 9 017)		**Basket** (Valve spring cage) Engine N52	
2	0 494 367 (11 9 002)		**Rod**	
3	0 494 368 (11 9 003)		**Adapter** (Sliding block)	
4	0 494 369 (11 9 004)		**Tab**	
5	0 494 370 (11 9 005)		**Quick fastener**	
7	0 494 372 (11 9 007)		**Shaped part** (shaped part)	
8	0 494 373 (11 9 008)		**Shaped part** (Shaped part) Shaped part made of plastic	
9	0 494 374 (11 9 009)		**Lever**	
10	0 494 375 (11 9 011)		**Hook**	
12	0 494 377 (11 9 013)		**Basket** (Valve spring cage) Engine M43, M73	
13	0 494 378 (11 9 014)		**Basket** (Valve spring cage) Engine M44, M52, M54, M56, M62, S52, S54, S62	
14	0 494 379 (11 9 015)		**Basket** (Valve spring cage) Engine M47, M47TU, M57, M57TU, N40, N42, N62, N73	
15	0 494 380 (11 9 016)		**Basket** (Valve spring cage) Engine M21, M40	

cardiagn.com

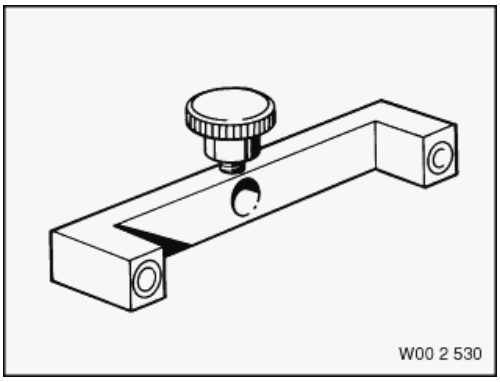
2 364 711 Plug



Common	Used in step 74
Usage	For closing the pressure oil holes for cleaning the cylinder head sealing surfaces.
Included in the tool or work	
Storage location	C20
Replaced by	
In connection with	
SI-Number	01 50 14 (203)

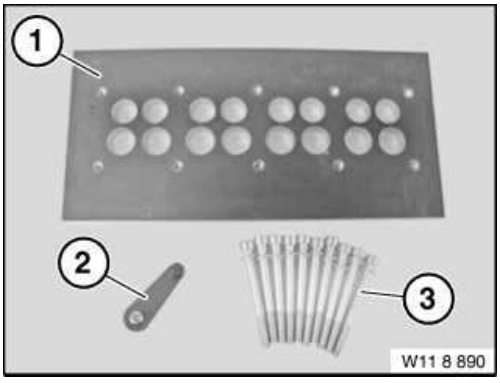
0 495 103 (11 4 471) Scraper

Common	Used in step 74
Usage	
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	



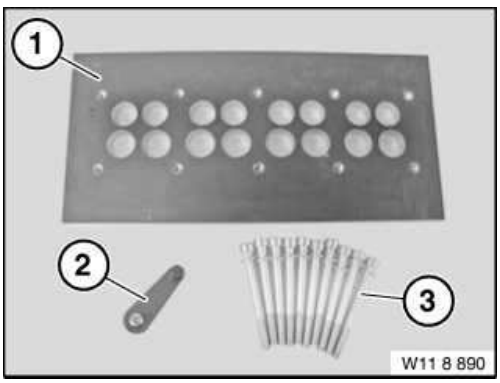
0 495 104 (11 4 472) Extractor

Common	Used in step 74
Usage	(grindstone)
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	



cardiagn.com

0 490 185 (00 2 530) Bridge



Common	Used in step 76
Usage	(Measuring bridge) For determining the piston projection (Diesel)
Included in the tool or work	
Storage location	A3
Replaced by	
In connection with	
SI-Number	

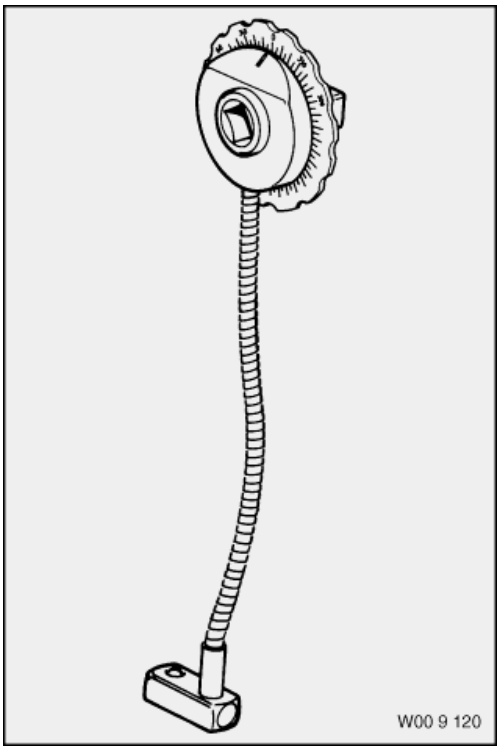
0 496 184 (11 8 891) Panel

Common	Used in step 77
Usage	(base plate with gasket)
Included in the tool or work	0 496 183
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 496 186 (11 8 893) Screw

Common	Used in step 77
Usage	(Set of screws) Can only be ordered as part of complete tool 11 9 660 = 0495955
Included in the tool or work	0 496 183
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

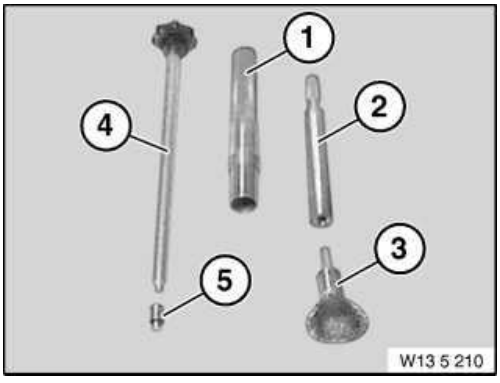
cardiagn.com



2 405 214 Supplementary set

Common Used in step 77

Usage	For leak-testing cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	2318431, 2337568, 2361215
SI-Number	01 23 17 (517)

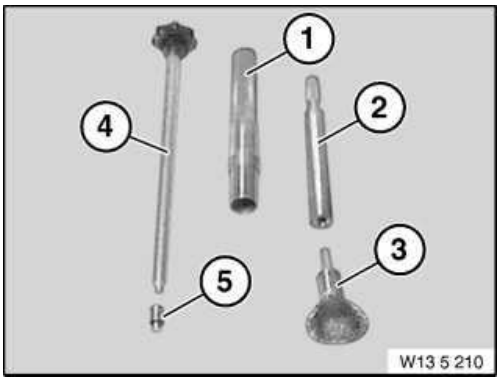


0 490 504 (00 9 120) Torque angle measuring dial

Common Used in step 79 116

Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

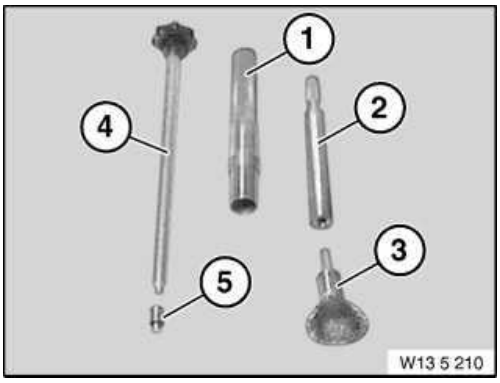
0 493 763 (13 5 215) Plug



Common Used in step 91

Usage	(Seal plug)
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com



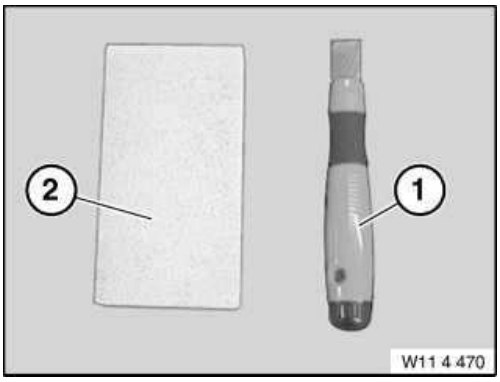
0 493 762 (13 5 214) Rod

Common Used in step 91

Usage	(Mounting rod) For the seal plug
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 758 (13 5 210) Tool

Common Used in step 91



Usage	(Cleaning set) For injector channels
Included in the tool or work	
Storage location	B4
Replaced by	
In connection with	
SI-Number	01 05 00 (574)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 759 (13 5 211)		**Holding sleeve** (Guide sleeve)	
2	0 493 760 (13 5 212)		**Holder** (Brush holder)	
3	0 493 761 (13 5 213)		**Brush head**

Exhaust-gas recirculation cooler seal on exhaust manifold	101
Exhaust-gas recirculation cooler seal on intake plenum	101

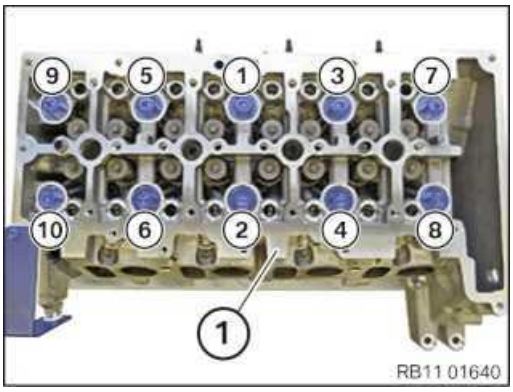
cardiagn.com

11 12 729 Checking cylinder head on watertightness (B47)

Special tools required:

- 11 8 890
- 2 405 214

Attention!



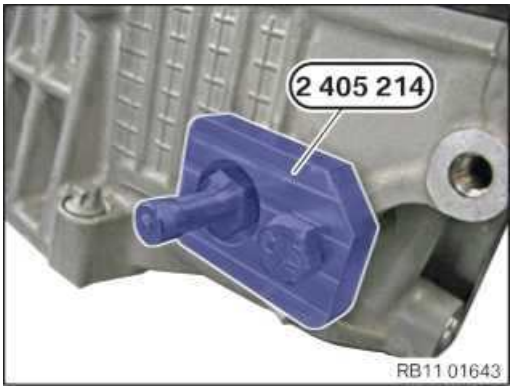
Pressure-test cylinder head to max. **3 bar**.

Heat cylinder head to 60 °.

Check for bubble formation in a water bath.

Necessary preliminary tasks:

- Remove cylinder head.
- Remove all glow elements.
- Remove exhaust manifold.



Secure special tool 11 8 890 with screws in sequence (1 - 10) on the cylinder head.

Tightening torque: **20 Nm**.

Mount and secure special tool 2 405 214 on the cylinder head.

cardiagn.com

Mount and secure special tool 2 405 214 on the cylinder head.

Note:
Compressed air at valve (1) max. **3 bar**.

Heat cylinder head to 60 °C.

Check for bubble formation in a water bath.

Concluding tasks:

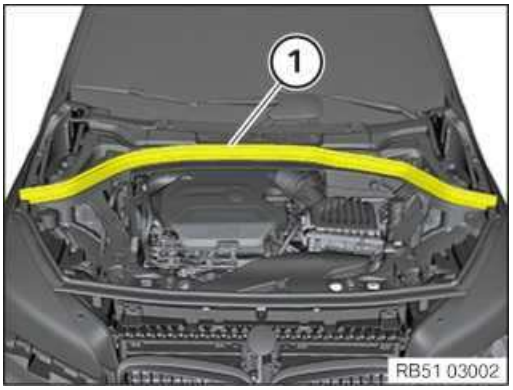
- Remove all special tools
- Attach exhaust manifold.
- Install all glow elements.
- Install cylinder head.

cardiagn.com

11 12 800 Clean cylinder head intake channels and intake plenums

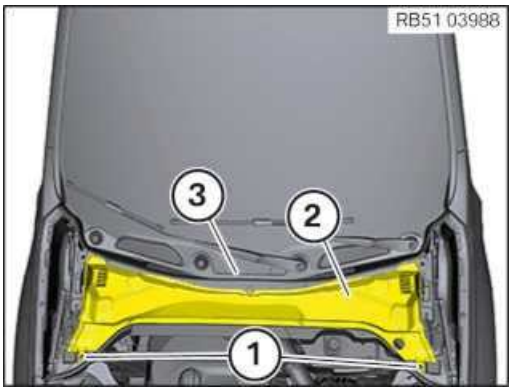
PRELIMINARY WORK

1 – Disconnecting all battery earth leads



- See additional information.

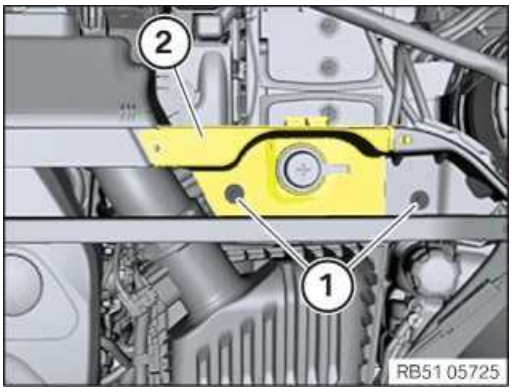
2 – Remove the seal for the rear bonnet



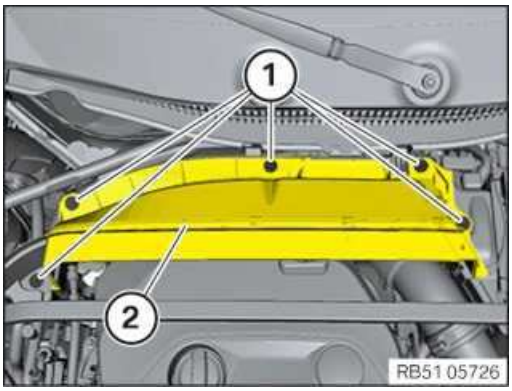
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.



3 – Removing front cowl panel cover

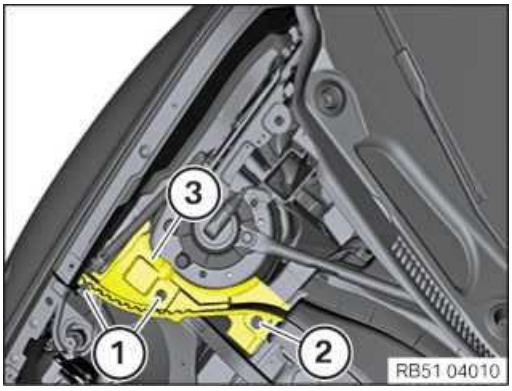


- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

4 – Removing the upper bulkhead cover

cardiagn.com

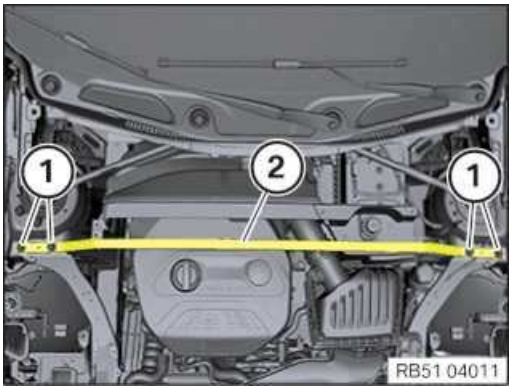
- Loosen screws (1).
- Guide out and remove the cover (2).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

5 – Remove suspension cross-brace

TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

NOTICE

Description is for right component only. The procedure on the left side is identical.

- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).

6 – Removing the acoustic cover

cardiagn.com

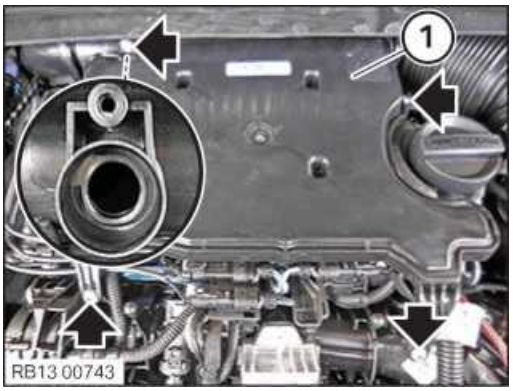
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

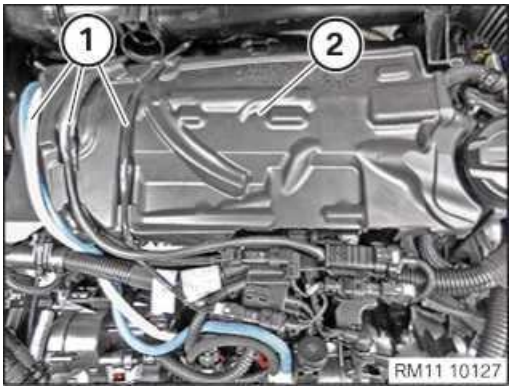
RISK OF DAMAGE



Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

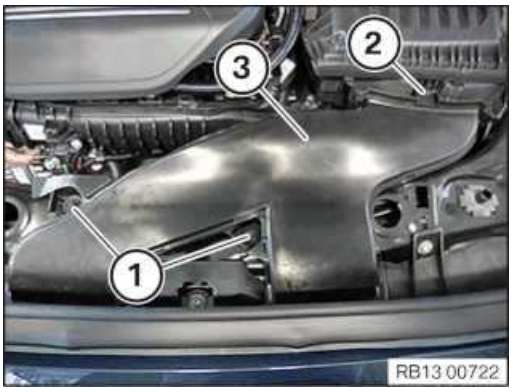
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



- Unclip the acoustic cover from the marked areas towards the top.

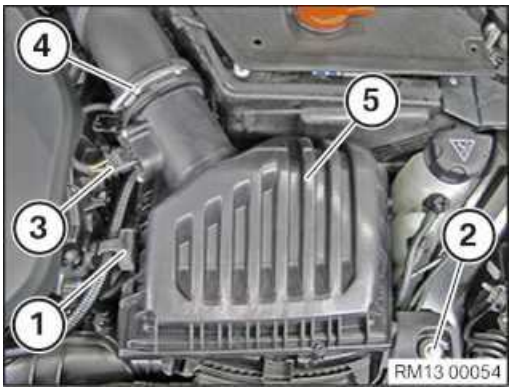
7 – Remove resonator

- Remove screws (arrows).
- Guide out and remove the resonator (1).



8 – Remove the acoustic cover for the injectors

- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

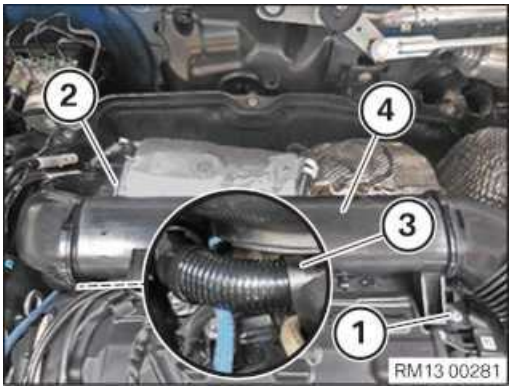


9 – Remove the intake neck for intake silencer housing

cardiagn.com

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

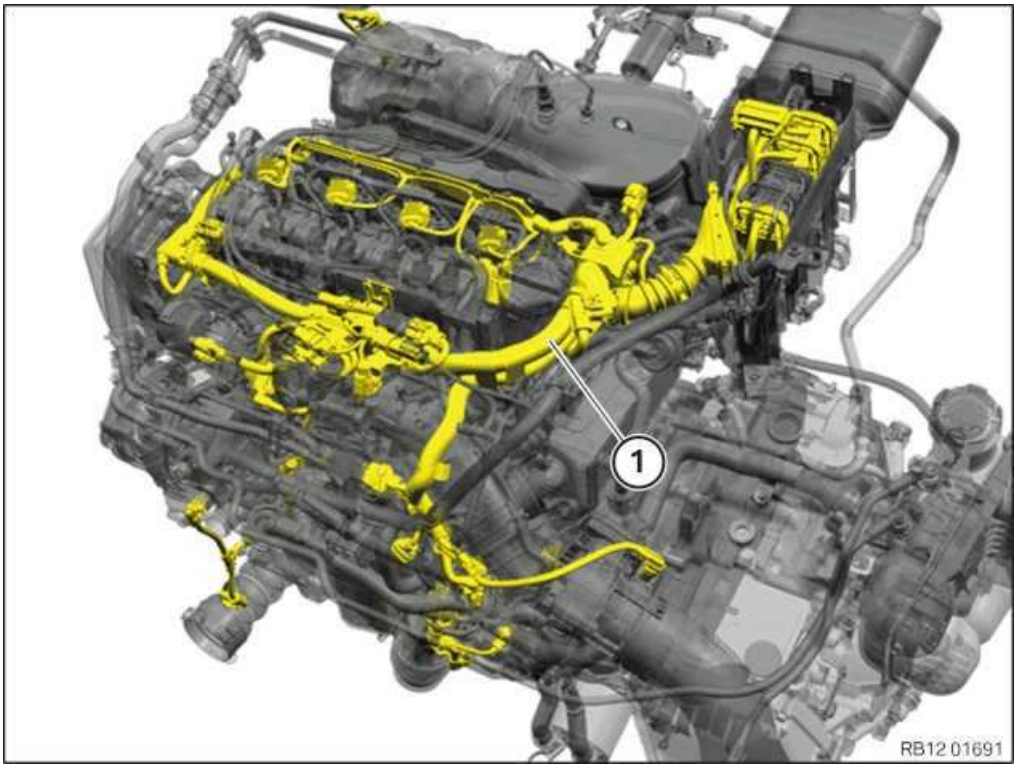
10 – Removing intake silencer housing



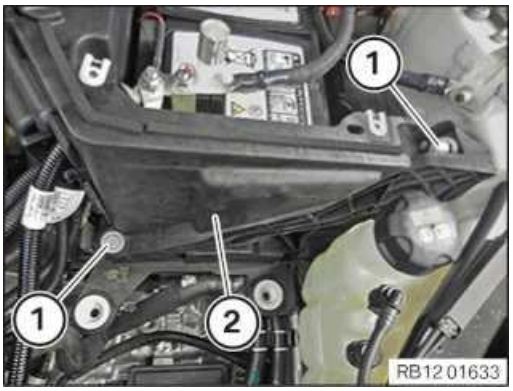
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

11 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.



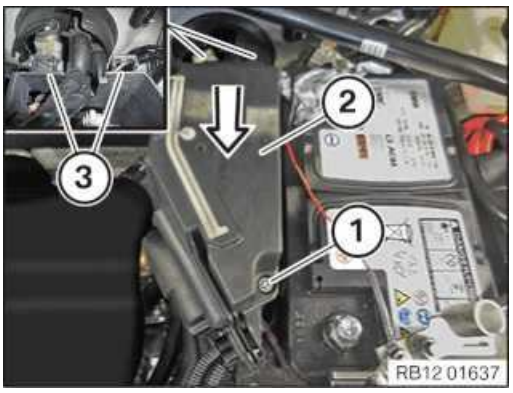
- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.



12 – Releasing the wiring harness section for the intake plenum

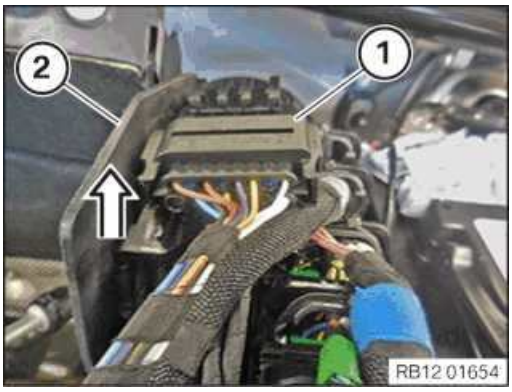
cardiagn.com

Overview: Wiring harness section for the engine

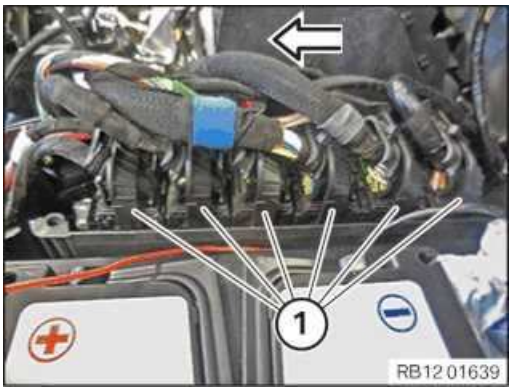


1 Wiring harness section for the engine

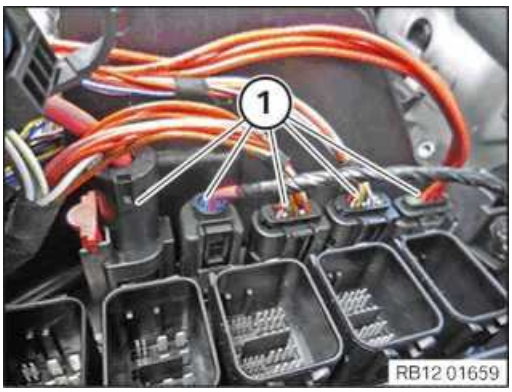
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



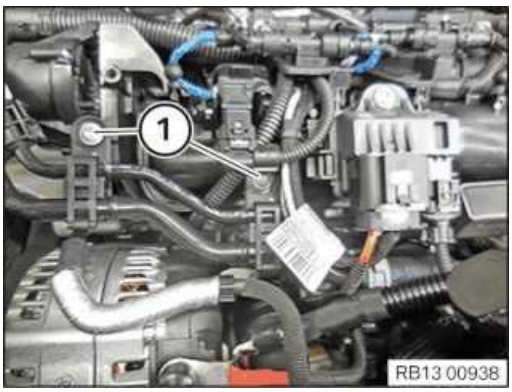
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



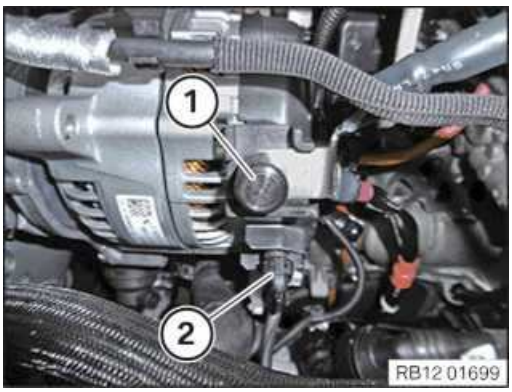
- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.



cardiagn.com

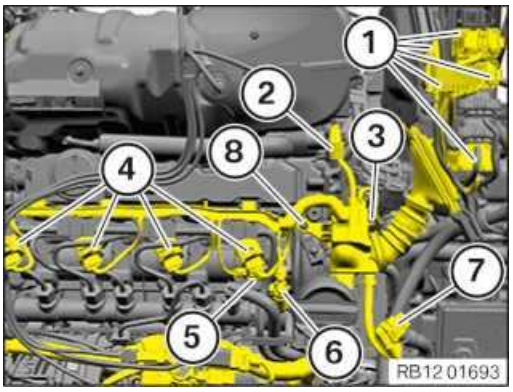


- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).

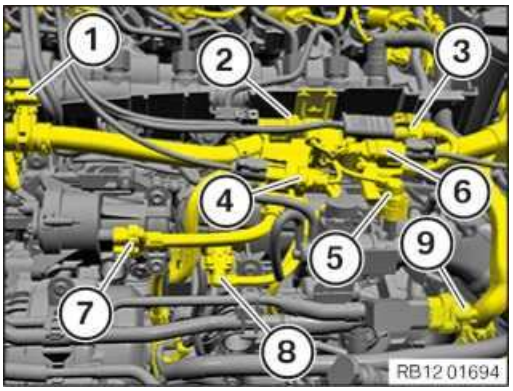


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

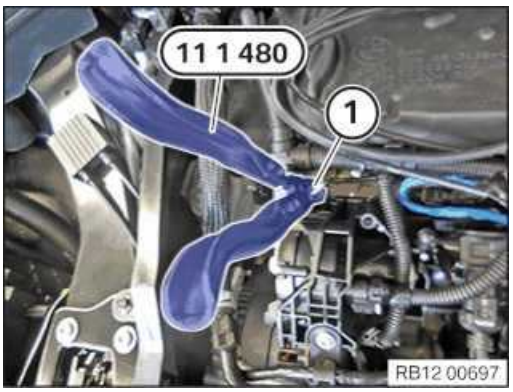
- Unlock and loosen connector (1).



- Loosen screws (1).

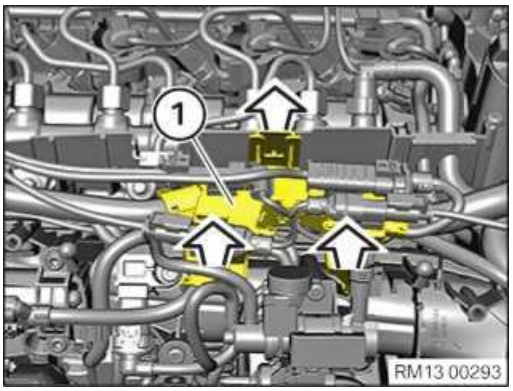


- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.



cardiagn.com

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).



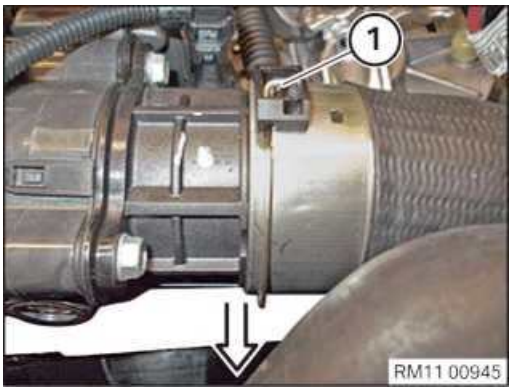
- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock and disconnect the connector (3) from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

▶ **Removing the cable clips from the intake plenum**

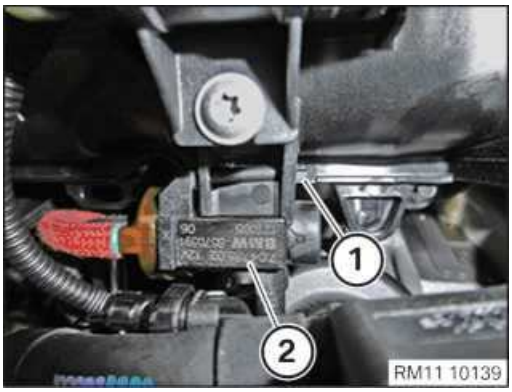
- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

13 – Removing the intake plenum

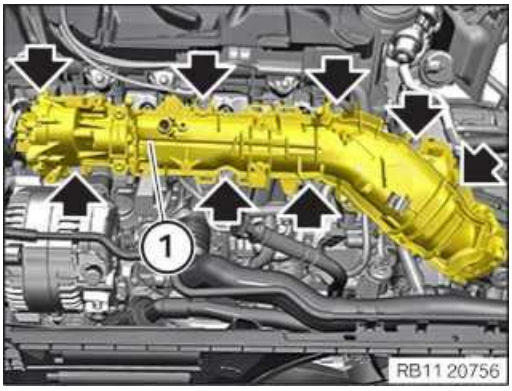


cardiagn.com

TECHNICAL INFORMATION

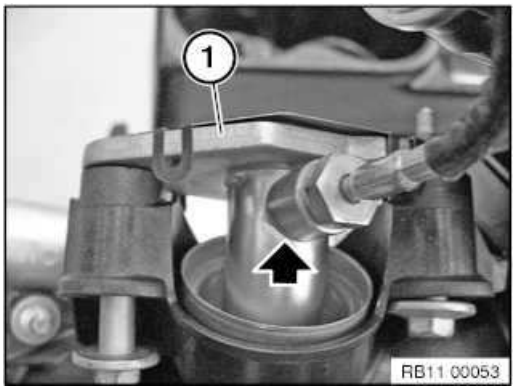


Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the lock (1).

- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.



- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

cardiagn.com

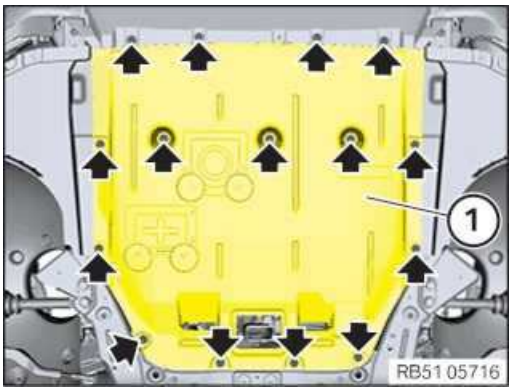
- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

14 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

TECHNICAL INFORMATION



Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

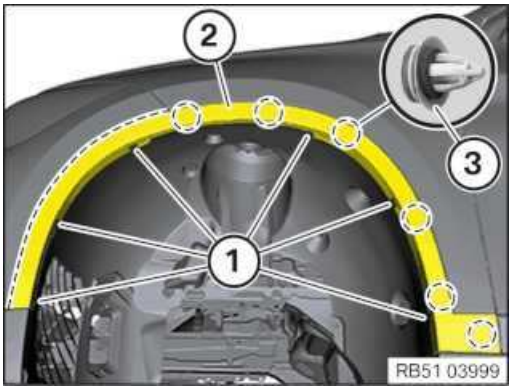
15 – Removing the front underbody protection

- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

cardiagn.com

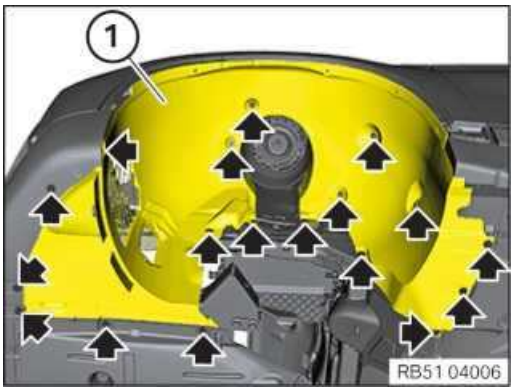
- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

16 – Removing the front right wheel arch cover



▶ **Remove the front wheel arch trim**

NOTICE



To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

17 – Removing glow elements

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

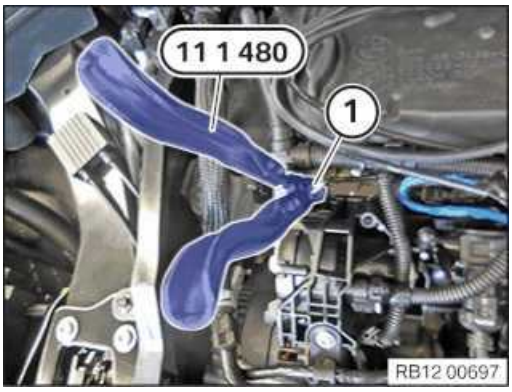
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool or conventional tools.
- Feed out preheating elements and remove.

MAIN WORK

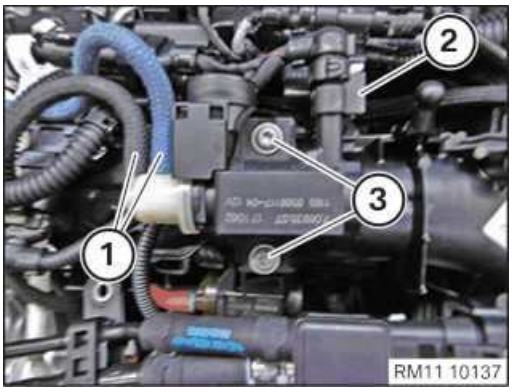
18 – Clean the intake system

CAUTION

Materials harmful to health.

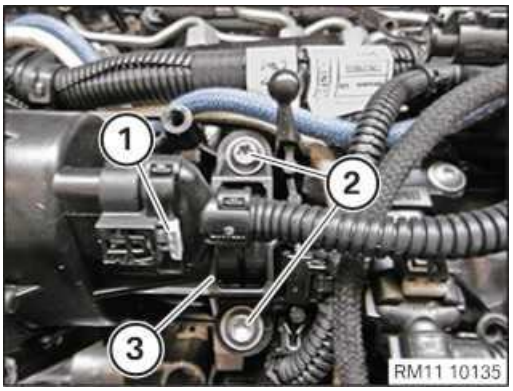
Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.



RISK OF DAMAGE

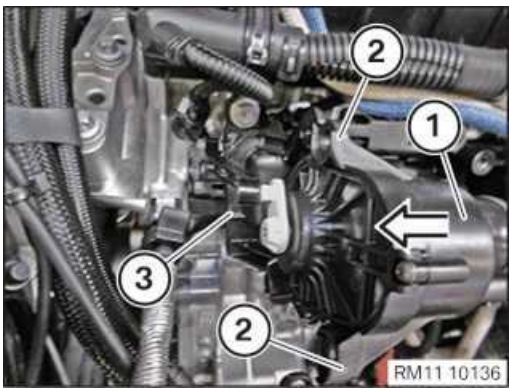
Electrostatic discharge.



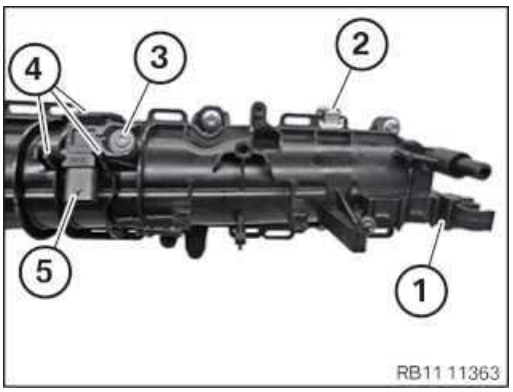
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

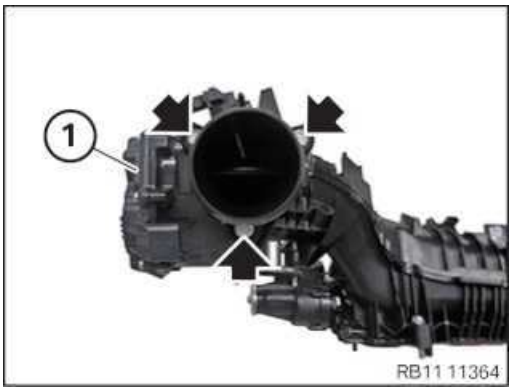


- Pull off the vacuum hoses (1).
- Make sure **not** to lose the green O-ring between the blue vacuum hose and the electric changeover valve.
- Unlock plug connection (2) and disconnect.
- Loosen screws (3).
- Remove electric changeover valve.

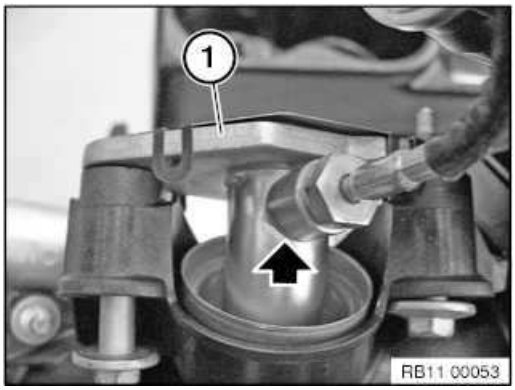


- Unlock plug connection (1) and disconnect.
- Place wiring harness to one side.
- Loosen screws (2).
- Remove holder (3).

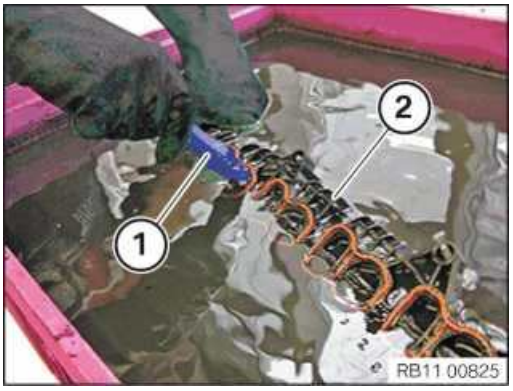
- Release the screws (1) with a suitable tool.



- Slightly lift the swirl-flap controller (1) at rear and in feed out direction of arrow, forwards out of the guides (2).
- Slightly tilt the swirl-flap controller (1).
- Carefully release the drive arm from the adjustment lever (3).
- Remove the swirl-flap controller (1).



- Guide out and remove holder (1).
- Feed out and remove the clamp (2).
- Loosen screw (3).
- Unlock the locks (4).
- Remove the charging pressure sensor (5).



cardiagn.com

- Remove screws (arrows).
- Remove the throttle bodies (1).

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Mix the cleaning agent in a large collecting vessel.

Cleaning agent

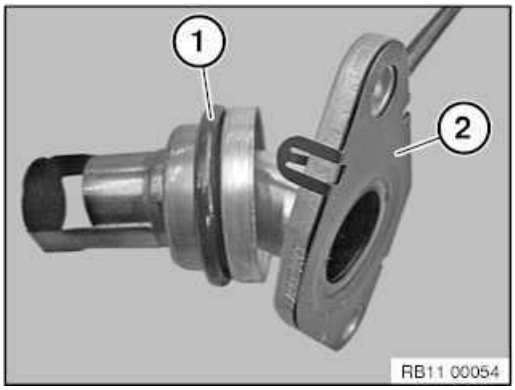
Universal cleaner must be diluted with water.	
Washer fluid	2 parts water, 1 part universal cleaner

Expendable materials: Universal cleaner

- Place the intake system (2) into the collecting vessel.

Clean the intake system

Soaking time of the cleaning agent	1 h

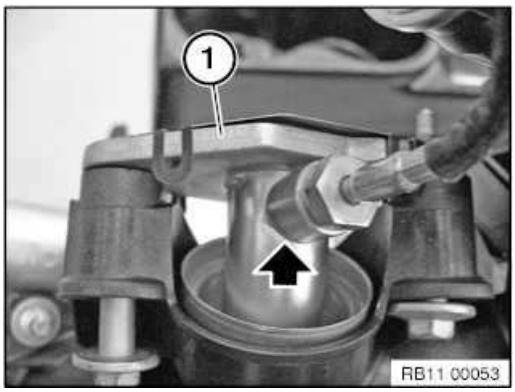


- Clean the intake system (2) with the brushes (1).

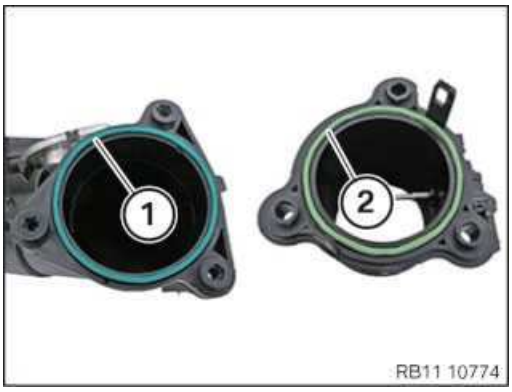
Care product

Wheel rim brushes	1x, Set	83192298237

- Then rinse the intake system (2) with water.



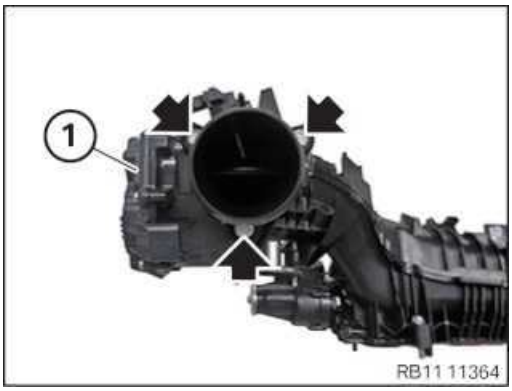
cardiagn.com



- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew the gasket (2).

  Parts: Gasket
- Position the seal (2) and clip it in.



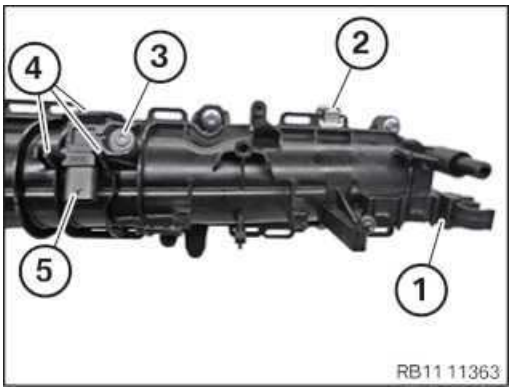
- Install exhaust-gas recirculation pipe (1) in the intake plenum (arrow).
- Position the swirl-flap controller.
- Engage the drive arm of the swirl-flap controller in the adjustment lever of the intake plenum.

- Renew the seal (1) between the intake system and the throttle body.

  Parts: Gasket
- Renew the seal (2) between the throttle body and charge air pipe.

  Parts: Gasket

- Feed in and install the throttle body (1).
- Tighten screws (arrows).

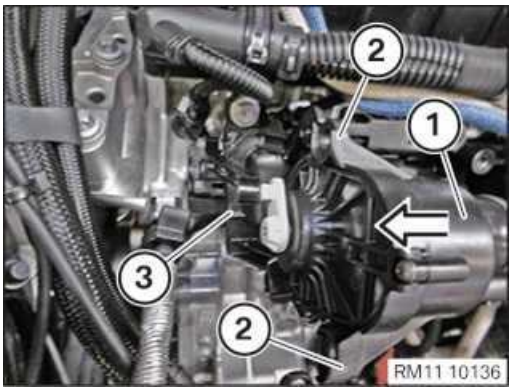


Throttle body to intake plenum

6x50		Tightening torque	7 Nm

- Clean the charging pressure sensor, replace, if applicable.
- Check the sealing ring (1) for damage and renew where required.
- Lightly coat the sealing ring (1) on the charging pressure sensor with lubricant for the installation.

cardiagn.com



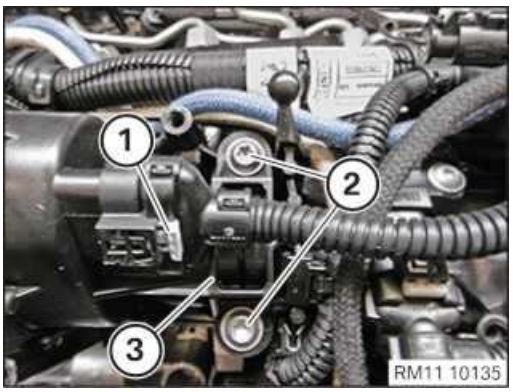
- Insert and install the charging pressure sensor (5).
- Lock the locks (4).

  The locks (4) must engage audibly.
- Tighten down screw (3).

Charging pressure sensor to intake plenum

TS6X20		Tightening torque	4 Nm

- Feed in and install the clamp (2).
- Insert and install the holder (1).

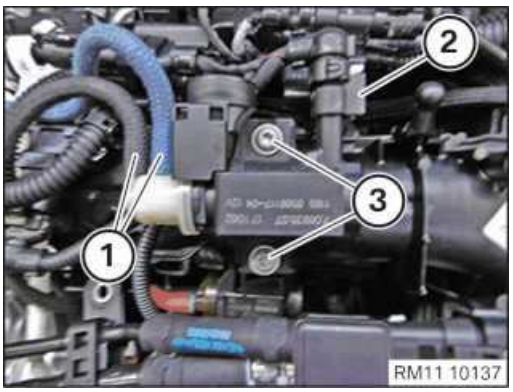


- Feed in the swirl-flap controller (1) in direction of arrow at a slight angle.
- Carefully engage the drive arm into the adjustment lever (3).
- Insert and install the swirl-flap controller (1) in the guides (2).

- Tighten the screws (1).

Swirl-flap controller to intake plenum

M6 x 16	Tighten the bolts in alternating order until flush.	4 Nm



- Position holder (3).
- Tighten the screws (2).

Swirl-flap controller to intake plenum

M6 x 16	Tighten the bolts in alternating order until flush.	4 Nm

- Connect and lock connector (1) .

  Lock must audibly engage.

- Position the electric changeover valve.
- Tighten the screws (3).

Electric changeover valve to intake plenum

TS6x20		Tightening torque	5 Nm

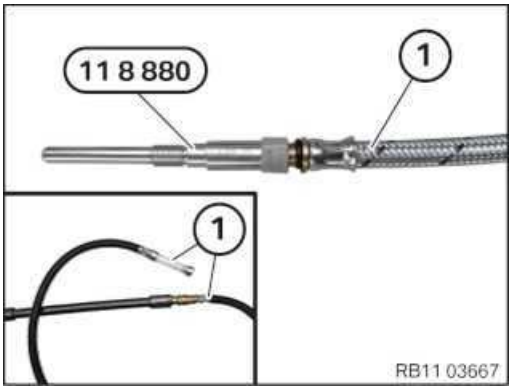
- Connect the blue vacuum hose (1) to the electric changeover valve.

Note: The connection for the blue vacuum hose has a green rubber ring.

- Connect black vacuum hose (1) to the electric changeover valve.
- Connect connectors (2) and lock.

  Lock must audibly engage.

cardiagn.com



19 – Turn the piston to top dead centre

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

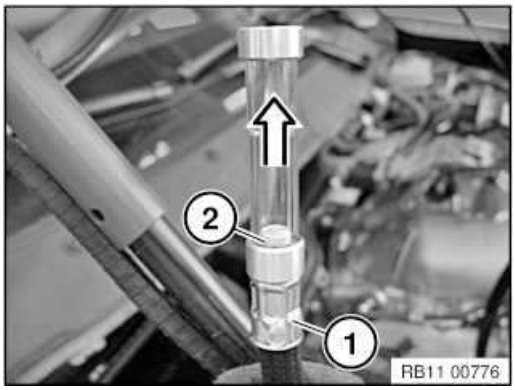
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Connect TDC gauge (1) from set of special tools to special tool **0 496 146 (11 8 880)**.

- Install special tool **0 496 146 (11 8 880)** in place of the glow element.

- Fit special tool **0 493 380 (11 6 480)**.

RISK OF DAMAGE



Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Turn the engine by hand using special tool **0 493 380 (11 6 480)**.

cardiagn.com

- Turn the engine by hand.
- When the piston moves up, the journal (2) in the special tool (1) also moves up.
- In the top dead centre, the piston and also the journal (2) are positioned at the highest point in the special tool (1).
- Turn the piston to the top dead centre.

» The valves are now closed.

RISK OF DAMAGE

Engine damage due to walnut granules in the combustion chamber.

If walnut granules penetrate the combustion chamber while cleaning the intake ports, engine damage may occur.

- Always clean the intake port with valves of the relevant cylinder closed.
- Set the piston of the relevant cylinder to the top dead centre.
- If walnut granules have entered the combustion chamber: Do **not** turn or start the engine by hand. Disassemble the cylinder head and clean all components.

- Engine must not be rotated further.
- Intake valves (1) must be closed while cleaning.

20 – Cleaning intake ports

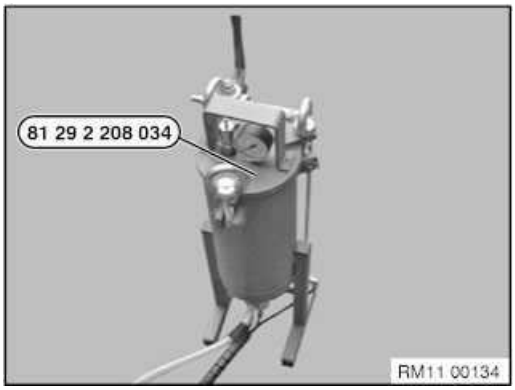
CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

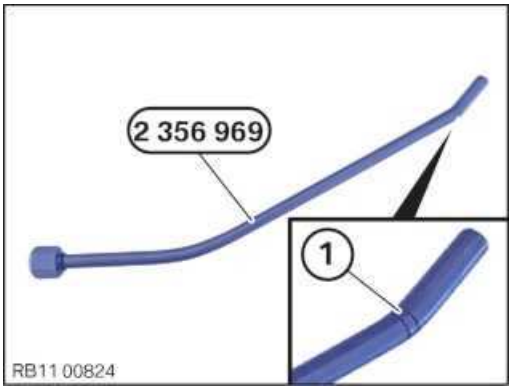
- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.



RISK OF DAMAGE

Engine damage due to walnut granules in the combustion chamber.



If walnut granules penetrate the combustion chamber while cleaning the intake ports, engine damage may occur.

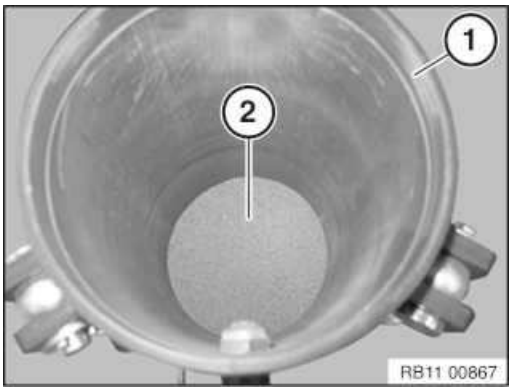
- Always clean the intake port with valves of the relevant cylinder closed.
- Set the piston of the relevant cylinder to the top dead centre.
- If walnut granules have entered the combustion chamber: Do **not** turn or start the engine by hand. Disassemble the cylinder head and clean all components.

cardiagn.com

- Keep the special tool **2 208 034**, the walnut granules and a vacuum cleaner ready.

- Have the special tool **2 356 969** ready.

TECHNICAL INFORMATION

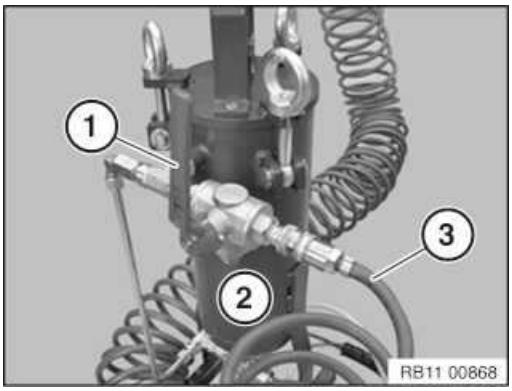


The front area of the blasting wand is marked with two notches. These may additionally be highlighted in colour.

During the blasting process, only pull the blasting wand out of the vacuum adapter until the mark becomes visible.

- Observe the mark (1).

- Stage special tools **2 356 966** and **2 356 967**.

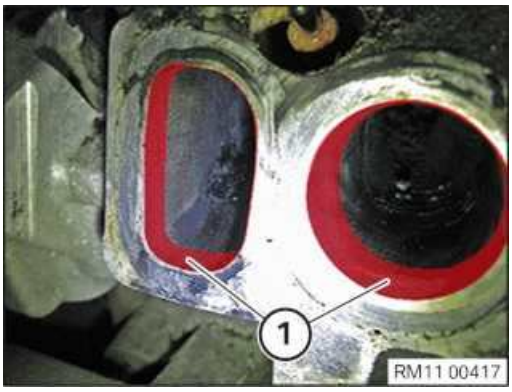


- Open blasting device (1).
- Fill in walnut granules (2).

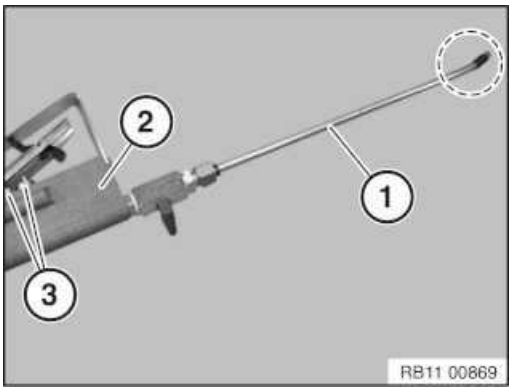
Walnut granules

Quantity for each blasting process	2 l

- Close blasting device (1).



- Close the valve (1) on the blasting device (2).
- Connect compressed air (3).



Cleaning the intake ports

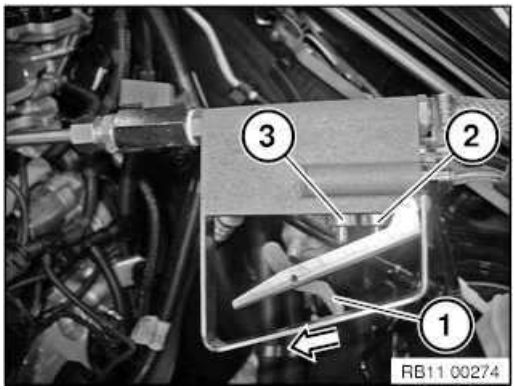
Operating pressure	6 bar ... 8 bar

cardiagn.com

- Clean marked areas (1) with a brush.

- Attach the blasting wand (2) to the blasting device (1).

- Connect the special tool **2 356 967** to a vacuum cleaner.
- Insert the special tool **2 356 967** into the swirl port of cylinder 1.



TECHNICAL INFORMATION

Conduct the following operation with the assistance of a second person.

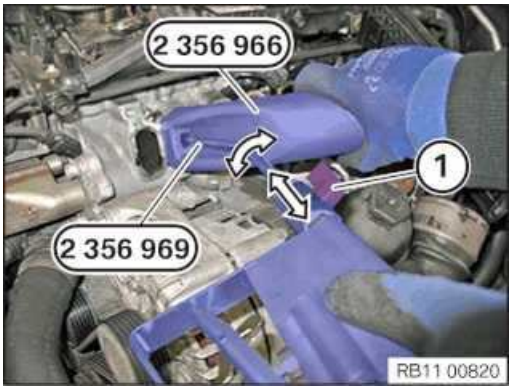
- Insert the special tool **2 356 969** into the special tool **2 356 967**.
- Open the valve (1).
- Move the blasting wand forwards and backwards and rotate.

  This removes any dirt in the tangential port.

cardiagn.com

- Slide the locking lever (1) forward in the direction of the arrow.
- To release the compressed air: Actuate valve (2).
- To release the walnut granules and the compressed air: Actuate valves (1) and (2).
- Clean the swirl port.

Cleaning the intake ports

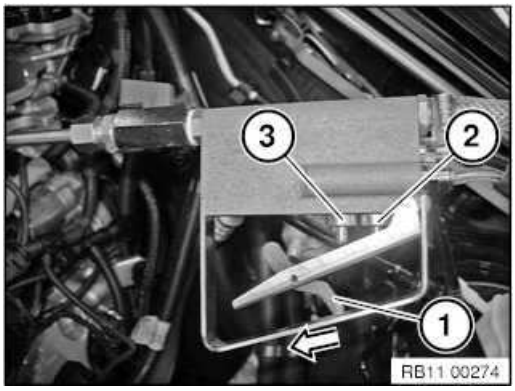


Blast duration with walnut granules	Approx. 20 s
Blast duration with pure compressed air for the complete blowing out of walnut granules	Approx. 10 s

- Close the valve on the blasting wand.

» Check the pressure drop at the pressure measuring device.

- Connect the special tool **2 356 967** to a vacuum cleaner.
- Insert the special tool **2 356 967** into the swirl port of cylinder 1.



TECHNICAL INFORMATION

Conduct the following operation with the assistance of a second person.

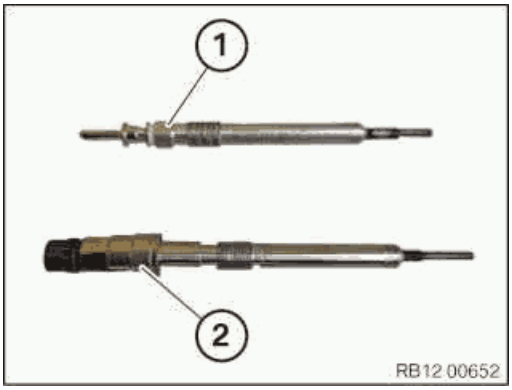
- Insert the special tool **2 356 969** into the special tool **2 356 967**.
- Open the valve (1).
- Move the blasting wand forwards and backwards and rotate.

  This removes any dirt in the swirl port.

- Slide the locking lever (1) forward in the direction of the arrow.
- To release the compressed air: Actuate valve (2).
- To release the walnut granules and the compressed air: Actuate valves (1) and (2).
- Clean the swirl port.

Cleaning the intake ports

Blast duration with walnut granules	Approx. 20 s
Blast duration with pure compressed air for the complete blowing out of walnut granules	Approx. 10 s



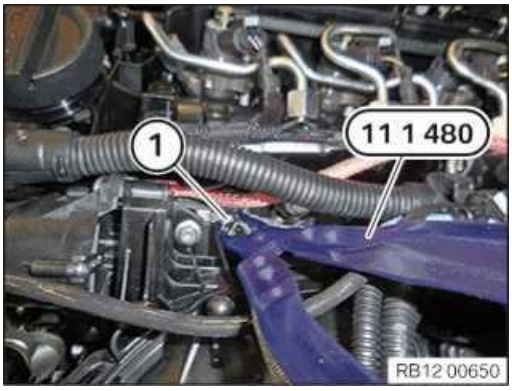
- Close the valve on the blasting wand.

» Check the pressure drop at the pressure measuring device.

- Perform the following steps one after another on all the other cylinders:
  - Turn the piston to top dead centre
  - Cleaning intake ports

cardiagn.com

21 – Install glow elements

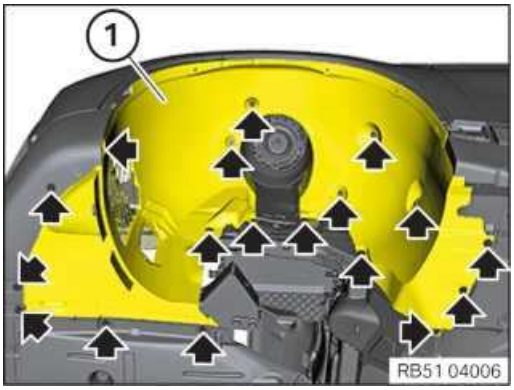


- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

- Tighten the glow element with the special tool or conventional tools.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

22 – Installing the front right wheel arch cover

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

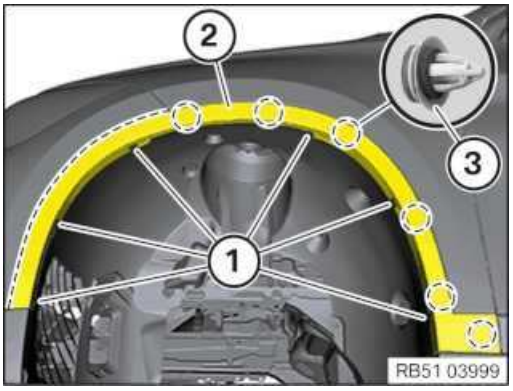
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**

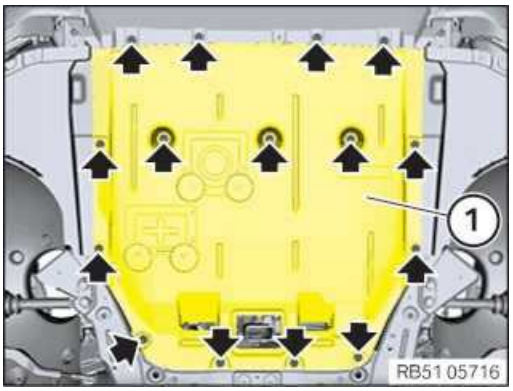


cardiagn.com

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

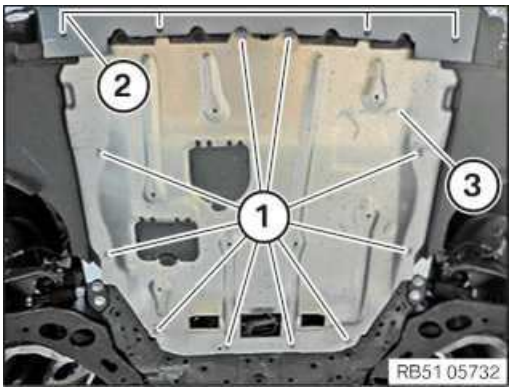
NOTICE



Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.



23 – Installing the front underbody protection

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

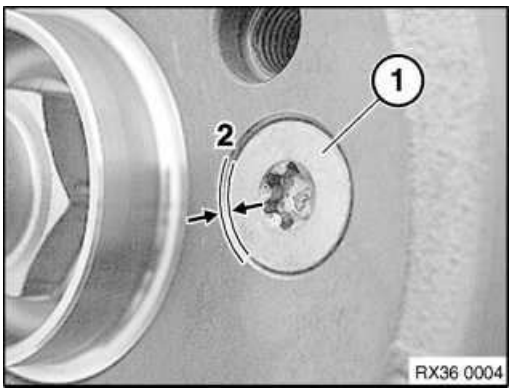
24 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

cardiagn.com

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

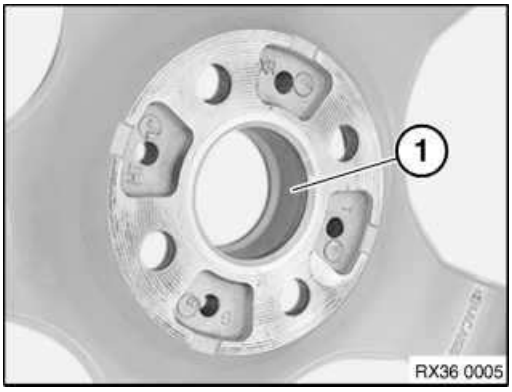


- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

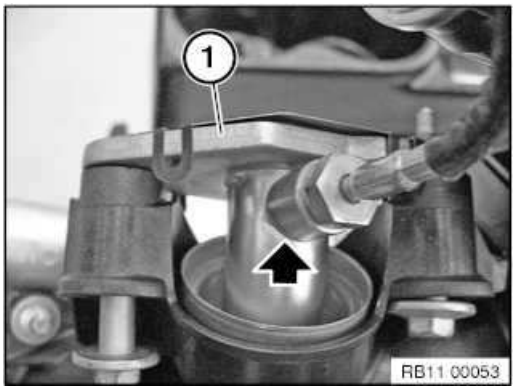
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

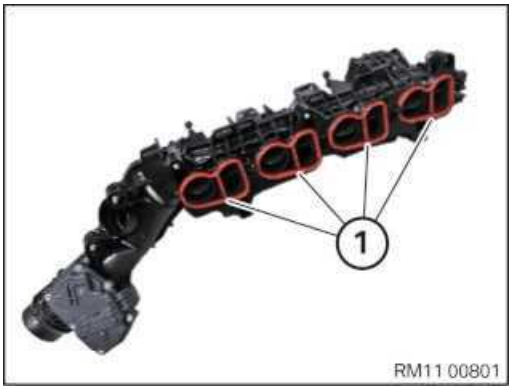
Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

cardiagn.com



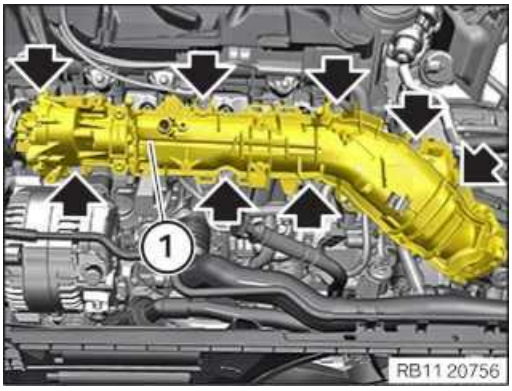
25 – Installing the intake plenum



- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

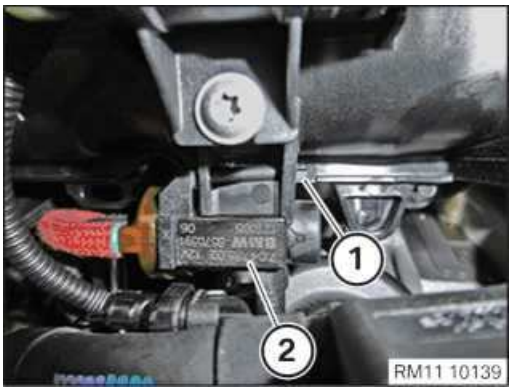
  Parts: Gasket
- Position the seal (2) and clip it in.



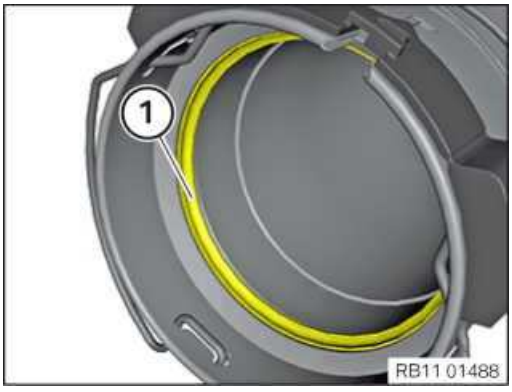
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

  Parts: Gasket



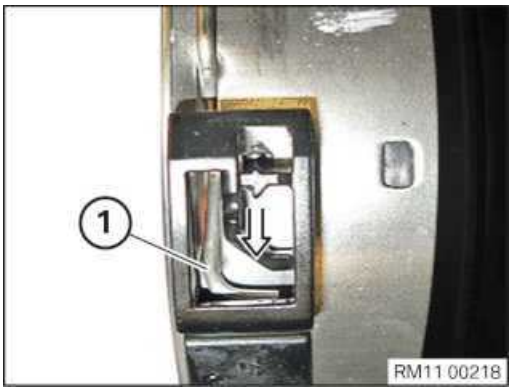
- Ensure that the seal (1) is firmly mounted on the intake plenum.



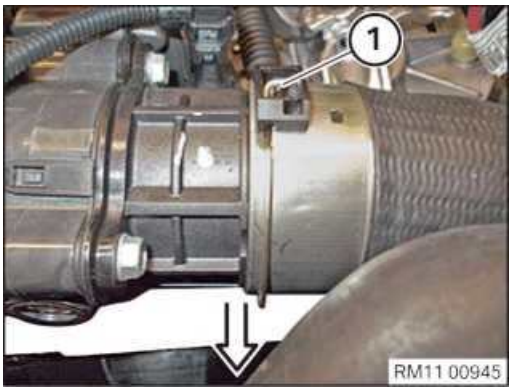
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



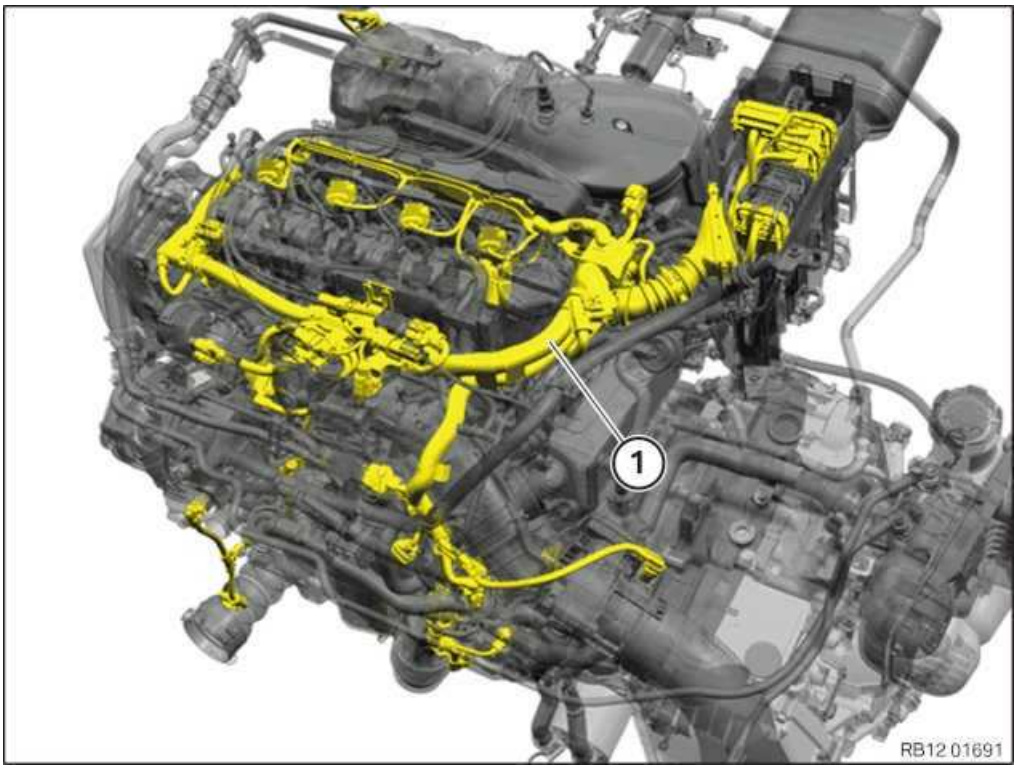
- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

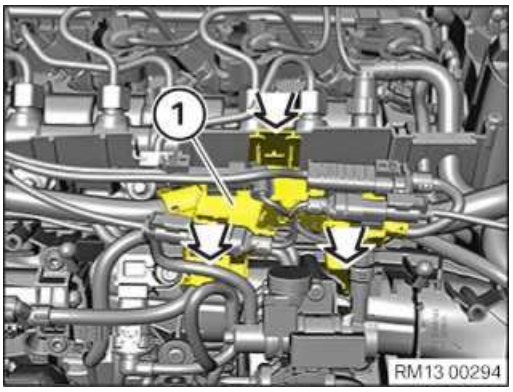
cardiagn.com



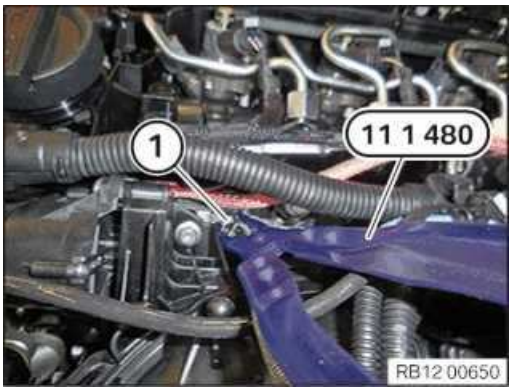
- Engage the lock (1) on the bracket (arrow).

- Connect the charge air line to the throttle valve.
  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

26 – Fastening the wiring harness section for the intake plenum



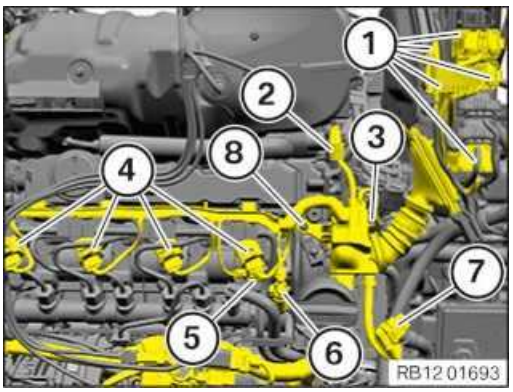
Overview: Wiring harness section for the engine



1 Wiring harness section for the engine

▸ **Installing the cable clip for the intake plenum**

cardiagn.com

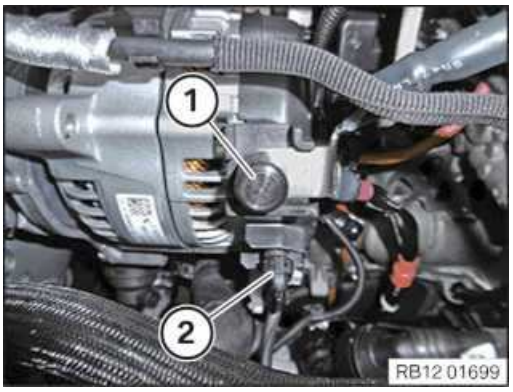


- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.

  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.

- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

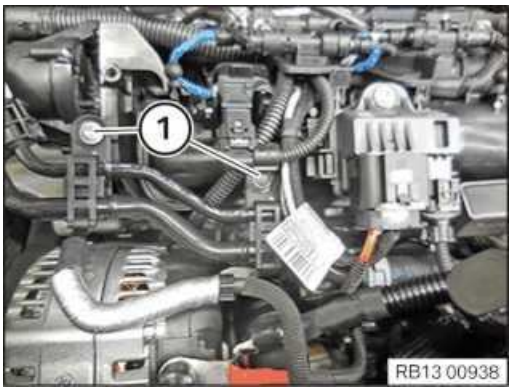


Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.

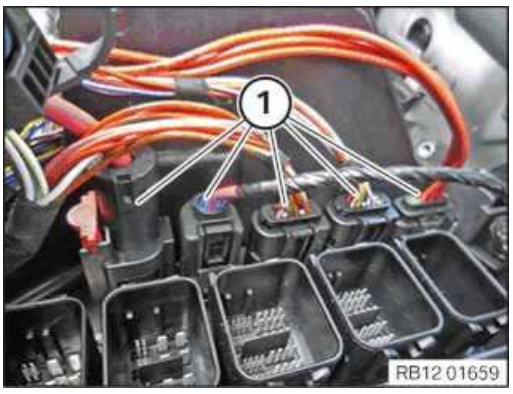
cardiagn.com



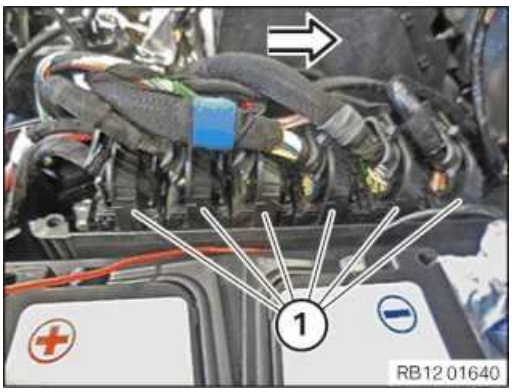
- Connect and lock the connector (2).

  Lock must snap audibly into place.
- Connect the positive battery cable (1) and tighten.

Positive battery cable to alternator

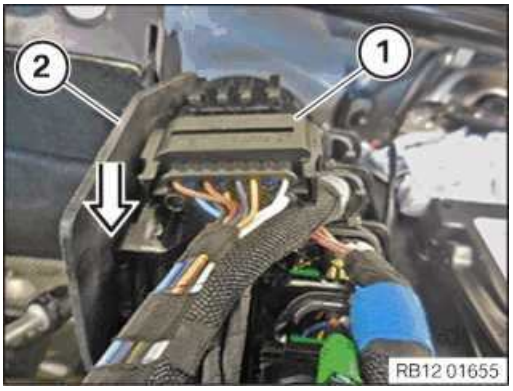


M8		Tightening torque	19 Nm



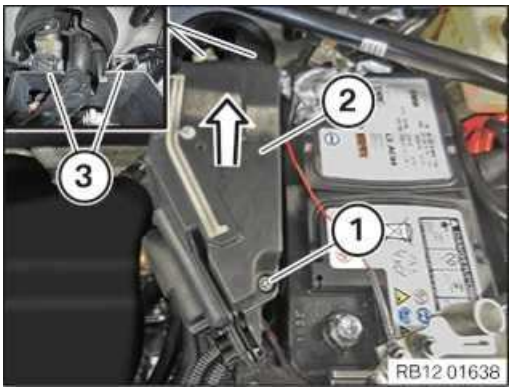
- Position the fuel line.
- Tighten the screws (1).

Fuel line to intake plenum



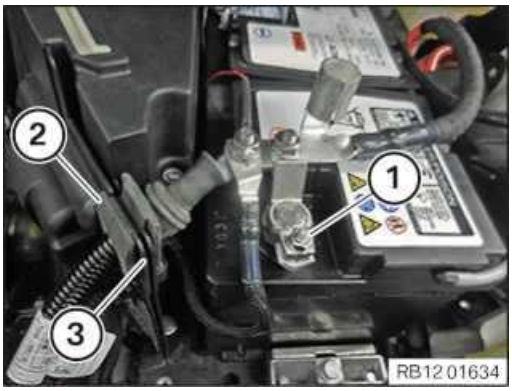
TS6x20		Tightening torque	5 Nm

- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

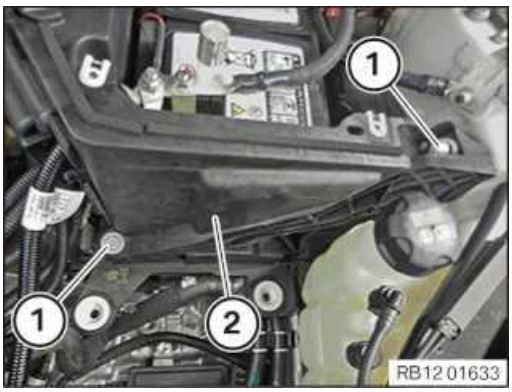
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



cardiagn.com

- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

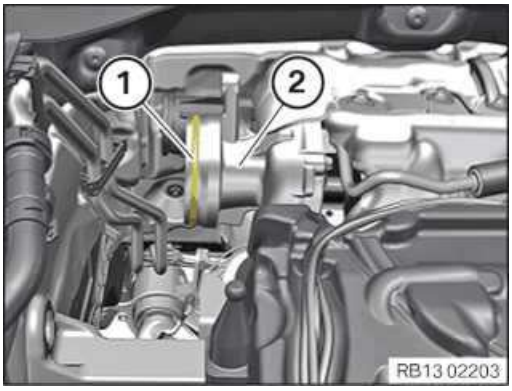


RF5x26.5		Tightening torque	2,5 Nm

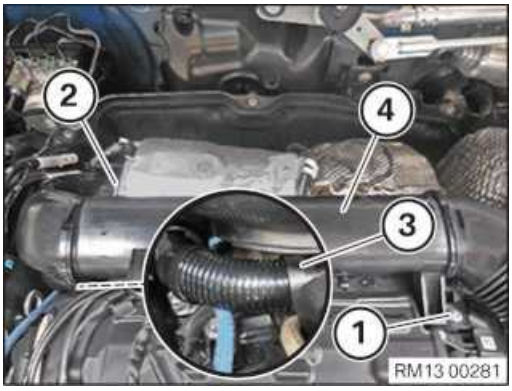
- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).



Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

27 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

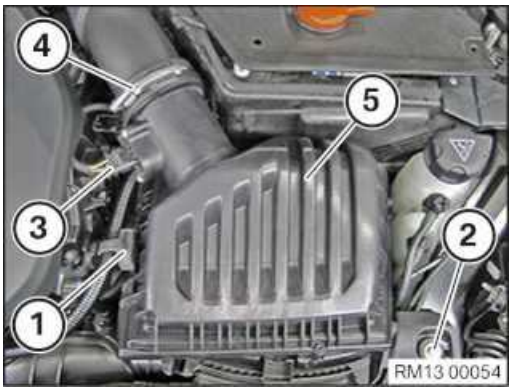
  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.

cardiagn.com



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

28 – Installing intake silencer housing

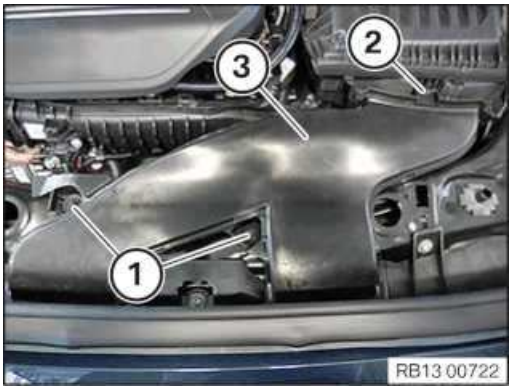
- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).



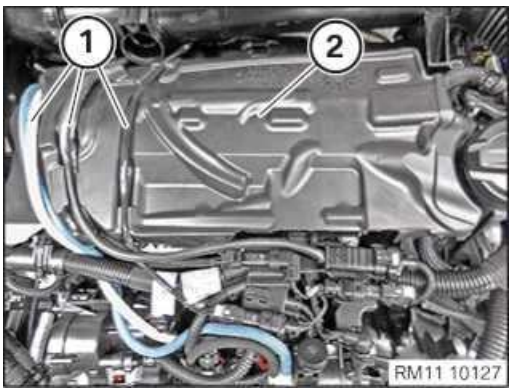
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

29 – Install the intake neck for the intake filter housing

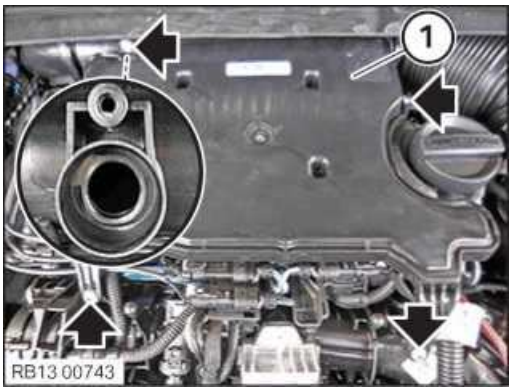


- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm



30 – Install the acoustic cover for the injectors

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

31 – Install resonator

cardiagn.com

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

32 – Install acoustic cover

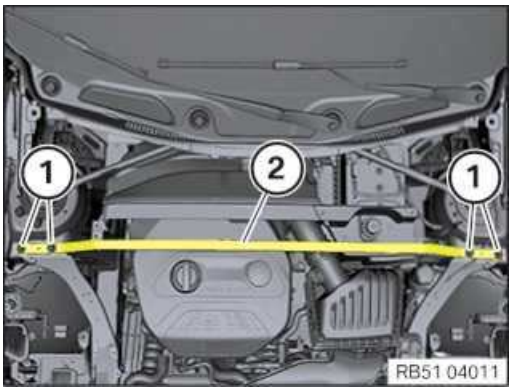
RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).



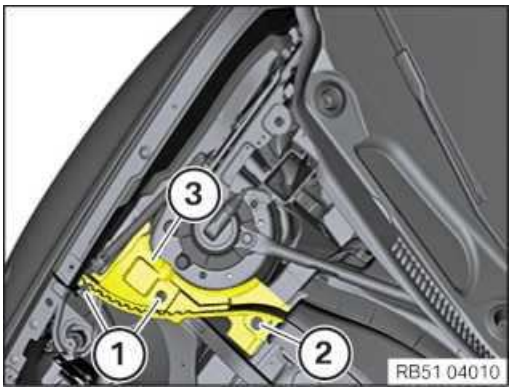
- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

33 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.

cardiagn.com



- Install the strut brace (2).
- Renew screws (1).

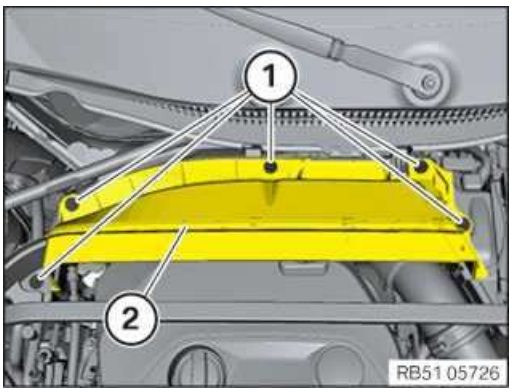
  Parts: Bolts
- Tighten the screws (1).

Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

NOTICE

Description is for right component only. The procedure on the left side is identical.

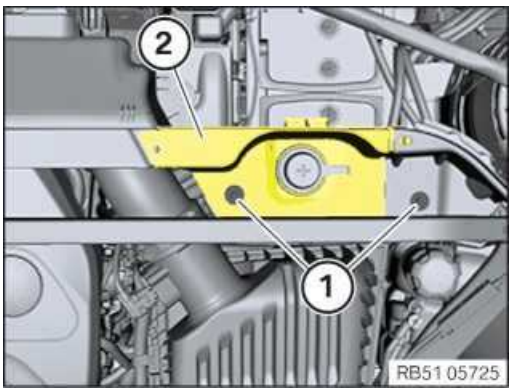


- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

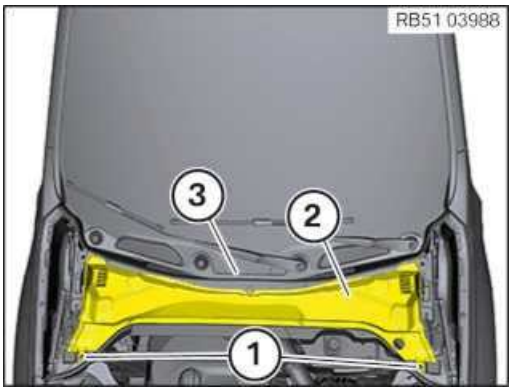


34 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm



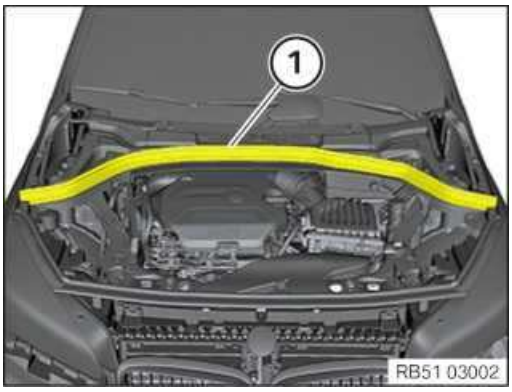
- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

35 – Installing front cowl panel cover

cardiagn.com



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

36 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

37 – Disconnecting all battery earth leads

- See additional information.

38 – Delete adaptations

- Connect diagnosis system.
  - Power train
  - Digital diesel electronics (DDE)
  - Reset adaptations
  - Delete adaptations

Overview Technical Data

Cleaning agent

Used in step 18

cardiagn.com

Universal cleaner must be diluted with water.

Washer fluid	2 parts water, 1 part universal cleaner

Expendable materials: Universal cleaner

Clean the intake system	Used in step 18
Soaking time of the cleaning agent	1 h

Walnut granules	Used in step 20
Quantity for each blasting process	2 l

Cleaning the intake ports	Used in step 20
Operating pressure	6 bar ... 8 bar

Cleaning the intake ports	Used in step 20
Blast duration with walnut granules	Approx. 20 s
Blast duration with pure compressed air for the complete blowing out of walnut granules	Approx. 10 s

Operating materials	Used in step
2.0 Grease for wheel centring	24

Parts

Parts required

Designation	Used in step
Intake system seal to throttle body	18
Throttle body gasket to charge air pipe with integrated temperature sensor for intake air	18
Charging pressure sensor seal to intake system	18

cardiagn.com

11 12 800 Clean cylinder head intake channels and intake plenums

Special tools required:

- 11 8 880
- 11 0 235
- 2 302 630
- 11 6 480
- 11 6 050
- 2 356 969
- 2 356 966
- 2 356 967

Necessary preliminary work:

- Disconnect negative battery lead
- Removing intake plenum
- Remove front right wheel arch panel

Dismantle intake plenum:

- Remove throttle body
- Remove adjuster
- Remove charging pressure sensor
- Remove the temperature sensor for the exhaust-gas recirculation
- If applicable, remove preheating control unit

Wear protective goggles and gloves.

Caution!
Never place electrical components in cleaning agent!

Cleaning intake plenum:

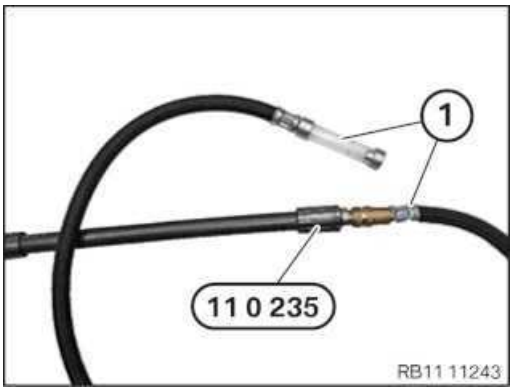
- Wear personal protective clothing/equipment
- Prepare cleaning agent: Mix 2 parts water with 1 part BMW universal cleaner (see Section 3.2)
- Place intake plenum in cleaning agent
- Observe application time of at least 1 hour

cardiagn.com

Cleaning intake ports: Caution!

Risk of engine damage!

When cleaning the intake ports, it must be ensured that the intake valves of the corresponding cylinder are closed.

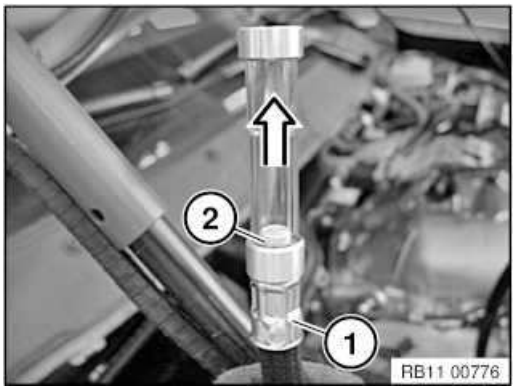


Determine the TDC (intake valves closed) using a TDC determination unit via the glow-plug hole.

Start with the 1st cylinder when cleaning the intake ports.

Remove glow-plug cylinder 1.

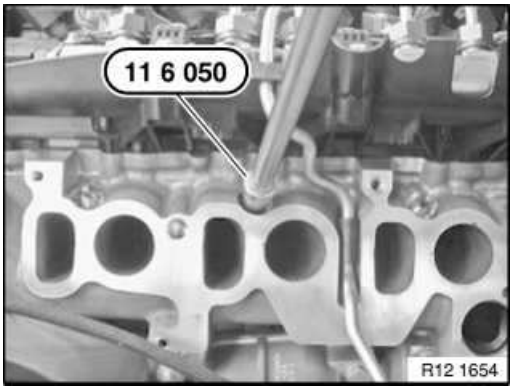
Screw in special tools 11 8 880 and 11 0 235 .



Connect TDC determination unit (1) from special tool 2 302 630 with special tool 11 0 235 .

Turn the engine with special tool 11 6 480 on the central bolt till cylinder 1 is in TDC position.**Caution!**

Do not crank engine in reverse direction.

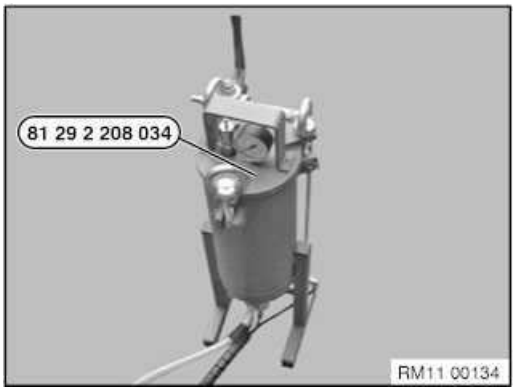


cardiagn.com

Caution!

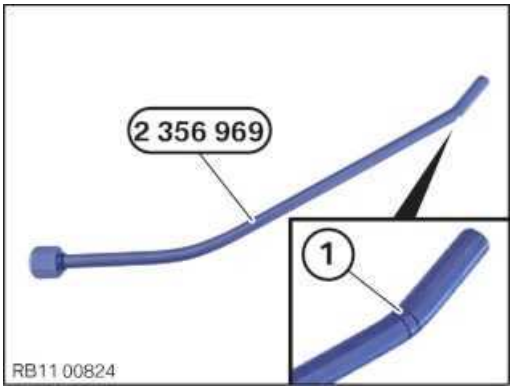
Determine the TDC (intake valves closed) using a TDC determination unit (1) via the glow-plug hole.

Turn the engine on the central bolt until cylinder 1 is in TDC position.



Remove special tools.

Reinstall glow-plug using special tool 11 6 050 .



Installation note:

Tightening torque 12 23 1AZ.

The following are required:

- Blasting tool 81 29 2 208 034
- Walnut shell granulate
- Vacuum cleaner

Caution!

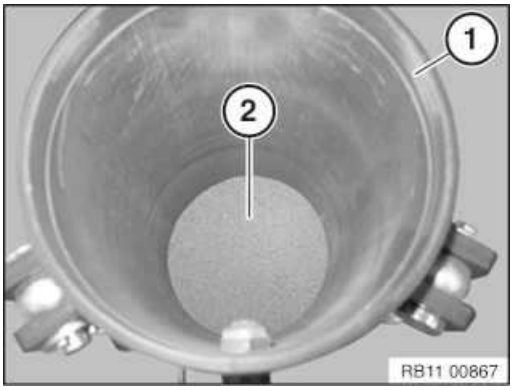
Front area of sensors is marked with two notches. These can additionally be highlighted in colour.

During the blasting process, only pull the wands out of the vacuum adapter until the mark becomes visible.

Blasting wand for swirl ports:

- 2 356 969

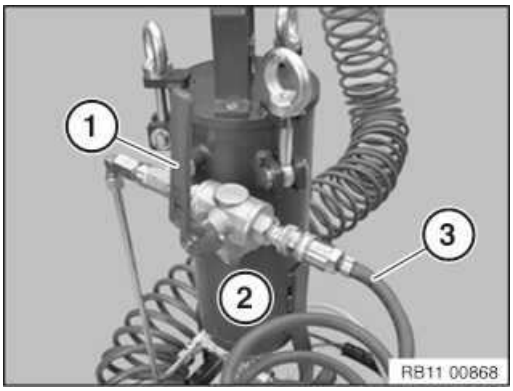
cardiagn.com



Vacuum adapter for tangential swirl port:

- 2 356 966

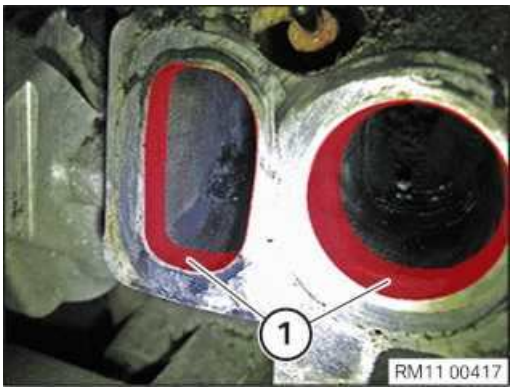
Vacuum adapter for swirl port:



- 2 356 967

Note:
Use 2 litres of granulate per cleaning operation; this corresponds to a blasting duration of approx. 20 seconds.

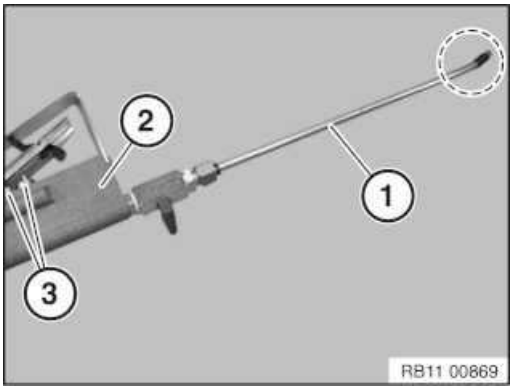
Open blasting tool (1) and pour in 2 litres of granulate (2).



Close the device again.

Note:
Operating pressure 6 - 8 bar.

Close main valve (1) on blasting tool (2).



Connect compressed air (3).

Cleaning the swirl port of 1st cylinder:

Prior to the blasting process, clean the front area of both intake ports (1) of first cylinder with a suitable tool (e.g. plastic scraper, brushes 83 19 2 298 237).

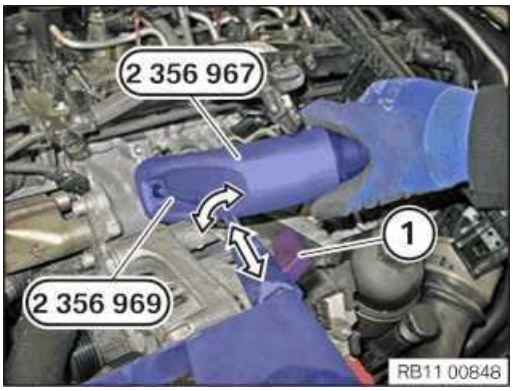
cardiagn.com

Screw together blasting wand 2 356 969 (1) and actuator (2).

Open blasting tool and pour in 2 l granulate.

Close the device again.

Note:
Actuator (3) has two stages!



In stage one, only compressed air flows through the blasting wand.

In stage two (operation is fully pressed), granulate is added (blasting process).

Connect vacuum adapter 2 356 967 to vacuum cleaner. Hold vacuum adapter 2 356 967 against swirl port at no. 1 cylinder.

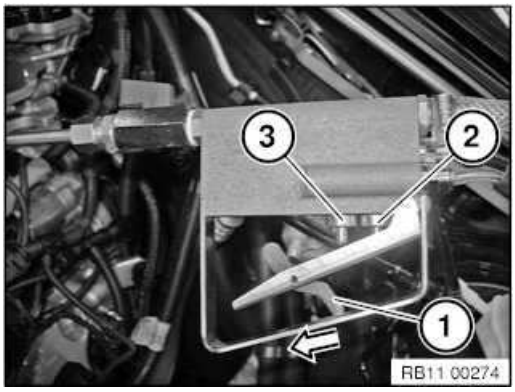
Open the main valve on the blasting tool and switch the vacuum cleaner on.

Caution!

Danger of injury!

Risk of damage!

Second person required to assist.



Blasting wand may only be pulled out until the mark becomes visible.

Wear safety goggles.

Insert blasting wand 2 356 969 in the adapter 2 356 967 .

Open the actuator valve (1).

Slide locking lever (1) to the front in direction of arrow.

Operate compressed-air valve (2) at stage one; compressed air can now flow in.

Fully operate valve (3) at stage two; walnut shell granulate is now injected.

Clean intake port, rotating the blasting wand and moving it vertically up and down.

Blasting wand may only be pulled out until the mark becomes visible.

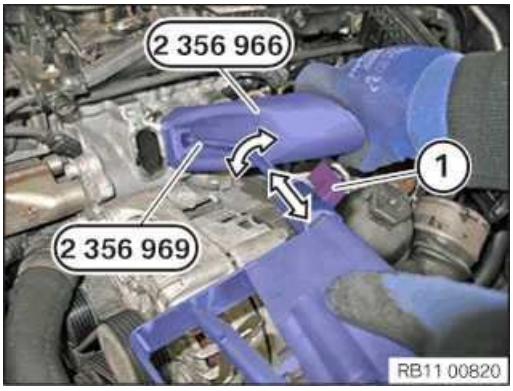
When you notice that the collection container is becoming empty, continue operation for at least 10 seconds at stage one in order to swirl up and draw off the remaining granulate.

Close operation valve. Close main valve, check pressure drop at the pressure gauge.

Evaluate result if necessary.

If necessary, repeat procedure.

cardiagn.com



Cleaning the tangential swirl port of 1st cylinder:

Open blasting tool and pour in 2 l granulate.

Close the device again.

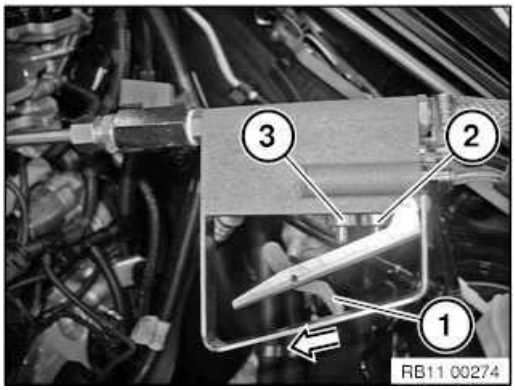
Connect vacuum adapter 2 356 966 to vacuum cleaner. Hold vacuum adapter 2 356 966 on swirl port of first cylinder.

Open the main valve on the blasting tool and switch the vacuum cleaner on.

Caution!

Danger of injury!

Risk of damage!



Second person required to assist.

Blasting wand may only be pulled out until the mark becomes visible.

Wear safety goggles.

Insert blasting wand 2 356 969 in the adapter 2 356 966 .

Open the actuator valve (1).

Slide locking lever (1) to the front in direction of arrow.

Operate compressed-air valve (2) at stage one; compressed air can now flow in.

Fully operate valve (3) at stage two; walnut shell granulate is now injected.

Clean intake port, rotating the blasting wand and moving it vertically up and down.

Blasting wand may only be pulled out until the mark becomes visible.

When you notice that the collection container is becoming empty, continue operation for at least 10 seconds at stage one in order to swirl up and draw off the remaining granulate.

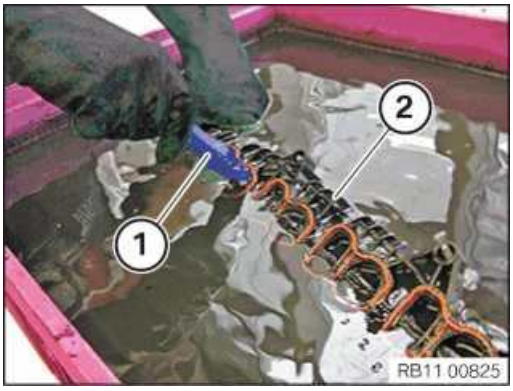
Close operation valve. Close main valve, check pressure drop at the pressure gauge.

Evaluate result if necessary.

If necessary, repeat procedure.

Cleaning the other cylinders:

Clean the tangential ports and swirl ports of the next cylinder using the same procedure.



Caution!

When cleaning the intake ports, it must be ensured that the intake valves of the corresponding cylinder are closed.

Determine the TDC (intake valves closed) using a TDC determination unit via the glow-plug hole.

Do not crank engine in reverse direction.

cardiagn.com

Wear protective goggles and gloves.

Caution!
Do not clean electrical components with a parts cleaning unit or high pressure cleaner!

Cleaning intake plenum:

- Remove the intake plenum (2) from the cleaning agent
- Clean the openings on intake plenum (2) and swirl flap using the brush (1)

  (Part number: 83 19 2 298 237)
- Clean throttle valve, exhaust-gas recirculation valve, mixing tube and mounted parts with the brush (1) if necessary
- Then clean intake plenum (2) with a parts cleaning unit or a high-pressure cleaner
- Check all seals for damage and renew, if applicable

Observe country-specific waste disposal regulations.

Required follow-up work:

Assemble intake plenum:

- Installing the throttle body
- Install adjuster
- Install the charging pressure sensor
- Install the temperature sensor for the exhaust-gas recirculation
- If applicable, install preheating control unit

- Crank the engine at the central bolt at minimum twice
- Install front right wheel arch panel trim
- Install intake plenum
- Connect battery earth lead

- Reset the quantity correction under:
  - Service functions
  - 01 Drive
  - Digital Diesel Electronics
  - Reset correction values of injectors

cardiagn.com

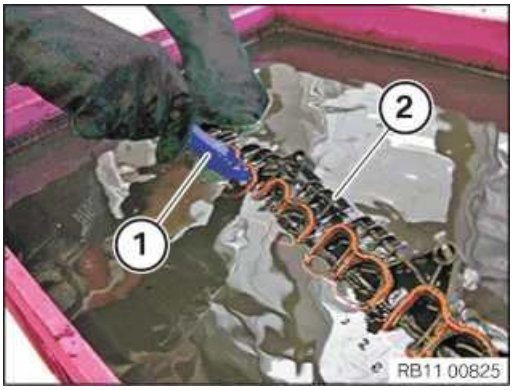
11 12 ... Clean intake plenum (B37, B47)

Necessary preliminary work:

- Remove intake plenum

Dismantle intake plenum:

- Remove throttle body
- Remove adjuster
- Remove charging pressure sensor
- Remove the temperature sensor for the exhaust-gas recirculation .
- If applicable, remove preheating control unit



Wear protective goggles and gloves.

Caution!
Never place electrical components in cleaning agent!

- Put on personal protective clothing/equipment!
- Prepare cleaning agent: Mix 2 parts water with 1 part BMW universal cleaner (part number: 83 19 2 360 981) mixed
- Place intake plenum in cleaning agent
- Adhere to an application time of at least 1 h

Wear protective goggles and gloves.

Caution!
Do not clean electrical components with a parts cleaning unit or high pressure cleaner.

- Remove the intake plenum (2) from the cleaning agent
- Clean the openings of the intake plenum (2) and swirl flaps using the brush (1)

  (Part number: 83 19 2 298 237)
- Clean throttle valve, exhaust-gas recirculation valve, mixing tube and mounted parts with brush (1) if necessary
- Clean the intake plenum (2) with a parts cleaning unit or a high-pressure cleaner.
- Check all seals for damage and renew, if applicable.

Pay attention to country specific instructions for disposal.

cardiagn.com

Required follow-up work:

Assemble intake plenum:

- Installing the throttle body
- Install adjuster
- Install the charging pressure sensor
- Install the temperature sensor for the exhaust-gas recirculation.
- If applicable, install preheating control unit

- Install intake plenum

cardiagn.com

11 12 070 Remove and install/replace acoustic cover

1 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

2 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

cardiagn.com

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

cardiagn.com

11 12 070 Remove and install/replace acoustic cover

1 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

2 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

cardiagn.com

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

cardiagn.com

11 12 100 Removing and installing cylinder head

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

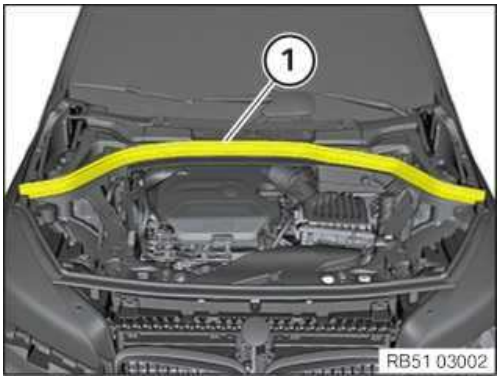
Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

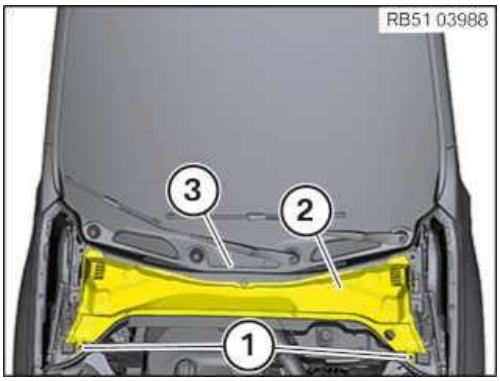


- Ensure there is a specific weight compensation on the motor vehicle.

PRELIMINARY WORK

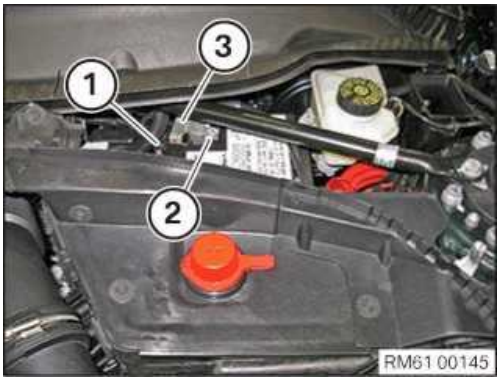
1 – Remove the seal for the rear bonnet

NOTICE



Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.

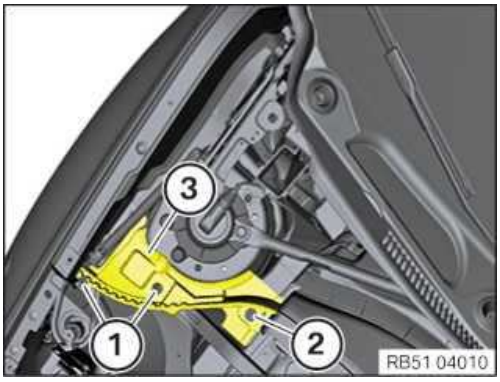


2 – Removing front cowl panel cover

cardiagn.com

- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

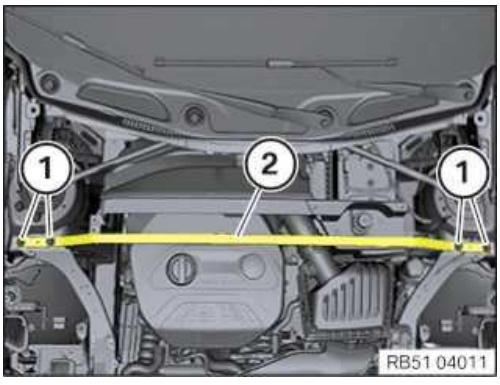
3 – Disconnecting the battery earth lead



- Unlock plug connection (1) and disconnect.
- Unfasten nut (2).
- Remove the battery earth lead (3) and secure to one side.

4 – Remove suspension cross-brace

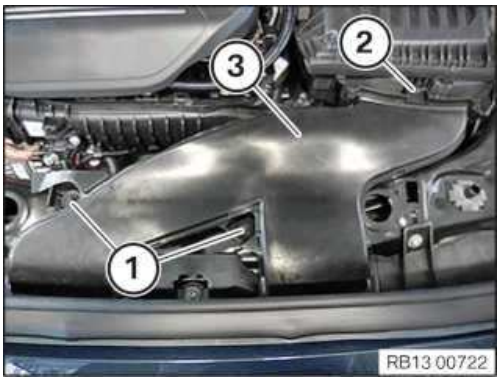
TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

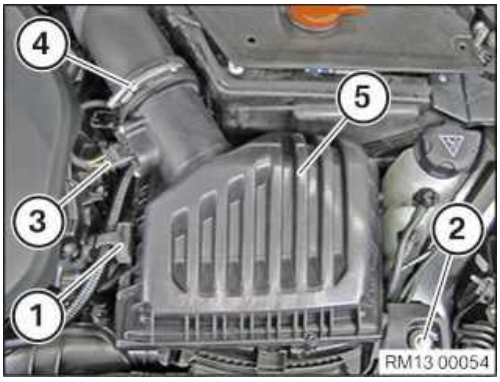
NOTICE

Description is for right component only. The procedure on the left side is identical.



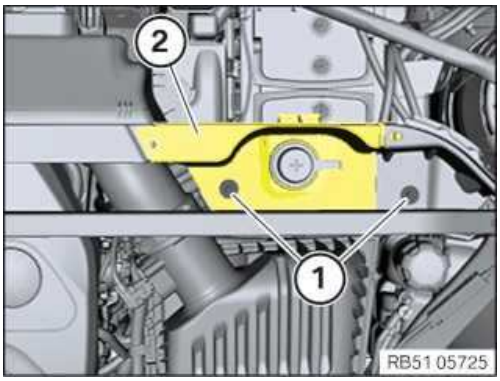
- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).



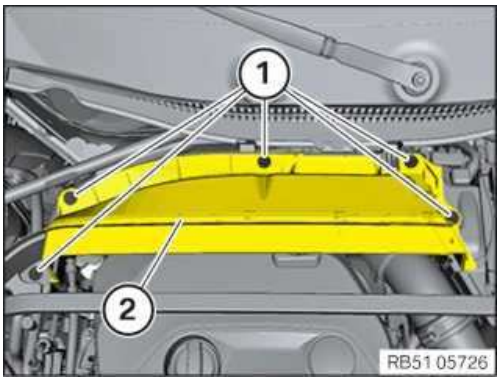
5 – Remove the intake neck for intake silencer housing

cardiagn.com



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

6 – Removing intake silencer housing



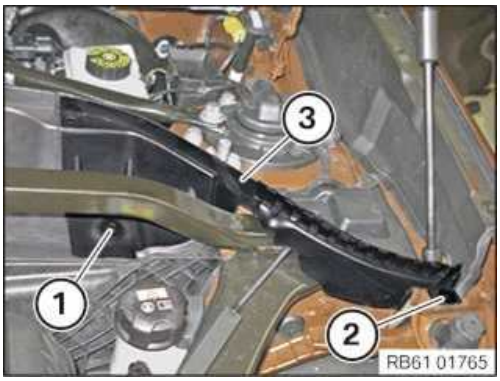
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

7 – Removing the upper bulkhead cover

- Loosen screws (1).
- Guide out and remove the cover (2).

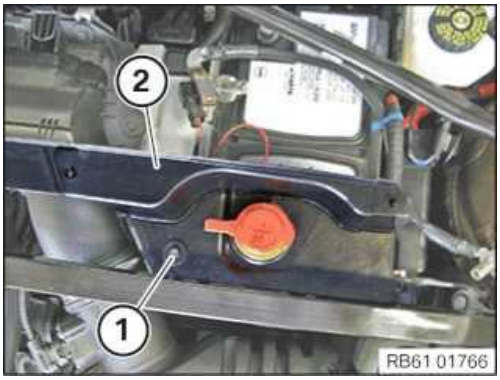
- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

8 – Remove vehicle battery



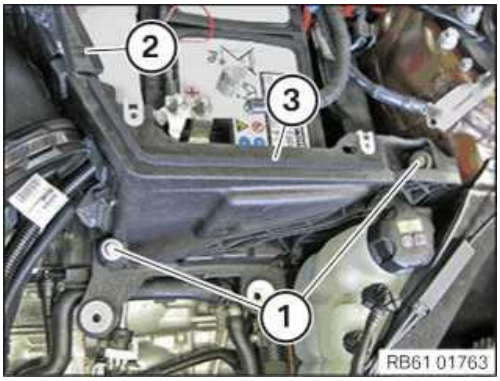
WARNING

Working on 12 V vehicle electrical system.

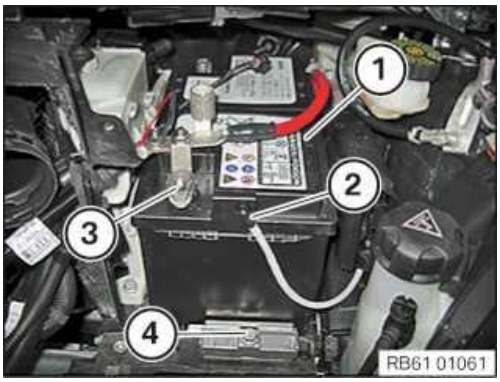


Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.



cardiagn.com



- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING

Unprotected battery terminals.

Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

9 – Removing the acoustic cover

WARNING

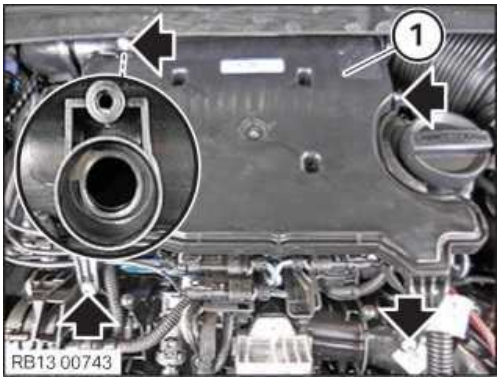
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE



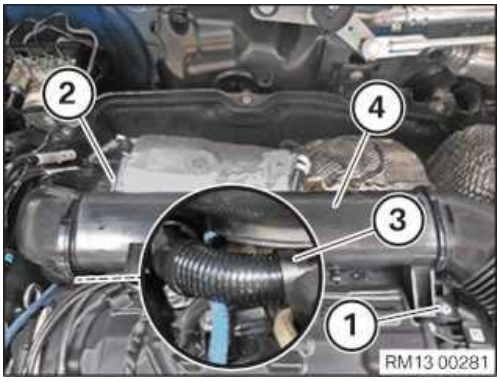
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

10 – Remove resonator



- Remove screws (arrows).
- Guide out and remove the resonator (1).

11 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

12 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

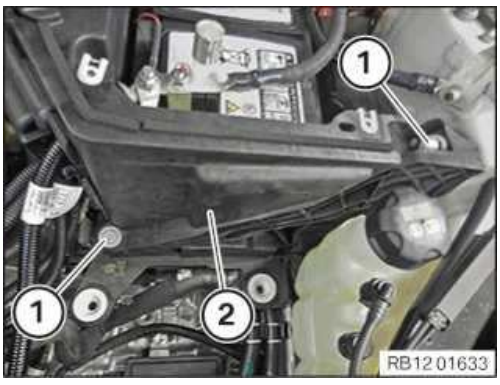
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

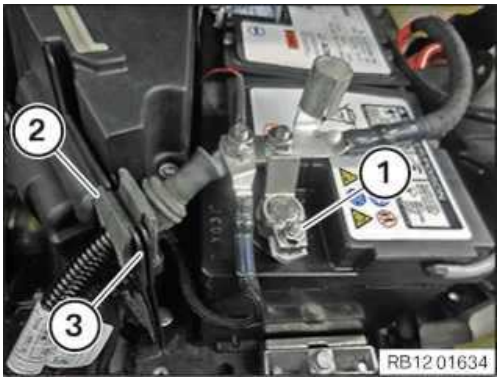
Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.



TECHNICAL INFORMATION

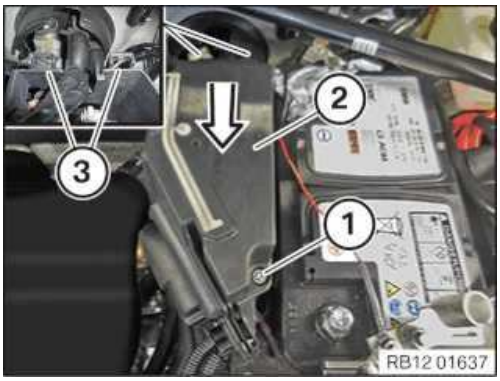
Follow instructions for removing and installing control units.



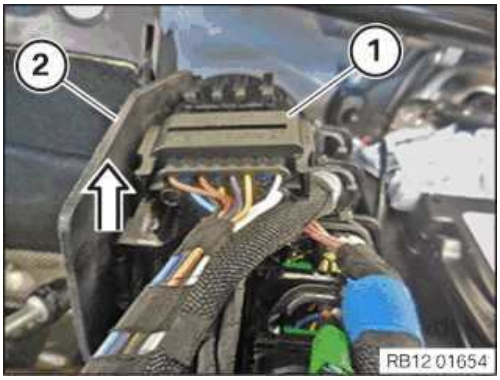
For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

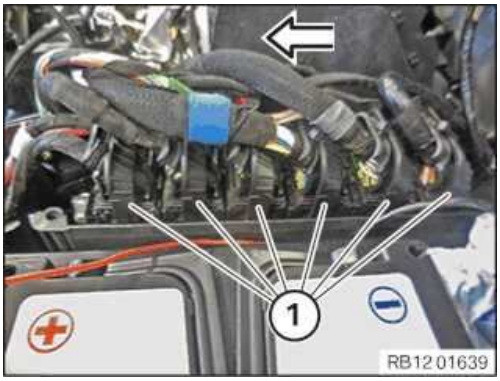
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



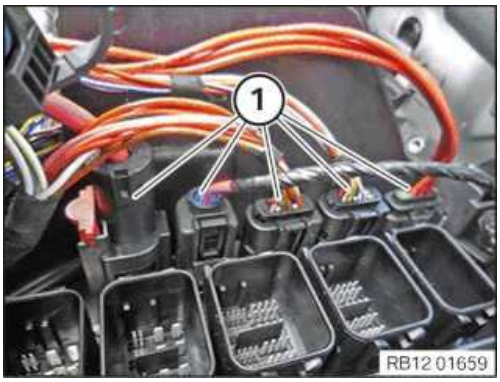
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



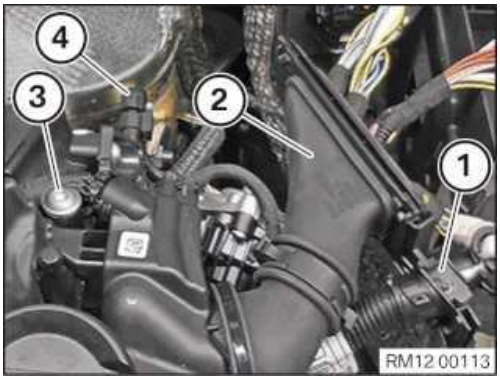
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



cardiagn.com

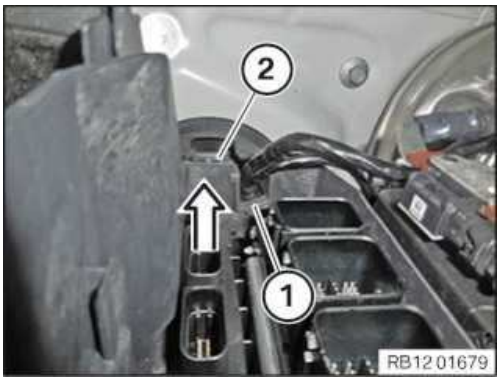


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

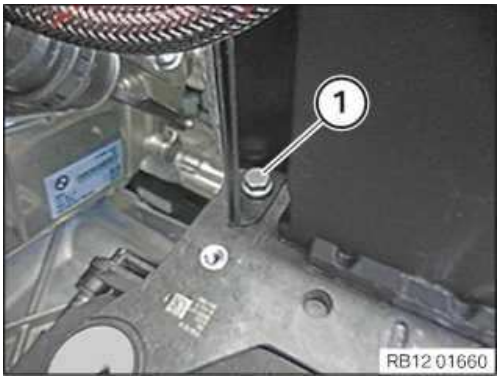


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

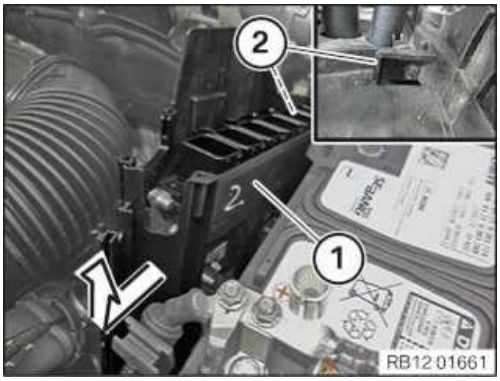
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).

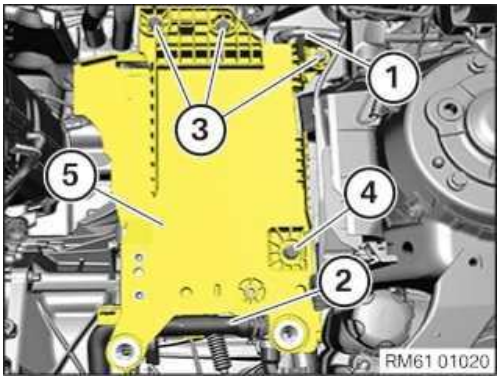


- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

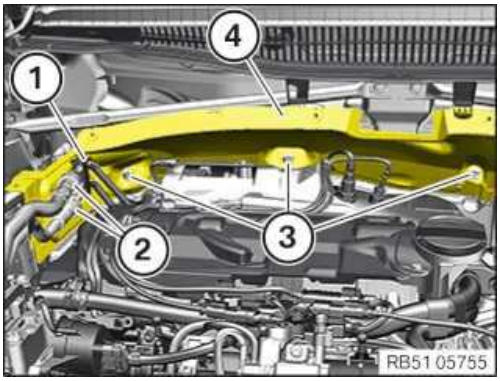


cardiagn.com

- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.



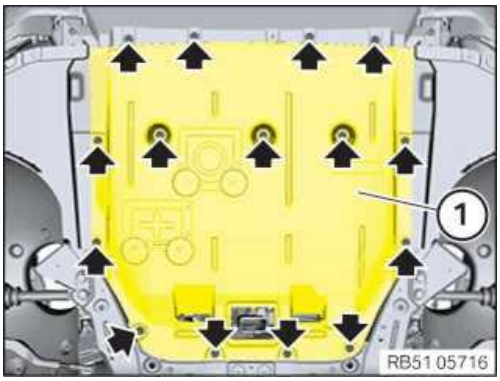
- Loosen screw (1).



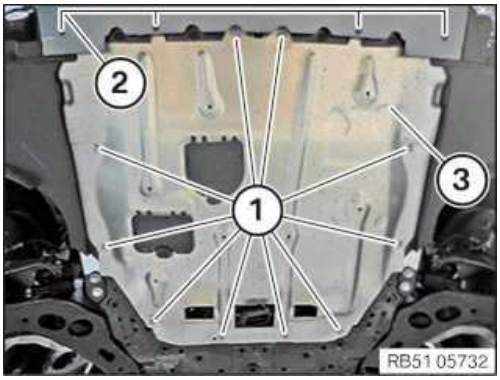
- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

13 – Remove battery holder

- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).



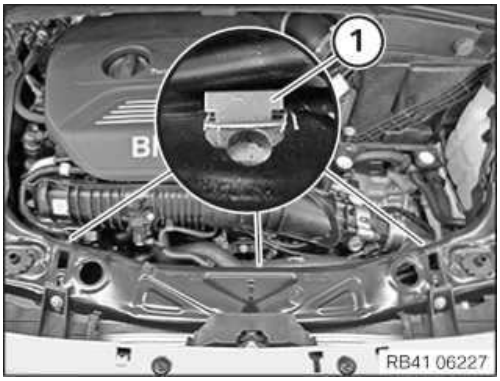
14 – Remove the rear bulkhead upper part



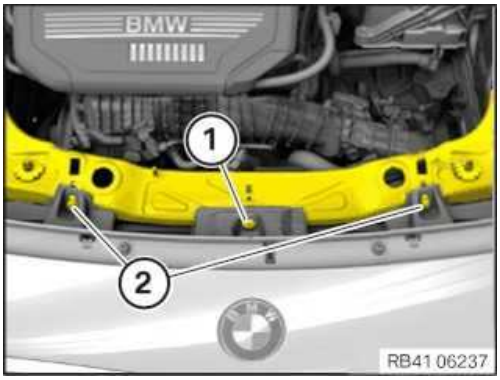
- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.

15 – Removing the front underbody protection

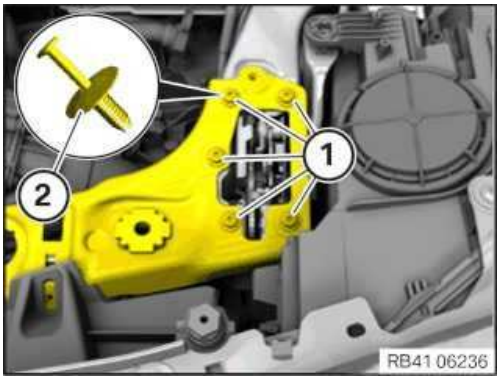
cardiagn.com



- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

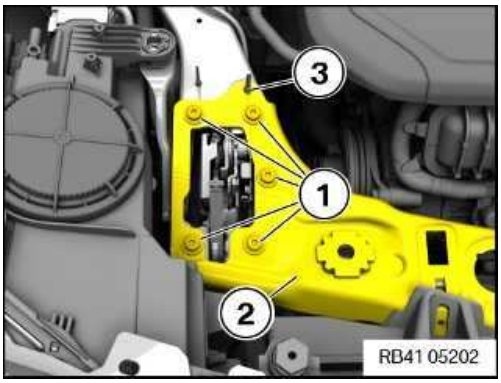


- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).



16 – Remove front cross connection

- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.



- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

cardiagn.com

- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

17 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

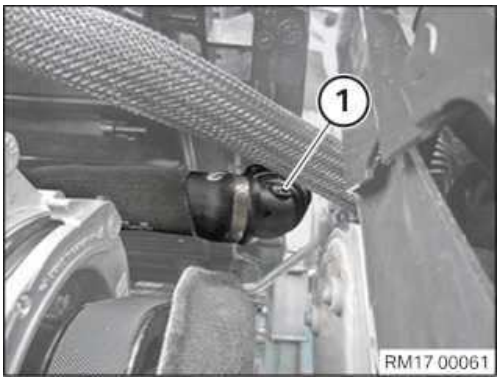
TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

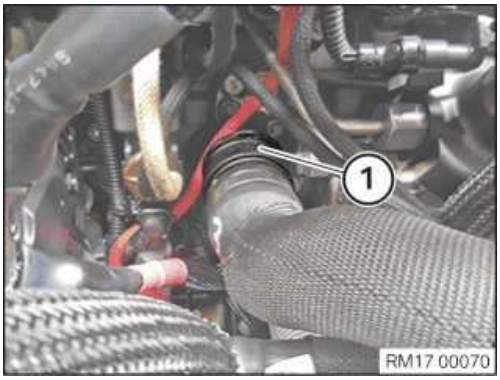
When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.



TECHNICAL INFORMATION

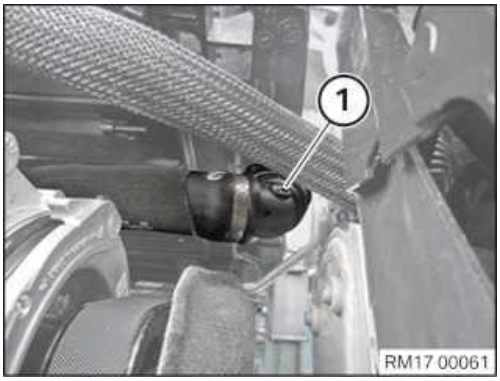
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



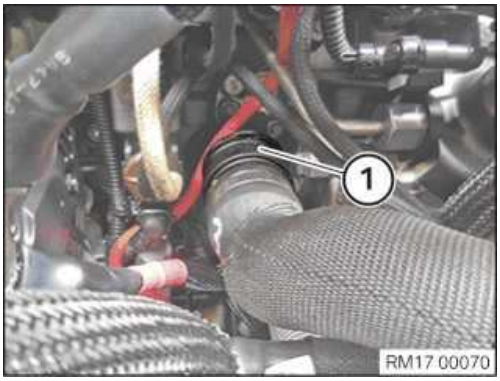
- Loosen sealing cap (1).

cardiagn.com

- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.



- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.

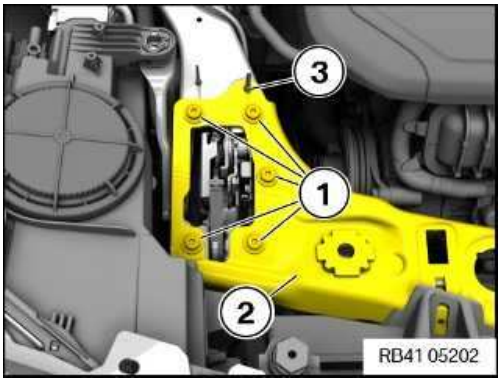


18 – Connect the coolant line

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

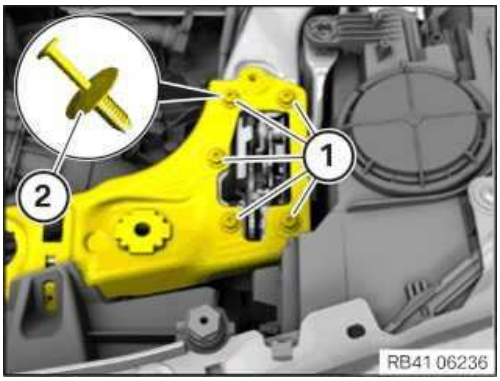
- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the connecting branch and lock audibly.

19 – Install front cross connection

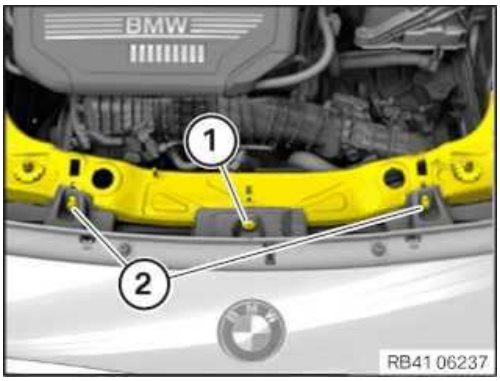
cardiagn.com



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

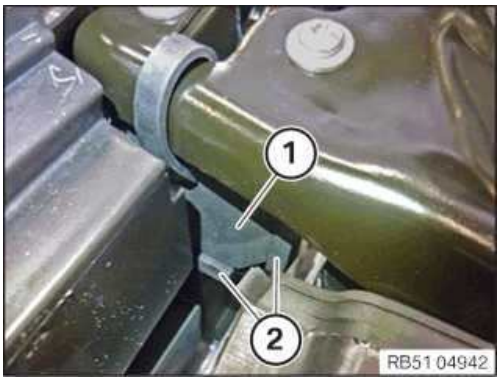
Screws M6x20		Tightening torque	11,8 Nm

- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

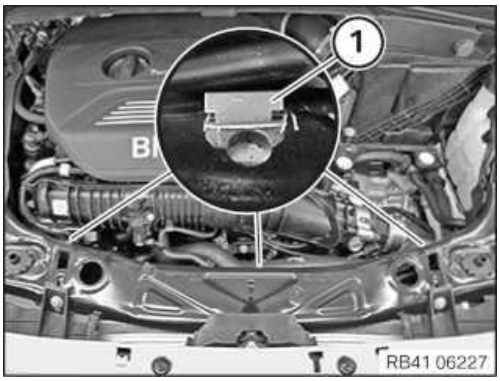
- Tighten down screws (2).



Air duct to upper connection

M6x20 screw		Tightening torque	11,8 Nm

- Tighten down screw (1).



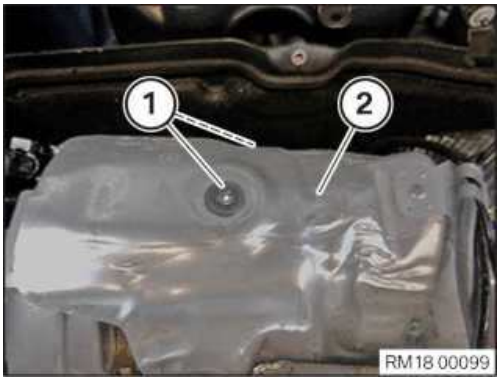
Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm

- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

cardiagn.com

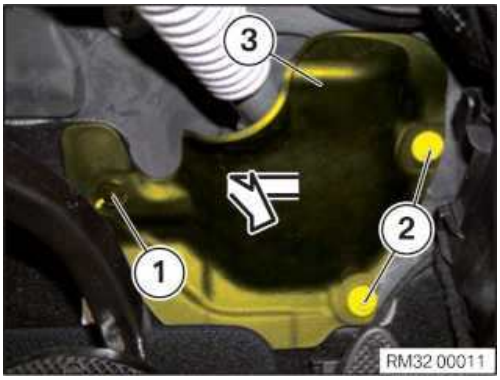
- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.



20 – Removing heat shield from top exhaust turbocharger

WARNING

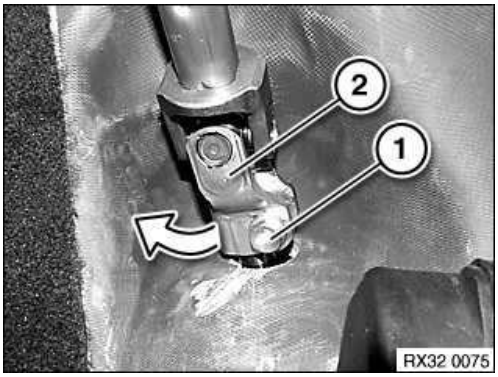
Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.

- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).



21 – Releasing lower steering shaft from steering gear

- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!

- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

22 – Securing radiator on left and right

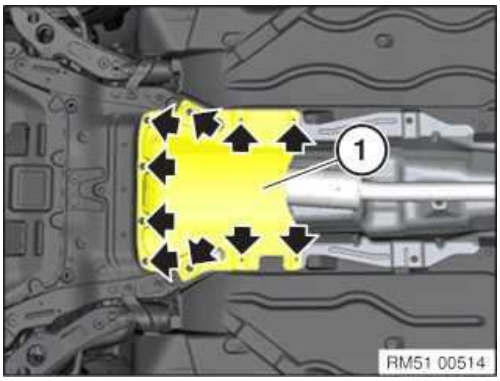
cardiagn.com

NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

23 – Removing both front wheels



▶ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

24 – If installed: Removing rear underbody protection

- Remove screws (arrows).
- Remove the rear underbody protection (1).

25 – Removing right underbody panelling

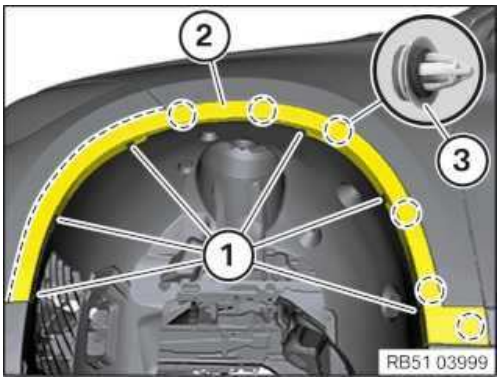
- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).

26 – Removing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

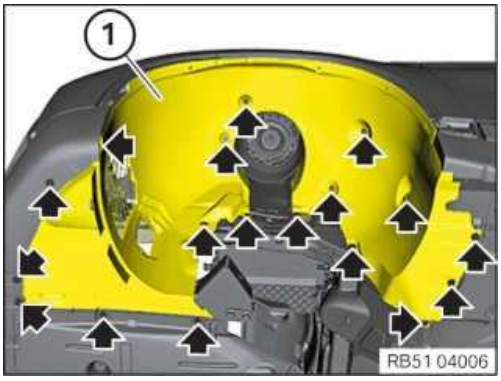
cardiagn.com



▶ **Remove the front wheel arch trim**

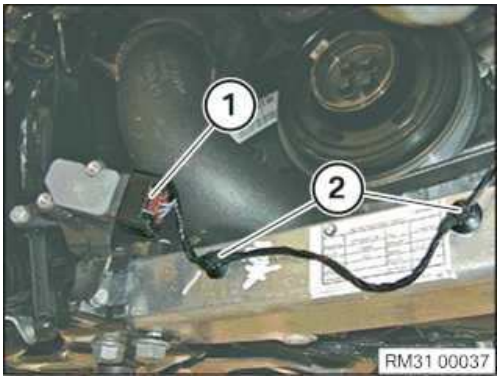
NOTICE

To provide a better overview: Schematic diagram with partially hidden components.



NOTICE

Description is for left component only. Procedure on the right side is identical.



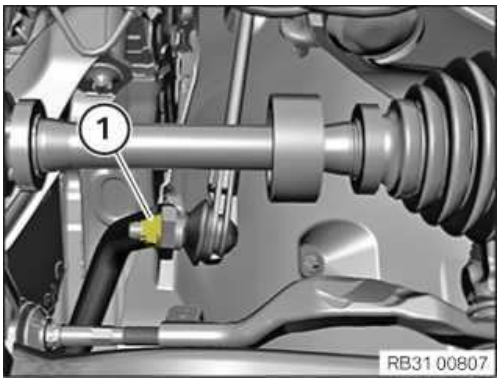
- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

▶ **Remove front wheel arch cover**

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

27 – With right installation: Detaching ride height sensor cable

- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.



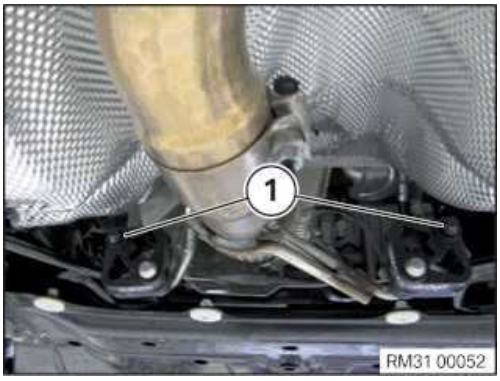
28 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Detach the anti-roll bar from the anti-roll bar link**

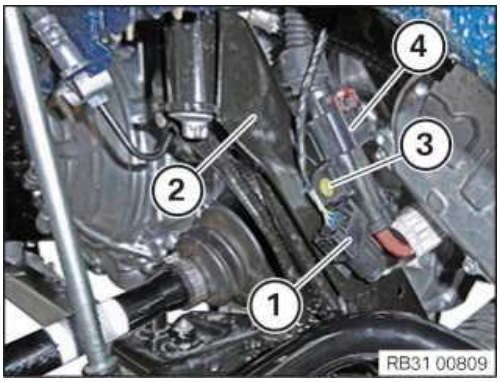
cardiagn.com



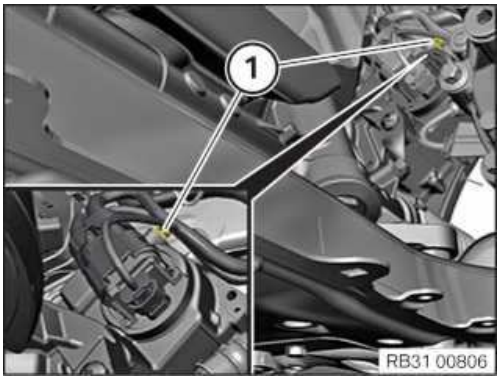
- Unfasten nut (1).

Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .



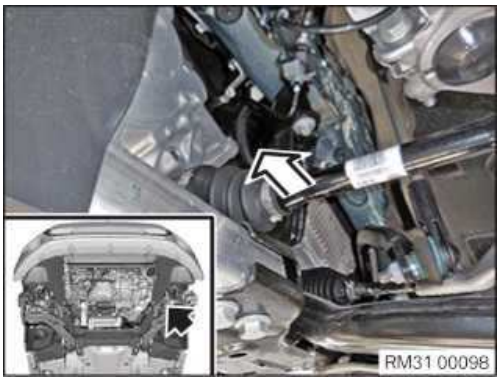
29 – Detaching rubber mount from front axle support



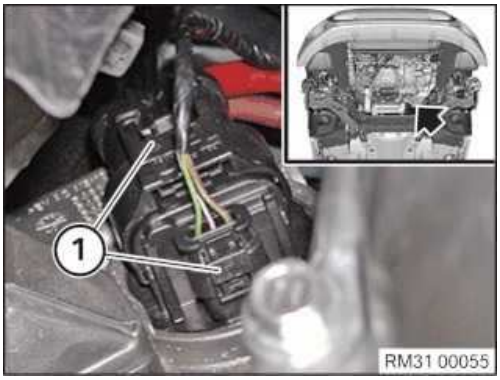
- Spray rubber mount (1) with lubricant and release from holder on front axle support.

30 – Disconnecting plug connections from steering gear

▶ **If installed: Detach connectors from the front axle carrier**

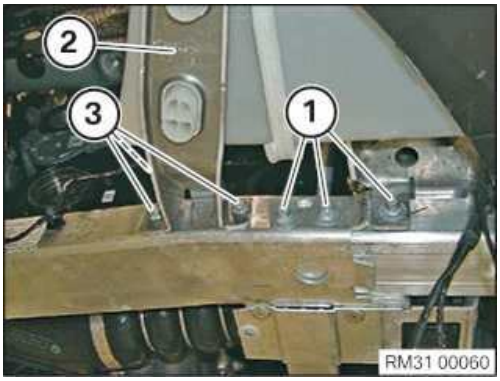


- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).



- Disconnect wiring harness (1) from steering gear.

cardiagn.com

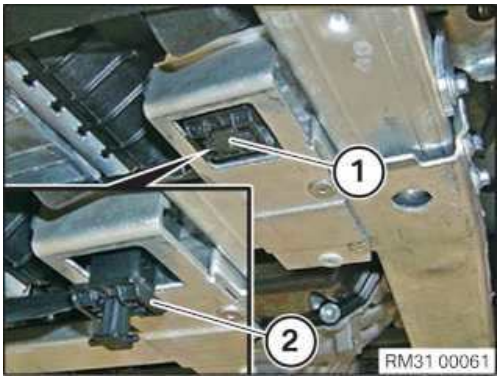


- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.

- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

31 – Releasing the mounted part from the front axle support



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

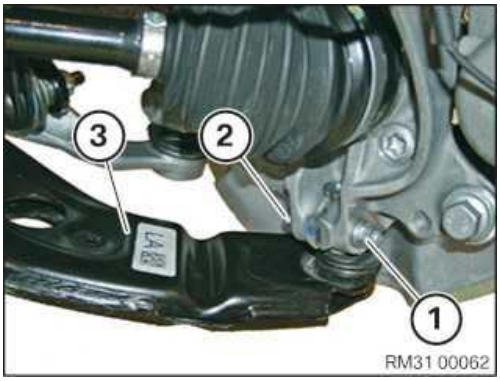
NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).

- Loosen screw (2) of the engine support (3) on the front axle (1).

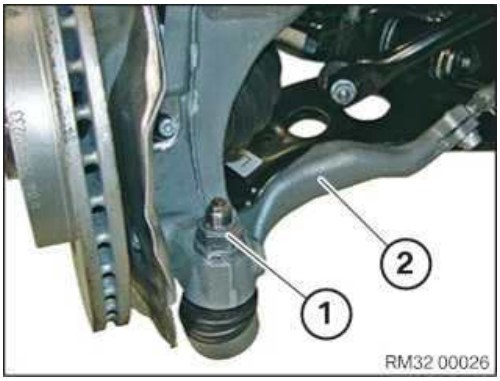
cardiagn.com



NOTICE

Perform the operations on the left and right side.

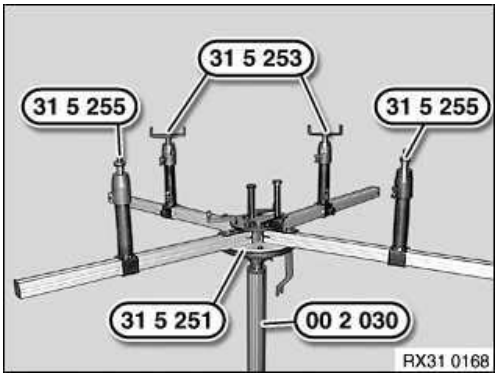
- Loosen screws (1).



32 – Detaching and removing front axle completely

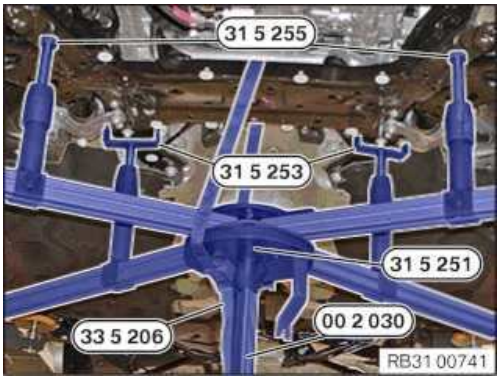
NOTICE

Perform the operations on the left and right side.



- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .

NOTICE

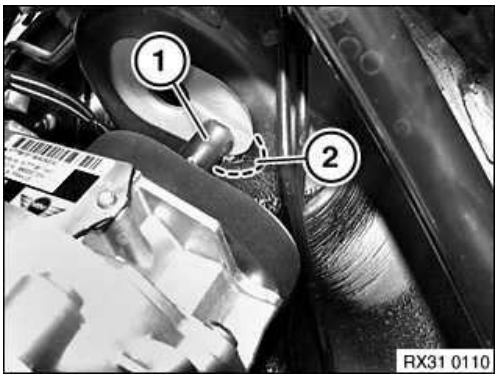


Perform the operations on the left and right side.

- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

Note: In a profile rail pair, two profile rails are connected to one another by gearing.

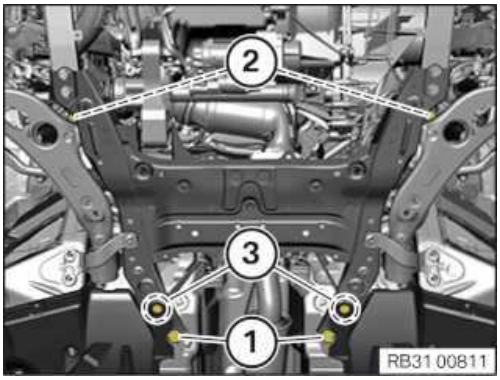


- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .

cardiagn.com

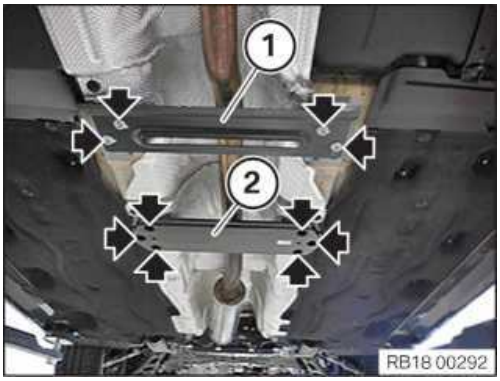


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



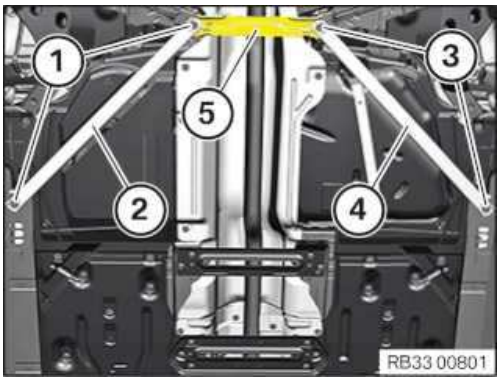
- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

33 – Removing the connecting support from the tunnel in front and back



- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

34 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.

cardiagn.com

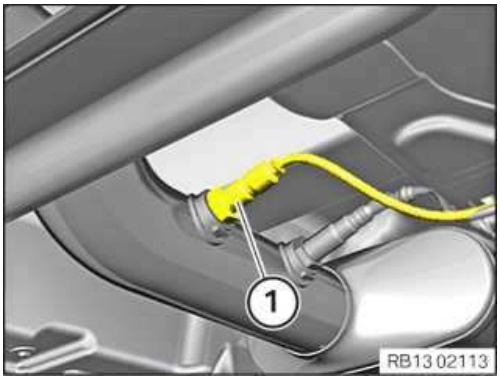
- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

35 – Remove exhaust system

WARNING

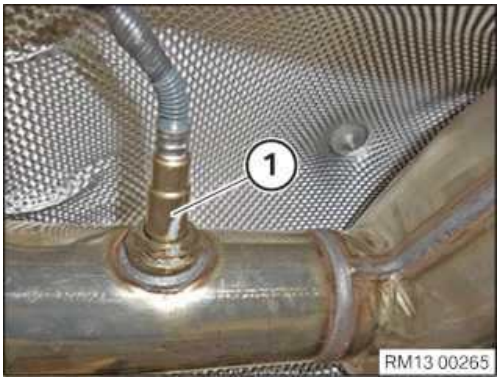
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

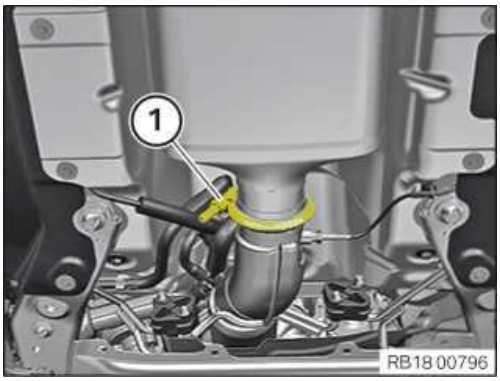
CAUTION



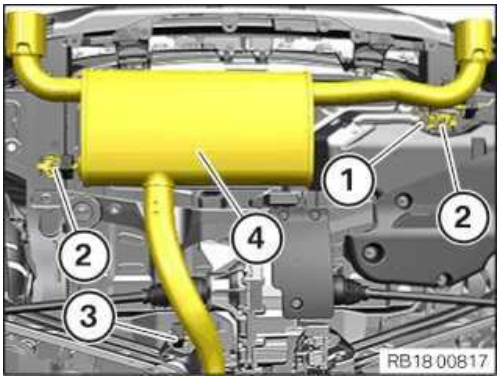
Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

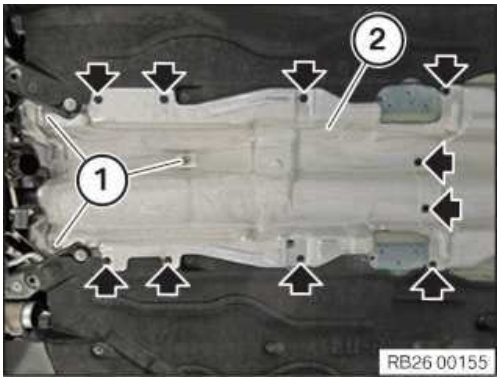


- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.

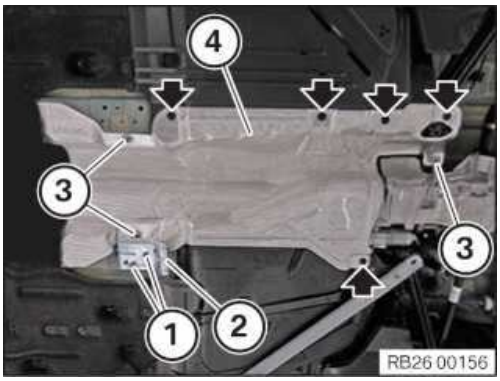


- Release the diesel particulate sensor (1), guide it out and set it aside.

cardiagn.com



- Loosen V-band clamp (1).



- Loosen screw (1).
- Loosen nuts (2).
- Release the rubber mount (3) of the exhaust system (4).
- Lower and guide out the exhaust system (4) with assistance of a second person and remove it.

36 – Remove front heat shield

- Remove screws (arrows).
- Loosen nuts (1).
- Guide the heat shield (2) out and remove it.

37 – Remove heat shield at rear.

- Loosen screws (1).
- Guide out and remove holder (2).
- Remove screws (arrows).
- Loosen nuts (3).
- Guide the heat shield (4) out and remove it.

38 – Remove propeller shaft

cardiagn.com

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

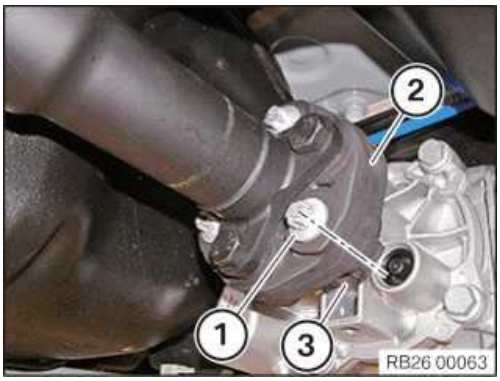
RISK OF DAMAGE

Damage to propeller shaft during removal.

Non-observance of the removal guidelines for the propeller shaft on the rear axle differential may cause severe damage.

- Do not disassemble the three-hole flange, flexible disc and propeller shaft. The three-hole flange to the rear axle differential is balanced with the flexible disc and propeller shaft.
- Loosen the recessed nut against the direction of travel in clockwise direction. The propeller shaft must be loosened on the recessed nut only and exclusively in the direction of rotation otherwise the anti-twist lock of the bi-hexagonal flange nut is damaged.
- In the event of a damaged anti-twist lock on the bi-hexagonal flange nut: Replace the rear axle differential.

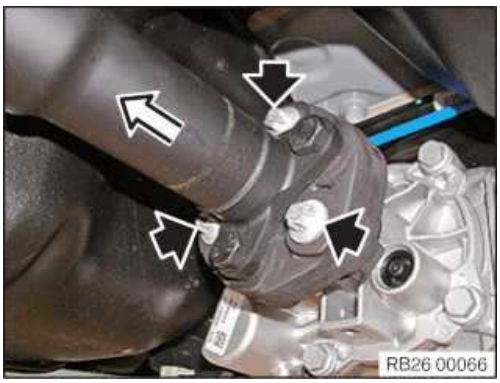
- Install the special too l between the front and rear propeller shaft.
- Make sure that the arrows on the special tool point forward in the direction of travel.



- Always support the propeller shaft (1) with a conventional jack.

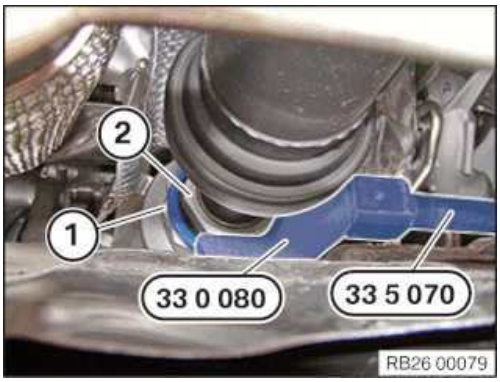
- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

cardiagn.com



TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.



- Mark the installation position of the screw connection (1), the flexible disc (2) and the three-hole flange (3) on the same level.
- Loosen the screw connection (1).

- Loosen screws (1).

- Remove screws (arrows).
- Guide the propeller shaft out in the direction of the arrow and set it aside.

RISK OF DAMAGE

Damage to the transfer box.

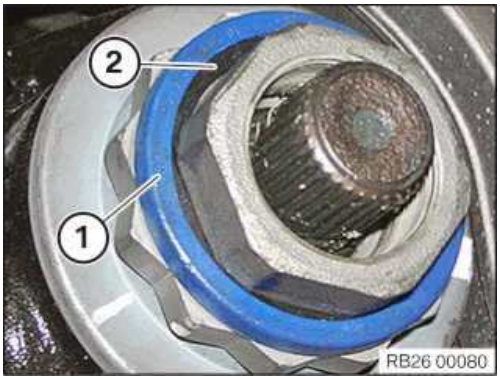
Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

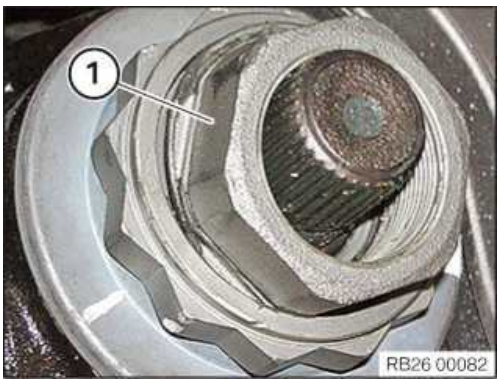
- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to detach the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



- Release the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.



cardiagn.com

- Thread the propeller shaft (2) out of the recessed nut (1) and remove.

- Thread the retaining clip (1) and the seal (2) out and remove.

- Thread out and remove the recessed nut (1).

39 – Removing starter motor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

cardiagn.com

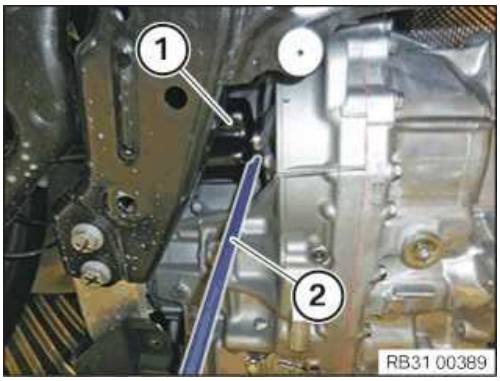
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

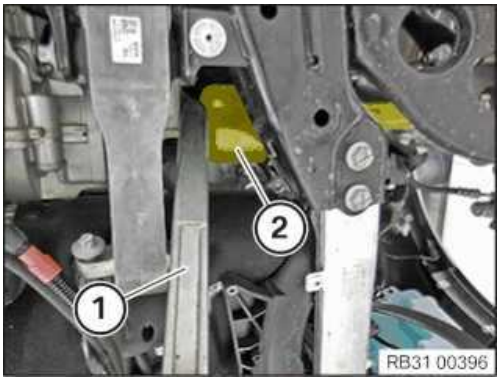
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Loosen screws (1).
- Feed out starter motor and remove.



40 – Partially removing the left output shaft

cardiagn.com

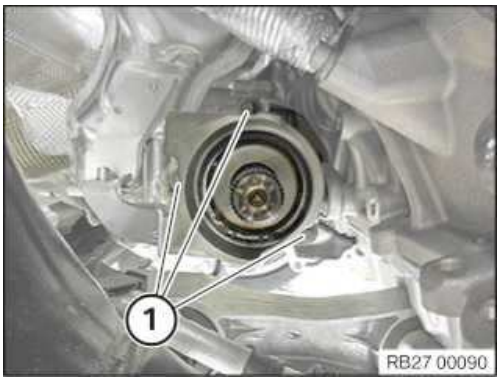
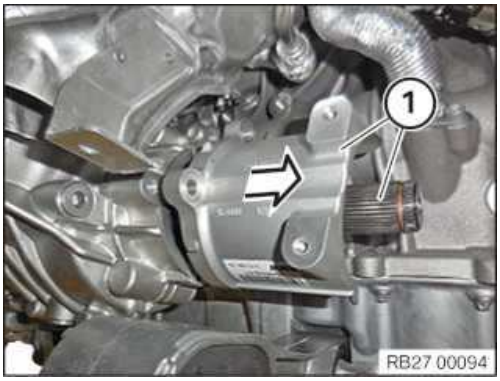
- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Tie up output shaft (1).

41 – Partially removing right output shaft

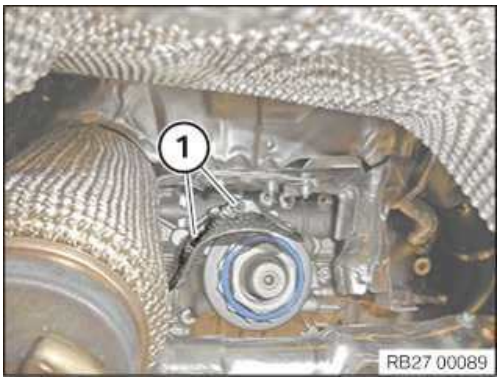


- Lever out the output shaft (2) with a mounting lever (1).
- Tie up output shaft (1).

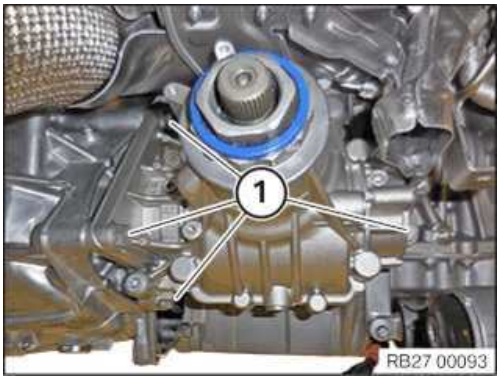


42 – Remove the intermediate shaft with the support tube

- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

43 – Remove transfer box (VTG)

cardiagn.com

- Loosen screws (1).
- Remove heat shield.

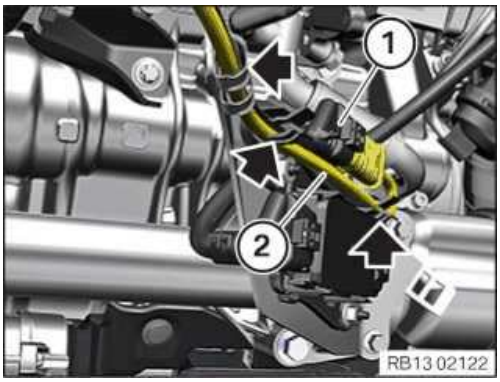
- Loosen screws (1).
- Remove the transfer box (VTG).

44 – Remove the monitoring oxygen sensor

WARNING

Hot surfaces.

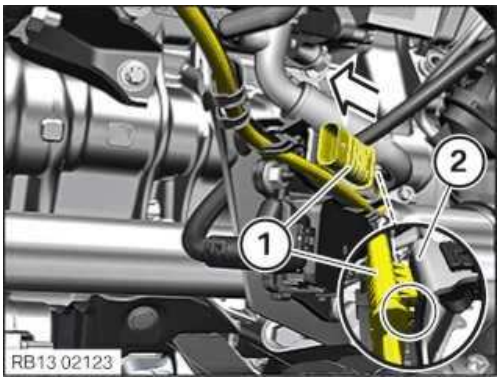
Risk of burning!



- Perform all work only on components that have cooled down.

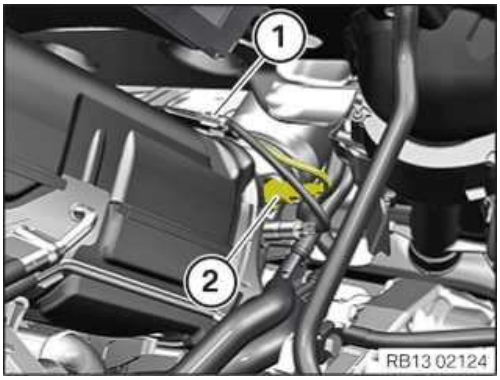
RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Feed oxygen monitor sensor cable (1) out of the clamps (arrows).

cardiagn.com

- Unlock the connector (1) in the marked area and disconnect it from the holder (2) in the direction of arrow.

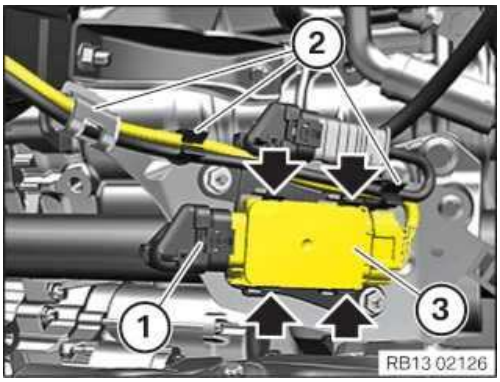
- Guide the cable of the monitoring oxygen sensor (2) out of the clamp (1).
- Release the monitoring oxygen sensor (2) using special tool **0 491 074 (11 7 020)**.
- Remove the monitoring oxygen sensor (2).

45 – Removing the nitrogen oxide sensor before SCR catalytic converter

WARNING

Hot surfaces.

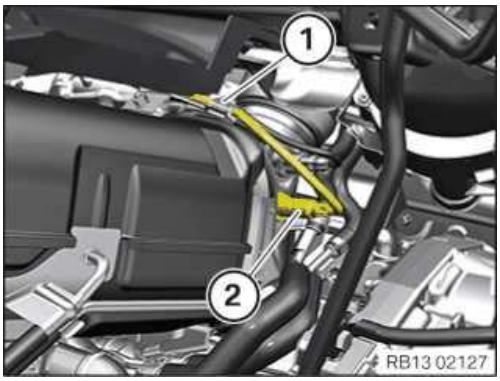
Risk of burning!



- Perform all work only on components that have cooled down.

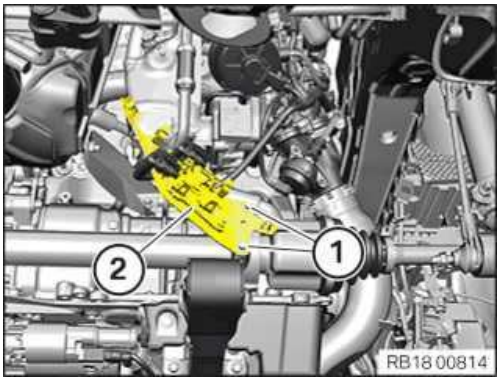
RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Slide the cable of the nitrogen oxide sensor evaluation electronics (3) out of the clamps (2) and remove.
- Unlock (arrows) and remove the evaluation electronics for the nitrogen oxide sensor (3).

cardiagn.com

- Slide the cable of the nitrogen oxide sensor before the SCR catalytic converter (2) out of the clamps (1) and remove.
- Detach the nitrogen oxide sensor before the SCR catalytic converter (2) using the special tool **0 491 074 (11 7 020)**.
- Guide out and remove the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

46 – Remove holder for oxygen sensor

- Loosen screws (1).
- Thread out the holder (2) for the oxygen sensor and remove.

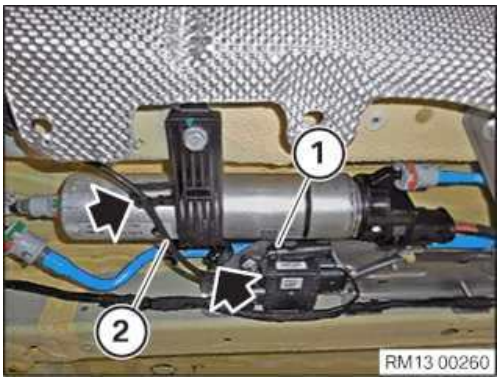
47 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

- Unlock and loosen connector (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

- Loosen the cable clip (1).

- Loosen exhaust temperature sensor (1).
- Feed out and remove exhaust temperature sensor (1).

48 – Removing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

WARNING

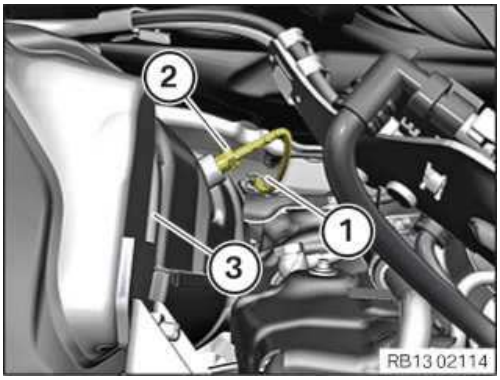
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

- Unlock and loosen connector (1).
- Uncover the exhaust temperature sensor cable.

- Guide the exhaust temperature sensor cable (2) out of the clamp (1) and place it to one side.
- Release the exhaust temperature sensor (2) with conventional tools .
- Feed out and remove the exhaust temperature sensor (2) from the diesel particulate filter (3).

49 – Remove the exhaust temperature sensor on the diesel particulate filter

WARNING

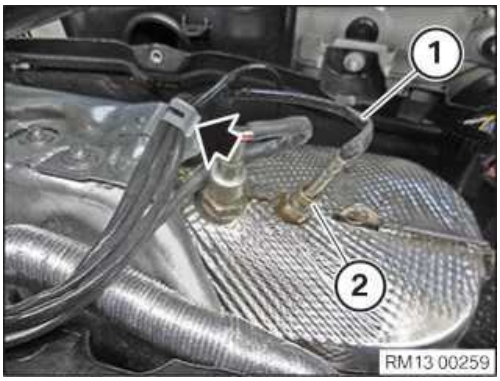
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect connector (1).
- Put the cable of the exhaust temperature sensor to one side.

cardiagn.com

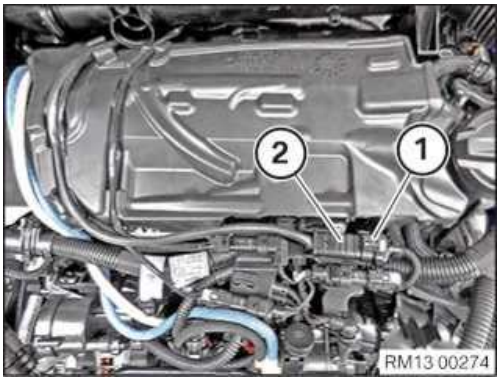
- Guide cable (1) of the exhaust temperature sensor out of the clamp (arrow) and remove it.
- Loosen exhaust temperature sensor (2).
- Feed out and remove exhaust temperature sensor (2).

50 – Remove the control sensor

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock plug connection (1) and disconnect.
- Detach the connector (2) from the holder .
- Release the front oxygen sensor cable.

- Detach the control sensor (1) with the special tool .
- Feed out and remove the control sensor (1).

cardiagn.com

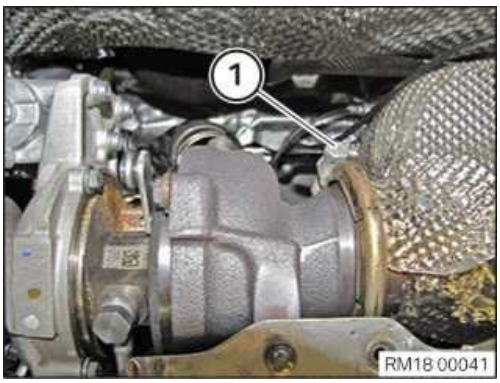
51 – Removing the diesel particulate filter

WARNING

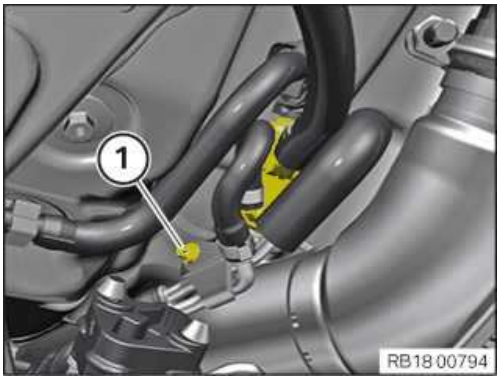
Hot surfaces.

Risk of burning!



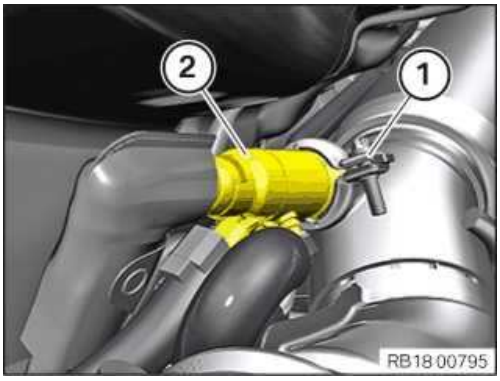
- Perform all work only on components that have cooled down.

CAUTION



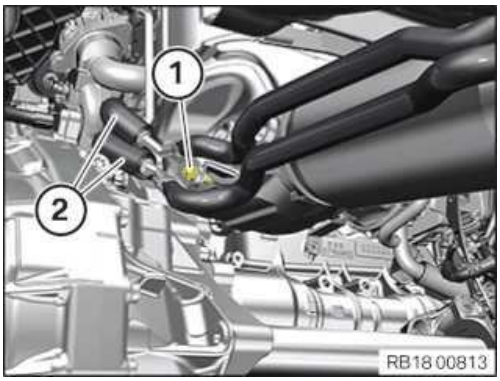
Heavy component.

Heavy components can lead to injury or damage.



- Remove and install heavy components with the aid of another person/other persons.

- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



- Loosen screw (1).

- Loosen V-band clamp (1).
- Remove the SCR metering module (2) and set it aside.

cardiagn.com

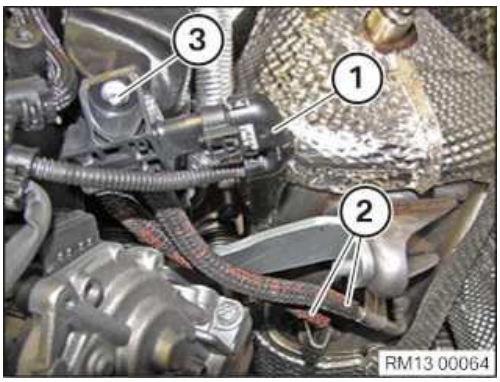
- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.



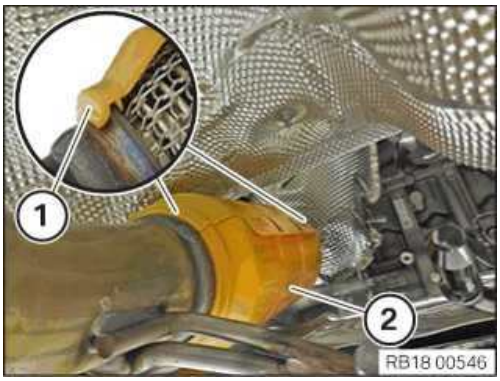
▶ **Remove differential pressure sensor**

RISK OF DAMAGE

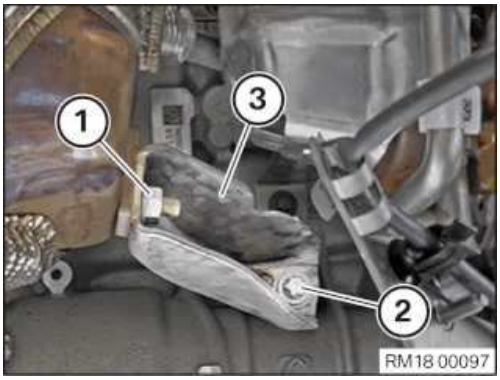
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.



- Loosen nuts (1).

cardiagn.com

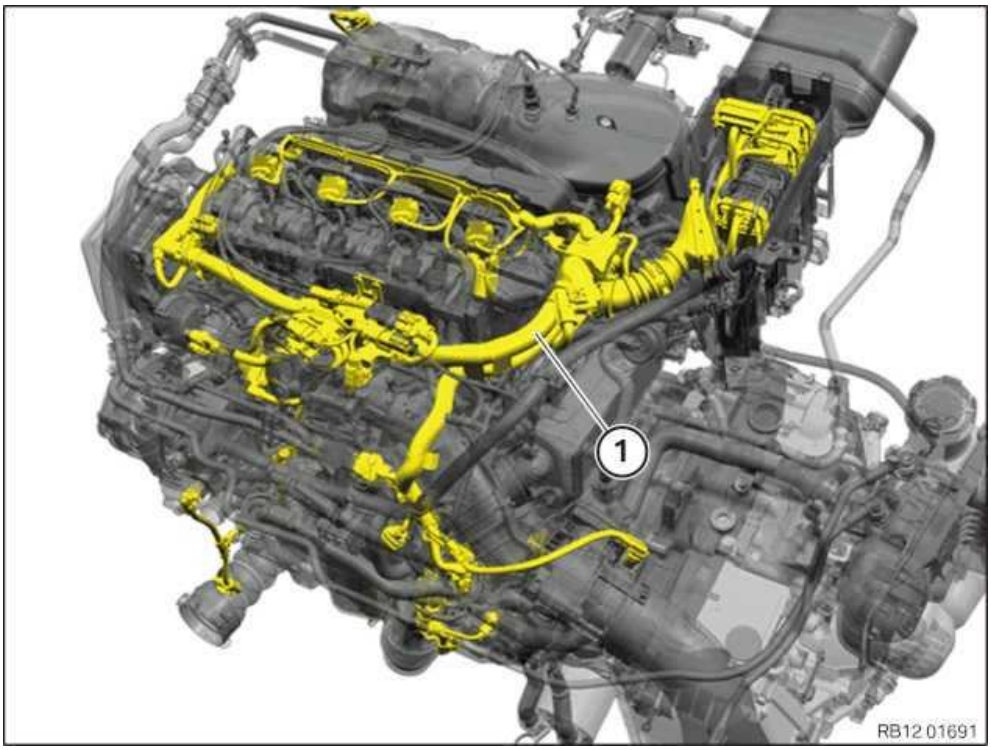
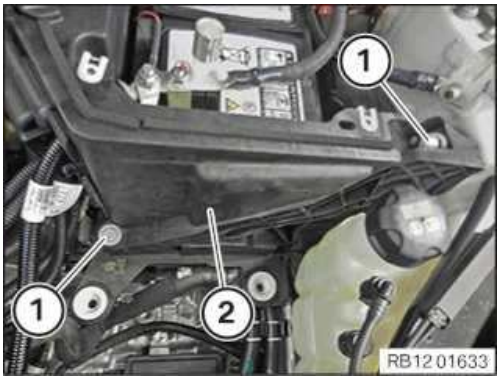
- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.

- Unfasten nut (1).
- Loosen screw (2).
- Remove holder (3).

- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).



- Feed out diesel particulate filter (1) toward the bottom and remove.



52 – Releasing the wiring harness section for the intake plenum

cardiagn.com

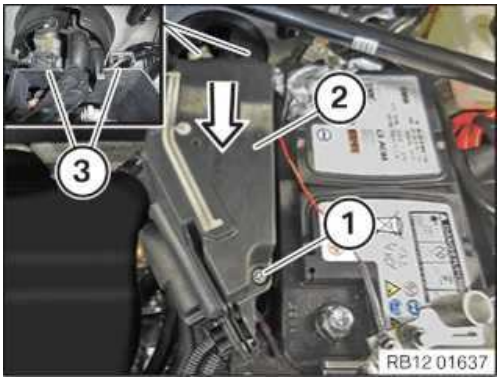
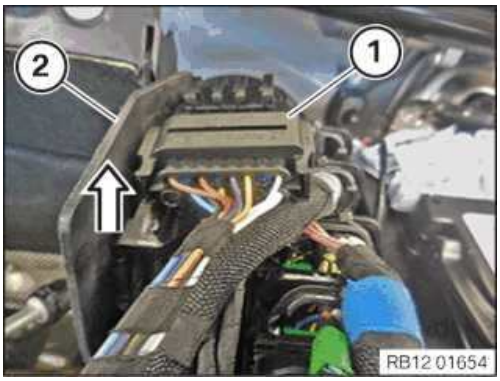
Overview: Wiring harness section for the engine

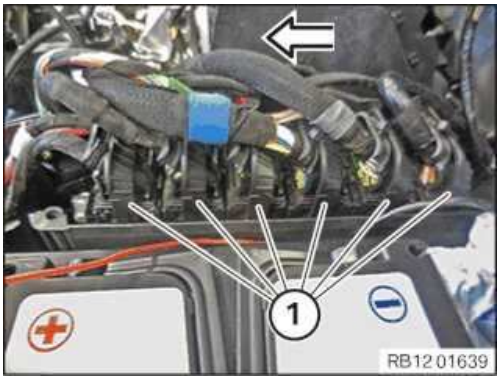


1 Wiring harness section for the engine

- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

cardiagn.com

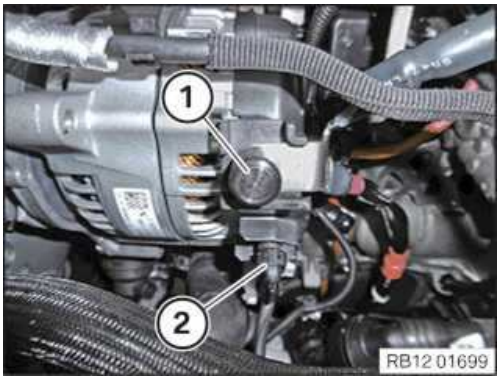
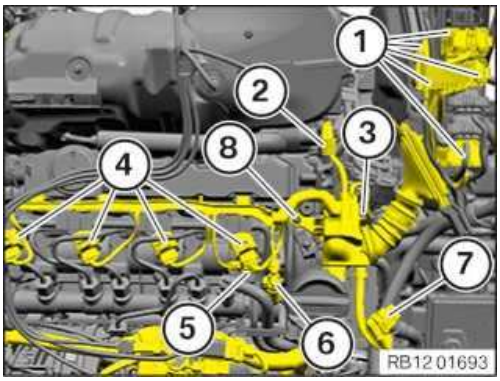
- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).

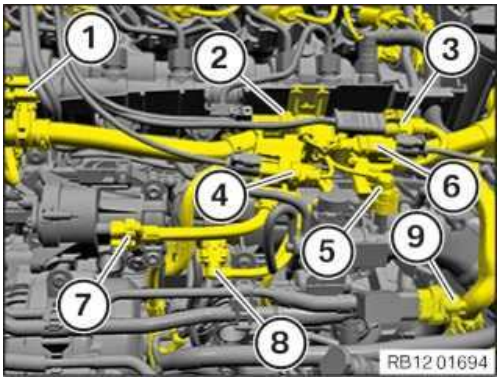


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

- Unlock and loosen connector (1).



- Loosen screws (1).



- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.

cardiagn.com

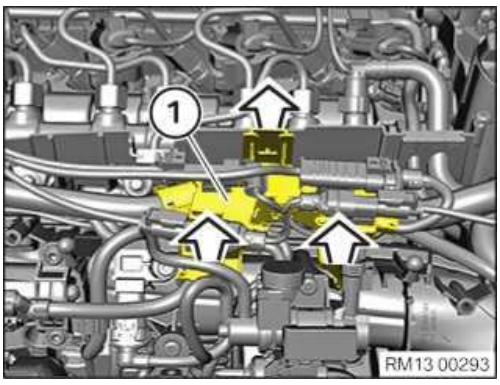
- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).



- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock and disconnect the connector (3) from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

▶ **Removing the cable clips from the intake plenum**

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

53 – Removing the intake plenum

cardiagn.com

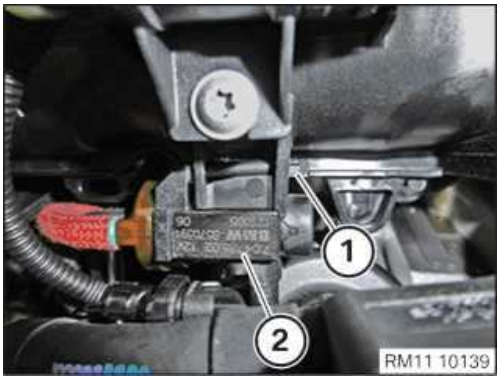
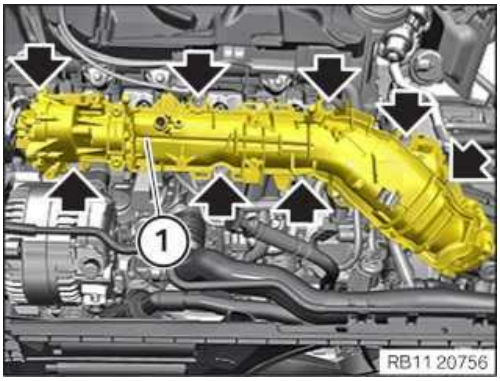
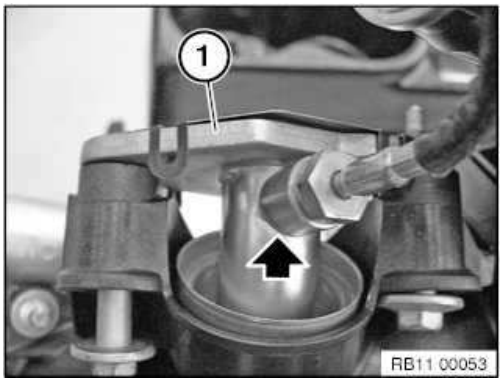
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

cardiagn.com

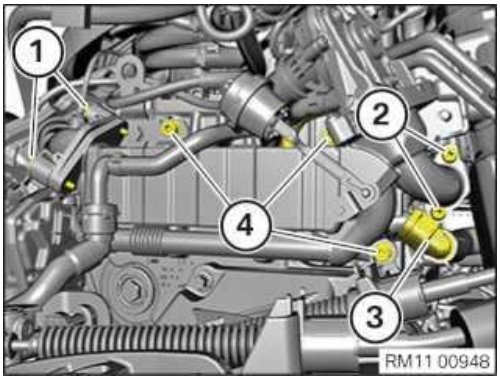
54 – Removing the exhaust-gas recirculation cooler

WARNING

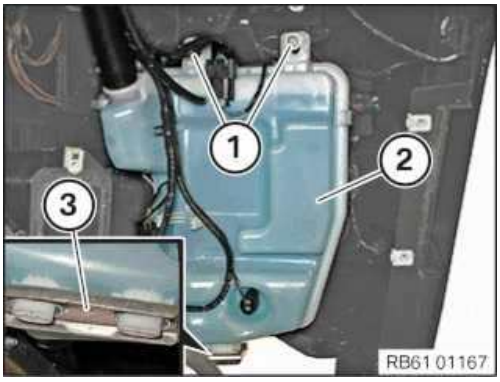
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

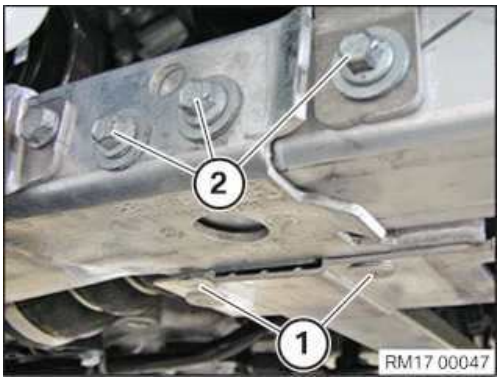
- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

55 – Remove the washer fluid reservoir from the fixture

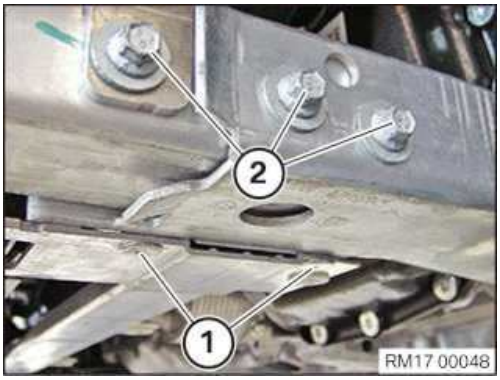
- Loosen screws (1).
- Guide the washer fluid reservoir (2) up and out of the fixture (3) and set it aside.

56 – Removing the right charge air duct between the exhaust turbocharger and the charge air cooler



WARNING

Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

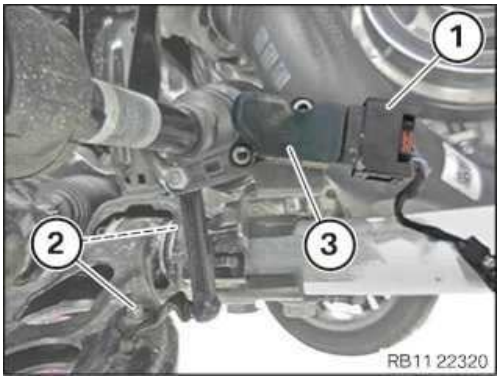
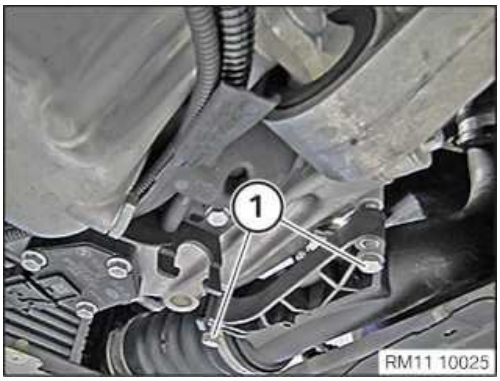
- Undo screws (2) at front left.
- Drill out blind rivets (1) at front left.

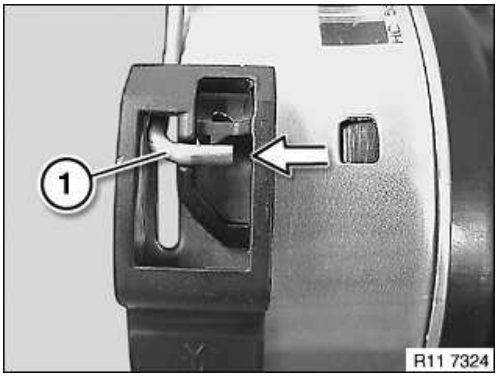


- Undo screws (2) at front right.
- Drill out blind rivets (1) at front right.

- Unlock locking pins (1).
- Thread out and remove locks (2).
- Thread out and remove cross connection (3).



- Release the screws (1) on the right front axle support.



- **If installed:**
- Unlock and release plug connection (1).
- Loosen screws (2).
- Feed out the ride height sensor (3) and remove.

cardiagn.com

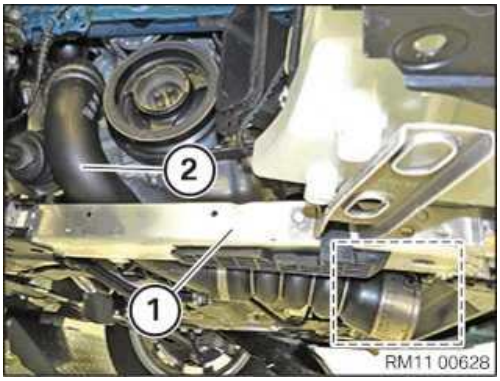
- Release screws (1) of charge air duct on right oil sump.



- Unlock lock (1).

  The lock (1) must engage in the bracket during unlocking (arrow).

- Unlock and release the charge air duct (1) on the charge air cooler.

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (2) in the **marked** area towards the bottom and set it aside.

- Unlock and detach the locks (1) on both sides.
- Feed out the charge air duct (2) on the exhaust turbocharger in the direction of the arrow and set it aside.

cardiagn.com

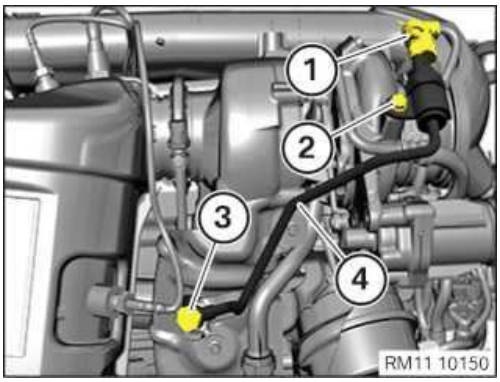
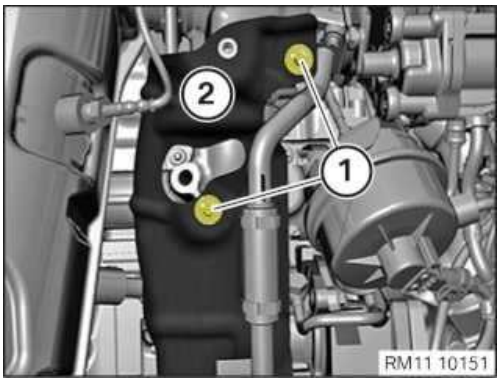
- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (1) in the direction of arrow between the side member and the deformation element and remove.



57 – Remove the heat shield from the exhaust turbocharger at the bottom

WARNING



Hot surfaces.

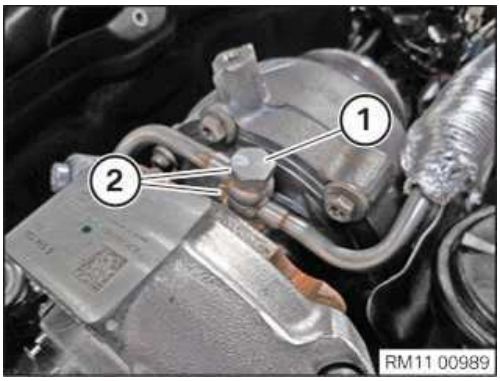
Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

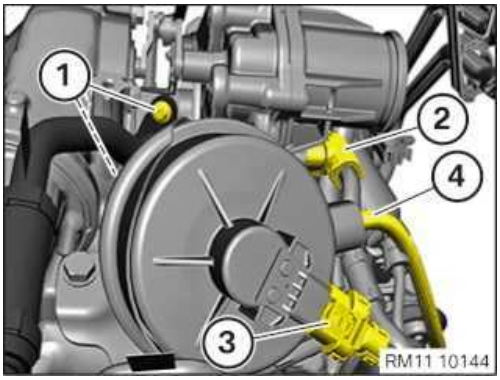
- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).

58 – Removing the low-pressure stage turbocharger



WARNING

Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

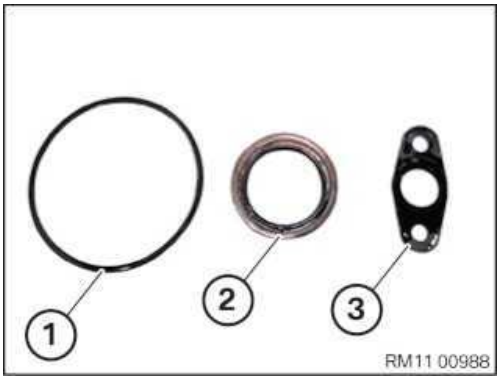
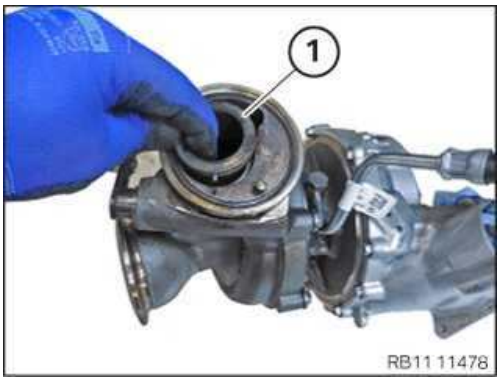
- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.



- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.

- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).



- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

cardiagn.com

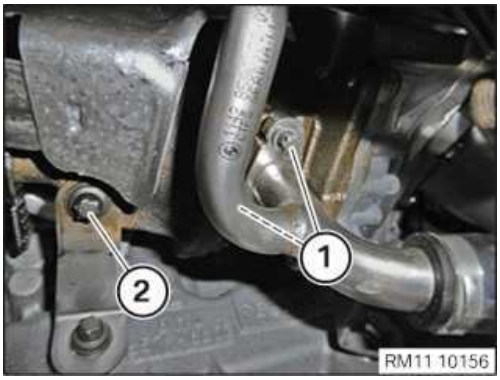
- Remove the spacer ring (1).

59 – Removing the high-pressure stage exhaust turbocharger

WARNING

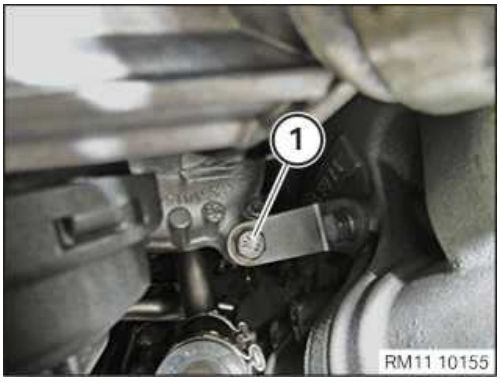
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

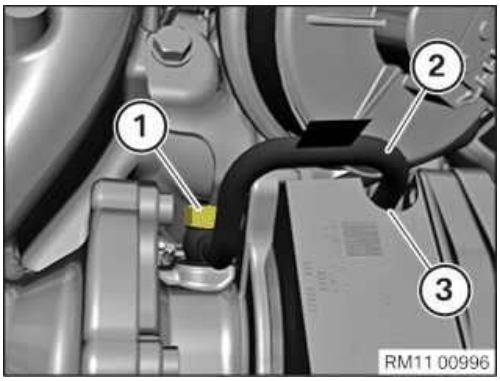
CAUTION



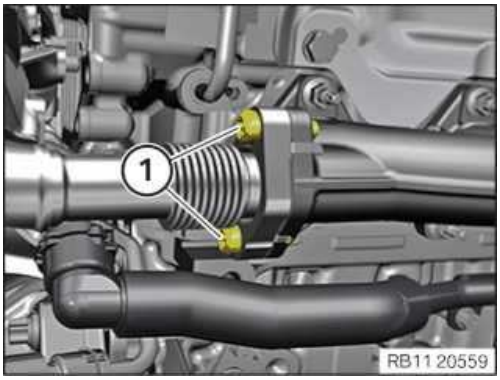
Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).



- Release screw (1) from the right wheel arch.

cardiagn.com

- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

- Loosen screws (1).

- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

60 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

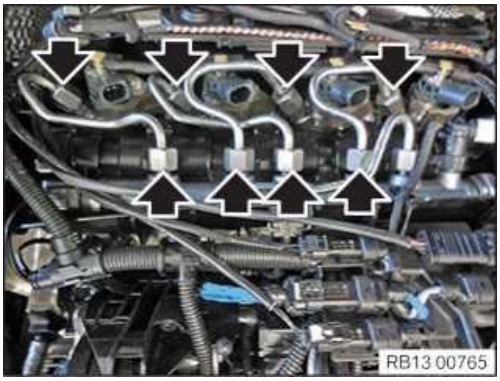
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION



If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

61 – Remove leakage oil lines

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

Hot surfaces.

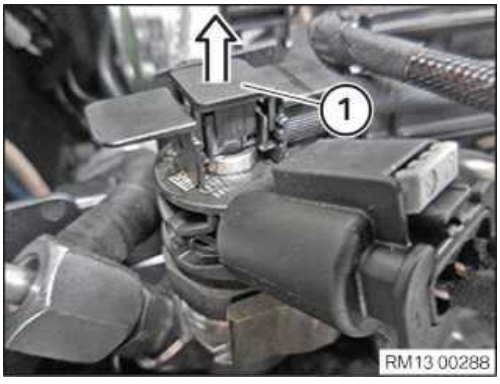
Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Contaminant or foreign body.

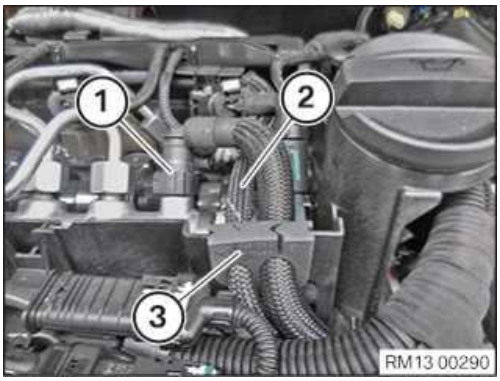
Contamination can result in malfunctions, operating failure or leaks.



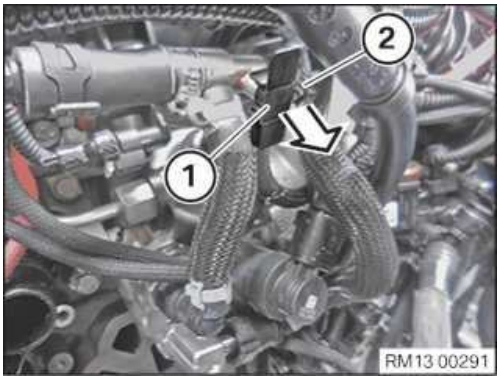
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the connectors (arrows) and disconnect.



- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

cardiagn.com

- Unlock and loosen fuel line (1) and set it aside.
- Guide the leakage oil line (2) out of the rubber grommet (3) and set it aside.

- Release lock (1) in direction of arrow.
- Feed out leakage oil line (2) and remove.

62 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

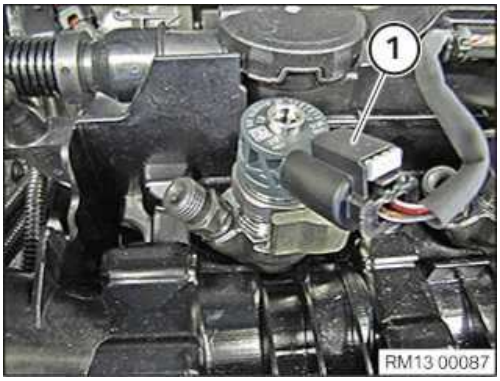
RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

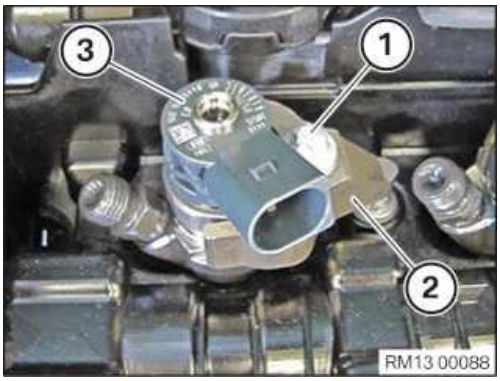
RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

- Unlock and disconnect connector (1).

cardiagn.com

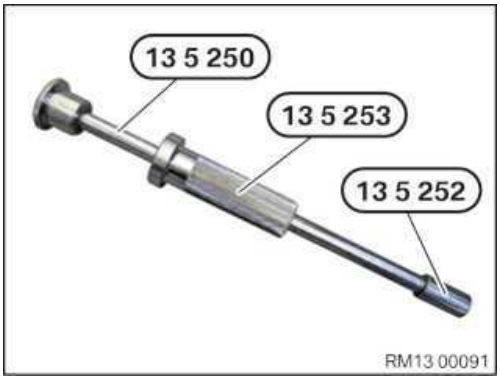
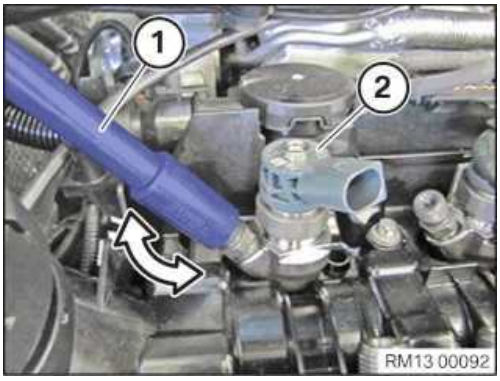
- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.



▸ **Loosen stuck injectors**

RISK OF DAMAGE

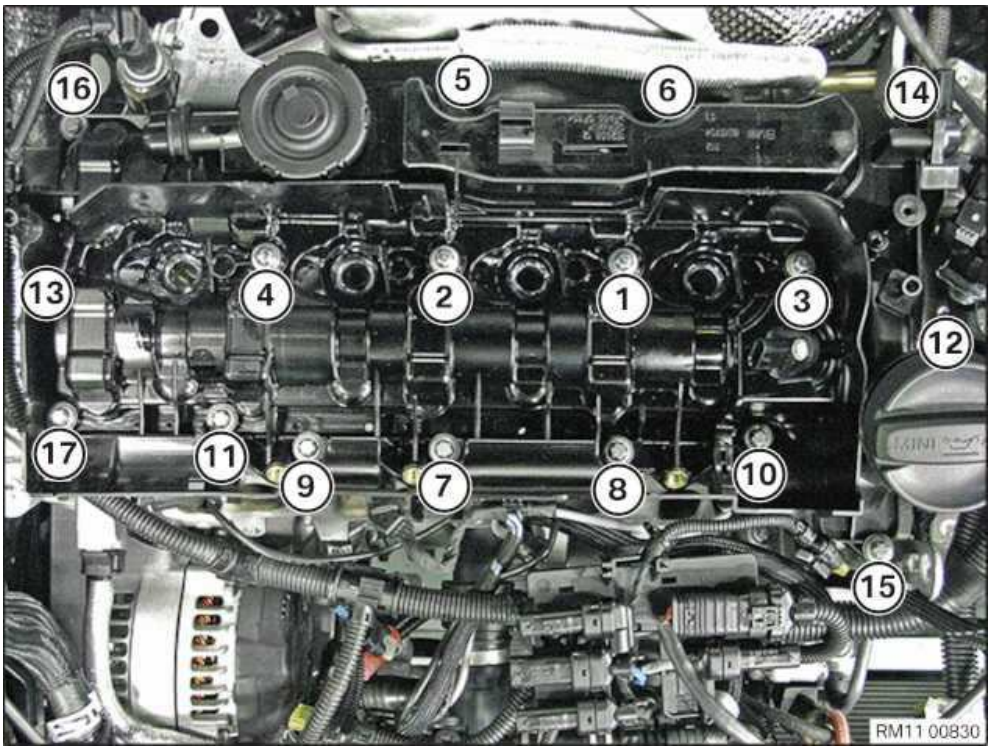


Contaminant or foreign body.

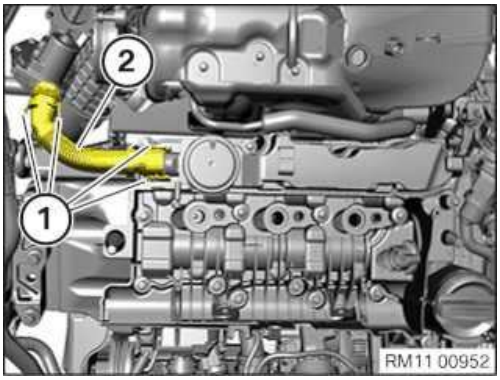
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)** back onto the special tool **0 493 321 (13 5 250)**.



- Screw the special tool (1) **0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1) **0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.



63 – Removing the cylinder head cover

cardiagn.com

Overview: Screw connection of the cylinder head cover

1 to 16 screws of the cylinder head cover.

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

cardiagn.com

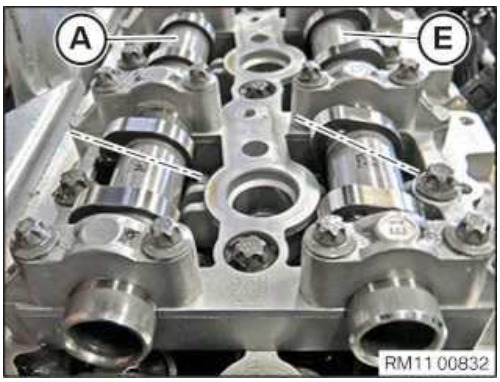
- Remove protective cap (1) from oil sump.

- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE



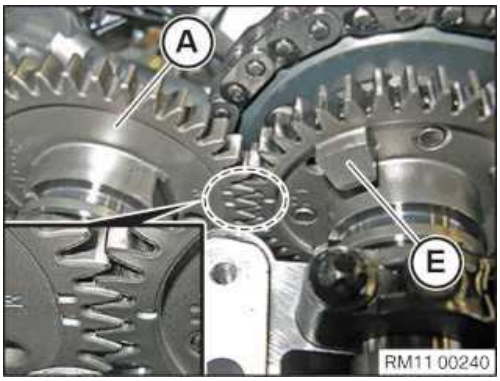
Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

cardiagn.com

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

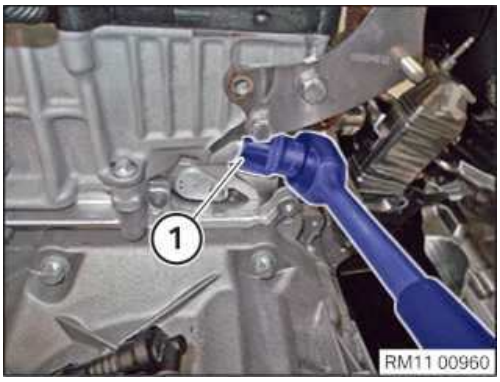
TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).



65 – Remove chain tensioner piston

WARNING

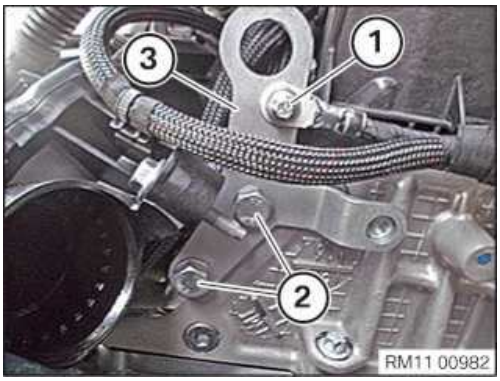
Hot surfaces.

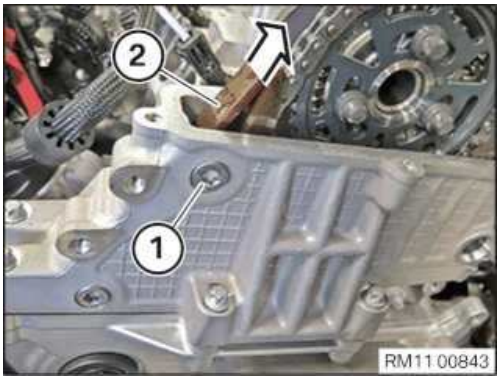
Risk of burning!

- Perform all work only on components that have cooled down.



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Remove the chain tensioner piston (1).

66 – Remove the timing chain guide rail

cardiagn.com

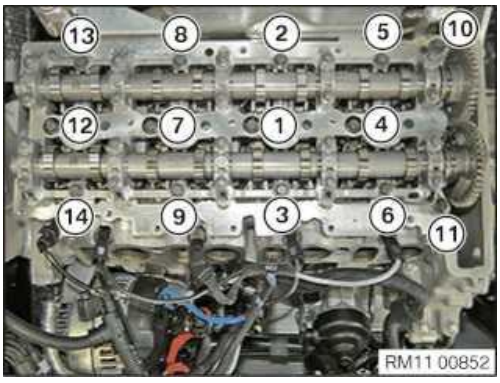
- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).



- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

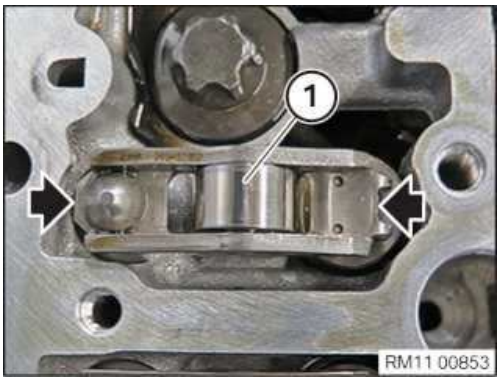
67 – Removing the camshaft sprocket on the intake camshaft

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

68 – Removing the camshaft support

- Evenly loosen all screws in a sequence from (14) to (1).
- Loosen and remove all screws in a sequence from (14) to (1).
  Both camshafts can be removed with the camshaft carrier.
- Remove the camshaft support including camshafts towards the top.

69 – Remove roller cam followers



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

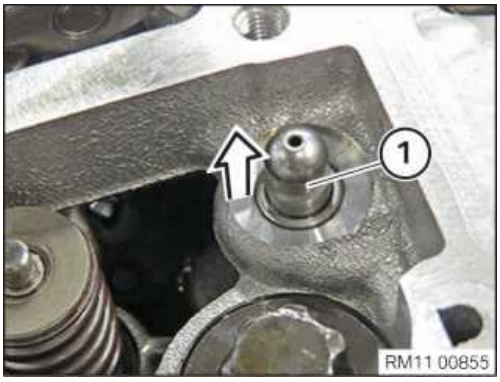
RISK OF DAMAGE

Damage to the engine.

If the classification of the roller cam followers is ignored, this can lead to engine damage.

- Observe the classification of the roller cam followers.
- Always reuse used roller cam followers at the same position.

- Remove the roller cam follower (1) and place it onto the special tool **0 495 105 (11 4 480)**.
- Repeat the process for all roller cam followers.



70 – Removing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.

71 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

cardiagn.com

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool or conventional tools.
- Feed out preheating elements and remove.

MAIN WORK

cardiagn.com

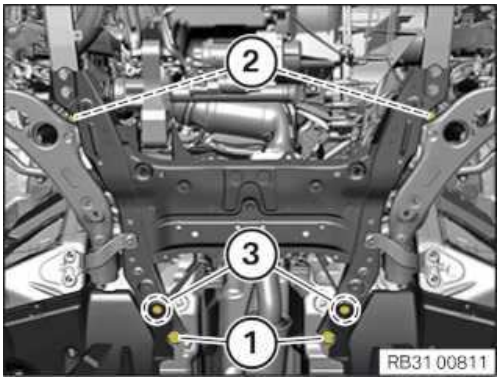
72 – Remove cylinder head.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

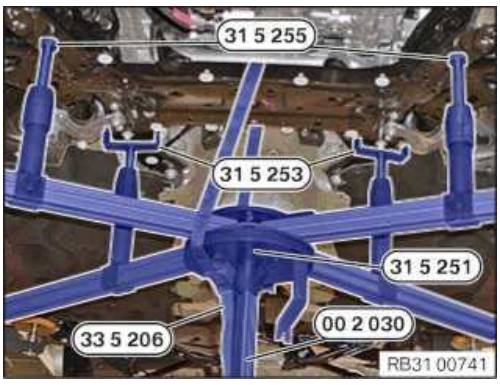
- Position front axle support.
- Bend the underbody panelling to the side in area (3).
- Raise front axle support.
- When raising, insert the charge air cooler into its rubber mount on the transmission cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

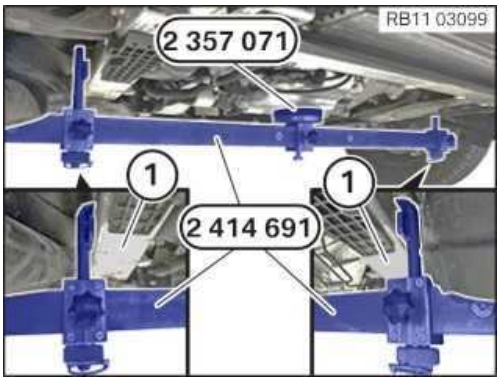
- Tighten down screws (2).



Front axle support, front to body

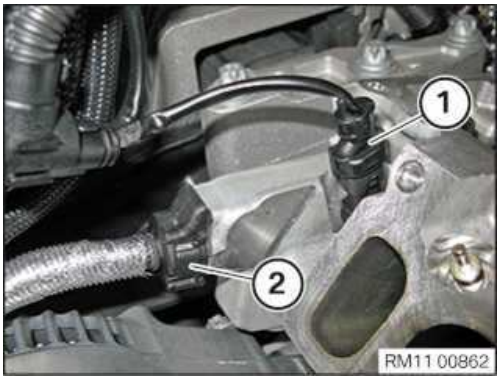
M12 screw	Renew screw.	Tightening torque	108 Nm

- If applicable, tighten the screws in area (3).



Underbody protection to body

Screw		Tightening torque	3 Nm



- Remove special tool from special tool .
- Lower the universal jack **0 490 133 (00 2 030)** with the special tool and set it aside.

cardiagn.com

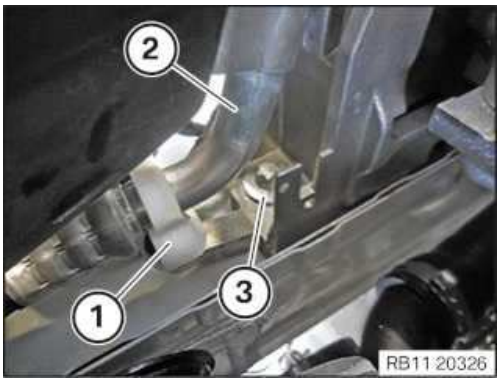
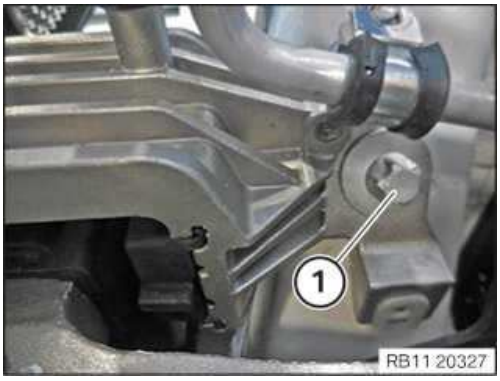
- Prepare special tool together with the special tool **2 357 071**.
- Attach special tool to front axle support and align special tool **2 357 071** correctly under the oil sump and then tighten.
- Turn special tool at adjusting screw uniformly upwards, until the special tool **2 357 071** makes contact with the oil sump.
- Tighten all adjusting screws of special tools and **2 357 071**.



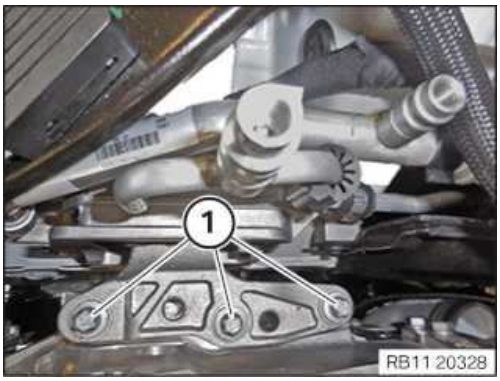
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

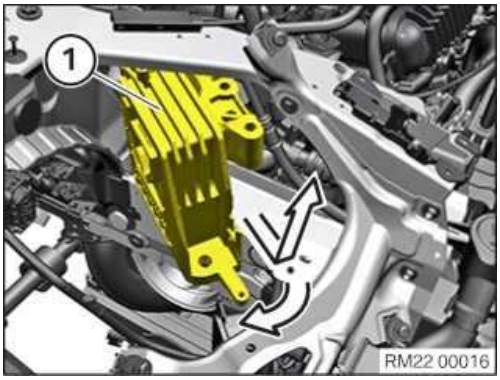


- Release the connector (1) from the coolant temperature sensor.
- Unlock and loosen coolant line (2).

- Loosen screws (1).
- Feed out the heat shield (2) and set it aside.



- Unlock and loosen holder (1).
- Feed out the refrigerant line (2) and put to one side.
- Loosen screw (3).



- Loosen screw (1).

cardiagn.com

- Loosen screws (1).

- Turn engine mount (1) in direction of arrow and remove upwards.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).

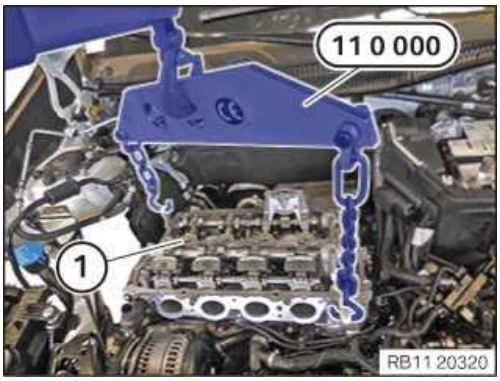
- Loosen the cylinder head bolts in the sequence from (10) to (1).
- Remove cylinder head bolts (1) to (10) with washers.



- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm

cardiagn.com

RISK OF DAMAGE

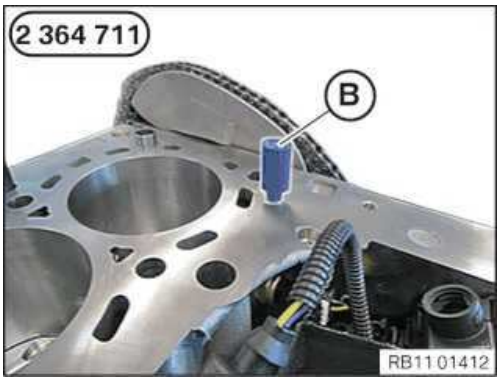
Damage to the guide rails.

Large amounts of force may damage the guide rails of the timing chain.

- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- **Carefully** guide out the cylinder head (1) with the engine lifter and the special tool **0 490 561 (11 0 000)** and remove.

- Mount the cylinder head (1) on the special tool **0 494 362 (11 9 000)**.



73 – Cleaning the sealing surface

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

RISK OF DAMAGE

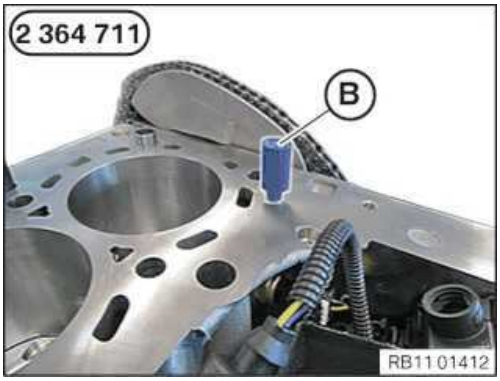
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.

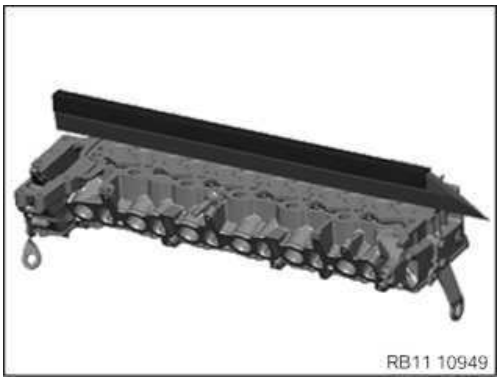
cardiagn.com



RISK OF DAMAGE

Damage to the surface.

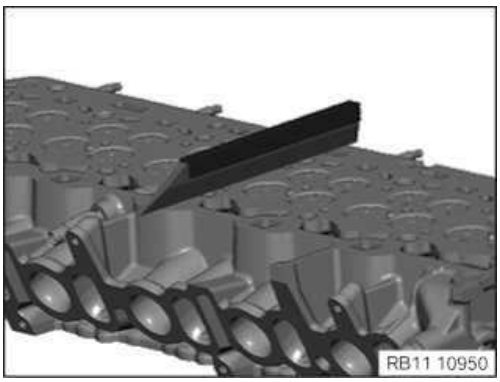
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.

- Remove special tool (B).

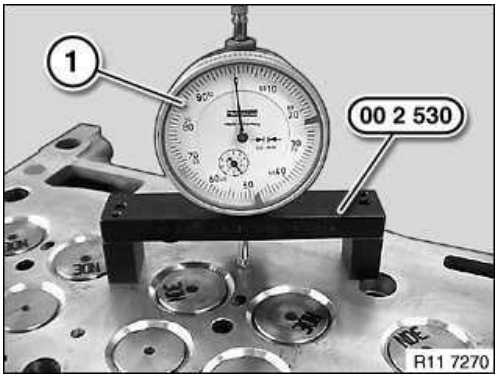


74 – Check the flatness of the cylinder head

- Check the flatness of the cylinder head lengthwise using a straightedge.

Cylinder head flatness

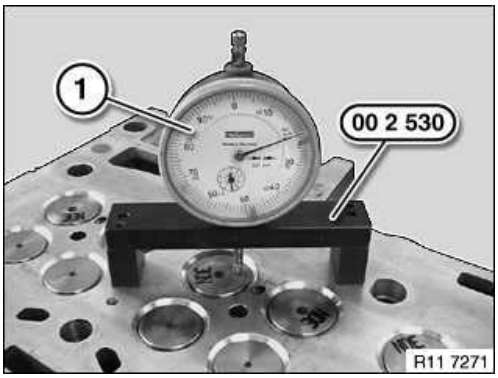
Maximum lengthwise deviation from flatness	0,10 mm
Maximum transverse deviation from flatness	0,05 mm



- Check the flatness of the cylinder head crosswise using a straightedge.

Cylinder head flatness

Maximum lengthwise deviation from flatness	0,10 mm
Maximum transverse deviation from flatness	0,05 mm



75 – Checking the valve underprotrusion

- Set the dial gauge (1) onto the cleaned cylinder sealing surface with slight preload in special tool **0 490 185 (00 2 530)**.
- Set dial gauge in mildly preloaded state to "zero".

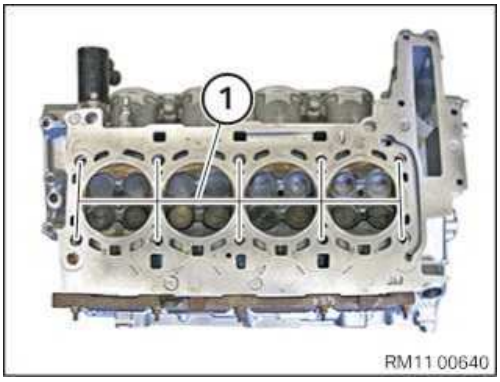
Check

cardiagn.com

- Position the dial gauge (1) on the valve with special tool **0 490 185 (00 2 530)**.
- Measure valve underprotrusion and compare with the setpoint value.

Valve underprotrusion

	0,8 (0,7 - 0,9) mm



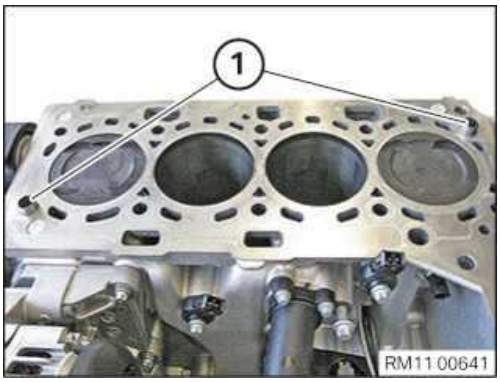
Result

» Valve underprotrusion is outside tolerance.

Measure

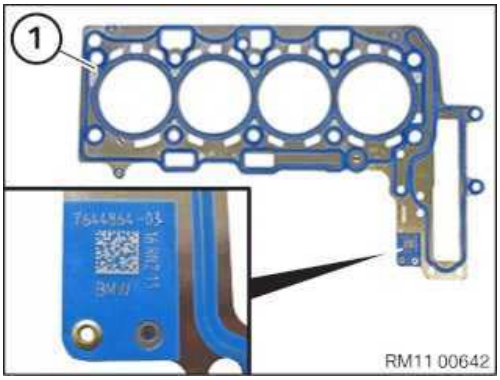
- Replace cylinder head.

76 – Renewing the cylinder head gasket



RISK OF DAMAGE

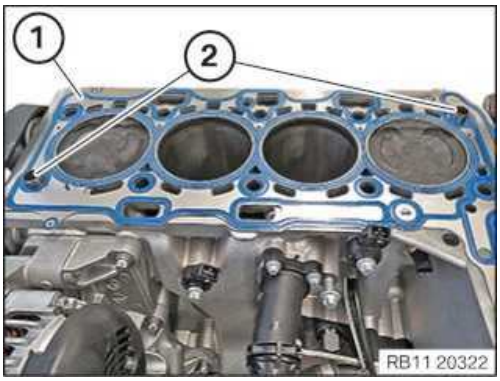
Damage to the surface.



The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).



- Check the fitting sleeves (1) for secure fit and damage.

- Identify the cylinder head gasket (1) using the part number.

Note: If the cylinder head is reworked, an additional thicker gasket 0.3 mm is available for service personnel.

cardiagn.com

- Guide in the cylinder head gasket (1) and install.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

77 – Installing the cylinder head

CAUTION

Heavy component.

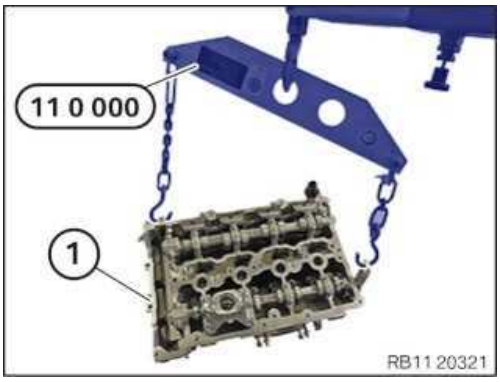
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Damage to threads.

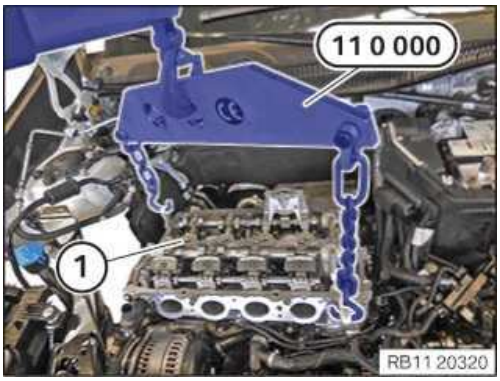
Fluid in the threaded hole may damage the thread when screws are tightened in the threads.



- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION

Do not remove bolt coating.



TECHNICAL INFORMATION

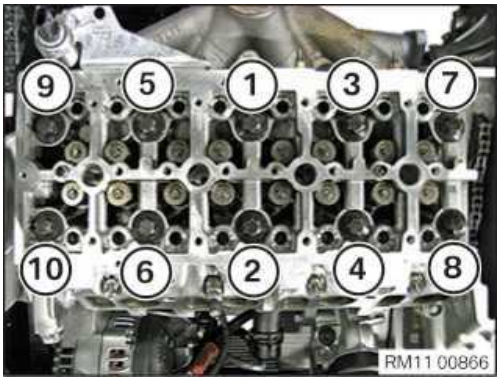
When replacing the cylinder head: The complete valve control and the Valvetronic servomotor are already pre-assembled for new cylinder heads.

- Position cylinder head (1) on special tool **0 490 561 (11 0 000)** and engine lifter.

cardiagn.com

RISK OF DAMAGE

Damage to the guide rails.



Large amounts of force may damage the guide rails of the timing chain.

- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- Feed in the cylinder head (1) **carefully** with the engine lifter and the special tool **0 490 561 (11 0 000)** and install.

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Guide the special tool **2 459 012** out and remove.

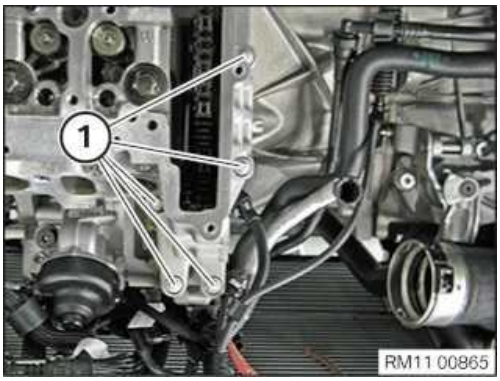
- Renew the cylinder head bolts (1).

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  No coolant, water or engine oil must be present in threaded holes of engine block.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

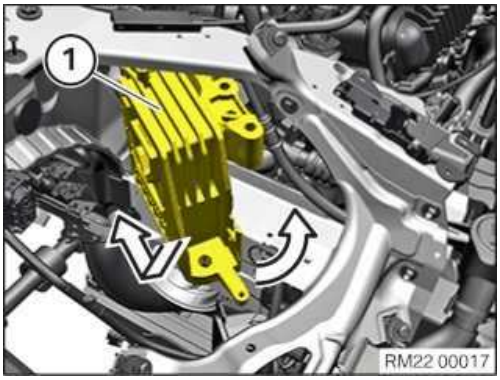


Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in cylinder head bolts in sequence (1) to (10).
- Tighten cylinder head bolts using special tools **0 490 504 (00 9 120)** and in sequence (1) to (10).

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

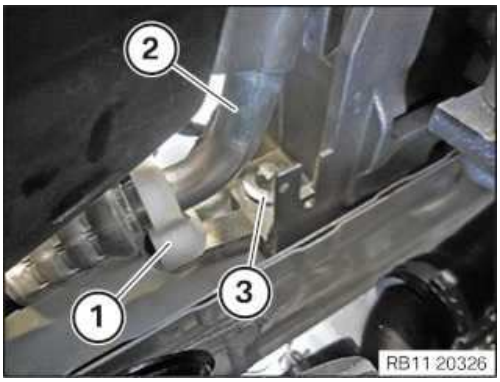


cardiagn.com

- Tighten the cylinder head bolts (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

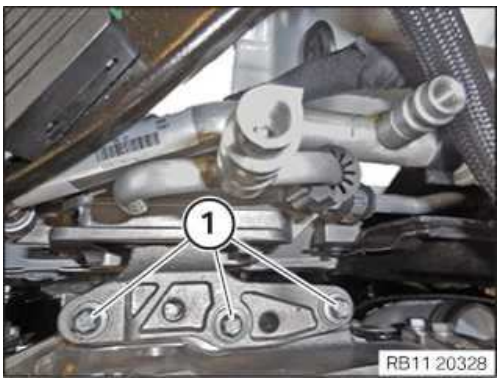


- Thread in engine mount (1) in direction of arrow then install.

- Tighten down screw (1).

Right engine mount to side member

M12		Tightening torque	100 Nm

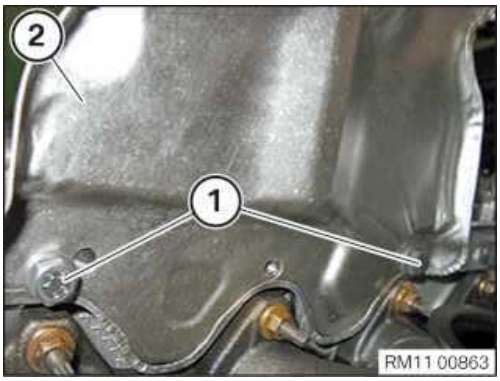


- Tighten down screw (3).

Right engine mount to side member

M12		Tightening torque	100 Nm

- Feed in and install the refrigerant line (2).
- Lock holder (1).
- Make sure the bracket (1) engages audibly.

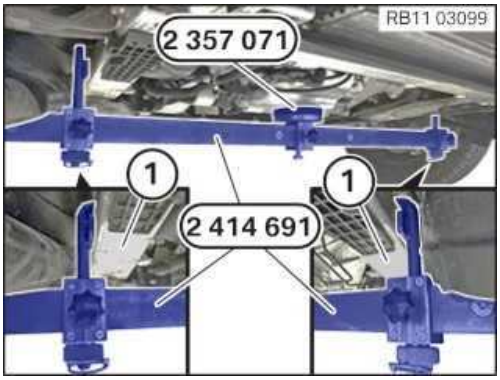


- Renew screws (1).

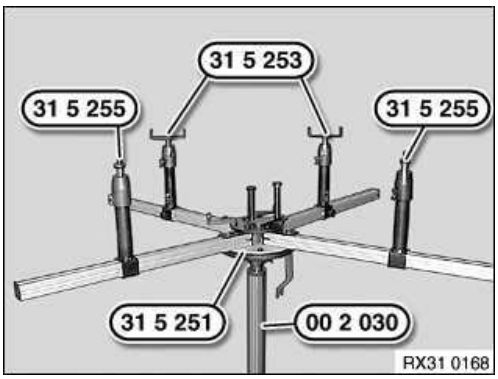
  Parts: Bolts
- Tighten the screws (1).

Right engine mount to cylinder head

M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °



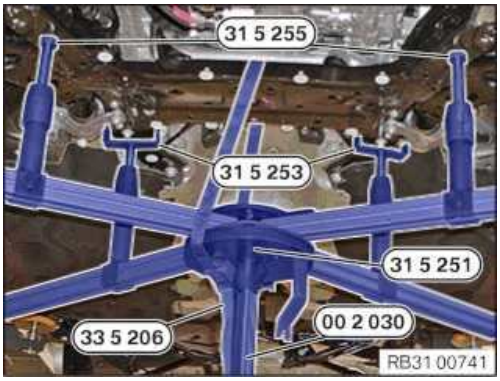
cardiagn.com



- Feed in and install the heat shield (2).
- Tighten the screws (1).

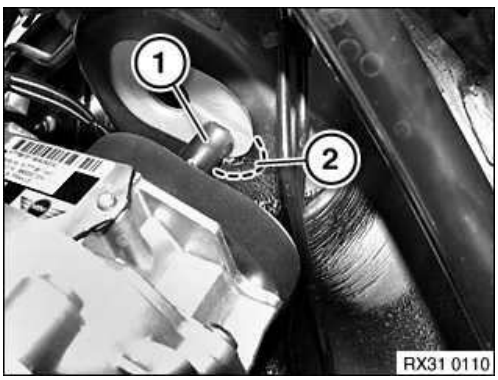
Heat shield to cylinder head

M8X16		Tightening torque	10 Nm



- Disassemble special tool using special tool **2 357 071**.

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

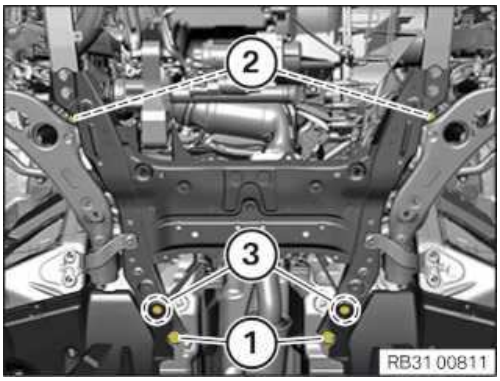


Note: In a profile rail pair, two profile rails are connected to one another by gearing.

- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .

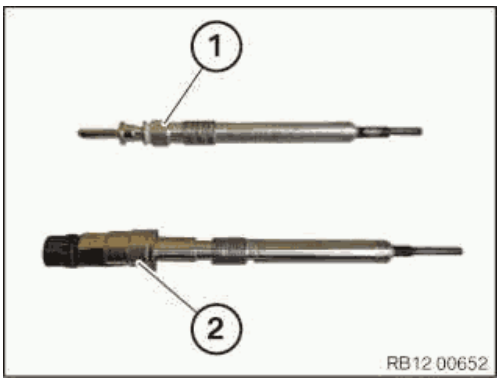


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

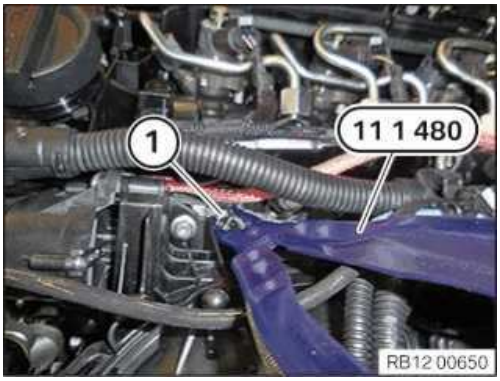


cardiagn.com

- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and the front axle remove.

POSTPROCESSES

78 – Install glow elements



- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

- Tighten the glow element with the special tool or conventional tools.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

79 – Installing the hydraulic valve clearance compensating element

cardiagn.com

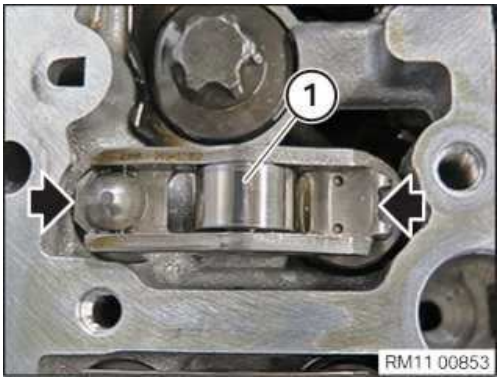
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.



80 – Install the roller cam followers

RISK OF DAMAGE

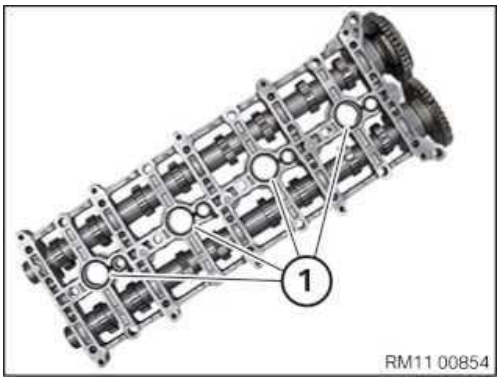
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

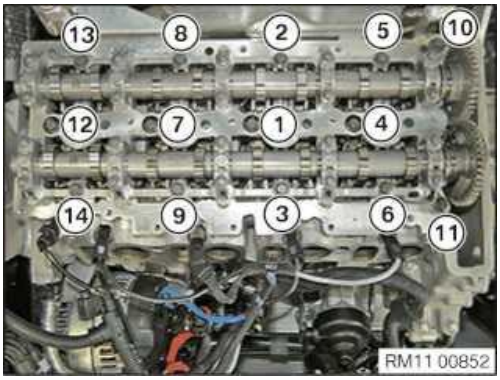
Damage to the engine.



If the classification of the roller cam followers is ignored, this can lead to engine damage.

- Observe the classification of the roller cam followers.
- Always reuse used roller cam followers at the same position.

- Install the roller cam follower (1).
- Repeat the process for all roller cam followers.

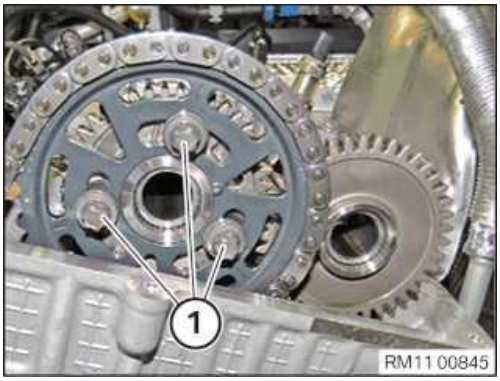


81 – Installing the camshaft support

cardiagn.com

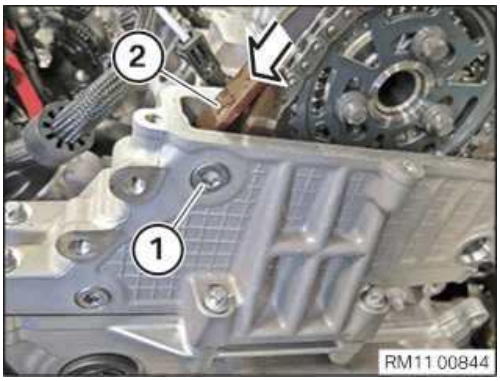
- Renew gaskets (1).

  Parts: gaskets



- Position the camshaft support including the camshafts.
- Tighten the screws in a sequence from (1) to (14) in several steps.

Camshaft carrier to cylinder head

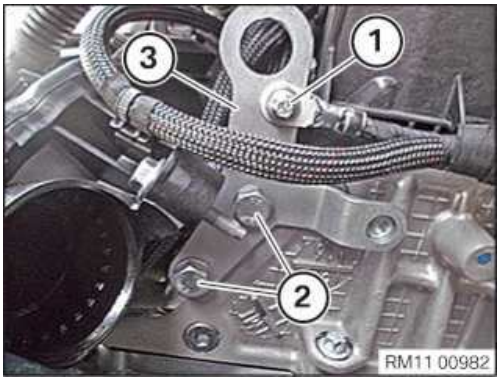


M7x35		Tightening torque	13 Nm

82 – Installing the camshaft sprocket on the intake camshaft

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

83 – Install the timing chain guide rail



- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6			8 Nm

84 – Installing the chain tensioner piston

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

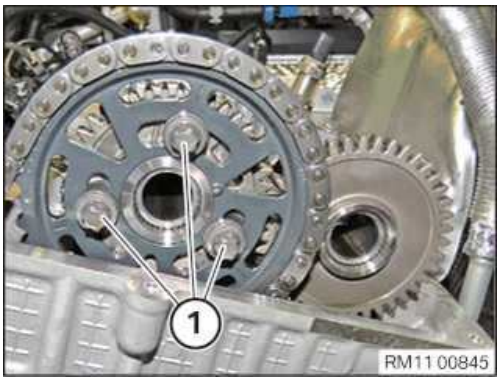
- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.



- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

85 – Tightening the camshaft sprocket on the intake camshaft

- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

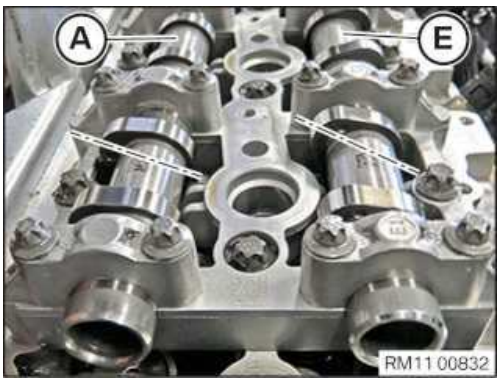
86 – Checking camshaft timing

cardiagn.com

- Remove protective cap (1) from oil sump.

- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE



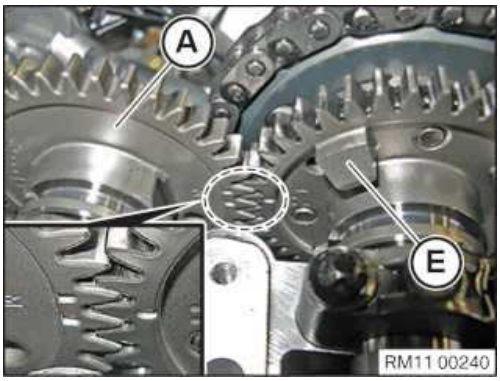
Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

cardiagn.com

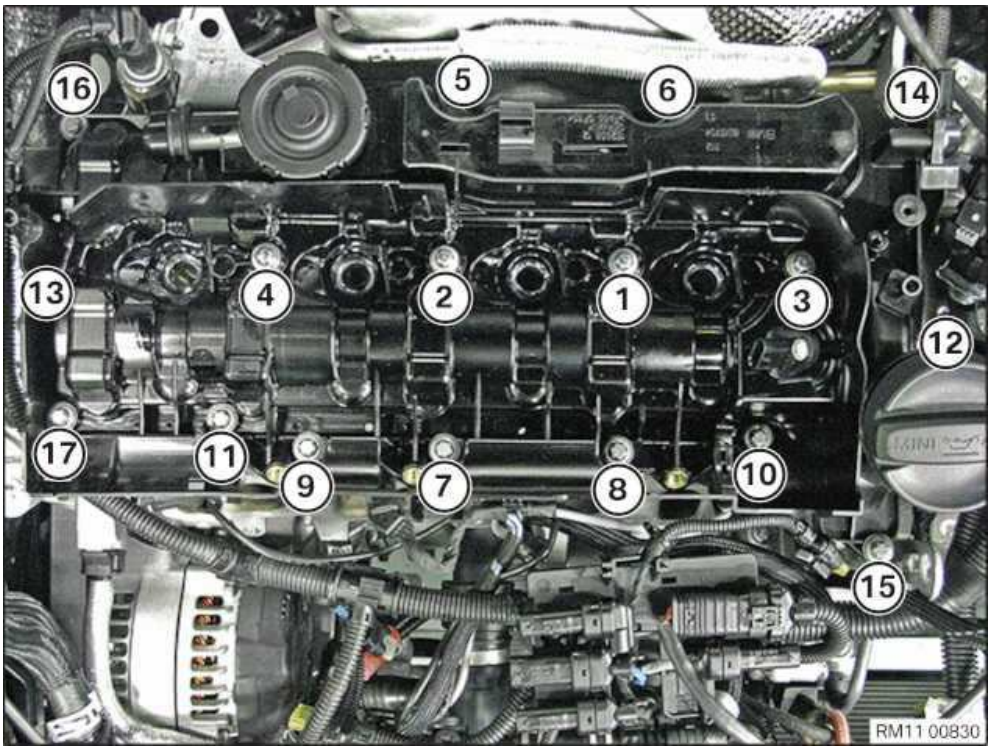
- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

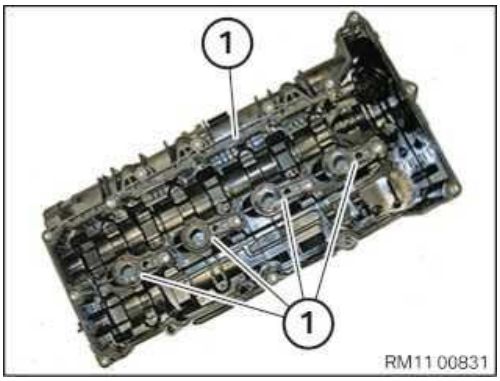
If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.



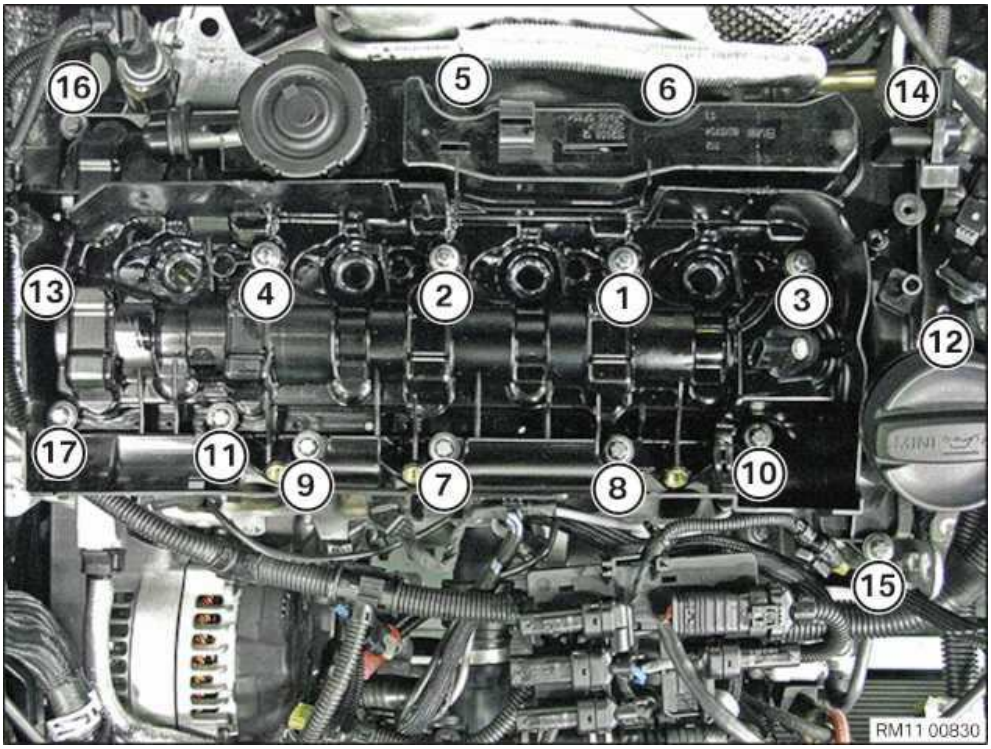
- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).



87 – Installing cylinder head cover

Overview: Screw connection of the cylinder head cover

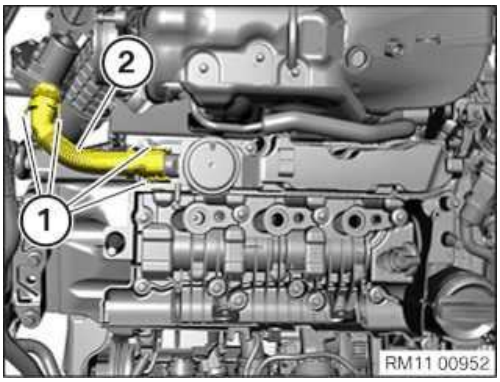


1 to 16 screws of the cylinder head cover.

cardiagn.com

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket



- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

88 – Installing injectors of injection system

▶ **Cleaning the injector shafts**

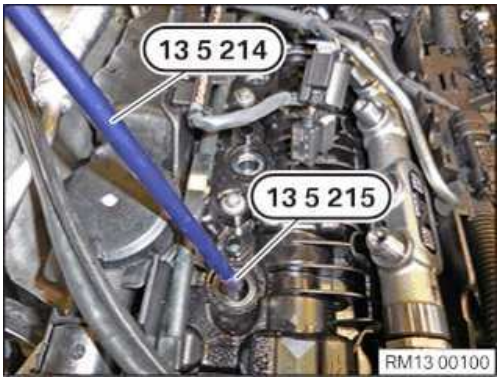
CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

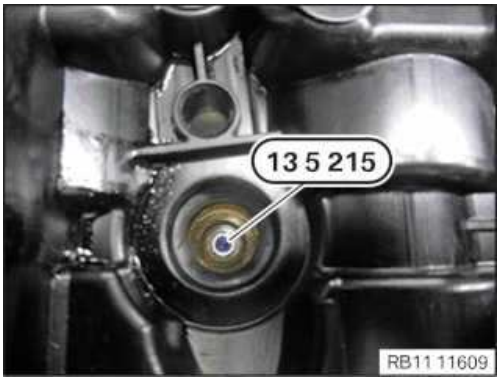
- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.



cardiagn.com

RISK OF DAMAGE



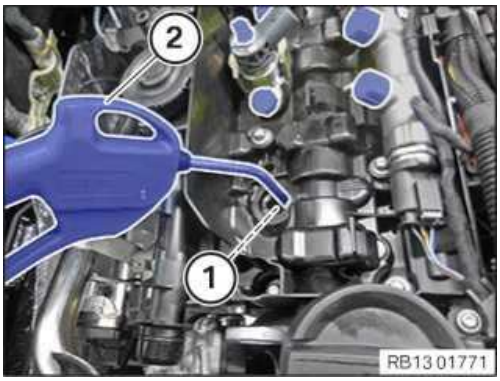
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

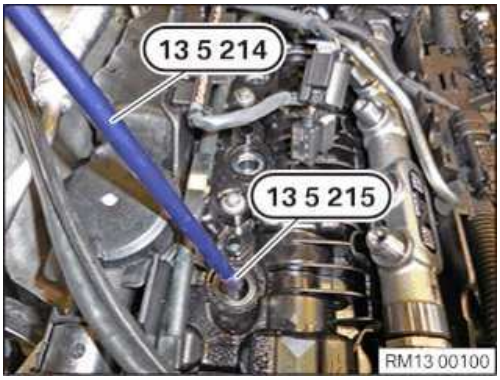
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.



- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

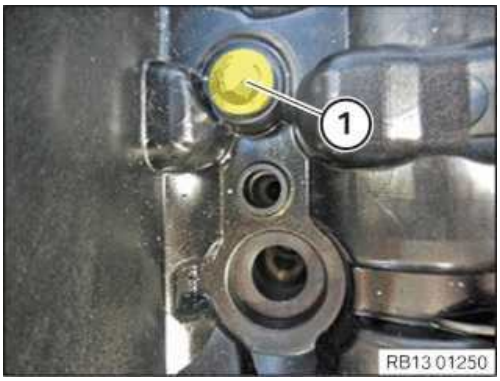


- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

cardiagn.com

- Blow out injector shaft (1) with air gun (2).

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.



▸ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▸ **Prepare the injector for installation**

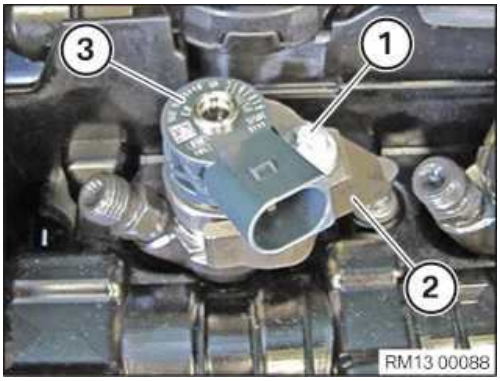
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

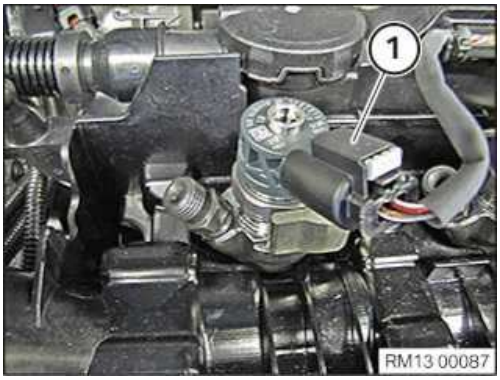


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring

- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials



Injector lubricating grease	50 g, Can	83230441070

- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

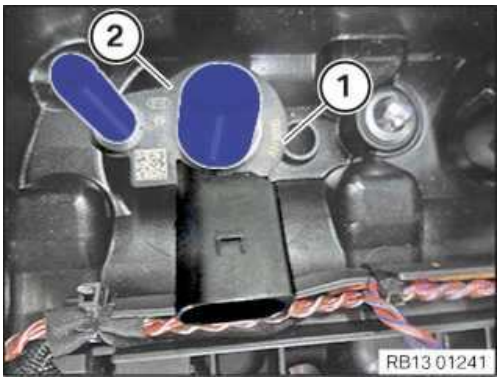
Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

▸ **Replacement: Perform injection quantity compensation**



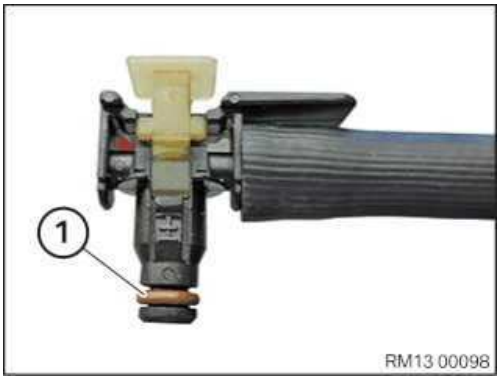
TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

89 – Connect the leakage oil line on the injector

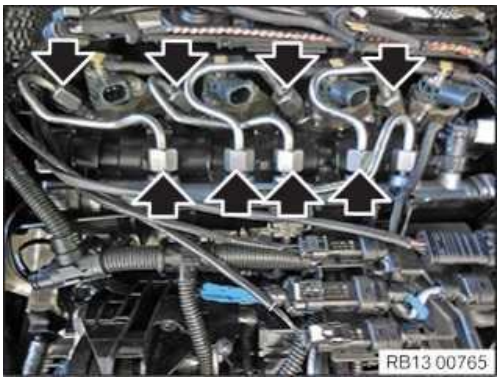
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

90 – Installing high pressure lines between rail and injectors



TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the high pressure lines (arrows) with the special tool .

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

91 – Prepare for the installation of the exhaust turbocharger

- Check the oil feed lines and the oil return lines for contamination or obstruction, clean or renew if necessary.
- If the oil feed lines and/or oil return lines are heavily contaminated, we recommend changing the engine oil and the oil filter.
- If installed: Check the coolant feed lines and the coolant return lines for the exhaust turbocharger for contamination or obstruction, clean or renew if necessary.
- Check that the screw connections and the plug connections of all the lines are correct.
- Check air cleaner for contamination and clean or renew as needed.
- Check correct functioning of crankcase ventilation.
- Replace all gaskets.

  Parts: Seals

92 – Installing the high-pressure stage exhaust turbocharger

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

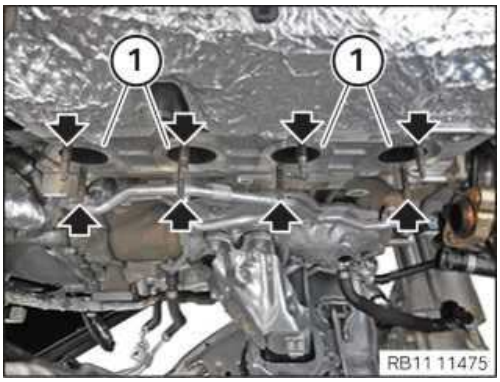
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

RISK OF DAMAGE

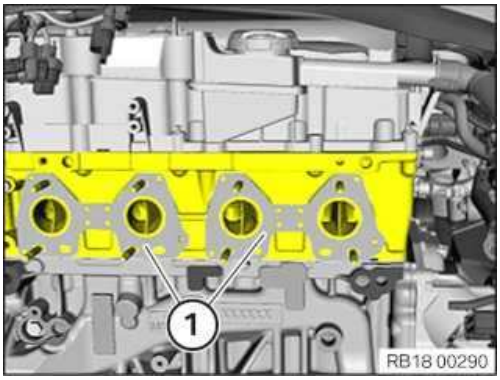


Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

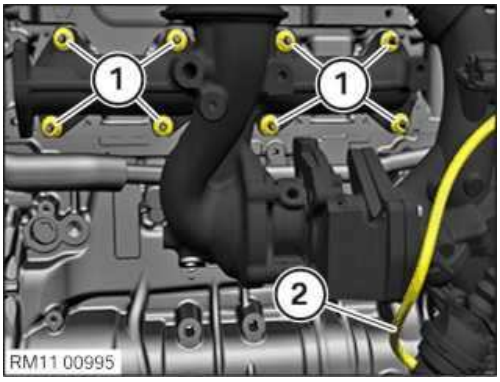
- Do not use any metal-cutting tools.

TECHNICAL INFORMATION



The sealing surfaces must be free from oils, grease and cleaning agents.

- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.



- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.

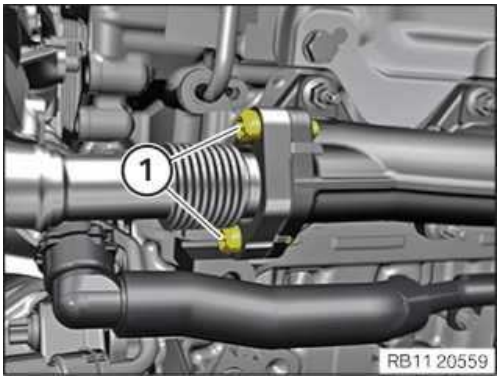
- Renew gasket (1).

  Parts: Gasket
- Install new gasket (1).

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

  Parts: Nuts
- Connect vacuum hose(2).

cardiagn.com



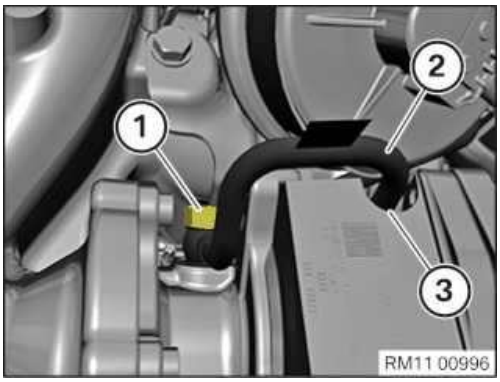
- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

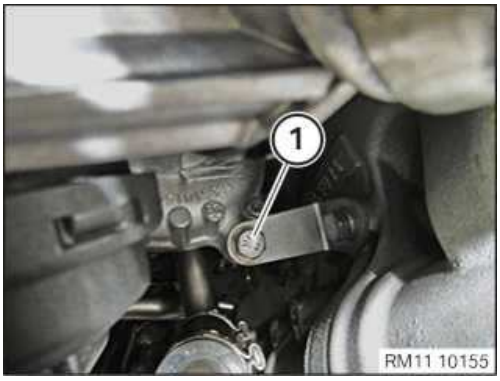
  Parts: Gasket

- Tighten the screws (1).



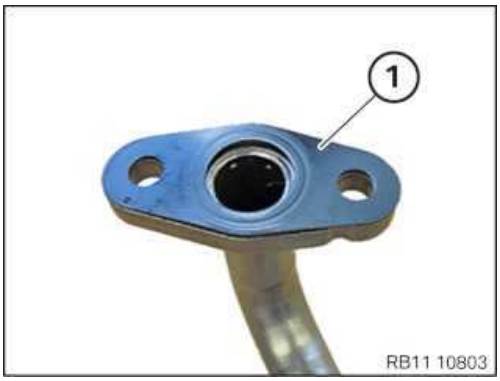
Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

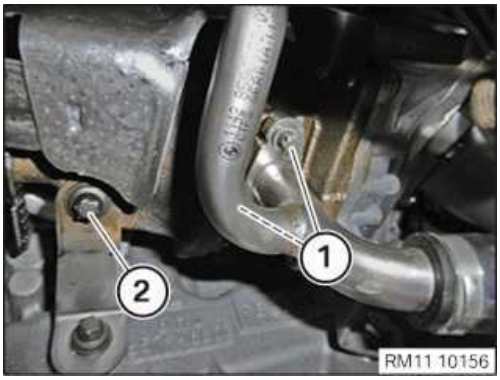


- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring



- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).



- Tighten bolt (1) from the right wheel arch.

cardiagn.com

- Renew seal (1) of oil return line.

  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

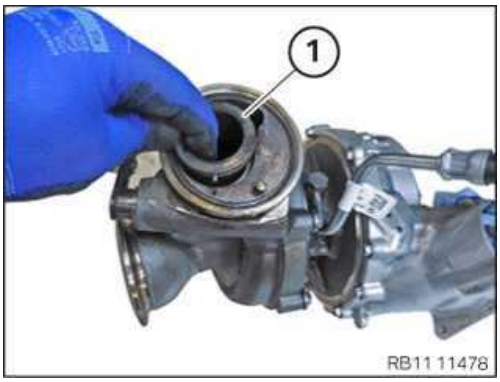
- Tighten down screw (2).

Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

93 – Installing the low-pressure stage turbocharger

RISK OF DAMAGE



Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

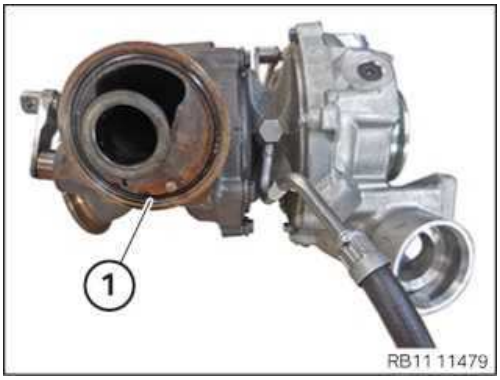
- Do not use any metal-cutting tools.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.



cardiagn.com

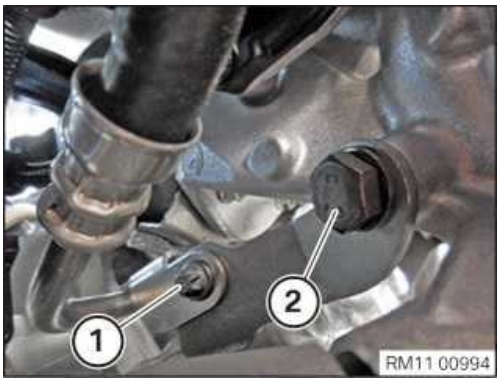
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



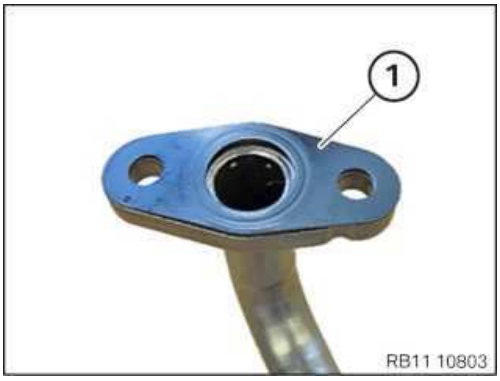
- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

- Tighten down screw (1).

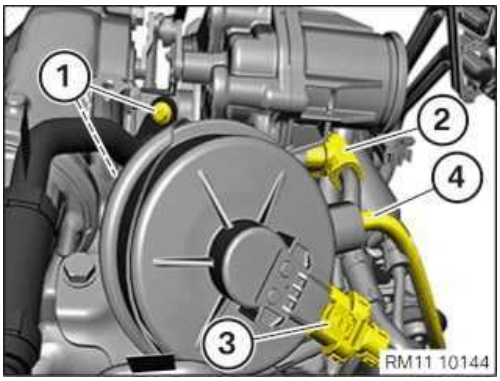


Oil feed line to bracket

Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

Holder to exhaust turbocharger and crankcase

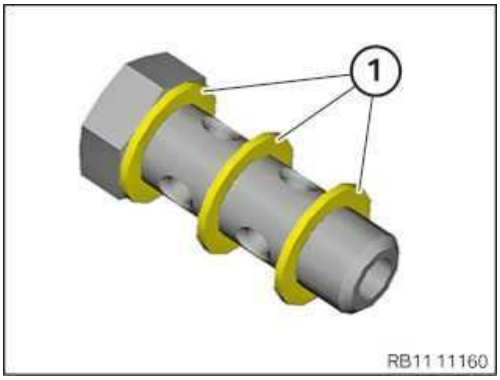


M8x16		Tightening torque	22 Nm

- Renew seal (1) on the oil return line.

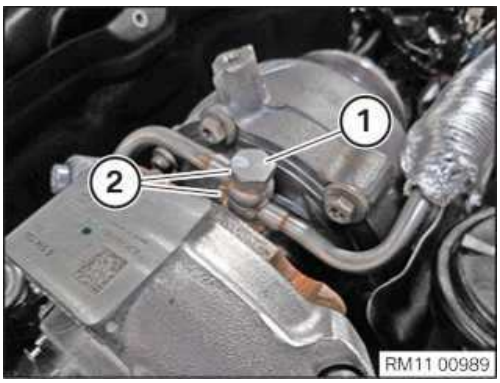
  Parts: Gasket

cardiagn.com



- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger



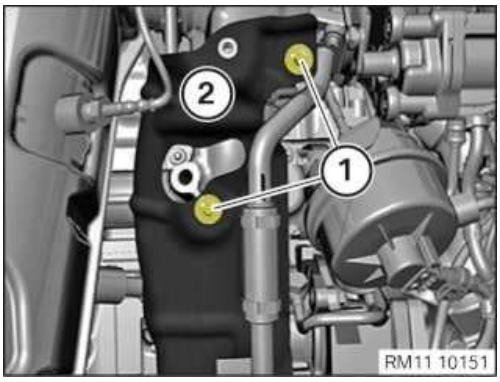
M6x12		Tightening torque	8 Nm

- Connect and lock connectors (2) and (3).

  The locks must engage audibly.
- Connect vacuum hose (4).

- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.



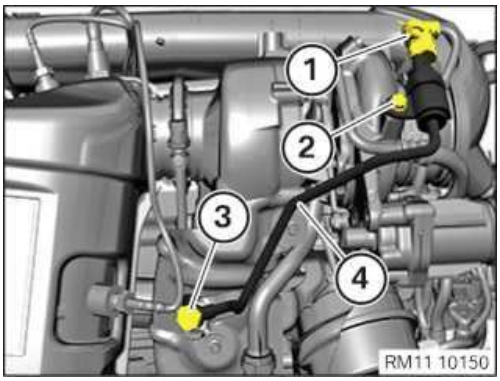
94 – Installing heat shield on exhaust turbocharger at bottom

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

cardiagn.com

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

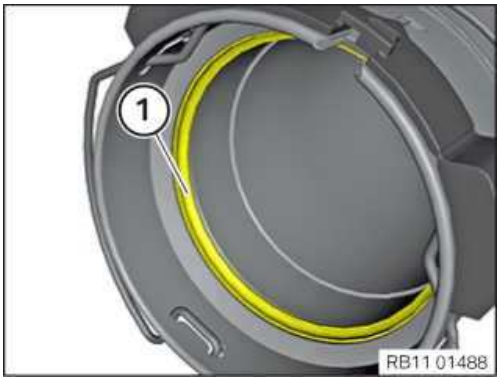
- Tighten down screw (2).

Standard screw connection M6

M6		8 Nm

- Connect connectors (1) and lock.

  Lock must audibly engage.



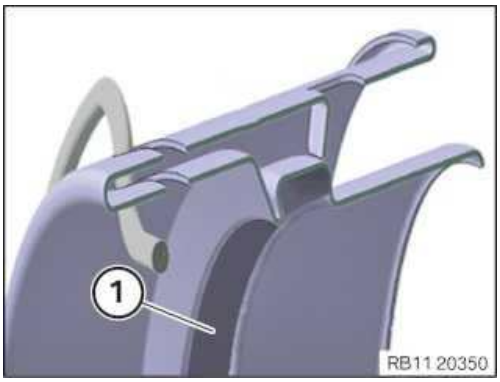
95 – Installing the right charge air duct between the exhaust turbocharger and the charge air cooler

RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.

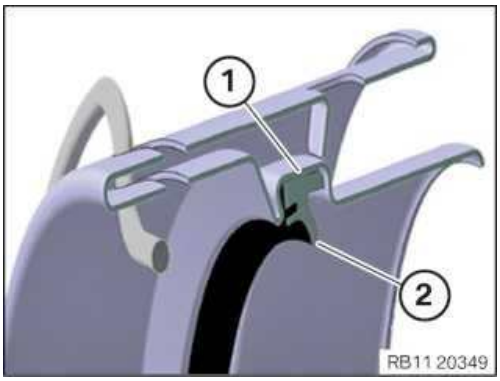


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

▶ **Replace damaged gasket**

TECHNICAL INFORMATION

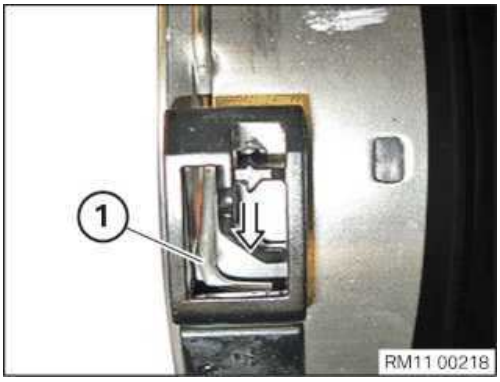


Do not use pointed or sharp-edged tools for the installation and/or removal.

- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

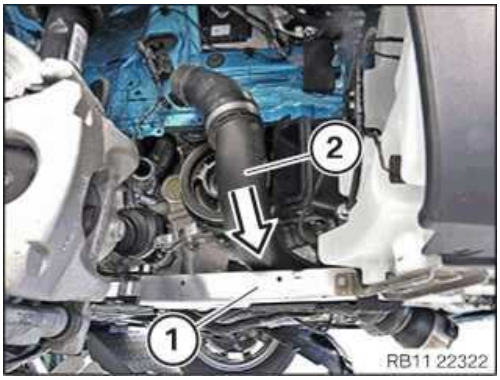
  The gasket groove (1) must be clean.

cardiagn.com



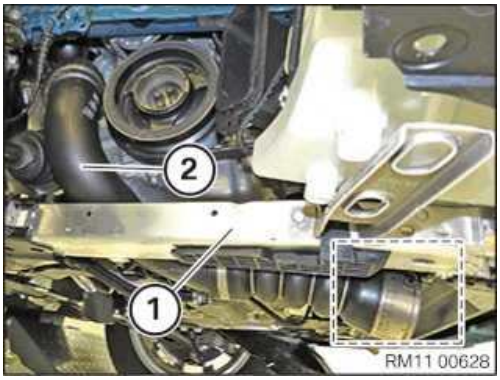
- Renew gasket.

  Parts: Gasket
- Install seal dry without lubricant or mounting agent.

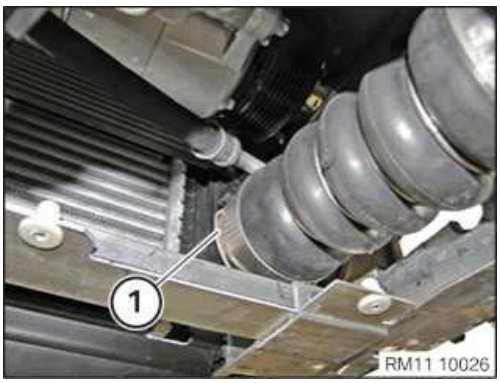


TECHNICAL INFORMATION

Incorrect assembly is possible. Ensure correct installation position.

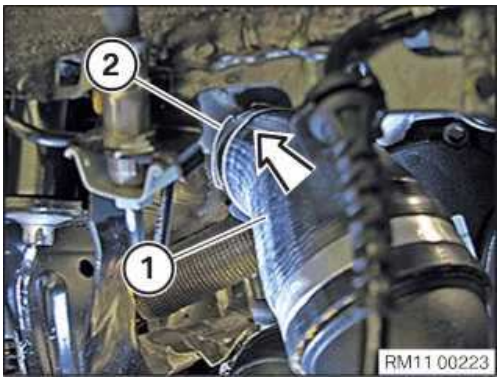


- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).

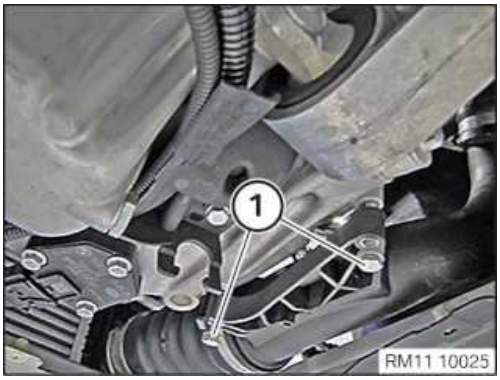


- Detach the locks (1) in the direction of the arrow from the brackets.
- Ensure that the locks (1) engage audibly.

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed in the charge air duct (1) in the **direction** of arrow between the side member and the deformation element and position.



- Pull the adapter of the front axle support (1) downwards to the front right.
- Position the charge air duct (2) in **marked** area on the charge air cooler.



- Feed in and install the charge air duct (1) on the charge air cooler .
- Make sure the charge air duct (1) engages audibly on the charge air cooler.

cardiagn.com

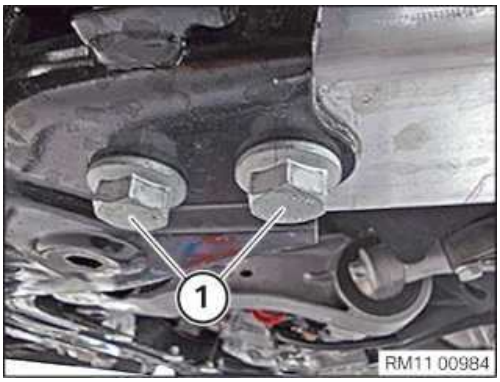
- Feed in and install charge air duct (1) in the **direction** of the arrow on exhaust turbocharger.

  The locks (2) must engage audibly.

- Tighten the screws (1).

Charge air duct to oil sump

M6		Tightening torque	8 Nm



- **If installed:**
- Feed in and install the ride height sensor (3).
- Tighten the screws (2).

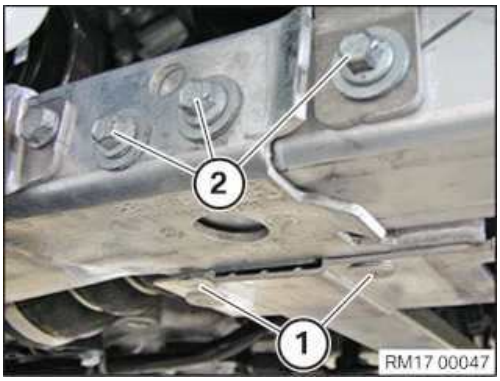
Ride height sensor holder to front axle support

M6		Tightening torque	8 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

- Tighten the screws (1) on the adapter of the front axle support.

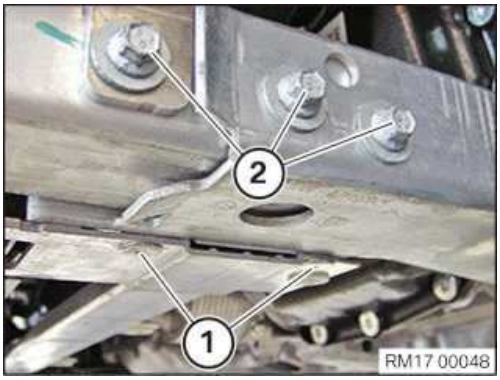


Adapter, front axle support to front axle support

		Tightening torque	100 Nm

- Guide in cross connection (3) and install.
- Guide in locks (2) and install.
- Lock the locking pins (1).
- Ensure that the locking pins (1) audibly engage.

cardiagn.com



- Tighten the bolts (2) at the front left.

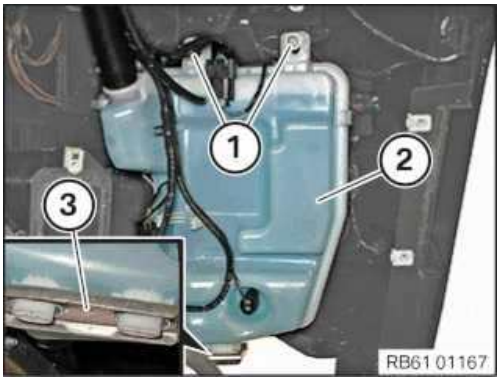
Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front left.

- Tighten the bolts (2) at the front right.



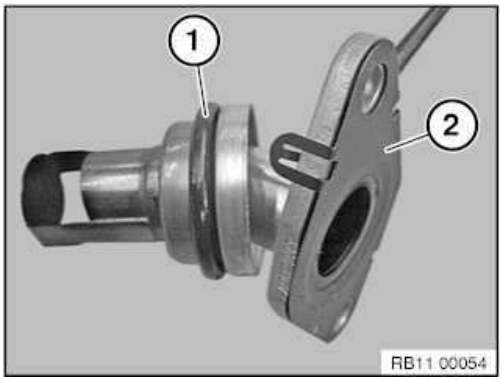
Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front right.

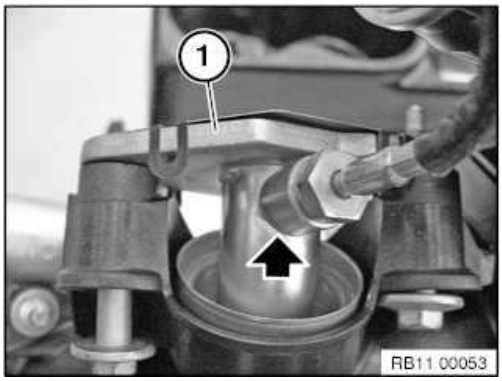
96 – Install the washer fluid reservoir in the fixture



- Feed washer fluid reservoir (2) into the mounting (3) and install.
- Tighten the screws (1).

Washer fluid reservoir to body

M6x20		Tightening torque	8 Nm

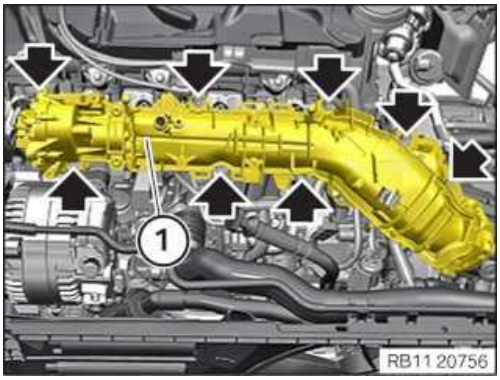


97 – Installing the intake plenum

- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position the seal (2) and clip it in.

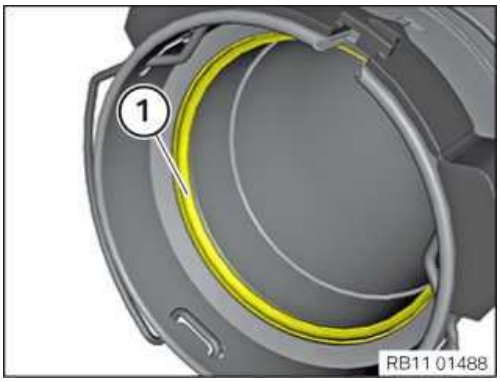


- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

cardiagn.com

- Renew gaskets (1).

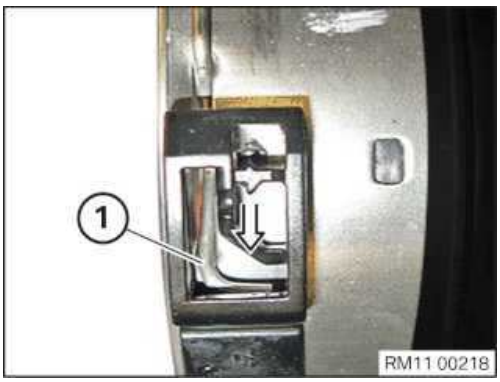
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



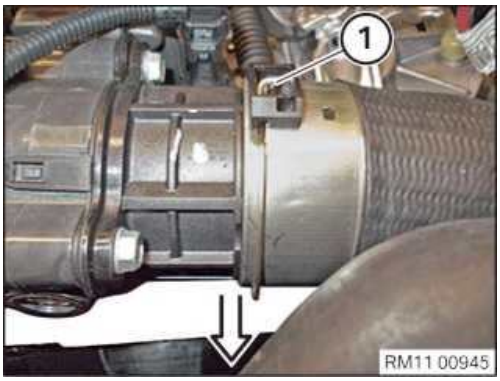
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

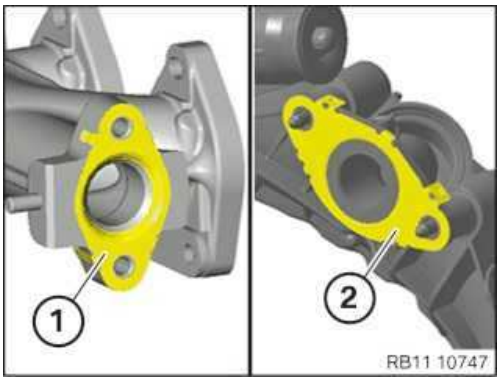
  Parts: Sealing ring

- Engage the lock (1) on the bracket (arrow).

cardiagn.com

- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.



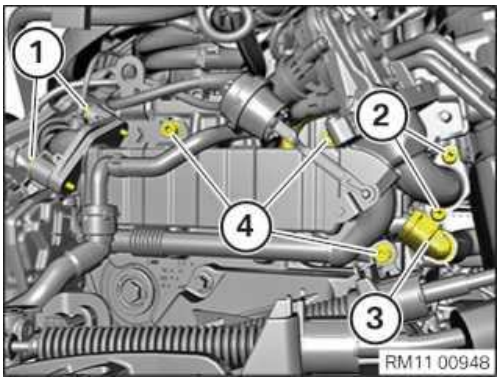
98 – Installing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

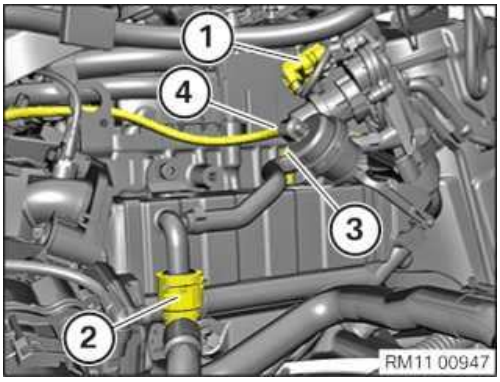
Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold



M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

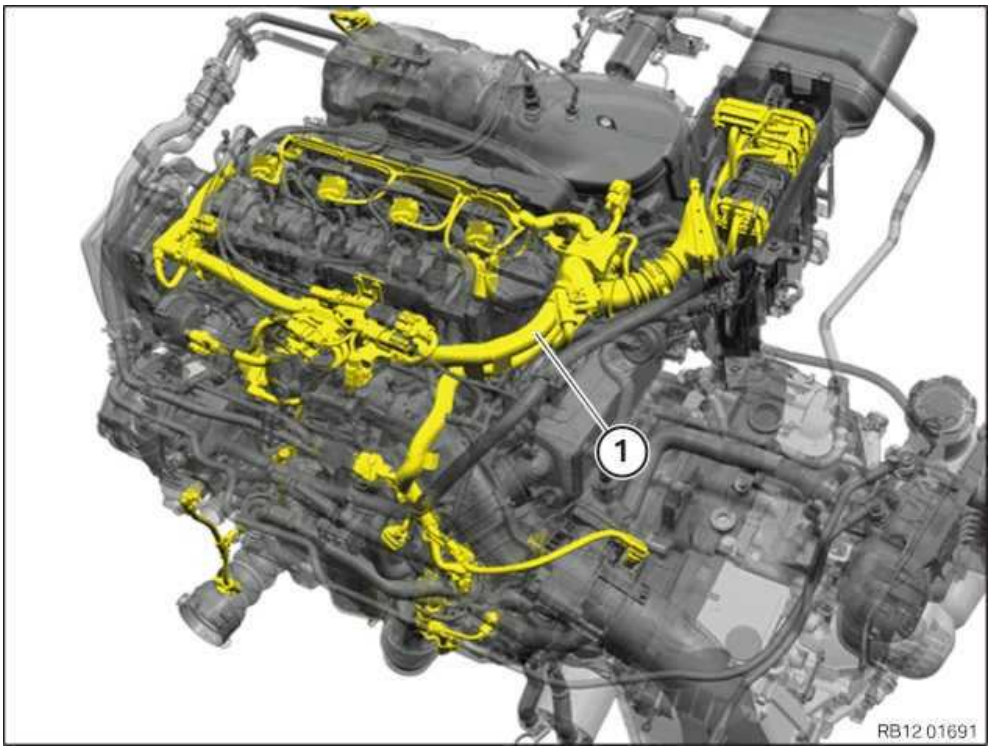
  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

TECHNICAL INFORMATION

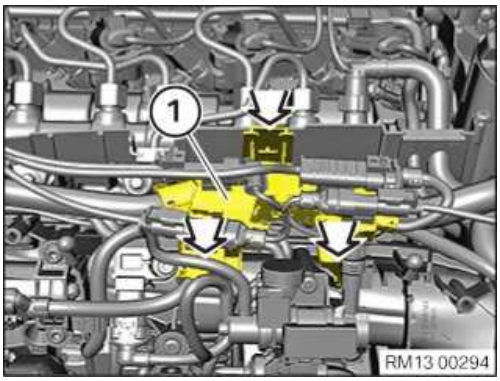
Make sure that the connections are locked correctly. The locks must engage audibly.



- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

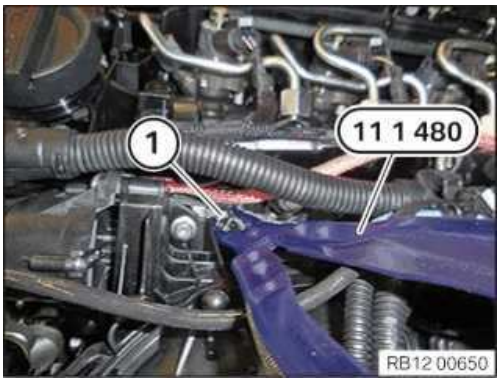
  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

99 – Fastening the wiring harness section for the intake plenum



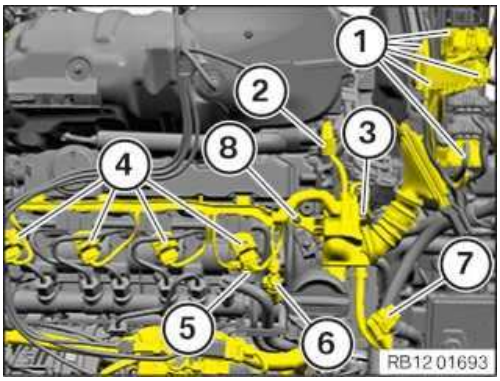
cardiagn.com

Overview: Wiring harness section for the engine



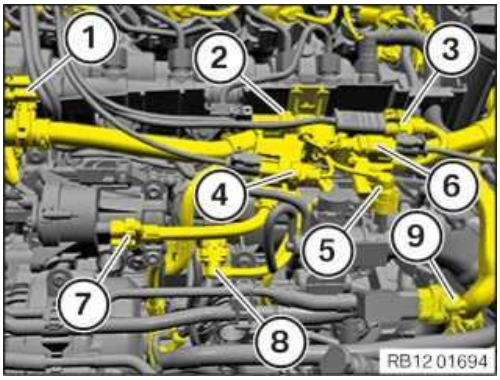
1 Wiring harness section for the engine

▶ **Installing the cable clip for the intake plenum**

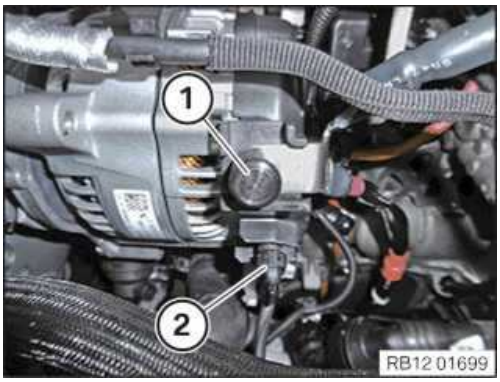


- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.



cardiagn.com

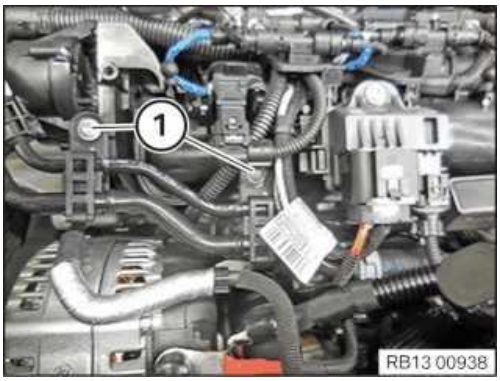


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.

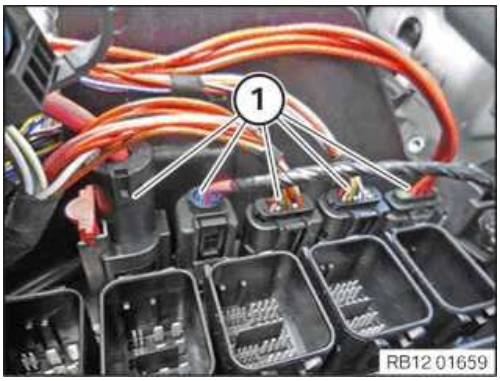


- Connect and lock the connector (2).

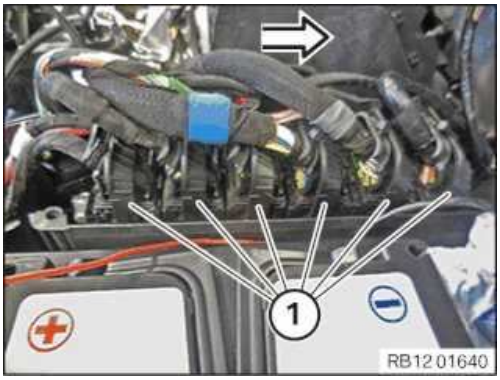
  Lock must snap audibly into place.
- Connect the positive battery cable (1) and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

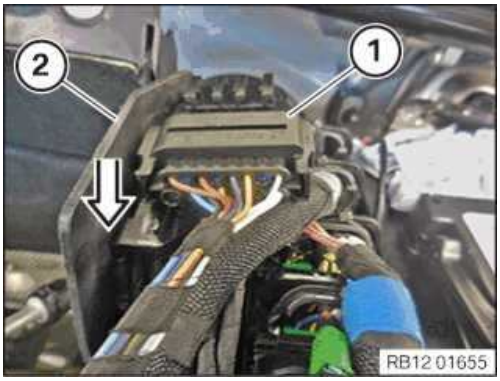


- Position the fuel line.
- Tighten the screws (1).

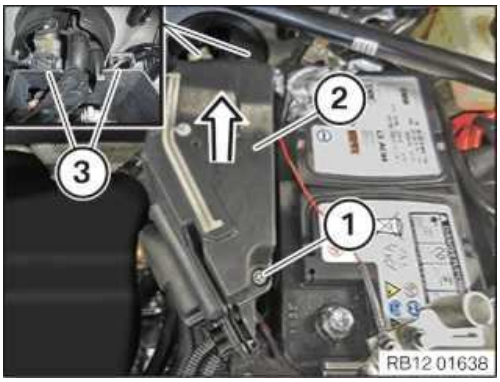


Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

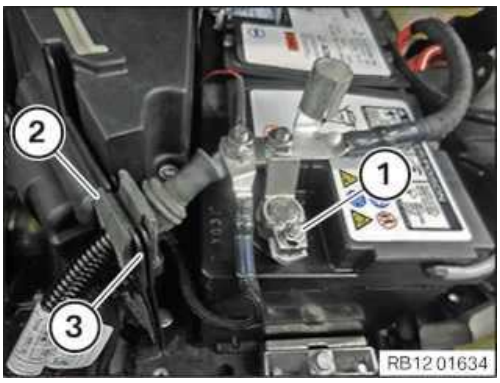


cardiagn.com



- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

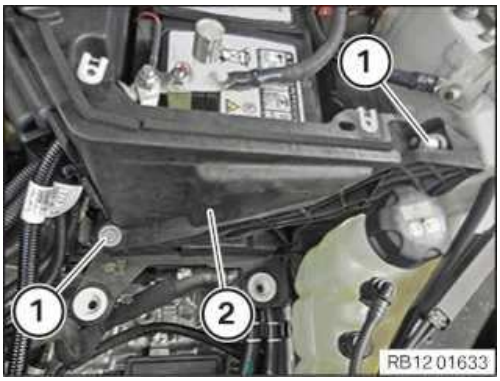


- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm



- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

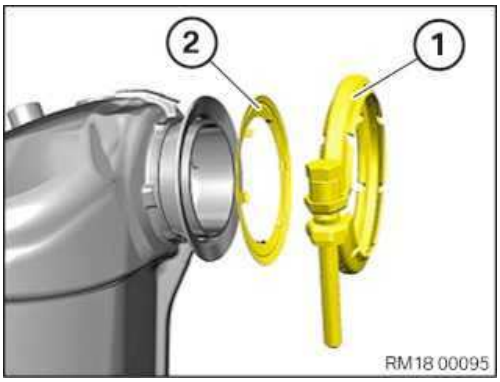
NutM6		Tightening torque	5 Nm

cardiagn.com

- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm



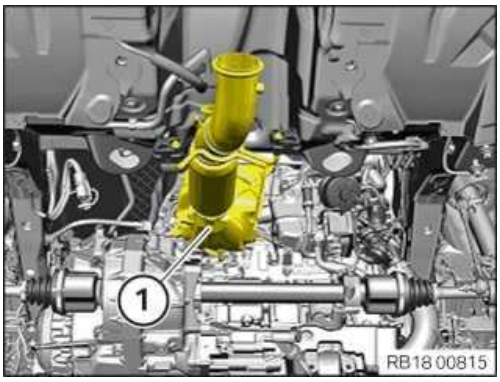
100 – Installing the diesel particulate filter

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

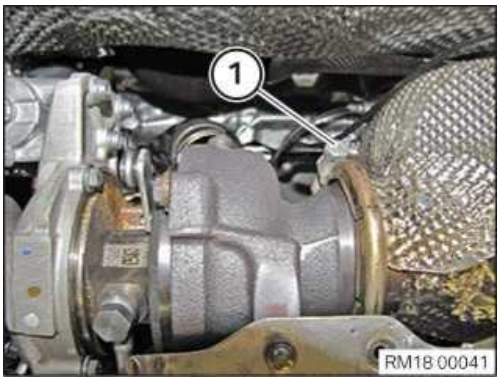
- Remove and install heavy components with the aid of another person/other persons.



- Renew the V-clip (1).

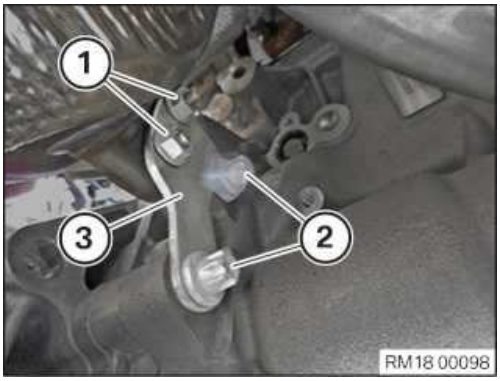
  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket

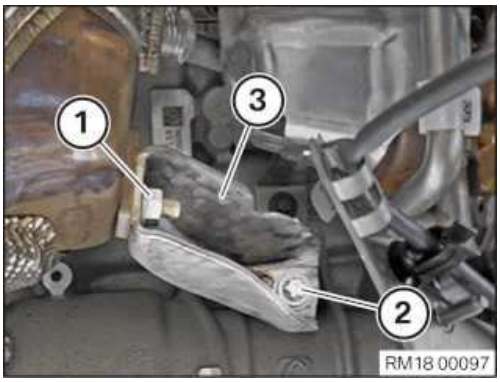


- Before installing the diesel particulate filter: Mount fitting aid (1) for the flexible tube.

- Carefully insert and install the diesel particulate filter (1).



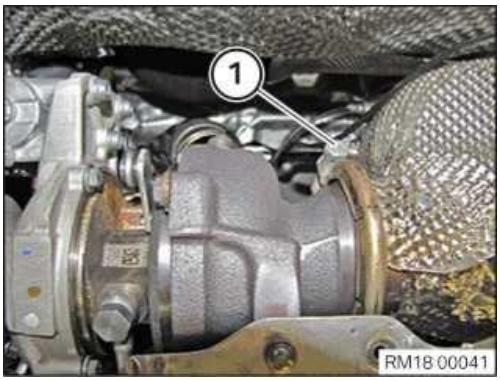
cardiagn.com



- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

- Tighten nuts (1) by hand.

- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.



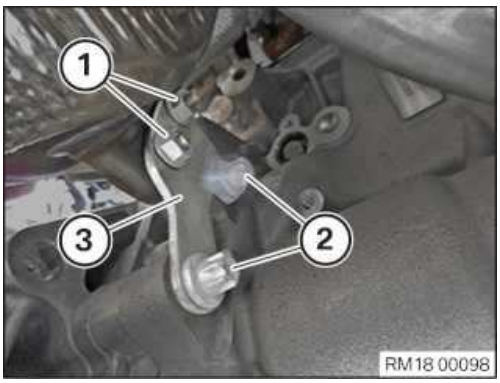
- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).

- Remove fitting aid (1) for the flexible tube.

cardiagn.com

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger



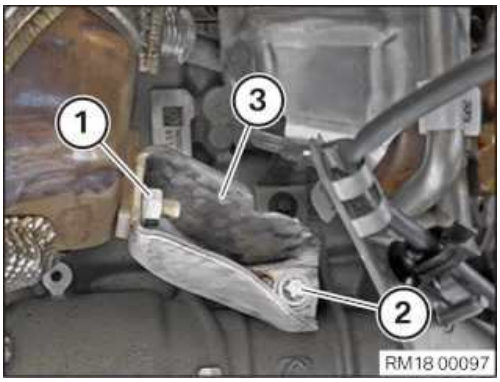
V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screws (2).



Diesel particulate filter holder to gearbox

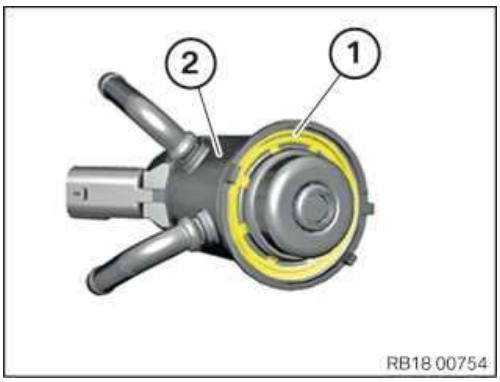
M12x75		Tightening torque	66 Nm

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screw (2).

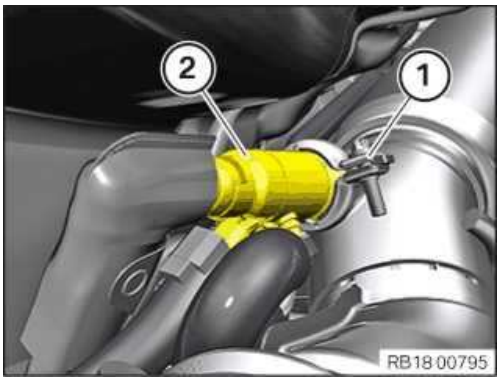


Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

Diesel particle filter to holder

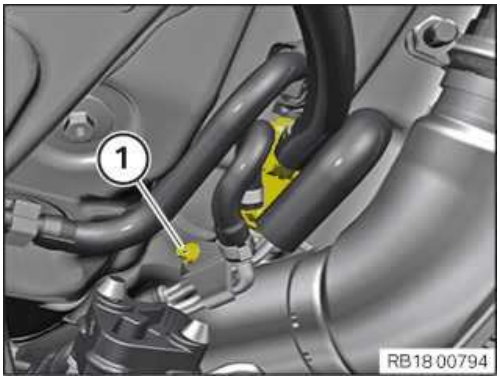


M8 hexagon nut		Tightening torque	19 Nm

- Renew sealing ring (1) of the SCR metering module (2).

  Parts: Sealing ring

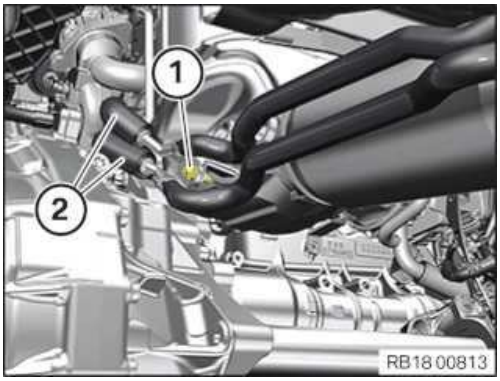
cardiagn.com



- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

SCR metering module V-clip to exhaust system

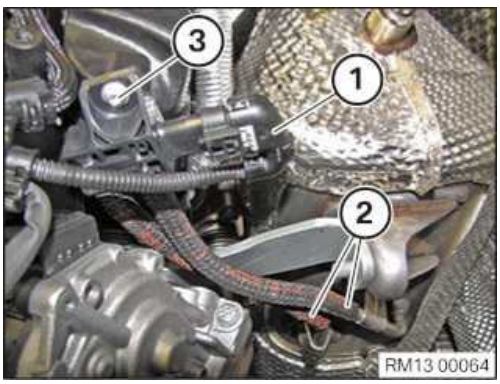


V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

▶ **Installing differential pressure sensor**

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

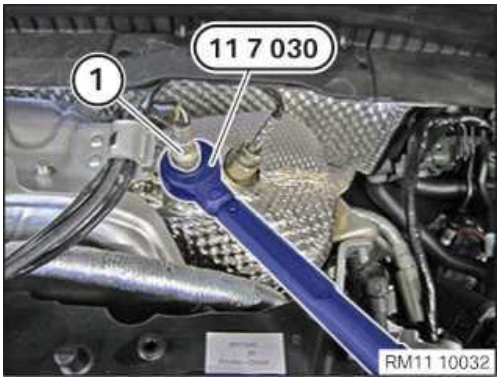
Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

101 – Install the control sensor

cardiagn.com



TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

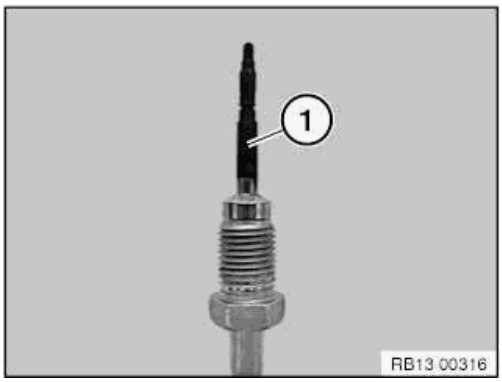
For oxygen sensors that are reused, the following should be observed:

Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Feed in front oxygen sensor (1) and install.
- Tighten front oxygen sensor (1) using special tool .

Control sensor

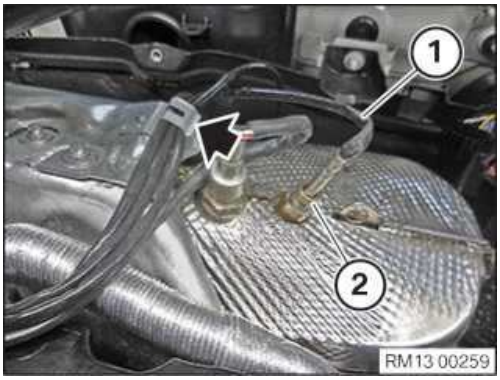


Control sensor		Tightening torque	50 Nm

- Lay and secure cable of oxygen control sensor.
- Secure the connector (2) to the holder.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

102 – Install the exhaust-gas temperature sensor on the diesel particulate filter



RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and renew the exhaust temperature sensor as needed.

- Feed in and install the exhaust temperature sensor (2).
- Tighten the exhaust temperature sensor (2).

Exhaust temperature sensor to diesel particulate filter

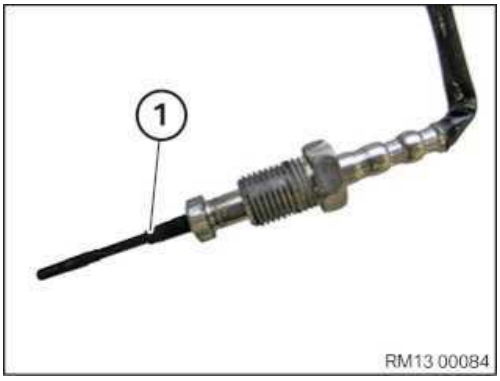
Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install cable (1) of the exhaust temperature sensor in the clamp (arrow).

cardiagn.com

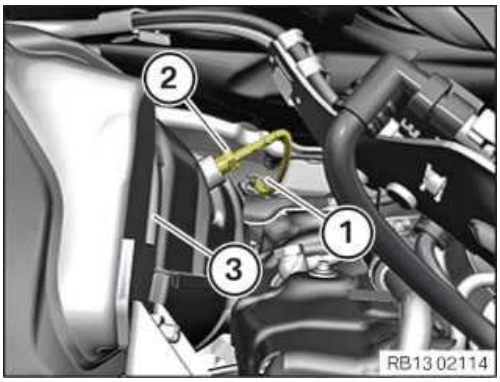
- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



103 – Installing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

RISK OF DAMAGE

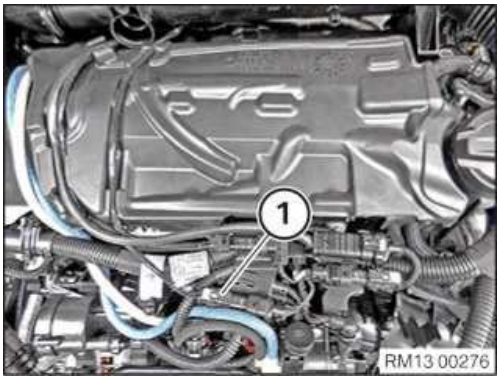


Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Make sure the gauge tip (1) is not damaged during installation.

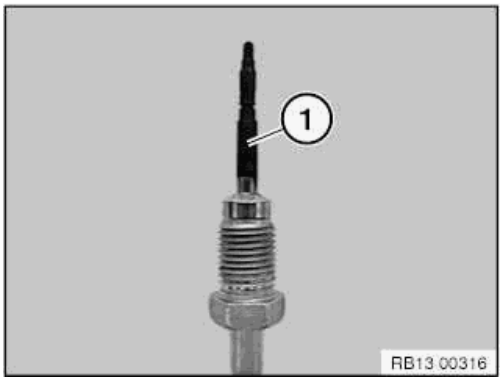


- Guide the exhaust temperature sensor (2) into diesel particulate filter (3) and install.
- Tighten the exhaust temperature sensor (2) with conventional tools .

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install the cable of the exhaust temperature sensor (2) in the clamps (1).

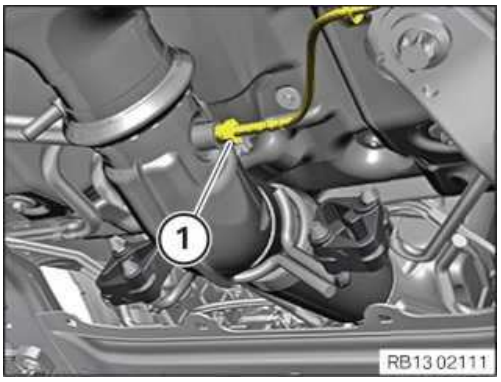


- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

104 – Installing exhaust temperature sensor on catalytic converter

cardiagn.com



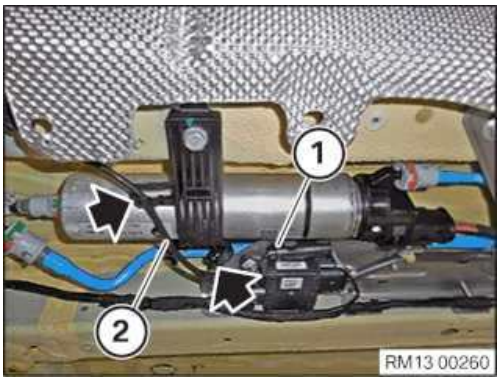
RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

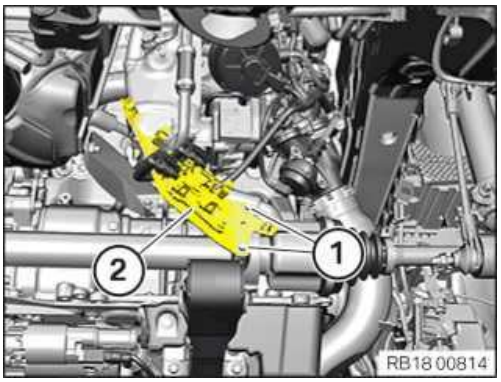
- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.



- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).

Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

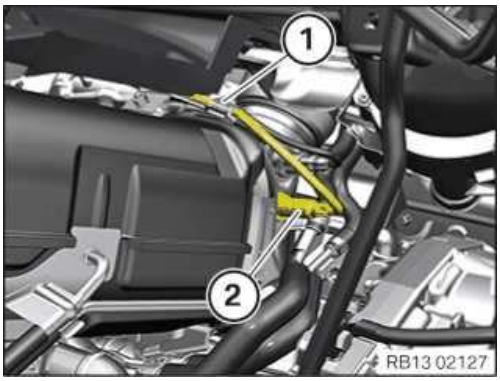


- Secure the cable clips (1).

- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

105 – Install holder for oxygen sensor

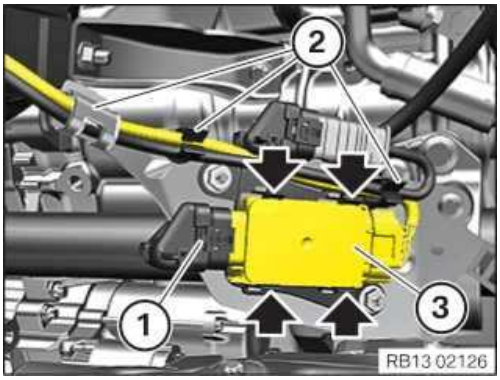


- Insert and install the holder (2).
- Tighten the screws (1).

Oxygen sensor holder to intermediate shaft

Hexagon screw M6x16		Tightening torque	8 Nm

106 – Installing the nitrogen oxide sensor before SCR catalytic converter



cardiagn.com

- Insert nitrogen oxide sensor before the SCR catalytic converter (2) and install.
- Tighten the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

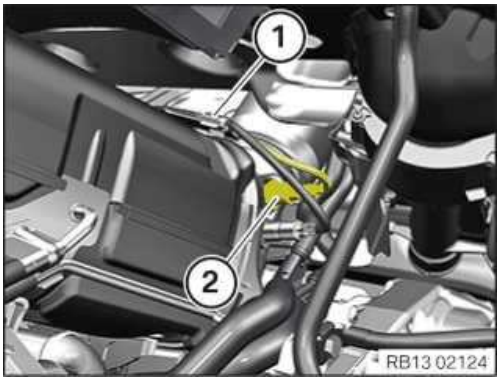
Nitrogen oxide sensor before SCR catalytic converter

Sensor		Tightening torque	50 Nm

- Install and lock the evaluation electronics for the nitrogen oxide sensor (3) (arrows).
- Insert the evaluation electronics cable for the nitrogen oxide sensor (3) into the clamps (2) and install.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

107 – Install the monitoring sensor



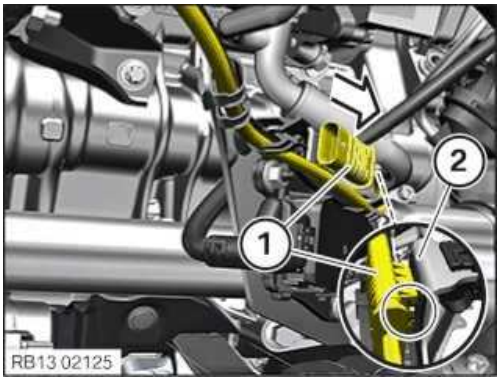
TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

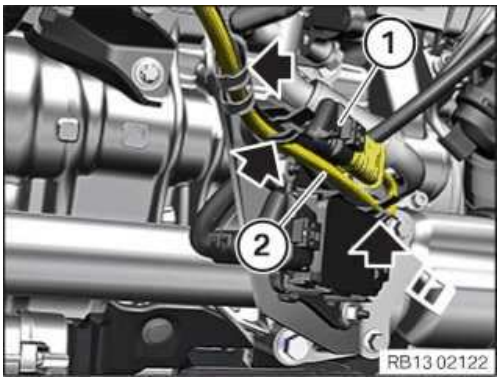
For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue



- Feed in the monitoring oxygen sensor (2) and install.
- Tighten the monitoring oxygen sensor (2) with special tool **0 491 074 (11 7 020)** .

Monitoring sensor

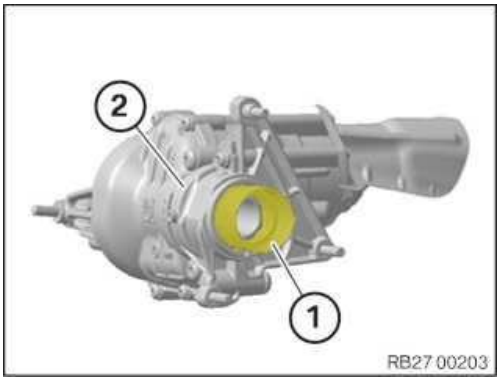
Sensor		Tightening torque	50 Nm



- Insert the cable of the monitoring oxygen sensor (2) into the clamp (1) and secure it.

- Connect the connector (1) with the bracket (2) in the direction of arrow.
- Make sure that the connector (1) is locked correctly in the marked area.

  The connector (1) must engage audibly.



cardiagn.com

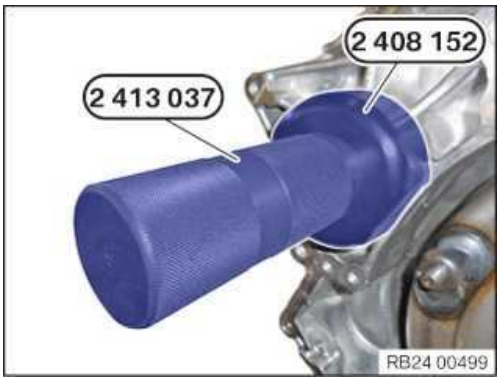
- Insert and attach the cable of the monitoring oxygen sensor (2) to the clamps (arrows).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

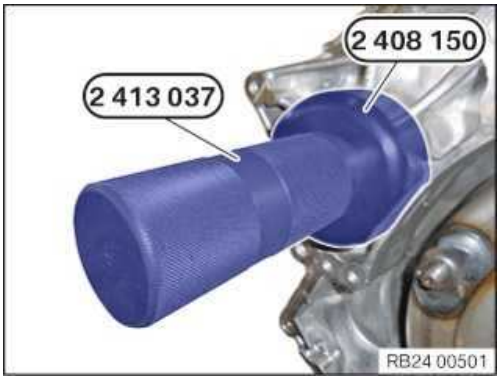
108 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

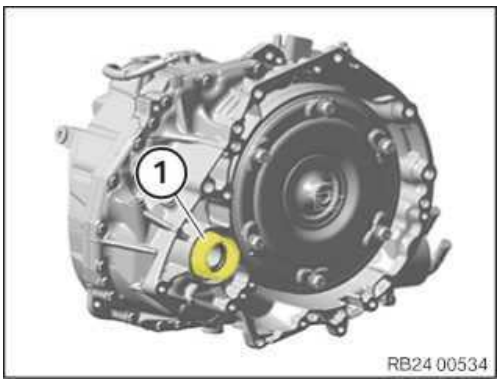
- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.



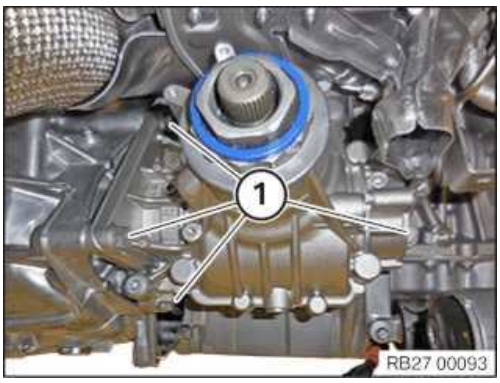
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



cardiagn.com

- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

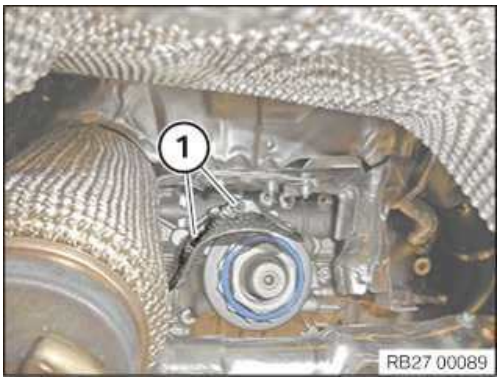


- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754



- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

cardiagn.com

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

Technically suitable transfer box and electrical transmission oils	

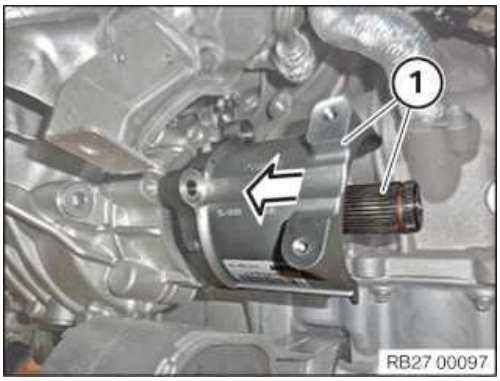
Main group 27

- Tighten the oil filler plug (1).

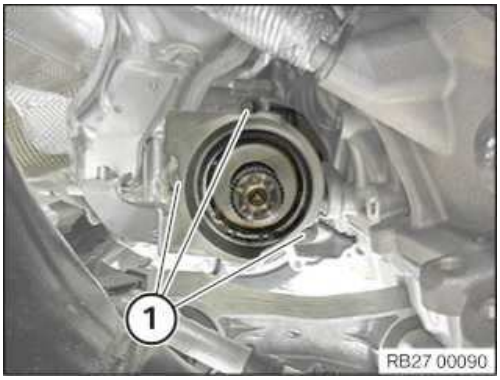
Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm

109 – Install the intermediate shaft with the support tube



- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

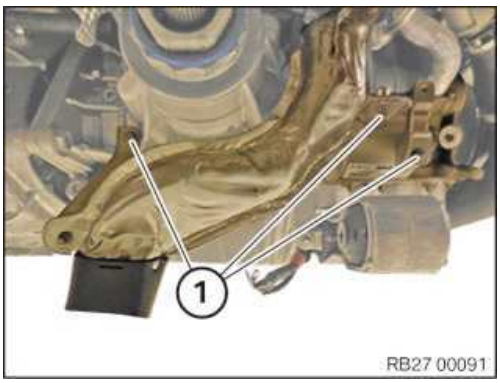


Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

cardiagn.com

- Install the intermediate shaft with support tube (1) in the transfer box.



- Position screws (1).

Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

- If installed: Install air duct.
- Tighten the screws (1).

110 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

cardiagn.com

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

111 – Installing right output shaft partially

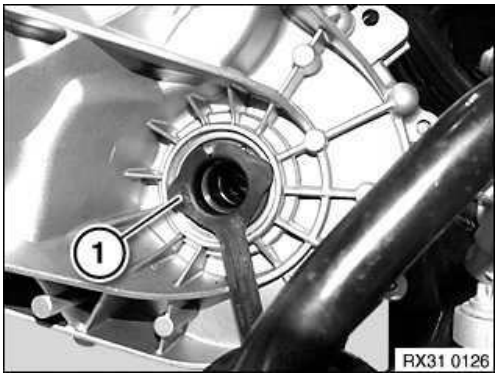
- Renew the circlip (1).

  Parts: Circlip
- Slide output shaft into the transmission as far as the limit position.
- Check for secure seat by levering.

112 – Partially installing the left output shaft

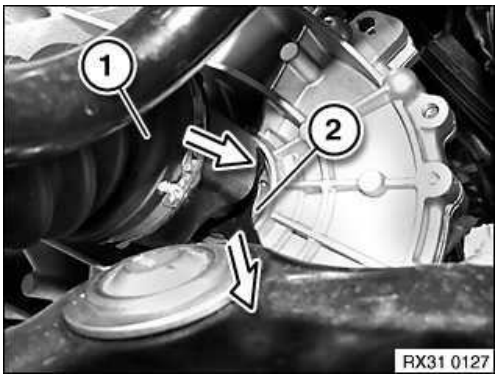
- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).



- Do not mix up circlips.

  Different types of output shafts fitted:
  - M: Manual transmission
  - A: Automatic transmission



cardiagn.com

- Renew circlip (arrow).

- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

- Insert output shaft (1) into transmission.
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

113 – Install propeller shaft.

CAUTION

Component with heavy weight.

Danger of injury!

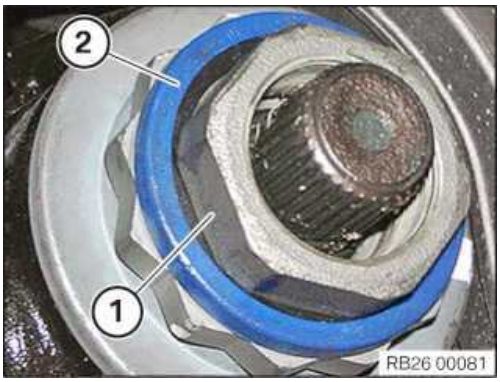
- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

Damage to the propeller shaft during installation.

Non-observance of the installation guidelines for the propeller shaft on the rear axle differential may cause severe damage.

- Always renew the recessed nut on the rear axle differential. Screw locking must be available.
- Strictly observe a minimum hardening time of two hours after having screwed in the recessed nut. The hardening time may be longer at lower temperatures.



cardiagn.com

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

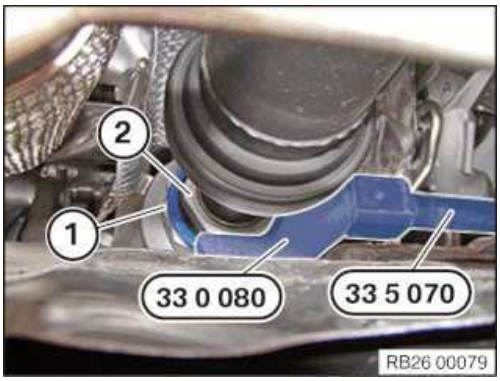
- Renew recessed nut (1).

  Parts: Insert nut
- Renew the retaining clip (2) and the seal.

  Parts: Retaining clip, seal
- Insert the seal with the recessed nut (1) and install.
- Insert the retaining clip (2) and install.
- Make sure that recessed nut (1) is screwed in within 5 min.
- Make sure that the hardening time of **minimum** 2 h for the recessed nut is observed.

  The hardening time must be extended at lower temperatures.

- Insert the propeller shaft (1) and install.
- Always support the propeller shaft (1) with a conventional jack.



- Hand-tighten the bolts (1).

- Push the propeller shaft (2) against the recessed nut (1) up to the limit position.
- Screw the propeller shaft (2) at least 2 thread starts onto the recessed nut (1) by hand.

cardiagn.com

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to tighten the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.

- Tighten the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

Propeller shaft to transfer box

		Tightening torque	80 Nm

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Assemble the screw connection (1) of the flexible disc (2) and the three-hole flange (3) according to the mark.
- Renew screws (1).

  Parts: Bolts

- Hand-tighten the bolts (1).

- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

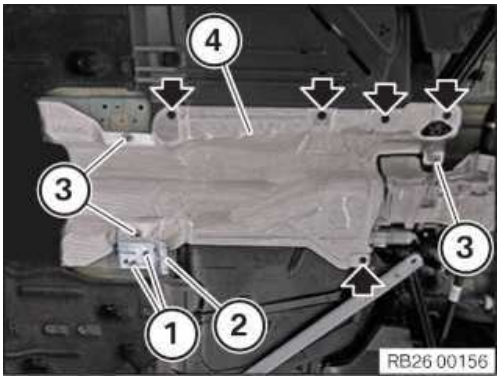
cardiagn.com

- Tighten the bolts with the special tools **0 490 504 (00 9 120)** and .

Flexible disc to rear axle final drive

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

- Tighten the screws (1).



Centre mount to body

M8		Tightening torque	19 Nm

- Guide the special too l out between the front and rear propeller shaft and remove.

114 – Installing the rear heat shield

- Insert and install the heat shield (4).
- Tighten screws (arrows).

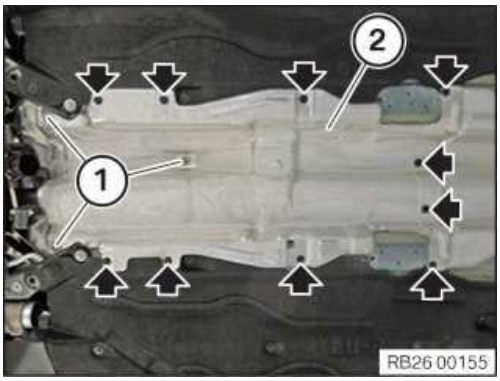
Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (3).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm



- Insert and install the holder (2).

Bracket to body

M8		Tightening torque	21 Nm

115 – Install the front heat shield

cardiagn.com

- Insert and install the heat shield (2).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (1).

Heat shield to body

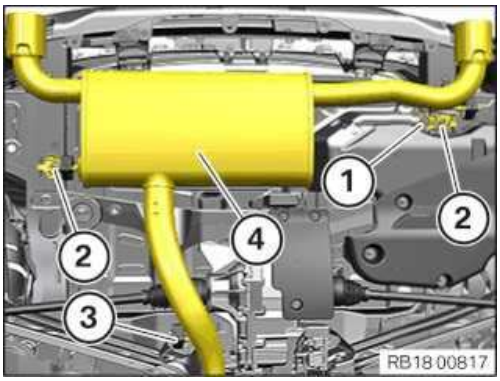
Bolts/nut		Tightening torque	3 Nm

116 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!



- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Feed in and install the exhaust system (4) with a second person.
- Renew nuts (2).

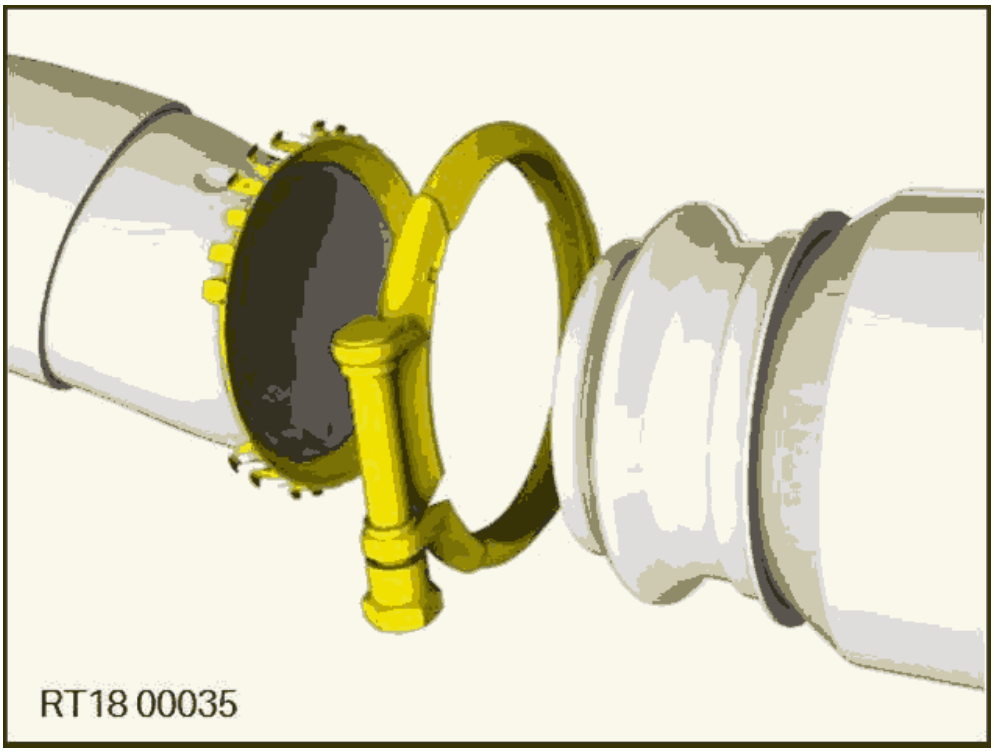
  Parts: Nuts
- Tighten nuts (2).

Exhaust system to body

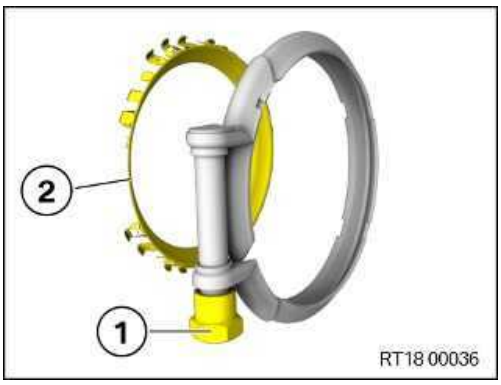
M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).

Exhaust bracket on body

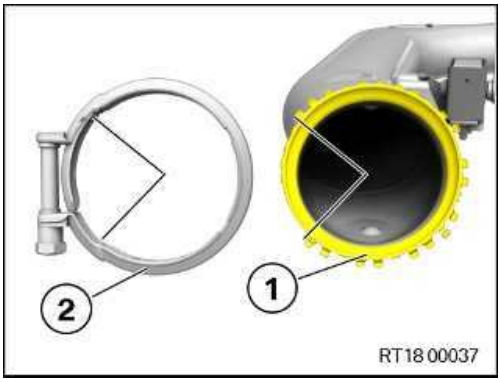


Hexagon screw M8x30		Tightening torque	19 Nm



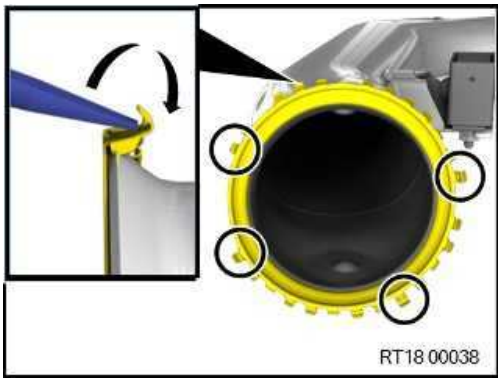
- Check the rubber mount (3) for damage and renew as needed.
- Mount rubber mount (3) on the exhaust system (4).

▸ **Install the V-clip**

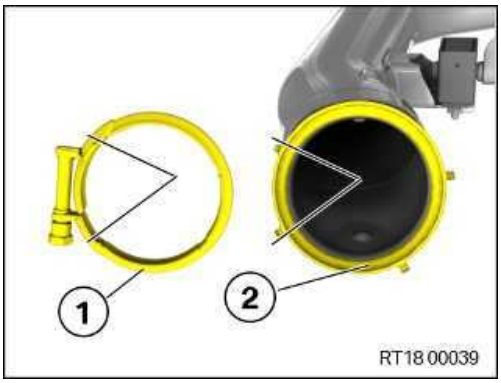


cardiagn.com

V-band clamp



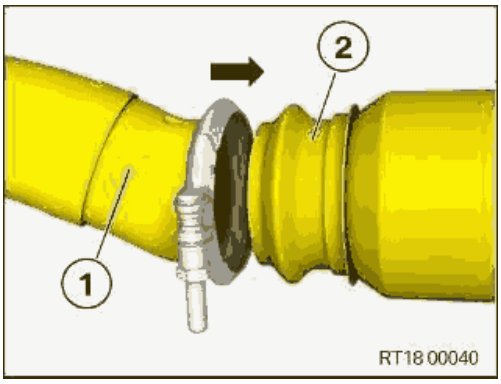
- Unscrew the nut (1) and remove the sealing ring (2).



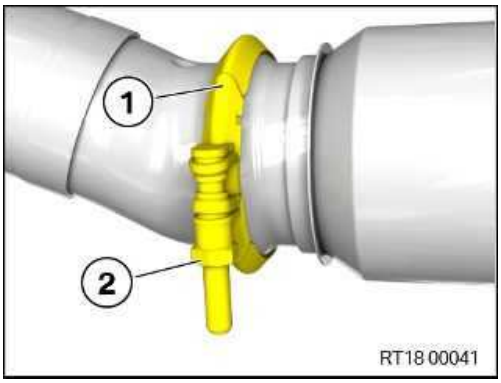
- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.

- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.

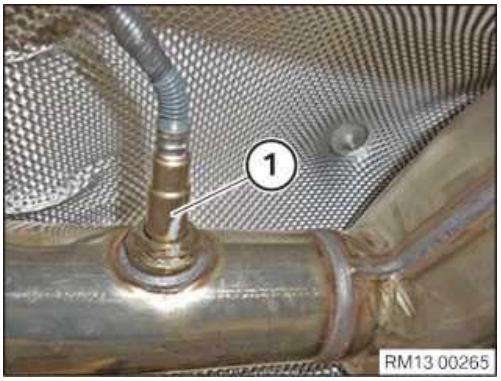


cardiagn.com



- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).

- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).

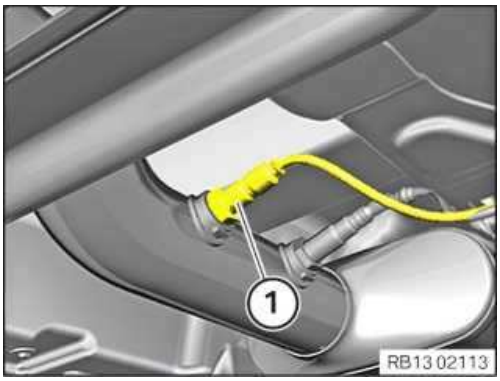


- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.

- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

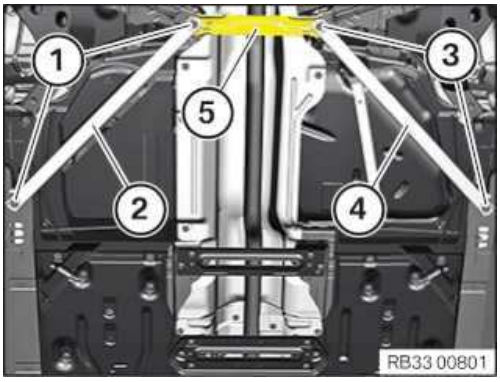


- Feed in, install and tighten diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

Sensor		Tightening torque	50 Nm

cardiagn.com



- Feed in, install and tighten nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

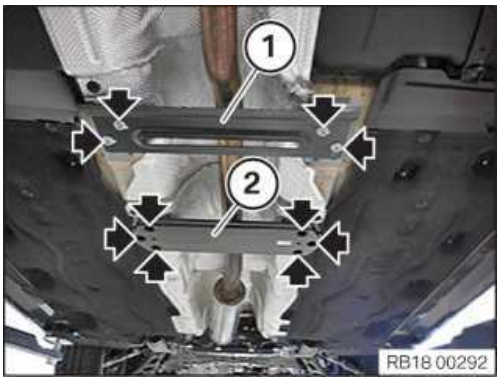
117 – Install the cross-member with torsion struts

- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °



- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Cross-member/torsion strut to axle support and mounting

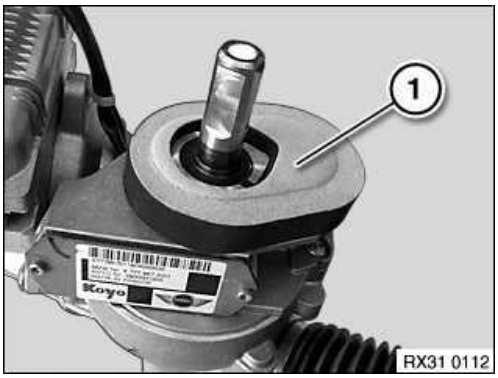
M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

118 – Install the connecting support on the tunnel in front and back

- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

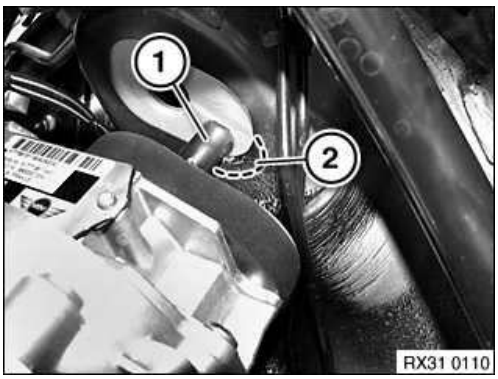
M10x18		Tightening torque	56 Nm



- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

M8x18		Tightening torque	28 Nm

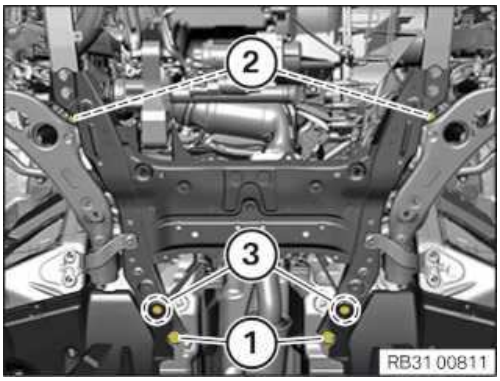


119 – Mount and secure the complete front axle

cardiagn.com

- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

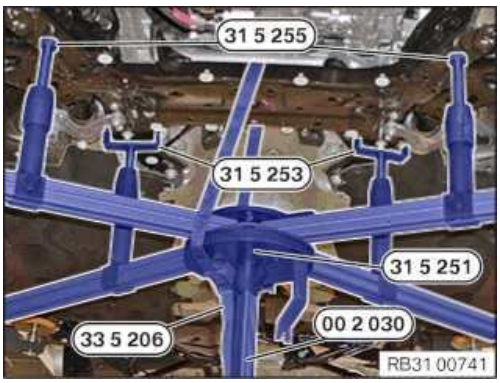
- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

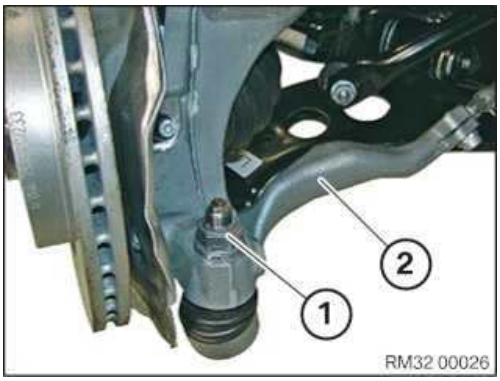
- Tighten down screws (2).



Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

- If necessary, tighten the screws in the areas (3).



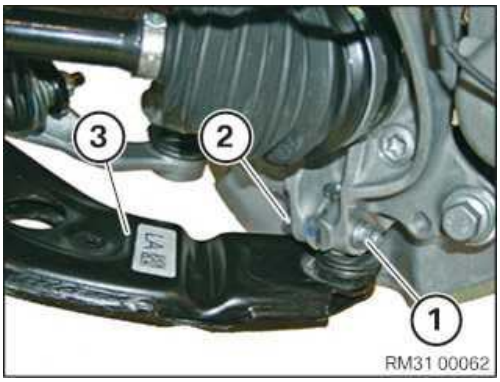
Underbody protection to body

Screw		Tightening torque	3 Nm

- Remove special tool from special tool .
- Lower universal jack **0 490 133 (00 2 030)** with the special tool and place it to the side.

cardiagn.com

NOTICE



Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm

NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

120 – Install the mounted parts on the front axle support

NOTICE

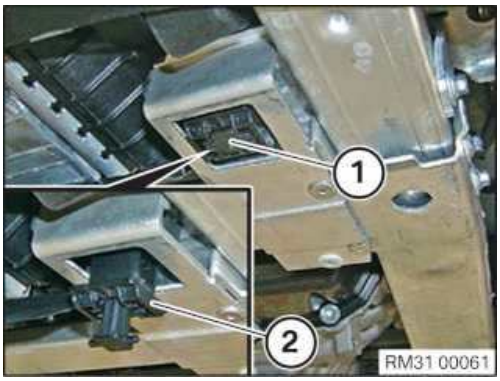
Perform the operations on the left and right side.

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

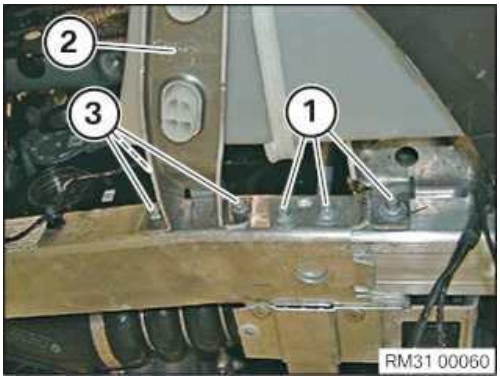
M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °



- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support

M12 screw		100 Nm



cardiagn.com

NOTICE

Perform the operations on the left and right side.

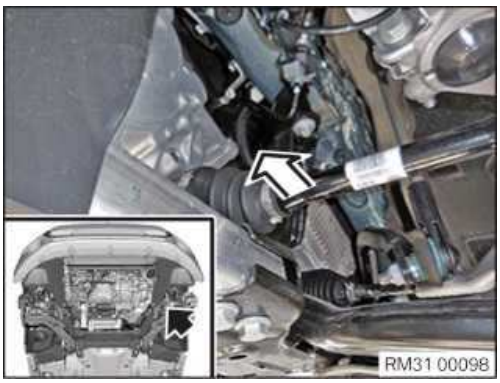
- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.

- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE



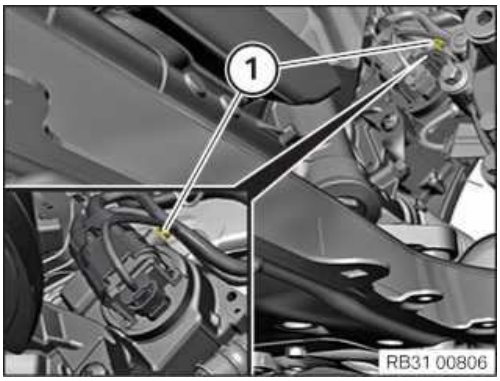
Perform the operations on the left and right side.

- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

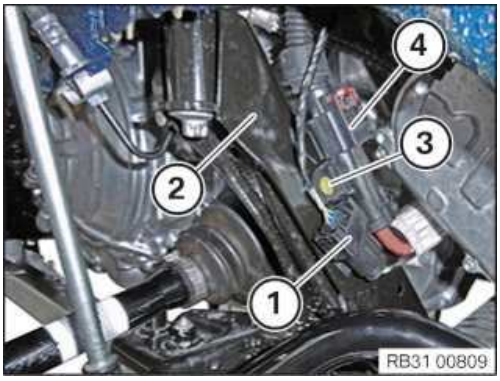
		Tightening torque	11,8 Nm

121 – Attaching connector at steering gear



- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.

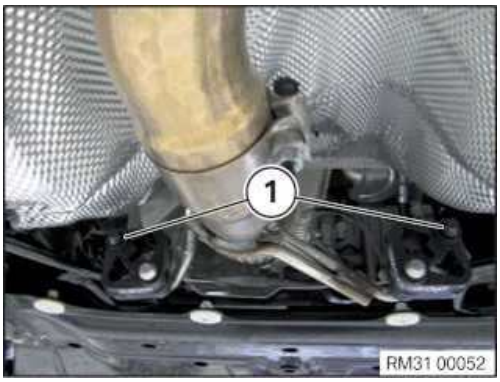


- Connect and lock connector (arrow) (1) with the steering gear.

cardiagn.com

- Fasten the wiring harness (1) on the steering gear.

▶ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

122 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.

123 – Securing anti-roll bar on left and right on the anti-roll bar link

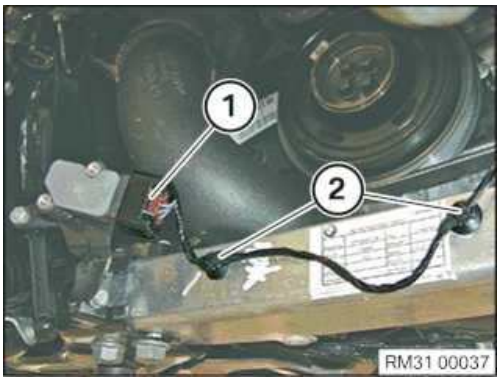
NOTICE

Perform the operations on the left and right side.

▶ **Fastening anti-roll bar on the anti-roll bar link**

- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

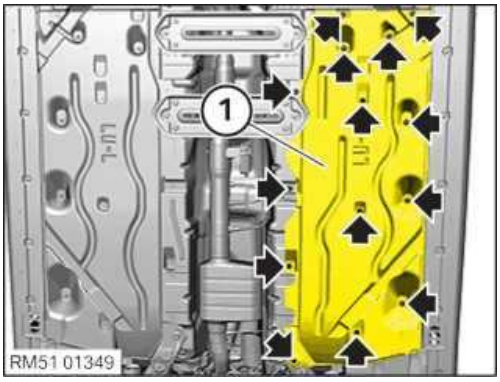
  Parts: Nut
- Tighten nut (1).



Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm



124 – With right installation: Securing the cable for the ride height sensor

cardiagn.com

- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

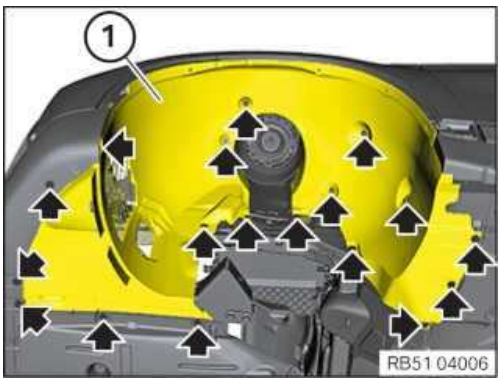
125 – Installing underbody panelling , right

- Correctly position the underbody panelling (1).
- Tighten all bolts and nuts (arrows).

Underbody panelling, side

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side



Plastic nut		Tightening torque	2,6 Nm

126 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

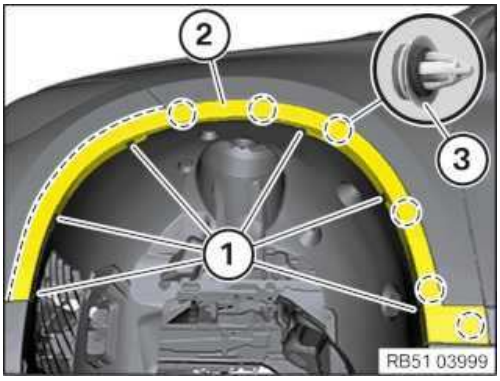
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

127 – Installing both front wheels

▶ Mounting the wheel

▷ Clean the contact surfaces between the brake disc and the wheel rim

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

cardiagn.com

- Renew mounting bolt (1).

  Parts: Mounting bolt

- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

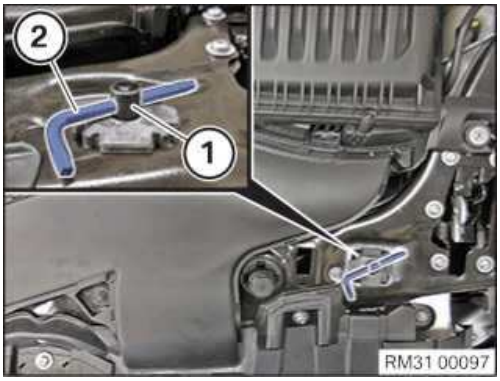
The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts



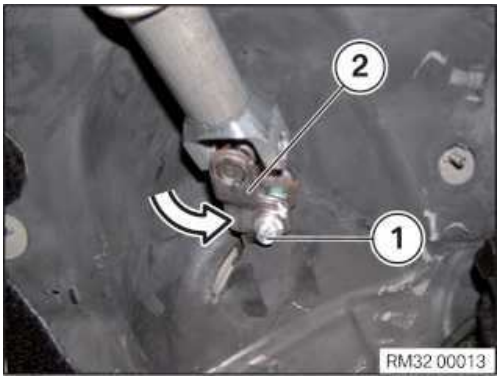
- Clean the wheel bolts.
- Check the wheel bolts and threads for damage, renew the wheel bolts if necessary.
- Join and tighten the wheel bolts (arrows).

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

cardiagn.com

128 – Removing fastener for left and right radiator



NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

129 – Secure the steering shaft at the bottom on the steering gear

- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

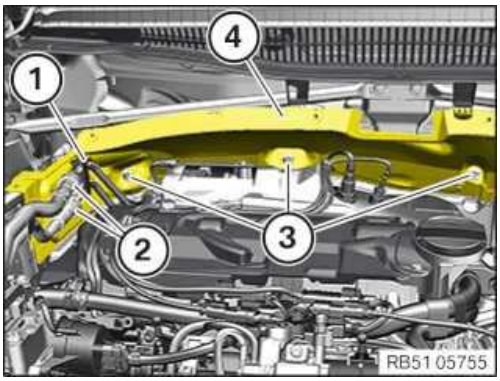
- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

130 – Install the heat shield on the exhaust turbocharger

- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.



Heat shield for exhaust turbocharger

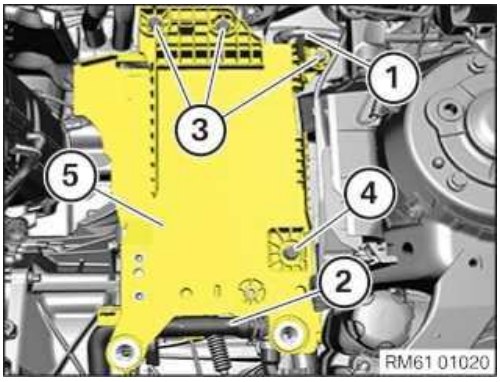
Torx screw BM 6x12		Tightening torque	10 Nm

- Fasten the cable at the clips .

131 – Installing rear bulkhead upper part

cardiagn.com

- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).



Rear bulkhead upper part to lower section of bulkhead

Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

132 – Install the battery holder

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

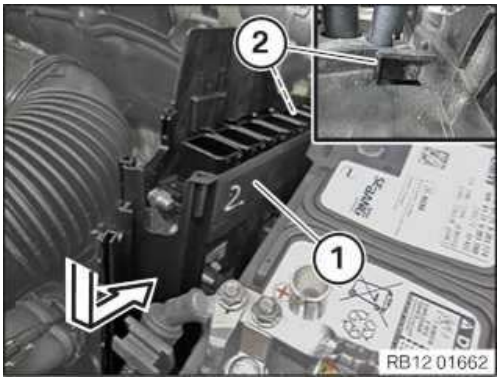
Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

133 – Install electronics box

Prerequisite



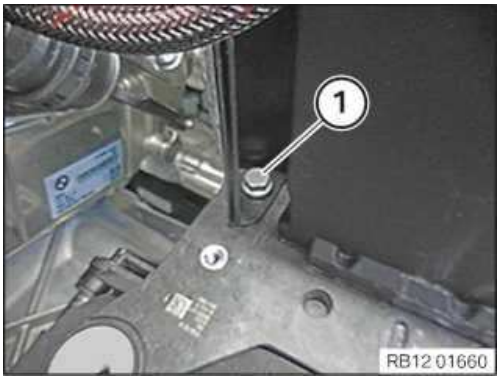
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

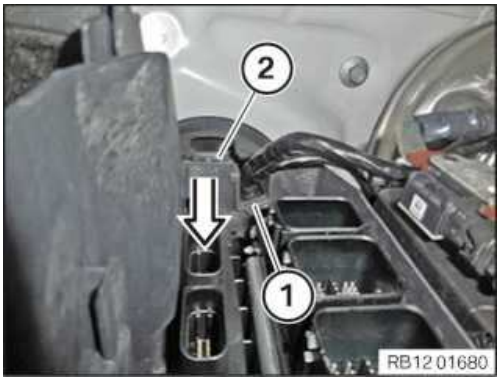
Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

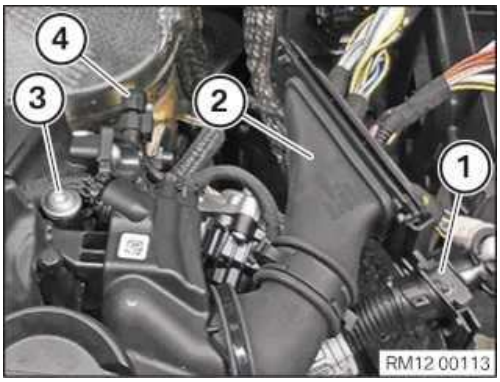


- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

cardiagn.com



- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).

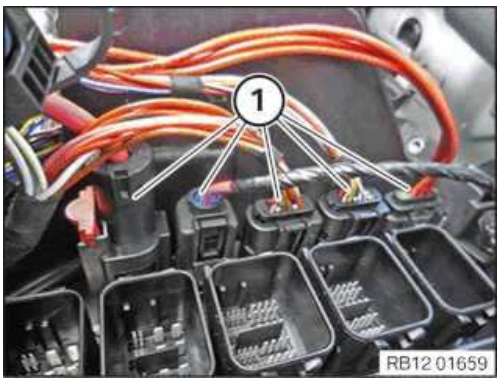


- Tighten down screw (1).

Electronics box to battery tray

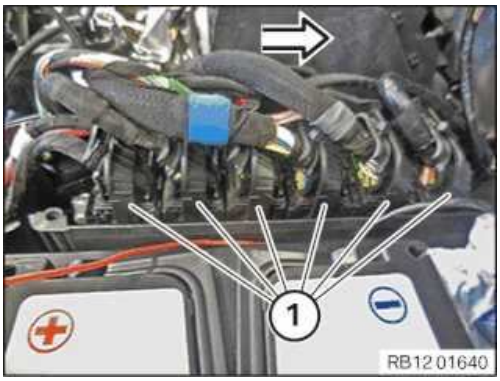
M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



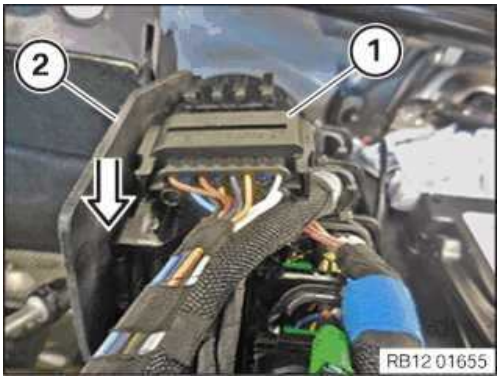
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

Wiring harness to cylinder head cover

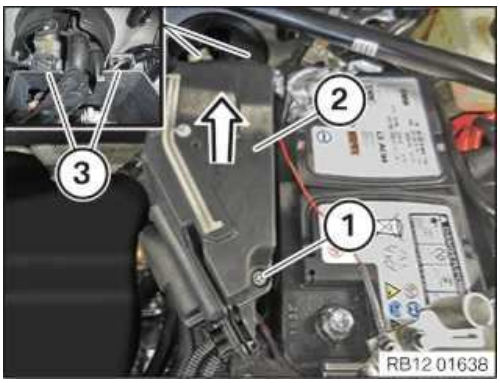


TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

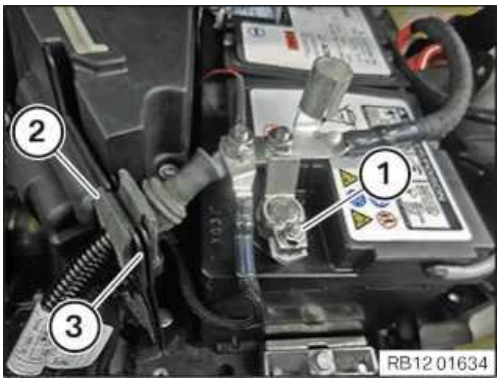


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



cardiagn.com

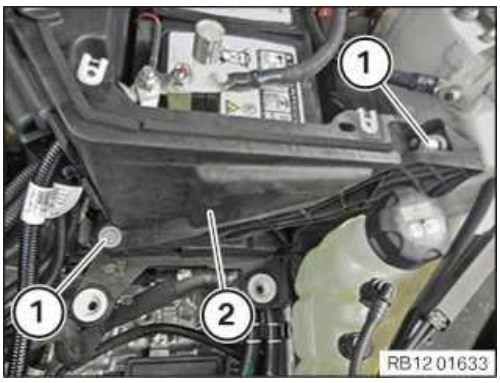
- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

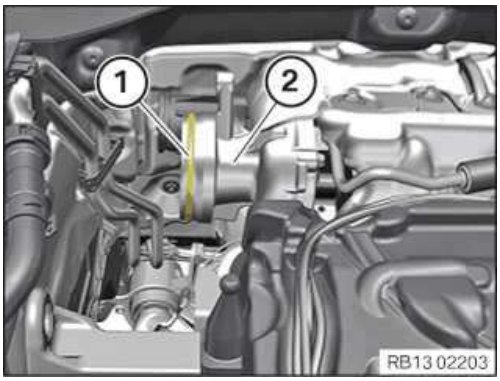


RF5x26.5		Tightening torque	2,5 Nm

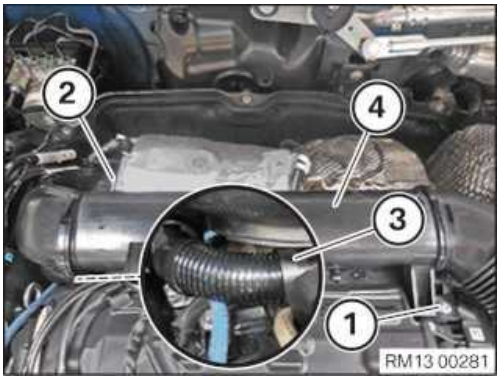
- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).



Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

cardiagn.com

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

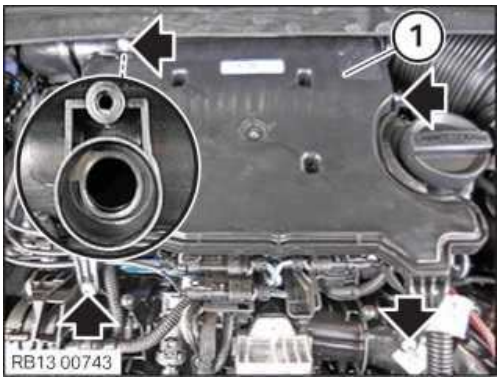
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

135 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

136 – Install acoustic cover

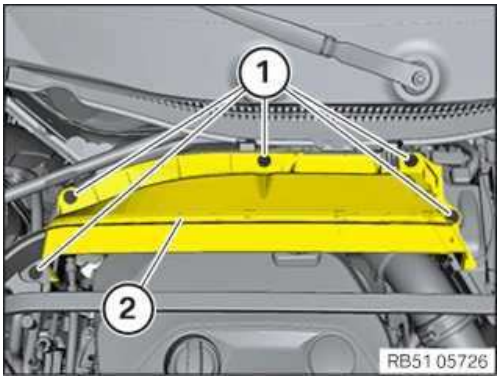
cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

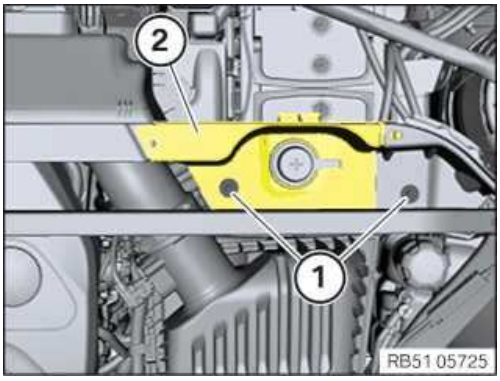
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

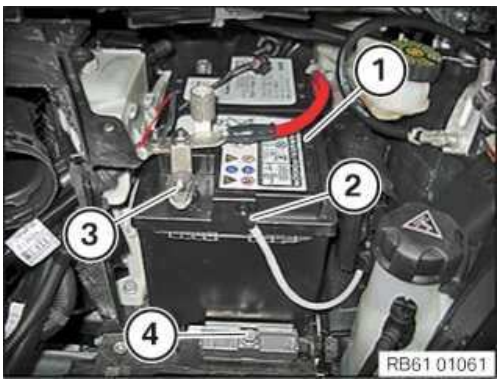


137 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm



- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

cardiagn.com

138 – Install vehicle battery

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

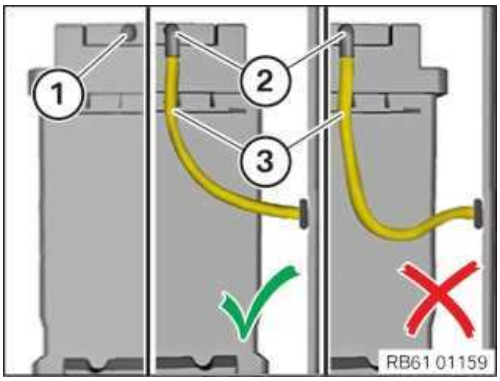
- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

▸ **Check the vent holes of the battery**

WARNING



Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

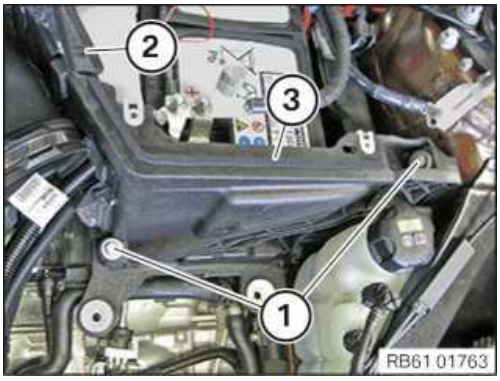
» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

cardiagn.com

Check



- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).

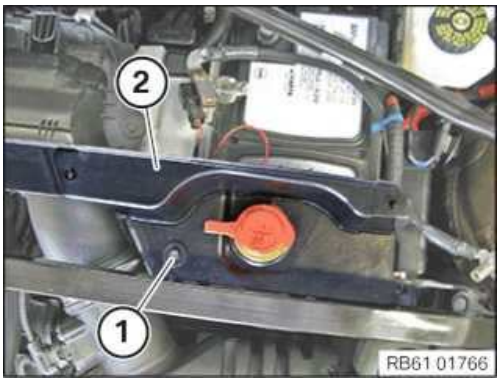
Result

» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

- Insert tension strut (3) and tighten with screws (1).

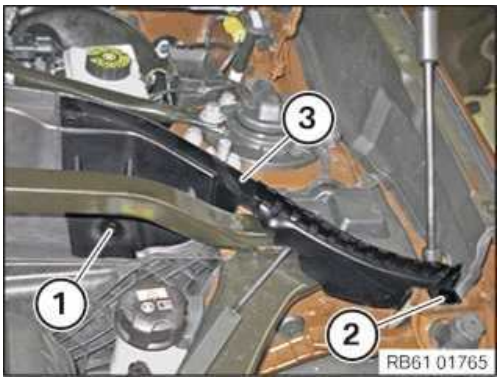


Trailing link

M8		Tightening torque	19 Nm

- Tighten down screw (2).

Battery cover



M8		2,8 Nm

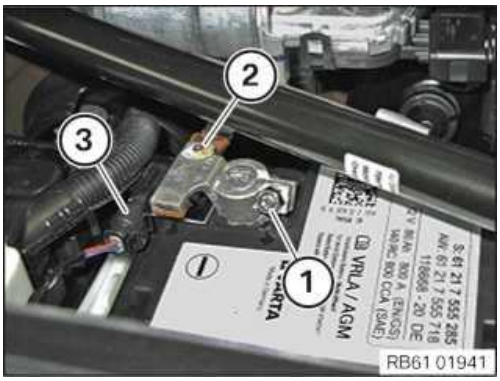
- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover



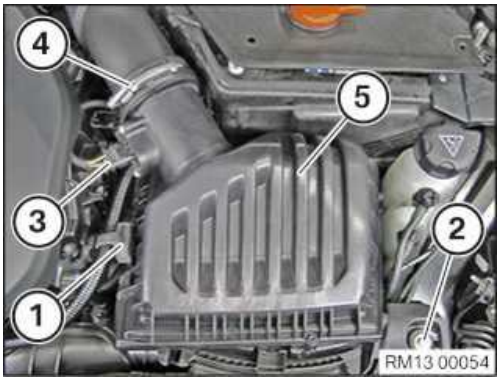
M8		2,8 Nm

139 – Connecting the battery earth lead

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)

cardiagn.com



- Remove the protective cover of the positive battery terminal.
- Position the battery earth lead (2).
- Tighten nut (1).

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

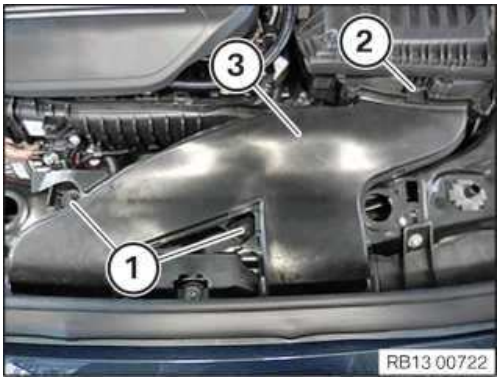
- If required, connect the connector (3).

140 – Installing intake silencer housing

- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm



- Tighten clamp (4).

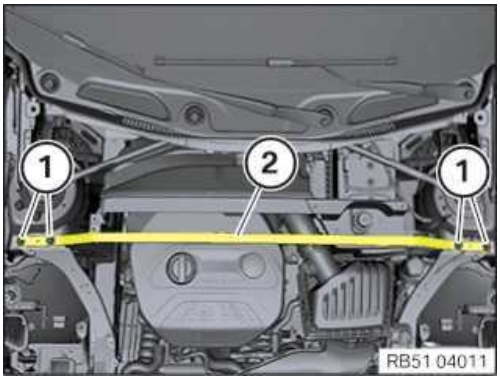
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

141 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).



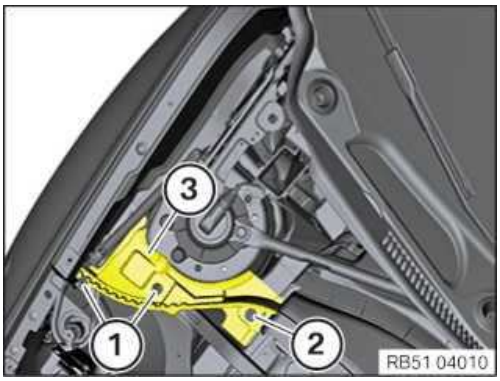
Intake neck to cross connection

M6		Tightening torque	8 Nm

142 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).
  Parts: Bolts
- Tighten the screws (1).

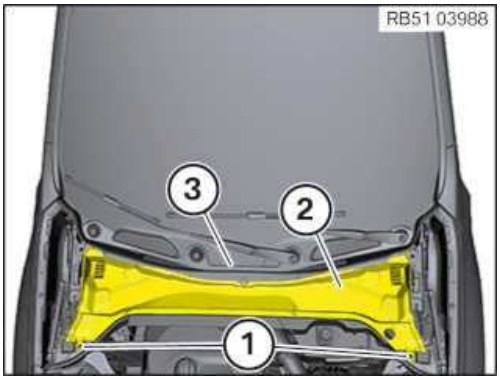
Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

cardiagn.com

NOTICE

Description is for right component only. The procedure on the left side is identical.



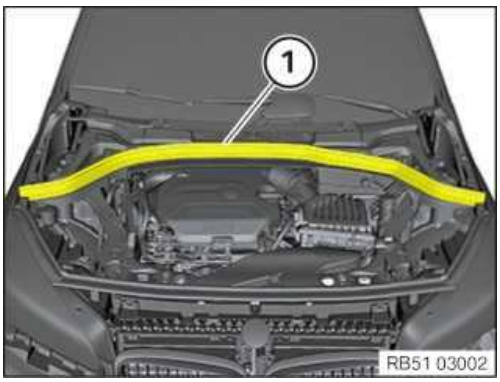
- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

143 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

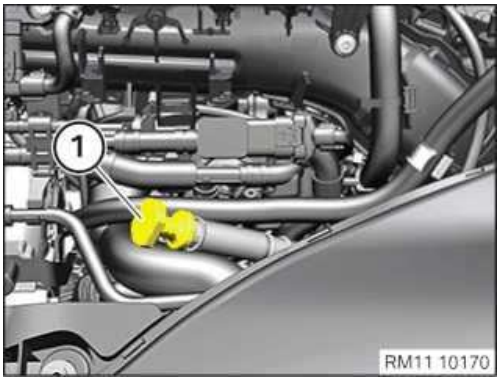
144 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

145 – Check engine oil level



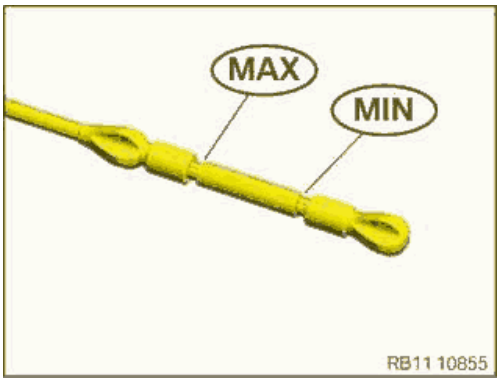
- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▶ **Check engine oil level**

cardiagn.com

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).



- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.

TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

146 – Fill and bleed the coolant circuit

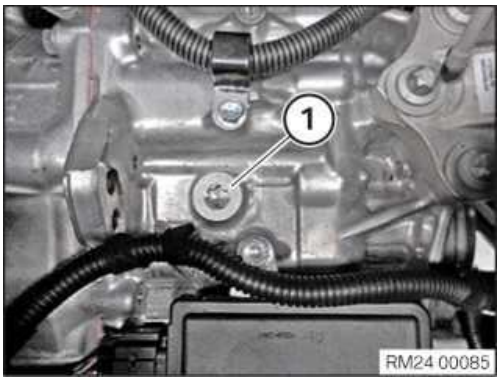
▶ **Filling and bleed the high-temperature coolant circuit**

- See additional information.

147 – Checking/topping up oil level in automatic gearbox (AISIN GA8G45)

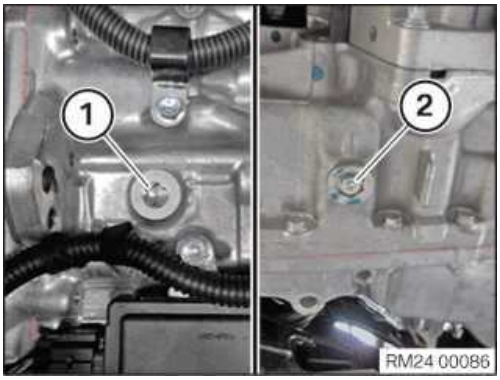
Prerequisite

Vehicle in horizontal position.



CAUTION

Materials harmful to health.



Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

- Move the selector lever to the "P" position.
- Secure vehicle to prevent it rolling.
- Connect diagnosis system.
- Release the oil filler plug (1) using the Torx T55 .

- **Topping up the automatic transmission fluid (the automatic transmission fluid was drained):**
- Release oil filler plug (1) from engine compartment.
- Loosen the overflow plug (2) below at the transmission.
- Top up automatic transmission fluid at oil filler plug (1) until oil emerges at overflow plug (2).
- Start engine and run at idle speed.
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check again whether the automatic transmission fluid is leaking at the overflow plug(2) .
- Read the temperature of the automatic transmission fluid with the diagnosis system.
- Increase temperature of automatic transmission fluid to 35 °C to 45 °C.
- Top up automatic transmission fluid until it flows over.
- Renew sealing rings.

  Parts: Sealing ring
- Screw in and fasten oil filler plug (1) and overflow plug (2).

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

- **Check oil level (transmission oil temperature must be between** 35 °C **and** 45 °C **):**
- Open the oil filler plug (1).
- Slacken overflow plug (2).
- Start engine and run at idle speed.
- Unscrew and remove overflow plug (2).
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Top up the automatic transmission fluid until it overflows at the overflow plug (2) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .

cardiagn.com

- Move the selector lever to the "P" position.
- Check the oil level again.
- Renew sealing rings.

  Parts: Sealing ring
- If the oil escapes slightly from the overflow plug (2) , tighten the overflow plug (2) and the oil filler plug (1) .

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

148 – Topping up oil level in the manual gearbox (GS6X60DA)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

TECHNICAL INFORMATION

Make sure during removal of the filling/level control screw to note the installed filling/level control screw variant.

It is **mandatory** to use variant 1 in transmissions up to production date 08/2015.

It is **mandatory** to use variant 2 in transmissions from production date 08/2015.

Failure to observe will result in a leak on the transmission.

- Variant 1 **until** production date 08/2015.
- Variant 2 **from** production date 08/2015.

- Unscrew filling/level control screw (1) and fill the transmission until the oil overflows.

Transmission oil capacity

Transmission oil GS6-60DA, GS6X60DA/Owner's Handbook	2,2 l

Transmission oil: Technically suitable manual gearbox oil

- Allow surplus oil to drain off.
- Renew the filling/level control screw (1).

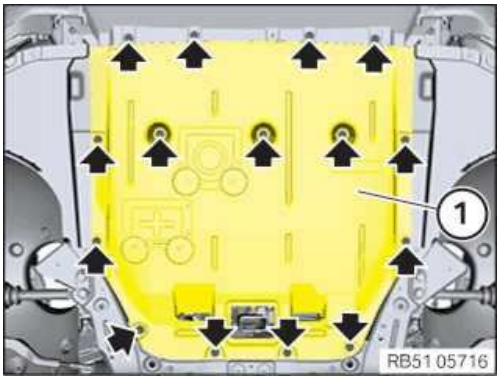
  Parts: Filling/level control screw
- Tighten filling/level control screw (1).

Oil drain plug / oil filler plug

Hexagon socket		Tightening torque	43 Nm

cardiagn.com

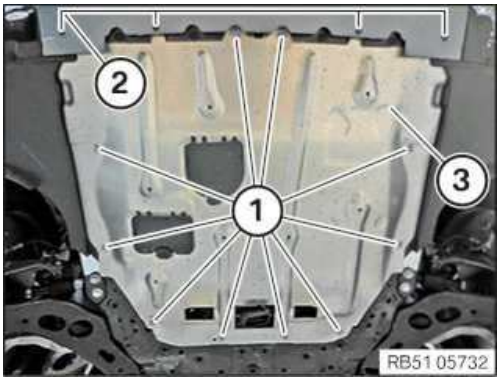
149 – If installed: Installing underbody protection at rear



- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body

Screw		Tightening torque	3 Nm



150 – Installing the front underbody protection

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm

Cross connection to front axle support

Used in step 95

M6		Tightening torque	12 Nm

Washer fluid reservoir to body

Used in step 96

M6x20		Tightening torque	8 Nm

Intake plenum to cylinder head

Used in step 97

M6		Tightening torque	11 Nm

cardiagn.com

Exhaust-gas recirculation cooler to cylinder head — Used in step 98

M8x20		Tightening torque	5 Nm
		Release angle	90 °

Intake plenum to exhaust-gas recirculation cooler — Used in step 98

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to cylinder head — Used in step 98

M8x20		Tightening torque	19 Nm

Wiring harness to cylinder head cover — Used in step 99 133

TS5x20		Tightening torque	3,5 Nm

Positive battery cable to alternator — Used in step 99

M8		Tightening torque	19 Nm

Fuel line to intake plenum — Used in step 99

TS6x20		Tightening torque	5 Nm

Cover to electronics box — Used in step 99 133

RF5x26.5		Tightening torque	2,5 Nm

Positive battery terminal to battery — Used in step 99 133

NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray — Used in step 99 133

M8		Tightening torque	19 Nm

Diesel particulate filter V-clip to exhaust turbocharger — Used in step 100

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

Diesel particle filter to holder — Used in step 100

M8 hexagon nut		Tightening torque	19 Nm

Diesel particulate filter holder to gearbox — Used in step 100

M12x75		Tightening torque	66 Nm

Diesel particulate filter bracket to crankcase — Used in step 100

M10x35		Tightening torque	38 Nm

SCR metering module V-clip to exhaust system — Used in step 100

V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

Holder for coolant lines to diesel particulate filter — Used in step 100

Torx bolt BM6x16		Tightening torque	8 Nm

Differential pressure sensor to holder — Used in step 100

Screw		Tightening torque	4 Nm

Clamp for the pressure hose on the differential pressure sensor — Used in step 100

Clamp 15–19mm		Tightening torque	3 Nm

cardiagn.com

Control sensor

Used in step 101

Control sensor		Tightening torque	50 Nm

Exhaust temperature sensor to diesel particulate filter

Used in step 102 103

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Exhaust-gas temperature sensor to exhaust system

Used in step 104

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Oxygen sensor holder to intermediate shaft

Used in step 105

Hexagon screw M6x16		Tightening torque	8 Nm

Nitrogen oxide sensor before SCR catalytic converter

Used in step 106

Sensor		Tightening torque	50 Nm

Monitoring sensor

Used in step 107

Sensor		Tightening torque	50 Nm

Transfer box to transmission

Used in step 108

M10		Tightening torque	56 Nm

Heat shield to transfer box

Used in step 108

M6	Renew screws.	Tightening torque	6 Nm

Oil filler plug on transfer box (VTG)

Used in step 108

M18x1.5		Tightening torque	35 Nm

Intermediate shaft to transfer box

Used in step 109

M8x35		Tightening torque	19 Nm

Starter motor to transmission

Used in step 110

M8x45		Tightening torque	19 Nm

Battery positive lead to starter

Used in step 110

M8		Tightening torque	13,5 Nm

Propeller shaft to transfer box

Used in step 113

		Tightening torque	80 Nm

Flexible disc to rear axle final drive

Used in step 113

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

Centre mount to body

Used in step 113

M8		Tightening torque	19 Nm

Heat shield to body

Used in step 114 115

Bolts/nut		Tightening torque	3 Nm

Bracket to body

Used in step 114

M8		Tightening torque	21 Nm

cardagn.com

Exhaust system to body — Used in step 116

M8	Replace nuts.	Tightening torque	19 Nm

Exhaust bracket on body — Used in step 116

Hexagon screw M8x30		Tightening torque	19 Nm

V-clip to catalytic converter — Used in step 116

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

Diesel particulate sensor to exhaust system — Used in step 116

Sensor		Tightening torque	50 Nm

Nitrogen oxide sensor downstream of SCR catalytic converter — Used in step 116

Sensor		Tightening torque	50 Nm

Cross-member/torsion strut to axle support and mounting — Used in step 117

M12x48	Renew screws.	Jointing torque Angle of rotation	100 Nm 90 °

Front connection carrier to body — Used in step 118

M10x18		Tightening torque	56 Nm

Rear connection carrier to body — Used in step 118

M8x18		Tightening torque	28 Nm

Track rod end to swivel bearing — Used in step 119

M14	Renew nut.	Tightening torque	175 Nm

Wishbone to swivel bearing — Used in step 119

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

Holder, wishbone rubber mount, to body — Used in step 120

M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

Holder with rubber mount to front axle support — Used in step 120

M12 screw			100 Nm

Washer fluid reservoir holder to front axle support adapter plate — Used in step 120

		Tightening torque	10 Nm

Deformation element, bottom, to adapter plate, front axle carrier — Used in step 120

		Tightening torque	11,8 Nm

Holder to front axle support — Used in step 121

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

Anti-roll bar link to anti-roll bar — Used in step 123

M10	Renew nut.	Tightening torque	56 Nm

cardiagn.com

Underbody panelling, side

Used in step 125

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side

Used in step 125

Plastic nut		Tightening torque	2,6 Nm

Wheel arch cover to body

Used in step 126

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

Wheel arch cover to body

Used in step 126

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Used in step 126

Plastic nut		Tightening torque	3 Nm

Brake disc to rear wheel hub

Used in step 127

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

Used in step 127

M8	Renew screw.	Tightening torque	16 Nm

Wheel bolts

Used in step 127

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Lower steering shaft to steering gear

Used in step 129

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

Steering column cover to bulkhead

Used in step 129

Plastic nut		Tightening torque	3 Nm

Heat shield for exhaust turbocharger

Used in step 130

Torx screw BM 6x12		Tightening torque	10 Nm

Rear bulkhead upper part to lower section of bulkhead

Used in step 131

Oval-head screw		Tightening torque	5 Nm

Battery holder to engine support

Used in step 132

Hexagon screw M8x30		Tightening torque	19 Nm

Electronics box to battery tray

Used in step 133

M8X16		Tightening torque	15 Nm

cardiagn.com

Clean air pipe to cylinder head cover

Used in step 134

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing

Used in step 134 140

Clamp		Tightening torque	3 Nm

Resonator to manifold and clean air pipe

Used in step 135

Screw TS6	Renew screw.	Tightening torque	5 Nm

Cover of top bulkhead

Used in step 137

Screw		Tightening torque	2,6 Nm

Cover of remote positive terminal

Used in step 137

Screw		Tightening torque	2,6 Nm

Battery terminal rail to battery tray

Used in step 138

M8			19 Nm

Battery terminal with IBS positive battery terminal / negative battery terminal

Used in step 138 139

NutM6			5 Nm

Trailing link

Used in step 138

M8		Tightening torque	19 Nm

Battery cover

Used in step 138

M8			2,8 Nm

Intake silencer housing to lock bridge

Used in step 140

M6X30		Tightening torque	8 Nm

Intake neck to cross connection

Used in step 141

M6		Tightening torque	8 Nm

Cross-brace to spring strut dome

Used in step 142

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

Cover on body

Used in step 142

Hexagon screw		Tightening torque	3 Nm

Oil filler plug to transmission housing

Used in step 147

M14	Renew the sealing ring.	Tightening torque	45 Nm

Overflow screw in oil drain plug

Used in step 147

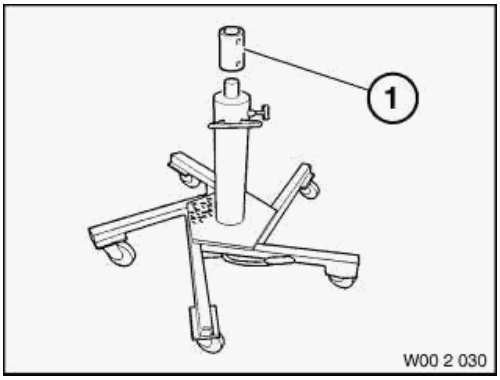
M6	Renew the sealing ring.		8 Nm

Oil drain plug / oil filler plug

Used in step 148

Hexagon socket		Tightening torque	43 Nm

cardiagn.com



Underbody protection front

Used in step 150

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

Overview of Special Tools

0 490 133 (00 2 030) Device

Common Used in step 32 72 77 119

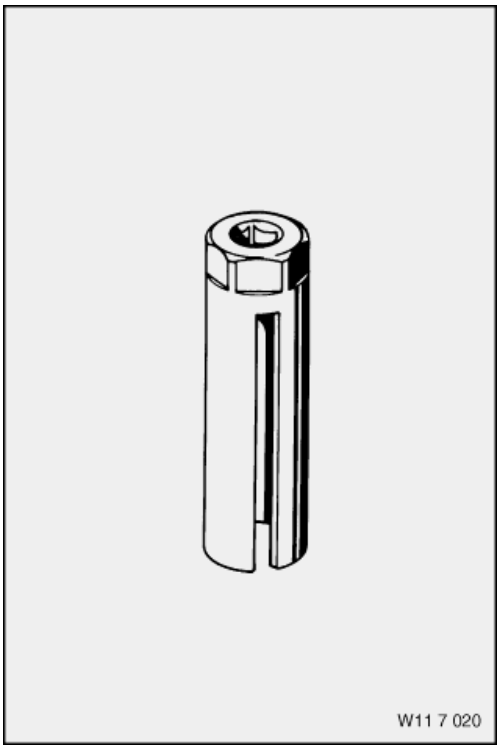
Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

0 495 554 (33 5 070) Extension

Common Used in step 38 113

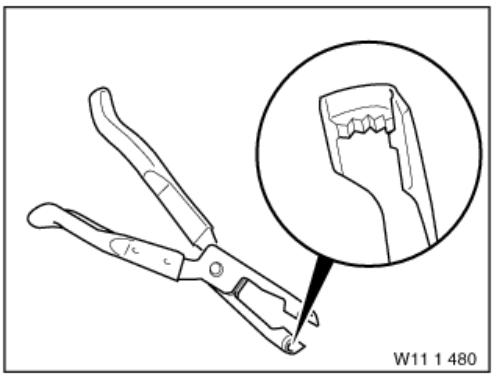


Usage	Pull-out extension for 33 5 040, 33 5 050, 33 5 060.
Included in the tool or work	
Storage location	A18
Replaced by	
In connection with	
SI-Number	01 21 06 (300)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 592 (33 5 071)		**Extension** (Extension (1 item)) discontinued, can only be ordered using complete tool	

cardiagn.com

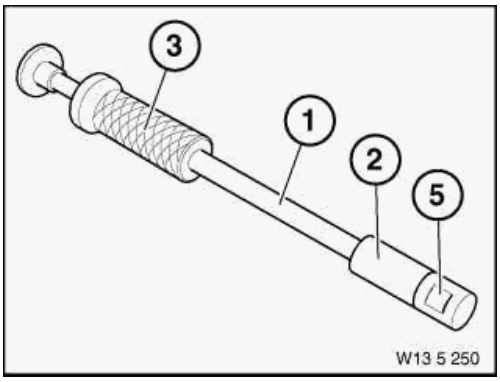


0 491 074 (11 7 020) Socket wrench insert

Common Used in step 44 45 107

Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	

0 490 796 (11 1 480) Pliers



Common Used in step 52 71

Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

cardiagn.com

0 493 321 (13 5 250) Puller

Common

Used in step 62

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

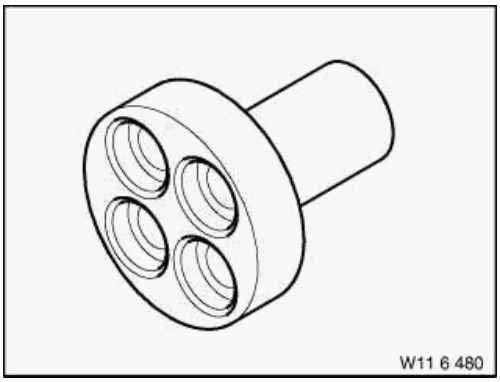
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

0 493 339 (13 5 252) Bush

Common

Used in step 62

Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

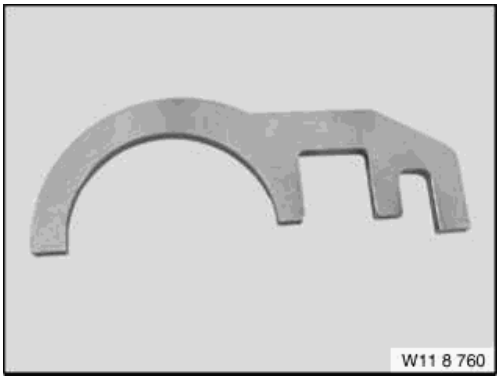


cardiagn.com

0 493 340 (13 5 253) Weight

Common	Used in step 62
Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 380 (11 6 480) Connector



Common	Used in step 64 86
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

2 288 380 Locating stud

Common	Used in step 64 86
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 112 (11 8 760) Gauge

Common	Used in step 64 86
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

cardiagn.com

0 495 105 (11 4 480) oddments tray

Common Used in step 69 70

Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

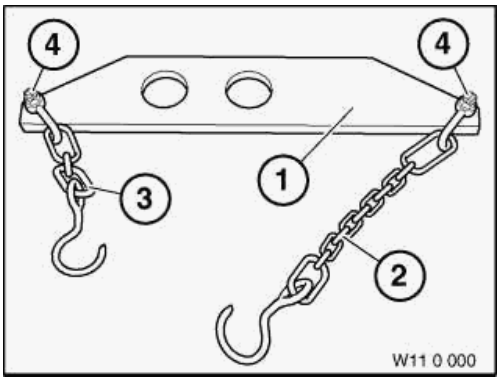
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

2 357 071 Panel

Common Used in step 72 77

Usage	Additional mounting plate for lifting table MHT 1200. Delivery quantity: 1 piece. During the course of the changeover from BMWi to iPerformance, a tool changeover also takes place from campaign to warehouse.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	Table lift MHT 1200 81222184136
SI-Number	01 21 13 (987)

2 459 012 Holder



Common Used in step 72 77

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

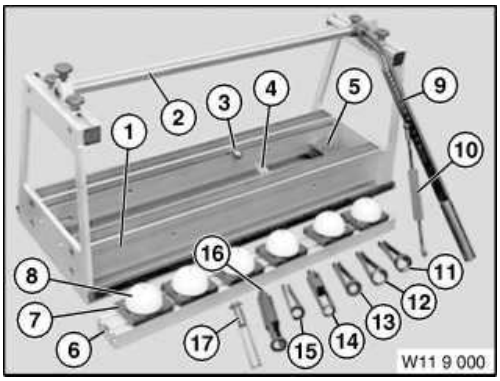
cardiagn.com

0 490 561 (11 0 000) Lifting gear

Common

Used in step 72 77

Usage	(Hoisting gear) For removing and installing engines. As of 08/2011 only available as a complete set. Delivered with TÜV inspection certificate and operating instructions. No delivery of separate parts.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 13 94 (888)



Consisting of

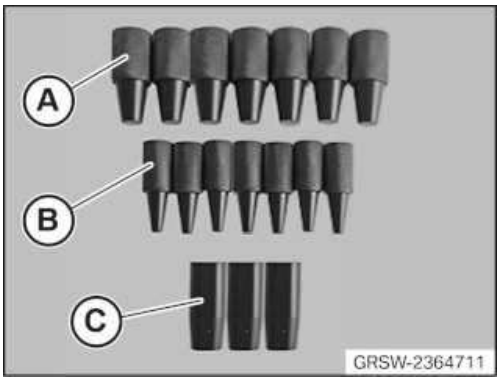
Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 490 565 (11 0 009)		**Shackle** (Shackle) 2 pieces. As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 562 (11 0 001)		**Lifting gear** (Cross member) As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 563 (11 0 002)		**Chain** (Chain) Version: long As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 564 (11 0 003)		**Chain** (Chain) Version: short As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	

0 494 362 (11 9 000) Device

Used in step 72

cardiagn.com

Common



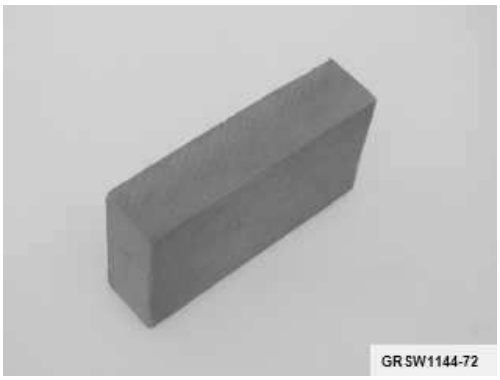
Usage	(Cylinder head expander tool)
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 03 02 (833)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 494 366 (11 9 001)		**Device**	
6	0 494 371 (11 9 006)		**Insert** (Aluminium strip)	
11	0 494 376 (11 9 012)		**Basket** (Valve spring cage) Engine M41, M51, S50	
17	0 495 028 (11 9 017)		**Basket** (Valve spring cage) Engine N52	
2	0 494 367 (11 9 002)		**Rod**	
3	0 494 368 (11 9 003)		**Adapter** (Sliding block)	
4	0 494 369 (11 9 004)		**Tab**	
5	0 494 370 (11 9 005)		**Quick fastener**	
7	0 494 372 (11 9 007)		**Shaped part** (shaped part)	
8	0 494 373 (11 9 008)		**Shaped part** (Shaped part) Shaped part made of plastic	
9	0 494 374 (11 9 009)		**Lever**	
10	0 494 375 (11 9 011)		**Hook**	
12	0 494 377 (11 9 013)		**Basket** (Valve spring cage) Engine M43, M73	
13	0 494 378 (11 9 014)		**Basket** (Valve spring cage) Engine M44, M52, M54, M56, M62, S52, S54, S62	
14	0 494 379 (11 9 015)		**Basket** (Valve spring cage) Engine M47, M47TU, M57, M57TU, N40, N42, N62, N73	
15	0 494 380 (11 9 016)		**Basket** (Valve spring cage) Engine M21, M40	

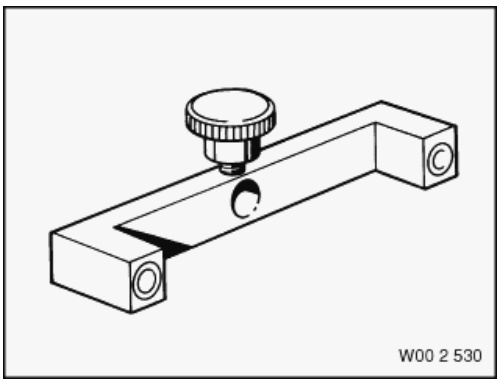
cardiagn.com

2 364 711 Plug



Common	Used in step 73
Usage	For closing the pressure oil holes for cleaning the cylinder head sealing surfaces.
Included in the tool or work	
Storage location	C20
Replaced by	
In connection with	
SI-Number	01 50 14 (203)

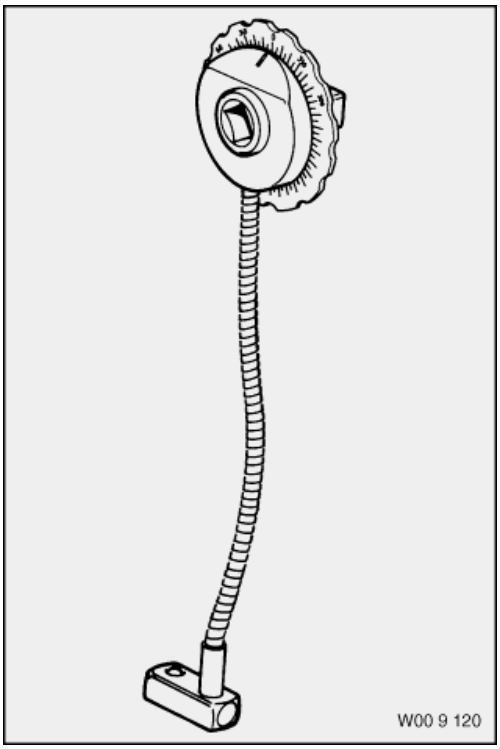
0 495 103 (11 4 471) Scraper



Common	Used in step 73
Usage	
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

0 495 104 (11 4 472) Extractor

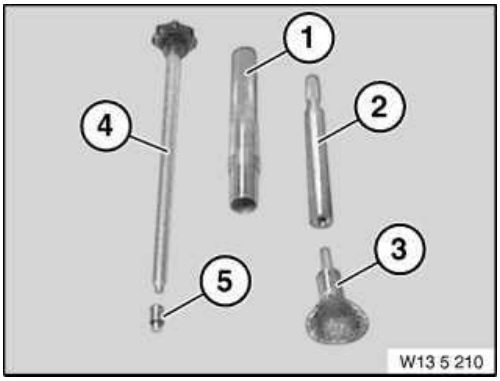
Common	Used in step 73
Usage	(grindstone)
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	



0 490 185 (00 2 530) Bridge

Common	Used in step 75
Usage	(Measuring bridge) For determining the piston projection (Diesel)
Included in the tool or work	
Storage location	A3
Replaced by	
In connection with	
SI-Number	

cardiagn.com

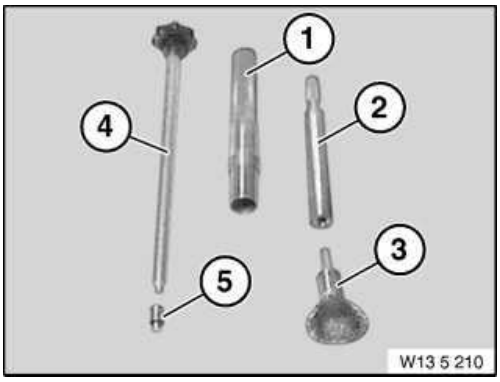


0 490 504 (00 9 120) Torque angle measuring dial

Common Used in step 77 113

Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

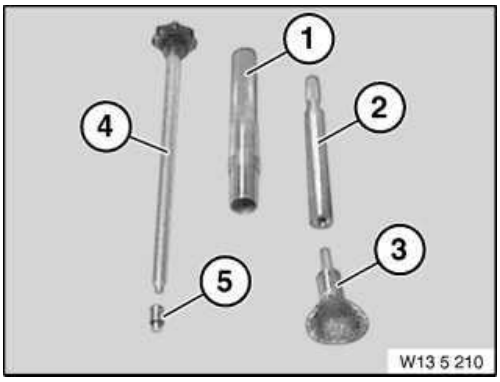
0 493 763 (13 5 215) Plug



Common Used in step 88

Usage	(Seal plug)
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com



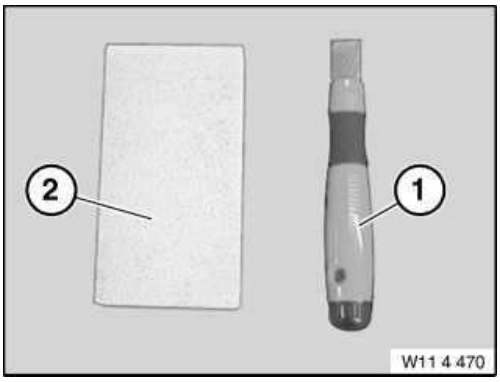
0 493 762 (13 5 214) Rod

Common Used in step 88

Usage	(Mounting rod) For the seal plug
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 758 (13 5 210) Tool

Common Used in step 88



Usage	(Cleaning set) For injector channels
Included in the tool or work	
Storage location	B4
Replaced by	
In connection with	
SI-Number	01 05 00 (574)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 759 (13 5 211)		**Holding sleeve** (Guide sleeve)	
2	0 493 760 (13 5 212)		**Holder** (Brush holder)	
3	0 493 761 (13 5 213)		**Brush head**	
4	0 493 762 (13 5 214)		**Rod** (Mounting rod) For the seal plug	
5	0 493 763 (13 5 215)		**Plug** (Seal plug)	

cardiagn.com

0 495 102 (11 4 470) Tool

Common Used in step 92

Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

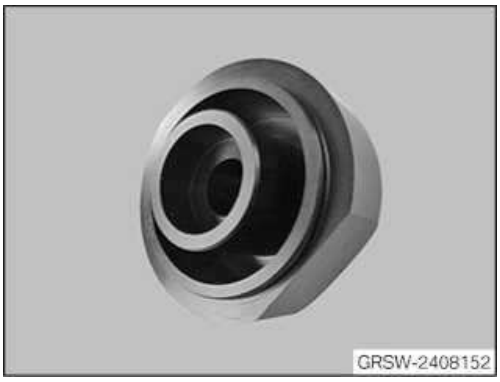
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 103 (11 4 471)		**Scraper**	
2	0 495 104 (11 4 472)		**Extractor** (grindstone)	

2 409 025 Puller

Common Used in step 108

Usage	For disassembly of the outer radial shaft seal of the transmission output shaft, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A76
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

2 411 739 Puller



Common Used in step 108

Usage	For disassembly of the inner radial shaft seal of the output, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C78
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

cardiagn.com

2 408 152 Striking element

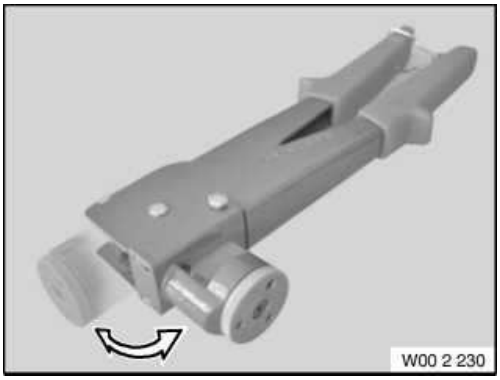
Common Used in step 108

Usage	For installation of the right radial shaft seal transmission output shaft (inner). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)

2 413 037 Handle

Common Used in step 108

Usage	Universal drift handle. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C77
Replaced by	
In connection with	
SI-Number	01 53 14 (211)



cardiagn.com

2 408 150 Striking element

Common	Used in step 108
Usage	For installing the right radial shaft seal transmission output shaft (outer). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)

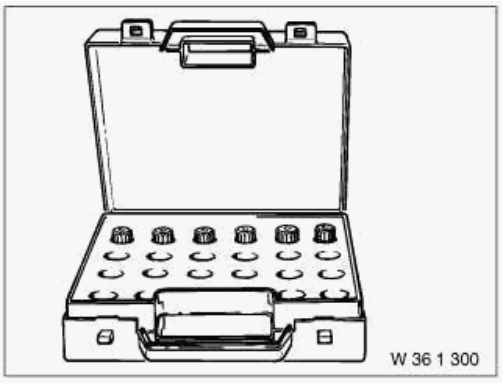
0 496 521 (00 2 230) Pliers

Common	Used in step 126
Usage	(Blind rivet pliers for plastic rivets) For shaft diameters of 3.5 mm, 3.9 mm and 4.5 mm
Included in the tool or work	
Storage location	C25
Replaced by	
In connection with	
SI-Number	01 17 08 (478)

2 344 011 Tool

Common	Used in step 127
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

Replacement tools:



cardiagn.com

0 495 221 (36 1 323) Wheel stud

Common	Used in step 23
Usage	(Code 30) Code 39 available separately, (see EPC) under 36 13 1 181 259
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 224 (36 1 326) Wheel stud

Common	Used in step 23
Usage	(Code 33) With centring bore available separately, (see EPC) under 36 13 6 765 546
Included in the tool or work	0 492 518

Overview Technical Data

Cylinder head flatness	Used in step 74
Maximum lengthwise deviation from flatness	0,10 mm
Maximum transverse deviation from flatness	0,05 mm

Valve underprotrusion	Used in step 75
	0,8 (0,7 - 0,9) mm

Transmission oil capacity	Used in step 148
Transmission oil GS6-60DA, GS6X60DA/Owner's Handbook	2,2 l

Transmission oil: Technically suitable manual gearbox oil

11 12 100 Removing and installing cylinder head (B47)

Special tools required:

- 11 1 480
- 2 414 691
- 2 357 071
- 11 4 470
- 11 4 471
- 11 4 472
- 2 364 711
- 00 2 530

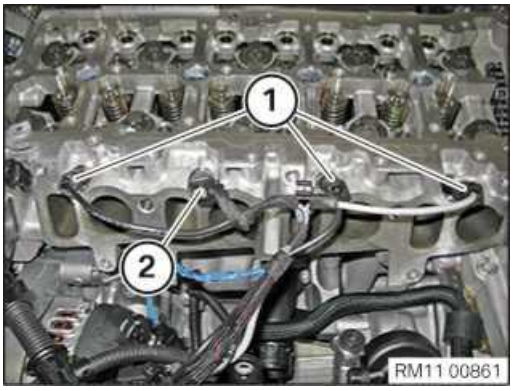
Attention!

There must be no coolant, water or engine oil in any of the threaded holes in the engine block.

Fit new cylinder head bolts.

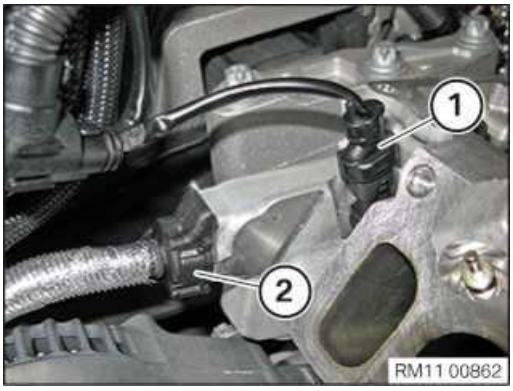
Do not wash off bolt coating.

Jointing torque and angle of rotation must be observed without fail (**risk of damage!**).



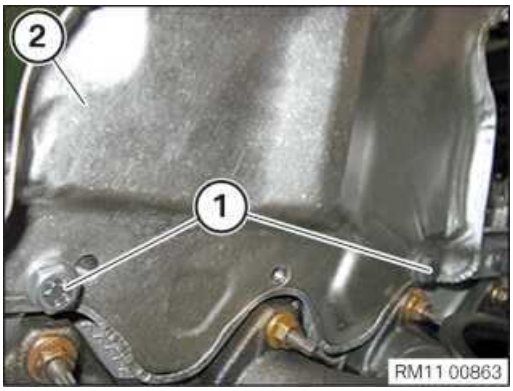
Necessary preliminary work:

- Remove front right wheel arch cover.
  Remove exhaust turbocharger.
- Remove diesel particulate filter.
- Remove exhaust-gas recirculation cooler
- Remove oil feed line.
- Remove cylinder head cover.
- Remove all valve clearance compensating elements.



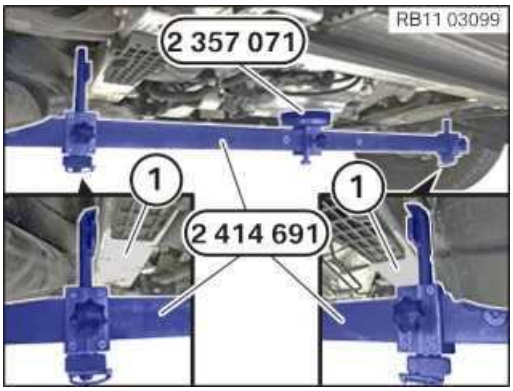
Removal:

cardiagn.com



Loosen connector (1) with special tool 11 1 480 .

Disconnect plug (2).

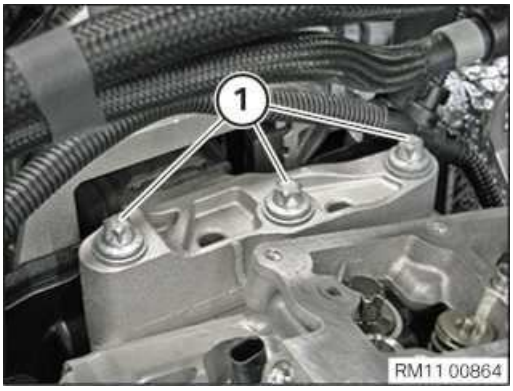


Unlock and disconnect the connector (1) for the coolant temperature sensor.

Unlock coolant line (2) and pull off.

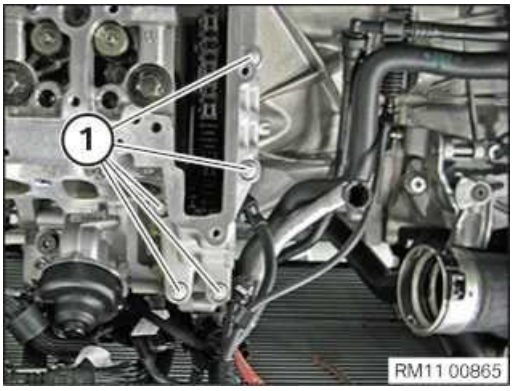
Release screws (1).

Remove heat shield (2).



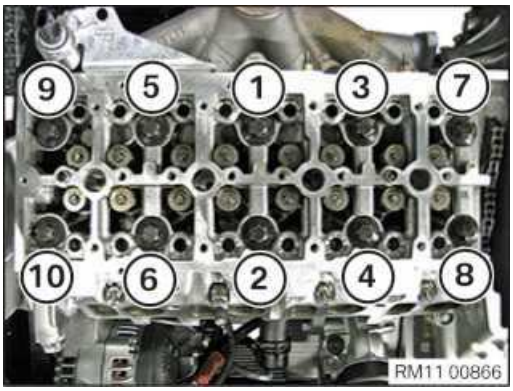
Prepare special tool 2 414 691 together with the special tool 2 357 071 .

Attach the special tool 2 414 691 on the front axle support and correctly align and tighten the special tool 2 357 071 under the oil sump.

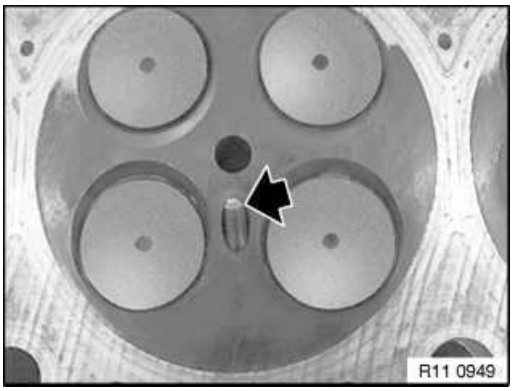


Turn the special tool 2 414 691 on the adjusting screws evenly in an upward direction, until the special tool 2 357 071 touches the oil sump.

Tighten all the adjusting screws of special tools 2 414 691 and 2 357 071 .



cardiagn.com



Release screw connection (1) of right engine support.

Release screws (1).

Loosen cylinder head bolts in **sequence 10 - 1** .

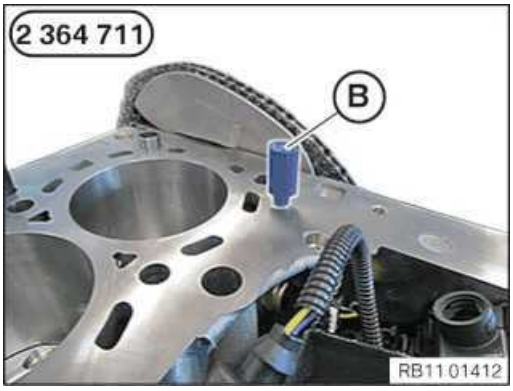
Attention!

Glow elements protrude at the sealing surface and may be damaged when put down.

Remove cylinder head.

cardiagn.com

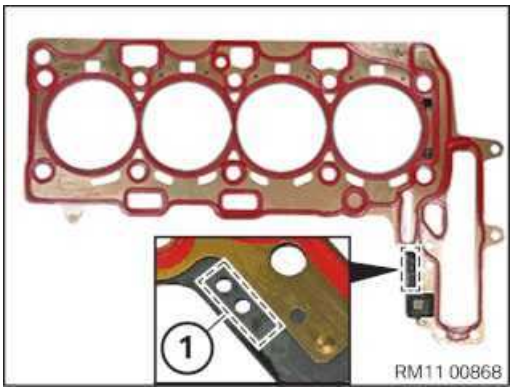
Check fitting sleeves (1) for damage and correct installation position.



Attention!

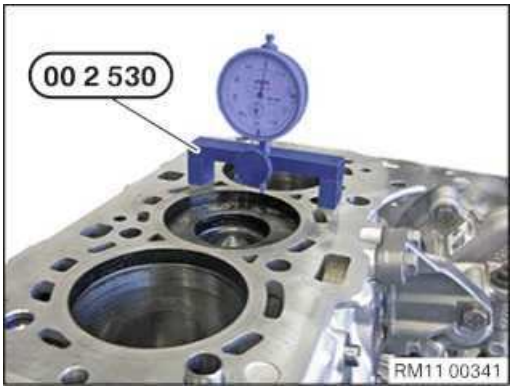
Do not use any metal-cutting tools (e.g. emery cloth).

Clean sealing surfaces on the cylinder head and crankcase using special tool 11 4 470 .



Installation:

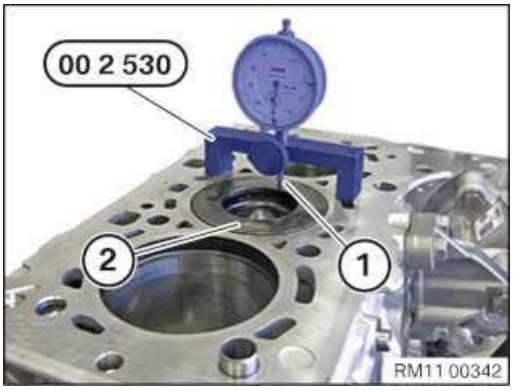
Note:
The oil ducts must be sealed before cleaning the sealing surfaces using special tools 11 4 471 and 11 4 472 .



Seal front oil duct with special tool **(B)** from tool set 2 364 711 .**Attention!**

Do not use any metal-cutting tools (e.g. emery cloth).

Note:
Without work on the engine block which alters the piston protrusion, use a new cylinder head gasket with the same gasket thickness (number of holes).

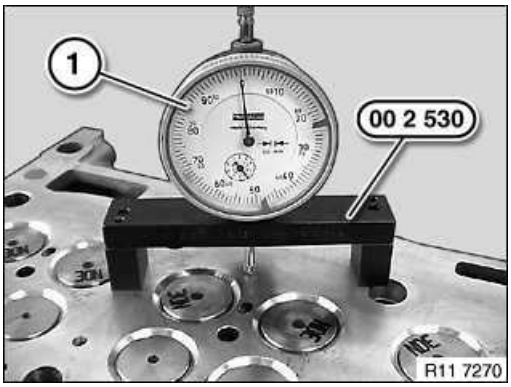


cardiagn.com

If work was carried out on the crankshaft drive or piston, the gasket thickness must be redetermined.

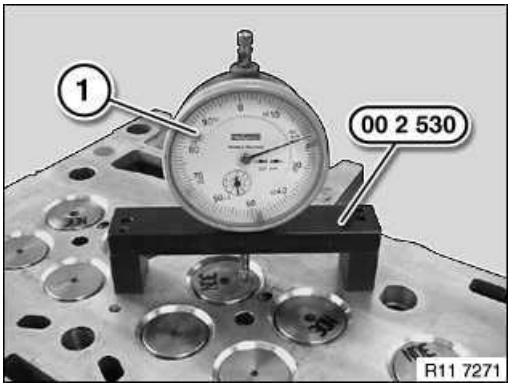
Measuring the piston protrusion:

Place dial gauge on the cleaned cylinder sealing surface using special tool 00 2 530 . Set dial gauge to zero under preload.



Clean piston at measuring points (1 and 2).

Place dial gauge on the measuring points (1 and 2) on the cleaned piston. Determine highest point by turning crankshaft.



Measure and note down piston protrusion at measuring points (1 and 2) on all 3 pistons.

Note:
Determine thickness of cylinder head gasket.

Position special tool 00 2 530 with dial gauge (1) on cylinder head.

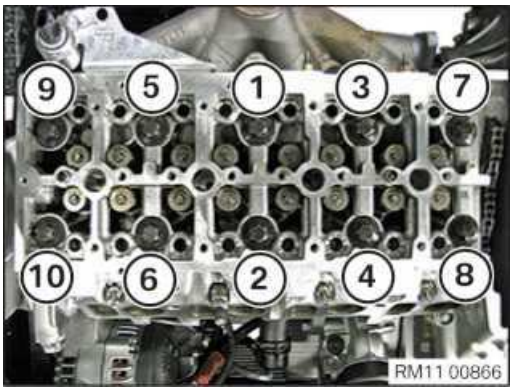
Set dial gauge (1) to zero.

Position special tool 00 2 530 with dial gauge (1) on valve.

Determine valve underprotrusion.

cardiagn.com

Attention!



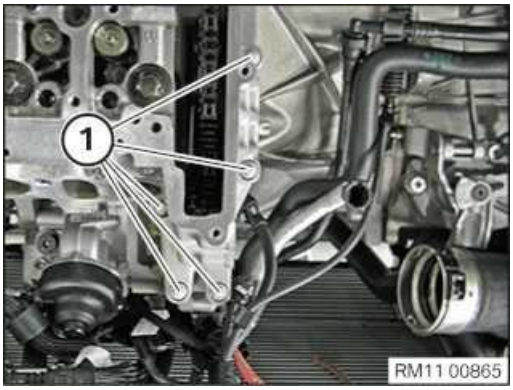
There must be no coolant, water and engine oil in any of the threaded holes in the engine block.

Fit new cylinder head bolts.

Do not wash off bolt coating.

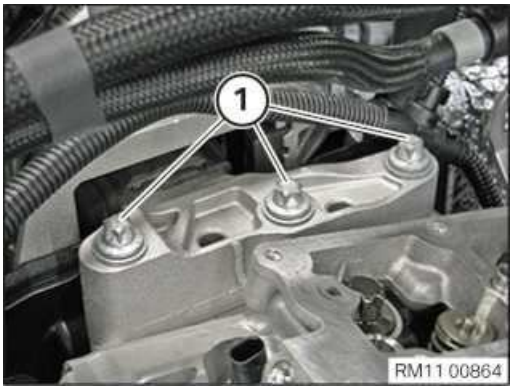
Lightly oil screw head support.

Jointing torque and angle of rotation must be observed without fail (**risk of damage!**).



Parts: Fit new cylinder head bolts.

Position the new cylinder head gasket with the previously determined gasket thickness.

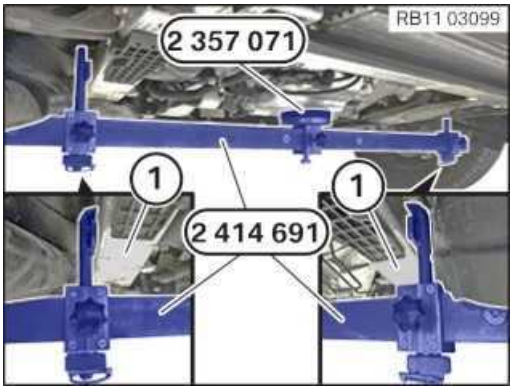


Fit the cylinder head and secure with new bolts, tightening in the sequence 1 to 10.

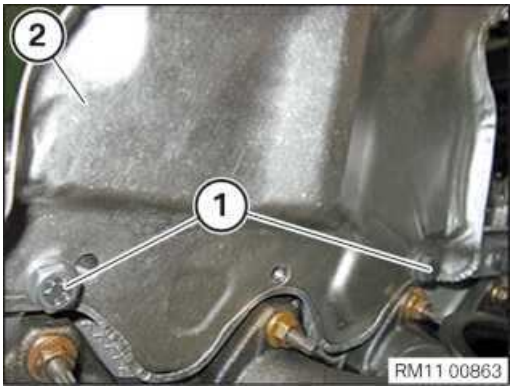
Tightening torque: 11 12 1AZ.

Install and tighten down screws (1).

Tightening torque: 11 12 2AZ.



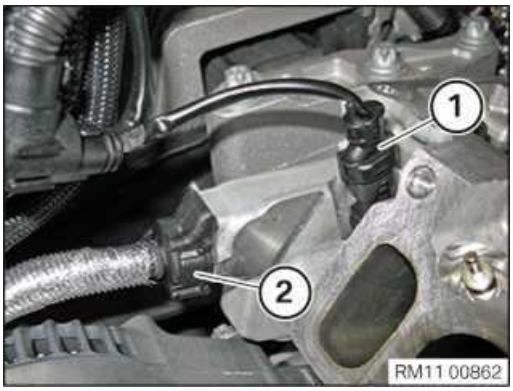
Parts: Renew screws (1).



Screw engine mount to engine mounting bracket (1).

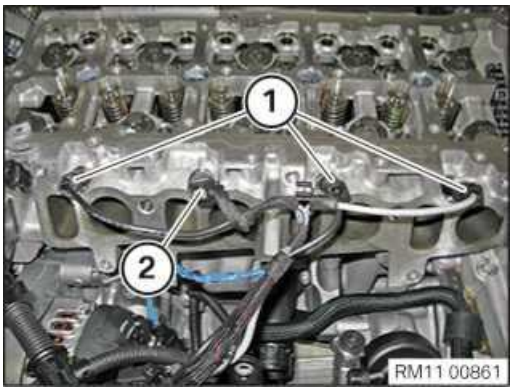
Tightening torque: 22 11 1AZ.

cardiagn.com



Disassemble the special tool 2 414 691 .

Mount heat shield (2).



Tighten down screws (1).

Tightening torque: 11 65 3AZ.

Connect coolant line (2).

Connect connector (1) for coolant temperature sensor.

Connect all connectors (1 and 2) and lock.*Note:*
Connectors (1 and 2) must engage audibly.

cardiagn.com

Required reworking:

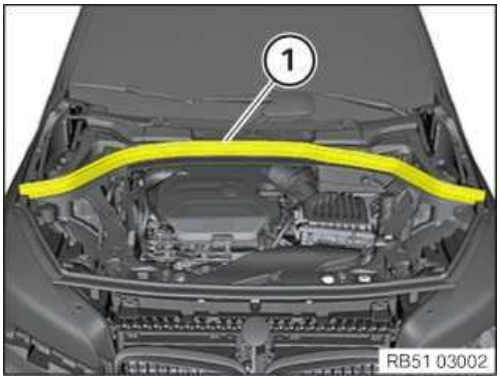
- Install all valve clearance compensating elements.
- Install cylinder head cover.
- Install oil feed line.
- Install exhaust-gas recirculation cooler.
- Install diesel particulate filter.
- Install exhaust turbocharger.
- Install front right wheel arch cover.

cardiagn.com

11 12 000 Removing and installing/sealing cylinder head cover

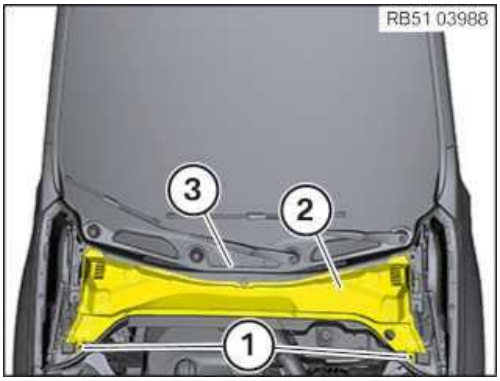
PRELIMINARY WORK

1 – Disconnecting all battery earth leads



- See additional information.

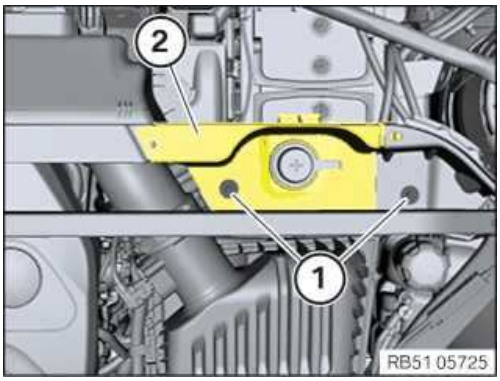
2 – Remove the seal for the rear bonnet



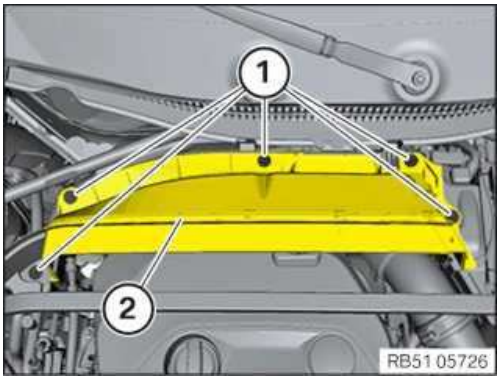
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.



3 – Removing front cowl panel cover

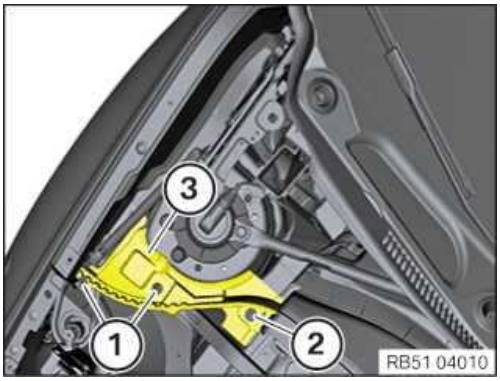


- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

4 – Removing the upper bulkhead cover

cardiagn.com

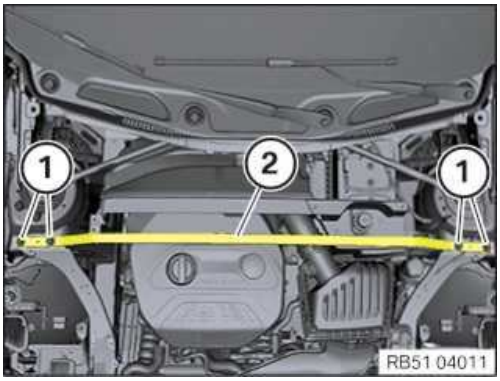
- Loosen screws (1).
- Guide out and remove the cover (2).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

5 – Remove suspension cross-brace

TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

NOTICE

Description is for right component only. The procedure on the left side is identical.

- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).

6 – Removing the acoustic cover

cardiagn.com

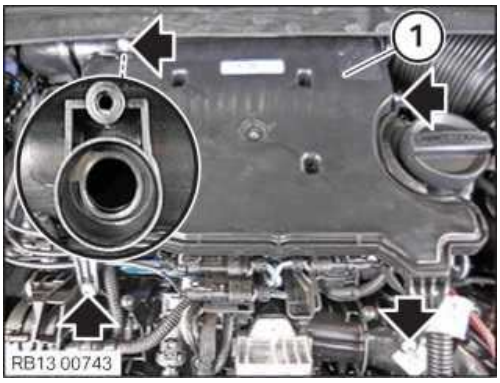
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

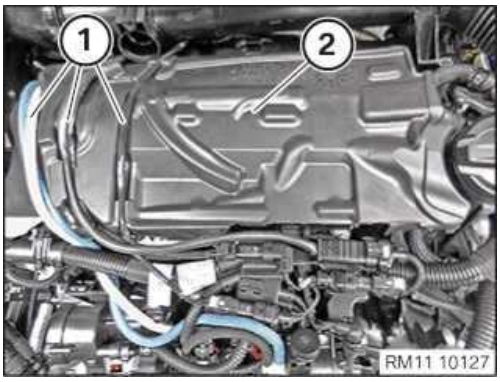
RISK OF DAMAGE



Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

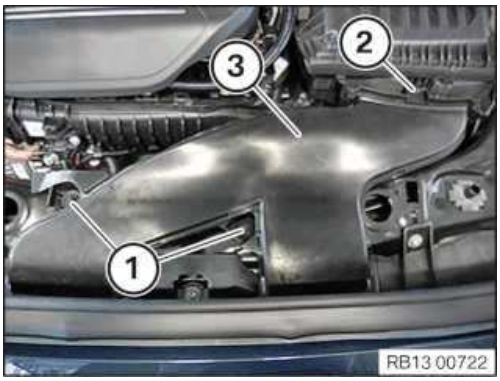
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



- Unclip the acoustic cover from the marked areas towards the top.

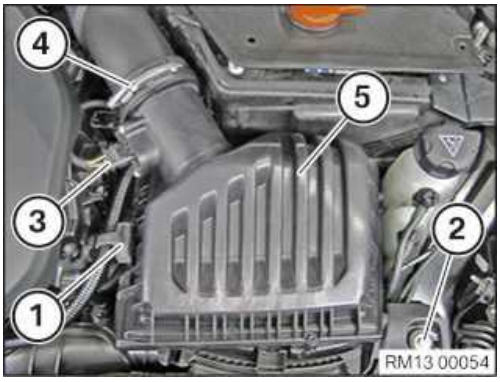
7 – Remove resonator

- Remove screws (arrows).
- Guide out and remove the resonator (1).



8 – Remove the acoustic cover for the injectors

- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

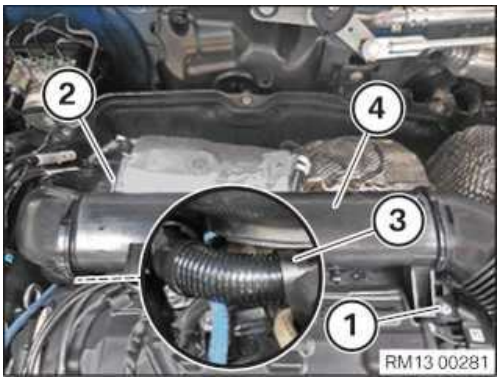


9 – Remove the intake neck for intake silencer housing

cardiagn.com

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

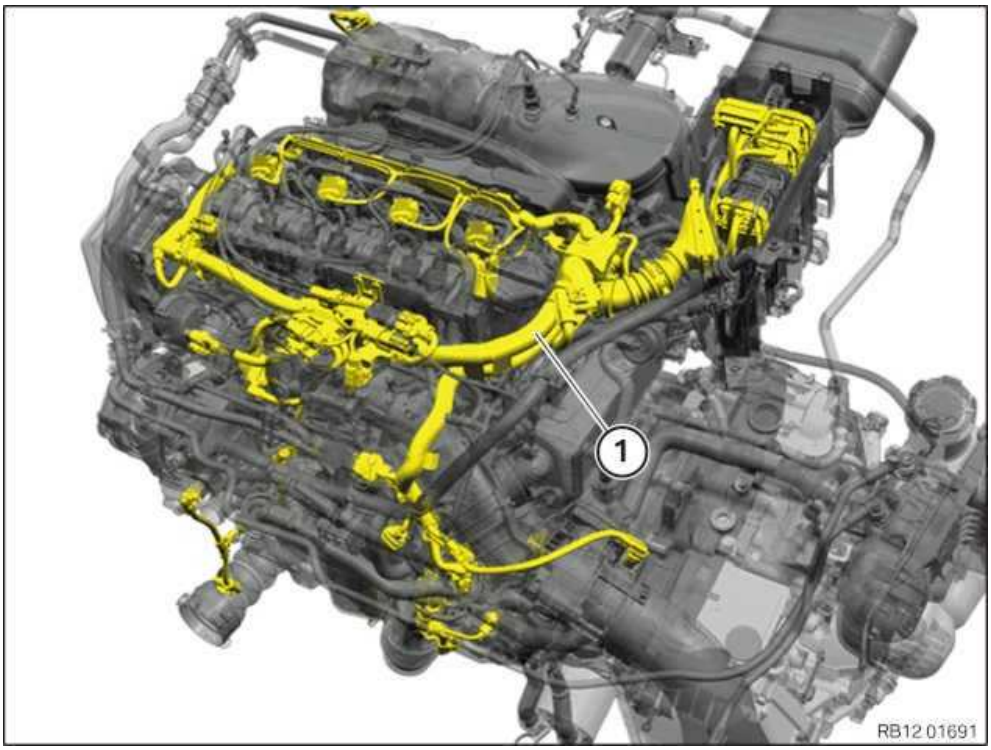
10 – Removing intake silencer housing



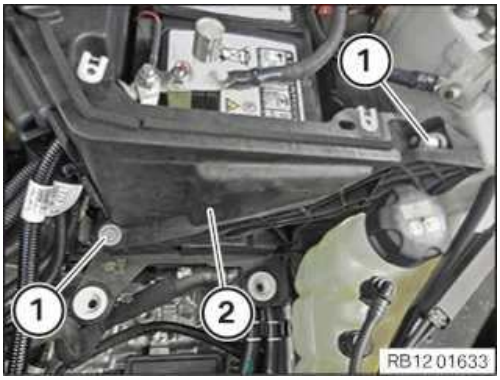
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

11 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

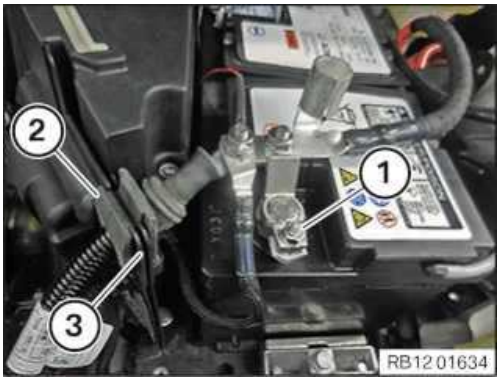


- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

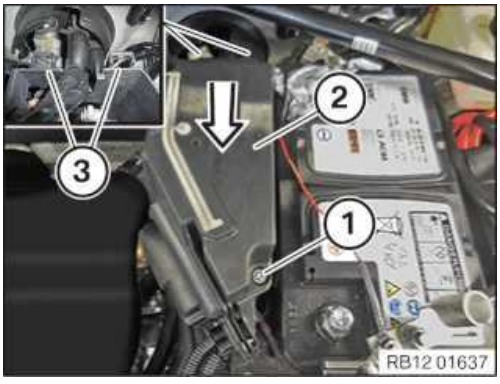


12 – Releasing the wiring harness section for the intake plenum

cardiagn.com

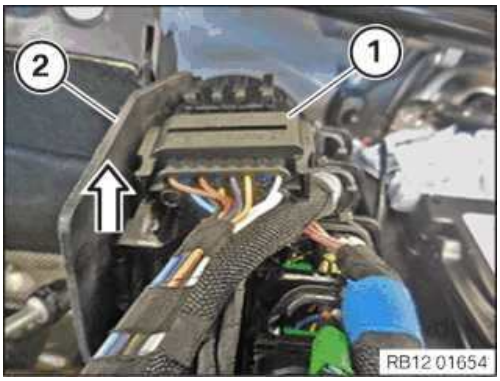


Overview: Wiring harness section for the engine

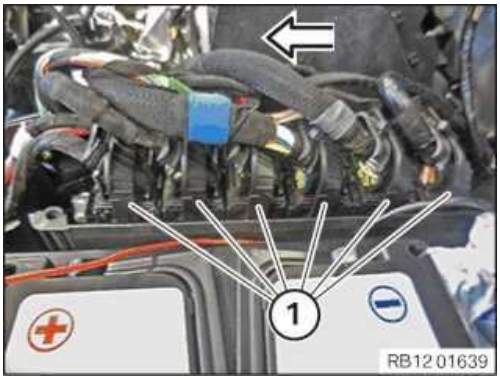


1 Wiring harness section for the engine

- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

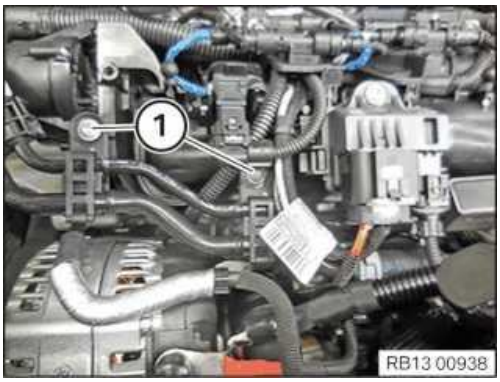


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

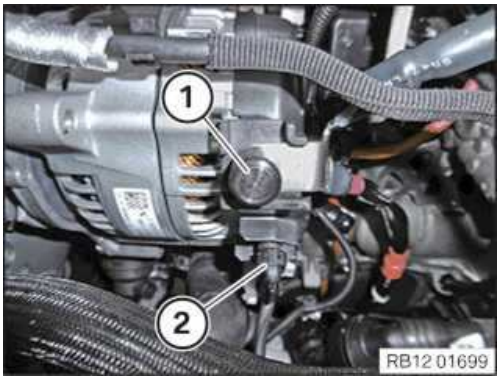


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

cardiagn.com

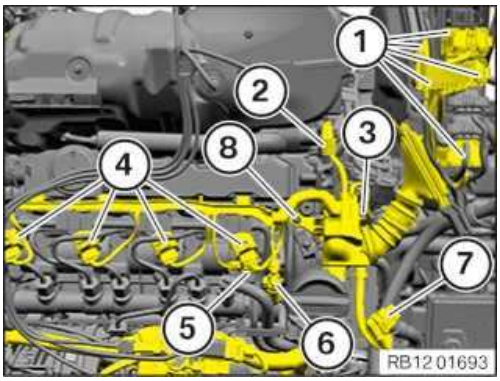


- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).

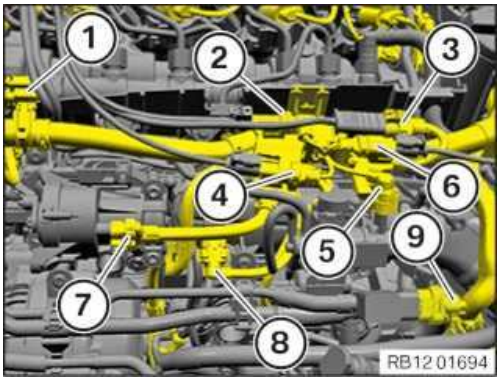


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

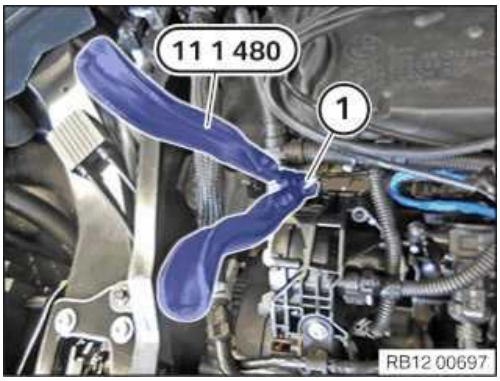
- Unlock and loosen connector (1).



- Loosen screws (1).

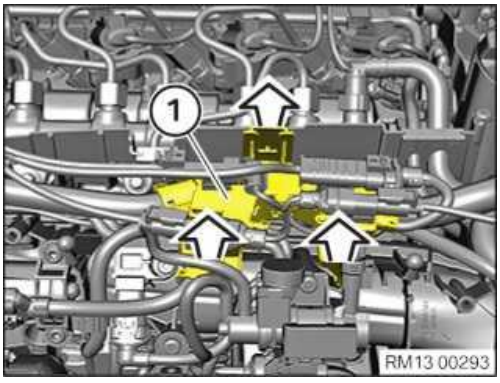


- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.



cardiagn.com

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).



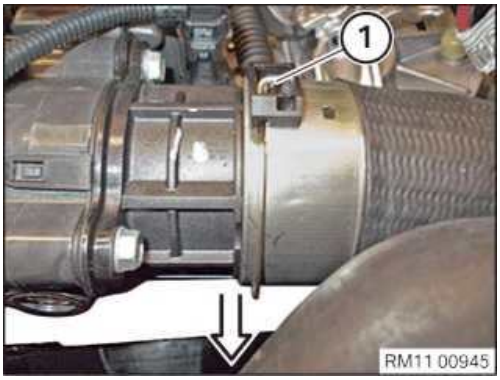
- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock and disconnect the connector (3) from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

▶ **Removing the cable clips from the intake plenum**

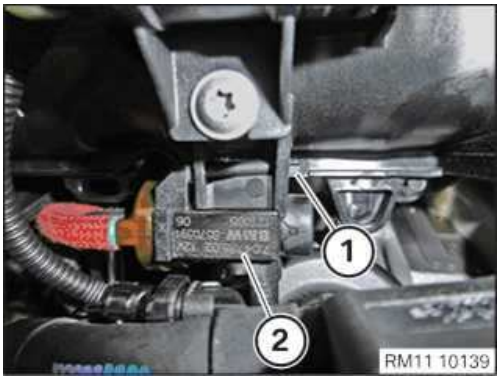
- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

13 – Removing the intake plenum

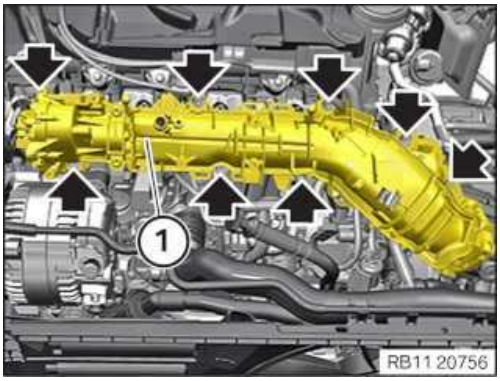


cardiagn.com

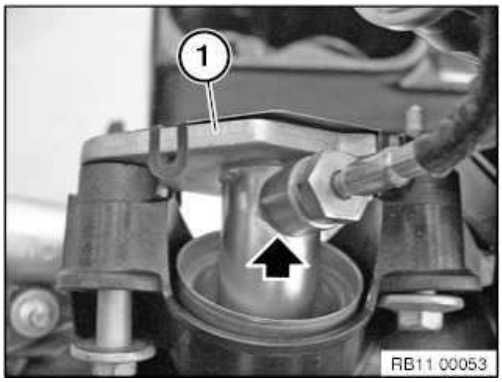
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

cardiagn.com

14 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

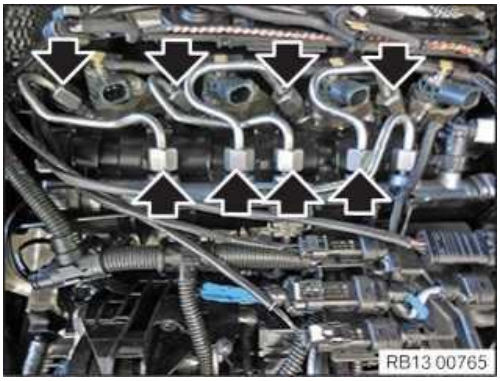
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.



TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

15 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

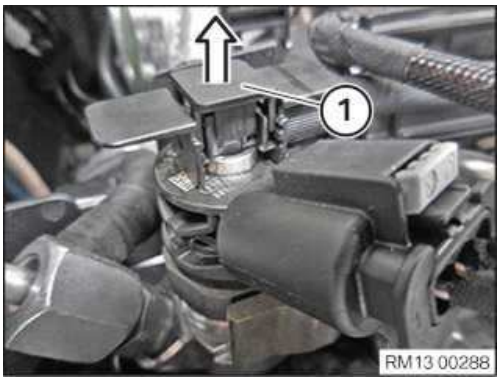
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

16 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

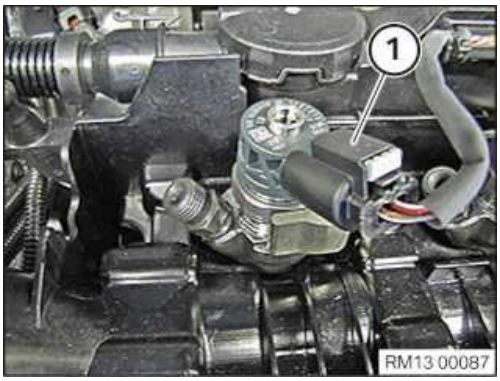
RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

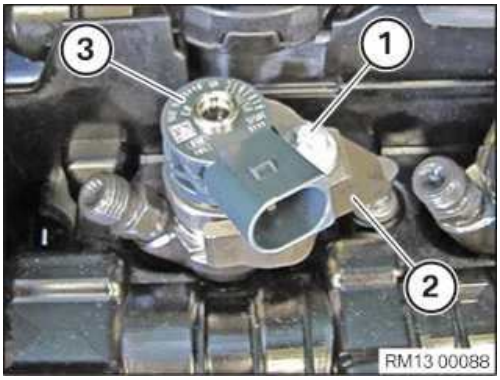
- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.



- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

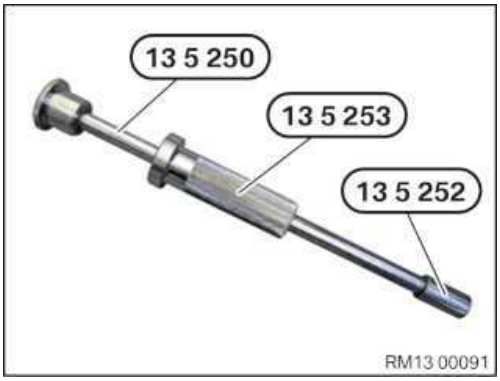
TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

- Unlock and disconnect connector (1).

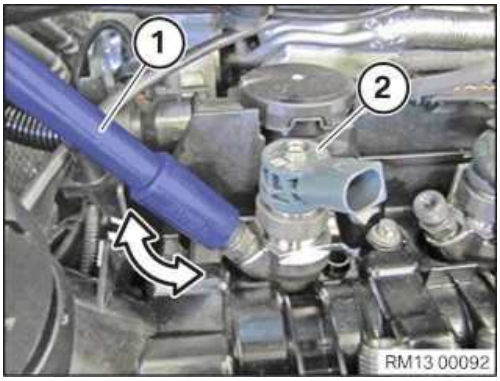
- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

▶ **Loosen stuck injectors**



cardiagn.com

RISK OF DAMAGE



Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)**back onto the special tool **0 493 321 (13 5 250)**.

- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

17 – Remove high-pressure rail

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

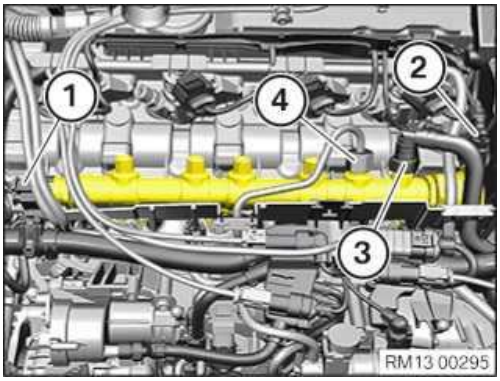
- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

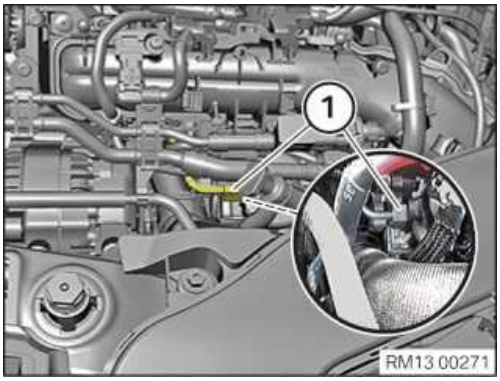
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



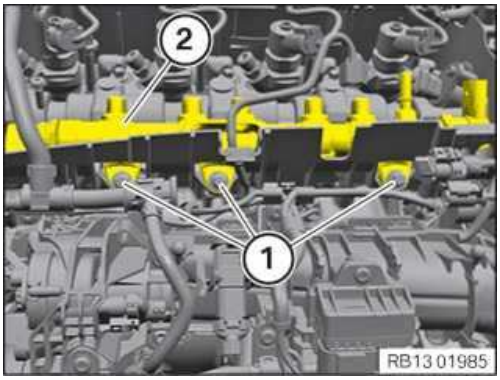
cardiagn.com

TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION



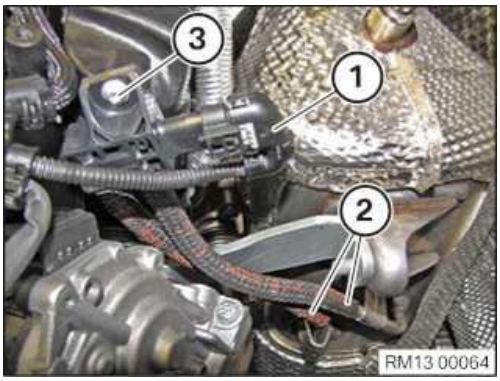
Reset special tool in early to avoid bending pressure lines.

- Unlock and disconnect connector (1).
- Unlock and disconnect connector (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool .
- Reset special tool early on to avoid bending pressure lines.

- Slacken the union nut (1) on the high pressure pump.

- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

18 – Remove differential pressure sensor



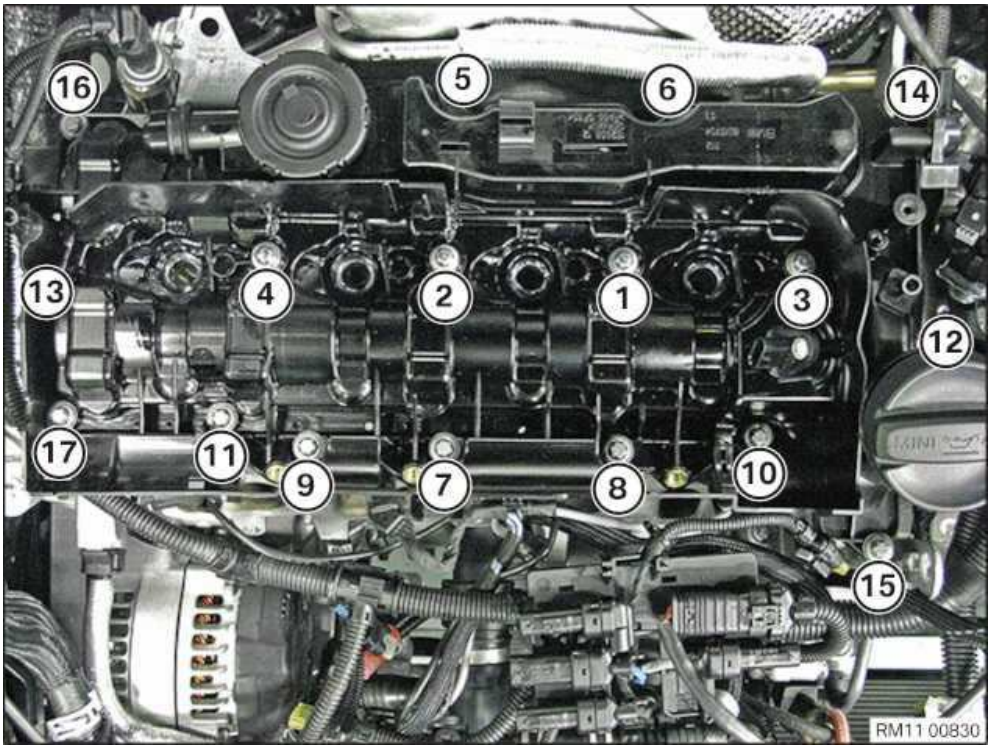
cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

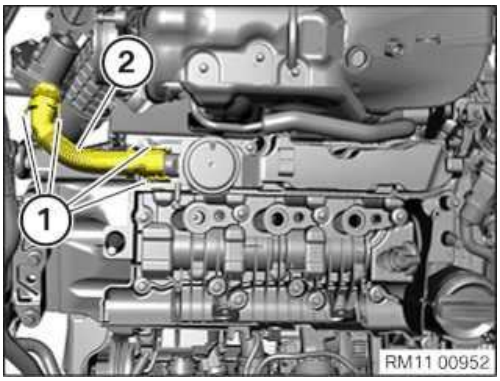
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



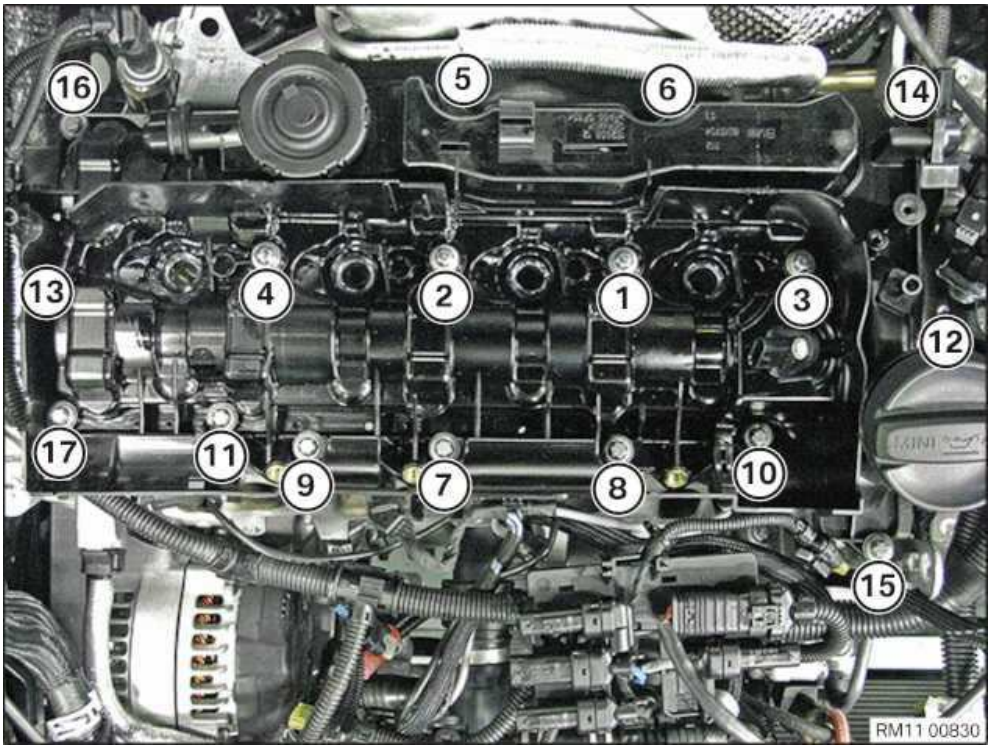
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

MAIN WORK



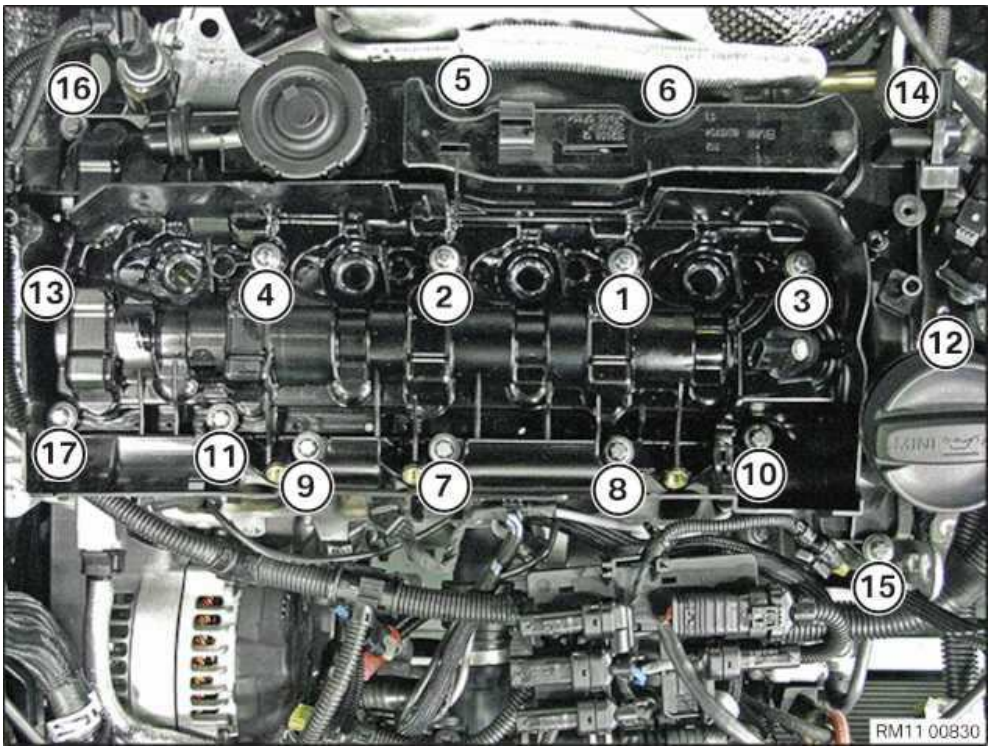
19 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



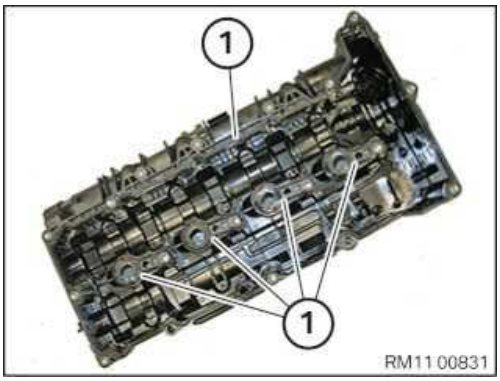
1 to 16 screws of the cylinder head cover.

cardiagn.com



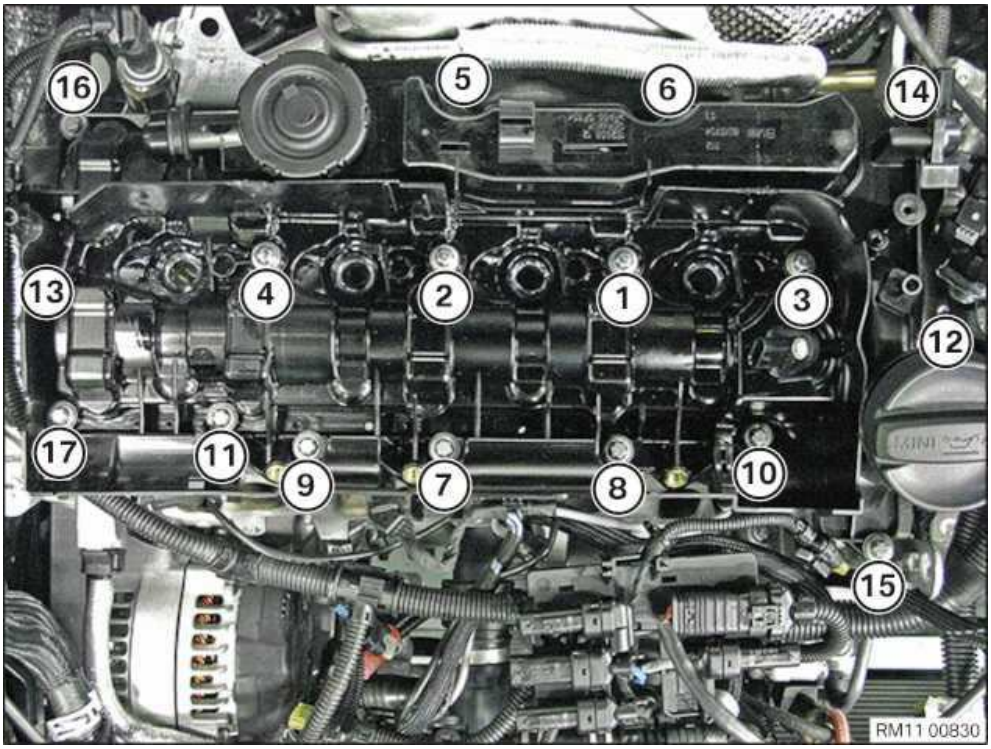
- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.



20 – Installing cylinder head cover

Overview: Screw connection of the cylinder head cover

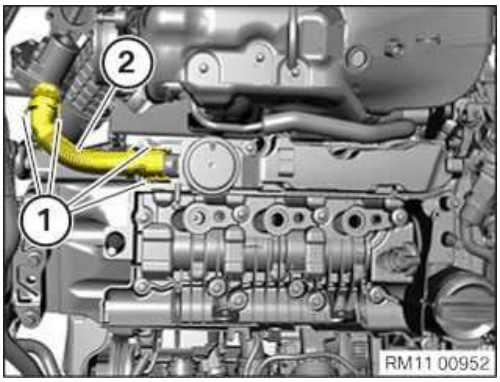


1 to 16 screws of the cylinder head cover.

cardiagn.com

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket

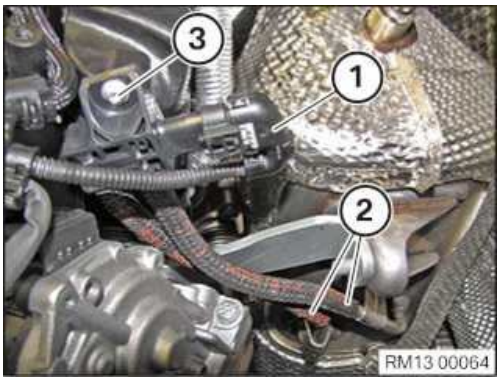


- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-



- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

POSTPROCESSES

21 – Installing differential pressure sensor

cardiagn.com

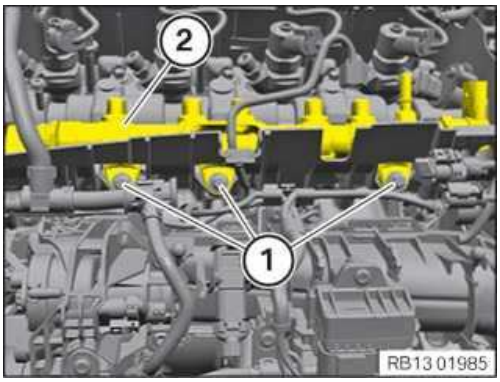
- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

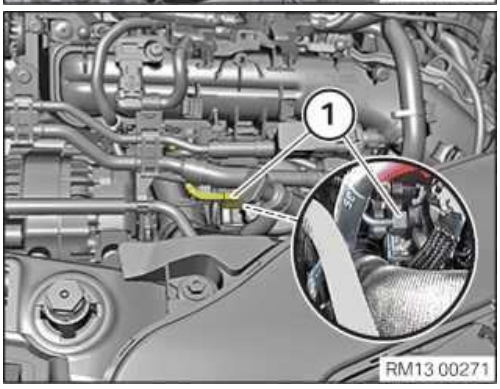


Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.



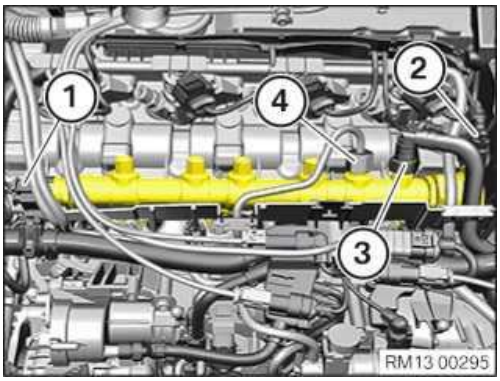
22 – Installing the rail

- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm

TECHNICAL INFORMATION



Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

cardiagn.com

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool .

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Connect and lock the fuel line (3).

  Fuel line (3) must engage audibly.
- Connect connectors (2) and lock.

  The connector (2) must engage audibly.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

23 – Installing injectors of injection system

▶ **Cleaning the injector shafts**

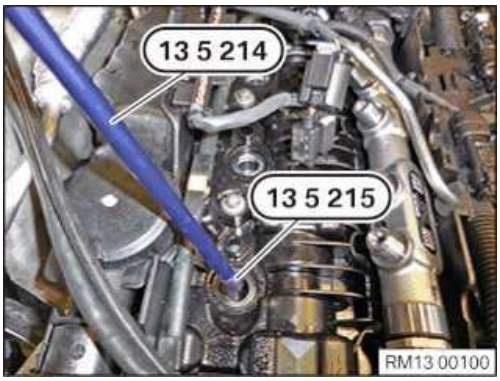
CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

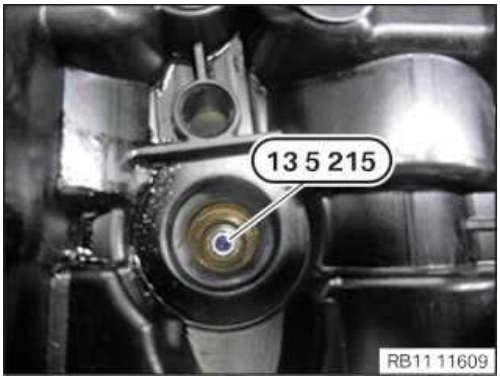
- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.



RISK OF DAMAGE

Contaminant or foreign body.

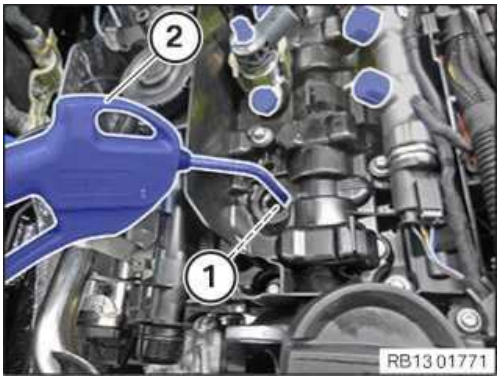


Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

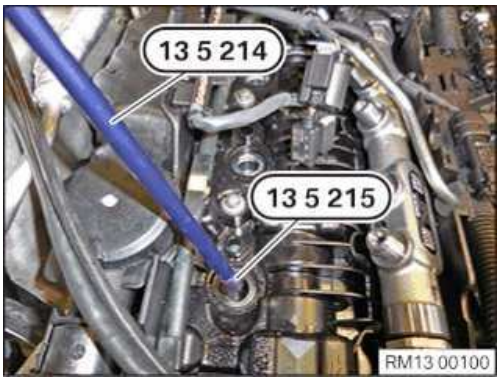
cardiagn.com

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

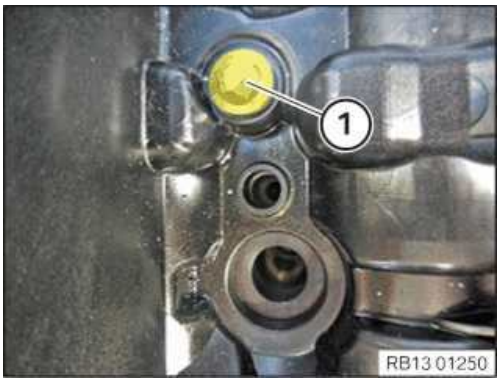


- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

- Blow out injector shaft (1) with air gun (2).

cardiagn.com

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.



▸ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▸ **Prepare the injector for installation**

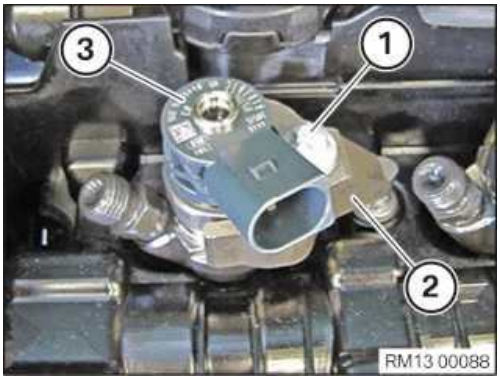
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

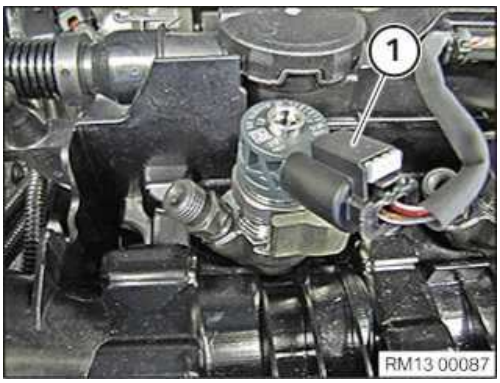


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring

- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials



Injector lubricating grease	50 g, Can	83230441070

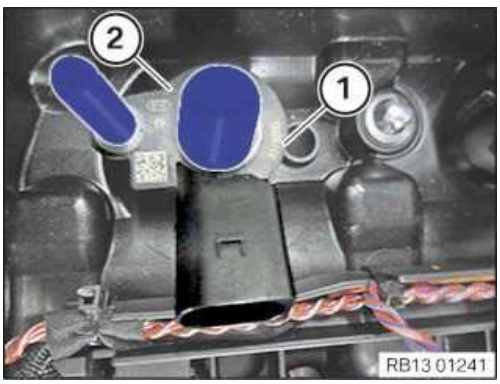
- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



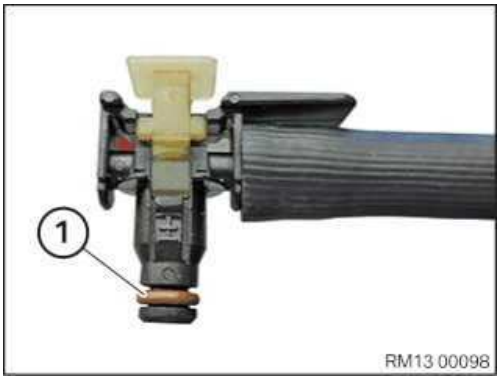
▸ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

cardiagn.com

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

24 – Connect the leakage oil line on the injector

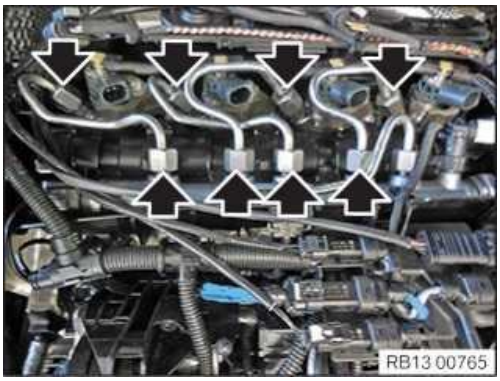
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

25 – Installing high pressure lines between rail and injectors



TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

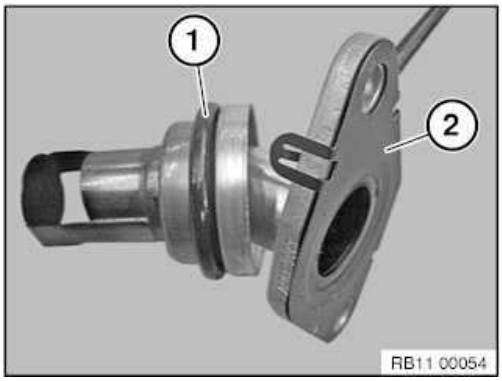
Reset special tool in early to avoid bending pressure lines.

cardiagn.com

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

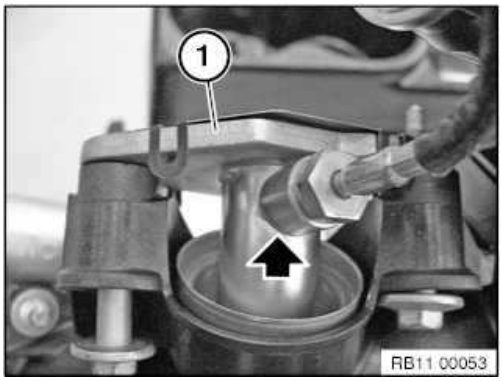


- Tighten the high pressure lines (arrows) with the special tool .

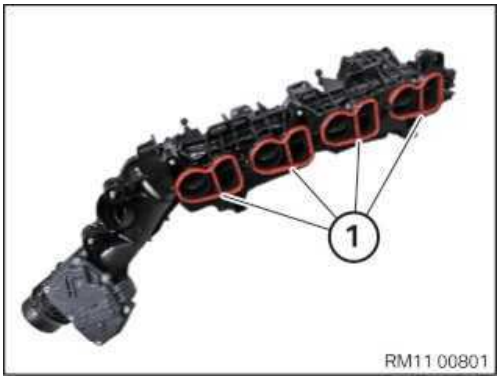
High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).



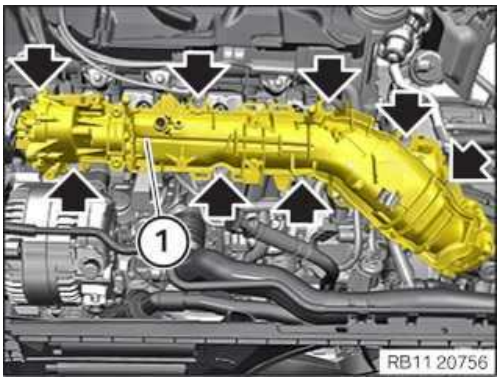
26 – Installing the intake plenum



- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

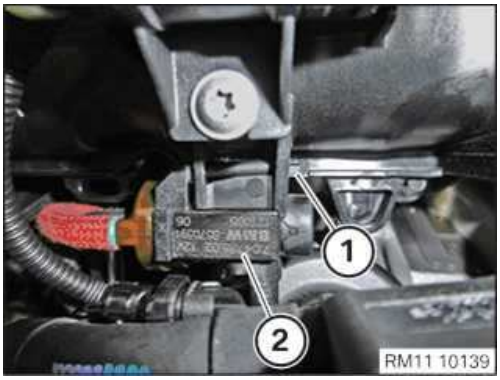
  Parts: Gasket
- Position the seal (2) and clip it in.



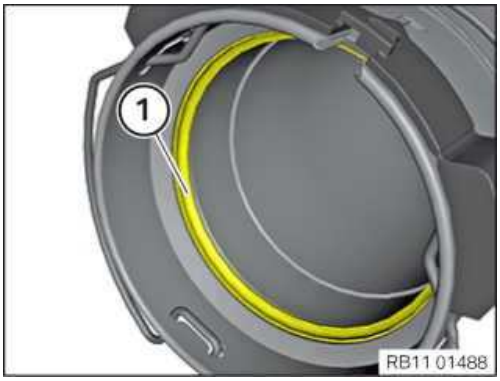
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



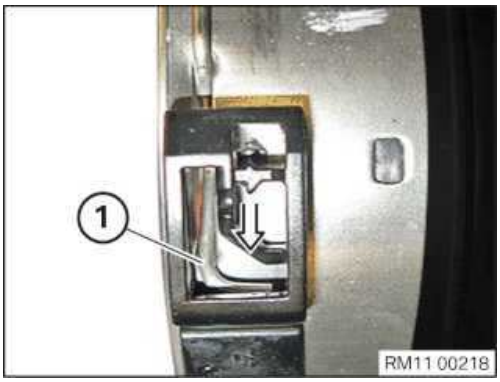
cardiagn.com



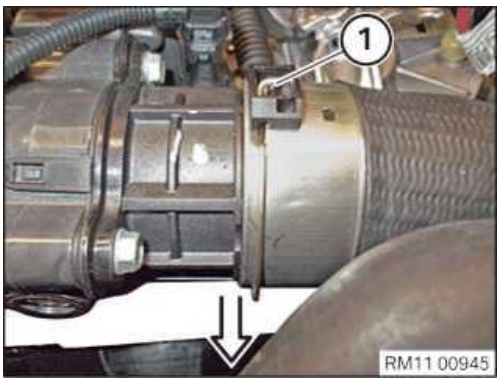
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



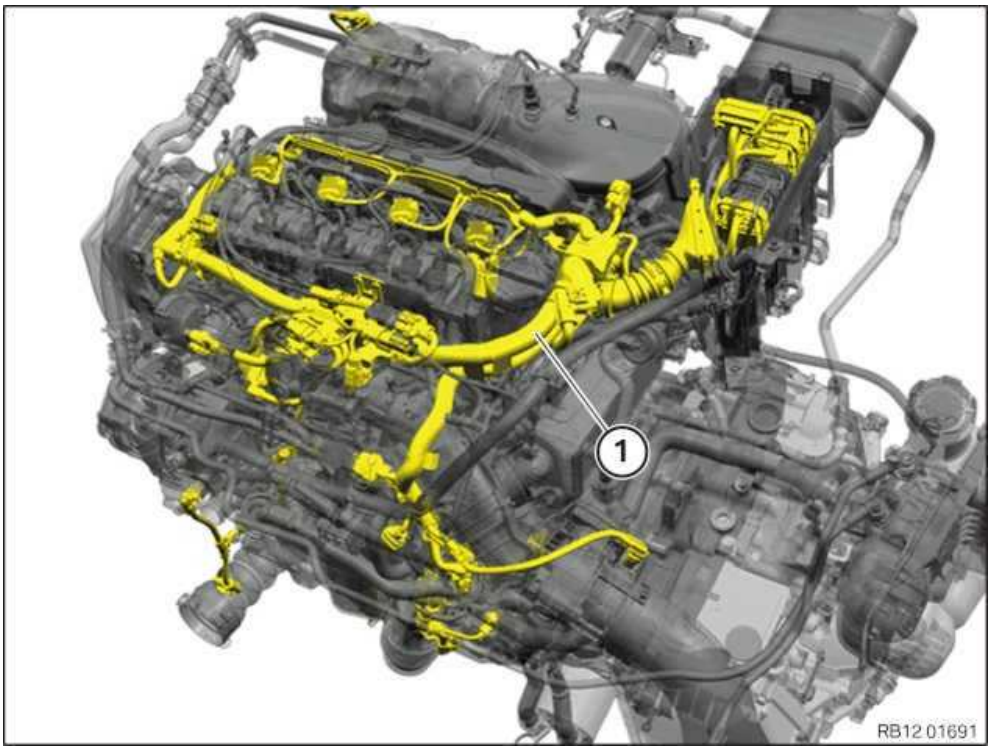
- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

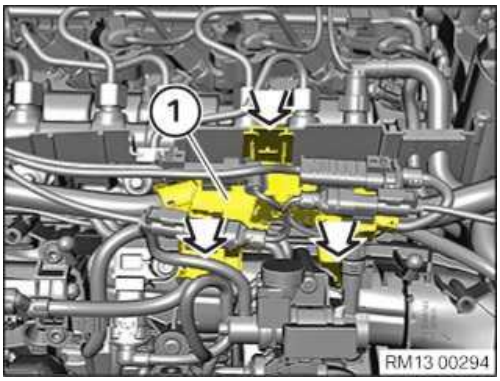
- Engage the lock (1) on the bracket (arrow).



- Connect the charge air line to the throttle valve.

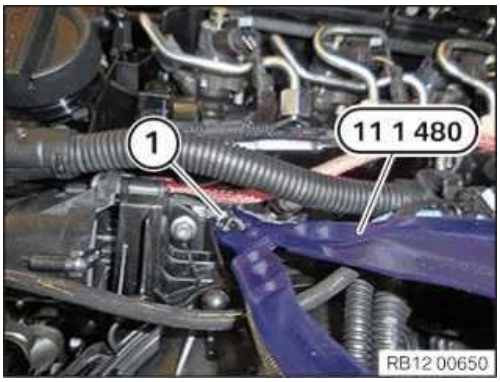
  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

27 – Fastening the wiring harness section for the intake plenum



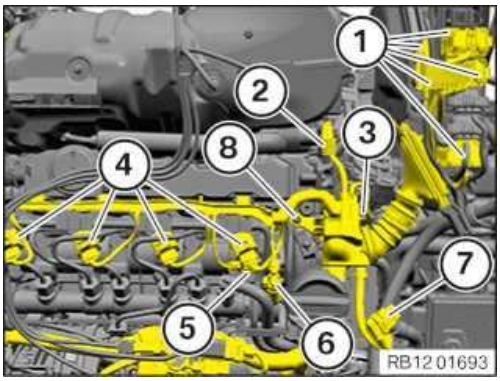
cardiagn.com

Overview: Wiring harness section for the engine



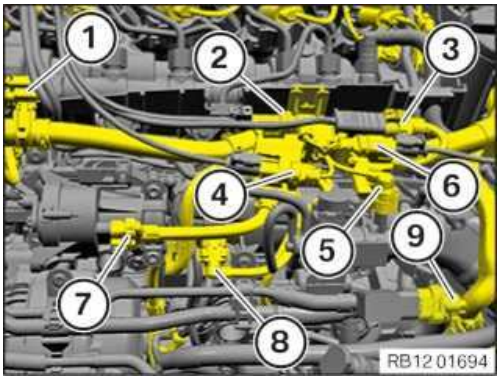
1 Wiring harness section for the engine

▶ **Installing the cable clip for the intake plenum**

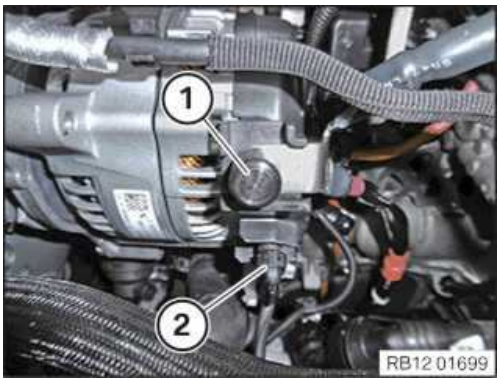


- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.



cardiagn.com

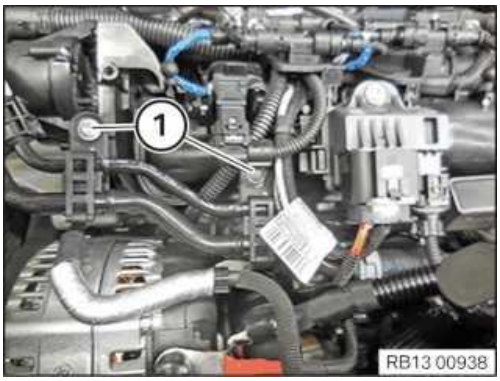


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.

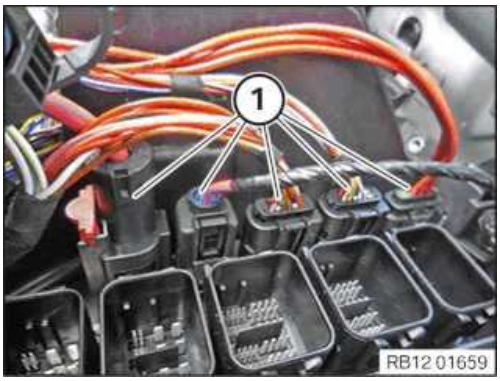


- Connect and lock the connector (2).

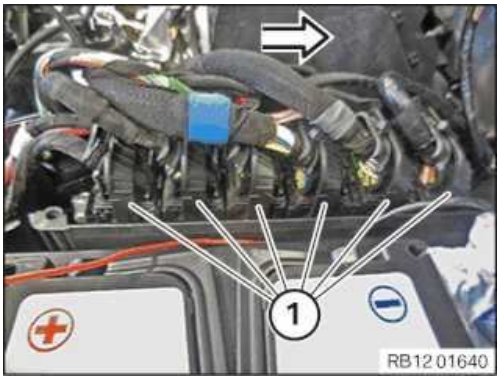
  Lock must snap audibly into place.
- Connect the positive battery cable (1) and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

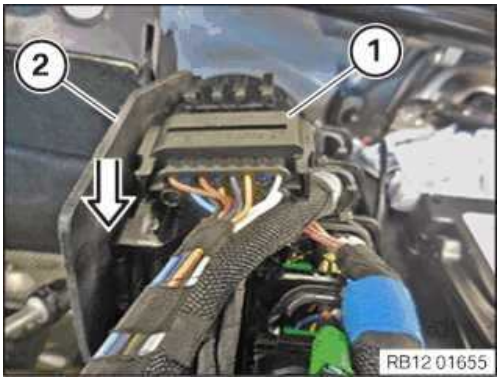


- Position the fuel line.
- Tighten the screws (1).

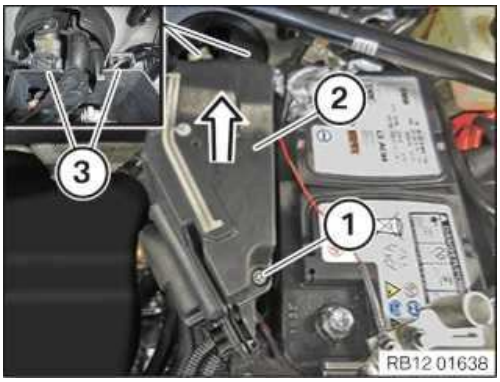


Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

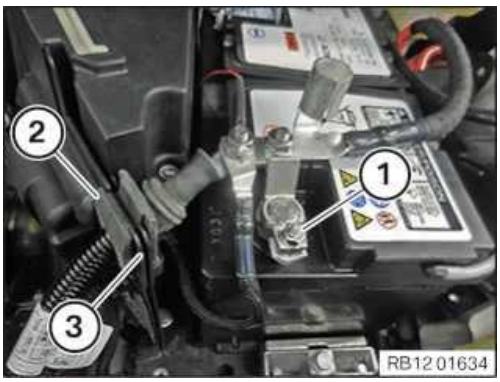


cardiagn.com



- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

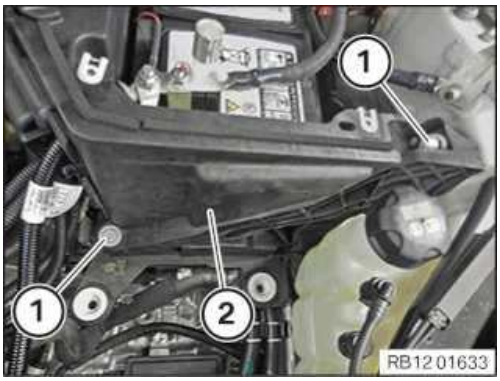


- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm

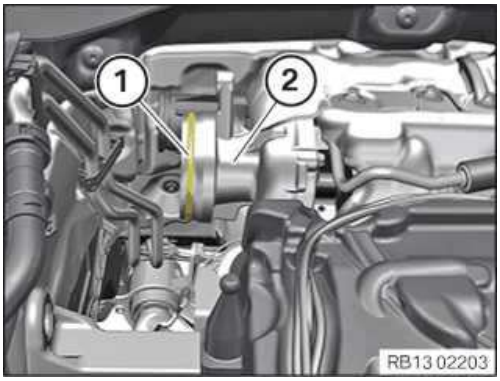


- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

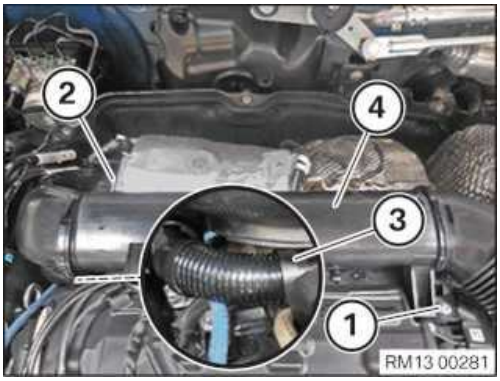
Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

cardiagn.com



- Feed in and install tension strut (2).
- Tighten the screws (1).



Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

28 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

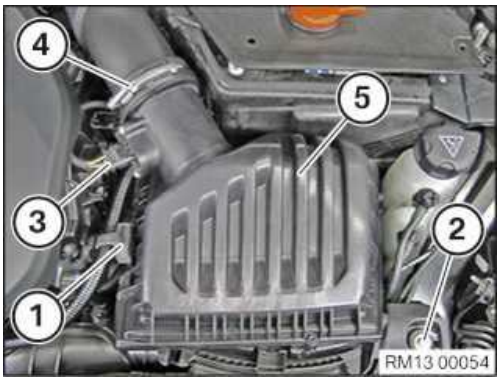
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

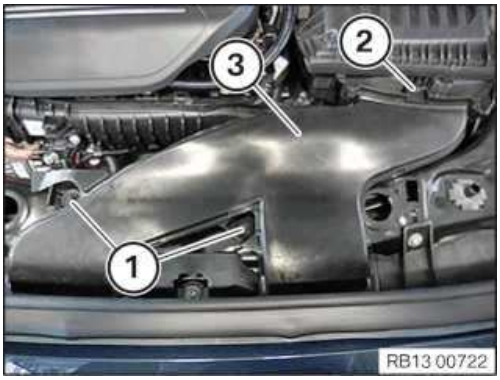
29 – Installing intake silencer housing

cardiagn.com

- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm



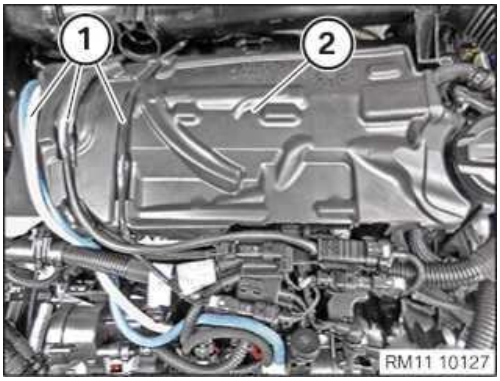
- Tighten clamp (4).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

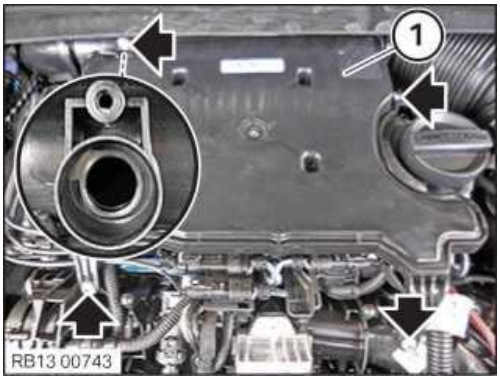
- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

30 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection



M6		Tightening torque	8 Nm

31 – Install the acoustic cover for the injectors

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

32 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).
  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

33 – Install acoustic cover

cardiagn.com

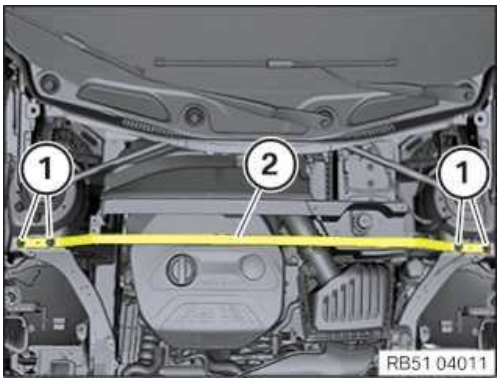
RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

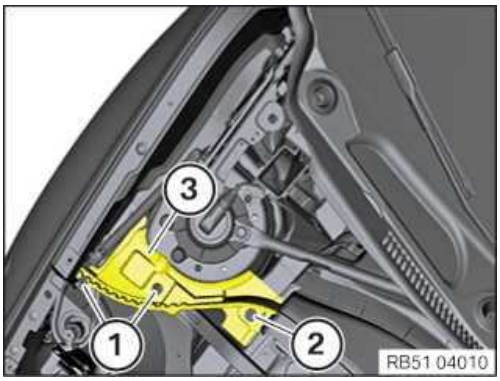


- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

34 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

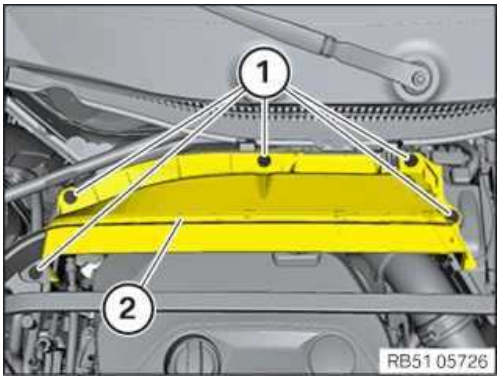
Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

cardiagn.com

NOTICE

Description is for right component only. The procedure on the left side is identical.

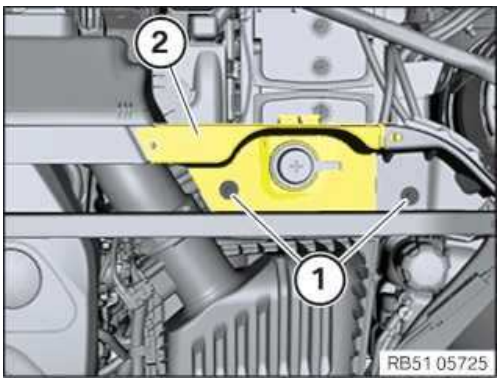


- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

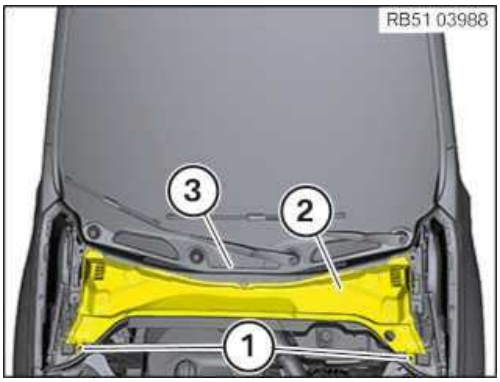


35 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm

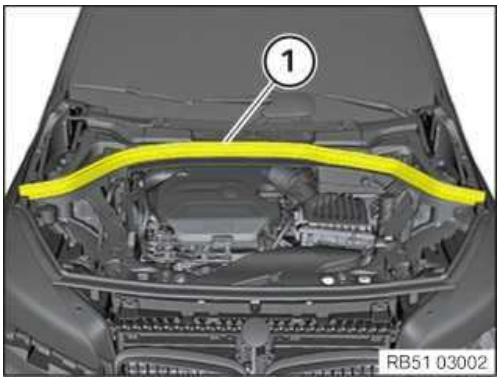


- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

36 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

37 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

38 – Disconnecting all battery earth leads

- See additional information.

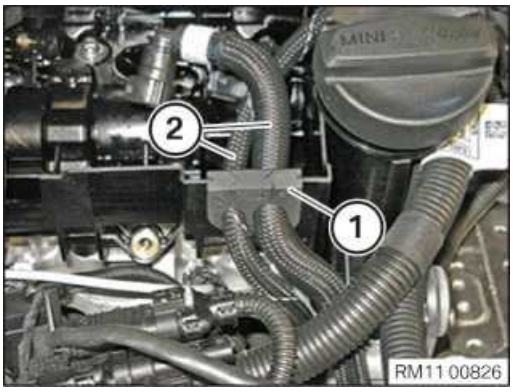
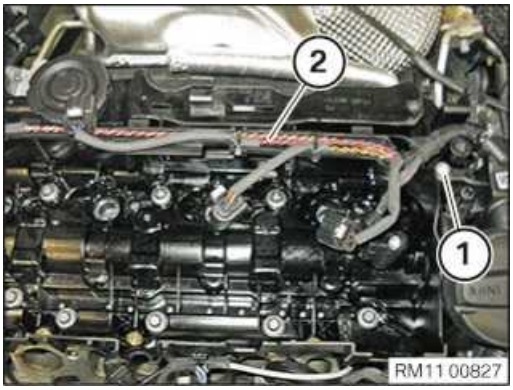
11 12 000 Removing and installing/sealing cylinder head cover (B47)

Important!



When carrying out repair work on the oil, coolant or fuel circuit, the alternator must be protected against dirt contamination.

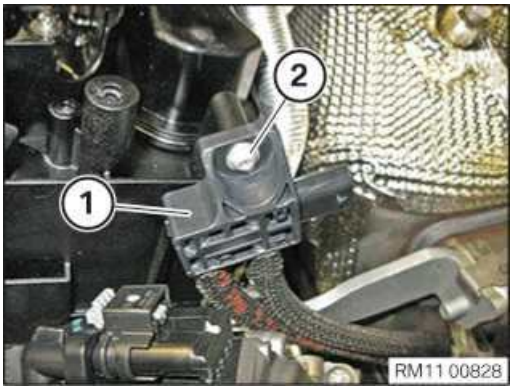
Cover alternator with suitable materials.



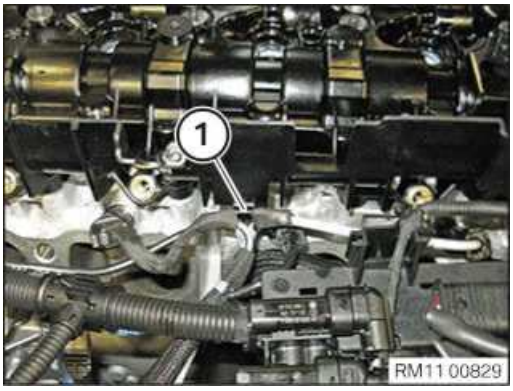
Necessary preliminary tasks:

- Release engine wiring harness in area of cylinder head cover
- Remove intake plenum
- Remove injectors
- Remove pressure accumulator

Removal:

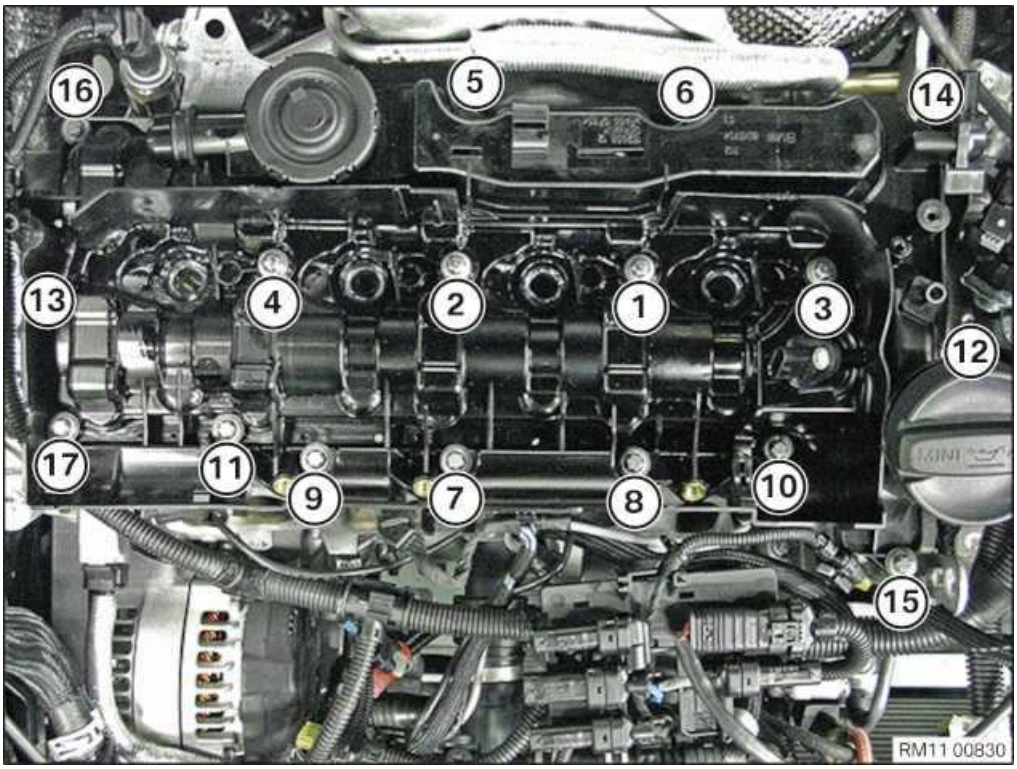


Loosen rubber grommet (1) from cylinder head cover with lines (2).



Release screw (1).

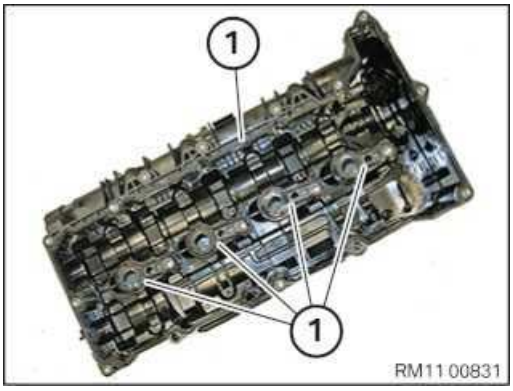
Loosen engine wiring harness (2) from cylinder head cover.



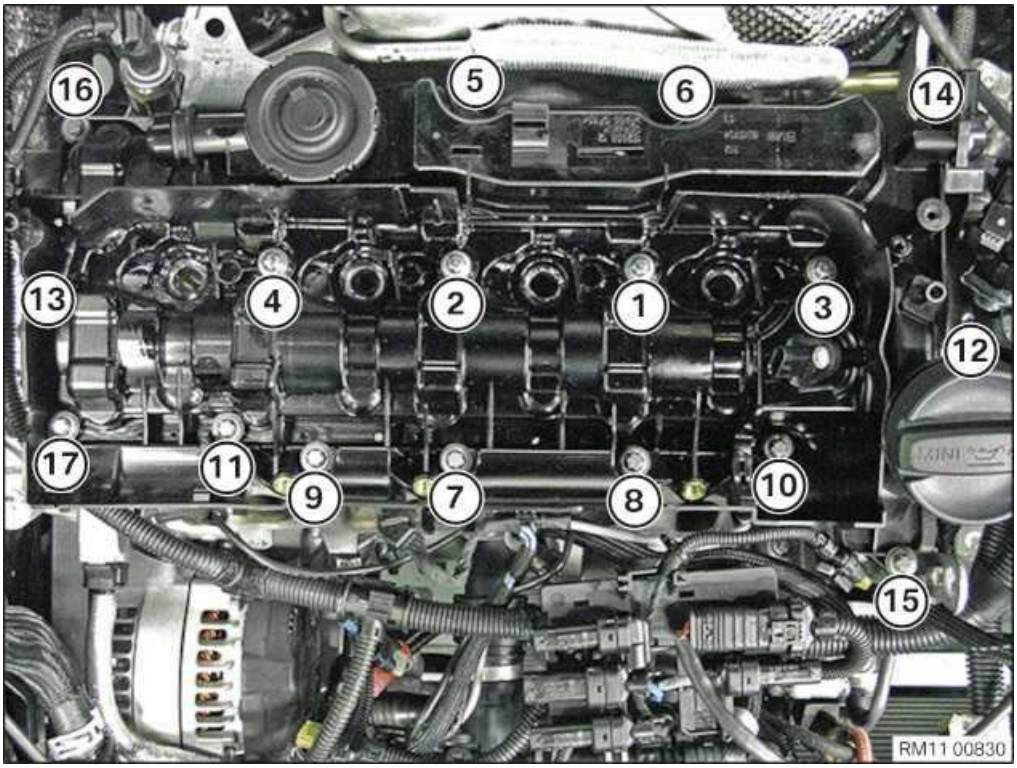
cardiagn.com

Loosen exhaust differential pressure sensor (1) with screw (2) on cylinder head cover.

Loosen engine wiring harness (1) from cylinder head cover with clamp.



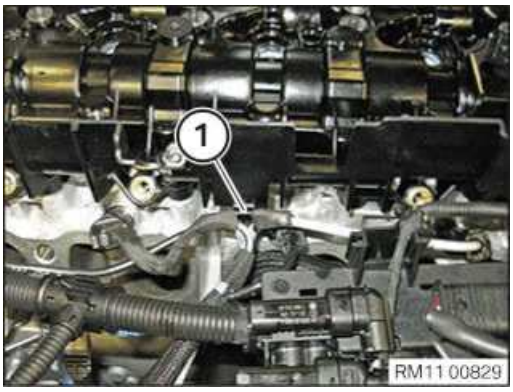
Release bolts in sequence **16 to 1**.



Remove cylinder head cover by lifting it out.

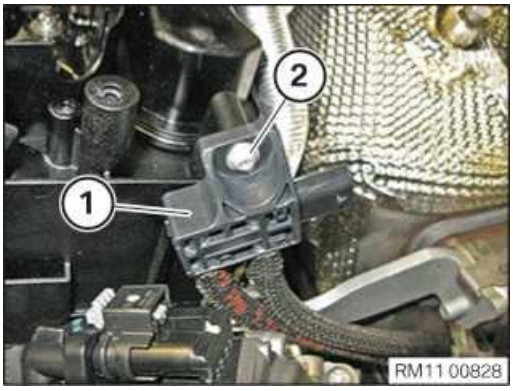
Installation:

cardiagn.com



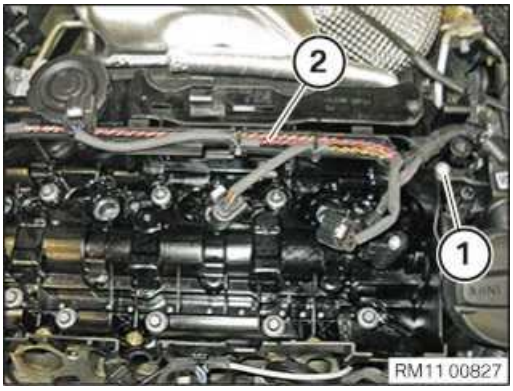
Parts: Replace profile seals (1).

Position cylinder head cover.



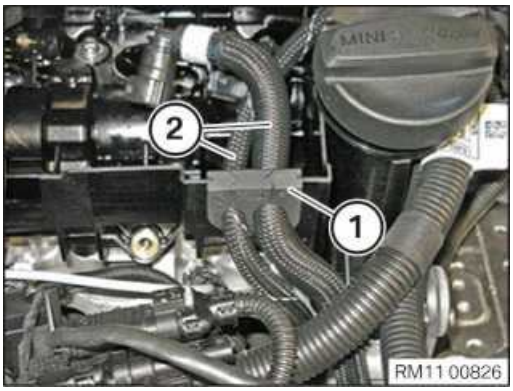
Tighten down bolts in sequence **1 to 16**.

Tightening torque 11 12 3AZ.



Attach the clamp (1) at the cylinder head cover with clamp.

cardiagn.com



Secure exhaust differential pressure sensor (1) with screw (2) on cylinder head cover.

Clip in engine wiring harness (2) at cylinder head cover.

Tighten screw (1).

Mount rubber grommet (1) on cylinder head cover with lines (2).

Required follow-up work:

- Install pressure accumulator
- Install injectors
- Install intake plenum
- Route and attach engine wiring harness in area of cylinder head cover
- Check engine for tightness

cardiagn.com

11 12 161 replace cylinder head

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

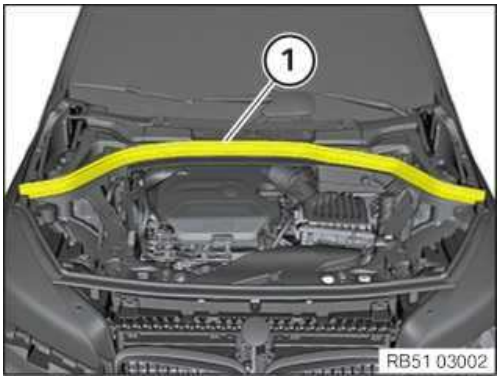
Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

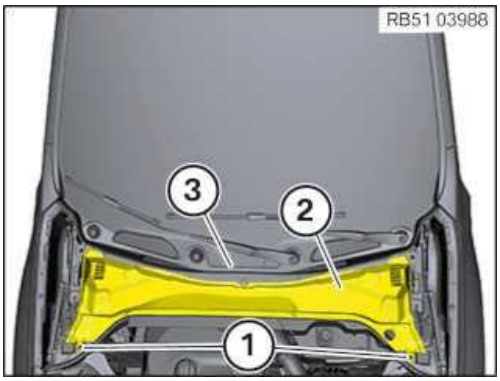


- Ensure there is a specific weight compensation on the motor vehicle.

PRELIMINARY WORK

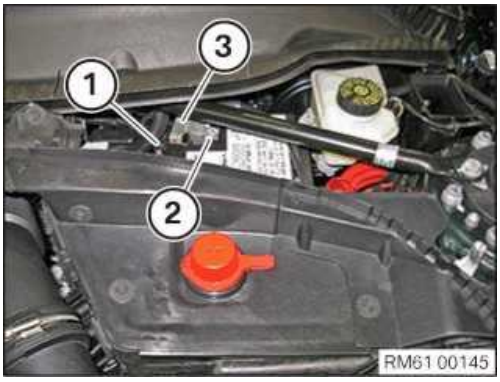
1 – Remove the seal for the rear bonnet

NOTICE



Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.

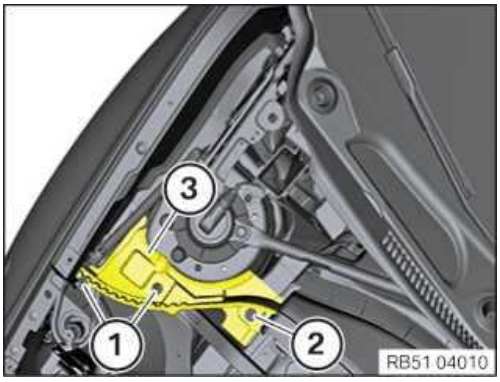


2 – Removing front cowl panel cover

cardiagn.com

- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

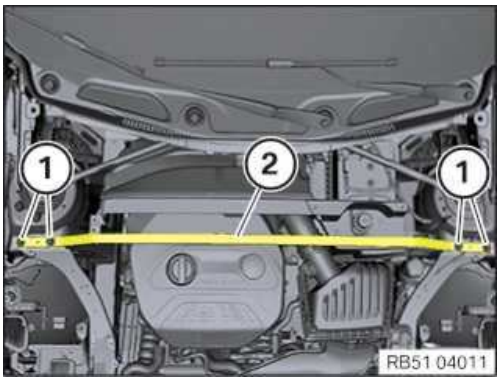
3 – Disconnecting the battery earth lead



- Unlock plug connection (1) and disconnect.
- Unfasten nut (2).
- Remove the battery earth lead (3) and secure to one side.

4 – Remove suspension cross-brace

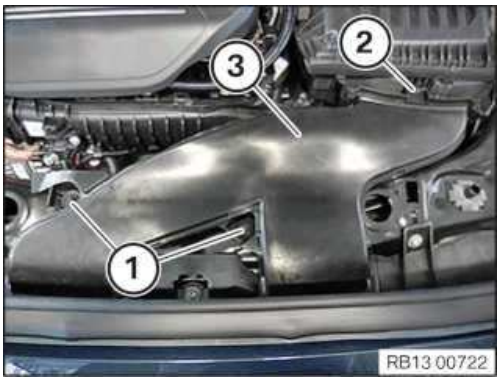
TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

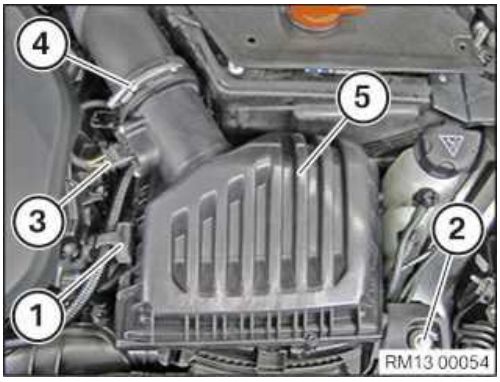
NOTICE

Description is for right component only. The procedure on the left side is identical.



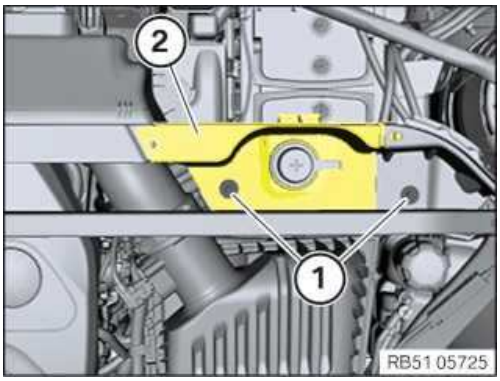
- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).



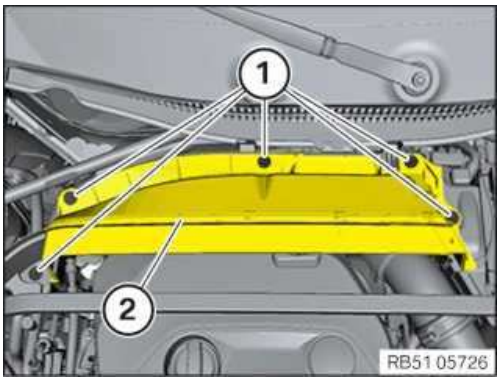
5 – Remove the intake neck for intake silencer housing

cardiagn.com



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

6 – Removing intake silencer housing



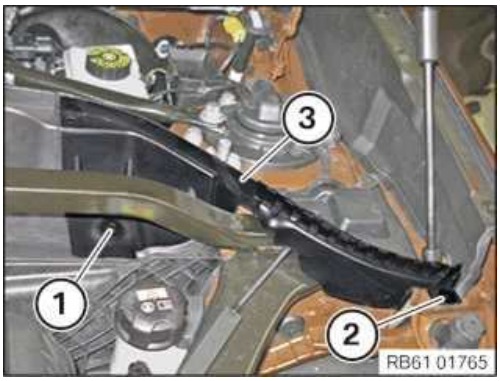
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

7 – Removing the upper bulkhead cover

- Loosen screws (1).
- Guide out and remove the cover (2).

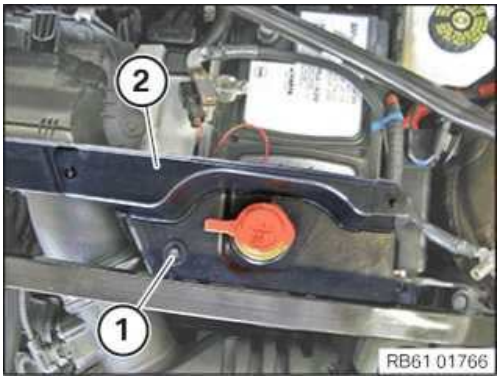
- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

8 – Remove vehicle battery



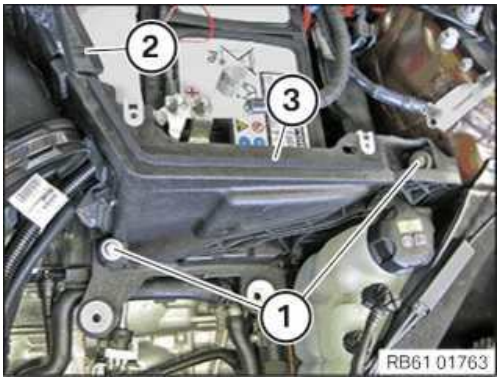
WARNING

Working on 12 V vehicle electrical system.

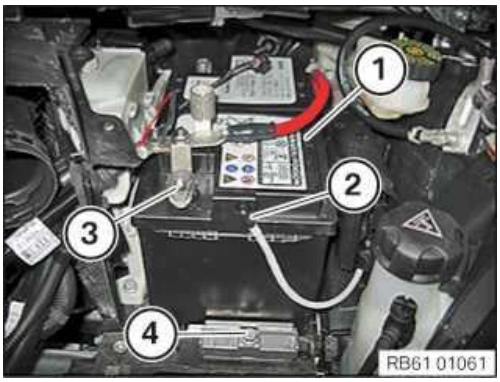


Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.



cardiagn.com



- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING

Unprotected battery terminals.

Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

9 – Removing the acoustic cover

WARNING

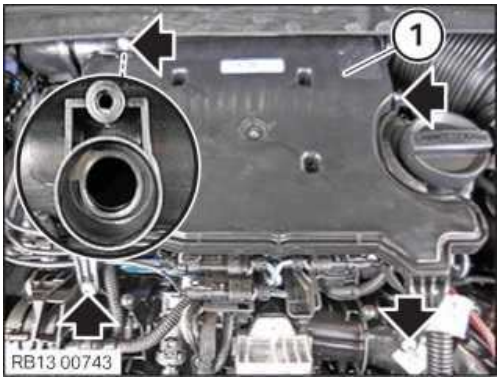
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE



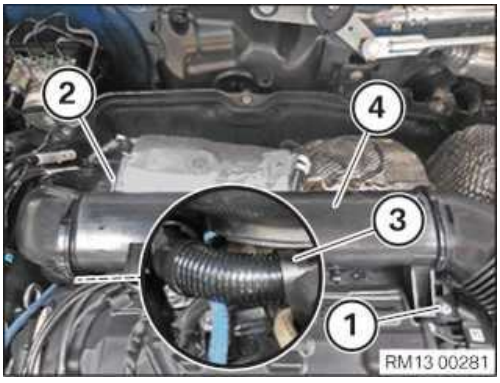
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

10 – Remove resonator



- Remove screws (arrows).
- Guide out and remove the resonator (1).

11 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

12 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

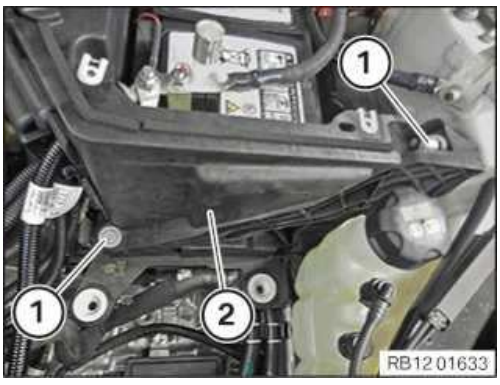
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

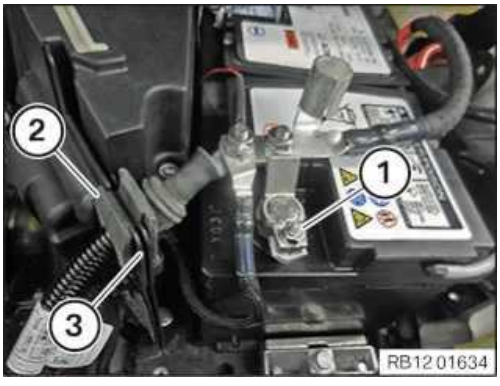
Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.



TECHNICAL INFORMATION

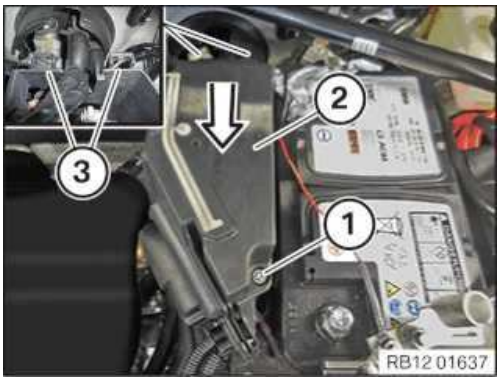
Follow instructions for removing and installing control units.



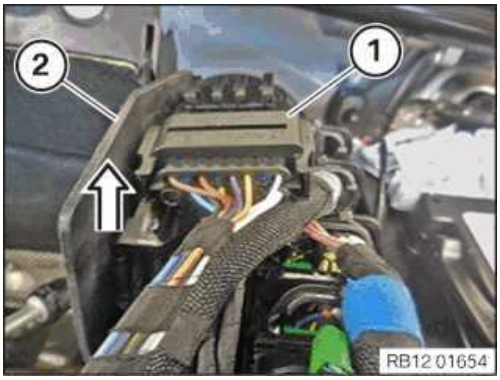
For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

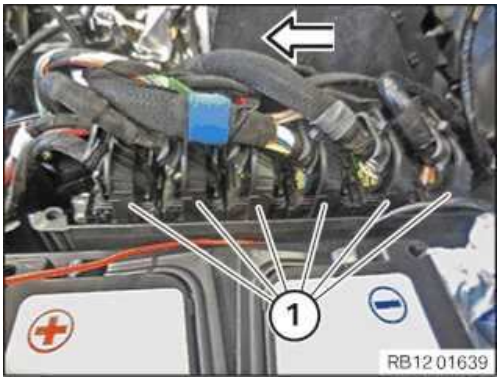
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



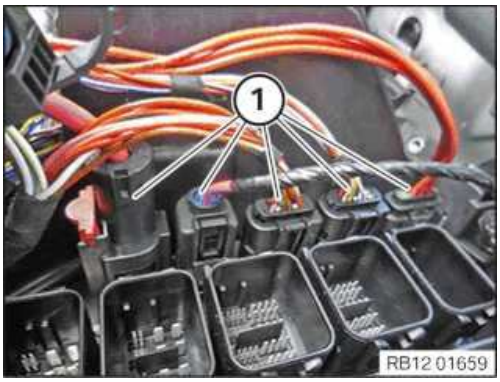
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



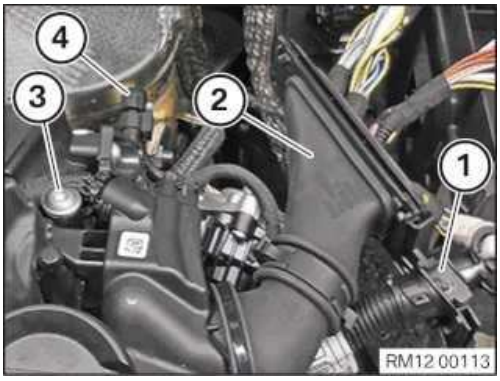
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



cardiagn.com

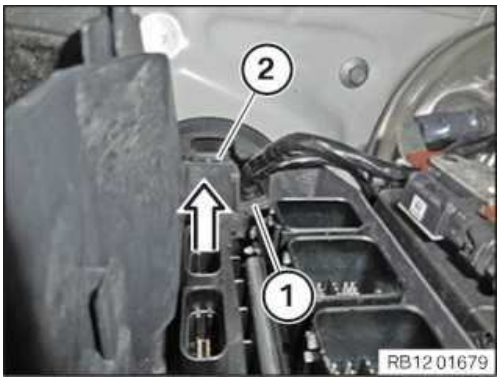


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

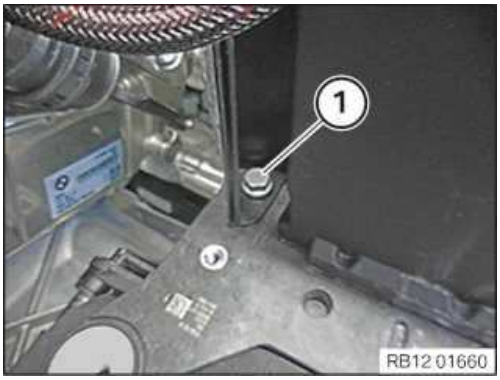


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

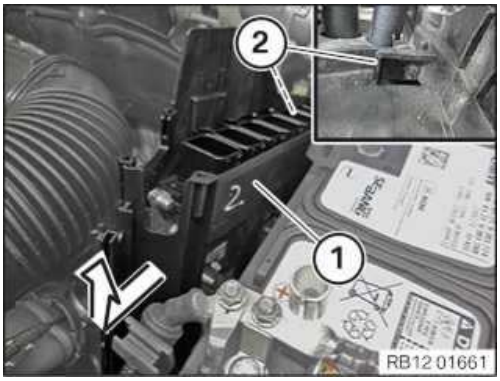
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).

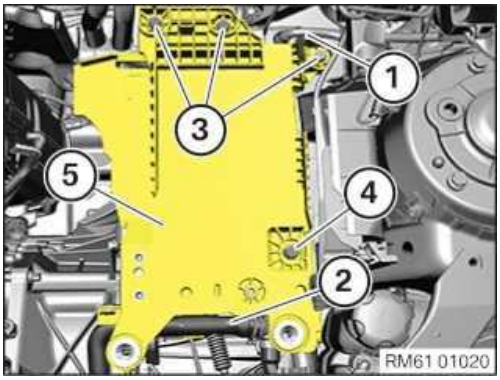


- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

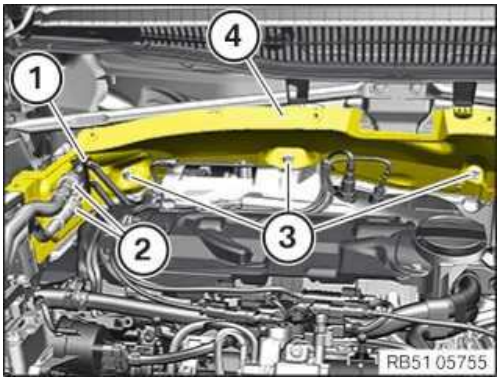


cardiagn.com

- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.



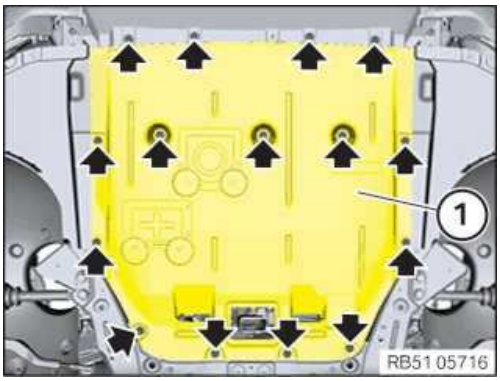
- Loosen screw (1).



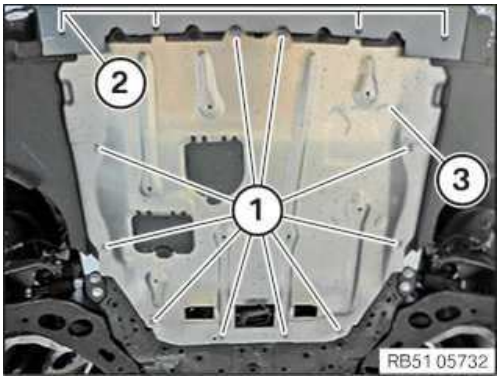
- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

13 – Remove battery holder

- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).



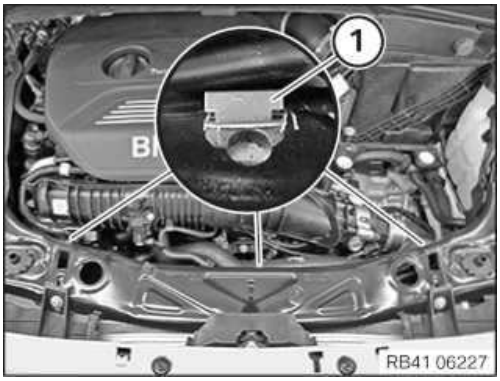
14 – Remove the rear bulkhead upper part



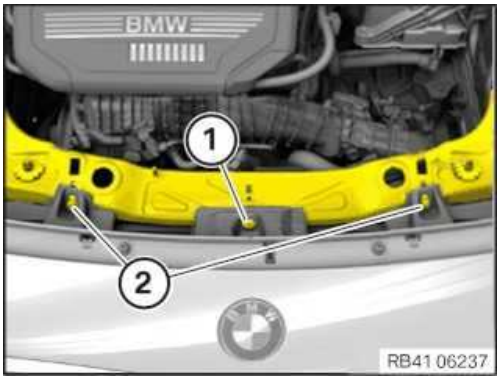
- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.

15 – Removing the front underbody protection

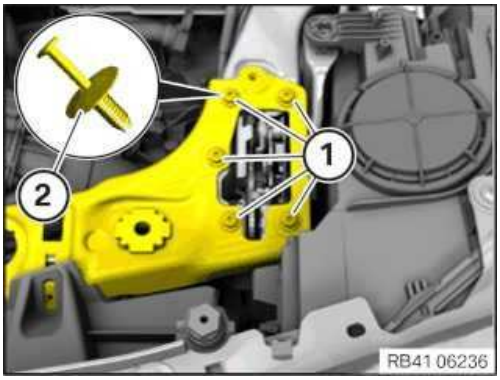
cardiagn.com



- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

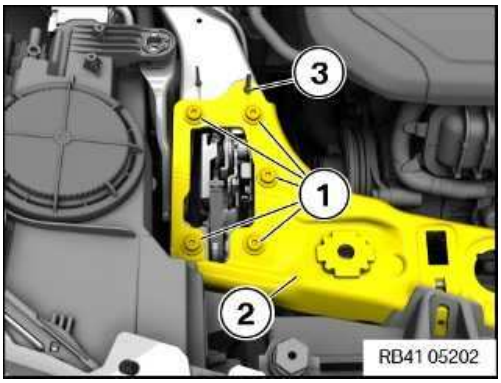


- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).



16 – Remove front cross connection

- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.



- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

cardiagn.com

- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

17 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

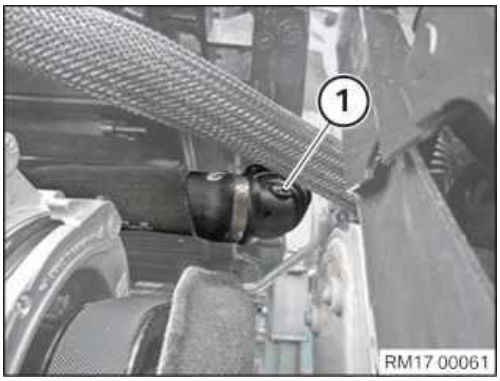
TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

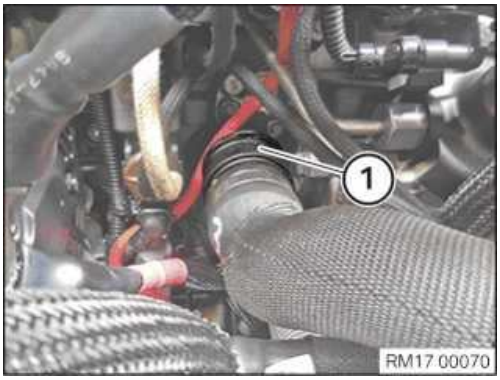
When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.



TECHNICAL INFORMATION

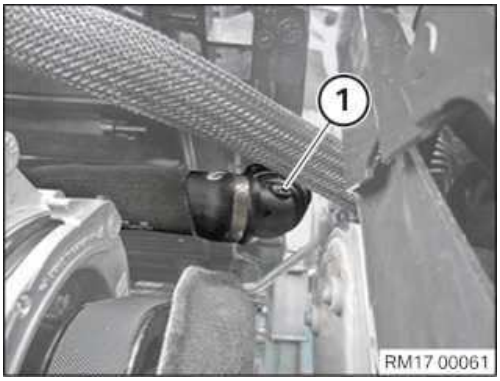
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



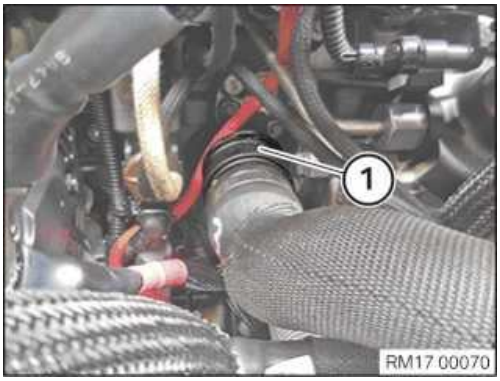
- Loosen sealing cap (1).

cardiagn.com

- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.



- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.

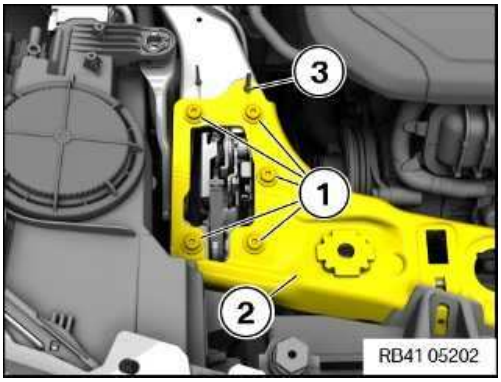


18 – Connect the coolant line

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

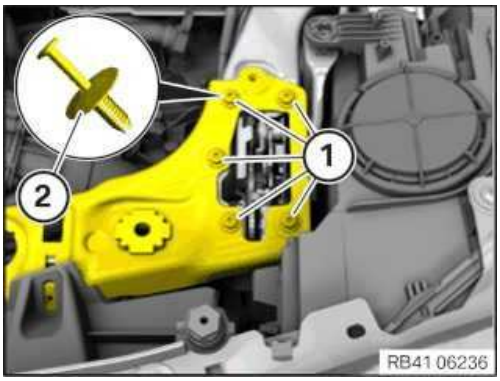
- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the connecting branch and lock audibly.

19 – Install front cross connection

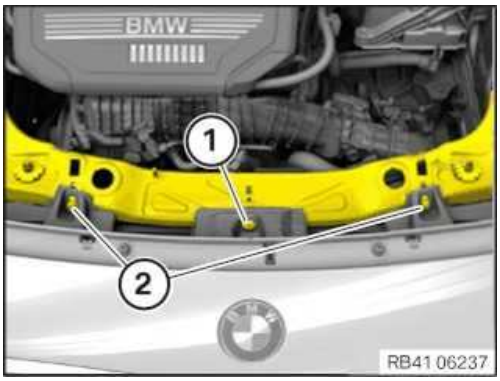
cardiagn.com



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

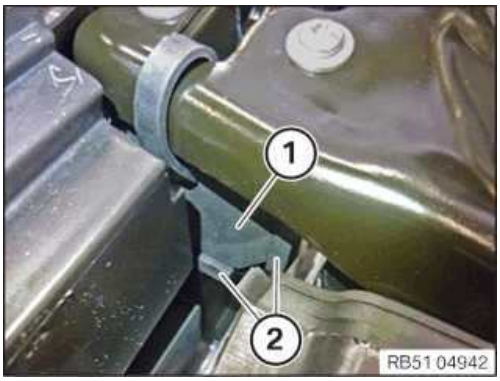
Screws M6x20		Tightening torque	11,8 Nm

- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

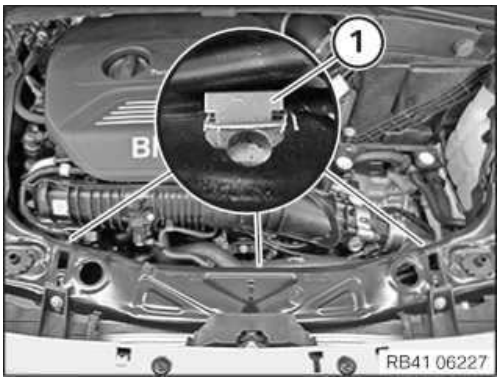
- Tighten down screws (2).



Air duct to upper connection

M6x20 screw		Tightening torque	11,8 Nm

- Tighten down screw (1).



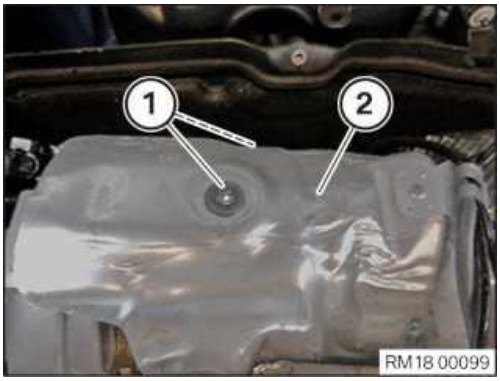
Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm

- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

cardiagn.com

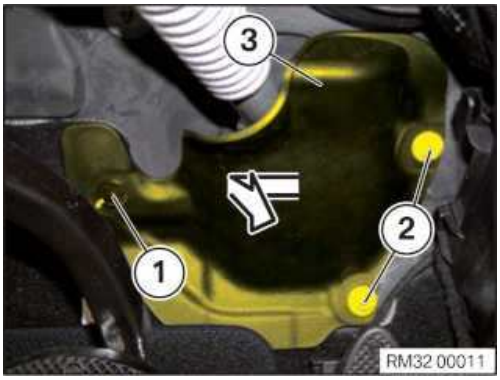
- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.



20 – Removing heat shield from top exhaust turbocharger

WARNING

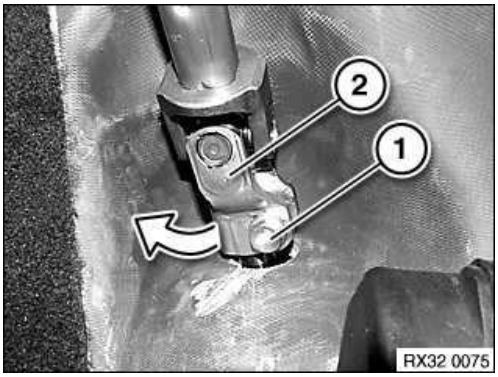
Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.

- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).



21 – Releasing lower steering shaft from steering gear

- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!

- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

22 – Securing radiator on left and right

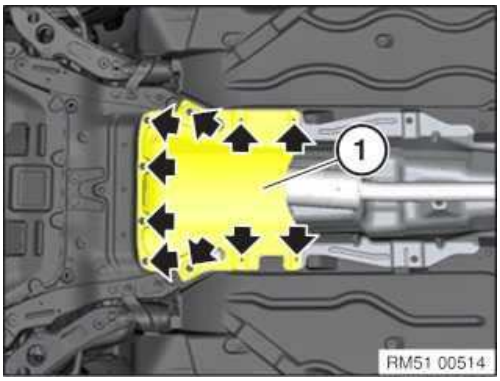
cardiagn.com

NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

23 – Removing both front wheels



▶ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

24 – If installed: Removing rear underbody protection

- Remove screws (arrows).
- Remove the rear underbody protection (1).

25 – Removing right underbody panelling

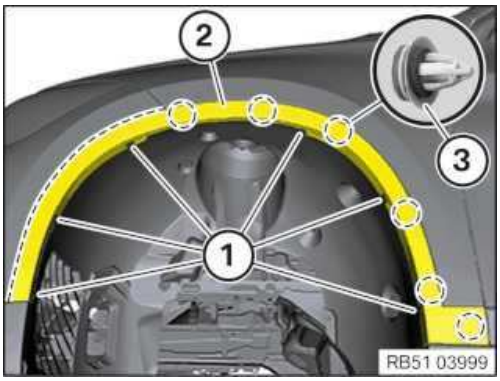
- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).

26 – Removing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

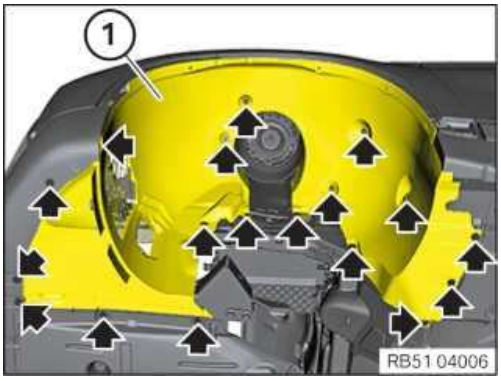
cardiagn.com



▶ **Remove the front wheel arch trim**

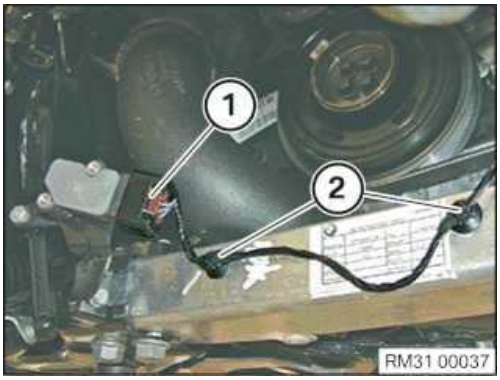
NOTICE

To provide a better overview: Schematic diagram with partially hidden components.



NOTICE

Description is for left component only. Procedure on the right side is identical.



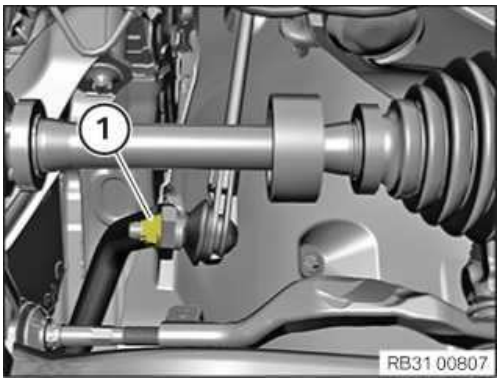
- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

▶ **Remove front wheel arch cover**

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

27 – With right installation: Detaching ride height sensor cable

- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.



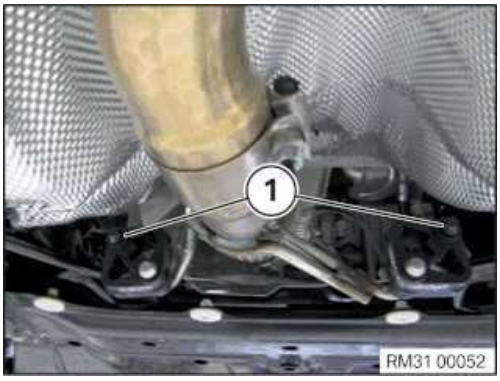
28 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Detach the anti-roll bar from the anti-roll bar link**

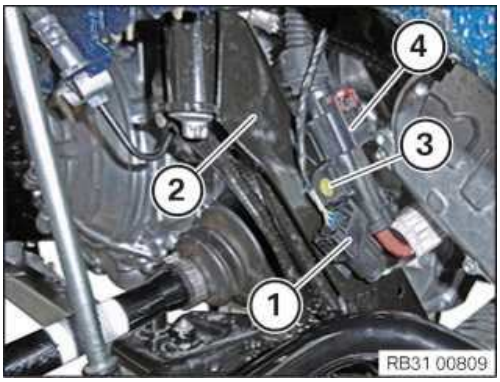
cardiagn.com



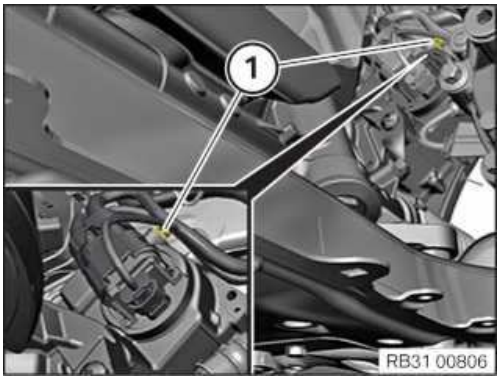
- Unfasten nut (1).

Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .



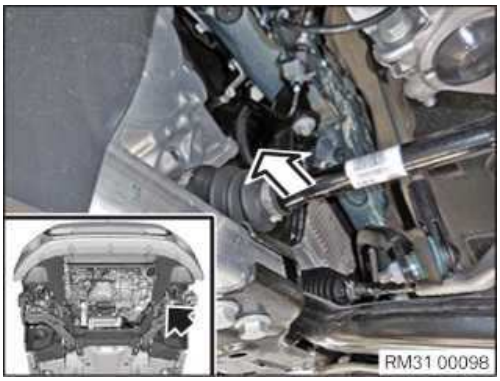
29 – Detaching rubber mount from front axle support



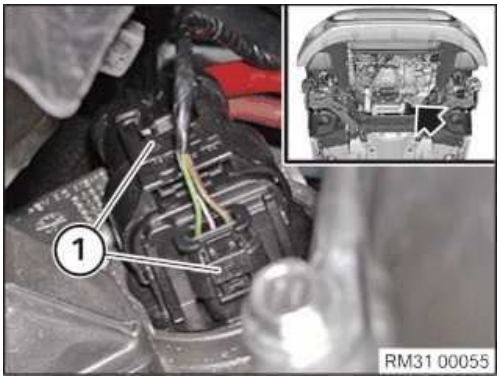
- Spray rubber mount (1) with lubricant and release from holder on front axle support.

30 – Disconnecting plug connections from steering gear

▶ **If installed: Detach connectors from the front axle carrier**

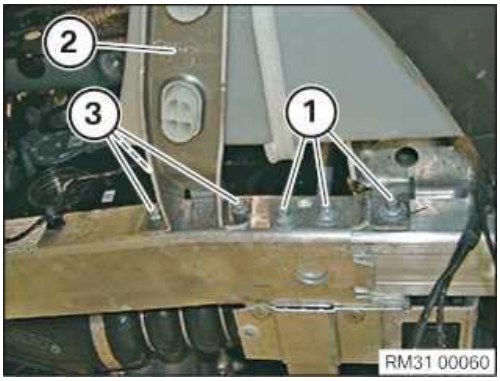


- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).



- Disconnect wiring harness (1) from steering gear.

cardiagn.com

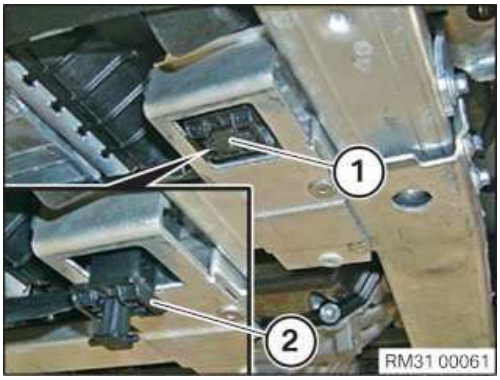


- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.

- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

31 – Releasing the mounted part from the front axle support



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

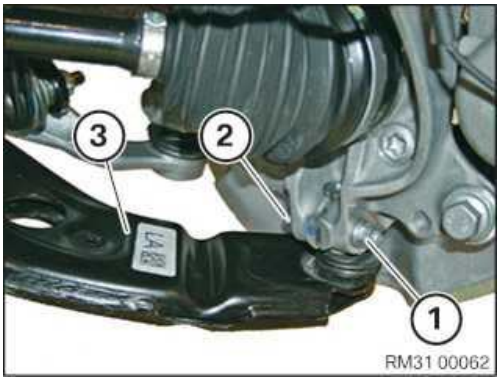
NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).

- Loosen screw (2) of the engine support (3) on the front axle (1).

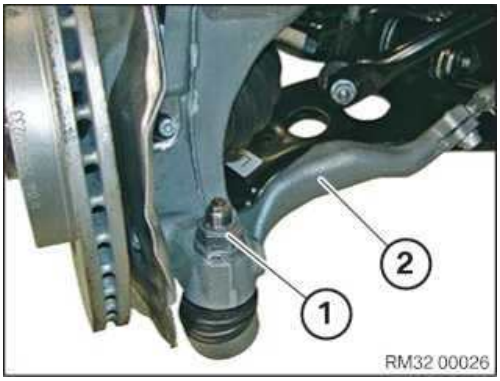
cardiagn.com



NOTICE

Perform the operations on the left and right side.

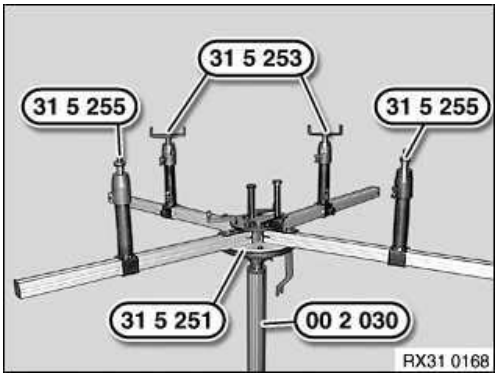
- Loosen screws (1).



32 – Detaching and removing front axle completely

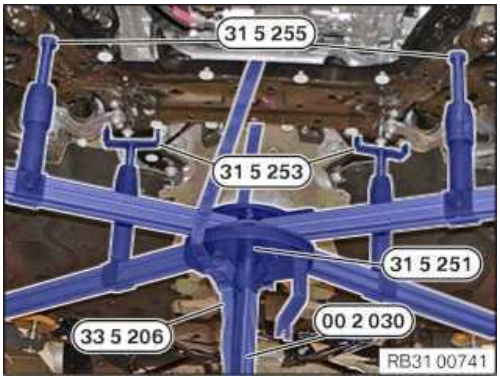
NOTICE

Perform the operations on the left and right side.



- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .

NOTICE

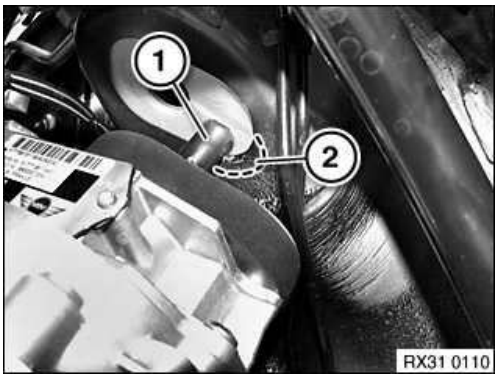


Perform the operations on the left and right side.

- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

Note: In a profile rail pair, two profile rails are connected to one another by gearing.

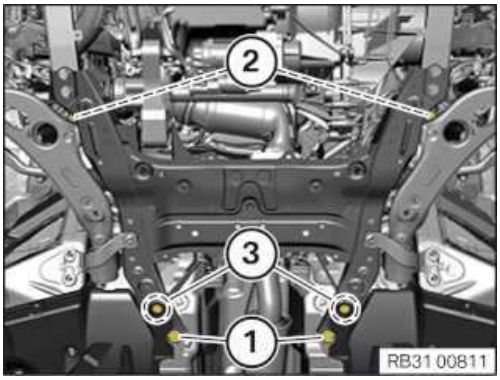


- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .

cardiagn.com

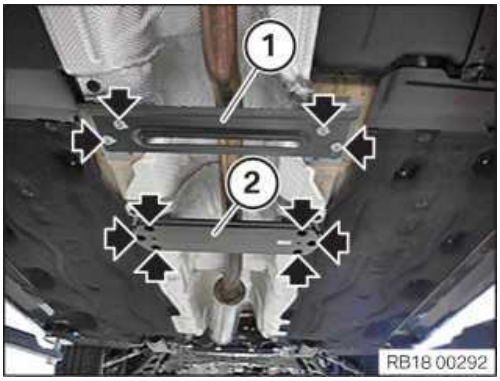


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



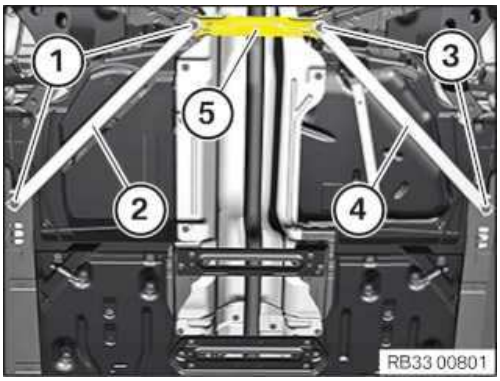
- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

33 – Removing the connecting support from the tunnel in front and back



- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

34 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.

cardiagn.com

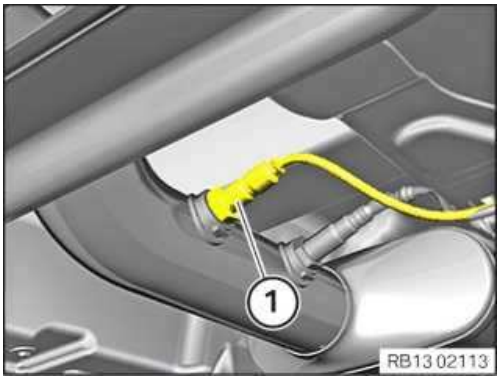
- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

35 – Remove exhaust system

WARNING

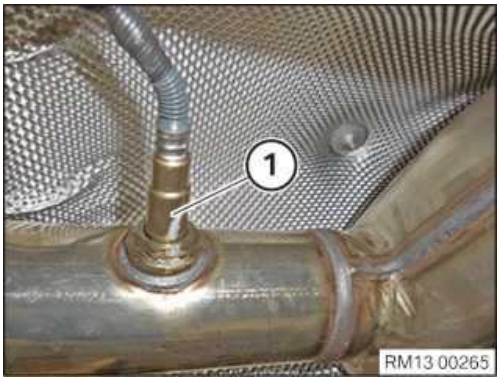
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

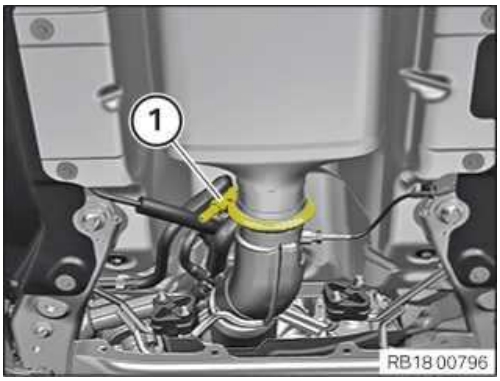
CAUTION



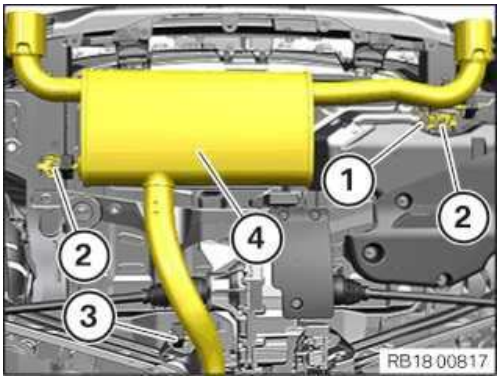
Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

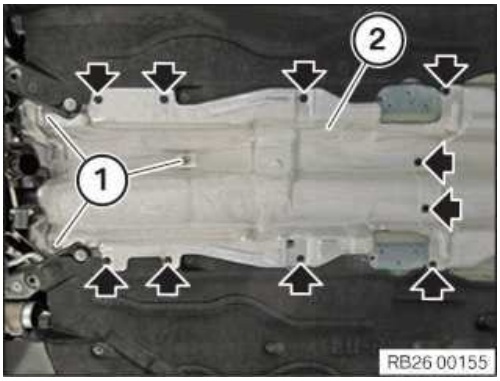


- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.

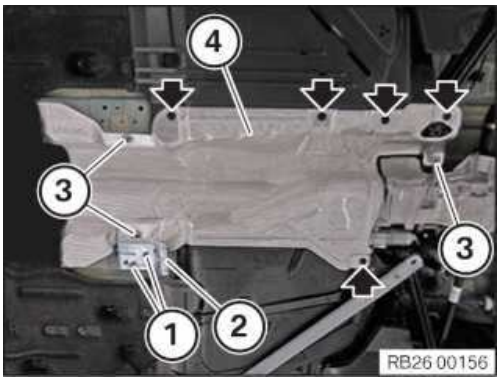


- Release the diesel particulate sensor (1), guide it out and set it aside.

cardiagn.com



- Loosen V-band clamp (1).



- Loosen screw (1).
- Loosen nuts (2).
- Release the rubber mount (3) of the exhaust system (4).
- Lower and guide out the exhaust system (4) with assistance of a second person and remove it.

36 – Remove front heat shield

- Remove screws (arrows).
- Loosen nuts (1).
- Guide the heat shield (2) out and remove it.

37 – Remove heat shield at rear.

- Loosen screws (1).
- Guide out and remove holder (2).
- Remove screws (arrows).
- Loosen nuts (3).
- Guide the heat shield (4) out and remove it.

38 – Remove propeller shaft

cardiagn.com

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

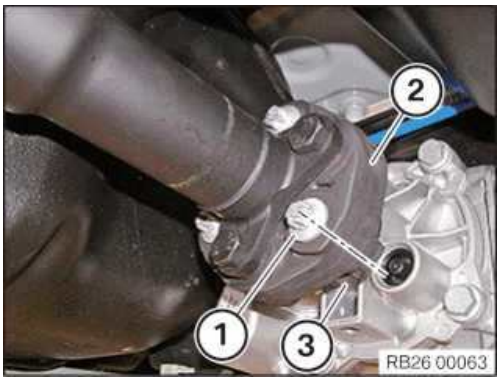
RISK OF DAMAGE

Damage to propeller shaft during removal.

Non-observance of the removal guidelines for the propeller shaft on the rear axle differential may cause severe damage.

- Do not disassemble the three-hole flange, flexible disc and propeller shaft. The three-hole flange to the rear axle differential is balanced with the flexible disc and propeller shaft.
- Loosen the recessed nut against the direction of travel in clockwise direction. The propeller shaft must be loosened on the recessed nut only and exclusively in the direction of rotation otherwise the anti-twist lock of the bi-hexagonal flange nut is damaged.
- In the event of a damaged anti-twist lock on the bi-hexagonal flange nut: Replace the rear axle differential.

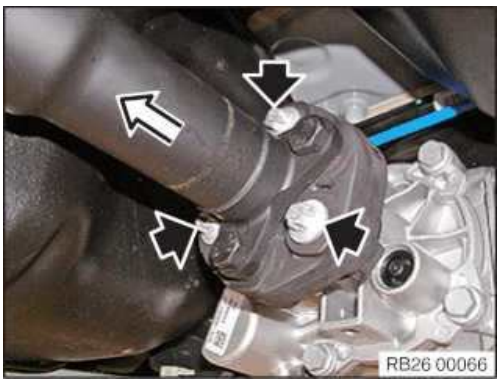
- Install the special too l between the front and rear propeller shaft.
- Make sure that the arrows on the special tool point forward in the direction of travel.



- Always support the propeller shaft (1) with a conventional jack.

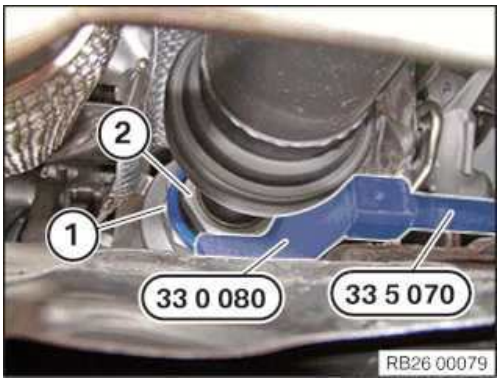
- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

cardiagn.com



TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.



- Mark the installation position of the screw connection (1), the flexible disc (2) and the three-hole flange (3) on the same level.
- Loosen the screw connection (1).

- Loosen screws (1).

- Remove screws (arrows).
- Guide the propeller shaft out in the direction of the arrow and set it aside.

RISK OF DAMAGE

Damage to the transfer box.

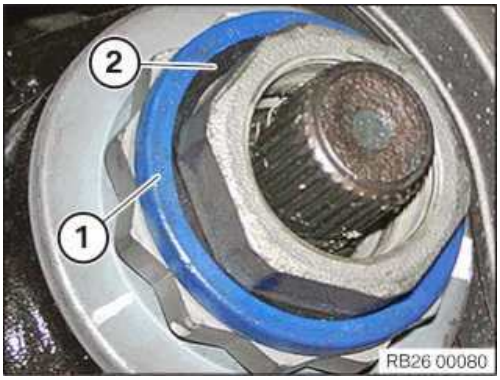
Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

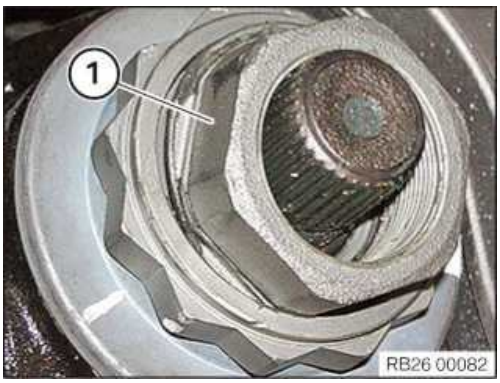
- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to detach the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



- Release the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.



cardiagn.com

- Thread the propeller shaft (2) out of the recessed nut (1) and remove.

- Thread the retaining clip (1) and the seal (2) out and remove.

- Thread out and remove the recessed nut (1).

39 – Removing starter motor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

cardiagn.com

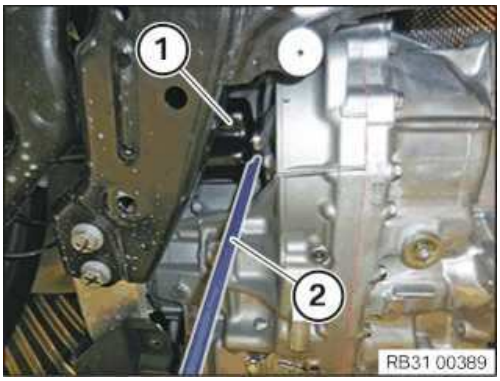
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

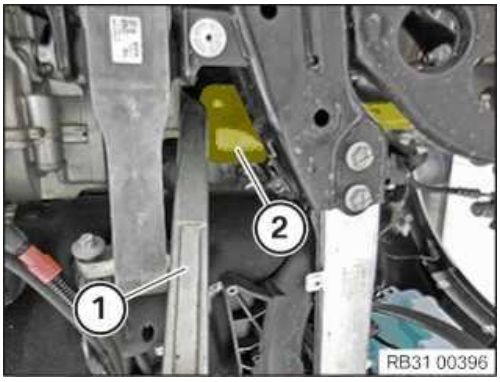
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Loosen screws (1).
- Feed out starter motor and remove.



40 – Partially removing the left output shaft

cardiagn.com

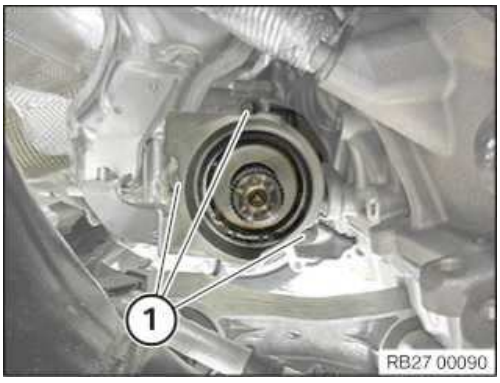
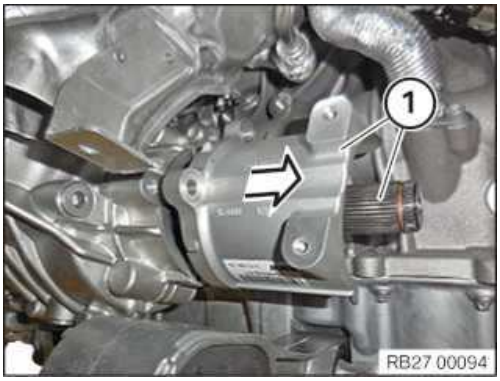
- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Tie up output shaft (1).

41 – Partially removing right output shaft

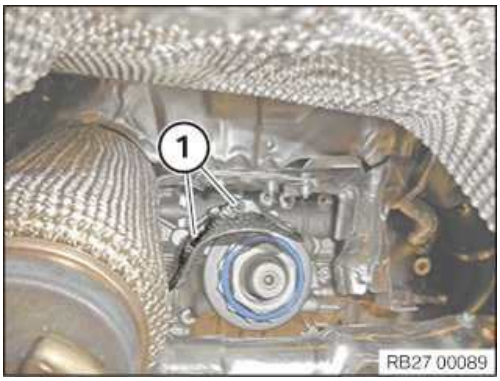


- Lever out the output shaft (2) with a mounting lever (1).
- Tie up output shaft (1).

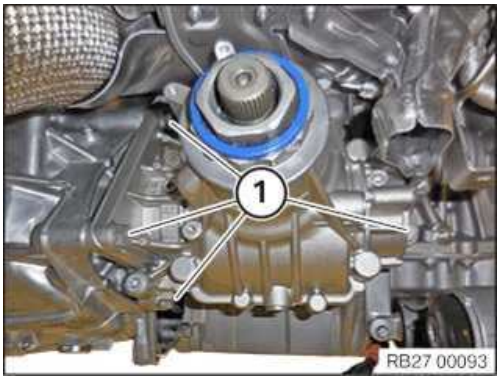


42 – Remove the intermediate shaft with the support tube

- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

43 – Remove transfer box (VTG)

cardiagn.com

- Loosen screws (1).
- Remove heat shield.

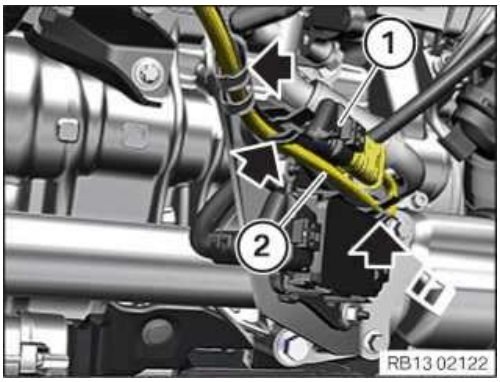
- Loosen screws (1).
- Remove the transfer box (VTG).

44 – Remove the monitoring oxygen sensor

WARNING

Hot surfaces.

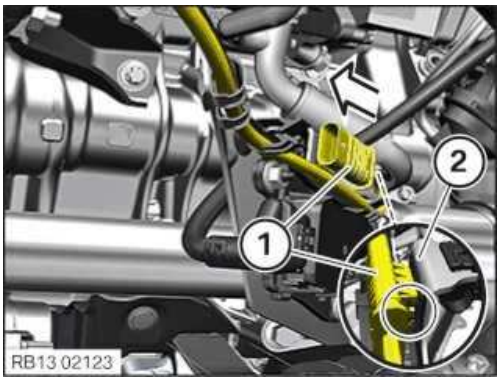
Risk of burning!



- Perform all work only on components that have cooled down.

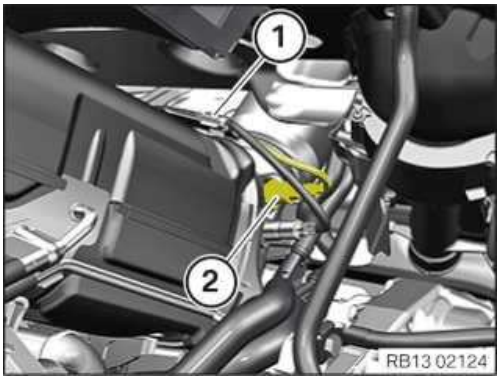
RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Feed oxygen monitor sensor cable (1) out of the clamps (arrows).

cardiagn.com

- Unlock the connector (1) in the marked area and disconnect it from the holder (2) in the direction of arrow.

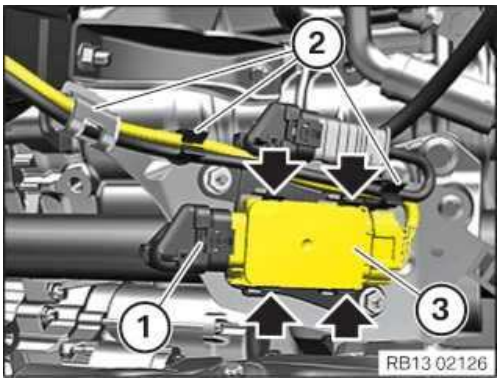
- Guide the cable of the monitoring oxygen sensor (2) out of the clamp (1).
- Release the monitoring oxygen sensor (2) using special tool **0 491 074 (11 7 020)**.
- Remove the monitoring oxygen sensor (2).

45 – Removing the nitrogen oxide sensor before SCR catalytic converter

WARNING

Hot surfaces.

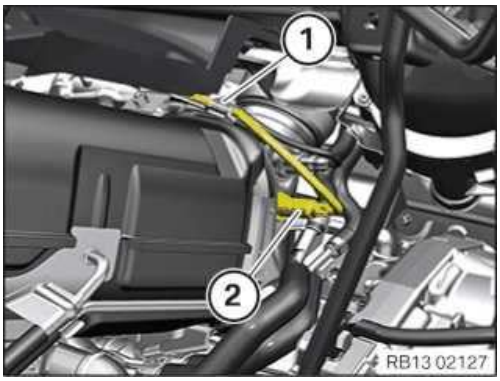
Risk of burning!



- Perform all work only on components that have cooled down.

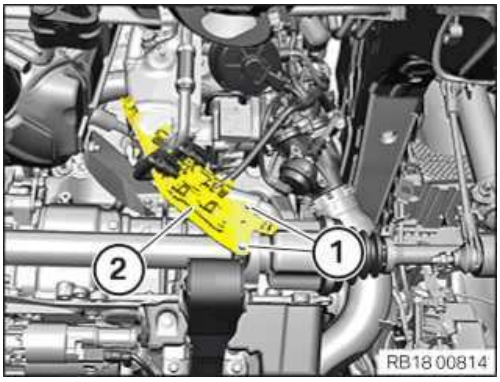
RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Slide the cable of the nitrogen oxide sensor evaluation electronics (3) out of the clamps (2) and remove.
- Unlock (arrows) and remove the evaluation electronics for the nitrogen oxide sensor (3).

cardiagn.com

- Slide the cable of the nitrogen oxide sensor before the SCR catalytic converter (2) out of the clamps (1) and remove.
- Detach the nitrogen oxide sensor before the SCR catalytic converter (2) using the special tool **0 491 074 (11 7 020)**.
- Guide out and remove the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

46 – Remove holder for oxygen sensor

- Loosen screws (1).
- Thread out the holder (2) for the oxygen sensor and remove.

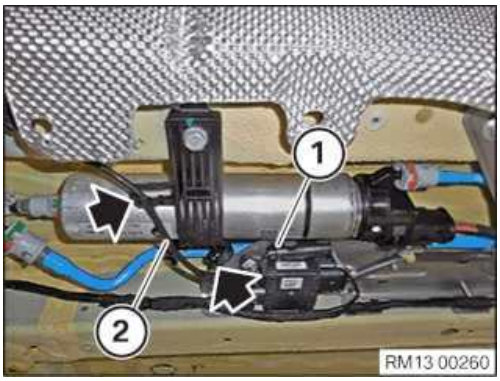
47 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

- Unlock and loosen connector (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

- Loosen the cable clip (1).

- Loosen exhaust temperature sensor (1).
- Feed out and remove exhaust temperature sensor (1).

48 – Removing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

WARNING

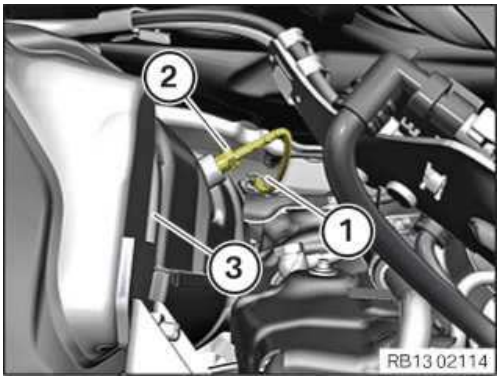
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

- Unlock and loosen connector (1).
- Uncover the exhaust temperature sensor cable.

- Guide the exhaust temperature sensor cable (2) out of the clamp (1) and place it to one side.
- Release the exhaust temperature sensor (2) with conventional tools .
- Feed out and remove the exhaust temperature sensor (2) from the diesel particulate filter (3).

49 – Remove the exhaust temperature sensor on the diesel particulate filter

WARNING

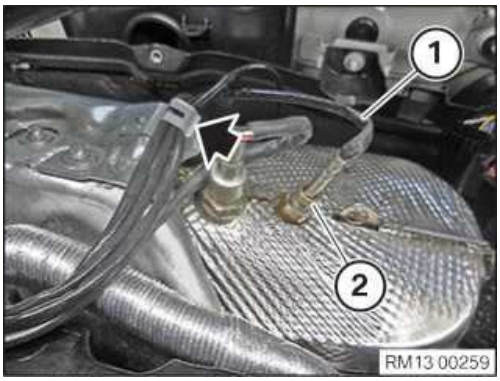
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect connector (1).
- Put the cable of the exhaust temperature sensor to one side.

cardiagn.com

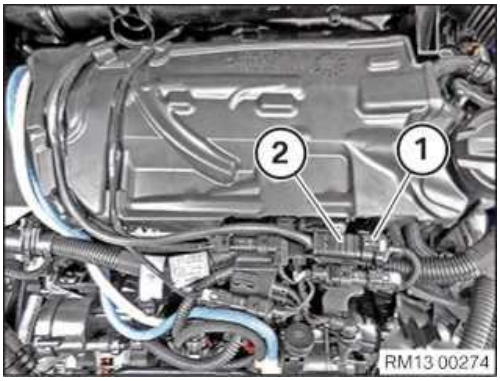
- Guide cable (1) of the exhaust temperature sensor out of the clamp (arrow) and remove it.
- Loosen exhaust temperature sensor (2).
- Feed out and remove exhaust temperature sensor (2).

50 – Remove the control sensor

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock plug connection (1) and disconnect.
- Detach the connector (2) from the holder .
- Release the front oxygen sensor cable.

- Detach the control sensor (1) with the special tool .
- Feed out and remove the control sensor (1).

cardiagn.com

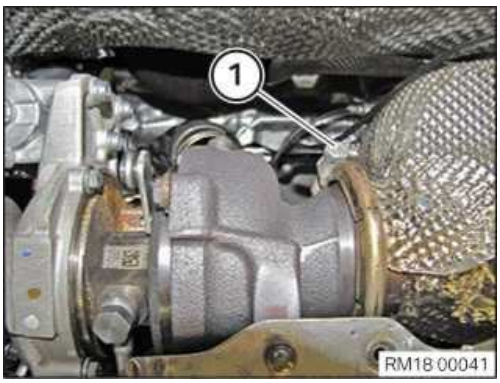
51 – Removing the diesel particulate filter

WARNING

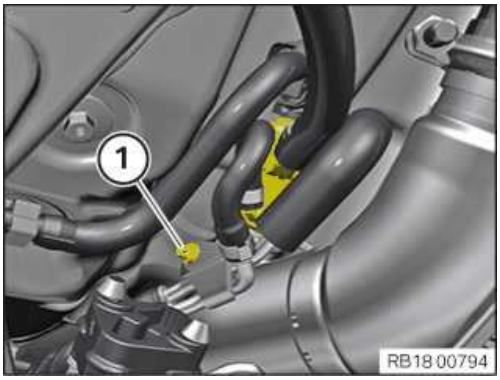
Hot surfaces.

Risk of burning!



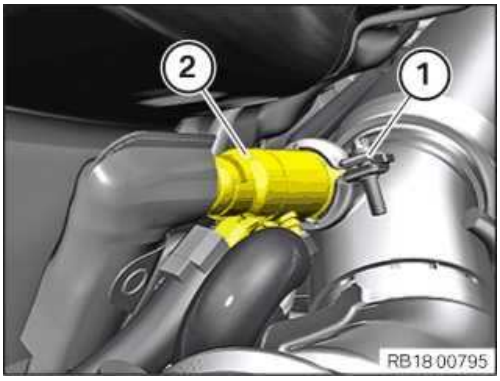
- Perform all work only on components that have cooled down.

CAUTION



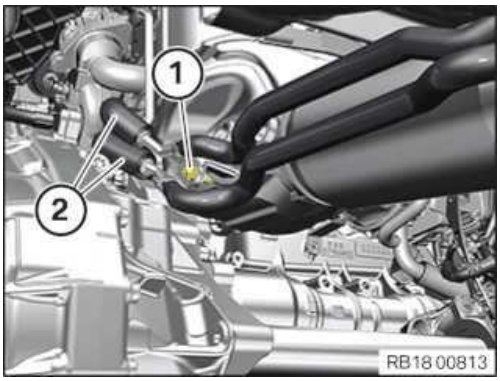
Heavy component.

Heavy components can lead to injury or damage.



- Remove and install heavy components with the aid of another person/other persons.

- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



- Loosen screw (1).

- Loosen V-band clamp (1).
- Remove the SCR metering module (2) and set it aside.

cardiagn.com

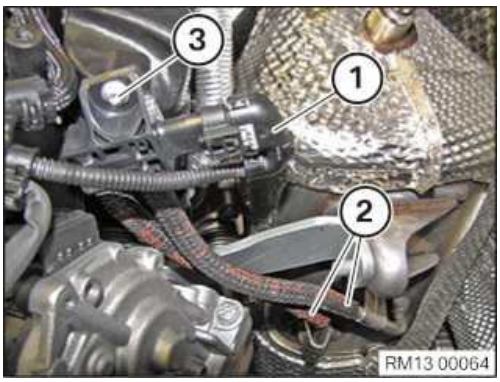
- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.



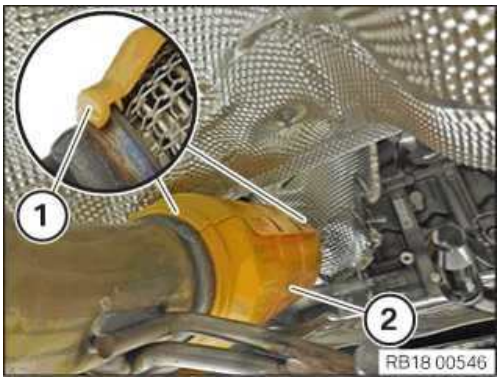
▶ **Remove differential pressure sensor**

RISK OF DAMAGE

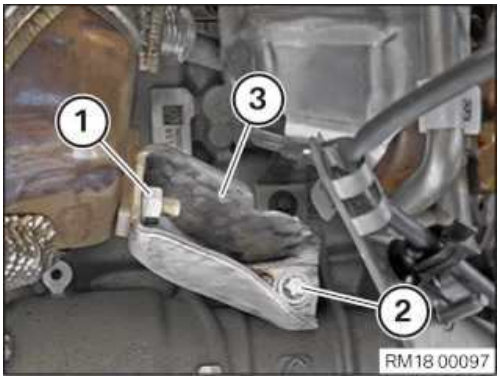
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.



- Loosen nuts (1).

cardiagn.com

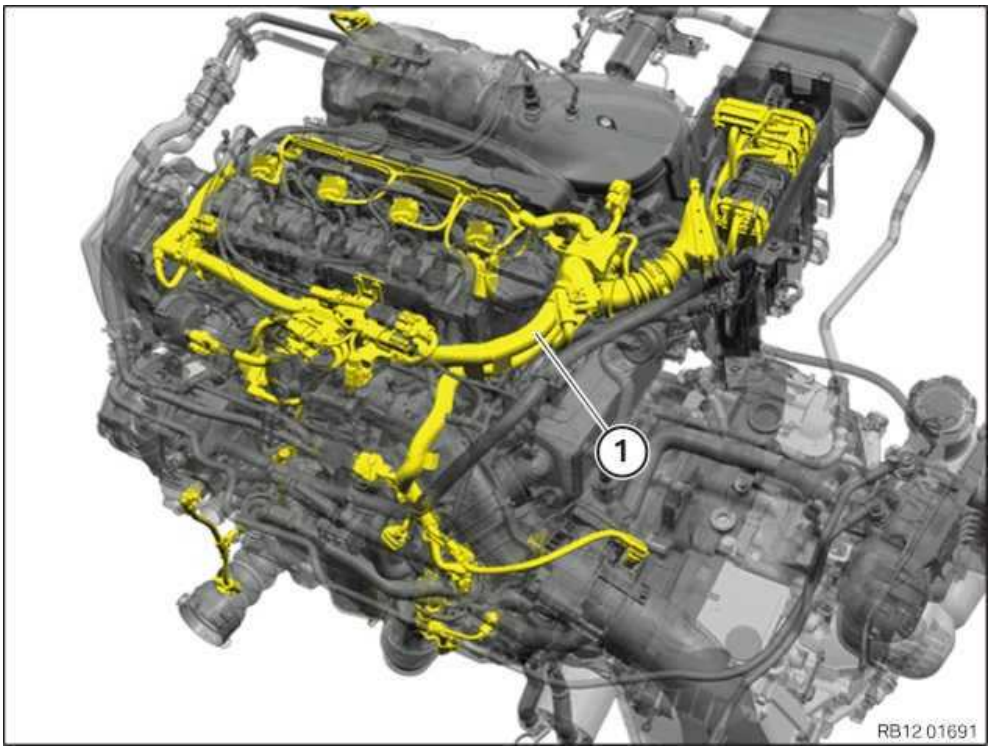
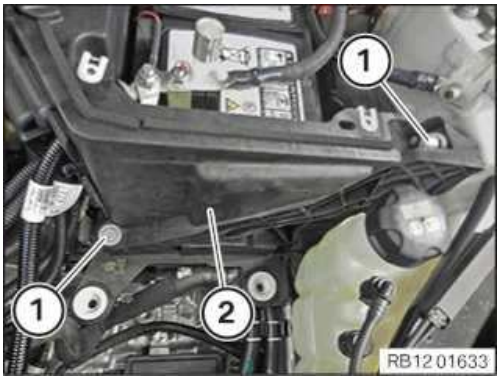
- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.

- Unfasten nut (1).
- Loosen screw (2).
- Remove holder (3).

- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).



- Feed out diesel particulate filter (1) toward the bottom and remove.



52 – Releasing the wiring harness section for the intake plenum

cardiagn.com

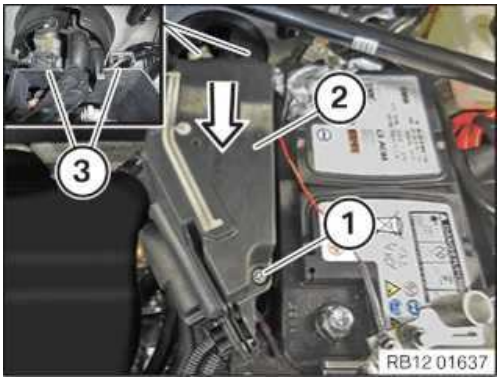
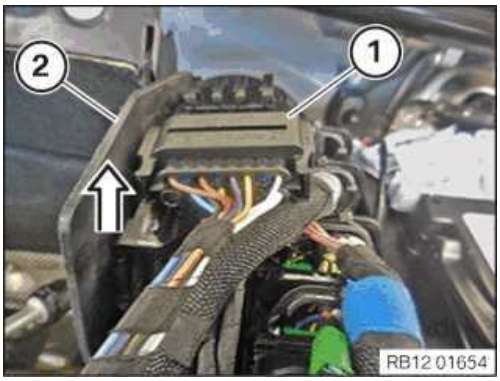
Overview: Wiring harness section for the engine

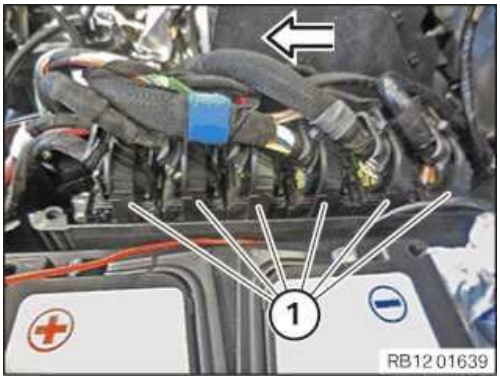


1 Wiring harness section for the engine

- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

cardiagn.com

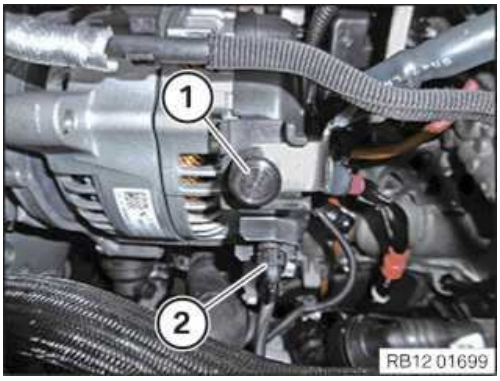
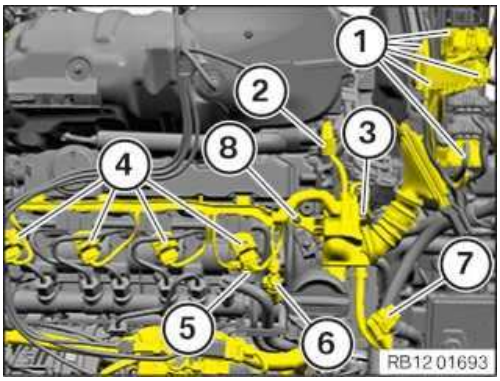
- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).

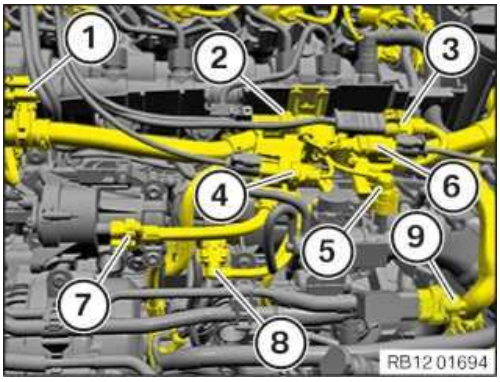


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

- Unlock and loosen connector (1).



- Loosen screws (1).



- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.

cardiagn.com

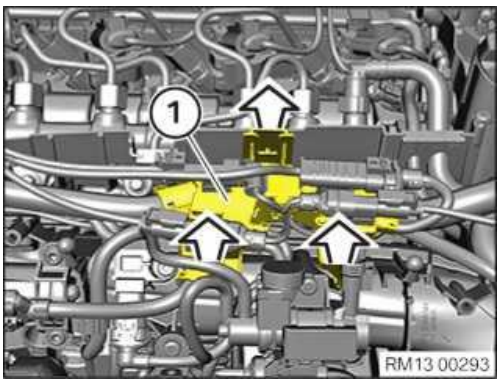
- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).



- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock and disconnect the connector (3) from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

▶ **Removing the cable clips from the intake plenum**

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

53 – Removing the intake plenum

cardiagn.com

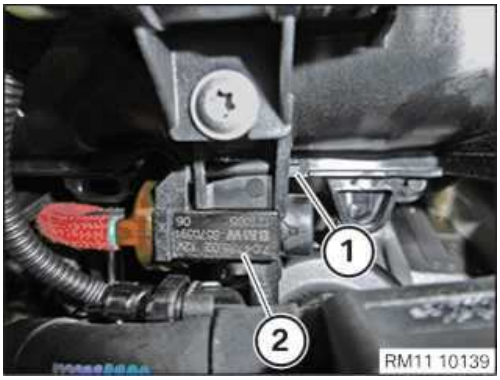
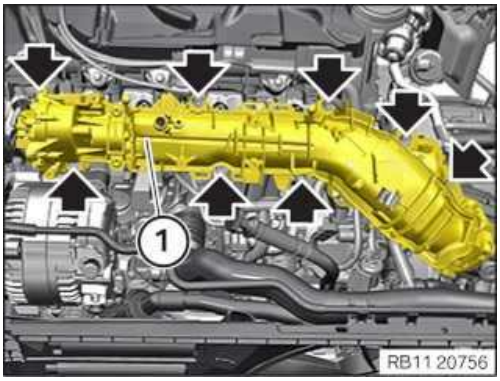
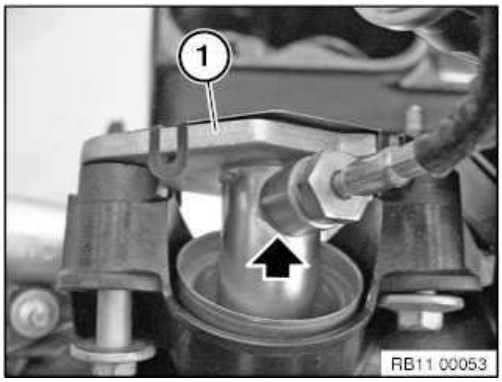
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

cardiagn.com

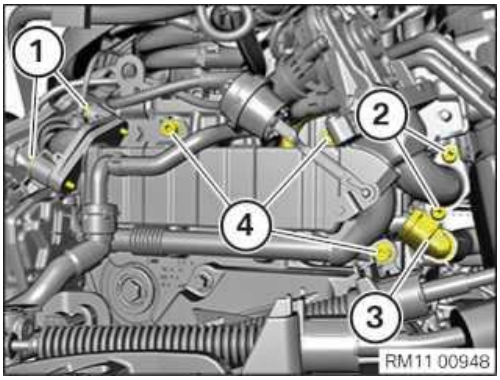
54 – Removing the exhaust-gas recirculation cooler

WARNING

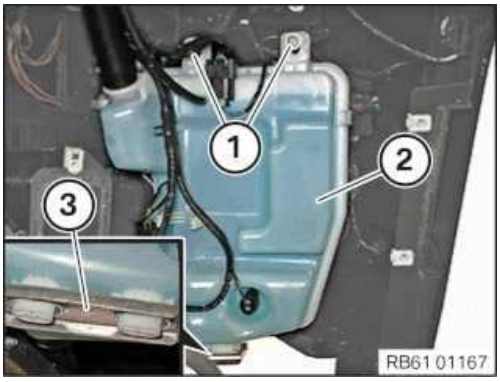
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

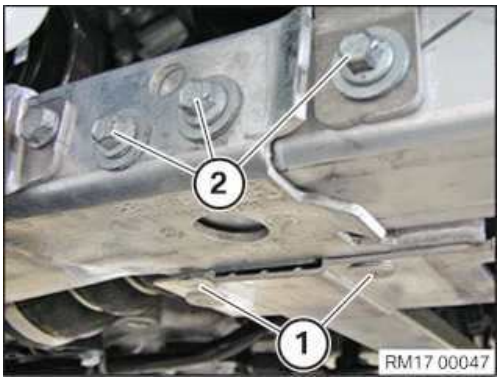
- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

55 – Remove the washer fluid reservoir from the fixture

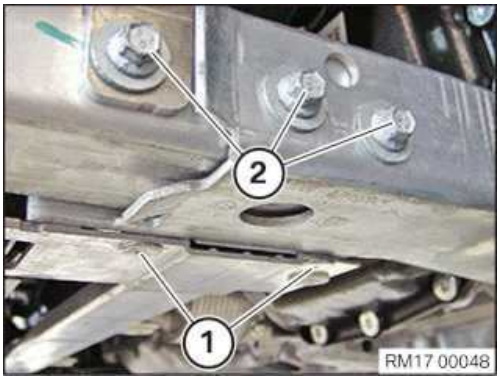
- Loosen screws (1).
- Guide the washer fluid reservoir (2) up and out of the fixture (3) and set it aside.

56 – Removing the right charge air duct between the exhaust turbocharger and the charge air cooler



WARNING

Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

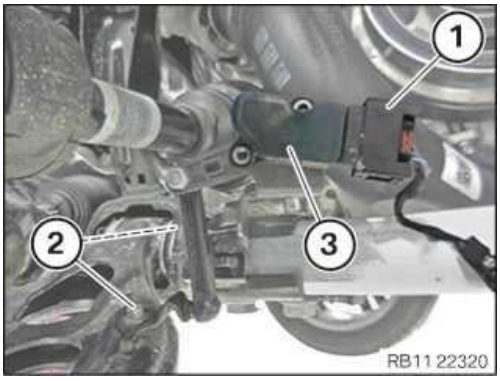
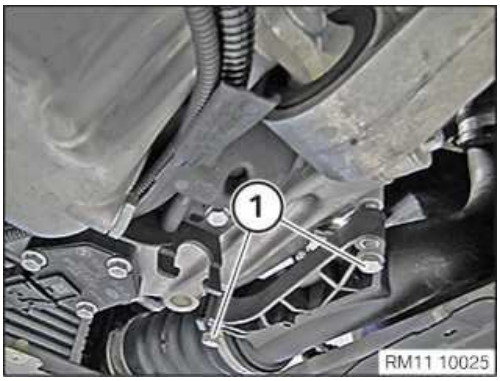
- Undo screws (2) at front left.
- Drill out blind rivets (1) at front left.

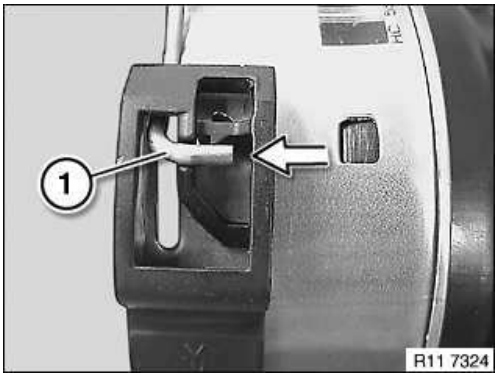


- Undo screws (2) at front right.
- Drill out blind rivets (1) at front right.

- Unlock locking pins (1).
- Thread out and remove locks (2).
- Thread out and remove cross connection (3).



- Release the screws (1) on the right front axle support.



- **If installed:**
- Unlock and release plug connection (1).
- Loosen screws (2).
- Feed out the ride height sensor (3) and remove.

cardiagn.com

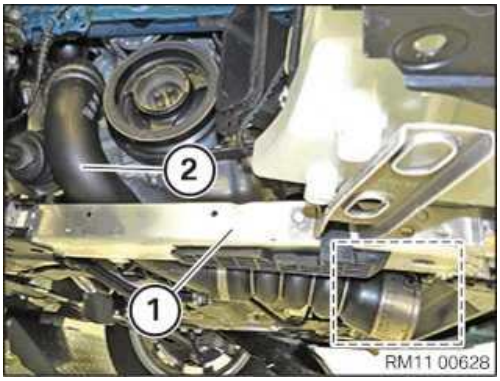
- Release screws (1) of charge air duct on right oil sump.



- Unlock lock (1).

  The lock (1) must engage in the bracket during unlocking (arrow).

- Unlock and release the charge air duct (1) on the charge air cooler.

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (2) in the **marked** area towards the bottom and set it aside.

- Unlock and detach the locks (1) on both sides.
- Feed out the charge air duct (2) on the exhaust turbocharger in the direction of the arrow and set it aside.

cardiagn.com

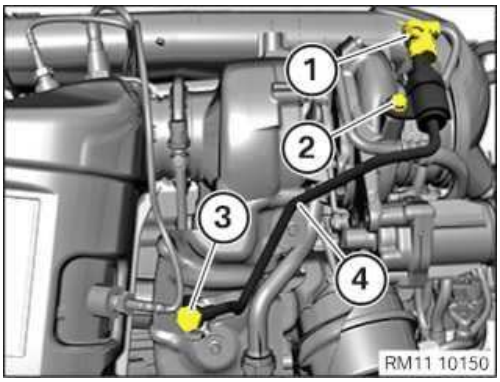
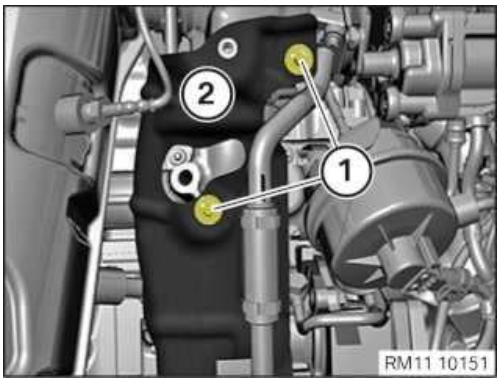
- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (1) in the direction of arrow between the side member and the deformation element and remove.



57 – Remove the heat shield from the exhaust turbocharger at the bottom

WARNING



Hot surfaces.

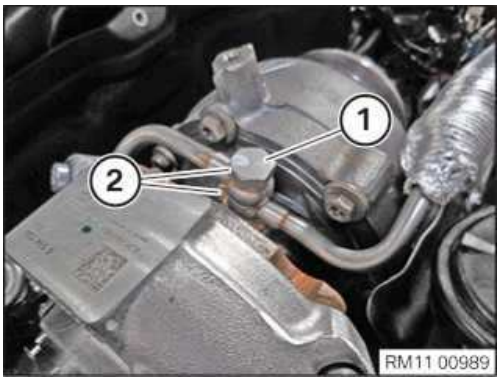
Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

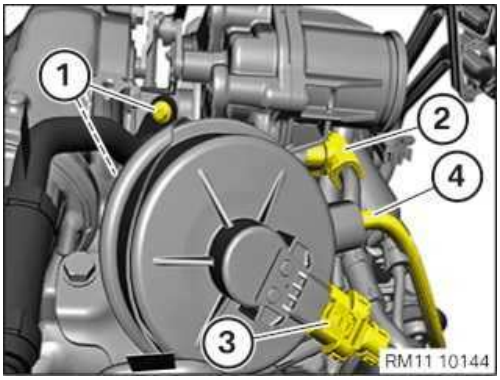
- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).

58 – Removing the low-pressure stage turbocharger



WARNING

Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

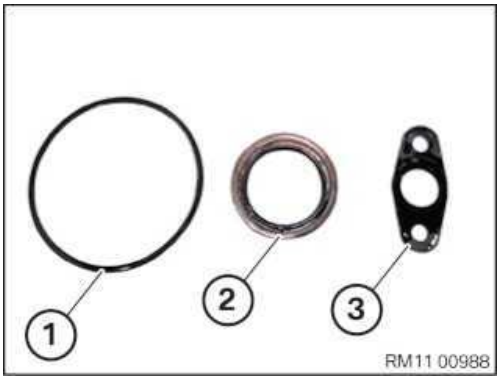
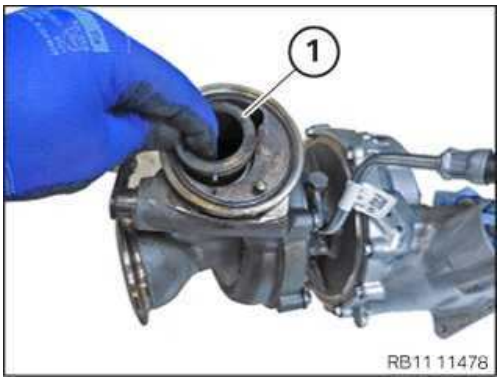
- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.



- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.

- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).



- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

cardiagn.com

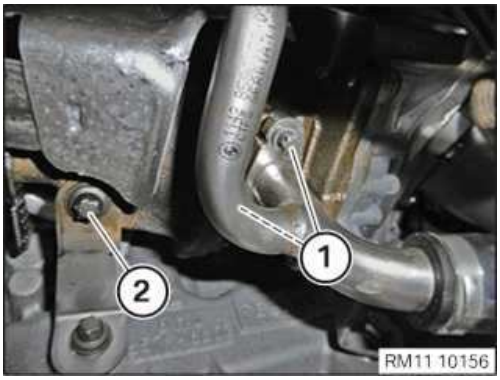
- Remove the spacer ring (1).

59 – Removing the high-pressure stage exhaust turbocharger

WARNING

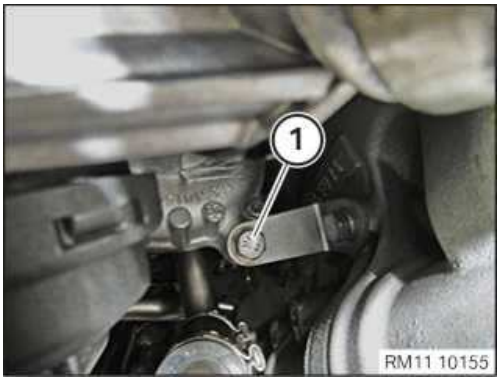
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

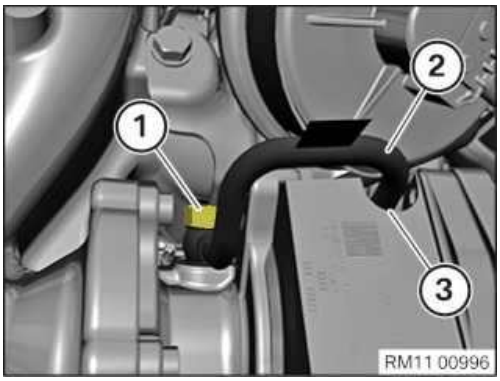
CAUTION



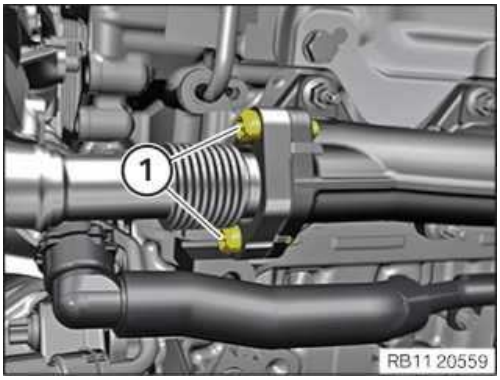
Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).



- Release screw (1) from the right wheel arch.

cardiagn.com

- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

- Loosen screws (1).

- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

60 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

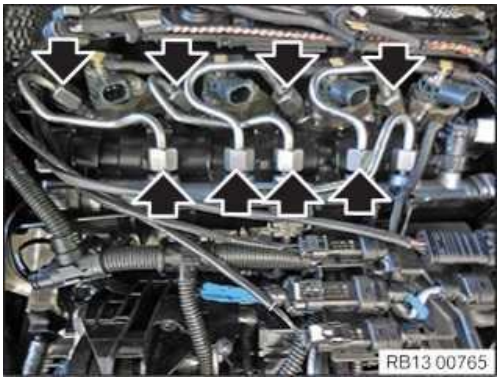
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION



If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

61 – Remove leakage oil lines

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

Hot surfaces.

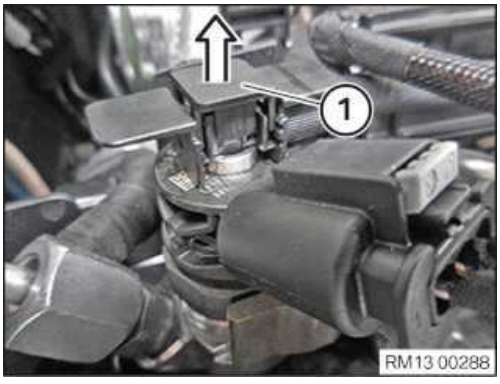
Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Contaminant or foreign body.

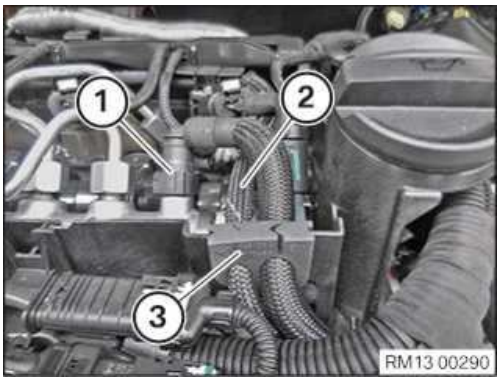
Contamination can result in malfunctions, operating failure or leaks.



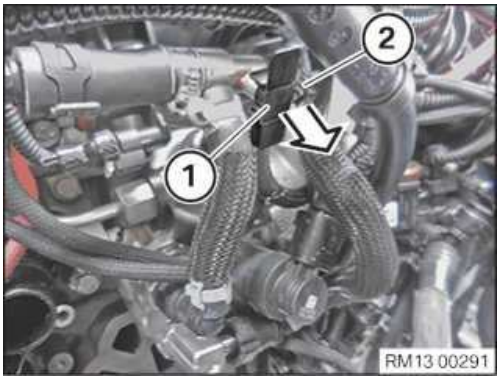
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the connectors (arrows) and disconnect.



- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

cardiagn.com

- Unlock and loosen fuel line (1) and set it aside.
- Guide the leakage oil line (2) out of the rubber grommet (3) and set it aside.

- Release lock (1) in direction of arrow.
- Feed out leakage oil line (2) and remove.

62 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

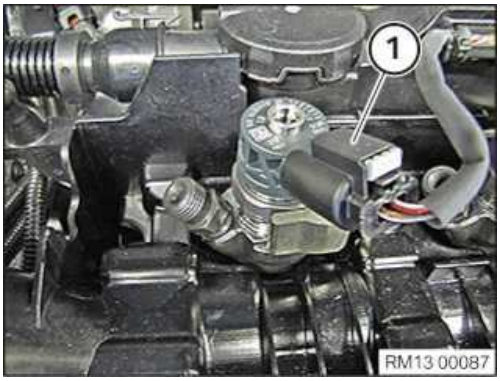
RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

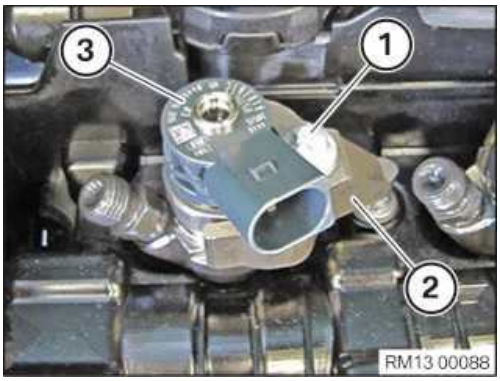
RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

- Unlock and disconnect connector (1).

cardiagn.com

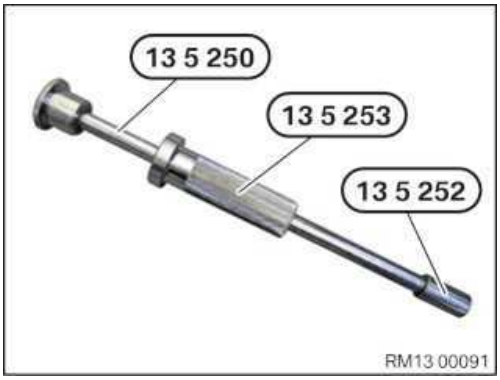
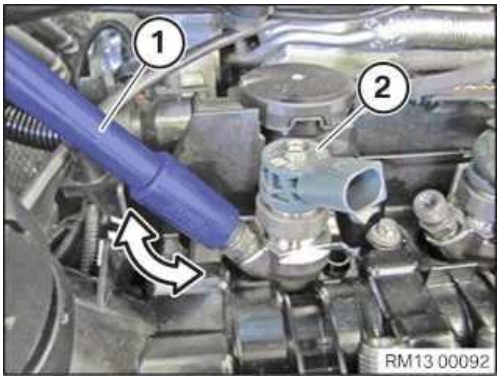
- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.



▸ **Loosen stuck injectors**

RISK OF DAMAGE

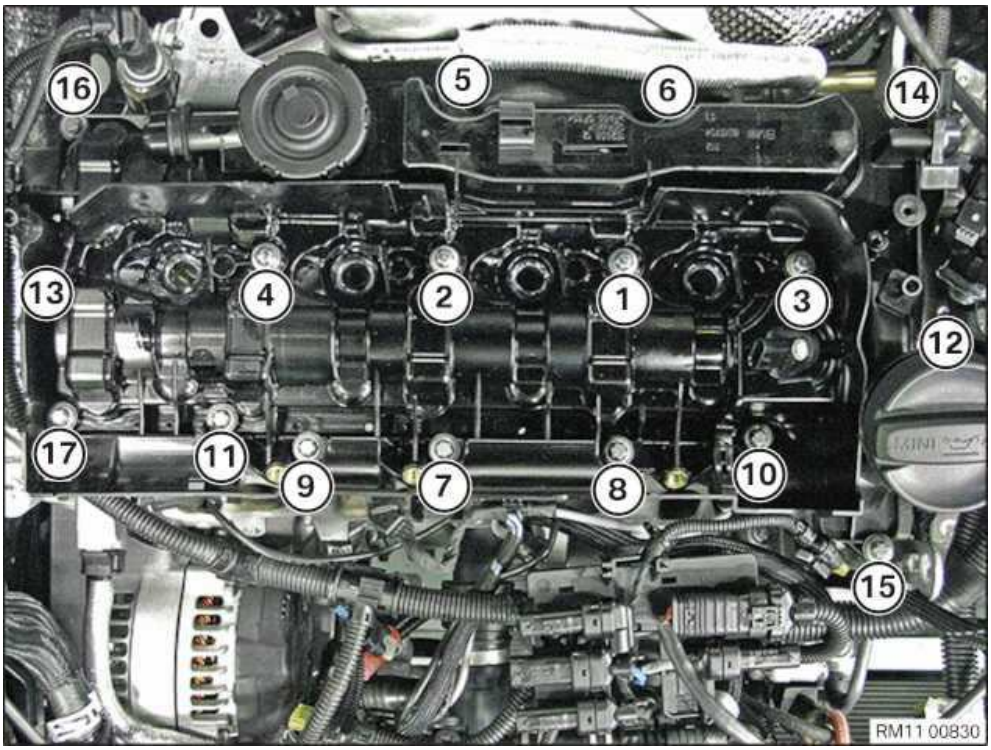


Contaminant or foreign body.

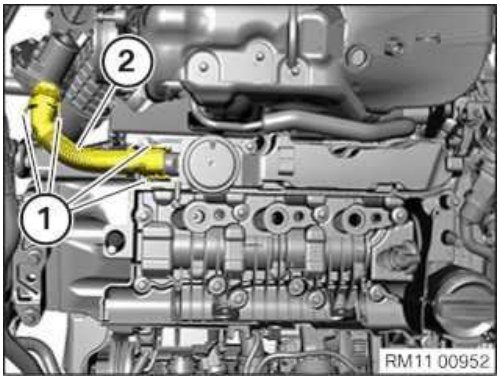
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)** back onto the special tool **0 493 321 (13 5 250)**.



- Screw the special tool (1) **0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1) **0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.



63 – Removing the cylinder head cover

cardiagn.com

Overview: Screw connection of the cylinder head cover

1 to 16 screws of the cylinder head cover.

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

cardiagn.com

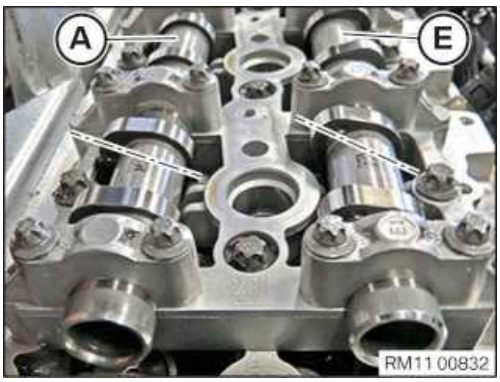
- Remove protective cap (1) from oil sump.

- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE



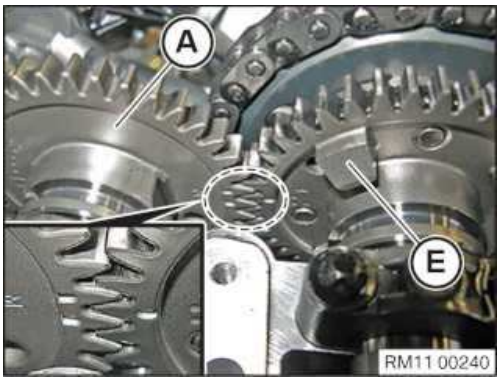
Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

cardiagn.com

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

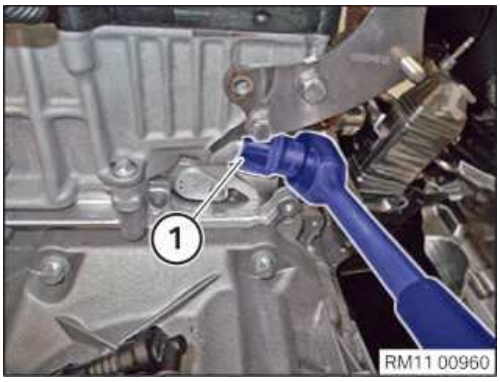
TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).



65 – Remove chain tensioner piston

WARNING

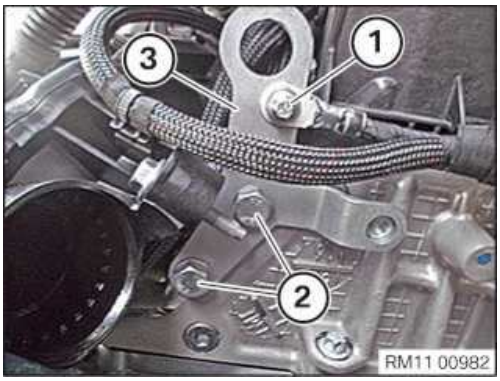
Hot surfaces.

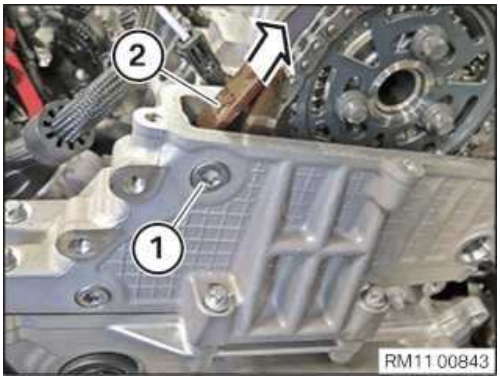
Risk of burning!

- Perform all work only on components that have cooled down.



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Remove the chain tensioner piston (1).

66 – Remove the timing chain guide rail

cardiagn.com

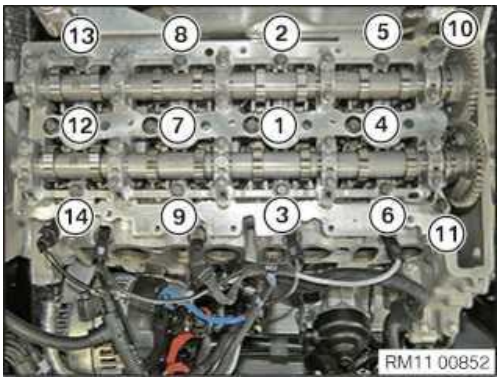
- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).



- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

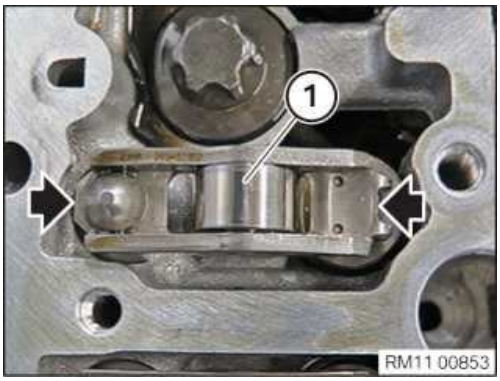
67 – Removing the camshaft sprocket on the intake camshaft

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

68 – Removing the camshaft support

- Evenly loosen all screws in a sequence from (14) to (1).
- Loosen and remove all screws in a sequence from (14) to (1).
  Both camshafts can be removed with the camshaft carrier.
- Remove the camshaft support including camshafts towards the top.

69 – Remove roller cam followers



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

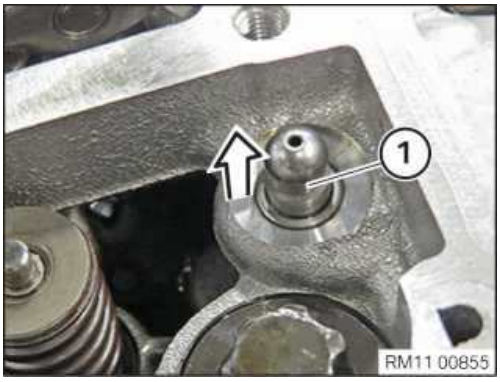
RISK OF DAMAGE

Damage to the engine.

If the classification of the roller cam followers is ignored, this can lead to engine damage.

- Observe the classification of the roller cam followers.
- Always reuse used roller cam followers at the same position.

- Remove the roller cam follower (1) and place it onto the special tool **0 495 105 (11 4 480)**.
- Repeat the process for all roller cam followers.



70 – Removing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.

71 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

cardiagn.com

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool or conventional tools.
- Feed out preheating elements and remove.

72 – Remove cylinder head.

cardiagn.com

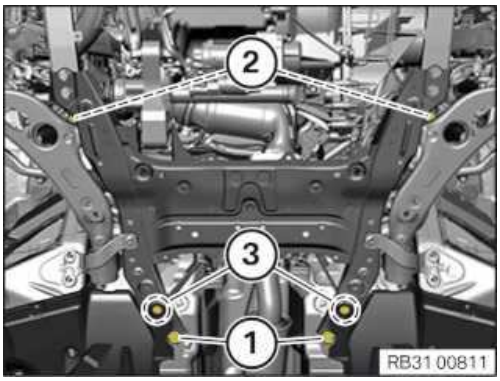
CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

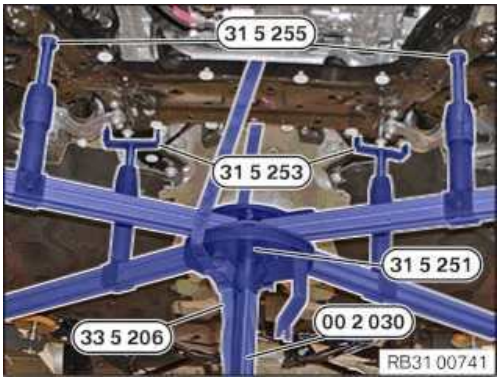
- Position front axle support.
- Bend the underbody panelling to the side in area (3).
- Raise front axle support.
- When raising, insert the charge air cooler into its rubber mount on the transmission cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

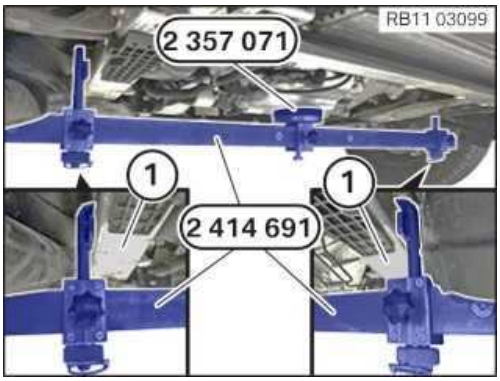
- Tighten down screws (2).



Front axle support, front to body

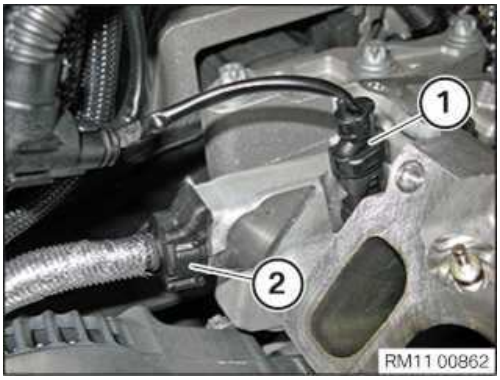
M12 screw	Renew screw.	Tightening torque	108 Nm

- If applicable, tighten the screws in area (3).



Underbody protection to body

Screw		Tightening torque	3 Nm



- Remove special tool from special tool .
- Lower the universal jack **0 490 133 (00 2 030)** with the special tool and set it aside.

cardiagn.com

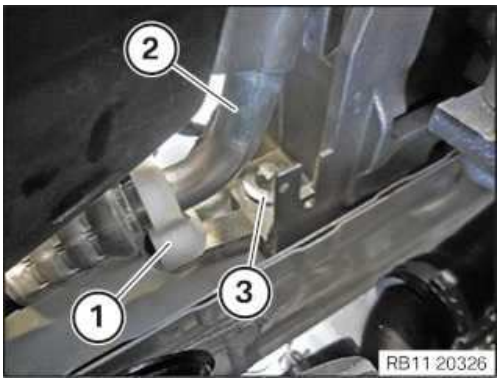
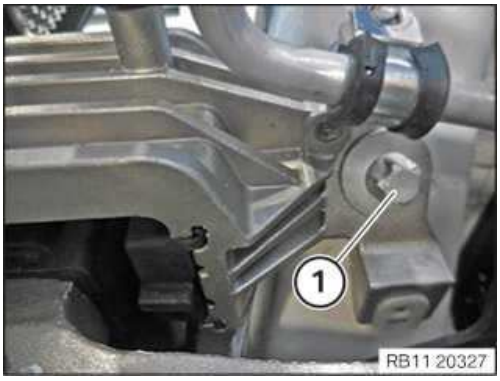
- Prepare special tool together with the special tool **2 357 071**.
- Attach special tool to front axle support and align special tool **2 357 071** correctly under the oil sump and then tighten.
- Turn special tool at adjusting screw uniformly upwards, until the special tool **2 357 071** makes contact with the oil sump.
- Tighten all adjusting screws of special tools and **2 357 071**.



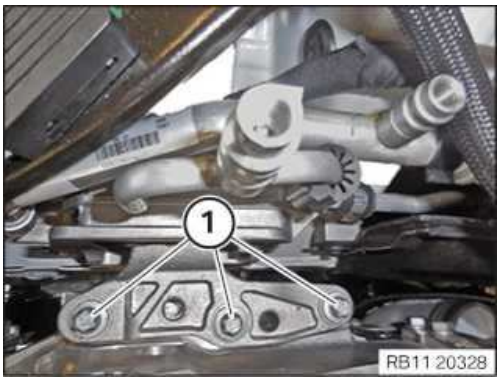
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

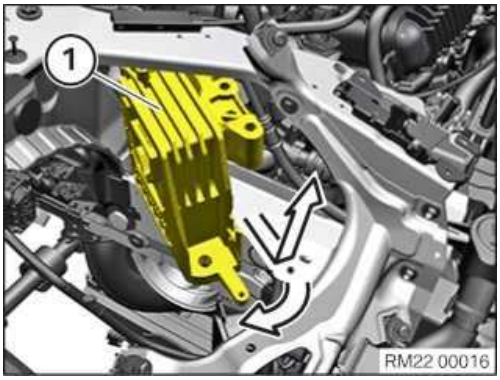


- Release the connector (1) from the coolant temperature sensor.
- Unlock and loosen coolant line (2).

- Loosen screws (1).
- Feed out the heat shield (2) and set it aside.



- Unlock and loosen holder (1).
- Feed out the refrigerant line (2) and put to one side.
- Loosen screw (3).



- Loosen screw (1).

cardiagn.com

- Loosen screws (1).

- Turn engine mount (1) in direction of arrow and remove upwards.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).

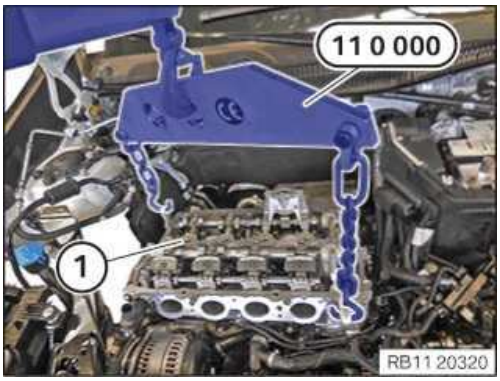
- Loosen the cylinder head bolts in the sequence from (10) to (1).
- Remove cylinder head bolts (1) to (10) with washers.



- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm

cardiagn.com

RISK OF DAMAGE

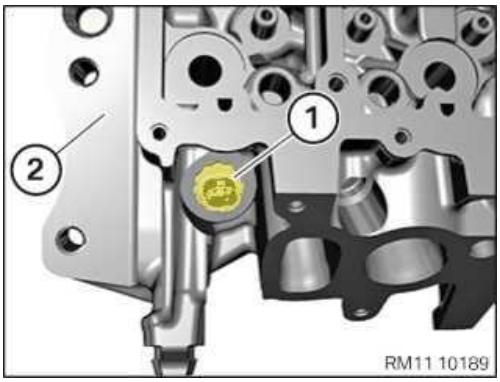
Damage to the guide rails.

Large amounts of force may damage the guide rails of the timing chain.

- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

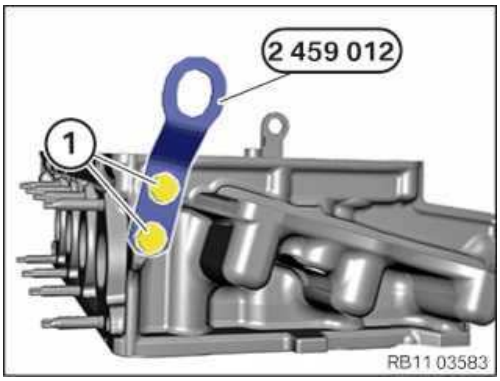
- **Carefully** guide out the cylinder head (1) with the engine lifter and the special tool **0 490 561 (11 0 000)** and remove.



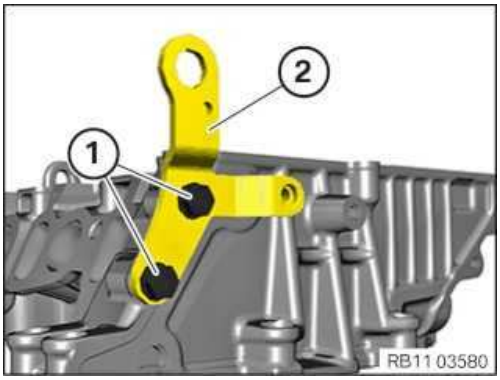
- Mount the cylinder head (1) on the special tool **0 494 362 (11 9 000)**.

MAIN WORK

73 – replace cylinder head



- Unscrew the preheating elements with special tool .

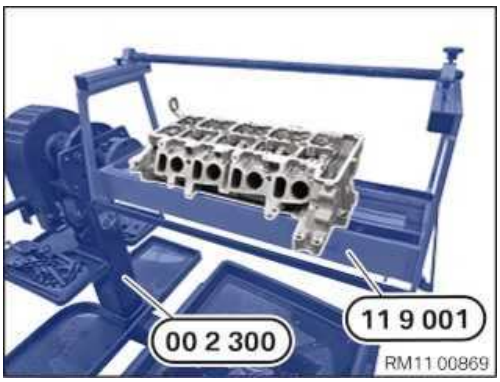


- Detach coolant temperature sensor (1) on cylinder head (2).

cardiagn.com

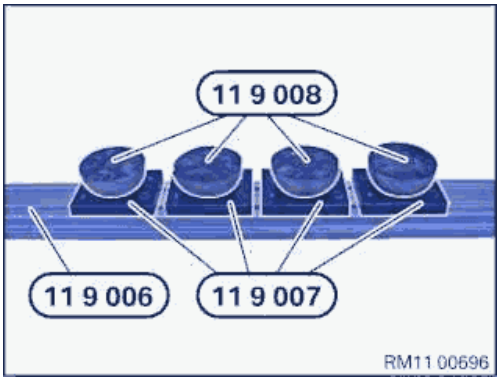
- Loosen screws (1).
- Remove special tool .

- Loosen screws (1).
- Remove mounting lug (2) from cylinder head.



▸ **Remove all valve springs**

RISK OF DAMAGE

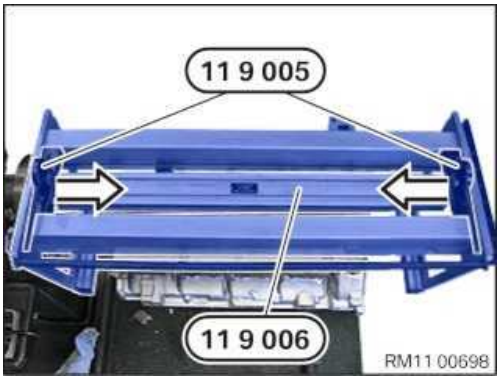


Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

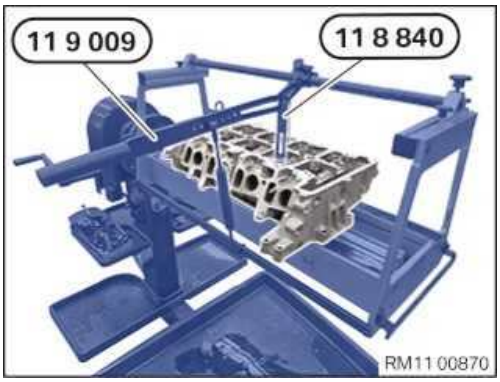
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Mount and screw the cylinder head onto the special tools **0 494 366 (11 9 001)** and **0 495 187 (00 2 300)**.

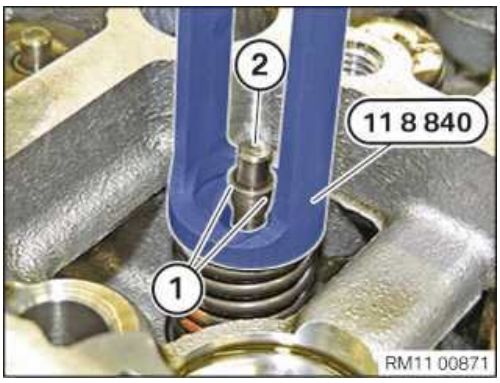


- Prepare the special tools **0 494 371 (11 9 006)**, **0 494 372 (11 9 007)** and **0 494 373 (11 9 008)** as shown.

cardiagn.com



- Position special tool **0 494 373 (11 9 008)** as illustrated.



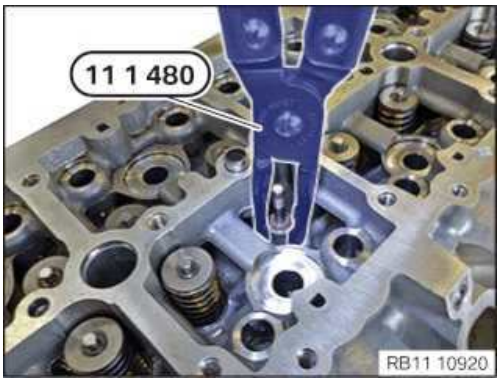
- Turn round special tool **0 494 371 (11 9 006)** and insert as shown.
- Lock special tool **0 494 370 (11 9 005)**in direction of arrow.

- Lock special tool **0 494 370 (11 9 005)**in direction of arrow.
- Use the special tool **0 494 362 (11 9 000)** to bring the cylinder head into the installation position by 180°.

- Align special tool **0 494 374 (11 9 009)** in direction of valve axis.
- Position the special tool **0 496 143 (11 8 840)** according to the nut.
- Press down the valve spring on the upper spring cup with the special tools **0 494 374 (11 9 009)** and **0 496 143 (11 8 840)**.
- The **hooks** from the set of special tools **0 494 362 (11 9 000)** can be used to **hold** the valve spring down.

- Keep the valve spring pressed down with the special tool **0 496 143 (11 8 840)**.
- Remove the valve shims (1) from the valve (2) using a magnet.
- Guide the valve spring and spring cup out and remove.
- Set down valve spring, spring cup and valve shims (2) in the special tool **0 495 105 (11 4 480)** in an orderly manner.

▸ **Remove valve stem seals**



cardiagn.com

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Disassemble the valve stem seal (1) using the special tool **0 490 796 (11 1 480)**.

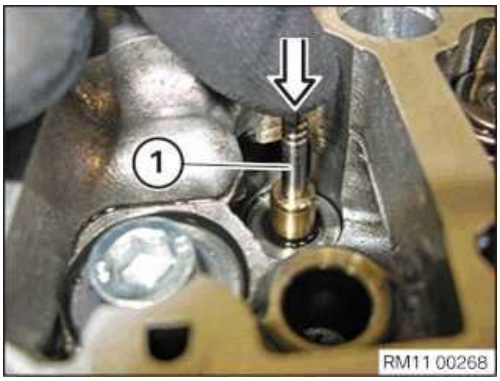
▸ **Remove all valves**

RISK OF DAMAGE

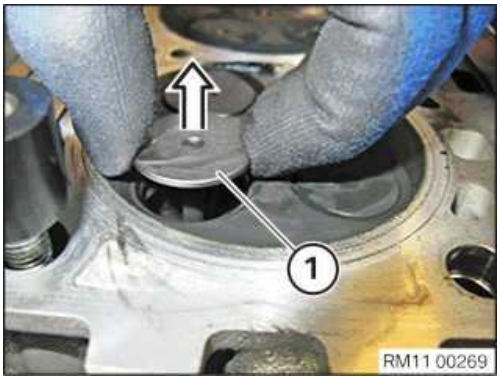
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

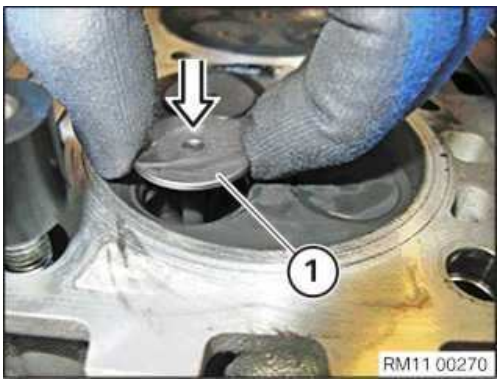
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Turn the cylinder head with the special tool **0 494 362 (11 9 000)**.
- Unlock the special tool **0 494 370 (11 9 005)** in the direction of the arrow.
- Remove special tool **0 494 371 (11 9 006)**.

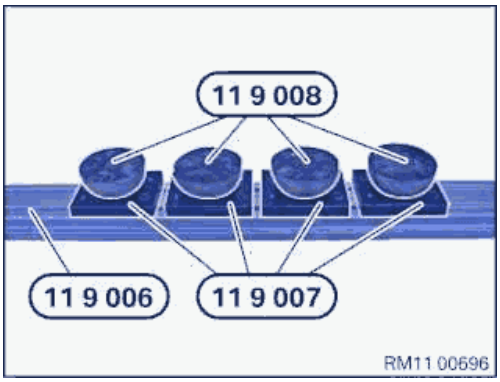


- Remove special tool **0 494 373 (11 9 008)** if necessary.



cardiagn.com

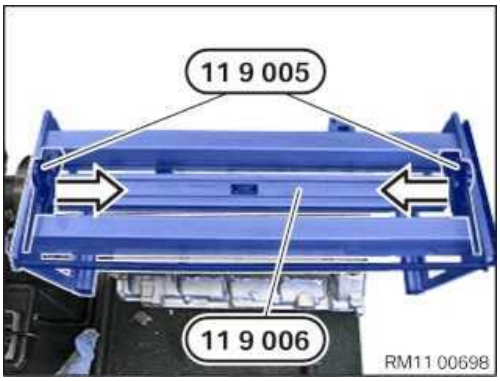
- Push the valve stem (1) into the cylinder head in the direction of the arrow.



- Remove the valve (1) in the direction of arrow and store it properly in the special tool **0 495 105 (11 4 480)**.

- Install valves (1) in the new cylinder head.

  Parts: Cylinder head
- Feed valves (1) in the direction of arrow and install.
- **Check the valves for tightness.**



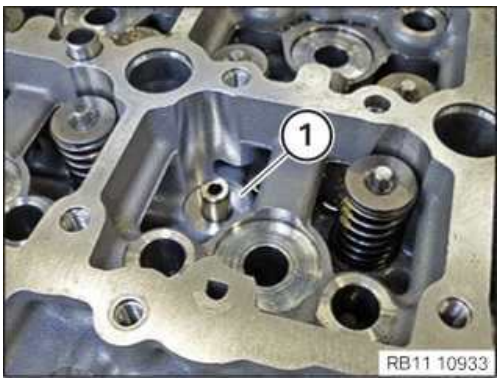
- Prepare the special tools **0 494 371 (11 9 006)**, **0 494 372 (11 9 007)** and **0 494 373 (11 9 008)** as shown.

- The special tools **0 494 373 (11 9 008)** must be set up accordingly in the next operation.

cardiagn.com

- Turn round special tool **0 494 371 (11 9 006)** and insert as shown.
- Lock special tool **0 494 370 (11 9 005)** in direction of arrow.

- Lock special tool **0 494 370 (11 9 005)** in direction of arrow.
- Use the special tool **0 494 362 (11 9 000)** to bring the cylinder head into the installation position by 180°.



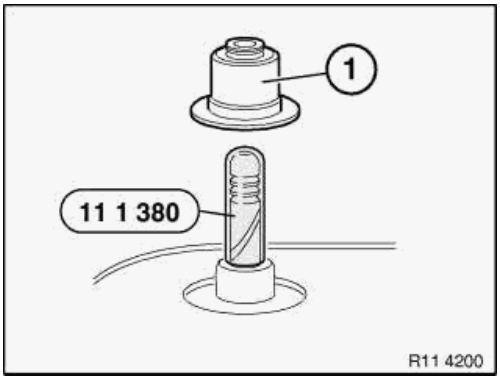
▶ **Installing valve stem seals**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

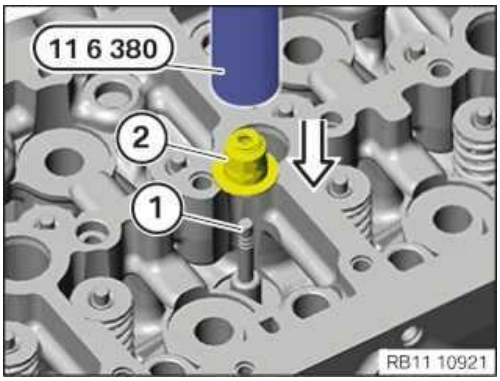


RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.



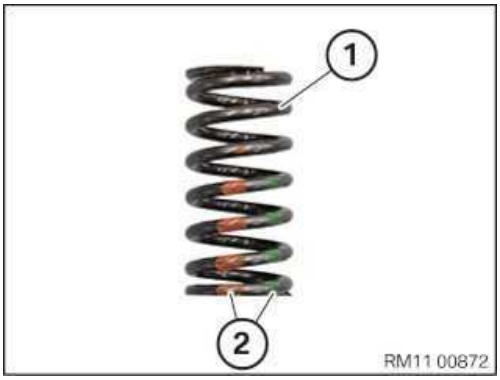
- Clean the contact surfaces (1).

- Fit special tool **0 490 746 (11 1 380)**.
- Oil the valve stem seal (1) and install it.

  Parts: Valve stem seal

cardiagn.com

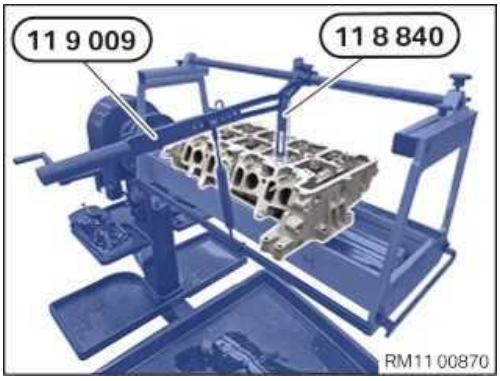
- Position the valve stem seals (2) on the valve (1).
- Use special tool **0 493 249 (11 6 380)** to press down the valve stem seal (2) until they are in contact with the cylinder head.



▸ **Install all valve springs**

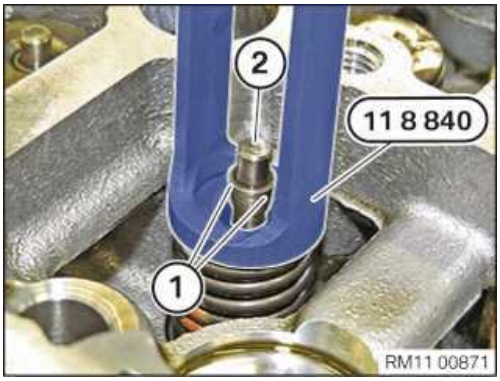
RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

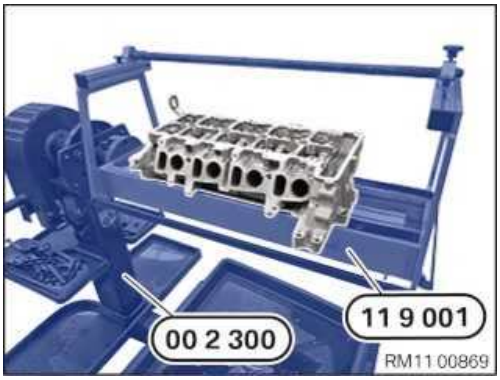
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- The valve spring (1) is marked with a colour code (2).

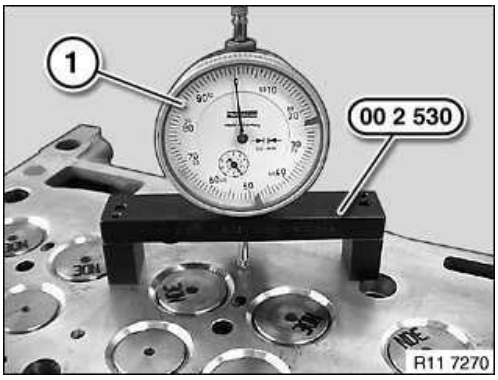
  The mounting orientation of the valve spring (1) can be freely chosen.

- Align special tool **0 494 374 (11 9 009)** in direction of valve axis.
- Position the special tool **0 496 143 (11 8 840)** according to the nut.
- Press down the valve spring on the upper spring cup with the special tools **0 494 374 (11 9 009)** and **0 496 143 (11 8 840)**.
- The **hooks** from the set of special tools **0 494 362 (11 9 000)** can be used to **hold** the valve spring down.

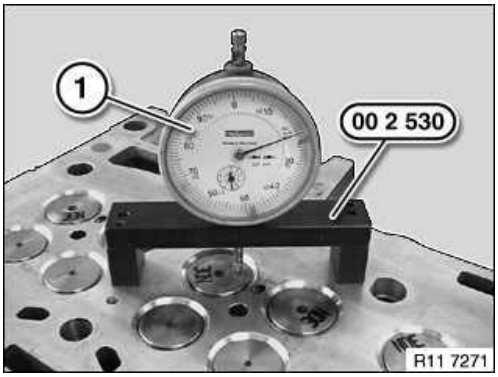


- Keep the valve spring pressed down with the special tool **0 496 143 (11 8 840)**.
- Insert the valve shims (1) at the valve (2) with the magnet and install.
- Relieve load on valve spring.
- Make sure that the valve shims (1) are installed correctly.

cardiagn.com



- Unlock the special tool **0 494 370 (11 9 005)** in the direction of the arrow.
- Guide the special tool **0 494 371 (11 9 006)** out and remove.



- Unscrew and remove the cylinder head from the special tools **0 494 366 (11 9 001)** and **0 495 187 (00 2 300)**.

▸ **Checking the valve underprotrusion**

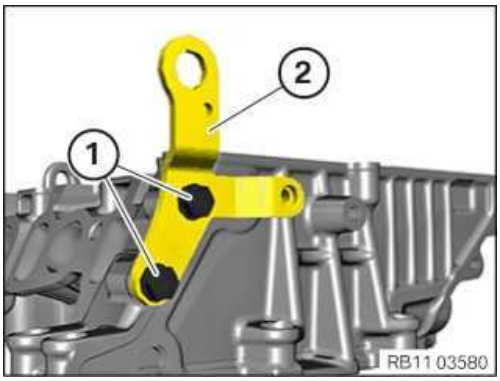
- Set the dial gauge (1) onto the cleaned cylinder sealing surface with slight preload in special tool **0 490 185 (00 2 530)**.
- Set dial gauge in mildly preloaded state to "zero".

Check

- Position the dial gauge (1) on the valve with special tool **0 490 185 (00 2 530)**.
- Measure valve underprotrusion and compare with the setpoint value.

Valve underprotrusion

	0,8 (0,7 - 0,9) mm

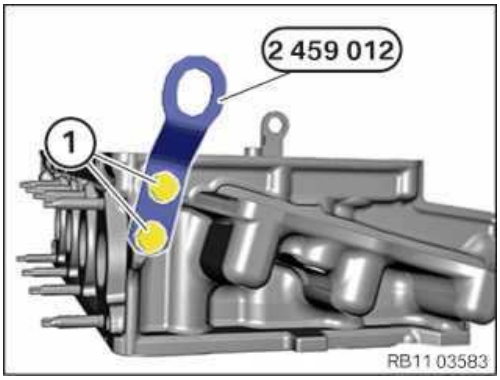


Result

» Valve underprotrusion is outside tolerance.

Measure

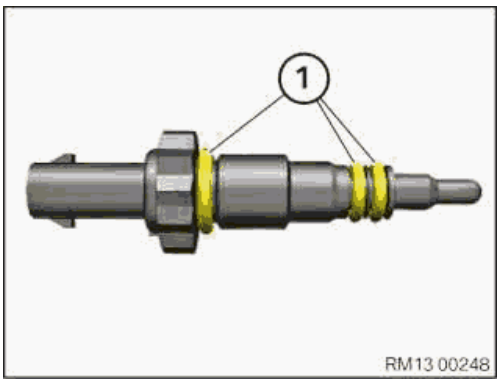
- Replace cylinder head.



cardiagn.com

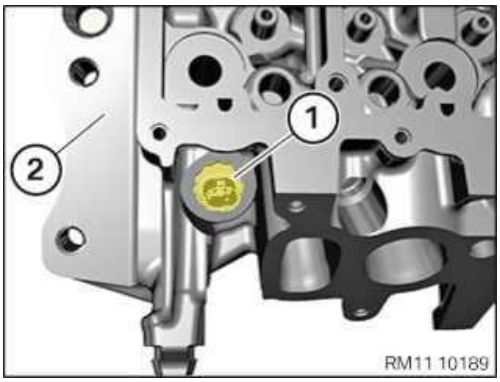
- Install mounting lug (2) on the rear cylinder head.
- Tighten the screws (1).

Standard screw connection M8



M8		Tightening torque	19 Nm

- Position special tool on cylinder head.
- Tighten the screws (1) of special tool .



Special tool to cylinder head

M8		Tightening torque	21,5 Nm

- When reusing coolant temperature sensor sealing rings (1), check for damage, renew if necessary.

  Parts: Sealing ring

- Tighten coolant temperature sensor (1) on new cylinder head (2).

Coolant temperature sensor at cylinder head

Temperature sensor		Tightening torque	3,5 Nm

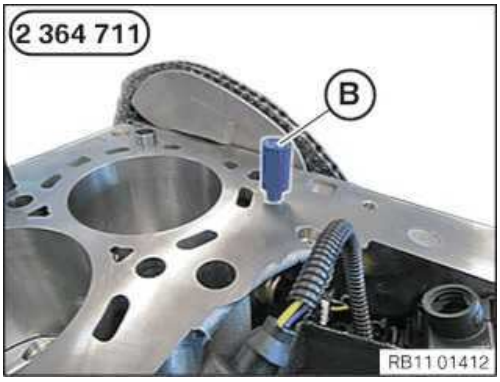
- Screw in preheating elements using special tool and tighten.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm

POSTPROCESSES

74 – Cleaning the sealing surface



cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

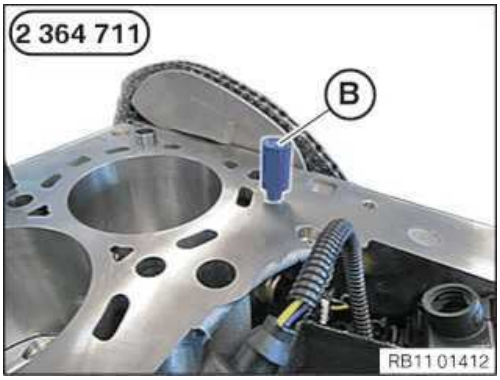
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

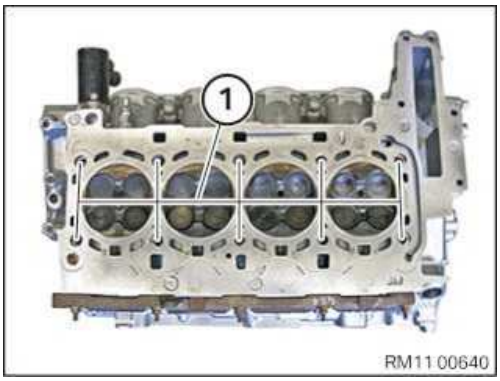
- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.



RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

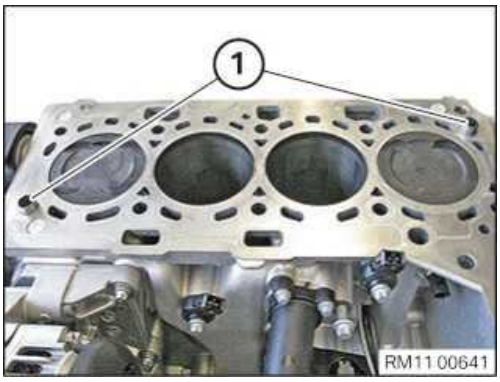


- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.

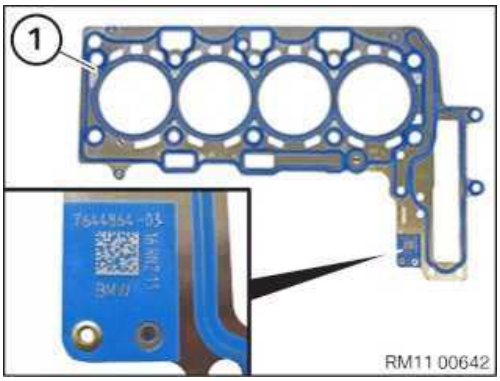
- Remove special tool (B).

cardiagn.com



RISK OF DAMAGE

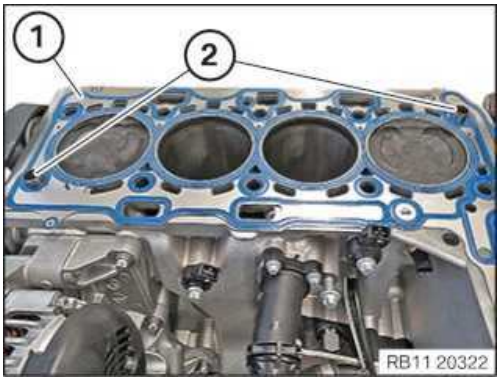
Damage to the surface.



The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).



- Check the fitting sleeves (1) for secure fit and damage.

- Identify the cylinder head gasket (1) using the part number.

Note: If the cylinder head is reworked, an additional thicker gasket 0.3 mm is available for service personnel.

- Guide in the cylinder head gasket (1) and install.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

76 – Installing the cylinder head

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

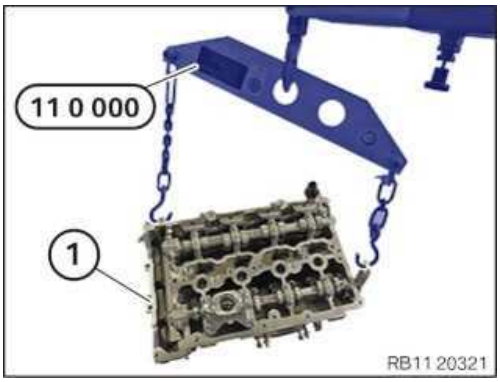
- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

RISK OF DAMAGE

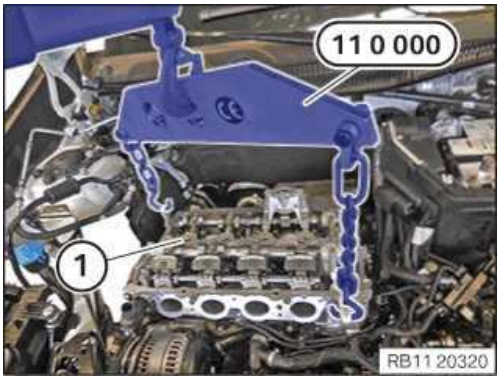
Damage to threads.

Fluid in the threaded hole may damage the thread when screws are tightened in the threads.



- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION



Do not remove bolt coating.

TECHNICAL INFORMATION

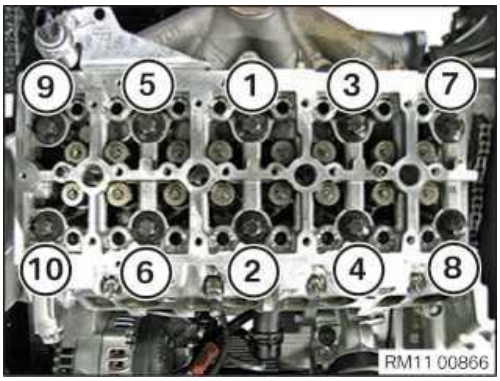
When replacing the cylinder head: The complete valve control and the Valvetronic servomotor are already pre-assembled for new cylinder heads.

- Position cylinder head (1) on special tool **0 490 561 (11 0 000)** and engine lifter.

RISK OF DAMAGE

Damage to the guide rails.

Large amounts of force may damage the guide rails of the timing chain.



- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- Feed in the cylinder head (1) **carefully** with the engine lifter and the special tool **0 490 561 (11 0 000)** and install.

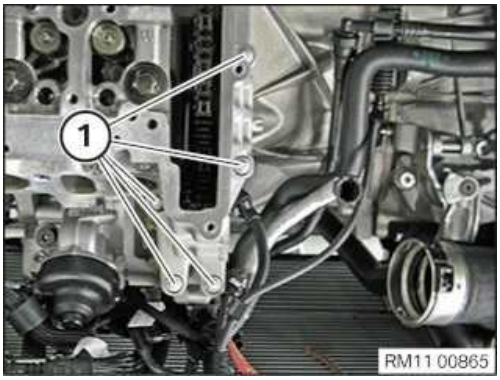
- Unscrew the bolts (1) of the special tool **2 459 012**.
- Guide the special tool **2 459 012** out and remove.

cardiagn.com

- Renew the cylinder head bolts (1).

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  No coolant, water or engine oil must be present in threaded holes of engine block.

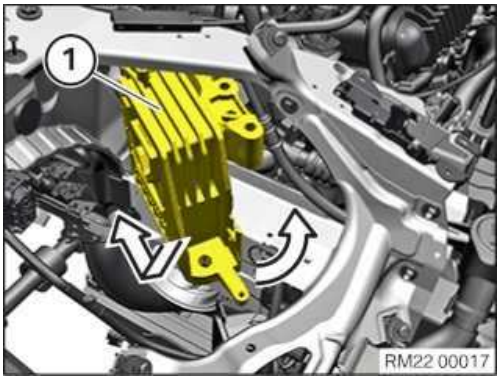


TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in cylinder head bolts in sequence (1) to (10).
- Tighten cylinder head bolts using special tools **0 490 504 (00 9 120)** and in sequence (1) to (10).

Cylinder head to crankcase



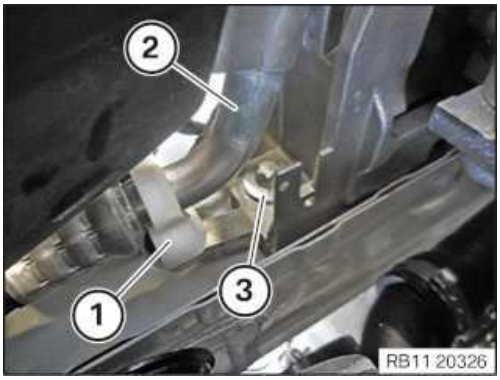
M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

- Tighten the cylinder head bolts (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

- Thread in engine mount (1) in direction of arrow then install.

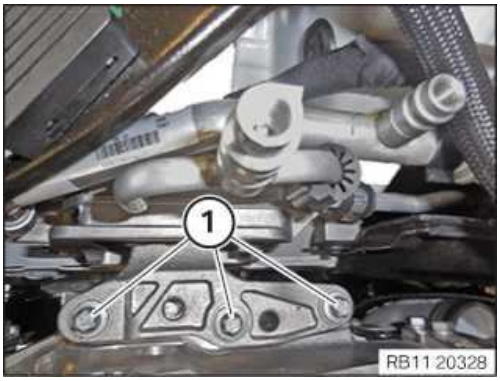


cardiagn.com

- Tighten down screw (1).

Right engine mount to side member

M12		Tightening torque	100 Nm

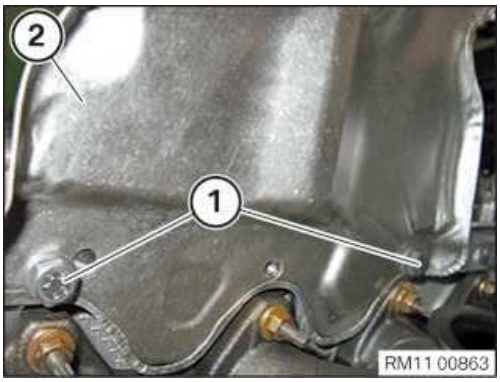


- Tighten down screw (3).

Right engine mount to side member

M12		Tightening torque	100 Nm

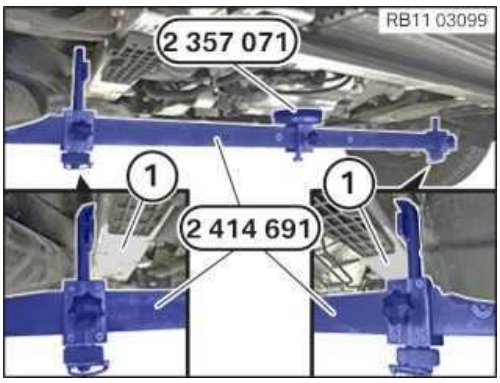
- Feed in and install the refrigerant line (2).
- Lock holder (1).
- Make sure the bracket (1) engages audibly.



- Renew screws (1).

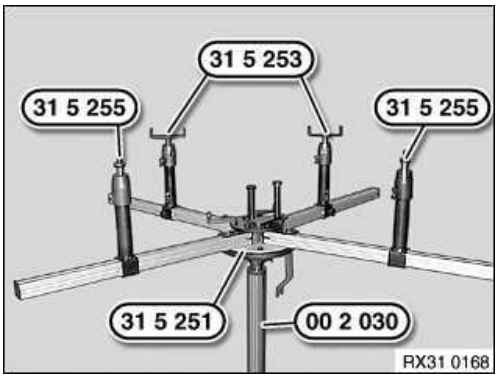
  Parts: Bolts
- Tighten the screws (1).

Right engine mount to cylinder head



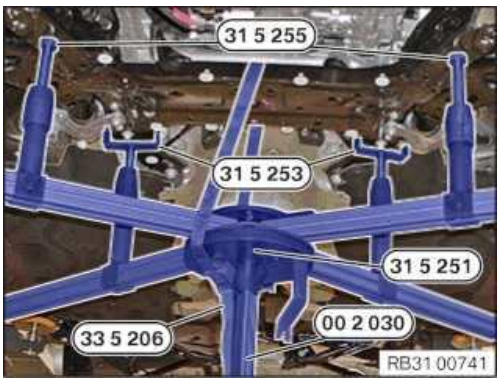
M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

- Feed in and install the heat shield (2).
- Tighten the screws (1).



Heat shield to cylinder head

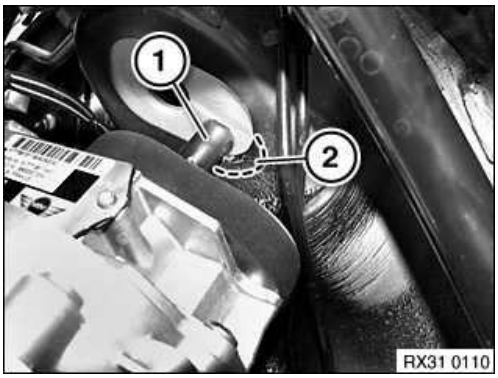
M8X16		Tightening torque	10 Nm



- Disassemble special tool using special tool **2 357 071**.

cardiagn.com

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

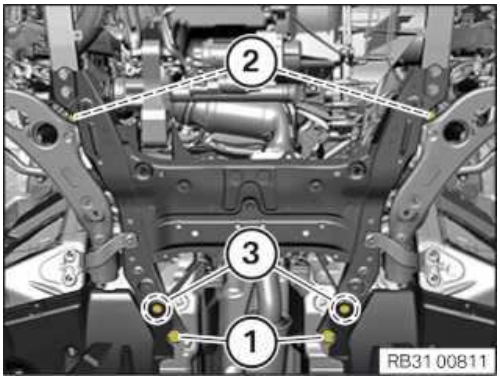


Note: In a profile rail pair, two profile rails are connected to one another by gearing.

- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

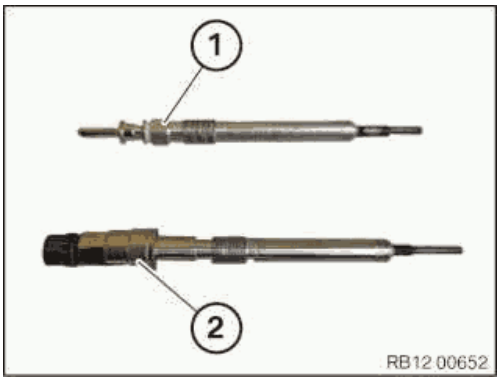
Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.



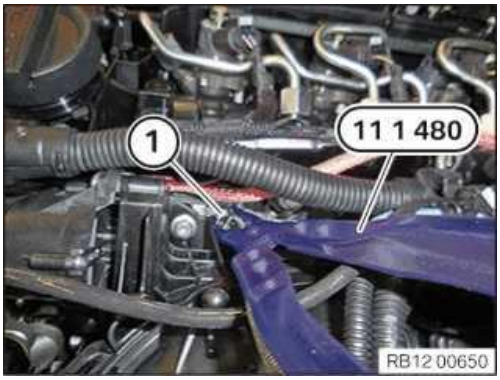
- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and the front axle remove.

77 – Install glow elements

- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.



cardiagn.com

- Tighten the glow element with the special tool or conventional tools.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

78 – Installing the hydraulic valve clearance compensating element

RISK OF DAMAGE

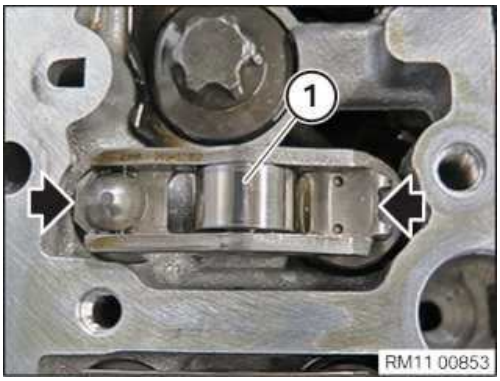
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

79 – Install the roller cam followers



RISK OF DAMAGE

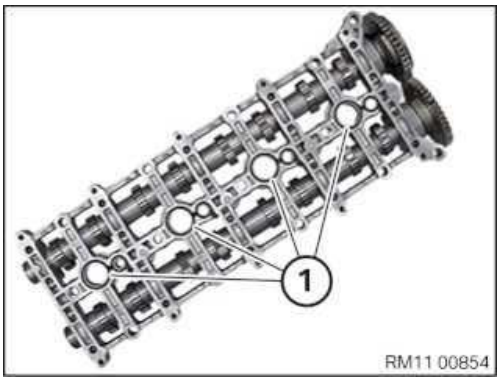
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

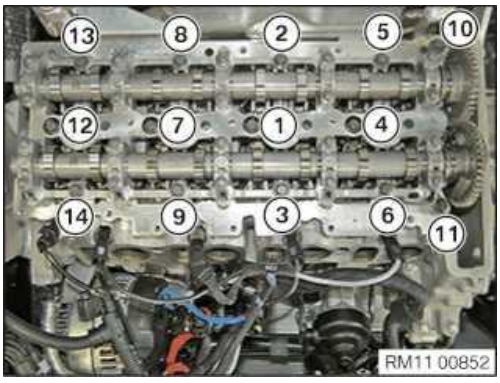
RISK OF DAMAGE



Damage to the engine.

If the classification of the roller cam followers is ignored, this can lead to engine damage.

- Observe the classification of the roller cam followers.
- Always reuse used roller cam followers at the same position.

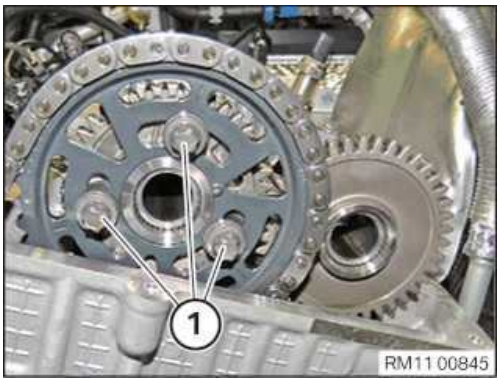


- Install the roller cam follower (1).
- Repeat the process for all roller cam followers.

80 – Installing the camshaft support

- Renew gaskets (1).

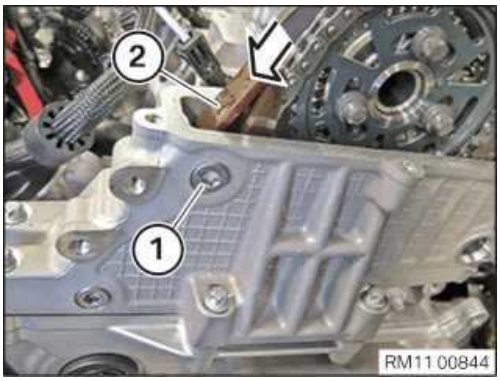
  Parts: gaskets



- Position the camshaft support including the camshafts.
- Tighten the screws in a sequence from (1) to (14) in several steps.

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

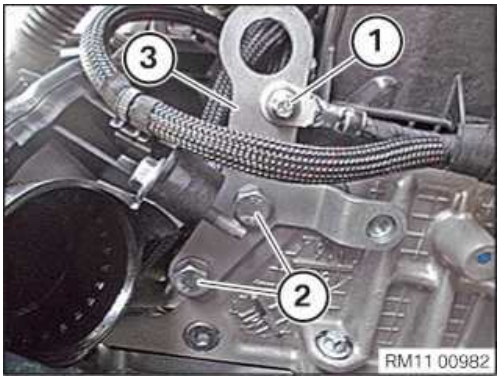


81 – Installing the camshaft sprocket on the intake camshaft

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

82 – Install the timing chain guide rail

cardiagn.com



- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

83 – Installing the chain tensioner piston

WARNING

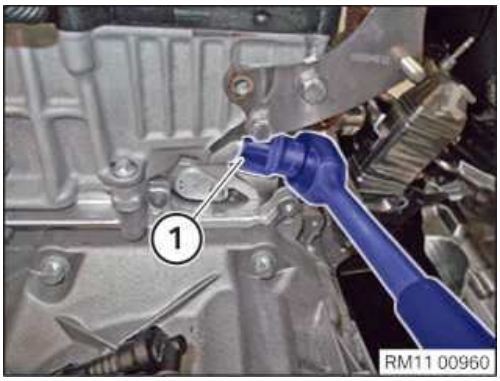
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Renew sealing ring (1).

  Parts: Sealing ring

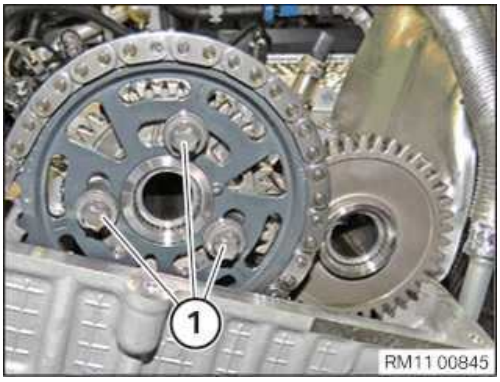


TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

cardiagn.com



- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

84 – Tightening the camshaft sprocket on the intake camshaft

- Tighten the screws (1).

Camshaft sprocket to camshaft

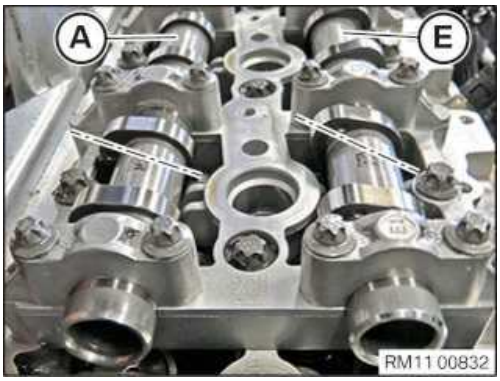
M7x17.			17 Nm

85 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

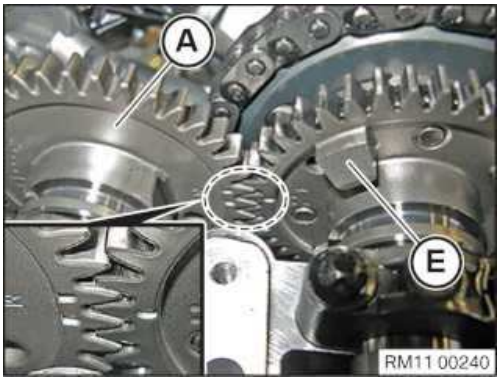


The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

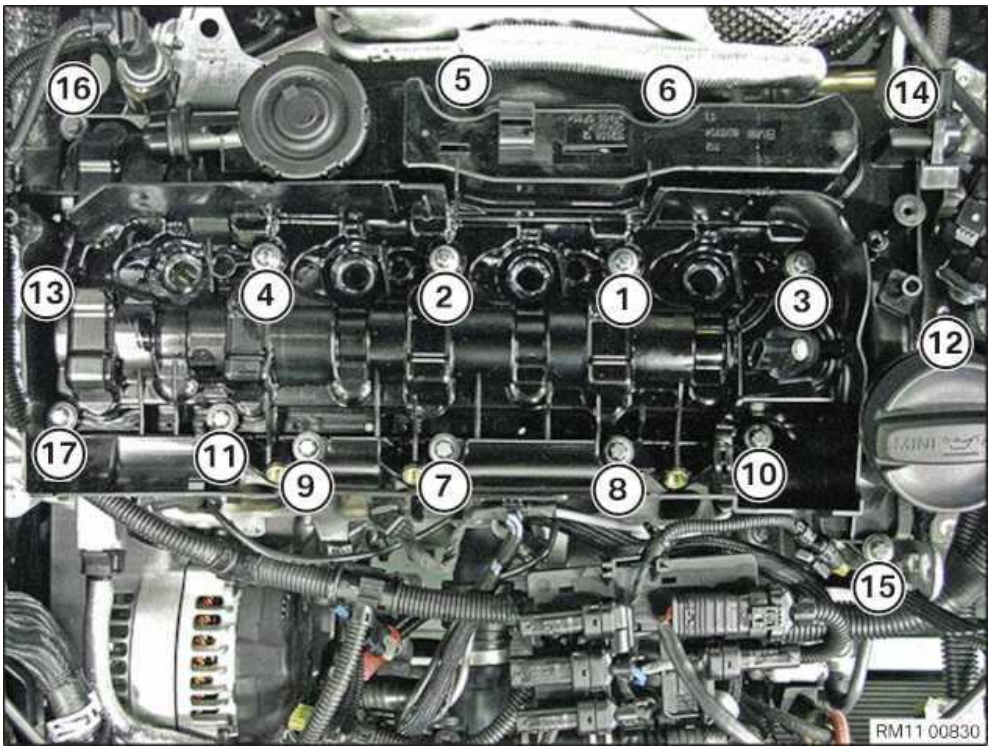
- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

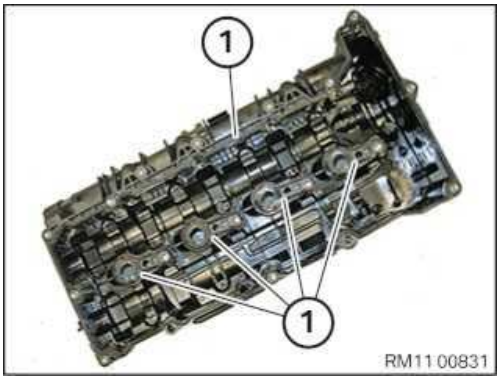
TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.



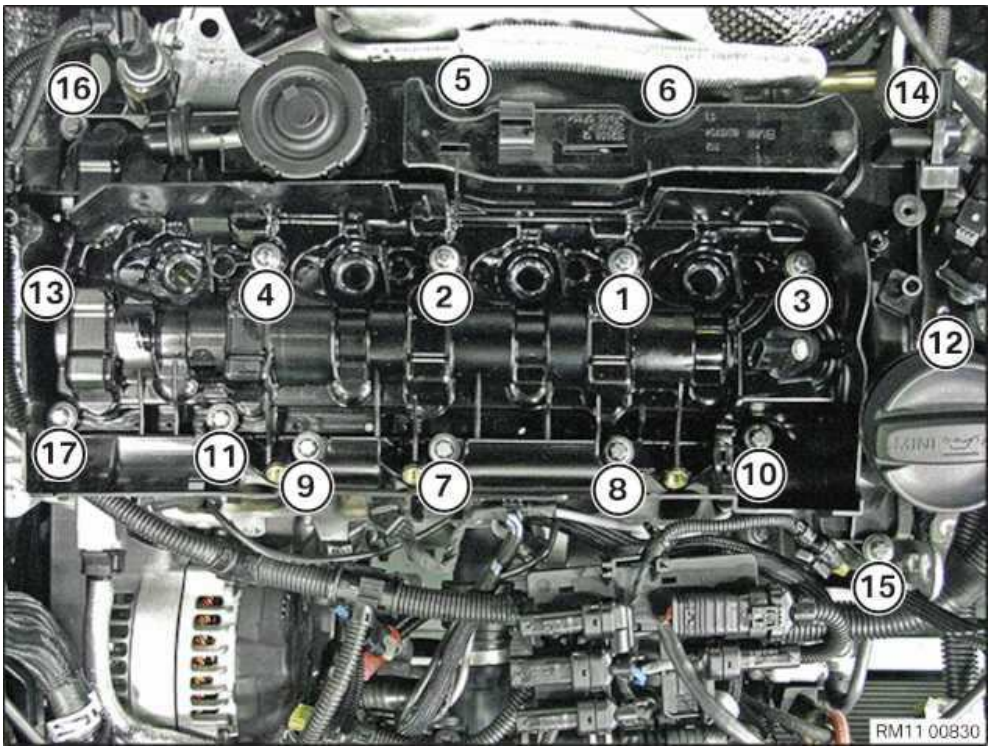
- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.



- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

cardiagn.com

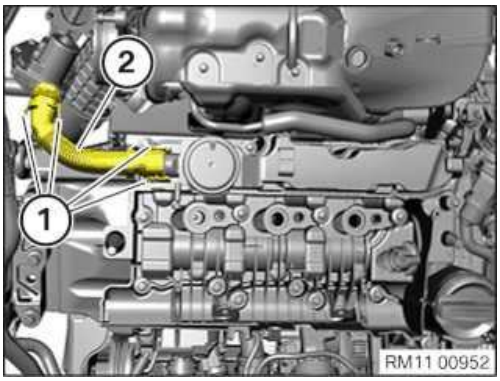
Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket



- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-

cardiagn.com

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

87 – Installing injectors of injection system

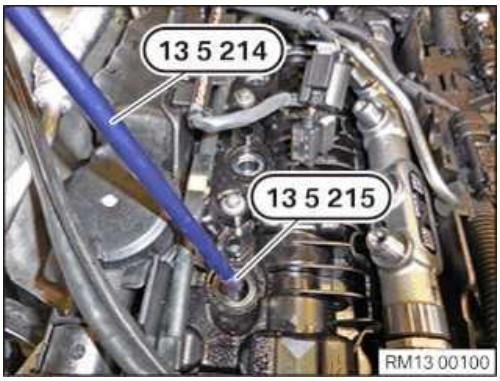
▸ Cleaning the injector shafts

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

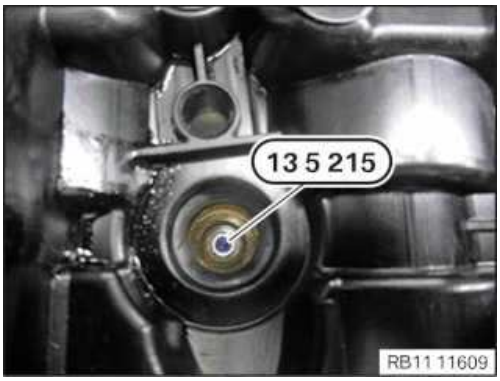
- Collect dirt particles, e.g. when blowing out, use cloth to do so.



- Wear safety goggles.

RISK OF DAMAGE

Contaminant or foreign body.

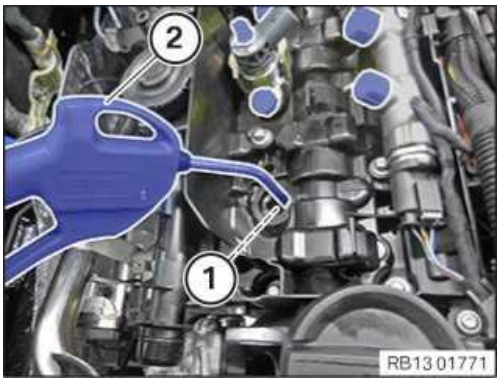


Contamination can result in malfunctions, operating failure or leaks.

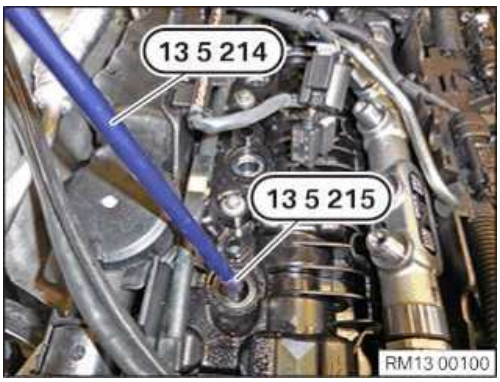
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

cardiagn.com



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.



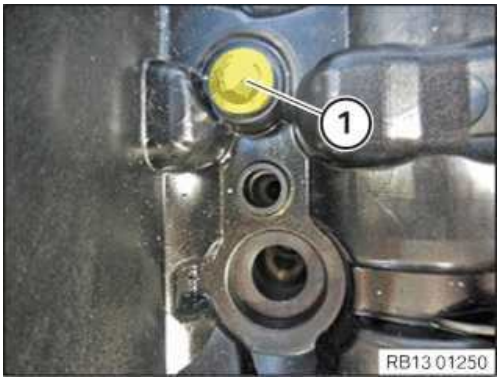
- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

- Blow out injector shaft (1) with air gun (2).

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

► **Check the placement of the clamping claw**



cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

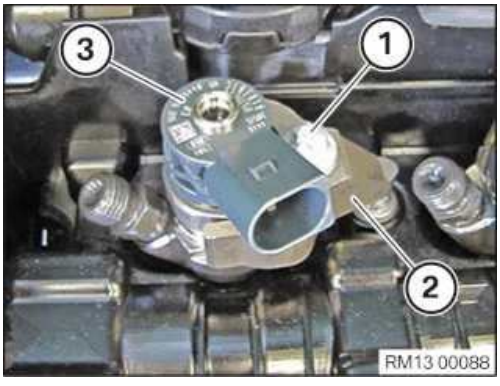
▸ **Prepare the injector for installation**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

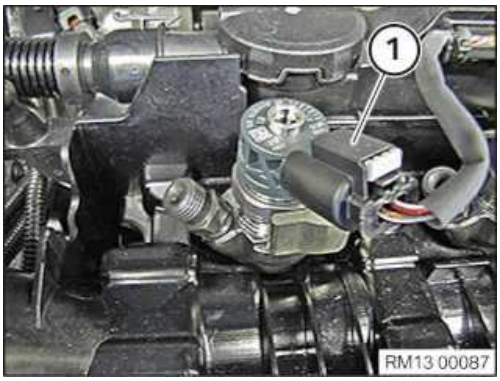


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

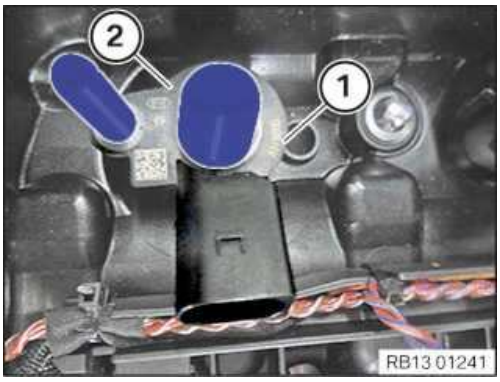
Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

cardiagn.com

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



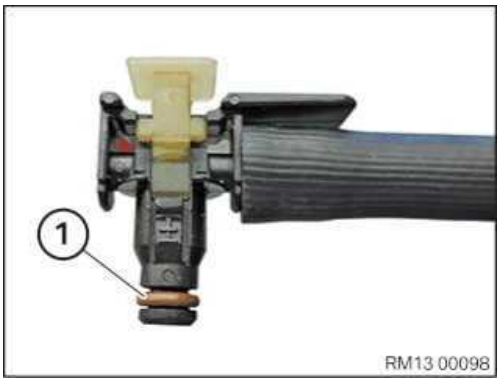
▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

88 – Connect the leakage oil line on the injector

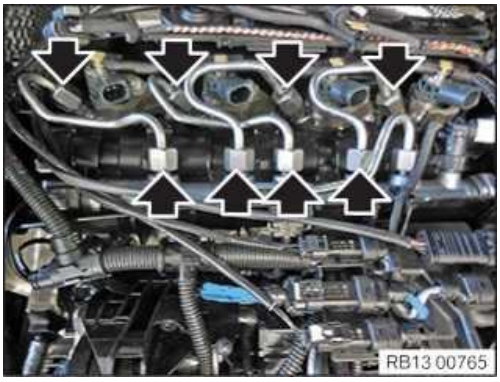
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

cardiagn.com

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.



89 – Installing high pressure lines between rail and injectors

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the high pressure lines (arrows) with the special tool .

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

90 – Prepare for the installation of the exhaust turbocharger

- Check the oil feed lines and the oil return lines for contamination or obstruction, clean or renew if necessary.
- If the oil feed lines and/or oil return lines are heavily contaminated, we recommend changing the engine oil and the oil filter.
- If installed: Check the coolant feed lines and the coolant return lines for the exhaust turbocharger for contamination or obstruction, clean or renew if necessary.
- Check that the screw connections and the plug connections of all the lines are correct.
- Check air cleaner for contamination and clean or renew as needed.
- Check correct functioning of crankcase ventilation.
- Replace all gaskets.

  Parts: Seals

cardiagn.com

91 – Installing the high-pressure stage exhaust turbocharger

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

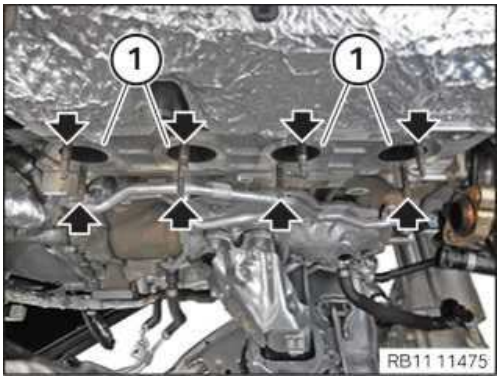
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE



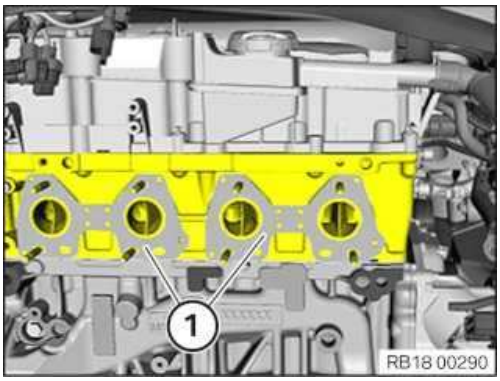
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

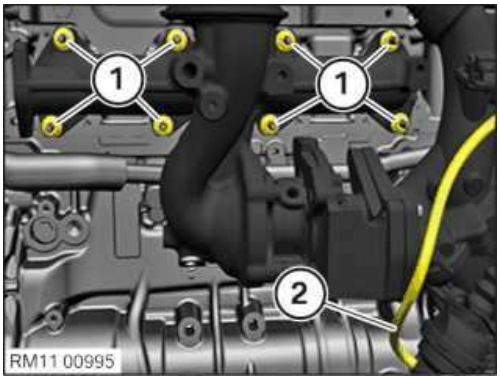
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.

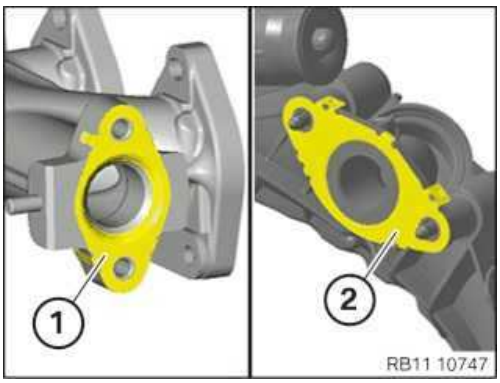
- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.



cardiagn.com

- Renew gasket (1).

  Parts: Gasket

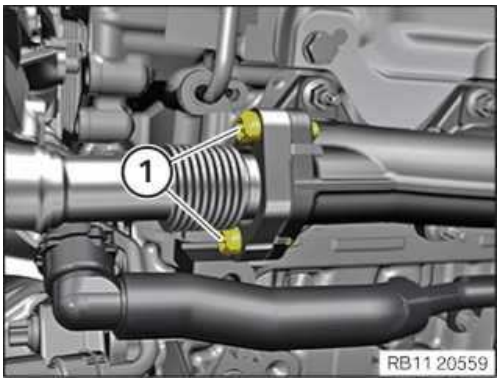


- Install new gasket (1).

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

  Parts: Nuts

- Connect vacuum hose(2).



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

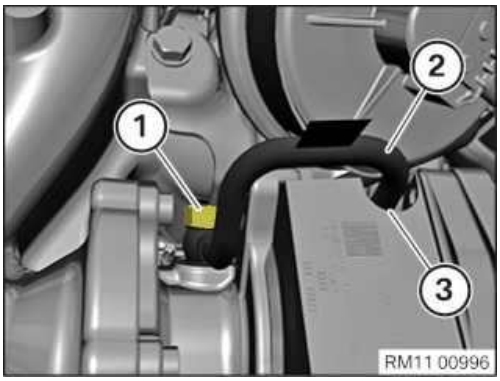
  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

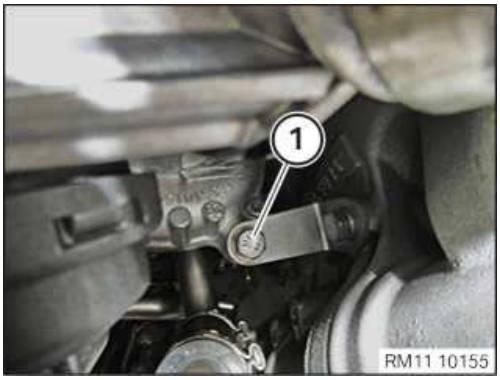
  Parts: Gasket

- Tighten the screws (1).

Exhaust-gas recirculation cooler to exhaust manifold



M8x28	Replace screws	Tightening torque	32 Nm

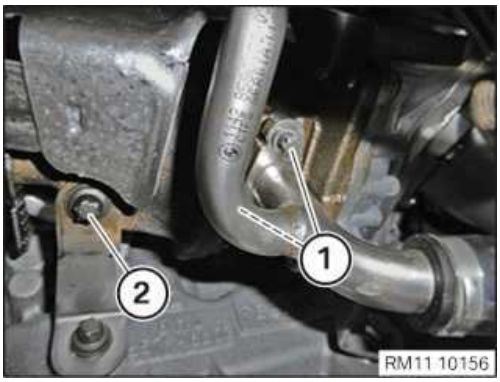


- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring

cardiagn.com

- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).



- Tighten bolt (1) from the right wheel arch.

- Renew seal (1) of oil return line.

  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

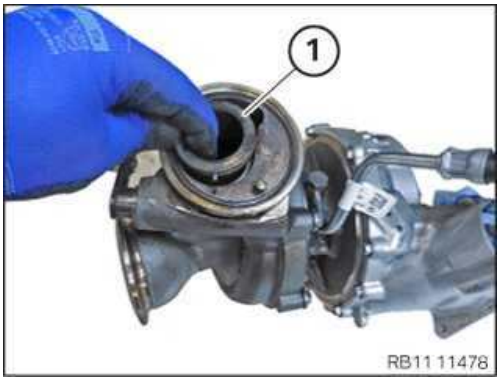
Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

92 – Installing the low-pressure stage turbocharger

RISK OF DAMAGE

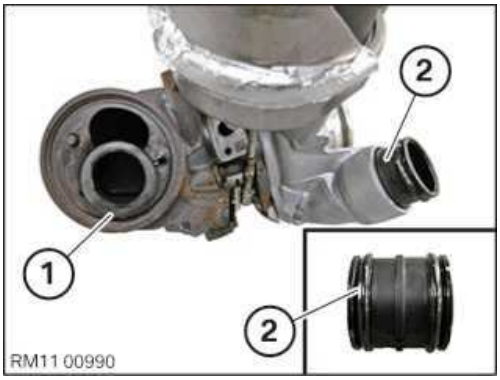
Damage to the surface.



The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

cardiagn.com



TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.

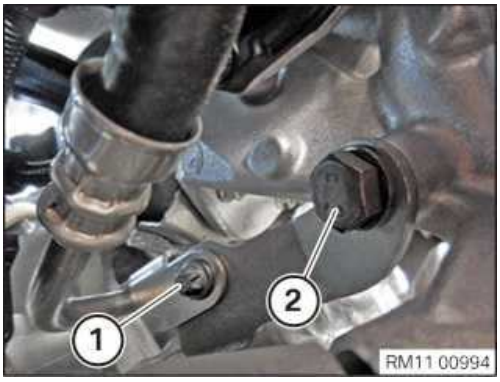
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

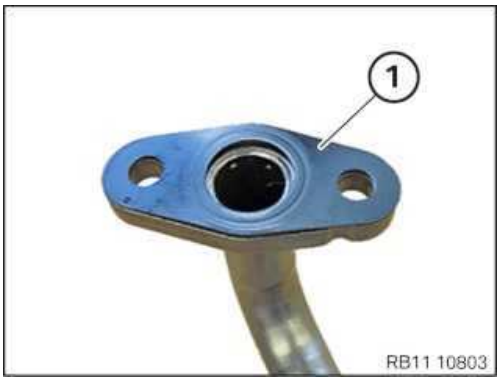
Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

- Tighten down screw (1).

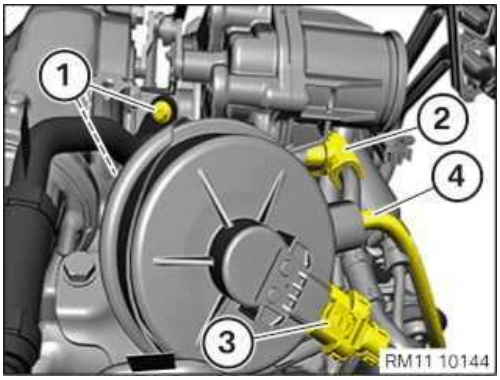
Oil feed line to bracket



Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

Holder to exhaust turbocharger and crankcase



M8x16		Tightening torque	22 Nm

cardiagn.com

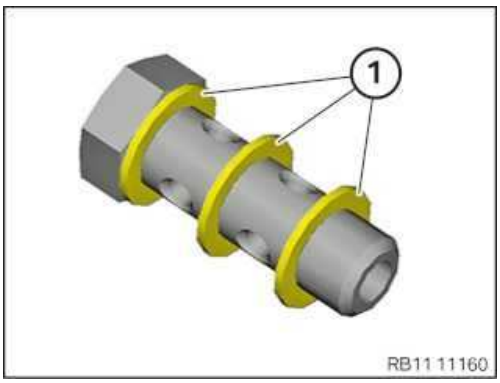
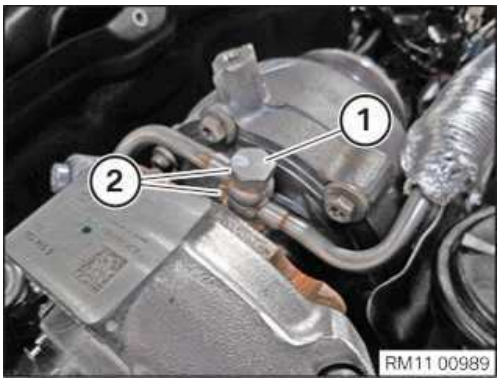
- Renew seal (1) on the oil return line.

  Parts: Gasket



- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger



M6x12		Tightening torque	8 Nm

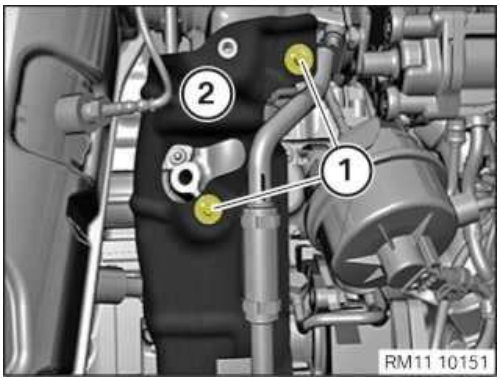
- Connect and lock connectors (2) and (3).

  The locks must engage audibly.
- Connect vacuum hose (4).

- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.

93 – Installing heat shield on exhaust turbocharger at bottom



WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

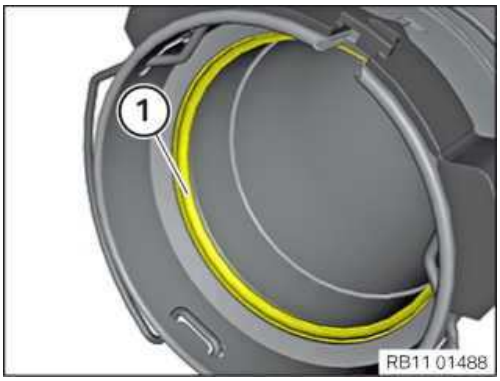
- Tighten down screw (2).

Standard screw connection M6

M6		8 Nm

- Connect connectors (1) and lock.

  Lock must audibly engage.



94 – Installing the right charge air duct between the exhaust turbocharger and the charge air cooler

RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

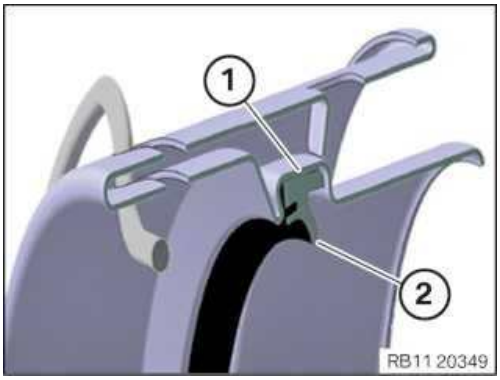
- Replace the gaskets and pressure pipe if necessary.

- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

▸ **Replace damaged gasket**

TECHNICAL INFORMATION



Do not use pointed or sharp-edged tools for the installation and/or removal.

cardiagn.com

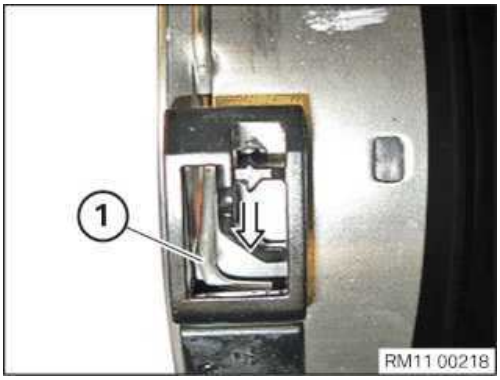
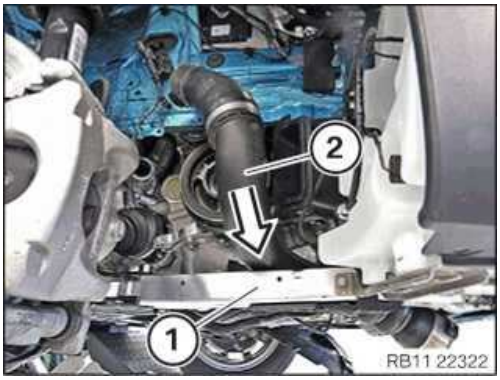
- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

  The gasket groove (1) must be clean.



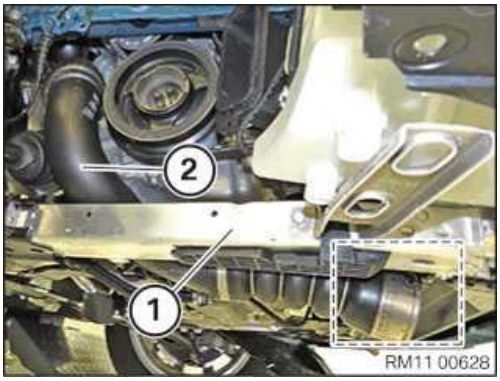
- Renew gasket.

  Parts: Gasket
- Install seal dry without lubricant or mounting agent.



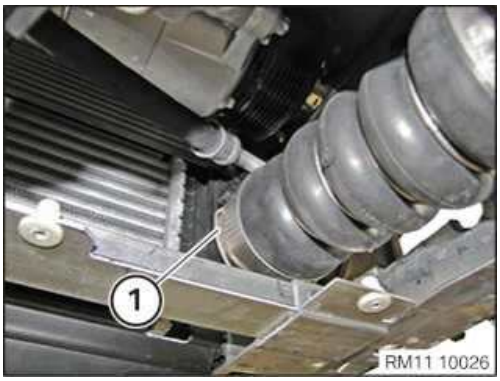
TECHNICAL INFORMATION

Incorrect assembly is possible. Ensure correct installation position.

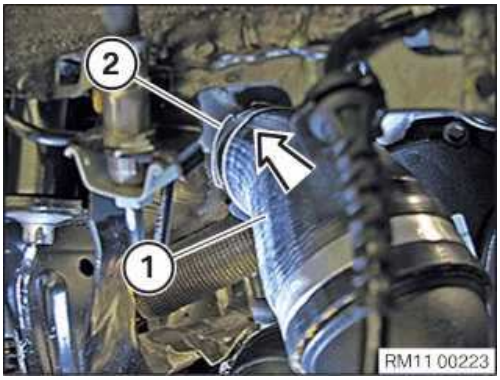


- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).

- Detach the locks (1) in the direction of the arrow from the brackets.
- Ensure that the locks (1) engage audibly.



- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed in the charge air duct (1) in the **direction** of arrow between the side member and the deformation element and position.



- Pull the adapter of the front axle support (1) downwards to the front right.
- Position the charge air duct (2) in **marked** area on the charge air cooler.

cardiagn.com

- Feed in and install the charge air duct (1) on the charge air cooler .
- Make sure the charge air duct (1) engages audibly on the charge air cooler.

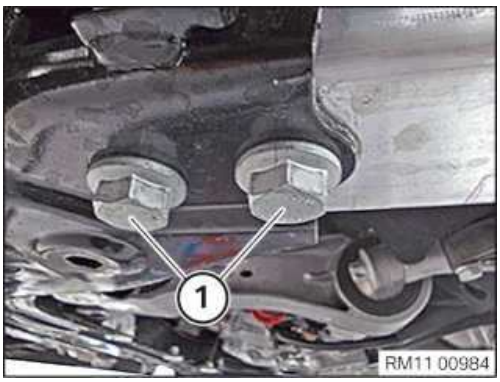
- Feed in and install charge air duct (1) in the **direction** of the arrow on exhaust turbocharger.

  The locks (2) must engage audibly.

- Tighten the screws (1).

Charge air duct to oil sump

M6		Tightening torque	8 Nm



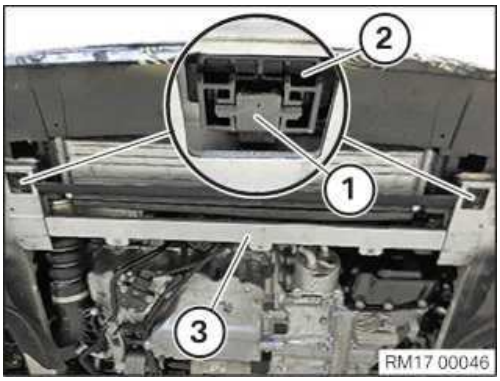
- **If installed:**
- Feed in and install the ride height sensor (3).
- Tighten the screws (2).

Ride height sensor holder to front axle support

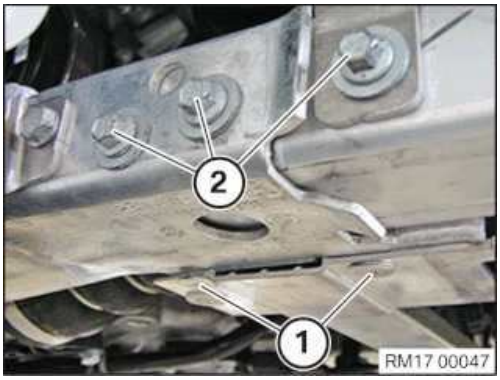
M6		Tightening torque	8 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.



- Tighten the screws (1) on the adapter of the front axle support.



Adapter, front axle support to front axle support

		Tightening torque	100 Nm

cardiagn.com

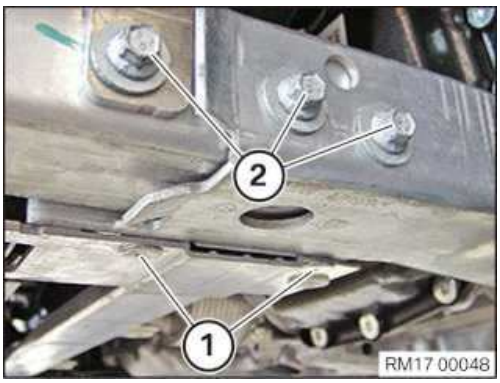
- Guide in cross connection (3) and install.
- Guide in locks (2) and install.
- Lock the locking pins (1).
- Ensure that the locking pins (1) audibly engage.



- Tighten the bolts (2) at the front left.

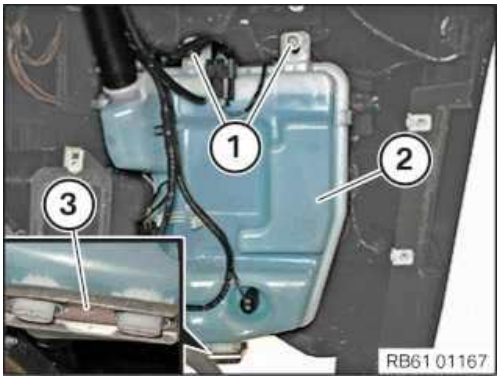
Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front left.

- Tighten the bolts (2) at the front right.



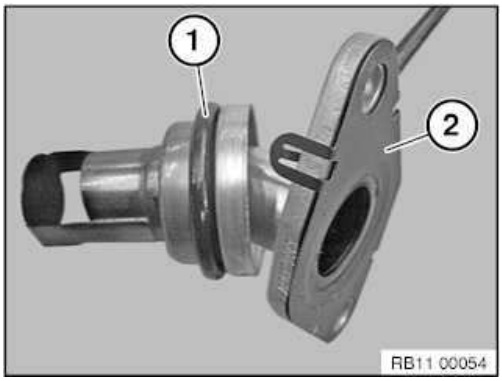
Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front right.

95 – Install the washer fluid reservoir in the fixture

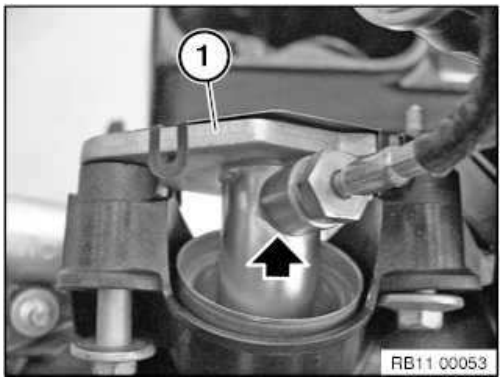


- Feed washer fluid reservoir (2) into the mounting (3) and install.
- Tighten the screws (1).

Washer fluid reservoir to body

M6x20		Tightening torque	8 Nm

96 – Installing the intake plenum



- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position the seal (2) and clip it in.

cardiagn.com

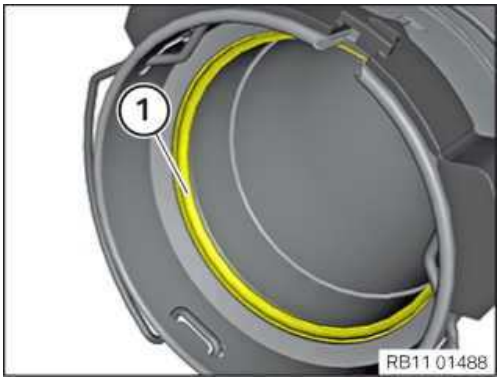
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

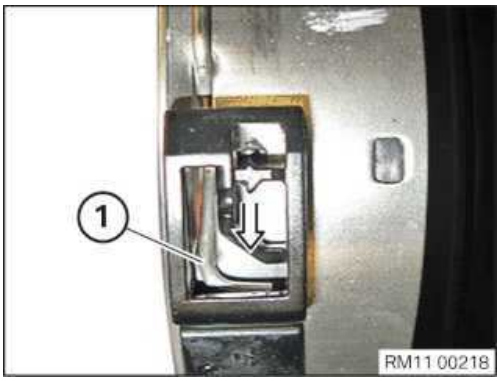
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



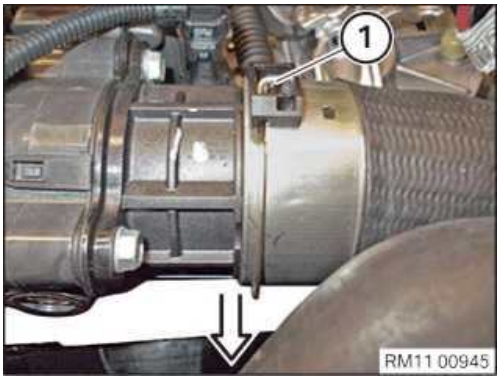
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

cardiagn.com

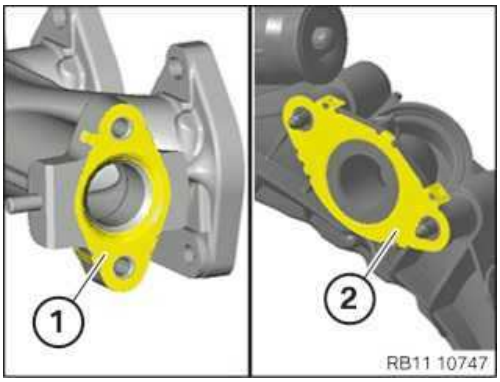
- Engage the lock (1) on the bracket (arrow).

- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.



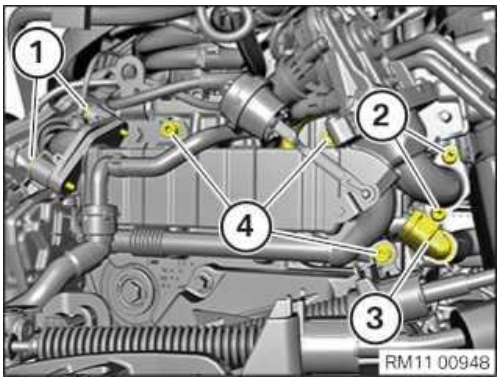
97 – Installing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

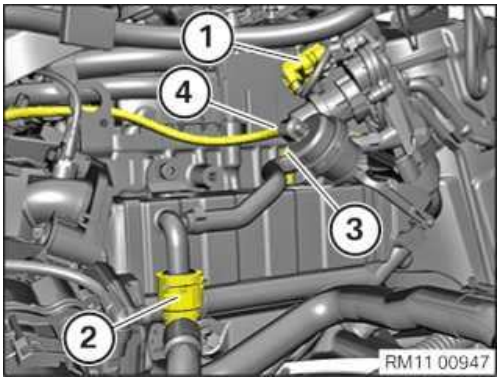
Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold



M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

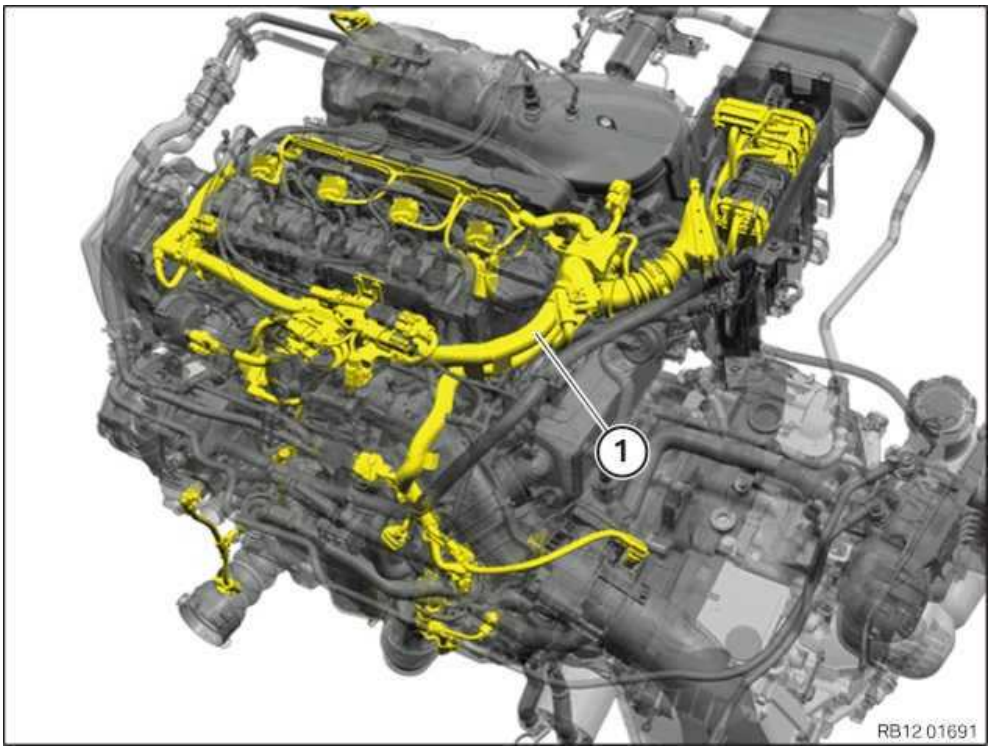
  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

98 – Fastening the wiring harness section for the intake plenum

cardiagn.com

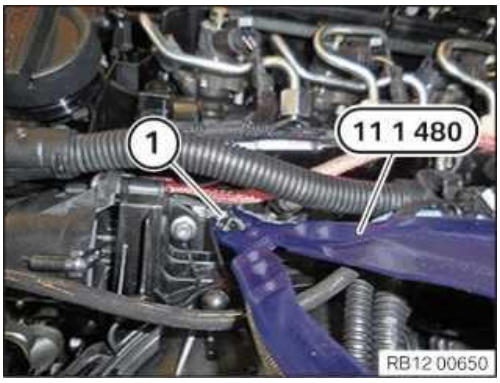
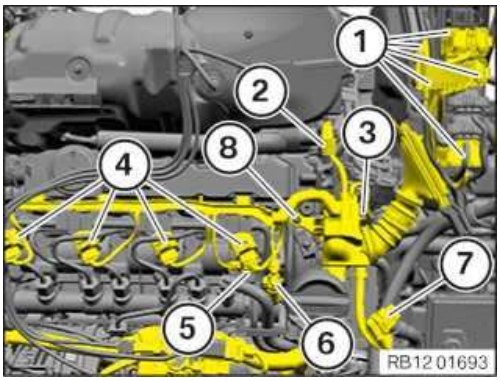
Overview: Wiring harness section for the engine



1 Wiring harness section for the engine

▶ **Installing the cable clip for the intake plenum**



- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.

cardiagn.com

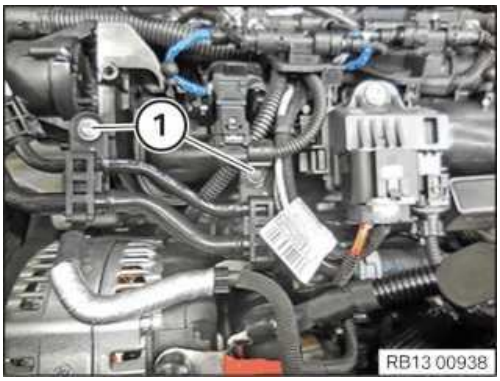
- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.

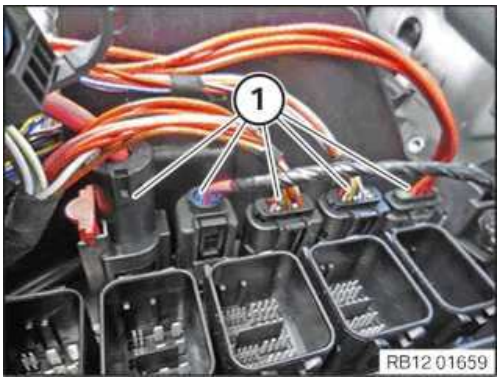


- Connect and lock the connector (2).

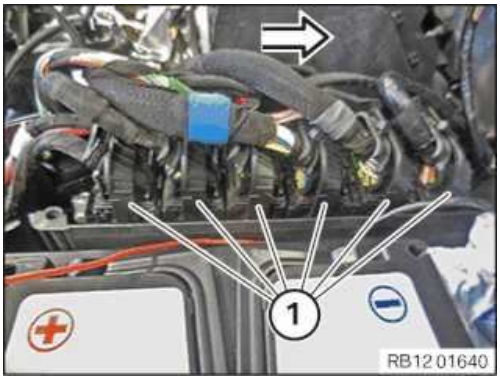
  Lock must snap audibly into place.
- Connect the positive battery cable (1) and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm



- Position the fuel line.
- Tighten the screws (1).



Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

cardiagn.com

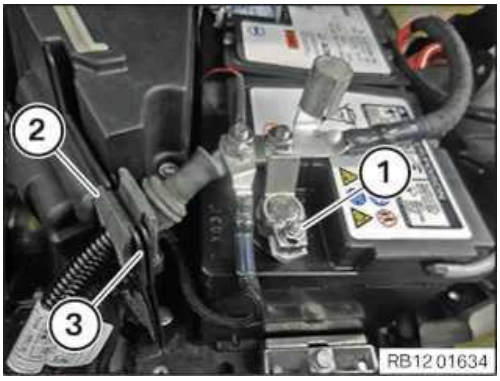
- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

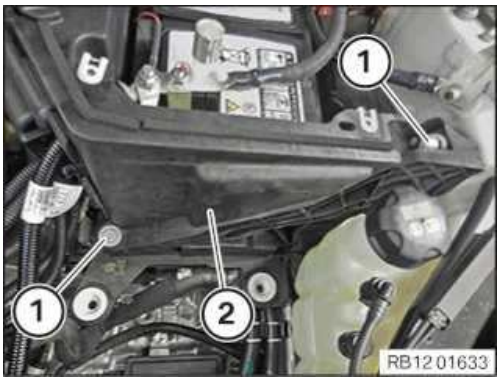


- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm



- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

cardiagn.com

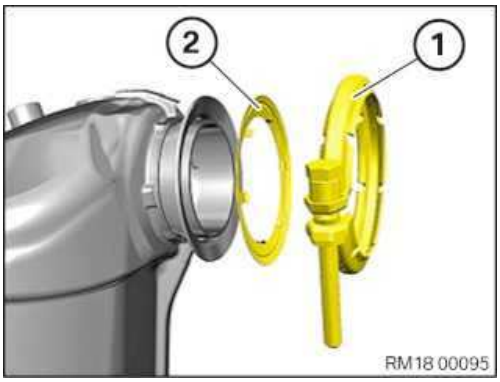
- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm



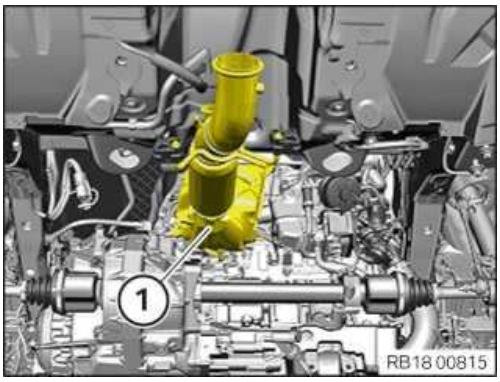
99 – Installing the diesel particulate filter

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

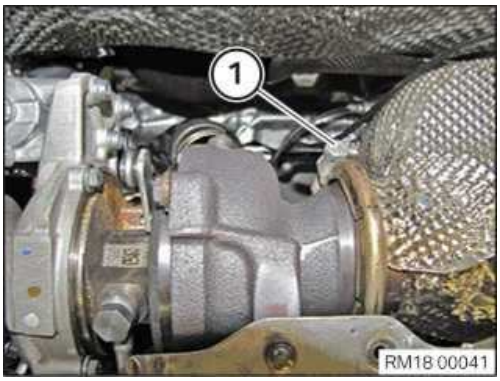
- Remove and install heavy components with the aid of another person/other persons.



- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket



- Before installing the diesel particulate filter: Mount fitting aid (1) for the flexible tube.

- Carefully insert and install the diesel particulate filter (1).

cardiagn.com

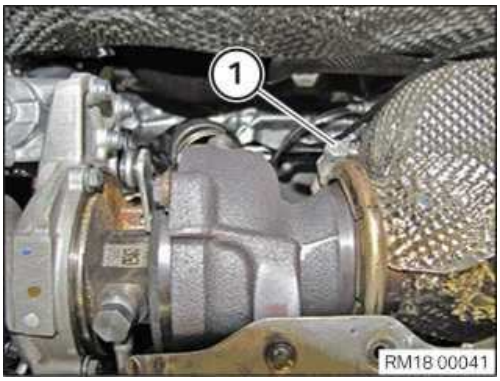
- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

- Tighten nuts (1) by hand.

- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.



- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).

- Remove fitting aid (1) for the flexible tube.

cardiagn.com

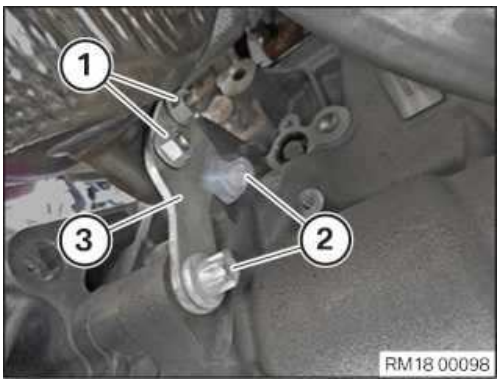
- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger



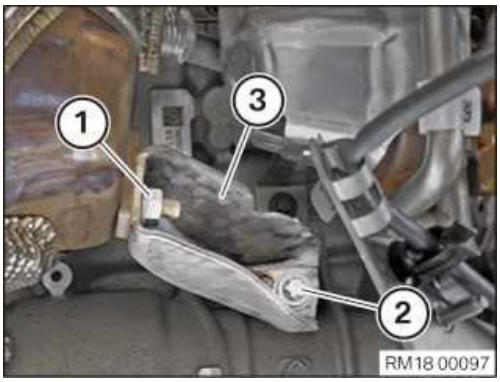
V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screws (2).



Diesel particulate filter holder to gearbox

M12x75		Tightening torque	66 Nm

- Tighten nuts (1).

- Renew sealing ring (1) of the SCR metering module (2).

  Parts: Sealing ring

cardiagn.com

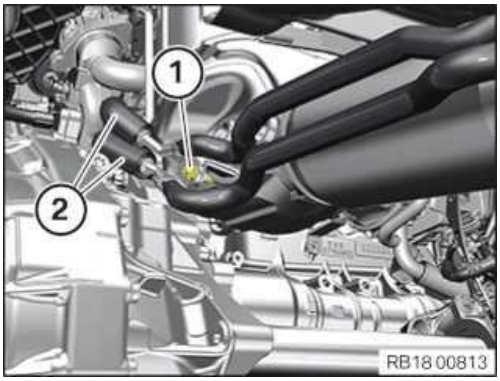
- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

SCR metering module V-clip to exhaust system

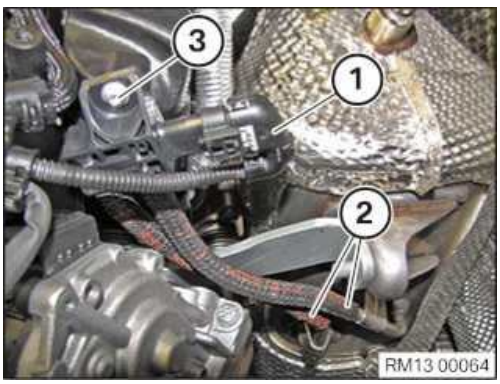


V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

▶ **Installing differential pressure sensor**

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

100 – Install the control sensor

cardiagn.com

TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

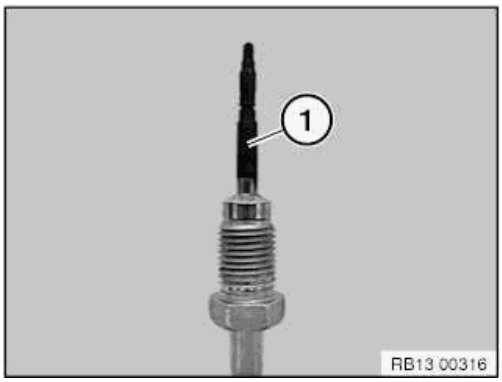
For oxygen sensors that are reused, the following should be observed:

Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Feed in front oxygen sensor (1) and install.
- Tighten front oxygen sensor (1) using special tool .

Control sensor

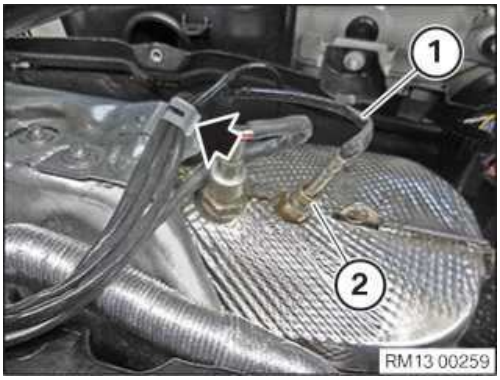


Control sensor		Tightening torque	50 Nm

- Lay and secure cable of oxygen control sensor.
- Secure the connector (2) to the holder.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

101 – Install the exhaust-gas temperature sensor on the diesel particulate filter



RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and renew the exhaust temperature sensor as needed.

- Feed in and install the exhaust temperature sensor (2).
- Tighten the exhaust temperature sensor (2).

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install cable (1) of the exhaust temperature sensor in the clamp (arrow).

cardiagn.com

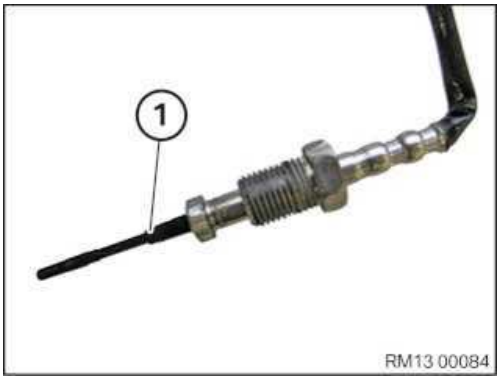
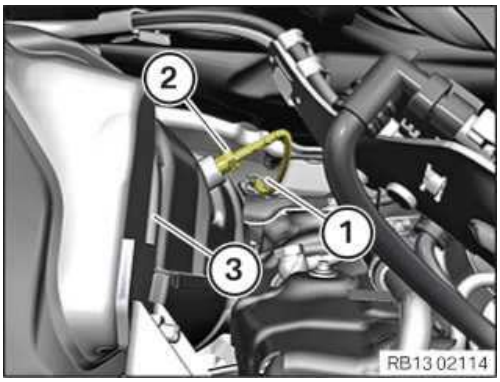
- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



102 – Installing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

RISK OF DAMAGE

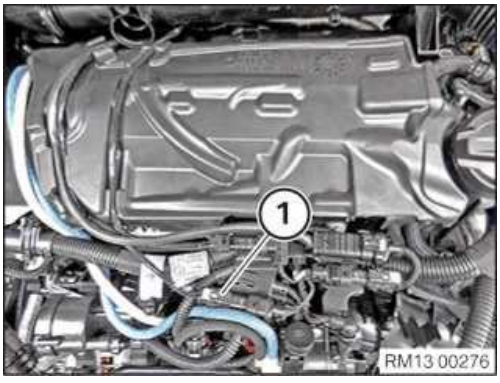


Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Make sure the gauge tip (1) is not damaged during installation.

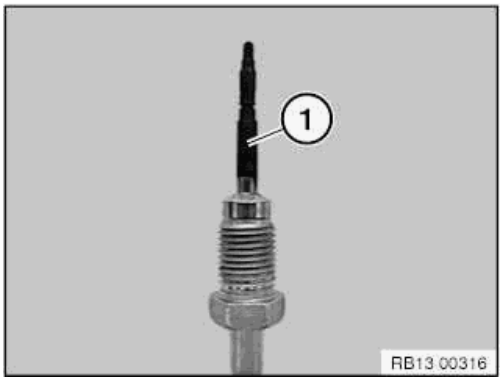


- Guide the exhaust temperature sensor (2) into diesel particulate filter (3) and install.
- Tighten the exhaust temperature sensor (2) with conventional tools .

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install the cable of the exhaust temperature sensor (2) in the clamps (1).



- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

103 – Installing exhaust temperature sensor on catalytic converter

cardiagn.com

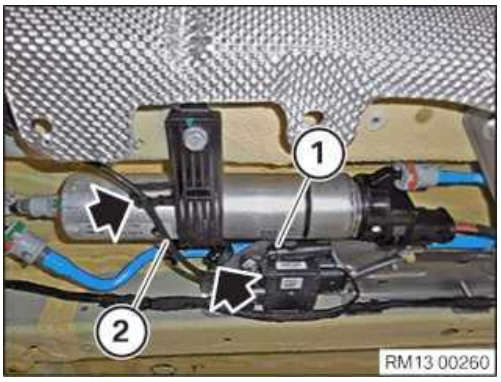
RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

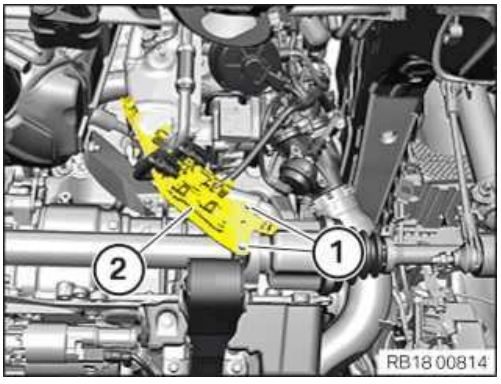
- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.



- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).

Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

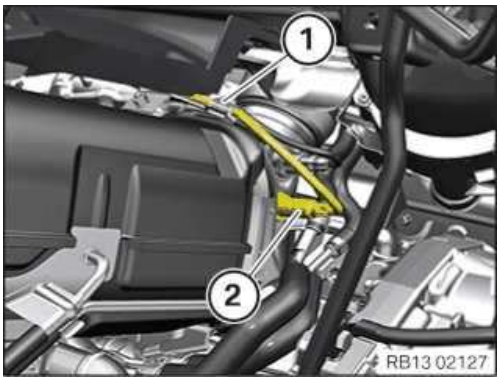


- Secure the cable clips (1).

- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

104 – Install holder for oxygen sensor



- Insert and install the holder (2).
- Tighten the screws (1).

Oxygen sensor holder to intermediate shaft

Hexagon screw M6x16		Tightening torque	8 Nm

105 – Installing the nitrogen oxide sensor before SCR catalytic converter

cardiagn.com

- Insert nitrogen oxide sensor before the SCR catalytic converter (2) and install.
- Tighten the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

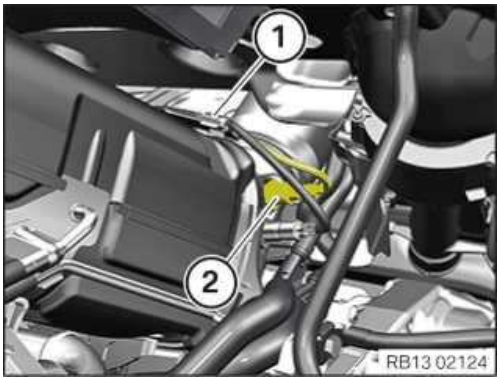
Nitrogen oxide sensor before SCR catalytic converter

Sensor		Tightening torque	50 Nm

- Install and lock the evaluation electronics for the nitrogen oxide sensor (3) (arrows).
- Insert the evaluation electronics cable for the nitrogen oxide sensor (3) into the clamps (2) and install.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

106 – Install the monitoring sensor



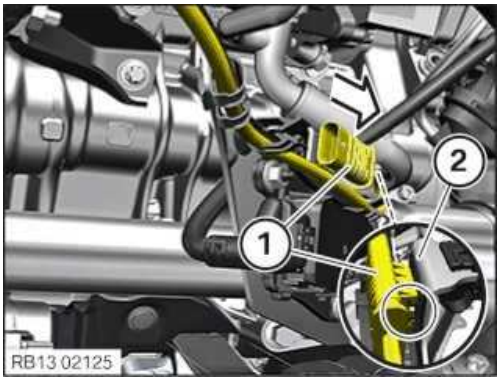
TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

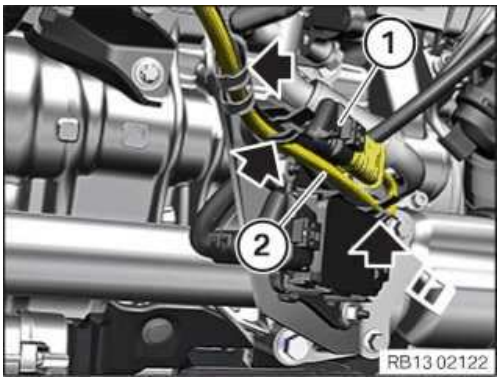
For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue



- Feed in the monitoring oxygen sensor (2) and install.
- Tighten the monitoring oxygen sensor (2) with special tool **0 491 074 (11 7 020)** .

Monitoring sensor

Sensor		Tightening torque	50 Nm



- Insert the cable of the monitoring oxygen sensor (2) into the clamp (1) and secure it.

- Connect the connector (1) with the bracket (2) in the direction of arrow.
- Make sure that the connector (1) is locked correctly in the marked area.

  The connector (1) must engage audibly.

cardiagn.com

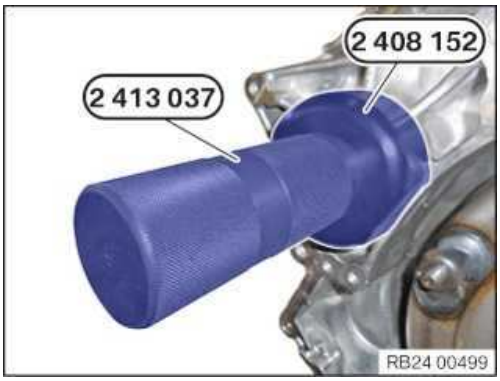
- Insert and attach the cable of the monitoring oxygen sensor (2) to the clamps (arrows).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

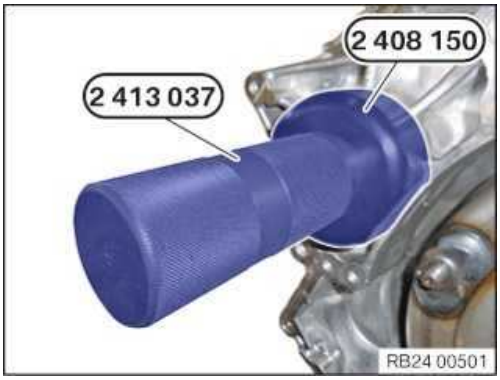
107 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.



- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.

cardiagn.com

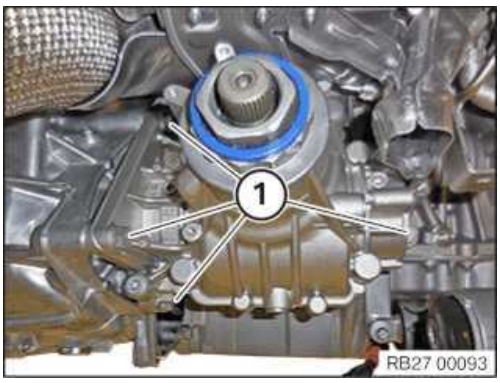
- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

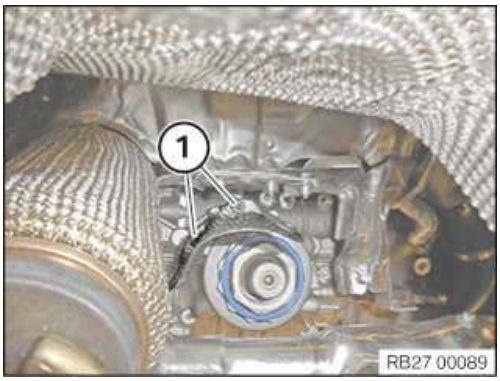


- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754



- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

cardiagn.com

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

Technically suitable transfer box and electrical transmission oils	

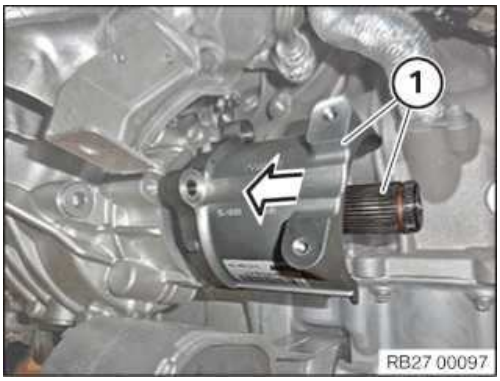
Main group 27

- Tighten the oil filler plug (1).

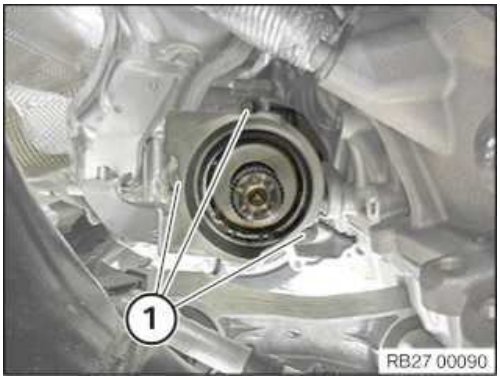
Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm

108 – Install the intermediate shaft with the support tube



- Coat gearing of the intermediate shaft uniformly with 5 g of grease.



Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

cardiagn.com

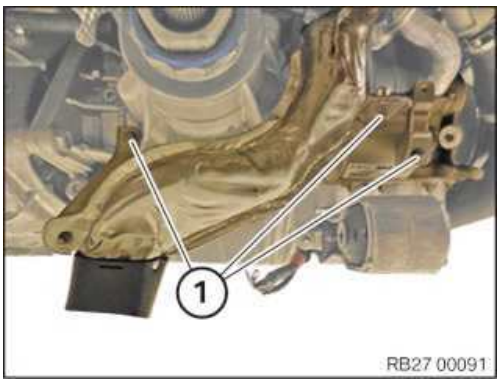
- Install the intermediate shaft with support tube (1) in the transfer box.



- Position screws (1).

Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

- If installed: Install air duct.
- Tighten the screws (1).

109 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

cardiagn.com

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

110 – Installing right output shaft partially

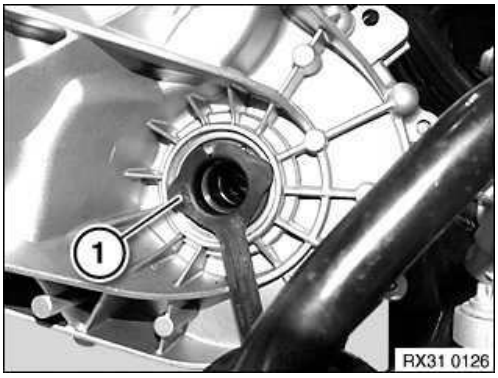
- Renew the circlip (1).

  Parts: Circlip
- Slide output shaft into the transmission as far as the limit position.
- Check for secure seat by levering.

111 – Partially installing the left output shaft

- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).



- Do not mix up circlips.

  Different types of output shafts fitted:
  - M: Manual transmission
  - A: Automatic transmission

cardiagn.com

- Renew circlip (arrow).

- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

- Insert output shaft (1) into transmission.
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

112 – Install propeller shaft.

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

Damage to the propeller shaft during installation.

Non-observance of the installation guidelines for the propeller shaft on the rear axle differential may cause severe damage.

- Always renew the recessed nut on the rear axle differential. Screw locking must be available.
- Strictly observe a minimum hardening time of two hours after having screwed in the recessed nut. The hardening time may be longer at lower temperatures.

cardiagn.com

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

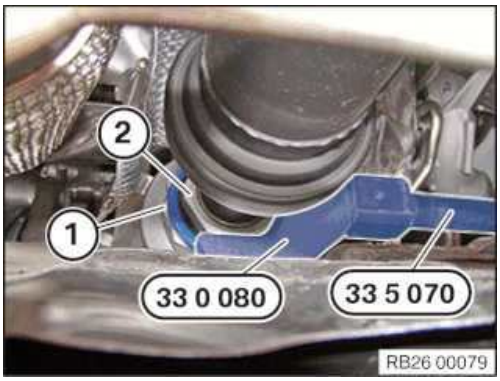
- Renew recessed nut (1).

  Parts: Insert nut
- Renew the retaining clip (2) and the seal.

  Parts: Retaining clip, seal
- Insert the seal with the recessed nut (1) and install.
- Insert the retaining clip (2) and install.
- Make sure that recessed nut (1) is screwed in within 5 min.
- Make sure that the hardening time of **minimum** 2 h for the recessed nut is observed.

  The hardening time must be extended at lower temperatures.

- Insert the propeller shaft (1) and install.
- Always support the propeller shaft (1) with a conventional jack.



- Hand-tighten the bolts (1).

- Push the propeller shaft (2) against the recessed nut (1) up to the limit position.
- Screw the propeller shaft (2) at least 2 thread starts onto the recessed nut (1) by hand.

cardiagn.com

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to tighten the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.

- Tighten the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

Propeller shaft to transfer box

		Tightening torque	80 Nm

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Assemble the screw connection (1) of the flexible disc (2) and the three-hole flange (3) according to the mark.
- Renew screws (1).

  Parts: Bolts

- Hand-tighten the bolts (1).

- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

cardiagn.com

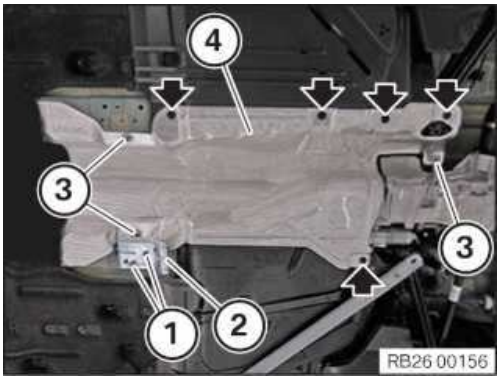
- Tighten the bolts with the special tools **0 490 504 (00 9 120)** and .

Flexible disc to rear axle final drive

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

- Tighten the screws (1).



Centre mount to body

M8		Tightening torque	19 Nm

- Guide the special too l out between the front and rear propeller shaft and remove.

113 – Installing the rear heat shield

- Insert and install the heat shield (4).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (3).

Heat shield to body

Bracket to body

M8		Tightening torque	21 Nm

114 – Install the front heat shield

cardiagn.com

- Insert and install the heat shield (2).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (1).

Heat shield to body

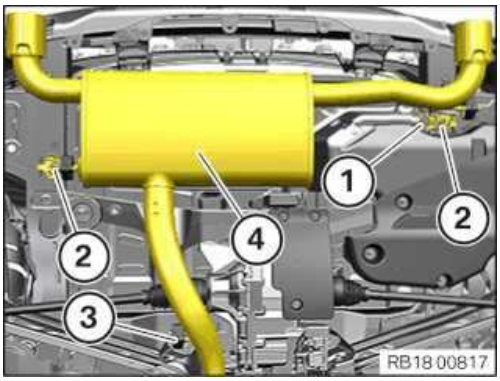
Bolts/nut		Tightening torque	3 Nm

115 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!



- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Feed in and install the exhaust system (4) with a second person.
- Renew nuts (2).

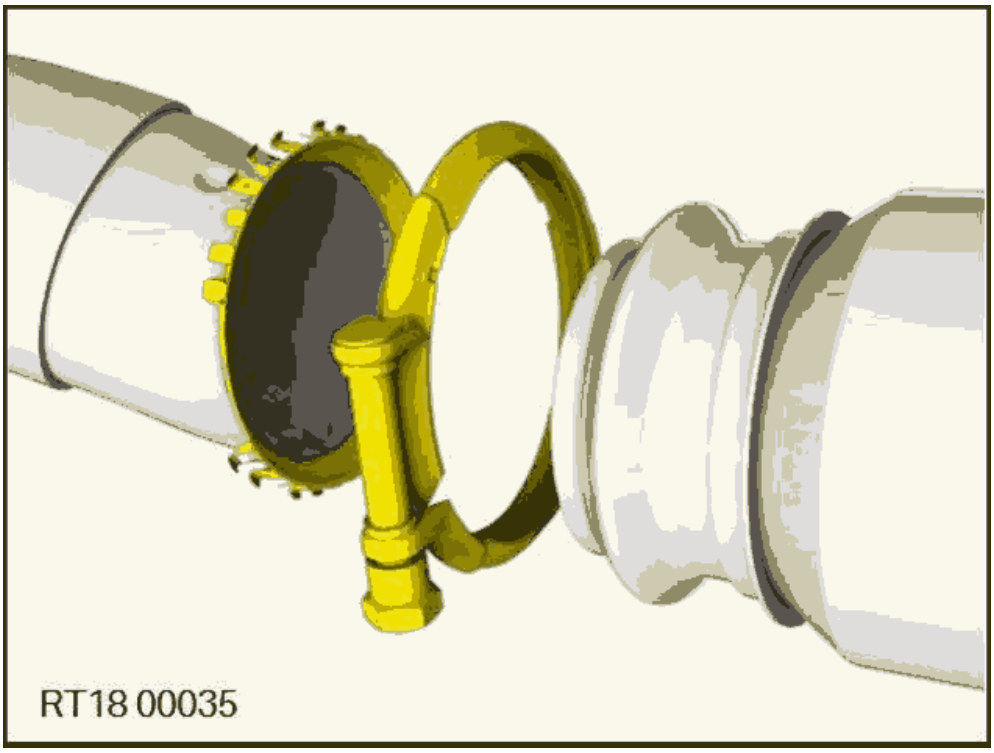
  Parts: Nuts
- Tighten nuts (2).

Exhaust system to body

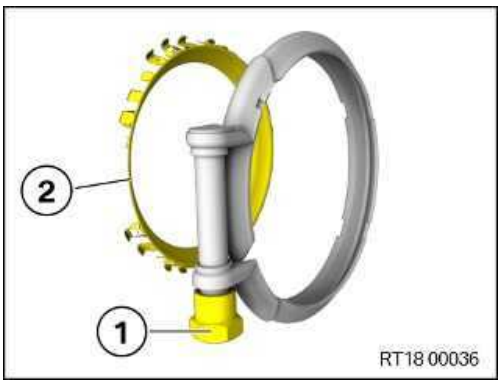
M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).

Exhaust bracket on body



Hexagon screw M8x30		Tightening torque	19 Nm



- Check the rubber mount (3) for damage and renew as needed.
- Mount rubber mount (3) on the exhaust system (4).

▸ **Install the V-clip**

cardiagn.com

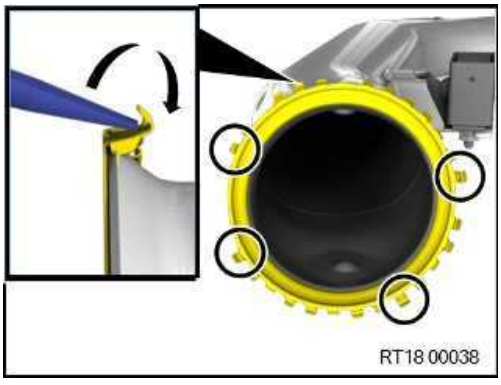
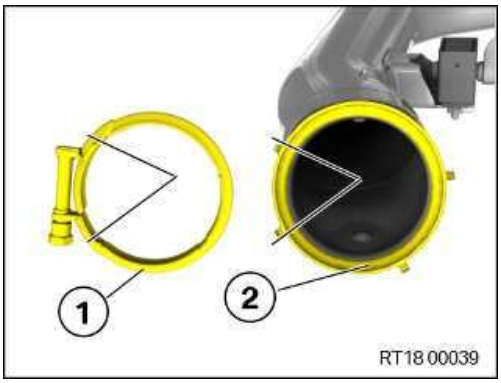
V-band clamp



- Unscrew the nut (1) and remove the sealing ring (2).



- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.

- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.

cardiagn.com

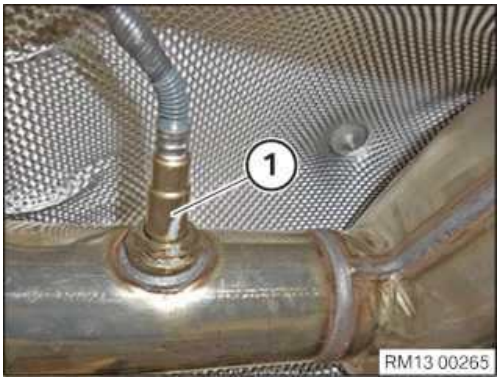
- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).

- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).

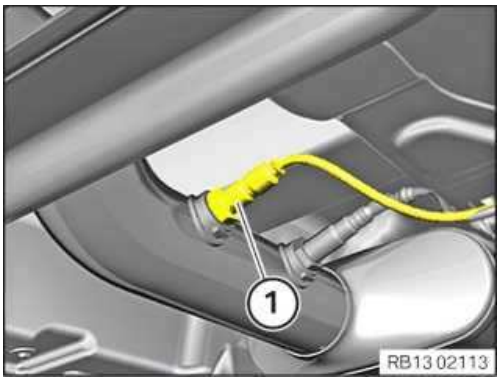


- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.

- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm



- Feed in, install and tighten diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

Sensor		Tightening torque	50 Nm

- Feed in, install and tighten nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

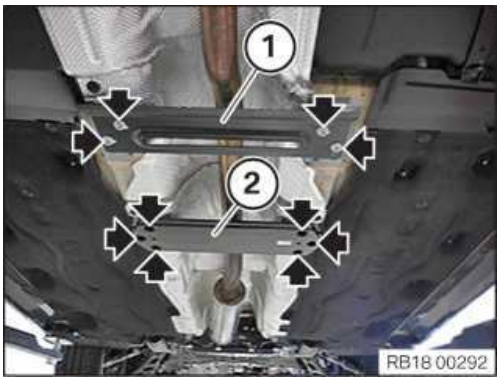
116 – Install the cross-member with torsion struts

- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °



- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Cross-member/torsion strut to axle support and mounting

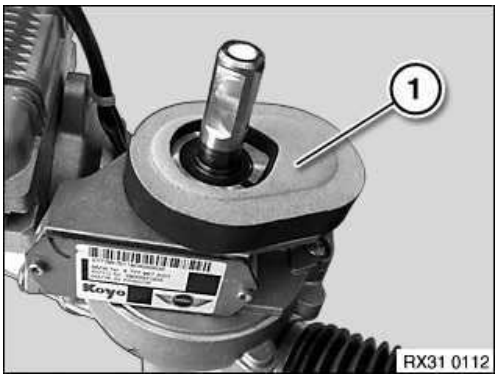
M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

117 – Install the connecting support on the tunnel in front and back

- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

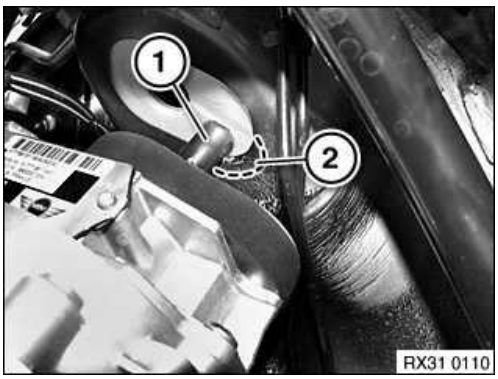
M10x18		Tightening torque	56 Nm



- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

M8x18		Tightening torque	28 Nm



118 – Mount and secure the complete front axle

cardiagn.com

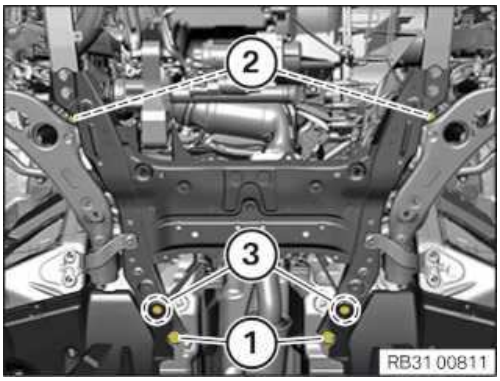
- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

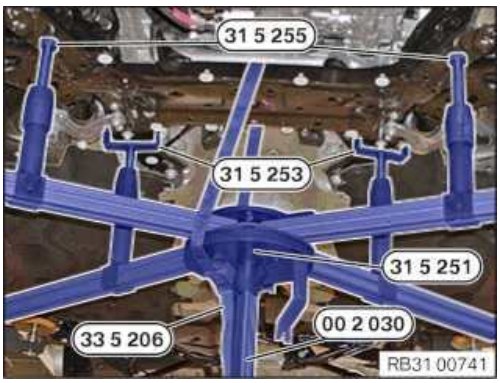
- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

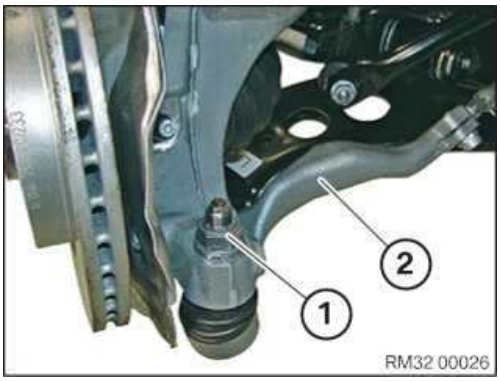
- Tighten down screws (2).



Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

- If necessary, tighten the screws in the areas (3).



Underbody protection to body

Screw		Tightening torque	3 Nm

- Remove special tool from special tool .
- Lower universal jack **0 490 133 (00 2 030)** with the special tool and place it to the side.

cardiagn.com

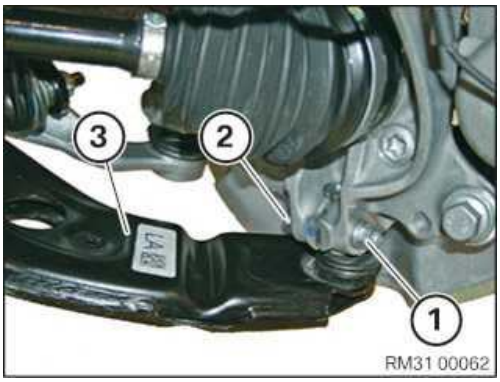
NOTICE



Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm

NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

119 – Install the mounted parts on the front axle support

NOTICE

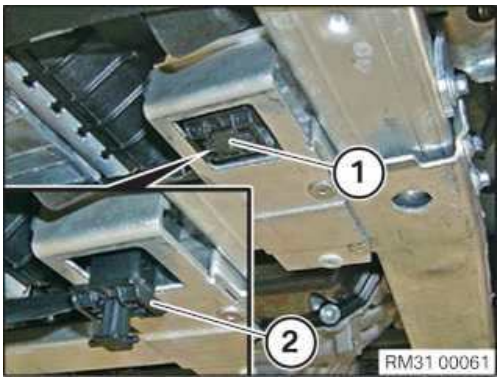
Perform the operations on the left and right side.

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °



- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support

M12 screw		100 Nm

cardiagn.com

NOTICE

Perform the operations on the left and right side.

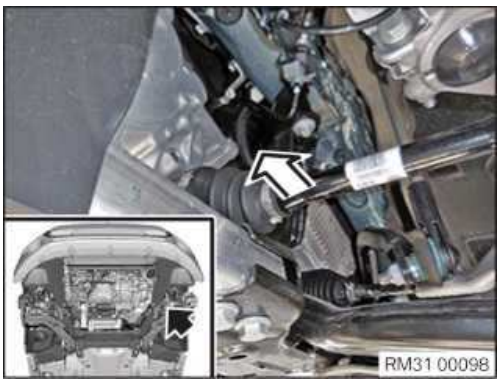
- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.

- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE



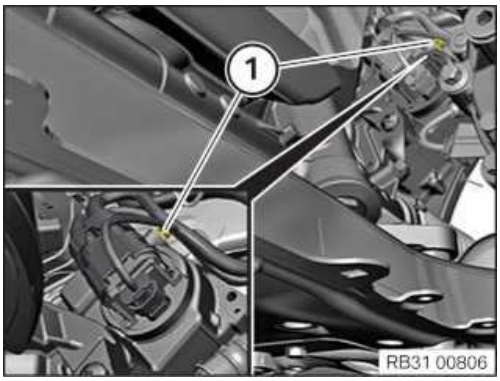
Perform the operations on the left and right side.

- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

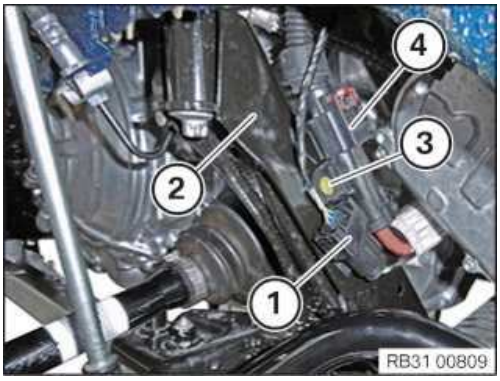
		Tightening torque	11,8 Nm

120 – Attaching connector at steering gear



- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.



- Connect and lock connector (arrow) (1) with the steering gear.

cardiagn.com

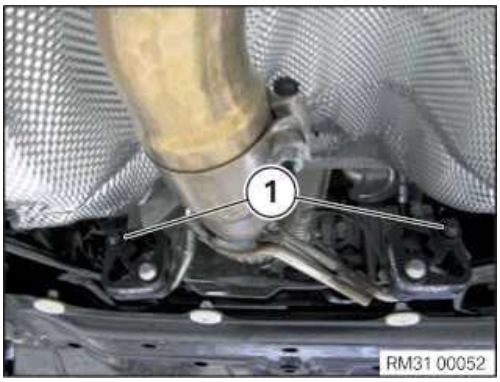
- Fasten the wiring harness (1) on the steering gear.

▶ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

121 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.

122 – Securing anti-roll bar on left and right on the anti-roll bar link

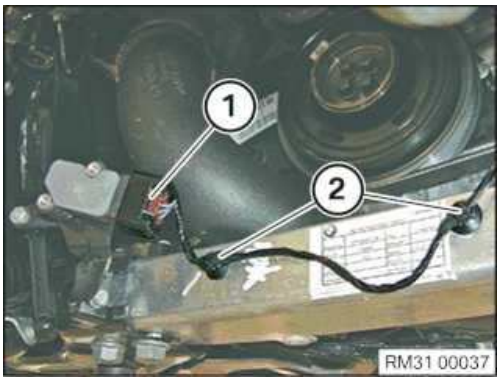
NOTICE

Perform the operations on the left and right side.

▶ **Fastening anti-roll bar on the anti-roll bar link**

- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

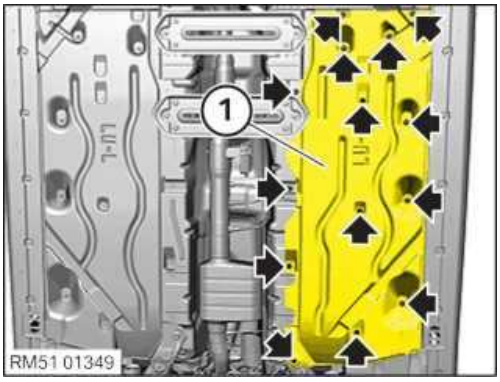
  Parts: Nut
- Tighten nut (1).



Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm



123 – With right installation: Securing the cable for the ride height sensor

cardiagn.com

- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

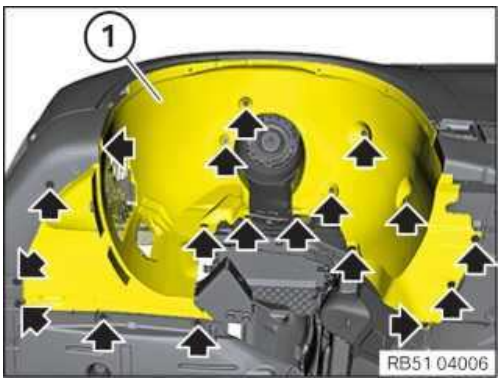
124 – Installing underbody panelling , right

- Correctly position the underbody panelling (1).
- Tighten all bolts and nuts (arrows).

Underbody panelling, side

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side



Plastic nut		Tightening torque	2,6 Nm

125 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

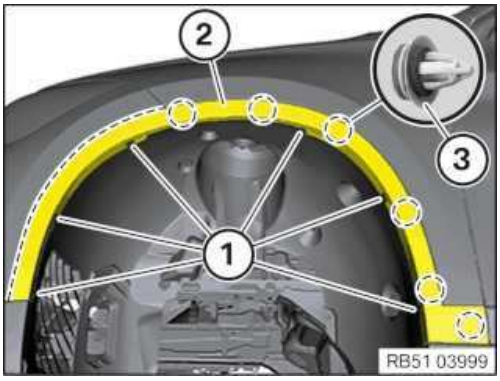
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

126 – Installing both front wheels

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

cardiagn.com

- Renew mounting bolt (1).

  Parts: Mounting bolt

- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

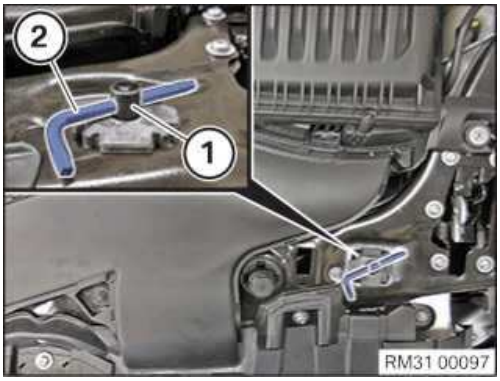
The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts



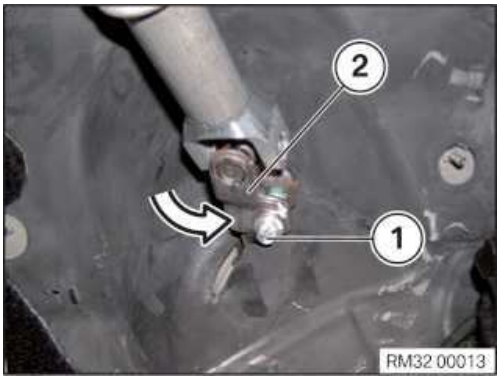
- Clean the wheel bolts.
- Check the wheel bolts and threads for damage, renew the wheel bolts if necessary.
- Join and tighten the wheel bolts (arrows).

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

cardiagn.com

127 – Removing fastener for left and right radiator



NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

128 – Secure the steering shaft at the bottom on the steering gear

- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

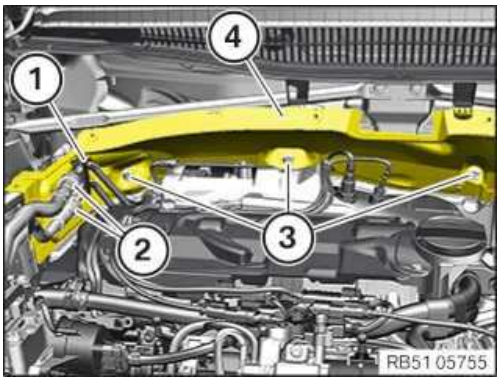
- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

129 – Install the heat shield on the exhaust turbocharger

- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.



Heat shield for exhaust turbocharger

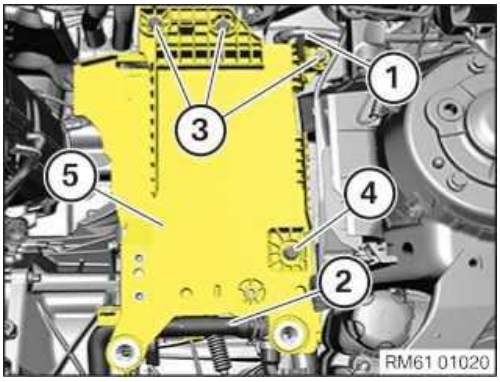
Torx screw BM 6x12		Tightening torque	10 Nm

- Fasten the cable at the clips .

130 – Installing rear bulkhead upper part

cardiagn.com

- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).



Rear bulkhead upper part to lower section of bulkhead

Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

131 – Install the battery holder

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

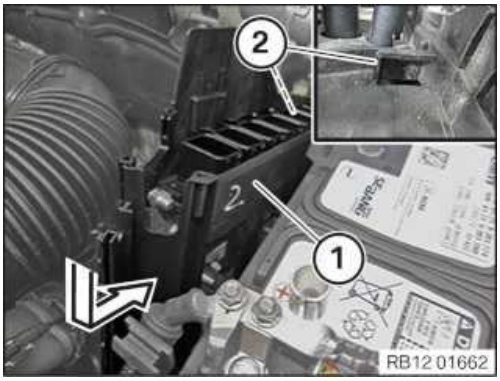
Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

132 – Install electronics box

Prerequisite



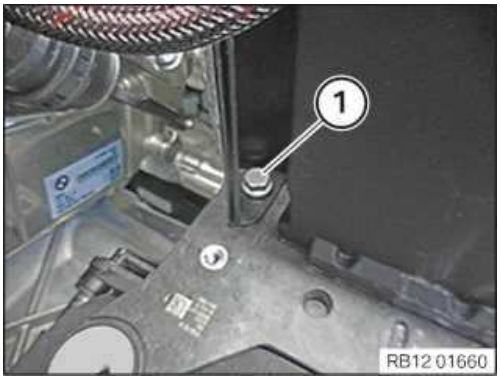
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

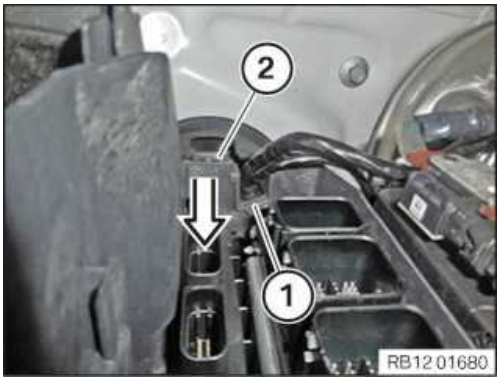
Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

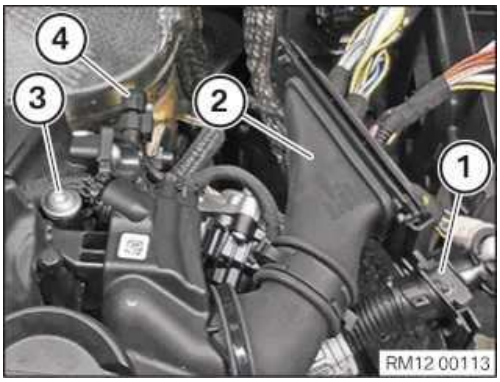


- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

cardiagn.com



- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).

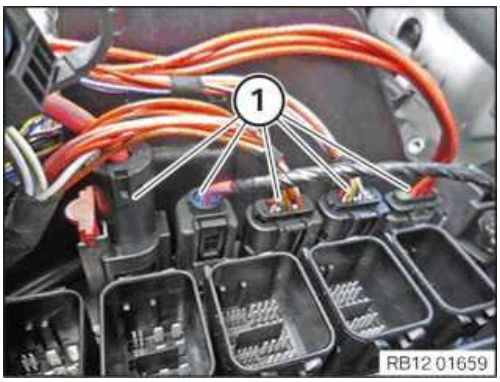


- Tighten down screw (1).

Electronics box to battery tray

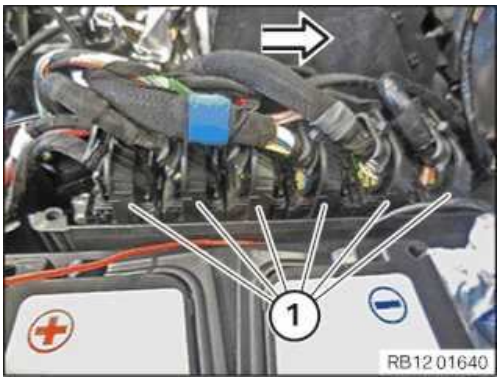
M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



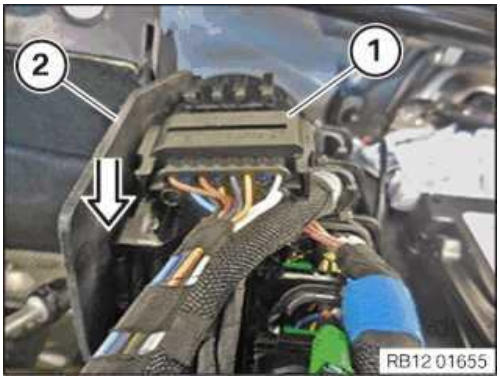
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

Wiring harness to cylinder head cover

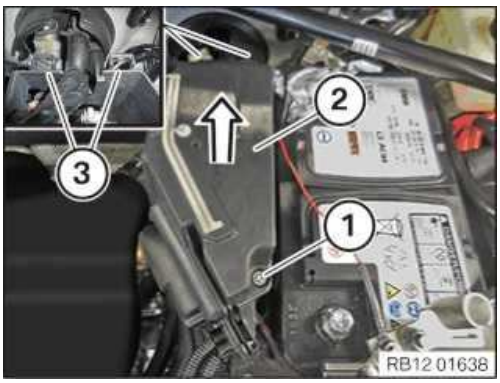


TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

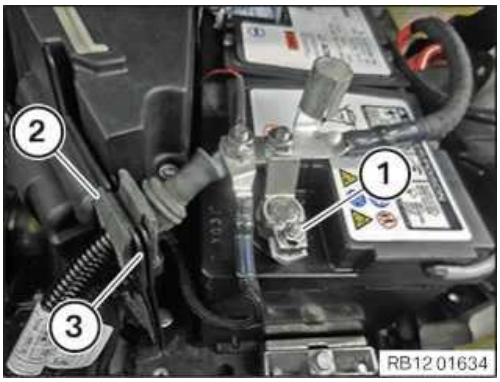


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



cardiagn.com

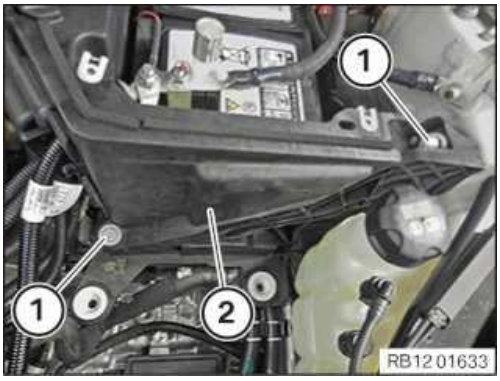
- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

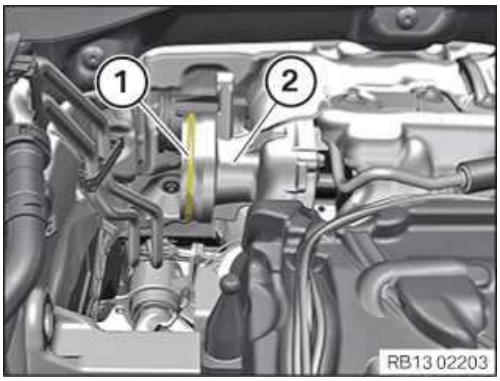


RF5x26.5		Tightening torque	2,5 Nm

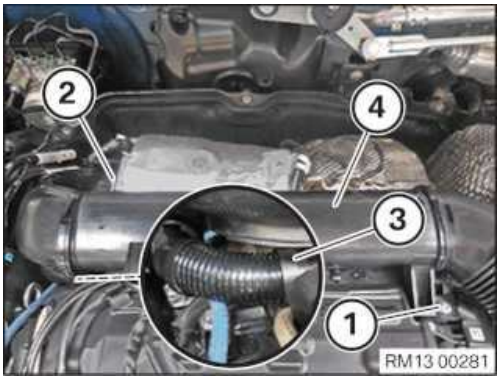
- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).



Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

cardiagn.com

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

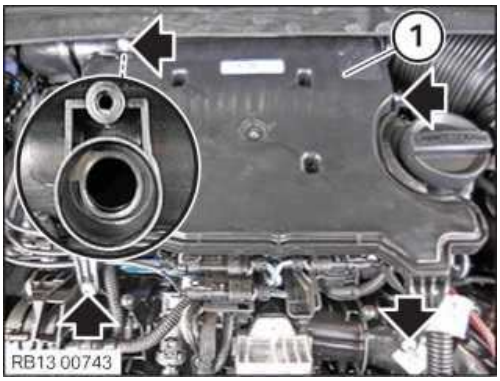
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

134 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

135 – Install acoustic cover

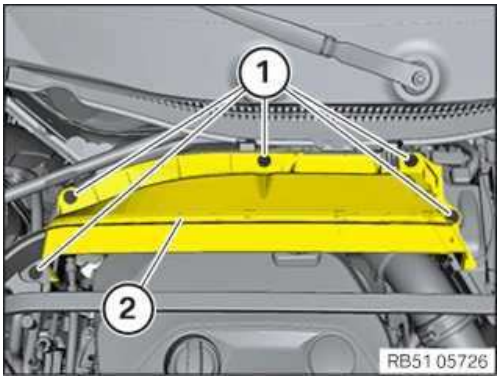
cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

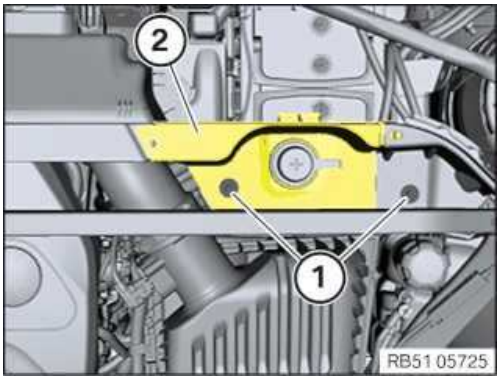
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

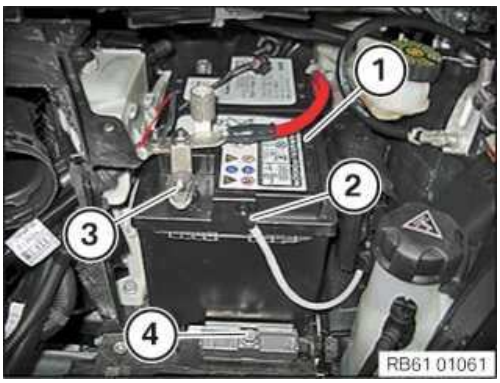


136 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm



- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

cardiagn.com

137 – Install vehicle battery

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

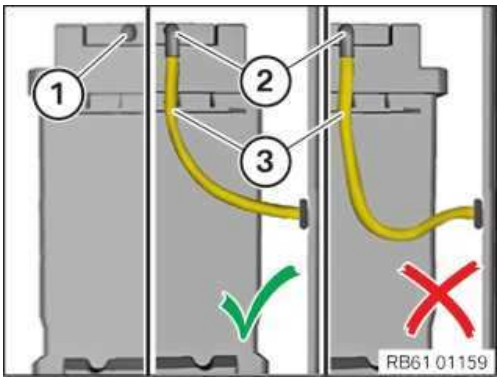
- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

▸ **Check the vent holes of the battery**

WARNING



Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

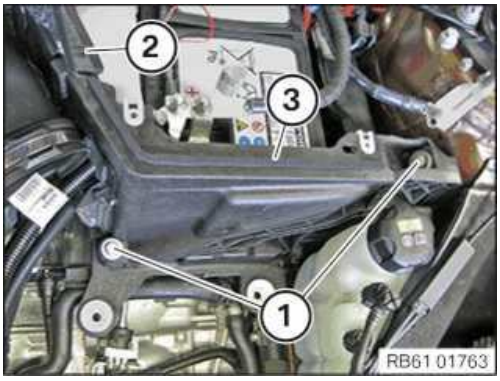
» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

cardiagn.com

Check



- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).

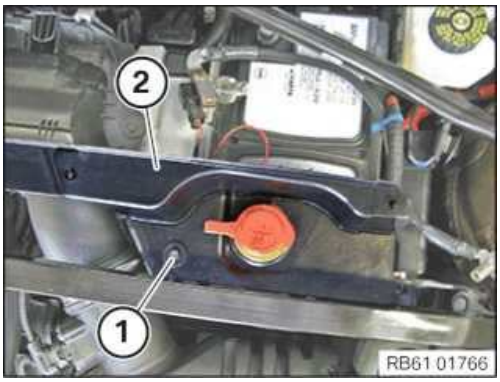
Result

» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

- Insert tension strut (3) and tighten with screws (1).

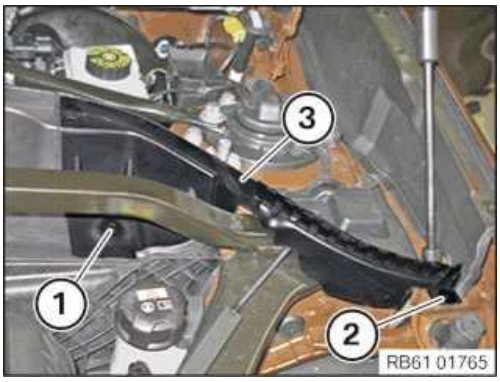


Trailing link

M8		Tightening torque	19 Nm

- Tighten down screw (2).

Battery cover



M8		2,8 Nm

- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

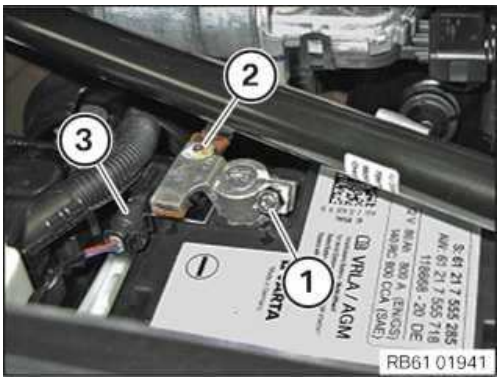
- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

138 – Connecting the battery earth lead

TECHNICAL INFORMATION



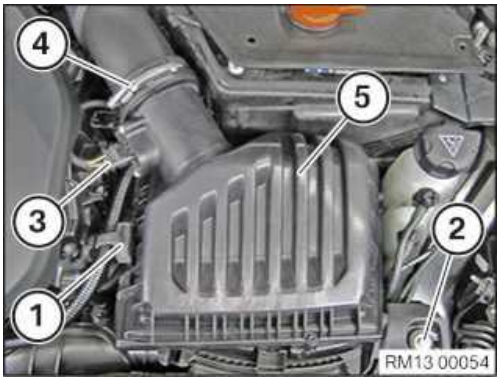
For additional information see:

61 00 ... Safety information on handling the vehicle battery

61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery

61 12 ... Notes on the intelligent battery sensor (IBS)

cardiagn.com



- Remove the protective cover of the positive battery terminal.
- Position the battery earth lead (2).
- Tighten nut (1).

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

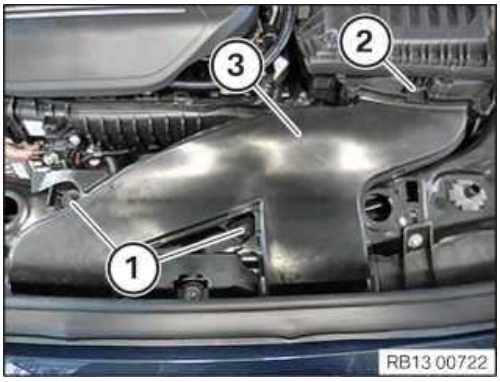
- If required, connect the connector (3).

139 – Installing intake silencer housing

- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm



- Tighten clamp (4).

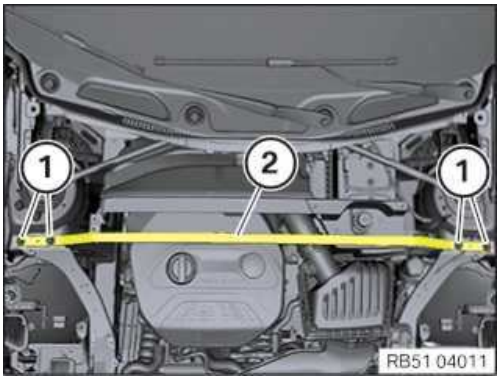
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

140 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).



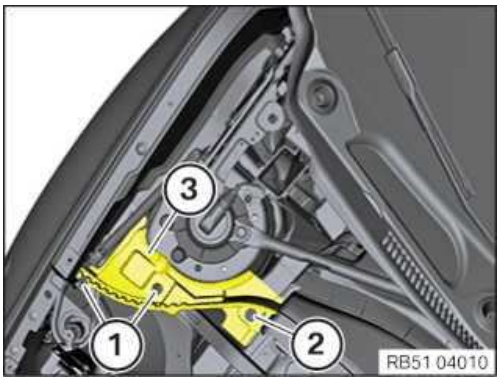
Intake neck to cross connection

M6		Tightening torque	8 Nm

141 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).
  Parts: Bolts
- Tighten the screws (1).

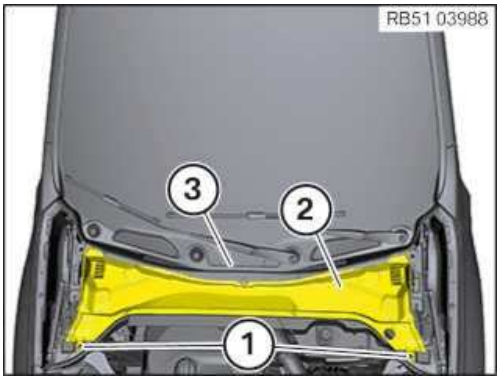
Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

cardiagn.com

NOTICE

Description is for right component only. The procedure on the left side is identical.



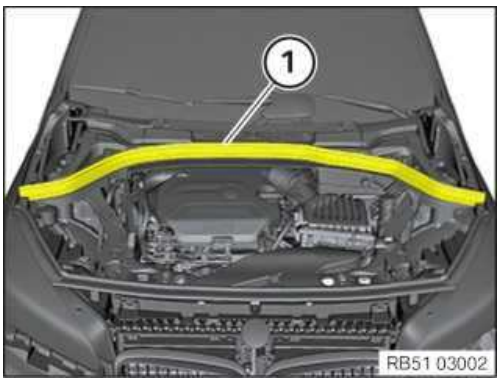
- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

142 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

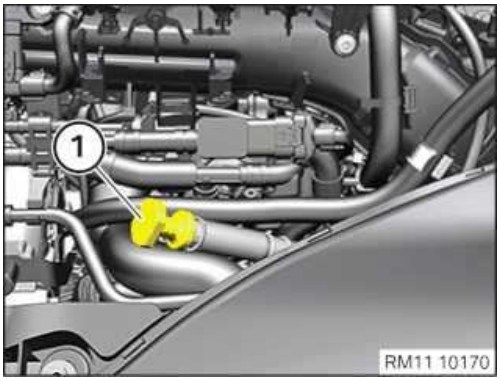
143 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

144 – Check engine oil level



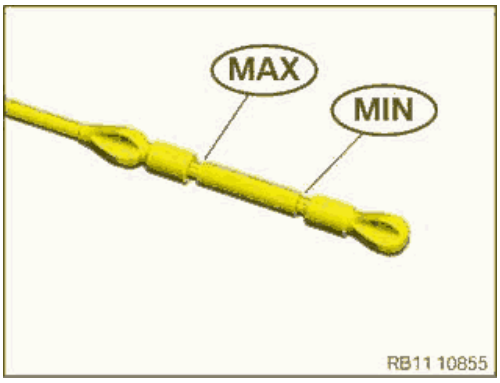
- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▶ **Check engine oil level**

cardiagn.com

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).



- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.

TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

145 – Fill and bleed the coolant circuit

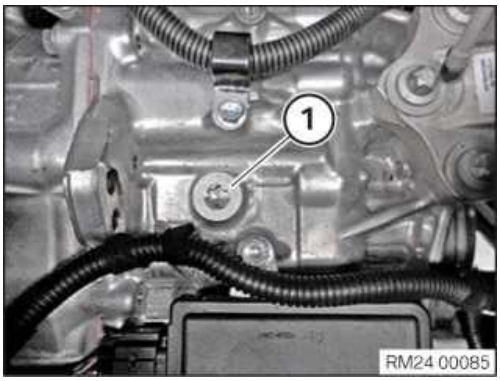
▶ **Filling and bleed the high-temperature coolant circuit**

- See additional information.

146 – Checking/topping up oil level in automatic gearbox (AISIN GA8G45)

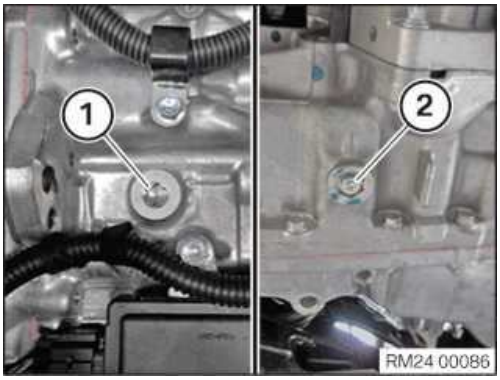
Prerequisite

Vehicle in horizontal position.



CAUTION

Materials harmful to health.



Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

- Move the selector lever to the "P" position.
- Secure vehicle to prevent it rolling.
- Connect diagnosis system.
- Release the oil filler plug (1) using the Torx T55 .

- **Topping up the automatic transmission fluid (the automatic transmission fluid was drained):**
- Release oil filler plug (1) from engine compartment.
- Loosen the overflow plug (2) below at the transmission.
- Top up automatic transmission fluid at oil filler plug (1) until oil emerges at overflow plug (2).
- Start engine and run at idle speed.
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check again whether the automatic transmission fluid is leaking at the overflow plug(2) .
- Read the temperature of the automatic transmission fluid with the diagnosis system.
- Increase temperature of automatic transmission fluid to 35 °C to 45 °C.
- Top up automatic transmission fluid until it flows over.
- Renew sealing rings.

  Parts: Sealing ring
- Screw in and fasten oil filler plug (1) and overflow plug (2).

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

- **Check oil level (transmission oil temperature must be between** 35 °C **and** 45 °C **):**
- Open the oil filler plug (1).
- Slacken overflow plug (2).
- Start engine and run at idle speed.
- Unscrew and remove overflow plug (2).
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Top up the automatic transmission fluid until it overflows at the overflow plug (2) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .

cardiagn.com

- Move the selector lever to the "P" position.
- Check the oil level again.
- Renew sealing rings.

  Parts: Sealing ring
- If the oil escapes slightly from the overflow plug (2) , tighten the overflow plug (2) and the oil filler plug (1) .

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

147 – Topping up oil level in the manual gearbox (GS6X60DA)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

TECHNICAL INFORMATION

Make sure during removal of the filling/level control screw to note the installed filling/level control screw variant.

It is **mandatory** to use variant 1 in transmissions up to production date 08/2015.

It is **mandatory** to use variant 2 in transmissions from production date 08/2015.

Failure to observe will result in a leak on the transmission.

- Variant 1 **until** production date 08/2015.
- Variant 2 **from** production date 08/2015.

- Unscrew filling/level control screw (1) and fill the transmission until the oil overflows.

Transmission oil capacity

Transmission oil GS6-60DA, GS6X60DA/Owner's Handbook	2,2 l

Transmission oil: Technically suitable manual gearbox oil

- Allow surplus oil to drain off.
- Renew the filling/level control screw (1).

  Parts: Filling/level control screw
- Tighten filling/level control screw (1).

Oil drain plug / oil filler plug

Hexagon socket		Tightening torque	43 Nm

Overview of Special Tools

0 490 133 (00 2 030) Device

Common Used in step 32 72 76 118

Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

Consisting of

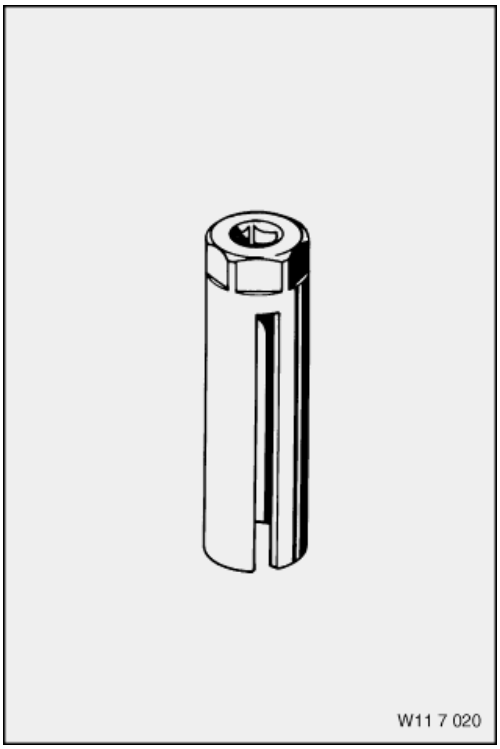
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

cardiagn.com

0 495 554 (33 5 070) Extension

Common

Used in step 38 112

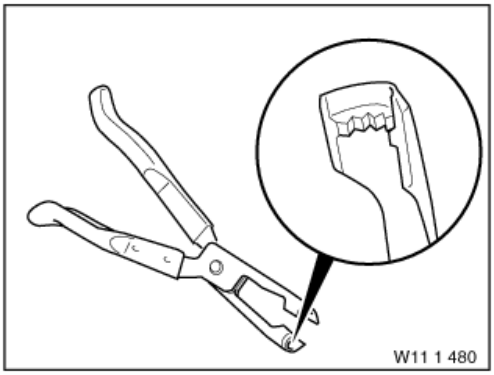


Usage	Pull-out extension for 33 5 040, 33 5 050, 33 5 060.
Included in the tool or work	
Storage location	A18
Replaced by	
In connection with	
SI-Number	01 21 06 (300)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 592 (33 5 071)		**Extension** (Extension (1 item)) discontinued, can only be ordered using complete tool	

cardiagn.com

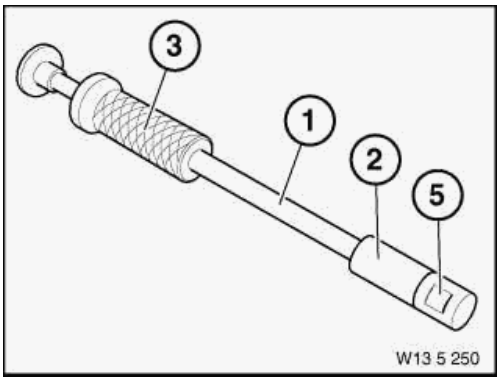


0 491 074 (11 7 020) Socket wrench insert

Common Used in step 44 45 106

Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	

0 490 796 (11 1 480) Pliers



Common Used in step 52 71 73

Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

cardiagn.com

0 493 321 (13 5 250) Puller

Common

Used in step 62

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

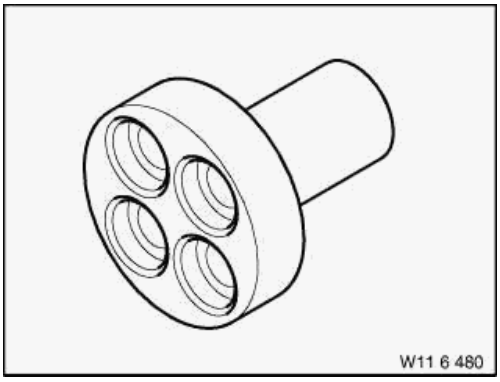
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

0 493 339 (13 5 252) Bush

Common

Used in step 62

Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	



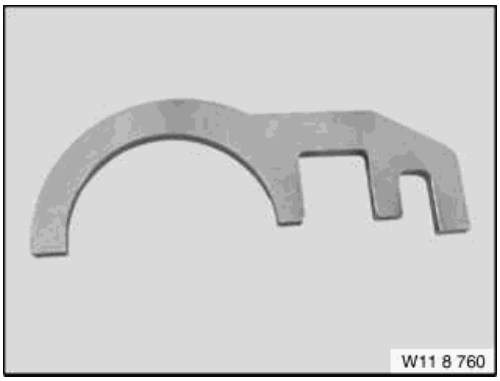
cardiagn.com

0 493 340 (13 5 253) Weight

Common	Used in step 62
Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 380 (11 6 480) Connector

Common	Used in step 64 85
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)



2 288 380 Locating stud

Common	Used in step 64 85
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

cardiagn.com

0 496 112 (11 8 760) Gauge

Common	Used in step 64 85
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 495 105 (11 4 480) oddments tray

Common	Used in step 69 70 73
Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

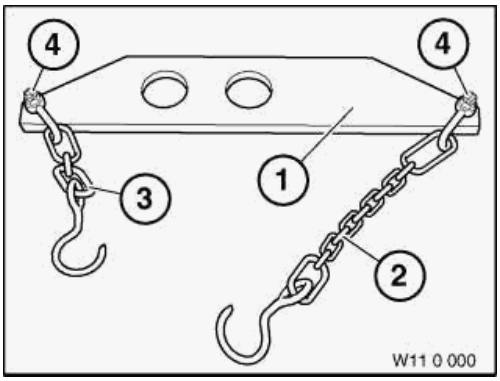
2 357 071 Panel

Common	Used in step 72 76
Usage	Additional mounting plate for lifting table MHT 1200. Delivery quantity: 1 piece. During the course of the changeover from BMWi to iPerformance, a tool changeover also takes place from campaign to warehouse.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	Table lift MHT 1200 81222184136
SI-Number	01 21 13 (987)

cardiagn.com

2 459 012 Holder

Common



Used in step 72 76

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

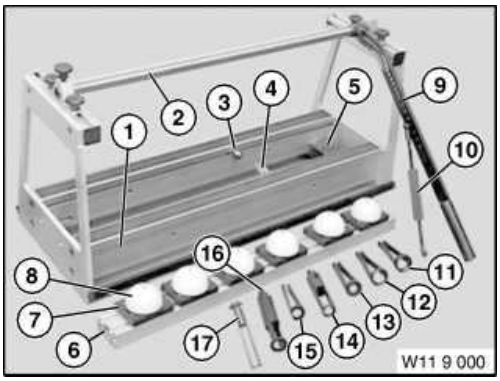
0 490 561 (11 0 000) Lifting gear

Used in step 72 76

cardiagn.com

Common

Usage	(Hoisting gear) For removing and installing engines. As of 08/2011 only available as a complete set. Delivered with TÜV inspection certificate and operating instructions. No delivery of separate parts.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 13 94 (888)



Consisting of

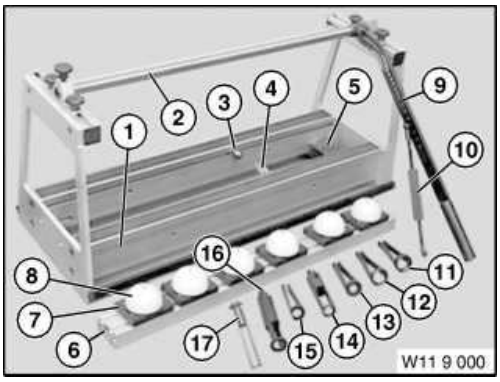
Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 490 565 (11 0 009)		**Shackle** (Shackle) 2 pieces. As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 562 (11 0 001)		**Lifting gear** (Cross member) As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 563 (11 0 002)		**Chain** (Chain) Version: long As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 564 (11 0 003)		**Chain** (Chain) Version: short As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	

0 494 362 (11 9 000) Device

Used in step 72 73

cardiagn.com

Common



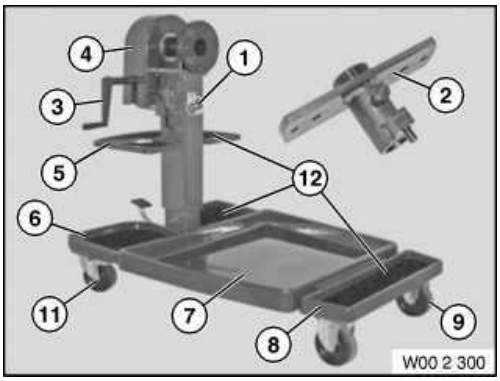
Usage	(Cylinder head expander tool)
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 03 02 (833)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 494 366 (11 9 001)		**Device**	
6	0 494 371 (11 9 006)		**Insert** (Aluminium strip)	
11	0 494 376 (11 9 012)		**Basket** (Valve spring cage) Engine M41, M51, S50	
17	0 495 028 (11 9 017)		**Basket** (Valve spring cage) Engine N52	
2	0 494 367 (11 9 002)		**Rod**	
3	0 494 368 (11 9 003)		**Adapter** (Sliding block)	
4	0 494 369 (11 9 004)		**Tab**	
5	0 494 370 (11 9 005)		**Quick fastener**	
7	0 494 372 (11 9 007)		**Shaped part** (shaped part)	
8	0 494 373 (11 9 008)		**Shaped part** (Shaped part) Shaped part made of plastic	
9	0 494 374 (11 9 009)		**Lever**	
10	0 494 375 (11 9 011)		**Hook**	
12	0 494 377 (11 9 013)		**Basket** (Valve spring cage) Engine M43, M73	
13	0 494 378 (11 9 014)		**Basket** (Valve spring cage) Engine M44, M52, M54, M56, M62, S52, S54, S62	
14	0 494 379 (11 9 015)		**Basket** (Valve spring cage) Engine M47, M47TU, M57, M57TU, N40, N42, N62, N73	
15	0 494 380 (11 9 016)		**Basket** (Valve spring cage) Engine M21, M40	

cardiagn.com

0 494 366 (11 9 001) Device



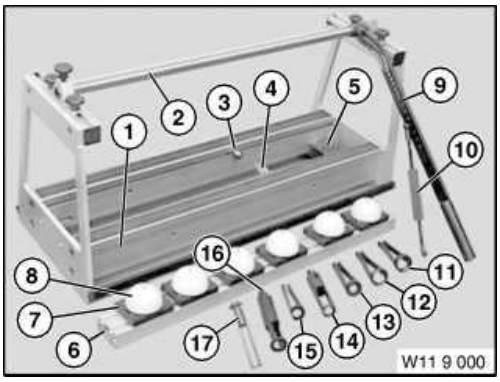
Common		Used in step 73
Usage		
Included in the tool or work	0 494 362	
Storage location		
Replaced by		
In connection with		
SI-Number		

0 495 187 (00 2 300) Assembly stand

Used in step 73

cardiagn.com

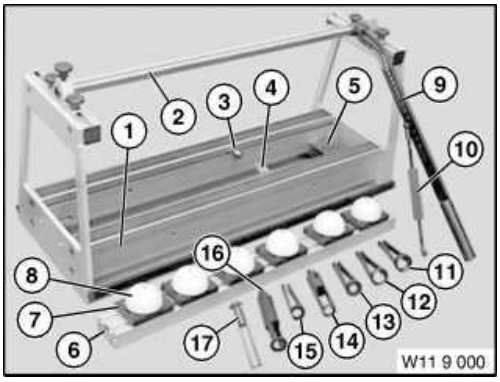
Common



Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.	

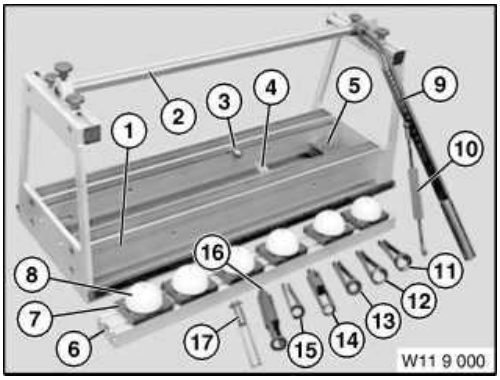


cardiagn.com

0 494 371 (11 9 006) Insert

Common	Used in step 73
Usage	(Aluminium strip)
Included in the tool or work	0 494 362
Storage location	
Replaced by	
In connection with	
SI-Number	

0 494 372 (11 9 007) Shaped part



Common	Used in step 73
Usage	(Shaped part)
Included in the tool or work	0 494 362
Storage location	
Replaced by	
In connection with	
SI-Number	

0 494 373 (11 9 008) Shaped part

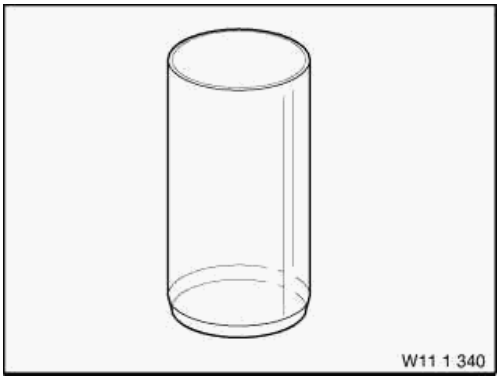
Common	Used in step 73
Usage	(Shaped part) Shaped part made of plastic
Included in the tool or work	0 494 362
Storage location	
Replaced by	
In connection with	
SI-Number	

0 494 370 (11 9 005) Quick fastener

Common	Used in step 73
Usage	
Included in the tool or work	0 494 362
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

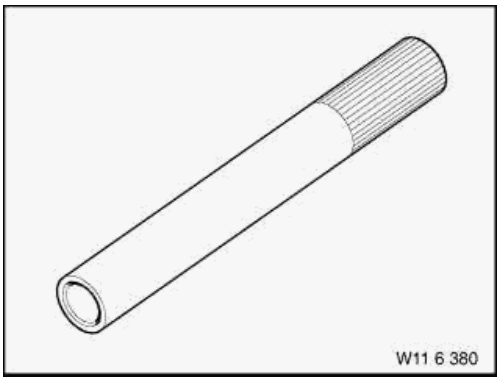
0 494 374 (11 9 009) Lever



Common	Used in step 73
Usage	
Included in the tool or work	0 494 362
Storage location	
Replaced by	
In connection with	
SI-Number	

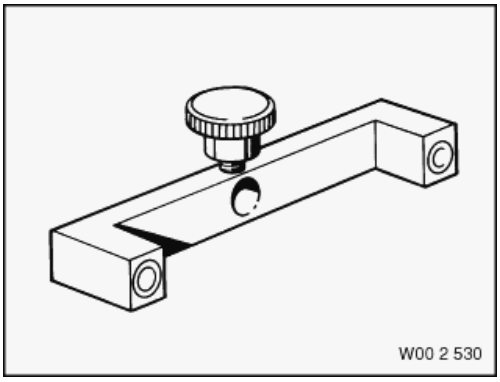
0 496 143 (11 8 840) Basket

Common	Used in step 73
Usage	(Valve spring cage) For removing and fitting the valves.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 05 07 (353)



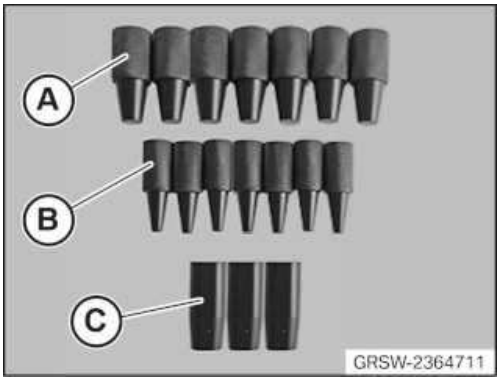
0 490 746 (11 1 380) Holding sleeve

Common	Used in step 73
Usage	(Assembly sleeve) For fitting the valve stem seal, diameter 7 mm
Included in the tool or work	
Storage location	individual
Replaced by	
In connection with	
SI-Number	



cardiagn.com

0 493 249 (11 6 380) Bush



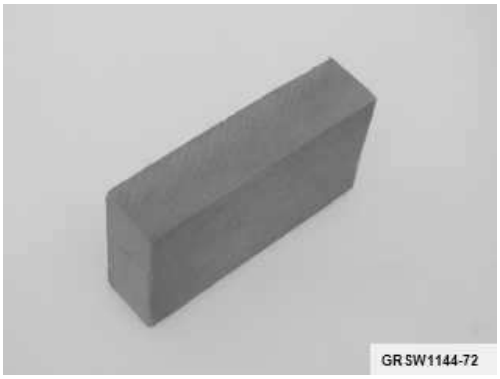
Common	Used in step 73
Usage	For fitting valve stem seal
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

0 490 185 (00 2 530) Bridge

Common	Used in step 73
Usage	(Measuring bridge) For determining the piston projection (Diesel)
Included in the tool or work	
Storage location	A3
Replaced by	
In connection with	
SI-Number	

2 364 711 Plug

Common	Used in step 74
Usage	For closing the pressure oil holes for cleaning the cylinder head sealing surfaces.
Included in the tool or work	
Storage location	C20
Replaced by	
In connection with	
SI-Number	01 50 14 (203)

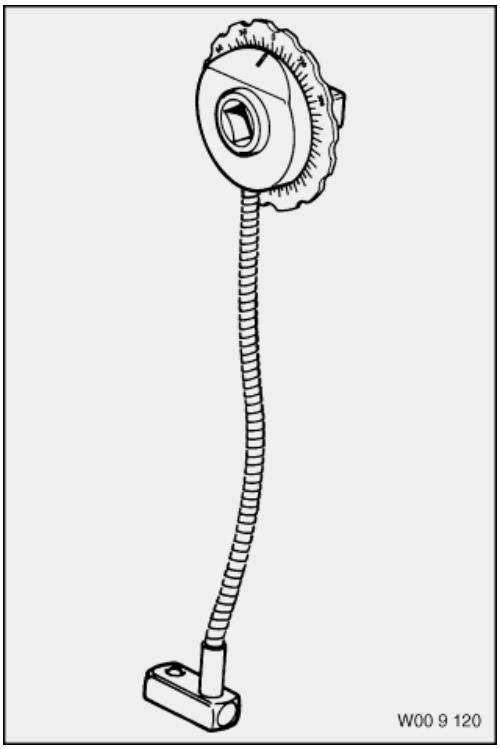


cardiagn.com

0 495 103 (11 4 471) Scraper

Common	Used in step 74
Usage	
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

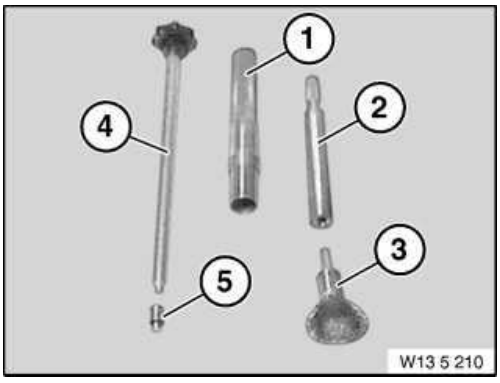
0 495 104 (11 4 472) Extractor



Common	Used in step 74
Usage	(grindstone)
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

0 490 504 (00 9 120) Torque angle measuring dial

Used in step 76 112

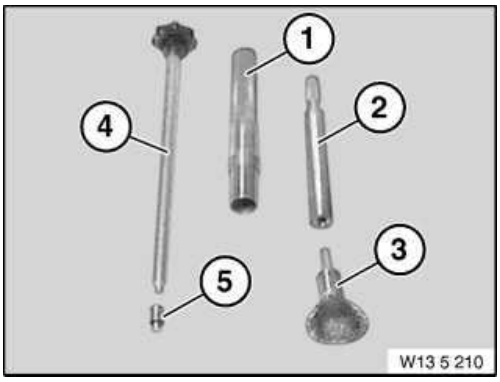


cardiagn.com

Common

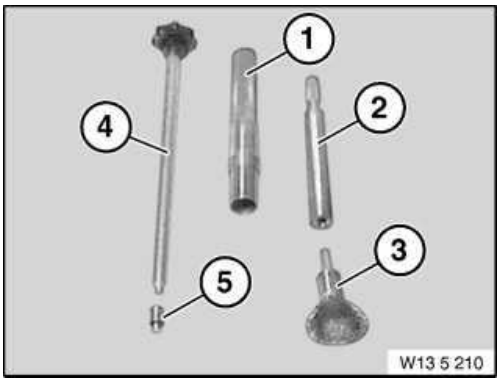
Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

0 493 763 (13 5 215) Plug



Common Used in step 87

Usage	(Seal plug)
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

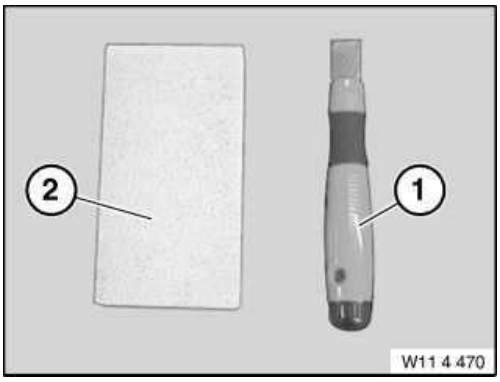


cardiagn.com

0 493 762 (13 5 214) Rod

Common	Used in step 87
Usage	(Mounting rod) For the seal plug
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 758 (13 5 210) Tool



Common	Used in step 87
Usage	(Cleaning set) For injector channels
Included in the tool or work	
Storage location	B4
Replaced by	
In connection with	
SI-Number	01 05 00 (574)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 759 (13 5 211)		**Holding sleeve** (Guide sleeve)	
2	0 493 760 (13 5 212)		**Holder** (Brush holder)	
3	0 493 761 (13 5 213)		**Brush head**	
4	0 493 762 (13 5 214)		**Rod** (Mounting rod) For the seal plug	
5	0 493 763 (13 5 215)		**Plug** (Seal plug)	

cardiagn.com

0 495 102 (11 4 470) Tool

Common Used in step 91

Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

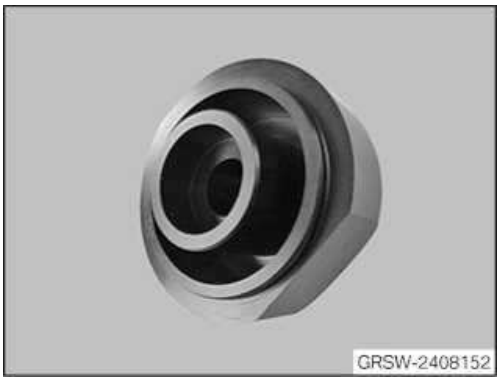
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 103 (11 4 471)		**Scraper**	
2	0 495 104 (11 4 472)		**Extractor** (grindstone)	

2 409 025 Puller

Common Used in step 107

Usage	For disassembly of the outer radial shaft seal of the transmission output shaft, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A76
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

2 411 739 Puller



Common Used in step 107

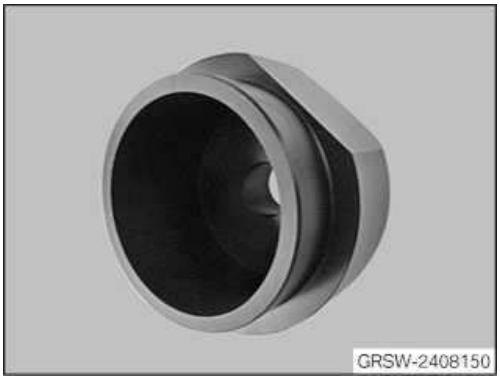
Usage	For disassembly of the inner radial shaft seal of the output, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C78
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

cardiagn.com

2 408 152 Striking element

Common Used in step 107

Usage	For installation of the right radial shaft seal transmission output shaft (inner). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)

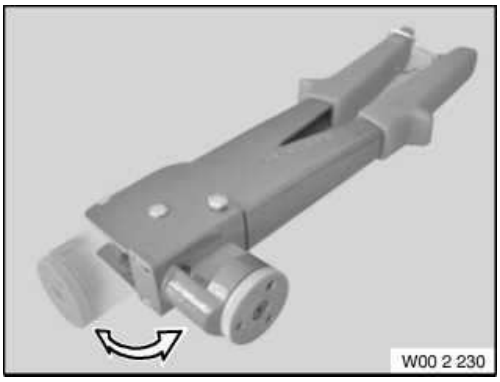


2 413 037 Handle

Common Used in step 107

Usage	Universal drift handle. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C77
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

2 408 150 Striking element



Common Used in step 107

Usage	For installing the right radial shaft seal transmission output shaft (outer). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)

cardiagn.com

0 496 521 (00 2 230) Pliers

Common	Used in step 125
Usage	(Blind rivet pliers for plastic rivets) For shaft diameters of 3.5 mm, 3.9 mm and 4.5 mm
Included in the tool or work	
Storage location	C25
Replaced by	
In connection with	
SI-Number	01 17 08 (478)

2 344 011 Tool

Common	Used in step 126
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

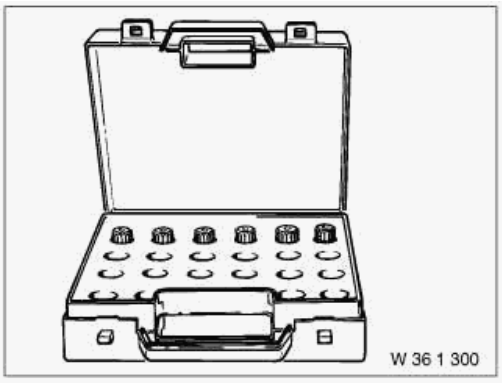
Replacement tools:

0 495 221 (36 1 323) Wheel stud

Common	Used in step 23
Usage	(Code 30) Code 39 available separately, (see EPC) under 36 13 1 181 259
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 224 (36 1 326) Wheel stud

Common	Used in step 23
Usage	(Code 33) With centring bore available separately, (see EPC) under 36 13 6 765 546
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	



cardiagn.com

0 495 225 (36 1 327) Wheel stud

Common	Used in step 23
Usage	(Code 34) With centring bore available separately (see EPC) under 36 13 6 765 547
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 226 (36 1 328) Wheel stud

Common	Used in step 23
Usage	(Code 35) With centring bore available separately, (see EPC) under 36 13 6 762 340
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 227 (36 1 329) Wheel stud

Common	Used in step 23
Usage	(Code 36) With centring bore available separately (see EPC) under 36 13 6 762 341
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

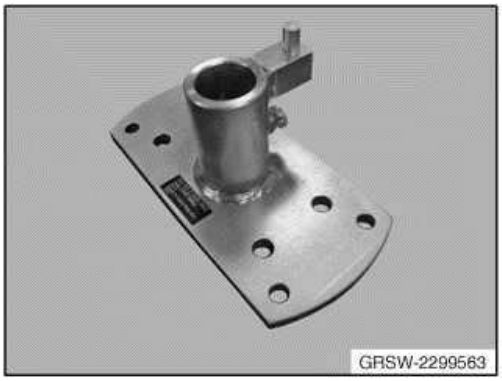
0 495 228 (36 1 331) Wheel stud

Common	Used in step 23
Usage	(Code 37) With centring bore available separately (see EPC) under 36 13 6 762 342
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 229 (36 1 332) Wheel stud

Common	Used in step 23
Usage	(Code 38) With centring bore available separately (see EPC) under 36 13 6 762 343
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	



0 495 230 (36 1 333) Wheel stud

Common	Used in step 23
Usage	(Code 40) With centring bore available separately (see EPC) under 36 13 6 762 344
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

2 299 563 Adapter

Common	Used in step 73
Usage	New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.
Included in the tool or work	0 495 187
Storage location	
Replaced by	
In connection with	
SI-Number	

Overview Technical Data

Valve underprotrusion	Used in step 73
	0,8 (0,7 - 0,9) mm

Transmission oil capacity	Used in step 147
Transmission oil GS6-60DA, GS6X60DA/Owner's Handbook	2,2 l
Transmission oil: Technically suitable manual gearbox oil

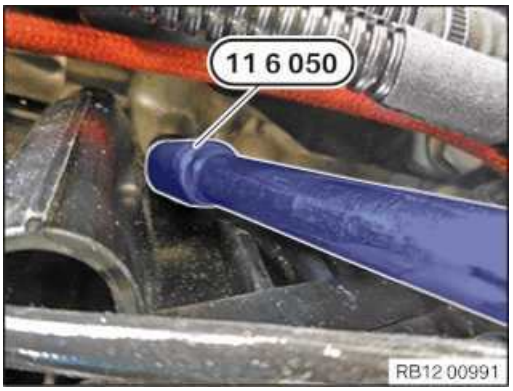
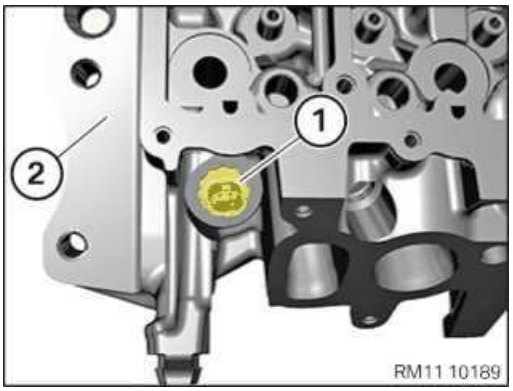
11 12 631 replace cylinder head



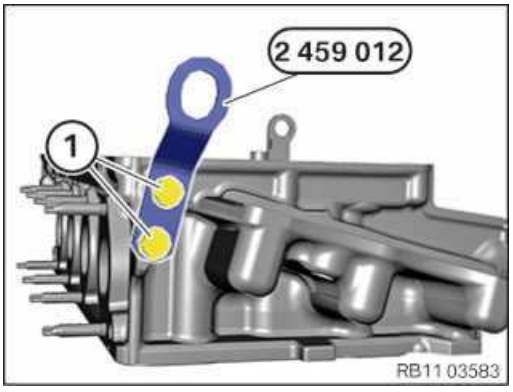
PRELIMINARY WORK

1 – Remove cylinder head.

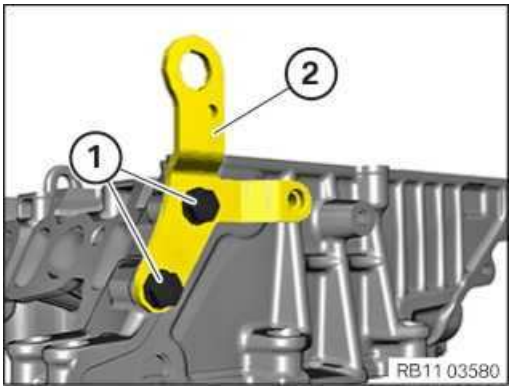


- See additional information.

MAIN WORK



2 – replace cylinder head



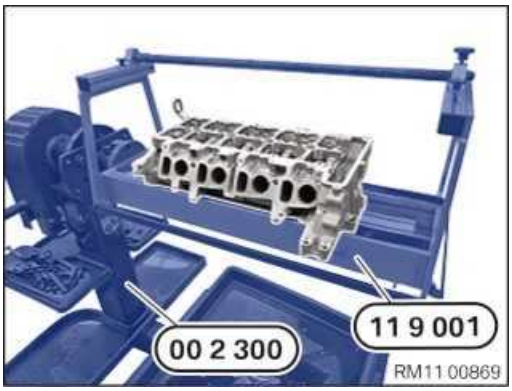
- Unscrew the preheating elements with special tool .

- Detach coolant temperature sensor (1) on cylinder head (2).

- Loosen screws (1).
- Remove special tool .

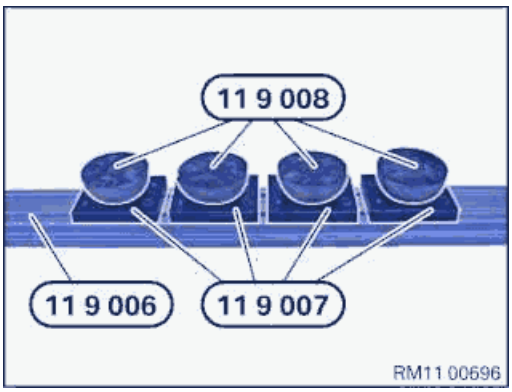
- Loosen screws (1).
- Remove mounting lug (2) from cylinder head.

▸ **Remove all valve springs**



cardiagn.com

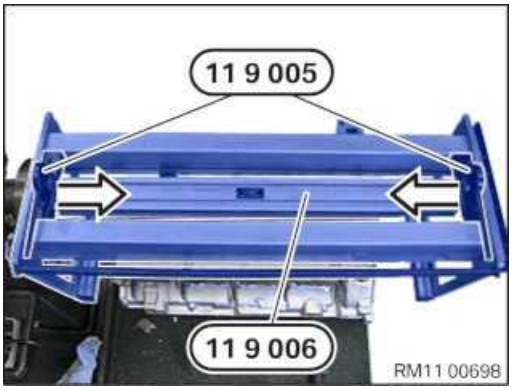
RISK OF DAMAGE



Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

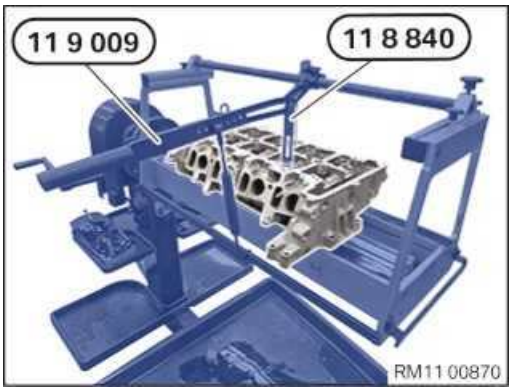
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



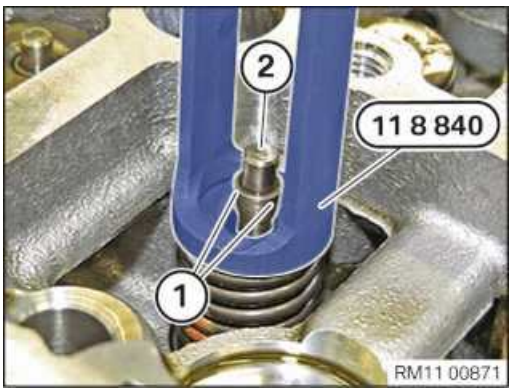
- Mount and screw the cylinder head onto the special tools **0 494 366 (11 9 001)** and **0 495 187 (00 2 300)**.

- Prepare the special tools **0 494 371 (11 9 006)**, **0 494 372 (11 9 007)** and **0 494 373 (11 9 008)** as shown.

- Position special tool **0 494 373 (11 9 008)** as illustrated.



- Turn round special tool **0 494 371 (11 9 006)** and insert as shown.
- Lock special tool **0 494 370 (11 9 005)** in direction of arrow.

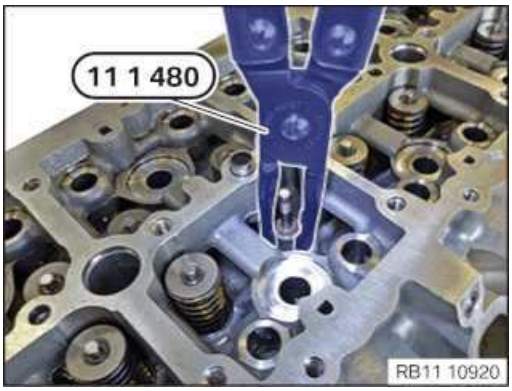


cardiagn.com

- Lock special tool **0 494 370 (11 9 005)** in direction of arrow.
- Use the special tool **0 494 362 (11 9 000)** to bring the cylinder head into the installation position by 180°.

- Align special tool **0 494 374 (11 9 009)** in direction of valve axis.
- Position the special tool **0 496 143 (11 8 840)** according to the nut.
- Press down the valve spring on the upper spring cup with the special tools **0 494 374 (11 9 009)** and **0 496 143 (11 8 840)**.
- The **hooks** from the set of special tools **0 494 362 (11 9 000)** can be used to **hold** the valve spring down.

- Keep the valve spring pressed down with the special tool **0 496 143 (11 8 840)**.
- Remove the valve shims (1) from the valve (2) using a magnet.
- Guide the valve spring and spring cup out and remove.
- Set down valve spring, spring cup and valve shims (2) in the special tool **0 495 105 (11 4 480)** in an orderly manner.



▸ **Remove valve stem seals**

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Disassemble the valve stem seal (1) using the special tool **0 490 796 (11 1 480)**.

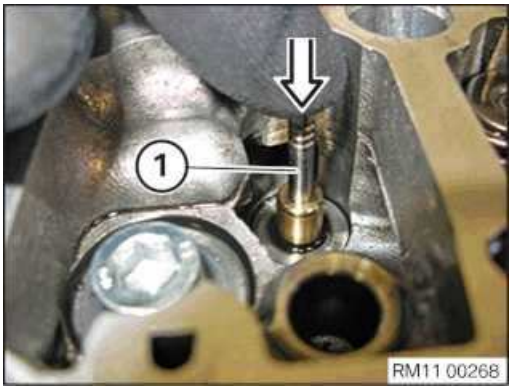
▸ **Remove all valves**

cardiagn.com

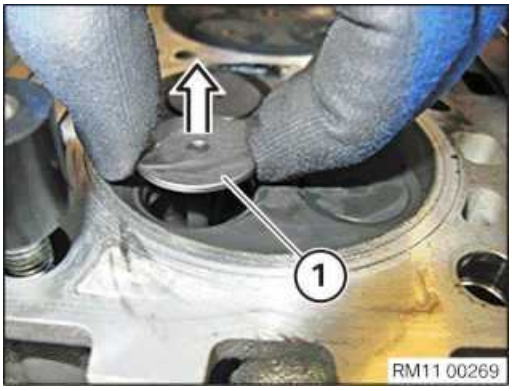
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

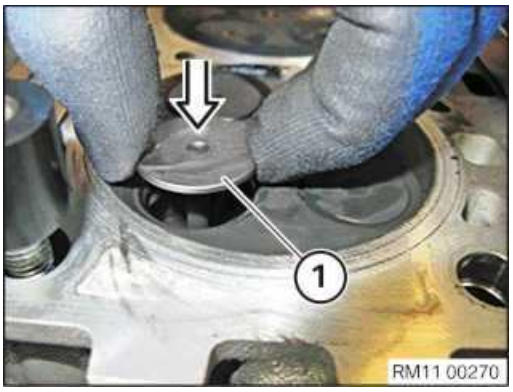


- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

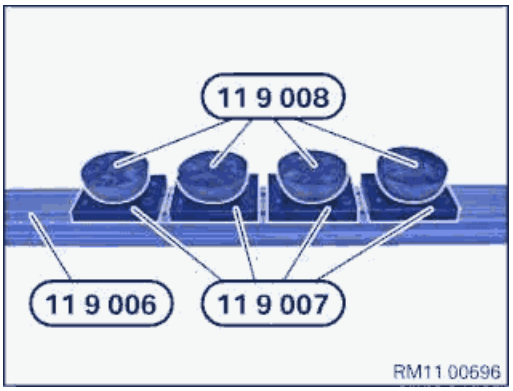


- Turn the cylinder head with the special tool **0 494 362 (11 9 000)**.
- Unlock the special tool **0 494 370 (11 9 005)** in the direction of the arrow.
- Remove special tool **0 494 371 (11 9 006)**.

- Remove special tool **0 494 373 (11 9 008)** if necessary.



- Push the valve stem (1) into the cylinder head in the direction of the arrow.



- Remove the valve (1) in the direction of arrow and store it properly in the special tool **0 495 105 (11 4 480)**.

cardiagn.com

- Install valves (1) in the new cylinder head.

  Parts: Cylinder head
- Feed valves (1) in the direction of arrow and install.
- **Check the valves for tightness.**

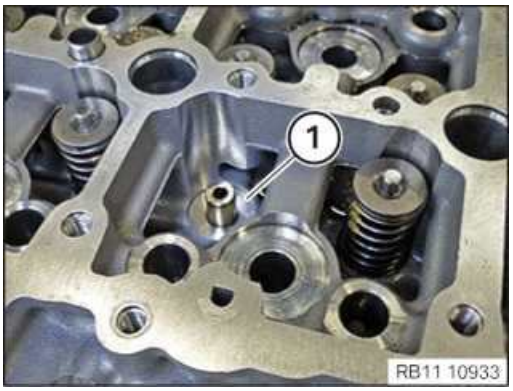
- Prepare the special tools **0 494 371 (11 9 006)**, **0 494 372 (11 9 007)** and **0 494 373 (11 9 008)** as shown.

- The special tools **0 494 373 (11 9 008)** must be set up accordingly in the next operation.

- Turn round special tool **0 494 371 (11 9 006)** and insert as shown.
- Lock special tool **0 494 370 (11 9 005)**in direction of arrow.

- Lock special tool **0 494 370 (11 9 005)**in direction of arrow.
- Use the special tool **0 494 362 (11 9 000)** to bring the cylinder head into the installation position by 180°.

▸ **Installing valve stem seals**



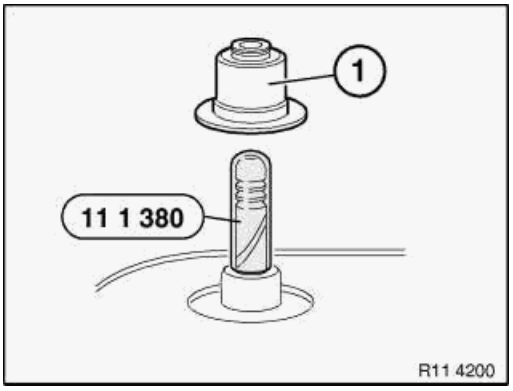
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

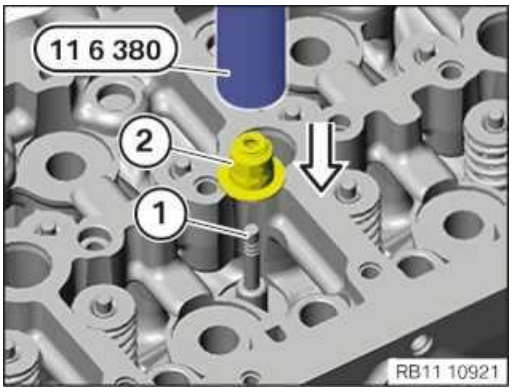
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



- Do not use any metal-cutting tools.

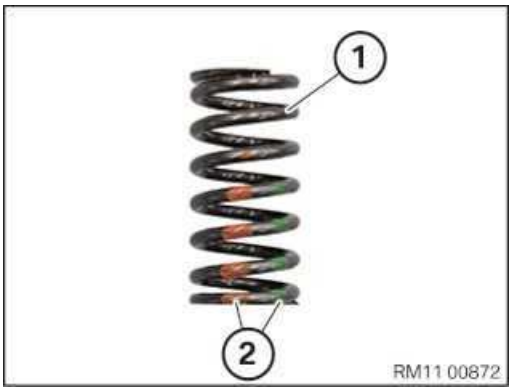
- Clean the contact surfaces (1).

- Fit special tool **0 490 746 (11 1 380)**.
- Oil the valve stem seal (1) and install it.

  Parts: Valve stem seal

- Position the valve stem seals (2) on the valve (1).
- Use special tool **0 493 249 (11 6 380)** to press down the valve stem seal (2) until they are in contact with the cylinder head.

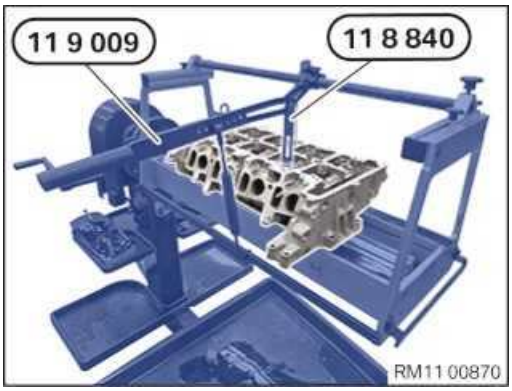
▸ **Install all valve springs**



RISK OF DAMAGE

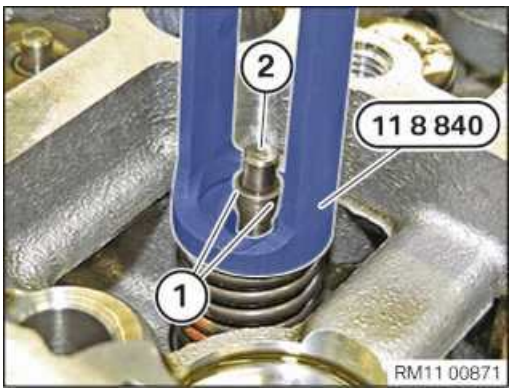
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.



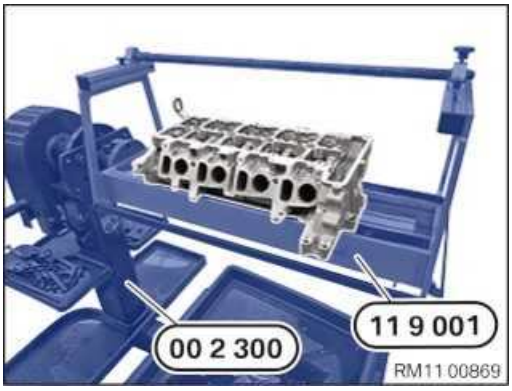
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com



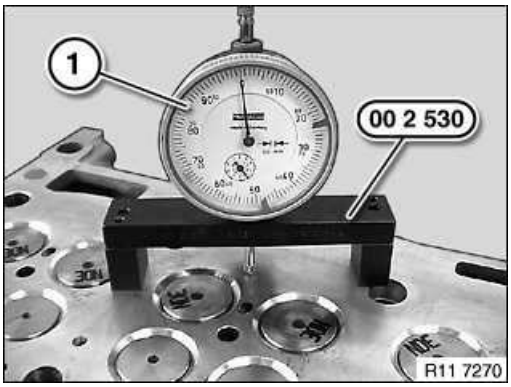
- The valve spring (1) is marked with a colour code (2).

  The mounting orientation of the valve spring (1) can be freely chosen.

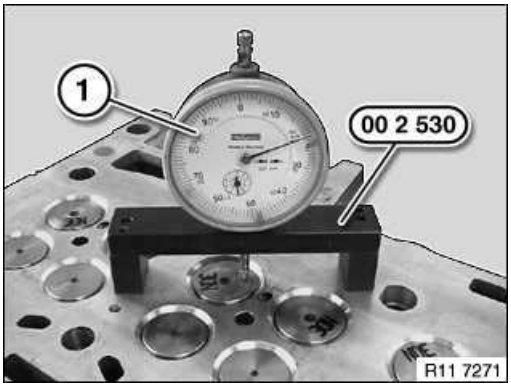


- Align special tool **0 494 374 (11 9 009)** in direction of valve axis.
- Position the special tool **0 496 143 (11 8 840)** according to the nut.
- Press down the valve spring on the upper spring cup with the special tools **0 494 374 (11 9 009)** and **0 496 143 (11 8 840)**.
- The **hooks** from the set of special tools **0 494 362 (11 9 000)** can be used to **hold** the valve spring down.

- Keep the valve spring pressed down with the special tool **0 496 143 (11 8 840)**.
- Insert the valve shims (1) at the valve (2) with the magnet and install.
- Relieve load on valve spring.
- Make sure that the valve shims (1) are installed correctly.



- Unlock the special tool **0 494 370 (11 9 005)** in the direction of the arrow.
- Guide the special tool **0 494 371 (11 9 006)** out and remove.



- Unscrew and remove the cylinder head from the special tools **0 494 366 (11 9 001)** and **0 495 187 (00 2 300)**.

▸ **Checking the valve underprotrusion**

cardiagn.com

- Set the dial gauge (1) onto the cleaned cylinder sealing surface with slight preload in special tool **0 490 185 (00 2 530)**.
- Set dial gauge in mildly preloaded state to "zero".

Check

- Position the dial gauge (1) on the valve with special tool **0 490 185 (00 2 530)**.
- Measure valve underprotrusion and compare with the setpoint value.

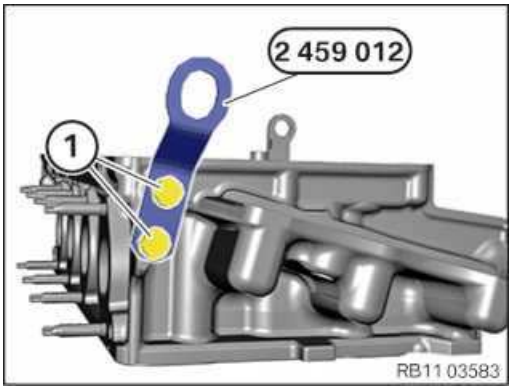
Valve underprotrusion

	0,8 (0,7 - 0,9) mm

Result

» Valve underprotrusion is outside tolerance.

Measure

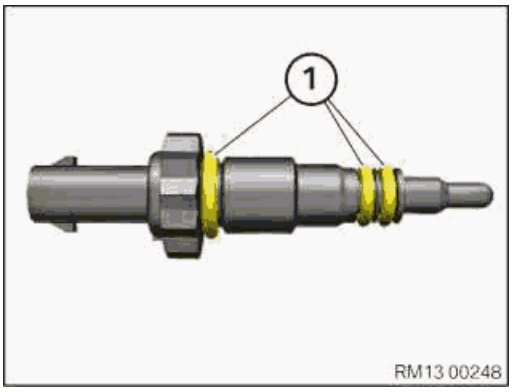


- Replace cylinder head.

- Install mounting lug (2) on the rear cylinder head.
- Tighten the screws (1).

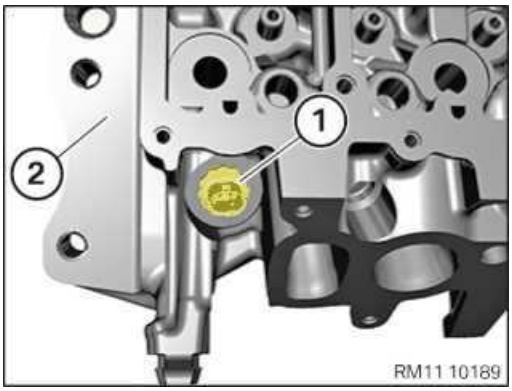
Standard screw connection M8

M8		Tightening torque	19 Nm



- Position special tool on cylinder head.
- Tighten the screws (1) of special tool .

Special tool to cylinder head



M8		Tightening torque	21,5 Nm

cardiagn.com

- When reusing coolant temperature sensor sealing rings (1), check for damage, renew if necessary.

  Parts: Sealing ring

- Tighten coolant temperature sensor (1) on new cylinder head (2).

Coolant temperature sensor at cylinder head

Temperature sensor		Tightening torque	3,5 Nm

- Screw in preheating elements using special tool and tighten.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm

POSTPROCESSES

3 – Installing the cylinder head

- See additional information.

Additional Information

Overview of Tightening Torques

Standard screw connection M8 Used in step 2

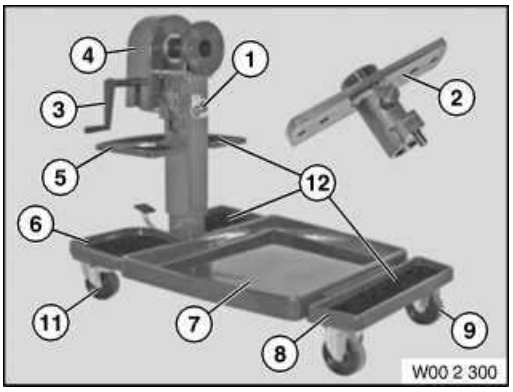
Overview of Special Tools



0 494 366 (11 9 001) Device

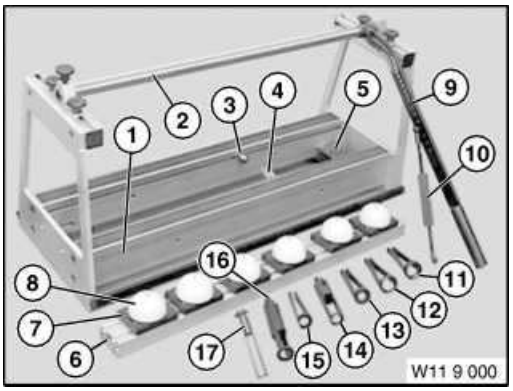
Common Used in step 2

Usage	
Included in the tool or work	0 494 362
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 187 (00 2 300) Assembly stand

Common Used in step 2

Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

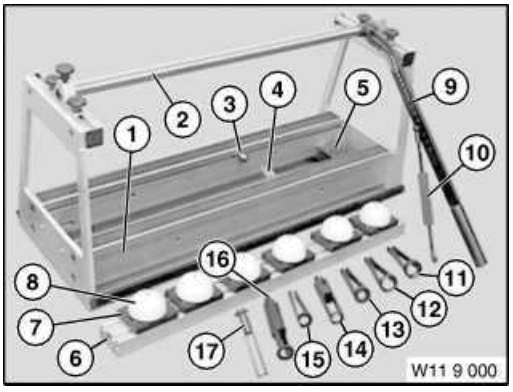


Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	

cardiagn.com

7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.	



0 494 371 (11 9 006) Insert

Common Used in step 2

Usage	(Aluminium strip)
Included in the tool or work	0 494 362
Storage location	
Replaced by	
In connection with

11 12 101 Replace cylinder head gasket

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

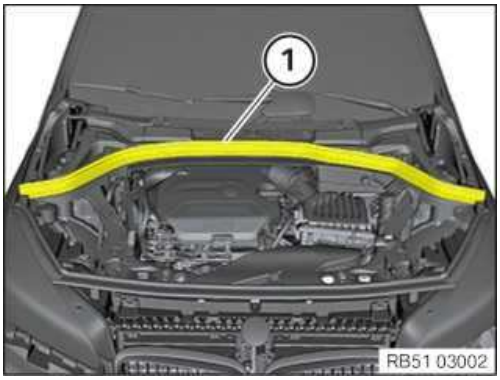
Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

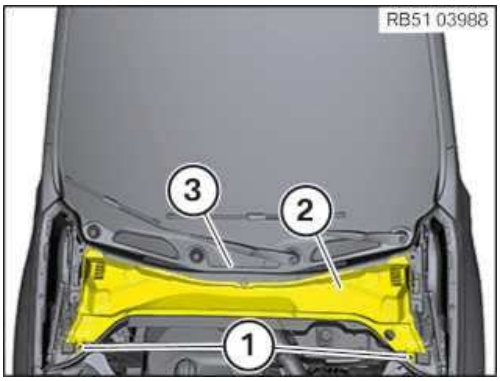


- Ensure there is a specific weight compensation on the motor vehicle.

PRELIMINARY WORK

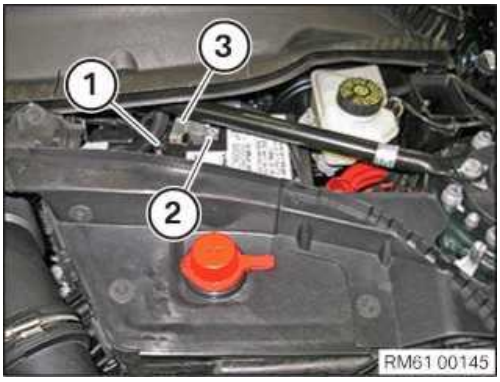
1 – Remove the seal for the rear bonnet

NOTICE



Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.

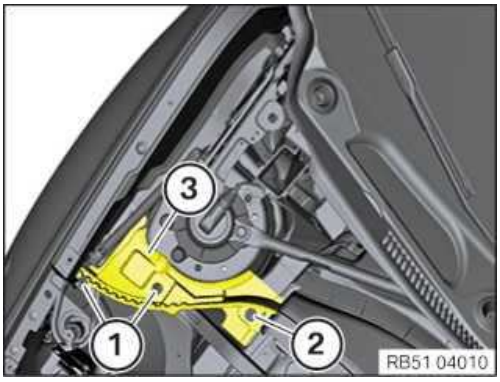


2 – Removing front cowl panel cover

cardiagn.com

- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

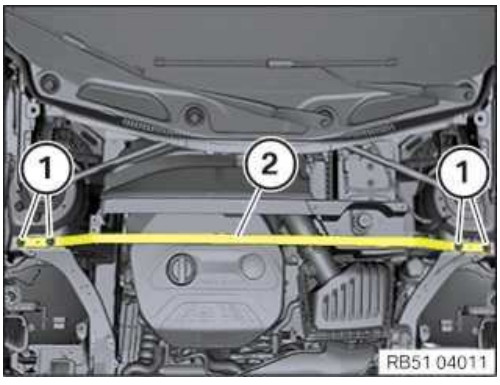
3 – Disconnecting the battery earth lead



- Unlock plug connection (1) and disconnect.
- Unfasten nut (2).
- Remove the battery earth lead (3) and secure to one side.

4 – Remove suspension cross-brace

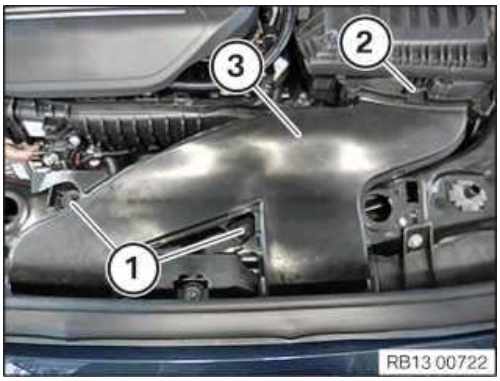
TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

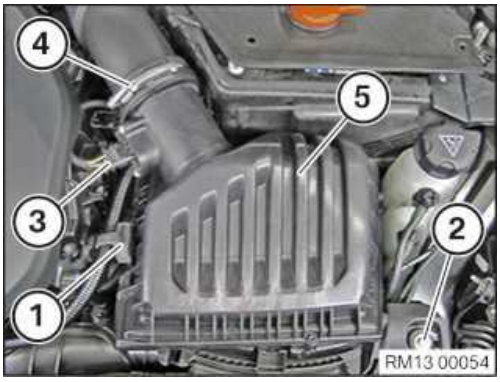
NOTICE

Description is for right component only. The procedure on the left side is identical.



- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).



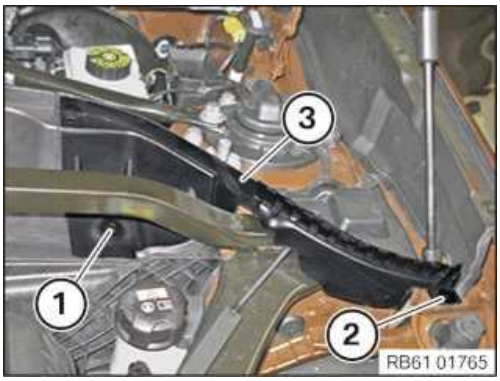
5 – Remove the intake neck for intake silencer housing

cardiagn.com

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

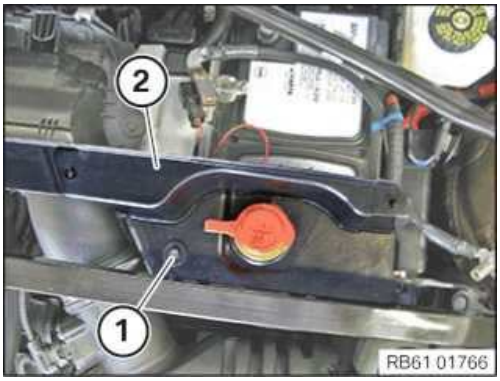
6 – Removing intake silencer housing

- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.



7 – Remove vehicle battery

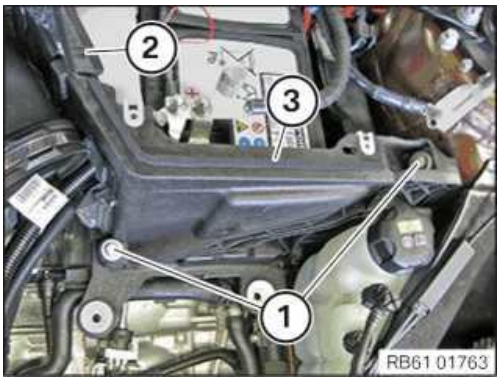
WARNING



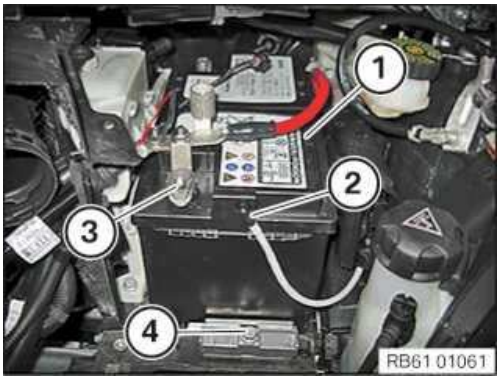
Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.



- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).



- Loosen screw (1).
- Remove the cover (2).

cardiagn.com

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING

Unprotected battery terminals.

Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

8 – Removing the acoustic cover

WARNING

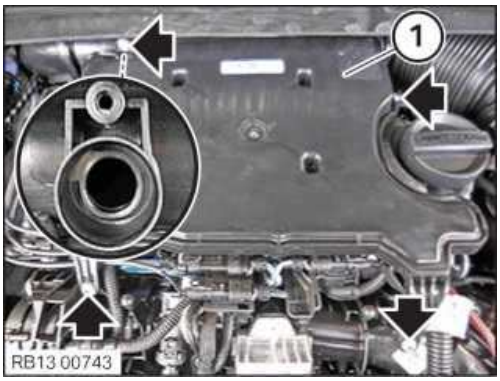
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the acoustic cover.



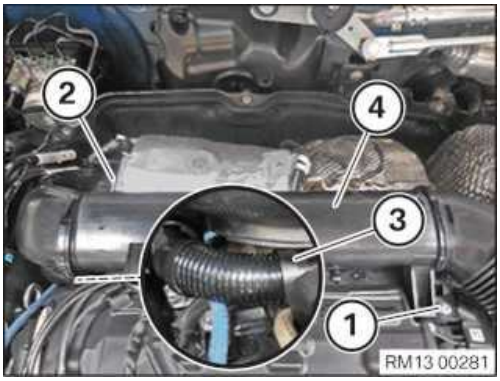
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

9 – Remove resonator

cardiagn.com



- Remove screws (arrows).
- Guide out and remove the resonator (1).

10 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

11 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

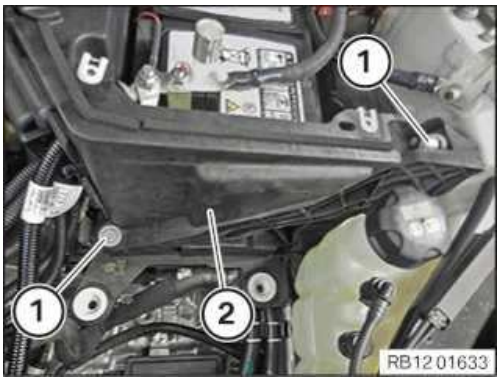
cardiagn.com

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

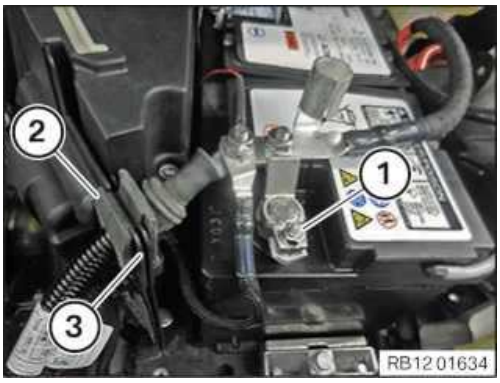
Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.



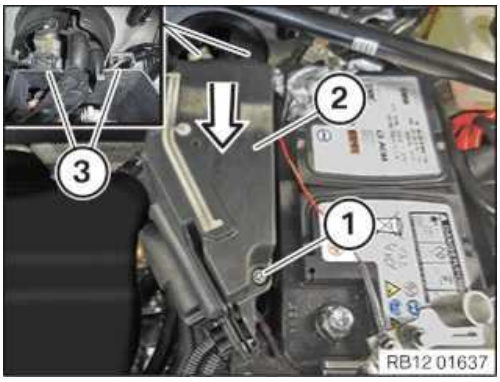
TECHNICAL INFORMATION

Follow instructions for removing and installing control units.



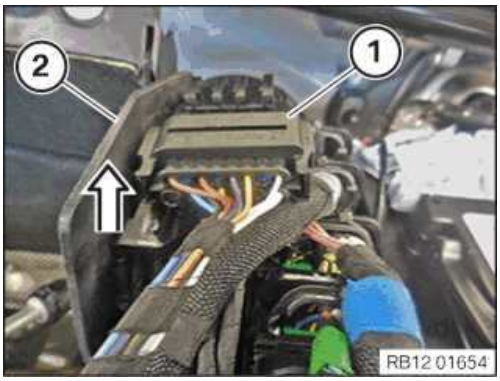
For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

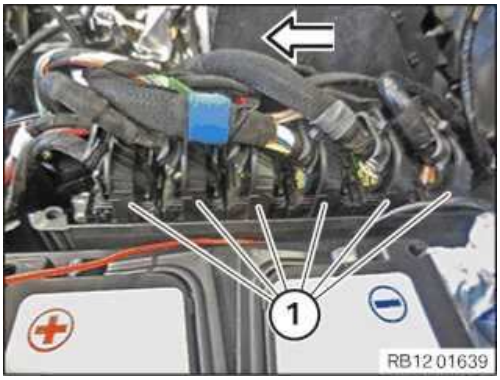


Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.

- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

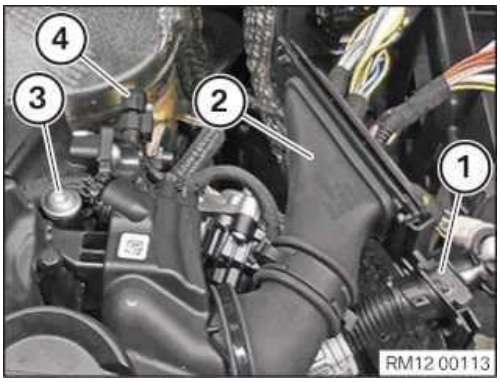


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

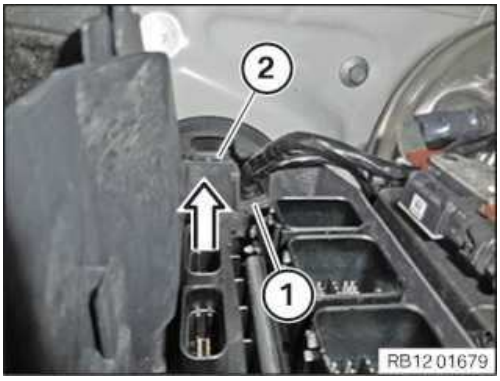


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

cardiagn.com

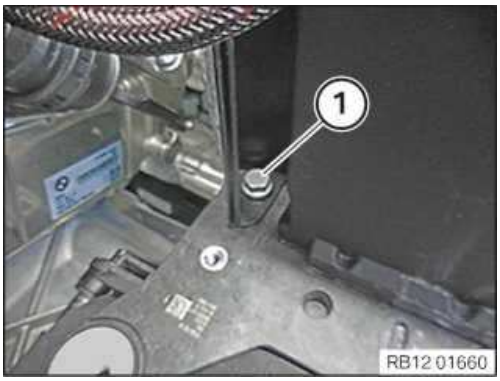


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

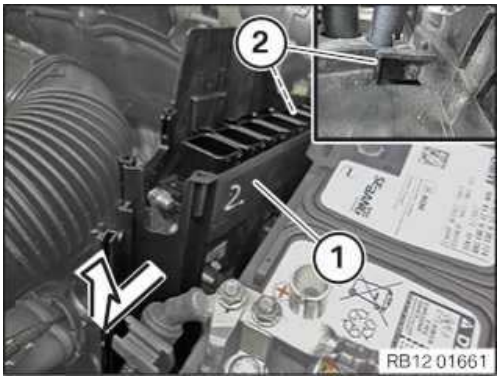


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

- Unlock and loosen connector (1).

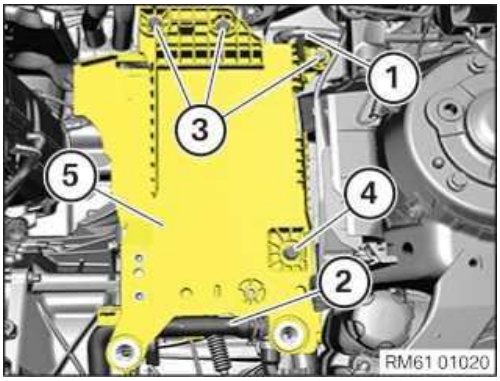


- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

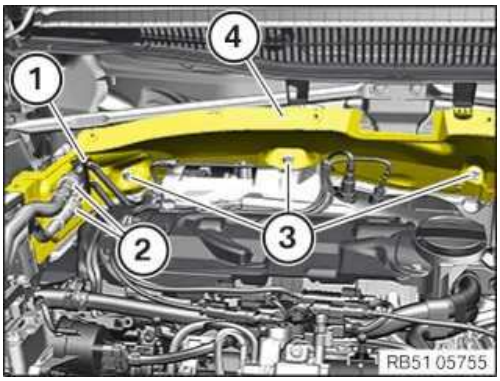


- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

cardiagn.com



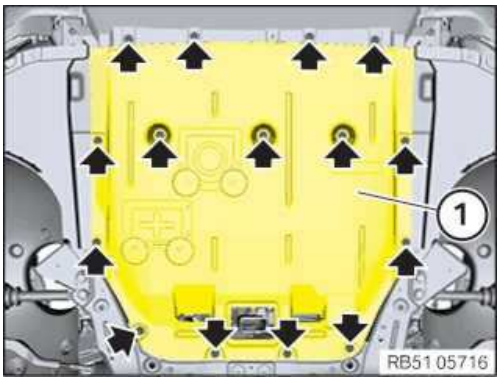
- Loosen screw (1).



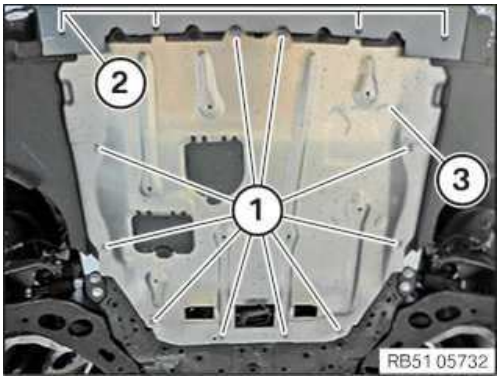
- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

12 – Remove battery holder

- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).



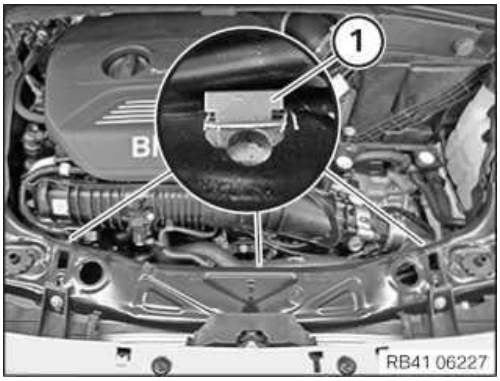
13 – Remove the rear bulkhead upper part



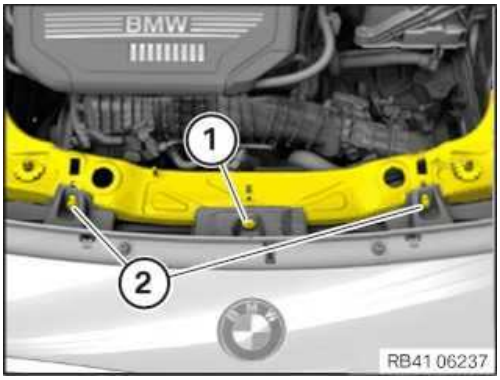
- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.

14 – Removing the front underbody protection

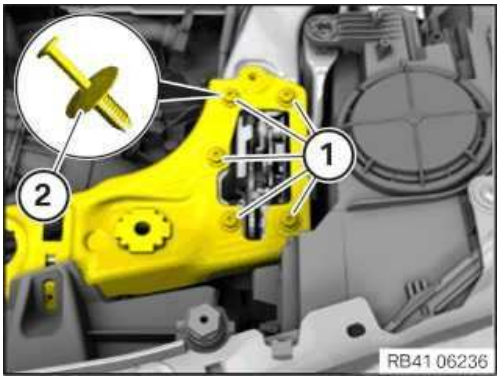
cardiagn.com



- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

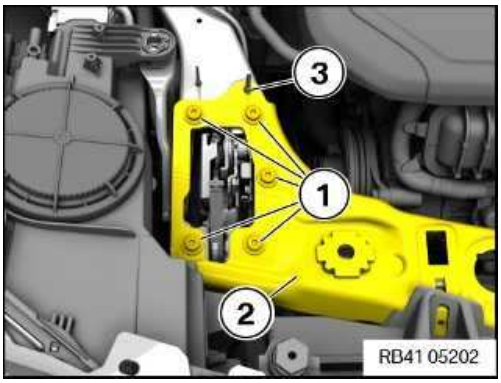


- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).



15 – Remove front cross connection

- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.



- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

cardiagn.com

- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

16 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

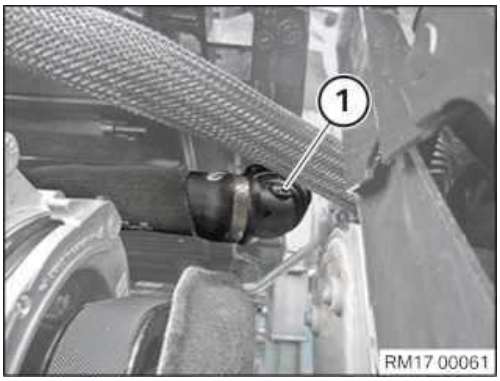
TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

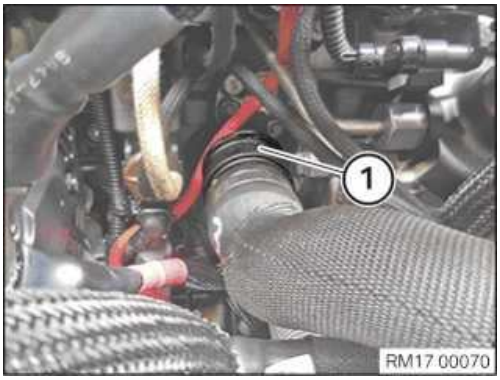
When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.



TECHNICAL INFORMATION

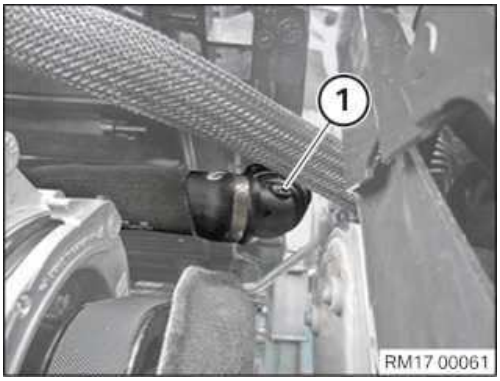
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



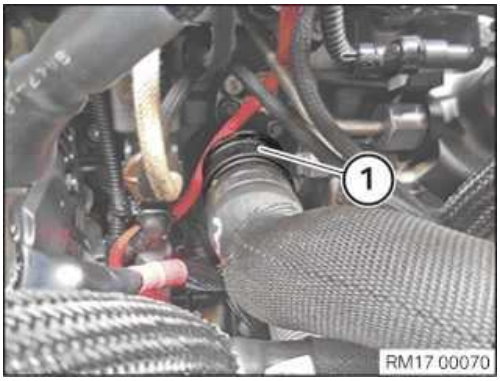
- Loosen sealing cap (1).

cardiagn.com

- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.



- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.

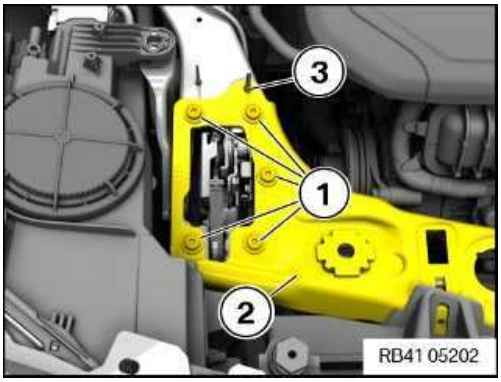


17 – Connect the coolant line

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

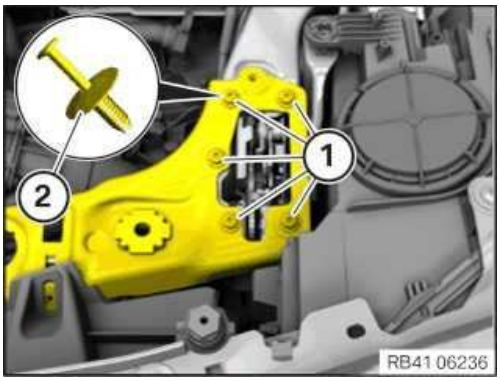
- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the connecting branch and lock audibly.

18 – Install front cross connection

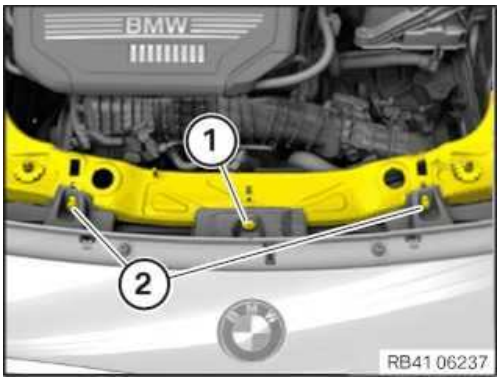
cardiagn.com



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

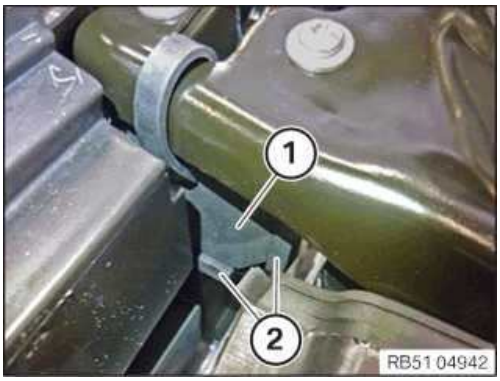
Screws M6x20		Tightening torque	11,8 Nm

- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

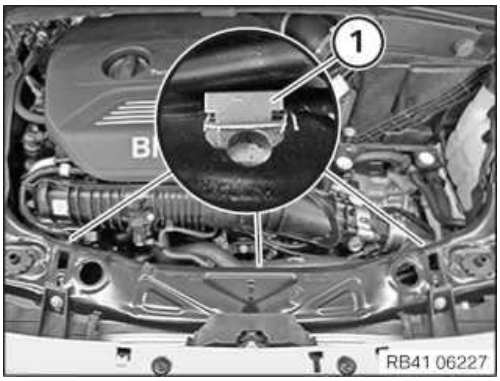
- Tighten down screws (2).



Air duct to upper connection

M6x20 screw		Tightening torque	11,8 Nm

- Tighten down screw (1).



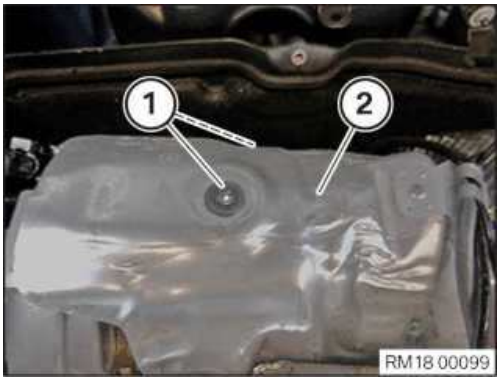
Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm

- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

cardiagn.com

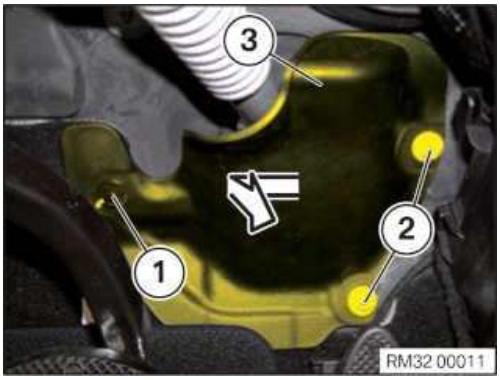
- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.



19 – Removing heat shield from top exhaust turbocharger

WARNING

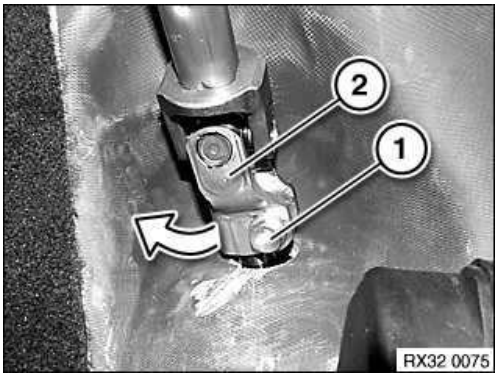
Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.

- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).



20 – Releasing lower steering shaft from steering gear

- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!

- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

21 – Securing radiator on left and right

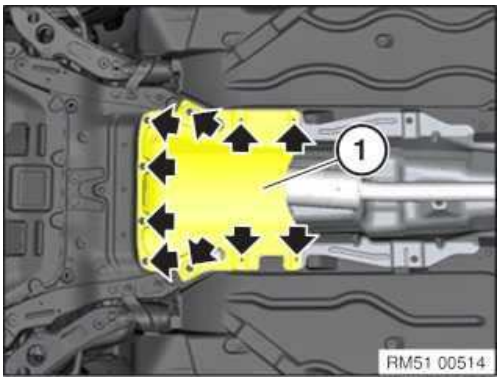
cardiagn.com

NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

22 – Removing both front wheels



▶ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

23 – If installed: Removing rear underbody protection

- Remove screws (arrows).
- Remove the rear underbody protection (1).

24 – Removing right underbody panelling

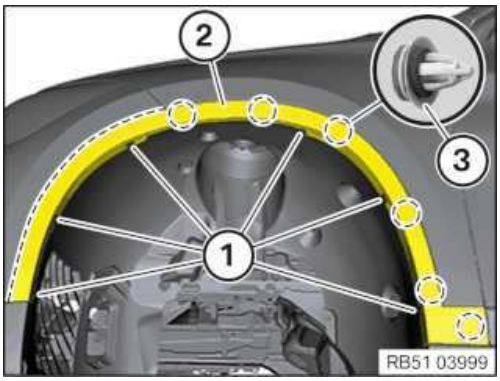
- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).

25 – Removing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

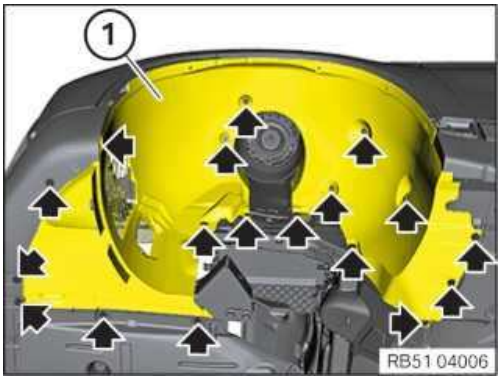
cardiagn.com



▶ **Remove the front wheel arch trim**

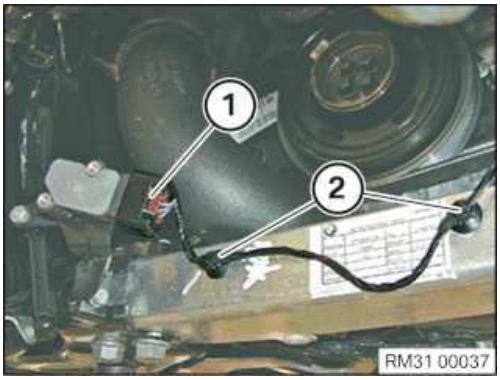
NOTICE

To provide a better overview: Schematic diagram with partially hidden components.



NOTICE

Description is for left component only. Procedure on the right side is identical.



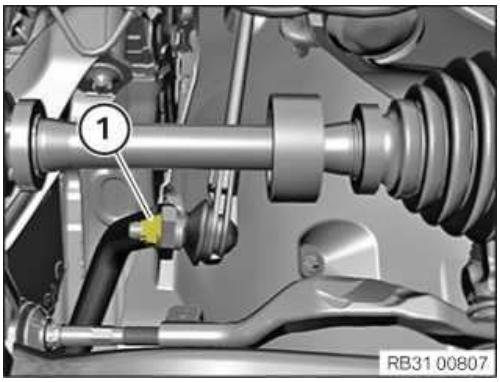
- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

▶ **Remove front wheel arch cover**

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

26 – With right installation: Detaching ride height sensor cable

- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.



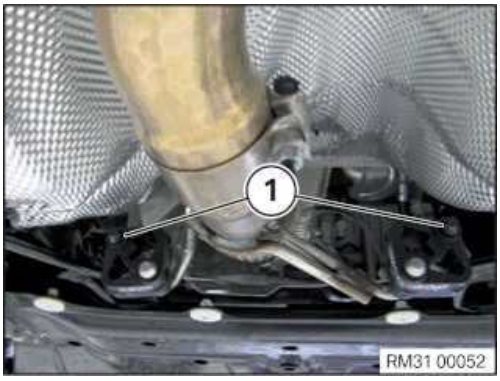
27 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Detach the anti-roll bar from the anti-roll bar link**

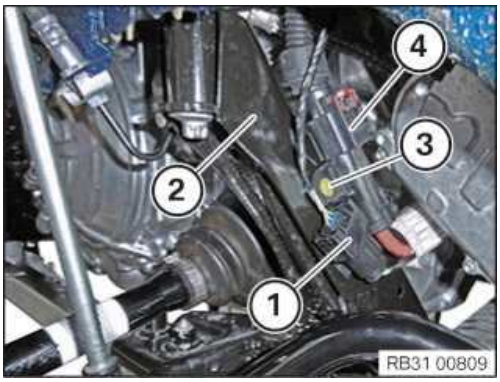
cardiagn.com



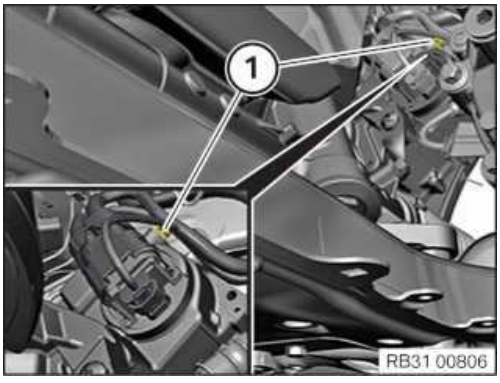
- Unfasten nut (1).

Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .



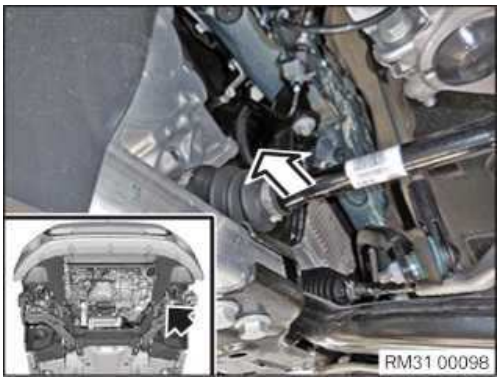
28 – Detaching rubber mount from front axle support



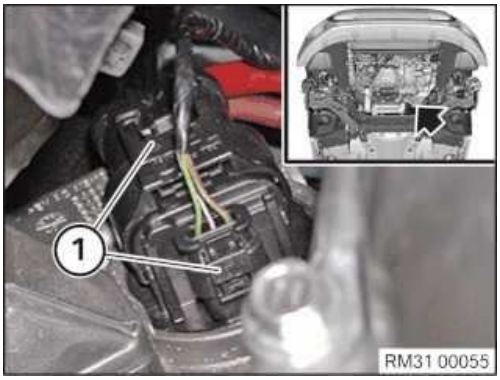
- Spray rubber mount (1) with lubricant and release from holder on front axle support.

29 – Disconnecting plug connections from steering gear

▸ **If installed: Detach connectors from the front axle carrier**

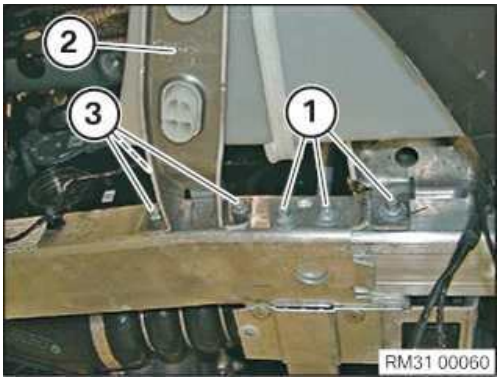


- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).



- Disconnect wiring harness (1) from steering gear.

cardiagn.com

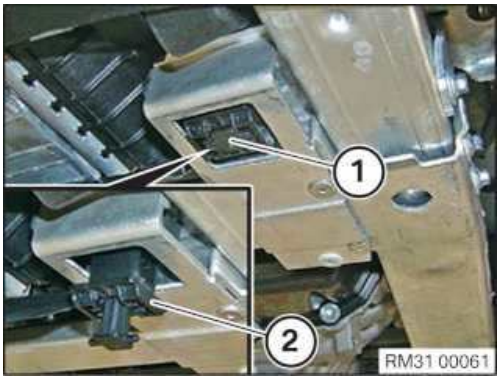


- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.

- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

30 – Releasing the mounted part from the front axle support



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

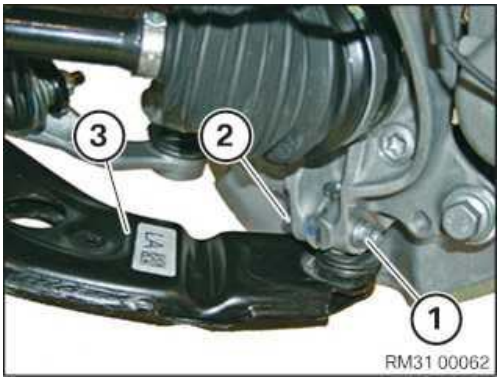
NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).

- Loosen screw (2) of the engine support (3) on the front axle (1).

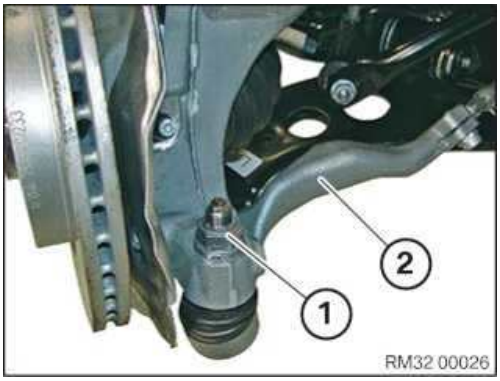
cardiagn.com



NOTICE

Perform the operations on the left and right side.

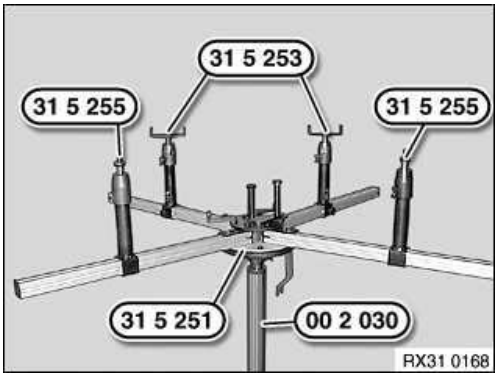
- Loosen screws (1).



31 – Detaching and removing front axle completely

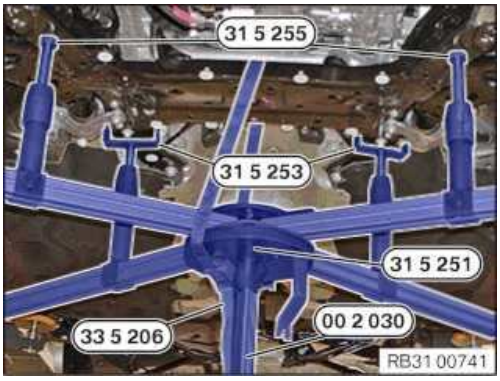
NOTICE

Perform the operations on the left and right side.



- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .

NOTICE

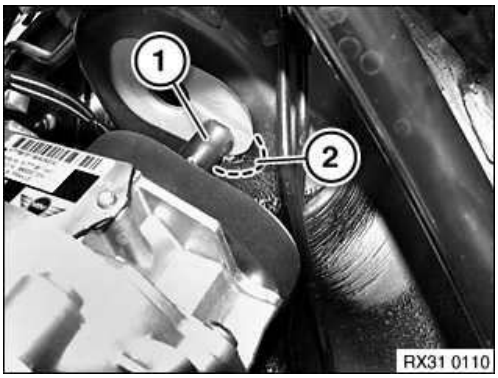


Perform the operations on the left and right side.

- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

Note: In a profile rail pair, two profile rails are connected to one another by gearing.

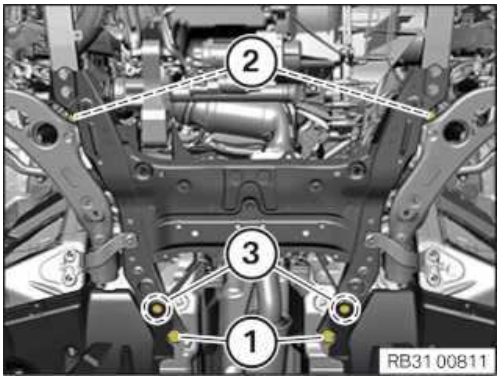


- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .

cardiagn.com

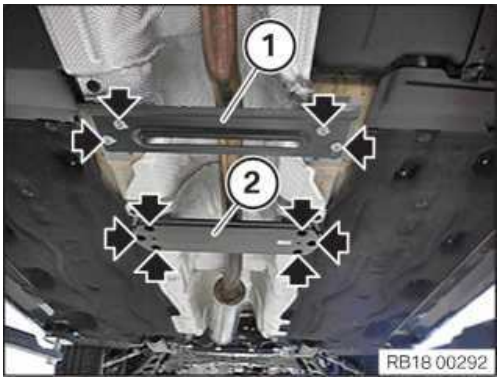


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



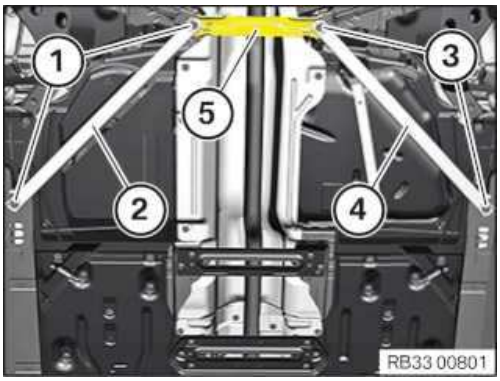
- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

32 – Removing the connecting support from the tunnel in front and back



- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

33 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.

cardiagn.com

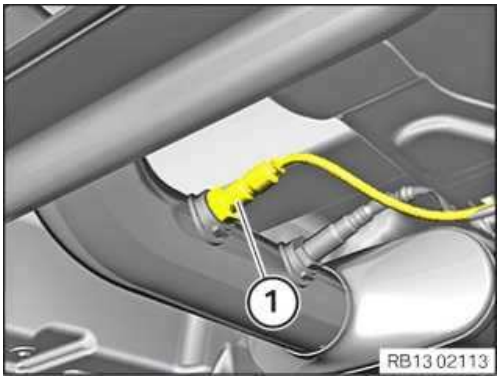
- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

34 – Remove exhaust system

WARNING

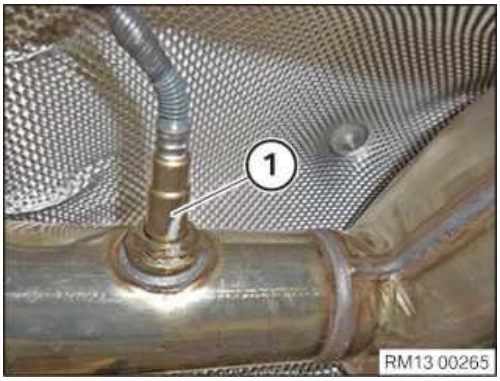
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

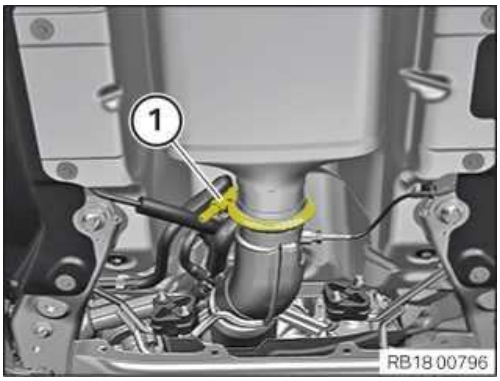
CAUTION



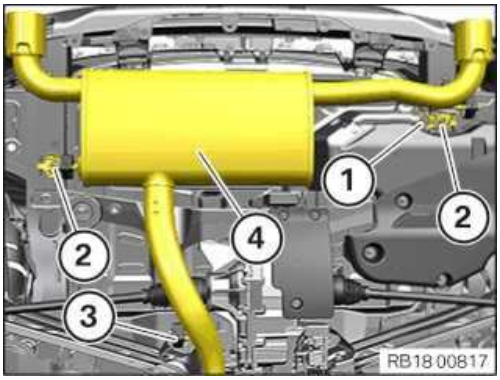
Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

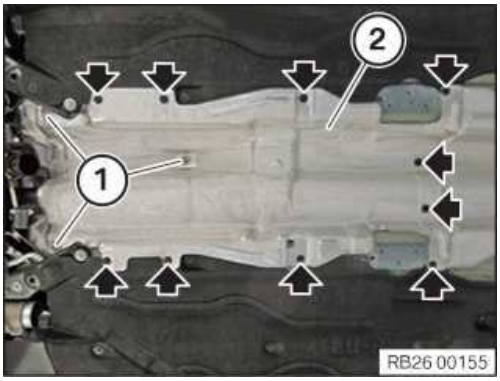


- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.

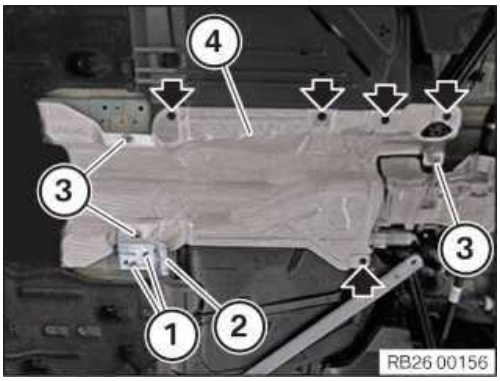


- Release the diesel particulate sensor (1), guide it out and set it aside.

cardiagn.com



- Loosen V-band clamp (1).



- Loosen screw (1).
- Loosen nuts (2).
- Release the rubber mount (3) of the exhaust system (4).
- Lower and guide out the exhaust system (4) with assistance of a second person and remove it.

35 – Remove front heat shield

- Remove screws (arrows).
- Loosen nuts (1).
- Guide the heat shield (2) out and remove it.

36 – Remove heat shield at rear.

- Loosen screws (1).
- Guide out and remove holder (2).
- Remove screws (arrows).
- Loosen nuts (3).
- Guide the heat shield (4) out and remove it.

37 – Remove propeller shaft

cardiagn.com

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

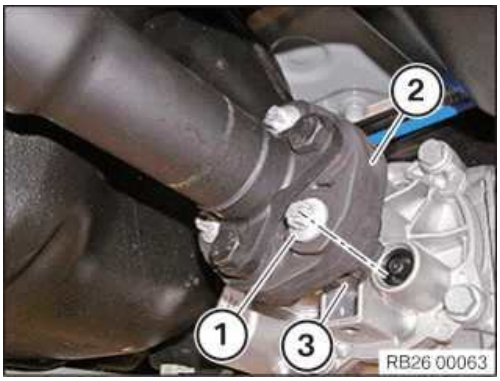
RISK OF DAMAGE

Damage to propeller shaft during removal.

Non-observance of the removal guidelines for the propeller shaft on the rear axle differential may cause severe damage.

- Do not disassemble the three-hole flange, flexible disc and propeller shaft. The three-hole flange to the rear axle differential is balanced with the flexible disc and propeller shaft.
- Loosen the recessed nut against the direction of travel in clockwise direction. The propeller shaft must be loosened on the recessed nut only and exclusively in the direction of rotation otherwise the anti-twist lock of the bi-hexagonal flange nut is damaged.
- In the event of a damaged anti-twist lock on the bi-hexagonal flange nut: Replace the rear axle differential.

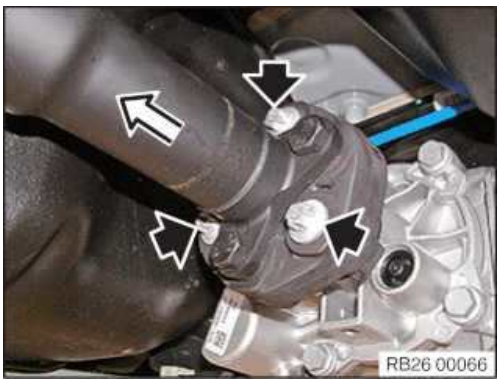
- Install the special too l between the front and rear propeller shaft.
- Make sure that the arrows on the special tool point forward in the direction of travel.



- Always support the propeller shaft (1) with a conventional jack.

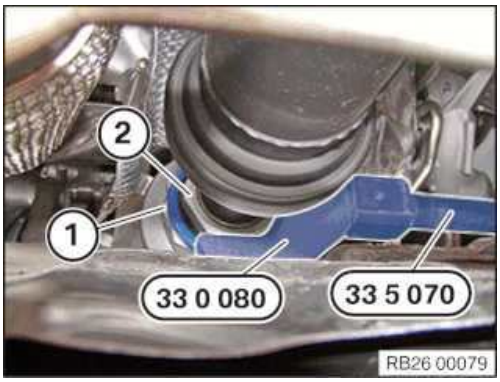
- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

cardiagn.com



TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.



- Mark the installation position of the screw connection (1), the flexible disc (2) and the three-hole flange (3) on the same level.
- Loosen the screw connection (1).

- Loosen screws (1).

- Remove screws (arrows).
- Guide the propeller shaft out in the direction of the arrow and set it aside.

RISK OF DAMAGE

Damage to the transfer box.

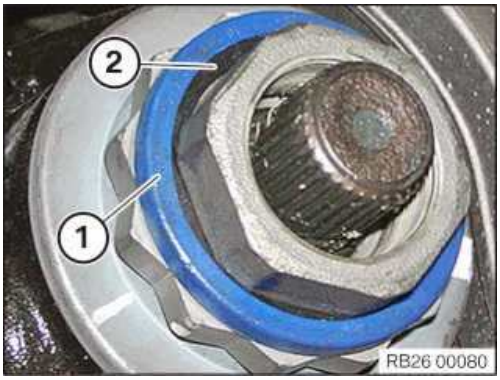
Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

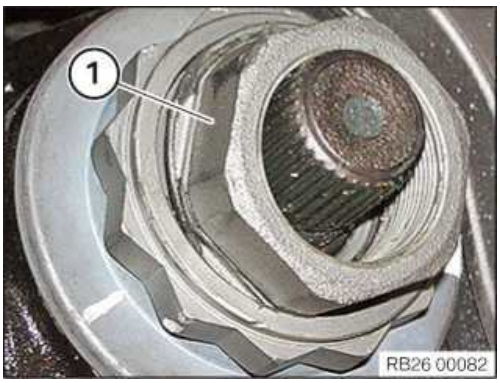
- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to detach the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



- Release the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.



cardiagn.com

- Thread the propeller shaft (2) out of the recessed nut (1) and remove.

- Thread the retaining clip (1) and the seal (2) out and remove.

- Thread out and remove the recessed nut (1).

38 – Removing starter motor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

cardiagn.com

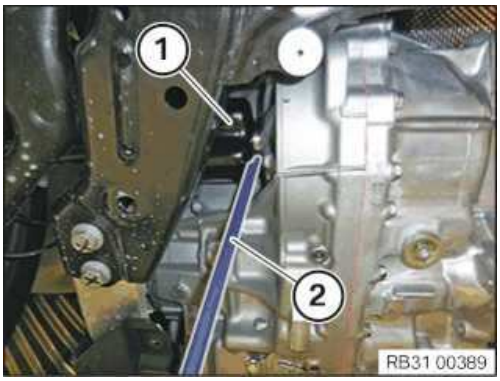
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

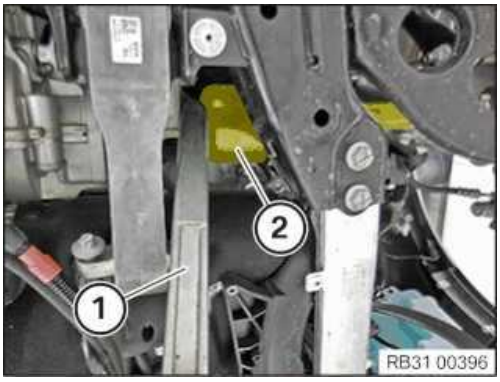
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



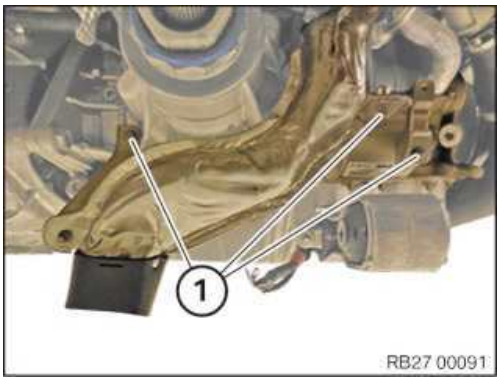
- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Loosen screws (1).
- Feed out starter motor and remove.



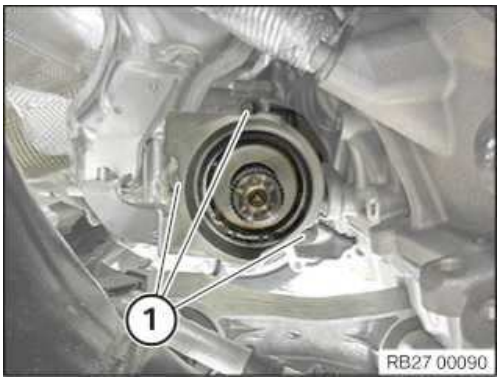
39 – Partially removing the left output shaft

cardiagn.com

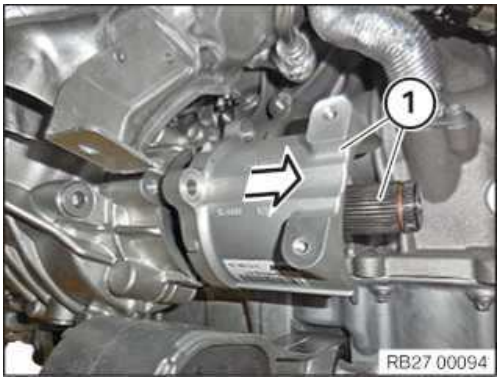


- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Tie up output shaft (1).

40 – Partially removing right output shaft

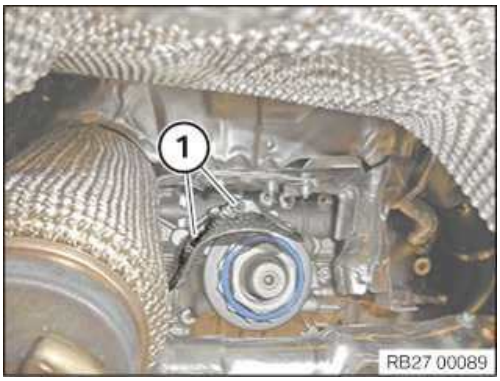


- Lever out the output shaft (2) with a mounting lever (1).
- Tie up output shaft (1).

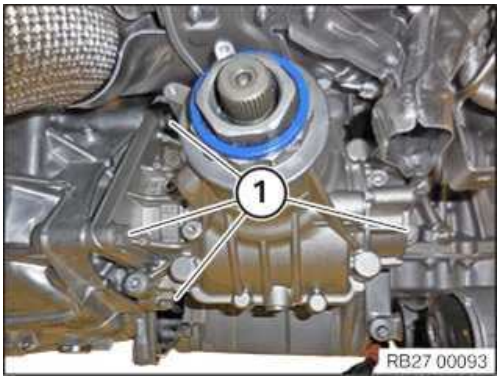


41 – Remove the intermediate shaft with the support tube

- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

42 – Remove transfer box (VTG)

cardiagn.com

- Loosen screws (1).
- Remove heat shield.

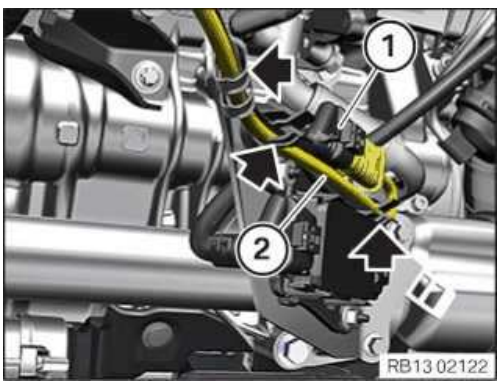
- Loosen screws (1).
- Remove the transfer box (VTG).

43 – Remove the monitoring oxygen sensor

WARNING

Hot surfaces.

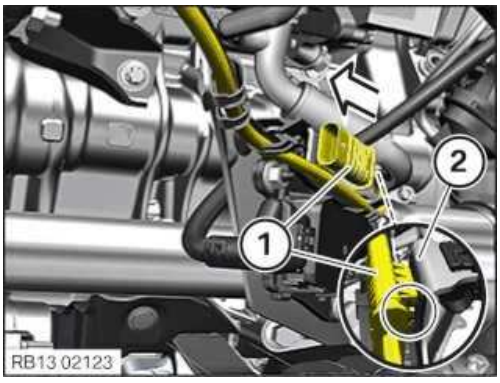
Risk of burning!



- Perform all work only on components that have cooled down.

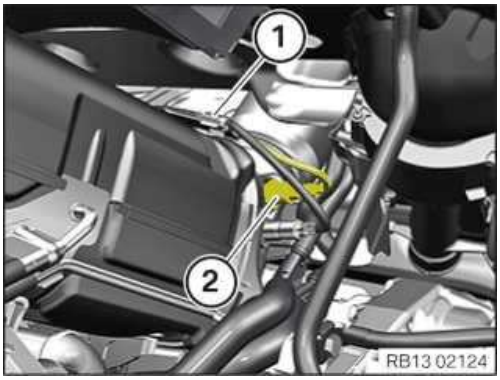
RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Feed oxygen monitor sensor cable (1) out of the clamps (arrows).

cardiagn.com

- Unlock the connector (1) in the marked area and disconnect it from the holder (2) in the direction of arrow.

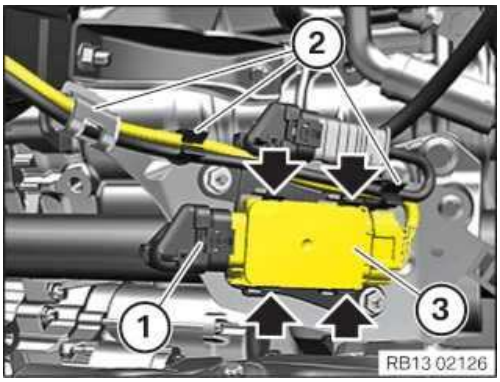
- Guide the cable of the monitoring oxygen sensor (2) out of the clamp (1).
- Release the monitoring oxygen sensor (2) using special tool **0 491 074 (11 7 020)**.
- Remove the monitoring oxygen sensor (2).

44 – Removing the nitrogen oxide sensor before SCR catalytic converter

WARNING

Hot surfaces.

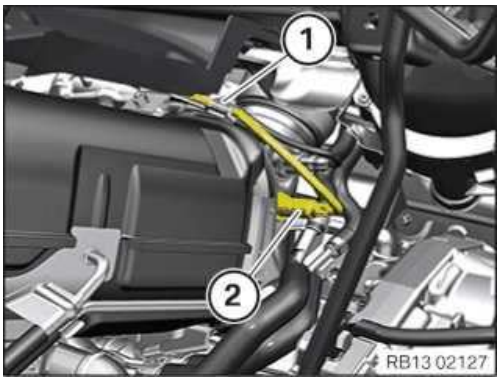
Risk of burning!



- Perform all work only on components that have cooled down.

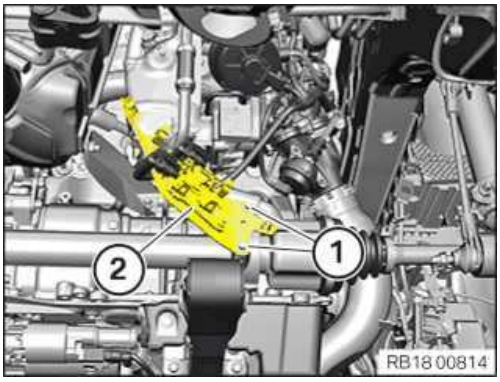
RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Slide the cable of the nitrogen oxide sensor evaluation electronics (3) out of the clamps (2) and remove.
- Unlock (arrows) and remove the evaluation electronics for the nitrogen oxide sensor (3).

cardiagn.com

- Slide the cable of the nitrogen oxide sensor before the SCR catalytic converter (2) out of the clamps (1) and remove.
- Detach the nitrogen oxide sensor before the SCR catalytic converter (2) using the special tool **0 491 074 (11 7 020)**.
- Guide out and remove the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

45 – Remove holder for oxygen sensor

- Loosen screws (1).
- Thread out the holder (2) for the oxygen sensor and remove.

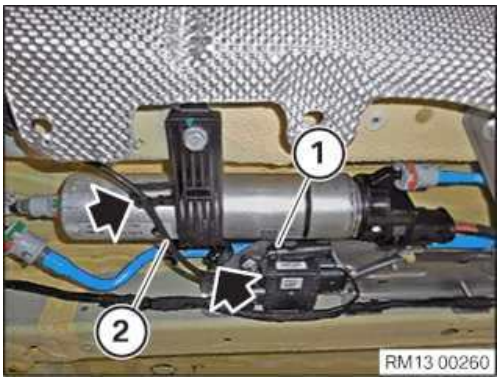
46 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

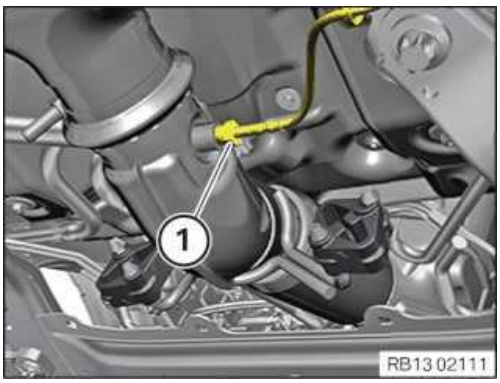


RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



cardiagn.com

- Unlock and loosen connector (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

- Loosen the cable clip (1).

- Loosen exhaust temperature sensor (1).
- Feed out and remove exhaust temperature sensor (1).

47 – Removing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

WARNING

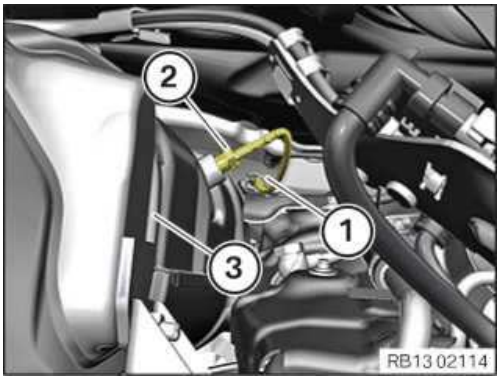
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

- Unlock and loosen connector (1).
- Uncover the exhaust temperature sensor cable.

- Guide the exhaust temperature sensor cable (2) out of the clamp (1) and place it to one side.
- Release the exhaust temperature sensor (2) with conventional tools .
- Feed out and remove the exhaust temperature sensor (2) from the diesel particulate filter (3).

48 – Remove the exhaust temperature sensor on the diesel particulate filter

WARNING

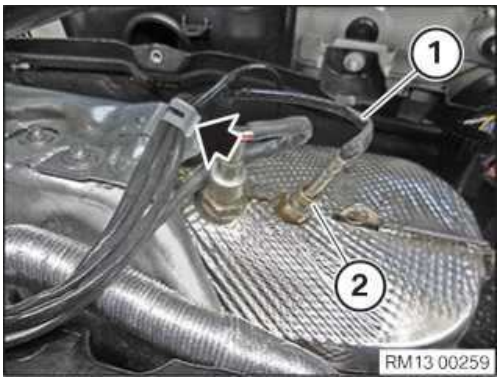
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect connector (1).
- Put the cable of the exhaust temperature sensor to one side.

cardiagn.com

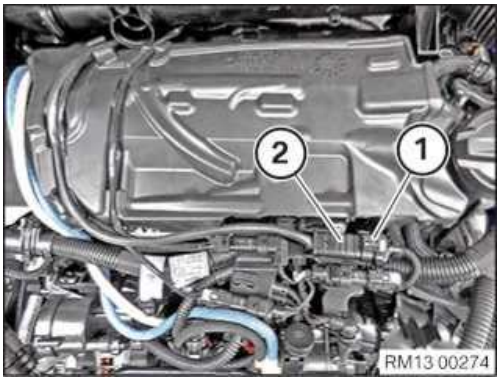
- Guide cable (1) of the exhaust temperature sensor out of the clamp (arrow) and remove it.
- Loosen exhaust temperature sensor (2).
- Feed out and remove exhaust temperature sensor (2).

49 – Remove the control sensor

WARNING

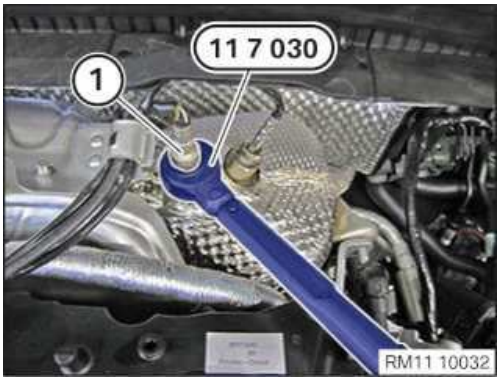
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock plug connection (1) and disconnect.
- Detach the connector (2) from the holder .
- Release the front oxygen sensor cable.

- Detach the control sensor (1) with the special tool .
- Feed out and remove the control sensor (1).

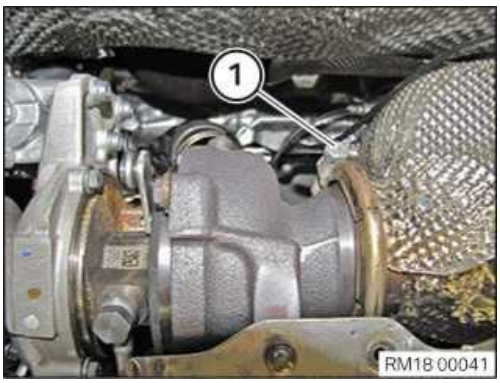
cardiagn.com

50 – Removing the diesel particulate filter

WARNING

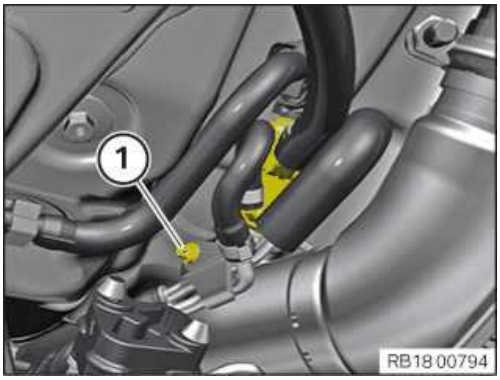
Hot surfaces.

Risk of burning!



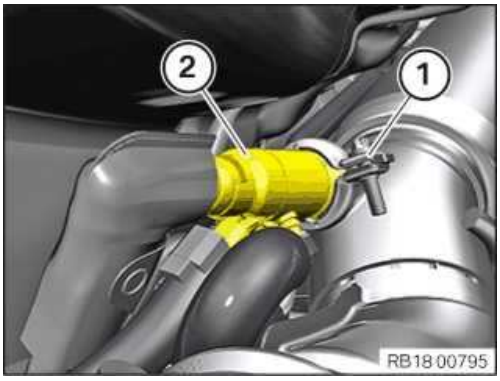
- Perform all work only on components that have cooled down.

CAUTION



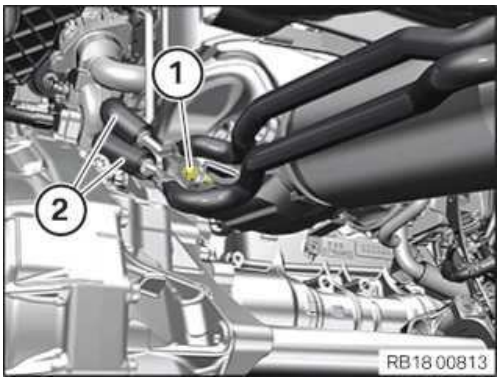
Heavy component.

Heavy components can lead to injury or damage.



- Remove and install heavy components with the aid of another person/other persons.

- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.

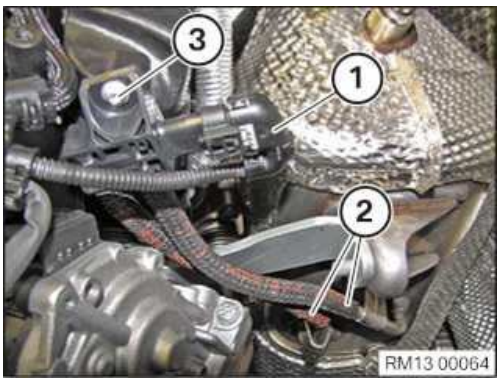


- Loosen screw (1).

- Loosen V-band clamp (1).
- Remove the SCR metering module (2) and set it aside.

cardiagn.com

- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.



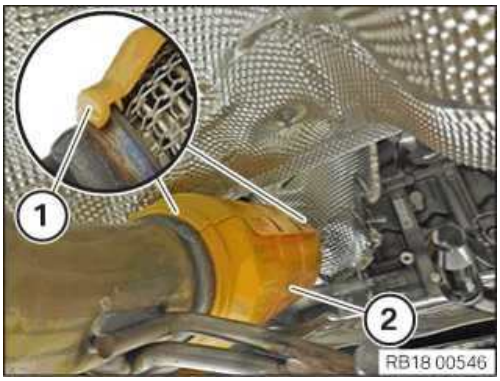
▶ **Remove differential pressure sensor**

RISK OF DAMAGE

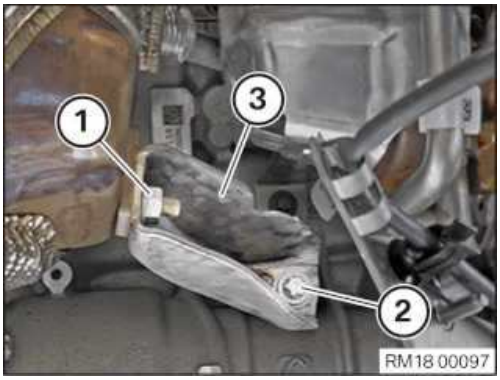
Electrostatic discharge.

Damage to or destruction of electrical components.

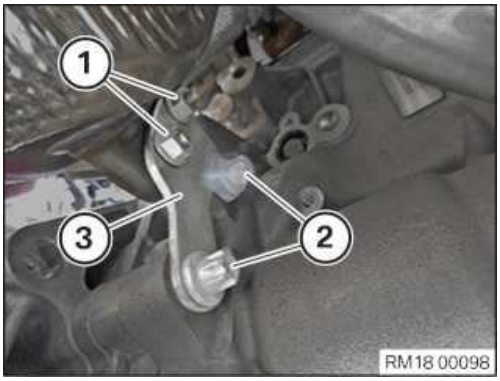
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



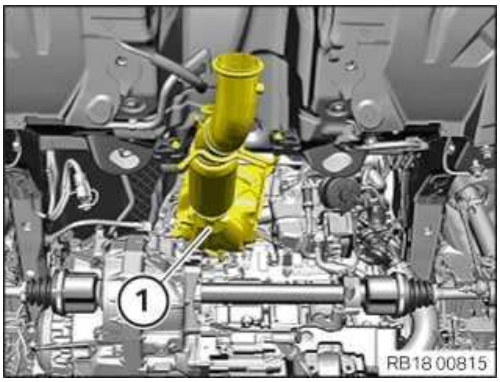
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.



- Loosen nuts (1).



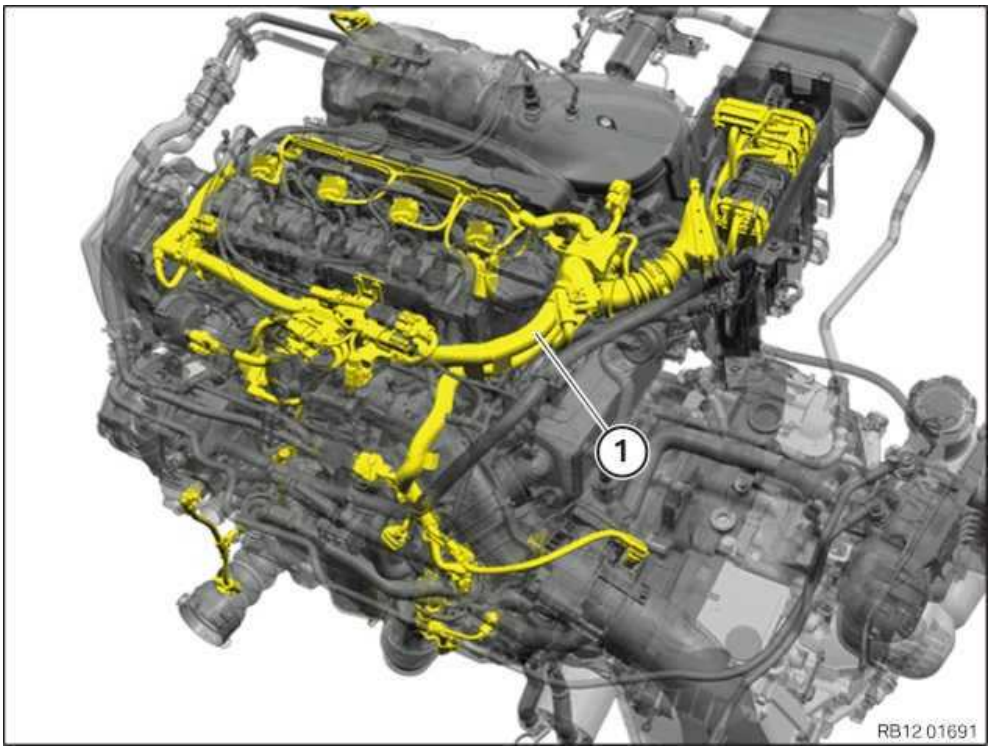
cardiagn.com



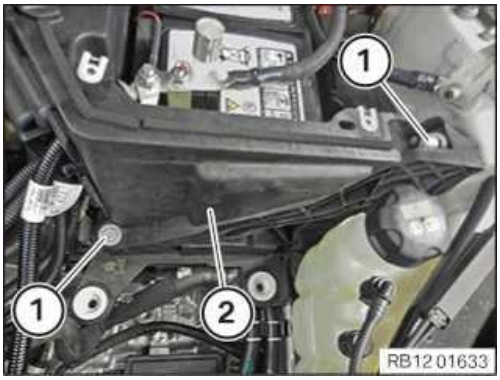
- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.

- Unfasten nut (1).
- Loosen screw (2).
- Remove holder (3).

- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).

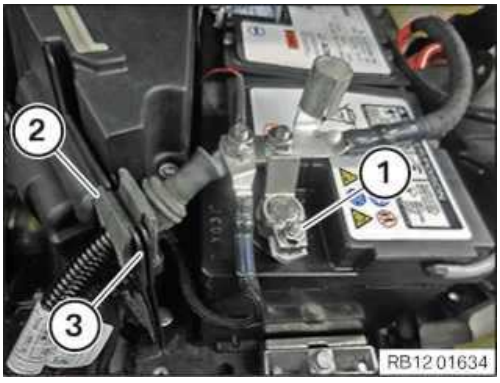


- Feed out diesel particulate filter (1) toward the bottom and remove.

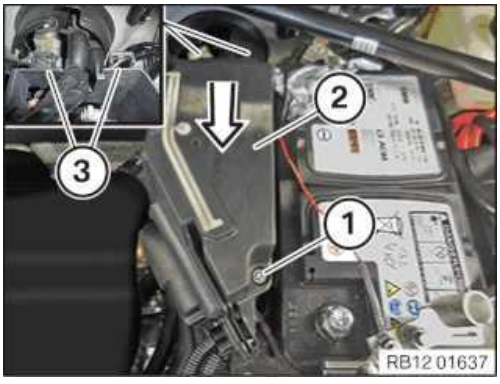


51 – Releasing the wiring harness section for the intake plenum

cardiagn.com

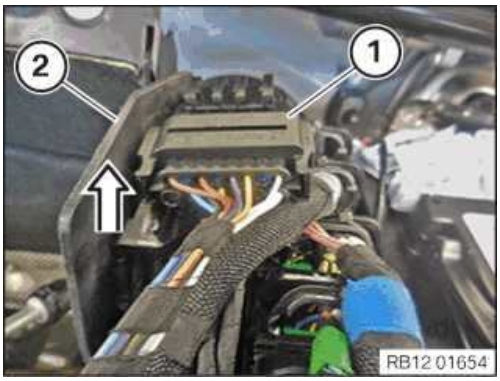


Overview: Wiring harness section for the engine

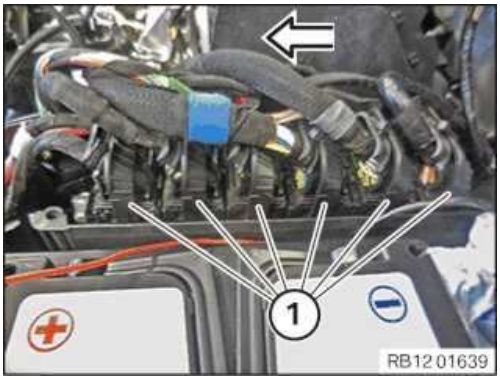


1 Wiring harness section for the engine

- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

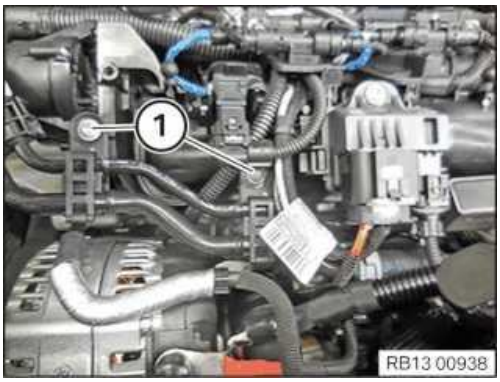


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

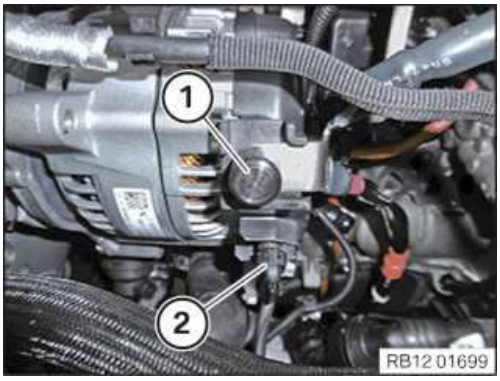


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

cardiagn.com

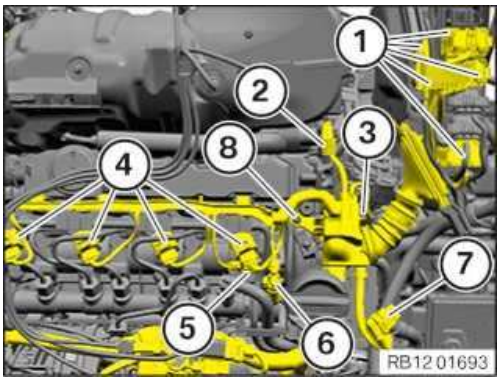


- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).

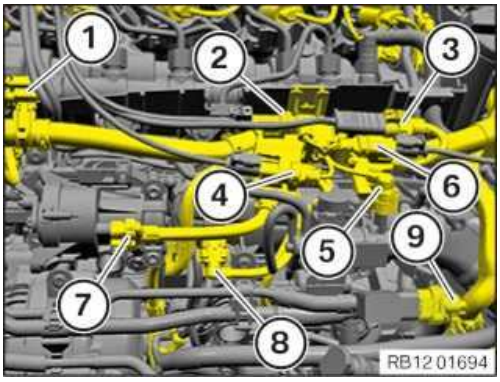


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

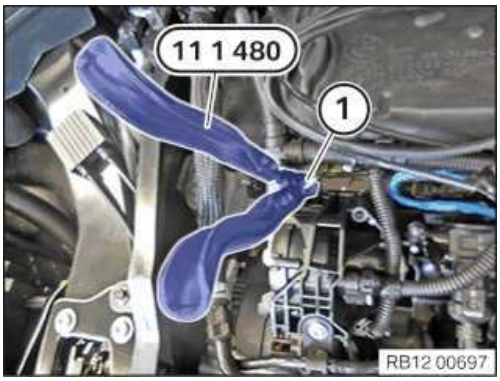
- Unlock and loosen connector (1).



- Loosen screws (1).

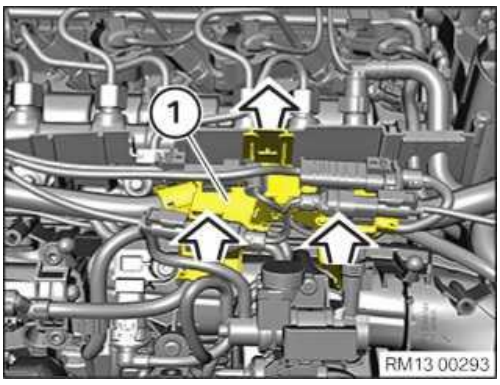


- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.



cardiagn.com

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).



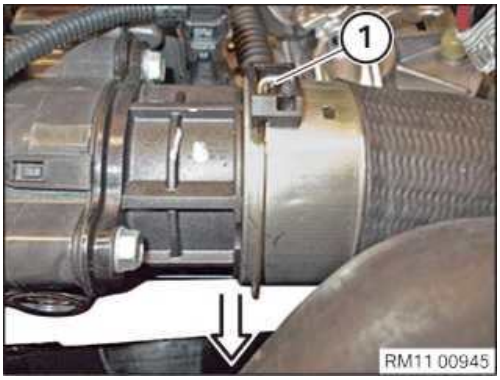
- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock and disconnect the connector (3) from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

▶ **Removing the cable clips from the intake plenum**

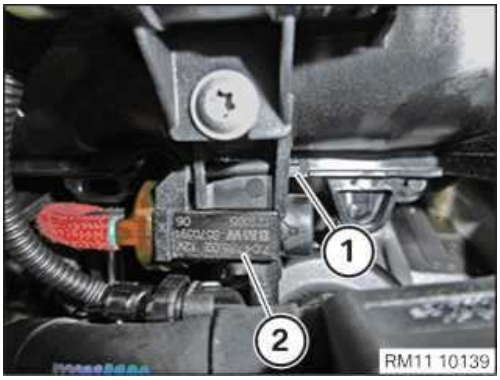
- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

52 – Removing the intake plenum

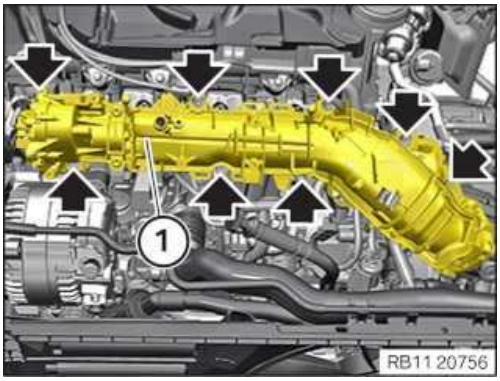


cardiagn.com

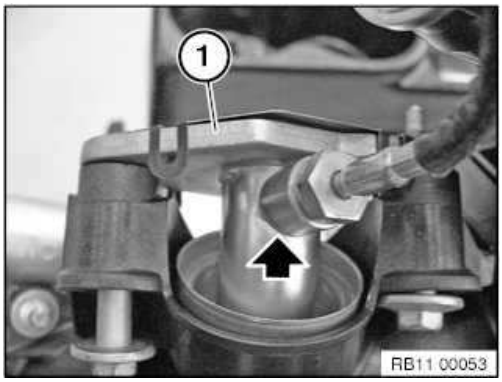
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the lock (1).



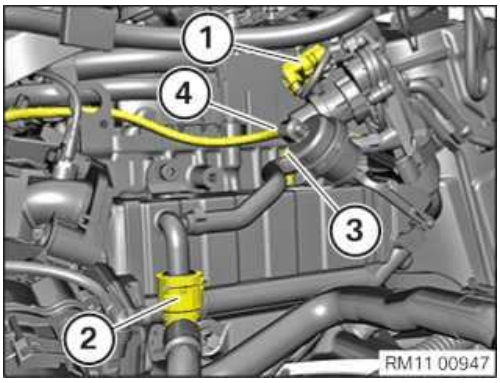
- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

cardiagn.com

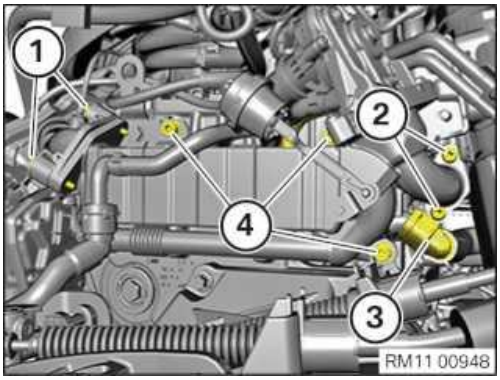


53 – Removing the exhaust-gas recirculation cooler

WARNING

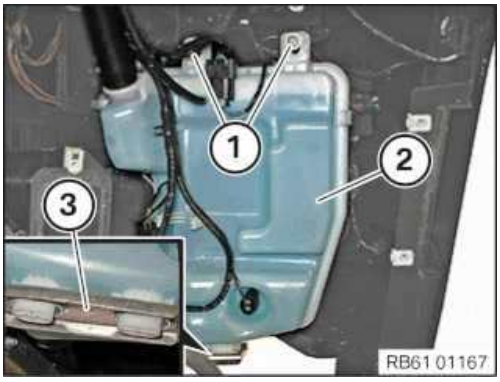
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

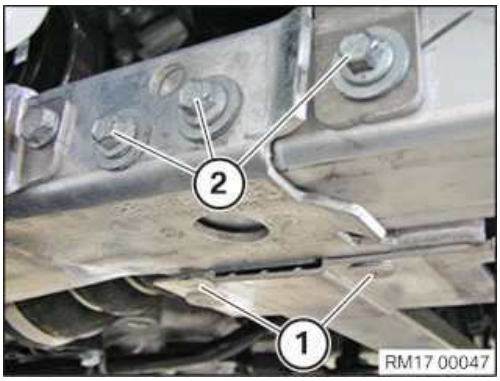
- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

54 – Remove the washer fluid reservoir from the fixture

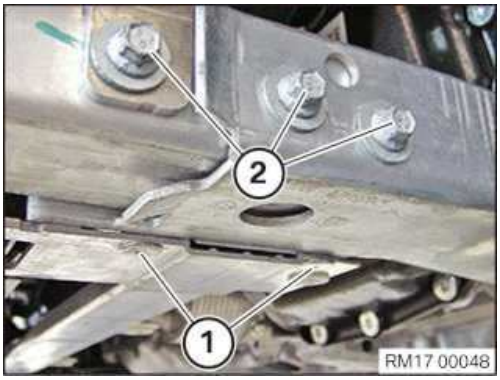
- Loosen screws (1).
- Guide the washer fluid reservoir (2) up and out of the fixture (3) and set it aside.

55 – Removing the right charge air duct between the exhaust turbocharger and the charge air cooler



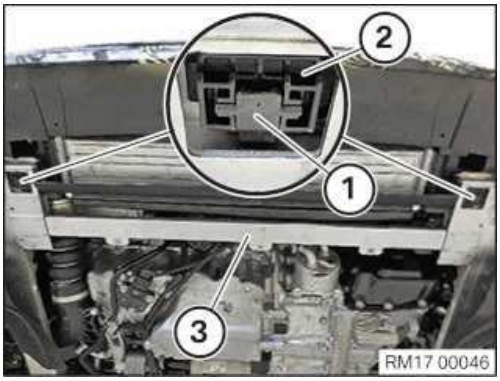
WARNING

Hot surfaces.

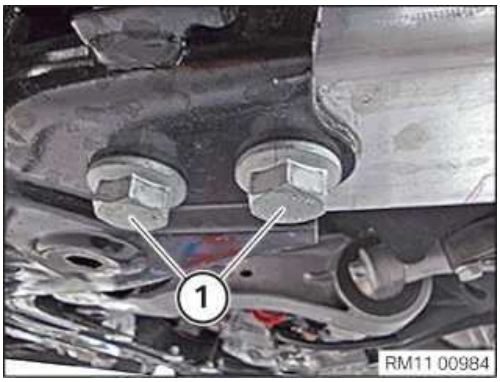


Risk of burning!

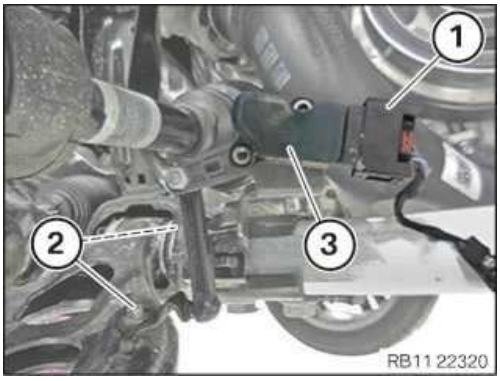
- Perform all work only on components that have cooled down.



cardiagn.com

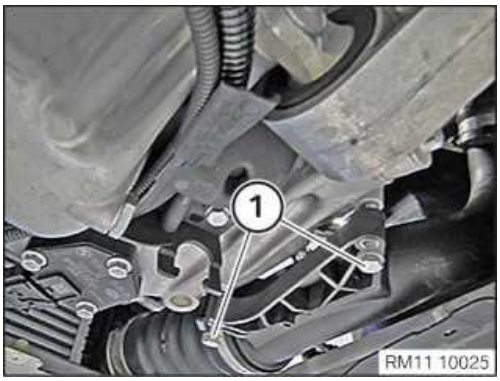


- Undo screws (2) at front left.
- Drill out blind rivets (1) at front left.

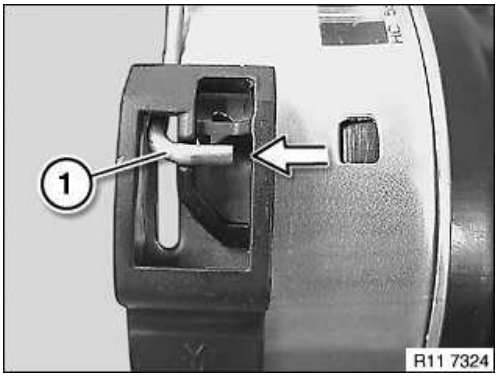


- Undo screws (2) at front right.
- Drill out blind rivets (1) at front right.

- Unlock locking pins (1).
- Thread out and remove locks (2).
- Thread out and remove cross connection (3).

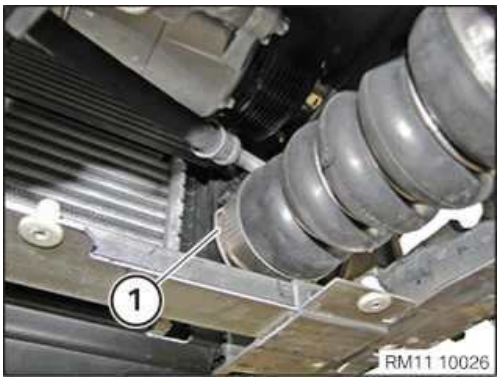


- Release the screws (1) on the right front axle support.

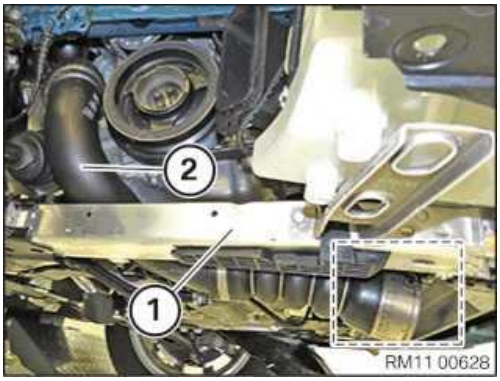


- **If installed:**
- Unlock and release plug connection (1).
- Loosen screws (2).
- Feed out the ride height sensor (3) and remove.

cardiagn.com



- Release screws (1) of charge air duct on right oil sump.



- Unlock lock (1).

  The lock (1) must engage in the bracket during unlocking (arrow).

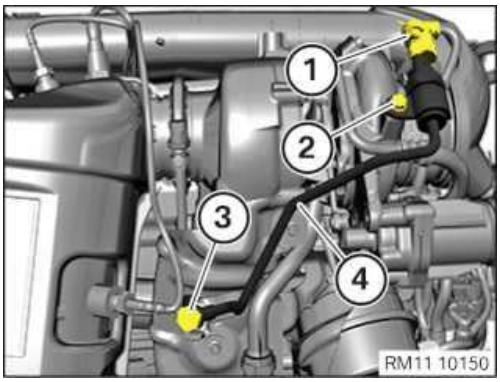
- Unlock and release the charge air duct (1) on the charge air cooler.

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (2) in the **marked** area towards the bottom and set it aside.

- Unlock and detach the locks (1) on both sides.
- Feed out the charge air duct (2) on the exhaust turbocharger in the direction of the arrow and set it aside.

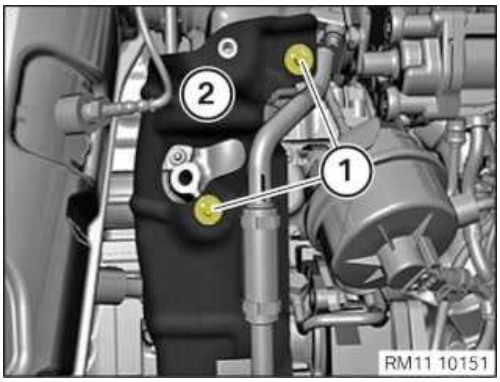
cardiagn.com

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (1) in the direction of arrow between the side member and the deformation element and remove.



56 – Remove the heat shield from the exhaust turbocharger at the bottom

WARNING



Hot surfaces.

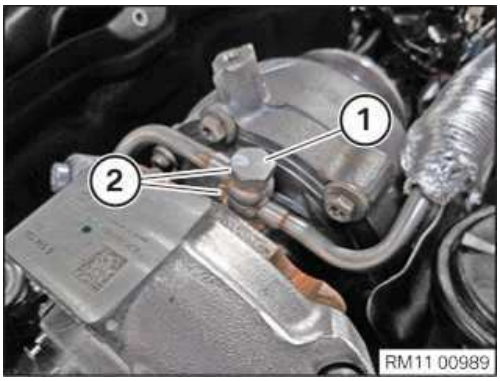
Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

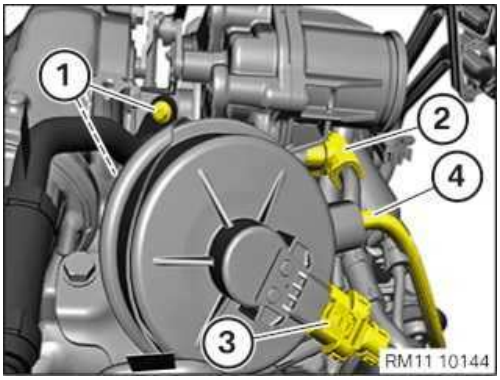
- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).

57 – Removing the low-pressure stage turbocharger



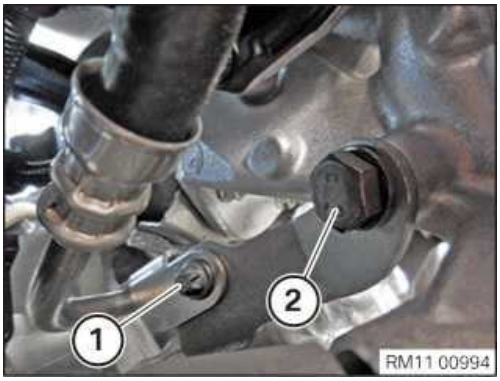
WARNING

Hot surfaces.



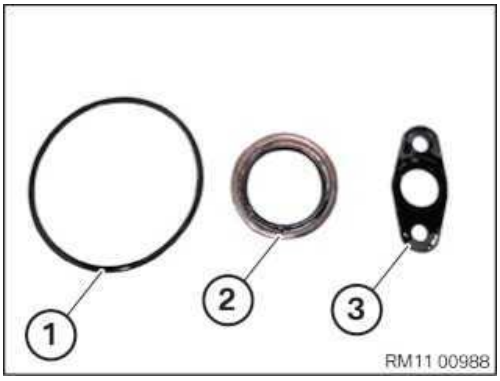
Risk of burning!

- Perform all work only on components that have cooled down.



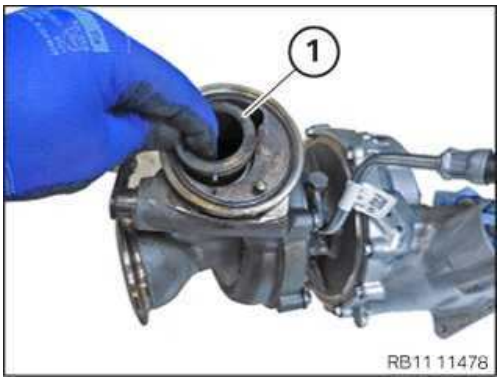
cardiagn.com

- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.



- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.

- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).



- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

cardiagn.com

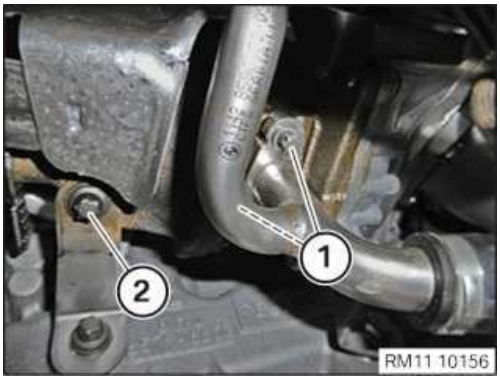
- Remove the spacer ring (1).

58 – Removing the high-pressure stage exhaust turbocharger

WARNING

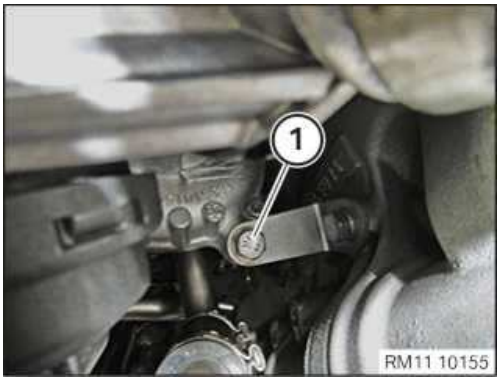
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

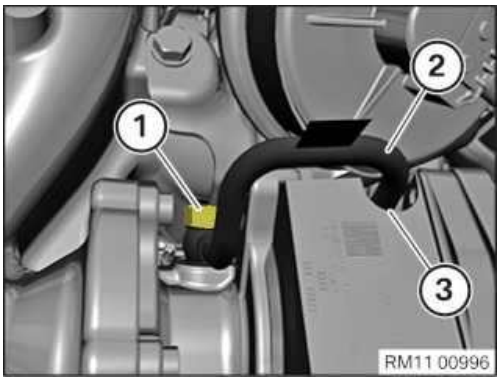
CAUTION



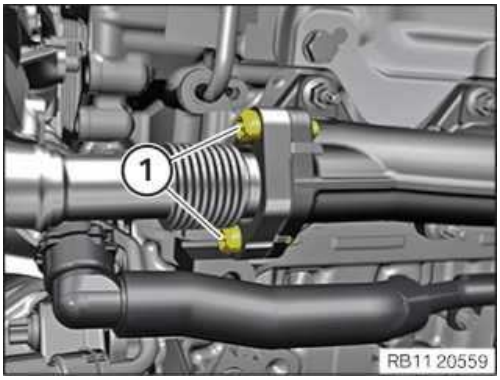
Heavy component.

Heavy components can lead to injury or damage.

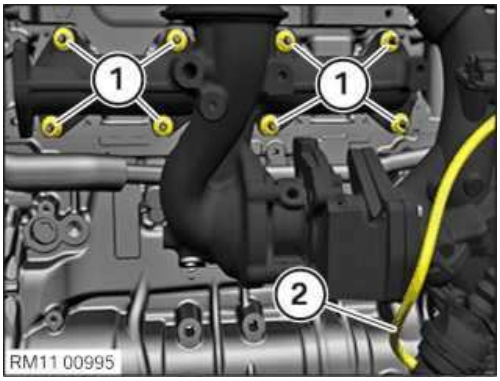
- Remove and install heavy components with the aid of another person/other persons.



- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).



- Release screw (1) from the right wheel arch.



cardiagn.com

- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

- Loosen screws (1).

- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

59 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

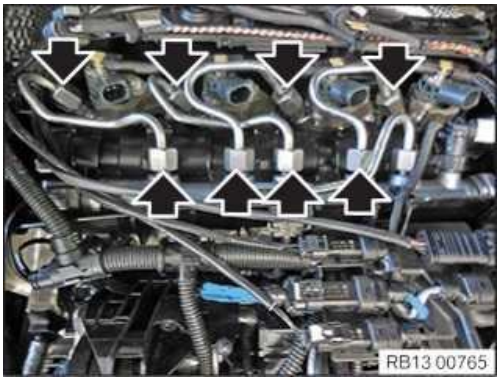
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION



If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

60 – Remove leakage oil lines

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

Hot surfaces.

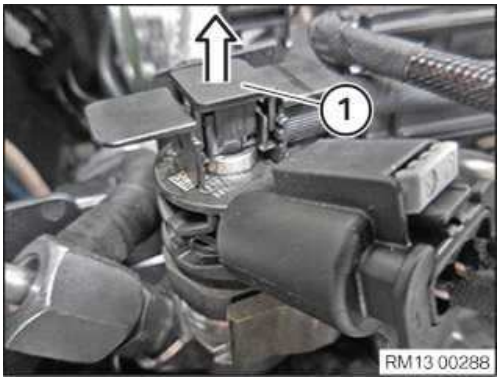
Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Contaminant or foreign body.

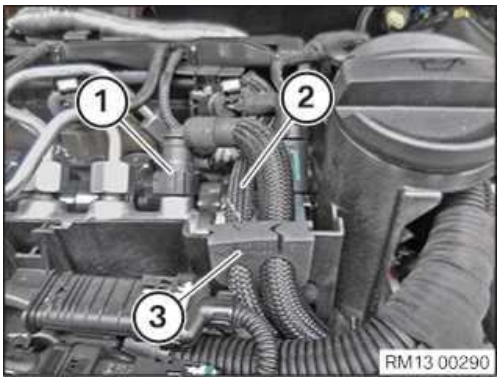
Contamination can result in malfunctions, operating failure or leaks.



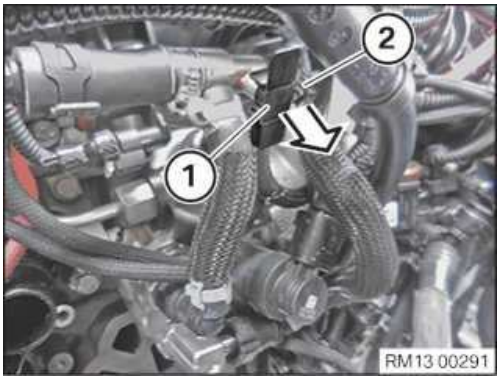
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the connectors (arrows) and disconnect.



- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

cardiagn.com

- Unlock and loosen fuel line (1) and set it aside.
- Guide the leakage oil line (2) out of the rubber grommet (3) and set it aside.

- Release lock (1) in direction of arrow.
- Feed out leakage oil line (2) and remove.

61 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

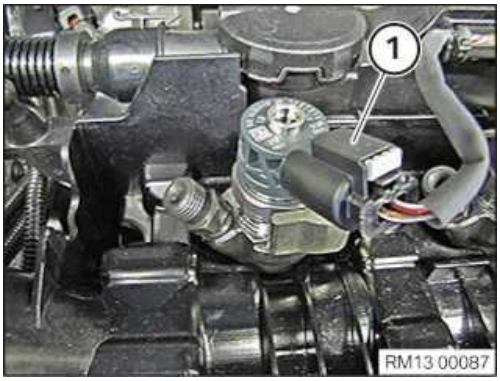
RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

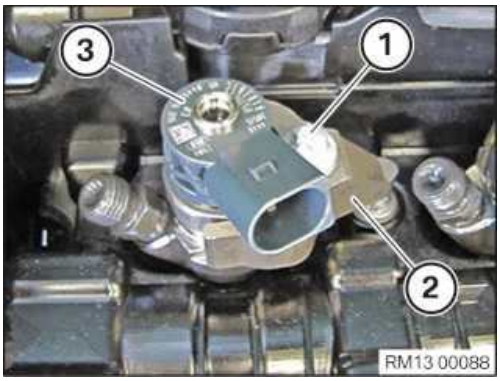
RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



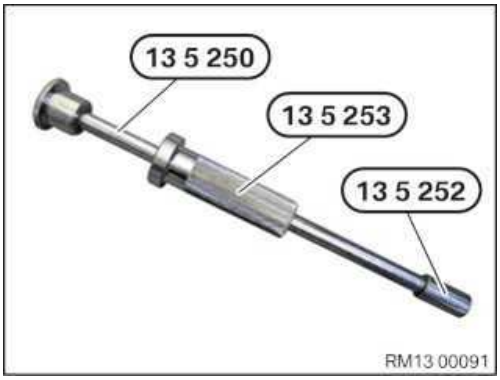
TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

- Unlock and disconnect connector (1).

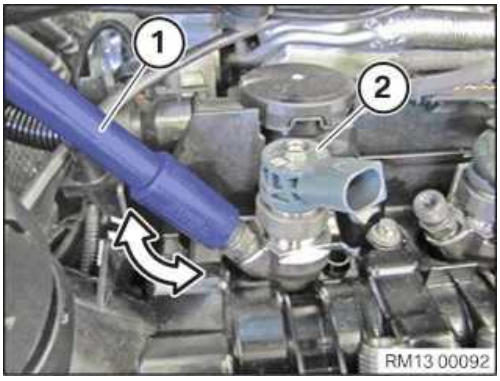
cardiagn.com

- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.



▶ **Loosen stuck injectors**

RISK OF DAMAGE

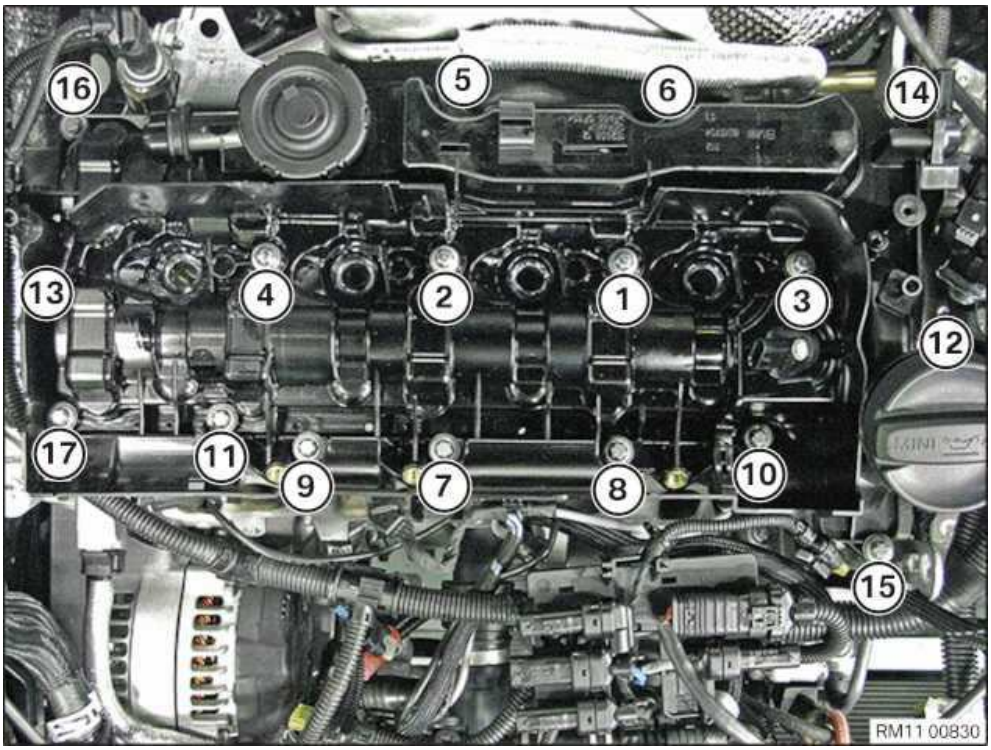


Contaminant or foreign body.

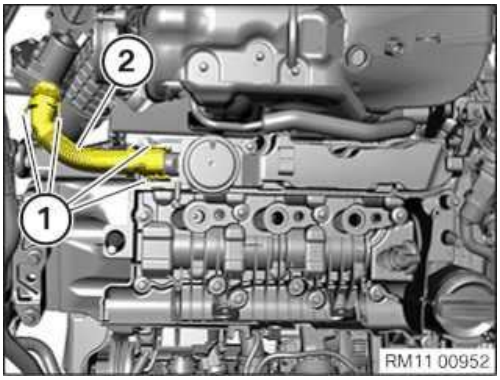
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)** back onto the special tool **0 493 321 (13 5 250)**.

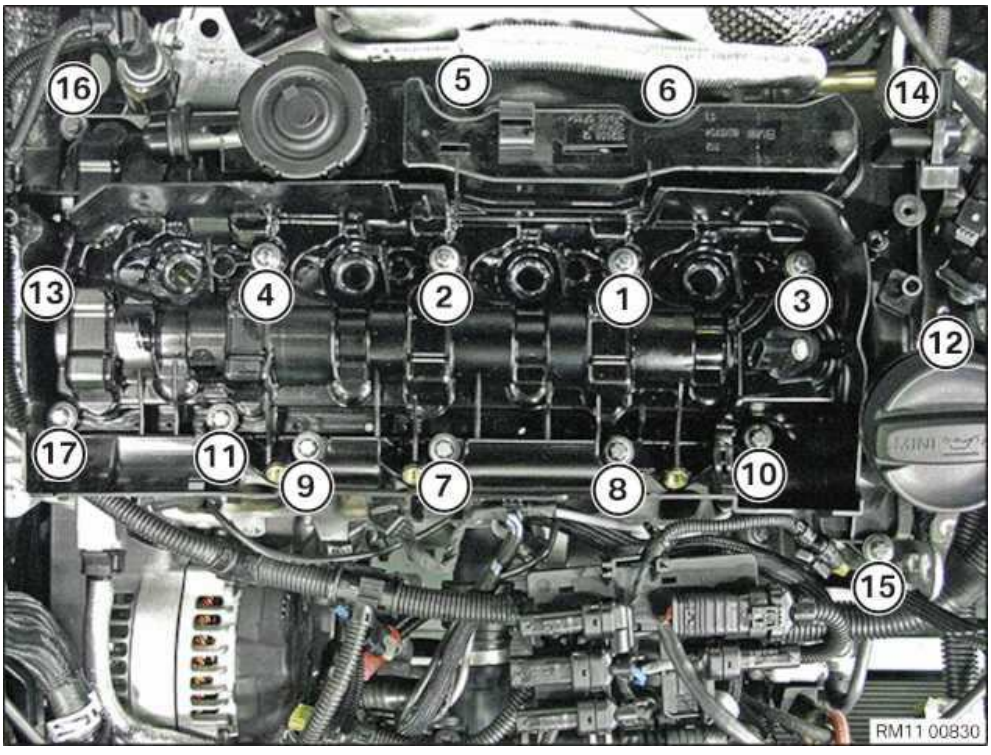


- Screw the special tool (1) **0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1) **0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.



62 – Removing the cylinder head cover

cardiagn.com



Overview: Screw connection of the cylinder head cover

1 to 16 screws of the cylinder head cover.

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

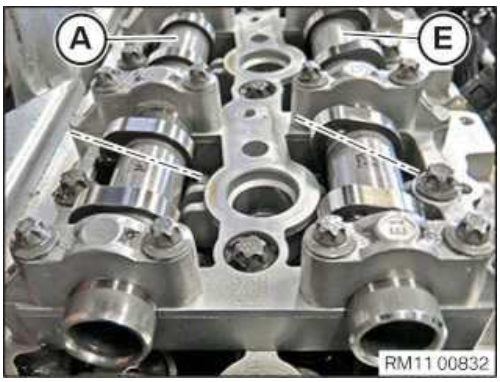
- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

cardiagn.com

- Remove protective cap (1) from oil sump.

- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE



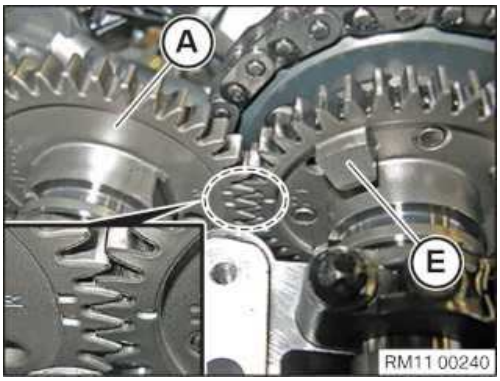
Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

cardiagn.com

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

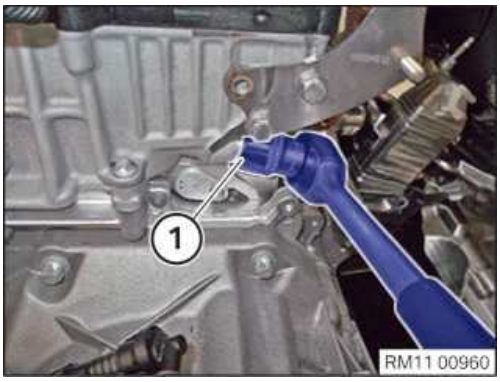
TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).



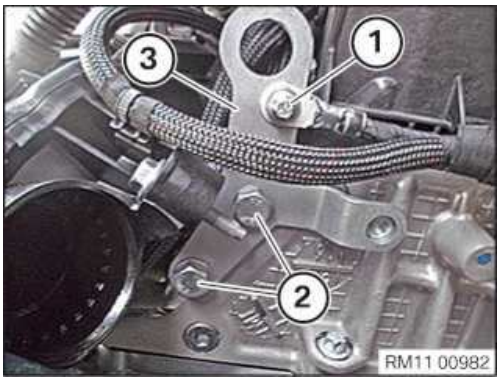
64 – Remove chain tensioner piston

WARNING

Hot surfaces.

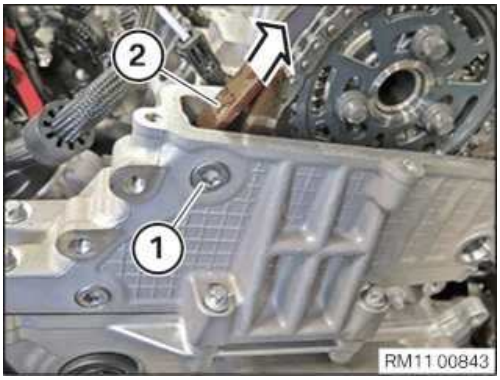
Risk of burning!

- Perform all work only on components that have cooled down.



TECHNICAL INFORMATION

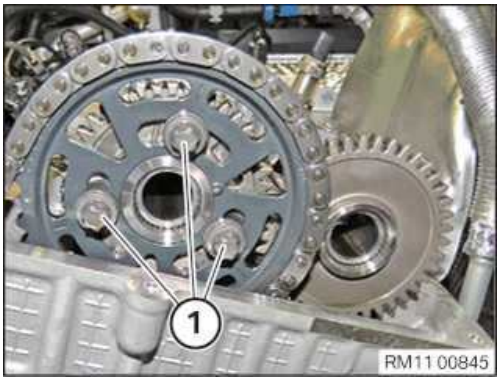
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



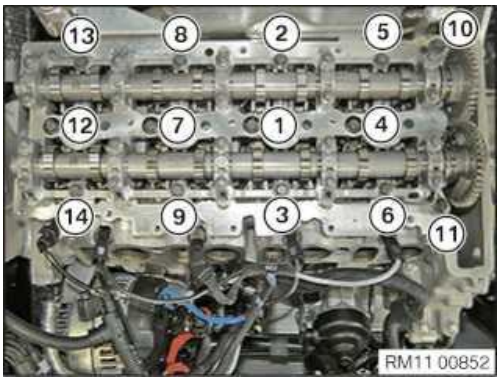
- Remove the chain tensioner piston (1).

65 – Remove the timing chain guide rail

cardiagn.com



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).



- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

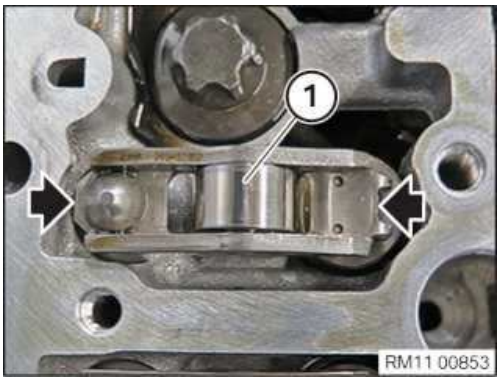
66 – Removing the camshaft sprocket on the intake camshaft

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

67 – Removing the camshaft support

- Evenly loosen all screws in a sequence from (14) to (1).
- Loosen and remove all screws in a sequence from (14) to (1).
  Both camshafts can be removed with the camshaft carrier.
- Remove the camshaft support including camshafts towards the top.

68 – Remove roller cam followers



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

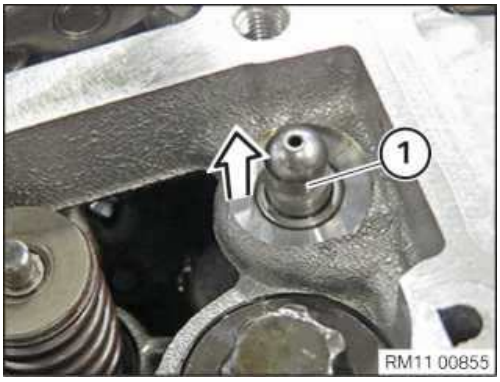
RISK OF DAMAGE

Damage to the engine.

If the classification of the roller cam followers is ignored, this can lead to engine damage.

- Observe the classification of the roller cam followers.
- Always reuse used roller cam followers at the same position.

- Remove the roller cam follower (1) and place it onto the special tool **0 495 105 (11 4 480)**.
- Repeat the process for all roller cam followers.



69 – Removing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.

70 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

cardiagn.com

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Electrostatic discharge.

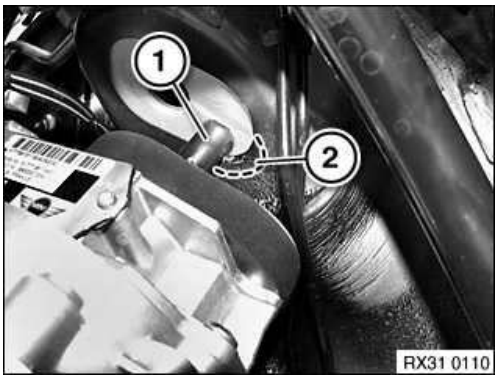
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool or conventional tools.
- Feed out preheating elements and remove.

71 – Remove cylinder head.



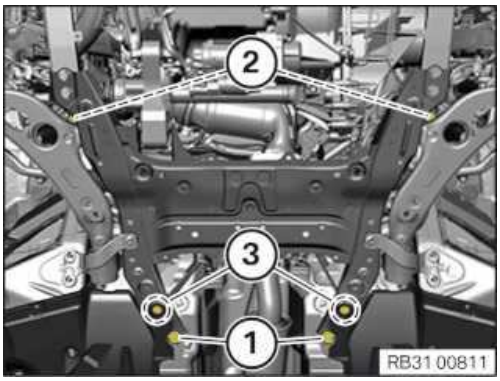
cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

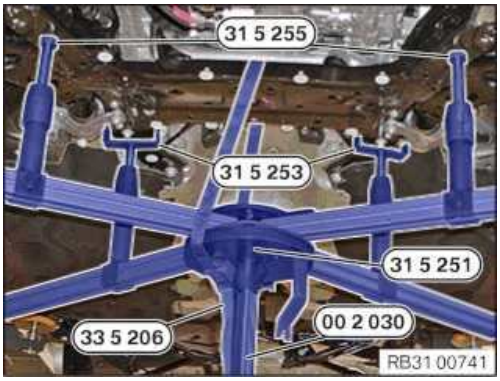
- Position front axle support.
- Bend the underbody panelling to the side in area (3).
- Raise front axle support.
- When raising, insert the charge air cooler into its rubber mount on the transmission cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

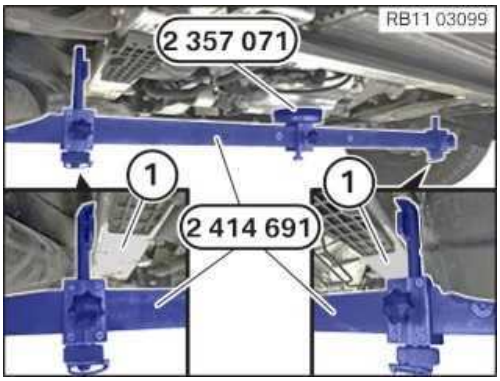
- Tighten down screws (2).



Front axle support, front to body

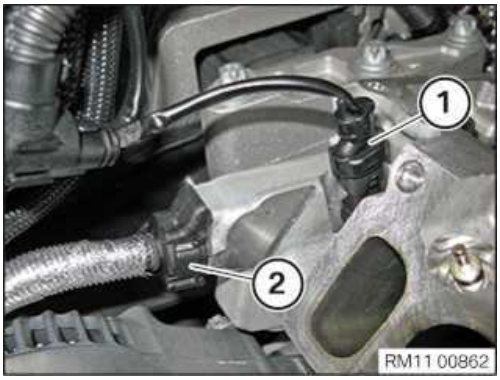
M12 screw	Renew screw.	Tightening torque	108 Nm

- If applicable, tighten the screws in area (3).



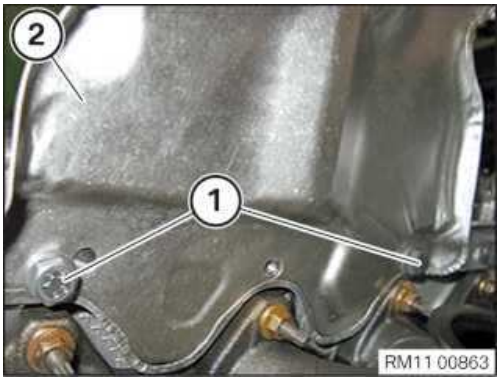
Underbody protection to body

Screw		Tightening torque	3 Nm

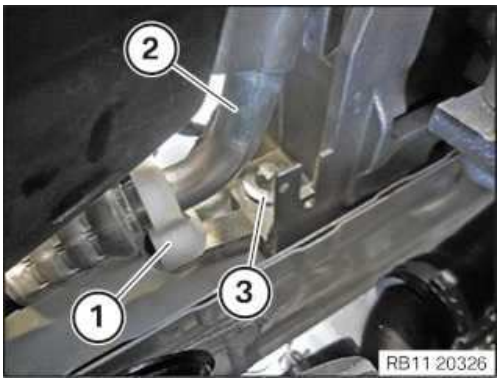


- Remove special tool from special tool .
- Lower the universal jack **0 490 133 (00 2 030)** with the special tool and set it aside.

cardiagn.com

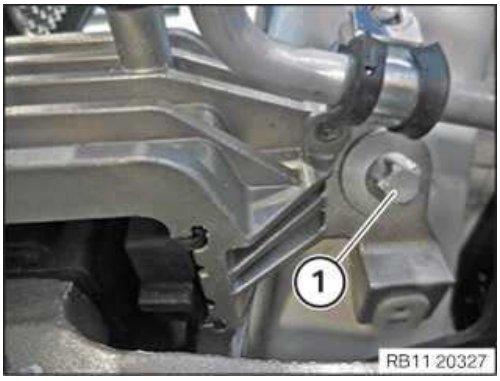


- Prepare special tool together with the special tool **2 357 071**.
- Attach special tool to front axle support and align special tool **2 357 071** correctly under the oil sump and then tighten.
- Turn special tool at adjusting screw uniformly upwards, until the special tool **2 357 071** makes contact with the oil sump.
- Tighten all adjusting screws of special tools and **2 357 071**.



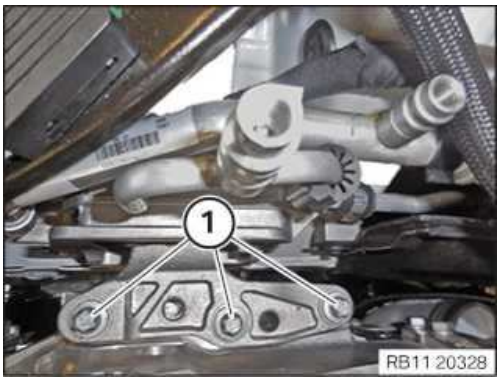
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

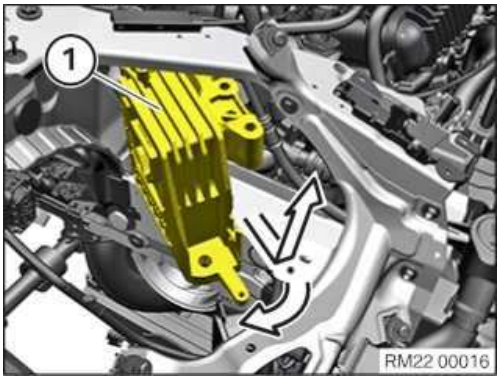


- Release the connector (1) from the coolant temperature sensor.
- Unlock and loosen coolant line (2).

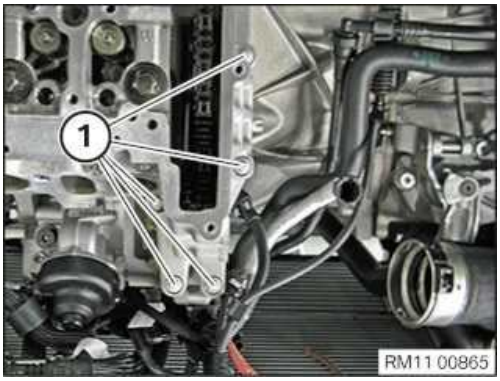
- Loosen screws (1).
- Feed out the heat shield (2) and set it aside.



- Unlock and loosen holder (1).
- Feed out the refrigerant line (2) and put to one side.
- Loosen screw (3).

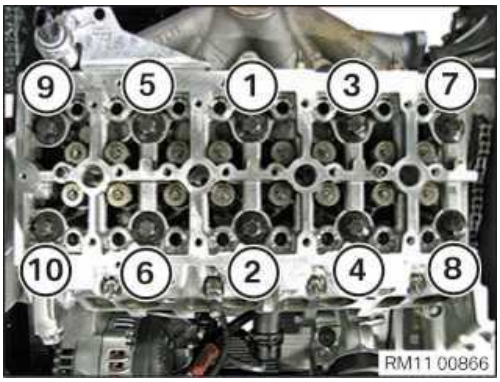


- Loosen screw (1).



cardiagn.com

- Loosen screws (1).



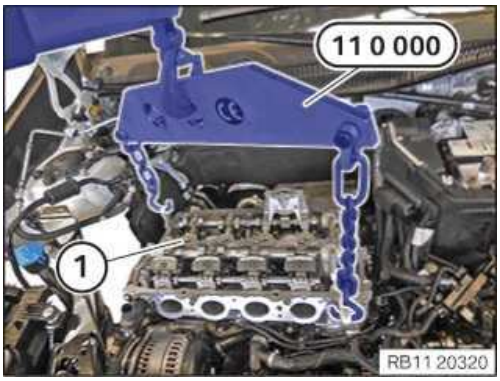
- Turn engine mount (1) in direction of arrow and remove upwards.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).

- Loosen the cylinder head bolts in the sequence from (10) to (1).
- Remove cylinder head bolts (1) to (10) with washers.

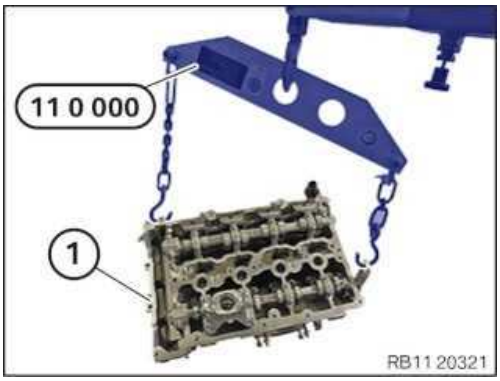


- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm

cardiagn.com



RISK OF DAMAGE

Damage to the guide rails.

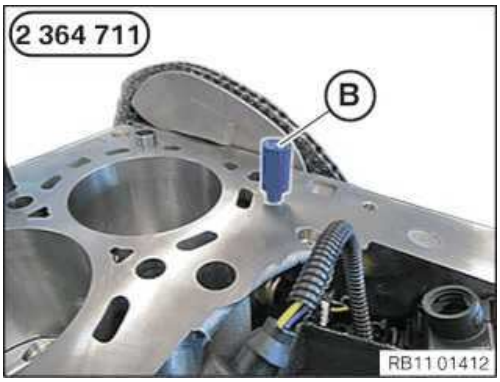
Large amounts of force may damage the guide rails of the timing chain.

- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- **Carefully** guide out the cylinder head (1) with the engine lifter and the special tool **0 490 561 (11 0 000)** and remove.

- Mount the cylinder head (1) on the special tool **0 494 362 (11 9 000)**.

MAIN WORK



72 – Cleaning the sealing surface

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

cardiagn.com

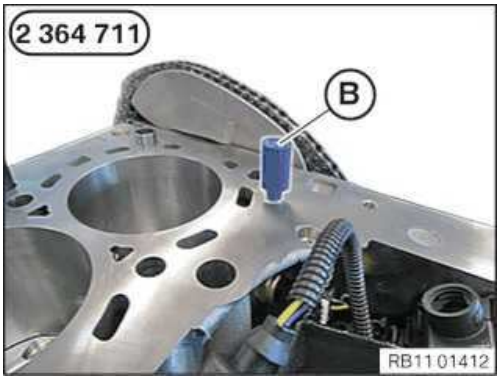
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

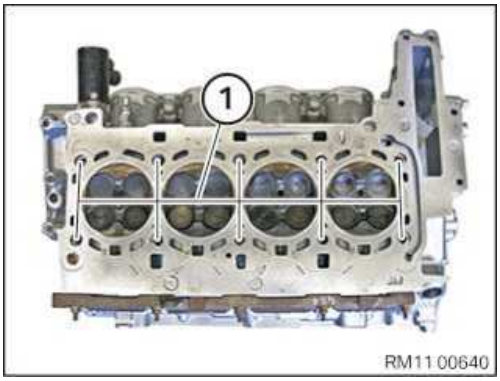
- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.



RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

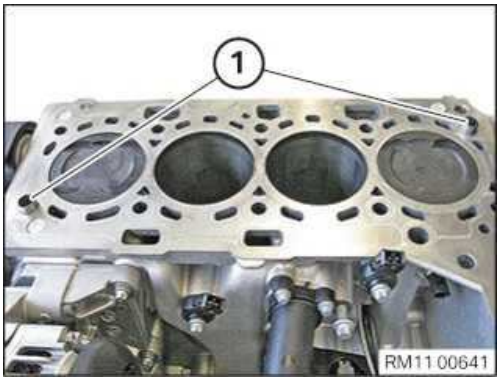


- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.

- Remove special tool (B).

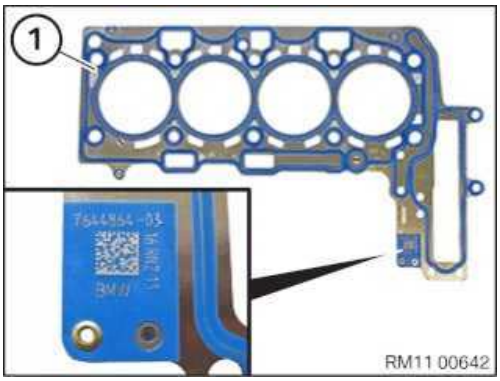
73 – Renewing the cylinder head gasket



RISK OF DAMAGE

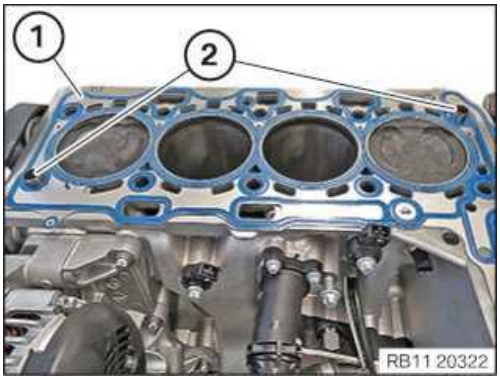
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



- Do not use any metal-cutting tools.

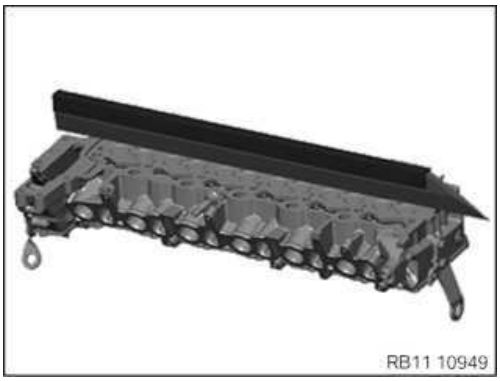
- Remove oil and dirt residue from the blind holes (1).



- Check the fitting sleeves (1) for secure fit and damage.

cardiagn.com

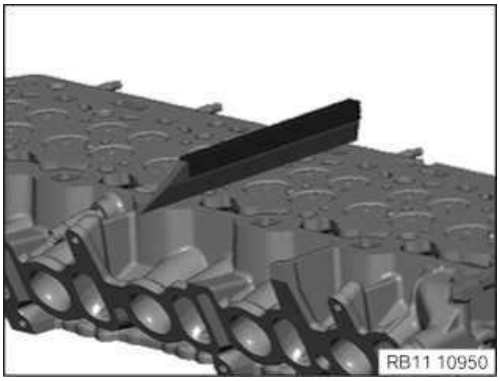
- Identify the cylinder head gasket (1) using the part number.



Note: If the cylinder head is reworked, an additional thicker gasket 0.3 mm is available for service personnel.

- Guide in the cylinder head gasket (1) and install.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

POSTPROCESSES

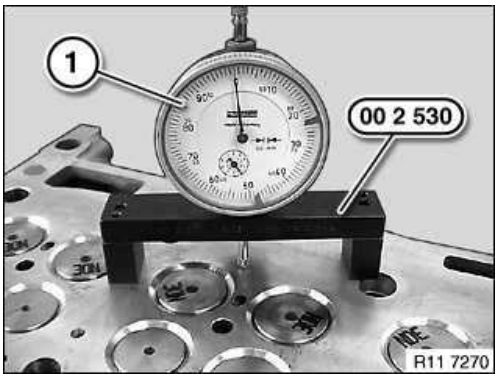


74 – Check the flatness of the cylinder head

- Check the flatness of the cylinder head lengthwise using a straightedge.

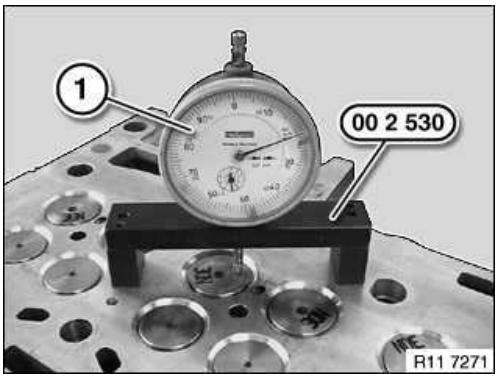
Cylinder head flatness

Maximum lengthwise deviation from flatness	0,10 mm
Maximum transverse deviation from flatness	0,05 mm



- Check the flatness of the cylinder head crosswise using a straightedge.

Cylinder head flatness



Maximum lengthwise deviation from flatness	0,10 mm
Maximum transverse deviation from flatness	0,05 mm

75 – Checking the valve underprotrusion

cardiagn.com

- Set the dial gauge (1) onto the cleaned cylinder sealing surface with slight preload in special tool **0 490 185 (00 2 530)**.
- Set dial gauge in mildly preloaded state to "zero".

Check

- Position the dial gauge (1) on the valve with special tool **0 490 185 (00 2 530)**.
- Measure valve underprotrusion and compare with the setpoint value.

Valve underprotrusion

	0,8 (0,7 - 0,9) mm

Result

» Valve underprotrusion is outside tolerance.

Measure

- Replace cylinder head.

76 – Installing the cylinder head

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

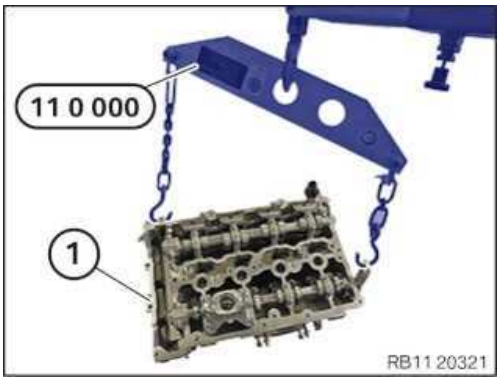
- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Damage to threads.

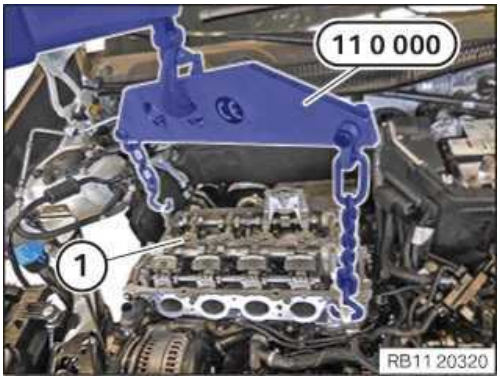
Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).



TECHNICAL INFORMATION

Do not remove bolt coating.



TECHNICAL INFORMATION

When replacing the cylinder head: The complete valve control and the Valvetronic servomotor are already pre-assembled for new cylinder heads.

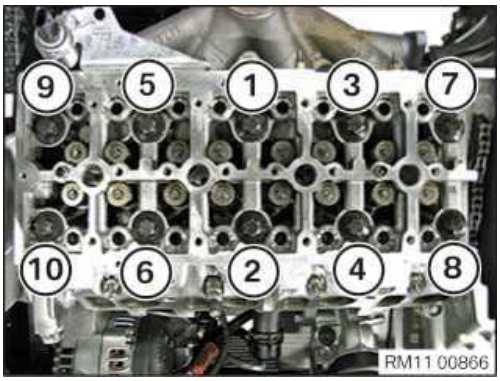
cardiagn.com

- Position cylinder head (1) on special tool **0 490 561 (11 0 000)** and engine lifter.

RISK OF DAMAGE

Damage to the guide rails.

Large amounts of force may damage the guide rails of the timing chain.



- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- Feed in the cylinder head (1) **carefully** with the engine lifter and the special tool **0 490 561 (11 0 000)** and install.

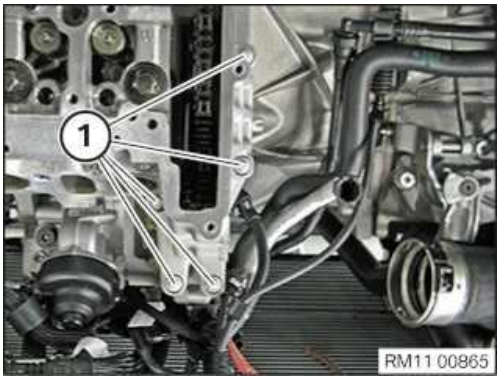
- Unscrew the bolts (1) of the special tool **2 459 012**.
- Guide the special tool **2 459 012** out and remove.

cardiagn.com

- Renew the cylinder head bolts (1).

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  No coolant, water or engine oil must be present in threaded holes of engine block.

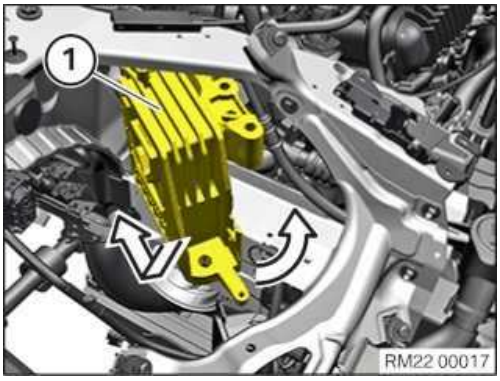


TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in cylinder head bolts in sequence (1) to (10).
- Tighten cylinder head bolts using special tools **0 490 504 (00 9 120)** and in sequence (1) to (10).

Cylinder head to crankcase



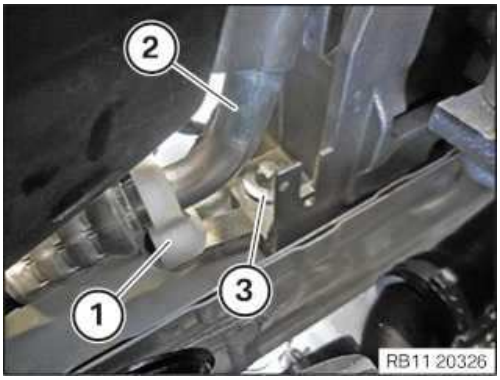
M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

- Tighten the cylinder head bolts (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

- Thread in engine mount (1) in direction of arrow then install.

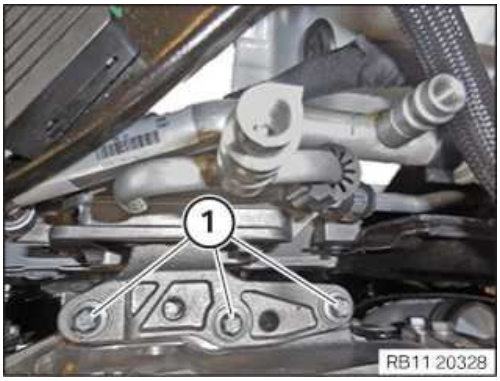


cardiagn.com

- Tighten down screw (1).

Right engine mount to side member

M12		Tightening torque	100 Nm

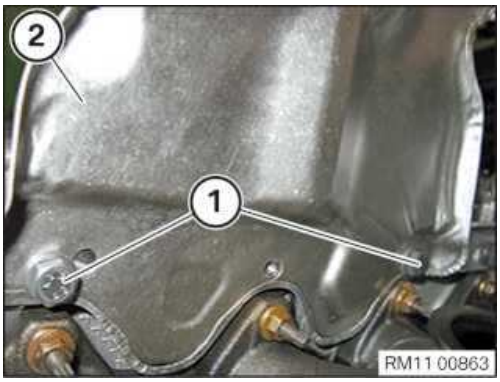


- Tighten down screw (3).

Right engine mount to side member

M12		Tightening torque	100 Nm

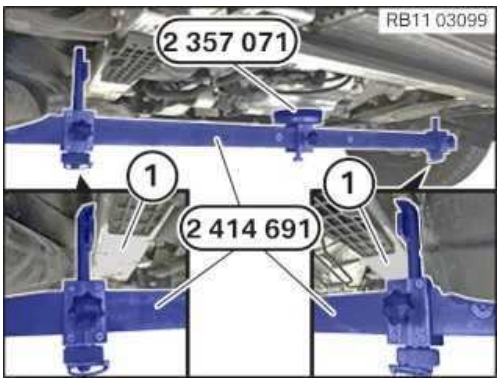
- Feed in and install the refrigerant line (2).
- Lock holder (1).
- Make sure the bracket (1) engages audibly.



- Renew screws (1).

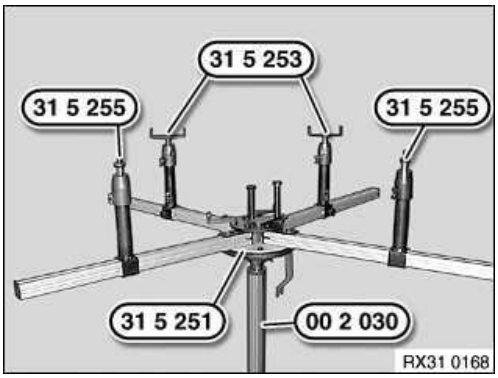
  Parts: Bolts
- Tighten the screws (1).

Right engine mount to cylinder head



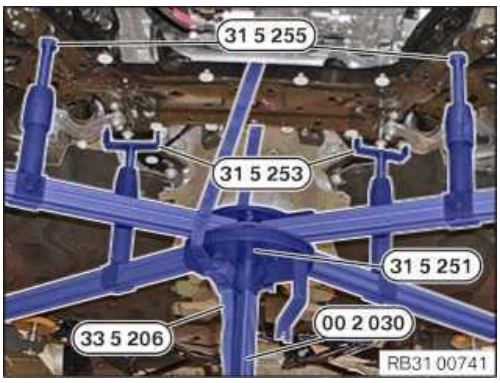
M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

- Feed in and install the heat shield (2).
- Tighten the screws (1).



Heat shield to cylinder head

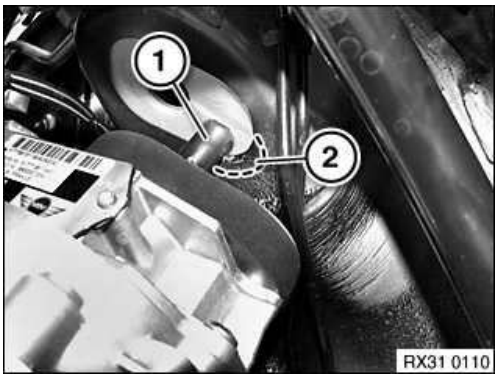
M8X16		Tightening torque	10 Nm



- Disassemble special tool using special tool **2 357 071**.

cardiagn.com

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

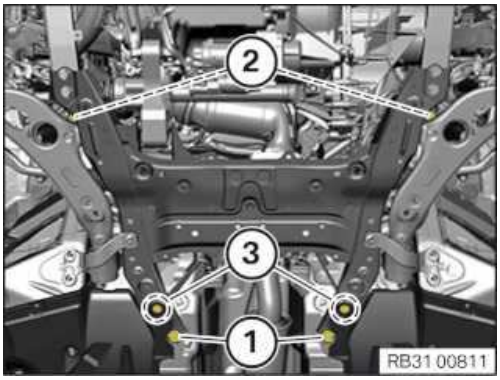


Note: In a profile rail pair, two profile rails are connected to one another by gearing.

- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

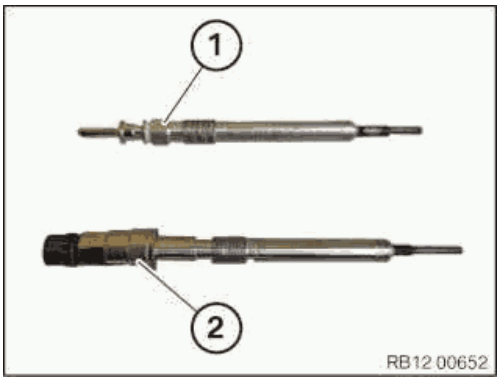
Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.



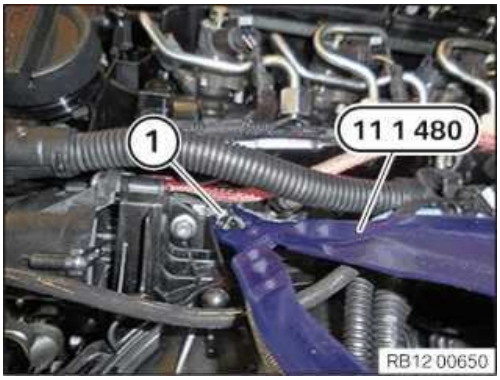
- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and the front axle remove.

77 – Install glow elements

- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.



cardiagn.com

- Tighten the glow element with the special tool or conventional tools.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

78 – Installing the hydraulic valve clearance compensating element

RISK OF DAMAGE

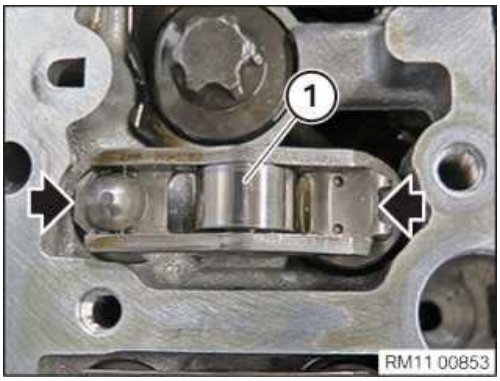
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

79 – Install the roller cam followers



RISK OF DAMAGE

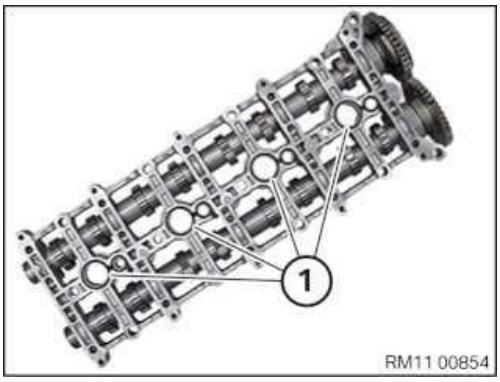
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

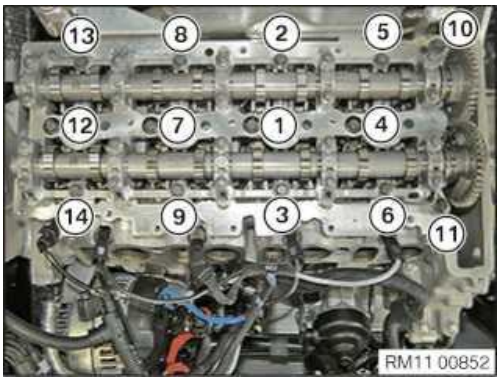
RISK OF DAMAGE



Damage to the engine.

If the classification of the roller cam followers is ignored, this can lead to engine damage.

- Observe the classification of the roller cam followers.
- Always reuse used roller cam followers at the same position.

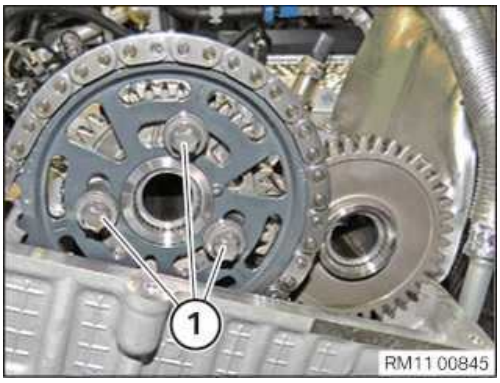


- Install the roller cam follower (1).
- Repeat the process for all roller cam followers.

80 – Installing the camshaft support

- Renew gaskets (1).

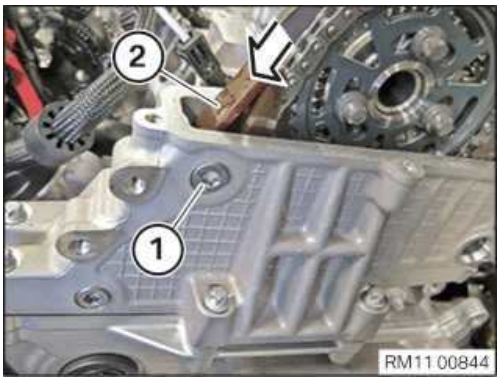
  Parts: gaskets



- Position the camshaft support including the camshafts.
- Tighten the screws in a sequence from (1) to (14) in several steps.

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

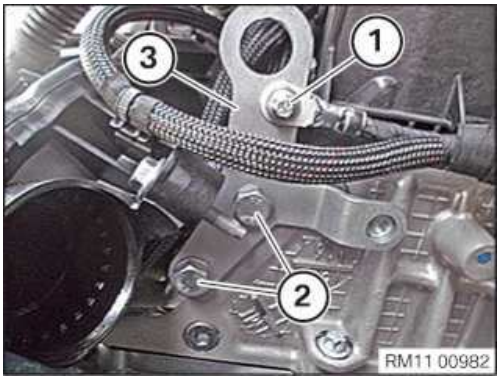


81 – Installing the camshaft sprocket on the intake camshaft

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

82 – Install the timing chain guide rail

cardiagn.com



- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

83 – Installing the chain tensioner piston

WARNING

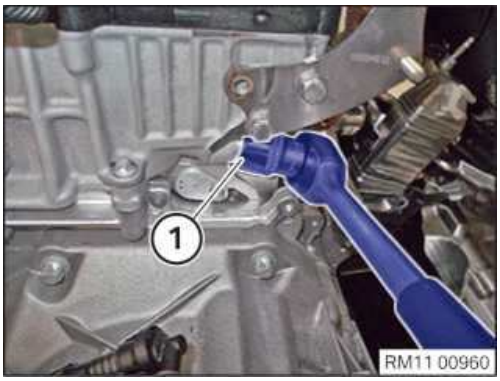
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Renew sealing ring (1).

  Parts: Sealing ring

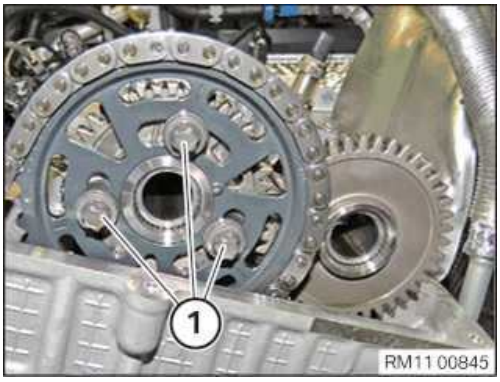


TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

cardiagn.com



- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

84 – Tightening the camshaft sprocket on the intake camshaft

- Tighten the screws (1).

Camshaft sprocket to camshaft

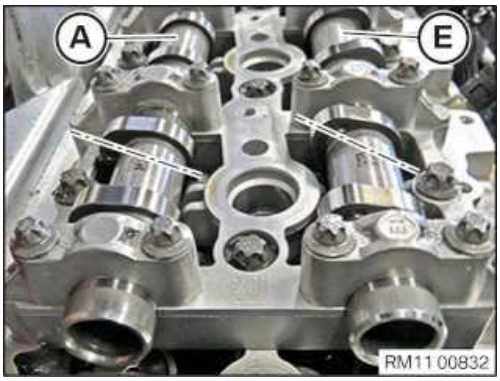
M7x17.			17 Nm

85 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

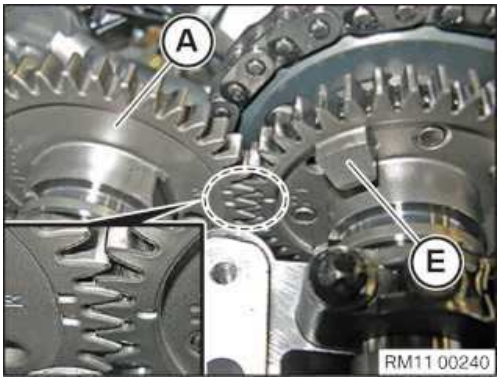


The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

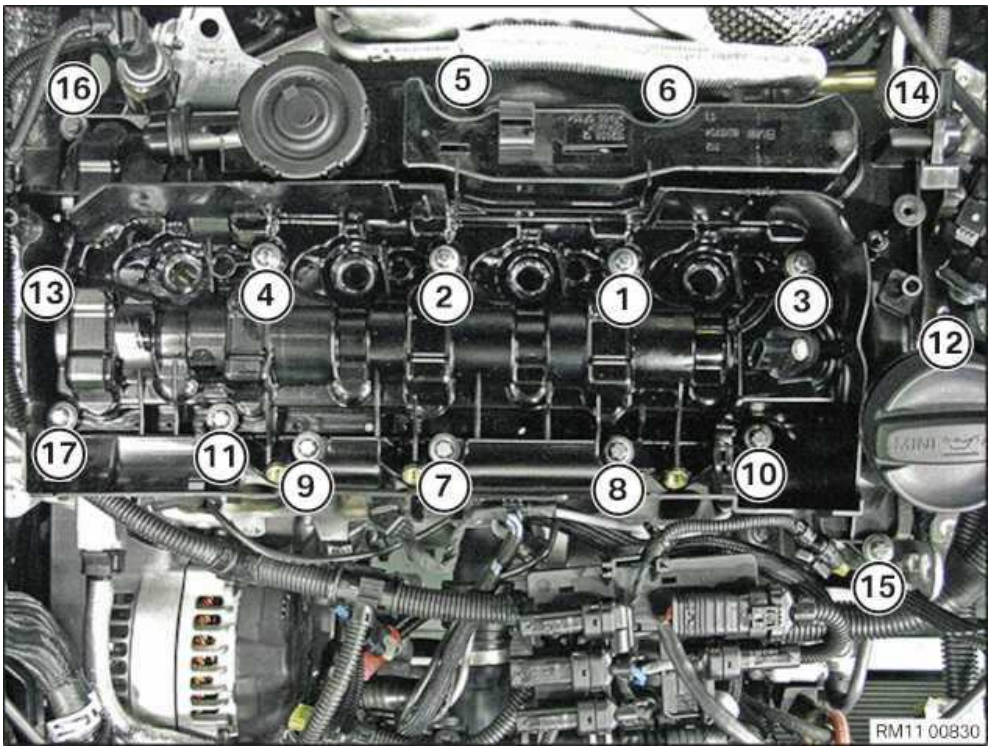
- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

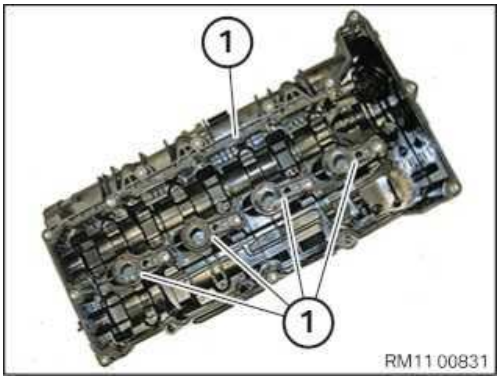
TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.



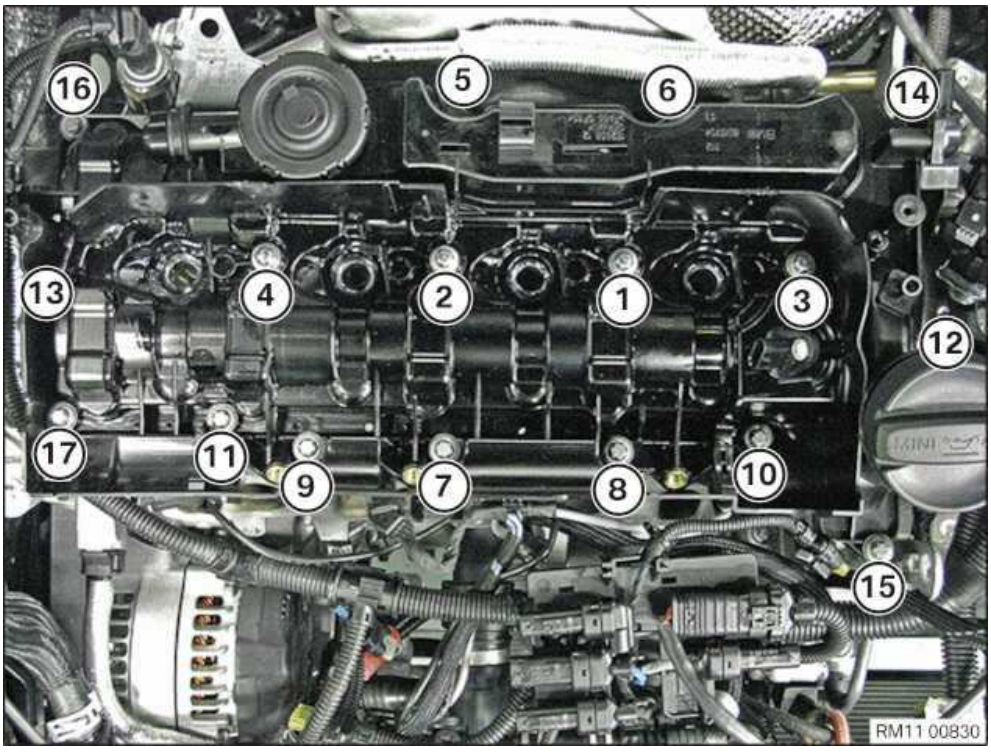
- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.



- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

cardiagn.com

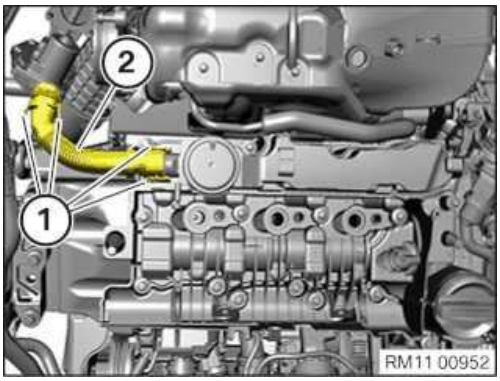
Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket



- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-

cardiagn.com

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

87 – Installing injectors of injection system

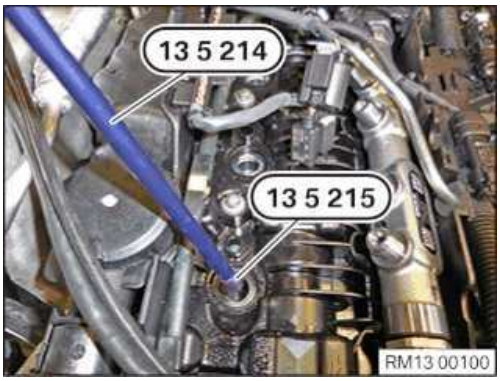
▸ Cleaning the injector shafts

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

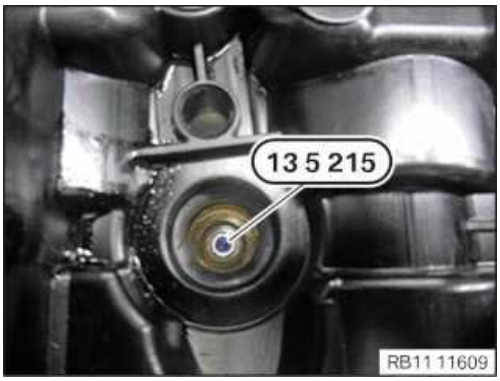
- Collect dirt particles, e.g. when blowing out, use cloth to do so.



- Wear safety goggles.

RISK OF DAMAGE

Contaminant or foreign body.

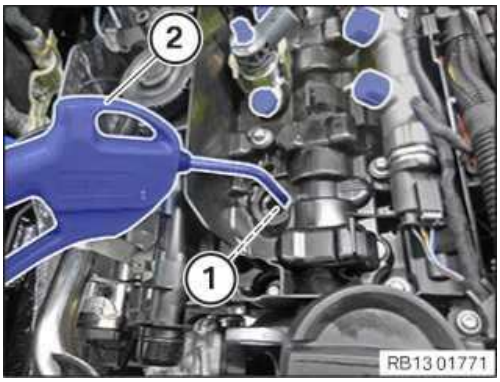


Contamination can result in malfunctions, operating failure or leaks.

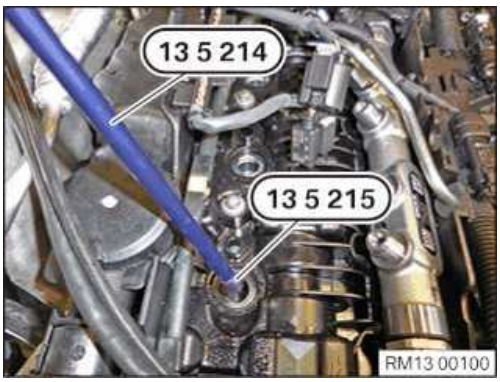
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

cardiagn.com



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.



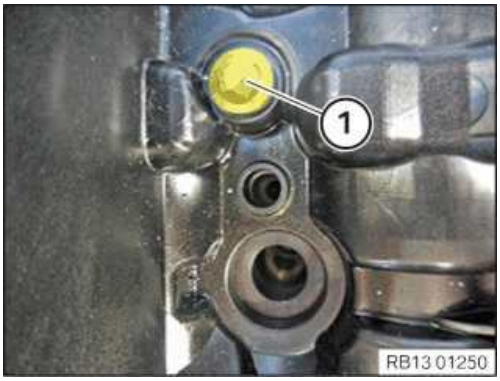
- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

- Blow out injector shaft (1) with air gun (2).

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

► **Check the placement of the clamping claw**



cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

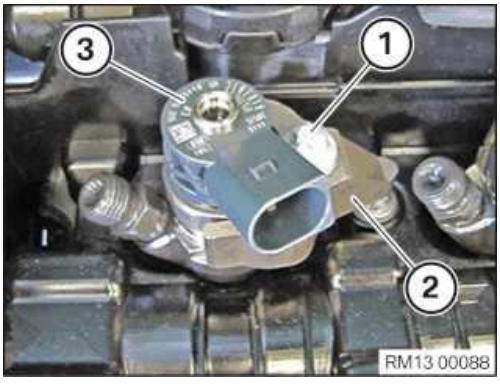
▸ **Prepare the injector for installation**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

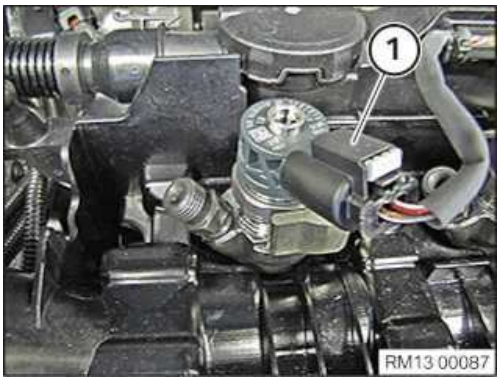


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

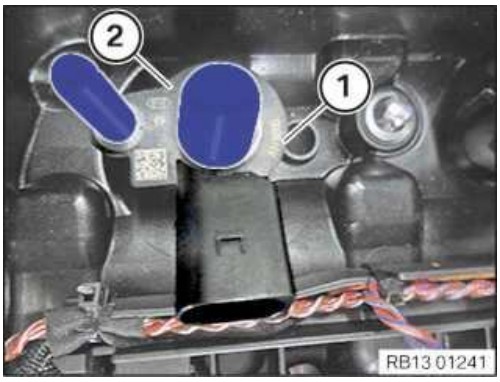
Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

cardiagn.com

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



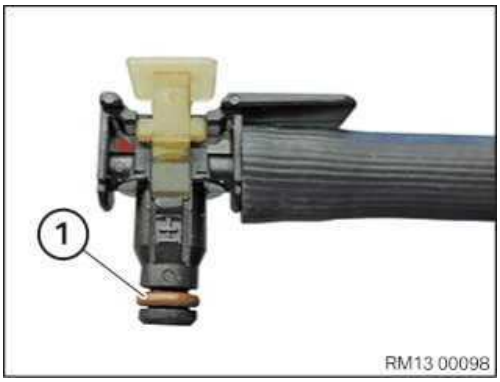
▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

88 – Connect the leakage oil line on the injector

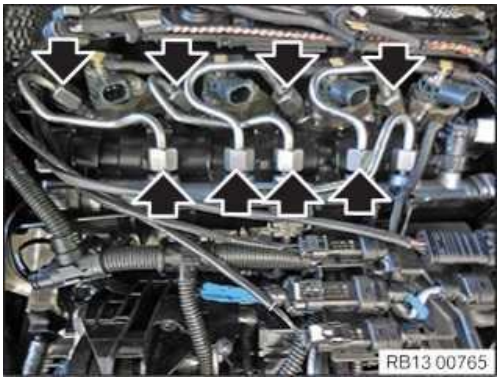
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

cardiagn.com

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.



89 – Installing high pressure lines between rail and injectors

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the high pressure lines (arrows) with the special tool .

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

90 – Prepare for the installation of the exhaust turbocharger

- Check the oil feed lines and the oil return lines for contamination or obstruction, clean or renew if necessary.
- If the oil feed lines and/or oil return lines are heavily contaminated, we recommend changing the engine oil and the oil filter.
- If installed: Check the coolant feed lines and the coolant return lines for the exhaust turbocharger for contamination or obstruction, clean or renew if necessary.
- Check that the screw connections and the plug connections of all the lines are correct.
- Check air cleaner for contamination and clean or renew as needed.
- Check correct functioning of crankcase ventilation.
- Replace all gaskets.

  Parts: Seals

cardiagn.com

91 – Installing the high-pressure stage exhaust turbocharger

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

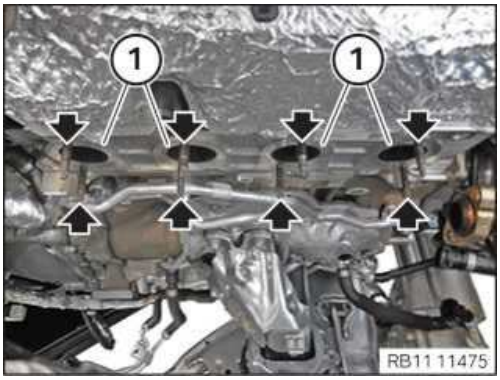
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE



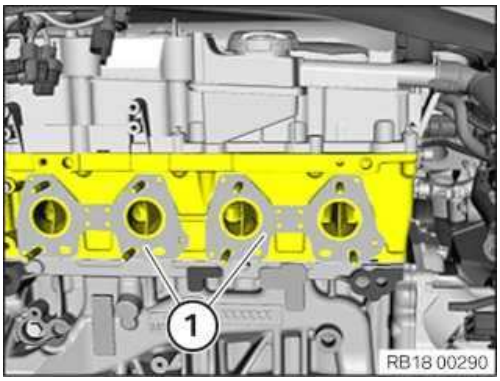
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

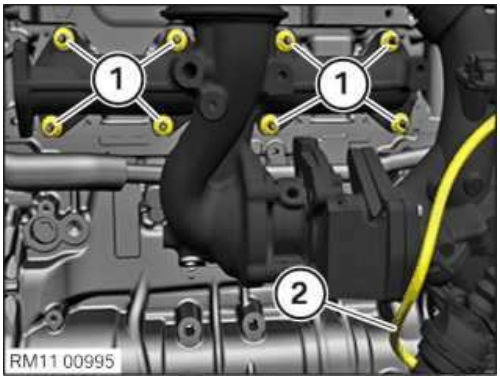
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.

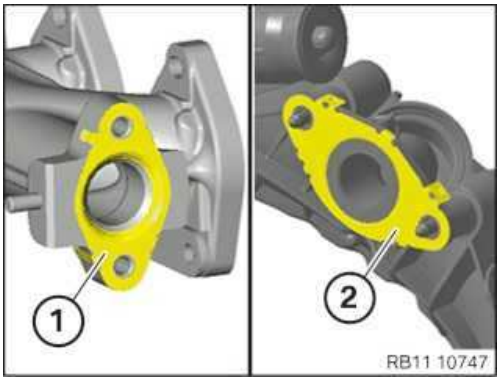
- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.



cardiagn.com

- Renew gasket (1).

  Parts: Gasket

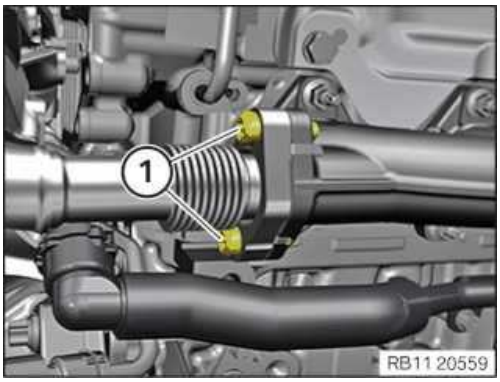


- Install new gasket (1).

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

  Parts: Nuts

- Connect vacuum hose(2).



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

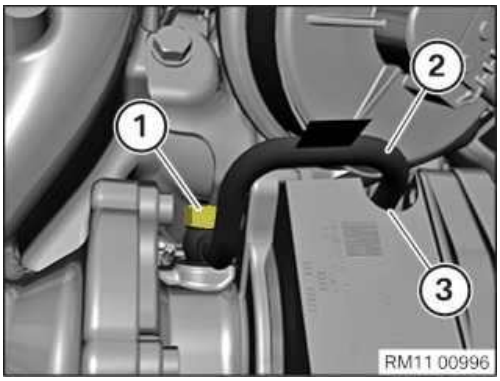
  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

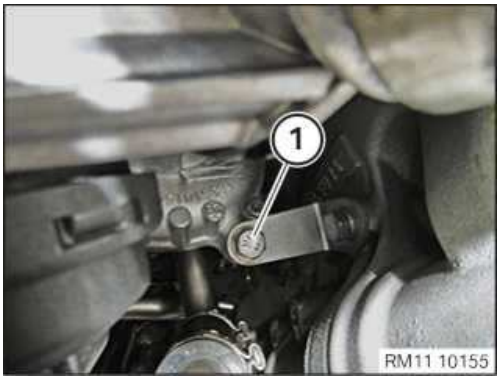
  Parts: Gasket

- Tighten the screws (1).

Exhaust-gas recirculation cooler to exhaust manifold



M8x28	Replace screws	Tightening torque	32 Nm

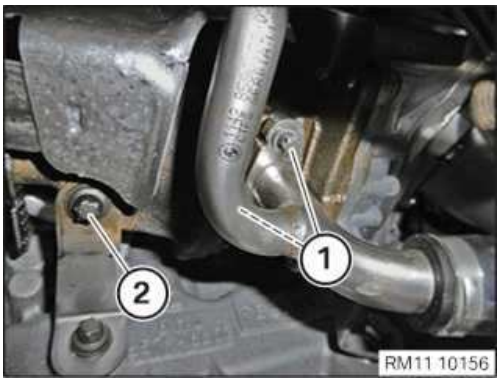


- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring

cardiagn.com

- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).



- Tighten bolt (1) from the right wheel arch.

- Renew seal (1) of oil return line.

  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

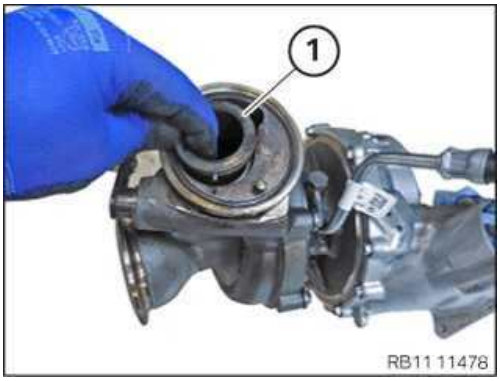
Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

92 – Installing the low-pressure stage turbocharger

RISK OF DAMAGE

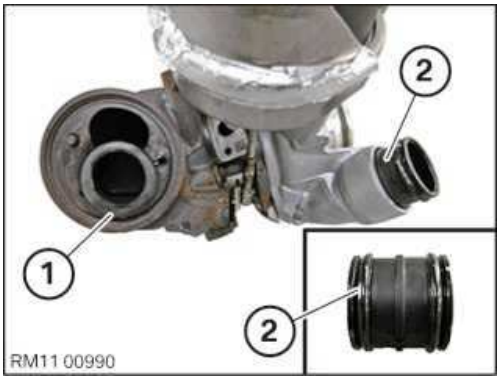
Damage to the surface.



The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

cardiagn.com



TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.

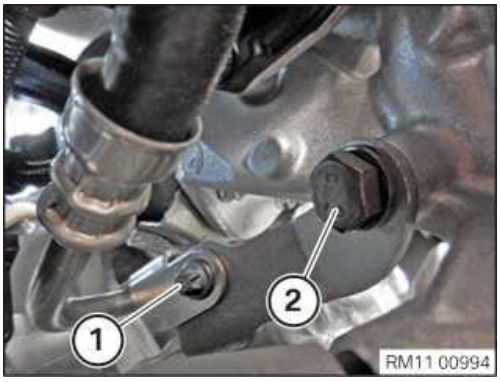
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

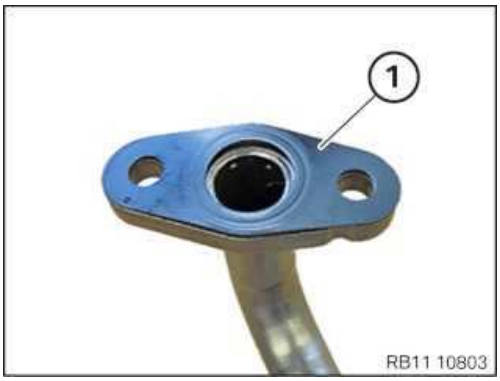
Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

- Tighten down screw (1).

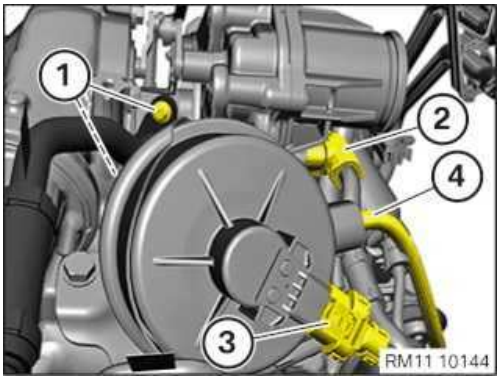
Oil feed line to bracket



Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

Holder to exhaust turbocharger and crankcase

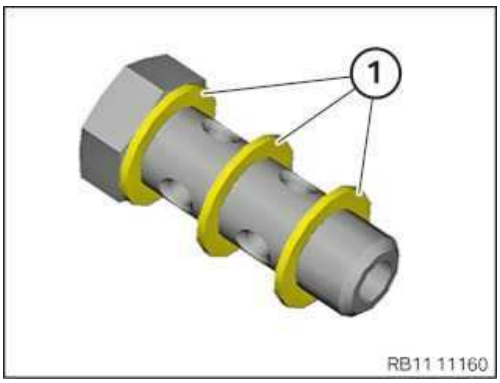


M8x16		Tightening torque	22 Nm

cardiagn.com

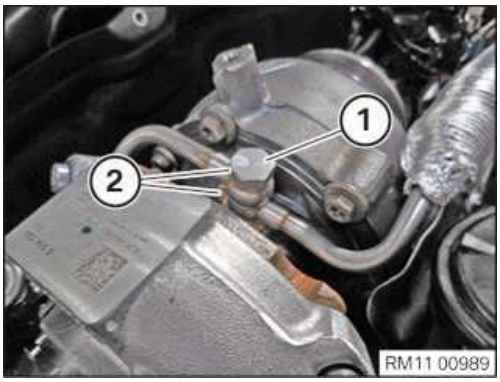
- Renew seal (1) on the oil return line.

  Parts: Gasket



- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger



M6x12		Tightening torque	8 Nm

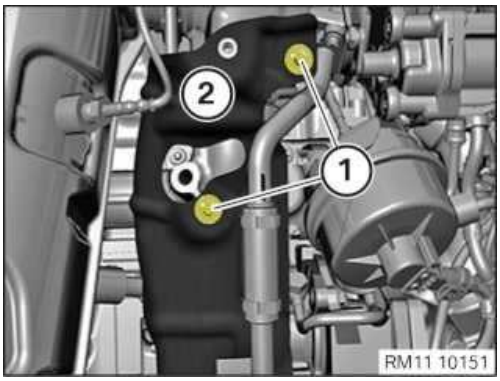
- Connect and lock connectors (2) and (3).

  The locks must engage audibly.
- Connect vacuum hose (4).

- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.

93 – Installing heat shield on exhaust turbocharger at bottom

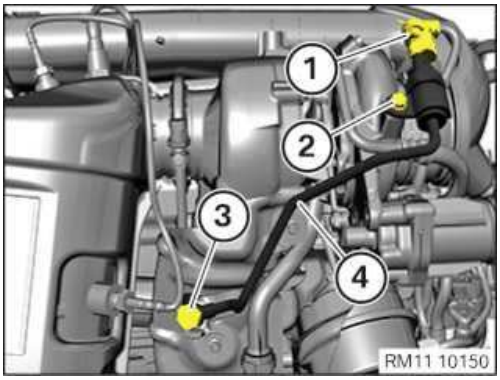


WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



cardiagn.com

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

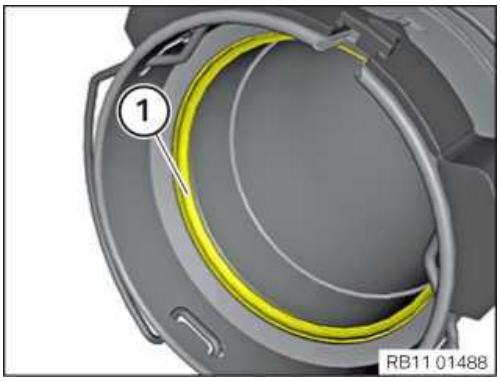
- Tighten down screw (2).

Standard screw connection M6

M6		8 Nm

- Connect connectors (1) and lock.

  Lock must audibly engage.



94 – Installing the right charge air duct between the exhaust turbocharger and the charge air cooler

RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

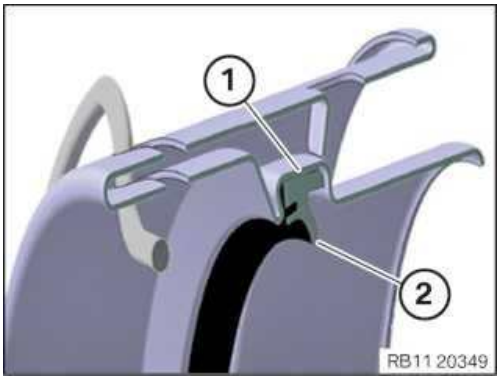
- Replace the gaskets and pressure pipe if necessary.

- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

▸ **Replace damaged gasket**

TECHNICAL INFORMATION

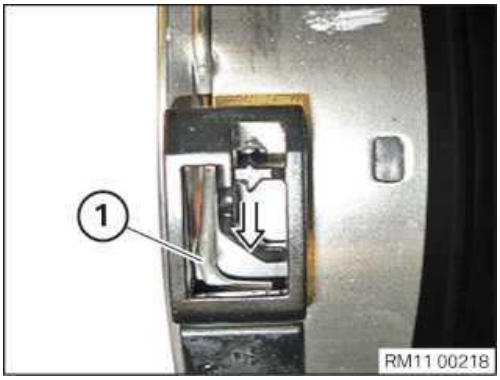


Do not use pointed or sharp-edged tools for the installation and/or removal.

cardiagn.com

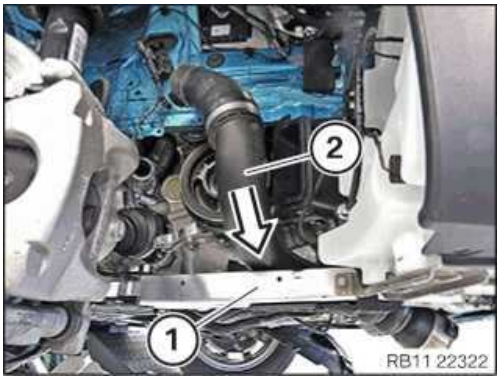
- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

  The gasket groove (1) must be clean.



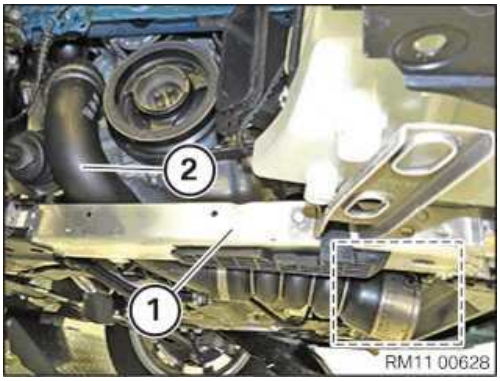
- Renew gasket.

  Parts: Gasket
- Install seal dry without lubricant or mounting agent.



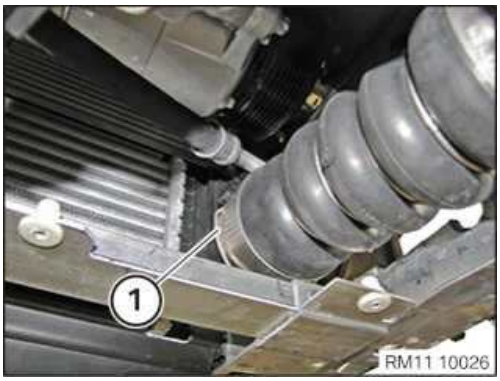
TECHNICAL INFORMATION

Incorrect assembly is possible. Ensure correct installation position.

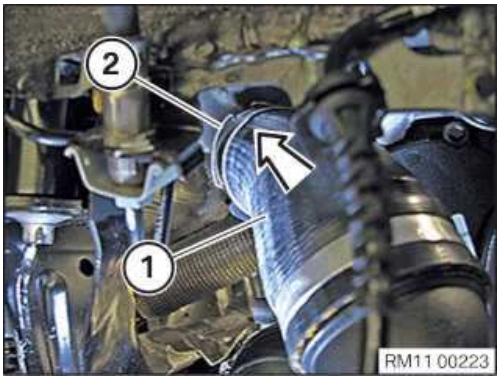


- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).

- Detach the locks (1) in the direction of the arrow from the brackets.
- Ensure that the locks (1) engage audibly.



- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed in the charge air duct (1) in the **direction** of arrow between the side member and the deformation element and position.



- Pull the adapter of the front axle support (1) downwards to the front right.
- Position the charge air duct (2) in **marked** area on the charge air cooler.

cardiagn.com

- Feed in and install the charge air duct (1) on the charge air cooler .
- Make sure the charge air duct (1) engages audibly on the charge air cooler.

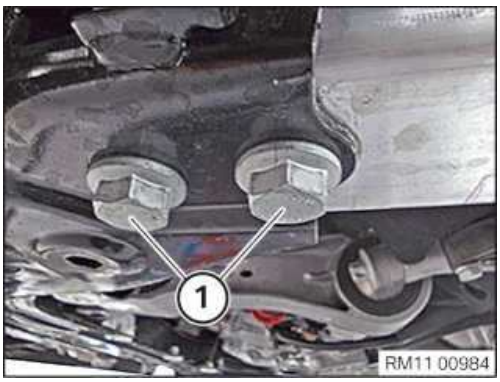
- Feed in and install charge air duct (1) in the **direction** of the arrow on exhaust turbocharger.

  The locks (2) must engage audibly.

- Tighten the screws (1).

Charge air duct to oil sump

M6		Tightening torque	8 Nm



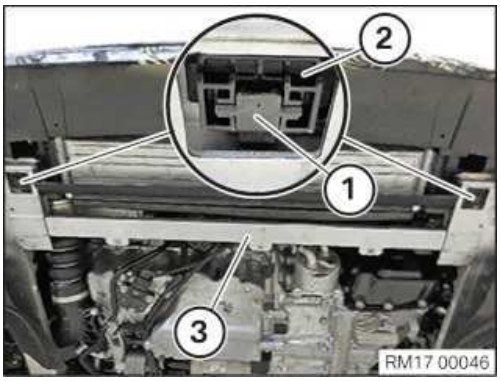
- **If installed:**
- Feed in and install the ride height sensor (3).
- Tighten the screws (2).

Ride height sensor holder to front axle support

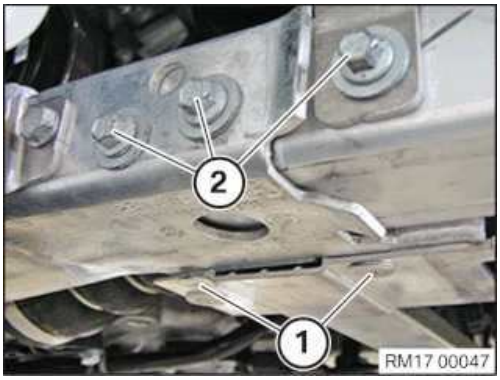
M6		Tightening torque	8 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.



- Tighten the screws (1) on the adapter of the front axle support.



Adapter, front axle support to front axle support

		Tightening torque	100 Nm

cardiagn.com

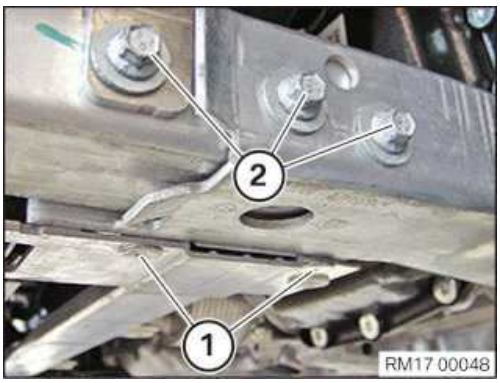
- Guide in cross connection (3) and install.
- Guide in locks (2) and install.
- Lock the locking pins (1).
- Ensure that the locking pins (1) audibly engage.



- Tighten the bolts (2) at the front left.

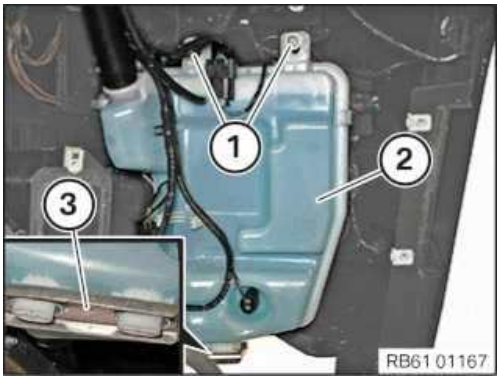
Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front left.

- Tighten the bolts (2) at the front right.



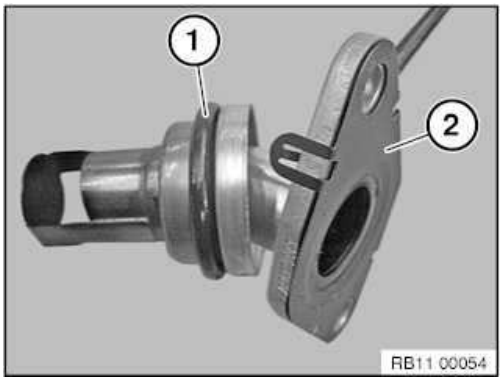
Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front right.

95 – Install the washer fluid reservoir in the fixture

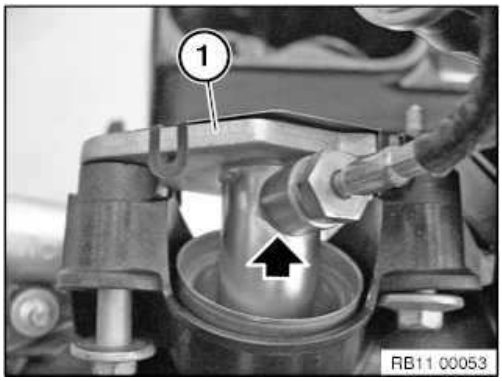


- Feed washer fluid reservoir (2) into the mounting (3) and install.
- Tighten the screws (1).

Washer fluid reservoir to body

M6x20		Tightening torque	8 Nm

96 – Installing the intake plenum



- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position the seal (2) and clip it in.

cardiagn.com

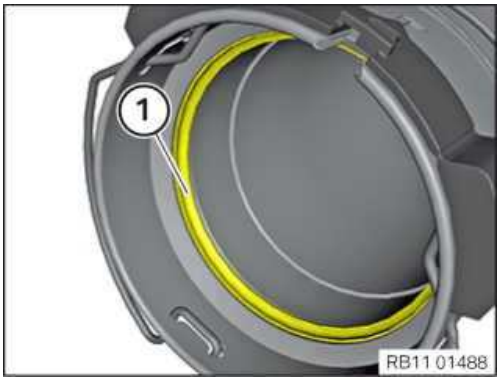
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

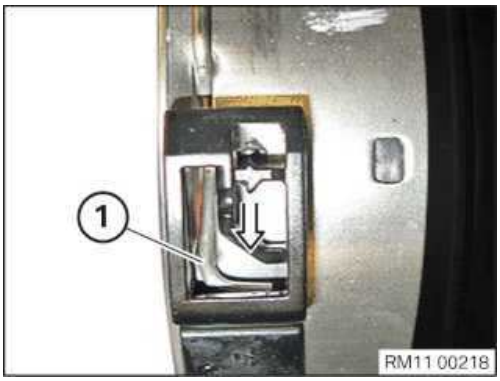
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



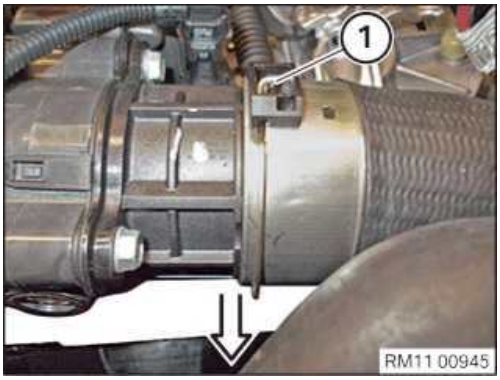
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

cardiagn.com

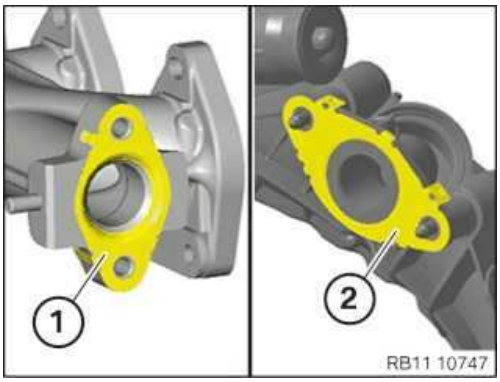
- Engage the lock (1) on the bracket (arrow).

- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.



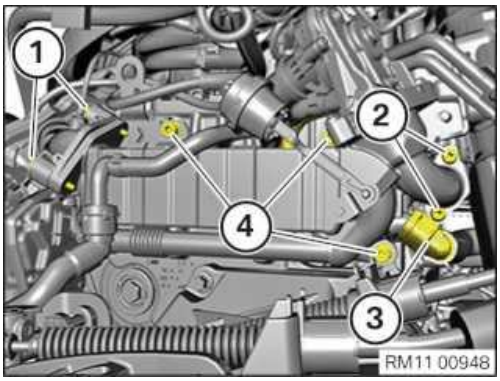
97 – Installing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

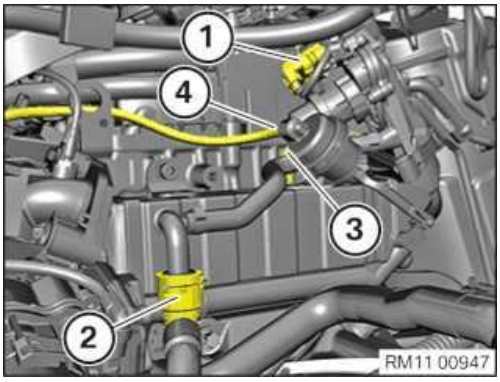
Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold



M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

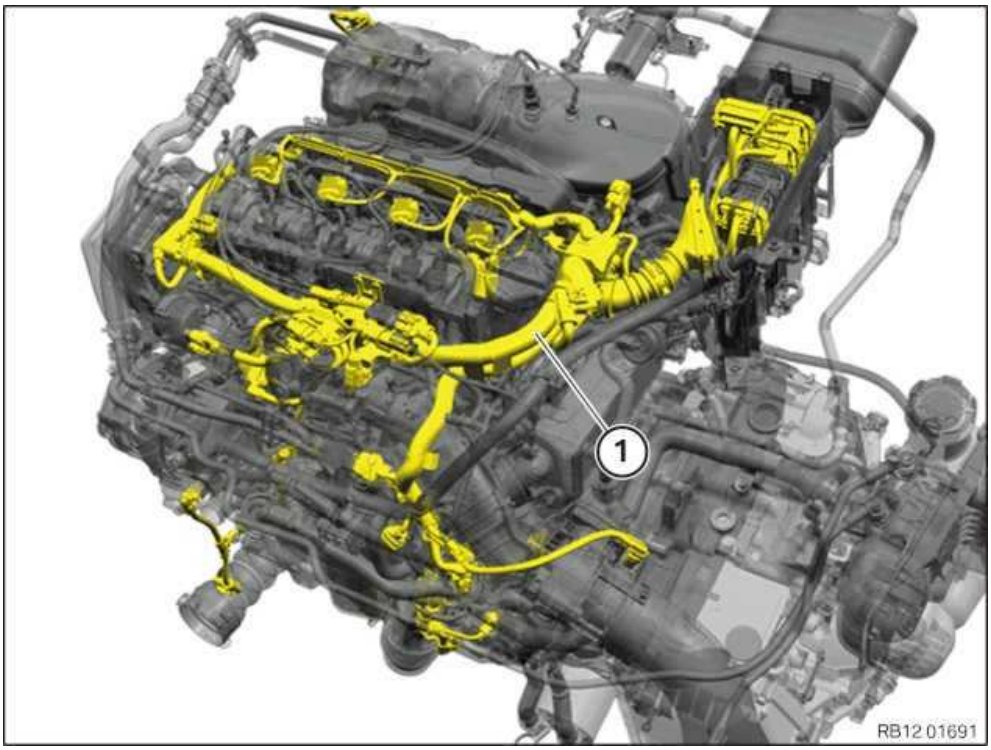
  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

98 – Fastening the wiring harness section for the intake plenum

cardiagn.com

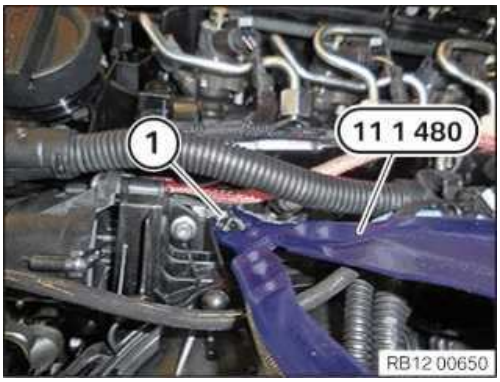
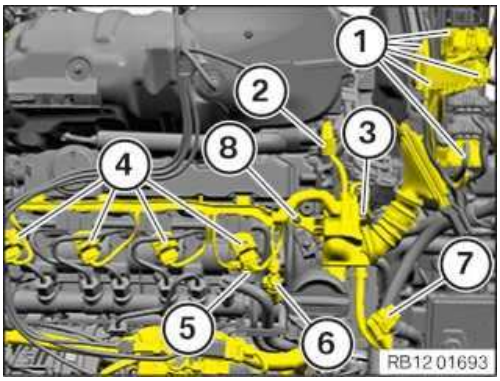
Overview: Wiring harness section for the engine



1 Wiring harness section for the engine

▶ **Installing the cable clip for the intake plenum**



- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.

cardiagn.com

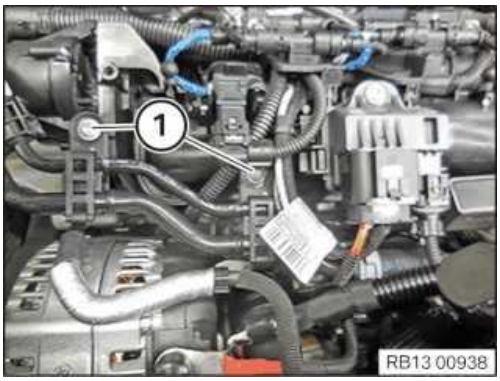
- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.

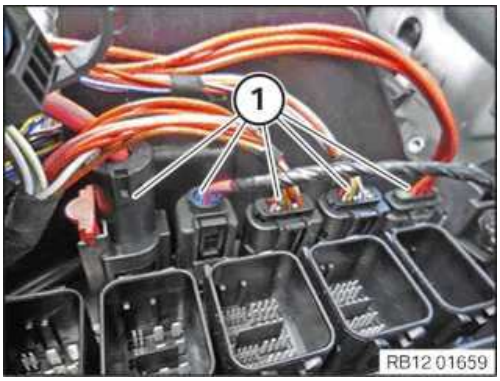


- Connect and lock the connector (2).

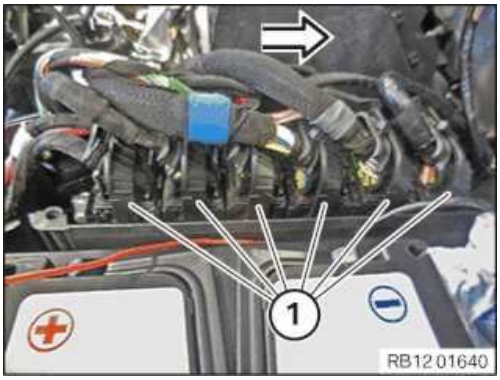
  Lock must snap audibly into place.
- Connect the positive battery cable (1) and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm



- Position the fuel line.
- Tighten the screws (1).



Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

cardiagn.com

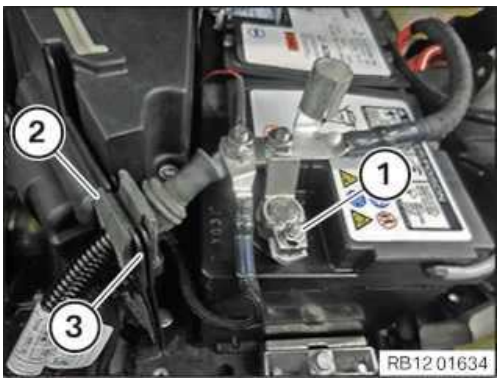
- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

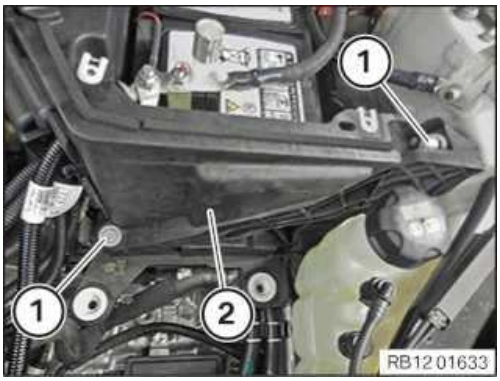


- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm



- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

cardiagn.com

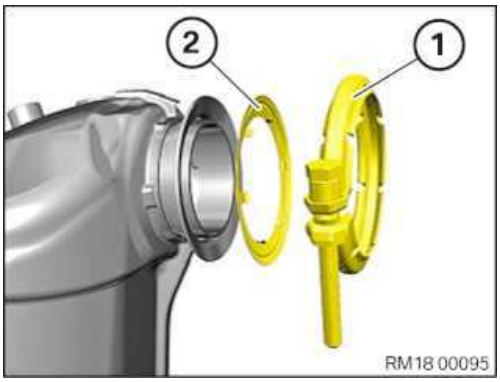
- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm



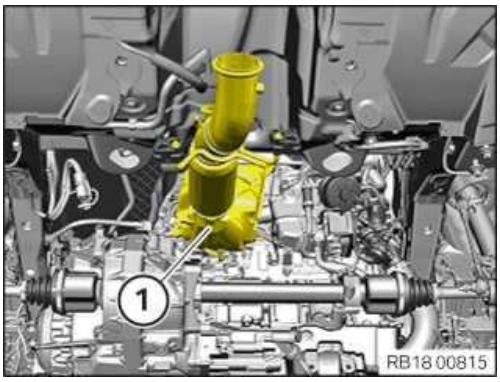
99 – Installing the diesel particulate filter

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

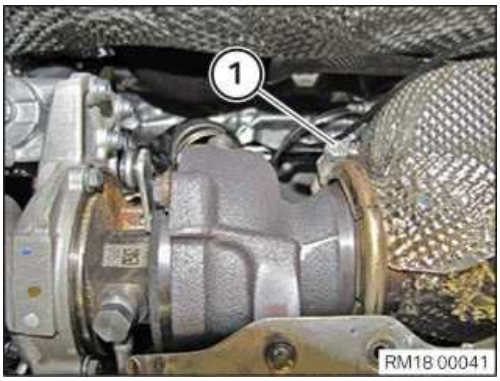
- Remove and install heavy components with the aid of another person/other persons.



- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket



- Before installing the diesel particulate filter: Mount fitting aid (1) for the flexible tube.

- Carefully insert and install the diesel particulate filter (1).

cardiagn.com

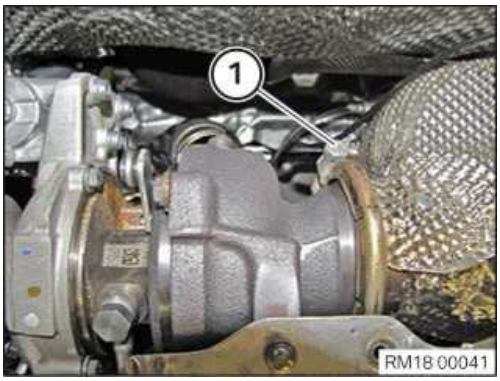
- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

- Tighten nuts (1) by hand.

- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.



- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).

- Remove fitting aid (1) for the flexible tube.

cardiagn.com

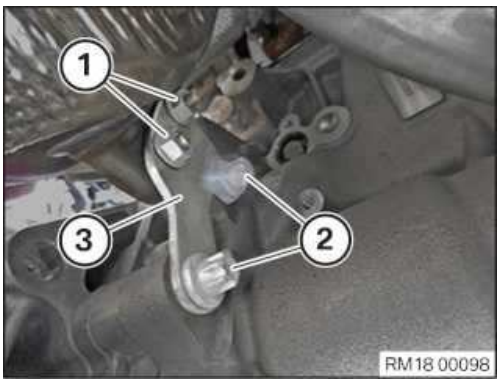
- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger



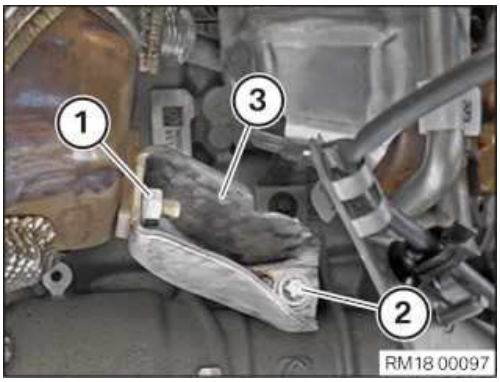
V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screws (2).



Diesel particulate filter holder to gearbox

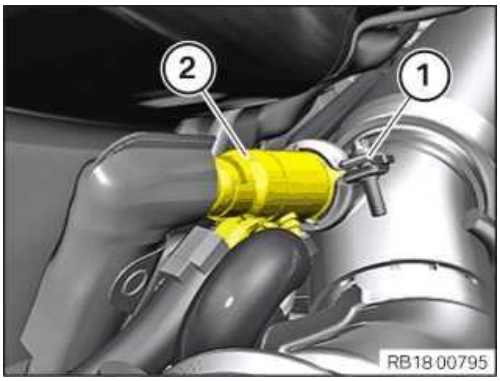
Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

Diesel particle filter to holder



M8 hexagon nut		Tightening torque	19 Nm

- Renew sealing ring (1) of the SCR metering module (2).

  Parts: Sealing ring

cardiagn.com

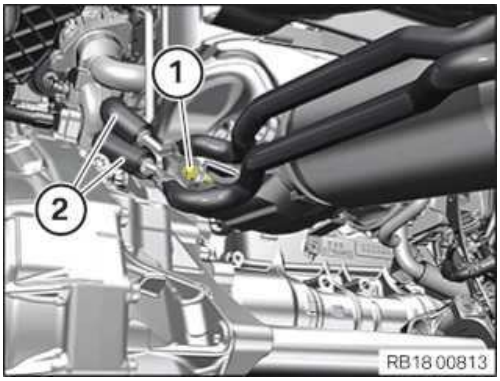
- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

SCR metering module V-clip to exhaust system

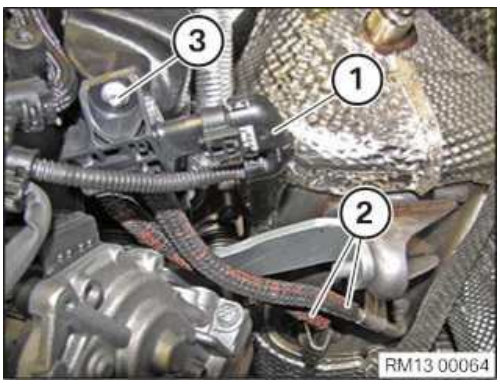


V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

▶ **Installing differential pressure sensor**

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

100 – Install the control sensor

cardiagn.com

TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

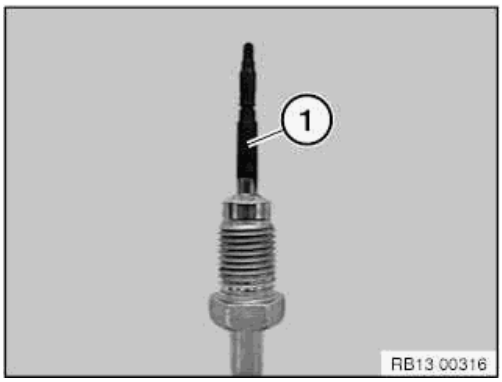
For oxygen sensors that are reused, the following should be observed:

Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Feed in front oxygen sensor (1) and install.
- Tighten front oxygen sensor (1) using special tool .

Control sensor

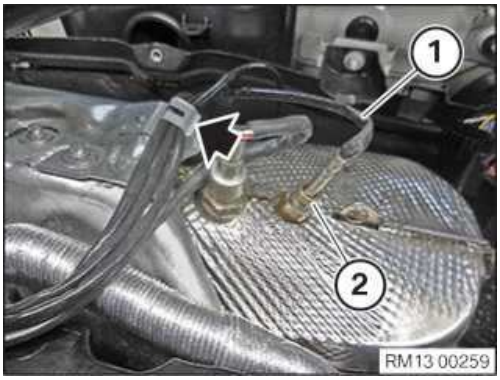


Control sensor		Tightening torque	50 Nm

- Lay and secure cable of oxygen control sensor.
- Secure the connector (2) to the holder.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

101 – Install the exhaust-gas temperature sensor on the diesel particulate filter



RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and renew the exhaust temperature sensor as needed.

- Feed in and install the exhaust temperature sensor (2).
- Tighten the exhaust temperature sensor (2).

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install cable (1) of the exhaust temperature sensor in the clamp (arrow).

cardiagn.com

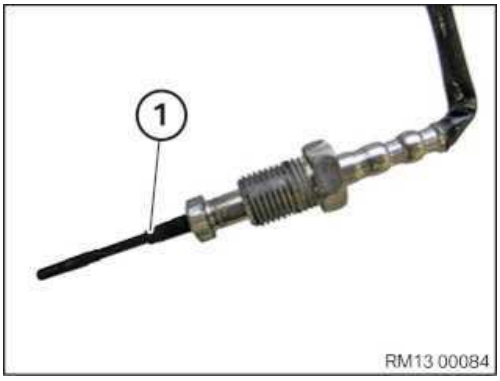
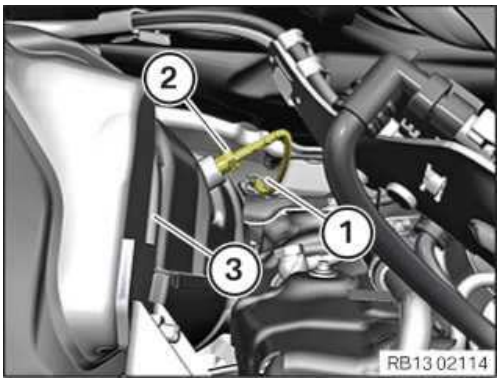
- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



102 – Installing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

RISK OF DAMAGE

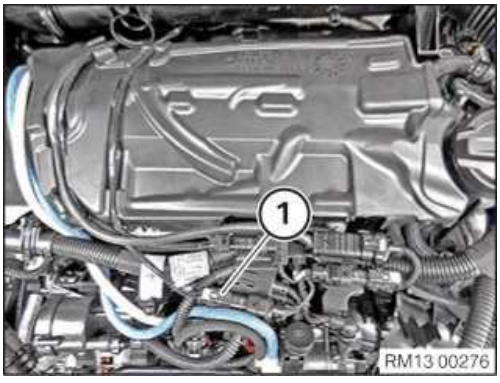


Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Make sure the gauge tip (1) is not damaged during installation.

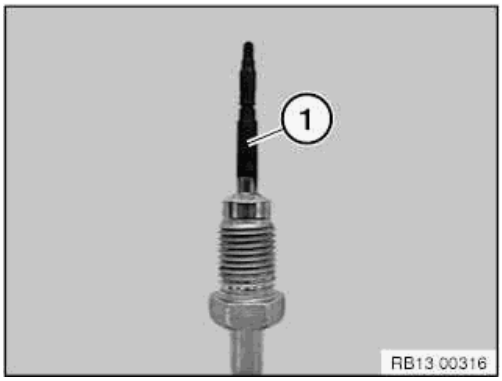


- Guide the exhaust temperature sensor (2) into diesel particulate filter (3) and install.
- Tighten the exhaust temperature sensor (2) with conventional tools .

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install the cable of the exhaust temperature sensor (2) in the clamps (1).



- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

103 – Installing exhaust temperature sensor on catalytic converter

cardiagn.com

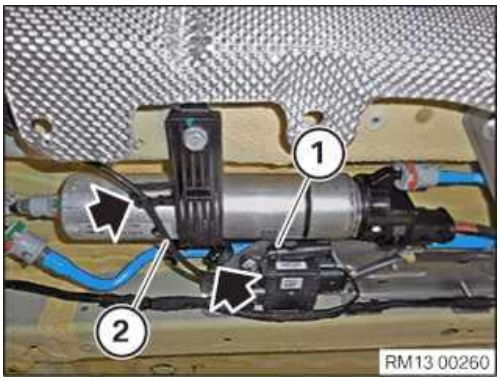
RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

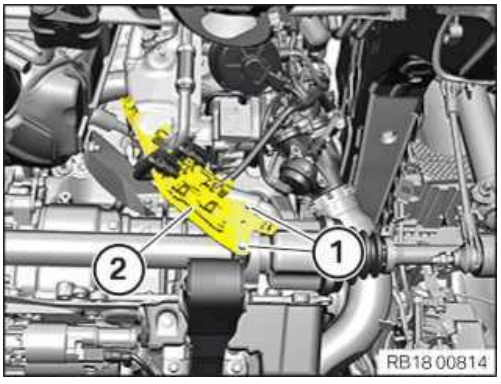
- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.



- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).

Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

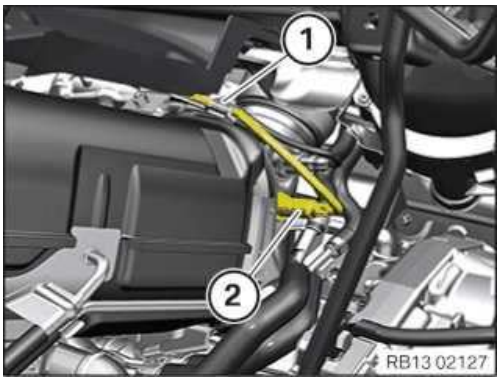


- Secure the cable clips (1).

- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

104 – Install holder for oxygen sensor



- Insert and install the holder (2).
- Tighten the screws (1).

Oxygen sensor holder to intermediate shaft

Hexagon screw M6x16		Tightening torque	8 Nm

105 – Installing the nitrogen oxide sensor before SCR catalytic converter

cardiagn.com

- Insert nitrogen oxide sensor before the SCR catalytic converter (2) and install.
- Tighten the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

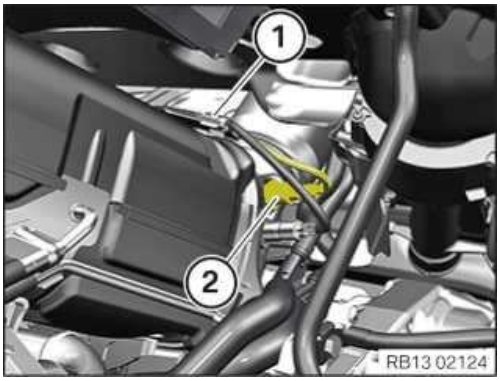
Nitrogen oxide sensor before SCR catalytic converter

Sensor		Tightening torque	50 Nm

- Install and lock the evaluation electronics for the nitrogen oxide sensor (3) (arrows).
- Insert the evaluation electronics cable for the nitrogen oxide sensor (3) into the clamps (2) and install.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

106 – Install the monitoring sensor



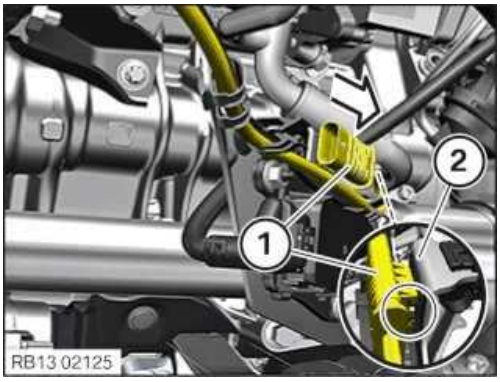
TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

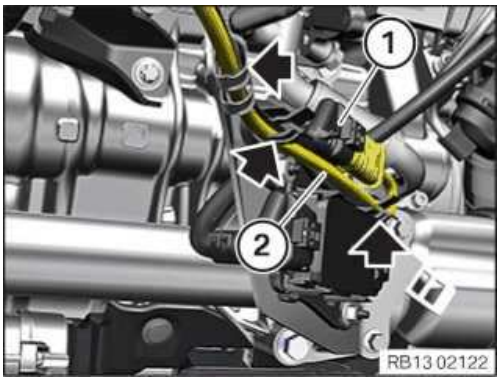
For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue



- Feed in the monitoring oxygen sensor (2) and install.
- Tighten the monitoring oxygen sensor (2) with special tool **0 491 074 (11 7 020)** .

Monitoring sensor

Sensor		Tightening torque	50 Nm



- Insert the cable of the monitoring oxygen sensor (2) into the clamp (1) and secure it.

- Connect the connector (1) with the bracket (2) in the direction of arrow.
- Make sure that the connector (1) is locked correctly in the marked area.

  The connector (1) must engage audibly.

cardiagn.com

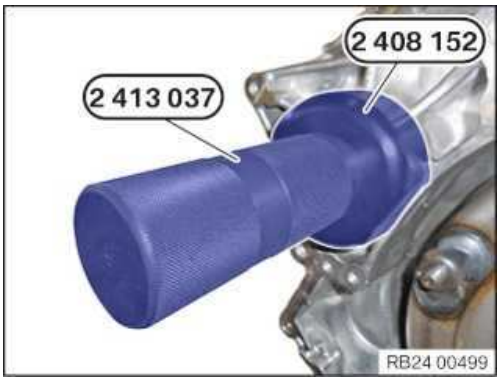
- Insert and attach the cable of the monitoring oxygen sensor (2) to the clamps (arrows).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

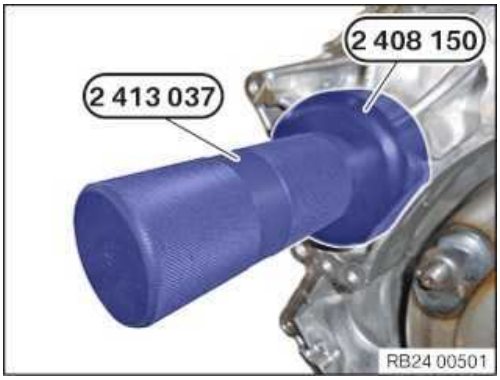
107 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.



- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.

cardiagn.com

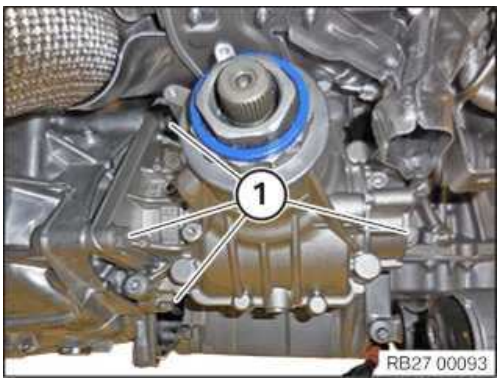
- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

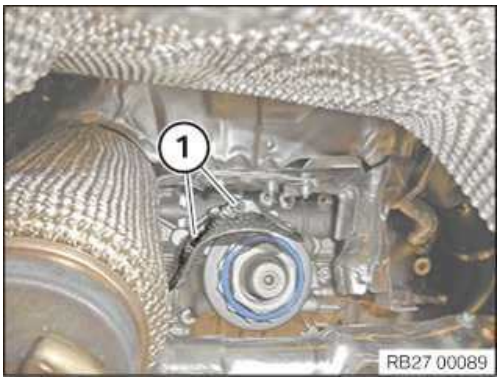


- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754



- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

cardiagn.com

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

Technically suitable transfer box and electrical transmission oils	

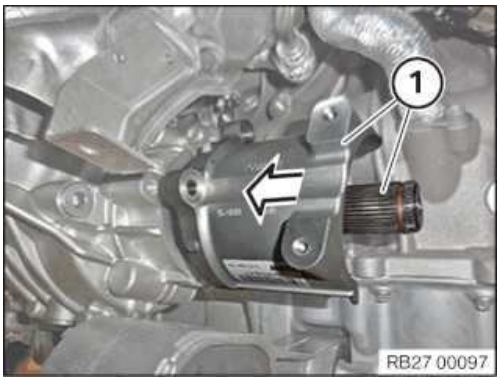
Main group 27

- Tighten the oil filler plug (1).

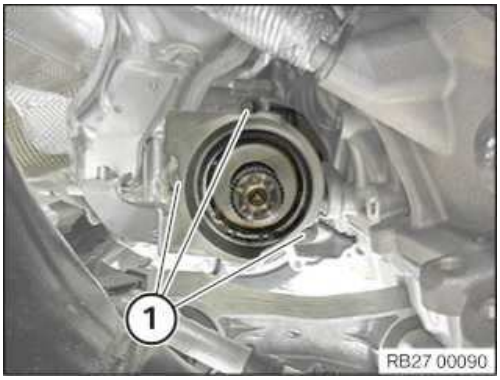
Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm

108 – Install the intermediate shaft with the support tube



- Coat gearing of the intermediate shaft uniformly with 5 g of grease.



Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

cardiagn.com

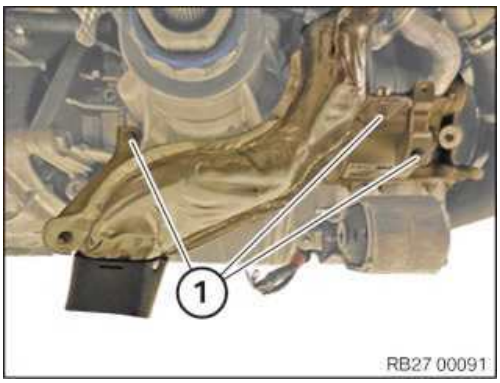
- Install the intermediate shaft with support tube (1) in the transfer box.



- Position screws (1).

Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

- If installed: Install air duct.
- Tighten the screws (1).

109 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

cardiagn.com

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

110 – Installing right output shaft partially

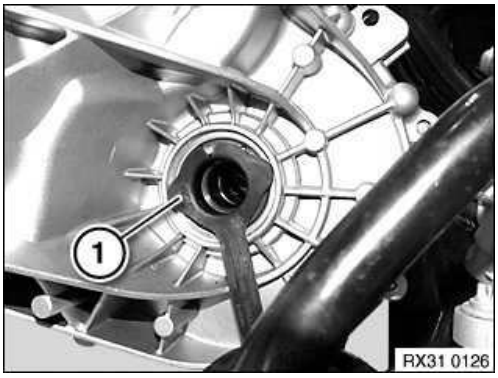
- Renew the circlip (1).

  Parts: Circlip
- Slide output shaft into the transmission as far as the limit position.
- Check for secure seat by levering.

111 – Partially installing the left output shaft

- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).



- Do not mix up circlips.

  Different types of output shafts fitted:
  - M: Manual transmission
  - A: Automatic transmission

cardiagn.com

- Renew circlip (arrow).

- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

- Insert output shaft (1) into transmission.
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

112 – Install propeller shaft.

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

Damage to the propeller shaft during installation.

Non-observance of the installation guidelines for the propeller shaft on the rear axle differential may cause severe damage.

- Always renew the recessed nut on the rear axle differential. Screw locking must be available.
- Strictly observe a minimum hardening time of two hours after having screwed in the recessed nut. The hardening time may be longer at lower temperatures.

cardiagn.com

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

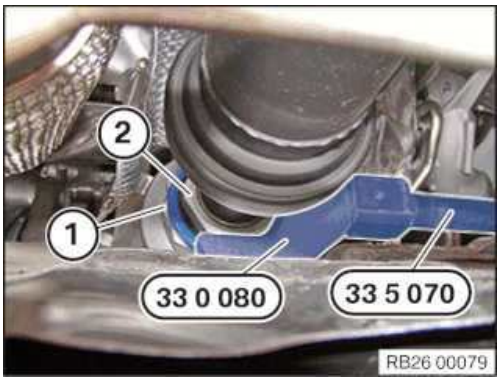
- Renew recessed nut (1).

  Parts: Insert nut
- Renew the retaining clip (2) and the seal.

  Parts: Retaining clip, seal
- Insert the seal with the recessed nut (1) and install.
- Insert the retaining clip (2) and install.
- Make sure that recessed nut (1) is screwed in within 5 min.
- Make sure that the hardening time of **minimum** 2 h for the recessed nut is observed.

  The hardening time must be extended at lower temperatures.

- Insert the propeller shaft (1) and install.
- Always support the propeller shaft (1) with a conventional jack.



- Hand-tighten the bolts (1).

- Push the propeller shaft (2) against the recessed nut (1) up to the limit position.
- Screw the propeller shaft (2) at least 2 thread starts onto the recessed nut (1) by hand.

cardiagn.com

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to tighten the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.

- Tighten the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

Propeller shaft to transfer box

		Tightening torque	80 Nm

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Assemble the screw connection (1) of the flexible disc (2) and the three-hole flange (3) according to the mark.
- Renew screws (1).

  Parts: Bolts

- Hand-tighten the bolts (1).

- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

cardiagn.com

- Tighten the bolts with the special tools **0 490 504 (00 9 120)** and .

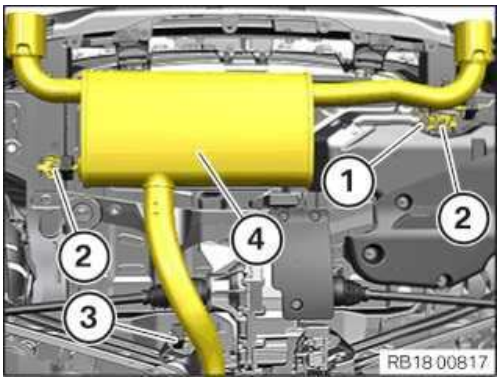
115 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!



- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Feed in and install the exhaust system (4) with a second person.
- Renew nuts (2).

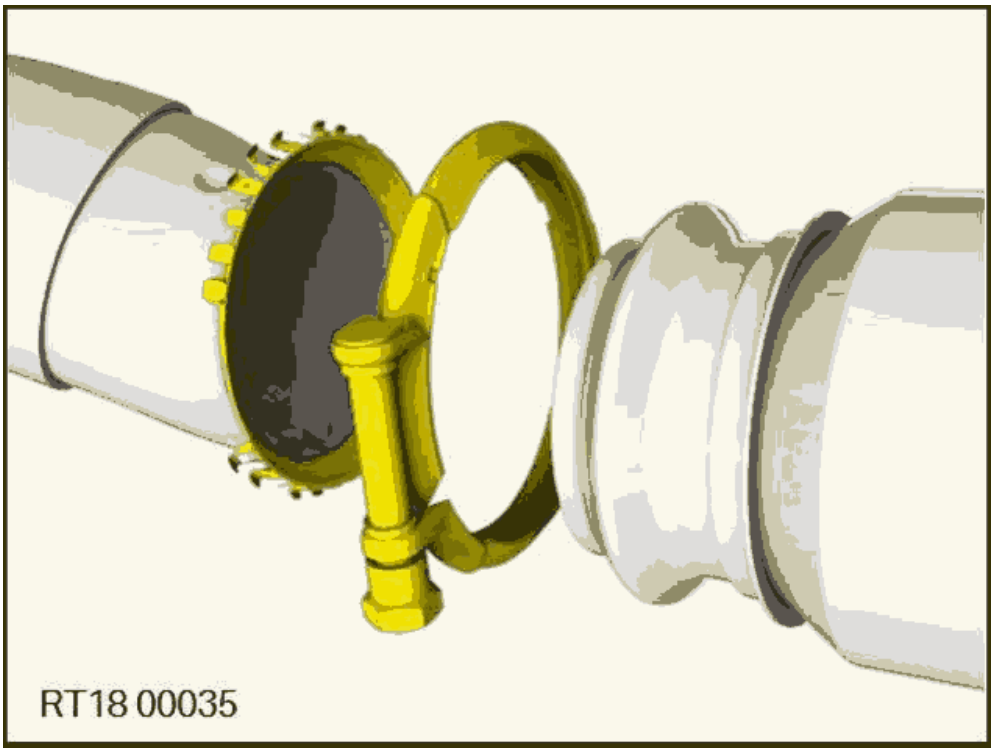
  Parts: Nuts
- Tighten nuts (2).

Exhaust system to body

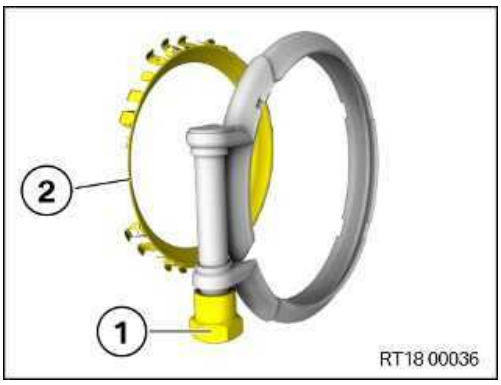
M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).

Exhaust bracket on body



Hexagon screw M8x30		Tightening torque	19 Nm



- Check the rubber mount (3) for damage and renew as needed.
- Mount rubber mount (3) on the exhaust system (4).

▸ **Install the V-clip**

cardiagn.com

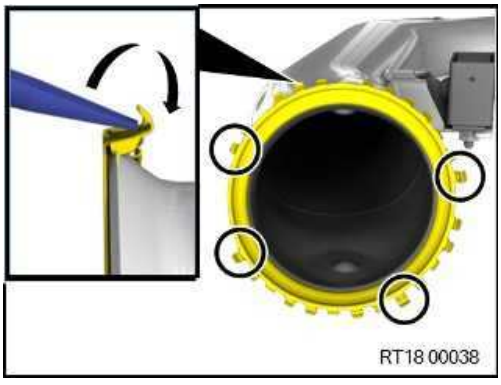
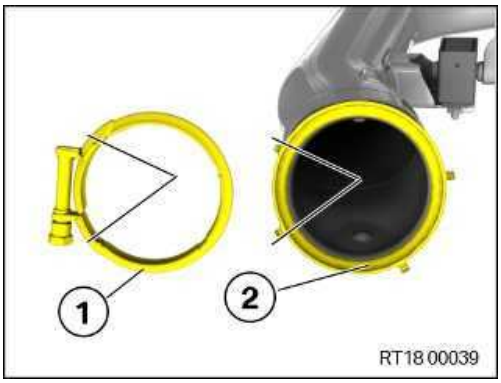
V-band clamp



- Unscrew the nut (1) and remove the sealing ring (2).



- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.

- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.

cardiagn.com

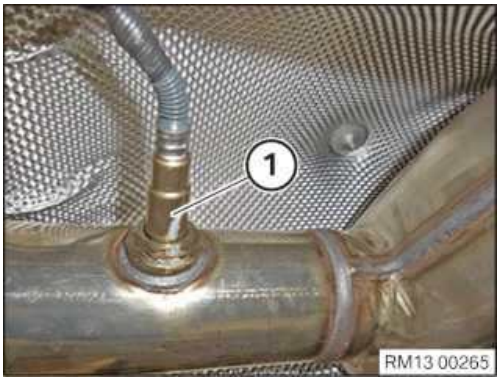
- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).

- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).

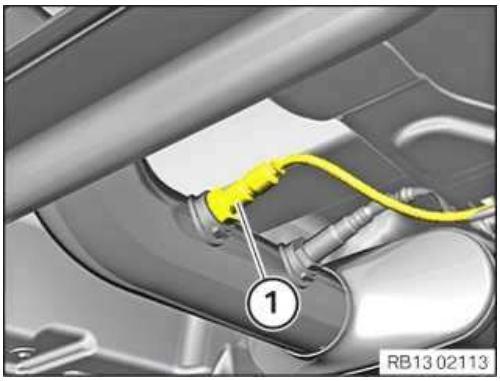


- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.

- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm



- Feed in, install and tighten diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

Sensor		Tightening torque	50 Nm

- Feed in, install and tighten nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

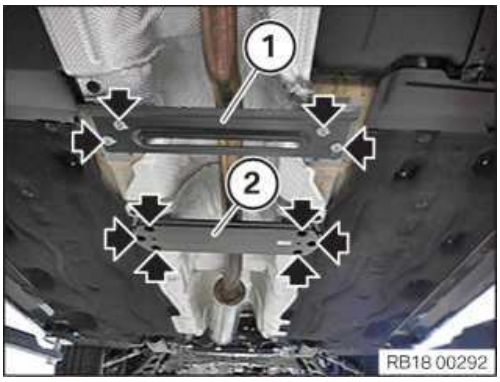
116 – Install the cross-member with torsion struts

- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °



- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Cross-member/torsion strut to axle support and mounting

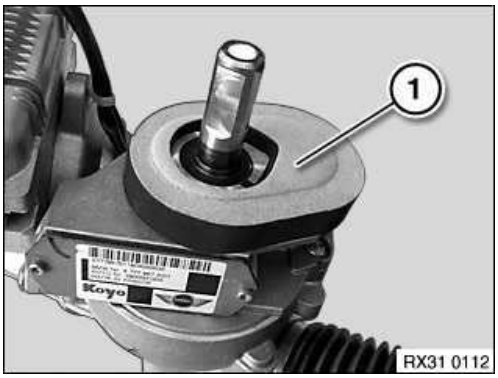
M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

117 – Install the connecting support on the tunnel in front and back

- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

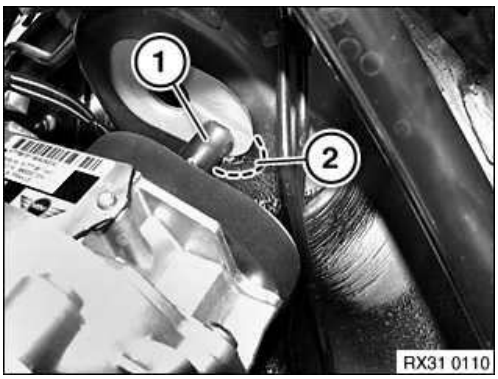
M10x18		Tightening torque	56 Nm



- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

M8x18		Tightening torque	28 Nm



118 – Mount and secure the complete front axle

cardiagn.com

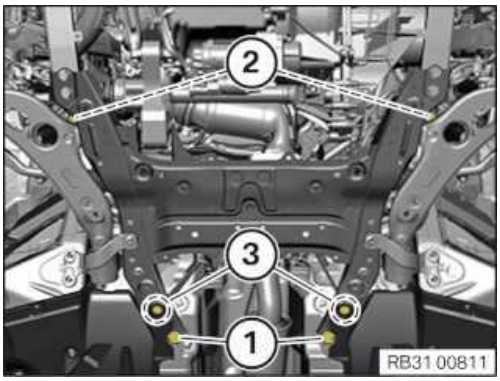
- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

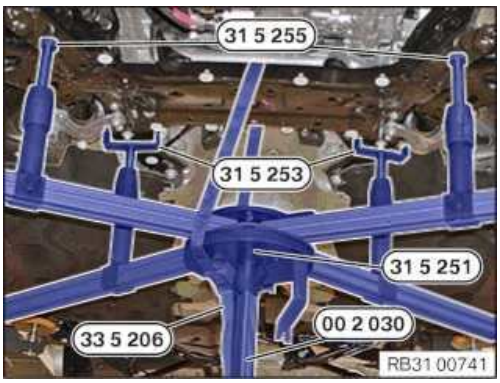
- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

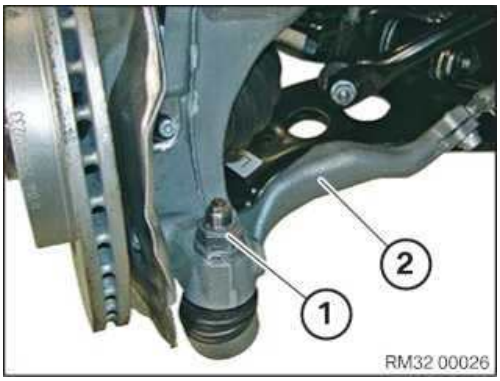
- Tighten down screws (2).



Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

- If necessary, tighten the screws in the areas (3).



Underbody protection to body

Screw		Tightening torque	3 Nm

- Remove special tool from special tool .
- Lower universal jack **0 490 133 (00 2 030)** with the special tool and place it to the side.

cardiagn.com

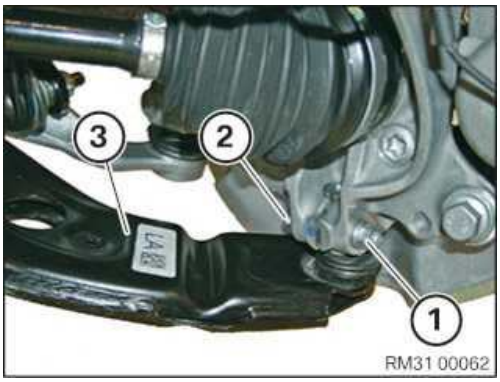
NOTICE



Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

- Tighten down screw (2).

Holder with rubber mount to front axle support

M12 screw		100 Nm

cardiagn.com

NOTICE

Perform the operations on the left and right side.

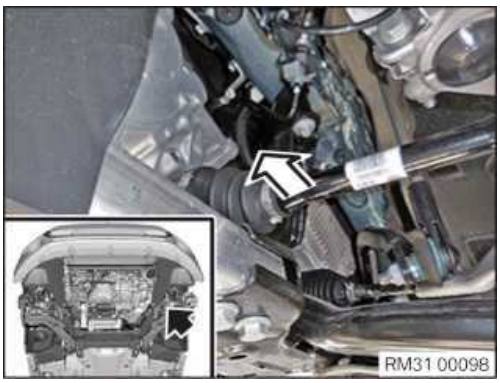
- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.

- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE



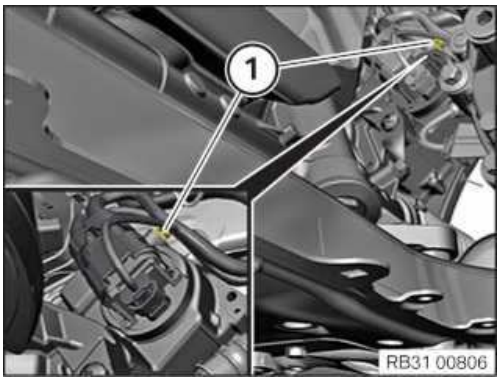
Perform the operations on the left and right side.

- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

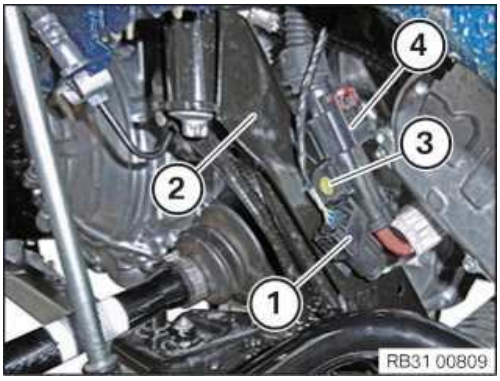
		Tightening torque	11,8 Nm

120 – Attaching connector at steering gear



- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.



- Connect and lock connector (arrow) (1) with the steering gear.

cardiagn.com

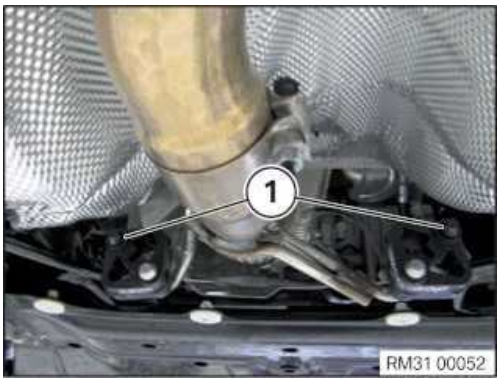
- Fasten the wiring harness (1) on the steering gear.

▶ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

121 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.

122 – Securing anti-roll bar on left and right on the anti-roll bar link

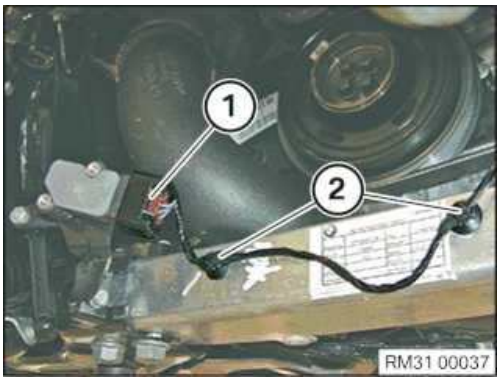
NOTICE

Perform the operations on the left and right side.

▶ **Fastening anti-roll bar on the anti-roll bar link**

- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

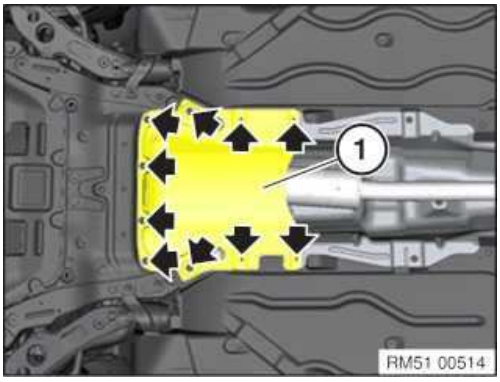
  Parts: Nut
- Tighten nut (1).



Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm



123 – With right installation: Securing the cable for the ride height sensor

cardiagn.com

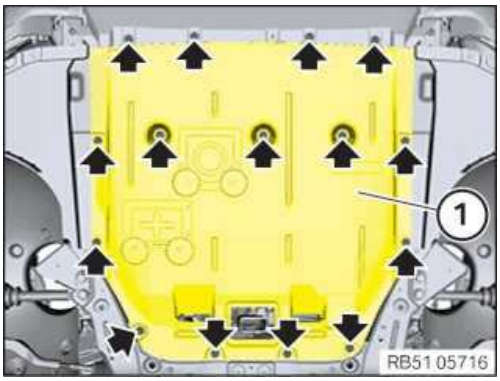
- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

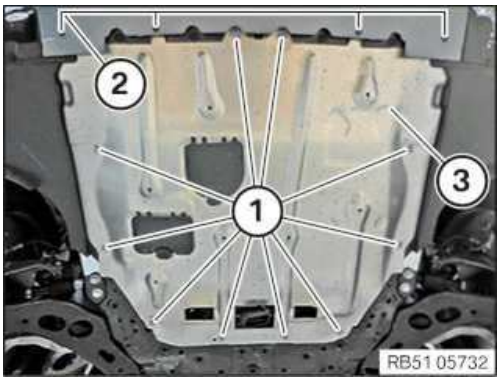
124 – If installed: Installing underbody protection at rear



- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body

Screw		Tightening torque	3 Nm

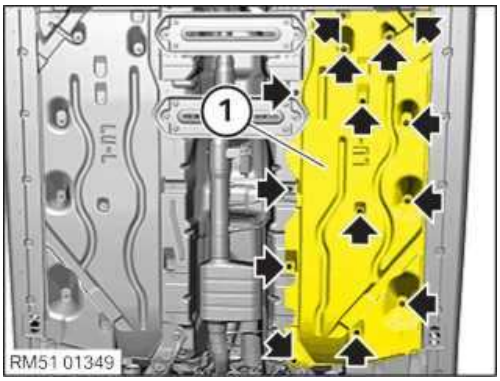


125 – Installing the front underbody protection

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm



- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

▸ **Installing front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

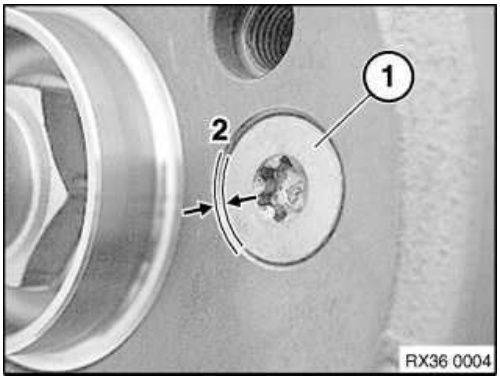
cardiagn.com

▶ Mounting the wheel

▷ Clean the contact surfaces between the brake disc and the wheel rim

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.



- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

- Renew mounting bolt (1).

  Parts: Mounting bolt
- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

cardiagn.com

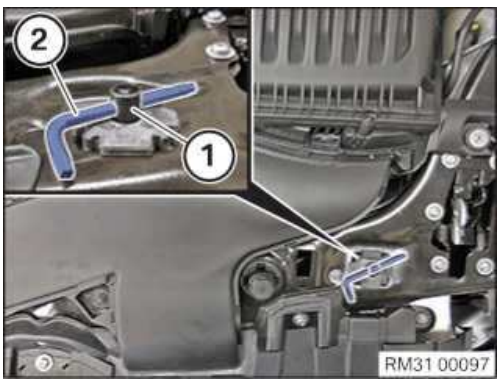
TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.



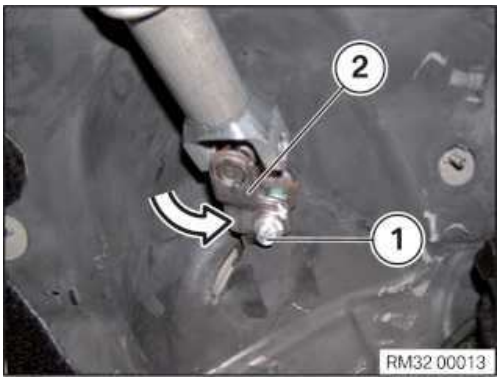
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts.
- Check the wheel bolts and threads for damage, renew the wheel bolts if necessary.
- Join and tighten the wheel bolts (arrows).

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

129 – Removing fastener for left and right radiator



NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

130 – Secure the steering shaft at the bottom on the steering gear

cardiagn.com

- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

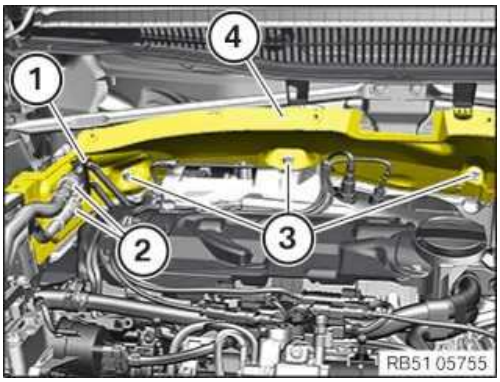
M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

131 – Install the heat shield on the exhaust turbocharger



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger

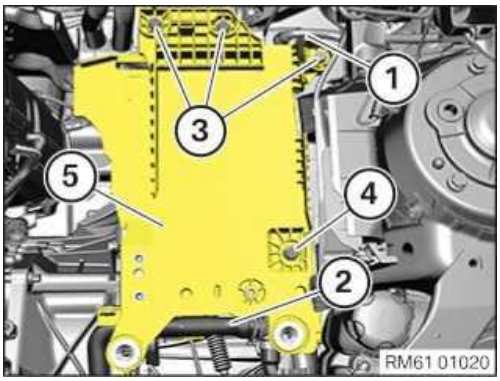
Torx screw BM 6x12		Tightening torque	10 Nm

- Fasten the cable at the clips .

132 – Installing rear bulkhead upper part

- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

Rear bulkhead upper part to lower section of bulkhead



Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

133 – Install the battery holder

cardiagn.com

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

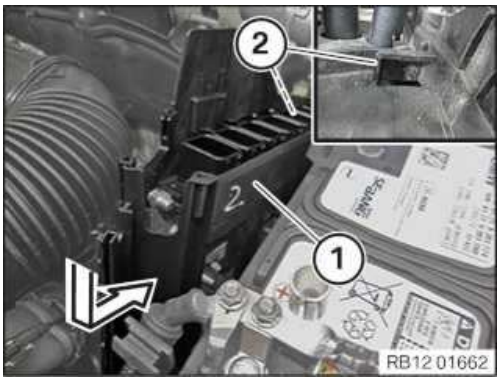
Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

134 – Install electronics box

Prerequisite



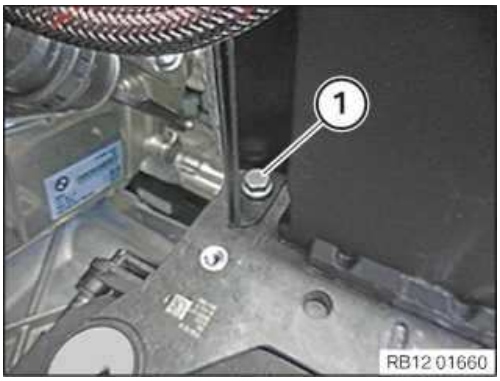
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

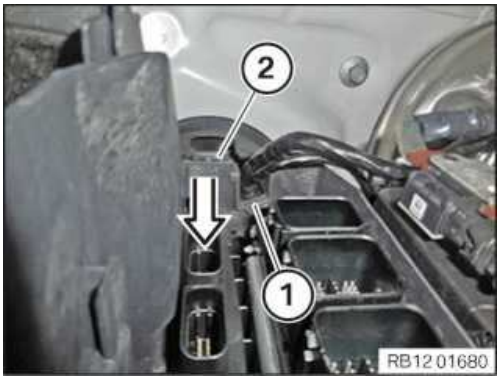
Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

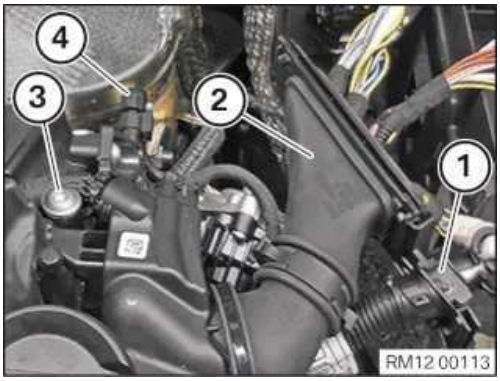


- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



cardiagn.com

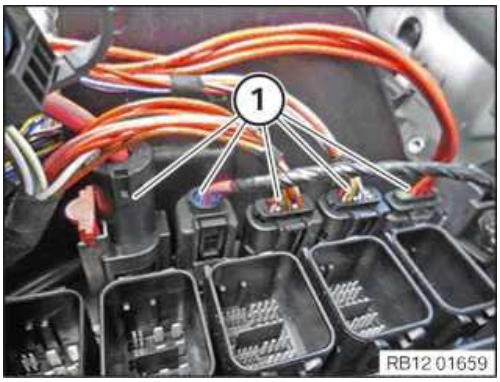


- Tighten down screw (1).

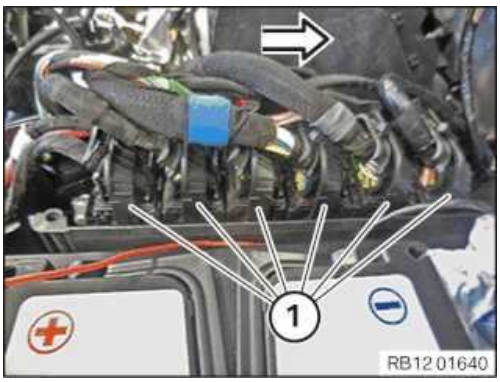
Electronics box to battery tray

M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



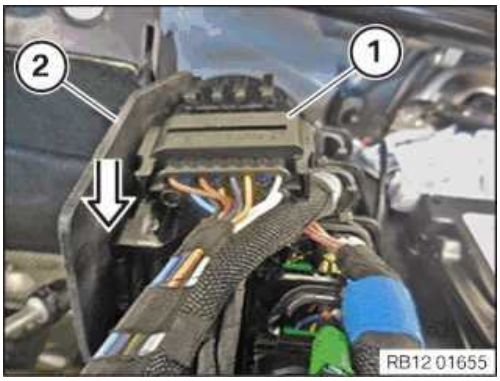
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).



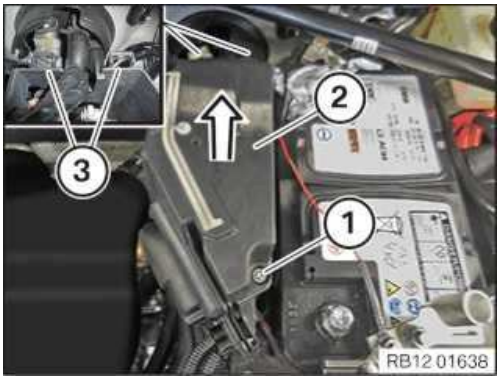
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

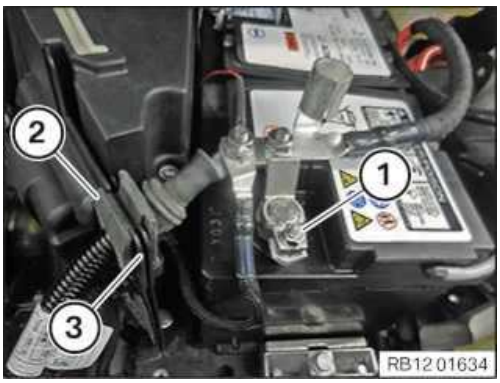


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

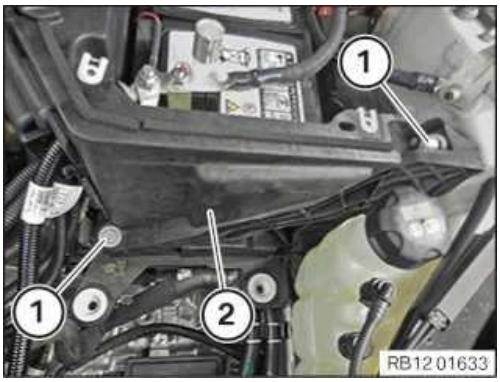
cardiagn.com



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

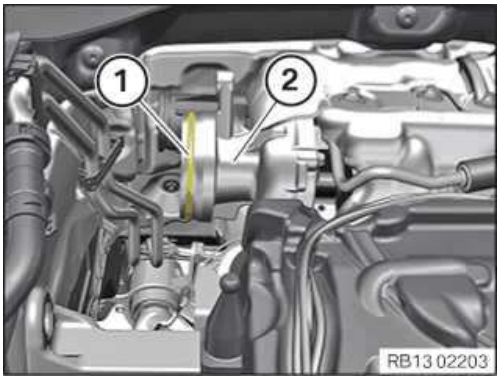


RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray

135 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

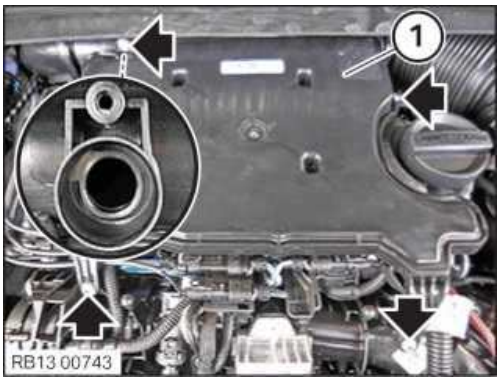
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

136 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

137 – Install acoustic cover

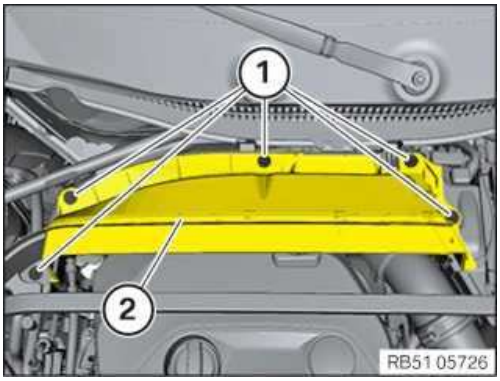
RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

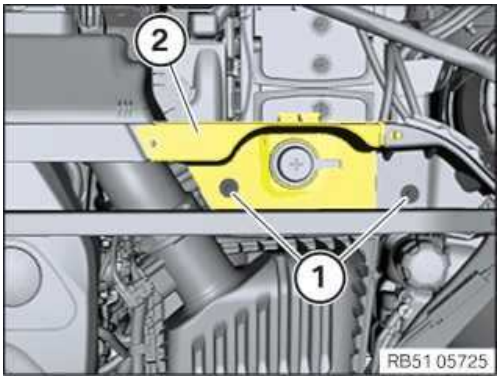
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

cardiagn.com



- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

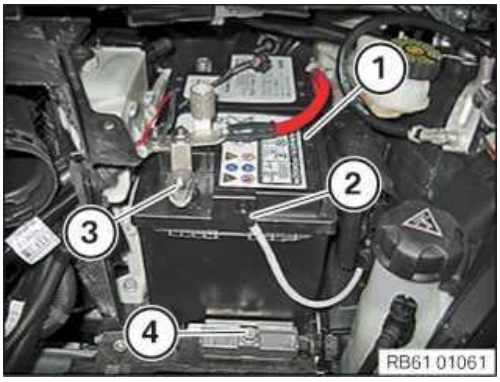


138 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm



- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

139 – Install vehicle battery

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

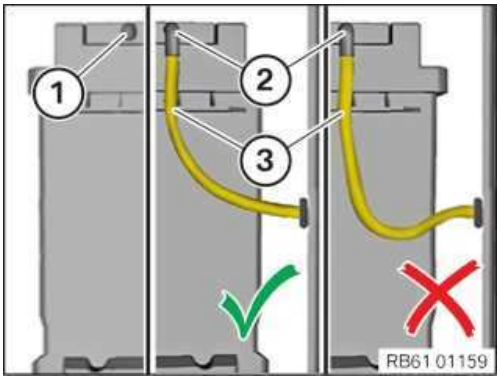
Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

cardiagn.com

▶ **Check the vent holes of the battery**

WARNING



Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

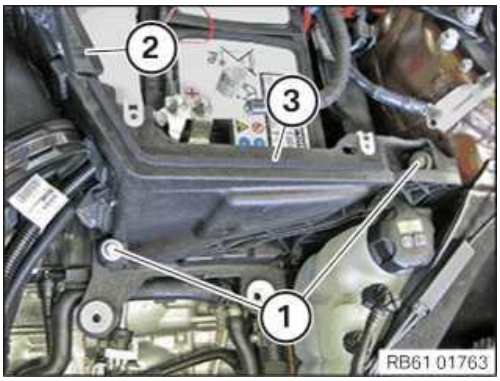
» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

Check

- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).



Result

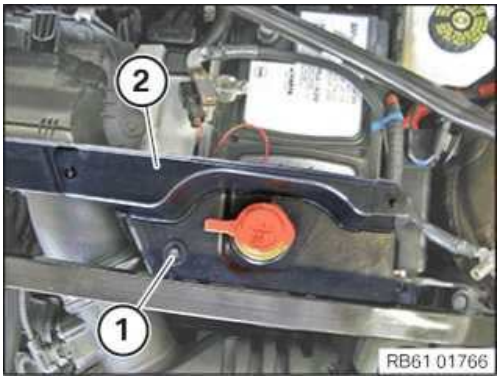
» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

cardiagn.com

- Insert tension strut (3) and tighten with screws (1).



Trailing link

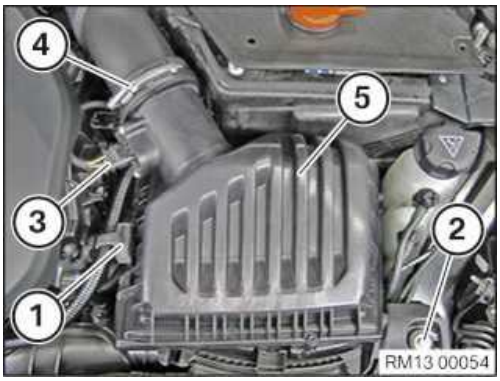
140 – Connecting the battery earth lead

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)

- Remove the protective cover of the positive battery terminal.
- Position the battery earth lead (2).
- Tighten nut (1).



Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

- If required, connect the connector (3).

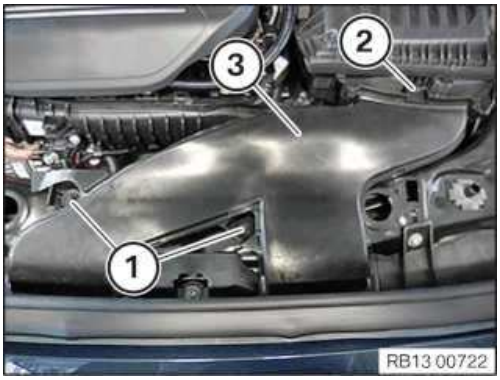
141 – Installing intake silencer housing

cardiagn.com

- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm



- Tighten clamp (4).

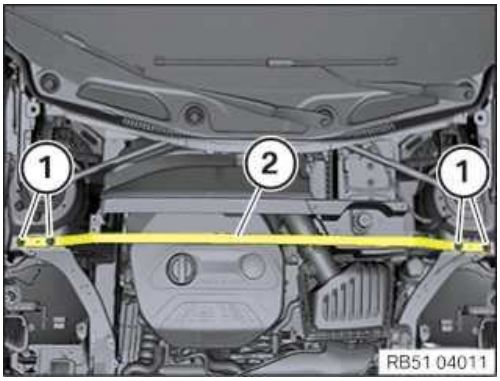
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

142 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).



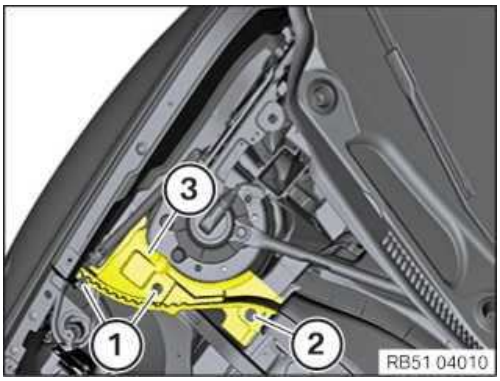
Intake neck to cross connection

M6		Tightening torque	8 Nm

143 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).
  Parts: Bolts
- Tighten the screws (1).

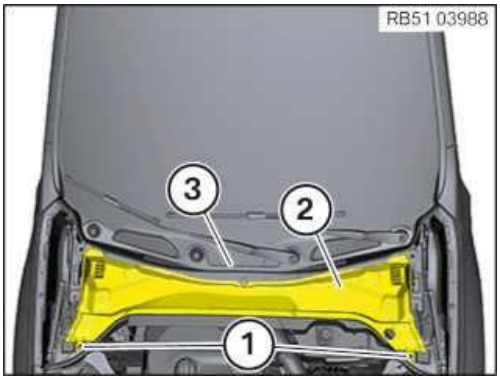
Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

cardiagn.com

NOTICE

Description is for right component only. The procedure on the left side is identical.



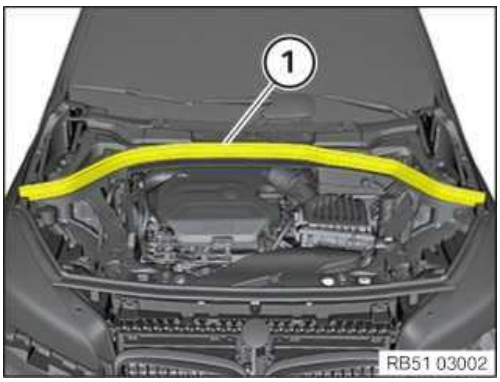
- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

144 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

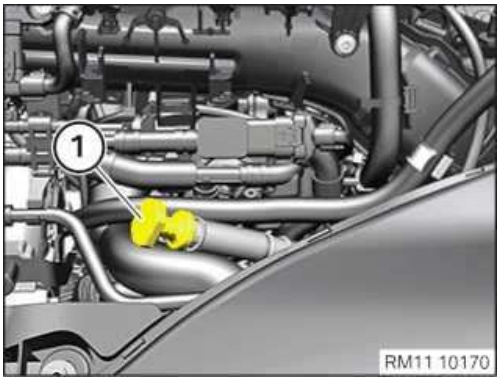
145 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

146 – Check engine oil level



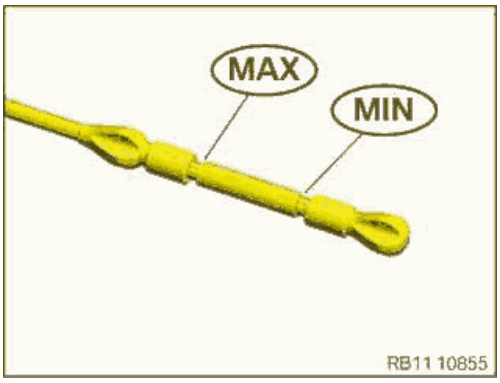
- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▸ **Check engine oil level**

cardiagn.com

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).



- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.

TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

147 – Fill and bleed the coolant circuit

▶ **Filling and bleed the high-temperature coolant circuit**

- See additional information.

Additional Information

Overview of Tightening Torques

Cross connection to carrier support — Used in step 18

Screws M6x20		Tightening torque	11,8 Nm

Screw connection for rubber mount of coolant radiator to coolant radiator — Used in step 18

Bolt to rubber mount		Tightening torque	8 Nm

Air duct to upper connection — Used in step 18

M6x20 screw		Tightening torque	11,8 Nm

cardiagn.com

Bracing strut to upper connection

Used in step 18

M8x20 screw		Tightening torque	28 Nm

Rear end of front axle support to body

Used in step 71 118

M14 screw	Renew screw.	Tightening torque	175 Nm

Front axle support, front to body

Used in step 71 118

M12 screw	Renew screw.	Tightening torque	108 Nm

Underbody protection to body

Used in step 71 118 124

Screw		Tightening torque	3 Nm

Special tool to cylinder head

Used in step 71

M8		Tightening torque	21,5 Nm

Cylinder head to crankcase

Used in step 76

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

Cylinder head bolt to timing case cover

Used in step 76

M8x40		Tightening torque	19 Nm

Right engine mount to side member

Used in step 76

M12		Tightening torque	100 Nm

Right engine mount to cylinder head

Used in step 76

M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

Heat shield to cylinder head

Used in step 76

M8X16		Tightening torque	10 Nm

Glow elements to cylinder head

Used in step 77

Glow element		Tightening torque	13 Nm

Camshaft carrier to cylinder head

Used in step 80

M7x35		Tightening torque	13 Nm

Bearing journal to cylinder head

Used in step 82

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

Standard screw connection M8

Used in step 82

M8		Tightening torque	19 Nm

Standard screw connection M6

Used in step 82 93

M6			8 Nm

Chain tensioner piston to cylinder head

Used in step 83

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

cardiagn.com

Camshaft sprocket to camshaft

Used in step 84

M7x17.			17 Nm

Cylinder head cover to cylinder head

Used in step 86

M6		Tightening torque.	8,5 Nm

Clamping claw facing to cylinder head cover

Used in step 87

Screw M6		Tightening torque	8 Nm

Injector to cylinder head cover

Used in step 87

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

High pressure lines between injector and rail

Used in step 89

High pressure lines		Tightening torque	28 Nm

Exhaust-gas recirculation cooler to exhaust manifold

Used in step 91 97

M8x28	Replace screws	Tightening torque	32 Nm

Oil return line to turbocharger

Used in step 91 92

M6x12		Tightening torque	8 Nm

Holder to exhaust turbocharger and crankcase

Used in step 91

M8x16		Tightening torque	22 Nm

Exhaust turbocharger to exhaust manifold

Used in step 92

V-band clamp		Tightening torque	19 Nm

Oil feed line to bracket

Used in step 92

Torx screw M6x12		Tightening torque	8 Nm

Holder to exhaust turbocharger and crankcase

Used in step 92

M8x16		Tightening torque	22 Nm

Heat shield for exhaust turbocharger

Used in step 93

Torx screw BM 6x12		Tightening torque	10 Nm

Banjo bolt for exhaust pressure pipe to exhaust manifold

Used in step 93

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

Charge air duct to oil sump

Used in step 94

M6		Tightening torque	8 Nm

Ride height sensor holder to front axle support

Used in step 94

M6		Tightening torque	8 Nm

Adapter, front axle support to front axle support

Used in step 94

		Tightening torque	100 Nm

Cross connection to front axle support

Used in step 94

M6		Tightening torque	12 Nm

cardiagn.com

Washer fluid reservoir to body

Used in step 95

M6x20		Tightening torque	8 Nm

Intake plenum to cylinder head

Used in step 96

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 97

M8x20		Tightening torque	5 Nm
		Release angle	90 °

Intake plenum to exhaust-gas recirculation cooler

Used in step 97

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 97

M8x20		Tightening torque	19 Nm

Wiring harness to cylinder head cover

Used in step 98 134

TS5x20		Tightening torque	3,5 Nm

Positive battery cable to alternator

Used in step 98

M8		Tightening torque	19 Nm

Fuel line to intake plenum

Used in step 98

TS6x20		Tightening torque	5 Nm

Cover to electronics box

Used in step 98 134

RF5x26.5		Tightening torque	2,5 Nm

Positive battery terminal to battery

Used in step 98 134

NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray

Used in step 98 134

M8		Tightening torque	19 Nm

Diesel particulate filter V-clip to exhaust turbocharger

Used in step 99

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

Diesel particle filter to holder

Used in step 99

M8 hexagon nut		Tightening torque	19 Nm

Diesel particulate filter holder to gearbox

Used in step 99

M12x75		Tightening torque	66 Nm

Diesel particulate filter bracket to crankcase

Used in step 99

M10x35		Tightening torque	38 Nm

SCR metering module V-clip to exhaust system

Used in step 99

V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

Holder for coolant lines to diesel particulate filter

Used in step 99

Torx bolt BM6x16		Tightening torque	8 Nm

cardiagn.com

Differential pressure sensor to holder

Used in step 99

Screw		Tightening torque	4 Nm

Clamp for the pressure hose on the differential pressure sensor

Used in step 99

Clamp 15–19mm		Tightening torque	3 Nm

Control sensor

Used in step 100

Control sensor		Tightening torque	50 Nm

Exhaust temperature sensor to diesel particulate filter

Used in step 101 102

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Exhaust-gas temperature sensor to exhaust system

Used in step 103

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Oxygen sensor holder to intermediate shaft

Used in step 104

Hexagon screw M6x16		Tightening torque	8 Nm

Nitrogen oxide sensor before SCR catalytic converter

Used in step 105

Sensor		Tightening torque	50 Nm

Monitoring sensor

Used in step 106

Sensor		Tightening torque	50 Nm

Transfer box to transmission

Used in step 107

M10		Tightening torque	56 Nm

Heat shield to transfer box

Used in step 107

M6	Renew screws.	Tightening torque	6 Nm

Oil filler plug on transfer box (VTG)

Used in step 107

M18x1.5		Tightening torque	35 Nm

Intermediate shaft to transfer box

Used in step 108

M8x35		Tightening torque	19 Nm

Starter motor to transmission

Used in step 109

M8x45		Tightening torque	19 Nm

Battery positive lead to starter

Used in step 109

M8		Tightening torque	13,5 Nm

Propeller shaft to transfer box

Used in step 112

		Tightening torque	80 Nm

Flexible disc to rear axle final drive

Used in step 112

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

Centre mount to body

Used in step 112

M8		Tightening torque	19 Nm

cardagn.com

Heat shield to body

Used in step 113 114

Bolts/nut		Tightening torque	3 Nm

Bracket to body

Used in step 113

M8		Tightening torque	21 Nm

Exhaust system to body

Used in step 115

M8	Replace nuts.	Tightening torque	19 Nm

Exhaust bracket on body

Used in step 115

Hexagon screw M8x30		Tightening torque	19 Nm

V-clip to catalytic converter

Used in step 115

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

Diesel particulate sensor to exhaust system

Used in step 115

Sensor		Tightening torque	50 Nm

Nitrogen oxide sensor downstream of SCR catalytic converter

Used in step 115

Sensor		Tightening torque	50 Nm

Cross-member/torsion strut to axle support and mounting

Used in step 116

M12x48	Renew screws.	Jointing torque Angle of rotation	100 Nm 90 °

Front connection carrier to body

Used in step 117

M10x18		Tightening torque	56 Nm

Rear connection carrier to body

Used in step 117

M8x18		Tightening torque	28 Nm

Track rod end to swivel bearing

Used in step 118

M14	Renew nut.	Tightening torque	175 Nm

Wishbone to swivel bearing

Used in step 118

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

Holder, wishbone rubber mount, to body

Used in step 119

M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

Holder with rubber mount to front axle support

Used in step 119

M12 screw			100 Nm

Washer fluid reservoir holder to front axle support adapter plate

Used in step 119

		Tightening torque	10 Nm

Deformation element, bottom, to adapter plate, front axle carrier

Used in step 119

		Tightening torque	11,8 Nm

cardagn.com

Holder to front axle support

Used in step 120

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

Anti-roll bar link to anti-roll bar

Used in step 122

M10	Renew nut.	Tightening torque	56 Nm

Underbody protection front

Used in step 125

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

Underbody panelling, side

Used in step 126

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side

Used in step 126

Plastic nut		Tightening torque	2,6 Nm

Wheel arch cover to body

Used in step 127

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

Wheel arch cover to body

Used in step 127

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Used in step 127

Plastic nut		Tightening torque	3 Nm

Brake disc to rear wheel hub

Used in step 128

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

Used in step 128

M8	Renew screw.	Tightening torque	16 Nm

Wheel bolts

Used in step 128

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Lower steering shaft to steering gear

Used in step 130

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

Steering column cover to bulkhead

Used in step 130

Plastic nut		Tightening torque	3 Nm

Overview of Special Tools

0 490 133 (00 2 030) Device

Common Used in step 31 71 76 118

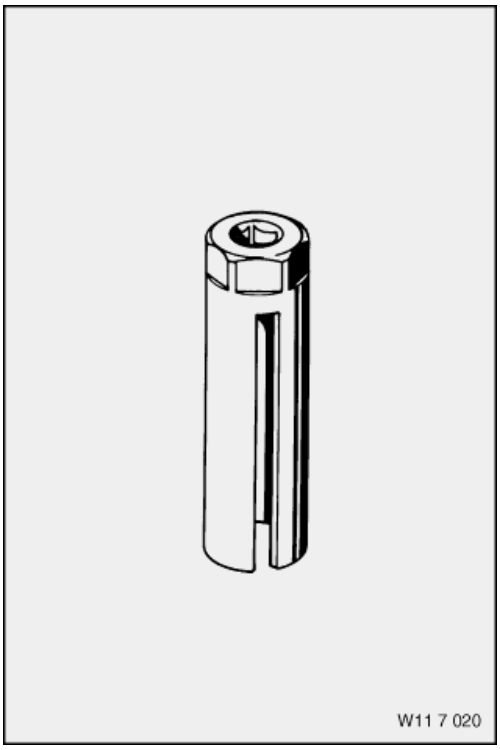
Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

0 495 554 (33 5 070) Extension

Common Used in step 37 112



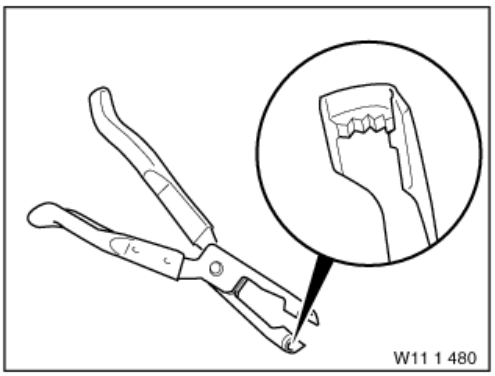
Usage	Pull-out extension for 33 5 040, 33 5 050, 33 5 060.
Included in the tool or work	
Storage location	A18
Replaced by	
In connection with	
SI-Number	01 21 06 (300)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 592 (33 5 071)		**Extension** (Extension (1 item)) discontinued, can only be ordered using complete tool	

cardiagn.com

0 491 074 (11 7 020) Socket wrench insert

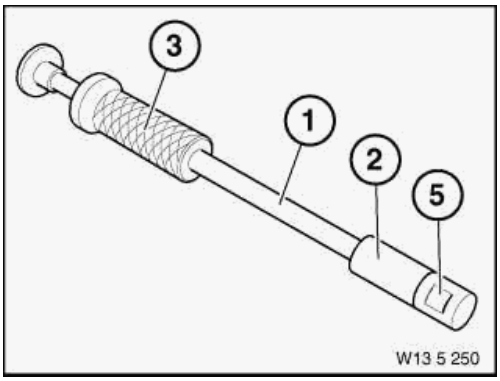


Common

Used in step 43 44 106

Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	

cardiagn.com



0 490 796 (11 1 480) Pliers

Common Used in step 51 70

Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

0 493 321 (13 5 250) Puller

Common Used in step 61

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with

2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

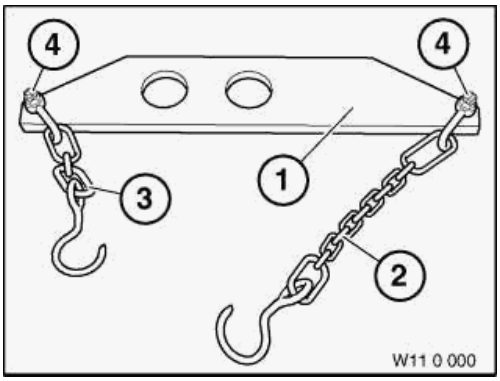
cardiagn.com

2 357 071 Panel

Common Used in step 71 76

Usage	Additional mounting plate for lifting table MHT 1200. Delivery quantity: 1 piece. During the course of the changeover from BMWi to iPerformance, a tool changeover also takes place from campaign to warehouse.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	Table lift MHT 1200 81222184136
SI-Number	01 21 13 (987)

2 459 012 Holder



Common Used in step 71 76

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

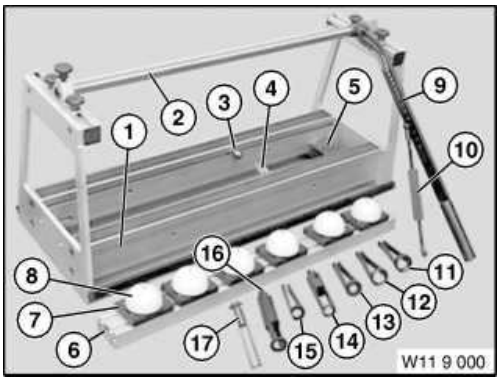
0 490 561 (11 0 000) Lifting gear

Used in step 71 76

cardiagn.com

Common

Usage	(Hoisting gear) For removing and installing engines. As of 08/2011 only available as a complete set. Delivered with TÜV inspection certificate and operating instructions. No delivery of separate parts.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 13 94 (888)



Consisting of

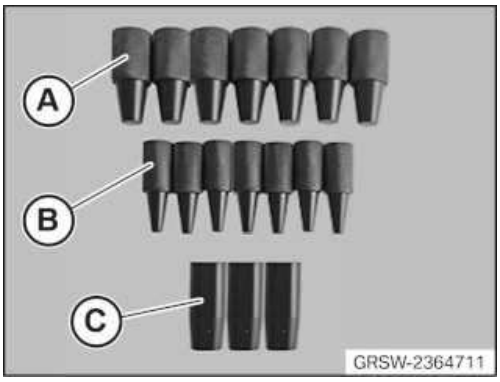
Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 490 565 (11 0 009)		**Shackle** (Shackle) 2 pieces. As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 562 (11 0 001)		**Lifting gear** (Cross member) As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 563 (11 0 002)		**Chain** (Chain) Version: long As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 564 (11 0 003)		**Chain** (Chain) Version: short As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	

0 494 362 (11 9 000) Device

Used in step 71

cardiagn.com

Common



Usage	(Cylinder head expander tool)
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187

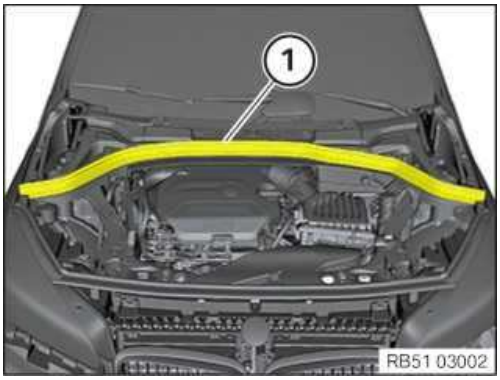
11 12 001 Replace the cylinder head cover

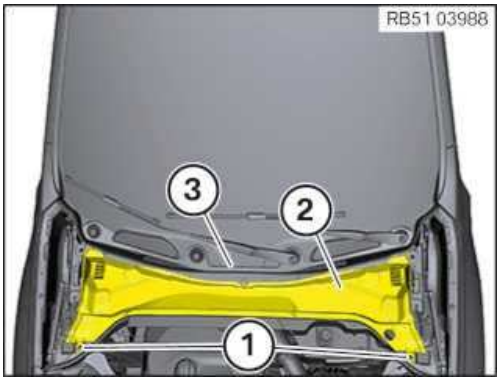
PRELIMINARY WORK

1 – Disconnecting all battery earth leads



- See additional information.

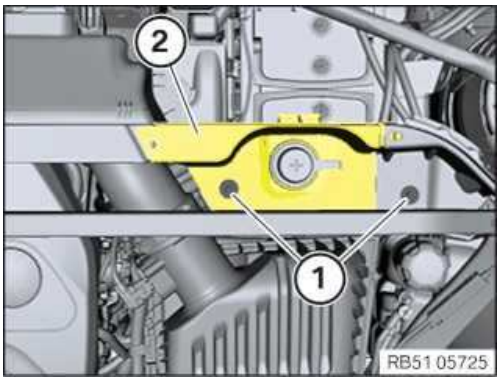
2 – Remove the seal for the rear bonnet



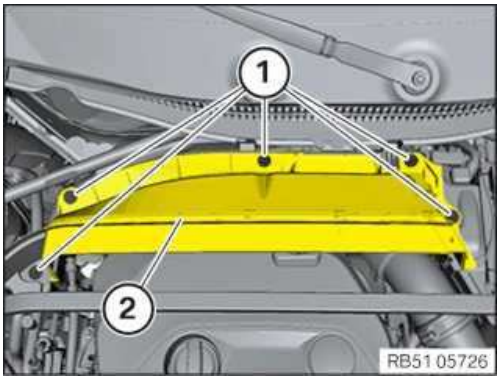
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.



3 – Removing front cowl panel cover

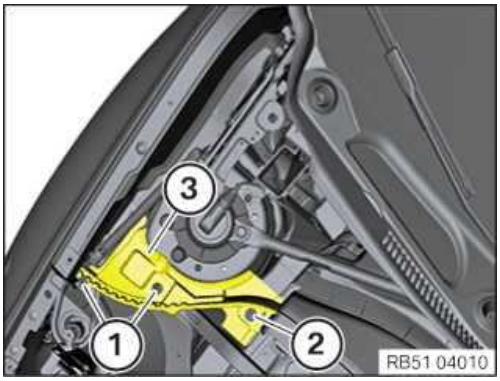


- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

4 – Removing the upper bulkhead cover

cardiagn.com

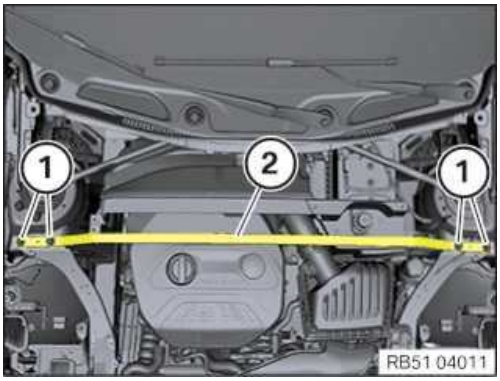
- Loosen screws (1).
- Guide out and remove the cover (2).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

5 – Remove suspension cross-brace

TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

NOTICE

Description is for right component only. The procedure on the left side is identical.

- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).

6 – Removing the acoustic cover

cardiagn.com

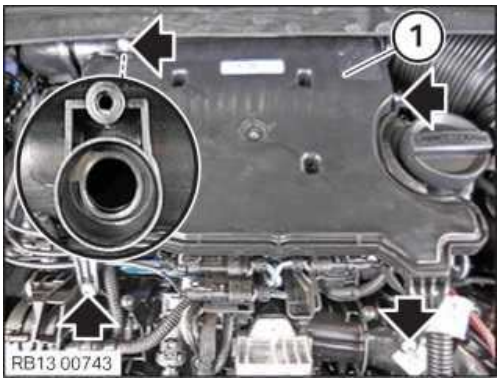
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

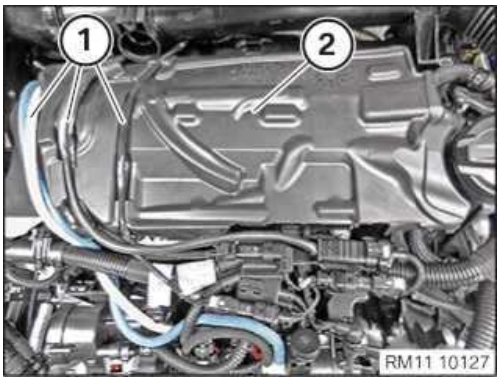
RISK OF DAMAGE



Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

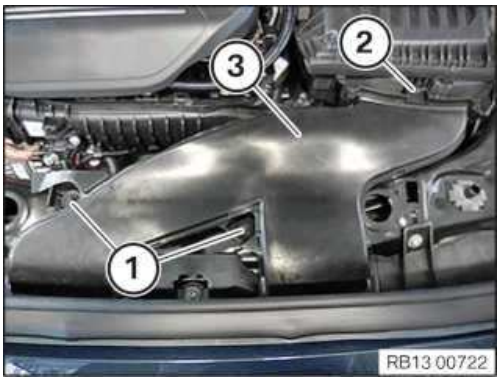
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



- Unclip the acoustic cover from the marked areas towards the top.

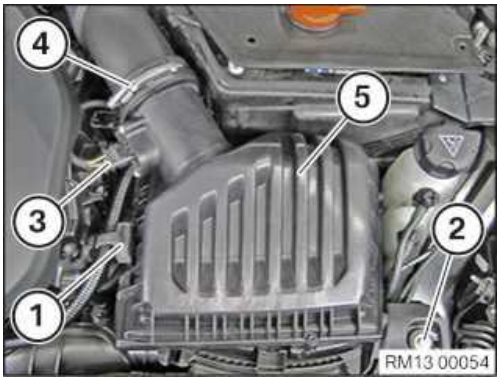
7 – Remove resonator

- Remove screws (arrows).
- Guide out and remove the resonator (1).



8 – Remove the acoustic cover for the injectors

- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

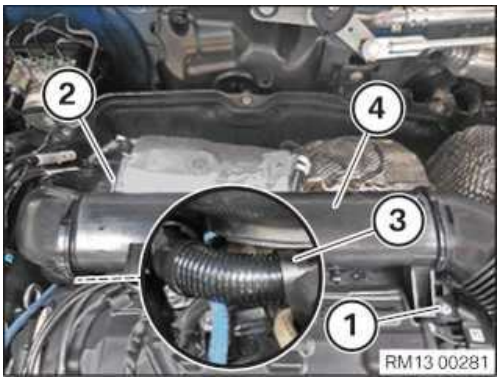


9 – Remove the intake neck for intake silencer housing

cardiagn.com

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

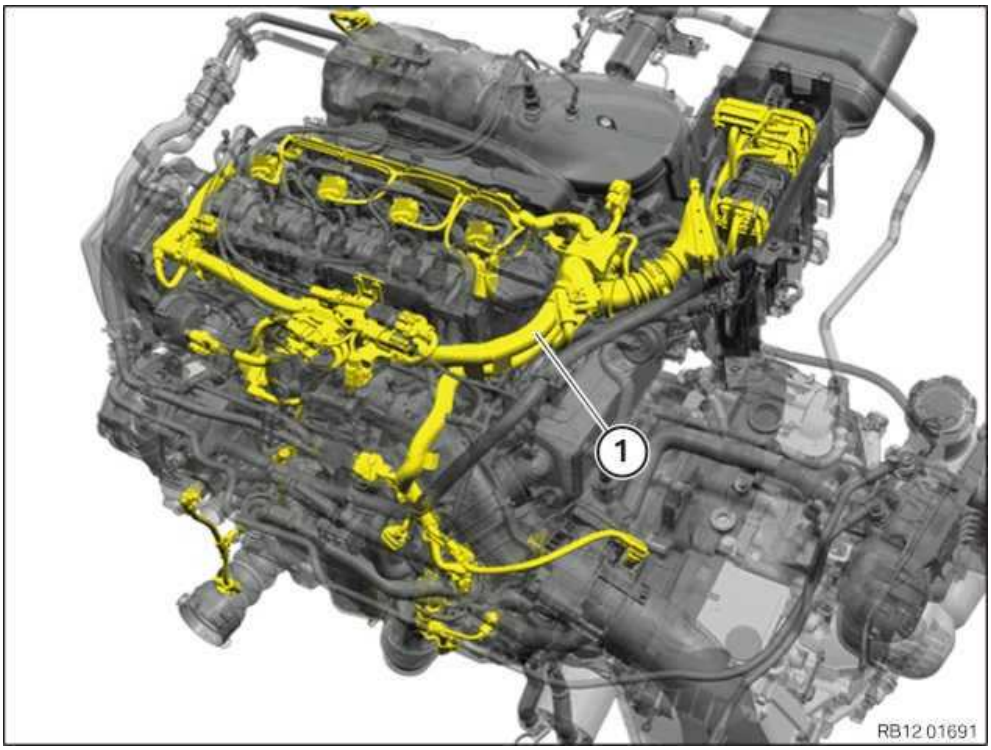
10 – Removing intake silencer housing



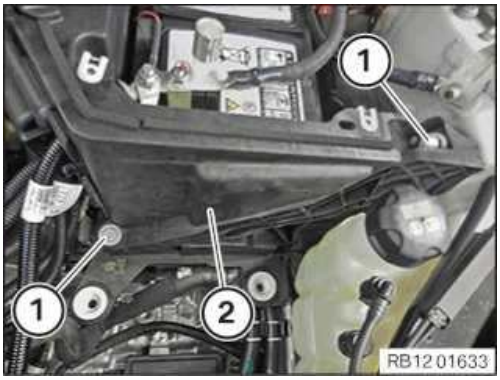
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

11 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

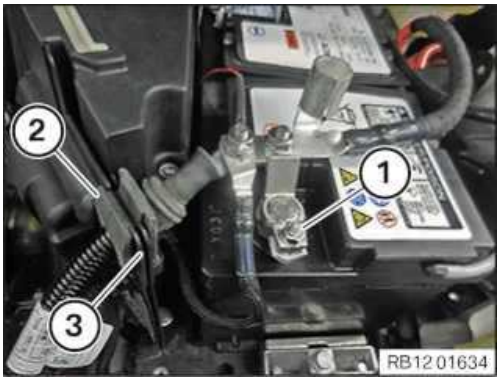


- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

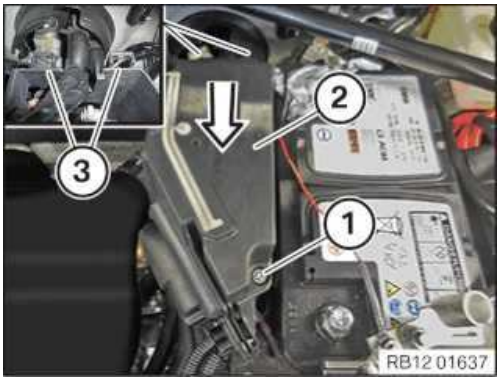


12 – Releasing the wiring harness section for the intake plenum

cardiagn.com

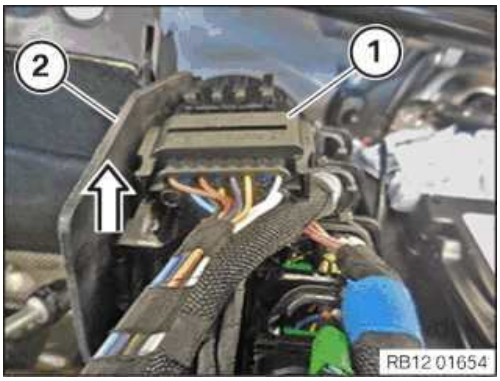


Overview: Wiring harness section for the engine

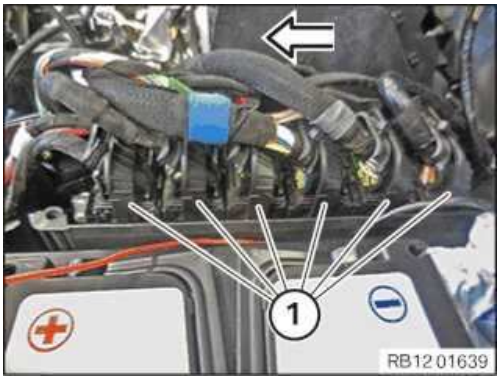


1 Wiring harness section for the engine

- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

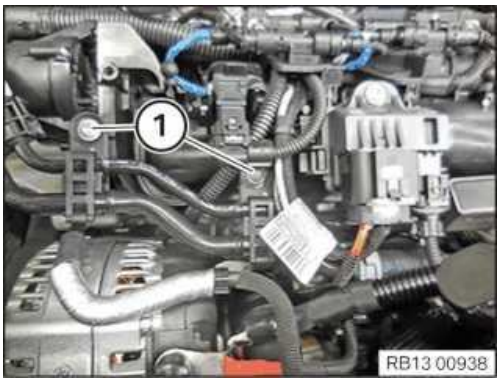


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

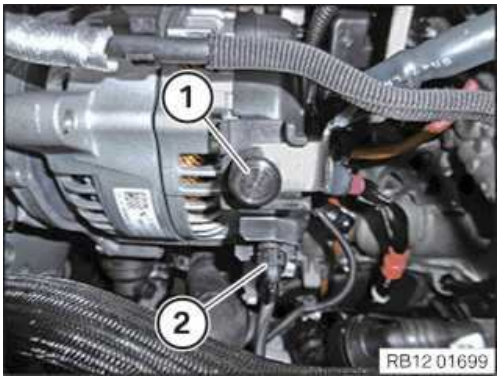


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

cardiagn.com

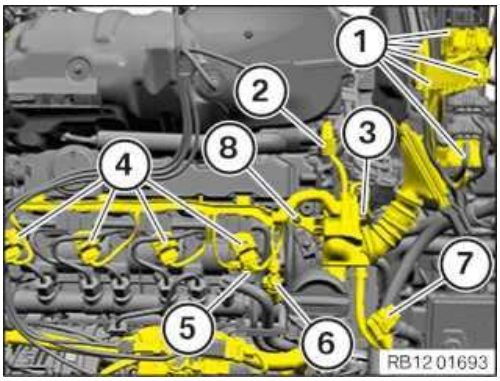


- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).

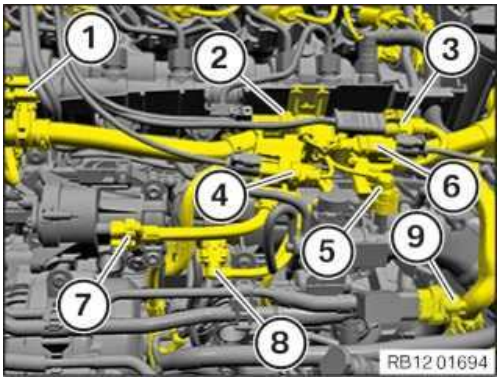


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

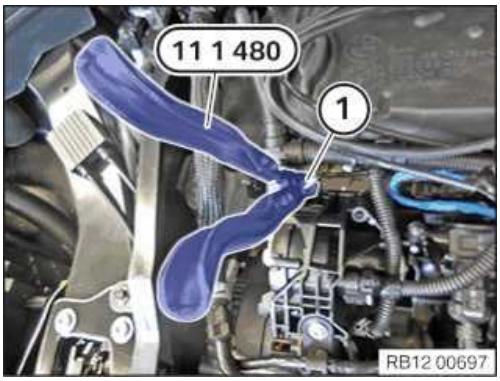
- Unlock and loosen connector (1).



- Loosen screws (1).

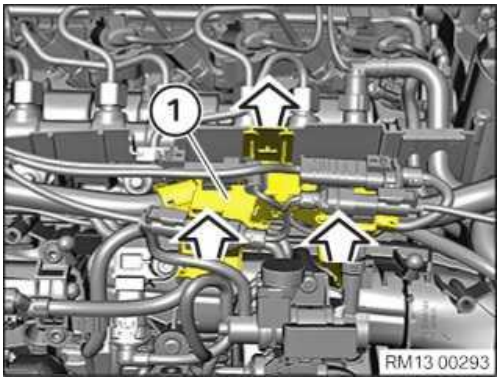


- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.



cardiagn.com

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).



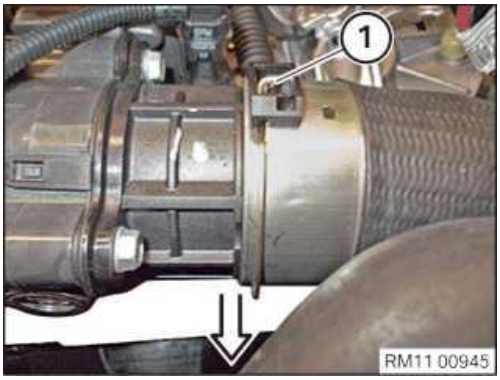
- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock and disconnect the connector (3) from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

▶ **Removing the cable clips from the intake plenum**

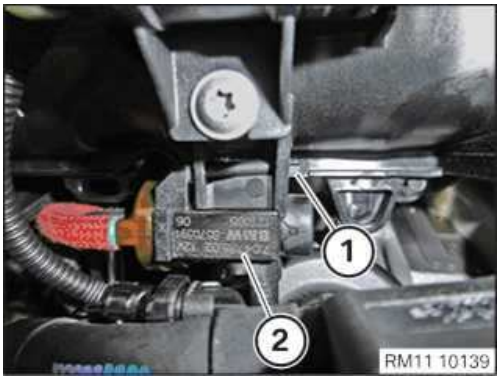
- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

13 – Removing the intake plenum

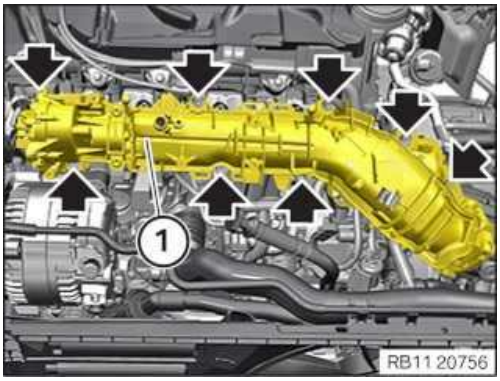


cardiagn.com

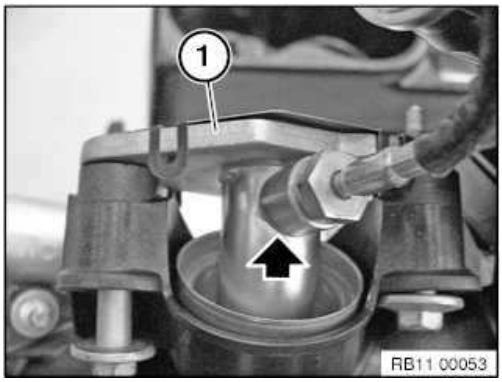
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

cardiagn.com

14 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

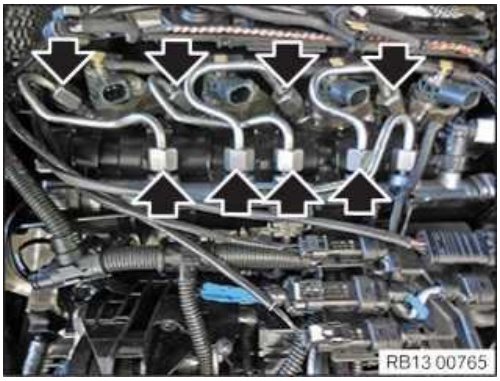
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.



TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

15 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

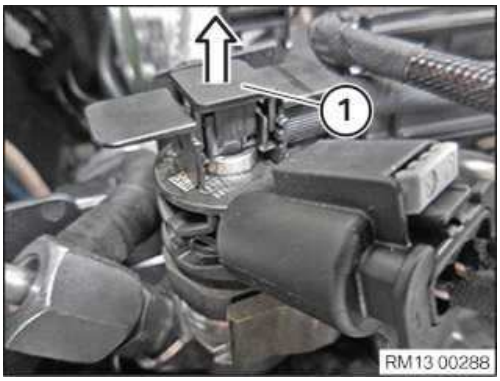
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

16 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

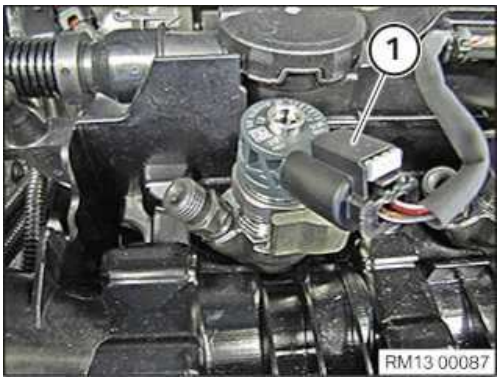
RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

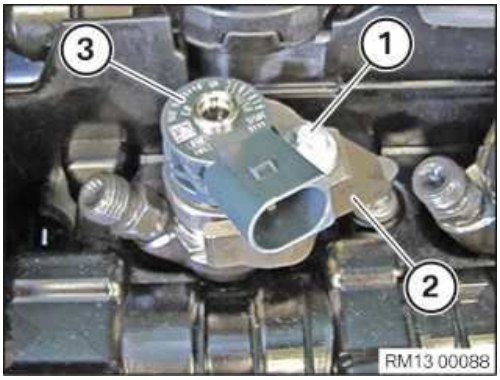
- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.



- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

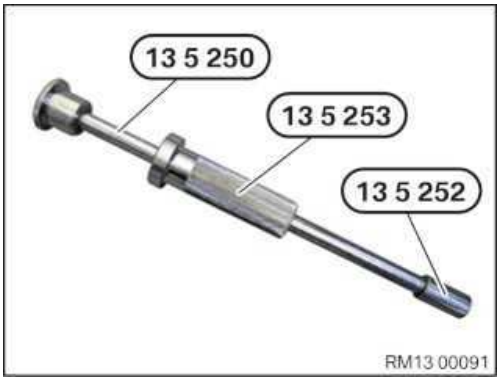
TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

- Unlock and disconnect connector (1).

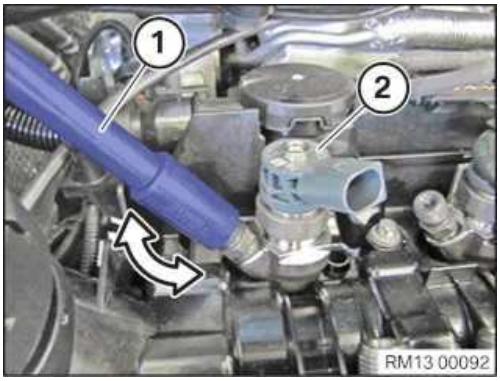
- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

▶ **Loosen stuck injectors**



cardiagn.com

RISK OF DAMAGE



Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)**back onto the special tool **0 493 321 (13 5 250)**.

- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

17 – Remove high-pressure rail

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

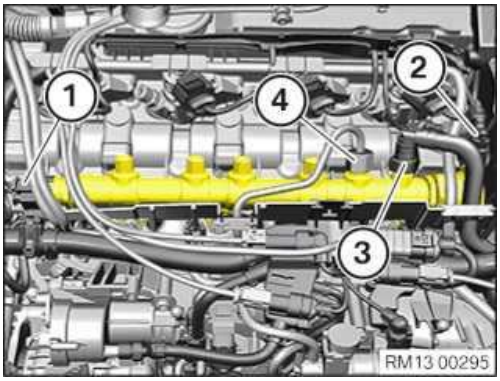
- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

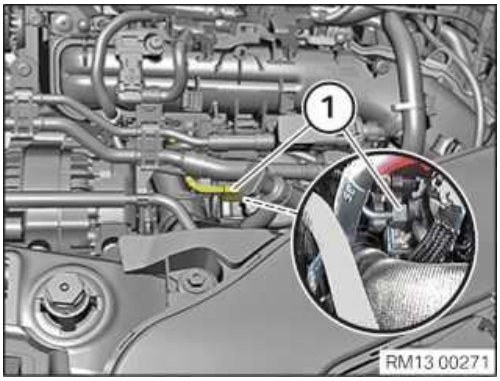
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



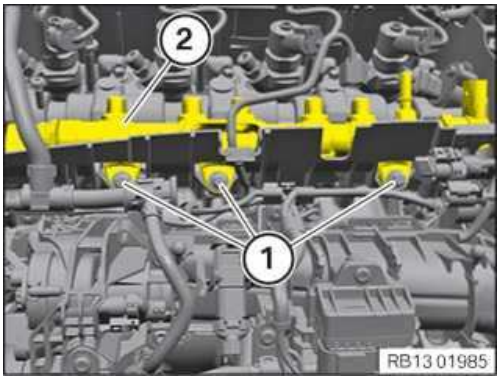
cardiagn.com

TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION



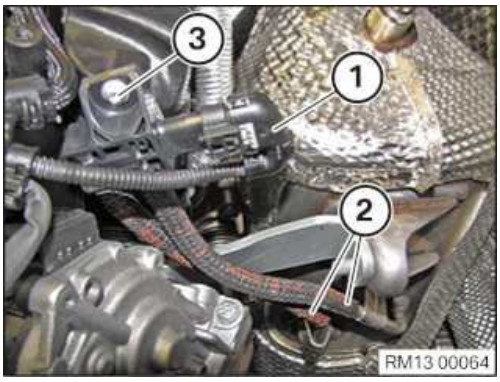
Reset special tool in early to avoid bending pressure lines.

- Unlock and disconnect connector (1).
- Unlock and disconnect connector (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool .
- Reset special tool early on to avoid bending pressure lines.

- Slacken the union nut (1) on the high pressure pump.

- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

18 – Remove differential pressure sensor

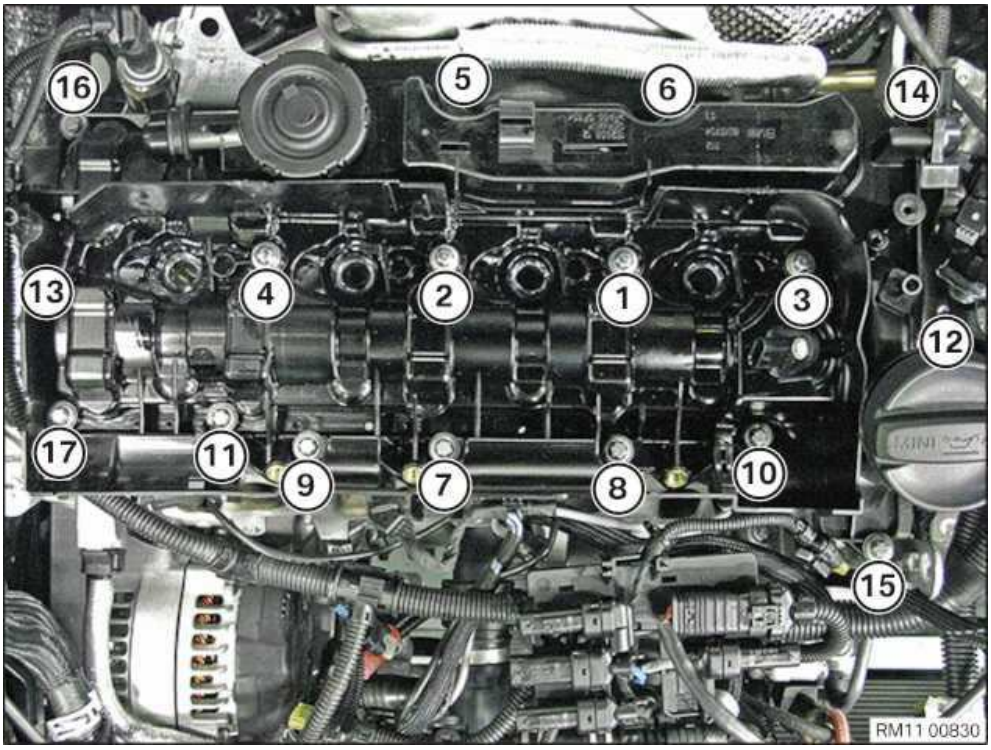


cardiagn.com

RISK OF DAMAGE

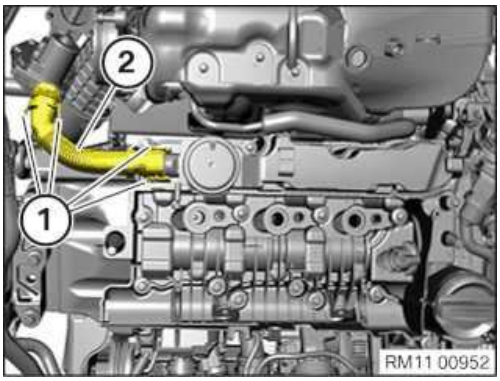
Electrostatic discharge.

Damage to or destruction of electrical components.



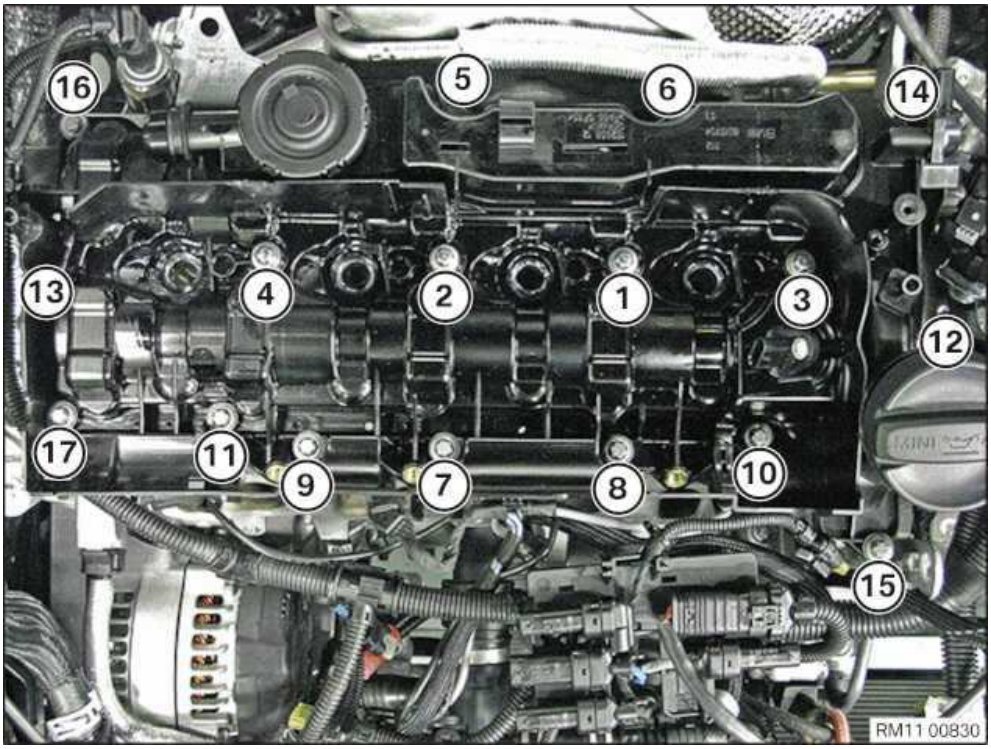
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.



19 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

cardiagn.com

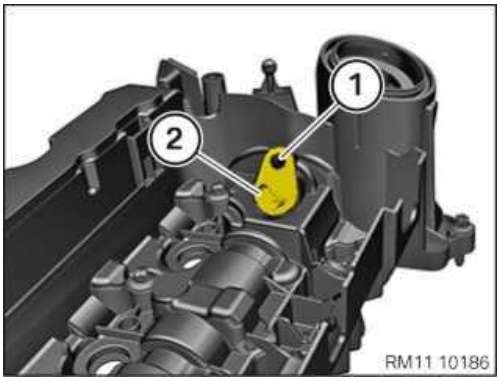
- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

cardiagn.com

20 – Renewing the cylinder head cover

RISK OF DAMAGE

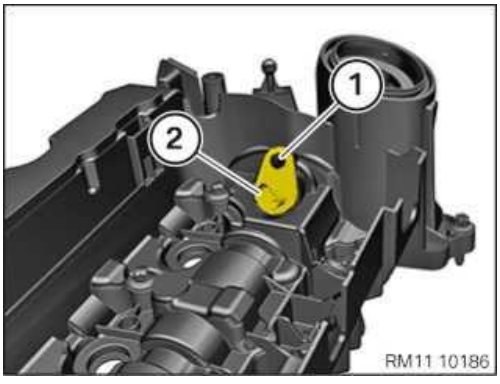


Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

NOTICE



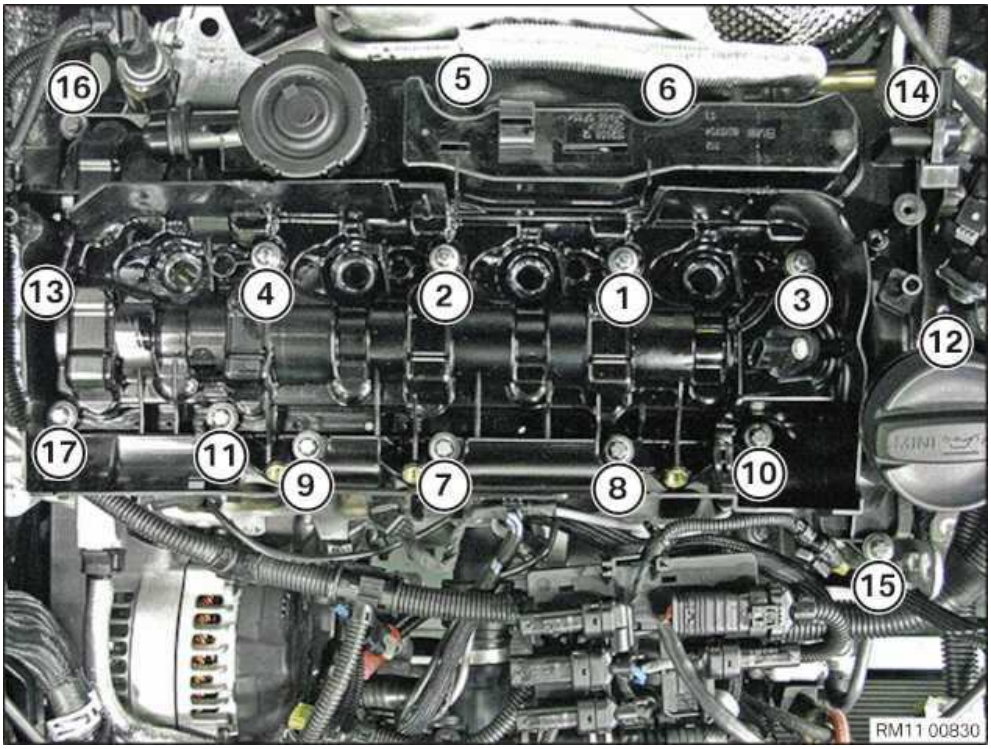
Schematic diagram is for example purposes. Some parts may differ in certain details.

- Loosen screw (1).
- Feed out and remove the camshaft sensor (2).

- Check the sealing ring (1) for damage and renew where required.

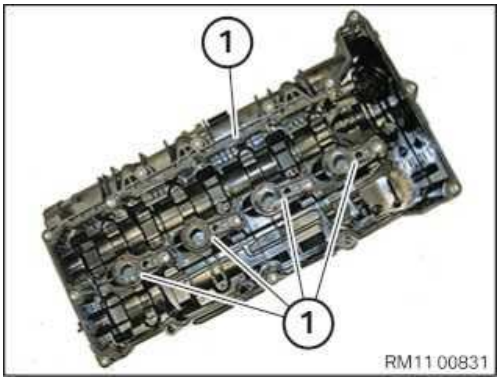
- Guide in camshaft sensor (2) into the new cylinder head cover and install it.

  Parts: Cylinder head cover
- Tighten down screw (1).



Camshaft sensor to cylinder head cover

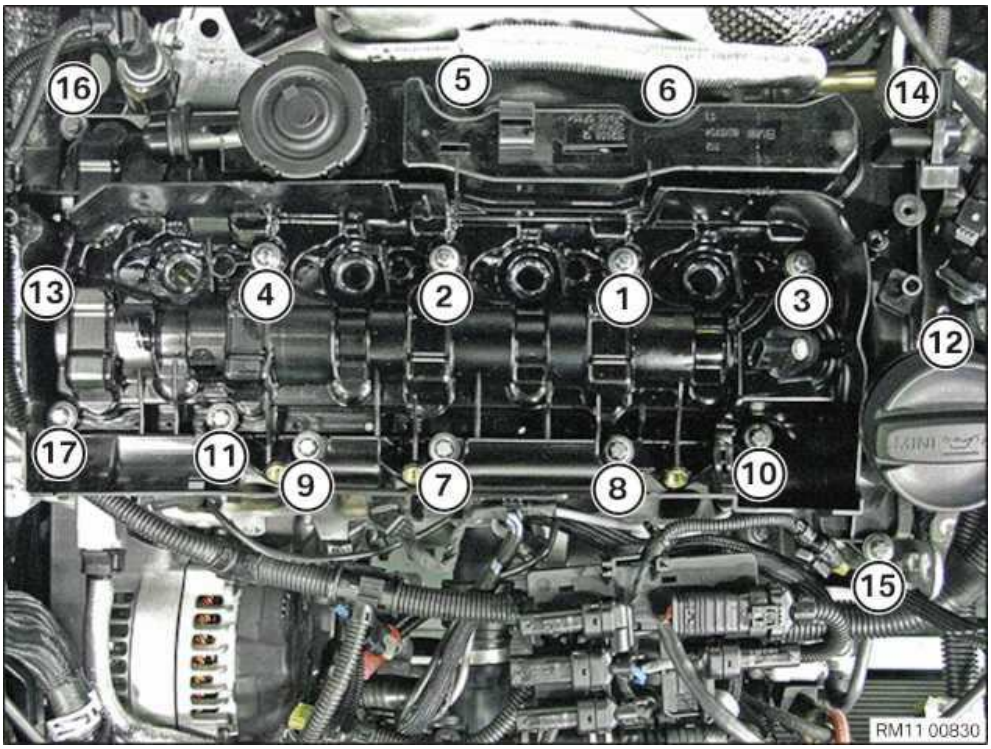
TS5x20		Tightening torque	4 Nm



cardiagn.com

21 – Installing cylinder head cover

Overview: Screw connection of the cylinder head cover

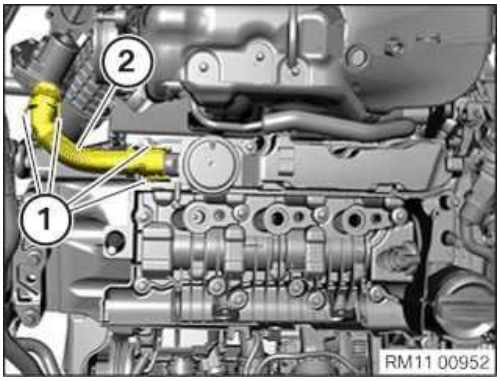


1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket

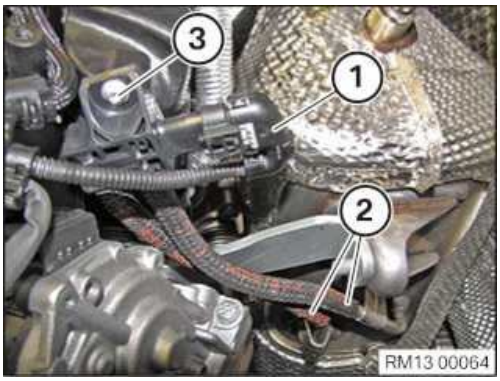
cardiagn.com



- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr



-

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

22 – Installing differential pressure sensor

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

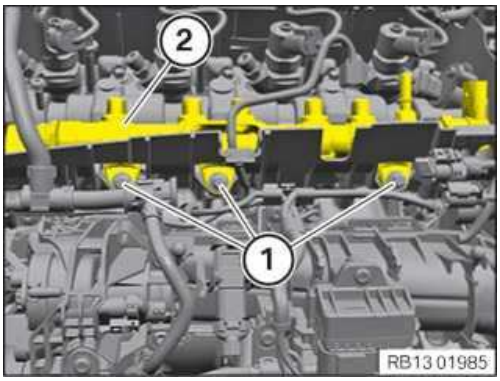
Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

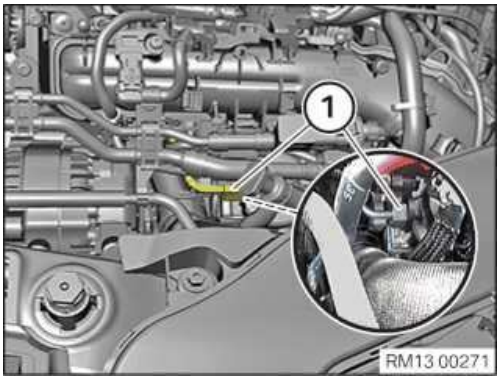


Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

23 – Installing the rail

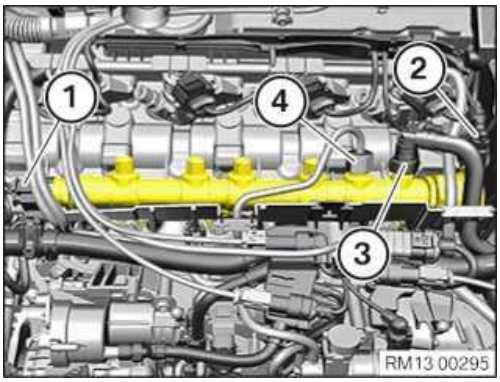


cardiagn.com

- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm



TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool .

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Connect and lock the fuel line (3).

  Fuel line (3) must engage audibly.
- Connect connectors (2) and lock.

  The connector (2) must engage audibly.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

24 – Installing injectors of injection system

▸ **Cleaning the injector shafts**

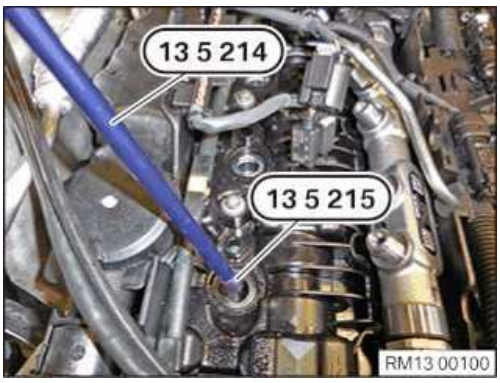
cardiagn.com

CAUTION

Swirling dirt particles caused by compressed air.

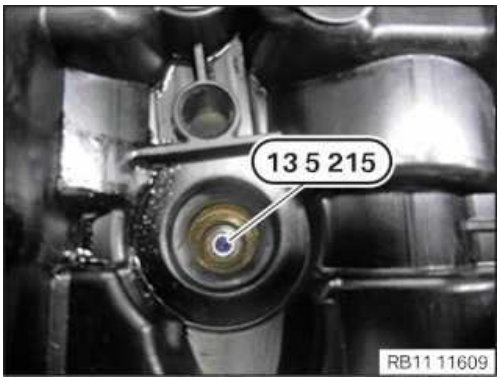
Danger of injury!

- Collect dirt particles, e.g. when blowing out, use cloth to do so.



- Wear safety goggles.

RISK OF DAMAGE



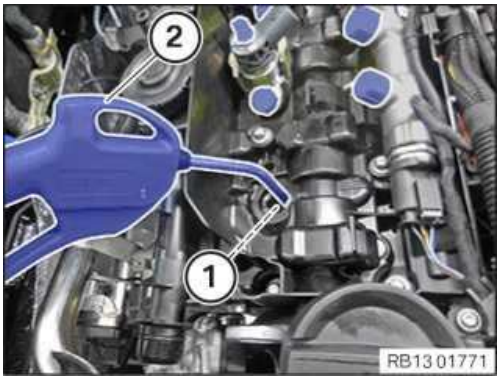
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

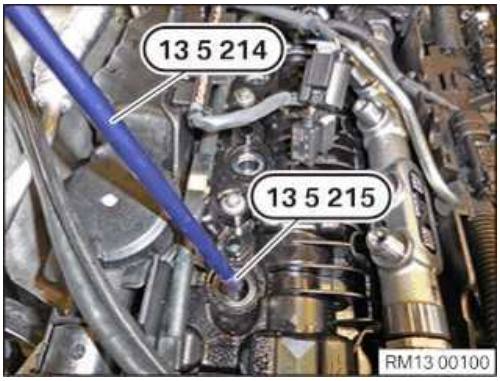
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.



- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

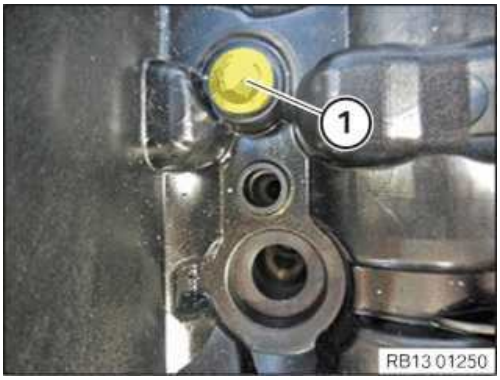


cardiagn.com

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

- Blow out injector shaft (1) with air gun (2).

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.



▸ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▸ **Prepare the injector for installation**

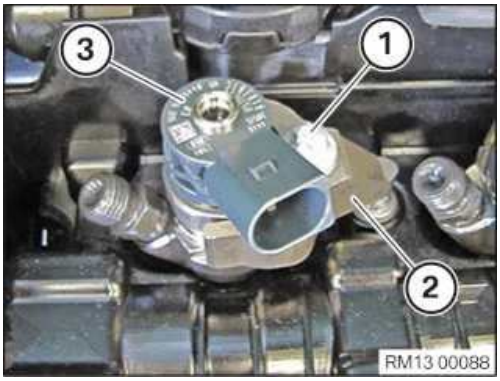
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

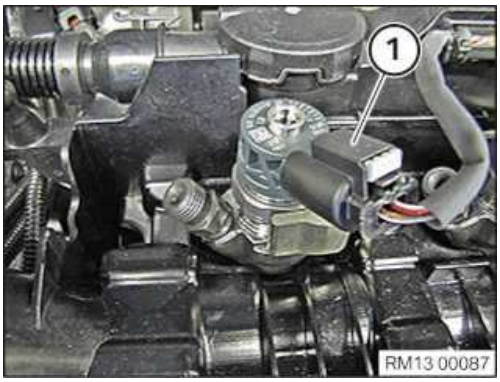


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring

- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials



Injector lubricating grease	50 g, Can	83230441070

- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

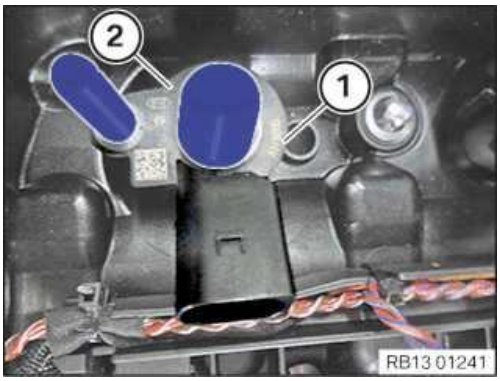
Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

▸ **Replacement: Perform injection quantity compensation**



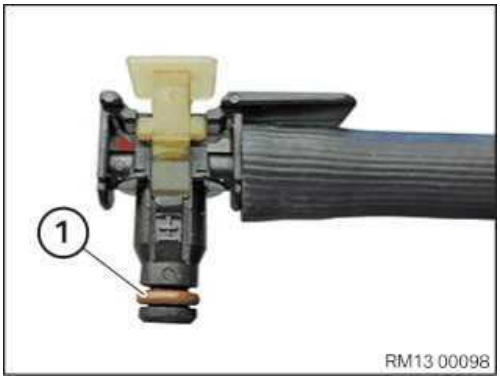
TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

25 – Connect the leakage oil line on the injector

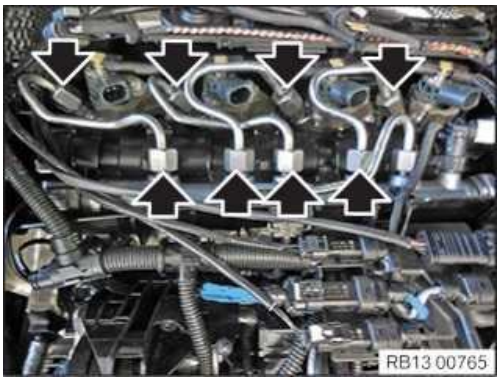
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

26 – Installing high pressure lines between rail and injectors



TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

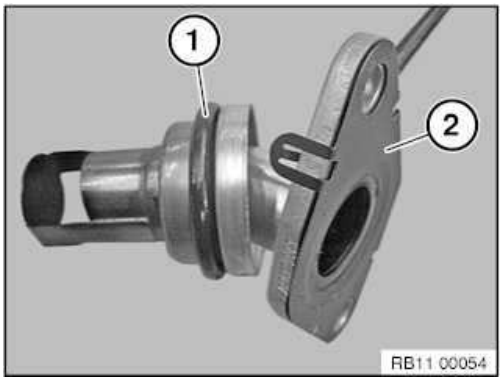
Reset special tool in early to avoid bending pressure lines.

cardiagn.com

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

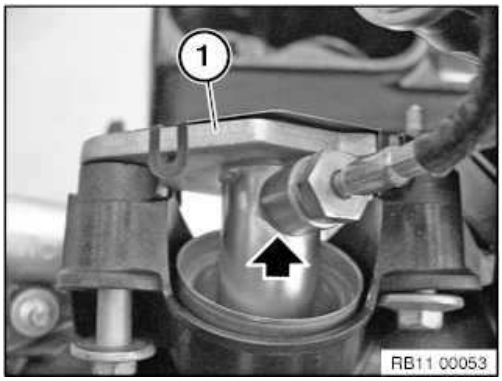


- Tighten the high pressure lines (arrows) with the special tool .

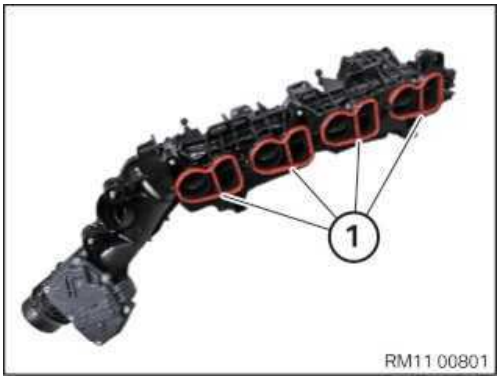
High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).



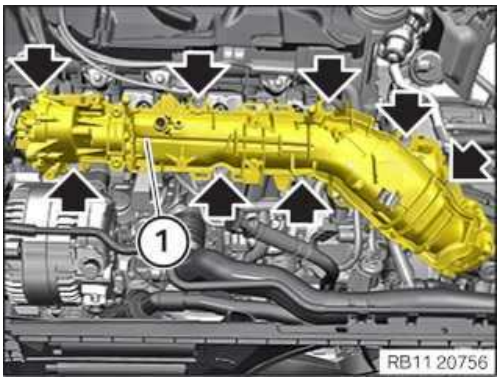
27 – Installing the intake plenum



- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

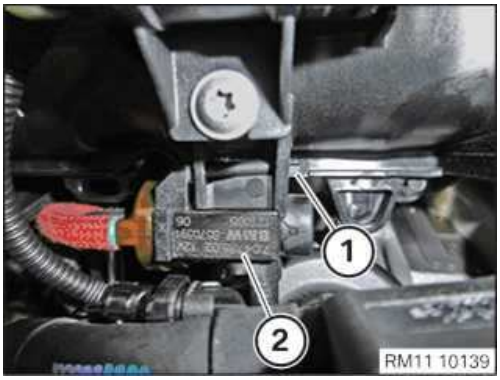
  Parts: Gasket
- Position the seal (2) and clip it in.



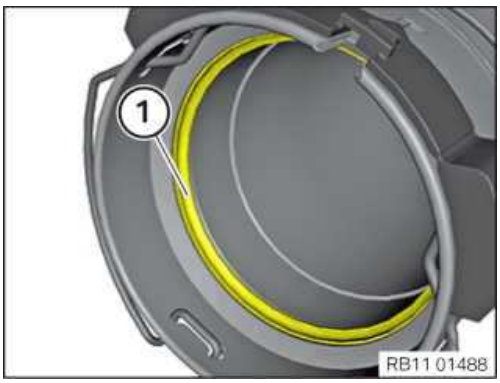
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



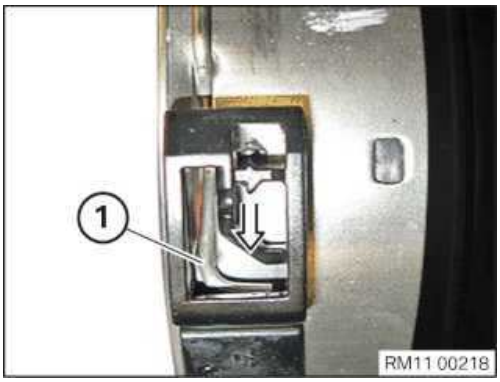
cardiagn.com



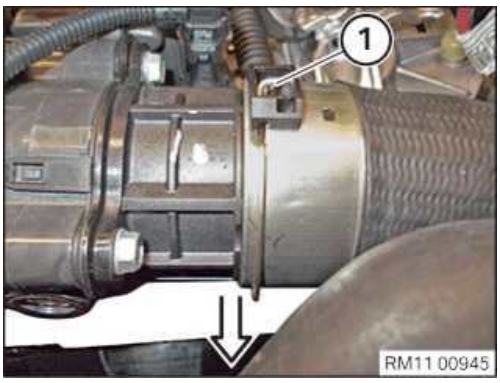
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



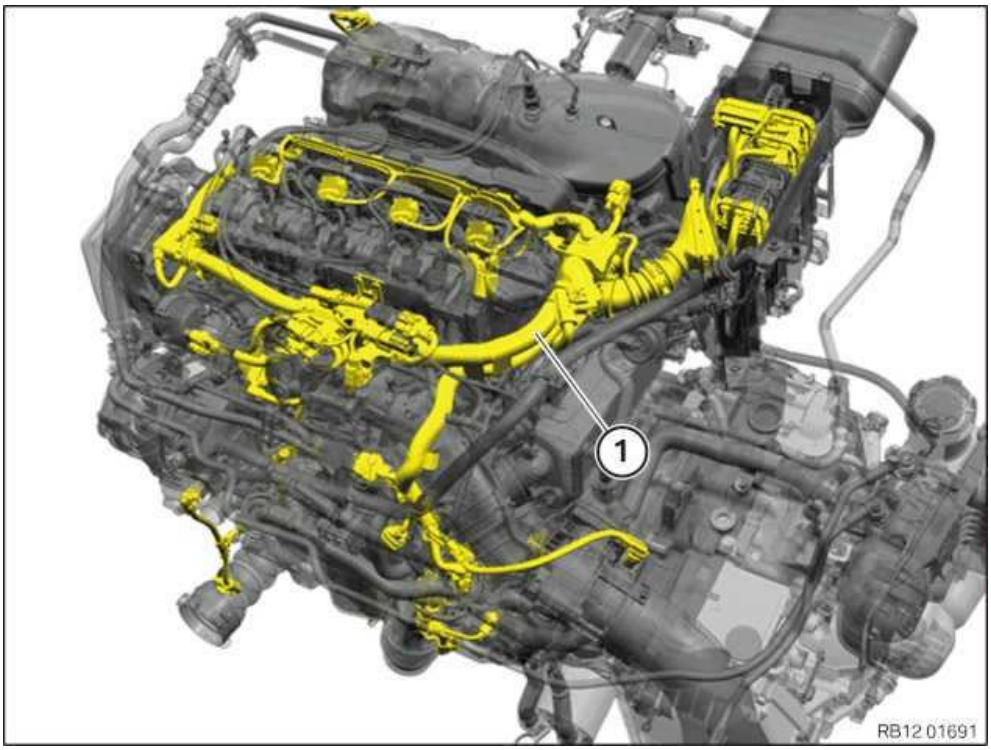
- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

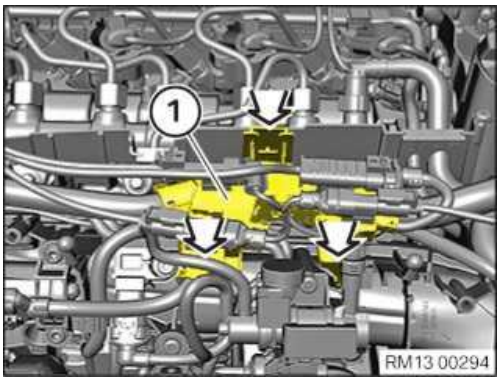
- Engage the lock (1) on the bracket (arrow).



- Connect the charge air line to the throttle valve.

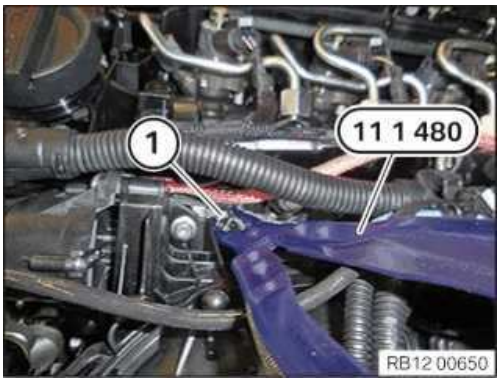
  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

28 – Fastening the wiring harness section for the intake plenum



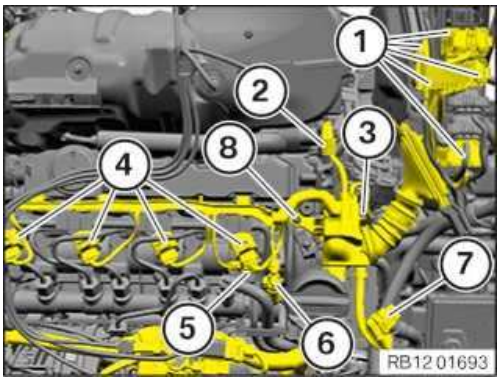
cardiagn.com

Overview: Wiring harness section for the engine



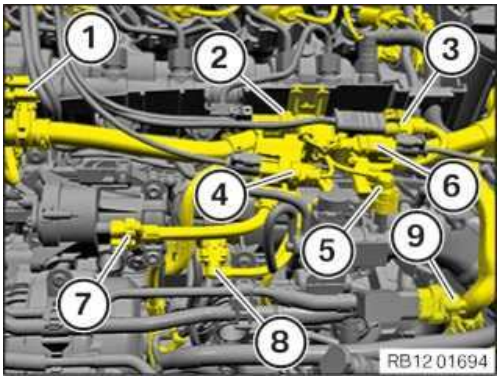
1 Wiring harness section for the engine

▶ **Installing the cable clip for the intake plenum**

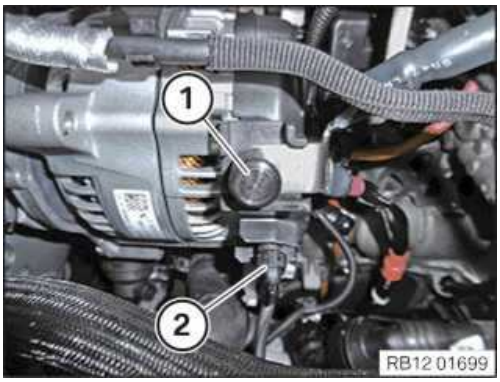


- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.



cardiagn.com

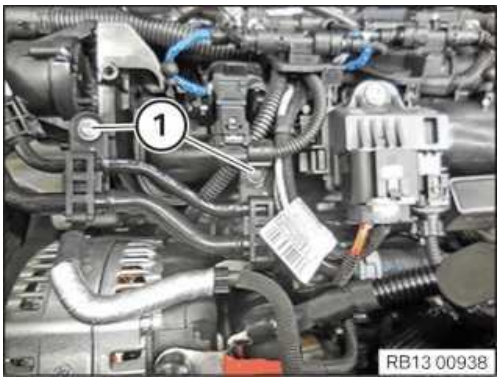


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.

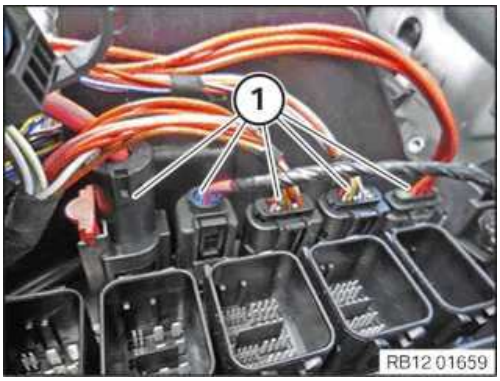


- Connect and lock the connector (2).

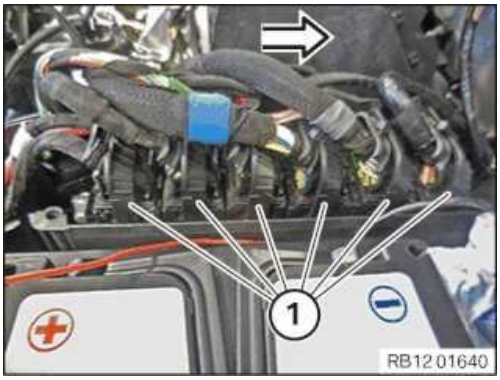
  Lock must snap audibly into place.
- Connect the positive battery cable (1) and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

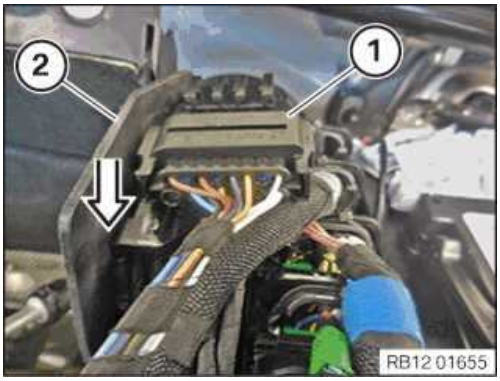


- Position the fuel line.
- Tighten the screws (1).

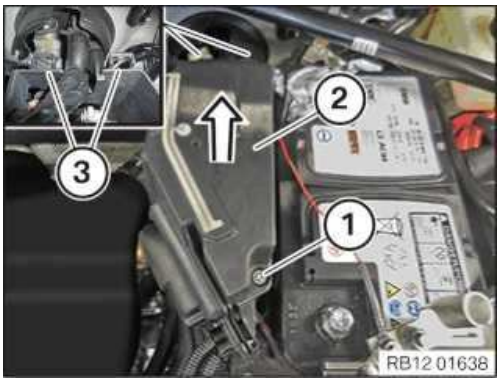


Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

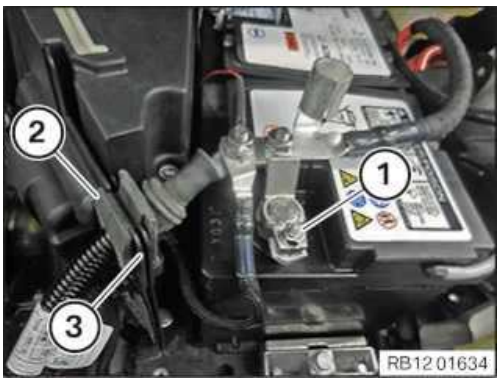


cardiagn.com



- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

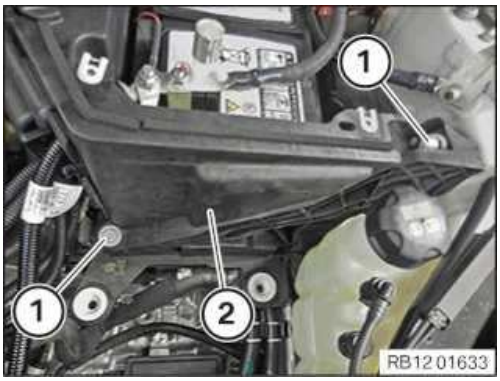


- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm

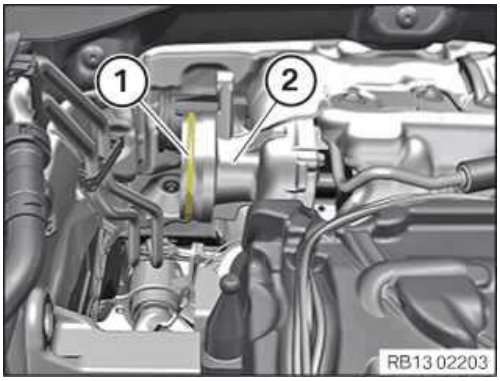


- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

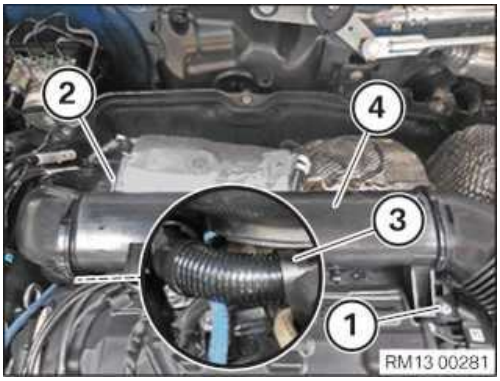
Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

cardiagn.com



- Feed in and install tension strut (2).
- Tighten the screws (1).



Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

29 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

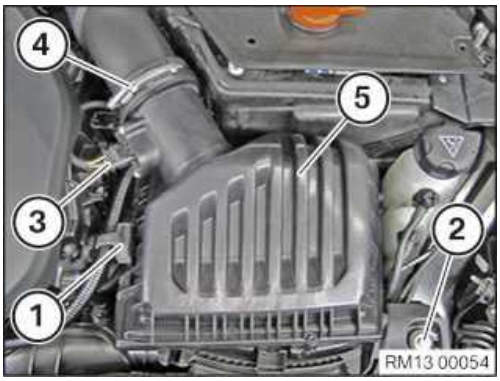
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

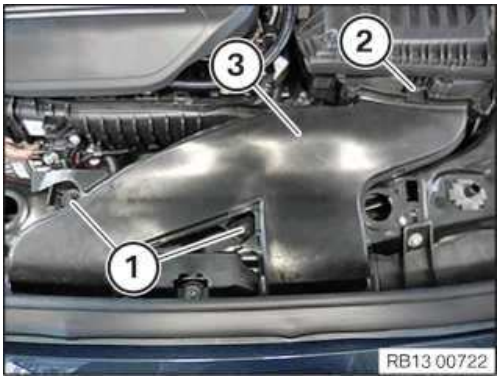
30 – Installing intake silencer housing

cardiagn.com

- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm



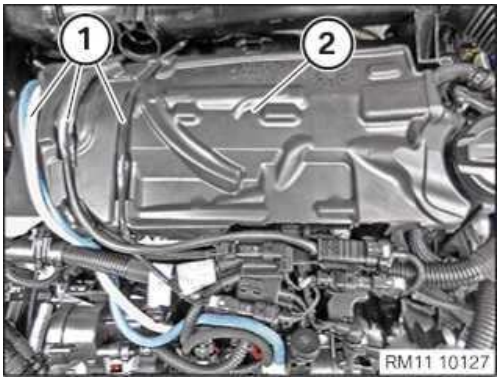
- Tighten clamp (4).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

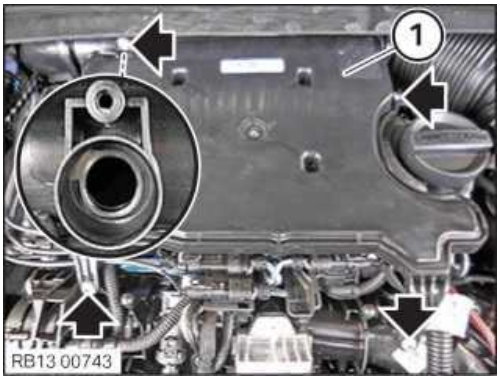
- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

31 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection



M6		Tightening torque	8 Nm

32 – Install the acoustic cover for the injectors

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

33 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).
  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

34 – Install acoustic cover

cardiagn.com

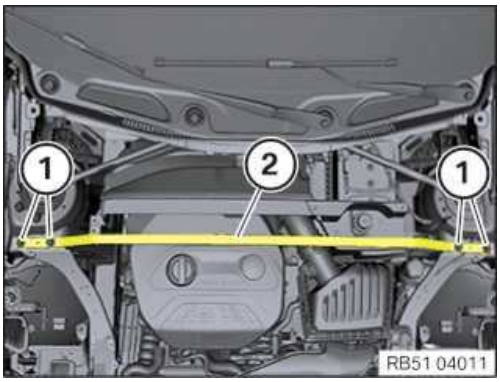
RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

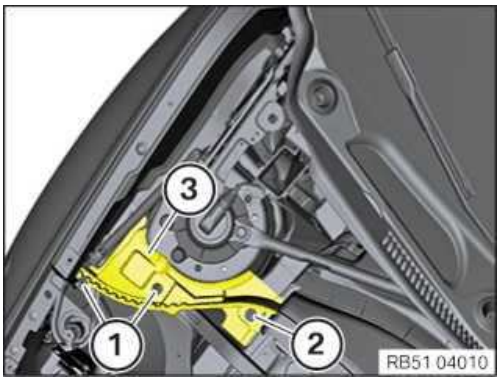


- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

35 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

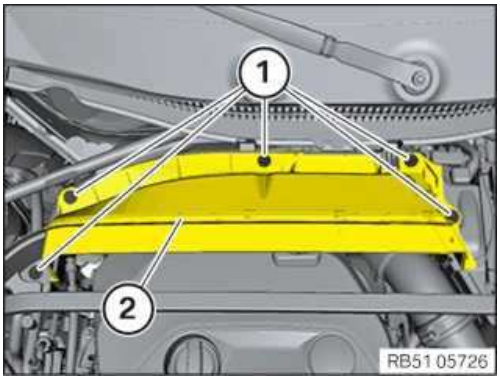
Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

cardiagn.com

NOTICE

Description is for right component only. The procedure on the left side is identical.

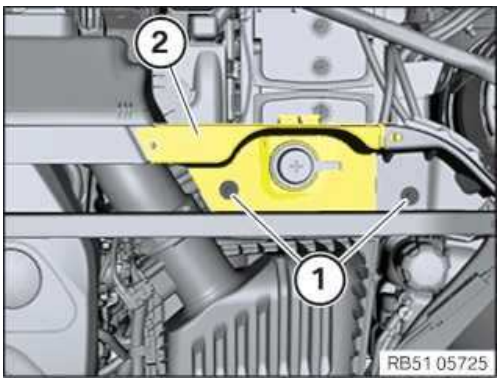


- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

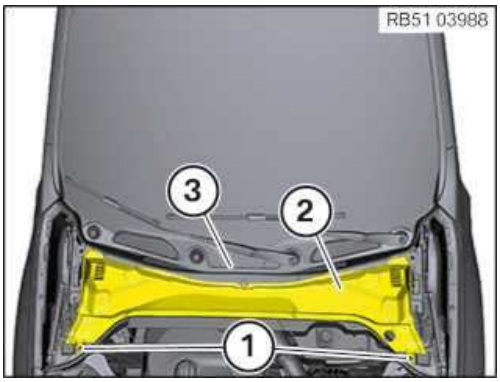


36 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm

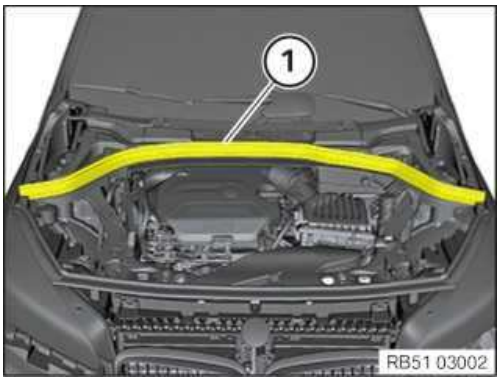


- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

37 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

38 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

39 – Disconnecting all battery earth leads

- See additional information.

cardiagn.com

11 12 501 Replacing cylinder head gasket (B47)

Necessary preliminary tasks:

- Remove cylinder head.

Check adapter sleeves (1) for damage and firm seating.

The cylinder head gasket is designed as a beaded metal gasket.

Note gasket thickness (1).

Highest piston protrusion at both measuring points of all 4 pistons determines thickness of cylinder head gasket.

Piston protrusion up to 0.92 mm

- Install 1 hole cylinder head gasket.

Piston protrusion >0.92 ... 1.03 mm

- Install 2 hole cylinder head gasket.

>Piston protrusion greater than 1.03 ... 1.18 mm

- Install 3 hole cylinder head gasket.

Concluding tasks:

- Installing the cylinder head

cardiagn.com

This documentation refers to special tools that were not yet available when going to press.

11 13 000 Remove and install, seal or replace oil sump

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Engine damage caused by excessively filling the engine with engine oil.

Filling an excessive quantity of engine oil may cause engine damage.

- Observe the exact engine oil filling capacity.
- Drain the engine oil.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

PRELIMINARY WORK

1 – Disconnecting all battery earth leads

cardiagn.com

- See additional information.

2 – Removing the acoustic cover

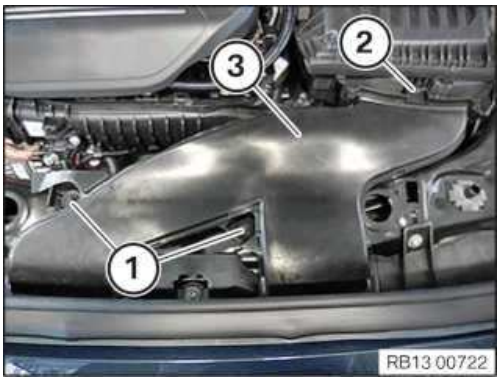
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

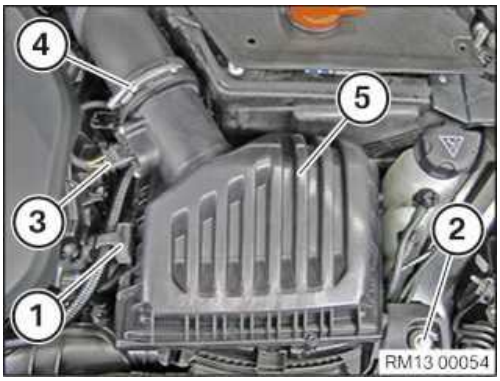


Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

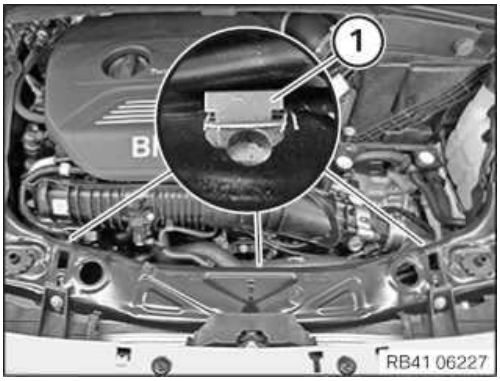
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.



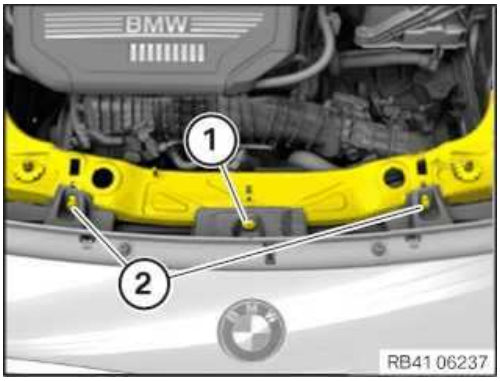
3 – Remove the intake neck for intake silencer housing

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

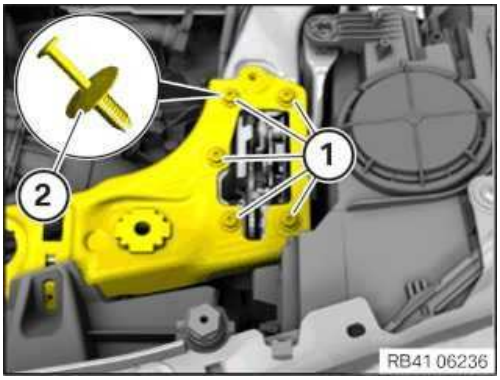


4 – Removing intake silencer housing

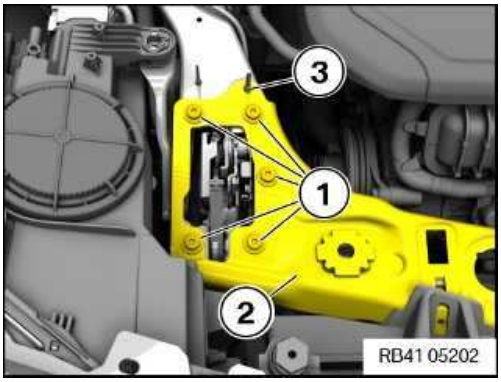
cardiagn.com



- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.



5 – Remove front cross connection



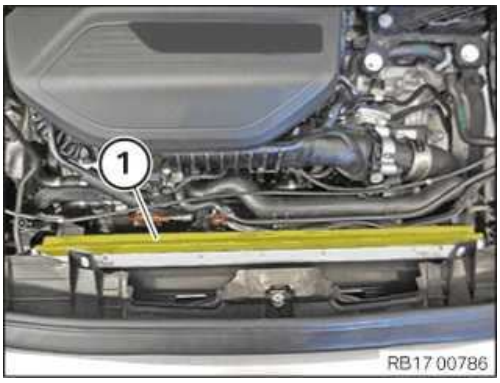
- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

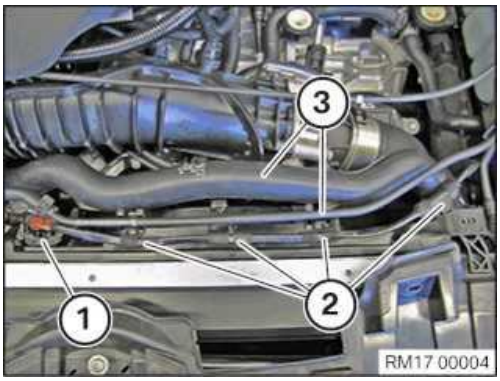
- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

6 – Removing the fan cowl with electric fan



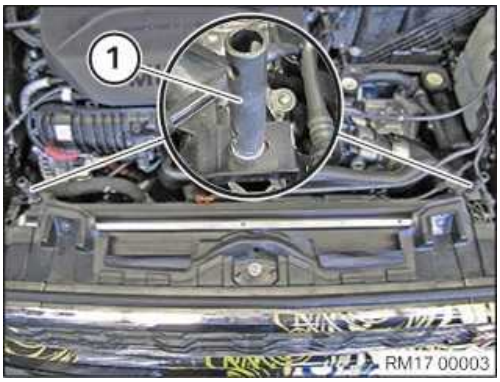
cardiagn.com

WARNING

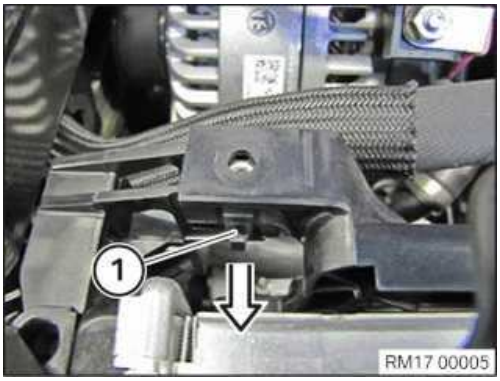


Hot surfaces.

Risk of burning!

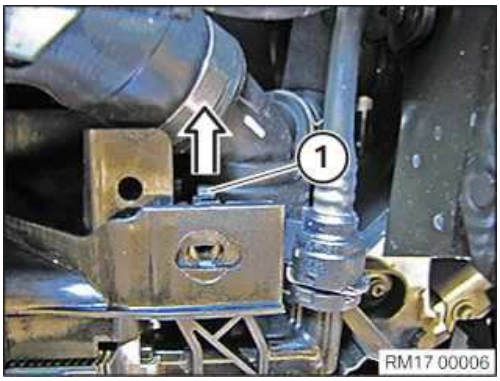


- Perform all work only on components that have cooled down.

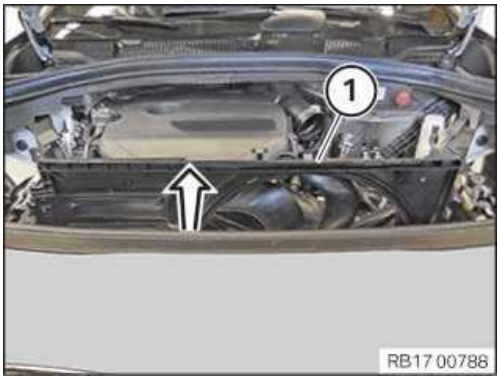


- Feed out and remove the sealing (1) from the radiator.

- Unlock plug connection (1) and disconnect.
- Unlock and loosen the clamps (2).
- Feed out connector (1) and place to one side.
- Thread off coolant line (3) and place to the side.

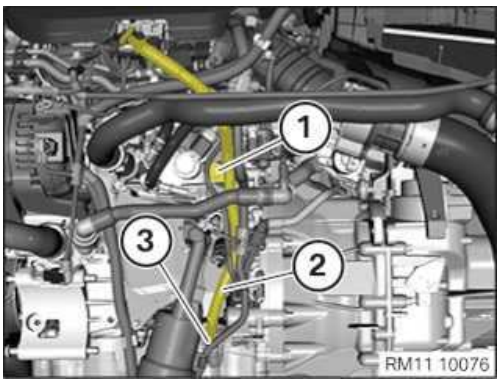


- Loosen screws (1).



- Unlock the right lock (1) on the fan cowl in the direction of the arrow.

cardiagn.com



- Unlock the left lock (1) on the fan cowl in the direction of the arrow.

- Guide out fan cowl (1) in direction of arrow and remove.

7 – Removing the guide tube for the oil dipstick

- Unscrew the bolt (1) in the marked area.
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- Remove sealing ring (3) from oil sump if necessary.

8 – Removing the oil filler cap

- Open oil filler cap (1).

9 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

cardiagn.com

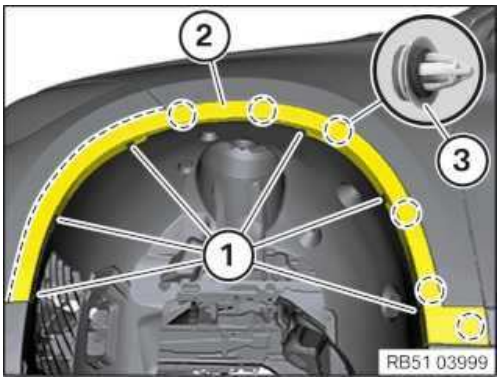
TECHNICAL INFORMATION

Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

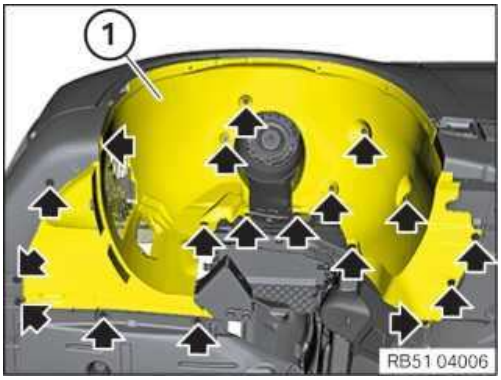
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

10 – Removing the front right wheel arch cover



▶ **Remove the front wheel arch trim**

NOTICE



To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

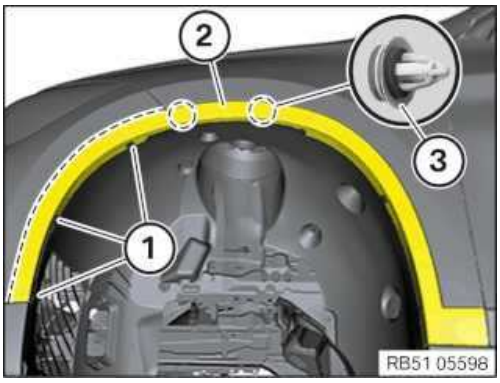
NOTICE

Description is for left component only. Procedure on the right side is identical.

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

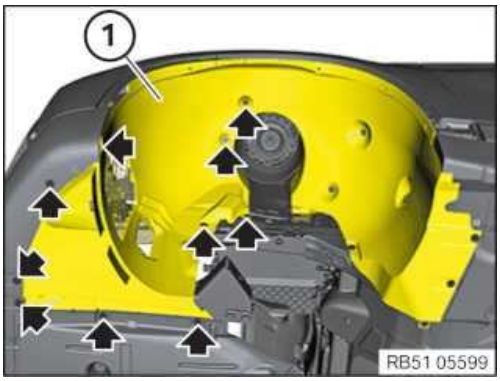
11 – Partially remove the front wheel arch cover

▶ **Partially removing the front wheel arch trim**



cardiagn.com

NOTICE

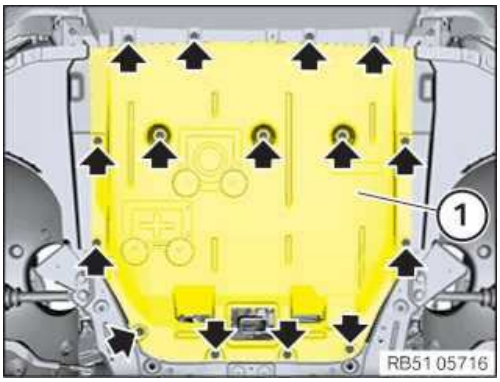


To provide a better overview: Schematic diagram with partially hidden components.

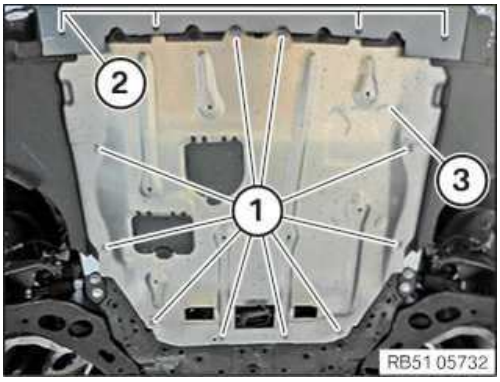
NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.



NOTICE



Description is for left component only. Procedure on the right side is identical.

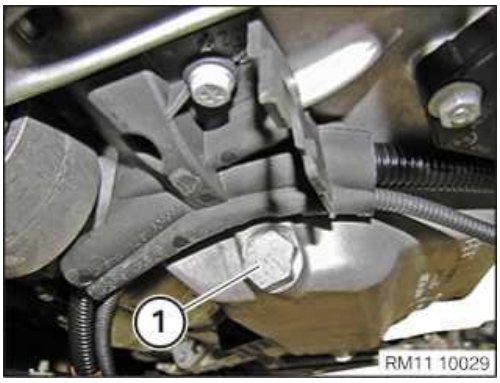
- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (2) out.

12 – Removing the front underbody protection

- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

13 – Releasing the oil drain plug



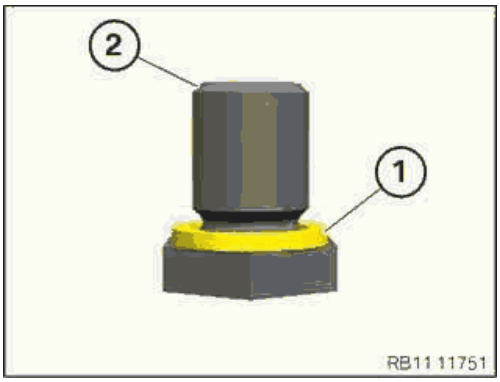
cardiagn.com

WARNING

Hot fluids.

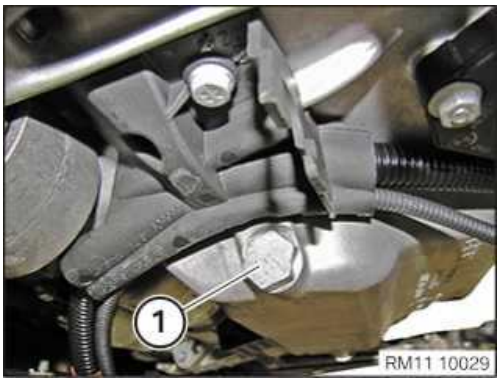
Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.



TECHNICAL INFORMATION

Catch and dispose of drained engine oil in a suitable collecting vessel. Observe country-specific waste disposal regulations.

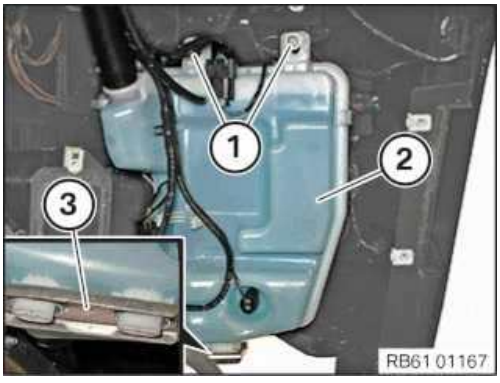


- Release oil drain plug (1).
- Drain engine oil.

14 – Tightening the oil drain plug

- Renew sealing ring (1) on the oil drain plug (2).

  Parts: Sealing ring
- Guide in the sealing ring (1) on the oil drain plug (2) and install.



- Renew the sealing ring.

  Parts: Sealing ring
- Position oil drain plug (1) on the oil sump and tighten.

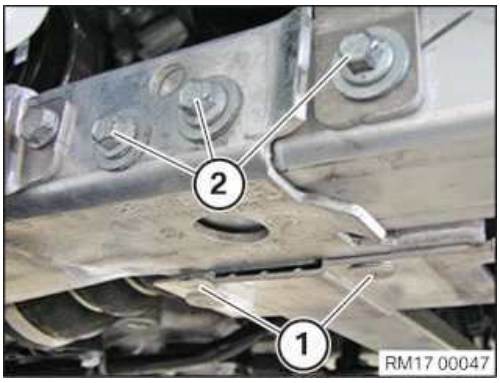
Oil drain plug on oil sump

M12x1.5	Renew the sealing ring.	Tightening torque	25 Nm

15 – Remove the washer fluid reservoir from the fixture

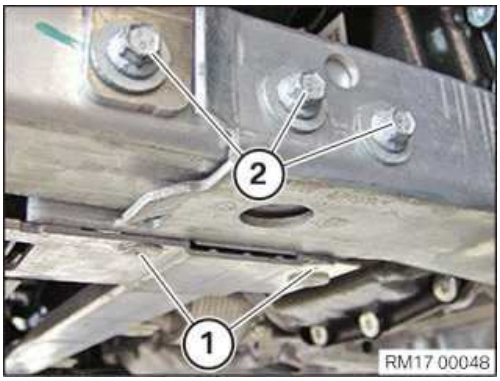
- Loosen screws (1).
- Guide the washer fluid reservoir (2) up and out of the fixture (3) and set it aside.

16 – Removing the right charge air duct between the exhaust turbocharger and the charge air cooler



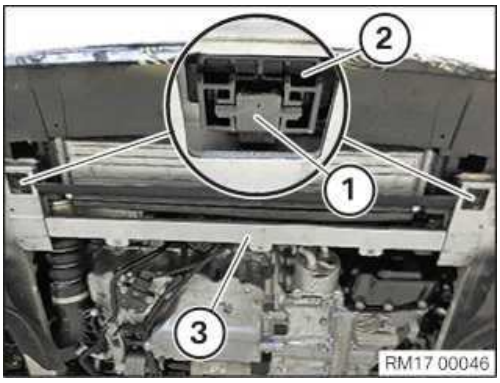
cardiagn.com

WARNING

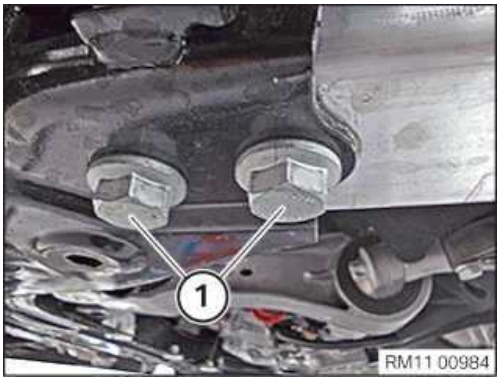


Hot surfaces.

Risk of burning!

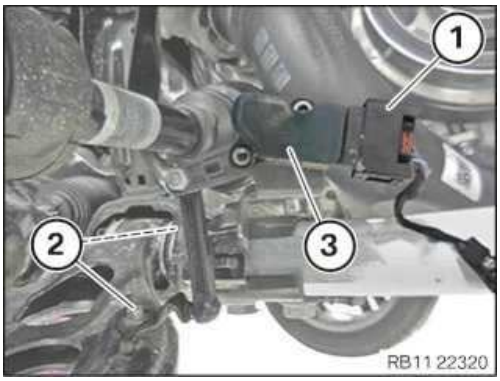


- Perform all work only on components that have cooled down.

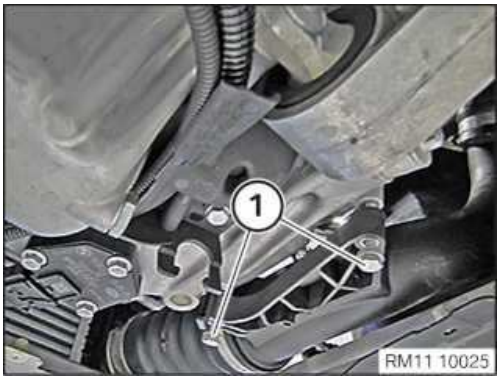


- Undo screws (2) at front left.
- Drill out blind rivets (1) at front left.

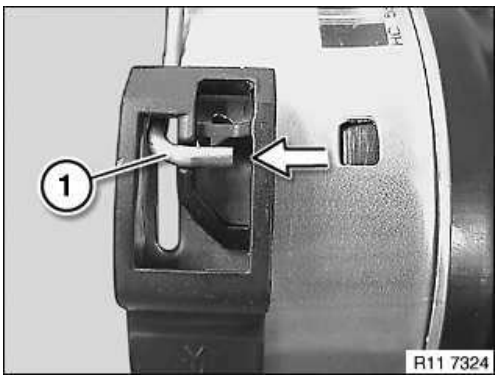
- Undo screws (2) at front right.
- Drill out blind rivets (1) at front right.



- Unlock locking pins (1).
- Thread out and remove locks (2).
- Thread out and remove cross connection (3).

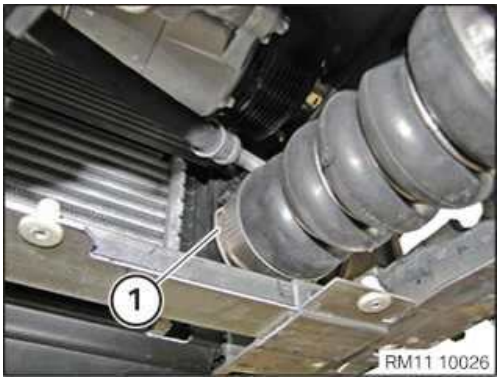


- Release the screws (1) on the right front axle support.

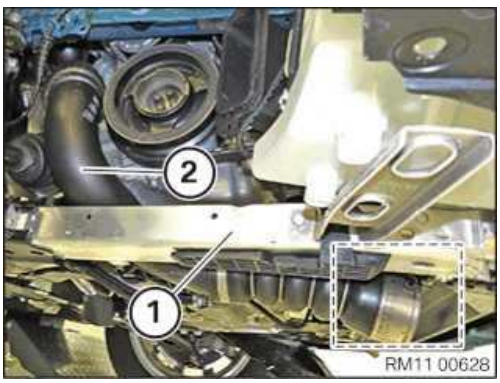


cardiagn.com

- **If installed:**
- Unlock and release plug connection (1).
- Loosen screws (2).
- Feed out the ride height sensor (3) and remove.

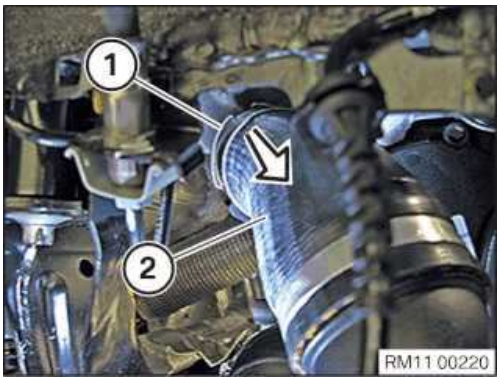


- Release screws (1) of charge air duct on right oil sump.

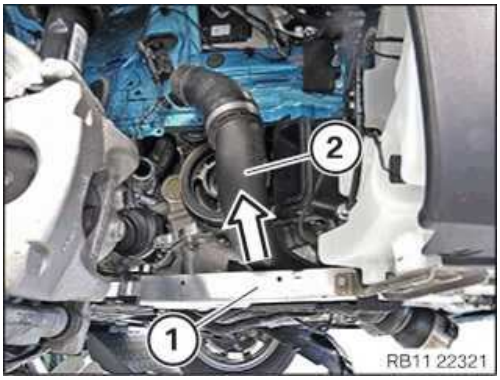


- Unlock lock (1).

  The lock (1) must engage in the bracket during unlocking (arrow).



- Unlock and release the charge air duct (1) on the charge air cooler.

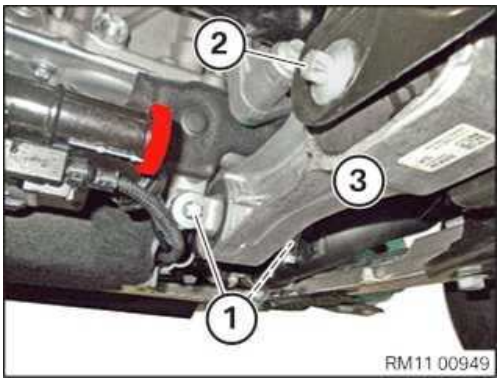


- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (2) in the **marked** area towards the bottom and set it aside.

cardiagn.com

- Unlock and detach the locks (1) on both sides.
- Feed out the charge air duct (2) on the exhaust turbocharger in the direction of the arrow and set it aside.

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (1) in the direction of arrow between the side member and the deformation element and remove.



17 – Remove bracket with rubber mount

WARNING

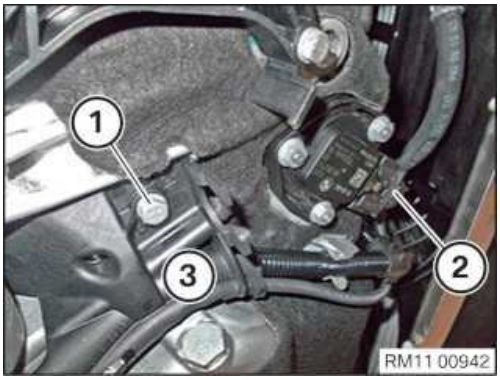
Motor vehicle may slip off the vehicle hoist where components are supported.

Danger! Life-threatening injuries!

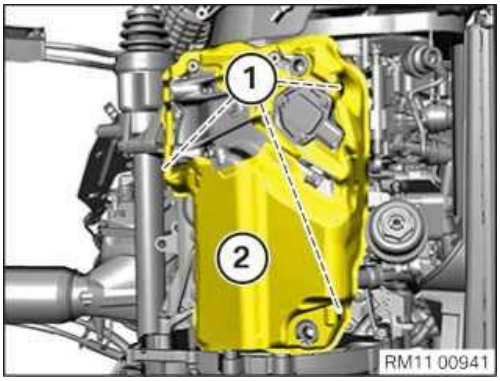
- Secure the vehicle hoist against lowering and lifting.

- Support the engine with the jack at a suitable point.
- Loosen screws (1) and (2).
- Guide out and remove holder (3).

18 – Removing the acoustic cover of the oil sump



- Unlock connector (1) and pull off.
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).

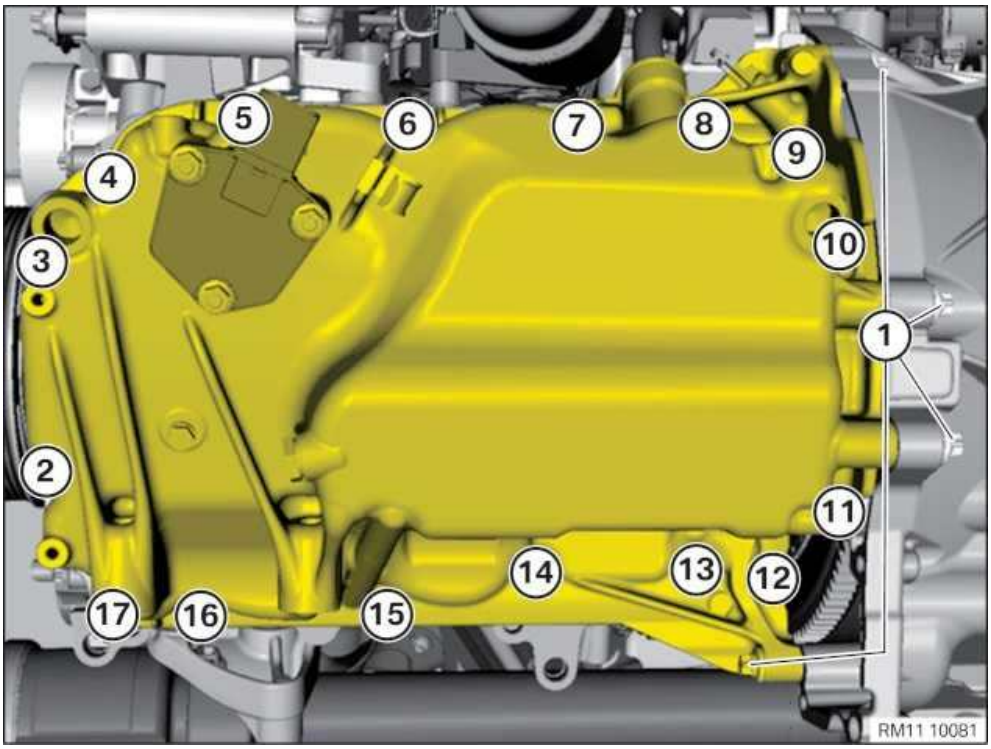


cardiagn.com

- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

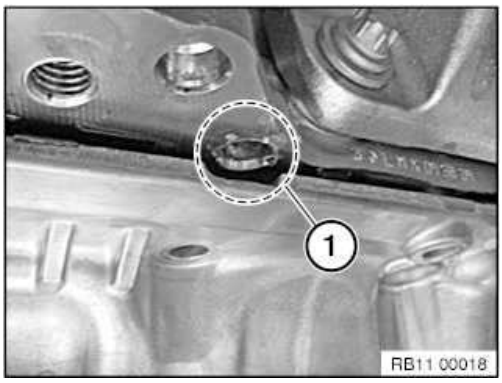
- Unscrew the screw (1) on the wiring harness to the oil sump.
- Unlock and pull off connector (2) on the oil-level sensor.
- Place wiring harness (3) to one side.

- Remove the expanding rivets (1) on both sides of the acoustic cover.
- Feed out and remove the acoustic cover (2).

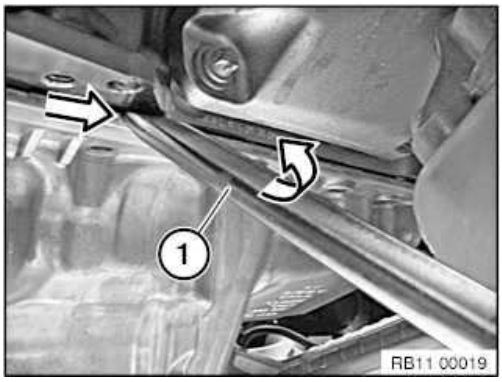


MAIN WORK

19 – Remove oil sump

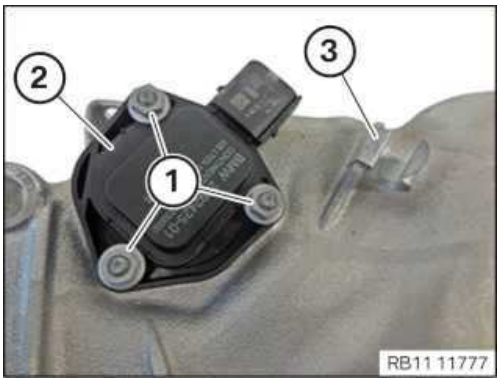


- Loosen screws (1).
- Feed out starter motor and remove.

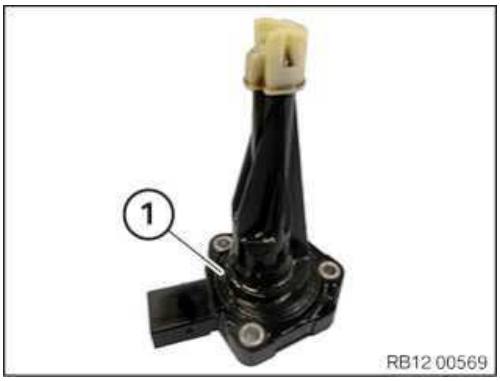


cardiagn.com

- Release transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).

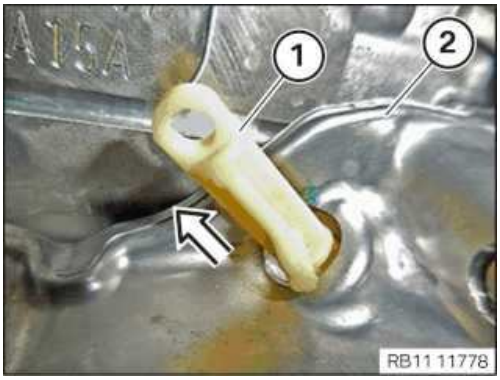


- Release the oil sump only in area (1).



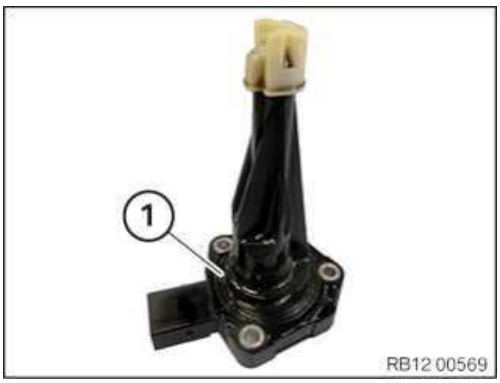
- Release the oil sump carefully using a suitable mounting lever (1) at the appropriate position in the direction of the arrow.
- Secure the oil sump to prevent it from falling.

20 – Renew oil sump



- Loosen nuts (1).
- Remove the oil-level sensor (2).
- Feed out and remove the clamp (3).

cardiagn.com

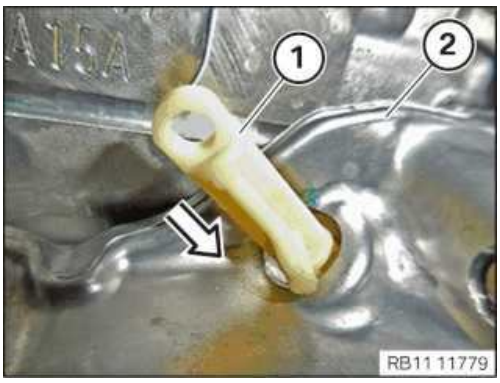


- Renew gasket (1).

  Parts: Gasket

- Guide the seal plug (1) out of the oil sump (2) in the direction of the arrow and remove.

- Insert and install the new gasket (1).



- Insert and install the oil-level sensor (2).
- Tighten nuts (1).

Oil level sensor to oil sump

M6		Jointing torque	2 Nm
		Tightening torque	8 Nm

- Secure clamp (3).

- Guide the seal plug (1) into the oil sump (2) in the direction of the arrow and install.

cardiagn.com

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove fine sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.
- Clean sealing surface (1) with brake cleaner.

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove coarse sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.
- Clean sealing surface (1) with brake cleaner.

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

- Have the special tool ready.

TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Position the sealing compound (1) on special tool as shown.

  Parts: Sealing compound

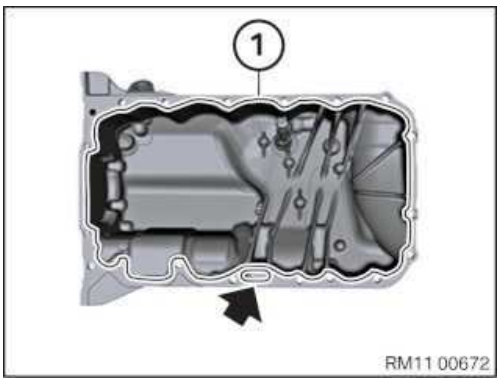
Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

cardiagn.com

TECHNICAL INFORMATION



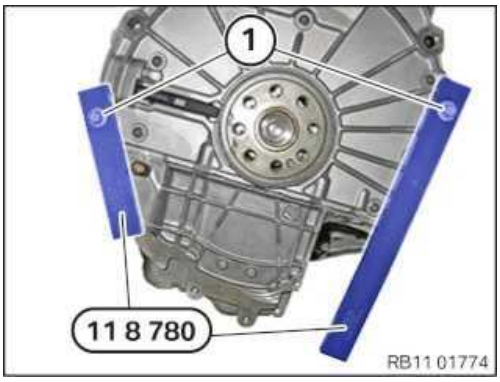
The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Completely surround the oil return orifice (arrow) with the sealing compound.

  No sealing compound may enter the oil return orifice.
- Fix oil sump within the prescribed application time of the sealing compound.



TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- Apply the sealing compound along the line (1) with a thickness of 2 mm to 2.5 mm.

  The sealing compound must be applied along the inner edge.
- Completely encircle the oil return orifice (arrow) with the sealing compound.

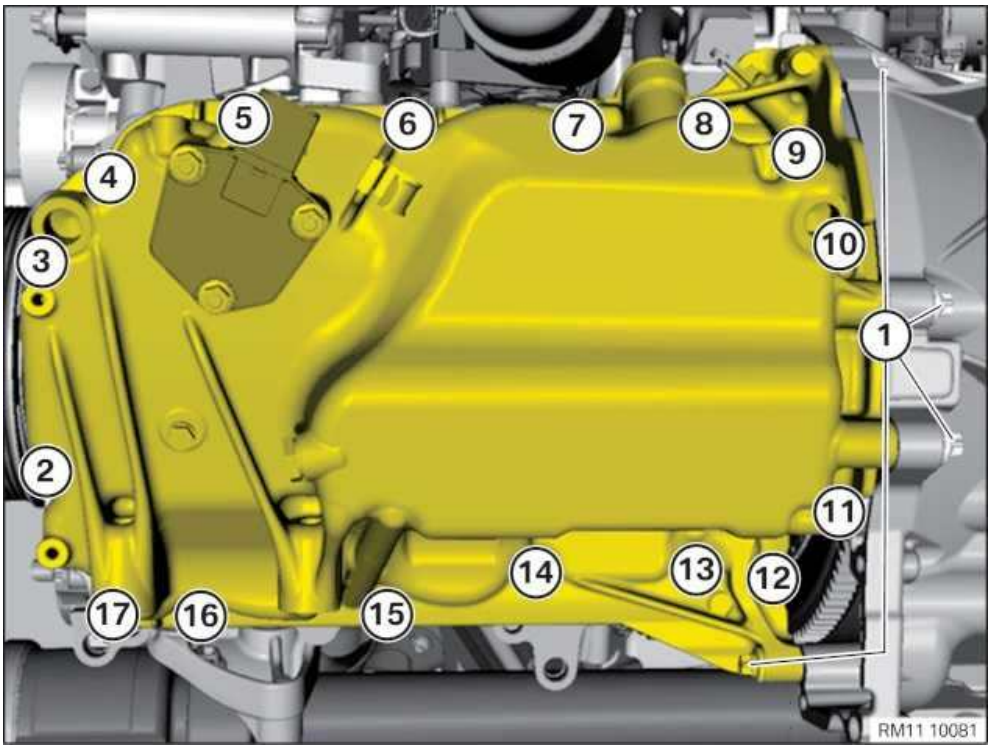
TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- Renew the fitting sleeves if required.

RISK OF DAMAGE

Component damage caused by incorrect screw length.



The use of screws with the incorrect screw length can damage the component.

- Check for correct screw length.
- Re-install screws that correspond to the original screw length.

- Ensure that the **correct** screw (2) (M8x40) is used for mounting the oil sump on the transmission.

  The screw (1) (mounting bolt of the starter motor) may **never** be used for mounting the oil sump.

cardiagn.com

- Position and install the oil sump.
- Tighten screws (2) to (17) **hand-tight**, do **not** tighten fully.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws (2) to (17) on the oil sump.

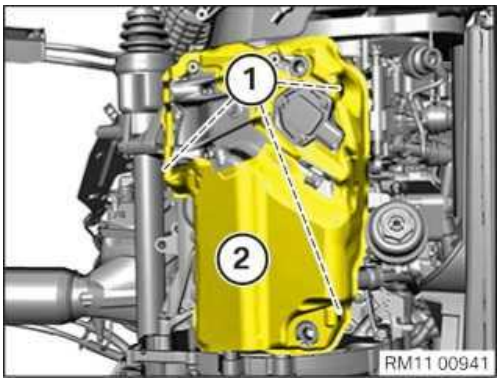
Oil sump to crankcase

M8x30		Tightening torque	2 Nr
M8x110		Tightening torque	2 Nr

- Tighten the transmission bolts (1) on the oil sump.

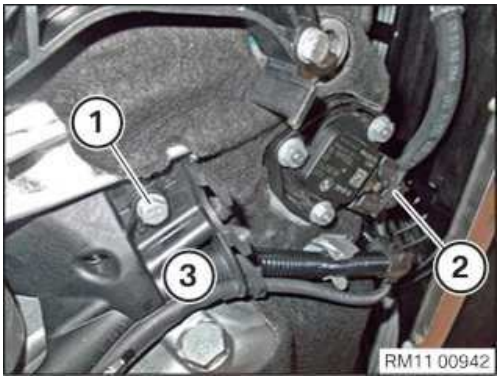
Transmission to oil sump

M8		Tightening torque	1 Nr



- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission



M8x45		Tightening torque	19 Nm

POSTPROCESSES

22 – Installing the acoustic cover for the oil sump

- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).

- Position wiring harness (3).
- Tighten down screw (1).

Bracket to oil sump

M6		Tightening torque	8 Nm

- Connect and lock the connector (2) on the oil-level sensor.

  The connector must lock audibly.

cardiagn.com

CAUTION

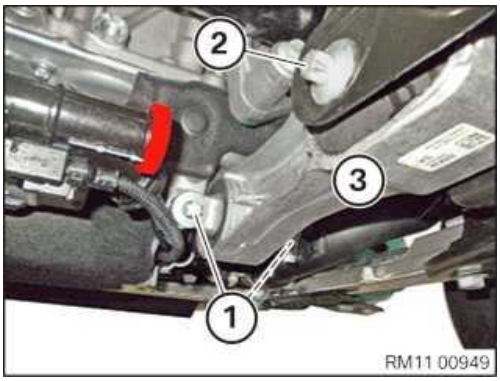
Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter



M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).

  The connector must engage audibly.

23 – Install the holder with the rubber mount

- Insert and install the holder (3).
- Tighten the screws (1) and (2) hand-tight.
- Release jack.
- Tighten down screw (2).

Holder to front axle support

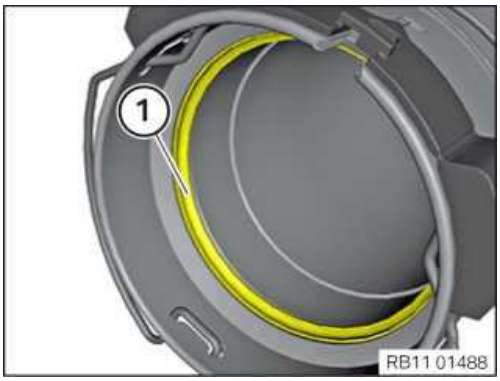
M12		Tightening torque	100 Nm

- Tighten the screws (1).

Bracket to oil sump

M12		Tightening torque	100 Nm

24 – Installing the right charge air duct between the exhaust turbocharger and the charge air cooler



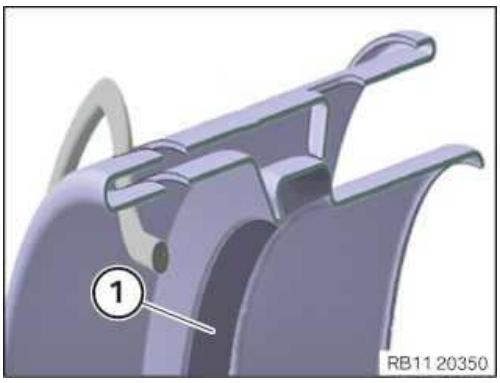
RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.

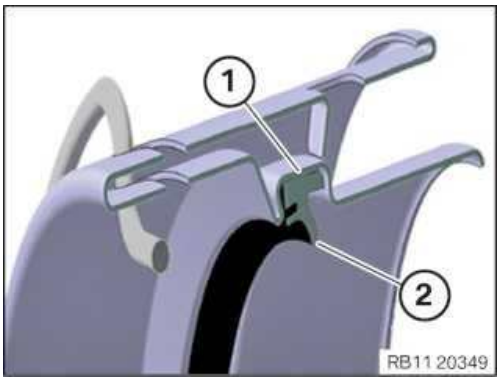
cardiagn.com



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

▶ **Replace damaged gasket**

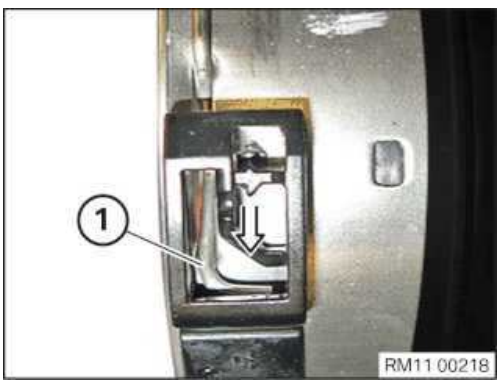


TECHNICAL INFORMATION

Do not use pointed or sharp-edged tools for the installation and/or removal.

- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

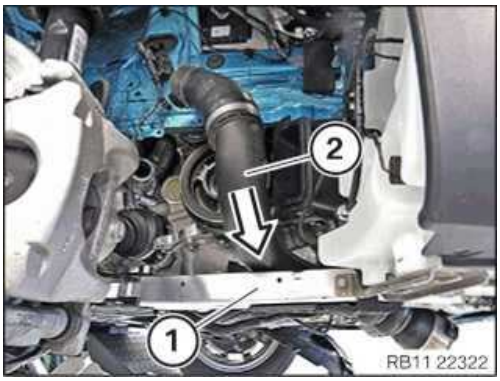
  The gasket groove (1) must be clean.



- Renew gasket.

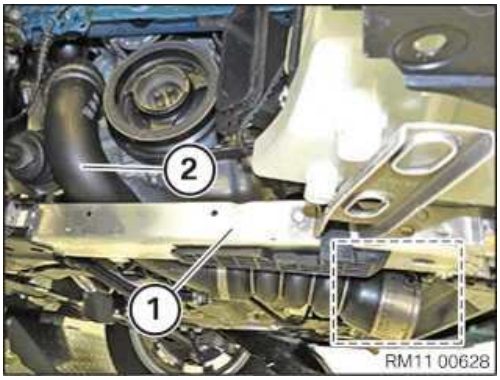
  Parts: Gasket
- Install seal dry without lubricant or mounting agent.

TECHNICAL INFORMATION

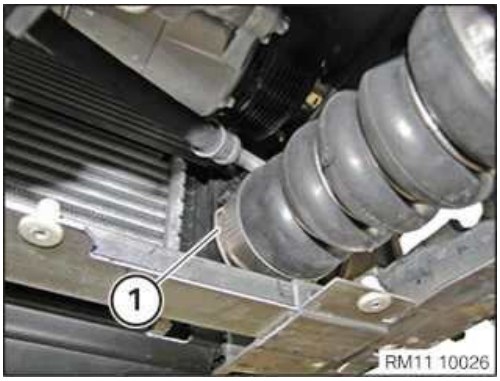


Incorrect assembly is possible. Ensure correct installation position.

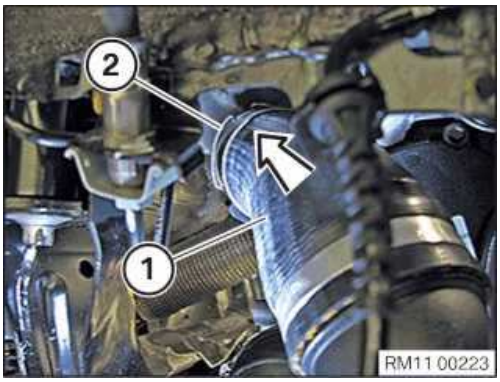
- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).



- Detach the locks (1) in the direction of the arrow from the brackets.
- Ensure that the locks (1) engage audibly.

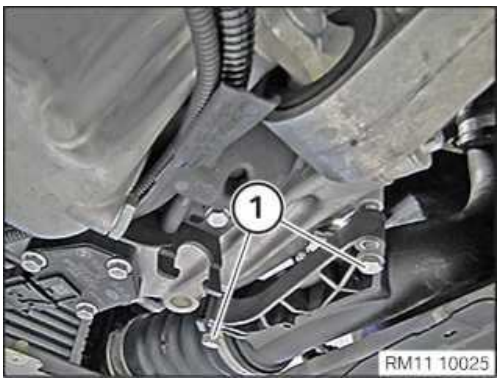


cardiagn.com



- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed in the charge air duct (1) in the **direction** of arrow between the side member and the deformation element and position.

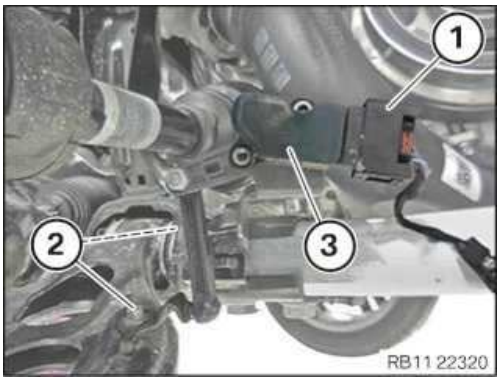
- Pull the adapter of the front axle support (1) downwards to the front right.
- Position the charge air duct (2) in **marked** area on the charge air cooler.



- Feed in and install the charge air duct (1) on the charge air cooler .
- Make sure the charge air duct (1) engages audibly on the charge air cooler.

- Feed in and install charge air duct (1) in the **direction** of the arrow on exhaust turbocharger.

  The locks (2) must engage audibly.

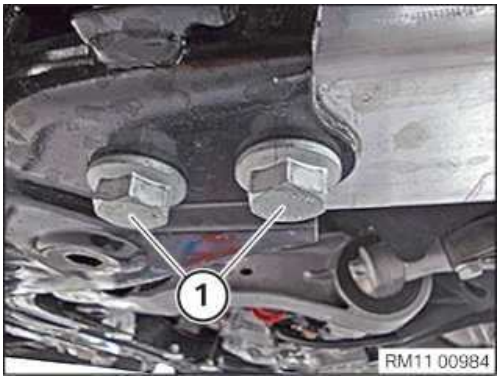


- Tighten the screws (1).

Charge air duct to oil sump

M6		Tightening torque	8 Nm

cardiagn.com



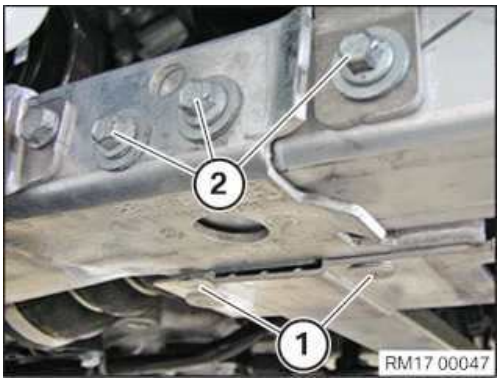
- **If installed:**
- Feed in and install the ride height sensor (3).
- Tighten the screws (2).

Ride height sensor holder to front axle support

M6		Tightening torque	8 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

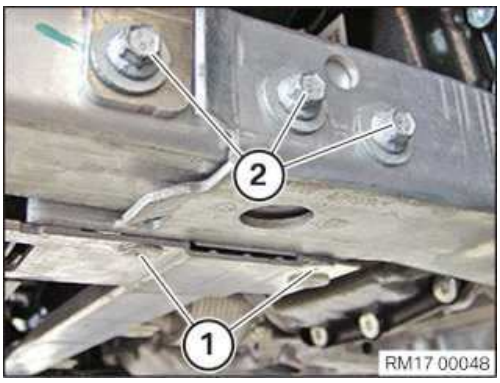


- Tighten the screws (1) on the adapter of the front axle support.

Adapter, front axle support to front axle support

		Tightening torque	100 Nm

- Guide in cross connection (3) and install.
- Guide in locks (2) and install.
- Lock the locking pins (1).
- Ensure that the locking pins (1) audibly engage.



- Tighten the bolts (2) at the front left.

Cross connection to front axle support

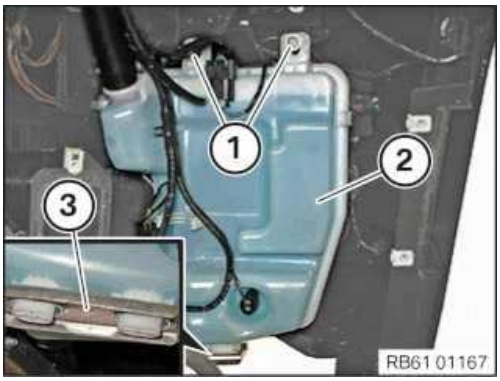
M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front left.

- Tighten the bolts (2) at the front right.

Cross connection to front axle support



M6		Tightening torque	12 Nm

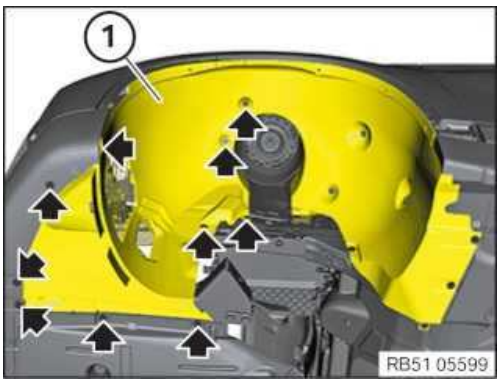
- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front right.

25 – Install the washer fluid reservoir in the fixture

cardiagn.com

- Feed washer fluid reservoir (2) into the mounting (3) and install.
- Tighten the screws (1).



Washer fluid reservoir to body

M6x20		Tightening torque	8 Nm

26 – Partially install the front wheel arch cover

NOTICE

Description is for left component only. Procedure on the right side is identical.

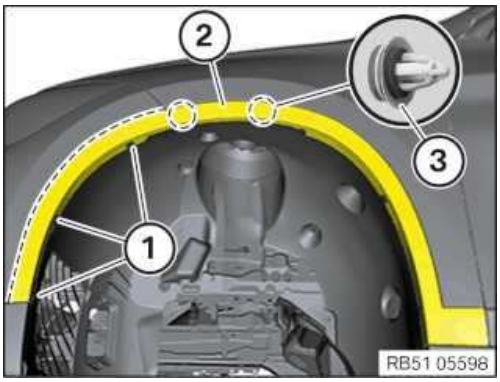
- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm



▶ **Partly install the front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

27 – Installing the front right wheel arch cover

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

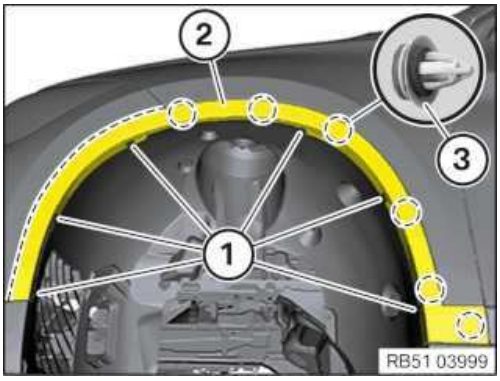
- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm



▸ **Installing front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.
  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

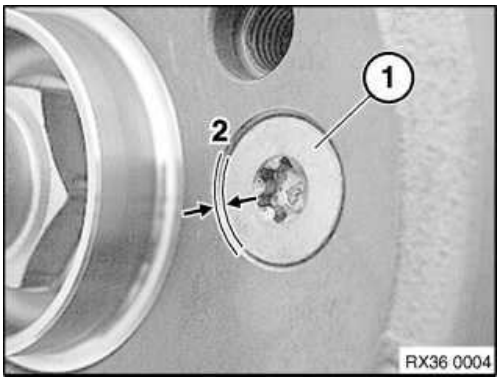
28 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

cardiagn.com

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

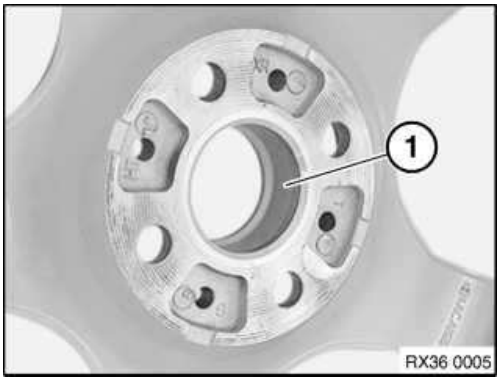


- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

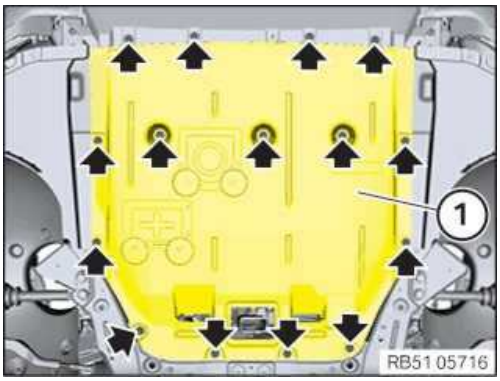
TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

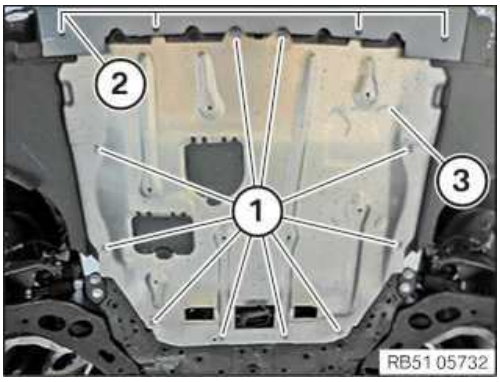


- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		



29 – Installing the front underbody protection

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front

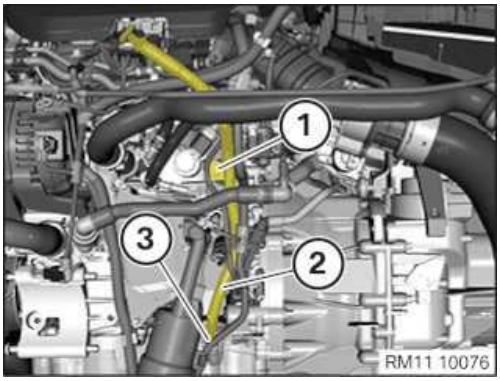
Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

30 – Installing guide tube for oil dipstick

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.



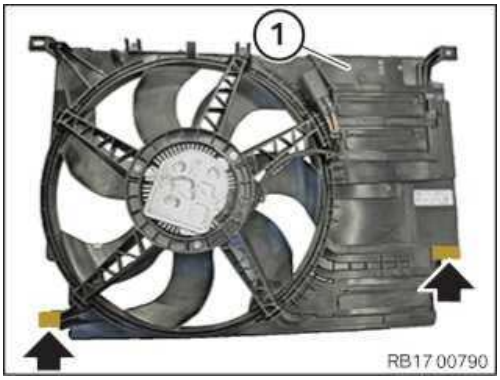
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Renew O-ring (1).

  Parts: O-ring

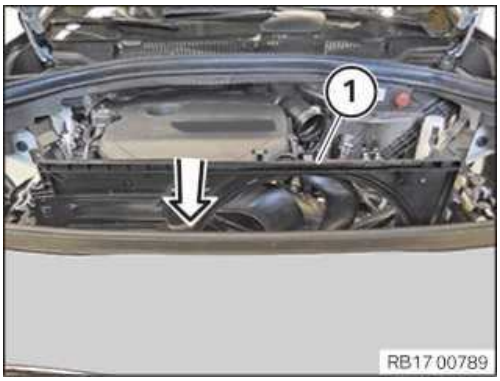
- Guide in guide tube (2) for oil dipstick and slide it into the oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).



Guide tube for oil dipstick on engine

M8x16		Tightening torque	19 Nm

31 – Installing fan cowl with electric fan



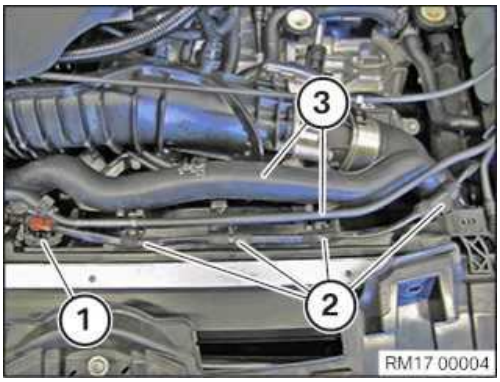
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Feed the guides (arrows) of the fan cowl (1) into the charge air cooler.

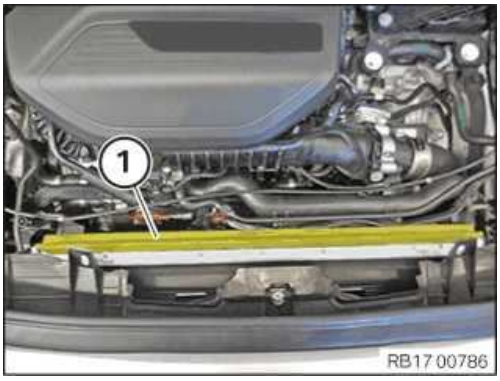
cardiagn.com

- Feed in and install the fan cowl (1) in the direction of the arrow.



- Lock the left and right locks (arrows).

- Tighten the screws (1).

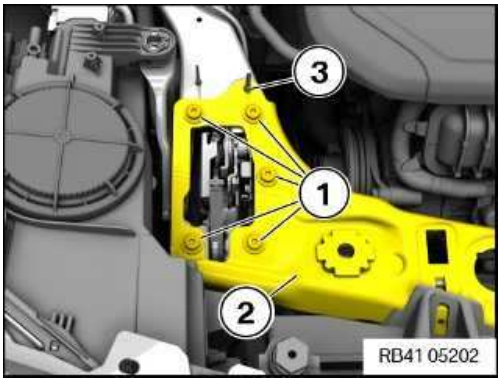


Fan cowl on radiator

M6X12		Tightening torque	6 Nm

- Connect connectors (1) and lock.

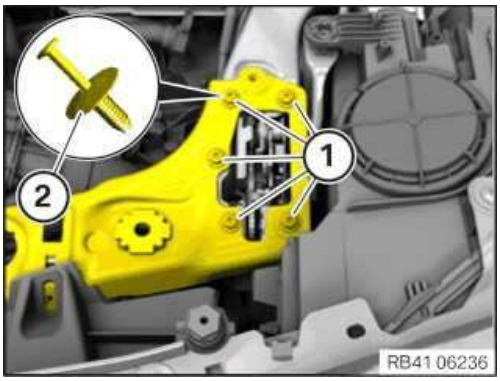
  The connector (1) must engage audibly.
- Secure clamps (2).
- Thread in and install coolant line (3).



- Guide the sealing (1) on the radiator in and install it.

32 – Install front cross connection

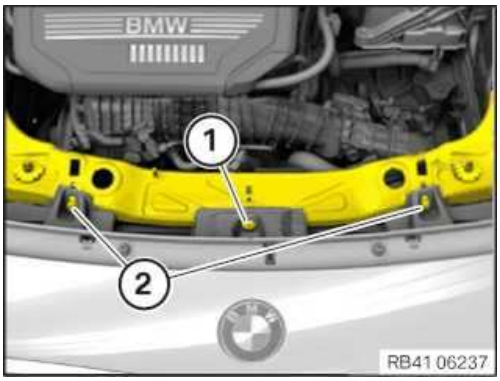
cardiagn.com



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

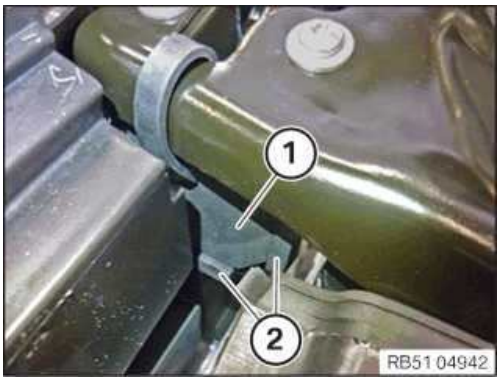
Screws M6x20		Tightening torque	11,8 Nm

- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

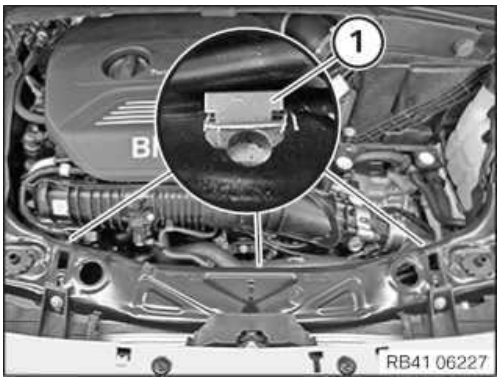
- Tighten down screws (2).



Air duct to upper connection

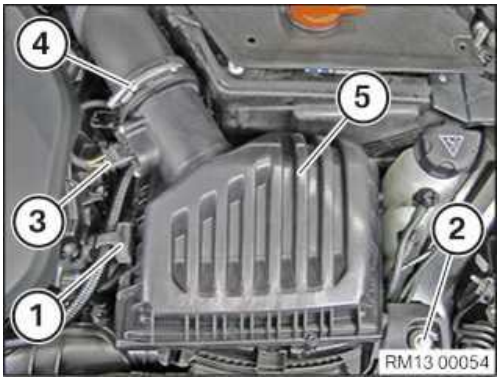
M6x20 screw		Tightening torque	11,8 Nm

- Tighten down screw (1).



Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm



- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

cardiagn.com

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

33 – Installing intake silencer housing

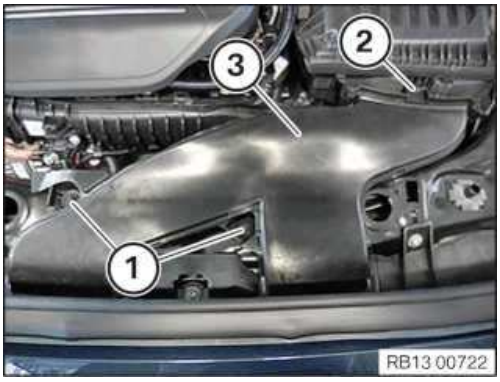
- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

34 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

35 – Disconnecting all battery earth leads

- See additional information.

36 – Topping up the engine oil

cardiagn.com

RISK OF DAMAGE

Damage to the petrol particulate filter.

Vehicles equipped with a petrol particulate filter must be operated with low-ash engine oil only.

- Use BMW Longlife-04 , BMW Longlife-12 FE or BMW Longlife-17 FE+ engine oils or engine oils approved by BMW matching the same specifications only.
- For additional information see: Overview of approved engine oils for BMW Group engines.

RISK OF DAMAGE

Engine damage caused by excessively filling the engine with engine oil.

Filling an excessive quantity of engine oil may cause engine damage.

- Observe the exact engine oil filling capacity.
- Drain the engine oil.

- Pour in engine oil.

Engine oilB47TÜ1

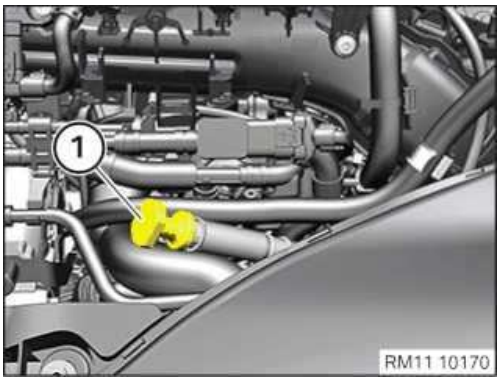
Capacity of engine oil	5,5 l

Engine oil: Technically suitable engine oils for BMW Group engines

37 – Installing the oil filler cap

- Close oil filler cap (1).

38 – Check engine oil level



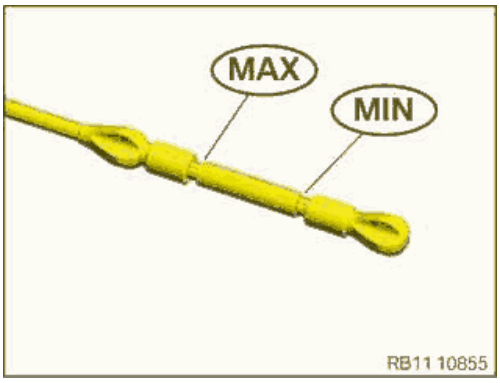
- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▶ **Check engine oil level**

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).

cardiagn.com



- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.

TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

39 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

cardiagn.com

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

Seal, guide tube for oil dipstick on oil sump	30

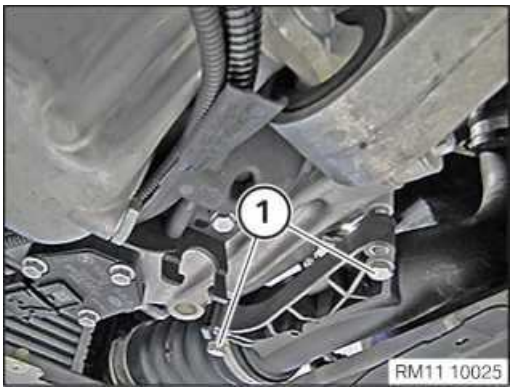
cardiagn.com

11 13 000 Removing and installing, sealing or replacing oil sump (B47)

Special tools required:

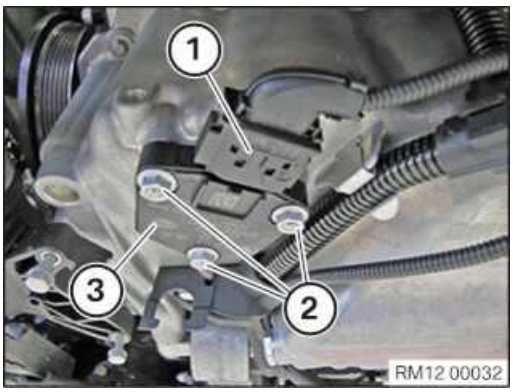
- 11 4 472
- 11 4 471
- 11 8 780

Necessary preliminary tasks:



- Remove underbody protection
- Remove oil dipstick guide tube.
- Drain engine oil.
- Remove starter motor.
- Bracket remove.

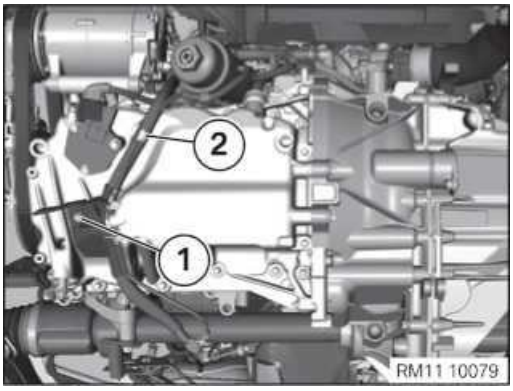
Important!



Engines with surface sealant:

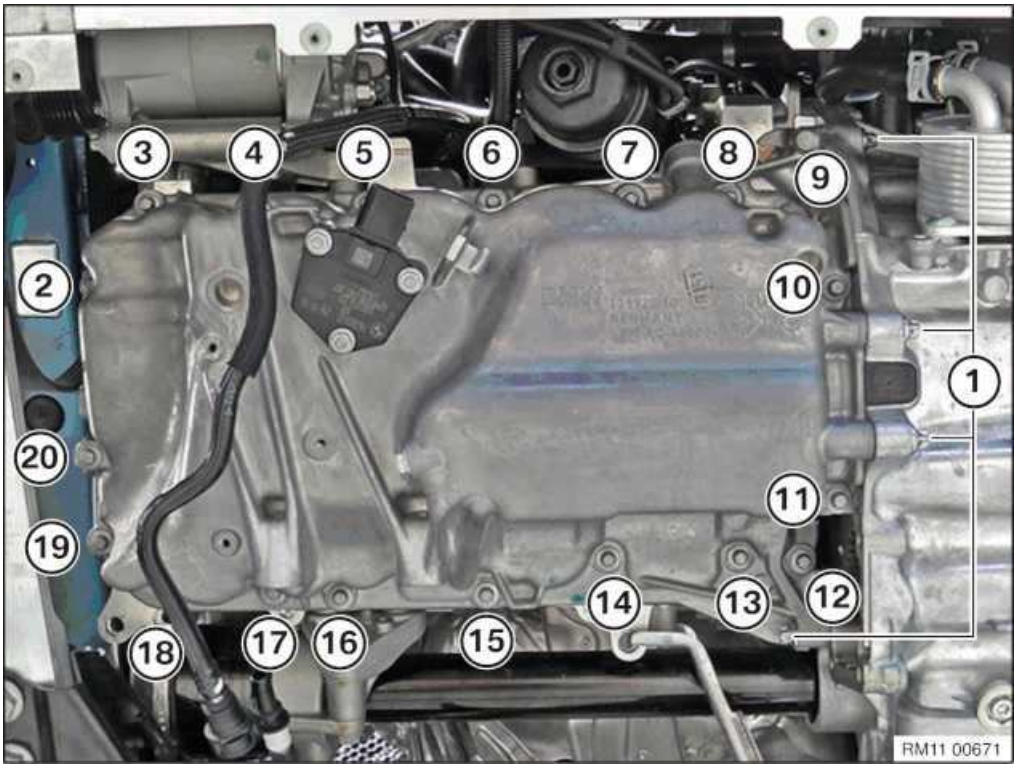
Application time of sealing bead max. 12 minutes.

Removal:



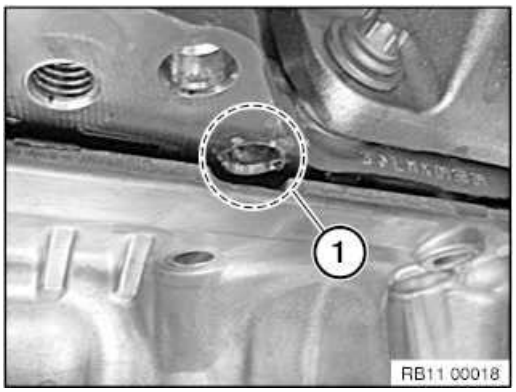
Release screws (1) from pressure pipe.

Unlock connector (1) and remove.



cardiagn.com

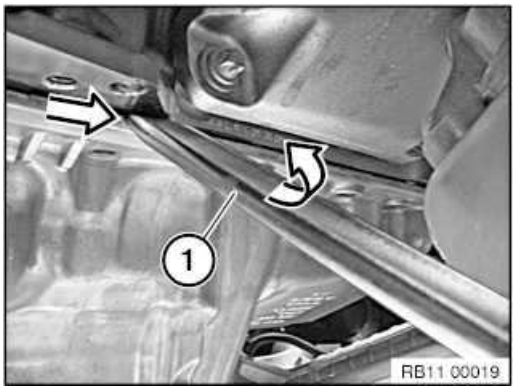
Release screw (1).



Release positive wire from clip (2).

Place wiring harness to one side.

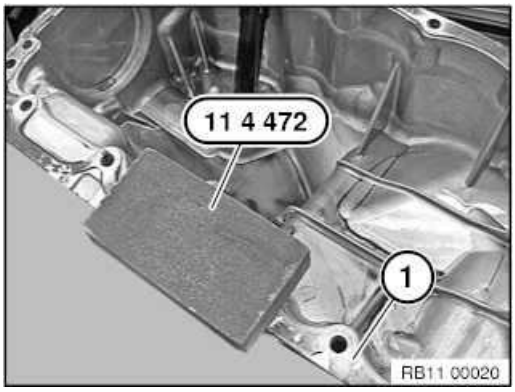
Release screws (1) from transmission.



Release screws (2-20).

Engine with liquid gasket: Important!

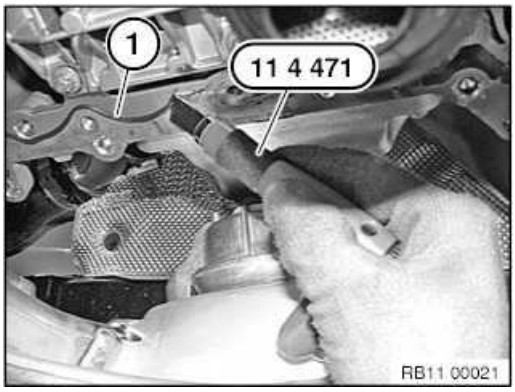
The oil sump can only be loosened in the areas (1) where an aperture is present in the oil sump.



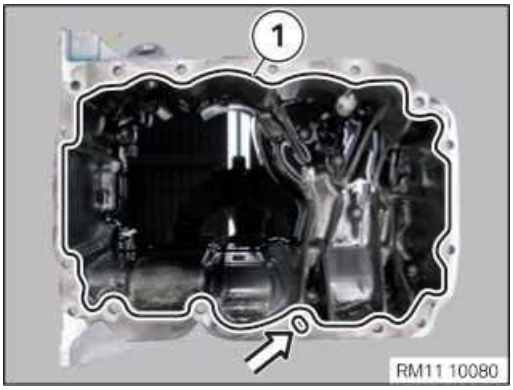
cardiagn.com

Use a mounting lever (1) to release oil sump in direction of arrow at the correct location.

Preparation for installation:



Clean sealing residues from oil sump and crankcase.



Important!

Do not use any metal-cutting tools (e.g. emery cloth).

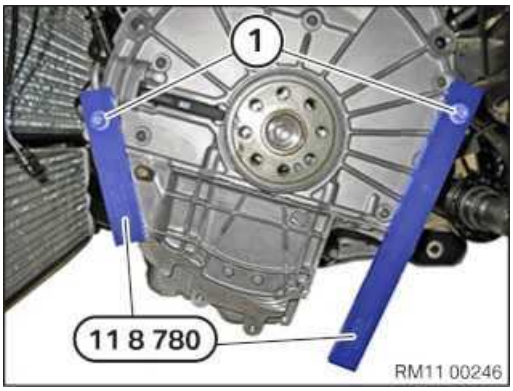
Clean sealing surface (1) with special tool 11 4 472 .*Installation note:* Sealing surfaces must be free of oil, grease and cleaning agents.

Clean sealing surface (1) with special tool 11 4 471 .*Installation note:* Sealing surfaces must be free of oil, grease and cleaning agents.

Applying sealing compound without replacing front bottom gear case cover:

Apply the sealing compound 2.2 in area (1).

Make sure that the sealing bead runs along the inner edge.



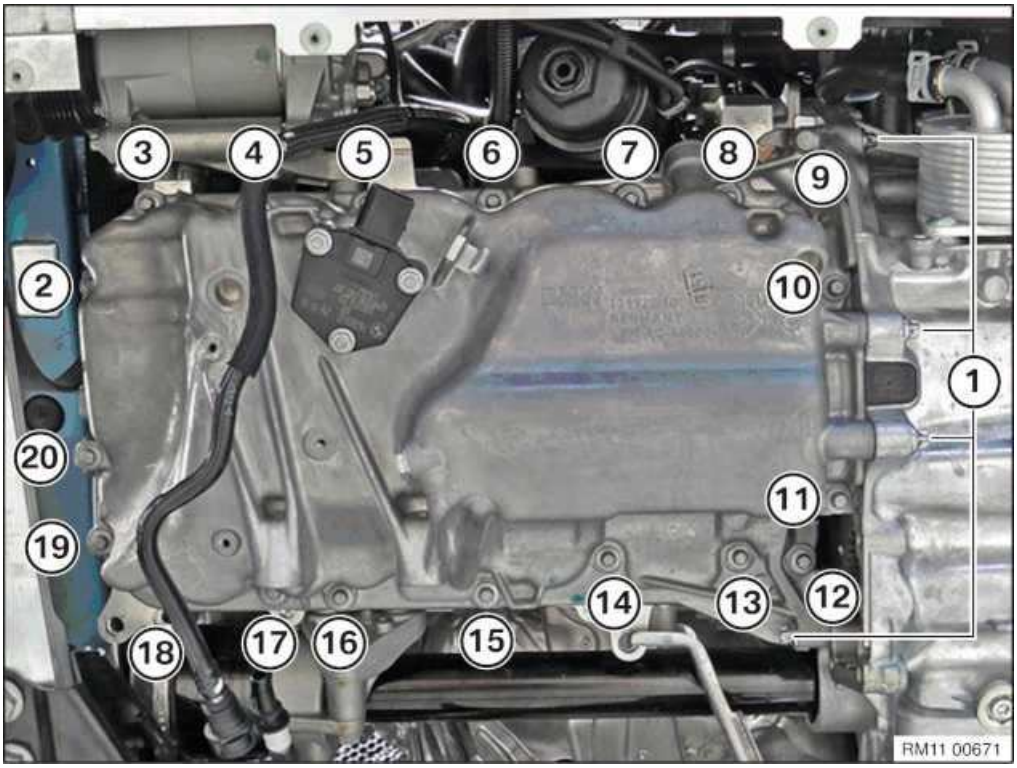
The oil return duct must be completely encircled.

Installation note:
The oil sump must be installed approximately 10 minutes after application of the sealing compound.

Sealant height approximately 2 to 2.5 mm.

cardiagn.com

Installation:



Installation note:
Special tool 11 8 780 is only necessary if the engine or the transmission is removed.

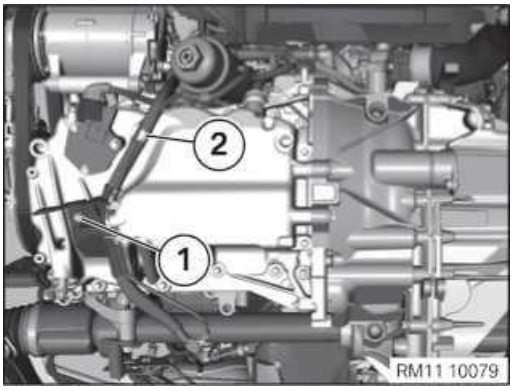
Position special tool 11 8 780 with transmission bolts (1) so that engine oil sump is exactly flush with engine block.

If necessary, replace fitting sleeves.

Attaching the oil sump.

Installation note:
Tighten all screws (2-20) on oil sump to 5 Nm.

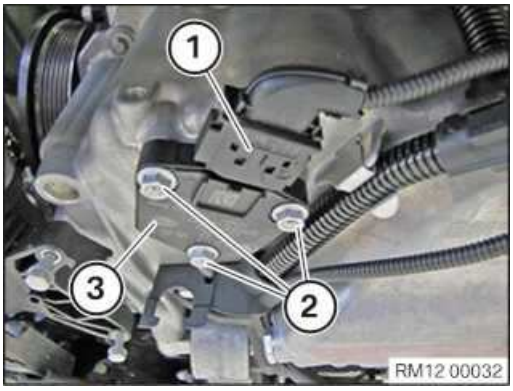
Join Torx screws (1) to 5 Nm.



Tighten down all screws on oil sump.

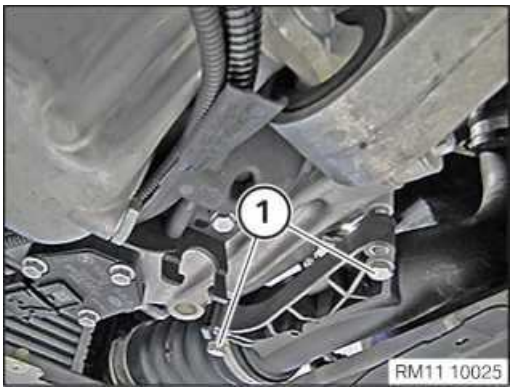
Tightening torque: 11 13 2AZ.

Tighten down Torx screws (1).



Tightening torque: 11 13 3AZ.

cardiagn.com



Tighten screw (1).

Clip in positive wire in clip (2).

Attach connector (1).

Tighten screws (1) of pressure pipe.

Required follow-up work:

- Install holder.
- Install starter.
- Install guide tube for oil dipstick.
- Top up engine oil.
- Install underbody protection.

cardiagn.com

11 14 295 Remove and install / replace the acoustic cover for the oil sump

PRELIMINARY WORK

1 – Disconnecting all battery earth leads

- See additional information.

2 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

TECHNICAL INFORMATION

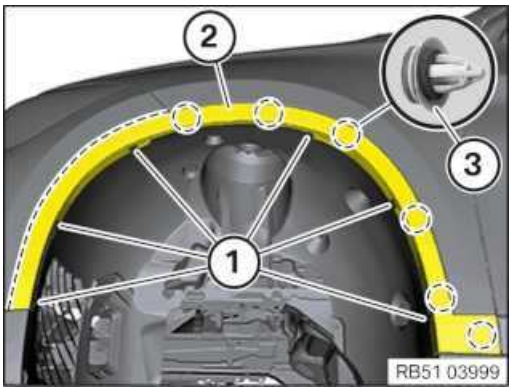
Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

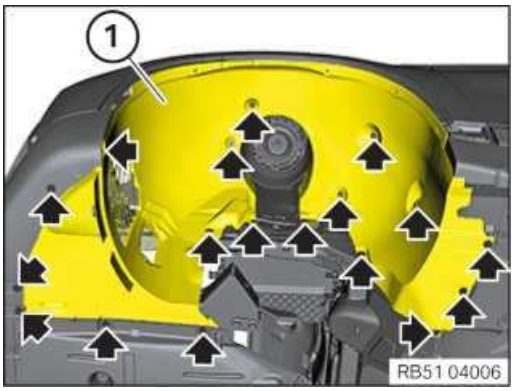
3 – Removing the front right wheel arch cover

▸ **Remove the front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.



NOTICE

Description is for left component only. Procedure on the right side is identical.

cardiagn.com

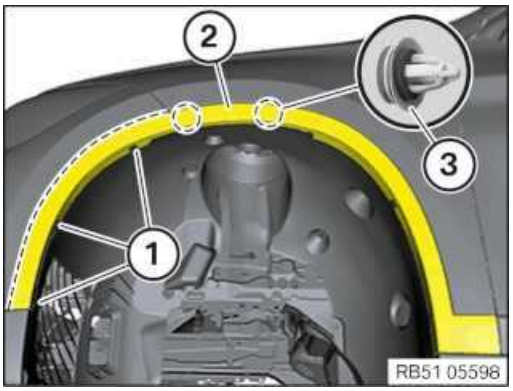
- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

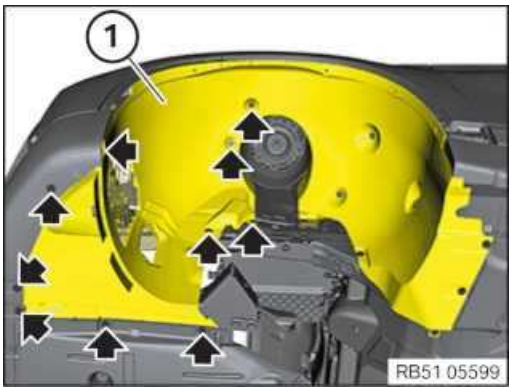
4 – Partially remove the front wheel arch cover



▶ **Partially removing the front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

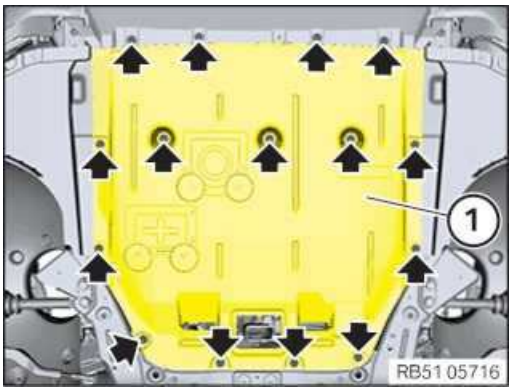


NOTICE

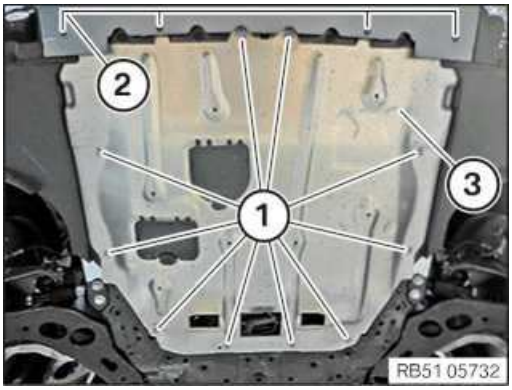
Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

cardiagn.com



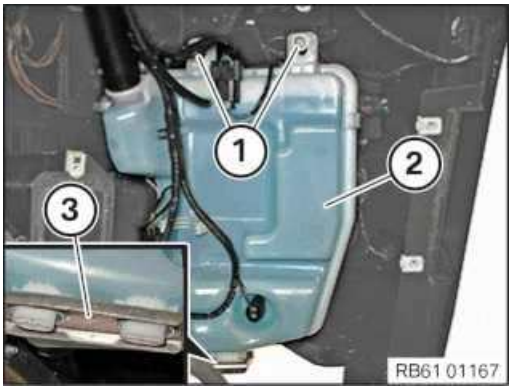
NOTICE



Description is for left component only. Procedure on the right side is identical.

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (2) out.

5 – Removing the front underbody protection



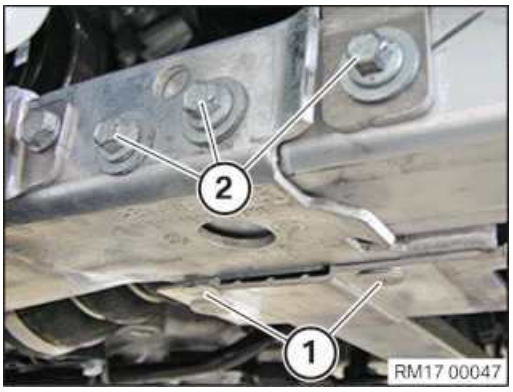
- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

6 – Remove the washer fluid reservoir from the fixture

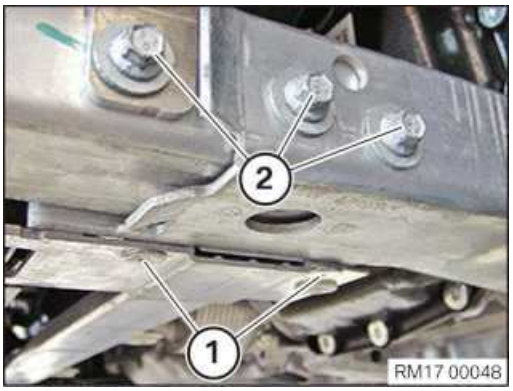
- Loosen screws (1).
- Guide the washer fluid reservoir (2) up and out of the fixture (3) and set it aside.

7 – Removing the right charge air duct between the exhaust turbocharger and the charge air cooler



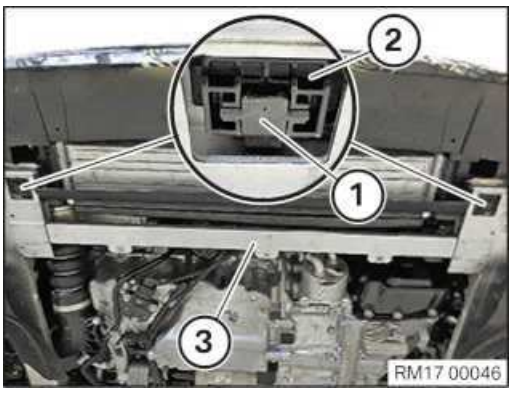
WARNING

Hot surfaces.

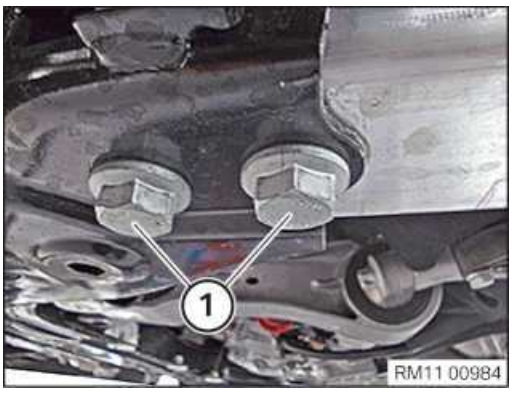


Risk of burning!

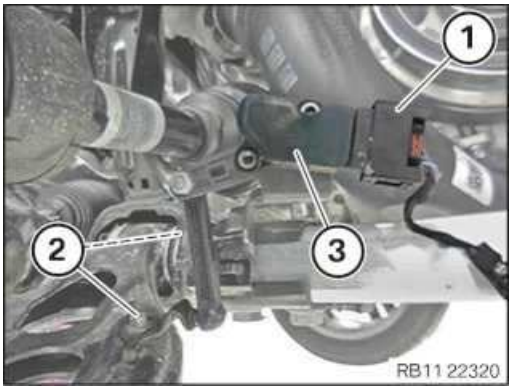
- Perform all work only on components that have cooled down.



cardiagn.com

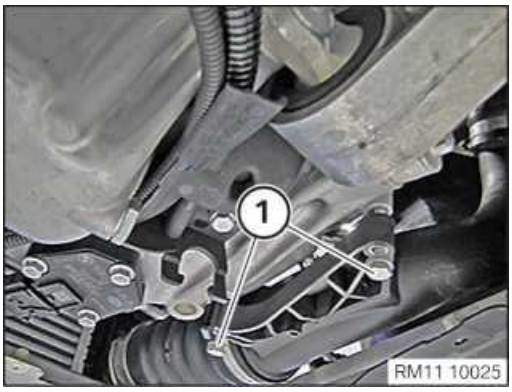


- Undo screws (2) at front left.
- Drill out blind rivets (1) at front left.

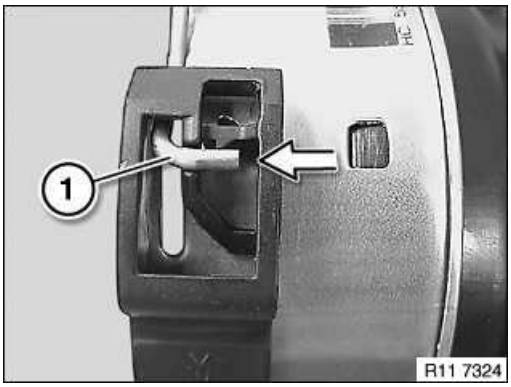


- Undo screws (2) at front right.
- Drill out blind rivets (1) at front right.

- Unlock locking pins (1).
- Thread out and remove locks (2).
- Thread out and remove cross connection (3).

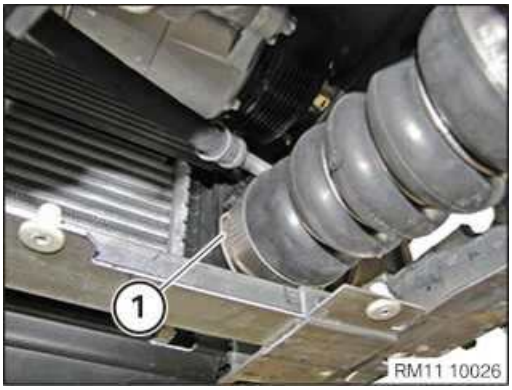


- Release the screws (1) on the right front axle support.

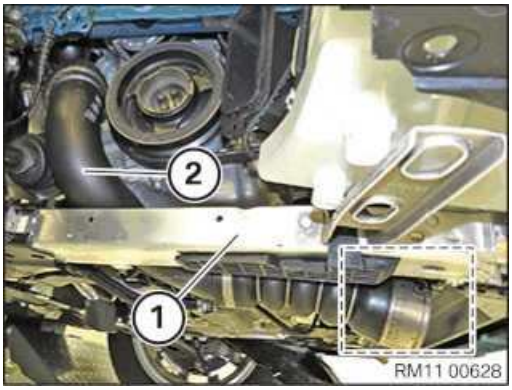


- **If installed:**
- Unlock and release plug connection (1).
- Loosen screws (2).
- Feed out the ride height sensor (3) and remove.

cardiagn.com



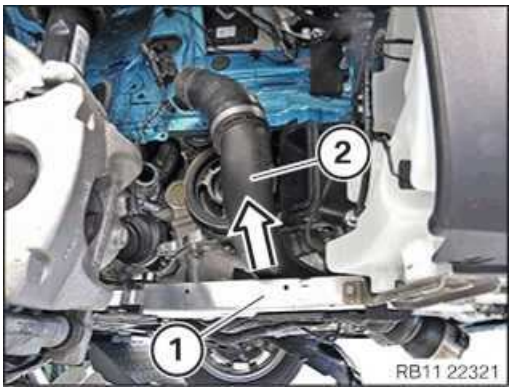
- Release screws (1) of charge air duct on right oil sump.



- Unlock lock (1).

  The lock (1) must engage in the bracket during unlocking (arrow).

- Unlock and release the charge air duct (1) on the charge air cooler.

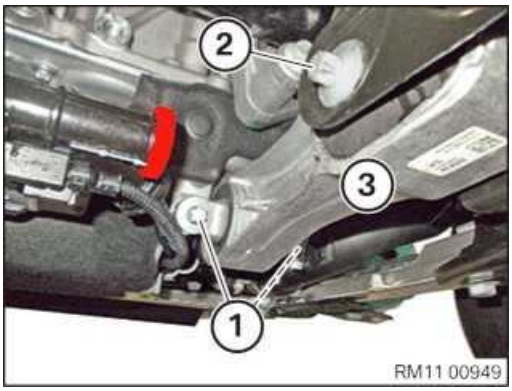


- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (2) in the **marked** area towards the bottom and set it aside.

- Unlock and detach the locks (1) on both sides.
- Feed out the charge air duct (2) on the exhaust turbocharger in the direction of the arrow and set it aside.

cardiagn.com

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (1) in the direction of arrow between the side member and the deformation element and remove.



8 – Remove bracket with rubber mount

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

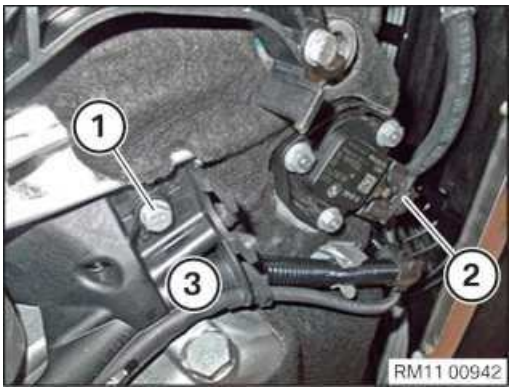
Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

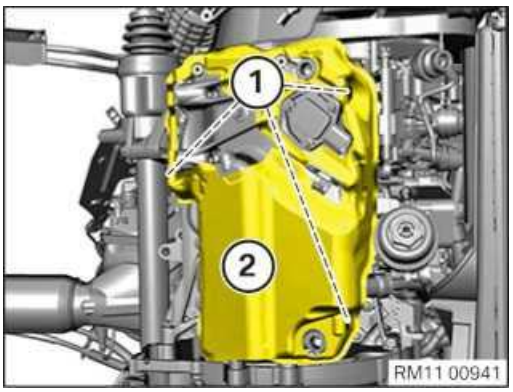
- Support the engine with the jack at a suitable point.
- Loosen screws (1) and (2).
- Guide out and remove holder (3).

MAIN WORK

9 – Removing the acoustic cover of the oil sump

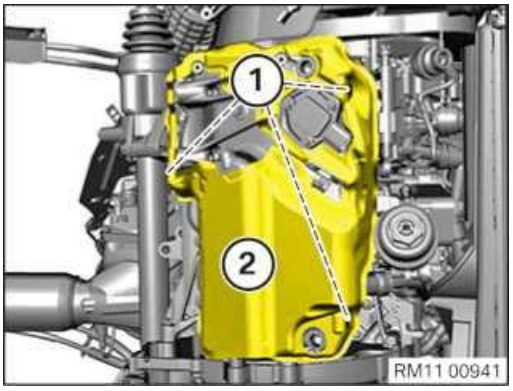


- Unlock connector (1) and pull off.
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).

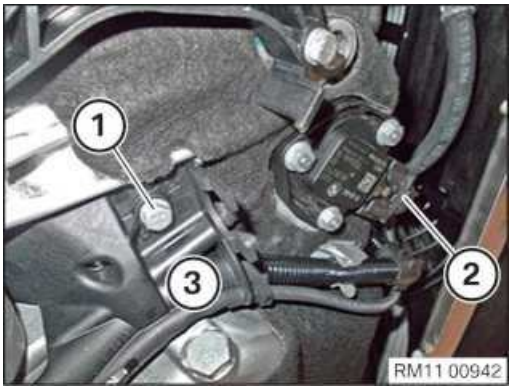


cardiagn.com

- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.



- Unscrew the screw (1) on the wiring harness to the oil sump.
- Unlock and pull off connector (2) on the oil-level sensor.
- Place wiring harness (3) to one side.



- Remove the expanding rivets (1) on both sides of the acoustic cover.
- Feed out and remove the acoustic cover (2).

10 – Installing the acoustic cover for the oil sump

- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).

- Position wiring harness (3).
- Tighten down screw (1).

Bracket to oil sump

M6		Tightening torque	8 Nm

- Connect and lock the connector (2) on the oil-level sensor.

  The connector must lock audibly.

cardiagn.com

CAUTION

Improper routing of the positive battery cable.

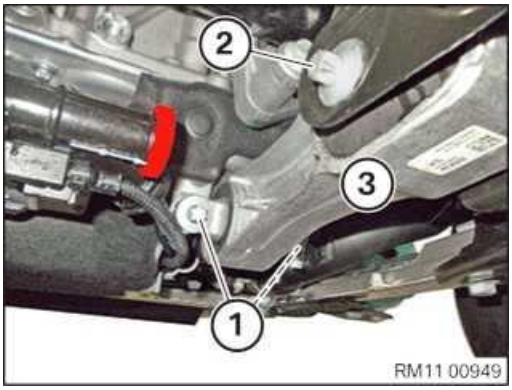
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm



- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).

  The connector must engage audibly.

POSTPROCESSES

11 – Install the holder with the rubber mount

- Insert and install the holder (3).
- Tighten the screws (1) and (2) hand-tight.
- Release jack.
- Tighten down screw (2).

Holder to front axle support

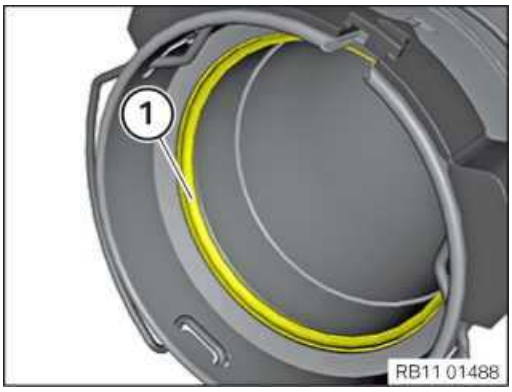
M12		Tightening torque	100 Nm

- Tighten the screws (1).

Bracket to oil sump

M12		Tightening torque	100 Nm

12 – Installing the right charge air duct between the exhaust turbocharger and the charge air cooler



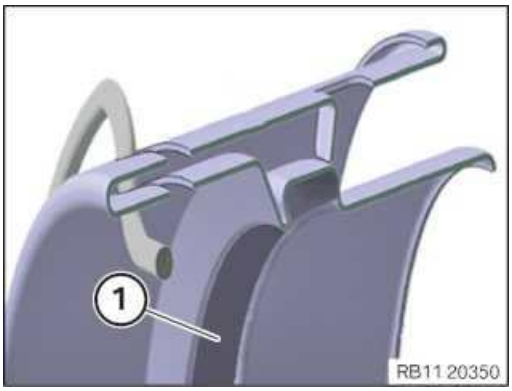
RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.

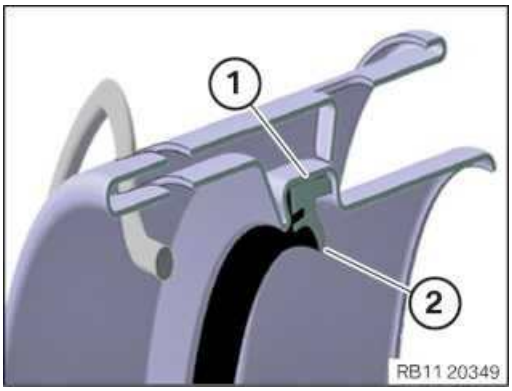
cardiagn.com



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

▶ **Replace damaged gasket**

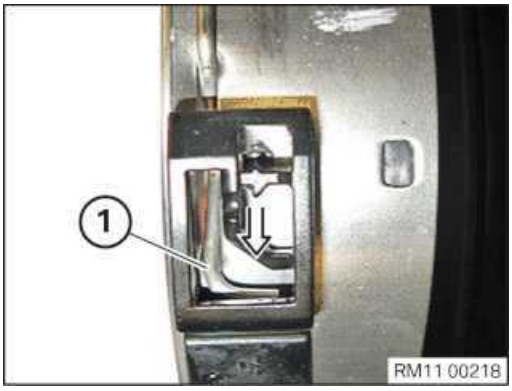


TECHNICAL INFORMATION

Do not use pointed or sharp-edged tools for the installation and/or removal.

- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

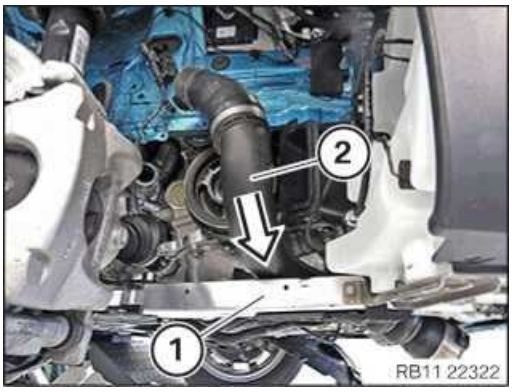
  The gasket groove (1) must be clean.



- Renew gasket.

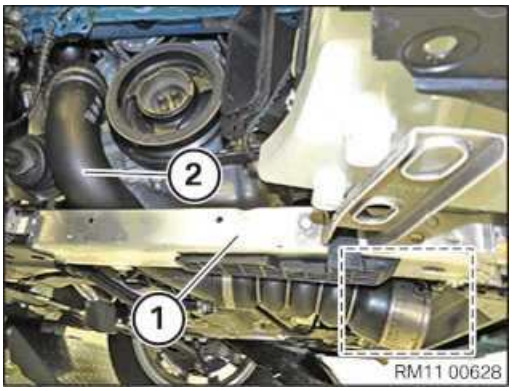
  Parts: Gasket
- Install seal dry without lubricant or mounting agent.

TECHNICAL INFORMATION

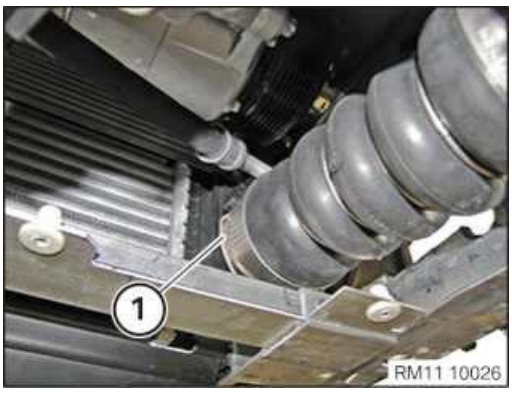


Incorrect assembly is possible. Ensure correct installation position.

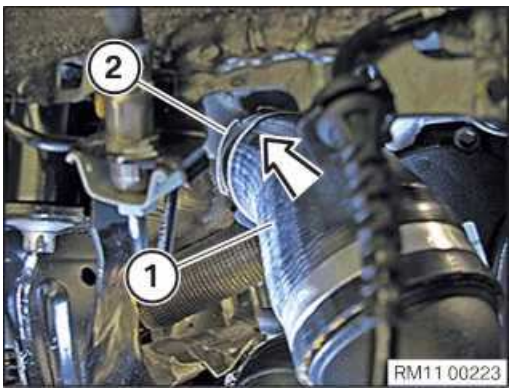
- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).



- Detach the locks (1) in the direction of the arrow from the brackets.
- Ensure that the locks (1) engage audibly.

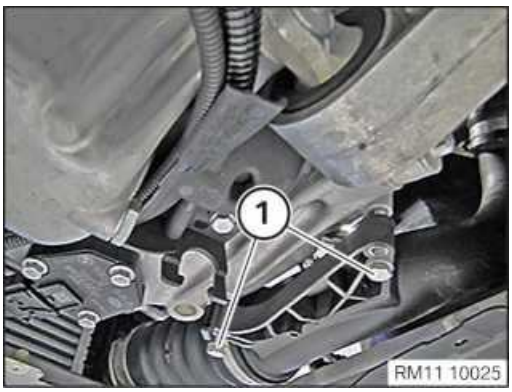


cardiagn.com



- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed in the charge air duct (1) in the **direction** of arrow between the side member and the deformation element and position.

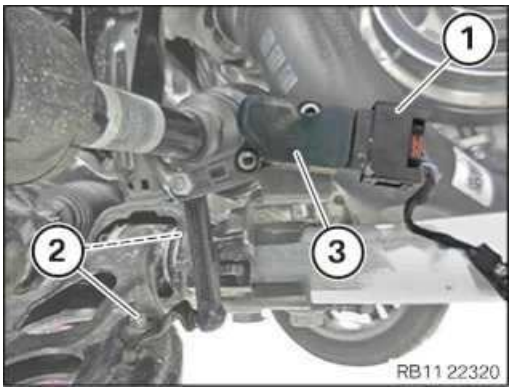
- Pull the adapter of the front axle support (1) downwards to the front right.
- Position the charge air duct (2) in **marked** area on the charge air cooler.



- Feed in and install the charge air duct (1) on the charge air cooler .
- Make sure the charge air duct (1) engages audibly on the charge air cooler.

- Feed in and install charge air duct (1) in the **direction** of the arrow on exhaust turbocharger.

  The locks (2) must engage audibly.

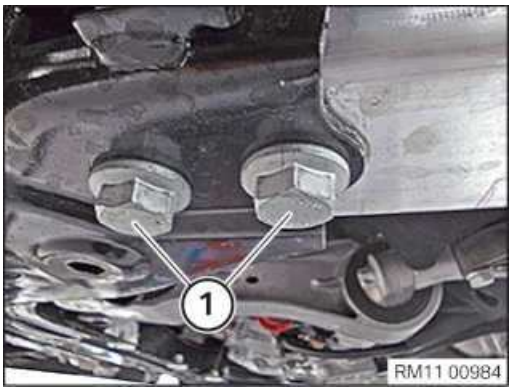


- Tighten the screws (1).

Charge air duct to oil sump

M6		Tightening torque	8 Nm

cardiagn.com



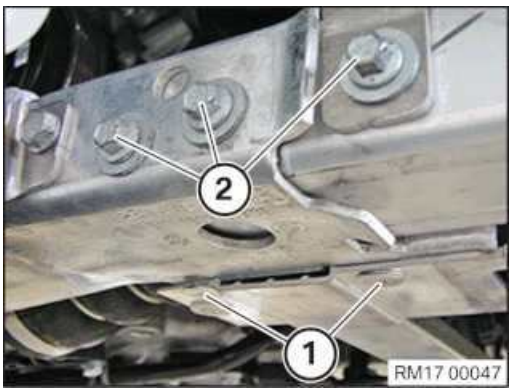
- **If installed:**
- Feed in and install the ride height sensor (3).
- Tighten the screws (2).

Ride height sensor holder to front axle support

M6		Tightening torque	8 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

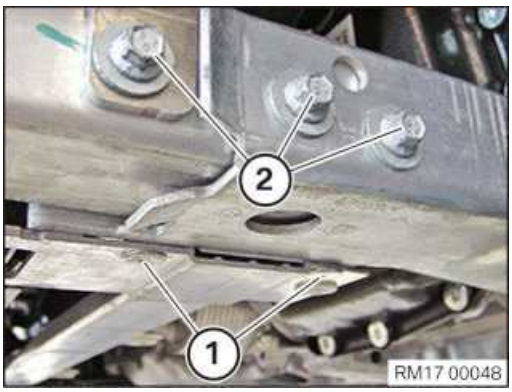


- Tighten the screws (1) on the adapter of the front axle support.

Adapter, front axle support to front axle support

		Tightening torque	100 Nm

- Guide in cross connection (3) and install.
- Guide in locks (2) and install.
- Lock the locking pins (1).
- Ensure that the locking pins (1) audibly engage.



- Tighten the bolts (2) at the front left.

Cross connection to front axle support

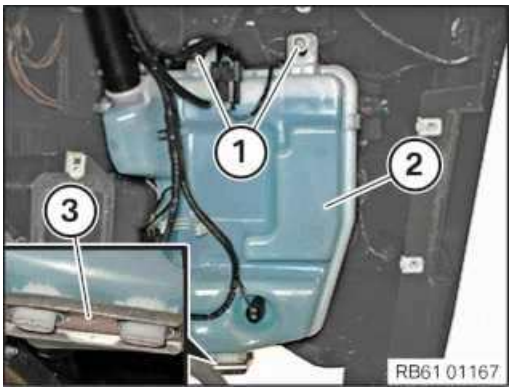
M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front left.

- Tighten the bolts (2) at the front right.

Cross connection to front axle support



M6		Tightening torque	12 Nm

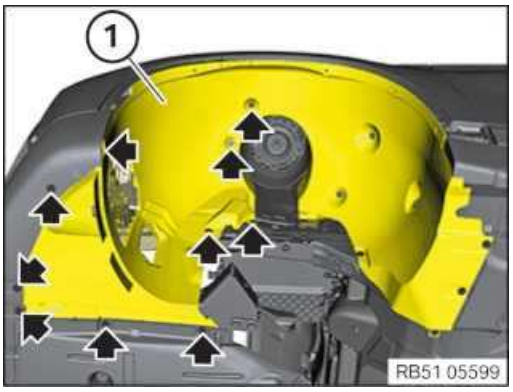
- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front right.

13 – Install the washer fluid reservoir in the fixture

cardiagn.com

- Feed washer fluid reservoir (2) into the mounting (3) and install.
- Tighten the screws (1).



Washer fluid reservoir to body

M6x20		Tightening torque	8 Nm

14 – Partially install the front wheel arch cover

NOTICE

Description is for left component only. Procedure on the right side is identical.

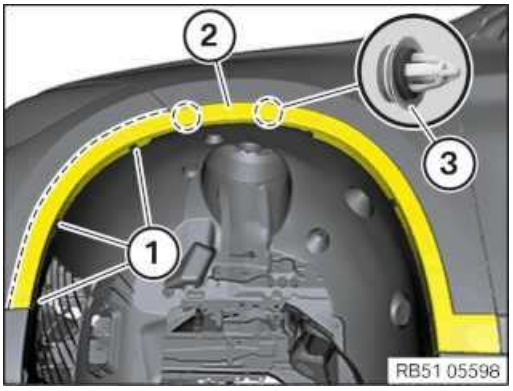
- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm



▸ **Partly install the front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

15 – Installing the front right wheel arch cover

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

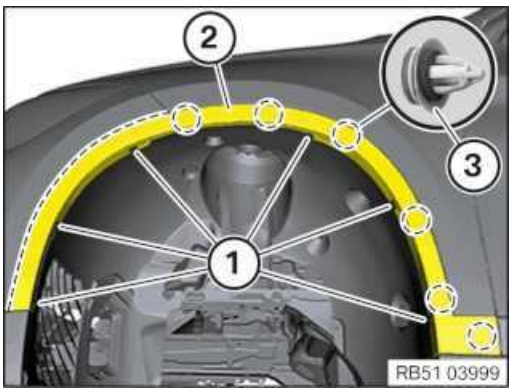
- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm



▸ **Installing front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

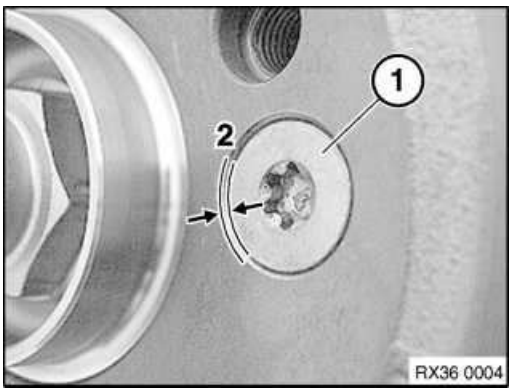
16 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

cardiagn.com

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

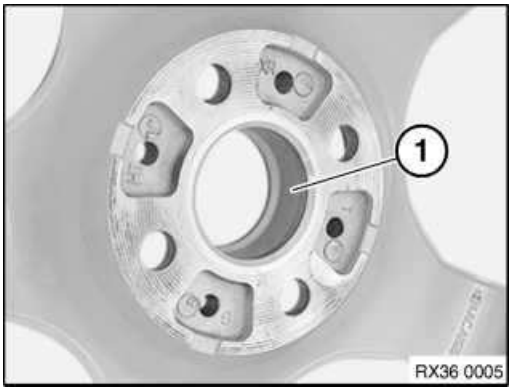


- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

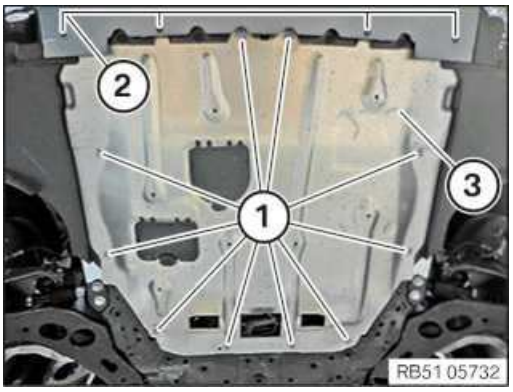
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

cardiagn.com



17 – Installing the front underbody protection

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

18 – Disconnecting all battery earth leads

- See additional information.

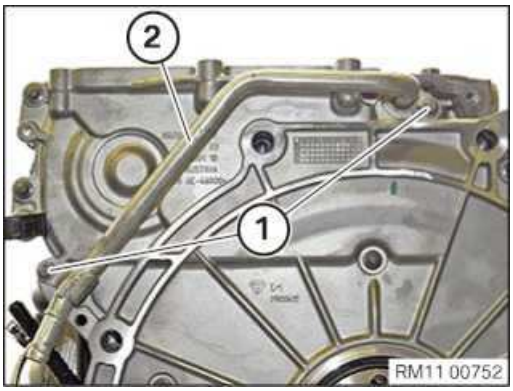
11 14 110 Removing and installing, sealing/replacing rear timing case cover (B47)

Special tools required:

- 11 4 470
- 11 8 815
- 11 8 811
- 11 8 812
- 11 8 813
- 11 8 814

Important!



Engines with surface sealant:

Application time of sealing compound max. 12 minutes.

Necessary preliminary tasks:

- Remove engine with gearbox.
- Mount engine on assembly stand.
- Remove flywheel.
- Remove cylinder head.
- Removing oil sump.

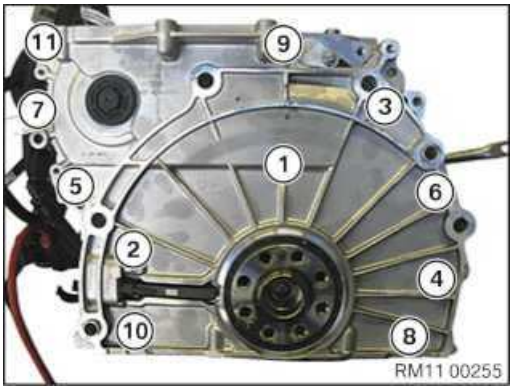
REMOVAL:

Release screws (1).

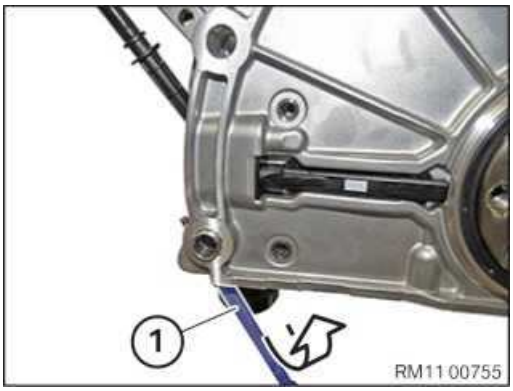
Remove coolant line (2).

Note:
Graphic B48.

cardiagn.com

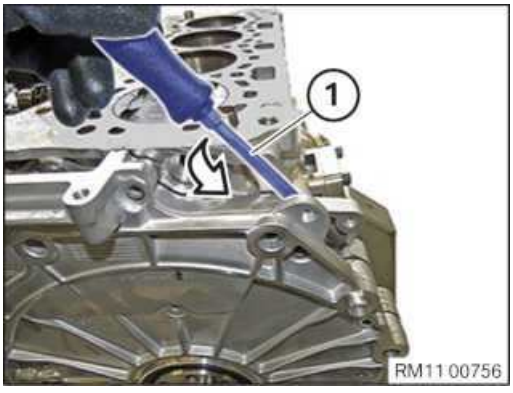


Important!



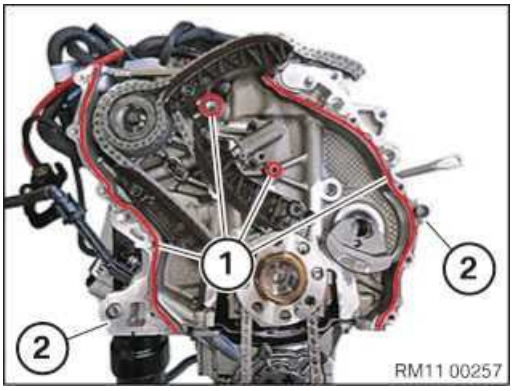
Magnet wheel (1) is magnetic.

Keep magnet wheel (1) in a plastic bag away from swarf.



Remove magnet wheel (1) from crankshaft.

Release screws in the sequence **11 to 1**.

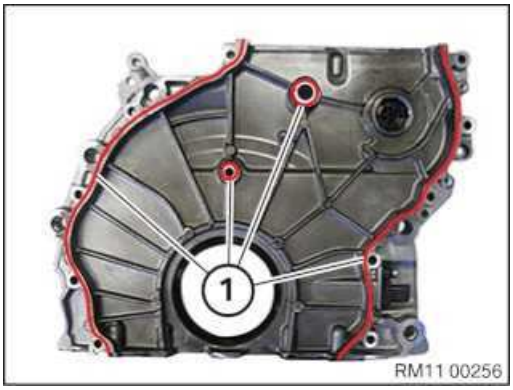


Loosen gear case cover with a screwdriver (1) in direction of arrow.

Loosen gear case cover with a screwdriver (1) in direction of arrow.

Remove gear case cover.

cardiagn.com



Important!

Do not use any metal-cutting tools (e.g. emery cloth).

Remove gasket remnants from the crankcase with special tool 11 4 470 .

Check that fitting sleeves (2) are correctly fitted, replace if necessary.

INSTALLATION:

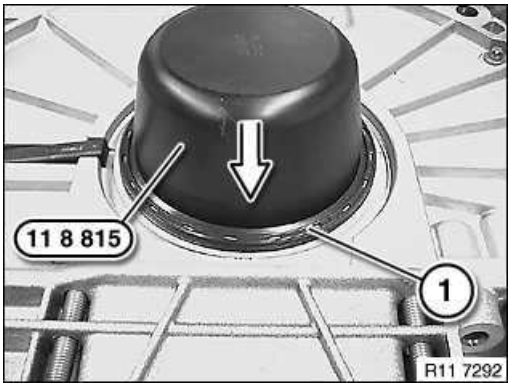
When replacing the rear timing case cover:

Note:

Application time of sealing bead (1) max. 12 min.

Thickness of sealing bead: **1.5 to 2.0 mm**.

Apply sealing bead (1) at the positions indicated (see graphic) on the inside of the timing case cover.

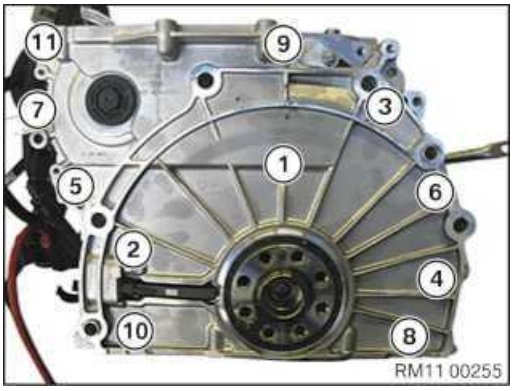


Parts:

Sealing bead (1): sealant 2.2.

Important!

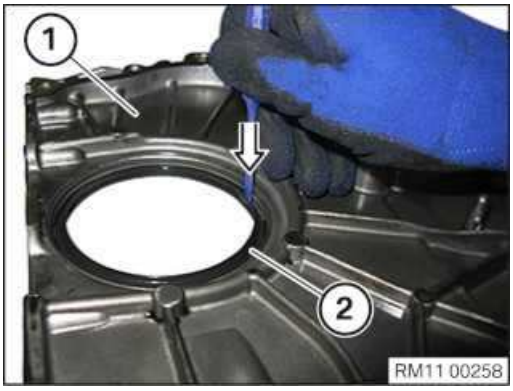
The radial shaft seal must be installed dry.



Do not use engine oil or lubricant.

Preassemble special tool 11 8 815 on crankshaft.

Mount the timing case cover with radial shaft seal (1).

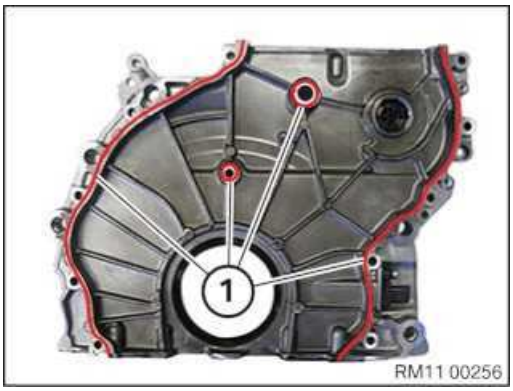


cardiagn.com

Insert bolts.

Tighten bolts in the sequence **1 to 11**.

Tightening torque: 11 14 1AZ.



When reinstalling the timing case cover:

Support the timing case cover (1) from below.

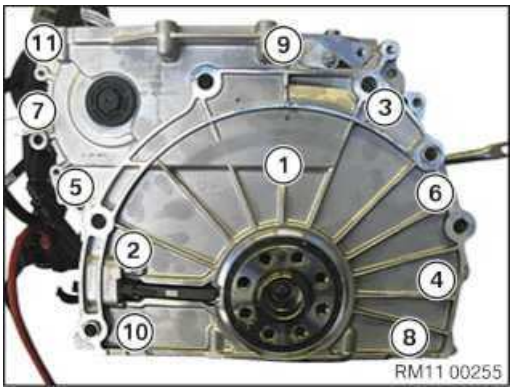
Place punch inside in the radial shaft seal (2).

Drive radial shaft seal (2) outwards.

Installation note:
Application time of sealing bead (1) max. 12 minutes.

Thickness of sealing bead **1.5 to 2.0 mm**.

Important!



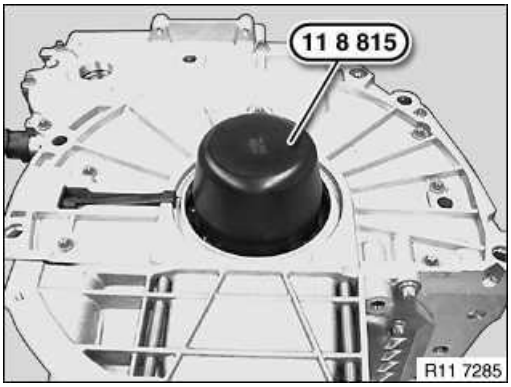
Do not use any metal-cutting tools (e.g. emery cloth).

Remove gasket remnants from the timing case cover using special tool 11 4 470 .

Apply sealing bead (1) at the positions indicated (see graphic) on the inside of the timing case cover.

Parts:

Sealing bead (1): sealant 2.2.



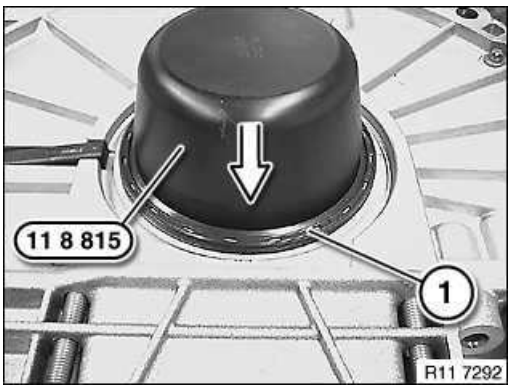
Mount timing case cover without radial shaft seal.

Insert bolts.

Tighten bolts in the sequence **1 to 11**.

Tightening torque: 11 14 1AZ.

cardiagn.com



Position special tool 11 8 815 on crankshaft.*Note:*
Graphic shows: N47 D20.

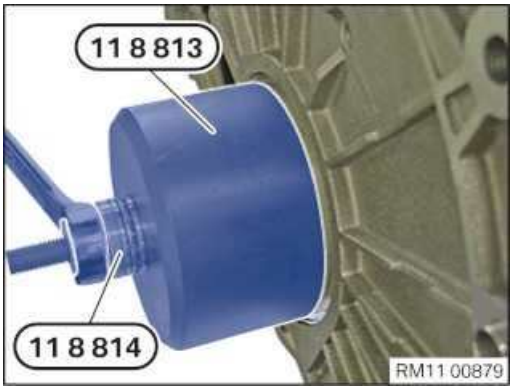
Important!

The radial shaft seal must be installed dry.

Do not use engine oil or lubricant.

Use special tool 11 8 815 to fit the radial shaft seal (1) in the direction of the arrow up to the timing case cover and position.

Remove special tool 11 8 815 .



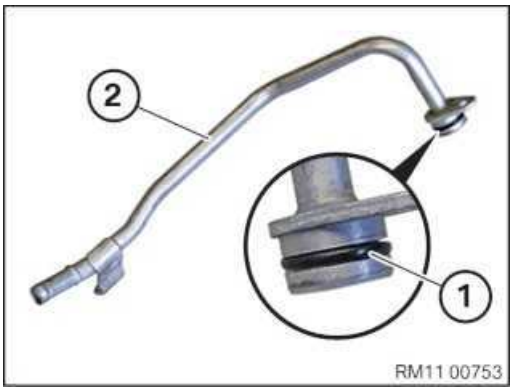
Fasten special tool 11 8 811 with special tool 11 8 812 on the crankshaft.

Slide on special tool 11 8 813 .

Screw down special tool 11 8 814 .

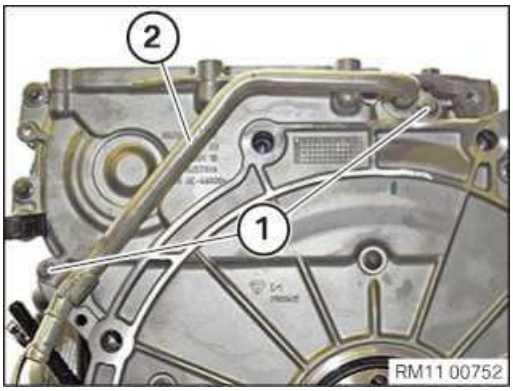
cardiagn.com

Press in radial shaft seal with special tool 11 8 813 .



Screw in special tool 11 8 813 up to gear case cover.

Note:
Check the fitting sleeve for damage.



Note the installation position of the magnet wheel.

Position magnet wheel (1) on crankshaft.

Check O-ring (1) of coolant line (2) for damage.

In case the O-ring is faulty, the coolant line (2) needs to be renewed.

Install coolant line (2).

Tighten down screws (1).

Note:
Graphic B48.

cardiagn.com

Concluding tasks:

- Install oil sump.
- Install cylinder head.
- Install flywheel.
- Remove engine from assembly stand.
- Install engine with transmission.

cardiagn.com

11 14 110 Removing and installing/sealing or replacing bottom timing case cover

PRELIMINARY WORK

1 – Removing engine

- See additional information.

2 – Removing the acoustic cover

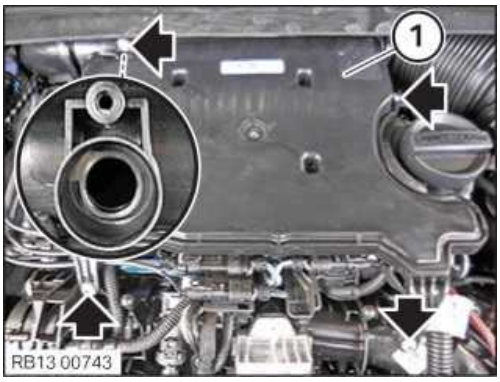
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

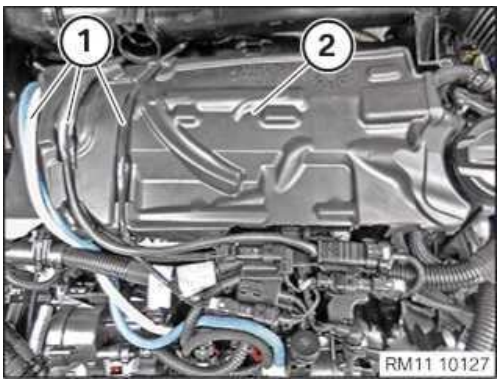


Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

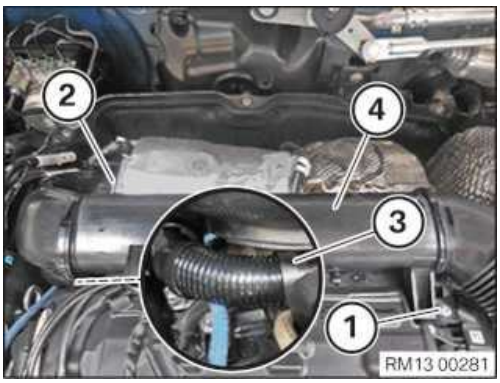


3 – Remove resonator

- Remove screws (arrows).
- Guide out and remove the resonator (1).

cardiagn.com

4 – Remove the acoustic cover for the injectors



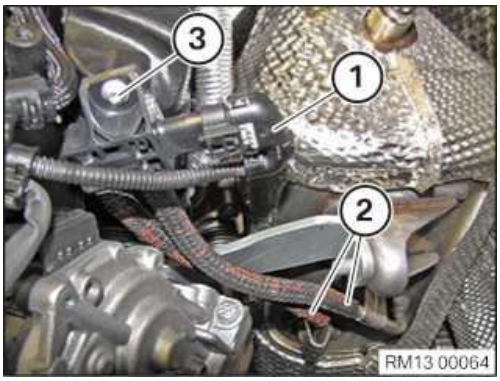
- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

5 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

6 – Remove differential pressure sensor

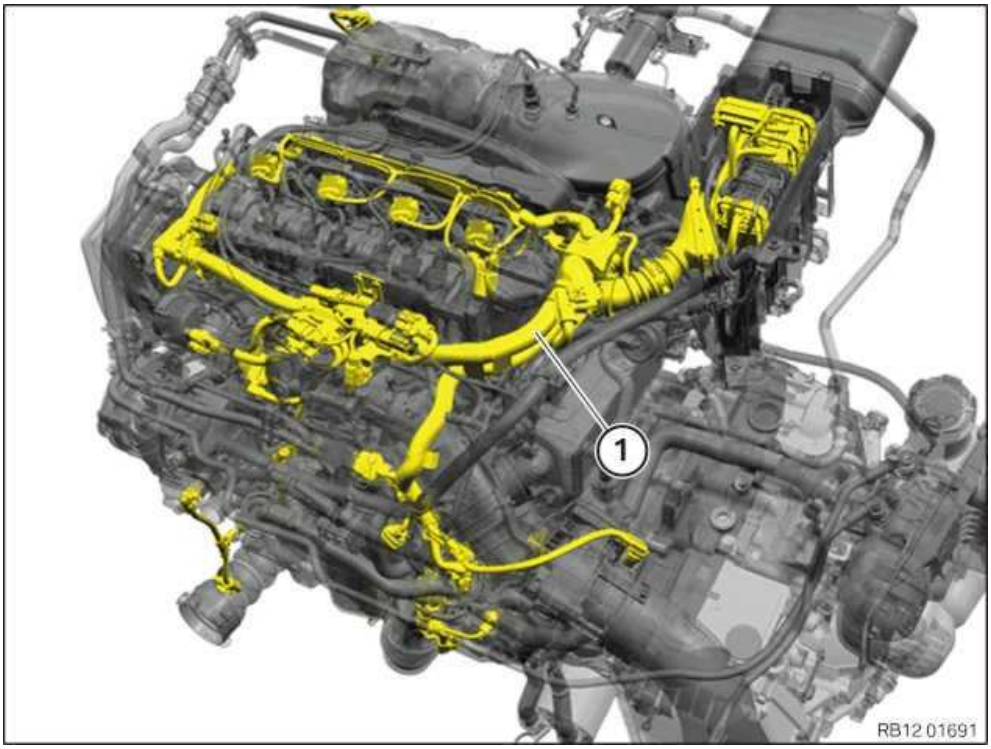


RISK OF DAMAGE

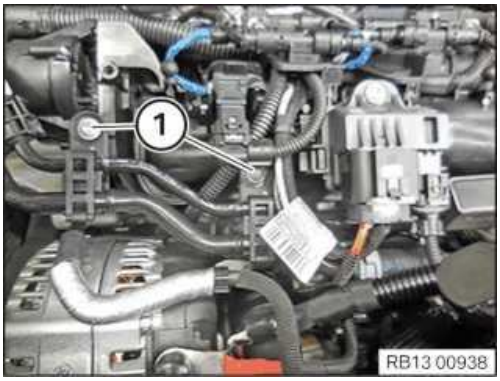
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



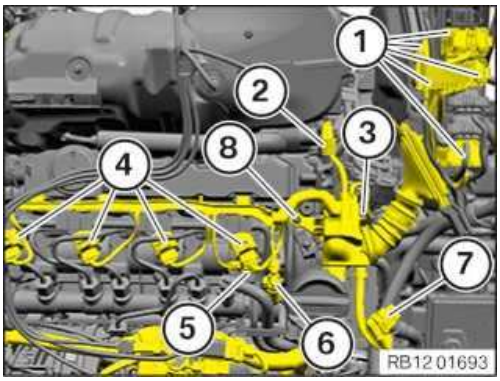
cardiagn.com



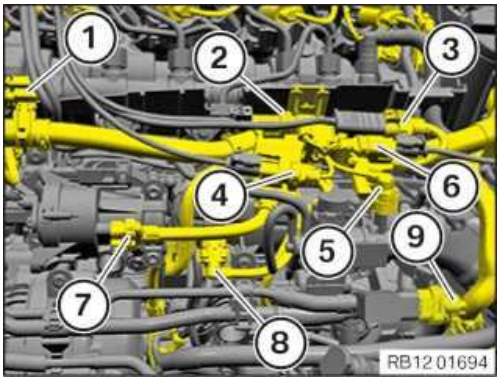
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

7 – Removing assemblies (on lifting table)

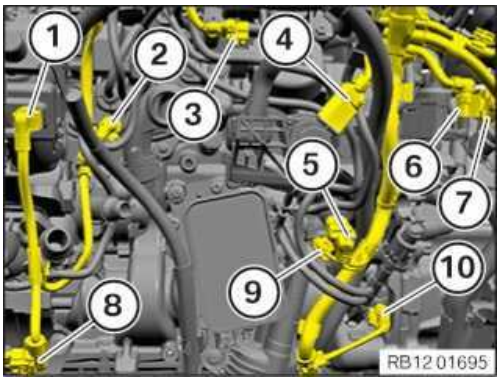
Overview: Wiring harness section for the engine



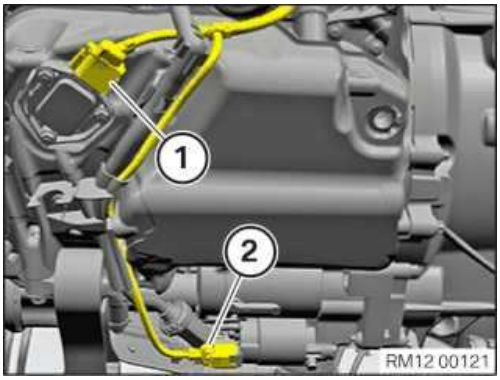
1 Wiring harness section for the engine



- Loosen screws (1).

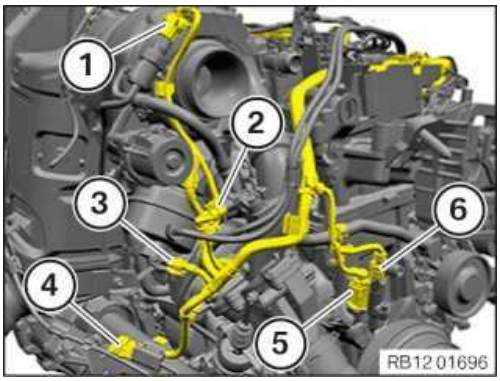


cardiagn.com

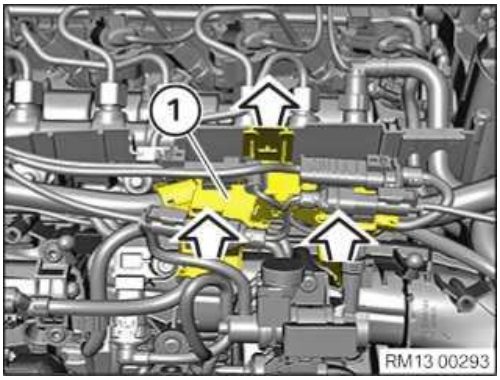


- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).

- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock connector (3) and pull it off from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

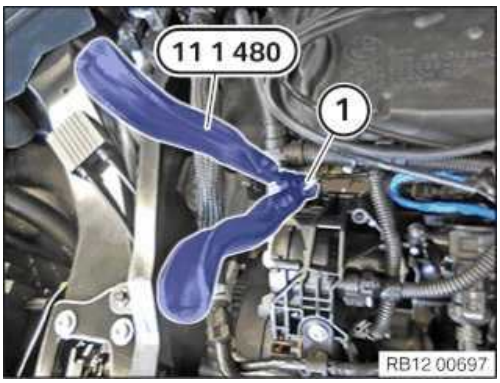


- Unlock and disconnect the connector (1) from the alternator.
- Unlock and disconnect the connector (2) from the electric changeover valve.
- Unlock and disconnect the connector (3) from the electric changeover valve.
- Unlock the connector (4) and pull it off the high pressure pump.
- Unlock the connector (5) and disconnect it from the oil pressure sensor.
- Unlock connector (6) and pull off from throttle body.
- Unlock the connector (7) and disconnect it from the intake air temperature sensor.
- Unlock the connector (8) and disconnect it from the air conditioning compressor.
- Unlock and disconnect the connector (9) from the solenoid valve.
- Unlock the connector (10) and pull it off the crankshaft sensor.

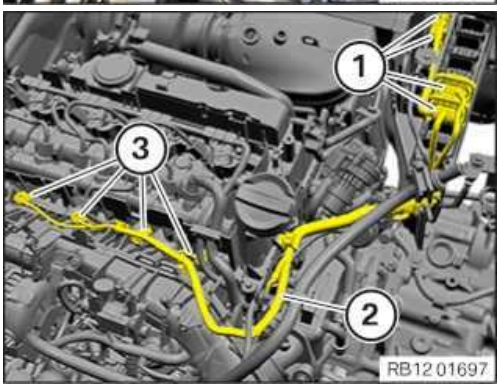


- Unlock the connector (1) and pull off of the oil-level sensor.
- Unlock connector (2) and remove from starter motor.

cardiagn.com



- Unlock the connector (1) and disconnect it from the exhaust gas pressure sensor.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock the connector (3) and pull it off the exhaust turbocharger.
- Unlock the connector (3) and disconnect it from the differential pressure sensor.
- Unlock connector (4) and pull it off from the monitoring oxygen sensor.
- Unlock the connector (5) and pull it off the oil pressure switch .
- Unlock connector (6) and disconnect from switching valve.
- Detach, feed out and remove the wiring harness from the clamps.



▶ **Removing the cable clips from the intake plenum**

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Pull off all connectors (3) from glow element using special tool **0 490 796 (11 1 480)**.
- Loosen screw (2) and remove the ground strap.
- Detach, feed out and remove the wiring harness from the clamps.

▶ **Removing the drive belt for alternator**

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

cardiagn.com

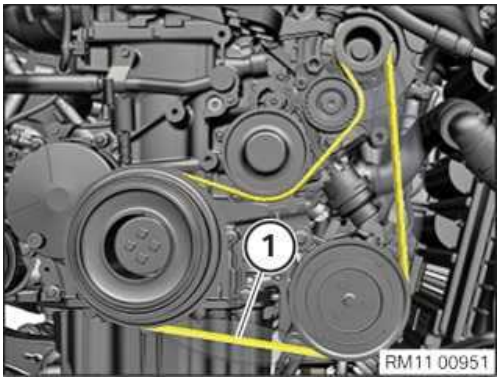
CAUTION

Component with preload.

Danger of injury!

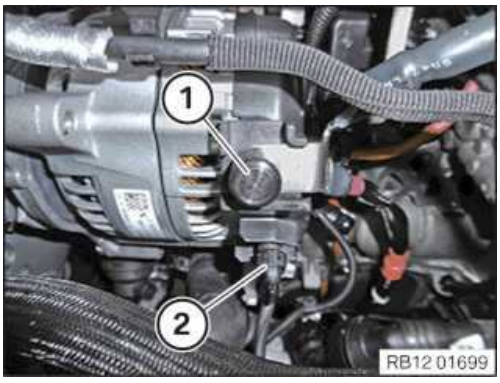
- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION



If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

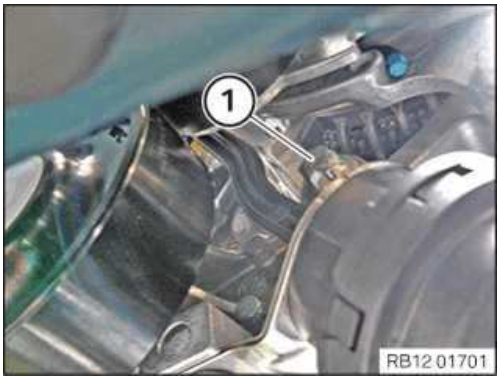
TECHNICAL INFORMATION



The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool **0 496 268 (11 0 390)**.

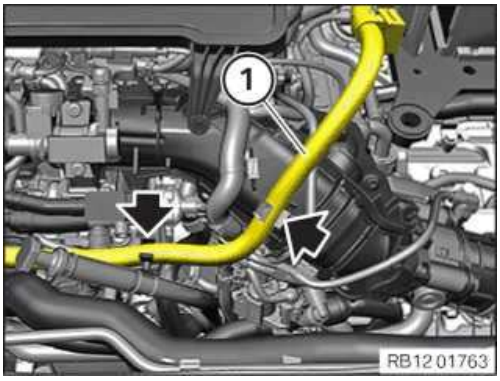
- Guide out the drive belt for the alternator (1) and remove it.



- Remove the cover (1) and loosen the nut below.
- Disconnect positive battery cable from alternator.
- Unlock and disconnect the connector (2) from the alternator.

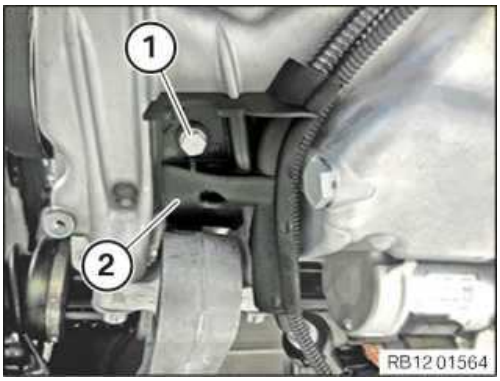
cardiagn.com

- Detach screw (1) on top on the alternator.



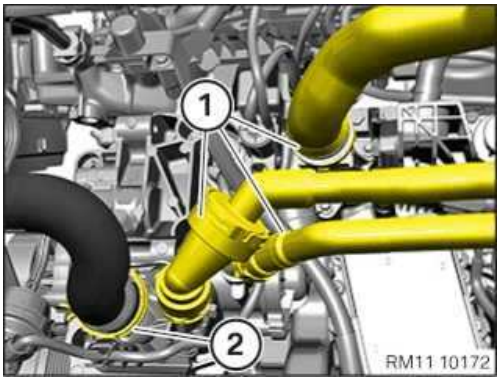
- Detach screw (1) below on the alternator.

- Feed out alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support and remove.



- Loosen screws (1).
- Feed out and remove the air conditioning compressor (2).

- Release the positive battery cable (1) from the clamps (arrows).

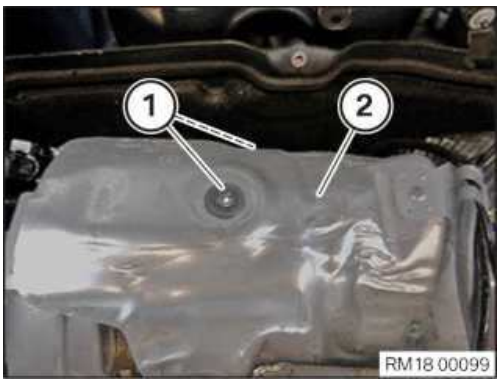


cardiagn.com

- Loosen screw (1).
- Guide out and remove holder (2).

- Feed out positive battery cable from the clamps (1) and remove.

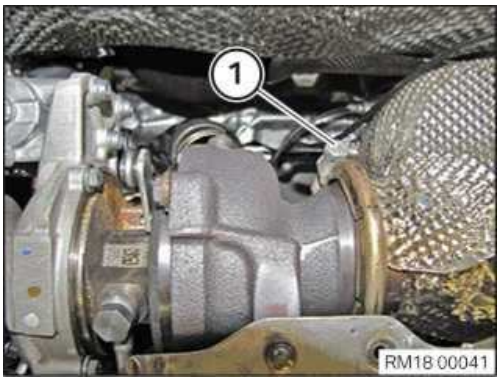
- Unlock and disconnect coolant lines (1).
- Guide out the coolant lines (1) and remove it.
- Detach the clamp (2).
- Guide the coolant hose out and remove.



▶ **Removing heat shield from top exhaust turbocharger**

WARNING

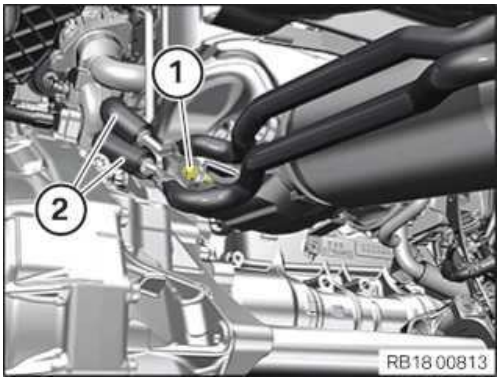
Hot surfaces.



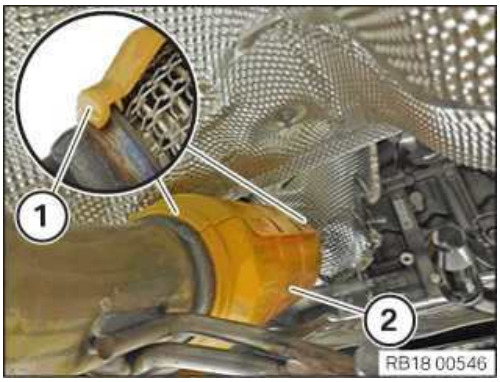
Risk of burning!

- Perform all work only on components that have cooled down.

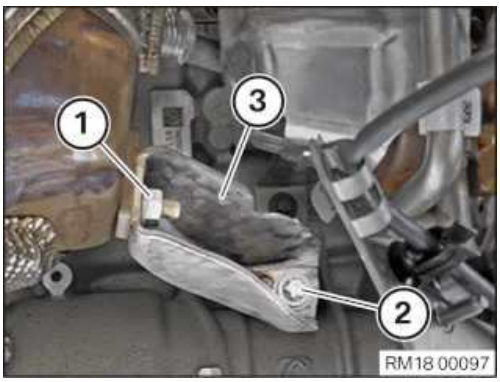
- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).



cardiagn.com

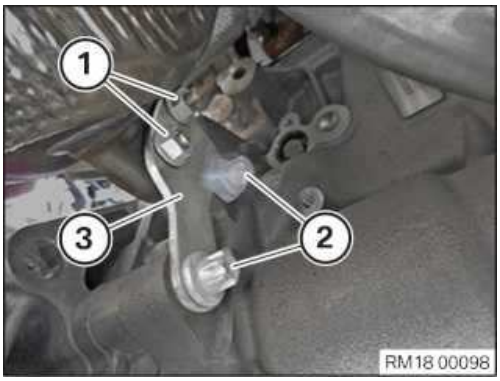


- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



- Loosen nuts (1).

- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

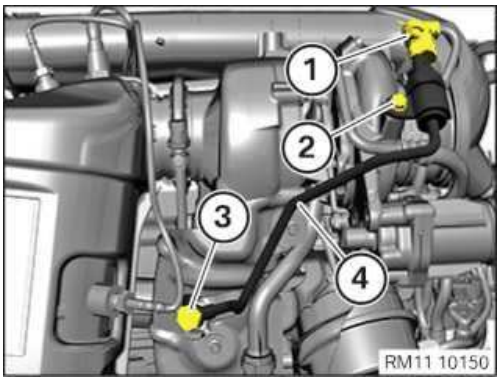


- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.

- Loosen nut (1).
- Loosen screw (2).
- Remove holder (3).

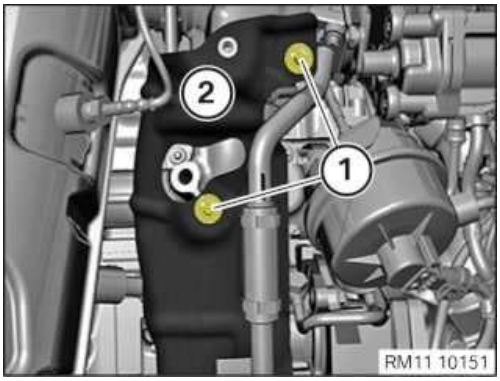
cardiagn.com

- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).
- Guide out and remove diesel particulate filter .



▶ **Remove the heat shield from the exhaust turbocharger at the bottom**

WARNING



Hot surfaces.

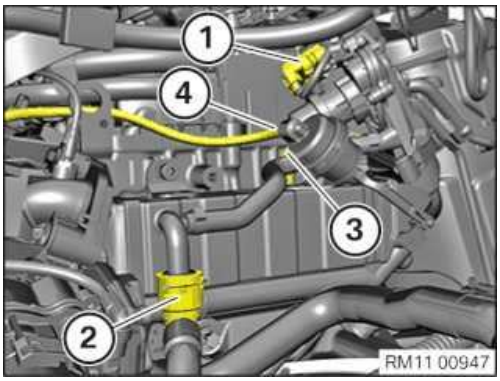
Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).

▶ **Removing the exhaust-gas recirculation cooler**

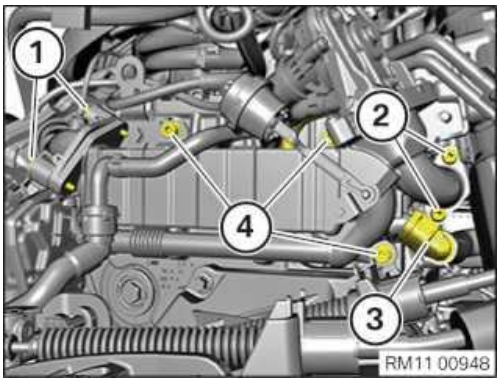


WARNING

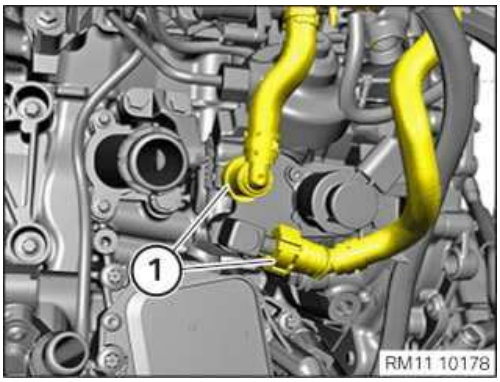
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

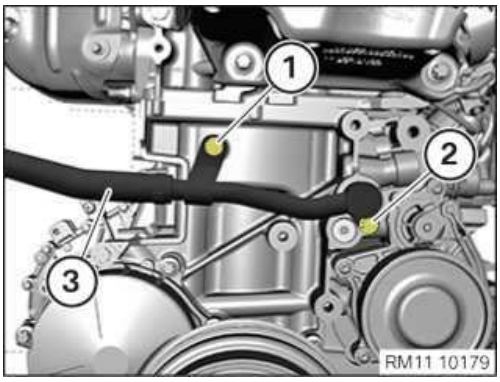


cardiagn.com



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



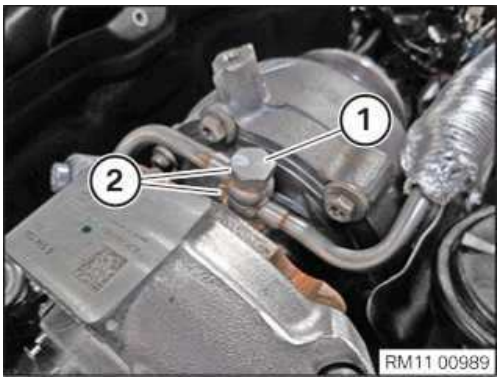
- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

- Unlock the fuel lines (1) and disconnect from the high pressure pump.
- Remove the fuel lines.

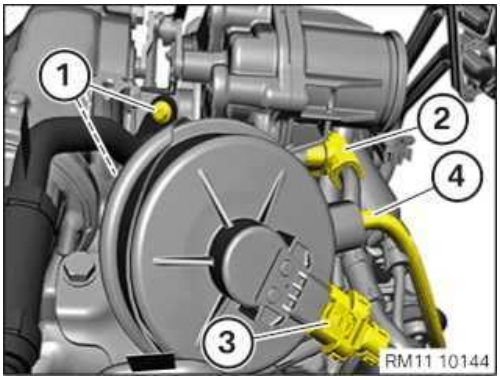
- Loosen screws (1) and (2).
- Remove coolant line (3).

8 – Removing the low-pressure stage turbocharger



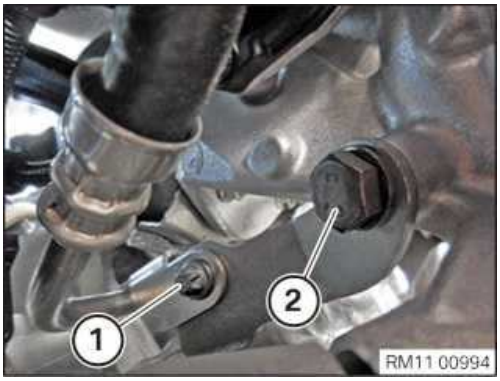
WARNING

Hot surfaces.



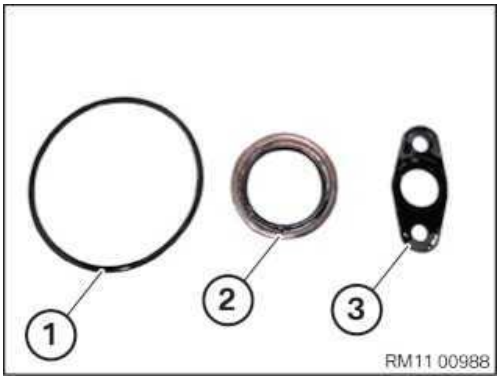
Risk of burning!

- Perform all work only on components that have cooled down.



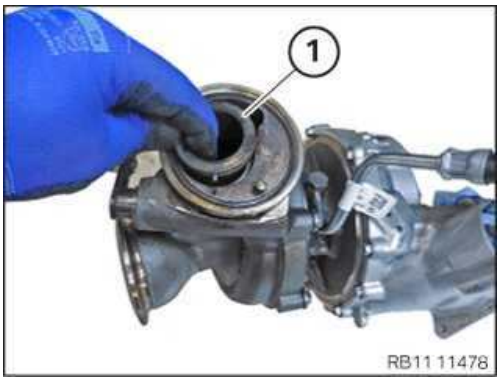
cardiagn.com

- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.



- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.

- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).



- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

cardiagn.com

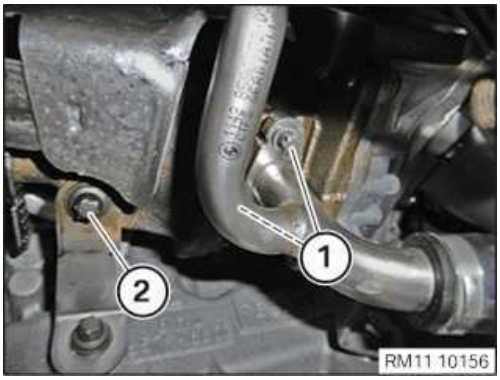
- Remove the spacer ring (1).

9 – Removing the high-pressure stage exhaust turbocharger

WARNING

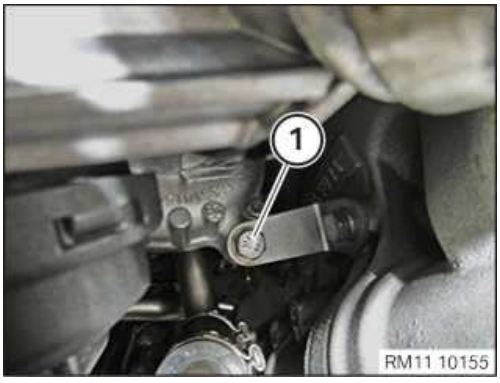
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

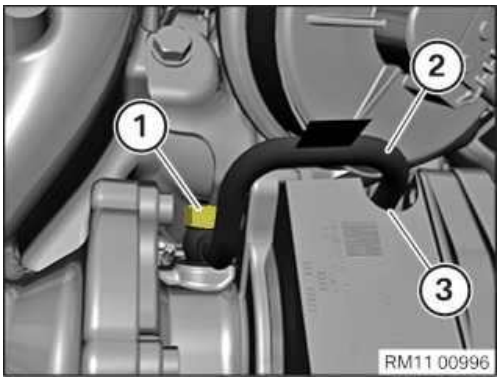
CAUTION



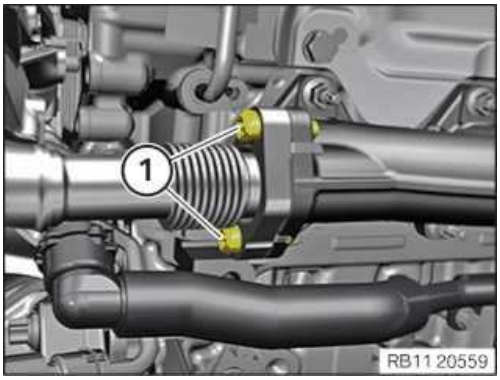
Heavy component.

Heavy components can lead to injury or damage.

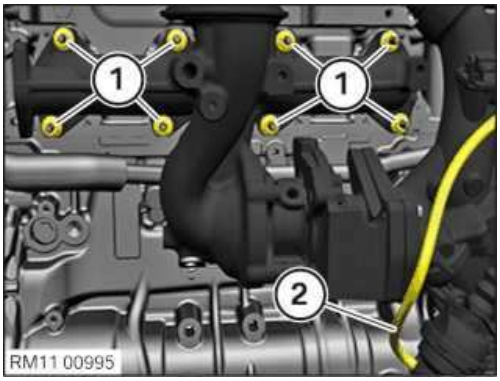
- Remove and install heavy components with the aid of another person/other persons.



- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).

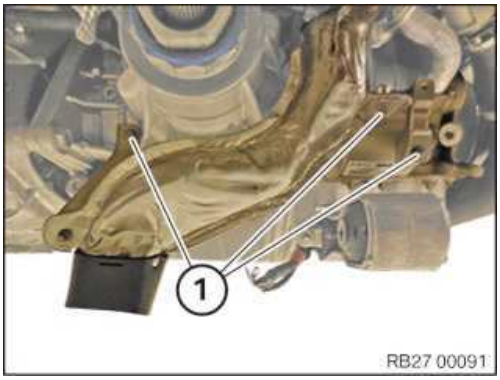


- Release screw (1) from the right wheel arch.

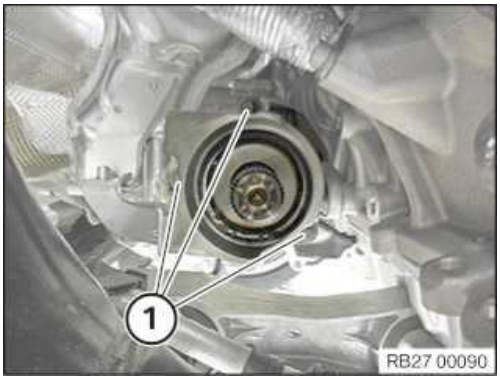


cardiagn.com

- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

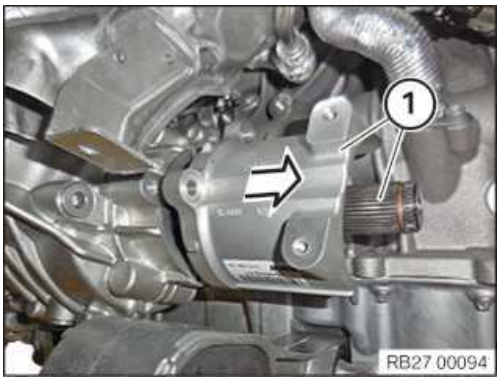


- Loosen screws (1).

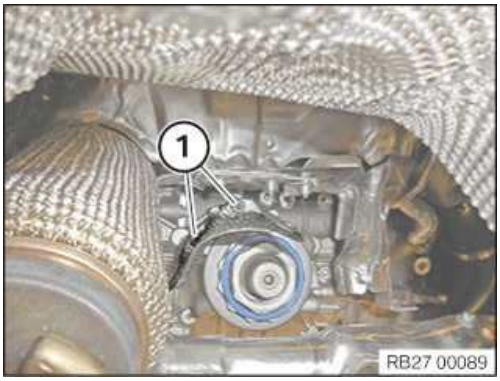


- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

10 – Remove the intermediate shaft with the support tube

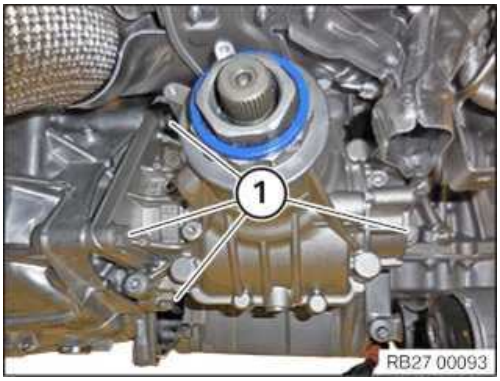


- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).

cardiagn.com



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

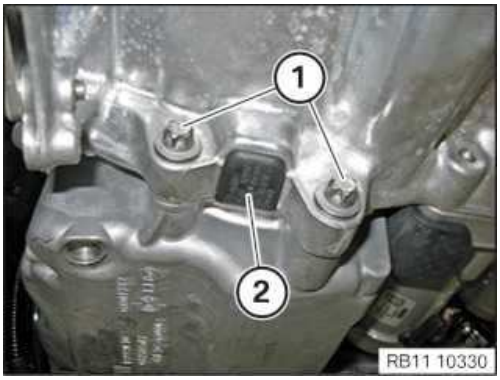
11 – Remove transfer box (VTG)

- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

12 – Detach the engine from the manual gearbox

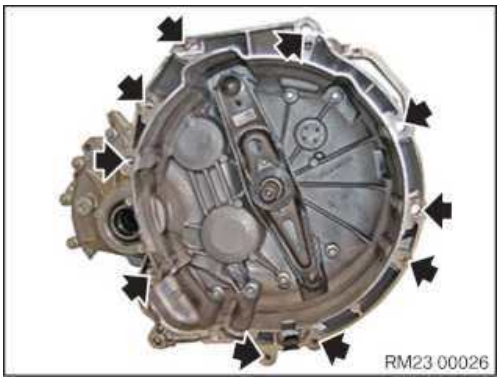
Prerequisite



Engine has been removed.

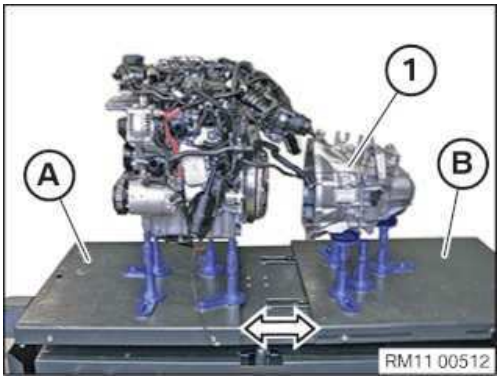
CAUTION

Heavy component.



Heavy components can lead to injury or damage.

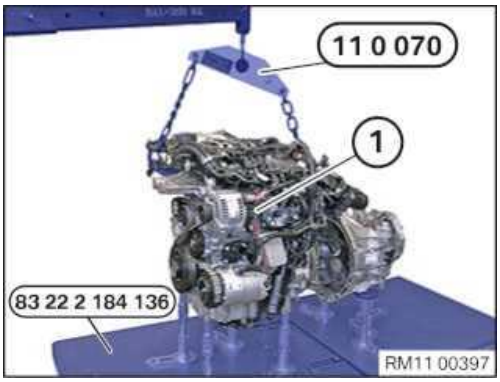
- Remove and install heavy components with the aid of another person/other persons.



- Loosen screws (1).
- Remove protective cap (2).

cardiagn.com

- Remove screws (arrows).



- Slide the table top (B) in the direction of the arrow and slide the manual gearbox (1) to the side.

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

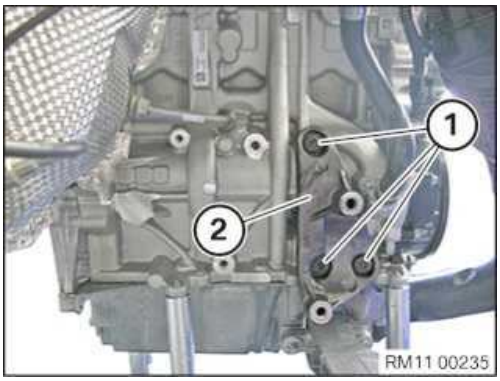
M8		Tightening torque	21,5 Nm

- Attach engine lifter to special tool and lift engine (1) off lifting table.

13 – Mount engine on assembly stand

CAUTION

Heavy component.



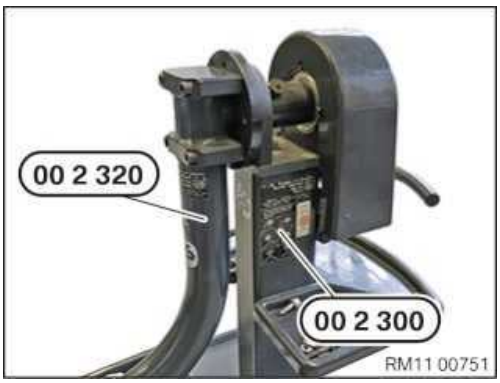
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

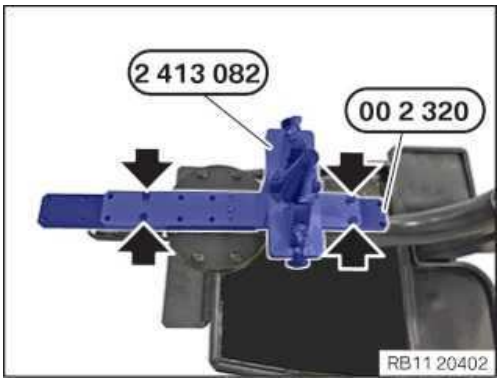
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com



- Loosen screws (1).
- Guide out and remove holder (2).



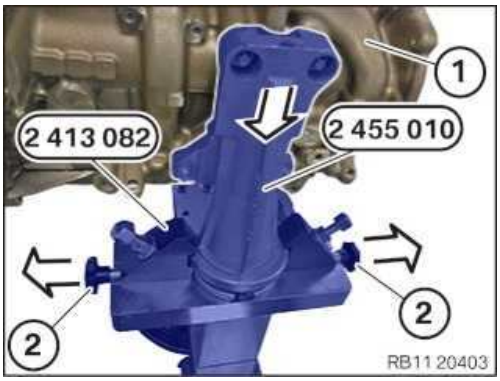
- Position the special tool **2 455 010** on the engine (1).
- Position the standard bolts **M10x30**.
- Tighten the standard bolts (arrows).
-

Special tool 2 455 010 to crankcase

M10x30		Tightening torque	38 Nm

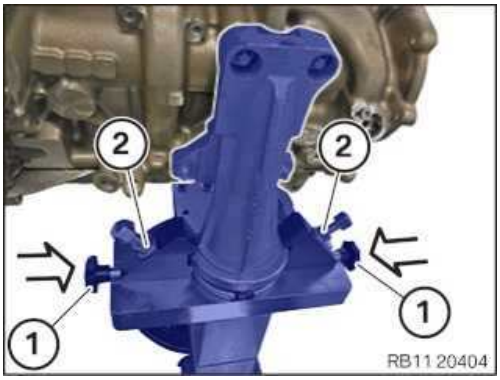
- Prepare the assembly stand **0 495 187 (00 2 300)** with the special tool **0 495 196 (00 2 320)**.

- Screw the special tool to the **0 495 196 (00 2 320)** special tool.
- Tighten screws (arrows).
-



Special tool 11 8 930 to special tool 00 2 320

M14x35		Tightening torque	160 Nm

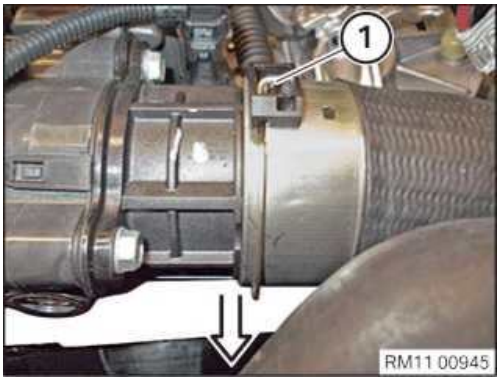


- Position the engine lifter with the special tool and the engine on the special tool **0 495 187 (00 2 300)**.

cardiagn.com

- Detach the holder (2) in the direction of the arrow.
- Position the engine (1) with the special tool **2 455 010** in the direction of the arrow on the special tool .

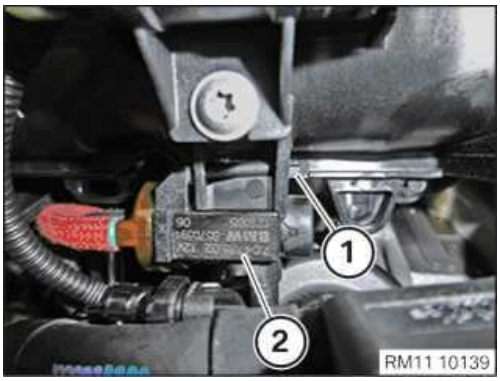
- Lock the holder (1) in direction of arrow.
- Tighten nuts (2).



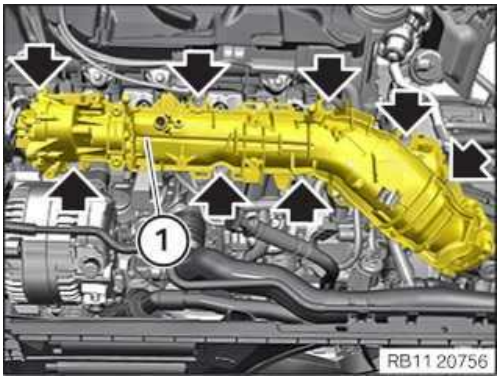
14 – Removing the intake plenum

TECHNICAL INFORMATION

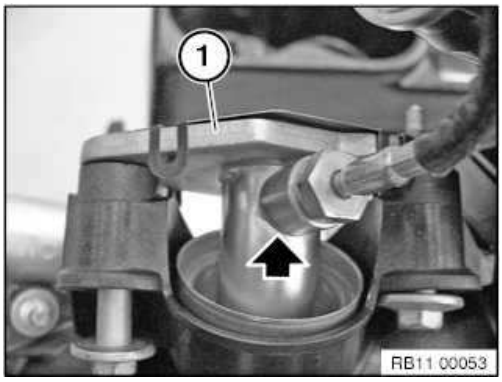
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.



cardiagn.com

- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

15 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

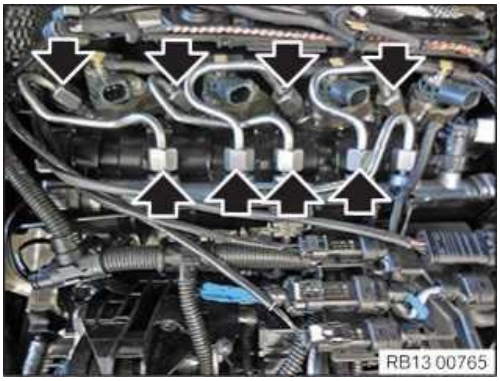
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION



If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

16 – Detaching leakage oil line from injector

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

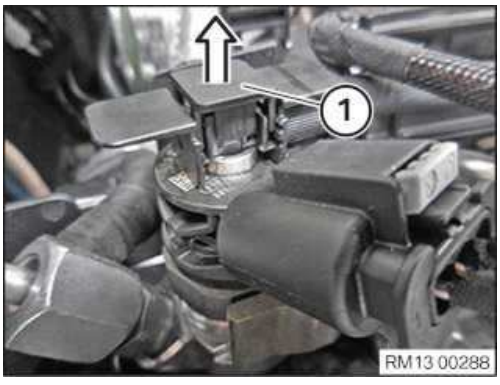
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE



Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

17 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

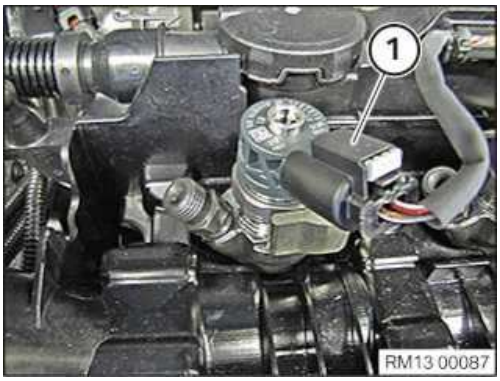
Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

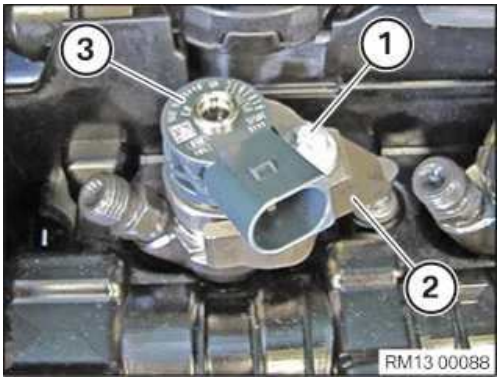
RISK OF DAMAGE

 **Electrostatic discharge.**



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



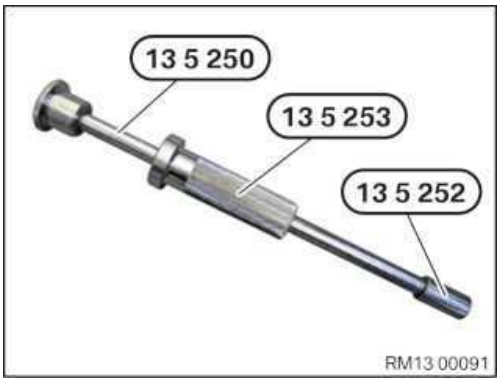
cardiagn.com

TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

- Unlock and disconnect connector (1).

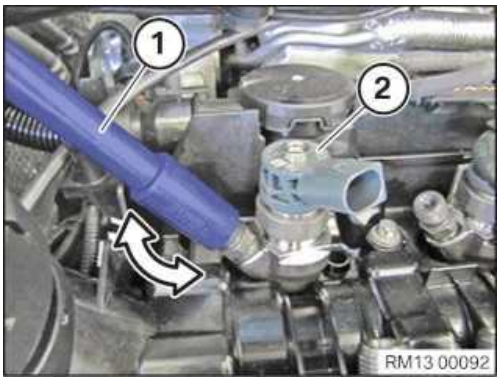
- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.



▶ **Loosen stuck injectors**

RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)** back onto the special tool **0 493 321 (13 5 250)**.

cardiagn.com

- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

18 – Remove high-pressure rail

WARNING

Working on fuel system.

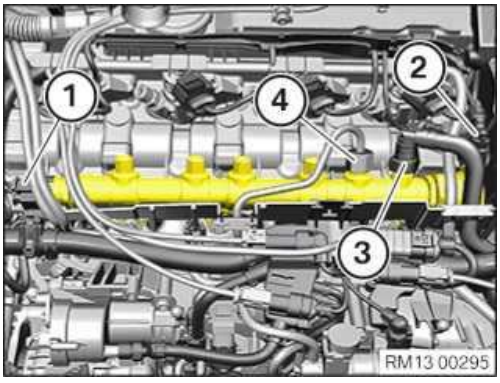
Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

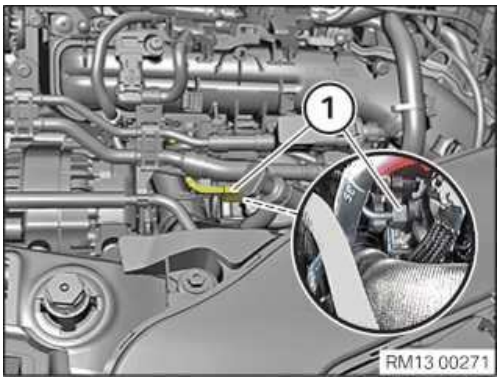
Contamination can result in malfunctions, operating failure or leaks.



- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

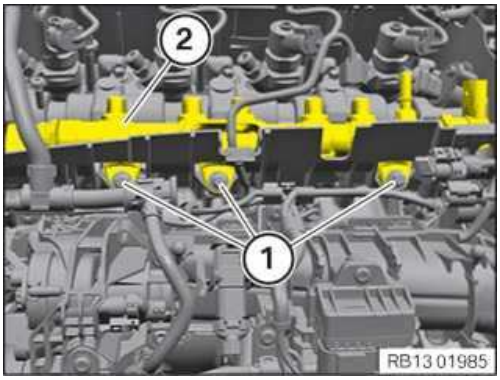
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



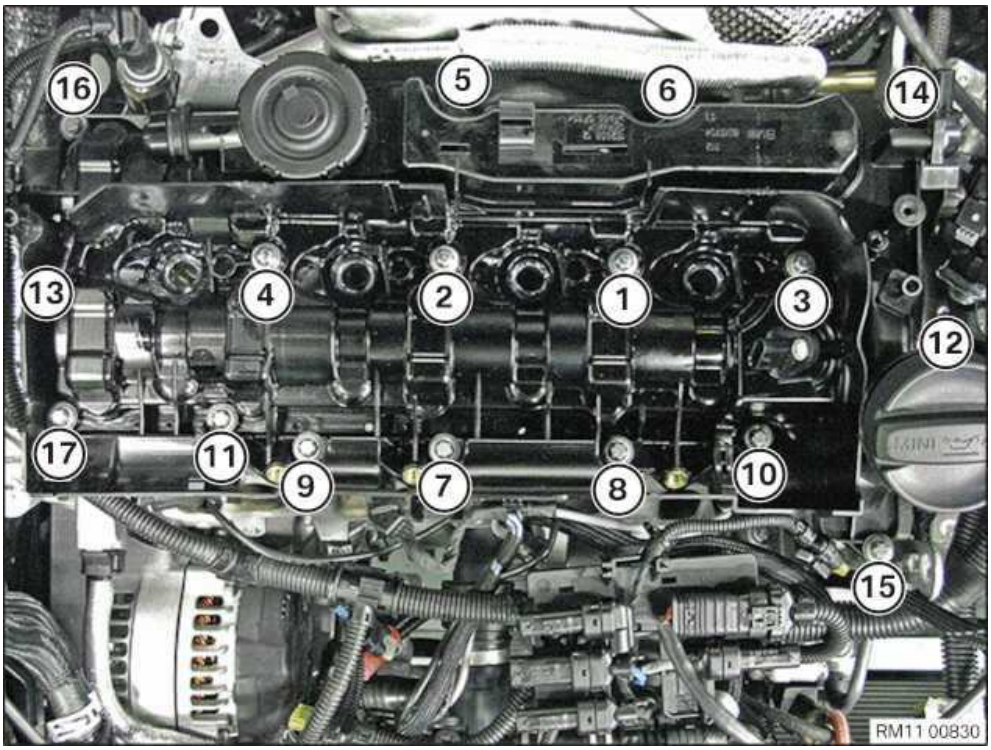
TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

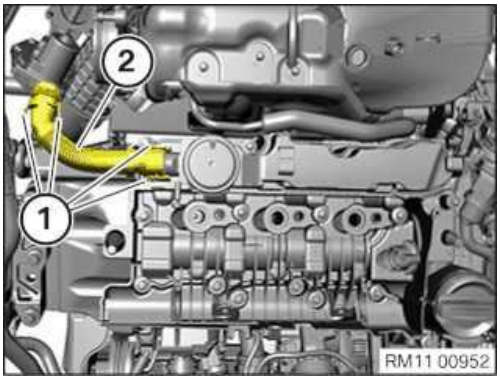


- Unlock and disconnect connector (1).
- Unlock and disconnect connector (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool .
- Reset special tool early on to avoid bending pressure lines.

cardiagn.com



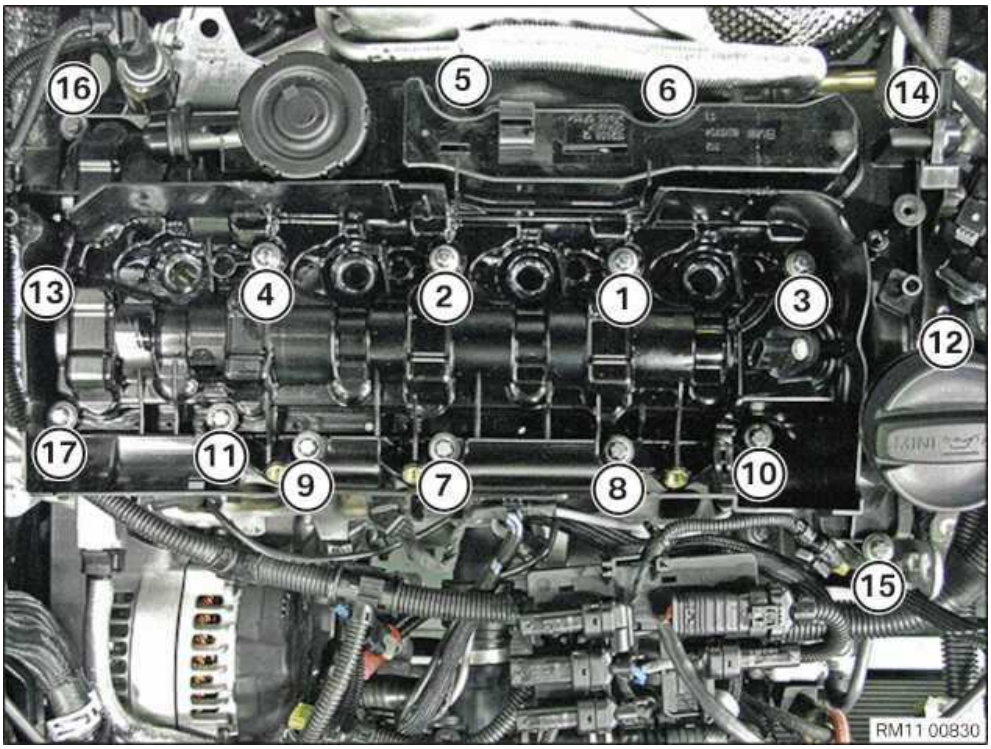
- Slacken the union nut (1) on the high pressure pump.



- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

19 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

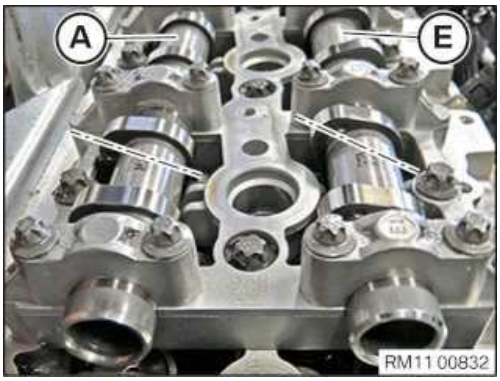
- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

20 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

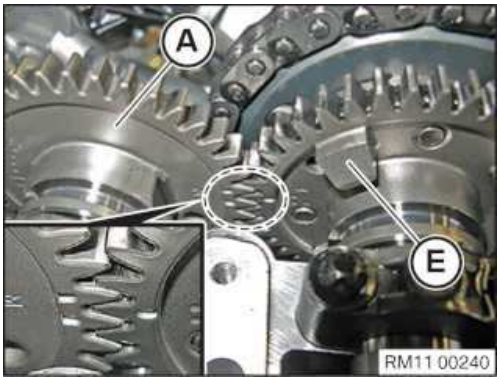


The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

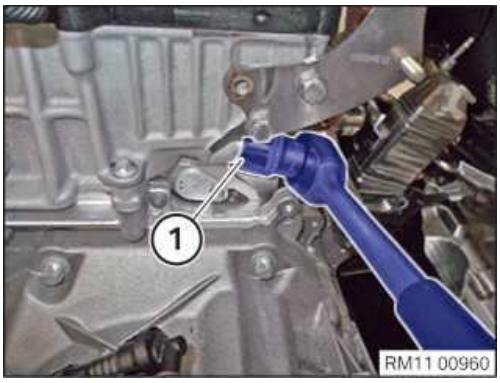
If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

21 – Remove chain tensioner piston



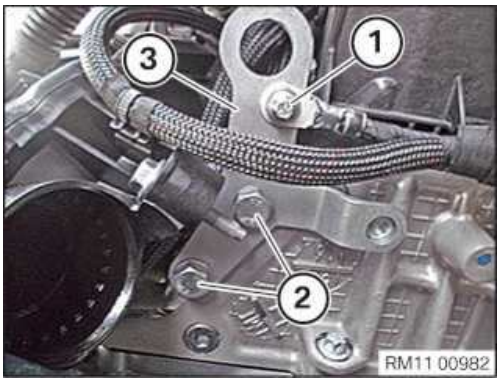
cardiagn.com

WARNING

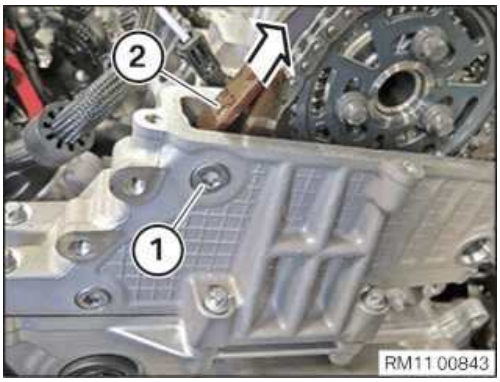
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



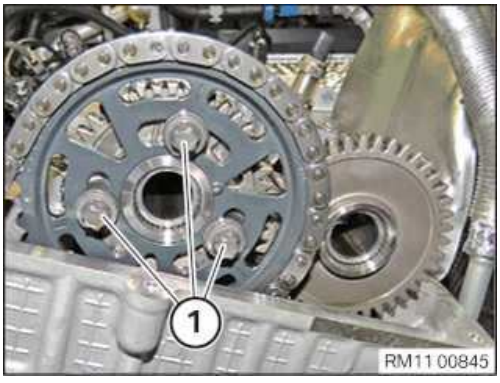
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

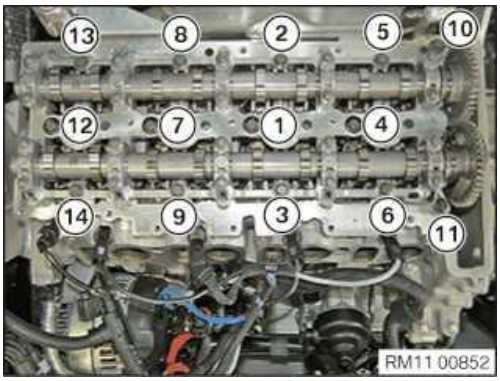
- Remove the chain tensioner piston (1).

22 – Remove the timing chain guide rail



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.



23 – Removing the camshaft sprocket on the intake camshaft

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

24 – Removing the camshaft support

cardiagn.com

- Evenly loosen all screws in a sequence from (14) to (1).
- Loosen and remove all screws in a sequence from (14) to (1).
  Both camshafts can be removed with the camshaft carrier.
- Remove the camshaft support including camshafts towards the top.

25 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

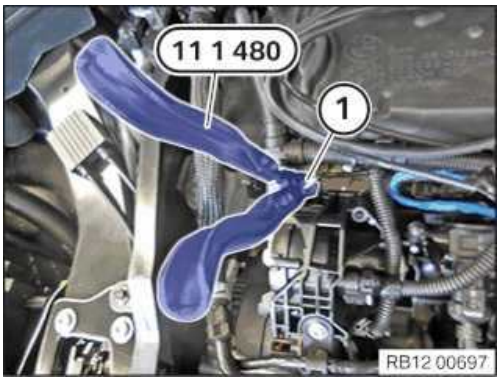
- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



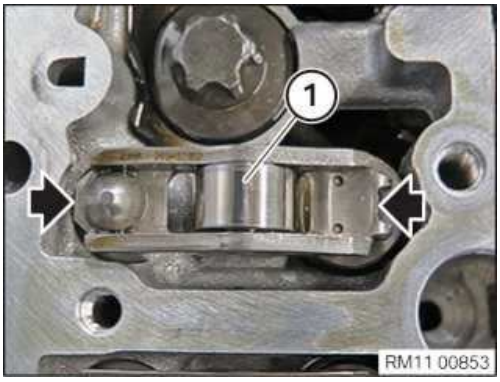
cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

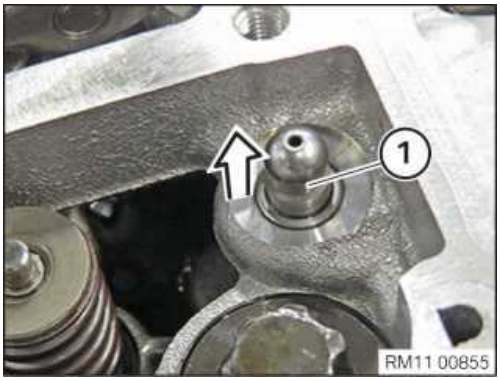
- Release the glow elements with the special tool or conventional tools.
- Feed out preheating elements and remove.

26 – Remove roller cam followers

- Guide out and remove all roller cam followers (1) (arrows).
- Place all roller cam followers (1) in order in special tool **0 495 105 (11 4 480)**.

  Roller cam followers that have already been used must be installed in same position again.

27 – Removing the hydraulic valve clearance compensating element



cardiagn.com

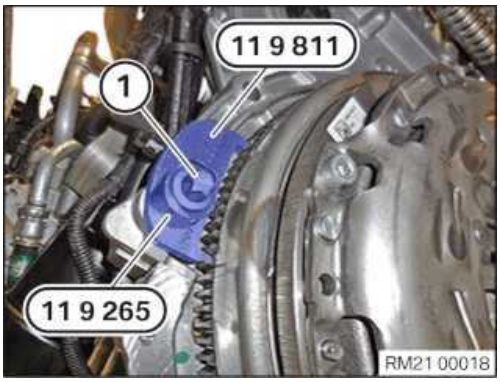
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

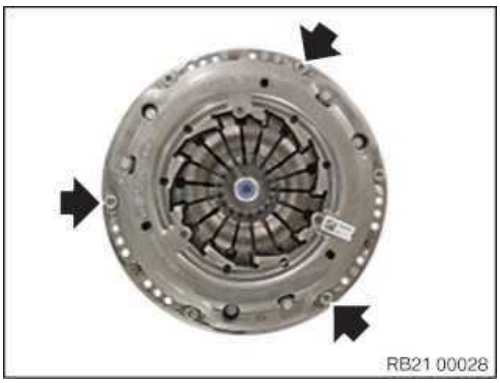
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.



28 – Remove clutch

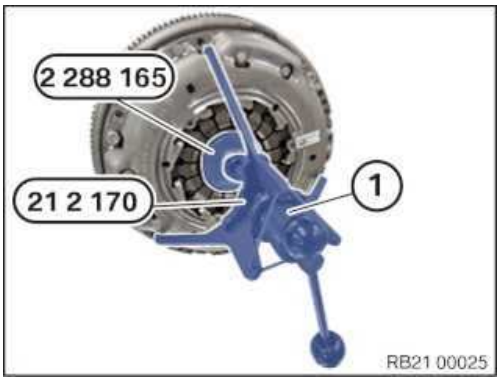
CAUTION



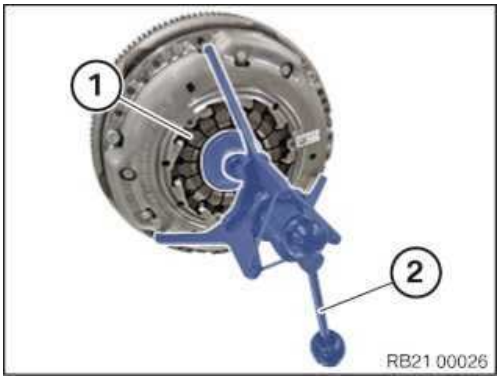
Materials harmful to health.

Contact with fluids harmful to health!

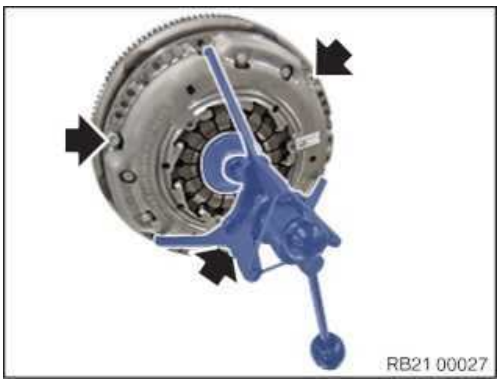
- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.



- Block flywheel with transmission bolt (1) and special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.



- Detach 3 screws to attach special tool and **2 288 165**.



cardiagn.com

- Position special tool and **2 288 165** and tighten on the knurled screw (1).

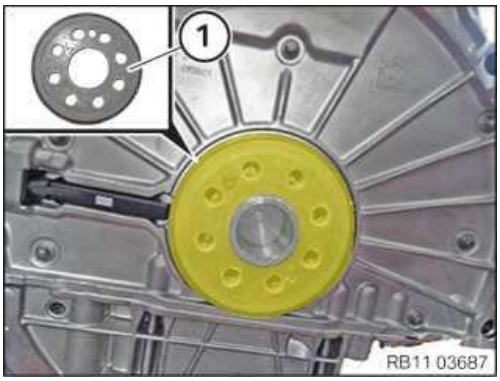
- Screw in the spindle (2) until the diaphragm spring (1) is preloaded and the clutch disc is free of tension.

- Loosen the remaining 3 screws and remove the clutch with clutch disc from the flywheel.

29 – Removing flywheel

CAUTION

Heavy component.



Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Secure the flywheel with a transmission bolt (1) and with special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.
- Unscrew the flywheel bolts with the special tool **0 491 018 (11 4 180)**.
- Remove flywheel.

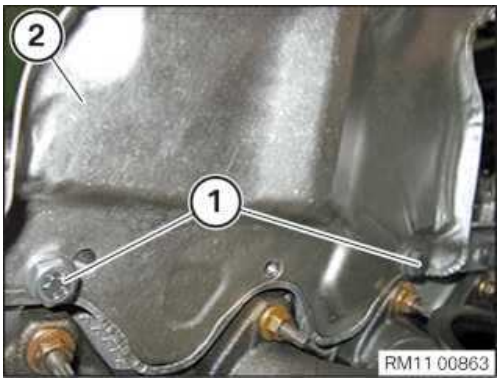
cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

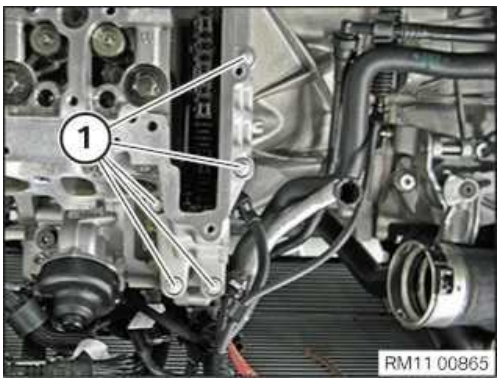
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Remove the increment wheel (1) from the crankshaft and lay it down correctly.

MAIN WORK

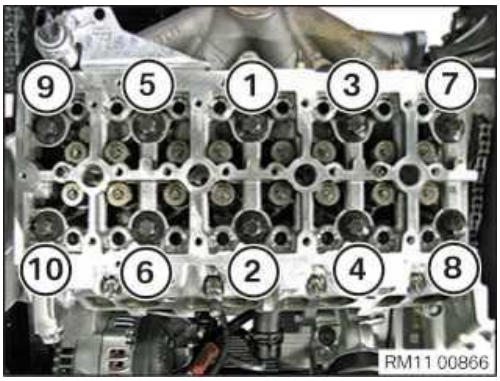


30 – Remove rear timing case cover

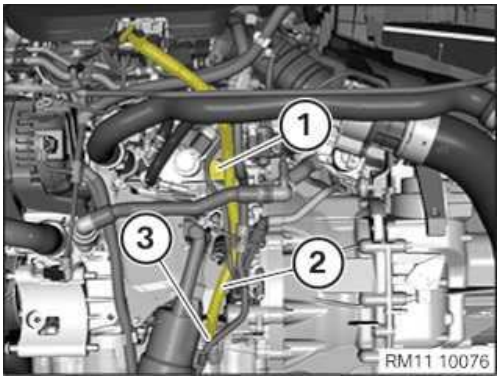
Prerequisite

Transmission is removed.

- Loosen screws (1).
- Feed out the heat shield (2) and place to one side.

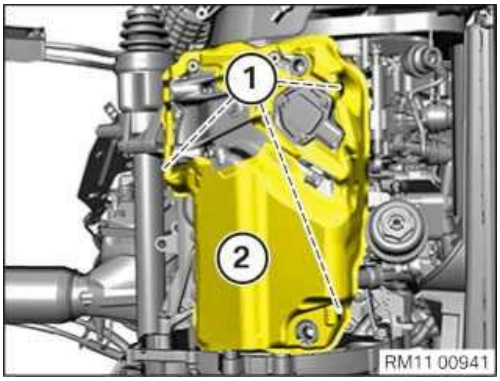


TECHNICAL INFORMATION

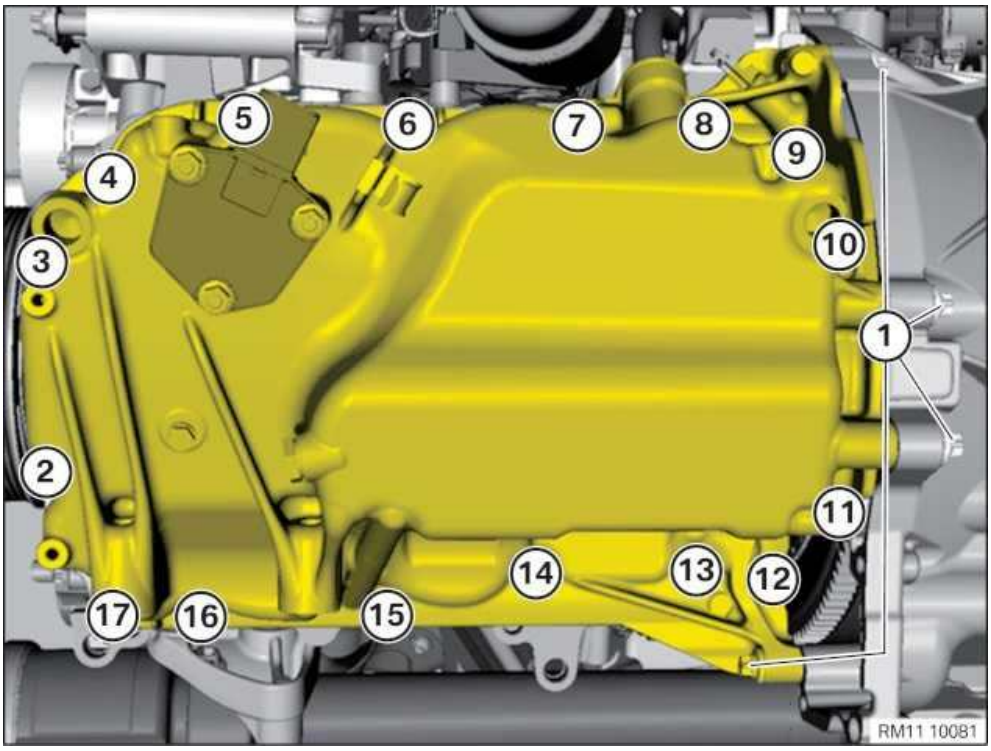


Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).

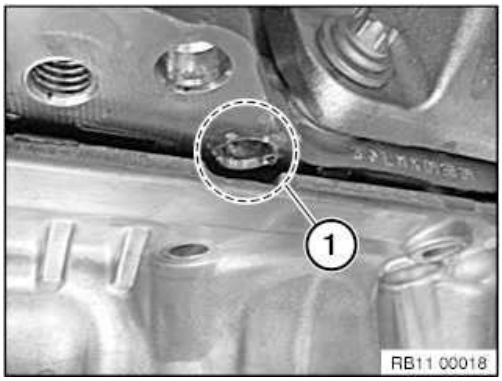


cardiagn.com

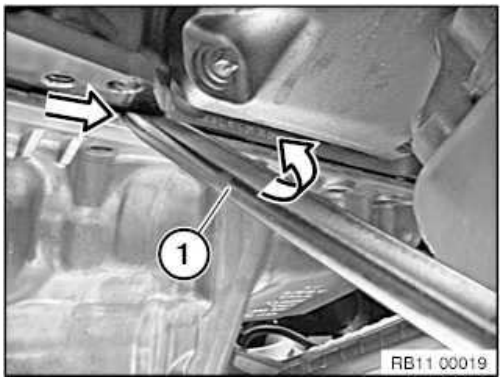


- Loosen the cylinder head bolts in the sequence from (10) to (1).
- Remove cylinder head bolts (1) to (10) with washers.
- Remove cylinder head.

- Loosen screw (1).
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- Remove sealing ring (3) from oil sump if necessary.

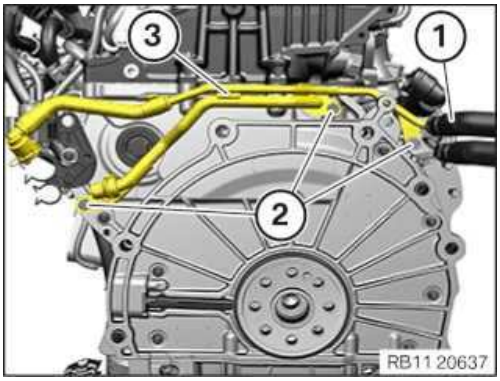


- Expanding rivets (1) on both sides of the acoustic cover (2).
- Feed out and remove the acoustic cover (2).

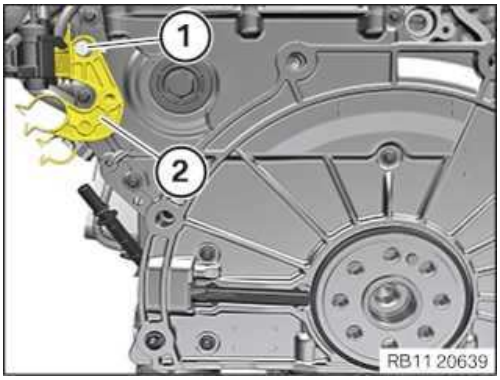


- Loosen the transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).

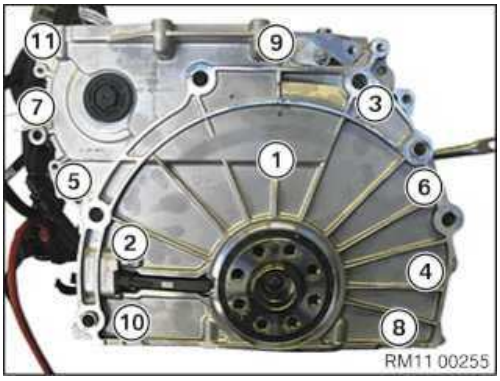
cardiagn.com



- Release oil sump only in area (1).

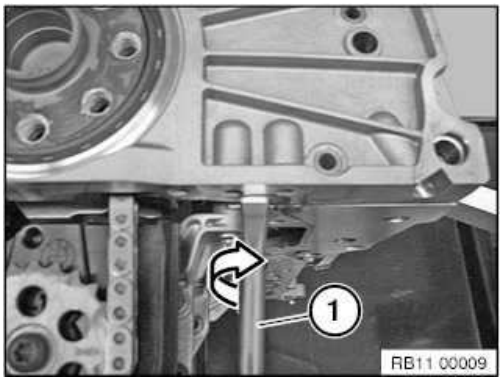


- Detach the oil sump with a suitable mounting lever (1) carefully at the point provided.
- Secure the oil sump against falling.

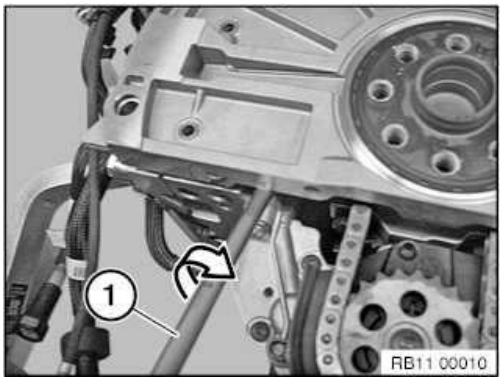


▶ **If installed: Remove coolant line of the SCR metering module**

- Unlock and disconnect the coolant hose (1).
- Loosen screws (2).
- Remove the coolant line (3).



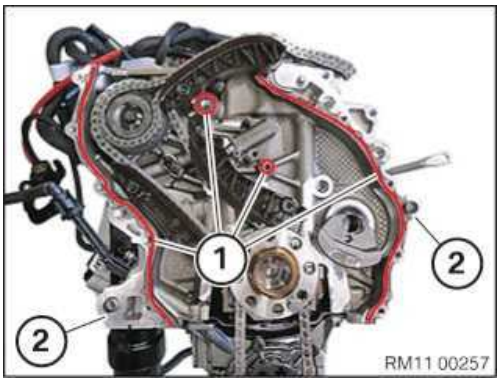
- Loosen screw (1).
- Guide out and remove holder (2).



- Loosen screws in the order (11) to (1).

cardiagn.com

- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.

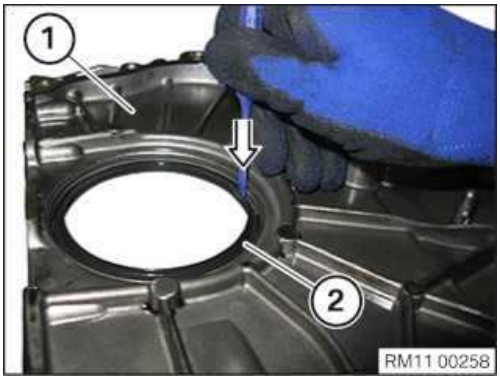


- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.
- Remove the timing case cover.

31 – Install the rear timing case cover

Prerequisite

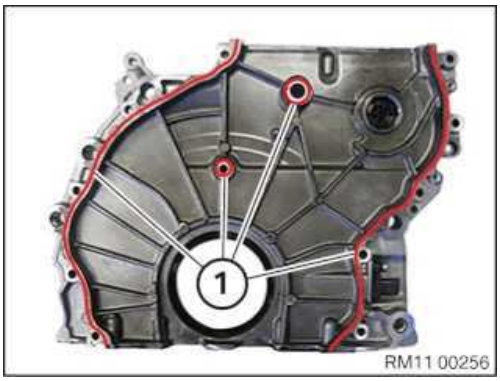
Transmission is removed.



RISK OF DAMAGE

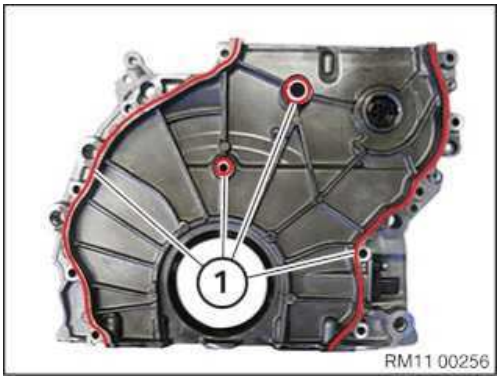
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



- Do not use any metal-cutting tools.

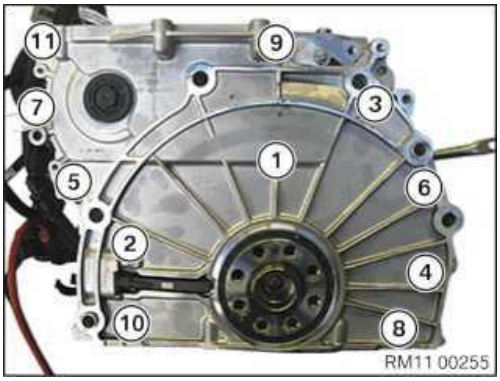
- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.
- Check fitting sleeves (2) for damage and for tight fit; renew if necessary.



- Position the timing case cover (1) underneath.
- Position punch on inner side of crankshaft seal (2).
- Drive out crankshaft seal (2) outwards.

cardiagn.com

- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.



TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Apply sealing bead (1) with a height of approx. 1.5 mm to 2.0 mm on inner side of timing case cover in marked locations. Use liquid sealing compound for this.

  Application time of sealing bead (1) must not exceed 12 minutes.

- Mount the timing case cover without the crankshaft seal.
- Renew screws (1) to (11).

  Parts: Bolts
- Join the bolts in with the sequence (1) to (11).
- Tighten screws in the order (1) to (11).

Rear timing case cover to crankcase

M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

▸ **Installing the rear crankshaft seal**

RISK OF DAMAGE

Radial shaft seal damage.

Touching the sealing lip (inner) on the radial shaft seal with the sharp-edged connector gearing of the output shaft will result in destruction and/or leaks.

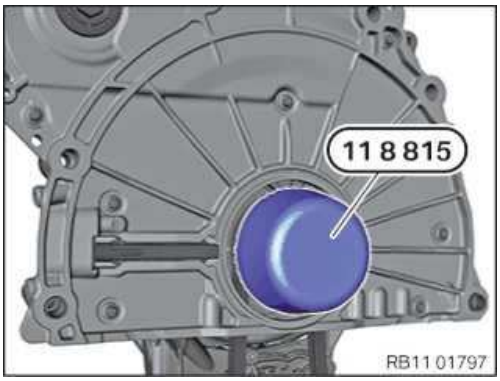
- When inserting the output shaft, make sure that the connector gearing of the output shaft does not touch the sealing lip (inner) of the radial shaft seal.

RISK OF DAMAGE

Radial shaft seal damage.

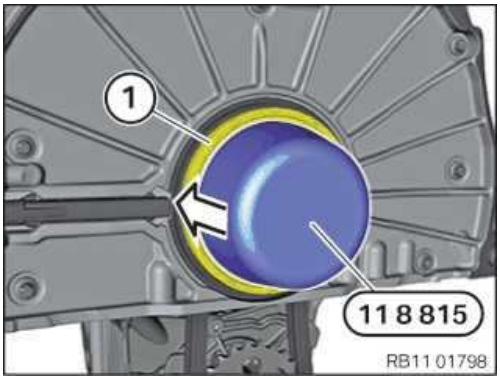
Touching the sealing lip (inner) and applying oil to the radial shaft seal will lead to its destruction.

- Do not touch the sealing lip (inner) of the radial shaft seal.
- Do not apply oil to the radial shaft seal.
- Install the radial shaft seal dry.



cardiagn.com

RISK OF DAMAGE



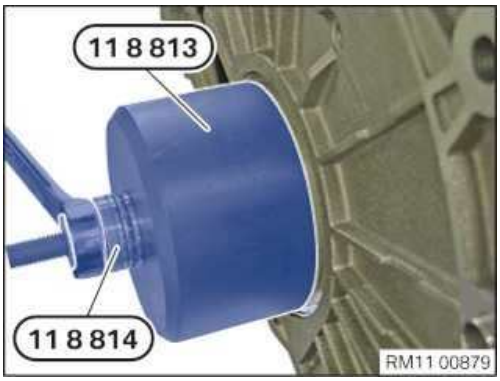
Electrostatic discharge.

Damage to or destruction of electrical components.

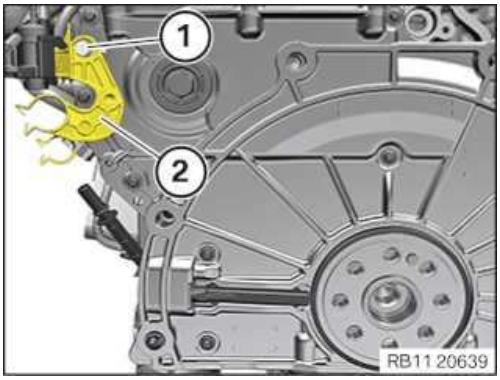
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Position special tool **0 496 137 (11 8 815)** on crankshaft. Make sure that the crankshaft sensor is not damaged.

- Fit the crankshaft seal (1) up to the timing case cover in the direction of the arrow using special tool **0 496 137 (11 8 815)** and position.
- Remove special tool **0 496 137 (11 8 815)**.



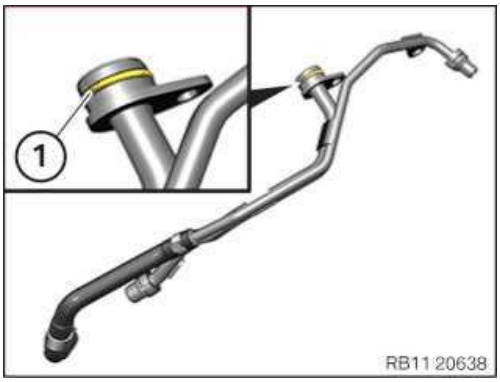
- Secure special tool **0 496 133 (11 8 811)** to the crankshaft using special tool **0 496 134 (11 8 812)**.



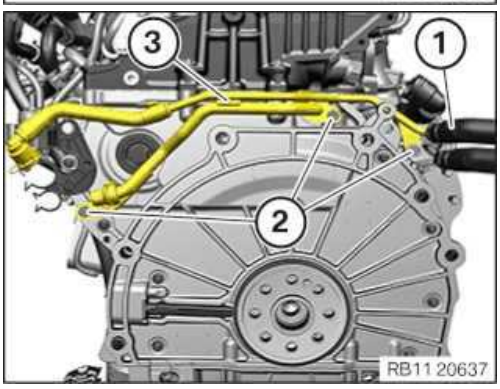
- Check the freedom of movement between the special tool **0 496 135 (11 8 813)** and the crankshaft sensor during installation.

  Otherwise there is a risk that the crankshaft sensor will be damaged.
- Slide on special tool **0 496 135 (11 8 813)**.
- Screw down special tool **0 496 136 (11 8 814)**.

cardiagn.com



- Press in crankshaft seal with special tool **0 496 135 (11 8 813)**.
- Screw in special tool **0 496 135 (11 8 813)** up to timing case cover.



- Insert and install the holder (2).

▶ **If installed: Installing the coolant line of the SCR metering module**

- Renew the O-ring 1.

  Parts: O-ring

- Feed in and install coolant line (3).
- Tighten down screws (2).

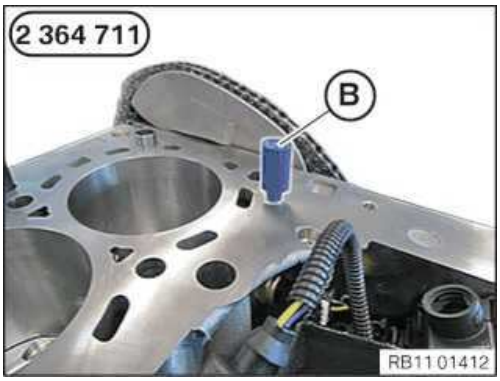
SCR coolant lines to crankcase end cover

Hexagon screw M6x16		Tightening torque	8 Nm

- Connect and lock the coolant line (1).

  Coolant line (1) must audibly engage.

▶ **Cleaning the sealing surface**



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

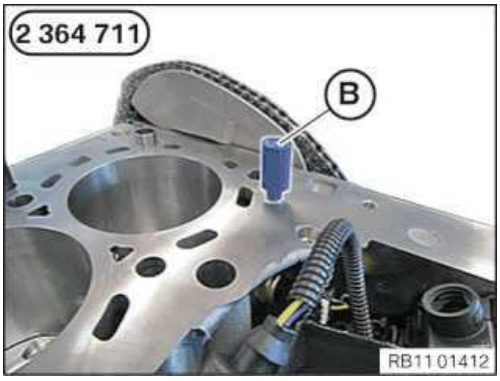
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

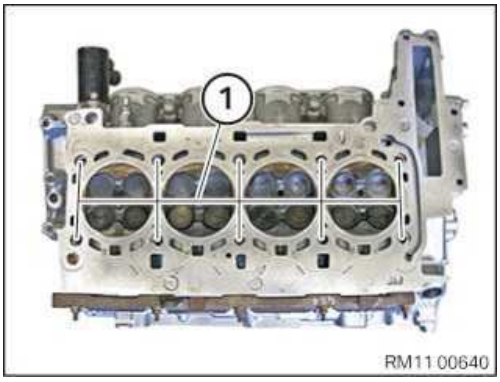
- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.



RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



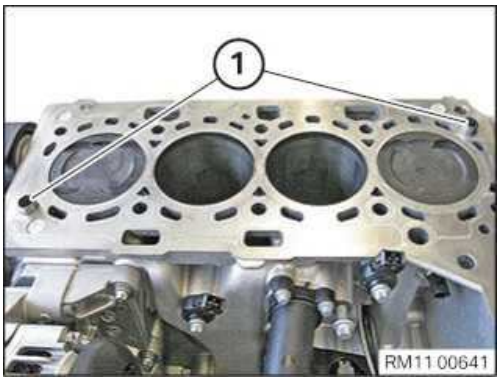
- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.

- Remove special tool (B).

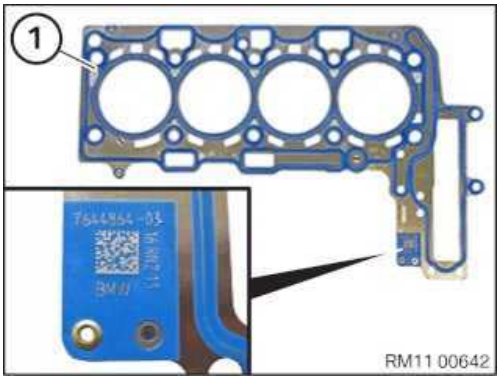
▸ **Renewing the cylinder head gasket**

RISK OF DAMAGE



Damage to the surface.

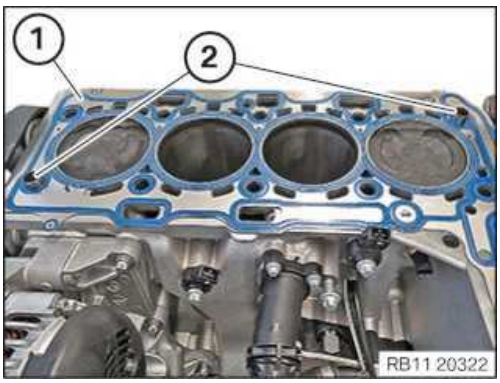
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



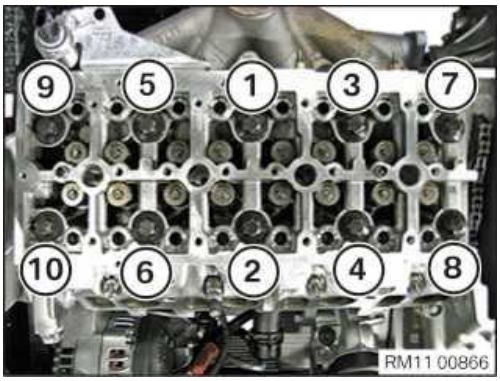
- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).

cardiagn.com



- Check the fitting sleeves (1) for secure fit and damage.



- Identify the cylinder head gasket (1) using the part number.

Note: If the cylinder head is reworked, an additional thicker gasket 0.3 mm is available for service personnel.

- Guide in the cylinder head gasket (1) and install.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Damage to threads.

Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION

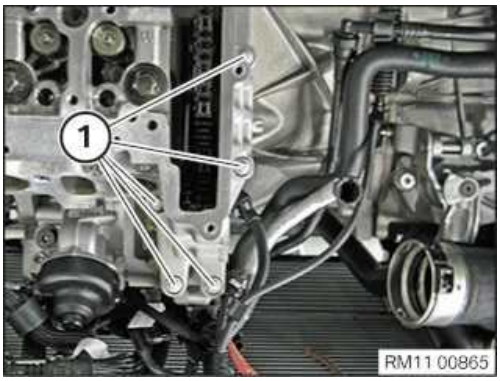
Do not remove bolt coating.

- Renew the cylinder head bolts (1).

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  No coolant, water or engine oil must be present in threaded holes of engine block.

TECHNICAL INFORMATION



When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in cylinder head bolts in sequence (1) to (10).
- Tighten cylinder head bolts using special tools **0 490 504 (00 9 120)** and in sequence (1) to (10).

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

cardiagn.com

- Tighten the cylinder head bolts (1).

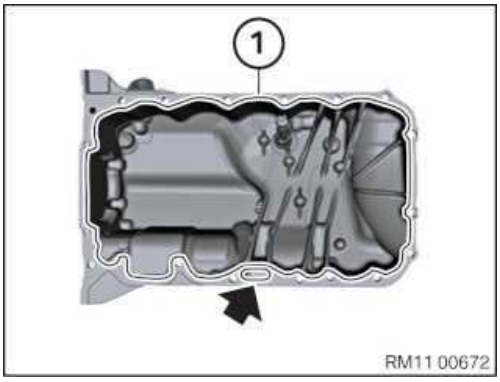
Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

-

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Remove fine sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

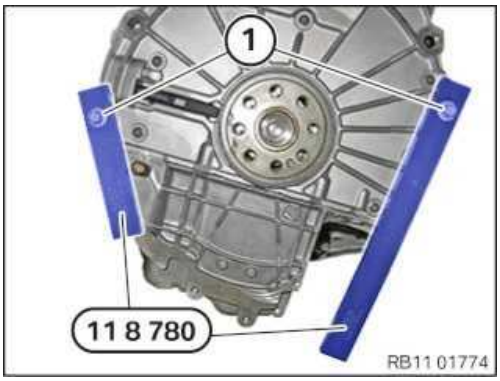
- Remove coarse sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- Apply the sealing compound along the line (1) with a thickness of 2 mm to 2.5 mm.

  Apply the sealing compound along the inner edge.

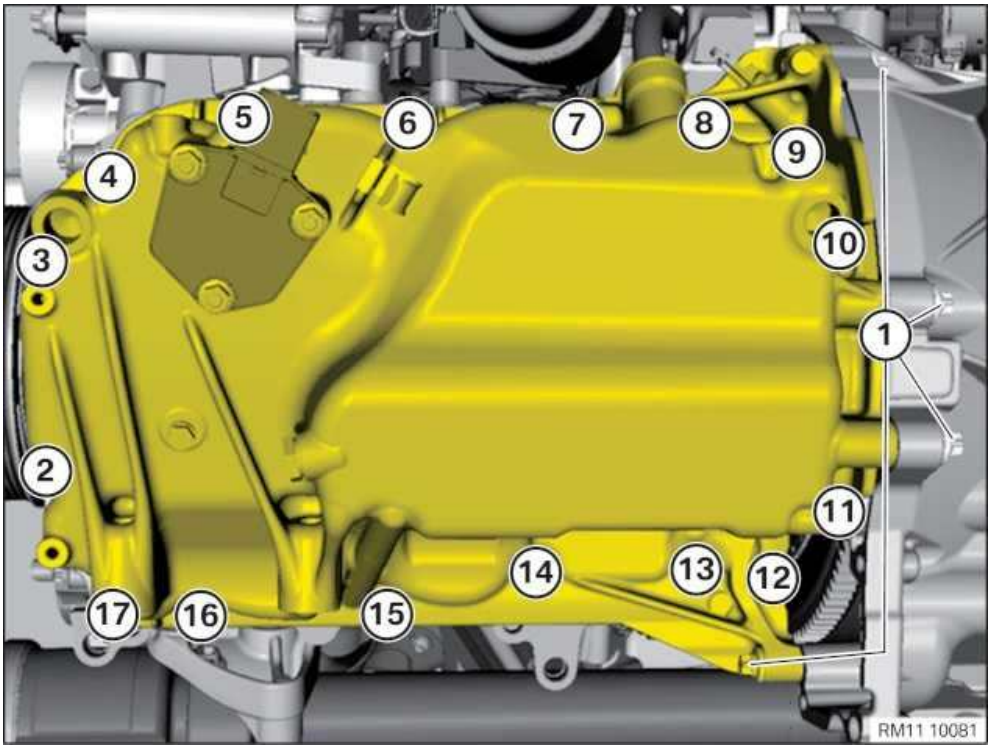


Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

- Completely encircle the oil return orifice (arrow) with the sealing compound.



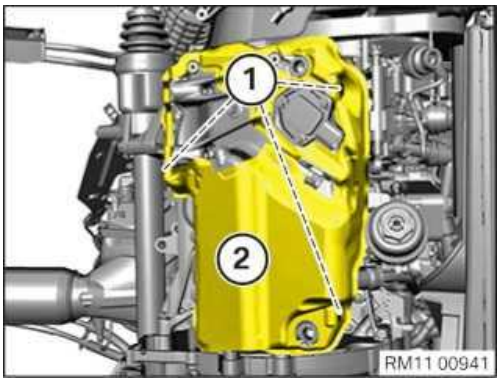
cardiagn.com

TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- If necessary, renew fitting sleeves.

- Position and install oil sump.
- **Hand-tighten** oil sump screws (2) to (17) but do **not** tighten completely.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws(2) to (17) of the oil sump.



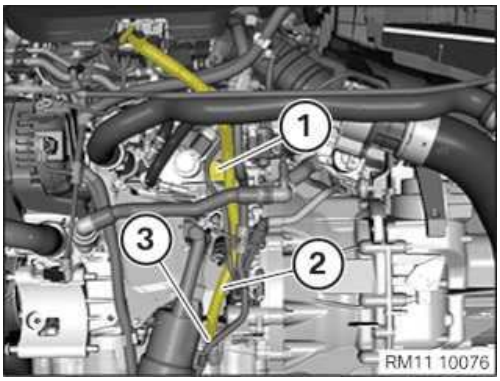
Oil sump to crankcase

M8x30		Tightening torque	2 Nr
M8x110		Tightening torque	2 Nr

- Tighten transmission bolts (1) on oil sump.

Transmission to oil sump

M8		Tightening torque	1 Nr



- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).

- Renew O-ring (1).

  Parts: O-ring

cardiagn.com

- Guide in guide tube (2) for oil dipstick and insert it into oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

Guide tube for oil dipstick on engine

M8x16		Tightening torque	19 Nm

POSTPROCESSES

32 – Installing the flywheel

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

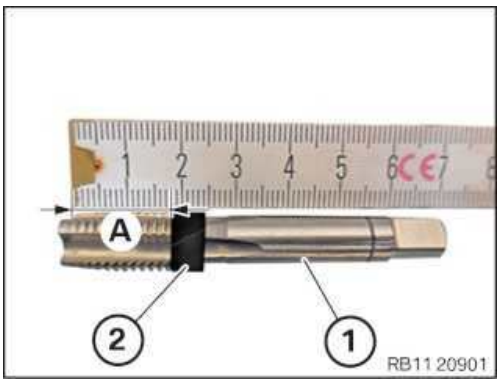
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

Clean all threads with a screw tap.

- Clean all screw threads (1).

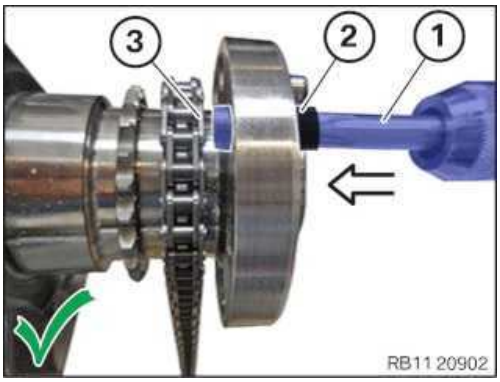
cardiagn.com



- Use the set of special tools **2 285 058**.

Description
Twist drill
Thread cutter M12x1.5
Depth
Insertion tool

- Assemble tool set.



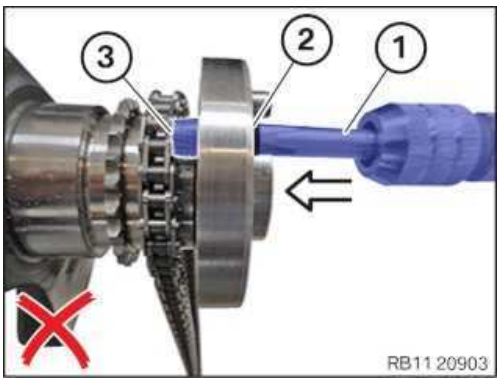
Number	Description
1	Tool holder
2	Thread cutter M12X1,5

- Mark the screw-in depth (A) on thread cutter (1) from the set of special tools **2 285 058** with a standard tool (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm

NOTICE



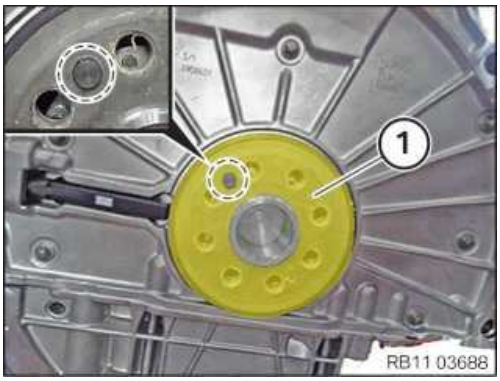
To provide a better overview: Shown with engine removed.

- Screw in the thread cutter (1) from the set of special tools **2 285 058** in direction of arrow up to the screw-in depth (2).

Screw-in depth of thread cutter

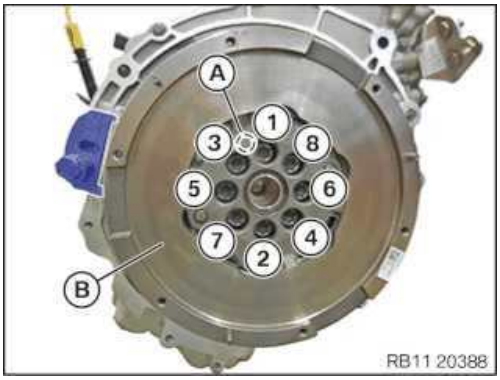
Screw-in depth	18 mm

- Make sure that the thread cutter does (1) **not** rest on the timing chain (3).



TECHNICAL INFORMATION

- **Carefully** handle the timing chain, to protect the timing chain and timing chain drive against damage.

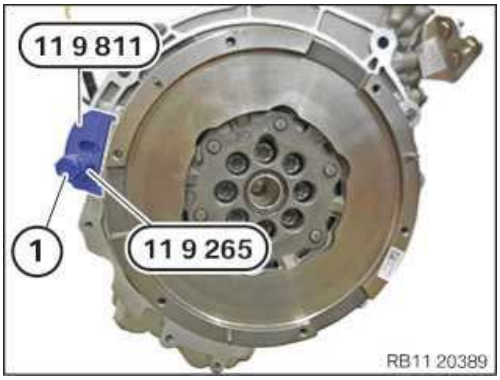


- Make sure that the screw-in depth (2) of the screw tap (1) is not exceeded.

  The thread cutter (1) may not rest on the timing chain (3).

cardiagn.com

- During the installation, note the mark shown without fail.
- Install special tool (1) on the crankshaft as shown.



- Position flywheel (B) .
- Renew flywheel bolts (1) to (8).

  Parts: Flywheel bolts
- Tighten flywheel bolts hand-tight with special tool **0 491 018 (11 4 180)**.
- Observe tightening sequence. While doing so, begin with dowel pin (A).
- Tighten the flywheel bolts using the special tool **0 491 018 (11 4 180)** in sequence (1) to (8).

Flywheel to crankshaft

M12x1.5	Renew screws.	Tightening torque	120 Nm

- Loosen the transmission bolt (1).
- Feed out and remove special tools **0 494 793 (11 9 265)** and **0 496 171 (11 9 811)** with the **standard** (5 mm) washer.

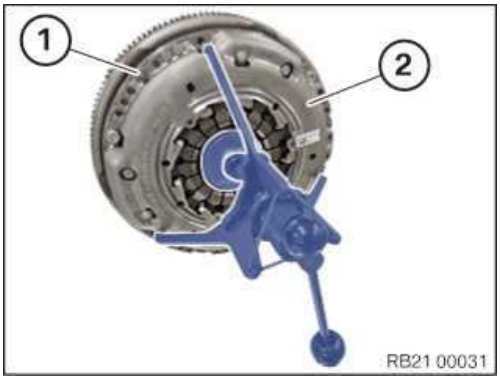
33 – Install clutch

CAUTION

Materials harmful to health.

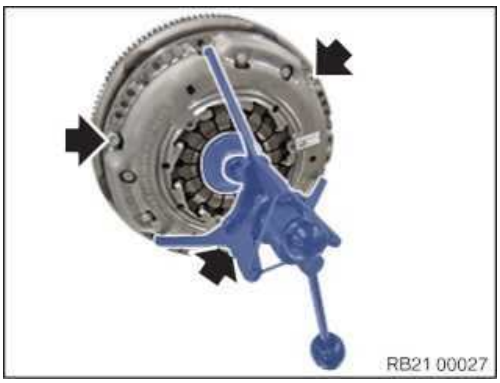
Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.



TECHNICAL INFORMATION

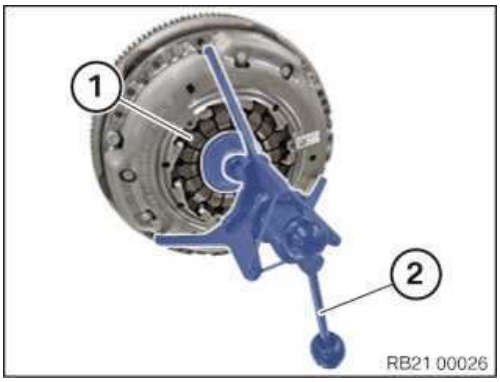
Handle the clutch disc carefully. Install the surfaces of the clutch disc in the correct mounting orientation.
Clean friction surfaces of the flywheel and the pressure plate with BMW-approved brake cleaner.
Note designation for ”engine side” / ”transmission side”.



cardiagn.com

- Centre the clutch disc (1) using special tool .

- Mount the clutch (2) together with the special tool to the flywheel.
- Observe the dowel pins (1).
- The clutch (2) must be secured via the dowel pins (1).

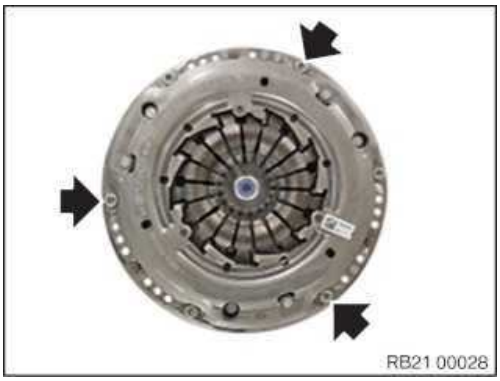


- Renew the bolts (arrows).

  Parts: Bolts
- Install and tighten screws (arrows).

Clutch to flywheel

M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °



- Loosen the spindle (2) until the diaphragm spring (1) is fully relieved.

- Unscrew the knurled screw (1) and remove the special tool with **2 288 165** from the clutch.

cardiagn.com

- Renew the bolts (arrows).

  Parts: Bolts

- Tighten screws (arrows).

Clutch to flywheel

M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

- Withdraw special tool from clutch disc with aid of accompanying screw.

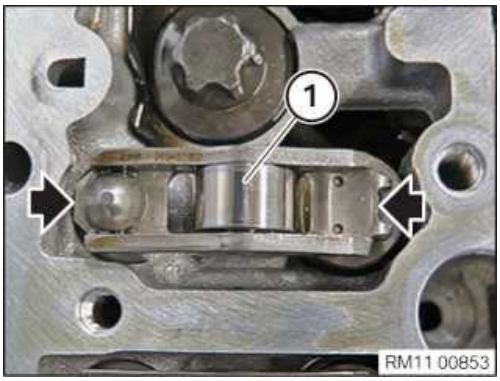
34 – Installing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



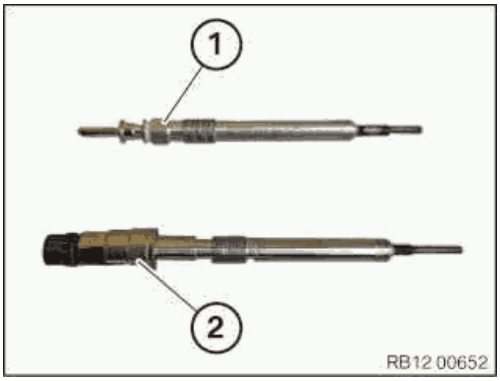
- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

35 – Install the roller cam followers

TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.

cardiagn.com

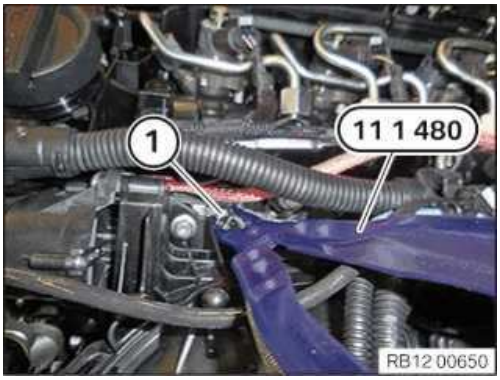


- Check all roller cam followers (1) for damage and replace if necessary.

  Parts: Roller cam followers
- Insert and install all roller cam followers (1).

  Roller cam followers (1) that have already been used must be installed in the same place.
- Note the mounting orientation of the roller cam followers (1).
- Oil all roller cam followers (1).

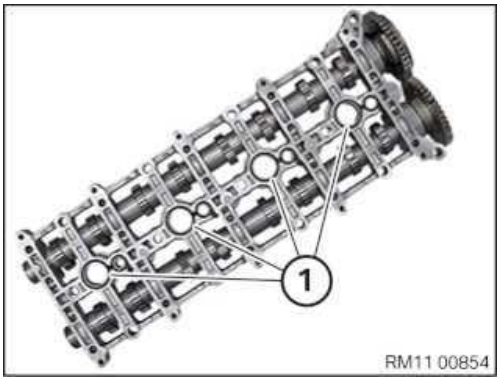
36 – Install glow elements



- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

- Tighten the glow element with the special tool or conventional tools.

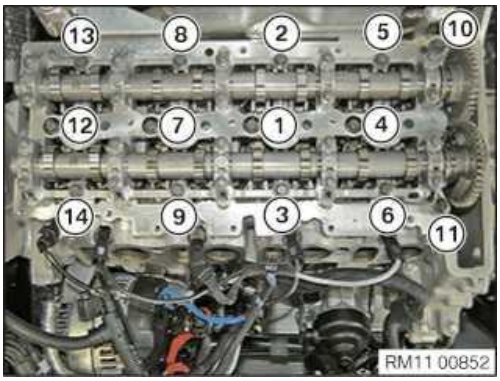
Glow elements to cylinder head



Glow element		Tightening torque	13 Nm

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



37 – Installing the camshaft support

- Renew gaskets (1).

  Parts: gaskets

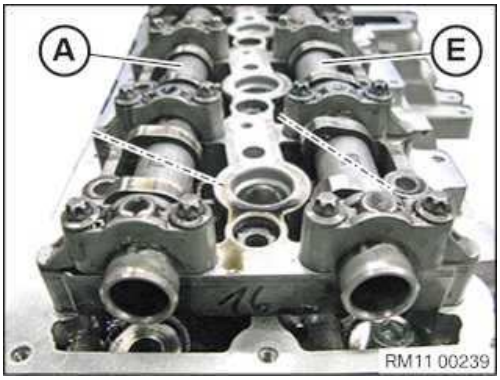
cardiagn.com

- Position the camshaft support including the camshafts.
- Tighten the screws in a sequence from (1) to (14) in several steps.

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

38 – Adjusting the timing of the camshafts



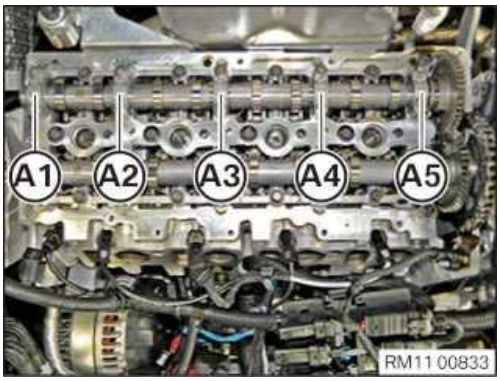
- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

- Slide the special tool **2 288 380** completely into the bore hole of the oil sump.
- Use the special tool to block **2 288 380** the crankshaft in the TDC firing position at the first cylinder.

- The cam of the intake camshaft (E) at the first cylinder points up at an angle.
- The cam of the exhaust camshaft (A) at the first cylinder points outward at an angle.

▶ **Remove exhaust camshaft.**



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

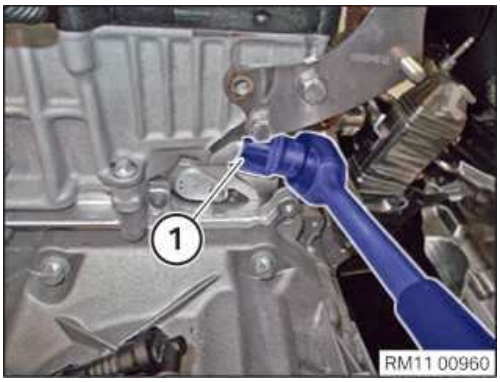
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

TECHNICAL INFORMATION

The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A5) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components on special tool **0 495 105 (11 4 480)** in a tidy and orderly fashion.



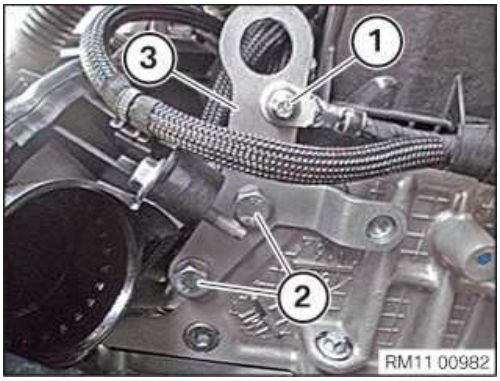
▸ **Remove chain tensioner piston**

WARNING

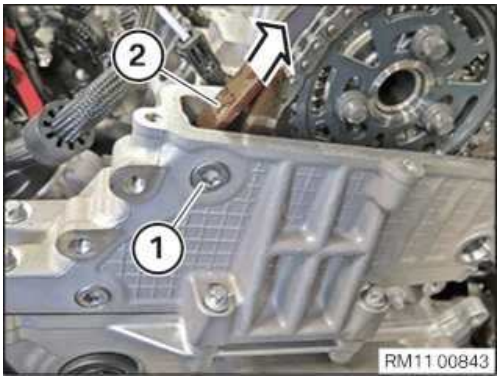
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



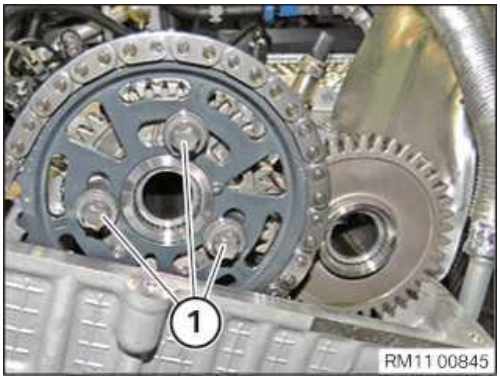
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

▸ **Remove the timing chain guide rail**



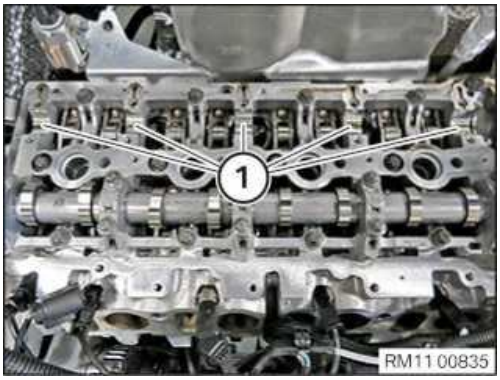
- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

cardiagn.com

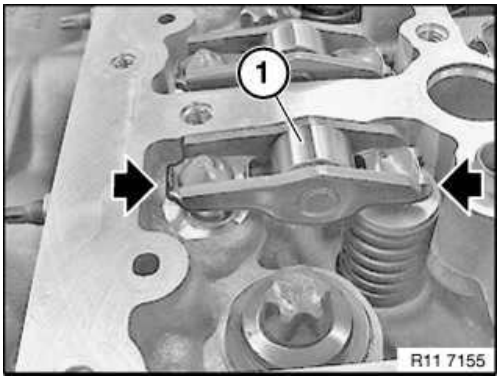
▶ **Removing the camshaft sprocket on the intake camshaft**

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.



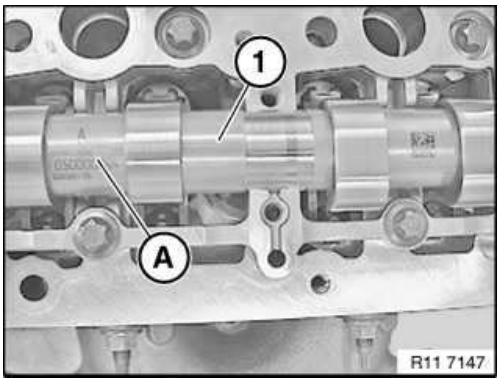
▶ **Install exhaust camshaft**

RISK OF DAMAGE



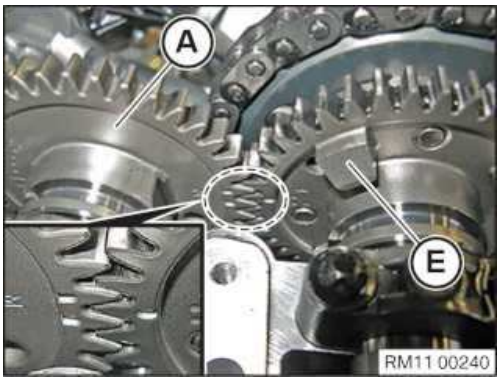
Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

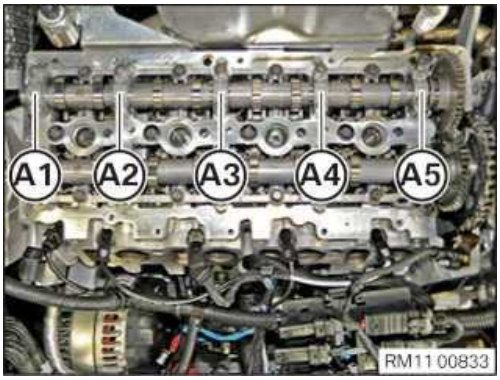


- Comply with the regulations for the installation and disassembly.
- Perform work with care.

- Oil all bearing positions (1).



- Make sure the roller cam followers (1) have the correct mounting orientation.



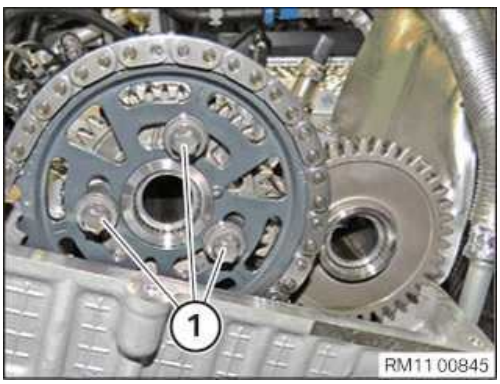
- Insert exhaust camshaft (1) so that the identification (A) points upwards.

cardiagn.com

- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.

- Tighten all exhaust camshaft bearing caps (A1) to (A5) from the inside to the outside by 1/2 a turn at a time.

Intake and exhaust camshaft in camshaft support



M6x31		Tightening torque	10 Nm

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

  Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

▶ **Installing the camshaft sprocket on the intake camshaft**

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

▶ **Install the timing chain guide rail**

- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

cardiagn.com

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

▸ **Installing the chain tensioner piston**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

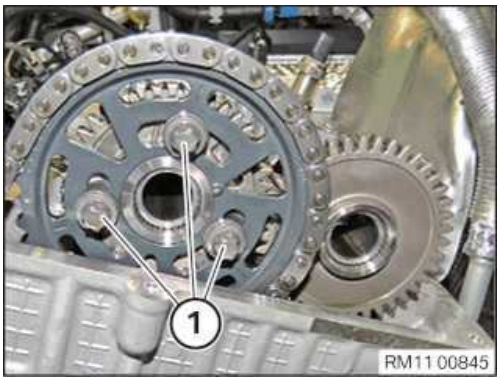
- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.



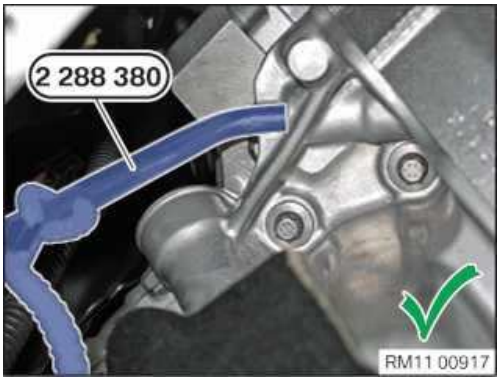
- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

▸ **Tightening the camshaft sprocket on the intake camshaft**

cardiagn.com



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

39 – Removing the special tool to disconnect the crankshaft

- Remove special tool **2 288 380**.

40 – Removing the special tool to secure the exhaust camshaft

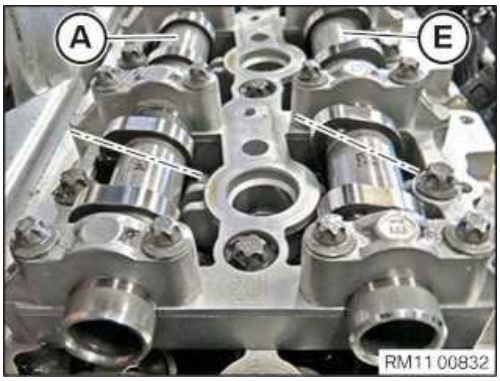
- Remove the special tool **0 496 112 (11 8 760)** to fix the exhaust camshaft.

41 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

cardiagn.com

RISK OF DAMAGE



Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

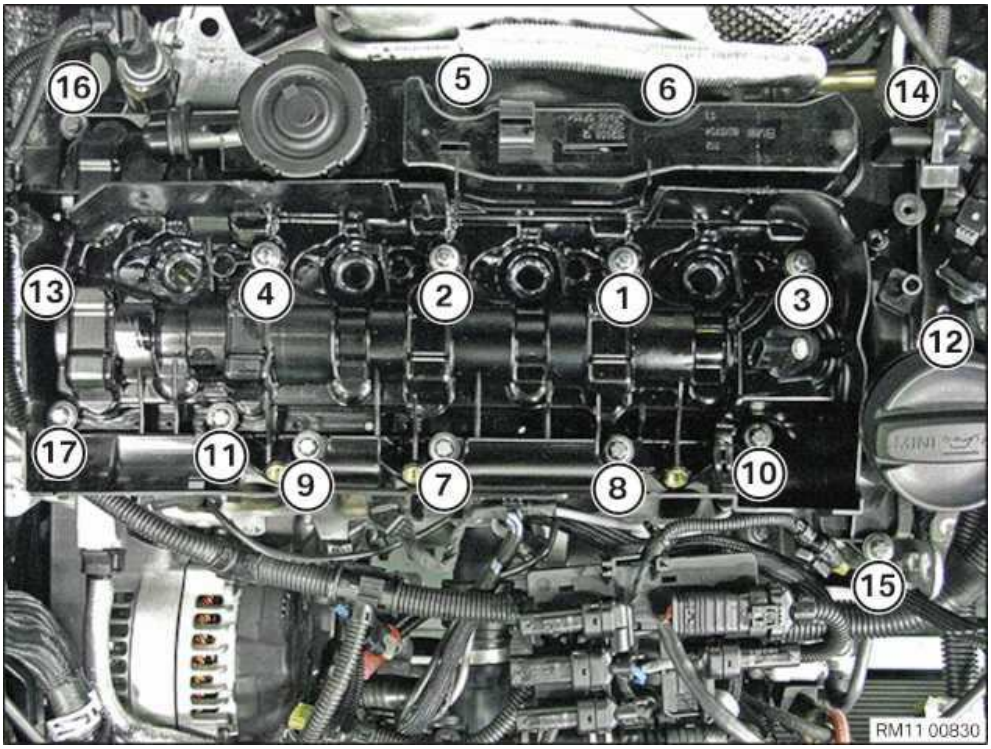
- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

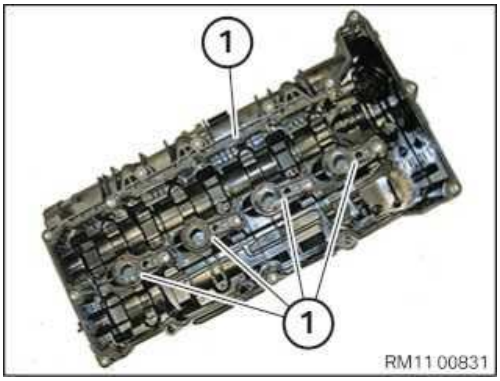
If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.



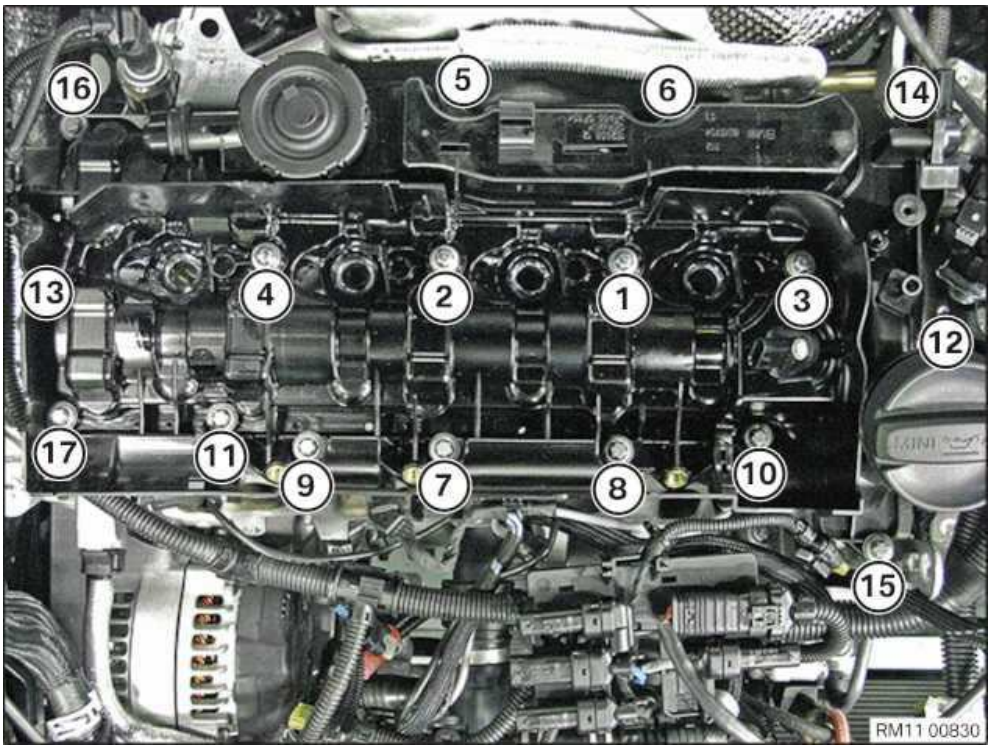
cardiagn.com



- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

42 – Installing cylinder head cover

Overview: Screw connection of the cylinder head cover

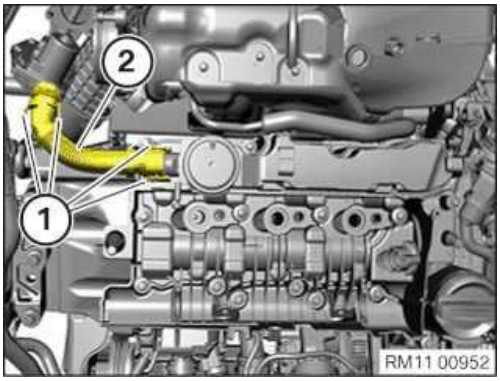


1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket

cardiagn.com



- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

43 – Installing injectors of injection system

▶ Cleaning the injector shafts

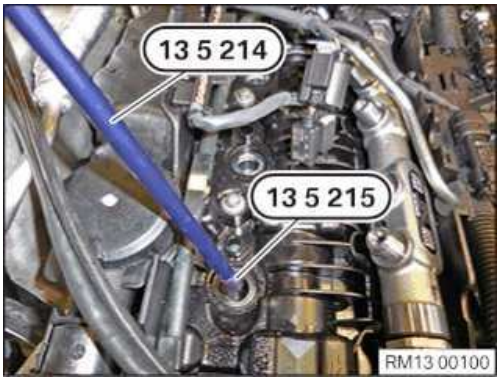
CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

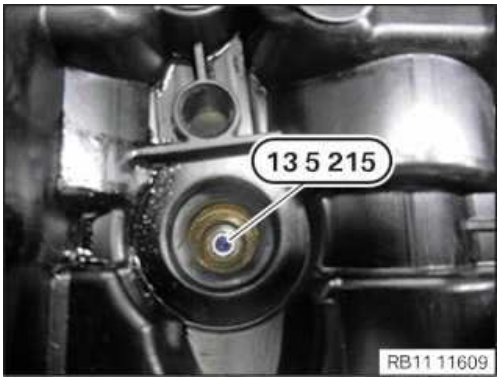
- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.



cardiagn.com

RISK OF DAMAGE



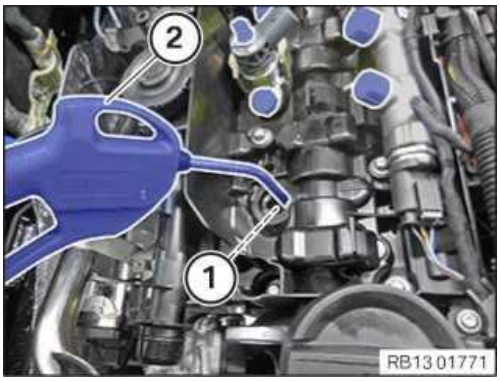
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

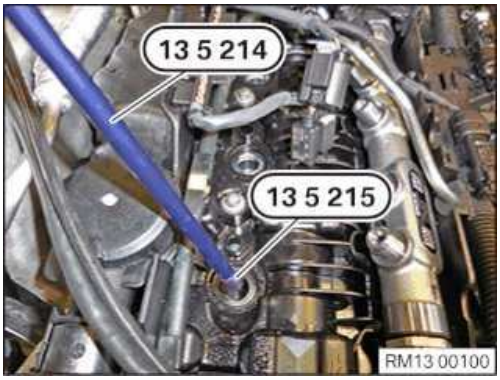
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.



- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

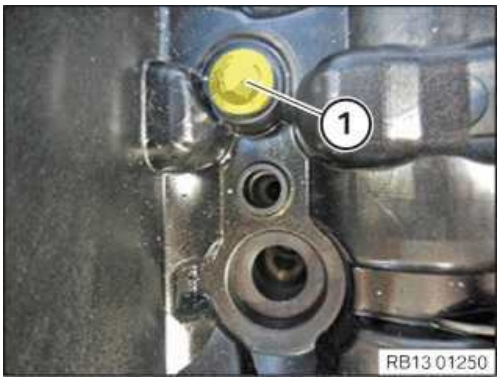


- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

cardiagn.com

- Blow out injector shaft (1) with air gun (2).

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.



▸ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▸ **Prepare the injector for installation**

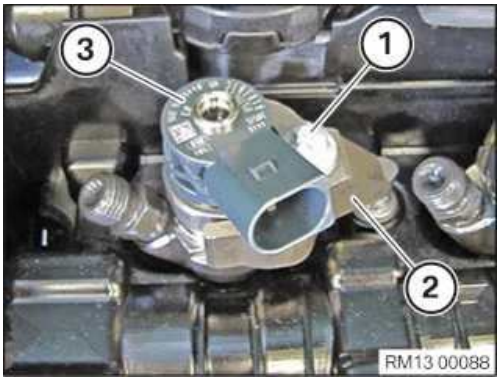
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

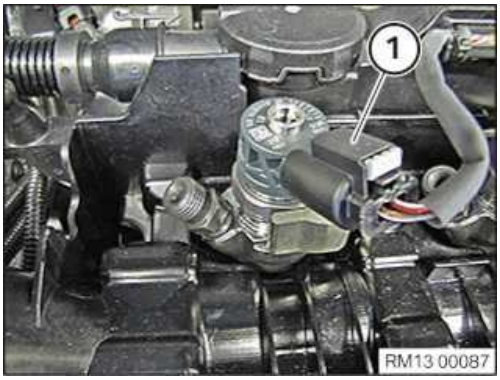


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring

- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials



Injector lubricating grease	50 g, Can	83230441070

- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

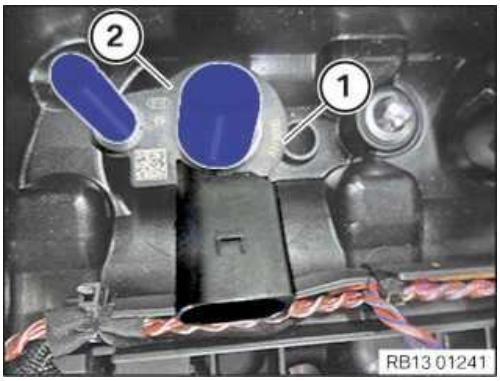
Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

▸ **Replacement: Perform injection quantity compensation**



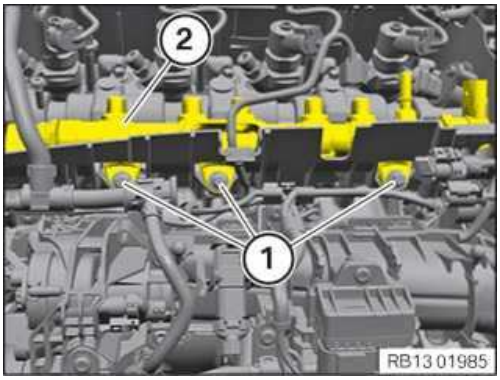
TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

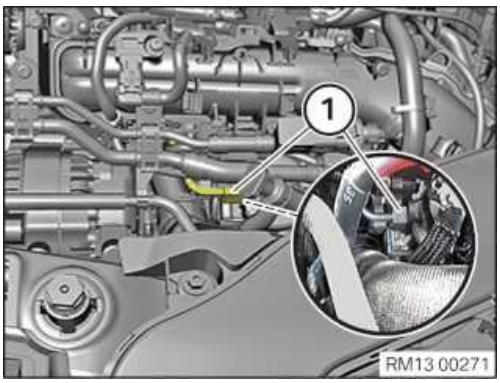
Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.



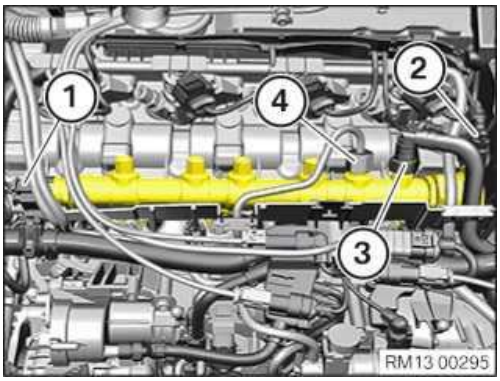
44 – Installing the rail

- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm

TECHNICAL INFORMATION



Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

cardiagn.com

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

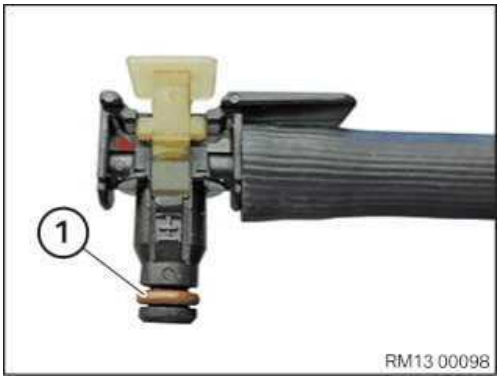
TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool .

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm



- Connect and lock the fuel line (3).

  Fuel line (3) must engage audibly.
- Connect connectors (2) and lock.

  The connector (2) must engage audibly.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

45 – Connect the leakage oil line on the injector

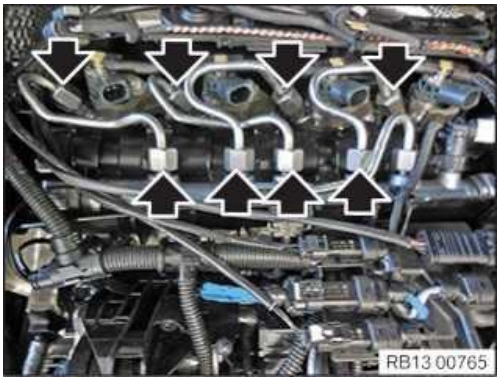
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

46 – Installing high pressure lines between rail and injectors



TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

cardiagn.com

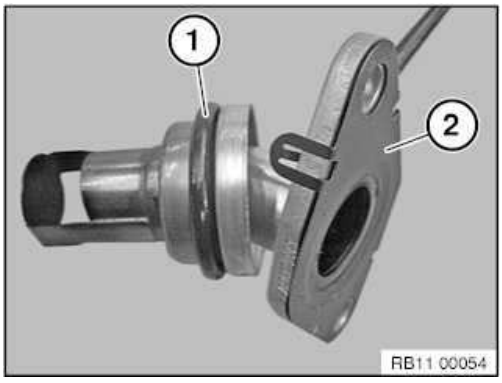
TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

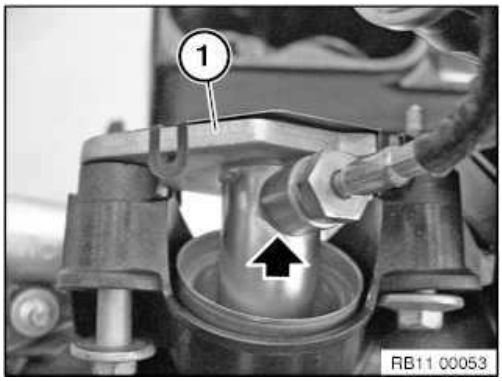


- Tighten the high pressure lines (arrows) with the special tool .

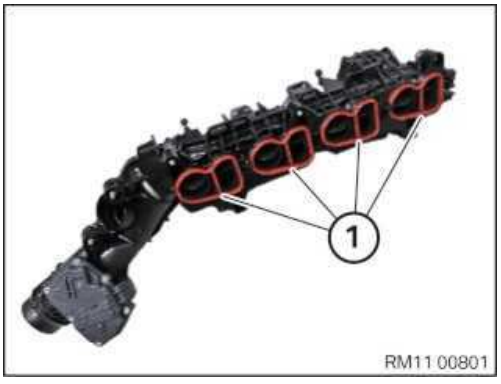
High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).



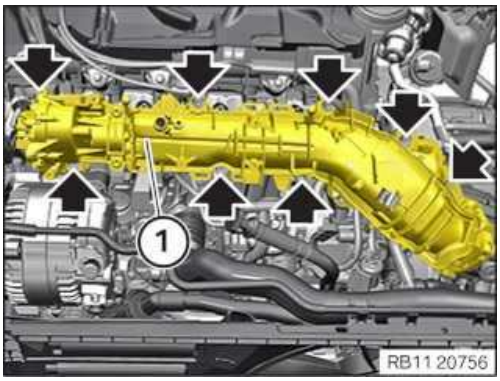
47 – Installing the intake plenum



- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

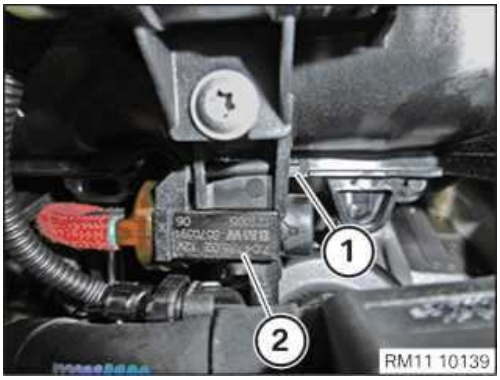
  Parts: Gasket
- Position the seal (2) and clip it in.



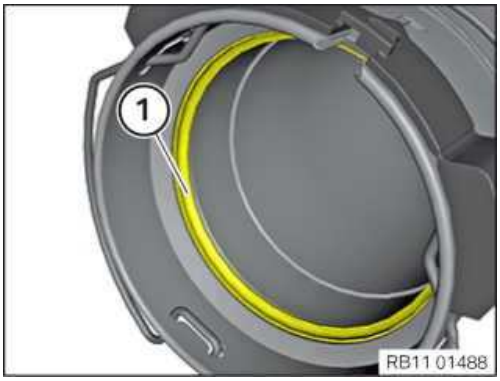
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



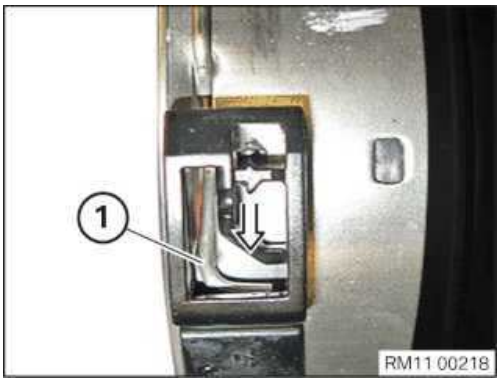
cardiagn.com



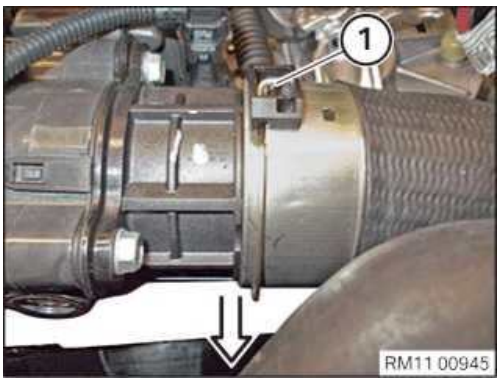
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

- Engage the lock (1) on the bracket (arrow).

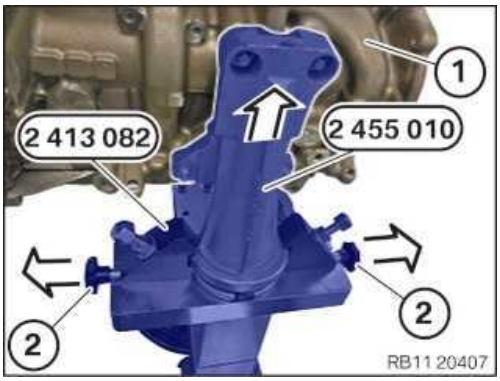
- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

48 – Remove the engine from the assembly stand

cardiagn.com

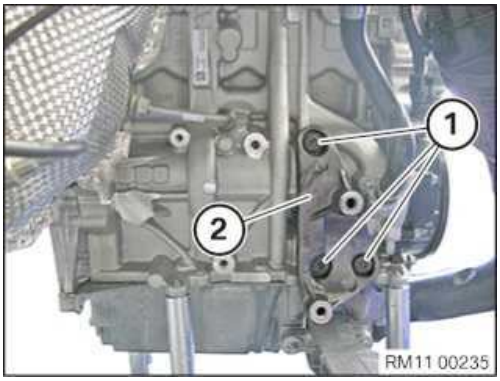
CAUTION



Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Insert engine lifter with special tool and position engine (1).

- Unscrew the nuts on special tool .
- Detach the holder (2) in the direction of the arrow.
- Detach the engine (1) with special tool **2 455 010** out of the special tool in the direction of arrow.

- Remove conventional screws (arrows).
- Feed out the special tool **2 455 010** on the engine (1) and remove.

- Insert and install the holder (2).
- Tighten the screws (1).

Holder to crankcase
